NILES' WEEKLY REGISTER.

NEW SERIES. No. 1—Vol. XI.] BALTIMORE, SEPT. 7, 1822. [No. 1—Vol. XXIII. WHOLE No. 573

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

BALTIMORE. The "Federal Republican" says there are thirteen cotton-mills in our vicinity, which drive at least 32,880 spindles.—Two woollen mills—one copper rolling mill, which is the only one of note in the United States—three extensive rolling-mills, which manufacture annually, at least 1500 tons of iron into rods, hoops, bolt and sheet-iron, besides at least 30 of the best and most improved merchant-mills within the limits and environs of the city, that manufacture about 300,000 barrels of flour annually.

NEW YORK. A few new cases of fever, from three to six, are daily reported to the board of health—but the disease does not appear to be on the increase. A great number of temporary buildings have been erected at Greenwich and in its neighborhood, and it is supposed that more than 25,000 persons have removed from their usual places of residence in the city.

The district thus abandoned appears infested with robbers—and their depredations are of an alarming amount. It is proposed to have a day watch as well as a nightly one; that a company of mounted men shall patrol streets, and boats be stationed in the river to prevent the escape of the plunderers.

FOREIGN GOODS. For a year or two past, but a small quantity of European manufactures were received at Baltimore, but no less than four vessels have already arrived with an abundance of them. The cargo of the *Belvidera* is supposed to have cost not much less than 150,000*l.* and the *Franklin* brought out 1700 different packages—the others were also well filled; so that the assortment is said to be complete as well as extensive. But we are more pleased to observe that the market is amply stocked with *domestic goods*, and that the sales of them are continually increasing.

FLAX. Another machine has been invented by Samuel Davidson, of Romulus, N. Y. for dressing flax. Its whole cost, including the patent right, is only forty dollars. It has been tried by many of the most respectable farmers. They estimate the saving in labor at three fourths, and the saving in flax at one fifth, compared with the common mode; while it leaves the texture of the thread unbroken. By the use of this machine the process of *rotting* may be dispensed with, as it will answer for dressing the flax either with or without rotting.

This improvement promises to be extensively useful—its price is so small that every neighborhood may easily have a machine. Flax is an article of easy cultivation and great product, if the process of rotting and usual way of cleaning it can be dispensed with, and must become an important staple to the people of the interior for home use and transport to the sea-board, &c. A pound of flax may be carried any given distance as readily as a pound of corn, pork, &c. The cost of transportation will be the same; but the amount of that cost as to the relative value of the article, will be essentially different. The seed, too, if crushed and made into oil, will always find a ready market, and better pay charges for carriage than any sort of provisions

that our farmers can raise in the interior. Oil mills may be erected at a small expense, and would yield large profits to their owners, if the supply of seed was abundant, in any part of our country west of the mountains.

We feel both publicly and personally interested in the cultivation of flax and the use of flaxen goods—publicly, because it will add much to the national prosperity; privately, because we cannot have good *paper* without flaxen rags to make it of.

COLOMBIA. There is a long and interesting account of the proceedings that took place at London, when a public dinner was given to Mr. Zca, the Colombian minister or agent. Several of the gentlemen present, members of parliament and distinguished persons, delivered some very handsome speeches on the occasion, and it might have been expected that Mr. Randolph, who seems to have suffered no opportunity to pass without displaying his eloquence among lords and loyalists, would have attended to honor the representative of the new republic in the south—but he was not there. Liberal minded Englishmen will wonder at his absence; but those who best know the excentric gentleman have no reason to be surprised at any thing that he does or refrains from doing.

THE QUERCUS CERRIS, or Oriental Oak, is abundant in Florida. It is the tree on which the *nut-galls* are produced. These are the work of an insect, for the purpose of depositing its eggs; and they are found on the branches of the tree so abundantly, that a person gathered several pounds of them in a few moments; and it is probable that they will become a considerable article of commerce, being in quality quite equal to those imported from the Levant.

PAINSVILLE, O. We never before heard of this place, which is in Geauga county, Ohio, until we received therefrom a very neatly printed and well conducted newspaper, called the "Painsville Telegraph," the first number of which was issued on the 16th ult. It contains a brief notice of the village, which has 100 buildings and 400 inhabitants—with a plenty of lawyers and stores, &c. It is located 30 miles north-east of Cleveland—the water power in its vicinity, on the Grand River, is great, and many mills have been already erected. It appears to be excellently well fitted for a large manufacturing town—many of which our friends in the west must establish, if they are disposed to make the most of the advantages that they possess.

THE SHIPS ON THE LAKES, especially those on Ontario, with the exception of the New Orleans and Chippewa, of 106 guns each, are in a state of rapid decay, as was to have been expected. Those named were not launched, and, being well covered, might now soon be fitted for service. But, even in the event of a war with Great Britain, of which there is no present prospect, it is doubtful whether any great naval force will be maintained on the lakes. The circumstances of the countries bordering on them are materially changed—what was a wilderness (on our side of them), at the beginning of

the late war, now teems with inhabitants, hourly increasing in numbers and advancing in power; abounding also in supplies of all sorts necessary on an emergency. No one ever entertained the idea, we should suppose, that the great naval establishment on the lakes would have been kept up—the ships were built for temporary purposes, and it will be much cheaper to build others, if they should even be wanted, than to keep in repair ships built as these were, during peace. Several of them, we know, were, on the lake, fitted for service, in less than 60 days after the trees of which they were built were felled in the forest. They were perishable in their nature, and have perished.

“**ILLIBERAL POLICY.**” Under this head, a writer in the Richmond “*Enquirer*” notices the passage of a law by the legislature of Virginia, which taxes every hawker and pedlar who deals in foreign or domestic manufactures, (except the latter are the product of that state), in the sum of eighty dollars *per annum*. The writer justly doubts the constitutional power of the state to pass such a law, and thinks it offers a strange comment on the favorite saying of “*Let us alone.*”

CUMBERLAND ROAD. The banks of Maryland, as a condition for the renewal of their charters, have agreed to make a good road between Boonsborough and Hagerstown, a distance of ten miles only; and then the great turnpike from Baltimore to Wheeling will be complete. The work is to be commenced immediately.

NAVAL SCIENCE. A late French writer observes—“How does it happen that the commanders of French vessels, with 34 schools of hydrography established in the kingdom, either know not, or do not wish to know how to calculate the longitude of their vessels by *Lunar* distances, while even the *cooks* and *negroes* of the American vessels understand it?”

This wholesale question appears to have resulted from a circumstance that occurred on board Mr. Crewinshield's famous little vessel—*Cleopatra's barge*, in which he visited Europe and the coasts of Asia and Africa on the Mediterranean, as a pleasurable excursion, some years ago. A conversation took place at Genoa, when many foreigners were on board the barge, about lunar observations, &c. The Americans made light of a knowledge of them; the foreigners were surprised, and the *black cook*, was literally called from his employ of cutting up a fowl, with his carving knife in his hand, to answer questions about them, all which he did in the most satisfactory manner; demonstrating that he was perfectly acquainted with them, the use of the sextant, &c. to the astonishment of the strangers. But it cannot be believed that such acquirements are common to persons of this class, though it does sometimes happen that every one of an American crew is able to navigate a ship to any part of the navigable world.

HARMONY, IND. A correspondent, who resides at or near this place, has occasionally informed us of the progress of this singular society, under the direction of Mr. Rapp, who appears to possess extraordinary power, as the civil and ecclesiastical ruler of this famous community. The letter now before us states, that for about six years the married women have not had any children, and that among many handsome girls and fine young men, an astonishing degree of obedience to [supposed]

orders had been observed. This society removed from Pennsylvania a few years ago—they now have a handsome town in Indiana, adorned with a splendid church having an elegant steeple, and other public buildings—though, generally, all are in common. It appears that they honored the last anniversary of American independence, and furnished a free dinner and plenty of beer to all who pleased to visit them, treating them also to fine music from their band. The writer goes on to state that, besides the great quantities of grain and other vegetables, beef, pork, &c. that they raise, the amount of their *manufacturing industry* may be estimated as follows:

Hatters and shoemakers,	value per day,	\$30
Distillers and brewers	“	30
Spinning and carding	“	15
Blacksmiths and coopers	“	15
Various cloth, (cotton)	“	25
Ditto (woolen)	“	70
Flannels and linsey	“	20
The tannery	“	15
Wagon makers and turners	“	12
Steam and other mills	“	15
Saddlers, &c.	“	15

\$262

Product of manufactures, 262 dollars per day, with a large value in agricultural products. We cannot determine the correctness of this aggregate, but, from what we do know of the society, it is probably within the daily earnings of this laborious people. We must confess, however, that, zealous to see as much as we can, the power of the republic in population and force, we cannot approve of a neglect of the *first* command, in a “*legitimate*” way.

FAMILIES. From various statements that we have lately examined, we think it may be accepted as a statistical fact, that the families in the United States will average between six and seven persons.

STAGE ACCIDENTS. At a late trial in England of a suit brought against the proprietors of a stage coach, for personal injury received from its being overset, by being imprudently loaded and driven, a verdict of \$9,000 was given for the plaintiff, subject to reference.

THE SARATOGA SPRINGS are now visited by a very numerous company of the fashionables and wealthy of the United States, as well as by many others, for the purpose of recruiting their health and strength. A letter published in a Boston paper, says that Mr. Phillips, the English singer, is there, and adds, “before he entered the village, he sent a servant to ascertain *what sort of company was at Congress Hall!*” The report was favorable; but he could find no apartment, or any thing else, to please him after his arrival. He, however, condescended to *honor* the establishment by stopping. The gentleman who keeps it, on observing his violin, and probably not knowing him, remarked, that “he thought his accommodations good enough for a *fiddler.*”

Though such a proceeding entirely conforms to the general character of the *great* men of England who have honored us with their presence for the sake of our money, while they feel it no disgrace to *exhibit* themselves to obtain it, differs in its point from what we have heard mentioned of the person named—who is said to have carried himself with the modesty that belongs to his humble vocation—that of a singer of songs, for pay.

CANALS. In a speech delivered in the French chamber of deputies on the 5th July, by M. Chabaud Latour, on the subject of improving and extending the canal system of France, is the following passage:—"The United States of America, in the course of an independent existence of only forty years, have established more communications by water than old Europe in all its states. The spirit of association has created numerous companies, and canals have been made with as much promptitude as economy."

MR. BALDWIN, a representative in congress from Pennsylvania, who nearly died at Washington after the last session, has since been seriously indisposed and travelling for the recovery of his health, which now is partially restored. On the morning of the 16th ult. it was known that he would return to his home, in Pittsburg, that day—and the people, by one general and spontaneous movement, resolved to welcome him after his long absence from among them. A salute of 15 guns was fired, the mayor and city council were suddenly convened, and the volunteer companies ordered out. At about two miles from the city line, he was met by the civil authorities, the battalion of volunteers, and a large concourse of the citizens—when judge *Walker*, in the name and on behalf of the multitude assembled, delivered the following short, but pertinent address:

"The committee of arrangement of the town councils and military, on behalf of the citizens and volunteers of the city of Pittsburg, have requested me to tender you their hearty welcome on your return. You ask the cause of this assemblage of your fellow-citizens? They answer—Their gratitude for your tried services in the national council, which, while they have given you a distinguished place among the American statesmen, have reflected their lustre on the district and the country.—Their regret that they are about to lose a representative who broke the first ground in a system of finance and national policy, which will form an era in the political history of the republic. Their sympathy for your protracted indisposition, produced by their's and their country's cause, prosecuted with all the labor and industry of counsel, and all the zeal and eloquence of advocacy. Their joy for your restoration to health and home."

To which Mr. Baldwin replied, that he felt wholly unable to express to his fellow-citizens the feelings which this occasion had excited in his mind, and he should not attempt it; that there was no reward for one's exertions or services so highly to be valued, as such an expression of the confidence and attachment of his constituents: he could never forget it; it could be attended with but one source of regret, that he had been able to effect so little for those who had honored him so much.

The procession was formed in a suitable order by marshals, and moved through the principal streets to the residence of Mr Baldwin.

AFRICA. The viceroy or pacha of Egypt, in prosecuting his scheme of conquering of the country on the Upper Nile, will probably be the means of furnishing the world with much information about the interior of Africa. The army is under the command of two of his sons, who have several learned Europeans in their train—one of them, Mr. Zuccoli, an officer of engineers, is charged with the geographical survey of the country, and a letter from him has lately been received by his correspondent in Germany. He has made a survey of the Nile

from Alexandria to Sennar, in which there are no less than 180 falls or cataracts, of greater or lesser magnitude. He thinks he has discovered the island of Meroe, in the slip of land between the Dender and the Rabb; where he discovered 45 pyramids, covered with hieroglyphics. He met here with M. Cailland, and his companion, who followed Ismail Pacha, one of the sons of the viceroy. He waited for the armed vessels to proceed as far up the Nile river, and see whether it comes, as is said, from the great inland lake, and is connected with the Niger, or at least in its neighborhood.

MR. BRAHAM. It is reported that this stage songster is about to honor us, by leaving England to sing for us one year for the moderate sum of forty thousand dollars. The editors of the National Intelligencer, noticing this matter, have observed, "we shall be glad to hear what our friend Niles will say to this folly." All that it is needful to say is easily said—"friend Niles" pays nothing to England for his coats, and will not pay any thing to transient Englishmen for songs—though pleased to hear good music on rightful occasions and reasonable terms. Yet the managers of our theatres may make money by exposing this musical biped to the public—and persons will spend 10 or 20 dollars to hear him, who have defrauded their honest creditors out of scores of thousands, or suffer themselves to be *dunned* by those who supply them with milk for their coffee and tea. It is even yet the fashion rather to be extravagant than to be honest—though the state of society is evidently improving; more perhaps, of necessity than from inclination.

MEXICO. Iturbide is playing the emperor right handsomely. The establishment of his household is splendid—masters of horse, captains of the guard, aids de camp, almoners, confessors, chaplains, preachers, tutors, surveyors of the palace, masters of ceremonies, gentlemen of the bed chamber, gentlemen ushers, pages, &c. &c. are in abundance; the empress, also, has her officers, ladies of honor, &c. in equal style, and the prince of the empire has his governor, tutors, &c. The emperor has instituted an order of *knighthood*, which he calls the Imperial order of Guadalupe, himself being the grand master, and there are crosses and grand crosses—many priests are in this body. The emperor and empress were crowned on the 21st July, with great pomp and ceremony. The coins are to bear his bust on one side, on the reverse an eagle crowned, &c. We cannot believe that these things will last—the people of Mexico are not prepared to yield up their liberties so easily; and the example of the United States on one side, and of Colombia on the other, we trust, will make his imperial majesty feel a little uneasy in his seat—the throne of Montezuma.

HAWAII. Our trade with this important island is increasing—and after that which we have with Great Britain, France, Spain and their dependencies, it is, perhaps, more valuable to us than any other—taking off a large amount of the products of our fields and forests, and latterly receiving considerable quantities of our manufactures. In the estimation of *Edwards*, the geographer and historian of the West Indies, the plains alone are capable of producing more sugar and other valuable commodities than all the British West India islands put together. The population is rapidly increasing and knowledge is diffusing—and, if the government

shall remain stable and continue to be administered as it now is, a powerful and wealthy nation will spring up in a few years.

THE PIRATES OF CUBA, probably checked by our vigilant cruisers, do not shew themselves so active as heretofore; but recent accounts tell us that they have plundered two or three vessels. The British sloop of war Tyne was cruising off Cape Antonio, to protect the trade.

The privateers of Porto Rico are capturing and carrying in a number of vessels, which are condemned by the court—and it appears also, that the privateersmen have sometimes conducted themselves with much cruelty to those who have happened to fall into their hands. The U. S. ship John Adams proceeds first to Porto Rico, where certain explanations will be demanded of the authorities of the island, in respect to the pretended blockade of the Colombian coast.

SUGAR. The Aurora says, no sugar was raised in the East Indies, for exportation, till 1792. Since then, the quantity has rapidly increased, and bids fair to supercede the West India, as it is produced at much less expense. Vast quantities of sugar are expected to be furnished by the Colombian republic. If there should be an excess of this article, as may be expected, attention should be turned in a greater degree to coffee, cocoa, indigo, &c.

THE LAWS! A London paper of the 18th of June contains the article that follows. It develops a system of fraud which, though in some respects peculiar to that of England, may be also applied to the practice in the United States, without the least variation in its principle or operation.

In the investigations that have taken place before a committee in the house of commons, on the subject of insolvent debtors, Mr. Thomas Clark (at the time clerk of the court) stated, that in a debtor's book, he found a paper, "wherein it was pointed out to debtors how to harass creditors." He had heard, he said, that it was sold from one prisoner to another, in a printed form, for six pence each. That witness then delivered to the committee a book, from which the following extract was read; it is extracted from the parliamentary report:

"Law proceedings.

"When arrested and held to bail, and after being served with a declaration, you may plead a general issue, which brings you to trial the sooner of any plea that you can put in; but if you want to vex your plaintiff, put in a special plea; and, if in custody, get your attorney to plead in your name, which will cost you 1*l.* 1*s.* your plaintiff 3*l.* as expenses. If you do not mean to try the cause, you have no occasion to do so until your plaintiff gets judgment against you; he must, in the term after you put in a special plea, send what is termed the paper book, which you must return with 7*s.* 6*d.* otherwise you will not put him to half the expenses. When he proceeds, and has received a final judgment against you, get your attorney to search the office appointed for that purpose in the Temple, and when he finds that judgment is actually signed, he must give notice to the plaintiff's attorney to attend the master to tax his costs, at which time your attorney must have a writ of error ready, and give it to the plaintiff's attorney before the master, which puts him to a very great expense, as he will have the same charges to go over again. The writ of error will cost you 4*l.* 4*s.* If you want to be further troublesome to your plaintiff, make your writ of error

returnable in parliament, which costs you 8*l.* 8*s.* and your plaintiff 100*l.* Should he have the courage to follow you through all your proceedings, then file a bill in the exchequer, which will cost about 5 or 6*l.* and if he answers it, it will cost him 80*l.* more. After this you may file a bill in chancery; which will cost about 10*l.*; and if he does not answer this bill, you will get an injunction, and, at the same time, an attachment from the court against him, and may take his body for contempt of court in not answering your last bill. You may file your bill in the court of chancery, instead of the exchequer, only the latter costs you the least. If you are at any time served with a copy of a writ, take no further notice of it than by keeping it; when you are declared against do not fail to put in a special plea immediately, and most likely you will hear no more of the business, as your plaintiff will probably not like to incur any further expense, after having been at so much."

Defendant's costs.

Common plea	£0 3 6
Special do.	1 1 0
Paper book	0 7 6
Writ of error	4 4 0
Do. returnable in parliament	8 8 0
Filing bill in exchequer	6 6 0
Do. in chancery	10 0 0
	£30 10 0

Plaintiff's costs.

Answer to special plea	£30 0 0
Answer to writ of error	100 0 0
Answer to bill in exchequer	84 0 0
Do. do. in chancery	100 0 0
	£314 0 0

Thus a creditor may be put to an expense of three hundred and fourteen pounds, by a debtor, for the small cost of thirty pounds ten shillings, and all because the law allowed him to sue for his own; and if he and his attorney do not keep a sharp look out, the creditor may get committed for "contempt of court."

BALTIMORE MONUMENT.

On the 12th inst. if fair—if not, on the 13th, the anniversary of the battle of North Point or of the bombardment of Fort McHenry—the statue is to be placed on the top of this beautiful and classic structure, in the presence of the 3rd and 14th brigades, &c. and under discharges of artillery and appropriate music from the united bands of our volunteer companies. We shall probably give a description of the ceremonies—and now present the following account of the monument itself.

Explanation of the Baltimore Monument, erected by the city of Baltimore, to the memory of the brave citizens who fell in the battle of North Point, and the bombardment of Fort McHenry, in defending the city, on the 12th and 13th of September, 1814—from the design of Mr. Maximilian Godefroy. The statue, the two bass-relievs and four griffins, executed in Baltimore, by signor Antonio Cappellano, late first statuary and sculptor of the court of Spain.

1st. The principal part of this monument presents a *Fasces*, symbolical of the union, the rods of which are bound by a fillet, on which are inscribed, in letters of brass, the names of the brave killed in defence of the city; because, by their glorious death, they strengthened the bands of the union.

2d. The *Fasces* is ornamented with two bass relievs, the one on the south front representing the

battle of North Point and the death of the British general Ross, and the other on the north front, a battery of Fort McHenry, at the moment of the bombardment. On the two other fronts, east and west, are *Lacrymal Urns*, emblems of regret and tears. On the top are bound two wreaths, one of laurel, and one of cypress; the first expressive of *glory*, the second, *sepulchral and mourning*. On the square base, are the inscriptions in letters of brass. This part is supported by a square *Egyptian basement*; this style being especially consecrated to tombs. Each of the four angles of the cornice is decorated with a *Griffin* with an eagle's head, (as an emblem of the United States), because this hieroglyphic having been dedicated to the sun, and often employed by the ancients in the front of their *temples*, has become the emblem of *glory and veneration*. Each centre of the Egyptian cornice is adorned with a winged globe. The globe represents *eternity*, and the wings *time*, which flies. On each of the four fronts of the basement is a false door, in the antique style, closed with a single tablet of black marble, to give the idea of the *remains of the brave being deposited in the edifice*, and is what is called a *cenotaph*. There are steps to ascend these doors in the socle, which forms the base around the whole.

3d. The Egyptian basement, above mentioned, is entirely *rusticated*, as this style announces *strength*; and the layers of stone which compose it are eighteen in number, in memorial of the eighteen states which formed the union at the period of the event which this monument commemorates. The principal parts form also altogether thirty-nine feet, to shew that it was founded in the *thirty-ninth year of the independence of the United States*.

Lastly—The edifice, which is entirely of *marble*, on the above mentioned anniversary, will be surmounted by the colossal *statue*, representing the city of Baltimore: the head of the figure bearing a *mural crown*, emblematic of *cities*: in one hand she holds an *antique rudder*, the emblem of *navigation*, and in the other she raises a *crown of laurel*, as she looks towards the fort and field of battle. At her feet are, on one side, the *eagle of the United States*, and a *bomb*, in memory of the bombardment.

The only thing yet to be done to complete that beautiful monument, is the marble platform or basis, which is to be inclosed with an iron railing, ornamented at each corner with half cannons of bronze. It is to be sixteen feet three inches wide at the base of each front. The height of the monument, without the statue, is forty-two feet eight inches; and the statue being, with its dependencies, nine feet six inches, makes the monument *fifty two feet two inches above the platform*.

FOREIGN NEWS.

From London papers of the 24th July.

Great Britain. There is some one hardy enough to speak of an appropriation of the revenues of the church to a payment of the national debt!—How monstrous, that so many thousand *fat parsons* should be compelled to make an honest living!

From returns to parliament, it appears that the debts of *six thousand and ninety* petitioning and discharged debtors amounted to upwards of *five millions and a half*, while the amount of the property received by the assignees was *one thousand four hundred and ninety-nine pounds!!!* This was somewhat more than *four shillings* from each debtor's estate to clear upwards of five millions and a half of debts.

The king is to visit Scotland, and there intends to appear in the Highland dress.

The distresses in Ireland increase. So great is the want of food, that a bullock, which died of a mortification, and the flesh of which had become putrid, was actually dug up and devoured on the fourth day after it was buried in the ground several feet deep to prevent infection! Nothing can be conceived more horrible than this. Hundreds die daily—the hospitals are filled with the sick; but the prospect of the harvest is favorable, and subscriptions in England for the relief of the people, amount to nearly 200,000*l*.

In the British house of commons, a motion was brought forward by Mr. Lennard, having in view the recognition of the independence of the South American states. Lord Londonderry said, that out of respect to Spain, he would not side with the South Americans at present, further than by cultivating a friendly intercourse with the southern states, while they remained, *de facto*, a government; he should, therefore, oppose the motion. It was lost by a majority of 35.

On the 23d July, Mr. Canning presented a petition to parliament, from certain merchants, who had suffered losses by piracy, and praying assistance to obtain redress. The ministers stated, they experienced a difficulty, because the depredators had commissions of some kind or other, [this is a mistake as to the Antonio pirates], but that they had applied to the Spanish government, who had promised to give strict orders on the subject. Mr. Canning said the question was how long we should wait for redress and security. He did not think the time for action had arrived, but he thought it not far distant.

On the 16th of July, a petition was presented to the British parliament, from certain persons of Leeds, stating that they viewed with horror and detestation the murder of their christian brethren, the Greeks, by those inhuman and blood thirsty barbarians the Turks, and praying for the interference of the house. The petition was ordered to be printed.

The society of Friends in England have proposed to take the lead in obtaining a subscription for the relief of the suffering Greeks.

To the credit of the underwriters at Lloyd's, it is said that they utterly refused to insure a certain vessel lying in the Thames, loaded with arms and munitions of war for the use of the Turks.

1,100,000 ounces of silver have been lately shipped to Russia by one house in London.

The contest as to West and East India sugar continues in England. It is stated that the latter could be sold for from 2*d*. to 3*d*. per lb. The West India is at 6*d*.

It appears by the following article that the communication is now *direct* from London to Calais—The steam yacht Lord Melville, left her moorings at the Tower, at 7 o'clock on the morning of July 17, with 120 passengers and six carriages, for Calais—reached that port at 7 in the afternoon—disembarked her passengers, and took on board 40 or 50 others for London, and arrived again at the Tower on the following morning.

A case of *crim. con.* was lately tried in Dublin, wherein Mr. Owen Georghagan Nolan was plaintiff, and lord Glentworth defendant. In the course of the examination, letters from the husband were read in defence, congratulating his wife upon the birth of a child, not his own, anticipating another; and expressing the utmost anxiety to behold the fruits of her guilt! The damages were laid at 10,000*l*. in lieu of which the jury gave a verdict of 40*s*. and 6*d*. cost.

France evidently appears to be preparing to act against Spain. A late letter from Paris says—"Government has concluded a contract for 10,000 horses for the artillery, &c. All the different officers have been ordered to their posts, and the *conscrip*ts of 1821 are ordered to join the army."

So great is the number of English residents in Paris, that an English theatre is to be opened in that city. Economy, or rather *st*ile at a moderate expense, drains England of hundreds of thousands annually.

Spain. The population of the fifty-one provinces of Spain, as ascertained by a census taken in the last year, amounts to 11,243,026 souls.

We have a great deal of matter in relation to the state of this kingdom. A body of the king's guard, to the amount of 1500 men, revolted at Madrid on the 30th of June, and with arms in their hands marched to the Prado.—Here they were exhorted by Morillo to return to their duty, but they asked him to place himself at their head; on which he indignantly left them. They remained together until the 6th of July, when, persuasion having failed, force was resorted to, and some fighting took place—after which they capitulated, but still a party attempted to escape; these were pursued and many of them killed. A great part of this body appears to have suffered death, and the survivors were chiefly in close confinement. Morillo, Riego, Ballasteros and others high in authority, behaved exceedingly well on this trying occasion. It is said that Morillo was offered *five millions* of dollars, if he would put himself at the head of the guards; but he said that the oath of a Spaniard was better than that sum.

The factious were in great force in Catalonia—it is said 1000 of them were killed in one battle. The country at large, is no doubt much disturbed; but it is difficult to ascertain the extent of disaffection. The last accounts from Madrid represent the capital as being tranquil, and say also that the insurgents in the provinces were declining in force. Some appear to suspect that the king secretly countenances these revolutionary movements, and that it is the object of the factious to get possession of his person—so he may be considered as a sort of prisoner at Madrid, not actually restrained as yet, but closely watched by the Constitutionalists.

The public indignation is strongly excited against France, who is strengthening her armies on the Spanish frontier, and seemingly prepared for instant hostilities; and it is thought that the factious are encouraged by the French. Why France should quarrel with Spain, we cannot imagine, unless in enmity to her constitutional government.

In alluding to the events at Madrid, the Paris Constitutional says—"A meeting was held by the Foreign Ministers at that place, to sign a declaration for the information of their governments. The Austrian and another minister were for ascribing the blame of what had happened to the revolutionists, but Mr. Forsyth, the American minister, would agree to no such statement."

Madrid, July 8.—The following proclamation by the constitutional Junta of Madrid was issued last evening.

People of Madrid—Spanish blood has flowed in the streets of this city, shed in consequence of the conduct of traitors to their country—perjured men, who have violated the sacred oaths by which they swore a defend liberty. The rebel battalions of the *royal guards*, which had taken a position in the Prado during the night, secretly entered the capital and attacked the defenceless population, the gal-

lant national militia, and the no less gallant troops of the garrison. But the perjured rebels paid dear for their temerity. Overthrown in every direction, dispersed and straggling, those who have saved their lives endeavour to repair to the palace of the monarch. Many are concealed in houses. Those wretched men obtain, perhaps, a merciful asylum from the generosity of the persons they intended to assassinate. Public tranquility and public safety, however, require that all these measures, which the existing circumstances call for, should be promptly adopted. Your constitutional Ayuntamiento, therefore, orders every citizen to deliver up, without delay, any guardman whom he may have received or concealed in his house, under the penalty which the laws inflict on criminals guilty of high treason. Citizens, the unfortunate wounded, as well as all the other prisoners who have fallen into the hands of the brave defenders of our liberties, have been treated with that compassion and generosity which the contemplation of unhappy men, misled by black intrigue and vile seduction, dictates to truly liberal minds. In fine, though factious, they are Spaniards; they are our brethren, and the conquerors are *Liberales*. The cause of the country has triumphed—the nation, the constitution, and liberty for ever. By order of the Ayuntamiento.

Francisco Fernandez, Secretary.

Portugal. By the plan suggested for the election of the cortes, it appears that the population of this kingdom amounts to 3,016,300 souls. The amount is supposed to be decreasing.

Russia. Though nothing of a decisive character is yet known, it appears highly probable that Alexander has lowered the Greek cross to the Turkish crescent, through the instrumentality of the holy alliance.

It is stated from St. Petersburg that the imperial guards had returned to that city. In addition to the other proofs that no war is to take place with Turkey, a sort of manifesto, considered as official, from St. Petersburg, is published in the Frankfort journals. We extract from it the following passage:

"The state of the case is simply this:—

1. Russia is in a state of difference with Turkey, but which has arisen from the breach of treaties and the law of nations on the part of the Turks, and in which the Greek insurrection has no direct share.

2. Russia has not by any means shewn a tendency to offensive war, but it is able to repel every attack.

3. Russia has signified to the Turkish government, by the intervention of England and Austria, in what manner the ancient relations may be re-established."

Turkey. The details of the proceedings of the barbarians at Scio, seem to be more and more horrid, if possible. It is stated that upwards of 5000 *children* have been hung, drowned or otherwise destroyed by the Turks, putting to death 50 or 60 of them at a time, by various means, as if it were for amusement!—But yet it does not appear that the Greeks have become dispirited, and, though abandoned by the "magnanimous Alexander," it is probable that they will maintain their ground for a considerable time—but we are now hopeless of their success, unless the infernal alliance of kings against men is shaken to pieces. It is *officially* stated that 30,000 women and children have been exported from Scio as slaves!

Many troops are arriving at Smyrna from the interior of the Asiatic provinces, and a body of 4000 Egyptians are said to have reached Stancho. It

seems that the Persians are still at war with the Turks, and it is reported that they have lately gained a battle near Erzerum. The island of Scio, was the dower of a sister of the sultan, and she has taken up the butchery of the people so warmly, that it is thought the captain pacha will lose his life for his inhuman conduct, though her brother appears willing to excuse it.

A great number of Greek families have taken refuge in Mass'illes.

A Turkish frigate was, in July, fitted at Deptford, Eng. with arms, &c. which it was reported was to be manned with English officers and sailors!

Reports of the proceedings of the British in support of the Turks are reiterated. The Greeks had released several Austrian ships having supplies for the barbarians, on the condition that the cargoes should be landed in some christian country.

Three Turkish vessels and a corvette laden with spoils and captives from Scio, had been taken by a Greek squadron and carried into , or

There is a report that the Asiatic troops in Moldavia were in a state of rebellion, and had taken post on both banks of the Danube.

Brazil. Captain Davis, arrived at New York, informs that about the first of June, a rencontre took place at St. Salvador between the inhabitants and European troops; the Brazilians insisting on a government of their own choice. In the contest, 300 of the latter were killed, principally citizens.—Prince Don Pedro had sent 10,000 stand of arms, 100 officers, 3,000 men, a frigate and three corvettes, from Rio, which force sailed on the 13th of July.

Colombia. A vessel containing British manufactured goods, valued at 25,000*l.* sterling, had sailed from London, for the republic of Colombia.

The Dutch government is stated to have intimated to the Colombian republic, that the moment any European power acknowledges them, they will be the first to follow the example.

Canada. A Quebec paper says—The arrivals this season were 391—settlers 8,987. [Of whom at least one half have passed into the United States.]

The same paper observes—The Catholic population of Lower Canada in 1820, was 333,000, that of the city of Quebec 4,000, and that of Montreal 12,000; as the ratio of increase for several years past has been found to be one twentieth per annum, it may, therefore, at present be considered as amounting to near 360,000. The Protestant population will not exceed 40,000; so that the whole population of Lower Canada may be fairly stated at 400,000 souls.

British Quarterly Review.

The fifty third number of this abusive work has been received, and contains a review of Miss Wright's travels in this country. The rage, mortification, jealousy, malignity, and insolence of those pensioned reviewers, may be gathered from the following remarks. They now have the 'chalice returned to their own lips;' they now have a taste of that retort which has long been their due; and they have to encounter the additional mortification of learning that Miss Wright is an Englishwoman. These reviewers will have a second dose to swallow when they receive 'Sketches of Old England, by a New England-man.'—[*Nat. Advocate.*]

"The fourth and last article is an impudent attempt, we conceive, to foist into public notice, under a spurious title, namely, that of an *Englishwoman*, a most ridiculous and extravagant pa-

negyme on the government and people of the U. States; accompanied by the grossest and most detestable calumnies against this country that folly and malignity ever invented. An Englishwoman, with the proper spirit and feeling attached to that proud title, would blush to be thought the author of such a work. We will not, we cannot, possibly, believe that one so lost to shame exists among us; and are rather disposed, therefore, to attribute it to one of those wretched hirelings, who, under the assumed names of 'travellers,' 'residents in France, Italy,' &c. supply the radical press with the means of mischief. Our first conjecture, indeed, on opening the correspondence, was, that we were indebted for it to the consistent Mr. Walsh, who, finding that his former work had made no converts on this side the Atlantic, (with the exception of our northern brethren, to whom the subject endeared it), had attempted to revive it under a more taking title.—A regard to justice, however, compels us to add, that the perusal of a very few pages convinced us that the calumnies are too stupidly outrageous to come from him; and, to say a bold word, we know of no other American that could justify even a guess. Such, however, as the correspondence is, we must proceed with it. We can smile at the bloated vanity which proclaims a Solon and Lycurgus to be mere simpletons in legislation compared with a Jefferson; and Hannibal a bungler by the side of a general Jackson, whose most glorious achievement, we believe, (before his unparalleled campaign in the Floridas), was that of the murder of two unarmed Englishmen. Nay, we can hear, without much impatience, that the American government is the perfection of all human institutions; that justice is cheaply dealt out, with such an even hand, to high and low, that slavery even ceases to be a curse; that a spirit of universal benevolence pervades all classes of society; that poverty is unknown, oppression unfelt, and dishonesty unpractised: but when we are told that the people of the United States are far superior to the English in all intellectual endowments, in the decencies of life, and in their general conduct towards each other and to strangers: that they have not, like us, disgraced themselves with an established church, supported by penal laws, the work of statecraft and priestcraft united:—in short, that 'relief from all the evils which the old governments of Europe have inflicted upon the poor and industrious, is only to be found in America'—it becomes a duty to rise up and expose the fallacies, in order to check the ruinous consequences which they are but too well calculated to entail upon those credulous people who are liable to be deluded by them."

Treaty of Ghent.

In common justice to Mr. Floyd, as well as for a right understanding of the matter, we cheerfully give place to his letter to the editors of the *Richmond Enquirer*, explanatory of his views in calling for certain papers relative to the negotiations at Ghent, to which we have added a note thereon by Mr. Adams.

We thank Mr. Floyd for the act of justice which he has rendered to our motives—but his name was not mentioned by us, nor did we regard him as originating what we approved; his objects were apart from *electioneering*; but the progress of things, we must think, justified the general remarks that were made on the subject—see last vol. page 220. We have the pleasure to know Mr.

Floyd, and to esteem his character as equal to that of any other gentleman of the house of representatives. But he wants not *our* endorsement on his good name.

TO THE EDITORS OF THE ENQUIRER.

New Berne, Virginia, Aug. 14, 1822.

GENTLEMEN: I am induced to write to you, impelled by the numerous editorial remarks which have issued from different parts of the union, relating to the controversy between Messrs. Russell and Adams, involving me in a greater or less degree; but more particularly from the unwarrantable assertions of Mr. Adams throughout his rejoinder.

On entering into public life, I formed a plan from which I determined never to depart, unless for the strongest reasons; and, I assure you, it is with pain and regret, I now deviate from that plan. When any thing occurs in my public conduct, if it concerns myself alone, I have been content to rest my claims to justice upon the decision of those with whom I act, entirely regardless whether the newspapers, or reporters to newspapers, either misunderstand me, misrepresent me, or do not hear me.

In the commencement of this affair, I was not a little surprised to see the editorial remarks of the Weekly Register, in concluding the publication of the president's message with the letters of Mr. Russell and Mr. Adams, subjecting me to imputations of "electioneering views" and the "getting up" this business: My surprise was not lessened to find any thing in my course liable to such imputations, as I have always felt the most perfect confidence in the correctness of my course: though I have too high an opinion of the correctness and integrity of the Weekly Register to believe these remarks were intended for any other purpose than to give an honest opinion of the transaction as it appeared to him.

With these feelings, as soon as I recovered from a severe illness, under which I was laboring when the Register was received, I wrote a statement of the whole matter, to the editor of that paper, whose independent republican course has impressed me with the most favorable sentiments of his rectitude and ability;—but, thinking there would be an end to the affair very soon, and that opportunities might offer elsewhere, of doing myself justice, I yielded to the suggestion of a friend in withholding it: nor, do I think the necessity would now exist, had the whole of the debate been published which took place in the house of representatives, upon the adoption of Mr. Fuller's resolution, making the final call upon the president for the papers; which now appears to have been done at the instance of Mr. Adams himself.

There is certainly something very singular in this affair, that Mr. Adams, who has labored with so much zeal and perseverance to impress the nation with the belief that Mr. Russell is not correct in his statements, should, nevertheless, as zealously adhere to declarations equally injurious, and unfounded, as it regards myself; to the end, it is presumed, to justify his own conduct in procuring Mr. Fuller to make the call which I had desisted from, and which it seems was so desirable to him, as a mean of getting into the newspapers—this, too, after Mr. Russell had said he knew nothing of my intention of making the request I did make.

Mr. Adams, I had believed, was too well acquainted with *etiquette*, to leave his lawful game to send a shaft at me, however he might feel towards

me; but, since he has thought proper to do so, I must defend myself.

Whatever a secretary shall say of me, I think it but right to hold him responsible; nor will I consent that he shall ransack his department to find a clerk to prop his desires by a certificate.—So far as it regards myself, I must protest against the certificates of clerks, who depend, for their daily bread, upon the capricious smiles of a secretary of a department. I do not wish to be understood as making any remark upon Mr. Adams' certifying clerks. It is possible they may be respectable, I know nothing of them; nor can I, consistent with my own self-approbation, know any body but Mr. Adams, who, I presume, having reliance, and regardless of feelings or opinions, boldly and confidently reiterates, in his rejoinder, that Mr. Russell procured me to subserve his purposes, and make the call in the house, which I did make; which assertion I, unequivocally, pronounce to be utterly destitute of that verity, which ought always to characterize assertions made to the public.

The story is briefly this:

Last winter was a year, at my lodgings, in conversation with some of my friends, we were discussing the advantages of the occupation of the Oregon, or Columbia river, the value of the fur trade of our western rivers, the wealth to be derived from that trade in the Canton market, and the practicability of supplying the valley of the Mississippi with the manufactures of China by that route: when one gentleman observed, that the Mississippi had been discussed at Ghent, and, from the character of the gentlemen engaged in it, there was a strong probability that, if I had that correspondence, I would obtain something which might be useful to me. I had then presented to the house my report upon the occupation of that river, and would have to make an exposition of the bill when it came up for discussion. I instantly determined to make the call, as the proper mode of getting the papers; but I soon found my bill for its occupation could not, from the place it held in the orders of the day, be acted upon that session; I then determined to postpone the call until the next session. Accordingly, on the 17th of January last, I requested all the papers; and, on the 23d of February, the president answered that request, taking more than a month to prepare a copy.

Mr. Adams says, after commenting upon this, that "it will be observed, that nearly two months had intervened between the report of the Ghent treaty documents to the house and this second call, which Mr. Russell has admitted was made at his suggestion."

Mr. Adams knew very well the papers were sent to the house on the 23d of February, and not only ordered to lie on the table, as he states, but likewise *ordered to be printed*: I had not an opportunity of examining them until they were printed, which would, of course, require some days. But, in that time, I had received intelligence of the afflictions of my family, and Mr. Adams does know I obtained leave of absence for the remainder of the session, believing it not possible for me to return.

I left the city, I believe, about the 13th of March, but my family being restored to health, I returned to Washington, and arrived on Sunday the 14th of April. I went into the house on the 15th and on the 18th submitted the second resolution, calling specifically for Mr. Russell's letter; that resolution was adopted on the 19th.

The reason of this second call was, that, on examining the papers, I could not find any thing I wanted, though I did perceive, from Mr. Russell's letter, dated the 25th of December, from Ghent, that he intended to write fully, and naturally concluded he had done so, as he was a public man and in the discharge, as I thought, of his duty; and too, expected what I wanted was contained in that letter, to wit, touching the value of the Mississippi river.

I will take no part in the controversy between Mr. Russell and Mr. Adams, nor would I now have written, had not Mr. Adams gone out of his way, in endeavoring to place me in an attitude, which he must know nothing but his injustice could have exhibited me in.

I am almost as much surprised at the memory of the friend of the National Intelligencer, as at all the rest of this affair: he has certainly reported to that paper, as far as he went, "substantially" what happened in that debate; but the surprise is, that his memory fails at the precise point where my justification begins. I recollect what was said, and made these remarks, and nearly in these words—That I had made the previous calls, and had not renewed it, as the letter wanted had been specifically desired and the president already knew the wishes of the house, and might send it if he thought proper, as he was the judge of the propriety of doing so; I did not think another resolution to the same effect would be consulting the dignity of the house, and if the papers would produce misunderstanding and ill blood between men high in office and public esteem, which the president, who had the papers, seemed to insinuate, I would not be the means of producing that evil. What I wanted was the information, which I supposed the papers to contain, relative to the value of the Mississippi, which would, according to my view of the occupation of the Columbia river, show the value of the trade to flow in that channel, which was to connect those two great rivers; and that there could not be any thing difficult to comprehend in that: that, if the president would tell the house such consequences would flow from the communication, and, at the same time, state that copies of the papers would be furnished to any gentleman at the department of state, who might desire them, was a thing left for him to justify and to reconcile—I wished myself to be correct, and said this for my own justification, and to show my own consistency, and not the president's.

I will close these observations by observing to you, that I have seen in your paper a few days ago, the remarks contained in a Charleston journal.—I cannot divine how the writer knew I had made a motion to refer the president's communication to my committee, before it was read.—I conclude, though, it is much after the disinterestedness of the times, and that a diplomatic mission to some of the new republics may be the hoped reward of the honest exertions of the writer.—How was that fact ascertained? there is no record showing whether the motion was made before the papers were read or not—this minute fact is known to the writer so distant from Washington, who does not even know the part of the country I live in, as he states me to be a member from the west—it may be honest ignorance. I believe though I did make the motion to refer the papers as soon as it was ascertained what the papers related to. This is every day's practice, and I have now papers referred to my committee which the house never saw, which contained information I had sought through the medi-

um of the house, as I had done that, which was to be used when my bill was called up.—I will say more, that if I, by any proper act, could have prevented this affair, that I would have done so; nor will I, either in public or private, refrain from commenting upon the public conduct and opinions of any public man, who may be thought, or may think himself entitled to office. My opposition has always been political, and directed by the ideas I entertain of the power which gentlemen may think themselves entitled to exercise under the constitution of the United States. I look upon that constitution as containing expressed grants of power, and cannot approve any opposite opinion.

I, as a public man, am willing to be judged by this test, and when I, or others, cannot defend their opinion, in justice to the country they ought to retire. In my public capacity I called upon the executive branch of the government for papers expressly relating to a national transaction, and for public use; and if evil has resulted, or private letters been divulged—it cannot attach to me.

I am, Sirs, with great respect, your obedient servant,

JOHN FLOYD.

TO THE EDITORS OF THE NATIONAL INTELLIGENCER.

In the Richmond Enquirer of the 27th August, 1822, there is published a letter from Mr. Floyd to the editors of that paper, in which he says, that in my rejoinder to Mr. Russell, I boldly and confidently reiterate, that Mr. Russell procured HIM to subvert his purposes, and make the call in the house, which he did make; which assertion he unequivocally pronounces to be utterly destitute of that verity which ought always to characterize assertions made to the public.

Whoever has read the rejoinder thus referred to, must have seen that the name of Mr. Floyd is not so much as mentioned in it. I have invariably spoken in it of the *call of the house of representatives*, and have mentioned the mover of the resolution, only to say, that, when Mr. Russell left the city, on the fifth of May, I presumed he knew that the call for the letter would not be renewed by him. I have said that the *call of the house* of the 19th of April was made at Mr. Russell's instance or suggestion, and that it was procured by him. My vouchers for this assertion are the declarations of Mr. Russell himself to Mr. Brent and Mr. Bailey, as attested in their statements—from the latter of which it appears how the call for Mr. Russell's letter was procured by him, namely, that Mr. Floyd, before offering the resolution, asked him for a copy of the letter, which Mr. Russell declined giving, telling Mr. Floyd that if he wished a copy he must move a call for it. Mr. Floyd has not denied this to be fact. If he did deny it, the question would be upon the verity of Mr. Russell's assertion, and not of mine. With the verity which ought always to characterize assertions made to the public, I am as deeply impressed as I could be by the precept of Mr. Floyd, or by his example. JOHN QUINCY ADAMS.

Washington, 30th August, 1822.

Servile Conspiracy in S. Carolina.

Of the following letter from the governor of the state of South Carolina, we have become accidentally possessed of a copy, without authority to publish it. The subject, however, being of so pervading an interest, and the letter itself being a printed circular, we see no sufficient reason for withholding from our readers the information it contains:

[Nat. Int.

Copy of a letter from the governor of the state of South Carolina.

EXECUTIVE DEPARTMENT,
Charleston, August 10, 1822.

SIR: After a prolonged and almost uninterrupted session of six weeks, the first court organized for the trial of slaves charged with an attempt to raise an insurrection in this city, was dissolved on the 20th ult. Another court was subsequently convened, and, after a session of three days, closed the unpleasant investigation with which it was charged, and adjourned on the 8th instant, *sine die*.

During the interesting period occupied by the court first organized, the public mind was agitated by a variety of rumors, calculated to produce great excitement and alarm. These had their origin in the nature of the transaction, and the secrecy and seclusion observed in the incipient stages of the inquiry; as but few of the circumstances were known to the community, and the number apprehended and sentenced to the severest punishment, beyond any former example. Certainty gave place to exaggeration, and the general impression sustained the rumor of a very extensive conspiracy.

The effects resulting from these reports, if uncontrolled by an exhibition of facts, are too obvious to require comment. The reputation of the state must suffer abroad, and a rapid deterioration of property occur within; while suspicion and anxiety will continue long to mar the public tranquility. It becomes, therefore, a duty imperiously obligatory on me, to represent the occurrences as they have transpired, and thus evidence to you that the attempt has not only been greatly magnified, but as soon as discovered it ceased to be dangerous.

A servant, prompted by attachment to his master, communicated to him that he had been requested to give his assent and subscribe his name to a list of persons already engaged in the conspiracy. The intendant immediately received the information, and caused the arrest of three slaves of Mr. Paul—one of whom was subsequently identified by the servant making the communication. The city council was convened, and after a very close and attentive examination, a general impression was produced that but little credence could attach to the statement. A prudent caution was nevertheless exercised, and the fellow charged committed to solitary imprisonment. A few days after his confinement, he made many disclosures to a member of council, but so amplified the circumstances that the utmost credulity was requisite to the belief of his tale.

Some consternation was obviously produced amongst a few of the conspirators by the arrest of these slaves, and I cannot doubt led to a detail more plausible and deserving of attention. Another servant, whose name is also concealed, from prudential motives, stated, generally, that such a combination actually existed, and mentioned the names of several who were most conspicuous in their exertions, adding, with great confidence, that the explosion of their schemes would occur on the ensuing Sunday night. This confession was given on Thursday, the 13th June, and contained the recital of several occurrences which would precede the attempt and evidence the intention. This suggested the propriety, while it sanctioned the effort, to conceal from the community the intelligence thus received, for the intervening time—during which extensive and efficient preparations were made for the safety and protection of the city. Saturday night and Sunday morning passed without the predicted demonstrations; doubts were again excited, and counter orders issued for diminishing the guard. The facts

communicated were generally known to our fellow citizens on Sunday; producing a night of sleepless anxiety. But no one of the predicted (or any other) occurrences presented itself to disturb the general tranquility.

On the 18th June ten slaves were arrested, and on the 19th the court was organized for their trial. Investigation was retarded by the difficulty of procuring authentic evidence, and it was not until the 28th that the sentence of death was pronounced against six of the persons charged with the offence. Denmark Vesey, a free negro, was arrested on the 21st, and on the 22d put on his trial. Although he was unquestionably the instigator and chief of this plot, no positive proof of his guilt appeared until the 25th. This grew out of the confession of one of the convicts, and on the 27th his guilt was further established by a servant of Mr. Ferguson.

The progress made, and the expectations of immunity from punishment by confession, gradually developed the plot, and produced the arrest of several others, fortunately two who were principals, Monday Gell and Gullah Jack. These, with three others, John Horry, Charles Drayton and Harry Haig, were convicted, and sentenced to die on Friday, the 12th July last; but, at the suggestion of the court that important communications were expected from them, Monday Gell, Charles Drayton and Harry Haig were respited.

The arrest of Perault, a servant of Mr. Strohecker, which took place the day previous to the respite, and the general and very important discoveries made by him, enabled the committee of vigilance, not only to elicit the confirmation of his statement from the three convicts, but to apprehend a great number of persons engaged in the plot. Among others, William Garner, reputed to be one of the principals, the only one not then apprehended.

The number of persons at this period under arrest, evinced the necessity of such arrangements of the testimony as would enable the court to progress with more rapidity. This duty devolved on the committee of vigilance: and principally from the general information of Perault, and of the convicts Monday Gell and Charles Drayton, facility was given to the further proceedings of the court. In the short space of seven days thirty-two negroes were convicted; twenty-two of whom were executed on Friday, the 20th July: and within four days after, eleven others were convicted, four of whom have also been executed.

Having established the existence of a plot, and the places of rendezvous, all that was deemed requisite for conviction was to prove an association with the ringleaders, and an expression of their assent to the measure. On such, generally, the sentence of death has been executed. Others who, without actually combining, were proved to have known of the conspiracy, and to have given their sanction by any act, have been sentenced to die, and their punishment commuted to banishment from the United States; or sentenced, in the first instance to banishment from this state or from the United States. In this manner, the whole number, seventy-two, have been disposed of; thirty-five executed, and thirty-seven sentenced to banishment. With these we may reasonably conclude that we have reached the extremities of this conspiracy, and this opinion, if not conclusive, is entitled to great weight, when we advert to the extraordinary measures pursued to effect the object and the motives which influenced the accused.

No means which experience or ingenuity could devise were left unessayed, to eviscerate the plot. In the labors of investigation, the court was preceded by a committee formed by the city council, whose intelligence, activity, and zeal, were well adapted to the arduous duties of their appointment. Their assiduity, aided by the various sentiments which influenced the prisoners, produced a rapid development of the plot. Several of the conspirators had entered into solemn pledges to partake of a common destiny, and one, at least, was found, who, after his arrest, felt no repugnance to enforce the obligation, by surrendering the names of his associates. A spirit of retaliation and revenge produced a similar effect with others, who suspected that they were the victims of treachery; and this principle operated with full effect, as the hope or expectation of pardon predominated. To the last hour of the existence of several, who appeared to be conspicuous actors in this drama, they were pressingly importuned to make further confessions.

Among the conspirators, the most daring and active was Monday, the slave of Mr Gell. He could read and write with facility, and thus attained an extraordinary and dangerous influence over his fellows. Permitted by his owner to occupy a house in a central part of the city, hourly opportunities were afforded for the exercise of his skill on those, who were attracted to his shop by business or favor. It was there that his artful and insidious delusions were kept in perpetual exercise. Materials were abundantly furnished in the seditious pamphlets brought into this state, by equally culpable incendiaries; while the speeches of the oppositionists in congress to the admission of Missouri, gave a serious and imposing effect to his machinations. This man wrote to Boyer (by his own confession) requesting his aid, and addressed the envelope of his letter to a relative of the person who became the bearer of it, a negro from one of the northern states. He was the only person proved to have kept a list of those engaged; and the court considered his confession full and ample.—From such means and such sources of information, it cannot be doubted that all who were actually concerned, have been brought to justice. There is no exception within my knowledge; it has, however, been stated, that a plantation in St. John's was infected, but I do not know on what authority.

This plain detail of the principal incidents in this transaction, will satisfy you that the scheme has not been general nor alarmingly extensive. And it furnishes a cause for much satisfaction, that, although religion, superstition, fear, and almost every passion that sways the human mind, have been artfully used by the wicked instigators of this design, so few have been seduced from a course of propriety and obedience. Those who associated were unprovided with the means of attack or resistance. No weapons (if we except thirteen hoop poles) have been discovered; nor any testimony received but of six pikes, that such preparations were actually made. The witnesses generally agree in one fact, that the attempt was to have taken place on Sunday night the 16th June, differing a little as to the precise time; 12 o'clock appears to have been the hour.

From the various conflicting statements made during the trials, it is difficult to form a plausible conjecture of their ultimate plans of operation; no two agreeing on general definite principles. That the first essay would be made with clubs against

the state arsenal is inferrible, from their being unprovided with arms, and the concurrence of several witnesses. But whether the attack would be made simultaneously by various detachments, or whether the whole, embodied at a particular spot, would proceed to the accomplishment of their object, is very uncertain. Upon the whole, it is manifest that if any plan had been organized, it was never communicated by the principal conspirator to the leaders or the men, as they were wholly ignorant even of the places of rendezvous; although within two days of the time appointed, and but one man arrested prior to the day fixed on for the attempt.

When we contrast the numbers engaged with the magnitude of the enterprize, the imputation of egregious folly or madness is irresistible: and supposing the attempt to have been predicated on the probability, that partial success would augment their numbers, the utmost presumption would scarcely have hazarded the result. Servility long continued, debases the mind and abstracts it from that energy of character, which is fitted to great exploits. It cannot be supposed, therefore, without a violation of the immutable laws of nature, that a transition from slavery and degradation to authority and power, could instantly occur. Great and general excitement may produce extensive and alarming effects; but the various passions which operate with powerful effect on this class of persons, impart a confident assurance of detection and defeat to every similar design. While the event is remote, they may listen with credulity to the artful tale of the instigator, and concur in its plausibility; but the approach of danger will invariably produce treachery, the concomitant of dastardly dispositions. In the fidelity and attachment of a numerous class of these persons, we have other sources of security and early information; from both of which, it is reasonable to conclude, that, in proportion to the number engaged, will be the certainty of detection; and that an extensive conspiracy cannot be matured in this state.

I have entered with much reluctance on this detail, nor would it have been considered requisite, but to counteract the number of gross and idle reports, actively and extensively circulated, and producing a general anxiety and alarm. And, although their authors may have no evil design, and may really be under the delusion, it is easy to perceive what pernicious consequences may ensue from not applying the proper corrective. Every individual in the state is interested, whether in relation to his own property, or the reputation of the state, in giving no more importance to the transaction than it justly merits. The legislature has wisely provided the means of efficient protection. If the citizens will faithfully perform the duty enjoined on them by the patrol laws, I fear not that we shall continue in the enjoyment of as much tranquility and safety as any state in the union.

I have the honor to be, very respectfully, sir,
your obedient servant, THO. BENNETT.

☞ A pamphlet has also been published, under the authority of the city council of Charleston, giving a long account of the intended insurrection in that city, and detailing the facts that appeared against individuals found guilty of being engaged in it. But, perhaps, enough has been said to shew the nature and extent of the conspiracy. It appears that 131 blacks were arrested, of whom 35 were executed, 12 respited until the 25th of October, 21 sentenced to be transported out of the United States, 1 to be sent out of the state, 9 were acquit-

ted, the propriety of transportation being suggested and agreed to, and 52 were acquitted and discharged.

"The following is the sentence that was pronounced on *Gullah Jack*, who affected great supernatural power by *charming* men and things, and declaring that he was invulnerable by white men, &c.

The court, after deliberately considering all the circumstances of your case, are perfectly satisfied of your guilt. In the prosecution of your wicked designs, you were not satisfied with resorting to natural and ordinary means, but endeavored to enlist on your behalf, all the powers of darkness, and employed for that purpose the most disgusting mummery and superstition. You represented yourself as invulnerable; that you could neither be taken nor destroyed; that all who fought under your banners would be invincible. While such wretched expedients are calculated to *inspire* the confidence, or to alarm the fears of the ignorant and credulous, they excite no other emotion in the mind of the intelligent and enlightened, but contempt and disgust. Your boasted charms have not protected yourself, and of course could not protect others. "Your altars and your Gods have sunk together in the dust." The airy spectres, conjured by you, have been chased away by the special light of truth, and you stand exposed, the miserable and deluded victim of offended justice. Your days are literally numbered. You will shortly be consigned to the cold and silent grave, and all the powers of darkness cannot rescue you from your approaching fate! Let me then, conjure you to devote the remnant of your miserable existence, fleeing from the "wrath to come." This can only be done by a full disclosure of the truth. The court is willing to afford you all the aid in their power, and to permit any minister of the gospel, whom you may select, to have free access to you. To him you may unburthen your guilty conscience. Neglect not the opportunity, for there is "no device nor art beyond the tomb," to which you must shortly be consigned."

☞ We have some *general* remarks prepared on the subject, which shall be published in our next paper if convenient.

Slave Trade.

An address to the inhabitants of Europe on the iniquity of the slave trade; issued by the religious society of Friends, commonly called Quakers, in Great Britain and Ireland.

(Copied from a pamphlet lately published in England).

Many years have now elapsed since the attention of the religious society of Friends, commonly called Quakers, was first turned to the subject of the slave trade. Such was the conviction of its iniquity, that it was felt to be a duty to represent to all in the same religious profession, the sufferings to which the natives of Africa were subjected, by being forcibly torn from their native soil, and condemned to cruel bondage on a foreign shore.

The society proceeded further: under a sense of the enormity of the crime, a regulation was made upwards of sixty years ago, which has continued in force unto the present time, that those who persisted in "the unrighteous traffic in Negroes,"* after pains had been taken to convince them of their error, should no longer be considered as its members. And as such as are in religious connection with us, have been uniformly warned not to partake

of the gain of oppression, not to defile themselves with any profits arising from this species of injustice, we trust that we shall obtain full credit when we allege, that we have no commercial or political end whatever to answer, by thus advocating the cause of the oppressed. We plead on the simple but firm basis of christian principle.

In common with many virtuous and benevolent characters of our own nation, we felt it to be a christian duty, to aid in diffusing among our fellow countrymen information on the horrors of the trade; and in soliciting our government to pass a law, for the termination of a commerce, at once barbarous and iniquitous. And we participated in feelings of joy on beholding that, notwithstanding there were great and numerous obstacles in the outset, and in the progress, of this work of humanity, the sense of the great bulk of the inhabitants of these islands was so clearly seen and yielded to by our rulers, that this stain on our national character, was ultimately effaced, in the year 1807, by an act of the British legislature;—many of the members of which not only acknowledge the injustice of the trade, but nobly and successfully united their unwearyed efforts to hasten its suppression.

We have rejoiced to hear that the respective governments of those countries, whose subjects are still implicated in the traffic, have proceeded so far as they have hitherto done towards its abolition; but we have learned, with deep regret and sorrow, that it is still pursued to a great and truly lamentable extent, and that under circumstances of aggravated cruelty, by the subjects of those very powers. We hear that numerous vessels are still hovering along the shores of Africa, to procure cargoes of human beings, and transport them to distant lands, whence they are designed never to return. In fact we hear, and that from undoubted authority, that the trade which the congress at Vienna, in 1814, pronounced to be "the desolation of Africa, the degradation of Europe, and the afflicting scourge of humanity," has been carried on with increased eagerness in the course of last year.

It is under the influence of christian love and good will, that we are now engaged to express our interest on behalf of this injured people. In thus introducing ourselves to the notice of our continental neighbors, we feel that we need not offer any apology, considering them as our brethren, as the children of one universal parent, as fellow professors, of a belief in one and the same merciful Saviour. The same feelings which lead us to consider the natives of France, of Spain, of Holland, of Portugal, and of the other nations of Europe, as our brethren, induce us to extend this endearing appellation to the inhabitants of Africa. Our heavenly Father has made of one blood all nations of men that dwell upon the face of the earth; and we are all the objects of that great redemption, which comes by our Lord and Saviour Jesus Christ. And, although the kindreds of the earth are divided into distinct communities and nations, we are all bound one unto another by the ties of love, of brotherly kindness and compassion. But the nations of Europe are united by an additional bond. To them has been granted a blessing, which has not hitherto been enjoyed by the greater part of the natives of Africa: this blessing, this invaluable treasure, is the bible, in which is contained the record of the gospel of Christ.

Permit us then, as fellow professors of the christian name, to remind you of the complicated iniquity of the slave trade. Possessed of a superior force, which he has acquired by a greater knowledge of

*Yearly meeting, 1761.

the dreadful arts of naval and military warfare, the slave trader visits the coasts of unoffending Africa. He employs his agents to tear her inhabitants from their country, their families, and their friends; to burn their villages and ravage their fields; to spread terror and desolation through their peaceful dwellings. He foments wars between neighboring chieftains, in order to supply himself with their subjects, the victims of his avarice. Having thus either stolen or bought his fellow men, who are equally with himself entitled to their liberty, and of which he possesses no right whatever to deprive them, he hurries them to the vessel that may be waiting in some adjoining creek to receive the objects of his cruelty; or he chains them with iron fetters, or loads them with heavy yokes, and drives them like the beasts of the field to the shores. There new distresses await them; they are violently conveyed on board the ships stationed to receive them, stowed beside each other like bales of goods, and conveyed across the Atlantic to the place of their destination. The horrors of this passage cannot be adequately described even by those who have been witnesses of them. Faint, then, must be the idea we can form of the situation of upwards of three hundred human beings, in a comparatively small vessel, each limited to so narrow a space, that it often happens they cannot lie on their backs. Here they are subjected to miserable reflections—for the power of reflection in common with us they undoubtedly possess—on the past, the present and the future. Their shrieks, and cries, and groans, ought to be sufficient to excite pity in the hardest heart. Arbitrary and cruel power is often exercised to prevent those attempts at insurrection, to which their situation prompts them. And such is their state of desperation, that they are often ready to have recourse to suicide. The noxious and pestilential effluvia, that arises from their close confinement between decks, (which are often not more than three feet apart), or from the illness of their companions, produce loss of appetite, disease, and, in many instances, suffocation, and other distressing forms of death. And here let us bear in mind, that these cruelties are practised in violation of the laws of many of the nations of Europe, and that the slave dealers in their attempts to elude the operations of the law, have recourse to fresh acts of oppression to accomplish their wicked designs.

When released from their horrible prison, the surviving slaves are exposed to sale like cattle, and consigned to pass their days in the loss of liberty, far separated from their nearest earthly ties, and exposed to such acts of domineering violence, as a capricious master or his dependents may be disposed to exercise. Such is the cruelty practised upon thousands and tens of thousands of innocent sufferers, not by men who might attempt to palliate their conduct on the plea of retaliating injuries; but by those who, when they themselves are enjoying the blessings of liberty, when the comforts of social life are within their reach, leave their native land for the sake of sordid gain, and spread desolation, distress, and misery, amongst a people who had never injured them. May the nations of Europe consider in time the awful consequences that await such accumulated guilt!

The arguments of the christian, like the religion from which they are derived, are plain and simple, but they are in themselves invincible. The gospel of our Lord Jesus Christ is a system of peace, of love, of mercy, and of good will. The slave trade is a system of fraud and rapine, of violence and cruelty. The author of our salvation, when he

took upon him our nature, set us a perfect example of piety and virtue. He went about doing good to the bodies and souls of men. He taught his disciples that the evil dispositions and passions of men are not to be indulged, but that they are to be restrained by the power of his Spirit acting upon the soul. His parables teach us the happy effects of a religious life. His miraculous cures bespeak a tender compassion for the sufferings and afflictions of man. His discourses inculcate disinterested, genuine humanity. The man who traffics in the lives and liberties of his fellow beings, goes forth to gratify the malevolent passions of selfishness and avarice; he does violence to all the tender feelings of humanity, and spreads around him distress and terror. Our blessed Redeemer has taught us pure, impartial justice, in this plain but most important language, "all things whatsoever ye would that men should do to you, do ye even so to them."* The slave trader, in open violation of this injunction, acts towards others in a way which he would use every means in his power to resist, if it were practised upon him. He is indeed guilty of the greatest injustice; he deprives his fellow men of their liberty; that gift of heaven which is estimated as the greatest of civil blessings; and which is the natural, and, (whilst we are not disturbing the peace and tranquility of our neighbours), the unalienable right of the whole human race. And here we would observe that as the practice itself is clearly unjust, it cannot be warranted by any *commercial* considerations. That which is morally wrong cannot be politically right. And our beneficent Creator has wisely ordered that our duty and our interest should be intimately combined; and it is contrary to his gracious purpose, that gain and advantage should be sought by one part of his rational creation, from the distress and sufferings of another.

It has been alleged by some, that the natives of Africa are a race of beings inferior to ourselves. If the intellectual powers of the present inhabitants of Europe are more vigorous than theirs, they should ever consider with thankfulness the means by which they have risen to their state of mental energy. If, in the inscrutable orderings of his Divine Providence, that being who is all-powerful, and all-wise, has accelerated the diffusion of moral and religious knowledge through this quarter of the globe, are we not showing our ingratitude for the blessing bestowed upon *us*, by acts of cruelty and oppression to *them*? But is not their conduct under the sufferings to which they are subjected, a proof that they possess the common feelings of humanity? Our intercourse with them, and the authentic reports of travellers, clearly show that they are capable of kindness, sensibility and gratitude; that they can make improvements in the arts of agriculture and mechanics, and that they can adopt wise and just regulations for the good order of society.

It has also been maintained by some, that we are justified in forcing the inhabitants of Africa from their native soil, to make them acquainted with the blessings of *christianity*. To these we would reply—The Divine Founder of our religion used no endeavors to compel his hearers to accept his doctrine, or to obey his precepts.—Even the Jews, who had been the peculiar objects of Almighty protection, who had, through many successive generations, partaken of the special care of God, were not to be forced to accept the blessings of the gos-

*Matthew, vii. 12.

pel. To them its promises were offered, and when by that nation they were rejected, the Saviour of the world, even when enumerating their sins and transgressions, so far from employing any compulsory power, pronounced this pathetic lamentation. "O Jerusalem, Jerusalem, how often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not."† He is our Lord and Master: He is the Great Head of the christian church: his precepts and his examples are equally obligatory upon all his true disciples, in all ages and in all countries. If we follow them, in the meekness and lowliness which he taught, under the influence of his spirit, we shall be happy here, and happy hereafter: but if, bearing his name, and calling ourselves his disciples, even though we profess to be teaching his doctrine,—if we reject his example, and violate his precepts, in the presence of those who have not, like ourselves, been partakers of the outward knowledge of the gospel, awful and fearful will be our future condition.

The nations of Europe owe indeed a heavy debt to Africa. Instead of improving the opportunity of their commercial intercourse with that unoffending people, to exemplify the excellence of the christian religion by the kindness of their conduct, and the purity of their morals;—instead of endeavoring to convey to them a knowledge of those exalted views, of that increase of temporal happiness, which the spirit of christianity produces, many of them have gone forth to plunder and to ravage, to spread desolation and terror, to practice injustice and cruelty in their most odious forms; and thus have caused the name of Christ to be blasphemed among the Gentiles through them.

We appeal to all who have felt that love of their country which is inherent in our nature; who can appreciate the blessings and enjoyments of social life; who can form an estimate of the endearing relation of parents and children, of brothers and sisters, of husband and wife. We entreat all to reflect on the violation of these feelings which is now practised on the continent of Africa; to cultivate in their minds from day to day, and from year to year, sentiments of pity for those unhappy sufferers;—to embrace every opportunity of advocating their cause among their neighbours, with christian firmness and love; and to obtain and diffuse correct information on the nature and extent of the traffic, by every means in their power, and in such a way as becomes the subjects of a christian government. The performance of acts of kindness and love to others is premitted by our great Creator, in his unmerited mercy, to bring an immediate reward;—a reward of such intrinsic value, that it becomes a strong incentive to further deeds of beneficence and humanity.—Surely then an attempt to rescue our fellow-men from the most cruel and distressing sufferings, is a pursuit worthy of our unwearied exertions, not only as our duty, but from the satisfaction which it may itself afford.

We hope that none will be disheartened from doing their utmost in this good cause, from the thought that their efforts will be of little avail. No one knows, let his station be ever so obscure, let his sphere of action be ever so limited, what may be the result of his persevering attempts in the cause of justice and mercy. Great events have often followed what appeared to be but small and unimportant beginnings. And we earnestly entreat those, whose influence may be more extensive, to

lose no time, to neglect no opportunity of pleading a cause, in which the happiness and comfort of an incalculable number of our fellow men, are most deeply involved.

If the foregoing should be read by any who are employed in this cruel traffic, we would suggest to these a few reflections. We feel whilst thus attempting to describe the miseries which you are inflicting, that *you* also are our brethren—that although we view your actions with indignation and abhorrence, you are the objects of our tender pity. As we are believers in a future state of rewards and punishments, we would warn you in christian love of the awful termination of that course of wickedness which you are pursuing. Our Lord, our righteous Judge, declared, "Blessed are the merciful, for they shall obtain mercy;"—what then will become of the unmerciful and cruel? In the same most excellent discourse, he uttered this solemn sentence: "With what measure ye mete, it shall be measured to you again." What then will be the portion of those who have meted out cruelty, distress, and sorrow, to the innocent and unprotected?

The voice of reason and justice, the voice of humanity and religion, proclaims that the slave trade is an iniquity of the deepest die. May the friends of the abolition of this abominable traffic, wherever they are scattered, combine their efforts in this righteous cause—may their energy and alacrity be in proportion to the enormity of the evil—may their patience and perseverance be in proportion to the difficulties which they have to encounter; and may the laborers increase until the trade be eradicated from the face of the earth.

May it please the Almighty parent of the universe to hasten the period of its extirpation, and by this and other means to prepare for the coming of that day, when, "from the rising of the sun even to the going down of the same, his name shall be great among the Gentiles; and in every place incense shall be offered unto his name, and a pure offering."

Signed in, by order, and on behalf of the Yearly Meeting of the said society, held in London, the 25th of the fifth month, 1822, by

JOSIAH FÖRSTER,

Clerk to the meeting this year.

Provisional government of Greece.

The Greek nation has taken arms, and combats against tyranny. The rights of the people are uncontested. The unheard of sacrifices made by that people, have for object its independence, and as it is acquainted with its rights, it knows also its duty. In declaring its independence, it established a central government to defend the former, and to fulfil the second, it is incumbent on the government to attain its object and to render the sacred cause of the people triumphant, to deprive the enemies of Greece of all their means of oppression; in consequence, the provisional government of Greece, in virtue of the law of nations of all the states of Europe, declares now in a state of blockade all the coast occupied by the enemy, both in Epirus and the Peloponnesus, Eubœa, (Negropont) and Thessaly from Epidaurus to Salonica, including that place—declares also in a state of blockade all the isles and ports occupied by the enemy in the Egean sea, the Sporadian Isles and the isle of Crete.

† Matthew, xxiii. 37.

All vessels, under whatever flag they sail, which, after obtaining a knowledge of the decree by the commanders of the Greek squadrons, or by separate vessels, shall attempt to enter these ports, shall be seized, and treated according to the laws and usages established in such cases. The commanders of Greek vessels shall continue to cause to be published this resolution, till the government have acquired the certainty that it has reached wherever it is necessary. The present declaration shall be besides communicated to all the consuls of the friendly powers in the different states of Greece.

The president of the executive power,

A MAURO CORDATO.

The minister of foreign affairs,

TH. NEGRI.

Corinth, March 13, 1822.

SMYRNA, May 15.

Extract of a private letter from a young Greek.

"My dear brother—Prepare yourself on reading this letter to summon to your aid the strength of your character; the blow which has struck us is so terrible that all my reason is required not to succumb under it. This opening alarms you—estimate at once the extent of our misfortunes—we have to weep for our country, the beautiful Scio, in the power of our barbarous enemies—we have to deplore the loss of our numerous family.

"Of all our relations my youngest sister alone escaped; by a miracle, owing to the protection of a generous Frenchman, she has been restored to my embraces. How can I speak to you of our father? Alas! this venerable old man now implores the Supreme Being for his country, and for the unfortunate children who have survived him. The following are the details of his dreadful assassination:—You know that he and our two brothers, Theodore and Constantine, and your father-in-law, were amongst the hostages shut up in the castle on the 8th inst; they went out with the archbishop, and it appears that, notwithstanding the promises of the barbarians, they had been all the time confined in dungeons; they were placed in two lines, and were either hung or put to death with prolonged tortments.

"Our father and his companions witnessed with tranquility the preparations for their execution, and these martyrs to their fidelity did not lose their presence of mind for a single instant. Our sister Henrietta is a slave; and I have not yet succeeded in discovering to what country of Asia the infamous ravishers have carried her. Nor have I yet been able to obtain the least information respecting the fate of our dear mother and three other sisters; the destiny of your wife and her family has also escaped my search. In short, our misfortunes are so great that I can scarcely credit them.

"On the 11th inst. I quitted Scio—saved by a miracle from the dangers of the most sanguinary catastrophe, of which any one can form an idea. But I do not feel that joy which one might experience on being delivered from the dreadful perils to which I have been exposed. Hatred and indignation against our executioners are the only sentiments which can henceforth dwell in my heart—Thanks to the European costume, which I have adopted; the captain of a English vessel agreed to take me on board; but my dreadful situation interested neither Turks nor Englishmen. The captain of the vessel would not allow me to embark till I had reckoned out to him 300 piastres, and it was not till after he had examined them one by one, that I received from him permission to set

my foot on board the vessel; whatever was my danger in remaining longer on board the chaloupe. I have left the island in ashes. The Turks, after pillaging all the houses, set them on fire, and joining sword to fire to demolish them to the last stone, in the hope of finding concealed treasure.

"Throughout the opulent Scio only fifteen houses are standing, containing our mothers, our sisters, and our daughters, reduced to the most dreadful slavery. There the monsters profane every thing to gratify their rage and their passions; and often the virgins, whom they have sullied by their embraces, receive from themselves the death which they wish for. All the chateaus which rendered our island the most agreeable in the Mediterranean, our academy, the library, the superb edifices of Saint Anaigroso, Saint Victor, the apostles, 86 churches, and upwards of 40 villages, have been consumed by the flames.

"The ferocious incendiaries then scoured the mountains and the forests, and they are now at the 24th village of Mastic. These tigers, a thousand times more cruel than those of the forest, have vented their hatred upon the dead, which they bear to the living. They opened the tombs, and threw into the streets the bones of our fathers, and the corpses of their own victims were dragged by the feet through the brooks.

"Every day women of the first families in the island are exposed to sale in the public markets; articles of great value, such as the sacred vases of the Greek and catholic churches, and the habiliments of the priests, are, by these wretches, sold at a vile price. Through the intervention of the charge d'affaires of the French consulate, I have succeeded in purchasing thirty five women, whose names I send you, and who are now in safety at the consulate.

"Since my arrival here, the same scenes have been renewed every day: there are sales of diamonds, rich pelisses, jewellery, chalices, fine stuffs, in short, all kinds of valuable articles, which are in the streets, and are given away for nothing. How should it be otherwise, when all the inhabitants of Asia, from children of 15 to old men of 80, embarked every day for Scio, from whence they return laden with our spoils? We can only return our thanks to the Europeans who reside at Smyrna; they have done all they could to purchase our women; to purchase all, the treasures which the country of Homer possessed before its disasters, would scarcely suffice. Amongst the ravishers of them, there are some with souls so atrocious that they will not listen to any species of arrangement.

One of these monsters refused 10,000 piastres for the ransom of the wife of Gaba, and replied that he would not restore her for 200,000. I have contributed to the ransom of Theodora Halle, purchased for 5,000 piastres. M. Petrochochico, on learning the death of his brother, precipitated himself from a window; his sister Julia threw herself into a ditch; the other, made a slave, was brought here, where she was immediately purchased. Our good friend, Jean d'Andre, was killed in his house in the presence of his wife, whilst hastening to save his two sons, who shared the fate of their father, also, in the presence of their mother; the latter has been conveyed in slavery to Algiers.

My hand refuses to trace at greater length the atrocious scenes which I have witnessed, and others a thousand times more dreadful might be added to these I have cited. In one word, the sanguinary catastrophe of Scio has produced the death or misery of 40,000 individuals, for to that amount may

be estimated the number of our fellow countrymen and women put to death or reduced to slavery. Just God, when will the day of vengeance come, and what vengeance can ever inflict upon our odious assassins all the chastisement which they deserve!"

CHRONICLE.

Died, at Lexington, Ken. *Thomas Dougherty*, esq. for the last eight years clerk to the house of representatives of the United States.

—, at Baltimore, on the 23d Aug. Dr. *George Brown*, aged 68—for nearly 40 years a practitioner in this city, much beloved as a man, and eminently respected as a physician.

The *Macedonian's* crew are doing well. No new cases have recently appeared.

The *Hornet*—returned some days ago to Norfolk, in an apparent healthy condition, and after a few days was permitted to anchor off Town Point. On reaching the navy yard, her hold was broken up, and the part of the crew detailed for this duty were nearly all taken sick—17 ill, 14 of them with the malignant fever, some of whom have died; among them midshipmen Zantzing and Newton.

Ship houses. A second house is building at Philadelphia, under the roof of which a ship of the line is to be built. The house will be 275 feet long, 100 wide, and 75 high—furnished with windows and weather boarded.

A *steam brig*, as a packet, has been built to ply between New-York and Norfolk—she is called the "New-York," and has been tried at Norfolk, where she was constructed, and found to perform exceedingly well: her accommodations are said to be elegant—and, no doubt, she will do a profitable business; of which we in Baltimore have no right to complain, though the establishment will interfere with us as an interesting point of communication between the north and the south. We are really friendly to the doctrine of suffering trade to regulate itself, though not friendly to the importation of goods, the product of foreign labor, when foreigners will not receive our's on reciprocal terms. All that we ask is this: and, *personally* speaking, all that I would desire to make my fortune, would be—the privilege of sending printed books to England on paying the same duties that we pay on English printed books.

A *fire* broke out in certain wooden buildings at Brooklyn, that were occupied as naval stores, on the evening of the 21st ult. and property, to the value of 100,000 dollars, was consumed—which, in part, consisted of 12,000 barrels of naval stores, and 12 or 1400 bales of cotton. The whole city of New York was illuminated by the flame. The goods chiefly belonged to southern merchants.

Kentucky. The following named gentlemen have been elected to the next congress by the people of this state, representing the new districts from No. 1 to 12, in the order given—David Trimble, Thomas Metcalf, Henry Clay*, Robert P. Letcher*, John T. Johnson, David White, jun.*, Thomas P. Moore*, Richard A. Buckner*, Charles A. Wickliffe*, Frank Johnson, Philip Thompson* and Robert P. Henry*. [*New members marked with a *.

Wheat. The crop in the United States, generally, appears to have been short of its usual product—but one farmer in New York is said to have

raised 3000 bushels, each acre cultivated averaging forty bushels.

St. Fe, of New Mexico, is now often visited by our traders on the upper parts of the Arkansas river. It is stated that there has not been any rain at the place for three years, and no complaint about it, the people irrigating their fields by ditches and canals from the river del Norte, and from the streams which issue from the highlands and neighboring mountains.

Maryland penitentiary. An extensive system for forging or altering the denominations of bank notes, was recently discovered within the walls of this institution!—a deputy keeper was in the plot, and the agent who carried on the business. Thirteen plates, or rather parts of plates, were found; but it is supposed that a good many of their manufactures were put in circulation, purporting to be of the Frederick County bank.

Sales of land. A part of the "Pulteney estate," located in Steuben and Alleghany counties, N. Y. is offered for sale. It consists of 380,000 acres of land, unsettled, and 340,000 dollars of debt for lands sold. The tract is watered by the Conhocton and Canisteo rivers, which are branches of the Susquehannah. The price at which the land will be disposed of is not stated—but it is said that the sales hitherto made have averaged \$3.37 per acre. There is yet enough of vacant or partially cultivated land in New York to occupy the attention of a million of people.

Interest. The legislature of Mississippi have fixed the legal rate of interest at 8 per cent. per annum. Persons who loan money, however, may recover 10 per cent. if the borrower contracts to pay it.

Water spouts on lake Erie. From the Cleveland Herald of Aug. 22. Yesterday, about 10 o'clock in the morning, while a cloud hung over the lake, apparently at the distance of about ten miles, the people of this village were entertained at the sight of several water-spouts, which formed themselves, one after another, from the lake to the cloud.—They were four in number, of different sizes, and a considerable distance from each other. The cloud being high, and the spouts being black and perpendicular, resembling huge pillars of some mighty fabric, and occasionally changing in their positions, presented a prospect both grand and beautiful. They continued visible for some length of time, and their disappearance was followed by the falling of rain in torrents on the lake, and a slight shower extending itself to this village,

Wonderful. On the 27th July there was killed in the town of Ogden, a large snake which, upon examination, was found to contain *one hundred and six live snakes!* One of the snakes had two complete heads and necks, with one body, another had two heads with one neck and body; and a third had one and a half heads, with one neck and two bodies! what is more singular still, these deformed reptiles were as active and sprightly as the others. They are now in the possession of one of the canal engineers, where they may be seen by the curious.

[Rochester Telegraph.]

[It is quite possible, that if the preceding paragraph should meet the eye of some British traveler, he will put it down as a fact that *all* the snakes in America are double headed.]

NILES' WEEKLY REGISTER.

NEW SERIES, No. 2—Vol. XI.] BALTIMORE, SEPT. 14, 1822. [No. 2—Vol. XXIII. WHOLE No. 574

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

THE DROUGHT. It should be noted, as a most singular fact, that about the 20th ult, a wagon load of flour was carried from Baltimore to York county, Pennsylvania—from whence, it is very possible, it might have been a short time before received; as large quantities are annually sent from that county to this city. The mills have nearly all stopped.

PAPER CARPETS, as a new discovery, or "invention," are noticed in a Philadelphia paper. They appear to be exactly the same as those invented by Mr. Guy, of Baltimore, eleven years ago and patented—an account of which may be found in the 1st vol. of the REGISTER, page 328.

PHILADELPHIA. The public and private buildings now erecting in this city, are numerous and important. We have already mentioned the *new water works*, on which it is estimated that the sum of 800,000 dollars will be expended before they are complete, as they pretty soon will be. The *new theatre* is almost finished—it is 100 feet front, by 150 in depth, and is a splendid edifice. A *state prison*, 600 feet by 800, is going on—the foundations are composed of massy stones. The *First Presbyterian church* is nearly completed—a beautiful building, with a portico, columns and cupola: It has cost about \$65,000. *St. Stephen's church*, a fine specimen of Gothic architecture, adorned with spires, slender and delicate, but rising 125 feet in the air, is expected to be occupied in December ensuing. *St. Andrew's church*, just commenced, is to have a steeple 236 feet high. The *Presbyterian church*, in Arch street, which goes on rapidly, is a large building, and to have a steeple 180 feet high. The *Orphan Asylum*, (the lower stories of which are fire-proof), has a front of 100 feet—all the walls are up. One of the most extensive *breweries* in the United States, is also building in this city. The numerous private edifices that are erecting, are remarkable for capacity, neatness and convenience. This city owes much of her prosperity to the amount and success of her manufactures.

GEOLOGICAL. Stephen Van Rensselaer, esq. of Albany, has engaged professor A. Eaton, of Troy, to take a geological and agricultural survey of the great canal route from Albany to Buffalo, a distance of 350 miles. The survey is to include this breadth of ten miles. An accurate investigation of the rocks, soils, minerals and plants, is to be made on both sides of the canal. The method of culture adopted by the best practical farmers is to be sought out, and all the varieties of soil to be analyzed.

THE GREAT DAM across the Hudson river for the supply of the northern canal, is completed. It is thirty-three feet high, and nine hundred feet long, and is well called "a stupendous monument of the ingenuity of man."

THE GREAT CURSE OF OUR LAND. The Edinburgh "Scotsman," speaking of slavery in America, says the following just and liberal remarks:

"Our anti Jacobins have been very eloquent upon the existence of slavery amidst the boasted free-

dom of America. But before they indulged in invective, it would have been wise to inquire who were the authors of the evil. Other nations may have a right to taunt the Americans on the subject, but assuredly we have none. The slavery existing there is the *misfortune of America*—but it is the *crime of Britain*. We poured the foul infection into her veins; we fed and cherished the leprosy which now deforms that otherwise happy country."

Never was any thing more true than what is set forth in the preceding;—several of the colonies petitioned the British government to stop the trade long before the revolution broke out, and Virginia, especially, exerted herself to accomplish it, by appealing to the justice and humanity of the "mother country." But the trade was *profitable* to Englishmen, and a consideration of that solitary fact overwhelmed all others.

It is an easy thing to rail against slavery, and those who inhabit countries or districts in which there are none or very few blacks, may indulge themselves with schemes of emancipation—but, until some way is provided to *remove* them out of the country, or overcome the prejudice against color, every attempt of the kind must be ineffectual. Without one or the other of these, a general liberation would be almost as productive of injury to the public welfare as a general insurrection. My feelings and principles on this subject are well known—I never will hold a slave; but the desire of my heart is to locate myself somewhere in which a black man is a rarity. The *worst* persons among us in Baltimore, are the free blacks—a lazy, idle and perfidious body—standing in the way of the white laboring classes, male and female, and depreciating such laborers by their ignorance, impudence and power of numbers. This opinion has been formed after much observation and considerable experience—and the fact is, to speak generally, if I personally knew nothing more of a black man than that he was a freeman or a slave, I would prefer the latter, if to be entrusted with a commission that involved his fidelity, regard for truth, or moral honesty. There are good *reasons* why the blacks should be what they are—they are in the state of those "to whom hope never comes" as to temporal things: their cast has determined their lot of degradation and estrangement from the mass of society—all they can expect is, that, after dragging out a weary life, they may enjoy the life to come, for God is "no respecter of persons." This, to be sure, ought to be the most powerful inducement with us all—but we know that it is but little attended to by the people at large; and that which leads white persons to acquire knowledge, merit distinction, and gain wealth, has but a small influence over the poor negro, because he cannot enjoy such things, if obtained. I know several persons of color who are more worthy of confidence than whites of their class generally are, and who, if helped forward, as they would be unless for the color of their skins, would rise to eminence and bring up most respectable families. But they cannot advance,—the negro is always a negro—in a class of his own; not for crimes by himself committed, but by the repulsive feelings of the whites. The most enthusiastic among us would have refused a matri-

most alliance even with *Paul Cuffee* a well informed man of property, possessed of a soul of benevolence and charity, and abundant in good works; who *forced* respect from all that personally knew him, for his many virtues, but could not escape from his cast, even in that part of our country where prejudice against color is supposed to have the least powerful operation. Thousands of Europe and who arrive on our shores, and tens of thousands of white persons born and brought up among us, have less intelligence, less honor, less of every estimable quality of the head or heart, than many of the blacks—but there is no impediment to their progress in society, and they, or their children, may arrive at eminence, through honest industry and steady perseverance in well doing, form alliances with the most reputable families, and lose the character and condition of their ancestors, or shake off a bad one of their own, by good behavior; while the black must retain his station, and continue a degraded being. And hence, perhaps, it is that, hopeless of being better off in the future, they are careless of the present—and the result commonly is, that the best treated among them, whether slaves or freemen, are as worthless as any. Cases of this sort are daily presented to us, and the fact appears to have been established at Charleston, that the leaders of the late contemplated insurrection were chiefly of those who were most indulged by their masters. Unpleasant as the fact may appear, there seems to be *reason* in it—we must admit that the slaves have a *natural right* to obtain their liberty, if they can; and hence those who best know what indulgence is, are the most desirous of being masters of their own conduct. The just man cannot blame the slave for seeking his freedom, though self-preservation may interpose to check his proceedings to obtain it. If, when captain Bainbridge and the crew of the Philadelphia frigate, were held in slavery at Tripoli, they had acquired their liberty by a confiscation of that city and the slaughter of every one who opposed them, even to the amount of tens of thousands of persons, we should have hailed them as *heroes* "*covered with glory*"—and, surely, the dey had a better claim on them as slaves than we can pretend to in imported negroes: they had crossed the ocean to attack him. It is the *right* of the blacks to seek their freedom—and the *necessity* of the whites to prevent them from obtaining it, unless under circumstances of which the *latter, in self-defence, must be the judges*. It is more our *misfortune* than our *crime*, that they are amongst us—and a dreadful misfortune it is, whose *effect* will be felt at some future day as surely as that we shall return to "dust and ashes." It is inevitable as fate, without some yet unthought of plan to relieve us of this sort of our population. It is the fault of individuals that, by the domestic slave trade, they are hastening events. In some districts of our country the elements of desolation are continually accumulating. Gangs of miserable wretches, the *worst of the bad*, are daily sent *south*, from Maryland and Virginia, chained together two by two, and all fastened to a chain that extends from the front to the rear—a spectacle that sickens the heart, and frequently causes travellers who are so unlucky as to meet them, to vomit.* But what is to be done—how can these things be prevented? The people of the states named regard slaves as property—the pro-

perty becomes bad or unprofitable—slaves run away, steal from or abuse their owners, and then the latter think it justifiable to transfer the property to save themselves from loss. The public sentiment is decidedly against this traffic; but private interest, and, perhaps, even in many cases, local benefit favors it. Few are disposed to give up a slave that will fetch them 4 or 500 dollars, merely because he behaves badly—as I myself would do if I was one; for nothing but force should keep me in subjection: kindness would not do it, if escape was practicable. There are two sides to the case, and each must be viewed to make out its merits. Either presents only a gloomy prospect, and all that remains for us is, to make the best that we can of this curse of our country. Yet we must say, that the people of the south are acting most imprudently, in receiving the outcasts of other states, and adding *matériel* to *matériel* for calamity. We refrain from further remarks on this distressing subject. Some will learn wisdom only in the school of adversity—but they should recollect that, by introducing those persons, they expel the free laboring whites, and thus act against their own safety in a duplicate manner.

It is probable that the slaves in the southern states, generally, are as well fed, clothed, &c. as the free blacks—and, it may be, that, except on account of their color, their condition is preferable to that of the white slaves of Russia, Poland, &c. and surely better than that of the Greeks, subjected to the fury of the barbarian Turks; but genius, industry, fidelity—an honorable mind and a grateful heart, avails little to the negro, except to ameliorate his own *personal* condition; and on this account it is that *white* slaves have the happiest lot: with being made free, they become full members of the society in which they live.

These remarks were chiefly induced by reflecting on the late conspiracy at Charleston, and certain shocking enormities committed near Norfolk and in North Carolina on the persons of white women, for which the perpetrators were put to death, the relation of which is too disgusting for our pages. Thirty five have been hung and others remain for execution at Charleston, and many were sentenced to transportation, &c. yet it appears that the trials are not over. The plot seems to have been well devised, its operation was extensive, and its intent terrific. The conspirators were associated in a sort of a society, and held frequent meetings. It was agreed that each slave should first kill his own master and the males about the house, then repair to a certain rendezvous, rush upon the guard, fire the city in various places, seize upon certain ships and laden them with plunder, and then proceed to Hayti, having secured a sufficiency of seamen to conduct them thither. When the plan was nearly ripe, the conspiracy was made known, and a large number of the supposed principals were arrested—twenty-two of whom were executed in one day! It is thought that some severe laws will be passed for the preservation of the whites, and to guard against such attempts in future. The system of slavery involves in itself a state of dreadful severity, for it is sustained only by force—and about 60 years ago, thirteen blacks were burnt alive in the then colony of New York for insurrectionary movements. Sanguinary punishment always has been and ever will be the attendant of slavery every where. We neither approve of the one nor the other—but all that we can do is, to disapprove of them.

*A case of this kind really occurred to one of my neighbors a few days ago, though he himself holds and has bought and sold slaves.

THE SWORD OF THE CHURCH! The rosy-faced vicar of Leigh, in Lancashire, England, lately appointed a *journeyman* to do his business at Astley, whom the people did not see proper to accept of, thinking that they had a special right to say who should take care of their souls! It being understood that the parishioners would resist the entry of the journeyman priest into the church, the bishop of Chester applied for a writ which is called a writ *de vi laica removenda*, directed to the sheriff, and commanding him to attach all lay or armed force that might oppose the induction of the priest. The deputy sheriff, accompanied by 20 or 30 persons, attempted to get possession of the church—the people resisted his entrance; he then proceeded to Manchester and obtained the aid of a parcel of *dragoons*, and, with military force, entered the house supposed to be dedicated to the *Prince of peace*.—and then the priest, supported by the swords of the soldiers, went through what is called “the service.” What a blessed state of things!

THE NAVY. We have seen, (says the Washington Gazette), a Naval Register, corrected from one kept in the navy department, up to 22nd August, which furnishes the following deaths and resignations, from the 1st of January to the 19th of August, 1822, which we publish in compliance with our promise.

DEATHS.

- Captain*—John Cassin.
- Lieutenants*.—George Pearce, Nathaniel D. Nicholson, Thos. A. Tippet, George W. Isaacs, Jas. A. Perry.
- Surgeons*—Peter St. Medard and John Cadle.
- Surgeon's mates*.—Samuel M. Kissam, Edward Tilley.
- Purser*.—Henry Dennison.
- Midshipmen*.—Francis Armstrong, Thos O. Bruff, James S. Coxe, John Cremer, Robert B. Coffin, Richard Dominick, Christopher T. Emmet, Abraham Hosack, Robert Marshall, Alexander M. Murray, Henry H. Myers, Edward Preble, Wilson C. Purviance, Richard S. Platt, Herman Rutgers, Isaac H. Rand, Nathaniel B. Richardson, Oliver W. Wood, Thos. B. Worthington.
- Sailing masters*.—Richard J. Coxe, Samuel B. Chamberlain, Thomas Nichols, George Ulrick.
- Boatswain*.—Abraham Walton.
- Sail maker*.—George Parcells.
- Marine corps. Lieutenants*.—Henry E. Dix, James M. Clements, Charles Betts.

RESIGNATIONS.

- Surgeon's mates*.—John A. Belches, Leuco Mitchell.
- Midshipmen*.—Jacob S. Allison, Oscar Davis, Jacob E. Gillemeyer, John Heth, Alexander Hosack, Richard Kennon, Charles W. Minchin, Solomon Rutter, T. M. Randolph, Nehemiah Tilton.

GEORGIA. This state has long been subject to strong political agitations—one party supports and the other opposes governor Clark. A late incident has given new life to their feuds.

If the office of secretary of state becomes vacant by death, resignation or otherwise, the governor for the time being, has power to fill up such vacancy. It appears that col Hammond, the secretary, was absent about 30 days—which the governor regarded as an abandonment of the office, and he appointed a new secretary, Col. H's clerk refused to give up the keys and papers confided to him—force was resorted to, and the possession obtained. Shortly after this, col. Hammond returned and de-

manded the re possession of his office, which was refused; and so the matter stands at present.

DOGS. Five hundred and fifty-two dogs were killed in Philadelphia in May, June, July and August last, in pursuance of the city ordinances, and to prevent the dreadful affliction of hydrophobia.

THE SOUTH SEA. Seventy-four American whalers were lately in this sea, at one time pursuing the mighty monster of the deep.

“WHO SHALL DECIDE?” “It is remarkable, in the progress of human opinions, that at the very moment that a British house of commons was rewarding Dr. Smith with 5000*l.* for the vapour of nitrous acid as a destroyer of contagion, an American legislator, Dr. Mitchell, of New York, was exhibiting to his fellow citizens, this individual substance, as being the very matter of contagion itself.

[London Magazine.

PLUNDER. On the capture of Havana, (says a London paper), the value of the conquest was estimated at three millions. The prize money distributed to the army amounted to about 736,000*l.* The earl of Albemarle, commander in chief, had of this nearly 500,000*l.* The second in command, 24, 539*l.* The major generals each 6,816*l.* The brigadier generals 1,947*l.* The field officers 563*l.* The captains 124*l.* The subalterns 116*l.* The sergeants 8*l.* 15*s.* The corporal 6*l.* 16*s.* And the privates, 4*l.* 11*s.* 8*d.* each man.

PROGRESS OF STEAM BOATS. From the Monthly Magazine for July—It is little more than ten years since the editor of this Magazine received a letter from his friend Fulton, in New York, to apprise him of the success of his first steam packet between that city and Albany. The substance of that letter was inserted in the Monthly Magazine for March, 1811; but, before it was printed, the editor read it to the late earl Stanhope, whose experiments on mechanical navigation had excited much attention. That nobleman, however, like the Douay professors in the case of the telescope, set about to demonstrate *the impossibility* of the thing, and convinced himself, if not his auditor, that Fulton had misrepresented the fact. The letter however appeared, and the attention of our speculative mechanics being drawn to the subject, the American steam boat was not only soon imitated in the rivers of Britain, but essentially improved by their skill and science. We have now, therefore, more than one hundred steam vessels plying in various parts of the empire, not merely against the current of our rivers, so as to render parallel canals as ridiculous as the aqueducts of the ancients, but performing their voyages, in the face of tides and winds, in the adjacent seas. Thus London and Edinburgh, London and Calais, Liverpool and Dublin, Holyhead and Dublin, Bristol and Liverpool, Brighton and Dieppe, are now connected by steam vessels, which perform their voyages in measured time; but within the past month an *iron* vessel, of 280 tons burthen, has performed its first voyage from London to Paris direct. It reached Rouen in fifty five hours, and proceeded from Rouen to Paris in a day and night, notwithstanding an accident in its tackle. We regard this as an event of great social importance to mankind, and record it with singular pleasure. It is the triumph of isolated genius over the inveterate prejudices of arrogant societies, all of whom have virulently opposed themselves to the improvements

of our age; and in no case have done more to accelerate them, than the rudest persons in the community. Thus, notwithstanding the royal associations of men of science, France alone has succeeded in establishing but two or three steam vessels. In Austria Jerome Bonaparte, almost unaided, has munificently expended 100,000 pounds, in vainly endeavoring to complete one to navigate the Danube. Only one has been established on the Adriatic; and, if one has been started on the Baltic, it is the speculation of a Scotchman. The lakes and rivers of North America are, nevertheless, filled with them, and we may soon expect to hear of their connecting the northern with the southern continent, and all parts of the latter by means of the vast rivers which penetrate the interior. The public are now awaiting with anxiety the results of Mr. Griffith's patent for steam land carriages, of the progress and experiments on which we shall duly apprise our readers.

☞ We are curious to know the amount of steam boats in the United States, and suppose they amount to about *two hundred*, or more; of which nearly one half are on the Mississippi and its tributary streams.

INDIAN OPINIONS. From the Aurora. Extract of a letter written by Mr. Sibley to Dr. Morse. "I have noticed Indians observing, with much apparent interest, the effects of our agricultural skill, our fine gardens, abundant crops, and numerous comforts and conveniences.

"A very sensible Osage, the Big Soldier, who had twice been at Washington, once said to me, when I was urging the subject of civilization upon him: 'I see and admire your manner of living, your good warm houses, your extensive fields of corn, your gardens, your cows, oxen, work horses, wagons, and a thousand machines that I know not the use of. I see that you are able to clothe yourselves even from weeds and grass. In short, you can do almost what you please. You whites possess the power of subduing almost every animal to your use.'" But, after this acknowledgment, on his part, of our superior skill in the various arts, and this candid expression of his admiration, he continues thus:

"You are surrounded by slaves. Every thing about you is in chains, and you are slaves yourselves; I fear if I should change my pursuits for yours I should become a slave. Talk to my sons; perhaps they may be persuaded to adopt your fashions, at least to recommend them to their sons; but for myself, I was born free! and wish to die free!! I am perfectly content with my condition. The forests and rivers supply all the wants of nature in plenty; and there is no lack of white people to purchase the produce of our labor."

THE ANCIENT WORLD. As the workmen were engaged in excavating the earth for the foundation of a culvert, over Sandy Creek, N. Y. about 20 miles from Rochester, on the route of the great canal, they struck upon a vein of salt water of very uncommon strength—about three times as strong as any other water hitherto discovered; and it is said that the spring may be wrought to advantage. Mr. Hamlin, the owner of the land, in a letter on the subject, says—"It may be proper to add, that the spring is attended by most of the usual associations—as secondary rocks; clay, in its usual state, and indurated; sandstone, *elephants' teeth*, &c."

And then adds—"A day or two since, the same workmen, pursuing their excavation in the bed of the creek, found, at the dept of 12 or 14 inches from the surface, a *tooth* of uncommon size, weighing 2lbs.

and 2oz. It must have measured, when entire, at least 8 inches in length, and it is 13 inches in circumference. The tooth appears be one of the molares or grinders, and the end or surface is deeply indented, forming three prominent, pointed, and parallel ridges across it. The extremity of the root has either decayed and crumbled off, or has been broken off with some violence; what remains of the tooth (say 6 inches in length) is entirely sound, and so hard, that a *file* will scarcely make an impression upon it. It has become a jet black, except some portions of the surface, which have received a peculiar polish, apparently from the action of the *opposing tooth*, when in use by the animal. These portions have retained their native white and the polish is of such freshness and brilliancy, as if the tooth had been in its natural and accustomed use but yesterday; a strong proof how indestructible are the materials of its composition. Several gentlemen of information, and some respectable for science, have examined the tooth, and expressed an opinion that it must have belonged once to a mammoth. It may have belonged to an elephant (although considered exotic) that might have strayed hither by the way of Kamschatka, before the Asiatic and American continents were separated; and, allured by the quiet seclusion of this deep and solitary dell, and above all, by the salt licks which abound in it, lingering about it, till, overtaken by old age, or the swifter messenger, lurking in an uncongenial climate, he laid his bones here, which may now be reposing undisturbed in the bed of the creek above.

"The tooth in question must doubtless have belonged to some animal altogether larger than any now known to our forests; yet, to what animal or by what means, it was deposited in the bed of Sandy Creek, is a question to be solved by the ingenious philosopher and naturalist."

SALMON RIVER FALLS. A few weeks ago I visited this spot, situated in Orwell, Oswego county, on the Great Salmon river, about 10 miles above what is called the Lower Bridge at Pulaski Village. Surrounded by a lofty forest of beech and maple, as you approach it, from the public road, the ear is agreeably exercised by the sound of its tumbling waters, until proceeding on almost to the verge of the chasm, a sudden burst affords a full view of its grandeur and sublimity. The fall, a perpendicular rock, of 107 feet, composed of slate stone and granite. The bank of the river ascends from above and below the falls, about 90 feet higher than the summit of the water: and from the foot of the falls to the summit of the adjoining bank, the height is, at the least calculation, 200 feet, composed of a similar formation. At the foot of the falls the prospect is awfully pleasing. In looking up the bank of 200 feet, huge ledges of rock, apparently hanging by a single stratum, threaten horribly the below; whilst the mist and spray refract the rays of the sun in all their prismatic variety. The water below the falls for some distance is kept in constant commotion from the first impulse; here is trout in abundance, and it is the head of passage for salmon which ascend this river.

At the summit of the falls the scenery is impressively romantic. When the river is at its height, a sheet of 250 feet in width glides unhurried and smoothly on for some distance above, until arriving at the precipice, it plunges off, with "roar tremendous." This place seems like a sudden breaking off of nature: all is order and symmetry above the falls, but at and below them a certain sublime want of har-

mony affords a spectacle of venerable grandeur and picturesque scenery, which just such a combination can only exhibit.

The place has been visited by several scientific gentlemen, who pronounce it next to the falls of Niagara; for one of those curiosities in nature which abound in materials for the painter, naturalist, and mineralogist; and to less inquisitive visitants, it cannot but afford amusement to the senses, and a convincing proof to the heart of the infinite resources of the divine architect. *Anon.*

THE NEWBURG LETTERS. *From the Salem Gazette.*

Judge Johnson, in his life of general Greene, remarks, that "popular opinion has attributed them to an individual, (general Armstrong) who has been satisfied to compound for the doubt cast upon his morals, by enjoying the eclat of giving birth to such brilliant productions."

The judge controverts this opinion, and says, "we think ourselves in possession of a clue to trace out the leader of the boldest and most portentuous intrigue that ever threatened the liberties of this country. If there ever was in the United States a man whose bold and decisive character, whose popular eloquence, nerve of style, and vigor of conception, qualified him more than any other for the author of these letters, and the leader of that undertaking, it was the author of a private letter to gen. Greene." which is dated Feb. 11, 1783, and inserted.

The judge, in a note, says, Gouverneur Morris was the writer; but remarks, that gen. G. "was fully apprised of the writer's intimate connection with the public creditors, to a greater amount probably than any other man in the union," and that

general Greene "was not deceived by his specious affectation of disinterestedness and public spirit."

The famous Newburg letters appeared March 10, 1783.

FOREIGN NEWS.

From London papers of the 31st July.

Great Britain and Ireland. No matter of importance as happening in these, has been received since our last. The distresses of the latter are yet on the increase. In one district, (Mayo), containing 500,000 inhabitants, there were only 40,000 who were not dependent on weekly charity.

It is thought that 150,000 English and Irish people of property reside on the continent. At Paris 20,000, with the duke of Hamilton and earls Stair and Fife, the persons named spending about 100,000*l.* a year. At Geneva, a member of parliament, and many titled persons. At Rome, the duke of Leeds and marchioness of Bute, with 1500 families. Near Bordeaux, lord Montford and 2,000 others. At Tours 4,000. At Boulogne there are 6,000 English, "4,000 of whom are entitled to some compassion, being half pay officers, who cannot live without wine." At Brussels, on the banks of the Arno and through Italy, Switzerland and France, they are every where to be found. It is added to the account, that prince *Leopold* very naturally expends his 50,000 pounds a year among his German cousins.

It has been pompously stated that the London "Times," when published on two sheets, contained 830 advertisements. The New-York Gazette, published on one sheet, not unfrequently contains as many.

France. Violent debates still agitate the chamber of deputies. The conduct of the ministry towards Spain and the Greeks has been severely reprehended. A motion was made to reduce the expenses on account of the *secret police* of Paris in the sum of two millions of francs, by which we may judge of the extent of the spy-system.

Spain. The Paris editors have hatched a complete revolution in Spain, and the release of the king from the hands of the "jacobins," saying that Morillo had placed himself at the head of the party in favor of *absolute* royalty: but there does not appear to be any truth in those stories. On the contrary, it seems that the constitutionalists were getting strength and solidity. Gen. Foy stated in the French chamber of deputies that the ministers of the king of France were answerable for the blood shed in Spain. He also spoke freely of the troops stationed on the Spanish frontier, and ridiculed the idea that they formed a *cordon sanitaire*—the yellow fever had ceased for eight months! The answers of the French ministers were, that the king had pledged himself to maintain the *cordon sanitaire*; that it was to protect against not only pestilence, but insults; that the welfare of Spain would not be found but in the support of a *strong monarchical authority*; that the French government might be on the alert to discharge the duty of a faithful ally; and, lastly, that it was essential to preserve "those great attributes inseparable from monarchies, the *inviolability and safety of kings.*" So no doubt remains that it is the design of the French ministry to act against constitutional liberty in Spain, on the first opportunity: but, perhaps, a spark from the altar of the revolution, may blow themselves up—to which we have no manner of objection.

It appears that Algiers is on the point of declaring war against Spain—the non-payment of the tribute is the excuse for or cause of it.

The king is closely watched—and persons are prevented from “abusing him by whispering political suggestions in his royal ear.”

Russia. A letter from St. Petersburg, of the 10th July, gives as frightful accounts of the deplorable state of the Russian peasantry, as the letters from Ireland contain of the wretched sufferings of that population. The farmers can get no buyers for their produce, and the people are perishing with hunger. The nobles, so far from reaping benefit from their possessions, find themselves obliged to purchase food for their slaves. There is plenty of food, but the great mass of consumers have no money. At Odessa, wheat brought from the interior of Poland and Russia, is worth no more than fifteen shillings a quarter, and other descriptions of grain are low in proportion. The great bulk of his imperial majesty's subjects are laboring under the deepest distress.

Turkey. It is distinctly stated, that the Turks, instead of evacuating the provinces of Moldavia and Wallachia, are strengthening the garrisons in them. The Russian army, except the imperial guards, remained in *statu quo*.

On the eve of the feast of Bairam, the 22d of June, the Greeks, stimulated to vengeance by the ravages at Scio, gallantly conducted three fire ships into the Turkish fleet, by which the admiral's ship and some others were in flames. Many lives were lost—the butcher, the captain pacha, half-roasted to death, was landed on Scio, and there died in torments. The amount of the destruction is not stated; but the news of the event had produced an extraordinary sensation at Constantinople, and raised the fury of the soldiers to the highest pitch; and a letter from that city says that the “affairs of the Morea assume a dismal aspect for the Porte.” How glorious would it be, if this oppressed people shall shake off the chains of the barbarians, unaided by their *christian* neighbors?

An article from Corfu states, that the Greek government has adopted a new mode of paying its troops. It has substituted land for money; and the sequestration of all the domains belonging to the Sultan, the Vakoufs, and the Mosques, affords an extent of territory more than sufficient to pay the services of a large army for a number of years. By a decree, issued at Corinth on the 19th of May last, the soldiers already enrolled, and those who may hereafter enlist, are to receive an acre of land per month as long as they continue to serve the state; so that if the war should linger on for several years, every private will find himself, at its close, not only a free man, but a landed proprietor. Those who may be called upon to serve beyond the frontiers of the Morea are to receive an acre and a half per month. The rights of those killed in battle will descend to their heirs, who will receive for the whole amount of the time which the deceased had engaged to serve. Those incapacitated by wounds are to be considered as having completed their engagement.

Smyrna, May 29.—Amongst the number of private circumstances, the following is guaranteed by several eye-witnesses. A young Greek female, sixteen or seventeen years of age, of great beauty, was carried off by an Arab, who sold her to a Turk for 300 piastres. Shortly afterwards he offered 3,000 piastres to her new master for the re-purchase of this beautiful Chiot. The Turk, who already felt a sentiment of love, refused the money. The Arab proceeded to the market, met the Turk, and wanted to compel him restore the slave on receiving 300 piastres, the original price. The Turk

opposed this, and high words arose; the Arab, at length, in a transport of anger, said, ‘you shall not have her,’ and, taking out his pistol, lodged the contents in her bosom; she fell and expired. The Turk embraced the inanimate body, and mingled his tears with its blood. Recovering himself, he presented himself before the captain Pacha and demanded justice. ‘You shall have it,’ said the grand admiral. ‘Do you know the murderer?’—‘Yes.’ ‘Let all the Arabs be arrested and brought before me.’ The order was executed, and the Turk pointed out the guilty individual. ‘Draw thy sabre and cut off his head.’ The Turk declined the office, which was then performed by the executioner.

Eaton, in his survey of the Turkish empire, relates the following anecdotes in illustration of the temper of the Turks towards the christians. ‘It is not 50 years since the grand vizier, Gin Ali Pacha, advised the divan to confine all the ambassadors to a small island near Constantinople, as lepers or other infectious and unclean persons. In 1756, the sieur Du Val, drogoman to the French ambassador, M. de Vergennes, having announced the double bond of alliance and marriage which had united his court with the house of Austria, received from the Reis Effendi no other answer than that “the sublime Porte did not trouble itself about the union of one hog with another.” This marriage was not very agreeable news to the Porte. A similar answer was given by vizier Kimperli to the French ambassador, monsieur de la Haye, even in the brilliant era of Louis XIV. when that minister announced the splendid success of his sovereign over the Spaniards, the vizier replied, with the barbarous insolence of an Ottoman satrap, “what care I whether the dog eat the hog, or the hog eat the dog, so that the interests of my sovereign prosper!”

Further to shew the character of this ‘legitimate’ government, it was proposed in the divan, (when the Greeks rose to emancipate themselves at the time when Russia was at war with the Turks), to put all of them to death—six or seven millions of people; but the project was defeated on the score of interest, it being asked how the capitation tax could be supplied?

Africa. The British government now have possession of the establishments on the coast that heretofore belonged to the African company, and they are placed under the restrictions of the colonial laws. The governor-general is sir Charles McCarthy. Com. Mends, the naval commander, has a frigate and several smaller vessels under his charge—He appears to be an active and vigilant officer, and a worthy man, affording aid and assistance liberally to strangers on the coast. He has had the command about eight months, during which his squadron has captured eight slave vessels, with 1856 slaves on board—in one case, after a smart resistance, in which severally of the dealers in blood were happily killed—as we wish that all engaged in it may be.

Treaty of Ghent.

Letter from Mr. Fuller, Member of Congress from Massachusetts.

Boston, 3d September, 1822.

TO THE EDITORS OF THE BOSTON PATRIOT.

Gentlemen: Having seen in the Richmond Enquirer of the 27th of August, a letter from Mr. Floyd, of Virginia, in which he speaks of the conduct of Mr. Adams “in procuring Mr. Fuller to make the call” for Mr. Russell's letter and Mr. A.'s

remarks in relation to the Ghent treaty, I am induced, with great reluctance, to address you a line on that subject, for publication. My great aversion to appear, without evident necessity, in the newspapers, alone withheld me from this course, on observing that Mr. Russell, in his letter, republished in the National Intelligencer on the 3d of July, says, Mr. Adams "sought for a member who would consent to make the call." "To one member from Massachusetts, at least, he had applied in vain, before he finally succeeded in his object."

It was perfectly obvious, on being informed by the president's message of the 4th of May, that Mr. Russell's private letter on the Ghent negotiation, was to be seen by gentlemen who might call at the department of state, that it would be immediately published in the newspapers. The message also stated the wish of the secretary of state to have the letter communicated to congress, together with his remarks explanatory of its contents. This course appeared to me perfectly fair, and, in supporting the motion which I had submitted for the purpose, I assigned, among other reasons, the palpable unfairness of making the letter public, while the answer was suppressed. Several members, with whom I conversed, concurred with me entirely in the propriety of having both communicated together. It seems to me, therefore, very singular that any censure could be attached to Mr. Adams, even had he, as alleged, requested or "procured" the call. I do, however, explicitly declare, that neither Mr. Adams, nor any other person, either requested or "procured" me to move the call, or to do any thing in relation to it.

I regretted the absence of Mr. Russell, and did not know of his intention to depart from Washington until he was actually gone. Had he been present, however, it did not occur to me that he could have any objection to the resolution, and it would not have prevented the support I gave it.

Mr. Floyd's remarks, in opposition to the resolution, appear to me more accurately stated in his letter than as reported in the Intelligencer; but the addition which he has supplied seems not material, in my view, for his "justification."

Permit me to add, that, while I regret extremely the unfortunate occasion, I nevertheless rejoice in perceiving that it has produced a full development of the import and bearings of several important points, which required only to be understood to allay the jealousies so natural, but I trust so unfounded, between the different sections of our country.

Yours, respectfully,

T. FULLER.

Bank of the United States.

PHILADELPHIA, Sept. 7.

At the general triennial meeting of the stockholders of the Bank of the United States, held by adjournment at their hall, in the city of Philadelphia, on Friday, the 6th of September, 1822,

Thomas Ellicott, esq. in the chair,

William Meredith, secretary.

The committee of inspection and investigation, appointed on Monday last, the 2d inst. reported as follows:

"Your committee, to whom was referred the investigation of the state of the bank, under the appointment of the 2d inst. beg leave to report, that the reasonable expectation entertained by the meeting of the arrival of delegates from among the distant stockholders, has not been realized; and they regret to add, that, in consequence of pressing and

unavoidable engagements, of a public and private nature, some of the gentlemen composing an important part of your committee, have been constrained to return home.

Under such circumstances, your committee, after having made some progress in the investigation confided to them, by the prusal of a variety of interesting documents, eminently illustrative of the past and present condition of the bank, are deeply sensible of the importance of the present meeting to its future prosperity and welfare, and how extremely desirable it is to obtain, if practicable, a full representation of stockholders from places at present unrepresented; more especially as the notification of the president of the bank, of July last, gives us emphatically to understand that he is about to retire from his present trust. The expediency of a free interchange of opinion as to the person who shall be his successor, confers upon this last consideration a peculiar interest, which it would be an affectation of delicacy to conceal or to attempt to repress.

With the hope, therefore, of obtaining an accession to their numbers from the different placés most interested in the bank, your committee have adjourned to Monday, the 23d of September instant, and, to promote the object of their own adjournment, they would beg leave most respectfully to submit the following resolution for the adoption of the present meeting:

Resolved, That the triennial meeting of the stockholders of the Bank of the United States, now convened, do adjourn to Saturday, the 21st of September, instant, for the purpose of affording time for the distant stockholders to assemble, either in person or by proxy, in order that the vacancies in the present committee of investigation may be filled; and for the promotion of which, be it further resolved, that the chairman of the meeting be requested to address letters to the different offices of the Bank of the United States, earnestly soliciting a call of the stockholders, for the appointment of the delegates in question, to convene at the period previously mentioned."

Whereupon, the said resolution was unanimously adopted, and this meeting adjourned accordingly, to Saturday, the 21st of September instant, at 12 o'clock.

THOMAS ELLICOTT, *Chairman.*

WM. MEREDITH, *Sec'y.*

Florida.

The legislative council of Florida met and organized at Pensacola on the 22d July. The governor administered the oath to the members to support the constitution of the United States, &c. A motion was made by Mr. Miller to proceed to elect a president—the council adjourned without going into an election. On the 23d the council having met, Mr. Bronaugh was called to the chair, when they proceeded to elect a president, and the choice was unanimous of James C. Bronaugh, esq. of Pensacola.

The president then made his acknowledgments to the council, in the following neat and appropriate address.

Gentlemen of the legislative council:

The flattering manner in which you have called me to preside over this honorable body, has excited in my mind emotions which I shall not attempt to describe. I should, however, do great injustice to my feelings, were I to withhold from you an expression of my sincere and grateful acknowledg,

ments for this distinguished mark of your confidence.

Conscious of possessing but little practical experience of the forms of legislation, I am but too sensible of my inadequacy to discharge the duties of the station assigned me, in a manner calculated to meet even your most just expectations—I therefore assume its functions with great diffidence, and the most anxious solicitude for the result—confidently relying on your liberality for a charitable indulgence of any errors which I may commit, and on your wisdom for guidance and support—all I dare promise, is rectitude of intention, strict impartiality, and a constant, zealous exertion, on my part, so to discharge the duties assigned me, as to merit your approbation.

As the first legislative body assembled in this territory, we are called upon to perform a task of great importance to its future welfare—we are required to lay the foundation of the laws and government of a Territory, which, at present, although but little known, is perhaps destined, at no very distant day, to become one of the most wealthy and respectable members of the American confederacy. Let us, therefore, unite in the work with harmony and good will, and by the usefulness of our labors, satisfy the expectations of the people of Florida, and justify the confidence of the president and congress of the United States.

The council then proceeded to elect their officers—when John Coppinger Connor was chosen clerk and Jabez N. Brown was elected sergeant at arms. The council being now organized,

Mr. Murray moved, that the governor be informed that the legislative council is now ready to proceed to business. And Messrs. Miller and Gaither were appointed a committee for that purpose.

Mr. Miller reported, that the committee had waited on the governor and received for answer, that he would immediately communicate his message to the council.

On motion—

Messrs. Law, Call and Murray, were appointed a committee to draft rules and regulations for the house.

A message was received from the governor, by col. Walton, secretary, and was read as follows:

Gentlemen of the legislative council:

Circumstances, over which we had no controul, have prevented us from meeting earlier; I trust, however, no serious inconvenience will result from the delay.

Permit me to call your attention to some few of the many subjects on which you will find it necessary to legislate—the superior courts for this territory cannot exercise jurisdiction in matters of debt or contract, under one hundred dollars; inferior courts ought, therefore, to be established for the purpose of adjudicating upon such small sums, and with such further powers as may be thought expedient and warranted by the organic law—as also to be intrusted with the controul over roads, mills, ferries and other matters of police within their respective counties. They should also possess the power to try all offenders in penal and criminal cases, not made capital by the acts of congress.

Some provisions are also required by which the causes now pending in the several courts of Florida may be transferred to the superior courts, and to such inferior tribunals as you may create.

In all cases of a penal or criminal character the common law is better calculated, than any other, to secure the accused a fair and impartial trial. By

the act of congress establishing the government of the territory of Florida, the laws in force at the passage of the act, not inconsistent with the constitution and the laws of the United States relating to Florida, as declared by the act, shall continue in force, until altered, modified or repealed by the legislature.

The uncertainty as to the laws actually in force in Florida, renders it your duty to give to the territory the basis of such a code, as can be clearly and certainly understood by the great body of the people. The civil code, as in force under the Spanish government, was not always the same in her several provinces: many of her laws were of necessity local in their character, and rested on decrees, and ordinances not now to be obtained.

I advise, therefore, that the common law be adopted as the basis of our code, engraving upon it such provisions of the civil law, as are best calculated to secure to our citizens an ample, speedy and certain redress for any injuries they may sustain.

That there exist serious objections to the common law, cannot be denied. Too often we see justice yielding her best and most sacred rights to the skill of the cunning pleader, or fettered under its unbending forms and rigid rules; yet, divest it of these evils; call in the aid of the civil law to simplify the rules and forms of judicial proceeding, and to do away the absurd fictions on which several of the common law actions rest, and you may combine whatever is excellent in both systems, and avoid whatever is objectionable in either, as a distinct code. The civil law has long been in force in Florida; the titles to real and personal estate being founded upon it you cannot make any radical alteration so as to affect existing rights.

It will readily occur to you, gentlemen, that a revenue is indispensably necessary to meet the expenses which must arise in the execution of our local laws; and the subjects proper for taxation, to meet this object, will claim your attention.

Gentlemen of the legislative council, the subjects on which you will necessarily be compelled to legislate, are so various, that, to call your attention specially to each of them, would be as tedious as it is unnecessary. To regulate with prudence and wisdom the government of the territory, is not less your desire than mine. The interest, feeling and wishes of the people who have lately become citizens of the United States, ought to be consulted, and treated with candor and liberality. Let us, by our acts, prove to them, that they are regarded by us as brothers of the same great family.

Gentlemen, I rely with confidence on your support, and, with candor and promptness on my part, you shall ever find me ready to sanction and execute such of your acts as will tend to the harmony and prosperity of our new country. That Florida will, in a few years, assume a rank among the states of our great and happy union, if her citizens are united and her government just and wise, cannot be doubted.

On these great principles then, let us all cordially unite to increase the respectability and wealth of our country, by inviting into our territory a population active and enterprising, and by promoting her agriculture and commerce. Your fellow citizen,

WM. P. DUVAL.

Pensacola, July 22, 1822.

The legislative council of Florida appear to be diligently engaged in the discharge of their duties. As the business of their first session embraces, as

far as practicable, the enactment of a general code of laws for the territory, it is both important and arduous. Down to the 9th of August many bills had been under consideration and some of the most interesting had finally passed. Among the former were bills to raise a revenue—to regulate civil proceedings and chancery proceedings—to regulate damages on bills of exchange—to establish inferior courts—to regulate descents—bills concerning awards and arbitration, proceedings on attachments—to prevent frauds and perjuries—for the distribution of intestate estates—for regulating executions, &c.

The bill providing for the election of a delegate to congress had been matured and passed. By this bill the council have extended the right of suffrage to soldiers, sailors, and marines, in the public service. On this principle, however, the council was nearly divided; a motion being made to exclude that description of persons from voting for delegates to congress, it was rejected by the casting vote of the president, Mr. Bronaugh. The members in favor of granting the privilege, were Messrs. Gaither, Hanham, Miller, and White; those against it were Messrs. Call, Law, Murray, and Reynolds.

The territory has been, by one of the acts, divided into four counties—in the east, St. Johns's and Duval—in the west, Escambia and Jackson.

The following resolution was adopted by the council on the 9th of August, and a committee appointed to draft a memorial accordingly.

Resolved, by the legislative council of the territory of Florida, that a respectful memorial ought to be addressed to the president of the United States, upon the subjects of general interest to the inhabitants of this territory, and particularly to request his excellency to direct the officers of the engineer corps, who are expected shortly to make a survey of Tampa bay, by order of the secretary of war, to explore the interior of the country, and report to the governor of this territory the most eligible place for the permanent seat of government, and to lay out the nearest practicable road from St. Augustine to the place designated, and from thence to Pensacola.

President Adams on the Fisheries.

FROM THE PLYMOUTH [MASSACHUSETTS] ADVERTISER.
Montezillo, Aug. 10, 1822.

Dear Sir--The grounds and principles on which the third article of the treaty of '83 was contended for on our part, and finally yielded on the part of the British, were these: First, that the Americans and the adventurers to America were the first discoverers and the first practisers of the fisheries.—2dly. That New-England, and, especially, Massachusetts, had done more in defence of them, than all the rest of the British empire; that the various projected expeditions to Canada, in which they were defeated by British negligence; the conquest of Louisiana in '45; the subsequent conquest of Nova Scotia, in which New-England had expended more blood and treasure than all the rest of the British empire, were principally effected with a special view to the security and protection of the fisheries. 3dly. That the inhabitants of the United States had as clear a right to every branch of these fisheries, and to cure fish on land, as the inhabitants of Canada or Nova Scotia; that the citizens of Boston, New-York, or Philadelphia, had as clear a right to those fisheries, and to cure fish on land, as the inhabitants of London, Liverpool, Bristol, Glasgow, or Dublin. 4thly. That the third ar-

ticle was demanded as an ultimatum, and it was declared that no treaty of peace should ever be made without that article. And when the British ministers found that peace could not be made without that article, they consented, for Britain wanted peace, if possible, more than we did. 5thly. We asked no favor; we requested no grant, and would accept none. We demanded it as a right, and we demanded an explicit acknowledgment of that right, as an indispensable condition of peace; and the word "right" was in the article as agreed to by the British minister, but they afterwards requested that the word "liberty" might be substituted instead of right; they said it amounted to the same thing, for *liberty* was *right*, and *privilege* was *right*, but the word *right* might be more displeasing to the people of England than *liberty*, and we did not think it necessary to contend for a word. To detail the conferences and conversations, which took place for six weeks on this subject, would require volumes, if they could be remembered.—Mr. Jay is the only person now living, who was officially concerned in that negotiation, and I am not afraid to appeal to his memory for the truth of these facts.

Lord St. Hellens, then Mr. Fitzherbert, though not officially concerned in the negotiation, was instructed by the British minister to assist at our conferences, and he was freely and candidly admitted by us. I dare appeal to his lordship's memory for the truth of these facts. There is another excellent character still living, Mr. Benj. Vaughan, of Hallowell, Maine, who was then a confidential friend of lord Stelburn, and an intimate friend to the British negociators, and I dare appeal to his recollections of the representations made to him of the conferences concerning the fisheries, by Mr. Oswald, Mr. Fitzherbert, and Mr. Whiteford.

6thly. We considered that treaty as a division of the empire. Our independence, our rights to territory and to the fisheries, as practised before the revolution, were no more a grant from Great Britain to us, than the treaty was a grant from us of Canada, Nova Scotia, England, Scotland and Ireland, to the Britons. The treaty was nothing more than mutual acknowledgments of antecedent rights.

If there is any other question that you wish me to answer, I shall be happy to do it, so long as my strength may last.

I had omitted what follows: 7thly. We urged upon the British ministers, that it was the interest of England herself, that we should hold fast forever all the rights contained in that article, because all the profits we make of those fisheries went regularly to Great Britain in gold and silver to purchase and pay for their manufactures; that if it were in her power, which it was not, to exclude us from, or abridge these rights, they would be the dupes of their own weak policy.

8thly. That if we should consent to an exclusion, the stipulation would not be regarded; our bold and hardy seamen would trespass; they must keep a standing naval force on the coast to prevent them; our people would fight and complain, and this would be speedily and infallibly the source of another war between the two nations.

I am, sir, your humble servant,

J. ADAMS.

William Thomas, esq.

Montezillo, Aug. 11, 1822.

Dear sir--Let me add a few hints to my former letter. Please to search in the publications after

the treaty of peace for a letter of monsieur de Marbois, secretary of the legation, to the Chevalier de la Luzerne, and records and files of congress during that period; and an octavo volume in French, entitled, "Politique de tous les cabinets de l'Europe," published by the French government during the revolution; in which you will find a memorial from the count de Vergennes to the king, recommending to his majesty a plan of policy toward the American colonies and the English government. I wish every document concerning the negociation of 1782-3 may be searched, and researched, that the truth, the whole truth, and nothing but the truth, in its minutest particulars, may appear. I wish, also, that every human being, who knows any thing concerning it, may be consulted and examined. I have before referred you to Mr. Jay, lord St. Hellens, and Mr. Vaughan. I now refer you to Mr. Wm. Temple Franklin, still living in France, who was secretary to the American legation, and attended most, if not all, the conferences. Mr. Thaxter, my private secretary, has long since deceased. But Mr. Charles Storer, who was then an inmate in my family, alert and active, and very useful to me in copying letters and papers, is now living. Let him be asked whether he remembers the letters that I wrote, and he and Mr. Thaxter copied, or which they wrote at my desire, to certain gentlemen then residing at Amsterdam, by the names, as I think, of Folger and Coffin, of Nantucket, earnestly requesting of them the most particular information concerning the extent, value and importance of these fisheries on the coast, and the right of curing fish on land, and especially on the coast of Labrador; and whether he remembers the ample information those gentlemen gave me in their answers, even concerning the value of the seal fishery, as well as all others.

If I should ever hear of any other person who knew any thing of that negociation, I will mention him to you.

I am, sir, your humble servant, J. ADAMS.

Fugitive Slaves.

COURT OF KING'S BENCH, GUILDHALL, July 15.

Forbes } Sitting after Trinity term, before lord
vs. } chief justice Abbot, and a
Cochrane. } special jury.

This was an action brought to recover from the defendant the value of thirty-eight slaves, the property of the plaintiff.

In the years 1814 and 1815 the defendant, sir Alexander Cochrane, commanded the fleet sent out to act against the Americans, and sir George Cockburn was second in command. The gallant defendant, on his arrival, off Georgia, issued a proclamation, stating, that he understood that many persons wished to emigrate from the U. States, and offering to such persons a reception on board his majesty's ships, and a conveyance, as free settlers, to his majesty's colonies in North America or the West India islands, if they should not wish to enter into his majesty's naval or military service. In the month of February, 1815, sir G. Cockburn was lying off Cumberland Island, and on the 23d of that month, a boat, having on board 18 men, 8 women and 12 children, all negroes, approached his majesty's vessel, the *Terror* bomb, and were taken on board; they were afterwards sent on board sir G. Cockburn's ship, the *Whon*, where they were treated as refugees. Shortly afterwards the plaintiff, who is partner in a house in East Florida, came on board sir G. Cockburn's ship, produced a letter

from the Spanish governor of that province, and demanded the negroes, who, he said, were part of a gang of 60 which had made their escape from off his plantation in East Florida. The negroes refused to return, alleging that the moment they got on board a British ship they were free. The plaintiff then requested sir G. Cockburn to send them back, but this he refused to do, saying that he thought them free agents, over whom he had no control; but he went to the negroes, and advised them to return and they said they would not return, unless compelled by force so to do. Sir G. Cockburn then refused to interfere any further, and he immediately wrote a letter to the defendant, who was at a great distance from him, stating what occurred, and also, that he had transferred them to the ship *Ruby*, which was going to Bermuda. The defendant wrote in answer to sir G. Cockburn, that he thought he had acted right, but to avoid giving offence to the Spanish government, that he had written home to England, stating the circumstances to this government, and requesting their further orders; and also that the slaves, on the 23d, 1816, had been landed at Bermuda dock yard, where he should have them closely guarded until he should have received instructions from his own government.

It having been proved that the plaintiff had bought the slaves for 60*l.* a head, and also that they were worth 100*l.* a head, that the proclamation was not published or circulated at any point south of the Chesapeake, and that it was addressed solely to the inhabitants of the United States,

The solicitor general proceeded to address the jury on behalf of the gallant defendant, who, he said, only acted in pursuance of the orders of his government, and therefore was not liable. The learned counsel was proceeding to contend, that the moment the slaves had escaped out of the province in which they were slaves, the master had no property in them unless that property was secured by treaty; and that sir G. Cockburn would have acted as improperly in compelling these creatures to return to the service of the plaintiff, as he would if he were to compel the plaintiff to go into the service of the negroes.

The chief justice—"Mr. Solicitor, I see no facts in dispute between you and Mr. Scarlett; your dispute is upon the law of the case, and as I, sitting here as judge *ad nisi prius*, will not take upon me to decide this point, I think the better way would be to agree to a verdict for the plaintiff, subject to the opinion of the court as to whether the plaintiff had or had not any property in the negroes when on board a British ship.

This suggestion was adopted, and a verdict for the plaintiff—damages 3800*l.* was taken, subject to the opinion of the court.

¶ We are curious to know what ultimately became of these slaves. Admiral Cochrane has been charged as a whole sale dealer in human flesh, and the probability is, that he made merchandise of his "emigrants." Reg.

Delaware and Hudson Canal.

Philadelphia, Sept. 6. At a numerous meeting convened at Morristown, on the 21st ult. present the governor of the state and many other persons of the first respectability, a committee was appointed, consisting of two citizens of each of the counties of Essex, Bergen, Morris, Hunterdon, and Sussex, New Jersey, to collect and embody such facts and information as may seem to them important respecting a canal to pass through that district, and

connect the Hudson with the Delaware. Another duty of the committee is to solicit the aid of the legislature in the undertaking.

In an able address, which was made to the meeting, by G. O. P. McCulloch, esq. the chairman, he mentioned several routes for the canal. One beginning above Easton, and following the valley of the Pequest; another beginning below Easton, and following the valley of the Muskenetkonk. Both approach to the neighborhood of Stanhope, from below which there is only one passage to the Rockaway, near Valley Forge; nor is there any diverging point on that stream until we arrive at Danville. There two courses offer themselves; the one by Hoottown to Patterson, the other by Morristown to Patterson, or Newark. Which of these should be preferred, future inquiry must decide. Each is now deemed practicable, and each holds out great advantages.

The length of the proposed canal is about ninety miles, passing through a rugged country, yet not such as to present any insuperable obstacles. The summit level near the verge of Suckasunny plain, is 185 feet above the waters of the Hudson, and 115 above those of the Delaware, making a fall of about 300 feet to be overcome by locks. The whole expense, however, including digging, making locks, &c. is not estimated at above three, or at most, four hundred thousand dollars.

A copious supply of water can be procured from two natural reservoirs, the great pond from which the river Muskenetkonk issues, and the Green pond, which, at a small expense, may be made to contain, together, 41,501,333 cubic yards of water.

The toll which it is supposed will be received, taken at unusually low rates, is estimated at \$81,100 a year, leaving a net revenue of \$60,000, after deducting \$21,000, for toll keepers, repairs and management.

The advantages which this canal promises are,—supplying the city of New York with Lehigh coal at one half the price it now pays for Liverpool coal—making coal the article of fuel in a large district of New Jersey, and thus enabling the inhabitants to convert their timber into lumber and sell it at a greater profit,—improving the agriculture of the district by opening markets for its produce at New York, Newark, Elizabethtown and Patterson; lastly, introducing new forges, furnaces, and manufactories, of every sort in a country full of water powers, and abounding in all the conveniences for manufacturing industry.

Mr. McCulloch very properly objects to entrusting this public work to a corporation. “In the hands of the people,” he says, “a canal could be executed and managed as cheaply, and would produce more than if owned by a company. Every legislature is reluctant to cede its authority to individuals. We know, in a former instance, that the privileges conferred upon a canal company were so scanty and embarrassed by such restrictions, as to frustrate the plan and to prevent subscriptions. Collisions and opposing interests will occur between the state and the company. Unforeseen cases, and exigencies unprovided for, must certainly arise, in which the people will be arrayed against the canal, or the canal against the people. To avoid all these evils, this enterprise should belong to the state; for, however easily a chartered society might be filled up, we ought to be subjected to no influence and bent under no controul, save that of our representatives; nor should our greatest national effort become the sport of speculation or the avenue to a paltry spirit of jobbing.”

Valenciana Silver Mines, in Mexico.

Valenciana has a shaft of 1680 feet from whence to bring up the ore. The use of machinery, to diminish labor, is but feebly adopted, and the execution of those few machines they construct is so bad that they are scarcely of any benefit. As the ore is brought from the mine on the backs of men, it is necessary that the descent should be made very capacious. That of the mine Valenciana is 1680 feet in perpendicular depth, and 90 feet in circumference. The pit is dug in the solid rock; it is beautifully walled, and, when completed, having cost a million of dollars, may be considered as one of the greatest and boldest undertakings in the history of Mexican mining. This mine has the peculiar property of being free from water, a circumstance of vast importance, since other mines, equally rich, have been abandoned, because the proprietors have not been enabled to exclude the water where the steam engine is not yet adopted. In the year 1760, the country around this mine was a perfect desert. M. Obregan, a Spaniard, with a vehement passion for mining, with a small capital, but with the confidence of richer men, who assisted him, began to excavate. In 1766, though he had got to the depth of 260 feet, the value of the produce was less than the current expenses. He then entered into partnership with a small trader, named Otero, who had some ready money. They continued their operations, with confidence in the result, till, in 1771, they came to masses of sulphuretted silver, mixed with native and red silver. From 1771 to 1804, the mine has yielded a gross produce of 533,000*l.* sterling; and, in some of the most profitable years, the two proprietors have each shared the enormous sum of 250,000*l.* sterling. The spot where these operations commenced was occupied by a few wild goats and in ten years it became a considerable town, with 7 or 8,000 inhabitants, surrounded with cultivated and highly productive fields. As the miners have gone deeper for the ore, the expenses of raising it have been increased; but the quality has so improved that the net profit to the proprietors has continued the same. The expense of working this mine amounts annually to 190,000*l.* sterling; three fourths of which are for wages to the laborers, and the remainder for gun powder, steel, iron, wood, leather, and tools of various kinds. The costs of powder for blasting the rocks, amounts to 16,000*l.* sterling annually. The number of individuals employed is about 3,000. The principal manager receives a salary of 2,500*l.* sterling, and has under him several overseers and nine master miners. These head men visit daily the subterraneous operations on the backs of men, who have a kind of saddle for the purpose, and are called little horses, (caballitos).

The whole of the labor of the mines is performed by freemen; the labor, though voluntary, is very severe, and the people are stimulated to perform it only by being paid, not by the time occupied, but, by the quantity of work that is performed. The ore is carried solely by men, who are so accustomed to this kind of labor, that they remain with a load from 240 to 370 pounds on their backs, six hours at a time, during which they ascend many thousand steps in the pits, in a temperature from 71 deg. to 77 deg. of Fahrenheit. They proceed in files of 50 or 60, among whom are some boys, of 10 or 12 years old, and some men, more than sixty, each of them loaded according to his own estimation of his strength. In ascending these stairs, they throw the body forward, and support themselves

with a staff, about a foot long. They walk in a zig zag direction, having found, by experience that their respiration is thereby less impeded. The muscular strength acquired by these men must be prodigious, since, without any burden, a person, not accustomed to it, feels intolerably fatigued from ascending and descending so many thousand steps.

The weight of each load is agreed on before the ascent is begun; regular registers of the quantity carried by each individual is entered by accountants, and the quantity of ore brought from the mine is easily ascertained to the satisfaction of all parties. Each digger of the ore is calculated to loosen as much from the vein as three of the porters can carry away. This operation is performed by a kind of iron crow, with a sharpened steel point, that requires perpetual re-pointing; for which purpose, small moveable forges are placed in various parts of the mines. Though the workmen are almost naked and are closely watched and carefully searched, they sometime contrive to embezzle considerable portions of the richest minerals by concealing them in their hair, under their arms and other parts of the body. Their thefts are often detected, and a register is kept of what is thus seized from the deprecators. In the mine of Valenciana it amounted, in fourteen years, to the value of £36,000 sterling.

Tame Rattle Snakes.

FROM THE RICHMOND ENQUIRER.

The exhibition of Mr. Neal's rattle snakes at the Eagle, is too great a curiosity to be passed over. It is one of the most singular sights which we have ever witnessed.

Mr. Neal is a Frenchman; while in North Carolina, he attempted to procure some rattle snakes, for the purpose of making out a collection. But some of the observations and experiments he made, induced him to believe the possibility of taming this poisonous reptile; he finally made the trial, and has succeeded in a manner which is calculated to astonish every beholder. What is the process he employed, is unknown to us—he probably availed himself of the power, which a control over the appetite of the animal gives him—he dwells very much, too, on the charms of music; while inflamed by hunger, and irritated by the application of hot iron, the creature is soothed and softened by a slow and plaintive strain.

Mr. N. has two rattle snakes—the male, which is four feet eight inches long, has eight rattles to his tail, thus proving him to be nine years old—he has had this snake four years. The female is much smaller, and has five rattles—she has been with him 33 months. So great is their docility, that he will take them up, after speaking a sort of jargon to them, and stroking down their backs, as if they were so many strings, he will make them crawl up his breast and face, caress and kiss him, coil round his neck, and while one of them is thus hanging around him, he will take up and exhibit the other. The perfect harmlessness of the reptile, and even attachment to his keeper, is astonishing. Meanwhile Mr. N. is himself thoroughly at his ease—completely self possessed, diverting the spectator with the exhibition of his snakes, or instructing them by his explanations. He says, he has no fears himself; for, independently of his command over the animal, he is satisfied he can cure the bite of it—of the remedy he makes no secret. Wash your mouth first with warm sweet oil, and then suck the wound—next drink most copiously of he decooc-

tion of the snake root, until it operates as a strong emetic. This is the regimen the recommends—and which he believes to be infallible.

There is no deception practised upon you. He opens the mouth of the snake, and shows you his fangs. They are in the upper jaw alone—two on each side, and have the faculty of renewing themselves, in case they are drawn out by a violent blow—the fang is within the mouth, bent sharpened and sheathed like the claw of a cat, and turned towards the throat—the orifice through which the poison is ejected, is a small groove on the upper side of the fang, between its point and upper curve—the poison bags lie at the roots of the fangs. But to remove all doubts of the poisonous qualities of these snakes being uninjured, Mr. N. proposes to have a public exhibition this week, when the snake will kill a young hare by a slight stroke, and then immediately devour him.

Perhaps no one has had so good an opportunity of studying the habits of the animal. His remarks will, of course, form a valuable addition to natural history. He is an intelligent man—and a memoir may be expected from him, when he arrives in Europe. The male snake has just cast his skin—and the new one is most beautiful. The tail has a fine glossy black. He says they renew their skins every two months; three times in the year: perhaps from October to April they remain torpid, and their functions are suspended. Most probably, it varies in different snakes with the quantities of food they can obtain. Mr. Neal generally feeds his once a week.

They have also a rattle every year after the first. They scarcely ever shake it but when they are strongly excited, or to strike the attention of their prey. He contends that the use of their rattles is to draw upon themselves the eyes of their victim, which generally consists of the fleetest animals, as birds, squirrels, &c.

As soon as the eyes meet, he says the process of charming commences. He believes in this faculty, for he has seen it exemplified in a garden by his own snakes; the victim will hop from bough to bough, and rock to rock, overcome with apprehension, until approaching each other, the snake seizes him—He denies altogether what some naturalists assert, the deleterious qualities of their breath—for he has often kissed them, and in blowing their breath upon him, he has found it uncommonly sweet.

Mr. N. has other snakes in his collection—as a wampum snake, beautifully streaked, and so called after the Indian ornament;—it is a small species of the boa constrictor, which winds itself round its prey, and kills not by poison, but by stricture—it even squeezes the rattle snake to death. He has also the common black snake, and the lead colored American adder, of the description of the flat heads. He has all these under the same command—exhibiting almost the same docility as the rattle snakes.—The spectacle is not dangerous nor even disgusting—and is well worthy of the attention of the curious.

Trade with the West Indies.

From the New-York E. Post, Aug. 21.

An act to regulate the trade between his majesty's possessions in America and the West Indies, and other places in America and the West Indies.—24th June 1822.

[The first section repeals all the acts of parliament theretofore passed, the titles of which are recited, for regulating the importation and exporta-

tion of certain articles into and from certain territories, islands and ports, under the dominion of the British king in America and the West Indies.]

H. Provided also, and be it further enacted, That nothing in this act contained shall extend, or be deemed or construed to extend to release or discharge any seizure of goods, wares or merchandise, or of any ship or vessel, or to release or discharge any forfeiture or penalty incurred on or before the passing of this act, but that the same may be prosecuted, sued for, recovered, and divided, in such and in the like manner as any such seizure, forfeiture, or penalty might have been prosecuted, sued for, recovered, and divided, if this act had not been made.

III. And be it further enacted, that from and after the passing of this act, it shall be lawful to import into any of the ports enumerated in the schedule annexed to this act, marked (A), from any foreign country on the continent of the North or South America, or from any foreign island in the West Indies, whether such country or island as aforesaid shall be under the dominion of any foreign European sovereign or state, or otherwise, the articles, enumerated in the schedule annexed to this act, marked (B), either in British built ships or vessels owned and navigated according to law, or in any ship or vessel bona fide the built and owned by the inhabitants of any country or place belonging to or under the dominion of the sovereign or state of which the said articles are the growth, produce or manufacture, such ship or vessel being navigated with a master and three fourths of the mariners at least belonging to such country or place; or in any British built ship or vessel which has been sold to and become the property of the subjects of any such sovereign or state, such ship or vessel last mentioned being also navigated with a master and three fourths of the mariners at least belonging to such country or place: provided always, that no articles enumerated in said schedule shall be imported in any foreign ship or vessel so sold as aforesaid, unless shipped and brought directly from the country or place from which they are the growth, produce or manufacture.

IV. And be it further enacted, that it shall be lawful to export in any British built ship or vessel, owned and navigated according to law, or in any foreign ship or vessel aforesaid, or in any British built ship or vessel so sold as aforesaid, from any of the ports enumerated in the schedule annexed to this act, marked (A), any article of the growth, produce or manufacture of any of his majesty's dominions, or any other article legally imported into the said ports, provided that the said articles, when exported in any such foreign ship or vessel, or in any British built ship or vessel so sold as aforesaid, shall be exported direct to the country or state in America or the West Indies to which such ship or vessel belongs as aforesaid, and before the shipment thereof, security by bond shall be given to his majesty, his heirs and successors, in a penalty equal to half the value of the said articles; such bond to be entered into by the master and exporter, before the collector or other chief officer of the customs of such colony, plantation or island, for the due landing such articles at the port or ports for which entered, and for producing a certificate thereof within twelve months from the date of such bond, under the hand and seal of the British consul or vice consul resident at the port or place where the said articles shall have been landed; but in case there shall not be any such consul or vice consul there resident, such certificate to be under

the hand and seal of the chief magistrate, or under the hand and seal of two known British merchants residing at such port or place; but such bond may be discharged by proof, on oath, by credible persons, that the said articles were taken by enemies, or perished in the seas: Provided always, that nothing herein contained shall be construed to permit or allow the exportation of any arms or naval stores, unless a license shall have been obtained for that purpose from his majesty's secretary of state; and in any case any such articles shall be shipped or waterborne for the purpose of being exported contrary to this act, the same shall be forfeited, and shall and may be seized and prosecuted as hereinafter directed.

V. Provided always, and be it further enacted, that for ten years after the passing of this act, nothing in this act contained shall extend, or be construed to extend, to exclude from the trade allowed by this act, any foreign ship or vessel, which, previous to the passing of this act, may have been engaged in lawful trade with his majesty's said colonies, islands, or plantations, on account of such ship or vessel not being of the built of the country to which such ship or vessel may belong.

VI. And be it further enacted, that in case any doubt shall arise, whether any goods, wares, or merchandise intended to be exported in any foreign ship or vessel, under the authority of this act, had been legally imported into such port, the legality of such importation shall be made to appear to the satisfaction of the collector and comptroller, or other principal officer of the customs of such port, before such goods, wares, and merchandise shall be suffered to be shipped for exportation.

VII. And be it further enacted, that from and after the passing of this act, there shall be raised levied, collected, and paid unto his majesty's, his heirs and successors, upon the several articles enumerated or described in the said schedule marked (C), imported or brought into any of the ports enumerated in the schedule marked (A), from any such foreign island, state, or country, under the authority of this act, the several duties of customs as the same are respectively inserted or described and set forth in figures in the said schedule annexed to this act marked (C), and the same shall be under the management of the commissioners of the customs in England, and shall be raised, levied, collected, paid, and recovered in such and the like manner and form, and by such and the like rules, ways, means, and methods, respectively, and under such penalties and forfeitures as any other duties now payable to his majesty on goods imported into any of the islands, plantations, colonies, or territories belonging to or under the dominion of his majesty in America or the West Indies, are or may be raised, levied, collected, paid, and recovered by any act or acts of parliament now in force, as fully and effectually, to all intents and purposes, as if the several clauses, powers, directions, penalties, and forfeitures relating thereto, were particularly repeated and again enacted in the body of this act; and the produce of such duties shall be paid by the collector of the customs to the treasurer or receiver general of the colony, province or plantation in which the same shall be respectively levied, to be applied to such uses and purposes as may be directed by the authority of the respective general courts or general assemblies of such colonies, provinces, or plantations.

VIII. And be it further enacted, That in case there shall be no general courts or general assemblies

blies in the colony, province, or plantation in which the said duties shall have been levied and collected under the authority of this act, the net proceeds of such duties shall then be applied and appropriated in such and the like manner and to such uses as any other duties levied and collected in any of his majesty's colonies, provinces, or plantations in America or the West Indies, not having general courts or general assemblies, may now by any act or acts of parliament, passed in Great Britain, or the united kingdom of Great Britain and Ireland, or by any order of his majesty in council, or by any proclamation issued in his majesty's name, be appropriated and applied.

IX. And be it further enacted, that in all cases where, by the schedule marked (C), the duties imposed upon the importation of articles into his majesty's colonies, plantations, or islands in America or the West Indies are charged not according to the weight, gauge, or measure, but according to the value thereof, such value shall be ascertained by the declaration of the importer or proprietor of such articles, or his known agent or factor, in manner and form following:—(that is to say),

“I, A. B. do hereby declare, that the articles mentioned in the entry, and contained in the packages [here specifying the several packages, and describing the several marks and numbers, as the case may be], are of the value of _____

Witness my hand, the _____ day of _____ A. B.”

“The above declaration, signed the _____ day of _____ in the presence of C. D. collector, or other principal officer.”

Which declaration shall be written on the warrant of entry of such articles, and shall be subscribed with the hand of the importer or proprietor thereof, or his known agent or factor, in the presence of the collector or other principal officer of the customs at the port of importation. Provided, that, if upon view and examination of such articles by the proper officer of the customs, it shall appear to him that the said articles are not valued according to the true price or value thereof, and according to the true intent and meaning of this act, then and in such case the importer or proprietor, or his known agent or factor, shall be required to declare on oath before the collector or chief officer of the customs at the port of importation, (which oath he is hereby authorised and required to administer), what is the invoiced price of such articles, and that he verily believes such invoiced price is the current value of the articles at the place from whence the said articles were imported: and such invoice price, with the addition of ten pounds *per centum* thereon, shall be deemed and taken to be the value of the articles in such colony, plantation, or island as aforesaid, in lieu of the value so declared by the importer or proprietor, or his known agent or factor, and upon which the duties specified in the said schedule shall be charged and paid: Provided also, that if it shall appear to the collector, or other chief officer of the customs, that such articles have been invoiced below the real and true value thereof at the place from whence the same were imported, or if the invoice price is not known, the articles shall, in such case, be examined by two competent persons, to be nominated and appointed by the governor or commander in chief of the colony, plantation, or island into which the said articles are imported; and such persons shall declare on oath, before the collector or chief officer of the customs, what is the true and real value of such articles in such colony, plantation, or island;

and the value so declared on the oaths of such persons shall be deemed to be the true and real value of such articles, and upon which the duties specified in the said schedule marked (C), shall be charged and paid.

X. And be it further enacted, That if the importer or proprietor of such articles shall refuse to pay the duties hereby imposed thereon, it shall and may be lawful for the collector or other chief officer of the customs where such articles shall be imported, and he is hereby respectfully required, to take and secure the same, with the casks or other package thereof, and to cause the same to be publicly sold, within the space of twenty days at the most after such refusal made, and at such time and place as such officer shall, by four or more days public notice, appoint for that purpose, which articles shall be sold to the best bidder; and the money arising by the sale thereof, shall be applied, in the first place, in payment of the said duties, together with the charges that shall have been occasioned by the said sale; and the overplus, if any, shall be paid to such importer or proprietor, or any other person authorized to receive the same.

XI. And be it further enacted, That whenever any foreign article is liable to duty by this act on the importation thereof into any of his majesty's colonies, plantations, or islands in America, or the West Indies, under the provisions of this act, the like duty shall be payable upon any such foreign article when imported into any such colonies, plantations, or islands, direct from any part of the united kingdom of Great Britain and Ireland; and such duty shall be raised, levied, collected, and paid, in such and the like manner, and be appropriated and applied to such and the like uses, as the duty payable upon the like article imported from any other place, under the provisions of this act, is by this act directed to be raised and applied.

XII. Provided always, and be it further enacted, That if, upon the importation of any article charged with duty by this act, the said article shall also be liable to the payment of duty under the authority of any colonial law, equal to or exceeding in amount the duty charged by this act, then and in such case the duty charged upon such article by this act, shall not be demanded or paid upon the importation of such article: provided also, that if the duty payable under such colonial law shall be less in amount than the duty payable by this act, then and in such case the difference only in the amount of the duty payable by this act, and the duty payable under the authority of such colonial law, shall be deemed to be the duty payable by this act; and the same shall be collected and paid in such and the like manner, and appropriated and applied to such and the like uses, as the duties specified in the said schedule annexed to this act, marked (C), are directed to be collected, paid, appropriated, and applied.

XIII. And be it further enacted, That all sums of money granted and imposed by this act, as duties, shall be deemed and are hereby declared to be sterling money of Great Britain, and shall be collected, recovered, and paid to the amount of the value which such nominal sums bear in Great Britain; and that such moneys may be received and taken according to the proportion and value of five shillings and six pence the ounce in silver.

XIV. And be it further enacted, That any article enumerated in the schedule (B), legally imported as aforesaid under the authority of this act shall be allowed to be exported in any British ship

or vessel, owned and navigated according to law, to any other British Island, colony, or plantation in America or the West Indies; provided, that, upon the importation thereof into any such other British Island, colony or plantation, proof shall be produced that the said duties due to his majesty have been first paid in the colony or plantation into which the said articles shall have been imported; and any article so imported; in any vessel as aforesaid shall be allowed to be exported to any part of the united kingdom of Great Britain and Ireland, under the rules, regulations, restrictions, securities penalties and forfeitures particularly mentioned and provided for in an act of parliament made in the twelfth year of the reign of king Charles the second, entitled an act for the encouraging and increasing of shipping and navigation; and in another act of parliament, made in the twenty-second and twenty-third years of the reign of king Charles the second, entitled an act to prevent the planting of tobacco in England, and for regulating the plantation trade; and in another act of parliament made in the twentieth year of his late majesty's reign, entitled an act to allow the trade between Ireland and the British colonies in America and the West Indies, and the British settlements on the coast of Africa, to be carried on in like manner as it is now carried on between Great Britain and the said colonies and settlements, or in any of the said acts with respect to the goods, wares or merchandise, therein enumerated or described.

XV. And whereas it is the intention and meaning of this act, that the privileges hereby granted to the foreign ships and vessels shall be confined to the ships and vessels of such countries only as give the like privileges to British ships and vessels in their ports in America and the West Indies; be it, therefore, enacted, That it shall be lawful for his majesty, his heirs and successors, by order in council from time to time, when and as often as the same shall be judged expedient, to prohibit trade and intercourse under the authority of this act, with any country or Island in America or the West Indies, if it shall appear to his majesty that the privileges granted by this act to foreign ships and vessels are not allowed to British ships and vessels trading to and from any such country or Island under the provisions of this act; and in case such order of his majesty in council shall be issued, then during the time that such order in council shall be in force, none of the provisions of this act, either as respects the laws herein repealed, or to any other provisions of this act, shall apply or be taken to apply to any country or state, the trade with which, under the provisions of this act, shall be prohibited by any such order of his majesty in council; and if any goods whatever shall be imported from, or shipped for the purpose of being exported to any such country or Island in America or the West Indies, in any foreign ship or vessel, after trade and intercourse therewith shall have been prohibited by any such order of his majesty in council, issued under the authority of this act, all such goods, together with the ship or vessel in which the same shall have been imported, or in which the same shall have been shipped for the purpose of being exported as aforesaid, shall be forfeited, with all her guns, furniture, ammunition, tackle and apparel; and in every such case the same shall and may be seized by any officer of his majesty's customs or navy, authorized or empowered to make seizures in cases of forfeiture, and shall, and may be prosecuted in manner as herein after directed.

XVI. And be it further enacted, That if his ma-

esty shall deem it expedient to extend the provisions of this act to any port or ports not enumerated in the schedule marked (A.), it shall be lawful for his majesty, by order in council, to extend the provisions of this act to such port or ports; and from and after the day mentioned in such order in council, all the privileges and advantages of this act, and all the provisions, penalties, and forfeitures therein contained, shall extend, and be deemed and construed to extend, to any such port or ports, respectively, as fully as if the same had been inserted and enumerated in the said schedule at the time of passing this act.

XVII. And be it further enacted, That no articles, except such as are enumerated in the schedule marked (B.), shall be imported in any such British built ship or vessel, or in any such foreign ship or vessel, or in any such British built ship or vessel so sold as aforesaid, from any foreign country or state, on the continent of America, or Island in the West Indies, into any of the ports enumerated in the schedule marked (A), or into any port which may be added to the schedule marked (A.), by virtue of any order in council as aforesaid, on any pretence whatever, on pain of forfeiting such articles, together with the ship or vessel in which the same shall have been imported, and the guns, tackle, apparel, and furniture of such ship or vessel; and in every such case the same shall and may be seized by any officer or officers of his majesty's customs or navy, who are or shall be authorized and empowered to make seizures in case of forfeiture, and shall and may be prosecuted in such manner, as herein after directed.

XVIII. And be it further enacted, That no article whatever shall be imported or exported, either in a British built ship or vessel or in any such foreign ship or vessel, as aforesaid, from or to any foreign country on the continent of North and South America, or from or to any foreign Islands in the West Indies, or from any port of any British colony, plantation, or Island in America or the West Indies, not enumerated in the schedule annexed to this act marked (A.), on any pretence whatever on forfeiture of such articles, also the ship or vessel in which the same shall be imported and all her guns, furniture, ammunition, tackle and apparel.

XIX. Provided always, and be it further enacted, That nothing in this act contained shall affect or be construed to affect the right which British subjects or others may enjoy under any law in force at the passing of this act, of exporting in British ships from ports not enumerated in the said schedule marked (A.), the produce of the fisheries carried on from any of his majesty's said colonies, plantations, or Islands.

XX. And be it further enacted, That all penalties and forfeitures imposed by this act shall and may be respectively prosecuted, sued for, and recovered, and divided in Great Britain, Guernsey, Jersey, or the Isle of Man, or in any of his majesty's colonies or Islands in America, in the same manner and from and by the same rules and regulations in all respects, in so far as the same are applicable, as any other penalties and forfeitures imposed by any act or acts of parliament made for the security of the revenue of the customs, or for the regulation or improvement thereof, or for the regulation of trade or navigation, and which were in force immediately before the passing of this act, may be respectively prosecuted, sued for, recovered, and divided in Great Britain, Guernsey, Jersey, or the Isle of Man, or in any of his majesty's colonies or Islands in America.

Schedule (A).—List of free ports; Kingston, Savannah Le Mar, Montego bay; Santa Lucia, Antonio, Saint Ann, Falmouth, Maria, Norant bay, Jamaica; Saint George, Grenada; Roseau, Dominica, St. John's, Antigua; San Josef, Trinidad; Scarborough, Tobago; Road Harbour, Tortola; Nassau, New-Providence; Pitt's Town, Crooked Island; Kingston, St. Vincent; Port St. George and Port Hamilton, Bermuda; any port where there is a custom house, Bahamas; Bridgetown, Barbadoes; St. John's, Saint Andrews, New-Brunswick; Halifax, Nova-Scotia; Quebec, Canada; Saint John's, Newfoundland; Georgetown, Demerara; New Amsterdam, Berbice; Castries, St. Lucia; Basseterre, Saint Kitts; Charles Town, Nevis; Plymouth, Montserrat.

Schedule (B).—Asses, barley, beans, biscuit, bread, beaver and all sorts of fur; bowsprits, calavances, cocoa, cattle, cochineal, coin and bullion, cotton wool, drugs of all sorts, diamonds and precious stones, flax, fruit and vegetables; fustick and all sorts of wood for dyer's use; flour, grain of any sort; garden seeds, hay, hemp, heading boards, horses, hogs, hides, hoops, hardwood or mill timber, indian corn, meal, indigo, live stock of any sort, lumber, logwood, mahogany and other wood for cabinet wares, masts, mules, neat cattle, oats, peas, potatoes, poultry, pitch, rye, rice, staves, skins, shingles, sheep, tar, tallow, tobacco, turpentine, timber, tortoise-shell, wool, wheat, yards.

Schedule (C).—A schedule of duties payable on articles imported into his majesty's possessions in America and the West Indies, from other places in America and the West Indies, the duties following; (that is to say): bbl of wheat flour not weighing more than 196 lbs net weight, 5s sterling; barrel of biscuit, not weighing more than 196 lbs, net weight 2s 6d; for every cwt. of biscuit 1s 6d; for every 100 lbs of bread made from wheat or other grain imported in bags or packages 2s 6d; for every barrel of flour, not weighing more than 196lbs, made from rye, peas or beans, 2s 6d; for every bushel of peas, beans, rye or calavances, 7d; rice, for every 100 lbs. net weight, 2s 6d; for every 1000 shingles, called Boston chips, not more than 12 inches in length, 7s; for every 1000 shingles, being more than 12 inches in length, 14s; for every 1000 red oak staves, 11 1s; for every 1000 white oak staves or headings, 15s; for every 1000 feet of white or yellow pine lumber, of one inch thick, 11 1s; for every 1000 feet of pitch pine lumber, 11 1s; other kinds of wood and lumber per 1000 feet, 11 8s; for every 1000 wood hoops, 5s 3d; horses, for every 100l of the value thereof, 10l; neat cattle, for every 100l of the value thereof, 10l; all other live stock, for every 100l of the value thereof, 10l.

CHRONICLE.

The U. S. schr. *Grampus*, is stated to have captured a Spanish privateer called *Panchetta*, of eight 12 pounders a long tom, and 92 men. It appears that the privateer first dogged the *Grampus*, and was then chased in turn. When the vessels were near to each other, the character of our schooner was made known, and received a broadside from the privateer. This was returned with full effect—11 men were killed and wounded, and the the privateer instantly surrendered, being also in a sinking condition. The prize was carried into St. Thomas.

Died, on the 4th instant, at Washington, *Josiah Meigs*, esq. commissioner of the general land office,

one of the best of men and most faithful of officers. At Harper's Ferry, on the 2nd, col. Jacinth Laval, in the 60th year of his age. He came to our country in company with gen. de la Fayette, and remained in the army until the close of the revolutionary war; during the late war he commanded a battalion of cavalry, and was personally engaged several times. He was a gallant officer and a much esteemed man.

New York. Six or eight new cases of fever are still daily reported, and the deaths are not numerous; yet the alarm has rather increased than subsided.

Penitentiary system. The following rigid but salutary regulation has been adopted at the state prison, Auburn, N. Y. "The convicts shall receive no letters or intelligence whatever from or concerning their friends, or any information on any subject out of the prison, nor be permitted to write letters themselves; that no relation or friend shall be allowed to speak to a convict, except in some extraordinary case, where the condition of his property or family imperiously requires it; and then only in the presence of the agent or the deputy keeper; but that any information concerning the convicts will be furnished to their friends on personal application, or by letter, post paid, directed to the agent."

Deaths in several cities, the year ending Jan. 1, 1822.

In Boston, 1,420.

Of these, there were by

NILES' WEEKLY REGISTER.

NEW SERIES. No. 3—VOL. XL.] BALTIMORE, SEPT. 21, 1822. [No. 3—VOL. XXIII. WHOLE No. 575

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

A ROGUE ON THE ROAD. Within a week past, I have received two letters from Tennessee—one from Gallatin and the other from Clarksville; the writers of which say, "I have enclosed you" such and such amounts, in bills of the bank of North Carolina, and one of the gentlemen gives the number of his note, 1148, state bank at Raleigh, for 5\$. It cannot be believed that the bills were not enclosed, as stated, and, as they both were from Tennessee, perhaps it may afford some clue to the post-master-general to ferret out the thief. In these dismal times, such things are doubly vexatious; but we hope that our friends will not be discouraged, for we still guarantee the safety of the mail, hoping, however, that, sooner or later, we may be the agents of bringing some of its robbers to justice.

ROADS AND CANALS. We present a very interesting report on these important subjects, laid before the house of representatives at its last session. It well deserves an attentive perusal, and contains much intelligence on the matters about which it treats.

THE PRESIDENTIAL ELECTION. Two much esteemed and able friends, have notified me that they are about to prepare some essays, to be published in the REGISTER, in regard to the pretensions of certain candidates for the office of president of the United States, after Mr. Monroe's period of service shall have terminated. It is very doubtful, indeed, whether we shall admit into our pages any discussions of a *personal* nature on that subject—but certainly not yet. Intelligent essays and state papers, regarding *measures*, and so affecting the pretensions of different gentlemen, shall, occasionally, and impartially, have place—but we cannot become even liable to the suspicion of being partizans in this controversy, until the *necessity* of it shall be shewn by the progress of things.

BALTIMORE MONUMENT. The statue was placed on this monument on the 12th inst. according to the plan and ceremonies adopted by the building committee, as heretofore stated; and without any accident or other occurrence to mar the occasion. The statue does honor to the artist, signor Capellano; and the monument, as a whole, is chaste, beautiful and classic.

NEW YORK. The fever seems to be rather on the increase; yet the new cases reported do not exceed 10 or 12 per day.

AMERICAN ATLAS—published by Messrs. H. Carey & I. Lea. From a slight inspection of this work, and because some of the proof sheets had been previously shewn to us, we lately spoke of this publication in terms of high approbation, which we are satisfied that, as a whole, it richly deserves. Indeed, the mere *attempt* to collect the materials for and bring out a work of this nature, ought to make a favorable impression on the mind of every friend of literature and political science.

But, in a country like that of the United States, wherein new towns are known as of almost daily origin, and new counties, and even new states, are

frequently established—wherein the constitutions of states are oftentimes altered, amended or made a-new, it was impossible to expect that a work of this sort could be free from errors—and, no doubt, this is as free of error than any reasonable, reflecting man calculated upon.

The chief complaints that we have yet heard, are as to certain inaccuracies about the constitution of Maryland, and some omissions in regard to one or two things about which we, in this state, are warmly interested. As soon as these inaccuracies and omissions were known, the publishers cancelled the objectionable sheet and supplied its place with a new one. What more could be asked of them—what more could they do? Many in Baltimore have regarded the people of Philadelphia as prejudiced and unfriendly to them, and hence the excitement; but is it possible to believe that the publishers of a work, the disbursements for which we suppose must have amounted to 20 or 25,000 dollars, would risk a remuneration of that sum to gratify such prejudice or wickedness? Certainly not—I speak of the publishers as persons pursuing their *interest*; I *personally* know it to be impossible that they should wilfully misrepresent facts.

These remarks have occurred on reading an article addressed to the editor of the "Federal Republican," by Messrs. Carey & Lea, and published in that paper of Wednesday, wherein the REGISTER is referred to to excuse or palliate the errors now corrected. I thank the gentlemen for the respectful manner in which they have spoken of me and my work; and, without hesitation, repeat, that "*the constitution of this state was a batch of absurdities at first, and has been so MENDED, that there are not five men within its limits who can promptly tell what it is.*"

In conclusion, I again recommend this ATLAS to the public patronage—it is a most valuable collection of facts, and deserves a most liberal support.

THE U. S. SCHOONER GRAMPUS has arrived at Charleston, with her prize, the brig Palmyra, belonging to Porto Rico, lately called the Panchita, a "notorious character" in the West India seas.

From the account, it appears that when the Grampus was convoying some vessels to St. Thomas, this brig came within hail, saying that she wished to board one of the fleet, and was told it would not be permitted. "The G. left St. Thomas 14th August, having under her care the schooners Velocede and Caduceus, for Curacao, and next day saw a brig in chase; on the morning of the 16th saw the same brig on the weather-bow and gave chase to her; she hoisted English colors and then changed them to Spanish and fired a gun to windward; and at half past 10, she hoisted a white flag at the fore top mast, and was soon found to be the Palmyra. At twenty minutes past 11, the Grampus was brought under the lee of the brig, within pistol shot, and lieut. Gregory demanded her instant surrender as a pirate; the brig answered that the demand was not understood, and, upon its being repeated, she commenced a fire upon the Grampus with her small arms and carronades; this was so effectually returned, that, in about three minutes and a half she gave up the combat, being a complete wreck, having one killed and seven wounded,

and three shot between wind and water, both pumps shot through, and the brig in a sinking condition. The cry of we are sinking, was made immediately upon striking her flag, and boats were despatched under command of lieutenant Voorhies, to take charge of the vessel, and save her if possible. It was with great difficulty and after great exertions that lieutenant V. was able to stop the leaks—the water was on the cabin floor, and the pumps being in a great measure useless, he laid her over on her side, by shifting her guns and other weighty articles to the sound side of the vessel, and by that means saved her. The *Grampus* received a little injury in her sails and rigging, but had no man hurt.—The *Palmyra* was armed with one long brass 18 pounder, and eight 18-pounder carronades, and had a crew of 88 men, "a mixture of all nations and the friends of none." It was ascertained that they had robbed several vessels of the United States, and a part of her crew was recognized as having committed certain acts of piracy—all which, it seems that lieutenant Gregory has taken care to obtain the proof of. The people of St. Thomas were much pleased with the capture of this vessel. The sick and wounded were sent to Porto Rico, by lieutenant Gregory, with a letter to the governor, stating the circumstances under which he had made the capture of the brig, and hoping it would cause no coolness between the United States and Spain: But it is said that the governor immediately embargoed all the American vessels, and imprisoned all the American citizens there.

On board of the *Grampus* and her prize, 77 prisoners, with the former captain of the brig, were brought in. In consequence of having so great a number on board, the duty of the officers and seamen has been severe to guard against a surprise. They slept upon deck for 28 nights, but are all healthy.

THE DROUGHT. A York, (Penn.) paper, speaking of the "Big Conewago," says—"This stream, which is the reservoir of the waters on this side of the South Mountain, and a range of lands of some 20 or 25 miles above the bridge across it on the Carlisle road, has its channel entirely bared of water. Above this bridge, the Conewago receives its principal tributary streams, Oppossum, Bermudian and other creeks, which, in low water, hitherto presented a volume of water, filling a channel from 90 to 120 feet wide, in which there was not a drop to be seen on the 13th of September, 1822.

MASSACHUSETTS. A census of the population of the state of Massachusetts, in the year 1764, (not sixty years ago), has just been published; from which it appears that the grand total was, at that day, 248,714 souls, of whom only 20,788 belonged to Maine. The population of Massachusetts proper, was, by the last census, 622,287, and that of Maine, 297,839; making together 821,126; having more than trebled within the period of sixty years.

JOHN HANCOCK. During the siege at Boston, general Washington consulted congress upon the propriety of bombarding the town of Boston. Mr. Hancock was then president of congress. After general Washington's letter was read, a solemn silence ensued. This was broken by a member making a motion that the house should resolve itself into a committee of the whole, in order that Mr. Hancock might give his opinion upon the important subject, as he was deeply interested from having all his estate in Boston. After he left the chair, he addressed the chairman of the committee

of the whole in the following words: "It is true, sir, nearly all the property I have in the world is in houses and other real estate in the town of Boston; but, if the expulsion of the British army from it, and the liberties of our country require their being burnt to ashes, issue the orders for that purpose immediately."—*Boston Patriot.*

NAPOLEON. In Dr. Meara's work, entitled "A voice from St. Helena," detailing his various conversations with the late emperor, we have the following as his own words: "To give you an instance of the general feeling in France towards the Bourbons, I will relate to you an anecdote:—On my return from Italy, while my carriage was ascending the steep hill of Tarare, I got out and walked, without any attendants, as was often my custom. My wife and my suite were at a little distance behind me. I saw an old woman lame, hobbling about with the help of a crutch, endeavoring to ascend the mountain. I had a great coat on, and was not recognized. I went up to her, and said, well *ma bonne*, where are you going with a haste which so little belongs to your years? What is the matter? "*Ma foi*," replied the old dame, "they tell me the emperor is here, and I want to see him before I die." Bah! bah! said I, what do you want to see him for—what have you gained by him? he is a tyrant as well as the others; you have only changed one tyrant for another, Louis for Napoleon. "*Mais Monsieur*, that may be; but, after all, he is the king of the *people*, and the Bourbons were the kings of the nobles; we have chosen *him*, and if we are to have a tyrant, let him be one chosen by ourselves." There, said he, you have the sentiments of the French nation expressed by an old woman."

STEAM. From an English paper. On a new line of road now cutting between Bury and Bolton, about half a mile distant from the former town, one of Kay and Routledge's patent rotary engines is a machine something similar to a bone mill, but considerably stronger, and breaks the stones to cover the road at the astonishing rate of 70 or 80 tons in 10 hours. The engine is mounted on wheels, so that it can be removed to any part of the road without being taken to pieces. This novel application of the power of steam originated with the spirited and ingenious inventor of the rotary engine. By it the commissioners of the road are enabled to prepare materials on a scale of economy not before contemplated.

LAW CASE. Copy right of a newspaper—from a Scotch paper. On the 4th July, the court of session (second division), determined an important point regarding the copyright of newspapers.

John and Peter Wilson, in 1803, established a newspaper called the *Ayr Advertiser*, or *West Country Journal*, which speedily became a lucrative concern, and thenceforward belonged to them equally. In 1809, Peter Wilson sold his half share to a third person, receiving a premium or price for the copy right, exclusive of the stock. The purchaser afterwards sold it to two strangers, receiving the same premium as he had paid.

John Wilson retained his original half share till his death in May, 1821. Conceiving it to be a valuable part of his estate, he, by his will, conveyed his half share of the copyright to his testamentary trustees. In all the changes of partners or proprietors, from the first establishment of the newspaper, there had been no written contract of co-partnership betwixt them.

John Wilson's trustees were about to sell his half share, when the two persons who had last purchased the other half presented a bill of suspension and interdict, to have the trustees restrained, upon the allegation that there was no such thing as the copyright of a newspaper; that the right to print and publish a newspaper, exercised by two or more persons associated together, just resembled any other trade; and that, upon the death of any partner, there being no written contract providing otherwise, the good will, as it is called, of the business accrued to the survivors. Lord Meadowbank, in the bill chamber, appointed the bill to be answered, and granted the interdict. On advising the bill, with answers, lord Cringletie appointed parties to prepare memorials to the court. In these memorials the case was fully argued.

The court were unanimously of opinion, that the right of printing and publishing a newspaper, or the share of such a right, however anomalous it may be in point of principle, and whether it might be called copyright, privilege, property, or whatever other name, is a valuable right, now perfectly known and understood, and is, by the common law, both transferrable, *inter vivos*, and transmissible to heirs, independently of any written contract between partners or proprietors. They, therefore, recalled the interdict, and refused the bill, with full expenses.

FOREIGN NEWS.

Great Britain and Ireland. The prospects of the harvest in England continued good, and the distresses of the people of Ireland remained unameliorated.

An *adder* has been killed in England that was found to contain thirteen young partridges.

No fewer than 6,040 persons were committed to jail in 5 years, from 1815 to 1821, under the game laws of England.

Spain. A squadron was about to sail from Toulon, supposed to be intended to cruise on the Mediterranean coast of Spain. The hostile designs of France are now pretty evident, and it seems to be a grand project to get possession of the person of the king, that he may sanction, by his presence, an invasion of the country! The Spaniards appear to be aware of this; and, perhaps, the idea may cost the poor simple creature his life, before there is an end of such proceedings. It was thought that the Spanish minister at Paris would be called home.

The monk of La Trappe, who excited the church militant to arms in defence of the catholic faith and the holy inquisition, made himself master of the forts of La Leo de Urgel, in the latter part of June. He has since assumed the title of "First Consul of the moderate republicans!"

There is much detail about the proceedings of the "factious" in Spain. In some instances they appear to be in considerable force, armed and prepared to effect a change of the constitutional system to an absolute monarchy. Many petit battles take place, which are represented to be as generally unfavorable to them. The accounts chiefly go to shew that Spain is in a very disordered condition. The whole province of Catalonia has been declared in a state of war!

The "*Aurora*," says—The cortes at Madrid have detected and possessed themselves of a secret treaty, entered into between Louis XVIII. and Ferdinand VII, negotiated by the duke del Infantado and count Legarde; which had in its express view, the overthrow of the constitutional and representative system of government.

The march of a large French army to the frontier, (*cordon sanitaire*), was stipulated to be, at stated times, augmented to 50,000 men: military supplies to be provided by France.

Great Britain to aid with her fleet, and, on condition that she should not acknowledge the independent states of the new world, Spain would cede to her the island of Cuba.

This treaty was entered into deliberately by Ferdinand, and when it was presented to him was not denied; but he promised (for the hundredth time) to be faithful to the constitution, if spared on this occasion.

The seizure and execution of the leaders of the liberales—Riego, Quiroga, &c. were among the stipulations, and the concurrence of Austria and Russia was expressly stated.

A Gibraltar paper of Aug. 7, says—The following is a translation of the note addressed to the Spanish secretary of state for the foreign department, by the foreign ministers at Madrid, on the 7th of July, of which an article in the Universal, referred to in the Chronicle of the 30th of the same month, had enabled us to give but an imperfect idea:

"After the deplorable occurrences which have just taken place in this capital, the undersigned, a prey to the liveliest apprehensions, on account both of the terrible situation his catholic majesty and his family are placed in, and of the dangers which threaten their august heads, again address his excellency, Mr. Martinez de la Roza, to repeat, with all the solemnity which interests of such magnitude call for, the verbal declarations which they have had the honor collectively to make to his excellency.

"The fate of Spain and of all Europe this day depends on the security and inviolability of his catholic majesty and of his family; this precious deposit is committed to the care of his majesty's government, and the undersigned take pleasure in renewing the acknowledgment, that it could not have been entrusted to ministers more honorable, or more worthy of confidence.

"The undersigned, perfectly satisfied with the explanations, full of dignity, loyalty and regard for his catholic majesty, which they yesterday heard from the mouth of his excellency Mr. Martinez de la Roza, would be wanting in their most sacred duty, if they should not repeat, on this occasion, in the name of their respective sovereigns, and in the most formal manner, the declaration that, on the conduct which will be observed towards his catholic majesty, irrevocably depend the relations between Spain and the whole of Europe, and that the least insult to the king's majesty would plunge the peninsula into an abyss of calamities.

"The undersigned avail themselves of this opportunity to renew, &c."

(Signed) The nuncio of his holiness; the ministers of France and Denmark; the charge d'affairs of Russia, Austria, Prussia, the Netherlands, Saxony, Portugal and Sardinia.

[The British minister, it was stated in the above mentioned article of the Universal, refused to sign the foregoing note on the ground of mere etiquette, but sent in a separate one to the same effect.]

Italy. By a storm of wind and hail, 127 persons were killed in the city of Venice, on the 24th of June.

Sweden. The king of Sweden has issued an *Ordonnance*, by which Swedish subjects are permitted to trade with all the places of the South American continent. To encourage that commerce

still more, a diminution of the custom duties, which hitherto took place only in certain cases, will extend to all merchandise coming from South America to Sweden, imported in Swedish vessels.

Russia. From a report lately made of the extent, population, industry, commerce, &c. of the Russian empire, it appears the 50 governments of Russia comprehend 298,950 geographical square miles, and contain 40,067,000 inhabitants. There are 3742 manufactories in the empire. The capital employed in commerce, as stated by merchants, amounts to 319,660,000 roubles. The revenue arising from the poll-tax, and that upon drink, is stated at 169,350,000 roubles.

Turkey. It is confirmed that the Greeks succeeded in blowing up some of the Turkish fleet, by their fire ships—one of them was a new 74, with the captain pacha and 2000 men. In consequence, the final massacre took place at Scio, and between 4 and 5000 persons were butchered. The Greeks at sea are still able to check, if not defeat, the whole naval power of the Turks; and they feel a confidence of being able to work out their own liberation. Nearly the whole of the Morea is in their possession, and their army therein is reported at 60,000 men, tolerably well armed, but wanting ammunition. The Turks only hold two places in Candia—the Egyptian and Barbary fleets had attempted to relieve them, but they were beaten off with considerable loss. The following is given as an account of the naval forces of the Turks and Greeks—that of the former, in the hands of our brave and experienced seamen, would prove itself the most powerful: the Turks have 6 line of battle ships, 11 frigates, 15 to 20 corvettes, and 20 gun boats; the Greeks in two divisions of 40 each, principally brigs of about 250 tons, a few ships, say 8 or 10, of 4 to 500 tons.

East Indies. A new weekly paper, edited by a learned Hindoo, has been recently published in India, in the Bengalee language. It is the first attempt of the kind; but the first and second numbers were purchased with so much avidity that both were out of print. The subjects on which they treated were the liberty of the native press, and the right of trial by jury. The title of the paper is as singular as its publication is novel. It is entitled "*Singpand Cowmuddy*," or the "*Moon of Intelligence*." The Sun and the Star are by no means uncommon titles; but this is the first instance we have known in which an editor has even impliedly admitted the existence of lunar influence as applied to himself, although the fraternity are often very willing to acknowledge the great extent to which it prevails over others!

Barbary. The plague rages severely at Algiers. It lately prevailed through the whole country, but, in the present case, is yet confined to the capital.

Peru. The state of Peru has established a new flag of three stripes, two of a carnation red on the exterior of a white stripe; in the centre of the white stripe, a sun in carnation red. The superior flag, or flag of the state, a carnation red, with a sun, all in white in the centre. The colors of merchantmen to be the same as the national, three stripes.

Buenos Ayres, May 23. The government has this day received a communication from the agent of the United States of North America, by which the most important facts are made known.

1. A message from the president of the United States and a report from the secretary of state to the congress of the United States, of which exact translations shall be made and published in the gazettes.

2. Both of these documents shall be published and printed separately, in a supplementary number of the official register.

3. This supplement shall be issued and circulated free of expense.

4. The minister of exterior relations is charged with the fulfilment of this order, and distribution of the supplementary register.

(Signed) RODRIGUES, *President.*

BERNARDO RIVADAVIA, *Sec'y of state.*

Hayti. A letter dated Port au Prince, Aug. 24, says—Gen. Romain, a former duke of Christophe's, undertook to raise a kind of insurrection among the Haytians; his purpose was, however, defeated by his arrest, and he not being willing to be taken, or, at least, making considerable resistance, was immediately shot by the guard in the street of *Leogane*, a town about 30 miles distant from this place; he had also hired a young man to bear despatches to *Cape Haytien*, his place of residence, for the purpose of exciting them to an insurrection; the messenger was, however, caught, brought to this place, had his trial on the 20th, was shot the same day, which I was witness to; since which president Boyer has issued the following proclamation:

Proclamation to the people and army.

JOHN PETER BOYER, president of Hayti.

Citizens—Our country was but a short time ago divided and torn by intestine factions. The traces of desolation are to be seen every where; we still behold the victims of those frightful times when crime was heaped upon crime, and when unbridled passions, overturning what might have constituted the force of the country, prepared an easy access for foreign enemies, who unceasingly meditated the destruction of our national independence.

You cannot have forgotten the calamities which have afflicted you for more than twenty years; you are not ignorant of the want of union being the sole cause of all your misfortunes. You are witnesses, that the government, since the foundation of the republic, has not deviated from the route marked out for the amelioration of your condition. By perseverance and good faith, by watchings and sacrifices, it has dissipated the clouds which were gathered over your heads; it has united and attached the scattered parts of the state to a common centre, and has formed out of all the Haytians only one family, rendering triumphant throughout our island the principles of true liberty, the advantages of a wise equality.

The prosperous futurity which such a change seemed to promise to the children of Hayti frightened its foreign enemies, and overwhelmed with chagrin those few within it who regarded the nation as existing only for themselves, and who were ever ready to sacrifice it to their vanity and ambition. Thus both conspired against the public felicity, because their efforts, altogether directed to a different end, co-operated to impede our progress to prosperity.

In fact, whilst I pacified the eastern part, and that glorious revolution proved to Europe the force of our institutions and the shameful and fruitless attempts of France against the Presquile of Samana, gen. Romain, a man whom, on account of his age, (and with a view to satisfy such as dream of our ruin, that no individual influence could overturn the state), I had rescued from the death he merited for having organized the conspiracy at Gonaives in February, 1821, sent secret emissaries to the north to foment troubles and augment the number of his partizans—with what intentions? It could only be for the purpose of subjecting his fellow-ci-

tizens and of obtaining the supreme command, by pursuing the path pointed out to him by Christophe. He, therefore, made use of the same means as the latter did against the victorious Pétion to excite doubts as to his devotion to his country.

With the exception of a few wretched intriguers, none have become the dupes of the artifices of Romain, who, more effectually to deceive good citizens, sent, in the names of generals Gedeon and Lamotteaigron, a messenger to general Magny, to excite disquietude in his bosom and to shake his devotion. For this purpose the old and ridiculous measure was resorted to, of spreading a report that the country was sold to the French. Gen. Magny, highly honorable and indignant at the message which had been addressed to him, arrested James Peter Lamotte, the bearer of it, and informed me of the conspiracy that existed. In answer to gen. Magny I repelled the idea of generals Gedeon and Lamotteaigron being the authors of this infamous message—and ordered the criminal messenger to this capital. But general Romain heard of this the moment it reached Leogane, and attempted to escape from that place, in which he was a prisoner. General Gedeon, who was responsible for his person, and charged with strictly watching him, then ordered him to the guard house—he formally refused to obey, and compelled them to use an armed force, which he also resisted: It is this resistance which, to my sincere regret and contrary to my intentions, has caused the death of general Romain, who doubtless preferred thus to bury his crime than to appear before judges whose severe equity would have quickly unveiled his abominable machinations. Such has been the end of a man, who, because he fought, as did many others, for his country, supposed he could subject it to his will and his caprices. This circumstance, although it has opened the eyes of the nation, and has called forth additional proofs of their unshaken disposition, has, nevertheless, induced other intriguers of a different class to believe, that the moment was favorable for the execution of their projects, by becoming the complaisant echoes of the seditious words of general Romain. Public opinion has defeated the plans of these perverse men, and the vigilance of government will pursue them till they have fallen beneath the sword of the law.

Citizens, the government, strong in the rectitude of its principles, will always march with a firm step, in order that you may enjoy that peace which is the disdain of your enemies, and for which you have made such heroic sacrifices. Neither the speeches nor the arts of ambitious men shall intimidate them; but your repose will be troubled, your families tormented if you do not exert yourselves to stifle them, by denouncing to the magistrates placed as a guard over the public tranquillity, those persons who spread alarming reports, whose seditious proposals have a tendency to shake your confidence. Observe well that these atrabilious characters are to be found in all countries; they are restless and envious, never satisfied with what may be done for them, and their tastes flattered only by the adoption of such innovations as they themselves propose. Thank heaven, their number is but small, and your patriotism sufficient to restrain them, and prevent them from again uniting in order to divide you. If, I repeat, you point them out to the proper authority, they shall no longer be the agents of our external enemies, who await only the slightest disturbance in our country to fall on it and destroy all that you have done for

the happiness of your posterity and the glory of the Haytian name.

Magistrates, functionaries of every description, you are responsible for the public tranquillity; recollect that the people wish to enjoy their liberty, their independence: that it will no longer be the sport of intrigues and factions; that it will obey only the voice of government for the defence of its interests and its rights. Hunt down these alarmists, whomsoever they may be, or to whatever corporation they may belong; pursue them according to the established rules, that they may be convicted and punished according to law, and that the honest and peaceable citizen may be protected. Fulfill, punctually, the obligations you contracted on accepting public stations; know that if your fellow citizens consent to respect you, to honor you as public officers, it is because they consider you as the watchful guardians of their repose; far be from you the criminal idea of acting like those men, who were ambitious of authority, solely because it offered them lucrative advantages, and the power of oppressing their fellow creatures.

Soldiers—You have ever been in the republic, and will forever be the columns on which the national edifice will rest. You will be constantly the terror of designing men, since you have learnt to appreciate the sweets of liberty amidst privations and sufferings known only in camps. You have sworn on your arms, fidelity to government; listen to my voice, it will be raised only to direct you in the path of honor; you have seen me sharing your pains, your fatigues and your dangers; you will still behold me, to my latest breath, consecrating my existence to your happiness, and to make you fondly cherish our rallying words—Long live liberty! Long live independence! Long live the republic!

At the national palace of Port au Prince, 19th August, 1822.

BOYER.

By the president.

B. INGINAC, *Sec'y gen'l.*

Mexico. A letter published at Havana, represents this country as already so dissatisfied at the new order of things, as to have caused the assembling of a force of 10,000 men, who call themselves the "army of the republic." If such is the fact, and such they are, we wish success to them.

The Shakers.

FROM THE PITTSBURG (PA.) RECORDER.

The following account of the Shakers, in Warren county, Ohio, has been furnished by the rev. *Jonathan Leslie*. It probably contains as correct and particular information of their peculiar tenets and practices as any heretofore published.

Mr. Andrews—I here send you an account of the Shakers and their creed, taken from personal knowledge, and acknowledged correct by their elders, together with some of my own remarks on their appearance, manner of worship, &c. You are welcome to publish the whole, or any part of it, as you may think best.

The Shakers live in a village called Union, 30 miles from Cincinnati, and 4 from Lebanon, the seat of justice for Warren county, Ohio.

Their number is 600, and they live in 11 families. The number of individuals in each family varies from 40 to 60, one half men, the other half women, who attend to their appropriate business.

Their dwelling houses are brick and frame, spacious, neat and plain, well finished and convenient. Their apartments are not decorated with ornaments; but are supplied with useful furniture. They are

neat farmers, and their mechanical work is completely executed. Their orchards and gardens are extensive. They have plenty to eat and wear, and appear to be contented with their condition. They are hospitable and social, and frequently bestow large charities to worthy objects.

They have a meeting-house, two stories 65 by 56. The outside is painted white, the roof as well as the walls, which gives it a singular appearance. In the upper story the ministry live. They are two men and two women, who are said to have arrived to an extraordinary degree of holiness. They superintend the whole community, visit different stations, and hear the confessions of those who are initiated into their community. The lower story is for public worship on the Sabbath, and in it are accommodations for a great number of spectators.

In each family are two male and two female elders, who have the whole spiritual direction of the members, and two male deacons, who furnish the kitchen, and attend to all the temporal concerns of the family.

First called at a great house, opposite the meeting-house, and had considerable conversation with three elders; who are men of intelligence and capable of expressing their ideas clearly. They directed me to Matthew Huston, for they Mr. no one who is appointed to converse with the people of the world, and to entertain them. He had formerly been a Presbyterian minister, and left that body in the time of the revival in Kentucky. He appeared very willing to gratify my curiosity, and answer the queries I made relative to their belief and practice.

At 8 o'clock, their stated hour for evening devotion, a folding door was opened, which united two spacious rooms. The men and women formed each a column facing one another, with a space between, at the head of which elder Huston stood. Their devotion commenced by all singing a hymn, in one part of music. The tune was lively, and their words were plainly pronounced. Amongst the women, were several little girls. After singing, the elder gave a short exhortation, and bade them prepare for labor. Then the men pulled off their coats, and the women some of their loose clothes, and all faced towards the head of their column.—Four of the brethren and as many sisters sung and the rest danced. At certain turns in the music, they spat on their hands, turned entirely round and still continued dancing. They sung a more lively tune, and danced with a more lively step.—They sang another hymn and immediately retired to rest.

My feelings at what I have just seen I cannot express. Their hymns are poor compositions, and partake strongly of their peculiar sentiments. Their singing and dancing are very similar to what I have frequently seen practised by the Indians. Never did a greater mixture of sensations crowd upon my mind. I felt contempt for their folly, pity for their ignorance, indignation at their leaders, who, to think the most charitably of them, ought to know better, and I wept at the awful disappointment they must experience when they enter the eternal world—when their sandy foundation shall be swept away, their hopes fall, and they be forever undone!

I retired to rest; but the recollection of what I had seen drove sleep from my eyes. I concluded they only are happy whom the arms of everlasting love support.

In the morning they rose at 4 o'clock and one half hour after attended their morning devotions. They took their places as described last evening, and sung a hymn of praise to, and expressive of, confidence in God their mother, after which they all fell upon their knees, and appeared to be in silent devotion for some minutes. They then arose and went to their respective apartments.

They are regular and systematic in every thing they do. They retire at 9 o'clock, rise at 4, breakfast at 6, dine at 12, and sup at 6. They keep a school, where children of both sexes are taught.—It is said that their teachers assiduously inculcate their peculiar principles upon their pupils. When their children are of lawful age to act for themselves, they insist on their making a choice either fully to unite with the community or to leave it. They inform me that, in seven years past, 200, young and old, have joined their community. They have no summary of doctrine; but, by looking over their books, and from conversation with them, I drew up the following creed, which they acknowledge as their belief.

There is one God, but no Trinity of persons in the Godhead. That the Son is inferior to the Father, and in the work of creation was used as a subordinate agent. That the principal excellency of the man Jesus Christ consisted in his being filled with the divine spirit. They deny the propitiatory nature of the atonement of Christ, and hold that he suffered only for our example, to show us how we are to crucify the flesh, that is, to eradicate our natural propensities and affections. They believe that none of those who died before Christ went to heaven, but that a number of them went with him to that blessed place, after his resurrection.

They believe that the plan of salvation was not developed, nor perfect holiness required of those who then professed religion. But that Christ has come a second time, "without sin unto salvation," in the person of a female; and now the plan of salvation is perfectly revealed and understood by all Shakers; perfect holiness is now required and attainable, and the example of Christ is to be literally followed. Hence they will not permit the members of their church to marry; nor those who are married, when they unite with them, to live together as husband and wife. They believe they are the children of the resurrection, and must neither marry nor be given in marriage, but be as the angels of heaven.

They deny the doctrine of God's decrees, and of justification through faith on the merits of Christ. But believe, when they confess their sins to their ministry and are absolved, they then live perfectly holy and free from every taint of sin. They believe the day of judgment commenced when Christ appeared the second time in the person of Anna Lee, and that it is still progressing. That her spirit diffused on the ministry enables them to judge, acquit, or condemn, and that they confer a portion of that same spirit on all that they account worthy of eternal life, which lives in, and continually governs them.

They say the resurrection is past, and will never be a resurrection of the body. They believe that judgment, begun in this world, will be continued until all the souls of the wicked, who departed this life ignorant of the gospel, as it is held by the Shakers, have an offer of it, and if they become Shakers, they shall be saved; if not, they shall be made eternally miserable. They believe the Bible is of no use now, farther than to prove the introduction of their new dispensation.—It is the old heavens which

have passed away. They deny the charge of worshipping Anna Lee. They trace the origin of their denomination from the French Jumpers.

Though they disavow worshipping Anna Lee, yet in their hymns they address their parents and their mother. It is my opinion they worship her as much as they worship Jesus of Nazareth.

Massachusetts Colonization Society.

From the Boston Daily Advertiser, Sept. 7.

The adjourned meeting on the subject of an Auxiliary Colonization Society, and of a society to aid in the suppression of the slave trade, was held on Wednesday evening, *George Blake, esq.* in the chair, *Mr. Lewis Tappan*, secretary, in the absence of the rev. *Mr. Frothingham*, who acted as secretary at the previous meeting. The following report was presented by the committee and read, and, after an interesting discussion of the whole subject, was unanimously accepted.

The committee appointed to consider the expediency of forming a society for the purpose of aiding the funds of the American Colonization Society, or of assisting in the suppression of the slave trade, have paid such attention to the subject referred to them as the time and their opportunities would permit, and respectfully submit the following report:—

The importance of providing some remedy for the evils arising from the rapid relative increase of the black population in some portions of our country, is becoming every year more serious. It is now well known, that, where a slave population abounds, their ratio of increase is much greater than that of the people among whom they live; hence the time cannot be far distant, when their numbers, in some of the states, and their power, will predominate over that of those who hold them in servitude, unless some mode is devised of diminishing their numbers, or some provision made for removing the surplus portion of them.

It was in the expectation of furnishing, in some measure, a remedy for these evils, or at least of diminishing their danger, that the American Society for colonizing the free people of color of the United States was established. The society has been in operation nearly six years, and its affairs appear to have been conducted with much enterprise and zeal, and, as your committee believe, in a spirit of enlightened christian benevolence.

Were the objects of the society extended no farther than to the colonization of such people of color in our country as are already free, or who will become free in the ordinary course of events, they would not, in the view of the committee, be such as to excite that deep interest among us, which is necessary to secure a very active co-operation. It might, indeed, afford some advantages to that unhappy people to remove them from their present degraded state, to a condition more free from temptations to vice, and more favorable to moral and intellectual improvement; and it would, doubtless, confer a benefit upon the community from which they are taken. And if, through the medium of a colony thus established, the arts of civilized life and the blessings of christianity can be introduced among the people who are ignorant of both, the good that may be done, may be greatly increased. But the accomplishment of the objects, valuable as they are, appears too remote and of too difficult attainment to admit of their enlisting our feelings very ardently in the cause. Other objects of benevolence press upon us with more urgent

solicitations and more immediate prospects of usefulness.

But if, while those purposes are accomplished, the colonization of the free people of color will aid effectually in the suppression of the slave trade, so as to lead to the entire abolition of that detestable traffic; and, at the same time, afford such encouragement to the emancipation of slaves as to prepare the way for the gradual extermination of slavery, it would become an object worthy of the attention and assistance of the whole christian world.

That such are the designs and expectations of those who are most active in managing the concerns of the American Colonization Society, the committee have the fullest confidence. The committee are not prepared to give an opinion how far these expectations are likely to be realized. If a colony, decidedly and actively hostile to the slave trade, can be maintained on the coast of Africa, and especially if several could be supported on different parts of that coast, much might doubtless be done to aid cruisers in the pursuit of slave ships, by furnishing supplies, and by giving information of their places of rendezvous. We are also assured that there are proprietors of slaves who are desirous of emancipating them, and that many will be thus emancipated as soon as an asylum shall be suitably prepared for them, and the means provided of transporting them to it.

We have no means of ascertaining how extensively such a disposition prevails among the holders of slaves. But there is reason to apprehend that it is at present limited to a very small proportion of them. The events of the last two or three years have furnished melancholy proof, that the great body of the people in the slave holding states are very little disposed to relinquish any of the advantages which their slaves afford them. That there are exceptions to this feeling, we are fully persuaded—and we hope there are many. It is only from the belief which the committee very cordially entertain, that the active members of the American Colonization Society are perfectly disposed to frame their measures with reference to the entire suppression of the slave trade, and to a gradual and prudent, but complete, emancipation of those now held in slavery, that we can regard the society as having any claim upon the sympathy or assistance of the people of New-England.

At the same time, there are other modes by which assistance can be given towards suppressing the slave trade, without losing sight of the objects which have been mentioned.

A society is particularly needed to aid in prosecuting those who are concerned in carrying on this trade. By combining the influence and exertions of its members, this purpose may be accomplished much more effectually than it can by individuals alone.

The committee would, therefore, respectfully recommend, that a society be formed for the general purpose of assisting in the suppression of the slave trade; that a subscription be opened to provide funds for the proposed society; and that the government of the society be fully authorized to make such a disposal of the funds as they shall judge most conducive to the object of its institution. If, on further attention to the subject, the managers of the society shall be satisfied that the operations of the American Colonization society are favorable to the suppression of the slave trade, they will be disposed to aid them as far as their funds will permit; while they will not neglect any other means that may present themselves, of accomplish-

ing that object. As, however, there may be some who are prepared to contribute at once to the American Colonization society, the committee would propose, that the subscription should be so arranged as to leave it to the option of each subscriber, either to appropriate the amount of his subscription directly or indirectly to that object; or commit it to the disposal of the government of the society.

Per order,

E. HALE, Jr.

The committee also presented a draft of a constitution of the proposed society, which was adopted, as follows; and it was voted that the blank in the second article be filled by the managers:

Constitution of the Massachusetts Society to aid in the suppression of the Slave trade.

Article 1. The society shall be called "the Massachusetts Society to aid in the suppression of the Slave trade;" and its objects shall be, either to assist the American Colonization society, or to contribute towards suppressing of the slave trade by such other means as the managers shall judge best.

Art. 2. Every person who shall subscribe and pay annually a sum not less than — dollars, shall be a member of the society.

Art. 3. The officers of the society shall be a president, vice-president, corresponding and recording secretary, and a treasurer, who shall also be managers, and five additional managers; the board of managers shall have power to elect honorary vice-presidents.

Art. 4. Every member shall be permitted to appropriate the amount of his subscription, either to be paid over to the American Colonization society, or to be left at the disposal of this society, as he shall direct in his subscription.

Art. 5. All the funds of the society, not specifically appropriated, as described in the preceding article, shall be subject to the order of the board of managers, to be disposed of as they shall judge most conducive to the objects of the society.

The society was then organized by the election of the following officers:

Hon. Daniel Webster, <i>President.</i>	
George Blake, esq. <i>Vice-president.</i>	
Rev. S. F. Jarvis, D. D. <i>Corres. secretary.</i>	
Bradford Sumner, esq. <i>Recording secretary.</i>	
Samuel H. Walley, esq. <i>Treasurer.</i>	
Richard Sullivan, esq.	} <i>Managers.</i>
Mr. William Sturgis,	
Bradford Sumner, esq.	
E. Hale, Jr. M. D.	
John Tappan, esq.	

National Policy.

TO THE EDITORS OF THE NATIONAL INTELLIGENCER.

Gentlemen: One of your late papers contains a strong panegyric on what you are pleased to style the "let-us-alone policy of our government," predicated on the present prosperous state of some of the manufactures of our country; which you appear to regard as an indubitable proof of the correctness of the rejection of the applications made by the manufacturers to congress for additional protection in past years, and of course of the impolicy of those applications.

I answer to your own expressions:

"Let us alone."—Every day brings to our view some additional proof of the wisdom of the policy of our government, in refusing to meddle with the interests of the manufacturers. In every part of the country where they are conducted with any sort of discretion, they are prosperous, no less in

the west than in the east, in the middle than in the extreme states.

How far congress, the parent of this policy, is entitled to the panegyric—and how far the policy in question displayed a sound view of the national interest, or humanity and justice towards the manufacturers, a large, respectable, and useful body of citizens, will appear from a very brief view of the subject.

War was declared in the year 1812: and through the pernicious operation of the "let-us-alone policy" pursued respecting manufacturing industry, from the organization of the government, it found the country in a lamentable destitution of the means of supplying itself with the most necessary articles of linen, cotton, or woollen clothing, for which, as well as the great mass of manufactures of iron, steel, brass, copper, &c. we had been almost wholly dependent on Europe. The supply of foreign merchandise of every description in the country was then inconsiderable, in consequence of years of embargoes, non-intercourse, &c. &c. and, being utterly inadequate to the demand, prices rose considerably.

This state of things tempted our capitalists, among whom were hundreds of merchants, whose commerce was nearly annihilated by the war, to devote their time, their talents, and their industry, to manufacturing establishments, in order to supply the deficiency. In those establishments, which arose, as it were, by magic, in every part of the country, millions were invested—and such were the energies of the citizens engaged in those pursuits, that, in a very short time, the wants of the country were supplied, and prices restrained within reasonable bounds; whereas, but for this timely aid, they would have risen most exorbitantly.

In these undertakings the parties had to struggle with immense difficulties. There having been little previous encouragement for machinery, and for certain manufactures, particularly cotton and woollen, mechanists and workmen were scarce and inexpert. Many of them led their employers into useless expenses, through their incapacity. Their wages were in many instances extravagantly high, as were all the raw materials, of which the prices were generally doubled, and in many cases trebled. The manufacturers effected loans, and contracted debts, in paper money, which were to be repaid ultimately in solid coin. In a word, it is a subject of wonder to every rational person, how they were able successfully to contend with, and finally to overcome, the host of difficulties and embarrassments with which they were surrounded. But, to their honor be it recorded, they were generally successful, and were 'in the full tide of successful experiment' when, unexpectedly, peace was proclaimed, and our country was deluged with rival foreign manufactures, which were sold in many cases at and below prime cost. The consequence was, that the markets were almost wholly supplied by them, and closed against our citizens.

In this period of distress, with ruin impending over them, they appealed for protection to that country to whose wants they had in time of need so beneficially ministered. But the appeal was in vain. The tariff was modelled almost wholly with a view to revenue. The article of coarse cottons forms a striking and splendid exception. They were protected by duties nearly prohibitory, averaging probably sixty per cent.

At the first glance it appears extraordinary and almost unaccountable, that the manufacturers of these articles should have such a powerful protec-

tion, and their fellow citizens, engaged in manufacturing woollens, iron, steel, brass, copper, lead, tin, glass, and china, have no more, the first than twenty-five, and all the others twenty per cent. This displays a very unequal distribution of favor, which is wholly irreconcilable with justice and consistency. It would be impossible to assign any sound reason why one class of citizens should be shielded by duties of sixty per cent—and others by no more than twenty. But the motive is easily developed. The manufacture of coarse cottons affords a most important and extensive market for the grand staple of the southern states. If imported at twenty or twenty-five per cent. duty, that species of goods, in consequence of their low price, would yield but little revenue. Therefore, in affording the domestic articles full protection, the solid and substantial interests of the cotton planters were carefully and scrupulously guarded, without materially affecting the revenue.

This, however, is somewhat of a digression. I return to the main point.

The affecting appeals to the justice, to the humanity of congress, were rendered nugatory—and all sympathy for the awful sufferings of the manufacturers were extinguished—by a cry of extortion, which, for illiberality and injustice, (I might use stronger terms with perfect propriety), has never been exceeded. Men who sold cotton at thirty-three cents, and wool at three dollars per pound—flour at eleven, twelve, thirteen, and even fourteen dollars per barrel—and tobacco at one hundred and eighty-five dollars per hogshead, felt no "*compunctious visitings of conscience*" at the transcendent injustice of branding their suffering and ruined fellow-citizens with the odious accusation of extortion for raising the price of broadcloth and other articles, forty, fifty, sixty, seventy, or eighty per cent. *beyond the peace prices*; whereas, be it observed, the raw materials were advanced from one hundred to two hundred and fifty per cent—labor fifty or sixty, and paper money, which formed the great mass of the national currency, had depreciated ten, twenty, and thirty per cent. Thus it was perfectly just and right for the farmers and planters to raise their prices one hundred, one hundred and fifty, or two hundred per cent—whereas it was monstrous wickedness for the manufacturers to raise theirs one-half or one-third as much!! That the world has never exhibited a more shocking illustration of the parable of the beam and the mote, will scarcely be denied by any man who has a regard to his character for veracity or honor.

From year to year, from 1816 to 1820, distress and ruin spread among the manufacturers. All the powers of language were exhausted in imploring the interference of congress to rescue them. But, I repeat, to all entreaties, expostulations, and appeals to justice or pity, an inexorably deaf ear was turned. Millions of money which had been invested in useful establishments were sacrificed—hundreds of estimable citizens, who had embarked their fortunes in those establishments, were bankrupted—and thousands of workmen bereft of employment, some of them thrown on the overseers of the poor for support, others driven to labor on the roads, and a large proportion to the pursuits of agriculture, for which their habits wholly incapacitated them: and thus the agricultural part of our population was deprived of so many consumers, who were perniciously converted into rivals. It is needless to dwell on the pernicious operation of this system on the agricultural interest.

While these lamentable scenes were going on,

it was confidently asserted that manufactures were adequately protected—that the complaints of the applicants were unwarranted—and that the clamor on the subject arose from persons disaffected to the government! These assertions, destitute of the shadow of foundation, to which the state of the country gave the most pointed contra-faction, were re-echoed, in and out of congress, with as much confidence as if they were capable of mathematical demonstration. And many of the newspapers throughout the union lent themselves to the dissemination of such delusive statements, to which they afforded factitious credit, whereby every avenue to relief was unfeelingly closed, and the sufferers consigned to hopeless ruin.

But impolicy generally works its own punishment. This was exemplified here in a most remarkable degree. The farmers and planters, the votes of which classes in congress had sealed the destruction of their fellow citizens, were overtaken by and involved in an equal calamity, the natural and inevitable result of the system so fatally pursued, whereby the industry of the country was cramped, and its resources impaired. The enormous importations, which high duties would have checked, and brought within somewhat reasonable bounds, so far exceeded the amount of our exports, that the country, after immense remittances of bank and government stock, was drained of its specie, notwithstanding an importation by the bank of the United States, in 1817—18, of above 7,000,000 dollars, at the enormous expense of above 500,000 dollars. This deprived the banks of their main support. It obliged all of them to press on their debtors, and many of them to stop payment. As a natural consequence, all the operations of industry, of every description, were more or less paralyzed throughout the country—and scenes of distress produced, which, to the end of time, ought to serve as a beacon to warn governments against the "*let-us-alone policy*."

Although these facts are of very recent occurrence, and have left behind them melancholy and lasting memorials of their existence in the blighted prospects of thousands of estimable families, it has lately become fashionable to deny them, and to charge all reference to them to the account of a grumbling and discontented spirit; it is, therefore, incumbent on me to produce vouchers to establish them, beyond the power of contradiction.

A report made to the legislature of Pennsylvania, in the session of 1819—20, presents a most alarming picture of the calamitous situation of the state at that period, from which I submit a few extracts. Among its features are enumerated—

"Ruinous sacrifices of landed property at sheriff's sales, whereby, in many cases, lands and houses have been sold at less than a half, or a third, or a fourth, of their former value, thereby depriving of their homes and of the fruits of laborious years, a vast number of our industrious farmers, some of whom have been driven to seek, in the uncultivated forests of the west, that shelter of which they have been deprived in their native state."

"Forced sales of merchandise, household goods, farming stock and utensils, at prices far below the cost of production, by which numerous families have been deprived of the common necessities of life and of the implements of their trade."

"A general suspension of labor, the only legitimate source of wealth in our towns and cities, by which thousands of our citizens are rendered destitute of the means of support, and are reduced to the extremity of poverty and despair."

"An universal suspension of all large manufacturing operations, by which, in addition to the dismissal of numerous productive laborers heretofore engaged therein, who can find no other employment, the public loses the revenue of the capital invested in machinery and buildings."

This frightful portrait, too true to nature, applied equally to the interior of New-York, and to the great mass of the population of Ohio, Kentucky, and Tennessee, embracing, together, about one fourth part of the citizens of the United States.

Here I might make a stand, and rest the merits of the question on the "let-us-alone policy," the bane and scourge of every nation where it has prevailed. Till all remembrance of those hideous scenes shall have faded from our minds--till these awful warnings shall have been obliterated from our historical records, it is imprudent to vaunt and eulogize the system from which they flowed. It is really "*renovare infandum dolorem*."

But I do not choose to depend on the above proofs alone. I shall bring other authorities, to which many of your readers will more readily bow down than to that of any committee of a state legislature. Only two years and a half have elapsed since the secretary of the treasury summed up a frightful detail of the calamitous situation of the country, with this short statement--

"Few examples have occurred of a distress so general and so severe as that which has been exhibited in the United States."

And one year later, viz. in 1821, a committee of the house of representatives of the United States assigned the general distress of the country as a reason against the imposition of an excise:--

"The imposition of an excise at this season of extreme distress, would be unwise, and is not demanded by the state of the treasury. If imposed, it would be difficult to collect:--and, if collected, it would, in some parts of the union, be in paper little available."

I presume that no man of character will ever hereafter be so unwise as to hazard that character by a denial of these facts, thus resting on the most impregnable basis.

It has afforded matter of intense astonishment to the observing part of mankind, that a nation with natural advantages, rarely, if ever, equalled--certainly never exceeded--with a population second to none in the world for skill, industry and enterprise--with the most perfect freedom of will--with a debt of not more than ten dollars per head--taxes insignificant--an unexpensive government--freedom from tithes--that a nation, I say, under such very favorable circumstances, could, in a period of profound peace, and after a war of only about thirty months' duration, by any conceivable policy whatever, without any great natural calamity, be precipitated in five years from the towering height we occupied at the close of the war, to the abyss in which we found ourselves in 1819, as so accurately depicted by the secretary of the treasury. But this is the natural and inevitable effect of the "let-us-alone policy," whereby the resources of the country, which ought to be employed for the protection of our own industry, are wantonly lavished to promote that of foreign nations.

That the country was, in the year 1821, and is now, in a state of convalescence, is beyond a doubt.

*It is a singular fact, that the revenue of England for the year 1815, was nearly treble--and the mere excise in 1817 was nearly equal to our entire national debt.

For such is the power of human industry, and so boundless are the resources of the United States, that no system of policy, however injudicious, can permanently depress her. She will, by our present policy, so long as it endures, be, from time to time, subjected to a renewal of the calamitous scenes of 1817, 1818, 1819 and 1820. But her native energies will enable her, like Antæus, to rise again in pristine vigor, with, or, as in the recent case, without the aid of government. I say distinctly, *without the aid of government*--because the most zealous advocate of congress cannot point out a single measure adopted, during all the awful scenes of the above-mentioned years, whose object was to apply a remedy to the public distress. Therefore, the melioration of our affairs is not to be ascribed to congress. Suppose a physician called in to a patient, writhing under a most acute and dangerous disorder: suppose he looks on with sang froid--does not feel the pulse--prescribes no remedy--affords no aid whatever, but lets the disorder take its course. Should the patient recover through the force of a sound constitution, would it not be regarded as something worse than folly for the physician to claim any merit for the escape? It is equally incorrect for congress to claim any merit from, or their friends to extol them for, the recovery of the nation from a state of distress so general and severe that few examples of the kind have occurred--a distress on which they looked with the most sovereign indifference, and without making a single effort to apply a remedy.

These are unpalatable truths. But, however unpalatable, they are matters of history. And the system pursued, together with its authors, and its baleful consequences, will be duly appreciated, when you, gentlemen, and your present correspondent, are consigned to the peaceful grave.

Our career, short as it has been, has afforded striking proofs of the ruinous effects of the *let-us-alone policy*--as well as of the benign ones of the protecting system. In addition to the facts above stated, in proof of the first point, it must be abundantly sufficient to refer to the deplorable condition of the United States in the years 1783, 84, 85, 86, 87 and 88, when the *let-us-alone policy* was the order of the day, and in full and unrestrained operation--and when public distress drove our legislative bodies to paper money, with suspension and tender laws--and a portion of our citizens to insurrection. On the second point, I shall confine myself to two cases--the coarse cottons, and our tonnage.

The coarse cottons are a very trite example, and have been often adduced in similar discussions.--But while our present policy continues, the example cannot be too often urged on the public attention. The duty on these goods is almost prohibitory. What has been the effect? Salutary or otherwise? Salutary in the highest degree. The goods are manufactured far superior to the imported rival articles; are cheaper; afford a most important market for a native staple; diminish the quantity of that staple exported: of course, prevent a reduction of price abroad; furnish employment to thousands of our citizens; and, so far as they amount, aid to reduce the balance of trade which has been, and is so ruinously against the country. How can a system, thus fairly tried in one important case, and found so eminently advantageous, be other than wise and beneficent?

The case of the tonnage of the United States is at least equally strong. No nation ever enacted a system of more protection, restriction, and exclu-

sion, than our navigation laws. They occupied the earliest and most sedulous attention of the first congress, and have never been lost sight of by their successors. Confiscation attends the attempt to carry on the coasting trade by any foreign vessels. Every means that ingenuity could devise has been adopted to protect our commerce. We have buckled on our armor and entered the lists with France and England, to accomplish this object—and in both cases have been successful. What has been the happy result? Why, that, in a very few years, this nation became the second in the world in point of tonnage. Had we pursued the *let us alone policy* with respect to our shipping, it would have been depressed and ruined by foreign rivalry, as our manufactures have been. No man of enlarged mind, who allows that mind fair play, can resist the strong inference deducible from these two cases—an inference which passes sentence of condemnation on the miserable *let us alone policy*, as to manufacturing industry—a policy which humbled Spain and Portugal in the dust for centuries, notwithstanding the extraordinary advantages afforded by their colonies—while the restrictive system has raised England to a degree of power to which neither her extent, her population, nor her natural advantages, entitle her; and has enabled France to overcome all the injury she sustained by a twenty years' war—the rapine of ferocious and embittered victorious armies; together with a military contribution amounting to 100,000,000 of dollars. He that will not be convinced by these facts, would not be convinced 'though one rose from the dead.'

HAMILTON.

P. S. Should it be objected to this essay, that it contains but little novelty, it may be correctly replied, that it is about as new as the defence of the *let us alone policy*, on which it animadverts.
Philadelphia, Aug. 30, 1822.

Roads and Canals.

Report of the committee on roads and canals in the house of representatives, January 2, 1822.

The committee on roads and canals, report:

That they have considered the general subject submitted to their charge, and also the specific objects of internal improvements which have been referred to them.

In relation to the subject, under its general head, they believe it will not be controverted, that, after the formation of a good government, it is the next interest of a nation to adopt such a system of internal policy as will enable the people to enjoy, as soon as practicable, all the natural advantages belonging to the country in which they live. Labor is justly considered to be the wealth of a nation—productions of every description, and all things valuable, are produced by it—and the whole operation of a society of people, as regards their political economy and social intercourse, consists in obtaining what are usually called first materials; in the conversion and fashioning of these for use; and the transportation of the raw or manufactured articles to the places where they are finally wanted. The transportation necessarily forms a heavy charge on the fund of labor, and, in proportion to the reduction of labor, in this respect, will be the gain of a nation, as the part saved can be employed to advantage in other objects.

The great extension of our territory, and its various latitudes, abounding in almost every species of products, will always render the expense of

transportation an object of great and national importance.

Although artificial works may not, for a while, afford a profit to the undertakers, still they will be beneficial to the community at large, not only by the increased value they will give to the productions at a distance from market, but, also, by an increase of the quantity of productions, in consequence of the additional excitement to enterprise, and the general diffusion of industry.

The utility of good roads and canals has been tested by long experience in other countries. In China, it is said, that, by means of their water carriage, their home market is nearly equal to the whole market in Europe. Satisfactory evidence of the immense advantages to be derived from canals, is likewise furnished from almost every part of Europe, and particularly in England, where they have been extended, within the last fifty years, in every direction, supplying the demands of one place by the resources of another, and so extensively spreading industry, as to enable them to supply their own wants, and to furnish vast exports to exchange for the wealth of other countries.

It must be a source of gratification to every American, when he reflects that his own country possesses advantages, in this respect, not inferior to that of any other on the globe—and that there is none that presents higher inducements for the legislative aid of its councils, or where there is a greater certainty of being repaid for any expenses which their patriotism may bestow.

From a well regulated system of internal commerce in the United States, by the means of good roads and canals, the happiest consequences may be expected to flow. We enjoy almost every variety of climate, and possess populous cities and condensed settlements, as well as vast tracts of country thinly inhabited. A regular trade in the exchange of manufactured articles for raw materials would take place, and the nation would receive, within itself, the whole benefit that is usually gained between old and new countries. It is admitted by the ablest writers on political economy, that the most important branch of the commerce of any nation is that which is carried on between the inhabitants of the towns and those of the country: customers become acquainted with each other, and less risk is generally incurred.

It is also essential to the prosperity of a nation to obtain all the labor it can from its members; and, as it is composed of people possessing various talents and inclinations, every reasonable encouragement should be given to each branch of national industry, as a means of calling into activity the different qualifications of men; and, besides, from a frequency of intercourse among the citizens living in different parts of the country, close and profitable connections would be formed, which would have a tendency to produce harmony and affections that would add to the safety of the union: the people would reap great benefits, from a stability in their affairs, as a judicious system of internal commerce would create a certain proportion, or level, in all the departments of industry, that could not be readily disturbed by the wars and vicissitudes of other powers. From charges of this description, over which we had no control, this country, in several instances, has experienced shocks and sustained losses, which would far exceed (as it is reasonable to conjecture) the aid or expense necessary, on the part of the general government, for the completion of such artificial roads and canals, and

improvements in rivers, as would satisfy, in this respect, all the real exigencies of the country.

Among the many objects of improvements in inland navigation, some are limited and within the means of individual and state enterprize—others are of a character too extensive, their productiveness depending on improvements to be made in different states, at great distances from each other. The great and important line of inland communication contemplated along the Atlantic coast, would be beneficial, in various degrees, to more than one half the states in the union; yet no one or two states would have sufficient inducements to furnish the necessary means for the completion of any of its parts; nor could a union of sentiment be scarcely expected among the states through which it would pass, as to the particular routes, or modes of execution. Such objects are great and national, requiring one general head, and, consequently, the aid of the general government is rendered indispensable, as well as regards the funds to be furnished as the facility of execution. Objects of such transcendent importance to the welfare and defence of the nation must be perfected by the general government, or their perfection can scarcely ever be expected. Had we waited for the joint agency of states, more than an age would have passed before we should have seen a road constructed by the union of states, equal, in national design and costliness, to the road from Cumberland to Wheeling. Objects on the large scale of national benefit are creatures of the union, the scope and views of state authority being local in their nature.

The committee will further observe that, antecedent to the existence of the general government, several states could not have perfected an object of this kind, without entering into some understanding or compact, in the nature of a treaty, in the character of independent states; but serious doubts may now exist on the subject, as states are not allowed by the constitution, to enter into any agreement or compact with each other; it will, at least, be difficult to say how such a power can be exercised by the states, which could be enforced, unless by corporations, in perpetuity, or by the consent of congress.

The committee will not undertake to make researches into the history of the rise and progress of canals and internal improvements, in ancient or modern times, in foreign countries; but the task is an agreeable one to pursue, even partially, the public spirit that has prevailed on this subject in many of the states. The works that have already been constructed are so many evidences of the opinion of the people in favor of their utility beyond their expense, and from them much experience has been derived, as to skill and economy, that will be very useful hereafter. Their influence should operate as a persuasive inducement to the general government to begin her own great work for her own benefit.

As to most of the improvements that were perfected prior to 1808, the committee will refer the house to a report of the secretary of the treasury, dated 4th of April, of that year. This plain and valuable document contains more information on the subject in general than is to be found any where else. Since that period, great efforts have been made towards internal improvements, but the committee do not possess an accurate knowledge as to their extent, and even if they were to embrace all the public improvements that are within their collection, it would too much enlarge this report; a few objects will, therefore, be selected.

In Massachusetts, a magnificent work or dam, a

mile and three quarters in length, has been constructed, to connect the town of Boston with the main land, at an expense of about 600,000 dollars. An allusion need only be made to the patriotic and laudable efforts of the state of New York, as to grandeur in the designs, and the execution of so great a part of their immense undertakings. Pennsylvania has made great advances in the construction of permanent bridges over her large rivers, and in the making of artificial roads; and is now engaged in the grand object of connecting the Susquehanna with the Schuylkill by the union canal. Maryland has made expensive roads, in many directions, for the accommodation of her citizens, and to bring trade to her capital. Virginia, in 1816, enacted a law, creating a board of public works, with power to appoint engineers and surveyors, and also creating a fund to be applied exclusively to the rendering navigable, and uniting, by canals, the principal rivers, and more intimately connecting, by means of public highways, the different parts of the commonwealth. North Carolina has made many and expensive improvements in roads and canals. In the state of Georgia, it appears, from official documents, that 189,000 dollars have lately been expended in public improvements, besides 100,000 dollars for free schools. In the state of Tennessee, the legislature has unanimously appropriated \$500,000 for the purpose of improving the navigation of the rivers in the state.

Public examples need not, at present, be farther traced.

The national objects, which, in the opinion of the committee, claim the first attention of government, are—

1. The great line of canals from the harbor of Boston to the south, along the Atlantic sea coast.
2. A road from the city of Washington to that of New-Orleans.
3. Canals to connect the waters of the Ohio above with those below the falls, at Louisville; lake Erie with the Ohio river, and the tide waters of the Potomac with the same stream at Cumberland.
4. Communications between the Susquehanna and the rivers Seneca and Genesee, which empty into lake Ontario.
5. Communications between the Tennessee and Savannah, and between the Tennessee, Alabama, and Tombeckbee rivers.

For the more particular information relating to those objects, and for their magnitude and the many and high advantages which they would produce to the union, either in times of war or peace, the house are referred to the above report of the secretary of the treasury, and to the very interesting and convincing report of the secretary of war, dated January 7th, 1819, which reports the committee beg may be annexed to their present report. As to some of the objects mentioned, or parts of them, it will be important, previous to the commencement of any general system, to form the basis of it upon the best information that can be obtained by scientific men; the committee, therefore, beg leave to report a bill, entitled "An act to procure the necessary surveys, plans, and estimates, on the subject of roads and canals."

The committee will make separate reports on the subject of the Chesapeake and Delaware canal, and the other objects referred to them.

HOUSE OF REPRESENTATIVES, APRIL 26.

The committee on roads and canals, report:—

That, after carefully examining the different resolutions and petitions submitted to them, they

have thought it best to make a general report, embracing the several objects of reference.

The committee have already reported that they consider it expedient to have a certain section of the state of Maine explored, for the purpose of ascertaining, by survey, the proper route for a road, and whether it would be useful in a military point of view, from the Penobscot river, at or near Bangor, to some point in the eastern boundary of the state; and, also, in favor of a survey being made to ascertain whether it would be proper for the general government to aid in the construction of a canal in the town of Gloucester, in Massachusetts, to connect the waters of Boston and Ipswich Bay in order to avoid the tedious and dangerous passage round Cape Ann.

The committee will bring the remaining cases referred to them into the view of the house.

The legislature of the state of New York have passed the following resolution, which has been transmitted and referred.

In assembly, April 10, 1822.

Resolved, (if the honorable the senate concur herein), that our senators, in congress, be instructed, and our representatives requested, to call the attention of the national government to the great importance and public utility of improving the navigation of the Hudson, so as to open a free communication and direct intercourse, for vessels of all descriptions, with the internal canal navigation of the state of New York.

The design of the resolution, as the committee understand, is to remove sand-bars that exist in several places in the Hudson river, and impede its navigation by vessels over a certain size. To improve the navigation of the tide waters of this river would require an expense of about two hundred thousand dollars, and it is believed to be practicable, either by the construction of piers and dams, in such places as may be proper to concentrate the current of the river, so as to give it, with the assistance of the engine called the mud turtle, where necessary, power sufficient to remove the bars, and to prevent future deposits, or avoiding them by a lateral canal, or a combination of both.

It appears to the committee to be an object, which, in an eminent degree, is deserving of the aid of the general government, to perfect the navigation of this river, which exhibits the phenomenon of carrying its tide waters through a mountain, and is destined to communicate with such a range of lakes and fertile countries.

Resolutions of this house have been referred, instructing the committee to inquire whether it is expedient for the U. States to give aid to the Delaware and Raritan canal company, and to the Chesapeake and Delaware canal company.

The advantages to be derived from these contemplated canals, as forming central links in the great line of inland navigation along the Atlantic coast, is apparent; they would afford a cheap transportation for merchandise and munitions of war, free from the dangers of storms and enemies. On this subject several committees have reported in favor of their great importance and public utility.

A resolution has been referred, instructing the committee to inquire into the expediency of appointing commissioners to examine and report as to the practicability and probable expense of connecting, by a canal, the Potomac and Youghagany rivers; and sundry petitions have been referred in pursuance of the same object, which state that these rivers approach each other within the short

distance of two miles; and that springs and rivers which supply them, are amply sufficient to furnish water on the summit level; and that the expense would be inconsiderable, compared with its great importance.

Petitions have also been referred, earnestly soliciting the attention of congress to the navigation of the Potomac river; the petitions state, that "this stream presents a direct communication from the seat of the general government, and the tides of the ocean, to the gentle and unobstructed waters of the west; the portage across the Alleghany mountain in about seventy miles, by the national road now completed. From Cumberland, on the Potomac, the commencement of this road, to the tides at the city of Washington, is the distance of one hundred and eighty eight miles, by the river; and the total fall is seven hundred and fifteen feet, or near four feet in each mile; this fall, with the scanty supply of water in dry seasons, renders the natural channel impracticable for useful navigation; and, to remedy this defect, a canal and lock navigation must be resorted to the whole distance; the expense to be incurred in completing this improvement, it can be easily ascertained, would not exceed two and a half million of dollars, estimated at the ordinary cost of such works, where obstacles of equal or greater magnitude have been overcome.

The committee need not endeavor to enumerate the many great advantages to be derived from a connection of the river Potomac with the western waters; they will only observe, that the project becomes more elevated and interesting, when they consider the practicability of extending this inland navigation to the lakes; which, by means of the New York navigation, and the proposed Atlantic canal, would form an island in the heart of the union.

A memorial from the legislature of the state of Alabama has been referred, praying aid of the general government to connect some of their valuable streams.

It states that the Alabama river commences, and becomes capable of a water transportation, within eight or eleven miles of a stream equally susceptible of being rendered navigable, and which empties into the Tennessee river; that the latter receives the tribute of several other streams, which take their rise, and become navigable, in the state of Virginia, passing through some of its most productive lands, and watering, in their course, the whole eastern section of the state of Tennessee; that the dividing ground, separating these waters, affords a favorable opportunity of connecting the waters of the Alabama with those of the Tennessee river, and that the distance required for the produce of Tennessee to reach a market on the seaboard, would be reduced from nearly two thousand miles, to New Orleans, to six or seven hundred miles, to the Mobile.

The memorial likewise calls the attention of congress to the communication of the Pensacola bay with that of Mobile.

On the important subject of the internal improvement of the country, the committee have adopted what they consider the only true plan, by reporting a bill to procure the necessary surveys, plans, and estimates, on the subject of roads and canals. This is a measure recommended by the able and valuable report of the secretary of the treasury, of the 4th of April, 1808. The following is an abstract:

"As an important basis of the general system, an immediate authority might also be given to

"take the surveys and levels of the routes of the most important roads and canals which are contemplated; a work always useful, and by which the practicability and expense of the undertakings would be ascertained with much more correctness than in this report." "A moderate appropriation would be sufficient for those several objects."

The execution of this measure would present to congress a full view of the subject, and enable them the better to decide on the propriety of engaging in these undertakings. It would lay the foundation of a well digested and regular system, and it would not require any immediate demand on the treasury for a large amount. It is believed that fifteen or twenty thousand dollars would be sufficient, and the expenditure of this sum would be divided between three and four years, as it would consume that period to obtain the information.

For many reasons the committee have supposed that the information could be more satisfactorily obtained by the corps of engineers than from any other source. They are a well disciplined and organized body and composed of the most capable of our scientific men, and it belongs peculiarly to the topographical corps to explore the country, and to give accurate knowledge of such parts as may be deemed necessary, by actual surveys. In this manner, a similar corps has been employed in France, through which every necessary information, relating to the face of the country, is acquired, and deposited in what is called their military bureau.

The corps of engineers, with the assistance of two civil engineers, and the aid of others who can be detailed to duty in that corps, are believed, by those best acquainted with the subject, to be sufficient. They proceed by a regular system, and report monthly. Young cadets, as they leave the military academy, can be employed. It will give them experience and advance their usefulness to their country. It will render the science appertaining to the engineer department more perfect and extensive, and obviate the necessity of employing foreign engineers. There are farther inducements as it respects economy; they are already in the employment of the government, and can have no motive to delay the work. They can be actuated by no other than an honorable ambition to establish their own reputation, and to show that their institution is valuable to their country. It is the practice to allow them but \$150 per diem beyond their usual compensation, which is merely to meet occasional expenses. The difference of expense in obtaining the information by the corps of engineers, or by commissioners and common surveyors, would be exceedingly great. The information, when obtained, would be valuable, for it cannot be otherwise than important to be acquainted with the capacities of the country for internal improvements. It would be useful to the states who have not the same economical means of acquiring it; and this part of the subject cannot be embarrassed by any constitutional question.

The commencement of internal improvements, upon a large scale, has generally been attended with difficulties, and improvidently delayed. The people of England, after having experienced their advantages, are astonished that such works had not been undertaken earlier. In the beginning of the reign of George III. the first charter to the duke of Bridgewater was obtained, and his canal is said to yield £80,000 sterling per annum. The growth of canals became so rapid that George III.

lived to see a hundred completed during his reign; and it is a matter of surprise now, that the government suffered them to be carried on without a participation, which would have produced so much revenue.

In the authority from which the above is derived it is stated that more than 2,400 miles of canalling have been completed, and that scarcely any district of country is more than fifteen miles from a water communication.

Nothing but the ardency of the most energetic minds could have overcome the opposing obstacles in the state of New York; by some the project, in the beginning, was looked upon as romantic; they began without resources, relying upon the credit of the state, and, in the course of six years, will have completed 414 miles of canalling, which averages nearly a quarter of a mile for each working day, including the locks; the expense of the undertakings, it is now ascertained, will fall below the original estimates; the whole will not exceed five millions of dollars: the profits of these works, from what appears to be a reasonable calculation, will, in a few years, extinguish the expense of making the works, and, afterwards, leave an annual revenue to the state of more than a million of dollars. These works are of high importance to the nation; they show what can be done, and that a government, with proper management, can execute great undertakings with despatch and economy; they have afforded, moreover, the most valuable experience in the science of engineering.

We must be convinced, from the examples of other nations, that the natural advantages of this country will not remain unenjoyed forever; national improvements will, at some time, be prosecuted and perfected; but why should we be deprived of their eminent advantages by further delay?

It is said that the proper period has not arrived, and that we have neither resources nor constitutional power.

As to the time:

We have opinions from different quarters that are entitled to our best respect:

In 1807, the attention of the senate was directed to this subject, and it was in pursuance of a resolution of that body, that the secretary of the treasury made his report. Able reports have been made in the senate at different times, recommending some system of internal improvements.

In 1817, a bill passed both houses of the legislature, on this subject, which was rejected by the president upon constitutional scruples.

The object of the bill was to set apart, and pledge a fund for the construction of roads and canals, and improving the navigation of water courses, in order to facilitate, promote, and give security to internal commerce, among the several states; and to render more easy and less expensive, the means and provisions necessary for the common defence. For this purpose the dividends from the shares belonging to government in the bank of the U. States were to be pledged for twenty years, during the charter, and the proportion of the moneys to be expended on the objects, in each state, was to be in the ratio of its representation in the most numerous branch of the national legislature. Mr. Madison, and the present chief magistrate, both, have recommended the subject of internal improvements to the attention of congress, as an object of sufficient magnitude to produce a change in the constitution; neither suggested the idea that the subject was prematurely pressed upon the nation.

In 1818, the house of representatives passed two resolutions, requiring the secretary of the treasury, and secretary of war, to furnish information respecting internal improvements.

When we reflect on the influence to which such authorities are entitled, and see that the nation has increased to nearly ten millions, we think it ought to be admitted, that the time has arrived when the national improvements ought to be commenced.

As to the resources:

New York commenced their immense undertakings on the credit of the state; and it is believed, that it would not, in a just comparison, be a greater undertaking for the union to accomplish the most prominent objects of national improvements.

In relation to the resources, it ought to be considered how much the country would be benefited; and in the casualty of a war, how much would be saved. Had the country been improved by roads and canals during the late war with England, a doubt can hardly be entertained, that as much money would have been saved as would be sufficient to complete them. Similar events may occur again, and it would be wise to prepare for them, and especially so, when the improvements, independent of this consideration, would be worth infinitely more to the country than the amount of their cost.

In the course of three or four years, which will be consumed in procuring the surveys and estimates under the proposed bill, our finances may be improved; but suppose no favorable change is produced: the improvements must be a work of time, and, if it should be necessary to resort to loans, large sums would not be wanted at any one time; and, if proper objects are selected in the beginning, a revenue will be coming in long before the whole is completed. A canal along the Atlantic coast, it is probable, would yield more than six per cent. immediately after its completion: the public expenditures would be spread over a period of perhaps twenty years; and if, during that time, the general government, with the aid to be derived from incorporated companies, would expend twenty millions of dollars, the advantages to the country would be incalculable; and the revenue to be derived from the improvements, if it did not meet the interest of the capital expended, it cannot be expected that it would fall short of it. In time, there can be no fear, but that it would exceed the interest, and become a source of revenue to the government.

Looking forward to the completion of the works, say twenty years, and supposing all the money to be borrowed, if we advert to the usual course of nature, we can perceive that the pension fund might be applied to the extinguishment of the debt. It would be passing the fund from an object of charity to one of permanent utility to the country.

We will suppose the last case, and the one which is most unfavorable. Suppose the debt, together with the improvements, go down to posterity; it would only create an obligation on those who would have the enjoyment of the improvements, to pay the debt. There does not seem to be the same pressing obligation on us to pay off such a debt, as in the case of most others.

If we are to wait until the public debt is paid off, the scheme of internal improvements may as well be abandoned at once. We have no good reason to expect a more favorable time to make a beginning.

As to the power, it is not customary in reports to

enter into a minute discussion of constitutional points. The committee will not, therefore, take up the constitution to examine it. Enough, they think, has been done on the part of government to preclude this question from further inquiry. Nothing can be more desirable to society than to arrive at a settled construction on the different parts of the constitution. Versatility on such questions would impair the character of the nation, and be detrimental to its interest. The committee will merely observe that, in their opinion, congress can possess no power except that which is derived through the constitution. Consent or contract cannot confer power; and, if congress has no power to construct roads and canals, and maintain a control over them, it can have no power to purchase lands, or appropriate money for the purpose of making them; but it has been the constant practice to allow to the new states five per cent. of the net proceeds arising from the sales of public lands, to be laid out in the construction of roads and canals. Three fifths are generally to be expended within the states, and two fifths are to be expended under the direction of congress in the making of roads leading to the states. From forty to fifty thousand dollars are annually expended in this manner.

In 1806 the president was authorized by congress to open a road in Nashville, in the state of Tennessee, to Natchez. this road passes through a state, without asking consent. In 1809, the president was authorized to cause the canal of Carondelet, leading from lake Ponchartrain, by way of the bayou St. John, to the city of New Orleans, to be extended to the river Mississippi. The Cumberland road has cost one million and eight hundred thousand dollars, which exceeds the proceeds arising from the sales of public lands in that state, more than a million of dollars. How is it possible to reconcile these acts with the idea that congress possesses no power to construct roads and canals? If there should ever be a construction of the constitution dangerous to liberty, there will be an apology for repeated resistance; but when there has been a series of legislation in pursuance of a construction of the constitution, which is calculated to promote the best interest of the country, it is not consistent with wisdom, or the peace and welfare of society, to disturb it.

In what age or nation has the power of improving a country been wilfully abused? Even the unsuccessful attempts at great undertakings have received the admiration of mankind. No power can be more safely placed in the hands of the representatives of the people; and it may be truly said, that, among the objects of a national character, which, at intervals, engage the patriotism and resources of a nation, none are more beneficial, and none so permanent, as the internal improvements of a country: While others, with the institutions that gave them birth, may be effaced even from remembrance by the flow of time, these will remain, as lasting as the rivers they connect, to be enjoyed and admired as long as generations are permitted to exist.

The committee, upon the whole, do not deem it expedient to recommend the immediate prosecution of any work; they think that some well digested system ought hereafter to be devised by congress, which can be done with greater propriety when the surveys and estimates shall have been received, by virtue of the proposed bill already alluded to.

They, therefore, offer the following resolution:

Resolved, That it is inexpedient at the present to authorize the expenditure of any money on any of

the objects referred, except to carry into effect the bill reported entitled a bill to procure the necessary surveys, plans, and estimates, on the subject of roads and canals.

CHRONICLE.

John McLean, of Ohio, formerly a member of congress from that state, has been appointed by the president commissioner of the general land office, in the place of the late Josiah Meigs.

Rhode Island. Messrs. Eddy and Durfee have been re-elected to congress without opposition.

Indiana. Jonathan Jennings is re-elected governor of this state.

Illinois. Edward Coles is elected governor of, and Daniel P. Cook re-elected the representative in congress from, this state. Mr. Cook had 4,764 votes, and his opponent, John McLean, 3,311.

Mississippi. Mr. Rankin has been re-elected a representative to congress from this state—he was opposed by George Poindexter, esq.

Missouri. John Scott is re-elected to congress by a considerable majority—there were several candidates.

A panther, weighing 140 lbs. was lately killed by a lad of 13 years of age, in Westlerly, R. I.

Witchcraft. A silly creature at Norfolk, has lately been found guilty of murder in the second degree, for killing a person that a female fortune teller informed him had bewitched his wife. The beldam, the author of this fatal event, escaped, and only could be required to give security for her good behaviour—on the inability to do which she was sent to jail.

A public dinner was recently given at Cincinnati to Mr. Clay and gen. Jessup, in testimony of respect for their public services. Many good and patriotic toasts were drank, and also the following of a personal nature:

Our guest, Mr. Clay—His public services are cherished in the gratitude and recollections of the people: we hail with gratitude and confidence his return to the councils of the nation.

Mr. Clay said that, in rising to make his respectful acknowledgments for the sentiments just drank, and for the flattering marks of kind attention which, on the occasion of a former as well as his present visit, he had experienced in this city, he trusted he should violate no usage nor offend against any sense of propriety which prevailed here. He should be sorry, indeed, if there existed any restraint to the expression, however inadequate it might be, of the grateful emotions which he felt. He had been long desirous to see Cincinnati. He had been prevented from having that gratification until about two years ago, when he was brought here principally by a professional duty, painful to himself, and which, had its citizens been less liberal, less magnanimous, might have induced them to have given him a cold and cheerless reception. They then received him with a warm and hearty cordiality which he should never forget.* He was anxious to see this city for many reasons. It held, indisputably, the first rank among our western towns. All had had a rapid and unexampled rise. Whilst towns, in other countries, rose gradually and so impercepti-

*Mr. C. was understood here to allude more particularly to the offer then made him of the compliment of a public dinner, which he was obliged to decline.

bly that their origin was obscured in their antiquity, this city had sprung up, on the banks of the most beautiful river in the world, as it were but yesterday, by a sort of enchantment. If causes, common to the whole of the western towns, for a moment seemed to cloud its prospects, he had no doubt that it would emerge by its native energies, by the industry and by the enterprize of citizens, and exhibit a renewed activity and an increased splendor and expansion.

He was extremely gratified to find that the gentlemen here assembled approved of his return to the national councils. He had left them with regret, and for imperious private motives, which it would be impertinent here to relate. In going back again he should endeavor to carry with him those broad and comprehensive principles, by which he had ever sought to guide his public conduct, and by which every part and every interest of this great confederacy ought to be fostered and encouraged and protected. And it will be to him a source of proud and agreeable recollection if he should be enabled hereafter to deserve the distinguished favor which, on this occasion, had been shown him.

Our distinguished friend and townsman, gen. Jessup—Merit has met its reward, and patriotism received her laurels.

Gen. Jessup said that, although he had not been accustomed to speak in public, yet he could not refrain from returning thanks for the honor shewn him: that it had been said the highest honor the soldier could receive was the approbation of his fellow citizens—but he felt that there is a reward still more precious—the confidence and approbation of those who had known him from his youth, and marked his course. He begged leave to propose as a toast,

The city of Cincinnati—May its prosperity equal the patriotism and enterprize of its citizens.

Volunteer by Mr. Longworthy. Gen. Wm. H. Harrison, the man who dared to be honest in the worst of times.

Gen. Harrison observed, that custom required that he should express his obligation for the honor done him by the company, and he had little to say but to express that obligation. In addressing, however, a portion of his fellow citizens, for whose favor he was then a candidate, he could not help giving utterance to the sentiment which was predominant in his mind—that of gratitude for their past confidence, and a determination to exert his utmost endeavors to serve them should he be again honored with their suffrages. He would never forget that he was the representative of two most respectable counties, and of a city which had been truly characterized by his friend Mr. Clay for the liberality and magnanimity of its inhabitants. The opinion which his friend had formed on a casual visit, he knew from a long residence to be correct.

By gen. Harrison—electioneering tricks: devised by the great enemy of mankind for the destruction of free governments, by preventing a fair expression of the public will.

Montgomery, (Ala.) Aug. 23. It is reported by a gentleman who arrived in yesterday's stage, that hostilities in the Creek nation had commenced between the Big Warrior and McIntosh. We have heard before that there was a misunderstanding between these personages; but have not learned the cause of their difference. The character of the reporter is known to us, and we doubt not his veracity.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 4—VOL. XI.] BALTIMORE, SEPT. 28, 1822. [No. 4—VOL. XXIII. WHOLE No. 576

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

PENNSYLVANIA. The long expected map of this state, by Mr. *Mellish*, has at length appeared. It may be called a magnificent work, worthy of the great commonwealth which has so liberally furnished the means to produce it. Greater accuracy could not well have been expected than is *assured* in this map; made up, chiefly, of *county* surveys, taken by experienced persons, resident in the respective counties, and *responsible* to their immediate neighbors and friends, for the truth of their representations. There is nothing like *direct responsibility*, whether in mechanics, manufacturers, map-makers, or governors and presidents. It assures fidelity, or enables the people to punish the want of it.

Some of these maps, besides all that it is usual to expect to find on such productions, shew the geology of the whole state, and mark the boundaries of the various cessions of the Indians, &c.

MILITARY ACADEMY. We understand that an order has been issued at this academy, prohibiting any cadet from receiving more than *one* newspaper; and this, perhaps, is right; but it seems that the paper which a cadet is permitted to receive, must be published in his own state, county or town, no matter how useless it may be as a vehicle of intelligence or news. Thus, a cadet from Missouri shall receive an account of the proceedings of congress via St. Louis; and another from Kentucky must expect European news through a Lexington newspaper!

We are informed of some other regulations of this national establishment that do not appear altogether consistent with the light and reason of the republican system—but we do not wish to interfere with them, without a better understanding of their nature; it is possible that a considerable degree of restraint may be necessary to preserve order among so many high-spirited young men, collected from different and distant parts of our country. Hitherto it has too much been a school for the *gratuitous* education of the children of the rich and influential; but we believe that some reformation has taken place in this particular: at least, there is a better and more just apportionment as to states than there used to be.

THE ATLANTIC AND PACIFIC. Lieut. *Weaver*, of the navy, has lately arrived in Washington city from the Pacific, though not immediately from our squadron in that sea. He left Lima about the 25th of June, shortly before which a battle took place between the royalists and a division of San Martin's army, in which the latter were decisively beaten, and nearly destroyed. No other event of importance had recently occurred.

Lieut. *Weaver* came over-land from the Pacific to the Atlantic, across the Isthmus of Panama, which has become an interesting country from the possibility of an attempt, some time or other, being made to connect the two great oceans at that point, if the nature of the intervening land be found to admit the practicability of such a work. Lieut. *Weaver* represents the country, on the route which he came, as generally low and flat; and such an one, we should presume, as would render

an inter-oceanic communication, by canal, between the rivers which fall into each sea, a work neither very difficult nor expensive. We did not see Lieut. *Weaver* ourselves during his stay in town, or our inquiries would have enabled us to give a more particular description of the Isthmus. Its general character, however, may be understood from the above, and from his denominating it as throughout an ague and fever country, of which he had good evidence, being detained some time on that road by the sickness. *Nat. Int.*

Our squadron in the Mediterranean, consisting of the Constitution frigate, Ontario, &c. has lately visited some of the Turkish ports and Greek islands. The people of the latter were much delighted with the hope that these vessels had arrived to assist them against the Turks, and were much disappointed to find that it was not so. They made many enquiries about our country, and it appears probable that many of them will embark for it, in the event of being driven to an extremity. The commodore landed at Ibra, and was received with a salute of 18 guns. When the squadron returned to Leghorn, it was visited by Lord Byron, who was very respectfully received, and much pleased to see a fine edition of his works in the cabin of the Ontario.

COTTON. Some time ago, we noticed certain experiments that were making in New-York, &c. to ascertain the probable success that would attend the cultivation of cotton, as a crop—those experiments have very generally succeeded so far; and there is every prospect of their complete success, if there should not be frosts before the 6th or 8th of October.

We have in our hands (says the National Gazette) a fine specimen of Pennsylvania cotton, planted on the 6th May, by a gentleman of South Carolina; at his summer residence near Germantown. He has half an acre of it in his orchard, and writes thus on the subject: "It is a sample of the green seed (or short staple cotton). From the rough and poor state of the soil, it has been cultivated under unfavorable circumstances; nevertheless it grows luxuriantly and is superior to what I expected; indeed, the staple is scarcely inferior to the best upland cotton of South Carolina."

BILLS ON ENGLAND are at 10 per cent. advanced again, and gold is in much demand, at a high premium, for remittances. The heavy importations of the present year will have a most uniaquy effect on the internal trade and commerce of our country. Silver begins to be in request for *exportation*.

RIGHTS OF THINGS—GREECE, and the French and British agents therein. There is no man in Christendom who has read of ancient Greece and is acquainted with the early progress of her people in the arts and sciences, which they so gallantly defended by their arms, against the vast hordes of barbarians—who has understood what was the condition of this fine country under the mastery of the Turks, and been informed of the present struggle of its present inhabitants for life, liberty and all that

is near or dear to the hearts of men, that can behold the existing state of things with indifference, unless his natural feeling, every honorable principle within him, has been destroyed, annihilated, by self interested views, or a vile devotion to the opinions and policy of others: but it is yet even so, that, in the United States, a republic, proudly styled "the asylum of oppressed humanity," not an hundredth part of the excitement exists on behalf of the *Greeks*, that prevailed when the people of Spain, made *fighting machines* of Great Britain, were ostensibly contending that stupified bigot should be their king and that the "holy inquisition" should be re-established. These poor fools were lauded as "patriots"—and many of our "moral and religious" people were ready to denounce any one *as* among the worst of mankind, that would not rejoice in their success or mourn for their discomfiture. We had feasts and processions and goings-to-church—orations and sermons; the public ear was wearied with praises of them, and heaven was invoked to patronize their efforts and rescue them from the dominion of France! But who cares for the *Greeks*, really fighting for life and liberty—to emancipate themselves from the yoke of barbarians—to rescue their country from the power of those who invaded and subjugated it, with fire and sword—to uphold their right to worship God after the dictates of their own conscience—to defend their wives and daughters from beastly pollution—to prevent a dashing out of the brains of their little ones, by heartless, cold-blooded, infernal assassins and murderers?

There must be some *reason* from the difference of feeling that prevailed in regard to *Spain* and that which exists in respect to *Greece*; and it is worth while to enquire a little into the matter. The *reason* that I assign is this—that GREAT BRITAIN was interested in *reducing* the power of Napoleon in Spain, but is interested in *maintaining* the power of the Turks. Some persons will be startled at this declaration—for they have not considered the *moral force* of that country over the people of this, which force I am devoted to the annihilation of, as of all other *foreign* influence. I do not want any importation of *opinions* or of *callicoes* from Great Britain, unless on reciprocal principles, such as one *independent* nation should extend to another. But, while the Spaniards were fighting for Britain, a bundle of tapes would not reach us without something about the *holy* cause of Spain—not a piece of bobbin, unless accompanied with an exhortation to throw up our hats and rejoice at a victory over Napoleon, even at the foul *massacre* of the French at Madrid!!! But now there is nothing said about a gallant people struggling for liberty and life—not a word of the descendants of those who fought at Thermopylæ, Marathon and Plataea, and preserved light and knowledge from extinguishing despotism—no feeling for 10,000 respectable women and amiable young ladies, dragged from one island and sold in one *market*, at Constantinople, like negroes at Havana; where purchasers examine their limbs as butchers do hogs that they wish to purchase, and who are treated with no more lenity than is shewn to the filthiest and most disgusting of beasts—no outcry for tens of thousands of husbands and brothers of these females purely *butchered*, whose carcasses covered the fields unburied—because Great Britain is now as much afraid of the power of Russia as she was that of France; because the emancipation of Greece may lessen her trade in the Mediterranean and open the way to her India possessions, where gold is gathered by the blood of men, and dominion extended by the *desolation* of

kingdoms. And shall *we*, for the reason that *benevolence* for Greece is not imported like that for Spain was, have none of it? This wretched thing comes out of the habit of suffering other people to *think* for us—and hence the *moral power* of England is greater in the United States than that of her arms, mighty as her means of annoyance are, even shaken as it was by the events of the late war, and affected as it is by the progress of domestic manufactures and internal improvement—which may, at last, render it harmless, if not eradicate it, and, perchance, "turn the tables" in our favor, at some further day.

Now, let every liberal minded man seriously consider the matters just presented, call to mind the excitement about Spain and regard the apathy respecting Greece—to the latter of which we can do just *as much* good as we did to the former. I repeat it, there must be some *reason* for this difference of feeling; and I believe that the true one is assigned above. It was the wish of Great Britain that the Spaniards should kill off the French; it is her wish that the Greeks would not rescue themselves from the Turks—and we seem to wish as she directs that we should!!! It ought to be our desire, that the Turks should be driven out of Europe, the Russians out of Poland, the British out of India, and the Ionian Islands &c. for the power of each is supported by the miseries of mankind, in rendering free persons slaves, like the blacks of Africa, stolen or subdued, and consigned to the lusts and lashes of masters for life. It is true, some pretendedly *religious* men among us, wish a plentiful destruction of people in Europe, that *trade* may revive; and will say that they "thank God" for the prospect of an abundant cutting off of heads—but who shall get the victory they care not, except that they want the war to be a long one! It is my prayer, that peace and prosperity should prevail and abound every where—and, when the wishes or the wants of a government or an individual are to be gratified mainly by the miseries of others, I earnestly wish that that government or individual may be precipitated into the misery which it was desired might be the lot of others—not out of vengeance, but as an act of *retributive justice*, to teach wisdom in the school of adversity—and many will not be taught in any other.

Some will pronounce me to be prejudiced or suppose me severe, for thus expressing myself, as to the *moral power* of England over the minds of the people of the United States; but the right of what I have said is easily maintained, and a hundred things to prove it might be put down from recollection as fast as I could commit them to paper. The defeat (or treason) of gen Hull at Detroit, and the massacre of the gallant Kentuckians on the river Raisin, pleased many—and the victory of capt. Hull displeased not a few; the result of the battle of Waterloo was openly rejoiced at, though it loosened the whole force of the enemy upon us, and caused some of the *heroes* of St. Sebastian's to be transported across the Atlantic, to play the part of Goths at Washington, to get "booty and beauty," at Baltimore, *if they could*, and ingloriously perish at New Orleans—and yet the legislature of a most important state, gravely resolved that it did not become "a moral and religious people" to rejoice at *Perry's* victory on lake Erie, which rescued an extensive frontier from the *tomahawk* and *scalping knife* of the savage and the more savage promoters of their terrible mode of war: legitimate kings in Europe were prayed for, and the freely elected president of the United States advised to "abdi-

cate," because so said the British—such were the key-notes of the British press! In the "era of good feelings" such recognitions may appear rude—we may forgive, but cannot forget them; the truly repentant may grieve, but will not complain that they are mentioned: for others, I care not.

In a thousand other things we are the most humble copyists—every *gim-crack* about religion or politics, dress or address, that becomes popular and makes a noise in England, is introduced here: missionary societies and Wellington boots, "his majesty's" virtues and the *eyes* and *vitches* of the cockney. We yankees are said to be full of "notions;" surely, the inventive genius of our countrymen is equal to that of any other people—yet we can hardly contrive a scheme even of *benevolence* for ourselves, and nine tenths of those that are popular are imported, as if the hearts of the American people were incapable of suggesting any good thing, suited to the condition of their own country and applicable to domestic purposes! I would wish to deal tenderly with the well-meaning members of some of our societies, even those instituted to make indifferent priests out of what might be rendered excellent ploughmen—but the *principals* of many of these are of the same class of people as compose the *dignitaries* of the church in Europe—influenced by the same considerations and leading to them by the same devices. What must we think of a pampered clergyman in the United States, whose whole receipts were, perhaps, equal to about 5000 dollars a year, commending a poor fellow who saved, as he thought, about 5 dollars in the course of 12 months, by working on the 4th of July, by going without a neck cloth, by wearing cow-hide shoes, &c. that he might give it to a missionary or some other religious society, of which that clergyman was a patron? I regard such conduct just as would that of "his royal highness, the duke of York," if, when he and his famous courtesan, Mary Ann Clark, were promoting persons to office in the state and church, he had become a most active agent for the suppression of vice and immorality—and some such thing it is highly probable that he was at the time: the character of the cases and of the actors in them, must be precisely alike. Yet, with all this zealous and servile copying of foreign contrivances, our own charitable institutions languish—we send men half way round the world to preach to people less vicious than we ourselves are, and neglect our own household—the multitudes of white persons in our frontier settlements, the wild Indian, and the debased descendant of Africa, resident among us and living at our doors!

The foreign missionary system is chiefly a favorite with us, because it is the hobby of the religious-proud in Great Britain—and for why? It has been the pioneer of the sword in India, the means used to "discover the nakedness of the land," to spread disaffection among the people, to divide and distract them, and guide armies to conquest!—so we must send missionaries to India to assist in completing the work of misery and subjugation! India—the blood seems as if curling in my veins, when I call to mind the doings of England in this extensive region of country, inhabited by an innocent people if compared with those who permit missionaries to travel among them. The British, in India, caused the destruction of between thirty and

forty millions of people, in about thirty years, and are now, in the most charitable aspect of things, about to make their peace with God for such extensive desolations, by sending out a few *some loving* missionaries to persuade those to Christianity, who ought to hate the very name of Christian, if judging by the acts of those who have called themselves so—who, like the Peruvian at the stake to be burnt to death, when exhorted to believe in the religion of his murderers that he might be prepared for heaven, preferred the *other place*, on being told that heaven was filled with Spaniards—as any reasonable man, *conditioned as he was*, would have done. But all that the Spaniards did in Hayti, Cuba, Mexico and Peru, were little sins—small matters, compared with the acts of professing christians in Hindostan. A mere trifle—millions against tens of millions! But all this is like Napoleon's "horrible conscriptions," though bearing, relatively, with less than half the force of British impressment, and the principle of the one being exactly the principle of the other—to tear men from their homes, (and, on the part of the British, to steal even *foreigners* on the high seas), to make white slaves of them and compel them to fight.

At the moment of writing this, we notice an extract from some newspaper called the "Christian Watchman," which says, that a subscription of 3000 dollars a year, for five years, has been made up at Boston, "for the purpose of putting in operation a printing office in Asia;" and that another of 3000 dollars was got up to purchase presses, &c. to start with—ALL at the urgent recommendation of a late British consul at Smyrna—mark that, of a British consul at SMYRNA, of which we shall have occasion to speak below. People may distribute their money thus, if they please—but my humble opinion is, that he who "provideth not for his own household, (out of the means that he hath), is worse than an infidel." I have always found enough at home for the pittance that I have had to spare, or rather that I have parted with without having them to spare. I trust that there is as much charity in my bosom as people generally have—but frankly confess, that I have no money to bestow on *foreign missions*; nor shall I, until there are no meritorious and respectable poor at home, on whom the amount of the money thus lavished would confer real, substantial, unaffected good. As I said sometime ago, "praying is well but doing is better," as is fully exemplified by the following anecdote:—"A German priest walking in procession, at the head of his parishioners, over cultivated fields, in order to procure a blessing on their future crops, when he came to those of unpropitious appearance, would pass on, saying, "here prayers and singing will avail nothing—this must have manure."

I am a great advocate for a national character, and do not think that the English are the best people in the world to lead us in works of "faith, hope, and charity." It is true, that their vanity and wealth have raised up many grand edifices and richly endowed them for the benefit of the poor, for the spread of the everlasting gospel: but the same persons have been the great advocates of the systems of fraud and oppression that made paupers to fill such edifices, and are supporters of a church establishment which substitutes the opinions of men for the light of that gospel; "dealing damnation" on those who do not subscribe to such opinions! We have nothing to do with "my lord, his grace, the archbishop of Canterbury," who gives back to suffering humanity a few hundred dollars out of the fifties of thousands that his "arat" exacts of the needy—

*But he himself not giving a cent's worth of any thing—unless there should be a cent's value in his formal prayers.

or with the "royal dukes," who grant a pittance to missionaries out of the thousands paid by the laboring poor to support them in their debaucheries. Their charity is like the "sounding brass or a tinkling cymbal"—only to make a noise, and keep up the deceptions of priest-craft and royalty. A fox-hunting parson, who, after a hard chase, lies prostrate under a dinner table, wallowing in his filth, might as well open his mouth and speak of mercy and temperance, if his tongue could give utterance to his cant on such subjects. In the dark ages, a certain nobleman having committed some outrage on the property of another in the days of his youth, repented of it in his old age—he sought out the heirs of the injured most zealously, but without success; the monks advised that he should bestow the ill-gotten wealth upon them. "What," said he, rudely, "and make the ALMIGHTY a partner in the sin? No—no; the poor shall have it." If those pricked by conscience or desirous of doing good, would act on this principle, we should be much better off than we are: for, I hold it more pleasing to God, as surely it is more beneficial to mankind, to give *employ and encouragement to the poor*, that they may honorably and honestly maintain themselves, than to build and endow hospitals for them, and cause priests to roll in the fatness of things extracted out of their substance.

The time has past, in which it is allowable to give people a gentle roasting to death, before a slow fire, to do "God's service," and convince mankind of the merciful dispensations of the MEDIATOR—when scoundrel priests, with an image of ALL GOODNESS in one hand, stirred the faggots with the other, and exhorted suffering wretches to love the religious dogmas that had sent them to the stake—yet there is, just now, a feeling abroad not less tolerant or unworthy of the Christian name, than that which prevailed when fire was used to establish *orthodoxy*; and for this opposition to the missionary system, I am quite sure that some will severely reprobate me—but they cannot hurt me! Miserable, indeed, must be a people when any set of persons are able to establish themselves as ORACLES OF THE DEITY! They work and twist and screw things to support their own constructions, and hurl anathemas on all who, like themselves, claim the privilege of exercising the reasoning powers that Heaven has given. My opinion, that missionaries to India have produced much harm to the people of that country, may be as rightly held as the opinion of another that they *will do good*—for no creature has a claim to direct the operations of my mind, though some would, very reasonably, take it into their own keeping—but they shall not. I would rather "do justice, love mercy and walk humbly," as a *responsible being*, than profess to believe all the dogmas and observe all the ceremonies invented by man since the flood, for what are called "religious" purposes.

The conduct of the French and British agents in Turkey, furnish us with glaring distinctions between *doing and professing*. Every one is horrified at the proceedings of the barbarians at Scio—the males have been murdered, and the most delicate and respectable females, to the amount of 10,000—ten thousand, have been literally exposed in the common slave market at Constantinople, like heasts—deprived, perhaps, of the necessary covering which decency required, so that their delicate limbs might invite purchasers! The French consul on this island saved 1500 of its unfortunate inhabitants, suffering his house to be literally filled up with them, and covering them by the flag of his country; resisting the demands of the Turks that

the butchery might be finished! What did the British do at Scio? No one ever heard of their intervention, except to create a belief that they cooperated with the barbarians to bring about the massacre and slavery of the people that inhabited it, the most refined and accomplished, perhaps, of all the inhabitants of Turkey. At *Smyrna*, too, where, through British exhortations, we are to send our money and missionaries—[*no money, no missionaries*—the French consul, a brave and generous gentleman, armed himself and his friends, to resist force by force, when the hell-hounds would have wrested from him the miserable people that had sought the sanctuary of his roof; and the French ships in the harbor stood prepared to second his noble efforts to save, even to cannonade the city, if his house had been assailed: and these ships received the Greeks flying from *indiscriminate murder*. Well might the king of France say, as he did in his speech to the chambers, that his naval force in the Levant had afforded aid to the *unfortunate*, whose gratitude has been the reward of his solicitude." And what did the British do on that occasion? They stood with arms folded—closed their doors against, or pointed their cannon at the fugitive Greeks, who were flying by water in boats; and they suffered many to be murdered within a few yards of their ships, under their guns—within a cable's length, perhaps; or beheld others precipitate themselves into the sea, and prefer death by drowning to the mercy of the Turks. These things we have been informed of through the British newspapers—and it is evident that if they have ever interfered with effect, it has been on the side of the barbarians, whom they have *succored and protected* at the Ionian islands, while they persecuted the inhabitants for their supposed attachment to the Greek cause, and they have *rejected* the Greeks. Consuls and agents in foreign countries have no right to interpose themselves between the *law* and its victims—but in the scenes that have taken place at *Smyrna, Scio, &c. &c.* there was no pretence of law or of authority to murder; and any man of honor would have interfered to save if he could, unless restrained by some very positive orders from the government to which he owed allegiance.

It is no more the desire of France than of Great Britain, that Russia should possess herself of European Turkey—but this desire is founded on or guided by different principles. The governments of the two nations join in an unwillingness that the power of Alexander should be extended, but to this the British add the meanness of the spirit of trade, and an apprehension of maritime supremacy. Ifence the one will do what humanity enjoins, while the other stands neutral, or secretly aids the barbarians. *It is not the genius of the British people to be cruel*, and, no doubt, a vast majority of them really wish the liberation of the Greeks—but *the government is heartless*. We mournfully know that it has placed the tomahawk in the hands of the savage, and bought the scalps of men, women and children, with money—and knowing this, we know enough to believe it capable of violating every principle of humanity, religion and law, that stands in the way of its purposes—it is not necessary to add any thing to the black catalogue of its crimes.

What will be the result of affairs in Turkey, we cannot foresee: but, if the Greeks accomplish their emancipation, with or without the aid of Russia, they will, no doubt, remember and duly esteem, *British neutrality* of the same character as the *British protection* of the Ionian isles. [This article was prepared two or three weeks ago—It is now civ-

dent that Russia, yielding to the *holy alliance*, has given up the Christian Greeks to *massacre* and *murder*.]

IMPROVEMENT IN PUBLIC EDUCATION. It is allowed by all, that the interests of public education are entitled to a character of being more extensively useful, and to an encouragement more liberal than those of any object or subject on which national character and independence are to be durably supported. On this subject, whatever experience may have suggested, or whatever genius, of any kind, may have discovered, it is presumed, should always lay claim to attention from an enlightened public.

From more than thirty years' exercise in the instruction of youth, of whom many have filled honorable stations in society: having, also, examined, with no little attention and interest, the systems of *Joseph Lancaster* and *Dr. Bell*, of England, the subscriber flatters himself that he has digested a plan much superior to that of either of those gentlemen; especially where the most liberal course of instruction is contemplated.

It has been on this presumption, that the following information and overture have been, in this way, submitted to the attention of the friends and patrons of literary instruction throughout the United States.

The improved plan would require a house and accommodations well adapted to the purpose, but not essentially different, either in form or in expense, from those which are already in use; and sufficiently spacious to contain, on the lesser scale, three hundred scholars, or, on the larger, six hundred.

The former of these would require only three instructors, and the latter not more than six: the method, in either, altogether different from any yet introduced—and which the author would engage to exhibit, in many respects, superior to any yet offered to public patronage.

This may seem to be professional vanity; and, on this account, if on no other, the plan may be discountenanced. However this may be, its author has too long cherished a confidence in its superiority of general usefulness, and is too thoroughly convinced of its probable advantages, for the diffusion and promotion of national literature, to be discouraged, by any considerations, from offering it to public acceptance.

It is not contemplated to submit a complete development of the system: the principal improvement, however, is to depend on the proper use of the *printing press*; and, by a suitable apparatus, enabling the instructors to extend to *many* their unremitting labors, with the same facility as to *a few*; and, at the same time, without resorting to the mode adopted by some other systems, of employing a portion of those to be instructed to teach their fellows—a practice suited to those only who have the misfortune to be in a state of dependence and pauperism.

With any state legislature, district, or city, or county, disposed to patronise and introduce such a plan of public education, its author would be happy in opening a correspondence; and flatters himself with being able to afford such a view of its advantages, as could not fail to receive adequate encouragement.

Any communication, post paid, on this subject, shall receive immediate attention, by the subscriber.

SAMUEL KNOX.

Baltimore, No. 31 East street, Sept. 20, 1822.

P. S. From an accurate estimate of the probable

expense of such an institution as the above contemplates, it might be supported by a reduction of at least one half of the terms of tuition, as they are at present, at least in Baltimore.

THE FUR TRADE. A St. Louis paper says—Since the abolition of the United States' factories, a great activity has prevailed in the operation of this trade. Those formerly engaged in it have increased their capital and extended their enterprise, many new firms have engaged in it, and others are preparing to do so. It is computed that a thousand men, chiefly from this place, are now employed in this trade on the waters of the Missouri, and half that number on the Upper Mississippi. The Missouri fur company, which alone employs upwards of 300 men, have reached the mountains, and will soon be on the Columbia river.—Others have the same destination, so that the rich furs of that region will soon cease to be the exclusive property of the Hudson Bay company.

THE SLAVE TRADE, &c. In a debate in the house of commons, on the 25th of July, on the subject of the slave trade at the cape of Good Hope, Mr. Wilberforce begged the attention of the house to an extraordinary circumstance. Would it be believed, (said the hon. gentleman), that while this country labored so much to propagate the doctrine of christianity, there were men who had been born Britons, and who boasted of their birth, who took pains to educate their slaves in the principles of Mahometanism? Yet there were colonists who did so, and they assigned in their justification the most extraordinary reasons, that the slaves, being by the principles of Moslemism prevented from drinking wine, would become throughly sober in their habits; and also that the want of christian marriages would enable them to separate the father from the mother of his children without any injury to their religious principles. He assured the house that the most odious practice was carried on in some of the colonies. He hoped that means would be taken to prevent it in future. It had been said that the Hottentots had always been incapable of civilization; but the house could not but be aware that man, once stamped with the signet of a beneficent Creator, was always capable of feeling. Mean as the Hottentots had been accounted, even as the meanest of the human race, Mr. Barrow, in his intelligent work on the Cape of Good Hope, had given proofs of their capability of feeling as men. Sir J. Craig too had, in defiance of prejudices and sarcasm, proved that they could be rendered good members of society, and had formed some of them into a regiment.

Mr. W. Smith, also, regretted that the Hottentots had been in effect reduced to the condition of slaves by the artifice of those who employed them; these farmers supplied them with necessaries and other articles until they got them into their debt, and then brought them before a magistrate, when having sworn to the debt (no doubt exorbitant) the unhappy Hottentot, being in most cases unable to pay, was handed over to his master, to work himself out of debt, which in effect condemned him to slavery, although no more a slave than any member of that house, and placed his liberty in the hands of an arbitrary and rapacious master. He (Mr. S.) had the highest respect for the right of property in all cases, except one, namely—an unqualified property existing in one privileged individual, to the labor and person of his fellow creature.

All this is as nothing. The British have 120 millions of slaves in Asia alone. White, brown, or black—all is the same to them, if profit is made by the proceeding. Some in parliament, no doubt, hated slavery because it was slavery; but I believe that the whole secret of the British interference to prevent the African slave trade, was a regard for the price of sugar and the support of the West India colonies, well stocked with this miserable class. To preserve such a wretched being as Ferdinand of Spain, the British appeared willing to spend millions of money and waste tens of thousands of lives; but they will not move a peg to save hundreds of thousands of Greeks from butchery.

HONOR TO THE BRAVE. It will be recollected that the legislature of Tennessee voted a sword to gen. Gaines, as well as to gen. Jackson. An account of the presentation of the latter has been inserted—the following is an account of what took place when governor Carroll tendered the compliment to the former.

The *Nashville Guards*, under the command of capt. Armstrong, paraded and escorted the general from his lodgings to the Presbyterian church, accompanied by the mayor and aldermen of the town, and a large concourse of citizens. After an eloquent and appropriate prayer by the rev. Mr. Campbell, the governor rose and addressed gen. Gaines as follows:

"Major general Gaines—By a resolution of the legislature of this state, in 1819, a sword, with suitable engravings thereon, was directed to be procured by the executive and delivered to you, as a testimonial of the high respect entertained by the state of Tennessee for your public services.

"I should do injustice to my own feelings, were I not to acknowledge the satisfaction I feel in carrying into effect that resolution. The devotion of the best years of your life to military pursuits, for the honor and interests of your country, entitle you to the gratitude of the nation. The distinguished services which you rendered during the late war, particularly in the gallant defence of Fort Erie, give you additional claims to the respect and admiration of your fellow citizens of this state. National gratitude, in a government like ours, is calculated to excite emulation, as well as to perpetuate the merits of those who are entitled to it.

"On the part of the people of Tennessee, I tender you this testimonial of their high consideration; with a sincere wish that your future days may be as happy as your past have been useful."

To which he replied as follows:—

"Governor Carroll—I feel grateful to the legislature of Tennessee for this elegant and acceptable testimonial of their respect.

"Early residence in this land of promise and of freedom; youthful associations from childhood to manhood; the commencement of my military service in the state, after witnessing her rise from territory to minority to state sovereignty, from adversity to prosperity; these recollections all unite to render her dear to me. Could any other tie have been wanting to complete the bond of union between us, to arm me with additional fortitude, and to nerve my arm in her defence, her resolution, announced by your excellency, with the interesting token of her approbation, which you have just now presented, could not fail to form that tie.

"Although the theatre of the principal military service confided to the gallant forces under my command in the late war, lay in a quarter far distant from this state, I am much gratified to know

that it was not too far distant to be seen by her statesmen and warriors—the faithful guardians of her fame. That those more immediately within her limits and vicinity, and those employed on the southern border, a part of whose achievements was no where surpassed, and the chief of which no where equalled—that they should have been alive to every effort made in defence of our common country, as well in Canada as in Alabama, in Florida as in Louisiana, was but to be consistent.

"I have witnessed, with unmixed gratification and pride, Tennessee's efficient patriotism and growing fame, in the cabinet and in the field. My long acquaintance with the chivalrous virtue of the chief of her defenders, warrants me in ascribing to him, as a statesman and soldier, the first merit in the achievement of that fame. His immediate colleagues and associates in following his example, have attracted, and, I trust, will long continue to attract, the applause and admiration of our countrymen. They will thus prove to an admiring world, that liberty has found an asylum in our union, and that her reign therein shall be eternal.

"I cannot permit myself to conclude without tendering to you, individually, my respectful acknowledgments, for the kind and complimentary terms in which you have addressed me; and, through you, to the legislature of the state, my heartfelt thanks for this distinguished expression of their regard; with my earnest prayer for a continuance of your and their happiness and prosperity, with that of the state over which you preside.

FOREIGN NEWS.

From London papers of the 6th Aug.

Great Britain and Ireland. Splendid preparations are making to receive the king in Scotland, and there will be "boozing" enough.

It is reported that England is in treaty with Denmark to obtain the Island of Zealand, and with it the command of the Baltic, for which the kingdom of Hanover is offered in exchange. The emperor of Russia will have something to say about this matter, if there is any reality in the report.

Twenty members of the British parliament hold offices during the king's pleasure, whose income is \$136,000.

London Aug. 6. His majesty this day proceeded in person to prorogue parliament. On taking his seat upon the throne, the commons were forthwith summoned to the bar, and on their arrival his majesty delivered the following speech in a clear and audible voice:—

"My Lords and Gentlemen,

"I cannot release you from your attendance in parliament, without assuring you how sensible I am of the attention you have paid to the many important objects which have been brought before you in the course of this long and laborious session.

"I continue to receive from foreign powers the strongest assurances of their friendly disposition towards this country; and I have the satisfaction of believing, that the differences which had unfortunately arisen between the court of St. Petersburg and the Ottoman Porte, are in such a train of adjustment as to afford a fair prospect that the peace of Europe will not be disturbed.

"Gentlemen of the house of commons,

"I thank you for the supplies which you have granted me for the service of the present year and for the wisdom you have manifested in availing yourselves of the first opportunity to reduce the interest of a part of the national debt, without the least infringement of parliamentary faith.

It is most gratifying to me that you should have been enabled, in consequence of this, and other measures, to relieve my people from some of their burdens.

“Lords and Gentlemen,

“The distress which has for some months past pervaded a considerable portion of Ireland, arising principally from the failure of that crop, on which the great body of the population depend for their subsistence, has deeply affected me.

The measures which you have adopted for the relief of the sufferers, meet with my warmest approbation, and, seconded as they have been by the spontaneous and generous efforts of my people, they have most materially contributed to alleviate the pressure of this severe calamity.

“I have the satisfaction of knowing that these exertions have been justly appreciated in Ireland, and I entertain a sincere belief, that the benevolence and sympathy so conspicuously manifested upon the present occasion, will essentially promote the object which I have ever had at heart, that of cementing the connection between every part of the empire, and uniting in brotherly love and affection all classes and descriptions of my subjects.”

France. The country is quiet, but the debates in the chamber of deputies are exceedingly rude and ardent.

The king of Prussia is expected at Paris—something of an important character seems to be projected.

The conduct of the French government with respect to Spain, has been frequently alluded to in the course of the protracted discussions on the budget. In the sitting of the 30th July, on the proposition of 1,865,000 francs for the service of marches and transports, general Semele forcibly exposed the wickedness and the folly of the attempts against the liberties of their southern neighbor. Having proposed a reduction, of 200,000 francs—

Fearing (he said) lest the expenses of the Sanitary Cordon should cover more extensive projects, that it was intended to crush a people who have recovered their liberty and wish to live under a constitutional government—he added, gentlemen, may it not be asked, with what elements we should undertake this war?

If I except the Swiss, the army is national. Is it not composed of the children of France?—Does it not exist under constitutional laws? And this is the army which it is wished to employ without any legitimate motive against a nation, essentially the friend of France by her geographical position, by her dynasty, by her institutions, and, finally, by the actual state of politics in Europe—(agitation on the right).

It is this army which they should order to go and kill the Spaniards, and be killed by them—[renewed murmurs on the right].

Many voices exclaim—It is the duty of soldiers to march wherever they are ordered.

M. Semele—And all this, because the Spaniards wish to enjoy the same advantages as ourselves. It is this national army which they wish to employ in the service of an ambitious oligarchy, which is as much the enemy of kings as of the people. No, gentlemen, such an enterprise is impossible—[violent murmurs and increasing agitation].

The project of establishing an English theatre at Paris, will probably be abandoned. Two or three plays had been offered, but the actors were greeted with showers of eggs, apples, &c. and many were thrown at the English part of the audience:

This seems to be retaliatory on the *courtesies* of London to Parisian actors.

The affair of gen. Berton occupies much public attention—it is given out as though his plot was extensive. Some of the deputies are implicated.—Several arrests had taken place. Darkness and despotism prevails.

The present army of France amounts to about 200,000 men.

It is stated that on the 1st of January, 1821, there were 1,070,500 boys from 5 to 15 years of age that attended the primary schools in France; there were 27,528 schools under the care of 28,945 masters, situated in 24,124 communes. About 500,000 girls attended the public schools. From the old method of teaching and the little assiduity of the pupils, two thirds of the people of France could neither read nor write.

Netherlands. It appears that the ports of this kingdom are open to the flags of the South American governments.

Spain. The accounts from Madrid are to the 22d of July. The capital was tranquil, and the parties in the provinces were suffering many defeats and discomfitures. It was thought that the extraordinary cortes would be immediately convened.

The constitutionalists seem to be perfectly aware of the doings of France, as the agent of the “holy alliance,” and speak in very confident terms of their ability to resist them; but it now rather appears as if those designs had been abandoned, through the defeat of the factious. The national militia amounts to about 500,000 men.

It was strongly reported at Paris that an army of Austrians and Prussians were about to arrive on the frontiers of France for the purpose of passing into Spain, with the consent of the French government. The rumor had excited some strong remarks in the chamber of deputies. Gen. Foy said—“You have been told of the holy alliance—the holy alliance! we only know it through the tributes which it has imposed upon us, through the injuries which it has inflicted upon our country! But should its soldiers once again appear on the national territory; should a third military occupation threaten, all Frenchmen, soldiers or not soldiers, (*the whole of the left side rising at once; “Yes, all! all!”*) all France would rise and march to exterminate them!”—(*Loud and reiterated applause on the left.*)

“We have seen (says the National Gazette) a letter of a recent date, from a gentleman resident at Madrid, in whose intelligence and opportunities of knowledge we have entire confidence, which represents that the revolt of the guards at Madrid was the work of a conspiracy against the constitutional government of Spain, formed by the royal families of Spain and France; that six battalions, composing the royal guard, were corrupted; that, in their attempt on the 7th July to make themselves masters of the capital, they were beaten at all points by the militia and constitutional regulars—that all was tranquil on the 18th July, and the constitution stronger than ever. ‘Two battalions,’ says the writer, attempted to escape, and a running fight commenced just out of the city. We heard the firing distinctly. The poor devils were killed, wounded and taken prisoners by hundreds. The officers and soldiers are in confinement, and some more of them will be the victims of a crime in the perpetration of which they were the blind instruments of worse men than themselves.”

Portugal. The Heroine, patriot privateer, was lately taken by a Portuguese frigate, and her crew consisted of the following nations, viz: 1 African,

1 Austrian, 1 Greek, 10 French, 6 Spaniards, 26 South Americans, 2 Dutchmen, 42 Englishmen, 19 Americans, 4 East Indians, 7 Italians, 1 Portuguese, 2 Prussians, 1 Russian, and 3 Swedes—in all 126 men.

Russia. Though the accounts are not of a positive character, it seems admitted that Russia has abandoned all present designs upon, or interference with the affairs of Turkey—it is even stated that Moldavia and Wallachia will be given up wholly to the *legitimacy* of the Turks.

A congress is to be held—the emperors of Russia and Austria will attend in person; England, France and Prussia will be represented by ministers. The sultan has been invited also to send one, which he declined, on the ground that he had no particular relations with the Christian powers. It is speculated, that the affairs of Spain, Italy and Turkey, will occupy the attention of this assembly—whose manifest design is to “consolidate the condition of Europe;” that is, to support kings and keep the people in chains. But a day of retribution will come, and justice overtake the oppressor.

Turkey. The governor of Scio has been beheaded at the instance of the sultan's sister, for the part that he took in the massacre in this island;

Most of the wives of the late Ali Pacha of Janina have been *drowned*, by order of the sultan. His lawful wife Waseleka will probably share the same fate, as soon as all the information she can give is obtained of her.

It appears that the Egyptian troops were suffered to land on Candia—they were then attacked with great fury and a multitude of them were destroyed—many being drowned in attempting to swim to their ships. These Egyptians had arrived at Candia for the very humane purpose of destroying all the Greeks. Some Austrian ships served as transports on this occasion. The Souliots have gained a splendid victory over Churchist Pacha, killing 2000 of his men.

A letter received in England from Constantinople says—“Since I have been here, 14 days, a great number of Greeks have lost their heads; they are taken from their houses, and their heads cut off before their own doors; they are then stripped, and laid with their heads upon their bodies for three days; after which they are thrown into the harbor. The streets being very narrow, I have been obliged to step over many, lying in them daily.”

We have accounts from Vienna confirming the intelligence already received of the destruction of the Turkish fleet, and the death of the captain Pacha. They give the following details.

“The chiefs of the Greek navy held a council at Ipsara, and decided on the plan which was afterwards adopted. They called upon all those who were willing to devote their lives for the public good; more than 200 immediately presented themselves, and swore on the cross to execute the preconcerted enterprize, or to die gloriously. Out of these, 48 were chosen by casting lots, and received the benediction of their priests before engaging in their magnanimous design. All arrangements having been made, on the first day of the festival of Bairam, a Greek frigate and five vessels appeared, under a foreign flag, before the Turkish line, as though to take a part in the rejoicings. The 200 heroes, who passed for Englishmen and Frenchmen, were well received by the enemy, who allowed them to enter the port of Tsenese, in order to anchor in the centre of the Turkish fleet. But scarcely had they reached that position when they carried their plan into effect. In a short time

five ships of the line were on fire. The Admiral's ship ran out of the harbor all in a blaze, in the hope of escaping total destruction, and run aground on the neighboring coast of Scio, where the captain Pacha was landed, expiring. After this signal success, the two hundred self-devoted patriots retired, without having experienced any loss.” The enterprize appears to have been conceived and executed in a spirit of self-devotion worthy of the best times of ancient Greece.

Ypsilanti, the celebrated Greek chief, and a victim of Russian cupidity, is said to be a prisoner at this time, in the fortress of Montgat.

We have many particulars of the late blowing up of the captain Pacha's ship. It was a deed of desperate bravery. The ship was of 84 guns, and had 2264 persons on board, including soldiers and Greek slaves—all these perished except about 180! A second fire vessel struck the vice admiral's ship and set her in a blaze, but not being grappled, they separated and the flames were extinguished. When the fire reached the magazine the explosion shook Scio like an earthquake.

The Greek accounts state the loss of the Turks at Scio to be, the admiral's ship of 130 guns, three others of the line and seven frigates wrecked—the greater part of their crews being drowned in consequence of the fright; that they had also captured 16 Turkish vessels, belonging to another expedition.

M. Bourville, the brave and humane French vice consul at Smyrna, died on the 23rd of June.

Chinese army. The emperor has expressed a desire to diminish the army, on account of the great expense of supporting it. The limited number of the standing army for China proper, is stated to be 600,000 men, of which the province of Sze chuen has allotted to it \$3,973 men. The governor of that province, (late of Canton), has remonstrated against diminishing his military establishment.

Colombia. In the British house of commons, Aug 5. general Gascoyne said he had a petition to present from the most respectable and numerous body of the merchants of Liverpool that had ever petitioned that house, complaining of the non-acknowledgment by our government of the independence of Colombia, from which conduct they anticipated great detriment to the trade of this country. All hopes on the part of Spain, of recovering her Colonies had ceased, and the Colombian, like all new governments, was very anxious to obtain the acknowledgement of her independence. A very lucrative trade has been established with Colombia, but an interruption to it was apprehended, as an accredited agent had notified, on the 8th April, to the several governments of Europe, that the Colombian government would only admit the ships and subjects of those states which would acknowledge their independence. This notification, they feared, would be followed up; and it was an immediate detriment to the trade, as all merchants felt extremely distressed in getting up shipments, which might, before they could enter Colombia, be met by the decree of exclusion. The policy pursued by our government appeared to him to be inconsistent with the true interests of the country, and he saw nothing in the past conduct of the Spanish government, (who had furnished arms, men, and money, to our own colonies, when they were in arms against us,) that could call for the political etiquette which we observed towards Spain. Other nations of Europe had nothing to gain and nothing to lose, by the acknowledgment, as they had no trade; but it was a matter which essentially concerned the interests of England, as in the present state of agri-

cultural distress, the loss of a large and prosperous branch of our commerce would be severely felt.—On this question, and in their conduct towards the pirates who had grown by encouragement, he thought the ministers had neglected their duty, and he should on the very first opportunity next session bring the matter before the house.

Mr. Lushington said, when the time came for discussing the question, it would appear that the government had acted with every regard to the dignity and interests of the nation.

Latest—London papers of the 14th August.

Great Britain. The marquis of Londonderry, alias lord Castlereagh, fully took his own life, on the morning of the 12th of August, "by opening an artery" in his neck with a penknife. He was just about to proceed to the continent to be present at the approaching congress. Great efforts are made to prove that he had been in a state of insanity sometime previous, and he appears to have been indisposed. Dr. Bankhead, his physician, was the first person who saw him after the act—he thinks it was committed at the moment when he, (the doctor), entered the room, and the marquis, on seeing him, said, "Bankhead let me fall on your arm—'tis all over." The doctor thought he was fainting—but, on the instant, the blood began to flow "like a torrent from a watering pot," and in about *one minute* he was dead, during which time about two quarts of blood flowed from him. Even yet he held the knife fast in his hand with which he had cut his throat. Cruel man that he was, may his sins be forgiven! Further notice of the case is not necessary. Mr. Canning is chiefly spoken of as his successor.

The king had started on his visit to Scotland—and all was bustle and confusion, pomp and shew, to receive him.

Spain. These later accounts do not make any material alteration in the appearance of things, which were in great confusion. The military seems to govern at Madrid—several of the provinces are in open insurrection—and, if the intelligence was not chiefly received through French vehicles, we should apprehend that a most dreadful civil war was on the point of breaking out. *It seems agreed that either the king or the cortes must be annihilated.*

Turkey. Twenty Turkish vessels were missing after the late attack of the Greeks, by fire ships—this is the Turkish account, and the consternation by reason of this great misfortune had not subsided. When the news reached Constantinople, the Sultan ordered some hundreds of Greeks to be publicly put to death, to calm the feelings of the people and prevent them from committing murder! *The English minister is stated to have profited by the alarm, and to have obtained some concessions.* The very important fortress of Napoli de Romania has surrendered to the Greeks, who have also possessed themselves of the citadel of Athens. We begin to entertain a hope that they will, of themselves, work out their own emancipation.

Sickness of the Hornet's Crew.

FROM THE AMERICAN BEACON.

Messrs. Shields Ashburn, & Co.

GENTLEMEN, I send you for publication in the "Beacon," an interesting communication from Dr. Cooke, surgeon of the U. S. ship *Hornet*, on the subject of the afflicting malady which recently visited the crew of that vessel.

I am very respectfully, &c. R. HENLEY.

Norfolk Sept. 21st, 1822.

U. S. FRIGATE GUERRIERE,
Gosport, Sept. 16th, 1822.

Sir. In conformity with your request, I lay before you a statement relative to the disease which occurred to the crew of the *Hornet*, while laying at Gosport navy yard. The duties incidental to the occasion have prevented an earlier compliance; in the mean time the event has given rise to statements in every respect erroneous, founded on mere rumor, without any knowledge of the facts relating to the subject. I consider a correct opinion of such events to be, not only of high importance to society generally, but also to the officers and crews of vessels which may hereafter labor under similar calamities, I therefore deem it necessary, not only to relate the causes which gave origin to the disease of the *Hornet's* crew, but to show the errors of the reports and fallacy of the alarms occasioned by it.

The first case of our sickness occurred on the 23d August, and the last case on the 1st September; during which period thirty-eight of our crew were attacked with a most strange and peculiar form of disease, the whole force of which, particularly in the more violent cases, was exerted almost exclusively on the stomach: Of this number eight died—the others recovered. The healthy state of the *Hornet's* crew, on her arrival in this port on the 11th of August—the continuance of this healthy state up to the 23d August—the rapidity with which her crew sickened after that period—the peculiar character of the disease—the measures adopted for its extinction, and the short interval between the first and last case of the disease, are such strong circumstances attending this event, that the conclusion is irresistible, that an observer of the calamity through its progress and termination, requires not the gift of divination to detect the causes by which it was produced, especially when he views them in connection with the measures which proved entirely effectual in its suppression.

The great cause of our sickness I attribute to the season and climate, which evidently produced a *predisposition* to this peculiar form of disease. The secondary or *exciting* causes were fatiguing duty in the sun—exposure by night, and, in the majority of the violent cases, excessive intemperance. When these causes were removed, the disease ceased. To produce conviction as to the validity of the causes assigned, and to remove the impressions made by incorrect statements, it becomes necessary to enter into a more detailed view of the subject.

The first or *predisposing* cause of our sickness, viz. season or climate, requires consideration. It is not necessary to examine in the present instance how this peculiarity of season or climate produces its effects, or in what it consists, whether in the atmosphere—from miasmata or exhalations—from vicissitude of temperature—from alternations of sun and rain—calms and winds—dryness and moisture, &c. &c. These at best are mere speculations which the investigations of science have as yet not been able to unfold: it is only necessary to shew that a peculiarity, predisposing to the particular form of disease which afflicted our crew did exist. The following facts will satisfactorily prove the existence of this peculiarity: 1st. On the day the *Hornet* arrived at the navy yard, a death occurred at the navy hospital, under the charge of Dr. Kenyon, of a similar form of disease to that which subsequently appeared among our crew; also, some days after, another death occurred there, under

the same form; no communication whatever occurred between these two men and our ship; the one sickened before the Hornet went up to the navy yard, the other sickened in the same place, and died during the period of our calamity. 2dly. A similar form of disease made its appearance among the prisoners at the marine barracks who had been in confinement long previous to the arrival of the Hornet from sea, consequently could have no communication with our ship. 3dly. A disease of a similar form has made its appearance at Portsmouth—and 4thly. diseases, evidently of a different nature, and well known character, such as the common intermittent and bilious fevers of this country, have in their progress, assumed in a number of cases, some of the peculiar symptoms of the disease of our crew, and evidently approximated to its form. These facts, more especially the latter, prove, that some peculiarity of the season has occasioned a *predisposition* to a particular form of disease, and the circumstances connected with the disease of the Hornet, will shew that it only requires some powerful *exciting* cause to produce this specific form of disease. These exciting causes were as follows, and succeeded each other in the order in which they are enumerated. 1st. On our arrival in this port, we found the Macedonian at Craney Island, under a prohibition from all intercourse with Norfolk and the navy yard, by her own boats and crew; she therefore required the aid of others, to carry communications—to market for her—to take supplies on requisition, &c. &c. This aid was granted by the Hornet, and necessarily exposed our men to much boat duty in the sun. 2dly. It was also assigned to the crew of our ship to tow up the guns, rigging, stores, &c. of the Macedonian to the navy yard, a very laborious duty, which several times exposed them to become wet, and to the night air. These duties, in addition to the proper duties of the Hornet, operated powerfully to give effect to the peculiarity of the season, by occasioning among our crew a more rapid *predisposition* to the peculiar form of disease with which they were subsequently attacked. 3dly. After our ship went up to the navy yard on the 21st Aug. she was immediately dismantled—her hold broken out—her guns, stores, rigging, spars &c. taken on shore and stored in the yard; this service was performed by the Hornet's crew in three days—the heavy labor attending which is too well known. 4thly. Gangs of our crew were employed in the duties of the navy yard, particularly in bringing the spars of the Congress from the depository of timber on the opposite side of the river, to the yard. 5thly. For the better accommodation of our crew, after the dismantling of the Hornet, the frigate Congress was assigned to them as quarters; immediately after they occupied this vessel, the order for her being fitted out to sea arrived, and the roof was taken of preparatory to her repairs. On the night of the 24th August, a heavy fall of rain occurred—the spar deck of the Congress leaked in every direction, and the greater proportion of our crew became wet in their beds: a disposition to sleep, in consequence of the fatigues of the preceding day, predominated over every other influence, and no effort was made to remove themselves to dry places; they consequently remained wet during the whole night. The morning of the 25th, I was called to visit the second case of our sickness, which was the case of the amiable and much lamented midshipman Newton; on this occasion I found him entirely wet in his bed; this occurred after he had been exposed the two pre-

ceding days to constant duty in the hot sun. 6thly. A very great proportion of our crew were indulged with liberty on shore on the 25th Aug. being Sunday; an indulgence, not only expected by them, but commonly granted, more especially after having performed laborious duties. On this occasion, as is also common among sailors, they indulged in intemperance, and few or none returned sober; many remained on shore all night, and of these, some slept all night on the ground; to add to their miserable situation a shower of rain fell. Under the existence of the causes I have enumerated, our crew sickened so rapidly, that on the 29th Aug. I had nine of the more violent cases of the disease, removed to the navy hospital, and seventeen more remaining on board the Hornet. I then found it my duty to make a representation to captain Warrington of the state of our crew, and the probable causes which produced this state, and to suggest to him the necessity of excusing them from further duty until the sickness was suppressed; also to request their removal to a more commodious vessel. The following reasons dictated this request. 1st. That the sick might be separated from the well, which it was impossible to do on the small birth deck of the Hornet, at this time already crowded with sick, to the great annoyance of the well, who also in turn, necessarily incommoded the sick. 2dly. That as our whole crew had been nearly equally exposed to the deleterious causes, and as it consequently could not be foreseen how long the calamity would continue, I wished our men to be so situated that as soon as any one should be taken ill, he might be immediately made comfortable without the fatigue and exposure of a removal. 3dly. Because the navy hospital was at this time so full that no new case could be taken there and some other accommodation for the sick was indispensable. Captain Warrington very promptly assigned the frigate Guerriere for this purpose, and prohibited the further employment of the crew, so that, from this period, they had nothing to do, but to make themselves easy and comfortable; this change took place on the 29th August, and on the 1st September the last case of the disease occurred!—On a review of the circumstances under which the Hornet's crew sickened, can it be a matter of surprise that causes, powerful as were those to which they were exposed—causes which are known to produce violent diseases—causes applied in such rapid succession, that the system had not time to recover itself from one violent shock before it had another to sustain—causes which, when singly applied, are daily the instruments of disease and death—I ask, can it be a matter of surprise that, under the operation of these causes, the crew should become sickly, and that some of these causes should have placed the system, in many cases, totally beyond the possibility of repair? Is it not rather a matter of surprise that of about one hundred and fifty persons exposed to such powers, only thirty-eight should be taken sick, and eight prove fatal? Or shall we lose sight of these causes and refer the calamity of the Hornet to imaginary agents, such as imported contagion, "deleterious air confined in the hold of the ship," or such like similar causes, the existence of which it is much easier to affirm, than to support by reasoning or facts. A review of this part of the subject will demonstrate the absurdity of attributing our sickness to any such causes.

On our arrival at Norfolk we had not any case of a contagious disease existing on board the ship, and the sickness which occurred during the cruise never manifested any such property. The di-

sease, which is the subject of this statement, made its appearance on the 23d August, 12 days after our arrival, and exhibited a totally distinct character from any form of disease which had existed on board the Hornet for the last two years; it is, therefore, absurd to consider it as connected in the remotest manner with contagion from former diseases. To ascribe it to deleterious air confined in the hold of the ship, which is stated in the Norfolk Herald, "upon the best information, as well as our own observation," to have "proved fatal to the greater part of those engaged in breaking it out" is equally as absurd as erroneous. The very construction of the Hornet makes it hardly probable that air can be confined in the hold, with the least precaution to its prevention, the hatches of the hold being directly under those of the spar deck, and these hatches being always open, and exposed to a constant current of air from large wind sails, or ventilators, which were always in use. Messrs. Zant, Zinger and Newton were never in the hold from the time the ship arrived from sea to the day of their death, and had no duties assigned to them which required their being there; those who did attend to the breaking out of the hold have never sickened, because, though their duty was laborious, yet they were confined exclusively to that particular employment during the whole time of dismantling the ship, consequently were not exposed in the sun, rain, &c. The only officer engaged in that duty, who became sick, was the master's mate, Mr. Gale, who was also engaged a whole day in the sun, and was exposed to rain. In every case which terminated fatally, great exposure or great imprudence, and, in many cases, both, occurred—this also took place in every violent case of the disease of those who recovered.

I know not one circumstance attending the Hornet, which can justify the opinion that the source of the disease existed in her. The hold was perfectly sweet and clean. It occurred, in breaking out the hold, that about ten casks of sea water, which had been filled on our passage home, for the purpose of improving the trim of the ship, had become, in a considerable degree, offensive; this was pumped off with a common hand pump, and, to free the ship from the disagreeable smell it occasioned, she was immediately washed out—the smell and effect of this water was the same as is experienced by bilge water in a tight ship, and, as on those occasions, it never caused any disease or injury, so it requires, infinitely, more credulity than I am possessed of, to consider this circumstance as, in the remotest degree, occasioning our sickness: its agency, if any it had, was most strangely exerted—those engaged in pumping it off—those engaged in the hold and over the hatches, superintending the duty, and who, of course, were exposed to its utmost virulence, escaped altogether, while those who were on deck in the hot sun—in boats—engaged in laborious duties on shore, &c. were its victims! This supposition would be absurd—if, in its most concentrated state, it proved wholly inert, it must have continued so after its dilution and total dissipation. One case of the disease, and that a fatal one, occurred before these casks were touched.

If any thing were wanting to establish the correctness of the causes which I have assigned, as giving origin to the disease of the Hornet's crew, and to show the futility of those assigned for it in the newspaper, it would be supplied by the circumstance of its rapid extinction: The exciting causes I have assigned as producing the disease, lose their

effect in a very short time, and those exposed to them, should they escape the consequences for two or three days, are generally entirely safe. On the other hand, it is well known that, when infection or contagion is the source of disease, but a very few will be so susceptible of their action as to become immediately contaminated; their effects are slow and progressive, so that the great proportion of cases resulting from such causes, will generally be developed at a considerably distant period from that of the exposure. This observation applies I believe universally—it does so in all cases of this nature that have ever fallen under my observation.

When it is considered that the hatches of the Hornet were open and exposed to the streams of air from a number of wind sails—that her hold was perfectly clean—that none of those engaged in the duties of the hold became diseased, except the case of Mr. Gale—that those who sickened were exposed to the causes I have enumerated, for the most part out of the ship, and became sick in a more or less violent manner, in proportion to the degree of those causes to which they were exposed—that the disease was unknown among our people until the application of these causes, and almost immediately ceased when they were removed—that, among the great number of persons who have been on board since the arrival of the Hornet, such as washerwomen, men's wives, &c. many of whom were on board day and night, during the whole time the ship's hold was broken out, and during the pumping out of the offensive casks of salt water, and after it, until the ship was finally abandoned—that these persons must have been equally, if not more, susceptible of any contagion or infection existing in our ship, and not one case of disease occurred among these people—I say, when these facts are considered, the conclusion necessarily follows, that the state of the Hornet's hold, or any other part of the ship, had no agency in producing the disease of her crew, but that her disaster is solely referable to the causes I have assigned.

The disease of the Hornet's crew was not in the least contagious or infectious; this is evidently proved by its rapid extinction after their removal to this ship—by the circumstance that none of those who attended the sick received the disease, and that, of nine of the most violent cases which were removed to the navy hospital, where there were about thirty other persons, no new case of the disease occurred, though attendants and physicians were constantly with these cases, sleeping in the same apartments with them, and performing all the offices necessary on such occasions, without adopting any precautionary measures for their own safety. A review of all these circumstances, clearly shews that there was not the slightest cause for the alarms which were excited in the public mind, on account of the calamity of our ship.

To conclude: when occasions of this distressing nature occur, how much more benefit would a community derive from a correct account of the character and causes by which it was occasioned, than from representations calculated to awaken their fears, by diverting their attention to contagion, infection, &c? They would then be told that a certain peculiarity of season exists, so feeble, indeed, in its effects, as to require the most powerful exciting causes to produce the disease to which it predisposes: that this peculiarity may go off without producing much evil; but, on the other hand, it may increase, as the season advances, to such a degree, as to make much less powerful causes equally efficient in the

production of the disease, and, ultimately, by its long continuance, or increased energy, it may become not only a predisposing, but also an exciting cause. The community might be told that, in the first state, little caution is necessary, as nothing but the most powerful exciting causes are dangerous. That, in the second state, every, even the least exciting cause, should be guarded against; and, when it is observed that new cases occur to those who have observed every precaution, they will then know that the last state exists, and that the only effectual security against disease, is to abandon a place surrounded by such peculiarity. The community should be told, whenever the occasion justifies the declaration, which I believe has almost always been the fact as relates to the epidemics of our sea port towns, that the disease is incommunicable from a sick to a healthy person. We might then see healthy towns opening, instead of closing their ports from communication with sickly towns. We should then not behold so frequently the heart-rending spectacle of an afflicted mortal deprived of the consolations, and his last moments embittered by the desertion of those whose duty it was to support and comfort him. Human ingenuity would no longer lend its aid to the cause of disease and death—we would not so frequently see the dreadful reports of miserable beings, hurried off to distant lazarettos, in the last moments of their existence, when quiet and repose are all important, dying during their removal, or shortly after; perhaps frequently by the gloom and dismay occasioned by their cruel transportation! But I have digressed from the immediate object of this statement, into a path that would lead me much too far. I must, therefore, close the subject.

I am, very respectfully, sir, your obedient ser^{vt}.

ANDREW B. COOKE,

Surgeon U. S. navy.

ROBT. HENLEY, esq.

Commander U. S. ship *Hornet*.

American History.

There are a number of interesting facts relative to early *American history* scattered through *Holmes' Annals*. The editor of the Democratic Press has read the work for the purpose of selecting such matter as may interest the American people.—He submits the result.—No. 1—

Robertson and Anderson concur in stating that in the year 1506 some ships of the *suger cane* were brought from the Canary Islands and planted in Hispaniola, (St. Domingo) where they were found to thrive so well, as soon to become an object of commerce.

Robertson says that a few *negro slaves* were sent to America in the year 1503. In 1508 negroes were imported into St. Domingo by the Spaniards from the Portuguese settlements on the Guinea coast.—The reason assigned was that the natives were too feeble to work in the fields and in the mines. It is clear that in modern times slavery is the offspring of cupidity. Charles V. of Spain, granted to a Flemish favorite an exclusive privilege of importing into America four thousand negroes. The Fleming sold the privilege for 25,000 ducats to some Geneose merchants, who first brought into a regular form the commerce for slaves between Africa and America. A commerce which is now happily at an end. It is an honorable fact in the history of the United States, that it was the first government which prohibited the importation of slaves.

The first *charter* for a colony granted by the crown of England was granted by queen Elizabeth in 1578 to sir Humphrey Gilbert. By this charter he was authorized to take possession of all remote and barbarous lands unoccupied by any christian prince or people."

The first *English colony* ever planted in America was at Roanoke Island, Virginia, in 1585.—One hundred and seven persons were left there by sir Richard Greenville under the government of Mr. Lane.

On the 18th of August 1587, Mrs. Dare was delivered of a daughter in Roanoke, which was baptized the next Lord's day by the name of Virginia. She was the first English child born in the country.

In 1593 the English sent some English ships to Cape Breton for morse, and others for whale fishing. This is the first mention we find of the *whale fishery* by the English. They found no whales, but they discovered on an island eight hundred whale fins, where a Biscay ship had been lost three years before, and this is the first account that we have of whale fins or whale bone by the English.

In 1607 the English settlers built a town in Virginia, and in honor of king James, called it James Town. This was the *first PERMANENT HABITATION* of the English in America.

In 1608 John Laydon was married to Ann Burras, and this was the *first marriage* in Virginia. The first marriage in New England was in 1621, between Edward Winslow and Susanna White.

In 1610 a member of parliament came to America. The commons declared his seat vacant, because by accepting a colonial office he was rendered incapable of executing his trust. This appears to be the *first time* that Virginia was noticed by the English parliament.

In 1616 *tobacco* was *first* cultivated by the English in Virginia.

The Abbe Sicard,

LATE INSTRUCTOR OF THE DEAF AND DUMB AT PARIS.

Translated for the American Sentinel, from the 'Magazin de Literature Europeenne, 1802.'

The celebrated and modest Sicard, the man whom the Abbe de l'Epee had chosen for his immediate successor, was, during two years and four months, the object of an unmerited prescription. Concealed in the house of a faithful friend, who, during nearly two years, exposed his own life to save that of so valuable a man, Sicard undertook to strew with flowers the earliest path in the studious career of children, to facilitate their progress, and to aid the fathers of families in the exercise of their duties. In a small chamber, by the assistance of a lamp whose feeble light seemed unwilling to disclose the respectable features of the estimable outlaw, and to betray his asylum, he wrote his *past-graphy*.*

During this time, the deaf and dumb of every age, and of both sexes, lamented the absence of their instructor. Sometimes, looking towards the windows of his chamber, their eyes were bathed with tears; at others, they adjusted with the greatest care the arm-chair in which Sicard daily extended the sphere of their understandings, and labored to render them susceptible of the impressions of nature. Of all the multiplied and most significant

*The art of writing and printing in one language, so as to be read and understood in all other languages without a translation.

gestures which had before animated their persons, they now remained nothing but the expression of dejection and sorrow.

Among others, one of them, Jean Massieu, the fifth individual of his family, who had enjoyed the instruction of the respectable Sicard, was so deeply affected by the loss of his instructor, that, in order to restore him to tranquility, they were obliged to disclose to him the place of his retreat. This young man, whose mind and talents had excited the admiration of all Paris, and who, notwithstanding his ill health, had become a tutor in the school of the deaf and dumb, with a salary of 1200 francs per annum, frequently offered to divide his little income with Sicard. "*My father,*" said he, by the most rapid signs, "*My father has nothing now; I must supply him with food and clothing, and rescue him from the misery by which he is overburthened.*"

In consequence he took the wisest measures. He engaged some of his friends to second him in his generous project, and resolved to profit, for this purpose, of the first favorable occasion. At length the moment so ardently desired, arrived. Bouilly, a dramatic author, excited by the enthusiasm of his heart, formed the design of captivating the interest of the public in favor of the successor of the Abbe de l'Epee, by introducing upon the stage one of the most remarkable traits of the life of the celebrated founder of the institution of the deaf and dumb. The enterprize was dangerous; but his desire on that account was the more invincible. The tears of the audience flowed at the recollection of this excellent man; and while they repeated his sacred name, many voices also made the house ring with that of the unhappy Sicard. Oh, why could he not, from the depth of his solitude, hear the cheering exclamations of so numerous and distinguished an assembly; and the generous transports of the enthusiasm of a people who did homage to virtue, and took under their protection the cause of innocence! "*Sicard! Liberty to Sicard,*"† resounded from every quarter.

From the internal sensibility which was painted on all countenances, from the noisy plaudits, and clapping of hands, and, above all, from the ineffable transports of the poet Bouilly, it was not difficult for the deaf and dumb Massieu himself to form an idea of the interest the audience had taken in the fate of his instructor. He contrived a few days after to meet Bouilly, at the house of one of the legislative commission, known to be a friend of men of merit and of the unfortunate, and to whom the brother of the first consul was at that moment making a visit. By his touching replies to the questions which were asked him, he succeeded in interesting the hearts of many of the company in the feelings of his own. He gave to the brother of the first consul a letter, which he had written in his presence, and which contained, among others, the following remarkable words:

"*Promise! oh promise me to speak for us to the first consul! They say that he loves those men who labor for the happiness of their kind. Then, surely, he should love the Abbe Sicard, whose whole happiness consists in producing that of the poor deaf and dumb.*"

This pathetic language of nature excited the admiration of all who were present, and produced the most lively emotions in their souls. Massieu, who perceived the effect, immediately threw one of his arms around Joseph Bonaparte, and the other around Bouilly, and all three melted in tears, Jo-

seph Bonaparte, who was the most excited, pressing the amiable pupil of Sicard to his bosom, desired his worthy friend to communicate to him that he would present his letter, that very evening, to the first consul, and that he ventured to promise that it would produce the desired effect. The effort of Massieu was not vain. The first consul ordered the name of Sicard to be struck off the list of outlaws, and, immediately after, he was permitted to continue the instruction of his scholars.

It was on the 14th of February, 1800, that the good father re-appeared among his children. It was 11 o'clock in the morning. The hall appropriated to the public exercises of the deaf and dumb was already crowded with a number of spectators, among whom were distinguished, many estimable men, who had consecrated their talents and exertions to the education of youth, and to the advancement of the happiness of their species. The scholars, the deaf and dumb of both sexes, were placed in the middle of the hall. The vivacity of their countenances, and the nimbleness of the signs by which they communicated their thoughts to each other, proved that this was the happiest day of their lives.

The friends of the respectable Sicard, among whom was the excellent man who had rescued him from the fury of party spirit, entered the hall in crowds, where a number of beautiful women rendered the assembly still more brilliant.

Massieu having uttered a very piercing cry of joy, every one arose. A respectful silence reigned through the whole assembly. Sicard appeared. Instantly Massieu is in his arms, he presses his lips against Sicard's, his whole soul appears to infuse itself into that of his instructor; he takes his hand and conducts him to his seat. Immediately the boys, his pupils, throw themselves upon him. The oldest surround him, they press him to their hearts, they lock him in their arms. The younger kiss his hands, they attach themselves to his clothes, they eagerly hold on him as high as the breast, as the cheek; shedding tears of joy, they cover him with the most tender kisses, and load him with the most affecting caresses.

Sicard endeavors to speak, but his emotion deprives him of utterance. He wished to express to each of his pupils what was passing in his heart; but all have their eyes fixed on him at the same instant, all embrace him, all caress him. To extend over them his beneficent hands, to communicate to them by signs, that he loves them all equally, with the tenderness of a father, that they have all a place in his heart; this is all he can do, all that the holy intoxication of his soul can inspire and permit him.

But as nothing escapes his penetrating eye, he soon perceives that his female pupils, withheld by their natural timidity, dare not allow their sensibility to break forth, which pours through their eyes and glows in every feature of their expressive countenances. Affected by this struggle of feeling with modesty, Sicard approaches them, and after a moment of silence, he extends his hands, and receives their caresses, in a manner which seemed to say, "*should a father blush to embrace his children?*"

While these timid girls expressed to their instructor the joyful feelings which his return caused them, those of the boys who had made the greatest progress, had approached the table, where they wrote, with the rapidity of lightning, the feelings of their hearts. One rendered thanks to the first consul and his brother, for having restored to their wisest the man to whom they owed their moral existence.

† Sicard! qu'on rende la liberte a Sicard."

another described the anguish and affliction which they had experienced during the absence of their beloved instructor; a third wrote this sentence: *Truth and virtue triumph soon or late over all the artifices of men.*

Massieu at length appeared before the table, and whilst to the great astonishment of the spectators he commented upon the most profound doctrines of natural and moral philosophy, a young girl, in the full bloom of beauty, placed a crown of poppies and heliotropes upon the head of Sicard, as a symbol of the grief which his absence had caused his pupils, and of the immortality with which his genius, his patience, and his benevolent labors would be crowned.

Censorship of France.

The "Scotsman" gives the following instructive summary of the legislation of the government of France on the subject of the press:

"The French constitution of 1791, which emanated from the people, and not from the throne, guaranteed to every citizen the liberty of speaking, writing, printing and publishing thoughts, without the writing being submitted to a censor for inspection before publication." (Tit. 1, art. 3.) Compare with this clear and explicit language the Jesuitical reservation contained in the 8th article of king Louis' charter: 'Frenchmen have the right to print and publish their opinions, provided they conform themselves to the laws which are to repress the abuse of this liberty.' Equivocations and evasions, which stamp a man with the character of a swindler in private life, have always formed part of the authorized arms of legislative policy. The law to repress the abuse of the press, when it was framed, turned out to be a law to take away the right which it pretended only to regulate. The charter says, that every Frenchman has the right to print and publish his opinions. The law of the 21st of October, 1814, vests the right to publish (as to all periodical works) exclusively in a board of censors, and named by the king; and the Frenchman's right to publish, comes to be nothing more than the right to submit his work to the censors. By this law, the censorship was extended not only to newspapers, but to reviews, tracts, pamphlets, and all works, not exceeding twenty sheets in size, unless written in the learned languages. An ordinance, issued on the king's second return to Paris, in July, 1815, restricted the censure to periodical works only. In this state the press continued till the Duc Decazes, by the acts of 17th and 26th May and 9th June, 1819, had the courage to withdraw the censorship entirely. Such a state of things could not last. The press acquired an activity and power which alarmed the ministers. The *Minerve*, a journal conducted by some liberaux of distinguished talents, overpowered all its royalist competitors, and reached the unexampled circulation of 35,000. A government resting on force, found the appeal to reason a dangerous experiment, and saw the necessity of retracing its steps. Accordingly, after a lucid interval of eleven months of free discussion, the censorship was re-established by the act of 31st March, 1820. The following is in force, at present, in relation to the press:

No person can be a printer or bookseller unless he has received a patent from the king, and has taken the requisite oaths.

The patent may be withdrawn from any printer or bookseller who has been judicially convicted of violating the laws or regulations:

Clandestine printing offices, (that are not authorized by royal patent), shall be destroyed, and the owners punished by a fine of 1,000 francs (40*l.*) and imprisonment for six months.

A printer must give intimation (to the authorities) before he print any work, and must deposit five copies of the work before publication or sale. Neglect as to either of these particulars, subjects him to a fine of 40*l.* for the first offence, and 80*l.* for the second. The five copies are for the royal library, the chancellor of France, the minister of the interior, the director general of printing, and the censors.

A work may be seized if the forms above mentioned have not been complied with, or if an action is raised before the tribunals as to its contents.

The printer who prints a book without his name and designation, is liable to a fine of 120*l.* besides imprisonment. If a false name is given, the fine is 240*l.* The bookseller who has in his possession a work wanting the printer's name, pays a fine of 80*l.* The same regulations apply to engravings. (Law 21st Oct. 1814; ord. 24th Oct.)

No journal or periodical work, devoted wholly or in part to news or political matters, (whether appearing at fixed intervals or irregularly), can be published without authorization of the king, (that is, without being submitted to the censors.)

The proprietors or editors of such a work are obliged, 1st. To give in a declaration, stating the name and residence of at least one proprietor or responsible editor, and the authorized printing office where it is to be printed. 2d. To furnish security to the extent of 10,000 francs *de zente* for a daily paper in Paris, or 5,000 for one published less frequently. [They are required to lodge a sum which would yield ten thousand francs yearly; that is, a capital of 200,000 francs, or 8,000*l.* sterling, in the one case, and 4,000*l.* in the other.] In the departments, the security is one fifth of this amount.

The security (*cautionnement*) so lodged, is answerable for any expense, damages, or fines, which may be awarded against the journal.

The editors and proprietors of periodical works are prosecuted in the same manner as authors of other works, and are liable to the same punishments. But the fines may be raised to double, or in case of a repetition of the offence, to quadruple of those fixed by the penal code. (Laws 9th June, 1819; 31st March, 1820.)

If the offence charged is committed against one or both of the chambers, the prosecution cannot take place without the authority of the same. If it is against the sovereign of the country, the prosecution must be at the instance of the government. And in all other cases, it must be at the instance of the party aggrieved.

Any person who, by means of writing, printing, or engraving, excites another to the commission of a crime, shall be punished as an accomplice.

If the excitement or provocation is not followed by a criminal act, the offender shall be punished by imprisonment, from three months to five years, and fine, from 50 to 6,000 francs.

Are considered as provocations to crime—all formal attacks on the inviolability of the king, the order of succession, or the constitutional authority of the king or chambers.

Provocations by writing, printing, &c. to disobedience of the laws, are punished as misdemeanors, (delicts.)

Correct accounts of the public sittings of the chamber of deputies given in good faith, are not liable to prosecution.

The power of raising actions against crimes or misdemeanors of the press, suffers prescription in six months from the date of publication. (Laws 17th and 26th May, 1819.)

A commission composed of twelve censors, named by the king, has charge of the periodical press in Paris.

Every article in a journal must, before being printed, be submitted to, and receive the sanction of the censors, who cannot pronounce unless five of them be present.

In the departments, the inspection of the journals is confided to a council of three censors, seated in the chief town.

Nine magistrates, named by the king, form a council of surveillance, to which the censors of Paris render an account of their decisions weekly, and those of the departments monthly.

If a proprietor or editor of a periodical work, print a sheet of an article without submitting it to the censors, he shall be punished by the correctional police with imprisonment from one to six months, and a fine of from 200 to 1200 francs, exclusive of any other penalty to which he may be liable for the contents of the article.

In this case, also, the council of surveillance may suspend the publication of the journal till the matter is tried. In the event of condemnation, the suspension may be continued for six months, and in the case of a repetition of the offence, the journal may be suppressed. (Law 31st March, and ord. 1st April, 1820.)

English Common Law.

In the *Edinburgh Review* of Feb. No. 72, the first article is entitled "the courts of the ancient English common law," and beginning with the following summary of the various codes, whose validity Great Britain at present recognizes in different parts of her dominions.

"At this moment there are few of the systems of legislation, either of ancient or modern times, which are not in force as a living law within the British empire.

Menu and Mohammed decide the civil rights of the *Hindu* and the *Mogul*; and an appeal from India compels our privy councillors to consult the *Koran* and the *Paranas*, as authorities at Whitehall.

Justinian is obeyed by the courts of the *Ionian* republic.

In the *Norman Isles*, the several portions of the domains of the conqueror, the Barbaric custumal framed by his justiciars, still guides the grand bailiff and the seneschal, who dispense the equity of *Rolo*, now forgotten in the halls of *Rouen*.

Canada cherishes the volumes which have been cast forth from the palace of justice; and the legitimate representatives of the proud and learned presidents of the parliaments of Paris, are found in the court house of a colonial town. Banished from the flowery meadows of the Seine, the ordinances expounded by St. Louis beneath the oak tree of Vincennes, constitute the tenures of lands on the Gulf of St. Lawrence; and whilst every vestige of feudality has been blotted out of the title-deeds of the European continent, it remains full in vigor in the wilds and wastes of the new world.

In the opposite hemisphere we bestow an equal protection on the codes of *Napoleon*; and it is possible that in future ages the speck of land, the *Mauritius*, in which they are now in force, may alone preserve the vestiges of the jurisprudence of the great empire.

Our sovereign appoints his *alcades* and his corregidores in the Indies of Columbus at Trinidad; while his *Landvoets* in Southern Africa (Cape of Good Hope) are guided by the placets of the states general of the departed republic of the Netherlands.

The laws of king Christian, of Denmark, are administered by British authority in the torrid zone. And the deemsters assembled on the Tynwald of Man, have not abandoned the polity of the Sea-Kings of Scandnavia."

British North West Expedition.

From the Montreal Gazette.

In addition to the communication which appeared in the *Montreal Herald* of the 17th ult. relative to the arctic expedition, under the orders of Lieut. Franklin, we are happy to be empowered to state, upon the authority of more recent arrivals, that the expedition had arrived at York Factory, in Hudson's Bay, and was about to embark for England.

It appears that the toils and the sufferings of the expedition have been of the most trying description, and that if they do not exceed belief, they were, at least, of such a nature as almost to overcome the stoutest heart, and deter all future attempts of a similar tendency. It was fitted out in the summer of 1819, and, in the course of the following year, it was enabled, by a liberal aid and reinforcement from the North West Company, to advance to the shores of the Great Bear Lake, which, we think, is situated in about 67 deg. N. latitude, where it encamped and wintered. In the ensuing spring it approached the Copper Mine river, which it descended until it fell into the ocean. Hitherto the expedition was accompanied by Mr. Wintzel, a clerk to the North West Company, with ten of their best Indian hunters; but the wide and open sea, which appeared at the confluence of the river with the ocean, elated the expedition so much with the hope of ultimate success, that it was thought proper to dispense with the further attendance of Mr. Wintzel and his hunters, who accordingly returned up the river, leaving the expedition to proceed in two canoes, to explore the coast of the Polar sea, eastward from the mouth of the Copper Mine river, towards Hudson's Bay. But, it seems that, in consequence of the approach of winter, so early as the latter end of August, heavy falls of snow, dense as mist, and an extremely bare and ill provided wardrobe, the expedition was unfortunately prevented from accomplishing its end, farther than exploring about 500 miles of the coast which lies to the north east of the Copper Mine river, and ascertaining that, so far as the eye could penetrate, the sea which lay before them was quite open and perfectly free of ice.

As the expedition returned, its wants and its exigencies became alarming in the extreme, and it soon required the whole fortitude of the heart, and the utmost exertion of the frame, to brave the hardships which stared it in the face. In approaching that part of the Copper Mine river from which it set out, it was necessary to double an immense point of land, which would occupy a greater length of time than its emergencies would well admit of, and it was, therefore, deemed necessary to set the canoes adrift, and cut a direct course over land to the Copper Mine river. When the travellers arrived on the banks of this river, they experienced some puzzling difficulties how to get across, but, having killed ten elks, with the skins of which they contrived to construct a canoe, this hardship was

soon overcome; but the joy which it diffused was as transient as disappointed hope. In forcing their melancholy way through the untravelled wilds between the Copper Mine river and the Great Bear lake, they fell completely short of provisions, and were for many days under the necessity of subsisting upon sea weeds, and a powder produced from pounding the withered bones of the food which they had already consumed. In this struggle betwixt the love of life and the dread of a death that must be terrifying to all mankind, Mr. Wood, nine Canadians, and an Esquimaux, fell untimely and regretted victims; and had not the survivors, who, for several days, were driven to the necessity of prolonging a miserable existence, by feeding upon the tattered remnants of their shoes, and, we fear, upon a more forbidding and unpalatable fare, exerted themselves by a superhuman effort to reach the Great Bear lake, it is probable that they would have all suffered the most exquisite and appalling martyrdom. Here they found the heads and the bleached bones of the animals that had served them for last winter's provisions, which afforded them the melancholy ingredients for preserving the vital spark, until their arrival at some post belonging to the Hudson's Bay Company. It is said that, upon the arrival of this surviving party of the expedition at Slave lake, the Canadians there were very nigh breaking forth into some alarming outrage, when they found that their former comrades, instead of returning with the expedition, had been lost forever; but we understand, that no serious injury has transpired, in consequence of this very natural disappointment.

CHRONICLE.

The Palmyra. The crew of this privateer, or pirate, are retained on board of the vessel, under charge of a suitable guard.

Piracy. The French brig L'Azima, arrived at Charleston from Vera Cruz, bound to Bordeaux, was robbed off the Havana of 78 seroons of cochineal, 2 do. of indigo, 3,800 dollars in plate and specie, and 1,700 dollars worth of clothing, &c. by a pirate of 3 guns and about 50 men. The American brig Rose-in-bloom, was also robbed by another pirate of 2 guns and 30 men, and had her crew treated extremely ill.

Yellow fever. The British frigate Iphigenia, which lately stopped at New-York, on her voyage home from Africa, via Jamaica and Havana, had sixty two cases of yellow fever on board when she anchored in the bay of New-York—She has recently sailed from thence.

Boston. According to the report of the financial committee of Boston, which has been approved by the common council of that city, for the current year, the expenses are estimated at \$249,170 15; of this sum, the amount devoted to the support of public schools is \$45,500, independent of \$19,000, appropriated for a new school house. These expenses are highly praiseworthy.

Maine. Albion K. Parris has been re-elected governor by a large majority, and Mark Richards chosen a representative in congress to supply the vacancy occasioned by the resignation of Mr. Whitman.

Vermont. Messrs. Malary, Rich, Crafts, Bradley and Buck, are elected representatives to congress

New York. About five thousand persons are now variously employed on the eastern section of the Erie canal. A raft of logs have been transported 24 miles on this canal for \$50, which, if they had been carried on land, would have cost 1,600.

South Carolina. A further investigation of the late insurrectionary plot of the blacks is going on—seven or eight more have been found guilty and sentenced to death; but their punishment has been commuted to perpetual banishment from the U. States. If any of them should return, they are to be executed on the Friday following their apprehension.

Insurrection. It appears that an insurrection of the blacks was contemplated at Beaufort, S. C. and that ten negroes belonging to the most respectable families were arrested. The town council was in secret session. Particulars had not transpired.

Hurricane. A severe, but not extensive, hurricane was lately experienced near Salem, N. J. A wagon house was taken up and carried one hundred yards and demolished, with a wagon in it. A large tree, four feet in diameter, was whirled round and taken, root and all, in the air, and in its descent fell on a distillery and demolished all the works.—Such were the effects of a whirlwind which was but a few feet in diameter.

The great dam. The following is a more particular description of the great dam at Fort Edward, than we have before seen. It is copied from the "Guardian," printed at Caldwell, lake George.

"The dam is situated about a quarter of a mile above the village of Fort Edward, and about two miles below Baker's Falls, at Sandy Hill. The river, at this place, is about 300 yards wide, enclosed in high banks. The dam is in a straight line across the river. The lower side is built of heavy timber, laid up in cob-work, and presenting a perpendicular front of 900 feet in length, and 30 in height. From the cob-work, rafters are laid up the stream, 70 feet in length, and the whole is closely planked and covered with gravel to the depth of from five to twelve feet. At the east end of the dam is the feeder, to conduct the water into the canal, about half a mile distant.

"The water is let into the feeder by means of a guard-lock, of great strength. When we saw it, the water was running into the feeder with a rapid current. The whole body of this mighty river is thus piled to the height of thirty feet above its common level; and here the grand division takes place, one portion tumbling over this immense pile of timber, in an unbroken sheet of nine hundred feet in length, dashing on the rocks below with a violence that creates a surface white as the drifted snow, and a noise that completely stuns the ear; but, at length, resuming its composure and serenity, winding its way down its natural channel to the ocean, at New York; while the other portion glides peacefully and silently through an artificial river, into lake Champlain, from thence, through its outlet into the St. Lawrence, and, finally, passing under the towering walls of Quebec, mixes with the brine of the Atlantic.

The distance between New-York and Quebec is not less than 400 miles; and yet the waters of the Hudson, which were intended by nature to discharge themselves at the former place, are, by the perseverance of human industry, turned from their course, and made to traverse this long and unnatural distance, to find a resting place in the bosom of the Atlantic, in the frigid regions of the north."

NILES' WEEKLY REGISTER.

NEW SERIES. No. 5—VOL. XI.] BALTIMORE, OCT. 5, 1822. [No. 5—Vol. XXIII. WHOLE No. 577

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

REVENUE. The duties secured at the port of New York for the last quarter of 1821 and the two expired quarters of 1822, amounted to the enormous sum of \$7,625,678; and it is estimated that the 3rd quarter of the present year will not be less than \$2,500,000—together \$10,125,678; and, on these facts, it is supposed that the revenue, from this source, will exceed the estimates of the secretary of the treasury in the sum of about six millions of dollars. This has been called “good news for the government.” We are sorry to see that any distinction is drawn between what is good for the government and what is good for the people. We shall pay dearly for this good.

But does it not prove what I have always asserted, that we rest as on the chapter of accidents to get along—that there is no solidity in our manner of collecting the ways and means of government—that they rise up or tumble down, hap-hazard—that no calculation is to be made upon them? If what is anticipated is realized, the secretary's calculations will be wrong in the amount of about forty per cent. It is no fault in him—it only shows the wretched uncertainty that prevails, and which must prevail, so long as we depend on foreign nations for the means of revenue—so long as we place no reliance on ourselves.

HEALTH. Neither the alarm, nor the fever, has yet abated at New York—but the cases of the latter are so few as not, in our opinion, to have justified the former. A high billious fever, of the same type, we suppose, has existed in Baltimore for several weeks—and, last week, 46 persons died of it; but the disease with us is universally believed to be local, and the people remain at their homes without any degree of alarm, except in a small district at present believed to be poisoned—though the new cases, we are happy to learn, are daily reducing in number. Many persons have died at Louisville, Ky. of the same disorder—eleven in one week; and Pensacola, hitherto regarded as one of the healthiest spots in America, has been severely affected by it—15 persons are said to have been buried in one morning; the city was deserted.

SUPPORT OF THE POOR. When last week we spoke of the richly endowed hospitals and other establishments for the relief of the poor in England, we reprobated those systems that made paupers to fill them; believing it far better to provide employment by which persons may maintain themselves in independence and comfort, than to furnish means for affording them a beggarly and mean subsistence. A letter from a gentleman resident at or near Williamsburg, O. addressed to the editor, says—“perhaps it may be gratifying to you to know that there is one ‘sequestered nook’ where the people are not oppressed with poor taxes. We have no pretensions to wealth here; but, for the eighteen years that I have resided in this place, I have not paid or been charged one cent for the support of the poor. It is provided by the laws of our state, that assessments shall be made in the various townships, if necessary, for maintaining the poor—and our township, at the last census, contained eleven hundred and seventy-seven persons.” There are not any paupers.

Now, surely, this is a much more pleasing article of information, than if the gentleman had said—*we are building a magnificent poor house, 150 feet long, 40 broad and 4 stories high, for the accommodation of three hundred miserable people.*

CORNWALLIS. From Dr. O'Meara's “Voice from St. Helena:” “Cornwallis,” said Napoleon, “was a man of probity; a generous and sincere character; *un tres brave homme.* He was the man who first gave me a good opinion of the English; his integrity, fidelity and frankness, and the nobleness of his sentiments, impressed me with a very favorable opinion of him. I recollect Cornwallis saying one day, ‘there are certain qualities which may be bought, but a good character, sincerity, a proper pride and calmness in the hour of danger, are not to be purchased.’ These words made an impression upon me. I gave him a regiment of cavalry to amuse himself with at Amiens, which used to manoeuvre before him. The officers of it loved him much. I do not believe that he was a man of first rate abilities, but he had talent, great probity and sincerity. He never broke his word. At Amiens, the treaty was ready, and was to be signed by him at the Hotel de la Ville, at 9 o'clock. Something happened which prevented him from going; but he sent word to the French ministers, that they might consider the treaty as having been signed, and that he would sign it the following day. A courier from England arrived at night, with directions for him to refuse his consent to certain articles, and not to sign the treaty. Though Cornwallis had not signed it, and might easily have availed himself of this order, he was a man of such strict honor, that he said he considered his promise to be equivalent to his signature, and wrote to his government that he had promised, and that, having once pledged his word, he would keep it—that, if they were not satisfied, they might refuse to ratify the treaty. There was a man of honor, a true Englishman. Such a man as Cornwallis ought to have been sent here, instead of a compound of falsehood, suspicion and meanness. I was much grieved when I heard of his death. Some of his family occasionally wrote to me, to request favors for some prisoners, which I always complied with.”

Bonaparte's opinion respecting the conquest of Turkey.—In the course of a few years Russia will have Constantinople, the greatest part of Turkey, and all Greece. This I hold to be as certain, as if it had already taken place. Almost all the cajoling and flattering which Alexander practised towards me, was to gain my consent to effect this object. I would not consent, foreseeing that the equilibrium of Europe would be destroyed. In the natural course of things, in a few years, Turkey must fall to Russia. The greatest part of her population are Greeks, who you may say are Russians. The powers it would injure; and who could oppose it, are England, France, Prussia and Austria. Now, as to Austria, it will be very easy for Russia to engage her assistance, by giving her Servia, and other provinces bordering upon the Austrian dominions, reaching near to Constantinople. The only Hypothesis, that France and England may ever be allied

with sincerity, will be in order to prevent this. But, even this alliance would not avail; France, England and Prussia, united, cannot prevent it. Russia and Austria can at any time effect it.—*A voice from St. Helena.*

WORTH! The following pointed paragraph, we notice as placed at the head of a *sparring* article in a Fredericktown newspaper—

“Why, fellow! do you not know that I rise every morning worth ——— thousand pounds?” “No,” answered the countryman, archly, “I really did not exactly know till you told me; but, by ——! that is all you are worth.” [*John Harriot.*]

TENNESSEE. At the late extra session of the legislature of Tennessee, an act was passed to amend the laws concerning marriages. No white man to intermarry with a negro, mulatto, or mutsee, or any person of mixed blood, bond or free, till the third generation, under the penalty of \$500; no minister of the gospel, or justice, to marry such persons under the penalty of \$500; and the said pretended marriages so celebrated shall be null and void.—If any white man shall live with a negro, &c. as man and wife, he shall forfeit \$500, and shall be indicted in a circuit or county court, and punished at the discretion of the court; no clerk shall issue such license under the penalty of \$500, and be subject to be indicted and punished at the discretion of the court.

THE COTTON MANUFACTORY at Waltham, is owned by gentlemen of Boston, and is unquestionably the most extensive of any one in the United States. We have heard it stated that the capital is *six hundred thousand dollars*. About 500 workmen are employed, (but few boys or girls), nearly all of whom are Americans. The weekly expenses are about \$2000, which amount to upwards of *one hundred thousand dollars* in a year. There are manufactured thirty-five thousand yards of cloth in a week, or, in a year, *one million eight hundred and twenty thousand yards!* which cloth, for shirting and sheeting, is daily gaining credit in every section of the union. The machinery, too, is, in many respects, superior to the English; so that this extensive establishment may emphatically be styled *the pride of America.*

PIRATES. From the *Charleston City Gazette*.—The late handsome exploit of captain Gregory and his gallant crew, recalls to our mind an achievement of similar effect and courage, which took place during the early history of our state. We should, indeed, rejoice, if the United States, in general, could receive from the latter event, the same benefit that South Carolina did from the former. But, in those times, there was rather more *expedition* in the punishment of certain offenders, than our present policy exhibits.

“1718.—Though the pirates on the island of Providence were crushed, those of North Carolina still remained, and were equally troublesome. Vane, who escaped from captain Rogers, had taken two ships bound from Charleston to London. A pirate sloop of ten guns, commanded by Steed Bonnet, and another, commanded by Richard Worley, had taken possession of the mouth of Cape Fear river, which place was now the principal refuge of the pirates. Their station there was so convenient for blocking up the harbor of Charleston, that the trade of the colony was greatly obstructed. No sooner had one crew left the coast than another appeared; so that scarcely one ship, coming in or

going out, escaped them. To check their insolence, governor Johnson fitted out a ship of force, gave the command of it to William Rhett, and sent him to sea for the protection of trade. Rhett had scarcely got over the bar when Steed Bonnett spied him, and, sensible of his own inferiority, made for his refuge into Cape Fear river. Thither Rhett followed him, took the sloop, and brought the commander and about thirty men to Charleston.

“Soon after this governor Johnson embarked and sailed in pursuit of the other sloop of six guns, commanded by Richard Worley, which, after a desperate engagement, was also taken. The pirates fought till they were all killed or wounded, except Worley and another man, who even then refused to surrender until they were dangerously wounded. The governor brought these two men, together with their sloop, into Charleston, where they were instantly tried, condemned and executed, to prevent their dying of their wounds. Steed Bonnett and his crew were also tried and condemned. With the exception of one man, all, amounting nearly to *forty*, were hanged and buried on White Point,* below high water mark. Governor Johnson, formerly a popular man, was now become more so by his bold and successful expedition against the pirates. The coast was now happily cleared, and *no pirates afterwards ventured to sea in that quarter.*”

[*Dr. Ransay, anno. 1718.*]

A BRITISH DISHOR. A letter dated London, July 26, says—

“A most extraordinary case has occurred, which occupies the conversations of all descriptions of people, for a week past. The right reverend *Percy Jocelyn*, bishop of Clogher, whose income from his bishopric exceeds 15,000*l.* sterling per annum, has been brought up before the magistracy charged with an *infamous crime*, and not fit for any son of a woman to name. His coadjutor in this affair is a private soldier. The affair was carried about from mouth to mouth for three or four days, and the utmost pains taken to prevent the publication in any paper. Several of the prints got sums of money to exclude any account of it; but one weekly paper, the *Observer*, came out with the whole case, names of parties, and all.

“The right reverend bishop, it appears, was held to bail, and has since taken *leg-bail*, and passed, it seems, to Hamburg. The soldier, however, was committed, bail being refused for him.

“It appears that this churchman has such powerful family connections in England, that the business would have been hushed up, if the press could be silenced; but it seems the present is not the first occasion in which the prelate has disgraced his species, his functions, and human and divine laws.

“About seventeen years ago, when the present lord chief justice of the king’s bench in Ireland, then C. K. Bushe, esq. was solicitor general, he was counsel for this bishop, who was, at that time, bishop of Ferns, in Ireland, and the bishop was the prosecutor of a respectable man, by the name of *Richard Byrne*; this man (Byrne) had been in affluent circumstances, and reduced below mediocrity, but with the fairest unblemished reputation, until the bishop of Ferns brought an accusation against him of an attempt to commit an *infamous crime*, or to *seduce this chaste bishop* to its commission. In short, Byrne was prosecuted, and, upon the sole testimony of the right reverend Percy Jocelyn,

*White Point is that sand reef nigh the battery or public walk.

bishop of Ferns, he was found guilty, and so vehement was general indignation against Byrne, that, not content with the ordinary executioner, the sheriff was induced to procure the stoutest drummer that could be found in the garrison of Dublin, to inflict the punishment of whipping, and the unfortunate Byrne was actually, at the tail of a cart, whipped on the bare back from Newgate to the Royal Exchange, and his body presented a gore of lacerated flesh, and his lower garments were covered with his blood. He suffered the brutal punishment without a groan; and when he was returned to the prison, he addressed himself to the officers, and calmly but solemnly declared himself innocent of the charge for which he had been thus punished; burst into tears, the first he had shed, and retired to his dungeon. It is not known to me whether he was transported or not; at least, it is not known where he now is. The detection of this noble shepherd has revealed the trifold atrocity. Byrne constantly alleged that the bishop threatened to accuse if Byrne should refuse to comply with his infamous desires; he spurned the threat, the bishop kept his word and perjured his soul. But the villainess of his foul character has at length brought him to the eye of justice, and poor Byrne, perhaps dead of a broken heart, has not remained to see himself justified.

"The bishop of Clogher has left his bail, and the boasted justice of this country has been prostituted to his escape, while the miserable associate of his crime, because he was not a bishop, nor possessed of 15,000*l.* a year, is in a dungeon, and his escape is not probable, as he has no family interests."

A London paper adds—"As soon as the matter connected with the disgraceful conduct of a certain bishop came to the knowledge of the home department, the particulars were submitted to the crown lawyers; and, according to their advice, if the criminal do not resign, recourse is to be had to the solemn process of *episcopal deprivation*. The attorney general will also officially prosecute the parties at the Middlesex sessions, either to trial, or, if they evade that, to outlawry.

"The *pious* bishop of Clogher is a member of the Society for the Suppression of Vice. His last subscription was 25*l.*"

The Dublin Evening Post, speaking of Byrne, says—"There was a report that the man prosecuted by the bishop of Clogher was dead. He had suffered the agonies of a thousand deaths, but he is still living. His crime was the whispering of a report that the miscreant, who is at length detected, had attempted to perpetrate a certain atrocity in this country. About 11 years ago, he lived as a coachman in the service of the hon. John Jocelyn, of Dundalk, and after quitting his service, was met in Dublin by his hon. and right reverend brother, who was then bishop of Ferns, when the horrid circumstance which he disclosed came to his knowledge; but to prevent his proceeding in the necessary prosecution, he was thrown into prison, and although he offered respectable bail, it was rejected. He had two letters in his possession, written to him by a confidential servant of the bishop, named Leonard, and at the bishop's desire, requesting him to conceal the fact from his brother; these letters were taken from him by stratagem, and he, being thus deprived of the only documents by which he could support his charge against the bishop, was brought to trial for defamation and found guilty. The sentence was two year's imprisonment, and two or three floggings. The incarceration was fully completed and ended, and under one flogging he

bled and tortured until the last spark of life and feeling had nearly become extinct. When he recovered, and was on the eve of getting a second flogging, a steward of the monster came to him and offered a remission of the impending punishment, on the condition of Byrne's signing a written acknowledgment of his having been guilty of slander and falsehood. Who, that was not prepared to die of the agonies of the rack, could refuse a signature under such circumstances? The poor creature, it may be supposed, was not slow in putting his trembling hand to the paper—and he was *mercifully* spared a punishment, of which it was a thousand to one he would not have survived the infliction. Byrne is a native of Maynooth, and a man, though he had been a servant, of some education, and very decent parentage. He has, for some years back, supported a numerous family, by driving job coaches for Collins, in Denzille-street; but having lately met with an accident in that employment, he has been obliged to go into an hospital; and his unhappy wife and children, thus deprived of his support, are now languishing in misery in South Cumberland-street."

Another paper gives the following additional particulars relative to the unfortunate Byrne—"We have stated that this unfortunate man consented to sign an acknowledgment of his guilt after the first flogging. We have learned, since our last, that he did not yield until after repeated menaces of utter destruction, and until his wife and four children were brought to his dungeon, and had thrown themselves on their knees, and actually *wept* him into acquiescence. 'This,' said the poor creature, pointing to the miserable group that surrounded him, 'I cannot stand; give me the paper, Mr. Sheriff, (Harty or James, we know not which), but mind, *I am about to put my name to a falsehood!*'"

CURIOUS TYPOGRAPHICAL ERROR.—The celebrated printer, Henri Ettiene, son of Robert, (both known in the learned world by the name of Stephanus,) once engaged in the printing of a splendid quarto Missal. The great number of subscribers seemed likely to make ample compensation for the heavy expense required by the undertaking. After the sheets had been corrected with the utmost care, the work was printed off, splendidly bound, and delivered to the subscribers. It would be impossible to describe the astonishment of the learned printer, when one copy after another, was returned to him, till all were sent back. He inquired the reason of this extraordinary circumstance, and was informed, that in one place the compositor had put *Ici le pretre otera su culotte*—(here the priest will take off his breeches), instead of *Calotte*, (small black cap), and the error escaped the correctors of the press. In vain did the poor printer offer to make a cancel; the subscribers who were almost all ecclesiastics, positively refused to take the work on any terms. This unfortunate affair is said to have been the first and the chief cause of the derangement which afterwards caused Henri Ettiene to be confined in the Lunatic Hospital at Lyons, where he died in 1698. There is a copy of the Missal, with this unlucky error, in the royal library at Paris. *Anon.*

FOREIGN NEWS.

A congress of sovereigns was to be held at Vienna in September last; but it was supposed that its sittings would be transferred to Florence, as being more convenient, perhaps, to a regulation of the affairs of Italy, Spain, &c.

Great Britain and Ireland. The things that are to be done on the king's arrival in Scotland are so supremely ridiculous, as forcibly to bring to mind the old saying, that "men are only boys of larger growth." If such things happened among those who are called savages, every body would laugh at them. As examples, take the following—the "purveyor of the king's" has established an extensive dairy, to supply his majesty with cream and butter; but the whole of the milk and butter milk is to be distributed among the poor, "by order of his majesty!" No gentleman can be presented in a Highland dress, "unless he is armed with steel wrought pistols, broad sword and dirk." A lady's tail, or train, is to be four yards long; this is to be dropped as she enters the circle of the king, the lord in waiting is to hold it up until this awful moment! She is to make a curtsie—the king to rise and kiss her on the cheek—then she retires backward until she is out of the circle, &c. It is expected that these long tails will cause many laughable embarrassments. The ladies are to wear nine feathers in their head dress. How funny this must be, when we recollect the laughter caused at the drawing room at Washington last winter, on account of a great Indian warrior being present, who had only one feather stuck in his hair, and that was a little one—from the tail of a dunghill fowl!

The church!—We mentioned the fact some time ago, about a certain priest being put in possession of a pulpit by a party of *dragoons*. The following account of subsequent events at the church, are copied from a Liverpool paper. "Affairs at this place of worship have never yet resumed their wonted aspect, since the late dispute. The officiating clergyman cannot restore due subordination among the auxiliaries. Last Sunday afternoon, the refractory singers were informed that other singers had been appointed, and that they must quit their pew. They resisted the mandate, claiming a right to their seat; but said, that if a little singing was all that was required, it should be offered. They accordingly struck up the 119th psalm, and actually sung the whole of that long composition, consisting of 176 verses, and we need scarcely say it lasted till 7 o'clock in the evening. How the clergyman endured the detention, or how the service afterwards proceeded, we have not been informed."

The character of Castlereagh is severely drawn in many of the British papers. As a public man, surely, he was about the most profligate person that ever lived, paying no sort of regard to the means to accomplish an object. He began his political career with open perjury, pursued it with fiend-like assiduity, and closed it with an *act of justice* on himself; the first, in the belief of some, that he ever performed. There is much conversation about his successor in the ministry.

It was believed in the best informed political circles, that sir Charles Stuart will succeed lord Londonderry, as foreign secretary. But it is stated that lord Liverpool intends to make it a *sine qua non* that Mr. Canning shall have the management of the house of commons.

The London Gazette of Tuesday the 6th instant, informs us that "the lord Chamberlain has appointed the hon. William Pole Tilney Long Wellesley gentleman usher daily waiter to his majesty." Thus, after extravagantly squandering his wife's immense fortune, he may return from his covert in France without fear of *arrest* by his creditors. A worthy application of the royal patronage!

A meeting has been held at Edinburgh, and was

well attended, to afford relief to the suffering Greeks; and the Dutch journals announce that subscriptions for the relief of the Irish continue to be received by the church wardens of Amsterdam.

The new marriage act, it appears, is so bewildered with legal jargon, technicalities, and tautology, that many persons, who have been joined in wedlock, complain that they really cannot decide, from perusing it, whether *they are married or not*.

The Glasgow frigate was about to leave Calcutta for England with the marquis of Hastings and suite. It was to bring 55 lacs of rupees in silver, (2,750,000l. sterling), and the Ganges, from Bombay, was also expected with 45 lacs of rupees, (2,250,000l. sterling), on account of the East India company, and sundry British merchants.

The brig Beaver arrived at Portsmouth, (Eng.) on the 8th of August, from South America, last from Rio Janeiro, with 600,000 dollars.

A steam boat, called the Rising Star, of 70 horse power, and 400 tons, had sailed from England for South America.

The largest plate glass manufactory in London, near the western entrance of the London docks, has been destroyed by fire. Loss estimated at 100,000 pounds sterling.

Thorogood, one of the proprietors of the Times Coach from Norwich to London, has actually driven the distance, 186 miles, and been in both those cities *every day*, for more than a twelvemonth.

American stocks at London, Aug. 13—3's, 68½; 5's, 95 to 95½; 6's, (according to date, the latest redeemable being highest in price), 92½ to 99; 7's, 94—all with dividend from 1st July. U. S. bank shares, 22l.

Spain. The feelings of the French soldiery may be estimated from the following circumstance:

When the victory of the national militia and regulars at Madrid, over the king's guards, was announced on the French frontiers, the French army forming the so called *Cordon Sanitaire*, gave a general shout of acclamation expressive of their joy at the event. A bad omen this for the French government, should that army be ordered to march into Spain.

There appears to have been an entire change in the Spanish ministry, in conformity to the wishes of the people, and much good is expected from it.

Russia. A St. Petersburg paper of July 20, has the following paragraphs:

The regiments of the guards continue to arrive successively. At the end of the month they will be assembled for a grand review near Petersburg.

The Persian ambassador, Mizra Saleh, has arrived in this city.

The institutes of the Russian law, published by command of the emperor, by the legislative committee, begins as follows:

Sec. 1. The sovereign, as autocrat, is the source of all political and civil power. The first principle which serves the Russian monarch as a guide in the exercise of this power is *declared in the act of the holy alliance*.

Turkey. Napoli de Romania, which was lately surrendered to the Greeks, is not only the strongest place in the Morea, but of all European Turkey, and a most important acquisition to the patriots. Victory accompanies the standard of freedom in Thessaly, and Hassan Pacha has been beaten with the loss of 5,000 men. Among the prisoners taken, were three beys and three hundred Saphis. Six British vessels were in the fleet that carried Ali Bey and his army to Candia, to kill off all the Greeks—but some sense of shame appears to have been

felt by the commanders of them, when the bloody work was about to be commenced, and they refused to have any thing further to do in the affair. The defeat of the barbarians has already been mentioned. The account of the glorious victory of the Greeks over Chourschid Pacha, near Patras, is amply confirmed, and many particulars stated. He lost six pieces of cannon and left 700 dead on the field—400 prisoners were taken in the pursuit. The Greeks had 200 killed and 450 wounded. *Colocotroni*, the gallant chief of the patriots, was wounded by a musket ball through his arm, but not dangerously. He has 20,000 men under his command. On the day after this battle, pursuing his victory, he captured the castle of More. The Greeks took 225 pieces of cannon and a large quantity of small arms, at Napoli de Romania.

Capitulation of the citadel of *Athens*, (June 21), agreed upon between the plenipotentiaries of the provisional supreme government of Greece, the counsellors of Athens, and the commanders of the Turks, besieged in the citadel of Athens, which, reduced by the Greeks to the last extremity, sent deputies to propose to capitulate.

1. The Turks shall deliver their arms to the Greeks without any reserve.

2. The Greeks shall preserve, with all their power, the honor and lives of the Turks.

3. Each Turkish family shall take their effects, beds, clothes, &c.

4. Of the gold, silver, pearls and jewels, the Turks shall keep half of all that is belonging to them, excepting such as may have been taken from the christians.

5. All the Turks who wish to remain in Athens will be granted the right of residence, and for all who wish to pass to Asia, the Grecian government will procure European vessels to convey them, and pay and provision them.

Signed with 52 names.

Africa. The boats of the British ships *Iphigenia* and *Myrmidon*, after a smart action in the river *Bonny*, captured the following vessels: the French brig *Vigilante*, 240 tons, four guns, thirty men, 343 slaves; French brig *Petite Betsey*, 148 tons, four guns, twenty-five men, 218 slaves; French brigantine *L'Ursule*, 100 tons, four guns, twenty-seven men, 246 slaves; Spanish schooner *Yeanam*, 306 tons, ten guns, fifty-five men, 380 slaves, and another brig, which took part in the action, but she had no cargo in. The state of the unhappy slaves on board these vessels, it is impossible to describe; some were linked in shackles by the leg, in pairs; some of them were bound in cords; and many of them had their arms so lacerated that the flesh was completely eaten through! Another of the inhuman practices of their purchasers is, to flog them until they dance and eat, as an antidote to dejection and despair, as, under their feelings, they often throw themselves overboard in pairs! On board one of the captured vessels, which the crew deserted on the attack being made, a lighted match was placed in the magazine, in which were several barrels of gunpowder, in the hope, no doubt, that so soon as the enemy boarded, the vessel would blow up with them and the 300 slaves who were chained together in the hold. Providentially, one of the men discovering it, very coolly put his hand under it, and carried it safely on deck. On the passage of the prizes from the *Bonny* river to *Sierra Leone*, the fine schooner *Yeanam*, (drawing 17 feet water), with 500 slaves on board, and 23 seamen, upset in a tornado, and all in her perished, excepting eight seamen, who were picked up five days

afterwards by the *Myrmidon*, in a state of derangement, from want of food. The number of slaves liberated by the capture of these vessels was 1876, about 200 of whom died on the passage to *Sierra Leone*; the others, (excepting those lost in the schooner), were landed at that place.

[*V. J. Ev. Post.*

Really—the trade in black slaves, carried on in Africa, so far as its amount goes, is quite as horrible as that in white christian slaves, now so extensively prevailing in Europe, under the sanction of the holy alliance!]

West Indies. The *Kingston*, (Jam.) Chronicle, of Aug. 3, says—The following affidavit details a most horrid and diabolical act of piracy and murder.—The circumstance has been laid before the admiral, at which he expressed great abhorrence; he stated, that the first brig of war he could get hold of would be stationed in the quarter where the piracy was committed; and that he was in hopes that some of our cruisers would capture one of those scoundrels, to enable him to make an example.

[cont.]

Jamaica, ss.

Personally appeared before me, one of his majesty's justices of the peace, Hugh Hamilton, mariner, who, being duly sworn, maketh oath, and saith, he sailed as mate on board the sloop *Blessing*, Wm. Smith, master, and had made three voyages from *Oracabessa*, in this island, to *St. Jago de Cuba*; and that in the return of the fourth voyage, about the beginning of the present month, (but cannot name the day), were fallen in with by a long black sloop, with black mouldings, (then), the name of *Emanuel* marked on her stern, and commanded by a white man, with a mixed crew of color and countries, among whom were English and American; that, after bringing the sloop to, the privateer, or pirates' boat came along side, and took out the captain and his son, with all the crew, and carried them on board of the schooner, leaving the sloop in possession of his people; that he demanded of the captain his money or his life. The captain persisted that he had none, but proffered him the cargo, which consisted of one hundred barrels of flour, and fifty tierces of corn meal; that, on the following day, not producing any money, a plank was run out in the starboard side of the schooner, upon which he made captain Smith walk, and that, as he approached to the end, they tilted the plank, when he dropped into the sea, and there, when in the effort of swimming, the captain called for his musket, and fired at him therewith, when he sunk, and was seen no more! The rest of the crew were ironed below, with the exception of his son, a boy about 14, who witnessed the fate of his father. In the agony of tears and crying, the captain took the but end of the musket and knocked the boy on the head, thereafter took him by the foot and hove him overboard; that, on the day following this sad event, having previously taken out all the rigging, sails, &c. &c. of the sloop, he set her on fire and burnt her—and, on the same day, gave the crew, consisting of three others, and him, this deponent, (having stript us of every article but what we had on our backs), the jolly boat, with a bucket of water, and one biscuit each person, without compass, which we asked for, but were refused by his saying, "he would sooner give *hell!* to be off, or he would sink them." Thus we parted, and in the afternoon of the same day was picked up by the schooner *Mary Ann*, belonging to *Black River*, and were landed at *Port Morant* on the 18th July.

(Signed)

HUGH HAMILTON,

Taken and sworn before me, in the presence of gen. Macay, esq. at Roselle estate, in St. Thomas, in the east, this 29th day of July.

(Signed)

R. FERGUSSON.

Porto Rico. Letters have been received from on board the U. S. ship Cyane, dated St. John's, Porto Rico, Aug. 31. Captain Spence arrived there at a very critical moment. The wounded of the Pan-chita, or Palmyra, privateer had been exhibited, and the populace was worked up into a ferment against the Americans at that place—the English were also threatened. Capt. S. immediately opened an official communication on the subject, and, by a firm but temperate policy, allayed the coming storm; a good understanding resulted, and our officers and citizens were treated with all possible respect; both the civil and military governors of the island meeting capt. Spence when he visited an American gentleman there resident.

One of the letters concludes thus:—"The harbor and town of St. John's, the capital of the island, are both fortified with prodigious strength, and are, perhaps, the strongest fortified of any place in the West Indies, Havana excepted. The island of Porto Rico is beautiful and fertile; its chief productions are rum, sugar, and coffee, for which the American merchants are the principal traders. It is one of the most healthy in the West Indies; since we have been here we have heard of no sickness, either amongst the natives or foreigners, in the island."

Brazil. The whole of this extensive country, except St. Salvador, is in the possession of the revolutionists, at the head of whom is the prince royal. They have 10,000 men at their head-quarters and a fleet of one frigate, and four or five smaller vessels: these lately met the royal squadron—the question was asked if either had orders to fight, and the answer being "no," they parted in peace. The force at St. Salvador consists of about 2500 European troops and 3000 militia, which was rapidly decreasing by desertion to the patriots. The Brazilians have had several smart fights with the royalists, and acquitted themselves well. It is probable that the bonds which held them to the mother country are forever dissolved.

The following proclamation was issued at Rio Janeiro, on the 17th of August—

The dignity and power of regent of this vast empire, that the king, my august father, had granted to me, having been confirmed to me by the unanimous consent and spontaneous will of the people of Brazil, a dignity of which the cortes of Lisbon, without any of the deputies of Brazil being heard, have dared to deprive me, as is notorious; and I having, moreover, accepted the title and duties of perpetual defender of this kingdom, that the same people have so generously and loyally conferred upon me; in obedience, therefore, to my sacred duties, and in gratitude for so much love and fidelity, which call upon me to take all the measures indispensable to the salvation of this greatest part of the Portuguese monarchy that has been confided to me, and whose rights I have sworn to preserve uninjured by any attack; and inasmuch as the cortes of Lisbon continue in the same erroneous and evidently unjust system of recolonizing Brazil, even by force of arms, notwithstanding she has already proclaimed her political independence, and has gone so far as that there is already convened, by my royal decree of the third of June last past, a general, constituent, and legislative assembly, at the request of all the chambers, thus proceeding with a formality that did not take place in Portugal,

where the convening of the congress was originally only an act of secret and factious clubs; and I also considering his majesty the king, Don John the sixth, of whose name and authority the cortes endeavor to avail themselves, for their own sinister purposes, as a prisoner in that kingdom, without any will of his own, and without that liberty of action that is given to the executive power in constitutional monarchies: I command, having first heard my council of state, all the provisional juntas of government, generals, military commandants, and all the constituted authorities, to whom the execution of this decree may appertain, as follows:

I. That all and whatever troops, that shall be sent from Portugal or elsewhere to Brazil, without my previous consent, upon whatever pretext, be reputed enemies; together with all the crews and marines belonging to the vessels, in which they may be transported or from which they may endeavor to land; but without interruption to the commercial and friendly relations between both kingdoms, for the preservation of the political union that I greatly desire to maintain.

II. That if they shall arrive peaceably, they shall immediately return, remaining on board and without communication, until they shall be furnished with the provisions and supplies necessary for their voyage back.

III. That, in case the said troops shall not choose to obey these orders, and shall dare to land, they be driven back, by force of arms, by all the military forces of the first and second line, and if necessary by the people, en masse, putting in execution, if it shall be requisite, all possible means to burn the vessels, and to sink the boats in which the troops may attempt to land.

IV. That if, notwithstanding all these efforts, it shall happen, that the troops get possession of any port, or part of the coast of Brazil, all the inhabitants retire towards the centre, carrying into the woods and mountains, all the provisions and cattle, that could be useful to them; and the troops of the country shall carry on against them a cruel war of posts and guerrillas, (carefully avoiding general actions), until it be freed from the enemy.

V. That it be the duty of all the competent military and civil authorities, to fortify all the ports of Brazil, at which such disembarkations can be made, under the most strict and severe responsibility.

VI. That if, in any of the provinces of Brazil, it shall happen that there are not the munitions and stores necessary for these fortifications, the same authorities above mentioned shall immediately represent to this court what are necessary, that they may be furnished from hence, or give immediate information to the nearest province, which shall be obliged to give them all the assistance necessary for the proper discharge of such important duties. The civil and military authorities, to whom appertains the execution of this, my royal decree, are to fulfil, and cause it to be fulfilled, with all due zeal, energy and promptitude, under the responsibility of being guilty of high treason, if they shall fail so to do.

Palace of Rio de Janeiro, the first of August, one thousand eight hundred and twenty-two.
By his royal highness the prince regent:

Luiz Pereira de Nobrega de Souza Coutinho.
Colombia. The report is confirmed that Portugal has acknowledged this new and interesting republic.

Gen. Morales was beaten off with the loss of 85 men in an attempt to land at Marques, 10 miles east

of Coro. He afterwards landed on an unsettled part of the coast. His fleet are plundering most vessels that they meet with. The Dutch authorities at Curacao have received orders to admit the Colombian flag, as that of a friend.

The following is a proclamation of gen. Bolivar, to the inhabitants and royal troops of Pasto, three days before his entry into that city.

Simon Bolivar, liberator, president of the republic, &c. &c.

An honorable transaction has stemmed the blood which was flowing from your veins. The martial bell shall no longer be heard in Colombia. Your valor and your constancy entitle you to the deference of the liberating army and the Colombian people. In return we tender you our friendship.

Spaniards!—The regeneration of your country promises you a final termination of this conflict which, in compliance with your duty, you have supported with a heroism most worthy of admiration.

Inhabitants of Pasto!—You are Colombians, hence you are my brethren. To reward you, I shall not only be your brother, but also your father. I shall heal your former wounds, soothe your sufferings, leave you to the enjoyment of rest in your homes. Neither shall I employ you in this war, nor burthen you with extraordinary taxes, or heavy contributions. In short, you shall be the favored offsprings of the government of Colombia.

Emigrants in Pasto!—Return to the bosom of your families, to comfort the widows and the orphans. You are already safe from all persecution, for you are Colombians.

Spanish soldiers!—The capitulation which has put a period to our woes, has given you two countries, Spain and Colombia: choose either. If you prefer a free, tranquil and fruitful soil, be Colombians—but, if you will carry your ashes to the tomb of your fathers, Spain is free, and must be happy.

BOLIVAR.

Liberating head quarters,

Berrencos, 5th June, 1822.

Latest—London papers to Aug. 20.

These papers are chiefly filled with notices of those who kissed the king's hand or fell on their knees before him, in Scotland—all which is highly interesting to the people of the United States! He was much depressed in the midst of all this pomp and shew, by receiving information of the death of Castlereagh.

No late news from France or Spain.

The Janissaries had openly revolted at the close of the Ramadan, and killed many Musselmans, whom they suspected of opposing them, and massacred a great number of Jews and Greeks—especially the females of the latter, after violating them! The Asiatic troops were called in to restore order, for the rebels appear to have contemplated a revolution of the government—a battle was fought, 200 killed in the streets, and “several thousands” executed afterwards! So the Janissaries were put down.

The Turkish force in the citadel of Athens amounted to between 3 and 4,000 men, at the time of its surrender to the Greeks, amply supplied with all sorts of munitions and stores.

Gen. La Fayette and col. Willet.

FROM THE NATIONAL ADVOCATE.

Every thing relating to this patriot, cannot but be interesting to the American reader. We find him, at an advanced age, in the French legislature, supporting manfully those principles for which he

contended during our revolutionary war. He has lately written an affectionate letter to an old fellow soldier, *colonel Marinus Willet*, in which he quotes those principles for which both have successfully fought for, and ends with the assurance that he hopes to visit this country, an event which will afford the highest gratification to the American people. Few men acted more conspicuous parts than gen. La Fayette and col. Willet, in the war, declared for American Independence.

Revolutions have sometimes been effected by the most trivial event, and by a mere act of boldness and enthusiasm, have the liberties of a great country been achieved. The patriots of the revolution never bestowed a thought on the form of government which they were in future to adopt. The great question was *independence*. Neither in the first instance did they contemplate opposing the king; they were only against lord North, and the principle of taxation, without their consent; and thus, by degrees, did Providence lead them on, step by step, until the entire dissolution of all ties with the mother country, was the result.

Among the most early and undaunted partizans, we may reckon col. Willet. He labored under great disadvantage, being the only one of his family on the whig side. When the news reached New York of the battle of Lexington, in which the first blood was shed for independence, it was on a Sunday; the churches were opened and most of the inhabitants at prayer. There is something in a first blow for a great cause, which is calculated to arouse and animate a people who had long complained of grievances, and remonstrated without effect. The blow was struck; blood had been shed; a mercenary soldiery had attacked and killed their fellow citizens; the tocsin must be sounded, yet who was to do it, and how was it to be done? While thus hesitating and pausing, Willet stated that there were 500 stand of arms in the garret of the city Hall, at the head of Broad-street, and proposed taking possession of them and arming the people, which was assented to. They called on the mayor, and demanded the arms; he referred them to the armourer, who lived in Liberty-street, which was then called Crown-street. The armourer hesitated, not knowing how to act, and finally said the keys were mislaid. Thus foiled, they were about giving up the project, when Willet told them the keys were unnecessary; and, supplying himself with a broad axe, he broke open the room, took out the muskets and cartouch boxes, and gave one to each man, and finding a fifer, they formed themselves in line, and marched through the streets on Sunday, and went up Broadway as high as John-street, where a fire ball court was kept, which they entered and stacked their arms. It was then apparent that some definite line of conduct must be pursued, and something like organization take place. Accordingly, the name of each person was taken down, to whom a musket was given, and the whole corps was properly officered, Willet being appointed a corporal. Although the city was perfectly tranquil, and no prospect of a contest was near, yet a step had been taken which was to be followed up, and it was agreed to divide the forces into a patrol, which was nightly, to go the rounds; and the countersign, probably the first American one, was *Boston*. They also formed a committee of safety and superintendence, which, in fact, took every thing in their hands, and met daily. At this period there was part of an Irish regiment stationed at New-York, about 300 strong, which observed these revolutionary movements with anxiety, and were not without fears

for their safety, and, therefore, kept in their barracks. An order arrived for these troops to sail for Boston, and the committee, which met somewhere near Coenties slip, deliberated whether they would permit them to depart armed. After much discussion, and urged by the timid inhabitants, they agreed that the soldiers might depart with their arms and accoutrements. Arrangements were made for their departure, and, after they had left their barracks for the water side to embark, some person told Willet that they were carrying off all the spare arms and accoutrements, which they were not permitted to do by the committee. He immediately ran to the foot of Broad-street, and saw the battalions turning down from Wall-street, in good order. In front were seven carts, containing boxes of arms and ammunition, each having a corporal's guard. The troops, with their baggage wagons, were in the rear. When they reached the Exchange, which was at the foot of Broad-street, Willet marched up alone, and seized the bridle of the first cart horse and stopped him; this movement stopped the rest of the carts, and finally the troops. The pause induced the major, who was a short red haired man, and who, from the beginning, was fearful that something would happen, to ride up and demand of Willet, why he stopped the carts? Willet replied that they had no permission to carry away the spare arms, that they might freely depart with their own arms and accoutrements, but should take no more; murmurs and disapprobation prevailed. The mayor, who was present, remonstrated with Mr. Willet on the impropriety of his conduct, and treated him with severity, for thus attempting to promote riot and blood shed. Gouverneur Morris, who belonged to their committee, and was decidedly of the whig party, also took part against Willet, and entreated him to permit the troops and arms to embark peaceably. Thus situated, pausing between duty and remonstrance, one of the most active of the committee came up, and hearing the merits of the dispute, told Willet he was right, and the spare arms should be retained. Thus supported, he seized the bridle of the first horse and turned the cart out of the ranks, the rest following him. Col. Willet, though a plain man, was excellent at haranguing; he could say more in a few words to arouse and animate, than any partizan officer of the day. Mounting on one of the carts he made a speech to the people and soldiers, and he told the latter that they were about being sent away to shed the blood of their brethren, and if any of them were unwilling to go, that they could leave their ranks and would be protected. Some actually did join him, and the rest embarked peaceably.

With the arms and accoutrements thus seized, did colonel Willet raise and equip the first regiment in New York, in the cause of independence.

The northern campaigns were unquestionably the most severe and trying. Compelled to be constantly on guard against the enemy and the Indians, with scanty clothing and provisions, exposed to the vicissitudes of an iron climate, the sufferings of the continental troops were extremely oppressive.—Colonel Willet was constantly on the frontiers, engaged in almost every skirmish and action, and, during the whole war, he had the good fortune never to retreat, and never to have been defeated. When our troops left Ticonderoga, he was engaged in fortifying fort Stanwix, cutting ditches and making redoubts. He knew very little of fortifications, but was compelled to dismiss an ignorant engineer and undertake the work himself. The men refused to labor: they contended that it was unnecessary;

because, when the fortifications were finished, they would be abandoned, like Ticonderoga, and general Burgoyne's army, which was powerful and advantageously posted, would soon occupy the fort. Colonel Willet, who always considered the war a holy one, and never despaired, continued to assure his men that Providence was with them, and drawing from his pocket a small bible, he declared to them that the destruction of Burgoyne's army was prophesied in sacred writ, and turning to the 24 chapter of Joel, he read the 20th verse, as follows:

"But I will remove far off from you the northern army, and will drive him into a land, barren and desolate; with his face towards the east sea, and his hinder parts towards the utmost sea," &c.

The men were satisfied that their colonel was a prophet, and went to work cheerfully.

In the various skirmishes with the Indians and British, colonel Willet was always aware of the powerful effect of example, and was always in front of his men, waving his hat, they followed promptly.

When the sortie from fort Stanwix was determined upon, one of the most brilliant events of the war, colonel Willet, always fond of haranguing his men, and always to great effect, called them together; developed his plans, and recapitulated the cruel conduct of the British and Indians. Now, my boys, said he, look the enemy right in the eye, he'll be afraid to look at you in return; reserve your fire till you come close, then give it to him; keep steady, none of you will be hurt; I'll bring you all back safe. The sortie was made in the day time, and was attended with wonderful success. The British, not dreaming of such a measure, were woefully beaten; and, on their retreat across the river, they looked at the continentals with wonder, not firing a shot at them for two hours.

But, to return to La Fayette. At the battle of Monmouth, colonel Willet was there by accident, and volunteered as an aid to gen. Scott, who commanded the infantry. In the hottest of the fight, he saw La Fayette, (then a very young man although a major general), ride up, and, in a voice cool, steady and slow, and with as much deliberation as if nothing exciting prevailed, said, "General, the enemy is making an attempt to cut off our right wing—march to its assistance with all your force." So saying, he galloped off; being exceedingly well mounted, though always plainly dressed, and very sedate for a Frenchman. A subsequent intimacy between them took place, which at this day is not impaired; and if La Fayette carries his determination of visiting this country into effect, no citizen will meet with a reception equal to his.

Colonel Willet was the first sheriff of New-York, and held the office at several distinct periods, after serving at each his four years; he was also a member of the legislature, and then mayor of the city, and in every situation exhibiting firmness, integrity and good sense. At the advanced age of 83 years, he enjoys good bodily health, a sound memory, and has no small gratification in witnessing the rising glory and eminence of our country.

But, to the letter of the marquis La Fayette; we had to press colonel Willet for permission to publish it, he indulging in delicate scruples which would be in order for a young man, but every thing relating to the revolutionary war, is of deep interest to the present generation, and the surviving patriots, together with every documentary evidence of their principles and services, are the property of the country.

PARIS, July 15, 1822.

My dear sir: I avail myself of a good opportunity to remind you of your old friend and fellow soldier, in whose heart, no time or distance can abate the patriotic remembrances and personal affections of our revolutionary times. We remain, but too few survivors of that glorious epoch, in which the fate of two hemispheres has been decided: It is an additional monitor to think more of the ties of brotherly friendship which united us. May it be in my power, before I join our departed companions, to visit such of them as are still inhabitants of the United States, and to tell you, personally, my dear Willet, how affectionately,
I am your sincere friend,

LA FAYETTE.

Mr. Birkbeck's Oration.

The peculiar circumstances of the gentleman who delivered the following address to his friends and neighbors on the late anniversary of American independence—have induced us to give it a place in the REGISTER. There is much sound sense and wholesome instruction in this product of a late British subject.

Oration delivered on the anniversary of the fourth of July, by MORRIS BIRKBECK, esq. of Waukegan, Illinois.

My friends and neighbors.—The period of five years has elapsed since I became an inhabitant of America, the season of probation has expired, and now may presume to address you as fellow citizens.

The opportunity thus afforded me by the partiality of my friends, to come forward on this interesting occasion, is in perfect accordance with my feelings, however poorly I may be qualified for the office assigned me.

I stand here—not as the advocate of freedom, though such I have been from my earliest recollection, for here, freedom needs no advocate. I stand as the organ of our congratulations on absolute, indefeasible enjoyment of this, the chief of earthly blessings. The subject has such complete possession of my faculties, as to leave no space for vanity, and but little for diffidence—What, indeed, is the orator for this occasion, when viewed in connection with his theme?

Millions of freemen are at this moment assembled, as with one accord, in every department of this great republic, to celebrate the return of that day, which may emphatically be called—the day of political redemption. O! her millions, spread over the vast regions of the southern continent, are also, at this moment, contending for their rights—in the very agony of the conflict. May the result be as happy as that we are assembled to commemorate! Let a fellow feeling for our brother men, who are now engaged in a tremendous struggle for the independence which we have accomplished, give dignity to our joy on the present occasion, and temper it with sobriety; and let gratitude, ascending to the great Disposer of events, for our own deliverance, be mingled with heartfelt aspirations that they too, may persevere until they have obtained the victory; and that they may have wisdom to secure, as well as courage to achieve their liberties.

Many noble instances are recorded of successful combats on the side of freedom. Tyrants have been dethroned, and systems of oppression have been swept away—but it has been to make room for other tyrants—for other modifications of servitude!

Of liberty secured, as well as acquired, our revolution, (ours, for my heart was in it from its com-

mencement) our revolution, has afforded the only established precedent since the beginning of history. This people had wisdom as well as courage. The rights they recovered, they retained inviolate—surrendering them to no master, nor aristocracy of masters. To an aristocracy, they indeed entrusted them, but it was to one of nature's creation, selected by common suffrage and accountable for the trust.

Deputation and responsibility—these are the essential characters of just and legitimate government. Every departure from these is a step towards tyranny—it is high treason against our own proper sovereignty—an attempt at political suicide which has always been made, and sooner or later, has always succeeded, the solitary instance of the North American republic only excepted.

Long may heaven avert from us this deplorable catastrophe! and it will be averted so long as we retain what we now hold—the entire possession and guardianship of the fountain of power—that is to say, as long as we remain faithful to ourselves. But, the moment we concede to a portion of the community, be it to one or to many, uncontrollable and exclusive privileges, or tolerate their assumption, that moment we cease to be free.

We are assembled, this day, not as an empty pageant, in honor of those great and good men who were the founders of the republic, but to evince our reverence for the constitution, and the laws which emanate from it.

Let us, then, look around us—let us see that all is safe. Are the laws respected? Can we take shelter under them as a sure refuge against every violation of our persons and property? Should the scrutiny discover defects either in the laws themselves or in their execution, the remedy is at hand—Let us depute to the legislature, at the approaching election, men of good capacity and sound character. Such men will apply themselves with fidelity to supply the deficiency or correct the evil. Some moments of this important anniversary should be devoted to serious examination and profitable reflection; than which there can be no better prelude to social enjoyment.

It has been said that *honor* is the support of monarchy and *virtue* of a republic. True honor is, however, inseparable from virtue. There is a sort of moral hypocrisy called honor, which attempts to supply the place of virtue, "and imitates her actions where she is not." We will leave this spurious production as an appendage to monarchy; it is of no value to a republic—we must have the reality. Let us, fellow citizens, adhere to virtue if we would be honorable: if we would be useful, let us adhere to virtue; if we would be happy, let us adhere to virtue.

It has been the policy of governments to cherish an overweening fondness for the peculiar habits, opinions, and institutions of their own people, and a contempt for those of other nations, founded not on their excellence, their truth or their wisdom, but merely on their nationality. The tendency of this has ever been to create antipathy among the members of the great human family, as baneful in their effects as they are frivolous in their origin. It has made foes of nations which ought to have been connected by links of brotherhood; and kept them so. To it may be traced a large proportion of the nefarious deeds which render history little else than a series of horrible tragedies. This national spirit is dignified with the name of patriotism, but it is not the patriotism fitted for a republic. It is another of the props of arbitrary power, and, like the

mimicry of virtue, miscalled honor, is a mere counterfeit. Genuine patriotism is a ray of universal benevolence which beams upon every man as a brother. Beginning in the near charities of the domestic circle, it extends through family to neighborhood--to country--to mankind.

This glorious principle, my fellow citizens, has the sure bond of union in our great political family. Spread over so large a portion of the globe, from the state of Maine to the gulf of Mexico, and flourishing under a federal constitution, founded on this principle, it affords the most exhilarating view of human affairs that has ever been exhibited to the lover of his species. May the like fraternal spirit prevail in the new order of things from Mexico to China?

The recognition of the independence of South America was carried in congress with but one dissenting voice. A vote, so nearly unanimous, has never before passed on any subject of importance since our own independence was established. What American heart can refrain from exultation at this honorable exposition of universal feeling, arising out of the identity of the representative body, in sentiment with its constituents?

My friends and neighbors! who, like myself, from various causes, have pulled up your stakes in the land of your nativity, and transported yourselves hither--let me invite you to take a view of your present condition, and its comparative advantages. It is, indeed, incumbent on us so to do, that we be qualified to act rightly in our new character.

On the continent of Europe, with some few exceptions, as well as in Great Britain and her sister island, the whole land, the entire surface of the earth, has been long appropriated, and remains in the possession of a small number of individuals, in comparison with the bulk of the population; inso-much that the poor man, having no title by birth in the soil of his country, has no means of possessing a portion of mother earth beyond what he might cover with his person in the field of battle, or what will cover *him* when all his labors are accomplished.

What, in fact, are the possessions which the poor man relinquishes; of what description are the stakes which he pulls up, on his removal from an old country? This is a question which it would be difficult to answer. He has a house, it is true, to which his title will not be questioned; but it is the workhouse; an income, too, by legal provision, which no man will envy; for it is received with reluctance, and paid with grudging.

This is the condition of the laboring man in England. Behold him here! he enters at once on the privileges of a citizen, and with industry and sobriety; in a short time he becomes a proprietor.

Here, we have houses, which we call our own--we have orchards of our own planting, and fields of our own inclosing; and no privileged order in church or state can touch an atom of the fruits of these orchards and these fields, without our consent.

But, supposing us to have been the more fortunate class--supposing us to have been *owners* of the land we tilled, what was our title to this land? It was little more than nominal, because the produce was at the mercy of others: the clergy take their tenth; the poor come upon it with an irresistible and ever increasing demand; government takes what it pleases, that is to say, as much as can be got. These various claims have, at this time, as I learn from unquestionable authority, absorbed all that remains of the produce, after the expenses of cultivation are defrayed.

Such was our position in England, or such it would now have been, had we remained there and retained our standing in society. But many whom we left behind us, in a state of affluence, have been reduced to poverty since our departure; and it is probable that some of us who were born to better expectations, might have been compelled, ere this, to take our stations among the wretched multitude who wait on the overseer of the poor for their daily sustenance, or have been consigned to the horrors of a prison. So far in regard to property--but, in a political view, how great is our advancement!

In the formation of the British legislature, many of us had no concern: this, however, was of small consequence. The majority of that assembly, on all questions of importance, votes regularly on the side of the executive, over which the electors themselves have no legal control whatever.

Here, the entire government, legislative and executive, from the base to the summit, has been built and amended by them. If it were to fall, it would be instantly restored, because it is essential to our well being. Every citizen has his share in the benefits of this edifice, as he has in its construction. And let every citizen do his duty. It is on the upright performance of our part, as individuals, that the aggregate of good government depends. The private man, who, in the exercise of his elective function, is biassed by unworthy or unpatriotic motives, is a betrayer of his trust, and does his part towards the ruin of his country. Two qualifications for office are indispensable--*virtue* and *talents*. He who gives his vote to a candidate destitute of these, is not a good citizen nor a sound republican.

The citizens of this great republic have proved, (and it is a discovery of the first importance in political science), that true liberty has no affinity--nothing in common with licentiousness. We can have no disposition to rise in tumult to destroy a government of our own creation, and of which the agents will in a little space be resolved into the common mass, surrendering to us the power of remedying their abuses, or correcting their mistakes, by the ready means of a better appointment.

In the redress of grievances, (for such may occur under every human institution, at best imperfect), there is this difference between a republic and a tyranny, between a government of election and a government by prescription; in the former they are corrected deliberately, by the collected wisdom of the people; in the latter, rashly, by popular fury.

Allow me, now, to recall your attention to the instrument which was read before the commencement of this address. The declaration of independence embodies, not only our rights, but our duties, as men and citizens. Let the enjoyment of our rights stimulate us to the performance of our duties. This declaration is a document of sublime importance, if the term sublime may be applied to any earthly transaction. The principles there proclaimed to the world are the basis of all that is good and great in the structure of human society. All the bright theories of government formed by the wise of other ages, and other nations, are founded on these principles, viewed by them with rapture, though in the distant perspective; whilst to you, who were born in this land of freedom, their practical effect is as familiar as the light of heaven: you inhaled them with the breath of life: they have become, as it were, the elements of your social character. Deprive you of these, what would be your existence?--a thing not worth caring for; an evil rather than a blessing! Let us not, then, forget, for a moment, that these sacred principles are equally

true, at all times and in all places, and equally applicable to every human being on the face of the earth. So thought, and so felt, the framers of this glorious instrument, than which a finer proof of wisdom and sincerity is not to be found. They avowed the truth and the whole truth, and they acted up to their avowal as closely as men could act, under their circumstances.

It was not they who bound, with fetters stronger than iron, the minds and the bodies of the unfortunate Africans—our brethren, the children of the same great parent! These fetters, it was not theirs to break: much they did; all they could not do. They pledged their lives, their fortunes, and their sacred honor, to support these principles, and they redeemed the pledge. To us, their successors, belongs the furtherance of the great work they commenced so nobly. Let us, my friends and fellow citizens, follow their example; and, relying, as they did, on the protection of Divine Providence, do our utmost to promote the restoration of every individual of God's creation to the enjoyment of his unalienable rights—of life, of liberty, and the pursuit of happiness.

The Attorney General.

Message from the president of the United States, transmitting, pursuant to a resolution of the house of representatives, information relating to the amount of public money paid to the attorney general, over and above his salary fixed by law. &c. April 9, 1822. Read, and ordered to lie on the table.

To the house of representatives of the U. States:

In compliance with the resolution of the house of representatives, requesting the president of the United States to cause to be furnished to that house certain information relating to the amount of public money paid to the attorney general over and above his salary fixed by law, since the first of January, 1817, specifying the time when paid, the particular services rendered, and the fund out of which such payments have been made, I transmit a paper marked A, containing the information desired. I transmit, also, a paper marked B, containing a statement of the sums paid to attorneys general of the United States prior to the 1st of January, 1817; and in the paper marked C, a like statement of sums advanced to district attorneys, for services not required of them by law. These latter documents being necessary to a full view of the subject, it is thought proper to comprise them in this communication.

By the act of 24th of September, 1789, instituting the office of attorney general, it was made his duty to prosecute and conduct all suits in the supreme court, in which the United States should be concerned, and to give his advice and opinion upon questions of law, when required by the president of the United States, or when requested by the head of any of the departments, touching any matters that might concern their departments. It will be seen, therefore, by the statement communicated, that no money whatever has been paid to the attorney general for his services, in that character, nor for any duty belonging to his office, beyond his salary, as fixed by law.

It will also be shown, by the documents communicated, that the construction given of the laws imposing duties on the attorney general and district attorneys, has been invariably the same since the institution of the government. On the same authority it was thought that the compensation allowed to the present attorney general, for certain ser-

vices, considering their importance, and the time employed in rendering them, did not exceed, regarding precedents, what might fairly be claimed.

JAMES MONROE.

Washington, April 6, 1822.

The statement A. shews that Mr. Wirt received, beyond his salary, 3,450 dollars, from the 18th of December, 1818, to the 9th April, 1821, inclusive of both—to wit:

For attending at Baltimore on certain trials for piracy	1,500
For ditto at ditto on prosecutions for robbing the mail	1,000
For drawing an answer of William Otis to the bill of Blake, &c.	50
For advice and argument in the case of James Johnson, of Ky.	400
For services in the supreme court, Anderson vs. Dunn, employed by the speaker of the house of representatives	500

\$3,450

The statement B shews that, in 1792, Edmund Randolph received 54 dollars, and, in 1814, William Pinkney received 100 dollars, while attorneys general of the United States, for extra services—together 150 dollars. No others are reported a having received any thing over their salaries.

The statement C. shews the amount that had been paid to district attorneys beyond their salaries and fees, for services not required of them by law. The items are various—the following are the amounts which each received:

Alexander Campbell, of Virginia, (1794) \$4 dollars, and in 1796, \$233 33. William Rawle, Pennsylvania, two items, in 1795, \$1,024 83; Richard Harrison, New-York, (1796) \$287 27; David L. Barnes, Rhode Island, (1799) \$50. George Blake, Massachusetts, two items, (1803, 1821) \$262. Alexander J. Dallas, four items, (1804, 1805, 1813, 1815) \$3,500. Pierpont Edwards, Connecticut, (1806) \$500. Walter Jones, jr. District of Columbia, three cases, (1808 and 1812) \$3,000. Silas Lee, Maine, (1808) \$450. Joseph M'Ilvaine, N. Jersey, (1820) \$206 28. Charles Ingersoll, Pennsylvania, (1821) \$150.

IN THE HOUSE OF REPRESENTATIVES, APRIL 12.

Mr. *Sergeant* delivered in the following:

The committee on the judiciary, to whom was referred a message from the president of the United States, furnishing, in compliance with a resolution of the house, certain information relating to the amount of the public money paid to the attorney general, over and above his salary fixed by law, since the 1st January, 1817, report:

That the office of attorney general was established by the act of the 24th September, 1789, and his duty defined to be "to prosecute and conduct all suits in the supreme court in which the United States shall be concerned, and to give his advice and opinion upon questions of law when required by the president of the United States, or when requested by heads of any of the departments, touching any matter that may concern their departments.

The same act directs that he "shall receive such compensation, as shall, by law, be provided."

By an act of the 23d of September, 1789, the compensation of the attorney general was fixed at \$1,500 a year. It has been raised by successive acts of congress, from time to time, as the increased labor and other just considerations seemed to require, and is now \$3,500, which cannot be deemed more than a reasonable allowance, considering

that the increased demand for the frequent legal aid of the attorney general has made it necessary for him to reside at the seat of government, and requires a much longer devotion of his time to the public service than was formerly called for.

From the act of September, 1789, to the present time, no change has been made in the constitution of his office, or the definition of the duties which belong to it, nor is it believed that any such has been suggested; and it may, therefore, well be inferred that nothing has heretofore accrued to induce any one to suppose that a change was expedient; and the committee deem it fit to add that they neither know nor have heard of any complaint that the office has not answered its purpose.

The appointments heretofore made, and the compensation heretofore and now allowed, have had reference only to the existing constitution of the office, and the duties belonging to it, as already stated.

It follows, clearly, that no department of the government has a right, nor ever has had a right, to call upon the attorney general to perform any other duties, and it would be difficult to show that an officer is under a greater obligation than a private citizen, to render gratuitous services to the government, particularly where they are of a nature to be estimated and paid for.

In the extensive and interesting concerns of the nation, it will nevertheless happen, as it has already frequently happened, that the government will have occasion for other or further legal aid than that which their officers are bound, or in some cases able, to afford. Such occurrences are in their nature contingent, and they can only be provided for by the establishment of offices, and the appointment of officers, upon a scale to embrace every possible contingency, with adequate salaries and emoluments, which, if it be at all practicable, would be onerous and wasteful, or by leaving to the executive officers of the government, the power of engaging such aid, from time to time, as the occasion may occur, exercising this very inconsiderable discretion under the same responsibility as belongs to their more important duties. The latter has been the practice of the government.

Where such occasional aid can be afforded by the attorney general, without interference with his proper duties, as in cases occurring at or near to the seat of government, there is no objection to his being employed in the ordinary professional footing of receiving a compensation for the service required. It was not the design of the office, as has already appeared, that he should render any other than the stated duties for the stated compensation or salary, and it was never understood or intended that the office was to deprive the officer of the right to employ his professional talents and learning for his own benefit, where that could be done without prejudice to the faithful performance of his stated duties. There is no good reason why the attorney general should not, under the limitation just mentioned, be at liberty to engage in the general pursuits of the profession. Accordingly, such has been the usage, not only in the instance of the attorney general of the United States; but, it is believed, of every state in the union, to engage in private practice, abstaining only where it interfered with public duty.

In reviewing the past, then, the committee find nothing to disapprove. Where additional professional aid has been employed, it seems to have been necessary and proper, and not to have been compensated beyond a fair and reasonable amount.

Where compensation has been allowed to the attorney general, it has been for services rendered which did not belong to his office, which he was in no manner bound to perform and for which, therefore, if he did perform them, he was entitled to be paid, as any other professional man would be. And they think it fit to state explicitly, that, in those instances where compensation has been allowed to the distinguished citizen who now fills the office, services have been faithfully rendered, well deserving what has been paid to him, and it certainly has not been greater than must have been paid to any other eminent lawyer.

In regard to the future, the committee can propose no other plan than that which has heretofore been adopted and approved. It seems to the committee to have well answered its purpose, and they perceive no good reason to fear, that it will prove less effectual in future.

They therefore offer the following resolution—
Resolved, That the committee be discharged from the further consideration of the subject.

Expedition to the Rocky Mountains.

FROM THE NATIONAL GAZETTE.

Extracts from the history of the expedition from Pittsburg to the Rocky Mountains, in the year 1819, under the command of major Long.

On the 14th of October, four hundred Omawhaw Indians assembled at camp Missouri. Major O'Fallon addressed them in an appropriate speech, stating the reasons for their being called to council, upon which *Ongpa ton-ga*, the *Big Elk*, arose, and after shaking by hand each of the whites present, placed his robe of Otter skins and his moccasins under the feet of the agent, whom he addressed to the following effect, as his language was interpreted by Mr. Dougherty,

"He had heard that his father wished to see him, and he had wished to see and to hear the words of his father, ever since he learned that he was ascending the river. He was informed last fall of his being at the river Platte, and as he could not then go to see him, he had now come to visit him—And here I am, my father. All these young people you see around here are yours, although they are poor and trifling, yet they are your children. I have always loved the whites since I first remember to have seen them, and this affection increases with my age. All my nation love the whites, and always have loved them—Amongst all the good things of this world, I place the whites first. But it appears, that there are many nations that live nearer to you than I, that do not love you, though you have done more for them than you have done for me. When they meet with you, they flatter you, in order to get presents from you, notwithstanding which, they would not hesitate to kill some of your people on their way home. Some of them shake hands with you in a friendly manner, whilst their hands are yet stained with your blood; and if you examine your own hands, my father, I think you would find some of it adhering to them yet. For my part, my father, I am proud to boast, that my hands are clean. Never has one of my nation stained his hands with the blood of a white man. I do not understand, my father, your mode of treating those well, who treat you ill. It is true I know that you have more sense than I have, but I cannot understand it. I have heard that the Pawnees have been to see you, a nation that has killed, robbed and insulted your people; I was also informed that you feasted them, and, at their departure, put weapons

in their hands. I should not be surprised to hear, that those very weapons were stained with white man's blood, before they reached the Pawnee village. This is what I cannot understand. This circumstance led me to believe, that, if you treated those that have injured you so well, you surely would treat your poor children, the Omawhaws, who have never done harm to your people, with much kindness also. But I am afraid the transaction will have a bad effect on my young men. When they heard of American troops ascending this river, they feared and respected them. But I am fearful that this transaction will throw them off their guard, make them lose their respect for you, and cause them to do something that they would not otherwise have done, and thus create trouble and difference between us. You said, my father, that those troops do not come to harm us. I believe it is true. I consider them all my brothers and friends. So far from thinking they come to injure me, I regard them as my shield, to guard me against bad nations around me. You say, that if ever there is a difference between us, that it will be our fault; but I hope not, my father. I cannot think that the Omawhaws will offer any indignity to your people, now that they have seen all those troops, when they have not harmed individuals who have resided years in their village unprotected, although we were then less enlightened than we now are.—Some think, my father, that you have brought all these warriors here to take our land from us, but I do not believe it. For although I am but a poor simple Indian, yet I know that this land will not suit your farmers; if I even thought your hearts bad enough to take the land, I would not fear it, as I know there is not wood enough on it for the use of whites. You might settle along this river, where timber is to be found; but we can always get wood enough in our country to make our little fires.—There is one thing I fear, my father; my nation is coming down here to hunt this winter, and if you send out your soldiers to hunt also, they will drive off all the game, and our women and children will starve.—We have heard of the ascent of the troops up this river ever since last fall, and we have been told by other nations, that if they chance to meet with any squaws unprotected, they ravish them.—But, my father, we shall soon know if this is true or not, because, having but little to eat, our squaws will be obliged to go out into the prairies to dig roots; I shall trust to you, and not hesitate to let them go." He also observed that he could not see the necessity of stationing so many troops here, as they had no one to oppose; he thought it desirable that they should go higher up the river, to chastise those refractory Indians, who will not listen to our words. "There is one thing, my father," he observed, "which I wish you to inform me of. We have heard of your tying up and whipping individuals of several nations, as you ascended this river.—What is the offence which will subject us to this punishment. I wish to know, that I may inform my people, that they may be on their guard." He then observed that all his children were poor, and that they had come with the expectation of receiving something from their father.

This speech, contrary to the usual mode of Indian orators, was commenced in a low tone, the voice gradually rising as the speaker proceeded, until it attained its full intonation.

Several speakers subsequently went forward and delivered their sentiments, generally alluding to the circumstance of our treating those who injure us, kindly, and neglecting our friends.

Ta-sone, the *White Dog*, spoke [with the allusion, and added, "Look at me, my father, look at my hands, examine me well, I am a wild man, born in the prairie," and subsequently, "I told you, my father, to look at me, that you might see if there is any of the blood of your people upon me. Some, whose hands have been stained with blood, endeavour to wash it off, but some of it will still remain."

It is proper to mention, as explanatory of some of the allusions in the above speeches, that the Pawnees, at the conclusion of their council, had been invited to dine at Camp Missouri, and that many of their chiefs were there presented with sabres, as I before stated. It was to this circumstance, that the above mentioned speakers had reference, as being inexplicable to them, as it seemed as if we wished to conciliate the good will of those evil doers through fear, and yet they could hardly accuse us of fear, surrounded as we were by so formidable an array of troops.

In the year 1814, a trader married a beautiful squaw of one of the most distinguished families in the Omawhaw nation. This match, on the part of the husband, was induced by the following circumstances. Being an active, intelligent and enterprising man, he had introduced the American trade to the Missouri Indians, and had gained great influence amongst them by his bravery and ingenious deportment. But he, at length, perceived that his influence was gradually declining, in consequence of the presence and wiles of many rival traders, to whom his enterprize had opened the way, and that his customers were gradually forsaking him.

Thus circumstanced, in order to regain the ground he had lost, he determined to seek a matrimonial alliance with one of the most powerful families of the Omawhaws. In pursuance of this resolution, he selected a squaw whose family and friends were such as he desired. He addressed himself to her parents, agreeably to the Indian custom, and informed them that he loved their daughter, that he was very sorry to see her in the state of poverty, common to her nation, and although he possessed a wife among the white people, yet he wished to have one also of the Omawhaw nation. If they would transfer their daughter to him in marriage, he would obligate himself to treat her kindly; and as he had commenced a permanent trading establishment in their country, he would dwell during a portion of the year with her, and the remainder with the white people, as the nature of his occupation required. His establishment should be her home, and that of her people during her life, as he never intended to abandon the trade.—In return, he expressed his expectation that, for this act, the nation would give him the refusal of their peltries, in order that he might be enabled to comply with his engagement to them. He further promised that if the match proved fruitful, the children should be made known to the white people, and would probably be qualified to continue the trade after his death.

The parents repudiated with thanks for his liberal offers, and for his disposition to have pity on them, they would not object to the connection, and hoped that their daughter would accept of him as a husband.

The parents then retired, and opened the subject to the daughter; they assured her that her proposed husband was a great man, greater than any of the Omawhaws; that he would do much for her

and for them, and concluded by requesting her to acquiesce in the wishes of the white man. She replied that all they said was, without doubt, true, and that, agreeable to his request, she was willing to become his wife.

The agreement being thus concluded, the trader made presents, agreeably to the custom of the nation, and conducted his interesting prize to his house.

The ensuing autumn she had the pleasure to see him return, having now conceived for him the most tender attachment. Upon his visit the following season, she presented him with a fine daughter, born during his absence, and whom she had nursed with the fondest attention. With the infant in her arms, she had daily seated herself on the bank of a river, and followed the downward course of the stream, with her eye, to gain the earliest notice of his approach. Thus time passed on. The second year the father greeted a son, and obtained his squaw's reluctant consent to take their daughter with him on his return voyage to the country of the white people. But no sooner had he commenced his voyage, although she had another charge upon which to lavish her carresses, than her maternal fondness overpowered her, and she ran crying and screaming along the river side in pursuit of the boat, tearing out her long flowing hair, and appearing to be almost bereft of reason. On her return home she gave away every thing she possessed, cut off her hair, went in deep mourning, and remained inconsolable. She would often say that she well knew that her daughter would be better treated, than she could be at home, but she could not avoid regarding her own situation to be the same as if the Wahconda had taken away her offspring forever.

One day, in company with six other squaws, she was engaged in her agricultural labors, her infant boy being secured to his cradle like board, which she had carefully reclined against a tree at a short distance. They were discovered by a war party of Sioux, who rushed towards them with the expectation of gratifying their vengeance by securing all their scalps. An exclamation from her companions directed her attention to the common enemy, and in her flight she fled precipitately, but suddenly recollecting her child, she swiftly returned full in the face of the Sioux, snatched her child from the tree, and turned to save its life, more precious than her own. She was closely pursued by one of the enemy, when she arrived at a fence which separated her from the trading house. A moment's hesitation here would have been fatal, and exerting all her strength, she threw the child with its board, as far as she could on the opposite side.

Four of the squaws were tomahawked, and the others escaped, of which number the mother was one, having succeeded in bearing off her child uninjured.

The trader, on his arrival at the settlements, learned that his white, or civilized wife, had died during his absence, and, after a short interval devoted to the usual formalities of mourning, he united his destinies with another, and highly amiable lady. The second season his wife accompanied him on his annual voyage up the Missouri, to his trading house, the abode of his squaw.

Previously to his arrival, however, he despatched a messenger to his dependants, at the trading house, directing them to prevent his squaw from appearing in the presence of his wife. She was accordingly sent off to the village of her nation, a

distance of sixty or seventy miles. But she could not long remain there, and soon returned with her little boy on her back; and, accompanied by some of her friends, she encamped near her husband's residence. She sent her son to the trader, who treated him affectionately. On the succeeding day the trader sent for his squaw, and after making her some presents, he directed her to accompany her friends who were then on their way to their hunting grounds.

She departed without a murmur, as it is not unusual with the Omawahaws to send off one of their wives, on some occasions, while they remain with the favorite one.

About two months afterwards the trader recalled her. Overjoyed with what she supposed to be her good fortune, she lost no time in presenting herself before the husband whom she tenderly loved. But great was her disappointment, when her husband demanded the surrender of the child, and renounced for the future any association with herself, directing her to return to her people, and to provide for her future well being, in any way she might choose.

Overpowered by her feelings on this demand and repudiation, she ran from the house, and finding a periogue on the river, she paddled over to the opposite side and made her escape into the forest, with her child. The night was cold and attended with a fall of snow and hail. Reflecting upon her disconsolate condition, she resolved to return again in the morning, and, with the feelings of a wife and a mother, to plead her cause before the arbiter of her fate, and endeavor to mitigate the cruel sentence.

Agreeably to this determination, she once more approached him, upon whom she had claims paramount to those of any other individual. "Here is our child" said she, "I do not question your fondness for him, but he is still more dear to me. You say you will keep him for yourself, and drive me far from you. But no, I will remain with him; I can find some hole or corner into which I may creep, in order to be near him, and sometimes to see him. If you will not give me food, I will, nevertheless, remain until I starve before your eyes."

The trader then offered her a considerable present, desiring her, at the same time, to go and leave the child. But she said, "Is my child a dog, that I should sell him for merchandise? You cannot drive me away, you may beat me it is true, and otherwise abuse me, but I will still remain. When you married me, you promised to use me kindly, as long as I should be faithful to you; that I have been so no one can deny. Ours was not a marriage contracted for a season, it was to terminate only with our lives. I was then a young girl, and might have been united to an Omawahaw chief, but I am now an old woman, having had two children, and what Omawahaw will regard me? Is not my right paramount to that of your other wife; she had heard of me before you possessed her. It is true her skin is whiter than mine, but her heart cannot be more pure towards you nor her fidelity more rigid. Do not take the child from my breast, I cannot bear to hear it cry, and not be present to relieve it; permit me to retain it until the spring, when it will be able to eat, and then, if it must be so, take it from my sight, that I may part with it but once."

Seeing her thus inflexible, the trader informed her, that she might remain there if she pleased, but that the child should be immediately sent down to the settlements.

The affectionate mother had thus far sustained herself during the interview with the firmness of conscious virtue, and successfully resisted the impulse of her feelings; but nature now yielded, the tears coursed rapidly over her cheeks, and clasping her hands, and bowing her head, she burst into an agony of grief, exclaiming, "why did the Wahonda hate me so much as to induce me to put my child again into your power."

The feelings of the unhappy mother were, however, soon relieved. Mr. Dougherty communicated the circumstances of the case to major O'Fallon, who immediately and peremptorily ordered the restoration of the child to its mother, and informed the trader that any further attempt to wrest it from her should be at his peril.

Paraguay.

FROM THE LONDON MORNING CHRONICLE.

It has been long erroneously believed in Europe, that *Artigas*, the noted chief, who, for a period of years, governed the eastern bank of river Plate in a state of independence, rejecting the overtures of Spain, and withstanding the attacks of the rival government of Buenos Ayres—who, without any organized government of laws, without having courts of justice, boards of admiralty or any other regular system for the trial of prizes, issued letters of marque, which were afterwards simulated and served for an extensive plan of plunder and murder on the seas: It has erroneously been believed in Europe, we repeat, that this noted Artigas has been taken by the Portuguese and killed. This, however, is not the case. Artigas is alive, although, perhaps, so situated as to be prevented from again using his influence and ascendancy, either as a terror to his neighbors or as an instrument of desolation in a country governed by him after the Tartar fashion; and the recent inquiries we have been induced to make after the fate of this singular character, have elicited a variety of interesting particulars which, availing ourselves of a leisure moment, we now lay before our readers.

Compared with the other independent governments which have been formed in South America, Paraguay, known to us from the labors of the Jesuit, and the descriptions of Maratori and Azara, presented many singular points of contrast. When the first disturbances commenced in that quarter, towards the year 1810, the inhabitants of Paraguay, owing to their peculiarly secluded situation, judged that no further protection or support could be derived from the mother country, whose affairs soon afterwards, at that distance, began to look desperate, and they early saw the necessity of considering what way they could best administer their own concerns, without being dependant on, or embroiled in the quarrels of their neighbors. Unattended by political commotion or anarchy, a junta of the principal inhabitants was assembled to deliberate on the best plan to form and carry on a local government, when upwards of 1,000 deputies unanimously declared in favor of a total independence, and, as it were, political seclusion, and in that state they have remained ever since. They further determined that the government should be confided in the person who, from his virtues and knowledge, was most deserving of public confidence; but, in order avoid the conflict of two parties, headed by two individuals equally entitled to this distinction, they determined to elect Dr. *Francia* and M. *Yedros* joint governors. These two persons administered the affairs of Paraguay jointly,

each having a separate district, and commanding an equal force; but in the course of time the growing ascendancy of Dr. *Francia* deprived his rival of his party, and through the sanction of another meeting of the inhabitants, he was made supreme dictator, the title he now bears, and poor *Yedros* became his prisoner, and had the limits of the city given to him, as the boundary of his personal freedom.

From the peculiar traits of character Dr. *Francia* has since evinced, it can hardly be supposed that this wish to exercise the supreme command, originated in interested or ambitious views. Had he been obstructed by the interference of another, possibly he could never have so successfully guarded his country from civil commotions, and raised it to the state of prosperity and happiness it now enjoys beyond any other portion of South America.

Dr. *Francia* is a native of Paraguay, and was bred a lawyer. Not fond of society, and rich enough to live with ease and independence previous to the revolution, he remained retired in the country, principally devoted to study. His pursuits gave him a reputation for learning beyond any of his countrymen, and his virtuous and moral conduct, added to his known disinterestedness, subsequently secured their confidence. Gradually, Dr. *Francia*, has consolidated his power, and become a sovereign over his country; but without having any of the appendages or incurring the expenses of a ruler. Equity, justice and policy are his guides, and his administration is founded on no written code of laws. The trade of the country affords him a sufficient revenue, and this is expended with the greatest frugality. The postmaster and collector of the customs are the only two public functionaries he employs; should they be wanting in their duty, he dismisses them and appoints others. He sees to every thing himself: purchases the clothing and arms for his militia, settles disputes, grants passports, in short, fills every department in the state. He has no favorites, and his impartial demeanor stands unimpeached in the opinion of his fellow countrymen, after governing them for a number of years. The militia of Paraguay is astonishingly well organized. One half is on duty during six months in the year, and for a similar period is succeeded by the other half. Thus he has always at least 3,000 men at his disposal, and he commands them in person. Since he came into power he has refused all political intercourse with the neighboring provinces, uniformly rejected the overtures made, and dismissed the emissaries sent to him.—He has repelled the attacks of Buenos Ayres, routed her armies, and defended his territory from the hostilities of savage Indians.

It has been the object of Dr. *Francia* to keep Paraguay clear from those feuds and broils, which have unfortunately so often desolated Buenos Ayres, and the other provinces, and by his ability and management he has prevented anarchy and rendered his country prosperous—Emigrants have flocked there from Corrientes, Tucuman, Buenos Ayres, &c. and particularly from the eastern bank. The population of Paraguay, under the last Spanish governor, that is, about the year 1805, was only from 130,000 to 140,000 souls; now it exceeds 200,000. It cannot be attacked, unless it is by ascending the river, and this is easily defended by gun boats.—European goods are supplied from Buenos Ayres and tobacco and Paraguay tea, so much used in the part of S. America alluded to, are brought down in return. The exportation of coin is prohibited, or only allowed in exchange for arms. The export of

timber, so much wanted at Buenos Ayres, for house and ship building, is also prohibited, unless in payment for arms. Some United States trading vessels have gone up to Paraguay, without touching at Buenos Ayres, with arms and warlike stores, the river admitting even to that immense distance up, vessels of 300 tons burden. The banks of the Parana are lined with willows, and the boats carry out long lined tow lines, which are tied to them, and the vessel is then hauled gradually against the current. In this the Paraguayans are very dexterous; they swim astonishingly well, and carry the tow-lines out without the aid of a boat, by putting an end in their mouths to ascend, and one to descend from Paraguay. There is also a local trade in rum, sugar, and coarse cottons of home manufacture.

Dr. Francia seems to have followed the policy of the jesuits who, by the most wonderful address, retained, till the time of their expulsion, an absolute dominion, both in spiritual and temporal concerns, over the inhabitants of Paraguay. He foresees and provides for their wants, and his great activity forms a striking contrast with the general apathy of his countrymen. He forbids the liberty of the press, from a wish to guard against political agitation, and from similar motives he rejects the visits of European foreigners. Owing to this peculiar policy it was, that Bonpland, the botanist, on his late excursion, was unable to ascend higher than Corrientes; but he receives Spaniards, South Americans and Brazilians indiscriminately, and treats them according to their deserts, although he does not allow Spaniards to marry white women in the country he governs.

It is into the power of this singular man, that Artigas has fallen. He has been his prisoner for nearly two years. Not flying from the Portuguese, but from the persecutions of a party of his own countrymen, under Ramirez, who was himself subsequently killed at Rio Seco, a place situated between Santiago del Estero, and Santa Fe, towards the close of 1820. Artigas sought an asylum in Paraguay, and there found one; but his turbulent disposition not allowing him to be quite, he formed a plan to raise troops, and again recover his ascendancy; when Dr. Francia, not to involve his country with his neighbors, arrested him in a convent, where he was closely watched and guarded, when the last advices left Paraguay. Notwithstanding the facts above stated, there are still cruisers at sea wearing the flag of Artigas, and most of their captures are paid at Lloyd's.

CHRONICLE.

Maj. gen. Brown, we are happy to say, has been restored to such a state of health as to enable him to resume his duties at head quarters—he arrived at Washington a few days ago.

Capt. John H. Elton, of the navy, died at Norfolk on Saturday last, after a lingering illness, aged about 37 years.

Col. Matthew Lyon, U.S. factor for the Cherokee nation, died at Spadre Bluff, in Arkansas, on the 1st of August ult. aged about 76 years. He was a soldier of the revolution, and for some time a member of congress, from Vermont, and afterwards from Kentucky.

The French corvette *La Tarn*, has arrived at Norfolk from Rochefort.

Another naval fight. It is said, that, on the 6th Sept. in the *Monia* passage, the U. S. schooner *Alli-*

gator fell in with, and, after an action, captured the Spanish piratical brig *Polono*, of 16 guns, and 180 men. Another account says there is no truth in the preceding report.

An account, truly Spanish, in the old fashioned style, has been published at Porto Rico, of the capture of the Palmyra by the *Grampis*. The most important thing mentioned is, that the latter fired into the former without "warning or explanation!" and that the crew of the privateer were much abused, &c.

Mr. Crawford, secretary of the treasury, in a late visit to his former home in Georgia, was received at many places with distinguished respect, and complimented with several public dinners. At the dinner at Athens, the following were among the toasts drank:

Thomas Jefferson—The re-incorporation of his principles, so purely republican, into the body of our government, "is a consummation devoutly to be wished."

Principles and not men—The motto of every good citizen, and the creed of every honest politician.

The United States—May all attempts at either sectional or political division, acquire neither length of acquiescence or strength of influence, but be resisted with unceremonious contempt.

By Mr. Crawford—The memory of general Jett Thomas—his gallantry in action was not less conspicuous than his integrity as a citizen.

(*Mr. Crawford having retired*)—*Our enlightened guest, William H. Crawford*—Whatever may be the hopes to the contrary, the world may be assured he has not lost the confidence and attachment of his own state.

By col. John A. Cobb—Prosperity to the manufactures of the United States, without the aid of protecting duties.

The following were drank at Greensborough:

By Mr. Crawford—The memory of the personal and political friend of my youth, Peter Early—May his public virtues stimulate those who succeed him to emulate his patriotic exertions.

By the president—(*Mr. Crawford having retired*)—Our distinguished guest, William H. Crawford—His vigorous intellect, republican simplicity, extensive political information and inflexible integrity, eminently qualify him for the first office in the gift of the American people.

By Thomas Crawford, esq.—Southern rights—Slavery is no institution of ours—if we are obliged to support it, it is because we can't help it.

Canandigua, N. Y. Sept. 20. By a gentleman passing this place from Chenango, we learn the following melancholy circumstances, which he stated to have occurred last week in the town of Otselic, in the above county.

A large number of men were employed in raising a barn; two young men were scuffling, and the neck of one was broken in the affray: in this situation he was carried before his father, who was holding a corner post of one of the *bents*—when, (dreadful to relate), the father, shocked at the horrid spectacle, left his hold, by which means the timbers fell and killed seven men on the spot.

Texas. There are miserable accounts from Austin's settlement, and those who were seduced to emigrate to Texas have chiefly perished by various hardships, or returned again to the United States. It is stated that every settler was required to make oath that he was of the Roman Catholic religion, no other being tolerated.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 6—Vol. XI.] BALTIMORE, OCT. 12, 1852. [No. 6—Vol. XXIII. WHOLE No. 578

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

BANK OF THE U. S. The important exposition of the affairs of this institution, which occupies so large a portion of the present sheet, cannot fail to excite the public attention, deeply interested in this establishment, for it partakes somewhat of a national character, though it has been so much devoted to private purposes. We have not yet seen the documents referred to, but, if any or the whole of them shall appear necessary to the more full elucidation of the facts stated, they shall have a place in the Register.

THE GREEKS. Though we cannot "thank God," as many seemingly pious people say that they do, even in temples or places appropriated to His worship, for the destruction of the human race, we cannot altogether withhold an expression of high gratification at the news received from Greece—perhaps we do rejoice, and may rightfully rejoice, at the great slaughter of the Turks; seeing that, if they had not been killed, they would, most certainly, have massacred the Greeks, and have performed in the Morea a second part of the terrible tragedy acted in Scio. If the accounts are true, and we see no reason to doubt them except because of the magnitude of the victory, we may begin to calculate upon the liberation of Greece by the arms of her sons, worthy of the best days of this interesting country. See "Foreign News," under the head of *Turkey*; a name that we have some little hope may be blotted from the map of Europe.

HEALTH. A few cases of fever are still reported at New York, and the infected district is yet nearly uninhabited. We had forty deaths by "bilious fever" in Baltimore, in the last week—many of them caused by diseases of the most violent character. The latest accounts from Pensacola shew that the city was nearly deserted, and give us a long list of deaths; many estimable and distinguished persons have found a grave at this place: and, it is said, that the living who remained in the city, were hardly sufficient to inter the dead! The disease generally terminated in about five days. The fugitives from the pestilence have suffered great hardships on account of the sparse settlement of the neighboring country, and the most respectable families have been glad to obtain the garret of a miserable hut to shield them from the weather. At New Orleans, also, though, until late in the season, very healthy, the yellow fever has broken out, and was carrying off 10 or 12 persons every day.

SLAVERY. One great good, at least, will grow out of the revolutions in Mexico, Colombia, &c. for slavery is abolished in all of them—and, after a few years, the road to honor, respectability and wealth being open to all—distinctions, on account of color, will be lost, and the whole mass of society have a common interest and feeling. Let the future fate of these countries be what it may, *personal slavery cannot be restored.* Much alarm prevails in Louisiana in consequence of the flight of slaves to Mexico—see page 96.

TERRIBLE STORM. The city of Charleston was visited by the most destructive hurricane on the 27th

and 28th ult. that, probably, ever occurred in our country. The direction of the wind was such that the damage done in the harbor was slight compared with that sustained in the city. Many houses were completely prostrated, and a considerable number of persons killed thereby—six of them by the falling of one building; several vessels were driven ashore or sunk—others lost masts and spars; but the U. S. schooner *Grampus* rode out the gale in safety. It appears that hardly a house in the city escaped uninjured, and the streets were almost impassable for the number of trees, &c. that had fallen in them. The force of the storm may be partially estimated by the following circumstances:—"The sheet of tin which covered the cupola of the circular church in Meeting street, about twenty feet in circumference, and which was well fastened round with brass nails, three or four inches in length, was completely torn up by the fury of the storm, and carried through the air into Queen-st. a distance of about one hundred yards. The iron vane at the top of St. Michael's church has been considerably bent, and the top of St. Philip's church has been carried away."

"The thermometer rose from 70 degrees at 10 o'clock, to 77½ at 1 o'clock.

"The barometer fell, in the same time, from 30° 15' to 29° 50'.

"The tide rose and fell, about one o'clock, 6 feet in 45 minutes."

This storm appears to have reached Raleigh, N. C. though the damage sustained there was not great. The mails from the south were delayed several days—and such was the amount of trees prostrated on the roads, that one gentleman was eight hours in going eleven miles! It was thought that *one half* of the trees had been blown down or bent. The preceding account reached us by a vessel that arrived at Norfolk, and, since the hurricane up to yesterday evening, inclusive, we have not received any mail from Charleston.

PIRACY. The pirates of Cuba, &c. appear to be nearly as active as ever they were, and not infrequently terminate their abuse of persons by putting them to death. Some great and general effort must be made by the United States, England, France, &c. to exterminate these wretches, who do not respect any flag, or suffer any thing to stand in the way between them and their business, but *force.*

THE AURORA newspaper establishment has been sold by Mr. Duane, its veteran proprietor, to Mr. James Wilson, editor of the Steubenville Herald, who, at a former period, had charge of the Aurora for some time. Mr. Duane, is about to be absent from the United States. The following extract from his parting address to his delinquent subscribers, presents too true a portrait of the negligence with which the just claims of the publishers of newspapers are often treated:—

"There is one subject, which, if I were alone concerned, I should scorn to notice on an occasion like the present—I mean the vast amount due to me for value delivered; my duty to others, however, compels me to make an anxious appeal to the justice, and, indeed, to the generosity, of those who

are indebted to me—if they had repaid my services with the fidelity with which I am conscious those services were performed, I should not have had occasion to relinquish this paper, (a painful operation), or to seek, in my sixty-third year, in a foreign clime and new pursuit, the means necessary to the support of a numerous family.”

To the editor of the Weekly Register.

Sir: In a late number there is an excellent paper on the moral force which Great Britain exercises over this country; to the sentiments of which I most cordially subscribe, believing them to be perfectly correct. With a view of aiding you in your laudable endeavors of putting down this pernicious influence, I send you an extract from a late periodical publication in Britain, of acknowledged respectability and veracity. In this your readers really find depicted the true character of the persons who exercise the power in England, and will clearly see the reason why the cause of suffering humanity in Greece is so little regarded among many of our moral and religious people. The columns of the London Courier may be consulted in coroboration.

“The ministers of England, if we may judge from the language of their organ, the unprincipled Courier, are devoting the resources of this mighty empire to the extinction of every thing liberal and generous in the affairs of mankind. The Greeks are insurgent rebels, as cruel as the Turks, and ought not to receive support. The Spaniards are public enemies of religion and royal prerogatives, and ought to be put down. The American republics ought to receive no countenance; and the Irish peasantry ought to be fed as paupers rather than be restored to their civil and social rights. In truth, such a series of machiavelian turpitude never was so unblushingly displayed as appears from day to day in this ministerial organ. Happily however the Greek cause improves. The friends of absolute power and priest-craft in Spain have met with defeat in every quarter; the American republics will be established in spite of all their enemies; and the pauperism of the Irish will render their situation known to the world, and when known, their social wrongs must be permanently redressed.

“Parliament is not yet prorogued; but a reward might be offered for the discovery of any laudable measures which have been adopted during so prolonged a session, without the hazard of being claimed. Never was more promised,—never was more expected,—never was more wanted by a country bleeding in all its vital parts,—and never was less done. Incapacity must be the apology, for certainly less talent never appeared in the house of commons than at this time, and nothing could render a patriot more melancholy and hopeless, than a few nights' attendance on its technical debates.”

Let our American brethren read the above true character of the organs of the moral force which is, most unfortunately, wielded over our beloved land; and, if possessed of republican feeling, they will blush that the case should be so—if possessed of patriotism they will use their utmost efforts to do away its effects, by discountenancing all pernicious importations from a country which is ruled by such inveterate enemies to republican principles and to civil and religious liberty.

J. M,

NATIONAL LAW. From a London paper. An answer has been received by the underwriters at Lloyd's coffee house, from the Dutch government, which has excited some surprise. It regards the Lutine frigate, which, as has been stated in the newspa-

pers, was long since wrecked on the coast of Holland, with half a million of specie on board, intended for Prussia. Not a soul survived, nor was it known what had become of the frigate until recently, when she was found buried in the sand, on the Dutch coast. The British government, which sent the specie as a subsidy to Prussia, insured at Lloyd's, and in due course received the money on proof of the loss. The insurers, therefore, or such of them as are alive, applied a short time since to the Dutch government, for permission to take the specie out of the wreck of the Lutine. The answer obtained this day, though very courteous, is by no means satisfactory, upon any account. It is this: That as the Lutine was wrecked pending a war with Holland, the property of course became Dutch, and no restoration can therefore be made. Had the disaster occurred while peace existed, the Dutch government would have been most ready to afford every facility for the recovery of the specie from the wreck.

FOREIGN NEWS.

London papers of September 9

The congress. Several ministers from foreign courts are stated to have arrived at Paris, on their way to the congress. The following is given in the Paris papers of the 5th of August, as a summary of the propositions to be submitted to the congress of Verona:—

“1. To declare firmly and openly against revolutions of every kind. 2. To entrust the guarantee of Italy and Germany to Austria. 3. To agree to a secret article relative to Spain. 4. To renew the guarantees given to the other states of Europe. 5. To declare a neutrality, at least ostensibly, with respect to the affairs of Turkey. 6. To invite the different powers to abstain from open war with Spain. 7. To agree to repressive and general measures with respect to the press.

Great Britain and Ireland. The 18th regiment of Hussars lately disbanded, was raised in 1759, by the present marquis of Drogheda, who commanded it sixty-two years!

A successor for lord Castlereagh was not yet determined on—but it seems to have been generally thought that Mr. Peel would be appointed. The duke of Wellington goes to the continental congress in the place of the late minister.

Mr. Wellesley Long, famous for his prodigalities, recently appointed to an office in the household of the king, with a view, it was thought, of preventing his arrest for debt, plead his “privilege;” but being told, by authority, that it would not avail him, he fled again to France.

The mob in London are stated, in the Sun newspaper, to have expressed “a feeling of triumphant joy at the funeral of the marquis of Londonderry. At Hambledon, near Portsmouth, and Laxfield, in Suffolk, the church bells were rung, as an expression of exultation over the melancholy fate of that great statesman.”

Some future good may be realized out of the present distress of the people of Ireland. As the best way of affording relief, it is said that about forty thousand persons are now employed in making roads, &c. in the counties of Mayo and Galway.

It is stated that there are fresh symptoms of an insurrectionary spirit in Ireland. “The hereditary bondsmen are determined to strike another blow this winter.”

A Scotch paper says—The sword which was drawn by the renowned Sir William Wallace, and now in the possession of the noble family of Lou-

don, who are lineal descendants of that illustrious hero, has been sent off from Loudon Castle, in Ayrshire, under an escort of a detachment of the Loudon troop of Ayrshire yeomanry cavalry, for the inspection of the king.

Herschell, the astronomer, died on the 25th August, in the 86th year of his age. What a folly it was to have dubbed that man as "Sir William!"

The best wheat is selling in England for 5s. 6d. per bushel of 70 lbs. Other sorts of provisions are proportionally cheap, and an increased distress of the agricultural interest may be expected!

The actual expenditure of the British government for fifteen years, taken from a late work.

		Of which was paid
1806,	£82,337,000 stlg.	as subsidies of
1807,	83,782,000	foreign powers.
1808,	89,802,000	£3,989,000
1809,	95,604,000	1,259,000
1810,	94,566,000	2,059,000
1811,	102,340,000	2,977,000
1812,	114,552,000	5,315,000
1813,	131,825,000	11,294,000
1814,	137,343,000	10,024,000
1815,	127,364,000	11,035,000
1816,	99,593,000	£731,000
1817,	73,061,000	
1818,	73,224,000	
1819,	73,697,000	
1820,	74,986,000	

Or 333 millions of dollars for the year 1820.

"Law." A young laborer lately won the heart of his employer's daughter in the west of England, to the great displeasure of her father, a man of property. The father settled a sum of money on her and got her made a ward in chancery, and the youth was forbidden to hold any communication with the "infant," then seventeen years old. But, after this, the young lady wrote a letter to her lover, which he received—he was, thereupon, arrested for a "contempt of court," and confined in jail three years; but then released through the interference of some respectable persons who deprecated such severity of treatment, though their efforts were still opposed by the father.

France. A society of Carbonari, is said recently to have been discovered at Paris, with the object of overturning the existing government, by fomenting insurrections in different parts of the kingdom, which they hoped would ultimately become general.

In a late debate in the French chamber of deputies, while discussing a proposition for that purpose, M. Bastarreche opposed the erection of statues to generals Pichegrin and Moreau, on the ground that the former sullied his services by betraying his country at one time, and losing his life in an attempt to commit "a cowardly assassination" on the person of Napoleon. With respect to Moreau, he declared himself to have been his most intimate friend and the sharer of his exile, but he had perished, fighting in the ranks of foreigners against France; and whilst, as a friend, he would cheerfully contribute to raise a statue to his memory for a private sanctuary, as a deputy of France he should vote against it as a public monument. It was observed that although the impression of that speech was negated, all the military officers, even those belonging to the right, rose in its favor, thus showing to the chamber that they shared the opinions of the orator with respect to the close of Moreau's career. The various sums proposed, were voted, however, without a discussion.

On an examination of our French journals, (say the New York Gazette), we find an account in the Havre paper of the 17th of August, of a public dinner given to the baron Hyde de Neuville at the exchange, on the 15th. The number of subscribers was 58. Among the guests were the sub-prefect, the chiefs of marine, the inspector of customs, and the United States vice consul. The exchange room was transformed into a banquet hall at twenty-four hours notice, and was decorated with the French and American flags united. The bust of the king was placed in the arcade in the centre, giving the appearance of a father presiding in his family at the re-union of his children.

The mayor, as president of the chamber of commerce, the president of the tribunal of commerce, and managers appointed by the subscribers, received the honors of the table.

After the cloth was removed, the following toasts were drank:

The king.

The president of the United States.

To the happy establishment of the direct commercial relations between the two nations.

Peace and commerce.

Baron Hyde de Neuville, the negotiator of the treaty.

After this toast the baron rose and made the following address:

"Gentlemen: Having terminated the mission with which the king has deigned to intrust me, and now ready to render him an account, it is very grateful to my feelings to receive so flattering a testimony of good will in the city of a kingdom, which so eminently contributes by its industry, to the national prosperity.

I dare not flatter myself, gentlemen, that I have always met the views of commerce and navigation, the noble and powerful resources of riches, force and the glory of empires; but this I can assure you, that I have neglected nothing in the defence and conciliation to these interests.

"Neither have I neglected any thing, (and I received my instructions from the king himself), in hastening to conciliate, in the most equitable manner, the interests of two nations which love and esteem each other, and are united, and wish to remain so.

"Yes, gentlemen, the Americans love us; they rejoice with the joy of friends, (it would give me pleasure to repeat expressions I have heard) in the actual prosperity of France. Let us, with the same cordiality, rejoice in theirs, and pray that the strictest union may ever exist between two people who neither have or can have any true cause of misunderstanding, and who are connected by mutual interests.

"This union, so desirable and so much desired by the intelligent of the two countries, cannot but turn to the advantage of all nations, in aiding in the maintenance of the peace of the world, and the strengthening of a principle; of which all governments cannot but recognize the importance, a principle which all liberal and generous minds should watch and defend—that of the liberty of the seas.

"Accept, gentlemen, the expression of my gratitude, and permit me to offer you the following toast:

"The city of Havre, one of the most flourishing cities in the beautiful and powerful kingdom of France. She must increase in prosperity under so enlightened and wise a monarch, who appreciates and honors commerce, and has the disposition to encourage and restore national navigation."

This sentiment was listened to with attention, and received the unanimous plaudits of the company.

The Baron set out the next day for Paris.

Chamber of Deputies. We received, (says a London paper of July 24), the Paris papers of Wednesday, last night by express.

The discussion of the budget has been conducted with considerable warmth. The following scene occurred in the sitting of the 16th.

It appears very extraordinary, said M. de Villele, that the king's government should be reproached with the care it takes to pay the debts of former governments; if there is any remarkable phenomenon that could prove the power of legitimacy, and of the institutions which guarantee our public liberties, it was the spectacle presented for several years by the king's government, imposing enormous sacrifices upon the people to fill the pockets of those who served the preceding government.

The most violent agitation broke out on the left; all the members rose at once and violently abused the minister. M. M. Casimir Perier, Lafitte, Demarcay and de Grammont, were particularly remarked.

M. Bignon—It is infamous.

M. Dupont (de l'Eure)—Do not insult the chamber.

M. Chauvelin—Let every one empty his pockets. A voice—You have paid foreigners with what came to your hands.

The minister—I know that when the truth is told [new interruptions more violent still on the left].

M. de Villele—What fact do you dispute? [on the right, order! order!]

M. Foy—Your order is disorder.

The president—I request the chamber to be silent; the king's minister ought to be heard.

On the left—Yes, when he speaks with propriety, and does not insult the chamber.

The president—It is for the dignity of the chamber not to answer by such interruptions. The king's minister ought to be heard, you can answer him if you have any thing to answer, but he ought to be heard in tranquility and silence.

M. de Villele—Is it pretended that I have not been correct, or that I have insulted the chamber? I have said that the king's government has imposed sacrifices on the people, and great sacrifices.—Upwards of 800,000,000*f.* is raised to pay, I have not said persons, but debts, which however, comes to the same thing, for there are no debts without creditors, to pay the debts of the preceding government.

On the right—That is clear.

The tumult re-commenced.

Numerous voices on the left—He does well; as he has the profit he ought to bear the expense.

Another voice—It is the nation who pays, not him.

M. Perier—All the liquidations have been purchased by your people.

Another voice—The privileged brokers have carried on a scandalous commerce.

Gen. Foy—Is it us who have devoured the treasures of the extraordinary domain?

Another voice—Is it us who have caused the civil war amongst our neighbors? (The tumult was at its height, the members of the right and the left rose and loudly abused each other. M. Delalot addressed himself to gen. Foy, who answered him with violence. The tumult was so great that it was impossible for us to hear their words).

In the midst of the noise, M. Demarcay rose and addressed an epithet to the minister, which we could not hear.

The president—M. Demarcay, I call you to order.

M. Dupont (de l'Eure)—That is very unfortunate.

M. Demarcay—What is it he has done to me?

Spain. A Paris paper says—A letter from Madrid, of the 5th of August, states the order of the king of Spain for the levy of 85,000 provincial militia, which, added to those already organized, comprise a force of 115,000 men, destined, (as the writer says), to suppress insurrection, to form a counter-cordon on the French frontier; and, what is of more moment in the present state of the Spanish finances, to put in execution the maxim of Bonaparte, "that bayonets formed the best mint for the coinage of silver."

The present ministry act with the greatest firmness—among other things they have demanded of the foreign ministers an unequivocal assurance of the friendly dispositions of their courts; stating that if they were not prepared for this, their passports would be immediately ready for them. They have banished the duke del Infantado and several other great titularies, accused of advising the king to violate his oaths. The people have confidence in the exertions of the administration, and it is probable that tranquility may soon be restored to Spain.

The new ministry had called together the official persons, and declared that all who showed themselves luke-warm in defence of the existing government, should immediately be dismissed.

Accounts from Madrid, to the 16th of August, are silent as to the alleged sickness of the queen. The king is said to have attempted a fruitless escape in the night, which was the cause of a guard being put on the palace, to watch the motions of his majesty. Perfect tranquility reigned at Madrid, and all the accounts received from the interior justified the opinion that the mal-contents would be speedily exterminated.

The following extraordinary statement is given in a Madrid paper of August 7. "It is said that col. St. Michael, accompanied by two other reporters, in the cause of the officers of the guard, lately had a private audience of the king, and explained the difficult situation in which he found himself with respect to his majesty, and to the officers, against whom he was preparing to proceed, in consequence of their producing, in vindication of their conduct, autograph letters from his majesty. He added, that, under such circumstances, he came to take the king's directions, and to endeavor to lighten the terrible charges laid against those unfortunate officers. His majesty answered in an ill-humored tone, 'tis true; the letters are mine. Well! what does that mean? So much the worse for them, (the officers), they knew that my orders were null and void, unless countersigned by the ministers; why did they execute them?' 'But yet,' replied St. Michael, 'your majesty will not abandon those unfortunate men!' 'You are charged with the prosecution,' returned the king, 'carry it on with activity, for I will hear nothing more about it.'

Portugal. A considerable number of troops have embarked at Lisbon for Bahia, Brazil.

Prussia. Considerable alarm appears to exist on account of the establishment of many secret societies, having for their object a revolution in the government. Their motto is said to be "freedom, honor and equality."

Russia. Previous to his setting out for the continental congress, the emperor Alexander issued the following ordinance: it marks the despotic character and rule of "the deliverer"--

"In every village or place where, unknown to the lord, a deserter or fugitive finds a forbidden shelter with a peasant, the community of those peasants shall be condemned to a fine of 2,000 roubles for every such deserter. If this shelter is given with the knowledge of the lord of the village, he shall pay the same sum, independently of that paid by the peasants. If the concealment has been effected by the lord, and if the deserter has been received into one of the villages by him, in that case the lord shall be obliged to pay alone the sum of roubles for every deserter, besides being liable to the other rigors of the law. Whoever shall denounce a deserter or fugitive shall receive a reward of 500 roubles, derived from the one imposed on the harbinger."

Poland. Among the many conjectures to be found in the French papers, is a rumor that the three great powers, Russia, Austria, and Prussia, which made the division of Poland, had agreed to give up their respective portions, and to restore that kingdom, with a sovereign, who is a native of the country, and free from all foreign influence. The question as to settling the indemnities, it is thought, will prove a bar to this arrangement.

Turkey. The following are the names of the principal men now at the head of the government of Greece:

The prince Alexandre De Macrogordate, president of the executive body.

The prince Demetrius Ypsilanti, president of the executive.

Theodore Negri, minister for foreign affairs, minister and secretary of state, and presiding over all the ministers.

Jean Celety, minister for the interior, and by interim minister of war, representing Mareo Bozzari De Tully, absent.

Verde Metaxan, minister of police.

Metaxan, minister of justice.

The bishop Joseph, minister of worship.

Panuzzo Notari, minister of finances.

The marine ministry is composed of a commission of three members, viz.—one Idiotie, one Ipariotie, and one Speriotie. There are three different districts; each furnishes one third of their fleet, composed of about 60 vessels, the largest carrying only 22 guns. Each district has its admiral; and when joined in a combat, the one who is nearest to its district takes the command over the two others:

Proclamation—Addressed by the Areopagus, or government of the eastern provinces which have shaken off the Turkish yoke, to their countrymen settled in Europe:—

"It is now generally known, and we doubt not but that you are already acquainted with the fact, that at last our nation has adopted a government—that the troubles and disorders inseparable from anarchy, together with their dreadful consequences, have ceased—and that we make daily advances towards the entire deliverance which is promised us by general liberty, and the destruction of the unheard of oppression of despotism.

"In consequence, we announce to you that we fight with all our force to extirpate our inhuman tyrants, and to expel them from the soil of Greece; and that as often as we have come to grapple with the enemy, we have, by the assistance of God, come off victorious.

"We continue to fight with courage, and endeavor to accomplish impossibilities by means of a general levy and extraordinary sacrifices. We put even the stones in motion. Hitherto victory has been faithful to us; and, full of confidence in succours from on high, we carry the war against our enemies into Thessaly and Macedonia.

"Let the ancient enthusiasm of Hellenians (Greeks) for their dear country animate you likewise—you who belong to Greece and who are settled in Europe. Come to her assistance as much as you can, by sending money, provisions, and military stores—send them to the council of the Hellenian people to enable them to encounter the extraordinary demands of the sacred struggle. Sons of Attica, of Bœotia, of Eubœa, of Phœcis, of Lœra, of Thessaly, and Macedonia, if you destine your succours to the provinces which gave you birth, send them as soon as possible to the Areopagus.—The blessing of Heaven, the gratitude of your country, will be the recompense of your generosity and patriotism.

"On the coast of Eubœa, the second year of liberty."

Signed by several of the members of the Areopagus.

In consequence of the preceding proclamation, and also from receiving the news of the death of the captain pacha, it was thought that about 2,000 Greeks at Odessa, &c. had started to make the long journey on foot, to participate in the efforts of their countrymen to shake off the yoke of the barbarians.

The Greek agents at Marseilles, under date of June 30, published the following statement—

"Nothing in history is more frightful than modern Turkish ferocity. Our towns and villages (in Scio) are ravaged and razed. Death and captivity have shared 60,000 victims between them. The sick and the aged were burnt alive in the hospitals. The noblest of our femals threw themselves and their children into wells.—Others died under the most horrible atrocities; such was the fate of madame *Constantine Ralli*, whose husband was the first magistrate of Scio. He was hanged with the Metropolitan and the remaining 119 of the most distinguished inhabitants—the hostages in the fortress.

His eldest son has been made a mussulman. So many hecatombs have not sufficed to pacify the Sultan. All the Sciots at Constantinople have perished, and at Smyrna the same system is adopted.

The conduct of the Jews has been devilish. Too base and cowardly to attack the living, their barbarism is directed principally to the dead. You know how they treated the body of the Patriarch. Their cruelties are of long standing. In August, 1821, when Balanos of Thessalonica was assassinated, a Jew, passing near his dead body, amused himself by pulling out his eyes. A Turk that was passing and who had known the deceased, shot the Jew dead.

When the bishop of Kitro was killed and thrown into the streets, the Jews put a stick into his mouth, to represent a pipe, and tore handfuls of hair from his head as they passed along. *Liberius*, an enlightened ecclesiastic, has saved the Turks made prisoners at Athens, though they had massacred all the Greeks in the citadel, and thrown their mangled remains over the wall. The same has occurred in Lavadia.

Is there any shame, if there is any sense of truth, in your country? Is there sensibility or sympathy? In England, the ferocious Mussulmen have their apologists. We did not expect this from England."

Other grand recollections are united to a pronunciation of the word "Thermopylae!"—famous for events long past, glorious for things that lately happened. Another victory has been gained by the Greeks at this noted point, which, like the fight and devotion of Leonidas, may lead to the extermination or expulsion of the barbarians!

It appears that Chourschid Pacha, being joined by the forces of the pachas of Negropont, Larissa and Janina, in the whole about 70,000 men, engaged the Greeks near Thermopylae on the 7th of July. The latter were commanded by Ulysses, Ypsilanti, Norman and Kazeatis. On this day, the barbarians appeared to have the advantage; but on the next day, they were assailed as if by lions and entirely defeated—losing in killed, wounded and prisoners, about fifty thousand men, among the latter, three of the pachas—Chourschid, (whose name), being able to rally only 4000 men, with whom he fled and escaped. The number of the Greeks engaged is not mentioned, but it is reported that they lost 18,000 men—self sacrificed on the altar of liberty, and to preserve their wives and children from bestial degradation and horrible suffering. Peace to their names!—for they died on the field of honor, in defence of the most sacred rights granted by the Creator.

A great number of heads and many packages of ears, were sent by the Turks to Constantinople, on the evening of the first day's fight with the Greeks.

This account is substantially confirmed in various ways, and there appears to be no doubt that a grand victory has been obtained by the Greeks. The great destruction of the Turks is said to be owing to their want of discipline and an ambuscade of their enemies—but we readily fall into the belief that it must be attributed to the desperation of the Greeks, every one of whom must have considered the contest as a personal concern. The gallant chief, Ulysses, is said to have been among the killed on the first day. Norman then appears to have taken the leading part—after the victory he was saluted by the title of "heroic prince," and carried through the camp on the bucklers of the soldiers. A letter from Constantinople, dated July 26, says that the Greeks in that city were intoxicated with joy at the news of the victory.

There is a rumor that the Greeks had slaughtered 600 Turks—the remnant of the garrison of Athens, having received false intelligence that their brethren had been defeated and afterwards massacred at Thermopylae: but this rumor is not relied on.

The plague has appeared in various parts of the Turkish empire.

It is reported that the Greeks have obtained some further advantages at sea.

The later accounts do not contain any official statements relative to the great victory of the Greeks, as noticed above; but there are many rumors and reports that confirm the general fact. At Jassy, 20,000 houses were destroyed by fire on the night of the 10th of August; this desolation was the work of the Turks! Chourschid pacha, in a late proclamation, said the "Porte had deigned to grant peace" to Russia, "since it has abandoned the cause of the Greek christians and recognized the pre-eminence of the crescent above the standard of the cross!" Some of the persons carried off from Scio have been restored, but all the young girls were still retained. A party of Turks formed the infernal project of getting possession of the French consul's house to murder the males and make slaves of the females, who had found an asylum therein—but the consul, M. Digeon, was ap-

prized of the scheme and repelled the assassins—meeting them at the head of his household, sabre in hand.

New Zealand. Extract of a letter from Mr. Kendall to the rev. Dr. Waugh, Nov. 25, 1821:—The longer I am among the New Zealanders, the more I am convinced that they sprung originally either from Assyria or Egypt. The god Pan is universally acknowledged. The overflowings of the river Nile, and the fertility of the country in consequence, are evidently alluded to in their traditions; and I also think the Argonautic expedition, Pan's crook, Pan's pipes, and Pan's office in making the earth fertile, are mentioned in their themes.

New South Wales, &c. By the last letters from New South Wales, (says a London paper), down to the 7th March, it appears such is the rapidly increasing population of this territory, that agreeable to the official census in October, there were mustered in Sydney alone, 13,400 souls, being 1400 more than, in 1810, were in the various settlements of the whole territory, including Van Diemen's land. The total population of Sydney, Paramatta, Liverpool, Windsor, Bathurst, Newcastle, and the surrounding districts, was mustered at 34,500; and, including Van Diemen's land, the inhabitants of the territory at large at 42,000 souls. The increase of respectable settlers during the preceding two years, exceeds the whole number that had arrived in the preceding 32 years of the establishment of the British government in this part of the world. So late as 1818, there were only 10 magistrates, and by the last papers we see that sir Thomas Brisbane had directed a *Declarum Potestatem* to be issued to 26 gentlemen, inclusive of the magistrates of Van Diemen's land. Lieut. R. Johnstone, R. N. who has been sent to examine the coast to the southward of Jervis's bay, to ascertain if a river fell into the sea near that place, found, at the head of Beaman's bay, the entrance of a fine, clear, capacious river, with 9 feet water over the bar, deepening after to 6 fathoms, and continuing from 4 to 7 fathoms for 25 miles. For the first 15 miles, the land is stated to be good forest land, after which it becomes lower, and fitter for cultivation. Mr. Throsby has also proceeded over land from Sydney to Jervis's bay, (having set out on the 23d of November and returned on the 26th of December), and is decidedly of opinion, that a good road may be cut from Sydney to that harbor, and reports the land to be extremely rich and promising. The Sydney Gazette, of March 8th, says:—"In confirmation of the many avowals that New South Wales has latterly rapidly increased in commercial prosperity, we state the pleasing fact that ten vessels have left the ports of Australasia, with cargoes for Europe, within the space of 12 hours."

Hayti. The fugitive slaves from Turk's Island have been given up, on well substantiated claims for them.

Mexico. Several persons, lately arrived at New-Orleans from Vera Cruz, report that universal discontent prevailed at Mexico; that general Victoria and other chiefs had raised the standard of liberty; that great numbers of men had joined them, and that their force was daily increasing. "In a word, that the reign of Iturbide could not last long."

Trade with the West Indies.

We have been politely favored by an esteemed correspondent, (says the Boston Daily Advertiser), with the following extract from the circular of the

comptroller of the treasury, addressed to the several collectors, &c. of the United States. Deeming it important that those interested in commerce should be possessed of the construction put upon the proclamation of the president, opening the trade with the British islands and colonies, we lose no time in laying these instructions before our readers.

Circular to collectors, naval officers and surveyors.
TREASURY DEPARTMENT,
Comptroller's office, Sept. 14, 1822.

SIR: You will receive, herewith, a copy of the proclamation of the president of the United States, of the 24th ultimo, issued in conformity with the authority vested in him by an act of congress passed on the 6th of May last, entitled "An act in addition to the act concerning navigation, and also to authorize the appointment of deputy collectors."

The proclamation specifies the British colonial ports in the West Indies, and in North America, which have, by an act of Parliament, of the 24th of June last, been opened to the vessels of the United States; and from which British vessels, possessing certain qualifications, may be admitted to entry in the ports of the United States, until the end of the next session of congress.

According to the terms of the proclamation, no articles can be imported into the United States, in any such British ship or vessel, other than articles of the growth, produce or manufacture of the British islands and colonies in the *West Indies*, in the case of British vessels coming from any such island or colony in the *West Indies*; and articles of the growth, produce or manufacture of the British colonies in *North America*, or of the island of *Newfoundland*, in the case of such vessels coming from the port of St. Johns, in that island, or any of the ports in *North America* specified in the proclamation.

This is a corresponding regulation with that contained in the third article of the act of parliament alluded to, in these words: "Provided always, that no articles enumerated in the said schedule shall be imported in any foreign ship or vessel, or in any British built ship or vessel so sold as aforesaid, unless shipped and brought directly from the country or place of which they are the growth, produce or manufacture."

It results that British vessels coming from British colonial ports in *North America*, cannot bring articles of the growth, produce or manufacture of the British *West India islands*, or the productions of any other place or country; and when coming from the British colonial ports in the *West Indies*, cannot bring articles of the growth, produce or manufacture of the British colonial ports in *North America*, or the productions of any other place or country.

It is not to be understood, however, that the proclamation limits the importation in British vessels, to the growth, produce and manufacture of the particular port or island from which the vessel may come;—on the contrary, a British vessel coming from any British colonial port in the *West Indies*, may bring articles of the growth, produce or manufacture, not only of such particular port, but also of any other of the British colonial ports in the *West Indies*;—and a British vessel coming from a British port in *North America*, may bring articles of the growth, produce or manufacture, not only of such particular port, but also of any other of the *North American* British colonies.

It may be proper to observe, that vessels of the United States are neither affected by the act of congress of the 6th of May last, before referred to,

nor by the proclamation of the president of the United States; but are still subject to the operation of the 3d section of the navigation act of the 15th of May, 1820—according to which they cannot import from British colonial ports in *North America*, the productions of the British colonial ports in the *West Indies*, or those of any other place or country; nor from the British colonial ports in *North America*, or those of any other place or country; with the same privilege, however, as has already been stated, with respect to importations in British vessels; that is to say, that the importation in American vessels are not to be limited to the articles of the growth, produce or manufacture of the particular port from which the vessel may come; but the same latitude is to be enjoyed in this respect as in the case of British vessels.

As the act of congress and the president's proclamations extend no farther than to the opening of the ports of the United States, on certain conditions and restrictions, to British vessels arriving from certain British colonial ports, such vessels and their cargoes are not entitled to the privileges of the convention between the United States and Great Britain, of the 3d of July, 1815; but British vessels arriving from such colonial ports, are liable to one dollar per ton for tonnage duties and light-money, and their cargoes to the usual discriminating duty of 10 per cent. between importations of goods in vessels of the United States, and foreign vessels not privileged by treaty stipulations.

Although the proclamation has no special reference to *exportations* from the United States, of the productions thereof, in British vessels, yet from the spirit and intention of the regulation contemplated by it, I am of opinion that the ports of the United States are to be considered so opened to British vessels, as to render the provisions of the act concerning navigation, of the 18th April, 1818, and of the act supplementary thereto, of the 15th of May, 1820, entirely inoperative, as well with respect to *exportations* as to *importations*.

You will, therefore, consider British vessels having the qualifications mentioned in the proclamation, as being privileged to export the productions of the United States to any of the British colonial ports or places specified in it, and grant clearances accordingly.

Bank of the United States.

At a triennial meeting of the stockholders of the bank of the United States, held by adjournment at their hall in the city of Philadelphia, on Tuesday the first of October, 1822.

Thomas Ellicott, esq. in the chair, and
William Meredith, Secretary.

The following report of the committee of inspection and investigation, appointed agreeably to the resolution of the stockholders, at the meeting held on the 2d of September, 1822, having been adopted, it was

Resolved, That the report, with its appendix, be published in the public papers; and that the president and directors of the bank of the United States, do also cause the same to be published in pamphlet form, and that a copy thereof be held at the disposal of each stockholder.

Your committee, to whom was referred an examination of the condition of the bank, report:

That they have carefully considered and diligently investigated the subject confided to them. But, before submitting any opinion or statement in detail, as to its actual situation, they beg leave to refer

to the luminous exposition of the president, hereto appended, containing a fund of information in relation to the institution, in connection with various topics of sound speculation and practical utility, which cannot fail to prove highly interesting to the stockholders, and to the public; while, at the same time, they illustrate the consoling truth that the most appalling difficulties may be surmounted by the steady application of industry, integrity and talent.

In compliance with the provisions of the 13th article of the 11th section of the charter, your committee have ascertained that the suspended debts at the bank and its various branches are

Upon personal and other than stock securities	\$6,401,255 90
And upon loans secured by pledges of stock	4,017,050 76

Together amounting to 10,418,306 66

Your committee are decidedly of opinion that the loss to the bank upon this debt, together with overdrafts, counterfeit checks, and from all other sources, cannot exceed \$3,732,899, a loss arising partly from the peculiar situation of the monied relations of the country, but principally from a misplaced confidence in unworthy agents. But your committee feel gratified in saying that a fund more than sufficient has been derived from the previous profits of the bank, and specifically pledged and set apart to meet this loss; besides which it possesses a surplus of 971,425 dollars 41 cents, arising from a balance which stood to the credit of the profit and loss account on the 1st of July last, and from interest which has actually accrued, but which has not yet been paid, upon that portion of the suspended debts, which, it is confidently believed, will be ultimately obtained.

The preceding facts, with the following analysis, your committee feel assured will render the conviction irresistible, that the bank of the United States has now arrived at that point when its capital may be declared to be sound and entire, while it possesses contingent interests of nearly one million of dollars, to be applied to such objects as the future administrators of its affairs may deem advisable.

DR. Bank of the United States, to stockholders, for capital paid in \$34,992,139 63

The sum paid, but not yet extinguished, for bonus, premium on four millions of 5 per cent. government stock and for banking houses, provided for and to be extinguished by the semi annual appropriation of \$60,000 2,015,802 15

Estimate of all the losses of the bank up to the present period 3,743,899 00

Balance 971,425 41

\$41,723,266 19

CR. Bank of the United States, by capital paid in \$34,992,139 63

The sum which has been paid on bonus, premium on four millions 5 per cent. government stock and banking houses, and which will be extinguished by a semi-annual appropriation of \$60,000 1,620,000 00

Value of banking houses which have cost \$834,992 15, but which, at the expiration of the charter, will not then stand on the books of the bank at a value more than 395,802 15

Contingent fund of 3,550,000 dolls. which will be increased by the transfers of 193,899 dollars from the balance of the profit and loss account as it stood on the 1st July last, to cover the losses sustained 3,743,899 00

The balance that will remain of what appeared to the credit of the profit and loss account on the 1st of July, after having transferred to contingent fund \$193,899 51,897 07

The interest which has accrued on suspended debts amounting to \$1,279,520 54

After deducting interest on that portion which is deemed bad of 511,808 20

767,712 35

Advanced above par on 57,954 shares stock of the bank of the U. States which it holds—say \$4 per share 151,816 00

\$41,723,266 19

In addition to the above, the committee deem it proper to exhibit the following brief view of the present actual situation of the funds of the bank, and of their distribution:—

The capital of the bank paid in is	\$34,992,139 63
The circulation of bank notes amounts to	5 456,891 90
The deposits are	6,776,492 74
Unclaimed dividends	129,741 28
Amount due to sundry banks, in current account, and to individuals in Europe	1,964,898 36
Fund reserved to cover the losses sustained by the bank	3,743,899 00
Profit and loss account, after having transferred to contingent fund \$193,899	51,897 07
Interest, discounts, &c. received from 1st July to — September	388,237 01

The total amount of funds are \$53,504,196 99

Which are distributed as follows:—

In United States 5 per cent. stock	\$11,000,000 00
United States 6 per cent. stock	2,020,469 27
Loans on personal security	26,236,150 88
Loans secured by bank stock	5,974,725 80
Loans secured by mortgage	8,000 00
Due by state banks, bearing interest	739,918 76
Real estate taken for debt, part of which is productive	587,102 38
Amount due by sundry state banks, &c. in current account	910,950 97
Paid on account of bonus, and premium on 5 per cent. stock	1,180,880 00
Banking house in Philadelphia and branches cost	834,922 15
Notes of state banks on hand	664,642 56
Specie in United States bank and branches	3,346,434 22

\$53,504,196 99

It might be deemed prudent to abstain from expressing an opinion upon the future prospects of the bank, leaving each individual to draw his own inferences from the facts exhibited; yet your committee are unwilling to omit the expression of what

they believe to be a well grounded hope that the profits of the bank and its public utility will continue to increase with the gradual development of its resources. If the bank has, under the embarrassment and perplexity in which it has been placed, not only sustained its own credit, but that of the circulating medium of the country, with which its interest and prosperity are indissolubly connected, it can scarcely be doubted, that these difficulties being surmounted, and a more ample field opened for the exercise of its energies, an increase of profit will result from a corresponding extension of its business. And whilst your committee have found it impracticable to view this institution in any other light than as an establishment to effect great national objects, they have been compelled to remark that, though those objects have been most fully attained, the institution itself has not received the support, which it is clearly the interest of the nation to afford.

The past history of the bank has proved that where a sense of moral obligation is wanting, the existing laws are inadequate to deter the agents of the bank from the commission of frauds upon its vaults. Your committee therefore advise that the president and directors present a respectful memorial praying—1st. The enactment of efficacious laws, that adequate punishments may be inflicted upon such agents of the bank as may be guilty of malversation in office. 2dly. That they ask an alteration in that part of the charter which requires that all the notes of the bank, which are payable on demand, shall be received in payment of debts due to the government, inasmuch as this requisition, as heretofore construed, has not only the tendency to prevent the bank from restoring to some sections of the country a sound circulating medium, but it may occur that the bank cannot safely place to the credit of the government, in cash, notes at one office, which, according to the contract on the face of them, are payable at different and distant offices alone, and where only funds have been placed for their redemption.

Though your committee are aware, that not only the convenience of the public but the interest of the institution require an additional emission of its notes, and although they believe that, with a degree of exertion on the part of the cashier, these may be executed and put in circulation, while the business of the bank is confined to its present limit; yet they are satisfied that a considerable extension of the ordinary business of the institution, would render it wholly impossible for its officers to perform this service: it is therefore respectfully suggested, that congress be prayed also to pass a law, authorizing other agents of the bank to sign its notes, and, in the mean time, the committee recommend that the best means in the power of the president and directors be taken to put in circulation a large additional amount of notes, not exceeding the denomination of twenty dollars.

Your committee have not discovered that any serious consequences have resulted to the interests of the bank (except those which have been followed by a public exposure) from want of obedience in distant agents; they nevertheless deem it proper to advise, that the president and directors of the parent bank keep steadily in view the absolute necessity of enforcing its own orders through all the various departments of the institution; without which, neither harmony can be expected in its administration, nor security to the interests of its stockholders.

Your committee feel much gratification in being able to state, that the current expenses of the bank have been essentially reduced since the year 1819, and while it might be supposed that the present embarrassed state of the commerce of the country, and the limited amount of interest heretofore divided upon the capital of the bank, are strong admonitions to your agents to observe the most rigid economy; yet, inasmuch as the splendid edifice in which you are assembled is now so nearly completed, they cannot but recommend that it be finished, provided the expense shall not exceed 25,000 dollars.

In taking into view the business of the bank, as connected with its different offices, the committee think it right to recommend to the continued attention of the president and directors the necessity of withdrawing those branches which are found to be unprofitable, and transferring their funds to those offices which shall seem to require additional capital.

Your committee take great pleasure in unanimously declaring that the circumstances of the bank fully realize the anticipations of the stockholders, as expressed at their last meeting, in regard to the president, who, by his talents, disinterestedness and assiduity, has placed its affairs in an attitude so safe and prosperous, as that the burthen of duty devolving upon his successor will be comparatively light.

THOS. ELLICOTT,
Chairman of the committee of inspection and investigation.

*Bank of the United States,
October 1st, 1822.*

EXPOSITION

Of the president of the bank to the stockholders.

The stockholders generally have never had any view of the progress of the bank submitted to them. At the triennial meeting in 1819, it was my intention to have given them such a view. I was, however, advised that it would be more expedient to reserve the communication for a committee, and my opinion was cheerfully surrendered. But as it is my determination in a few months to quit the station with which you have honored me, and as my silence on a former occasion has kept you, as well as the public, in a great measure, ignorant of the difficulties in which I found the bank, and has subjected the administration, of which I have been a member, to censures which were unfounded, and which have fallen, in many instances, from the lips of the very persons who were the authors of the errors and misarrangements, to use no harsher language, by which this institution was brought to the verge of bankruptcy and ruin, I will now present to you a short view of the progress and present state of the bank. You will probably raise a committee of inspection and investigation, and as far as any facts or circumstances which I shall present, may be deemed material, their accuracy or error may be ascertained.

The institution commenced active banking operations about the 1st of January, 1817, and in the course of that year established eighteen branches, being all that have been established. One was projected at Augusta, but, on reconsideration, was abandoned. The report of the committee of congress made in December, 1818, has made you fully acquainted with so many leading details of the previous management, and the lapse of time has made them so much less interesting than they would have been at an earlier day, that I mean to do little more, in relation to the period which preceded 1819, than

present the results as they will be exhibited in the state of the bank, when I came to it.

The bank, immediately on its commencement, did a very extensive business, imported vast sums of specie, paid its notes and those of the offices, without reference to the places where they were payable at the bank, and all the principal offices north of the Potomac; while they were under the charter, necessarily received every where in payment of debts to the government of the United States; and drafts were given, without limit, on the parent bank, and northern offices by the western offices, at par, or at a premium merely nominal. As soon as the notes of the southern and western offices were paid or received by the bank and northern offices, they were returned to them and re-issued in perpetual succession. An accompanying exhibit (1) will shew the enormous amount of the notes of southern and western offices which became chargeable on the bank, directly and indirectly, through the northern offices. The result was, that the bank and the great northern offices were drained of their capital, and, on the 20th of July, 1818, only eighteen months after the institution began its operations, it was obliged to commence a rapid and heavy curtailment of the business of the bank and its offices. During all this time it had the advantage of immense government deposits. At the moment these curtailments were ordered, the government deposits in the bank and its branches, including the deposits of public officers, amounted to eight millions of dollars, (a) and they had been larger at preceding periods. Curtailments were ordered, from time to time, at the southern and western offices, to the amount of seven millions of dollars, and at the parent bank to the amount of two millions, though at the latter they were made to the amount of 3,600,000 dollars and upwards, between the 30th July, 1818, and the 1st April, 1819. No curtailments were ordered at the offices of New-York and Boston, because there was no room for them, yet necessity obliged them to reduce their business very much. The curtailments at all points, within the abovementioned dates, (b) being eight months, were 6,530,159 dollars 49 cents. Yet, after these immense and rapid curtailments, the most sensible and vital points (Philadelphia, New-York and Boston) were infinitely in a worse condition than when the remedy was devised.

An accompanying exhibit, (2) will shew the distribution of capital at the close of this period. At that moment the discount line of the important office at Boston was only 94,584 dollars 37 cents! And when in this wretched state, the southern and western circulation was pouring in upon these weak points, and the government at liberty, according to the practice of the time, to draw on either office or the bank, for the gross amount of its deposits, throughout the whole establishment, whether, south, north, east, or west. The southern and western offices were not restrained from issuing their notes, which they did most profusely. The curtailments, in many instances, resulted merely in a change of debts bearing interest for debts due by local banks, or the notes of local banks, on neither of which was interest received. The western offices curtailed their discounted paper, but they purchased what were called *race horse bills*, to a greater amount than their curtailments. The

bank itself continued, during the whole period, to purchase and collect drafts on the southern and even western offices, though almost the whole active capital already lay in these quarters of the union, and though the great object of the curtailments was to draw funds from these points. The debt due in Kentucky and Ohio, instead of being reduced, was, within this period, actually increased upwards of half a million of dollars. An accompanying exhibit (3) will shew, that instead of getting relief from the southern and western offices generally, where curtailments had been ordered, the bank was still further exhausted by the intervening operations.

At the commencement of this period, (a period commencing with the order for curtailments, and ending March, 1819), the bank was indebted to Baring, Brothers & Co. Reed, Irving & Co. Adams, Robertson & Co. and Thos. Wilson & Co. the sum of 1,586,345 dollars 47 cents, growing principally, if not entirely, out of its specie operations. Of this sum, the greater part was paid during this period. It had, however, contracted new debts with Baring, Brothers & Co. and Thomas Wilson & Co. of which there remained due, including any balance which may have been due on the former accounts, the sum of 876,648 dollars; and within the same period it had disposed of 2,270,926 dolls. 65 cts. of its funded debt, furnishing, by these compound operations, ways and means, in addition to its curtailments, to the amount of 1,561,239 dollars, 13 cents, and making, with these curtailments, a reduction in the productive capital of the bank, within the period of eight months, of eight millions of dollars and upwards.

At the close of this period, the discounts on personal security at Philadelphia, had been so long the subject of curtailment, that but a small portion of them admitted of further reduction, and, after great efforts, a rule had been established to reduce the discounts which had been granted on the stock of the bank at the rate of 5 per cent. every 60 days. These latter constituted the bulk of the discounted paper, and so small a reduction afforded no material relief against a great and immediate demand. Even this small reduction was the subject of loud, angry, and constant remonstrances among the borrowers, who claimed the privilege, and the favor which they contended were due to stockholders, and sometimes succeeded in communicating their sympathies to the board. All the funded debt which was saleable, had been disposed of, and the proceeds exhausted. The specie in the vaults, at the close of the day, on the 21st of April, 1819, was only 126,745 dollars 28 cents, and the bank owed to the city banks, deducting balances due to it, an aggregate balance of 79,125 dollars 99 cents.

It is true, there were in the mint 267,978 dollars 9 cents, and *in transitu* from Kentucky and Ohio, over land, 250,000 dollars; but the treasury dividends were payable on that day to the amount of near 500,000 dollars, and there remained at the close of the day, more than one half of the sum subject to draft, and the greater part, even of the sum which had been drawn during the day, remained a charge upon the bank, in the shape of temporary deposits, which were almost immediately withdrawn. Accordingly, on the 12th of the same month the bank had in its vaults but 71,522 dollars 47 cents, and owed to the city banks a balance of 196,418 dollars 66 cents; exceeding the specie in its vaults 124,895 dollars 19 cents. It must be again remarked, that it had yet the sum before mentioned in the mint, as well as the sum *in transitu* from

(a) See the monthly statements, of the 6th and 30th of July, 1818.

(b) I refer to the monthly statements of the 30th of July, 1818, and 1st of April, 1819.

Ohio and Kentucky—this last sum (250,000 dollars) arrived very seasonably, on the next day or a day or two thereafter. The bank in this situation, the office at New-York was little better, and the office at Boston a great deal worse. At the same time, the bank owed to Baring, Brothers & Co. and to Thos. Wilson & Co. nearly \$900,000, which it was bound to pay immediately, and which was equivalent to a charge upon its vaults to that amount. It had, including the notes of the offices, a circulation of six millions of dollars to meet, to which was to be added the demands of depositors, public and private, at a time too, when the scarcity of money called forth every disposable dollar, and therefore created demands upon the bank for an unusual portion of the ordinary deposits and circulation.

The sums which were collected daily on account of the revenue, in branch paper, were demandable the next day in Philadelphia, and, at the same time, at every office of the establishment, at the discretion of the officers of the government. The revenue was principally paid in branch paper, as well at Boston and New York as at Philadelphia; and while the duties were thus paid at one counter in branch paper, the adventures, which amounted to one million of dollars every three months, were demanded and paid at the other in specie, or its equivalent—money of the place. Many additional details, increasing the difficulties of the moment, might be added. The southern offices were remitting tardily, and the western not at all. All the resources of the bank would not have sustained it in this course and mode of business another month!! Such was the prostrate state of the bank of the nation, which had only twenty seven months before commenced business, with an untrammelled active capital of twenty eight millions of dollars.

But it would have been fortunate for the institution if its danger had ceased here. There still remained in some of the trusts of the bank, some of the men who had contributed most to involve it in this state of things. As I must be brief, and the subject is very extensive, I will advert only to the principal instance of the misfortunes and profligacy to which I allude.

In the office at Baltimore of which James A. Buchanan was president, and J. W. McCulloh was cashier, there were near three millions of dollars discounted or appropriated, without any authority, and without the knowledge of the board of the office, or that of the parent bank! S. Smith and Buchanan, of which firm J. A. Buchanan was a member, James W. McCulloh and George Williams, (the latter a member of the parent board by the appointment of the government), had obtained of the parent bank, discounts, in the regular and accustomed manner, to the amount of 1,957,700 dollars, on a pledge of 18,290 shares stock of the bank. These men, without the knowledge of either board, and contrary to the resolves and orders of the parent bank, took out of the office at Baltimore, under the pretence of securing it by pledging the surplus value of the stock, already pledged at the parent bank for its par value and more, and other like surplusses over which the bank had no control, the sum of 1,540,000 dollars: this formed a part of the sum before stated to have been discounted by the president and cashier of the office without authority. When this stupendous fraud was discovered, attempts were immediately made to obtain security, and it was obtained nominally to the amount of 900,000 dollars. It was probably really worth 500,000. For this the bank is principally indebted to the good management of Messrs. Oliver, Hoffman and M'Kim,

of Baltimore, who were at the time members of the parent board. The losses sustained at the office at Baltimore alone, the great mass of which grew out of this fraud and others closely connected with it, have been estimated at the immense sum of 1,671,221 dollars 87 cents. The aggregate of the losses of the institution, growing out of the operations which preceded the 6th March, 1819, exceed considerably 3,500,000 dollars. The dividends, during the same time, amount to, 4,410,000. Of this sum, 1,348,558 dollars 98 cents were received as the interest on the public debt held by the bank, which leaves, as the entire profits on all the operations of banking, the sum of 3,061,441 dollars 2 cents, which is less, by at least half a million of dollars, than the losses sustained on the same business!!

When I was invited, and consented to fill the station I now hold, (4) I was alike ignorant and unapprehensive of the situation in which I have just described the bank (truly, I believe), to have been. I was at the moment remotely situated from the scenes of its active business, and its important transactions. I had held, it is true, shortly before, to oblige my friends, a place in the board of the office at Charleston, at which I occasionally attended, and from what I saw there, as well as from the public facts concerning the transactions of the bank, I was satisfied that there was a great want of financial talent in the management of it. But I had not the faintest idea that its power had been so completely prostrated, or that it had been thus unfortunately managed or grossly defrauded. I never imagined that when it had, at so much expense and loss, imported so many millions of specie, they had been entirely exhausted and were not yet paid for; nor that the bank was on the point of stopping payment. It was not until the moment I was about to commence my journey to Philadelphia, that I was apprized by a letter (5) from a friend, who had been a member of the preceding board, that he feared, in a few months, the bank would be obliged to stop payment.

This was, indeed, appalling news. When I reached Washington, I received hourly proofs of the probability of this event. In Philadelphia it was generally expected. My memory deceives me much if I found any one in or out of bank, who entertained a sanguine belief of its being able to sustain its payments much longer. On the contrary there was (I think it cannot be forgotten) a public and general expectation that the nation was about to suffer the calamity of a currency composed entirely of irredeemable paper. The evil which thus threatened the country, is not at all to be compared with a suspension of a sound currency in times of war and great national emergencies. The former can only be conceived by a people who have suffered under a paper currency in profound peace. What a train of evils does it produce? The destruction of public and private credit, the national torpor, the individual ruin, the disgraceful legislation, and the prostration of the morals of the people, of which you may discover within your own territories, some examples, will give you some but yet a faint idea of the calamity which was about to fall on the country.

On the bank it must have brought inevitable ruin, for if it had failed, from its own mismanagement, to serve the great purpose for which it was just before established—that of restoring and preserving the soundness of the currency—there is no doubt that the hostility which its great habitual public usefulness cannot now appease, would have overwhelmed it. Indeed it would have had no claim on the

sympathy or the justice of the government, and would have suffered a merited fate. No exertions and no sacrifices were therefore too great to avert this calamity. It was not to be accomplished without sacrifices: But they have been small, and infinitely less than was expected.

Thus stood the bank at the organization of the present administration. I was elected and took my seat as president of the board on the 6th March, 1819. But some time of course was necessary to look into the state of the bank before measures of relief could be projected. Its danger, however, was too manifest, and too pressing to allow much time for this purpose. The principal errors which produced the danger were fortunately of easy discovery, and to them the proper remedy was immediately applied. The southern and western offices were immediately directed not to issue their notes, and the bank ceased to purchase and collect exchange on the south and west. A special meeting of the board was called, which the non-resident directors were summoned to attend for the 9th April (the next month) and a correspondence with the secretary of the treasury was commenced, entreating his forbearance and his aid, to which I beg leave to refer (6). To this officer I should be ungrateful and unjust, if I were not publicly to acknowledge my obligations and those of the bank, for the countenance and support which he afforded to both in this struggle.

At the meeting of the directors on the 9th April, which was very full, the state of the bank was submitted to them, a select committee appointed, to whom the subject of its difficulties was referred, and after very mature deliberation, that committee made a report which was *unanimously* agreed to. The principal means of relief proposed and agreed to were:

1. To continue the curtailments *previously* ordered.
2. To forbid the offices to the south and west to issue their notes when the exchanges were against them.
3. To collect the balances due by local banks to the offices.
4. To claim of the government the time necessary to transfer funds from the offices where money was collected, to those where it was to be disbursed, as well as like time (until the difficulties of the bank were removed) to transfer funds to meet the notes of offices paid into the bank or other offices, than those where they were payable according to their tenor.
5. To pay debentures in the same money in which the duties on which the debentures were secured, had been paid.
6. To obtain a loan in Europe for a sum not exceeding 2,500,000 dollars, for a period not exceeding three years.

These measures, simple and obvious as they are, and some of them so strangely overlooked so long, lifted the bank in the short space of 70 days (from 6 March to 17 May) from the extreme prostration which has been described, to a state of safety and even some degree of power, enabled it to cease its curtailments, except at points where it had an excess of capital, to defy all attacks upon it, and to sustain other institutions which wanted aid and were ascertained to be solvent; above all, to establish the soundness of the currency which had just before been deemed hopeless; and, in a single season of business (the first) to give to every office as much capital as it could advantageously employ. There are two of the measures thus adopted, on which I will enter into some detail, because they have been misconceived and misrepresented.

1. The curtailments. The immense curtailments which had been made before the present adminis-

tration of the bank was organized, have been stated. The public has been led to believe that these curtailments were made by this administration, and were the fruit of a policy which originated with it. Men who have sat at the board and knew the contrary, or, which is little better, without taking the trouble to ascertain a fact which was so easily within their reach, have consented to propagate this slander.

I now state and defy contradiction, and am ready to prove that *no curtailment has been ordered from the time I took my seat, until this day.*

That any curtailments which have been made by the administration of which I have been a member, were made under orders which I found in force;—that the bank at Philadelphia continued to curtail only 70 days after I took my seat, that the offices of New York and Boston were only required to sustain themselves, according to circumstances, until the scattered funds of the institution could be collected to give them capital; and further, that the greatest reduction of the discounts of the bank itself, and all the offices north of Philadelphia, together, at no one time, exceeded 400,000 dollars, until they were reduced by a want of demand for money which was general through the nation.—When this want of demand for money prevented the profitable employment of the funds of the bank, the only expedient to relieve it from the losses of unemployed capital which existed, was promptly and successfully employed, by purchasing of the government of the U States, first two millions of six per cent. stock, redeemable at the pleasure of the government, and afterwards four millions of five per cent. stock, redeemable in 1835, on terms which were then deemed highly advantageous to the bank, and which are so still, as shall be hereafter proved.

It is believed that a candid and dispassionate investigation of the facts will shew that, with the same means and under the same circumstances, no change of proceeding or policy could have increased the profits of the bank, (7) and that if the interest which has accrued on the heavy amount of suspended debt and not been received (and that it has not been received, is not the fault of the present administration, which did not grant the loans on which this interest accrued) be added to the dividends made and the accumulations reserved, the gains will be within about a half per cent. per annum of the nominal profits of the preceding period, in which every thing was hazarded, and more actually lost than all that was thus nominally gained. I should have had no disposition to make these comparisons had they not been made necessary by false statements and representations of the same facts. In looking at these results, let it also be recollected what different circumstances characterized the different periods.

2. The other measure which I mean particularly to notice is the loan which was obtained in Europe. There was at the time this loan was projected great embarrassment in all the concerns of commerce, but the pressing difficulty was a real unsoundness in the bank circulation which constituted the whole currency of the country. The weakness of the bank of the United States, has been exposed. That of the state banks was probably greater, though they were not subject to so many and such complicated dangers. The revenue was accumulating to the credit of the government, at various points, in paper that if immediately pressed upon the banks

(7) Statement of monies at interest.

which issued it would not have been honored, and yet to have discredited it suddenly would have forced the crisis of the unsoundness of all the bank circulation at a moment when it had no recuperative faculty, and must have ended in consequences alike disastrous to the bank and the country. On the other hand to have imposed no pressure upon these banks would have been to cherish and perpetuate and increase the evil of an unsound currency. The course to be pursued by this bank was a subject of great delicacy and difficulty. The situation of the country was exceedingly alarming.

It was not simply the present evil that was dreaded—the country was in its money concerns in an extreme state of exhaustion. It was drained of its specie in the preceding year before the first instalment of the Louisiana stock became payable. The sum necessary to make the payment stood to the credit of the treasury in the bank and was transferred to the credit of the holders of this stock. The agent of Baring, Brothers, and Co. had, for foreign account, at one moment, 2,410,000 dollars at his credit at the bank in Philadelphia, and on the same day all the specie in the bank and all its offices did not amount to as much. It was impossible to have paid it, and the bank was obliged to enter into a contract to pay it in England by a given time, with interest. In executing this contract it employed the whole operations of the next season of business in foreign exchanges and paid a very large amount of interest; and at the time this loan was projected there remained a large balance due to Baring, Brothers and Co. on account of this contract. The country had been still further divested of the metallic basis in the interim, and a pretence was only wanting by too many individuals and banking institutions to stop payment. To them it might have afforded immediate relief and profit. But to the bank of the United States it must, as already shewn, have caused inevitable ruin. At every hazard it was obliged to continue its payments. Its ability to do so, depended on sustaining the credit of the country, and restoring the soundness of the currency.

If its own vaults had been better replenished than they were, it could not have relied upon them alone. The ability of this bank to sustain its credit at no time depends solely or principally on the specie in its own vaults: but, on the general credit of the country sustained by the usual legal and moral obligations—destroy these practically, and all its power becomes feebleness. Thus it has, at any given moment, from 20 to 30 millions of dollars becoming due to it within 90 days, besides very large sums standing in balances against other banks, and further sums in the notes of other banks. Now suppose at any moment, that a state of things should arise which should destroy the general credit of the country, and disable debtors, who in their turn depend on the same means for their ability to pay, to comply, with the first, and tempt him to disregard the last of these obligations, what would be then the situation of the bank of the United States? Yet that state of things was on the point of taking place; when the loan in question was projected.

The country could bear no further exhaustion, however small, until it had a season to recover. But the second instalment of the Louisiana stock, was to be paid in a few months; and the sum to be withdrawn by foreigners, exceeded probably all the specie in the two great cities of Philadelphia and New York. The bank would have been bound to pay it, had it received the local paper in payment of the revenue; and if it had refused it, we have

seen the disastrous consequences to which it would have led. It was a payment which the country could not, at the time, bear, and the ability of the bank was necessarily limited by the ability of the country. Hence, in a general view, the necessity and expediency of the loan.

It has, I understand, been said, that events have proved that the loan was unnecessary, regarding merely the direct obligations of the bank. This is an objection which no mind capable of comprehending the just policy of a national bank could make, if the foregoing views be correct. But it is not true. Events on the contrary, proved it was indispensable. What would the situation of the bank have been, if in October, 1819, upwards of two millions of dollars had been, in this section of the union, where it was payable, drawn from its vaults. Although they had been by that day considerably strengthened, yet all the specie in the bank, and all the offices on this side the Potomac, could not have met the draft! Will it be said, that the government had not, at the time this instalment was payable, a sufficient deposit to make the payment? It is true, because the government, as soon as it was discovered that the public credit would not be made to suffer, disbursed the monies which must have been and would have been reserved for this purpose; and thus the bank and the community generally were relieved from the foreign drain upon them, in the manner in which the relief was originally projected.

Again—the burthen of this loan has been greatly misrepresented. It has been supposed that in consequence of the subsequent want of demand for money, which prevented the bank from fully employing its capital, therefore the interest paid on this loan was a loss to the bank. This might be admitted, and still the loan was not the less necessary. A sacrifice of gain was expected and intended. But the fact is not so. Although undoubtedly there was a long period during which the capital of the bank was not fully employed, yet it so happened, that the specific money derived from this loan was employed, and has not ceased to bring in six per cent. per annum from that day to this: Without it the bank could not have taken the government loan of two millions of dollars in 1820, which remains yet unpaid, nor could it have done the profitable business in foreign exchanges which it did in that year, nor have distributed capitals as early as it did to the northern offices, which infused into them a new life, nor could it have sustained the character or the usefulness of a national bank, until it should have collected by slow and painful means its scattered capital.

I have said so much of the loan, not only because it is an important circumstance in the management of the bank, but also because it is a measure closely connected with the financial history of the country, and on which turned, in a great measure, the preservation of a sound currency, an event, however unusual it is so to consider it, probably of more importance than any other in the history of the country since the late peace. In sustaining the bank a great public purpose was served, but it cost not an additional cent. Censured though it may be, I proudly say I suggested and advised this measure, and am well content to bear the responsibility of it. The loan was for only two millions of dollars, and was payable on the 5th of July last. One million thereof has been continued at 5 per cent. interest, and the other has been paid off at a profit which would defray the charge of remitting the

remaining million, even at the present adverse rate of exchange.

During the present administration of the bank, considerable sums have been drawn from the capital in erecting necessary buildings for the use of the institution, considerable burthens, which were previously created, have been discharged; one million of dollars have been paid on account of the bonus to the government for the charter, six millions of funded debt have been purchased, and are now held by the bank, three millions five hundred and fifty thousand dollars have been accumulated for the purpose of repairing the losses, which had been previously sustained, and there now stands to the credit of profit and loss the sum of 245,796 dollars 7 cents; and there is due to the bank 1,279,520 dollars 54 cents, for interest which accrued before the 1st of July last, on suspended debts, and which has not been received.

The losses of the institution were estimated, at the last meeting of the stockholders, at three millions of dollars. They have been found to exceed that sum. The estimates of the dividend committee, in July last, made the aggregate of the losses \$3,743,899. This includes all losses to that time from whatever cause. A very small portion of these losses, you will discover, has resulted from the business or management posterior to March, 1819. It is hoped, from the lapse of time, and the trying circumstances which have intervened, that the losses have reached their utmost amount. The greatest pains have been taken to probe the state of all the offices to the botom, as the accompanying documents will shew. (8)

The western debts, by which are meant those due in the states of Ohio and Kentucky, have been a subject of peculiar anxiety and attention. To ascertain the exact state of them, the board were not satisfied to rely on the ordinary means, but dispatched the cashier of the bank, who was understood to be particularly well acquainted with these states, to look into the situation of the offices in Kentucky and Ohio, and to furnish an estimate of the probable loss which would be sustained upon them. His reports which accompany this communication, will exhibit these results. His estimates, very far exceeded those of the committees of the offices; and the parent board and the committees of that board have been governed by his estimates, in forming their opinions of the amount of these losses. A number of investigations of particular cases have, in the course of the current transactions of the bank, taken place, and, on all such occasions, his estimates of loss have appeared to be beyond the probable loss, with the exception of the cases of some local banks at Cincinnati. Doubts, however, of the sufficiency of these estimates, founded on the fear of the fraudulent disposition of some of the debtors and the unjust laws of those states in relation to creditors, were excited—the board, therefore, in July 1821, set apart, as an auxiliary fund, in addition to the contingent fund of 3,550,000 dollars, all excess over the par value of certain stock pledged and transferred to the bank, and all interest due and to grow due on the suspended debts at the offices in Kentucky, and Ohio, to be with the said "contingent fund" inviolably appropriated to the extinguishment of the losses of the bank, unless otherwise ordered or advised by the stockholders at a triennial meeting or at a regular meeting which should be called for the purpose.

The course of policy pursued by the board in relation to suspended debts, and particularly the debts due in the western states, was not to press

the debtors rigorously where they were willing to give the best security in their power, and indeed never to press them except with a view to security.—The most liberal indulgence therefore has invariably been granted where satisfactory security or the best in the power of the debtor has been given. On the 1st April 1819, the sum due to the bank, in Ohio, and Kentucky, including balances due by local banks, was 6,351,120 dollars, 80 cents; on the 30th August 1822 the sum due, including also real estate taken in payment, was \$5,389,477 18, being a reduction of \$961,653 62 (o) but in the debt now due, is a considerable sum of contingent interest which has been liquidated and notes taken for it, so that the reduction will exceed one million of dollars of the principal.—Mortgages, and other collateral security deemed ample have in many cases been obtained, in others valuable additional security, in others judgments, and suits are pending in all, or nearly all cases in which security has not been obtained.

The office at Cincinnati was discontinued in September 1820, and a confidential agent is now employed in winding up its affairs.—The reasons for discontinuing this office it would be tedious and perhaps invidious to narrate, they shall be stated to any committee you may appoint. It has been deemed inexpedient to discontinue any other office.

The several funds which may be relied upon to extinguish the estimated losses are the following. 1. A contingent fund of actual profits which has been reserved of three millions five hundred and fifty thousand dollars. 2. Any excess beyond the par value of 37,954 shares of the capital stock of the bank pledged to it and standing in its corporate name on the books. Though the debts secured by these shares are only estimated at par, they give a claim to the bank which will cover any value beyond par, which the shares may hereafter bear. 3. The sum of 245,796 dollars 7 cents now standing to the credit of profit and loss. 4. The sum of 1,279,520 dollars 54 cents, arrears of interest due the bank. It must be remarked that this last sum includes interest as well on debts estimated as bad and doubtful as on those deemed good. There is now no charge on the bank besides ordinary current charges, except 60,000 dollars semi-annually, which will, if applied for the duration of the charter, extinguish the bonus, the premium on the five per cent. loan, and within a trifle of forty per cent. of the cost of the banking houses which have been erected, and of any that in all likelihood will be hereafter erected, as well as the completion of the building in which you are assembled; and although I have been opposed and have even entered my dissent upon the journals, to some of the acts of the board in relation to this building, I nevertheless do advise, as it is so near completion and is so beautiful a specimen of architecture, that it be finished. It never again can be done at so small an expense, and never under the superintendance of an agent more skilful, faithful, economical and accurate, than the gentleman who planned and has so far executed it. The additional expense will be small. (9)

It was expected by the stockholders at their last meeting, that the bank would have been enabled to have repaired the losses which had been sustained, and to have made a dividend in January, 1820.—This the increased estimates of the losses and the stagnation of trade concurred to prevent, while the

(o) Vide monthly statements for 1st April 1819 and 30th August, 1822.

same causes have diminished the amount of the dividends which have since been made. It will be seen, however, on reference to the accompanying statement, (10) that the bank would have been able to have made dividends which would, no doubt, have been satisfactory to the stockholders during the whole period of this administration, had it been incumbered as well with the losses as the various embarrassments which belonged, in their origin, to a previous period.

The expenses of the institution very soon attracted the attention of the present administration, but it was not practicable to reduce them immediately. An accompanying statement (11) however, will shew that much has been done towards the accomplishment of this object. The amount is still enormous compared with the profits growing out of the proper operations of banking; that is to say, the profits of the bank, exclusive of the dividends received on the funded debt, which it holds and which require no management or expense in the receipt of them.

The monthly statements of the bank exhibit an analysis of the state and current business of the bank and the several offices, as perfect as the nature of the subjects will permit: but if taken without explanations they are often likely to mislead. No attempt at this time and in this form to give such explanations in a general way would be admissible, or practicable, but all such will be cheerfully and promptly given in reply to every inquiry on particular points which may be presented.

You will probably desire to have some notices of the condition of the principal funds in which the capital is invested. This I will briefly attempt:

1. The discounted paper. The current paper of this bank and its offices is probably as good, or better, than the current paper of other banks, in the places respectively where it is due. There is, however, unfortunately a heavy mass of suspended paper on which interest is continually accruing, a great part of which will, no doubt, in time be recovered, but which adds little or nothing at the present time, to the fund from which the bank is to divide. There is one portion of this which, independent of the losses already sustained by it, and which are included in the estimates, I consider as very good and productive. I mean the forfeited stock consisting of 57,954 shares which may be considered as a reduction of a capital quite too large, to the extent of their par value.

II. The funded debt held by the bank. This now consists, with the exception of a very inconsiderable sum, (1) of seven millions of five per cent. stock subscribed by the government; (2) of two millions of six per cent stock purchased in 1820, redeemable at the pleasure of the government; (3) of four millions of five per cent. stock purchased in 1831, and redeemable on the 31st of December 1835. The two millions of six per cent stock, of the loan of 1820, will, in all likelihood, be speedily redeemed. The four millions of five per cents. are longer irredeemable than any other stock of the government of the United States, and hence probably this stock is more valuable than any other stock of the government of the United States. It is quoted higher in the London market than the average of the six per cent stocks. When the bank obtained this stock it was deemed a great bargain. It is now unusually depressed, from causes which probably cannot be permanent, and some stockholders who urged the bank to endeavor to take it at any price, begin now to doubt whether the institution were not better without it. If it were

now sold at a profitable rate, as it may be, the same persons, if it rise, would condemn the sale of it. Leaving these persons then to the indulgence of their opinions, it may be remarked that the more the bank can retain of this stock the better for the institution. It wants active funds but for two purposes: Firstly, to pay the loan of \$1,000,000, due in London. And, secondly, to give additional capital to its offices. All the offices south of Philadelphia, I venture to say, have as much capital as they can use advantageously.

I cannot stop to give my reasons for this opinion. It is doubtful whether more than half a million in addition to its present funds could be profitably employed at the parent bank: more than an additional million I am satisfied cannot, under any circumstances, be profitably employed at New York, (a great many crude suggestions to the contrary notwithstanding): and I doubt whether at this moment a dollar more ought to be added; though I am of opinion that a million ought to be added to the capital of that office at a proper time, making the capital 2,500,000 dollars. Half a million added to the capital of the office at Boston, making the capital 1,500,000 dollars, will be enough for that office. All this will be supplied by the redemption of the two millions 6 per cent. loan, and if a little more be necessary, it will soon be supplied from the suspended debt. I think, therefore, if the bank find it necessary to part with a million and a half of this loan, it ought to do it with regret; but it should on no account, part with more. The unextinguished part of the premium of this loan is about 44 per cent, and the last London quotations are 95 a 96; and the exchange in favor of London 10 to 10½ per cent. It is obvious, therefore, that at the lowest quotations now or at any other time of this stock, it would realize the cost, in connexion with the rate of exchange, the rise of which against this country, is supposed to be the principal cause of the depression of this stock. Here is one error in relation to this subject which it may be worth explaining.

It is supposed by some, that because the government of the United States have not been enabled to convert their six per cent. stocks into fives, that a five per cent stock is deemed undesirable abroad; but the government has never offered a stock like that which the bank holds in exchange for the sixes. It has offered a stock redeemable in eight or ten years. The stock held by the bank is not redeemable in less than 13 years and 3 months. No stronger proof can be given that the sixes would be exchanged for such a stock, than the fact that is quoted higher than the average of the six per cents, in the London market.

The bank, by a resolution of the 26th day of November, 1816, agreed to remit to the holders of the capital stock of the bank, residing in Europe, the dividends which should be declared thereon, free of expence. This was deemed a very disadvantageous and burthensome engagement on the part of the bank—advice of eminent counsel has been taken, to know whether the bank was bound to continue these remittances, and it has been advised that it was not bound longer than it should desire to do so from its own views of expediency or advantage. It was determined therefore to discontinue this agency except as to those who had made regular requisitions or who should do so by a given day. As to these it was thought better that the bank should make the sacrifice which these remittances required, then incur the suspicion of having misled the holders of stock who had made

the requisition, perhaps, under the impression, that the regulation was not disadvantageous to the bank, and that it would be permanent; as to all others there was no pretence of claim. There is one case of 3,540 shares which is under consideration, which the bank has heretofore determined not to be entitled to this privilege, but the parties have urged a reconsideration of it. If this be embraced the number of shares on which the bank has determined to continue remittances, will be 15,330 shares. If they be excluded the number will be 11,790 shares.

With these facts, and an inspection of the documents which are referred to and ready to be exhibited, the stockholders will be able to form an opinion for themselves, with all the lights and information which I have or of which the subject is susceptible, of the state of the bank, and may offer their advice and express their opinions accordingly.

LANGDON CHEVES,

President bank United States.

[Mr. George Williams, implicated in the preceding exposition, has publicly requested a suspension of public opinion.]

CHRONICLE.

A trader, named Jonas Whitney Farnsworth, who says he was of Boston, has been tried at the U. S. district court, sitting at Batavia, N. Y. found guilty, and sentenced to death, for forging United States' patents for military bounty lands. The fellow had every thing complete for carrying on the business.

Money. Messrs. Astor & Son have taken the New-York canal loan, at 6 per cent. interest. On \$100,000 they gave a premium of $7\frac{1}{2}$ per cent. and on 150,000 a premium of 7.

Emigration. A number of cotton weavers have started from Carlise, Eng. for the United States. A great many Irish emigrants, who arrived at St. Johns, N. B. on their way to the U. S. are reported to be in extreme distress—without the means of reaching their destination.

Mississippi lead. On the 12th ult. 12,000 lbs. of Mississippi lead arrived at Detroit, from Green Bay. It was transported by water the whole distance, with the exception of the short portage between the Fox and Ouisconsin rivers.

Baltimore. One of the most severe electioneering contests that we have known of took place in this city on Monday last, for the choice of electors of mayor. The ticket presumed favorable to the election of Edward Johnson, received 3518 votes, and that supposed friendly to the re-election of John Montgomery, 3500—majority for Johnson *eleven*.

Massachusetts. It is announced that Mr. Jonathan Russel declines a re-election to congress.

New Hampshire. Messrs. Bartlett, Harvey, Matson, Plumer and Whipple are elected to congress; a new election must be held for the sixth member, no one having a plurality.

Delaware is one of the states in which the old parties of republicans and federalists are maintained in nearly their former warmth and activity. The late election for governor and representatives in congress was severely contested. Mr. Haslett, son of the patriot who fell at Princeton, was the republican candidate, and judge Booth received the federal support for governor. The former was elected last week by a majority of 22 votes.

We have not seen a return of the votes for congress, nor do we know who is elected.

Maryland—Elections for congress In the district composed of the city and county of Baltimore, sending two members, col. Peter Little received 6867 votes, and gen. Samuel Smith 6765. John Patterson, esq. who opposed col. Little, had 1874 votes. Dr. Joseph Kent is re-elected without opposition from the district composed of Prince George's and Anne Arundel counties. The returns from the other districts will be noted hereafter.

Kentucky. The Louisville Morning Post of the 20th ult. states the fact that "a specie dollar has been selling for some weeks in that place for \$2.05 of their bank paper."

Mississippi. The vote lately taken for a representative in congress stood thus—for Mr. Rankin 4,811, for Mr Poindexter 2,654.

Michigan. Six new counties have been laid off by gov. Cass, extending from the Saginaw bay and river. This territory is rapidly populating. The troops at the Saut de St. Marie are very comfortably quartered; and it was supposed that those at Saginaw would be equally well situated by the 10th of the present month. On this subject the Detroit Gazette remarks—"It is gratifying to reflect that the expense of erecting the barracks at the two posts alluded to, will be even less than the same species of work would have cost in any of the states; such has been the economy with which their erection has been conducted, that the government will be put to the cost of scarcely a single article, except those of iron, nails, and glass."

Louisiana. The mayor of New-Orleans has caused the following letter to be published for the information of the citizens. It is dated St. Martinsville, 9th July, 1822. "The good people in this place are all on the alert. The freedom and equality granted to the blacks by the Mexican constitution, have set the slaves from this neighborhood on the wing for that country. A gang of fourteen, (six of whom were arrested), were met in the Grand Prairie between the Mesmentas and Ceriassis. We have just learned that *seventy five* started last night from the Vermillion. Night before last, four were arrested in this place, as they were absconding with their masters' horses. It is said that a mulatto, son of Mr. Feuille Declaet, leads those who have not been taken. A mulatto, belonging to Mr. Actave de la Eloussage, had stolen his master's horse and saddle and gun, and was making off when he was arrested. The rascal asked if, by the common law, they had a right to do so. He was formerly a servant of judge Porter's, and thought that he had picked up law enough while dusting his master's law books to shield him from harm in case of arrest. Another fellow, belonging to Dr. Alpen, called on Mr. Robin to borrow his horse. Robin lent him his horse, and away the fellow went, full speed; but, fortunately, the horse fell and he was arrested. This fellow had learned that the plot had been discovered, and that it was known that he was at the bottom of it, and but for the falling of his horse would have made his escape.

A true copy. DAVEZAC, Sec'ry."
York, (Penn.) Oct 5. On Tuesday last a drove of 300 merino sheep passed through this borough, destined for the state of Ohio. No state in the union is more active in retrieving past errors than Ohio; her citizens have learned that sale and barter, and speculating in hills of credit, without productive labor, leads to inevitable bankruptcy.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 7—VOL. XI.] BALTIMORE, OCT. 19, 1822. [No. 7—VOL. XXIII. WHOLE No. 579.

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

THE REVOLUTION IS NOT OVER," said one of the American patriots, long after the independence of our country had been acknowledged. The revolution may now be *physically* completed, but the *mind* is still in unthought-of subserviency to the views and interests of the "mother country," as has been shewn in relation to the cause of humanity—that of the *Greeks*. We yet rejoice when Britain rejoices, and mourn when she mourns—or, at least, passively fall into the most of her designs, and become the victims of her ever-watchful policy to promote her own prosperity—even at the cost of the destruction of nations! I wish that we might regard all *foreigners* as they regard us—be ready to meet them at all times, and at every point, on terms precisely *reciprocal*; not exacting anything, but yielding nothing unless also yielded by them: acting as an *independent nation* should do, in matters of fact as well as in those opinion.

The following is an extract of a letter from one of the most distinguished statesmen of our country—and late events, especially the prodigal importation of foreign goods during the present year* and the consequent rise of exchange on England to about *thirteen per cent. above par*, with the severe pecuniary pressure now felt by most persons, shew that he has examined the subject beyond its surface—that he is capable of separating appearances from realities.

I feel confident that the state of the country is daily becoming worse, and it appears to me more hopeless because there seems a general apathy—or,

*Some degree of retirement on the product of the labor of our own country, gave a check to the progress of distress—but such is the elastic character of the American people, that the least relaxation of a cord that may bind them will only produce new exertions for entire release—so the prospect of business has induced hundreds to make large importations of British and other foreign goods, who already repent the proceeding almost in despair. There are some—bankrupts, who cannot cease importing, because of the *credit* that they receive on the duties secured at the custom house, and the sooner we are clear of this description of persons the better, for they are dead weights on the national prosperity; but the real or apparent relaxation which rigid and indispensable economy produced, led many to extend their business to an amount that, I fear, will prove ruinous to many honest and otherwise prudent men. We could name individuals who anticipate "harder times" than they ever encountered, from the amount of their engagements with foreigners—who, if they had kept quiet, would have remained "snug." When and how the importations of the present year are to be paid for—"no man knoweth." The demand is not any thing like equal to the supply, and the stores are every where lumbered with goods. The government will receive a fine revenue from the procedure spoken of—but it will cost the people dearly; more dearly than the sale of six per cent. stocks during the late war, for payment of which the nation was pledged, at 12 or 13 per cent. below the par amount thereof; but that was a season of great emergency, and the end in view may have justified the means used.

what is more injurious, a general opinion that our condition is improving; and, of course, no exertion is necessary. The abstract opinion of the people is in favor of a system that shall support the national industry—but when a tangible measure is proposed, how does it succeed? You cannot convince individuals, and individuals compose the nation—that the efforts of 1 man, 10 men, or 20,000 men, are any thing—they expect the *nation* will come out with an expression of its opinion and give an impulse to government, though the component parts of the nation are silent!—that a great machine is to be put into motion, while the first principle of its power is at rest! One may make speeches, write essays and gain the argument—acquire reputation for talents, industry, zeal and public spirit, but not make a practical convert. The whole are convinced, but the national policy remains unchanged—the people are clothed in foreign cloths, they labor with foreign tools, they riot on foreign luxuries. The government clings to a system of revenue which is built on a sacrifice of domestic and an encouragement of foreign labor. How is this grand error to be corrected?—"where is the rub." We see the resources of the country diminishing, debts accumulating, property depreciating, profitable industry declining, capitalists looking to the funds for a *revenue*, not to the employment of their money for *profit*—the capital of the country abundant, while embarrassment intrudes itself in almost every useful *creative* occupation. Most sections of the world are flourishing in peace, while we are retrograding. The cure must be radical, for so is the evil. The distress of the United States is through the acts of the individuals who compose the nation; and the remedy must be by individuals. Until the people take the great concern into their own hands—until they make the affairs of the state as personal matters, the times will get worse and worse. This cannot be expected for a while—we may not soon see our measures in operation, but let us not despair; let us not "give up the ship." Mr. Randolph, when speaking on the Missouri question, said, "we have the argument if we lose the land," and truth will prevail. Yet the intermediate distress will be very great—it is unavoidable; but the fault is not in you or in me. We have warned the people of it, according to our respective means; and are innocent of a participation in a system that comforts the foreign laborer at the expense of a fellow citizen."

DOMESTIC PRODUCTS! Among the articles lately exhibited at Brighton, Mass. were three sons (by one birth), of Mrs. Willis, wife of Joseph Willis, of West Sudbury in that state, a soldier of the revolution. Their names are George Washington, John Hancock and Samsel Adams. They are now 23 months old and weigh 71 pounds. The mother is 48 and her husband 57 years of age.

THE SUSQUEHANNAH. The value of the produce brought down this noble river, during the present season, has been estimated at \$1,168,954—yet a great number of boats were prevented from descending by the unusual lowness of the water. The importance of the project to open and clear the bed

of this river, is every day made more and more manifest. The *descending* trade naturally centres at Baltimore; but this city has only a small part of that which ought to *ascend* this great artery of our country.

RUSSIAN MINISTER. The baron de Thuyte, formerly envoy extraordinary and minister plenipotentiary to the court of Lisbon, has been appointed the successor of M. Poletica in the United States.

THE ARMY. It is, without doubt, necessary, in the present state of society, that the United States should maintain an efficient military and naval establishment. The *knowledge* acquired in the "trade of war," whether on land or at sea, should not be lost to the nation, through a withering parsimony on one hand, or a blasting prodigality on the other; and of this every one is convinced, that, whether we support a military force of 50 or 5,000 men, or have a navy of 5 vessels or of 50, *efficiency* should be studied, and every branch or department of either service be *understood* by those who are engaged in them respectively, for the instruction of others and the wholesome regulation of the whole.

Without at all entering into the merits of the question whether the present military force is too large or too small, whether economy has been exerted or waste suffered, we are glad to believe that a more efficient body of men can hardly be found in any country than that which composes our little army; and there is a degree of respectability for talents and good conduct in both officers and privates, that, perhaps, never was equalled. It is probable that this respectability will be kept up by the great caution that is observed as to new enlistments—not many men being wanted, the officers are careful to receive only such as have claims to decency, and there is not a deficiency of such applicants at this time.

Under these impressions, we have, with pleasure, inserted an article relative to the capacities, &c. of the present army of the United States, from a gentleman whose opinion is entitled to the greatest respect. We invite some one in the navy to furnish a similar view of that establishment; for it contains information that ought to be spread before the people—entitled to know all that relates to the institutions which they support.

EDUCATION. We have a catalogue of the officers and students of the University of Vermont, to which is annexed the terms of education. The faculty consists of a president and seven professors. The medical students amount to 53—there are 6 seniors, 11 juniors, 12 sophomores and 11 freshmen—in all 93. The charge for tuition, room rent, use the library, &c. is only twenty dollars a year, and the price of boarding is from 125 to 150 cents per week.

LONGEVITY. A respectable gentleman of Ohio gives us the following particulars respecting a poor old woman of his neighborhood, named Ann Baily. "She cannot tell her age exactly, but believes that she was about 12 or 13 years old when queen Ann (of England) died, after whom she was named. When about 46 years old, she emigrated to the United States, and now resides with her son, who is an old man. When the state of Virginia kept up a garrison of Kanawha, to defend the western country against the Indians, frequent attempts were made to force it by the savages, and at one time it became necessary to obtain a supply of ammunition.

Ann volunteered to proceed to Greenbriar county, 100 miles, through an entire wilderness—she left the fort in the night, on horseback, and returned with the ammunition amidst the acclamations of the soldiery. Being wretchedly poor, a petition was presented in her behalf to the legislature of Virginia, praying for a pension—a bill for the purpose passed the house of delegates, but the senate rejected it on general grounds—as establishing a precedent that might bear hard upon the treasury; so poor Ann has to dwindle out a long life dependent chiefly on the bounty of her neighbors: but she sometimes attends market with a few fowls, &c. making a journey on foot of about *seven miles* to dispose of her articles, which she carries on her back.

"When the N. W. army was at Fort Meigs, during the late war, Ann travelled on foot as far as Delaware, or Fort Stephenson, my informant could not certainly say which, to procure some situation in which she might be useful: but she could not find any employment and returned home."

Queen Ann died in August, 1714; so Ann Baily, if the account be true, which we have reason to believe that it is, must be about *one hundred and twenty years* old.

CRIMES. The population of France is about 29 millions—that of England is 10. In 1817, the total convictions for crimes in France was 9,431—in England 9,056; condemnations to death in France 538; in England 1,302. In 1818, no more than 324 persons were sentenced to death in France, but in England they amounted to 1,251. France has nearly three times the population of England, yet furnishes only a bare majority of convictions, and a fourth part as many sentences of death.

THE BALTIC. One hundred American vessels passed Elsinore previous to the 16th August in the present year; of these 74 were bound direct to St. Petersburg, 12 to Copenhagen; 10 to Stockholm, &c. Sixty-two of the number belonged to the single state of Massachusetts—38 to Boston, 12 to Salem, &c.

BANK OF THE U. S. We had laid aside with an intention to publish, the following note as an appendix to the exhibit of Mr. Cheves; but, at the moment when the last Register was going to press, observed that it was missing. As an act of justice to the accused, we now give it a place:—

To the public. Langdon Cheves, in his recent exposition, as president, of the affairs of the bank of the United States, having reiterated charges of fraudulent conduct on my part towards that bank, at a time, too, when, through the agency of that institution, proceedings are prosecuted on the same charge, which I have in vain sought to have brought to a full investigation; I content myself, for the present, with pronouncing the said Cheves' statement concerning me, to be false and without a just foundation. GEO. WILLIAMS.

Baltimore, 7th October, 1822.

THE PIRATES. We are becoming disgusted by feeling bound to notice the doings of the wretched men who infest the coasts of Cuba, especially in the neighborhood of Cape Antonio. The brig *Hannah*, of Philadelphia, has been plundered of 460 bags of coffee, 5,000 dollars worth of tortoise shell, and 1,000 dollars in specie. The crew were most horribly treated—the captain, his brother and five passengers, were nearly *roasted* to death, to make them

confess that money was on board, by building a large fire round them, they being tied; they were also nearly killed by being beaten with swords! The same pirates also robbed and destroyed the Danish schooner Albert, from Vera Cruz for St. Thomas, of \$20,000 in specie and \$5,000 worth of cochineal, and, after abusing the captain and crew in the most unmerciful manner, they put them aboard the Hannah, in which vessel they arrived at Charleston. These pirates rendezvous at a place called Feureas, 30 or 40 miles to windward of Cape Antonio. They have daily communications with Havana, which is the market for their spoils.

We hear of several cases every week, like those noticed above.

Our cruisers in these seas do not appear to want activity—but the pirates, keeping close to the coast, have so many hiding places in shoal water, that it is almost impossible to get at them.

THE PALMYRA. *Charleston, Oct. 8.* His honor, judge Drayton, pronounced the decree of the court in the case of the Spanish privateer Palmyra, brought into this port by the United States' schooner Grampus. The vessel and crew are discharged from detention, with the exception of one officer and six men, against whom affidavits have been exhibited as having plundered the Coquette. They will be retained for trial at the court to be held next November. The commission of the Palmyra was adjudged to be a legal one, and as such saving the vessel and her crew from the forfeitures and penalties of piracy, excepting those individuals who may have been recognized as having boarded and plundered any vessel lawlessly.

Hayne and Holmes for the libellants—Prioleau for the claimants.

PENSACOLA. It was believed that, from the 15th of August to the 11th of September, not less than 120 persons had died of the pestilence at Pensacola; an amount of mortality without precedent, we believe, in the United States, when that of the population to be acted upon is taken into consideration.

Among the names of the deceased, we notice the following: Dr. Bronaugh, president of the legislative council; major Underwood, judge Shannon, J. Connor, secretary to the governor; Mr. Car, commodore; captain Crocker, of the sloop Intrepid; Mr. Bradford, sheriff; Mr. Kennedy, deputy; Mr. Harrison, of Washington city, and his family; F. Johnson, Mrs. Johnson, and two Misses Johnson, J. Keyser, New-York; Mr. Kennedy, merchant; judge Foster, Mr. and Mrs. Stutson, J. H. Champlin, esq. Dr. Rogers, of Baton Rouge; Dr. Elliot, U. S. army; captain Young, U. S. engineers; Mr. Wadlington, clerk to the paymaster; Miss Benson, Miss Ker, Mrs. Dinkins, Mr. Saltonstall, Mr. Newton, wife and child, captain Gerrish, Mr. Simms, navy agent, and W. H. Flournoy, esq.

THE JEWS. In every case wherein this people have been mentioned by the Greeks, struggling for life and seeking to preserve themselves and their wives and children from the cold-blooded murder of the barbarians, they have been described as more base and meanly cruel than the Turks themselves; and, in the early part of the contest, before their character was ascertained by their conduct, they were reported as the chief spies and informers, and as causing the seizure, and, generally, subsequent execution of many distinguished and wealthy Greeks. We are not of those who would condemn a whole

people for the acts of a few, but think there is reason to believe that the Jews of Turkey are about the most degraded of mankind—whom it will be necessary, and, perhaps, also just, for the Greeks to expel, if they shall have the strength and good fortune to work out their own emancipation from the perfect despotism of the Porte. Many worthy men, no doubt, belong to this people; but, is probable that the persecutions which they have suffered, afford the reason for their general repugnance to honest labor, and causes them, almost every where, to stand in opposition to productive industry—they are, nearly every one of them, mere consumers.

SNAKE IN THE STOMACH. An astonishing surgical operation was lately performed, with success, in the hospital of St. Louis, Paris. A peasant, of the neighborhood of La Fere, was persuaded that, about five years ago, he had swallowed, with his food, some reptile, which, in an inexplicable manner, still lived, as he affirmed, in his stomach. The physicians employed various prescriptions, without effect. Tortured by excruciating pains, the unhappy man resolved to go to Paris to be opened, which operation was in fact performed, by making an incision just below the region of the heart, when it was ascertained that his conjecture was well founded. As soon as the animal perceived more air than it was accustomed to, it shewed itself at the end of the incision, but immediately drew back; when one of the assistants put his finger into the wound and drew out a snake two feet and an half in length, and eighteen lines in circumference! It lived sixty hours. The patient felt great relief, and is in a situation which gives no reason to apprehend any bad consequences. [French paper.]

CIRCULATION OF THE BLOOD. Blumenbach says that the pulse of a new born infant, while placidly sleeping, is

About	(in a minute)	140
Towards the end of the first year		124
Towards the end of the second year		110
Towards the end of the third and fourth years		96
When the first teeth drop out		86
At puberty		80
At manhood		75
At sixty, about		60

"Three turkies and a basket of sallad" have been seized by the custom-house officers at Detroit, which, as well as the "United States against one red ox," were to come before the court on the 7th of October last, for adjudication! We hope that the editor of the *Detroit Gazette* will give us the particulars, with an account of the costs on those queer prosecutions. The turkies, if condemned as forfeited, will probably cost the people of the U. States not less than ten dollars a piece.

THE SLAVE TRADE. A French slave vessel, the schooner Maria, of seventy five tons, with a crew of 14 persons, has arrived at Havana from the coast of Africa, with a cargo of one hundred and seventy-six human beings. The captain stated that he had put into Havana, in consequence of being chased out of his course for Martinico by an insurgent privateer. We cannot form an idea how, in so small a vessel, so many wretched beings could be stowed.

RUSSIAN SENTIMENTS. A late St. Petersburg journal contains the following article—it is perfectly Russian, alias slavish. The people of the empire

of the "deliverer" have as imperfect ideas respecting free government, as the black slaves of Jamaica, being white slaves themselves, attached to the soil even more closely than our negroes are, and subject to a more perfect and unrelenting despotism. Yet with such machines, the emperor, who has given up his fellow christians, the Greeks, to the *mercy* of the barbarians, dictates to enlightened Europe; and, by force, finds advocates among the most liberal and polished nations. He is called "magnanimous," though his people, generally, are political and personal slaves.

"If civilization were lost, where should we find it again? Would it be in Africa, that ancient bazaar of human flesh?—or in Asia, which is falling back into childhood from decrepitude?—or in that *Ancientia*, whose government proclaims in the face of the universe, *dogmas which will cause itself to perish*? Between us and barbarism, we see only the HOLY ALLIANCE!!"

DISGRACEFUL. A certain A. JONES, L. L. D. or doctor of laws, has recently published at London a collection of *crim. con. cases*, which he calls "the Annals of Gallantry," in 3 vols. 8vo. illustrated with numerous colored plates—price 2l. 5s. in boards.—This work is chiefly given up to a record of the debaucheries of "the Corinthian pillars of society," the nobility of Great Britain; and perhaps no book recently published, contains so much filthy, dirty, despicable matter. We can hardly imagine a condition of society in which such things are tolerated; and this, by the amount of its cost, is evidently designed for the amusement of the wealthy! It is publicly advertised for sale.

REPROOF FOR LYING. A late English paper furnishes the following article: "In the coffee room at the Bush tavern, Bristol, the conversation of the company touched on the subject respecting the real or imaginary existence of mermaids, when one of the party declared in favor of the affirmative: "Oh! real, beyond all doubt; I have seen seven or more at one time, the most beautiful creatures I ever beheld, with long black hair, and their young ones sucking at their breasts." The worthy and facetious host of the Bush, replied, "Sir, captain —, of the —, informed me that one Sunday morning, a merman had suddenly appeared to his men, dressed in gay attire, with his hair frizzled and powdered as white as a full grown cauliflower, and demanded to know if the captain was on board. The captain soon appeared on deck. The merman addressed him as follows: "Sir, I shall feel particularly obliged by your giving orders for your anchor to be taken up, as it lays against my street door, and prevents my family from going to church."

LIABILITY OF MAIL CARRIERS. The supreme court of Massachusetts, in the case of Dwight vs Brewster, a mail carrier, who undertook to carry a packet of bank bills from Northampton to Springfield, and failed of his undertaking; that is, the packet was lost on the way, have decided for the plaintiff. The court decided, that, as such a packet was not within the prohibitory clauses of the United States law, prohibiting mail carriers from carrying letters, not mailed, past an established post office, there could be no objection to the maintenance of the action on the ground of a fraud practised upon the revenue by the parties; but that, in the transportation of packets, other than letters, (written messages), independent of the mail, the undertaking of the stage driver was that of a common carrier, and, as

such, nothing could excuse the loss, except the act of God or the public enemy. The court held further, that no packets of merchandise, &c. are within the said prohibitory clauses of the law, even though the envelope contain a written communication, if that communication relate to the contents of the packet.

"THE HOLY ALLIANCE!" The following is given in the Lohdon Sun of the 12th September, as an authentic statement of the project with which M. De Montmorency is charged by the government of France, to propose to congress:

1. A uniform measure of compression to be adopted against the present popular feeling, so alarmingly prevalent in Europe; for which purpose, the contracting parties are to provide a military contingent, to be employed at the request of any one of the parties, the internal tranquility of whose state may be menaced; and the employment of this contingent not to be considered as any way interfering with the general relations of amity existing between the countries.

2. A general law for the regulation of the press, which is to suspend all local laws now authorising a greater latitude of publication than may be thought consistent with the new European arrangements.

3. The erection of a tribunal upon the principle of the Mayence tribunal, established at Troppau, for the punishment of offences against the German confederacy, for the trial and punishment of offenders against the order of things now existing in Europe. The authority of this tribunal is to extend over all representative governments, to the extent of bringing under its action individuals who may, from the tribune of their national assemblies, hold language and inculcate doctrines deemed subversive of the present system of legitimacy.

4. A measure which may induce or compel Spain to enter into the views of the holy alliance, by the establishment of a chamber of peers.

It seems quite probable, from the temper of the sovereigns in "holy alliance" against liberty and justice, that some grand plan will be adopted to reduce the people into more abject obedience and servile submission, than as yet belongs to those of several nations. The condition of Russia, wherein the whole population may be regarded as political, if not personal slaves, will furnish a model of that which will "preserve the tranquility of Europe," in the estimation of the "magnanimous Alexander," the head of this league against the rights granted by the CREATOR. The march of mind must be arrested, or tyranny will fall—but can despotism extinguish light, will the sword forever restrain the operations of common sense? It would appear, from the French project given above, that the United States are to be brought under the care of "the holy alliance," for, surely, our practice (as well as our doctrines), is subversive of the present system of legitimacy! The chain that binds the people of Europe, being too severely stretched, may be broken—and emancipated man avenge himself on the oppressor. The liberales have the power in Spain and Portugal; France is feverish, and seemingly ready for a bustle; Italy is unsettled; and Germany and Prussia not a little alarmed with secret societies and supposed plots in favor of liberty; and even in Russia, measures have been adopted which shew that the emperor is not altogether confident of the obedience of his slaves. If the congress shall do much more at restraint and directly meddle with the affairs of nations—it is very possible that such a congress will not be held again; being dissolved by revolution.

THE LATE STORM. In our last paper we briefly noticed the terrible storm with which the city of Charleston, and the parts adjacent, was visited on the 27th ult. By a vessel that arrived at Baltimore on Wednesday last, we received a great quantity of newspapers—forwarded by sea, because the roads were yet impassable for carriages, from the general prostration of the forest trees that bordered on them.

We have anxiously looked for some summary statement, that might help us to form an idea of the power and extent of this awful visitation—but we do not notice any thing of the sort; and we cannot, for want of local knowledge, attempt to make one out: but we should suppose that, at least, *one thousand lives* have been lost, and that more than 1,000 houses were blown down or otherwise injured; and the damage done to buildings, rice fields and plantations, must amount to several millions. In the neighborhood of Georgetown and North island, 300 lives are ascertained to have been lost, and the damage farther suffered is estimated at half a million. A letter from "North Santee" enumerates 127 persons lost, chiefly slaves. These are only particular cases. In several of them, as well as in other instances, whole families perished—white and black; some by the falling of chimneys, others by the prostration of houses, and many by the rising of the tide, or swell of the sea, raging tremendously. Sullivan's island, a great summer resort, felt the whole fury of the gale, and the accounts therefrom are shocking. The district between the two Santees appears to have been completely swept—negroes and crops nearly all lost. The storm did not extend more than 25 miles into the country; but was felt all along the coast from a little south of Charleston to a short distance south of Georgetown—especially on the islands.

The following letters, which enter into details, may aid us in forming some estimate of the condition of those exposed to the force of the gale—

Extract of letter from a gentleman at North Inlet, to his friend in Charleston, dated Sept. 29.

"It is my very painful duty to be the bearer of dreadful news. I pray you, my dear friend, to calm and compose yourself, and bear with resignation the dispensation of an Almighty Providence, in whose hands alone are all our lives. In announcing the dreadful catastrophe, I can scarcely proceed—but it must be done. Our dear and beloved friends, R. F. Withers and family, with the house, were swept away on Friday night, by the terrible storm or tornado, and of the whole number, only Mr. Withers has yet been found. He was taken out of the water yesterday morning, after having been it three or four hours. He was carried to Debordieu's island, and has had every kindness and attention paid to him by Mr. Cohen's family. I was with him all the day, as was also the rev. Mr. Capers, and it is at his particular request that I make this communication to you. Every search was made and still is making for the rest of the family—but as yet nothing has been seen or heard of them. The materials of the house, furniture, &c. are found scattered and drifted in every direction, and the dead body of one of his negroes has been found.

"Mr. Withers states, that between one and two o'clock in the morning, after the chimneys had fallen, his whole family, with Withers Shackelford and captain Wish, left the body of the house, and went into the western shed room, (wind S. E.) being, as they thought, the most safe.—In ten minutes after, the house wavered, and in an instant was crushed; he fell, but recovered, and found him-

self in the water, and recollects hearing a call for him to catch Anna Maria; after which he recollects nothing of his family.—After being in the water a long while, he saw a negro near him; he asked who he was? the fellow replied a stranger—well, said he, "take hold, for I must quit;" a voice behind exclaimed "my dear father don't give up, we can yet be saved."—turning, he said, "Is it you my son?" "Yes my dear father—don't give up, I'm yet strong, and can hold on—we may be saved."—Here a wave came, and a part of the wreck of the house in it, and covered them all, which was the last he saw of his son.

"Mr. Withers was heard, and seen, and rescued by lieutenant Levy, of the United States navy, who was passing the summer at Mr. Cohen's, on Debordieu's Island—this gentleman waded up to his chin in the marsh and creek; and was the happy instrument of saving Mr. Withers and his servant Cudjo, who was the fellow Mr. Withers spoke to as before mentioned. Jack a little boy, was also saved, by floating up to Mr. Cohen's on one of the steps.—As yet we have made no further or successful discovery of any other part of the family—I fear their fates are but too certain. In vain should I attempt to give an account of this most awful and dreadful scene—I am inadequate to the task. Such a night as Friday night and such a day as yesterday, I never before experienced. Poor Mrs. Myers and family, fourteen or fifteen in number, are also swept away, and nothing can be heard of them; and also a poor barber named Deroca. Mrs. Bottsford and two white children and two negroes, killed by the fall of Mr. Fort's house. Every heart is full, and every eye is streaming—I can say no more."

Extract of a letter from Long Bay, Waccanaw, dated Sunday, 29th ult.

"No doubt you must have felt in Charleston the storm of the 27th. To describe the horrors of our situation is utterly impossible. You cannot conceive of any thing more dreadful.—Between 12 and 1 o'clock, the wind became very high; we got up, secured the doors and windows as well as we could; but the wind increased every moment, and we soon perceived that it was a hurricane, more violent than any that we had ever before witnessed. Still we felt secure; but conceive the agony, the terror that seized us, upon hearing the tremendous crash of the roof falling in, and both piazzas torn away! The first impulse was to run out, but were could we run to? The water was upwards of 3 feet deep at the back piazza, and in front the waves were breaking over the hill upon which our house stood.

We stayed in the house until it appeared to be giving way, when we rushed out upon the Sand Hills, but the wind was so violent, that it was with difficulty we could stand our ground; after a while, when the wind had abated a little, we got into an outhouse, where we remained until the morning.—The tide fell about 3 o'clock—had it continued to rise one hour longer, the whole island must have been swept away. Mr. Huger's establishment is so completely broken up, that they have been obliged to remove to the river. Poor Mrs. Myer's body and the bodies of several black children have been washed upon the beach."

TURKISH DECLARATION OF WAR. The German papers have published the following curious declaration of war, issued in 1663 by Mahomet IV. against Leopold, emperor of Germany:

"By the grace of God, the great God in heaven, we, Molo Mahomet, God of the earth, renowned and

powerful emperor of Babylon and Judea, from the rising to the setting of the sun, king of all earthly kings, mighty ruler of Arabia and Mauritania, born triumphant sovereign of Jerusalem, possessor of the tomb of Christ the crucified, declare to thee, emperor of Germany, to thee, king of Poland, and to all the chiefs of thy land, as well as to the pope of Rome, his cardinals and bishops, that we are resolved to attack thee with thirteen kings, 1,300,000 men on horseback and on foot, with Turkish courage unknown to thee and thine. We will visit thee in Vienna, thy capital, and pursue thee, and the king of Poland, and all thy allies, sword in hand, burning, plundering, murdering and destroying thy country and subjects. As for thee, thou shalt suffer the most horrible death that can be imagined. As thy government is weak and cruel, even among christians, we will wrest from thee, with fire and sword, thy empire and kingdom, and likewise overthrow and annihilate the see of Rome and its triple crown.

This, emperor of Germany, and king of Poland, is our declaration to thee and to all thy dependents; and we, moreover, inform thee that these words will speedily be followed by deeds, for which thou hast to hold thyself in readiness.

Given in our powerful city Stamboul, containing 1,639 streets, 90 hospitals, 1,000 public baths, 997 fountains, 120 markets, 115 stables for mules, 480 inns for foreigners, 1,652 great and small schools, 4,122 mosques and churches. This great and powerful city is four German miles in circumference, and on its walls are 360 strong towers. Our ancestors wrested it from the hands of the christians, whose wives and children were murdered before their eyes. Thus will we treat thee and all christians, to prove our hatred and disdain.

Given in the 25th year of our age and the 7th of our potent reign.

(Signed)

“MOLO MAHOMET.”

TRADE WITH FRANCE. The French government has promulgated the following ordinance respecting the tonnage duties, to be levied upon American ships, entering the ports of France.

Royal ordinance.

Louis, by the grace of God &c. &c.

On the report of our minister secretary of state and finance, our council being heard, we have ordered and do order as follows:—

Art. 1. The application of our ordinance on the 26th of July, 1820, purporting that “the duties of tonnage collected on foreign vessels arriving in the ports of our kingdom situated in Europe, shall be replaced, with regard to the ships of the United States of America by a special duty of 90 francs per ton,” shall be suspended from and after the first of October next.

2 From and after the said date of the 1st of Oct. and until it be otherwise ordered, the natural produce or manufactures of the United States of America, which when imported by vessels belonging to that power, pay, in virtue of the laws now in force, a surcharge amounting to more than 20 francs per marine ton (tonneau de mer), shall only pay an additional duty of 20 francs per ton over and above the duties paid on the same natural produce or manufactures of the United States when imported in French ships.

Such articles of the said produce, the surcharge on which does not amount to 20 francs per ton, shall continue to pay the duties and surcharges imposed by the general tariff, the present ordinance being intended to apply only in the way of reduc-

3. The following quantities shall be considered as forming the ton of merchandise for each of the articles hereinafter mentioned:—

Cotton, in wool	365 kilograms
Tobacco, in leaf	725 ditto
Potashes and pearlshes	1,016 ditto
Rice	725 ditto

All other articles which are specified, and which are weighed, 1,016 kilograms. Those generally measured, 42 cubic French feet.

4. The produce of the soil and of the industry of the union which are re-exported after deposit, or pass in transit through France, shall continue to pay no differential duty.

5. Under the name of tonnage duty, American ships shall pay only a duty of 5 francs per ton of measurement, according to the American register of the vessel, they will thereby be relieved from the tonnage of duty established by the laws of October, 1793, and the 4th of May, 1802, and will only be liable on the same footing as French ships to the other taxes and dues relative to navigation, such as light house duty, pilotage, brokerage and others which affect foreign vessels in a different manner. The administration of the customs remaining charged with paying those entitled, out of the produce of the collection above of the five francs per ton, the differences to which American ships would have been subject in virtue of any laws and regulations whether general or local.

Our minister secretary of state for finance is charged with the execution of the present ordinance, which shall be inserted in the bulletin of the laws.

Given at the Tuilleries, September 3.

(Signed)

LOUIS.

POPULATION OF PARIS. The population of Paris, in 1817, was 714,000 souls, divided into two separate classes, namely—the inhabitants who live by salaries of office and public professions, or any income whatever, who are neither artisans nor workmen, amounting to 366,000; and the laboring class, amounting to 348,000 individuals.

But these two distinctions are not sufficient to discover the quantity of actual consumption; for this purpose, M. *Beniston* established two others: “the opulent consumers” and “the indigent consumers.” The former comprises 47,000 married men and 47,000 married women; 27,700 bachelors, between the ages of twenty and forty years; 25,000 spinsters; 9,600 widowers; 20,000 widows; 16,700 bachelors at and above the age of forty, and 20,000 spinsters at the same age—this gives 95,000 men and 105,000 women, making a total of 200,000 individuals belonging to the class of opulent consumers.

The class of indigent consumers are as follows: 85,000 married men and 85,000 married women; 24,000 male and 24,800 female children at and under the age of 5 years; 14,844 males between the age of five and seventy, and 19,304 females at academies or boarding houses and schools; 67,506 young men living with their parents or otherwise; and 66,046 young women in the like situation; 16,000 soldiers, 1,000 nuns and charitable sisterhood; 32,730 unmarried men between the ages of twenty and forty years, and not included in the preceding numbers; 37,770 females of the same age and in the same situation; 4,200 widowers; 27,000 widows; 4,000 bachelors above the age of 40; 4,800 females in the same situation; making a total of 248,280 men, and 265,769 women of this class; altogether 514,000 individuals—which number added to the

preceding class, makes 714,000 souls the population of Paris.

To estimate the extent of consumption in articles of workmanship and manufacture, M. Benoiston takes into consideration the number of persons who have the pecuniary means of making use of them, and, according to the above statement, the following is the result: The consumption of articles of dress and ornament during the year 1817 was 71,900,000 francs; in articles of trade and workmanship, 35,726,000 francs; and in sundries, 217,000,000 francs—total consumption of material manufactured, and other expenses, 324,626,000 francs, or, in English money, 12,987,340*l.* It will, doubtless, be observed, that M. Benoiston has not noticed, in the above estimate, some objects which are probably but little calculated to appear in such a table: such as theatres, lotteries, women of the town, gambling houses, &c. All these are, doubtless, objects of expense and often ruin; but ought they to appear in an estimate of consumption? In speaking of this class of profits, which are certainly the most deplorable species, M. Benoiston says, the scourge, prostitution, brings the revenue of Paris 50,000 francs; and that before the revolution the number of unfortunate females amounted to 15,000.

FOREIGN NEWS.

London papers of September 14.

Great Britain and Ireland. We forgot to mention the important fact that the king had returned from his expedition to Scotland! The Glasgow Courier mentions that, when "his majesty and sir William Curtis first met in their Highland dress, they both burst out into a rude laugh at the ridiculous appearance of each other."

Mr. Canning is appointed the successor of the marquis of Londonderry.

It is somewhat remarkable that the premier peer in each part of the united kingdom should be in opposition to the present ministers, viz. the duke of Norfolk in England, the duke of Leinster in Ireland, and the duke of Hamilton in Scotland.

A gentleman named *Boyle*, became a bankrupt at London sometime ago. A motion being made before the lord chancellor to supercede the commission that had been issued against him, it appeared that he had paid off debts to the enormous amount of 719,000*l.*—that there was yet unclaimed of him only 14,000*l.*, to satisfy which the amount was deposited in the hands of the assignees. The counsel on the part of the latter supported the motion, and, in the name of his clients, felt it his duty publicly to thank Mr. Boyle for his exertions; by which, after satisfying all these claims, he had a surplus of 600,000*l.* The chancellor granted the motion and said that this was worth all the bankruptcies that he had ever heard of in his life.

Walter Fitzmaurice, well known in Ireland as "*capt. Rock*," was lately arrested, and, being put on his trial, plead guilty, though warned of the consequence. He was sentenced to death.

A respectable catholic priest has been tried in Connaught for marrying "a reputed catholic to a woman who professed to be a protestant." The result is not stated; but the proceeding is said to be a felony!

The receipts of the British religious charity societies in 1821, amounted to the sum of 341,141*l.* 12*s.* 8*d.* of this aggregate the "British and Foreign Bible society" received 103,802*l.* and that for the conversion of the Jews, 10,689*l.*

At the Leicester assizes, John Bates was sent enclosed to be imprisoned one year, and to pay a fine of

£200, on a conviction of having given orders for the making of twenty frames or machines, called bobin-lace-machines, with the intent that the same should be exported to Antwerp. The indictment was grounded on an act of 21 Geo. III, which forbids the exportation to foreign parts, of utensils made use of in the cotton, woollen, and silk manufactures of the kingdom. The prosecutor was Mr. Lacy of Nottingham, to whom a patent for making lace, was some years ago granted.

France. Great efforts are continued to restrain the press. The following article subjected a person to a prosecution—"The old clothes shop.—An officer covered with honorable scars, is in the deepest distress. He looks to his clothes for a last service. Their condition announces under what glorious circumstances they covered their unfortunate owner; but that is no recommendation to an old clothes man. As to his sword, the veteran warrior transmits it, bequeaths it, but will not sell it. The blade is bright, though stained with the blood of the enemy. This veteran is in poverty; but perhaps if his sword had been dipped in French blood ———"

It is stated in a German paper that a part of the Austrian army in Italy is about to march into France to relieve the cordon on the frontier of Spain! This is not probable.

Netherlands. Many children have died at Amsterdam of the small pox; and the people were seriously called upon by the magistrates to promote vaccination.

Spain. The ministers are completely gleaning the persons that were about the king—they have given many of them orders to retire to their homes, and have intimated to his majesty himself, the possibility of his being brought to trial for mal-conduct, if he does not behave better in future!

Gibraltar papers inform us that—The insurrections in Spain continue to prevail in the provinces of Catalonia, Navarre and Biscay.

The marquis of Mata Florida, the bishop of Tarragona, and baron d'Creoles, have issued a proclamation dated at Urgel, Aug. 15, announcing themselves as the regency of Spain during the captivity of the king!

A French squadron was cruising off Cadiz.

Portugal. The cortes has voted to establish a regency of five persons, with secretaries, in the Brazils; all with limited powers, and to be appointed by the king. Cortesian delegates from Paraiba, Rio Grande del Norte, and Pernambuco, have arrived at Lisbon.

Italy. The present pope is eighty years of age, and has governed the church twenty-two years.—There are forty-four cardinals, and twenty-three vacant hats. The number of patriarchs, archbishops and bishops dispersed throughout christiandom, is 550. The reason of the "vacant hats" is, that the moderate revenues of the ecclesiastical state, compel the holy father to be as sparing as possible in filling up the vacancies, lest the scanty income of the college should be still more subdivided. The present income of a cardinal is not more than four hundred pounds sterling a year.

Switzerland. A Swiss diet was held at Zurich in July last, and took into consideration the overtures of M. Zea, ambassador of the Colombian republic. His proposals were *ad instrumentum*. The assembly also appointed two Swiss merchants, one a native of Yverden, the other of Geneva, who had long resided in America, to be consuls at New York and Washington.

Germany. The lordship of Ernsdorf, in Austrian Silesia, is advertised to be disposed of by way of

lottery, *title and all*. The property is valued at 1,632,619 florins—the tickets are at 1*l.* sterling each.

Russia. An order was issued at St. Petersburg on the 21st of August, for closing all the freemasons lodges. Some great alarm appears to have seized on the government.

It is stated that during the late review of the troops at Moscow, about eighty petitions were presented to the emperor (*by soldiers stepping out of the ranks*), praying that he would commence war with the Turks. A priest of consideration, has loudly denounced him for his insensibility to the sufferings of his fellow christians.

Turkey. The French papers state, that after the Turkish fleet, under the command of the captain pacha, sailed from Constantinople, and that since, in consequence of a 3d expedition having taken place, there scarcely remained a single ship of war in the before mentioned harbor. The captains of several Greek vessels, then lying in the port of Odesa, formed the daring resolution of immediately sailing to Constantinople, and there to set fire to the arsenal. They might perhaps have succeeded in this rash attempt, from which great consequences would have issued, but our government prevented them from carrying it into execution, by not allowing them to sail.

The following details of the late victory of the Greeks, is from a Frankfort paper of Aug. 24.—We have at this instant received new details of the victory gained by the Greeks on the 14th of July, which are of the greatest interest. As already stated, the Hellenians were forced, on the 13th, after fighting valiantly, to retreat, and they took up a new position in the Straits of Thermopylae. Encouraged by their success the evening before, the Turks attempted on the 14th, to force all the passages; but seven hundred brave soldiers, under the command of another Leonidas, young Bozzaris, stopped their progress till night, repeating a thousand times the cry of Eleutheria (liberty). They defended with the greatest heroism the principal defiles. During this time, the greater part of the Greek army marched with great haste, and arrived, after making several detours in the rear of the enemy's army, where it took up a position. The Turks, entirely surrounded, were attacked with fury and completely routed. The results were most brilliant—three pachas, seventy boys, and eleven thousand men were taken prisoners. All the baggage of the Ottoman army, with its artillery and tents, fell into the power of the victors. Nearly a third of the Turkish army was killed, and a considerable number wounded.—Chourschid Pacha had great difficulty to save himself with four thousand men, the miserable wreck of his army at Larissa.

During the battle, Grecian women, leading with them boys of ten years of age, who followed the example of their mothers, hurled down stones on the Turks from the tops of the mountains. In general, the Hellenians fought with an enthusiasm, great almost beyond example. There cry was, 'death to the barbarians, vengeance, our brothers were massacred at Scio.' Young Bozzaris, the modern hero of Thermopylae, in his devotion to his country, for feited his life. His corpse was transported to Corinth with the greatest pomp; 1000 women, preceded by 160 priests, accompanied the procession. They are preparing in that city to pay him the greatest honours.

Another great victory has been obtained by the Greeks! Chourschid Pacha, threatened by the divan on account of his defeat, assembled all his re-

serves in the utmost haste to recover his reputation. He met the enemy again on the 1st of August, and is said to have lost as many men as on the former occasion—he himself being among the prisoners! It must be remarked however, that the London Courier, (the mouth-piece of the ministry, and deadly hostile to the Greeks), *doubts* the truth of this report.

A Greek fleet of 40 sail, had been fitted out to bombard Salonichi. It is confirmed that the Turks have nearly destroyed the whole city of Jassy with fire, out of mere love of ruin or for the sake of plunder. Nine churches and seven monasteries were consumed.

The Greek patriarch is dead, and the late bishop of Chalcedonia has been elected his successor. The patriarch died of the dropsy, and the Greeks at Constantinople appear to have had full liberty to pay the usual respect to the remains of a person so distinguished.

The porte has intimated his willingness to receive a Russian minister, provided he shall not come in a vessel of war.

Porto Rico. The privateers that have been fitted out in this island, are the Palomo, of 6 guns and 130 men; the Pancheta, of 16 guns and 120 men; the Pareira of 6 or 8 guns and 80 men; the Bruqueña, of 4 guns and about 60 men; the Flora de la mar, 1 gun, and 40 men; La Carmen, 4 guns and 50 men—besides three or four other small vessels.

A letter from a gentleman who was on board the brig Fairy, which was captured by one of those privateers and sent into Pounce, Porto Rico, says—"I received three stabs in the breast, and the crew of the Fairy were treated very badly. They talk about hanging us, on account of an United States' schooner having taken one of their privateers. We are double-ironed, both and land foot. They give us one pint of water and one biscuit a day each man; and if we ask for more, they threaten to cut our throats. We are down in the hold of a schooner, with just room enough to move, and eaten up with vermin. Mr. Mitchell, the first mate of the brig, suffers equally with us."

The new governor of the island, gen. La Torres, had arrived, and it was believed that he would put a stop to the privateering business, having expressed the greatest disapprobation of it.

Colombia. Morales, the royal general, has made a descent on the coast and captured Maracaibo without opposition. A large force was sent to expel him. The war prosecuted by him is useless—yet it involves a great waste of life and treasure.

Mexico. A battle is reported to have taken place between the imperialists and the republicans, in which the former were defeated, with great loss. It is quite certain that many are dissatisfied with his *emperovanship*. We have a copy of a proclamation signed "Guadaloupe Victoria," informing the people that "the standard of liberty is raised," and inviting them to take up arms—he proscribes Iturbide as a tyrant, and proposes that a general congress be held at Puebla.

The emperor has arrested many distinguished persons at Mexico—several of them being members of the congress; he is evidently alarmed. It is probable that his reign will be short.

Military establishment of the U. S.

COMMUNICATED.

Every country that pretends to take a station among the nations of the earth and to maintain that rank and standing which its population and re-

sources justly, ought to be prepared with the necessary means of sustaining herself, under all circumstances, against foreign aggression and attack. Some countries, according to their localities or the tempers of their rulers, keep on foot at all times numerous forces, so as to be able either to secure themselves from the sudden attack of their more powerful neighbors, or to avail themselves of the opportunity which may offer for extending their own power by seizing the colonies and distant establishments of their rivals, in order to weaken their trade and resources and to increase their own. But the United States, having in view the single object of defence and not that of conquest, in making her military arrangements, and being disposed, at the same time, to leave as much power in the hands of the people as is consistent with good government and her civil institutions, have always avoided increasing her regular forces in time of peace, beyond what is actually necessary to preserve her fortifications from decay, to protect her arsenals from pillage, and to secure her ports and harbors from foreign insult. She has not however been unmindful of the advantages of possessing at all times a well organized and instructed corps of artillerymen and engineers, a small but well disciplined body of infantry, and a military academy of sufficient extent to educate annually a certain number of youths capable of filling the vacancies which may occur in her little army. This small establishment, with the general staff, constitutes the whole of the land forces of the republic, forming an aggregate of about 5000 men, and maintained at an annual expense of about 1,500,000 dollars. This force is the nucleus around which, it is proposed, when the necessity shall exist, to form a body of regular troops sufficient to answer all the purposes of defence and to relieve the militia from the task of remaining constantly in the field, when the state shall be threatened with invasion. Small as this establishment is, it is susceptible of an extension equal to 36,000 men, a greater body than was ever on foot at any one time during the whole of the late war, and perhaps, judging from the events of that period, equal to all the exigencies of the union.

It may perhaps be questioned by some as to the feasibility of this extension, and therefore, it is thought proper to demonstrate the fact by showing how it may be effected. First, we have, exclusive of the general, field and staff officers, 644 platoon officers and cadets, more than one half of whom are capable of commanding companies—say 300 companies at 120 men each, (the standard of the French companies on the war establishment), would be equal to 36,000 men; and second, from the remaining 344 officers, and from the field and staff officers now in service, could be obtained the general, field and staff officers for such a force, to say nothing of the recourse that may be had to that valuable body of officers who served through the late war and retired on the reduction at the peace. All these 300 captains commanding companies will be well instructed, respectable, acquainted not only with the theoretical and practical parts of their duty, but well versed in the system of accountability and general administration of regimental affairs. Had the United States had the command of such a corps of officers at the commencement of the late war, our army would have been in a better condition in three months after the declaration of hostilities to have taken the field, than it was at the close of the contest: for now we have one uniform system of discipline, administration and accountability, in every arm and branch of the service—a staff organized on

a proper plan and in successful operation. The supplies of every description are regular and of excellent quality. But at the commencement of the late war we were without a general staff, without system and experience, or any fixed rule of conduct; the officers of the old army were not advanced and dispersed among the new troops, but left in inglorious retirement with the old regiments, except in few instances, and then the effects of their experience were visible wherever they were placed. It is a mistaken notion that the officers of the old army did not distinguish themselves in the late war—when ever they had the opportunity they did. Look at Brownstown, Erie, Niagara, Fort George, York, Sackett's Harbor, Christler's field, Plattsburg, Baltimore, Norfolk, St. Mary's, Pensacola and New Orleans, and you will see among the distinguished in these affairs many officers of the old army—you will see the names of Pike, Covington, Gaines, Scott, Macomb, Jesup, Boyd, Porter, Bissell, Swift, McLee, Wood, Backus, Lawrence, Armistead, Gibson, Taylor, Morgan, Forsythe, Mosias, Chambers, Dorman, Brooke, King, Gardner, Snelling, Baker, Miller, Gratiot, Blue, Haynes, Toten, Walback, Eustis, McPherson, Jones, Crane, Boyl, Bomford, Atkinson, Thayer, Deltussy, Gadsden, Fenwick, Laval, Smith, Russell, Ball, Hindman, Appling, Brooks, Larabee, Overton, Woolstoncraft, Pratt, Chotard, Davis, Humphreys, Whiting, Brevort, Vail, White, Allen, and many others whose names are not now recollected, who have been honorably and publicly mentioned. Yes, let it be repeated, had the officers of the old army been distributed among the new troops, and a just regard been paid to their experience and talents at the beginning of the late war, instead of seeking for popular characters to lead the troops, the treasury would not have exhibited such a waste of money, nor history had to record so many failures and blunders as the onset of the conflict exhibited.

British Population—1822.

FROM A LATE ENGLISH PAPER

There has just issued a voluminous elaborate, and very valuable statistical work, consisting of an abstract of the population and parish registry returns for 1821, "ordered by the house of commons to be printed July 2, 1822." The volume is a thick folio. It consists first of "preliminary observations," on the enumeration abstract, on the divisions of England into shires, &c.; on the ages of persons, baptisms, marriages, &c.; on the increase of the population, &c. Secondly, of "comparative enumeration of five periods, 1700, 1750, 1801, 1811, and 1821." Thirdly, "enumeration abstract," being an account of the population of England, Wales, Scotland, the Isles, &c. showing the number of houses inhabited; by how many families occupied; houses building; uninhabited; the number of families chiefly employed in agriculture; those chiefly employed in trade, manufactures, &c.; "all other families not comprised in the two preceding classes;" males, females; total of persons; and fourthly, "parish register abstract."

These outlines of the varied contents will show their interest, and the number of objects respecting which accurate and official information is here given; and its massive character may be imagined when it is stated that the volume consists of seven hundred and fifty pages, almost the whole of which is table work. To give even the results of the various details would exceed the limits of our journal; the work, however, has been prepared with great

care, chiefly under the superintendance of Mr. Rickman, clerk at the table of the house of commons; Mr. Philips, the speaker's secretary, and several clerks.

We shall give some extracts from what may be deemed the most popularly interesting parts of the work. In making the extracts, we shall pursue the order adopted by the parliamentary document.

In the "preliminary observations" it is stated that "the subject of classification may be dismissed by stating that the third or negative class appears to consist chiefly of superannuated laborers, and widows resident in small tenements; this may serve to show that scarcely any information can be drawn from the numbers which appear in the third or negative class; from the two former classes, and especially the agricultural, important inferences may with confidence be deduced; for instance, that in the year 1811, rather more than one-third part of the population of Great Britain (or, more accurately, 352 in 1,000) were employed in raising subsistence for the other two-thirds, that in the year 1821 the proportion had decreased to one-third, (333 in 1,000); the degree in which the population of the several counties of Great Britain is agricultural, may of course be easily deduced from the respective county summaries.

Summary and comparative statement of the enumerations of 1801, 1811, and 1821.

	Populat'n 1801.	Rate of		Populat'n 1811.	Rate of		Populat'n 1821.
		Incr	Dim		Incr	Dim	
		p. ct.	p. ct.		p. ct.	p. ct.	
England . . .	8,331,434	14		9,533,827	18		11,261,437
Wales . . .	541,546	13		611,788	17 1-5		717,438
Scotland . . .	1,599,068	13		1,805,688	15 6-7		2,093,456
	10,472,048	14		11,956,303	17 2-3		14,073,331
Army, navy, &c	470,498	36		640,500		50	319,300
Total . . .	10,942,546	15		12,596,803	14 1-4		14,392,631

A calculation has also been made upon the comparative population of each county, in the same periods.

In order to avoid uncertainty, the increase has been separately calculated on the respective numbers of females only—viz:

	1801	Incr. per cent.	1811	Increase per cent.	1821				
						14 or 1402		15 4-5ths or 15-82	
Females.	5,492,554		6,225,716		7,253,728				

And the absolute increase of population in Great Britain (if measured by doubling that of females only) appears to have been 1,500,000 in the first period, 2,000,000 in the second period.

It is afterwards added, that "the enumeration of the whole population may be considered as complete, no place being known finally to have omitted making returns. In cases where the name of a place differs from the abstract of 1811, or where two places are included under one title, all the former names are preserved in a note; and in cases where any place has been transferred from one hundred to another, explanation is afforded in the same manner.

The proportion of the sexes was as 100 males to 110 females of the resident population in the years 1801 and 1811; at present to only 106 females, a difference which may be ascribed to the cessation of war, and consequent smaller number of males in the army and navy.

In conclusion, it is proper to mention that where the total of any county, as laid before parliament, in February, 1822, shall be found to differ from the

total in the present volume, the latter is to be considered as the authentic total, a few corrections on discovery of duplicate entries, of omissions, and of clerical errors, having been made on the final revision of the work. The only material error discovered in the abstract of 1811, upon collation with the present abstract, occurs in the North Riding of the county of York, where, from some clerical error in adding the columns of the liberty of Lang-baugh, an omission of 13,061 persons took place, whence a diminution of population between the enumeration of 1801 and 1811 was ascribed to the North Riding, making it appear a singular and unaccountable exception from the general increase. The error is now rectified in the comparative table of counties.

On the subject of burials, there are the following consolatory observations:—"The annual number of burials, as collected in pursuance of the three population acts, authorises a satisfactory inference of *diminishing mortality in England*, the average number of burials not differing materially from the year 1780 to the year 1800; the first five years of that period, the last five years, and the whole period giving the same average result; not but that the effect of the deaths by which England was afflicted in 1795 and 1800, is very perceptible in the increased mortality of those years. Many other, and no doubt, very various considerations would occur to every investigator of such a subject; especially the doubt as to how many years of the burial register ought to be applied as a divisor or existing population. If, for instance, the average number of registered burials in the preceding ten years, is applied to the number of persons resident in England and Wales in the year 1821, the annual mortality very little exceeds one in sixty; but if the registered burials of the year 1820 are applied in like manner, the result is a mortality of one in fifty-seven or fifty-eight, which last proportion (burials not brought into the account considered) is perhaps nearest to the truth.

The same calculations founded on the numerical results of the population act of 1811, show a mortality of one in *fifty-two*, and one in *fifty* respectively. The rate of mortality in the year 1801 has heretofore been taken at one in *forty-seven*; in the year 1790, at one in *forty-five*; in 1780, at one in *forty*; so that on the whole the annual mortality seems to have decreased from one in *forty*, to one in *fifty-eight* (nearly one-third) in forty years.

The causes of increase in the duration of human life (hereby indicated) will, no doubt, be investigated by those who are able to elucidate the subject; houses less crowded, better food, better clothing, and more cleanliness among the numerous classes of society, cannot have been without some effect; and to these may be added the increased extent of drainage, which may have acted beneficially on the health of the agricultural population.

The improved treatment of diseases is stated in many of the returns, as a cause of increasing population, and especially the substitution of vaccination for the small-pox; infectious fevers have almost disappeared, even in the metropolis; and intermittents, which till lately under the name of ague, infested the country very extensively (especially the ten districts) are no longer spoken of. In former times, the plague, (as it was called) (disappeared as soon as the city of London had been rebuilt, after the great fire of 1666, so the land-scurvy, and before that the leprosy, became gradually extinct, when the reformation of religion, and improvements in agriculture, had removed the necessity of eating

salt fish and salted meet during the greater portion of the year.

The mortality in the several counties of England ranges between one in forty-seven, and one in seventy-two; Middlesex and Sussex being the extremes. In Anglesey, the mortality is stated at one in 83.

The abstract of answers and returns is followed by this complete and interesting general summary of houses, families, and persons in Great Britain,—

	England	Wales	Scotland	Great Britain
HOUSES, inhabited	1,951,973	356,483	341,474	2,929,634
by how many families occupied	2,346,717	146,705	447,960	2,941,383
Building	18,289	98	2,405	21,679
Uninhabited	66,035	3,652	12,657	82,264
FAMILIES, chiefly employed in agriculture	773,732	74,225	130,699	978,656
in trade, manufacture or handicraft—	1,118,295	41,680	190,261	1,350,239
all other families not comprised in the 2 preceding classes	454,680	30,801	126,997	612,488
PERSONS, Males	5,433,679	380,487	983,552	7,137,018
Females	5,777,758	360,951	1,109,904	7,248,613
Total of persons	11,261,437	747,438	2,093,456	14,301,631

There being added 319,360, for "army navy, marines and seamen in registered vessels."

And it is succeeded by an equally curious summary of baptisms, burials and marriages, in England and Wales:—

YEARS.....	BAPTISMS.			BURIALS.			MARRIAGES.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
1811	155,671	149,186	304,857	94,971	93,572	188,543	86,389	82,066	168,455
1812	153,919	148,005	301,924	95,987	94,445	190,402	82,066	83,860	165,926
1813	160,685	153,747	314,432	93,726	92,751	186,477	83,860	82,066	165,926
1814	163,282	155,524	318,806	103,552	102,878	206,408	89,944	89,944	179,888
1815	176,233	168,694	344,927	103,442	97,966	197,408	91,946	91,946	183,892
1816	168,801	161,398	330,199	103,924	102,005	205,929	88,234	88,234	176,468
1817	169,337	163,246	331,583	101,040	98,229	199,269	89,779	89,779	179,558
1818	169,181	162,903	331,384	107,724	103,900	213,624	95,571	95,571	191,142
1819	171,107	163,154	333,261	106,749	106,811	213,560	96,835	96,835	193,670
1820	176,311	167,349	343,660	104,329	104,020	208,349	96,835	96,835	193,670
Total	1,664,557	1,590,510	3,255,067	1,011,417	998,152	2,009,569	910,426	898,152	1,808,578

The summary of England and Wales is collected from the registers of 10,453 parish churches, and 389 chapels; and it is believed that no more than five returns remain due.—103 returns of registers of Roman catholics, Quakers, and Dissenters, and of registers kept at hospitals and work houses, were received, and are included in the above summary, and many of the returns mention unentered baptisms, burials and marriages, to the following amount, viz.: Annual average number of unentered baptisms, 23,066; burials, 9,505; marriages, 191. (Signed) JOHN RICKMAN,

In the "preliminary observations" there is an account of the population throughout the last century—As it may be useful to illustrate the above details, we shall return to quote it; and then conclude, for the present, with the remarks which follow such table respecting "the increase of the population." Table of population throughout the last century in England and Wales.

Year.	Population.	Year.	Population.
1700	5,175,000	1760	6,736,000
1710	5,240,000	1770	7,428,000
1720	5,565,000	1780	7,953,000
1730	5,795,000	1790	8,675,000
1740	6,064,000	1801	9,168,000
1750	6,467,000		

Hereby it may seem, that although the beginning of the 18th century exhibits a decreasing population, the lost number had been regained in 1720; since which time a continual, though irregular, increase appears. For the year 1790, the average medium of the baptisms of each year, with the four preceding years, is taken. The baptisms of every year previous to 1730 were not called for by the act of 1801.

It was supposed that when the enumeration returns of 1811 were collected and arranged, a considerable deficiency in those of 1803 would become manifest; but this did not happen, the seeming deficiencies of 1801 so constantly disappearing upon enquiry and explanation, as to leave scarcely twenty places additional in 1811, and those among the smallest of the 15,741 which made separate returns. The variation from this number in the present abstract, which contains 15,773 enumeration returns, entirely arises from the conjunction or division of parts of the same parish, at the option of the overseer, or of the other persons employed in the enumeration, and of course does not indicate any real defect or redundancy, nor affect the total return of any parish, nor of the abstract generally.

It has been reasonably supposed that the first enumeration of the people in Great Britain, especially as it took place in time of war, was rendered somewhat defective from backwardness or evasion in making the answers required, inasmuch as direct taxation, and more obviously the levy of men in every place, might possibly be founded on the result of such an investigation. But as no such effect was perceived to take place, the returns of the year 1811 were, in all probability, more full and accurate than those of 1801; and the war having now ceased, there remains no reason to suspect the least deficiency in the return of 1821. Indeed, the voluntary return of the ages of persons, an inquiry of far more labor than of the enumeration of houses, families, and persons, proves, by the extent of the answers, that the population act has been carried into effect in the year 1821, not merely with willingness, but even with zeal, throughout the greatest part of the kingdom.

How far the increase of 14 per cent. in the period between the enumerations of 1801 and 1811, and of nearly 16 per cent. in the period from 1811 to 1821 (as computed on the female population only) may have been produced from such causes, cannot be discovered: but that the effect was not very different in the two respective periods, may be reasonably inferred by shortly adverting to the parish register abstract.

It may be stated that the increase of the population of Great Britain, from 1801 to 1811, was 1,654,000 according to the respective enumeration returns; and of this increase 1,277,000 in England and Wales:—the registered baptisms are 2,878,906;

the registered burials 1,950,189; showing an increase of 928,717; so that, even allowing the deficiency of the baptismal register not to be greater than of the burial register, more than two-thirds of the increase is established upon incontrovertible grounds. Again, in the period between the enumerations of 1811 and 1821, the increase of population in England and Wales appears to have been 1,828,000: while a comparison of registered baptism and burials give an apparent increase of 1,245,000, or rather more than two thirds of the actual increase. This similarity of result seems to prove that the enumeration of 8101 was no more defective, as compared with that of 1811, than the enumeration of 1811 is to that of 1821. The annual excess of unentered baptisms over unentered burials is estimated at 13,561, in answer to the third question put to every officiating minister; but three times this number, after making every allowance, would scarcely reconcile the parish register abstract with the actual increase, as resulting from the three successive enumeration abstracts. But that the register of baptisms is much more deficient than that of burials has already been shown, although it does not seem possible to ascertain (by direct evidence) in what degree one deficiency exceeds the other.

The proximate causes of the increase of population in Great Britain are obviously the diminished rate of mortality, and the increasing number of children born. The first of these causes has been already adverted to, and the remarks on the schedules, in answer to the 6th question, assign many local causes of increased population, and are briefly inserted in the notes whenever any remarkable increase appears really to have taken place. The instances of diminished population are very few, and almost always noticed.

The remarks which state the increase of population to have resulted from the operation of the poor laws, are too frequent for distinct insertion; they suppose persons to marry with a direct view of thereby obtaining a weekly allowance, or at least in reliance on that kind of resource in time of need, nor can it be denied but that such an effect seems very naturally to follow from the compulsory nature of the relief afforded to the poor in England; and it is quite certain that whenever employment is scarce, the married man will have a preference, lest he should be constrained to apply to the overseer for gratuitous aid.

But there is reason to suspect that the poor laws are much less conducive to an increase of population than they are usually stated to be in argument, and in the remarks on the population schedules; because it must be recollected that although in Scotland there is no poor's rate, the ratio of increase since 1811 is nearly sixteen per cent. upon the resident population; while in England it is no more than 13 per cent. (as computed upon the resident population, of both countries); a small difference and such as probably would be expected had poor rates equally, or not at all existed in both countries.

A class of remarks more frequent in Scotland than in England, goes some length in accounting for the increase of the agricultural population; not immediately from the prosperity of agriculture during the first twelve or thirteen years, of the present century, but consequentially, from the disuse of farm-house servants, (male servants especially), when the master began to live in a very superior manner, to his domestics, and the mistress to dislike the trouble of providing for them. The dismissed laborer in such

cases could not but become a cottager, and in his new situation could scarcely fail to become a married man.

The manufacturing population is naturally on the increase; not only as every short period of prosperity and increased wages produces imprudent marriages, but also because in many manufactures, children are able to maintain themselves at an early age, and so to entail little expense on their parents, to the obvious encouragement of marriage.

But this is not a proper place for going deeply into the causes of increasing population, which may be deemed a solid good, or a dreadful evil, according to the circumstances of the country in which it occurs. (Signed) JOHN HICKMAN.

To pay holders of 5 per cents,	2,801,000	
Deficiency of ways and means		
1821,	290,456	
Total for reduction of Debt,		3,381,456
Reduction of unfunded debt,		21,196,456
Exchequer bills,		29,000,000
Irish treasury bills,		1,000,000
Bills for public works and churches,		368,330
		50,368,330
Total,		51,564,786

The chancellor of the exchequer entered into a statement of the probable expenses of the year 1822, and taking them on the scale of the present year, assuming that the revenue would be considerably increased, and that the unfunded debt would be very much diminished, he expressed a strong hope that, at the conclusion of that year, there would also be found a clear surplus of 5,000,000*l*. Thus, in the two years, the amount of surplus revenue above the expenditure would be 10,000,000*l*.

African Treaty.

The following copy of the treaty entered into at Cape Mesurado is a curiosity well worth preservation.

Agreement for the cession and purchase of lands entered into between the agents of the American colonization society, and the king and head men of Cape Mesurado.

Know all men, That this contract, made on the fifteenth day of December, in the year of our Lord one thousand eight hundred twenty-one, between king Peter, king George, king Zoda and king Long Peter, their princes and head men, of the one part; and captain Robert F. Stockton and Eli Ayres, of the other part, witnesseth, That whereas certain persons, citizens of the United States of America, are desirous to establish themselves on the Western Coast of Africa; and have invested captain Robert F. Stockton and Eli Ayres with full powers to treat with and purchase from us the said kings, princes, and head men, certain lands, viz: Dozoa Island, and also all that portion of land bounded north and west by the Atlantic ocean, on the south and east by a line drawn in a south east direction, from the north of Mesurado river, We, the said kings, princes and head men, being fully convinced of the pacific and just views of the said citizens of America, and being desirous to reciprocate the friendship and affection expressed for us and our people, Do HEREBY, in consideration of so much paid in hand, viz: six muskets, one box beads, two hogsheds tobacco, one cask gunpowder, six bars iron, ten iron pots, one dozen knives and forks, one dozen spoons, six pieces blue bafta, four hats, three coats, three pair shoes, one box pipes, one keg nails, twenty looking glasses, three pieces handkerchiefs, three pieces calico, three canes, four umbrellas, one box soap, one barrel rum; and to be paid, the following: three casks tobacco, one box pipes, three barrels rum, twelve pieces cloth, six bars iron, one box beads, fifty knives, twenty looking glasses, ten iron pots different sizes, twelve guns, three barrels gunpowder, one dozen plates, one dozen knives and forks, twenty hats, five casks beef, five barrels pork, ten barrels biscuit, twelve decanters, twelve

glass tumblers, and fifty shoes, FOREVER CEDE AND RELINQUISH the above described lands, with all thereto appertaining or belonging, or reputed so to belong, to captain Robert F. Stockton and Eli Ayres, TO HAVE AND TO HOLD the said premises, for the use of these said citizens of America. And WE, the said kings, and princes, and head men, do further pledge ourselves that we are the lawful owners of the above described land, without manner of condition, limitation, or other matter.

The contracting parties pledge themselves to live in peace and friendship for ever; and do further contract, not to make war, or otherwise molest or disturb each other.

WE the kings, princes, and head men, for a proper consideration by us received, do further agree to build for the use of the said citizens of America, six large houses on any place selected by them within the above described tract of ceded land.

IN WITNESS whereof, the said kings, princes, and head men, of the one part, and captain Robert F. Stockton and Eli Ayres, of the other part, do set their hands to this covenant on the day, and year above written,

(Signed) King Peter, ✕ his mark.
 King George, ✕ his mark.
 King Zoda, ✕ his mark.
 King Long Peter, ✕ his mark.
 King Governor, ✕ his mark,
 King Jimmy, ✕ his mark.
 Captain Robert F. Stockton.
 Eli Ayres, M. D.

Witness:
 (Signed) John S. Mill,
 John Craig.

Agreement with J. S. Mill.

I HEREBY CONTRACT, for the consideration of one barrel of rum, one tierce of tobacco, one barrel of bread, one barrel of beef, one barrel of pork, and one piece of trade cloth, to give to captain R. F. Stockton and Eli Ayres, all my right and title to the houses situated on the land bought by them on Cape Mesurado.

In witness whereof, I have hereunto signed my name, on this sixteenth day of December one thousand eight hundred and twenty-one.

(Signed) JOHN S. MILL.
 Witness:
 (Signed) Charles Carey, ✕ his mark.
 William Rodgers ✕ his mark.

We promise to present to Charles Carey, one coat.

(Signed) R. F. STOCKTON.
 ELI AYRES.

Foreign Ministers of the U. States.

Among the papers laid before congress at the last session, was a report from the secretary of state "showing the amount of money paid as salaries, outfits and contingent expenses of foreign ministers since the year 1800, and the amount paid to each." The following recapitulation takes in every thing that can be generally useful for reference as to this subject.

M. P. stands for minister plenipotentiary. E. E. and M. P. for envoy extraordinary and minister plenipotentiary—these abbreviations were necessary to mechanical convenience in printing the table. We have also arranged it so that the different missions, &c. of the several gentlemen are placed together, that the amounts paid to each may be more easily ascertained by such as desire it.

NAMES.		OUTFIT.	RETURN.	SALARIES.	CONTINGENC'.	TOTAL.
Prattis King, M. P.	to Great Britain, from 1st January, 1801, to 18th May, 1803		\$9,000

The cause of the Greeks.

FROM THE LIVERPOOL MERCURY.

Lord Erskine, whose early career was distinguished by his attachment to the liberties of his own country, is a genuine cosmopolite, whose motto appears to be, "The world my home, and doing good my religion." To his immortal honor, the lively interest he has manifested to the cause of regenerated Greece presents a striking contrast to the slavish and criminal apathy with which we blush to own our countrymen have witnessed the fate of a struggling and gallant people, towards whom our national habits and earliest predilections ought to have inspired the deepest sympathy. His lordship's appeal, from which we subjoin a few passages, is addressed to the earl of Liverpool; and if it, in any degree, operates favorably upon the approaching congress, we shall greatly rejoice. For our own parts, we have very little hope that a liberal spirit will ever find its way into the deliberations of the holy alliance.

"We hail the appearance of this production (says the *Morning Chronicle*) as the harbinger of better fortune to the cause of that unfortunate people. Religion and humanity have here guided the pen of this amiable and venerable nobleman, whose voice has so often and so successfully been already raised in behalf of the oppressed; and the heart that can read his powerful appeal unmoved, must be torpid indeed. On the religious part of the community, we are warranted in believing that it will produce a strong and durable impression."

His lordship commences with informing lord Liverpool that "he is solemnly and indispensably forced, by a duty paramount to that of a statesman, to make an instant effort to engage the nations in alliance with this country, to overthrow the cruel dominion of unprincipled, incorrigible barbarians, over a christian people, struggling for freedom and independence."

The noble writer then proceeds as follows:

"The freehold of the Greeks, if I may so describe the possessions of that nation, comprehend Thrace, Macedonia, Thessaly, Epirus, Achaia, Peloponnesus, and Negropont, &c. with most of the islands in the Archipelago, the Ionian islands amongst the number, they being sometimes called Ionians on that account. They were masters of the celebrated cities, with their districts, of Athens, Sparta, Thebes, Corinth, and Mycenae, &c. and were a most refined and celebrated people. Classical learning, so justly encouraged in all countries as indispensable, derives its principal sources from their sublime superiority in poetry and eloquence, which, in the lapse of so many ages, have found no competition; and, even at this hour, to inspire those who are to live after us with the most exalted sentiments, with contempt of danger, and the sacred love of their country—we make them stoop at their desks, in their earliest years, over the histories of their illustrious forefathers, in periods when the noblest of our own were in the woods. The claim, therefore, of the Greeks, with the aid of all christianity, to a free and undisturbed territory, *com mensurate, at least, with the present population*, is the clearest in human signals, whilst the dominion of the Turks, who overpower and oppress them, is the most audacious usurpation. They began, extended, and completed their ravages under the mask of imposture, impiously pretending to a commission from heaven for the desolation of the earth.

"All that I ask of the British government, through your lordship, is an *instant, faithful, and strenuous*

exertion, to engage our allies in this great cause of humanity, without giving rise (as I assert it could not) to any probable, or, rather, possible contest, which could deserve the name of war.

"It cannot be questioned, that, by thus taking the lead for the deliverance of the Greeks, we should lay the foundation of an endless gratitude, be advantaged by their returning power and commerce, while we were snatching from the desert the most fertile provinces, and redeeming from their abject slavery and contagious pestilence, the noblest people of the ancient world.

"But it is objected that the Greeks are not less savagely cruel than the Turks. *I will not hear such a charge*—the gentlest animals which Providence has subjected to us, patient of labor, and licking the benevolent hand that feeds them, when maddened with terror and goaded by barbarous oppression, will change on a sudden all the characteristics of their original natures, and overthrow every thing in their course. To judge of what the Greeks, *under good government*, are capable of being, we have only to look back to what they *have been*. Their pedigrees, in which we can trace so many great men, who *never should have died*, ought to protect them from the Saracens, who cannot show, in all their esoutecheons, a *single man who should have lived*.

Well then may we exclaim to such miscreants, in the language of Milton—

"Lift not thy spear against the Muse's bower,
"The great Æmathian conqueror bid spare
"The house of Pandarus, when temple and tower
"Went to the ground."

"But, although I have thus endeavored, against my most predominant feelings, to expel from my indignant views, cruelties by whomsoever committed, and, in protection of the unfortunate Greeks, have covered them with the veil which our imperfect natures entitle me to throw over them; yet, let it be remembered, that what I have written concerning them, applies only to unpremeditated inhumanity, such as, when hunted like wild beasts, they have turned upon their pursuers, but that barbarous retaliations can receive no pardon—it continued when they are contending, as a nation, for their religion and freedom. I rejoice that they are advanced in that condition, that they are marshalling armies, that they are laying the foundations of a civil government; and I feel confident that they will henceforth remember that they are soldiers and christians.

"That our influence could fail, if faithfully exerted, I cannot bring my mind to believe. I might ask those who were the warmest advocates for the war, and who held the highest its happy termination, and the eminence on which it has placed us, what *rueux* would think, if it could be doubted, that if we spoke the word we should be obeyed? The misfortune is, my lord, *that we did not speak it* at a time when many of the enormities which have taken place, and for a long time must follow, might have been averted, and I fear that we may be now under great embarrassment in holding a different course. I am convinced that it has been entirely owing to the system which the governments of Europe have too long been pursuing, that the great work of humanity and justice has not long ago been complete, and the only difficulty I can foresee to its instant accomplishment is, that, perhaps, we ourselves must retrace some of our steps in taking the lead to give it effect. Our alliance with the Porte ought to have been long ago removed out of the way, as being unworthy of the British government and people; and, without contending that we should at once have resented by hostility their monstrous in-

quities, yet, if not a man in England were prepared to second my opinion, I should assert, that it would have become us to withdraw our ambassador from Constantinople, and reject such a banditti as our allies. The king of Great Britain ought not to be styled the brother of the Sultan, whilst the desolation of Scio and the butchery of the hostages are unatoned for. Those authorized murders are not the acts of a civilized nation. "The voice of their blood," like that of the first victim of violence, "cries unto God out of the ground," and the judgment of God ought to be an example to the nations who worship him—"Let them be fugitives and vagabonds upon the earth."

"My observations, my lord, upon this afflicting subject, are drawing fast to their close. It has been for some time no secret that a congress is to be held upon the continent, where the subject of the Greeks cannot but come under consideration, and that we are to be represented at it by some minister of state. It was this which determined me, without a moment's delay, to write and to publish this letter; because it would have been too late to make any useful appeal to your lordship or the public, after we had taken our part, and, perhaps, concurred in measures which I could then only uselessly dissent from.

"If this congress of sovereigns and their ministers is only to have for its object the renewed support of principles and projects already too notorious, and if, to avoid any incongruity or departure from the system hitherto acted upon, *Two keys is to be sanctoriously upheld as a legitimate sovereignty, and the Greeks are to be sacrificed, or in any manner compromised, on the ground that they are the subjects of the Porte, and bound by their allegiance, though against their universal will, to obedience and peace,* I desire hereby to express my abhorrence of comprehending this country in such an odious combination, and I am confident that the great mass of the British people will join me in my protest. My alarm as to the future, my lord, is justified by what is past. The conduct of Russia is quite inexplicable upon any other ground than that she has been, recently, at least, acting in concert with the continental powers, and ourselves, perhaps, along with them, had taken no steps for any establishment for the Greeks, nor were preparing to provide for them any security whatsoever."

CHRONICLE.

Thomas Jefferson, James Madison and James Monroe lately met, like private persons, at Charlotteville, or as ordinary visitors to the University of Virginia.

Florida. The legislative council have agreed to wear crape for sixty days, in testimony of respect for their late president, Dr. James O. Bronough. This late valued man fell a victim to his disinterested zeal in attending the sick at Pensacola.

Washington City. The first bell erected in this city for public purposes, was placed in the tower of the Unitarian church on the 11th instant.

Close polling. An election was held last week in the district composed of the city and county of Philadelphia and county of Delaware, (under the former apportionment), to supply a vacancy in the present congress—the amount of votes was 11,953, of which col. Forrest had a majority of one.

Philadelphia. Robert Wharton, esq. is re-elected mayor.

New Jersey. The elections in this state were held last week. No opposition was made to the republican candidates for congress: to the council 9 republicans and 4 federalists are returned; to the assembly 30 republicans and 12 federalists—majority in joint meeting twenty three.

The gentlemen elected to congress are Messrs. Lewis Condict, Geo. Cassedy, Samuel Swan, Geo. Holcombe, James Matlack and ——— Garrison.

Delaware election. The returns are now published and shew that Louis McLane is re-elected to congress by a majority of 639 votes—and that Daniel Rodney is chosen to supply the place of C. A. Rodney, in the present congress; these are "federalists," though a "republican" governor has been elected by a majority of 22 votes. The legislature, for nearly the first time we believe, has a decided republican majority.

Maryland election. The following is a list of the members of congress lately chosen in this state—Peter Little, Samuel Smith, Joseph Kent, Henry R. Warfield, Raphael Neale, re-elected. Thomas Hayward, jr. in the place of Mr. Wright, George E. Mitchell, in the place of Mr. Read, John S. Spence, in the place of Mr. Bayly, and John Lee, in the place of Mr. Nelson—the old members in each of those cases having declined a poll.

More mines in North Carolina. Gold and silver, as well as lead, in considerable quantities, have lately been discovered in Lincoln county, in the state of North Carolina.

Mad dogs. A London paper states that the hydrophobia prevailed to such a degree in New York and Philadelphia, that the military had been called out to kill the dogs!

A tyger, weighing 92 lbs. and measuring 6 feet 3 inches, was lately killed in the neighborhood of Blakely, Alabama.

Squirrels. In some parts of Ohio, these animals are so numerous as to threaten the destruction of whole crops of corn. Thousands of them are killed by hunting parties, without an apparent diminution of their numbers. A Cadiz paper says "they are literally thronging the streets and house tops of our villages every day"—2,351 of them were killed by a party of eleven men in four days.

Geese. James Sisson, esq. who resides near Warren, R. I. has a breed of geese, that weigh, when fatted, 20 lbs. or upwards a piece. The old ones were imported from Germany, and the young broods appear to do well.

Newspapers. For the first eighty years after the British colonies began to be settled, (says Dr. Dwight), there were no newspapers printed in any of them. The first was the Massachusetts Gazette, originally the Boston Weekly Newsletter, which was published in 1704. There were only 7 published before 1750. In 1765 there were 26 on the continent, and 5 in the West India Islands.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 8—VOL. XI.] BALTIMORE, OCT. 26, 1822. [No. 8—VOL. XXIII. WHOLE No. 580

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ The second, and much improved, edition of a very valuable pamphlet, has appeared at Philadelphia, entitled "Desultory facts and observations, illustrative of the past and present situation and future prospects of the United States: embracing a view of the causes of the late bankruptcies at Boston. To which is annexed, a sketch of the restrictive systems of the principal nations of Christendom." By a Pennsylvanian."

Mr. Mathew Carey is understood to be the writer of this pamphlet—it is one of the best productions of his prolific and powerful pen, and presents a great variety of facts and remarks that are entitled to the most profound consideration, and we wish that it was in the hands of every thinking man in the United States. The great purpose of it is to shew the importance of the home market, and illustrate the necessity of it to the prosperity of the nation, fast retrograding by excessive importations of foreign goods and ruinous drains of the precious metals—the consequence of which is bankruptcy and distress. These things are demonstrated by many authentic tables—to which, as well as the pamphlet generally, we shall hereafter liberally refer.

One or two things we shall just notice now: It is shewn that the price of cotton has declined at Liverpool from 34 pence, in 1814, to 8 pence, in 1822; that, from January to June, in the present year, the imports, at the three ports of Boston, New York and Philadelphia, exceeded the exports by 150 per cent. or, in the sum of 19,000,000 dollars, [in both cases, exclusive of specie]; that the returns of the custom-houses, for the last quarter of the last year and two quarters of the present, so far as they were received at the treasury, give an *import* of specie and bullion to the value of \$1,913,415, and an *export* thereof to the amount of \$10,095,468—being a balance of more than eight millions against us; that, in January, 1814, the Boston banks had 4,945,444 dollars in their vaults—in the same month, 1821, only 2,435,188—in the same month of the present year, but 936,427, and on the 22d of June last, only the sum of 406,275!!! If these facts are not calculated to put the people to *thinking* and *acting*, we know not what will do it.

☞ THE SUPPLEMENT. It was mentioned during the past summer, that a supplement would be published for the volume of the REGISTER just closed. The unprecedented drought kept back a supply of paper and delayed its progress—and since then, a variety of circumstances have retarded its publication so long that, after consideration, we have resolved to issue it as belonging to the *current* volume, and shall take care to have it finished by the first week in March next, the larger part being already printed.

This change is not material to any one, and, in deed, but tend to make the supplement more valuable; but the fact should be stated, that gentlemen may have their twenty second volume bound without waiting any longer for it. It shall be duly forwarded, (and in due season), for the twenty third, or current volume, to those who have or shall have ordered it.

Vol. XXIII.—8.

CAPT. HULL. It is understood that the proceedings had in the case of this celebrated officer, (at his own request), have resulted in his complete acquittal. The testimony, &c. it is said, will make two octavo volumes.

AS DISGRACEFUL. We noticed in our last the publication of three volumes of cases of adultery and fornication in England, as being disgraceful to the society of that country—but our own newspapers have column after column, sometimes as much as three columns at a time, of the foul and filthy productions of two persons, whose noise about their design to *kill* one another was equally disgusting as that which they now *say* about each other—and this wretched stuff finds its way into some of our best conducted periodical works, for the edification of those who desire instruction in the use of bad words and abominable epithets!

GLASS. An extensive establishment for the manufacture of glass, is about to be made at Ipswich, Mass.

CANALS. The water is about to be let into another section of the great Erie canal, so that a communication will be opened from Schenectady to Rochester—the distance is about *two hundred miles*.

A letter from Whitehall states that the northern canal is in full operation, and that great quantities of plank are daily passing the locks at that place.

BANK OF THE U. S. There is a great apparent diversity of opinion as to the person who shall succeed Mr. Cheves, as president of this institution. Public opinion seemed to be in favor of Mr. Gallatin, but it is stated that he has absolutely declined, and some half a dozen are named for the office, about to become highly important. The time has nearly arrived when the mammoth power of this establishment may be felt—and it will soon be felt to the whole extent long since predicted, unless there should again be some great mismanagement of its concerns: we shall know what this bank is before the bonds given for the payment of duties on goods imported during the *present year* are cancelled; and there is no sort of doubt on my mind, that the public suffering will coerce the adoption of some measures to embarrass the operations of the institution. Much, however, will depend on the administration of its affairs—and a liberal and enlightened, as well as an honest man for its president, may do a great deal to promote its popularity, without diminishing the profits which ought to be rightfully made. But, if the president shall be the *tool* of a junto, the public and the stockholders must look out for troublesome times and much confusion, and no small amount of loss.

HEALTH. The eastern states have been, and remain to be, generally healthy—there was a little alarm of fever at one or two places, but it soon subsided. The same remark applies to the state of New York, except the city, in which, however, there is a decrease of cases of fever, and the people begin to look to a speedy return to their homes.

Philadelphia is healthy, but some places in Pennsylvania have been severely afflicted with a high bilious fever, such as we call the yellow fever, when it appears in our cities—Delaware has been like situated, except that the cases have been less malignant. Though a small part of Baltimore has been infected, the rest of the city has been quite as healthy as any other part of Maryland—much more so than many parts. Some spots in Virginia have been quite sickly; but the southern states and cities have been more than usually healthy, except New Orleans and Pensacola. The former of these were remarkably free from fever until about the 1st of September, when it broke out with great fury, so that, up to the 23th of that month, it was believed that from 7 to 800 persons had died of it—60 new cases were reported on the 24th; out of one vessel, with a crew of 16 persons, there were 15 interments; all business was nearly at a stand, though it is said that not one native of Louisiana has died. Pensacola, at the last dates, remained nearly deserted—the fever was dreadfully fatal at this place; of two hundred persons attacked with it, only four are known to have recovered; so says a letter therefrom. Several of the towns of Kentucky and Ohio, situate on the great rivers, have suffered severely; but the rest of these states are healthy. Detroit has been much afflicted—the prevailing disease is called the typhus. The season, generally, has been sickly—which, in many parts, is attributed to the remarkable drought that we had.

YELLOW, OR MALIGNANT FEVER. Without any pretensions to the medical character, we have thought that a few common sense remarks, drawn from much personal observation and considerable enquiry, may have a tendency to *humanize* the feelings of some, in respect to others, afflicted with this awful malady. If the disease which partially visited Baltimore in 1819 and 1821, and more slightly in the present year, was the "yellow fever," (as all the doctors say that it was, or a grade of bilious which amounts to the same thing), we feel authorized to speak a little about it.

In 1819, that section of our city which is called the "Point,"* and containing about an eighth part of our population, was pretty generally affected with this disease—350 persons (in all) died of it during the season, and the majority of the people of that section abandoned their homes, about 1000 being encamped and supported by public provision and private bounty. In 1821, a small part of the same district was afflicted; the deaths therein, by the fever, may have amounted to about 150, and, perhaps, a fifth part of the population removed. In the present year, 1822, a still smaller part, and in a new place, was affected—but the deaths may have amounted to 130 or 150; because there were fewer removals, not more than an eighth or a tenth of the *whole* people of the "Point" having fled from the disease.

In each of those years, such as left their homes generally took up a temporary residence in other parts of the city—many, with their bedding, &c. in the most densely populated districts and neigh-

* The fever also prevailed in some other parts of the city—such as Smith's wharf, Dugan's wharf, &c. and there were a number of cases in Commerce street, &c. but the noxious matter was seemingly expelled from those places by the exertions of the board of health, soon after its appearance.

borhoods; and, as above stated, 1000 were encamped, or rather accommodated chiefly in two adjacent rope-walks—yet *no case of contagion existed*. In 1819, about thirty persons from "the infected districts," died within 100 yards of my own dwelling, (where my family remained as unimpressed with the fear of catching the fever as if they had been located on the Allegany mountains), and not one person received the disease from either of them. Other instances happened in 1821 and in the present season; but the people among whom they occurred were no more apprehensive of the disease, as being *contagious*, than of contagion from a broken leg; they sympathized with the sufferers, kindly attended upon them, and the neighbors visited them as in ordinary cases of sickness. These are facts within my own knowledge and experience—and *beds* on which persons died of the "yellow fever," were slept on as other beds are, without fear or effect. It is demonstrated, then, that the disease is not contagious, and the cause of humanity is advanced by the abundant proof of it. We all believe it imprudent, uselessly to frequent a district supposed to be *poisoned*, and especially at night—but all communicate as freely with those who reside in such districts as with any other persons whatever. It is strictly a *local* disease—I know of *one* house in a thickly built part of this city, wherein five persons sickened (four of whom died) in 1819, without a case occurring in the adjacent houses—indeed, the *immediate* neighborhood was quite healthy: the cause was ascertained and removed, and, consequently, the effect ceased.* We believe the yellow fever may be produced by any one desirous of doing it, in a proper season, by collections of filth, especially of vegetable matter, exposed to the operations of the weather; and suppose that the causes of it are at most times within the power of human efforts, though they may not be within present, *instant* means. That part of the "Point" which was the most unhealthy in 1819, has been nearly, if not altogether, exempt from the disease in the present year—as we believe from the vigorous exertions of the board of health in 1820. The malady that lately prevailed has been called "bilious fever," but is of the same character as that which has affected various parts of Maryland and the states adjacent. An estimable friend, who resided on a most delightful spot about six miles from Baltimore, lost his own life and that his niece, and his lady also nearly died, from having visited his daughter in Calvert county (who perished of this disease), after their return home: but no other of a very numerous and most affectionate family were afflicted with it.

* *Richmond, Oct. 14.* A mortality has afflicted the family of Blandfield, in the county of Essex, which is sufficient to touch the hardest heart. One of the interesting daughters was the first to fall a victim. A second soon followed her to the tomb. Dr. Geo. Clark, a son-in-law, and a highly esteemed physician of Georgetown, (D. C.) visited the family to administer his professional services, and shared the same fate on last Saturday week. The father himself, and a respected guest, who is a lieutenant in the navy, are now stretched on a bed of sickness. The sick, indeed the whole family, are scattered among the hospitable neighbors. It is much to be apprehended that the disease has put on the type of yellow fever. *There is black vomit spoken of.* It is said the disease is ascribed to some shingles which were mouldering in one of the cellar rooms, for some time shut up—the room was opened, and the fatal *effluvia* is supposed to have pervaded the house.

It is useless to multiply cases*—an idea that the disorder which we have had in Baltimore is *contagious*, cannot be tolerated. There is not a solitary case to support the preposterous notion.

The city of New-York has been a little visited and much alarmed with the "yellow fever," for some time past. It has been publicly stated that about 30,000 persons had removed from the "infected district," and established themselves at Greenwich, &c. among whom were many of the principal merchants, for the disease appeared in the business-part of the city. Persons and their goods have been received at Greenwich, &c. from the "infected district" without apprehension of danger; and we venture to say, that not one person has died out of the "infected district," in consequence of receiving the fever from persons or goods, from that district.—This broad assertion is offered from much observation on the nature of the disease—if incorrect, proof of the contrary may be easily furnished, nay, would have been furnished; because some in N. York would rather that a man should doubt the Christian religion than a contagious principle in the yellow fever! Yet, with this proof at their own doors, in the "very teeth" of obstinate demonstration, the authorities at New-York *quarantined vessels from Baltimore, during the present season, until the 1st of November ensuing*† though they must have known that, of our 60,000 inhabitants, not more than 500 or 600 had even removed a few hundred yards, to avoid any disease prevailing here—that the city, proper, is as healthy as ever it was at this time of the year; that the people, in general, have no sort of fear of the disorder, and that there is no general cause for it! What strange inconsistency—to receive persons and goods from *their own* "infected district" without apprehension of danger, though to travel the distance may consume only half an hour's time, and quarantine vessels from *Baltimore*, loaded at and departing from places not liable to the suspicion of being infected! The mystery of this is past finding out, and we shall not attempt it. But we do hope that the time of such things has nearly passed away, and that mighty truth will soon triumph over obstinate, inconsistent prejudice. It is very possible that vessels filled with noxious matter, may cause the decease of persons by the yellow fever, who inhale the poison—but the disorder will not spread be-

*There is one, however, that deserves a special notice. *John M'Henry*, (colonel of one of our Baltimore regiments of militia, and son of the former secretary of war, after whom our famous little fort was named), returning from the springs, stopped at Mercersburg, Pennsylvania, and was there seized with a malady at that time prevailing in the place. His illness being reported, his brother-in-law, *John E. Howard*, jun. (general of one of our brigades, and son of our much revered revolutionary veteran), went on to administer to his necessities, and, soon after the decease of colonel M'Henry, he also was taken down, and died with a few days illness. Now, this malady that prevailed at Mercersburg is exactly the same as that which has afflicted a small part of the city of Baltimore—a high bilious fever; and, at a place hitherto regarded as one of the most healthy in the country, we have suddenly lost two of our most estimable citizens—who, if goodness of heart, enlightened minds and overflowing means could have saved them, would not have left us so prematurely.

† Since the preceding was in type, we notice that the proclamation establishing a quarantine is revoked.

yond these, unless such noxious matter abounds in the district to be acted upon. The famous cases of the U. S. ships *Macedonian* and *Hornet*, at Norfolk, are precisely in point. To a certain extent, the quarantine laws may be useful—foul vessels should not be permitted to approach our large cities in several of the months—their filthy matter may act on a foul atmosphere like a spark on a cask of gunpowder—but even so without a *contagious* principle; for the yellow fever will not prevail in any place that does not abound with *its own* elements. In several little towns of Virginia and Pennsylvania, this disease has prevailed ten times more severely than in New-York or Baltimore, to which, most assuredly, it was not imported.

BOLIVAR. The following is an extract of a letter from this great man to his correspondent in Caracas. If our own loved *WASHINGTON* lived, the chief of Colombia might stand beside him, without fear of disparagement except as a copy of the great original. He is, surely, about the most illustrious soldier and statesman of his day.

"This beautiful country, so much Colombian and patriotic, that none exceeds it in these sentiments, is very fertile, populous, and affords the best hopes: it will form the grandest department of Colombia, and general Sucre, its liberator, will command it, with the greatest applause of its inhabitants.

"I shall remain here some months, and then, at the end of the year, I go to Bogota, to resign my presidency, because I have fully concluded the duties of my office as a soldier. At present in Colombia there are no Spaniards, and thus I have consequently fulfilled, beyond my hopes, the inestimable work of peace. I owe it to myself to resign public affairs, because having grown grey in the service of my country, I ought to dedicate the remaining third part of life, to my glory and my repose."

NAPOLEON. When the British had violated the rights of hospitality and all laws, divine or human, after they had obtained possession of the person of Napoleon Bonaparte, they called him "general;" and after his death at St. Helena, his jailor, Sir Hudson Lowe, refused to permit the following tablet to be placed on his coffin—

"*Napoleon.*

"*Ne a Ajaccio, le 15 Aout, 1789;*

"*Mort a Ste. Helene, le 5 Mai, 1821.*"

Sir Robert Wilson noticed the proceeding in parliament—he acquitted lord Londonderry of participation in these mean and ignoble proceedings, from his general character, and from the liberal conduct which he manifested at Chatillon, which was acknowledged by his enemies, and more particularly after having sanctioned that treaty of Chatillon, which has never been made public, but which Sir Robert Wilson had in his possession, and the first article of which he read in the house, and to the authenticity of which he pledged himself—

"In the name of the Most Holy and Indivisible Trinity, their imperial majesties the emperors of Austria and Russia, his majesty the king of the united kingdom of Great Britain and Ireland, and his majesty the king of Prussia, acting in the name of all their allies on the one part, and his majesty the emperor of the French on the other, desiring to cement the repose and future welfare of Europe by a solid and durable peace by land and sea, and having named, to attain this salutary object, their plenipotentiaries, have agreed on the following articles:

"Art. 1. In the name of the holy and indivisible trinity. There shall be peace and friendship between their majesties the emperors of Austria and of Russia, the king of the united kingdom of Great Britain and Ireland, his majesty the king of Prussia, acting in the same time in the name of their allies, and his majesty the emperor of the French, their heirs and successors in all perpetuity.—The high contracting parties engage, &c. &c.

(Signed) "ABERDEEN,
CATHCART,
Le Comte de RAGOUNOSKI,
HUMBOLDT,
Le Comte de STADION,
CRAS. STEWART, Lt. Gen.

"February 17, 1814."

Sir Robert Wilson remarked, that he should not say a word upon the sacrifices of *legitimacy* on that occasion, notwithstanding that it had been so much insisted upon at subsequent periods, but he would never believe that the noble lord could have forgotten such an act of disinterestedness on the part of Napoleon, when the latter sacrificed for the presumed interests of his country, that throne and the recognition by England of that dynasty which was supposed to be the object of all his ambition.

EXTREMELY MODEST!—From the *London Courier of Sept. 12, the ministerial paper of Great Britain.* "It is a common practice with those ignorant pretenders to political knowledge among us who set themselves up as the reformers of all abuses, imaginary or real, to refer to the United States of America, as the pattern for all governments to follow. We have more than once exposed the puerile absurdity of the argument, that the internal economy of an infant republic can, in any manner, be adapted to the wants and necessities of an ancient monarchy. Before we can move within the narrow circle which limits the operations of the U. States' government, we must be reduced to the dimensions of that government; we must, in fact, retrograde three or four centuries, in arts, literature, in civilization, in conquests; and then, having lopped of all our wide spreading branches of power and dominion—having extinguished our taste for refinement and luxury—having lowered the standard of our intellectual character—and brought ourselves somewhat nearer to Shakspeare's "forked animal," we may fit ourselves with the garb of republican simplicity. But till that is done, it is preposterous, and would be amusingly ridiculous, if we did not know the mischievous end that is aimed at, to talk of taking the United States as our model."

☞ It is thus that proud Englishmen treat their best customers—but we shall never coerce their respect until we cease to use their tapes, bobins and calicoes; and then they will make us out to be angels, in the hope of wheedling us into a support of their starving population. Yet it would be well indeed, if the importation of bales of British goods were as harmless as the commodities of the "Courier." The one robs us of our specie and palsies the national industry; the other only raises the smile contemptuous.

THE PANCHITA. Letter from lieut. com. Gregory, of the *Grampus*, addressed to the editor of the *Charleston City Gazette*—

SIR: I herewith transmit you a few remarks, accompanied with certain documentary evidence. On the grounds thus established, I conceived it my duty to capture the *Panchita* alias *Palmyra*, as in my opinion they fully established her character to be such as was at least doubtful, if not *piratical*.

If I know any thing, I hope I know the duties of my profession, and the nature and extent of the orders I have from the government of my country. Permit me, then, before the following documents are read, to make a few plain remarks.

One of the crew of the brig *Maria-Ann*, from Curacao to New York, was brought into court, and swore to the fact, that in July last the *Palmyra* boarded the said brig, robbed her, and demanded and searched for money. The privateer *schr. Periera*, was in company at the same time, which also boarded and robbed the brig. Capt. *Escurra* acknowledged that an American pilot boat schooner, (the *Dennis* of Newburyport) was robbed of money and clothes. If this came to his knowledge, permit me to ask why he did not punish the offenders! He afterwards sent the same men to board the American schooner *Coquette*, which they robbed. All the authority by which the *Palmyra* had to cruise is derived from the signature of a lieut. in the Spanish Navy, who is also the harbor master of *St. John's, Porto Rico*, and upon examination of the commission, it will be found to be one that had expired, and afterwards unlawfully extended!!! It was also given without securities to indemnify for any spoiliations they might commit at sea!

I insist, sir, upon these truths. The commission is for a schooner of 93 Spanish tons, (equal to 110 American) to carry one long 12 pounder, eight 10 pound carronades, and one hundred men. Now, the *Palmyra* is an hermaphrodite brig of 163 tons, American tonnage; mounts a 12 pounder, which is the only circumstance that corresponds with the commission; two of the crew have been recognized as Cape Antonio pirates, and another of her crew was heard to say that the *Grampus* was the same schooner that broke them up at *Sugar Key*. It may here be necessary to remark, that all vessels which have been robbed by the crew of the *Panchita* alias *Palmyra* have been boarded when the flag of Venezuela or France has been worn by that vessel. Threats of vengeance, which pass unheeded by me, have already been thrown out, but I will execute notwithstanding, what in my apprehension is my duty as a naval officer.

The respect I bear to the civil tribunals of my country, suffers me not for one moment to cast any reflection on the decision of the honorable judge. He has pronounced a sentence of acquittal in the case of the brig *Palmyra*. The *Grampus* must, therefore, relinquish her prize, if the law does not sanction the claim. But respect to myself, and to the brave men under my command, induces me to shew to the world, that while we would risk our lives for the protection of fair commerce, we have not captured and brought into port any prize without strong grounds for the correctness of our conduct.

The public's most respectful servant,
FRANCIS H. GREGORY,
Lieut. commandant.

Charleston, Oct. 8, 1822.

[The documents mentioned by lieut. Gregory, are 1st a letter from the captain and mate of the American schooner *Coquette*, dated 9th August last, in which they state, that they were that day fired on, and brought too by an hermaphrodite brig, in the passage between *St. Bartholomews* and *St. Thomas*; that the officer and crew of the brig overhauled the captain's, mate's and seamen's chests, trunks, bags and births, from which they carried away a number, of articles enumerated; and that, on the arrival of the captain of the *Coquette* at *St. Thomas*, he was informed, "notwithstanding

Der republican, or patriotic colors; she is one of his catholic majesty's brigs, named the Panchita (Palmyra) and last from Porto Rico." 2d. A letter from captain Langdon of the brig general A. Jackson, of New York, dated August 10th, wherein he details various acts of piracy committed on his vessel while on the passage from this port to Curracoa. 3d. Affidavit of the captain, mate and two seamen of the schr. Coquette, as to the circumstances noticed in the first letter above mentioned, in which, the piratical vessel is described to be an "hermaphrodite brig with a red streak, and one long gun midships, and several others" 4th. Affidavit of the master and mate of the French schr. Jeune Eugenia, in which they depose that they were boarded on the 11th August, (in sight of the island of St. Croix) by a brig "hermaphrodite rigged, with red sides," that an officer and boats crew of this brig, carried off a barrel of beef, and a barrel of rice from the French schooner; and that, to the best of their knowledge, the Palmyra, which then lay at anchor in the harbor of St. Thomas, a prize to the Grampus, was the same which boarded them at sea as above deposed. 5th. Affidavit of Megal Pascino, a seaman belonging to the Palmyra, formerly the Panchita, who deposes to several acts of piracy committed by that vessel while he was on board, and which were explicitly sanctioned by the officer belonging to the Palmyra, who accompanied her boat when the acts of piracy were committed. 6th. Copy of the commission granted by the Spanish authorities, referred to in the above statement of lieutenant Gregory].

It will be recollected, that the Palmyra was discharged by judge Drayton, on the ground "that the commission is a regular one of a private armed vessel, and that the acts of such part of the crew as have committed depredations on our commerce, subject only *them* to punishment, and does not create a forfeiture of the vessel. *Com. Adv.*

FOREIGN NEWS.

Great Britain and Ireland. It is with great pleasure we learn that the distresses of the people of Ireland have nearly ceased, on account of hunger and general sickness. The potatoe crop has arrived at maturity, and the product is large; so starvation is no longer apprehended.

The following are among the ridiculous things that happened during the king's visit to Scotland—the pillows on which the old debauchee slept, were *kissed* by young girls and old women; when he landed at Leith, he happened to put his *foot* on a log of mahogany, and, for being thus honored, it is all to be made up into snuff boxes; when Sir Walter Scott presented him with a splendid gift of certain ladies, the king drank their health, and Sir Walter, on his marrow bones, begged the glass to be preserved as a *precious relic*—it was "graciously" given, but the wretched knight had the misfortune to break it in his pocket! When the steadiness and sobriety of the Scotch character is considered, we may well wonder how such things took place.

The Irish papers contain a long report of the trial of *seven men*, as actors in a most terrible deed of violence committed on a young lady, aged 16, of the name of Gooild. The rascals entered the house by force, made her get out of bed, carried her off, and then gave up the entire possession of her to a wretch named Browne, who abused her. The case excited much attention, and the poor girl was universally pitied and believed. The fellows were all sentenced to death. This occurred in Limerick.

Spain. A good many of the insurrectionists have been made prisoners at different times, and there is a *priest* to be found in almost every parcel of them. If to take life in any case is justifiable, these fellows should be hung up without mercy, as the authors of the whole mischief that affects Spain. In this, as in every other country, the priests, of *established religions*, are the basest portion of the society, taking them as a body of men.

Turkey. Notwithstanding the Paris Journals, under direction of the "legitimate" government, and the London Courier, &c. in the pay of the British ministry, have done all that they could to resist a belief in late accounts of the victories of the Greeks, as though they, by the force of their paragraphs, would change the nature of things that had past!—we have ample evidence of the two defeats sustained by Chourschid pacha, near Thermopylæ.

An article dated Corfu, Aug. 11, says—"We have just received certain news of the general defeat of the Turks. It took place at Thermopylæ. It was the greatest battle which the Greeks have gained since their insurrection. Chourschid pacha, with an army of 40,000 men, composed of the combined forces of Thessaly and Macedonia, and all the reinforcements from the bank of the Danube, attacked the straits on the 20th July. The columns of the Turks which got entangled in the defile, surrendered after great carnage, and the rest of the Turkish army took to flight. Pursued in his retreat, Chourschid pacha took the route of Pharsalia; but in this direction, he found the defile of *Trachis*, about four leagues long, where he lost three fourths of the remains of his army. From the village of Zoli to Thaumacos, the road remained blocked up with dead bodies." (These statements are accompanied by particulars of the battles).

"The Souliots, after their two victories against Omar pacha, continued their sallies from the heights of Kianna upon the Albanese, commanded by that pacha, whose army, which, at the beginning of June, amounted to 24,000 men, is now reduced to 7,000."

About the second victory, we learn, that the wreck of the Turkish army retreated on the side of Corinth, where they were joined by fresh troops to the amount of about 6,000 men. They were speedily attacked by the victorious Greeks, on the 6th and 7th of Aug.—and their army was nearly annihilated: 3,000 perished on the field—many prisoners, with 2000 horses, 150 camels, and all their baggage, ammunition, &c. fell into the hands of the victors. The following is the Greek official account of the *latter* affair—but in regard to the dates, the difference between the old and new stile must be recollected:

"Chourschid pacha, commander in chief of Rømelia, after having uselessly sacrificed 8,000 Albanians to conquer the Souliots, and from thence to invade the whole of western Greece, resolved to enter the Peloponnesus. He began his march with a powerful army, penetrated Boetia, and afterwards Peloponnesus, without the efforts of the Greeks being able to prevent him. He came and encamped in the plains of Napoli de Romani, at the moment when that fortress was about to surrender, in virtue of a previous capitulation. The Greek senate saw the whole extent of the danger which threatened the country, and took the most energetic measures. They judged it more useful to employ the body of troops which formed their guard to repulse the enemy, than to retreat with it to another position; they therefore caused it to march against the Musselmen, and retired on

board the vessels that blockaded Napoli de Romani. They caused the women and children to retire into the interior of the peninsula. They ordered, that all the corn and other provisions that had been stored in magazines should be carried to a safe place, with the greatest care, as well as all the cattle. They likewise ordered that the troops of all the neighboring cantons should go against the enemy, who, deprived of provisions, and harassed by continual skirmishes, would be obliged to march back to Corinth, hoping after the arrival of the fleet at Patras, to procure provisions and maintain himself with greater security in the fortress of Corinth; but that fortress had been stripped of every means of defence by the Greeks, who had need of cannon and munitions, in order to defend redoubts at other places. On the 25th and 26th, while the Turkish corps was on its march to Corinth, the Greeks attacked it with a firm resolution to conquer or die; they were victors. The result of the battle carries the number of enemies killed to 3,000—that of prisoners and wounded is not yet known. Two thousand horses, 150 camels, laden with baggage, all the munitions, all the materials of the enemy, and their military chests, have fallen into our possession. The valor that the Greeks displayed in this affair can be equalled only by the cowardice of the Turks, who disgraced themselves so far as to cry *aman! aman!* (mercy) *let us fly!*

This battle furnished gen. Nichita with a new opportunity of distinguishing himself. He shewed himself worthy of the surname of *Turcophagus*, (eater of Turks), that was given him by his troops. The Vizier Ali pacha was killed. Our loss is very inconsiderable. The patriotism of the Greeks, and the energetic measures of the government, afford the best founded hope that the Turks will not succeed in placing us under the yoke. The more wonderful it is that the Greeks should remain conquerors in this contest, so unequal in all respects, the more will their memory be glorious; but forced to resort to arms to shake off the frightful yoke that oppressed them, they have need of prompt assistance.—Will Europe never remember that she is indebted to our ancestors for the progress of science and civilization? Is it then just, and is it then useful for her to refrain from contributing to the future felicity of her brethren? Let us hope that the wise men of all Europe will employ themselves about this great object, and that their voice may reach the ear of those who can do so much for the happiness of the human race.

The vice president of the Greek government,

H. CANACARI.

The arch-chancellor of state, minister of foreign affairs,

J. NEGRU'

Argos, July 30, 1822.

Cuba. The elegant schooner Dandy arrived at Baltimore last week from Matanzas. That place appeared as if filled with pirates, and they openly spoke of seizing upon the schooner, at all hazards—even of cutting her out of the port! And it is probable that they would have possessed themselves of her, had not the captain taken advantage of a strong wind, and cleared the boats that were waiting off the harbor to capture her!

At a place called Regla, in the harbor of Havana, the pirates also teem, and their *business* seems just as well known as that of any merchant in the city. A person named Matteo Garcia is at their head, who publicly boasts of his earnings—he does not fear justice, because he can purchase it! Powder, &c. is carried off from hence without disguise—their craft have regular licences to pass the Moro, cap-

tures have been made in sight of the fortress, and they discharge much of their plunder on the wharf at Regla—if a guard happens to pass, he is silenced with a bribe. Things have arrived at such a pass that some strong measures must be adopted in self-defence—Havana must not be the *home* of pirates, if we can help it; it is the key of the Gulf, and a most valuable part of our coasting trade is subject to the depredations of the most abandoned of mankind, who care not about committing murder, if it better suits the disposition they happen to be in. The sea was never before so infested by pirates as it now is.

The U. S. ship Peacock has taken five piratical vessels, three of which she burnt; one had arrived at Havana, and the other had not yet been heard of. Twenty-five of the crews were made prisoners, the rest escaped to the shore and took to the woods.

Two armed vessels, having five transports, with 1500 troops, under charge, lately left Havana for Porto Rico, where they have arrived, for the protection of the island, menaced by an expedition from St. Barts to revolutionize it, by a party of adventurers under general Henry William Decoudray Holstein—which, however, has failed; the vessel that had them on board having separated from two transports with troops, and being compelled to put into Curracoa, from having sprung a leak.

Mexico. A New Orleans paper of the 20th September, says—The tyranny of Iturbide is at its height. Those who displease him disappear daily—by what means, no one knows!

"The bishop of Puebla, all powerful, makes Iturbide tremble—who, in his turn, makes others tremble.

"The republican party wait the moment when they may overthrow this ephemeral throne, under the ruins of which, without doubt, Iturbide will bury himself, if he is as brave as he is said to be.

"The troops remain unpaid, and are discontented; there is no quicksilver to supply the mines, which consequently remain unproductive."

National Economy.

The following essay or remarks on certain propositions and assertions of M. Say, has been in our possession since February last, and appear to have been written in the month preceding. The writer is a young man of the *interior* of Pennsylvania, and his matter will shew that he has reflected much on political economy and national policy. It was not expected that these remarks would ever meet the public eye—they were really prepared at the request and for the private use of a friend; but they contain so much good sense, expressed in such an intelligible manner, that, having obtained possession of them, we requested permission to give them a place in the REGISTER, at some convenient season.

It is with no small degree of pleasure that we notice the progress of good principles throughout the country, and it is delightful to believe that strong-minded men are affording an increased attention to the affairs of the nation—which, to be safely directed, must be governed by the common sense of individuals participating in these affairs. And individuals must *act* as well as think—they must cast their strength into the government; and then, and not till then, will a system be pursued which, (by securing the prosperity of individuals), will steadily advance the national power and secure the national independence—both resting upon the private comfort

and personal profit of the free laborers of the republic, whether in peace or in war.

In your favor of the 21st inst. you ask me to examine the doctrine contained in an extract from Say's treatise on political economy, published in the National Gazette of the 19th inst. and point out its fallacy, if it can be done in the compass of a letter.

It may be thought presumption in me to attempt a refutation of the doctrine advanced by a writer who has gained so much celebrity in the world as M. Say for his treatise on political economy; I will however attempt to examine a little the arguments he makes use of in the extract above mentioned. Before I proceed, however, I cannot help stating it as my opinion that most of the writers upon political economy, who have attempted to examine the whole subject, have assumed premises, and reasoned from them, in the same way that it would be proper to do if all nations were governed by the same general laws and bound by the same interests. But, in the present state of society, it appears to me as fallacious to advocate such doctrine, as it would be to pretend to uphold a particular religion. If there were no restrictions imposed upon commerce by any nation, it might be thought imprudent in any one to break through the established order; but even in that case, it is extremely doubtful whether it would be sound policy in all to submit to such a state of things. However, as that is not likely soon to be the case, and as that nation which pursues such a policy would be likely to neglect her own real interests in pursuing a course that might, if pursued by all, be thought beneficial to all—it seems to be the better course, on the ground of expediency at least, to reason from things as they are.

In the first paragraph of the extract above mentioned, the author says, that, "by the exclusion of specific manufactures of foreign fabric, a government establishes a monopoly in favor of the home producers of these articles, and in prejudice of the the home consumers." That such an *exclusion* establishes a monopoly, may be true; but it by no means follows, that the establishing such a monopoly as the writer speaks of, is in prejudice of the home consumers. If the raw material, necessary for the manufacture of a particular kind of goods, is in sufficient abundance in a country, and there is capital, that is, money enough in that country to be spared from other pursuits sufficient to carry on the new business to an extent equal to the wants of the nation, no inconvenience can result to it from an exclusion of the foreign product; because the competition among the home producers will soon be such as to reduce the price as low, and, perhaps, much lower than was before paid for the foreign; and the home consumers will be benefited by, at least, the whole amount of the cost of importing such foreign product, (which may be added to the capital of the nation), in addition to the advantages they may derive from being able to pay the home producers in articles of home production which the foreign producer could not take, and which the home consumers could not otherwise dispose of. There is also a saving of the cost of transporting the raw material to the foreign country to be manufactured.

I think the truth of these remarks is fully proved by the present state of our cotton manufacture, which has been wholly brought about, in my opinion, by the prohibitory duty laid on the foreign fabrics, of coarse kinds. In this case the home producer is not only able to compete with the foreign, but the monopoly which the prohibitory duty creat-

ed in favor of the home producer, gave such advantages as to bring into activity a sufficient quantity of skill and capital to cause such a competition among the home producers, as to reduce the article even far below what the foreign, of equal quality, ever was known to be; and, in addition to which, that very competition, caused by our own capital and skill, is sufficient forever to insure a sufficient supply, not only to keep down the price lower than it could be imported for, but at the same time to insure a better fabric. The supply of the article will be more steady than when we depended upon a foreign supply; not being subject to those fluctuations in price or quantity, arising from a disturbance between the nation supplying and the one supplied; or between one of them and any other; from embargoes or restrictions laid by one on the other, and many other causes. I think that even M. Say himself, if he were fully acquainted with our present, compared with our past condition in relation to cotton goods, would be disposed to grant, that, at least to us, the prohibitory duty in this case has been productive of great benefit, and that it *does not* "compel the home consumer to pay unnaturally dear" for the home product; but that, on the contrary, the home consumers have been greatly benefited by being able to purchase at home (with produce perhaps which they could not dispose of abroad), a better article for less money or labor than they formerly purchased in the foreign market.

The same reason that applies to the cotton manufacture would equally apply to many others, if equally protected. I believe the same results would be experienced from all, the raw materials for which are abundant for the supply wanted.

The author goes on and says, "should any one maintain that the advantage of producing at home counterbalances the hardship of paying dearer for almost every article that our own capital and labor are engaged in the production, and the profits pocketed by our own fellow citizens; my answer is, that the foreign commodities we might import are not to be had gratis; that we must purchase them with values of home production, which would have given equal employment to our industry and capital."

In the first place I deny that we should be compelled to pay "dearer for almost every article" that it might be thought best to prohibit the importation of, the reasons for which may be found above; and secondly, I am not willing to allow, that the "values of home production, which would have given equal employment to our industry and capital," could be so employed as always to make it for our advantage to purchase the article in a foreign market, which might have been prohibited. I think the present situation of the United States with respect to our intercourse with other nations, will sufficiently prove the correctness of my opinions. A large number of our citizens that were engaged in the pursuits of agriculture a few years ago, are now manufacturers of articles with which the government have thought proper to prohibit other nations from furnishing us, without imposing thereon a heavy duty, which, in some instances, encourages, in others protects, the home manufacturer; and notwithstanding this great number of manufacturers have become consumers instead of producers of agricultural products, the agriculturalists find it very difficult to get rid of their produce. What they would have become of the additional quantity that would have been in the market, had not government interfered in the way so much condemned by

M. Say? Can it be supposed that a greater quantity would have been wanted if there had been more producers, some of whom are now only consumers? Surely not; and the situation of foreign nations, which causes them to take less of our agricultural products now than they did some years ago, has not been caused by the policy pursued by us; but our policy had been caused by their's. How then could it be possible, that instead of manufacturing for ourselves as we now do to some extent, we could have found it advantageous not to do so, but to purchase from foreigners and run the risk of paying with our products, which could hardly be any thing but agricultural ones, and even they, not wanted to the extent they can now be furnished? We should in such case have been compelled now to pay 25 per cent. or more, for bills on England instead of 12 or 14 as at present; a pretty round tax for the privilege of buying at the cheapest market! What in such case would become of the "values of home production," which were to "have given equal employment to our industry and capital?"

"It is most for our advantage to employ our productive powers, not in those branches in which foreigners excel us, but in those, which we excel in ourselves, and with the product to purchase of others," says the author. Now let me ask, if we as a nation were to adopt this course, what would be our situation? We are young in arts. Previous to the revolution, the colonies which now compose the United States, were not, to use the language of that day, *suffered to make a hob-nail*. After the revolution, and until the embargo and non-intercourse laws were passed, we found it profitable to pursue agriculture, which was the only branch in which we could be supposed to excel foreigners; and this was only supposition, as we found soon after the late peace commenced in Europe. During their wars, we derived a considerable profit not only from exchanging our products for those of Europe, but by being carriers of that and the produce of other nations, and of again exchanging with other nations the products of other nations. But when we all returned to a state of peace, those persons who had previously, and many of them for a long time, been engaged in war, and consequently as consumers, immediately became producers: each nation contributed much more largely to the production of what we were supposed to excel in, than they had done before; and each in a great degree having become the carriers of their own productions, we were left without a market, and without the profits of the carrying trade. The very branches we were supposed to excel in, were rendered unprofitable; consequently it became us to look out for other sources of profit, and the means of exchanging products for products. Could any have been more proper than those we resorted to, during the embargo, non-intercourse and war? that of manufacturing for ourselves articles of the first necessity? These, to be sure, were such as foreign nations then excelled us in but in some of which we now excel them; and this has arisen, not from the fact of the "prohibitive system finding so many partizans and so few opponents," but from necessity, arising from the fact that we are too young to attempt to compete with the whole of Europe in their own markets, even in any one branch; therefore must content ourselves to compete with them at home, where we can only expect to do it to advantage for some time to come. Had we continued farmers and planters exclusively, what could have been our situation now? Where would we have been able to dispose of our products to an amount sufficient to purchase

what we do of other nations, and as much more as the amount of our home manufactures, seeing we cannot dispose of as much now as we can produce, even for the products of other nations? By pursuing the policy laid down by Monsieur Say, we should soon become the *bondsmen*, not to say *slaves*, of other nations.

I have said we are too young to compete with foreign nations in their own markets; that is, in their own countries. But we can compete with them at home, in all the articles of necessity, the raw materials for which we have in abundance, or can procure cheap. The only thing necessary to that end is a high import duty, and a confidence that such duty will be continued. Sufficient capital would then soon become employed, and the effect would be what it has been with respect to coarse cotton goods. "Products are always bought ultimately with products," says Say. Why, then, can it not be as profitable to exchange products for products of home produce or manufacture, as to exchange products of home manufacture for products or manufactures of foreign nations? I presume it will not be denied, that it is good policy in every nation to turn its attention to such a course of trade and business as will insure it a market for the greatest amount of its products; and whenever a surplus is produced beyond the demand for any article, or the products of any branch of business, it is the true policy of that nation to engage in some other business that will employ the amount of capital and industry, equal to what was requisite to produce the surplus of the other branches of business pursued by it; otherwise the nation would be the loser by the whole amount of capital necessary to produce that surplus: and that, therefore, it would be better to have that capital employed in some branch of business that would supply a part of the necessities or luxuries for the consumption of the nation, which it had been in the practice of depending upon other nations for—and that, even if the employment of such capital did not enable the nation to compete with its rival, still the amount of production caused by the employment of that capital would be wholly a profit of so much which would have been paid to other nations, in case it had not been so employed; and hence I conclude it may be advantageous, sometimes, to give the home manufacturer more for an article than the importer. This may be illustrated by an example: suppose a landholder in Huntingdon county has a large tract of woodland, also as much cleared as he can manage to advantage, and his wood is likely to waste for want of a market. He desires a suit of clothes, and can buy imported cloth that will do very well for a suit, at \$5 per yard: a manufacturer in the neighborhood will furnish him with the same quality of cloth at \$6; then 20 dollars worth of imported cloth will make his suit—but he concludes that if the manufacturer will give him cloth for wood he will take of his neighbor, and they fix the price of the wood at \$1, the cutting of which, at 30 cents per cord, amounts to \$7.20, and the drawing to \$16.80, making altogether \$24. He will then have his suit for \$4; because it is understood that, without this exchange with the manufacturer, he would never have got his wood to market, and the labor used in getting it there would never have been turned to any other account. It is in this way that the resources of a young nation must and will be brought into action; and the sooner it is done by protecting or prohibitory duties on articles, the raw materials of which we have in abundance, or by other means, the sooner we will become not only independent, but rich.

The author then asks, "Who are the classes of the community so unfortunate for prohibitions or heavy import duties?" and answers, "the producers of the particular commodity that applies for protection from competition, not the consumers of that commodity. The public interest is their plea; but self-interest is evidently their object. Well, but say these gentry, are they not the same thing? are not our gains national gains? By no means: whatever profit is acquired in this manner, is so much taken out of the pockets of a neighbor and fellow citizen: and if the excess of charge thrown upon consumers by the monopoly could be correctly computed, it would be found that the loss of the consumer exceeds the gain of the monopolist. Here, then, individual and public interest are in direct opposition to each other; and, since public interest is understood by the enlightened few alone, is it all surprising that the prohibitive system should find so many partizans and so few opponents?"

In the above quotation there is a contradiction, not to say absurdity; and, in my opinion, the conclusions the writer draws from his assertions are as unwarrantable as it is evident that he is the servile tool of a despotic government. His assertions are strong, but not supported by reason or facts, as I believe; at any rate, they are not demonstrated to be true. I believe that, as it respects most nations except our own, a majority of the people are in favor of the very prohibitions their governments have adopted; consequently, it is not "the producers of the particular commodity that applies for protection from competition" alone, that are "so importunate for prohibitory or heavy import duties;" for it will hardly be denied, that, in every nation, the consumers make a large majority of the community. And it is not so clear that, even in this country, with all the prejudices imbibed from European authors on political economy, (who, it would seem, are hired to advocate the very doctrines which their own governments condemn, in order to mislead others,—that they themselves may be the better of others' folly), the majority are not in favor of, at least, "heavy import duties" on all articles which can be manufactured at home, and of which we have the raw materials in abundance. My own opinion is, that a majority of our citizens are in favor of even prohibitory duties, upon many articles now imported; and, if so, what would they say of you or me, or even Monsieur Say, when we should tell them that they opposed the interests of the nation, and that "the public interest is understood by the enlightened few alone?" As well might we tell them that they "are their own worst enemies."

"In buying of a foreigner, the nation really does no more than send abroad a domestic product in lieu of consuming it at home, and consumes in its place the foreign product received in exchange. The individual consumer himself, probably, does not conduct this operation; commerce conducts it for him. No one country can buy of another, except with its own domestic products." So says our author: therefore admitting it to be true, how can it be expected that a nation like ours can exchange in foreign markets our own produce for the quantity of foreign products which we want for our own consumption; considering that we are principally an agricultural nation, and our products are prohibited in those very countries whose products we most want? The only alternative we have left is, to produce less of those products we have been in the practice of exchanging for those of foreign nations, and produce others similar to those we have been in the practice

of receiving from other nations in exchange for our own; otherwise, according to Say's own doctrine, we shall be drained of the little wealth we derived from our carrying trade, while the nations of Europe were at war with each other. And whenever we take of the productions of foreign nations for consumption, more than we can pay for in our own productions, the balance is a debt against us, which must be paid in specie, if we have it; and if we have it not, we will not be able to purchase it, consequently we must become bankrupt. If the present policy of our government continues, such appears to me our inevitable fate. The fact of bills of exchange on England bearing a premium of 12 to 14 per cent, is certainly some evidence of it; particularly as we can draw on no country at a premium to balance it. Hence I conclude, that if we were to prohibit, for instance, foreign manufactures of iron, glass, cottons and wollens of particular descriptions, to the amount of our over-trading, the industry of the nation, to an extent equal to the production of that amount, and, perhaps, much more, would be turned into other channels, so as to create a saving of that amount, at least, in manufacturing the kinds of goods prohibited.

I have not time to follow the writer any farther at present; and if I had, I presume you would neither have time nor inclination to follow my observations: but I cannot help saying, as I said before, that the whole tenor of the writings of Smith, Say, Hume, Malthus, and the whole host of book makers on political economy, are not calculated for the present state of society: and I would rather trust myself with the notions of brother Jonathan, than all the fine spun and closely woven productions of John Bull and his European cotemporaries on that subject.

I am not an advocate for the total prohibition of all foreign commodities or manufactures; but I see no reason why we might not, with advantage, prohibit nearly all the foreign manufactures of iron, cotton, wool, hemp, flax, glass, paper, and a few others. We have the raw materials, or can produce them in abundance. A prohibition would have the effect to bring into profitable operation a great deal of the capital, skill and industry of the nation, now idle or unproductive; and would save us a great deal both in the cost and freight of those heavy articles we import. Our iron ores, now buried in the earth, would be brought up and converted into the most useful machinery: our hills would become sheep pastures: our farms in the interior of the country, now almost unproductive, would be converted into hemp and flax farms: the streams and rivulets that flow uninterrupted to their great depository, would be studded with manufactories; and, in fine, the nation would be better fed and clothed, and with less expense, than heretofore. Plenty would fill our board and gladness beam in every countenance.

Bank of the United States.

TO THE PUBLIC. The exposition which I made to the stockholders of the bank of the United States, on the 2d ult. contained no personal allusions, except such as were required by the discharge of my public duty; but, when thus called upon, I frankly confess no fastidious delicacy in relation to the sensibilities of the guilty restrained me from disclosing the truth. The exposition which I made, I considered to be due to the stockholders, and to the public morals. It ought to have been made three years ago. In relation to the fraudulent agents of

the bank, no more was said than was necessary to give a correct view of the state of the bank, and a distinct impression of the extent and character of the frauds which had been committed upon it. The multitude of facts and circumstances from which the just coloring of the picture may be derived, (without which its shades are comparatively feint), have not been touched, though justice to the public and the stockholders, require that they should be given at a proper time hereafter.

I was well aware that any statement I might make would, in all likelihood, be controverted by those whom it tended to inculpate and expose; and that the easy *tactics*, as much as the command of the guilty as the innocent, of declaring it to be *false*, would be employed, unless it should be established by such proof as should leave no room for this subterfuge. It was for this reason that, when I made the exposition, I invited an investigation of it. With the same view I requested as a favor, and claimed as an act of justice, an opportunity of proving the facts which I had alleged. When the committee were first convened, I went into proofs of nearly every fact. When the stockholders re assembled, after a temporary adjournment, many new members were added to the committee, and I again exhibited the proofs before adduced, and added such as were necessary to complete the evidence of every fact I have alleged. Several days were spent in the investigation, and when I had concluded, I emphatically called upon the committee to say, whether, on any fact, they entertained doubt, and if they did, to give me an opportunity of removing it by further proof. No member expressed any. I was afterwards informed that, upon the question being expressly made, whether the facts narrated in the exposition had been established, the committee resolved *unanimously* that they had. I mentioned this in discussion, on the last day of the meeting of the stockholders, when the report was before them, and appealed to the committee for the truth of it, when a distinguished member of it, (the whole committee being present, acquiescing in his statement), declared that the committee had been perfectly satisfied with the proof of every fact alleged, and had *unanimously* resolved that every fact had been fully proved.

I confess, I did suppose, after so solemn and public a testimony on the subject, that even the hardihood of the most audacious guilt would have been silenced; but in this I find I have been mistaken, though it may, perhaps, be discovered that that silence would have been as much an act of prudence as decency. I had, however, relied so much upon the submission to truth, which is natural even with the guilty, when the proof is incontrovertible, that I omitted, until recently, to obtain an authenticated copy of the resolution, believing that I should never have occasion to use it. This fact has prevented me from publishing the annexed document at an earlier day. It will speak for itself, and when the character of the gentlemen who composed the committee shall be regarded, comprising, too, as they did, every species of intelligence, and representing almost all parts of the union, no doubt can be left on any mind of the truth of the facts narrated in the exposition. Whether the conclusions I have drawn, or the commentaries I have made on those facts be correct or not, are questions which I shall, without any solicitude about the result, leave to the judgment of the public. In publishing this document, I am aware that many will suppose I am induced to do so by a circumstance utterly unworthy of such notice, and that the pub-

lication of it is altogether supererogatory. If the circumstance alluded to were my only or my principal motive, the conclusion would be correct; but it is not. I have been much more influenced by a desire to show to the public, once for all, in the most incontrovertible shape, that the facts stated in the exposition *were actually and fully proved* before they were adopted by the committee, than from any apprehension that the public would doubt the truth of the statements I had made.

J. LANGDON CHEVES.

October 17, 1822.

“*Bank United States, Sept. 25, 1822.*”

“The committee of inspection and investigation, appointed in pursuance of a resolution adopted at the meeting of the stockholders, met agreeably to adjournment. Mr. Cheves continued the proof of his statements, and closed at 12—when, on motion of Mr. Hamilton, the following resolution was unanimously adopted:

“*Resolved, That, in the opinion of this committee, Mr. Cheves has fully and satisfactorily proved the facts detailed in his statement of the past and present condition of the bank, submitted by him to the stockholders, on the 2d September, and now in the possession of this committee.*”

I do hereby certify that the above is a correct extract from the minutes of the committee of stockholders of the bank of the United States, signed by the chairman and secretary, and deposited in the bank for safe keeping.

J. ANDREWS, Assistant cashier.

Bank United States, Oct. 17, 1822.

The fruits of Liberty.

The following delightful article is from a late number of the “Richmond Enquirer:”

COMMUNICATED

Curiosity a few days past carried me to Albemarle court—I was more than gratified.—A meeting of the visitors of the university and of the agricultural society of Albemarle had drawn together a large number of our most distinguished citizens. The group was highly gratifying to a Virginian, and still more to a philanthropist. To pass over many private citizens of great intelligence; to say nothing of members of congress, of whom there were three—and among them the speaker of the house of representatives—not to notice the present or ex-governors, of whom there were five—but to confine our attention exclusively to the three distinguished individuals, one of whom now fills, and two had filled the office of chief magistrate of the United States—this alone was a spectacle that could not fail to strike the eye of observation, and to produce a train of the most pleasing reflections. To see citizens, who had held the most important office in the government of their country, in perfect concord with each other, mingling with the great mass of the people upon the footing of the most perfect equality and social familiarity, not otherwise distinguished than by their services, is a practical commentary on the spirit and beneficent effects of our institutions, which cannot fail to obtain the approbation of the good and the wise every where. What a contrast does this incident present, between America and the world beside! The repose of all christendom has been frequently disturbed by the rival pretensions of two insignificant beings, arrogantly claiming to be the temporal head of the mildest of all religions, whose distinguishing characteristics are humility and a contempt of earthly

things—but who scrupled not to disgrace religion itself in their efforts at personal aggrandizement. How many nations have been drenched in blood, and given up to desolation, while waging interminable wars of succession—while settling the contemptible question by what name they should be oppressed. On the contrary, here we see the most illustrious of mankind, if worth and talents confer that exalted distinction, voluntarily retiring from the highest station, and enjoying, in their domestic relations, a happiness which a restless ambition, however successful, never knew. Elsewhere abdication from supreme power is a synonym with the grave. Here it leads directly to the full fruition of the most perfect happiness which man can enjoy—a consciousness that his course is finished, that he has been the benefactor of his species, and that endless gratitude will consecrate his name. Elsewhere the assemblage of chiefs is a direful portent to the hopes of nations—here its beneficent purpose is to multiply, in a thousand ways, the prosperity of mankind—elsewhere those, to whom power has been given, unite themselves under the hypocritical and imposing name of a holy alliance, for the execrable purpose of uniting the chains of slavery by closing the fountain of light—here, without ostentation and without hypocrisy, they lay the solid foundations of everlasting freedom by fostering the means of illuminating the human mind. In the contemplation of this contrast let America rejoice and be thankful.

Pitcairn's Island.

The following account of a visit lately paid by an American whale ship to this little speck in the vast Pacific ocean, cannot fail to interest many readers. The history of the present inhabitants is simply this—the British ship *Bounty*, Lieutenant Bligh, was sent to the South Seas, for the purpose of transporting the bread fruit tree and other productions to the West Indies. Being in these seas, the crew mutinied in 1789, and committed their commander and the other officers to the ocean in a small boat, and their wonderful preservation is well known from lieut. Bligh's narrative. The mutineers proceeded to Otaheite, where they took on board several of the natives, chiefly females, and then went in search of some uninhabited island to escape punishment—they reached Pitcairn's island, ran the ship ashore, and destroyed her, to prevent a discovery of them, after taking out what they thought might be necessary to them. Until the year 1808, nothing was known of the mutineers—it was supposed that they had all perished; but in that year the American ship *Topaz* accidentally fell in with the island, and this was the first visit that the people thereon had ever received. It is not known that they were visited again until 1814, when two British vessels of war, in search of the *Essex* frigate, touched there, to the great alarm of "John Adams," whose right name is said to be Alexander Smith, who was a seaman on board the *Bounty*; but he was not molested by his countrymen, his then harmless life and virtuous conduct disarming any thing like resentment which they might have felt for his former proceedings. The account below was communicated to the publishers at New-York, by captain Ridgely, of the U. S. frigate *Constellation*, on his arrival at that port from his cruise in the Pacific.

Previous to the sailing of the *Constellation* from Valparaiso, the American whale ship *Russell*, capt.

Arthur, of New Bedford, arrived from Pitcairn's Island, and, from the private journal of the captain, the following interesting account of the people of that island was copied:

"March 8th, 1822—lat. 24, 30, S. long 129, 25, W. at midnight love to; at day light saw Pitcairn's Island, 3 leagues off; stood for it, and while we were within about 3 or 4 miles of the shore, were boarded by the most interesting crew of young men that I had ever seen: at noon, we lay aback near the land.

From all I had otherwise read and learned respecting the inhabitants of Pitcairn's Island, induced me to have the following notice posted up in the fore part of our ship, before we had any communication with the islanders:

"It is the impression of the *Russell*'s owners, that the most part of her company were from respectable families, and is desirable that their conduct towards the islanders should verify the opinion. As this island has been hitherto but little frequented, they will be less susceptible of fraud than a more general intercourse with the world would justify. It is desired that every officer and man will abstain from all licentiousness in word or deed; but will treat them kindly, courteously, and with the strictest good faith. As profane swearing has become an unfashionable thing even on board a man of war, it is quite time it were laid aside by a whaleman, particularly at this time. As these islanders have been taught to adore their Maker, and are not accustomed to hear his name blasphemed, they were shocked with horror when they heard some of the crew of an American ship swear, and said it was against the laws of their God, their country and their conscience."

Ship *Russell*, March 9th, 1822.—Pleasant weather, at 2, P. M. went on shore, accompanied by capt. Arey in his boat; as the islanders' boat wanted repairing, we took her on deck, and before the next morning had her done, to the grateful satisfaction of our new friends. The islanders went on shore in one of our boats; captain Arey taking five and we the other five—our landing was effected much easier under the skilful direction of our new pilots than could otherwise have been done.

Previous to leaving the ship, bread and butter was put on the table and they were invited to eat, but they refused, alleging that it was their fast day; however, after some importunity and inquiry whether I thought it would be any harm to them, and being assured in the negative, they partook, though slightly, and not till after they had asked a blessing. And after their repast was finished, a hymn and prayer was preferred with great devotional propriety.

On our landing, the bill of difficulty was to be ascended, a job I could not myself have performed in less than two or three hours; it was done in much less time with the assistance of a young man named Robert Young, who helped me almost every step. When we arrived at the top, we appeared to be at least 300 feet above the surface of the water—having gone up a zigzag path, the boat was almost directly under us. We were then met by the venerable governor, J. Adams, who was attended by most of the women and children of the island, and were welcomed to their shores in the most artless yet dignified manner. After resting a while, we were invited to the village, about half a mile distant, through groves of cocoa nuts and other trees of a large growth, which made an excellent shade. Although we came to the village, which was situated on a gentle declivity, with a sufficient distance be-

tween the houses for the drying and bleaching of their cloth, the beautiful prospect, regularity and neatness of the houses, with the joyous and double welcome of its truly hospitable inhabitants, made the spot enchanting. Soon after our arrival a dinner was served up, consisting of two roasted pigs, fowls, yams and plantains; but as they declined partaking with us, on account of its being their fast day, we concluded to wait till near sun down, at which time they would be at liberty to join us; and when they thought it seasonable we all sat down together, but not till the chief of our kind entertainers had asked a blessing in a very impressive manner. The return of thanks appeared not less impressive on the minds of the little community, who were like olive branches around the family table. After spending the evening, if not the feast of reason, at least we had the flow of soul--beds were prepared for captain Arey and myself, and J. Adams having taken a bed in the chamber, though it was not his house, we conversed till midnight. Early in the morning, our kind female friends were actively employed in getting breakfast for us, which was ready by 7 o'clock, consisting of fowls boiled with yams, which made an excellent soup: it was good and we ate heartily. For our dinner we were treated with baked pigs and roasted goats, with a large quantity of yams, plantains, &c. Our people were equally well provided for. At 3 o'clock I returned to the shore to go on board, receiving the same kind attention in descending; the mountain which was paid when going up it. We got into our boats with feelings of gratitude, which I was unable to express towards these good people, but not till they made me promise to come on shore again before we left the island.

10th, 11th and 12th--Still lying off and on, a part of the crew on shore, relieving each other by turns. On the 12th I again went on shore, and was received and treated with every attention. Before noon I returned on board, after taking a more affectionate leave than I ever did any where except my home. I was accompanied on board by John Adams, Dolly Young and Mary Ann Christian--having received from them a supply of young cocoa nuts and fowls, and made such presents as they wished for and we could spare from the ship's stores--we gave them a part of a bolt of light duck, one axe, two hatchets, four boat knives, a bag of bread, a few bottles of wine, a roll of old canvas, a little grindstone and a watch. Having now accomplished the business for which we came, our friends, after wishing us a good voyage and safe return home, went on shore. Captain Arey, not having finished watering, concluded to stay another day or two. He was anxious for us to stay till he was ready, but I was unwilling to lose more time.

Before we leave Pitcairn's Island, it will not be improper to make a few observations. The time and manner of its colonization are to most general readers well known. John Adams and six Otaheitan women is all that is left of the Bounty. Forty-nine have been born on the island, two of whom are dead, which leaves fifty-three persons on the island, now all in good health, without a single exception. There are about eleven active young men, who are ready and willing at all times to assist a ship's crew in procuring water or wood, or any thing else the island affords. John Adams assures, and from what we ourselves saw, we have no reason to disbelieve him, that the island was inhabited before themselves, but at what period is difficult to conjecture. They found after their arrival, many places where houses had stood, burying places and images repre-

sented a human figure, with other indubitable marks that they were not the first possessors of Pitcairn's Island. It is, however, certain, that the aborigines left it at no recent period, as the trees growing on the house spots could not have arrived to their present size in less than a hundred years, perhaps five hundred. The land is high, and may be seen 12 or 15 leagues--its coast clear of dangers--winds variable, which makes it easy to lie off and on--the town is situated on the north side of the island, rather nearest the west end--the houses may be seen three or four leagues by a ship coming from the north.

The different names of the islanders are Adams, Christian, sen. Christian, jun. Young, Quintrall and M'Kay.

Henderson's Island lies E. N. E. from Pitcairn's one hundred miles. Ducie's Island is rightly laid down in the Practical Navigator, and is low and very dangerous.

Pitcairn's lat. 25, 3, S. by acct. 26, 41--long. 130, 22, W. by acct. 128, 52.

Henderson's lat. 24, 26, S long. 123, 30, W.

Independence of Brazil.

[TRANSLATED FOR THE FEDERAL GAZETTE.]

Manifesto of his royal highness, the constitutional prince regent, and perpetual defender of the kingdom of Brazil

To the people of the same kingdom:

BRAZILIANS--

The day in which men could be deceived has entirely past, and governments which still wish to establish their power on the presumed ignorance of the people, or ancient errors and abuses, will discover that pillar of their usurped greatness too feeble to support it; it will be levelled and they will find one which will rise in the majesty of its strength on the ruins of so fragile a support. Little did the cortes of Lisbon suppose that the southern province of Brazil would shake off the yoke, which they were preparing for them, and that they would place themselves under my protection, requiring of me to stand forth in defence of their rights, and for the preservation of their liberty and independence. Permit me, therefore, Brazilians, to declare to you the truth. The congress of Lisbon, arrogating to itself the tyrannical prerogative of imposing on the Brazilians a new principle of government, an article of new belief, affirmed by a partial and promissory oath, and which contained, in fact, the seeds of self-destruction, compelled the Brazilians to examine minutely the document, in which they discovered so much injustice in their unfounded pretensions. This examination, which reason dictated, was instituted to show to the people that Portugal, destroying all the established forms, changing all the ancient and respectable institutions of the monarchy, effacing the recollection of all its relations on re-establishing itself again, could not compel the Brazilians to accept a disgraceful and contemptible system of government, without violating those very principles on which the revolution was predicated. By their acquiescence they would have denied the right of changing their political institutions when found at variance with the public good; they would have destroyed the very base on which they intend to establish the proper rights of a government suited to their interest, (the unalienable right of all people); they would have arrested the march of reason; they would have destroyed the claims of justice, whose laws are predicated on the very nature of

things, and can never derive any authority from the mere caprice of men.

Then will the southern provinces of Brazil by an unanimous effort rise in the majestic strength of a people, who claim, as their inviolable right, the privileges of liberty and happiness, and will cast their eyes on me, the son of their king and friend, who, properly estimating the advantages of so rich a portion of the globe as this we inhabit, who properly appreciates the talents of this community, will be roused with a just indignation when viewing the contemptible and tyrannical conduct of those who so falsely and prematurely had assumed the title of fathers of their country, and, instead of acting in the character of the faithful representatives of the Portuguese, assumed to themselves the *sovereignty* over its vast provinces.

I thought it, therefore, highly worthy of me, the great king, my father, whose delegate I am, to respect the sons of such faithful subjects, in whose breasts exist the noble feelings of republicanism, and who, avoiding the example of some neighboring towns, will deposit in me all their hopes and thus save the royal offspring in this American continent, and preserve the acknowledged rights of the power of Braganza.

I acceded to their generous and sincere requests and remained in Brazil, informing, in the mean time, our good king. Persuaded that this step would have made known to the cortes of Lisbon the state of feeling in Brazil, its well known dignity and the new acquirement of its enlarged sentiments, it was hoped the knowledge of this state of feeling would have arrested the impolitic career they were pursuing, and would have caused them to adopt one dictated by justice, which they had entirely neglected. Such a course was pointed out by reason; but the visionary schemes offered by egotism and folly, frustrated the patriotic wishes of the people of this kingdom and threw it into a state of anarchy.

Such conduct immediately produced, (as was to be expected), the resentment and indignation of the allied provinces, and, in a moment, as if by magic, all their ideas and sentiments were directed to one point and to one only end. They desired me, as the guarantee of their precious liberty and of the national honor, peaceably to call a general constituent and legislative assembly in the Brazil. I deferred this only to see if the vanity of the cortes of Lisbon would yield to the voice of reason and justice, and to their own interests; but the order suggested by them, and transmitted to the Portuguese consuls, to prohibit the exportation of munitions of war, was too strong an indication of war and the actual commencement of hostilities.

This kingdom, since it acknowledged me their perpetual defender, required of me immediately to adopt the most energetic measures for the preservation of their honor and prosperity.

Had I hesitated in my determination, I would at once have violated my sacred promise, on the one hand, and, on the other, would have given rise to all the evils of anarchy, the dismemberment of the provinces, and all the fury of a democracy. What wrestling would there not have been amidst such sanguinary parties, between a thousand successive and opposing factions? Who would have retained possession of the gold and diamonds of her mines? of those formidable rivers which are the strength of our state—of that astonishing fertility, the inexhaustible fund of so much riches and prosperity?—Who could have appeased, allayed the fury of so many conflicting parties—who could have civilized our distant province, divided by so many rivers?

Who would have penetrated into the wildness of the interminable forests to offer aid to our poor deserted Indian; who could have ascended their lofty and inaccessible mountains? Most assuredly, Brazilians, Brazil would have been ruined, this precious jewel of all beautiful nature, which is at once the envy and admiration of the whole world.

I should have been answerable for all these evils—for all the blood shed—for the unfortunate victims which, unquestionably, would have been sacrificed to the particular views and interests of such contending factions, had I not adopted the measures so earnestly solicited by the people; I, therefore, immediately directed that an assembly of Brazil should be called for the cement of the political independence of this kingdom, at the same time not intending to break the bonds of the Portuguese fraternity; to tranquilize, on principles of justice, the united kingdoms of Portugal, Brazil and Algarves, and to preserve, under the same chief, two families, separated by a wide ocean, who can only live united by the equality of rights and the reciprocation of their interests.

Brazilians, it is not necessary for you to recollect all the evils to which you were subject or what induced you to make the representation transmitted to me by the chamber of representatives and the people, on the 23d of May, and which gave rise to my royal decree of the 3d of June, of the present year; but a deference for the opinions of mankind require us to declare the reasons which dictated this course—the history of the acts of the congress of Lisbon, with regard to Brazil, is a history of continual injustice and deceit—all having in direct object to destroy the prosperity of Brazil, and so effectually to paralyze all its energies as to make it entirely dependent on the mother country; that the world may have been witness to the justice of our cause, we appeal to the following facts.

The congress of Lisbon gave laws to Brazil without waiting for its representation, thus destroying the sovereignty of the majesty of the nation.

They denied us a delegation of executive power so necessary to the proper development of our physical means. Knowing, at the same time, the great distance which separated us, leaving us without laws appropriate to our climate, our wants, and our local situation.

They gave us a government without stability and without unity, formed in insubordination, rivalry and contradictions—thus depriving us of the rank which she enjoys, and weakening the foundation of our future grandeur and prosperity, and driving us into all the horrors of anarchy and confusion.

They excluded the Brazilians from all participation in the emoluments arising from offices of honor or profit, and filled your cities with European bayonets, commanded by cruel, rapacious and foreign chiefs.

They received with enthusiasm, and loaded with benefits all those monsters who attempted to destroy the best affections of the heart, and who triumphed in the idea of extinguishing the last ray of hope among the people.

They cast *usurping hands* upon the resources of the bank of Brazil, overloaded with an enormous national debt, which the congress never used: at a time when the credit of the bank was united with the public credit of Brazil and with its own prosperity.

They negotiated with foreign nations the alienation of portions of your territory, to weaken and enslave you.

They disarmed your fortresses, stripped your navy yards, left in a defenceless state your harbors, calling to Portugal all your navy—they exhausted your treasures with repeated demands to support the troops which came without your permission to shed your blood; and, at the same time, they prohibited the introduction of arms and ammunitions with which you could arm yourselves and support your liberty.

They showed a project of commercial relations, which, under the false appearance of imaginary reciprocity and equality, monopolized your riches, and offered your ports to foreigners; thus destroying your agriculture and industry, and again reducing the inhabitants of Brazil to the state of fatherless and unsettled planters.

They have treated, from the beginning, with contempt and scorn, the representatives of Brazil, when they had the valor to proclaim their right; and even, (but who can dare mention it!) threatened you with setting free all the slaves, that they might rise in opposition against their own masters.

To finish then this long narration of horrid injustice, when, for the first time that congress listened to the expressions of your just indignation, they doubled their opposition and endeavored to take advantage of the goodness and confidence reposed in them.

The delegation of the executive power which was rejected, as unconstitutional, by the congress, is now offered to us by a commission from that congress, without the necessary modification to make it acceptable to the people. Its acknowledgment would be the signal of your destruction and would tend to arm province against province, and brother against brother—thus realizing the views of those who formed it for the purpose of prostrating your liberties.

Remember then, generous inhabitants of this vast and powerful empire, that you now enjoy the independence and happiness which have been predicted at so many different periods by the politicians of Europe. You are now a sovereign people,—you have now entered into the great society of independent nations, to which you had every claim. Honor, national dignity and the voice of nature, all commanded the colonies not to be colonies any longer, since they have arrived at maturity; and, although treated like colonies, they are capable of forming and maintaining a government independent of any foreign dominations. The same right which Portugal has to destroy its ancient institutions, and to establish new, you possess in an extended degree; you inhabit a vast and a spacious country, with a province, although disseminated, already greater than that of Portugal, and which promises to grow in power with unexampled rapidity. If Portugal denies to you this right, it renounces itself the right which it may claim, for the acknowledgment of its new constitution, from other nations.

Brazilians! Nothing further is to be done than to unite yourselves with interest, love, and hopes;—to command the august assembly of Brazil to manage the helm of state, with justice and prudence, that we may avoid the rocks which the seas of revolutions unfortunately present to *France, Spain, and even to Portugal.*

Do not doubt, Brazilians, that your representatives, who are occupied in pointing out the true rights, will support yours, which have been trampled down, and denied to you for these three centuries; they will consecrate the true principles of the *Brazilian* representative monarchy; they will declare king

of this beautiful country seignor D. John VI. my august father, whose love you most highly possess; they will destroy anarchy and despotism; they will compel all the officers and public functionaries to enter into the requisite responsibility for the faithful discharge of their duties, and they never will obstruct the majestic flight of the national legislation and public will.

Pain in the invariable principles of not sanctioning abuses, your representatives will introduce light and new order into the dark chaos of public revenue, economical administration, and civil and criminal laws. They have the magnanimity to believe that those necessary and useful ideas, which tend to the good of mankind, are not destined to be only the ornament of books. And that the perfection granted to man by the Almighty, must not be manifested by the obstruction, but the advancement, of the social order and happiness of nations. They will give you a code of laws adequate to the nature of your local circumstances, interests, population and relations, whose execution will be entrusted to just judges, who will gratuitously administer justice, and will banish all the perplexed causes of your bar, founded on obscure, unfit, complicated and contradictory laws.—They will give you a penal code, devised by reason and humanity, instead of these bloody and absurd laws, of which you have been the unhappy victims. You will have a system of tributes, which will shew respect to the agricultural labors, and to the works of industry, to the dangers of navigation, and to the liberty of commerce.

Valiant soldiers, you have also a military code, made to suit the exigencies of an army constituted of disciplined citizens, possessed of valor, and capable of defending the country and civic virtues, by which they themselves will be protected and secured.

The literati, almost always hated and despised by despotism, now have open the way to the temple of glory and honor. You will now see that only virtue and merit will decorate the sanctuary of our country, and then intrigue will not gain access to the throne, whose doors were heretofore only open to hypocrisy and imposition.

Ye citizens of all ranks, and Brazilian youth, to you I would observe, that you have a code of public and national industry, which will germinate and sprout luxurantly, the talents of this blessed climate, and will place our constitution under the safe guard of the future generations, infusing to all the nation a liberal education, which will communicate to all its members instruction sufficient to promote the happiness of the great Brazil.

Brazilians! Do not fear foreign nations; Europe, which acknowledged the independence of the United States of America, and which kept itself in a perfect state of neutrality towards the Spanish colonies, cannot fail to acknowledge Brazil, which, with so much justice, means and resources, also strives to enter into the great family of nations.—We shall never interfere with their particular affairs, and consequently they will not obstruct the peaceful and free commerce which we shall offer to them, secured by a representative government which we shall establish.

Let no other shout be issued from your lips, but *UNION*; let no other word be reiterated, from the *Amazons to the Prato*, but *INDEPENDENCE*. Let all our provinces be strongly chained into unanimity, not to be broken by any force. Let all ancient prejudices be banished at once, substituting in their place the love of the public good. Let mean bless-

phemers, oh! Brazilians, declaim with injuries and slanders against you, against me, and against our liberal system; for if they praise us, Brazil might be ruined. Let them say that we act against Portugal, against our mother country, against our benefactors; we, supporting our rights, punishing by our justice, and consolidating our liberty, wish to free *Portugal* from a new class of tyrants.

Let them say that we rise in opposition to our king; he well knows that we love him, as a citizen king, and that we wish to deliver him from the ignominious state of servitude to which he has been reduced. Let them shout, wishing to persuade the world that we break the bonds of union with our European brothers; no,—we wish to ground it upon solid foundations, without the influence of a party, which basely despised our rights and trampled upon our liberties.

Illustrious natives of the bay, generous and unlucky portion of the Brazils, whose soil is seized by greedy and envenomed harpies, how much do I feel for your fate! The time of drying your tears, and assuaging your despair may yet appear. Natives of the bay! sprightliness and courage are your characteristic; banish from you, these haunts, which support themselves on your blood, and are emboldened by your forbearance. They are no more Portuguese; throw them off from your sight, and come to join us, who are waiting for you with our arms open.

Valiant minors, intrepid Pernambuguians, defenders of the Brazilian liberty, march and succor your brother; it is not by the cause of a province, it is by the cause of Brazil, that the primogenial of *Cabral* is to be defended. Extinguish the nursery of wolves, who yet support the bloody caprices of the factious party. Remember the fires of *Bonito*, and scenes of *Recife*. We succor and love, as brothers, all the peaceful Portuguese, who respect our rights, and who are anxious for our, as well as their own, happiness.

Inhabitants of *Cera*, of Maranham, and of the rich *Para*, possessors of those beautiful northern provinces, come sign to the act of our emancipation, that we may see you incorporated in the great political society. Brazilians, in general! Friends, let us unite ourselves; I am your companion, I am your defender; let us obtain, as the only reward of all our toils, the honor, glory and prosperity of Brazil; for the accomplishment of which, I shall always be at your front, in the most dangerous places. Permit me to convince you that your felicity depends on mine. It is my glory to rule an upright, valiant and free people. Give me the example of your virtues, and of your union, and be assured that I shall be worthy of you.

In the palace of the Rio Janeiro, on the first day of August, 1822.

(Signed)

PRINCE REGENT.

Mexican Papers.

The following documents may serve to indicate the present condition of this country, and require an insertion in this work for reference:

ROYAL PROCLAMATION.

Whilst in every quarter it was rumoured that a conspiracy was ready to break out threatening to throw the country into the stormy sea of anarchy, good citizens, contemplating with astonishment the apparent indifference in which the government maintained itself, censured as inactive or dissembled a conduct, which sought its justification in that very slowness and delay of its proceedings. The wick-

ed, at the same time, hastened their measures, and believing their horrible triumph secured by the lenity and excessive indulgence of the government, were on the point of displaying their bloody standard of sedition, and delivering up the state to the tumultuous shock of all the passions. They were united only in that, and discordant in every other part of their plans; some wishing to realize chimerical ideas of republicanism, and others to place the sceptre in foreign hands in order to hurl from the throne the person who had been called to occupy it by the free votes of the people.

It would be impossible to calculate the enormous evils, which this opposition of interests among the discontented would produce in the great mass of the people if suffered to be longer exposed to the contagious breath of irreconcilable and inimical factions. In such circumstances, the government, responsible for the security and repose of the nation, found itself under the necessity of applying those remedies pointed out by the nature of the evil itself, and last night proceeded to take steps against the individuals whom public opinion and circumstantial evidence designate as the authors or agents of the revolution; but this measure, of which even these who provoked it cannot complain, insures public order, which would have been compromised by further impunity; and if among those implicated are found some of the deputies of our august congress, sensible and impartial men will be convinced that the government, impelled by imperious necessity for the salvation of the state, has no design against the national representation.

The constitutional representative system is the most suitable for the country, and the emperor, who has sworn to die in its defence, and who has given so many proofs of his adhesion to this form of government, will lose no opportunity of repeating them, and of evincing that he aspires only to preserve uninjured the rights of the people, which can have no guarantee amidst the convulsions of anarchy.

Under this impression, he wishes that all the citizens, informed of the motives which gave rise to last night's proceedings, may live happy and secure, while his majesty watches over their preservation and tranquility, which, by the special favor of Providence, remain undisturbed. And by his order I communicate it to your excellency that, by publishing it in the usual manner, the surprise which always results from exaggerated and incorrect statements may be avoided.

God preserve your excellency many years.

HERREDA.

Mexico, August 27th, 1822.

REPUBLICAN PROCLAMATION.

To the inhabitants of *Anahuac*.

CITIZENS! COUNTRYMEN! A man who has always worn the livery of despotism, and who has gloried in it in the face of the world—by immolating many victims of his compatriots, assassinated by his hand and by his orders, might blind us for a moment, when, pretending to follow the banner of liberty, he proclaimed our independence. But now the veil is rent, and the illusion has disappeared forever. From the moment that the subtle and capricious author of the plan of *Iguala* and treaties of *Cordova* was seen to concentrate in his person and family, all the interests of the country and the fruit of past sacrifices of his well deserving sons; when, with an impudence without example in history, violating physically and morally the august national congress, we have seen him arrogate to

himself the imperial diadem of Anahuac, and finally when, with a paricidal hand he has seized the bar of iron, to establish an *hereditary dominion* in the 19th century over the same empire which was governed in the 15th with a sceptre of gold and flowers, by the generous and unfortunate elective emperor MONTÉZUMA; from that period, I say, the hearts of the sons of liberty ought to beat with indignation, and their arms should be stretched out to seize the naked steel, to rouse our fellow-citizens from their fatal lethargy, and our beloved country from its present abjection and abasement. And their hearts have already leaped, do not doubt, fellow-citizens; and their arms are already extended, and the patriotic ardor has spread even to the anti-chambers of the tyrant's palace. His real followers are few, vile slaves, and for the most part foreigners; his soldiers are either hirelings, or have already served in our ranks and have shed their blood under the banner of liberty. Draw together companions, and besides our bayonets let us use our arms to fraternally embrace each other.

MEXICANS: I aspire to nothing personal; you know it; if the ambition of honors had occupied my heart, nothing would have been easier than to see myself loaded with the most pompous which the tyrant could bestow in the *gotic fame* of his coronation. I propose no plans upon the form or basis of government which we must have to govern us—the first cry of all the people of our continent upon rising against the oppression of Spain, except him of Iguala, was for a *republic*; but I do not believe myself sufficiently the organ of the nation to fix it. But for liberty I do; that I proclaim in the face of the universe, persuaded that I shall find no man so degraded as to resist it. The tyrant himself, although falsely, has vociferated it without intermission. Liberty, then, is that which sustains our arms—above all, liberty for the august congress. The fundamental laws of the nation are not to be dictated by acclamation, nor by the point of the bayonet. The city of Puebla shall be henceforward the residence of the government, where, by the first of October next, the deputies of the provinces, who have or may then abandon the capital, shall meet, until it shall be free from the tyranny which oppresses and degrades it; the general congress shall assemble there without any other garrison or escort than what they may point out.

CITIZENS, COUNTRYMEN!—The standard of liberty is raised; there can be no peace nor treaties with any kind of tyranny. If you assist me, this handful of heroes are sufficient to fix it forever in our country. Follow us, Mexicans; and I, for the first, swear, by the most sacred oath which exists, that the arms shall never leave my hands but with one of those extremes, *liberty or death*.—Jalapa, 1st August, 1822. Your fellow-citizen,

GUADALOUPE VICTORIA.

CHRONICLE.

Naval. The keel of a ship to carry 120 guns, we are told, is about to be laid at Philadelphia. She is to be built under the especial care of captain Bainbridge.

The U. S. schooner *Porpoise* arrived at Charleston on the 14th inst. after a long and active cruise in the West India seas. Lieut. com. Ramage is said to possess irresistible evidence of the piratical character of the Palmyra, lately released at Charleston, though not yet departed from that port.

Pennsylvania. The following gentlemen have been elected members of the 18th congress—the eight last named are fed ralists:

Daniel H. Miller, Samuel D. Ingham, Thomas J. Rogers, Philip S. Markley, James S. Mitchell, John Findlay, James Wilson, Daniel Udree, Henry Wilson, Andrew Stewart, T. Patterson, John Brown, Patrick Farrelly, John Tod, George Plumer, Robert Harris, Samuel McKean, George Kreamer, Samuel Breck, Joseph Hemphill, Samuel Edwards, James Buchanan, Isaac Wayne, W. Cox Ellis, Walter Forward, J. Allison.

Georgia. It is stated in the Washington Gazette, that Col. Hammond, after legal investigation, has been restored to the office of secretary of the state of Georgia.

Singular longevity. Henry Brown, now living in Pennsylvania, was born in January, 1686. His father was a negro, his mother an Indian. He was a slave 70 years, and has been a freeman 58 years. He was a soldier at Ohio in Braddock's defeat, in 1755, then aged 59 years. He is now in his 129th year; has long, straight, black hair; walks about, and enjoys tolerably good health. He never married, and begins to think it too late. He wants to die, but is afraid he never shall.

Mrs. Gowing, a widow lady, of Jaffrey, N. H. on the 8th ult. being then 83 years old, had the pleasure of seeing at her own table her eight sons and four daughters, and their wives and husbands, except two—all in health and prosperity. The account adds—"Few, with her, can say, they have seen, of 26 children, 81 grand children and 3 great grand children, (in all 110)—88 yet living and prosperous."

Died, at Lebanon, Con. Miss Hepzibah Strong, aged 67. When a blooming girl of 19, and on the eve of being married, she received a fall and injured the spiral marrow, and, for the space of 48 years, never walked, or was able to raise her head from the pillow—most of the time also unable to bear the least noise or light.

RAPID WORK. From the [N. Y.] *Steuben & Allegany Patriot*, of Oct. 10. Gen. McClure made a bet of 50 dollars that he would take wool in the fleece and manufacture a suit of satinet cloth in ten hours. The bet was decided last Saturday in his favor, having completed the suit and put them on in 8 hours and 45 minutes. The color was a blue mixture; the wool was colored in 55 minutes; carded, spun and wove in 2 hours and 25 minutes; filled, knapped, dried, sheared and dressed in 1 hour and 56 minutes; carried, in four minutes, three quarters of a mile to Mr. Gilmore's tailor shop, who, with the assistance of seven hands, completed the coat, jacket and overalls in 3 hours and 45 minutes; there was a half yard of the cloth left, being, in the whole, 8½ yards, and of such quality as was estimated to be worth one dollar per yard. The general offers to double the bet that he will make a better suit in less than eight hours—and dares the advocates of John Bull's manufactures to take him up.

There was a great collection of people assembled on the occasion. Col. Bernard, with the officers, commissioned and non-commissioned, of his regiment, a full band of music, and many citizens escorted the general from the village to the factory, when, after partaking of this worthy citizen's usual liberality, the procession returned to the village, the air resounding with many hearty cheers.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 9—VOL. XI.] BALTIMORE, NOV. 2, 1822. [No. 9—VOL. XXIII. WHOLE No. 581

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

HEALTH. We are truly glad to see it announced in the New-York papers, that the calamity which lately afflicted that city has ceased. The statement of the board of health computes but six cases which could not be traced to the west and south of Fulton street, and but two cases that have not been traced to that part of the city included within the bounds of Catherine, Banker and Pike streets and the river. Is it possible that better evidence than this could be furnished of the *locality* of the disease—that it was not *contagious*?

The whole amount of cases reported was 401; of deaths 230.

To give an idea of the desolation of part of New York, we copy the following from the "Statesman:" "We have seen green beans at Mr. Bruce's store, which were plucked this morning, by one of the watchmen, from vines growing in Liberty-street, which had not been touched by the frost. Mr. Bruce has some muskmelons, of from two to three inches in length, which grew upon the pavements in Greenwich-street! The beans, which are about three inches in length, grew also in the street, and, as in the case of the muskmelons, are the product of seed thrown out by the inhabitants before they were driven thence by the pestilence, and which took root in the scanty soil between the paving stones. What a striking evidence is this of the utter desertion of that part of the city by all human beings and domestic animals! And what a picture of desolation and gloom does it exhibit!"

Those who had left their homes on "the Point," in this city, have generally returned. It appears every where, as yet, that the yellow fever always gives way to a heavy frost, and this also shews that its elements are in the atmosphere—not in persons or goods.

At the date of our last accounts, the angel of death had not stayed his arm at New Orleans—the cases of fever were rather increasing. In Pensacola, the disease had nearly stopped for the want of subjects; the people, generally, having abandoned the place or perished in it: but cases were occurring among those who had fled to the neighboring parts of the country,—and the editor hereof has just received intelligence of the decease of his second son, SAMUEL NILES, at the Barrancas, on the 6th ult. aged 22 years—a well-informed and accomplished young man, who promised to fulfil the best hopes of his now mourning parents. He had been in Pensacola only a few hours on his first arrival, and proceeded to the Barrancas, where he was attacked by the fever—a letter from thence announced that he was the fourth person who had *recovered*; but it seems that he relapsed and departed, after an illness of about four weeks.

THE NAVY. Some friend has sent us a ponderous pamphlet of 104 octavo pages, being an account of the "trial of capt. John Shaw, by the general court martial," held on board the U. S. ship Independence, at Charlestown, Mass. in March last; printed at Washington, "from the official record on file in the navy department;"—to which there is an appendix "subjoined by capt. John Shaw."

We have not waded through this *weighty* exhibit, and perhaps never shall. But opening the book by

accident, we were struck with the words "*much injury to the service generally*," at the top of page 93, being a part of the appendix. This attracted attention, as having immediate bearing on a matter that has become almost *disgusting* of late—the frequency and great waste of money on courts martial and courts of inquiry about the conduct of naval officers. It is part of a letter from capt. Sinclair to capt. Shaw—and the whole of the pointed sentence is to express his regret at the difference that had happened, "*as those feuds among ourselves tend very much to the injury of the service.*" Capt. Sinclair is right—the service is materially injured by it, and the people are *worried* by such doings. They have book after book about these things, and are even threatened with two heavy octavo volumes to contain an account of a proceeding just brought to a close! This is too much!—but it encourages the consumption of rags and employs printers—so we ought not to complain of it!—yet we lose what is much more valuable—the renown, perhaps even the *efficiency* of the navy. These belong to the nation, they are the "main brace" of the establishment; and, if the officers by their "feuds among themselves" destroy them, down it will go and they with it, great and meritorious as may have been their services. The American people are a quiet people; and, above all things, they dislike that the officers cherished and supported by them, should be engaged in any kind of fighting but such as the law designates against the enemies of the republic. There may, or may not, have been cause for the late trials and investigations—they are too tedious, too *large*, for any soberly disposed and disinterested person to examine, that he may form an opinion "from a view of the whole ground;" but this is certain, that, if there is not less of such proceedings, there will be less subjects to give rise to them hereafter: the establishment will be *ruined*. The people will not be taxed because those paid and supported by them wrangle with one another: we do not pay them for *that*. I venture to say that the people will not.

INSOLVENTS. The (Philadelphia) Democratic Press, of the 19th inst. says—"At the present insolvent court for the city and county of Philadelphia, there were 303 applicants, of whom fifty-one were opposed, the remaining two hundred and fifty-two are either discharged or are discharging without opposition."

So it is, or has been, in all our large cities. At Boston, during the months of May, June and July last, about one hundred *capital* failures took place, whose aggregate amount was estimated at from 3 to \$4,000,000! Other cities have had equally perilous times, and some of them have suffered more—"but the end is not yet." The fiery trial will be felt when the great amount of goods imported in the present year, with the duties upon them, are to be paid for. Then we shall have a *smashing*—a tumbling down of the lofty, the ruin of honest but imprudent men, and the triumph of the base—who *calculate* on relief by the insolvent laws as a part of their means of supporting themselves in indecent profligacy and waste. The latter, unapplying, make so large a portion of the people in all our

large cities, as to form societies of their own—to fill the ball-rooms and the theatres, and overflow with quantities for dinner and tea-parties, whereat, seemingly, the sweat and blood of the poor chiefly go into the formation of what they riot upon. At the most *fashionable* places, you may find men sporting with their families, who ought to be occupied in sawing stone or making nails in the penitentiary. These are the fellows who dash through the law, intended for the relief of honest men—who, not being able to do or to swear *any* thing, oftentimes find the operation most difficult, unless they have been very circumspect with their accounts—for they cannot *make* accounts to suit the occasion!

The fluctuations of commerce and of dealing-men in our country, especially those whose business has been in foreign products or with foreigners, should teach us wisdom. It may be easily believed that one half of the whole number of these, become bankrupts in every period of ten years. Their succession is more like the *perpetual motion* than any thing that Redhæller thought of! Mr. Carey, in his late admirable pamphlet, says, "I have in my possession a list of the signers to a policy of insurance drawn in Philadelphia in 1799, amounting to *thirty-seven*, all merchants of high standing, of whom *twenty-seven* subsequently became bankrupt." I have lately examined an exhibit of the duplicate flags kept at the Baltimore observatory, made out less than *four* years ago, which shews the flags and names of about 54 persons or houses, who were engaged as ship owners in foreign trade and importers, of whom twenty four have since become bankrupts, and some of them, I am sure, honestly so. It is stated, that a venerable and very wealthy merchant, lately deceased, not long ago counted up *ninety-nine* persons, or houses, who had maintained a *high* standing in Baltimore and failed during his time. A like sweeping has taken place among the second hand dealers in *imported* goods—the wholesale or retail store or shop-keepers. Let a man pass through the whole length of Market street, and point out how many of the present occupants of the houses were in the same business ten years ago, and cail to mind the mutations that have happened during that period: as a contrast for these, let him look to those who were engaged as manufacturers or mechanics and dealers in the products or labor of *our own country*, and he will not find many of them missing, except by deaths or removals, unless they had abandoned their old businesses. These are plain sense remarks, and must come home to the feelings of every man who reads them. They require no further comment than simply to say, that private happiness and the public good—common honesty and the general prosperity, cannot be sustained but by a reliance on ourselves for the main supply of our own wants. Under the present wild state of things, the government is one year *disgraced* for the want of money; in the next, the treasury overflows. So individuals, to day are riding in their coaches and *commanding the banks*; in a week, they are not rightful owners of a wheelbarrow, and the banks regard them as defunct. This is the fate of most of the *speculators* in cotton and tobacco, &c. I have heard of many, and myself have known some, whose wealth, estimated at 2 or 300,000 dollars, was melted down to nothing by a small breeze of wind that wafted a ship from Liverpool to a port of the United States, with intelligence from *abroad*. Yet pursuits that produce effects like these, are they only that are *protected* by government—because it is deemed most expedient to *deceive* the people into the payment of taxes for its support;

perhaps that they may not too rigidly enquire into what has become of their money.

DISTANCE—*what is it?* In noticing the progress of improvement, we have many times asked this question. New York and Norfolk are now brought within *forty eight hours* journey of each other, by means of a steam brig that plies with passengers and freight between them. We shall soon have *Oliver Evans'* ideas of steam wagons realized, when a trip to Pittsburg will be only a little excursion—the mighty ridges of the Alleghanies being sunk by the pressure of scientific power! Over the water and over the earth—when shall we travel in the air, as we will it? By steam?—we know not; but dare not say what is *impossible* in respect to it.

FOREIGN CONSULS. The president of the United States has recognized John Vaughan, esq. as vice consul at Philadelphia; John Peter Prading, esq. as vice consul for the states of Maine, New Hampshire, Massachusetts and Rhode Island; and James E. Burrill, esq. as vice consul at New Orleans—all for "his majesty the king of Sweden and Norway." And Don Louis Depau, as vice consul, for "his catholic majesty" for North and South Carolina.

THE PIRATES OF CUBA. To rouse the public attention to the subject, as well as to preserve some account of the horrible proceedings and wide desolations of these pirates, we have thought it right frequently to notice their conduct. The period of the last week furnishes us with several terrible narrations of their excesses, in beating and abusing persons, nearly to the loss of life, the carrying off whatsoever they pleased and destroying whatever they would. Vessels of all nations are equally their game—their only enquiry is for valuable property, especially money—and they stab, shoot or drown persons to get a knowledge of it, if on board those so unlucky as to fall into their power. They often leave nothing to the poor mariners but the clothes they stand in, sometimes even taking off their hats and shoes. The British brig *Industry*, of Montego bay, Jamaica, is among those lately plundered—the chief of the pirates was an Englishman, who happened to be known by the captain, but the wretch disavowed such knowledge—they stabbed and beat with their swords the captain and crew of the *Industry*, made them tow their vessel in chase of another, which they captured, and behaved in the most savage manner, in every possible way, except that they did not commit actual murder. These fellows, at the same time, had possession of a Dutch ship, an American brig, and English sloop. We hope that these things will rouse other nations to act with us on this pressing occasion. The whole trade of the gulf, as it were, is at the mercy of this band of robbers and assassins.

We have some further accounts of the late success of the U. S. ship *Peacock*, capt. Cassin. On the 1st of October, off the bay of Honda, she fell in with the British government schooner *Speedwell*, lieutenant Geary, who was attacked by a little fleet of pirates, and, perhaps, would have been taken, unless for her aid. Capt. C. and his officers and crew succeeded in the capture of four piratical schooners and 23 men; the rest reached the shore and fled to the woods. The two other schooners, the rest of the fleet, were run ashore and fired by the pirates. One of these vessels was carried to Havana, where she was recognized as just before having belonged to a merchant of that port—by

whom she was ransomed; the three others, with the prisoners, were sent to New-Orleans.

ALABAMA. No less than 45,423 bales of cotton were exported from Mobile and Blakely in the year ending on the 30th September last, and there remained 840 bales in store. A few years ago, there was hardly one bale exported from either of those places; and the product of next year may be 90,000 bales; for the means of raising the commodity are powerfully increased, in every respect. The cotton-growing lands of this world are adequate to the supply of many other such worlds with that valuable article, *if* they wanted it, and *if* we would send it to them. The consumption has been pushed nearly to its ultimate, on account of the facility with which it is manufactured, so far as *our own* trading world is concerned; but the amount of its production, has not reached the hundredth part of what it might arrive at, under *present* means of labor and subsistence, if the surpluses were applied thereto.

The expected increase of the product of cotton in Alabama, may be esteemed from the fact, that a fire proof warehouse, to be capable of containing 8,000 bales, to be provided with two horse presses, on the most improved plan, and one powerful by draulic press, is now building at Mobile. The crop of the present year, it is believed, will greatly exceed that of the last season.

"A risu stou!" It seems that the pope, yielding to the reason and fitness of things, as a good man always should do, has granted to the Catholics of Portugal and Brazil the liberty of eating meat all the year, except on Fridays, during Lent, and a few of the principal holidays—*if they please to cat it*. The decree is to have force for the period of six years. This has given cause to the following right grave and merry article in a Halifax (Nova Scotia) paper, called the "Free Press." It really *stinks* "of the shop," and is quite laughable, as coming from a protestant of any persuasion:

"It appears from the Newfoundland papers, that fish, to the value of about 200,000*l.* have been shipped from that island to the ports of Lisbon, Alicante, Genoa, Naples and Leghorn. And the bull of the pope, which, it is stated, has been issued, has evidently for its *object* to injure the trade of Great Britain in *that article*. That such will be the effect is very much to be doubted—prohibitory laws alone will prevent the Roman Catholic population of the South of Europe from consuming a description of food to which they have been long accustomed, and which affords them a frugal and wholesome meal. And his holiness may discover, at the expiration of six years, that the *light of reason*, and the fair exercise of the *human understanding*, will render unavailing any farther decrees upon the subject; and that, by endeavoring to injure a nation who has befriended the world, he has injured the cause of that church over which he has been elected to preside!"

LIBERAL BEQUESTS. Mr. Abraham Turo, a jew, of Boston, at which place he was a respectable merchant, lately died, and made the following bequests—to the Massachusetts general hospital 10,000 dollars; to the synagogue at New York 10,000; to the same at Newport 15,000; to the Boston female asylum, the asylum for indigent boys and the humane society 5000 each—in all 50,000 dollars. Mr. Obadiah Brown, a Quaker, of Providence, and extensively engaged in the cotton manufactory, left 3000 dollars to the Friends yearly meeting board-school, to become 6000 on the decease of his widow;

an annuity of 1200 dollars, under charge of a committee, for the printing and dissemination of useful books for the promulgation of the gospel; small annuities to several religious congregations, baptists, &c. 1000 to the Rhode Island bible society, 500 to the peace society.

SINGULAR TOAST—drank at Washington, Geo.—"Wm. Lowndes, our next vice president—and afterwards the successor of Mr. Crawford."

We are sorry to find, in another paper, that the state of Mr. Lowndes' health is such that he has been advised to spend the ensuing winter in the south of France, for which he has embarked.

LIBEL SUIT. The trial of the action brought by captain Isaac Hull against Mr. Joseph Ingersoll, of Boston, for an alleged libel in the Boston Patriot, was concluded on Tuesday, last week. The cause was given to the jury about two o'clock, when the court adjourned. At nine o'clock on Wednesday, the jury brought in a verdict of five hundred dollars damages for the plaintiff.

IRELAND. We have an account of the trial of the "real captain Rock," for the murder of a young gentleman named Hoskins. The wretched man, wearied with blood, gave himself up and plead guilty. Murder, he confessed, was committed for "hire," without enmity to the individual to be slain; and this account shews that, when the victim was on his knees begging for mercy, one of the party fired a pistol "down through his body." The frequency of these things is appalling—and, if we could believe that the wretched state of the people was not produced by the tyranny and neglect of their government, we should say that Ireland was the best field for British missionaries in the world—but they wish to go further from home. The Irish are a noble, kind-hearted people—faithful to their friends, but indiscriminate in their resentments; easily won by kindness, and led by their feeling to the noblest or basest of deeds: the fittest of all people, perhaps, to be led from semi-barbarism to the light and benefits of the gospel, teaching forbearance and the performance of good offices, one to another. We speak of that class which is denominated the peasantry, who have no interest or lot in the welfare of the state, conditioned as they are—kept down by physical force, and resisting it by all the means, and any means, within the scope of their intellectual powers or personal strength.

SPAIN. We have given our opinions freely of the priesthood of Spain, seeking to deluge the country with blood in a civil war, to defend the religion of the PRINCE OF PEACE! We record the following as one of the proclamations issued by these miserable men to excite their brethren to murder their fellows. Comment is not necessary upon it—

"*Navarrese!*—The insults suffered by our holy religion, which is publicly outraged by the arms of the liberals, excite terror. The proclaimers of the most perfidious of men cry aloud—"Down with a religion! the devil forever." ("*Muera la religion! y viva el demonio.*")

"The soldiers of the royal army will bear testimony to the truth. The people of Erro and Viscarete deplore the profanation of their churches and the sacrilegious robbery of the sacred utensils, caused by these Vandals of Spain.

"The dreadful violation of Artajona and Anorbe, the pillage of Vidangos, Azcona, Sturgoyca, Valle de Erro, and many other places; the assassination

of the innocent people of Munain and Puente, who were put to death without being allowed the spiritual comfort of penitence, are authentic proofs of the *atheism* that inspires them. And, in sight of all this, will one of you hesitate a moment to take part with us? The hour of struggle is come, and those who do not issue forth to the combat will not be worthy to retain the names of Catholics, of Spaniards, and Navarrese. The *standard of the faith* is unfurled; and the banners of the king are every where displayed. Hasten, then, to join them; and, bravely fighting for our captive king, Ferdinand, this faction of *impious republicans* will instantly vanish, who endeavor to deprive us at once of *eternal felicity* and of temporal happiness, by plunging us into an abyss of incalculable evils. Unite, without delay, and you will give to Spain a day of glory and renown, which will descend to the latest posterity, with the immortal names of those who have defended, at the hazard of their lives, the *cause of God*, of the king, and of the country.

“Given in the palace of the government at Ochagavia, the 16th of August, 1822.”

(Signed) JUAQUIN LACARRA,
President, *ad interim*.
JOSE JUAQUIN DE MELIDA.
MANUEL DE URIZ.
FRANCIS BENITO DE ERASO.”

TREATY OF CHATILLON. In our last paper, page 115, we gave some extracts from this treaty, signed by two famous British ministerial lords, Aberdeen and Cathcart, and the no less famous whipper-in and supervisor of the “holy alliance,” lieutenant general Charles Stewart, in which *Napoleon was acknowledged as emperor of France*. In every word that we have spoken, and in every line we have written, we have considered that man as having been an usurper of the *rights of the people*, but not as one of the *throne of France*: but as to this, the people of France appeared to differ with us—and we indulged them, (out of our great goodness), with doing as they thought best for themselves, though not pleasing to us!—Yet the British afterwards called him “general,” notwithstanding they had “legitimized” the old French serjeant Bernadotte as king of Sweden, though placed on the throne of that country by the force of the influence of this said Napoleon! So much for the *consistency* of the proceedings in respect to him.

The following article, in relation to that treaty, appears, editorially, in the *Federal Gazette* of Tuesday last, and it is of much interest in the history of that extraordinary man:

“This is a circumstance connected with this treaty of Chatillon, by which all the allies were so willing to acknowledge Napoleon as emperor of France, little, if at all, known to the public, but which we shall now state on good authority. Caulincourt, duke of Vicenza, was the minister on the part of the French emperor, who met and treated with those whose names are signed above,* and when the duke presented the treaty to him for his approval, Napoleon exclaimed, “*take it away, I never treat with my prisoners!*” It was at this moment he made that great movement, throwing himself into the rear of the allies, and placing them between the French army and Paris, by which, as Sir Robert Wilson said, “he should have gained, but lost an

*Aberdeen, Cathcart, le comte de Ragoumowski, Humboldt, le comte de Stadion, Charles Stewart—the British, Russian, Austrian and Prussian ministers, on the occasion.

ED. REG.

empire.” So certain was he of capturing by that movement, that he rejected the treaty of Chatillon, which secured to him the imperial throne of France, but contained some restriction as to territory, to which he would not asscede. Had it not been for the treachery of *Marmont* and others in and before Paris, it is the opinion of the ablest military men in Europe, that Napoleon must have completely succeeded in his object.”

“**HOLY ALLIANCE.**” The abbe de Pradt, in an article in the *Constitutionnel*, on the approaching congress, says, “I should as soon think of having the affairs of St. Domingo settled by a congress formed altogether of whites. In truth, I know not why princes and ministers should give themselves the trouble of quitting their homes, for they know before hand all that they can say to each other, and what they have to decide. The 7th of July of Madrid has disturbed and dislocated the whole of the political machine of Europe. The cabinets are off their hinges, and the congress will not set them to rights. They had made their arrangements for one thing; another has taken place. They reckoned on Spain being counter revolutionized, and now it is more revolutionized than ever, and less manageable than formerly. The events which may take place every day in Spain may well derange all the plans formed in the first moment. Spain is too far from the place where she forms the subject of consideration; it requires too much time to act. Oh! but this Spain is an embarrassing country! With her it may be necessary to digest what cannot be devoured. The announcement of the congress has excited the warlike propensities of many. May it be permitted to represent to those warlike personages, that war is carried on with the *blood of men*, and the *money of the people*, that the assailants being only able to enter by Catalonia, would have to *take the bull by the horns*, and must commence by a great number of sieges; that Napoleon began by occupying Figueras, Barcelona, Pampeluna, and other places; that the holy alliance has very little money; and that the first match would set fire to their paper edifices!”

PORTO RICO PRIVATEERS. Extract of a letter dated 29th September, from one of the officers of the John Adams, capt. Renshaw, off St. John's, Porto Rico, to his friend in Richmond, Va.

“We arrived here after a passage of 39 days from Norfolk; officers and crew in good health.

“It appears the object of our visit here was to make some inquiries in relation to the captures of American vessels by Spanish cruisers, supposed to have been connived at by the Spanish government. Captain Renshaw has had an interview with the governor on the subject; the result of which is, that such a supposition is without foundation; and that those privateers have been fitted out by private individuals; and that if any American vessel is taken by their cruisers in future, and brought into this port, retribution shall be made to the owners, and a reasonable sum paid by the captors for their detention. In case any of these privateers are taken by our men of war, they shall be considered lawful captures, and taken to the United States for trial. Our captain was much pleased with this satisfactory and amicable settlement; and, as the object of our visit is attained, we shall sail this afternoon or tomorrow for Laguna.”

A CALICO PRINTER. It is mentioned in a late London paper, that Sir Robert Peel, the father of Mr.

Peel, is possessed of property to the amount of a million or two in value. His origin in life was very humble: he became possessed of a calico printing establishment, at Bury, near Manchester, and subsequently established others. During many years of the war with France, Sir Robert had this branch of the business so much to himself that he earned 100,000 guineas per annum.

This "Mr Peel," son of "Sir Robert," is now so great a man as to have been spoken of as a probable successor of lord Castlereagh—he fills one of the first offices in the state, though his father was a calico printer!

FORGERY. The *Democratic Press* says—A legal friend has suggested that he knows no case in which the counterfeiting of a private mark is regarded as forgery. He made the remark after having taken the trouble to look into the subject; he therefore suggests, for the better protection of *American manufactures*, that it may be necessary to have some cheap *public* stamp affixed to them, to guard against frauds, and enable the manufacturer or the government to prosecute for forgery. Those hints, at this time, are thrown out to induce the manufacturers to associate, to consult together, and digest some plan to protect themselves and their country from imposition. They should be up and doing. All our cities have their chambers of commerce, and why not their committees of manufactures?

SENATE OF THE U. S. The period of service of the following senators of the United States will expire on the third of March next.

- New Hampshire*—David L. Morrill.
- Massachusetts*—James Lloyd, who has been recently elected for the balance of Mr. Otis' term.
- Rhode Island*—Nehemiah R. Knight.
- New Jersey*—Mahlon Dickerson.
- Delaware*—Nicholas Van Dyke.
- Virginia*—James Pleasants.
- North Carolina*—Montford Stokes.
- South Carolina*—William Smith.
- Georgia*—Nicholas Ware.
- Kentucky*—Richard M. Johnson.
- Tennessee*—John Williams.
- Louisiana*—Henry Johnson.
- Mississippi*—Thomas H. Williams.
- Illinois*—Jesse B. Thomas.
- Alabama*—William R. King.
- Maine*—John Chandler.

One vacancy in Maryland, by the death of Mr. Pinkney.

Governor Bell, of New-Hampshire, has been elected the successor of Mr. Morrill.

MEXICO. The *coinage* in the mint of Mexico, from 1802 to 1821, amounted in

Gold	to	16,684,223 dollars.
Silver	to	286,292 811
Copper	in 1814-15-16-21	342 893

The *products of the mines* of Mexico, in gold and silver, and coined, from 1690 to 1803, inclusive, amounted to \$1,353,452,020: Silver drawn from the mines of Mexico, from 1690 to 1800, amounted to 149,350,271 marks, or 98,008,212lbs. troy.

THE RETORT. *An historical fact.*—When Miss Ann Pitt, sister to the great William Pitt, after wards earl of Catham, received a pension from lord Bute, her brother wrote her a very angry note, saying "he never wished to live to see the name of Pitt and pension together." When the same Wil-

liam Pitt received a pension from the same lord Bute of three thousand pounds per annum, his sister sent him back his own letter.

MONEY. The following account of the expenses of a dinner given by the mayor of Norwich, Eng. in 1561, may be useful to shew us what is *value*, when compared with or regulated by amounts of *money*, put down in pounds or dollars; and, as affording a lesson to such as calculate things by their apparent cost—the great fault of those who pay no attention to public or private economy.

William Mingay, esq. mayor of the city of Norwich, his expenses for a dinner, at which he feasted the duke of Norfolk, &c. the lords, knights, and gentry of the county.

	s.	d.
Eight stone of beef 14 lbs. to the stone	5	4
Two collars of brawn	1	4
Four geese	1	2
Eight pints of butter	1	6
A fore quarter of veal	0	10
A hind quarter of do.	1	0
Leg of mutton	0	3
Loin of mutton and shoulder of veal	1	0
A breast and coat of mutton	0	7
Six plvers	1	0
Four brace of partridges	2	0
Four couple of rabbits	1	8
Two guinea pigs	1	0
Four couple of hens	2	0
Two couple of mullards	1	0
Thirty-four eggs	1	6
Two bushels of flour	1	6
Sixteen loaves of white bread	0	4
Eighteen wheaten bread	0	9
Three loaves mislen do.	0	3
One barrel double beer	2	6
One barrel small do.	1	0
One quarter of wood	2	2
Nutmegs, mace, cinnamon and greens	0	3
Four pounds of barberrys and sugar	1	6
Fruit and almonds	0	7
Sweet water and perfumes	0	4
Sixteen oranges	0	2
Two gallons of white wine and claret	2	0
One quart of sack	0	9
One quart of malmsey	0	5
One quart of bustard	0	3
One quart of muscadine	0	6

£1 18 1

A speech made by Johnny Martyn, of Norwich, a wealthy, honest man, after Mr. Mayor Mingay's dinner. Found in the collection of one Turner, of Lyn Regis:—

"Maister Mayor of Norwich, and it please your worship, you have feasted us like a king, God bless the queen's grace. We have fed plentifully, and now whilom I can speak plain English, I heartily thank you, master mayor, and so do we all; answer, boys, answer! your beer is pleasant and potent, and will soon catch us by the caput, and stop our manners. And so huzza for the queen's majesty's grace, and all her bonny brow'd dames of honor! Huzza for master mayor, and our good dame mayoress. His noble grace, there he is, God save him, and all his jolly company! To all our friends round county, who have a penny in their purse, and an English heart in their bodies, to keep out Spanish Dons, and papists with their faggots to burn our whiskers! Slove it about, turn your cap cases, handle your jugs, and huzza for master mayor, and his brethren their worships!"—*London paper.*

A DESPERATE FIGHT. The brig Patriot, of New York, Horace T. Jacobs, master, on her voyage from Port au Prince to New Orleans, on the 7th of September, being off Cape Antonio, and in a dead calm, was attacked by a piratical schooner of about 60 tons, with a crew of from 45 to 50 men. After noticing the approach of the enemy, we find the following account of the engagement in a New Orleans paper: "Capt. Jacobs then tacked to the south and eastward and hauled up the courses, and ordered preparations to be made for action, which was readily and unanimously obeyed; the universal good spirits which pervaded all hands, (consisting of ten men and a boy), were truly conspicuous. When the schooner was close under the stern, captain Jacobs hailed her, upon which she fired a whole volley of musketry into the brig—and we in return commenced upon the schooner by firing the stern gun, which was under the direction of Mr. Johnson, the chief mate, which, with the musketry, did great execution amongst them. This gun was however dismantled the 3d round, and our colors were shot away at the same time, upon which the schooner set up a terrible shout to board from the bowsprit end—her boarders were covered by an abundance of musketry, but notwithstanding their vast superiority they were very gallantly repulsed. She then set fire to the brig astern, by throwing fired wads in at the cabin windows and into the stern boat, which was happily extinguished without damage. She then made another attempt to board, but was equally unsuccessful. By this time her fire considerably abated, and we could perceive an almost clear deck on board of her, and that she manifested a willingness to get clear of us. She asked for quarters repeatedly, but it was suspected to be a trick, (and regarded as such), to get a sight of the people and knock them off. She had much difficulty in getting clear of the brig, as her jib-boom and some of her ropes forward had got foul of the brig's davis and the stern boat's bow. Seven men could only be counted on her deck with the glass when she was a half mile off. The brig's rigging and sails are very much cut up: Captain Jacobs was wounded in the head by a musket ball and is supposed to have fractured his skull. He died of a lockjaw and violent convulsive fits on the night of the 12th inst. He has left a wife who was on board in the action, to lament his loss: he had only been married a little more than three months. Mr. Johnson, chief mate, to whom reference has already been made, is the only surviving officer of the brig, and was wounded in the thigh by a musket ball. He is much to be praised for his good and persevering conduct. Mr. J. D. Walker, of New York, doing 2d mate's duty, was killed in the action.

The following persons, comprising the crew of the said brig, to wit: Robert Greenoh, Thomas Stanley, Robert Mins, Henry Wilson, alias John Cotton, Henry Brown, Wm. Brown and Jerry Dedon, are deserving of every encouragement for their intrepid conduct against so unequal a force, as well as their dutiful obedience throughout to Mr. Johnson, in bringing the brig hither.

SQUIRRELS. A letter from Chillicothe, gives the following account of the damage sustained by those little animals, the quantity of which almost exceeds belief—"As we passed through the country, from Dayton to Zanesville, it is impossible to describe the havoc and destruction, made by the grey and black squirrels. Whole fields of corn, from 5 to 10 acres, are said to be wholly destroyed—not an ear left. During a squirrel hunt of about a week, in

the neighboring towns about Columbus, the first part of this month, nearly twenty thousand were killed. The exact number, I think, was 19,626.— Hundreds were seen every day swimming the Great Miami, Mad river, Scioto, and other streams.— Children, from 6 to 10 years of age, would wade into the shallow water, before the squirrels reached the shore, and kill them with sticks. Many of them are fat, and fine eating—many families almost live upon them. We saw many little boys; and some men, with from ten to thirty, or forty on their backs. They seem to be almost as destructive as the locusts formerly were in Egypt. They have never before been known so numerous in this section of the country. It is supposed they swim to find mast, as the nuts are scarce in this quarter, and then attack the corn fields. They will probably occasion a scarcity in many places."

ELECTION OF PRESIDENT. From the *Richmond Enquirer*. The 68th No. of the *Federalist* treats of "the mode of appointment" of the president. I do not mean to disparage the almost unqualified eulogium which the writer passes upon this part of the constitution; for he contends that "it unites, in an eminent degree, all the advantages, the union of which was most to be wished for." The following are the *desiderata* which he enumerates:

"It was desirable that the *sense* of the people should operate in the choice of the person to whom so important a trust was to be confided."

"It was equally desirable that the immediate election should be made by men *most capable* of analyzing the qualities adapted to the station, and acting under circumstances favorable to deliberation and to a judicious combination of all the reasons and inducements that were proper to govern their choice."

"It was also peculiarly desirable to afford as little opportunity as possible to tumult and disorder."

"Nothing was more to be desired, than that every practicable obstacle should be opposed to *cabal, intrigue and corruption*."—"They have not made the appointment of the president to depend on pre-existing bodies of men, who might be tampered with beforehand to prostitute their votes; but they have referred it, in the first instance, to an immediate act of the people of America, to be exerted in the choice of persons, for the temporary and sole purpose of making the appointment. And they have excluded from eligibility to this trust, all those who, from situation, might be suspected of too great devotion to the president in office. No senator, representative, or other person holding a place of trust or profit under the U. States, can be of the number of the electors. Thus, without corrupting the body of the people, the immediate agents in the election will, at least, enter upon the task free from any sinister bias. Their transient existence and their detached situation, afford a satisfactory prospect of their continuing so, to the conclusion of it."

"Another, and no less important, desideratum was, that the executive should be *independent*, for his *continuance in office*, of all, but the people themselves. He might otherwise be tempted to sacrifice his duty to his complaisance for those whose favor was necessary to the duration of his official consequence."

"But, (continues the *Federalist*), as a *majority of votes might not always happen to centre in one man*, and as it might be unsafe to permit less than a majority to be conclusive, it is provided, that, in such a contingency, the house of representatives shall select out of the candidates, who shall have the

five" (reduced, by the amendment of the constitution, to three), "highest number of votes, the man who, in their opinion, may be best qualified for the office."

The Federalist fails at the very point where it was necessary to justify the constitution. Why was it requisite to appoint in the house of representatives, by a majority of *states*, and not of *members*? Why reduce New York, with 34 votes, to the same level with Delaware, which has only one vote? Is this the way to make the "majority conclusive?" to prevent "cabal and intrigue?"

Suppose a state of things which may occur—Occur? must it not inevitably occur at the next election, if so many candidates be held up, and there be no means, provided by the good sense of the people, to concentrate a majority of the votes upon one of them? Suppose then the election goes to the house of representatives.

I put out of view all the opportunities of corruption and of intrigue—all dangers of failing to make an election at all, but under the most tremendous sacrifices of private faith or public good—I will dismiss all these considerations and calculate only how far it is possible to trample on the will of the majority—in other words, what *few men* may give a chief magistrate to this union.

There are 260 electoral votes. Suppose no man receives as many as 131—Then the election is made by the H of R. They vote by states.

There are 24 states—13 a majority.

Now Missouri has	1	R.—majority	1
Illinois	1	—	1
Mississippi	1	—	1
Delaware	1	—	1
Alabama	2	—	2
Rhode Island	2	—	2
Indiana	3	—	2
Louisiana	3	—	2
Vermont	5	—	3
New Jersey	6	—	4
Connecticut	6	—	4
N. Hampshire	6	—	4
Maine	7	—	4
			—
			31

Thus, it seems, that by possibility 31 representatives only may give a president to the union. Substitute S. Carolina or Tennessee for Maine, then 32 may become the majority. In other words, we can conceive of a variety of combinations by which an extremely small minority may be "conclusive."

I confess I start at this conclusion only—without throwing in any risks, perils, cabals or corruption.

From these consequences, I trust we may be saved, by uniting in some fair and constitutional mode in favor of some man, so as to secure him a majority of the electoral votes.

CALCULATOR.

DR. BRONAUGH. We have already mentioned the decease of this gentleman at Pensacola on the 1st of Sept. The following are the resolutions of the council, with the remarks of Mr. *White*, in announcing the deplorable event.

Mr. *Chairman*, It has become my painful duty to announce to the legislative council, the melancholy intelligence of the death of our much respected friend and president, doctor J. C. Bronaugh, who, in the charitable office of interposing his medical skill to arrest the progress of a violent epidemic, which was spreading death and desolation around it, has himself fallen a victim to its destructive fury. I shall not attempt to paint the emotions which this distressing occurrence has produced in

my own mind; language is incompetent to their expression.

"But a few days since, our friend was associated with us in the labors of giving to this territory a system of laws, in all the pride of life and vigor of intellect; endeared to us not only as a constituent member of our council, but as a companion conspicuous for his social virtues, and distinguished for those sentiments of honor which adorn the human character, and give to intrepidity and talent an elevation far above the schemes of faction, or machinations of intrigue. His noble soul disclaimed the duplicity which governs ordinary politicians; Exempt from every vicious and visionary passion, he was frank, sincere, generous, and brave; his cheek of innocence never was crimsoned by the blush of guilt; he accompanied the illustrious defenders of our country in the north, and in the south, wherever patriotism invited, and his country's security required, a bold and daring enterprise, to awe back the savage to his native wilderness, or repel the lawless foot of British depredation.

"The loss of such a citizen, Mr. Chairman, is to be regretted as a most serious calamity to our territory, and indeed to the whole United States; for, in times of difficulty and danger, the eye with pleasure and confidence is directed to such men, as the guardians of our rights, and the defenders of our country. With the most flattering prospects of extending the sphere of his usefulness to our territory, as a delegate in congress, he has been sacrificed by the iron grasp of death, which no virtue can prevent, or bravery avert. His body is deposited in the cold chamber of the grave; but his memory will be embalmed in our hearts so long as we preserve a recollection of his virtues, and when all the busy scenes in which we are now engaged shall have passed away like the "baseless fabric of a vision." As a testimony of our regard, I move you, sir, that the following resolutions be adopted:

"Resolved, That the members of the legislative council wear crape, for sixty days, on the left arm, as a testimony of the respect they entertain for the memory of their much-esteemed friend and president, Dr. J. C. Bronaugh.

"Resolved, That the council now adjourn."

Unanimously adopted.

BATTLE OF NIAGARA. From the *Buffalo Patriot* of Oct. 15. The facts contained in the following article were furnished us by a gentleman who recently visited the battle ground.

During the late war with Great Britain, no action with the enemy added greater reputation to the American arms than the sanguinary conflict with some of the best disciplined troops of Europe, who were also superior in numbers to the Americans engaged. This battle was fought about half a mile below the cataract of Niagara, on the Canada shore, at a place called Lundy's lane, and about one mile below the place called Bridgewater, by all which names it has been designated. The Chippewa creek, near which another desperate and bloody battle was fought, is two miles above the Falls.

The British army occupied a position in Lundy's lane, with their artillery on an eminence, commanding the road, by which the Americans advanced, and all the adjacent country, within the range of cannon shot. From this position they were driven by the Americans, and their battery taken, at the point of the bayonet, by the troops led on by the gallant colonel Miller. Their battery was several times taken and retaken, during the battle, which

continued until near midnight; and in their charges the bayonets repeatedly met before the lines fired; and a great number were bayoneted at the field pieces; which finally remained undisputed in the hands of the Americans; who were, however, unable to remove them from the field, in consequence of the loss of all the horses, and the excessive fatigue of the troops.

On the morning after the battle the American army retreated towards Erie, and having no carriages, were obliged to leave their wounded and dead to the care of the enemy. To the wounded we are willing to believe the necessary attention was paid, but in disposing of the dead, a more expeditious method than usual was adopted. The bodies were stripped and dragged together into an immense pile, intermixed and covered with dry fence rails, and set on fire, which soon reduced them to a heap of ashes. To this mode of funeral no objection is made, as the hot weather and situation of the army would not admit of any other.—But, will it be credited, that among a christian people, this pile of human bones and ashes should remain uncovered until the present time; and such, we are assured, is the fact. Colonel Robert Carr, of Philadelphia, passing near that place a few days since, visited the field of battle, and observed a number of hogs turning up the loose ashes and bones, on the spot where the field pieces had so gallantly been won: on inquiry, he learned from a person who keeps a school a few rods from the place, and who was himself wounded in the battle, that the dead bodies of the soldiers were burned on this very spot, and that they had never been covered; he belonged to the English army, and stated that their own dead were collected and buried, and that the Americans only were burnt, and that it was said at the time, that it was in retaliation for similar conduct of the Americans at Chippewa. On being asked what became of the bodies of the officers he pointed to a place where they were interred, but observed that a number of them must have been burned, as they had been stripped during the night and very early in the morning, and could not be easily distinguished from their men.

Colonel Carr employed a number of the school boys, by permission of the teacher, to collect a quantity of stones, laying near the place, and covered the remains of his gallant fellow soldiers, at least sufficient to protect them from the hogs.

TANNING. A late London paper (the Globe) announces the following highly important discovery: "Six weeks since, application was made to a person for the loan of *one hundred pounds* to a young chemist, who had made a discovery he was too poor to substantiate by experiment. The money was obtained, and, in a few days repaid by the borrower, already raised to sudden affluence by the private disposal of his invention. It is a new mode of tanning skins, combining such rapidity and economy, as promise to the public an immediate and immense advantage. Raw hides, hitherto lying twelve months in the tan pit, and subjected to a process otherwise defective and precarious, are now perfect leather within six weeks, and at less than half the expense. The gentleman who bought the invention, is a noted opposition member and contractor; and, from the terms of his stipulation, we may form some judgment of the probable magnitude of the results. He has paid him ten thousand pounds down, he has given obligatory deeds, secured him 5,000*l.* on the 1st of January, 5,000*l.* per annum for the four years next succeeding, and afterwards eleven thousand a

year for life! It is expected the price of a pair of boots will not exceed eight shillings, and a corresponding fall will be produced in all articles of leather manufacture."

BRITISH REPRESENTATION. *Ilchester and sir W. Manners, (lord Huntingtower)* In the last parliament this borough was nominally represented by the honorable Mr. Ward, son of lord Dudley and Ward—The borough then belonged to sir W. Manners; and in the month of February, 1817, Mr. Ward, (representing the baronet's borough in the house of commons), opposed parliamentary reform from his place there, and concluded his observations by saying that, "as parliamentary reform, however moderate, was the beginning of an inroad on the constitution, and was dangerous, so he would firmly resist every proposition that might be made on the subject." Mr. Oldfield, in his history of the house of commons, says, respecting Ilchester, that "this borough has been so imprudent in the exercise of its corruption as to have had the whole system several times exposed before committees of the house of commons." He then states that "the houses in this place were purchased up about 1785 by the late John Harcourt, esq. who sold them to Richard Troward, esq. attorney at law, of Norfolk street. Mr. Troward sold them again to his partner, the late Mr. Albany Wallis, who bequeathed them to col. Bayly, from whom they were purchased by sir William Manners, the present proprietor, who has since possessed himself of nearly the whole borough. At the general election in 1802, a great part of the voters were bribed at 30*l.* a man, to vote against the proprietor. This caused the trial and conviction of Alexander Davidson, esq. and his agents, at the assizes for the county of Somerset in 1804, for which they afterwards received sentence in court of king's bench to suffer one year's imprisonment. To prevent a similar occurrence at a future election, sir William Manners caused all the houses to be pulled down, except about sixty, in order to limit the number of voters, and erected a large work house to accommodate those whose disobedience had offended him. The number of houses destroyed upon this occasion was about one hundred, and the electors, who occupied them, with their families, have mostly resided in the work-house ever since; the nomination of the members is thereby transferred from about one hundred and sixty householders to an individual, (sir William Manners!)." [Lon. paper.]

FOREIGN NEWS. We have extracts from London papers of the 16th Sept. The following are the only things presented that seem worth present notice.

New wheat was selling at London at from 5*s.* to 6*s.* 3*d.* per 70 *lbs.* So there will be great distress among the farmers because of its abundance! 3 per cent. consols, for money, 80 5.8 1 2. Mr. Canning has received the seals as secretary of state for foreign affairs.

Extracts from the *French* papers shew an entirely different picture of the Greeks from that which we have hitherto received. They state that Chourschid pacha had advanced in despite of all difficulties, that many districts had submitted, that the Turkish army in the Morea was 50,000 strong, &c. The truth of the accounts from this quarter may be estimated from a fact, as gravely asserted, that the squadron of the United States landed a great quantity of arms and ammunition at Hydra!!! It is certain that no such thing happened. The number of the houses, destroyed or burnt by the Turks, when

they lately set fire to the city of Jassy, is given at 4700!

Trials for conspiracies and seditions are numerous in France. Gen. Berton and 5 of his accomplices, have been sentenced to death--and many printers have been fined and imprisoned.

The "holy allies" are proceeding to their place of meeting at Verona. It is now stated that they will not interfere with the internal affairs of Spain.

In Spain, the extraordinary cortes is to be convoked--gen Elio has been found guilty of treason. Many parts of the kingdom is still desolated by civil war, but the ultra royalists seem generally to be worsted; yet, at certain points, they appear in considerable strength.

The scraps of intelligence that we have from Mexico, presage the downfall of the recently-made emperor--but we chiefly receive them through Spanish channels.

It is reported that the government of Brazil has resolved to send deputies to the United States and England. Three have arrived at Rio Janeiro from Pernambuco, one *white*, one *black*, and one *mulatto*. In this country, there is no doubt of a complete amalgamation of the whites and the blacks, especially if it maintains its independence.

The late southern storm.

We have briefly noticed the sufferings in the neighborhood of Georgetown, South Carolina, by the late storm. The *Winyaw*, (or Georgetown), Intelligencer, of the 12th ult. contains an account of the proceedings of the citizens, who met to express their sorrow at the losses they had sustained. The intendant was called to the chair--a committee of five was appointed to draw up resolutions suited to the mournful occasion--on presenting these, Mr. *Mitchell*, (member of congress, as we suppose, from that state), made the following remarks:

Mr. *Intendant*--I hold in my hand the resolutions drafted by the committee of which I have the honor to be chairman. They will be found, I hope, to indicate and express that deep and heart felt concern, with which we are all afflicted by the loss of those of our citizens who were swept away in the late gale. We are not, however, sir, bigoted to those resolutions. Should any gentleman of the meeting submit *others* of a deeper cast of character, more significant, more expressive of intensity of feeling, we will most cheerfully and readily concur in their substitution. The stronger the resolutions are, the more faithfully will they exhibit the anguish of our hearts. All that we supplicate and entreat, gentlemen, is, that whatsoever measures they do adopt, they will adopt unanimously and without division. For it will be admitted on all sides, that there is no event in the annals of this part of the country, so afflicting to the hearts of individuals, so desolating to our society at large, as the solemn and melancholy event which we are called upon this day to commemorate.

Our little village, Mr. *Intendant*, has been often and often the victim of the most sorrowful dispensations of Heaven. It is known to us all, that, during the revolutionary war, it was reduced by a merciless foe from a state of smiling prosperity to a heap of ashes. Many of our ancestors, who arose on that fatal morning, blest with fortune, found themselves at noon stripped of every thing--Fathers and mothers wandered about the streets houseless, with young and imploring families, exposed to the fatalities of a sickly season, or depen-

dant on the charity of the few who had fortunately escaped the flames. *This* surely was a most appalling event--but aggravating and aggravated as it was, there was something in it to support, and to uphold and to cheer the hearts of the sufferers. It was not like that, which we are called upon to bedew with our tears--a scene of heart-rending, unmingled, comfortless woe. No, sir, in the black smoke, which arose from the cinders of their habitations, they beheld the bright light of the independence of their country; and to counterbalance the temporary evils which they suffered, they had in prospect great and mighty political and civil blessings. But, alas! what are our consolations on this occasion? What is there to soften and alleviate the agonies of our grief? What to impart a ray of light to this Egyptian darkness, "the like of which no eye hath seen, no heart conceived," "and which no tongue can adequately tell." And here, sir, I do not allude to the loss of property, immense and incalculable as it is; though in recalling the disasters of that tremendous night our hearts are rent by the exhibition of adversities in this respect, almost too great for utterance. We are informed, sir, that some of our fellow-citizens who arose, on the Friday morning of the storm, men of fortune, possessing fair and fertile and ample plantations, cultivated and animated by cheerful and affectionate laborers, with their barn yards laden and groaning under the weight of a most plenteous harvest, and their hearts melting with gratitude to God, for the unprecedented autumn which we had then had; that these men, sir, so gifted, so endowed, so blessed, found themselves on the following morn bereft of every thing, reduced almost to a state of bankruptcy--In casting their eyes over their estates, they beheld nothing but one confused heap of ruinous, disastrous, frightful desolation; not a living creature was left to cheer the hopeless view; *all and every thing* was swept from them by the unfeeling flood. This surely was an overwhelming reverse; a catastrophe as sudden as it was beyond all human calculation. But still it is a reverse at which they should not be inconsolable. For no man, *here*, can continue poor, who is honest, and economical and industrious; and there is no country on earth in which a person, so bereft by Heaven, will meet with such cherishing and universal encouragement from all quarters, if he will manfully put his hand to the plough and his shoulder to the wheel, as in this our most blessed country. Nor is there any where else so little connection between wealth and respectability. For no citizen is here distinguished on account of the number of slaves which he owns, or the number of plantations which he has inherited, or the amount of stock which he holds in the national funds. We have adopted a different standard of estimation.--The principle of our government is that every man should be considered, and loved, and respected, and honored, according to his usefulness; in proportion to the virtues of his heart, and the excellencies of his head.

What I have said of these individuals may with equal applicability be said of the whole society.--Although, on whatsoever side we turn our eyes, we behold nothing but ruin and disaster; yet, if our society will exert its energies, in the course of a very short time, in the revolution of a very few moons, every thing will be restored to its former order, and fitness, and comfort and beauty. For, Mr. *Intendant*, there is nothing which can resist the power of man's industry. The earth must yield to the spade, and the forest must fall before the axe. But supposing that this wreck of property is irretreiv-

able; that it is beyond the reach and grasp of our exertions, still when we balance it against the dispensations with which Heaven is now afflicting the fairest portions of our earth, we must say, that we have cause of gratitude to God for the lightness of his chastisement in this respect. For is all the wealth, which we have lost, to be compared to the dreadful ravages of the yellow fever in our sister city of New York? Or can our wretchedness in this respect be weighed against the wretchedness of the excruciated people of Ireland? Or will you say that our desolation is equal to that lately witnessed by some of our countrymen in the city of Scio in Greece; where nought was seen but streets literally flowing with blood, and nought was heard but the shrieks of prostituted beauty; the groans of mangled decrepitude; the remonstrances of manacled, fettered heroism? *So far we have some consolation.* But the calamity which we are now to touch upon, and which we have assembled this day chiefly to consider, *is an irreparable calamity.* Our society has sustained a wound, for which "there is no balm in Gilead." We have lost some of the best of our people. You, sir, enjoy the reputation of having a most critical and sagacious eye, and I will ask, if you had been appointed to select from the whole mass of our population a given number of individuals as distinguished as any others for the possession of the purest, the chastest, the most gentle, and the most kindly disposed hearts; if you had been appointed to select those who were remarkable for a perfect blamelessness and innocence of life, would your eyes have lit upon any other than those identical persons who have been swept from us by the remorseless ocean? I, sir, was born on this spot; I have lived here all my life, and it is very well known to every man in this assembly, that I have been much engaged in the heats and broils of political contention, yet never have I heard foul-mouthed malice, heart less, reckless, relentless, insidious, undistinguishing as it is; never have I heard foul mouthed malice utter, nay whisper, in its most suppressed and stifled tones, aught against the character of the late Dr. Myers.

[The orator then proceeds to make some most feeling remarks on the character of Dr. Myers, and others, who perished by the awful visitation, and adds—]

In fine, my countrymen! He, "who layeth the beams of his chambers in the waters—who maketh the clouds his chariot—who walketh upon the wings of the wind—who looketh on the earth and it trembleth—who toucheth the hills and they smoke"—He has ordained us this calamity, and we must kneel to its influence. I fear, sir, I have violated a rule that I laid down very early in life, which was, never to address any assembly of which I had the honor to be a member, but when compelled by some private necessity, or public duty. If I have intruded on the patience of my fellow-citizens, I entreat their pardon, and that they will ascribe the trespass to my feelings on the occasion. I beg leave to submit the resolutions of the committee.

Whereas, it having pleased Almighty God to send forth the winds of destruction, and to scatter affliction and ruin among us—it becomes us, as a moral and religious people, to clasp our hands in prayer before his wrath—to humble our hearts, and to seek mercy from him who alone can sooth our affections:

And whereas, it is a duty which we owe the memories of those of our fellow-citizens, who have been unexpectedly torn from us, to pay a suitable tribute to their worth,

Resolved, therefore, That the hon. the intendants and wardens, do set apart a day of prayer, humiliation and thanksgiving, and that our fellow citizens of the country be requested to join in its solemnities.

Resolved, That a committee of five persons be appointed by the chairman, for the purpose of requesting some minister of the gospel to deliver a suitable discourse, as well upon the late visitation of Providence, as upon the worth and virtues of our departed fellow citizens.

Resolved, That the citizens do assemble on the day appointed by the town council, at the market house, and that a procession be formed to the church, and the bell be tolled as at a funeral.

Resolved, That the citizens be recommended to wear crape on the left arm for thirty days.

[These resolutions were separately adopted, after amendment, and a committee to carry them into effect was appointed, as required.]

American Colonization Society.

ADDRESS OF THE BOARD OF MANAGERS.

The period has at length arrived, when we feel it our duty to call upon our friends for their united aid and exertions. We have now a reasonable prospect of accomplishing the great object for which the society was formed. The public have been made acquainted with the difficulties with which it has pleased Providence to try our faith, our constancy, and our zeal. They have been informed by the last report, that a territory had been purchased, under the direction of Lieutenant Stockton and Dr Ayres, on the 15th of December last. This territory is situated at Montserado, at the mouth of Montserado river. Further accounts and fuller observations confirm all the representations formerly made of the health, fertility, commercial and agricultural importance of this place. It is situated in about 6° 13' of north latitude, and about 250 miles south-east of Sierra Leone. Our people who were at Pourah bay, in the colony of Sierra Leone, have been removed to their new settlement. Dr. Ayres and Mr. Wiltberger left them on the 4th of June, when houses had been prepared for them. They amounted, at that time, to about eighty. A vessel was then on the way to join them, with thirty-five new settlers, and fifteen captured Africans, with a good supply of provisions and stores. As the rains will cease in October, and the season then commence for active operations, it is of importance that such reinforcements as will be necessary to place the settlement on a respectable footing, as to strength, society and resources, should be forwarded without delay. It is for this purpose we now call upon the public for aid. To this period we have always looked, not without anxiety as to the result, but with a confident expectation that we might rely upon the liberality, benevolence, and christian zeal of our fellow citizens, to supply the necessary funds for laying the foundation of a settlement, which will make Africa rejoice, and which America shall not be ashamed to own as her work. Great as have been our difficulties, our discouragements, and our trials, we view in them all the hand of a kind Providence, who has sent them, as we believe, for wise purposes, and has not failed to support us under them. We necessarily commenced our operations under much ignorance of the country and people of Africa. By the delay which has taken place, we have procured such information as, we hope, has enabled us to select our situation with greater advantage, and to direct our future

operations with greater skill and judgment, and to give to some of the people of Africa a knowledge of our objects, and a confidence in our agents and country.

We are happy to learn that many of the most powerful and intelligent of the kings along the coast, have become convinced that the slave trade must soon cease; and they have been led to look, with no small anxiety, for the sources of their future supplies; and they now see in our new settlement that resource, the object of their solicitude. Their interest and their hopes are already enlisted in our favor; and the activity and enterprize of our cruisers have brought them to dread the power, and to respect the name of our country. We are now seen and known through another medium, than that of slave traders, and we are now enabled to place the safety of our people and the success of our settlement, on two of the strongest passions of man—fear and interest.

At a grand palaver, called by Dr. Ayres in April last, at which there were seventeen kings, and upwards of thirty half kings, or head men, there were but two opposed to the settlement of our people at Montserado, and all but one offered Dr. Ayres land, within their own jurisdictions. As to the disposition of the colored people in this country to avail themselves of an opportunity to join the colony, we can confidently state that many hundreds are not only willing but anxious to go, and that applications for this purpose are almost daily made to the board. At the same time, it is proper to state that no persons, of any description, ought to attempt to settle in the colony without the permission of the board, and that they will not be received without such permission. We request the auxiliary societies to exert themselves in making collections; and we hope that, where there are no auxiliary societies, individuals, friendly to the cause, will do something among their friends and neighbors. If this is done extensively, even small contributions, which will hardly be felt, will, from their number, enable us to send out a powerful reinforcement. We hope no friend of the cause will omit giving something. This is an important crisis in our affairs. We, therefore, hope none will be lukewarm or indifferent. In a short time, we expect the settlers will be able to support themselves, and to aid other emigrants. Now is the time to encourage them, and lay a foundation for future strength. Many thousands will be enabled, in a few years, to find their way to the settlement, when it is once firmly established, and employment and assistance can be readily furnished them on their arrival. Let us, then, be up and doing. The cause is great, the object important, and the occasion urgent.

Collections in money should be forwarded to Richard Smith, esq. cashier of the United States branch bank, Washington, treasurer of the society. By order of the board.

E. B. CALDWELL, sec.

October, 1822.

The Christian Church.

From the Democratic Press.

We lately gave an extract from a London paper, relative to a book published in England, as to the consumption of the public wealth, by the clergy of every christian nation. We have since been presented with more copious extracts from that work, and find them of so interesting a character as to determine us to exhibit some of its most important facts.

In FRANCE, the number of hearers of the Word are given at 30,000,000; about 29 millions of Catholics and one million of Protestants. There are 25,895 Catholic places of worship, and 357 Protestant. The number of Catholic clergymen is given at 35,286 and 357 Protestants, of whom 183 are Calvinists and 174 Lutherans. The average annual expense is 1,050,000*l.* equal to 35,000*l.* per million of hearers. This estimate is for the year 1821.

By comparing this table with official tables of the expenses of the clergy before the revolution in France, we find that the present establishment provides a far more equal apportionment of clergy to those to whom they are to serve, and secures to the lower orders of ministers a more ample compensation than was provided by the ancient establishment; there is, nevertheless, an *annual saving* to the nation of more than *thirty millions of dollars*. This is *one* of the rich fruits of the revolution. It is thirty years, and more, since the revolution, and, in that time, the French nation, in this one item, have saved upwards of *nine hundred millions of dollars*, and have had the duty of the clergy better performed and their comfort better provided for. Such, and so important are the effects of a good government.

The church or kirk of SCOTLAND, is estimated at 1,500,000 hearers, who have 1,000 places of worship, with each one clergyman; the income of the kirk is given at 206,360*l.* equal to 135,000*l.* per million of hearers. No clergyman can have less than 150*l.* a year, and they average more, besides a dwelling house and a glebe of land.

The following is given as the present state of the church of SPAIN. Hearers, all Roman Catholics, are 11,000,000, who have 11,000 places of worship and 16,552 clergymen, whose annual income is given at 1,134,400*l.* which averages 100,000*l.* for every million of hearers. The Spanish church was organized by a decree of the cortes, of October 24, 1821. The author of the work under review says it is characterized by "kindness, good feeling and wisdom." Comparing this establishment with the expenses of the church before the late revolution in Spain, it appears that the new establishment effects an *annual saving* to the nation of *forty-four millions and a half of dollars*. What an immense saving; and, probably, as in France, the clergy are better provided for and the people better instructed. Here again is the rich fruit of a revolution founded on the rights of man.

The church of PORTUGAL follows next: its hearers are 3,000,000, all Roman Catholics; the places of worship are given at 3,000, the number of clergymen 4,465, the income of the church, annually, 300,000*l.* equal to 100,000*l.* for every million of hearers. This is the new establishment. It is on precisely the same plan as that of Spain, and the saving, although not stated, is probably as great in Portugal as in either Spain or France.

The latin Catholic church in HUNGARY is said to have 4,000,000 of hearers, 3,230 places of worship, 5,469 clergymen, whose annual income is given at 320,000*l.*, equal to 80,000*l.* per million of hearers. The Calvinistic church in Hungary is estimated at 1,050,000 hearers, 1,351 places of worship, 1,384 clergymen, whose income annually is put down at 63,000*l.*, equal to 60,000*l.* per million of hearers. The Lutheran church in Hungary has 650,000 hearers, 448 places of worship, 456 clergymen, whose annual income is 26,000*l.*, equal to 40,000*l.* per million of hearers.

From the facts we have extracted, the following is constructed by our author:

The clergymen receive on an average per million of hearers,
 In France, national stipend £35,000
 In Spain, do. 100,000
 In Portugal, do. 100,000
 In Scotland, do. dwelling and glebe 135,000
 In Hungary, Catholics, do. 80,000
 Do. Calvinists, do. 60,000
 Do. Lutherans, do. 40,000

The average number of people for whom a church is provided,
 In France 1,150
 In Scotland 1,500
 In Hungary, Cath. 1,240
 In Hungary, Lutherans, 1,500.

The average number for whom a clergyman is provided,
 In France 1,150
 In Scotland 1,500
 In Hungary, Cath. 730
 In Hungary, Lutherans, 1,500.

We are next presented with the estimated expenditure on the clergy of these UNITED STATES; the hearers are said to be 9,600,000, places of worship 8,000, clergymen 8,000, annual income 576,000*l.*, equal to 60,000*l.* per million of people.

The church of ITALY is next—its hearers are 19,391,200, all Roman Catholics, places of worship 16,170, clergymen 20,400, whose annual income is 776,000*l.* equal to 40,000*l.* per million of hearers.

The estimated expenditure on the clergy of AUSTRIA is thus given; hearers 18,918,800, places of worship 15,800, clergymen 19,000, whose income is 956,000*l.*, equal to 50,000*l.* per million of hearers.

The clergy of SWITZERLAND are said to have 1,720,000 hearers, they are about two thirds Calvinists and one-third Catholics, 1,430 places of worship, 1,700 clergymen, whose annual income is 87,000*l.*, equal to 50,000*l.* per million of hearers.

In PRUSSIA the hearers are estimated 10,536,571, places of worship 8,100, clergymen 9,578, whose annual income is 527,000*l.*, equal to 20,000*l.* per million of hearers. Of these, there are Lutherans 6,054,579, Catholics 4,023,513, Reformed or Calvinistic 300,101, Jews 127,345, Menonites, &c. &c. 21,233.

THE GERMAN STATES, exclusive of Austria and Prussia, are said to have 12,763,500 hearers, 9,800 places of worship, 12,600 clergymen, with an income of 665,000*l.* annually, equal to 60,000*l.* per million of people.

The kingdom of the NETHERLANDS is said to have 5,000,000 of hearers—of these, there are 3,500,000 Catholics, 1,000,000 of Calvinists, and 500,000 of other sects. They have 3,840 places of worship, 4,540 clergymen, with an annual income of 265,000*l.* being at the rate of 80,000*l.* per million, for two millions of Dutch, and 35,000*l.* per million for three millions of Flenish.

The clergy in DENMARK have 1,700,000 hearers, all Lutherans, 1,300 places of worship, and 1,586 clergymen, whose annual income is 119,000*l.*, at the rate of 70,000*l.* per million of hearers.

In SWEDEN and NORWAY there are supposed to be 3,400,000 hearers, 2,620 places of worship, and 3,100 clergymen, whose incomes are estimated at 238,000*l.*, at the rate of 70,000*l.* per million of hearers.

In the RUSSIAN EMPIRE the hearers are said to be 42,000,000—of these, there are of the Greek church 34,000,000, Catholics 5,500,000, and Lutherans 2,500,000, places of worship 24,500, clergymen 74,270, whose yearly income is 910,000*l.*

34,000,000 Greek church, at 15,000*l.* per million, 510,000*l.*
 8,000,000 Catholics and Lutherans, at 50,000*l.* per million, 400,000*l.*

The Greek christians in TURKEY are calculated at 6,000,000, who pay at the rate of 30,000*l.*, equal to 180,000*l.*

In SOUTH AMERICA the hearers of the gospel are estimated at 15,000,000, who pay at the rate of 30,000*l.* per million, which gives an annual income of 450,000*l.* In small christian communities, dispersed over the world, it is believed there are 3,000,000 of hearers, who pay at the rate of 50,000*l.* per million, equal to 150,000*l.*

ENGLAND and WALES our author calculates to have 6,000,000 of hearers of the church established; there are 11,743 places of worship, and 13,000 clergymen, whose annual income is estimated at 7,596,000*l.*, at the rate of 1,266,000*l.*

In IRELAND, it is assumed that there are not more than 40,000 hearers of the established church; they have 740 places of worship, and 1,700 clergymen, whose annual income is 1,300,000*l.*, at the rate of 3,250,000*l.* per million of hearers.

The people who are not hearers of the established church in England and Wales, are estimated at 6,000,000, who have 8,000 places of worship and 8,000 clergymen, who receive, annually, 510,000*l.*, at the rate of 85,000*l.* per million. In Scotland, the hearers who do not belong to the kirk, are estimated at 500,000, who have 333 places of worship and 400 clergymen, whose yearly income is 45,000*l.*, at the rate of 90,000*l.* per million. In Ireland, the hearers of the gospel not of the established church, are calculated to be 6,600,000, viz. Catholic 5,500,000, Presbyterians 800,000, Methodists and other sects, 300,000—who have 2,378 places of worship, and 2,378 clergymen, whose annual income is estimated 254,080*l.*, equal to 40,000*l.* per million of hearers.

From these and many other facts which we have passed over, it appears that, in all the countries of Europe and America, except G. Britain, 198,728,000 people pay their clergy 8,852,000*l.*; while 6,000,000 of the people of the established church of England and Wales pay their clergy 8,896,000*l.*

The following table exhibits an abstract of the state of christianity throughout the world:

	R. Catholics.	Protestants.	Gk. church.
In G. Britain & Ireland	5,800,000	15,200,000	
Rest of the world	118,872,000	33,856,000	41,500,000
	124,672,000	54,056,000	41,500,000

Catholics, 124,672,000, pay to their clergy 6,106,000*l.*

Protestants, 54,056,000, pay to their clergy 11,906,000*l.*

Greek church, 41,500,000, pay to their clergy 760,000*l.*

Total of christians 220,228,000, pay to their clergy 18,672,000*l.*; of which Great Britain and Ireland, for twenty-one millions of people, pay more than one half.

We will not lengthen this article by remarks upon the number of extraordinary facts it presents for contemplation. We would recommend our readers to lay this abstract away, to be read again and consulted occasionally. Before we close, we would submit the following short statement, exhibiting the expense per thousand of the whole christian world—of the Catholic, of the Protestant, and of the Greek churches, for the maintenance of their clergy.

220,228,000 christians in the world, per thousand, 85*l.* 4s. 9d.

124,672,000 Catholics in the whole world, per thousand, 487 19s. 6d.

54,036,000 Protestants in the world, per thousand 250l. 5s.

41,500 000 Greeks in the world, per thousand, 18l. 6s. 3d.

Hence it appears, that the maintenance of the clergy of the Protestant church cost more than twelve times as much as those of the Greek church, and four and a half times as much as those of the Catholic church.

Legislature of Vermont.

GOVERNOR'S SPEECH.

Gentlemen of the council, and

Gentlemen of the house of representatives:

The evidence given by my fellow citizens, of their continued respect, in electing me again to the office of chief magistrate of the state, excites in my breast the liveliest sense of gratitude; and while it encourages the belief that, hitherto, the discharge of the important duties of the trust has merited approbation, it reminds me, that repeated tokens of confidence demand increased exertions of faithfulness and diligence.

The opportunity which I have been favored of becoming acquainted with the sentiments of gentlemen who compose this assembly; having been frequently associated with most of you, in some of the different departments of the governments, enables me to rely, with confidence, upon your countenance and support in every proposition made by the executive, which has for its end the advancement of the public interest; at the same time afford satisfactory evidence, that the independent and enlightened opinions of the representatives of the freemen are duly appreciated.

In assembling together upon an occasion like the present, we are naturally led to a recollection of the events of the past year; and although, in the dispensations of Providence, there are none distinguishingly marked with prosperity or adversity, in which we are immediately interested, much to the sober, considerate mind, is presented, which demands sincere acknowledgments to the Supreme Being; and that, through his gracious influence, our present labors may have a prosperous result, it becomes us to cherish a grateful remembrance of past favors, and, in sincerity, humbly implore Divine assistance.

The short period for which the representatives hold their offices, and the plenary powers with which they are invested, was designed, by the venerable framers of our constitution, to secure to the people the power of speedily abrogating such laws as were inexpedient or unjust; and, while we possess this peculiar advantage, that we may practically avoid the evil of frequent and injudicious changes of the public laws, against which other governments have provided, by erecting a co ordinate and more permanent branch of legislative authority, we ought to cultivate an habitual regard for existing laws, and carefully to resist a natural, yet dangerous, propensity of magnifying partial imperfections, (to which all human institutions are unavoidably subject), into unnecessary defects.

The present period of public and radical tranquility is highly favorable to the adoption of measures calculated to promote the permanent interests of the state. To improve the means of transporting the various commodities with which the state abounds, and to facilitate access to the most favorable markets, are objects of the first importance.

We have witnessed, with pleasure, the interest which this subject has excited in our sister states; and it cannot be doubted, that the time is not distant when it will claim the attention of our own. Whether the period has arrived in which it would be practicable to attempt any thing beyond the improvement of our roads, will be decided by the discretion of the legislature. That striking disparity which exists in the state of the roads, in different towns, possessing equal means, and subjected to equal obstacles and difficulties, is evidence of a defect in the law, or its administration. I apprehend it will be found, upon examination, that the statute of A. D. 1810, applying the penalty imposed upon a town, for neglect in making and repairing roads to that object, has produced no salutary effects, but has rather induced the very neglect against which the law was designed to provide. Instead of stimulating to diligence and attention, from the fear of punishment, it invites delay till the tardy process of the law shall compel them to do that, and that only, which was their duty to have performed. It is, in effect, saying, "if you neglect to impose this necessary tax upon yourselves, it may, at some future period, be imposed upon you by others."

The fiscal concerns of a state, however limited and inconsiderable, require the constant care and watchfulness of its guardians. They ought not only to require, but to obtain, annually, information in relation to every source of revenue, as well as the state and condition of all the demands, under the charge of the various public officers through the government. Although retrenchment cannot be deemed necessary, in reference to the present compensation allowed for specific services, which is probably below that of any other state of equal rank, that the claims upon the treasury may not be unnecessarily augmented, every branch of public expenditure demands frequent examination. The expenses incurred by public prosecutions, constitute a principal source of the disbursements made by that department; and it is to be noticed that, for many years, they have much increased.

In a government like ours, established upon the avowed principle of securing equal privileges and affording equal protection to all, justice demands of those to whom its administration is entrusted, so to provide as that the unsuspecting and unfortunate may be secured against the unjust exactions of the more artful and fortunate. The distinctions which exist in other governments, arising from affluence and indigence, and which may *there* be necessary to support the deformed fabrics, are alike opposed to the safety of our civil institutions and the well being of society. The acquisition of wealth, by laudable industry, economy and prudence, merits approbation and encouragement; but laws providing facilities for a few calculating, greedy citizens, to monopolize that property, the product of the toil and industry of the more useful and deserving, can never be sanctioned by the faithful and intelligent representatives of the people. These suggestions are made from a conviction, that the practice of exacting exorbitant interest, (a subject alluded to in addressing the legislature the last year, and for which I hope to be excused in again inviting its attention), is becoming extensively injurious to the interests of the great body of the citizens. The amount of the exaction is overlooked in the covert poison of long credit, and the illusive hope of good fortune and better times, or submitted to from necessity. In most governments, where the amount of interest is at all restricted by law, the contract or security, in which is reserved the usury, is rendered

void. Should any law on the subject be considered useful, I submit to the general assembly whether a provision to that effect in our law, would not necessarily check the evil. So long as the security is not jeopardized, the usurer will not hesitate to make the reservation; suspending on the happening of events the ultimate determination of receiving. It is believed, that the existing penalty is inadequate to the object. Private prosecutions, by the aggrieved or others, are discouraged by the consideration that, in most cases, the cost and expense incurred in, and the uncertainty of the final issue of, the prosecution, will counterbalance the offered and unprecedented low reward. Public prosecutions are rare, inasmuch as where no private advantage is expected, there are few who will, at the expense of the displeasure of a powerful class of citizens, voluntarily exercise the reputedly invidious office of informer.

The natural effect produced by the success which of late has attended the petitions for the establishment of banks, is to encourage others in the pursuit; and the difficulty of resisting applications, supported by arguments which have heretofore been urged, with so much skill and efficacy, is probably not diminished. The commercial concerns of the state cannot require extensive banking institutions. The resources of our husbandmen, and their course of business, are illy calculated to meet the demands and comply with the necessary regulations. An opportunity will be afforded for investing that money, which would otherwise remain in the hands of many wealthy, honorable citizens, accessible to those who will then become the prey of such as are thereby enabled to increase the means of usurious depredations. The advantages ordinarily derived to the state at large, from the augmentation of a circulating medium, which is not the representative of real wealth, are not discerned. The ruinous effects of multiplying banks in the interior of our country, have indeed been felt, and, I believe, generally acknowledged; and I can but hope the legislature will concur in the opinion, that enough has already been done to satisfy every requisition, emanating from an ingenious desire for the public good.

The doubts which have been entertained by many whose opinions merit respect, together with the decision lately made by the circuit court of the United States, will suggest to the general assembly the propriety of cautiously providing for the relief of the unfortunate, who are induced to ask for acts of suspension and insolvency, that the intended favor may not prove delusive to the debtors, or prejudicial to those who have humanely furnished the requisite aid, for extending the limits of their confinement beyond the walls of a comfortable prison.

In obedience to the direction of the general assembly, at their last session, a correspondence has been opened with the governor of Canada, on the subject of obstructions supposed to have been erected on the waters issuing from Lake Memphragog; and it is due to that distinguished public officer to state, that a prompt attention was given to the complaint, and satisfaction afforded to the citizens who felt aggrieved.

The sincere attachment of this state to the government of the union, cannot fail to excite a deep interest in the success attending its administration; and it is with pleasure I am enabled to congratulate you on the present prosperous state of our national concerns.—The general anxiety produced by the depressed state of the revenue, has measurably

subsided, by the favorable reports of its augmentation.

The success which has attended the exertions of that meritorious class of citizens engaged in manufactures, notwithstanding the obstacles and difficulties they have encountered, is noticed with much satisfaction; and it is to be hoped, by that encouragement, which may reasonably be expected, our supplies and our revenue, which heretofore have rested upon a precarious foreign commerce, may be drawn from a source, profitable to the citizens and safe to the government. An enlightened and enterprising people cannot long be satisfied with a system of regulations, in which a favorable market for the varied and principal productions of every part of the country, and the different interests of every class of citizens, is not duly regarded. The good sense of the community will discover that the nominal price of the wares in market, is not so important as is the possession of the requisite means to defray the expense of the purchaser. This subject is one which has not heretofore been passed unnoticed; and is now only referred to in the hope that some salutary effects may issue from a frequent recurrence to the claims of the greatest portion of the useful and industrious citizens of this section of our country.

The unanimity which has hitherto apparently prevailed amongst the freemen of the state, in placing me in the responsible station I now occupy, and which I hope will ever be remembered with gratitude and delight, has induced the belief, that it is probable, without a manifestation of my desires, I might again be honored with the suffrages of some portion of my fellow citizens; I have therefore deemed it my duty to request, that I may not again be considered a candidate for the office.

RICHARD SKINNER.

October 11, 1822.

Independence of Brazil.

TRANSLATED FOR THE PHILADELPHIA GAZETTE.
From the Lisbon Diario do Governo, Aug. 27.
The general extraordinary and constituent cortes of the Portuguese nation, to the people of Brazil.

To establish and to consolidate the constitutional monarchy in both hemispheres, is the ardent desire of the cortes. To straighten, by indissoluble ties, the union of two brotherly nations, though they be separated by so great a space, is the difficult problem, which can only be solved by a thorough conviction and a frank declaration of what our circumstances loudly call for. Let us not therefore spend in useless disputes and reciprocal recriminations, the time which we ought to employ to maintain the integrity of so vast an empire, whose greatness and solidity depends on a well adjusted and permanent union.

Brazilians! Neither do your European brethren contradict you, nor did even the cortes deny you the natural right which you have to constitute yourselves independent and to select the conditions of government which might suit you best; the cortes recognized this expressly, when they proposed you the fundamental law of the basis of the constitution, in order that you might declare whether you wished to form with us, under those conditions, the same association, the same empire. If, on account of the distance and time, your representatives could not co-operate in framing this law, you adopted it, after it had been made; you swore to it, the votes of all the political assemblies of Brazil re-echoed in the halls of this building amidst the greatest ap-

plause and the liveliest enthusiasm. Since then it was notorious to the whole world, that, far from adopting an unconditional submission, you had recognized and swore to the basis of the constitution of the Portuguese monarchy, and that you had proclaimed the union with Portugal in the most solemn and most spontaneous manner, under the political system and the conditions of government therein determined.

The essential principles of our original political charter have not been altered by the constitution, they have only been better developed and expounded. They consist generally in the division of the political powers; one single chamber of representatives, with legislative power, assembling once in each year—an inviolable king, with responsible ministers—the liberty of the press—the right of petition. These are the first guarantees of the political and civil liberty of the people of Portugal and of the people of Brazil; a liberty, Brazilians, which is one and the same, as well for you, as for your European brethren, since it is equally valuable and efficacious to both; nor does the constitution allow to one what it refuses to the other; those who tell you the contrary, wish only to satisfy ambitious passions, alienating your minds in order to expose your safety, and to draw on you the horrors of anarchy and civil war; they are restless persons, who flatter any kind of authority, only for the purpose of ascending to the summit of power and riches, heedless of all disastrous consequences.

Let, therefore, all illusion, which may yet possess some minds, disappear at once.

Brazilians! When the cortes displayed to your sight the standard of liberty, and invited you to rally under this signal, it was certainly not done in order to retain you in the abject state of colonial dependence; when they offered you the same constitution, the same liberties and the same guarantees, it was certainly not done in order to make you slaves. It would be a singular way of reducing to a colonial state and enslaving the people, to recognize the rights, of which they had been deprived, and the privileges, which they had never fully enjoyed. As if the civil and political liberty were some abstract speculation and without the reach of any common capacity, a set of disorganizers have tried to persuade you, that it were inconsistent with that liberty to continue the provincial Juntas, which yourselves have established by the elections of the people; to abolish the tribunals which are notoriously useless and a heavy charge; to withdraw from America the heir of the crown, when political reasons called him to the foot of the throne, and when you had yourselves shown an unwillingness to obey him. This faction of ambitious men, enemies of the public tranquility, have taken hold of and exaggerated in the south of Brazil such ill-founded pleas; they have pretended, at first, that the cortes had no authority to legislate for Brazil; they have alleged next the injustice of the legislative measures; and, at last, they have declared their formal disobedience and manifest revolt, whereas the legislative authority of the cortes have sprung from the basis and from the will of the people, who have adopted, sworn to, and recognized that authority; whereas the justice of the legislation is founded on the nature of things and on the will of the people, previously and expressly declared; whereas, finally, partial resistance is the very crime of rebellion, which is always the forerunner of anarchy, and ought to be punished in every well organized society.

The cortes, knowing that this revolt is only the act of a few individuals who have signed a certain document, have decreed that the rebels shall be prosecuted. The cortes respect the general will of all Brazil, and they know that the general will of the people is the vehicle and organ of every prudent legislature; but they know also, that the general will of all Brazil is to adopt, with the same conditions, the same system of government, uniting itself to Portugal by an everlasting tie, and they know that the disorganizing attempts of partial resistance are only ramifications of the faction of the south, in order to prevent the re-acton of these and other turbulent passions, obnoxious to liberty and contrary to the general opinion of the people of Brazil, the cortes have determined, that the executive be authorised to send troops to that continent. A new pretext for the factious!—but as groundless as the former ones. This expedient, in the terms with which the cortes have adopted it, (who of you, Brazilians, does not see it!), if it serves the purpose of suppressing dangerous parties, is certainly inadequate to make conquests or to maintain tyranny; this consideration alone is sufficient to free it even from the appearances of hostility. However, the cortes have taken more and more into consideration the degree to which the irritation between the Europeans and the natives has arrived in Brazil, and how much the excesses of a popular frenzy, which the troops of the country would not be able to contain, are to be feared; it is therefore necessary to protect the real and personal property of a great number of citizens. And how could so great a mass of interests and opinions be indifferent? Nothing else has influenced this determination of the cortes.

Brazilians! The proceedings of the cortes and of government, whose authority you have recognized and swore to, have exceeded neither the principles of universal justice, nor the maxims of the art of governing, in the laws and orders which they have sent you. Do not, therefore, give yourselves up to the intrigues of a party, which wants to persuade you of the contrary, because it intends only to distract and to disunite you. Reflect, yourselves—think of what you were and of the political consideration to which the constitution raises you; examine attentively what these violators of the most solemn oaths pretend to insinuate, and you will find that some want the excess of liberty, proclaiming a democratic independence, and that others want the excess of servitude, opening the road to an absolute power and to the privileges of aristocracy; but the cortes offer you the constitutional monarchy, as a mean term between these two dangerous extremes, as the plank of your political salvation; you have it from their hands, and you need not undertake the arduous and hazardous task of establishing a government entirely new. Your representatives co-operate with activity and wisdom in making to the constitution such additions, as may be consistent with the unity of the power and the empire, and as may contribute towards the general and immediate benefit of the nation. You shall not want the most absolute independence in the exercise of the judiciary power; courts of justice, improperly situated, cannot well administer justice. Nor shall you be wanting of an authority delegated by the king, which may, in the distribution of offices and favors, put you nearer within the reach of the intervention of the royal power.

Brazilians! The act of adopting or of rejecting a system of government, is a compromise; we weigh the inconveniences, we give and we receive; we re-

nounce some rights, better to enjoy others, and, as we sacrifice our natural liberty, in order to enjoy with more security the advantages of civil society, so we must sacrifice a part of the civil advantages to the superior utility of union of a great empire. Though the seas be agitated and months may pass, though an ocean of fifteen hundred leagues may interpose space and time between the law and its execution, yet the sphere of human ingenuity is not so circumscribed, but that the wisdom of the institution may unite what nature separated, and if even some inconveniences should remain, they will be amply compensated by avoiding thereby the horrors of anarchy and the vexations of an absolute power. All this was well calculated by you at the time of your adhering and swearing to the basis of the constitution.

Then, Brazilians, do not violate such solemn and just engagements. Exercise your political power, by sending wise representatives to the cortes of the nation, their personal inconvenience will not be of great weight, if you compare it with the importance of the union; enjoy the gifts of liberty; the protection of the government insures you all the advantages of society.

The cortes do not pretend to maintain the union of Portugal with Brazil by means of arms; force is a weak instrument for retaining in a subordinate and profitable connection, a people who are active, numerous, growing and jealous of their liberty.

Our union, Brazilians, depends only on the affections and interests produced by mutual advantages; by the ties of friendship and blood, by equal laws, and by equal protection. The title to your rights is the constitution; shortly it will be transmitted to you with the necessary additions. After this exposition, no body will ever dare to persuade you into the extravagant and delirious belief, that those, who wish to constitute you a free people, want to reduce you to colonists and slaves; and if so sincere and frank a declaration be not capable of removing all causes of discord, and of re-establishing the prior, unsuspected confidence, the cortes, lamenting your blindness and your hallucination, will, at least, remain satisfied with having followed the dictates of of their conscience, by declaring their principles and manifesting their sentiments.

Palace of the cortes, Aug. 17, 1822.

Agostino Jose Freire, president.

Deputy and secretary.

CHRONICLE.

The Peacock. Lieut. T. H. Bowyer and midshipman C. Lowndes, have died on board of this vessel. The former after a few days illness, the latter of an apoplexy.

Domestic industry. At the meeting of the Susquehannah (Pa.) Agricultural Society, the premium for the greatest quantity of domestic manufactures produced in one family, was awarded to W. C. Turrel. His household having made upwards of sixteen hundred yards of different kinds of cloth, besides stockings and yarn sold.

Prolific Parturition. Mrs. Jennings A. Yeatman, aged about 40 years, was delivered, on the night of the 16th inst. near Westmoreland courthouse, Virginia, of four full grown children—three of which are now living; the fourth was a still born child, and

the unfortunate mother expired in the act of its parturition: the resources of her constitution being insufficient to withstand a shock so violent and preternatural.

Boston. The city of Boston has recently adopted a city seal, the device, motto and inscription of which are as follow:

"The device of the seal is a view of the city, as seen from the harbor and South Boston. The motto "*Sicut Patribus, sit Deus Nobiscum.*" The inscription, "BOSTONIA, Conditæ, A. D. 1630. Forman Municipi. Civitatis. Accepit, A. D. 1822."

Maryland. Political complexion of the ensuing legislature of Maryland.

Majority on joint ballot	69	—

Last year there were 23 federalists in the house of delegates. At no time since parties have divided this state, has there been so large a majority of republicans in the legislature, as will be in the ensuing.

Pennsylvania prisons. On the 1st of Jan. 1822, there were 500 convicts in the penitentiary—434 males and 46 females. During the year 1821, 255 males and 45 females were received—of these, 121 were from the city and county of Philadelphia, the rest from the different counties, the highest sending 12; of the whole, 113 were colored—more than one third of the amount. The convictions were 232 for larceny, 15 for burglary, 3 for horse stealing, 7 for murder in the second degree, 2 highway robbery, 3 perjury, 2 forgery, 4 counterfeiting, 1 each, bigamy, arson, sodomy and rape, &c. Of those convicted, 145 were born in Pennsylvania, 70 of them in Philadelphia, 22 in New Jersey, 18 in Delaware, 16 in Maryland, 9 each in New York and Virginia, &c. and 61 in foreign countries, of whom 29 in Ireland and 11 in England.

Louisiana. The annual expenses of the government of Louisiana amount to \$384,530, of which the following items constitute a part:

Three supreme court judges	\$15,000
Eight district judges	17,000
Criminal judge	4,000

Making, with other items, the annual cost of the judiciary department, \$196,500, which the St. Francisville Asylum states to be double what is paid the judiciary of the United States.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 10—VOL. XI.] BALTIMORE, NOV. 9, 1822. [No. 10—VOL. XXIII. WHOLE No. 582

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

BALTIMORE. One of the New-York editors seems astonished at the "frank confession" made in the *Register* of the 26th ult. of the late prevalence of a disease in this city, bearing the character of yellow fever. If he will turn to a former number of this work, he will find that we had declared the same thing about a month before; and we cannot see why the board of health should not have stated the fact, appending thereto a representation of the truth, that all the city proper, and indeed a great part of "the Point," was as healthy as ever it was known to be at that season of the year—that the range of the disease was of a small extent, that it was strictly local, and should not cause alarm even to strangers—very few of whom, except seamen, would be likely to have business to transact within the well-known infected district—which was not a *terra incognita* with us, as such district was called in New-York.

The neighborhood of Deer Creek, Harford county, Maryland, chiefly settled by members of the Society of Friends, has been most severely afflicted, though heretofore healthy. It is stated that their burial ground at Darlington "presents an awful memento of the general devastation"—that "there is no room left inside the inclosure for interring, and that they have commenced burying outside the pailing." The malady that prevailed was a high bilious fever; the difference between which and the yellow or malignant is not attempted to be defined, if any difference there is. In some cases, nearly whole families have been swept off. The great drought is assigned as the cause of this sickness at Deer Creek.

NEW ORLEANS. We have seen what is given as a statement of the deaths in this city from the 13th to the 30th of Sept. inclusive of both—the aggregate is 393, of whom 257 were reported as of yellow fever. Average deaths per day, nearly twenty-two: of the yellow fever, more than fourteen.

On the first seven days of October there were 209 deaths, of which 147 were of yellow fever: average of deaths per day, nearly 30. On the 18th of October there were *sixty-one* deaths!

The mayor of the city has formed what is called "a board of benevolence" in each district—whose duty it is to provide for the removal of those subject to the disease, and to administer to the wants of persons infected with it.

LONGEVITY. According to the census of Great Britain, the population, in 1822, is as follows:

In England,	Males	4,308,898	} 9,830,461
"	Females	5,021,563	
Wales,	Males	342,154	} 880,210
"	Females	533,056	
Scotland,	Males	923,546	} 1,956,706
"	Females	1,033,166	

Total 12,667,377

In this population, there were 100 males and 191 females about the age of 100.

The population of Great Britain in the year 1720, according to Colquhoun, was 6,955,000—as there are now living therein 291 persons upwards of 100 years old, we then find it out, by the rule of three,

VOL. XXIII. — 19.

that an original stock of twenty-four thousand individuals, is necessary in Great Britain to furnish one centenarian.

I do not know of any statement shewing the probable amount of the population of those then uninhabited regions which now compose the United States 100 years ago, more entitled to respect than that produced by my own calculations, and published in this work, vol. XIII, page 179—on which occasion, every thing like authority within my reach was resorted to. I supposed that the whole population, exclusive of Indians, may have amounted to 490,000, in the year 1725—if so, and in the year 1825, we shall have *twenty* individuals, only, of the age of 100 and upwards, it would appear that our climate and country are as favorable to long life as Great Britain. But some allowance must be made for the immigration of persons, of mature age or advanced in years, since 1725; and it is reasonable to believe that about *thirty* centenarians, in all the United States in 1825, will fully establish the fact, that such aged persons are as common in our country as in the other. The allowance for immigration is regarded as liberal—for, according to the best estimate that I can make, [see volume and page referred to above], the amount of all such, of all sorts and all ages, has not exceeded 227,900 persons from the year 1725 up to 1819—the addition, then, of a *third* as acting on the whole stock of 1725 for the production of centenarians, is large enough. But those who are curious in such things will estimate for themselves—and such estimates must considerably depend on opinion at last.

In vol. IX, page 97, there is a very valuable essay "on the probability of human life in the middle states, particularly at Wilmington, in the state of Delaware, and its vicinity." This was furnished by one of the most acute and correct men of the age; a plain man that never knew his own worth, or put forth the strength of his own mind. I recommend it to the consideration of all who feel an interest in its subject. The following is the substance of a small part of that essay—in the year 1794, the borough of Wilmington, with about 3,000 inhabitants in all, contained 152 persons aged more than 60 years; some of these moved away, and it was uncertain whether they were living or dead: but it was ascertained that 112 of the 152 had died previous to the year 1814, of whom 46 attained the 80th year, 26 the 85th, 12th the 90th, 2 the 92nd, 1 the 94th, 1 the 95th, 2 the 96th, 1 the 102nd, 1 the 103d. — Now, though we cannot count the stock which gave these results, we see that a gross population say of 4,000 souls, at or about the year 1814, furnished two centenarians—or one to two thousand living persons. At this rate, Great Britain ought now to have 6,338, of 100 and upwards, instead of 291.

Again—the rev. Dr. Perkir's lately delivered his *half-century* sermon, at Hartford, Con. He was a minute observer and careful recorder of such things as are now before us—he stated that, "during the fifty years of his ministry, sixty persons had died in his parish who were over 70 years of age, thirty over 80 years, eight over 90 years, and two over 100 years each. He had preached 3,550 sermons of his own writing." We cannot tell the average amount of the persons in his "parish," by which

we understand those under his own pastoral charge: for a "parish," in the United States, simply means a congregation of Christians, of any sort whatever, worshipping at one place—so any town, if it has five or ten ministers and as many places of worship, may have as many parishes. It would seem then, a large allowance to suppose that the congregation of the venerable doctor averaged 1500 persons for the 50 years, which would give one centurian for, at the most, 1500 existing persons.*

But Hartford as well as Wilmington, are remarkably healthy places, and the people are of very temperate and sober habits—so that they cannot furnish us with general data; nor do the cities and large towns—for they are, in all countries, regarded as unfriendly to long life. The bills of mortality of these, however, shew a much larger proportion of centurians than Great Britain exhibits—in which latter the amount of these is as one to about forty two thousand five hundred of the existing population.

In Baltimore, with 60,000 inhabitants, during the year 1821, five died over the age of 100—or, as 1 to 12,000. In Boston, in 1820, population 43,893, four died that were aged more than 100 years—or, as 1 to 11,000. In New-York, the same year, population 124,000,† only two of 100 years and upwards—as 1 to 62,000; but there were 46 persons who died between the ages of 90 and 100. In Philadelphia, population 116,000,‡ in the same year, there were five above 100 years old, or 1 to 22,000—and 18 between 90 and 100. The average of the four cities of Boston, New-York, Philadelphia and Baltimore, together containing about 338,000, and having 15 centurians, is as one to twenty one thousand existing inhabitants—twice the proportion that exists in Great Britain. We have no particular returns of the southern cities, but know that at Charleston, Savannah, &c. the decease of persons of more than 100 years is frequently noticed in the papers. My apprehension is, that they have a full proportion of such persons compared with their sister cities of the United States.

PRESIDENTIAL ELECTION. We have not yet formed an opinion, the least satisfactory to our own minds, as to the person who will succeed Mr. Monroe in the presidency, though so much is said in the newspapers on the subject. Several prominent gentlemen are before the public, and it is quite likely others will be introduced. The people do not yet understand why this or that man should be preferred; for the measures that either will pursue, if elected, are not designated as differing from those of his competitors. The old political landmarks have been broken down, and no new rallying point is set up, so that it will be difficult, if not impossible, to concentrate public opinion through the agency of a congressional nomination, or caucus, as has been the practice heretofore. The present prospect is, that neither of the candidates will receive

*In 1810, there were three churches in Hartford: the city and township then contained, in all, 5,347 inhabitants. It has increased considerably since, and now has a population of nearly 7,000—so that the number suggested is rather large, as the average of Dr. Perkins' "parish" for fifty years.

†The whole island of New-York is included in this number, as all the persons that die on it come within the range of the bills of mortality—in regard to Philadelphia, this is about the amount of persons of the city and county who are supposed to be within the range of such bills, and is pretty near the real number.

a majority of the whole number of votes; and then the choice will devolve on the house of representatives, voting by states—each state one vote: and, though there are 260 electoral votes, it is shewn by the article published in our last from the Richmond Enquirer, that *thirty one* persons may make a president of the United States! This is, truly, an alarming affair: it is a condition that never was contemplated by the *spirit* of the constitution, though plainly expressed in its *letter*—for it cannot be believed as ever having been intended, that *one* man in Delaware should have the weight of *thirty four* men in New York, as good as he. It is wholly at war with the *popular* system; and the weight of the states in the senate, as the most stable branch of the legislative body, is sufficient to all the purposes of the *confederation*, and affords all needful or rightful power to the small states. The argument on this subject would occupy more time and room than we are disposed just now to give it—but we apprehend it must be admitted, that a president of the United States was designed to be a *man of the people*, and that the senate was intended to represent and maintain the *sovereignty of the states*. In the present prospect of things, *thirty one* persons may accidentally represent the voice of the people, and do away the votes of *one hundred and thirty others* immediately selected to elect a president. Again, without meaning to insinuate any thing to the disparagement of either of the gentlemen, (all of whom I happen to know and personally esteem), the case will be, that, at least, four of the supposed candidates for the presidency will be at the seat of government, invested with power and influence to distribute favors or bestow offices: now, is it not human nature, or, as we may say, the unavoidable course of things, that those *thirty one* persons will be coaxed, courted and obtained, if it be possible—not by bribery; I cannot suppose that: but the parties are *men*, not angels—one party must feel its probable power and the other its probable dependence on it. I will not pursue the subject—but its nature is of the most unpleasant character, and may lead into evils which no one has yet apprehended as possible. We sincerely deprecate a congressional *caucus*, but a vote by states is more to be dreaded; and we hope that some good men, able to meet the apparent emergency, will devise a plan to keep the door shut against intrigue and corruption, which, if once fairly opened, may not again be closed but after the most painful events. Vigilance is the condition on which liberty is granted—caution is the parent of security.

"UNFASHIONABLE." Extract of a letter to the editor from a gentleman who is a member of the present congress, and also a member elect of the 18th. "The second and last session of the 17th congress is at hand—and, although it will, fortunately, be a short one, I fear that it will, nevertheless, be too long; for so many have embarked in the BUSINESS OF PRESIDENT-MAKING, that I have no hope of any thing being done which will be worth the trouble of meeting, until a new president shall have been made. With my present "notions" on the subject, if I were called on to recommend what I believed was best for the country, I would say, that the ensuing session should last only six weeks, and that that time should be employed in the simple adaption of such measures as would enable the government to keep its wheels moving until the Monday preceding the day on which the votes for the next president must be counted—and assign that day for the commencement of the 18th congress.

"You must have seen, with regret, that our best men are voluntarily retiring from congress. It is what I feared would happen, and which I am sure will continue to happen, unless that body shall respect itself sufficiently to promise something more of the high character that naturally belongs to it."

BANK OF THE U. S. We ought not to have given a place to Mr. Chéves' address to the public, dated on the 17th ult. and inserted in page 121. It was sufficient that we had published his exposition of the affairs of the bank, and the declaration of one of the persons implicated that some of the matters set forth were "without just foundation." The address partakes more of a private defence than a public paper, though we regarded it as of the latter character: but, having committed ourselves, we feel an obligation to go further and insert Mr. Williams' rejoinder, and here we shall stop, without taking any part or lot in the matter, believing it always obligatory on us to suffer a person accused to be heard in his own vindication before judgment is passed upon him, let his rank or condition in society be what it may.

THE MISERY OF PLENTY England is, perhaps, the only country in the world wherein the bounties of Providence, producing an abundant harvest, are really regarded as curses by that class of persons on whom those bounties immediately operate. Every English farmer wishes a large crop, and does all that he can to secure it; but such is his desperate condition, that his own self-preservation calls up a hope that his neighbor's may be blasted! What a state of things is this for a "Christian land!" But it only shews the effects of a bad government—of that kinglycraft and priestcraft that have so many admirers in our own country—which fill the realm with palaces and poor houses, lords and beggars.

The plain matter of the fact is, that the land is so heavily burthened with ordinary taxes, poor rates and tythes, that, unless corn is at double the monied price that it ought to maintain, these taxes and rates cannot be paid. The taxes and rates call for a determinate amount of money, and two or three bushels of wheat, in a productive season, will only pay so much of that amount as one bushel would do if the poor were reduced to a state of semi-starvation. A return of the days of "roast beef and plum pudding," which live now only "in song," would reduce the British financiers to despair.

We have before us an article from Bell's (London) Weekly Messenger, of the 16th September. It states that the quantity of the late crop is exceedingly large, and the quality uncommonly good. It is thought that there is now enough of bread stuffs on hand for two years' supply, and that the wheat weighs at least 60 or 61 lbs. per bushel. But wheat is sold by the quarter in England, which is made of a quantity understood to be as of eight bushels, each weighing 70 lbs. The new crop has been sold at 3s. the quarter, or 4s. 3d. for 70 lbs. and it was apprehended that the price would fall: some, however, had brought 40s. In consequence of those things, "the difficulties to be encountered by the ministers," and the "general alarm amongst the farmers," are spoken of as serious matters—*showing that a season of abundance is a season of distress.* What a lamentable state of things is this—what a lesson does it teach the people of this free republic to compel their rulers to practice economy, and to call them to a severe account for all that they do! But we shall never arrive at that degree of carefulness necessary to preserve the blessings we en-

joy, until every one knows and can readily count up the amount that he individually pays to government. It is *indirect taxation* and the *borrowing system*, that has reduced the farmers of England to the condition just described, by which the blessing of God is made unto them as a curse.

THE CUSTOMS. The following pointed paragraph is copied from the *Maryland Republican*, published at the seat of government of this state, and now edited by Mr. *Jeremiah Hughes*; who will renovate it, and give it a standing second to no other similar establishment in the state.

"Whilst the customs on the importations of the current year replenish the treasury and relieve the committee of ways and means, a balance against us of 20 millions of dollars between the imports and exports, will have to be settled by the people."

Mr. Hughes is entirely right. There is a balance against us of about twenty millions to be settled by the people. But how? Enquire at the banks—look at the prices current of American produce abroad. Gold has disappeared—it is more of a rarity now to see a half eagle than a hundred dollar note, scarce as the latter are at this time; and, when exchange on England shall be about 16 per cent. above par, as there is every prospect that it will be, our silver will follow our gold and the vaults of the banks will be emptied. Many of these institutions can pay all the notes that they have out; but, to save themselves from bankruptcy, they will have to bankrupt their best customers. There is a fearful looking for this state of things. Such is the result of the "glorious uncertainty" of trade, equally perilous as that of the law, with all its quibbles, quibbles and delusions.

TOBACCO. The "American Farmer" tells us that some tobacco made by judge Dorsey, of Maryland, last year, sold in Europe for \$52 per hundred, and some which grew in Montgomery county, and sold here for \$37, brought in Holland the enormous sum of upwards of \$60 per hundred.

COTTON. The "Democratic Press" says—"It is believed that, at this time, the middle and eastern states consume nearly one fourth of all the cotton grown in the United States. It is certain that, in those states, the consumption annually increases."

The experiments that have been made to cultivate cotton in some of the middle states are also alluded to, and the possibility suggested, that the cultivation may be pushed to an extent equal or superior to the local demand. In Indiana and Illinois, the plant prospers well, and has been grown to a considerable extent. If it will succeed in some of the thickly populated states, in Connecticut for instance, there is no manner of doubt that it can be cultivated cheaper there than in any of the southern states—for free labor is much cheaper than the labor of slaves; and the capital needful to raise the crop will be small in the one case compared with the other.

COLOMBIA. Col. Charles S. Todd, our diplomatic agent, has arrived at Laguirra. He was received with enthusiasm, and, after a short stay, proceeded to Caraccas. A letter says that if the people do not cease giving him dinners, balls and other parties, "they will actually kill him with kindness." The colonel was soon to proceed to the city of Bogota—a long journey.

The loss of Mr. Torres is greatly deplored in Colombia—several distinguished persons are spoken of as his successors.

PORTO RICO. An expedition of a very mysterious character has been formed in the West Indies, the head quarters of which were at St. Bartholomews, and the commander gen. Decoudray, whose singular arrival at Curracoa we noticed some time since. It is strongly hinted, that the design of this expedition was for the purpose of revolutionizing the fine island of Porto Rico, and it is intimated that the force collected for the intent amounted to *twenty two hundred men*, nine hundred of whom went from *New-York, Philadelphia and Baltimore*. It is stated, too, as being probable, that a landing may have been made at Porto Rico, &c. Subsequent accounts, however, speak of the authorities of that place as being fully apprized of the design, and as amply prepared to defeat it.

We are wholly in the dark concerning this business, though some affect to know a little about it. Perhaps, it is only an ill-digested predatory excursion of a few desperate individuals, "above the dull pursuits of civil life," and will end like several other things of the sort have ended. How so many as "nine hundred men" were collected at "New York, Philadelphia and Baltimore," for military purposes, without the knowledge or suspicion of any but themselves, we cannot apprehend; nor do we believe that the fact is as reported.

THE U. S. SHIP PEACOCK has arrived at Norfolk, from a cruise off the coast of Cuba, &c. She has lost lieutenants Stallings, Bowyer and Searcey, with midshipmen Lowndes, Archer and Wetherell, and seven men, with the yellow fever, and several severe cases remained undetermined at the latest accounts. Thus our gallant brothers perish to check the depredations of the pirates of Cuba.

The previous accounts of the captures made by the Peacock were substantially true—but the crews of the pirates, 18 excepted, escaped in the woods: the prisoners were sent to New-Orleans. It appears that the British government schooner Speedwell was *in company* with the Peacock when she grounded, and was relieved by the boats of the latter; and, of course, not in danger of capture by the pirates as heretofore stated.

Just before the Peacock sailed from Havana, a privateer, under the Colombian flag, had been brought into that port as a prize. Fifty six of her crew of sixty odd men, were stated to be Americans. There were great rejoicings at the event, and the case was exultingly used to palliate or justify the piracies committed off Cape Antonio, &c. for this privateer had much annoyed the commerce of Spain. We truly regret that the shew of an excuse has been afforded for proceedings so enormously wrong.

A Norfolk paper of the 6th says, that Dr. Samuel R. Trevett, surgeon of the Peacock, died on the 4th inst.—and that there were upwards of forty of the crew on the sick list, of which only four or five were of the yellow fever.

RHODE ISLAND. There is a sharp contest between the legislature and the banks of this state, on the subject of a tax imposed on them. The latter say that their charters are *contracts*, and that therein no provision is made to tax them—that the constitution of the United States forbids the passage of any law "impairing the obligation of contracts," &c. It is probable that the subject will be referred to the judiciary of the United States.

KENTUCKY. The printers, generally, of this state, have refused any longer to receive the bills of the

bank of the commonwealth, except at their real value. The amount of their prices were fixed on other sorts of money; and the present rate of the value of the local currency reduces those prices fully one half. A person lately paid \$5 to a printer in Kentucky, tendering a 10 dollar bill of one of the banks of Virginia, and was surprised at obtaining a discharge of his debt and three five dollar notes, in the way of change for his own!

"RELIEF LAWS." *St. Louis, Oct. 9.* It may gratify our Kentucky friends to learn the result of the unconstitutional attempts at "relief" in Missouri.

The *replevin law*, as it is called, which gave a stay, unless loan office certificates were taken at par, was repeatedly decided *unconstitutional* by the inferior courts, and was, at length, declared so by the supreme court of the state. Public opinion took sides with the judiciary, and has elected to our next legislature a very large majority in favor of the integrity of constitutions and the honest payment of debts. There will, therefore, be no judge-breaking on this account.

The statute creating *loan offices* for the purposes of insuing a paper medium on the credit of the state, has been in several instances declared unconstitutional by the courts, but there has been as yet no adjudication of the subject in our tribunal of the last resort. The members elect of our next legislature are, however, opposed to the experiment of *paper money*, dissatisfied with the depreciation of that which has been issued, and will certainly issue no more.—*Missouri Repub.*

"BETTER TIMES." The Piqua Gazette mentions the late sale of public lands in that district, as an evidence of better times—saying that "the land at Fort Defiance was sold at \$50 per acre, and a number of tracts, convenient thereto, were purchased at the rate of from 2.00 to \$12.50 per acre."

The northern parts of Ohio are rapidly populating—a late Buffalo paper says that the emigration west is greater than it has been for four years that the streets of the village are daily thronged with wagons of the east, bearing, not unfrequently, *three* generations.

THE BATTLE OF THE THAMES, was celebrated on its anniversary, the 6th ult. near the residence of col. *R. M. Johnson*, in Kentucky, by some of the mounted volunteers who were engaged in that affair. Among many other good toasts the following were drank—

The 5th of October, 1813—the battle of the Thames—The day when Kentucky volunteers vanquished British regulars, supported by 1500 Indian warriors, commanded by Tecumseh.

Isaac Shelby—When his country needs his services he prefers danger to security, and the hardships of the camp to the bed of ease.

Col. R. M. Johnson and his mounted regiment—He sought the post of danger, and he carries about him evidence that he performed his duty with honor to himself and to the satisfaction of those whom he commanded.

Col. Waitly, and those who fell in defence of their country's rights in the battle of the Thames.

Jefferson, Madison, Monroe, Jackson and Clay, were remembered in the "flowing cup," and a solemn tribute was paid to the memory of the father of his country, &c.

HUNTSVILLE LAND OFFICE *From the Republican of Sept. 6.* By the obliging attention of the register

of the land office in this village, we are enabled to present the public with the annexed abstract of the operations of this office under the relief law of March, 1821.

This abstract includes only the transactions of the months of August and September, 1821. We learn from the register that the new certificates are made out and will be ready for delivery in the course of this week.

Total quantity of land contained in the surrendered certificates	1,237,807
Total amount of purchase money, including interest	\$7,899,196
Total quantity of acres relinquished	415,196
Amount of purchase money of lands relinquished	\$3,147,896
Total quantity acres retained	822,611
Amount of purchase money of lands retained	\$4,750,988
Total quantity acres patented	144,987
Amount of purchase money of land patented	\$930,837
Total quantity of acres held on further credit	677,883
Amount due on lands held on further credit	\$2,743,111
Amount Yazoo stock extinguished	1,163,347

"MITCHELL'S GROUP." Captain Barrett, of the ship Independence, of Nantucket, on his voyage from Japan to New Zealand, on the 6th of Nov. 1821, being in lat. 9 18 S. and long 179 45 E. by lunar, fell in with a group, of inhabited islands, which, not being laid down in any chart, he named Mitchell's Group, in compliment to Mr. Mitchell, the owner of the ship. The people appeared mild and acted kindly in making presents of cocoa nuts, &c.

THE GREEKS. The London Morning Chronicle, in a spirited article on the affairs of Greece, has the following paragraph—"It has been the fate of almost every nation to be conquered, and it is therefore no disgrace to the Greeks that they fell under the power of the Turks, at a time when nothing in Europe could withstand them. But while other nations have, in the course of time, melted into one mass with their conquerors, it has been the signal misfortune of the Greeks, that a firm adherence to their religion forbade their union with their masters, and kept them a distinct and degraded cast. While we speak of their protracted slavery we should not forget its cause. *Had they yielded up their faith as easily as the clergy of England did in the reign of queen Elizabeth, they would have escaped that oppression at the hands of the Turks, and that abuse at the hands of some of their brother christians, which their constancy has entailed upon them.*"

BRITISH INDIA. The following is copied from Grimsby's Daily Advertiser, of the 3d of September, 1818, published at Calcutta; and furnishes a most excellent comment on some of the efforts made in Great Britain to suppress the foreign slave trade in African negroes—

"Females ruffled for. Be it known, that six fair and pretty young ladies, with two sweet and engaging children, lately imported from Europe, having the roses of health blooming on their cheeks and joy sparkling in their eyes, possessing amiable tempers and highly accomplished, whom the most indifferent cannot behold without expressions of rapture, are to be raffled for next door to the Bri-

tish Gallery. Scheme, twelve tickets, twelve rupees each; the highest of the three throws, doubtless, takes the most fascinating."

GENERAL JACKSON. The Philadelphia Aurora, of Saturday last, says—"We have heard and are induced to believe, that the hero of New-Orleans has resolved to withdraw from all public employments. Like Cincinnatus, he was called by his country to be its shield and buckler in the hour of peril; like him, he accomplished all that man could effect; and now, seeking the repose of private life, he fully imitates the glorious example of that distinguished Roman. If such is his determination, it is almost certain that we are not, hereafter, to have for a high station a soldier of the revolution: had gen. Jackson become a candidate for the presidency, he would have been the last of the heroes and statesmen of "the times that tried men's souls," whom the people would have had the opportunity to honor."

LYNXES. Four of these animals lately appeared in the arrondissement of Notre dame de la Zose. The alarm was spread and three of them soon killed. The following account of the ferocity of the fourth, and the contest in which he was destroyed, is copied from the Paris Moniteur.

"One of them, about the size of a large dog, passed through a flock without doing any harm, and ran at the shepherd, who owed his safety to his two dogs. In another quarter, he attacked an unfortunate woman whom he bit severely, and whose life was despaired of. At length, he sought refuge in the territory of the commune of Pignans, where he found his conqueror in a peasant of extraordinary courage and strength, made like a Hercules, and in the bloom of life. This man, who was unarmed, siezed him body to body, and, after a sanguinary and obstinate struggle, which lasted three quarters of an hour, succeeded in throwing him to the ground; but still he would not have conquered him but for his address and promptitude.

This ferocious animal had devoured the hat of his adversary; a large buckle attached to the hat stuck between his teeth; he availed himself of this circumstance, and, having courageously thrust his hand, armed with a stone, into his mouth, as deep as possible, left the stone there, and in spite of the numerous bites which he received did not let go his hold until he tore out the tongue of the animal, flung him to the ground, and saw him expire in dreadful convulsions.

POISON. Mr. Edmund Jukes, a surgeon of Westminster, Eng. has invented an apparatus by which the stomach may be emptied of poison, received be accident or design. After trying it on various animals, with complete success, he experimented on himself—and swallowed ten drachms of laudanum, from which he was promptly relieved.

THE LUTINE FRIGATE. In page 82, we noticed the case of this frigate, wrecked on the coast of Holland several years ago, when employed in the conveyance of specie to the continent, which the present Dutch government had decided as now belonging to Holland, if attainable, because that vessel was wrecked during a war—in 1799: on this decision a London editor has the following remarks—

"And this is the return made for supporting the prince of Orange for about five and twenty years, at an expense of 16,000l. a year, and spending millions in endeavoring to restore him as a stadtholder;

raising him to the rank of king and creating a kingdom for him, and giving him colonies which we ought to have retained. After all this, his majesty refused the subjects of Great Britain their own property, lost in that very cause which was to raise him from being a princely pauper to an independent sovereignty. How subtle the distinction of national law on which this refusal is founded, and how unmanly is it to tell us that the money belongs to Holland by the rights of war, when the king had stigmatized that war on the part of the Dutch as an act of rebellion against his legitimate authority."

WATER. A late English paper says—"Recent experiments, in many parts of England, have proved, that supplies of the best water may be obtained by properly boring the earth to a sufficient depth. The expense appears to be trifling, while the result is of the highest importance to all landed property. Fountains have been made in parishes where water has usually been sold by the gallon, which yield a constant supply, the year round, of a hog'shead per hour."

This appears probable enough, when we call to mind how salt water is procured throughout the western states of the union.

A **CARPET** has been manufactured at the royal establishment of the *Savonneris*, at Paris, destined for the hall of the throne, which is believed to be the largest that has ever been executed. It is 50 feet long and 50 wide, and might have been done in one piece agreeably to the design, but it would have required, in that case, nine years for its execution. For the sake of greater expedition, it was divided into three parts, which have been accomplished in three years. Agreeably to the details that have been furnished, it has cost, in labor alone, 50,000 francs—ten thousand dollars.

DESTRUCTIVENESS OF MICE. The *Journal des Debats* says, "The department of the Lower Rhine has been for the last four months afflicted with a scourge which has thrown the inhabitants into the utmost consternation, and reduced them to a situation truly deplorable. The sufferings of this district have arisen from the incredible ravages of mice! The arrondissement of Savern and Strasburgh have been most exposed to their depredations. Those destructive animals have multiplied there to such a degree, that, in the district of Savern, 1,570,000 have been taken in a fortnight, and nearly as many have perished in their holes. The crops have been nearly destroyed in many communes; and the potatoes, the last resource of cultivators, are now attacked and threatened with destruction. What the mice have spared has been carried away by hail storms. On the 23d, a dreadful storm burst over the town and environs of Strasburgh, especially over the districts of Marienheim and Dappenheim, where the crops were almost entirely destroyed, and the loss is estimated at 500,000 francs."

REAL NEIGHBORHOOD. Mr. John F. Hicks, farmer, in Smithfield, Madison county, N. Y. having accidentally had his leg broken, which prevented him from attending to the getting in of his crop, his neighbors, to the number of one hundred, turned out on Wednesday last, and, in the space of four hours, gathered and secured from eight acres, 250 bushels of corn; besides digging and burying 100 bushels of potatoes, and securing all Mr. H's pumpkins, stalks, &c.

A LIBEL. From a late London paper. In the golden days of good queen Bess, those halcyon days to which every Englishman affects to look up with rapture, the punishment for libel was the loss of the right hand to the libeller. A Mr. Page, who had presumed to write a pamphlet on the subject of the queen's marriage with the duke of Anjou, was prosecuted for, and convicted of, libelling her majesty, and suffered the punishment. When on the scaffold, he made the following manly and spirited speech:

"Fellow countrymen—I am come here to receive the sentence of the law, according to my judgment, and thank the God of all, and of this I take God to witness, who knoweth the hearts of men, that I have never offended her majesty's person, crown or dignity; but have been as true a subject as any was in England, to the best of my ability, excepting none." Then holding up his right hand, he said, "this hand did I put to the plough, and got my living at it many years. If it would have pleased her highness to have taken my left hand, or my life, she had dealt more favorably with me, for now I have no means to live; but God, who is the father of us all, will provide for me. I beseech you, good people, to pray for me, that I may take my punishment patiently." He then laid his hand upon the block, and prayed the executioner to despatch quickly. At two blows his hand was taken off; when lifting up his bleeding arm, and pointing to the block, he said to the by-standers, "see, I have left there a true Englishman's hand;" and then went from the scaffold stoutly, and with great courage. What would be said to such a punishment in the present day?

HOLMES' ANNALS. There are a great number of interesting facts, relative to early American history, scattered through Holmes' annals. The editor of the Democratic Press has read the work for the purpose of selecting such matter as may interest the American people:

Lima, the capital of Peru, with Callao its port, was completely destroyed in 1746 by an earthquake. Of twenty-three vessels nine were sunk. The convulsions continued, with short intervals, four months—12,000 persons were killed.

In 1747 a great tumult was raised in the town of Boston. Commodore Knowles, while lying at Nantucket with a number of men of war, losing some of his sailors by desertion, thought it reasonable that Boston should supply him with as many men as he had lost. He, therefore, sent his boats up to town early in the morning, and surprised, not only as many seamen as could be found on board any of the ships outward bound, as well as others, but swept the wharves, taking some ship carpenter's apprentices, and laboring landmen. This conduct was universally resented as outrageous. A mob was soon collected. As soon as it was dusk, several thousand people assembled in King's street, below the town house, where the general court was sitting. Stones and brickbats were thrown into the council chamber through the windows. A judicious speech of the governor from the balcony, greatly disapproving of the impress, promising his utmost endeavors to obtain the discharge of the persons impressed, and gently reprehending the irregular proceedings of the people, had no effect. Equally ineffectual were the attempts of other gentlemen to persuade them to disperse. The seizure and restraint of the commanders and other officers, who were in town, were insisted on, as the only effectual method to procure the release of the

inhabitants on board the ships. The militia, of Boston was summoned the next day to the aid of government, but refused to appear. The governor, judging it inexpedient to remain in town another night, withdrew to Castle William. Letters, in the mean time, were continually passing between him and the commodore. The council and house of representatives now passed some vigorous resolutions, and the tumultuous spirit began to subside. The inhabitants, assembled in town meeting, while they expressed their sense of the great insult and injury by the impress, condemned the riotous transactions. The militia of the town, the next day, promptly made their appearance, and conducted the governor, with great pomp, to his house. The commodore dismissed most, if not all, of the inhabitants who had been impressed; and the squadron sailed, to the joy and repose of the town.

So early as 1746, 200,000, lbs. of *Indigo* were sent from South Carolina to England. [At a time when we grow such a superabundance of cotton that its price is lower than ever before known, would it not be prudent and profitable for some of our South Carolina planters to turn their attention to the cultivation of the *Indigo* plant, which, it is ascertained, will grow well in that state.]

In 1749, *Philadelphia* contained two thousand and seventy-six dwelling houses. There were eleven places of public worship in the city, viz.—2 Presbyterian, 2 Quaker, 1 church of England, 1 Roman Catholic, 1 Moravian, 1 Baptist, 1 Swedish, 1 Dutch Lutheran, and 1 Dutch Calvinist.

This year the *drought* in New England was so great that the grass crop did not yield a tenth of what it usually yielded, and the inhabitants were obliged to send to Pennsylvania and others to England for hay.

FOREIGN NEWS.

From London papers of the 22nd Sept.

Great Britain and Ireland. The stock of cottons in England was estimated at 370,000 bales, on the 20th September. The consumption is about 10,000 bales per week. The prices were, for Uplands from 6d. to 8½; Orleans 6½ to 10½; Alabama 5½ to 8.

The levy of the last year for the support of the poor, in England and Wales, amounted to the sum of 6,958,445 pounds—about thirty-one millions of dollars; or much more than the whole cost of the government of the United States, including all sorts of contributions levied on the people for the support of the poor, for roads, public schools, and the administration of justice, &c. in their several states, counties, cities, towns or townships.

It is supposed that, at one horse race, at Doncaster, at which there was apparently much *jackeering*, alias roguery, one person won about 50,000l.; and some of the servants of the "knowing ones" got as high as 2,000 in winnings.

France. The Cathedral at Rouen, in France, was destroyed by lightning on the 15th Sept. The fire communicated to several houses in the neighborhood, which were burnt down, and some lives lost. The storm which caused this catastrophe is said to have been one of the most terrible ever witnessed.

Spain. The London *Courier* styles the constitutional government of Spain "the faction predominant at Madrid!"

Russia. The following is the imperial decree for closing the masonic lodges in this empire. It is dated at St. Petersburg, August 30, 1822:

The rescript directed by his majesty on the 13th instant, to the minister of the interior, count Kotchuberg, respecting the dissolution of all secret societies and Freemasons' lodges, is as follows:

"*Count Peter Pawlowitch*—The troubles and disorders which have arisen in various other states through the existence of secret societies, some of which, under the names of Freemasons, were, at first, founded for charitable purposes, and others secretly pursued political objects, have induced some governments to pay stricter attention to them, and, in the end, wholly to prohibit such secret associations: As I always direct particular attention to the creation of a firm bulwark against every thing that may be injurious to the empire, and especially at a time like the present, when, unhappily, so many states offer sad examples of the ruinous consequences of the philosophical subtleties now in vogue, I have found it necessary to the general good to command as follows, with respect to the above mentioned secret societies:

"1. All secret societies, under whatever name they exist, (as well as the Freemason's lodges), shall be closed, and the establishments not be allowed.

"2. All the members of such society, as soon as they shall be informed of this measure, are to engage, in writing, to take no part, henceforward, under any pretext, in any secret society, under whatever well meaning name it may exist, in the empire, or in any foreign countries.

"3. As it does not become officers in the public service to bind themselves by any oath but that which the laws determine, the ministers and authorities are bound to require from those subordinate to them a frank declaration, whether they belong to any Freemason's lodge, or other secret society, in or out of the empire, and what that society is.

"4. A written engagement is to be taken from the members of them, that they will break off all intercourse with them; and he who refuses to sign such an engagement, shall be dismissed from the public service.

"5. The authorities in the governments are strictly enjoined to take care that no lodges subsist, or be created, any where, on any pretext whatsoever.

"6. That all persons employed in the public service engage, by their signatures, according to the 3d and 4th sections, not to belong to any secret society, either now, or in future. Without having signed such an engagement they cannot be employed in our service.

"I am convinced that you will neglect nothing to effect the due execution of my order—and that you will communicate this to the other ministers, that they may co operate with you for this purpose.

(Signed)

"ALEXANDER."

This ukase (rescript) has been read, partly in the Russian language, partly in the translation, to all public officers and Freemasons. In consequence, all the officers here, as well as all other members of Freemasons' lodges now present, have signed the engagement required, and they are already delivered to the minister. The police, too, have already examined the places where the Freemasons held their meetings, to see whether all the emblems, &c. were removed. Last week the Freemasons sold their furniture, by auction, among themselves. All have shewn the greatest readiness to execute his majesty's commands. A great many persons were discharged from their offices, shortly before the emperor's departure.

Turkey. The plague has broken out in Albania and spread into Epirus and the Morea—some of the cities were nearly deserted and the people were flying in all directions.

The following very *legitimate* article is from the London *Courier* of the 19th Sept. "We apprehend it can be no longer doubted, that the Greek cause

in the Morea is at an end, and if so, the real friends of humanity will have occasion to rejoice." But—the London papers of three days' later date contain several articles that confirm the previous accounts of the victories of the Greeks, which it is not worth our while to give a repetition of. The head of Char Hadje Ali Pashaw was brought to the vice-president of the Grecian government at Argos. Yet there are still reports that are unfavorable, and a Trieste article, of September 2, says—"A ship arrived yesterday from Corfu, (says the Gazette of Augsburg), brings us overwhelming news from the Morea; Chourschid has penetrated there, the amnesty of Scio in his hand. *The gold of the English will do what the swords of the Turks could not effect.* Numbers of fugitives endeavor to gain the islands. The lot of the Jews is reserved for the Greeks. It is useless to expect any moderation on the part of the irritated Mussulmen, should even the sultan wish it. The Morea is become one vast cemetery. *This catastrophe has been so rapid that many suppose that lord Stangford has pressed the Sultan to terminate this affair before the opening of congress.*"

The following proclamation has been issued by the provisional government of Greece.—"Whereas the danger menacing the western continent of Greece, and consequently the whole of Greece, is great and imminent, and whereas it is necessary that the strongest and most extraordinary measures should be taken,

"In virtue of the 539th article of the decree of the legislative body of the 11th of May, the president of the executive did decree, and does decree as follows:

"1. That all the inhabitants of the western continent of Greece, and whatsoever class, from 16 to 50 years of age, without exception, must take up arms, and must repair to whither the danger of their country may call them.

"2. All Greeks, from 16 to 60 years of age, who, having left the country in these critical moments, and taken refuge in the neighboring Ionian Islands, do not return within three days after the above decree shall be made known to them, in order to second the exertion of their brethren, will be declared expelled from their country, and their property, real or personal, shall be publicly sold by auction.

"3. Whoever, in these circumstances, shall show themselves unworthy of their country, and disobedient, not only will they be declared as such, but will lose every right of citizens; their property will be sold by public auction, and the produce of it serve as pay to the soldiers who defend the country.

"All military and civil officers are charged with the immediate execution of the above decree.

(Signed)

"MAUROCORDATO.

(Signed)

"H. POLISTODES.

"*Machata, July 7, (19), 1821.*"

East Indies. Fifteen hundred houses, occupied by 7,000 muslin weavers, have been destroyed by an accidental fire at Surat.

Buenos Ayres. Another conspiracy is said to have been detected in this city on the 23rd of August, Tagle, formerly secretary of Pueyrredon, is reported to have been at the head of it. Sundry persons were arrested.

Brazil. The prince regent has fully assumed the character of a *revolutionist*—he lately appeared at the theatre with a green badge round his arm, and the motto "independence or death," having removed the Portuguese cockade from his hat. This act appears to have been wholly of his own will. He is very popular with the people. St. Salvador still adheres to Portugal.

The Military Staff of the U. States.

[COMMUNICATED].

The military staff of this country may be considered as applicable to the land service in general, and not exclusively appertaining to the regular army, but equally intended to aid the operations of the militia of the several states. Its present organization is such, that, having a competent and responsible head to each branch, it may be extended, on its present plan, so as to answer all the demands of the service, without greatly increasing its cost, other than what may result from the employment of additional assistance and subordinates to correspond with the number of forces to be employed. Each branch has established rules for transacting its various duties; the system of accountability is as perfect as the nature of the service will permit, and the whole is now in successful operation. The general staff consists of several distinct branches, the chiefs of which reside at the seat of government, and perform their functions under the direction of the war department; they are as follows—

The adjutant general's department or military correspondence.

The engineer department, or the department of fortification and topography;

The ordnance department;

The quarter master's department;

The pay department;

The subsistence department;

The medical department, and

The purchasing department—which last, for convenience, is located at Philadelphia. Besides these there are two inspectors general, who have no fixed residence, but whose duties are divided. One for the artillery and the other for the infantry. Their duties are important and arduous. They inspect the condition of the troops as to discipline, arms and equipments, also as to their numerical, physical and moral efficiency. The arsenals, stores, provisions, clothing, camp-equipage, ordnance and supplies of every description, pass under their inspection at uncertain periods. They keep the government informed of the actual state and condition of the military establishment, both as to the personal and material.

The application of the staff to the militia as well as to the regular forces, is proper, convenient and advantageous. For instance, all the supplies of provisions, camp-equipage, quarter masters stores, hospital stores, ordnance, arms and ammunition, pay and other allowances for the militia, when called into the service of the United States, must be drawn from this source, and it would be still more beneficial and efficacious to add to every detachment of militia, a suitable proportion of regular staff officers, to assist the commanding general of the militia, and to relieve him from the multiplied details of service which must otherwise fall upon himself, and the inexperienced militia staff officers, that may be called out with the troops. Thus surrounded with officers acquainted with the routine of business, accustomed to the transactions connected with military supplies and details, the general or commanding officer would be unembarrassed and left at leisure to form his plans of attack and defence, with the moral certainty of having his troops fed and supplied with every necessary which is deemed essential to his operations. The public treasure would be applied to the proper objects, and the nation thereby secured from the enormous losses and unreasonable expenditure, which, hitherto, unavoidably attended the employ-

ment of the militia. The officers and soldiers, finding themselves sufficiently and regularly supplied, and conducted scientifically, would naturally feel an additional confidence in themselves, and continue more cheerfully to perform their duty. The number of their sacrifices would be greatly lessened, and every comfort would be afforded them consistent with the nature of the service. To effect all this, it is only necessary to increase the staff from the officers of the regular army, whose knowledge of service, and whose known character and experience could be relied on. The military academy is the source from which all these results may be anticipated; because, not only a correct military education is there obtained, but the graduates must prove themselves capable of passing an examination on every branch of the service, and also, during the four years of probation which they have to undergo while remaining in that institution, previous to receiving commissions in the army, satisfy the academic staff that their moral character is unimpeachable. With this constant supply of intelligence and virtue, the army will never fail to possess the means of increasing the national staff when the public service may require it.

Bank of the United States. TO THE PUBLIC.

Langdon Cheves, president of the bank of the United States, has thought proper, in his late exposition, to introduce my name in connection with statements and assertions, which I have been compelled, by a due respect for myself, as well as the demands of justice and truth, to pronounce "false and without a just foundation."

In a notice to the public, he has since come forward with what he would seem to intend a vindication; and such, perhaps, it might be, if arrogance were argument, or indecorous epithets were persuasion, or the speaking infirmities of a heated temper were evidences of a fair mind, and an honorable purpose. I shall make no apology to my fellow-citizens for coming before them in self defence on this occasion. I rely too much on the good feelings, the sense of right, and the virtue of the community, to suspect, for a moment, that I shall be considered as obtruding myself, where I am not commanded to appear by every principle and motive which can actuate an honest mind, or give value to character.

And, like Mr. Cheves, I may be permitted to have so much regard for the "public morals" as to feel it a duty to expose the audacity, which is restrained by no "fastidious delicacy" from violating the rights and sporting with the reputation of individuals; I may be permitted to deprecate the "hardihood of guilt" which dares to condemn a man unheard, to persecute him without allowing his defence, and sacrifice him at the shrine of private animosity; and especially may I be allowed so much disinterested concern for the "public morals," when it is felt that I am myself the victim and the sufferer. But I must be excused from meeting Mr. Cheves on his own ground; I am no adept in the kind of language with which he proves himself so familiar, and I have a deeper interest at stake than a trial of skill in uttering the voice of passion or selecting epithets of abuse. I have nothing more to offer than a plain statement, which comes entirely within the compass of justice and fact. It wants no ostentatious flourish of self assurance, nor the aid of dogmatical assertions, without proof, or the concurrence of a committee, to make it clearly under-

stood, and fully appreciated by every candid mind.

About three years ago the president and directors of the bank caused a prosecution to be instituted against me, which has been most unreasonably protracted *through their agency*. On a late occasion I used all the means in my power to bring the investigation to an issue, having been all along subjected to a great expense; but these attempts were frustrated by the counsel of the bank. While this prosecution was pending, a meeting of the stockholders was called. From their number a committee was selected, who, the world is told, organized themselves into a court of justice. The president brought his charges, and this self-constituted judicial body, as it is said, went through an investigation, and finally judged, condemned and sentenced the accused. Upon this mock trial and condemnation, which is acknowledged to have been founded wholly on *ex parte* testimony, the president imagined himself authorized, and actually took the liberty to publish this sentence to the world, and declare me guilty of being accessory to a "stupendous fraud" on the bank.

This is a literal narrative of facts, as short and simple as it is obvious and imposing. And now I appeal to every man in the community, who looks upon the laws of his country as the safeguard of his rights, and who considers, as every honorable man must consider, a wanton attack on his reputation as the deepest injury which can be inflicted or designed—I appeal to every such man, whether I have been precipitate or rash in the charge I have made, or whether I have gone beyond the bounds to which I was compelled to go by a consciousness of injury like this, inflicted under circumstances as novel in their details, as unjustifiable and aggravating in their character.

And how does Mr. Cheves acquit himself when he attempts a vindication of his conduct? He breaks into a passion—is amazed that his authority should be questioned; and concludes with an extract purporting to contain a resolution of the self-constituted judicial committee above-mentioned.

As to the first and most prominent feature of his vindication, I have already acknowledged my inability to meet him on any terms of equality. I have no mind to be in a passion upon so grave a matter; and if I could think myself capable, I should not suppose my cause would be strengthened by any studied refinement of abuse or indecorum of language. These may be potent weapons in skilful hands, but as I have never learnt to wield them, it is fortunate that I do not need their aid.

In the second place, it seems to have excited a furious resentment in this man, that any one, whom he condemns, should dare to assert his innocence; and, by some unaccountable mental obliquity, he confounds accusations with proofs of guilt. But let me ask by what authority has he acted in this case? Whence does he derive the power to be the accuser and the judge, the prosecutor and organ by which his own sentence of condemnation is published to the world? Does he derive it from the laws of this free country, from the laws of nature, or from the equitable privileges of society? No—this power is assumed, and its exercise is equally an encroachment on the liberty of the citizen and the rights of human nature. From no privileges of the one, no principles of the other, is he authorized to usurp the authority which he has claimed. He has set himself above law, thrust aside the forms of every equitable process, rendered nugatory the judicial institutions of his country, bid defiance to the majesty of justice, and then

wonders that the victims of his usurpation should doubt his infallibility, and remonstrate against proceedings, which not only aim at their ruin, but which, if tolerated, would blast with the pestilence of tyranny every plant in the fair field of liberty. For myself, I am not disposed to submit to such authority; nor do I believe the time will soon come, when there will be so little virtue, or so much blindness in the community, as to suffer any one to tolerate presumption like this, or look upon it with any other than an eye of ridicule or contempt.

To show that his authority is worth something more than I am willing to allow, he fortifies himself with a resolution of a committee? And what committee? A selection of persons, most of whom were his particular friends, adherents and dependants, some of whom were known to be hostile to the accused, and all of whom were in the exclusive interests of the bank, and acting as its agents. That is, the committee, who erected themselves into this tribunal, were the virtual prosecutors of the very men, whom they tried and judged! And how did this committee proceed? They received the charges of the president, listened to his accusations, examined such papers as he presented, and this without even informing the party accused, or hearing a word in their defence. And, to add to the enormity of this outrage, if indeed it admits of addition, this farce was acted over at the moment when a legal investigation was pending! This self-organized court will find a true prototype in the inquisition. And yet, strange as it may seem, Mr. Cheves has been a judge, and acted in this capacity, not in the cloisters of Spain, but under the laws of these independent states of America. This is the court which he puts forward as the supporting pillar of his authority. I make no comments. I abuse not the good sense of any one, by asking him to weigh the authority of this committee. It is just as good in this case as the president's, and no better.

And supposing this authority were as incontestable as Mr. Cheves would have it, the resolution of the committee has no direct bearing on his case. Not a word is there said about "fraud." We are told of the "past and present condition of the bank;" but we have no hint that even this tribunal sanctioned the outrageous charge of which I complain in the president's exposition. Why this resolution should have been made public it is difficult to conjecture. It may amuse some and deceive others; but it would seem impossible that even Mr. Cheves should have been so blind as not to perceive that it argues nothing in his favor. It throws the responsibility still more strongly upon himself, and proves still more clearly that his conduct is indefensible on any principles of justice and fair dealing, since he has been obliged to lean on such a support.

And, after all, let it be supposed that Mr. Cheves has made his case good, that his investigation was conducted with impartiality, and that he has indubitable evidence of my having been guilty of fraud; I should not even then consider his conduct as admitting any possible justification. In its most favorable aspect, it is an outrage upon the laws of his country, and a contempt of its courts of justice. With any testimony in his favor, he has no right, under such circumstances, to anticipate a legal decision. If a man, in a public capacity, is suffered to take upon himself the offices of accuser and judge, and in a public document to send out a libel on the character of an individual, it is a vain boast to talk

any longer of the citizen's rights, or the sacredness of the laws. It is obvious how much more indefensible such a measure must be, when it involves a rash and flagrant charge against one who is conscious of innocence, and who only asks the privilege, which the laws allow him, of confronting his accusers and making his defence.

As I must be supposed to know at least as much of my own case as Mr. Cheves, and as he has publicly uttered what I deem a slander on my character, I have felt it a duty, in the same public manner, to pronounce his statement "false and without a just foundation." He has produced such a vindication as he could, but in this I see no apology for his conduct, and no reason for altering my mind. As for myself, I have no apprehensions for the result, and only desire that public opinion may be suspended until a legal investigation shall have been made; and that no person may be influenced in his decision by the unauthenticated assertions, the passionate violence, and arrogant pretensions with which this assault on my character has been published and defended.

GEO. WILLIAMS.

Baltimore, October 28th, 1822.

Sir William Herschel.

FROM A LONDON PAPER.

The accounts of this celebrated individual, which have found their way into the papers and magazines since his death, are in many respects very inaccurate. The following has been furnished by a gentleman well acquainted with sir William and his family, and its accuracy may be relied on:

"Sir William Herschel was born in November, 1738. His father, being a musician, brought up his four sons, of whom sir William was the second, to the same profession, and placed him, at the age of fourteen, in the band of the Hanoverian foot guards. Unable, however, long to endure the drudgery of such a situation, and conscious of a superior proficiency in his art, he determined on quitting the regiment, and seeking his fortune in England, where he arrived about the end of the year 1757. After struggling with great difficulties in London, he was engaged by the earl of Darlington to superintend and instruct a military band then forming by that nobleman in the county of Durham; the opening thus afforded contributed so far to increase his reputation and connections, as to induce him to spend several years, after the termination of the engagement, in the neighborhood of Leeds, Pontefract, and Doncaster, where he had many scholars, and led the public concerts and oratorios.

"In 1766 he was chosen organist at Halifax, a situation he soon after resigned for the more advantageous one of organist at the Octagon Chapel at Bath. In this great and gay resort of fashion, his extraordinary musical talents procured him ample employment, and the direction of the public concerts and his private teaching produced him a considerable income.

"But though fond to enthusiasm of his profession, his ardent thirst for knowledge had begun for some time past to open a nobler field to his exertions. While at Halifax he had commenced a course of mathematical reading, and in spite of the difficulty of such studies, acquired without assistance a considerable familiarity with the principle both of pure and applied mathematics. The sublime views disclosed by the modern astronomy had powerfully attracted his attention, and when he read of the noble discoveries made by the assistance of the telescope, he was seized with an irresistible desire

to see with his own eyes the wonders he read of. Fortunately the price of an instrument capable of satisfying his curiosity was beyond his means, and he resolved to attempt the construction of one for himself. In this arduous task, after encountering endless difficulties, he succeeded, and in 1774 first saw Saturn in a five feet reflecting telescope, made by his own hands. Encouraged by this success, he now attempted larger telescopes, and soon completed a seven, a ten, and a twenty feet reflector, labring with such obstinacy as to have actually finished no less than 200 object mirrors before he could satisfy himself with the performance of one.

"Astronomy now occupied so much of his attention, that he began to limit his professional engagements, and restrict the number of his scholars.

"About the latter end of 1779 he commenced a regular review of the Heavens, star by star, with a seven feet reflector, and having already continued this upwards of eighteen months, he was at length rewarded, on the 15th of March, 1781, with the discovery of a new primary planet, to which he afterwards gave the name of Georgium Sidus, now more generally distinguished by that of Uranus.

"In consequence of this memorable discovery, the attention of the scientific world became fixed upon him, and his late majesty, with a promptitude of liberality which must ever be recorded, to his honour as a patron of science, enabled him, by the settlement of a handsome salary, to discontinue his professional exertions, and devote the remainder of his life wholly to astronomy. In consequence of this arrangement, Herschel immediately quitted Bath, and took up his residence at Datchet, in the neighborhood of Windsor, where he was no sooner established than he entered on a career of discovery unexampled, perhaps, in the history of science. Having removed to Slough, he commenced the erection of a telescope of yet larger dimensions than any before attempted, which he completed in 1787, and, aided by this stupendous instrument, and by others of hardly inferior power, extended his researches to every part of the Heavens, penetrating into regions of space of a remoteness elding calculation, and developing views of the construction of our own system, and the universe, of a daring sublimity, hardly more suprising than the strictness of the induction on which they rest.

"In these observations, and the laborious calculations into which they led, he was assisted throughout by his excellent sister, Miss Caroline Herschel, whose indefatigable and unhesitating devotion, in the performance of a task usually deemed incompatible with female habits, surpasses all eulogium. It is not our task to trace the progress of these discoveries, which were communicated as they arose to the royal society, and form an important part of the published transactions of that learned body from the year 1782 to 1818.

"In 17—he married Mary, widow of the late John Pitt, esq., and the accession of domestic happiness he experienced from this union, while it testified the justice of his choice, contributed powerfully to cherish that calm tranquility of mind which is the native element of contemplative philosophy, and the soil from which its shoots rise most vigorous and most secure.

"In 1816, his present majesty was graciously pleased to confer on him the decorations of the Guelphic order of Knighthood. His astronomical observations were continued to within a few years of his death; till his declining strength, no longer keeping pace with the activity of his mind, he sunk at length, full of years and glory, amidst the

applause of the world, and, what was far dearer to him, the veneration of his family, and the esteem and love of all who knew him."

Sir William Herschel has left one son, who, with his father's name, inherits his distinguished talents.

Mexican Coinage.

FROM THE NATIONAL GAZETTE.

Amount of gold and silver extracted from the mines of Mexico, and coined at Mexico, from 1690 to 1803, inclusive.—*Humboldt.*

Years.	Value in dolls.	Years.	Value in dolls.

Tot. \$16,684,223 \$286,292,811 5¼ \$342,893 3

Statement of the gross amount of tythes of the holy Metropolitan church of Mexico, with the expenses of collection and administration—the gross amount of receipts, and the partition of it for one common of five current years, viz: 1783 a 1799.

RECEIPTS.

Balance remaining due the year antecedent with the expense of collection	204,103 5.9
Gross amount of tythes	490,441 4.9
Balances due from preceding years	54,227 4.3
	<u>\$748,772 6.9</u>

EXPENSES.

Expenses of collection	97,438 3.5
Incidental expenses	12,955 0.0
Expenses on wool handed over from this to other churches	1,447 6.5
Do. in old balances	6,809 4.4
Do. on sugar	40 0.0
Balance on hand and due	209,971 7.5
	<u>328,642 3.7</u>

Amount divisible \$420,130 3.2

DISTRIBUTION.

<i>Archbishop's Fourths.</i>	
To his excellency the archbishop, for his fourth, the expenses appertaining to it included	105,032 4.9
<i>Royal Ninths.</i>	
To the two royal ninths	46,681 3.2
<i>Fabrica Church Fund.</i>	
To the fund for the repairs of churches, 3-18ths, the incidental expenses included	35,010 6.9
<i>Hospital</i>	
To the hospital del Amor de Dios and that of "Queretaro," their 3-18ths, expenses included	35,010 6.9
<i>Mesa Capinular.</i>	
To the table of the chapter for its fourth & 4-9ths, incidental expenses included,	174,152 6.8
Vacantes menores	24,242 1.1
	<u>198,394 7.9</u>
	<u>\$420,130 3.2</u>

Allowance made to the Individuals of the "Mesa Capinular," at the same time.

To the dean, including the "anniversarios"	\$13,751 0.5
To each of the four dignitaries,	11,570 7.2
To each of the five canons,	8,908 5.5
To each of the six prebendaries,	6,230 3.9
To each of the six half do.	3,115 1.9

Roman Catholic Church.

A new periodical publication has been just issued at Charleston, South Carolina, which presents a new feature in the passing history: it is entitled the "United States Catholic Miscellany," and is to be issued periodically: the first number appeared on the 5th of June. The editor says—

"We beg to inform those who may read this article, that we are most anxious to obtain the fullest and most minute accounts of the venerable father of this church, the late archbishop Carroll. His memory is so deservedly esteemed, that we are eager to render it what justice we can; and are convinced that our readers will be pleased at receiving many traits of the good man's character, in the relation of many facts of his useful life and valuable ministry.

At the commencement of the present order of things, there were, in these states, very few Roman Catholic clergymen, residing principally in Philadelphia and Maryland. There was then no bishop. In the year 1790 the right. rev. John Carroll was appointed and consecrated bishop of Baltimore, and had the jurisdiction throughout the union. In 1803, the increase of Roman Catholics, and of churches, was so great as to require the erection of new sees in Boston, New York, Philadelphia, and Bardstown; and in 1820, Richmond and Charleston were created—and last year a new see was created at Cincinnati, Ohio. One or two more are likely to be soon added at this side of the Mississippi. New Orleans had been for many years successively under the French and Spanish, and having been ceded to this union, and therefore having acquired stability and permanence, the ecclesiastical government was also permanently regular, and a bishop consecrated therefor. He spends a considerable portion of his time at St. Louis in the Missouri, but, from the extent of his diocese, and the increasing number of his flock, division of dioceses must also ere long, take place in the western portion of the states.

Thus, notwithstanding numberless obstacles, many of them of the most appalling nature, and many of which still remain to be overcome, within the space of about 32 years, there has risen up in this union a Catholic hierarchy, consisting of an archbishop and seven suffragans and one coadjutor, together with a bishop of an exempt jurisdiction.

The names and titles, and places of residence of those prelates, are as follows:

Archbishop of Baltimore—most rev. Ambrose Mareschal, Baltimore.

1. Bishop of Boston—right rev. John Cheverus, Boston.

2. Bishop of Bardstown—right rev. Benjamin J. Clagget, Bardstown, Kentucky.

3. Bishop of New York—right rev. John Conolly, N. York.

4. Bishop of Philadelphia—right rev. Henry Conwell, Philadelphia.

5. Bishop of Richmond—right rev. Patrick Kelly, Norfolk.

6. Bishop of Charleston—right rev. John England, Charleston.

7. Bishop of Cincinnati—right rev. Edward Fenwick.

Coadjutor to bishop of Bardstown—right rev. David.

Exempt bishop of New Orleans—right rev. William Dubourg, New Orleans and St. Louis."

Trade to the N. W. Coast.

From the *North American Review*.

A short account of this trade, and a sketch of its present state, may assist our readers in forming some estimate of the importance of this subject to the United States, merely in a commercial view, and independent of any question of territorial rights which it may be thought to involve. The third voyage of Cook having made us acquainted with countries of which little was before known, several enterprising individuals, allured by the prospect of a profitable traffic with the natives, engaged in voyages to the northwest coast as early as 1784. The citizens of the United States, then just recovering from the entire prostration of their commerce by the revolutionary war, and possessing more enterprise than capital, were not slow in perceiving the benefits likely to result from the participation in a branch of trade where industry and perseverance could be substituted for capital. In 1787, two vessels were fitted out in the port of Boston, the *Columbia*, of three hundred tons, and the *Washington*, of one hundred tons burthen, the former commanded by Mr. John Kendrick, the latter by Mr. Robert Grey, since known as the first navigator who entered the river *Columbia*. Other vessels followed shortly after, and those entrusted with the management of those voyages soon acquired the necessary local knowledge to insure a successful competition with the traders of other nations, (mostly English), who had preceded them. The habits and ordinary pursuits of the New-Englanders qualified them in a peculiar manner for carrying on this trade, and the embarrassed state of Europe, combined with other circumstances, gave them, in the course of a few years, almost a monopoly of the most lucrative part of it.

In 1801, which was, perhaps, the most flourishing period of the trade, there were sixteen ships on the the northwest coast, fifteen of which were Americans, and one English. Upwards of eighteen thousand sea otter skins, besides other furs, were collected for the China market in that year, by the American vessels alone. Since that time the trade has declined, the sea otter having become scarce, in consequence of the impolitic system pursued by the Russians, as well as by the natives, who destroy indiscriminately the old and the young of this animal, which will, probably, in a few years, be as rarely met with on the coast of America, as it is now on that of Kamtschatka and among the Aleutian islands, where they abounded when first discovered by the Russians. There are at the present time absent from the United States fourteen vessels engaged in this trade, combined with that to the Sandwich islands, which, for several years past, has been carried on to a considerable extent in sandal wood. These vessels are from two to four hundred tons burthen, and carry from twenty five to thirty men each, and they are usually about three years in completing a voyage. After exchanging with the natives of the coast for furs, such part of their cargoes as is adapted to the wants or suited to the fancy of these people, they return to the Sandwich

islands, where a cargo of sandal wood is prepared, with which, and their furs, they proceed to Canton, and return to the United States with cargoes of tea, &c. The value at Canton of the furs, sandal wood, and other articles, carried thither the last season, by American vessels engaged in the trade, was little short of half a million of dollars. When it is considered that a comparatively small capital is originally embarked; that a great part of the value arises from the employment of so much tonnage, and so many men, for the long time necessary to perform a voyage; and that government finally derives a revenue from that portion of the proceeds which is brought home in teas, equal, at least, to the amount invested at Canton, we believe this trade will be thought too valuable to be quietly relinquished.

Rights of Nations upon the Seas.

FROM THE FREEMAN'S JOURNAL.

1. A nation may occupy and extend its dominion on the sea, beyond the immediate vicinity of its own particular coast, either in rivers, lakes, bays, straits, or the ocean; and such dominion may, if the national security require it, be maintained by a fleet of armed vessels. The empire of a nation on the seas may extend as far as it has been acknowledged to extend, by the consent of other nations, and beyond the boundary of its property. It remains then to be considered, whether or not there are such extended limits on the European seas, acknowledged to be the property, or under the dominion of particular nations. Among the bays, straits, and gulfs, there are some which are generally acknowledged to be free; there are others which are looked upon as under the dominion, and in part, even the property of the masters of the coast; and there are others the property and dominion of which are still in dispute.

2. (1) The following are acknowledged as free. The Spanish sea, the Aquitan sea, the North sea, the White sea, the Mediterranean sea, the straits of Gibraltar. (2) The three straits between Denmark and Sweden are under the dominion, and are looked upon as the property, of the king of Denmark; St. George's channel, between Scotland and Ireland, is under the dominion of Great Britain; the straits of Sicily are under the dominion of the king of Sicily; the gulf of Bothnia is under the dominion of the king of Sweden; the Black sea, the Egean sea, the Bosphorus of Thrace, the Propontis, and the Hellespont, are, with the exception of the Greek innovation, all under the dominion of the Turkish emperor. (3) Other nations dispute with England her claim to the dominion, and, in part, to the property, of the four seas that surround her, particularly the British channel, and the straits of Dover. They dispute with the republic of Venice her claim to the dominion over the Adriatic; and with Genoa, her claim to the dominion over the Ligustic sea. More than one dispute has arisen concerning the dominion over the Baltic.

3. With respect to the vast ocean, and the four great seas that compose it, *first*, the uncommon extent of each of these seas, and particularly that of the Indian sea, about which the greatest disputes have arisen, renders it not only extremely difficult to occupy, but puts it absolutely out of the power of any of the states of Europe to maintain and defend the possession of it. And even if this could be done, the want of a justificatory reason for keeping such possession would render it unlawful. Nei-

ther the right of discovery, nor the donation of the *Holy Father*, nor prescriptions have been able to exclude other nations from that possession in common which ought to be preserved. The sole dominion must exist in the theory; but it has never been acknowledged by the nations of Europe to belong to any one of them. The ocean, then, is free; and, surely, it ought to be so. After the vain pretensions and contestations of the Portuguese on the subject, during the sixteenth and seventeenth centuries, all the powers of Europe now acknowledge the ocean and the Indian sea to be exempt from all property and dominion, and to be the common possession of all nations. A nation may, however, renounce the liberty of navigating in the Indian or any other sea.

4. Rivers and lakes are useful for navigation or for fishing, or for other emoluments arising from their possession; and, therefore, the powers that are masters of the banks have a right to appropriate the use of them exclusively to themselves. In general they do forbid foreigners to fish on them; but, with respect to navigation, as such a prohibition would produce retaliation, and as it is contrary to the commercial liberty generally introduced, foreigners are now permitted, in time of peace, to navigate freely and without restraints. This liberty is founded, in part, on treaties, but, in some demisovereign states, on law. But in every case where it is only founded upon custom, that custom does not hinder a nation from making whatever regulations and restrictions it pleases, or from exercising over such parts of its territories all the rights of sovereign dominion.

5. The sea surrounding the coast, as well as those parts of it which are land-locked, such as the roads, little bays, &c. as well as those which are situated within cannon shot of the shores, (that is, within the distance of three leagues), are so entirely the property, and subject to the dominion, of the master of the coast, that, *First*, he has the exclusive right to all the produce of it, whether ordinary or accidental, as far as relates to things unclaimed by any other lawful proprietor: *Second*, he can forbid or restrain the navigation of foreigners in his roads, and their entry into his ports. Yet, in time of peace, this liberty is generally permitted to merchant ships, and even to ships of war, to a certain number:—*Third*, he has a right to impose duties, tonnage, fees of entry, of clearance, &c. and he can institute tolls for the benefit of his navigation: *Fourth*, he may require the maritime honors that custom allows to those who have dominion over any part of the seas. In short, the parts of the sea surrounding the coast, ought to be looked upon as forming a part of the territory of the sovereign who is master of the shore.

6. The master of the shore cannot be said to have a right to appropriate to his own use the wreck of any foreign vessel cast away on his coast, nor the goods, &c. that, in a moment of danger, have been thrown overboard. This pretended strand right, contrary, most certainly, to the laws of nature as well as those of humanity, was formerly exercised pretty generally in Europe. It has been restrained, from time to time, particularly since the thirteenth century, by privileges, laws, and a number of treaties; so that it may now be considered as generally abolished throughout Europe. If there still remain some relics of it in a few places, it is against such place only that it is made use of by way of retaliation.

7. The rights exercised on the sea near the coast, are exercised also in those straits which are not

wider than two cannon shots. It is for this reason that the king of Denmark, by possessing the property and dominion of the navigable part of the sound, claims, not only those maritime honors due to him as sovereign, but certain tolls or rates for the liberty of passing. This payment is now fixed by his treaties with other nations.

8. With regard to the extent of the rights exercised on the seas adjacent to landed territory of particularly states: *First*. The Turkish emperor has hitherto exercised his right of proprietor and sovereign of the Black sea in such a manner as not to permit even the entry or navigation of it to any nation whatever, unless he has granted it by treaty. Should the Greeks become masters of the coast in their present struggle for independence, they will, no doubt, augment the privileges, as well to this country as to the friendly European powers. *Second*. Denmark, wishing to extend her empire and rights of proprietor over the seas adjacent to Iceland and Greenland, to the space of four miles from Iceland, fifteen miles from Greenland, claims the right of excluding foreigners from fishing, and even navigating in that space. But this is disputed by many nations, and particularly by the United Provinces, in what concerns the right of fishing. *Third*. Great Britain, claiming the property and empire of certain parts of the four seas that surround her, empire over more-distant parts, and maritime honors on all the seas, has very often had contestations with foreign nations, who, on their part, except bound by treaties, have never yielded her any more than what belongs to every master of the shore. *Fourth*. The republic of Venice claims empire, and particularly maritime honors, on the Adriatic; but the neighboring states dispute them with her, and recently she has not been in a situation to maintain this pretended right. An annual ceremony is of little use towards it. *Fifth*. Genoa has no longer a naval force respectable enough to claim, with effect, the maritime honors which she pretends to be entitled to on the Ligustic sea. *Sixth*. After many disputes with respect to the empire of the Baltic, and particularly with respect to the honors of the flag, some of the states situated on the shores, have agreed to yield these honors in certain districts, and to admit them reciprocally in others.

9. The maritime honors, about which there have been so many disputes, and which have often led to violent acts, and even to war, consist: *First*. In saluting with *cannon*; and, on this point, it is to be determined who shall salute first, at what distance the salute shall be given, with how many guns, and if the salute shall be returned gun for gun. *Second*. In saluting with the *flag* or with the *pendant*; and here it is to be fixed whether it shall be furled up, lowered, or hauled quite down. *Third*. In saluting with the sails, by lowering or hauling down the fore-top-sail. This last way of saluting is usually made use of by merchantmen, but vessels of war sometimes use it also.

10. Merchant ships, even when they are armed, are obliged to salute all vessels of war, fortresses, and ports, as well with their cannon "as with their merchant flag and their sails. ARCANUS.

The Tread Mill.

A London paper gives us the following description of the "tread mill," recommended by the society for the improvement of prison discipline. Its introduction is said already to have had a most salutary effect on vagrants and rogues. We cannot apprehend any thing more irksome than this

Kind of labor—disgusting from its sameness, excessively fatiguing, and seemingly without object or end.

The attention of the society for the improvement of prison discipline has long been devoted to the adoption of some plan for the effectual employment of prisoners. All attempts of this nature have heretofore been attended with considerable difficulty, but it is confidently anticipated that this invention will not only afford suitable employment, but act as a species of preventive punishment. Although but very recently introduced into practice, the effects of its discipline have, in every instance, proved highly useful in decreasing the number of commitments; as many prisoners have been known to declare that they would sooner undergo any species of fatigue, or suffer any deprivation, than return to the house of correction, when once released.

This wheel is exactly similar to a common water wheel; the tread boards upon its circumference are, however, of considerable length, so as to allow sufficient standing room for a row of from 10 to 20 persons upon the wheel.* Their weight, the first moving of the machine, produces the greatest effect when applied upon the circumference of the wheel at or near the level of its axle; to secure, therefore, this mechanical advantage, a skreen of boards is fixed up in an inclined position above the wheel, in order to prevent the prisoners from climbing or stepping up higher than the level required. A hand rail is fixed upon this skreen, by holding which they retain their right position upon the revolving wheel.

By means of steps, the gang of prisoners ascend at one end, and when the requisite number range themselves upon the wheel, it commences its revolution. The effort, then, to every individual, is simply that of ascending an endless flight of steps, their combined weight acting upon every successive stepping board, precisely as a stream of water upon the floating boards of a water wheel.

During this operation, each prisoner gradually advances from the end at which he mounted towards the opposite end of the wheel, from whence the fast man taking his turn, descends for rest, another prisoner immediately mounting as before to fill up the number required without stopping the machine. The interval of rest may then be portioned to each man by regulating the number of those required to work the wheel with the whole number of the gang: thus, if twenty out of twenty four are obliged to be upon the wheel, it will give to each man intervals of rest amounting to twelve minutes in every hour of labor. Again, by varying the number of men upon the wheel, or the work inside the mill, so as to increase or diminish its velocity, the degree of hard labor or exercise to the prisoner may also be regulated. At Brixton the diameter of the wheel being five feet, and revolving twice a minute, the space stepped over by each man is 2,193 feet, or 751 yards per hour.

To provide regular and suitable employment for prisoners sentenced to hard labor, has been attended with considerable difficulty in many parts of the Kingdom: the invention of this discipline mill has

removed the difficulty, and it is confidently hoped that, as its advantages and effects become better known, the introduction of the mill will become universal in houses of correction. As a species of prison labor, it is remarkable for its simplicity. It requires no previous instruction; no task master is necessary to watch over the work of the prisoners; neither are materials or instruments put into their hands that are liable to waste or misapplication, or subject to wear and tear; the internal machinery of the mill being inaccessible to the prisoners, is placed under the management of skilful and proper persons, one or two at most being required to attend a process which keeps in steady, constant employment from ten to two hundred or more prisoners at one and the same time; which can be suspended and renewed as often as the regulations of the prison renders it necessary, and which imposes equality of labor on every individual employed, no one upon the wheel being able, in the least degree, to avoid his proportion.

The classification of the prisoners according to offences, &c. may be adhered to in the adoption of these discipline wheels; the same wheel or the same connected shafts can be easily made to pass into distinct apartments, in which the several classes may work in separate parties.

As the mechanism of these tread mills is not of a complicated nature, the regular employment they afford is not likely to be frequently suspended for want of repairs to the machinery; and should the supply of corn, &c. at any time fall off, it is not necessary that the labor of the prisoners should be suspended, nor can they be aware of the circumstance; the supply of hard labor may, therefore, be considered as almost unailing.

Old Times.

FROM THE NEWBURYPORT HERALD.

The subsequent extracts from Winthrop's Journal, a book which gives a minute account of the history of the first years of the colony of Massachusetts, may perhaps afford our readers as much amusement, and certainly as much instruction, as the ordinary chapter of accidents, with which we are too often compelled to supply our columns.

1631.—“At a court, one Josias Playstone and two of his servants were censured for stealing corn from Chickatabot, and two of his men, who were present; the master to restore two fold and to be degraded from the title of a gentleman and fined 5*l.* and his men to be whipp'd.”—p. 29.

1634. (Nov. 24).—“About the same time one _____ was 21 days upon Plumb (so spelt in the book) Island, and found by chance frozen in the snow, yet alive and did well. He had been missing 20 days; and himself said he had no food all that time.”—p. 77.

1655.—“At this court brass farthings were forbidden, and musket bullets made to pass for farthings.”—p. 30.

1637.—“Being about full moon, about 10 of the clock in the evening, in a clear sky, a perfect moon was seen about a slight shot northerly from the true moon. It was seen to about half an hour, and then vanished with dim flashings. It was more dim than the true moon.”—p. 124.

1637.—“There was an old woman, in Ipswich, who came out of England blind and deaf, yet her son could make her understand any thing and know any man's name by her sense of feeling. He could write upon her hand some letters of the name, and by other such motions would inform her. This the

*The wheels erected at the house of correction at Cold Bath Fields are each capable of containing forty or more prisoners, and the joint force of the prisoners is expended in giving motion to a regulating fly, which, by expanding of itself in proportion to the power, will keep any number of men, from twenty to three hundred and twenty, at the same degree of hard labor.

governor himself (*i. e.* the writer of this account) had tried often when he was at Ipswich."—p. 135.

1638.—"This was a very hard winter. The snow lay from November 4th to March 23d one and a half yard deep, about the Massachusetts, and a yard deep beyond Merrimack, and so the more northward, his day the deeper. (November 4th), it did not snow two hours together, after much rain from the north east, with flakes as big as a shilling."—p. 154.

1638.—"The court taking into consideration the great disorder proceeding through the country in costliness of apparel and following new fashions, sent for the elders of the churches, and conferred with them about it, and laid it upon them, as belonging to them, to redress it by urging it upon the conscience of the people, which they promised to do. But little was done about it, for divers of the elder's wives, &c. were in some measure partners in this general disorder."—p. 162.

1638.—"Those who were gone with Mrs. Hutchinson, fell into new errors daily. One Nic Eason, a tanner, taught that gifts and graces were that anti christ mentioned, Thess. ii. 2, that every one of the elect had the holy ghost and also the devil in dwelling. Another, one Herne, taught that women had no souls, and that Adam was not created in true holiness, for then he could not have lost it."—p. 166.

1638.—"The devil would never cease to disturb our peace and to raise up insurgents one after another. Amongst the rest there was a woman in Salem, one Oliver his wife, who had suffered somewhat in England for refusing to bow at the name of Jesus, though otherwise she was conformed to all their orders. She was for ability of speech and appearance of zeal and devotion, far before Mrs. Hutchinson, and so the fitter instrument to have done hurt, but that she was poor and had little acquaintances. She took offence at this, that she might not be admitted to the Lord's supper without giving public satisfaction to the church of her faith, &c. and covenanting or professing to walk with them according to the rule of the gospel, so as upon the sacrament day she openly called for it, and stood to plead her right, though she were denied, and would not forbear before the magistrate, Mr. Endicott, did threaten to send the constable to put her forth. This woman was brought to the court for disturbing the peace in the church, and there she gave such peremptory answers as she was committed till she should find sureties for her good behavior. After she had been in prison three or four days, she sent ——— to the governor and submitted herself, and acknowledged her fault in disturbing the church; whereupon he took her husband's bond for her good behavior, and discharged her out of prison; but he found after that she still held her former opinions, which were very dangerous—As 1. That the church is the head of the people, both magistrates and ministers met together, and that these have power to ordain ministers, &c. 2. That all who dwell in the same town, and will profess their faith in Christ Jesus, ought to be received to the sacrament there, and that she was persuaded that if Paul were at Salem he would call all the inhabitants their saints. 3. That excommunication is no other but where christians withdraw private communication from one that both hath offended.

"About five years after this woman was adjudged to be whipped for reproaching the magistrates.

She stood without tying, and bore her punishment with a masculine spirit, glorying in her suffering. But after, when she came to consider the reproach which would stick by her, &c. she was much dejected about it. She had a cleft stick on her tongue for half an hour, for reproaching the elders."—p. 166 and 167.

1639.—"At the general court, an order was made to abolish that vain custom of drinking one to another, and that upon these and other grounds:—1. It was a thing of no good use.—2. It was an inducement to drunkenness, and occasion of quarrelling and bloodshed. 3. It occasioned much waste of wine and beer. 4. It was very troublesome to many, especially the masters and mistresses of the feast, who were forced thereby to drink more often than they would. Yet divers, even godly persons, were loth to part with this idle ceremony."—p. 195.

1640.—"One of the ships which came this summer, struck upon a whale with a full gale, which put the ship a-stays. The whale struck the ship on her bow with her tail a little above water, and broke the planks and six timbers and the beam, and staved two bogsheads of vinegar."—p. 205.

1641.—"At the court of assistants one Hugh Bewett was banished for holding publicly and maintaining that he was free from original sin, and from actual also, for half a year before; and that all true christians after (regeneration) were enabled to live without committing sin."—p. 213.

CHRONICLE.

Baltimore. The electors of mayor met at the council chamber on Monday last, and, being organized according to law, they unanimously elected Edward Johnson, esq. mayor of this city for the ensuing two years.

Some nests of gamblers have been sorely disturbed since the new mayor came into office—they were punished to the very extent of the law, and have decamped for new quarters, after having ruined some promising young men.

Execution. Lechler was lately executed at Lancaster, Pennsylvania, pursuant to his sentence, for murder. Lancaster county contains a population of 68,000 souls; and it is *forty five years* since any other persons was executed in it.

Counterfeiters. We have heretofore noticed the capture of a horde of counterfeiters in Alabama, where they had established a *shop* in the wilderness. One of them, the famous Thomas Jones, alias Davis, was hung at Tuscaloosa on the 11th ult. and his lieutenant, John Reed, escaped the same fate, to which he was condemned, by dying in prison before the day.

New Jersey. Isaac H. Williamson is re-elected governor of this state for the ensuing year.

Vermont. It is officially announced that R. C. Mallary, S. Crafts, Charles Rich, D. A. A. Buck and William C. Bradley are elected members of the next congress from this state.

The auditor of the treasury department reported, that the receipts into the treasury for the year ending September, 1822, amounted to \$51,102 48. That the allowances, &c. for the same period, amounted to \$42,819: leaving in the treasury \$8,284 15. That, at the same time, there was due for arrearages of taxes, \$30,280 53. And that, since his last report, \$40 of the old Vermont state bank bills had been redeemed, leaving only five dollars now in circulation.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 11—Vol. XI.] BALTIMORE, NOV. 16, 1822. [No. 11—Vol. XXIII. WHOLE No. 585

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ The second session of the 17th congress approaches, and many highly important documents may be expected to be laid before it. To prepare for them, we have been diligent to relieve our files of stock-matter as much as possible, and now insert a correct copy of the new constitution of New York, as promised. The census of 1820, as designed to be published in detail, is yet on hand—the cause which delayed its insertion still exists; but we hope soon to give it a place in a satisfactory manner, convenient for general and comparative reference.

PRESIDENTIAL ELECTION. We stated in our last, some of the many important objections that might be offered to the selection of a president of the United States, by *states*, in the house of representatives. Since then we have noticed the following letter, as published in the Washington Gazette, the editor of which pledges himself for its authenticity—it was from the late *James A. Bayard*, esq. at that time the sole representative from Delaware, to one of his friends in Wilmington.

Washington, 17th February, 1801.

“DEAR SIR—Mr. Jefferson is our president—Our opposition was continued till it was demonstrated that Burr could not be brought in, and even if he could he meant to come in as a democrat.

“In such case, to evidence his sincerity, he must have swept every officer in the United States. I have direct information that Mr. Jefferson will not pursue that plan. *The New England gentlemen came out, and declared they meant to go without a constitution and take the risk of a civil war.* They agreed, that those who would not agree to incur such an extremity ought to recede without loss of time. We pressed them to go with us and preserve unity in our measures.

“After great agitation and much heat, all agreed but one. But in consequence of his standing out, the others refused to abandon their old ground. Mr. J. did not get a federal vote. Vermont gave a vote by means of Morris withdrawing. The same thing happened with Maryland. The votes of S. Carolina and Delaware were blank. Your obedient servant.

[Signed]

J. A. B.

☞ The authenticity of this letter is not doubted, though it is rather surprizing that a person of Mr. Bayard's great caution should have committed such things to paper. The editor of the Register, though he had no intimacy with Mr. Bayard, has oftentimes met him in companies in which there was much freedom of conversation, and heard him frankly express his utter detestation of the proceedings had at Washington during the contested election for president in 1801, regretting that the force of party feeling had led him to take some part therein. Mr. Bayard was a decided partizan (as almost every man was at that time), but he was also a true patriot, as was shewn on the great occasion above alluded to, but more clearly manifested just before the late war with Great Britain. The history of a certain meeting held at ———, is probably lost; but his firmness therein, and his devotion to his country rather than a love of power at that time clearly indicated, possibly preserved us from “an illiad of woes.”

Vol. XXIII.—11.

☞ The more I think on the subject, the more am I convinced of the propriety of the plan suggested in the last REGISTER, by an old member of congress, that that body should meet, pass such laws as may be necessary to keep the government a-going, and then adjourn until the Monday preceding the day on which the votes for a new president are to be counted! For, the fact is, that the business of *president-making*, like the curse of the frogs in Egypt, is, or is supposed to be, in every matter and thing of national policy. No general measure, if it has regard to whatever pertains to the affairs of three of the great departments of government, can be approved or disapproved,—nay, documents or authentic papers can hardly be called for in congress, or published in regular course in a newspaper, without rendering persons liable to the suspicion of having yoked themselves to the car of this man or that. This is a serious misfortune; and it seems that, for the period of two years, we may be essentially denied the benefits of free and liberal discussion, through partizan jealousies and personal feelings!

The REGISTER has been, at different times and by different persons, suspected of being devoted to the exaltation of at least *three* individuals, because that we thought it our duty *fully* to represent the character of certain transactions in which the people were interested. The proprietor has only to say that *when* he shall take a part, *as an editor*, nothing shall be left to inference—until *then*, and then also, all public papers and matters that are important to the public intelligence, shall be inserted just as they have been heretofore, without the least consideration whether they affect the pretensions of any one to the presidency or not.

A warmth of discussion has been already excited that is to be regretted; and the fact surely is, that at least two of those who are held up as candidates have suffered, and are suffering, in the public estimation, through the indiscretion of their “good natured friends.” The mind of the people is not yet prepared to act on the occasion, much less inclined to receive invective for argument, or fulsome praise for ability—and those interested will find, though they may *seem* to lead when public opinion is with them, that the people's good sense and sober judgment cannot be carried by storm. The selection of a president is a grave and solemn matter, and will not be hastily decided on.

ANTI-NATIONAL. It is a true saying that “straws shew which way the wind blows”—and we find “straws” flying in too many parts of our country that indicate a *foreign* wind. The following is “*ex pluribus unum*”—one of many: In a notice of the valuable line of packets that ply between New-York and Liverpool, but owned in the *first named city*, we see it mentioned that the price of the passage, in the cabin, is thirty-five guineas, for which money accommodations of the best quality are provided, &c.

Now, what do we, Americans, know of guineas? They are not money of account, and perhaps one person out of a thousand of us do * not see one in a twelve-month. The proprietors might as well have said so many livres, maravedies, rubles, guilders, rupees, craitzers, pistoles, pagodas, talas

or one dollar, in either case, the *American*, accused to dollars and cents, would have to take his pen and calculate what he should have to pay for his passage: thus saying, a guinea is twenty-one shillings sterling money of Great Britain, thirty five guineas are 735 shillings, which divided by 20, (for there are 20 shillings in a pound), give thirty six pounds fifteen shillings—the pound is four dollars and forty four cents, as established by law for the collection of duties, &c. and so 36l. 15s. are one hundred and sixty-three dollars and seventeen cts.

Now, I like that strange simplicity of heart and generous attachment to his nation, that is ascribed by Smollet to his com. Trumion; who directed that his own epitaph should be put down in plain *English*, for the reasons he stated, though we must smile at the notion conveyed—and, when an *American* speaks to me, I wish him to select terms that correspond with my ideas of things, as an *American*. Indeed, it is contrary to the rules of good breeding to use any other; and, as being at war with the progress of a national feeling, it ought to be deprecated. In England, and to Englishmen, the use of the term "guineas," is right and proper; but in America, and to Americans, it is as absurd as it is rude and self disrespectful.

ROTATION IN OFFICE. A late number of the *Richmond Enquirer* contains a sound article on "rotation in office," though the policy of it is so much opposed in the present day—for the reason that the possessors of office have so much controul over the press. A good and faithful public servant should not be heedlessly ejected—but there is right and reason in a practice which shall teach all such that they are only public servants, not possessors of the public revenue—as many seem to think that they are, because they have enjoyed a portion of it so long.

The writer says—"In the abstract it has not yet been denied, that a frequent recurrence to first principles, is the surest way to preserve uncorrupted and unchanged the government of a free people. Men are the elements or principles of which a people in the aggregate are composed—and if men were incorruptible in their nature—no matter how long or how remote their employment from the people; longer practice in their various posts would only improve their dexterity and usefulness in service. But alas! men in their course too nearly resemble the elements of those descending streams—which have flowed to too great a distance from their native fountains. They cease to partake of their original simplicity and purity—and become open to the influence of every new combination, pure or impure—which may assail them, through their various assailable points. The people are the sole accredited fountain of all power in America alone; and the will of the people must be to promote their own good. It would be a solecism in principles to suppose—in terms to assert, that a people could meditate their own injury. It is only where partial wills from partial views, are made to usurp the general will, that the councils of a popular government can err. Can any better plan be devised to prevent this, than a frequent recurrence of public servants to the nature and condition of their constituents?"

The rest of the article is pretty much in the same strain, and supports the old fashioned doctrine, that rotation in office is productive of public good.

The writer proceeds—"But new representatives are novices in business. Better so then—than the drilled instruments of a weak or a corrupt partial

influence. But are we to be cajoled and misled by the humiliating idea, that any congressional district in this or any other state, can afford but one competent representative at any one time—and this one too requiring an indefinite succession of re-elections, to have him properly schooled in congress? If this is the case, if this is the deplorable state of popular ignorance—it is high time that the fact should be clearly established, and the proper remedy applied. Let our members of congress be changed; let them be changed often; and if it becomes manifest that we have so few competent to represent us usefully and truly; let the people themselves provide the means of their improvement—let our future candidates be prepared at home, in the state legislature or otherwise—so that they shall take their mould from the states and their constituents. Congress is too dear and too dangerous a place, for our representatives to be sent to school to receive the first impressions to direct their future acts: or if it is not, change your scholars often, in times of peace and less difficulty, than an accidental death, or executive reward for representative compliance, may not suddenly leave you without all resource, in greater difficulties."

This remark about members of congress, brings to recollection an observation which a pure hearted, strong minded republican member of congress made to me, several years ago at Washington. He said—"I am entirely convinced that every member of congress ought to go out at the end of four years and be ineligible for two succeeding years—for the fact is, that, in spite of all that we can do, the very best men among us become more or less impressed with opinions not conformable to that of the people, and we act upon them as though the people were their own worst enemies, requiring our wisdom and grace to prevent them from harming themselves," or words to this effect, "so that the creature assumes the power of the creator." Now, this is as true as the gospel. Human nature is weak—the only corrective of human error, that we can rely on, is the good sense and sober discretion of the people at large. That they may be deceived and often do wrong, is admitted—but the deception or the wrong acts upon themselves, and they must suffer the penalty. Individuals may profit by their own wrongs; but the people cannot, except to avoid future wrongs. The interest of one man or a set of men may be easily opposed to the interests of a community; but the interests of a community must point to the good of the whole.

It has happened, and, I think, that I have seen more than one case of it, that a new member of congress, fresh from the sovereign power, and possessing much of its original purity and disinterestedness, has been looked down by old and hacknied members, if he proposed any thing in the way of retrenchment or reform—as if they had established a set of notions and manner of acting, superior to control and unchangeable, unless at their own motion. Now and then, a man, bold in his own virtues and strong in talent, breaks in upon the mill-horse routine of pleasing or displeasing persons in power; but this is not often the case, (though the right of it may be evident), from a sort of jealousy that is entertained in the human mind. If a wrong is designated by a new man in the usual proceedings of an old body of men, there are always some who feel their pride wounded, because that they themselves, or some of their colleagues, had not detected it. The results of experience are not to be disregarded; but all human things are suscepti-

ble of improvement—without it, we might yet have made horses draw by their tails. Old age too, is always to be honored and respected—but as good and capable men hold the plough as make the laws; and the spending of a winter in the pomp and parade of Washington, is no more needful to know what is right, than the sending of a youth on board a privateer to teach him morality. The fact is, that the mind gradually becomes callous of wrong—and persons act on the idea of the old fish woman, whose practice it was to skin eels alive; on being asked if it was not cruel do to so? said she "thought so at first, but *they had got used to it!*" Her feelings were lost in frequent repetitions of the act, and the convulsions of the poor animals may have been regarded as an exhibit of their delight in the operation! This is a homely metaphor, and some may not like it—but the fact is, the people, though frequently skinned, never "get used to it!"—yet they do not provide against such skinnings so well as they might if they would. My most earnest wish is, that every man in the republic should spend a few days at Washington during a session of congress, that he may be assured of the fact that the best of the members are only men, like unto himself; sometimes buying, sometimes selling—sometimes wise and sometimes foolish—silly, very silly, indeed.

And, though the abuses under our government are yet in their infancy, as regards the progress of corruption, we have not a few persons in office who esteem the emoluments as due to themselves for some bowings to the great, some lickings of the feet of the mighty. I know some such—some *civil* officers, who, by "candles ends and cheese pairings," receive, (and *nobly* spend), about 3,000 dollars per annum a-piece, on whom a person might call, on ordinary business, two or three hundred times in a year, hour after hour, week after week, and month after month, and not find them in the performance of any official duty, save the *drudgery* of signing their names, a few times in a quarter, or in a year, that their salaries and emoluments may be secured. There is a great deal of *deputy-business* going on—to the detriment of the public service, to the disgrace of our system of government, and the contempt and disgust of honorable men: but those persons, who do nothing but eat up their salaries, are enemies of *rotation in office*, as much as the priest of an *established* church would be at any result that should compel him to work for his own living like an honest man—and the misfortune is, that they have much controul over the press—and they can dance, fiddle and sing, and *afford* to give good dinners, by which they tickle the fancy and reach the *souls* of others. How can a person vote or act against another who feeds him on ortolans and drenches him with champagne? Impossible—it would be a breach of *hospitality!* But a pirate of Cuba might do all this, and more—and afford it much better. The principle of things with us is, that a man shall do what he is appointed to do; and large salaries or handsome allowances are made to guarantee the application of competent persons—not for their support in idleness.

☞ A writer in a western paper has violently thrown about a dozen columns of matter at me, and is not yet apparently half finished, because I ventured to recommend *home charities* instead of *foreign missions*, to the benevolence of the people. I anticipated something of the sort; though I expected more *fairness* and *charity* than this person has manifested: with whom, however, there shall not be any controversy, on my part.

I have only looked over a few of these columns, to catch the manner and get an idea of the matter of them. The author denies several things that are obvious truths on my mind—but I do not wish to judge for him, nor shall he judge for me. Yet this is very clear, and will not be denied, I apprehend, that he has furnished conclusive evidence of the justice of my remark, when I declared, that, though it was not allowable now to roast people to death to do "God's service," so called—yet a spirit was abroad "not less intollerant or unworthy of the Christian name, than that which prevailed when *fire was used to establish orthodoxy,*"—which I respectfully recommend to his serious consideration, after retiring to his own closet, in a sincere hope that he will profit thereby. It is the duty of every one to do all the good that he can—and I would rather *perform* a good thing than gain an *argument* about it.

CIRCULATING MEDIUM. Notwithstanding the depreciation of the bills of the bank of the commonwealth of Kentucky, there are complaints in that state of the want of a sufficient quantity of circulating medium; and the "Louisville Public Advertiser" makes out the case very clearly—in substance as follows: When the paper of the old bank of Kentucky was nearly as good as specie, it had bills in circulation to the amount of \$2,500,000, which was barely sufficient for the purposes of trade; and this bank now has in its vaults as large an amount in the bills of the bank of the Commonwealth as those of its own in circulation. The whole issues of the new bank amount to 2,300,000 dollars; but, as in the present rate of exchange and price of commodities, this amount only does the business of 1,150,000 dollars, the real circulating medium has been reduced nearly one half. This is at once a curious and highly interesting view of the subject, and presents an important fact that should not escape the attention of legislators.

NAVAL. A letter from Boston says—"The government have built here, and have now ready to launch a monstrous ship, with one hundred and two port holes; and to-morrow the stern post of another equally innocent vessel is to be erected. For the purpose of protecting the early infancy of this naval Hercules, an immense house, covering seven eighths of an acre, has been built, which entirely conceals the manufactory of death that progresses under its roof."

FOREIGN NEWS! The following may serve to shew us what degree of reliance should be put on foreign speculations, received through the newspapers—

Advices from Leghorn of the 7th September, state that "another American squadron is expected in the Mediterranean, to reinforce the one which is there already. The news is also *confirmed* of the American agents, who arrived some time ago in the Morea, having brought to a conclusion important negotiations with the Greek government!"

LIBERTY. On taking up a newspaper the other day, I noticed the famous saying of the late *Fisher Ames*, that "the immortal wood-nymph, Liberty, dwelt *only* in the British oak." A very pretty saying, but a very queer one.

A TRAVELLER! "I had no idea," said an English gentleman, who had travelled about twelve miles south of New Haven, Connecticut, "I had no idea that the country was settled so far in the interior!"

THE NEW MARRIAGE ACT in England has created much discussion in the papers. Its apparent design, or practical operation, is to prevent marriages.—Among other things, the parties are required to make certain affidavits before a magistrate, as to their age, &c. after which a notice of their intention must be published for three weeks, by being posted at the church door, &c. A widow woman, aged 46, lately appeared as a witness to swear that her *mother*, (about to become a bride), had, to the best of her knowledge and belief, attained the age of twenty-one years! In consequence of these things, great numbers of persons have proceeded to Ireland or Scotland, and been married there, to the severe loss of the English clergymen—whose influence, it is possible, will bring about a repeal of some of the objectionable parts of the act.

THE FUR TRADE. A St. Louis paper of the 12th ult. announces the first arrival of furs from the Rocky Mountains—the boat load valued at 14,000 dollars; another boat with 10,000 dollars worth, was daily expected. They descended the Yellow Stone, and the length of the voyage is estimated at about 3,000 miles.

BANKING. The Philadelphia Gazette, of Saturday evening last, says—"A minute and laborious examination has been had before his honor Judge Hallowell, relative to an alleged conspiracy to defraud the Bank of the Northern Liberties. It closed last evening, when the judge ordered the parties to enter bail, in the whole amounting to sixty thousand dollars."

The report, as given in another paper, is, that one of the clerks, by keeping false accounts, had permitted a friend to draw for large sums of money which he had never deposited.

POLITICAL PARTIES. Mr. Jefferson lately expressed himself as follows, in a letter to Mr. Samuel M. McKay—"That such do exist in every country, and that in every free country they will make themselves heard, is a truth at all times. I believe their existence to be salutary, inasmuch as they act as censors on each other, and keep the principles and practice of each constantly at the bar of public opinion. It is only when they give to party principles a predominance over the love of country, when they degenerate into personal antipathies, and affect the intercourse of society and friendship, or the justice due to honest opinion, that they become vicious and baneful to the general happiness and good. We have seen such days: may we hope never to see such again!"

A BARE DINNER PARTY. Sir Henry Blackman, of Lewes, (England), on being knighted in 1782, gave a dinner to sixteen friends, with an invitation to them to dine with him annually for forty years; four of them died during the first four years, but twenty eight years rolled round before another seat became vacant at the festive board. In 1814 two died, aged 80 and 90; so that ten remained of the original number at the thirty-third anniversary held in July 1815.

THE CURA PIRATES. A British frigate, the *Hypereion*, with a schooner in company, has arrived at Havana, and sailed thence in search of the pirates. It is stated that she would shortly be followed by six new schooners, built for the express purpose of cruising on this station. It is reported that the British commander had demanded payment for a car-

go of coffee, of which a vessel from Jamaica was robbed, and which he said was sold in Havana.

The city of Havana appears to be infested with land-pirates, or thieves, to an alarming extent.—Their depredations are extensive, and there seems to be also great personal fear of them. Not a family, it is said, can go to rest with a tranquil mind—even the police officers are alarmed.

The Congress frigate has sailed from Norfolk, for a cruise off the island of Cuba, &c.

LA FAYETTE. *Philadelphia, Nov. 7.* The following extracts from letters will be read with pleasure by all who take an interest in our revolutionary history, and in the character and feelings of such worthies of the revolution as gen. Bloomfield and col. Ogden. It may be well to mention, in order to illustrate the reverence in which the marquis La Fayette continues to hold the memory of Washington, that the impression upon the seal of the letters is a beautiful and correct likeness of the American hero, surrounded by a glory.

Extract of a letter from the marquis La Fayette, to Isaac Coxne Barnet, esq. of New-Jersey, consul general of the U. States at Paris, dated Le Grange, Aug. 28th, 1822.

"You have reminded me of times, circumstances and names, ever gratifying to my recollection. Col. Ogden and his regiment have been my beloved companions in war, particularly a picked company of light infantry, under captain Ogden, the colonel's brother, who have shared with me the most interesting toils of the revolutionary war. I enclose a letter to my old brother officer general Bloomfield."

Copy of a letter from the marquis La Fayette to gen. Joseph Bloomfield, of Burlington, New-Jersey.
LE GRANGE, 28th Aug. 1822.

My dear sir—I avail myself of the opportunity offered by Mr. Barnet, to remind you of an old brother soldier, who finds in his own heart a right of reciprocity upon your affectionate remembrance. Our patriotic toils and friendly union in the army, have been to me a happy time, the dear recollection of which fills me with sentiments of love and regret for our departed companions, and of the tenderest attachment for those who survive. I am sure, my dear general, you will, with affection, receive these lines, and sympathize in my feelings. Let me hear from you. Remember me to your comrades, and believe me forever your constant friend,
LA FAYETTE.

The captain Ogden spoken of is col. Aaron Ogden, of Elizabeth Town, New-Jersey, formerly governor of the state.

NAPOLEON BONAPARTE. Dr. O'Meara's book entitled "a voice from St. Helena," and containing his conversations with Napoleon, seems generally acknowledged as authentic, and, indeed, bears evidence in itself that it is so. When the feelings of the times have passed away, and the people are willing to hear and receive the truth, it will become important to history and rescue the memory of that much abused, though often faulty man, from the odium which prostituted writers have heaped on his character and conduct.

His opinion of his own imprisonment is thus stated—"He frequently, (says O'Meara), walked for hours in the shady paths and shrubberies of the Briars, where care was taken to prevent his being intruded upon. During one of these walks, he stopped and pointed out to me the frightful precipices

which environed us, and said, "Behold your country's generosity, *this* is their liberality to the unfortunate man, who, blindly relying on what he so falsely imagined to be their national character, in a evil hour, unsuspectingly confided himself to them. I once thought that you were free: I now see that your ministers laugh at your laws, which are, like those of other nations, formed only to oppress the defenceless, and screen the powerful, whenever your government has any object in view."

The terror that he had inspired, and a knowledge of the devotion of the people of France to his person and proceedings, may be judged of by the means that were adopted to prevent his escape: for what would he, *one man*, have done, if he had been the tyrant and wretch that he was called?

"A subaltern's guard was posted at the entrance of Longwood, about six hundred paces from the house, and a cordon of sentinels and picquets were placed round the limits. At nine o'clock, the sentinels were drawn in and stationed in communication with each other, surrounding the house in such positions, that no person could come in or go out without being seen and scrutinized by them. At the entrance of the house, double sentinels were placed, and patrols were continually passing backward and forward. After nine, Napoleon was not at liberty to leave the house, unless in company with a field officer; and no person whatever was allowed to pass without the countersign. This state of affairs continued until daylight in the morning. Every landing-place in the island, and, indeed, every place which presented the semblance of one, was furnished with a picquet, and sentinels were even placed upon every *goat-path* leading to the sea.

"From the various signal posts on the island, ships are frequently discovered at twenty-four leagues distance and always long before they can approach the shore. Two ships of war continually cruised, one to windward, the other to leeward, to whom signals were made as soon as a vessel was discovered from the posts on shore. Every ship, except a British man-of-war, was accompanied down to the road by one of the cruisers, who remained with her until she was either permitted to anchor, or was sent away. No foreign vessels were allowed to anchor unless under circumstances of great distress, in which case no person from them was permitted to land, and an officer and party from one of the ships of war was sent on board to take charge of them as long as they remained, as well as in order to prevent any improper communication.—Every fishing boat belonging to the island was numbered, and anchored every evening at sun-set under the superintendance of a lieutenant in the navy. No boats, excepting guard-boats from the ships of war, which pulled about the island all night, were allowed to be down after sun-set. The orderly officer was also instructed to ascertain the actual presence of Napoleon, twice in the twenty-four hours, which was done with as much delicacy as possible. In fact, every human precaution to prevent escape, short of actually incarcerating, or enchaining him, was adopted by sir George Cockburn."

Of the Algerines, &c. when the conversation turned upon them, Napoleon said—"It is a disgrace to the powers of Europe to allow so many nests of robbers to exist. Even the Neapolitans could put a stop to it, instead of allowing themselves to be robbed. They have upwards of 50,000 seamen in the kingdom of Naples and Sicily, and, with their navy, they might easily prevent a single barbary ship from stirring out."

politans were so great cowards at sea, that the Algerines had the utmost contempt for them. "They are cowards by land as well as by sea," replied the emperor, "but that might be remedied by proper officers and discipline. At Amiens, I proposed to your government to unite with me, either to entirely destroy those nests of pirates, or at least to destroy their ships, fortresses, and make them cultivate their country, and abandon piracy. But your ministers would not consent to it, owing to a mean jealousy of the Americans, with whom the barbarians were at war. I wanted to annihilate them, though it did not concern me much, as they generally respected my flag, and carried on a large trade with Marseilles."

FULLERS' EARTH. On the 29th of August last, we copied from the Hartford, (Connecticut) Mercury an article under this head, setting forth the inconveniences woollen manufacturers, in this country, labor under for want of Fullers' earth, and describing its properties. We have received, within a day or two, a piece of earth which answers all the tests there mentioned. It came from the plantation of Alexander Poe, esq. on the Chickasaha, Mississippi, about 80 miles from this city, where it extensively abounds. The surface is, to the touch, very much like that of castile soap, somewhat like the soapstone, though not as hard, and more glossy when cut. We took two pieces, from different parts, and put them in glasses of water, when they instantly began to crumble, each falling into a fine mass of a slippery, plastic nature, as perfectly free from grit as is dissolved soap. It has been tried in washing greasy woollens and was found to have the desired effect, leaving the cloth bright, soft and perfectly free from spots or stains. The gentleman to whom we are indebted for this specimen has promised to furnish us, shortly, with a small box of it, which we shall immediately forward to a friend in New-York, for the particular inspection of those who, from interest or curiosity, may be disposed to ascertain its properties, with a request that specimens be sent to Boston, Providence, Philadelphia and Baltimore.

This earth, of which there is supposed to be an extensive stratum, is found in large and almost detached blocks of various shades, from white to black; some in color resembling that of chocolate. Mr. P. tells our informant, (who is a connexion of his residing in this city), that, for many years, within his recollection, the Indians were in the habit of assembling in considerable numbers at the spot from whence it was taken, for the purpose of manufacturing their wares for domestic uses, some of which were very fine—but, until very lately, it was supposed to be of little if any more value than the common pipe clay, which is so abundant in many parts of the southern Atlantic, and, perhaps, other states—there is an earth very similar to this, though said to vary somewhat from it, to be found in various parts of this state, particularly at Florida, (Fort Stoddart), which has been used advantageously in white-washing—and we are inclined to suspect that some of the perpendicular banks of the Alabama river are composed of a material very much resembling, if not of this class, of which we have seen apparently very extensive ledges. We have been struck with the fineness of the material with which were made sundry pieces of earthen ware dug out of some of the large mounds, from 15 to 20 feet from the surface, where perhaps they had been concealed for hundreds of years—evidently having been deposited long before any of the mechanic

arts. (as now pursued), were known in this quarter of the world, unless by a race exterminated before the record of its discovery.

There are doubtless many hidden sources of wealth within the bowels of this section of our country, which are yet to be brought to light, besides those of a fertile soil, rendered valuably productive by a congenial climate, a valuable natural growth on the borders of navigable streams, iron, coal, copper, lead, and possibly, gold and silver mines, together with salt and mineral springs, furnishing a catalogue of benefits calculated strongly to impress upon our minds how greatly we are indebted to the bounteous hand of the God of nature.

Mobile Register.

"THE WALKING HORSE." The *Leeds Mercury* gives the following account of the application of steam power for propelling land carriages—It is many years since that this power was applied for such purposes in the United States, and we wish that the fact should be remembered. The idea suggested itself to the late Oliver Evans in 1772, and was actually put into operation in the year 1804, at Philadelphia—see Addenda to the REGISTER, vol. III.

"The engine which conveys coals from the Orrell pits, drags twenty wagons, each containing upwards of a ton. The people in the neighborhood emphatically call it the "walking horse;" and certainly, from the description of a friend, it bears no little resemblance to a living animal. The engine being on the high pressure principle, the superabundant steam is emitted at each stroke with a noise something similar to the hard breathing or snorting of a horse—the escaping steam representing the breath of his nostrils, and the deception is altogether aided by the regular motion of the engine beam, and the rapidity of motion, which precludes minute observation. In the ascent, the rate is about four miles an hour, and, on level ground, from five to six.

On Wednesday last, a highly interesting experiment was made with a machine, constructed by Messrs. Fenton, Murray and Wood, of this place, under the direction of Mr. John Blenkinsop, the patentee, for the purpose of substituting the agency of steam for the use of horses, in the conveyance of coals on the iron rail way, from the mines of J. C. Branding, esq. at Middleton, to Leeds. This machine is, in fact, a steam engine, of four horses' power, which, with the assistance of cranks turning a cog-wheel, and iron cogs placed at one side of the rail way, is capable of moving, when lightly loaded, at the speed of ten miles an hour. At four o'clock in the afternoon, the machine ran from the coal-staith to the top of Hunslet-moor, where six and afterwards eight wagons of coal, each weighing $3\frac{1}{2}$ tons, were hooked to the back part. With this immense weight, to which, as it approached this town, was superadded about fifty of the spectators mounted upon the wagons, it set off on its return to the coal-staith, and performed the journey, a distance of about a mile and a half, principally on a dead level, in twenty-three minutes, without the slightest accident. The experiment, which was witnessed by thousands of spectators, was crowned with complete success; and when it is considered that this invention is applicable to all rail roads, and that, upon the works of Mr. Branding alone, the use of fifty horses will be dispensed with, and the corn necessary for the consumption of at least two hundred men saved, we cannot forbear to hail the invention as of vast public utility, and to rank the inventor amongst the benefactors of his country."

FOREIGN NEWS.

From London papers of September 26.

Great Britain and Ireland. Vessels bound to Honduras &c. were arming to protect themselves against pirates. A governor general of India had not yet been appointed. Several nobleman of Ireland had offered to fill certain public offices to which large salaries are attached, without pay. On the 25th Sept. 3 per cent. consols were at 81 $\frac{1}{2}$. The Jews, at London, have celebrated what is called the "white fast," with great pomp—3000 of them were present, and a great deal of money was collected for charitable purposes.

France. Nothing important is stated as having occurred in this country, except the continued persecution of the press.

Spain. The constitutional system is gathering strength, and the disorders were subsiding pretty rapidly. The army of the "defenders of the faith," is chiefly made up of priests, smugglers and robbers, and others of desperate fortunes. The late proud and cruel *Elio*, has suffered death at Valencia, by the *garotte*. He was strangled on a scaffold erected close to a delightful garden that he had owned in the zenith of his power. He died with great apparent humility.

Denmark. A Danish paper remarking on the depreciation of landed property, mentions the sale of a fine estate for 29,000 rix dollars, on which there was a mortgage of 100,000 dollars.

Russia. Capt. Wassiliew had returned to St. Petersburg from a voyage of discovery. He had reached a higher latitude than Cook, and discovered a groupe of inhabited islands.

Turkey. Additional confirmation of the heretofore reported successes of the Greeks in the Morea, is received, and there seems now no manner of doubt that the Turks have been most completely defeated. A general sea fight was expected—the Greek fleet, of 90 sail, all told, was in sight of the collected force of the barbarians. An attack by the former was intended by fire ships, said to have been constructed by an *American*, who was also to conduct them.

It is now distinctly stated that it was not the Greeks who broke the capitulation Trippolizza, by which a great slaughter of the Turks ensued. It was the Turks themselves: when all appeared quiet, they suddenly commenced a terrible fire from the houses, and killed 600 Greeks; the survivors, naturally excited, took a severe vengeance therefor.

Wallachia and Moldavia have not been evacuated by the Turks—the emperor of Russia has still a great army on the frontier, and there seems to be some new mystery attached to his proceedings. Four Russian men of war were off Copenhagen on the 16th Sept. supposed to be bound for the Mediterranean.

Jassy is reported to be in a deplorable condition; out of the 8000 houses that it lately contained, only 2000 were standing.

China. A letter lately received from Canton says—"The emporor of this country having by some means discovered the disgraceful conduct of the Mandarins, at and about Canton, has just issued an impartial decree, (which, like that of the Medes and Persians, is irrevocable) to the high officers about the court to inquire into the conduct of these people, and to report correctly the nature of the transaction with the English at Lintin, as well as our own affair at Whampoa, and the measures which have been pursued with regard to the introduction of opium. Thirty mandarins are already imprison-

ed, and how many more will be, it is impossible to foresee.

"This examination, it is expected by every one here, will produce important results, and finally place the intercourse of foreigners upon a different footing from heretofore—perhaps, their expulsion and interdiction."

Brazil. The prince regent was to be crowned emperor of Brazil on the 12th of October—8,000 troops had been raised at and in the neighborhood of Rio Janeiro. The government possessed the confidence of the people, and had just effected a large loan. A national coat of arms, flag and cockade have been established by different decrees. The motto on the last is, "independence or death," which is also the burthen of their patriotic songs.

More recent intelligence from Pernambuco and St. Salvador, represent the people as being in a most agitated state. Indeed, there appears to have been some fighting, and a republican government is contended for instead of an imperial one. So, perhaps, the prince has not been crowned, according to appointment.

Colombia. Morales, as yet having the command of the sea, is carrying on an active predatory war.—There were some apprehensions, that, as there were no troops at hand to resist him, he might make a dash at and capture the city of Caraccas, which he could reach in twelve hours after landing. The people of Laguaira appear to have been considerably alarmed. The U. S. ship Cyane and brig Spark were lying there. The Colombian commodore, (Daniels), was expected, and then it was hoped that the patriot force might be able to meet the royal, at sea.

Letter—from London papers of the 29th September.

The fruits of the successes of the Greeks on the 15th, 16th and 17th of August, were 3000 prisoners, 2000 horses and 200 camels. The head of the pacha of Salonicha was presented to the senate at Argos, which has just renounced the charge of military affairs in favor of Calestroni, whom they have appointed dictator, for the time being. There was a naval fight off Zante—the Greeks took six or seven Turkish frigates or corvettes, and sunk several other vessels; the rest of the barbarian fleet sought protection under the British cannon at Zante, &c. Chourschid pacha had reached Larissa, with only 3000 men out of the 40,000 with which he had attacked the Greeks. These have now a seemingly good prospect of effecting their independence.—Their struggle begins to excite much attention in Europe, and they will get assistance from many individuals.

A London paper, of the 29th of September, says—A Lisbon mail arrived yesterday with papers to the 15th instant. On the 11th the committee of the constitution proposed to the cortes a decree to the following tenor:

1. That the decree of the 3d of June last, convoking an assembly of the constituent cortes in Brazil is null.

2. That the secretaries of state at Rio Janeiro are highly responsible for the illegality of so despotic a resolution, and shall be impeached.

3. That the government of Rio de Janeiro, disobeying the cortes and constituting itself independent, contrary to the wishes of the people of Brazil, who are represented in this assembly, is a government *de facto* and not *de jure*, and that the obedience of any authority will be criminal, unless when compelled by force.

4. That the delegated authority of the prince shall immediately cease, and that the king appoint

a regency to exercise that authority in the manner already sanctioned.

5. That the prince royal shall return to Portugal in the course of four months, reckoning from the day when the present decree had been notified to him; and if, contrary to the expectation, he should not obey, the proceedings fixed by the constitution shall be adopted.

6. That every commander of the land and sea forces shall be accounted a traitor, who shall obey the government at Rio de Janeiro, unless compelled by force.

7. That the government shall try all the means in its power to carry all these resolutions into effect.

It appears pretty evident that, before the self murder of lord Castlereagh, a proposition had been made, and partially adopted, to crush Spain, by an overwhelming allied army, while British fleets scoured the coasts, &c. and it seems as if that kingdom was to have been held as the property of the "Holy Allies." Whether the project is wholly abandoned or not, is unknown; but the great mischief has lost its head, by the act of justice which his lordship committed on himself.

Goubin, and three others, who were implicated with Berton, and condemned, were executed at Paris on the 23d September. Goubin's last words were "Vive la liberte!" The sympathy of an immense concourse of people was strongly excited.

Bank of Vincennes.

FROM THE BROOKVILLE ENQUIRER.

For the information of the public, in regard to the late arrangement made by our senator in congress, James Noble, in relation to the debt due to the United States from the state of Indiana, for moneys deposited in the bank of Vincennes, we are enabled to give the following statement, chiefly taken from papers on the subject in the hands of Mr. Noble, who has favored us with their perusal.

On the 7th September inst. Mr. Noble attended at Corydon, who had in his possession certain notes or engagements, executed by the governor of this state on behalf of the state, to the president, directors, & Co. of the bank of Vincennes, for the payment of \$30,800. On the 22d of September, 1821, the board of directors of said bank transferred to Thomas T. Tucker, esq. treasurer of the United States for the time being, and his successor in office, the notes or engagements of the governor aforesaid, for the purpose of paying a part of the deposits to the United States, which had been made by them in said bank. Near the time of the transfer, the state had in her treasury upwards of \$21,000, in notes of the said bank and branches.

During the last winter and spring, Mr. Crawford, the secretary of the treasury of the United States, being informed that the state objected to the transfer made by the bank, and the truth of the case being submitted to him, he, with an eye single to the interest of the United States and the interest of this state, and, to prevent any collision between the federal and state authority, proposed and determined that those notes or engagements of the governor should, under certain restrictions, be delivered to the board of directors of said bank. In pursuance of the restrictions and instructions of Mr. Crawford, on the 7th of Sept. inst. Mr. Noble, together with the treasurer of state, Daniel C. Lane, esq. liquidated and adjusted a part of the said notes or engagements, amounting to \$25,159. Two of the directors of the said bank, Dr. G. L. Murdock and

William H. Eads, were present, and received the said sum of \$25,159, in bank notes on the said bank and branches, from Mr. Lane; Mr. Noble delivered to him, as the treasurer of the state, so many of the notes or engagements aforesaid, as amounted to the sum last named; Mr. Noble having, previous to his setting out for Corydon for the purpose aforesaid, taken mortgages of the board of directors of said bank, through their attorney and agent, in favor of the United States, upon real estate, consisting of near twenty town lots, lying in Brookville and Connersville, upon which there are seven buildings and other improvements. The state debt, including interest, up to the 29th of December last, amounting to \$32,570 17, leaving a balance due by the state of \$7,411 17, which is payable in 1823, 1825 and 1826

The Indiana Republican of the 12th inst. states, "that general Noble was selected to arrange the matter, and he undertook it with the hope and expectation that he might prevent injury to the state, and for his services he is to receive no compensation," which statement we have no doubt contains the fact.

Protection against lightning.

FROM THE PLYMOUTH, (ENGLAND), TELEGRAPH.

We last week noticed an invention, by a gentleman of Plymouth, for conveying the electric fluid, by means of a copper conductor fixed in the masts, through the bottom of ships. Instead of being ascribed to Mr. T. Harris, jun. as then stated, it should have been Mr. W. S. Harris. The experiment took place on Monday last, on board the *Caledonia*, in the presence of the navy board, sir A. Cochrane, commissioner Shield, several captains in the navy, and the principal officers of the dock yard, in the following manner: The *Louisa* cutter, having had a temporary mast and topmast fitted with a copper conductor, according to Mr. Harris' plan, was moored astern of the *Caledonia*, and at the distance of eighty feet from the cutter a boat was stationed, with a small brass howitzer. On the tiller-head of the *Caledonia* were placed the electrical machine and an electrical jar, with the outer coating of which a line was connected, having a metallic wire woven in it; this line being carried out of the starboard window of the wardroom, terminated in an insulated pointed wire in the immediate vicinity of the touch-hole of the howitzer: a similar line was passed from the larboard window, which communicated with the mast-head of the cutter, and, at the termination of the bolt through the keel, a chain was attached, connected with another insulated pointed wire in the boat, placed in the vicinity of the touch hole—the space between the insulated points being the only interval, in a circuit of about 300 feet, from the positive to the negative side of the jar. Some gunpowder being placed in contact with the conductor in the cutter and the prising in the interval of the insulated points, the jar was charged, and the line attached to the mast head of the cutter being brought into contact with the positive or inside of the jar, a discharge of electric matter followed, which was passed by the line to the mast-head, and by the conductor through the powder to the chain in the water, by which it was conveyed to the interrupted communication in the boat, where it passed, in the form of a spark, and, discharging the howitzer, returned to the negative or outside of the jar, by the line leading into the starboard window, thereby demonstrating that a quantity of electric matter had been passed by the

conductor through the powder. (without igniting it), in contact with the mast of the cutter, sufficient to discharge the howitzer. Mr. Harris then detached the communication between the keel of the cutter and the positive wire in the boat, leaving that wire to communicate with the water only; but this interruption did not impede or divert the charge, as the discharge of the howitzer was effected with equal success as in the first instance, the water forming the only conductor from the cutter to the boat. In order to demonstrate that a trifling fracture or interruption in the conductor would not be important, it was cut through with a saw; but this produced no material injury to its conducting power.

These trials, carried on under the disadvantages of unfavorable weather, could not fail of convincing all present of its efficacy, and called forth the decided approbation of the navy board in particular, which was evinced by sir T. B. Martin requesting Mr. Harris to superintend the equipment of the masts of the *Mindin* 74, and *Java* frigate, preparatory to its general introduction into the navy.

Putnam's Rock.

FROM SILLIMAN'S JOURNAL.

Extract of a letter from professor Dana, of Dartmouth college, to the editor, dated February 5th, 1822.

I have received an account of "Putnam's Rock," which is in the river opposite West Point. It was given to me by my friend colonel Tucker, of Gloucester, (Mass.) and the history, as connected with the American revolution, cannot fail to be interesting; I will give it in his own words, as there is a naivette in his manner of relating it.

This famous rock, originally a native of the highlands above West Point, was situated on the extreme height of Butter Hill*; when the morning fog was descending from the hill, it had a very beautiful appearance, not much unlike a horseman's tent or hospitable marquee riding on the cloud. It was a common amusement for the officers when off duty to roll large rocks from the sides of those hills. These often set others going with them, to the great terror of those persons who were below. One day when this laborious amusement was over, colonel Rufus Putnam proposed going up to take a peep of this curiously situated rock; it was found situated on a flat rock of great extent, and near the brink of a considerable precipice, and hung very much over it. Colonel Putnam believed that it was moveable, and if once moved, that it would roll over; and falling from 20 to 50 feet, would commence its route to the river. A few days after, we formed a party of officers, with our servants, who took with them axes, drag-ropes, &c. in order to procure levers for the purpose of moving the rock, which we soon found was in our power. The levers being fixed with ropes to the end of them all, col. Putnam, who headed the party, ordered us to haul the ropes tight, and, at the word congress, to give a long pull, a strong pull, and a pull altogether.—This we did; the levers fell, the rock rolled over, tumbled from the precipice, and took up its line of march for the river! The party then had the satisfaction of seeing the most majestic oaks and loftiest pines bowing down in homage and obedience to this mighty traveller, which never stopped till it had reached the bed of the river, where it now lies on the edge of the flats, and far enough from

*This hill is 1520 feet above tide water, and 1332 above its base, according to capt. Partridge.

the shore for a coasting vessel to sail around it. The party followed after in its path, and were astonished to see that rocks of many tons weight, and trees of the largest size, were ground to powder; on arriving at the river the party embarked, and landed, to the number of sixty or seventy, on the rock, when colonel Putnam broke a bottle of whiskey and named it "Putnam's Rock." I may have forgotten some of the minutia of the transaction in the lapse of 43 years, but it is a fact that the rock now in the river was removed from the extreme top of Butter Hill by the officers of colonel Rufus Putnam's regiment, in the revolutionary war, in the service of the United States, sometime in the month of June, in the year 1778.

Naval Power.

From the work of Monsieur Du Pradt, 'upon' colonies.

[TRANSLATED FOR THE NATIONAL INTELLIGENCER.]

The sea is the element common to all people, the way open to all, for the relations of which all have need with all; the military marine, protectress of the mercantile marine, is the conservatory means of these relations; the sea, no more than the continent, cannot support one universal and exclusive empire; from thence alliances between maritime powers for the liberty of the seas, like continental alliances for the liberty of the continent. The same necessities have dictated the same measures. Under the reign of Louis the fourteenth, the epocha of the creation of military marines in Europe, there was counted four great marines; those of England, of France, of Spain, and of Holland; they were seen to struggle against each other, together or separately, and, as always happens in the commencement of establishments, with success balanced enough to maintain some equilibrium, and by that some liberty. Holland did not fear to measure herself alone with England and France united—since that epocha the maritime power of Europe was divided into two parts, England on one side, and France and Spain on the other; in the two wars of 1740 and 1756, the French marine, notwithstanding the co-operation of that of Spain, could not defend the colonial possessions of France. In the American war, the two marines, reinforced by that of Holland, did not fairly balance the English marine. They could not wipe out the affront of the 12th of April, nor shut the entrance of Gibraltar. * * * *

It may be said that, from this epocha, people have learnt to know all the value of the sea; before it was the secret of some, such as England and Holland: now it is that of all; but how much have things changed since those times? the revolution has delivered the ocean to England, and with it all the colonies, all the marines of Europe. Her position, in the centre of the European ocean, interdicts the communication of the north with the south. Where could they unite? All that would go out of the sound would be arrested at Heligoland, at Ferroe: it would have to pass under this long battery from Yarmouth to Plymouth. The channel is a sea shut by the ports of England, a real English roadstead, through which the squadrons of France and Holland would never dare to pass, to form a junction. At the first signal, Brest, Cadiz, and Foulon, would be blockaded; Gibraltar shuts the entrance of the Mediterranean; Malta occupies the centre of it; Corfu overawes the Adriatic. Where to pass or reunite? It is the same in the other parts of the world, where England has given herself positions desperate for all maritime people,

A coalition of all the marines of Europe against England, is then a thing to be of reason. But, some of the parts of this coalition are too much exposed in their commerce and their colonies, not to prefer their actual sufferings to their aggravation, which would be the inevitable consequence of a rupture with England. This latter has left them colonies and commerce, precisely what is enough to form a web woven by fear and by the discretions it always dictates. An eternal statu quo is the only calculation of these powers; provided it lasts, it is sufficient. There is but one power independent of England; it is Russia; and the first owes some regard to her for the sake of her commerce. But, there the power of Russia stops. At the Cape of Good Hope, at Ceylon, at Trinidad, at Barbadoes, at Halifax the English are, with respect to colonies, in the same position as they are at Heligoland, at Gibraltar, at Malta, with respect to Europe. Slavery is there, as well as here. In this condition, all military marine in Europe is a useless expense, a subject of triumph prepared for England, and, since it must be said, a real absurdity. In effect, what other name to give to an expense which returns nothing, which serves neither for attack or defence, and which definitively profits only the enemy? It is no longer within itself that Europe must seek its means of maritime enfranchisement; it is no longer upon itself that it can solidly support its lever to raise the burden which crushes it; *it is upon America.* Hereafter the principle of its liberation is there.— We have just seen the proof in the war of the United States against England; they have more tormented England than all the united marines of Europe have done. The reason is very simple; the remoteness from England. At this distance from the seat of her power, she loses a part of the advantages which render her so formidable in Europe; consequently, the more there shall be states like to the United States, the more will there be allies for Europe; for all these states, like the United States, are essentially navigating, possessing an infinite number of ports and rivers which invite navigation and commerce, will have the greatest interest in the liberty of the seas, in an alliance with the weak upon the sea, against the strong, the natural oppressors of the weak; consequently, every flag of liberty raised in America will cover the seas of Europe with a tutelary shade.

Suppose in America some free states, as Brazil, the United States, Mexico; and upon the other reverse of this country, Peru and Chili. In this state of liberty which cannot escape them sooner or later, do we not see raised with them as many rivals against England, as many ship-yards, and arsenals, as we count in the United States, and all at the service of Europe against the common enemy, the master of the sea, whatever name he bears? for as soon as he is master, he is the enemy of all that is weaker than him, and also all are enemies to him. Do we not see raised, with the means to support it, a general struggle for the independence of the seas—a struggle which, in this case, cannot fail of its effect, favored as it will be found to be by the position of the parties that will take part in it, whilst it is impossible for Europe alone to establish a like one, precisely by reason of its position and proximity with England. When England shall have to blockade at once all America and all Europe, her blockades, instead of being a chain of iron that cannot be broken, as we have seen in the last 20 years, will be no more than spider webs that can be pierced at will. When her vessels shall have to guard stations several thousand leagues distant, without as-

sured ports of refit; when her commerce, exiled from the two continents, pursued by swarms of privateers, shall extend its withered arms to the metropolis, suppliant for peace; then will be re-established a maritime liberty for Europe which she cannot obtain by her own proper means. Let us say it without balancing, without the independence of colonies, Europe has nothing better to do than to burn all her vessels; for there is not a single one which is not destined to be drawn in triumph to London in eight days after they shall dare to put to sea; without the independence of colonies, all the vessels of war of Europe will be taken, or will rot in the ports; such is the arrest of fate, of which England is the minister.

This was then the capital error of the politics of Napoleon; he wanted to enfranchise the seas by Europe! and it was only by America that could be done. He turned his back upon his aim by going to search for it in Russia, where surely it was not. Such is yet the error of Spain; she does not perceive that, in laboring to re-establish the dependence of America, in her own regard, she only confirms her own dependence upon England, who will be able to dispose of all the force of which she would have need against America. France does not act more wisely in not occupying herself to prepare a future, less servile than the condition to which she is descended.

A proposition so new as that which is just announced, cannot fail to excite much outcry; the thing is easy to foresee, and, above all, to explain, from the interests which it reaches. But what are outcries against the truth? It is precisely because this truth is new, that it ought to be published.—Let us then pursue our route, and make to France the application of these principles. Let us ask, for what purpose does her marine serve, in the actual condition? It has two objects—commerce and policy; that is to say, riches and power. We protect commerce with vessels of war; with them we fight, we drive off, or humiliate, the enemy. The question is, then, to judge of the interest France can have to preserve a military marine, to examine to what degree it can fulfil this double destination. The military marine of France cannot protect its mercantile navigation, &c. It follows, from this exposé, that the French marine is both useless and ruinous, which is too much, by half, &c. But we discover in this same French marine a certain and immense utility, in allying itself with the system of the independence of colonies, a system that will give to all the marines of Europe auxiliaries, which will enfranchise it from the supremacy of England, from which they are impotent, of themselves, to deliver it.

Legislature of Kentucky.

GOVERNOR'S MESSAGE.

Frankfort Oct. 22.—This day at twelve o'clock, his excellency, the governor, transmitted to both houses the following message:

Fellow citizens of the senate

And of the house of representatives:

Amid the rich and numerous blessings with which Providence has signalized our happy country, we have not been wholly exempted from some of its severest calamities. While peace, tranquility and order have reigned throughout the land; while the fruits of the earth have repaid the labors of the husbandmen with a bounteous profusion, and every species of industry and skill have been liberally encouraged by the rewards of reviving

commerce, while our people have witnessed with joy and thankfulness the masculine growth of their favorite institutions, and hailed, with sentiments of just and exalted pride, the glorious triumphs of that redeeming spirit, inspired by their own example, which, in distant regions of the world, impelled the votaries of republican freedom to plant her standard on the grave of departed despotism, the sudden incursions of sickness and death have cast an unexampled gloom over different portions of our healthful state. In common with her sister states, Kentucky, during the short periods of the summer and autumn, experienced an unusual visitation of disease. When we look back on the sufferings inflicted by the prevalence of a general malady and remember—who can forget it?—that we have been deprived of some of our most valuable and respected citizens, it is with hearts full of gratitude to a kind Providence that our minds are averted from the painful retrospect by the welcome and consolatory assurance that the evil has departed, and that returning health, with her long train of blessings, occupies again her accustomed abode!

The general assembly has legislated so fully on the great interests of education, that it only remains for them to give successful operation to their wise and liberal plans, by a patient and persevering application of the means which have been appropriated for the attainment of the most laudable and necessary objects. You will have before you, during the present session, the result of the diversified inquiries and united deliberations of the joint committee, heretofore appointed on the subject of free schools, and will not fail to avail yourselves of all the lights to be expected from the report of that committee, in any subsequent modifications which experience shall suggest, or a more minute knowledge of the subject may recommend, in the practical development of the system adopted. The state university continues to flourish. Its recent growth is unrivalled; and the benefits it dispenses are diffused far beyond the limits of our own state. When we consider how large a sum of money it retains among us, which would otherwise be expended abroad in educating our youth in habits and opinions, not the most happily adapted to render them useful at home; and that it attracts from other states a considerable amount that could not in a different mode be obtained, this institution might well be estimated, by avarice itself, as worth all the care and expense that it has cost. But when we regard it as a distinguished seat of science, affording all the means for the attainment of knowledge, which are common to any seminary of learning in the United States, the advantages of its rich and imperishable contributions to our moral strength and intellectual acquisitions, are not to be calculated by the standard of wealth, but of glory. We may be permitted to felicitate ourselves on the rapid and general dissemination of useful and liberal knowledge, through all classes of society, and to hail with sentiments of deep delight the auspicious era, at which philosophy and the muses claim a residence in the wilderness of the west.

Our colleges and schools, fostered by that nascent spirit of improvement which prevades the whole community, are daily multiplying the sources of instruction, and extending the sphere of their usefulness. In several of the former, although comparatively in their infancy, a complete course of academical learning is given; and in others is postponed only for the want of competent teachers; a defect soon to be remedied by the alumni of the university.

Your predecessors, duly impressed with the vital importance of education in a government like ours, have made it a subject of legislative concernment. Thus it becomes your duty to inspect the existing institutions of learning, to correct their errors, and supply their wants; and thus opportunity is afforded you of participating in the high honors which are due to those who enlighten and reform the public mind.

The digest of the statute laws now in force in this commonwealth, authorized by the act of December 6, 1821, has been executed and approved, and in the course of the next month will be ready for distribution. It is believed that the work will meet the expectations of the legislature and prove itself of immense utility to the community at large.

The subject of our currency will no doubt occupy a portion of your deliberations, and it may be expected that I will not remain wholly silent on so important a topic. Permit me to remark, that the great and complicated concerns of finance can receive but little advancement from the frequency of legislation. The constancy and patience of virtuous economy; the victorious energies of well directed industry; and the demands of foreign commerce, regulate the wants, acquisitions of every people.

It is true, that communities, like individuals, are sometimes doomed to endure the severities of unlooked for disease. Extraordinary emergencies, and inevitable calamities, impose the adoption of appropriate experiments to avert or mitigate the sufferings that attend them.

The safety of society becomes the ruling motive of the law; and every controlling power of the state must submit to the paramount law of necessity. But as such a condition of affairs is unnatural, its continuance must be destructive, and that people, the rigour of whose circumstances compels them often to depart from the established order of their legislations, and long to require extraneous aid of unusual remedies, must lose in time the graceful consistency of their national character, and weaken the salutary influence of those venerable usages, the sanctity of whose immemorial authority exerts so persuasive an influence over the affections of the heart. If the legislature of Kentucky has been compelled to yield for a season to the imperious nature of causes which it could not subdue, in devising measures requisite to insure the general welfare; has sanctioned means heretofore not usually employed, let it never be forgotten, that the measures adopted have completely realized their proposed ends; that an agitated and endangered population of a half a million of souls has been tranquilized and secured without the infliction of legal injustice or the example of violated morality. I rejoice that the hour is near at hand, when we may change, without fear or injury, our precautionary attitude, and mingling freely in the emulative pursuits of nations, with increased vigour urge onward our career of wealth, of power and of fame.

I respectfully suggest for your consideration the propriety for authorizing by law the Bank of Kentucky to pay, in a short period of time, into the Bank of the Commonwealth, in the notes of the latter, the whole amount of the capital stock owned by the state in the former. Such a measure, by withdrawing at once from circulation, at least one sixth part of the entire amount of the notes issued by the Bank of the Commonwealth, already considerably reduced by regular calls on the principal loaned and the payment of accruing interest, could not fail greatly to raise the credit of the paper. If to this a provision were added authorizing

the directors to make discretionary calls on her debtors, the legislature would have done all, in relation to that institution, which appears to me expedient at this time. The measures alluded to, would afford a satisfactory demonstration to the minds of all candid men, of your justice and fidelity. They would silence the clamors of those who have depreciated the credit of the paper by impeaching the integrity of the public faith, and inspire the community with increased confidence in the final redemption of the notes. The resources pledged for this purpose would remain undiminished, while the aggregate amount of the notes to be redeemed would be daily decreasing and their relative value correspondingly enhanced. That the state should receive in payment for her stock the notes of the Bank of the Commonwealth, is peculiarly proper, because she holds at her disposal the entire capital, on the faith of which those notes were issued. Every dollar that she receives exempts the general fund appropriated for redemption from its liability for an equal amount, and leaves the bank in possession of a valid claim on its debtors who borrowed the sum thus withdrawn from circulation.

When the interest now held by the state shall have been withdrawn from the Bank of Kentucky, her direct participation in the government of that institution, as contemplated by existing provisions, will cease. The design of those regulations, it is hoped, will not be changed. The divided government of the private stockholders and the state, established by the original charter of the corporation, was impolitic and unequal. It has been the origin of much evil, and no advantage can be fairly anticipated from its longer duration.

The resources of that institution may enable it, during the ensuing year, to resume specie payments. This is an event most earnestly to be desired; and one which ought not to be delayed a moment longer than the inability, to sustain such payments, exists. When we consider the almost entire reduction of our foreign debts, and the consequent indulgence and protection afforded to them; the vast returns of trade; the growth of economical habits; and the excitement to general industry produced by the pressure of the times; we cannot doubt the removal of numerous and formidable obstacles that have impeded the usual current of business, and diverted our resources into new and unproductive channels. The resumption of specie payment by the Bank of Kentucky would promote the rapid circulation, that is at present wholly unemployed, impart new life to commerce, add powerful incentives to industry, and restore public confidence in the moneyed institutions of the country. Nor could the payment of specie by the Bank of Kentucky be in any manner detrimental to the Bank of the Commonwealth. By gradual, but not oppressive calls and the operation of the resources before recommended, its notes in circulation must soon be diminished below the amount which, after discharging all the functions assigned them, will be adequate to meet the requisitions made at bank. These requisitions must therefore be met by payment in specie or the notes of the Bank of Kentucky, which, by this indiscriminate and inevitable application, will be rendered of equal value to the Bank of the Commonwealth. If the whole of the amount of the circulating medium of the state shall be diminished, the inconveniences of such diminution will be more than compensated by the freedom of its circulation, and the facilities gained by the re-establishment of credit. To produce these

important results it is true that time is required. But time, in its silent and powerful developments, is always in advance of man's anticipations.

I cannot close this communication without once more earnestly inviting the attention of the general assembly to the subject of the Lunatic Asylum, and the condition of the state penitentiary. To my previous communications I beg leave to refer for an exposition of my general views in relation to those important, but neglected institutions. An inspection of the accounts of the auditor, exhibiting the annual disbursements at the treasury, for the maintenance of persons of unsound mind, and a comparison of this rapidly increasing item of public expenditure, with the probable expense attending the support and recovery of these unfortunate beings, embraced in the proposals of the Fayette hospital, demonstrably establish the humiliating fact, that the present wretched and impracticable system, wholly inadequate as it is for every purpose of mental restoration, is supported at a charge more than sufficient to afford the afflicted sufferers every gentle and humane attention, and all the kindly aids of restoring skill, which form the constituent regulations of a well appointed asylum.

The penitentiary system has been adopted by most of the North American republics. This general sanction is honorable to our country, and worthy the imitation of all civilized nations. It is no longer a question whether the system is of practical utility, and its introduction a blessing to mankind. It is progressively and widely extending its triumphant march. The principles on which it rests find easy converts and zealous advocates in every clime, where generous feelings and enlightened sentiments prevail; and the only inquiry among the friends of human happiness, freedom and reform, is, how can his benign invention be improved and perfected? Kentucky was among the first of the states that established a penitentiary and her example has contributed to propitiate general approbation.

How strange, how lamentable an instance of the mutability of opinion, if she should be the first to abandon a system she has so successfully recommended! Yet the simple question which obtrudes itself is, will you have a penitentiary? It is nugatory to amuse ourselves with flattering hopes of salutary amendments when we are destitute of an adequate object to amend. I am not now urging upon your adoption a single improvement in the general system; but am driven to the melancholy supplication that you will not permit the system itself to perish. The existing establishment, in the best condition that the means afforded can place it, is merely a confined and ruinous work shop, necessarily deprived of every concomitant aid designed for the re-formation of the convict, and, furnishing, within its walls in spite of every available precaution, the opportunities and incentives to the most contaminating associations and the promulgation of the most depraved principles. From such a place repentant virtue never can return. With the present increase of our population and in the existing state of society, such an institution is a curse; and the general assembly, in obedience to the force of circumstances, must very soon adapt it to the wants of our actual condition or return to the bloody code of our fathers.

On a subject so momentous in its consequences to the most sacred rights of the community, I feel an extreme solicitude which I shall not pretend to disguise. But this solicitude does not arise in the slightest degree from a distrust of the justice and

magnanimity of my country. To estimate this matter correctly, it is only necessary to consider it. This is not a money-making, or a money saving project. It is a magnificent plan, devised by the spirit of philanthropy and approved by the profoundest wisdom, to accelerate the progress of civilization, to diminish the sufferings, and amend the morals of human kind. In the support of such a plan, on the successful termination of which is deeply staked the dignity of our race, no frigid speculations of abstract policy, no mercenary calculations of pecuniary profit, should retard the consummation of the noble design. The protection which every government owes to its citizens, includes every practicable amelioration of their condition, and whatever may be the practice in arbitrary dominions, this is not a soil, the blood of whose sons is to be weighed in the balance against gold.

In relation however to the cost of their support the convicts in your penitentiary, considered as mere laborers fed at the public expense, have not been unprofitable during the last year. The price of the manufactured articles during that period, ending with the month of September, exceeds the entire expenses of the institution. The whole of those articles cannot be vended at this place; and a large amount, including many articles manufactured during the several preceding years, remains unsold.

If the agent were authorized to distribute those for sale at the neighboring towns, or to dispose of them by auction at stated times and places, similar losses and inconveniences might, for the future, be obviated. It has been with regret that I have observed the prodigious increase of legislation on local and individual interests, abundantly provided for through the judicial organs of the government. When you consider how large a portion of each session is consumed in transacting this description of business, and consequently how greatly the public expenses are augmented, I am convinced that, apart from all other considerations, you will deem this a subject worthy of your attention on the score of economy, and particularly as the practice is more likely to grow, and is the more difficult to resist, by reason of the benevolence of the motives in which it originated.

JOHN ADAIR.

Frankfort, Oct. 22, 1822.

Constitution of New-York.

We, the people of the state of New-York, acknowledging with gratitude the grace and beneficence of God, in permitting us to make choice of our form of government, do establish this constitution.

ARTICLE FIRST.

Sec. 1. The legislative power of this state shall be vested in a senate and an assembly.

Sec. 2. The senate shall consist of thirty-two members. The senators shall be chosen for four years, and shall be freeholders. The assembly shall consist of one hundred and twenty-eight members, who shall be annually elected.

Sec. 3. A majority of each house shall constitute a quorum to do business. Each house shall determine the rules of its own proceedings, and be the judge of the qualifications of its own members. Each house shall choose its own officers; and the senate shall choose a temporary president, when the lieutenant governor shall not attend as president, or shall act as governor.

Sec. 4. Each house shall keep a journal of its proceedings, and publish the same, except such parts as may require secrecy. The doors of each house shall be kept open, except when the public welfare shall require secrecy. Neither house shall, without the consent of the other, adjourn for more than two days.

Sec. 5. The state shall be divided into eight districts, to be called senate districts, each of which shall choose four senators.

The first district shall consist of the counties of Suffolk, Queens, Kings, Richmond, and New-York.

The second district shall consist of the counties of Westchester, Putnam, Dutchess, Rockland, Orange, Ulster, and Sullivan.

The third district shall consist of the counties of Greene, Columbia, Albany, Rensselaer, Schoharie, and Schenectady.

The fourth district shall consist of the counties of Saratoga, Montgomery, Hamilton, Washington, Warren, Clinton, Essex, Franklin, and St. Lawrence.

The fifth district shall consist of the counties of Herkimer, Oneida, Madison, Oswego, Lewis, and Jefferson.

The sixth district shall consist of the counties of Delaware, Otsego, Chenango, Broome, Cortland, Tompkins, and Tioga.

The seventh district shall consist of the counties of Oneida, Cayuga, Seneca, and Ontario.

The eighth district shall consist of the counties of Steuben, Livingston, Monroe, Genesee, Niagara, Erie, Allegany, Cattaraugus, and Chautauque.

And as soon as the senate shall meet, after the first election to be held in pursuance of this constitution, they shall cause the senators to be divided by lot into four classes, of eight in each, so that every district shall have one senator of each class; the classes to be numbered one, two, three, and four. And the seats of the first class shall be vacated at the end of the first year; of the second class, at the end of the second year; of the third class, at the end of the third year; of the fourth class, at the end of the fourth year, in order that one senator be annually elected in each senate district.

Sec. 6. An enumeration of the inhabitants of the state shall be taken, under the direction of the legislature, in the year one thousand eight hundred and twenty-five, and at the end of every ten years thereafter; and the said districts shall be so altered by the legislature, at the first session after the return of every enumeration, that each senate district shall contain, as nearly as may be, an equal number of inhabitants, excluding aliens, paupers, and persons of color not taxed, and shall remain unaltered until the return of another enumeration, and shall, at all times, consist of contiguous territory; and no county shall be divided in the formation of a senate district.

Sec. 7. The members of the assembly shall be chosen by counties, and shall be apportioned among the several counties of the state, as nearly as may be, according to the number of their respective inhabitants, excluding aliens, paupers, and persons of color not taxed. An apportionment of members of assembly shall be made by the legislature, at its first session after the return of every enumeration; and when made, shall remain unaltered until another enumeration shall have been taken. But an apportionment of members of the assembly shall be made by the present legislature, according to the last enumeration, taken under the authority of the United States, as nearly as may be. Every county heretofore established, and separately organized, shall always be entitled to one member of the assembly; and no new county shall hereafter be erected, unless its population shall entitle it to a member.

Sec. 8. Any bill may originate in either house of the legislature, and all bills passed by one house may be amended by the other.

Sec. 9. The members of the legislature shall receive for their services, a compensation to be ascertained by law, and paid out of the public treasury; but no increase of the compensation shall take effect during the year in which it shall have been made. And no law shall be passed increasing the compensation of the members of the legislature, beyond the sum of three dollars a day.

Sec. 10. No member of the legislature shall receive any civil appointment from the governor and senate, or from the legislature, during the term for which he shall have been elected.

Sec. 11. No person, being a member of congress, or holding any judicial or military office under the United States, shall hold a seat in the legislature. And if any person shall, while a member of the legislature, be elected to congress, or appointed to any office, civil or military, under the government of the United States, his acceptance thereof shall vacate his seat.

Sec. 12. Every bill which shall have passed the senate and assembly, shall, before it become a law, be presented to the governor: if he approve, he shall sign it; but if not, he shall return it, with his objections, to that house in which it shall have originated; who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration, two thirds of the members present shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered; and if approved by two thirds of the members present, it shall become a law. But in all cases, the votes of both houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill, shall be entered on the journal of each house respectively. If any bill shall not be returned by the governor within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the legislature shall, by their adjournment, prevent its return; in which case it shall not be a law.

Sec. 13. All officers, holding their offices during good behavior, may be removed by joint resolution of the two houses of the legislature, if two thirds of all the members elected to the assembly, and a majority of all the members elected to the senate, concur therein.

Sec. 14. The political year shall begin on the first day of January; and the legislature shall, every year, assemble on the first Tuesday of January, unless a different day shall be appointed by law.

Sec. 15. The next election for governor, lieutenant governor, senators, and members of assembly, shall commence on the first Monday of November, one thousand eight hundred and twenty-two; and all subsequent elections shall be held at such time in the month of October or November as the legislature shall, by law, provide.

Sec. 16. The governor, lieutenant governor, senators, and members of assembly, first elected under this constitution, shall enter on the duties of their respective offices on the first day of January, one thousand eight hundred and twenty-three; and the governor, lieutenant governor, senators, and members of assembly, not so elected, shall continue to hold the same until the first day

of January, one thousand eight hundred and twenty-three, and no longer.

ARTICLE SECOND.

Sec. 1. Every male citizen of the age of twenty-one years, who shall have been an inhabitant of this state one year preceding any election, and for the last six months a resident of the town or county where he may offer his vote; and shall have, within the year next preceding the election, paid a tax to the state or county, assessed upon his real or personal property; or shall, by law, be exempted from taxation; or being armed and equipped according to law, shall have performed, within that year, military duty in the militia of this state; or who shall be exempted from performing militia duty in consequence of being a fireman in any city, town, or village in this state: and, also, every male citizen of the age of twenty-one years, who shall have been, for three years next preceding such election, an inhabitant of this state, and for the last year, a resident in the town or county where he may offer his vote, and shall have been, within the last year, assessed to labor upon the public highways, and shall have performed the labor, or paid an equivalent thereof, according to law, shall be entitled to vote in the town or ward where he actually resides, and not elsewhere, for all officers that now are, or hereafter may be, elective by the people. But no man of color, unless he shall have been, for three years, a citizen of this state, and for one year next preceding any election, shall be seized and possessed of a freehold estate of the value of two hundred and fifty dollars, over and above all debts and incumbrances charged thereon; or shall have been actually rated, and paid a tax thereon, shall be entitled to vote at any such election. And no person of color shall be subject to direct taxation, unless he shall be seized and possessed of such real estate as aforesaid.

Sec. 2. Laws may be passed, excluding from the right of suffrage persons who have been, or may be, convicted of infamous crimes.

Sec. 3. Laws shall be made for ascertaining, by proper proofs, the citizens who shall be entitled to the right of suffrage hereby established.

Sec. 4. All elections by the citizens shall be by ballot, except for such town officers, as may by law be directed to be otherwise chosen.

ARTICLE THIRD.

Sec. 1. The executive power shall be vested in a governor. He shall hold his office for two years; and a lieutenant governor shall be chosen at the same time, and for the same term.

Sec. 2. No person, except a native citizen of the United States, shall be eligible to the office of governor; nor shall any person be eligible to that office, who shall not be a freeholder, and shall not have attained the age of thirty years, and have been five years a resident within this state; unless he shall have been absent, during that time, on public business of the United States, or of this state.

Sec. 3. The governor and lieutenant governor shall be elected at the times and places of choosing members of the legislature. The persons respectively having the highest number of votes for governor and lieutenant governor shall be elected; but in case two or more shall have an equal and the highest number of votes for governor or for lieutenant governor, the respective offices of the legislature shall, by joint ballot, choose one of the said persons so having an equal and the highest number of votes for governor or lieutenant governor.

Sec. 4. The governor shall be general and commander in chief of all the militia, and admiral of the navy of the state. He shall have power to convene the legislature, (or the senate only,) on extraordinary occasions. He shall communicate, by message, to the legislature, at every session, the condition of the state; and recommend such matters to them as he shall judge expedient. He shall transact all necessary business with the officers of government, civil and military. He shall execute all such measures as may be resolved upon by the legislature, and shall take care that the laws are faithfully executed. He shall, at stated times, receive for his services a compensation which shall not be increased nor diminished during the term for which he shall have been elected.

Sec. 5. The governor shall have power to grant reprieves and pardons after conviction, for all offences except treason and cases of impeachment. Upon convictions for treason, he shall have power to suspend the execution of the sentence until the case shall be reported to the legislature, at its next meeting; when the legislature shall either pardon or direct the execution of the criminal or grant a farther reprieve.

Sec. 6. In case of the impeachment of the governor, or his removal from office, death, resignation, or absence from the state, the powers and duties of the office shall devolve upon the lieutenant governor for the residue of the term, or until the governor, absent or impeached, shall return or be acquitted. But when the governor shall, with the consent of the legislature, be out of the state in time of war, at the head of a military force, thereof, he shall still continue commander in chief of all the military force of the state.

Sec. 7. The lieutenant governor shall be president of the senate but shall have only a casting vote therein. If, during a vacancy of the office of governor, the lieutenant governor shall be impeached, displaced, resign, die, or be absent from the state, the president of the senate shall act as governor, until the vacancy shall be filled, or the disability shall cease.

ARTICLE FOURTH.

Sec. 1. Militia officers shall be chosen, or appointed, as follows: captains, subalterns, and non-commissioned officers, shall be chosen by the written votes of the members of their respective companies. Field officers of regiments and separate battalions, by the written votes of the commissioned officers of the respective regiments and separate battalions. Brigadier generals, by the field officers of their respective brigades. Major general, brigadier

generals, and commanding officers of regiments or separate battalions, shall appoint the staff officers of their respective divisions, brigades, regiments or separate battalions.

Sec. 2. The governor shall nominate, and, with the consent of the senate, appoint all major generals, brigade inspectors, and chiefs of the staff departments, except the adjutant general and commissary general. The adjutant general shall be appointed by the governor.

Sec. 3. The legislature shall, by law, direct the time and manner of electing militia officers, and of certifying their elections to the governor.

Sec. 4. The commissioned officers of the militia shall be commissioned by the governor; and no commissioned officer shall be removed from office, unless by the senate, on the recommendation of the governor, stating the grounds on which such removal is recommended, or by the decision of a court martial, pursuant to law. The present officers of the militia shall hold their commissions, subject to removal, as before provided.

Sec. 5. In case the mode of election and appointment of militia officers, hereby directed, shall not be found conducive to the improvement of the militia, the legislature may abolish the same, and provide by law for their appointment, and removal, if two thirds of the members present in each house shall concur therein.

Sec. 6. The secretary of state, comptroller, treasurer, attorney general, surveyor general, and commissary general, shall be appointed as follows: The senate and assembly shall each openly nominate one person for the said offices respectively; after which they shall meet together, and if they shall agree in their nominations, the person so nominated shall be appointed to the office for which he shall be nominated. If they shall disagree, the appointment shall be made by the joint ballot of the senators and members of assembly. The treasurer shall be chosen annually. The secretary of state, comptroller, attorney general, surveyor general, and commissary general, shall hold their offices for three years, unless sooner removed by concurrent resolution of the senate and assembly.

Sec. 7. The governor shall nominate, by message, in writing, and, with the consent of the senate, shall appoint all judicial officers, except justices of the peace, who shall be appointed in manner following, that is to say: The board of supervisors in every county in this state shall, at such times as the legislature may direct, meet together; and they, or a majority of them, so assembled, shall nominate so many persons as shall be equal to the number of justices of the peace to be appointed in the several towns in the respective counties. And the judges of the respective county courts, or a majority of them, shall also meet and nominate a like number of persons; and it shall be the duty of the said board of supervisors and judges of county courts to compare such nominations, at such time and place as the legislature may direct; and if, on such comparison, the said boards of supervisors and judges of county courts shall agree in their nominations, in all or in part, they shall file a certificate of the nominations in which they shall agree, in the office of the clerk of the county; and the person or persons named in such certificates shall be justices of the peace; and, in case of disagreement, in whole or in part, it shall be the farther duty of the said boards of supervisors and judges, respectively, to transmit their said nominations, so far as they disagree in the same, to the governor, who shall select from the said nominations, and appoint, so many justices of the peace as shall be requisite to fill the vacancies. Every person appointed a justice of the peace, shall hold his office for four years, unless removed by the county court, for causes particularly assigned by the judges of the said court. And no justice of the peace shall be removed, until he shall have notice of the charges made against him, and an opportunity of being heard in his defence.

Sec. 8. Sheriffs, and clerks of counties, including the register and clerk of the city and county of New-York, shall be chosen by the electors of the respective counties, once in every three years, and as often as vacancies shall happen. Sheriffs shall hold no other office, and be ineligible for the next three years after the termination of their offices. They may be required by law to renew their security, from time to time; and, in default of giving such new security, their offices shall be deemed vacant. But the county shall never be made responsible for the acts of the sheriff; and the governor may remove any such sheriff, clerk or register, at any time within the three years for which he shall be elected, giving to such sheriff, clerk or register, a copy of the charge against him, and an opportunity of being heard in his defence, before any removal shall be made.

Sec. 9. The clerks of courts, except those clerks whose appointment is provided for in the preceding section, shall be appointed by the courts of which they respectively are clerks; and district attorneys by the county courts. Clerks of courts and district attorneys shall hold their offices for three years, unless sooner removed by the courts appointing them.

Sec. 10. The mayors of all the cities in this state shall be appointed annually by the common councils of the respective cities.

Sec. 11. So many coroners as the legislature may direct, not exceeding four in each county, shall be elected in the same manner as sheriffs, and shall hold their offices for the same term, and be removable in like manner.

Sec. 12. The governor shall nominate, and, with the consent of the senate, appoint masters and examiners in chancery; who shall hold their offices for three years, unless sooner removed, by the senate, on the recommendation of the governor. The registers and assistant registers shall be appointed by the chancellor, and hold their offices during his pleasure.

Sec. 13. The clerk of the court of oyer and terminer, and general sessions of the peace, in and for the city and county of New-York, shall be appointed by the court of general sessions of the peace in said city, and hold his office during the pleasure of the said court; and such clerks and other officers of courts, whose ap-

pointment is not herein provided for, shall be appointed by the several courts, or by the governor, with the consent of the senate, as may be directed by law.

Sec. 14. The special justices, and the assistant justices, and their clerks in the city of New-York, shall be appointed by the common council of the said city; and shall hold their offices for the same term that the justices of the peace, in the other counties of this state, hold their offices, and shall be removable in like manner.

Sec. 15. All officers heretofore elective by the people, shall continue to be elected; and all other officers, whose appointment is not provided for by this constitution, and all officers, whose offices may be hereafter created by law, shall be elected by the people, or appointed, as may, by law, be directed.

Sec. 16. Where the duration of any office is not prescribed by this constitution, it may be declared by law; and if not so declared, such office shall be held during the pleasure of the authority making the appointment.

ARTICLE FIFTH.

Sec. 1. The court for the trial of impeachments, and the correction of errors, shall consist of the president of the senate, the senators, the chancellor, and the justices of the supreme court, or the most part of them; but when an impeachment shall be prosecuted against the chancellor, or any justice of the supreme court, the person so impeached shall be suspended from exercising his office, until his acquittal; and when an appeal from a decree in chancery shall be heard, the chancellor shall inform the court of the reasons for his decree, but shall have no voice in the final sentence; and when a writ of error shall be brought, on a judgment of the supreme court, the justices of that court shall assign the reasons for their judgment, but shall not have a voice for its affirmance or reversal.

Sec. 2. The assembly shall have the power of impeaching all civil officers of this state for mal and corrupt conduct in office, and for high crimes and misdemeanors: But a majority of all the members elected shall concur in an impeachment. Before the trial of an impeachment, the members of the court shall take an oath or affirmation, truly and impartially to try and determine the charge in question, according to evidence; and no person shall be convicted without the concurrence of two thirds of the members present. Judgment, in cases of impeachment, shall not extend farther than the removal from office, and disqualification to hold, and enjoy, any office of honor, trust, or profit, under this state; but, the party convicted, shall be liable to indictment and punishment, according to law.

Sec. 3. The chancellor and justices of the supreme court shall hold their offices, during good behavior, or until they shall attain the age of sixty years.

Sec. 4. The supreme court shall consist of a chief justice, and two justices, any of whom may hold the court.

Sec. 5. The state shall be divided, by law, into a convenient number of circuits, not less than four, nor exceeding eight, subject to alteration, by the legislature, from time to time; as the public good may require; for each of which a circuit judge shall be appointed in the same manner, and hold his office by the same tenure, as the justices of the supreme court; and who shall possess the powers of a justice of the supreme court and chambers, and in the trial of issues joined in the supreme court and in courts of oyer and terminer and goal delivery. And such equity powers may be vested in the said circuit judges, or in the county courts, or in such other subordinate courts, as the legislature may, by law direct, subject to the appellate jurisdiction of the chancellor.

Sec. 6. Judges of the county courts, and coroners of cities, shall hold their offices for five years, but may be removed by the senate, on the recommendation of the governor, for causes to be stated in such recommendation.

Sec. 7. Neither the chancellor, nor justices of the supreme court, nor any circuit judge, shall hold any other office or public trust. All votes for any elective office, given by the legislature or the people, for the chancellor, or a justice of the supreme court, or circuit judge, during his continuance in his judicial office, shall be void.

ARTICLE SIXTH.

Sec. 1. Members of the legislature, and all officers, executive and judicial, except such inferior officers as may, by law, be exempted, shall, before they enter on the duties of their respective offices, take and subscribe the following oath or affirmation:

I do solemnly swear, (or affirm, as the case may be), that I will support the constitution of the United States, and the constitution of the state of New-York, and that I will faithfully discharge the duties of the office of _____ according to the best of my ability.

And no other oath, declaration, or test, shall be required as a qualification for any office or public trust.

ARTICLE SEVENTH.

Sec. 1. No member of this state shall be disfranchised or deprived of any of the rights or privileges secured to any citizen thereof, unless by the law of the land, or the judgment of his peers.

Sec. 2. The trial by jury, in all cases in which it has been heretofore used, shall remain inviolate forever; and no law shall be enacted, but such as shall proceed according to the course of the common law; except such enactments of equity, as the legislature is herein authorized to establish.

Sec. 3. The free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed in this state, to all mankind; but the liberty of conscience hereby secured, shall not be so construed as to excuse acts of licentiousness, or justify practices inconsistent with the peace or safety of this state.

Sec. 4. And whereas the ministers of the gospel are, by their profession, dedicated to the service of God, and the cure of souls, and ought not to be diverted from the great duties of their faith,

tion; therefore, no minister of the gospel, or priest of any denomination whatsoever, shall, at any time hereafter, under any pretence or description whatever, be eligible to, or capable of holding, any civil or military office or place within this state.

Sec. 5. The militia of this state shall, at all times hereafter, be armed and disciplined, and in readiness for service; but all such inhabitants of this state, of any religious denomination whatever, as, from scruples of conscience, may be averse to bearing arms, shall be excused therefrom, by paying to the state an equivalent in money; and the legislature shall provide, by law, for the collection of such equivalent, to be estimated according to the expense, in time and money, of an ordinary able bodied militia man.

Sec. 6. The privilege of the writ of habeas corpus shall not be suspended, unless when, in cases of rebellion or invasion, the public safety may require its suspension.

Sec. 7. No person shall be held to answer for a capital, or otherwise infamous crime, (except in cases of impeachment, and in cases of the militia, when in actual service, and the land and naval forces in time of war, or which this state may keep, with the consent of congress, in time of peace, and in cases of petit larceny, under the regulation of the legislature), unless on presentment, or indictment of a grand jury; and in every trial on impeachment or indictment, the party accused shall be allowed counsel as in civil actions. No person shall be subject, for the same offence, to be twice put in jeopardy of life or limb; nor shall he be compelled, in any criminal case, to be a witness against himself; nor be deprived of life, liberty, or property, without due process of law; Nor shall private property be taken for public use, without just compensation.

Sec. 8. Every citizen may freely speak, write and publish, his sentiments on all subjects, being responsible for the abuse of that right; and no law shall be passed to restrain, or abridge, the liberty of speech, or of the press. In all prosecutions or indictments for libels, the truth may be given in evidence to the jury; and if it shall appear to the jury, that the matter charged as libellous is true, and was published with good motives, and for justifiable ends, the party shall be acquitted; and the jury shall have the right to determine the law and the fact.

Sec. 9. The assent of two thirds of the members elected to each branch of the legislature shall be requisite to every bill appropriating the public monies or property, for local or private purposes, or creating, continuing, altering, or renewing any body politic or corporate.

Sec. 10. The proceeds of all lands belonging to this state, except such parts thereof as may be reserved or appropriated to public use, or ceded to the United States, which shall hereafter be sold or disposed of, together with the fund denominated the common school fund, shall be and remain a perpetual fund; the interest of which shall be inviolably appropriated and applied to the support of common schools throughout this state. Rates of toll, not less than those agreed to by the canal commissioners, and set forth in their report to the legislature of the twelfth of March, one thousand eight hundred and twenty-one, shall be imposed on, and collected from, all parts of the navigable communications between the great western and northern lakes and the Atlantic ocean, which now are, or hereafter shall be made and completed; And the said tolls, together with the duties on the manufacture of all salt, as established by the act of the fifteenth of April, one thousand eight hundred and seventeen; and the duties on goods sold at auction, excepting therefrom the sum of thirty-three thousand five hundred dollars, otherwise appropriated by the said act; and the amount of the revenue, established by the act of the legislature of the thirtieth of March, one thousand eight hundred and twenty, in lieu of the tax upon steam boat passengers, shall be and remain inviolably appropriated and applied to the completion of such navigable communications, and to the payment of the interest, and reimbursement of the capital, of the money already borrowed, or which hereafter shall be borrowed to make and complete the same. And neither the rates of toll on the said navigable communications; nor the duties on the manufacture of salt; nor the duties on goods sold at auction, as established by the act of the fifteenth of April, one thousand eight hundred and seventeen; nor the amount of the revenue, established by the act of March the thirtieth, one thousand eight hundred and twenty, in lieu of the tax upon steam boat passengers; shall be reduced or diverted, at any time, before the full and complete payment of the principal and interest of the money borrowed, or to be borrowed, as aforesaid. And the legislature shall never sell, or dispose of the salt springs belonging to this state, nor the lands contiguous thereto, which may be necessary or convenient for their use; nor the said navigable communications, or any part or section thereof; but the same shall be, and remain the property of this state.

Sec. 11. No lottery shall hereafter be authorized in this state; and the legislature shall pass laws to prevent the sale of all lottery tickets within this state, except in lotteries already provided for by law.

Sec. 12. No purchase or contract for the sale of lands in this state, made since the fourteenth day of October, one thousand seven hundred and seventy-five, or which may hereafter be made, or of with the Indians in this state, shall be valid, unless made under the authority and with the consent of the legislature.

Sec. 13. Such parts of the common law, and of the acts of the legislature of the colony of New-York, as, together, do form the law of the said colony on the nineteenth day of April, one thousand seven hundred and seventy-five, and the resolutions of the congress of the said colony, and of the convention of the state of New-York, in force on the twentieth day of April, one thousand seven hundred and seventy-seven, which have not since expired, or been repealed or altered; and such acts of the legislature of this state as are now in force, shall be and continue the law of this state, subject to such alterations as the legislature shall make concerning

the same. But all such parts of the common law, and such of the said acts, or parts thereof, as are repugnant to this constitution, are hereby abrogated.

Sec. 14. All grants of land within this state, made by the King of Great Britain, or persons acting under his authority, after the fourteenth day of October, one thousand seven hundred and seventy-five, shall be null and void; but nothing contained in this constitution, shall affect any grants of land within this state, made by the authority of the said King or his predecessors, or shall annul any charters to bodies politic and corporate, by him or them made, before that day; or shall affect any such grants or charters since made by this state, or by persons acting under its authority; or shall impair the obligation of any debts contracted by the state, or individuals, or bodies corporate, or any other rights of property, or any suits, actions, rights of action, or other proceedings in courts of justice.

ARTICLE EIGHTH.

Sec. 1. Any amendment, or amendments, to this constitution, may be proposed in the senate or assembly, and, if the same shall be agreed to by a majority of the members elected to each of the two houses, such proposed amendment, or amendments, shall be entered on their journals, with the yeas and nays taken thereon, and referred to the legislature then next to be chosen; and shall be published for three months previous to the time of making such choice; and if, in the legislature next chosen as aforesaid, such proposed amendment, or amendments, shall be agreed to, by two-thirds of all the members elected to each house, then it shall be the duty of the legislature to submit such proposed amendment, or amendments, to the people, in such manner and at such time as the legislature shall prescribe; and, if the people shall approve and ratify such amendment, or amendments, by a majority of the electors, qualified to vote for members of the legislature, voting thereon, such amendment, or amendments, shall become part of the constitution.

ARTICLE NINTH.

Sec. 1. This constitution shall be in force from the last day of December, in the year one thousand eight hundred and twenty-two. But all those parts of the same, which relate to the right of suffrage; the division of the state into senate districts; the number of members of the assembly to be elected in pursuance of this constitution; the apportionment of members of assembly; the elections hereby directed to commence on the first Monday of November, in the year one thousand eight hundred and twenty-two; the continuance of the members of the present legislature in office until the first day of January, in the year one thousand eight hundred and twenty-three; and the prohibition against authorizing lotteries; the prohibition against appropriating the public monies, or property, for local or private purposes, or creating, continuing, altering or renewing any body politic or corporate, without the assent of two-thirds of the members elected to each branch of the legislature, shall be in force and take effect from the last day of February next. The members of the present legislature shall, on the first Monday of March next, take and subscribe an oath, or affirmation, to support the constitution, so far as the same shall therein be in force. Sheriffs, clerks of counties, and coroners, shall be elected at the election hereby directed to commence on the first Monday of November, in the year one thousand eight hundred and twenty-two; but they shall not enter on the duties of their offices before the first day of January then next following. The commissions of all persons holding civil offices on the last day of December, one thousand eight hundred and twenty-two, shall expire on that day; but the officers then in commission may, respectively, continue to hold their said offices until new appointments or elections shall take place under this constitution.

Sec. 2. The existing laws, relative to the manner of notifying, holding and conducting elections, making returns and canvassing votes, shall be in force and observed, in respect to the elections hereby directed to commence on the first Monday of November in the year one thousand eight hundred and twenty-two, so far as the same are applicable. And the present legislature shall pass such other and further laws as may be requisite for the execution of the provisions of this constitution in respect to elections.

Done in convention, at the capital in the city of Albany, the fourth day of November, in the year one thousand eight hundred and twenty-two, and of the independence of the United States of America, the forty-sixth.

In witness whereof, we have hereunto subscribed our names,
DANIEL D. TOMPKINS, President,
and delegate from the county of Richmond.

State of New-York, secretary's office,
Albany, November 10, 1821.

I, John V. N. Yates, secretary of the state of New-York, do hereby certify, that the foregoing is a true copy of the engrossed constitution of the said state, as adopted in convention this day, and deposited of record in this office.

J. V. N. YATES, Secretary of state.

RESOLUTIONS.

In the convention of the people of the state of New-York, assembled at Albany, on the twenty-eighth day of August, in the year of our Lord one thousand eight hundred and twenty-one, pursuant to an act of the legislature of the said state, entitled "an act recommending a convention of the people of this state," passed March 13th, 1821:

Resolved, That the preceding amended constitution of this state be submitted together, and not in distinct parts, to the decision of the citizens of this state; and if the said amended constitution be ratified by the citizens, in the manner hereinafter prescribed, the same shall become the constitution of this state.

Resolved, That an election be held in the several towns and wards in this state on the third Tuesday of January next, and be continued, by adjournment, from day to day, for three days successively, including the first; at which election, the citizens, qualified as voters by the act aforesaid, may vote, by ballot, for or against the said amended constitution. And on such of the said ballots as are for the said amended constitution, shall be written or printed the word "Yes," and on those which are against the said amended constitution, the word "No."

That the officers of the several towns in this state, authorized in act as inspectors of the election for senators, and the persons who may be appointed in the several cities in this state for the purpose, shall be the inspectors of the election hereby directed; and that the said election shall, in all things, be conducted in like manner, as nearly as may be, as is prescribed in and by the fourth, fifth and sixth sections of the act, entitled "an act for regulating elections," passed March 29, 1813; and in and by the second section of the act, entitled "an act recommending a convention of the people of this state," passed March 13th, 1821; and in and by the act, entitled "an act to amend an act, entitled 'an act for regulating elections,' passed March 29th, 1813," passed April 11th, 1815. And that the votes given at such election shall be canvassed by the inspectors of the several polls; and returns of the said votes shall be made, by the said inspectors, to the clerks of the respective towns and counties; and certificates of such returns shall be recorded by the said clerks, and transcripts of such certificates shall be certified and delivered to the secretary of state, in like manner, as nearly as may be, as is prescribed in and by the sixteenth section of the act entitled "an act for regulating elections," passed March 29, 1813, in relation to votes given for senators.

That the transcripts, last mentioned, having been received by the secretary of state from the clerks of the respective counties, shall remain in his office of record; and the said secretary, the surveyor-general, the attorney-general, the comptroller and treasurer of this state, or any three of them, shall, on the 15th day of February next, assemble at the office of the said secretary and proceed to calculate and ascertain the whole number of votes given at such election for and against the said amended constitution; and shall, thereupon, within six days thereafter, determine, conformably to such transcripts, the number of votes given for and against the amended constitution, respectively, and whether a majority of the said votes are for or against the said amended constitution. And they shall, without delay, make and subscribe, with their proper names, a certificate of such determination, and file the same in the office of the secretary of state, which shall remain therein of record; and shall, without delay, cause to be delivered a true copy thereof, so subscribed as aforesaid, to the president of this convention; to the person administering the government of this state; to the president of the senate, and to the speaker of the house of assembly; and shall also cause a copy of such certificate to be published in the newspaper printed by the printers to this state. And if it shall appear, by the said canvass last mentioned, that the majority of votes, given and returned as aforesaid, are against the amended constitution, then the said amended constitution shall be deemed to be rejected by the citizens of this state; but, if a majority of the said votes are for the amended constitution, then the same shall be deemed to be ratified and confirmed by the citizens of this state.

Resolved, That five thousand copies of these resolutions, with the amended constitution subjoined, be printed; and that the comptroller cause the same to be transmitted, without delay, at the expense of the state, to the county clerks; whose duty it shall be to distribute the same among the different towns.

Resolved, That five thousand copies of the address of the convention to their constituents, be printed and distributed in like manner; and that two copies of the amended constitution be transmit-

ted by the comptroller, by mail, to each of the delegates to the convention.

By order of the convention,
DANIEL D. TOMPKINS, President,
and delegate from Richmond county.

John F. Bacon, } Secretaries.
Samuel S. Gardiner, }

State of New-York, secretary's office,

Albany, November 10, 1821.

I certify the preceding to be a true copy of certain resolutions of the convention of this state, filed this day in this office.
J. V. N. YATES, Secretary of state.

CHRONICLE.

Gen. Jackson has been elected grand master of masons in Tennessee.

Mr. Randolph has arrived at New York from England.

Counterfeiters. A gang of counterfeiters, consisting of six men and two women, lately took up their abode in a retired house in Wilmington, Del. Their conduct excited suspicion—and finally, with great address, five of the men and one of the women were taken. They had the amount of 50,000 dollars in counterfeit and spurious notes, and an apparatus for the manufacture of half-dollars out of base metals. The notes were chiefly 20 dollar bills of the bank of Wilmington and Brandywine, 10's of the bank of New Brunswick, and 5's of the Franklin bank of Baltimore—all easy to be detected with care; but they had altered and circulated many three dollar notes of the Philadelphia bank as twenties, which are not easily guarded against. Those arrested were committed to jail, and the pursuit was hot after the man and woman who had escaped.

There are many counterfeits, 10's and 5's, of the Farmers bank of Alexandria, now afloat—3's on the Washington bank of Rhode Island, and 5's on the Suffolk bank, Massachusetts.

Massachusetts. Mr. Daniel Webster has been elected to the next congress from the Boston district, by a large majority, in opposition to Mr. Putman, supported by the "midding inte rest."

New York. After a most active contest, Mr. P. H. Wendover, late a member of congress, has been elected sheriff of the city and county of New York. He was opposed by Mr. Noah, late sheriff, and editor of the "Advocate." For Mr. W. 3826, for Mr. N. 2493—majority 1333.

Judge Yates is elected governor, without an opposition worth notice. Mr. Southwick received 25 votes in the city of New York—judge Yates nearly 5000. Gen. Root is, no doubt, elected lieutenant-governor by an exceedingly great majority; Mr. Huntington had 688 votes in the city—gen R. 4074.

South Carolina. Mr. Lowndes, on account of ill health, has resigned his seat in congress.

Georgia. The congressional election returns are all received. The representation to the 18th congress will be composed of Messrs. Forsyth, Tamm, Abbott, Cobb, Thompson, Carey and Culbert.

Kentucky. Col. R. M. Johnson has been re-elected a senator of the United States, for six years from the 4th March next, without opposition.

Ohio. Members elect of the 18th congress—James W. Gazlay, *Thomas R. Ross, William McLean, *Joseph Vance, *J. W. Campbell, Duncan McArthur, Mordecai Bartley, S. F. Vinton, William Wilson, Philemon Beecher, John Patterson, John C. Wright, Elisha Whittlesey, *John Sloane. This state, at present, has only six members; those marked with a star are re-elected.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 12—VOL. XI.] BALTIMORE, NOV. 23, 1822. [No. 12—VOL. XXIII. WHOLE No. 584

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ We are furnished with an article from an able pen, which we have placed under the head of "national affairs"—and we are glad to say, that we expect to receive several other essays from the same thinking writer.

CAPTAIN HULL. We publish the official abstract of the testimony, together with the opinion of the court of inquiry, which recently sat at Boston, for the purpose of investigating the conduct of captain Hull, as commandant of the navy yard at that place, &c. The court appears to have performed its duty with much patience and perseverance, and an earnest desire to arrive at truth—and the nation will rejoice at the release of the conqueror of the Guerriere from the suspicion of any intended violation of his duty as an officer, or of conduct as a gentleman: but—[to use a word *so much* used in the abstract and opinion], if we may take this investigation "all in all," we can sincerely say, that we hope never "to look upon its like again."

THE RACE—THE RACE! "All the world"—so far as 10,000 persons would go to make it, went out to the race-course at Washington city, on Wednesday last—some of whom were said to have made a journey from Boston for the purpose, to see a trial of speed between a N. York horse, called *Eclipse*, and a Virginia horse, dubbed *Sir Charles*, for a bet of 10,000 dollars; but, at about 1 o'clock, when impatience had nearly passed into a mania, it was announced that poor *Sir Charles* had somehow got lamed and would not run the match—so *Eclipse* walked over the course, and his owner received the forfeiture, 5,000 dollars.

But, after this, another match was made up—*Eclipse* against *Sir Charles*, to run four miles, for 1500 dollars—this was won by the former with great ease and without pushing; yet he went over the ground in eight minutes and four seconds.

So ends this important affair, and we are glad that the great race was not run; for many had betted large sums upon it who are *unable*, as they say, to pay their honest debts, to mechanics and grocers, &c. and even the washer-women of their families.

THE WEST! A party of traders, under the direction of a col. Cooper, have penetrated the country from Boon's Lick, in the state of Missouri, to Santa Fe, in the province of Texas, where they arrived with three wagons loaded with goods, to the great astonishment of the people. The country is open and level, and abounds with grass. In return for his goods, colonel Cooper brought back specie and mules. Another party, with 60 pack-horses, laden with merchandise, had started for Santa Fe. The eastern and western people are of the same stock: with the former, a voyage to the coast of Japan is a common affair; and to cross the Rocky Mountains will soon become as familiar to the other. It is very possible that the citizens of St. Louis, on the *Mississippi*, may eat fresh salmon from the waters of the *Columbia*!—for distance seems as if annihilated by science and the spirit of adventure. We have only to regret that our progress in science and extension of enterprize, so much tends to the sup-

port and encouragement of foreign industry. The specie brought by the wagons from Santa Fe to Boon's Lick, will descend the Missouri to the Atlantic, and find a *resting place* at Liverpool or Canton, and there add to the means of keeping us in a state of dependence and servitude. Such things are, that if capt. Symmes could get into the earth at the north pole, as he proposes, and there find gold growing on trees, it would all pass into England to check the progress of pauperism in that country and promote it in this. As the "True Briton" says, we [seem to] act as if we were of a "degraded stock"—[see a subsequent article], and it may be that it is right that we should pay the tribute of our sweat and blood to the land that honored our ancestors so far as to deny them the rights of conscience and to kick them out of the country, because they felt it a duty to worship the CREATOR of all things, according to the dictates of their own hearts! At least, it is thus that we do—but not with my consent—that's certain. Yet I say, "let us alone." Let others do unto us as we do unto them, and I am content to meet the hazard of profit and loss by industry and skill. But we stand now like a defenceless man before a bully armed with a cudgel. I would, that he might be compelled to lay down his cudgel, or that we should take one up; saying—*peace*, or "*the hardest fend off*"—just as you please to have it; let us alone, and we'll let you alone: "if not, not."

I wish that my good friends, the editors of the *Richmond Enquirer*, would speak to this "*let-us-alone*" proposition.

Mr. WELBY, one of the "British travellers in America," says, "the business of courts of justice, during the summer, is done in the evenings and nights; the great heat of the weather in the day absolutely preventing any number of people from collecting together without danger of fevers, particularly such persons as compose the witnesses, auditors and attendants in a law court!"

☞ What but the sheer spirit of falsehood could have tempted this traveller to have told such a story? Who, in America, ever heard of a court of justice being held in the evening or night, unless to terminate and conclude some business begun in the day? Evening sessions are never held, except for the especial purpose just named, and, even so, not often.

CANAL NAVIGATION. From the *Rochester (N. Y.) Telegraph*. Arrived at this village on Wednesday last, the canal boat Western Trader, capt. Garney, from Utica, with a full freight of emigrants, consisting of eight families, in all sixty persons, who have come the distance of 150 miles for the moderate sum of \$1.50 each; thus completely elucidating one of the many important benefits of the great western canal.

CANALS. The great "Union Canal," in Pennsylvania, goes on rapidly, and, so far, promises to fulfil the hopes of its projectors. It is stated that four hundred boats ply upon the New-York Erie canal, between Rochester and the Little Falls. Several lines of elegant packet-boats are established.

ANOTHER CANAL—projected in New York. Mr. B. Raymond, of Louisville, St. Lawrence county, New York, has addressed a circular letter to the land-holders adjacent to the proposed route, suggesting a pledge, on their part, to convey certain portions of land to the state of New York, on the condition that a navigable canal shall be made to unite the waters of lake Ontario and those of Champlain. He supposes that the length of the canal would be about 100 miles, and cost not more than 1,500,000 dollars, and says that no great obstructions exist, that the supply of water is abundant, &c. He estimates that 150,000 acres of land might be obtained for the purpose, as stated—which, after the canal should be completed, would be worth 750,000 dollars—and he thinks that the landholders might well afford to offer that quantity from the rise in value of what they would retain.

NAVAL. It is stated that our vessels cruising in the West India seas, have been ordered not to frequent sickly ports, except in case of necessity; and that captain Biddle, of the Congress frigate, has received instructions that may render our commerce less hazardous on account of the Porto Rico privateers.

SLAVES, &c. A writer in the Southern Patriot, says—"It is believed that the number of slaves in the United States amounts to about one million five hundred thousand. The late census shows it to be greater. These, estimated at \$300 per head, would amount to four hundred and fifty millions dollars!"

☞ This is a singular article, and might as well not have been written. The single state of Pennsylvania contains about 320,000 horses, not less than 100,000 working oxen—and millions on millions worth of other "working machines;" but also nearly a million of free persons, and how shall we value them?

FLORIDA TREATY. The National Intelligencer of the 20th inst. says—"The board of commissioners on Spanish claims is still sitting in this city, but is expected to adjourn in the course of this week. They have passed upon about an hundred and twenty cases, of which about seventy had been allowed. The claims in the cases already rejected at this session, amount, we believe, to more than a million of dollars."

JOHNSON'S LIFE OF GEN. GREENE. We see, by the Charleston City Gazette, that this work has passed through the hands of the gentlemen of Boston who conduct the 'North American Review,' an able work, but too much British, in some cases. It appears that they call judge Johnson 'an inhabitant of a very remote part of the nation'—he lives in Charleston, which, we rather suppose, is located about as near to the centre of the "nation" as the "good city of Boston"—surely, it is not so near to any foreign dominion!

From the notice of this review, (for I myself have not seen it), it appears that the reviewers object to certain historical facts relative to the character of Andre, as shewing he was not that exalted being which some have supposed that he was. They would have wished that the truth should not have been told! The mawkish sensibility about the fate of Andre, among those who do not recollect that HALE, their own countryman, met the same death for a lesser offence, though of the same nature as a spy, and under barbarous circumstances,

(being denied the consolations of his friends, or even the use of a bible), is completely disgusting. If ever a man died rightfully in war, it was Andre—he was engaged in an illegal, as well as a most dishonorable and dishonest business—a mean thing, such as no brave man should have taken a part in. I have myself some original notices of him—the recollections of an old officer in the revolutionary army, which long since satisfied me that his character had been outrageously extolled by the British and their adherents of his day, in order to divert public attention from the treachery of Arnold, and heap censure on the commander in chief, for ordering the execution of one who had been engaged in the dirty business of purchasing a man's oath and duty to his country, with money. *Let him rest in peace.* All the celebrity that can pertain to his memory is connected with and depends upon the infamy and crime of Arnold—Andre, of himself, has no rightful part in the history of the revolution more than tens of thousands who died in the war, without record—less than any one of those who were slain in their sleep at Paoli, or starved to death on board the Jersey prison ship.

A GREAT BRIDGE. Overhauling some old papers a few days ago, I met with an extract from the London Times, of the 24th of August, 1819, giving an account of a bridge then building to unite the island of Anglesea with the county of Carnarvon. It was to be on the suspension principle; the centre opening to be 560 feet between the points of suspension, and 500 feet at the level of high water line—the road was to be 100 feet above the highest spring tide, divided into carriage-ways of 12 feet each, and have a foot-way between them, of 4 feet. In addition, there were to be three stone arches, on the Carnarvon side, and four, of the same dimensions, on the Anglesea side, &c. We have not heard whether this stupendous work was completed, which it was expected that it would be in three years.

LOUISIANA. A very unpleasant contention still exists at New-Orleans, between those who are called the *American* and *French* parties, in common phrase: that is, those who speak the language of and assimilate their manners to those of the people of the United States in general, and such as still adhere to the language and manners of France.—We do not wish any overbearing conduct on either side; but it is clear and undoubted, that the former must prevail in point of numbers, as well as in moral strength; and it is the duty of the latter, if devoted to the government of the United States, as they warmly profess themselves to be, to give into and join with the greater interest to promote the common good—for they must see it impossible to support a "French party" in Louisiana—they must amalgamate with the citizens of the republic; and the sooner it is done the better for all "parties."

The following queer paragraph appears in one of the essays in the "Louisianian." We have before heard of the "nation of New-England," and laughed at the notion—this beats that notion "all hollow!"—but the saying has not the same "authority:"

If it is, "we citizens of Louisiana, a NATION brave and independent, should not consent to be subjugated by a league of the conquerors of the north. No! we are not Helots, we are free and independent. We will, as a NATION! that our officers shall fulfil their duties and obey the laws."

BANK OF THE UNITED STATES. At a meeting of the stockholders, held at Charleston on the 5th inst. among other proceedings, the following resolution was unanimously adopted—

Resolved, That the president and directors of the parent bank at Philadelphia, be requested to instruct the president and directors of the office of discount and deposit at Baltimore, to have published, (after the trial of the parties concerned), a full and authentic statement, from the documents in their possession, of the "stupendous frauds" committed at that office during the period when J. A. Buchanan was president, and J. W. McCulloch cashier—subject, nevertheless, previous to publication, to the inspection and revision of the parent board.

At a meeting of stockholders resident in Connecticut, held at Middletown, on the 18th inst. Samuel W. Dana was appointed to represent the trustees at the meeting to be held at Philadelphia, and it was resolved, "that whereas proxies have been given by some under misapprehensions, this meeting recommend that the same be revoked, and others be made out and given to persons *in whom they may have confidence.*" Signed Josiah Savage, chairman, John Alsop, secretary.

MAMMOTH FAMILY. A New London (Connecticut) paper says—We are informed that Mr. Joseph Mosely, of Chaplin, has eleven children, all now living, the youngest is about thirty years of age, and they average upwards of two hundred pounds each!

SINGULAR CONSANGUINITY. Two gentlemen of the county of Bucks, in England, lately deceased, married the other's daughter, and each of them left issue thereby.

ROBBERY. The printing-office of the New York *Commercial Advertiser* was lately visited by some fellows in the night, and some small damage done to the property. The editors say—"the thieves must certainly have come in search of something to eat, for no mortal would think of entering a printing office for obtaining cash!" The printers call their type, when broken down and in a confused state, by the name of *pi*.

THE GREEKS. The London Courier, in an article about the intended meeting of the "holy allies" at Verona, has the following paragraph:

"No enlightened statesman would put his hand to the document that should relegate the Turks to Asia, and elevate the Greeks to empire in Constantinople." **WHY NOT?**

DUELLING. Some persons in Connecticut have seriously offered a premium of fifty dollars for the best written farce on the late duel-meetings and proceedings between two citizens of the south. And, no doubt, some of our wits will attempt to fit the matter for the stage.

PORTO RICO. Several persons have been shot on this island as having had a part in the late expedition fitted out at St. Bartholemews, to revolutionize it. It seems now as if the government of Hayti had some concern in the matter—but, as yet, the whole affair is a mystery to us; though we have just received some particulars of the late design to capture the island, together with a copy of a proclamation that was to have been issued after its seizure, to establish some general regulations. It is signed "Louis Villaurie du Coudras, president and

commander in chief," and "B. Irvine, government secretary, pro tem"—the dominion was to be named the "republic of Bortguen." But it appears that the whole expedition has been wrecked to pieces, and the history of this desperate adventure does not seem worthy of record. It was about as wild a scheme as a few discontented individuals were ever engaged in. We shall, however, preserve the papers, in the possibility that they may be useful hereafter.

"THE TRUE BRITON," in a very conciliatory article about the progress of American manufactures, elegantly concludes it in these terms—

"If it be practicable, *we wish to suppress all heart-burnings* abroad as at home, and most especially with those who, notwithstanding some little rivalry, are still our brethren by birth, *though they may have emanated from a guilty and degraded stock!*"

PRESIDENTIAL ELECTION. The following letter was received from New-York after the last number of the "REGISTER" was in the press. In my opinion, it contains some sensible remarks on an interesting subject, which claims, (or is about to claim), much of the public attention. In joining in with the apprehensions of the writer in the "ESQUETREN," as to the choice of a president of the United States by the states as represented in congress, I had not the remotest idea of supporting "the congressional caucus system," though what *might be* the practice under the constitution was more to be "dreaded" than the usage of members of congress, in their individual capacities, to recommend persons for the most dignified offices known in our government.—The first is absolute, conclusive—unless without proceeding to the lengths that Mr. Bayard said "the New-England gentlemen" were willing to go: the other is conditional, and worth nothing at all, if not supported by public opinion, though time has been when the power of it was mighty: and the time may come, when it will be proper to exert a force of this kind, but not through such agents, except public opinion *leads the way* to individuals who shall be named. I speak without reference to either or any political party—for all have resorted to *caucusing* at different periods, as they found it expedient to set up persons as rallying points for their respective principles. The latter do not depend on the former—but doctrines must be carried into operation through persons. In the present state of things, when all the supposed candidates profess the same principles, I believe that a congressional nomination would be laughed into contempt; and, such is my opposition to it, that, as a citizen, I should be strongly tempted to oppose it, even if the men that I might happen to prefer were selected—for "a right thing may be brought about in a wrong way," and so become hurtful as a wrong on society. Every one who has been at the head of a family must be sensible of this. There is a time to exert and a time to refrain—and when, as is now the case, a caucus nomination by congress would amount only to an *opinion about individuals*, I should consider it the plenitude of impudence to make such nomination. It may have been contemplated; but, at the close of the last session, the project seemed to have been abandoned. If any thing that I said, went to recommend it, on the present occasion, I truly regret it—but I cannot believe that it did.

LETTER TO THE EDITOR OF THE REGISTER.

Is it possible that Mr. Niles can support the congressional caucus system? We were induced to ask

ourselves this question on reading his remarks on "presidential election," in his last No. (10.) Can he be alarmed by the specious imaginings of "Calculator" of the *Richmond Enquirer*, at the danger of a contingent "vote by states," in the event of no candidate having a majority of electoral votes? The purpose of this sound of alarm from Richmond, we took to be obvious—having the view which briefly follows of the arguments that accompany it upon this (as it supposes) pernicious error of our constitution. (We allude to no farther purpose of this alarm than the effect of a congressional nomination.)

It is clear, that if there be no choice by the electoral votes, there must necessarily be (except the accident of a tie), *three** candidates voted for. This, then, is secured to the people, that one of the three having the highest number of their electors' votes, shall be chosen by the house of representatives: and if, as is probable in such a case, the chief of the votes be shared, with no great inequality by those three, where would be the danger to the nation, even if one of the men thus designated should be fixed on by lottery? But, the choice is to be determined by the preference, as expressed by states, of our representatives in congress. Now, we would ask Mr. Niles, (but that he has already spoken of it), and of the "Calculator" of Virginia, where have been found *any considerable number* of men, of our country, filling a responsible station under the constitution, liable to corruption in the discharge of a duty, and, (to make it more applicable), of a specific duty, on the due execution of which the eyes of the nation are anxiously and watchfully bent?

But, may not the voices of congressmen, on the exercise of an unofficial, an assumed duty, one unknown to the constitution, and against which its spirit objects, be *more easily obtained*, in the manner suggested by Mr. Niles—courting, coaxing, &c? From this course there is only mischief to be expected, and, under present circumstances, no possible good: and the danger, from the last resort, of a decision by the vote of the representatives of states, is inexplicable and intangible. This imagined danger supposes, that the vote of a majority (thirteen) of the states are to be obtained incorrectly; and it gives a facility to this, by presuming the smallest states secured for such purpose—interspersed, as they actually are, (except three of the north western), among all their larger sisters of the union—from New-Hampshire to Mississippi, and from Delaware to Missouri. After all this, what does it require?—that the representatives of *six* of these states should be unanimous in this project, to effect so many votes; and that more than *two thirds* of the representatives of the whole number named, should concur in it. (See "Calculator" in the preceding number of your Register). At such a possibility "of an extremely small minority" of representatives being conclusive in this final determination, the alarmist "starts" with apprehension!

The necessity for caucus nominations, existed only when the support of important party principles exacted the united efforts of leading party men: then the people who constituted the party, required of their men of influence throughout the nation, a subservience to this discipline, in the pur-

*The house of representatives may elect any one out of the *three* highest of those voted for as president. We mention this, because a general idea is that *one* of the *two* highest must be elected.

suance of *their* interests, and for the success of their cause. But now, these principles having triumphed, why not leave the people to vote according to their judgment, or feeling of reverence for services rendered, in favor of any of the four or twelve supposed candidates? Will a caucus recommendation from *Washington* better enable them to judge "why this or that man should be preferred?" or to understand "the measures that either will pursue, if elected," as designated from those of his competitors? Our conclusions are, under present circumstances, if we are left without any farther nomination of any kind:

- 1st. That there will be very few votes thrown away;
- 2d. That it is probable *one* of the *two* highest in popular favor will be chosen by the representatives, in the event of their having to choose; and,
- 3d. That no danger need be apprehended, to the large states, or to the government, from the influence of the little ones, or the corruption of any of the agents of the result—even if three candidates should have so divided the public attention as to render the choice of the *lowest* practicable.

The fabric of our government has more stability in its construction.

TRIGINTY QUATOR, of N. Y.

NAVIGATION. The great improvements in the arts of ship-building and navigation, supported by an increased spirit of enterprize, prompted also by the increased necessity for exertion, have rendered the most distant voyages as things hardly worth mentioning—a cruise round the world is no more thought of by our eastern brethren than a steam boat excursion! No place is too distant for them to visit—no time too long to be employed—no danger sufficient to intimidate them, provided there is a reasonable prospect of profit held out.

A letter published sometime since from the captain of a Nantucket ship to his owner stated—that, after recruiting at the *Sandwich Islands*, he had proceeded to catch whales on the coast of *Japan*, where he obtained 1100 barrels of oil—he was about to run over to *California*, for winter quarters, from whence he would take a trip again to the *Sandwich Islands* for supplies, and thence to return to the neighborhood of *Japan* to complete his cargo. His ship was in fine order, and he had not lost a man since he left home!

It is now well known that some of these hardy people had visited what is regarded by the *English* as newly discovered land, and now called *New South Iceland*, as early as 1800—but the great profit which they made by catching seals, sea-elephants, sea-bears, &c. caused them to keep their voyages a secret. In the year just stated, nine vessels arrived with 151,000 fur-seal skins, giving it out that they had been obtained on the N. W. Coast. A British ship accidentally discovered this land in 1819, in lat. 60 deg. 30 min. south, and 60 deg. long W.—the fact was reported to the commander of the British frigate *Andromache* at Valparaiso, who despatched a vessel and made some survey of the coast. In the *Aurora*, of June 26, 1821, there is a very interesting paper concerning this southern continent, as it is supposed to be. It is said first to have been seen by a Dutch navigator, named Dirck Gherritz, in 1599; by a Spanish commander of a vessel of war, named *Torres*, in 1606, and fallen in with by several others afterwards, by chance, or from being driven out of their course. Though capt.

Cook reached a higher southern latitude he did not meet it, because of the longitude that he was in; and his biographer says that he had decided two great problems, namely, that there was no *antarctic land*, and no passage into the arctic polar sea—both of which have been negatived.

This land is not inhabited by human beings, nor habitable—it is a barren hideous waste, covered with snow and nearly destitute of any green thing—no vegetable, but a little stunted grass, having ever been seen upon it. All the animals that frequent it are aquatic, except a bird that resembles a pigeon.

KENTUCKY. We have an official statement of the condition of the bank of the commonwealth of Kentucky, signed O. G. Waggener, cashier, and dated the 26th October, 1822. The principal bank is at Frankfort, and there are branches at Harrodsburg, Lexington, Hartford, Greensburg, Princeton, Winchester, Mount Sterling, Falmouth, Bowling Green, Farmington, Louisville and Somerset. The following are the aggregates of the several items given, as relating to each—

Bills payable	\$2,792,063 87
Stock	72,644 00
Notes discounted	2,731,796 95
Specie :	2,633 25
Kentucky bank notes	98,089 50
Eastern notes	612 00
Notes on hand, (its own)	422,299 00
Other bank notes	2,374 12
Total cash	525,808 50
Net profits	180,565 65
Expenses	48,133 95

Another statement shews that "all the interest that has accrued since the commencement of the bank up to July 1, 1822, and its appropriation, as follows:

Total amount of interest or profits	\$140,638 66
Appropriation to Southern college	618 15
Do. Centre college	866 37
Do. Transylvania university	7,646 44
Do. Literary fund	70,319 32
Amount due the treasury	61,248 34

HOUSEHOLD MANUFACTURES. The real cause of the great rise of population and wealth in the western and northern parts of the state of New-York, late a mere wilderness, but now possessing counties out-numbering states, is in the industry of the people and the application of their own means for the supply of their own wants, by labor and attention to "small things"—though generous dispositions and honest-fronted hospitality are no more strangers to them than to others of much higher pretensions. To shew the extent to which household manufactures are carried, we have selected the following from one of the Canandigua newspapers:

At the late anniversary of the Ontario county Agricultural Society, four premiums were awarded to the families which had manufactured, in the past year, the greatest number of useful articles. The following is a list of the articles which received the several premiums:

In the family of Seth Jones, of Bristol.

319 yards of linen cloth, 25 yards of kersey, for bags, 42 yards of shirting, 35 yards of diaper, 52 yards of cotton and linen, 199 yards of woollen cloth, 16 yards of kersey, for blankets, 24 yards of plain flannel, for blankets, 28 yards of cotton and wool, 34 yards of cotton, 22 yards of worsted, 30 pairs of socks, 7 pairs of stockings, 3 pairs of mit-

tens, 5 bed quilts, 1 carpet, 27 pairs of pan taloons 23 frocks, 2 surtouts, 4 coats, 4 sailor do. 12 aprons, 1 bed tick, 7 blankets, 10 flannel sheets, 20 linen do. 30 shirts, 5 vests, 12 kersey bags.

In the family of Nathaniel Allen, of Richmond.

486½ yards of linen cloth, comprised of diaper, striped, checked and plain; 193 yards of woollen do. woollen yarn on hand sufficient to make 77 yds. when wove, 5 bed quilts, 4 feather bed ticks, 20 pairs of woollen socks, 14 do. of woollen stockings, 9 of mittens for men and boys, 29 do. of pantaloons for do. 9 coats and surtouts for do. 9 vests for do. 16 pairs of linen pillow cases, 21 linen sheets, 2 dozen of diaper towels, 3 diaper table cloths, 1 dozen kersey towels, 1 dozen of kersey bags, 20 frocks, for females, 1 mantle for do. 2 great coats for do. 15 runs of thread, 9 runs of worsted stocking yarn, 43 shirts.

In the family of William Otley, of Phelps.

201 yards of linen cloth, 8 yards of linen handkerchiefs, 69 yards of diaper, 30 yards of linen check, 112 yards of fulled cloth, 89 yards of flannel, 28 yards of pressed do. 1 pair of rose blankets, 11 yards of cotton and wool coverlets, 20 yards of double work blankets, 14 pairs of women's stockings, 10 pairs of socks, 3 pairs of mittens, 16 runs of worsted yarn for stockings, 6 runs of linen thread.

In the family of James Harland, of Manchester.

61½ yards of fulled cloth, 16 yards of pressed flannel, 20 yards of mixed do. 46½ yards of plain do. 2 coverlets, 16 yards of diaper, 5 towels, 5 pairs of pillow cases, 3 pairs of tow and linen sheets, 10½ yards of tow cloth, 3½ yards of kersey, 1 feather bed, 1 under bed tick, 1 pair of horse blankets, 3 pairs of socks, 5 pairs of women's stockings, 5 meal bags, 42 yards of worsted plaid, spun and partly wove, not having time to finish it.

THE MARIANA FLORA. In the circuit court of the United States, in this town yesterday, the honorable judge Story delivered the opinion of the court in the case of the United States and Robert F. Stockton, commander of the U. S. schooner Alligator, libellant, vs. the Portuguese ship Mariana Flora. An appeal had been entered by the libellant, from that part of the decree of the district court, which awarded damages against the captors. That part of the decree which ordered restitution of the vessel and cargo, was not appealed from. An agreement has been had at the present term of this court by Messrs. Webster and Blake, for the captors, and Prescott and J. Knapp, for the claimants. The hon. judge was of opinion that the conduct of the Mariana Flora, was such as to render the capture lawful, and that although, under the circumstances disclosed on examination after the capture, captain Stockton might have released her at sea, yet he was not bound so to do, but had a right to send her in for adjudication. He, therefore, reversed the decree of the district judge awarding damages, and ordered that each party should sustain his own costs. An appeal from this decision of the circuit court was claimed and granted to the supreme court of the United States.—*Boston Daily Advertiser.*

ALGIERS. We hope that the following affair, as related in a letter from on board the U.S. ship Ontario, will not cause any difference between us and the Algerines. If the case is reported truly, the dey did much less than what was right and justly due to his own people—

"We arrived at Gibraltar early in August, having stopped at Malta; hearing of a disturbance at Port Mahon, did not remain at the former place twelve

hours. After our return to Mahon, we learnt that a disagreeable affair had taken place at Algiers, of which I will now relate the particulars:

"Our consul, Mr. Shaler, being away, had left his nephew, the vice consul, to act in his place: when out hunting one day, he met some Turks, who told him he was on their fields, and must go off; he refused; they attempted to use force, when he presented his gun at them; they disarmed him and beat him severely; he complained to the dey, demanding satisfaction; the dey told him he could give him none; adding, I allow you a drogoman. This is a man sacred among the Turks; every consul being allowed one as a protection. If a Turk insults any one under their protection, he loses his head. Our young consul neglected to take his drogoman with him, therefore he was refused satisfaction. He told the dey that if he did not punish those men in twenty-four hours, he would cut down the American flag staff; the dey replied he could not help it. The flag staff was cut down, and a vessel chartered to bring the consul to Port Mahon, where we then were. We immediately made sail for this place for provisions, and in two or three days we sail for Algiers, thence to Leghorn to take our consul to Tunis, Dr. Swift having been left in his place, &c.

LAW CASE. *Important to men in trade.* We understand that it has been decided by the supreme court of this state now in session here, that the seller of goods is not liable for any damage for inferiority of quality which may be discovered by the buyer after delivery. This does not apply to frauds, for which the seller probably is liable, though this point came only incidentally into consideration in the case in which the above decision was made. It is understood that there is no warranty on the part of the seller that the goods sold are merchantable, but simply that the seller has a title to sell, and that the goods shall be what the bill of parcels declares them to be—if cotton, that the article sold is cotton, &c. This case, we hear, is soon to be published at length, for the information of all concerned.

[*Boston Palladium, Nov. 12.*]

JUST PAYMENT OF TYTHES! *From an English paper.* A clergyman espied, in a poor laborer's garden, ten bee hives; tenacious of his tythes, he exclaimed, "John, so you have got ten bee hives, one I claim as rector of the parish—see you bring it to my house." The man shortly after took it; and, on his arrival at the rector's, was ordered to carry it into the garden: "No," says he, "where's master?" On being shewn into the parlor, where the reverend divine sat, "Here," said he, "I've brought your bees, but the hive's mine; for d—n me, but I gave two pence for it." He then shook out the bees, combs, &c. from the hive, and carried it off with him; and left the parson to make the best he could of the industrious and enraged insects.

A WONDERFUL VILLAIN. *From a Paris paper.*—During the awful prevalence of the plague, on the north east of Spain, in the autumn of 1821, a foreigner, who was variously said to be a Jew, a Turk, an Armenian and a renegade, but whose acknowledged vocation was that of a merchant, in which capacity he had amassed a large property, visited the devoted city of Barcelona. A letter from thence gives the following account of this singular atrocious character. "This man, who, from his long white beard, might have been taken for a patriarch, had been an eye witness of all the plagues that had desolated, of late years, the Turkish em-

pire. As soon as he heard that a pestilence had broken out in any city, he immediately hastened to it. He used to account for these extraordinary journeys, by the advantage he found in such desolated countries in purchasing his goods, at a lower rate than usual; but still it seemed inexplicable how lust of gold could so far overcome the love of life, and how the old man, who was already so rich, should continually expose himself to almost inevitable death. Questions put to this traveller were never answered clearly.—When he arrived at such a theatre of death he wrapped himself from head to foot in tarred linen, covered his hands with black leather gloves, his face with a glass mask, and thus guarded against infection, and provided with a stick, which had an iron hook at the end, he entered the infected houses; there he possessed himself of whatever he found, seized on hidden treasures, and the most valuable utensils, and tore their jewels from the bodies of the dead. More than once he is said to have hastened the effects of the pestilence, and to have given the death blow to the victims whose cries would have interrupted him in perpetrating his robberies. If chance led him into a house which was still free from contagion, he announced himself as a physician, and woe to those who confided in his skill. Loaded with treasures, he always returned to Venice, where, admired by every body, on account of the success of his enterprise, he waited for the signal for fresh booty, like the carrion vulture.

"The news of the distress of Barcelona became glad tidings for this wretch, and he had already carried on his horrid trade among us for a fortnight, when he was detected in the very act of stabbing a patient who was quite delirious. This patient was a young French merchant, who was greatly beloved at Barcelona on account of his integrity. He had just lost his wife and two sons, and was himself struggling against the distemper, which had hitherto spared this courageous young man, who most tenderly devoted himself to his family. He was murdered almost in the arms of his countryman, captain R., who was near his friend in an adjoining room. Hearing the door opened, he hastened back to the patient; sees the villain stab his friend to the heart; rushes on him, seizes him, and throws him on the ground after a hard struggle, in which the old wretch shewed much more strength than could have been expected.—"Sir," cried the wretch, finding himself overpowered, "surely you will not kill me."—"Villain, what hast thou done?"—"But he was so ill!"—"And those things which you had already stolen?"—"I thought every body was dead; give me my life: I will make you a rich man."—"You dare to offer me your blood-stained gold?"—"Sir, be without fear; I possess several remedies against the plague; I will give you as many sequins as you can carry."—"And were you to offer me two arrobas?"—"You shall have ten," said the murderer, and received the captain's sword through his heart.

"The magistrate seized the body of the pretended Israelite, and had it hung at the corner of Regomin street. They also sent officers to the house in which he had lived, and ordered all they found there to be sold, for the benefit of the poor."

SPONTANEOUS COMBUSTION. Within a month past there have been three instances of spontaneous combustion in large masses of coal in our navy yards—at Washington, at New-York, and at Portsmouth, N. H. by which each has been in great danger of being destroyed. The coal was obtained from one

of the mines near Richmond; was found to contain an unusual quantity of sulphur; lay exposed to the air and rain; and became ignited near the centre of the heaps. It would be well for persons having large quantities of this coal on hand, to examine it frequently; and it would be a subject worthy the attention of the curious and philosophic to explain the cause of this ignition. [Nat. Intel.]

"THE HOLY INQUISITION." When general Lasalle entered Toledo, he immediately visited the palace of the inquisition. The great number of the instruments of torture, especially the instrument to stretch the limbs, the drop baths, already known, which cause a lingering death, excited horror even in the minds of the soldiers; hardened in the field of battle. Only one of these instruments, singular in its kind, for refined torture, disgraceful to reason and religion, in the choice of its object, seems to deserve particular attention. In a subterranean vault adjoining the secret audience chamber, stood, in a recess in the wall, a wooden statue, made by the hands of the monks, representing—who would believe it?—the Virgin Mary. A gilded glory beamed round her head, and she held a standard in her right hand. It immediately struck the spectator, notwithstanding the ample folds of the silk garment which fell from the shoulders on both sides, that she wore a breast plate. Upon a closer examination, it appeared that the whole front of the body was covered with extremely sharp nails, and small blades of knives, with the points projecting outwards. The arms and hands had joints, and their motion was directed by machinery placed behind the partition. One of the servants of the inquisition, who was present, was ordered by the general to make the machine manœuvre, as he expressed himself. As the statue extended its arms gradually, and then drew them back, as if she would affectionately press some body to her heart, the well filled knapsack of a Polish grenadier supplied, for this time, the poor victim. The statue pressed it closer and closer, and when, at the command of the general, the director of the machinery made it open its arms and return to its first position, the knapsack was pierced two or three inches deep, and remained hanging upon nails and knife blades. It is remarkable that the barbarians had the wickedness to call this instrument of torture *Madre Delorosa*—not the deeply afflicted, pain enduring, but a play on the words, the pain-giving, Mother of God.

ELECTIONEERING!—*law and lawyers.* The following strange speech is reported as having been delivered at a late Boston caucus, held to promote the election of Mr. Webster to congress, by a gentleman named Bartlett.

"I come here with my locks white, my head bald, and my jaws toothless, and what do I come here for? I come here to tell what I know of Daniel Webster. I shall not go to Greece or Rome, to tell what I know of him, I have practiced at the same bar with him for sixteen years, and I know him well, and this I can say of him—he has a *head* and he has a *heart*; two things which are seldom found united in the same person. * * * * I have heard a great deal said about the Middling Intergrest. I know nothing about it. But there is a Latin maxim, *In medio tutissimus ibis*, the safest place is in the middle. [*Here the clamour was so great that Mr. B's application of the maxim was lost.*] * * * * A circumstance occurred in this city, a few days ago, which will illustrate the character of

the man. A thief was brought before the court, charged with stealing two hundred dollars from one of his shipmates. Mr. Webster managed his defence, and got him clear. Next day he sent a constable after the man who had lost the money, and handed him fifty dollars, saying, "That was all he got of the money, and that he was sorry he could not give him the rest." Now, where will you find another lawyer that would have done this? Nowhere—you cannot find one. I have been a lawyer myself thirty-two years, and I know they will seize you by the collar with one hand, and thrust the other into your pocket, and while they strip your back of the one, they will empty the other of its contents."

GREAT DAMS. From the *Philadelphia Daily Advertiser*. That over the river Schuylkill, near Philadelphia, has an over fall of 1204 feet long, and is 1600 feet in length, from shore to shore, a part of the channel which it crosses is 36 feet in depth at high water, and the greatest volume of water that has at any time passed the over-fall, has been in depth on the top of it nine feet, and in velocity computed to be at the rate of 12 miles an hour.

This dam is 150 feet broad at its base, and 12 feet wide on the top, formed of solid stone and gravel—the whole height of it 36 feet, of which 44 feet under water, and 12 feet above the top of the over-fall: it is coated with a stone wall three feet thick, from the water's edge on its upper side, proceeding on an angle of 45 degrees to the top of it, then continued horizontally 12 feet, until it meets a perpendicular solid stone wall on the lower side, firmly laid in mortar, and six feet in thickness, thus compactly securing the whole work.

The purposes for which this great dam was constructed, are for the Schuylkill canal navigation, and for forming one of the greatest water powers known in the world, both of which objects it has effectually accomplished.

That styled the "great dam," over the Hudson near Fort Edward, is 900 feet in length, and 30 feet high, constructed of timber, after the manner called cobwork."

FOREIGN NEWS.

Great Britain and Ireland. A man, near Bristol, lately sold his wife for three pence, with an engagement to take her back again unless her new master was pleased with her. The man and wife were young, and had been married only a month.

The marchioness dowager of Hertford is supposed to be the richest widow in the kingdom. Her ladyship has four hundred thousand pounds in money, and one hundred thousand in land.

A report that a young lady is detained, by force, in a nunnery, in the west of England, has made a considerable stir in the neighborhood of the establishment.

The late census shews that there are almost half a million more of females than of males in Great Britain.

The famine having subsided in Ireland, the papers contain accounts of murders committed. Oppression hath made the people mad.

A person has lately been committed to prison, in London, for a deliberate attempt to hang his own son, a lad between ten and eleven years old. He had tied the child's hands behind his back, and actually suspended him, when a man rushed into the house and cut the rope!

The executor of the rev. Peter Beauvoir, late of Downham-hall, in the county of Essex, paid the sum

of £38,000 to the stamp office, being the duty on £720,000, payable to the residuary legatee, Richard Benyon, (now Richard Benyon de Beauvoir). This fortunate legatee was no relation to the testator. Above £50,000 were otherwise left in legacies. The immense property was bequeathed by the testator, independent of his freehold estates, which are of considerable value. In addition to this prodigious wealth, the testator possessed and retained, till the day of his death, a living of £300 a year!

It is stated, in a letter appearing in the London Statesman, signed William Cobbett, and addressed to the honorable Mr. Canning, that the wages of a laborer in England amounts to three shillings and six pence a week, while a private foot soldier receives seven shillings and seven pence a week, besides clothing, lodging, fire and candle.

On the subject of the piracies in the West-Indies, the London Traveller asks, "What is the reason that our naval force, which costs ten times as much as the navy of America, is so managed that our commercial ships have to thank the Americans for their only protection?"

France. The company of English players, it appears, are still at Paris, performing for the amusement of their numerous countrymen in that city. They had advertised the comedy of *John Bull*, which represents a plain honest mechanic firmly seeking and obtaining justice of a dignified knave. The prefect of the police "invited" the company not to perform it, and to substitute a less "indecent" piece—of course, it was not performed. A Paris correspondent of a London paper ascribes the proceeding to "alarm respecting the popular mind, and sensitiveness to any thing like ridicule of the aristocracy." "It was thought too scandalous that profligacy and knavery should be made the characteristics of the rich and great; virtue, honesty and independence those of the poor—on the stage."

The Charleston City Gazette gives us the following anecdote—"A little boy observing the duke d'Angouleme descending from his carriage and entering a house, asked his elder brother, a young man of twenty, "where the duke was going?" To which the other replied, "I suppose to take a drink!" An old crone who overheard him, in her zeal for loyalty, immediately communicated this seditious expression to the police. The young man, after a confinement of four months, was heard in his defence; and, as it appeared that the expression, though having a seditious tendency, was uttered with the most innocent intention—the criminal was only sentenced to banishment on the frontiers of this delivered, this mild, this happy kingdom!

Paris Sept. 9. "Day before yesterday in the morning a commissary of police, accompanied by agents and gens d'armes, went to No. 20 rue des Jeuneurs, to the dwelling of the venerable of a masonic lodge, and seized fifteen band-boxes filled with papers. A journal announces that these papers belong to a lodge of free masons. The *Quotidien* hopes that there will be found therein traces of the famous committee of directors which they had searched for throughout and of which they found no part."

If the preceding article is worth any thing, it only goes to shew the fears of the French government—and the spirit of the "holy alliance."

Spain. The following anecdote is given by an eye witness of the events of the 7th July at Madrid. It reminds one of the arrest of Andre. In the dispersion of one of the battalions of the insurgent guards, Mon, their commandant, was met and taken prisoner by a peasant. He offered six ounces

of gold and his gold repeater to let him escape; but the peasant, although he had scarcely a shoe to his foot, rejected the offer with scorn. Mon begged of him to spare his life. "I will not kill you," replied the peasant, "but with the sword of the law." He conducted him to the artillery quarters.

East Indies. The *Free Native Press* at Calcutta, it is said has nearly destroyed Juggernaut. At the last festival, no one would be persuaded to sacrifice himself, and the priests were exceedingly mortified, and talked of removing to the interior. Priestcraft is the same thing every where. The "*Madre Delorosa*," of the Spaniards in the holy inquisition at Toledo, (see a preceding article), was less excusable than the sacrifice of victims to Juggernaut. Nothing of the sort can exist where the press is free to discuss its merits.

The rain at Calcutta fell to the depth of twelve inches in three days!—A great amount of property has been lost or damaged by the inundation. Many lives have been lost, and it was feared that on the small "Churs," dependents on Dukhunshabzapore, the greatest part of the population had perished. Some took refuge in the trees, where they remained two days, feeding on the leaves. It is even estimated that the lives lost amount to 100,000.

Certain missionaries—two of the monks from the monasteries of St. Bernard and St. Gothard, are in the East Indies, collecting donations, and have been well received. If they are not what they pretend to be, their impositions on the charitable are to be greatly lamented, as well as their meeting with success instead of punishment.

It is possible, that these are the villains who filched the people of the United States some years ago—perhaps, the sturdy beggars who once asked alms of me, to whom I said "go to work;" at which they seemed much shocked!

A person in Calcutta it is said has been cured of the hydrophobia, by having four grains of the extract of Belladonna administered, and three pounds of blood taken from him.

China. A Junk, of 800 or 900 tons, from Amoy, China, for Batavia, with 1600 passengers, from the ages of 70 to 6, and a valuable cargo, and numerous crew, was wrecked, on the 6th of Feb. on Gaspar Island, and all but 190 perished. Those saved were taken up by the British ship *Indiana*, capt. Pearl, from the rocks, island, pieces of the wreck, &c. and treated with great humanity.

Brazil. It is stated that 45,507 slaves were shipped from Africa, for Rio Janeiro, alone, in the year 1821; of whom 38,102 arrived—seven thousand four hundred and five having been murdered, (or died), on the passage. This trade will, probably, be soon abolished.

Light proceeds in the midst of revolutionary confusion. The trial by jury is established in Brazil, and, though royalty may prevail, there must be a giving into the spirit of the times and the progress of reason. A printer was lately tried for a libel at Rio Janeiro—the government named twenty persons as a jury—he elected eight of those to act on his case, and was acquitted. It was a new thing, and the people marvelled thereat!

West Indies. The negroes rose near St. Pierres, Martinico, on the 13th ult. and killed several white people. The troops and the militia had subdued them. The plot appears to have been extensive, and to have had for its object a general massacre.

Latest Intelligence.

London papers of the 9th October, have been received by an arrival at New York—the following contains a brief notice of the chief things presented:

Ireland is greatly disturbed by burnings, burglaries and murders. The levying distress for rent, is openly resisted. The south is chiefly affected. Spain is still unsettled, but no important event is noticed. An invasion from France is expected, and preparations were making for it.

At Naples, the royal spirit is still kept up by executing and otherwise punishing those who took a part in the late revolutionary proceedings, under the dictation of Austria. Some, however, who were condemned to death, had their sentence mercifully commuted for *thirty years* imprisonment at hard labor.

There is but little news from *Greece*. The Persians are again said to have gained a great victory over the Turks in Asia.

The city of *Aleppo* has been much damaged by a succession of earthquakes, commencing on the 13th August, which was the severest. In an instant, thousands of persons were buried in the ruins of their spacious stone houses!—two thirds of this great city, which contained about 40,000 houses and 200,000 inhabitants, is in ruins!—the amount of lives lost is uncertain, but estimated at between 20 and 30,000

At the time of the most severe shock, two rocks rose out of the sea near Cyprus.

National Affairs.

[COMMUNICATED.]

EXPORT OF SPECIE—RATE OF EXCHANGE, IMPORTS AND EXPORTS

*Statement of the import and export of specie into and from the United States, for the three last quarters, as furnished through the kindness of the secretary of the treasury. [N. B. The returns of the imports for the second quarter of 1822, are deficient from Salem, Boston, and New-York—and of the exports for the same quarter, from Boston, Charleston, and New-Orleans. Boston and New-York, in both cases, I am enabled to supply by the politeness of the collectors respectively.]**

IMPORTS.

Balance of specie exported from the United States for nine months,			8,182,053

* Copied from Mr. Carey's late pamphlet.

As I think it best to reason entirely from facts, I will make no conjecture as to the result of the six months ending 30th September last; for conjecture may be answered by conjecture, as we well know that where suppositions are admitted as the basis of an argument any thing may be proved. Standing, then, on these facts, thus carefully ascertained, it may be permitted to inquire in what is this state of things to end? To me, it indicates the most gloomy prospects for the country—it effectually contradicts the assertion so often and pertinaciously made, that the commerce of the country is reviving and its prosperity returning. I hope that the draining the country of its specie, the diminution of its circulating medium, the almost total failure of its importation, will not be dignified by the name of commerce, or that these will be deemed the indications of its restoration. Certainly, none will be hardy enough to assert that the present rate of exchange, (say 13 per cent.), is beneficial to the nation, or that it can indicate any other than the most disastrous consequences. It seems to me, that this diminution of our currency, combined with the ruinous rate of exchange against us, presents an occasion for a serious appeal to good sense, the national feeling, as well as the patriotism of the mercantile class of the community. Their influence in society and over the government is very great, they have much in their power—if they choose to exert themselves, it rests with them to change or to continue our present policy. I cannot believe that any merchant seriously thinks that commerce or the country is now prosperous, or that both will not soon become less so, if their operations are carried on in future as they have been for the past. To my mind, and according to my simple mode of reasoning, there is no difficulty in understanding the course of trade—the sources of national profit as well as the true and substantial interests of the people. It has long been my anxious wish to draw from intelligent and candid merchants, their ideas on the important concerns of the country, to point out the connection of commerce with the other great interests of the nation, to explain to us the nature of the balance of trade, the causes of the rise and fall of exchange on Europe, to point out the true course of policy which a wise and paternal government ought to pursue to best promote and secure the general prosperity. Hitherto, merchants have contented themselves with opposing the plans and measures of others—they have objected thus far to any interference by the government in any matter to which their own petitions have not called attention. *Let it be remembered, that to their requests no counter petitions have ever been offered by any other class, while their opposition to the petitions of the manufacturers and farmers has been uniform, systematic and inveterate.* It is time that the nation should understand why this is so; and, as I know of no paper so proper through which to ask for information as yours, must take the liberty of requesting of some person who has the means and the will to do it, the favor of a solution of what appears to me a system of conduct little reconcilable with generous or liberal sentiments, national interest, or national honor.

In pursuing the subject with which this article begins, the exportation of specie and the rate of exchange—I must observe, that their effect upon the operations of commerce and the welfare of the nation, cannot be unimportant. It must be good or bad—it must be an indication of prosperity or embarrassment; and some opinion will be expected from those so competent to decide, whether the entry must be made on the debtor or creditor side

of the ledger—for these are fair as well as plain questions:

When a country exports more specie than it imports, is this no evidence of a favorable or unfavorable commerce?

Is a rate of exchange, thirteen per cent. above par, advantageous or otherwise to the operations of commerce?

Do these causes combined, or either of them separately, promote or retard the prosperity of the country?

If the answers to these questions should be favorable to the operation of these two causes, then let us make the most of them, increase the exportation of specie and raise the rate of exchange by every possible encouragement, which the government or people can give—let the country be drained of its last dollar of current coin, let the people pay for every 100 dollars worth of imported goods fifty dollars in exchange beyond the first cost. Let me repeat the injunction, if this will promote the general welfare, carry it to the utmost possible extent—for it cannot be beneficial on a small and injurious on a large scale. But if it portends ruin, then let it be stopped. I here offer a fair alternative to the merchants, that they may come out publicly and express their opinion with candor; they owe it to themselves, and cannot, in justice to their own character, decline doing it. Public opinion must not be forever divided on these all-important questions—to settle them at once, I do not throw down the gauntlet of defiance, but only seek to elicit truth from those best qualified to disclose it. It is an invitation, not a challenge—a request and not a threat. There is not any mystery in the subject matter; it will expose no secrets of trade, embarrass no commercial operation, interfere with no adventure or speculation. Every importing merchant is well informed about these matters, and Baltimore abounds with mercantile intelligence, and it must not be thought unfair or indecorous to ask, nay, to insist, on an answer to these questions—aye or no, with reasons for their opinion—short and pithy as may be pleasing to whoever will take the trouble; but so much at large, at least, as to enlighten public opinion and enable the people to judge and decide correctly.

I now leave the subject of the exportation of our coin and the rate of exchange, in the confident expectation of being speedily furnished with a satisfactory answer, or at least some information respecting these subjects.

There is another subject which deserves the very serious consideration of the American people—it is the credit on the duties. I have long been of opinion that they are not required for the accommodation of the American importer, that their tendency is to throw the commerce of the country into the hands of foreigners, to encourage the importation of goods beyond the wants of the people or their ability to pay; for that, owing principally to the facilities afforded by these credits, our government lends to foreigners a capital to trade upon, which is drawn from the people without any aid to our revenue—and that they are one great cause of the deep embarrassment which now threatens prostration to all the great interests of the country. On this subject I must also endeavor to elicit information from our merchants—they must not be backward in giving it; for, if I am not greatly mistaken, there is no class of men so deeply interested as themselves: and if they will but take a view of their operations, they must find this to be one of the greatest drawbacks on commerce. That, to the

country at large, these unreasonable credits are extremely injurious, has been long and deeply felt. If there is not in congress a perfect apathy—nay, if there is not a determination to see how far the interest of the nation may be depressed by their supineness and subserviency to foreign policy, they will look to the evils which afflict the nation, and administer the remedy, nauseous as it may be, to those who are preying on its vitals. T.

The Atmosphere.

From an article in the Encyclopædia Britannica,

BY MR. LESLIE.

The vault of heaven seems to darken by insensible transitions, from the western to the eastern horizon. It is most probable, therefore, that the diminution of light, after the close of evening, is owing to the prodigious rarefaction of much higher portions of the atmosphere, which still catch some faint rays of the sun, without being able, from excessive attenuation, to reflect them efficiently to the earth. But since, unless the sky be overcast, there is total darkness in no climate, even at midnight, we may, therefore, infer that the body of air extends to such an altitude as to receive the most dilute glimmer, after the sun has obtained his utmost obliquity, and sunk ninety degrees below the horizon. It would thence follow that the elevation of the atmosphere must be equal at least to 1658 miles, or the excess of the hypotenuse of an isosceles right angle triangle having 3955 miles, or the radius of the earth for its base.

This very great extension of a rare expansive atmosphere appears conformable to the general phenomena. But the thin investiture of our globe, at least near the equator, may stretch out much farther, and yet its elevation can never exceed a certain absolute limit. The highest portions of the atmosphere, which is carried round in 23 hours and 56 minutes, by the rotation of the earth about its axis, would be projected into space, if their centrifugal force at that distance were not less than their gravitation towards the centre. But the centrifugal force is directly as the distance while the power of gravity is at its square. Consequently, when the centrifugal force, at the distance of 6.6 radii of the earth, is augmented as many times, the corresponding gravitation is diminished by its square or 43.7 times, their relative proportion being thus changed, to 289. Now, the centrifugal force being only the 289th part of gravity at the surface of the equator, it will, therefore, just balance this power at the distance of 6.6 radii from the centre, or at the elevation of 22,200 miles.

Such is the extreme boundary of atmospheric expansion. Though it surpasses all our ordinary conceptions of the space occupied by that dilatible fluid, it yet scarcely exceeds the twentieth part of the distance of the moon, which was held by the ancients to communicate with our atmosphere. If it really spreads out to the limit now assigned, it must, in its remote verge, attain a degree of tenuity which would utterly baffle imagination to conceive. Perhaps the fluid itself may change in those lofty regions, and pass into a sort of ætherial essence, more analogous to diffuse light than to a mass of air.

Perhaps air, in its most concentrated state, occupies the bottom of the ocean, and forms a vast bed, over which the incumbent waters roll. Air has actually been condensed above a hundred times, and during this process it betrayed no deviation from the fundamental law, that its elasticity is di-

rectly proportional to its density. There seems no reason, therefore, to doubt that, if an adequate compressive force could be exerted, air might be reduced to the thousandth part of its ordinary volume. But this elastic fluid would then be denser than water, and, consequently, instead of rising would fall through the liquid. Suppose, for instance, a bladder filled with air, and having a small bullet attached to it, were thrown into the sea: in continuing to sink, it would reach a depth where the enormous weight of the column of water would compress it to the same density with the surrounding mass; and if the bullet were now disengaged, the bladder would remain suspended in that stratum, or if carried a little lower, it would precipitate itself to the bottom.

To form some estimate of this singular event, a simple calculation will be required. Air, of the ordinary temperature, is 840 times lighter than distilled water, and is, therefore, 865 times lighter than sea water, assuming the density of this to be 4.03. But the mean pressure of the atmosphere being equal to that of a column of 34 feet of distilled water, is, hence, equal to the weight of a column of 32½ feet of sea water. Wherefore, 32½ × 864, or 28,296 feet, is the depth of the ocean where the necessary compression would obtain.

This computation is to be considered as only a near approximation, yet sufficiently accurate for the object in view. It is enough to mark the conclusion, that any portion of air, carried five miles and a half below the surface of the sea, will never ascend again. Now, this limit is only half the depth which the theory of tides assigns to the waters of the ocean. There is more difficulty in conceiving by what process air can be conveyed to its abyss. Increase of pressure, however, enables water to hold a larger share of air; and the effect is, hence, the same as an augmented attraction. The minute globules of air may therefore be gradually drawn downwards, from stratum to stratum, till they are, at last, detached from the body of water by their own superior density. The precipitation and accumulation of concentrated air under the ocean, would thus be the result of some unceasing operation. Such a process may, perhaps, constitute a part of the great economy of nature. It seems probable that the existence of a subaqueous bed of air is necessary to feed the numerous fires which continually rage in the bowels of the earth, and occasionally burst forth on the surface in volcanic spiracles.

Naval Court of Inquiry.

Navy department, July 31st, 1822.

GENTLEMEN: You are hereby appointed a court of inquiry, and required to assemble on the 12th day of August next, at the United States' navy yard in Charlestown, in the state of Massachusetts, to examine, minutely, into the official conduct of captain ISAAC HULL, since his appointment as commandant of that yard: and you will report to me all the facts and circumstances which shall be disclosed by the inquiry, together with your opinion in relation to the same. You will please to appoint a gentleman possessing the requisite qualifications to officiate as judge advocate. I am, very respectfully, your obedient servant, SMITH THOMPSON.

To John Rodgers, Isaac Chauncey, and Charles Morris, captains of the U. States navy.

Navy department, Nov. 15, 1822.

I certify that the above is a true copy from the original. BENJAMIN HOMANS.

REPORT.

This court, in obedience to the warrant of the secretary of the navy, having examined into the official conduct of captain Isaac Hull, since his appointment as commandant of the navy yard at Charlestown, and having considered the testimony and the defence or statement of capt. Hull, report the following as all the material facts and circumstances disclosed by the inquiry:

It appears that capt. Hull was ordered to the navy yard at Charlestown the 1st day of July, 1815, took command there in the same month, and has continued in the command to the present time.

As no charges or specifications were exhibited against capt. Hull, the court was left, by the terms of the warrant, to discover, from a general investigation of his official conduct, if, in any respect, he had failed in the faithful performance of his duties. To this end, a series of general interrogatories were prepared, embracing the whole course of duties on this station; and these have been propounded to all such persons as were supposed to have opportunity of knowing any thing of his conduct, or to possess any means of information on the subject; and all the witnesses have been permitted to testify freely as to the reasons for their belief where it appeared they did believe that captain Hull had failed in the performance of any duty. The restriction of witnesses to their own knowledge, without permitting them to disclose what they had heard from others, would, it is obvious, have precluded the court from resort to many unknown sources of information, to which the court might and ought to resort, for evidence of those facts and circumstances which had given occasion for the ordering of this court, and which it was expected this court should report upon to the department.

Had charges and specifications been exhibited, these would have incidentally directed the court to witnesses connected with the transactions to be investigated. The duty of this court would have been less arduous, but the result of their inquiry might have been less satisfactory.

By the course they have pursued, which, however, they presume will not be cited as a precedent in any other than a perfectly similar case, no source of information has been left unexamined; and they confidently believe that every transaction which has given rise to any imputation against captain Hull, has been spread upon their record in such a manner that the government may be satisfied that the conduct of captain Hull, during his command, has been fully inquired into, and that no instance of misconduct has escaped the attention of the court.

In presenting their report or statement of all the facts and circumstances disclosed by the inquiry, the court will follow the analysis of captain Hull's official duties, which suggested the standing or general interrogatories propounded to the several witnesses.

In respect to the first branch of their inquiry—how far public property has been converted to the private use of captain Hull, or of any other person with his knowledge?—they find that some public property at first appeared to have been so converted, but, on investigation, it appears this was, in fact, applied to public use; some appears to have been borrowed for his use, and afterward returned; some appears to have been taken for his use by his orders, and some without his orders or knowledge; but an equal quantity of the same kind, or an equivalent of a different kind, has been returned. But, it does not appear to the court that any public pro-

perty, with captain Hull's knowledge, has been converted to his own use without his returning some equivalent: neither does it appear that any public property has been converted to the use of others with his knowledge or assent.

Pursuing this analysis of the evidence, the court, in obedience to the warrant, proceed to state the facts and circumstances respecting this branch of their inquiry in regard to property which at first appeared to have been converted to captain Hull's use, but, on investigation, appears to have been applied to public use. It was proved that several sticks of timber were taken by captain Hull's orders from the navy yard to remove certain buildings of captain Hull's. On investigation, it appears that these buildings were situate on the Woodward estate, purchased by captain Hull, on his own account, at the suggestion of Mr. Crowninshield, then secretary of the navy, upon an understanding that the government might subsequently purchase such portion thereof as might be deemed necessary for the convenient enlargement of this navy yard: that the government did take a portion of this estate on an appraisal fairly and satisfactorily made: that the department agreed to remove the buildings thereon to land of captain Hull at the public charge; and this timber was used to remove his buildings conformably to this agreement. It also appears that all this timber was subsequently and seasonably returned into the yard, and is now there in the use of the United States.

It was proved that some glass was taken from the store to be set in the buildings of captain Hull after they were removed from this estate. On investigation, it appears that the government engaged not only to remove captain Hull's buildings from that portion of the Woodward estate which government might take for its own use, but also to place the buildings, after removal, in as good order and condition as before, and that this glass was taken to replace that which was broken in the removal.

It was stated in evidence that a shovel, three pair of tongs, a pot-bale, and pot hooks and gridirons, were made at the smith's shop; but, on investigation, it appears that these were made for public use: the shovel and tongs for the fire places in the yard, and the residue of these articles for the quarters of an officer attached to, and residing in, the yard, and, after his decease, they were returned into the public stores.

It also appears that six small rakes, worth from 12 to 15 cents each, were made and used in capt. Hull's garden, but were used also in the yard.

To this class of cases may be referred the purchase of medicines at the public charge for the use of capt. Hull's family.

It appears that captain Hull did obtain of Dr. Elliot, an apothecary in Boston, a quantity of medicines to the amount of \$53 54 cents, for the use of his family; that these were paid for by the navy agent, were by him charged in account to the government, and was allowed by the department. It further appears, from the testimony of Mr. Crowninshield, late secretary of the navy, and several surgeons in the navy, that it had been the practice at the naval stations, in this place, at Portsmouth, New-York, Philadelphia, and Washington, and on the Lakes, of the surgeons of the navy, to supply medicines from the public stock for the use of the officers' and men's families. It appears that captain Hull had obtained this supply from Dr. Elliot, under full conviction that this was conformable to usage, and it fully appears to this court that captain Hull did not at the time doubt his right to

this as a customary allowance, but so insisted with Dr. Elliot, who, on receipt of the money, transferred the amount to the debit of the United States, and acknowledged receipt of his money as from the government.

In respect to public property, borrowed by captain Hull for his own use, it was proved, that four sticks of timber were taken by his orders and used to remove a small house of his in the vicinity of the yard; but these were returned without injury, and it does not appear that the U. States have suffered any inconvenience from this use of them.

In respect to public property taken by captain Hull's orders for his own use, it appears that 300 pound of nails were taken from the navy store by his orders, and were used in his buildings; for these he returned 320 pounds of a different kind, but of equal value and utility. It also appears that 23 pounds of spikes were taken for his use with his knowledge, at different times, in small parcels, and for these he returned a like quantity and of equal quality. It also appears that 1000 feet, in board measure, of sawn pine timber, were taken for his use, upon his order, and, subsequently, a quantity of the same kind was returned.

These are all the instances of the taking of public property for capt. Hull's use, by his orders or with his knowledge at the time, during his command on this station.

In respect to public property, taken for his use by mechanics in his employment, it appears that, at a time when he was confined to his house by indisposition, his carpenter obtained from the yard a quantity of clear pine plank of the value of 12 dollars, and, instead of this, returned, on the same day, a quantity of merchantable plank of the same value and of equal utility.

It also appears that a bar of iron, about two or three feet long, was taken by one of his mechanics from the smith's shop, and used in capt. Hull's buildings for the chimney bar, but another of equal value was returned.

It also appears that hoops were put on a wheel of captain Hull's travelling carriage, immediately after a journey by captain Hull with Mr. Barker, master builder, into New Hampshire, for the service of the United States, in quest of timber for the navy yard; but this was without his knowledge at the time.

It appears that two small pieces of yellow pine, and one of oak, were taken to make some cellar cills, of the estimated value of one dollar and a quarter; but this does not appear to have been known to captain Hull at the time.

In respect to public property converted to the use of others, it appears that an axe was made for lieutenant Ward and delivered to him on his engagement to return it; also that a gridiron was made and delivered to sailing master Waldo; also, that two garden rakes were made and delivered to James Bogman, gunner of the yard, for use in his garden within the limits of the yard.

It also appears that a small oven door, 14 by 9 inches, was made of a piece of sheet iron, and also a frame for this, by the blacksmith, for his own use; but it does not appear that captain Hull knew of either of these instances of the conversion of public property to the private use of others.

These are all the instances of the conversion of public property to private use, which were proved to the satisfaction of this court. Some witnesses did indeed mention other articles of very trifling value, as dog nails, old hinges, &c. but, on investigation, it fully appeared that the materials were

not public property, or that the witnesses who mentioned such articles, as appears by the record of evidence, were so fully discredited that their testimony could not justly have any weight with this court.

The next branch of the general analysis is the employment of mechanics or others for private use, while in the pay of the United States, for the same time they were so employed, and the employment of the navy yard teams for capt. Hull's or others' private benefit.

In respect to this branch of the inquiry, the court find that some men, and the oxen of the yard, had appeared to have been employed for private use, but, on investigation, it appears that they were engaged in public service; that sometimes the men and teams were employed for captain Hull's use, but he made an ample return for such service to the United States; and that some men have been employed for the use of others, but without his knowledge.

In respect to the employment of the men, apparently for his use, or the use of others, but in fact for the use of government, it was proved that men were employed in removing the buildings and fences from that part of the Woodward estate which was taken by government for the enlargement of the yard, and in re-setting broken glass, and otherwise re-fitting captain Hull's building thus removed. But, on investigation, it appears that these were so employed, conformably to the verbal agreement between captain Hull and the government before mentioned, for removing buildings from the ground taken by government, to other land of captain Hull, and putting them in the same good order and condition as before their removal, and in setting up the fences on the new boundary line of the yard.

It was also proved that men and teams were employed in transporting cord wood and chips to captain Hull's and other officers' quarters; but, on investigation, it appears that the cord wood was fuel which the government delivered agreeably to the regulated allowances to officers on this station at their quarters; and the chips were removed conformably to the regulations of the navy commissioners recorded in these proceedings.

It also appeared that a laborer was employed in sawing and piling capt. Hull's wood, and the wood of capt. Shubrick, attached to the yard; but it appears that this is not inconsistent with the regulations of the navy yard: the government customarily delivers allowance of fuel at officers' quarters in a fit state for use.

In respect to the employment of men and teams by capt. Hull, for his own use, it appears that one man was employed about half his time, in the spring and summer, in the cultivation of the commandant's garden within the yard. This was a laborer in the yard, who was regularly mustered there, paid by the United States, and labored the rest of his time in the public service: on investigation, it appears that capt. Hull is allowed 3 servants, at 8 dollars each a month, and one ration a day—that he has not drawn pay for more than two servants since April last, which is a saving to government of 15 dollars per month. Besides this, also, it appears to the court, that the labor of this man, in setting out valuable trees purchased by capt. Hull, and otherwise permanently improving this appendage to the yard, is a substantial benefit to the public property.

It also appears that capt. Hull has employed the government teams in carting earth from his land when digging a cellar, and in hauling stones to be

laid there. But, on investigation, it appears that this earth was hauled within the navy yard, to improve the passage or road from the gate by the stores, where it was useful and indeed necessary, and that, while the cart was loading with this earth, and without any interruption or delay of public work, the oxen were employed to haul a few large stones, not exceeding seven in number, for a short distance.

Although it would seem, from various witnesses, that there is much evidence of employment, by capt. Hull, of mechanics and laborers for his private use, while these were in pay of government, yet, on investigation, and very careful examination of the master mechanics and laborers themselves, it does not appear that any mechanic, laborer, or other person, has received pay of government for any portion of the time he was employed in captain Hull's service, except the instance of the gardener before mentioned; and, although two witnesses positively assert their belief that they have received pay of government for the time they were employed in capt. Hull's service, yet the testimony of these witnesses is so discredited by the direct contradiction of the master mechanics, who had better opportunities of knowing, and whose duty it was to know the fact, that this court cannot regard their testimony as worthy of credit.

In respect to employment of men of the yard for the use of others, without capt. Hull's knowledge, it appears that a laborer was employed the greater part of his time for the use of an officer in the yard: but this, though not purposely concealed, was unknown to capt. Hull. It also appears, that another laborer, acting as an under assistant to the store keeper, was occasionally employed by him in some domestic services. It does not, however, appear, that there was ever any occasion which called capt. Hull's attention to this practice, or that it ever came within his knowledge. It does not appear that the government's team had been otherwise employed for private use.

The next branch of the general analysis, is the neglect of any duty by capt. Hull, as commandant of this navy yard.

It appears to the court that capt. Hull has suffered a sailing master to attend to the mustering of the men in the yard, instead of a lieutenant, which the recent regulations for mustering the men prescribes, and that the check-roll has not been kept conformably to these regulations; some other person than the clerk of the yard having been allowed to call the men.

It also appears that capt. Hull has not always exacted of the purser of the yard strict compliance with his duties, according to the regulations now in force.

It also appears, that capt. Hull gave lieutenant Percival leave of absence from the United States, without first obtaining the assent or authorization of the navy department. But it appears, however, that there were more than a sufficient number of officers on the station at the time this leave was granted, and during the absence of lieutenant Percival, to perform all requisite duties.

It also appears, that lieutenant Percival received his full pay for the time he was so absent, that capt. Hull approved his account, but not until after the letter of the 4th auditor, under date of the 3rd September, 1818, recorded in these proceedings, had been exhibited to capt. Hull. It further appears, that the letter of lieutenant Percival to the 4th auditor, under date of the 27th August, 1818, also recorded in these proceedings, was not seen

or its contents known to capt. Hull, before it was sent to the department, or before he approved the account of lieutenant Percival, nor, indeed, until very recently. It further appears to this court, that the payment, by lieutenant Percival, of the sum of 126 dollars, through the hands of sailing master Waldo, was repayment to capt. Hull of money which lieutenant Percival held in his hands, and claimed in satisfaction of certain charges, and that, on the disallowance of these charges by capt. Hull, this money was repaid: That this repayment was not made with any reference to capt. Hull's approval of lieutenant Percival's public account for his own pay, but was entirely disconnected with that subject.

The next branch of analysis is, neglect of any proper measures for the detection of Fosdick's fraud, by capt. Hull, or his collusion with Fosdick in this speculation.

It appears to the court, that the fraud of Fosdick was effected by his procuring the men to sign their names to the pay rolls, in which either the time they had worked or the amount of their pay was not written, and that these blanks were filled up by Fosdick after the men were paid, with more time than they had worked, and larger sums than were due them; that he drew from the navy agent the whole amount, and kept the excess above the just sum due to the men, for his own use. On inspection of the pay rolls laid before the court, they appear to be fair, and to each is subjoined, in common form, a certificate by the person paying the men, that he has compared it with the muster roll, and found it correct, and below this is the approval of capt. Hull.

This is in the usual course, and no circumstance of any kind ever occurred to capt. Hull's knowledge, during Fosdick's service in the yard, to excite the least mistrust of his correctness, or doubt of his integrity. It appears that Fosdick had been highly recommended to capt. Hull's immediate predecessor, capt. William Bainbridge, and that persons of high standing warmly recommended him to capt. Hull. No officer in the yard sustained a fairer reputation for integrity or talents in his particular station than Fosdick. But it appears to this court that, on the first intimation of the fraud, capt. Hull instantly adopted, and constantly, zealously, and ably pursued at Charleston, Boston, New York, and New Orleans, all proper and requisite measures for the detection of this fraud, and the recovery of satisfaction for the U. States, and that, through his activity and zeal, in an eminent degree, a full and complete satisfaction was obtained from the property and effects of Fosdick.

It further appears, that capt. Hull, in negotiating with Fosdick for this satisfaction, was more rigorous and unyielding than the other commissioners appointed for this purpose; That Fosdick complained of this treatment of him by capt. Hull as harsh, and was greatly incensed against him at the time: That Fosdick then complained that the government would get from him more than he had taken from the United States: That in this state of Fosdick's affairs, it was represented to him by an intimate friend that some persons suspected capt. Hull of being concerned with him in the transaction, and advised him, upon motives of policy, to expose capt. Hull, if in fact he had been concerned. This Fosdick instantly denied, declaring in effect that the fraud could not have been conducted by more than one person, and that no person was concerned with him in the transaction. It also appears, from the testimony of the district attorney of this state, and

of the state of New York; also of an eminent counsellor of the city of New York, and of the hon. judge Livingston of the United States' supreme court, that the conduct of capt. Hull, throughout his pursuit of Fosdick, was that of a perfectly innocent man, and highly zealous officer. No fact or circumstance appeared in any manner tending to prove or to justify any suspicion that capt. Hull had ever been connected with Fosdick in this fraud, or ever knew of its existence, till discovered by examination of some pay rolls, with reference to the true time which certain men had labored. Of all the witnesses examined on this subject, none expressed a present belief of such connection or collusion, except lieut. Joel Abbot and Daniel Leman; but these were so utterly discredited, as appears on the face of the record, that they were deemed unworthy of any credit by this court.

The next branch of the analysis is oppression; and in respect to this branch, the court find no evidence tending to prove any oppression by capt. Hull of officers or men, except in respect to disallowances of chamber money, wood and servant money, and in respect to his refusal to lieut. Abbot of leave to visit Newburyport. It appears that lieut. Joel Abbot, who states that one of his reasons for procuring orders to this navy yard, was that he might receive chamber money, made application to capt. Hull for this allowance. Capt. Hull was in doubt if he might with propriety allow it, and corresponded, and suffered lieut. Abbot to correspond, with the department on the subject—the whole of which correspondences are annexed, in copies from the original record of the trial of lieut. Abbot by a court martial, and are as follows: The letter of lieutenants Abbot and Caldwell, and sailing master Ferguson, to the secretary of the navy, under date January 2d, 1821, and his answer of the 16th of the same month; a letter from Constant Freeman, accountant, to capt. Hull, dated 30th March, 1816; one from T. H. Gillis to the accountant, to same, dated 16th May, 1816; capt. Hull's letter to Constant Freeman, 4th auditor, dated 17th July, 1817—Constant Freeman's reply, dated 26th July, 1817—another letter to same, from capt. Hull, dated 30th of September, 1820—Constant Freeman's reply, dated 4th of October, 1820; capt. Hull's letter to the secretary, dated 9th of October, 1820, and the secretary's reply, dated 10th November, 1820.

It appears that lieut. Abbot was very importunate with capt. Hull on this subject, reiterating his solicitations for this allowance, in a manner not usual for officers, and not pursued by lieut. Caldwell and sailing master Ferguson.

It is represented by lieut. Abbot that capt. Hull repulsed him with harsh and profane language. On the other hand it appears that capt. Hull is not in the habit of using such language to officers. It appears, that capt. Hull gave much attention to this subject of chamber money, and to the particular application of lieut. Abbot and others.

In respect to the allowance of wood, it appears that there were two boatswains in the yard, one of whom was old and infirm, and only able to do light work, and as, by the regulations, there was an allowance of wood only for one, capt. Hull advised or directed, that this allowance of wood should be divided in some way between them. It does not appear that they or either of them objected or have complained.

In respect to the allowance of servant-money, it appears, that the gunner of the yard had received, through mistake, servant-money, as if entitled to

this allowance, and, on being directed, he refunded it without objection or complaint.

It appears that capt. Hull did refuse lieut. Abbot leave to visit Newburyport; but it does not appear to this court that capt. Hull was apprised by lieut. Abbot, on his first application, that Mrs. Abbot was dangerously, or otherwise, indisposed. But, it appears, that, although lieut. Abbot had been allowed leave of absence oftener and for longer periods than other officers on the station, at or about that time, yet leave was granted as soon as representation was made by lieut. Abbot that his wife was near confinement, and it was very desirable he should visit her, although, as it appears in evidence, this was an indulgence attended with inconvenience to the service.

It does not appear that Mrs. Abbot was dangerously sick at that time, although it appears in evidence, lieut. Abbot has made representations of her situation to this effect, which he does not confirm in giving his testimony.

It appears, that lieut. Abbot was at Newburyport from the 14th or 15th of February, 1821, to the 22d, when he returned to the yard, and that he did not, while at Newburyport, request an extension of his leave. He states, that he desired it, but refrained from asking it, because he knew capt. Hull would refuse it.

It appears, however, from the testimony of capt. Shubrick, that an extension of lieut. Abbot's leave would, no doubt, have been granted as soon as asked for.

It appears that he did renew his application for leave of absence on the 23th of the same month, representing Mrs. Abbot's recent confinement, and leave was immediately granted. It appears that this lady was alive till the 15th of April following, and that lieut. Abbot was absent on leave from the 23th or 29th of February, until after her decease, and never since has been on duty in the yard.

The court being required to state all the facts and circumstances disclosed by the inquiry, which are of moment, in connection with the object of this investigation, deem it their duty to state the following:

It appears in evidence, that captain Hull deposited his own paints in the public paint store; that this was a temporary deposite, and ceased as soon as another convenient place was in readiness, to receive it.

It also appears that some hinges, and chimney-bars and crane-eyes, taken from his, captain Hull's, houses, were deposited in the smiths'-shop, in the yard, and these deposites, probably, gave rise to rumors of improper use of public property.

It also appears that he employed mechanics and laborers on his private property, who had been or were subsequently mustered in the yard for the United States, and this under circumstances which might naturally lead persons, not acquainted with all the circumstances, to suspect that the government's time was appropriated to private benefit.

It appears also that he bought a quantity of lumber from a government contractor, who had landed this with government timber in the navy yard, and that this was transported from the navy yard to captain Hull's estate, near Chelsea bridge, by a team often employed there in the service of the United States, and that, although on the investigation it clearly appears that this timber never was the property of the United States, and that capt. Hull paid for the transportation, yet the purchase and transportation of it from the navy yard did excite the attention of respectable persons. It also appears

that captain Hull permitted the same persons to master and pay, at the same time and place, men employed for his private use and men in the employment of the United States.

It also appears that, when the buildings were removed from the Woodward estate, a barn of the estimated value of one hundred dollars, and a wood shed of the estimated value of twenty dollars, both belonging to captain Hull, were moved into the yard, and have ever since been used in the United States service, as their property, without any recompense therefor to captain Hull.

It also appears that, previous to the purchase, by captain Hull, of his real estate near the western entrance to the navy yard, the small buildings there had been occupied by disorderly persons, to whose shops the men of the navy yard resorted at night, and where articles of value, pilfered from the yard, were purchased: That captain Hull endeavored to get rid of these tenants, but was unable to do so without purchasing this property himself: That he did purchase it, and it is now occupied by decent and orderly tenants.

In conclusion, this court deem it their duty to state, that lieut. Joel Abbot, whose testimony covers more than fifty pages of the record, did not appear to have knowledge or information of any facts which, in the opinion of this court, authorized the general expressions or imputations against captain Hull, contained in his letter of the 11th January, 1822. And, on his examination, which was conducted, as the court believes, with the greatest indulgence and patience, he was constrained to admit, in respect to almost every such imputation, that he had no better authority for making them, than common reports, which he had never investigated or traced to their source.

And this court regret, for the honor of the service, to add, that very many of lieut. Abbot's declarations, under oath, in which it appears to this court that he could not have erred through mistake, are distinctly and directly contradicted by most respectable and disinterested witnesses.

No other facts or circumstances, tending to implicate captain Hull, in respect to his official conduct, could be collected from any source within the control of this court, and they have reason to believe that no others exist.

The preceding statement, therefore, embracing, in the opinion of this court, all the facts and circumstances disclosed by the inquiry, which the court is required to report, is respectfully submitted, with the following opinion in relation to the same:

OPINION.

This court is of opinion that the conversion of articles in this yard, belonging to the United States, to the private use of individuals, whether by loan, exchange or otherwise, is incorrect. But, as it appears, to the satisfaction of this court, that all the articles which have been so converted to private use, with the consent or knowledge of captain Hull, have also been replaced, by similar or other articles of equal or greater value, the court are, therefore, of opinion that no loss has, in fact, resulted to the United States; and that no fraud was practised, sanctioned or intended by captain Hull in these transactions.

The court are further of opinion, that the employment of persons, while in the pay of the U. States, for the private advantage of individuals, excepting such as are specially allowed by the regulations, is incorrect: But the court are further of opinion that, in the particular instances of this kind which were

sanctioned or known to captain Hull, the deviation from the regulations has not been the cause of loss to the United States.

The court are further of opinion, that the deviations in this yard, from the regulations prescribing particular forms to be observed, in mustering and paying persons employed in navy yards for the United States, was improper, inasmuch as such deviation was made without the previous sanction of the navy department. But it is also the opinion of this court, that no loss has resulted to the United States from this deviation.

The court are further of opinion, that the permission granted to lieut. Percival, to visit Europe, by captain Hull, without the previous sanction of the secretary of the navy, was incorrect. But the court are further of opinion, that no injury did, in fact, result to the United States from the permission thus granted.

This court are further of opinion, that captain Hull, in allowing articles, belonging to himself, to be placed in the public stores containing similar articles belonging to the United States, and in permitting the same persons to muster and pay, at the same time and place, within the navy yard, men employed for his private benefit, and other men who were employed for the United States, was indiscreet, inasmuch as such conduct, though in itself innocent, may, nevertheless, give rise, in the minds of persons not acquainted with the real nature and all the particulars of such transaction, to vague impressions of misconduct in public officers.

The court are further of opinion, that the charge made by captain Hull's orders, against the U. States, for the medicines furnished for the use of his family by Dr. Elliott, was allowed by the general usage of the service at that time.

The court are further of opinion, that, in withholding his sanction to allowances for chamber-money, fuel and candles to officers not permanently attached to the yard, captain Hull was justified by his instructions from the navy department.

The court are further of opinion, that, in his conduct towards the officers, mechanics and others, under his command, captain Hull has been guilty of no act of oppression or unjustifiable severity, but, on the contrary, he has, so far as was consistent with his duty to the United States, granted every proper indulgence.

The court are further of opinion, that the purchase of property, in the immediate vicinity of public stations, by officers attached to such stations, may excite surmises injurious to the reputation of such officers, and therefore is not discreet. Yet it is the opinion of the court, that the particular purchases of this kind made by captain Hull, were made with no improper view of private advantage to himself, but originated in solicitude for the public interest, and were prosecuted with expectations of public benefit, which the United States, in the opinion of the court, have realized in the removal of disorderly persons from the vicinity of this navy yard.

And finally, this court is of opinion, that, with the before mentioned exceptions, the conduct of capt. Hull, since his command of this yard, for strict personal attention to the preservation of the public property committed to his charge; for the judicious application of the means placed at his disposal for the public service; and for the faithful performance of all his other official duties, has been correct and meritorious. JOHN RODGERS, *President*.

GEORGE SULLIVAN, *Jude Advocate*.

The president of the court and the judge advocate having, respectively, set their hands to the above record, and this court having acted on all matters committed to them by the warrant of the secretary of the navy, ordering this court, the court was thereupon adjourned, without day.

Attest, GEORGE SULLIVAN,
Judge Advocate.

Navy department, Nov. 15, 1822.

I certify that the foregoing has been carefully examined and collated with the original, and is a true copy.

BENJAMIN HOMANS.

CHRONICLE.

Lithgow, at Richmond, famous about a certain check, was lately again on his trial—but the jury was “hung;” that is, divided on the verdict, and no other indictment was to be tried “during the present term of the court.”

Marble. It is stated that a quarry of marble has been lately discovered near Lancaster, Pen. that, for its delicate grain and other good qualities, is equal to that of Italy.

Lehigh coal is now much used in Philadelphia, and sold at 30 cents per bushel, or eight dollars and forty cents per ton. Those who have given it a fair trial consider it as superior to a wood fire, and at one third of the expense.

The Susquehanna. The citizens of Luzerne county, Pennsylvania, held a meeting at the court-house in Wilkesbarre, on the 4th inst. to take into consideration the propriety of adopting measures to facilitate the clearing of the Susquehanna. As we have already said much on this important subject, we shall simply mention just now, that the chief resolution adopted was for the purpose of bringing the case before the legislature of the state in such shape as should be thought best “to answer the passage of a law effecting that great object”—for which a committee of two from each township was appointed.

Philadelphia loan. The loan of \$25,000, advertised for by the mayor, has been taken at a premium of seven dollars in the hundred. Two hundred and ninety-six thousand dollars were offered.

Charleston. A gang of armed run-away negroes commit many depredations about a place called ‘New Bridge.’ Eleven of them have been seen together, armed with muskets, classes and hatchets.

New Orleans. As late as the 22d ult. the fever still raged with unabated violence. An impressive fact to show the desolation of the city, is, that the federal court there was opened, and neither parties, lawyers, jurors, nor witnesses, attended—and the court was closed without having acted on a single cause.

Massachusetts. Messrs. Nelson, Fuller, Allen, Lathrop, Dwight, Enstis, Baylies, Hobart and Reed, are re-elected members of the 18th congress, Mr. Webster has been chosen in the place of Mr. Gorham, who declined—and in three districts there was not any choice, a plurality of votes being required.

New Jersey. Mahlon Dickerson, esq. has been re-elected a senator of the United States for six years, from the 4th of March next.

The penitentiary of this state contains 99 convicts, and, as the cost of the establishment amounts to \$6,442, their average expense is \$64 each, per annum.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 13—VOL. XI.] BALTIMORE, NOV. 30, 1822. [No. 13—VOL. XXIII. WHOLE No. 583

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

THE WEST INDIES. We have accounts from the Cyane and brig Spark. They have lost a considerable number of their officers and crews, by the yellow fever.

SPANISH CLAIMS. Of the claims presented to the board of commissioners under the Florida treaty, (which seems likely to be a long job), 113 have been allowed as valid, and 79 rejected, for want of sufficient evidence. The nominal amount of claims received is about eighteen millions and a half. The board has lately adjourned to meet on the 18th of February, 1823.

LONGEVITY When we published an article, thus headed, in the REGISTER, of the 9th instant, we had some apprehension that there was a mistake as to the amount of centenarians in Great Britain—but the following specification of particulars goes to shew that the aggregate was correct—which is, surely, much below the relative proportion of such persons in the United States, as to an original stock to produce them, or a present population to possess them.

A London paper says—By the late population report, the following curious fact is elicited:

Men 100 yrs. & upwards,	Women 100 & upwards,
England, 57	England, 111
Wales, 5	Wales, 18
Scotland, 40	Scotland, 62
Total, 100	Total, 191

VERMONT. It was proposed on the 9th inst. that the legislature should make a presidential nomination. Mr. Adams was named in the resolution. But the resolution was, very properly, rejected on general grounds.

NEW-YORK. It is stated to be a common thing for the steam boats on the Hudson to bring to the city of New-York, from 200 to 250 passengers, each trip.

TENNESSEE. James Robinson, who nearly perished in Tennessee, then all a wilderness, lived to see the country populated and assume the rank of an independent state, of which he himself was the freely elected chief magistrate!

PIRATES. It is said these wretches, who frequent the coast of Cuba, have boasted of the murder of four hundred people near Cape Romaine. In this, perhaps, they include the persons killed by quarrels among themselves—which are stated to be numerous.

THE PRESIDENT. We see that an idea is advanced of re-electing a president of the United States "during good behaviour." This the people may do, if they please; but it seems established by practice and ratified by common sense, that no person shall serve more than two periods of four years each. It would be far better for the public interest, if a president were at once elected for six or eight years, and thereafter deemed ineligible, unless after an interval of a certain number of years.

VOL. XXIII. — 13.

JUSTICE. A broker of Virginia sued the North Carolina state bank for a large sum, about 60,000 dollars, after having protested the notes, in ample form, for non-payment. The case was lately decided, and he obtained judgment for principal, interest and costs, all which were paid.

MIDSHIPMEN. A list of those who passed examination at New-York, for promotion, in October and November, 1822:

Duncan N. Ingraham, South Carolina; John Maiston, jr. Massachusetts; Henry Bruce, do.; David Conyngham, Pennsylvania; Wm. D. Newman, New York; Robert Ritchie, New Jersey; David R. Stewart, Maryland; Thomas Hayes, Pennsylvania; Alexander B. Pinkham, Massachusetts; Wm. H. Homer, do.; James D. Knight, S. Carolina; Joseph Mattison, New Jersey; Wm. W. M'Kean, Pennsylvania; Wm. S. Walker, N. Hampshire; Alexander Slidell, N. York; James G. Boughan, Virginia; Benjamin Tallmadge, jr. Connecticut; Hubbard H. Hobbs, Virginia; Samuel Mercer, South Carolina; Franklin Buchanan, Pennsylvania; George F. Pearson, New Hampshire, Chas. Lowndes, Maryland.

FRANKLIN. It is rather a curious incident, that when the Americans sent Dr. Franklin, a printer, as minister to France, the court of Versailles sent M. Girard, a bookbinder, as minister to congress.—When Dr. Franklin was told of it, "Well," said he, "I'll print the independence of America, and M. Girard will bind it."

THE RACE. The things that were said and are yet running through the newspapers, about the race that was to have been run at Washington last week, are quite enough to make a sober-minded man laugh. The Philadelphia Democratic Press, published the day preceding that appointed for it, announced, that "there were only eight passengers in the steam-boat from Baltimore"—that the city of Baltimore was "nearly depopulated" by the departure of its inhabitants for the race"—that one person had offered to bet eight hundred human beings, valued at three hundred dollars each, on Sir Charles—that the amount of a million and a half of dollars was betted on the race.

I can speak only to one point—on the day of the race, I had a good deal of "out-door business" to do, and called upon and saw many persons, without hearing that any one had gone to the race—and really, the streets seemed to be quite as well filled as usual, so our city was not "nearly depopulated!"

The president and secretary of the "Jockey Club" have gravely given it forth, officially, that Sir Charles was accidentally lamed.

The day after the affair, a match was made up for twenty thousand dollars a side, the New-York horse Eclipse against any horse that might be produced at the starting post of the Long Island course, in May next—and the forfeit was fixed at \$3,000.

The following is given as an extract of a letter from the owner of Sir Charles to the owner of Eclipse, written in October last:

"I met the golden Sir William with Sir Charles, and they run single-handed, and, sir, I have to inform you that this golden horse, that commanded

the wind to stand still, and all creation to bend before him, last winter, in South Carolina, has now taken a western direction to seek his level with the depreciated currency of that part of the country!" Which, being published, brought out the owner of Sir William, (belonging to North Carolina), in pretty much the same strain, and inviting the owner of Sir Charles to a *fair* trial of speed, for the sum of 1,000 dollars, as "better suited" to the funds of the parties than 5,000. The epistle concludes with the famous saying of Macbeth—

And now, "come on MacDuff, and damned be he
Who first cries—hold, enough!"

About all which we say—

"Angels and ministers of grace defend us!"

TANNING. The story lately republished from the London Globe, respecting a great secret discovered in the art of tanning, for which the inventor had received a large sum of money, turns out to be fabulous.

LAW! About a year ago, Mr. Frederick A. Tracey, of New York, delivered to Mr. Joshua B. Wood, of Rhode Island, a quantity of doubloons, put up in two separate bags, to take to Providence. Mr. Wood took the valice in which the bags were deposited, on board the steam boat Connecticut, and left it in an open berth while the boat was lying at the wharf, at New York, all one afternoon and evening, sleeping on board the boat at night, in a different cabin from that in which the doubloons were left. In the morning he discovered that one bag of the doubloons was gone, and, after having made the discovery, he left the valice, with the remaining bag in it, lying on a table in the forward cabin, and went on deck for about five minutes.—When he returned, the valice and the other bag of gold were missing, and have not yet been found. Mr. Tracey, in consequence, brought a suit against Mr. Wood, on the ground that he has been guilty of *gross negligence*; and, after a hearing, which lasted two days, in the United States circuit court at Providence, the jury decided that the plaintiff was entitled to recover for the value of the bag that was first missed, (*five thousand seven hundred dols.*); but they did not consider the leaving of the other bag on the table for so short a period as five minutes, as amounting to gross negligence.

"INFIDELITY AND DISLOYALTY." The London Courier calls upon the congress of Verona to exert its power to uphold the monarchical principle, and says—"we must either fall before the desolating maxims of infidelity and disloyalty, or, when the danger is imminent, take *refuge in despotic power as the minor evil.*"

What terrible doctrine!—But what is meant by "infidelity and disloyalty?" What are the present legitimate meanings of the terms? When the "reformation," as it is called, took place in England, out of about *nine thousand* priests who lived on the people, less than *one hundred* refused to change their religion for the preservation of their fat things. Was this "infidelity." The priests of Spain, headed by three archbishops, are now carrying on a predatory desolating war on the body of the people of that kingdom, and deeply engaged in the business of murder—is this an evidence of their *fidelity*? At what is called the "revolution" in England, the king was expelled and a thick-headed tyrant imported to fill the throne: was this "disloyalty?" Events in France produced somewhat similar events—were the French *disloyal*? The Russian boor quietly submits to be kicked by his

lord—is this *loyalty*? The regenerated Spaniard will have his king to rule according to the law—and is this "disloyalty." I recollect somewhere to have seen an old saying, "that he who spoke against the Jesuits was an enemy of God"—of course, guilty of "infidelity." The Jesuits went down to the disgrace and contempt they merited, and he that would speak in favor of them in England, would now be charged with "infidelity."—For, "infidelity," *there*, is to oppose the present pampered priesthood, a more base body of men than the Jesuits ever were—less tolerant, less merciful, less Christian, than that once mighty tribe of depredators on the public labor. So that we see "infidelity and disloyalty" are terms that "conform" to the will of such villains as happen to possess power. It was *loyal* to murder Paul the father of Alexander; but, *as yet*, "disloyal" to imagine that the son should lose one hair of his head; yet it may become as loyal to put him out of the way as it was to assassinate Paul—to bring Charles the first to the block, or banish James II; proscribe his kindred as "pretenders," and punish his adherents with death as rebels and traitors.

THE AMERICAN NAVY, &c. The articles below, copied from British papers, have led to certain reflections and considerations, which I think it may be useful to present to the consideration of others. It is for this purpose that orators make speeches, statesmen compose arguments, and editors write paragraphs and other fugitive pieces.

Our little navy is now a great object of national pride; and it seems as if likely to remain a "political hobby" for a long time, if its affairs are carefully managed; though all men seem to form some limit to the extent of the establishment, most persons wish its perfection and preservation as a means of *defence*. And so it is, that, though influenced by different considerations and led on by different views, the American *people* may be said to be proud of the character, progress and prospects of their military marine. Its reputation warms the heart of every man—whether his feet are laved by the waters of the ocean, or have been wet only in the mountain stream. It cannot then be unprofitable to ascertain what has caused this naval power, and to make sure of what sustains it—in a firm belief that "like causes will produce like effects."

From the time when these states started into existence as 'free, sovereign and independent,' the commerce of the country, or, more strictly speaking, the SHIPPING INTEREST, has been most zealously protected, by bounties and premiums, and peculiar or exclusive privileges. This spirit was originally produced, no doubt, by the influence of the people of the eastern states, deeply concerned in the fisheries and powerfully directed to the business of trade and navigation. It was opposed by another in the south, which seemed to have no regard at all to the circumstance, whether the products of that section of the union were carried to market in a vessel belonging to New or Old England—and it was these counter spirits that rendered so many 'checks and balances' necessary in the constitution, that all might accept it. It was thus that the power to "regulate commerce" was given to congress, and thus that slaves were to be counted for representation in that body; and several other *comprises* made—the right of which we shall not call into question just now. But yet the shipping interest had a powerful hold on the national legislature; and, perhaps, the fact was, that our great divisions of party grew out of it, little as it seems they had to do with

the old denominations of *democrats* and *federalists*. The spirit of support and opposition still continues, though softened and modified by the progress of liberal ideas and a better acquaintance with the nature of things. It has been, that Massachusetts appeared prepared to oppose any measure suggested by Virginia, while Virginia was, in like manner, arrayed against Massachusetts. The spirit in favor of the shipping interest is now chiefly lost in a general feeling to support it, and hardly felt though existing in full force—but that of the opposition has shewn itself most strikingly on several occasions: the tariff bill, as reported by Mr. Baldwin, and the bill to establish an uniform system of bankruptcy, reported by Mr. Sergeant, had only four votes each (I believe), from all the members south of the Potomac, though one was carried in the house of representatives and the other nearly prevailed. The former would have succeeded by a much larger majority, and probably, also, have been so arranged that it would have passed the senate, if a part of the shipping interest had not joined itself to and acted with its old opponent, to defeat the *protection* asked for by a newly-interested class—the *GRAIN-GROWERS* of the United States, seeking a market for their surplus crops. A dissection of the vote on the tariff bill clearly proves this, and the exhibit will be useful:

	For the bill.	Against it.
1. New-Hampshire, Massachusetts, Rhode-Island, Connecticut* and Vermont.	19	14
2. New-York, New-Jersey, Pennsylvania, Delaware, Kentucky, Ohio, Indiana and Illinois.	67	4
3. Maryland, Virginia, North-Carolina, South-Carolina, Georgia, Tennessee, Louisiana, Mississippi and Alabama.	4	51

The first may be said to represent the shipping interest—the second the grain growers, and the third the planters of cotton and tobacco. Maryland and Tennessee, especially the former, however, grow large surplus crops of grain: but the tobacco interest was the most powerful in one, and the cotton interest predominated in the other.

Here we see that the eastern states were divided, the middle states almost unanimous for the bill, and the southern states nearly unanimous against it. I do not like these geographical divisions—but I dislike it worse that the members of congress should *demonstrate their existence and give THEM EFFECT*.

All that the ingenuity of the shipping interest could contrive for its own advancement, has been secured to it by statute, without opposition. It has become as a matter of course, that whatever the merchants unite in requiring of the government shall be granted—they even took out of the pockets of the people *fifteen millions* of dollars through the operation of their famous bonds, the penalty which was given up, though it had been realized to them. The tobacco and cotton interest have as good reasons to be content in the power of representation acquired by their slaves, and from the nature of their products. If the general amount of domestic articles exported from the United States shall be forty millions, those of cotton and tobacco may be put down as being thirty, or three fourths of the whole—though a twentieth part of the whole people may not be immediately interested in either of them. With such monopolies, these interests may say “let us alone,” because *you have done all that you can for us, all that we have asked of you*. But they should look-out for a re-action—93,000,000 lbs. of cotton brought one-third, or eleven millions of dollars, more, in 1818, than 135,000,000 lbs. pro-

duced in 1821—and the surplus quantity will yet further press down the price, unless it is supported by the home-market.

Here it may be asked what has all this, (and much more that might well be said on the subject), to do with “the American navy?” The application is at hand, and will soon be offered; but this digression seemed necessary to shew how strangely the old opposing spirits had united to defeat the interests of a new and much more numerous and important class, produced by the events of the times and the progress of things; whose interest is the greatest interest—and, from its own nature, cannot be opposed to any other rightful interest in the United States—because it is *that* interest which must mainly support the government in the time of its need. It is composed of the body of free laboring persons—who always have, in every country, in peace or in war, to “bear the burthen and the heat of the day,” as connected with *national* affairs.

To return to the navy—what built it, what sustained it in battle, what renders its present increase other than a prodigal waste of money? The answer is, the *shipping interest*, supported and protected, from the beginning of the government until this day, by *restriction on restriction, defence on defence*: even by *two wars*, at the cost of an hundred and fifty millions of dollars, a great loss of life, and the constant keeping up of fleets or cruising vessels in the Mediterranean, South Sea and West Indies, at the expense of more than a *million a year*. It was *this* interest that brought about our quarrel with France in 1779, and produced the war with Great Britain in 1812: it is *this* interest that keeps up a fleet in the Mediterranean, and sends ships to the coasts of the Pacific—and the people say it is well. To maintain *this* interest, statute has been heaped on statute—the volumes of the laws are filled with acts to *protect* it, and we are ready to fight whenever it is assailed! Why?—what difference, in point of *money-cost*, will it make to me, whether a pound of tea is brought to the United States in an English, Dutch or French ship, or in one owned by my next door neighbor, the great merchant, Mr. John Donnell? for he does not sail his ships *cheaper* than foreigners can sail theirs. But what amount of tea is imported in foreign ships? We may say none—the reason for it is that there is a *restriction* in the way. And why might not an English vessel bring me a cheese from Rhode Island or Connecticut, as well as some old friend who owns a “sloop” in one of these states—again, there is a *restriction* in the way. And so it was in *every* case, until the shipping interest felt strong enough to compete with the *same* interest in other countries—but it is still guarded “as the apple of our eye.” Did we not lately prohibit, *utterly prohibit*, the entry of a *British* vessel with cargo from the West-Indies, because *our own* with cargoes were forbidden an entry thereat? Were we not recently almost at an open quarrel with *France*, meeting her with *duty against duty*, because she would have encouraged *her* shipping interest to the injury of *our's*, in the transport of our commodities? Did we not, by restriction against restriction, duty opposed to duty, cause an opening of the ports of the British West Indies, and induce France to meet us on reciprocal and liberal terms? At these events, the people seemed to throw up their hats and make a great shout—huzzaing for *restriction*, though most of them did not know it. They had been so much accustomed to believe that the shipping interest must needs be *protected*, as to apprehend THAT THAT

*It is right to observe that Connecticut gave six votes for and only one against the tariff.

LITY WAS NO MORE THAN RIGHT!! It is this interest which has built up and must keep up the navy, by its production of SEAMEN—though it has not paid an hundredth part of its own cost to the support of the general government, as shall be shewn below. Ships, without seamen, are less useful than trees in the forest. During our late war with Great Britain, Napoleon had twelve or fourteen of the best and most powerful ships ever built, rotting at Antwerp. If we had had them, would a ruffian, like admiral Cockburne, have depredated on the hen-roosts and pig-styes located on the borders of the Chesapeake, in the manner that he did? Would he not have found it a different affair to have met RONGEONS on the sea, than to stamp on his portrait and insult his venerable mother, at the village of Havre de Grace? But Napoleon had not seamen—and those ships, that might have struck terror under a "bit of striped bunting," were as feeble for the purposes of war as the forests that furnished the timber for them, though they would have been so useful to us—because, by *restriction*, we had raised up a shipping interest which furnished the means to *man* them. It was by *restriction* that this interest rose to such power that we were content to say, even to England, "let us alone and we'll let you alone"—*we will receive your ships on the same terms that you receive ours*, and so *reciprocity*, at present, exists. The *commerce* of the country was not consulted in this arrangement—for we should not want ships to bring in bales of cloth or carry away others of cotton, if all those of the United States were destroyed—the British and Dutch would gladly become our carriers, pay all the *duties* just as honestly as our own people do, and perform the whole business for the same amount of *money* that we now pay to our own citizens—*or less*: but then what would become of the great ships that we have built? they would perish, and their heaps of rotten wood only remain for a while to mark where a "folly" had been located.

We regard the navy as a strong arm of the national defence—but it cannot so act unless it is supported by *money*, as well as men. The shipping interest furnishes the latter, but the other must be derived from the *people* at large—among whom are tens of thousands who never saw a ship. The shipping interest pays no more to the revenue than other persons not united to it. *Commerce* pays no taxes, except a little tonnage duty, hardly sufficient to keep up the light-houses erected for its benefit. The taxes fall on the *consumers* of the goods taxed—the wood-sawyer as much as the merchant; most heavily on the forner, according to his means to pay them. Every poor negro who carries home a pound of sugar, pays three cents on it for the support of government; and it matters not the value of a straw to him, whether it is brought hither in a foreign or domestic vessel—he is still a negro, and must pay the tax or refrain from the sugar. And so it is with us all—IF *domestic industry is to be gauged by a money-amount of value paid for goods imported and consumed*, we should be as indifferent about it as the negro would be in the case just stated. But we are not indifferent—it would destroy the shipping interest and ruin the navy, if we were so—if *we did not meet restriction with restriction*. Well—what is to become of the navy, even if we have sailors to man the ships, provided the people are not able to pay them—if the government pursues the policy of sending *four dollars* out of the country that it may receive *one dollar* in revenue?—a policy that would exhaust and beggar the richest nation in the world? It is only of late

years that this policy—this perpetual desire of the government to encourage the consumption of foreign goods for revenue, has borne with peculiar hardship on the grain-growing districts. While Europe was in commotion, they had a market for their surplus; Europe is at peace, and this surplus chiefly tends to diminish the value of their lands and labor. The freemen of the United States, who hold their own ploughs and cultivate their own soil, are severely oppressed—it is true, they *can* live among themselves; but old habits are not easily parted with, fashion is powerful, and the influence of government is great. We see that *restriction* has raised up and manned the navy, and compelled other nations to meet us on *reciprocal* terms, or else virtually *prohibits* an intercourse through their shipping interests. Our merchants have never been refused any thing that they desired to promote their views—embassies have been specially sent out, as it were, to collect their *debts* in foreign parts, and the *people* have paid the cost of them—indeed, the whole diplomatic corps of the United States is kept up exclusively for the benefit of the shipping interest, at the cost of about 100,000 dollars a year; for we *cannot* have any business with Europe, &c. unless on account of commerce; we have no affinity or alliance with any other nation or people, no influence over the "holy" conspirators against man, no power to "preserve the peace of the civilized world," further than our wishes may go.

The shipping interest has prospered and grown to what it is, through *restriction* producing *reciprocity*. We would not suffer the arrival of a British ship with cargo from the West Indies, when our own ships were excluded, notwithstanding the former might have been more moderate; on account of charges for freight, than the latter. Why, then, should we receive a yard of cloth from Great Britain, when she will not receive even a barrel of flour in payment for it? Should we not apply the rule which has been found advantageous to raising up a commercial marine, to the support of the great agricultural interest, in the establishment of a home market for its products, seeing that a foreign one is uncertain if not absolutely denied? Is it right that every thing should be done for one small class, and nothing done for the other, an exceedingly large and infinitely valuable one? May not the latter demand *equality of protection*—have they not the *power* to enforce that demand? They have both; and the time will come when the past and present state of things will be remembered with feelings that I have no wish to promote. The chief increase of representation is from the *grain-growing states*, and this rate of increase will continue. The people of these districts, through their representatives, have almost unanimously asked for *equality of protection*—that they might be put on the same footing as the other classes of their fellow citizens—see the preceding exhibit of the votes on the tariff. Is it possible they can *forget* the neglect they have met with, the supercilious scorn that they have encountered? When the states of New-York, New-Jersey, Pennsylvania, Delaware, Kentucky, Ohio, Indiana and Illinois shall, at the next congress, move in solid column to claim this equality, *as they surely will do*,—will they not obtain it? That congress will consist of 212 members—the states named will have *ninety-seven* of them, and, after the next census, possess a large, decisive majority, without counting, in either case, on the support to be derived from other states having a common interest with them. They will obtain equality of protection, or *cut loose* the protection

afforded to others; withdraw the diplomatic agents, by refusing appropriations, keep our ships in dock, instead of manning and sending them to the Mediterranean and South seas—saying, “let commerce alone, let it protect itself. It is all the same to us—it will not cost us any more, if foreign goods are brought hither in a foreign vessel than in an American one, and we shall get rid of an expenditure of more than a million and a half a year by suffering foreign and domestic trade to regulate itself. An English agent will give us just as much for our products as an American merchant will do. Britain will take the trouble of clearing the sea of pirates—give her the coasting trade and she will defend it, out of her great goodness to the United States!”

The grain-growers cannot desire a monopoly—“no man hateth his own flesh;” they do not wish to injure themselves. In being anxious that some support should be given to the manufacturing industry of the country, they seek only to bring about equality: excluded by foreign interests from the foreign market, they would create and support a market at home, as it is the policy of all nations to do. Even Great Britain, though the greatest commercial nation ever known, always keeps a steady eye on the home market. Of the 45 millions which she raises in taxes, a little more than an eighth part, only, is produced by the customs; these are used by her as they should be by all nations, merely to balance and protect the domestic labor, not for revenue purposes; and, notwithstanding the waste and prodigality of the government, its inordinate ambition and desperate tyranny, her march to power has been without a parallel. No branch of her industry is left to protect itself—yet her writers and people modestly tell us to let every thing alone: “throw your wheat to the hogs and buy our broad cloths!”

It is really strange that the shipping interest of the United States, built up and existing by restriction, should join in this clamor against restriction for the benefit of the growers of grain. But it is too much the practice of individuals and bodies of men, to “kick down the ladder”, by which they mounted to eminence. They have been protected, and are protected, to the extent of their wishes—they are satisfied; and those who are dissatisfied are “grumblers.” Is not this magnanimous? But what an uproar should we have, if an English vessel from Boston was permitted to an entry at Baltimore, with a cargo of cod-fish—or even allowed to transport British goods along the coast? Why, it would seem as if the world were coming to an end, so great would the outrage be considered, unless redress was promptly made!

There is one and one only item of manufacture what can be regarded as protected, that is of cotton. And what has been the consequence? As restriction built up the best ships in the world and manned them by the best people, so restriction has established the cotton manufacture and furnishes the citizens of the United States with cheaper and far better goods than they were accustomed to import. Is it possible to believe that this effect belongs exclusively to the manufacture of cotton? Surely not, or common sense is at fault. There are many others on which the same operation would take place, even if the present rate of exchange were assured. But who can rely upon that, and will invest his money on the hazard? No prudent man will do it, and so many of what ought to be the most productive branches of our manufacture, and profitably employ and give comfort to tens of thousands of persons, do not exist, and tens of thousands of industrious

people are put into difficulty to find themselves with bread—rather rendered consumers than producers of the national wealth. I can speak feelingly on this subject—accidental circumstances have placed me in a condition to know something of the state of the laboring classes, and it is with a mournful conviction of the truth, I must say, that the real distress now prevailing in Baltimore is without its parallel, at this season of the year. What will be the amount of it, before the ensuing winter is passed, God only knows! But the aggregate is looked to with fear and trembling. Hundreds—perhaps, I might say thousands, of the laboring classes have left us, seeking subsistence—but others have arrived on the same errand; every branch of business is reduced in its extent—the mechanics, in general, do not employ *one half* of the hands that they did, and the industrious poor are oppressed that revenue may be derived from the products of foreign labor. Our poor house is filled, the British poor houses may be kept empty. This is the plain practical effect of the operation, though the loudest cryer of “let us alone” will hardly avow it. And though what is said of my own knowledge, as to Baltimore, is general—and, though the American people, through real or acquired wants, are suffering more than they ever did since the years 1784 or 1785, we shall soon have a grand exhibit of the prosperity of the national treasury—be told, perhaps, that the general government can meet its obligations without any further borrowings of money to pay current expenses, which is desirable enough in itself, though objectionable as to the manner by which it has been accomplished. But it is useless to talk—it is probable, that, by the time when the importations of the present year are paid for, we shall feel sufficiently to “listen to reason.” “Issachar is a strong ass;” yet he may be over-burthened; and his back may be broken, if he does not kick off the oppression.

The following are the little articles that gave rise to the preceding remarks:

The *Liverpool Mercury* contains the following paragraph, copied from the *British Luminary*, on the American navy.

“There is at this moment a 74 gun ship, the Franklin, on the coast of Chili, in the Pacific Ocean, looking after the interests of the American merchants in Chili and Peru. Of this ship an intelligent friend of ours at Valparaiso writes thus:—“The Franklin is commanded by com. Stewart, who has his wife with him, a handsome and well educated accomplished woman; she plays on the harp, and speaks the French, Spanish and Italian languages, both fluently and correctly. The ship is in high order—has 700 men on board, who have a library for their use; consisting of about a thousand volumes. The captain has 700 volumes in his cabin, which is exquisitely fitted up and beautifully furnished. Here, then, we see sailors, who are freemen, submitting to the strictest discipline; here we see what was never before seen or heard of, and what will never be seen or heard of, except on board a ship manned by freemen—a library of books for the men; an arrangement in many respects utterly incompatible with a crew composed of pressed men, or men who have entered from fear of the pressgang; men who have had no hand in settling the terms on which they shall serve, and whose term of service depends wholly on the will and pleasure of those who compel them to serve.”

The following remark is added by the editors of the *Mercury*—

Our readers will recollect the jokes of Mr. Canning about this same American navy, and their "bits of striped bunting." We have a notion that we shall hear no more of such sneers from the right honorable gentleman, since it is a matter of public notoriety, that, whilst his "big red lion" has been asleep, British merchant ships have found protection from pirates under this identical "striped bunting."

RUSSIA AND BRITAIN. We see many extracts from the British papers, some even from the London "Courier," that abound with sullen or malignant remarks on the proceedings or supposed designs of the emperor Alexander, who is intimated to consider himself "the autocrat of Europe as well as of Russia." This is what every reflecting man has long been looking for—it is the natural course of things, that he should feel his importance and act on that feeling for his own aggrandizement. It is stated that, when Napoleon surrendered himself to the British in 1815, he said "you have been guilty of a great mistake—you affected to fight against my ambition, whilst you should have joined me in my endeavors to check the ambition of a power, which you will feel when you will be unable to remedy the evil." It is said also that the marquis Wellesley, from the same considerations, pronounced the victory at Waterloo "an unfortunate battle for England;" as having put down a power that she might have controlled, and set up a power that she would be unable to control." The British now appear to be somewhat sensible of the "mistake" that they made; but the proceeding was in exact conformity with their previous conduct. If they had "kept themselves snug," and not have interfered with the affairs of France and the continent generally, Napoleon would never have arrived at the dominion he attained; but, having raised him to the most elevated point, through a miserable policy, they ran to the other extreme to put him down by raising up Alexander, who is nearly untamable to them, let him do what he pleases, and capable of rendering them more harm than Napoleon was. He modified his tariff some time ago, to promote a home market and protect the domestic industry of his mighty empire—and, whether it is that the British are offended because he will not allow his people to be tributaries to them for threads and calicoes, or from a well founded jealousy at the march of his ambition, we cannot tell—for Britain is quite as sensitive about an affair of tapes and bobbins as of national honor, separated from a direct pecuniary profit. This may be thought a hard saying by some—but the justice of it is completely exemplified in the case of their conduct to Napoleon himself. Their government had made a treaty with him, and ratified it, as the first consul or ruler of France—by that of Chatillon, he had been acknowledged emperor; and France was established a strong nation, not only as a free and independent power, but as a chief power of the world—yet when Napoleon surrendered himself, as any one defeated by battle is presumed to have a right to do, to be received as a prisoner of war according to the usage of civilized nations, he was not permitted to touch British ground, but transferred to a rock, and there chained, as it were, with the manifest design of taking his life. The laws of Great Britain were trampled under foot, that that man might be oppressed—by these laws, a vessel of war, within the range of the civil jurisdiction of a county, is subject thereto: but such process was resisted by force, and every civil officer denied ad-

mittance to his prison, a 74 gun ship. The despicable ministry would not suffer him to land, because they feared that their utmost power would be insufficient to retain him as a captive, *under the laws and feelings of England*—and so they violated not only every accepted principle of honor and hospitality, but their own institutions, about the excellency of which they prate so much, and hold up for the example of nations. A more outrageous act of personal violence never was committed, and there is no Englishman that will approve it—no one has attempted to justify it, except on the plea of necessity, a plea of tyrants, that will justify any thing in those having power to enforce it. After his surrender, they called Napoleon "general"—as a general of France; they made peace with France, but gave not up the "general" to France, either as a felon or as a prisoner of war. If Louis had really been king of the French, he would have demanded him: this was due to himself as a sovereign prince, and the nation as an independent power. Suppose that, by any means, before the proclamation of peace with Great Britain, ANDREW JACKSON had fallen into the hands of the military force of that country, and had been retained a prisoner after the ratification of the treaty was known to the British authorities—what would have been our feelings on the subject? Who would have blamed one of his gallant Tennesseans for directing his unerring rifle at the "right eye" of even the "Lord's anointed" as he now is called, or of doing to Castlereagh that act of justice which he has rendered on himself? Two wrongs do not make a right—but, if war is allowable, it establishes the principle of retaliation and justifies a resistance of violence by violence—of force by force. If JACKSON had done wrong, it was our right to judge and punish him as a "general" in our service—but this is self-evident; and the treatment of Napoleon deserves and, I hope, will meet with its avenger, even through Alexander, who was the apparent tool, but the real master of British policy—whose character we now regard as one of the worst of the bad, as a conniver at the murder of his own father, whose death was foretold in London, as his own may surely be, unless he surmounts himself by the affections of his people as Napoleon did, who thereby avoided many deliberate plans to assassinate him.

The "holy alliance" which Alexander is now at the head of—(a conspiracy of villains against HEAVEN'S own ordinances, granting free will and imposing consequent responsibility on the human race), upholding the doctrine of legitimacy, cannot sanction the murder of Paul; nor is there any rule, divine or human, to palliate the conduct of the son, "the magnanimous Alexander," for aiding in, conniving at, or sanctioning the base assassination of his father. "Vengeance is mine, saith the Lord, I will repay it" and it will come in Its time and His way. This abominable band, for whom —

—"what wish can prosper or what prayer,

"For merchants rich in cargoes of despair;

"Who drive a loathsome traffic—gauge and span,

"And trade in muscles and the bones of man!"

will be dissolved; and the agents of it be con-

*There are not a few who believe that the conduct of this man to Napoleon, given to history by Dr. O'Meara's "Voice from St. Helena" was the real cause of his self execution—and of all the men at his command, Castlereagh could not have selected two persons better fitted for brutal force or the mean exercise of power, than admiral Cockburn and sir Hudson Lowe.

signed to the indignation and punishment of an outraged world—unpitted, unforgiven!

The following narrative of the murder of the emperor Paul is introduced, that some may better understand our allusions to that event—he was a bad man and a fool; but these are qualities most respected in the "holy alliance," and would have entitled him to the presidency of the board of conspirators, if he had lived, instead of his peace-loving, unambitious and religious son. [By the bye, I have much impatience to hear what certain persons in the United States will say of Alexander, if the English should quarrel with him.]

From the Baltimore Federal Gazette.

Lord Holland, in a late speech before the house of peers, makes some very severe remarks on the present emperor of Russia. After speaking of the violent death to which every Czar, since the death of Peter the great, seems to have been predestined, he observes, that Alexander himself sits on a throne weltering in the blood of his father; and insinuates that his present majesty's conduct towards the unfortunate Paul, was such as to give rise to the most unfavorable suspicions. As the circumstance of that emperor's tragical end are not generally known, I will present before the public some details collected from conversation and periodical works, particularly that valuable emporium of knowledge, the *Bibliothèque Historique*.

On the death of Catharine II. Paul gave reins to his wild and disorderly passions, which had been fettered down by his mother during her lifetime; but, even in the riot of his disorders, one could discern a mind which would have done honor to the throne, had it been more carefully cultivated. "At length, (says De Staël), his passions encompassed him on all sides, like the serpents of Laocoon"—like Nero, he finally threw off all restraint, and appeared in the nakedness of despotism, which is, at best, but an organized anarchy—it may, for a time, envelope anarchy in its hideous veil, but the latter will soon shew her face in "Gorgon horrors clad." Paul had by him a list of proscriptions; like Domitian, he resolved to let no one live near him, of whose fidelity he had the slightest suspicion;

"And where his frown of hate I hardly fell,
"Hope, withering fled, and mercy cried farewell!"

M de Pahlen was then prime minister of Russia; he was the servile instrument of this emperor's passions—but this modern Sejanus at length suspected that his own name was on the fatal proscription list. He conferred with the grand duke, Alexander, on the measures to be adopted, and he found him but too ready to listen to his overtures; a conspiracy was formed to dethrone the emperor, and the night of the 23d March, 1801, was fixed on for the accomplishment of their traitorous designs.

Paul had retired to his chamber in the Palais Miché, an impregnable fortress, flanked with bastions—none but Pahlen knew the outlets, trapdoors and "passages that lead to nothing"—by which human contrivance had secured his majesty from intrusion. The assassins collected by the traitorous minister, were about sixty in number, and had all been well plied with wine—Benixen and Subow, (the last a favorite of the voluptuous Catharine), commanded the horde. After some difficulty they made their way to the emperor's bed chamber; but, to the consternation of Subow, Paul had left his bed. He had concealed himself behind a screen, where he remained almost motionless with fear "Sire," exclaimed the traitor, "you are a prisoner, by order of the emperor Alexander—you had better make no resistance, as your life would

be endangered." "What have I done to deserve this treatment," said Paul. "You have been martyring us for the last four years," answered one of the ruffians.

During the scene, the grand dukes, with their wives, were in an apartment immediately below their father's, where they waited to learn the issue of the conspiracy. A party of desperadoes, headed by prince Tatchwill, (who was extremely intoxicated), now entered the imperial room; some of the conspirators, less ferocious than the rest, were for sparing their master; but Tatchwill's horde insisted on dispatching him:

"The longings of the Canibal arise,
"Although they spoke not, in their wolfish eyes."

The prince threw himself on the unfortunate monarch, and, in his fall with him, threw down and extinguished the lamp; the remaining scene of midnight horror was passed in the dark. Benixen left the room in search of a candle—when he came back, he found Paul lying dead on the floor. The ruffians had strangled him by means of a scarf. He made but a feeble resistance, being paralyzed with fear; he only passed his hand between his neck and the scarf, and cried out, "Gentlemen, for heaven's sake spare me! Give me but time to make my peace with God!" "Go make it with the devil!" exclaimed one of the inhuman monsters, as he stopped the breath of his victim.

Immediately after this murder, the empress and grand duke quarrelled about their respective rights, before death had spread its freezing coldness over the monarch's corpse! The empress wished to act the part of Catharine II. over again, and insisted that, since she had been crowned, allegiance was due to her alone. At length Pahlen hurried off Alexander to receive the oaths of fidelity from the grand dignitaries of the empire, and the empress mother was persuaded to give up her pretensions in favor of her son. In the interim, the report was circulated that Paul had suddenly died of an apoplexy. Even, (but this is "hypocrisy to the very devil"), even they caused his body to be opened, to ascertain the cause of his death! Paul was exposed fifteen days on a bed of state, and at length he was entombed with his fathers, with the "pomp and glorious circumstance" usual on such occasions. I have one fact to add to all these soul-harrowing details—not one of the emperor's assassins has suffered the punishment due to traitors; and the Sejanus, who instigated the murder, lives in ease and affluence!

If any one reflects on these speaking facts, and afterwards can envy "the boast of heraldry and the pomp of power," he little knows how happy is his lot compared to that of the fortunate wretch, whose situation he sighs after.

Tobacco. The following is given as the amount of Tobacco exported from the United States in the year ending 30th September, 1822:

Boston	4,409
New-York	7,581
Philadelphia	3,615
Baltimore	19,858
George Town	4,148
Alexandria	5,941
Petersburg	12,467
Richmond	12,131
New-Orleans	7,897
Other ports	4,729

82,778

THE BRITISH NAVY—*from late English papers.* According to the quarterly returns up to the 25th Sept. the total number of vessels of war is 609—included in that number are 84 ships, &c. now building in different dock-yards by order of government. The following is a classification of the 84 ships, &c. now building:

Ships of 120 guns, the Neptune, Prince Regent, Royal George and St. George	4
110 guns, the London and Princess Charlotte,	2
86 guns, the Formidable	1
84 guns	4
80 guns	6
74 guns	1
60 guns	4
46 guns	26
28 guns	11
18 guns	4
16 guns	1
10 guns	13
Yachts, Bombs, &c.	—

Total ships, &c. now building 84

Of these ships, there are 4 building at Bombay, and those are ships that are on a grand scale, namely, the Asia, 84 guns; the Bombay, 84 guns; the Madagascar, 64 guns, and the Manilla, 46 guns. The other ships and vessels are building in English dock yards, viz. Plymouth, Portsmouth, Woolwich, Chatham, Pembroke, Deptford, &c.

TURNPIKE ROADS. An English paper states that the annual income of all the turnpike roads in Scotland is 129,635*l.*; the total debt, 1,124,273*l.*; the annual expenditure, 152,820*l.*; the excess of expenditure, 6,671*l.*; the interest, 140,826*l.*; and the total number of miles of turnpike roads in Scotland, completed and not completed, 3,611.

The following roads in England afford a remarkable contrast:—

Glostershire—897 miles road; annual income, 51,581*l.*; income per mile, 572*l.*; amount of debt, 212,509*l.*; debt per mile, 236*l.*; annual expenditure, 31,494*l.*; expenditure per mile, 35*l.*; excess of income, 19,734*l.*; interest of debt, 4,346*l.*

Middlesex, which we believe includes London and its vicinity, north of the Thames, 157 miles road: annual income, 95,545*l.*; income per mile, 608*l.*; amount of debt, 185,475*l.*; debt per mile, 118*l.*; annual expenditure, 66,050*l.*; expenditure per mile, 548*l.*; excess of income, 9,495*l.*; interest of debt, 1,802*l.*

FOREIGN NEWS.

France. The National Gazette says—We were struck with the following article in the *Paris Journal des Debats*. It implies a complete vassalage of the business of bookselling to the ministry. "The bookstore of Mr. Correard, which was shut yesterday by order of police, by virtue of the ordinance of the king, withdrawing from him his privilege as bookseller, was opened again this morning. This afternoon, at four o'clock, the commissary of police, accompanied by several *gen d'armes*, presented himself anew, and, after having remained several hours preparing a process verbal, caused the store to be shut up a second time. Notwithstanding the great numbers of people always assembled at the Palais Royal, in the evening, every thing remained in perfect quiet."

Spain. Captain Alvey, an American, has reached London from Madrid, bearing despatches from Mr. Forsyth, our minister in Spain, though robbed of

some of his papers by the soldiers of the "army of the faith," and otherwise ill-used by them. He speaks of them as bands of smugglers, convicts and priests, who commit the most horrid and deliberate murders. He says that the apostolic troops, on a certain occasion, having made thirteen constitutionalists prisoners, commenced the work of death by putting out an eye of each, that they then took off one joint from each finger; after this they cut out the tongue, and, in mercy, closed their lives by beating out their brains with the but-end of a musket! He found at Bayonne three archbishops, each accompanied by a suit of friars, &c. buying up arms and seducing all they could to enter Spain and murder the people thereof—for the good of the faith! We trust that they will meet with a suitable reward for their zeal—the holy zeal of the "holy alliance."

The sitting of the extraordinary cortes commenced on the 8th of October. An official letter, from the war department, was read, stating the inadequacy of the military establishment of 51,000 infantry and 6,500 cavalry, and requesting that the cortes would decree an increase of 37,956 of the former, and 7,637 of the latter. This increase, it was contended, was necessary for the consolidation of the constitutional system. The letter was referred to the committee of war.

An official letter was read from the department of finance, stating that, in taking into consideration the arrears of the public funds, which caused a deficit of 352 millions, (£3,960,000 sterling), and that the government had to attend to highly important obligations, for which it would be necessary to add to the estimate the sum of 432 millions, (£4,860,000 sterling), the cortes ought to decree the necessary measures for collecting these sums, of which the government was in want, in order to carry on the public service.

Naples. Some of the persons lately executed for having taking a part in the revolutionary proceedings, were denied Christian burial, because they would not confess to, and have confidence in, the priests of the king who condemned them to death.

Greece. There are sundry rumors, (but as yet only rumors), that the Greeks are doing badly—that their cause is desperate. But particulars are not stated and we have hope that the rumors are not true.

Mexico appears distracted by an extensive civil war. The emperor is not seated on a bed of roses. If he maintains the throne, he must establish it by blood. Gen. Victoria, at Xalapa, and apparently at the head of a strong force, still upholds the banner of liberty—he contends for a republican government, and we must wish him success.

Gen. Darilla, having retired from the command of the castle at Vera Cruz, the new governor, seeking "reputation even at the cannon's mouth," resolved to attack the city. He did so, and was completely defeated, with the loss of 200 men. The battle was fought in the streets. Thus the *quasi* peace that prevailed between the royalists in the castle and the imperialists in the city, has been broken, and open war may be expected.

We have procured, (says the Charleston Courier), a translation of the following eloquent memorial, from the Havana Noticioso of the 28th ult. Memorial, addressed to Iturbide, by the chief of the province of New Santandeo, the council and people of Soto de la Marina, and the officers and troops composing the militia of said province.

Sire—The chief of the province of New Santandeo, the council and people of Soto de la Marina,

and the officers and troops, composing the militia of said province, assembled: Penetrated with the deepest regret at the measures so oppressive to the liberties of the nation, which the government of your imperial majesty has thought fit to execute in the most scandalous manner, and in direct violation of our most sacred rights; and the ministry besides, by their artifices and intrigues, proving clearly that they are sold to the partizans of the Spanish government, in order to dis-unite and destroy us—present to your imperial majesty, with all the dignity of freemen, this memorial of our complaints and grievances, and our astonishment at the imprisonment of the worthy deputies to the sovereign congress, by which act the national representation has been reduced to a mere nullity.

What, sire! does your imperial majesty so soon forget the sacred oath you took in congress? There your majesty protested, in the most solemn manner, before God and man, that, above all, you would inviolably respect the political liberties of the nation, and of each individual in particular. How, sire, does this accord with the annihilation of congress, the imprisonments effected in the capital and provinces, of men distinguished for their patriotism and love of liberty? These enormities are excused, it is true, under the specious veil of subversion of difference of opinion and overthrow of the state; but, sire, where is this subversion and difference of opinion truly to be found? It is in the ministry, whose interests are incompatible with those of the nation—'Tis the ministry, sire, who are ambitious of governing in your name, without submitting themselves to any rule or responsibility. Their object is to assume all the power in their own hands, and to exercise a tyrannical despotism. They wish, in short, to alienate your majesty from the people, demonstrating that your interests are different, when, in fact, they are perfectly identified with each other.

Sire, we do not pretend to establish new forms, nor of deviating, in the smallest degree, from those already sanctioned. We wish that the laws do govern, and not mere caprice; that government have our happiness for its end, not their own aggrandizement. We wish to impress upon your majesty, that we are not guided by a revolutionary and innovating spirit, but, on the contrary, by the most ardent desire for the welfare of our country. We have sworn to a limited monarchical constitutional government, and far from us the intention of altering or attacking it; but we are anxious that it may not degenerate into an absolute monarchy. We require that your majesty comply with your oath, and no more.

In conformity with this resolution, which we have adopted, and sworn to maintain, sacrificing, if necessary, our lives, our fortunes, and whatever we hold most dear upon earth, we therefore supplicate your majesty:—

1st. To be pleased to order the immediate release of the deputies to congress, arrested on the night of the 26th of August, and all those subsequent to that date.

2d. That congress meet at a place of their selecting, and where they may deliberate with absolute freedom.

3d. That the present ministry be deposed, and tried according to law.

4th. That all military tribunals of public safety be extinguished and suppressed, wherever they are already established.

5th. Also, that every individual, in Mexico and the provinces, imprisoned on suspicion, and in consequence of the circular of the first secretary of

state, dated on the 27th of the said month, of August, be liberated: those who may be convicted of any crime, to be tried according to law, and by the competent tribunals; and lastly, that the fundamental laws that we have adopted for the time being, be observed.

If, (which God forbid), your majesty should reject these just petitions, the demon of evil and discord will lower on the desolated empire of Anahuac, and we shall be plunged in a war, whose only object shall ever be for the sacred cause of our freedom. We, at least, and all this province of New Santandero, faithful to our oaths, and devoted to the cause of liberty, will sooner die a glorious death in the field of honor, than bow our necks to fierce despotism. We have taken up arms, not against your majesty, but against those who, abusing your name, wish to enslave us in irons still heavier than those we have just rent asunder; and we shall not lay them aside until we have seen our congress liberated, yourself freed from the insidious snares which the vile and designing are laying out to your majesty, to ruin both you and the nation; but, above all, to rescue the latter from the evils with which it is threatened. Sire, it is in your power to avoid it; let posterity say, that the great Augustine the first, twice saved the Mexican nation.

And, whilst your memorialists take into consideration what we have exposed, we shall not permit Don Pedro Jose Lanuza, who came for the purpose, to take the command of the province. We do not wish to be under his command, neither for the present nor for the future. We approve of the present chief; his virtues and patriotism entitle him to your confidence; and we shall suffer no other to command us, until we see our freedom secured. Neither shall we allow any foreign troops to enter the province. If any should attempt it, by force of arms, without listening to the voice of that reason and justice, which prompt us to apply to your majesty, as the father of his people, we shall oppose them with arms; whilst we, on our side, do not wish the effusion of blood, unless we be forced to repel force by force, state, we shall always observe the rights of war and men, regretting, eternally, the blood of our brethren, which we may be forced to shed.

May it please the Almighty to enlighten your majesty in the resolutions which you may adopt, and to carefully preserve, for many years, your precious life, for our own happiness.

Soto de la Marina, 26th Sept. 1822: second of the independence.

[Here follow the names.]

Russian State Paper.

The following *modest* exposition of the designs, &c. of the emperor of Russia, was published, by authority, at St. Petersburg, on the 28th Aug.

His majesty, the emperor, set out for Czarskjesela, on the 16th of this month, to go, first, to the capital of his kingdom of Poland, then to Vienna, and afterwards to Verona. This journey is to be considered as a sacrifice made by the emperor for the good of Europe. His great empire constantly needs him, and the (certainly not common) ties which, in Russia, attach the sovereign to the country and the people to the sovereign, would not allow of a long absence without grounds of this important kind; yet his majesty will be absent several months. Nay, his faithful people is prepared not to see him return till the manifold and complicated interests, which have been rendered important by

so many conflicting events, shall have been discussed and adjusted to the general satisfaction.

The emperor has a right to expect from the European public, that it shall sincerely acknowledge his upright endeavors to preserve the peace of our part of the world, consequently the undisturbed welfare of millions of families: for his majesty, ever since the commencement of his great political career, has shewn no other wishes, and followed no other system, than to secure peace to his contemporaries, and maintain the most complete possible harmony between the governments which can alone consolidate this peace. The emperor may expect, that his present absence, from his beloved subjects, will be seen in this point of view only, as he has just given the greatest personal proofs of a moderation seldom met with in history. Offended at a neighboring power, which seemed to have laid it down as a rule to depart from these principles, which, with all other deviations from ordinary forms, could alone place it in the rank of an European power, the great heart of the emperor preferred counting the drops of blood which the pursuance of his just claims to satisfaction must have caused to flow. *Elated above the sensations innate in the nature of men and of sovereigns, the ruler of the greatest empire on earth resolved to follow only his own feelings for the peace and happiness of nations, and to illustrate his name by the greatest example of moderation that so mighty a monarch could leave to posterity. Even the prospect of a great increase of power could not induce his majesty to sacrifice his pure principles to ordinary policy. The emperor needed it not to make Russia more happy; and that was sufficient for him not to expose the welfare of this quarter of the globe to new dangers.*

There needs but a short review of the history of our times to prove to the world, how the emperor himself is ready to open his heart to any newer views of national prosperity. The constitution given to the Polish nation must convince all Europe of this, for the emperor gave it freely from the impulse of his own paternal heart. But he did not let his work rest here. He proved in Warsaw that he was magnanimous enough to remain unchanged, even when the result of his generous resolution did not perfectly answer his expectation. It was impossible more clearly to manifest the implicit will, to gain the love of his people.

With all the feelings for the happiness of the world, the emperor cannot approve when individuals, or perhaps associations of individuals, throw obstacles in the way of such high purposes, through an unhappy love of disorder, or perhaps for a wish to promote their private interest, and thereby perhaps to endanger the tranquility and peace of nations. Ever since there have been governments and people, there have existed forms, the sacred inviolability of which ensured the peaceful existence of both. To destroy them with an inconsiderate hand is a crime committed against nations. What monarch, what reasonable man, what reflecting people could approve of it? The cosmopolite must dread its existence.

But who can deny that such a crime does exist? and what citizen, regardful of his domestic happiness, will not be alarmed at it?

If the emperor of Russia holds out his august hands, in conjunction with his most illustrious allies, to confine every storm that threatens danger to the happy citizen, he acquires a claim to his gratitude, and that of his posterity. Present and future governments pay him this tribute, and history will immortalize his memory like that of a Titus.

The object of the meeting of the august monarchs and their representatives at Vienna and Verona, after what has been said, cannot be a secret to the world, because the emperor Alexander has taken the resolution to attend it in person. Though the details of the negotiation may be reserved for a future period; though the means to attain the noble object may be subject to manifold discussions, the main point itself is indubitable, since Europe has seen that the founder of that holy alliance, which originated on the banks of the Seine, has exerted himself practically to confirm the principles laid down in it, and still farther to confirm them by his present journey.

The Russian nation blesses, therefore, the resolution of its generous sovereign, even though it must be for a time deprived of the benefits which it daily receives from the hands of its monarch. With high and well-founded pride, it will strew the way by which its beloved sovereign returns, with the flowers of its boundless gratitude.

AGRICULTURE.

[The following letter has been communicated to the president of the different agricultural societies in the state of Virginia]:

October 21st, 1822.

Sir,—The enclosed resolutions of the agricultural society of Albemarle, explain the wish of the society to provide for agriculture the advantage of a professorship, to be incorporated in the university of Virginia; the means proposed for making the provision, and the hope entertained of a general co-operation in the scheme.

The present seems to be an important crisis in the agriculture of Virginia. The portions of her soil first brought into cultivation, have, for the most part, been exhausted of its natural fertility, without being repaired by ameliorating systems of husbandry; and much of what remains in forest, and can be spared from the demands of fuel and other rural wants, will need improvement, on the first introduction of the plough.

These truths are now sufficiently impressed on the public attention, and have led to the establishment of the agricultural societies among us, which are so laudably promoting the work of reform.

As a further means of advancing the great object, it has occurred to the Albemarle society, that a distinct professorship in the university of the state, if sanctioned by the proper authority, might be advantageously appropriated to the instruction of such as might attend in the theory and practice of rural economy, in its several branches.

To the due success of agriculture, as of other arts, theory and practice are both requisite. They reflect light on each other. If the former, without the test of the latter, be a vain science, the latter, without the enlightening precepts of the former, is generally enslaved to ancient modes, however erroneous; or is, at best, but too tardy and partial in adopting salutary changes. In no instance, perhaps, is habit more unyielding, or irrational practice more prevalent, than among those who cultivate the earth. And this is the more to be lamented, as agriculture is still so far below the attainments to which it may fairly aspire.

A professorship of agriculture might derive special advantage from the lights thrown out from the chair of chemistry in that institution. This science is every day penetrating some of the hidden laws of nature, and tracing the useful purposes to which they may be made subservient. Agriculture is a

field on which it has already begun to shed its rays, and on which it promises to do much towards unveiling the processes of nature to which the principles of agriculture are related. The professional lectures on chemistry, which are to embrace those principles, could not fail to be auxiliary to a professorship having lessons on agriculture for its essential charge.

The fund contemplated for the support of such a professorship, is to consist of a sum drawn from unexpended subscriptions, from special donations, and from a diffusive contribution, not exceeding a dollar from an individual. It is hoped, that for a purpose of such general utility, the number of contributors will more than make up for the smallness of the respective sums; and that with the other resources, means may be gathered not only adequate to the immediate views entertained, but justifying an enlargement of them.

Should this prove to be the case, it will be an improvement of the plan of agricultural instruction, to provide and place under the superintendence of the professor, a small farm, in the vicinage, to be cultivated, partly as a pattern farm, illustrating practically a system at once profitable and improving; partly as an experimental farm, not only bringing to the test new modes of culture and management, but introducing new plants and animals deemed worthy of experiment. In obtaining these, aid might be found in the patriotic attention of the public and private naval commanders, in their visits to foreign countries; and it might well happen that occasional success, in rearing new species or varieties of peculiar value, would yield, in seeds and stocks, a profit defraying the expense incurred on this head.

A farm, exhibiting an instructive model, observed as it would be by occasional visitors, and understood as it would be in its principles and plans, by students returning to their dispersed homes, would tend to spread sound information on the subject of agriculture, and to cherish that spirit of imitation and emulation, which is the source of improvement in every art and enterprise.

You will oblige, sir, the society of Albemarle by laying this communication before that over which you preside, and by transmitting its sentiments thereon; which will afford particular pleasure, if they should accord with the views of this society, and promise so valuable a co-operation in carrying them into effect.

By order of the society,

JAMES MADISON,

President Agricultural Society Albemarle.

October 7th, 1822.

On the motion of general John H. Cooke, the following preamble and resolutions were adopted:—

Whereas, the establishment of a professorship of agriculture, in one of the principal seminaries of learning in this state, is a measure eminently calculated to hasten and perpetuate the march of agricultural improvement, already so happily commenced: And, whereas, there are grounds to believe that such an institution may be incorporated into the university of Virginia, a position at once the most advantageous and convenient to every part of the state: And, whereas, this society could not make an appropriation of its funds more conducive to the permanent attainment of the primary objects of its institution—and as it is reasonable to expect that all the agricultural societies, the farmers and planters generally, will cheerfully con-

tribute to an establishment of such universal interest—therefore,

Resolved, That one thousand dollars of the sum, now in the hands of the treasurer of this society, be appropriated to the establishment of a fund, the profits of which shall go to the support of a professorship of agriculture at the university of Virginia.

Resolved, For the furtherance of this design, that the president be requested to prepare an address to the other agricultural societies of this state, requesting their co-operation in this scheme—and further to promote the same object, and increase the said fund, that a committee be appointed to solicit donations, not to exceed one dollar, from individuals in every part of this commonwealth.

Resolved, That the aforesaid appropriation, together with all that may accrue under the foregoing resolutions, be loaned to individuals on good personal security, or to corporate bodies; and that, when the sum loaned to any one individual shall amount to one thousand dollars or upwards, landed security shall be required. That the interest shall be payable semi-annually, and shall be re-invested, until the yearly profits of the fund shall be sufficient to afford an income equal at least to a professorship in the university.

Resolved, That the funds above referred to, together with donations of books and property of any other description, be, with the permission of the legislature, transferred to the rector and visitors of the university in their corporate capacity.

(Extract from the minutes.)

P. MINOR, *Sec'y.*

Legislature of Georgia. GOVERNOR'S MESSAGE.

EXECUTIVE DEPARTMENT GEORGIA.

Milledgeville, 6th Nov. 1822.

*Fellow-citizens of the senate,
and house of representatives:*

As the representatives of the people permit me, on your annual assemblage, to congratulate you upon the happy condition of our common country, at peace with all the world, our agricultural pursuits furnishing ease and comfort, without the temptation to luxury, we find the nation rapidly advancing to a state of physical strength and importance which will enable the republic to defy every attempt to draw her into the vortex of European turmoil, or to corrupt or abolish the pure principles of our government. To the principles of the constitution of the union, so wisely framed and prudently administered, may be attributed this prosperity. But, in the enjoyment of these blessings, we should not be forgetful of the favor of an all-wise Providence, in allowing to us a country for a home, combining every advantage that could be asked for by man. Be it ours to improve, with a grateful heart, all those benefits, so signally conferred.

In the affairs of the general government, it is believed, but few changes have taken place, affecting its exterior relations, of immediate importance to this state. Among the most important of these may be considered the opening of many of the West India ports to the vessels of the United States. This was a measure anxiously looked for by a considerable portion of this state, and it is hoped that the anticipated benefits will be fully realized. With all the nations of the civilized world, a perfect harmony exists, which promises to our country a long and prosperous peace; and it is a circumstance

much to be deplored, that there should be found any thing in the internal condition of our country calculated, even remotely, to impair the full enjoyment of such a blessing. It cannot, however, have escaped you, that the second chief magistrate of the union, who united all hearts and all voices in his elevation, is destined to feel the weight of a restless and ambitious opposition. It would have been a source of proud exultation that the last of the patriots, whose principles have been purified in the crucible of the revolution, should have been supported in that policy which is derived from Washington, and which experience has established to be the best calculated to secure to the republic peace and prosperity. That political axiom which experience has demonstrated to be perfectly correct, "that a due preparation for war is a mean most to be relied on to prevent aggression," seems to have been forgotten by those who manifest a disposition to pull down and destroy those national defences which have been so wisely planned, and, as yet, but partially executed. Were other reasons wanting, it would be amply sufficient to establish the policy in question, to advert to the unprepared state of our country immediately preceding the late war; much blood and treasure would have been saved to the nation by a few additional frigates, a few thousand well disciplined troops and fortifications, located at the most exposed and probable points of attack. But it would seem that there are those who are deaf to the suggestions of experience, and whose political creed it is, for the pleasure of hoarding a dollar for the moment, to sacrifice thousands at a distant period. A steady adherence to a system of national defence, commensurate with the resources of the republic and situation of the country, is obviously a dictate of wisdom; for nothing short of the power of repelling injuries, will secure to the union a rational prospect of escaping the calamities of war or the degradation of insult. Such has been the enlightened and energetic course, throughout, of the present chief magistrate, and we may well hope that it may not be changed from light or transient motives, or obstructed from mistaken views of economy, or the restless aspirations of individual ambition.

[The governor next speaks of the increased population of the state, which entitles it to one more member in the national legislature—notices the territory newly acquired from the Creek Indians, as entitled to representation in the state legislature—recommends education and internal improvement, in a very handsome stile—refers to a treaty held with the Cherokees, with a prospect of a further acquisition of territory, and notices the proceedings had—details the progress made in adjusting the claims of Georgia against the United States, which had been adjusted at the war department and allowed to the amount of \$88,702 62, recommending the subject to the further attention of the legislature; and notices several other important local subjects, among the rest the case of Mr. Hammond, as follows]—

A statement of warrants drawn on the treasury during the political year eighteen hundred and twenty-two, and a list of executive appointments, are herewith transmitted. By the latter document it will be seen that, on the 12th day of August last, Simon Whitaker, esq. was appointed secretary of state, in the place of Abner Hammond, esq. The causes which led to this exercise, as it is conceived, of a constitutional right and political duty of the executive, I deem it not improper to submit to your consideration. About a month previous to the 12th

August last, Mr. Hammond, without the knowledge of this department, had absented himself from the seat of government, nor did he intimate to this department the length of time he intended to be absent, or the place whither he was going. A clerk, contrary to the express orders of the executive, persisted in the discharge of the duties of the office as deputy, acting solely under a letter of attorney from Mr. Hammond, and signing his individual name for that of the secretary—"Thos. H. Crawford, for Abner Hammond, secretary of state." The absolute uncertainty of the time at which the secretary would return, it depending upon contingencies which might protract his stay to an indefinite period—knowing that there existed no law of the legislature which would legalize the acts of his clerk, no matter under what authority from his principal he might have acted—and believing that the great seal of the state, which had been solemnly intrusted to me, and, according to the forms prescribed, solemnly committed to the safe keeping of the secretary, had been by him illegally and improperly transferred to a mere boy, acting under no oath or legal responsibility; in fine, knowing that the office for the time was vacant, and that it had been vacated to all legal intents by the act of Mr. Hammond himself, and that his long absence and the uncertainty of his speedy return, affording no sufficient ground for the exercise of executive forbearance in his favor, without a direct and palpable preference to individual convenience, at the expense of the public good and the rights of the community, I deemed it my imperious duty, under the 9th section of the 2d article of the constitution, to resume the great seal of the state, and confide it to the keeping of a more attentive officer. Mr. Whitaker was accordingly selected to fill that vacancy, and was the day thereafter regularly inducted into office. So far, however, as provision could be made to secure Mr. Hammond from all possible injury by this act, his feelings nor his rights were forgotten or neglected; for it was expressly mentioned to his successor, that it would be gratifying to the executive, in the event of his return, that he should resign the office, and that he should retain the clerks then in the office. All this was done with the view to the appointment of Mr. Hammond. The principal injury sustained by him, is attributable to his own indecorous, rude and vulgar conduct, on his return, at his first interview thereafter with the executive and the person appointed. From the document herewith transmitted, it will be seen that this solicitude for his welfare was, on his part, totally unmerited. For years he has been more inattentive to his duties than any officer attached to the state-house. He has often been unable, from various causes, to sign his name, and frequently got some one of the young men in the office to do it for him. If this is allowed of, he need never go into his office: it is, therefore, communicated for your consideration.

Upon a deliberate view of this act, with all the facts and arguments which have been arrayed for its support and opposition fresh in my recollection, I now assert that it was a measure which I then believed, and yet conceive, the interest of the state required and the provisions of the constitution demanded. That I may have erred from a defect of judgment is possible, for fallibility is the lot of all men. And there are no instruments more variously construed than the charters of our national and state rights. In the formation of my opinion upon the article in question, I sought neither to force a power by implication, or torture words to a mean-

ing not intended for them. It is a rule of construction, dictated by plain reason, as well as founded on legal axioms, "that every part of an expression ought, if possible, to be allowed some meaning, and made to conspire to some common end."

It never could have been intended by the wise framers of that instrument, which was made for the good of the whole community, that the operations of the government might be suspended by the capricious absence of an high officer of state, and that there should exist no redeeming power for such an evil, both speedy and efficient in its operation. Is it not more consistent with the principles which they had in view, to construe that power as a political one, specially granted and to be exercised at the discretion under the legal and constitutional responsibilities of the chief magistrate of the state? Such I conceive to have been the intention, such the specific grant, as applicable to the case in question, and such my responsibilities.

As to the question of vacancy or no vacancy, suffice it to say, that I conceive, had Mr. Hammond died or resigned on the 12th day of August, so far as it regarded the community, in the discharge of official duties, it would have had no more effect than did his absence. All these causes alike produce the same consequences to the people; and if, in the one, the protection of the rights of the community should be incompatible with those of an individual, the latter must yield. Although, as regards the powers of the executive, whilst acting under oath, I should not conceive precedent in any case as absolutely binding, yet I would be disposed to give to one the most mature consideration. I know of no precedent entirely analogous to the present case. In principle, however, the doctrine contended for is conformable to the views and practice of one of my most enlightened predecessors, as will appear by documents herewith transmitted. It is well known to those who were acquainted with the late governor Jackson, that he, having himself been one of the framers of the constitution, must have understood and regarded its true principles. Under his administration of the government, we find that he issued orders directing the state-house officers not to leave the seat of government without his consent, and dictated the hours they should attend at their respective offices for the despatch of business. None that knew him will believe that he would issue an order, a nullity in itself, and which he was not empowered virtually to enforce.

That this appointment of the executive has been, by a separate and distinct branch of the government, reviewed and pronounced illegal and unconstitutional, is fully known to you. Not arrogating to myself, as a co-ordinate branch of the government, the power to decide upon the constitutional rights of the judicial department, I claim to have exercised in this case, the powers properly belonging to, and expressly given to the executive.

The framers of our constitution undoubtedly supposed that, in that instrument, they had laid a solid foundation on which the wisdom of future legislatures might establish laws securing to their constituents the full and free enjoyment of all their just rights. It devolves upon you to inquire whether that end has been sufficiently attained—if it has not, to devise means by which it may be more effectually secured. Does the constitution itself require alteration or amendment? It is with you to propose such alterations or amendments as your wisdom may suggest. Are existing laws adequate to secure to the people the great object of all right legislation—the good order and harmonious ad-

ministration of the government, in all its departments, according to the true principles on which our republican institutions rest? If they are not, it is within the scope of your functions to apply the corrective, and, in the language of the constitution, to make all laws and ordinances which you shall deem necessary and proper for the good of the state, which shall not be repugnant to the constitution. With these objects steadily in view, regarding the constitution as the polar star by which you are to be guided, and believing, as you unquestionably do, that a portion of the rights of the people were delegated to you, to be used for their common good, your deliberations cannot fail to result in the adoption of measures best calculated for the advancement of the highest interests and happiness of the people.

Reports from the different banks in this state have been received, and, with matters of minor importance, reserved for future communications.

JOHN CLARK.

Naval Court of Inquiry.

Navy department, Aug. 29, 1822.

GENTLEMEN: By direction of the president of the United States, I enclose to you an extract of a letter from captain James Biddle, dated July 24, 1822, attributing, in a great degree, the late sickness and mortality on board the frigate *Macedonian*, under his command, to the negligence of the officers of the United States' navy yard at Charlestown, Massachusetts, in omitting to cleanse sufficiently the hold of that ship previously to the commencement of her last cruise; and I request that you will, when the inquiry in which you are at present engaged shall have been completed, proceed to investigate minutely the truth of the several allegations contained in the said extract, and report to the department all the facts and circumstances that shall be elicited by the inquiry, together with the opinion of the court in relation to the conduct of the officers of the navy yard; and also the cause to which the sickness and mortality that prevailed on board the frigate *Macedonian* may properly be ascribed.

Capt. Biddle and the persons named in the extract, have been ordered to report to you for examination.

I am, very respectfully, gentlemen, your obedient servant,

SMITH THOMPSON.

Capt. John Rodgers, Isaac Chauncey,

Charles Morris, Charlestown, Massachusetts.

Extract of a letter from capt. James Biddle to the secretary of the navy, dated

*U. S. frigate Macedonian,
off Havana, July 24, 1822.*

"It has become my painful duty to acquaint you that a malignant, infectious fever has prevailed extensively among the officers and crew of this ship; that already *forty-nine* deaths have occurred from it within the short period of our cruise in these seas, and that the whole number of sick to-day, by the surgeon's report, is *eighty-four*."

"This ship was fitted out from Boston, in the months of February and March, months in which a crew are peculiarly liable to sickness from the exposure and fatigue unavoidable in fitting out; accordingly, on the 2d April, the day on which the ship sailed, we had a sick list of *fifty-five*, nearly all of them colds; and experiencing immediately thereafter severe and blustering weather, the list was increased on the 5th April to *sixty-six*. A more

southern latitude and milder weather had their usual effects upon the sick, and on the 28th April, the day of arriving at Havana, the list was reduced to *twenty*, all of them convalescent. One only had died during the passage.

"Towards the end of May, the sickness incident to the climate made its appearance on board, and, presuming that it was occasioned by the climate, and becoming alarmed lest it might increase, I went to sea on the 4th June. During my stay at Havana, I had the misfortune to lose seven of my people by fever.

"It was of course a just expectation that, on quitting the port, the condition of the crew, in respect to health, would have become ameliorated. Yet, to my great distress, this was not the case; and, although the weather at sea was unusually fine, the people were taken down with fever in the most surprising manner.

"The crew of this ship have never been on an allowance of water; they have been carefully preserved from unnecessary exposure to the sun and the rain, and particular attention has been paid to cleanliness. I took down from the birth deck, two large state rooms, and a paint locker, and a close bulk head forward of the midshipmen's apartment, and, previously to arriving among the islands, I birthed 135 persons on the gun-deck. By these precautions I had a right to expect a healthy crew, notwithstanding the unhealthiness of the climate; but, owing to the neglect of duty on the part of the officers of the navy yard at Boston, it is now manifest that no precautions on our part could have prevented the introduction of sickness on board.

"When this ship was last commissioned, a part of the ballast was taken out and landed; and for the purpose of ascertaining if the keelson was cased, the ballast immediately on each side of it was moved; all the ballast was completely covered with black mud and dirt, and so hardened together that it was a work of much labor to separate the different pieces of iron. The quantity of mud taken from the ballast that was moved was so great, that midshipmen Gerry informed me he saw two cart loads of it carried from the wharf. Mr. Doggett, the gunner, acquaints me that the water casks on the ground tier were immersed in mud to about a fifth of their height—and this extraordinary accumulation of mud is to be explained by the extraordinary fact, that, on the return of this ship from the Pacific, the hold was not broken out; and that, as respects the hold, she was laid up in ordinary nearly in the condition in which she arrived from sea.—Midshipmen Turner acquaints me, that he was stationed within the Boston navy yard last winter; that the fire-wood he used was taken out of this ship, and that, when ignited, it became so offensive that he was unable to remain in the room.—Thomas Pewmont, a seaman on board, informs me that he was employed in the Boston navy yard last summer; that, in September last, some gang casks were taken from this ship, for the United States brig Spark; that this ship's hold was at that time extremely offensive, and that there were in it several casks of salt provisions, in a rotten and putrid condition. Pewmont also states, that this ship had not been pumped out for upwards of two months! That it then took half a day to pump her free, and that the water discharged from the ship was horridly offensive.

"A positive regulation of the service requires, that a ship, when put in commission, shall be perfectly cleansed; and so necessary is this precaution to the health of the ship's company, that it is dif-

ficult to believe it would be omitted, even in the absence of all regulation on the subject. Yet the great bulk of ballast in this ship, although covered with mud and dirt, was never moved, nor properly cleansed; and the hold was stowed with this horrid and offensive matter remaining in it. Offensive, indeed, it might not have been at Boston, in the winter season; but it is obvious that it would, and must have become highly so, after it had time to ferment within the tropic.

"Another regulation of the service requires, that the hold shall be whitewashed previously to receiving the provisions and stores on board; and this regulation was also neglected at Boston.

"The sickness and the mortality on board has been greatest among the persons employed in the hold, and among the carpenter's crew: who, by working the pumps, were most exposed to the offensive bilge water discharged from the ship.

"With all the means in our power, such as ventilation, whitewashing, fumigation, fires, and letting water into the ship, we have been able but partially to correct the impure and offensive air emitted from the hold. This can be effectually corrected only by breaking out the hold, and thoroughly cleansing it; but medical gentlemen whom I have consulted are of opinion it would be extremely imprudent to do this in the West Indies. As the cause of the sickness on board, therefore, must continue as long as we continue in this climate, I have felt it my imperative duty to those under my command to return home; and accordingly I got under weigh from Havana this morning, and I shall proceed to the Chesapeake.

"I need not say, sir, how deeply my feelings have been afflicted at this distressing mortality and sickness; and since so many deaths have unhappily taken place—since the safety of the ship has in some degree been hazarded, and the purpose defeated for which she was equipped, I hope you will order an investigation into the cause of the sickness on board."

REPORT.

In making this inquiry, the attention of the court was first directed, by the testimony of captain Biddle, to the state of the Macedonian's hold, and the circumstances connected with her fitting out from the navy yard; then to the treatment of the crew and the management of the ship in respect to measures of health on the passage out, to the Havana, during her cruise in the West Indies, and on her return to the United States.

It appears to the court, that, in June, 1821, on the third day after the Macedonian's return from the Pacific, the breaking out of her hold was commenced. This was finally completed in October and November, 1821, when all the water casks were broken out of the hold, and, before the 15th January, 1822, every thing except her ballast was taken out of the vessel. The spirit room was broken out soon after her arrival.

The hold was cleaned and the skin down to the ballast, and the ballast and the keelson were washed and scraped, and all the dirt taken up; then, about three feet of the ballast on each side of the keelson was taken up, in order to case the keelson. This ballast was square kentledge, was stowed very close, and, by the pressure of the ballast in the wings, was so compact and cemented by the corrosion of the iron, and frozen, that it was necessary to use wedges and mauls to separate the pieces. All the limber boards were taken up, except those under the shot locker, and the limbers were found

to be not more dirty than usual. The pumps were got up, and the pump well was cleared.

It also appears that nearly one half of the ballast was removed for the purpose before mentioned, and to give it a different shape, and but very little dirt was found under the ballast so removed. The old hoop-poles used for dunnage under the kentlege, which had been removed, was taken out, and the skin scraped and washed, and fresh hoop-poles substituted for the old before the kentlege was replaced. After the kentlege was put in place, the hold was swept and all the chips and dirt sent out of the hold, and every part was white-washed down to the ballast, and a part of this, as much as the state of the weather, it being very cold, would permit

It appears that the water casks used on the cruise to the Pacific, were not unusually decayed: of these only two or three were condemned; the rest were accordingly repaired and painted. In stowing these, care was taken by sweeping off the dirt from each before it was stowed to keep the hold clean. The wood for fuel was stripped of its bark, and the provision casks were carefully brushed off to prevent any snow or dirt from getting below with them. It also appears that the ballast in the spirit room was moved and cleaned, and that the spirit room and ballast in it were white-washed before the spirit casks were stowed. It also appears that the magazine was carefully and thoroughly repaired, and that all the store rooms were put in order and white washed. Here it may be proper to observe that Doggett, the only witness who asserts that the hold was not white washed before the water casks were stowed, had not much opportunity of knowledge, or was not observant, of what passed. He states that there was no superior officer in the hold, superintending the stowing of the hold. It, however, appears that lieutenant Percival was there from time to time, directing this operation; and this officer, and the men who were actually employed in the operation of white-washing the hold, have, on examination, distinctly and positively sworn that the hold was white-washed down to the ballast before the water casks were stowed. It also appears that many of the men were afflicted with colds about the time the ship sailed; that most of the men suffered from catarrh in consequence of bad weather at sea a few days after leaving the port of Boston; that they recovered generally from this before the ship arrived at the Havana, at which time there were from 18 to 20 on the sick list, and these generally convalescent, and the crew was apparently in a healthy state. It appears that the men were not as well clothed as usual on board public ships on the passage out and at the Havana. But, there was as much cleanliness among the crew as practicable under these circumstances. It also appears that, although captain Biddle manifested great anxiety for the health and comfort of his crew, yet the men were suffered to sleep in their watches on deck, on the passage out.

It appears that the birth deck was washed two or three times a week, on the passage out, and often during the first week, after the ship's arrival in the Havana, and the spar and gun deck every day. But the washing of the birth deck was discontinued after the second week in the Havana. It also appears that 135 men were birthed upon the gun-deck for the sake of the health of ail. But, on one occasion, these, as a punishment to them, were sent below to sleep, and all the crew slept two or three nights on the birth deck after the ship's arrival in the port of the Havana. It appears that no water

was let into the ship on her passage out, but during the first week after the ship arrived in the Havana, the water of the harbor was several times let into the hold, and pumped out; that this water was impure as appeared afterwards.

It appears that the hold was very warm, and the air very close, dense, and offensive; that a quantity of fresh water was, at one time, while in the Havana, brought off from the shore, and started into the hold and pumped out; that the ship was once, but for only two or three days warped broadside to the wind. But, while she lay at all other times with her head to the wind, the wind sails were kept constantly trimmed at proper times down every hatch. It appears that the awning was constantly spread while in the Havana, and that the men were very little exposed to wet or to the sun, or to duty in the boats, or to fatiguing duty on board, being excused from keeping watch at night. That the first case of malignant fever which occurred on board, was of an ordinary seaman belonging to one of the boats. He sickened the 8th May and died the 11th. It was a case of yellow fever, and it appeared that this man had, the day before, taken part in a boat race in the harbor of the Havana.—Another ordinary seaman died of the fever on the 19th; lieutenant Clements died on the 26th. He had been on shore the evening preceding his sickness for a short time: a marine died on the 28th May; several others sickened in this month.

The names of all who died of the fever, from the 11th of May to the 8th September, inclusive, being 100 cases of fever, are mentioned in the list communicated by Dr. Chase, and attested by him and lieutenant Simonds, hereunto annexed. From this it will appear that,

Of 10 commissioned officers on board, 4 died of fever;

Of 25 warrant officers on board, 7 died of fever;

Of 28 petty-officers on board, 5 died of fever;

Of 118 seamen on board, 19 died of fever;

Of 118 ordinary seamen on board, 37 died of fever;

Of 27 boys on board, 15 died of fever;

Of 50 marines on board, 14 died of fever;

That of these, 7 died in May and June, while at the Havana; that 50 in all had died by the 15th of July, when both the surgeon and surgeon's mate sickened, and were unable to do duty; that the surgeon, Dr. Cadle, died on the 29th July; and while Dr. Chase, surgeon's mate, was confined to his cot, 35 more died. It also appears, that a great despondency prevailed among the crew, from having been so informed, it was generally believed on board, that the cause of the sickness was owing to the foul state of the hold, and the men were under strong conviction that all who sickened would inevitably die; that, during this state of despondency and sickness, the crew were allowed to sleep any where about the ship--some slept in the chains, some in the tops, some in the boats, and on the booms, and but few in their hammocks.

It also appears, that, on the 4th of June, the ship sailed for Port au Prince, and on the passage, the number of new cases was less, and the sick appeared better while at sea. But at Haytien, and subsequently, the sickness and mortality continually increased, and the ship became so infected, that there was no reasonable ground for expectation, that the crew could be relieved but by change of situation or climate. It also appeared, at the Havana, after the ship's return to that port, a person recommended by a physician of that place, came on board to do the duty of a surgeon, and assist in

the care of the sick. It appears that an alarming state of sickness continued on board during the passage from the Havana to Norfolk, and that the men were allowed to sleep in any part of the ship, as before stated, during the passage home, and the sickness and mortality were not diminished till after the vessel's arrival in the U. States, and the landing of the crew.

The preceding report embraces all the facts and circumstances elicited by the inquiry which this court is required to report, and are respectfully submitted with the following

OPINION:

The court is of opinion that the conduct of the officers of the navy yard at Charlestown, manifested great zeal and attention to the fitting out of the Macedonian for her late cruise; and that the prevalence of sickness and mortality, on board the Macedonian, is not to be ascribed, in any degree, to any omission of duty on their part; on the contrary, it is the opinion of this court, that the hold of that ship was sufficiently cleansed.

The court is further of opinion, that the principal causes of sickness and mortality on board the Macedonian, during her late cruise, were the sudden transition from a northern climate, to the climate of the port of Havana, the continuance of the ship in that port for so long a period, as it appears she was there detained, and the want of proper medical aid, for a considerable period.

The court is further of opinion, that, beside these principal causes, the debilitated state of a large portion of the crew at the time of their arrival at the port of Havana, the admission of water at that place, into the hold of the ship, until its injurious effects were suspected, and the permission given the crew to sleep about the decks, may also be considered as additional causes for the sickness and mortality which prevailed on board the Macedonian during her late cruise.

The want of additional clothing, of tea and sugar, and the despondency of the crew, which have been enumerated by the medical officers, in the opinion of this court, have not produced in themselves very considerable injury to the health of the crew.

The court feel themselves incompetent to determine, whether the treatment to which the sick were subjected, was judicious or otherwise, and therefore refer, in that particular, to the opinions of the medical officers, which are annexed to these proceedings.

JOHN RODGERS,

President of the court.

GEORGE SULLIVAN, Judge Advocate.

Navy Department, Nov. 15, 1822.

I certify that the foregoing has been carefully examined, and collated with the original, and is a true copy.

BENJAMIN HOMANS.

CHRONICLE.

Mr. Jefferson lately broke one of the bones of his left arm by a fall—but we are really happy to learn that, though advanced in life as he is, every prospect is afforded of a speedy recovery from the injury.

Cotton. Eight cents have been offered for the new crop at Milledgeville, Geo. The product of the present year will be very large in the United States; and, it is thought, exceed the amount of the

last by 60 or 80,000 bales. The cultivation has been much extended in Alabama, as well as in South Carolina, &c.

New York. The revenue received on the Erie canal, for tolls, will exceed 60,000 dollars for the present year! When this great work, and others of the like nature, are finished and in complete operation, it is very possible that their profits may be equal to the whole ordinary expenditure of the government of the state.

The following are the names of the persons elected to the 18th congress from this state—S. Wood,* Jacob Tyson, John I. Morgan,* Churchill C. Cambreleng,* Peter Sharpe, Joel Frost, William Van Wyck,* Hector Craig, Lem'l Jenkins, John Strong, James L. Hogeboom, Stephen Van Rensselaer,* Charles A. Foote, Lewis Eaton, Isaac Williams, Henry R. Storrs, Jno. Herkimer, Jno. W. Cady, Jno. W. Taylor,* Henry C. Martindale, John Richards, Egbert Ten Eyck, Ela Collins, Lot Clark, Justin Dwinell, Elisha Litchfield,* Rowland Day, Samuel Lawrence, Dudley Marvin, Robert S. Rose, Moses Hayden, Wm. B. Rochester, Isaac Wilson, Albert H. Tracey.* Those marked thus * are members of the present congress.

They are thus politically classed in some of the New-York papers—republicans 27, federalists 4, "Clintonians" 3.

The state senate, just elected, is said to be unanimately republican; in the house of representatives there are only 4 federalists, and a few "Clintonians."

A republican governor and lieutenant governor have been elected without serious opposition.

A duel! Wesley Tapsico, a black man and native of Philadelphia, was lately killed in an affair of honor at Port au Prince; by another black named Kelly, who eluded the summary justice of the government of Hayti by concealment and escape from the island.

Longevity. The Indianapolis Gazette says—"There is now living at the Bluffs of White River, a Mr. Summers, aged 119 years—his eldest child is 93 years old, and his youngest 14. Mr. Summers enjoys good health, for a man of his age, and can read the smallest print without the aid of glasses."

Steam. In a conversation which a short time since took place upon the wonderful and various applications of steam, an Irish gentleman present, who had just arrived in England, suddenly exclaimed. "It is quite entirely past all belafe; by the powers! I'll be no way surprised to find myself going a hunting, some morning, on my own tay kettle!"

[London paper.

New Orleans. The following was published in the papers of this city on the 26th October:

"The board of health have seen, with regret, that several strangers have had the temerity to come into the city within the last week, and fallen victims to the fever, which, notwithstanding the cool weather, unhappily continues to prevail. The sudden decrease in the number of deaths, is believed to be owing more to the absence of proper subjects, than to any change in the character of the disease. Strangers are, therefore, admonished to avoid the city, until the board of health shall redeem the pledge made to the public, to give the earliest information when they may enter it with safety.

H. K. GORDON,

Secretary of the board of health.

October 25.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 14—VOL. XI.] BALTIMORE, DEC. 7, 1822. [No. 14—VOL. XXIII. WHOLE No. 586

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

THE MESSAGE. The usual communication of the president of the United States, at the commencement of a session of congress, will be found in the subsequent pages. It does not contain any thing new or important—nor was matter of either character to be expected. The receipts of the year have much exceeded the estimates; and we learn that the money borrowed in 1820, to help out with expenditures of that year, is now to be paid off, and something is said that is, in part, or partially, favorable to the support of manufacturing industry. The commercial interest appears to have been carefully protected—and restriction has produced reciprocity, in regard to it.

FROM MEXICO a minister arrived at Baltimore, the latter end of last week—don Jose Manuel de Zozaya, with a numerous suite of officers and attendants.

BANKS. The mania to make new banks, though the best managed of the old ones can hardly do business, and, in general, yield not more than 5 per cent. per ann. has broken out afresh. Some two or three have been made in New Jersey, and several are projected in New York, under different names and with various ostensible purposes. We apprehend that this is not the time to institute new banks—the specie capital of the country, rapidly decreasing, will not sustain those already established in doing one half of the business that they would do, under different circumstances; and any diversion of that capital will only add to the danger seriously apprehended by some, that many of our banks will either have to suspend specie payments, or support themselves by the ruin of their debtors. The former is an evil of great magnitude; for it will be immediately followed by associations of money-manufacturing swindlers, and render unavailing all that the people have suffered to bring about the restoration of a wholesome currency. It is complained that the banks do not accommodate those whom they ought—but the fact is that they cannot. Some of them, and especially the Mammoth, may be chiefly devoted to an accomplishment of the views of certain great traders in money and bills—speculators and shavers; but, by affording them more room for iniquity, we cannot expect to diminish it. It is the principle of monied institutions to grow into aristocracies, for they have no souls; and we are not disposed to increase their number.

While on this subject, we are pleased to notice the introduction of late resolutions into both branches of the legislature of Kentucky, which, if adopted and persevered in, will relieve the people of that state of their present rag system and its accompanying stay laws and stop laws, as rapidly, perhaps, as the condition of things will admit of. The sudden appreciation of the value of a currency has almost as severe an operation as a sudden depreciation. There is not, probably cannot be, any standard of value; but the best that can be devised is that which is most generally considered so—whether it be gold, silver, iron or leather, as used to measure the exchange of labor and commodities.

BANK OF THE UNITED STATES. A convention of delegates as from the stockholders in the states of

Massachusetts, Connecticut, New-York, Pennsylvania, Delaware, Maryland and South Carolina, and the District of Columbia, met at Philadelphia on the 25th ult. for the purpose of agreeing on some person to be supported as president of that institution, on the retirement of Mr. Cheves. After various preparatory proceedings, it was agreed that Nicholas Biddle, esq. should be recommended. On the final vote—the delegate from Massachusetts was absent, those from Pennsylvania declined voting, but all the rest were in the affirmative and without division, except Connecticut—two for and one against Mr. Biddle. This gentleman is highly commended by some and much objected to by others, and it is likely there will be some noise made in the papers about the matter. The “miser” is, that a few unknown, irresponsible individuals, have the power of an institution that grasps at a regulation of some of the dearest interests of the people of the United States, and can assess, as it were, the price of every man's farm, if to be brought into market for sale.

PORTO RICO EXPEDITION. It will be remembered that some of those, and, seemingly, nearly all the chiefs of the expedition fitted out at St. Bartholomew's for the conquest of Porto Rico, had arrived at Curracoa, where they were taken into custody by the Dutch authorities. Gen. De Coudras and Mr. Irvine, and others, were yet in prison at the beginning of last month. Captain Spence, of the U. S. ship Cyane, had requested the release of Mr. I. as an American citizen; but the governor, though he expressed great willingness to cultivate a good understanding with the United States, would not consider him in any other light than as “secretary of state of the island of Bouqua,” as declared by every paper relative to the affair. It was believed that captain Spence would not persist in his request.

It may be only necessary to add, that this wild, or worse than wild expedition, has completely failed, after the cost of some lives and much money and suffering; and we hope that it may do a little, in addition to many things of the kind that have happened, to teach caution and prevent others from engaging in such illegal, unwarrantable practices—the foundation of which is desperation and the desire of plunder, though some may embark in them with different views, and others are fairly kidnapped and reduced to a state of slavery, by sets of knaves, no punishment for whom is sufficient for the purposes of justice.

CORROX, of a good quality, has been experimentally raised in Connecticut, New York, New Jersey, Pennsylvania and Ohio, during the late season. We have a specimen of some that grew near Steubenville, which is said to be equal to the average quality of the Georgia upland. It is probable that some crops of the article may be attempted next year. If it will succeed in a thickly populated state like Connecticut, there is no doubt that it can be raised cheaper by the labor of free persons than by that of slaves. A late writer of a pamphlet at Charleston, estimates the average cost of slaves, including interest on capital, at 70 dollars per head—but, as not more than one half of the whole number on a plantation are effective workers, the cost

of the latter is supposed by him to be about 140 dollars per annum. For this sum, in many parts of our country, free white laborers of the first class, may be hired and supported with food. See an interesting article on this subject in the present sheet.

WORCESTER'S GEOGRAPHY. We have a copy of the second edition of Mr. Worcester's geography, as reduced for the use of schools or young persons: it is accompanied by an atlas of neatly drawn and seemingly correct maps. Having long felt anxious for a work of this sort that might be freely adopted for the instruction of children in *geography*, without the danger of leading them into errors or opinions on subjects not connected therewith, we regard this little work as a valuable acquisition.—Brought into a space of a moderate duodecimo, it must needs be supposed that the various subjects, belonging to all the known countries of the world, are briefly spoken of—but the great leading or remarkable things are distinctly mentioned, and the volume abounds with statistical information, by which a knowledge of the most important items is conveyed in the shortest and most intelligible manner. In our opinion, the compiler has completely succeeded in his purpose of forming a book for the use of schools.

MIDDLEBURY COLLEGE, and Vermont Academy of Medicine. The college faculty consists of a president, three professors, one lecturer and two tutors—the medical faculty of five professors, in the different departments. The senior sophisters are 18, the junior 31, the sophomores 18, and the freshmen 20—the medical students amount to 85. The cost for tuition, room rent, repairs and incidental charges in the college, are about thirty-two dollars per annum: the price of boarding from 100 to 150 cents per week, in private families. For all the medical courses, 40 dollars are charged; graduate fees 12; reading terms 8; board, washing and lodging, 150 cents per week. The medical lectures continue twelve weeks.

GEORGIA. Students in Franklin college, university of Georgia—Seniors 20; juniors 17; sophomores 42; freshmen 41—total 120. Nearly all the students belong to that state—but there are several from Alabama, &c.

PRESIDENTIAL ELECTION. The following is the reply of a writer in the Richmond "Enquirer," to an article published in this paper on the 23d ultimo:

To the "one word to Mr. Niles"—we are quite as much opposed to any collusion and corruption that may exist in opposition to the manifest intention of the constitution, as to injuries that may arise from the operation of its established provisions. We do dislike a caucus, and also the idea of a vote in the house of representatives—but it does not follow that, for disliking both, we must adopt either. There is time enough yet to act on the case—and, though at "present" so much diversity of opinion exists, no reason can be offered why the public intelligence shall not be prepared to act, in due season, on the momentous question submitted to the public will; for, no doubt, certain great principles will be brought to bear upon it. We are opposed to all attempts to forestall the opinion of the people, or put a president over them by intrigue or by storm. To the author of "*Triginti Quatuor, of New York.*"

Sir: I have seen your remarks, (in Mr. Niles' last Register)—and beg leave to offer a very short rejoinder.

You ask Mr. Niles how he can "be alarmed by the specious imaginings of "Calculator" of the Richmond Enquirer, at the danger of a contingent "vote by states," in the event of no candidate having a majority of electoral votes."—And you are charitable enough to add that "the purpose of this sound of alarm from Richmond, we took to be obvious. We allude to no further purpose of this alarm than the effect of a congressional nomination."

How do you discover that I prefer a congressional caucus? Do I avow such a preference? Surely not. All that I inferred, was, that we should "unite in some fair and constitutional mode in favor of one man, so as to secure him a majority of the electoral votes." Now, whether this is to be done by a caucus, a convention of state delegations proportioned to their electoral representation, or any other mode, I have not undertaken to say. All that I urged, was the concentration of votes—the mode was left to the good sense of the people. I am free to confess, however, that I would infinitely prefer a caucus, (provided it would have the desired effect) to an election by the H. of R. I have no interest to promote by a caucus. Richmond has none. The state at large has none. I dread the mischiefs of a vote by the H. of R.; and in my opinion, every Virginian, and every friend to his country, should view it with apprehension.

You make my only objection to consist in the members being "liable to corruption." You misrepresent me again. I did not dwell on this objection.—The one on which I principally relied was this: that the election *might possibly be made* by 31 representatives only! at all events, by "an extremely small minority"—a result which the people at large ought not to provoke.

Whether the vote of the 13 states which are represented by the 31 members, will be "obtained incorrectly," or not, is not the question.—The result in defeating the will of the majority is still the same. By fair means or by foul, a man may be imposed as a president upon the nation by an insignificant majority, when he had possibly received only a few of the electoral votes. It is a consequence of this sort which I would especially avoid.

Some of these representative votes may be incorrectly obtained. Bad men would bid high for the votes of the weak and the wicked—and I would not expose them to so great a temptation. I think my countrymen purer than any other people on the globe; but human nature may be corrupted, and suspicion is the very principle of a republic.

But, putting corruption aside, what do you say to *cabal*—to party views—to sectional feelings—to a variety of considerations, which may swerve men from the best interests of their country? what do you say to the only experiment we have already seen? to the election in 1801? Are you so ignorant as not to know that there was a design even then of appointing a president by law? Have you seen Bayard's letter, who states that the eastern federalists were determined to trample the constitution under foot, rather than elect Mr. Jefferson? Really, sir, if you wish to see another election by the H. of R. I do not. Deliver us from this evil, I beseech you.

I say, then, let us concentrate the votes of the electors. How is it best to be done? You do not like a caucus. Well, give us some better mode. If I like it, I will take it.—I wish with you to do away the caucus, if I could only find a better substitute; but to abolish it without any other plan, and leave the matter to such risks and perils as might arise in H. of R., requires more nerve than I possess.

One word to Mr. Niles—You dislike a caucus.— You think, 'in the present state of things,' it would be laughed into contempt.' Now, sir, I lay before you this obvious dilemma. If you dislike a caucus, and you also dislike the idea of a vote by the H. of R. what plan will you fall upon to avoid that vote? For, if I do not mistake "the present state of things," there is much cause to fear there will be no election without some means of concentrating the votes of the electors.

CALCULATOR.

THE PIRATES OF CUBA. The following extract of a letter from an officer on board the United States schooner Alligator, to a friend in Washington city, may be regarded as a semi-official account of a melancholy event:

Extract. "I will now give you a brief account, in detail, of the *pirate fight* of the 9th inst. The Alligator was coming to anchor the morning previous in the port of Matanzas, when information was brought on board that an American brig and schooner had been captured some days before, and were then at anchor and in possession of a large gang of pirates in a bay on the east side of Point Hycacos, about 15 leagues to the windward of Matanzas, and that the master of the brig and mate of the schooner had been sent in the preceding morning by the pirates to procure \$7000 for the ransom of the two vessels, with which sum they were to return in three days on pain of their vessels being destroyed, and the officers and crew, remaining on board, treated with every severity their avaricious revenge could inflict.

Having the master and mate on board, we immediately stood to sea, and proceeded to the release of their vessels. At day-light on the morning of the 9th inst. came to anchor off Point Hycacos and within one of the islands at the entrance of the bay, and about 10 or 12 miles distant from where the brig and schooner had been left at anchor, being hid from our view by intervening land. We then discovered, some little distance over a small island, a ship, a brig, and schooner, lying at anchor, and, a little further to the leeward, a small schooner under sail, her deck apparently filled with men, and boats communicating between her and the vessels at anchor, the two last of which, at the same time, getting under way. With the boats of the Alligator chase was immediately made after the schooner, and she with her sweeps endeavoring to escape by doubling an island nearest Point Hycacos, and steering up the bay. The wind being light, after rowing three or four leagues, we had gained within reach, when the chase rounded, hoisted a *red flag*, and commenced a heavy fire of round and grape upon us. We soon regained her wake, and when within reach of our muskets commenced our fire, the men at the oars at the same time giving way to lay alongside and board her quarter. At this time, a second schooner, armed and filled with men, had commenced firing upon us, and passing some distance ahead, brailed up her foresail on the starboard bow of the first, which we were now within pistol shot of, and had silenced her fire with our small arms, when her men took precipitately to their boats, four or five in number, to wing on the larboard side, to get on board their consort, when our two boats (launch, capt. Allen, and cutter, lieutenant Dale) pulled away to cut them off. Seeing our object, they returned on board their vessel. We immediately regained our position astern to pull up and board on her quarters, returning their fire of small arms; and they again took to their boats, now on the starboard side, and escaped on board the other

schr. Capt. Allen now directed a midshipman, with four men, in his gig, which was near us, to board and take possession of the first prize, and, with our two other large boats, rowed immediately after the second, now reinforced with from 30 to 40 men in addition to her own, (which we have since understood to be from 60 to 80), all well furnished with small arms and boarding pikes, &c. and had gained within twice our boat's length of her stern and larboard quarter, sustaining and returning their fire, when the cutter began to veer off, and was falling round on her starboard bow, from the obstruction of killed and wounded at her oars, and the launch unable to keep way with the chase, from like causes, (and capt. A. having previously been wounded by two musket balls, of one of which he died four hours after), both boats dropped along side the prize, and removed our killed (two) and wounded (five, two since dead) on board her. She was armed with one long 12 pounder, (on a pivot), two do. 6-pounders, two do. 3-pounders, carriage guns, and two swivels—her *red flag nailed to the mast*. In the cabin and run were a number of bottles filled with powder, and slow matches through the corks, some of which having been lighted and extinguished, it appeared evident that the pirates had set fire to them on first leaving her, expecting she would blow up soon after our boarding, but, returning so instantly on board, they extinguished the matches, and the last time they were too closely driven in abandoning her, to take time to re-fire them. The pirates now kept off, and in shore, where they were joined by another schooner, about three miles distance from us, of heavier armament than either of the others, and about thirty men on board, (according to our subsequent information), both, however, kept away under the land, and, with our prize, we stood out to the Alligator. Having buried our killed and taken the wounded on board, crews were sent to take possession of the brig and schooner in the bay, both of which had been cut adrift, and were found without any individual on board either. The next day, with those and the ship, brig and schooner we had first seen at anchor, all of which had been abandoned by the pirates on the Alligator's coming in the morning previous, leaving orders for the two last to follow them into the bay on *point of death*, we proceeded to Matanzas, where the remains of captain Allen were interred with military honors; an escort being furnished by the lieutenant-governor of the island and commander of Matanzas, who expressed much sympathy and regret for his death, and the deprecated, but increasing villainies that had caused it.

He had, the day previous to our first going in there, furnished arms, &c. to put on board a small American schooner, at the request of the Americans in that port, and gave her a commission to go out and re-capture the two merchant vessels. But I am digressing from my intended narrative, which, for the present, you must take as finished, only adding, that, while in Matanzas, we were informed that the pirates had lost in the action 14 killed, and that a great number were taken on shore the same afternoon wounded; among whom was the second in command, shot through the body, and since reported dead.

"I consider it the most hazardous and dangerous action in which I have been engaged. I cannot but deeply lament the fate of poor Allen, on whom a widowed mother and orphan sister were almost wholly dependent. Leaving them so, appeared to be his only regret in meeting his death; and his last wishes were, that the government, in whose

service he had fallen, should, in requital, give due credit to his name, and extend its protecting aid to them."

The ship re-captured was the William-Henry, of New-York, brigs Sarah Morrill, and Iris, of Boston, one schooner belonged to Rochester and the other to Salem—these have since arrived in the United States, together with the pirate schooner captured. She is called the Revenge, and is a fine vessel. It is believed that 14 of the pirates were killed—one of their captains among them. Much respect has been paid to the memory of lieut. com. Allen at the various navy stations and ports of the United States. He was a very valuable officer.

There is a rumor that the British sloop of war Tyne has had a severe fight with a large body of these villains, in which she lost 12 killed, besides wounded. But, it is said, that between 40 and 50 of the pirates were slain, and 29 of them taken prisoners.

We have not room to detail the acts of the pirates. The last week has furnished us with matter enough about their proceedings to fill a whole sheet! Their number is great, and success has stimulated them to commit the most daring atrocities. They make many captures, and murder and destroy at their own will, without mercy—beating and cruelly abusing those whom they spare. The whole trade of the gulf is subjected pretty much to their controul, and the time has arrived when something of a most decisive character must be done. The utmost power of the government should be exerted; the nest of villains must be destroyed, or they will destroy us. Our coasting trade must be protected, as our internal industry should be—they go hand in hand.

THE BENEFIT OF CLERGY. The Wilmington Watchman of November 29, details the following instance of a case in which this privilege was claimed at the late session of the court of oyer and terminer, held at Newcastle, Delaware.

Elizabeth Bachelor had been convicted of burning a stable with hay in it, belonging to Mr. John Rumford, and on Saturday, the 16th inst. the court had directed, or were about to direct, the sheriff to bring her to the bar for the purpose of passing sentence of death, when her counsel, Mr. Brinckle, suggested an opinion that the burning of a stable was a clergyable offence. After some conversation between the attorney general and Mr. Brinckle—the court adjourned until Monday for the purpose of hearing the point formally argued. The whole of Monday was occupied in a full and deliberate discussion of the point, and on Tuesday morning the court delivered their opinion in favor of the claim. The sentence upon Elizabeth Bachelor, therefore, instead of death, was to be branded on the hand, and to suffer one year's imprisonment. The branding was to have been inflicted forthwith, but was postponed, at the suggestion of the attorney general, who intimated his intention to carry the case up to the court of appeals. For the benefit of incendiaries, and others disposed to engage in that line, we have thought it right to state this case.—If any such should hereafter take it into their heads to burn a dwelling house or a barn with grain in it, he will surely be hung; if a stable, or out house, the benefit of clergy comes to his aid, and, for the first offence only, saves his neck from the gallows.

AMBASSADORS' PRIVILEGE. A French paper says, "a statement has been copied from the German papers by all the French journals, which requires explanation. It has been said that Hamet Effendi,

the grand signior's favorite, declared to lord Strangford, that if a new ambassador from Russia presented himself on board an armed frigate, the guns of the fort should fire upon the vessel. This declaration of Hamet Effendi, has been termed insolent, and yet it is very simple. The German papers, doubtless, were not aware that, when baron Strogonoff was appointed by the emperor Alexander his ambassador to Constantinople, after the treaty of Bucharest, in 1812, that minister attempted to establish an old claim of privilege, agreed to under the reign of Peter the Great, but which had after fallen into disuse; in effect, he entered the harbor on board of his frigate, notwithstanding the usage by which all foreign ships are prohibited from passing, armed, under the walls of the seraglio, and was received with a terrible broadside. The frigate, happily, sustained no damage, and did not return the fire, so that no notice was taken of the occurrence. On the present occasion, the expressions which Hamet Effendi made use of are to be attributed solely to his anxiety to prevent the repetition of a scene of such a description."

THE OYSTER BEDS, in Delaware bay, and the adjacent coves, within the limits of the jurisdiction of New-Jersey, afford employment and subsistence to fourteen hundred men.

The demand for these oysters being very great at New York and Philadelphia, fleets of boats from both cities have been annually employed in gathering them; and, of late years, the dredge has been generally used for this purpose; but, as this instrument is said to destroy more than it catches, and soon to break up the beds, the legislature of New Jersey, to preserve the oysters, and to secure them to its own constituents, passed an act in June, 1820, imposing penalties on all persons using dredges, and forfeiting the boats of citizens of other states found catching oysters in their waters.

Under the provisions of this act, the citizens of Maurice township seized and prosecuted to condemnation two boats owned in Philadelphia; but our oyster-merchants, nothing daunted, formed an association, and commenced prosecutions against every individual who had aided in enforcing the law and happened to be called by business to the city. Five suits, thus commenced, are still pending. In one, a verdict has been rendered for the defendant; but the plaintiff excepted to this decision, and has removed the cause into the supreme court of Pennsylvania, where it remains for final adjudication. Another of the cases has been removed by the defendant, at the request of the township, into the circuit court of the United States, considering it an appropriate tribunal for the enlightened and impartial decision of the question.

The legislature of New Jersey considers "the rights of sovereignty and the territory of the state at stake," but is fully disposed to defend those rights in a constitutional manner; and, therefore, contents itself with passing a law for the reimbursement of the reasonable expenses incurred, and to be incurred, by the township of Maurice river in defending the oyster beds in Delaware bay.

[Phil. Union.]

WESTWARD. The Pittsburg Mercury, of the 12th ult. says—There is now lying at the mouth of Wayne street, in this city, a shallop-rigged keel-boat, thirty five feet long, with several families on board, who embarked in this boat at the mouth of Wood creek, head of the Oneida lake, state of New-York. The course pursued to reach Pittsburg, was by passing

down the Oneida lake and through Oswego river into lake Ontario, thence up the Niagara to within five miles of the Falls. The vessel was then carried round the falls on wheels, and placed in the river two miles above the falls; she then pursued her course to Portland, on lake Erie, and was again placed on wheels, and carried seven miles along a good road to the Chataqua lake and creek into Conewango creek—entered the Alleghany river at Warren, Erie county, Pa. and arrived safe at Pittsburg. Facts like these are worth preserving, and their diffusion may be of ultimate utility. It is also a practical evidence, that a water communication between Pittsburg and New-York can be opened without difficulty.

Anecdote of lieut. Manning. Gen. Greene having expressed a desire to learn the strength and position of the British forces, who were encamped at no great distance from our army, lieut. Manning offered to undertake the hazardous service. He left the camp, and the next morning arrived at a poor farmer's house—he had been there before, the family knew him, and he readily obtained the loan of a shabby suit of clothes, and an old slouch hat of one of the sons, and borrowing an old gun, the barrel of which was tied on with cotton strings, he set out apparently a hunting, and in a few days came in sight of the British camp; the sentinel hailed, "who's there?" he answered, "me;" several questions and answers passed; the sentinel demanded what he was after? he replied, "why I am looking for a turkey—law, what pretty white linen houses you've got there;" coming toward the tents, the sentinel then stopped him and took his gun from him, when a disturbance arose between them; an officer came up, ordered the sentinel to take him to the general, where Manning sustained his assumed character stating that his daddy had gone off with the Tories, as our neighbors call them, and we had nothing to eat at home, so mammy had sent me out to shoot a wild turkey, but coming along here I was only looking at them little linen houses, when that fellow began to quarrel with me, and took my gun away and now mammy will scold like all the world because I staid so long, and hav'nt killed a turkey yet, so give me my gun and let me go, as I darsent go home without it;" then noticing the epaulette on the general's shoulder, he pointed at it, and said, "oh law, what a pretty thing you've got on your coat there, I guess it must have cost five shillings—if I only had some of them guns out there, may-be I could'nt shoot a whole site of them turkeys," with many other clownish expressions. The young officers were amused and all deceived too, while Manning's mind and eye were busy; the general ordered them to dismiss him—he is nothing but an ignorant country boy. Manning was soon back to the house, returned his disguise, and hastened to camp, with a full account to general Greene. [Dayton Watchman.]

FOREIGN NEWS.

Turkey. Many fugitive Greek families have located themselves at Marseilles. It is stated that the Turks have reduced the Suliot, by which they have acquired the release of 14,000 men to act against the Greeks in the Morea. The accounts, however, are very uncertain and obscure.

The island of Cyprus is in a state of desolation by the Turks. They have destroyed sixty villages. In some instances, they filled the houses with women and children, and consumed the whole with fire! Many of the monks have been put to death,

after the severest tortures. Cyprus has remained unaffected by the insurrection of the Greeks, and no reason is assigned for such barbarous acts.

The Greeks have obtained some further signal advantages at sea. The Turks had fitted out a great fleet for the purpose of conveying troops to the Morea, &c. Nearly the whole of the ships were captured or driven ashore, and about two thirds of the soldiers and sailors perished by the sword or the waves. Several persons were captured that were proceeding to the Morea for the purpose of purchasing slaves for the Asiatic market! The victory appears to have been a great one, but the particulars are not distinctly stated. The destruction seems to have been dreadful and as if the Turks lost several thousand lives; for it is said that they all perished "except two thousand." The affair took place in the straits of Bocca. It would appear that the naval power of the barbarians was nearly annihilated.

A Paris paper of the 12th Oct. has the following article—An account from Souli, dated the 13th August, inserted in the *Drapeau Blanc*, gives the particulars of further important successes of the Greeks. It appears that, shortly after a signal defeat of the Turks, they, (the Turks), suddenly re-appeared at the foot of the Souli mountains with 15,000 men. The situation of the Greeks was then very precarious, and it was resolved to destroy their wives and children to prevent them falling into the hands of the enemy, and afterwards to rush upon them, and sell their lives as dearly as possible. This resolution reached the ears of the Greek women, but they had influence sufficient to prevent its execution, and succeeded in restoring confidence amongst them. It was then resolved that the women, (who insisted upon it), should arm, and 800 were selected and armed. The women amounted to 3000. After invoking the Deity in their favor, they attacked the enemy, the women vieing with the men in feats of personal valor, and drove them far from Souli. The result of the action has been 1350 prisoners and four pieces of cannon. The loss of the Greeks was 167 men and seventeen women.

A letter from Constantinople, dated September 10, says—Since the last post, disagreeable news for the Porte has arrived from the Morea. The Greeks have destroyed there more than 20,000 Turks, in partial battles and ambuscades. The Turks possess nothing there but Corinth, which is destitute of every thing necessary for its defence; it is therefore probable, that the garrison will soon be obliged to surrender. Colocotroni is the commander in chief of the Greeks. All these particulars are said to be true, though the Porte studies to conceal them.

At Scio, several Turks have been executed, who persisted in massacring the sick Christians. On the 5th Sept. there were only 300 Christians remaining out of 160,000!

Political Curiosity.

The following was written by the late col. MATHEW LYON, for several years a member of congress from the state of Vermont, and afterwards from Kentucky—and who, at the time of his decease, held a respectable office under the government of the United States, in the territory of Arkansas. It was received several months since, but the publication of it was delayed, from the want of leisure just then to examine it, and it was forgotten until his death brought it to recollection. The

manner is, in some cases, rather rough, and a great latitude of expression is assumed—yet it contains a large portion of wholesome truth, and may be regarded as that which we have called it—a “political curiosity.”

MR. NILES—A quotation, from a Washington city paper, exulting in the continued carnival and the constant routine of dissipation kept up in that *Modern Venice*, has roused the dormant pen of a man of old times, and led him to request a place in your Register, for his lucubrations on the much agitated subject, the next presidential election. Nothing could more accord with the feelings and opinions of those I converse with, than your determined opposition to a congressional caucus on this subject. No place so improper for president-making as Washington, in which the most eminent sycophants of the nation are gathered together.

What habits of dissipation and extravagance have the rulers of this republican nation descended to since the declaration of our independence! In those days, we recollected with consolation and pleasure, what was said to their master by the Spanish envoys sent to treat with the revolted Netherlanders, whose negotiators furnished their frugal meals from their own wallets—“such men,” said the haughty Spaniards, “cannot be conquered, their frugality will save them.” In former times, we prided ourselves in the simplicity of our habits and the unostentatiousness of our rulers.

Luxury, dissipation, extravagance and effeminacy, their concomitants, have been the destruction of many ancient nations besides proud Rome; which, from being mistress of the world, has dwindled to the mere patrimony of a pontiff. Every person conversant with the history of the French revolution, knows that the dissipation, the luxury, the debauchery, effeminacy and the rapacity of the court, brought on the bloody scenes and the heart-rending miseries which that giddy nation has suffered.

We have before us the warning fate of the British nation, where the avails of the hard earnings and the life-labor of thousands and tens of thousands are screwed from them to glut the rapacity of an individual, who regards them less than he does his dogs. Time was, when the people of the British Isles would not have borne with this; but, with the people's money, the devouring government buys men and arms to enable it to wrest the means of defence from the oppressed, build prisons to incarcerate, and gallowses to hang those on who dare to murmur or complain. However distant from us this state of things may seem to be, dissipation, extravagance and luxury is the sure road that leads to it. Our civil list expenditure has increased within about 50 years, faster than ever did that of Great Britain: while our population has been increasing at the rate of from 4 to 10, the expenditure for support of our national government has more than ten folded; for the year 1790, \$141,492 73 cents was the appropriation; of late years, more than a million and a half has been appropriated for the support of the civil list. About two thirds of this sum, besides a considerable share of many other appropriations, is spent in our beggarly capital, too much of which is applied to purposes of corruption and political prostitution.—In 1790, when the necessaries of life were about the same price that they are now, \$16,750 paid the salaries of the secretaries, the comptroller, the auditor, the treasurer and the register, and \$800 each was appropriated for the salary of the first clerks. In 1821, there was appropriated for the salaries of

the officers of the same denomination \$51,500; and \$1800 were given to an inferior clerk.

It is not merely on account of the number of mendicants begging alms in the streets, that I call Washington our “beggarly capital.” They are much easier got rid of than the beggars to be met with in higher life.

While I sojourned in that city, I was almost daily assailed by a host of clerks complaining of the parsimony of congress, the scanty pittance allowed them, and the expense of living. I have often been tired with hearing one or other of them compare his salary and his duties with those of more favored clerks, always insisting that his duties were more important and more difficult than the other whose salary was higher. I recollect one of the clerks lamenting, that he had to give two dollars that morning for about a quart of green peas and a dollar for a pair of small chickens. This was so early in the season that I had not imagined that the peas were in bloom, and when, I thought, chickens of that year could not be fit to eat. I observed to him that flour was selling at six dollars a barrel, and bacon at eight cents a pound—and that the price of a few quarts of such peas would purchase a cow, which could get her living in the common while she gave milk for his children. As for his part, he replied, that he could not eat bacon, and did not like milk, and his children were not used to them.

The next class of beggars were the officers and their assistants in waiting about congress hall.—Those, by their civilities, their attentions, their gestures and their intimations, were constantly reminding the members of their wants and their wishes.

Whenever I fell in company with a number of the officers of the army, I was sure of being reminded of the parsimony of congress, and of being told how poorly they were paid.

The judges of the district of Columbia, (a district which ought to pay its own judges), were, one or other of them, ever complaining of the parsimony of congress, and begging for a larger salary.

The most important beggars of all were the higher officers. With those I have occasionally dined, and where the greatest profusion prevailed. There might be seen fresh beef, pork and butter from Maryland; mutton from Pennsylvania; hams from Burlington; turkeys and chickens from Virginia; pickled beef and codfish from Massachusetts; potatoes from Carolina and from Maine; wild fowl and fresh fish from the Potomac; salmon from Canada; oysters from New York; olives and spices from both the Indies; raisins and figs from the Mediterranean; nuts from Germany, Italy and the Mississippi; brandy from Nantz; rum from Jamaica; Gin from Holland; cheese from the Netherlands, from England and from Connecticut; wines from Spain, France, Germany, Portugal, Madeira, and the Cape of Good Hope; and porter from London.

While the cloth was removing and the glasses replacing, some sycophant, (perhaps a member of congress), was sure to commence a dissertation on the parsimony of our government, and the inadequate compensation given to our officers. The more frequently the glasses were emptied the more attention was paid to the orator, until his doctrine was echoed from side to side. Too often have the guests carried the infatuation away with them, and I have had occasion to intreat them to resume their reason and their common sense—referring them to what their eyes had seen and their lips had tasted, to convince them that, instead of being parsimonious the government gave too much to their officers, when they enabled them to feast their guests in a

style so far above the medium of good living. I reminded them that man was much the creature of fashion and imitation, and begged them to look around and consider what a number there was plunging themselves into ruin and misery, by their endeavors to furnish a table like that we had lately sat at; always insisting that it was impolitic, as well as immoral, to appropriate the hard earnings of the people for the encouragement and support of such voluptuousness.

I have been led to those recollections and reflections by the perusal of the before mentioned extract from a Washington city paper, which says, "This place can never be tedious. The pleasures of the day are succeeded by the pleasures of the night; for the president and his four secretaries, by means of drawing rooms and parties, have appropriated the nights to pleasure as well as the day. One would be led to believe that members of congress and strangers of distinction, would be surfeited by this continued succession of delights, and, 'like the bee, die on the rose in aromatic pain.' But no such thing-- their appetites are rather sharpened than blunted by perpetual indulgence, and the poor secretaries, who are all looking up to the presidency, are obliged to feed and plaister them on all occasions."

Is it for this that the people of the nation send representatives to Washington, and pay each of them \$56 a week? Is it to spend their nights in revelry and their days in slumber, that they have been sent there? Is it to enable the higher officers of the government "to feed and plaister," to corrupt and prostitute their representatives, that they have suffered the late great increase of their salaries to pass almost unnoticed? If this apathy is continued, they will only merit the political degradation and perdition which infallibly awaits them.

I, by no means, consider it amiss for the president to invite members of congress and strangers of distinction to call upon him and dine with him, or for a drawing room entertainment, once in a while, to be given at his house. At those convivial meetings, the president has an opportunity to become personally acquainted with his guests, and they with him and with one another. Their sentiments and opinions are frequently interchanged. This practice prevailed in the early stages of the government, and, for its support, a superb mansion, ready furnished, is provided, and \$25,000 salary for the president is appropriated. But, at the rate things seem to be going on, the poor secretaries are not to leave off feeding and plaistering, nor congress giving, until each of them have \$25,000 a year to support this magnificent "succession of delights;" those "pleasures by day" and "pleasures by night," so boastfully spoken of by the Washington editor—who tells us the secretaries are all looking up to the presidency: and it seems, by the run of the tale, that one or other of them is expected to be foisted into the presidential chair by this banqueting and revelry.

It has been too much the practice of the candidates for the electorship to pledge themselves to vote for this or that particular candidate. This practice, as well as the congressional caucus, ought to be discarded; and, by the legislature of every state naming the persons they wish to be the next president and vice-president, that the electors will be able to select men who will give satisfaction to the nation. Satisfaction to the nation is the main point—as the elements and principles of our government are so plain and simple, that there are more than one thousand honest, well-informed men

in the states who are as capable of administering the government for four or eight years, as any of the most celebrated candidates hitherto spoken of, while the number of exceptionable characters, who aspire to the station, is comparatively small.

Hoping and believing that the legislatures of the states will generally fall into the practice of nomination, I have amused myself with contemplating the extended field of choice which will be presented to the electors.

I hope the presidential chair will never be filled by a man under sixty years of age, until there shall be a constitutional bar against electing the same person oftener than once or twice. A president of the United States possesses such vast powers and prerogatives, and such immense patronage—has so many offices and favors to bestow, and so much public money to disburse, that it is next to impossible to oust one who shall act with a common share of prudence and foresight. Had gen. Washington chosen to accept a third election, although not without objection, he would have obtained it by seven eighths of the electoral votes. So with Mr. Jefferson—he had early to announce his solemn determination not to accept a third election, in order to avoid solicitation—and to him we owe the rule which forbids any person to look for a third election to the presidency. It is but a rule however. I have never been better pleased with the political course of a president than that of Mr. Monroe—yet I have trembled for fear that he would be induced, by the sycophancy which surrounds him, to agree to accept a third election.

[The writer then proceeds to mention several persons who, he supposed, might be nominated by the several states, and gives his remarks freely on their claims and competency, &c. all which we think it best to omit. He concludes with these words, "such are the opinions of a man of old times, written on the Mississippi, in April, 1822."

Grecian Emancipation.

The following resolutions were passed at a very numerous meeting of the citizens of Albany, convened, by public notice, at the capital in Albany, on Tuesday evening last. John Savage, esqr. comptroller of the state, presided as chairman, and col. James McKown, as secretary. The object of the meeting was explained by Isaac Hamilton, esqr. in a very interesting address. S. S. Lush, esqr. followed Mr. Hamilton in a speech of much feeling in behalf of the suffering Greeks, the land of Demosthenes, of Plato, Pericles, Alcibiades and Leonidas, where "now the shouts of Allah are resounding from christian temples, formerly dedicated to the living God, and the turbaned Turk tramples upon the cross of the Saviour." These gentlemen were followed by John Van Ness Yates, and D. L. Vander Heyden, esqrs. in strains of patriotic eloquence. The speeches were received with reiterated bursts of applause. The resolutions were all carried unanimously. [N. Y. Daily Adv.

Resolved, That, in the opinion of this meeting, it is consistent with the peace, neutrality, and honor of our government, for the people to assemble together and express their sentiments upon the subject of the emancipation of Greece—that such an expression not only comports with the magnanimity and feelings of a christian people, but is more particularly honorable to the character of a nation, who were the first to declare and establish the principles of freedom.

Resolved, That the interesting appeal by the patriots of Greece, to the American people, is worthy the cause in which they are engaged, and demands our most respectful attention—that when we consider that Greece has been alike distinguished as the seat of science and the arts—that to her, sculpture is indebted for its best models, poetry its greatest master, and our seminaries of learning for much of their classic lore—that she has given birth to the most illustrious philosophers, statesmen, and heroes, we cannot be indifferent to the relentless tyranny now exercised over them by their savage and ferocious masters.

Resolved, That we view, with extreme mortification and regret, the policy of the potentates of Europe, especially those claiming to belong to the "holy alliance," in remaining passive spectators of the great scene now acting before them in Turkey, instead of affording the suffering Greeks that countenance and aid, which all christendom had a right to expect—more particularly we cannot but express the painful disappointment of all our hopes in the policy pursued by the emperor Alexander, from whose large armies, and vast preparations, the most prompt and decisive measures were fondly anticipated by the American people.

Resolved, That the cause of religion and the rights of humanity are intimately connected with the result of the conflict between the Greeks and the Turks—and should that conflict prove unsuccessful to the Greeks, (which Heaven forbid), that then it is our duty, as christians, and as men, to offer them an asylum from oppression in this happy country.

Resolved, That J. V. N. Yates, S. A. Tallcott, J. Hamilton, S. S. Lush, and P. Gansevoort, be a committee to correspond with such other committees as may be appointed throughout the union, for affording relief to the suffering Greeks, and that they have power to call any future meetings of the citizens, and to co-operate with other committees, by raising subscriptions or otherwise, in aid of the Greeks, as in their judgment shall be deemed most advisable.

Resolved, That D. L. Vander Heyden, John Stillwell, Wm. Maywell, John Koon, and James McKown, be a committee to prepare and publish an address, in the name of this meeting, to the citizens of the United States, upon the subject of the foregoing resolutions.

Cultivation of Cotton.

The following, though a mercantile "circular," contains many things worthy of observation and exposes some facts of much interest to American statesmen and political economists. The writers, however, are greatly mistaken as to the amount of labor transferred to the cultivation of the cane, for sugar—and many other of their own calculations, and conclusions on them, are evidently wrong. The cultivation of cotton is increasing, though the price of the article is diminishing—and it will increase until it yields to the planter less than ten cents per pound. The capital invested must be employed; and cannot be suddenly and generally changed. Nothing but the success of the cotton manufacture in the U. S. can prevent it from becoming a truly bad business, in consequence of its greater extent of cultivation, which has advanced more rapidly than the increased demand. But at ten cents *per lb.* it appears to be unworthy of this attention of a capitalist, if he has the power to turn his capital to

almost any thing else—supposing that the estimates are to be relied on—the product being only about three and a half *per cent.*

The following extract from a circular from the house of Cropper, Benson and Co. under date of the 27th September, contains some views and estimates in relation to the culture and sale of cotton, which may be very interesting to the planter and merchant
[Savannah paper.]

Annexed, we give two estimates, drawn up by two different planters, neither knowing any thing of each other's statement, nor we of their's, and though there is some trifling difference in the mode of estimate, yet it will be seen that they exhibit almost exactly the same result.

This is the present mode of management, with which the planters must be content, if they can do no better. But sugar on the banks of the Mississippi is paying a much greater profit, and though the land fit for its growth is more limited than that fit for cotton, yet it is estimated that there is enough within the proper latitude, to produce more, by at least 150,000 hogshheads, than is yet grown there.—The estimates which we have seen from thence, make the cost of lb. of cotton very nearly the same as that of 4lb. of sugar; and yet, if our present prices of cotton remain, it will yield only 7 cents, whilst sugar, by the last advices from New Orleans, is quoted 9 to 11 cents, or 8 cents, on the plantation. Estimating the profit of the one culture with the other, upon this scale of prices, whilst the one only pays $2\frac{1}{2}$ per cent. the other would pay about 23 per cent. per annum. Estimates are not always to be depended upon, but we have some thing more than estimate in this case. We know that in Barbadoes the culture of cotton is nearly given up, and in Demerara, though sugar has very much increased, yet there has been a decrease in cotton. Now, whilst these changes are taking place, it is a fact which any one, knowing the prices of the two articles, can ascertain for himself, that cotton has sold on the average at three or four times, at least, the prices of sugar; and yet sugar, under these circumstances, has been preferred. Will not the change be very rapid where sugar is even higher than cotton?

Next as to manufacturing; the planters are giving in some cases, 40 cents per yard for cotton bagging. This they might make themselves from cotton, as is done in the Brazils, with great advantage. They might also make their own clothing, especially that of the negroes. If they changed their system in this respect, and grew and made every thing they wanted, they might certainly sell their surplus cotton at any price; but it must be borne in mind, that they would have much less to sell. They have the spinning jenny, in some parts of North Carolina, amongst the farmers; weaving is carried on in almost every part of the world; and a little consideration will show what great advantages they would have in manufacturing.

The bale of cotton which the planter can only sell for 4l. 10s. cannot be delivered to the British manufacturer for less than 9l.; and when to this the expense of manufacturing is added, the whole cannot be conveyed back to the planter without an addition of fully 50 per cent. in duty and profit.—Then we may fairly say, that, in exporting cotton and importing manufactured goods, the planter pays 100 per cent. on the wages paid in England, and he would gain an advantage to this extent if he manufactured them at home. Perhaps it will be said that wages are higher; let us examine this. The average produce of a slave's labor is 1½ bags

of cotton, or 6l. 15s being about 5d per working day. Now we think we do not over rate the earnings of a whole family in our cotton manufacturing districts, if we take them at 5s. per week, reckoning the whole population, whether able to work or not. Five shillings per week is 10d. per day; yet the planter now gives 100 per cent, which makes 20d.

That low prices will make the planters turn to something else is not mere conjecture; we can refer to the years of the embargo and the war.— Before the commencement of that period, viz. in 1807, the export of cotton, from America to this country, was 171,000 bags; there was no year from that to 1816, when the imports were the whole of one crop, and then our imports were 166,000, and in 1817, 197,000. The crop of 1807 was a great one, and, therefore, it would not be fair to take that singly; putting the crop of 1805 to it, which was 124,000, it will make an average of 148,000 bags; whilst 1816 and 1817, put together, will make 182,000 bags, an increase of only 20 per cent. whilst the population had increased about 30 per cent. This, too, comprises three years, when the inducement to plant extensively would be great; so that there is a strong probability that, for a part of the time of the embargo and war, the cultivation of cotton must rather have receded than gone forward; and yet at that time they knew little of the growth of sugar. They could, during these periods, sell cotton, if they chose, and they would naturally look forward to a better market for their produce at the termination of their disputes with this country.

A part of the extension of the cultivation of cotton arises from the purchase of slaves, which they would have the power, as well as the inducement, to do, while cotton sold above 15 cents; but when it has fallen to half that price, they will have neither. This will at once take off 7 of the 10 per cent. increase, for their natural increase is only about 3 per cent. We may also suppose a transfer to sugar of, perhaps, one-eighth, or 12 1-2 per cent; for the Americans move about rapidly to what pays them best; and, surely, for both time and cotton consumed in manufacturing cotton bagging, and their own clothes, we may put 10 per cent. more: these together will make 29 1/2 per cent. We will call it 30 per cent, which would reduce the crop, to arrive in 1824, from 645,000 bags to 452,000 bags, reducing the stock at the end of that year 193,000; but that would be impossible, for it was only estimated in the other case at 149,000 bags.

It is quite evident then, if it were possible that our present prices should continue, we should have such a decrease in the growth, and such an increase in the consumption, as would, at a very early period, leave us without a bag of cotton on hand.

The apathy which has allowed the prices of cotton to fall to their present rates, pervades other branches of commerce; for though it is reasonably estimated, that, at the present rate of consumption, all the sugar in the country will be exhausted before the new will arrive, yet the holders are selling at the lowest price ever known, and look on these facts, with which they are perfectly acquainted, as though it could never rise again. Last year's crop of corn is generally estimated not to have supplied the country more than 11 months; and though the present crop was less than the preceding and the consumption going on at a greater rate than ever known, still the price is lower than ever remembered. If the present un-mercantile feeling

of holding no stocks is to continue to prevail, we may be quite run out of all these important articles before any one is aware.

CROPPER, BENSON, & CO.

ESTIMATES.

South Carolina contains 502,741 inhabitants, of which 258,475 are slaves. Georgia contains 340,989 inhabitants, of which 143,432 are slaves. Alabama contains 127,901 inhabitants, of which 41,000 are slaves. Mississippi contains 75,448 inhabitants, of which 32,814 are slaves. Louisiana contains 153,407 inhabitants, of which 68,500 are slaves. Tennessee contains 422,613 inhabitants, of which 80,000 are slaves. Total, 1,623,099 inhabitants, of which 629,271 are slaves.

Total population as above	1,623,099
Deduct slaves	629,271

Leaving a population of free persons of	993,828
Deduct for free colored persons	20,828

Leaving a population of white persons of	973,000
--	---------

It is commonly estimated that one slave to every ten white persons, is employed for domestic purposes, which will give

	97,300
--	--------

Estimated number of slaves on sugar and tobacco plantations	40,000
---	--------

Do on rice	do	40,000
------------	----	--------

Do mechanics	do	20,000
--------------	----	--------

Total	197,500
-------	---------

Total slave population	629,271
------------------------	---------

Effective and non-effective hands employed otherwise than on cotton plantations as above	197,300
--	---------

Leaving effective and non-effective slaves on the cotton plantations	431,971
--	---------

First estimate of cost of cotton plantations.

Food, 13 bushels of corn, or 1 peck per week, at 70 cts. per bushel	\$9 10
---	--------

1 hat, \$1 50; 2 pair shoes, \$2 50; 1 blanket, \$3	7 00
---	------

6 yards plains, at 75 cts. 4 50; doctor and physic, \$1	5 50
---	------

One suit of osnaburgs	1 50
-----------------------	------

Tools, vehicles, and horses	1 00
-----------------------------	------

Tax	1 50
-----	------

25 60

100 negroes are equal to 60 good working hands:

100 average negroes worth now perhaps \$350 each	\$35,000
--	----------

100 average negroes, or 60 working hands, will cultivate each 3 1/2 acres, or 210 acres, worth per acre 50 dollars	10,500
--	--------

Planter's capital	\$45,500
-------------------	----------

If one working hand cultivates 3 1/2 acres, which give 900lbs of clean cotton, 60 working hands, or 100 average hands, will cultivate 210 acres, which yield 54,000 lbs. clean cotton, which, at 11 cts. per lb. is gross

	\$5,940
--	---------

Deduct the expense of keeping 100 hands at \$24, in lieu of 25 60, the estimate	2,400
---	-------

Factorage, 2 1/2 per cent on \$5,940	148
--------------------------------------	-----

Carriage, rent, drayage, and labor on 185 bags or 54,000lb weight, at \$2 50	712	
Bagging, at 90 cents per bale	256	
		5,316

Leaves net profit of 100 negroes, or 60 working hands, at 11 cents 2,324

Then it appears, that a capital of 45,500 dollars in land and negroes, yields, if the cotton sell at 11 cents per lb, 2,324 dollars, or 5 1 10 per cent.

Second estimate of cost of cotton plantations.

Cost of keeping one negro a year on a cotton plantation:

Food, 13 bushels of corn, or 1 peck per week, at 70 cents per bushel \$9 10

Touching this item, this planter says that he appoints a certain portion of his negroes to cultivate bread stuff for those employed in his plantations, and that whether he cultivate it or buy it, it will cost as above.

A pair of shoes \$1 28; 1 blanket in 3 years, at 3 dollars, is 1 dollar 2 25

Or yards of plains, at 75 cents, 4 50; doctor and physic, 1 dollar 5 50

Suit osnaburgs for summer 1 50

Tools, vehicles, and horses 1 50

Tax 1 00

20 85

This planter says, that, on an average, 20 dollars will defray the expense per head, and these items come near it. The negro, out of his own earnings, buys a hat and any more shoes he may require.

But, out of 100 average hands, 50 only are workers, the other fifty being rendered non-effective by infancy, infirmity, or from being used for domestic purposes.

100 average negroes, worth 400 dollars each 40,000

100 average negroes, or 50 working hands, will cultivate each $3\frac{1}{2}$ acres or 175 acres, worth per acre \$80 14,000

Amount of capital in negroes and land \$54,000

The land is only worth \$20 an acre; but a planter must have at least four times the quantity that is actually employed for cotton, seeing that it soon gets exhausted. It is too expensive to restore it by manure and it lies in fallow until the remainder of the estate has undergone exhaustion; so that \$80 is really the cost of an acre of the land actually in use.

Average gangs of negroes would, not long ago, have commanded \$425 each, so that the above is a low estimate.

If one working hand cultivates $3\frac{1}{2}$ acres, which will yield 900lbs of clean cotton, 50 working hands will cultivate 175 acres, which will yield 45,000lbs of clean cotton, and which, at 10 cents per lb. is 4,500 00

Deduct expense of keeping 100 hands at \$20 2,000 00

Factorage on \$4,500 at $2\frac{1}{2}$ per cent 112 50

Carriage, rent, drayage and labor on 150 bags, or 45,000lb weight, \$2 50 each 375 00

Bagging, at 90 cents per bale 135 00

2,622 50

Nett profit of 100 average or 50 working hands, at 10 cents \$1,877 50

So that on a capital of negroes and land, amounting to \$54,000 there is a profit of \$ 238 540 per cent, at 10 cents per pound.

Seventeenth Congress—2nd session.

IN THE SENATE.

December 2, 1822. At 12 o'clock the president of the senate pro tempore, Mr. GAILLARD, took the chair of the senate, and the following members appeared in their seats, viz:

From *New Hampshire*. Mr. Morrill and Mr. Parrott.

From *Massachusetts*. Mr. James Lloyd, (in the place of Mr. Otis, resigned).

From *Rhode Island*. Mr. Knight.

From *Connecticut*. Mr. Boardman and Mr. Landon.

From *Vermont*. Mr. Palmer and Mr. Seymour.

From *New York*. Mr. King and Mr. Van Buren.

From *New Jersey*. Mr. Dickerson.

From *Pennsylvania*. Mr. Findlay and Mr. Lowrie.

From *Delaware*. Mr. Van Dyke and Mr. Rodney.

From *Virginia*. Mr. Barbour and Mr. Pleasants.

From *North Carolina*. Mr. Macon.

From *South Carolina*. Mr. Gaillard and Mr. Smith.

From *Kentucky*. Mr. Johnson and Mr. Talbot.

From *Tennessee*. Mr. Eaton and Mr. Williams.

From *Ohio*. Mr. Brown and Mr. Ruggles.

From *Louisiana*. Mr. Brown and Mr. Johnson.

From *Indiana*. Mr. Noble and Mr. Taylor.

From *Mississippi*. Mr. Holmes and Mr. Williams.

From *Illinois*. Mr. Edwards.

From *Maine*. Mr. Chandler and Mr. Holmes.

From *Missouri*. Mr. Barton.

A quorum of the members being present,

A message was, on motion of Mr. Barbour, sent to the house of representatives, announcing that fact, and the readiness of the senate to proceed to business.

On motion of Mr. Barbour, a committee was appointed to join the committee of the house of representatives to wait on the president of the United States, and inform him that the two houses were ready to receive any communication from him; and Mr. King, of New York, and Mr. Macon were appointed; and

The senate then adjourned.

December 3. The vice president took his seat this day as president of the senate.

The president's message was received, (as given in the proceedings of the house), read and ordered to be printed, &c.

A letter was received from the secretary of war, transmitting, in pursuance of an order passed at the last session, a report of the number of persons placed upon the pension list, up to the 4th Sept. 1822, by virtue of the acts of the 18th March, 1818, and 1st of May, 1820. [The total number of officers, non-commissioned officers, and privates, placed on the revolutionary pension list, up to the 4th Sept. 1822, appears to be 12,331].

After adopting several orders connected with the despatch of business—

The senate adjourned.

December 4. Mr. Ware, of Georgia, appeared and took his seat. No matter of importance transacted.

HOUSE OF REPRESENTATIVES.

December 2, 1822. At 12 o'clock precisely, the speaker, (Mr. P. P. BARBOUR, of Virginia), took the chair, and Mr. Samuel Burch, principal clerk in the

office of clerk of the house of representatives, called over the roll of members, when it appeared that the following members were present, viz:

Maine. Joshua Cushman, Joseph Dane, Mark Harris, Ebenezer Herrick, Mark L. Hill, Enoch Lincoln, William D. Williamson.

New Hampshire. Josiah Butler, Matthew Harvey, Aaron Matson, William Plumer, jr. Nathaniel Upham, Thomas Whipple, jr.

Massachusetts. Samuel C. Allen, Francis Baylies, Lewis Bigelow, Henry W. Dwight, William Eastis, Timothy Fuller, Benjamin Gorham, Aaron Hobart, Jeremiah Nelson, John Reed, Jonathan Russell.

Rhode Island. Job Darfee, Samuel Eddy.

Connecticut. Noyes Barber, Henry W. Edwards, John Russ, Ansel Sterling, Ebenezer Stoddard, Gideon Tomlinson.

Vermont. Samuel C. Crafts, Elias Keyes, Rollin C. Mallary, John Mattocks, Phineas White.

New York. Churchill C. Cambreleng, Alfred Conckling, John D. Dickinson, John Gebhard, Jas. Hawks, Thomas H. Hubbard, Joseph Kirkland, Elsha Litchfield, Richard McCarty, Walter Patterson, Jeremiah H. Pierson, Nathaniel Pitcher, William B. Rochester, Charles H. Ruggles, C. D. Golden, Micah Sterling, John W. Taylor, Albert H. Tracey, Stephen Van Rensselaer, William W. Van Wyck, Reuben H. Walworth, Silas Wood, David Woodcock.

New Jersey. Ephraim Bateman, George Cassidy, Lewis Condict, George Holcombe, Samuel Swan.

Pennsylvania. John Brown, William Darlington, George Denison, Samuel Edwards, Patrick Farrelly, Walter Forward, John Findlay, Samuel Gross, Joseph Hemphill, James McSherry, Thomas Forrest, James S. Mitchel, Samuel D. Ingham, Thomas Murray, jr. Thomas Patterson, Jno. Phillips, George Plumer, Thomas J. Rodgers, John Tod.

Delaware. Louis McLane, Daniel Rodney.

Maryland. Joseph Kent, Peter Little, John Nelson, Philip Reed, Samuel Smith, Henry R. Warfield, Robert Wright.

Virginia. Mark Alexander, William S. Archer, Philip P. Barbour, (*speaker*), Burwell Bassett, Robert S. Garnett, Edward B. Jackson, James Jones, William McCoy, Charles F. Mercer, Hugh Nelson, Thomas Newton, John Randolph, Arthur Smith, Alexander Smyth, Andrew Stevenson, James Stephenson, George Tucker, Jared Williams.

North Carolina. William S. Blackledge, Hutchins G. Burton, Henry Connor, Weldon N. Edwards, Thomas H. Hall, Charles Hooks, John Long, Archibald McNeil, Romulus Sanders, Felix Walker, Lewis Williams.

South Carolina. John Carter, Joseph Gist, Thos. R. Mitchell, Sterling Tucker, John Wison.

Georgia. Joel Abbot, George R. Gilmer, Edw'd F. Tattell, Wiley Thompson.

Kentucky. James D. Breckenridge, Benjamin Hardin, Francis Johnson, John T. Johnson, Thos. Metcalf, Thos. Montgomery, Anthony New, David Trimble, Samuel H. Woodson.

Tennessee. Robert Allen, Newton Cannon, John Cocks, Francis Jones, John Rhea.

Ohio. Levi Barber, David Chambers, Thomas R. Ross, John Sloan, Joseph Vance.

Louisiana. Josiah Stoddard Johnson.

Indiana. Jonathan Jennings.

Mississippi. Christopher Rankin.

Illinois. Daniel P. Cook.

Alabama. Gabriel Moore.

Missouri. John Scott.

The following gentlemen, elected during the recess to fill vacancies which have occurred in this body, made their appearance, and were qualified by taking the oath to support the constitution of the United States, viz:

From Maine. Mark Harris.

Pennsylvania. Walter Forward and Thos. Forrest.

Delaware. Daniel Rodney.

Virginia. James Stephenson.

South Carolina. John Carter.

Indiana. Jonathan Jennings.

On motion of Mr. Taylor, of N. Y. a message was ordered to be sent to the senate, informing that body that a quorum of this house was formed, and was ready to proceed to business.

On motion of Mr. Taylor, it was ordered, that a committee be appointed, to act jointly with such committee as may be appointed by the senate, to wait on the president of the United States, and inform him that the two houses were in session, and ready to receive any communication which he might have to make to them.

After receiving a message from the senate, by their secretary, that they had formed a quorum—

On motion of Mr. Taylor, it was ordered, that the house do now proceed to the election of a clerk, to fill the vacancy occasioned by the death of Thomas Dougherty, esq. late clerk of this house.

This being an office to which persons other than members of the house may be elected, nominations of candidates are, by the rules of the house, required previous to election; and twenty persons were nominated as candidates for the office.

The balloting took place.

[Six ballots were taken—the following shews the several results at one view:

	1st.	2d.	3d.	4th.	5th.	6th
William Milnor :	14	12	9	7	—	—
Samuel Burch :	10	6	—	—	—	—
Levi H. Clark :	19	22	24	26	21	12
B. S. Chambers :	17	20	20	25	28	29
S. D. Franks :	15	13	13	8	10	9
Tobias Watkins :	12	10	12	6	—	—
Robert Temple :	13	15	23	28	46	54
E. W. Du Val :	5	—	—	—	—	—
S. A. Foot :	9	9	8	6	—	—
James H. Pleasants :	13	13	15	17	8	17
Mr. Briggs :	5	—	—	—	—	—
J. S. Williams :	4	—	—	—	—	—
M. St. C. Clarke :	9	12	14	17	21	24
Mr. Goldsborough :	—	4	—	7	—	—

There were, on the different ballots, a few scattering votes, that are not put down in the preceding exhibit.]

Between the first and second ballots—Mr. Taylor, from the committee appointed to wait on the president of the United States, reported that the committee had performed that duty, and had received for answer that the president would to-morrow, at 12 o'clock, make a communication to the house in writing.

Tuesday, December 3.—This day the president of the United States transmitted to both houses of congress the following

MESSAGE.

Fellow citizens of the senate, and house of representatives:

Many causes unite to make your present meeting peculiarly interesting to our constituents. The operation of our laws, on the various subjects, to which they apply, with the amendments which they occasionally require, imposes, annually, an important duty on the representatives of a free people.

Our system has happily advanced to such maturity, that I am not aware that your cares, in that respect, will be augmented. Other causes exist which are highly interesting to the whole civilized world, and to no portion of it more so, in certain views, than to the United States. Of these causes, and of their bearing on the interests of our union, I shall communicate the sentiments which I have formed with that freedom which a sense of duty dictates. It is proper, however, to invite your attention, in the first instance, to those concerns respecting which legislative provision is thought to be particularly urgent.

On the 24th of June last, a convention of navigation and commerce was concluded, in this city, between the United States and France, by ministers duly authorized for the purpose. The sanction of the executive having been given to this convention, under a conviction that, taking all its stipulations into view, it rested, essentially, on a basis of reciprocal and equal advantage, I deemed it my duty, in compliance with the authority vested in the executive, by the second section of the act of the last session, of the sixth of May, concerning navigation, to suspend, by proclamation, until the end of the next session of congress, the operation of the act, entitled "an act to impose a new tonnage duty on French ships and vessels, and for other purposes," and to suspend, likewise, all other duties on French vessels, or the goods imported in them, which exceeded the duties on American vessels, and on similar goods imported in them. I shall submit this convention, forthwith, to the senate, for its advice and consent as to the ratification.

Since your last session, the prohibition which had been imposed on the commerce between the United States and the British colonies, in the West Indies and on this continent, has likewise been removed. Satisfactory evidence having been adduced that the ports of those colonies had been opened to the vessels of the United States by an act of the British parliament, bearing date on the 24th of June last; on the conditions specified therein, I deemed it proper, in compliance with the provision of the first section of the act of the last session, above recited, to declare, by proclamation, bearing date on the 24th of August last, that the ports of the United States should thenceforward, and until the end of the next session of congress, be open to the vessels of Great Britain, employed in that trade, under the limitation specified in that proclamation.

A doubt was entertained whether the act of congress applied to the British colonies on this continent, as well as to those in the West Indies; but, as the act of parliament opened the intercourse equally with both, and it was the manifest intention of congress, as well as the obvious policy of the United States, that the provisions of the act of parliament should be met, in equal extent, on the part of the United States, and as, also, the act of congress was supposed to vest in the president some discretion in the execution of it, I thought it advisable to give it a corresponding construction.

Should the constitutional sanction of the senate be given to the ratification of the convention with France, legislative provisions will be necessary to carry it fully into effect, as it likewise will be to continue in force, on such conditions as may be deemed just and proper, the intercourse which has been opened between the United States and the British colonies. Every light in the possession

of the executive will, in due time, be communicated on both subjects.

Resting essentially on a basis of reciprocal and equal advantage, it has been the object of the executive, in transactions with other powers, to meet the propositions of each with a liberal spirit, believing that, thereby, the interest of our country would be most effectually promoted. This course has been systematically pursued in the late occurrences with France and Great Britain, and in strict accord with the views of the legislature. A confident hope is entertained that, by the arrangement thus commenced with each, all differences respecting navigation and commerce with the dominions in question, will be adjusted, and a solid foundation be laid for an active and permanent intercourse, which will prove equally advantageous to both parties.

The decision of his imperial majesty the emperor of Russia, on the question submitted to him by the United States and Great Britain, concerning the construction of the first article of the treaty of Ghent, has been received. A convention has since been concluded between the parties, under the mediation of his imperial majesty, to prescribe the mode by which that article shall be carried into effect, in conformity with that decision. I shall submit this convention to the senate for its advice and consent, as to the ratification, and, if obtained, shall immediately bring the subject before congress, for such provisions as may require the interposition of the legislature.

In compliance with an act of the last session, a territorial government has been established in Florida, on the principles of our system. By this act, the inhabitants are secured in the full enjoyment of their rights and liberties, and to admission into the union, with equal participation in the government, with the original states, on the conditions heretofore prescribed to other territories.—By a clause in the ninth article of the treaty with Spain, by which that territory was ceded to the United States, it is stipulated, that satisfaction shall be made for the injuries, if any, which, by process of law, shall be established to have been suffered by the Spanish officers, and individual Spanish inhabitants, by the late operations of our troops in Florida. No provision having yet been made to carry that stipulation into effect, it is submitted to the consideration of congress, whether it will not be proper to vest the competent power in the district court at Pensacola, or in some tribunal to be specially organized for that purpose.

The fiscal operations of the year have been more successful than had been anticipated at the commencement of the last session of congress.

The receipts into the treasury during the three first quarters of the year, have exceeded the sum of fourteen millions seven hundred and forty-five thousand dollars. The payments made at the treasury during the same period have exceeded twelve millions two hundred and seventy-nine thousand dollars; leaving in the treasury on the 30th day of September last (including one million one hundred and sixty eight thousand five hundred and ninety-two dollars and twenty-four cents, which were in the treasury on the first day of January last) a sum exceeding four millions one hundred and twenty-eight thousand dollars.

Besides discharging all demands for the current service of the year, including the interest and reimbursement of the public debt, the six per cent. stock of 1796, amounting to eighty thousand dollars, has been redeemed. It is estimated that,

after defraying the current expenses of the present quarter, and redeeming the two millions of six per cent. stock of 1820, there will remain in the treasury, on the first day of January next, nearly three millions of dollars. It is estimated that the gross amount of duties which have been secured, from the first of January to the 30th September last, has exceeded nineteen millions five hundred thousand dollars, and the amount for the whole year will probably not fall short of twenty-three millions of dollars.

Of the actual force in service under the present military establishment, the posts at which it is stationed, and the condition of each post, a report from the secretary of war, which is now communicated, will give a distinct idea. By like reports, the state of the academy at West Point will be seen, as will be the progress which has been made on the fortifications along the coast, and at the public armories and arsenals.

The position on the Red river, and that at the Sault of St. Marie, are the only new posts that have been taken. These posts, with those already occupied in the interior, are thought to be well adapted to the protection of our frontiers. All the force, not placed in the garrisons along the coast, and in the ordnance depots, and indispensably necessary there, is placed on the frontiers.

The organization of the several corps composing the army, is such as to admit its expansion to a great extent, in case of emergency, the officers carrying with them all the light which they possess to the new corps, to which they might be appointed.

With the organization of the staff there is equal cause to be satisfied. By the concentration of every branch, with its chief, in this city, in the presence of the department, and with a grade in the chief military station to keep alive and cherish a military spirit, the greatest promptitude in the execution of orders, with the greatest economy and efficiency, are secured. The same view is taken of the military academy. Good order is preserved in it, and the youth are well instructed in every science connected with the great objects of the institution. They are also well trained and disciplined in the practical parts of the profession. It has always been found difficult to control the ardor inseparable from that early age, in such manner as to give it a proper direction. The rights of manhood are too often claimed prematurely; in pressing which too far, the respect which is due to age, and the obedience necessary to a course of study and instruction, in every such institution, are sometimes lost sight of. The great object to be accomplished is the restraint of that ardor, by such wise regulations and government, as, by directing all the energies of the youthful mind to the attainment of useful knowledge, will keep it within a just subordination, and at the same time elevate it to the highest purposes. This object seems to be essentially obtained in this institution, and with great advantage to the union.

The military academy forms the basis, in regard to science, on which the military establishment rests. It furnishes, annually, after due examination, and on the report of the academic staff, many well informed youths, to fill the vacancies which occur in the several corps of the army, while others, who retire to private life, carry with them such attainments, as, under the right reserved to the several states to appoint the officers and to train the militia, will enable them, by affording a wider field for selection, to promote the great object of the power vested in congress, of providing for the

organizing, arming and disciplining the militia. Thus, by the mutual and harmonious co-operation of the two governments in the execution of a power divided between them, an object always to be cherished, the attainment of a great result, on which our liberties may depend, cannot fail to be secured. I have to add, that, in proportion as our regular force is small, should the instruction and discipline of the militia, the great resource on which we rely, be pushed to the utmost extent that circumstances will admit.

A report from the secretary of the navy will communicate the progress which has been made in the construction of vessels of war, with other interesting details, respecting the actual state of the affairs of that department. It has been found necessary, for the protection of our commerce, to maintain the usual squadrons on the Mediterranean, the Pacific, and along the Atlantic coast, extending the cruises of the latter into the West Indies, where piracy, organized into a system, has preyed on the commerce of every country trading thither. A cruise has also been maintained on the coast of Africa, when the season would permit, for the suppression of the slave trade; and orders have been given to the commanders of all our public ships to seize our own vessels, should they find any engaged in that trade, and to bring them in for adjudication.

In the West Indies piracy is of recent date, which may explain the cause why other powers have not combined against it. By the documents communicated, it will be seen that the efforts of the United States to suppress it, have had a very salutary effect. The benevolent provision of the act, under which the protection has been extended alike to the commerce of other nations, cannot fail to be duly appreciated by them.

In compliance with the act of last session, entitled "an act to abolish the United States' trading establishments," agents were immediately appointed and instructed, under the direction of the secretary of the treasury, to close the business of the trading-houses among the Indian tribes, and to settle the accounts of the factors and sub-factors engaged in that trade, and to execute, in all other respects, the injunctions of that act, in the mode prescribed therein. A final report of their proceedings shall be communicated to congress as soon as it is received.

It is with great regret I have to state that a serious malady has deprived us of many valuable citizens at Pensacola, and checked the progress of some of those arrangements which are important to the territory. This effect has been sensibly felt in respect to the Indians who inhabit that territory, consisting of the remnants of several tribes who occupy the middle ground between St. Augustine and Pensacola, with extensive claims, but undefined boundaries. Although peace is preserved with those Indians, yet their position and claims tend essentially to interrupt the intercourse between the eastern and western parts of the territory, on which our inhabitants are principally settled. It is essential to the growth and prosperity of the territory, as well as to the interest of the union, that these Indians should be removed, by special compact with them, to some other position, or concentrated within narrower limits where they are. With the limited means in the power of the executive, instructions were given to the governor to accomplish this object, so far as it might be practicable, which was prevented by the distressing malady referred to. To carry it fully into effect in either mode, additional funds will be necessary, to the provision of which

the powers of congress alone are competent. With a view to such provisions as may be deemed proper, the subject is submitted to your consideration, and in the interim, further proceedings are suspended.

It appearing that so much of the act, entitled "an act regulating the staff of the army," which passed on the 14th April, 1818, as relates to the commissariat, will expire in April next, and the practical operation of that department having evinced its great utility, the propriety of its renewal is submitted to your consideration.

The view which has been taken of the probable productiveness of the lead mines, connected with the importance of the material to the public defence, makes it expedient that they should be managed with peculiar care. It is, therefore, suggested whether it will not comport with the public interest to provide, by law, for the appointment of an agent skilled in mineralogy, to superintend them, under the direction of the proper department.

It is understood that the Cumberland road, which was constructed at a great expense, has already suffered from the want of that regular superintendance, and of those repairs, which are indispensable to the preservation of such a work. This road is of incalculable advantage in facilitating the intercourse between the western and the Atlantic states. Through it the whole country, from the northern extremity of lake Erie to the Mississippi, and from all the waters which empty into each, finds an easy and direct communication to the seat of government, and thence to the Atlantic. The facility which it affords to all military and commercial operations, and also to those of the post office department, cannot be estimated too highly. This great work is, likewise, an ornament, and an honor to the nation. Believing that a competent power to adopt and execute a system of internal improvement has not been granted to congress, but that such a power, confined to great national purposes, and with proper limitations, would be productive of eminent advantage to our union, I have thought it advisable that an amendment of the constitution, to that effect, should be recommended to the several states. A bill which assumed the right to adopt and execute such a system, having been presented for my signature, at the last session, I was compelled, from the view which I had taken of the powers of the general government, to negative it, on which occasion I thought it proper to communicate the sentiments which I had formed, on mature consideration, on the whole subject. To that communication, in all the views in which the great interest to which it relates, may be supposed to merit your attention, I have now to refer. Should congress, however, deem it improper to recommend such an amendment, they have, according to my judgment, the right to keep the road in repair, by providing for the superintendance of it, and appropriating the money necessary for repairs. Surely, if they had a right to appropriate money to make the road, they have the right to appropriate it to preserve the road from ruin. From the exercise of this power no danger is to be apprehended. Under our happy system, the people are the sole and exclusive fountain of power. Each government originates from them, and to them alone, each to its proper constituents, are they respectively and solely responsible for the faithful discharge of their duties, within their constitutional limits. And that the people will confine their public agents, of every station, to the strict line of their constitutional duties, there is no cause to doubt. Having, however, communicated

my sentiments to congress, at the last session, fully, in the document to which I have referred, respecting the right of appropriation, as distinct from the right of jurisdiction and sovereignty over the territory in question, I deem it improper to enlarge on the subject here.

From the best information that I have been able to obtain, it appears that our manufactures, though depressed immediately after the peace, have considerably increased, and are still increasing, under the encouragement given them by the tariff of 1815, and by subsequent laws. Satisfied I am, whatever may be the abstract doctrine in favor of unrestricted commerce, provided all nations would concur in it, and it was not liable to be interrupted by war, which has never occurred, and cannot be expected, that there are other strong reasons applicable to our situation, and relations with other countries, which impose on us the obligation to cherish and sustain our manufactures. Satisfied, however, I likewise am, that the interest of every part of our union, even of those most benefitted by manufactures, requires that this subject should be touched with the greatest caution, and a critical knowledge of the effect to be produced by the slightest change. On full consideration of the subject, in all its relations, I am persuaded, that a further augmentation may now be made of the duties on certain foreign articles in favor of our own, and without affecting, injuriously, any other interest. For more precise details, I refer you to the communications which were made to congress during the last session.

So great was the amount of accounts for money advanced during the late war, in addition to others of a previous date, which, in the regular operations of the government, necessarily remained unsettled, that it required a considerable length of time for their adjustment. By a report from the first comptroller of the treasury, it appears, that, on the 4th of March, 1817, the accounts then unsettled amounted to one hundred and three millions six hundred and eighty thousand eight hundred and seventy six dollars and forty one cents, of which, on the 30th of September of the present year, ninety three millions one hundred and seventy five thousand three hundred and ninety six dollars and fifty six cents had been settled; leaving on that day a balance unsettled of nine millions eight hundred and ninety three thousand four hundred and seventy nine dollars and eighty five cents. That there have been drawn from the treasury, in paying the public debt, and sustaining the government in all its operations and disbursements, since the 4th of March, 1817, one hundred and fifty seven millions one hundred and ninety nine thousand three hundred and eighty dollars and ninety six cents, the accounts for which have been settled to the amount of one hundred and thirty seven millions five hundred and one thousand four hundred and fifty one dollars and twelve cents; leaving a balance unsettled of nineteen millions six hundred and ninety seven thousand nine hundred and twenty nine dollars and eighty four cents. For precise details respecting each of these balances, I refer to the report of the comptroller, and the documents which accompany it.

From this view, it appears that our commercial differences with France and Great Britain have been placed in a train of amicable arrangement, on conditions fair and honorable, in both instances, to each party; that our finances are in a very productive state, our revenue being at present fully competent to all the demands upon it; that our military force is well organized in all its branches, and capable of rendering the most important ser-

vice, in case of emergency, that its number will admit of; that due progress has been made, under existing appropriations, in the construction of fortifications, and in the operations of the ordnance department; that due progress has, in like manner, been made in the construction of ships of war; that our navy is in the best condition, felt and respected in every sea in which it is employed for the protection of our commerce; that our manufactures have augmented in amount, and improved in quality, that great progress has been made in the settlement of accounts, and in the recovery of the balances due by individuals; and, that the utmost economy is secured and observed in every department of the administration.

Other objects will likewise claim your attention; because, from the station which the United States hold, as a member of the great community of nations, they have rights to maintain, duties to perform, and dangers to encounter.

A strong hope was entertained that peace would, ere this, have been concluded, between Spain and the independent governments south of the United States in this hemisphere. Long experience having evinced the competency of those governments to maintain the independence which they had declared, it was presumed that the considerations which induced their recognition by the U. States, would have had equal weight with other powers, and that Spain herself, yielding to those magnanimous feelings of which her history furnishes so many examples, would have terminated, on that basis, a controversy so unavailing, and at the same time so destructive. We still cherish the hope, that this result will not long be postponed.

Sustaining our neutral position, and allowing to each party, while the war continue, equal rights, it is incumbent on the United States to claim of each, with equal rigor, the faithful observance of our rights, according to the well known law of nations. From each, therefore, a like co-operation is expected in the suppression of the piratical practice which has grown out of this war, and of blockades of extensive coasts on both seas, which, considering the small force employed to sustain them, have not the slightest foundation to rest on.

Europe is still unsettled, and although the war long menaced between Russia and Turkey, has not broken out, there is no certainty that the differences between those powers will be amicably adjusted. It is impossible to look to the oppressions of the country, respecting which those differences arose, without being deeply affected. The mention of Greece fills the mind with the most exalted sentiments, and arouses in our bosoms the best feelings of which our nature is susceptible. Superior skill and refinements in the arts, heroic gallantry in action, disinterested patriotism, enthusiastic zeal and devotion in favor of public and personal liberty, are associated with our recollections of ancient Greece. That such a country should have been overwhelmed, and so long hidden, as it were, from the world, under a gloomy despotism, has been a cause of unceasing and deep regret to generous minds for ages past. It was natural, therefore, that the re-appearance of those people in their original character, contending in favor of their liberties, should produce that great excitement and sympathy in their favor, which have been so signally displayed throughout the United States. A strong hope is entertained that these people will recover their independence, and resume their equal station among the nations of the earth.

A great effort has been made in Spain and Portugal to improve the condition of the people, and it most be very consoling, to all benevolent minds, to see the extraordinary moderation with which it has been conducted. That it may promote the happiness of both nations, is the ardent wish of this whole people, to the expression of which we confine ourselves; for, whatever may be the feelings or sentiments which every individual under our government has a right to indulge and express, it is, nevertheless, a sacred maxim, equally with the government and people, that the destiny of every independent nation, in what relates to such improvements, of right belongs, and ought to be left, exclusively to themselves.

Whether we reason from the late wars, or from those menacing symptoms which now appear in Europe, it is manifest, that, if a convulsion should take place in any of those countries, it will proceed from causes which have no existence, and are utterly unknown in these states, in which there is but one order, that of the people, to whom the sovereignty exclusively belongs. Should war break out in any of those countries, who can foretell the extent to which it may be carried, or the desolation which it may spread? Exempt as we are from these causes, our internal tranquility is secure; and, distant as we are from the troubled scene, and faithful to first principle, in regard to other powers, we might reasonably presume, that we should not be molested by them. This, however, ought not to be calculated on as certain. Unprovoked injuries are often inflicted, and even the peculiar felicity of our situation, might, with some, be a cause for excitement and aggression. The history of the late wars in Europe furnishes a complete demonstration, that no system of conduct, however correct in principle, can protect neutral powers from injury, from any party; that a defenceless position, and distinguished love of peace, are the surest invitations to war; and that there is no way to avoid it, other than by being always prepared, and willing, for just cause, to meet it. If there be a people on earth whose more especial duty is to be at all times prepared to defend the rights with which they are blessed, and to surpass all others in sustaining the necessary burthens, and in submitting to sacrifices, to make such preparation, it is undoubtedly the people of these states.

When we see that a civil war, of the most frightful character, rages from the Adriatic to the Black Sea; that strong symptoms of war appear in other parts, proceeding from causes, which, should it break out, may become general, and be of long duration; that the war still continues between Spain and the independent governments, her late provinces, in this hemisphere; that it is likewise menaced between Portugal and Brazil, in consequence of the attempt of the latter to dismember itself from the former; and that a system of piracy, of great extent, is maintained in the neighboring seas, which will require equal vigilance and decision to suppress it, the reasons for sustaining the attitude which we now hold, and for pushing forward all our measures of defence with the utmost vigor, appear to me to acquire new force.

The United States owe to the world a great example, and, by means thereof, to the cause of liberty and humanity, a generous support. They have so far succeeded to the satisfaction of the virtuous and enlightened of every country. There is no reason to doubt, that their whole movement will be regulated by a sacred regard to principle, all our institutions being founded on that basis. The ability

to support our own cause, under any trial to which it may be exposed, is the great point on which the public solicitude rests. It has been often charged against free governments, that they have neither the foresight, nor the virtue to provide, at the proper season, for great emergencies; that their course is imprudent and expensive; that war will always find them unprepared, and whatever may be its calamities, that its terrible warnings will be disregarded and forgotten as soon as peace returns. I have full confidence that this charge, so far as relates to the United States, will be shown to be utterly destitute of truth. JAMES MONROE.

Washington, December 3, 1822.

The Speaker laid before the house letters from the secretaries of the state, treasury, war and navy departments, and from the postmaster general, each transmitting a report of the number of officers and messengers retained in their respective departments, which were severally ordered to lie on the table.

The house then proceeded to ballot, (the seventh time), for a person to fill the vacancy of clerk of the house, in the place of the late Thos. Dougherty, esq.; and the votes were as follow:

	7th.	8th.	9th.	10th.	11th
Mr. Temple	46	47	50	55	48
Chambers	26	25	23	7	—
L. H. Clark	19	5	—	—	—
Franks	16	20	15	2	—
Foot	13	16	16	13	—
Pleasants	12	3	—	—	—
Milnor	11	9	—	—	—
M. St. C. Clarke	5*	29	45	71	98
Watkins	3	—	—	—	—

So Matthew St. Clair Clarke, of Penn. was duly elected clerk of the house of representatives of the United States, and, being in attendance, was sworn into office.

Wednesday, Dec. 4. Messrs. Burrows, of Connecticut; Borland, Litchfield and Morgan, of New York; Neal, of Maryland; J. S. Smith, of Kentucky; Floyd, W. Smith and T. L. Moore, of Virginia; Campbell, of Ohio; and Crudup, of N. Carolina, appeared and took their seats: also, Mr. Andrew R. Govan, elected in the place of Mr. Overstreet, of S. Carolina, deceased.

On motion of Mr. Cocks, of Tenn. it was

Resolved, That the committee of ways and means be instructed to inquire into the expediency of prescribing, by law, a mode by which the senators, and representatives, and delegates in congress, shall receive their compensation; and, also, a mode by which the contingent expenses of the senate and house of representatives shall be liquidated and paid.

On motion of Mr. Moore, of Alab. it was

Resolved, That the judiciary committee be instructed to inquire into the expediency of allowing the state of Alabama three representatives, in conformity with the 2d section of the act for the apportionment of representatives among the several states, according to the fourth census.

Sundry resolutions, referring the president's message to different committees, as is customary, were introduced by Mr. Taylor, of New York, and agreed to without debate, in a committee of the

* On this occasion it appeared that the votes placed to the name of Mr. L. H. Clark were chiefly intended for Mr. St. Clair Clarke—but no choice having been made, it was suffered to be corrected by the next ballot.

whole—they were concurred in by the house, after an amendment of Mr Wright, which has a more special view to the entire suppression of the slave trade, and it was acquiesced in by Mr. Taylor. It was referred to a special committee.

The following standing committees have been appointed by the speaker of the house:

On the committee of elections. Mr Sloane, Mr. Edwards, of N. C. Mr. Kirkland, Mr. Moore, of Va. Mr. Rodgers, Mr. Mallary, and Mr. Tucker, of S. C.

On the committee of ways and means. Mr. Smith, of Maryland, Mr. McLane, Mr. Mitchell, of South Carolina, Mr. Jones, of Tennessee, Mr. Thompson, Mr. Andrew Stevenson, and Mr. Cambreleng.

On the committee of claims. Mr. Williams, of N. C. Mr. McCoy, Mr. Edwards, of Conn. Mr. Litchfield, Mr. Forrest, Mr. Matson, and Mr. Reed, of Md.

On the committee of commerce. Mr. Newton, Mr. Tomlinson, Mr. Hill, Mr. Abbot, Mr. Morgan, Mr. Hardin, and Mr. Durfee.

On the committee of public lands. Mr. Rankin, Mr. Scott, Mr. Cook, Mr. Cannon, Mr. Sterling, of New York, Mr. Bassett, and Mr. Jennings.

On the committee on the post office and post roads. Mr. Francis Johnson, Mr. Hooks, Mr. Gross, Mr. Stoddart, Mr. Campbell, of New York, Mr. Bateman, and Mr. Wilson.

On the committee for the district of Columbia. Mr. Kent, Mr. Mercer, Mr. Neale, Mr. Matlack, Mr. Patterson, of Pennsylvania, Mr. Rochester, and Mr. James Stephenson.

On the committee on the judiciary. Mr. Nelson, of Virginia, Mr. Plumer, of N. Hampshire, Mr. Dickinson, Mr. Burton, Mr. Sanders, Mr. Johnston, of Louisiana, and Mr. Hemphill.

On the committee on pensions and revolutionary claims. Mr. Rhea, Mr. Luttle, Mr. Eddy, Mr. Allen, of Tennessee, Mr. Wm. Smith, Mr. Hubbard, and Mr. Barber, of Ohio.

On the committee on public expenditures. Mr. Montgomery, Mr. Dwight, Mr. Crafts, Mr. Gebhard, Mr. Gist, Mr. Tatnall, and Mr. Harris.

On the committee on private land claims. Mr. Campbell, of Ohio, Mr. Conckling, Mr. Moore, of Alabama, Mr. Upham, Mr. Sterling, of Connecticut, Mr. Crudup, and Mr. Van Rensselaer.

On the committee on manufactures. Mr. Tod, Mr. Woodson, Mr. Floyd, Mr. Conner, Mr. Nelson, of Maryland, Mr. Condict, and Mr. Forward.

On the committee on agriculture. Mr. Butler, Mr. Baylies, Mr. Garnett, Mr. McNeil, Mr. Vance, Mr. Findlay, and Mr. New.

On the committee on Indian affairs. Mr. Metcalfe, Mr. Bigelow, Mr. Mitchell, of Pennsylvania, Mr. Mercer, Mr. McCarty, Mr. Williamson, and Mr. Williams, of Virginia.

On the committee on foreign affairs. Mr. Russell, Mr. Wright, Mr. Trimble, Mr. Taylor, Mr. Archer, Mr. Farrelly, and Mr. Rodney.

On the committee on military affairs. Mr. Eustis, Mr. Cocks, Mr. Walworth, Mr. Darlington, Mr. Smith, of Ken. Mr. McCoy, and Mr. Mattocks.

On the committee on naval affairs. Mr. Fuller, Mr. Randolph, Mr. Gilmer, Mr. Colden, Mr. Warfield, Mr. Plumer, of Pennsylvania, and Mr. Harvey.

On the committee on revision and unfinished business. Mr. Riss, Mr. Hawks, and Mr. Brown, of Penn.

On the committee on accounts. Mr. Allen, of Massachusetts, Mr. Swan, and Mr. Ruggles.

Thursday's proceedings are unimportant, and we have not room for them. What is necessary, shall be preserved in our next.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 15—Vol. XI.] BALTIMORE, DEC. 14, 1822. [No. 15—Vol. XXIII. WHOLE No. 587

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ We have a copy of the volume of documents that accompanied the president's message—out of which we shall make some liberal extracts and abstracts of what we suppose most interesting to our readers. Without the tables, it makes 91 pages.

☞ There is a report that com. PORTER is to take command on the West India station, with discretionary powers to suppress piracy, if it be possible—“peaceably if he can, forcibly if he must.” This matter could not be confided to a better man, and we say, *let commerce be protected*—about which we shall, probably, offer some further remarks in our next.

The British now have six or eight vessels cruising on the coast of Cuba, for the suppression of piracy, and they appear to be active. One of them has captured a piratical schooner off Matanzas, and killed or secured the whole of the crew—15 of them have been sent to Nassau.

THE GREEKS. A vessel has arrived at New York, in 45 days from Leghorn, bringing intelligence that peace had been concluded between the Turks and the Greeks, through the mediation of the emperor of Russia.

“The news was brought to Leghorn on the 22d Oct by a vessel from Constantinople, and captain Ashford states that the fact was generally believed at Leghorn, whence he sailed on the 25th. He also says, that the treaty leaves the Greeks in the same state of slavery they were in before the war.”

☞ We do not believe this—no former account has intimated that the subject was suggested, and it would require some time to settle the principles and obtain the assent of the parties.

CHURCH AFFAIRS. The differences among the congregation of St. Mary's church, Philadelphia, appear to be widened by a late rescript of the pope, which it was thought would heal them. The trustees and a few pew-holders, had a meeting to take the subject into consideration—“the result was, (says a communication in the Centinel), that the gentlemen present voluntarily subscribed five thousand dollars, to be appropriated to resist this foreign monster.”

DIPLOMATIC AGENTS. We have envoys extraordinary and ministers plenipotentiary, at London, Paris, St. Petersburg, Madrid and Lisbon, at 9000 dollars a year, with outfits and *infits*, and secretaries of legation at 2000 each. There are charges des affaires at Amsterdam and Stockholm, at 4,500 dollars, and sundry consul-generals, agents, &c. all for the protection of commerce. We hope to see the time when we shall not have one minister plenipotentiary, resident abroad. We have nothing to do with the *politics* of the old world, and special missions, to accomplish special purposes, would better suit the genius of our government and the state of our means to pay for them. We are, and ought to be, a separate people. No favors are ever granted to us; and we would do unto other nations just as they do unto us, provided they refused to meet us in commerce and navigation on reciprocal principles.—And it is only in respect to these, that we have any rightful business with any of them.

Vol. XXIII.—15.

VERMONT. We have often wondered at the shortness of the sessions of the legislature of this state, which appears to be as well governed as any other in the union: but the following classification of the members recently elected, shows a reason for the despatch of business: Farmers 157, manufacturers and mechanics 22, lawyers 20, merchants 12, printer 1—total 212.

Virginia. The report of the treasurer to the legislature of this state, shews, that on the first day of October, 1821, there was in the Treasury \$140,729 32 cents; that during the last fiscal year, the receipts at the Treasury, amount to \$739,699 78 cts. and disbursements during the same period to \$770,955 63 cents; leaving a balance in the Treasury on the 30th day of September last, of \$100,473 47 cents” It also appears, that “of the balance, the sum of \$25,464 89 cents, was at the credit of the Literary Fund—and the sum of \$22,584 77 cents to the credit of the board of public works. Of the balance, the sum of \$13,963 10 cents had been paid into the Treasury, at different periods, by the subscribers to the erection of a Monument, to the memory of Gen. George Washington.

NORTH CAROLINA. The annual report of the treasurer of the state, exhibits the following particulars:

Receipts for the past fiscal year	127,064 24
Balance in hand at the commencement of it,	114,099 44
	<hr/>
	241,163 68
Expenditures for the same term, including treasury notes, &c. burnt	126,701 69
Balance in the treasury, Nov. 1,	114,461 69

SOUTH CAROLINA. Col. Hayne has been elected a senator of the United States for six years, in the place of judge Smith, by a majority of 18—whole number of votes 154. It seems that col. H. was thought friendly to Mr. Calhoun, and Mr. Smith to Mr. Crawford, as president of the U. States. Why should the election of a senator have anything to do with the election of a president.

GEORGIA. An attempt to change the constitution of the state, so as to give the people the election of their chief magistrate, has failed in the senate: for the bill 30, against it 17—two thirds of the votes being required, the proposed amendment was, consequently, lost.

KENTUCKY. The auditor reports, that the receipts of the present year, ending Oct. 10, amount to

	232,446 60
In the treasury, 10th Oct. 1821	73,810 78
	<hr/>
	306,257 44
Various payments during the year,	251,411 22
	<hr/>
In treasury, 10th Oct. 1822	54,846 22

Some of the chief items of expenditure are— for the executive and judicial departments, \$28,990; attorneys 5,272; legislature 26,793, two sessions; stock subscribed to the bank of the com-

monwealth \$75,715; support of lunatics \$15,490; loans to the penitentiary 21,352 dollars; slaves executed 1,600 dollars; criminal prosecutions 10,439 dollars, &c. cents omitted.

The expenditures the next year are estimated at 183,600 dollars;—viz. salaries 35,000 dollars; legislative and contingent 40,000 dollars; criminal prosecutions 12,000 dollars; slaves [to be] executed 2,000 dollars; lunatics 18,000 dollars, &c. The receipts are estimated at 176,329 dollars, viz. taxes 69,483; from clerks on law processes 10,000 dollars; tax on bank of Kentucky 7,500 dollars; dividends on stock in ditto 27,000 dollars; on ditto in the bank of the commonwealth 54,000 dollars, &c.

It appears that the present balance against the penitentiary establishment amounts to 61,369 dollars, but there are credits in the sum of 31,344 dollars; and the nominal worth of the claims is 31,344 dollars.

REVOLUTIONARY PENSIONERS. A letter from a soldier in the war of independence is published in the National Intelligencer, shewing that revolutionary pensioners in the west are paid their pittance in the depreciated currency of that district of our country. We do not believe that this practice could be known at Washington;—but if the fact is so, some persons have been playing a game for which they should be rendered infamous, in making a profit of from 20 to 50 per cent. on their disbursements, at the cost of the poor and needy, the few yet remaining of those who fought in the revolution. The truth should be known—if it is so, that the amount due is drawn from the United States treasury in "good money," as we suppose that it is, and paid to the pensioners in the wretched currency of Kentucky, it is about one of the most rascally things that we have heard of, and the names of the actors in it should be given up to public execration. We are afraid the fact is as presumed.

LONGEVITY. By a paragraph in a late *New Hampshire Patriot*, it appears, that no less than seventy-five persons have died within that state since 1732, who had attained the remarkable age of 100 years and upwards; of these one reached 120, another 116, and a third 115 years.

It mentions the following persons yet living; Mrs. Tryphena Stiles, of *Somersworth*; Mrs. Mary Bar-ward, of *Amherst*; Mrs. Bailey, of *Chesterfield*, each aged 101; Mrs. Sarah Kelly, of *New-Hampton*, 103; and the venerable Mr. Samuel Welsh, of *Bow*, in his 113th year.

FLORIDA. We have always supported the project of annexing the strip of land, west of the Apalachicola, to the state of Alabama, to which it seems naturally to belong; and, surely, its junction, for the purposes of government, with the peninsula of East Florida, is exceedingly inconvenient, if not absurd—provided it is designed to continue it. Speaking of the late wreck of the United States schooner Alligator, on Craysford Reef, the National Intelligencer observes—The navigation along the coast of Florida is said to be the most dangerous in the world. The distance between Pensacola and St. Augustine is, by water, two thousand miles, of this dangerous navigation; and vessels are frequently lost in attempting the passage. Seven vessels were lost in that sea and on that shore in one storm in May or June last, some of which were never after heard of—particularly one with several passengers, (among whom was Mr. LITTLE, of Baltimore, one of the executive coun-

oil of Florida.) Whilst on the subject, it may be remarked, that the distance between St. Augustine and Florida, even by land, is twenty days journey on horseback, which renders it impracticable that the two Floridas should long remain under one government.

DETROIT. The people of this city, about the 15th of November, were apprised, by newspapers from the eastward, that they were very sickly! It seems that they had not known any thing of a "terrible" disease that prevailed among them, until they were thus informed of it! To be serious, Detroit has not been sickly during the late season—the whole number of deaths thereat, from the 1st of May, to the 1st of November, was less than twenty.

"LET US ALONE." A friend (says the Chronicle) has mentioned an anecdote which transpired on the arrival of the regular packet ship Franklin, that plies between Baltimore and Liverpool, which we think worthy of being recorded. On the last voyage, an American citizen and a native of this city, took passage on board, for the recovery of his health, with no other books than a bible, a common prayer book, and a volume of Silliman's travels. These books were pronounced at the custom house at Liverpool, liable to a duty. Astonished at such intelligence, the passenger waited upon the collector of the port, and represented himself as an American travelling for his health, and remonstrated on the absurdity and injustice of this demand for custom house duty on a bible and prayer book, in a nation where so many charitable, human and religious societies were formed for the dispensation of these very volumes. No apology, no excuse would answer—the custom house duties were paid.

FAMILY OF NAPOLÉON. It is said that Lucien Bonaparte and his family, and Achille Murat, oldest son of the ex-king of Naples, have received liberty to depart for the United States. If they are willing to work to get an honest living, we shall be glad of their arrival—but we have consumers enough already.

THE DROPSY—CURED. Two persons of Louisiana lately fought a duel in Texas. One of them had been labouring under an abdominal dropsy. He was shot through the belly. The dropsical matter was discharged; and the bowels, from the inflammation excited by the wound, adhering to the peritoneum, a permanent cure was accomplished, and the man is now hale and hearty.

LAWYERS. The Philadelphia Union states, that Mr. Griffith, of Burlington, has ascertained that the practising members of the bar in the United States, exceed in number 6000, of which New-York furnishes the disproportionate amount of 1391. Mr. Griffith has the names and places of residence of those who were practising in 1821, in fifteen states: Maine had then 217, Massachusetts 521, New Hampshire 204, Vermont 220, Connecticut 273, New York 1391, New Jersey 134, Pennsylvania 417, Delaware 32, Maryland 175, Virginia 483, Kentucky 307, Ohio 204, Georgia 157, Louisiana 106,—whole number in these, 4841. In the other nine states, namely, Rhode Island, North Carolina, South Carolina, Tennessee, Mississippi, Alabama, Indiana, Illinois and Missouri, the number is supposed to be at least 1000.

Mr. CLAY. After an adjournment of the senate and house of representatives of Kentucky, on the 18th ult., the members met in the hall of the latter, and, having appointed William T. Barry, chairman, and Thomas Speer, secretary, a resolution was unanimously passed, recommending HENRY CLAY as a suitable person to succeed Mr. Monroe, as president of the United States. To this resolution is attached an address. It is probable that we shall publish the proceedings at full length in our next.

SPONTANEOUS COMBUSTION. The following singular incident lately happened at Taunton, Massachusetts—About two tons of refuse iron, consisting of filings and shavings, were deposited in a wooden store near this village. By accident, a few quarts of linseed oil were spilt on the heap. In about three weeks after this occurred, a person walking over the mound, perceived it to be very sensibly warm. In opening it, a great part of the interior was discovered to be heated to redness!

N. B. The iron was free from sulphur, (which is known to inflame spontaneously with iron.)

SILVER MINES. It is believed that there is no truth in a late report of the discovery of certain silver mines in North Carolina.

THE PORTO RICO EXPEDITION. Though this matter is of very little importance, it may be, perhaps, useful to record some further account of it.

By an arrival at Charleston from Havana, the editors of the *City Gazette* have received many papers from the latter—from their notices of those papers we extract the following:

The 'Noticioso' of the 19th Nov. contains the proclamation of the governor of Porto Rico, dated 13th October, 1822, giving his reasons for the capital punishment imposed upon Pedro Dubois, and many others, for having attempted, in conjunction with outlaws and foreigners, to revolutionize the island, and take possession of the same. It appears that the insurgents calculated on external assistance, and that a servile war was to have been raised. The governor, however, says, that he had, from time to time, received information of their intentions. He states the focus of this incendiary attempt was in the United States, and sustained and animated by individuals, through error or through ambition. The governor proceeds to give an account of the expedition and of the progress of the adventurers—the places they touched at—their rendezvous at the east end of Porto Rico—their extravagant proclamations—offering to all, equality of rights, an asylum, happiness and protection." These proclamations are signed from Head Quarters, Mayquez, Sept. 1822, by "Louis Villanne Ducondray Holstein"—no fictitious name, but belonging to a Swedish adventurer, who had formerly been governor of the castles of Boccachica, and afterwards earned his living in the honest calling of a music and French master. His excellency appears to have been very happy in tracing the steps of this man, who, he says, fled to New York, and there organized, with some Americans, the plan of attacking a neutral government.

But a much more significant signature appears to these proclamations: "B. Irvine, government secretary pro tem." This Irvine was formerly editor of a paper, called the 'Columbian,' in New York; and afterwards of the 'Washington City Gazette.' The good people at St. Bartholemews thought Mr. Irvine a 'great writer,' and that, with

his pen, he could conquer empires; but the governor of Porto Rico, (and we doubt not he is a good judge of style), calls Irvine's proclamation "*un exordio extravagante y concebido en un language barbaro*"—The "government" of which Irvine is, or was secretary, he calls the "Republic of Bericua." We suspect this republic has disappeared.

There is something wrong in this business—something apparently disgraceful to our country, and on which it would be well to excite attention and inquiry at Washington. The piracies abroad give us trouble enough; let us have no domestic expeditions that have any resemblance to piracy.

A letter from St. Jago de Cuba, dated Oct. 31, and printed in the Havana papers, says—"The frigate Ligera, with her worthy commander, Laborde, is in port at Curracoa, where came in sight five schooners, directing their course to that point. This brave commander presented himself immediately to the governor, and asked permission to set sail to reconnoitre, but was positively refused; but as he made the most energetic protestation in the name of the Spanish nation, he was at last permitted to sail, which was immediately effected, and coming up with the 5 schooners, he beat them completely, took 3 out of the 5, and conducted them in triumph to Porto Cabello.

"He found on board of them 4000 muskets, and a large quantity of ammunition, with some gentry, calling themselves governors, intendants, &c. It is ascertained that this expedition sailed from Philadelphia for Curracoa, with the intent to invade the Island of Porto Rico.

"But I think they were from the province of Caraccas or Cartliagena. The two schooners which escaped, entered Curracoa; the governor of the Island had them scrupulously searched, and there being found many instruments of war, ammunition, and a quantity of papers, he arrested the people and sequestered the ships until further orders from government. We owe the security of this Isle to Morales, Laborde, and Calzada, who are indefatigable to protect us in our tranquility.

"The governor of Porto Rico, Sr. Latorre, has just discovered a conspiracy, set on foot by some individuals in the interior of the island, in communication with some malevolent strangers. But Latorre one morning, with a company of 100 strong, issued from the city with secrecy, and surprised the conspirators, and a large deposit of arms, &c; they were all brought to town to be judged, except one Frenchman (Dubois) who has already been executed in this city a few days ago.

"On account of these transactions, measures have been taken, which rendered it utterly impossible, either to sail from or enter the Island, unless strictly examined."

NAVAL COURT OF INQUIRY. Having published the analysis of the late naval court of enquiry, instituted at the request of captain Hull*—referred to in the following communication, we feel bound, in obedience to the common principles of justice and the right of reply, to give place to the subsequent article—

Charlestown, Dec. 3, 1822.

To John Rodgers, esqr.

President of the late court of inquiry.

SIR—In looking over the report of the court of inquiry on captain Isaac Hull, of the United States navy, I find my name introduced in the following quotation. "Of all the witnesses examined on this

* See page 190, present volume.

subject, [the fraud of Fosdick], none expressed a present belief of such a connexion or collusion, except lieut. Joel Abbot and Daniel Leman; but these were so utterly discredited, as appears on the face of the record, that they were deemed unworthy of any credit by this court." I will now ask the gentlemen of that court the favor, which I think I have the right to expect, what evidence there is on the face of their record, or in my written testimony, or in my character as a good citizen, and as a man of honor and integrity, that gives them the right to publish me to the world, as a person utterly unworthy of credit. Now, if these gentlemen will publish the whole of my written testimony as given to them, I am willing to stand or fall by the judgment of my fellow citizens. I ask this as a duty the gentlemen of that court owe me, from whom they seem to wish to take that which an honest man holds dearer than life—that is, his character for truth.—Take this away, and I acknowledge that I am poor indeed. Who is there so poor in spirit, as to suffer his good name to be taken from him, and be told that he dare not vindicate himself? Duty to myself and children, demand that you do me justice. This I have a right to claim: and shall claim, till the laws of my country take it away.

Your humble servant, DANIEL LEMAN.

The following certificate of the selectmen of Charlestown, is given to show what my reputation is among my fellow citizens, who have known me more than thirty years. D. L.

[COPY.]

To all whom it may concern: Whereas, Daniel Leman, of Charlestown, in the commonwealth of Massachusetts, has made application to the selectmen of said town for a certificate of his general character—This is to certify that we, the undersigned, know the said Daniel Leman as a native inhabitant, a mechanic, who ranks high in his occupation, and a peaceable good citizen, and that we believe him to be an honest man, and worthy of confidence.

Richard Devens,
Thomas Harris,
Isaac Tufts,
James K. Prothingham,
Samuel Gardner,
Simeon Copps,
Isaac Mead,

of Charlestown,
Selectmen

Charlestown, Dec. 2, 1822.

MEXICAN MINES. The silver mine of Valenciana has produced the most uniform profit to its owners; but that of Sombrete, in the intendancy of Zacatecas, has produced the largest profit in a short period. A portion of this mine, called, (*Cveta negra*), the black vein, yielded to its proprietors, the family of the marquis del Apartado, upwards of 800,000 sterling, within six months; and though nothing approaching to that profit has since been gained, it still holds its rank among mines of the first class.—The mines of Catorce have been begun, but recently, to be excavated. This district was first explored by an accurate and adventurous miner, in 1778. He was fortunate enough, at first trial, to hit on what is called the great vein, (*Cveta grande*), and in a very short time gained more than half a million of dollars by it. The great riches of the vein, however, were not developed till it had been carried 550 feet down, whence, to the depth of 550 feet, they found the metals called *colorados*, a mixture of silver and gold, and abundance of native silver. At that period, the expense of working scarcely exceeded 80,000 dollars, whilst the value

of the metals amounted to 1,200,000 dollars. This vein is of the extraordinary breadth of 130 feet.—It continued highly productive till 1798, when it had reached a depth of 1574 feet; since that time the mineral has become less valuable, the *metales colorados* have disappeared, and pyritous and coppery, minerals are found with the silver. It is, however, still worked to considerable profit, but not to the extraordinary advantage which was yielded between 1778 and 1798.

[These things sound "large," as the cant saying is—yet the fact exists, that mining, in Mexico, is considered pretty much like dealing in a lottery; and persons engaged in it must be possessed of much solid capital, or be regarded as unworthy of credit—so uncertain is the result of their speculations.]

FROM A NEW JERSEY CORRESPONDENT.

Permit me, sir, through the medium of your useful and widely circulating Register, to inquire:

1st. Will our southern and West India commerce be permitted to be depredated upon and destroyed by pirates? 2d. Will our national industry be suffered to languish and decline for the want of adequate protection?

If so, other men must govern our republic. We shall not merely say "*principles, not men,*" but shall say "*MEASURES.*" "No idle professions of principles; no empty parade of the names of parties or of individuals;" measures, efficient and powerful, adapted to the exigencies of our country, must be adopted, or the men now in power will soon pass into the obscurity of private life.

As early as 1816, the attention of more than one distinguished member of congress was called to the subject of piracy. It was distinctly foreseen and foretold, that after the cessation of a maritime warfare of so long continuance and so widely extended, piracies would be frequent; that many men, long accustomed to plunder on the ocean for others, and "above the dull pursuits of civil life," would, on the return of a general peace, set up plundering for themselves; and it was urged, with the earnestness of sincere patriotism, to prepare and guard against a danger so obvious. My dear sir, we wanted just about the cost of a single 74, laid out in vessels of 16 to 24 guns.—But no, "the pomp, the pride, the circumstance of glorious warfare" forbade this, and commerce suffers.

On the protection of national industry, what can be said that has not been said? Can any new views be taken of the subject? Must we become a bankrupt, impoverished and ruined people, in order to learn that our true wisdom consists in protecting the industry of our own citizens? This is the course, I fear, we shall pursue; and, when we find the wealth of the nation exhausted, learn, too late, that, by due protection, our ample capital might have been saved and used as a means and a stimulus to national industry, which then will be stimulated only by poverty and want.

The *relationships*, the order and course of all things, may, by means of our copious language, be accurately described. I pretend not to any peculiar felicity of expression, but will essay.

A *relationship* subsists between the beaver catcher, who lives at the foot of the Rocky Mountain, and the Londoner, who wears the hat made of the beaver.

A nation merely occupied in hunting for the furs, skins and flesh of wild animals, must occupy a vast extent of country, however fertile, or be few in number. If they exchange for the agricultural and

manufactured products of other countries, they must receive but little, for they can pay for but little, and *must live miserably poor.*

A very small district of this buffaloe and beaver hunting ground, would afford subsistence to an agricultural and manufacturing population, equal to supply the hunters with all they could pay for, or would subsist a population equal to the whole hunter population.

Another view:—This agricultural and manufacturing population, sufficient to supply the wants of the hunter population, would not sensibly lessen the hunter population, so small would be the space they occupied.

A nation agricultural only, must exchange to a disadvantage with a manufacturing nation, (admitting that the exchange is permitted in any case). It must lose by all the expense of transporting its bulky commodities to the manufacturing nation, and by all the expense of transporting the manufactured goods back, and by transporting both, to and from, within its own territory. It can use no more of manufactured goods than the sale of its bulky commodities, charged with a heavy transportation, will pay for, and this amount limited again perhaps by heavy import and export duties on the manufactured goods. The cost of distant transportation of bulky commodities, and the small returns they yield, prevents their being produced; for who will work where their labor yields little or no return? All the natural products of the soil, and its mines, too bulky to transport, are left unused, and are without value. The non-encouragement of industry produces idleness, want, misery and crimes.

A country can feed, while residing within its own territory, just as many laborers or manufacturers, as it can feed or pay if they reside in distant lands. It can feed and pay more if they reside at home, than if they reside abroad, by all the difference of the cost and waste of transportation both ways.

A country which manufactures, as well as agriculture for itself, will have all the advantages of an infinitely increased agriculture, by reason of the infinitely increased stimulus and support given to agriculture by the vicinity of manufactures.

A country which has its manufacturers within its own bosom, has all their additional numbers to contribute to its defence.

A country which manufactures for itself, has not only the increased wealth which a vastly increased agriculture brings, but it has all the additional wealth of its whole body of manufacturers, their vast and costly buildings and machinery, their immense capitals, and personal property.

And last, though not least, a country which manufactures for itself, will be exempted from those great vicissitudes and changes in its trade and commerce, to which all nations are subjected whose commerce depends on other people.

It must always be for the advantage of every nation to have all, or as many as possible, of its own citizens residing within its own dominions, and spending their income and paying taxes there. Those who manufacture for us are as much a part of our population as those who agriculture. If they build their workshops in a distant island, spend their income and pay taxes there, we loose all these advantages: we ought to say to them, "come home."

But they answer "no; we cannot remove our families, work shops and machinery; and if you attempt to set up others, we will, at their very commencement, undersell them and put them down. We can do this, because we have our costly work-

shops and machinery erected; we have vast capitals and ages of experience; you are young, you are poor, and we will keep you forever so."

All those arguments which apply with force in favor of having our manufacturing citizens reside at home, when imports and exports are, in a measure, unrestricted, apply with greatly increased force when the importation of our most valuable commodities into the nation which manufactures for us, is either chiefly restricted, or prohibited altogether. We are then required to buy, without being permitted to sell, or without being able to furnish ourselves with the means of paying.

I am prepared to hear, and fully prepared to answer, (if the limits of a letter permitted), the objection, that if we have no foreign sale for produce, it will decline in price; that with its decline of price, wages will decline; that with the decline of wages, manufactures will rise up or be established. This is, no doubt, the theoretical order in which these things will be expected to progress; but to arrive at the desired point, may be the painful labor of ages of want, and misery, and suffering.

FRANKLIN.

FROM A WASHINGTON CORRESPONDENT.

The following article was not written for publication—but it bears so powerfully on subjects of great interest, that I feel myself justified in presenting it to the readers of the Register. En.

Mr. Niles—The piece in your last Register upon "the American navy, &c." is excellent, and I am sure that it, and similar suggestions, will, sooner or later, do much good. How strange it is, that the *merchant proper*, i. e. the exporter, does not see that he cannot live on cotton and tobacco; and the planter of those staples ought to know that he would furnish on *tonnage*. Our system of navigation is nothing but a system of restriction—sometimes of prohibition. We exult, as we ought to do, at the effect of our commercial policy, but we forget that the effect is produced entirely by restriction and prohibition. Our tonnage is second only to that of England—but did it grow up in spite of foreign competition? or, has not the fostering care of government preserved it from utter ruin? The act of 1792 is the basis of our system of navigation, and the "wisdom of congress" has been called upon year after year, ever since, to make the system more and more efficient; and, after all, it is nothing but a system of restriction. The nation has made extraordinary efforts to increase our tonnage, protect our commerce, and form a nursery for seamen—and all that has been effected, (in peace), was done by bounties and premiums, restriction and prohibition. Our navy, like our tonnage and commerce, is second only to that of England, and this also is effected by discriminations and restrictions. A tariff upon foreign tonnage gives encouragement to the domestic shipper, and a tariff upon foreign goods will stimulate domestic manufactures. One is cheerfully granted and the other most obstinately refused. Cotton and commerce are in league—let corn and manufactures, food and raiment, look to themselves for self protection. Man has but three wants—food, raiment, and protection: why not rely upon foreigners for food and protection as well as raiment? Let cotton and commerce fraternize, let them "rejoice and be exceedingly glad" in the day of their prosperity, let their joy will be turned to sorrow and their gladness into mourning, ere the present generation shall have passed away. Nothing can save them but a war in Europe, or a change in our own policy." *Washington, Dec. 3.*

FROM A MASSACHUSETTS CORRESPONDENT.
RIGHTS OF THE CLERGY.

Mr. Niles. The following remarks upon a provision in the constitution of New York, are offered with a desire to promote inquiry into the principles of our government, to guard against error, and to provide for the stability of a system we wish to see worthy of the admiration and imitation of the world.

Constitution of New York, art. 7, sec. 4. "And whereas the ministers of the gospel are, by their profession, dedicated to the service of God and the care of souls, and ought not to be diverted from the great duties of their functions; therefore, no minister of the gospel, or priest of any denomination whatsoever, shall at any time hereafter, under any pretence or description, be eligible to, or capable of holding, any civil or military office or place within this state."

By this section in the constitution of a state that has often manifested a generous devotion to the cause of our country and to the maintenance of her liberties, probably not less than ONE THOUSAND OF HER CITIZENS are doomed to a civil proscription: with slaves and outlaws, they are stripped of the rights of FREEMEN! This is done from motives ostensibly good; but the principle of such proscription is fraught with absurdity and danger. It is a proscription tending in its very nature to convert the clergy into a stupid race of sullen monks. The clergy are either *men*, or *demons*, or *gods*, or a class of beings superhuman. Admit them to be gods or superhuman, and their claims to *exclusive privileges* and *prerogatives* is established at once. But such claim is both anti-republican and anti-christian. If they are demons, the provision goes not far enough. It should authorise them to be swept from the face of the earth to the regions of darkness. If they are *criminal*, punish them, by a due process of law, like other criminals. If they are *unfaithful* in their callings, their employers have the power to *dismiss* them. If they are men, can any principle of republican government justify the decree that sets upon them the ignominious seal of slavery? It was the pride of even a primitive apostle of Jesus to boast, that "he was free." He firmly resisted the least encroachment upon his rights as a citizen.

Why did our fathers contend for the right of representation in the British parliament? Undoubtedly, that their own personal rights and interests might be duly regarded.

To be under laws which they had no participation in making, they scorned as the condition of slaves. Suppose the British government had said to them, every citizen of the colonies shall be disqualified for holding any civil or military office or place, but may elect a representative who is an inhabitant of Great Britain. Would not the colonists have spurned the proposal as an insult added to injury? The constitution of New York allows, indeed, the clergy to vote for their rulers, provided they will elect any other than those of their own class! This is humiliating, indeed, to a class of men who have the sweet recollection that they were born free.

I assert that the section in question is a violation in principle of the constitution of the United States. The articles of confederation, adopted at the origin of this government, lay down this great and essential principle as the corner stone of the republic. "The free inhabitants of each of these states, (paupers, vagabonds and fugitives from justice excepted), shall be entitled to all privileges and immunities of free citizens in the several states." In the constitution, subsequently adopted, it is declared,

(art. 4, sec. 2), "the citizens of each state shall be entitled to all the privileges and immunities of citizens in the several states." Now, if the citizens of each state have a right to equal privileges and immunities with the citizens of the several states, on the same principle is every class of citizens, other things being equal, entitled to equal privileges and immunities with the several classes. Take but this equalizing principle from our government, and it becomes a mere mockery of the spirit of our ancestors and of the name of a republic. It was one of the great maxims asserted by the founders of our government, that "no association of men have any other title to obtain advantages, or particular and exclusive privileges, distinct from those of the community, than what arises from the consideration of services rendered to the public." It is equally unjust and oppressive when the many assume exclusive privileges over the few, as when the reverse takes place.

I know not that a single minister in New York regards this feature of their constitution as I do. I have no personal acquaintance with one gentleman of this profession in that state. It is the bold innovation upon the essential principles of free government, sanctioned by the name and power of a great state, menacing danger to all classes, against which I solemnly protest. Some specious pretext may be found for proscribing another class and another, till the rights of all are frittered away. The injury of one class in a community produces reaction, and strife between the several classes, and, like a violent palpitation of the heart, threatens fatal disease and dissolution.

The cure of soul and body, too, are often in the hands of physicians; why should not they be proscribed? The cure of souls is more in the power of parents and of instructors of youth, than of any other classes that can be named. Therefore, they "ought not to be diverted from the great duties of their functions."

A present I forbear to add only one observation which, at this moment, occurs, that the section in view originated, probably, in a mistaken notion of the nature of religion and of the ministerial office. On this subject I propose to offer a few remarks, with permission, in another number.

EQUAL RIGHTS.

FOREIGN NEWS.

Great Britain and Ireland. Lord Amherst is appointed governor general of India. Numerous outrages are committed in Ireland. The wool manufactory is remarkably prosperous. Forty new cutters are fitting out to prevent smuggling. The distress of the emigrants to the Cape of Good Hope is called to the public attention. Mr. Hunt, the period of his imprisonment being about to expire, was to make a public entry into London. It is proposed to reduce the 4 per cents. to 3½. A repeal of the act of union between Great Britain and Ireland, is loudly spoken of in the Irish papers. The famous Mr. Kean has been playing at Aberdeen to beggarly houses of 35 or 40 pounds each; and at his benefit, there was not 50 pounds in the house. On one occasion, the audience was so thin that he would not play—on another, by free admissions, a tolerable company was collected, though at a late hour, so that Mr. Kean deigned to exhibit himself.

A London paper says, that Mr. Colburn has just obtained the journal of Count de Las Casas, in which are recorded the whole of Napoleon's conversations with him during his residence at St.

Helena. This journal, it will be recollected, was seized with the other papers of the count, and has lately been restored by the British government. It will be published in a few weeks.

France. There is a great bustle of military preparation—Louis perhaps, is getting in readiness to obey the orders of the "holy alliance" in respect to Spain.

It is said that, "to the consternation of all France," Talma has resolved to retire from the stage!

It seems that Sir Robert Wilson has been ordered to quit Paris in 24 hours, and France as fast as he could travel, on the idea that he designed to assist in the liberation of some state prisoners.

Spain. The soldiers "of the faith" are still performing the office of bandits in many parts of this kingdom—in some, they are in great force. Mina has however captured several of their priestly leaders, and punished them as foul murderers, by hanging them.

A great national festival was to be held at Madrid, in honor of the national militia, by putting down the rebel guards on the 7th of July!

The death of lord Castlereagh it is said, will leave the "defenders of the faith" to their fate. It is intimated that they will not now be supported by the holy allies. The constitutionalists call these deluded persons "*defenders of the bellies*" of their reverences, the priests.

Morillo seems to have suddenly disappeared—the cause not stated.

A Spanish paper says—We are assured that the government has accepted the proposition made by the Portuguese government; and consequently we may expect every moment to see in this kingdom 16,000 infantry and 2000 cavalry, who will be sent to the frontier of France.

On the 17th of Oct. the extraordinary cortes held their first session. The king and queen were received by large separate deputations from the representatives of the nation, and the king opened the session, by a speech from the throne, replete with patriotic declarations and assurances of fidelity to the constitution. H. M. was replied to, by the president, Senr. Salvato, in terms truly energetic and patriotic.

Portugal. The Brazilian declaration of independence had reached Lisbon and been communicated to the cortes. A member pronounced it an open declaration of war against the cortes. The aged king displays great zeal in favor of the constitution and cortes. Many of the Brazilian deputies, who refused to sign the constitution, had gone to England. The Portuguese appear to wish to conciliate the British, and it is said they will not exact the 15 per cts. duty on woollens.

Sardinia. The king is fitting out a squadron of 2 ships of the line, 2 frigates and two small vessels, ostensibly to protect the commerce of his states against the Barbary powers—but the Spanish politicians aver that his real design corresponds with that of France, in keeping up her armament on their frontier and a squadron on their coast.

Russia. There was a report in London of a serious insurrection at Moscow. We shall be glad to hear that the slaves of Russia have resolved to become freemen.

A Russian frigate has arrived at England on her way to the N. W. coast, to land stores at the Russian settlements, &c. Perhaps, to enforce the reasonable boundaries established by the ukase of the "magnanimous Alexander."

Turkey. Our advices are favorable to the Greeks. Prince Mavrocordato has lately been elected presi-

dent of the congress, and put himself at the head of a body of Suliotes. Preparations seem as if making for some great efforts on both sides.

There is a hope that the British and their dear allies, the barbarians, may quarrel. The captain pacha seized an Ionian vessel and hung the captain, on the pretence that he was transporting provisions to the Greeks. Captain Hope, of the Rhine frigate, sent his first lieutenant on board to demand satisfaction—he was rudely dismissed, with an intimation that he was in some risk of being hanged for meddling in the business—after this, capt. Hope went on board, and was treated in the same way. The fact being stated, several other British vessels of war had entered the Archipelago, and were in the neighborhood of the Turkish fleet.

The Turks were preparing to attack the people of the island of Samos. After what has happened at Scio, it is believed that they will defend themselves bravely. To kill or be killed, is the only choice left them. It is also reported that an attack had actually been made on *Hydra*, the chief place of resort of the Greek ships—the Turks were seen proceeding towards the island with 106 vessels, including transports.

The Turks have refused to send an agent to the congress at Verona—and protested against any interference between them and the Greeks. The sultan intimates that he will manage his own affairs.

West Indies. A general insurrection of the blacks was designed at Martinico, if we may judge from the fact stated that *two hundred have been condemned to be burnt!* But only the slaves of three plantations had actually revolted, and these committed many outrageous acts before they were subdued. When we look at the probable fate of the West India islands, generally, we are filled with horror.

Colombia. Com. Daniels having arrived with a sloop of war, carrying twenty-two 32-pounders and three 12's, and well manned, had proceeded in search of the Spanish frigate *Ligera*, whose force had hitherto given the royalists the command of the sea.

The notices of events on the Main are various and contradictory. Morales still held Maracaibo, and was projecting some new expeditions. On the 15th of September, he had issued a decree which directs that all foreigners found in the ranks of the patriots—in any branch of the administration—with printing presses, or acting as editors of papers, or works encouraging the rebellion against Spain or the Roman catholic religion, shall be tried by a military court and *suffer death, and their properties forfeited to the public chest.* Foreigners not engaged in the service of the patriots, but who introduced themselves into the country while it was under their government, were doomed to serve in the public works, and their properties confiscated. Foreigners who were accidentally in the place, were ordered to quit all Spanish territory within the exact period of eight days, and never to return again, under pain of death.

Another decree, dated Oct. 22d, declares the treaty of the 20th Nov. 1820, for regulating the war on the Main, null and void—And directs that all spies, conspirators, and auxiliaries of the patriots, of both sexes, whatever they may be, shall be tried and punished agreeably to military law.

It is not, however, believed that Morales can accomplish any thing of a decisive character against the republic. Indeed, his late movements appear to be without object, except out of the mere spirit of opposition, or for the sake of plunder.

It is understood that a *confederation* has been formed between Colombia, Peru, Chili and Buenos Ayres, through the agency of Bolivar.

Our agent, col. Todd, has been received in the highest stile and most respectful manner possible, at Laguiria and Caraccas. Indeed, his arrival seemed to inspire the people with a sort of enthusiasm. He was escorted from Laguiria to Caraccas by many of the most respectable citizens on horseback, and there received by the battalion of *Carabobo*. Feasts and balls, and other entertainments followed in rapid succession, and the colonel, by his amiable manners (and he has also a most prepossessing person,) endeared himself to all. At some of the dinners given to him, the following toasts were offered and drank:

By colonel Todd, at the residence of Mr. Taggart. "The memory of *Manuel Torres*, late charge des affaires of Colombia, in the United States, the Franklin of South America."

By the same, at the dinner given by the governor of Laguiria.—"Health, prosperity, and perpetual independence to the hospitable authorities and gallant people of Laguiria."

By the same, at the entertainment given by gen. Soublette.—"President BOLIVAR. The people of the United States rejoice to see the exact imitation which his conduct affords to that of the example furnished by their beloved WASHINGTON."

By the same.—"The spirit of liberty in the republics of the United States and of Colombia—may its march be as irresistible as the streams of the Mississippi and Oronoco; and the hearts of the people present barriers as formidable against invasion as the Andes and Alleghanies."

Peru. San Martin, having had an interview with Bolivar, at Guayaquil, was on his return to Callao. It appears as if the former had obtained 2000 auxiliaries from the latter.

The state of the country is by no means settled. There had been some disturbances at Lima. The minister of state, Monte Agudo, was arrested for endeavouring to procure signatures to support either his own coronation or that of San Martin.—They accuse him of embezzling two millions of dollars, and it is said he has declared Peru a confederate Republic with Colombia. This great occurrence was preceded by the conflagration of the palace; and all the papers of the ministers of war, revenue and state, with only a few exceptions of the latter, were consumed.

The people of Lima appear weary of the heavy requisitions that have been made upon them. The royal army under Cantarac, is reported at 2000 men, in good condition. He was so sanguine of the success of his cause, from having so much weakened the power of Lima, that he had issued proclamations, offering pardon to the people, if they availed themselves of his mercy in time.

Mexico. We have miserable accounts from Mexico—the passes of the mountains between the capital and Vera Cruz are held by powerful bands of robbers, who have captured several convoys with specie. But the strangest part of what is stated is, a supposition that these bands act under the secret orders of the *emperor himself*, though they sometimes kill the whole of the troops employed to escort money, leave having been granted to export it!

Report on Pensioners.

WAR DEPARTMENT, December 2, 1822.

SIR: In obedience to a resolution of the senate,

of the 29th of April last, requiring from this department, at the present session of congress, a report of the number of persons placed upon the pension list, up to the 4th of September, 1822, by virtue of the acts of the 18th of March, 1818, and 1st of May, 1820, I have the honor to transmit, herewith, a statement containing the number aforesaid, distinguishing between those who enlisted to serve during the war, and those for different periods, stating the number of each, and the time served, and the number of the officers who receive twenty dollars per month.

I have the honor to be, very respectfully, your obedient servant,

J. C. CALHOUN.

To the hon. the president of the senate of the United States.

The following is the number of officers, non-commissioned officers, musicians, privates, petty officers, seamen, and marines, on the United States' pension list, on the 4th September, 1822, under the laws of the 18th of March, 1818, and 1st of May, 1820, who enlisted to serve to the end of the war, with the length of their service.

New Jersey Legislature.

Mr. Elmer, from the committee to whom was referred a communication from his excellency the governor, covering a correspondence with the secretary of war, respecting the island in the Delaware bay, called the Pea-Patch, reported, That it appears, by the documents submitted to them and from other information upon which your committee rely, that, in the year one thousand eight hundred and thirteen, the United States hav-

ing determined to erect fortifications for the defence of the Delaware bay and river, selected the Pea Patch as a position suitable for that purpose. This island lies within the jurisdictional limits of New Jersey, and was, at that time, in the peaceable occupation of one of our citizens claiming under a grant of the West Jersey proprietors, made in one thousand seven hundred and eighty four. No application, however, was made on the subject to the authorities of the state, but military possession was taken by the United States officers, and the occupant dispossessed. The district attorney of Delaware, and other legal characters in that state and Pennsylvania, it seems, were consulted, who, being of opinion that the title to the soil and territory was, in the state, of Delaware, the legislature of the latter state made a cession, and under that title the United States took possession, and commenced constructing a fort. The individual dispossessed instituted a suit against the engineer, which is now pending before the circuit court of the United States.

A difference unhappily exists between New Jersey and Delaware relative to their boundary, and their respective rights in the river and bay of Delaware; and this difference is not limited to the Pea-Patch, but embraces other subjects of dispute. In the year one thousand eight hundred and twenty, the legislature of this state, having been made acquainted with the facts above-mentioned, and with the circumstance that a suit was pending, actuated by a desire to effect a speedy and amicable settlement of the controversy, as well in relation to this particular subject, as to all other questions growing out of the disputed boundary, passed an act for the appointment of commissioners to meet commissioners to be appointed on the part of Delaware, with full power to make and conclude an agreement between the two states; defining their respective boundaries, jurisdiction, rights to islands, &c. in the river and bay of Delaware. To this overture the state of Delaware did not think proper to accede; nor was any answer returned to the proposal.

In the year one thousand eight hundred and twenty-one, the legislature of this state passed an act (among other things) to authorize and empower the governor to appropriate a certain sum of money, at his discretion, to prosecute and defend to final issue or judgment, any suit or suits which he might deem necessary, for trying or finally determining the jurisdictional line between the two states. The attempt to effect an amicable settlement having failed, it was believed that the pending suit afforded a favorable opportunity of obtaining the decision of an impartial and enlightened judicial tribunal.

The United States, claiming under Delaware, and the former occupant under this state, the jurisdictional line will fairly come in question. This must inevitably happen, unless the plaintiff should fail on account of some technical defect in his title. It would, therefore, be manifestly unsafe, to leave this question of jurisdiction to be tried and determined in an action brought solely by an individual, free from all control or interference of the state.— Though the state would not be concluded by such a trial and decision, yet its rights might be greatly prejudiced by the action being brought to trial without all the advantage which might arise from a direct interference, by employing counsel and taking the management and control of this suit.

The secretary at war, under the direction of the president, now asks for a cession from this state,

for the purpose of furthering and strengthening the title of the United States, and of enabling them the better to resist the claim of our citizen.

Your committee are decidedly of opinion that were the subject freed from the danger of affecting, as well the rights of our citizen, who has been deprived in the manner stated of his possession, as the question of boundary between this state and Delaware, the required cession ought to be unhesitatingly made. The position is deemed by the secretary at war a very valuable one, not only as it regards the defence of the state of New-Jersey, but the country bordering on the Delaware. Whatever opinion we might be disposed to entertain on this point, as individuals, it would certainly be yielded to the decision of the distinguished officers composing the board of engineers, approved as that has been by the able and enlightened head of the war department. New Jersey has, at all times, evinced a sincere desire to afford every facility to the measures of the general government, and your committee are well aware, that the present is a time when we are particularly called on to encourage, by all proper means, the laudable effort to arrange and complete a well digested system of defence. Your committee however are of opinion, that, taking into view all the circumstances, it will be most prudent, and consist better with the dignity and interest of the state, to delay a cession of the island in question.

No injury can result from such a course. The works commenced will not be interrupted in their progress, and, in the meantime, the controversy existing between this state and Delaware may be settled by a judicial decision, and the claim of our citizen decided in the same manner. The general government will duly appreciate the motive by which we have been governed, and cannot impute to this state any desire to obstruct or delay the completion of the fort now erecting.

In the event of a determination adverse to our claims, no cession will be necessary, and should the contrary, as we confidently believe, be the result, we can then, with more propriety, transfer our right in the manner requested, and at the same time protect the interests of the individual claimant.—Your committee, therefore, respectfully propose, that the documents referred to them be recommended to the consideration of the next legislature.

Which report was read and agreed to by the house.

Legislature of Kentucky.

The committee to whom was referred that part of the governor's message which relates to the currency of the country, have had the same under consideration, and respectfully report:

That they, in common with their fellow citizens, feel a deep interest in the restoration of a sound circulating medium to the country as soon as practicable; and your committee rejoice to have it in their power to say, that the abundant productions of our soil, together with our increasing exports, are fast hastening this desirable event. But, while we anticipate the most favorable results, and from our calculations on our future prospects, we ought not to forget the many difficulties which have heretofore embarrassed the wisdom and energies of the legislature to select the appropriate remedies; and if, in any degree, these difficulties have been more or less removed, it is to be hoped that the advocates as well as the opponents of the several measures brought forward to *relieve the coun-*

try, were governed by the purest motives; and when we thus take a retrospect of our situation for the last three or four years, we feel confident that an ample justification will be found for many of the leading measures, which were forced on the country by necessity and adopted with reluctance. Owing to a variety of unforeseen events, previous to the year 1819, the metallic currency of the state was greatly exhausted, indeed far below what was absolutely required for the payment of existing debts. The bank of Kentucky, (from causes which will be hereafter noticed), was compelled during that year to reduce her notes in circulation, to about one third of the amount usually kept out by that institution; a vast amount of eastern debt has been created soon after the close of the late war, by extraordinary importations of merchandise, which placed our infant manufacturing establishments in the back ground, and at once destroyed all the capital vested therein, which ruined some of our most enterprising citizens. This, when connected with the spirit of emigration to the territories and states, drained the country of its specie, while an accumulating debt still existed at home. About the first day of January, 1817, the bank of the U. States went into operation, and, in the course of that year, two branches were established in this state. These powerful institutions immediately opened the arteries of the country through which our precious metals flowed in an unremitting stream. To counteract their operations, and, if possible, to keep up a sufficient *quantum* of currency of our own, which had been for several years supplied by the Ohio banks, the independent banks were established the ensuing year. These banks, instead of curing the evil, only opened so many new avenues through which the United States' bank, and the purchasers of public lands, could more easily procure the specie, which, in a short time, prostrated that overweening confidence that many entertained, that the golden age had arrived. The balance of trade being against us to a great amount, when the year 1819 commenced, many began to see and feel that they had been deluded by appearances; and such was the universal pressure over the whole United States, that even the bank of the United States, with all its power and influence, was almost driven to the brink of ruin, and was only saved by the fortunate arrival of two hundred and fifty thousand dollars in specie from the states of Kentucky and Ohio, at a moment when every other resource had failed, as acknowledged by the president of that bank, in his last report. In this state the pressure was unprecedented in every quarter of the country; alarm and distrust pervaded every class of our citizens, and it was evident to every reflecting and humane mind, that wide spread ruin and desolation would soon overwhelm thousands of our best citizens, unless some expedient could be resorted to, for the purpose of saving the country. A twelve months' replevin law was resorted to, in the first instance, which only dammed up the current for a time to again break loose with redoubled fury. As the hopes and expectations for that year were cut off for the want of a market, because it cannot be forgotten, that in the spring and summer of the year 1820, the products of the country had fallen to prices far below what was ever known before, and although abundance and plenty smiled around the husbandman, his debts were increasing, and a fearful looking-out for the day of execution and ruin, met the unfortunate in every direction. These are stubborn facts which cannot be denied, and are now

fresh in the recollection of all. Under these circumstances the legislature of 1820 assembled.—What can be done to save the country? was the universal inquiry. The resources and funds of the state were known to be ample and it was determined to draw upon her as the safest expedient.

Thus, the *bank of the Commonwealth of Kentucky* was established, with a view of aiding our citizens to extricate themselves from misfortune and approaching ruin, which had been cast upon them by a train of events beyond their power or control. Our people had a right to expect relief, and to effect which, they commenced a system of economy and retrenchment; but this alone was too slow for those who were already struggling with the storm, and we are happy in the belief that this bank saved many worthy citizens at an important crisis.—The commonwealth, like a wise and beneficent parent, gave to her children bread in a time of need. To conduct prudently, and not abuse this institution, ought to be the object of all.

Your committee have always believed that republican governments were instituted for the happiness and safety of their people, and, although the bank of the commonwealth has been deprecated by many as unconstitutional, which cannot be admitted according to a just construction of that instrument, but which we consider as founded upon sound wisdom; yet the better feelings of the human heart cannot avoid responding with a noble pride, that it has been able to carry joy and gladness to the homes of the distressed, the unfortunate and enterprising mechanic, farmer and merchant, whose all would have been sacrificed perhaps at one tenth of its value. Your committee believe that *moral principle* would as much oppose one citizen taking the property of another for one tenth or twentieth part of its value, under *sanction of law*, as if it was taken *without law*. The bold and intrepid robber, who takes our property by violence, cannot have a worse conscience than the man who coolly and deliberately deprives his neighbor of his home, without *any consideration*, under *pretext of justice*. Moral principle and honest feeling equally forbid both.

The creditor has at all times a right to demand of his debtor what is justly due him, but at no time has he any right, according to any principle found in ethics, or in the great and fundamental laws of God and nature, to take advantage of adventitious circumstances, to demand from him and coerce ten times the amount; and whenever such a state of things exists, from *unavoidable necessity*, the government is bound to interfere to protect the citizen, or it proves unfaithful to its obligation. And while no law should ever "impair the obligation of contracts or make any thing else but gold and silver a legal tender in payment of debts," yet it must be left to the legislature to provide the modes of remedy, as expediency or the peculiar situation of the country may demand; and, although it is to be regretted, that, in the division of the *loss and gains* of the remedies afforded, the creditor portion of the community have come in for their share, yet it is much below what would have been the loss on the *other side*, if *specie* had been rigidly coerced for the last two or three years. Hence all the measures in relation to the currency were the least of two *inevitable evils*, and your committee are of opinion, that the legislature of Kentucky have wisely pursued a policy, which, in its nature, was least calculated to do injury, and which was due to the people, on the great principle of doing *justice in mercy*, at a moment when the trade of the

world had been converted into new channels, contrary to the expectation of the wisest politicians. And notwithstanding some unavoidable injury has been inflicted on a portion of our citizens, yet it is far less than the injury which would have been felt, if the hand of relief had been withheld; and when, at the close of the year 1819, the bank of Kentucky had been driven to the wall by the United States' bank, and had to stop specie payments under the sanction of her stockholders, and with the implied consent of the Legislature, it would have been an act of *cruel injustice* to our citizens to have extorted gold and silver from them. It would have been like demanding "*the pound of flesh nearest the heart*," at a time when the withering blasts of misfortune had left none to give.

Upon the whole, your committee seriously regret, that the notes of the state bank, and the notes of the bank of the Commonwealth, have depreciated during the present year, and it can only be accounted for, on the ground of a redundancy of the paper of these banks, because it must be acknowledged by all, that the resources of the state are ample for the redemption of all the paper of both institutions, and it cannot be doubted, that the legislature intend to faithfully apply them. Yet, even this evil has not been permitted to prevail, without its concomitant good. The high rate of exchange has had a tendency to increase the quantity of gold and silver, as these articles naturally flow to the *highest market*, as every other species of property, which is *fully demonstrated by all writers on political economy*. Hence a new spring has been given to enterprise by enabling our exporters to carry to other states and countries our flour, tobacco, horses, hogs, beef, cattle, and, in return, to bring back a sound circulating medium, which is fast supplying the place of the paper of both banks, which, at this time, is rapidly diminishing. So far as relates to the policy of permitting the state bank to pay over the whole of the state's stock to this bank of the commonwealth, at this time, your committee believe, that it would be injurious to both institutions to disconnect them too suddenly, at a time when their true interest does not require it; but said institution should be permitted to wind up its concerns in connection with the state, until a just and equitable division be made, so as complete justice may be done to all the stockholders as well as the state, according to the provisions of its charter. Your committee would therefore recommend, that the state bank continue to be united with the state for the present, and that a rigid and faithful adherence to the views and intentions of the founders of the Commonwealth's bank be maintained, by strictly and honorably fulfilling the provisions of the charter, in sustaining the directory in their regular calls, and in all other measures calculated to promote the public good, and we may then justly expect to see confidence soon restored, and the currency of the country once more assume a value which will enable the bank to provide the means for the payment of gold and silver for its notes.

Your committee therefore beg leave to recommend the following resolutions as the outlines of their policy.

1. *Resolved*, That a sum, not exceeding one million of dollars each, of the notes of the bank of the Commonwealth, and the notes of the State bank be burnt, one half as soon as the same can be effected, and the balance in six and twelve months.

2. That a replevin of twelve months only be given on all contracts entered into after the first day of March next, in case the plaintiff does not choose to avail himself of the endorsement law.

3. That all original contracts specially made for the payment of specie, after the first day of March next, be replevin, after judgment, for three months only.

4. That this general assembly have full confidence in the notes of the bank of the Commonwealth, and that the means provided by the original charter will be faithfully applied.

ROBT. B. MAFFEE, Chm.

P. BARRETT,

CHAS. MOREHEAD,

TH. D. CARNEAL.

Seventeenth Congress--2nd session.

IN THE SENATE.

December 5. Mr. Thomas, of Illinois, appeared to day and took his seat.

Mr. Johnson, of Kentucky, gave notice that he should, on Monday next, ask leave to introduce a bill to abolish imprisonment for debt.

Mr. Burton gave notice, that he should, on Monday next, ask leave to bring in a bill, concerning the lands to be granted to the state of Missouri for the purposes of education, and other public uses.

The senate then adjourned to Monday next.

December 9. Mr. Southard, of New Jersey, (who arrived on the 6th instant), took his seat.

The senate then, according to the order of the day, proceeded to the appointment, (by ballot, agreeably to the practice of the senate), of the standing committees; and they were successively appointed, as follows:

On foreign relations—Messrs. Barbour, Brown of Louisiana, Macon, King of New York, Elliott.

On finance. Messrs. Lowrie, Holmes of Maine, Van Buren, Eaton, Macon.

On commerce and manufactures. Messrs. Dickerson, Ruggles, D'Wolf, Findlay, Lanman.

On military affairs. Messrs. Williams, of Tenn. Chandler, Taylor, Johnson of Ky. Elliott.

On the militia. Messrs. Noble, Seymour, Stokes, Lanman, Chandler.

On naval affairs. Messrs. Pleasants, Williams of Miss. Parrott, Ware, Lloyd of Mass.

On the public lands. Messrs. Van Dyke, Thomas, Lowrie, Eaton, Benton.

On Indian affairs. Messrs. Johnson of Lou. Johnson of Ken. Holmes of Miss. King of Alab. Benton.

On claims. Messrs. Ruggles, Van Dyke, Boardman, Barton, Morrill.

On the judiciary. Messrs. Smith, Southard, Van Buren, Holmes of Maine, Brown of Ohio.

On the post office and post roads. Messrs. Stokes, Palmer, Barton, Chandler, King of Alab.

On pensions. Messrs. Noble, Eaton, Seymour, Ware, Elliott.

On the District of Columbia. Messrs. Barbour, Lloyd, of Md. D'Wolf, Lanman, Southard.

On the contingent expenses of the senate. Messrs. Macon, Lowrie, Lanman.

The following message was received from the president of the United States, by Mr. BENTON, of the department of state:

To the senate of the United States:

In compliance with the resolution of the senate of the 8th of May last, requesting "information relative to the copper mines on the southern shore of

Lake Superior, their number, value and position; the names of the Indian tribes who claim them, the practicability of extinguishing their titles, and the probable advantage which may result to the republic, from the acquisition and working these mines," I herewith transmit a report from the secretary of war, which comprises the information desired, in the resolution referred to. JAMES MONROE.

Washington, Dec. 9.

Mr. BARBOUR presented a petition from a large number of the merchants and owners of vessels, of the city of Richmond, in Virginia, praying for the establishment there, out of the fund raised by the tax on seamen, of a hospital, for the relief of distressed and disabled seamen; which petition was referred to the committee on commerce.

The rev. James Melvain was elected chaplain. The senate then adjourned.

December 10. Mr. Mills, of Massachusetts, and Mr. Benton, of Missouri, appeared to-day and took their seats.

Agreeably to notice, Mr. Johnson, of Kentucky, having obtained leave, introduced a bill to abolish imprisonment for debt, by the courts of the United States; and the bill was twice read by general consent, and referred to the committee on the judiciary.

In introducing this bill, Mr. J. made a few general remarks, explanatory of the justice and expediency of such an act; intimating that he should go more fully into the merits of the measure, when the bill should come up for consideration.

The following message, from the president of the United States, received yesterday, was read.

To the senate of the United States:

Recent information of the multiplied outrages and depredations, which have been committed on our seamen and commerce, by the pirates in the West Indies and Gulf of Mexico, exemplified by the death of a very meritorious officer, seems to call for some prompt and decisive measures on the part of the government. All the public vessels adapted to that service, which can be spared from other indispensable duties, are already employed in it; but, from the knowledge which has been acquired of the places from whence these outlaws issue, and to which they escape from danger, it appears that it will require a particular kind of force, capable of pursuing them into the shallow waters to which they retire, effectually to suppress them. I submit to the consideration of congress the propriety of organizing such a force for that important object. JAMES MONROE.

Washington, 6th Dec. 1822.

The message was referred to the committee on naval affairs, to consider and report.

The following message from the president of the United States, also received yesterday, was read:

To the senate of the United States:

In compliance with a resolution of the senate, of the 22d February last, requesting the president of the United States to cause to be collected and communicated to the senate, at the commencement of the next session of congress, the best information which he may be able to obtain relative to certain Christian Indians, and the lands intended for their benefit on the Muskingum, in the state of Ohio, granted under an act of congress of June 1st, 1796, to the society of United Brethren, for propagating the gospel among the heathen, shewing, as correctly as possible, the advance or decline of said Indians in numbers, morals, and intellectual endowments; whether the lands have enured to their sole benefit, and, if not, to whom, in whole or in part, have

such benefits accrued, I transmit a report from the secretary of war, with the accompanying documents.

JAMES MONROE.

Washington, Dec. 9.

The message and accompanying papers were ordered to be printed.

A message was received from the president of the United States, transmitting a report of the commissioner of the public buildings, stating the progress made thereon, the disbursement of the appropriations, &c. which were read and referred to the committee on the District of Columbia.

Mr. Barton submitted the following resolution for consideration:

Resolved, That the committee on public lands be instructed to inquire into the expediency of making further provisions by law for regulating the leasing and working of the lead mines of the United States.

Mr. Barton, agreeably to notice given, having obtained leave, introduced a bill concerning the lands to be granted to the state of Missouri, for the purposes of education and other public uses; which bill was read.

December 11. Mr. D'Wolf, from Rhode-Island, appeared to-day, and took his seat.

Mr. Talbot submitted for consideration the following resolutions:

Resolved, That so much of the president's message as relates to the repairs, preservation, and superintendance of the national road from Cumberland to Wheeling, be referred to a select committee, with leave to report by bill or otherwise.

Resolved, That that part of the president's message which recommends the adoption of an amendment to the constitution of the U. States, which shall vest in the congress thereof power adequate to the adoption and carrying into effect a system of internal improvements throughout the whole union, be referred to a select committee, to consider and report thereon.

On motion of Mr. Lowrie, the message of the president of the United States of the 9th instant, relative to the copper mines on the shore of Lake Superior, together with the accompanying documents, were referred to the committee on the public lands.

Mr. Lloyd, of Massachusetts, laid on the table the following resolution:

Resolved, That the secretary of the treasury be requested to lay before the senate, a statement, exhibiting the amount, in the aggregate, of the goods, wares, and merchandise, exported from the U. States to France, and imported from thence, in each year, from and after the year 1814, to the year 1820, discriminating in the exports, between articles of the growth, produce, or manufacture of the U. States, and those of foreign countries; and also stating the national character of the vessels in which such exports and imports have been made.

The senate then adjourned.

HOUSE OF REPRESENTATIVES.

Thursday, December 5. Mr. Stewart of Tenn. attended to-day.

On motion of Mr. Hall, it was

Resolved, That the committee on the post-office and post roads be instructed to inquire into the expediency of establishing a post route from Fayetteville, North Carolina, to Norfolk, Virginia, and from thence up the bay, by steam boat carriage, to Baltimore, or such other place, as will be most convenient, at all seasons of the year, to form a junction with the main stage road.

Mr. A. Stevenson, of Va. called the attention of the house to a communication made, at a late period of the last session of congress, by the president of the United States, transmitting to the house the correspondence which had taken place between the French government and the United States relative to the claim of the heirs of Beaumarchais. The subject had then been referred to a select committee, which did not report upon it.—He now moved that the subject be again referred to a select committee.

After some remarks, the claim was referred as suggested by Mr. S.

On motion of Mr. Smith, of Md. the bill reported at the last session, proposing a revision of the

tariff of duties on imports, was re-committed to the committee of ways and means.

After five ballots, the rev. Mr. Breckenridge, of Ken. was elected chaplain of the house.

Friday, Dec. 6. Mr. Lefrwich, from Virginia, and Mr. Sibley, delegate from Michigan, appeared and took their seats.

Mr. Ingham, of Penn. elected in the place of Mr. S. Moore, resigned, appeared, was qualified, and took his seat.

On motion of Mr. Cocke, of Tenn. it was

Resolved, That the subject of revolutionary pensions be referred to a select committee.

On motion of Mr. Newton, of Va. the committee of the whole house were discharged from the further consideration of the bill, reported at the last session, for the relief of sick and disabled seamen, and it was re-committed to the committee on commerce.

On motion of Mr. Stevenson, of Va. it was

Resolved, That the committee on the public lands be instructed to inquire into the expediency of continuing, for a further time, the act, entitled "an act to extend the time for locating Virginia military land warrants, and returning surveys thereon to the general land office," and that they have leave to report by bill or otherwise.

It was ordered, that, when this house adjourns, it stand adjourned to 12 o'clock on Monday next.

And then the house adjourned.

The following committees have been appointed by the speaker of the house of representatives in addition to those already published:

On the suppression of the slave trade. Mr. Gorham, Mr. Phillips, Mr. Govan, Mr. Borland, Mr. Jones, of Virginia, Mr. Hall, and Mr. Herrick.

On the militia. Mr. Cannon, Mr. McCarty, Mr. Findlay, Mr. A. Smyth, Mr. J. T. Johnson, Mr. Sanders, and Mr. Reed, of Massachusetts.

On the Cumberland road. Mr. Hemphill, Mr. Pitcher, Mr. Russ, Mr. Jackson, Mr. Long, Mr. Cushman, Mr. Stewart.

On Beaumarchais' claim. Mr. A. Stevenson, Mr. Cambreleng, Mr. F. Johnson, Mr. Dwight, and Mr. Holcomb.

Monday, Dec. 9. Various resolutions, in the form of inquiries, were submitted.

On motion of Mr. Smith, of Md. the bill, reported by the committee of ways and means at the last session, entitled "an act supplementary to, and to amend an act, entitled 'an act to regulate the collection of duties on imports and tonnage,' passed March 2, 1799, and to repeal an act supplementary thereto, passed April 20, 1818, and for other purposes," was re-committed to the committee of ways and means.

A letter was laid before the house, from the first comptroller of the treasury, transmitting a list of balances on the books of receipts and expenditures, which have been due more than three years, prior to 50th September last; also, a list of balances standing on the books of the revenue, unsettled by the collectors of the customs, during the period before mentioned.

On motion of Mr. Johnston, of Louisiana,

Ordered, That the petitions of sundry inhabitants of the parish of Ouachita, in the state of Louisiana, owners of a tract of land, called Bastrop's Grant, and others on their behalf, heretofore presented on the 9th and 30th of January, 1822, be referred to a select committee.

And Mr. McLane, Mr. Ingham, Mr. Tattнал, Mr. Jones, of Tennessee, and Mr. Blackledge, were appointed the committee.

On motion of Mr. Trimble, the calendar (or roll) of orders of the day, as it stood at the close of the last session, and of course at the commencement of this, was ordered to be re-printed for the use of the house.

On motion of Mr. *Bassett*, the house then resolved itself into a committee of the whole, Mr. *Taylor*, of New York, being called to the chair, on the bill, reported at the last session, "concerning the disbursement of public moneys."

The bill having been read—

Mr. *Bassett*, as a member of the committee which prepared this bill, stated the general views on which it was founded. This bill, he said, had been drawn with a great degree of caution, so as, by embracing all cases in which advances could be necessary, to take away any possible objection which could be made against it; and it had afterwards been submitted to the treasury department to undergo any alterations which it might appear to require. The jeopardising of the public money was of that character, Mr. B. said, and the consequent waste of it so enormous, that it was time for this house to look into it. At the last session of congress, a catalogue of defalcations had been presented, which astonished every body, embracing a range, the extent of which could hardly have been conceived. Mr. B. recalled the attention of the house also to one or two facts stated in the president's message. The fact was there disclosed, that, at one time, accounts for one hundred millions of dollars advanced for different objects, remained unsettled. Such an amount, dependent on the personal responsibility of individuals, at once tells us how careful congress ought to be in trusting so great an interest in the hands of public agents. If it had been found that this great trust had been confided to them without injury to the public interest, legislation on the subject might be less necessary: but such was not the fact. At the last session, the house was presented with a large amount of balances due by individuals, and supposed to be lost; and the message of the president spoke of several millions of suspended accounts. Mr. B. said he had been told that, since the last session of congress, public officers had gone off the stage of life considerably indebted to the government—officers, too, in whom the greatest confidence had been placed. This shewed, he said, that it was time to change the present system. It was most obvious, if we took the reason of the thing, the history of other countries, or the experience of this, that it was necessary to exercise a more rigorous control over the disbursements of public moneys. It was more than probable, Mr. B. continued, that, on the first establishment of this government, the different state institutions having little connection or sympathy with one another, it was not very easy to transact the fiscal business of the nation, or to carry money from one part of it to the other, &c.—but the government had been now established for 40 years, and every difficulty of that sort had ceased. Could it be right, on the plea of enabling the poor man to be employed in public service, that the public money should be put in jeopardy? It was not necessary, he said, that it should be so; for, the moment the government makes a contract, the contractor has credit to the amount of his contract, and can borrow or buy upon that credit. It was not true in fact, that advances were necessary, and it could not, therefore, be right to make them. These, Mr. B. said, were some of the general views which led the committee to prepare the bill now under consideration, and present it to the house. If the bill were to go through the committee without amendment, he should then, to afford to gentlemen all proper time to consider the subject, move to lay it on the table.

Mr. *Smith*, of Md. suggested that few of the members had preserved the printed copies of the bill from the last session; and, as the subject was of some magnitude, he thought the members ought to have an opportunity to examine it. He, therefore, with this view, moved that the committee should rise.

The committee rose accordingly, and the bill was ordered to be printed.

Some time was spent on the bill for disciplining the militia of the United States—and it was recommitted.

The next bill in order was the bill reported at the last session, supplementary to the act for the relief of American captives during the late war; and, on motion of Mr. *Sibley*, the house resolved itself into a committee of the whole on the subject, Mr. *McCoy* in the chair.

The bill was read through.

Mr. *Sibley* briefly stated the object of the bill. After the surrender of Detroit during the late war, and subsequent to the defeat afterwards sustained, in 1813, many persons taken under our standard were brought captive by the Indians to and through Detroit. The citizens of Detroit, moved at the spectacle, though themselves at the time in a state of vassalage, exerted themselves to relieve the sufferers, and employed in that manner all the money they could raise. These facts were made known to congress, and an act was passed to reimburse to them the money thus advanced. But the act was of that narrow construction, that it was not at all calculated to give the relief contemplated by it. It required, in the first place, that the persons relieved from captivity should be American citizens; which, in the first place, was hardly susceptible of proof, and, if it were, was not material, where the individuals were taken under the American flag. Another requisition of that law was, that written evidence of the amount paid, or a receipt for the ransom money, should be produced, to entitle to relief. Now, Mr. S. said, the money was paid to Indians; and every one must know that they give no receipts for ransoms, and that such a receipt, if given, would be good for nothing, inasmuch as an Indian would as readily give a receipt for ten thousand dollars as for ten. In the agitation, alarm, and hurry of the times, the people did not calculate where or how they were to get their money again, and thought of nothing less than the taking receipts for it, &c. Besides, Mr. S. said, clothing was furnished to the captives, the season being inclement, and they literally naked. For this, also, the citizens of Detroit ought to be remunerated. The claims embraced in this bill, he said, were altogether bottomed on humanity, and he trusted that the patriotic exertions made by the people of Detroit, whilst they themselves were oppressed by the presence of an enemy, would not be disregarded, but that they would at length be repaid the money which they had advanced almost ten years ago.

No other remarks being made on the bill, the committee rose and reported it to the house, and it was ordered to be engrossed and read a third time to-morrow.

The following gentlemen compose the new committee on revolutionary pensions: Mr. *Cocke*, Mr. *Hobart*, Mr. *Cassedy*, Mr. *Burrows*, Mr. *Van Wyck*, Mr. *McSherry*, and Mr. *Walker*.

Adjourned.

Tuesday, Dec. 10. On motion of Mr. *Walworth*, it was

Resolved, That the committee on military affairs be instructed to inquire into the expediency of authorizing the president of the United States to cause to be delivered to captain Aikin's volun-

teers, certain rifles, promised them by major general Macomb, for their gallantry and patriotic services during the siege of Plattsburg in September, 1814.

On motion of Mr. *Williamson*, it was

Resolved, That the committee on military affairs be instructed to inquire into the expediency of erecting a battery or other fortification on the west side of Penobscot river, in the town of Prospect, and state of Maine, near the head of Orphan Island, and opposite the Narrows, so called, in said river.

On motion of Mr. *Cook*, of Illinois, it was

Resolved, That so much of the several acts of congress passed for the admission of Louisiana, Illinois, and Missouri, into the union, as sets apart a portion of the money arising from the sale of the public lands in those states, for the purpose of constructing roads and canals leading to those states, respectively, be referred to a select committee.

Mr. *Cannon* submitted the following resolutions for consideration:

Resolved, That it is expedient to provide for the national defence by improving the militia of the U. States.

Resolved, That the committee on military affairs be instructed to inquire whether it is most expedient to improve the militia throughout the United States, by means of the military academy, or that of the encampment of the officers, by brigades or otherwise, under proper regulations.

Resolved, That the committee on military affairs be instructed to inquire into the expediency of continuing the preference given to the cadets educated at the public expense, in the military academy at West Point, in entering the public service, over others of equal qualifications and merit, who are, or may be, educated at their own expense, or that of their parents or friends, at the school under the superintendance of capt. Partridge, in the state of Vermont, or at any other place in the U. States.

Resolved, That the committee on military affairs be instructed to inquire into the expediency of employing the regular army, or a part thereof, in the erection of fortifications during a state of peace, instead of having them built by contract in the way heretofore pursued.

Resolved, That the secretary of the navy be directed to make a statement to this house containing the names and grade of the officers belonging to the naval establishment of the United States, and the duties each officer is performing, also, the number of officers of each different grade necessary to command in active service the vessels of war, at this time belonging to the navy.

Mr. *C.* said he did not mean to press these resolutions to an immediate decision. Being of much importance in his view, he wished them to lie on the table and be printed, with the expression of a determination on his part to call them up on an early day.

The resolutions were ordered to lie upon the table accordingly.

Mr. *Candlish*, of New Jersey, rose to make a motion. In the message of the president to both houses of congress, at the opening of the session, he said, a very brief allusion was made to piracies, committed in the West Indies. All that was said on that subject, is comprised in a short paragraph, which Mr. *C.* read. Intelligence has been recently received, and probably since that part of the message was penned, of transactions, so flagrant and outrageous in their character, as to call, imperiously, for the early and efficient interposition of this house. The premature death of the gallant and lamented *Allen* has excited a spirit of indignation throughout our country, unequalled since the late war. It calls loudly for retributive justice, from those lawless barbarians, and I hope to see, with as little delay as practicable, a competent force, at the disposal of the executive, under some one of our most experienced naval officers, with ample powers and instructions to ferret them out of their lurking holes, and drag them to a condign and speedy punishment. A speedy punishment, because I have no idea of incurring the delay, or the hazard, of transporting them here, or of extending to them a trial by jury, with all the delays incident to our courts of justice. They have placed themselves beyond the protection of the laws of civilized society; they have set at open defiance the laws of God and man; their hand is against every man, and every man's hand should combine against them. And the most effectual restraint which you can impose upon their barbarities, is to furnish to them the spectacle of a

few dozen of their leaders suspended by the halter, from the yard-arms of some of our public ships. Deeming it expedient that congress should, at an early period, adopt some decisive measures on this subject, I submit the following resolution:

Resolved, That the committee on naval affairs be instructed to inquire, and report as early as may be, what further measures are necessary, not only for the more efficient protection of our commerce in the West India seas from piracy, but for the entire extirpation of those freebooters, and the punishment of those who may be found to aid and abet them.

[Laid on the table, to give place to the president's message, (see proceedings in the senate), on the same subject.]

On motion of Mr. *Johnson*, of Kentucky, it was

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of allowing to the widowed mother of lieut. W. H. Allen, of the United States' navy, a half pay pension for five years.

The speaker laid before the house a message from the president of the United States, transmitting a plan for the peace establishment of the navy of the United States, and also of the marine corps, which has been prepared in obedience to a resolution of the house of representatives, of the 7th May last. [Referred to the naval committee.]

The engrossed bill, supplementary to the act relating to the ransom of American captives in the late war, was read the third time, passed, and sent to the senate for concurrence.

[Of this act the National Intelligencer observes—The first bill which has passed either house of congress at this session, is an act of justice too long withheld. We speak of the bill which yesterday passed the house of representatives, for indemnifying our citizens who, when Michigan was held by the British during the late war, advanced their all to ransom the captives brought in by the Indians in the British service. It would be a reproach to the nation, had the delay been deliberate and intentional, that indemnity for an expenditure of this sort should have been so long delayed.]

Sometime was spent on the bill to provide for clothing the militia of the United States, when in actual service. It was ordered to lie on the table and be printed.

The house was resolved into a committee of the whole, on the bill to grant pre-emption rights to certain parcels of land, at or near the centre of the counties to be laid off, &c. in Alabama and Arkansas, for the accommodation of seats of justice. Much diversity of opinion was expressed—if granted as proposed, it would be claimed by other and older states, &c. But finally, the bill, being amended to give it a general effect, was agreed to by the committee, who reported it to the house, &c. The question of passing it to a third reading was debated, and the bill lost—for it 61, against 64.

After which the house adjourned.

Wednesday, Dec. 11. Mr. *John Carter*, elected in the place of Mr. *Blair*, of South Carolina, resigned, appeared, was qualified, and took his seat.

Mr. *Spencer*, of New York, Mr. *Ball*, of Virginia, Mr. *Reich*, of Georgia, and Mr. *Cuthbert*, of the same state, also appeared.

Mr. *Lathrop*, from Massachusetts, whose arrival we omitted noticing on Monday last, on that day took his seat.

The resolution yesterday laid upon the table by Mr. *Woodcock*, calling for information from the president of the United States, respecting advances of money to public agents, was considered, modified, and adopted by the house.

[In support of this motion, Mr. *W.* made some observations, which our reporter had not the op-

portunity of hearing. The purport of them was, that, in the statements received from the several departments, of the accounts of public officers, no account was given of moneys advanced to sub-agents and sub-contractors, &c. without security, &c. so that this class of defaulters often escape without observation. His object was, if practicable, to supply this deficiency.]

M. Colden, of New York, submitted for consideration the following resolution, which lies on the table one day of course:

Resolved, That the president of the United States be requested to lay before this house, such information as he may possess, which regard to any hostile expedition, which may have been prepared in the United States, and sailed from thence, within the present year, against the territory or dependency of any power in amity with the United States, and to inform this house, whether any measures have been taken to bring to condign punishment persons who may have been concerned in such expedition, contrary to the laws of the United States.

Mr. Condict, of New Jersey, offered the following resolutions:

Resolved, By the senate and house of representatives of the United States in congress assembled, That it shall be the duty of the secretary and clerk of the respective houses, to lay before congress, at the commencement of every session, a detailed statement of the expenditure of the contingent fund of each house during the preceding session, stating the items, quantity, prices, and to whom payment is made.

This resolution was read, and by the rules lies on the table one day.

On motion of *Mr. Condict*, of New Jersey it was

Resolved, That the committee of accounts be instructed to inquire and report whether any, and what, part of the contingent expenses of this house can be curtailed, without detriment to the public service: And, that said committee revise the system pursued by the officers of this house in disbursing the contingent fund, and report whether any further restrictions, responsibilities or checks, are necessary for its disbursement.

The bill of the last session, providing for the occupation of the mouth of the Columbia river, being next in order—

Mr. Floyd said he was not, at the moment, ready to present the information on the subject, which he was prepared, at any time during the last session, to have laid before the house; but, not wishing the consideration of the subject to be long deferred on his account, he moved to go into committee with a view to retaining for the bill its present place in the orders of the day.

The house accordingly went in and out of committee upon it, leave was given to sit again, and the bill was ordered to be re-printed.

A similar course being proposed on another bill—

Mr. Campbell, of Ohio, said he had no idea of sitting here, to receive motions to go in and out of committee, and to re-print bills; and suggested the propriety of some step to put an end to this, (as it appeared to him), wasteful consumption of time.

No specific proposition, however, being made by *Mr. Campbell*, the speaker proceeded in calling over the bills.

A bill respecting registers of wills in the district of Columbia was passed through a committee of the whole, &c. as was also a bill fixing the compensation of receivers of the public moneys; a bill for the relief of registers and receivers in the land offices; and a bill to enable the proprietors of lands, held by titles derived from the United States, to obtain copies of their papers.

Adjourned.

THURSDAY'S PROCEEDINGS—DEC. 12.

In the senate. *Mr. Rodney* laid the following resolution on the table for consideration:

Resolved, That the committee on the judiciary be directed to inquire into the expediency of continuing in force the act, entitled "an act to protect the commerce of the United States, and to punish the crime of piracy," and also of making such further provi-

sions on the subject as may be deemed proper for the security of our citizens, the safety of our commerce, and the punishment of the offence.

Mr. Pleasants, from the committee on naval affairs, reported the following bill, which was twice read by general consent:

Be it enacted, &c. That, for the purpose of enabling the president of the United States to afford more efficient protection to the commerce of the United States, from the depredations of pirates in the Gulf of Mexico and the West India seas, the sum of — dollars is hereby appropriated, to be paid out of any money in the treasury not otherwise appropriated; which sum shall be used by the president in providing such an additional force as in his judgment shall be best calculated to answer the end aforesaid.

[Accompanying this bill, *Mr. Pleasants* laid before the senate a communication from the secretary of the navy to the chairman of the naval committee, furnishing estimates of the additional force deemed necessary for the suppression of piracy, and the expense thereof. The secretary, having the concurring opinion of the navy board in its favor, recommends an additional force of

First, 1 steam boat of 90 to 120 tons, to carry two 18-pounders, and two 12 pounders, upon travelling carriages, so as to fire from any part of the vessel.

Second, 10 fast sailing schooners, of 45 to 60 tons burthen, to draw not more than 5 to 7 feet water; each to be armed with one long 12 or 18 pounder, mounted on a circle, with two 12-pou nd carronades; with the necessary number of small arms, to row from 20 to 24 sweeps; and

Third, 5 light double bank cutters, each to row 20 oars, and adapted to carry 40 men, well armed with muskets, pistols, boarding pikes, cutlasses, &c.

The whole cost of procuring these additional vessels and of equipping and fitting them for service, is estimated at 44,000 dollars.]

House of Representatives. This was a busy day in the house, in the preparation of business, &c. Some time was spent on a call made for inquiry into the "Porto Rico expedition," and the call was made for information, if any there was, in the possession of the executive. We shall notice the proceedings more at length in our next.

CHRONICLE.

Don Jose Manuel Zozaya was presented on Thursday last, by the secretary of state, to the president of the United States, as envoy extraordinary and minister plenipotentiary from Mexico. He was accompanied by colonel *Don Jose Anastasio Torrens*, secretary of the legation, who was also presented to the president by the secretary of state.

The United States schooner Aligator, late under the command of lieutenant com. Allen, but, since his decease, under charge of lieutenant Dale, was wrecked on *Craysford Reef*, about thirty miles to the southward of Cape Florida, on the night of the 9th ult. Every attempt to get her off having proved unavailing, she was fired and blown up. All of the officers and crew were saved, and arrived safely at Charleston.

New York. At the late election, the first under the new constitution, Joseph C. Yates, esq. received 128,393 votes for governor; and Solomon Southwick, esq. 2,913. Prastus Root, esq. received for lieutenant governor 82,450; and Henry Huntingdon, esq. 50,052.

Maryland. Samuel Stevens, esq. of Talbot county, has been elected governor of Maryland, for the ensuing year; and Thos. Enory, Joshua Pridcaux, Israel D. Malsby, Philemon Chew and Nicholas Brewer, esqs. appointed his council. Gen. Samuel Smith, has been elected a senator of the United States, to supply the vacancy occasioned by the decease of Mr. Pinkney.

North Carolina. Gabriel Holmes has been re-elected governor of this state, without opposition.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 16—Vol. XI.] BALTIMORE, DEC. 21, 1822. [No. 16—Vol. XXIII. WHOLE No. 588

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

“A Subscriber” will see that, in the reply of a Merchant” to our correspondent ‘T,’ his wishes are partly complied with. The article referred to shall be examined, and, most probably, have an early insertion.

THE PRESIDENT’S MESSAGE was copied into the “Register” from the “National Intelligencer”; which has corrected a clerical error in one of the paragraphs that throws confusion into the sense of it. It is in that which speaks of the state of the finances, in which the sum of 1,168,592 is printed instead of 1,681,592. See page 220.

In our brief notice of the message we observed that manufactures were *indefinitely* encouraged in it. The Richmond “Enquirer,” in passing through its various topics, says—

“Manufactures—where the president is far from being precise; though he cautiously recommends an augmentation of duties on certain foreign articles, leaving these *certain* articles in a state of the most profound *uncertainty*.”

THE CORRESPONDENCE between Messrs. Jefferson and Adams, inserted in the present sheet, will produce singular sensations of combined pleasure and regret in many who read it. But it is delightful to see these old political veterans so calmly preparing to retire to the tomb, at perfect peace with one another, and possessed of the gratitude and respect of millions of freemen—willing to forget any error that either may have committed, in the great public services that both have rendered to their country.

PIRACY. It will be seen in the proceedings of congress, that a law has already passed both houses, appropriating money to fit out an expedition for the suppression of piracy—com. Porter is appointed to command it.

The U. S. schooner Shark, just arrived at Norfolk, convoyed two British ships from Jamaica until she saw them clear of Cape Antonio, and out of the range of the pirates.

The British under capt. Godfrey of the ship Tyne with the Speedwell schooner, have made a splendid dash at these fellows, near St. Juan de los Remedios. They took four vessels and 17 prisoners, it was believed that about forty more had been killed or wounded. The governor of St. Juan went on board to congratulate them on their success, and informed them that he had arrested 22 others on shore. Two more pirate vessels were captured a few days afterwards, and some of their crews killed—the rest escaped on land. A Spanish brig of war has also seized more of their vessels, and it is thought that the coast is nearly cleared of them for the present.

COST OF BANKS. It is stated that the annual cost of the Farmers bank of Virginia and its branches, amounts to \$48,486—of which 40,290 are paid for salaries. Those the bank of Virginia are nearly the same.

The capital of the Farmer’s bank is \$2,000,000—the cost of keeping it a-going being 48,486, is equal to nearly *two and a half per cent.* on the whole capital. No wonder that the dividends for the benefit

of the *stockholders* have, for the last two years, hardly yielded three per cent: too much is given to presidents, cashiers and clerks.

PUNISHMENT. It very often seems as if the law was chiefly administered for the punishment of little knaves—the great ones generally break through its meshes. Many poor wretches have been sent from three to ten years to our penitentiaries, for thefts or frauds of a less amount than one hundred dollars—but Hollingshead and Scull, (who were lately convicted of a conspiracy to defraud the underwriters of the sloop Norfolk, about which so much was said some time ago), have been sentenced to only one year’s imprisonment at hard labor, and to pay a fine of 100 dollars each, by judge Tilghman, at Philadelphia.

SINECURE OFFICES. The design of every government, in affording liberal salaries to its officers, is to secure the application of personal talent to a discharge of the duties that belong to them. In the old and corrupted governments, however, it is well known that persons are appointed to office without even the expectation that they will personally discharge the duties thereof—these being performed by deputy. Thus, the *pious* duke of York is bishop of Osnaburg—and one of his brothers is, or was, governor of Gibraltar—and so on from the highest to the lowest, if the latter is worth making a sinecure of. This practice begins to prevail pretty extensively in our country—we have many officers that we may expect to find any where but in their offices—who eat, drink and riot upon the profits derived from journeymen; persons, of real merit, perhaps, but irresponsible and unknown to the government: hired at 5 or 600 dollars a year to do *all* the business for which the principal receives 2 or 3000. Assistants are doubtless indispensable in many of the offices—perhaps in every important office save that of a judge; but when a principal leaves every thing to an assistant, it is high time that he should be discharged—nay “kicked out” of his office, as a *fraudulent and unfaithful* person.

We thank Mr. Cocks for his notice of the case of a register of wills in the district of Columbia. A bill was under consideration, last week, to raise the fees of those officers—but Mr. Cocks said that no register had resigned on account of the lowness of the fees; and he had been told that the late Dr. Blake had *leased* out the office for five hundred dollars per annum, and had not the least trouble with it. I suppose this is what some call “*radicalism*”—but, if to keep people to the honest discharge of their duties and prevent such speculations is to be “*radical*,” one would suspect that all men would deserve to be called so, the *official leeches* excepted—of whom there are too many just now.

It is due to the case to say that an anonymous communication in the National Intelligencer, represents it as though Dr. Blake had not leased out the office, or derived other than a very small profit therefrom.

HARTFORD CONVENTION. Several of the Eastern papers, according to usage, have noticed the anniversary of the meeting of this convention, the 15th

Dec. 1814, and given a list of the names of the members—surmounted with a *crown* and suitable inscriptions.

The famous political preacher of the days of the convention, Dr. Osgood, departed this life a few days ago, in the 75th year of this age.

"NAPOLEON THE YOUNGER" begins to excite much attention in Europe, and the idea seems pretty generally entertained that, on the decease of the present king of France, a vigorous attempt will be made to place him on the throne. It appears as if agreed upon, that the Bourbon dynasty must soon have an end in France, as sovereign over that country.

DREAD OF SLAVERY. Mr. Moncy, a member of the British house of commons, in a speech delivered in the house in July last, on the subject of preventing the extension of slavery at the Cape of Good Hope, gave the following as a fact of which he was personally acquainted, having resided himself at the Cape.

"In the year 1819, a female slave, belonging to a Dutch gentleman at the Cape, had been treated with harshness, and, at last, her mistress threatened that she would take her children from her and sell them to the Boors in the interior. The dread of that worst of all evils, which, in her estimation, could be inflicted on her offspring, so worked upon her mind, that, to save them from this fate, she took them, four in number, down to the sea, early in the morning, where she succeeded in drowning three of them, and was in the act of destroying herself and the remaining child, when she was discovered; and, the alarm being given, she was rescued from her watery grave in a state of insensibility. She was carried to the gaol, where medicines were applied to restore her, and a court of criminal justice was immediately summoned to try her. Scarcely able to stand, she was brought before this tribunal. When asked what she had to say for herself, she stared wildly, and made no answer; and in this state of apparent unconsciousness as to every thing around her, she was convicted and sentenced to death by being strangled at a stake. The following morning this sentence was carried into execution, a party of the military attending, under the command of a British officer.

DIFFERENT VIEWS. We have been much interested by the following statistical notices of "the resources of Madison county," in the state of Alabama, in a Huntsville paper—and not a little amused at the *turn* given to the facts by our friends, the editors of the "National Intelligencer."

From the Huntsville paper—The assessor and tax collector of Madison county, (James Bibb, esq.) while performing his official duties, took the trouble to ascertain the number of gins, the quantity of cotton, (the growth of 1821), ginned and packed at each. The result of his inquiries is, that there are 149 gins, at which were cleaned and packed 6,026,667 lbs. making 20,088 bales,* averaging 300 pounds each.

That quantity of cotton at 12½ cents per lb. the average price of last year's crop, amounts to the comfortable sum of \$753,333. While this year's crop, if it should prove equally abundant, at the present price of 8 cents, will only bring \$482,133, leaving a deficit in the value of our exports of \$271,200.

How forcibly do these facts shew the necessity of economy and retrenchment! What a commen-

tary on the fluctuation of affairs do such comparisons afford! And how satisfactorily do those authentic statements account for the stagnation of business and the general depression of property!"

[To prevent a break in the subject matter, we shall here insert the Huntsville editor's note, referred to by the asterisk in the preceding].

* While on this subject we cannot refrain from inquiring into the expense of baling and preparing for market such an immense quantity of cotton, and suggesting to our planters, in these times of universal pressure on the agricultural community, the possibility of lessening that expense, or of saving it to the country. We are told it will take something like 100,000 yards of bagging to put up 20,000 bales of cotton—this year the estimate is made at \$3 per bale, which will amount to \$60,000, including rope and twine. The present price of bagging is 50 cents per yard, and, at this estimate, that article, alone, will cost the county \$50,000, which is wholly paid to foreigners. It is probable the whole valley of the Tennessee river will, in a short time, consume three or four times the quantity of Madison county. If cotton bagging cannot be advantageously manufactured in private families, would it not be an object worthy the attention of an association of gentlemen to establish a manufactory of so indispensable an article? The demand of such goods will be extensive and regular, and they could be made of refuse cotton, the last picking, and such as will scarcely defray the expense of carrying to a foreign market.

From the National Intelligencer. We learn from the Huntsville paper, that, by an accurate investigation, it has been ascertained that the quantity of cotton grown, cleaned, and packed for market, in the county of Madison, in the state of Alabama, was, in the year 1821, upwards of six millions of pounds, amounting, at the then market price of 12 1-2 cents per pound, to 753,333. This year's crop, if equally abundant, will bring, at the present price of 8 cents per pound, 482,133 dollars. The population of that county, by the last census, (taken late in 1821), was 17,481. The product for exportation, in 1821, was, therefore, within a fraction of forty-five dollars per soul, or, on a fair estimate, one hundred dollars for each working hand. The same rate would give to the union a production beyond the consumption, of more than four hundred millions of dollars.

Now, though the latter article was derived from the former, the general idea conveyed is exactly opposed to that which the other most pointedly and properly presents. The Huntsville paper brings forward the case to shew the necessity of economy, the means of the county being reduced one third—the Intelligencer offers its abstract to shew the profit of production, in furnishing an article for export. The first tells us that the bagging alone for the crop, which is imported and its cost wholly paid to foreigners, will consume more than a ninth part of the value of the cotton—the other regards export only, and tells us what it was, and what the export might be, if all the people of the U. States could produce for export, at the same rate. In short, the original article affords probable grounds to expect a great deal of private distress in Madison county, in consequence of the diminution of the means of the people, at the enormous ratio of thirty-three per cent. in one year—the abstract would make us believe them to be wonderfully prosperous and as abounding in means.

But, if all the people of the United States could produce cotton to an amount beyond the consump-

tion equal to those of Madison county, what would they do with it—where find a market for it? It would not sell for more than one or two cents per pound. The "four hundred millions" that the Intelligencer speaks of, is a greater amount of value perhaps, than that of all the raw agricultural products of all the nations in the world, exported or transported to or from one another! The calculation, therefore, as applied to the *United States*, must be regarded as a very moderate one, indeed!

The product of "100 dollars for each working hand," is not extraordinary, seeing that they are so much assisted by labor-saving machinery in picking and cleaning the cotton, for the gins do about one half of the whole work that belongs to the crop; and this product of value could not be exchanged with the spinners of the cotton. It is estimated that 240,000 persons in Great Britain, three fourths at least of whom are children, assisted by machinery, perform a quantity of labor that would employ twenty-eight millions of persons without the aid of machinery—so that one child stands as one hundred and ten persons, and must be supposed the agent of creating as great a value as they could unitedly create; and, admitting their labor to be worth only ten cents per day, the child would have eleven dollars worth of products per day to oppose to the products of the 110 persons—a rate of exchange and condition of things that cannot exist.

It is computed, that the labor saving machinery of Great Britain, applied to the manufacture of goods, is equal to the labor of four hundred millions of hands. These may give direct employment or agency to about one million of persons—then, one person in Great Britain, assisted by machinery, stands opposed to 400 laboring persons in another country which has not such machinery. No exchange of labor can take place between them, unless sustained by the utmost degree of human misery.

"One hundred dollars per working hand," if reference is had to the mechanic arts and manufactures, is a very moderate production. The most common country blacksmith, if he has a family, must produce more than this by the mere labor of his hands, or his family will starve; and there are few agriculturalists that do not create more—though they may not furnish that amount for exportation: but the grain-grower does not import bags to hold his grain, to the amount of a ninth part of the value of his whole product of grain.

The fact is, that Madison county, producing an article for export—that is cotton, to the value estimated in the present year, and importing every thing save food and some coarse raiment, must be doing a bad business, if we take into the account the value of capital invested. From the credit sum, \$482,153, is to be deducted the interest on all the capital in LANDS and SLAVES, nearly 9000 of the latter, at 300 dollars each, are worth an annual interest of 162,000, as laboring machines—the bagging and ropes, to fit the cotton for transport, cost 60,000; the ginning a large sum; and, what balance can there really be left to pay for the articles of food and raiment imported for the supply of 17,481 souls? The fact is easily supposed that the entire product does not yield five per cent. on the capital actually expended—out of which the people are to be supplied with the tens of thousands of imported articles that they want, and will obtain, if they can get them.

FROM A BOSTON CORRESPONDENT.

Mr. Niles—I notice in your Register, of the 23d ultimo, a statement of the quantity of specie im-

ported and exported for nine months, ending 30th June last, as taken from the custom-house returns—by which it appears that the export of specie, during that period, has exceeded the import something over eight millions of dollars. This statement is followed by a communication, with the signature "T," in which the writer appears to consider this fact as conclusive evidence that the trade of the country, and the country with it, are on the road to ruin—and in which he triumphantly calls on the merchants to answer the following questions:

"When a country exports more specie than it imports, is this no evidence of a favorable or unfavorable commerce?"

"Is a rate of exchange, 13 per cent. above par, advantageous, or otherwise, to the operations of commerce?"

"Do these causes, combined, or either of them, separately, promote or retard the prosperity of the country?"

His appeal is so urgent, and seems the result of a belief in his own views so sincere, that I cannot, in charity, refuse him—and, in accepting his "invitation," shall not desire so much to be "pithy," as to the purpose.

To the first question, then, I answer, that the fact of an exportation of specie greater than the importation, is not, in itself, a decisive criterion by which to determine whether the trade of a country is prosperous or otherwise, as it may take place during either: but I have no hesitation in saying, that, as it respects this country, it is *presumptive* evidence of a prosperous commerce—that is to say, though a bad trade checks exportation, a prosperous trade promotes it.

By the official treasury report of exports for the year ending 30th September, 1821, it appears that 10,477,000 dollars, in specie, were exported during the year—of which 7,900,000, (upwards of three-fourths), were to ports beyond the Cape of Good Hope. Now, as it is perfectly notorious that no credit is given in any part of that trade, this whole export must have been made on new adventures, for the purchase of commodities—a part for our own consumption, but the greater part to be sold in Europe. The whole motive to these adventures was profit—the returns come into the trade of the present year. The greater part of these voyages have been profitable, a part have been otherwise—it is the course of trade; but, as I said before, it is strong *presumptive* evidence of the general success of this trade—at any rate, it is *absolute* evidence that the *present prospect* is considered good, that so much has gone into it the present year; for it will be found that the greater part of this eight millions is on the same track. I have taken the example of this trade as placing the subject in a strong light. But I contend that the same reasoning will apply to the exportation of specie generally.

A certain quantity of specie is necessary to supply the circulating medium—or, rather, to support the credit and serve as the standard of value of our bank notes: all beyond that is useless surplussage. It will be found, on examination, that the accumulation of specie in this country, has always followed a stagnation of trade; and that the revival of trade has always been the signal to set this accumulation afloat, in search of profitable employment. As evidence of this, I give the following statements from the official returns of the banks in Boston, made up on the first of January of the respective years, and exhibiting the aggregate amount of specie in their vaults at that time in each year, viz.

January, 1814,	4,898,000 dollars.
1818,	630,000
1819,	541,000
1820,	978,000
1821,	2,434,000
1822,	937,000

There can be no doubt an examination of the situation of the banks in the commercial cities, at the same periods, would give nearly similar results, with the exception of the first, in 1814—in reference to which they were affected by large loans to government. I quote that period to shew the natural effect of an *annihilation of trade*; for, at that period, the grass was literally growing on our wharves. A prosperous trade, after the peace, soon dispersed this unprofitable hoard. But mark the effect of the disastrous year 1819—early in this year, owing to causes which it is not necessary now to consider, and about which there is a great diversity of opinion, a commercial convulsion paralyzed the commerce of Europe, and eventually affected the trade of every part of the world. The average reduction in the value of commercial products that year, has been estimated in Europe at 40 per cent. The effect on the trade of this country was severe—and, when to this effect was added that produced by the bursting of the bubble of a paper currency, dreadfully so. From this paralysis the commerce of Europe is now slowly recovering—its effects are still visible. Our commerce is more elastic, and has recovered more rapidly. The home trade may now be considered sound and prosperous—that connected with European markets is somewhat cramped by their inactivity. It will be seen, by the foregoing statement, that the first effect of this revulsion of 1819, was to withdraw our funds from the unprofitable field of commerce—to lock them up in the vaults of our banks, where they continued to accumulate, during the year 1820, in unprofitable idleness; in 1821 our merchants again ventured cautiously abroad, and the fact, that they have this year put in motion our whole surplus specie capital, is evidence that they find the field of commerce profitable and tempting. It is certainly true that this temptation may be so great as to cause exportation to a degree inconvenient to the mercantile community, in consequence of a sudden reduction in the circulating medium. Thus the specie in our banks was reduced, on the first June last, to 430,000 dollars. A severe pressure for money was the consequence, but it continued scarcely a month. The effect of these occasional periods of pressure is salutary—they keep the currency sound, and purify the commercial atmosphere.

I come now to the second inquiry of your correspondent—whether a rate of exchange, 13 per cent. above par, is advantageous or otherwise? As it is utterly impossible, in a time of peace, when insurance on specie can be effected at one per cent. premium, that such a rate of exchange, with England, can exist, I can answer the question in no other way than by shewing the actual state of our exchange with that country, and making such remarks as the subject suggests. The par of exchange between two countries can only be ascertained by ascertaining the quantity of the precious metals represented by their respective currencies. The currency of Great Britain is gold only—silver is there mere merchandise, fluctuating in value: our currency is, *nominally*, either gold or silver—but, *in fact*, at the present time, silver only: there is, therefore, no absolute par between two currencies, one consisting of gold the other of silver, inasmuch as there is no fixed proportion between the two me-

als. The only mode of ascertaining the real par of exchange, in such circumstances, is to take a given quantity of the metal represented in the currency of one country and compare it with the par of the same quantity of the same metal in the other. Thus, by our standard, silver is current at the rate of 117 cents per ounce—whether our own coinage, Spanish or French. The present price of silver, (Spanish dollars), in England, is and has long been 4s. 9d. sterling per ounce.

100 oz. of silver, with us, are worth 117 dollars.
100 oz. do. in London, at 4s. 9d. per oz. L.23 15 0 sterl.
£23 15s. at \$4.93 per pound sterling, amounts to \$116.97—of course, \$4.93, or, as near as may be, 11 per cent. above nominal par, is the true par of exchange on London. As Spanish dollars, the species of silver quoted in London, bear a premium here over other silver, it is proper to add that premium in this comparison. I have 100 oz. of Spanish dollars, worth 117 dollars—add premium, 1½ per cent. or \$1.75, is \$118.75: I go into the market with this money and buy a bill of exchange, at the present price, \$5 per pound sterling, or 12½ per cent. advance; it will buy me a bill for £23 15s. sterling, which will buy me in London precisely the 100 oz. of Spanish dollars with which I began the operation. This shews conclusively that bills on London are not, at the present moment, above the true par of exchange. The price of silver, (Spanish dollars), has fluctuated in England, for the last six or nine months, from 4s. 9d. to 4s. 9½d. per oz.: the rate of exchange, during the same period, has fluctuated, in the United States, from 9 to 13 per cent. The probability is, that the average has been rather below than above the real par.* It is true, the comparative value of gold and silver is unusual—it has usually been as 15 or 15½ to 1; it is now, in England, as 16½ to 1. This is sufficiently accounted for by the circumstance of the bank of England preparing to resume specie payments—it became necessary to attract gold to England. She has done it, and partly, by giving an unusual proportion of silver in exchange for it. She has thus got possession of all our gold, which was necessary to her, and given us, in exchange, an extra quantity of silver, which is equally useful to us. The bank of England having now got her full supply of gold, it is probable that the price of silver will gradually rise in England; in which case bills on England will fall here, *pari passu*—we shall get back our gold for less silver than we have received for it. In fact, if your correspondent will leave the merchants to manage their affairs in their own way, he need feel very little apprehension for the community—ruin cannot approach the community from without, but by first ruining the merchants; and they will look out pretty well for themselves. It is true, they make mistakes now and then—as this year, in giving the planters so much more for their cotton and tobacco than they proved to be worth—but this was no fault of our present system of free trade. It would be amusing, to be sure, if we should abandon the system at the very moment that our success is making converts to it in every part of the world, and when the rapid extension of our manufactures proves it to be equally favorable to them as to commerce.

*Since making this calculation, I find that, although French crowns are current, by law, at 117 cents per ounce, Spanish dollars and our own silver coins are worth a fraction less than 116 cents per ounce—this will vary this calculation about one per cent.—of course, the present rate of exchange on England may be considered one per cent. above par.

Your correspondent is desirous to discontinue the credits given on the duties on goods imported; the policy of giving credit on the duties rests on the same principle which induces the individual merchants to give credit on their merchandize; arousing competition and the equalization of profits. By making duties payable in cash, you confine importation to a smaller number—the rich merchants; by doing so, it is not probable you will increase the revenue or reduce the price of commodities. On the whole, I apprehend your correspondent may venture to bear things as they are another year.

A MERCHANT.

Boston, December 9, 1822.

PRESIDENTIAL NOMINATION. The following is an account of the proceedings had in Kentucky, alluded to in the last REGISTER.

Frankfort, Nov. 18, 1822. At a meeting of the members of the senate and of the house of representatives, composing the general assembly of the state of Ky. convened after the adjournment of the respective houses in the hall of the house of representatives, agreeably to a previous notice, for the purpose of taking into consideration the propriety of recommending to the people of the United States some suitable person to fill the office of the president of the United States, after the expiration of the present presidential term, *William T. Barry* was called to the chair, and *Thomas Speed* appointed secretary to the meeting, when the following resolution and address were offered for consideration by *George Robertson*:

Resolved, That *HENRY CLAY*, late speaker of the house of representatives of the United States, be recommended as a suitable person to succeed *James Monroe* as president thereof.

In respectfully inviting the attention of the people of the United States to a citizen of Kentucky, as a fit person to fill the highest office in their gift, that portion of the citizens of Kentucky now assembled, will not conceal that they entertain a warm affection for, and a strong confidence in, their distinguished fellow-citizen whom they have ventured to propose; nor deny that they think the time has arrived, when the people of the west may, with some confidence, appeal to the magnanimity of the whole union, for a favorable consideration of their equal and just claim to a fair participation in the executive government of these states. Sectional motives they are ready freely to admit, ought not to have a predominant influence in the choice of a chief magistrate: But it cannot be disguised that they ever must have some weight, until that sentiment shall be eradicated from the human breast, which attaches man most to those whom he knows best, and to the objects which are nearest and dearest to him. It is not, however, alone, nor principally, upon considerations merely local or personal, but on those of a much more liberal and elevated character, that they rest the pretensions of the individual whom they now recommend: For they believe, without disparaging, in the smallest degree, the very great and acknowledged merits of the other illustrious men, to whom public attention has lately been directed, that, throughout his whole public career, no American statesman has been less actuated by narrow or selfish impulses, and that he yields to none in eminent services, in distinguished ability, in political rectitude and virtue, nor in liberal and enlarged views of national policy.

In presenting him, therefore, to the consideration of their fellow-citizens, they think they are authorized to believe, that they have consulted the best

interests of the whole union, as well as the feelings and interests of the west, and that they may be allowed to hope that his strong claims to the confidence and approbation of his country, will be properly appreciated, and his talents and public services justly rewarded.

And, on the question being put thereon, the said resolution and address were unanimately adopted.

W. T. BARRY, chairman.

Attest, *Thomas Speed*, Secretary.

☞ A meeting of the legislature of Missouri has been held in like manner, at which it was, also, agreed to recommend Mr. Clay.

LAW CASES. During the late term of the district court of the U. States, held at Corydon, Indiana, judgment was rendered in favor of the government against *Nathaniel Ewing*, pension agent, for 11,318 dollars. Judgments were also obtained against the following individuals, at the instance of the post master general, viz: *Ansel Wood* and others, \$172 22—*John Roads* and others, \$ 88—*William Williams* and others, \$80 60—*Joshua Harlan* and others, \$416 62—*David F. Sacket* and others, \$282 06—*James Lemon* and others, \$400 19—*John D. Hay* and others, \$42 22—*William Boon* and others, \$53 08—*William Williams* and others \$22 55.

[*Kentucky Reporter*.

The federal court of Frankfort, Kentucky, was engaged, for two or three days, in the second week of November, in trying a cause between the United States and the col. Johnsons. The government claimed \$260,000, for which they instituted suit. The col. Johnsons produced set offs until they liquidated the claim and brought the government \$13,000 in debt, which the jury allowed. These are the claims for supplies and steam-boats for the Missouri expedition, which were refused by the war department and rejected by congress.—*Nat. Gaz.*

STATE OF SPAIN. From the *National Intelligencer*. Mr. *Samuel Alvey*, of Baltimore, has recently arrived in this country from Spain, and is at present in this city. He is the gentleman who was severely wounded by the insurgents at Madrid, on the 7th July last, and the same who was robbed of despatches from Mr. Forsyth, to this government, by a guerilla party, when on his way from Madrid to Bayonne.

From our conversation with him, we learn that our accounts of the intestine wars of Spain, give us wrong impressions of its actual situation. The constitutional government is strongly established, nothing seriously moved by the predatory excursions of guerilla bands, which, it is said, often retire within the French boundary, and are suffered to go and come without molestation by the French troops, which line that border. At Bayonne, it was known that, notwithstanding the rigid quarantine observed at the lazarettos, on the frontiers, by the French government, and that the violation of the sanitary laws was subject to the heaviest punishment, even that of death, the *cordón sanitaire* admitted the insurgents of the army *de se*, anti constitutional, without performing any quarantine whatever. They were provided with particular passports that enabled them to proceed to any part of France they chose, for the purpose of purchasing arms and equipage for their treasonable projects. Three bishops were in Bayonne, with their secretaries, and surrounded by priests and friars, admitted without being detained a single moment in quarantine. These members of the apostolic army, were publicly purchasing arms and ammuni-

tion, and sending them both by water and land to the peninsula.

We learn from the same gentleman, that Mr. *Obadiah Rich*, consul of the United States at Valencia, has got possession of the original manuscript of Columbus's account of his first voyage to America. It is to be translated and published in English and in Spanish; after which, it is expected the original will be transmitted for deposit in the capitol, or among the archives of the United States.

FOREIGN NEWS.

Spain. It is now stated that France has given notice to the two emperors that she cannot participate in a war against Spain, nor suffer the passage of troops through her territory—and it is strongly reported that England has declared a determination to resist any attempt to invade the peninsula! If these things are true, the 'holy alliance' will hardly meddle with the affairs of Spain and Portugal; yet these are making all possible preparation for the preservation of their liberties. The French corps on the frontier is now called the "army of observation," and a Barcelona paper, of October 13, noticing the arrival of a French frigate, demands—"What does this French ship want with us? We cannot tell. We only know that her commander took the liberty to ask several untimely, as well as impertinent questions. What would the French ultras say, if one of our vessels should arrive to-morrow at Toulon, inquiring 'Who commands here? Louis XVIII, Napoleon II, or the republicans?'"

Colombia. The Sapphire sloop of 28 guns, now called the New Orleans, and the Musquito brig of war, both purchased by the Colombian minister in England, have arrived at Laguaira—these, with the Bolivar, commanded by com. Daniels, must secure to the patriots a naval superiority. The Spanish frigate *Ligera* and brig *Hercules* were at Carracoa, repairing.

In the *Pacific* the American flag is much respected; owing, perhaps, very much to the presence of the Franklin and the good conduct of com. Stewart. He has built two small schooners and armed and manned them, to assist in his operations.

The Chilian congress was in session early in Sept. last. O'Higgins had resigned the directorship, but was re-elected for 5 years.

It is reported that *La Serna*, at the head of the royalists in Peru, has declared himself independent of Spain; and it was thought that he would drive San Martin from Lima, and possess himself of Peru, being very popular. Flour at Lima was \$50 per barrel—at Guayaquil the price was *sixty-five dollars!*

The city of Cartagena, that contained 12,000 inhabitants, has been destroyed by an earthquake—not a house was left standing, but not one life was lost! It is said that a vast quantity of gold and silver, brought to view by the earthquake, has been discovered by the people.

Ghent Negotiators.

TO THE EDITORS OF THE NATIONAL INTELLIGENCER.
LEXINGTON, 16th Nov. 1822.

Gentlemen: I have witnessed, with very great regret, the unhappy controversy which has arisen between two of my late colleagues at Ghent. In the course of the several publications, of which it has been the occasion, and particularly in the appendix to a pamphlet which has been recently published by the honorable John Q. Adams, I think there are some errors, (no doubt unintentional), both as to matters of fact and matters of opinion,

in regard to the transactions of Ghent, relating to the navigation of the Mississippi, and certain liberties claimed by the United States in the fisheries, and to the part which I bore in those transactions. These important interests are now well secured; and, as it respects that of the navigation of the Mississippi, left, as it ought to be, on the same firm footing with the navigation of all the other rivers of the confederacy, the hope may be confidently cherished, that it will never hereafter be deemed even a fit subject of negotiation with any foreign power. An account, therefore, of what occurred in the negotiations at Ghent, on these two subjects, is not, perhaps, necessary to the present or future security of any of the rights of the nation, and is only interesting as appertaining to its past history. With these impressions, and being extremely unwilling to present myself, at any time, before the public, I had almost resolved to remain silent, and thus expose myself to the inference of an acquiescence in the correctness of all the statements made by both my colleagues; but I have, on more reflection, thought that it may be expected of me, and be considered as a duty on my part, to contribute all in my power towards a full and faithful understanding of the transactions referred to. Under this conviction, I will, at some time more propitious than the present to calm and dispassionate consideration, and when there can be no misinterpretation of motives, lay before the public a narrative of those transactions as I understood them. I will not, at this time, be even provoked, (it would, at any time, be inexpressibly painful to me, to find it necessary), to enter the field of disputation, with either of my late colleagues.

As to that part of the official correspondence at Ghent, which had not been communicated to the public, by the president of the United States, prior to the last session of congress, I certainly knew of no public considerations requiring it to be withheld from general inspection. But I had no knowledge of the intention of the honorable Mr. Floyd to call for it, nor of the call itself, through the house of representatives, until I saw it announced in the public prints. Nor had I any knowledge of the subsequent call which was made for the letter of the honorable Mr. Russell, or the intention to make it, until I derived it through the same channel.

I will thank you to publish this note in the National Intelligencer, and to accept assurances of the high respect of your obedient servant,

H. CLAY.

TO THE EDITORS OF THE NATIONAL INTELLIGENCER.

Gentlemen:—In your paper of yesterday I have observed a note from Mr. Henry Clay, which requires some notice from me.

After expressing the regret of the writer at the unhappy controversy which has arisen between two of his late colleagues at Ghent, it proceeds to say, that, in the course of the several publications, of which it has been the occasion, and particularly in the appendix to the pamphlet recently published by me, "he thinks there are some errors, (no doubt unintentional), both as to matters of fact and matters of opinion, in regard to the transactions at Ghent, relating to the navigation of the Mississippi, and certain liberties claimed by the United States in the fisheries, and to the part which he bore in those transactions."

Concurring with Mr. Clay in the regret that the controversy should ever have arisen, I have only to find consolation in the reflection that, from the seed

time of 1814 to the harvest of 1822, the contest was never of my seeking, and that, since I have been drawn into it, whatever I have said, written or done in it, has been in the face of day, and under the responsibility of my name.

Had Mr. Clay thought it advisable now to specify any error of fact or of imputed opinion which he thinks is contained in the appendix to my pamphlet, or in any other part of my share in the publication, it would have given me great pleasure to rectify, by candid acknowledgment, any such error, of which, by the light that he would have shed on the subject, I should have been convinced. At whatever period hereafter he shall deem the accepted time has come, to publish his promised narrative, I shall, if yet living, be ready, with equal cheerfulness, to acknowledge indicated error, and to vindicate contested truth.

But as, by the adjournment of that publication to a period "more propitious than the present to calm and dispassionate consideration, and when there can be no misinterpretation of motives," it may chance to be postponed until both of us shall have been summoned to account for all our errors before a higher tribunal than that of our country, I feel myself now called upon to say, that, let the appropriate dispositions, when and how they will, expose the open day and secret night of the transactions at Ghent, the statements, both of fact and opinion, in the papers which I have written and published, in relation to this controversy, will, in every particular, essential or important to the interest of the nation, or to the character of Mr. Clay, be found to abide unshaken the test of human scrutiny, of talents, and of time.

JOHN QUINCY ADAMS.

Washington, 18th Dec. 1822.

Interesting Correspondence.

FROM THE CHRISTIAN REGISTER.

The following letters have been obtained by solicitation; and are sent to the press by the permission of their venerable authors. The character, standing, and age of the writers, the one in his eightieth, the other in his eighty-seventh year, give them peculiar interest, and they cannot fail to be read with great pleasure. It is delightful to witness this kind of correspondence between these two distinguished men, the asperities of party by which they were at one time separated, worn down, and nothing remaining but the interchange of sentiments of unfeigned kindness and respect. It is charming to see an old age like this, retaining, even under its decays and infirmities, the intellectual vigor unimpaired; and displaying, amidst its snows, the greenness and freshness of the summer of life. It is an enviable and privileged height to which these great men have attained; from which they are permitted to look down upon an extensive and eminently happy country, enjoying the fruit of their labors and sacrifices, more than realizing their boldest anticipations; and regarding them with that gratitude and respect to which their magnanimity and distinguished patriotism so emphatically entitle them.

The letter of Mr. Jefferson was written soon after an attack upon him by the "Native of Virginia;" and when there was a strong expectation of a war between Russia and Turkey: this will explain some allusions in them.

FROM MR. JEFFERSON TO MR. ADAMS.

Monticello, June 1, 1822.

It is very long, my dear sir, since I have written

to you. My dislocated wrist is now become so stiff that I write slowly, and with pain; and, therefore, write as little as I can. Yet it is due to mutual friendship to ask once in a while how we do? The papers tell us that general Starke is off at the age of ninety-three—* * * * still lives, at about the same age, cheerful, slender as a grasshopper, and so much without memory that he scarcely recognises the members of his household. An intimate friend of his called on him not long since. It was difficult to make him recollect who he was, and sitting one hour, he told him the same story four times over. Is this life?—with laboring step

To tread our former footsteps? pace the round
Eternal?—to beat and beat
The beaten track—to see what we have seen—
To taste the tasted—o'er our palates to decant
Another vintage?

It is, at most, but the life of a cabbage, surely not worth a wish. When all our faculties have left, or are leaving us, one by one, sight, hearing, memory, every avenue of pleasing sensation is closed, and atrophy, debility, and mal-aise left in their places, when the friends of our youth are all gone, and a generation is risen around us whom we know not, is death an evil?

When one by one our ties are torn,
And friend from friend is snatch'd forlorn;
When man is left alone to mourn,
Oh, then, how sweet it is to die!

When trembling limbs refuse their weight,
And films slow gathering dim the sight;
When clouds obscure the mental light,
'Tis nature's kindest boon to die!

I really think so. I have ever dreaded a dotting old age; and my health has been generally so good, and is now so good, that I dread it still. The rapid decline of my strength during the last winter has made me hope sometimes that I see land.—During summer, I enjoy its temperature, but I shudder at the approach of winter, and wish I could sleep through it with the dormouse, and only wake with him in spring, if ever.—They say that Starke could walk about his room. I am told you walk well and firmly. I can only reach my garden, and that with sensible fatigue. I ride, however, daily, but reading is my delight. I should wish never to put pen to paper; and the more because of the treacherous practice some people have of publishing one's letters without leave. Lord Mansfield declared it a breach of trust, and punishable at law. I think it should be a penitentiary felony; yet you will have seen that they have drawn me out into the arena of the newspapers. Although I know it is too late for me to buckle on the armour of youth, yet my indignation would not permit me passively to receive the kick of an ass.

To turn to the news of the day, it seems that the cannibals of Europe are going to eating one another again. A war between Russia and Turkey is like the battle of the kite and snake; which ever destroys the other, leaves a destroyer the less for the world. This pugnacious humor of mankind seems to be the law of his nature, one of the obstacles to too great multiplication provided in the mechanism of the universe. The cocks of the hen yard kill one another; bears, bulls, rams, do the same, and the horse, in his wild state, kills all the young males, until, worn down with age and war, some vigorous youth kills him. * * * * I hope we shall prove how much happier for man the Quaker policy is, and that the life of the feeder is better than that of the fighter: and it is some consolation that the desolation by these maniacs of one part of the earth, is the means of improving it in other parts. Let the latter be our office; and let us milk

the cow, while the Russian holds her by the horns and the Turk by the tail—God bless you and give you health, strength, good spirits, and as much of life as you think worth having.

THOMAS JEFFERSON.

MR. ADAMS' REPLY.

Montezillo, June 11, 1822.

DEAR SIR—Half an hour ago I received, and this moment have heard read, for the third or fourth time, the best letter that ever was written by an Octogenarian, dated June 1st.

I have not sprained my wrist; but both my arms and hands are so overstrained that I cannot write a line—Poor Starke remembered nothing and could talk of nothing but the battle of Bennington. **** is not quite so reduced.—I cannot mount my horse, but I can walk three miles over a rugged rocky mountain, and have done it within a month; yet I feel, when sitting in my chair, as if I could not rise out of it; and when risen, as if I could not walk across the room; my sight is very dim, hearing pretty good, memory poor enough.

I answer your question—Is death an evil?—It is not an evil. It is a blessing to the individual, and to the world; yet we ought not to wish for it till life becomes insupportable. We must wait the pleasure and convenience of the "Great Teacher." Winter is as terrible to me as to you. I am almost reduced in it to the life of a bear or a torpid swallow. I cannot read, but my delight is to hear others read; and I tax all my friends most unmercifully and tyrannically against their consent.

The ass has kicked in vain; all men say the dull animal has missed the mark.

This globe is a theatre of war; its inhabitants are all heroes. The little eels in vinegar, and the animalcules in pepper water, I believe, are quarrelsome. The bees are as warlike as the Romans, Russians, Britons, or Frenchmen. Ants, caterpillars and cankerworms, are the only tribes among whom I have not seen battles; and Heaven itself, if we believe Hindoos, Jews, Christians, and Mahometans, has not always been at peace. We need not trouble ourselves about these things, nor fret ourselves, because of evil doers; but safely trust the Ruler with his skies' Nor need we dread the approach of dotage; let it come, if it must. ****, it seems, still delights in his four stories; and Starke remembered to the last, his Bennington, and exulted in his glory; the worst of the evil is, that our friends will suffer more by our imbecility than we ourselves.

In wishing for your health and happiness, I am very selfish; for I hope for more letters; this is worth more than five hundred dollars to me, for it has already given me, and will continue to give me, more pleasure than a thousand. Mr. Jay, who is about your age, I am told, experiences more decay than you do. I am, your old friend,

JOHN ADAMS.

President Jefferson.

Northern Canal.

FROM THE NEW YORK STATESMAN.

Waterford, 28th Nov. 1822. On this day the last stone of the Northern or Champlain Canal was laid by governor Clinton, president of the board of canal commissioners, in the presence of a great assemblage of people. The ceremony was solemn and impressive. Before the laying of the stone the pre-

sident delivered a short address, which stated, in substance, that he proceeded, with great pleasure, in the presence of his assembled fellow-citizens, to consummate a great work devoted to the interests of agriculture, manufactures and commerce, and connecting the waters of the gulf of St. Lawrence with the bay of New York. He invoked the smiles of the Almighty Father of the universe on the work and the occasion, and supplicated the realization of all the blessing anticipated from this undertaking. The stone was then laid amidst the acclamations of the people, and a most eloquent prayer was offered to the throne of grace by the rev. Dr. Blatchford. The company passed in two boats, drawn by five elegant horses, from the river through a tier of three locks of white marble and excellent workmanship, into the canal. The marble was procured from West Chester county, and is firmly cemented by hydraulic mortar, made of northern lime stone. The locks are of 11 feet lift each, and are almost perfect water tight. Between the locks there are two spacious circular basins for the accommodations of boats passing out and into the river. Waterford is the head of sloop and boat navigation of the Hudson, and the northern canal is now finished to it; indeed it has already been navigated by boats of transportation. One has just arrived from Lake Ontario by the St. Lawrence and Sorel rivers and Lake Champlain; and I saw, with great pleasure, packages and boxes, stowed on the banks of the canal, destined for Whitehall and Peru in Clinton county.

As the importance of this canal is not sufficiently appreciated, nor its character extensively known, it may not be amiss to subjoin a few remarks, which I have derived principally from the enlightened acting commissioner.

From Whitehall, where it unites with Lake Champlain, to Waterford, where it finally enters the Hudson river, the distance is about 61 1-2 miles. From Whitehall to fort Edward, there are 19 miles of canal, and about 5 miles of the waters of Wood Creek. In this space there are 10 locks; 3 at Whitehall to let boats down into the lake; 3 at Fort Edward for the same purpose as to the Hudson river; about half way between fort Edward and Whitehall, to wit, at fort Ann there are 3 locks, which descend to the level of Wood Creek and Halfway Brook. These streams unite below the village, and feed this lower level of the canal. Some short distance below this junction there is a lock recently located and made of wood. The upper level of the canal from fort Edward to fort Ann is supplied by the Hudson—the water is impelled into a feeder by a most stupendous dam of 30 feet altitude, erected across that river, and there is now another feeder preparing to run from above Glen's falls, and to pass into the canal north of Sandy Hill, which will also serve us as an auxiliary canal, to convey lumber and other commodities from an extensive range of country in that direction.

There is a striking feature in the geology of this route, which deserves a scrutinizing examination—it appears that the Hudson river, at fort Edward, which, you know, is below Glen's and Baker's falls, is 22 feet higher than lake Champlain. There is a descent of 5 feet from the summit level at fort Ann, to the lake at Whitehall, and 28 feet to the river at fort Edward. Forty or fifty feet high, in the primitive rocks, at a place called the Narrows, in Wood creek, there are great cavities or pots, produced by the action of rotary stones under the power of water falling perpendicularly; a critical inspection of these lapideous excavations might determine

whether the Hudson river did not, previous to its rupture of the great barrier at the highlands, diverge to the north in this direction. From the canal at fort Edward to fort Miller falls, 8 miles, the river is used in lieu of the canal, and is kept up to the requisite altitude by a dam. Round those falls there is a short canal of half a mile, which unites again with the river by two locks; the river is again used for about two and a half miles, and then by a dam it is forced into a canal, on the west side, which extends about 26½ miles, to Waterford. This part contains six locks, and at Waterford there are three more, making in the whole extent 21 locks; 45 miles of artificial navigation, and 15½ of improved natural navigation, to wit, five miles of Wood creek, and 10 1-2 of the Hudson river. From Waterford the canal proceeds 2½ miles further south, where it unites its waters with the western or Erie canal, after crossing the Mohawk river by a dam, and which river is thereby put into requisition as a feeder for the northern canal, in both a northern and southern direction, and also before and after its junction with the western. This latter portion is nearly completed.

The whole extent is 64 miles. This work was commenced on the 10th of June, 1818, and has been finished in somewhat more than four years.—When compared with similar works in the old world, the execution may be pronounced a rapid one, and has never been exceeded, in that respect, except by its relative, the western canal. The celebrated canal of Languedoc is only 148 miles long, and it took 14 years to finish it, and it employed always the labor of 8,000, and sometimes 12,000 men.—The Forth and Clyde canal is 35 miles long. It was commenced in 1768, and not completed until 1790.

The canals of China have been the subject of unbounded panegyric. The distance from Peking to Canton, by canals and rivers, is 920 miles, and the voyage takes about three months. On our canals the same extent could be passed in one month. The truth is, that the Chinese canals are very inferior to the European. Instead of locks, the boats are drawn up and let down inclined planes by human power, at vast expense and trouble. A lock appears to be a very simple invention. It is but a sluice with two double gates, and yet it never occurred to that ingenious people. The first lock was constructed by the Venetians in 1481.

The influence of these works is already felt, not only in different parts of the United States, but has extended to Europe. The transportation of merchandise from Philadelphia to Pittsburg, has fallen from 120 dollars to 40 dollars a ton. When the western canal is finished, goods can be transported from New York to Pittsburg for 30 dollars a ton. They formerly cost 100 dollars from New York to Buffalo. It will now be done for less than 15 dollars. The receipts of the Holland land company have this year been immense, because the western settlers have found a market; and the share-holders of our *farther land* will be astonished at the unexpected increase of their profits.

In their report of 1817, the canal board estimated that the country, within the reach of the northern canal, would furnish, annually, two millions of boards and planks; one million feet of square timber, and immense quantities of dock logs, scantling, masts and spars. Besides, those northern regions are the sites appropriated by nature for her mineral productions; and it is well known that they contain iron ore unsurpassed for quantity and quality—marbles of various kinds and colors—lime-stone,

from the primitive to the secondary, and the materials of the best hydraulic cement—bark for tanning and other manufacturing process—inexhaustible stores of pot and pearl ashes, wheat, flour, butter, cheese, beef, pork and maple sugar; the best of cattle for the butcher, dairyman and grazier, and the finest sheep, hogs and poultry, besides the fruits of autumn. In going to the New York market, the proprietors of these articles follow the current of interest, and the direction of political affinity, and their preference is enforced by the act of the British parliament, fettering our commerce with the Canadas, and thereby imposing the necessity of a limited or partial trade with those countries.

We cannot form any definite opinion of the value or the amount of the commodities that will be conveyed down the canal; nor of the merchandise that will be returned, because it has not been in operation until this day. So far back as July last, it was estimated such was the immense amount of timber in the canal and in the lake waiting for the advent of the waters, that it would take twenty days for that in the lake to pass into the canal, and forty days for that in the lower level to pass into the upper—and the waters of the Hudson are, even at this advanced period of the season, covered with rafts, making their way to our great commercial emporium.

G. W.

Opium Trade with China.

A Chinese edict was, some time since, published, announcing the seizure of the cargoes of one American and three English vessels at Canton, for introducing opium, in violation of the law, and the confiscation of half the cargoes. By a subsequent edict this forfeiture was remitted, the viceroy finding that the merchants concerned were greatly afflicted, and that they "roar out, as under the agonies of a head ache, their supplications;" but they were forbidden to sell their cargoes, to carry away any tea or rhubarb, and the hong merchants were ordered to make a memorandum of the names of these ships and their merchants, and forever to prohibit their coming to Canton to trade. The following is the concluding part of the edict [Fed. Gaz.]

"As to one of the four ships, viz. *Coupland and Emily*, of Baltimore, she containing nearly a thousand cattie of foreign gin, worth scarcely any thing, and it paid for the port charges upwards of 1400 taels, from which it appears that the said ship came for no other purpose but to sell opium. Infinitely detestable! Rightly did Heaven send down punishment, and cause Francis Terra-orea to commit a crime for which he was strangled. The ship should be punished more severely, only as the three ships, *Hogg* and the others, have had clemency extended to them, I shall remit the sentence on all equally, and shall, with her as with the others, inflict a little punishment.

"In a word, as before said, the celestial empire permits tea, rhubarb, &c. to be sold, to keep alive the people of the said nations. Those persons who are annually kept alive thereby are more than 10,000 times 10,000. How substantial a favor is this! Yet these foreigners feel no gratitude nor wish to render a recompence, but smuggle in opium, which poisons the empire. When this conduct is referred to the heart, it must be disquieted—when referred to reason, it is contrary to it. In broad day, on earth, there is the royal law—in the shades, after death, are gods and demons. These foreign ships pass an immense ocean; they, likewise, go

through gales of wind, boisterous seas and unknown dangers, entirely preserved by the condescending protection of the celestial Gods; and, therefore, they should, hereafter, rouse themselves to zealous reflection, to bitter repentance and to reformation, and alter their inhuman,—unreasonable conduct. Then will the winds be fair and waves stilled; and they will, forever, receive the gracious bounty of the celestial empire.

"Let the hong merchants, in obedience to this edict, carefully and minutely inculcate its contents to all foreign ships going away to their own country, and to all supercargoes—requiring them to know and understand it.

"I, the Poohong Sye, having received from the governor the above quoted document, transfer it to the local magistrate to carry it into effect. Disobedience will involve great and heavy consequences.

"Haste on, haste on. TAOU KWANG.

"2d year, 1st moon, 8th day."

Spanish Cortes.

KING'S SPEECH.

The following speech was read by H. C. M. on the opening of the cortes, on the 7th Oct. last:

Gentlemen members: The most weighty circumstances call me among the representatives of the nation, who have so many claims to its confidence. Mine is revived at seeing them again in this sanctuary of the laws, for the urgent necessities of the state will now be remedied.

The enemies of the constitution not having sight of any method their folly or barbarity might suggest, have succeeded in dragging into the career of crime a considerable number of Spaniards. The calamities which these disorders produce in Catalonia, Aragon, and other frontier provinces, are as afflicting to my heart as to yours. To you it belongs to employ the most efficacious remedy to such lamentable irregularities. The nation requires a numerous force to curb at once the audacity of its rebellious sons; and the faithful and brave soldiers, who serve her in the field of honor, require powerful and abundant assistance to secure a happy completion of the duties to which they have been called.

Nations are mutually respected by their power, and the energy which they know how to exhibit in certain situations. Spain, by her position, her coasts, her productions, and the virtue of her inhabitants, merits a distinguished place in the political map of Europe. Every thing induces her to take that imposing and vigorous attitude which will draw from the others the consideration of which she is worthy. It appears necessary to make new relations with the states who know how to value our real riches.

It is useless to offer to your consideration the glory and merit of the Spanish army, a model of disinterestedness and patriotism. Its heroic sacrifices for the national independence are well known. It is evident to all Europe the service it is rendering to the cause of liberty and its country. These citizens warriors require statutes and regulations conformable to the established laws, and the improvement in the art of war. The cortes was occupied in its former sessions in this interesting work; its continuation is one of the objects which ought to fix its attention.

As we now possess a criminal code, and as the promulgation of so necessary a work relieves those who administer justice from the immense fatigue of referring to it in so voluminous a shape, it is ab-

solutely necessary that such a part of it relative to proceedings should be immediately finished.

These, gentlemen, are the important subjects to which you are called. Others of equal moment will be committed to your determination in the course of this session. If all these are arduous and difficult, they will be surmounted by your wisdom, decision and patriotism. The unanimity among all lovers of liberty, will add a new lustre to these eminent qualities, which are a sure guarantee to Spain and to me of your judgment. The good will rejoice to see you occupied a second time for their happiness, and the wicked will find, in the national congress, an impenetrable barrier to their criminal projects.

Portuguese Cortes.

On the 1st of October, on the occasion of taking the oath to the new Portuguese constitution, the king of Portugal read the following speech to the cortes at Lisbon.

"*Gentlemen,*—I have examined with attention the political constitution of the monarchy, which, in the name of all the inhabitants of the united kingdoms of Portugal, Brazil, and Algarve, was offered to me by its legitimate representatives, united in those general extraordinary and constitutional cortes of the Portuguese nation, and I have considered, with scrupulous attention, the conditions of this new social compact.

"Placed by Providence at the head of a valiant and magnanimous nation, and convinced that the general will is the fountain and the medium of all political power, it is my duty to identify my will with the general wish, as I was always sensible that my own happiness is essentially connected with the prosperity of the Portuguese people.

"Faithful to my principles, I flatter myself with having offered to the nation, even in the most difficult circumstances, decisive proofs of the love I bear it, and of the uprightness which becomes my own dignity. The Portuguese acknowledge it, and this is a recompense the most worthy of my labors as well as the sole object of my ambition.

"The new social compact being, therefore, the expression of the general will, and the fruit of your wise meditations, conformable to the enlightened age, and founded on a reciprocity of interests and sentiments, which make my cause inseparable from the cause of the nation, I come to day, in the midst of the national representation, to accept the constitution which you have just made: and to confirm, by the most solemn oath, the inviolable promise to keep it, and cause it to be kept.

"Yes! Representatives of the heroic Portuguese nation! your magnificent work, the fruit of so many enlightened and patriotic labors, will be respected and maintained. I swear it by the probity and firmness which you know me to possess. This sacred promise, as spontaneous as the resolution which brought me from the new world to the cradle of the monarchy, to co-operate in this your glorious enterprise, cannot have a surer guarantee than this same firmness with which I have maintained the basis to which I swore, and which appears in all the acts which characterise my promises as sincere, and my intentions as pure.

"I congratulate myself both on meriting the confidence and love of the nation, and on the arrival of this happy day, twice celebrated in the annals of Portugal. It will shew to posterity, the, perhaps, unparalleled example of a nation, regenerated without disturbing the public tranquility; one

that the first constitutional king of the Portuguese, knowing how to make himself worthy of the confidence of the people, knows also how sweet it is to reign over their hearts. Such, gentlemen, is the glory to which I aspire, and such are the sincere motives which induced me to accept, and to swear to the political constitution of monarchy.

Legislature of Maryland.

IN THE HOUSE OF DELEGATES.

Mr. T. Kennedy, of Washington county, submitted the following resolutions—

Whereas, the great national road leading from Cumberland to Wheeling, which is of such incalculable advantage in facilitating the intercourse between the Atlantic and the western states, and which was constructed at a great expense, has already suffered from the want of that regular superintendence, and of those repairs which are necessary to the preservation of such a work, therefore,

Resolved, by the general assembly of Maryland, That the senators and representatives of this state in congress, be requested to use their best exertions to procure the immediate passage of a law by congress, making a sufficient appropriation to repair the great national road, leading from Cumberland to Wheeling.

Resolved, That the governor be, and he is hereby, requested to cause a copy of this resolution to be transmitted to the senators and representatives of this state in congress.

The following resolution has also been brought into the house of delegates, by the same member:

Whereas, a system of internal improvement, confined to great national purposes, with proper limitations, would be productive of eminent advantage to the people of the United States, and would promote the general welfare, and tend to secure a more perfect union; and, whereas, doubts may and do exist, whether the congress of the United States have the power to adopt such a system: therefore,

Resolved, by the general assembly of Maryland, That the senators and representatives of this state, in the congress of the United States, be requested to use their best exertions to procure such an amendment to the constitution of the United States, as will give congress power to adopt and execute a system of internal improvement, to be confined to great national purposes with proper limitations.

Resolved, That the governor be, and he is hereby, requested to cause a copy of this resolution to be transmitted to each of the senators and representatives of this state in congress.

Mr. John P. Kennedy, of Baltimore, offered the following—

Resolved, That the governor and council be directed to select, as soon after the passage of these resolutions as it can conveniently be done, nine of the most discreet and intelligent citizens of this state, as a committee for the purpose of reporting to the executive, either collectively or individually, as their convenience may allow, upon the most efficient, useful and practical plans of internal improvement, in relation either to the whole of the state, or such parts thereof as they may think proper respectively to select; and that the executive be authorized to supply any vacancy in said committee which may occur during the term of their appointment.

Further resolved, That to each person selected as aforesaid, the governor and council be directed to transmit a copy of the reports on internal im-

provement by the committees of the senate and house of delegates respectively, and also a copy of the following instructions: "You are requested to communicate to the executive of this state, as soon as it may suit your convenience, not delaying longer than the period of commencement of the next general assembly, such information as you may have in your power to afford in relation to the subjects of internal improvement within this state, more especially confining your attention to the general face and character of the country; the elevation of the most remarkable hills and mountains, the nature of their minerals, soil and vegetable productions, the courses of the rivers and creeks, the nature of the country through which they pass, and the produce in which it abounds; the means of connection between important rivers—the facilities afforded to the construction of canals, roads or railways—the prices of labor—the respective average charges per mile in making roads or canal—the probable advantages to the internal trade and commerce of each district by making such improvements—and all such other information upon these questions as you may consider useful."

Further resolved, That the governor and council be authorized to procure such general surveys of the rivers, water courses or districts of country, as they shall in their judgment, deem, necessary to the illustration of the subjects of internal improvement, and that, for the expenses of the same, they be authorized to draw on the treasurer of the western shore.

Imprisonment for Debt.

Remarks of Mr. R. M. JOHNSON, of Kentucky, in the senate, December 14th, on introducing his bill to abolish imprisonment for debt.

Mr. Johnson, of Ky. said, that, in pursuance of notice given on a former occasion, he would now ask leave to introduce a bill to abolish imprisonment for debt. He was prepared to have presented it yesterday but he did not wish to interrupt the course of business then before the senate. He did not intend, now, to make many remarks on this motion, reserving to himself the privilege of investigating the subject more fully, when its merits should be more properly before the senate. He was happy to learn, he said, that he should have assistance in his exertions from some honorable members whilst he expected opposition from others. The subject had been before congress two or three sessions previous, and the uniform result had been favorable reports from select committees, to whom it had been referred, without any final decision, for the want of time. He hoped at the present session, the measure would be adopted or decisively rejected. Mr. J. said, he was actuated by several considerations in making this motion. The most important was a thorough conviction of the propriety of the measure. Another inducement was, that it accorded with the sentiments of the state which he had the honor in part to represent. The Kentucky legislature had already adopted the measure; and though her relief measures had produced some discontent with distant journals, still this part of her system had met with something like general approbation, so far as he could ascertain public sentiment. He had no doubt time would prove the justice and wisdom of her whole system, but, in relation to this particular branch of it, (he meant the abolishing of imprisonment for debt), it gave her claims to as much honor and glory as any one act of her administration since her ad-

mission into the union. Mr. J. said he was anxious to see the system adopted by congress, and extended to every branch of the federal judiciary, that the liberty of the citizen might be secure and the public confidence increased in that branch of the general government. He believed that the right of the states to exercise such a power had not been questioned. In fact, it had been decided by the supreme court of the United States, in the case of *Sturgis vs. Crowninshield*, that a state had the right to pass laws releasing the body of the debtor from imprisonment.

Mr. King, of New York, here suggested whether it was in order to enter into a discussion of the merits of the bill in this stage of its progress.

Mr. Johnson replied that he had intended merely to submit a few introductory general views of the subject. If, however, his remarks were unacceptable to the senate, or uninteresting to the gentleman from New York, he would give way to any other business—he would give way to the gentleman from New York.

Mr. King felt certainly no indisposition to hear the remarks of Mr. J. but he thought them not strictly in order.

Mr. Johnson said he would proceed, as nothing else appeared to claim the attention of the senate. He was about to remark upon the operation of the system in Kentucky, and the difficulties that had arisen there from the emanation of the ca. sa. from the federal judiciary, the law of that state to the contrary notwithstanding. Very early after the organization of the federal government, congress had adopted the execution laws of each state, to be the rule of government for its courts located in the several states. The execution laws of the several states were widely different. During the late troubles in Kentucky it was made a question, what was the intention of congress in relation to this subject? Whether it was intended to recognize the execution laws then in force, and make them, like the laws of the Medes and Persians, irrevocable; or to recognize and conform to the systems of the different states, as they should be modified. Although a diversity of opinion existed among the most eminent counsel of the state, the federal court in Kentucky decided that the execution laws of the state, as modified, were to control federal court process. He believed this a correct decision. Since the passage of the law abolishing imprisonment for debt, application had been made to the federal court in Kentucky for the ca. sa.—The court refused to grant it, and an appeal had been taken to the supreme court. After this decision of the court, that the body of the debtor could not be taken, he was surprised to find that instances had occurred in which the clerk of the court had issued the ca. sa. and it had been executed by the deputy marshal. Mr. J. was convinced, from the information he had received, that this procedure had taken place in consequence of some misunderstanding as to the extent of the opinion of the court; and he hoped the practice would conform to the statutes of the states, until the ultimate decision of the supreme court, or until it could be ascertained whether congress would expressly, by law, abolish imprisonment for debt; or whether they would modify the law and make it more definite and precise. He was happy to believe that public sentiment was in favor of this measure; and he conceived this sentiment to be something like an instruction to congress. He was happy to find that the governor of South Carolina, in his excellent message, had recommended this

subject to the consideration of the legislature of that state.

Mr. J. concluded, by expressing a hope that, in offering these brief views, he had not trespassed on the rules of the senate. The remarks he had offered were not for the pleasure of talking; but were drawn from him by a sense of duty—believing that the importance of the subject demanded the early attention of congress.

Seventeenth Congress—2nd session.

IN THE SENATE.

December 13. The senate did not sit this day, nor the following.

December 16. Mr. Pleasants, (elected governor of Virginia), resigned his seat in the senate this day.

Agreeably to the notice which he had given, Mr. D'Wolf, having obtained leave, introduced a bill allowing a drawback on the exportation of cordage manufactured in the United States, from foreign hemp; and the bill was read.

The resolution submitted on the 12th instant, by Mr. Rodney, was taken up and agreed to.

The senate laid their own bill about piracy on the table, to take up that which had passed the house of representatives; and, being read, it was, after some debate, &c. ordered to a third reading and PASSEN, *nem. con.*

The senate spent some time on executive business and then adjourned.

December 17. Mr. Samuel Smith, a senator from the state of Maryland, in the place of William Pinkney, deceased, appeared to-day, was qualified and took his seat.

Mr. Stokes, of North Carolina, and Mr. King, of Alabama, also appeared to day, and took their seats.

Sundry resolutions to refer the president's message to different committees were considered and agreed to.

December 18. The senate was occupied this day chiefly on local matters.

HOUSE OF REPRESENTATIVES.

Thursday, Dec. 12. The house resumed the consideration of the following resolution, yesterday submitted by Mr. Colden:

Resolved, That the president of the United States be requested to lay before this house such information as he may possess, with regard to any hostile expedition which may have been prepared in the United States, and sailed from thence, within the present year, against the territory or dependency of any power in amity with the United States, and to inform this house whether any measures have been taken to bring to condign punishment persons who may have been concerned in such expedition, contrary to the laws of the United States.

Mr. Little moved to strike out all that part of the resolution which follows the word "States," in the 6th line, and in lieu thereof insert the following:

"And inform this house what amendments to the existing laws are necessary to punish persons who may have been concerned in any such expedition."

Mr. Colden explained at some length—he alluded to the Porto Rico expedition. There were various reports about it—but it was agreed that persons engaged in it had departed from this country. He noticed the occupation of Amelia Island, by the United States, and had reference to Mr. Irvine, (secretary *pro tem.*) of the intended republic, who had held the place of a diplomatic agent from this government—but he wished to censure no one—he desired to investigate the transaction, &c. He declined an assent to the proposition of Mr. Little.

Mr. Little explained his views. His object was to devise laws to punish offences of this description that may be hereafter committed, if such laws

do not now exist. But finally withdrew his proposed amendment.

Further debate took place, and the resolution was agreed to, as originally offered, by a large majority.

On motion of Mr. Campbell, of Ohio, it was resolved, That all the bills, resolutions and reports, committed to a committee of the whole house, on the state of the union, and to committees of the whole house, not already printed, be ordered to be printed.

Mr. Condict's resolution about the contingent expenses of congress, was laid on the table, as being under charge of the committee of ways and means.

The Speaker laid before the house the following letter:

Boston, July 4, 1822.

To the speaker of the house of representatives.

Sir: The letter which I had the honor to address to you on the 4th of July, 1819, and which Mr. Lowndes was so obliging as to take charge of and deliver, was intended to have been accompanied by the collection of medals therein referred to; but this was unfortunately lost on board the ship "Factor," bound to New-York, of which accident it appears that the house was duly informed by its committee. As soon as I heard of it, I endeavored to procure a duplicate of the collection, and succeeded, a few days before I left Paris, in April last. This, together with the medals which have been struck at Paris, to commemorate some principal events of, and men distinguished in, our revolution, I take the liberty, through you, sir, of herewith sending and offering to congress, for the use of the national library.

With sentiments of the highest respect, sir, your most obedient servant, GEORGE W. ERVING.

P. S. A printed catalogue of the French medals proper is enclosed in the case which contains them.

The American medals are but five proper, viz:

One of general Washington, at the siege of Boston; one of doctor Franklin; one of Paul Jones, and two of the battle of the Cowpens.

To these I have thought it well to add Columbus and Kosciusko, taken from the collection of illustrious men, deceased, now publishing in the French mint.

The letter was, on motion of Mr. Plumer, of N. H. referred to the library committee.

The Speaker also presented a memorial from T. McCormick, senior, proposing an improvement of the navigation of the falls of the Ohio, by cutting a canal around the same; which, on suggestion of the speaker, was referred to the committee of the whole on the state of the union, to whom was referred the bill for providing for surveys of certain canals, &c.

The bill respecting registers of wills in the district of Columbia was recommitted—apparently on the suggestion of Mr. Cocke that the fees were high enough, because Dr. Blake had leased out the office for five hundred dollars a year, and had not the least trouble with it.

The bill for the relief of registers and receivers of the public money of the several land offices was read a third time—and was laid on the table; which was also the fate of the bill "fixing the compensation of receivers of the public moneys for their services in transmitting public moneys to safe places of deposit."

On motion of Mr. Bassett the house again resolved itself into a committee of the whole, Mr. Condict in the chair, on the bill for imposing more rigorous checks on the disbursement of public money.

On motion of Mr. Bassett, the bill was amended by adding to it the following, as a new section:

"Sec. 4. Be it further enacted, That no security given to, or obligation entered into with, the government, shall be, in any wise, impaired by the dismissing any officer, or from failure of the president to dismiss any officer, coming under the provisions of this act."

Another slight amendment being made—

The committee rose and reported the bill; and, on motion of Mr. Bassett, who did not wish to precipitate the bill through the house, the consideration of the report was for the present deferred. And

The house adjourned.

Friday Dec. 13. After some minor business—

Mr. Newton, from the committee of commerce, reported a bill to repeal the third section of the act, entitled "an act supplementary to an act, entitled "an act concerning navigation" [This bill provides, "That the third section of the act entitled "an act, supplementary to an act, entitled "an act concerning navigation," passed 15th of May, 1820, be, and the same is hereby, repealed.]"

The bill was read the first and second time, and ordered to be engrossed and read a third time to day; and was subsequently read a third time, passed and sent to the senate for concurrence.

Mr. Smith, of Maryland, from the committee of ways and means, to which was recommitted the bill supplementary to and to amend an act, entitled "an act to regulate the collection of duties on imports and tonnage," passed 2d of March, 1799, and to repeal an act supplementary thereto, passed 10th April, 1818, and for other purposes, reported a new bill of the same title; which was read the first and second times, and committed to a committee of the whole house on the state of the union.

Mr. Fuller, from the committee on naval affairs, to which was referred the message of the president, upon the subject of piracy, reported "A bill authorizing an additional naval force for the suppression of piracy;" which bill was read the first and second time, and committed to the committee of the whole house on the state of the union.

Mr. Hemphill, from the committee appointed on that part of the president's message which relates to the Cumberland road, reported a bill for the preservation and repair of the Cumberland road; which bill was read the first and second time, and committed to a committee of the whole house to-morrow.

Mr. Hemphill, from the same committee, also reported a bill making appropriations for the Cumberland road; which was read the first and second time, and committed to a committee of the whole house to-morrow.

On motion of Mr. Tomlinson, it was

Resolved, That the committee of commerce be instructed to inquire into the expediency of repealing the act passed April 26th, 1816, by which was allowed an additional compensation of fifty per cent. to the compensations of certain officers of the customs therein named.

Mr. Chambers submitted for consideration the following resolution:

Resolved, That the committee on public lands be instructed to inquire into the expediency of extending the time allowed by law, for issuing and locating military land warrants, to officers and soldiers of the revolutionary army, with leave to report by bill or otherwise. [Agreed to.]

The house then resolved itself into a committee of the whole on the state of the union, Mr. Lathrop in the chair, and took up the following bill, being that reported this day by the committee on naval affairs.

An act authorizing an additional naval force for the suppression of piracy.

Sec. 1. Be it enacted by the senate and house of representatives of the United States of America in congress assembled, That the president of the United States be, and he hereby is, authorized to purchase or construct a sufficient number of vessels, in addition to those now employed, of such burthen and construction as he may deem necessary, and to fit, equip, and man the same for im-

mediate service, for the purpose of repressing piracy, and of affording effectual protection to the citizens and territories of the U. S. States in the Gulf of Mexico, and the seas and territories adjacent.

Sec. 2. *And be it further enacted*, That the sum of — dollars be appropriated to meet the expenditure to be incurred as aforesaid, and paid out of any money in the treasury not otherwise appropriated.

Mr. Fuller presented a letter from the secretary of the navy, embracing the details of force necessary to be provided, and an estimate of the cost thereof, which was read. In conformity to the suggestions contained in that document, and to the opinion of the naval committee, Mr. F. moved to fill the blank in the bill with the sum of 160,000 dollars—declining to urge any arguments in support of the measure itself, as not considering them necessary.

The motion to fill the blank was agreed to.

Mr. Floyd, of Va. then rose, and moved to strike out of the bill the words "purchase or," so as to require the vessels therein mentioned to be built, and not purchased. If we are to embark in schemes for spending the three or four millions in the treasury, Mr. F. said he should prefer that the objects of the expenditure should be such as were worthy of it. He was opposed to making this appropriation for purchasing the refuse commodities of unprofitable traders—these schooners and steam-boats, referred to in the letter of the secretary just read. The mania for steam-boats prevailed for a while, but the paper mania had ruined that, and there were abundance of steam-boats now to sell. If any vessels were to be procured, he wished they might be such as should be permanently useful, and not such as, according to the suggestion in the secretary's letter, might be sold after the cut throats of Matanzas were disposed of. Mr. F. assigned some grounds on which he placed little faith in estimates of the description now presented to the house. We have had an estimate of a building for a naval seminary, to cost ten thousand dollars, which is to be as large as one of the public offices, which cost the United States a hundred thousand dollars. Further, said he, we authorized at a former session an expenditure of ninety thousand dollars under an act for the suppression of the slave trade. It was distinctly understood in that committee that the object of this appropriation was that the vessels of the United States should be employed on the coast of Africa, and that the necessary expenditure caused by this employment should be defrayed out of this fund. And yet the chairman of the committee of ways and means, at the following session, wondered at the oversight of congress in not having appropriated money for this very purpose, and the executive gravely recommended to them to make an appropriation for it. Perhaps, after these vessels were done with that are now to be procured, they might be sold, for their having seen service, at an advantage, and put money into the treasury! He wished it might be so; for he said he was radically fond of money, and wished to keep these three millions in the treasury for this year, and for the next year, and for the next—and perhaps we might redeem our credit by the year 1825. He was not disposed to refuse any measure which might be necessary to put down the pirates. They ought to be destroyed, and he hoped they would. But, he said, we ought to build for ourselves, and not provide the requisite force by buying old steam-boats and unserviceable schooners.

Mr. Fuller said, if the question was between purchasing and building vessels, and the one could be done in any thing like the same time as the other, he should agree with the gentleman in preferring the construction to the purchase of them. Vessels constructed for the purpose might, however, be as

indifferent as any that could be purchased, and it was quite likely to be the case if they should be constructed in haste. If the gentleman meant to give six or eight or ten months' time to their construction, and, in the mean time, let the pirates have their way, (and such must be the consequence of the success of this motion), Mr. F. was wholly averse to it. If the vessels were to be built suddenly, of green timber, they would be worse than any that were likely to be purchased. The service for which they were intended would be a short one; and, if the vessels escaped out of it, they would be so little deteriorated as to sell for nearly or quite as much as they will have cost; and it might be an argument in favor of this plan, at least with the gentlemen who are very fond of economy, that no great loss would be sustained by the employment of this additional force. Mr. F. did not believe with Mr. Floyd in the existence, now or heretofore, of a steam boat mania. They were almost the only objects presenting an opportunity for the exercise of the spirit of speculation, on which there had not been a mania. He was convinced that, on this subject, not only this house, but the whole nation, was in possession of its sober senses, and that a beneficial use would be made of the agency of steam under this bill, which, however, would be passed to little purpose, if, before pursuing the pirates, time were taken to build vessels for the purpose.

Mr. Cooke thought a steam-boat unnecessary—three of them had already been purchased on the western waters, and these might be used, &c. A long and desultory debate followed, in which the speakers were Mr. Tomlinson, Mr. Smith of Md. Mr. Taylor of N. Y. Mr. Eustis, Mr. Fuller, Mr. Wright, Mr. Smyth, Mr. McLane, Mr. Cook, Mr. Cambreleng, Mr. Barbour, (speaker), Mr. Archer, Mr. Colden, Mr. Trimble, and Mr. Mallary—Mr. Floyd withdrew his original objection, being friendly to the design to suppress these piracies, but several other propositions were started; these all failed, and the bill, as originally introduced, was at last passed and ordered to be sent to the senate for concurrence. [Here is an evidence of the despatch of business not often met with in congress—a bill was introduced, amply discussed and passed the same day].

Monday, Dec. 16. Mr. Buchanan, of Pa. appeared and took his seat.

Mr. Colden presented a memorial of the chamber of commerce of the city of New York, praying that the bill now pending before this house, supplementary to, and to amend an act passed 20th April, 1818, entitled "an act supplementary to an act entitled 'an act to regulate the collection of duties on imports and tonnage, passed 2d March, 1799,'" and for other purposes," may be passed into a law during the present session of congress, which was referred to the committee of the whole on the state of the union.

Mr. C. also presented a petition of Stephen Rudd, of the city of New York, stating that he is the inventor of a machine for propelling vessels at sea in calms; which has been adopted for the service of the navy of the United States, and praying compensation for the use of his said invention; which petition was referred to the committee on naval affairs.

Mr. Johnson of Ky. presented a petition of John W. Simonton, on behalf of himself and others, of Thompson's island, in Florida, praying that the port of Key West may be placed on an equal footing with the ports in the United States, by being allowed the privilege of exporting foreign goods from that port for the benefit of drawback, whether

imported there directly, or from ports in the United States; which was referred to the committee of commerce.

Mr. Farrelly submitted the following motion for consideration:

Resolved, That the committee on naval affairs be instructed to inquire into the propriety of making some provision for the support of the widow and child of lieut. George Pierce, of the United States' navy, who lately died of the yellow fever, contracted on board of the frigate *Macedonian*, when in the service of his country.

Mr. Farrelly stated that he thought the case analogous to that of lieut. Allen. Lieut. Pierce did not die in battle, but lost his life in the same service, by the disease to which that service was liable, &c. The resolution was agreed to—57 to 54.

Mr. Cocke moved the following resolve:

Resolved, That the president of the United States be requested to cause to be laid before this house a statement shewing the amount expended for the current expenses of the ordnance department during the years 1817, 1818, 1819, 1820 and 1821, and as much as can be shewn, of said expenditures, for the year 1822; with the particular items for which the money was expended, the place where, and the persons to whom paid, what quantity of timber has been procured for gun carriages and caissons, its cost annually, and where deposited; the quantity of ordnance of every kind that has been procured during those years, or paid for; the sums expended in the purchase of sites for arsenals since the peace, the cost of the buildings erected thereon, and whether all those arsenals are necessary for the service of the United States.

The resolve, according to rule, lies on the table one day, before being acted upon.

On motion of Mr. Stewart, the subject of roads and canals was referred to a special committee.

A good deal of time was spent on the bill to provide for clothing the militia—at last, it was ordered to be engrossed for a third reading.

Mr. Bassett's bill concerning the disbursement of public money, after some amendments, was ordered to be engrossed and read a third time to-morrow. Adjourned.

Tuesday, Dec. 17. Mr. Colden presented a memorial of Lawrence Kearney, commander of the U. S. brig of war *Enterprise*, on behalf of himself, the officers and crew of said brig, stating that, in execution of the orders of the navy department, he captured, in the month of October, 1821, five piratical vessels, with two of their prizes; that he destroyed two of the piratical vessels, and, with the remaining three and the two prizes, arrived in the port of Charleston, in South Carolina, where the former were libelled for condemnation, and the latter for salvage; that the condemnation took place, and the claim for salvage was allowed; but that the costs of prosecution were so enormous as to amount to upwards of 700 dollars more than was received for the sale of the prizes; which deficiency he has been compelled to pay; and that the costs of prosecuting the claim for salvage amount to almost as much as the proceeds of said claim, leaving but a small balance to be distributed among his crew as prize money; that the merchandize libelled for salvage paid upwards of nine thousand dollars duties into the treasury, and praying that such part of said duties may be refunded as will make a reasonable compensation to himself, his officers and crew, for the risk and trouble they have had in the capture aforesaid.

Mr. Eustis, from the committee on military affairs, reported a bill to continue the present mode of supplying the army of the United States, (that is, the commissariat system)—which was twice read and committed.

The resolution submitted yesterday, by Mr. Cocke, about the ordnance expenditures, &c. after some remarks from him, was agreed to.

The bill to provide for clothing the militia of the United States when in actual service, was read a

third time, *passed*, and sent to the senate for concurrence.

The engrossed bill "concerning the disbursement of public moneys," (forbidding advances on contracts), was read a third time; and the question being "shall the bill pass?"

After some debate and opposition, the bill was *passed* by a large majority and sent to the senate.

Considerable time was spent, in committee of the whole, on the resolutions respecting the articles of cession and agreement between the United States and the state of Georgia, as affected by the Creek and Cherokee treaties—

Leave was granted to sit again.

The next bill in order was the bill to provide for the occupation of the mouth of the Columbia river, and the house went into committee of the whole on the subject, Mr. Campbell, of Ohio, in the chair.

The bill passed through—the blank for the number of miles square of land to be obtained of the Indians was fixed at 30—each actual settler at the head of a family, was to have 320 acres—the territory to be called "Oregon," was to be occupied by military force—the governor to receive 3000 dollars a year, &c. The bill being thus prepared, Mr. Floyd made a speech, abounding with facts, in favor of it—after which the committee rose and had leave to sit again, &c.

Wednesday, Dec. 18. Mr. Tattall presented the petition of John Miller, late a captain in the second regiment of U. S. Infantry, praying to be allowed, in the settlement of his accounts, for a large sum of money, of which he was robbed while in the discharge of his duties as district paymaster: which was also referred to the committee of ways and means.

Mr. Cook, from the select committee on the subject, reported, in part, a bill to authorize the laying out and opening a road from Wheeling, in the state of Virginia, to St. Louis, in the state of Missouri. [The bill proposes to appoint commissioners, &c. One of the provisions of it is, that the road shall pass by the seats of government of the states of Ohio, Indiana, and Illinois]. The bill was twice read and committed.

On motion of Mr. Hardin, of Ky, it was

Resolved, That a committee be appointed to inquire what further retrenchment can be made in the expenditures of government, without detriment to the public service.

Mr. J. S. Johnston, of Louisiana, offered the following resolution.

Resolved, That the secretary of state be requested to lay before this house so much of the letter of Mr. Prevost as relates to the establishment at the mouth of the Columbia river, and such information as he may have in his possession in relation to the arrangements made about the year 1814, by the north west company with the proprietors of a settlement made by citizens of the United States, at the mouth of Columbia river, by which that company became possessed of that settlement.

This resolution, from its nature, lies on the table one day of course.

After a variety of minor business which will sufficiently appear hereafter, the house, in committee of the whole, further considered the bill about the occupation of the mouth of the Columbia river—

After some debate, the bill was, on the motion of Mr. Floyd, postponed to the second Monday of next month.

Adjourned.

THURSDAY'S PROCEEDINGS—DEC. 19.

The senate was chiefly occupied this day in the consideration of private bills.

In the house of representatives. Mr. Alex. Smyth, from the joint library committee, made the following report:

The committee of the library, to whom was referred the letter of George W. Erving, esqr. accom-

panying a collection of medals, have had the same under consideration, and submit the following report:

Resolved, That the speaker be directed to express to George W. Erving, esqr. the thanks of this house, for the liberal donation of French and American medals, made by him to congress, for the use of the national library.

Unanimously agreed to.

The resolution offered yesterday by Mr. Johnston, of Lou. was taken up, amended and agreed to—as were several others.

The following resolution was offered by Mr. Little, and agreed to—

Resolved, That the committee on commerce be instructed to inquire into the expediency of so amending the laws as will more effectually afford relief to sick and disabled seamen.

The resolution was agreed to.

Mr. Trimble submitted for consideration the following resolution:

Resolved, That the president of the United States be requested to inform this house what appropriations will be required to enable him to fortify Thompson's island, usually called Key West; and whether a naval depot established at that island, protected by fortifications, will not afford facilities in defending the commerce of the States, and in clearing the Gulf of Mexico and the adjacent seas of pirates.

This resolution lies on the table one day, according to the rules.

Several bills, &c. passed through different stages, to be noticed hereafter.

CHRONICLE.

The U. S. schooner Spark, lieu. com. Perry, has arrived at Norfolk, from a cruise on the coast of Africa and in the West India seas, &c. She has been under sail 236 days, boarded 166 vessels, convoyed 30, and gave relief to 5 in actual distress, as well as captured several pirates—officers and crew in fine health.

New York. On the 1st of Dec. inst. there were 681 vessels in the port of New York—viz: 95 ships, 3 barques, 91 brigs, 166 schooners, 295 sloops, 17 fishing smacks, 7 steam boats, 3 ditto ferry boats, 8 horse ditto. Seven ships, one brig and several smaller vessels were building.

Considerable efforts are making in this city to raise 50,000 dollars to erect and complete a statue of Washington, worthy, in some degree, of the dignity and fame of the beloved of his country.

Virginia. James Pleasants, then being a senator of the United States, was lately elected governor of Virginia. For Mr. Pleasants 151; Mr. George Hay 37; and Mr. Linn Banks 18. Mr. Pleasants has accepted the appointment, and the national legislature loses one of the most amiable men that ever belonged to it.

Virginia and Kentucky. The convention entered into by Henry Clay, on the part of Kentucky, and Benjamin W. Leigh, on the part of Virginia, having been unconditionally ratified by the general assembly of Kentucky, an election was held on the 9th ult. for two commissioners to constitute a part of the board to be organized under the compact between the two states, and for two attorneys to represent the interests of that state before that tribunal.

Hugh L. White, of Tennessee, and Jacob Burnett, of Ohio, were unanimously elected commissioners.

Henry Clay and John Rowan were duly elected counsel for the state of Kentucky.

The board of commissioners is to meet at Washington city in the course of next month.

South Carolina. John L. Wilson has been elected governor of this state—for Mr. Wilson 83, Mr. Huger 73—blank votes 3. Gen. Bradley is elected lieutenant governor by a large majority.

Finances of Georgia.—On the 20th ult. the treasurer, Mr. Clayton, submitted his annual statement, from which it appears that there has been received from various sources, from the 4th of November, 1821, to the 31st of October, 1822, \$306,256 03½ Balance in the treasury, 4th Nov. 1821,

145,116 60½

\$451,572 63

168,097 13

Expenditures in the same time

Balance in treasury, 31st of Oct. 1822, 283,475 50

Book Luxuries.—An edition of the "British gallery of pictures," &c. has been published—price, in Russia binding, and colored in imitation of the originals, 151l. [over 671 dollars per volume.] A volume of the engravings of the collection of the marquis of Stafford, with remarks—price 178l 10s, finely colored, [nearly 800 dollars.]

Fisheries of lake Superior. The Detroit Gazette says, that fishing, upon an extensive scale, has been commenced on lake Superior. One man has already caught two hundred barrels. The editor of the Gazette proposes making oil from the sturgeon, which are found in immense numbers in those waters.

Penitentiaries. A statement of the affairs of the Georgia penitentiary, for the year ending 31st Oct. 1822, shews the receipts, stock on hand, &c. to amount to \$25,092 25—and the expenses and debts to the sum of 22,671 39; leaving a balance in favor of the institution of \$2,420 86.

The convicts received since the establishment of this institution, (1st Nov. 1817), to the 1st of Nov. 1822, was 207; out of this number during the same period, 39 were pardoned; 18 escaped; 12 died, and 48 discharged, making 117, leaving in the penitentiary, on the 1st day of November, 1822, 90 convicts. Of the 207 who were received in the institution, 36 were from Georgia; 37 from South Carolina; 37 from North Carolina; 25 from Virginia; 9 from New York; 8 from Pennsylvania; 6 from Maryland; 5 from New Jersey; 1 from Rhode Island; 3 from Connecticut; 4 from Massachusetts; 3 from the Canadas; 2 from Tennessee; 1 from New Hampshire; 18 from Ireland and Scotland; 4 from England; 2 from the West Indies; 1 from Holland; 3 from Spain; 1 from France, and 1 from New Orleans.

The penitentiary of Ohio, at a late date, contained 103 white male, nine colored do. and one white female—total 113. Of these, 26 were convicts for horse stealing; 25 for larceny; 16 for passing counterfeit money, 7 for counterfeiting notes; 7 for burglary; 5 for murder in the second degree; 6 for forgery; 4 for arson; 3 for rape; 3 for perjury; 2 for stabbing; 2 for incest—the rest for different crimes. The original states from whence they were from, were—25 from Pennsylvania; 1 from South Carolina; 23 from Virginia; 10 from New Jersey; 6 from Maryland; 1 from Ohio; 8 from New York; 4 from Massachusetts; 1 from Maine; 3 from Kentucky; 2 from Vermont; 7 from Connecticut; 2 from North Carolina; 1 from Tennessee; 1 from Delaware; 3 from England; 1 from France; 1 from Germany; 6 from Ireland; 1 from Scotland, and 2 from Canada. 4 not known.—113.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 17—Vol. XI.] BALTIMORE, DEC. 28, 1822. [No. 17—Vol. XXIII. WHOLE No. 589

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ We are of those who believe it wrong to commence the discussion of a subject, unless a disposition is manifested to regard what may be temperately urged on either side or party at issue—hence we have several times inserted addresses and essays in direct opposition to our own opinions about national industry, well knowing that those opinions do not constitute facts; and, being requested, we now publish the political part of Dr. Jones' address to the Nottoway Agricultural society: on which we may, respectfully, offer some remarks hereafter.

It is by this practice that, as we believe, the public reason is best consulted, and the people most powerfully induced to act on important subjects and occasions—hearing the argument and knowing the intent of both parties to any matter, they feel an interest in it which they could not otherwise have.

☞ An article in reply to one of the points assumed by the Boston "Merchant," in the last REGISTER, has been received—but too late for insertion in the present sheet.

THE DOCUMENTS. We commence a publication of the documents which accompanied the president's message, and shall select out of the volume such as we believe to be most needful to the public intelligence, it not being in our power to give the whole *in extenso*. In this proceeding, the president appears to have adopted a new plan, and one, (we think), that will prevent many calls for information on subjects of interest to the nation and its representatives, and save a great deal of time and trouble.

TREASURY REPORT. We present the annual treasury report—a paper which, after the message of the president, always claims the first attention of the nation. Its length has materially interfered with the proposed contents of this sheet and excluded many small articles.

THE PIRATES. Com. Porter is already in motion—he arrived in Baltimore on Thursday evening last week, and, as it were before any one knew that he was here, he had purchased and sent off to Norfolk, all the light vessels designed to act against the pirates—they sailed in less than 48 hours after he reached this city. The next day he proceeded to the north in search of a steam-boat.

UNITED STATES' BANK. Nicholas Biddle and John Connolly, of Philadelphia, H. Eckford, of New York, E. I. Dupont, of Delaware, and John McKim, of Baltimore, have been appointed directors of this bank, on the part of the government.

NEXT PRESIDENT. An unsuccessful attempt has been made, at a meeting of the legislature of Ohio, to nominate a person to be supported for the next presidency. It was decided by a majority of three votes, that it was inexpedient to go into any nomination, at that time.

NORTH CAROLINA. John Branch has been elected a senator of the United States, for six years from the 4th of March next, by a small majority, over

Montford Stokes, the present member. Six or seven ballots were had before a choice was made.

It is strangely intimated that the presidential election had something to do with this contest—perhaps not; for it has been said that the late election of a senator from Maryland had a relation to the presidency, which we do not believe—never having heard the fact suggested until we saw it in print in the Washington Gazette. But the truth is, that the presidential election is running into things that have no rightful connection with it, out of which much evil will probably be produced.

SILK GOODS. A writer in a Boston paper, urging the levy of a tax or duty of 25 per cent. *ad valorem* on silk goods, instead of the present rate of 15 per cent. says that such goods to the value of \$1,318,237, have been imported at that place alone, in the three first quarters of the present year. The duty thereon at 15 per cent. is 231,441 dollars—at 25, it would amount to 385,736; difference 154,295. It is not probable that this advance on the duty would affect the consumption at all; and it would have some little tendency to equalize the amount of the taxes paid by the rich and the poor, many articles that have become necessities through custom, are taxed at the rate of *fifty per cent. ad. val.*

COUNTERFEIT MARKS. The Delaware Watchman has an article which notices the importation of a quantity of goods ticketed thus—"Indigo blues, manufactured by J. Steele & Co. Philadelphia." But the colors are fugitive, and the goods of an inferior quality. The name of J. G. Oliver, of Philadelphia, is given in the importer. This is right—public opinion will do all else that is necessary. A record should be kept of all persons who thus injure the reputation of our manufacturers to defend the people—and the list should be repeatedly published, that their names may become as familiar to every one, as that of Arnold was in the revolution.

CIDER. The Portsmouth Journal states that the society of Shakers in Canterbury, N. H. have, within three weeks, sold ten barrels of cider in Boston, for which they received one hundred dollars in cash. Good common cider has been selling in the same town for one dollar a barrel. Such is the difference between good and very good!

☞ Here is shewn the difference between *production* and *perfection*. The expense of carrying the indifferent cider to market is as great as that of the good—if that cost is 25 cents per barrel, it acts upon the value of the former so as to reduce it one fourth; but the reduction of the value of the latter is only a fortieth part. It is thus that thousands of articles, the produce of our country, are of little value for the want of a home market, or such a degree of improvement as will support the cost of transport to a distant one.

COMMITTEES. The Albany Daily Advertiser remarks, that though the state of New York has thirty members in congress, not one of them is a presiding member of a standing committee in either branch of the national legislature.

VIRGINIA. Able writers in the Richmond "Enquirer," are calling the attention of the people to the question "what shall be done for the university?" and inviting the legislature to place its hopes in the western counties. These are matters of great interest to the people of that state. They are drained of many tens of thousands of dollars every year for the education of their youth, yet they have a "literary fund" that might, and ought, to raise up every useful establishment within themselves. They have a back country equal to any in the world—but that country has always been neglected, and the freemen who inhabit it are denied an equality of rights with those of the eastern section of the commonwealth.

The reason of these things I attempted to shew in the 21st volume of this work, page 201. My remarks on that occasion, I know, offended the *pride* of many Virginians, though they acknowledged the *justice* of all that I said—and *so pride acted against truth*. The fact is, as I then said, that, "unhappily, the splendid talents of the accomplished and learned men which she abounds, have been more applied to discuss and settle abstract questions of right, than to accomplish positive benefits." An able and eloquent report about the university or concerning the literary fund, has been more regarded than the *practical operation* of the university or *careful application* of that fund. It is just exactly the difference between *talking* and *acting*. How are the resources of the small state of Connecticut to be compared with those of Virginia?—yet Yale college has 400 students, and the youths of Virginia are sent from home to be educated! The capital of her literary fund is not less than 1,250,000 dollars—what might not be done with this if her legislators and people were resolved to *do*? Her fund for internal improvements amounts to more than a million and a half—but what internal improvement has been made?—though year after year they have been *surveying* and *reporting*. They have been longer engaged in those things than New York will require to mix the waters of the *Lake of the Woods* with those of the *Atlantic*, and cast those of the *Hudson* into the *St. Lawrence*. Is not this true?—and yet look at the present state of the literary institutions of New York; they are, in every way, of a superior character, from horn-book learning to the most exalted branches of science, all raised up and supported by *practical* legislation. And, if we compare Virginia with the eastern states, how stands the case in respect to those matters? How vast the difference between application and exposition—practice and theory!

If the western parts of Virginia had been regarded as they ought; if they had received *common justice* from the hands of the legislature of the state, we agree with the writer in the "Enquirer," that she might have had "thirty representatives in congress instead of her present humble number of twenty-two." The table published in the last volume of this work, page 346, should rouse the exertion and provoke the liberality of the legislators of Virginia. Let us make an abstract of that table as applicable to the case:

	Representatives in congress,				
	1790	1800	1810	1820	1830
Virginia	19	22	23	22	19
New York	10	17	27	34	40
Pennsylvania	13	18	23	26	26
Ohio	0	1	6	14	19

What a decline of power!—One great cause of this, (though there is a far greater cause), is the

jealousy of the little barren eastern countries at the progress of the large and luxuriant west—this jealousy has effect through the operation of the wretched provision in the constitution of the state, which may be said to give legislative representation to a second growth of dwarf *pine trees* in one section as to a growth of *freemen* in the other, adopting the British *Old Sarum* principle and abusing every rule of equity and honesty known amongst men. All attempts to raise up the west, by giving to the people those rights which our fathers took up the sword to obtain in 1776, have been resisted by the little eastern counties, feeling power and forgetting right, though one in the west, in regard to population, wealth and physical force, ought to have the weight of half a score of them. Some of these almost deserted counties have hardly 200 free white males in them above the age of 26 years—yet they send *two* members to the legislature—how prolific must they be in *statesmen*! The greatest county in the state has no more than two delegates. Now look again at New York—her back counties, that were a wilderness a little while ago, now contain almost as many people as the whole state of Virginia, her slaves included! But New York has legislated as well for the western as for the southern counties, and the whole have prospered under the *equal* care of a liberal and enlightened policy. Virginia must look to the west—she must do *justice* to the west, and release the people thereof from their political bondage, by which she will obtain *practical* men in her councils—or be content to take a very inferior rank in the grade of the states, *in every respect*.

The people of Virginia are proud—but their pride *does* nothing. It is *mere pride*—that will acknowledge the truth of the preceding remarks, and yet be displeased because they are made—though it is evident that a desire for the prosperity of the state, (and nothing else), could have produced them. It is our wish, for the good of the whole, that every state may be the rival of its neighbor in the performance of whatever tends to ameliorate or improve the condition of society—and we have been so long accustomed to regard the *whole* republic, that no possible advancement in these things in any part of it, can excite our jealousy or fail to meet with our approbation, such as it is, to the full extent of its worth.

As has before been observed, much that applies to Virginia in her fraud on the representative principle, applies to Maryland—the city of Baltimore, that pays at least *one fourth* of the taxes and contains a fourth of all the efficient population of the state, has a *fortieth* part of the legislative power of the state of Maryland. How can we laugh, that, because Old Sarum, which is now without a house or a resident inhabitant, sends two members to the British parliament, while London with more than a million of people sends only four, or Manchester, with 120,000, sends none? The consequence is, that every census shews a reduction of political power in Maryland. Freemen will seek the place where liberty has her home and *equality* prevails.

FROM A KENTUCKY CORRESPONDENT.

"The meaning of words" and "application of principles" begin to be understood. When I commenced my profession of the law in this country in 1813, with an extensive circuit, almost every man who was able to buy for money or on credit, was clothed with European fabrics: now scarcely one in an hundred of the most respectable citizens wears an imported coat. Sheep are in high de-

mand, and weavers' shuttles and reeds are to be seen in the streets of all our towns, in the hands of farmers and others that have purchased them for their own use. Several factories for carding and spinning cotton are building. The people begin to think seriously on the subject of domestic manufactures, and have a great disposition to encourage them. [Here a compliment is paid to the Register which we shall not repeat]. The young Pennsylvanian, (see page 118), shews correct thinking—such pens ought not to remain unemployed. The blessings of thousands of intelligent and thinking freemen accompany you and your correspondents in your labors. European notions, as given in their books on political economy, must be corrected and the public mind set right, before our workshops can be brought across the Atlantic. The great reform is going on—we look to you as an instrument to keep it in progression. What has become of our old friend, the author of the "meaning of words," &c. He was doing much good—and, for the sake of his country, I hope that he will resume his pen. I cannot see how any reasonable and unbiased mind can resist his evidences and arguments," &c.

ANOTHER KENTUCKY CORRESPONDENT

writes as follows—which, as the subject-matter is so great a rarity, we cannot refuse to lay it before our readers, for their consideration. This gentleman thinks justly and has acted nobly. Would that all else might believe that money was necessary to the carrying on of our business!

Mr. Niles. I enclose you a \$5 note of the Valley bank of Virginia, in advance for my next year's Register. Times are getting a little better with us. This note only cost me \$10 of our currency, and there is a probability that exchange will be much lower. It would be to my interest to wait and buy at a lower rate to send to you; but I know you must have cash or quit your business, and it is better for each customer to lose a little than for you to lose thousands."

SOUTH CAROLINA. The following petition, of one of the Catawba tribe of Indians, was lately presented to the legislature of this state.

"To the councils of South Carolina.

I am one of the lingering embers of an almost extinguished race—our graves will soon be our habitations. I am one of the few stalks that still remain in the field, when the tempest of the revolution is past. I fought against the British for your sake—the British have disappeared, and you are free: yet, from me, the British took nothing—nor have I gained any thing by their defeat. I pursue the deer for my subsistence—the deer are disappearing, and I must starve. God ordained me for the forest, and my habitation is the shade—but the strength of my arm decays, and my feet fail in the chase. The hand which fought for your liberty, is now open for your relief. In my youth, I bled in battle that you might be independent—let not my heart, in my old age, bleed for the want of your commiseration.

(Signed)

PETER HARRIS."

KENTUCKY. *Richmond, Nov. 22.* The letter we published to-day, from our correspondent on the state road, is quite gratifying to all who feel a deep interest in the prosperity and credit of Kentucky. The best law-givers we have ever had to relieve the country of the heavy debt she has been long groaning under, are those whose industry rears our stock and carries it to market. There is no mis-

take in this kind of relief—it requires no Commonwealth's bank as its handmaid. It's all a real transaction.—*Chronicle.*

TO THE EDITOR.

Cumberland Ford, Ky. Nov. 14, 1822.

SIR: At this time, there have passed this place, 45,421 live hogs for market—say they are worth 7 dollars each, which, in my opinion, is a moderate calculation, amounts to 317,947 dollars. 5,446 horses and mules, at an average of 80 dollars each, makes 435,680 dollars. Only 236 stall fed steers, as yet, say worth 40 dollars each, makes 9,440. Two or three thousand hogs, I hear, are on the road to be added to the above list; which, when arrived, you shall have the correct amount at the year's end. If only 2,000 comes, they will add to the amount 14,000 dollars more, making in all, (at the lowest calculation of mine), 777,067 in good money. I trust the time is not very distant, when Kentucky will restore her credit, and there will be no more relief measures prayed for, nor stop laws passed; which have so much disgraced one of the most prolific and rich states in the union, whose sons are bold and enterprising, beyond any, I believe, in the world.

FOREIGN NEWS. We had a number of items prepared for this paper, but must omit all except those inserted below:

Turkey. The Turks are again driven out of the Morea, after a series of engagements in which they lost great numbers of men. In one of those battles, near Corinth, they left 3,000 men on the field, among whom was Ali Pacha, formerly grand vizier—the pacha of Thessaly was made prisoner. After this the Turks separated, and several of their corps were destroyed—all killed or made prisoners. In Candia, also, the barbarians have been defeated, and were shut up in the fortresses. Another naval victory, gained by the Greeks, is mentioned.

A French paper reports that Alexander had declared his intention of changing his system in regard to the Turks, and of employing "force to compel the barbarous government of Constantinople to make concessions."

The war with Persia still goes on—a Turkish army, of 50,000 men, had been defeated near Treblison, which had been entered by the Persians, who are also said to be in possession of Mesopotamia, Armenia, &c. It was reported that they were advancing on Anatolia, and that many Turkish towns on the Black sea had revolted. Other places in Syria, as well as Aleppo, have greatly suffered by earthquakes—in that unfortunate city only one habitable house is said to be left standing!—20,000 persons were killed and an "immense number wounded." Two thousand houses, generally small, were lately destroyed by fire at Constantinople. The plague has appeared in many parts of the empire. The Russian army, that was falling back from the Turkish frontier, had received orders to maintain its position. An extraordinary divan was lately held at Constantinople, at which notes were agreed upon to the ministers of Austria, France and Prussia, explaining the reasons of the sultan for refusing a renewal of the ancient relations of the Porte with Russia. The Wechabites are again in arms, and lately destroyed and carried off a whole caravan, proceeding from Mecca to Medina, killing from 5 to 10,000 Turks. "In the midst of the disasters," says a letter from Constantinople, the Turks crowd their mosques and predict the dissolution of their empire." May their predictions be realized!

Colombia. A despatch from Morales, dated the 4th Nov. states that, on the preceding day, near

Garabuya, he had had a battle with a body of the enemy, consisting of 1200 infantry and 100 cavalry; and that, after a hard fight, the "rebels" were surrounded and completely defeated, leaving 1,000 muskets, 800 prisoners with 36 officers, 100 dead and 160 wounded, two colors and all their stores in his hands.

Agricultural Societies of Virginia.

The following is an extract from one of the papers directed to be published by the delegation of the United Agricultural societies of Virginia, at the meeting held at Petersburg, on the 7th instant. It is from an address delivered to the Nottoway society, by its president, *Dr. James Jones*, on the 20th November, 1822.

It has fallen to my lot, (and I deem it a fortunate incident in my life), to present to the national legislature one of the first memorials which that body has ever received in defence of the rights of agriculture, in opposition to the monopolizing claims and pretensions of the manufacturing interest of the United States. The firm and dignified tone of remonstrance, with the forcible appeal to the good sense and justice of congress, contained in those memorials, I doubt not, had the effect, in a great degree, to arrest that body in one of the most baneful systems of policy that ever disgraced any nation, professing to be governed by impartial laws, based upon the principle of equal rights; a system of policy which would lay prostrate at the feet of the most insignificant and inconsiderable interest in this nation, the whole of that course of administration by which we have grown to renown, to wealth, to prosperity, and to a dignified rank among the nations of the earth; a policy which would drive this nation from a course of measures pointed out to her by the unerring hand of nature, which has stamped upon our geographical chart, in indelible characters, "that agriculture and commerce should be the principal occupations of our people." This foul spirit of monopoly, of local and partial legislation, so frequently and so fatally insinuating itself into our legislatures, whether in the form of protecting duties, to encourage domestic manufactures, or of privileged chartered incorporations, of whatever description, remains yet to be exercised from its unhallowed hold upon our institutions, by the all-pervading and all controuling influence of public opinion. This influence, embodied in a new form, and derived from a source hitherto silent and overlooked, has already begun the work of reformation in this behalf. The agricultural interest, throughout the United States, have, at length, discovered in what way it has happened that all other interests have mounted over their heads into the favor and patronage of government; to their manifest injury and gross injustice. They too have indulged the feelings and obeyed the impulses of the "*Esprit de Corps*:"—They have followed the example set them by the commercial and manufacturing interest, by embodying themselves, and, as a distinct separate interest, have addressed the government in language manly, independent, and disinterested. "We ask you, 'say they' "for no favor, no exclusive privilege, no charter of incorporation. We call to your recollection the instruments by which our independence was achieved. It was the yeomanry of the country, nurtured and cherished in the lap of rural occupation: From their bosoms the republican spirit was transfused into our political institutions. Monopoly, privileged orders, chartered rights were the bane of that

government from which we seceded. We threw it off on account of the mischiefs produced by that course of policy in the mother country.—Our government was made *by the whole for the whole*, and no exclusive privilege can be conferred, but as a reward of services rendered to the public. *Let us all alone.* We demand only protection in our persons and in our property—leave private individual enterprise to its own guidance and direction, equally untrammelled by the officious interference of government in the form of restriction or of a pretended fostering care. Pursue your legislative career under the constitutional prescriptions of a definite and specified power, not by the unwarranted inferences of a loose construction of general phrases. Give to all an equal participation in the blessings of free government, by adopting a system of general policy; not by *local*, partial legislation, for a particular interest, with the false insidious pretence that *all may* indirectly come in for a share of the benefit. It is to this latter principle we trace that policy which, in all ages, has led to the establishment of despotic governments, and, from the practical operations of which, particularly in the hierarchical institutions of England, we were driven into successful opposition to that power."

With sentiments like these, addressed to the understandings and justice of congress, we will not doubt of success in reclaiming that body to a course of correct and legitimate and constitutional policy, at least so long as that body shall be composed of a majority of those who represent the laboring and productive interest of the country, in contradistinction from speculative interest.

The great mischiefs attendant upon all the governments that have ever existed, have arisen from an officious, meddling, disposition, in those who govern, to regulate every thing in society. This, however, should not be considered extraordinary in those governments which were made exclusively for the benefit of the few privileged orders; because without such universal and constant superintendance and regulation, they could not wield and manage the machinery to the purposes intended by its formation. Hence has originated in despotisms the bold assumption of a power, not only to regulate the high and important concerns of conscience, in the form of establishments of religion and test acts, but, also, the more insignificant and petty concerns of private domestic economy. But, in the United States, where we have proceeded upon a belief that man is competent to self government, it would be natural to suppose that political power should abstain from all interference with the affairs of society, except so far as to exercise a salutary parental power of protecting the weak against the strong, and restraining and coercing the vicious, the refractory and the violent, at the same time allowing all to pursue their own happiness in their own way, strictly regarding the rights of their neighbors. Whatever political measure shall detract either from the profits or the respectability of any avocation in society, must necessarily do it an injury; nor is it less true that, whenever government shall lend its fostering aid to any particular branch of industry, it will, therefore, give it an impulse which may force it ahead of others, not so favored. For many centuries preceding the revolution in France, the royal favour and patronage were exclusively bestowed upon the church and the army; and, by amalgamating these two interests with the hereditary nobility of the country, it was not surprising that all honor, as well as emolument, attached exclusively to them. The consequence

was that agriculture, commerce and manufactures, being viewed and treated merely as subservient and auxiliary to the promotion and aggrandizement of these other leading interests, became disreputable and unprofitable, and were pursued exclusively by those only, who, in the fashionable slang of the times, were termed the *ignoble*, the *vulgar*, the *rabble*, &c.

The history of other governments in Europe, which, like France, have had a feudal origin, would furnish instances equally apposite to our purpose, which is to shew the all pervading influence of political power in directing the destinies of man in this world. Nor is it important, as to results, whether such power is exercised under the title of a republic, or of an aristocracy, or of a monarchy. The effects will always be the same, if the causes are of the same nature. It matters not, as to results, whether the great laboring interest is ground to dust by the operation of a tythe to the churchmen, under the specious and imposing pretext of supporting the hallowed institutions of religion, or whether it be done by the operation of chartered privileges, in the more dangerous, (because less intelligible and more insidious,) form of protecting duties for the support of manufactures, and charters to banking institutions. He must, indeed, be a short-sighted politician, and unacquainted with the plainest and most obvious principles of political economy, who does not perceive that all such monopolies derive their support from the class of productive labor. Equivalents, it is true, are promised: It is said that labor shall find in those chartered bodies a surer and more convenient market for its productions; but, with these false pretences in their mouths, the politicians of Great Britain have gone on, for more than a century, in the practice of a system whose monstrous effects begin now to develop themselves in the bankruptcy and ruin of nearly a moiety of their laboring population.

Whilst, then, gentlemen, as a society, we keep steadily in view the important subject of agricultural improvements, by communicating the results of experiments and of practice, and by a mutual interchange of opinions, let us equally guard and protect the rights of agriculture, by joining with our brethren throughout the United States whenever the occasion shall call for it, in a mild, but firm and manly, tone of remonstrance against every branch of our government policy, which shall be found to operate injuriously to agriculture, and, of course, ought to be considered as partial, unjust and oppressive.

Religious Liberty.

LEGISLATURE OF MARYLAND.

House of Delegates, Dec. 18, 1822.

Mr. Thomas Kennedy delivered the following report:

The committee appointed to bring in a bill entitled, an act to extend to the citizens of Maryland, the same civil rights and religious privileges that are enjoyed under "the constitution of the United States," respectfully ask leave to report,

That they have taken the subject into their serious consideration, and it is a subject of far greater importance than may at the first glance be imagined; it is a subject in which the honor, the character,

the interest and the future prosperity of the state, are all deeply interested.

Religious liberty does not exist in Maryland; for religious liberty cannot be said to exist under any government, where men are not permitted to worship God in the manner most agreeable to the dictates of their own consciences, or what is the same thing, denied the enjoyment of civil rights, and rendered incapable of holding any office civil, military or judicial, except they acknowledge their belief in a particular system of religion.

The constitution of Maryland was framed at an early period of the revolution—when ancient prejudices had a strong influence over the mind, when it was considered as going far in the work of reformation, to declare that there should be no established church in the state, and it certainly required great exertions to effectuate that object, for in Maryland as well as in other states, even the christian sects, Catholics particularly, had formerly been proscribed, and we may at once see how strongly these prejudices influenced the minds of the wise and worthy framers of our constitution, when in one breath they declare, "that it is the duty of every man to worship God in such a manner as he thinks most acceptable to him." And in the next, that it was only professing christians who were entitled to protection in their religious liberty.*

When the revolutionary war was at an end, and the people of the United States had time to give the principles of government, and of civil and religious liberty a fair and a full examination; when the immortal Washington and his illustrious coepeers, selected from every state in the union, met in convention to frame a constitution, which was ratified by the people of the United States, they unanimously declared, that "no religious test shall ever be required as a qualification of any office or public trust, under the United States." Such a declaration, at such a time, and from such an assemblage, comprising a greater share of talents, virtue, and patriotism, than our own, or perhaps any other country will ever again exhibit, calls loudly for our admiration. They broke the last link of religious tyranny, and put an end to the dominion of superstition—the free, sovereign and independent people of the United States, echoed and re-echoed the noble sentiment—"No religious test shall ever be required"—even Maryland joined in the general acclamations, and hailed the glad tidings with joy; and we find the names of a McHenry, a Jenifer, and a Carroll, attached to that instrument under which the United States have risen to glory and greatness.

The only state constitution which imposes a restriction in any degree similar to that of Maryland, is that of Massachusetts, which was also adopted during the revolutionary war, and even that is only applicable to a few offices. The state of Maine, which formed part of Massachusetts, and was received into the union a few years past, has made it a part of her constitution, that no religious test shall be required as a qualification for office. The adjoining state of Delaware was the first to follow the footsteps of Washington in this respect, and to use the same words in her constitution as in that of the United States. Tennessee, Ohio, Illinois and Alabama have all incorporated the same declaration in theirs—and all the other states have recognized religious liberty as a "natural unalienable

*Declaration of rights, article 33.

right" (1)—"as an inestimable privilege" (2)—as a right to be enjoyed "without discrimination or preference" (3)—"to cause no abridgment of civil rights" (4)—that "no human authority can in any case whatever, control or interfere with the rights of conscience" (5)—"that no person shall be denied the enjoyment of any civil right merely on account of his religion" (7)—and wherever they have not recognized the most perfect freedom in religious matters, they do not require as a qualification for office any other test than a simple oath.

Maryland, therefore, stands alone in this respect; and your committee ask—and may ask with confidence, why should Maryland continue to retain this feature in her constitution, since it has been virtually abolished by the constitution of the United States, and is at once inconsistent with the dictates of wisdom and common sense, and is not sanctioned by any authority either human or divine.—We have no right to interfere with the religious opinions of others—we have no right to prescribe those who differ from us on religious subjects—we are answerable in this respect, to our great creator, to God, not to man.

Shall that religion which was announced to humble shepherds on the plains of Bethlehem as the "glad tidings of great joy"—as proclaiming "on earth peace, good will towards men"—that religion which commands us to "love our neighbors as ourselves"—shall that religion be used any longer in Maryland as a political instrument to deprive worthy and virtuous citizens of their just rights. (3) Principles are eternal, and whether we prescribe from office ten, or ten thousand citizens, it amounts to the same thing, and is equally contrary to the law of God which is written in every heart, and directly at variance with that precept which proceeded from the lips of our divine Master "whatsoever ye would that men should do unto you, do ye even so to them;" and who so contravenes this sacred command, may call himself a christian, may be a recorded christian, but he is not a christian indeed and in truth; he is not a real disciple of the meek and lowly Jesus who declared that his "kingdom was not of this world."

Situated as Maryland is, in the midst of large and powerful states, who have universally thrown open the doors of office and honor to all whose talents and merit entitle them to the confidence of the people; it becomes our interest, as well as our duty, to let the world know that in Maryland as well as in the other states, civil and religious liberty is enjoyed in its fullest extent. Nor can we hope for prosperity as a state, until we do justice to all men.

Your committee, will only further call the attention of the house to the inconsistency of retaining in the constitution a provision which is at war with the principles of civil and religious liberty, and remark that the same citizens whom the people cannot chose to represent them in the state legislature may be by the same people elected to congress, and may also be elected to the presidential chair; that he who cannot be a justice of the peace in Maryland, may be chief justice of the U. States;

(1) Constitutions of North Carolina and New Hampshire.

(2) New Jersey.

(3) New York and South Carolina.

(4) Vermont.

(5) Constitution of Pennsylvania.

(6) Georgia.

(7) Kentucky and Mississippi.

and he who cannot be an ensign in the militia may command the army of the nation; such inconsistency is too glaring—too ridiculous to be longer tolerated by a free people.

This question has been presented to the consideration of former legislatures in another form—It is now presented to your consideration on what your committee think is the true ground; on the ground of extending to all the citizens of Maryland without distinction of sect or name, the same civil rights and religious privileges that are enjoyed within the constitution of the United States, and surely no danger can arise from our following the example of our sister states—or from incorporating into the constitution of Maryland the language used in the constitution of the United States, we, therefore, ask leave to report a bill to that effect. All which is respectfully submitted.

JOSHUA COCKEY, jr. clerk.

AN ACT

To extend to the citizens of Maryland the same civil rights and religious privileges that are enjoyed under the constitution of the U. States.

Whereas, By the declaration of rights of this state, it is declared "that it is the duty of every man to worship God in such manner as he thinks most acceptable to him."

And Whereas, By the constitution of the United States, which is the supreme law of the land, it is declared that, "no religious test shall be required as a qualification to any office or public trust under the U. States."

And whereas, certain citizens of Maryland are deprived of civil rights, and rendered incapable of holding offices on account of their religious principles; *therefore,*

Section 1. *Be it enacted by the general assembly of Maryland,* That no religious test shall ever be required as a qualification to any office or public trust under this state of Maryland.

Sec. 2. *And be it enacted,* That all such parts of the declaration of rights and constitution and form of government of this state as are inconsistent with the provisions of this act, be, and the same are hereby abrogated, annulled and made void.

Sec. 3. *And be it enacted,* That if this act shall be confirmed by the general assembly of Maryland, after the next election of delegates, in the first session after such new election, as the constitution and form of government directs, in such case, this act, and the alterations of the constitution therein contained, shall constitute and be valid as a part of the said constitution and form of government, to all intents and purposes, any thing therein contained, to the contrary notwithstanding.

The following resolutions were introduced into the senate of Maryland, by Mr. Chambers, and have since passed both branches of the legislature *unanimously.*

Resolutions approving the measures of the general government.

Whereas, the state of Maryland is in a peculiar degree dependent on that aid and protection, to secure which, was the great object of the confederation of these United States, and especially is exposed from its vast extent of navigable waters, and the geographical position of the city of Baltimore, to the attacks of a maritime enemy, who, as has been demonstrated by the events of the late war can harass our citizens, plunder and destroy our property, pos-

ness themselves of our territory, prevent our necessary transactions, so far as a large proportion of our citizens are affected. And whereas, exemption from such danger to the lives and exposure of the fortunes of our citizens, can only be secured to us, by the liberal application of those means which the good people of these United States, have placed at the disposal of the government of the union, for the common defence and general welfare; and it is not only the soundest policy, but the best dictate of prudent economy, to use the period when a general peace and the ordinary resources of our country afford opportunity to the government to provide for the defects in our system, which a state of war has disclosed, and to be prepared against a recurrence of injuries, which may be repeated at a moment, impossible by any political calculation to be anticipated.

And whereas, it is at all times the duty of the citizens of a free government, to deliberate on the policy and measures of those to whom they have confided the administration of their political concerns, and on occasions when contrariety of opinion is entertained on matters vitally affecting their best interests with candor and firmness.

We the members of the senate, and house of delegates, acting as the representatives of the people of Maryland, and influenced by a belief, that it is highly expedient in the present situation of our political concerns to announce the opinions and wishes of the people of this state, in relation to such measures of the government of the United States, as have in view the better security of our country against the approaches of a hostile maritime force do therefore

Resolve, That we cordially approve the efforts of the general government, to foster our navy and to cause a progressive increase of this means of defence, which experience has taught us to regard as necessary to our protection and to the maintenance of that high and dignified character which has exalted our country amongst the nations of the earth.—That we cordially approve of every effort of the general government to extend and perfect a system of defence by fortifications highly useful in other places, and essentially necessary to the waters of the Chesapeake and its tributary rivers.

And whereas, from the relative position of this state, and those vast sources of successful enterprise and wealth, the rivers Potomac and Susquehanna, as well as from the relation of our largest city, to an extensive district of inland country. It is of the utmost importance to our citizens that a system of internal improvement shall be vigorously pursued: Therefore, we do further resolve, That we will highly approve and zealously co operate with the general government in the adoption of such measures as will afford to our country the facilities and advantages which nature has placed in our control, and which a wise policy should induce us to improve.

Resolved, That a copy of the foregoing preamble and resolutions be forwarded by the executive to each of our senators and representatives in congress, with a request that they will co-operate in the promotion of the measures which in the sense of the legislature are best calculated for the interests of the union at large, and especially of this state.

Decree of Morales.

We have already noticed the following decree of the royal commander in Colombia, but shall repeat its insertion to give a nearer view of the

subject—It is dated at Maracaybo, Sept. 15, 1822, and signed *Francisco Tomas Morales*.

DECREE.

Art. 1. All foreigners taken or found in the ranks—in any branch of administration of the enemy—with printing presses, or acting as editors of newspapers, of works relative to the present war, to the scenes of action in rebellious America, or the Roman Catholic religion, or in any manner offensive to the nation, its government or subjects, shall suffer death, after a short military trial, and their properties forfeited to the public chest.

Art. 2. Foreigners who may be found, although not in the exercise or under the circumstances aforesaid, but having introduced themselves into the country during its occupation by the enemy, shall be doomed to serve in the public works for three years, and their properties forfeited to the national treasury.

Art. 3. Those foreigners, who have been found in this capital and its environs, who, by an effect of national forbearance, have been exempted from the fate they deserved, both as regards their persons and properties, owing to their political and religious conduct having been hitherto unknown, shall quit all Spanish territory in the precise period of eight days, with their baggage, and other property which may have been given over to them; and they are warned not to return again, under pain of death, unless it be under the conditions and circumstances prescribed for the carrying on a legitimate commerce in the ports of Venezuela.

PROTEST OF CAPT. SPENCE, U. S. NAVY.

From the commander of the United States ship *Cyane*, and senior naval officer in the West Indies, to his excellency *Francis Tomas Morales*, general in chief of the Spanish royal forces on the Main.

SIR—I have been presented with your excellency's public decree of the 15th Sept. last—a declaration of the most despotic and sanguinary nature, against all foreigners, whose love of glory, commercial pursuit, and lawful occupations, may enlist them in the service, or detain them in the territories possessed by the enemies of Spain recognized by the United States as independent governments.

A manifesto so extraordinary, so hostile to the rights of nations, so disparaging and prejudicial to the character of the era in which we live, cannot fail to excite astonishment, and to attract the attention of all who wish to preserve civilization from the encroachments of barbarism, or have rights to protect from military misrule and invasion.

As commander in chief of the royal forces, ineffectually employed in Venezuela, you are accountable to your king only for your proceedings against his subjects. But, for acts of rapacity, cruelty and oppression exercised against foreigners—for their illegal imprisonment—for their seizure and the confiscation of their property—for their degradation under the aforesaid proclamation, you are answerable to the world, because, by such acts of hostility, you wage an indiscriminate war against all governments, and, by trampling on the sacred rights of man, place at defiance nations who hold the laws and humane usages of civilized society as rules of action.

War, under the mildest aspect, is a calamity to be deplored; but when to its inseparable horrors are superadded cruelties, perpetrated without necessity, and men, pursuing peaceable avocations,

are included in the most sanguinary proscriptions, without reference or respect to the nation which owes them protection, it becomes a demoniac scourge, a hydra curse, which policy and humanity are equally interested in arresting.

Against such a course of violence as you have proclaimed to the world, in behalf of my countrymen, I protest, and do hereby premonish your excellency, that to enforce the penalty, punishment and ignominy, threatened in your manifesto, against the citizens of the United States, who are at present, or who may hereafter be found by your excellency in the independent territories to which you refer, prosecuting their commercial concerns under the guarantee of laws and usages, which no christian soldier, fighting either for glory, his monarch, or his country, can violate with impunity.—The soldier, whose sword is stained with the blood of unoffending men, superfluously shed, wins not the wreath of the warrior, but the reputation of a recreant.

The blockade declared by general Morillo, to which your excellency alludes, exists not, neither has it, at any anterior period, been enforced in conformity to rules prescribed by the accepted decisions of the highest authorities, rendered valid by time and general acquiescence. It, therefore, has hitherto been a mere pretext for the interception of our lawful trade—for the seizure and detention of our property—for the abuse and maltreatment of our mariners—for purposes of plunder and outrage—all of which evils it has produced.

For spoiliations committed on the commerce of the United States, under the sanction of that paper interdiction, restitution will be required—and to the dignity which characterizes the government of the republic is Spain indebted for that magnanimous forbearance from reprisal, justifiable on every principle of self-preservation and defence.

The citizens of the U. States, from the peaceful and neutral course prescribed by their government, are justly entitled to the respect of the belligerent parties, and if their enterprize induces them to reap the advantages of a lawful trade within territories alternately in the occupancy of either, they are there as citizens of a truly neutral power—a power that has at no time afforded aid, or exercised influence of any kind, in the present unhappy contest.

Between the United States and the sovereign of Spain there exists a treaty, recently made, and consecrated by the most formal observances, the acknowledged basis of which is good will and a cordial spirit of conciliation. How, then, in the face of this pledge of concord, do you, sir, undertake to threaten with forfeitures and ignominious penalties—with slavery and death—the citizens of a republic, who have a right to expect, under this token of friendship, safety and exemption from molestation.

Wrongs and injuries that may accrue to citizens of the union from your unlawful decrees, whether visited on their persons or property, will be numbered with the catalogue of outrages already sustained, and for which Spain must be answerable. Against all such wrongs and injuries I protest, and do hereby solemnly call upon your excellency to abstain from the adoption of measures fraught with most evil consequences—measures coercing a spirit of retaliation and reaction, the end and issue of which may be conceived, foreseen and prevented by your excellency. And I invite your excellency, as a lover of the character and honor of Spain, of

the amity and good faith so happily preserved between her and the republic, to annul all such restrictions as lead to a violation of the laws of nations—as infringe the just rights of citizens of the United States—as deprive them of the benefits of peace, and tend to augment to an alarming amount the account which hereafter must inevitably be balanced between the two nations.

I have the honor to be, &c.

ROBERT TREAT SPENCE,

Senior naval officer of the United States
in the West Indies.

Curacao, 15th Nov. 1822.

PROTEST OF THE GOVERNOR OF CURRACOA.

The rear admiral, governor of Curacao and its dependencies, to his excellency the general in chief of the Spanish army on the Main.

I had the honor, on the 4th inst. to receive your excellency's letter of the 18th October, together with an authentic copy of your excellency's decree, dated 15th September, ult. relative to the treatment which foreigners have to expect from your excellency, as expressed in the said decree, if they are found in the service or in the territories in possession of the enemies of the Spanish nation on the Main.

I will not enter into the measures of policy and safety which your excellency may think proper to adopt, wherever you have lawful authority, with regard to the rights of nations and warfare. I feel myself, however, in consequence of your excellency's said decree, obliged to oppose those measures which may be made applicable to, or exercised on Dutch subjects, who may be found engaged in lawful trade, or in the peaceable prosecution of their profession.

I refer myself to what I have already stated with regard to the blockade, namely: I will not acknowledge any other than such as is declared in conformity to the laws of nations, and duly enforced.

With respect to the threatened proceedings, I most solemnly deny the right your excellency presumes to have, of putting them in force against peaceable Dutchmen, subjects of the kingdom of the Netherlands, who may be found trafficking, or in the prosecution of their business or interests, which are not prohibited by laws and customs generally admitted and acknowledged by subjects of neutral powers, who do not interfere in the disputes or wars of others.

I thus protest against all and every act of violence or ill treatment, and against all injustice exercised by your excellency on Dutch subjects, either in their persons or property, for which, and for the consequences thereof, I hold your excellency responsible, whilst I reserve to myself all such measures and steps, which your excellency's proceedings may render necessary for the maintenance of the dignity and rights of the Dutch nation, and for the protection of the persons and properties of her subjects.

I remain, with all consideration.

2. To make known the above-mentioned letter, with its annexed document, and our answer thereto, as given in the foregoing article, by publication in the usual manner, and through the medium of the Curacao Gazette, in order that the said decree of the general in chief of the Spanish army on the Main, and our answer thereto, may come to the knowledge of all Dutch subjects.

The said governor,

GANTZ'LAAR.

Curacao, 5th November, 1822.

Annual Treasury Report.

In obedience to the direction of the "act supplementary to the act to establish the treasury department," the secretary of the treasury respectfully submits the following report:

1. Of the public revenue and expenditure, of the years 1821 and 1822.

The nett revenue which accrued from duties on imports and tonnage, during the year 1821, amounted to **Dolls. 15,898,434 42**

The actual receipts in the treasury, during the year 1821, including the loan of 5,000,000 dollars, amounted to **Dolls. 19,573,703 72**

Viz.	
Customs	13,004,447 15
Public lands, exclusive of Mississippi stock	1,212,966 40
Arrears of internal duties and direct tax	356,290 11
Dividend on stock in the Bank of the United States, and other incidental receipts	
Loan authorized by act of the 3d March, 1821, including a premium of 264,763 70 dolls, gained on the same	5,000,000 00
Making, with the balances in the treasury, on the 1st of January, 1821, of	Dolls. 1,198,461 21

An aggregate of **Dolls. 20,772,164 93**
The expenditures during the year 1821 amounted to **Dolls. 19,090,572 69**

to	
Civil, diplomatic and miscellaneous	2,241,871 54
Military service, including fortifications, ordnance, Indian department, revolutionary and military pensions, arming the militia, and arrearages prior to the 1st January, 1817	5,162,364 47
Naval service, including the gradual increase of the navy	3,319,243 06
Public debt	8,367,093 62

Leaving a balance in the treasury, on the 1st of Jan. 1822, of **Dolls. 1,661,592 24**

The actual receipts in the treasury, during the three first quarters of the year 1822, are estimated to have amounted to **Dolls. 14,745,408 75.**

Viz.	
Customs	12,648,933 15
Public lands, exclusive of Mississippi stock	1,298,484 56
Arrears of internal duties and direct tax, dividend on stock in the bank, & other incidental receipts	391,871 76
Balances of appropriations for the war and navy departments, returned to the treasury and carried to the surplus fund	406,119 28

The actual receipts into the treasury, during the 4th quarter, are estimated at **5,000,000 00**

Making the total estimated receipts into the treasury, during the year 1822 **19,745,408 75**

And, with the balance in the treasury on the 1st of January, 1822, forming an aggregate of **Dolls. 21,427,000 99**

The expenditures during the three first quarters of the year 1822, are estimated to have amounted to **12,278,653 32**

Viz.	
Civil, diplomatic and miscellaneous	1,536,434 24
Military service, including fortifications, ordnance, Indian department, revolutionary and military pensions, arming the militia, and arrearages prior to 1st January, 1817	4,930,210 63
Naval service, including the gradual increase of the navy	1,538,952 88
Public debt	4,273,055 52

The expenditures during the fourth quarter, including the redemption of 2,600,000 dollars of six per cent. stock of 1820, are estimated at **Dolls. 6,000,000 00**

Making the total estimated expenditure for the year 1822 **Dolls. 18,278,653 32**

And leaving in the treasury on the 1st of January, 1823, an estimated balance of **Dolls. 3,148,347 67**

After deducting from this sum certain balances of appropriations, amounting to \$1,232,212 11, which are necessary to effect the objects for which they were severally made, or have been deducted from the estimates, for the service of the ensuing year, a balance of \$1,916,135 56, remains; which, with the receipts into the treasury during the year 1823, constitutes the means for defraying the current service of that year.

2. Of the public debt.

The funded debt which was contracted before the year 1812, and which was unredeemed on the 1st October, 1821, amounted to **Dolls. 17,833,746 84**

And that which was contracted subsequently to the 1st of January, 1812, and was unredeemed on the 1st of October, 1821, amounted to **75,852,458 18**

Making the total amount of funded debt unredeemed on the 1st of October, 1821, **93,686,205 02**

In the fourth quarter of that year there was issued treasury note six per cent. stock, to the amount of **390 43**

Making an aggregate of	93,686,595 42
Viz.—Reimbursements of six per cent. deferred stock,	Dolls. 257,180 60
Redemption of Louisiana stock	8,588 15

Reducing the funded debt, on the 1st Jan. 1822, to **93,423,830 67**
From that day to the 1st of October last, there was issued three per cent. stock to the amount of **143 02**

Making an aggregate of **93,423,999 69**
Viz.—Reimbursement of six per cent.

deferred stock	300,980 02
Redemption of six per cent stock of 1796,	80,000 00

Reducing the funded debt, on 1st. Oct. 1822, to **93,043,019 67**
It is estimated that, in the 4th quarter of the present year there will be paid **2,265,588 07**

Viz.—Reimbursement of six per cent. deferred stock	265,588 07
Redemption of six per cent. st'k of 1820,	2,000,000 00

Which will reduce the funded debt, unredeemed on the 1st of January, 1823, to **90,777,431 60**

The amount of Treasury notes outstanding on the 1st of October, 1822, is estimated at **27,437 00**
And the amount of Mississippi stock, unredeemed on that day at **26,735 94**

3. Of the estimate of the public revenue and expenditure for the year 1823.

The gross amount of duties on imports and tonnage which accrued from the 1st of January, to the 30th of September last, both days included, is estimated at \$19,500,000 00, and that of the whole year at \$23,000,000 00.

It is estimated that the amount of debentures, issued during the same period, exceeds the amount issued during the corresponding period of the year 1821, by \$86,000, and that the amount of debentures outstanding, on the 30th of September last, chargeable upon the revenue of 1823 is \$234,000 more than was, on the same day in 1821, chargeable upon the revenue of 1822.

It is estimated the value of domestic articles exported from the United States in the year ending on the 30th of September last, has amounted to 49,874,079 00 dollars, and that foreign articles, exported during the same period, have amounted to \$22,286,292.

As the receipts from the customs in the year 1823 depend, 1st, upon the amount of duty bonds which become due within that year, after deducting the expenses of collection, and the amount of debentures chargeable upon them: and, 2d, upon such portion of the duties secured in the 1st and 2d quarters of that year as are payable within the year, it is manifest that an increase in the amount of debentures chargeable upon the revenue of the year 1823, or a diminution of the importations of foreign merchandise during the two first quarters of that year, must necessarily diminish the receipts into the treasury. As debentures can be issued at

any time within twelve months after importation, chargeable upon bonds given for the duties upon such importation, it is impossible to foresee the amount which may be chargeable upon the bonds that are payable during the year 1823. The facts, however, which have been stated, justify the conclusion, that the amount of debentures which will be issued and charged upon the revenue of 1823, will considerably exceed the amount which was chargeable upon that of 1822. From the same facts, it is also presumed that the importations of the two first quarters of the year 1823 will be less than the corresponding quarters of the present year.

Giving weight to all the facts connected with the subject, the receipts for the year 1823 may be estimated at

Viz.			\$21,100,000
Customs	Dolls.	12,000,000	00
Public lands		1,600,000	00
Bank dividends		350,000	00
Arrears of internal duties and direct tax, and incidental receipts		150,000	00
To which is to be added the sum of			1,916,135 56

Remaining in the treasury after satisfying the balances of appropriations chargeable upon the revenue of 1822, which makes the entire means of the year 1823 amount to

The expenditure of the year 1823, is estimated at

Viz.			23,016,135 56
Civil, diplomatic and miscellaneous		1,599,317	35
Military service, including fortifications, ordnance, Indian department, revolutionary and military pensions, arming the militia, and arrangements prior to the 1st of January, 1817		5,134,292	75
Naval service, including the gradual increase of the navy		2,723,937	12
Public debt		5,602,000	00

Which, being deducted from the above sum, will leave in the treasury, on the 1st day of January, 1824, after satisfying the current demands of the year 1823, a sum estimated at

Dolls. 7,956,538 34

Although the facts already disclosed justify the conclusion that the importations of the present year exceed the value of domestic articles exported during the year, yet there are no means of ascertaining the extent of that excess. If the custom house documents were to be considered conclusive evidence upon this subject, it would be apparent that the nation has, through the whole period of its existence, imported more in value than it has exported. But the fact is incontestable that the United States have enjoyed a more uninterrupted prosperity, and have increased their capital to a greater relative extent, than any of the nations with whom they have maintained commercial intercourse.

To shew that the custom-house documents cannot be considered conclusive evidence in this case, it is proper to observe—1st, That the value of articles paying duties ad valorem, imported into the United States, is ascertained by adding to the invoice value 20 per cent. if from beyond the Cape of Good Hope, and 10 per cent. from all other places; whilst the value of domestic articles exported is ascertained at the port of shipment without any such addition. 2d. The greatest portion of the importations and exportations are made in vessels of the United States. 3d. The capital employed in the trade of the North West Coast and the Pacific Ocean consists almost exclusively of the labor and enterprize of those engaged in it. Foreign articles, the proceeds of those enterprizes, imported into the United States, are, therefore, only equivalent to the labor and enterprize by which they were procured. 4th. The value of domestic articles exported is more imperfectly ascertained than of foreign articles imported; because it has not been considered necessary to resort to the

same sanctions to enforce a compliance with the regulations which have been prescribed for that purpose. To ascertain the relative value of imports and exports, it is necessary—1st. That the same additions should be made to the invoice value of the latter as are required by law to be made to the former. 2d. The freight of domestic articles exported in American vessels should be added to their value, after deducting from it the freight of foreign articles imported in foreign vessels. 3d. The value of foreign articles imported in vessels engaged in the trade of the North West Coast and Pacific Ocean, the proceeds of the labor and enterprize of those by whom they are navigated, should be added to the domestic exports. 4th. It is impossible to ascertain what addition should be made to the value of the domestic exports, on account of the omission of the exporters to state correctly the value of articles exported by them; but, after making a liberal allowance for foreign articles illicitly introduced, or inaccurately invoiced, it is believed that a considerable addition should be made.

If, then, to the amount of domestic articles exported during the year ending on the 30th of September last, already estimated at 49,874,079, dolls. the additions should be made which the preceding facts and considerations appear to authorize, the value of our domestic exports during that period may be estimated at nearly \$60,000,000.

Although no calculation has been completed, shewing the average rate of duty upon the value of foreign articles imported into the U. States, it is presumed that an importation of 60,000,000 dolls. of foreign merchandise will not produce a less revenue than \$17,000,000. As the receipts from the customs during the year 1823 have been estimated at \$19,000,000, it is probable that the receipts from the same source, in 1824, which will depend upon the importations of 1823, will not exceed 15,000,000. Under the most unfavorable circumstances, it is believed that the receipts of that year will be sufficient to discharge all demands upon the treasury which may be authorized by law.

If the current appropriations for the year 1825 shall be equal to those required by the estimates for the ensuing year, the expenditure of that year may be estimated at

Dolls. 28,253,997 22	
Viz.—current appropriations	Dolls. 8,578,722 22
Permanent appropriations for arming the militia, and Indian annuities	373,875 00
Gradual increase of the navy	500,000 00
Public debt, including balances unapplied in 1823 and 1824, amounting to	Dolls. 18,796,000 00

The means of the treasury to meet this extraordinary expenditure, consist,

1st. Of the balance which may be in the treasury on the 1st of January of that year, estimated at

Dolls. 8,000,000

And, 2d. Of the receipts of that year,

19,000,000	
Viz.—Customs	Dolls. 17,000,000
Public lands	1,500,000
Bank dividends	350,000
Incidental receipts	50,000
Making together, an aggregate of	27,000,000 00

And leaving a deficit of about

Dolls 1,253,997 00

In the estimate, the receipts and expenditures of the year 1824 are estimated to be nearly equal. It is probable however, that the receipts may exceed, to a small extent, the expenditures; but there it at least an equal probability that the receipts for the year 1825 are estimated too high. In the year 1826, the expenditure, assuming the current appropriations to be the same as in the year 1823, may be estimated at 19,457,000 dollars, and the receipts at 19,000,000. As the appropriation of 500,000 dollars for the gradual increase of the navy expires

in that year, the annual expenditure may, for subsequent years, be estimated at 10,000,000 dollars, unless it shall be considered expedient to make further provision for the increase of that essential means of national defence.

It is probable that the annual revenue will be equal to that sum. To provide for the estimated deficit of the years 1825 and 1826, as well as to meet any extraordinary demands upon the treasury, which unforeseen exigencies may require, it is believed to be expedient that the revenue should be increased. This may be conveniently effected by a judicious revision of the tariff; which, while it will not prove onerous to the consumer, will simplify the labors of the officers of the revenue. At present, articles composed of wool, cotton, flax, and hemp, pay different rates of duty. Difficulties frequently occur in determining the duties to which such articles are subject. The provision in the tariff, that the duty upon articles composed of various materials shall be regulated by the material of chief value of which it is composed, is productive of frequent embarrassment and much inconvenience. It is, therefore, respectfully submitted, that all articles composed of wool, cotton, flax, hemp, or silk, or of which any of these materials is a component part, be subject to a duty of twenty-five per cent ad valorem.

The duties upon glass and paper, upon iron and lead, and upon all articles composed of the two latter materials, may also be increased with a view to the augmentation of the revenue. In all these cases, except articles composed of silk, it is probable that the effect of the proposed augmentation of duties, will gradually lead to an ample supply of those articles from our domestic manufactories. It is, however, presumed, that the revenue will continue to be augmented by the proposed alterations in the tariff until the public debt shall have been redeemed; after which the public expenditure, in time of peace, will be diminished to the extent of the sinking fund, which is, at present, 10,000,000 dollars. But if, contrary to present anticipations, the proposed augmentation of duties should, before the public debt be redeemed, produce a diminution of the revenue arising from the importation of those articles, a corresponding, if not a greater, augmentation may be confidently expected upon other articles imported into the United States. This supposition rests upon the two-fold conviction, that foreign articles, nearly equal to the value of the domestic exports, will be imported and consumed, and that the substitution of particular classes of domestic articles for those of foreign nations not only does not necessarily diminish the value of domestic exports, but usually tends to increase that value.

The duties upon various other articles, not in any degree connected with our domestic industry, may, likewise, be increased with a view to the augmentation of the public revenue. If the existing tariff shall, during the present session of congress, be judiciously revised for the purpose of augmenting the revenue, it is confidently believed that it will not only be amply sufficient to defray all the demands upon the treasury at present authorized by law, but that there will remain an annual surplus, subject to such disposition, for the promotion of the public welfare, as the wisdom of congress may direct.

Under the act of the 20th April last, authorizing the exchange of certain portions of the public debt for five per cent. stock, 56,704 77 dollars only have been exchanged. The increased demand for ca-

pital, for the prosecution of commercial enterprizes during the present year, and rise in the rate of interest, consequent upon that demand, which were not anticipated at the time that the measure was proposed, have prevented its execution.—Existing circumstances do not authorize the conclusion, that a measure of this nature will be more successful during the next year. If the price of the public debt, in 1825, should be as high as it is at present, any portion of it, redeemable at the pleasure of the government, which should be undervalued in that and subsequent years, after the application of the sinking fund, to that object, may be advantageously exchanged for stock redeemable at such periods as to give full operation to the sinking fund. This may be effected, either directly by an exchange of stock, or indirectly by authorizing a loan to the amount of stock annually redeemable beyond the amount of the sinking fund applicable to that object.

All which is respectfully submitted.

WILLIAM H. CRAWFORD.

Public Documents

Accompanying the message of the president of the United States to congress, December 3, 1822.

THE ARMY.

Department of war, November 27, 1822.

SIR: In compliance with your directions, I herewith transmit statements from the major general of the army, and the several subordinate branches of this department, which give in detail the information requested.

In order to render the military organization more complete, the major general, after the late reduction of the army, under the act of 2d March, 1821, was stationed at the seat of government, thus bringing the military administration of the army, as well as its pecuniary, through the several subordinate branches, under the immediate inspection and control of the government. There is reason to believe that the arrangement will be highly useful.

The report of the major general, herewith transmitted, marked A, exhibits the present organization, strength, and distribution of the army. In the distribution, both in relation to the positions occupied, and the number at each post, regard has been had to the protection of important points, and the discipline of the troops. The artillery, with the exception of four companies on the lakes, and the one at West Point, has been assigned to the garrisoning of the various fortresses along the line of the sea coast, and the important ordnance depots in the interior; while the infantry, with the exception of a regiment at Pensola, has been stationed at the important points in the interior, principally on the upper lakes, and the western frontier.

No change has been made in the course of the year in the distribution of troops, with the exception of transferring one company of artillery from Ferdinandina to Charleston harbor, one battalion of the 2d regiment of infantry from Sackett's Harbor to the Sault of St. Marie, at the outlet of lake Superior, and the whole of the 7th regiment from fort Scott and bay of St. Louis to the Arkansas and Red rivers, to each of which one battalion has been assigned.

The inspector generals, (one of whom has been assigned to the artillery and the other to the infantry) have, in the performance of their duty, visited all of the posts and military depots in the course

of the year, with the exception of the posts on the Arkansaw and Red rivers, the inspection of which was prevented by the inspector being severely attacked by a fever while on his tour of inspection. In addition to the inspection by the inspector general, the generals commanding the departments have inspected, or are in the course of inspection, of the whole of their respective commands.

The various articles which constitute the supplies of the army, have been, during the year, regularly issued, and of a good quality.

The report of the chief of engineers, marked B, exhibits the progress which has been made in the course of the year in the erection of fortifications, also the operation of the board of engineers, and the corps of topographical engineers, and the present condition of the military academy; by reference to which it will appear that the important duties assigned to that department have been performed in a very satisfactory manner.

The report of the colonel of ordnance, marked C, contains an exhibit of the operations in that branch of service during the last year, comprising the operations of the armories, the ordnance depots, and the measures which have been taken in relation to the lead mines, the superintendance of which has recently been annexed to the ordnance department. The report satisfactorily shows, that this important department is gradually attaining a state of high perfection. The rigid inspection of the various ordnance depots, which has lately been made the duty of the inspector of artillery, will, it is believed, greatly contribute to improve this important branch of service.

The reports of the quartermaster general, paymaster general, surgeon general, and the commissary generals of provision and of purchases, herewith transmitted, marked D, E, F, G, and H, exhibit a very satisfactory view of the condition of their respective departments. On the 4th of March, 1817, there remained unsettled on the books of the 2d and 5d auditors, of the sums disbursed through this department previous to that date, \$45,111,123 01, which, on the 30th of September last, was reduced to \$4,689,292 95. Since the former period, there has been disbursed, through this department, \$40,837,772, 85, of which, on the 30th of September last, there remained to be settled 6,290,110 60, dollars, the greater part of which consist of accounts in the ordinary and due course of settlement. Of the sums advanced in the year ending the 30th of September, 1821, to the officers under the control of this department, but \$30,657 48 remained to be accounted for at the commencement of this quarter.

By reference to the statements in the reports of the subordinate branches of this department, already referred to, it will appear that there was drawn from the treasury, in the three first quarters of this year, on account of the army, military academy, fortifications and ordnance, 1,930,464 59, dolls. and that accounts, amounting to 1,737,072 30 dollars, have been rendered for settlement, leaving but \$193,392 29 to be rendered, all, or nearly all, of which, it is believed, will be accounted for before the termination of the quarter; and there are reasonable grounds to believe that the disbursements of the year will be made without any loss to the government. Nearly the whole amount which is outstanding of the disbursements of the three first quarters of the year has been prevented from being accounted for, either by the sickness of the disbursing agents, or the very great dis-

ance of the posts at which the disbursements have been made.

Great reductions have been made in the amount of expenditures in every branch of service, as will appear by reference to the reports already referred to, which contain comparative statements of the present and former rates of expenditure.

All which is respectfully submitted.

J. C. CALHOUN.

HEAD-QUARTERS OF THE ARMY,
Washington, 25th Nov. 1822.

SIR: In compliance with your instructions of the 6th instant, I have the honor to enclose the returns and statements following, viz:

- A. A statement of the organization of the army, agreeably to the act of congress of the 2d March, 1821.
- B. A return of the strength of the army, from the last regimental and other returns received at head quarters.
- C. A statement of the distribution of the troops in the eastern department.
- D. A similar statement of the troops in the western department.
- E. A statement showing the number of men enlisted since the first of January last, the amount of moneys advanced since that date for the purposes of recruiting, and the amount to which recruiting accounts have been rendered for settlement.

In connection with the document last mentioned, I have the honor to state that, of \$12,256 35 advanced for the recruiting service, the sum of 3,500 dollars was remitted, on the 22d of May last, to the most remote posts on the lakes, the upper Mississippi, Missouri, &c. for the re-enlistment of men whose terms of service were expiring, and sufficient time has not yet elapsed for the receipt of accounts of disbursements. The remainder of the advance has been made, since the date above mentioned, to commanding officers of regiments and to the superintendents of rendezvous, and from the promptitude with which these officers have rendered their accounts, there is every reason to believe that nearly the whole amount advanced will be accounted for by the 31st of December next.

In reply to that part of your communication directing a report of the inspections which have been made since the first of January, I have the honor to state that brevet major general Scott inspected in person, in the months of January, February, March, and April, all the posts on the Atlantic frontier south of New-York.

Brevet Major General Gaines, during about the same time, inspected the posts of St. Marks and Pensacola, and Baton Rouge, with those on the Red River and Arkansaw, and was, at the date of the last advices from him, on a tour of inspection embracing the posts on the Missouri and the upper Mississippi.

Colonel Wool commenced a tour of inspection in June last, to embrace the troops and posts upon the northern, western, and southern lines of frontier. After passing from Green Bay, on lake Michigan, to the falls of St. Anthony, on the upper Mississippi, and from thence to Council Bluffs, he descended the Missouri, on his way to the Red River, and was left by the last advices convalescent of a dangerous illness, contracted by exposure in his efforts to accomplish the laborious services which had been assigned to him.

Colonel Archer has been engaged, since the 1st of January, in an inspection of the posts of Baton

Rouge, Pensacola, Mobile, and all the posts within the eastern department, garrisoned by the artillery. This inspection has also embraced the ordnance, ordnance stores, &c. at those posts, as well as at the different arsenals.

In this branch of service, so vital to the mechanical discipline and moral efficiency of the army, I owe it, in justice to those concerned in its performance, to say, that every possible exertion has been made to accomplish it effectually.

The commanding officers of the regiments of artillery within the eastern department, were directed, by major general Scott, in the month of August, to inspect their respective regiments; but no report has yet been received as to the execution of the order.

I have the honor to be, sir, very respectfully, your obedient servant, JACOB BROWN.

Hon. J. C. Calhoun, secretary of war.

[Here follows document A, as above described: the aggregates are,

Commissioned officers,	541
Non commissioned officers and privates	5642

Grand aggregate, 6183

B exhibits the latest return of the actual force; the aggregate of which is 5211.

C and D exhibit the distribution of force in the eastern and western departments, under the command of major general Winfield Scott and major general E. P. Gaines.

E. shews the enlistments made in the army since January 1, 1822—total 641.

Next come the following letters:

WAR DEPARTMENT, PENSION OFFICE,

November 3, 1822.

Sir: In conformity with your order of yesterday I have the honor of informing you, that the following sums have been transmitted to the agents for paying the United States' pensioners during the present year:

Revolutionary pensioners	\$1,353,308 58
Invalid pensioners	303,094 24
Half pay, or commutation	12,689 30

I have the honor to be, very respectfully, your obedient servant, J. L. EDWARDS.

Hon. J. C. Calhoun, secretary of war.

B.

ENGINEER DEPARTMENT, November 14, 1822.

Sir: I have the honor to submit the following report in compliance with your order of the 6th inst. viz: "You will report, as early as practicable, the application of the appropriation of last session for fortifications to the several works, and the expenditure necessary for their completion. The works remaining to be commenced according to the plans of the board of engineers; the estimate of the board for those works; the progress of the board of engineers in its labors; comprehending the operations of the topographical engineers, from the commencement of this year; the condition of the military academy, including its present number, and the number which graduated last year; the amount drawn for the three first quarters of this year, under the several heads of appropriation; and the amount of accounts rendered and settled in the same period."

So much of the information above required, as can be exhibited in tables, will be found in those accompanying, marked A, B, and C; and the residue, relating to the board of engineers, the topographical engineers, and the military academy, is stated herewith.

Table A exhibits the sums appropriated at the last session, and their application to the several fortifications; and, also, those necessary for their completion. Of those appropriated, amounting to 350 000 dollars, the proportion applied in the three first quarters of the year is shewn to have been 221,154 dollars and 23 cents, and that applicable to the fourth quarter to be 128,845 dollars and 67 cents. These amounts indicate that the appropriations have been in a regular course of application.

Table B exhibits the works remaining to be commenced, according to the plans of the board of engineers, and the estimates of the board for them arranged into three classes, in the order of their efficiency to meet the earliest probable emergency.

Table C exhibits 274,665 dollars and 43 cents, as the aggregate of amounts drawn for the three first quarters of this year, under the several heads of appropriation; deducting from which 62,484 dollars and 84 cents, the amount unexpended in the hands of agents, at the expiration of the third quarter, there will remain to be accounted for, \$212,180 and 59 cents. The accounts rendered for settlement, as shewn in the table, amount to \$190,477 and 50 cents, which, being deducted from the last stated sum, will reduce the amount to be accounted for to 21,703 dollars and 5 cents, and this sum, with the exception of a trivial amount for contingent disbursements, not yet completed, will be covered by the accounts of captain De Russy for disbursements at Mobile Point, the rendition of which has been delayed in consequence of the sickness of captain De Russy.

The labors of the board of engineers commenced this year on the Gulf of Mexico, where, at the close of last year, they had arrived, on the completion of an examination of the Ohio and Mississippi rivers, with a view to the improvement of their navigation, from the Falls of Ohio to the Balize. Having inspected and reported upon the condition of the Rigolets; re-examined the localities of Mobile Bay, and reported the result, which confirmed and strengthened their previous reports on the propriety of fortifying the east end of Dauphine Island, and reconnoitered Pensacola and its vicinity, they returned to New York, and shortly after repaired to this place. On their return to New York, they commenced immediately their report on the improvement of the navigation of the Ohio and Mississippi rivers, and, at the same time, resumed the prosecution of their projects for the defence of Narraganset and Boston Bays. In June, besides the foregoing, they inspected and reported on the condition of Fort Diamond, and attended the examination at the military academy. In July, they commenced the projects for the defence of Salem and Marblehead; in August completed those for Narraganset roads, and in September completed their report, &c. respecting the Ohio and Mississippi rivers: The projects for Boston, Salem, and Marblehead, being still under prosecution at the close of the month.

The operations of the topographical engineers embraced surveys at Mobile and Pensacola Bays, and the contiguous coast; at Savannah river and at the coast adjoining; at Fort Royal and St. Helena sounds, Charleston, Georgetown, and their vicinities, in South Carolina; at Ocracoke inlet, harbor and bar, in North Carolina; at Marblehead and Salem, in Massachusetts; at Kennebeck and Sheepscut rivers, and Mount Desart Bay and Island, in Maine; also, roads in Michigan, and the lead mines on the Upper Mississippi; besides plotting and drawings relating to the surveys just mentioned.

and others previously made, and the preparation for publication of an account of an expedition on the western waters.

The number of cadets belonging to the military academy amounted, on the 31st ult. to 248, and the number which graduated last year to 40. The condition of that institution is now, in every respect, more flourishing than it has been at any other period heretofore. This is manifest, equally, in the extent and value of attainment, as in subordination and cheerful observance of police regulations, and may be attributed, in a great measure, to the operation of the excellent rules and regulations adopted last year and now in force, together with the zeal and ability with which the duties of the superintendent and officers of the academy have been performed. The additional studies in the higher branches of mathematics and philosophy, although not long since introduced, have now become familiar, and are prosecuted with a zeal worthy of their importance.

Respectfully submitted,

ALEXANDER MACOMB,
Major gen. brv. chief engineer.

Hon. J. C. Calhoun, Secretary of War.

The tables A. B. & C.

A.—[ABSTRACT.]

The appropriations were—

Fort Delaware	:	:	:	:	:	20,000
Washington	:	:	:	:	:	25,000
Monroe	:	:	:	:	:	75,000
Calhoun	:	:	:	:	:	50,000
At Mobile Point, (collecting materials)						50,000
Rigolets and Chef Menteur	:	:	:	:	:	100,000
Opposite St. Philip, on the Mississippi, (collecting materials)						30,000
						<hr/> 350,000

On these works \$221,154 53 cents, had been expended in the three first quarters of the year, leaving \$128,845 67, for those of the last quarter. In no case had the appropriation been exceeded, and, as to two or three items, the balance in hand was large, for the reason that the appropriation could not be profitably expended, on account of the season, &c. as is set forth.

The following shews the balance of the appropriations remaining on hand and the amount estimated as necessary to complete the works—that on hand to be deducted from the whole sum given—

	On hand.	To complete the works.		
Fort Delaware	:	:	6,600 00	57,899 80
Washington	:	:	6,181 14	46,077 98
Monroe	:	:	14,821 37	175,560 86
Calhoun	:	:	12,600 00	530,554 32
At Mobile Point	:	:	30,000 00	547,065 94
Rigolets, &c.	:	:	29,443 16	362,189 53
Opposite St. Philip	:	:	29,200 00	392,127 40
			<hr/> 128,845 67	<hr/> 2,111,475 83

Table B.—[given in full.]

Exhibiting the works remaining to be commenced, according to the plan of the board of engineers, and the estimates of the board for those works:

First class, to be commenced as soon as possible.

Designation of the works.	Estimate of the Board.		
Fort St. Philip, Louisiana	:	:	77,810 79
Battery at Bayou Bienvenue	:	:	94,582 30
Fort at Soller's point flats, (Patapsco river)	:	:	673,205 44
Fort at New Utrecht Point Narrows, New-York harbor	:	:	371,970 60

Redoubt in advance of ditto	:	:	53,024 72
Fort Tompkins, New-York	:	:	420,826 14
Redoubt in advance of ditto	:	:	65,162 44
Fort at Wilkin's point, New-York			456,845 51
Fort at Throg's point, New York			471,181 53
Fort at Brenton's point, Rhode Island			575,514 10
Redoubt in advance of ditto			154,652 42
Fort at Dumping's point, Rhode Island			579,946 56
Fort at Rose Island, Rhode Island			82,411 74
Dyke across west passage Narraganset Roads			<hr/> 205,000 00

Dolls. 4,282,134 30

Second class, to be commenced at a later period.

Designation of the works.	Estimate of the Board.
Fort at Grand Terre, Louisiana,	264,517 52
Tower at Pass au Heron, Mobile bay	16,677 41
Tower at Bayou Dupre	16,677 41
Fort at Hawkins' point, Patapsco river	244,337 14
Fort at St. Mary's, Potomac river	205,602 33
Fort opposite Pea Patch, Del. river,	347,257 71
Fort at Middle Ground, outer harbor, New York	1,681,411 66
Fort at East Bank, do.	1,681,411 66
Fort Hale, Connecticut,	31,815 83
Fort Wooster, do.	27,793 34
Fort Trumbull, do.	77,445 21
Fort Griswold, do.	132,230 41

Dolls. 4,727,177 63

Third class, to be commenced at a remote period.

Designation of the works.	Estimate of the Board.
The rafts to obstruct the channel between forts Monroe and Calhoun	240,568 00
Fort on Craney Island flats	258,465 00
do. New Port News	244,337 14
do. Naseway shoal	673,205 44

Dolls. 1,416,575 58

RECAPITULATION.

First class, 14 works	:	:	4,282,134 30
Second class, 12 works	:	:	4,727,177 63
Third class, 4 works	:	:	1,416,575 58

Dolls. 10,425,887 51

Remarks. The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

C.—[Noticed.]

This table gives only the amounts drawn and accounts rendered, and is not important except to shew a careful disbursement—unless on account of those on the southern coast, the one agrees with the other with remarkable accuracy; the accounts of the disbursements at the Rigolets, Chef Menteur, Mobile, &c. have not been rendered as yet, in consequence of the sickness with which the officer, charged with them, had been and yet was afflicted, at the date of his last report.

[Next follows a letter, signed 'Geo. Bomford, lieutenant on ordnance duty,' offering certain suggestions for the better management of the lead mines belonging to the United States.

[Another letter, from the same officer, shews that, from the 1st January to 30th October, 1822, 16,800 muskets had been manufactured at the armories at Springfield and Harper's Ferry; 25,792 ditto cleaned and repaired at different arsenals, and gives a detail of all other minor things done at the various stations.

[He next gives a statement of the funds remitted during the same period—they amount to \$311,347

15 cents; for which accounts are rendered to the amount of \$297,852 16—leaving only \$13,494 99 cents to be accounted for by the disbursing officers, who, it is estimated, have not really more than \$2,000 in their hands.

[The comparative cost of muskets in 1817 and 1821, is then shewn. The average cost in 1817 was \$13 90½; in 1821, \$12 51½—difference \$1 39. It is expected that the cost of making a musket will not exceed twelve dollars in the present year.

[Then follows a report from the quarter-master general's office, going to shew certain great savings made by the present system under which it is managed. The accounts appear well kept up, and the difference in the expenditures in this department is thus exhibited:

Expenditures in 1817,	\$460,000 00
1822,	\$351,825 41
	108,674 59

This results from a comparison of the items common to both years.

[After which comes a letter from the paymaster general, detailing his affairs. The whole amount remitted in the three past quarters of the year was \$693,925 47, of which \$2,073 62 is to be accounted for hereafter. The debits and credits seem to be carefully attended to.

[The surgeon-general also makes an interesting report—in 1806 and 1807, the appropriation to the medical department amounted to 4 dolls. per man; in 1810 and 1811, to 5 dolls.; in 1816, '17 and '18, to 7 dollars; in 1819 and '20, after the organization of the present system, to 3 dolls.; but, in 1822, the cost will only be at the rate of 2½ dolls. per man.

[The commissary general of subsistence shews a saving of one-third in favor of the present commissariat system, and yet the troops appear to be much better provided than they were. Only 10,729 dolls. are represented as being in the hands of the contractors and assistant commissaries, yet to be accounted for.

[The commissary-general of purchases gives a statement of his accounts—he reports a balance of cash in hand, amounting to \$10,491, after all the purchases of clothing, &c. required for the service of the present year, are paid for. There has been a general saving in the cost of articles within this branch of the department. The expense of every item is minutely stated.]

Here ends the documents belonging to the department of war.

Seventeenth Congress—2nd session.
IN THE SENATE.

December 20. A bill concerning the lands to be granted to the state of Missouri for the purposes of education, and other public uses, and two private bills, were passed.

The senate then proceeded to the appointment of a committee on the subject of roads and canals, in pursuance of the resolution adopted yesterday, and Messrs. *Bronson*, of Ohio, *King*, of New York, *Smith*, of Md. *Johnson*, of Ky. and *Rodney*, were appointed.

Mr. *Talbot*, from the select committee appointed on that subject, reported a bill making an appropriation (in blank) for repairing the national road from Cumberland to Wheeling; the bill was read.

Mr. *Johnson*, of Ky. in submitting the following resolution, observed that the information it proposed to call for was necessary to enable the committee on military affairs to proceed understandingly in the inquiry which they were instructed to make

into the expediency of establishing an armory on the western waters; and, as it was desirable to enable the committee to commence that inquiry as early as practicable, he deemed it proper to submit the resolution, which he now laid on the table:

Resolved, That the president of the United States be requested to cause to be laid before the senate the number of arms required annually to supply the militia of the west, according to the acts of congress; the probable number necessary to be placed in the military depositories located, or to be located on the western waters; the cost of transportation of arms to the western states and depositories; the probable cost of manufacturing arms in the west; the probable cost of erecting, at this time, on the western waters, such an armory as that at Harper's ferry or at Springfield; and such other information as he may deem important to establish the expediency or inexpediency of erecting on the western waters a national armory.

The senate then went into the consideration of executive business, after which they Adjourned to Monday.

December 23. Mr. *Noble* submitted the following for consideration:

Resolved, That the select committee on roads and canals be instructed to inquire into the expediency of modifying the act of congress, entitled "An act to authorize the appointment of commissioners to lay out the road therein mentioned," in such manner that the road named in the said act, shall be laid out through Columbus, Indianapolis, and Vandalia, the seats of government of the states of Ohio, Indiana, and Illinois; and to inquire also into the expediency of making a further appropriation for the purpose of completing the location of the said road.

The resolution submitted by Mr. *Johnson*, of Ken. on Friday, calling on the executive for information relative to the manufacture of arms, &c. was taken up and agreed to.

After attending to some minor affairs, the senate went into the consideration of executive business, and then adjourned.

December 24. Mr. *Homes*, of Maine, submitted the following resolution for consideration:

Resolved, That the president of the United States be requested to communicate to the senate such information as he may possess, of the commercial relations which now exist between the United States and the present government of St. Domingo; what is the political condition of the island; whether any European nation pretends to claim the government of the island; and whether any further commercial relations with the existing government would be consistent with the interest and safety of the United States.

The other business transacted this day will sufficiently appear in the future details of proceedings.

HOUSE OF REPRESENTATIVES.

Friday, Dec. 20. Mr. *Nelson*, of Virginia, from the committee on the judiciary, to which the subject had been committed, reported a bill concerning the apportionment of representatives in the state of Alabama, which received its first and second reading, and was committed to the committee of the whole house.

The resolution yesterday moved by Mr. *Trimble*, requesting from the president of the United States information and estimates of the expense of fortifying Thompson's Island, commonly called Key West, on the coast of Florida, was then taken up; and the question being stated on agreeing thereto,

Some debate took place—the policy of establishing a naval depot on an island, was questioned by Mr. *Floyd*. Mr. *Trimble* was not sure that he should finally vote to establish a depot at Key West, but he thought the information that he sought was important. and he briefly stated the following facts— "From Cape Florida to West Key is 70 miles; from West Key to Havana is 75 miles—and the island lies about 35 miles west of a direct line drawn from Cape Florida to Havana. It commands the commerce of the gulf stream better than Havana itself. Its harbor is sufficiently capacious for the whole navy of the United States to lie in, supposing it to consist of fifteen ships of the line, and a due proportion of vessels of a smaller class."

At last, the resolution was agreed to. Mr. *Fuller* offered the following:

Resolved, That the secretary of the navy department be directed to inform this house what rules and regulations have been proposed by the board of commissioners and approved by the president, for the government of the navy of the United States, and how far a revision of the same may be necessary.

This resolve lies over for one day.

Mr. *Wright* submitted the following:

Resolved, That the committee on the militia be instructed to inquire into the expediency of arming the militia with rifles, except those residing in cities, towns, and villages, and report thereon by bill or otherwise.

Mr. *W.* supported his resolution by a speech of considerable length. He noticed the carnage at New Orleans, and said he had been told that, after the battle, a bet of a supper was made between the officers of two rifle corps from Georgia and Tennessee, of six shots aside, an hundred yards; that they shot at a paper on the mouth of a musket; that the Tennesseans shot their six balls into the musket, on which the Georgians gave up the bet.

The resolution was ordered to lie on the table.

The house then, on motion of Mr. *Fuller*, took up the bill, lying on the table from the last session, for incorporating the United States' naval fraternal association for the relief of the families of deceased officers; and the question being on ordering the bill to a third reading—

Mr. *Colden*, though entirely favorable to the object, asked if congress was competent to incorporate such an association? Mr. *Fuller* stated that the power of the corporation was limited by the bill to the district of Columbia, &c. The bill was recommended, that it might be so amended as to remove some objections to it.

The engrossed bill to make perpetual the act of March 3, 1815, to regulate the collection of duties on imports and tonnage, was read a third time, *passé*, and sent to the senate for concurrence.

The following committees have been recently appointed by the speaker, in pursuance of the orders of the house of representatives:

On retrenchment. Messrs. Hardin, Whipple, Tracy, Holcombe, Ross, Williams, of N. C. Wm. Smith. *On the sales of city lots, &c.* Messrs. Cocke, Woodcock, Warfield, Floyd, Lincoln.

On the bill to abolish imprisonment for debt. Messrs. Speed Smith, Nelson, of Va. and Cuthbert.

Adjourned to Monday.

Monday Dec. 23. Mr. *Udree*, of Penn. elected in the place of Mr. *Worman*, deceased, appeared, was qualified and took his seat.

Mr. *Barstow*, of Massachusetts, also took his seat.

A memorial was presented by Mr. *Gorham*, of the merchants and others, inhabitants of Boston, interested in commerce, representing many defects in the present system for the collection of duties on imports and tonnage, and praying for a revision of said system, and that certain alterations specified in the memorial may be made in the said system, which memorial was referred to the committee of the whole house on the state of the union, and ordered to be printed.

Mr. *Little* presented a petition of sundry merchants of the city of Baltimore, praying for further compensation for damage sustained by their vessels, in consequence of their being sunk in the entrance of the harbor of Baltimore to prevent the entrance of the British shipping into that harbor in the month of Sept. 1814; which petition was referred to the committee of claims.

The house then, on motion of Mr. *Tattnall*, resolved itself into a committee of the whole, Mr. *Tomlinson* in the chair, on the report of a committee of the last session, condemning so much of cer-

tain treaties with the Cherokee and Creek Indians, as grants to those Indians the fee simple to certain lands in the state of Georgia.

[This appears to be a matter of great interest to the state of Georgia, and the object is to obtain an appropriation of money to extinguish the Indian title to certain "reserves" embraced in different treaties. As the house did not seem prepared to act on the case, the report was laid on the table for the present.]

The bill to make a road through the Black Swamp, in Ohio—that is, from the lower rapid of the Miami of lake Erie, to the western boundary of the Connecticut Western Reserve, agreeably to the provisions of the treaty of Brownstown, was next taken up and considered. Mr. *Vance*, of Ohio, gave a brief statement of the importance of such a road, not as being of much benefit to Ohio, but as of great benefit to the United States; saying that if this road had been constructed before the late war, millions of dollars would have been saved. The bill contemplates the grant of certain parcels of land bordering on the road, to enable the state of Ohio to make it. Ordered to lie on the table, that time might be allowed to consider it.

The bill to allow three representatives to the state of Alabama, was read a third time and passed. It appears that the federal number in this state, is returned at 125,401, though the returns of two counties had not yet been received.—So she has a population of 5,401 over the requisite amount to entitle her to three representatives without those counties.

On motion of Mr. *Gorham*, of Massachusetts, the house resolved itself into a committee of the whole Mr. *Campbell*, of Ohio, in the chair, on the bill in addition to an act to continue in force the act to protect the commerce of the United States against pirates, and to punish the crime of piracy.

The object of this bill is to make certain classes in the act perpetual—no opposition was made thereto, and it was ordered to be engrossed and read a third time to-morrow.

The house, in a committee of the whole, spent much time on the bill providing for the examination of certain land titles in Louisiana. The committee rose at sun-set, and had leave to sit again.

Tuesday, Dec. 24. Mr. *Dwight* presented a memorial, (which was read), signed by 138 citizens of Washington and Georgetown, praying congress to appropriate two or three millions of dollars for the assistance of the Greeks—Mr. *D.* preceded the presentation by a speech of some length, which we shall insert hereafter. The memorial was laid on the table.

On motion of Mr. *Ingham*, it was

Resolved, That the committee on roads and canals be instructed to inquire into the expediency of appropriating money for the purpose of aiding in the completion of a canal from the waters of the Chesapeake to those of the Delaware.

The bill to amend the act regulating the collection of duties on goods imported from adjacent states and territories; and the bill to make perpetual the provisions of the act for the punishment of piracy, &c. were severally read a third time, *passé*, and sent to the senate for concurrence.

The rest of the day was spent on the bill for examining titles to land in Louisiana—it was ordered to lie on the table for the present.

The speaker presented the annual report of the secretary of the treasury, of which 5,000 copies were ordered to be printed.

The house adjourned until Friday.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 18—Vol. XI.] BALTIMORE, JAN. 4, 1823. [No. 18—Vol. XXIII. WHOLE No. 590

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$3 PER ANNUM, PAYABLE IN ADVANCE.

"THE HOLY ALLIANCE." The latest London paper received at New York—from the Courier of France, Nov. 7 at 3 o'clock, P. M. mentions a strong report that the congress of Verona had suddenly broken up. No official information of the fact had been received—but the report is corroborated by a notice in the French papers of the return of the minister of that court from Verona. No cause is assigned for this unexpected affair.

THE GERMAN SOCIETY, of Maryland, lately held their annual meeting at Baltimore, and, after the transaction of the usual business, partook of a dinner. The cloth being removed, the following neat toasts were among those that were drank.

The land of our fathers—The country of thought.
The land we live in—"The home of the free."

The German universities—The majestic march of mind is about to lay the foundation of the independence of all nations.

WHEAT. The N. Y. Commercial Advertiser says—It is a singular fact, that more than two thousand bushels of wheat have recently been imported from London to this city, and we are told that five thousand bushels are now on the way hither, from Liverpool. We have seen a calculation, by which it appears that, after deducting the freight, insurance, and other charges, this wheat will yield a profit of 25 per cent.

MARYLAND. A report and estimate on the financial affairs of this state, gives us the following results:

What is called the "states capital" amounts to \$1,183,926 13—of which \$133,717 is in U. S. 6 per cent. stock, and \$335,104 in the 3 per cents. The stock held in different banks and companies amounts to \$619,944, of which 170,444 is at this time unproductive, being chiefly in the Potomac company.

The receipts into the treasury for the year ending Dec. 1, 1822 amounted to \$237,858 86
In the treasury Dec. 1, 1821 76,675 74

Expenditures of the year 227,900 52
Appropriations yet unpaid 37,535 04
Journal of accounts, present session 35,000 00 300,435 56

Balance 14,100 04
The deficit of the next year is estimated at \$26,410; the probable receipts being put down at 119,259, and the expenditures at 145,669.

Some of the chief items of expenditure are as follows:

The governor 2,666 67; 5 councillors at 500 each 19 judges 32,400; the chancellor 3,400; half-pay list 19,822; donations to colleges and schools 12,200; the penitentiary 9,800; interest on loans 6,500; journal of accounts of the session of the legislature 35,000.

NAVY OF THE U. S. According to the letter, or report, of the secretary of the navy, (see page 282), Vol. XXIII.—18.

the present condition of the navy of the United States is as follows:

Ships of the line. In commission 1—in ordinary 6—building 5, of which two are nearly finished—total 12

Frigates of 44 guns. In commission 1—in ordinary 4—building 4—total 9.

Frigates of 36 guns. In commission 1—in ordinary 3—total 4.

Steam frigate of 30 guns. The *Fulton*, in ordinary.

Ships of 24 guns. In commission 2—total 2.

Sloops of war, of 18 guns. In commission 3—in ordinary 1—total 4

Brigs of 12 guns. In commission 2—total 2.

Schooners of 12 guns. In commission 6—total 6. (One lost since the return, but not included in this amount.

RECAPITULATION.

Admitting that all the ships now building were, (as they might speedily be in case of necessity), prepared for action, the naval force would rate as follows:

	guns	guns.
12 ships of 74	.	888
9 do. of 44.	.	396
4 do. of 36	.	144
1 do. of 50	.	30
2 do. of 24	.	48
4 do. of 18	.	72
2 brigs of 12	.	24
6 schooners of 12	.	72

40 vessels 1674 guns

Besides these vessels, (which are all of the first character in their several classes), some light vessels are attached to the navy, as for the time being.

The amount of guns shews what the regular navy will carry at the respective rates of the vessels; but it is known that each of them carries a considerable number more than the amount of their rate.

COTTON GOODS. The Boston Statesman gives the following as the aggregate value of the colored and white cotton goods imported at Boston, in the three first quarters of the present year.

Colored cottons	\$890,911
White do.	373,403

\$1,264,314

During the same time the value of 4,841 dollars in bullion, and 166,484 in coin, was received at the same port.

THE CALEDONIAN CANAL. This great work, which opens a communication from sea to sea through Scotland, is just completed, and was opened a short time ago, after twenty years labor and the cost of about 900,000, or 4,000,000 dollars.

"PUNISHMENT."—In an article under this head, in the Register of the 21st ult. we noticed the degree of punishment that had been inflicted on Hollingshead and Scull, at Philadelphia, for being engaged in a most detestable attempt to defraud certain underwriters. As it regards Scull, that punishment seems to have been severe enough.

He had before maintained a respectable standing, and the ignominy he had brought on himself has caused his death, through a deep sensibility of his miserable condition.

CITY OF NEW-YORK. The progress of the population of this city is given as below. Since the year 1790 it has increased nearly 400 per cent. Who can calculate its advance, when fully aided by its intercourse with the "vast" west and north, by means of canals?

Census	Inhabitants
1756	10,881
1771	21,863
1786	23,614
1790	33,131
1800	60,489
1805	75,770
1810	93,914
1820	123,000

FROM A PENNSYLVANIA CORRESPONDENT.

Mr. Niles,

SIR—I have read in your last number, with the attention to which the subject is justly entitled, the essay signed "A Merchant," on which I request your permission to offer a few remarks.

I pass over the very profound and judicious observations on the reduction of the rate of exchange to one or two per cent. above par, and the equally profound and judicious observations on the novel discovery, that the excess of the exportation of specie over the importation, may be a proof of a favorable state of the commerce of a nation. These views I leave to your criticism, being so far more capable than I am of doing justice to the subject. I shall confine myself to two points—the "success of our present system of free trade," and the position that this success "is making converts to our system in every part of the world"—that is to say, I presume, in Asia, Africa, and South America, as well as in Europe—for certainly, those regions are embraced in the comprehensive terms, "every part of the world."

The idea of the success of "our system of free trade," which means simply the "freedom" to import every thing our merchants choose, how pernicious soever to the country, from "every part of the world," is almost too ludicrous for serious argument, if the "Merchant" really means good "success." If he means ill "success," then he is perfectly correct.

In place of a long abstract discussion, which would perplex a common reader, I shall state a few notorious facts, which will shed strong light on the subject, and prove that the "Merchant" must have had sinister "success" in his mind's eye, when he penned his essay.

"Our freedom of trade" deluged the country in 1815 and 1816, with foreign merchandise to the amount of \$179,000,000, (exclusive of re-exportations,) affording a revenue, in the first year, of \$36,300,000—and in the second, of \$27,480,000. Whereas, in the two years, our exports amounted to only \$110,700,000. These enormous importations, the successful result of our "freedom of trade," produced a most ruinous system of over-trading—raised the price of bills on England exorbitantly—drained the country of its specie—forced many of the banks, which were wholly unprepared for such a pressure, to stop payment—obliged all of them to curtail their discounts, and to press on their debtors—whereby bankruptcy, ruin and destruction, overspread the face of the land in 1817,

1818, and 1819, producing more distress and suffering than a war of equal duration would have done.

These are the "successful" exploits of "our freedom of commerce," for the first five years of peace. How far the "Merchant" can find any rational ground of congratulation for the remaining three years, remains to be ascertained.

In 1820 and 1821, a state of convalescence proceeded. We recovered gradually, and were felicitating ourselves on the favourable prospect of our affairs—when, lo! this eulogized "freedom of commerce" once more comes into operation, and dashes the cup from our lips. In the year 1822, it renews the scenes of 1815 and 1816—deluges the country with merchandise to the amount of \$58,000,000 in nine months—whereas, our exports for the same space of time were but \$41,000,000, on which we have lost at least \$3,000,000, thus leaving a balance against us of \$20,000,000. So much for "freedom of trade."

The other point, on which I wish to offer a few comments, is embraced in the assertion, that "our system is making converts to it in EVERY PART OF THE WORLD."

This is a sweeping, unqualified assertion, which, if true, ought to have weight with congress and our citizens at large—if unfounded, it ought not to have been hazarded by a man of honor, as being liable to mislead our citizens, and the government, on a subject of vital importance—a subject in which errors are pregnant with the most serious consequences. My convictions, but they may be erroneous, are, that the assertion is wholly without foundation. I therefore call on the "Merchant," as he values his character for veracity, to produce any substantial evidence—I will not say "in every part of the world," (which would embrace Asia, Africa, and South America,) but in Great Britain, France, Russia, Austria, Prussia, Denmark, or Sweden, within the last ten years. Should he fail in this, I trust he will come forward, as a gentleman ought to do, and acknowledge he was in error.

Let it be observed, however, that I enter my protest against two things—first, against the citation of the relaxation of the colonial system of Great Britain, and the navigation laws of France, adopted in both cases with a very ill grace—with great reluctance, and after a long and arduous struggle, and in which there is no "imitation" of "our system"—no proof of its "making converts." These were victories obtained by our "restrictive system" over the "restrictive system" of Europe.

My other protest is against any reference to theorists, in "every" or any "part of the world," who are probably paid to spread false doctrines to deceive us as to our true interests. I insist on solid facts. But if recourse is had to theory, Ferria, a recent French author, will outweigh all the modern disciples of the new school. NECKER.

December 25, 1822.

DICKINSON COLLEGE—Carlisle, Pa. The college faculty consists of Dr. J. M. Mason, D. D. principal; H. Vethake, esq. of New Jersey, Rev. A. McClelland of New York, and rev. J. Spencer, of Maryland, professors in the different departments. The faculty were inaugurated and the college opened on the 15th January last, and there are now 19 senior sophisters, 25 juniors, 21 sophomores and 11 freshmen—making 76 students. In the grammar school attached to the college, there are 24 scholars. About one half of the students are from Penn-

the remainder from Kentucky, Tennessee, Ohio, Virginia, Maryland, New Jersey and New York. The increase of students has been so rapid as to induce the trustees to apply to the legislature for aid in the erection of additional buildings, and a bill has been reported in the senate of Pennsylvania for the building of an edifice to accommodate 200 students, and granting \$3,000 for the purchase of philosophical apparatus and to complete the laboratory. It is expected that this bill will pass, for Pennsylvania omits no opportunity to encourage education, internal improvement, and domestic industry.

STEAM BOATS ON THE MISSISSIPPI, &c. *From the Louisiana Advertiser of the 25th November.* The first steam boat employed in trade, on the Mississippi, was called the New Orleans, of New Orleans, built at Pittsburgh in 1812, and enrolled and licensed for the coasting trade, at the port of New Orleans, in 1813, nine years ago; since which period, up to the present time, there has been eighty nine different boats enrolled at the port of New Orleans.

Of this number, several have been built at New Orleans, but they have been principally built on the waters of the Ohio—forming, in the aggregate, a tonnage exceeding *eighteen thousand tons*.

This first boat was lost in 1814, and up to the present time there have been twenty-three other boats lost, either being sunk, destroyed by fire, decayed or laid up, and out of use—forming, in the aggregate, about four thousand tons—and leaving a balance, say in round numbers, fourteen thousand tons of this description of vessels now employed, or which may be employed, in trade on the Mississippi and its tributary waters, with the port of New Orleans.

This 14,000 tons does not probably employ more than 1000 hands, and can do more in a given time than 50,000 tons could have done in barges, keel boats, or any other kind of vessels employed ten years ago, with 20,000 hands. The rapid increase of steam boats, had very soon the natural tendency of reducing freights, and although the owners suffered severely from this cause and the consequent diminution in the value of the vessels, yet the country, at large, has been greatly benefited by their introduction; and it is to be hoped, the number in existence can now be beneficially employed.

The Jews are building a new synagogue at Philadelphia—it is now under roof. In the south east corner stone, was deposited the coins of the country, and a plate with the following inscription.

"The corner stone of a house consecrated to the worship of Almighty God Jehovah, by the congregation Kal Kadosh Miekve Israel, is placed in its bed by John Moss, on the eleventh day of Tisri, Anno Mundi 5588, corresponding to the 26th day of September in the 47th year of the independence of the United States of America—"

James Monroe being president, and Daniel D. Tompkins vice-president of the United States of America, and Joseph Hiester governor of the commonwealth of Pennsylvania. This happy country in which religious and civil liberty is secured to its inhabitants, is now at peace with the whole world; may that enjoyment long endure, and the integrity of this government, and the reign of "virtue, liberty and independence" be triumphant until "the wreck of matter and the crush of worlds."

After this follows the names of the building committee, &c.

ESTABLISHED CHURCH.—*The blessing of one.* There are about 13,000 clergymen of the established church in England and Wales. They are evidently divided into two parties; one denominated—but why I have yet to learn—*Orthodox*; the other, generally, *evangelical*, frequently, *methodical*, and sometimes, *puritanical*. The former which is by far the more numerous, may comprise about 10,000; the latter, which appears to be annually increasing, and to be chiefly composed of pious, zealous clergymen, sound expert theologians, exemplary in their conduct, very useful members of the community, and conscientiously attached to the established church, but as ardently solicitous for its reformation, may comprise about 3000. Of the *orthodox* clergy, it has been fairly computed that at least three fourths are attached to the established church, *merely under the influence of pecuniary considerations*. These, together with their families, dependents, patrons, &c. may amount to about 40 000; and in each parish, one with another, there are probably about twenty individuals *habitually*, or *hereditarily*, but inconsiderately attached to the established church, *without any regard to its reformation*; making altogether about 250,000.—*Lon. pap.*

HUMAN BONES. *From a late London paper.* It is estimated that more than a million of bushels of human and inhuman bones were imported last year from the continent of Europe into the port of Hull. The neighborhood of Leipsic, Austerlitz, and Waterloo, and of all the places where, during the late bloody war, the principal battles were fought, have been swept alike on the bones of the hero and the horse which he rode. Thus collected from every quarter they have been shipped to the port of Hull, and thence forwarded to the Yorkshire bone grinders, who have erected steam-engines and powerful machinery, for the purpose of reducing them to a granular state. In this condition they are sent chiefly to Doncaster, one of the largest agricultural markets in that part of the country, and are there sold to the farmers to manure their lands. The oily substance of the bone gradually evolving as the bone calcines, makes a more permanent and substantial manure than almost any other substance—particularly human bones. It is now ascertained beyond a doubt, by actual experiment, upon an extensive scale, that a dead soldier is a most valuable article of commerce, and for ought we know to the contrary, the good farmers of Yorkshire are indebted to the bones of their children for their daily bread. It is certainly a singular fact, that Great Britain should have sent out such multitudes of soldiers to fight the battles of the country upon the continent of Europe, and should then import their bones as an article of commerce to fatten her soil.

FOREIGN NEWS.

From London Papers to Nov. 27.

Great Britain and Ireland. The counties of Cork, Limerick, Carlow, Westmeath and Antrim, in Ireland are in a dreadful condition.—The peasantry are in arms, committing all sorts of outrages, and persons of wealth are abandoning their homes for safety in the towns. It seems as if this miserable people had been rendered savage by suffering.

We learn that las Casas, (says a London paper,) eldest son of the count, lately gave sir Hudson Lowe a sound horse-whipping in London—in the street, and opposite the house of the latter.

France. There has been a sudden fall in the French funds—which is ascribed to the illness of

the king, whose death would be attended with serious embarrassments.

It is believed a most extensive conspiracy exists in France—it is avowed that more than a million of men were affiliated. What their design is no one knows—possibly it is to act together on the decease of the king, who cannot be expected to live much longer.

Several lecturers on history in the different colleges, have been ordered to suspend their lectures. Any thing that touches the revolution of France, is deemed seditious.

Spain. It was thought that the constitutional army in Catalonia would amount to 30,000 men before the end of October. Great efforts were making to put down the seditious priests and their adherents, who, it seems, find a refuge in France, when hard pressed. But it appears that the "army of the faith," 20,000 strong, has lately defeated a constitutional army under general Torrijos, who lost 600 men and was himself killed. The "army of the faith" is commanded by M. d'Eroles, lieutenant general.

A French paper reports that the allied sovereigns have resolved to re-establish the former constitution of Spain, and "restore the king to his liberty."

Portugal. A splendid reward, "of 30,000 golden crusades, payable in 20 years, and 600,000 reas of annual revenue to be applied to the purpose, with a medal of the value of 50,000 reas," is offered by a Portuguese decree for the best project of a civil code for that kingdom—the award to be made by five persons, and subject to a revision of the cortes.

Prussia. The priests of this kingdom are ordered to make the following addition to the formal prayers used on the national holidays. It looks more like blasphemy than religion—but the priests will be obedient to the king, though they offend the OMNIPOTENT!

"Bless and protect, in a peculiar manner, the Holy Alliance, and the Monarchs who formed it, in order that they may govern their people, and render them happy in the faith of Thee and Thy Son, Saviour of the world. Cause their holy work to succeed for the glory of thy name, and the assurance of the general welfare: to the end that peace, order, and justice, may reign every where; and that our most remote posterity may with gratitude partake of thy benedictions and benefits."

Cuba. About the 7th ult. certain proceedings at Havana seemed to threaten complete destruction. The natives and the European Spaniards have always been jealous of one another, and, at the late election of delegates to the cortes, they nearly came to a general battle. The old Spaniards, fearing the success of the ticket supported by the natives, attempted to influence the choice by the presence of the troops—on which the other party collected a superior force, and sent word to the governor that they were prepared to maintain their rights by arms. The military were withdrawn, the ticket supported by the natives succeeded, and the quiet of the city was restored after being disturbed for some days.

It is expected that examples will be made of some of the ringleaders of this plot against the rights of the people. Eighteen persons, most of them officers in the army, are to be tried, and capital punishment of some of them is spoken of.

Colombia. The latest accounts notice two battles between generals Montilla and Morales, in both which the Colombians were victorious. They were fought on the 22nd and 23d of November, near Salina Rica; and, by the result, the royal forces were reduced to about 600 men, with whom Morales fled

to Mitari, where general Torrelles was making every preparation to attack his shattered forces. The Spanish frigate *Ligera*, brig *Hercules* and schooner *Constitution*, that sailed from Curracoa on the 24th November anchored at Las Tacques on the 25th, and were still lying there on the 27th. Commodores Daniels and Beluch were cruising in the Gulf of Maracaybo with a view of intercepting the Spanish fleet. The following vessels compose the Colombian squadron:

Corvette Bolivar	25 guns—	250 men
Ship Lady Barrington,	28	200
Brig Independencia	18	150
Brig Vencedor	18	150
Brig Mosqueto	20	100 fr. Engl'd
Schr. Independencia	10	80
Ketch brig	8	50
Total	127	980

The Spanish squadron consists of

<i>Ligera</i> frigate	44 guns—	300 men
<i>Hercules</i> brig	20	140
<i>Constitution</i> schr.	5	50
Total	69	490

Canova, the Sculptor.

The most important intelligence derived from Europe, is the death of the celebrated sculptor CANOVA. The following extracts relating to him, taken from English papers, will be read with interest:

FROM A GENTLEMAN AT VENICE.

Oct. 12, 8 o'clock.—Sent my servant to inquire for Canova's health. Half past eight, or before nine, he returned; I was in hopes with Canova's thanks, that he was better; but no—that he was dead!—Canova died about ten minutes before 8 o'clock.

"Sic transit gloria mundi!"

Ten o'clock.—Went to Canova's house. The professors, they said, were come. I was ushered into the chamber of death. Canova's body was covered, except his head, and at the head was a professor; my feelings sicken; covering the mortal part of Canova with plaister of paris to take a cast! In two seconds I repressed my indignation, recovered my senses, and forced myself, with foreigners, to assume a tone, or rather manner, which ill accorded with the genuine and native feelings of my heart. Coffee was handed to me, and different statues were discussed, as if Canova himself had been sleeping. Approaching nearer the bed, I saw, and seeing, took hold of his right hand. Death had not yet stiffened the nerves, nor had the blood become entirely colorless. His thumb lay concealed by the position of the hand. I was touching it, but could only see that part of it which had wrought such miracles. After this, I was ill prepared to re-discuss any of this great man's works, and slid gently out of the room. For a few seconds, I set down in the anti-room, next to Canova's bed room, till the entrance of different persons roused me to a different scene.—An inspector of the police entered, with an air which said, "I am here of right and of consequence, and as a matter of business." Sitting down, with pen and ink, and taking out a printed form, not forgetting his snuff box, which seemed more necessary than either, he began a number of polite questions. No one of feeling could detail the hard, dry skeleton of this form. One coincidence struck me; a door opened: a servant passed across the room with downcast and blood-shot eyes. It was Canova's own body servant. When, tapping his box, I heard the police

officer repeat, "thirteen different orders, I think, you said?" This question was put to the bystanders. I know not their names; they were people of the house; no connexions, but of locality alone. The poor servant had passed on, thinking little and caring less about all the decorations this world could bestow. People began to enter the anti-room. The questions of curiosity ill suited the scene, and I left it as quietly as I had entered. The feeling which led me there was to know the certainty. Canova is to be opened to-morrow. My servant says that the dust from the chisel was the primary, I mean distant, cause of his death; but on this point I am not informed.

The ensuing scanty particulars of his biography, are given in a work by a lady, entitled "Rome in the nineteenth century."

Canova was born at Passagno, a small village in the Venetian territory, of parents whose poverty disabled them from giving to the genius his earliest youth displayed, the usual cultivation or encouragement. But he resolutely struggled with every difficulty, and finally triumphed over his fate.

At the age of fourteen, having obtained the long wished for boon of a small piece of marble, he sculptured out of it two baskets of fruit, which are now on the staircase of the Palazzo Faresetti, at Venice.

The next year, when only fifteen, he executed Eurydice, his first statue, in a species of soft stone, called Pietro Dolce, found in the vicinity of Vicenza; and, three years after, Orpheus, both of which are in the Villa Falier, near Asolo, a town about fifteen miles from Treviso.

His first groupe in marble, that of Dædalus and Icarus, he finished at the age of twenty, and brought with him to Rome, where he vainly solicited the patronage of the Venetian ambassador, and of many of the great; but when almost reduced to despair, without money or friends, he became known to sir William Hamilton, whose discernment immediately saw the genius of the young artist, and whose liberality furnished him with the means of prosecuting his studies, and of establishing himself as an artist in Rome. To this, his first patron, and to all his family, Canova has through life manifested the warmest gratitude.

Through sir William Hamilton, his merit became known to others; even the Venetian ambassador was shamed into some encouragement of his young countryman, and ordered the groupe of Theseus and Minotaur. A few years after, Canova was employed to execute the tomb of Ganganelli, in the church of the SS. Apostoli, at Rome. With these exceptions, all his early patrons were Englishmen. Amongst these were lord Cawdor, Mr. Latouche, and sir Henry Blundell, for the latter of whom the Psyche, of the earliest and most beautiful of his works, was executed.

The most beautiful of all his works, the Venus and Adonis, was finished at the age of six and thirty.

Many are the delightful hours I have spent with Canova, both when he has been employed in modelling and chiselling; and few are the companions whose society will be enjoyed with such interest or remembered with such regret.

The warmth and kindness of his disposition, the noble principles and generous feelings of his mind, and the unpretending simplicity of his manners, give the highest charm to his exalted genius. By the friends that know him best, he will be the most beloved.

Canova has the avarice of fame, not of money. He devotes a great part of his fortune to the purposes of benevolence.—With the title of Marchese, the pope conferred upon Canova three thousand piastres of rent, the whole of which he dedicates to the support and encouragement of poor and deserving artists. But I should never be done, were I to recount one half of the noble actions, the generous exertions, and the extensive charities of his life, which are as secretly and unostentatiously performed, as judiciously applied. He is now building a church in his native village, and has alienated the greatest part of his own fortune for the support of charitable institutions.

It is not, I believe, generally known that Canova is a painter as well as a sculptor. He has pursued the sister art occasionally, for the amusement of his leisure hours, and many of his designs are truly beautiful.

Political History.

PRESIDENTIAL ELECTION OF 1801.

Having republished, from the Washington City Gazette, the letter of the late James A. Bayard, (see the REGISTER of the 16th Nov. ult.), we feel it due to the subject and as a matter of right to copy the following articles from the "National Gazette." The public mind is much directed to the election of president, and an account of the past may be useful for the future. That the whole subject may be presented together, we have prefixed Mr. Bayard's letter, agreeing with general Harper that "it was not designed by the writer for publication," and believing that he thought it had been destroyed. Why it has been brought forward at this late day we cannot imagine, except to effect a caucus nomination by congress.

"Washington, 17th February, 1801.

"DEAR SIR—Mr. Jefferson is our president—Our opposition was continued till it was demonstrated that Burr could not be brought in, and even if he could, he meant to come in as a democrat.

"In such case, to evidence his sincerity, he must have swept every officer in the United States. I have direct information that Mr. Jefferson will not pursue that plan. *The New England gentleman came out, and declared they meant to go without a constitution and take the risk of a civil war.* They agreed that those who would not agree to incur such an extremity, ought to recede without loss of time. We pressed them to go with us and preserve unity in our measures.

"After great agitation and much heat, all agreed but one. But, in consequence of his standing out, the others refused to abandon their old ground. Mr. J. did not get a federal vote. Vermont gave a vote by means of Morris withdrawing. The same thing happened with Maryland. The votes of S. Carolina and Delaware were blank. Your obedient servant, [Signed] J. A. B."

The very harsh allusions which were indulged in congress during the agitation of the Missouri question, to the conduct of the federalists in that body, when the choice between Thomas Jefferson and Aaron Burr, for the office of president, devolved upon the house of representatives, led us to ask the true history of this affair from a gentleman, general R. G. Harper, whom we knew to have been, at the time, one of the most conspicuous of the federal members. General Harper referred us to statements which he had made, on oath, in answer to formal interrogatories administered to him

many years before, in a libel cause, then depending in the supreme court of judicature of the state of New York, against Aaron Burr, as plaintiff, and James Cheatham, as defendant. Not long after he kindly placed in our hands an authentic copy of the interrogatories and the answers, which, as the subject forms an interesting and important part of the political history of the union and was not properly understood by the country, we resolved to publish at the first good opportunity.

The appearance of a letter of a most invidious cast, relating to the temper of the New England delegation, on the occasion, and ascribed to the lamented Mr. Bayard, drew our attention again to the matter, and induced us to apply to general Harper for his opinion concerning the real purport and the general correctness of that letter. No one alive seemed to us more able to determine these points, to the satisfaction of every dispassionate and intelligent reader in the nation. He possessed, at least, as much influence as Mr. Bayard himself, with the federalists in congress; he enjoyed their confidence fully, and was intimately acquainted with all that passed among them with respect to the struggle in the house of representatives. At this day, when party heats and prejudices have subsided in the breasts of the great majority of the survivors of the ardent politicians of that period, credit will be almost universally given to the positive testimony of general Harper. He has no superior in the qualities of honorable spirit and manly candor; his sentiments are as elevated as his views are liberal and comprehensive; and his memory is not less retentive and exact, than his understanding is vigorous and richly mature.

In writing thus of one of the most able, patriotic and enlightened of the representatives, who have, at any time, led and adorned either branch of the national legislature, we are not merely gratifying a lively personal affection and esteem, founded on a long and close observation of his character, but contributing, as far as we can, to secure due attention and weight to a record, which we deem of much consequence, as it regards the national annals. We insert this morning the interrogatories and replies above mentioned, and subjoin to these remarks a communication which we have received from general Harper, touching the letter imputed to Mr. Bayard. We would, in addition, premise this observation, that our object is not immediately to clear the federalists as a party, or the federal members of congress in question, from any charges or suspicions, however unjust; but to establish interesting facts, and vindicate the truth of history,

Baltimore, Dec. 1822.

My dear sir: In answer to that part of your letter which asks my opinion respecting the determination supposed to be imputed to the federal members of congress from New England, in 1801, by the late Mr. Bayard, in the letter published in a late number of Niles' Weekly Register, I must remark, in the first place, that I saw the letter with very great regret. Certainly, it was not intended by the writer for publication: and what good could have been expected from its publication, at this late period, I am unable to conjecture. Surely it cannot be desirable to revive old party heats and prejudices, which, it is to be hoped, that every good man, of every party, has long since wished to forget. The federal party having had nothing but the public good in view, and content with seeing their system substantially adopted by their former opposers, as they know that it must be, sooner or later, by whomsoever may be called to the administration

of the federal government, had willingly and even gladly retired from the contest, which they had firmly maintained as long as a course, essentially opposed to their principles, was pursued by the men in power. In some places a struggle of state parties, under the old names, but solely with a view to state or local politics, was still maintained: but to the administration of the national government, nothing like a systematic or united opposition, on the part of the federalists, has any where appeared, since the present chief magistrate received the reins; nor indeed since the general peace in Europe, and the termination of the war between us and Great Britain.

On the contrary, the federalists, almost universally, declared their approbation of the leading measures of the government, and gave it their cordial support. The national government indeed destroyed the federal party, in the only way it could be destroyed, by adopting substantially its principles. Numbers of those who had acted with it most zealously, and perhaps most efficiently, while its fundamental principles were still denied in practice, now regretted and endeavored to prevent the local and sectional opposition, which, under its name, was still made for merely local objects. They saw and lamented, as there is reason to believe that almost ever good and reflecting men of every party did, that such an opposition must tend to prolong and confirm the influence of those, whose claims to public consideration and confidence were felt to require the aid of party spirit and popular prejudice. I very much regret the publication of Mr. Bayard's letter, at this late day, after a lapse of twenty-two years, believing that it may have this effect, in some degree, and can have no other.

That part of the letter in which Mr. Bayard affirms, in relation to the contest in the house of representatives between Mr. Jefferson and col. Burr, that "the New England gentlemen came out and declared they meant to go without a constitution, and take the risk of a civil war," requires some particular notice. It is certain that Mr. Bayard did not mean to say, that such a determination was declared or formed, by the New England members of the federal party in a body, or in any public, open and direct manner. He must have meant merely to say, that such he understood to be their determination; and this conclusion, which I know and pronounce positively to be erroneous, he must have drawn from some angry and ill judged expressions, hazarded by individuals, in a moment of excitement.

We all know, or at least I know, that declarations, of a similar import, were made then, and at other times, by angry men on the other side, in relation to the failure of their favorite candidate, and to other subjects of contest: and yet it would have been extremely erroneous to conclude, that the supporters of Mr. Jefferson had determined "to go without a constitution, and to take the risk of a civil war," rather than see col. Burr made president. Such intemperate expressions, in times of party heat and violent agitation, merely shew that their authors are much excited. I was present at all the general deliberations of the federal members, on this momentous subject, which were frequent and very anxious. I may, I think, safely say, that I was as much in the confidence of those gentlemen, and as well acquainted with their private and individual views, as any other person. I had a great deal of full and free communication with them, individually and privately, which I have every reason to believe was frank and confidential.

And I declare that, on no occasion, did I hear from them or any of them, a hint of such a determination as Mr. Bayard, at the time of writing the letter in question, supposed them to have formed. It is very improbable; and I cannot believe that so momentous a resolution would or could have been concealed from me, and from those of my colleagues, with whom I agreed in opinion, and acted throughout the whole scene.

The subsequent parts of this letter, prove, incontestably, that Mr. Bayard is not, in the passage in question, to be understood literally or positively; but merely as speaking of hasty expressions, and resolutions that were talked of by some, but not definitively formed. He goes on to say, "they, (that is the New England gentlemen), agreed that those who would not agree to incur such an extremity, ought to recede without loss of time. We pressed them to go with us, and preserve unity in our measures."

"After great agitation and much heat, all agreed but one. But, in consequence of his standing out, the others refused to abandon their old grounds."

That is, all of these federal members from New England, who had "come out and declared that they meant to go without a constitution, and take the risk of a civil war," finally agreed, with the exception of one only, to vote for Mr. Jefferson; not merely to acquiesce in his becoming president, which was the certain consequence of the withdrawal of one of them, (gen. Morris, of Vermont, who did in fact withdraw), but actually to vote for him. This was their final determination, and the only one which they took; for whatever passionate expressions may have been thrown out by individuals, in the preceding conferences, or in separate consultations, and in whatever light they may have appeared to Mr. Bayard, it is certain that no such resolution as his words, taken separately, would import, was ever formed by the federal members from New England. I most firmly believe that there was not a man among them, who would not have voted for Mr. Jefferson, had his vote been necessary to prevent such a catastrophe. It appears, from Mr. Bayard's own statement, that there was but one who ultimately refused to give such a vote, for the incomparably less important purpose, of producing unanimity in their own proceedings.

The details given by Mr. Bayard, concerning the form of relinquishing the contest are not important; but I believe them to be correct. I say, "the form of relinquishing," because the substance, the relinquishment itself, appears, by his statement, to have been, and in fact was, done by general consent. It had been resolved on some time before it was done: as soon, indeed, as it was ascertained that col. Burr could get no votes from his own party, to give him an opportunity of doing which was the sole motive for making the stand, Mr. Bayard would have given the decisive vote alone for Mr. Jefferson, had it been necessary. This I know. He could have done it, because he alone held the vote of Delaware, and Mr. Jefferson, from the first, wanted but one vote. He would have done it, because he had resolved, from the first, that there should be a president. I also know, and he knew, that there were other individuals who, by reason of the division of votes in the representations of their respective states, had the same power, and were equally resolved to exercise it in the same manner, in case of need; and for the same reason.

This, I believe, was known to all from the beginning; consequently it was known to all, from the beginning, that there would be a president cho-

sen; and that no set of men had it in their power, if it had been in their will, "to go without a constitution, and take the risk of a civil war." Whatever vain and idle discourse of this kind, produced by the effervescence of the moment, Mr. Bayard may have heard, could have amounted to no more than crude and hasty expressions of individual passion. It is wonderful that a man, of his understanding and discernment, should have mistaken them, if he did indeed mistake them, (which his letter, taken altogether, and correctly understood, does not import), for a determination of any body of men acting in concert, or indeed of any individual.

I have entered into this tedious detail, my dear sir, in compliance with what I understood to be your wish, and with the hope that it may assist in protecting a most honorable and patriotic body of men, from the obloquy to which they may be exposed, in consequence of the publication and misconstruction of Mr. Bayard's letter. For such further information as I possess, respecting the conduct and views of the federal party, in relation to the contest between Mr. Jefferson and col. Burr, I refer you, as I have done before, to the depositions in an action, brought soon after the event, by colonel Burr against James Cheetham; in which several members of congress, of whom I was one, were examined on interrogatories.

Election of Jefferson and Burr, 1801.

Interrogatories to be administered to Robert Goodloe Harper, counsellor at law, esqr. of Baltimore, in the state of Maryland, a witness to be produced, sworn and examined in a cause now depending in the supreme court of judicature of the state of New York, between Aaron Burr, plaintiff, and James Cheetham, defendant, on the part of the defendant.

1st. Do you know the parties, plaintiff and defendant, or either, and which of them, and how long have you known them respectively?

To the first interrogatory, this deponent answereth and saith, that he doth know the plaintiff, and hath been acquainted with him, as far as this deponent can now recollect, from some time in the month of February, in the year one thousand seven hundred and ninetyfive: and that he does not know the defendant personally.

2d. Was you a member of the house of representatives in congress of the United States from the state of Maryland, in the session holden in the months of Jan. and Feb. in the year one thousand eight hundred and one?

To the second interrogatory this deponent answereth and saith, that he hath never been a member of the house of representatives in congress, from the state of Maryland; but was in the session of congress holden in the months of January and February, in the year one thousand eight hundred and one, a member of the said house, from the state of South Carolina.

3d. Was there not an equal number of votes for Thomas Jefferson and Aaron Burr, as president and vice-president of the United States, at the election for those offices in the December preceding, and did not the choice of a president, consequently, devolve on the said house of representatives?

To the third interrogatory, this deponent answereth and saith, that, to the best of his information and belief, there was an equal number of votes for Thomas Jefferson and Aaron Burr, as president and vice-president of the United States, at the election mentioned in this interrogatory; which equality was a matter of general notoriety: and

that, to his certain knowledge, the choice of a president from those two persons was declared, by the then vice president of the United States, after counting the said votes in the senate of the U. States, to devolve on the said house of representatives; which did accordingly proceed to make the said choice by ballot, as prescribed by the constitution of the U. States.

4th. Did not the said house ballot for the president several times before a choice was made; if so, how many times? Was not the frequency of balloting occasioned by an attempt, on the part of several members of congress, to elect the said plaintiff, Aaron Burr, as president? Do you know who such members were? If so, what are their names?

To the fourth interrogatory this deponent answereth and saith, that the said house did ballot several times before a choice was made. He doth not recollect now the number of times, but believes it was more than thirty. The frequency of balloting was occasioned by an attempt, on the part of several members of congress, to elect the said plaintiff, Aaron Burr, president, in preference to the said Thomas Jefferson. This deponent doth not now recollect the names of all the members who were understood and believed by him to ballot for the said plaintiff. He, this deponent, was of that number himself; as were also, to the best of his knowledge and belief, Thomas Pinckney, John Rutledge and Abraham Nott, three of his then colleagues; William Barry Grove, William Hill, ———— Dickson, and Archibald Henderson, from North Carolina, Josiah Parker, Thomas Evans, Samuel Goode, and Robert Page, from Virginia, William Craick, George Baer, junr. John Dennis, and John Chew Thomas, from Maryland, James A. Bayard, from Delaware, Robert Wain, Henry Woods, and John Wilks Kittera, from Pennsylvania; James H. Inlay, and Thomas Sinickson, from New Jersey, John Bird, Jonas Platt, and Thomas Morris, from the state of New York, one other member from that state whose name this deponent cannot certainly recollect, Theodore Sedgwick, Harrison Gray Otis, and Lemuel Williams, from the state of Massachusetts, with several other members from that state, whose names this deponent doth not now recollect; Roger Griswold, from the state of Connecticut, with all the other members from that state, whose names this deponent doth not recollect. Lewis R. Morris, from the state of Vermont, John Brown, and Christopher G. Champlin, from the state of Rhode Island, and all the members from the state of New Hampshire, whose names this deponent doth not recollect, except that of Samuel Terry, whom he believes to have been then a member. All the members belonging to the federal party united in supporting the said Burr, except Benjamin Huger, from South Carolina, who, as well as this deponent now recollects, voted uniformly for the said Thomas Jefferson: and the result was that, on all the ballotings, except the last, the states of South Carolina, Delaware, Connecticut, Massachusetts, Rhode Island and New Hampshire, voted for the said Aaron Burr, and that the states of Maryland and Vermont, were divided equally, and their votes lost.

5th. Do you know that any measures were suggested or presented, by any person or persons, to secure the election of Aaron Burr to the presidency? If so, who were such person or persons? Did he, the said Aaron Burr, know thereof? Was any letter or letters written, communicating such an intention? If so, were such letter or letters forwarded to him through the post-office, and by whom?

Has he not inform'd you, or have you not understood, and if so how, that he was apprised that an attempt would be made to secure his election?

To the fifth interrogation, this deponent answereth and saith, that no measures, to his knowledge, were suggested or presented by any person whatever to secure the election of Aaron Burr to the presidency, other than the resolution of the aforementioned members to vote for him in preference to the said Thomas Jefferson, as the constitution authorized, and their duty, in their opinion, required. This deponent doth not know or believe, that the said Aaron Burr was informed of this resolution, until it was declared by the votes themselves. He might have been informed that several members had declared it publicly, as far as it respected themselves; which was certainly the case; but he could not have known before the balloting began, that it would be adhered to by a sufficient number to prevent the election of Thomas Jefferson; because some members, whose votes were necessary for that purpose, either had not formed the resolution, or had not communicated it to those with whom they generally acted, till the day when the balloting commenced. And this deponent hath no knowledge of any letter or letters being written to the said Aaron Burr, or any other person, on the subject of this election, except a letter written to him by this deponent, bearing date on the 24th day of December, 1800; of which a true copy is hereunto subjoined. This letter was transmitted by post, in the usual manner, and this deponent supposes that it was received; but he does not know the fact, and has never heard a word from the said Aaron Burr, or spoken one to him, on the subject, since the said letter was written. This letter was never communicated to any person whatever, except Abraham Mott, one of this deponent's colleagues. The said Aaron Burr has never informed this deponent, nor has this deponent understood from any other person, that he, the said Aaron Burr, was apprised, that an attempt would be made to secure his election further than he might have inferred it from the above mentioned letter.

6th. Did he or any other person, (and if so, who) ever communicate to you, in writing or otherwise, or to any other person or persons to your knowledge, that any measures had been suggested, or would be pursued to insure his election? When were these communications made?

To the sixth interrogatory, this deponent answereth and saith, that no person ever did communicate to him, in writing or otherwise, or to any other person or persons, to his knowledge, that any measures had been suggested or would be pursued to secure the election of the said Aaron Burr, other than the resolution to vote for him, as above mentioned, in the answer of this deponent to the fifth interrogatory.

7th. Had not some of the federal members of congress a meeting at Washington, in the month of December, one thousand eight hundred, at which it was determined to support Aaron Burr for the presidency? Or if there was any meeting or meetings, to your knowledge, in respect to the ensuing election for a president of the United States, in the said house of representatives, what was advised or concluded upon to the best of your belief? Was not David A. Ogden, of the city of New York, attorney at law, authorized or requested by you, or some other member or members of congress, or some other person, and who, in particular, to call upon the plaintiff and enquire of him?

1. What conduct he would pursue in respect to certain cardinal points of federal policy?

2. What co-operation or aid the plaintiff would or would not afford towards securing his own election to the presidency. Or if you, or some other person, did not authorize, or request the said David A. Ogden, to make such communication to the plaintiff in exact terms, what, in substance, was such authority or request? Do you know, or was you informed, by the said David A. Ogden, or otherwise, that he, or any other person, had made the said communication to the plaintiff, or the same in substance? Do you know, or have you been informed, and if so, how? that the plaintiff declared, that, as to the first question, it would not be expedient to enter into any explanations, or words to that effect? That, as to the second question, New York, and Tennessee would vote for him, on a second ballot; and New Jersey might be induced to do the same, or words to that effect. Did you ever communicate with the plaintiff, or he with you, on the subject? Do you know any person who did communicate with him, and if so, what did he say? Did you not receive a letter, or letters, from Alexander Hamilton, of the city of New York, and the late secretary of the treasury of the United States, now deceased, in the months of January or February, one thousand eight hundred and one, or at some other time, and when, respecting the election of a president of the United States? Did he not communicate to you that the said David A. Ogden had been authorized or requested to see the plaintiff, for the purposes aforesaid? And what, in particular, were the contents of such letter or letters or communication? Do you know that any, and what measures were suggested or pursued to secure the election of the said plaintiff as president? And did the plaintiff know, or was he informed thereof, or what did he know, or of what was he informed? Had you any reason or reasons to believe that any of the states would relinquish Thomas Jefferson and vote for Aaron Burr, as president, in the said election in the said house of representatives, or that the said Aaron Burr calculated on such relinquishment; if so, which state, or states, and what was the reason, or reasons, of that belief.

To the seventh interrogatory this deponent answereth and saith, that there was a meeting of the members of the house of representatives, belonging to the federal party, at Washington, during the session of congress in which the above mentioned election took place, and before the balloting commenced; but, precisely at what time this deponent doth not recollect. At this meeting, all or nearly all the members of that description attended; and the objects of the meeting were to compare sentiments, and, if possible, to settle a plan as to the approaching election in the house of representatives. There were probably more meetings than one of this kind; and certainly were many conferences between some members. But at none of these meetings or conferences, as far as this deponent knows and believes, was any general determination made or expressed to support Aaron Burr for president. Far the greatest part of those who attended, and among the rest, this deponent and his colleagues, Pinckney, Rutledge and Nott, declared themselves in favor of that measure—but some refused to do so; and, in meetings of that kind by the federal party, the idea of binding the minority by the opinion of the majority, was always disclaimed, as far as this deponent knows or believes. This deponent has no knowledge that David A. Ogden, of

the city of New York, was authorized or requested, by any person whatever, to make any enquiries from the plaintiff. This deponent never spoke to him or had any intercourse or communication with him, on the subject of the election: and he, this deponent, is firmly persuaded that no person, who had authority to speak in the name of the federal party, or of any considerable number of individuals belonging to it, ever authorized or requested the said David A. Ogden or any other person, to make any inquiries whatever from the plaintiff, on the subjects mentioned in this interrogatory or any of them.

At one of the meetings above mentioned, it was indeed suggested by a member, that some steps ought to be taken, before Aaron Burr was supported, to ascertain what would probably be his conduct if elected, on some great leading points of policy; and that it would be proper to obtain some stipulations from him, which might bind him to pursue such a course of conduct as was deemed correct, but his suggestion received no support or countenance whatever: on the contrary, most of all those who were considered as men of influence in the federal party declared themselves decidedly against it; and insisted that it was wholly inconsistent with their principles, and with those principles by which the federal party professed to be governed, to enter into any bargain whatever respecting their votes, or to support any candidate on any other ground, than a conviction that, of those from whom the choice was to be made, he was the fittest person for the office. That they declared that, on this ground, and on this alone, they would give their votes for the said Aaron Burr; whom, moreover, they would deem wholly unworthy of their support and of the office, if they supposed him capable of entering into any previous stipulations for the purpose of securing his election. They further declared that they neither intended to render themselves in any degree responsible for the conduct of the said Aaron Burr, in case he should be elected; nor thought it consistent with their own dignity or with the honor of the federal party, to take any part in his administration, or in any manner to connect themselves with it, until it should have taken a settled course, substantially conformable to those principles by which their public conduct had always been governed: an event on which they did not rely, but which they considered as much more probable under him, than under the said Thomas Jefferson; and this greater probability was the sole ground on which they felt it their duty to vote for him in preference to the said Thomas Jefferson.

Among those who urged these principles the most warmly, were Thomas Pinckney, John Rutledge, Roger Griswold, and James A. Bayard. They were also supported on that and on every other occasion by this deponent, and appeared to be universally adopted. The idea of any intercourse, communication or stipulations with the said Aaron Burr, was, as this deponent then supposed, and now believes, wholly abandoned. This happened, as well as this deponent now recollects, while the said David A. Ogden was at Washington. This deponent saw that gentleman there, and sometimes conversed with him on indifferent subjects; but knew nothing of his business, and never spoke to him respecting the election of president; except perhaps to make to him, in the course of conversation, some of those general observations to which such an event always gives rise, and which were then in every person's mouth.

This deponent doth not know, and hath not

been informed that the plaintiff made any declaration whatever concerning the election of president, further than is contained in a letter, said to have been written by him to Samuel Smith, then a representative from the state of Maryland, which appeared in the public prints: neither had this deponent any communication with the plaintiff, nor the plaintiff with him, on the subject of that election, further than as stated above: nor does he know that any other person had such communication with the plaintiff, further than having seen, about that time, in the hands of Josiah Parker, then a representative from Virginia, a letter to him, said to be from the plaintiff, and containing, as far as this deponent recollects, some general observations respecting the election, by way of answer to some letter from the said Parker on that subject: but what those observations were, or what was their substance or general import, this deponent does not recollect; from which circumstance he believes that they were not very particular or important.

This deponent never did receive any letter from the late general Hamilton, respecting the election spoken of in this interrogatory, nor doth he know that any measures, other than he hath already stated, were suggested or pursued to secure the election of the plaintiff; or that the plaintiff had any information on that subject, further than this deponent has already stated.

This deponent had reason to believe that the state of New-Jersey, and probably those of Tennessee and New-York also, would probably relinquish Thomas Jefferson and vote for Aaron Burr as president in the said election; and that the state of Vermont and perhaps that of Maryland, would at length cease to be divided, and would vote likewise for the said Aaron Burr. Whether the said Aaron Burr calculated on such relinquishment of votes or not, is a point on which this deponent hath no means of forming a decided opinion, nor any reasons for entertaining a belief. He thinks it probable, from his general view of the subject, but not from any particular fact, that the said Aaron Burr had some expectation of such relinquishment on the part of a sufficient number of states to give him the election: and he, this deponent, is perfectly confident, from his knowledge of the transactions at that moment, and of the persons concerned in them, as well as from events of a public nature which took place immediately after the election, that it depended on the said Aaron Burr himself to secure those votes; and that had he used, with vigour and address, the means which were certainly in his power, and which this deponent is firmly persuaded were used against him, he would have obtained the votes of three more states, at least, and, consequently, would have been president.

As to this deponent's reasons for believing that some states would relinquish Thomas Jefferson, and vote for Aaron Burr, as president, in the said election, which he, this deponent, is called on by this interrogatory to state; they were founded on general calculations about the views, characters, principles, and probable conduct of certain individuals, and on general reports concerning their intentions and arrangements; calculations and reports which have been fully confirmed by subsequent and public events; but not on any facts proper to be given in evidence.

8th. Do you know any other matter, circumstance, or thing, which can be material to the defendant in this cause, if yea, set the same forth fully and particularly.

To the 8th interrogatory this deponent answereth and saith, that he doth not know any other matter, circumstance, or thing, which can be material to the defendant in this cause, further than he has stated in his answers to the foregoing interrogatories.

Interrogatory on the part of the Plaintiff.

Do you know any matter or thing that may be beneficial to the plaintiff on the trial of this cause? if so, declare the same fully and at length, in the same manner as if you had been particularly interrogated thereto.

To the interrogatory on the part of the plaintiff, this deponent answereth and saith, that he doth not know any matter or thing that may be beneficial to the plaintiff, further than is stated by him, this deponent, in his answers to the foregoing interrogatories on the part and behalf of the defendant.

Copy of the letter alluded to in the foregoing answers.
WASHINGTON, Dec. 24, 1800.

My Dear Colonel—The votes of Tennessee are come in, and decide the tie. The language of the democrats is, that you will yield your pretensions to their favourite; and it is whispered that overtures to this end are to be, or are made to you. I advise you to take no step whatever, by which the choice of the house of representatives can be impeded or embarrassed. Keep the game perfectly in your own hands, but do not answer this letter, or any other that may be written to you by a federal man, nor write to any of that party.

Your friend, sincerely,

(Signed)

ROBT. G. HARPER.

Public Documents

Accompanying the message of the president of the United States to congress, December 3, 1822.

THE NAVY.

Navy department, Nov. 30th, 1822.

The president of the United States:

Sir: In compliance with your request, I have the honor to transmit to you, herewith, sundry papers, numbered 1 to 5, inclusively, which contain the information desired.

No 1. List of piratical vessels, &c. captured by vessels of the navy of the United States.

No. 2 List of vessels of the navy of the United States, in actual service.

No 3. List of vessels of the navy of the United States in ordinary.

No. 4. List of vessels built and building, under the act for the "gradual increase of the navy;" and, also, a general view of improvements at the several building yards.

No. 5. Copies of correspondence between the commanders of our cruising vessels, and the Spanish authorities. All which is respectfully submitted.

SMITH THOMPSON.

No. 1. Statement of captures of piratical vessels, and boats made by vessels of the United States' navy in the West Indies.

Four piratical schooners, of about 40 tons each, and one sloop of 25 tons, in all carrying about 100 men, captured by lieut. com't. L. Kearney, in the United States brig Enterprise, at Cape Antonio, Island of Cuba, October 16th, 1821, in the act of robbing the American ship Lucies, American brig Aristides, and English brig Larch; burnt two of the piratical schooners; the other two, and the sloop, were sent into Charleston, S C. and condemned.

Schooner Moscow, captured by captain Robert Hently, in the sloop of war Hornet, Oct. 29th, 1821, sent into Norfolk.

A boat laden with goods, captured by lieutenant commandant Ramage, off Cape Antonio, Nov. 8th, 1821; took out the goods, and destroyed the boat; crew escaped.

A schooner of about 35 tons, captured by lieutenant commandant Kearney, 21st December, 1821; crew, about 25, escaped.

Six piratical vessels captured by lieutenant commandant Ramage, Jan. 7th, 1822; burnt 5 of them, and manned one, took three prisoners, and destroyed their depot, &c. on the coast of Cuba.

A large barge taken by gun vessel Revenge, 7th March, 1822; she was deserted by her crew, and evidently fitted for piratical purposes.

Three piratical launches and four barges, captured by lieutenant commandant Kearney, in the United States' brig Enterprize, at Cape Antonio, on the 8th March, 1822, destroyed.

Two piratical schooners, captured by lieutenants commandants Perry and Gregory, in June, 1822, three pirates prisoners.

Spanish privateer Palmira, alias Pancheta, captured by lieutenant commandant Gregory, Aug. 16th, 1822, sent into Charleston, S. C.

Five piratical vessels captured by captain S. Cassin, commanding the United States' ship Peacock, on the 28th and 30th Sept. 1822, burnt two; found 89 bags coffee concealed in the woods by the pirates: two of the vessels sent to New Orleans.

A Dutch sloop was re-captured from pirates by captain John H. Elton, commanding United States' brig Spark, in January, 1822, and the prize crew, seven men, were sent into Charleston, S. C.

Portuguese ship Mariano Faliero, captured by lieutenant commandant R. F. Stockton, in the United States' schooner Alligator, sent into Boston.

No. 2.—List of vessels of the United States' navy, now in service.

In the Pacific Ocean.

Ship Franklin, 74 guns,
Schooner Dolphin, 12 "

In the Mediterranean.

Frigate Constitution, 44 guns,
Sloop of war Ontario, 18 "
Schooner Nonsuch, 12 "

On the coast of Africa.

Corvette Cyane, 24 guns,

In the West-Indies.

Frigate Congress, 36 guns,
Corvette John Adams, 24 "
Sloop of war Peacock, 18 "
Brig Spark, 12 "
Schooner Alligator, 12 "
" Grampus, 12 "
" Shark, 12 "
" Porpoise,* 12 "
Gun boat No. 158, 1 "

Sloop of war Hornet, 18 guns, preparing for a cruise in the West Indies, at Norfolk, Va.

Brig Enterprize, repairing at New-York, for a cruise in the West Indies.

*And on survey coast Florida.

No. 3.—List of vessels of the United States' navy, in ordinary, exclusive of ships on the list of the navy commissioners; exclusive of list numbered 4.

Ship Independence, 74 guns,
Ship Washington, 74 "
Frigate United States, 44 "
" Guerriere, 44 "
" Java, 44 "
" Constellation, 36 "
" Macedonian, 36 "
Steam frigate Fulton, 30 "
Sloop of war Erie, 18 "

No. 4.—Vessels built and building under the law for the gradual increase of the navy; with a general view of improvements completed at the several building yards.

Columbus	74	} Launched in ordinary at Boston, with a roof over her, to protect her from the rain, sun, &c. } Launched, in ordinary at N. York, with a roof over her to protect her from the rain, sun, &c. } Launched, in ordinary, at Norfolk, and now covering with roofs, to protect them. } At Boston, nearly finished; house over her, and perfectly protected. } At Boston; frame raised; under a house, perfectly protected. } At Portsmouth, N. H. nearly finished; under a house, perfectly protected. } At Norfolk, Va. about half finished; house over her; perfectly protected. } At Philadelphia; keel laid; frame nearly out; house now building over, and probably raised by this time. } Launched, and hauled up on the inclined plane at Washington, where she now lies, under a house perfectly protected from the sun, rain &c. } At Washington, about half finished. } At Philadelphia, nearly finished, house over her; perfectly protected. } At New York; frame getting out, and nearly ready to raise. } At Portsmouth, N. H. in forwardness; house over her, perfectly protected.

One	74	
Potomac	44	
One	44	
One	44	
One	44	

The frames of the other frigates authorized to be built, excepting a few pieces yet to be delivered by the contractors, and nearly all the other materials, excepting the iron, are procured, and placed in situations where they will probably not sustain any immediate material injury.

Two steam battery frames are securely deposited under cover at Washington navy yard.

One steam battery frame is securely deposited under cover at New York.

The engines are put up, and in a state of preservation, at New York.

The building yards are in as good a state as the means placed at the disposal of the department would allow; but to erect the necessary ware-houses, repair wharves, cover some of the vessels now building, and to erect suitable sheds over the timber, for its preservation, there will be required for the year 1823, the sum of 150,000 dollars.

General view of improvements completed at the several building yards in 1821 and 1822.

At Norfolk—timber dock filled up, and house built over a new ship of the line.

At Washington—Inclined plane, with a house over it; large warehouse; sail loft and rigging loft.

At Philadelphia—Foundation of a new ship laid; house built over a frigate, and house now raising over a ship of the line.

At New York—Foundation of a new ship laid; house built over a frigate; low ground filled up to an extent to afford sufficient room to work on.

At Boston—Foundation of a new ship laid; a house built over a ship of the line; a blacksmith's shop erected; the timber dock piled and improved; cover placed over the frame of a 44; about two acres of ground levelled.

At Portsmouth, N. H.—Foundation of a new frigate laid, and a house erected over it.

[No. 5, embraces a correspondence of some length between captain *Biddle* and *general Mahy*, and between captain *Spence* and the governor of Porto Rico, and a few letters from our naval commanders to the navy department, giving an account of things which are already pretty generally known to the public.]

COMPTROLLER'S STATEMENT.

TREASURY DEPARTMENT,

Comptroller's Office, 26th Nov. 1822.

The president of the United States:

Sir: I had heretofore the honor to inform you that your letter, dated the 20th of Sept. last, addressed to the secretary of the treasury, had been referred to me.

In your letter, you request "that the proper officers might be directed to prepare and furnish a statement of the accounts unsettled on the 4th of March, 1817, the amount since settled, and the amount then remaining unsettled: distinguishing the several departments, civil, military, and naval, &c. from each other, with the proper classification in reference to the several appropriations."

In order to carry into effect the object contemplated in your letter, I addressed letters to the register of the treasury, and to the second, third, and fourth auditors, being the officers from whom the information you requested, was to be obtained; and have recently received reports from each of them, which I herewith transmit, together with a general or consolidated statement of the whole of the accounts contained in the several reports; which you will perceive comprehends not only the accounts unsettled on the 4th of March, 1817, the amount since settled, and the amount now remaining unsettled, but also the amount of moneys drawn from the treasury between the 4th of March 1817, and the 30th of September, 1822; the amount of those moneys settled for between those days, and the amount remaining unsettled on the last mentioned day; and I have annexed to the general report explanatory remarks.

I have the honor to be, with the highest respect, your most obedient servant,

JOS. ANDERSON, Comptroller.

STATEMENT, exhibiting the amount of accounts in the several departments, say treasury, war and navy, arising out of appropriations made by acts of congress, unsettled on the 3d of March, 1817; the amount of those accounts settled between the 4th of March, 1817, and the 30th of September, 1822; the amount of the unsettled accounts on the 3d March, 1817, remaining unsettled on the 30th September, 1822; the amount of moneys drawn from the treasury, between the 4th March, 1817, and the 30th September, 1822; the amount of those moneys accounted for or settled between those days; the amount of those moneys remaining unaccounted for, or unsettled, on the 30th September, 1822; the total amount of accounts unsettled on the last mentioned day.

		ON WHAT BOOKS	
Treasury War Navy	2d auditor 3d auditor	\$43,549,950 90	Amount of accounts unsettled on the 3d of March, 1817.
		5,228,478 39	Amount of unsettled accounts on the 3d March, 1817, settled between that day and the 30th of Sept. 1822.
	(a)	4,906,879 65	Amount of unsettled accounts on the 3d March, 1817, remaining unsettled on the 30th September, 1822.
		40,079,927 62	Amount of moneys drawn from the treasury, between the 4th of March, 1817, and the 30th September, 1822.
	(b)	836,917 80	Amount of moneys drawn from the treasury, between the 4th March 1817, and the 30th September, 1822; accounted for or settled between those days.
		321,998 74	Amount of moneys drawn from the treasury between the 4th March, 1817, and the 30th September, 1822; the amount of those moneys settled for between those days, and the amount remaining unsettled on the last mentioned day.
	(c)	4,367,694 21	Total amount of accounts unsettled on the 30th of September, 1822.

		157,199,380 96	
		137,501,451 12	
		19,697,929 84	
		29,591,409 69	

(a) This includes the sum of \$197,283, transferred from the books of the register of the treasury.

(b) This includes the sum of \$411,129 69, transferred from the books of the register of the treasury.

(c) This includes nearly \$200,000 transferred from the books of the register of the treasury.

These balances were originally brought on the books of the register of the treasury, from the books of the war and navy departments, for the purpose of instituting suit, at a time when, by law, only the certificate of the register, verified by the secretary of the treasury, could be received in court as evidence of the debt; but as the act of 3d March, 1817, for the prompt settlement of public accounts, made the certificate of the several auditors of the same validity with those of the register, it was concluded to re-transfer those balances to the departments, respectively, from which they were originally transferred; more particularly as some of the parties were still in service, and had farther accounts to settle in those departments.

Explanatory remarks respecting the situation of the accounts unsettled on the 30th September, 1822; of the balance which remained unsettled on the 3d of March, 1817.

(1) *Register of the treasury, \$836,917 80.* This consists of nearly three hundred personal accounts, which have been accumulating since the commencement of the government; partly of advances, in relation to which no accounts and vouchers have been rendered; and partly of balances, found due on settlements; authenticated transcripts of which advances and balances have, in nearly all those cases, been furnished, and suits instituted. The particular situation of each of those accounts, composing the above sum, will appear in the list which is in a state of preparation for the purpose of being laid before congress at the approaching session, conformably to law; except in those cases where the parties have been heretofore reported as insolvent, so as no longer to be required to be reported in those lists.

(2) *Second auditor, \$321,598 74.* This arises from advances made to officers and contractors, between the 8th May, 1816, and 3d of March, 1817, nearly all whose accounts have been reported to the agent of the treasury for suit. The particular state of each case will appear in the list required by law to be laid before congress annually, which list is in a state of preparation.

(3) *Third Auditor, \$4,367,694 21.* This sum is composed of more than two thousand personal accounts, and includes charges on the books of the late accountant of the war department, from the time of its establishment in 1792. The principal part of it, however, consists of advances made during, and shortly antecedent to, the late war, which are generally of the following description, viz:

1st. Of accounts settled, on which balances appear to be due to the United States.

2d. Of debits for money advanced, for which no accounts or vouchers have been rendered.

3d. Of debits for moneys advanced for which irregular accounts, or accounts only in part, have been exhibited, in some cases requiring legislative interference, and in others additional vouchers and explanations.

As to the two first mentioned cases, it is to be stated, that suits generally have been instituted; and, as to the last, that every exertion has been made, and is making, to effect settlements. The list of accounts unsettled more than three years, required by law to be laid before congress annually, and which is in a state of preparation, will shew the particulars in each individual case.

(4) *Fourth Auditor, \$4,367,269 10.* This consists of balances which have been accumulating since the first establishment of the navy department, in 1798, and which are due from persons not now in service, and of whose place of residence,

or of whose solvency or insolvency, nothing is known. In some cases, confused and informal accounts have been rendered by persons indebted, to a very large amount; in others the parties have been either lost at sea, or killed in action, and no accounts whatever rendered. A considerable part, also, consists of sums advanced to prize agents who have rendered no accounts for settlement. Transcripts to a large amount have been made out, and placed in the hands of the agent of the treasury, for the purpose of instituting suits; and further transcripts, in those cases requiring suits to be instituted, will be made out as early as practicable, and continued until the whole be completed.

Explanatory remarks respecting the situation of accounts remaining unsettled to the 30th of September, 1822, of the moneys drawn from the treasury between the 4th of March, 1817, and the said 30th of September, 1822.

(5) *Register of the Treasury, \$8,809,186 76.* This is composed of advances on account of appropriations drawn out of the treasury, under requisitions of the department of state; and of advances to the several officers and agents of the government, whose accounts, generally, are settled quarter yearly, and includes the advances to the presidents of banks, acting as commissioners of loans, on account of the principal and interest of the public debt, which advances alone constitute about \$6,100,000 of the above sum.

Of this sum of \$6,100,000, it has been ascertained that payments were actually made on account of the public debt, (exclusive of the payments made at the branch bank of the U. States at Washington,) anterior to the 30th of September, 1822, to the amount of the dividends for the quarters ending the 31st December, 1821, 31st March, and 30th June, 1822, to the amount of the following sum; credits for which could not, according to the regular course of settlements, be given until after the 30th September, 1822,

\$4,441,499 35
That it includes advances to the branch bank of the U. States at Washington, for paying treasury dividends; and the dividends returned to the treasury as unclaimed, by the several loan officers, to the amount of

120,789 13

That it includes advances to the several loan officers in the month of September, to meet the dividends for the quarter ending on that day; the payments on which commenced on the 1st of October, and will continue at the loan offices until the 30th of June, 1823, to the amount of

1,389,320 19

And that the balance consists of moneys in the hands of the different loan officers to meet the dividends for the quarters ending the 31st March and 30th of June, 1822, remaining unpaid, and still demandable at their offices,

148,491 33

\$6,100,000 00

(6) *Second Auditor, \$2,169,877 69.* The greater part of this consists of accounts in regular course of settlement, and of advances made to paymasters, and others, of the army. The residue consists of balances found due on settlements, for the recovery of which, suits have been ordered, and other measures taken.

(7) *Third Auditor*, \$4,120,232 91. The greater part of this is composed of accounts in regular course of settlement, and which may be classed under the following heads, viz:

1st. Accounts for advances to regular disbursing officers of the war department, (including those to the agents for paying pensions, which alone constitute more than two millions of this balance,) whose vouchers are rendered quarter yearly.

2d. Accounts for advances to states on account of disbursements during the late war, the vouchers for which have generally been rendered and examined; but the final settlements have been delayed for the production of further documents and explanations.

3d. Balances ascertained on actual settlements, and advances for which no accounts have been rendered; for the recovery of which balances and advances, suits have generally been instituted, or measures taken.

(8) *Fourth Auditor*, \$4,598,632 48. For the greater part of this, accounts and vouchers have been rendered, and are in a train of settlement. A part of it consists of advances on account of contracts for supplies, which contracts are not yet completed, and of advances to pursers, and other officers, who are now, and have been, at sea, for several years; and, consequently, have not rendered their accounts for settlement.

Seventeenth Congress—2nd session.

IN THE SENATE.

December 27. No matter of importance was decided this day—the bill to allow a draw-back on the exportation of cordage manufactured from foreign hemp, was, after some debate, laid on the table.

December 30. Mr. *Lloyd*, of Maryland, appeared to day and took his seat.

Mr. *John Taylor*, a senator from Virginia, in the place of Mr. *Pleasants*, resigned, also appeared, was qualified, and took his seat.

Among the petitions presented to day and referred, was one by Mr. *Rodney*, from the Delaware and Chesapeake canal company, praying the aid of the general government.

Mr. *Johnson*, of Kentucky, submitted the following resolution for consideration:

Resolved, That the committee on roads and canals be instructed to inquire into the expediency of authorizing the subscription on behalf of the government of the United States, of a certain portion of the stock of the Ohio, as well as of the Delaware and Chesapeake canal companies, or of any other company which has been incorporated within the United States for the improvement of internal commerce and navigation.

A bill was reported to abolish imprisonment for debt, and made the order of the day for Monday next.

Considerable time was spent, in a committee of the whole, on the bill to allow a draw back on the exportation of cordage, manufactured from imported hemp, which subject was introduced by Mr. *D'Wolf*. A debate of three hours took place.—Mr. *Talbot* proposed to extend a like drawback, or bounty, on cordage made of domestic hemp—but his proposition was not accepted—for it 15, against it 28. The senate adjourned without coming to any thing decisive on this subject.

December 31. After disposing of the usual minor business, the senate took up the bill making an appropriation for the repairs of the Cumberland road. Much variety of opinion existed as to the amount with which the blank should be filled—and the bill was postponed until Tuesday, to which day the senate adjourned.

HOUSE OF REPRESENTATIVES.

Tuesday, Dec. 24. When petitions were called for—
