Mr. *Dwight* said he was requested to present the memorial of William Thornton, Walter Jones, and one hundred and fifty other respectable citizens of the district of Columbia, in behalf of the Greeks. Whatever doubts this house might entertain in regard to the specific appropriation prayed for by the memorial in behalf of this interesting and unfortunate people—doubts which he felt himself constrained to say he entertained not less sparingly than any gentleman upon the floor; he felt assured that they would all concur in the opinion that the sentiments of the memorialists were not less honorable to them than accordant to the spirit of this nation. Indeed, he was quite sure he did not exaggerate, when he asserted that there was a sympathy, deep and universal, throughout the country, in behalf of this oppressed and injured nation. The memorialists, in reply to the charge of enthusiasm in relation to a remote and feeble people struggling for liberty against the power of the Ottoman empire, would have a right to call upon the house to recollect, that not half a century had elapsed since a less numerous, though more enlightened people, had successfully made war upon the most powerful nation on earth; and that too, for evils, which, compared to the massacre of Chios and the tyranny of those inhuman masters, were easily to be borne. Nor, sir, will the house need to be reminded, that not half a dozen years have elapsed since the intrepid and eloquent advocate of South American independence, stood in a small minority upon this floor, and upon a question too, which, at the last session, was carried in this house by acclamation. Indeed, but yesterday we were told that the recognition of South American independence was no longer opposed by the British government, because it can no longer be resisted.—Regard to the just interests of our own country, perhaps, ought to prevent our making the appropriation prayed for, but no considerations of delicacy or propriety could deter the memorialists from the expressions of feeling in behalf of the Greeks against a nation with whom we have never had negotiation, or truce, or treaty. The house would view, with an interest proportioned to the importance of the question, that, should liberty be now unable to maintain herself in Greece, the country of her earliest temples and longest worship, she would cease to have a footing on either of the three continents, or an existence in the governments of six hundred millions of people. He did not mean, by the remarks he had made, to commit himself to any ulterior measures upon the subject; but he thought it his duty not to refuse an application from so respectable a source, and particularly from a portion of our citizens who are unrepresented upon this floor. For the purpose of obtaining the opinion of the house as to the destination of the memorial, he would now move that it be read, and he hoped that some gentleman of more experience than himself would move for it such reference as the house might think proper to give it.

[The memorial which Mr. D. here presented is signed by one hundred and thirty-eight citizens of Washington and Georgetown, praying of congress "to appropriate two or three millions, in provisions, and whatever may be necessary to the Greeks, as an easy and honorable mode of acknowledging the aid, bounty, and obligation received from France in like circumstances."]

The memorial was read; when.

After some remarks from several members, the memorial was laid on the table, as mentioned in our last—and, at the close of this day's sitting, the house adjourned to Friday.

Friday, Dec. 27. Mr. *McLane*, from the committee of ways and means, reported a bill for the relief of John Babbet, proposing to release the duties on certain goods destroyed by a violent storm at Providence, in 1815. After some debate, the bill was referred to a committee of the whole—

On motion of Mr. *Williams*, of N. C. it was

Resolved, That the committee on military affairs be instructed to inquire into the expediency of allowing to the officers of the army a salary, or stated sum of money, per year, instead of pay and emoluments, as now allowed by law.

On motion of Mr. *McCoy*, it was

Resolved, That the committee of claims be instructed to report a bill, in addition to the act for the prompt settlement of public accounts, and for the punishment of the crime of perjury.

[Mr. *McCoy* stated his object to be, to get before the house again a bill which was before congress at a former session, but was not acted upon for want of time.]

Mr. *Watworth* submitted for consideration the following resolution:

Resolved, That the committee on revisal and unfinished business, be instructed to inquire into the expediency of reviving and continuing in force, for a further time, the acts of the 7th of April, 1798, and of the 24th of February, 1810, which provide for the relief of the refugees from the British provinces of Canada and Nova Scotia, agreeably to the resolutions of congress, of the 23rd of April, 1783, and the 13th of April, 1785.

After some remarks, the house refused to consider the resolution—59 to 45.

Mr. *Nelson*, of Maryland, presented the following resolutions of the legislature of Maryland:

By the house of delegates, December 13th, 1822

Whereas, the great national road leading from Cumberland to Wheeling, which is of such incalculable advantage in facilitating the intercourse between the Atlantic and western states, and which was constructed at a great expense, has already suffered from the want of that regular superintendence, and of those repairs, which are necessary to the preservation of such a work; therefore,

Resolved, by the general assembly of Maryland, That the senators and representatives of this state, in congress, be requested to use their best exertions to procure the immediate passage of a law, by congress, making a sufficient appropriation to repair the great national road leading from Cumberland to Wheeling.

Resolved, That the governor be, and he is, here by, requested to cause a copy of this resolution to be transmitted to each of the senators and representatives of this state in congress. By order:

JOHN BREWER, Clerk.

The *Speaker* presented a letter addressed to him by Edwin Lewis, of the State of Alabama, making certain charges against the hon. Charles Tait, judge of the United States for that district.

Mr. *Moore*, of Alabama, moved to refer the letter and documents to the judiciary committee.

On this motion, a desultory but not long debate ensued, which ended in the papers being sent to the judiciary committee, with instruction to examine them, and report their opinion on them.

The following is the letter of Mr. Lewis above referred to—

Mobile, Nov 26, 1822.

The hon. the speaker of the house of representatives.

Sir—I enclose several charges against judge Tait, which I wish you to lay before congress, together with the enclosed documents. If judge Tait is sustained in his tyrannical conduct towards me, as an American citizen, and in his mock proceedings in the African slave cases, I shall no longer boast of being a free citizen of a free country;

and I believe, from a fair impartial view of the proceedings in the case of the United States vs. English, for importing slaves contrary to the laws of congress, as well as in the cases of three vessels captured with African slaves, that no one will likely again attempt to prosecute, under the laws of the United States, made with a view to prohibit the slave trade; as the parties who have heretofore approached the court have had no success, but have been subject to every obstacle, vexation, delay, and disgusting mockery. And the secret reason that judge Tait refused me to be sworn in as an attorney was, no doubt, owing to my having expressed opinions opposed to the proceedings of the attorney for the United States. In fact, sir, what apology is there for all this delay, when the records prove, by the very claims of the parties filed, that the most aggravated cases of violations had actually been committed? Do not the claimants, Messrs. —, of Havana, whose names are made use of,* assert that they did ship, in and upon the American schooner Constitution, eighty-four African slaves, &c.? Is not this, sir, equal to a plea of guilty of the facts alleged? Why postpone the case at all, in the first instance? And why now stay the execution on the judgment, and order of condemnation on bonds, for \$150; in each case? The appeal to the supreme court was not carried up to the last term: whether it will be carried up to next term, or ever, is a very doubtful case with me. Thus, we see property, worth more than \$100,000, at the time of capture, yet unsettled, and a great part of it totally lost. And, in the prosecution of English, the proof was most positive. But what can justify the keeping the witnesses tending court, riding hundreds of miles, court after court, at the expense of government? Why not discharge the witnesses? I acknowledge the insulting indignity offered to me by judge Tait is irreconcilable to my feelings, and highly aggravated, when I am so well convinced it was to favor the importers of slaves, in violation of the laws of congress, as I defy judge Tait, and all the world, to bring any charge against me to be tried by a tribunal that would disqualify me. This, judge Tait was well aware of; or he would never have ventured this act of tyranny at the hazard of his reputation, if any other means had existed. I will add, sir, that, if judge Tait is to be sustained in this conduct, I have no hesitation in asking, what avail are all the laws of congress against the slave trade, without an efficient judiciary, without a judge, and officers of the court, who will execute the laws?

With great regard, &c. your very obed't servant,
F. LEWIS.

After the house had agreed to refer the matter to the committee on the judiciary—

The *Speaker* rose and said, that, in regard to these papers, whatever might be his personal feeling, he did not think that he had a right to forbear laying them before the house. He had sometimes felt hesitation in laying before this house papers forwarded to him as speaker; and in cases where the matter contained in them was obviously libellous, he had forborne. But a charge of the nature of this, though it may, as he trusted it would, turn out to be utterly libellous, might be otherwise, and the speaker thought he had not the right to withhold the papers from the house.

Monday, Dec. 30. Among the petitions presented this day—

* The slaves actually belonged to American citizens, several of whom I could name.

Mr. *Forward* and Mr. *Stewart* presented two from sundry inhabitants of the state of Pennsylvania, praying for the aid of congress in opening a water communication between the head waters of the rivers Potomac and Ohio.

After some debate on the subject generally, the following resolution, offered by Mr. *Rankin*, was agreed to—

Resolved, That the committee of ways and means be instructed to inquire into the expediency of making an appropriation adequate to the purchase of the reservations made in favor of the Creek and Cherokee Indians within the territory ceded to Georgia.

The resolutions submitted by Mr. *Cannon*, on the 11th ult. (see page 239), were all agreed to.

The *Speaker* laid before the house the following documents:

A letter from the comptroller of the treasury, transmitting a list of accounts, which have remained unsettled for three years prior to the 30th of September, 1822; a list of such officers as have failed to settle their accounts within the year, or have balances unaccounted for, advanced one year prior to the 30th of September, 1822; and an abstract of moneys prior to the 3d of March, 1809 on the books of the late accountant of the war department, and which have remained to be accounted for on the books of the 3d auditor of the treasury, on the 30th of September, 1822.

After considerable debate, the bill to confirm certain claims to lots in the village of Peoria, in the state of Illinois, was lost. This bill was resisted on general principles, and finally rejected by striking out the first section—59 to 57, being all the members present.

Mr. *Ingham*, of Pennsylvania, is appointed by the *Speaker*, a member of the committee of ways and means, in place of Mr. *S. Smith*, resigned.

Tuesday, Dec. 31. Mr. *Fuller*, from the naval committee, reported a bill allowing \$150 per annum, each, for five years, to the mother and sister of the late Wm. H. Allen, deceased; which was twice read and committed.

Mr. *Fuller*, from the same committee, to whom was recommitted the bill to incorporate the United States' Naval Fraternal association, reported the same with sundry amendments.

Mr. *Mitchell*, of S. C. after speaking of the mortality that had lately prevailed on board of several vessels of the United States, offered the following resolution—

Resolved, That the secretary of the navy be directed to inform this house, how many surgeons and surgeon's mates are on duty, and where: what are the annual receipts of each, and, when additional pay is received for extra service, what is the nature and extent of such service.

The resolution was agreed to.

Mr. *Hill* submitted for consideration the following resolution:

Resolved, That the committee on commerce be instructed to inquire into the present state of the trade and intercourse between the United States and the island of Hayti, and report what measures would be necessary to improve the commerce between those countries.

Mr. *H.* having made a few observations, the resolution was agreed to without debate.

Several other resolutions were submitted, which will be sufficiently noticed hereafter.

A motion prevailed to *re consider* the bill relating to the claims to certain lots in the village of Peoria; and, after much debate, the bill was ordered to a third reading. The house then adjourned to Thursday.

THURSDAY'S PROCEEDINGS—JAN. 2, 1825.

The senate did not sit this day.

In the house of representatives, the bill to continue the present mode of supplying the army of the United States, was passed. Sundry propositions were submitted, among them one by Mr. *Woodson*, embracing an extensive system of internal improvement by canals, which shall be noticed in our next.

CHRONICLE.

The U. S. ship *John Adams* had left Vera Cruz for Tampico, for the purpose of taking Mr. *Poinsett* on board. She had on board 400,000 dollars, and expected to receive 300,000 more at Tampico.

Baltimore. On Wednesday last an election was held in the city and county of Baltimore to supply the place of general S. Smith, in the 17th and 18th congresses of the United States. The result was as follows:

	City.	County.	Total.
For major Isaac McKim,	2067	588	2655
gen. Wm. H. Winder	2400	176	2576
John Barney, esq.	1430	588	1818

Majority for Mr. M. Kim 79. In one of the wards, however, the U. S. garrison at Fort McHenry gave 49 votes for Mr. Winder and 6 for Mr. Barney. A special return was made of these, and they are not included in the above; but, if included, Mr. McKim would still have a majority of 30.

Virginia. John Taylor, (of Caroline), is elected a senator of the United States, from this state, in the place of Mr. Pleasants, appointed governor and resigned. The votes were—for Mr. Taylor 111; H. St. Geo. Tucker 81; John Tyier 22.

Died, lately at Philadelphia, Dr. *Michael Leib*, for many years a leading political character in Pennsylvania; and on the 30th inst. Mr. *John Melish*, the celebrated geographer, in the 56th year of his age.

Genessee flour, brought to New York by the Erie canal, bears a price of 37½ cents per barrel above any other kind quoted, because of its superior whiteness.

A great dealer. According to the confession of Thomas Davis, who was lately executed in Alabama for counterfeiting, he had been 38 years engaged in that business, during which time he had made 600,000 to 1,000,000 of dollars.

Paupers. It is stated in the Philadelphia papers, that there are about fourteen hundred persons in the Philadelphia alms house. A proposal to introduce the discipline mill into that establishment, is said to be under consideration.

A live hog was lately received at New York from Troy, that weighed 1465lbs.

Wolves. Three of those animals were lately killed by a hunting party near Wilksbarre, Pen.

Massachusetts clergy. In the year 1773, there were 57 settled ministers in the county of Essex, three of whom are now living, viz: Joseph Dana, D. D. of Ispwich, Manasseh Cutter, L. L. D. of Hanilton, and rev. Daniel Fuller, of Gloucester.—The number is now 67, an increase of only 10 in 49 years. In Suffolk and Norfolk, not one now remains who was in the ministry at the first mentioned time. In Middlesex, Henry Cummins, D. D. of Billerica. In Worcester, Joseph Sumner, D. D. of Shrewsbury, and rev. John Cushing of Ashburnham. In the whole state of Maine but one—rev. Samuel Eaton, of Harpswell. Of nearly 400 settled ministers in Massachusetts and Maine, in the year 1773, but seven remain as settled ministers of the same churches of which they were the pastors at that time.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 19—Vol. XI.] BALTIMORE, JAN. 11, 1823. [No. 19—Vol. XXIII. WHOLE No. 591

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM. PAYABLE IN ADVANCE.

☞ The agents and friends of the REGISTER, are earnestly requested to do all that they rightfully and reasonably can, to have the old accounts settled up. There is an imperious—absolute necessity, that these little matters should be attended to. The rule to cook a *beef steak* is exactly applicable to our collections—

“To be well done—twere well, twere well done—quickly.”

FOREIGN NEWS. Nothing important has reached us from Europe since our last—except that the congress of Verona had not broken up, as was rumored, though the rumor had severely affected the British and French funds.

“POLITICAL HISTORY.” General Harper has sent us a corrected copy of his letter to col. Burr, which was inserted in our last, page 282, notifying us that “in the National Gazette, which the Register has followed, the word *decide*, in the second line, is changed to ‘divide,’ which obscures or rather wholly destroys the sense of the first sentence.” The error was corrected in the chief part of our last impression.

IMPORTANT DISCUSSION. In the REGISTER of the 23d Nov. last, there was published a valuable article on the export of specie, rate of exchange, &c. in which certain queries were put forth, with an earnest request that some one would answer them. A Boston “Merchant” did so, in a very ingenious essay, which we published in our paper of the 21st ult. Some of the remarks of the “Merchant” were noticed by “Necker” in the last “Register,” and we have now the pleasure to present an essay on exchange from the correspondent who originally sought the discussion, in which he attempts to overthrow the conclusion of the “Merchant.” The subject is one of great interest to political economists and statesmen—and, as the people seem more inclined just now to *think* than they were formerly, we have no doubt that these essays have been and will be extensively read.

An article on revenue and *ad valorem* goods, by our correspondent T. shall appear in our next.

CONGRESS. No important business has yet been transacted in congress, unless in relation to acts for the suppression of piracy. The session can only last seven weeks longer, and it is not likely that any matter of great interest will be decided upon. An important report, however, may be expected from the committee of ways and means, for amending the tariff with a view to revenue—and we learn also, that the committee on manufactures made a report on the subject with which they were charged, on Thursday last.

We are informed that the electioneering fever was rather on the decline—it seems that an attempt was made by some to get up a caucus to nominate a president, but it was abortive; and it is now thought that the members of congress will kindly give leave to the people to think a little on the subject, at least until the next session, before they will impose such a nomination on them—for which respite we are very thankful!

COM. PORTER. It is stated that this enterprising officer, having obtained a steam boat suited to his purpose at New York, and collected his little fleet at Norfolk, will soon be prepared to act against the Cuba pirates. He will have with him, in all, ten or twelve small vessels of easy draught of water, so fitted as to enjoy every advantage of rapid movements by sailing, rowing, &c. A full company of marines will be attached to the expedition—and all that can be done, will be done, and with all possible promptitude.

In resigning his seat at the navy board to take charge of this matter, the gallant commodore has given an instance of his devotion to the service that ought not be passed over lightly. He has surrendered a place of honorable ease, the duties of which were chiefly to be performed at the seat of government where his family is settled, to encounter the uncertainty that must belong to all military expeditions, as well as the hazard of battle, with bands of outlaws whose force is not known and whose resistance must be desperate, if escape is impracticable. For this, he deserves the thanks of his country; and if the measure of his success equals that of his zeal, we shall soon have such an account of his proceedings as will do honor to the American name.

☞ The pirates are still busy—they have lately plundered several vessels, after using the officers and crews with great barbarity. They were even so impudent as to attempt to cut out a schooner in the harbor of Havana—but they were defeated with the loss of several lives: yet it seems that the British have suddenly withdrawn the force they have had in those seas for the protection of their commerce! The frigate *Seringapatam* and brig *Redwing* have sailed direct for England, the other vessels have gone to Jamaica. Much surprize is expressed at the procedure.

GEN. SMYTH AND MR. ADAMS. Some time ago, gen. Smyth, one of the representatives in congress from the state of Virginia, put forth a long address to his immediate constituents, giving his reasons why he should vote against the elevation of Mr. secretary Adams to the presidency, if the choice should happen to fall on the house of representatives. To this address, Mr. Adams has made an able reply, through the Richmond “Enquirer” of the 4th inst. Many things stated by this gentleman are of deep public interest—and we would gladly give a place to the papers on both sides, if we could regard them in any other light than as an affair between two private persons. If we had published gen. Smyth’s address, the reply would have appeared in course. We shall wait until gen. Smyth makes a replication, as he probably will do, and then, having a view of the whole ground, may feel disposed to record the articles.

THE COUNTERFEITERS, arrested some time ago at Wilmington Del. have been tried, and four men and one woman found guilty of conspiracy, &c. They were sentenced to pay a fine of five hundred dollars each, to suffer one year’s imprisonment, and to stand in the pillory half an hour on a Friday in each and every month. The ring-leader of this

gang was recently pardoned and discharged from the Pennsylvania penitentiary. The woman is handsome, and about twenty years of age.

MONEY. The late canal loan of New-York, of 300,000 dollars, bearing an interest of 5 per cent. was taken by the Farmers' and Mechanics' bank of Albany, at \$99 in cash for 100 in stock.

PUBLIC BUILDINGS. We have the annual report of the commissioner of the public buildings at Washington. From the 8th of May to the 7th of Dec. 1822, the following sums were expended—

On the centre of the capitol	113,040 74
president's house and culvert	2,974 73
capitol square	780 25
	116,795 72

A letter from the architect of the capitol details the progress made in the centre building. The dome has been raised, and the ranges of committee rooms nearly finished—the western projection completed, &c. It is a mighty edifice, and the great rotunda will, probably, be one of the most magnificent rooms in the world, appropriated to public purposes. Much money, however, will yet be required to complete the design, for it is "vasty."

BANK OF THE U. S. On the 6th inst. the directors declared a dividend of 2 1/2 per cent, for the last six months. The stock is quoted at 102 3/4 to 1 1/3, dividend off.

The following persons were appointed directors, at Philadelphia, without opposition:

James C. Fisher, Thomas P. Cope, Henry Pratt, John Culter, Robert Flemming, Joshua Lippincott, John Bohlen, Daniel W. Coxe, R. M. Whitney, *Thomas Cadwallader, *Richard Willing, *Alexander Henry, Joseph Hemphill, all of Philadelphia; Simon Magwood, of S. Carolina; William Patterson, of Maryland; Robert Gilmor, do; *Thomas Knox, of New York; *Walter Browne, do; *Jas. Lloyd, Massachusetts; *Jonathan Mason, do;

The following, as has already been announced, have been appointed by the government.

*Nicholas Biddle, Philadelphia; John Connelly, do; *E. I. Dupont, Delaware; *J. M'Kin, Baltimore; *Henry Eckford, New York.

Those marked [*] are new directors.

At a meeting of the new board, Nicholas Biddle, esq. was elected president, in the place of Mr. Clieves, resigned.

"EQUALIZATION OF THE EXCHANGE!" When we recollect the *professions* of those who got up the bank of the United States, and the *practice* of the officers and agents of that institution, on various occasions since its establishment—how great is the amount of promises violated and of hopes disappointed, that presents itself to our view! Instead of being a *national* institution conducted on liberal principles, and with a regard to the public convenience, it became a mighty broker's office, and dealt, as it were, in "the bones and sinews of men," that it might be made profitable to a contemptible and profligate few. But, it is probable that we shall have more to say about these things hereafter. Our present design is only to mention an occurrence that recently took place in Baltimore.

Some days, or weeks since, one of our most wealthy and respectable merchants, paid certain of his bonds, due to the United States on account of duties, at the office of the bank of the United States

in this city. On Saturday last, (as is the custom of the merchant about once a month), he directed his clerk to gather up his debentures, and obtain the collector's check for their aggregate due. The collector drew his check on the office, which check was deposited, as usual, in one of the state banks in which the merchant keeps his account, as money. On Monday, when the customary exchanges took place, the cashier of the office refused to pass said check to the credit of the local bank, or pay it otherwise than in *foreign* notes—that is, notes of the bank of the United States or its branches, not payable in Baltimore,—on the supposition, or the fact, that the merchant had paid his bonds in such paper. In this condition, the check was returned to the merchant, and he presented it to the collector—the latter said he had no money to meet it except such as was deposited in the office, and that he could not pay it: it was then placed in the hands of a notary, who, in ample form, *protested the office and the collector for the non payment of the check*, and so the affair rests at present.

To explain this matter more clearly, it may be needful to say, that the bills or notes of the bank of the United States, unless payable in Baltimore, are not regarded as *bank money*, though all, or nearly all, the state banks receive small parcels of them on deposit from their customers, by way of accommodation, in which great facilities are afforded to men in business. Of these notes thus accepted they must be relieved, or be compelled to cease the receipt of them; and hence those more immediately interested in the local banks, pretty generally, perhaps, make it a rule to pay their bonds in such notes, if to be had in those banks, it being provided by law that said notes shall be received in the payment of debts due to the United States: and this is the *condition*, one of the little inconveniences that the bank of the U. S. is subjected to, in consideration of the many advantages which it enjoys. The government may agree to receive what it pleases, (as any individual may), into its treasury as money; but has no power to impose any thing but specie on private persons as money—else the operation would at once be to make the bills of the bank of the United States, though payable on the summit of the Rocky Mountains, a **LEGAL TENDER**. The people are not prepared for this—the collector's check was payable to bearer, and debentures also are transferable property; so either of them represents current money, and should so be paid.

We regard this proceeding as a violation of the understanding on which the mammoth bank was instituted. What we can say on the subject may have but little effect, such is its present mastery over the country; but still, we apprehend that it is measurably responsible to public opinion and the eternal fitness of things. It is rightful that all its steps should be closely watched—and much caution should be observed that the few advantages secured to the people to balance to the great advantages conferred on the corporation, are strictly maintained. More hereafter.

AMERICAN MANUFACTURES. The Providence Journal of the 30th December, has the following gratifying paragraph:

We learn that the orders now in this place, for the purchase of brown cotton cloths, for exportation to foreign markets, anticipate the actual manufacture of those cloths. The steady prices maintained, notwithstanding the additional machinery which has lately been put into operation, form a

pretty convincing proof that our information is correct. It could not be otherwise, when single invoices are called for, of from one hundred to one hundred and fifty bales each. It is now almost a year since the first considerable shipments of domestic cotton cloths were made to South America. The increased and increasing calls for such goods, at the present moment, when the results of first adventures are ascertained, justify the conclusion, that those shipments were profitable.

If the ample protection afforded to the manufacture of cotton goods, has accomplished so great a purpose as to render them articles of export; by what sort of reasoning is it that we should suppose a like degree of protection, afforded to other manufactures, would not operate in a manner equally advantageous?

PENNSYLVANIA. The present house of representatives of this commonwealth is composed of

Lawyers	12
Merchants	10
Physicians	3
Farmers	52
Manufacturers and mechanics	10
Surveyors	2
Tavernkeepers	4
Without any profession	7
	--- 106

Among this number are 17 bachelors.

SOUTH CAROLINA. The legislature of this state has adjourned. Among the laws passed, were the following—New charters for the bank of South Carolina and state bank, have been granted upon the payment of the sum of 20,000 dollars each. A bank is chartered at Hamburg, with a capital of 500,000 dollars, and appropriations have been made for opening the navigation of Wappon, Bull and Wall's Cuts. A law has passed allowing the enlistment of 150 men, to serve as a standing body for the protection of Charleston, the suburbs and Charleston neck. A state loan is to be opened for 200,000 dollars, at 5 per cent. interest. The owners of slaves executed for the late negro plot, are to receive the usual compensation for such losses under the law, \$122. The owners of slaves condemned to transportation out of the United States, are left to carry the sentence into execution at their own expense. Pinceel is to receive \$1000 and to be exempt from taxation, and Scott is to receive 500 with a like exemption. Col. Prioleau's and major Wilson's slaves are to be freed with the consent of their masters, and to receive \$50 per annum for their lives.

ALABAMA. Limestone county, in this state, contained at the last census, 9871 inhabitants, of whom 2919 were slaves. The cotton crop of 1821 amounted to 2,100,000lbs. ginned cotton, or 6,000 bales of 350lbs. each.

The land in cultivation this year, (1822—

In cotton	11,385 acres:
corn	14,982
small grain	1,291

Total 27,678

There are in this county 2204 horses and mules, 7667 neat cattle, 2282 sheep; 1594 spinning wheels and 469 looms; and the cloth manufactured last year was 112,445 yards. These facts are derived from the Huntsville Republican.

William R. King has been re-elected and William Kelly elected, senators of the U. States from this state. The presidential election seems to have thrust itself into this matter. Mr. King was opposed by William Crawford and, after seven ballots, was elected 38 to 35, and Mr. Kelly had a majority of only one vote over John McKinley.

NEWS PAPERS taken by the Indians. Among the letters lately received on a certain day at the office of the "National Intelligencer," was one from a person who says that he is "what the vulgar term a full-blooded, Cherokee;" and from his name and residence we have no reason to doubt him. His letter is well and correctly written, enclosing money to constitute him a subscriber to this paper.—He concludes his letter as follows: "The improvement of the Cherokees in civilization is such as to warrant the anticipation that you may have "more subscribers from this quarter." *Nat. Int.*

A NEW LOCK has been invented by Samuel Goodwin, of Philadelphia. It has received the most decided approbation. The inventor calls it a "trap lock." It is thus spoken of in the Democratic Press: "There is a singular advantage in this lock; it is so contrived that any key but its own, being introduced into the lock, is made fast and cannot be removed by the knave, who for dishonest purposes had introduced it—Notwithstanding its simplicity, it is so constructed that if five hundred locks and keys were made, no key would open any one but the one for which it was originally made—It is a perfect safeguard against pick-locks."

BRITISH REVENUE, from the year ending 10th of October 1822.

Customs	£ 9,470 709
Excise	25,846,322

FROM A MASSACHUSETTS CORRESPONDENT.

RIGHTS OF CLERGY.

MR. NILES—In a preceding essay under this head, I proved, as I think candid men will admit, that the new constitution of the state of New York, by excluding the clergy from all offices, civil and military, violates the spirit of the constitution of the United States, and a vital principle of republican government; that is, the principle of equal rights. Eligibility to any office of honor, trust or emolument, I hold to be a right belonging to every free male citizen, "paupers, vagabonds and fugitives from justice, excepted." These only are excepted by the constitution of the union, and this exception is grounded on correct moral principles. The exception at once provides for the common safety, and fixes an ignominy on the character of bad citizens. The section of the New York constitution in question, under a plausible pretext, dooms the clergy to the grade of outlaws and vagabonds. This is a blot on the fair fame of the republic, at which tyrants may point with scorn of our pretensions.

But the New York constitution plasters over the proscription of the clergy with a few smooth words. It says "the ministers are, by their profession, dedicated to God and the care of souls, and ought not to

be diverted from the great duties of their functions." Specious pretext, indeed! What a wonderful and gracious concern for the care of souls? If all the lawyers in the state had put their heads together, a more crafty plan could not be devised to monopolize all offices of honor and emolument among themselves. The pretext, probably, satisfied many honest unsuspecting minds.

We will examine the pretended reasons for this bold proscription. Is "dedication to the service of God," a reason to justify a state for stripping more than a *thousand citizens* of the privileges and immunities of citizens? Is not every Christian, by his profession, dedicated to the service of God. Is the service of God incompatible with the duties of all civil and military offices? This is a new discovery, that may well astonish every understanding republican and every Christian in the union.

The *care of souls* comes last, as the great reason for proscription. The phraseology of this reason is quite sanctimonious, indicating a deep concern for souls. What, in plain English, is the care of souls other than to instruct and persuade men to their duty as members of society, that thus they may serve God and find the way to heaven? I had hoped that the old superstitious notion of the Romish church, that the clergy were to be used as 'scape goats, to bear off the sins of the people, had not prevailed to such extent in this enlightened land. I had hoped that the absurd pretence, that religion is a concern distinct from the common duties of life, had been exploded. There never was a policy adopted so dangerous to liberty, both civil and religious, as that which sets apart the clergy as an order of men distinct from the community. It is the most direct way to secure to them an undue and dangerous influence. A perfect level with their fellow citizens, is the only ground consistent with the christian system or with the principles of republican government. The duties of ministers are the duties of men, having the same objects in their ultimate view as the duties of instructors of youth, lawyers, civilians, physicians, rulers and men of various callings. When any man, in any office or station, ceases to act under the impression of future accountability, the trust reposed in him is in dangerous hands. The clergy would have an equal right with that asserted in the constitution of New York, were their power sufficient to adopt a constitution, declaring that the other classes *ought not to be diverted from their callings*. The physician has the lives of the people in his hands; and on life depends all the vast concerns of this and the coming world. The cause of the poor, the persecuted, the afflicted and oppressed, the widow and fatherless, is often committed to the lawyer, and his responsibility is solemn, therefore he ought not to be diverted from the functions of his office. The ruler has the concerns of a state, on which are pending the causes of life and death, entrusted to his care; therefore he ought not to be diverted to pursuits of trade, of common business or speculation. Thus the clergy might find some smooth pretext to proscribe the various classes.

Government is a common concern of all classes in a community; the interests of religion are actually under the controul of civil government. All religious institutions are continually aided or opposed by the operation of the laws of the state.—The great characteristic of our Saviour's example was, that "he went about *doing good*" His ministry was not confined to any set forms or functions—He gave an example in the character of a dutiful child, of an industrious and useful citizen during

the greatest part of his life, and afterwards of a great variety of benevolent actions. And, if the government under which he lived, had not been corrupt and tyrannical, I see no reason why he might not have left to the world an admirable example as a legislator or a judge, in civil affairs—Although he declared his kingdom was not of this world, it evidently had regard to all that relates to the welfare of man in the present state. The great business of ministers is to do good, and I deny that any power on earth has a shadow of right to limit their sphere of doing good. They may promote the interests of religion as extensively and as surely, by imparting a salutary influence through the medium of civil office as in any other way for the benefit of society. I hold that the clergy ought in all respects to be amenable to the laws like other men. But I must abandon this position, if I admit a power to abridge their rights and privileges. The danger arising to any state by creating distinct classes of citizens with privileges, either diminished or increased beyond the measure common in the community, must be manifest. If the clergy are robbed of their rights, their professional duties will be affected by their sense of injury. And indeed, they may now with propriety say to the people of New York—If you are so unwilling that we should be diverted from the functions of our profession, you will double your contributions for our support, that we may not be diverted to *secular* concerns. God has formed every creature with a nature to resist encroachment and wrong. The mild and merciful spirit of the gospel remonstrates against being "beaten openly uncondemned."

The clergy have been much stigmatized as a class of men whose influence is dangerous to the welfare of states. Their power to do evil has always been in proportion to the prevalence of superstition, that attaches to their character a false sanctity as a distinct class of beings. And it has ever been found in the character of all classes of men, that the possession of an unequal portion of power, would produce a disposition to try the operation of that power.

The evils that have arisen in the governments of the old world, have been owing to that policy that vested the church, in matters of religion and conscience, with distinct and sovereign prerogatives, thus giving the clergy an opportunity to do toward the laity much the same as the laity of New York have done toward their clergy. If the laity say to the clergy, your calling forbids that you should be entrusted with *civil* power, the clergy may, with equal propriety, say to the laity, your calling forbids that you should be entrusted with any *ecclesiastical* power. A hierarchy is established of course, and the rights of common christians are compromised. Religion herself receives a wound and civil liberty languishes in a decline.

Public bodies, as truly as individuals, when they have power do strange things. This fact appeared in the proceedings of the late convention in Massachusetts, many of which were rejected by the people. And, thanks to heaven, remedy is found against unequal and unjust measures, by a frequent recurrence of political power into the hands of the people. If not deceived by designing men, their decisions are almost universally in favor of liberty and equal rights.

With sincere regret have I felt constrained to protest against one instance of example in a great state, whose public spirit and high-minded patriotism have so often merited the applause of the union.

EQUAL RIGHTS

The rate of Exchange.

MR. NILES—I beg leave, through you, to offer to the Boston "Merchant" my thanks, for his answers to my questions. It is a pleasing omen that merchants are willing to give information, to meet us with facts and reasons—instead of mere assertions and general declamation. Fully confiding in the candor of the Boston "Merchant," I will question none of his facts or statements, and proceed to the discussion of the question, with the high gratification arising from the belief that my opponent has stated facts with as much truth as he has reasoned on them with ability. I shall question nothing but his conclusions.

The "Merchant" says—1. That the fact of the exportation of specie, greater than the importation, is presumptive evidence of a prosperous commerce—that is to say, as a bad trade checks exportation, a prosperous trade promotes it.

2. That it is absolute evidence that the prospect was considered good.

3. That the accumulation of specie has always followed the stagnation of trade, and the revival of trade has always been the signal to set this accumulation afloat, in search of profitable employment.

Adopting his statement of the specie in the Boston banks as correct, and likewise as indicating the state of other banks throughout the union, I would ask the "Merchant" what he means by what he calls "the disastrous year 1819." On the 1st of January of that year, the specie in the Boston banks was only 541,000 dollars, nearly 100,000 less than in any year mentioned in his table. On his own principles, it was "presumptive evidence of a prosperous commerce," and "absolute evidence that the prospect was considered good"—yet he admits there was a paralysis in commerce in that year. These admissions at once overthrow his whole theory. In June last, he states the specie to have been \$430,000, and we all know that the numerous bankruptcies in Boston, at that time, indicated any thing but a flourishing commerce. He states that there was a severe pressure for money—that pressure must have been on the merchants. He says the pressure continued scarcely a month—will he inform me whether that pressure was removed by draining still further, or by replenishing the vaults of the banks? He says "the effect of these occasional periods of pressure is salutary; they keep the currency sound and purify the commercial atmosphere"—what does the "Merchant" mean? he seems, to me, to have forgotten himself: the excessive embarrassment felt in the commercial atmosphere of Boston amounted almost to suffocation—even respiration was difficult for the want of specie; and the "Merchant" well knows that life and action was infused into the system by its importation and not its exportation. Their commerce had been, as in 1819, paralysed by exhausting the country of the precious metals, and, for the same reasons, the European market had become glutted with our produce—the demand and price had both been diminished; commerce no longer consisted in the exchange of equivalent articles—it was carried on, on our part, by the export of specie, and, by other nations, by the export of merchandise: our merchants were obliged to procure their dollars at great expense—goods were plenty, dollars were scarce; they were obliged to make sacrifices on their goods to procure money, and, as these goods were bought in countries where money was plenty and goods in demand, the merchants had the double disadvantage

of purchasing specie where it was scarce and dear, and of sending it to a market where it was plenty and depreciated—of buying their goods where they were in demand, and bringing them to an overstocked market. This was the true cause of that disastrous paralysis in commerce in 1819, and will be found to have the same effects in the still more disastrous year of 1823. I will ask the "Merchant" if, in June last, a dollar would not have commanded as many yards of cotton in Boston as in Liverpool? and, if so, where was the merchant's profit? With one more question I will close this part of the subject—What does the "Merchant" mean by "purifying the commercial atmosphere?" Had it become so corrupt or infected in Boston, as to require the dreadful pressure of June last to purify it? He ought to inform us of the nature of the infection, its causes and remedy—so that others may avoid it. I had always thought the commercial atmosphere of Boston was pure; that it did not require the healing process of bankruptcy to make it salutary; but, when a Boston "Merchant" avows the contrary, it is time for the nation to be on its guard against the causes of its pollution, as well as to prevent its becoming contagious.

I am pleased with the ingenuity of the "Merchant" in replying to my question on the subject of exchange. It was this—"Is a rate of exchange, 13 per cent. above par, advantageous, or otherwise, to the operations of commerce?" He denies the fact, saying that it is utterly impossible that such a rate of exchange with England can exist; and attempts to shew the actual state of exchange with that country. He says, "the par of exchange between two countries can only be ascertained by ascertaining the quantity of the precious metals represented by their respective currencies." By this rule, if the coin of both countries represented the same quantity of silver—that is, if a dollar in each represented an oz. of silver, the difference of exchange would be only the freight and insurance on the transportation from one country to the other—and thus the "Merchant" concludes the present rate of exchange is at par, because 100 ounces of silver will produce in Boston a bill on London, which will produce the 100 ounces of silver. This would always limit the rate of exchange; for an ounce of silver is worth as much in Boston as in London, deducting the expense of transportation to convey it to London, and exchange would never fluctuate beyond the fluctuations of freight and insurance. There would be the same results, let the currencies of the two countries represent different quantities of silver—for ounce will buy ounce, less the transportation. The "Merchant" must be mistaken in his definition of exchange. I will not contend with him about technical phrases; if he puts the question on that, I yield to him that exchange is now at par, and can never, in the nature of things, be otherwise. I take the meaning of exchange to be its common acceptance in the commercial world, at the coffee house, at the brokers, in prices current, and in common parlance. A merchant asks another, what is exchange on London to day?—the answer is 12½. This does not mean that it costs so much to carry gold and silver to London. If we look at a price current to know the rate of exchange with any country, and we find bills on London 12½—Amsterdam 41 cents per guilder—Hamburg 85 cents mark banco. It does not mean what is called the real par of gold against gold, or silver against silver—the custom house par is settled by law; but it means the actual exchange resulting from a variety of causes which are mentioned by Mr. Adams, in his most admirable

report on weights and measures, page 145:—"The actual exchange is never regulated by the medium, or any other par, but by the relative value of bullion in the two countries at the time of the transportation; by the relative proportions between the value of gold and silver established by their respective laws; by the prohibitions of exportation of bullion sometimes existing, and the duties upon its exportation levied at others; by the laws which, in some countries, make gold alone, in others, silver alone, in others again, both silver and gold, legal tenders for the payment of debts; by the existing condition of the commerce of the two countries, and of each of them with all the rest of the world; and last, and most of all, by the substitution of paper currency instead of the precious metals, in one or both of the countries, and the existing depreciation of the paper." Exchange between two countries is the result of the operation of these causes. This is the kind of exchange of which common people speak, and which is its accepted meaning in all commercial language—and to this kind of exchange every one refers when he says exchange on London is 12½ advance. Advance above what, let me ask the 'Merchant'?—From his calculations, he must mean the custom house par—but, be that as it may, his answer does not meet my question. I agree with him fully, that real par cannot amount to 13 per cent.; for silver or gold can be transported at less expense—nor custom house par, for that is regulated by law; nor intrinsic par, because that depends on the purity of the metals. I mean the actual, commercial, practical par, which the 'Merchant' has not thought proper to notice. My question alluded to one kind, his answer to another; with the adroitness of a veteran, he avoids the point of attack. But, as we both write for the public, they must understand this subject as well as the 'Merchant,' and me understand each other. The fallacy of his remarks consists in this—he refers to a par of exchange which does not exist in practice, and thus artfully draws the public attention from the actual par of exchange, to one existing in his own fancy merely. To meet his views, the materials of exchange must be the same—silver for silver, gold for gold, ounce for ounce; but, between this country and England, these are not the materials for exchange. In England, debts are payable in bank paper; in the United States they are payable only in gold or silver; the pound sterling represents a determinate quantity of gold or silver, and it represents a one pound note; in America a dollar represents a given quantity of silver or gold only: thus—a debt due to an American in England, can be paid in paper: a debt due to an Englishman in America, can only be paid in specie. "So that, at this time, the materials of exchange between the United States and England, are, on the side of the United States, gold or silver, on the side of Great Britain, bank paper"—(Mr. Adams' report, page 144.) No one knows this better than the Boston 'Merchant,' and yet he has dwelt entirely on that par of exchange which can only exist where the materials are the same. In illustrating his position, he assumes the remittance of 100 ounces of silver to London, when no such thing exists in practice. Debts are contracted, bills are payable in pounds sterling, which means in gold, silver or bank paper—but, in buying a bill or remitting the money, we can use only gold or silver; thus all the various causes enumerated by Mr. Adams, have their operation to keep exchange in a constant fluctuation; and, at the present time, to bring it against this

country 12½ per cent. It is not necessary to make calculations between the real, the custom house, and the intrinsic par of exchange. I will adopt the custom house, that being fixed by law—by that standard, a pound sterling is fixed at \$4.44 4-10. This is the legal par—thus, an invoice of goods of £1000 sterling, pays duties, at our custom house, on \$4,444 44—so, a man, sued in the United States for £1000, must pay \$4,444 44. Now, it is easy to ascertain the actual exchange between the United States and England—a Boston merchant owes in London £1000; he provides the money in Boston to pay it by a bill to that amount—the merchant says he must pay \$5 for the pound sterling; to pay the £1000 it will then cost him \$5,000, instead of \$4,444 44, being a difference of \$555.56 between the legal and the actual par of exchange. And it must be remembered too, that the \$5,000, in Boston, must be paid in gold or silver, the £1,000, in London, may be paid in bank paper—dollars for paper. Again, a merchant, in London, owes in Boston, £1000 sterling; he can pay it with \$4,444 and 44 cts: this shews the actual exchange against this country. If it was at par, then \$4.44, in Boston, would be worth a pound sterling in London, for he could purchase a bill for £1000 on London; and by so much more as he is obliged to pay for it, so much is the rate of exchange against Boston. This solves, at once, all the mystery of exchange, and it now becomes an easy thing to ascertain whether the present rate of exchange is favorable to commerce or the country. No ingenuity can evade the conclusion, founded on the fact which the 'Merchant' himself admits, that, to pay a pound sterling in England, costs \$5—to pay it in Boston costs only \$4.44—a loss of 12½ per cent.: in other words, it costs us \$112.50 to pay one \$100 in England. A familiar case will place this subject in a plain matter-of-fact point of view: A, in London, owes B, in Boston, £1000—B owes C, in London, £1000; if exchange was at par, B would draw on A to pay C in London. In the present state of exchange, he cannot do it. A pays B, in Boston, \$4,444.44, in full of the debt; but, in order to pay C, in London, B must pay the additional sum of \$555.56. Thus two debts, equal in amount, both for the same number of pounds sterling, become unequal by the existing rate of exchange—£1000 will not pay £1000. The Bostonian receives his £1000, and is still £125 in debt. Every £1000 worth of English goods we import, costs £1.125. Now I call on the 'Merchant' to answer my question—Is such a rate of exchange beneficial to commerce, or otherwise? He must, likewise, permit me to remind him that he has attempted no answer to my third question—which is, whether, "the exportation of specie, more than we import, combined with the present rate of exchange, promotes or retards the prosperity of the country?" An answer will be expected to this question—for, though these two causes may, in the opinion of the 'Merchant,' benefit commerce, they may ruin the country.

Having brought the 'Merchant' on paper, we must be better acquainted before we part; the subject of exchange has been thought a complicated one, and my endeavors to simplify it may have led me to prolixity—but it seemed necessary to amplify on the subject so as to make it familiar to every one. I hope to hear again from the 'Merchant'—we can employ our winter evenings, and, perhaps, instruct the people; at any rate, our discussions will tend to elicit truth and diffuse information.

Important Law Case.

Yesterday the chief justice delivered the opinion of the court in the case of Wain against Thomson. That cause has been the subject of much conversation, and various opinions have been entertained as to the final result. We, therefore, believe a publication of it will be both useful and acceptable to the public.

[*Phil. Gazette.*]

William Wain }
vs. } In the Supreme Court,
Edward Thomson. } Eastern District, Penn.

This is an action on a policy of insurance "on supposed profits on a cargo of goods, in the ship Bengal, on a voyage from Canton, in China, to Philadelphia, warranted free from average, and without benefit of salvage. Amount valued at \$20,000.

The ship sailed from Canton on the 25th December, 1815, with a cargo of teas, cassia, china, &c. On the 29th January, 1816, she met with a gale of wind, by which she suffered considerable damage: in consequence of which she put into the Isle of France for repairs. On a survey, the whole cargo being unloaded, part of the tea was found so much damaged, that it was ordered to be thrown into the sea. Another part being damaged and in a perishable state, was sold for the benefit of the concerned, and the proceeds vested in other goods, which, with the saved part of the cargo, were shipped on board of the Bengal, who, after receiving the necessary repairs, resumed her voyage to Philadelphia on the 9th April, 1816, and arrived there the 1st July following. At Philadelphia, it was found that part of the teas taken on board at the Isle of France, as sound, were, in fact, damaged at that time. The sound teas were sold at Philadelphia at a very considerable profit; but, upon the whole cargo, there was no profit: and there was a loss of more than 50 per cent. on the whole amount of the goods shipped at Canton. The plaintiff abandoned, and claims for a total loss.

On this state of facts, the plaintiff contended—

1. That there was a total loss of the voyage by the very great interruption and delay which took place, in consequence of the damage at sea, which obliged the ship to put into the Isle of France.

The court decided that this argument is not sustainable. The insurers engage that the voyage shall be accomplished, but not in any particular time. The ship is to be repaired at their expense, and then to prosecute her voyage. She did so in this case, and arrived at her port of destination.

2. The plaintiff contended that the loss was total, because it exceeded 50 per cent.

The court agreed this was, in general, the rule—but this is an insurance on profits, and, by the express agreement, the defendant is to be free from all average loss, and to have no benefit of salvage.

The court here considered the nature of losses, whether total or partial—every loss, less than total, is, in fact, a partial loss; that kind of total loss which arises from damage greater than 50 per cent. is merely technical. The question then is, whether, if the assured discharges the insurer from all average loss, he does not discharge him from loss which may be properly called average without regard to its amount. The insurance on profits partakes of the nature of an insurance on the goods from which the profits are to arise.

The court then considered the meaning of the words "free from average," as it has been used and adjudged in relation to insurances on goods. The leading cases were examined particularly; and concluded that, under this warranty, in the case

of goods, if "free from warranty," no recovery could be had on the ground of a technical loss; and the law is the same as to an insurance on profits.

3. Another question was made by the plaintiff: that, as some of the tea was totally lost, he was entitled to recover for loss or profits on them. The court decided against the plaintiff on this point also, on the authority, *Beays, vs. Ches. Ins. Comp.*—decided by the supreme court of the United States. Judgment for the defendant.

Legislature of Pennsylvania.

Report of Mr. STEVENSON, chairman of the committee on domestic manufactures—Read Thursday, Dec. 24, 1822, in the house of representatives of the state of Pennsylvania.

The committee on domestic manufactures, to whom was referred, as unfinished business of the last session, bill-No. 363, entitled "an act for the protection and promotion of the commerce, internal trade, and manufactures of the state of Pennsylvania," have had said bill under consideration, and report:

That the bill of last session, entitled as above, proposes an arrangement with the several turnpike companies on what are usually termed the northern and southern routes, from Harrisburg to the waters of the Ohio river; by which arrangement, wagons, having wheel tire of at least four inches in width, engaged in the transportation of merchandise, and of our agricultural and manufactured products, may pass to a market toll free; and, in order to effect this, it is proposed that an additional subscription to the stock of the several companies shall be made by the state.

The several turnpike companies mentioned in the bill No. 363, it appears are still deeply in debt to workmen, contractors, and others, who have done the labor on the several sections of road, and it is ascertained that the managers are willing, at this time, to concede to the state the privilege desired, at an immense sacrifice of their private interests, with a view to the general advantage, and to enable them to do justice to their suffering creditors.

The debts of these companies are, at this time, about two hundred and fifty thousand dollars; and, from communications with some of the managers, it is believed, that, if the state will subscribe about one hundred and ninety-eight thousand dollars, to aid in the liquidation of these debts, payable in six annual instalments of thirty three thousand dollars; or that if the state will allow certificates of the debts due by the companies to the above amount, to be received in payment at the land offices, the managers will agree to grant to the state, subject to such regulations as the state may make, from time to time, the privilege of suffering all broad-wheeled wagons to pass toll free, on their respective sections of road forever.

The whole cost of the road from Harrisburg, by Chambersburg, to Pittsburg, in round numbers, has been eleven hundred and fifty thousand dollars.—The cost of the road, by way of Huntingdon, now nearly completed, it is ascertained, will be five hundred and seventy thousand dollars; the total cost of the two routes seventeen hundred and twenty thousand dollars.

The state holds stock in the companies on these routes to the amount of nine hundred and twenty thousand dollars; individuals hold four hundred and seventy thousand dollars.

There have been debts of the companies extinguished by the application of tolls received, to the amount of eighty thousand dollars; and the debts still existing amount to about two hundred and fifty thousand dollars. The whole extent of road under consideration is four hundred and twelve miles.

It is well known, to all persons acquainted with the settlement and improvement of the country lying beyond the Appalachian mountains, that the first line of communication with it passed through Pennsylvania; and that, from the doubtful and devious footpath, through each successive stage of improvement, up to the regular and costly turnpike, Pennsylvania, to the year 1820, possessed the best and most attractive road.

The legislature, convinced, at an early period, of the advantages to be derived from the settlement of the west; and desirous of facilitating and securing to her citizens the highly productive and valuable carrying trade between the Atlantic and the waters of the Ohio, and of fixing the points of exchange, between the east and west, within her limits; and actuated by the most honorable and enlightened views of state policy, did, at successive periods, make large appropriations for encouraging objects of such unquestionable advantage to the commonwealth.

The fostering care of the legislature, and public spirit of our citizens, induced a vast portion of the emigration and property destined to the west, to pass through our state. To such an extent had the carrying trade arrived, in consequence of the demands of the increasing population of the western country, that the average annual amount of carriage money, paid to wagoners at Pittsburg alone, in the years 1816, 1817, 1818, and 1819, exceeded a million of dollars; almost every dollar of which was drawn from the western states, and retained in Pennsylvania. An immense amount of property from the extensive west, accumulated at Pittsburg; and from thence found its way to Philadelphia in the returning wagons; these, taking back loading at very low rate, in fact so low as to be an inducement to the citizens of Kentucky, Ohio, &c. to send their products to Pittsburg, to be conveyed over land to Philadelphia, rather than to send them to a New Orleans market by water carriage.

The weight of articles conveyed from our Atlantic cities to the waters of the west, at points within the limits of our state, for an average of several years, exceeded that returned by about one half; the first being about twenty-one millions of pounds weight, and that returned about ten millions. The carriage of the outer loading, at this period, costs about six hundred thousand dollars, and that inward about one hundred thousand, the price of carriage being very low at this time. About five millions of pounds are also taken up by the return wagons at intermediate points, between the western waters and the Susquehanna river, and are conveyed to Philadelphia or Baltimore.

The attention of the legislature has been urged by a large body of the citizens of the state, to circumstances deeply and permanently important to them; and memorials, signed by great numbers, were last year presented to the house of representatives, praying the legislature to devise measures to retain this carrying trade in its old and accustomed channel; these petitions were, at the last session, referred to a special committee, and the bill, No. 363, now under consideration, grew out of the examinations made by that committee upon the subject. The bill was introduced into the house late in the session, was debated in the committee

of the whole, and the first section agreed to, at which stage the debate closed; and, with a view to give time to the citizens of the state to inform themselves fully on the subject, the bill was not again called up.

The anxiety of our citizens, on the subject of rendering the turnpike roads alluded to free, arises from the effects produced by the completion of the national turnpike road, commencing at Cumberland, in the state of Maryland, and terminating at Wheeling, on the Ohio, in the state of Virginia. This road was finished in the year 1820, at an expense to the nation of one million eight hundred thousand dollars, and declared free.

The consequences of this expenditure of the national funds, in local improvements, must be to rapidly divert the carrying trade from its accustomed channel, and to render valueless the large amount of stock which the state holds in her western roads, and also that held by her citizens, many of whom placed great, and, it now appears, lasting embarrassments on their property, to raise the means of meeting their subscriptions. The cheaper rate at which wagons can pass by the national free road, from Baltimore to Wheeling, must, undoubtedly, unless counteracted by suitable measures on the part of Pennsylvania, draw many of our citizens and much wealth, in wagons, horses, &c. from our state, and lose, to the commonwealth, the commercial and other profits on the amount of produce and purchases diverted from Philadelphia and Pittsburg, to Baltimore and Wheeling, and must create a distressing evil to the farmers and manufacturers of the western and middle counties, by depriving them of the advantage of sending their products to market, as heretofore, by the returning wagons.

As an evidence of the evil which the loss of this trade would inflict on our western citizens, your committee will only state, that, as yet, a barrel of flour is carried from Pittsburg to Philadelphia, a distance of three hundred and one miles, for two dollars. Yet, if the farmer was compelled to send his own wagon, his team of five horses could only convey fifteen barrels, would be from home 35 days, and if his flour produced him six dollars per barrel at Philadelphia, would, after spending the whole proceeds of his load, leave him twenty dollars in debt. At present, however, large quantities of flour, whiskey, pork, hemp, tobacco, &c. the produce of the west, and the manufactured articles of window and other glass, paper, linen, spun yarn, cordage, &c. are daily loaded at Pittsburg, destined eastward.

The loss of the carrying trade, must, by rendering it impossible for the western agriculturalist to get his produce to a market, force a part of the population of Pennsylvania to abandon it, in order to approximate toward one; and a depreciation in the value of land, arising from a diminution of inhabitants, and a removal of personal property, must ensue.

It is, therefore, especially recommended by your committee to the legislative body, to adopt prompt and efficient measures to secure to our citizens the benefits of the carrying trade: the advantages to many of them are now immense, and the moment the roads from Harrisburg, by Lewistown, to Pittsburg, are completed, will prove, also, of primary consequence to the inhabitants of all that section of the state through which those roads pass. The wagons, returning from Pittsburg, will divide on the several routes, and will take up the surplus agricultural and manufactured products on each; the barrel of flour will be conveyed from Huntingdon

to Philadelphia, for less than one dollar and a half by a prompt and sure conveyance, without the hazard and delay of water carriage. The iron manufacturers of Huntingdon, Centre, Mifflin and other counties, will be able to meet the foreign product to advantage, and, if similar advantages could be more general, the national legislature might, in a considerable degree, avoid the odium of giving encouragement to manufacturers by raising the price upon the consumer, through the medium of a tariff, which too large a portion of our citizens are unwilling to adopt. A ton of iron can be taken from Huntingdon to Philadelphia, for fifteen dollars; such will be the benefits of internal trade, of good and free roads.

Had it not been that the turnpike road from Huntingdon to Pittsburg, was finished about the time foreign iron fell to ninety dollars per ton, all the manufactories in the middle counties must have inevitably closed, as it would have continued to cost them sixty dollars per ton to reach their market; whereas, they now reach Pittsburg at an expense of thirty dollars per ton, by taking twice the former load, and making the trip in less time. It may be objected, that, although the making the leading western roads free, may be of great moment to a large portion of the state, it is not so to it all; that every part has a claim to equal nurture, and that it is not in the power of the state, at this time, to render the whole free. To this it may justly be replied, that all improvement must be progressive, and that the measure now proposed is of primary importance. That the state, many years since, contributed effectively towards the making of these roads, and that they were amongst the first to which the state gave assistance; that the appropriations were long contested, and were obtained after great difficulty. Yet, the making of these led to further improvements in every section of the state; turnpike roads having multiplied, until there is no part of the state but what offers to the farmer great facilities in getting his produce to market, at half the expense he could have formerly done.

It may be proper to state, that the amount of toll which must be paid at this time, on the trip from Pittsburg to Philadelphia and back, on a six horse team and broad wheeled wagon, by the cheapest route, is nineteen dollars and twenty cents; and that the toll upon a narrow wheeled wagon, and six horses, for the same trip, is twenty-nine dollars and thirty cents: which is an average of about twenty-four dollars on each load; and at the present price of carriage, is upwards of twenty-one per cent of the wagoner's whole receipts, on his outward and inward load.

The effect of this upon the interests of Pennsylvania, must be too clear to every mind to make it necessary for your committee to enlarge upon the subject. The national road runs from Baltimore to Wheeling on a line nearly parallel with our principal road, and but about thirty miles south of it; and being a good road and toll free, must gradually draw away our trade, and, in fact, has already drawn away a considerable part of it: and although some impediments are still in the way of its total loss, occasioned by the reluctance to quit an accustomed channel of trade, and to dissolve commercial and other long established connections; yet interest must eventually prevail, and when the trade is once diverted to its new channel, we can never hope for its return. If we will not know the ways of wisdom in the days of our prosperity, she will leave us to our own in the days of our adversity.

The provisions of the bill which your committee have had under consideration, will place the trade on the great leading western turnpike roads, both state and national, on an equality, as regards toll; and should this be effected, the industry of Pennsylvania, the economical habits of her citizens, her fine breed of draft horses, and the low price of provender in our state, will give such advantages as will secure to the citizens of this commonwealth the almost entire benefits of the carrying trade.

Your committee, therefore, after mature consideration, report the bill of last session, with some slight alteration in its details, and cannot forbear to earnestly urge upon the legislature, the utility of adopting the provision, which it contains.

In the language of the report of the committee of the last session, "it has been deemed advisable to limit the provisions of the bill, to terminate at the Susquehanna; knowing that if the road is thus far made free, the produce of the west will find its way to Philadelphia, by some one of the various channels leading to that place, and which can be designated, and incorporated in the bill, when under consideration before the house." This channel may be the union canal, or some one of the turnpike roads leading from Harrisburg to Philadelphia, or the Susquehanna river, as it is highly probable, that the removal of the obstructions in that noble stream, will be a special object of legislative attention; being so deeply important to a large portion of the state.

Your committee sincerely hope, that, in considering the subject here offered to the attention of the members of the legislature, they will each view themselves as representing the state at large, instead of particular districts: surely, as each of us may justly be prouder to view ourselves as citizens of the United States, whose name is respected in every land, and whose flag is honored in every sea, rather than as citizens of any particular state: so we ought to feel more pride as representatives of the whole state, than as those of particular counties. Let us then, divesting ourselves of all local feelings, give the necessary support to what is now the weaker part of the commonwealth; it may yet become the stronger and return the favor.

Finances of the United States.

Several tables and statements accompanied the annual report of the secretary of the treasury on the state of the finances, which contain useful information. Not having room for the whole, we offer such a selection from them as includes whatever is interesting among them to readers in general.

REVENUE FROM IMPORTS IN 1821.

A statement, exhibiting the value and quantities, respectively, of merchandise on which duties accrued during the year 1821, (consisting of the difference between articles paying duty imported, and those entitled to drawback, re-exported); and, also, of the nett revenue which accrued that year from duties on merchandise, tonnage, passports, and clearances.

<i>Merchandise paying duties ad valorem.</i>		
340,613	dolls. at 7½ per cent.	\$63,045 98
13,036,191	at 15	1,955,428 65

Do. J. Harding	180 00

Seventeenth Congress—2nd session.

IN THE SENATE.

January 5. The senate was chiefly occupied this day with executive business—as is, probably, explained by the following paragraph from the National Intelligencer of the 4th inst.

“We understand that the senate yesterday, by a unanimous vote, advised and consented to the ratification of the convention concluded during the last year, between the United States and Great Britain, under the mediation of the emperor of Russia, to prescribe the mode by which the first article of the treaty of Ghent shall be carried into effect, in conformity with the decision of his imperial majesty.”

The following written message was received from the president of the United States by the hands of Mr. Everett, his private secretary:

To the senate and house of representatives.

In compliance with the three resolutions of the senate of the 5th April, 1822, requesting the president of the United States to communicate in detail the expenses of building each vessel of war, authorized by the act of the 2d of January, 1813, and its supplements: and also the names, number, grade, &c. of the officers and men employed at each navy yard and naval station, during the two years immediately preceding the 1st January, 1822, I herewith transmit a report from the secretary of the navy, with the accompanying documents, which contain the desired information.

JAMES MONROE.

Washington, Jan. 3, 1823.

January 6. After some other business—Mr. Rodney rose and said, that, in the war which we are now waging against the pirates in the West India seas, it was proper, he thought, to give some stimulus to our seamen engaged in it. Our gallant tars, he said, were not likely to gain, in such a war, the honor they acquired in the late war, and, as there was but little of that to be got, he wished to supply the deficiency by providing a stimulus of another kind. He therefore asked leave to offer the following resolution:

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of allowing a bounty to the officers and crews of the public armed vessels of the United States; and in the owners, officers, and crews of the private armed vessels of the United States, for the prisoners captured, and the guns taken by them, in any piratical vessel.

Among the petitions presented and referred this day, was one by Mr. Lowrie, from the board of manufactures of the Pennsylvania society, for the encouragement of American manufactures, praying a revision of the tariff, with a view to the further protection and encouragement of domestic manufactures.

Several bills were passed to a second reading, and others were taken up and partially acted upon. Some time was spent in executive business.

The blank in the bill to repair the Cumberland road, was filled with 25,000 dollars—ayes 19, noes 11, and three dollars per diem allowed to the superintendent of said repairs. In this state it was ordered to be engrossed and read a third time.

January 7. Mr. Williams, of Tenn. from the committee on military affairs, to which was referred the resolution relative to the Georgia claims for militia services rendered in 1792, 3, and 4, made a report accompanied by the following resolution:

Resolved, That the committee on military affairs be instructed to report a bill appropriating 129,375 dollars and 65 cents, in full discharge of the militia claims of Georgia.

The engrossed bill making an appropriation for repairing the national road from Cumberland to the Ohio river, was also read the third time, and the question whether it should pass, being about to be put,

Mr. Taylor, of Virginia, then rose, and in an argument of about an hour, submitted his views of the inexpediency and unconstitutionality, not only of this bill, but also of the exercise by the general government of the power to make internal improvements at all in the states; of the impolicy and unconstitutionality of departing from the exercise of express and rightful powers, to exercise concurrent powers; the advantage and necessity of adhering to the true line of demarcation between the powers of the federal and state governments; his opinions as to the manner by which that line was to be ascertained, and where it exists, &c. &c.

Mr. Talbot, of Kentucky, replied to Mr. Taylor, at considerable length—controversing and arguing against all his leading opinions; defending the constitutionality of the power to make, and the public advantages of, internal improvements; urging the particular value and utility, to the union at large, of the road in question, the necessity of preserving it, &c.

After some remarks from Mr. Smith, of Maryland, Mr. Macon and Mr. Van Buren—the question was taken by yeas and nays and decided as follows:

YEAS—Messrs. Barton, Benton, Boardman, Brown, of Lou. Brown, of Ohio, D'Wolf, Dickerson, Edwards, Holmes, of Me. Holmes, of Miss. Johnson, of Ken. Johnson, of Lou. Knight, Lannan, Parrott, Ruggles, Seymour, Smith, of Md. Stokes, Talbot, Taylor, of Indiana, Thomas, Van Buren, Van Dyke, Williams, of Miss. Williams, of Tenn.—26.

NAYS—Messrs. Chandler, Findlay, Gaillard, Lloyd, of Mass. Lowrie, Macon, Mills, Smith, of S. C. Taylor, of Va.—9.

The bill was then ordered to be sent to the house of representatives for concurrence, and The senate adjourned.

January 8. Mr. Elliott, of Geo. appeared this day, and took his seat.

The resolution offered by Mr. Rodney, on Monday, instructing the committee on naval affairs to inquire into the expediency of allowing a bounty to the public armed vessels and private armed vessels of the United States, for prisoners captured and the guns taken by them in any piratical vessel, was read for consideration.

Mr. R. supported his proposition in a speech of some length, and the resolution was agreed to.

The bill to allow a drawback on cordage manufactured from foreign hemp, was again taken up—after much debate,

The question was taken, by yeas and nays, on engrossing the bill and reading it a third time, and was negative, by the following vote:

YEAS—Messrs. Boardman, Chandler, D'Wolf, Holmes, of Maine, Knight, Lannan, Lloyd, of Mass. Mills, Murril, Palmer, Parrott, Ruggles, Seymour, Smith, of Md. Van Buren, Van Dyke,—16.

NAYS—Messrs. Barton, Benton, Brown, of Ohio, Dickerson, Edwards, Findlay, Gaillard, Holmes, of Miss. Johnson, of Ken. Johnson, of Lou. King, of Ala. Lowrie, Macon, Rodney, Smith, of S. C. Southern, Stokes, Talbot, Taylor, of Indiana, Taylor, of Va. Thomas, Ware, Williams, of Miss. Williams, of Tenn.—24.

So the bill was rejected; and

The senate adjourned.

HOUSE OF REPRESENTATIVES.

Thursday, Jan. 2. The following resolution, offered by Mr. Woodson, of Ky. was, on motion, ordered to be laid upon the table, and be printed:

Whereas it is the duty of the representatives of this nation, to promote, to the extent of their zeal and abilities, the best interests, the highest destinies of their country; and it is believed that nothing would contribute more essentially to the accomplishment of those great objects, than internal improvements, by means of artificial roads and canals, which, when completed, would serve as a bond of union, keep the chain of confederacy forever bright, enhance our internal and external commerce, by affording increased facilities to transportation, and a consequent reduction in the price of foreign articles; give a new impulse to industry in our customary pursuits, and multiply and present additional objects for the useful and productive employment of our citizens; increase their ability to consume, and, with the progressive value of our public domains, produce a corresponding accession to our revenue, operate as a powerful auxiliary to the full development of our dormant resources, by extending the means of internal intercourse, and exchange of the productions, raw materials, and manufactured articles of the different sections of the union; tend to assimilate our habits, diffuse our knowledge, multiply kindred ties of the dearest nature, drawing around our hearts more closely the chord of sympathy and national feeling; promote true economy by the most advantageous investment of the public funds, leaving eternal traces of their expenditure; adding to the strength and durability of the government, by enabling it to concentrate, with certainty, economy, and dispatch, its forces, either to chastise a daring invader, or quell misguided civil tumult; and, co-operating with a judicious system for the encouragement and protection of the skill and industry of our citizens, from the counteracting and destructive policy of foreign governments, render us completely independent, prosperous, and happy: Therefore,

Resolved, That it is expedient and proper that the general government should interpose in the accomplishment, or at least render its aid in promoting the whole, or some portion of the following

great objects of internal improvement: A canal, or canals, through the isthmus of Barnstable; that part of New Jersey which extends from the Baritan to the Delaware; the Peninsula between the Delaware and the Chesapeake and the tract of country which divides the Chesapeake from Albermarle sound. Also, a canal from lake Erie, or its waters, to the Ohio river, or some one of its tributary streams, and around the falls of Ohio; together with artificial roads, from three of the great western rivers, the Alleghany, Kenhawa, and Tennessee, to the nearest corresponding Atlantic rivers, the Susquehanna, or Juniata, James river, and either the Santee or Savannah.

And that the committee on roads and canals be instructed to report a bill, or bills, in conformity to the foregoing resolution; embracing the whole, or any portion of the specified objects, as to them may seem most expedient.

Friday, Jan. 5. Mr. *Williams*, from the committee of claims, reported a bill in addition to the act for the prompt settlement of accounts.

Mr. *Hernandez*, a delegate from Florida, appeared and took his seat.

Mr. *Kent* reported a bill for the divorcement of a certain man and his wife, in the district of Columbia.

Mr. *Kent* presented the following resolutions of the legislature of the state of Maryland:

Whereas, the state of Maryland is, in a peculiar degree, dependent on that aid and protection, to secure which was the great object of the confederation of these United States, and especially is exposed, from its vast extent of navigable waters, and the geographical position of the city of Baltimore, to the attacks of a maritime enemy, who, as has been demonstrated by the events of the late war, can harass our citizens, plunder and destroy our property, possess themselves of our territory, and prevent our necessary transactions, as far as a large proportion of our citizens are affected: And whereas exemption from such danger, to the lives and exposure of the fortunes of our citizens, can only be secured to us by the liberal application of those means which the good people of the United States have placed at the disposal of the government of the union, for the common defence and the general welfare, and it is not only the soundest policy, but the best dictate of prudent economy, to use the period when a general peace and the ordinary resources of our country afford opportunity to the government to provide for the defects in our system, which a state of war has disclosed, and to be prepared against a recurrence of injuries which may be repeated at a moment, impossible, by any political calculation, to be anticipated:

And whereas it is, at all times, the duty of the citizens of a free government to deliberate on the policy and measures of those to whom they have confided the administration of their political concerns; and on occasions when contrariety of opinion is entertained on matters vitally affecting their best interests, to express their sentiments with candor and firmness:

We, the members of the senate and house of delegates, acting as the representatives of the people of Maryland, and influenced by a belief that it is highly expedient, in the present situation of our political concerns, to announce the opinions and wishes of the people of this state, in relation to such measures of the government of the United States, as have in view the better security of our country against the approaches of a hostile maritime force; do, therefore,

Resolve, That we cordially approve the efforts of the general government to foster our navy, and cause a progressive increase of this means of defence, which experience has taught us to regard as necessary to our protection, and to the maintenance of that high and dignified character which has exalted our country amongst the nations of the earth; that we cordially approve of every effort of the ge-

neral government to extend and perfect a system of defence by fortifications, highly useful in other places, and essentially necessary to the waters of the Chesapeake and its tributary rivers.

And, whereas, from the relative position of this state, and those vast sources of successful enterprise and wealth, the rivers Potomac and Susquehanna, as well as from the relation of our largest city to an extensive district of inland country, it is of the utmost importance to our citizens that a system of internal improvement shall be vigorously pursued: Therefore, we do further

Resolve, That we will highly approve, and zealously co-operate with the general government, in the adoption of such measures as will afford our country the facilities and advantages which nature has placed in our control, and which a wise policy should induce us to improve.

Resolved, That a copy of the foregoing preamble and resolutions be forwarded by the executive to each of our senators and representatives in congress, with a request that they will co-operate in the promotion of the measures which, in the sense of the legislature, are best calculated for the interest of the union at large, and especially of the state.

By order:

WILLIAM KILTY, Clerk.

The resolutions were read, laid on the table, and ordered to be printed—not without objection, however, on the ground of the informality of the manner in which the resolves were brought before the house, being abstract resolutions, not addressed to this house.

Mr. *Campbell* offered a resolution, which was agreed to, to institute an inquiry, by the committee of accounts, about the state of the contingent funds of the house.

On motion of Mr. *Barstow*, it was

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of modifying or repealing the law, providing for the allowance of salvage on all vessels and goods belonging to citizens of the United States, when re-captured by our public ships in time of peace.

The bill to confirm the title to certain lots in the village of Peoria, was put on its passage—and, after debate, *recommitted*.

After attending to some other minor matters, the house adjourned.

[It is stated that the whole value of the lots in the village of Peoria, (about which so much time has been occupied), is less than 1000 dollars—the time consumed in debate concerning them, has already lost the people several thousands. Such is the nature of the organization of congress in the decision of questions of equity, between individuals and the government].

Monday, Jan. 6. Messrs. *Rich*, of Vermont, and *Hamilton* of South Carolina, appeared this day

Mr. *Hemphill* presented a petition from the board of manufactures of Pennsylvania similar to that noticed in the proceedings of the senate.

Mr. *McLane* reported a bill for the extinguishment of the Indian title to certain reserves of land within the state of Georgia. It appropriates 50,000 dollars for the purpose.

The resolution laid on the table by Mr. *Rankin*, on the 3d instant, calling on the president of the United States, for information in relation to the number and locality of the salt springs, lead and copper mines, in any of the states or territories of the United States, the exclusive property of the government, the quantity, and the terms on which they are leased or rented out, with the amount received for the same, was taken up and agreed to.

Mr. A. Smyth, of Va. offered the following joint resolution:

Resolved by the senate and house of representatives of the United States of America in congress assembled, two thirds of both houses concurring, That the following amendment to the constitution of the United States be proposed to the legislatures of the several states, which, when ratified by the legislatures of three-fourths of the states, shall be valid, to all intents and purposes, as part of the said constitution:

No elector of president and vice president shall be nominated or appointed by the president elected, to any office, appointment, or place, whatsoever:

When the house of representatives shall choose a president, no person who shall have been a member at the time of making the choice shall be nominated or appointed, by the president so chosen, to any office, appointment, or place, whatsoever:

When the senate shall choose the vice president, no person who shall have been a member of the senate at the time of making the choice, shall be nominated or appointed, by the vice president acting as president, to any office, appointment or place, whatsoever:

This resolution was read and ordered to lie on the table.

Mr. Allen, of Tennessee, offered the following resolution, which, by the rules of the house, of course, lies one day:

Resolved, That the secretary of the treasury be directed to communicate to this house such information as the department over which he presides affords relative to a loan of one hundred thousand dollars made to Scott, Thornton, and White, late city commissioners, particularly the time when, and the authority under which said loan was made, the conditions that were to have been performed, and the accountability secured; how far the same has been complied with, and the difficulties (if any) that exist in a settlement of the transaction with the accounting officers of the treasury.

The house then, on motion of Mr. Fuller, took up the bill to incorporate the United States' naval fraternal association.

The remainder of the day's sitting was spent in debate upon this bill.

[Speaking of this debate, the National Intelligencer observes—The house of representatives found itself yesterday unexpectedly engaged in a discussion of the nature, limits, and extent of the authority of congress to create corporations. The debate grew out of the bill to incorporate the United States naval fraternal association.

It will be readily believed, by our readers, that the bill was not objected to because of any demerit in the association proposed to be incorporated, whose object is to establish a fund, from periodical contributions of the officers, for the benefit of the widows and orphans of such as die in the service. On the contrary, the object of the bill is calculated to win the favor of all men, and almost to lead the judgment captive to the senses.

The bill was opposed, however, on two grounds: first, as proposing an exercise of power beyond the authority conferred on congress by the constitution—and, secondly, as inexpedient, for reasons apart from its present and ostensible object.

The constitutional views of the question embraced several points of considerable importance, which one would hardly have expected to be accidentally touched upon in the debate on this bill: such, for example, as the constitutionality of the bank of the U. States, and the merit of the decision by the supreme court in the case of *Cohens vs. the state of Virginia*.

The power of congress, it was argued, to establish corporations, was either incidental to an express power, as in the case of the charter of the bank of the United States, or it was local, derived from the power of exclusive legislation over the District of Columbia. Under the former power, this bill could not be passed, it not being contended that it was necessary, or essential, to the exercise of any of the powers expressly delegated to congress. The power of local legislation in this district, on the other hand, it was argued, did not authorize congress to legislate unless upon subjects peculiar to the district, and in no manner operat-

ing beyond its limits. This bill proposes to establish a corporation here, it was said, but it is to have effect on the naval officers and on the courts of law every where, and, it was argued, is not therefore constitutional. These arguments were repelled by opposite suggestions, urged with a confidence and zeal equal to that of the opponents of the bill.

Our object being only to give to our readers some idea of the tendency of the questions brought into discussion, we do not pretend to exactness in stating the argument.

The arguments against the bill, on the ground of expediency, were, the general danger of monopolies or privileged classes; the particular danger of incorporating the navy or any class of it; or the army or any class of it; and the probability that this association would injuriously affect the discipline of the navy, by the election of subordinate officers to the higher offices of the association. These objections were met with the same decision with which they were advanced, and

The question remains in suspense.

Of several questions of constitutional and common law, raised in the course of the discussion, we do not pretend here to give any account.]

A message was received from the president communicating information requested by sundry resolutions of the house—which shall be inserted as thought necessary, and at length.

Tuesday, Jan. 7. Mr. Sawyer, of N. C. appeared this day.

The rule of the house this day took effect, which limits the presentation of petitions, after thirty days from the commencement of the session, to Mondays. No petition of course was presented this day.

A great deal of local business was attended to, and Mr. Allen's resolution, submitted yesterday, was agreed to.

The joint resolution of Mr. A. Smyth, of Va. proposing several amendments to the constitution, to disqualify for holding office all persons who shall be members of the house of representatives, at the time of an election of president of the United States, &c. was read a second time.

After a speech of some length from Mr. Smyth, the resolution was committed to a committee of the whole on the state of the union.

The speaker then laid before the house the following letter from the post-master general.

General post-office, Jan. 7th, 1823.

SIR: In obedience to a resolution of the house of representatives, passed the 31st of December, relating to the state and condition of the Cumberland road, the obstacles, (existing), to the safe and speedy transportation of the United States' mail on said road, and what effect they may have, (if not removed), on the expenditure of the post office department; I have the honor to communicate, that, in the month of November last, I passed over the whole of that road, and, travelling only by day light, was enabled to observe its state and condition, which I attentively did.

The western, (being the newest), part of the road, is in a ruinous state, and becoming rapidly impaired.

In some places the bed of the road is cut through by wheels, making cavities which continually increase and retain water, which, by softening the road, contribute to the enlargement of the cavities. In others, the road is much injured, by the sliding down of earth and rocks from the elevated hills, and by the falling off of parts of the road down

steep and precipitous declivities of several hundred feet; so much abridging the width of the road, that two carriages cannot pass each other.

Obstacles do really exist to the safe and speedy transportation of the United States' mail upon that road. The mail contractors have sometimes been necessitated to remove them, before the mail could pass on; and such delay produced, that the mail stages have, in some instances, been unable to reach their point of arrival in due season, to deliver over the mail, and consequently producing failures.

If these obstacles are suffered to exist and increase, the great western mail must be transported on lengthier, oblique, and circuitous roads, which will retard the expedition of the mail, and considerably enhance the expenditure of the post office department.

The Cumberland road, so interesting to the nation, will, (in my opinion, formed by observations when upon it), cease to be useful, unless repaired. The part of the road contiguous to Cumberland, and the oldest, is in a tolerably good condition, because, it has been seasonably and judiciously repaired; which repair was true economy in the preservation of the road.

I enclose a letter from J. L. Skinner, esq. an intelligent and practical gentleman, on the subject of that road; also, another from George Dowson, esq. a gentleman of much respectability. I have the honor to be, very respectfully, Your most obedient servant,

RETURN J. MEIGS, Jr.

Hon. Philip P. Barbour,

Speaker of the house of representatives.

The letter was read, and, with the enclosures, ordered to lie on the table.

Mr. Mitchell's resolution, about surgeons in the navy, was agreed to.

Certain reports being received—

The house resolved itself into a committee of the whole on the bill making a partial appropriation for the support of government, and, no objection being made to it, the bill was ordered to be engrossed and read a third time. [Afterwards read a third time and passed.]

The house then resumed the consideration of the bill to incorporate the United States naval fraternal association.

The debate on this subject occupied the remainder of the day—the speakers were, for the bill, Messrs. Wright and Reed—against it, Messrs. Archer, Wood, and Colden.

Wednesday, Jan. 8. Mr. McKim, elected in the place of Mr. S. Smith, of Md. appeared, was qualified and took his seat.

A great many propositions were submitted, not necessary to be noticed by us just now. The bill to appoint an additional judge in the territory of Michigan was passed.

The rest of the day was spent in a debate on the bill concerning the "Naval Fraternal Association." Messrs. McLane, Hemphill and Fuller supported, and Messrs. Williams, of N. C. Forward, and Wood, spoke against it, on constitutional grounds. At last,

The question recurring on the engrossment of the bill for a third reading, the yeas and nays were taken as follows:

YEAS.—Messrs. Allen, of Mas. Barstow, Baylies, Bayly, Bigelow, Brown, Burrows, Cambreleng, Carter, Cassidy, Condict, Cook, Cushman, Cuthbert, Dane, Darlington, Dickinson, Durfee, Dwight, Eddy, Edwards, of Con. Edwards, of Penn. Farrelly, Findlay, Fuller, Gorham, Hamilton, Hemphill, Herriek, Hill, Hobart, Holcombe, Ingham, J. S. Johnson, Keyes, Lathrop, Little, McCar-

ty, McKim, McSherry, Mattocks, Mercer, Moore, of Va. Neale, Nelson, of Mass. Picher, Plumer, of N. H. Plumer, of Pen. Reed, of Mass. Reid, of Geo. Rogers, Ruggles, Russ, Sterling, of N. Y. J. Stephenson, Swan, Tattnell, Taylor, Tod, Van Rensselaer, Warfield, White, Williamson.—69

NAYS.—Messrs. Abbot, Alexander, Allen, Ten. Archer, Barber, of Con. Barber, of O. Bassett, Bteman, Blackledge, Borland, Buchanan, Burton, Butler, Campbell, N. Y. Campbell, of O. Cannon, Chambers, Coeks, Conkling, Crafts, Crudup, Denison, Edwards, of N. C. Eustis, Floyd, Forrest, Forward, Garnett, Gebhard Gilmer, Govan, Gross, Hardin, Harvey, Harris, Hawks, Hubbard, Jackson, Jennings, F. Johnson, J. T. Johnson, Jones, Va. Kent, Kirkland, Litchfield, Lincoln, Litchfield, McCoy, McNell, Matlack, Matson Metcalf, Mitchell, of Pa. Morgan, Murray, Nelson, of Va. Patterson, of N. Y. Patterson, of Pen. Phillips, Pierson, Randolph, Reed, of Md. Rhea, Rich, Rochester, Rodney, Ross, Russell, Sanders, Sloane, Arthur Smith, Alexander Smyth, W. Smith, A. Stevenson, Stoddard, Thompson, Tomlinson, Tracy, Trimble, Tucker, of Va. Tucker, of S. C. Udree, Upham, Vance, Van Wyck, Walworth, Whipple, Williams, of Va. Williams, of N. C. Wilson, Wood, Woodson.—92.

So the bill was rejected. After which the house adjourned.

THURSDAY'S PROCEEDINGS—JAN. 9, 1825.

The senate was chiefly employed this day on the bill to abolish imprisonment for debt. Various amendments were submitted, which were ordered to be printed, &c.

In the house of representatives, a petition for the relief of Mrs. Denny, widow of Jas. Denny, late gunner of the Alligator, and killed when lieutenant Allen fell, was referred to the naval committee.

On motion of Mr. Eustis, it was

Resolved, That a select committee be appointed to inquire whether any legislative provision is necessary to effect a final adjustment of the accounts of Daniel D. Tompkins, esq. relative to advances made to, and disbursements made by, him during the late war.

Mr. Tod, from the committee on manufactures, reported "A bill for the more effectual encouragement and protection of certain domestic manufactures;" which was twice read and committed. [Particulars in our next.]

Much time was spent on the bill to appropriate a certain quantity of land to defray the charge of laying out and making a road from the Miami of lake Erie, to the Connecticut Reserve.

After debate, it was ordered to be engrossed and read a third time to-morrow, by yeas and nays: yeas 130, nays 21.

Several reports were received, which shall be noticed hereafter.

The engrossed bill "to confirm certain claims to lots in the village of Peoria, in the state of Illinois," was read a third time, passed, and sent to the senate for concurrence.

A bill from the senate, "appropriating money for the purpose of repairing the national road, from Cumberland to Wheeling," was twice read and committed.

The rest of the day was spent on the bill to provide for disciplining the militia. Nothing decided.

CHRONICLE.

Died, at Canandaigua, N. Y. on the 31st ult. Gideon Granger, esq. formerly postmaster general of the United States.

New-York. Stephen Allen, esq. has been elected mayor of the city of New-York.

THE MAILS from Tennessee, have been oftentimes pilfered of late. A gentleman of that state writing to the editor, endorsed his letter with these words—"No money in this, and need not be opened."

Brazil. Five American seamen have been released at Rio Janeiro, through the exertions of C. Ragnet, esq. our consul there, after having been confined twenty two months in a prison ship.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 20—Vol. XI.] BALTIMORE, JAN. 18, 1823. [No. 20—Vol. XXIII. WHOLE No. 392

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

It is not often that we have the pleasure to present an essay so important as that of our correspondent "T," in this paper, on "revenue and ad valorem goods." It will claim the attention and, perhaps, surprise many thinking persons.

The bill reported by the committee on manufacturers, with a view to the encouragement of domestic industry, is given in the present sheet. We shall offer some general remarks on the subject in our next.

The latest intelligence from Europe, noticed below, gives us reason to expect that a war will break out between France and Spain, though the facts that belong to the affair are not spread before us in an authentic form. It is stated that letters have been received from Paris asserting that, in the event supposed, Great Britain has agreed to supply Spain with money, for which she is to receive a sort of a mortgage on Cuba. It is rumored that there are certain persons from that island now in the United States, to sound our government as to the course which it would pursue, provided that Cuba should be declared independent. We give these things as mere rumors. The independence of the island has long been a favorite project with many of its inhabitants.

CONSTITUTION OF THE U. S. The proposition submitted by the senate to amend the constitution of the United States, as to the election of president, which has for its purpose to lessen the chance of a selection by the house of representatives, appears to be worthy of great consideration. See page 317.

IMMIGRATION. We have several times endeavored to impress it on the minds of our readers, that the amount of foreigners arriving in the United States was greatly over-rated. It appears from an official statement, laid before congress, that the whole amount of passengers who arrived in the United States, from foreign places, during the year that ended on the 30th Sept. last, was only 8482—of whom 5241 were males and 1136 females, the sex of the remainder not being reported to the department of state. This total includes all the citizens of the U. S. returning from visits to foreign countries. A good many foreigners, however, reach our country via the St. Lawrence, who do not come into this aggregate.

THE WESTERN WATERS. No less than seven steam boats are prepared, or preparing, to start from Pittsburg, early in the spring, to ply between that place and St. Louis, Nashville, New Orleans, &c. regularly. They are amply fitted for the transportation of passengers and merchandise or goods, of all sorts, and will depart and arrive in succession, so as to afford the greatest possible facility to transportation, wherever the river will admit of it. The land carriage to Pittsburg is now very moderate.

THE NAVY LIST. It is said that one hundred officers, one eighth of the list, have resigned or died during the last year,
Vol. XXIII.—20.

THE NAVY. An able writer in the Richmond "Enquirer," deprecates the practice of the commanders of our ships in receiving freights for the transportation of money—and says, "To pass over other instances, I have it from good authority, that captain Downes, whilst he commanded the Macedonian in the Pacific ocean, realized, by this means, upwards of fifty five thousand dollars; and by the report of persons who have lately left our squadron in that sea, captain Stewart is in a fair way of pocketing a still larger sum."

He thinks, and we believe justly, that the public service may be neglected when such temptations are held out; observing that an officer "may go to Valparaiso when it would be better to be at Callao, or he may be coasting the gulf of Guayaquil, when the protection of our trade or some other great public interest, requires him to be in the bay of Panama," &c. and, after making some remarks on the practice of British officers in this respect, he refers to certain law decisions to shew that such proceedings are illegal. Indeed, it seems undoubtedly right that public ships should not be used for private purposes.

NOMINATIONS. It is stated that the members of the legislature of Illinois, have accorded with those of Kentucky and Missouri, in nominating Mr. Clay, as a suitable person to succeed Mr. Monroe in the presidency of the United States.

P. S. And so has the legislature of Ohio—50 votes to 7. Mr. Clinton had 5, Mr. Adams 1, and Mr. Calhoun 1.

ILLIBERALITY. The following speech has been extensively published in the papers as something to be laughed at—and is said to have been delivered in the house of representatives of Pennsylvania:

"Mr. Speaker—My Kolleck's* come, and I drink
"he ought to be schwoore."

Now—what of all this? Suppose the most flip-pant county-court lawyer in congress, (who had not regularly learned the German language), were required to address Mr. Speaker in that language—what sort of stuff would he make of it? The tables would be turned, and the Germans have the laugh on their side.

PROTECTION OF COMMERCE. The audacity of the pirates of Cuba has raised the almost universal indignation of the American people. The citizens of the town of Franklin, on the Missouri, and those located on the shores of the bay of Massachusetts, have a similar feeling on the subject—FOR COMMERCE MUST BE PROTECTED. The service on the West India station for the suppression of piracy, has already cost us at least two hundred lives and a million of dollars; and all are prepared to support the commerce of the country at every hazard and at any expense—to employ the whole military means of the United States for the purpose, if necessary—and some even dream of a conquest of the island of Cuba, that our ships may navigate the Gulf in safety! And the fact is, so great is the public feeling on this matter, that there is no measure too remote to be entertained to accomplish the ob-

*Colleague.

ject. A war with Spain—a war with all the world, would be popular, if the cause of it could be laid in these depredations on our ships and property *at sea*; and, with all the feeble aid that I could give, such a war should be supported, *that our commerce might be protected.*

But why should not persons and property *on land* be also supported?—the agriculturalists and manufacturers, the free laborers of the nation, many times more numerous than those interested in shipping and ships? The pirates of Cuba may have plundered us to the amount of a million or two—but other nations are depredating on us to the amount of many millions, without observation: what difference is it to any one whether he loses property on land or at sea? Do not all men know that certain persons associated in England, and subscribed large sums of money, to put down the rising manufactories of the United States—and how, in reality, was their conduct different from that of the *pirates*, save that they did not commit cold actual murder, which the latter have been guilty of in some few cases? By this British conspiracy, the property of the citizens of the United States was depreciated more in value than the captures by the pirates would amount to in many years. Factories and improvements, that cost from 150 to 200,000 dollars, were sold, by forced sales, for from 30 to 50,000 dollars; the proprietors were beggared, and tens of thousands of persons cast out of their usual means of subsistence. Yet this horrible piracy—this war against property, waged by foreigners, was submitted to without any act of resistance on our part.—Was this equitable? Where was the paternal care of the government and the deep sympathy of the nation, when destruction walked forth and penetrated all parts of the country, reducing the wealthy to poverty, those that were happy to misery? What act was passed to *protect* the American people from this *land piracy*? There was none. We were left to do as well as we could—matters would “regulate themselves,” it was said, and the cry of distress was not heeded. Suppose I should now say, let the ship owners regulate themselves, and make the best bargain with the pirates of Cuba that they can—what would the let-us-alone-men say of me? They would say that I was destitute of a national feeling, that I had not one spark of national honor, &c. Yet, why is a conspiracy to rob at sea, worse than a conspiracy to rob on land?

Military glory, as the phrase is, is not to be disregarded. It enters into the moral force, if it does not even increase the physical power of a nation, and it is valuable as a preventive of wanton attack: but the glory of that sort of legislation which makes a weak people a strong one, or a miserable population a happy one, as much transcends the glory of the other, as the light of the sun does that of a candle. The one is solid,—lasting,—every where felt; the other is artificial, evanescent and partial. Soldiers may easily be made when the *materiel* exists; but to produce the *materiel* is a work of application and time: it rests upon a prosperous industry. Wretchedness may drag persons into an army, but *labor* must support them when there, or they will certainly perish of their own wants.

I happen to recollect the substance of what is called an eastern apologue, which seems applicable to the present occasion—it is after this manner: A sultan, the son of a mighty warrior, was one evening riding out with his vizier, when he observed a couple of owls seated on the walls of a decayed house, who appeared as if deeply engaged in conversation. The prince, jocularly, expressed a de-

sire to know what they were talking about—and the vizier, affecting a knowledge of their language, promised to gratify him. So he quietly approached the owls, and reported to his master that they had been engaged in discussing the condition of a treaty of marriage between the son of one of them and the daughter of the other. The father of the young male owl was an owl of much consequence—a sort of owl-king, and would not agree to the match without a handsome dowry—demanding the property of an hundred ruined villages. But to this the other objected—it was true, he possessed, in his own right, several hundred ruined villages, but he had many children, and wished to portion them all alike, &c. and hence it resulted that they broke off the match, and left each other dissatisfied. The young sultan pondered deeply on these things—he had seen the exhausted and ruined state of his kingdom, but never thought of its cause or attempted to do away the effect. He resolved to attend to business—he promoted agriculture, encouraged the arts, patronized learning—and the face of the country soon assumed a different appearance, under a wise administration of its affairs. In about twenty years after his ascent to the throne, he happened again to be riding out with the vizier above alluded to, who yet maintained his post, when he saw another pair of owls. This called to his mind, most forcibly, the former occurrence, and, for the joke's sake, he again directed his minister to ascertain what subject the owls were discussing. The old statesman yielded to the direction, and reported to his sovereign, that the matter which engaged the attention of the owls was, whether the whole race ought not to leave the kingdom immediately, seeing that there was not one ruined village remaining for a habitation, in consequence of the encouragement given to industry and the desire that existed in the sultan for the preservation of peace.

There is a sort of “*slip shod common sense*” (as a friend in New York would say), in this little story, that is worth a volume of speculation: more valuable than a thousand “state papers” each of forty times its length. To *talk* is one thing—to *do* is another. A man might talk to a field for a whole generation, without reaping a good crop of wheat from it, unless he manured and ploughed the land, and planted the seed, and guarded its progress to maturity.

Perhaps, as I have before observed, there is no one who has been more jealous of the honor, and more zealous to promote the enlargement of the navy, (to a certain extent), than myself. I have ever done all that I could to make it a favorite with the people, as a powerful means of the general defence—seeing that what is called “the world” is constituted as it is; but my homely opinion is, that the erection of a new iron manufactory, that affords employment to one hundred men, by which they earn a subsistence for their families, or the establishment of a new cotton or woulen factory that renders five or six hundred unproductive persons productive, is infinitely more advantageous to the U. States, than the fitting out and manning of a ship of the line: and for this simple reason—the one converts a body of consumers into a body of producers; the other makes a body of consumers out of what should be a body of producers. An hundred men engaged in a manufactory may easily *create*, (including the value of the capital employed), one dollar each per day, or, in all, 30,000 dollars a year—but an hundred men, employed in a ship of the line, will cost the people as much; and so the dif-

ferent modes of employment amount to 60,000 dollars a year: for, in the one case, we have saved that which would be spent in the other, according to Franklin, who said—

"A penny saved is two pence clear."

Government, however, may be called a compound. It necessarily involves expenses for the general welfare: but its continual object should be to enable the people to bear these expenses, by the support and encouragement of whatever may profit them most. The man who raises an extra quantity of provisions equal to the support of a soldier, and pays that amount into the public treasury, cannot be less regarded as a benefactor of his country than the soldier himself—because, without that support, the soldier would soon be a non-combatant.

RELIGIOUS LIBERTY. The senate of Maryland have rejected a bill to repeal the *test act* required by the constitution of the state. This was not expected. There is, however, a bill before the house of delegates that has special regard to the *emanipation* of the Jews—which, it is thought, will pass both branches of the legislature.

We are advised that the report delivered to the house of delegates of Maryland, on the 18th ult. (see page 261), contains an error of some consequence, in saying that the "only constitution which imposes a restriction in any degree similar to that of Maryland, is that of *Massachusetts*." It was so in Massachusetts; but, by the late alteration of the constitution, it was abolished. No declaration in any system of religion is now required in that state. So Maryland has the *honor* of standing alone.

A bill is before the house of representatives of Pennsylvania that involves some very important principles. It is an application from the trustees of St. Mary's church, in Philadelphia, for an alteration in the charter, so as to give them the *right of electing their own pastor*: it seems as this power is now claimed by the bishop, and that it virtually rests in the pope at Rome! The charter was framed under the British provincial government; Britain had long before renounced the authority or influence of the pope, and we, by our revolution, shook off that of Britain—yet we should apprehend that, if a certain decision of the supreme court is correct, the charter may be held superior to the British constitution and that of the U States! The Philadelphia papers teem with essays, communications and correspondence in relation to the dispute about the property of this church, and the rights of its members, &c.

An article in the Delaware "Watchman" says—"In a trial, in the court of oyer and terminer, held at New Castle, in November last, of a man indicted for rape, one of the jury empanelled, was, on his being called, challenged by the attorney general, who proceeded to show cause for the challenge, by propounding to him, under the direction of the court, the following questions, and requiring his answers thereto:

Q. 1. Do you believe in the obligation of an oath?

A. 1. An honest man, to speak the truth, requires not an oath to bind him; and a dishonest one will not be bound by an oath.

Q. 2. Do you believe in the existence of a God?

A. 2. It appears reasonable to believe, that all things are governed by a Superior Intelligence, rather than by a blind fatality.

The same question being repeated and a more direct answer required, juror replied,

2. I do believe in the existence of a God.

Q. 3. Do you believe in a future state of rewards and punishments?

A. 3. I am ignorant of them. The subject is beyond my comprehension.

The court, on hearing the answer of the juror to the questions proposed, decided that he was incompetent to serve as one of the jury."

After which follows a long essay to shew that the decision of the court was inconsistent with the constitution of the state, and at variance with religious liberty.

Mr. MATHEWS, a *legitimate* son of Momus, from the London stage, but as different in his conduct from the puffed-up Kean as any man can easily be, has performed in several of our great cities with uncommon applause—pleasing as the actor, and interesting as the gentleman. He is now at Boston—where, to prevent the great press to obtain boxes, they are sold by auction, and have several times brought a premium over the price of the seats that they contained, of more than \$300 a-night.

CASTLEREAGH. The following "hard lines" are from lord Byron's late poem, entitled the "Liberal:"

"Oh, Castlereagh! thou art a patriot now;
"Cato died for his country, so didst thou;
"He—perish'd! rather than see Rome enslav'd;
"Thou cut'st thy throat, that Britain may be sav'd.
"So Castlereagh has cut his throat! The worst
"Of this is—that his own was not the first."

THE U. S. SHIP CYANE, AT LAGUIRA. The Philadelphia Gazette gives us copies of a number of letters that passed between capt Spence and the American merchants at Laguirra, while the Cyane and Spark were lying in that port.

No. 1, is a letter signed by twelve merchants, among them our consul, Mr. Lowry, dated Oct. 7, stating that the recent capture of Maracaibo by the Spaniards, caused them to entertain some fears for Caraccas; in which case they, at Laguirra, might suffer by pillage, &c. and requesting that capt. Spence would remain to protect their persons and property, if necessary.

No. 2, is the reply of capt. Spence, in which he handsomely yields to the request of the merchants—"while there was aught to fear," he would remain with them, though anxious to sail for the coast of Africa.

No. 3, is as follows—

To R. K. Lowry, esq. American consul at Laguirra, and other American citizens at Laguirra and Caraccas.

Gentlemen—The time is come when I propose to leave you. The force concentrating near Caraccas, renders it improbable that gen. Morales will attempt the reduction of Laguirra. All cause for fear being, therefore, remedied, my object for remaining no longer exists, and I feel myself at liberty to depart, without any apprehension as regards your safety. It is a subject of gratulation that the intention of the general to attack this place, was not realized, as a difference of opinion between the commander of the Spanish marine forces and myself, in relation to the American property I should have taken under my protection, might have been productive of very unpleasant consequences. Citizens of the United States and their property on the ocean, must and will be protected—'tis the determination of our government to have our maritime rights respected throughout the world the vigilance and activity of officers employed to effect

this purpose, daily demonstrates their zeal to search out every violation coming within their cognizance.

Good is not without its concomitant evil; most evils have their antidote. Commerce is a good of this description. A national benefit we should all feel anxious of seeing prosper—yet we cannot hope to have a commerce, so wide in its range as ours, [something is omitted here, but several newspaper copies that we have examined do not supply it—the captain, probably, took notice of our naval means, “a vigorous application,” &c.] a vigorous application of which, will arrest and beat down the audacity of a band of licensed plunderers, who, infesting the West Indies, hold the very ocean in a state of blockade. Such a course of things ought to cease—and those who have been so long the aggressors, made to become the complainants. In this way only can we suppress the evils which, for so long a period, have outraged our neutral rights. The time will come when it shall be a sufficient safeguard and passport to say, “I AM AN AMERICAN CITIZEN!” No nation has more just cause to indulge in this pleasing expectation than the United States. A republic full of strength, whose power, resources, laws and institutions, are the admiration of the world. The vigor of whose government will reach every wrong offered to citizens, wherever its banner may float.

Such, my countrymen, is the land of our nativity, a land to which we turn, like the Peruvians to the sun, as an object of love and adoration. That we may live to hail once more its happy, happy shores, is the prayer of, your very obedient servant,

(Signed) ROBERT T. SPENCE.

[Without date].

No. 4, dated 10th Oct. is another request from the American merchants at Caraccas, that capt. Spence would defer his departure, until the probable result of the movements of Morales was ascertained. To which request, in no. 5, capt. Spence complies, saying—“In reply to which I beg leave to request that you may calculate on my remaining at Lagaira during the present crisis, and until I feel satisfied that all just cause of apprehension is at an end. Should those calamities, which would inevitably follow the sudden attack of an enterprising assailant, be realized, you know my duty as an officer, and, I trust, are acquainted with my feelings as a man: when duty and inclination unite, there is no want of zeal on occasions like the present. The flag that waves on the ship I have the honor to command, guarantees the safety of every American citizen, who, afloat, may claim its protection.

No. 6, dated Nov. 26, is a warm letter of thanks from the merchants, which we insert entire—

Laguria, Nov. 26th, 1822.

SIR—We should do injustice to our feelings if we refrained from expressing to you the extreme gratification we have received from a perusal of your protest of the late most extraordinary and sanguinary decree of general Morales, threatening not only the property, but the liberty and lives of American citizens engaged in lawful pursuits, and in a country whose independence has been solemnly acknowledged by the government of the United States.

The spirit and dignity of the sentiments which is evinced in your protest, are such as will, undoubtedly, receive the approbation of your government, demand the attention of the royalist general, reflect honor on yourself, and tend greatly to the personal security of your fellow countrymen now here, and who may hereafter arrive.

Since your arrival, we with pleasure have witnessed your zeal and firmness in the discharge of your duty to the United States, (notwithstanding your continued illness), and the unremitting attention you have paid to the protection of the rights of your countrymen in these seas, and at a most important crisis, when such assistance was absolutely wanted.

We congratulate ourselves that you were designated by our government to visit us, and regret that obedience to your instructions compels you to leave us, in prosecution of further most arduous duties.

It is with extreme pleasure, also, we find our government have afforded such effective resistance to the continued and frequent violations of our commercial rights, by employing a respectable portion of our gallant navy in these seas, when such force has been, and still is, so much wanted, and by which the dignity and interest of our country have been hitherto so successfully supported.

We believe, sir, that your official protest will show that the rights of American citizens can never be trampled upon with impunity, and consider it as an additional shield from lawless attack on our property and lives, which otherwise might have been seriously attempted.

With sincere wishes for the success of your future operations, and a complete restoration of your health,

We are respectfully your most obedient servants,

Edward W. Robinson	Robert K. Lowry
James F. Guedron	Lemmon & Forsyth
Benj. F. Pollock	David M. Miles
John Myers	John M. Poster
Wm. Hathenday	Henry Taggart
John Devit	James Gaul
Battye Gill	Y. D. Elworth
George Neville	H. Smith
Edmund S. Ray	Wm. Thomas
Charles Graff	Wm. Burr
P. J. McDermott	Geo. W. Danshue
E. James	John C. King

No. 7—is nearly of the same character as the preceding, but goes more into detail, approbatory of the ground taken by capt. Spence in regard to the exterminating decree of Morales, already inserted in the REGISTER. The Congress frigate was expected soon to arrive at Lagaira, or, it is believed, that captain Spence would not have left the port. For the countenance and support thus given, the merchants appear to be very grateful.

MAINE. *Finances of the state.* The treasurer's report to the legislature, now sitting at Portland, gives the following exhibit of the finances of the state:

Receipts into the treasury, during the year 1822, including the money on hand, at the commencement of the year, \$139,999 13

Expenditures, during same period, 114,497 61

At the commencement of the year 1822, the state debt was \$47,800, bearing an interest of six per cent. But as it was thought money might be obtained on more advantageous terms, it will be recollected that the legislature, last winter, authorized the treasurer to make a new loan of forty thousand dollars, to be applied to the liquidation of the state debt. This sum, together with the money at that time in the treasury, was sufficient to redeem all the former obligations of the state, which was accordingly done. So that the state now owes forty thousand dollars, bearing an interest of only five per cent.

The treasurer estimates the expenditure for 1823 at \$71,798; and the receipts into the treasury during the same time, including cash now on hand, at \$79,013 12. Leaving in the treasury on the close of the year 1823, a balance of \$7,215 12.

NEW YORK. The legislature of this state has commenced its first session, under the new constitution. On the 1st instant, Joseph C. Yates, as governor of the state, and Erastus Root, as lieutenant-governor, were sworn into office by chancellor Kent.

On the 31st ult. gov. Clinton issued the following, dated at "Head quarters:"

On retiring from the command of the militia of this state, the commander-in-chief considers it due to his feelings, as well as their merits, to express the high sense which he entertains of their good conduct, and his sincere hope that they will, on all future occasions, maintain the character which they have so honorably acquired.

He is conscious that, in the discharge of the important duties connected with the command of a militia composed of 140,000 men, many errors have been committed; but he has the satisfaction to know, that they have been unintentional; and to infer from the uniform respect which his fellow soldiers have manifested for his orders, and from the faithful performance of all their official obligations to him, that his views and his objects have been justly estimated, and the difficulties attending his situation duly considered.

Persuaded, as he has always been, of the great efficacy of the militia against foreign aggression or domestic violence, he cannot omit, at the close of his administration, to urge on every citizen, (where religious restraints do not forbid), the duty of qualifying himself to perform the functions of a soldier, as well as the importance of cherishing and cultivating those virtues and faculties which compose and adorn the character of a good citizen, and which are calculated to render him a useful and worthy member of a republican government. The military strength will then be commensurate with the moral power of the state, and both be lodged, where they always should be, in the great body of the people. The danger and expense of large standing armies will then be avoided, military usurpation effectually guarded against, and a force be always in readiness, on any emergency, to vindicate the rights, and maintain the honor and independence of our country. By order of the commander in chief,

J. S. VAN RENSSLAER, A. D. C.

Military Secretary.

NEW YORK—the city. Report of arrivals from foreign ports, at the port of New York, in 1822:—Ships, American, 288 British, 15; Swedish 2; Dutch, 1; Hamburg, 7; Prussian, 1; Russian, 1;—Total, 315. Barques, American, 4; brigs, American, 369; British, 57; Swedish, 2; Danish, 6; Dutch, 5; Hamburg, 2; Bremen, 2; Haytien, 3; Spanish, 2; Portuguese, 2; Neapolitan, 1.—458. Schooners, American, 361; British, 3; Dutch, 2; Haytien, 2—363. Ketch, Swedish, 1. Sloops, American, 32; British, 1.—33. Total number of the whole, 1172.

Since April, 1821, there has been launched at the port of New York, 36 *ships*, amounting to 14,500 tons, and averaging about 402 tons each; besides numerous brigs, schooners, sloops, steam-vessels, &c. Two other ships are in a state of forwardness for launching.

Com. Ad.

NORTH CAROLINA. The legislature of this state has adjourned. An act has passed which provides

(that a debtor, who honestly gives up his property, shall not be imprisoned for debt—another, that the sheriffs shall provide blankets for the use of their prisoners—and a third for the promotion of agriculture and household manufactures.

A spirit is up in this state for internal improvement. The message of the governor to the legislature, at the opening of the session, is a valuable paper, and we intend to give it a place with other like messages, as soon as we can. North Carolina possesses many sound statesmen and valuable men, and her fertile back country is peopled by a hardy race of industrious and intelligent freemen. She has much in her power, and now seems resolved to bring out her great resources to improve her natural advantages, by a sound legislation. We heartily wish her good speed!

NORTH CAROLINA BANKS. In the senate of North Carolina, on the 25th ult. Mr. Branch, from the joint select committee to whom had been referred the subject of the administration of the banks in that state, made a report, concluding as follows:

Whereas, it manifestly appears to this general assembly, from the report of the joint committee appointed to examine into the administration of the banks of North Carolina, that the state bank at Raleigh is in the habit of refusing specie payments when the directors think proper to do so, in palpable violation of their charter, and that they, and the agency of the bank of Newbern, at this place, are in the practice also of demanding, as a prerequisite to the granting of accommodation at the bank, that the applicant should furnish them with an equal amount in northern funds at par, which funds the applicant, in most cases, is compelled to give four per cent. for, and which, in market, will command that premium. Therefore,

Resolved, By the senate and house of commons, That the governor of this state be requested to submit the facts, as contained in the report of the aforesaid committee, (appointed to inquire into the administration of the banks of North Carolina), to some one, or more legal gentlemen, in this state or elsewhere, eminent for their abilities and legal learning, and totally unconnected with those establishments:

And if it should be the opinion of such counsel that the banks, or either of them, have directly or indirectly, through the medium of northern funds, exacted more than 6 per cent. per annum for their discounts, or have failed to pay specie for their notes, as by the terms of their charters they are bound to do, that then, and in that case, it shall be the duty of the governor, and he is hereby empowered and directed to employ counsel to institute a judicial investigation into the administration of those institutions, and to ascertain judicially, by what authority they have transcended their chartered powers; and, furthermore, to adopt the most efficient means to check the progress of such a dangerous usurpation of power, so much calculated to enrich the monied capitalist, and to impoverish the community generally.

On the day following the report was taken up in the senate and *rejected*, by a vote of 34 to 19.

PERU. *Proclamation.* "I was present at the declaration of the independence of the states of Chili and Peru; I have in my possession the standard which Pizarro brought with him to enslave the empire of the Incas; I am no more a public man. This is a recompence, with usury, for ten years' revolution and war.

My promises with the people, with whom I have waged war, have been fulfilled; I have achieved their independence, and I leave to their will the election of their governors.

The presence of a successful warrior, however disinterested may be his intentions, is an object of fear for states that establish new constitutions; on the other hand, I am already vexed to hear said, that I wish to make myself a sovereign. However, I shall be always ready to make the last sacrifices for the liberty of the country, but as a private individual and nothing more.

As to my public conduct, the opinions of my compatriots, as it generally happens, will be divided; but their children will give the true criterion.

Peruvians! I leave with you the national representations already established; if you put in it an entire confidence, you will triumph; if not, you will become the victims of anarchy.

Let firmness preside over your destinies, and may you enjoy forever felicity and peace.

JOSE DE SAN MARTIN.

Magdalena, near Lima, Sept. 20, 1822.

FOREIGN NEWS. By an arrival at New York, London papers to the evening of the 5th Dec. have been received. Though there is not any thing of a positive character in the news, except in relation to a few matters that have occurred, much food is afforded for speculation, on important events.

The congress of Verona has broken up. Among other proceedings had, the following is mentioned in such a way, that we must believe the report of it. It appears that the French minister, viscount Montmorency, (created a duke since his return to Paris), had claimed the right, for France, of an *armed intervention in the affairs of Spain*. This seems to have been faintly resisted by the ministers of several of the foreign powers, and especially by the duke of Wellington, on the part of Great Britain—but Montmorency maintained, the right of his king to make war if he pleased, and the result is stated to be, that liberty was granted to France to employ that right against Spain, if she thinks proper. It is not intimated that the other powers will interfere—one of the London papers of Dec. 4, says that "*war is inevitable*," but declares that England will maintain the strictest neutrality.

It is understood that the decision of the congress was known at Madrid—and so far from the cortes being disposed to give way to the assumptions of France, they appear rather to wish for war, as an agent to terminate the civil commotions that prevail in many parts of the kingdom, which they believe are excited and sustained by the intrigues of France, whose object is to destroy the constitutional government in Spain, dreading the influence of it as an example.

Both parties are busy with military preparations—and couriers had been despatched from Paris to Madrid, said to bear the conditions on which the French government would maintain peace.

Such is the substance of several columns of remarks and speculations in the British and French papers—but whether there will be any war, at present, is doubtful. We should regard the French ministers as mad men, if they hazard one. If the state of their country is faithfully represented, a revolution would appear to be the inevitable result. The Bourbons are not loved in France—the present generation has risen up under a different order of things, and tens of thousands of old soldiers scattered through the kingdom, are, heart and soul,

devoted to the memory of Napoleon and his deeds of war and peace.

The soldiers of the "army of the faith" appear to have been most severely dealt with in several late affairs with the constitutionalists. The king is closely watched, and all persons about him are appointed by the cortes. The whole palace, except his private apartments, are subject to domiciliary visits.

New levies are raising in Poland—and the movement of the Russian troops, adjacent to the Turkish frontier, indicates, in the opinion of some, a change in the resolves of Alexander as to Turkey.

There is some account of the late naval battle between the Greeks and the Turks near Spezia. The Greek fleet consisted of 60 vessels, but 28 of these were driven by the wind so that they could not get into the contest; the remaining 32 gallantly attacked the Turks, who had 90 sail, among them 6 of the line and 9 frigates. The fight lasted six hours with great fury and desperation—The Greeks performed prodigies of valor in the sight of their wives and children, who covered the neighboring eminences; and, at last, the superior force of the barbarians gave way to the nervous arms of a few patriots striking for liberty.

Envoys from the Greeks had attended at Verona, but they were not *officially* admitted to the presence of the sovereigns.

The ministers from Piedmont and Naples had exerted themselves to the utmost, to have the *Austrian* troops withdrawn from their territories—but could not effect any thing.

A British squadron was fitting out at Portsmouth for a special service, to be commanded by com. Owen, consisting of one 74, two stout frigates and three smaller vessels.

The intelligence from Verona had produced a great sensation in London—cabinet councils were frequently held, and the stocks had fallen to 79½.

It is stated that Mr. Zea, the Colombian minister in England, died at Cheltenham, whither he had gone for the benefit of the waters, about the 1st of December.

West Indies. Nearly the whole city of Port au Prince was destroyed by fire on the 16th and 17th ult. Between 2 and 300 houses and a great quantity of goods, were consumed. The aggregate loss is estimated at between 3 and 4 millions of dollars. In consequence, the port has been opened for the reception of building materials, free of duty, for the space of one year.

Revenue and ad valorem Goods.

MR. NILES—The prosperous state of the finances, as exhibited by the treasury statements of the year 1822, is a matter of great exultation with many—being hailed as evidence of the reviving prosperity of the country; but, to those who understand the meaning of the word revenue, the increase of revenue, by impost, is justly considered as a true indication of industry and production declining at home. To come to correct conclusions we must know what impost is—it is admitted to be an assessment made upon articles of foreign produce imported into the United States: the amount of this assessment, or tax, being in proportion to the quantity of articles imported, the increase of revenue is, of course, the increase of importation—and the question at once presents itself, is the state of the treasury a correct index of public prosperity? Reasoning from official facts, of the truth of which

there is no doubt, one would think that the conclusions, if fairly drawn, would be equally certain and satisfactory. As our laws prescribe that the annual accounts of the treasury shall begin on the first of January of each year, the secretary's reports are, necessarily, of the preceding year—so that our comparisons must be made between the years 1820 and 1821, so far as they relate to revenue. As to exports and imports, the law is different—the year commences on the first of October, thus the report of the secretary of the treasury, presented to congress, on the 24th December, contains the statement of the revenue only for the year ending first of January, 1822—but of the imports to the end of the year ending on the first of October. It will be, therefore, understood that, in speaking of revenue in any year, reference is had to the year from the 1st January to the 30th December—when of imports and exports, to the year from the 1st October to the 30th September:—the first being the fiscal, the last the statistical year. In order to simplify the statements of imports and revenue, I take two items of the customs, viz: the duties on goods paying a duty ad valorem and specific duties; the other items are small and will not vary the results:

In 1820, the amount of goods, paying duty ad valorem, imported,		
was,	Dolls.	*22,128,000—Revenue accrued 4,420,000
1821, do. do.		*36,560,000 7,545,000
Increase of importation	14,432,000—	Increase revenue 3,125,000

In 1820, the amount of goods, paying specific duties, imported		
was,	Dolls.	*15,315,000—Revenue accrued 8,517,000
1821, do. do.		*15,666,000 8,712,000
Increase of importation	351,000—	Increase revenue 195,000

Thus, we see, that the increase in these two items has been, ad valorem goods, 14,432,000 dols; duty 3,125,000—specific goods 351,000 dols.; duty 195,000. With this acknowledged fact to begin with, that the increase of revenue has been by the increased importation and consumption of ad valorem goods, I will inquire how this fact bears on the general prosperity of the country? In doing which the reader must have patience, as a comparison between the relative effects of ad valorem and specific importations on the country, has not, hitherto, been much attended to—a comparison, it is believed, which will lead to results conclusive with every candid mind, and well pay for the trouble of examining in detail.

*These sums exhibit the nett importation and the nett revenue; and, making allowances for small quantities exported without the benefit of drawback, they shew the amount of foreign goods consumed in the country. For the year 1820, the value of articles paying specific duty, is made from calculation in this way—until 1821, there was no law requiring the secretary of the treasury to state the value of specific goods, only the quantity. In the statistical tables of 1821, the imports of specific goods, deducting re-exportation, is stated at 15,666,000 dollars for the year ending 30th September, the statistical year; the revenue for the fiscal year 1821, is stated at 8,712,000 dols. The revenue for the fiscal year 1820 is stated at 8,517,000 dollars—which, on the same proportion between imports and duties as in 1821, produces the above results. Without a laborious research, it is impossible to adopt any other mode of ascertaining the value of specific articles, and it cannot be far from being accurate—as the relative imports of the last quarters of the fiscal years 1820 and 1821 must be nearly the same.

Generally speaking, ad valorem goods are the manufactures of Europe and the East Indies, composed of materials which either abound in the United States, or may be produced to an amount far beyond our wants—imported from countries which rigidly exclude from their consumption the produce of our soil, seas and manufactures—paid for by the profits of our freighting, fisheries and the trade with countries from which we import specific articles in exchange for our provisions and other produce; many of them fabricated from the raw materials which we export, and then brought back, enhanced five-fold in value by foreign labor, and nearly the whole of which can be manufactured by our own citizens

In 1821, the imports of ad valorem goods, for home consumption, was 36,560,000 dollars, altogether, we may say, from Europe, the British East Indies and China; in the same year the domestic produce exported to those countries, excepting cotton and tobacco, did not exceed 5,600,000 dols.* It thus appears that the duties alone on the ad valorem goods, imported into the United States, exceed the value of our whole domestic produce consumed in the countries whence we import them, (except cotton and tobacco), by \$2,000,000. The increase in the amount of ad valorem goods imported, does not increase the market of the northern, middle and western states, or those of the southern, who do not raise cotton and tobacco. The increased consumption of these goods in the United States, does not induce any one nation to relax at all in the rigor of their system of excluding our produce. They do not admit cotton and tobacco from any principle of friendship to us, or because we purchase their manufactures. Cotton is indispensable to them as a raw material for their manufactures, and tobacco is as much an article of necessity to Europeans as tea is to us; but, necessary or not, they will have it. We do not refuse to import tea from China because the Chinese will not take our flour; tobacco will be chewed, snuffed and smoked, though we refuse to buy glass, linen, woollens or hardware—and the cotton manufactories of Europe will not stop because we make our own cotton goods. Ad valorem goods, paying 25 per cent. imported and consumed in 1821, amounted to \$16,600,000—these are cottons and woollens; and of those allow one-half to be cottons, say 8,300,000. Manufactured cottons bear to the raw material a proportion, in value, of 5 to 1. The price of the raw material then being \$1,660,000, we should, by excluding cotton goods, lose only a market for this amount of cotton wool—this would be made up to the planter by the increased domestic demand, arising from our manufacturing at home the extra quantity before imported. When England realizes such immense profits from her cotton manufactures, she will not exclude our cotton wool, which she requires to supply other markets with goods. It may then be safely assumed,

* This sum is made up from a careful examination of the statistical tables of 1821, as to the destination of our domestic exports. That the reader may judge of the correctness of the calculation, I subjoin the items of European and East India consumption—Rice \$950,000; pot and pearl ashes 890,000; skins and furs 600,000; animals 120,000; flour, &c. 370,000; wood 400,000; flaxseed 420,000; naval stores 270,000; all other 300,000. To Europe \$4,750,000; to the British East Indies 32,000; to China 388,000. To which add the produce of our fisheries in the Pacific, not included in the tables, 350,000—total \$5,520,000.

that the markets for none of our produce depend on our consumption of ad valorem goods; and that the increased importation, and the consequent increase of revenue, does not tend to the prosperity of the country, unless it increases the means of the country to pay for them. There are no data from which to calculate the amount of ad valorem goods consumed in the different states of the union, and compare it with the amount of domestic produce, of any one state, which is consumed in the country whence ad valorem goods are imported. As an example, take the states of Massachusetts and Connecticut—let any person, conversant with their commerce, state the amount of ad valorem goods they consume of British manufacture, on one side, and the amount of their domestic produce consumed in England, on the other. I am much mistaken if it would pay for the pins, needles, thread, tape and bobbins of the ladies; at all events, the result would convince the people of those states that they did not prosper in proportion to the increased importations. And, if the advocates of import will contend that a country flourishes the more as the increase of foreign goods progresses, not regarding the increase or diminution of markets, they will find a stubborn fact in the report of the secretary of the treasury: The increase of domestic exports in 1821 was only \$6,200,000, while the increase of ad valorem imports was \$14,432,000—proof conclusive, to common minds, that increased importation does not cause a proportionate increase of exportation, or add to the ability of the people to buy or consume. From a calculation of the average duty on ad valorem goods, for 1820 and 1821, it appears that it amounts to about 20 per cent.—thus, for \$22,128,000 of imports, the revenue was \$4,420,000 for 1820; for \$36,560,000 of imports, the revenue was \$7,545,000 for 1821—so that, for every dollar that goes into the treasury, five dollars worth of goods are imported. An increase of revenue on ad valorem goods then, being, of necessity, an increase of imports of five times the amount for the goods, and, with the present rate of exchange added, say 12½ per cent., presents this result: the treasury gains, in revenue, 3,125,000 dolls.—the people pay \$19,144,000. Will any one tell me what the people gain to correspond with the gain to the treasury? The people, who live in states which do not raise cotton and tobacco, pay their proportion of this 19,000,000—not with their produce consumed in the countries which send them their manufactures—not with raw materials, nor by the exchange of foreign produce for manufactures. In 1821 we imported from England to the amount of 23,000,000 dollars, mostly manufactures; we exported, in foreign produce, to England, \$2,125,000, of which 1,933,000 was specie, leaving, for what alone might be called foreign goods, 192,000. Imports from China, in 1821, \$3,111,000—exports, foreign produce, \$3,902,000, of which 3,391,000 was specie, leaving, of foreign goods, only 511,000. Imports from British East Indies, same year, \$1,530,000—exports, foreign produce, \$1,934,000, of which 1,884,000 was specie, leaving 50,000 only of foreign goods. The following calculation will shew the amount which the country pays on ad valorem goods:—Amount imported, \$36,560,000, exchange 8= 2,920,000; duties, 7,545,000= 47,025,000; our domestic exports in the same year were 43,671,000 dollars, being 3,350,000 less than the cost of these goods, after exhausting all the exportable produce of the country. From these facts it appears, conclusively, that the importation of ad valorem goods swallows up all the profits of our agriculture, fish-

eries, commerce and manufactures, without opening any new, or enlarging any of our old markets for domestic or foreign produce; without giving any additional encouragement to our agriculture or commerce. The West Indies is the great mart for our provisions; it will not be contended that they, or the Spanish Main, will consume any more because we purchase our cottons and woollens from England, or silks from France and China. In 1821, our domestic exports to Hayti, Cuba, the Spanish and Portuguese possessions in South America, were \$6,250,000. almost altogether provisions; being \$600,000 more than was consumed in all the countries whence we import \$36,000,000 of ad valorem goods. The most profitable item in our commerce is the exportation of foreign goods; it affords employment to our seamen, freight to the ship owners, and a profit on the cargo. In the statistical year 1821, the gross importation of ad valorem goods, was 30,894,000 dollars; of specific goods \$21,608,000, a difference of \$9,200,000; yet the export of ad valorem goods was only \$4,595,000; of specific \$5,942,000, a difference of \$1,347,000 in favor of the specific—which, being heavy, bulky articles, of much less value, in proportion to their weight than ad valorem goods, would, in exportation, employ five, nay, perhaps, ten times as many seamen and vessels as the export of the same value of ad valorem goods. Let merchants think well of this; let the friends of our shipping interest make their own calculation, and I would be almost willing to leave the question to them. This is a subject which is well worth being examined in detail—more so than is in my power. Essays, like this, are intended for the reflecting part of the country, who will extend their thoughts beyond what they read; think and examine for themselves; seize an idea, statement or calculation, and carry it into all the operations of the various branches of our industry; examine its bearing on the general interests of the country; and then, regardless of the opinions of official men, however elevated, think and act for themselves. It is of the last importance then, in the discussion of public measures, we should exercise the spirit of free and candid inquiry; reasoning from admitted facts, our conclusions cannot be wrong, unless our judgments are warped by prejudice, preconceived opinions, or a magisterial, dogmatical self-conceit, which leads a man to consider himself only to be right, and to treat, with contemptuous disrespect, the opinions of others, 'equally conscientious with himself,' and, perhaps, equally able to form just conclusions. The facts on which I rely are drawn from authentic public documents—my deductions seem to me obvious and natural; if any one deigns to answer them, it is earnestly hoped it will be in the same spirit in which they are made. Having some leisure time on my hands, it will give me pleasure to discuss this subject with temper and freedom, with any one who thinks me mistaken. But I here offer a solemn protest against entering the field to reply to such productions as the address of Mr. Jones, in your REGISTER of the 28th of December, in which there is neither reasoning or a statement of facts—he has indulged his fancy in drawing a picture which none of his opponents will recognize as their work; he has been at the trouble of making a man of straw—it would be hard not to leave him unmolested in his efforts to destroy it.

Having pursued these remarks to a length, tiresome, perhaps, to your readers, it is best to rest a week, when I will take up the subject of the imports of specific goods,

Monumental Address. TO THE PUBLIC.

The citizens of New York, will specially recollect, that, in the year 1803, an appropriate vault or tomb was constructed, by Tammany society, at the Wall about, opposite to the city of New York, and that, after thirty years neglect, a portion of the remains, were then collected, of the eleven thousand and five hundred *citizens, soldiers and sailors*, of our revolutionary war, who had perished in doleful dungeons and pestilential prison-ships, and whose bodies were thrown in heaps into the earth, at the said Wall-about, frequently when life was scarcely extinct.

These relics are yet repeatedly collected, as the beating rains of heaven discover the places of their deposit, and are carefully interred into the vault, denominated "*the tomb of the martyrs*;" and which yet remains destitute, even of an inscription stone!

At the time of the general interment of those remains, in 1808, the hope was fondly cherished that, from individual donations, an appropriate monument would speedily have arisen, and the work rendered complete which should transmit to future generations the entire devotion of those *heroes, who rather chos. death, than enlist in the service of the enemy!* though they were incessantly offered liberation on the dishonorable condition.

The exertions to erect a monument over the tomb then failed; though our state legislature had granted an appropriation, from the sale of lands, of *one thousand dollars* in aid of the proposed work. This sum, being inadequate to do justice, in workmanship, to such a *national object*, the donation was not applied for, nor was the sale of the public lands made.

After the lapse of nearly fourteen years, the above sum was applied for, by Tammany society, to whom the original appropriation had been made; when, by a subsequent law of 1821, the legislature granted the sum of one thousand dollars, in *cash*, to Benjamin Romaine to be accounted for by him, towards building such a monument as had been originally intended.

That sum is now received from the state treasury, and plans and estimates of the work, in a variety of forms, have been had, all of which again prove the total inadequacy of that amount to erect a monumental structure, suited to that eventful period of our national history. With the present means in hand, it cannot be made equal to several church-yard inscriptions, and far inferior to that raised at West Point, by the cadets, commemorative of a single death of one of their members, in the exercise and display of arms, on the first day of January, 1817.

It is now confidently hoped and fully believed, that the patriotic citizens of New York, freed from all party distinctions, will no longer delay a work through a deficiency of means, to do justice to an object of such magnitude, and so *specially their own*; that they will now cause the same to be graduated on a plan suited to a scale of the nation.

Other cities, towns and villages are now vieing with each other in the erection of works to perpetuate the memorable events of our revolution.—In a special manner, we now hear from our fellow-citizens of Orange county, in this state, consisting of a few farmers, who are about to construct a monumental inscription, estimated at fifteen hundred or two thousand dollars, over the relics of about forty of their citizens, who fell in the massacre of Minisink,

during our war of emancipation from British thralldom.

At the time of the interment at the Wall about, in 1806, a vast concourse of citizens attended, who formed in line, by their several societies, and the citizens, not of the association, formed in a separate body: the military followed. All were invited, without any distinction of party, and the concourse was immense. The scene was grand, and, at the same time, solemn and mournfully impressive. Several females attended from Philadelphia, New-Jersey and Connecticut, whose fathers and brothers had perished *here*, in the contest for our independence; several individuals from Charleston, Virginia, Boston and elsewhere, came also, specially to this city to sympathise and witness the solemnity, whose parents and relatives had perished here, and to whom funeral honors were then exhibited.

Thirteen coffins, representing the thirteen original states, were filled with the bleached bones of the martyrs to our freedom. These were borne in the procession, attended by their palls, and accompanied by one hundred and four pall-bearers, all revolutionary men. The relics were deposited in the vault, near the navy yard, *which yet remains without inscription or monumental stone!!!*

The undersigned, having in charge, in the first instance, the commencement of seeking further means to effect the above object, are hereby authorized, by the society of Tammany, to associate themselves with the honorable the corporation of the city, or with individuals of that body;—and also with other regularly delegated individuals, from such other institutions as may be pleased to join their aid in erecting the contemplated monument.

The undersigned do, therefore, beg leave to commence the acquisition of means by exhibiting the above address, together with a subscription paper, at the Coffee-house, City Hotel, Mechanic, Washington, and Tammany Halls, and Broadway-house, Wall street House, Mansion House, City Tavern. At Brooklynn, and such other places, as patriotic individuals shall request; and especially at the navy yard, under the care of com. Evans—where the monument is to be erected.

By order,

CLARKSON CROLIUS, Chairman.
GEORGE MILLS
PETER EMBURY
SAMUEL B ROMAINE
WILLIAM MOONY
BENJAMIN ROMAINE, Treasurer.

Treaty of Indemnity.

By the president of the United States of America:
A PROCLAMATION.

Whereas a convention between the U. States of America and his Britannic majesty was concluded and signed at St. Petersburg, under the mediation of the emperor of all the Russias, on the twelfth day of July last, by the respective plenipotentiaries of the three powers: And whereas the said convention has been by them duly ratified, and the respective ratifications of the same were exchanged at Washington, on the tenth day of the present month, by John Quincy Adams, secretary of state of the United States, the right honorable Stratford Canning, envoy extraordinary and minister plenipotentiary of his Britannic majesty, and George Ellisen, charge d'affaires of his imperial majesty the emperor of all the Russias, on the part of their several governments: which convention is in the words following, to wit:

[TRANSLATION.]

In the name of the most Holy and Indivisible Trinity:
The president of the United States of America, and his majesty the king of the united kingdom of Great Britain and Ireland, having agreed, in pursuance of the fifth article of the convention concluded at London on the 20th day of October, 1818, to refer the differences which had arisen between the two governments, upon the true construction and meaning of the first article of the treaty of peace and amity, concluded at Ghent on the 24th day of December, 1814, to the friendly arbitration of his majesty the emperor of all the Russias, mutually engaging to consider his decision as final and conclusive. And his said imperial majesty having, after due consideration, given his decision upon these differences in the following terms, to wit:

"That the United States of America are entitled to claim from Great Britain a just indemnification for all private property, which the British forces may have carried away; and as the question relates to slaves more especially, for all the slaves that the British forces may have carried away from places and territories of which the treaty stipulates the restitution, in quitting these same places and territories.

"That the United States are entitled to consider as having been so carried away, all such slaves as may have been transferred from the above mentioned territories to British vessels within the waters of the said territories, and who for this reason may not have been restored.

"But that if there should be any American slaves who were carried away from territories of which the first article of the treaty of Ghent has not stipulated the restitution to the United States, the United States are not entitled to claim an indemnification for the said slaves."

Now, for the purpose of carrying into effect this award of his imperial majesty, as arbitrator, his good offices have been further invoked to assist in framing such convention or articles of agreement between the United States of America and his Britannic majesty, as shall provide the mode of ascertaining and determining the value of slaves and of other private property, which may have been carried away in contravention of the treaty of Ghent, and for which indemnification is to be made to the citizens of the United States, in virtue of his imperial majesty's said award, and shall secure compensation to the sufferers for their losses, so ascertained and determined. And his imperial majesty has consented to lend his mediation for the above purpose, and has constituted and appointed CHARLES ROBERT COUNT NESSELDORF, his imperial majesty's privy counsellor, member of the council of state, secretary of state directing the imperial department of foreign affairs, chamberlain, knight of the order of Saint Alexander Nevsky, grand cross of the order of Saint Vladimir of the first class, knight of that of the white eagle of Poland, grand cross of the order of St. Stephen of Hungary, of the black and of the red eagle of Prussia, of the legion of honor of France, of Charles III. of Spain, of Saint Ferdinand and of merit of Naples, of the annunciation of Sardinia, of the polar star of Sweden, of the elephant of Denmark, of the golden eagle of Wirtemberg, of fidelity of Baden, of Saint Constantine of Parma, and of Guelph of Hanover; and JOHN COUNT CAPODISTRIAS, his imperial majesty's privy counsellor, and secretary of state, knight of the order of St. Alexander Nevsky, grand cross of the order of St. Vladimir of the first class, knight of

that of the white eagle of Poland, grand cross of the order of St. Stephen of Hungary, of the black and of the red eagle of Prussia, of the legion of honor of France, of Charles III. of Spain, of St. Ferdinand and of merit of Naples, of St. Maurice and of St. Lazarus of Sardinia, of the elephant of Denmark, of fidelity and of the lion of Zähringen of Baden, burgher of the Canton of Vaud, and also of the Canton and of the republic of Geneva, as his plenipotentiaries to treat, adjust, and conclude such articles of agreement as may tend to the attainment of the above mentioned end, with the plenipotentiaries of the United States and of his Britannic majesty; that is to say: on the part of the president of the United States, with the advice and consent of the senate thereof, HENRY MIDDLETON, a citizen of the said United States, and their envoy extraordinary and minister plenipotentiary to his majesty the emperor of all the Russias; and on the part of his majesty the king of the united kingdom of Great Britain and Ireland, the right hon. SIR CHARLES BAGOT, one of his majesty's most honorable privy council, knight grand cross of the most honorable order of the Bath, and his majesty's ambassador extraordinary and plenipotentiary to his majesty the emperor of all the Russias. And the said plenipotentiaries, after a reciprocal communication of their respective full powers, found in good and due form, have agreed upon the following articles:

ARTICLE 1.

For the purpose of ascertaining and determining the amount of indemnification which may be due to citizens of the United States under the decision of his imperial majesty, two commissioners and two arbitrators shall be appointed in the manner following: That is to say, one commissioner and one arbitrator shall be nominated and appointed by the president of the United States of America, by, and with the advice and consent of the senate thereof; and one commissioner and one arbitrator shall be appointed by his Britannic majesty. And the two commissioners and two arbitrators, thus appointed, shall meet and hold their sittings as a board in the city of Washington. They shall have power to appoint a secretary, and before proceeding to the other business of the commission, they shall, respectively, take the following oath, (or affirmation), in the presence of each other. Which oath or affirmation, being so taken, and duly attested, shall be entered on the record of their proceedings; that is to say: "I, A. B. one of the commissioners, (or arbitrators as the case may be), appointed in pursuance of the convention concluded at St. Petersburg on the 30th day of June, (12th day of July), 1822, between his majesty the emperor of all the Russias, the United States of America, and his Britannic majesty, do solemnly swear, (or affirm), that I will diligently, impartially, and carefully examine, and, to the best of my judgment, according to justice and equity, decide all matters submitted to me as commissioner, (or arbitrator, as the case may be), under the said convention."

All vacancies occurring by death or otherwise shall be filled up in the manner of the original appointment, and the new commissioners or arbitrators shall take the same oath or affirmation, and perform the same duties.

ARTICLE 2.

If, at the first meeting of this board, the governments of the United States and of Great Britain shall not have agreed upon an average value, to be allowed as compensation for each slave for whom indemnification may be due; then, and in that case, the commissioners and arbitrators shall conjointly

proceed to examine the testimony which shall be produced under the authority of the president of the United States, together with such other competent testimony as they may see cause to require or allow, going to prove the true value of slaves at the period of the exchange of the ratifications of the treaty of Ghent; and upon the evidence so obtained, they shall agree upon and fix the average value. But in case that a majority of the board of commissioners and arbitrators should not be able to agree respecting such average value, then and in that case, recourse shall be had to the arbitration of the minister or other agent of the mediating power, accredited to the government of the United States. A statement of the evidence produced, and of the proceedings of the board thereupon, shall be communicated to the said minister or agent, and his decision, founded upon such evidence and proceedings, shall be final and conclusive. And the said average value, when fixed and determined by either of the three before mentioned methods, shall in all cases serve as a rule for the compensation to be awarded for each and every slave for whom it may afterwards be found that indemnification is due.

ARTICLE 3.

When the average value of slaves shall have been ascertained and fixed, the two commissioners shall constitute a board for the examination of the claims which are to be submitted to them, and they shall notify to the secretary of state of the United States, that they are ready to receive a definitive list of the slaves and other private property, for which the citizens of the United States claim indemnification; it being understood and hereby agreed that the commission shall not take cognizance of, nor receive, and that his Britannic majesty shall not be required to, make compensation for any claims for private property under the first article of the treaty of Ghent, not contained in the said list. And his Britannic majesty hereby engages to cause to be produced before the commission, as material towards ascertaining facts, all the evidence of which his majesty's government may be in possession, by returns from his majesty's officers or otherwise, of the number of slaves carried away. But the evidence so produced, or its defectiveness, shall not go in bar of any claim or claims which shall be otherwise satisfactorily authenticated.

ARTICLE 4.

The two commissioners are hereby empowered and required to go into an examination of all the claims submitted, through the above-mentioned list, by the owners of slaves or other property, or by their lawful attorneys or representatives, and to determine the same, respectively, according to the merits of the several cases, under the rule of the imperial decision herein above recited, and having reference, if need there be, to the explanatory documents hereunto annexed, marked A and B. And in considering such claims, the commissioners are empowered, and required, to examine, on oath, or affirmation, all such persons as shall come before them, touching the real number of the slaves, or value of other property, for which indemnification is claimed: and, also, to receive in evidence, according as they may think consistent with equity and justice, written depositions or papers, such depositions or papers being duly authenticated, either according to existing legal forms, or in such other manner as the said commissioners shall see cause to require or allow.

ARTICLE 5.

In the event of the two commissioners not agreeing in any particular case under examination, or of

their disagreement upon any question which may result from the stipulations of this convention, then and in that case they shall draw by lot the name of one of the two arbitrators, who, after having given due consideration to the matter contested, shall consult with the commissioners, and a final decision shall be given, conformably to the opinion of the majority of the two commissioners, and of the arbitrator so drawn by lot. And the arbitrator, when so acting with the two commissioners, shall be bound in all respects by the rules of proceedings enjoined by the fourth article of this convention upon the commissioners, and shall be vested with the same powers, and be deemed, for that case, a commissioner.

ARTICLE 6.

The decision of the two commissioners, or of the majority of the board, as constituted by the preceding article, shall in all cases be final and conclusive, whether as to number, the value, or the ownership of the slaves, or other property, for which indemnification is to be made. And his Britannic majesty engages to cause the sum awarded to each and every owner in lieu of his slave or slaves, or other property, to be paid in specie, without deduction, at such time or times, and at such place or places, as shall be awarded by the said commissioners, and on condition of such releases or assignments to be given, as they shall direct: Provided, that no such payments shall be fixed to take place sooner than twelve months from the day of the exchange of the ratifications of this convention.

ARTICLE 7.

It is farther agreed, that the commissioners and arbitrators shall be respectively paid in such manner as shall be settled between the governments of the United States and Great Britain, at the time of the exchange of the ratification of this convention. And all other expenses attending the execution of the commission, shall be defrayed jointly by the United States and his Britannic majesty, the same being previously ascertained and allowed by the majority of the board.

ARTICLE 8.

A certified copy of this convention, when duly ratified by his majesty the emperor of all the Russias, by the president of the United States, by and with the advice and consent of their senate, and by his Britannic majesty, shall be delivered by each of the contracting parties, respectively, to the minister or other agent of the mediating power, accredited to the government of the United States, as soon as may be after the ratifications shall have been exchanged, which last shall be effected at Washington, in six months from the date hereof, or sooner if possible.

In faith whereof, the respective plenipotentiaries have signed this convention, drawn up in two languages, and have hereunto affixed their seals.

Done in triplicate, at St. Petersburg, this thirtieth [twelfth] day of June, [July] one thousand eight hundred and twenty-two.

[L. s.]	NESSELRODE,
[L. s.]	CAPODISTRIAS,
[L. s.]	HENRY MIDDLETON,
[L. s.]	CHARLES BAGOT.

Now, therefore, be it known, that I, JAMES MONROE, president of the United States, have caused the said convention to be made public; to the end that the same, and every clause thereof, may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness, whereof, I have hereunto set my [L. s.] hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this eleventh day of January, in the year of our Lord one thousand eight hundred and twenty-three, and of the independence of the United States the forty-seventh.

JAMES MONROE.

By the president:

JOHN QUINCY ADAMS, *Secretary of State.*

Alteration of the Tariff.

COPY OF A BILL WHICH IS NOW PENDING IN THE HOUSE OF REPRESENTATIVES.

A bill for the more effectual encouragement and protection of certain domestic manufactures.

Be it enacted, &c. That, from and after the thirtieth day of June, in lieu of the duties now imposed by law, on the importation of the articles hereinafter enumerated, there shall be levied, collected, and paid, the following duties, that is to say:

First. A duty of thirty per centum ad valorem on all manufactures of wool, or of which wool is a component part: *Provided,* That all woollen cloths, or cloths of which wool is a component part, excepting blankets, flannels, and worsted or stuff goods, the original cost of which, at the place whence imported, with the addition of ten per centum, shall be less than eighty cents per square yard, shall, with such addition, be taken and deemed to have cost eighty cents per square yard, and shall be charged with duty accordingly.

Second. A duty of twenty-five per centum ad valorem on all manufactures of cotton, silk, flax, or hemp, not herein particularly specified, or of which either of these materials is a component part: *Provided,* That all cotton cloths, or of which cotton is a component material, (excepting nankeens imported directly from China, and excepting cloths colored or dyed, wholly or in parts, the original cost of which, at the place whence imported, with the addition of twenty per centum, if imported from the Cape of Good Hope, or from places beyond it, and and of ten per centum, if imported from any other place, shall be less than twenty-five cents per square yard, shall, with such addition, be taken and deemed to have cost twenty-five cents per square yard, and shall be charged with duty accordingly: And, that all cotton cloths, or of which cotton is a component part, colored or dyed, wholly or in part, the original cost of which, at the place whence imported, with the addition aforesaid, shall be less than thirty-five cents per square yard, shall, with such addition, be taken and deemed to have cost thirty-five cents per square yard, and shall be charged with duty accordingly: And that all unbleached and uncolored cotton, twist, yarn, or thread, the original cost of which shall be less than sixty cents per pound, shall be deemed and taken to have cost sixty cents per pound, and shall be charged with duty accordingly: And all bleached or colored yarn, twist, or thread, the original cost of which shall be less than seventy-five cents per pound, shall be taken and deemed to have cost seventy-five cents per pound, and shall be charged with duty accordingly: *And, provided, also,* That all linen or hempen cloths, or cloths of which flax or hemp is a component material, not herein particularly specified, the cost of which, at the place whence imported, with the addition of ten per centum, shall be less than twenty-five cents per square

yard, shall, with such addition, be taken and deemed to have cost twenty-five cents per square yard, and shall be charged with duty accordingly.

A duty of thirty per centum ad valorem on nankeens.

Third. A duty of twenty-five per centum ad valorem on printing types, brass wire, cutlery, pins, needles, buttons, button moulds, buckles of all kinds, japanned wares of all kinds, cannon, muskets, fire arms, and side arms, and on all manufactures, not herein specified, made of brass, iron, steel, pewter, lead, or tin, or of which any of these metals is a component material.

A duty of forty per centum ad valorem, on all Leghorn and silk hats: *Provided,* That, if the cost of the same, at the place whence imported, with the addition of ten per centum, shall be less than one dollar each, they shall be deemed and taken to have cost one dollar each, and shall be charged with duty accordingly.

The following duties severally and specifically:

On lead, in pigs, bars, or sheets, two cents per pound;

On leaden shot, three cents per pound;

On red or white lead, dry or ground in oil, four cents per pound;

On hemp, two and a quarter cents per pound;

On tarred cable and cordage, four cents per pound;

On untarred cordage, yarns, twine, pack thread, and scins, five cents per pound;

On linseed and hemseed oil, twenty five cents per gallon;

On wool, — cents per pound;

On copperas, two cents per pound;

On iron, in bars and bolts, not manufactured, in whole or in part, by rolling, one dollar per hundred weight;

On round iron or braziers' rods, of three-sixteenths to eight-sixteenths of an inch diameter, inclusive, three dollars per hundred weight;

On iron, in sheets or hoops, three dollars per hundred weight;

On slit iron, in nail or spike rods, three dollars per hundred weight;

On iron spikes, three cents per pound;

On nails, five cents per pound;

On iron or steel wire, not exceeding number eighteen, five cents per pound; and over number eighteen, nine cents per pound.

On plough pieces, or share moulds, one and a half cents per pound;

On anvils, two cents per pound;

On iron cables, or chains, or parts thereof, three cents per pound; and no drawback shall be allowed on the exportation of iron cables, or parts thereof;

On spades and shovels, two dollars and fifty cents per dozen;

On screws, manufactured of iron or brass, weighing twenty-five pounds and upwards, fifteen cents per pound;

On screws of iron, for wood, called wood screws, not exceeding one inch in length, eight cents per groce; over one inch, and not exceeding two inches in length, fourteen cents per groce; over two inches in length, twenty cents per groce;

On all wares, or flint glass, of whatever description, cut or uncut, a duty of six cents per pound, and in addition thereto, an ad valorem duty of twenty per centum;

On window glass, not above eight inches by ten inches in size, three dollars per hundred square feet; not above ten inches by twelve inches in size,

three dollars and twenty-five cents per hundred square feet; and if above ten inches by twelve inches in size, three dollars and seventy-five cents per hundred square feet;

On black glass bottles, two dollars per groce;

On all other articles of glass, five cents per pound;

On Russia duck, per piece, of fifty-two archeens, two dollars;

On Raven's duck, per peice, of fifty-two archeens, one dollar and twenty-five cents;

On Holland duck, per peice, of fifty-two archeens, two dollars and fifty cents;

On all printing paper, eight cents per pound;

Wrapping paper, six cents per pound;

Colored paper, six cents per pound;

Writing paper, not otherwise described, twelve cents per pound;

Sugar loaf paper, four cents per pound;

Letter or folio post paper, fifteen cts. per pound;

Book binder's bandbox, and sheating paper, three cents per pound;

On printed paper hangings fifteen cts. per pound;

On all other paper, six cents per pound;

Sec. 2. *And be it further enacted*, That, in all cases, all articles composed, or mixed of various materials, shall pay the highest duty to which articles manufactured from any of such materials are subject.

Sec. 3. *And be it further enacted*, That, from and after the — day of — one thousand eight hundred and twenty — to the duties on any goods, wares, and merchandise, whatsoever, there shall be added and paid the full amount of such bounty or premium, or allowance in nature thereof, as, on the exportation of sinular articles, may be given, paid, or allowed in the place or country whence the same shall be exported, or in the place or country, wherein the same shall be produced or manufactured, which shall be calculated and ascertained, under such rules and regulations as the secretary of the treasury shall, from time to time, prescribe.

Sec. 4. *And be it further enacted*, That an addition of ten per centum shall be made to the several rates of duties hereby imposed upon the several articles aforesaid, which, after the said thirtieth day of June, one thousand eight hundred and twenty-three, shall be imported in ships or vessels not of the United States: *Provided*, That this addition shall not apply to articles imported in ships or vessels, not of the United States, entitled, by treaty, or by any act of congress, to be admitted on payment of the same duties that are paid on like articles imported in ships or vessels of the United States.

Sec. 5. *And be it further enacted*, That there shall be allowed a drawback of the duties by this act imposed, upon the exportation of any articles that shall have paid the same, within the time, and in the manner, and subject to the restrictions prescribed in the fourth section of the act, entitled "an act to regulate the duties on imports and tonnage," passed the twenty seventh day of April, one thousand eight hundred and sixteen.

Sec. 6. *And be it further enacted*, That the existing laws shall extend to, and be in force for the collection of, the duties imposed by this act, for the prosecution and punishment of all offences, and for the recovery, collection, distribution, and remission of all fines, penalties and forfeitures, as fully and effectually as if every regulation, penalty, forfeiture, provision, clause, matter, and thing, to that effect in the existing laws contained, had been inserted in, and re-enacted by, this act.

Seventeenth Congress—2nd session.

IN THE SENATE.

January 10. The bill from the house of representatives, making partial appropriations for the expenses of government, was referred, taken up, and, by general consent, passed.

The bill to abolish imprisonment for debt was postponed until monday.

Mr. Taylor, of Virginia, rose to ask leave, of which he yesterday gave notice, to introduce a resolution proposing an amendment to the constitution of the United States. Mr. T. prefaced his motion with a few remarks. He adverted to the circumstances which led to the former amendment of the constitution in relation to the election of president and vice-president of the United States, by which it was required that the person should be designated for each office by the electors; he described the evil which that amendment was intended to cure, and said that if it had been foreseen that the evil could occur in a different form, the remedy would have been extended to meet it.— Mr. T. deprecated any improper fastidiousness in recurring to the constitution, either for instruction or for its improvement. If ever the time should arrive when it would be considered as vain or ridiculous to do so, the powers of the constitution would become remitted, and merged in legislation and precedents; and we should gradually return to the spirit, the principles, and the practice, of the British government, where precedent and legislation controlled every thing. Mr. T. inculcated, impressively, a constant attention to the constitution, the practice of testing every act of legislation by it, and a vigilant care not only that its powers should be rigorously exercised, but that it should be repaired and improved whenever the public good should require it to be done. If an appropriation of money, he argued, were necessary to repair a public road, it might be said, with equal propriety, that an appropriation of attention and care were necessary to keep the constitution in repair. Inattention to that, he said, would produce in it flaws and dilapidation, and would bring it into the same disuse, that neglect would cause in a public road. Mr. T. after other remarks of the same character, and to enforce the same general sentiment, went on to say that whenever any opinions or wishes were demonstrated to be general with the people, they ought to be attended to and put in practice. It was manifest he thought, that this was the case in regard to the present mode, in the last resort, of electing the president of the United States, and that the people universally deprecated the election of the president by the house of representatives. Thinking so, he had sought to provide a remedy, and, therefore, asked leave to introduce the following joint resolution:

Resolved by the senate and house of representatives of the United States of America, two-thirds of both houses concurring, That the following amendment of the constitution of the United States be proposed to the legislature of the several states:

"The electors of a president and vice president shall meet on the — day of — next preceding the expiration of the time for which the existing president may have been appointed, vote for a president and vice president, according to the constitution, and make two lists of all persons voted for, to be signed and certified by them; one to be delivered sealed to the president of the United States, within — days thereafter, to be opened and examined by him; and if it shall appear that no person has received the votes of a majority of the electors appointed, the president of the United States shall forthwith, by proclamation, and also by notifications to the executives of each state, publish the number of votes given to each person as president, whereupon the said electors shall again meet on the — day of — next succeeding their first meeting, and vote for one of the two persons, as president, who shall have received, at their first meeting, the greatest number of votes for that office; or, if it should happen that more persons than two should have received the greatest number

and also an equal number of votes, the said electors shall vote for one of them as president. The said electors shall transmit one of the lists to be made at their first meeting, and also that to be made at their second, should it take place, to be proceeded upon as the constitution has prescribed, except that the person having the greatest number of votes at the second meeting of the said electors shall be the president. But if two or more persons shall have received the greatest, and an equal number of votes at the second meeting of the said electors, the house of representatives shall choose one of them for president in the mode prescribed by the constitution.

The leave was granted, and the resolution was read and passed to a second reading.

The bill to continue the present mode of supplying the army, was ordered to a third reading—and several other bills were read, &c. The senate spent some time in the consideration of executive business and then adjourned.

January 13. Mr. *Barbour*, from the committee on foreign relations, reported a bill to regulate the commercial intercourse between the United States and certain British colonial ports; and the bill was read.

A message was received from the president of the United States, transmitting the information requested, some weeks ago, on the motion of Mr. *Johnson*, of Kentucky, as to the number of arms required annually to supply the western states, &c. &c.

The chief part of this day was spent on local business.

January 14. Much local or private business was attended to. The bills from the other house, to continue the present mode of supplying the army of the United States; and to enable the proprietors of lands held by the titles derived from the United States, to obtain copies of papers from the proper department, and to declare the effect of such, were severally read the third time, passed, and returned.

The bill to abolish imprisonment for debt was further discussed and occupied the senate until it adjourned.

January 15. After other business—The senate proceeded to the appointment of a select committee, for the reference of Mr. *Taylor's* proposed amendment to the constitution; and Messrs. *Taylor*, of Va. *King*, of New York, *Macon*, *Dickerson*, and *Smith*, of South Carolina, were appointed the committee.

The senate, in a committee of the whole, spent the rest of the day, [except a small space of time on executive business], in considering the bill to abolish imprisonment for debt, which was again pretty fully debated. Postponed till to-morrow.

HOUSE OF REPRESENTATIVES.

Thursday, Jan. 9. The following were the yeas and nays on the bill to appropriate a certain quantity of land to defray the charge of laying out and making a road from the mouth of the Miami, of lake Erie, to the Connecticut Reserve, in the state of Ohio:

YEAS—Messrs. *Ahant*, *Allen*, of Mass. *Allen*, of Tennessee. *Archer*, *Barber*, of Conn. *Barber*, of Ohio. *Barstow*, *Bateman*, *Bayly*, *Biglow*, *Borland*, *Breckenridge*, *Brown*, *Buchanan*, *Burrows*, *Butler*, *Cambreleng*, *Campbell*, of New York. *Campbell* of Ohio. *Cannon*, *Carter*, *Cassedy*, *Chambers*, *Conkling*, *Cook*, *Crafts*, *Crudup*, *Cushman*, *Dane*, *Denison*, *Dickinson*, *Dorfee*, *Dwight*, *Eddy*, *Edwards*, of Conn. *Edwards*, of Penn. *Farely*, *Findlay*, *Forrest*, *Forward*, *Fuller*, *Gowan*, *Hardin*, *Harris*, *Harvey*, *Hemphill*, *Hill*, *Holcombe*, *Hooks*, *Hubbard*, *Ingham*, *Jackson*, *Jennings*, *Francis Johnson*, *John T. Johnson*, *Jones*, of Va. *Jones*, of Penn. *Kent*, *Keyes*, *Kirkland*, *Lathrop*, *Lefewich*, *Lincoln*, *Litchfield*, *Little*, *McCarty*, *McLane*, *McKim*, *McNeill*, *McSherry*, *Mallary*, *Matlack*, *Matson*, *Mattocks*, *Merrer*, *Metcalf*, *Mitchell*, of Penn. *Mitchell*, of S. Carolina. *Moore*, of Va. *Moore*, of Ala. *Morgan*, *Murray*, *Neale*, *Nelson*, of Mass. *Nelson*, of Va. *Newton*, *Patterson*, of N. York. *Patterson*, of Penn. *Phillips*, *Pirson*, *Fitcher*, *Plumer*, of N. H. *Plumer*, of Penn. *Reed*, of Mass. *Reed*, of Md. *Rhea*, *Rochester*, *Rogers*, *Ross*, *Ruggles*, *Russell*, *Sanders*, *Scott*, *Sloane*, *Wm. Smith*, *Spencer*, *Sterling*, of Conn. *Sterling* of N. York. *J. Stephenson*, *Stewart*, *Swan*, *Tattall*, *Taylor*, *Thompson*, *Iod*, *Tomlinson*, *Tracy*, *Trimbale*, *Fucker*, of Va. *Tucker*, of S. C.

Udree, *Uphan*, *Vance*, *Van Rensselaer*, *Walker*, *Walworth*, *Whipple*, *White*, *Williamson*, *Wilson*, *Wood*, *Woodcock*, *Woodson*.—130.

NAYS.—Messrs. *Alexander*, *Bassett*, *Blackledge*, *Burton*, *Cocke*, *Condit*, *Conner*, *Edwards*, N. C. *Garnett*, *Gilmer*, *Gorham*, *Hawks*, *McCoy*, *Rich*, *Rodney*, *Russ*, *Arthur Smith*, *Stoddard*, *Van Wyck*, *Williams*, of Va. *Williams*, of N. C.—21.

Friday, Jan. 10. After attending to many minor matters—the house, in a committee of the whole, took up the bill providing for disciplining the militia. A long debate followed—Messrs. *Sanders*, *Keyes*, *Dwight*, *Woodcock* and *Ployd* opposed—and Messrs. *Chambers*, *Cannon*, and *Williamson* supported it.—Finally, the bill was laid on the table. The house adjourned to Monday.

Monday, Jan. 15. Mr. *Fuller*, from the committee on naval affairs, made a report on the petition of the widow and child of lieut. G. *Pearce*, accompanied with a resolution, recommending that the committee be discharged from the further consideration of the said petition; and that it be referred to the commissioners of the navy pension fund which report and resolution were concurred in by the house.

Mr. *F.* from the same committee, reported a bill for the relief of *Penelope Denny*; which bill was twice read and committed.

Mr. *Williams*, of N. C. from the committee of claims, made an unfavorable report on the petition of sundry merchants of Baltimore for further compensation for damages sustained by vessels sunk in the entrance of the harbor of that city during the late war, which was laid on the table.

Mr. *Walworth*, of New York, rose and said it had become his unpleasant duty to inform the house, and particularly his worthy friend from Kentucky, who a few days since moved a resolution on the subject, (to whom Mr. W. took this opportunity to tender the thanks of the friends of the deceased), that it was no longer in their power to render a tribute of gratitude to the memory of the gallant *Allen*, by providing for the necessities of his bereaved mother. Mrs. *Allen's* health, said Mr. W. had long been impaired, and she was unable to sustain the shock, produced by the sudden and tragical death of her brave son, who was the hope of her old age, and on whose filial piety she depended for the support of her declining years. Her heart, said Mr. W. has been broken, by this cruel and unexpected stroke of adversity, and her spirit has taken its departure to meet its kindred spirit in another and a better world. But, said Mr. W. although we have thus been deprived of the power of making provision for the support of the mother, whose welfare occupied his latest thoughts, there is one still left, who has a right to our protecting care. And, said Mr. W. I hope and trust the sister, whose desolate situation gave an additional pang to the heart of the dying hero; that she, who has thus been deprived, not only of the support of a kind and worthy brother, but also of the guardian care of a pious and affectionate parent; that she, who has now a double claim to our protection and to our sympathy, may receive that bounty, which congress intended to bestow upon the mother, who is now removed beyond the reach of a nation's gratitude. Mr. W. concluded by moving a recommitment of the bill, for the relief of the mother and sister of lieut. *Allen*, to the naval committee, that it might receive such amendments as present circumstances had rendered necessary.

And the question being taken thereon, the motion was agreed to.

On motion of Mr. *Rochester*, of New York, it was resolved, That a select committee be appointed to inquire into the expediency of continuing in force, for a further term, so much of the act, entitled "An act regulating the currency, within the

United States, of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France and five-franc pieces," passed on the 29th day of April, 1816, as relates to the crowns of France, and five-franc pieces, and have leave to report by bill or otherwise.

[Mr. R. proposed, at first, to refer this subject to one of the standing committees; but, on suggestion of Mr. Ross, that the subject was of sufficient importance to require special investigation by a select committee, Mr. R. varied his motion accordingly].

The *Speaker* communicated a letter from the secretary of the treasury, transmitting a report and statements in relation to a loan of \$100,000, formerly made to the commissioners of the city of Washington; also

A letter from the secretary of the navy, accompanied by an exhibit shewing the number of officers of each grade necessary to command the vessels of the navy.

The greater part of this day was spent on the bill making provision for the occupation of the mouth of the Columbia river. It was, finally, laid on the table.

Tuesday, Jan. 14. Several resolutions for inquiry were submitted.

On motion of Mr. *McCoy*, the bill, entitled "an act in addition to an act, for the more prompt settlement of public accounts, and for the punishment of the crime of perjury," was read, and ordered to be engrossed for a third reading.

On motion of Mr. *Cook*, of Illinois, it was

Resolved, That the committee of ways and means be instructed to inquire into the expediency of requiring all payments of money out of the treasury of the United States, to be paid directly from the treasury, to the party entitled to receive it, where such mode of payment may not be detrimental to the public interest.

In offering this resolution—

Mr. *Cook* said he had but a few words to say in support of the resolution. The amount of money that passed into the hands of disbursing officers, was very great; and the number of those officers was multiplied to an unnecessary extent. The object of the resolution, he said, was to discontinue the practice of placing in the hands of those officers all moneys that it was not necessary to the public interest to confide to them. He believed that the list of public defaulters was greatly swelled by the number of disbursing officers who had been faithless in making their disbursements. If the individuals who were entitled to money out of the treasury, for services rendered to the government, could be supplied with drafts on the treasury, they would, in most instances, prefer them to the money, particularly in distant parts of the union; and, if there should be some slight inconvenience to such persons, the door that such a practice would close against official fraud and speculation would more than make amends for it. The effect that the present mode of paying out the public money, through disbursing agents, had upon the public morals, was highly deleterious; and, if the interest of individuals could be properly provided for, and at the same time remove the temptations, now so frequently held out to public officers to betray the confidence reposed in them, it would be an important point gained. That some measure could be adopted, which would greatly protect the treasury against such abuses as had so repeatedly happened of late years, he had no doubt; and no committee was better able to advise that measure than the committee of ways and means.

The house then resolved itself into a committee of the whole, Mr. *Woodcock* in the chair, on the bill to provide for procuring the necessary surveys and estimates for certain roads and canals.

[This bill proposes to provide—"That the president of the United States is hereby authorized to cause the necessary surveys, plans, and estimates, to be made for a national road from the city of Washington to that of New Orleans; and for canals, from the harbor of Boston, to the south, along the Atlantic sea-coast; and to connect the waters of the Ohio above, with those below the falls at Louisville; lake Erie with the Ohio river, and the tide waters of the Potomac with the same stream at Cumberland, designating what parts may be made capable of sloop navigation; and for communication between the Susquehannah and the rivers Seneca and Genessee, which empty into lake Ontario; and between the Tennessee and Savannah, and between the Tennessee, Alabama and Tombeckby rivers; and for such other routes for roads and canals as he may deem of national importance in a commercial or military point of view. The surveys, plans, and estimates, for each, when completed, to be laid before congress.

"Sec. 2. And be it further enacted, That, to carry, into effect the objects of this act, the president be, and he is hereby, authorized to employ two skilful civil engineers, and such officers of the corps of engineers, or who may be detailed to do duty with that corps, as he may think proper; and the sum of —dollars be, and the same is hereby, appropriated, to be paid out of any moneys in the treasury, not otherwise appropriated"]

The bill having been read—

Mr. *Stewart* proposed an amendment—he withdrew it for the time being, that the general principle of the bill might be considered. Mr. *Barbour*, (the speaker), moved to strike out the first section, and supported the proposition by a speech of some length. Mr. *Hemphill* replied. The motion to strike out was lost, for it 56, against it 62. The committee rose and reported the bill to the house. Mr. *Edwards*, of N. C. moved to lay it on the table. After some remarks, they yeas and nays were called, as follows:

YEAS.—Messrs. Abbot, Alexander, Archer, Barber, of Con. Barstow, Bassett, Bigelow, Borland, Butler, Canalelong, Cannon, Carter, Cassidy, Cooke, Colden, Conkling, Conner, Crafts, Cuthbert, Dane, Edwards, of N. C. Eustis, Floyd, Fuller, Garnett, Gebhard, Gilmer, Gorham, Hardin, Harvey, Hawks, Herrick, Hubart, Hooks, Hubbard, Jones, of Va. Keyes, Kirkland, Lathrop, Lettwich, Lincoln, Litchfield, Long, McCoy, Mattocks, Mitchell, of Pa. Montgomery, Muggan, Murray, Nelson, of Mass. Pierson, Reed, of Mass. Reid, of Geo. Rhea, Rodney, Roggles, Russ, Russell, Sanders, Arthur Smith, Alexander Smyth, A. Stevenson, Thompson, Tomlinson, Tucker, of Va. Tucker, of S. C. Van Rensselaer, Van Wyck, Walker, White, Williams, of Va. Williams, of N. C. Williamson, Wilson, Wood, and Wright.—76.

NAYS.—Messrs. Allen, Ten. Barber, of O. Bateman, Baylies, Bayly, Blackledge, Buchanan, Burrows, Campbell, of O. Chambers, Condict, Cook, Cushman, Darlington, Durfee, Dwight, Eddy, Edwards, of Con. Edwards, of Penn. Farrelly, Findlay, Forrest, Forward, Gross, Hamilton, Harris, Hemphill, Hill, Holeombe, Ingham, Jackson, Jennings, F. Johnson, J. T. Johnson, J. S. Johnston, Jones, of Tenn. Kent, Little, McCarty, McLane, McSherry, Mallary, Mallock, Merer, Metcalfe, Mitchell, of S. C. Moore, of Va. Neale, Nelson, of Md. Newton, Patterson, of Penn. Phillips, Plumer, of N. H. Plumer, of Penn. Rich, Rochester, Rogers, Ross, Slatte, W. Smith, Sterling, of N. Y. Stewart, Swan, Tattnall, Taylor, Trimble, Udree, Vance, Walworth, Warfield, Whipple, Woodcock, Woodson.—73.

So the bill was ordered to lie on the table:

[The circumstance of thus calling and recording the yeas and nays, is regarded as a defeat of the bill].

Wednesday, Jan. 15. Much time was spent on a resolution requesting a statement shewing the contracts that had been made for the survey of public lands, &c. At last, the resolution was laid on the table.

Mr. *Reid*, of Geo. after a short speech, proposed the following amendment to the constitution, that a great question might be settled.

Resolved, by the senate and house of representatives of the United States of America, in congress assembled, two thirds of both houses concurring, That the following amendment to the constitution of the United States, be proposed to the legislatures of the several states, which, when ratified by the legislatures of three fourths of the states, shall be valid, to all intents and purposes, as part of the said constitution, to wit:

"Congress shall have power to establish and construct roads and canals."

This joint resolution received its first reading, and lies on the table.

The engrossed bill, entitled "an act in addition to an act for the more prompt settlement of the public accounts, and for the punishment of the crime of perjury," was read a third time, passed, and sent to the senate for concurrence.

The bill supplementary to the act to amend the act regulating the collection of duties, &c. was read. Several amendments were suggested, but the committee rose and had leave to sit again—and the house adjourned.

THURSDAY'S PROCEEDINGS—JAN. 16.

In the senate, the day was spent in debating the bill to abolish imprisonment for debt. Mr. Mills spoke against and Mr. Barbour in favor of the bill.

In the house of representatives—a bill for the better organization of the district court of the United States, in Louisiana, was introduced, and, after debate, ordered to be engrossed and read a third time—yeas 89, nays 57.

The bill further to regulate the collection of duties on imports occupied the chief part of the remainder of the day. The speakers were Messrs. Tracy, McLane, Cambrelong, Nelson, of Md. Wood, Barstow, McKim, Buchanan, Ingham and Little.

The Speaker laid before the house a letter from the secretary of the treasury, transmitting the estimates of appropriations necessary for the year 1823; which were referred to the committee of ways and means.

The Speaker also communicated a letter from the secretary of the navy, transmitting a statement shewing the names of the surgeons and surgeon's mates of the navy of the United States now on duty; their respective stations, and annual compensation, &c. &c. which was read and ordered to lie on the table; and

The house adjourned after 4 o'clock.

CHRONICLE.

Hugh Nelson, esq of Virginia, has been appointed by the president, with the advice and consent of the senate, envoy extraordinary and minister plenipotentiary to Spain, in the place of Mr. Forsyth, who is about to return home.

Naval. A late New York paper says—the U. States steam galley Enterprize, having undergone the necessary alterations, commodore Porter yesterday hoisted his broad pendant on board of her, and made a trial of her speed in the harbor. The wind blew a gale at N. W.—and, although she displayed a great deal of canvass, she proved to be stiff, and capable of carrying a great press of sail. An experiment was also made of the effect which the artillery might have upon the engine. The result was perfectly satisfactory:—the machinery was not the least affected by the shock. The Enterprize then passed the city, moved by both sails and steam—the wharves were crowded with citizens, who viewed with much satisfaction the performance of the vessel, and the alterations made in the galley in so short a space of time. The appearance of the Enterprize is very warlike.

The steam boat purchased by com. Porter is now called the Galliot Sea Gull; he has also obtained and fitted a ship at New York, which he calls the "Decoy." The former is directly under the command of lieutenant John F. Newton, bearing the commodore's flag; the latter under charge of lieutenant Kearney. These vessels have left New York to join the light squadron sitting at Norfolk.

The Alligator. A court of inquiry was held on board the U. S. frigate Guerriere, at Norfolk, on the 13th ult. captain William Crane, president, to investigate the causes of the loss of the U. States schooner Alligator, under the command of lieutenant J. M. Dale, when the court came to the following opinion—

That the loss of the Alligator is to be attributed to the variety of courses steered to keep company with her convoy, the counter-currents, and the haziness and darkness of the night. There appears to have been a vigilant look-out kept, but the navigation is known to be dangerous, and the charts unfaithful, and they believe that the ablest navigators are often deceived on this coast.

The conduct of lieutenant Dale, the officers, and crew, appears to the court to be highly praise worthy, and that they manifested great zeal in endeavoring to save the vessel; and that they were unsparing in their exertions to accomplish it.

Flour!—Late accounts from the Pacific, received in Baltimore, via Panama and Chagres, announce that flour had risen to one hundred and ten dollars per barrel at Guayaquil!

Massachusetts. James Lloyd has been re-elected a senator of the U. States, from the state of Massachusetts, for six years from the 4th of March next.

Maryland. Gen. William H. Winder has been unanimously elected a member of the senate, vice Issac McKim, esq. resigned—being elected to congress. The choice is quite satisfactory to Baltimore.

Fatal rencounter. A Mr. Irvine, of Richmond, Ky. lately attempted to horsewhip the editor of a newspaper in that place, but the latter shot him through the heart and he instantly expired. The editor has been tried before the examining court and acquitted.

Died, on Sunday morning last, Jonathan Ingersoll, esq. lieutenant governor of Connecticut, in the 76th year of his age.

—, at Lancaster, on the 10th inst. Mr. William Dickson, editor of the "Intelligencer," aged 59—he was a veteran republican and an honest man.

Rochester, in the state of New York, is situated on the Genessee river, and a principal seat of trade in the western district. The first house was built here in 1812—it now contains 641 buildings, 437 of which are dwelling houses. It has four meeting houses and many considerable factories.

Northern canal of N. Y. During the season just closed, 15 millions feet of boards and plank, 440,000 feet of timber, 854,000 shingles, 20,000 staves, 8000 hoop poles, 30 bbls. whiskey, 18 cwt. paint, 19 tons of marble, and 10 bushels wheat, passed through the western canal.

"The Hornet." A paper, under this title, was lately started at Richmond, Va. as if to reform the manners of the place by pointed satire and personal reference: but on the night of the 27th ult. the office was attacked by a large party, and the apparatus demolished—the types were thrown into the street and trampled in the mud, &c.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 21—Vol. XI.] BALTIMORE, JAN. 25, 1823. [No. 21—Vol. XXIII. Whole No. 593

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ We have prepared a body of general remarks on the tariff proposed for the more effectual protection of domestic manufactures, and think that they present some subjects in a new point of view—but yield up our own article to that of our more able correspondent "I," whose essay on revenue and specifically dutied goods, we recommend to the notice of our readers.

IMPRISONMENT FOR DEBT. Lively discussions have taken place in the senate of the United States and in the legislatures of several states, on the propriety or necessity of imprisonment by way of punishment for debt, for so it really is. I have entertained but one opinion on this subject for twenty years—which is, that the whole system of our laws between debtor and creditor, are radically wrong. They are not strong enough to bind rogues, and honest men have no need of them. But I would abolish imprisonment for debt, from motives very different from those generally urged in favor of the procedure—that is, to reduce the range of credits, and compel persons to act by principles of honor, instead of on the uncertain provisions of the law, which oftentimes operate in direct opposition to justice and common sense. When the rules of honor are violated by an individual, few will trust to his honor, and, if nothing else could be depended on, he would not find it an easy matter to run into debt; but the most accomplished knaves, who, perhaps, by deliberate roguery and severe perjury, have secured independence to themselves through the ruin of others, are credited on their supposed ability to pay until they find it convenient to become bankrupts again, and cheat a new set of credulous persons. If there were no law presumptive of a compulsion to pay debts, few would "break" a second time, yet those who failed honestly would not suffer by it. There are not many men, not one in a thousand, who, if compelled to stop payment, cannot shew the reason of it, if they please, unless they have been criminally negligent of the manner in which they used other people's property; and for such negligence they ought to suffer in the public estimation, so far as to prevent a repetition of the offence: and the truth is, that when a man fails honestly and can demonstrate the fact to his creditors, there is an almost universal disposition in the latter rather to support than to oppress him. There are some miserable wretches, it is true, who would exact the "pound of flesh," the penalty of the bond; but their number would rapidly diminish, if there were not numerous excuses for severity in creditors in the unblushing impudence of debtors. But even these, very generally, pay, or endeavor to pay, monies borrowed as debts of honor, for there is "hor among thieves"—so that, if persons were released from all legal compulsion to pay, they would have to rely on the strength of their character for credit, or not obtain any. It is true, that by a course like this, the amount of business would be greatly reduced, but the community would profit exceedingly by that. If a man had to pay the cash down for every thing, he would buy sparingly, and not hazard the loss of a plantation to get a coach, for which article many plantations have been sacrificed at sheriffs' sales. Money, too, would circulate

more rapidly, and every one could do a more 'soub' business, without the constant fear of losing the profits of a whole year's labor by a single bankruptcy—without that of being sometimes totally beggared by a solitary failure. There would also, be a great reduction in the price of articles, for every one could afford to work the cheaper as the danger of loss became less. The practical difference in business in general, between cash and credit, is hardly less than 10 or 15 per cent. in favor of the former. When a man lays out his money, he makes a bargain for his goods—when he sends to the store for credit, the bargain is all on the side of the store-keeper; and he must and will make those whom he credits that are able pay, pay for what he may lose by crediting others who may not pay. There are many businesses that are carried on on this principle—the gains of medical gentlemen, (for example), of large practice, would be enormous, if all their patients paid at the same rate at which some are charged; and printers and publishers, in extensive business, would make large profits, if all their customers paid as all are charged to pay, for they cannot make the discrimination which the doctors do in their bills: yet there are few persons so poorly compensated as doctors and printers for the application of their time and talents, be the latter what they may.

Let all debts be debts of honor, and honorable men will then only be trusted. We should have fewer splendid equipages, not so many extravagant dinners and suppers and balls, less extravagance, in every respect—but more of peace and quietness, prosperity and independence—fewer of paupers in the poor houses and of dirty vagrants in the streets, but fewer also, of those who sink of the plunder of their neighbors, and outrage decency by displays of their ill-gotten wealth.

A CURIOSITY. Among a list of articles lately placed in Peale's museum, Baltimore, we observe the following—Part of the stump of a Cyprus tree, which measured 38 feet in circumference—this, with hundreds of others, are exposed to view, by the washings of the Rappahannock, at the depth of 48 feet from the surface of the earth, on the estate of Manuel Peck, esq. Richmond county, Virginia. Presented by David Monserrat.

GOOD NEWS. The Frankfort, (Ky.) "Commentator," of the 9th inst. has an article stating, that *seventy-one thousand dollars* of the commonwealth's bank paper, was burnt on the day preceding, in the presence of the president and directors. What an excellent fire it must have made! It is a good beginning.

NAVAL. The Norfolk Herald of the 20th inst. says—The steam galliot *Sea Gull*, which arrived at the navy yard at Gosport on Thursday night last from New York, has been found, upon trial, to require some important alterations and improvements, both in her rig and construction, which are now making with a celerity which would astonish those who are accustomed to the mode of doing things in civil life. *Com. PONTREA* appears determined to take time by the forelock—and has, in the

whole of this undertaking, made a complete sacrifice of his personal comfort and convenience to a sense of public duty.

DIED, on the 27th of October last, on board the ship *Moss*, on her passage from Philadelphia to London, *William Lowndes*, esq. for a long time one of the most able, as well as most honest members of the house of representatives of the United States. He was only in his 43d year, though an *old* statesman.

PHILADELPHIA. This city appears to be infested with a desperate gang of incendiaries. There was a large fire in Bank street, early on Sunday morning last, many houses being in flames at the same time—when at its height, a fellow cast a lighted segar in a neighboring hay-loft, he was seized, but certain of his supposed accomplices interfered and he escaped. Many pockets were picked and several accidents occurred by the falling of walls, &c While the fire was yet raging, a decided attempt was made to set fire to another stable, by introducing a box of lighted combustibles. Another fire took place on Sunday night, and, at 2 o'clock on Tuesday morning, the auction stores at the corner of Third and Chestnut street were in full blaze. The heat was intense and the damage sustained great—at last, it was subdued: it raged three hours with uncommon fury, during which a quantity of lighted combustibles were thrown into the great Quaker meeting house, on Arch street; but the person who had charge of it saw the flame and found a quantity of cotton rags burning, which he extinguished—a parcel of coals were thrown into another part of the building, they burnt a hole through the floor and then expired.

PRESIDENTIAL. At a meeting “of most of the members of both branches of the legislature of Maine,” held on the 16th inst. in the representatives chamber, the following preamble and resolution were proposed and unanimously adopted—

“Whereas, it has been represented that the people of this state are in favor of the honorable William H. Crawford for the next president, and it being proper to correct any false impression on this subject; Therefore,

Resolved, That this convention entertain the highest respect for the distinguished talents and public services of the honorable *John Q. Adams*, and do fully believe that no man possesses better qualifications for the important office of president of the United States; but as the election of president will not take place for a considerable time to come, this convention do not deem it expedient to make a formal nomination of any person as a candidate for that station. J. M'DONALD, chairman.

J. L. CHILB, secretary.”

MONEY ON DEPOSITE. A Philadelphia paper says—“The United States bank receives on deposit the notes of the following states: Of *New Jersey*—the banking company of Trenton, state bank at Camden. *Pennsylvania*—all the city banks of Philadelphia, Girard's bank, Easton bank, Farmer's bank of Lancaster, and Harrisburg bank *Delaware*—bank of Delaware, Farmer's bank of Delaware, and her own branches.”

Now, why might not such accommodation be extended to other places? To relieve or assist the operations of their customers, the state banks in Baltimore receive on deposit, (in small quantities), the bills of the bank of the United States and

all its offices—but the office of that bank in this place, if it does not, at times, even refuse the notes payable at the parent bank, rejects those issued from the most of its branches—and otherwise will take nothing on deposit but the precious metals, its own notes, or the bills of the Balt. banks. Nay, it even goes further, and interposes itself between the state banks and the accommodation that they are willing to extend to the people, as shewn in the case stated in this paper of the 11th inst. in the article headed “equalization of exchange,” page 290.

PITTSBURG. There is a cotton factory at this place, aptly called the *Phanix*, the idea of building which was not entertained at the commencement of the last year, though it now has 500 spindles and 8 power looms at work, and, before the close of the present year, will have 1000 more spindles. Last year, there were only two steam boats owned in Pittsburg—there are now six of them for the prompt transportation of persons and goods to any part of the “vast west,” watered by its mighty rivers.

GOVERNORS OF THE STATES. The following is a complete list of the governors of the several states—

Maine,	Albion K. Parris.
New Hampshire,	Samuel Bell.
Massachusetts,	John Brooks.
Rhode-Island,	George C. Gibbs.
Connecticut,	Oliver Wolcot.
New York,	Joseph C. Yates.
New Jersey,	Isaac H. Williamson.
Pennsylvania,	Joseph Heister.
Delaware,	Joseph Haslett.
Maryland,	Samuel Stevens, Jr.
Virginia,	James Pleasants.
North Carolina,	Gabriel Holmes.
South Carolina,	John L. Wilson.
Georgia,	John Clark.
Kentucky,	John Adair.
Tennessee,	Wm Carroll.
Ohio,	Jeremiah Morrow.
Louisiana,	Thos. B. Robertson.
Mississippi,	Walter Leake.
Indiana,	William Hendricks.
Illinois,	Edward Coles.
Alabama,	Israel Pickens.
Missouri,	Alexander McNair.

BOSTON. In the year 1821, there were 354 arrivals at Boston from foreign ports, and the amount of duties received at the custom house was 4,156,867 dollars—of which 44,943 were on goods imported in foreign vessels.

In 1822, there arrived from foreign ports 762 vessels—of which 22 were British, 4 Swedish, 1 Bremen, 1 Dutch, 1 Portuguese, 1 Danish; and the amount of duties received at the custom house was 4,489,753 dollars—74,695 of which were from imports in foreign vessels.

The arrivals were as follows—from Russia 25; Sweden 23; Swedish West Indies 8; Copenhagen 1; Danish West Indies 37; Amsterdam and Rotterdam 13; Dutch West Indies 33; Dutch East Indies 4; London, Liverpool and Bristol 64; Scotland 1; Ireland 1; Gibraltar 3; Calcutta 9; British West Indies 25; Halifax, St. Andrews and St. Johns, N. B. 74; Hamburg and Bremen 7; Havre and Rochelle 13; Marseilles 11; French West Indies and Miquelon 64; Hayti 40; Cadiz and Bilbao 7; Malaga 19; Teneriffe and Canary Islands 5; Manila 1; Honduras, Campeachy 9; Cuba 103; Porto Rico 13; Spanish South American colonies 7; Portugal 27; Madeira 4; Fayal, St. Michaels 13; Cape de Verd 15.

lands 6; Brazils, Monte Video 25; Leghorn, Messina, Genoa 38; Trieste 1; Smyrna 5; Cape of Good Hope 1; China 8; Sumatra 1; Africa 4; South seas 1—Total 762.

LOUISIANA, &c. A writer in the "Louisiana Advertiser," who is furnishing a series of essays to show a depreciated value in the products of that state, and the necessity of some change in the business of the banks to afford relief to the community, gives the following statements—

The state of Louisiana cannot produce this year more than 60,000 bales cotton, which will not exceed an average price of 40 dolls per bale

	2,400,000
10,000 hhd. sugar, at an average of 60 dolls per hhd.	600,000
5,000 hhd. molasses, at an average of 13 dolls. per hhd.*	9,000
	3,009,000

From which is to be deducted, the maintenance of slaves; interest on loans; commission on sales, freights, storage, drayage, &c. &c. equal to 50 per cent. 1,504,500

1,504,500

Leaving a balance in favor of the planters of this state, one million five hundred and four thousand five hundred dollars. The only recompense for the employment of upwards of thirty millions of dollars capital for one year. To men, who have not given that proposition a due consideration, the foregoing statement will appear improbable; but, to put that statement out of question, and to establish my premises beyond a doubt, I will also lay before my readers a general view of the deposits of produce which have heretofore been made in our market, viz:

From the states of Tennessee and Alabama, there have been heretofore received 50,000 bales cotton; which I presume may be about the quantity we shall receive this year; and will average about 30 dolls per bale

	1,500,000
10,000 hhd. tobacco, which will average about 35 dolls. per hhd.	350,000
Corn, pork, lard, &c. &c.	150,000
	2,000,000

From the states of Kentucky, Ohio, &c. we have, heretofore, received 20,000 hhd. tobacco, averaged 35 dolls. per hhd.

	700,000
150,000 lbs. flour, averaged 3 dolls. 50 cents per bbl.	525,000
Pork, lard, beef, hogs, &c. &c.	575,000
	1,800,000

And from the state of Mississippi, 70,000 bales cotton, at a average price this year of 40 dolls. per bale.

	2,800,000
--	-----------

Recapitulation of produce.

Louisiana, gross amount, 60,000 bales cotton, &c.*	3,900,000
Tennessee and Alabama 50,000 bales cotton, &c.	2,000,000
Kentucky, Ohio, &c. tobacco, &c. &c.	1,800,000
Mississippi, 70,000 bales cotton	2,800,000
	10,500,000

*There is something wrong in these figures, but we cannot put them right: it is so in our copy. [En. Reg.]

Whence it will appear, that the proportion of cotton, (viz: 60,000 bales), allotted to the state of Louisiana is not underrated, and that the estimate of ten million five hundred thousand dollars, as the aggregate amount of produce deposited and sold in our market, is correct.

It would appear then, that the net proceeds of the product of our state will not amount to more than *one million and a half of dollars* for the present year; out of which the planters have to pay to *one* bank, nearly that amount, for loans obtained a year ago; and for which that bank has been obliged long since to advance the specie."

Now, it would seem from this statement that the employment of slave labor is not profitable, even in Louisiana. A million and a half only is left to recompense thirty millions of capital invested, which, at 6 per cent. is 1,800,000 So that the capital does not yield more than *five per cent. per annum*. This was the rate that we made out as the profit of capital vested in Madison county, Alabama, see page 243; and it is more than the average profit estimated on the product of cotton in South Carolina, at its present price: see the article, page 216.

LONDON. *A lord mayor's feast.* Alderman Hergate, being elected to the mayoralty of London, lately gave the usual banquet, ball, &c. Two of the "royal dukes" and a good number of lords and ladies were present, &c. A London paper giving an account of the affair, says—The following is the bill of fare of the above feast. From its contents, strangers may form some distinct conception of what is meant by a city feast, and by city eating. The provision is provided on a scale of the capacities of 1300 guests, for that was the number of those who signified their intention of dining with his lordship:—

Imprimis—3000 pounds of real turtle, which will fill upwards of 200 tureens—300 dishes of game, hares, pheasants, partridges, &c. &c. and some of the finest and rarest species—34 fowls—30 peacocks—50 turkeys—34 sirloins of beef—24 stewed rumps of beef—48 hams—60 tongues—48 large pigeon pies—30 large raised pies—48 fish of the finest species—28 ragouts—128 jellies, creams, &c. &c.—60 large fruit pies—36 large marrow puddings—50 sallads—48 large dishes of curious cookery, each of which would take a chapter to describe—100 full grown pine apples—200 pounds of the finest grapes—250 ice creams; and pears, apples, olives, cakes, and dried fruit of the finest and rarest description.

CHINA. *Factories at Canton.*—They lie nearly E. and W.—at the E. end the 1st is Ewo-Hong, "Righteousness and Peace factory," commonly called the Creek factory. At the front of it is a custom house, where the tide-waiters, to examine ship's boats, reside: it is called Hong-how-kwan-how. The custom house *behind* the factories, for what is *in front* to Europeans landing, is *behind* relatively to people in the city.

2d. Tseep-ee Hong, "Assembled Righteousnesses factory"—The Dutch factory.

3d. Pow-wo-hong, "The factory that ensures tranquility"—The English factory. Next to this factory there is a narrow lane, with small shops on one side, were seamen procure cloths, spirits, &c. called, by Europeans, "Hog lane;" by the Chinese Tow-lan-kae.

4th. Fung-tae-Hong, "Affluent great factory," called the "Chow chow" factory, intimating, that it is

occupied by a variety of persons, Parsees, Moormen, &c.

5th Lung shun hong, "The gloriously prosperous factory"—the old English factory.

6th. Suy Hong, "The Swedish factory"—for Swede, the Canton people say "Suy."

7th. May ying Hong, "The twin-eagle factory"—the Imperial factory.

8th. Pow-shun Hong, "The precious prosperous factory."

9th. Man-yune Hong, "The factory of ten thousand fountains"

10th Kwo: g yune Hong, "the factory of wide fountain"—the American factory. Here a street, containing shops, were Europeans make their various small purchases, intervenes, called "China-street;" s met mes new China street, in contradistinction from a street that runs at right angles to this one, and which is called "Old China street." By the Chinese called Sunkae, "New-street," and Tsing yune kae.

11th. Een tze chaou, "The swallow's nest"—the corner factory.

12th. Fung sang Hong, "The factory produced in the East"—occupied by a Hong merchant—one of his brethren calls his house or factory Seishing Hoig, "Formed in the West," probably intimating, that he owed his commencement to Europeans.

13th. Kaw-kung Hong, "Old Public Hong"—the French factory.

14th Luy-sung Hong, "The Luzon factory"—the Spanish factory.

15th. Tung-foo-Hong, "The factory of mutual trust"—occupied by a Hong Merchant.

16th. Wo: g-he Hong, "The yellow-flag factory,"—the Danish factory

Revenue—specific duties.

MR. NILES—In comparing the relative effects of the increase of imposts on ad valorem and specific goods, it is unnecessary to go into a minute classification; for general purposes, it is sufficient to consider ad valorem as manufactured goods, and all others as specific—but, to avoid misconception, I will here state, that, in speaking of the policy of encouraging our trade in specific goods, of imposing high duties on those and low ones on ad valorem, I except iron, hemp, lead, flax, duck, sheeting, &c. which, though specific goods, are raw materials or manufactures which this country is fully able to furnish, and to the import of which the same objections apply as to the import of cottons or woollens.

It seems, from the statements in my former number, that the increase of imposts on ad valorem goods is no evidence of the increased prosperity of the country - for they produce no increased demand for our produce, and cause five dollars to be sent out of the country for every dollar which goes into the treasury: But, generally speaking, the same objection does not apply to the importation of specific goods. We have seen that, to produce a revenue of \$7,545,000 from ad valorem imposts, the importations amount to \$36,560,000 - whereas, to produce a revenue of \$8,712,000 from specific imposts, the importation amounts only to \$15,650,000 - so that, altho' the specific imports are 21,000,000 dolls. less than the ad valorem, they yield 1,167,000 dolls. more of revenue. The average rate of specific duties is 55½ per cent. Thus, to bring into the treasury 8,712,000 dollars, it requires that only 15,650,000 dollars be sent out of the country; less than two to one. It is well worthy the attention of

congress to consider this effect of the revenue system—for it will be difficult to give a good reason why manufactured goods should be imported at an average duty of 20 per cent. and other articles at 55—why our laws should thus encourage the importation of articles which we can make at home, and discourage the importation of those which are necessary to our wants; and, above all, *why they tax the produce of our good customers so high, and the produce of our bad customers so low.* The principal markets for our produce, except cotton and tobacco, are the West Indies, South America, the Western Islands, Spain, Portugal and the Mediterranean—with all which countries we carry on a profitable commerce, not merely in articles of domestic, but also of foreign exports from which our imports are almost entirely specific goods—from most of which we import a balance of specie; and yet, on whose productions we impose a duty of more than 55 per cent. though we pay for them with our own produce: while the silks of China, for which we pay in specie, are subject to a duty of 15 per cent.; the manufactures of England, from which the bulk of our produce is excluded, pay only 20. It would certainly seem to be a wise policy in our government, to give every encouragement to trade with those countries who will consume the most of our domestic exports—to put on their imports a low rate of duty: It would seem best calculated to promote the general prosperity of the various branches of national industry— but, by a strange work of calculation, the directly opposite course has been pursued. Duties seem to have been imposed in a ratio inverse to the national interest—a spirit of perversity seems to have guided the public councils—a species of madness has pervaded our legislation, of which our trade with the island of Madeira and Russia furnishes memorable examples. In 1821, our domestic exports to Madeira were \$193,000, our imports from thence \$190,000. In the same year, our domestic exports to Russia were \$127,000, our imports from thence \$1,852,000: exporting to Russia 66,000 less, and importing thence 1,662,000 more than from Madeira. The duty on Madeira wine is one dollar a gallon, equal to 75 per cent. ad valorem—while the duty on Russia duck is two dollars a piece, hemp 30, and iron 15 dollars a ton, averaging an ad valorem duty of about 20 per cent. By comparing our present tariff with the public documents, this will be found to be only one of the many illustrations of our present policy. It has been selected as an instance of the total want of all statesman like policy; as evincing a total want of regard to the agricultural, commercial and manufacturing interest of the country—and exhibiting, in a striking point of view, the ruinous effects of increase of imports of manufactured articles. We will pursue the comparison a little further—the revenue from Madeira wine, for 1821, was \$93,480; this wine was paid for by the produce of our soil, it could not be made in the country, it displaced no domestic materials, and interfered with no domestic manufacture, and it was the produce of one of our best customers: In the same year, the duties on Russia and Ravens duck and sheeting amounted to \$123,824; of this amount of duck and sheeting, only one fourteenth part was paid for in domestic exports, (for that is the proportion between our domestic exports to Russia and our imports from thence—being 127 to 1852). The treasury valuation of 74,600 pieces of duck and sheeting, is but little less than 800,000 dollars, of which we pay in our own produce one fourteenth part, say 57,000 dolls. the balance, say 743,000 dollars, we must pay in

foreign exports or money. Duck or sheeting can be made at home of domestic materials, hemp and flax—their importation therefore displaces 800,000 dollars of domestic materials and labor, for which Russia, in return, gives us a market for only 57,000 dollars. On such facts comment is unnecessary; it would be thrown away on minds that would require it. Who can say that such a trade as we carry on with Madeira ought not to be encouraged, and that with Russia discouraged—and the same remark may be applied to all countries with which our trade is carried on under like circumstances. We formerly supplied Madeira with all her provisions—since imposing the high duty on her wines, she is, in a great measure, supplied from the Black sea; if the duty was reduced, we should import more of her wines, she would consume more of our provisions; but is not so with Russia or England the consumption of our provisions is prohibited by both.

It seems to me that we can now very easily ascertain how far an increase of revenue, by imposts, promotes the prosperity of the country at large. My mind has come to this conclusion—that, by the increase of revenue from importations from countries which afford us a proportionately increased market for domestic or foreign produce, the country will prosper—but that it will decline when the increased revenue arises from importations from countries which afford us no increased market, and when we must buy on credit, pay by the remittance of stock or specie, or the profits of our trade with nations who deal more liberally. The preceding facts will enable the reader to form his own conclusions. The increase of our revenue has been almost entirely from ad valorem goods, (foreign manufactures), and has produced no new or increased demand for our products, and, therefore, cannot have benefitted the country. It will be well to inquire if it has not been a very serious injury? If, in political economy, there is a proposition which will meet with universal assent, it is that a system of revenue which is built on the encouragement of foreign and the depression of domestic industry, is destructive of the best interests of the country. The only question is, whether such is the effect of our system? It is admitted that to raise \$7,545,000 of revenue, by impost on ad valorem goods, we must consume, at custom house valuation, \$36,650,000 of foreign manufactures; to pay for which we must send abroad so much of the produce of our labor. Necessarily dependent on importation for revenue, the government must be interested in promoting foreign manufactures and in retarding the progress of domestic; for any addition to the consumption of them is a diminution of revenue. As a mere matter of revenue then, the less made at home, the more imported from abroad, the better for the treasury. How is it for the country? I will test it by our trade with Russia. In 1821 the nett importation from Russia was as follows:

Duck and sheeting	\$818,850
Cordage	28,281
Iron	274,593
Hemp	441,114
	<hr/>
	1,562,838
Tallow, &c.	185,119
Bristles, &c.	9,036
Ad valorem	77,471
Free of duty	13,526
*Other	4,219
	<hr/>
	289,361
Total of imports	1,852,199

The exports, in the same year, were—	
Oak bark, &c.	(domestic) \$6,072
Rice	" 31,089
Cotton	" 44,405
Hops	" 1,884
Spirits	" 39,654
*Other	" 4,835
	<hr/>
	127,939
Free (dye woods),	(foreign) 10,385
Other free articles,	" 4,427
Nankeens	" 2,394
Silk	" 4,396
All other ad valorem	" 4,867
Madeira wines	" 23,286
Coffee	" 58,424
Sugar	" 252,521
Indigo	" 135,412
Cigars	" 2,113
*Other	" 2,710
	<hr/>
	500,955
Total exports	628,894

These statements are taken from the statistical tables of 1821, and, as far as our official documents go, present a full and detailed view of our commerce with Russia. Imports \$1,852,000; exports \$628,000; balance against us \$1,224,000. The duty on this amount of the balance of imports is, say 250,000 dollars, and is a gain to the treasury but none to the country; we should have the same market for our foreign and domestic produce if we imported 1,224,000 dollars less from Russia: as we have there no market for more than 628,000 dollars, the country can gain nothing by importing more. This is very certain. But the loss is very great—the import of 1,852,000 dollars gives us a market for only 628,000 dollars—but, if the articles now imported were made at home, then there would be an additional market for, at least, 1,224,000 dollars more of domestic materials, labor and subsistence, which are now useless, unemployed and unsaleable. It would give a new aspect to Kentucky and Missouri if these states could supply the hemp, cordage and duck which we buy from Russia. These articles amount to 1,286,000 dollars. This sum, distributed among the farmers, rope-makers and weavers of the west, would, indeed, cause "the wilderness to blossom like the rose"—yet, for the sake of the paltry revenue derived from these articles, the country is deprived of the profits of raising, manufacturing and distributing such articles. Of the domestic exports to Russia there is not one item of the produce of the middle or western states, unless some oak bark; while, of the imports from Russia, 1,562,000 dollars are of the materials with which the middle and western states abound, and which they could manufacture to an extent far beyond the demand of the whole country. New York or Pennsylvania alone, could supply the union with iron; the raw material has no value for exportation—the entire value of iron is made up of labor and subsistence. The treasury estimate of the cost of iron in Russia is 65 dollars a ton; every ton imported then deprives this country of a market for labor and subsistence to that amount; which is a loss balanced by nothing but the 15 dollars duty paid to the treasury. It is easy to test the principle by the article of iron; it is very certain that, by importing more and making less at home, the trea-

* These sums are made up of small items, and therefore not specified.

sure gains—but the loss to the country would be 65 dollars for every 15 paid to the treasury. If a common forge, producing, say 200 tons a year, is stopped in its operations by the influx of foreign iron, the treasury is enriched, by the duty, 3,000 dollars—the country is impoverished 13,000 dollars, by materials becoming worthless, workmen idle, and provisions without a market—so that when a system of revenue is built entirely on imports, the abundance of the treasury is the sure indication of the people's wants. Without undertaking to propose or advocate an entire prohibition of iron, hemp &c. it cannot be questioned that the nation, at large, would be benefited by imposing such additional duties on these articles, as would reduce the importation to such an amount as not to exceed our exports; this could not injure our market for either foreign or domestic products; and it is the only way of mitigating the evils of the present system of revenue. This word is not well understood—we speak of the revenue of the government as of an individual—as of rents, dividends, interest, &c.; but the important difference is this—rents are the profits of land and proportioned to the products raised from it; it is the landlord's interest to make the land as productive as possible: so ought revenues of the government to be an assessment on the people's profits, to increase in proportion to the products of our labor. But impost is an assessment on the foreign goods consumed, without regard to what the people can raise or fabricate. Its essential principle is that the country shall make as little and import as much as possible.—It is like a landlord renting a grist-mill at a high rate to the tenant, and then endeavoring to take all custom from it; instead of increasing the rent in proportion to the quantity ground in it, the rent is raised in proportion as the mill grinds less. It is like a man deriving his income from the dividends of foreign bank stock—he is interested in enlarging the business of that and diminishing the business and profits of a domestic one. Impost thus becomes the most oppressive of all taxes; instead of being assessed on the profits of the produce of the country, growing with its growth, it is, in reality, the greater in the same proportion as the profits of the country become less. Now, to increase the revenue on iron 15,000 dollars, we must import 1000 tons more and manufacture 1000 tons less—so of hemp and every article which we can raise or make; and, in accordance with these reasons, has been all our experience. The most disastrous year for the country was the one in which our revenue was 36,000,000 dollars. It was the year which saw the decay of our manufactures, the increase of foreign importations and an overflowing treasury. It was the year which led to embarrassment, distress and bankruptcy, 1815—that year which saw the end of a war by which the nation acquired wealth and glory, the beginning of a peace which has spread ruin through the land and covered it with disgrace; which has perpetuated a system of revenue that makes the wealth of the treasury the people's curse—which fertilizes foreign and sterilizes the domestic fields; builds up foreign and pulls down domestic manufactures; secures the foreign laborer employment and dooms the domestic to want; gives a value to foreign materials and leaves domestic ones in the bowels of the earth. Such are the direful effects of the increase of the public revenue. These are the present realities and future prospects of the country. Such are, and ever must be, the consequences of an overflowing treasury.

Naval Establishment.

To the house of representatives of the United States:

In compliance with the resolution of the house of representatives, of the 7th March last, requiring that a plan for the peace establishment of the navy of the United States, and also of the marine corps, should be communicated to that house at the present session, I transmit a report from the secretary of the navy, containing a plan which has been prepared for the proposed establishment.

JAMES MONROE.

Washington, 6th Dec. 1822.

Navy Department, December 2, 1822.

SIR: The secretary of the navy, to whom has been referred the resolution of the house of representatives, of the 7th of May last, requesting the president of the United States to cause to be laid before that house a plan for a peace establishment of the navy of the United States, has the honor of submitting the accompanying papers on that subject.

The paper marked A, is the draft of a bill, embracing all the provisions which have been deemed necessary; presuming that a plan presented in this form would best meet the object contemplated by the resolution. It is deemed necessary, in this report, to notice only briefly such parts of the bill as contain new modifications of our naval establishment.

The bill, it will be perceived, contemplates the establishment of two new grades of office, viz. commodore and rear admiral. These grades are considered, if not absolutely necessary, at least, of very great importance, as regards due subordination and the discipline of the service; and, in recommending the adoption of the provision, I can only repeat what I have had occasion heretofore to urge in support of this measure. The rank of captain is now the highest grade in the navy recognized by law; and, during the infancy of our navy, and whilst we had no vessels of a higher class than frigates, and the number of captains small, it was, perhaps, as high a grade as the good of the service required. It is, however, believed that, from the additions, both to the number and class of our public vessels, and from what may reasonably be anticipated to be the situation of our navy in the course of a few years, both justice and policy require the establishment of some higher grades. According to the relative rank, as now regulated between the military and naval officers, a captain in the navy only ranks with a colonel in the army. This is thought to be contrary to sound policy, and the good of the service. The establishment of the grades contemplated by the bill, will place the relative rank in the army and navy upon a just footing. A commodore will rank with a brigadier general, and a rear admiral with a major general. But the more important and substantial benefit, it is believed, growing out of this measure, will be the effect it will have upon the discipline of the service. The importance of rank, both in the military and naval service, will readily occur to all in any degree acquainted with either. In a fleet or squadron, when the different vessels may be commanded by officers of the same grade, and their relative rank, and even that of the commander himself, known only by the dates of their commissions, there will not be that respect and subordination observed that are essential to order and harmony. The additional pay, it is thought, cannot afford any well founded objection to the measure,

if the real benefits, confidently believed to result from it, are duly appreciated.

Authorizing the appointment of midshipmen, who have been examined and found qualified for promotion, to the duty of sailing master, would be highly beneficial to the service. By the rules and regulations of the navy, sailing masters are not considered in the line of promotion, and have not, of course, so strong inducements to remain permanently attached to the service, as officers who have this prospect before them; and whenever more profitable employment in the merchant service is presented, they will generally accept of it.

The number of lieutenants is already so great that the prospect of promotion of midshipmen is not very promising. To employ examined midshipmen as sailing masters, would be giving them some little distinction, and affording them an opportunity of improving themselves for the higher and more important duties of the service.

In most of the classes of commissioned officers the number fixed by the bill, embraces all at present in office, and where that is not the case, it is provided that none shall be discharged, but the number reduced to that contemplated in the bill, by omitting to fill the vacancies as they may occur. This, it is thought, is no more than justice requires; and, as the number thus retained is but small, the expense will be inconsiderable, and will soon entirely cease.

The increased pay provided for some few of the officers, attached to ships of the line and frigates, whilst in actual service, is recommended by considerations of justice, and the good of the service. To perform the duties required of these officers on board the largest ships, involves far more responsibility, and requires not only greater professional knowledge and experience, but much more labor; these, or similar distinctions, are recognized in every well regulated service; and as but a small number of our largest vessels are kept in service in time of peace, the additional expense will be of no great amount.

It has been considered a more simple mode of payment, and less liable to abuse, to allow fixed salaries to the officers stationed at the several navy yards and naval stations, than as now provided by law by monthly pay and rations.

That part of the bill which makes the marine guard, detailed for the protection of navy yards, subject to the orders of the commandant of the yard, is deemed essential for the preservation of order and harmony. The difficulties which have occurred under the present regulations on that subject, suggest the necessity of some alteration, and no well founded objection is perceived to placing this guard under the immediate orders of the commandant of the yard, in the same manner as the marine guard is placed, on ship-board, under the orders of the captain.

The exhibits accompanying this bill will serve to shew the applicability of its provisions to our present naval establishment, and the comparative expense between it and the one contemplated by the bill.

Paper B is an exhibit shewing the number of commission and warrant officers required to officer certain ships and vessels, and navy yards.

Paper C is an exhibit shewing the petty officers, able seamen, ordinary seamen, and boys, required for the vessels of war in active service.

Paper D is an exhibit shewing the whole number of commission and warrant officers required for the navy of the U. States, when the ships of the line,

frigates, and steam batteries, directed by the "act for the gradual increase of the navy," shall be completed.

Paper E is an estimate of the annual expense of the officers of the navy, proposed by the bill, including the organization of the navy yards, and a comparative view between the present expense and that proposed.

By which last exhibit, it will be seen, that the annual expense of the officers of the navy will be reduced about ninety thousand dollars below the estimates necessary under the existing establishment.

A peace establishment for the marine corps having been fixed by the act of the 3d of March, 1817, and no material alteration being deemed necessary, no other plan has been prepared to accompany this report.

Although, perhaps, not falling strictly within the scope of the resolution, yet the present affords a fit opportunity of respectfully suggesting the importance of establishing a naval academy for the instruction of our young officers in the sciences connected with their profession. As this is intended as a mere suggestion of a measure, deserving consideration, I have not thought proper to present any plan for carrying it into effect. This may be done hereafter, should the measure meet with a favorable reception: nor is it deemed fit for me, at this time, to urge the many considerations which will readily occur to all liberal and enlightened minds, in favor of such an institution.

All which is respectfully submitted.

SMITH THOMPSON.

The president of the United States.

A.

A bill to fix and render permanent the naval peace establishment of the United States.

Be it enacted by the senate and house of representatives of the United States of America, in congress assembled, That the naval peace establishment of the United States shall, from and after the day of _____, consist of

One rear admiral,
Five commodores,
Twenty-five captains,
Thirty master commandants,
One hundred and ninety lieutenants,
Twenty sailing masters,
Four hundred midshipmen,
Thirty-five surgeons
Forty five surgeon's mates,
Forty pursers,
Six chaplains,
Twenty boatswains,
Twenty gunners,
Fifteen carpenters,
Fifteen sail makers,

and of all other officers, petty officers, seamen, ordinary seamen, and boys, a number not exceeding three thousand five hundred; but, the president of the United States may, if, in his opinion, the good of the service shall require it, make additional appointments of midshipmen: provided, however, that the whole number of midshipmen shall not, at any one time, exceed four hundred and fifty. The president shall also have the power, if, in his opinion, the exigencies or the good of the service should require it, to give acting appointments, of lieutenant and master, to such midshipmen as have passed the examination required by the regulations of the service to qualify them to be lieutenants in the navy: Provided, The whole number of acting lieutenants and masters, including those holding commissions and warrants, shall not exceed two hundred and

thirty lieutenants, and forty sailing-masters. And the president shall also have the power to appoint such additional chaplains, boatswains, gunners, carpenters and sail makers as the good of the service may, in his opinion, require, not exceeding, however, ten chaplains, ten boatswains, ten gunners, five carpenters, and five sail makers; but none of the officers, retained in service under this act, shall be entitled to receive more than their monthly pay, without rations, during the time when they shall not be under orders for service: Provided, nevertheless, that none of the commissioned officers now in service, shall, by virtue of this act, be discharged, but vacancies, as they occur, shall not be filled until the officers in the several grades shall be reduced to the number herein before designated.

Sec 2. *And be it further enacted*, That the pay and subsistence of a rear admiral, shall be one hundred and twenty dollars per month, and twenty-four rations per day, and of a commodore, one hundred dollars per month, and sixteen rations per day.

Sec. 3. *And be it further enacted*, That the secretary of the navy, with the approbation of the president of the United States, may grant furloughs to such of the officers as may choose to enter the mercantile service of the United States, or such foreign service as the president may approve, for a term not exceeding two years; subject, however, to be recalled at any time he may deem necessary and proper; but all officers, so furloughed, shall receive only one half their monthly pay, without rations, during the time they shall be, in such manner, absent from the public service.

Sec. 4. *And be it further enacted*, That, for the preservation of the ships and vessels placed in ordinary, the president of the United States shall have the power, provided he may deem the same necessary, to attach, permanently, to each ship or vessel, the following officers, seamen, ordinary seamen, and boys; that is to say, to a ship of the line,

One captain,
Two lieutenants,
One sailing master,
Four midshipmen,
One boatswain,
One gunner,
One carpenter,
Two carpenter's mates, who shall be caulkers;
Eight seamen,
Eight ordinary seamen, and
Six boys.

To each forty four gun frigate,

One captain,
One lieutenant,
One sailing master,
Three midshipmen,
One boatswain,
One gunner,
One carpenter,
One carpenter's mate, who shall be a caulker;
Six seamen,
Six ordinary seamen, and
Four boys.

To each of the frigates rated less than forty-four guns,

One captain,
One lieutenant,
One sailing master,
Two midshipmen,
One boatswain,
One gunner,
One carpenter,
One carpenter's mate, who shall be a caulker;
Five seamen,

Five ordinary seamen, and
Three boys.

To each of the sloops of war,

One master commandant,
Two midshipmen,
One boatswain's mate,
One gunner's mate,
One carpenter's mate, who shall be a caulker;
Three seamen,
Three ordinary seamen, and
Two boys.

To each of the brigs and sloops, if not less than ten guns,

One lieutenant,
One midshipman,
One boatswain's mate,
One gunner's mate,
One carpenter's mate, who shall be a caulker;
Two ordinary seamen, and
Two boys.

To each of the several stations at which ships and vessels are placed in ordinary, shall be attached

One surgeon, and

One surgeon's mate, to attend all the sick of such ships and vessels;

One chaplain, and one schoolmaster, who shall perform, in their respective stations, the duties of chaplain, mathematician, and schoolmaster, on the station, under the superintendence of the senior officer of such ships and vessels in ordinary, whose duty it will be, under such instructions as may be given by the secretary of the navy upon the subject, to establish a school on board of the ship to which he is attached, for the purpose of instructing the midshipmen on the station, and those belonging to the ships in ordinary, in the several branches of mathematics, geometry, trigonometry, and navigation, agreeably to the rules and regulations of the navy.

Sec. 5. *And be it further enacted*, That each of the following naval stations, to wit:

Portsmouth, New-Hampshire,
Charlestown, Massachusetts,
New York,
Philadelphia,
Washington,
Gosport, Virginia, and

one other station, south of the Chesapeake, (such as the president of the United States shall select), shall be under the command of an officer not below the rank of captain of the navy, who shall have, agreeably to such regulations as are now, or may hereafter be established, by authority of law, for the service, a general superintendence over the ships and vessels in ordinary at those stations, respectively, as well as over the officers, (such officers only excepted as may be senior in rank), and crews attached to them. And it shall be the duty of such officers and crews, under his general superintendence and direction, to keep clean, ventilate, and prevent, by constant examination, and, when necessary, caulking such rents and seams in the respective vessels to which they are attached, as may be found open, the deleterious effects arising from water getting between the timbers, and for the preservation, repairing, overhauling of the rigging, stores, &c. of the ships and vessels in ordinary, deposited in the navy yards and store houses, as well as for the rigging and equipping of any of the public ships or vessels fitting for sea, and like purposes; and the commanding officers of the respective ships in ordinary, shall, upon the requisition of the commandant of the yard, furnish, from time to time, agreeably to the general regulations of the service, such number of officers and men, as, in his opinion, the work to be done may require.

Sec. 6. *And be it further enacted*, That all officers attached to vessels in ordinary shall be allowed their full pay and rations, and such quantity of fuel and candles, provided they live on board of the respective vessels to which they are attached, as they would be allowed were they at sea.

Sec. 7. *And be it further enacted*, That, to the officers stationed at the several navy yards, that is to say:

Portsmouth, New Hampshire,
Charlestown, Massachusetts,
New York,
Philadelphia,
Washington,
G. sport, Virginia, and

One other yard, south of the Chesapeake, the following annual compensation, in lieu of all pay, rations and emoluments, shall be allowed:

To the commanding officers not under the rank of captain, three thousand dollars.

To the master commandant, one thousand seven hundred dollars.

To the lieutenant, one thousand dollars.

To the sailing master, eight hundred and fifty dollars.

To the surgeon, if attending an hospital, one thousand five hundred dollars.

To the surgeon, if not attending an hospital, nine hundred dollars.

To the purser, eight hundred dollars.

To a laboratory officer at Washington, seven hundred and fifty dollars.

To each midshipman, three hundred and fifty dollars.

To each boatswain, gunner, and sailmaker, five hundred dollars; which compensation shall be paid quarterly.

Sec. 8. *And be it further enacted*, That, to any other naval station in the United States, (other than those enumerated in the preceding section), the president of the United States may deem necessary, there shall be attached one master commandant, who shall have the like superintendence over such station, as is provided in the fifth section of this act for the commandants at the several navy yards therein enumerated; and the following annual compensations, in lieu of all pay, rations, and emoluments, shall be allowed to the officers attached to the lake stations; that is to say,

If attached to the station on Lake Ontario,

The master commandant shall be entitled to one thousand three hundred dollars.

The lieutenant to eight hundred dollars.

The surgeon to eight hundred and fifty dollars.

The purser, who shall perform also the duties of storekeeper, to eight hundred dollars.

If attached to the station on Lake Erie,

The master commandant shall be entitled to one thousand two hundred and fifty dollars.

The surgeon to eight hundred dollars.

The purser, who shall perform also the duties of storekeeper, to seven hundred and fifty dollars.

If attached to the station on Lake Champlain,

The master commandant shall be entitled to one thousand two hundred dollars.

The surgeon to eight hundred dollars.

The purser, who shall perform also the duties of storekeeper, to seven hundred and fifty dollars; which compensation shall be paid quarterly.

Sec. 9. *And be it further enacted*, That an officer, appointed to superintend the recruiting service in any port within the United States, shall not be entitled to any allowance for house rent, fuel or candles.

Sec. 10. *And be it further enacted*, That officers, of the following grades, attached to ships of the line and frigates, when in actual service, shall receive, in addition to their present emoluments, the monthly pay hereafter mentioned, viz:

The first lieutenant of a ship of the line, ten dollars.

The sailing master, ten dollars.

The surgeon, fifteen dollars.

The boatswain, five dollars.

The gunner, five dollars.

The carpenter, five dollars.

The sail maker, three dollars.

The first lieutenant of a frigate of forty four guns, six dollars.

The sailing master, six dollars.

The surgeon, ten dollars.

The boatswain, three dollars.

The gunner, three dollars.

The carpenter, three dollars.

The sail maker, two dollars.

The first lieutenant of a frigate of thirty six guns, four dollars.

The sailing master, four dollars.

The surgeon, six dollars.

The boatswain, two dollars.

The gunner, two dollars.

The carpenter, two dollars.

The sail maker, two dollars.

Sec. 11. *And be it further enacted*, That, when a surgeon's mate shall act in the line of his duty on board a brig, schooner, or other small vessels of war, having no other medical officer attached to said vessel, he shall be allowed at the rate of fifteen dollars per month, in addition to his present pay and rations, as authorized by law.

Sec. 12. *And be it further enacted*, That the president of the United States be, and he is hereby, authorized, to discharge all warrant officers at present in the navy of the United States, over and above the respective numbers retained by this act; and all such officers who shall be discharged under this act, shall be entitled to receive six month's pay, over and above what may be due to them, respectively, at the time of their discharge.

Sec. 13. *And be it further enacted*, That the guard of marines detached for the protection of a navy yard, shall, while doing duty in the yard, be subject to the orders of the commandant of the yard, and receive from him instructions as to the duties they are to perform therein; and all persons enlisted into the service of the United States, and doing duty under the orders of the commandant of the yard, shall, for every offence, be subject to the "act for the better government of the navy of the United States," and be tried and punished in the same manner as if the offence had been committed at sea, any law or usage to the contrary notwithstanding.

B.

Ships and vessels afloat.

7 Seventy-fours,
7 Frigates,
1 Steam frigate,
1 Twenty-four gun ship,
5 Sloops of war,
2 Brigs,
6 Schooners and 2 gun boats.

Navy yards.

At Portsmouth,
Boston,
New York,
Philadelphia,
Washington,
Norfolk, and one Contemplated south of the Chesapeake.

Commissioned and warrant officers required to officer the above ships and vessels and navy yards.

Seven seventy-fours--7 captains, 63 lieutenants, 14 sailing masters, 21 masters' mates, 168 midshipmen, 7 surgeons, 21 surgeons' mates, 7 pursers, 7

chaplains, 7 school-masters, 7 boatswains, 7 gunners, 7 carpenters, 7 sail-makers

Four frigates of forty-four guns--4 captains, 24 lieutenants, 4 sailing masters, 80 midshipmen, 4 surgeons, 8 surgeons' mates, 4 pursers, 4 chaplains, 4 boatswains, 4 gunners, 4 carpenters, 4 sail-makers.

Three frigates of thirty six guns--3 captains, 15 lieutenants, 3 sailing masters, 48 midshipmen, 3 surgeons, 6 surgeons' mates, 3 pursers, 3 chaplains, 3 boatswains, 3 gunners, 3 carpenters, 3 sail-makers.

One steam frigate--1 captain, 5 lieutenants, 1 sailing master, 12 midshipmen, 1 surgeon, 1 surgeon's mate, 1 purser, 1 chaplain, 1 boatswain, 1 gunner, 1 carpenter.

One ship of twenty four guns--1 captain, 4 lieutenants, 1 sailing master, 12 midshipmen, 1 surgeon, 1 surgeon's mate, one purser, 1 boatswain, 1 gunner, 1 carpenter, 1 sail-maker.

Five sloops of war--5 masters commandant, 15 lieutenants, 5 sailing masters, 40 midshipmen, 5 surgeons, 5 surgeons' mates, 5 pursers, 5 boatswains, 5 gunners, 5 carpenters, 5 sail-makers.

Two brigs, six schooners, two gun boats--10 lieut's. commandant, 18 lieutenants, 10 sailing masters, 34 midshipmen, 10 surgeons, 10 surgeons' mates, 10 pursers.

If divided into two squadrons, 2 captains.

Seven navy yards--7 captains, 7 masters commandant, 7 lieutenants, 7 sailing masters, 14 midshipmen, 7 surgeons, 7 surgeons' mates, 7 pursers, 7 boatswains, 7 gunners, 7 carpenters.

To which should be added,

Navy commissioners, 3 captains.

For recruiting stations, 4 masters commandant, 4 lieutenants.

For the ordnance service, 1 master commandant.

For hospitals, 4 surgeons, 4 surgeon's mates.

Making a total of

28 captains, 17 masters commandant, 10 lieutenants commandant, 155 lieutenants, 45 sailing masters, 21 masters mates, 408 midshipmen, 32 surgeons, 63 surgeons' mates, 38 pursers, 15 chaplains, 7 school masters, 28 boatswains, 28 gunners, 28 carpenters, 20 sail makers.

NOTE. Besides the above navy yards, there is a station at Charleston, S. C. Baltimore, Newport, R. I. Sackett's Harbor and White Hall, at each of which places there is one captain, and other officers. Also, a station at Erie, Pennsylvania, having one master commandant.

There is no such commission officer as lieutenant commandant; they are, from time to time, selected from the corps of lieutenants, and receive, while in command, \$10 dollars extra per month, which ceases with their command; they then return to the body of lieutenants, and receive only lieutenant's pay. The master's mates are taken from the most experienced midshipmen; the number of masters' mates stated above, should, therefore, be added to the midshipmen, which make the whole number of midshipmen required, 429.

☞ This statement makes no provision for sickness and other casualties.

Statement C exhibits the number of petty officers, (viz: captain's clerks, boatswains' mates, gunners' mates, carpenters' mates, sail makers' mates, quartergunners, quartermasters yeomen, coxswains, stewards, coopers, armourers, masters at arms, ships' corporals, cooks), able seamen, ordinary seamen and boys, required for the vessels of war stated below.

	P. Off.	A. S.	O. S.	Boys.	
Franklin,	74,	47	244	264	42
Constitution,	44,	38	160	170	27

Bull dog felucca, and } small vessels, at N. } Orleans,	5	40	40	—	

Say 424 petty officers, 1207 able seamen, 1106 ord. seamen, 242 boys:--Total 2979.

For six 74's, viz: the Columbus, Ohio, Delaware, North Carolina, Washington and Independence, 2 carpenters' mates, 3 able and 8 ordinary seamen, and 6 boys, each.

For three 44's, viz: the United States, Guerriere and Java, 1 carpenters' mate, 6 able and 6 ord. seamen, and 4 boys, each.

For the Fulton steam frigate and Macedonian, 36, 1 carpenters' mate, 5 able and 5 ordinary seamen, and three boys, each.

For Sacket's Harbor, 1 armourer, 5 able and 10 ordinary seamen.

For Whitehall and Erie, 2 armourers, 10 able and 10 ordinary seamen.

Grand total, 5240.

The exhibit marked D. shows the whole number of commission and warrant officers, required for the navy of the United States, when the ships of the line, frigates, and steam batteries, directed by the act for the gradual increase of the navy, shall be completed--viz:

- 45 captains,
- 17 Masters commandant,
- 173 Lieutenants, (10 of whom allowed for lieuts. commandant),
- 66 Sailing masters,
- 48 Surgeons,
- 97 Surgeons' mates,
- 54 Pursers,
- 31 Chaplains,
- 22 School masters,
- 44 Boatswains,
- 44 Gunners,
- 44 Carpenters,
- 33 Sail-makers,
- 724 Midshipmen,
- 36 Sailing masters' mates,

Required to officer 12 ships of the line, 12 ships of 44 guns, 3 do. of 36, 1 do. of 24, 4 steam batteries, 5 sloops of war, 2 brigs, 6 schooners and 2 gunboats, (with a reservation of 3 captains for the brigs, schrs. and gunboats, in case they should be divided into 3 squadrons)--for 7 navy yards, for the board of navy commissioners, for recruiting stations, for ordnance service, and for hospitals.

NOTE.--The above is exclusive of the officers that may be required at Charleston, S. C. Baltimore, Newport, R. I. Sacket's Harbor, Whitehall and

Erie stations; makes no provision for sickness and other casualties.

With respect to the number of masters commandant, it may be observed, that we have not a number of sloops of war, in proportion to other ships; if we had, the number of this grade of officers would be greatly increased.

It is recommended that certain officers be allowed additional pay per month, according to the rate of the vessels they are attached to, as follows:

	Line ship.	44	36
First lieutenant,	\$10	\$6	\$4
Sailing master,	10	6	4
Surgeons,	15	10	6
Boatswains,	5	3	2
Gunner,	5	3	2
Carpenter,	5	3	2
Sailmaker,	3	2	2

E.

Estimate of the annual expense of the officers of the navy, proposed by the bill, all calculated on full pay and rations.

1 Rear admiral, \$120 per month, 1,440 per annum; 24 rations per day, 8,760 do. per year, at 25 cents each, is \$2,190—total, \$3,630.

5 Commodores, each \$100 per month, with 16 rations, at 25 cents per day, or \$2,660 per year—total 13,300 dollars.

17 Captains, each \$100 per month, with 8 rations per day, or \$1,930 per year—total 32,810 dollars.

1 Captain, \$75 per month, with 6 rations per day, or \$1,447 50 per year.

20 Masters commandant, each \$60 per month, with 5 rations per day, or \$1,176 25 per year—total, 23,525 dollars.

185 Lieutenants, each \$40 per month, with 3 rations per day, or \$753 75 per year—total, 139,443 dollars 75 cents.

13 Sailing masters, each \$40 per month and 2 rations per day, or \$662 50 per year—total, 8,612 dollars 50 cents.

382 Midshipmen, each \$19 per month and 1 ration per day—total 121,953 dolls. 50 cents

25 Surgeons, each \$50 per month and 2 rations per day—total 19,562 dolls. 50 cents.

42 Surgeons' mates, each \$30 per month and 2 rations per day—total 22,785 dollars.

30 Pursers, each \$40 per month and 2 rations per day—total 19,875 dollars.

6 Chaplains, each \$40 per month and 2 rations per day—total 3,975 dollars.

Boatswains 13, gunners 13, carpenters 15, sailmakers 11, each \$20 per month and 2 rations per day—total 21,970 dollars.

Grand total 432,889 dolls. 75 cents

Proposed organization of the navy yards and shore stations.

Portsmouth, (N. H.) and Philadelphia, each 1 captain, 1 master commandant, 1 sailing master, 1 surgeon, 1 purser, 2 midshipmen, 1 boatswain, 1 gunner.

New York, Boston and Norfolk, each 1 captain, 1 master commandant, 1 lieutenant, 1 sailing master, 1 surgeon, 1 surgeon's mate, 1 purser, 3 midshipmen, 1 boatswain, 1 gunner, 1 sail maker.

Washington, same as the last, with the addition of 1 laboratory, and the deduction of 1 surgeon's mate.

South of the Chesapeake, 1 captain, 1 master commandant, 1 sailing master, 1 surgeon, 1 purser, 2 midshipmen, 1 boatswain, 1 gunner.

Lake Ontario, 1 master commandant, 1 lieutenant, 1 surgeon, 1 purser.

Lake Erie and Lake Champlain, each same as Ontario, with the deduction of the lieutenant.

The officers embraced by this organization of the yards, with those included in the above estimate, constitute the number proposed by the bill.

At the compensation proposed, the compensations of the above officers of yards will amount to \$84,750 00

To which add the amount of the above estimate 432,889 75

Making a sum total of \$517,639 75

From which deduct the amount calculated for three commodores who act as navy commissioners 7,980 00

\$509,659 75

Estimate of the annual expense of the officers now on the navy register, calculated at full pay and rations, Nov. 1822.

	Pay per month.	Rations per day.	Amount per year.
9 Captains	\$100	16	\$23,940
18 Ditto	100	8	34,740
1 Ditto	75	6	1,447 50
31 Masters com'dt.	60	5	36,463 75
203 Lieutenants	40	3	153,011 25
406 Midshipmen	19	1	129,615 50
47 Surgeons	50	2	36,777 50
46 Surgeons' mates	30	2	24,955
44 Pursers	40	2	29,150
12 Chaplains	40	2	7,950
57 Sailing masters	40	2	37,762 50
149 Boatswains, gunners, carpenters, sailmakers and masters' mates	20	2	62,952 50

Note.—The above estimate is exclusive of the allowances made to officers of the yards, for fuel, candles, servants and rent, which, if added to the estimate, would increase it probably \$20,000.—making the whole estimate \$598,765 50

Annual expense of full pay and rations to the officers now on the navy register \$598,765 50

Annual expense of full pay and rations to the officers proposed by the bill 509,659 75

Difference in favor of the bill \$89,105 75

Seventeenth Congress—2nd session.

IN THE SENATE.

January 17. A resolution offered yesterday, by Mr. Smith, of Md. directing an inquiry into the expediency of erecting fortifications at St. Mary's, on the Potomac, and on a point in the Patuxent, was taken up and agreed to.

A debate on the bill to abolish imprisonment for debt occupied the senate till 4 o'clock. Mr. Smith, of S. C. directly opposed and Mr. Van Buren supported the bill. It was laid on the table, and the senate adjourned to Monday.

January 20. The senate took up the following resolution, offered by Mr. Johnson, of Louisiana, on Friday last:

Resolved, That the committee on the post office and post roads be instructed to inquire into the expediency of repairing the mail road from New Orleans to Nashville, and of establishing ferries at the water courses on the route, or of making bridges over them, so as to facilitate the conveyance of the mails to and from New Orleans; and also, to inquire into the expediency of repairing the national road commencing at Madisonville, in the state of Louisiana and terminating at Florence, on the Tennessee river, and into the propriety of providing for the conveyance of the mail on the said route, in covered carriages.

Mr. Johnson supported his resolution by some brief, but very appropriate and strong remarks—the resolution was agreed to.

The president communicated a letter from the secretary of the treasury, transmitting statements of the foreign commerce of the United States, made in pursuance of the act of January 10, 1820, which letter was read. [And shall be fully noticed when we receive a copy of it].

The senate then resumed, in committee of the whole, the consideration of the bill to abolish imprisonment for debt--Mr. *Smith*, of Md. in the chair.

Several gentlemen spoke on the subject--certain amendments, proposed by Mr. *Southard*, were ordered to be printed--the senate proceeded to the consideration of executive business, after which an adjournment took place.

January 21. Mr. *Kelly*, elected a senator from Alabama, to supply the place of Mr. *Walker*, appeared and took his seat.

Among the petitions presented this day was one from sundry banks, in Charleston, S. C. representing the expediency of certain alterations in the charter of the United States' bank.

Mr. *Benton*, from the committee on public lands, reported a bill to enable the president of the United States to treat with the Chippewa Indians for the purchase of certain lands on the south side of lake Superior, supposed to contain valuable mines of copper, which bill was twice read by general consent.

A message, which was received from the president of the United States, on Thursday last, and read, was taken up, and, on motion of Mr. *Barbour*, referred to the committee on foreign relations. The message was as follows:

To the senate of the United States.

The convention concluded and signed at St. Petersburg, on the 12th day of July last, under the mediation of his imperial majesty the emperor of all the Russias, having been ratified by the three powers, parties thereto; and the ratifications of the same having been duly exchanged, copies of it are now communicated to congress, to the end that the measures for carrying it, on the part of the United States, into execution, may obtain the co-operation of the legislature necessary to the accomplishment of some of its provisions. A translation is subjoined of the three explanatory documents, in the French language, referred to in the fourth article of the convention, and annexed to it. The agreement executed at the exchange of the ratifications is likewise communicated. JAMES MONROE.

Washington, Jan. 16, 1823.

Some time was spent in debate on the bill to abolish imprisonment for debt--and the senate also were sometime engaged in executive business. The other matters attended to will sufficiently appear in course.

January 22. The senate spent nearly the whole of this day in the consideration of executive business, (as is always the case), with closed doors.

HOUSE OF REPRESENTATIVES.

Friday, Jan. 17. A good deal of local or minor business was attended to, and many resolutions were submitted--to be noticed hereafter as necessary.

The resolution calling for information respecting the surveys of public lands, was taken up, debated, amended and agreed to.

The engrossed bill for the better organization of the district court in the state of Louisiana was read a third time. Much diversity of opinion was expressed--the vote ordering the third reading was reconsidered, that the bill might be open to amendment, and it was ordered to lie on the table.

Monday Jan. 20. Forty two petitions were presented this day. Several reports from committees were received.

Mr. *Tad*, from the committee on manufactures, presented a comparative table of duties on imports, &c. which was referred to the committee of the whole, to whom is referred the bill "for the more effectual protection and encouragement of domestic manufactures." Mr. T. also gave notice that he would call for the consideration of this bill on Monday next.

Mr. *Fuller* from the committee on naval affairs, made a report, accompanied by "a bill to fix and render permanent the naval peace establishment of the United States;" which bill was twice read and committed.

Mr. *Wright*, from a select committee on the subject, made the following report:

The committee to whom was referred the petition of Dr. *Smith* relative to vaccination, having considered the same, report that, perceiving no other purpose in the petition than the enactment of some law on the subject, and believing legislation thereon to be inexpedient, beg leave to be discharged from the further consideration thereof.

The report was agreed to.

The resolution about newspapers, journals and other periodical papers received at the different departments, as submitted yesterday, was taken up and agreed to--adding thereto a catalogue of works, charts, instruments, maps and prints furnished at the public expense.

Mr. *Rich*, of Vermont, offered the following resolution, which, by the rules of the house, of course, lies one day.

Resolved, That the president of the United States be requested to cause to be arranged, and laid before this house, a *disposition* shewing such changes in the commercial regulations of the different foreign countries with which the United States have intercourse, as shall have been adopted, and come to the knowledge of the executive subsequently to the formation of the digest, communicated to the senate on the 17th of December, 1819.

Mr. *Mallory* moved the following:

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of providing for an equal selection of midshipmen for the navy, from the different states of the union.

[In submitting this resolution, Mr. M. said its object was to attach every part of the nation to that essential arm of national defence, the navy, by giving to every part of the nation an interest in its prosperity, &c. so far as that effect might be produced by the equal distribution of the offices among the population of our country. Such a distribution, he believed, would have the further effect to strengthen the government. With these views, he hoped to be indulged in the proposed inquiry].

The resolve was agreed to.

Mr. *Reid*, of Geo. moved that the house do now proceed to the consideration of the resolution for amending the constitution, submitted by him a few days ago, (to give congress expressly the power to make roads and canals)--with a view to committing it to a committee of the whole. But the house refused to consider the same, by a vote of 55 to 30.

The *Speaker* communicated the following letter from the secretary of the treasury:

Treasury Department, 18th January, 1823.

SIR: In conformity with the provisions of the act of 10th January, 1820, entitled "an act to provide for obtaining accurate statements of the foreign

* We do not like to offer notes on the proceedings of congress, unless by way of argument on the subjects discussed--but feel it a duty to say, that, in our opinion, this resolution is a wise one--believing, as we do, that the legislation on the subject heretofore has been worse than useless. REO.

commerce of the United States," I have the honor to submit the following statements of the commerce and navigation of the United States, during the year ending on the 30th September, 1822, viz:

1st. A general statement of the quantity and value of merchandise imported into the United States.

2d. A summary statement of the same.

3d. A general statement of the quantity and value of domestic articles exported.

4th. A general statement of the quantity and value of foreign articles exported.

5th. and 6th. Summary statements of the value of domestic and foreign articles exported.

7th. A general statement of the amount of American and foreign tonnage employed in the foreign trade of the United States.

8th. A general statistical view of the commerce and navigation of the United States; and

9th. A statement of the tonnage entered and cleared, in and from the several states.

From these statements it appears that the imports, during the year ending on the 30th of Sept. 1822, have amounted to 83,241,541 dollars, of which amount 76,984,331 dollars were imported in American vessels, and 6,257,210 dollars in foreign vessels: That the exports have, during the same period, amounted to 72,160,281 dollars, of which 49,874,079 dollars were domestic, and 22,286,202 dollars were foreign articles: That of the domestic articles 39,931,913 dollars were exported in American vessels, and 9,942,166 dolls. in foreign vessels; and, of the foreign articles exported, 20,783,655 dollars were exported in American, and \$1,502,547 in foreign vessels: That 787,961 tons of American shipping entered, and 815,748 cleared, from the ports of the United States, and that 100,541 tons of foreign shipping entered, and 97,490 cleared from the ports of the United States during the same period. I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. P. P. Barbour, speaker of the

House of representatives.

The letter was read, and, with the documents, ordered to be printed.

On motion of Mr. Hill, of Maine, 500 extra copies of the letter and documents accompanying the same, were ordered to be printed, by a vote of 69 to 37.

The house then again resolved itself into a committee of the whole on the state of the union, Mr. Hill in the chair, on the unfinished business of Thursday last, being a bill regulating the duties on imports.

The gentlemen who took an active part in arranging the details of the bill, and discussing the various amendments proposed to it, in the committee, to-day, are Messrs. McKim, Cambreleng, Colden, Lule, McLane, Tracy, Wright, Ingham, Wabworth, Barstow, Rhea, Whipple, Tomlinson, and McCoy.

Before going through the details of the bill, the committee rose.

The Speaker communicated a letter from the president of the United States, transmitting a report of the secretary of the navy, respecting the cost and expediency of fortifying Thompson's Island, or Key West; which was referred to the committee on naval affairs, and ordered to be printed. And then the house adjourned.

Tuesday, Jan. 21. After the reading of the journal of the house was concluded—

The speaker laid before the house the following letter:

Washington, Jan. 21, 1823.

SIR: In the Washington Republican of last evening is an article, a copy of which we have the honor to annex hereto, impeaching the honesty of our conduct as printers to the house of representatives.

We are glad to meet this charge in a tangible form, unfounded as it is. Always holding ourselves amenable to the authority of the house for the faithful discharge of our official functions, we ask, of the house, that it will do us the justice to institute a committee to inquire into the correctness of our conduct, herein impeached, with power to send for persons and papers, and report the result of its investigation to the honorable body over which you preside.

With the highest respect, we have the honor to be, your most obedient servants,

GALES & SEATON,

Printers to the house of representatives.

Hon. Philip P. Barbour, Speaker &c.

From the Washington Republican of Jan. 21.

The following communication we are induced to insert in our paper, not from any feeling of hostility to the respectable gentlemen to whom it is addressed—a feeling we are incapable of cherishing towards them—but, because we think it due to them to afford them an opportunity of doing away with an impression which has been made on the minds of some members of the house, and which, if suffered to remain, may be disadvantageous to their reputation.

MESSRS. GALES & SEATON:

Gentlemen: Influenced by the charitable principle of considering every man innocent, until his guilt is proved, and knowing that presumptions, even the most violent, are not always to be relied on, it is the object of this address, which shall be short, to elicit from you explanations that are indispensably necessary to acquit yourselves of suspicions highly injurious to you, that have existed for nearly twelve months past.

It will be recollected that, at the last session of congress, the house of representatives adopted a resolution calling upon Mr. Crawford to exhibit a statement of his transactions with all those banks, which had been made by him the depositors of public moneys received from the sale of public lands. In conformity to which resolution he made his report on the 14th February, 1822, and accompanied it with numerous corroborating and explanatory documents, all of which the house ordered to be printed. You were the public printers to whom these documents were delivered; and it was your duty to have them printed correctly—yet it is a fact, incontrovertible, that parts of those documents, implicating Mr. Crawford the most strongly, were suppressed, and totally omitted in the printed document, with which you furnished the house, professedly in obedience to its orders. Of this fact, any gentleman may be fitly satisfied, who will take the trouble to compare the printed document with the one transmitted to the house by Mr. Crawford, and which is now in the possession of the clerk. The latter also affords intrinsic evidence that the omissions were not accidental, for they are inclosed in black lead pencil brackets, which would seem to have been intended as a guide to your compositor.

Strong as are the implications which those facts seem to warrant, and decided as your partiality for Mr. Crawford has been, I will not indulge the belief, (at least until you have had an opportunity of explaining), that you could have reconciled it to yourselves, to have sheltered him from a just re-

sponsibility, by so great a violation of the confidence reposed in you, and such a flagrant contempt of the legitimate authority of the house of representatives, that no member thereof, however infatuated by party zeal, who feels the slightest respect for the dignity of his station, could, without dishonor, regard with indifference.

A. B.

Mr. *Dwight*, of Massachusetts, made a motion, which was subsequently reduced to writing, in the following words:

Resolved, That the letter of Messrs. Gales and Seaton be committed to a select committee, and that said committee have power to send for persons and papers.

Much difference of opinion was manifested on the subject—some were for *laying the letter on the table*; but others thought that, as Messrs. G. and S. were officers of the house, the matter should be investigated, and this opinion finally prevailed, *nem. con.* by the adoption of Mr. *Dwight's* resolution.—In the course of the remarks, Mr. *Campbell*, of Ohio, stated, that the perusal of the publication in the newspaper had induced him to go to the clerk's office, to see the document referred to in that publication. It seemed, upon the face of it, that this house has been imposed upon either by the printers or some other officers of the government. He did not undertake to declare where the fault lay, but the censure rested somewhere, and it ought to be fixed at the proper place. The letter in question, he said, was one from W. R. Dickinson, cashier of the bank of Steubenville. In the original of this letter was one paragraph inclosed within brackets, and a cross made over it with a pencil, which perhaps had been done as a notice to the printer that that part was not to be published. That paragraph was one which ought not to have been suppressed, as it had been. Mr. C. said he presumed that when a member makes a statement of this kind in his place, it is due even to him that a committee should be raised to inquire into the matter. The marks referred to might perhaps have been inadvertently made: they might, for example, have been made by the person who first read the letter, and taken by the printers for a mark of omission. The thing ought, however, to be investigated. When a department is called on for information, and, in communicating it, a part of a letter is suppressed, or it is in any other way suppressed, it is treating the house in a very shameful manner. It was due to all who could be suspected of this suppression, that it should be inquired into. Let those who are innocent appear so, and those who are guilty be exposed. It is our duty, as members, to see that such frauds do not go unpunished. Suppose that any member, hearing from this cashier what he had written to the secretary of the treasury, should state it on this floor, and, on turning to the printed documents, should find nothing of the sort there, what an unpleasant situation he would be placed in, &c. It was due, under every view, to Messrs. Gales & Seaton, and to the head of the treasury department, that an inquiry should take place into this matter.

And Mr. *McLane* said, that, where any imputation was seriously made on any officer of this house, it ought to be investigated. He was, therefore, in favor of the resolution—not because he believed there had been any fault on the part of the printers to this house, or because he believed there had been any fault any where. He wished a full inquiry, and to have all the circumstances connected with this matter placed before the house. He had never heard of the fact stated by the gentleman from Ohio; or even seen the publication in question, before it was presented to the house this morning. But he had formed his opinion that there was no

fault any where, from the single fact, which speaks loudly to all parties. This house is in possession of the *original* letter from the cashier. When calls are made on the department for information, it is usual to furnish copies. In this instance, the original paper had been sent to this house; and he could not conceive any other motive for the department furnishing the original paper, unless it were that the house should be in possession of all the facts connected with the subject, though it might not have been proper that every particular of it should be spread before the public.

Mr. *Fuller*, from the committee on naval affairs, to which was re-committed the bill for the relief of the mother of the late lieut. Wm. H. Allen, with instructions to report a bill for the relief of his sister, reported the same with sundry amendments, which go to substitute the daughter's in the place of the mother's name; which bill was committed to the committee of the whole house.

Mr. F. from the same committee, reported a bill for the relief of Sarah Perry, mother of the late Oliver H. Perry; which bill was twice read and committed.

Mr. F. also made an unfavorable report in the case of Julia Lawrence, widow of the late capt. Jas. Lawrence; which report was, on motion of Mr. *Calden*, (one of the naval committee), committed to a committee of the whole house, to which is committed a bill for the relief of Sarah Perry.

Mr. *Rich's* resolution, submitted yesterday, was taken up and agreed to.

Mr. *Cook*, of Illinois, offered the following resolution.

Resolved, That the president of the United States be requested to communicate to this house, all the correspondence between the government of the United States and Great Britain, relating to the negotiation of the convention entered into between the two governments, on the 20th of Oct. 1818, which may not be inconsistent with the public interest.

This resolution will of course lie one day.

Mr. *Hamilton*, of S. C. rose, and, in very warm terms, announced the decease of his predecessor, Mr. *Lowndes* saying that, at the time of his death, he was, constructively, a member of the house, &c. He pronounced a handsome eulogium on the deceased, but sat down to give way to

Mr. *Archer*, of Va. who rose to follow with the resolution, which had been intimated by his friend from South Carolina, the feeling announcement which had been just addressed to the house. That gentleman might well feel and speak more strongly than any other member of the house could do, on the subject of this melancholy event, from his more intimate association, both by residence and friendship, with the eminent man whose loss we deplored; and the peculiarity of whose character and fortune it was to be esteemed and beloved in the exact proportion in which he was known. It was, indeed, a character, Mr. A. said, in which the qualities which won esteem, were blended in the happiest union with those which commanded it. He had no intention of entering into any minute delineation of his character, for many reasons. The most important was, that he felt he was unequal to the office. Nor was it necessary, after the picture which had been presented to us to-day, to which, if he attempted to add any coloring, he should only contribute to deface, perhaps, that which did not require to be improved. Panegyric, on this occasion, was, indeed, rendered unnecessary, by the settled feeling and opinion of this country in relation to Mr. Lowndes. He had been, for a considerable time, conspicuously before the public, a part of that time comprehending a very trying period of our history, and the judgment of the public had

been awarded in relation to him. He was already ranked with the eminent names which had passed by, and been consecrated to national respect. He was already ranked as a man superior in worth as he was in mind—as one of the purest, and ablest, and most faithful of the statesmen who might claim from our country the meed of honor—as combining a large share of the highest titles to human deference and estimation, talent, and public service and virtue. Mr. A. said that the house would be deficient in the discharge of its appropriate office, it would not reflect the sentiments and the wishes of the people whom it represented, if it omitted the testimony of respectful regret which was due to this afflicting occasion. The face of this country was clothed in mourning, and this countenance ought to be reflected in its proper mirror, the proceedings and language of this house. The house would be wanting, in a due respect to itself, if it omitted this last tribute to a man who had filled so large a space in its service, and brought to it so great an accession of reputation. The house had, he knew, no disposition to withhold the tribute. Their feeling, on the subject, was in a true accord with the feeling of the country. Some gentlemen might suppose, however, that the case was not comprehended by the rule of usage of the house in this respect. If it were not so embraced, Mr. A. had no hesitation, for himself, in saying this was a case in which he would make a rule for the occasion. He acknowledged, himself, the obligations of precedent in no other place than a court of justice; conceiving, in all other places, a higher obedience to be due to the sources of precedent, the justice and reason from which it was presumed to spring. But the case did fall within the principle and intentment of the usage. We have been told, by his friend, from South Carolina, that Mr. Lowndes was, constructively, a member of this house at the period of his lamented demise. But, for the near approach and prospect of this event, his seat would never have been vacated; and because he refused to hold an office of which he was unable to discharge the duties, and had given, in his last public act, a new and farther proof of his just claims to our esteem, was the testimony of our respect to be withheld from him which would otherwise have been accorded? This could not, Mr. A. knew, be the sentiment of the house. It was among the first duties of patriotism, especially in a free state, to accord a due testimony of public sensibility to eminent public service. It was the most unquestionable dictate of policy, in such a state, to hold out the incitements, at once so cheap and so splendid, to public virtue, which were afforded by the prospect of posthumous honor and reputation. A case could scarcely occur, calling more loudly for action, in reference to this duty and this policy, than that which was now presented. Mr Archer had no doubt that the house duly appreciated its obligation; and that there would be an unanimous accord in rendering the last office of respect which he was about to propose, to a man whom it would long be a subject of our pride to remember, and of our regret to have lost; and that, too, at a period of life at which he might have been expected to render still farther services to his country, and to establish a still larger, though not more undoubted, title to its esteem. He should, therefore, move that this house do

Resolved, That the members of this house will testify their respect for the memory of *Wm. Lowndes*, late a member of this house, from the state of South Carolina, by wearing erape on the left arm for one month.

Mr. Taylor, of New York, addressing the speaker, said, I rise to second the motion of the gentleman

from Virginia, and to tender to him sincere thanks for having made it. To omit this homage of national respect, could in no wise impair the exalted and well earned fame of our lamented friend, but it would indicate a want of sensibility to the greatest bereavement, in the loss of a citizen, which has befallen the union since I have held a seat in its councils. The highest and the best hopes of this country looked to *WILLIAM LOWNDES* for their fulfilment. The most honorable office in the civilized world—the chief magistracy of this free people, would have been illustrated by his virtues and talents. During nine years service in this house, it was my happiness to be associated with him on many of its most important committees. He never failed to shed new light upon all subjects to which he applied his vigorous and discriminating mind. His industry in discharging the arduous and responsible duties, constantly assigned him, was persevering and efficient.

To manners the most unassuming—to patriotism the most disinterested—to morals the most pure—to attainments of the first rank in literature and science—he added the virtues of decision and prudence, so happily combined, so harmoniously united, that we knew not which most to admire, the firmness with which he pursued his purpose, or the gentleness with which he disarmed opposition.

His arguments were made, not to enjoy the triumph of victory, but to convince the judgment of his hearers: and when the success of his efforts was most signal, his humility was most conspicuous!

You, Mr. Speaker, will remember his zeal in sustaining the cause of our country in the darkest days of the late war. You cannot have forgotten—who, that heard him, can ever forget the impression of his eloquence, in announcing the resolution of thanks to the gallant Perry, for the victory of Lake Erie! Alas! alas! the statesman has joined the hero—never, never again shall his voice be heard in this Hall. We shall here him no more, until the voice of the Archangel shall summon the grave to surrender its dead.

When Mr. Taylor sat down—

Mr. Archer made a few additional remarks, and the resolution was carried, *nem. con.* Immediately after which the house adjourned.

Wednesday, Jan. 22. Several reports on private claims were received. Mr. Cook's resolution submitted yesterday, was taken up and agreed to.

Mr. Lincoln, of Maine, submitted for consideration the following:

Resolved, That the committee on the judiciary be instructed to inquire into the expediency of establishing by law, such offices, the compensation for which has usually been provided for by appropriation bills, without any other act of legislation; and such offices, the duties of which have been usually compensated by extraordinary and per diem allowances out of contingent funds.

Mr. Lincoln mentioned some particulars—about a clerk to the attorney general, a clerk to the surgeon general, two clerks in the treasury department, one clerk to the clerk of the house, &c. who had been provided in the way that he would avoid for the future, &c. &c. The extraordinary and per diem allowance recapitulated by him, amounted to a considerable sum. Mr. Williams, of N. C. supported the motion decidedly, but he proposed that it should be referred to the committee of ways and means, which was agreed to.

On motion of Mr. Barstow, it was

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of allowing a bounty to captors of all pirates taken and brought into the United States, on conviction, and likewise on the vessel and armament in which they may be captured, on condemnation in the United States.

Mr. Conkling offered the following resolution:

Resolved, That the select committee, appointed on the 13th inst. to inquire into the expediency of continuing in force the law making the crowns of France and five-franc pieces a lawful

tender, he also instructed to inquire into the expediency of continuing in force the act entitled "an act concerning the mint," approved March 3d, 1801, and that the said committee have leave to report by bill or otherwise.

Mr. *Rochester*, of New York, said that this resolution reminded him of another subject, somewhat analogous to it, to which he wished to call the attention of the house, viz. the propriety of inquiring into the expediency of reducing the standard of American gold coin, or rather of proportioning it to the value of the gold coin of other countries. This subject, Mr. R. said, had occupied the attention of several committees at former sessions of congress, at the head of one of which was the distinguished gentleman whose death the nation now deplores; and to whose memory the house yesterday, in a manner so honorable to itself, paid a tribute of respect. That committee, and other committees, had reported in favor of reducing the standard of our gold coin. The subject, he believed, had never been acted upon; if it had been acted upon, it had at least not received the sanction of the house: The gold coin, Mr. R. said, is now entirely disappearing from among us. It may be owing to this cause very much, that the tabular statements of exports and imports of specie for the last year exhibit a balance of eight millions of dollars against us. It was only yesterday, he said, he had been told that the banks in New York have not in their vaults a single piece of gold of any kind, nor an American or Spanish milled dollar; their specie being made up entirely of French crowns, five franc pieces, and parts of dollars. He presumed that the banks in other cities were in pretty nearly the same situation. With these views, he wished to propose an amendment to the resolution, to allow him an opportunity to prepare which, he moved that this resolution lie on the table.

Mr. *Conkling* not objecting to this course, the resolution was ordered to lie on the table accordingly.

Mr. *Breckenridge* offered the following resolution:

Resolved, That the committee on the judiciary be instructed to inquire into the allowances made to marshals for the safe keeping of seized or captured vessels. [Agreed to.]

Mr. *Wright* rose and paid the tribute of respect that ad been paid to the memory of William Lowndes, and then moved the adoption of the following resolution, which was unanimously adopted—

Resolved That this house will testify its respect for the memory of Thomas Van Swearingen, of Va. Ludwig Worman, of Pennsylvania, and James Overstreet, of S. C. late members of this house, by wearing crape on the left arm for one month.

The *Speaker* laid before the house a letter from the president of the United States, communicating to congress a report of the board of engineers, of surveys made on the rivers Ohio and Mississippi, from the rapids of the Ohio, at Louisville, to the Balize, for the purpose of facilitating and ascertaining the most practicable mode of improving the navigation of those rivers; which was read, and ordered to lie on the table.

The *Speaker* communicated a letter from the secretary of state, transmitting a list of the names of persons to whom patents have been issued for the invention of any new or useful art or machine, manufacture, or composition of matter, or any improvement thereon, during the year 1822; which list and letter were laid on the table.

The *Speaker* also presented a letter from the secretary of war, transmitting a report of what progress has been made in opening the road leading from Plattsburg to Sackett's Harbour; which letter and report were laid on the table; also,

Another from the secretary of the treasury, transmitting a printed statement of the receipts and expenditures of the United States, for the year 1821; with an appendix, containing statements of the debt of the United States, and of its redemption to the close of the year 1821; which were laid on the table.

The house resolved itself into a committee of the whole on the state of the union, on the unfinished business of Monday last, which is the bill regulating the duties on imports and tonnage.

Messrs. *McLane*, *Ingham*, *Cambreleng*, *Colden*, *Barstow*, *McKim*, *Rhea*, *Warfield*, *Gorham*, *Tomlinson*, *Forward*, *Trimble* and *Wright* engaged in the interesting and laborious duty of preparing, supporting or opposing amendments to the details of the bill.

At half past 4 o'clock the committee rose.

And then the house adjourned.

The committee appointed by the Speaker on the letter of Messrs. Gales & Seaton, are Messrs. Dwight, Condict, Edwards, of Conn. Darlington, Kent, Sanders and Breckenridge.

THURSDAY'S PROCEEDINGS—JAN. 23

In the senate—no important matter engaged attention; but, to keep up the chain of intelligence, a further notice will be taken of the proceedings in our next.

In the house of representatives, several reports were received and referred. The bill regulating the duties on imports and tonnage was further considered, and sundry amendments, suggested by Mr. *McKim*, agreed to. The committee rose, that the bill, as amended, might be printed.

The bill from the senate making provision for the preservation and repair of the Cumberland road, was considered and amended.

CHRONICLE.

☞ We have the pleasure to learn, that a bill to relieve the Jews from anti-christian as well as anti-republican provisions of the constitution of the state of Maryland, has passed the house of delegates by a majority of 17.

Banks. Petitions are to be preferred to the legislature of New York at its present session, for the establishment of thirteen bank. All except four to be instituted in the city.

Colombia. The squadron under com. Daniels, has captured the Spanish sloop of war Maria Francisco, of 24 long 12-pounders and 200 men, from Havana for Maracaybo, with 25,000 dollars in specie, and provisions, clothing, &c. for the royalists. Daniels was seeking for the frigate Ligera and brig Hercules. He now has a handsome and well fitted little fleet. He has also recently captured a Spanish schooner with a cargo worth 30,000 dollars, the most valuable of the plunder of Morales.

☞ *Mexico*. The important castle of San Juan de Ulloa, at Vera Cruz, has been surrendered to the imperialists. General Davilla, its late commander, has arrived at Hayana.

It is stated that the emperor, having ordered general Santa Ana under arrest, the latter, instead of proceeding to the capital, as ordered, returned to Vera Cruz, put himself at the head of the troops and proclaimed a republican government. He has been joined by several divisions of the army, and extensive civil commotions are expected.

NILES' WEEKLY REGISTER.

NEW SERIES, No. 22—Vol. XI.] BALTIMORE, FEB. 1, 1823. [No. 22—Vol. XXIII, WHOLE No. 594

THE PAST THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ A communication has been received from the Boston "Merchant," in reply to our correspondent "T"—but *mechanical* necessity has caused its postponement until next week. The writer holds a very free pen, and his manuscripts, no doubt, are easily read by those who are accustomed to them—but a number of words must be found out by a stranger to the manner of his writing; a task that every person in a printing office is not competent to.—The "Merchant" has requested us to correct two errors in his former communication—In page 244, 2nd col. for "par" read *price*; in page 245, 1st col. for "arousing" read *producing*. Though we examined his article with great care, we feared that there were many more errors.

What is said above may, without the least variation, apply also to our correspondent "T"—but we have some advantage in a better knowledge of his manner of putting down characters for words. I ought not myself to complain of a hand writing difficult to be read—but, when gentlemen write for the press they ought to be particular. They can hardly imagine the difficulty under which we sometimes labor on this account, frequently increased by the want of a single *point* to assist us in gathering the meaning of a sentence that we may discover some of the words of it.

MARYLAND. The bill to alter the constitution so as to do away religious tests, which had passed the house of delegates by a majority of 17, has passed the senate by a majority of one vote only: for it 8, against it 7—every member present. Before it can take effect, it must be ratified by both houses at the next session.

BANKING. We have an exhibit of the state of the banks in Pennsylvania, as laid before the legislature of the state. It appears that the amount of the capital of the bank of the Northern Liberties, actually paid in, was 299,280 dollars—against this is charge *OVER-DRAFTS* to the amount of 283,329 dollars, leaving only 16,000 dollars of the capital remaining. If this robbery had happened in Baltimore!—Why this beats the *division* of the City bank, for about one fifth of the capital of the latter was left untouched!

A KENTUCKY CORRESPONDENT says—"I have at last succeeded in getting a note that may satisfy my subscription for the REGISTER—such is the *blessing* of our commonwealth's bank. It has nearly destroyed all commerce or trade, extinguished personal credit, and broken down confidence between man and man, as well as damped and depressed the industry of the state—but thank God, the people are beginning to get tired of its blessings, and its paper mill will soon cease working; leaving a debt, however, due to it from the *poorest of the people*, to the amount of 2½ or three millions of dollars."

PORTO RICO. Some further particulars relating to the late expedition for revolutionizing this island, are published. They only go to shew how certain *merchants* of New York and Philadelphia were taken in by the desperadoes.

IMPORTANT APPOINTMENTS. The following appointments have been made by the president of the United States, with the advice and consent of the senate, viz:

Andrew Jackson, of Tennessee, to be envoy extraordinary and minister plenipotentiary to the government of Mexico.

John Mason, Jun. to be secretary of legation to the same government.

Casar A. Rodney, of Delaware, to be minister plenipotentiary to the government of Buenos Ayres.

John M. Forbes, to be secretary of legation to the same government.

Richard C. Anderson, of Ky. to be minister plenipotentiary to the government of Colombia.

C. S. Todd, to be secretary of legation to the same government.

Heman Allen, of Vermont, to be minister plenipotentiary to the government of Chili.

J P Kennedy, of Maryland, to be secretary of legation to the same.

Expedition against the pirates. The following are the new names given by com. Porter to the vessels that he has purchased, &c. They are quite characteristic: Steam galliot *Sea gull*, storeship *Decoy*, schr. *Greyhound*, *Jackall*, *Fox*, *Wild Cat*, *Beagle*, *Ferret*, *Terrier* and *Weazle*; and the cutters *Midge*, *Musquito*, *Sand Fly*, *Gallinipper*, *Gnat*. The sloop of war *Peacock* and schooner *Shark*, will be attached to the squadron.

THE RIGHTS OF MEN AND THINGS. We have published a copy of the bill now before the house of representatives of the United States, "for the more effectual encouragement and protection of domestic manufactures." I like the title of this bill—there is reason in it, and without disguise. We have many laws for the "protection of commerce," and we wish it understood that *other* branches of industry should also be protected.*

Without entering into a detail of the merits of this bill, we now propose to offer some remarks on the subject at large—in the hope of persuading some to do handsomely, what they may soon be compelled to do of necessity, if *reciprocity* is much longer refused to a great majority of our population, in whom especially rests the wealth and strength of the nation; who must make it flourish in peace and triumph in war, or it cannot either flourish or triumph. We intend to speak pretty plainly, but not to offend any one, unless offence shall be taken at the evidence of facts. If so—so be it.

The small advance on the duties generally proposed by the bill, will not be felt by the consumer, though they may sustain the producer. Indeed, the general rise of duties hardly exceeds, if it

* This bill is now before the house of representatives—see page 352. The vote to take it up indicates a design to act decisively upon it. The editors of the National Intelligencer curiously call it the "*manufacturers' bill*." Would they call the law [*e pluribus unum*] that provides for a difference of rate between foreign and domestic tonnage, the *merchants' law*?

amounts to as much as, the extra price now laid on imported goods on account of the difference of exchange; and, as the probable effect of the passage of a liberal bill for the encouragement of domestic industry, will be to keep out of the country a large amount of the products of foreign manufacturers, the result might soon shew itself in an equalization of the rate of exchange—so the price of commodities would not be enhanced at all. But there would be this material difference—the 12½ per cent. on exchange, now paid to Englishmen, would be retained at home for the use of Americans, and add millions to the amount of the domestic circulation. This is a matter of great consideration and exceedingly important: it is the difference between one amount thrown into the common mass of business, and of another amount drawn out of it—between getting and expending. If the present rate of exchange were *assured* to our farmers and manufacturers, they would be reasonably content—for the “protection,” in many cases, would be sufficient; but this cannot be, because the rate of exchange is as uncertain as the winds and waves, and to be affected by the acts of the tyrants of Europe, whether they will direct their people to cut each others throats, or cause them to remain in the stillness of despotism: so it cannot serve as a foundation for the erection of costly manufactories. The people have suffered too severely by artificial excitements, to invest labor and capital without sober calculation. They will know what they have to depend upon, before they advance a single step; but knowing that, they will enter into those pursuits that will yield the best probable profit. This is clearly shewn by the facts that relate to cotton manufactures. Many prudent, intelligent and wealthy men, were absolutely ruined by embarking in this business during the late war—hardly one in ten of them stood the shock of peace! The whole sacrifice amounted to millions of dollars. But an act of government has secured the domestic manufacture of the article to a certain extent—a large amount of coarse goods are already *exported*, and the market for them promises to be large: in consequence, all the old establishments that had stopped, are fully at work, and millions of dollars have been invested or are now investing in the building and fitting of new ones. Let those who apprehend monopolies, or rather affect to believe that they will happen, get over this “stumbling block” if they can; but they evade it, go round it, and *double*, like old foxes, to avoid the evidence of truth. They know that domestic cottons are cheaper than the imported ever were—they know that the price has been reduced because of the protection afforded—they know that, by the prosecution of this business many thousand persons are employed that would otherwise be idle, and that a great value is annually *created* at home which we hitherto obtained from abroad—yet they will not give into the principle or suffer its general application, for the common good of the country. I cannot believe that this is a generous proceeding—I have been afraid that it comes out of ungenerous motives, local jealousies and sectional feelings. Let all persons look at the vote on the tariff bill, as exhibited below, and reflect—they will see that there is power to command what courtesy should give—what justice requires. Power too, is every day and hour passing into the hands of those interested in the product of *food and raiment*. Is it not possible—nay is it not probable, that wrong may be retaliated by wrong? The vote in the congressional body is with those who suffer, and that vote will yet “tell,” in despite of *manage-*

ment, which has long had its day. God knows that I would not build up my prosperity on the injury of another—“I never held out my hand to clench a hard bargain” in my life—I never will: but I love *EQUALITY*; and, while protecting the interest of others, I *calculate* that they ought to protect mine. If this principle is wrong, I should like to correct it. Seeing then, what “protection” has done for the cotton manufacture, why should we not protect other branches of the national industry? Place those of wool, iron, flax, hemp, &c. on the footing, and the same results will follow. We shall have cheaper and better articles of home product than those now imported; and the immense benefit of a prosperous application of labor. The iron works of western Pennsylvania, at which were consumed one half of the whole surplus product of bacon in Kentucky, a few years ago, do not now consume a pound of it—the market has departed with the decline of the factories: and thus it is every where and in regard to every thing. In respect to many articles, the cost of transportation in search of a market, may make them of no value at home; but the establishment of manufactories affords a ready market and stamps value on things that were valueless. There are places in our country where a bushel of wheat will hardly buy a paper of pins; and where the extra *cabbages* that a farmer might raise in his own garden without any apparent trouble, would pay all possible advance that could be made on imported articles used by him on account of a rise in the tariff—provided, we had a market for these poor cabbages. This matter begins to be understood. The *farmers*, though not so easily moved, are not less intelligent than the *planters*; and they are well assured that an acre of land will not produce more wheat when it is at 50 cents per bushel, than when it is at 200—and they know also, that when wheat is at 200 cents, they can afford to pay many times more tax, or disburse many times the amount of money, that they can do when it is worth only 50: for this product acts as a barometer for the rest of their products of bread-stuffs and meats, and fixes a value on the whole. The *money cost* of an article is nothing—it is the *means to pay* it, and that only, which comes into rightful consideration. A yard of cloth at \$3 may cost 6 bushels of wheat, and the price seem low; but when the same cloth sells for \$6, and may be had for 3 bushels of wheat, it is at the one half of its former price to the wheat grower consuming it, though the nominal cost is doubled. These are very simple things—they are self-evident when mentioned; but many will not think of them. I feel them—*severely feel them*; and so does every man in business, except speculators, stock jobbers and shavers, though all may not note them as they should.

We have more than once endeavored to shew some of the proceedings that have been had for the “protection” of commerce, but not to reprobate them—for, we say, that commerce *must* be protected. The merchants have never asked for relief in vain. They have been supported by restriction, until, (as manufacturers of coarse cottons are now conditioned), they can generally compete with the merchants of other nations. To accomplish this, ten thousand lives and many tens of millions of dollars have been wasted or expended—but we do not complain of that; for, as old STARK said, “death is not the greatest of evils.” We fought for our rights and we gained them. The time has arrived, when the person and lawful pursuits of a free American, shall not be arrested with impunity on the high seas. A tame submission to the im-

pressment of individuals, or the confiscation of property through "paper blockades," no longer have their advocates among us. This is as it should be. *The national feeling is right*, for it is honorable to the nation—and national honor is national strength. So let it be in all things. Great Britain would go to war for the impressment of one of her seamen, and so will we. Great Britain will not receive any of our products, even at a reduced price, if her own people can furnish the commodity, nor should we. *Protection* has been claimed and supported for commerce: it is all that is asked for the twenty times greater interest of *agriculture and manufactures combined*, as they are in the grain-growing states. We are ready to fight for the person of a seaman or the property of a shipper—why not equally jealous of the welfare of farmers, mechanics and manufacturers, our immediate neighbors and friends? *Equality* only, is wished for; and this, or soon will be, required. The cost of the squadrons in the Mediterranean and the Pacific is far greater than the profits of the whole trade which they are presumed to protect. It would then be *economy* to carry on those trades in British bottoms—more so than it is to receive British goods that we can and ought to make for ourselves. But we despise this—the flag must be protected. Why is the flag, hoisted at the mast of a vessel worth 5000 dollars, more worthy of protection than the same flag floating over a manufacturing establishment worth 100,000 dollars? The shipping business makes seamen, and they are necessary to the defence of the country—but who is it that must pay and subsist these seamen, if employed in the public service? "Here's the rub;" the combattant and the producer equally depend on the other for the measure of success against a common enemy of both. Why such an extraordinary high-souled regard for things *abroad*, and no respect at all for things *at home*? The most enthusiastic friend of domestic manufactures, would not be so immodest as to ask one half of the degree of "protection" which commercial men freely receive. It is for the benefit of the latter that all our foreign ministers and agents are sent out and supported; it is for their use, that squadrons and vessels of war traverse every sea, at the cost of the people. Foreigners would gladly supply us with their goods, and be equally pleased to furnish ships to bring them to the United States—why may they not do the one as well as the other? But we will not allow it—"American commerce must be protected," though it does not pay one cent. per annum into the public treasury. It is little more than a *tax-gatherer*—a thing with an ink-horn at its button-hole and a book under its arm, collecting assessments on persons, without regard to the fact whether they are rightfully or wrongfully levied. So much for this interest that seems to swallow up all other interests, and to care only for itself. But I still say, let it be protected. I would not take from it the least part of its favors—I only ask some little governmental patronage to support a much more numerous and important class than the commercial; the people that must either fight the battles of the country themselves, or pay others for fighting them. I have seen a caricature print shewing a king that governed all, a priest that prayed for all, a lawyer that plead for all, a soldier that fought for all, and a laborer who paid for all. It is the free laborers who pay for all. The slave pays nothing, any more than a horse. He is only a "working machine," like a plough or a harrow—a turnip-cutter or an apple-peeler. I speak of the slave in his *political* character.

The capital of the United States, appropriated to the cultivation of cotton, tobacco, sugar, &c. is even more extensively protected than that vested in commerce. The possessor of 100 slaves has the representative weight of *sixty one* free persons vested in himself, and with this he ought to be content. All his products, as well by the acts of government as from their own nature, have a larger market; and nothing that has ever been requested to extend or secure that market has been refused. It ought not to be refused, for the profits of individual industry is national wealth. The only matter to be wondered at is—that we can see these things so clearly as it regards the *merchants and plumbers*, and cannot discover them in reference to the *farmers and manufacturers*. And it is most strange that these, having obtained all that they desire, should so manage it as to refuse to others a portion of that protection which should be common to all. Look at it—the thrifty and *grain growing* states of Connecticut, New York, New Jersey, Pennsylvania, Delaware, Kentucky, Ohio, Indiana and Illinois, gave *seventy-three* votes in favor of the tariff, in 1818, and only *five* against it—whereas the tobacco, cotton and sugar growing states Maryland, Virginia, North Carolina, South Carolina, Georgia, Tennessee, Louisiana, Mississippi and Alabama gave *fifty one* votes against and only *four* in favor of that bill. The first seek a home market, the latter *have* a foreign one: but a home market for the former will not in the least degree affect the foreign demand for the products of the latter—Europe takes nothing of us out of kindness, but prohibits the import of *every article that she can make or produce for herself*—AND SO SHOULD WE. So we would, if there was an *equality of protection*.

I invite attention to the table given below. It will surprize some persons, and perhaps, cause others to ask, how is it possible that the greater interest of five millions of freemen, as represented in congress, should be surrendered to the erroneous views of three millions of their fellows? The table is founded on the most equitable principles—but if any way wrong, it is in favor of the minor class—still the greater class stands almost as five is to three of the lesser; yet the former have been uniformly defeated, through a want of the same degree of concert that prevails in the other—which has always managed so as to keep the "weather gauge."

I do not wish to press this subject to its full extent—and I pray to heaven that there never may be a necessity for it, for I would that the *United States* should be perpetual. But the naked truth is, that *five* millions are disappointed in their wishes through the opposition of *three* millions. This is not right. It is against every rule and principle of courtesy or common sense. We would not urge the matter roughly, nor do any thing to sacrifice the interests of the minority to those of the majority—the will of the latter "to be rightful must be reasonable," and they believe that it is so. They believe that what will afford prosperity to them, will not be in the least detrimental to that of others of their fellow citizens—they believe, indeed, that the establishment of domestic manufactures and a consequent home market for the farmers of the grain growing states, will be advantageous to the commercial class through an increased business, while it will secure to the growers of cotton a market that cannot be affected by foreign events. These last should seriously reflect on it: the lands fitted for the cultivation of cotton are equal to the supply of an hundred worlds like this with that material, using it as we do. The consump-

tion of cotton goods has nearly reached its ultimate, because of the astonishing facility of their manufacture; but the supply of the raw material has not arrived at a thousandth part of the capacity to produce it.* In resisting the progress of other manufactures, may they not bring about a repeal of the duty on cotton at some future day, when South America shall fill the world with her exuberant production? That duty is now *three cents per lb.* about equal to a duty of *fifty per cent. ad valorem*; and, even with this great *protection*, large quantities of foreign cotton have been consumed in our manufactures, and will be, unless the price of the domestic article remains very low. It appears to me as certain, that the cotton planters of the United States are as much interested in maintaining the good will of the farming and manufacturing interests of the middle and western states, as any set of people whatever.

To conclude—the majority, a great majority of the people, are evidently in favor of affording some

*There is no doubt now, that cotton, if the crop is profitable, or *can* be profitable in the United States, will be raised in large quantities in many of the middle states, perhaps extensively on Long Island and in Connecticut. The New York "Statesman" of the 22nd ult. contains a letter from David Dunham, esq. stating that he had raised from 250 to 300 cotton plants in his garden, in Long Island. The seed was deposited early in May the season was dry, and he supposes also that the young plants were much injured by the shade of flowers and other plants. In August, they flowered, and grew luxuriantly until the first frost—at that time there had been but one picking, on the 20th October. The gardener proposed to pull them up, but was prevented—and as fine a picking as the first was made on the 1st November; others on the 5th, 14th and 25th of *December*; a sixth, on the 14th of *January*, and Mr. Dunham expected another picking about the 1st of *February*, this day. He says—"The curiosity about the growth of cotton in this climate appears to be this—till now it was supposed that our season was not long enough to raise cotton, and that immediately after the frost appeared no more could be counted on; but from the experiment here adduced, it will be seen, that, so far from the frost destroying the vital parts of vegetation, it only stops its progress, leaving so much nourishment in the plant, that, with the aid of dry, cold weather, every pod of any size, matures, expands and opens, like a chesnut burr; and the cotton, in point of staple and every thing else relating thereto, is fully equal to that produced before the frost made its appearance, with the single exception that the pods are not so large, and appear to be stopped in the growth, immediately after frost appears."

These facts cannot be doubted—and it is probable that there are many tens of thousands of acres of land, (with a southern exposure and shielded from the N. W. wind), in the middle states and as above mentioned, that will yield good crops of cotton, to be cultivated by the plough instead of the hoe, and picked by a teeming population of children, who will gladly labor during the season for much less than slaves can be obtained at, for these must be supported the whole year; the other can be hired, in any quantity, when wanted, and by the day. If an acre of land in Connecticut will produce as much cotton as an acre in South Carolina, the article can be raised 25 per cent. cheaper in the former than in the latter.

decided protection to certain branches of the national industry, and they ought to be gratified. But they have been continually defeated, through the superior address or concert of the minority. A narrative of the *secret things* that took place in 1818 to impede, and finally to reject, the tariff bill, would not be pleasant in the history of the country: nor is it probable that what may happen in the present session, will be more so. But we ask that the question may be met fairly: if not, let strength of vote obtain what reason should yield. The people who solicit a common protection, pay about three fourths of the taxes, and are more than three fourths of the *disposable force* of the nation. They are rapidly increasing in numbers, their opponents are comparatively declining: By the apportionment of the census of 1820, they have gained *twenty* members in the house of representatives, whereas those opposed to them have gained *only six*. It is probable that by the census of 1830, they will have gained since the census of 1810, not less than *thirty five* members, and the other party have lost *one* member. This last is a matter of speculation, but the idea is not hastily advanced. It is built on reasonable data, and a looking to the case will not injure any of us. "Caution is the parent of security." "The wise man foreseeth the evil, and avoideth it." For this purpose, the following exhibit may be useful:

States now decidedly for a tariff to encourage domestic manufactures.

	Present representation.	Representation in next congress.	Probable after 1830.*
Rhode Island	2	2	1
Connecticut	7	6	5
New York	27	34	40
New Jersey	6	6	6
Pennsylvania	23	26	26
Delaware	2	1	1
Kentucky	10	12	13
Ohio	6	14	19
Indiana	1	3	6
Illinois	1	1	3
	85	105	120

States now opposed to such a tariff.

New Hampshire†	6	6	5
Vermont†	6	5	5
Maryland	9	9	7
Virginia	23	22	19
North Carolina	13	13	12
South Carolina	9	9	8
Georgia	6	7	7
Tennessee	6	9	10
Louisiana	1	3	3
Mississippi	1	1	1
Alabama	1	3	3
	81	87	80

Doubtful, or more divided States.

Maine	7	7	7
Massachusetts	13	13	11
Missouri	1	1	3
	21	21	21

*This ratio is fixed at 50,000. See vol. 22, p. 346.
 †How is it that the representatives of these states united themselves with the minority, on a question of this sort, is totally beyond my comprehension—for it appears to me that the people of said states are as deeply interested in the support and encouragement of free labor as any others.

TABLE—showing the state of the vote on the tariff bill in 1818, the number of free persons in the states named, with the representation thereof according to the apportionment of 1820, and the number of freemen represented by that vote for or against the tariff.

STATES.	Actual vote on the tariff—1818.			Free persons in 1820.	Representatives under the new apportionment	Freemen represented, admitting the ratio of the vote of 1818.	
	For	against	abs'nt			For the tariff.	Against it.
Maine	10	6	4	{ 298,335	7 } 20	575,136	246,486
Massachusetts				{ 523,287			
New Hampshire		5	1	244,161	6		244,161
Rhode Island	2			83,011	2	83,011	
Connecticut	6	1		275,187	6	236,875	39,312
Vermont	1	2	3	235,764	5	39,294	196,470
New York	25		2	1,362,729	34	1,362,729	
New Jersey	6			270,018	6	270,018	
Pennsylvania	22	1		1,049,137	26	1,004,069	45,118
Delaware	2			68,240	1	68,240	
Maryland	1	5	3	299,952	9	33,261	266,691
Virginia	1	15	7	640,213	22	29,100	611,113

Illinois	1			54,294	1	54,294	
Mississippi		1		42,634	1		42,634
Alabama		1		(ab't) 108,000	3		108,000
Missouri, &c.						Did not vote.	
	*91	69	26			4,843,890	3,179,732

*The vote was only 90, but Mr. Clay, being speaker, did not vote, though he had been one of the ablest advocates of the bill.

REMARKS. The absentees are thrown, in all cases, into the majority of the several states to which they belonged. This seems to be the only general rule that could be adopted, though we know that there were some exceptions, in fact, at the time—and on both sides.

We offer the following as a probable estimate of the will of the people of the several states, if to be shown by a vote of their representatives, according to the apportionment of 1820:

States.	Whole no.	For the tariff.	Against it.
Maine	7	4	3
New Hampshire	6	2	4
Massachusetts	13	9	4
Rhode Island	2	2	-
Connecticut	6	6	-
Vermont	5	2	3
New York	34	32	2
New Jersey	6	6	-
Pennsylvania	26	26	-
Delaware	1	1	-
Maryland	9	3	6
Virginia*	22	2	20
North Carolina	13	2	11
South Carolina	9	1	8
Georgia	7	1	6
Kentucky	12	10	2
Tennessee	9	3	6
Ohio	14	14	-
Louisiana	3	-	3
Indiana	3	3	-
Illinois	1	1	-
Mississippi	1	-	1
Alabama	3	-	3
Missouri	1	1	-
	213	131	82

Of the minority, *eighteen* are representatives on the compromise of the constitution—by “federal numbers.” If the table be correct, the vote would stand, according to free persons, about as 120 is to 71. This comparison is forced upon us by the inflexibility of the minority. We do not wish to dwell upon it, but they ought to think of it.

*Virginia, west of the Blue Ridge, really has and soon will manifest the same interest as Kentucky, in the success of domestic manufactures. Pride of opinion, as yet, is at variance with the reason of things, and political power is in the hands of a minority of the people. See the following article, headed “Virginia.”

VIRGINIA. Seven and an half of the ponderous columns of the Richmond “Enquirer,” of Saturday last, are occupied with a speech of Mr. Baldwin, delivered in the house of delegates of that state on the 10th of January, respecting the right and necessity of a removal of the seat of government, to accommodate the western population of the commonwealth.

The argument is a very able one—but we cannot pretend to follow the speaker through the whole chain of his observations. Some of the statistical facts that he has furnished deserve particular notice.

Richmond, the present seat of government, he says, is 70 miles from the North Carolina line, on

the south, and 200 miles from the Maryland line, on the north; from 60 to 80 miles from the mouths of the principal rivers, and as much as 450 from the extreme western points of the state. He then shews that the white population who would be accommodated, by a removal of the seat of government west of the Blue Ridge, amounts to 351,458, and that the rest of the state contains only 264,754; and adds that the force of population is still accumulating in the west, which he proves by shewing that, since the year 1790, the white persons beyond the Blue Ridge have been more than doubled, or increased in the sum of 132,076, whereas the whole increase of the remainder of the state has been only 42,032. Speaking of the tide-water counties, he says they are retrograding instead of improving. You need only look at the face of the country, look at the ruined mansions and deserted plantations, and observe how the beasts of the forest are returning to their primeval haunts." After this, he mentions a number of those counties to shew that, while the white population had increased very little, if any, that of the slaves had advanced rapidly. Brunswick, for instance, had increased by 149 whites and in 3261 slaves, since 1790; Charlotte had diminished in 59 whites and increased in 3261 slaves. Near the close of his speech, Mr. Baldwin notices the state of the representation, and shews that the country west of the Blue Ridge, with 259,967 white inhabitants, sent only two delegates more to the legislature than the tide-water country with only 166,827 of such inhabitants—that a majority of the delegates were elected by 237,573, and a minority of the delegates by a population of 373,644 white persons. He then said—"This prodigious inequality of representation is a striking blemish in the theory of our government, and would not have been submitted to so long, but for the practical equity and benignity of its administration. Let the numerous, the intelligent, the hardy, the pertinacious people who are subjected to this inequality, be once impressed with the idea that their rights are withheld, because their are not fully represented on this floor, and the consequences will be such as no loyal Virginian can regard without the most painful emotions. Depend upon it, they will strike at the root of the evil; and who does not foresee the heart-burnings, the jealousies, the commotions, the ruinous projects for reforming the constitution—the angry struggles for power, to which the attempt would lead."

UNITARIANS. It is said there are 400 regular congregations of Unitarians in England, and 120 of their churches in Transylvania.

MR. ALLEN, a celebrated philanthropist and Quaker, visited Verona when the congress of sovereigns sat there, in the hope of doing some little good to mankind. He was permitted to present himself freely to the emperors and kings, without moving his beaver, and allowed to discourse familiarly with them. Such is the force of virtue, that even those dealers in the blood and bones of men paid homage to it.

THE "HOLY ALLIANCE." A letter from Verona, dated Nov. 26, says—The congress is at length finally dissolved. The powers who are most impatient for war with Spain, have consented to try the effect of negotiation before they commence their grand crusade. An official remonstrance either has been or will be immediately despatched to the cabinet of Madrid, demanding such an alteration in the con-

stitutional system, as will at least render it analogous to that of Portugal, and place the crown beyond the reach of popular control. In case of refusal, Russia, Austria and Prussia will give their fullest sanction to the hostilities which the ultras of France are so anxious to commence—and there is no doubt that the army of observation will soon cross the frontier.

England, will not, under such circumstances, become a party to the measure, for she sanctions the principle of an armed intervention only in case of the constitutionalists being determined to put the king to death, or invade other countries.

The Russian mission has broken up and Count Pozzo Di Borgo took his departure this morning on his return to Paris, where he is to resume his functions as ambassador, and will no doubt urge on the zeal of the ultras to the utmost degree of incitement. This appears to be the principal feature in the policy of the Russian cabinet.

The Greeks are to be left to the good faith of Turkey, who has given to lord Strangford a conditional pledge of future moderation towards them. The London editor remarks on this "that this is the most farcical of all political farces, delivering the lambs to the tender protection of the wolf."

PRESIDENTIAL NOMINATIONS.

At a meeting of the members of the general assembly of the state of Ohio, convened in the hall of the house of representatives, on Friday evening, Jan. 3d, 1823, agreeably to notice previously given, to take into consideration the propriety of nominating a suitable person to succeed his excellency *James Monroe*, as president of the U. States, general *Allen Trimble* was called to the chair, and *R. Collins*, of Highland county, chosen secretary.

Whereupon general Duncan McArthur moved the adoption of the following resolution:

"Resolved, as the opinion of this meeting, that—, from his talents, patriotism, and public services, is entitled to the confidence of his country, and eminently qualified to fill the office of chief magistrate of the United States for the next constitutional term."

And, thereupon, Mr. Harper, from the county of Ashtabula, moved the following resolution, as a substitute for the one offered by Mr. McArthur:

"Resolved, That it is inexpedient, at this time, to go into a nomination of any person for the presidency of the United States."

On motion of Mr. J. Rollins, of Butler, the question on Mr. Harper's resolution was decided by yeas and nays, and said resolution was rejected—yeas 43, nays 47.

The resolution proposed by Mr. McArthur was then unanimously adopted.

On motion of Mr. McArthur, the members of the meeting then proceeded by ballot to select a person whose name should be inserted in the resolution; and, upon collecting and counting the ballots, it appeared that Henry Clay had 50 votes; Dewitt Clinton had 5 votes; J. Q. Adams 1 vote; and J. C. Calhoun 1 vote—the members opposed to caucus nominations in principle, and those opposed to it, at this time, having generally withdrawn.

Thereupon, the resolution was amended by the insertion of the name of HENRY CLAY, and was unanimously adopted.

Resolved, That the proceedings of this meeting be published.

ALLEN TRIMBLE, Chairman.

R. Collins, Secretary.

Mr. Clay had not been nominated by the members of the legislature of Illinois, as late as the 24th of last month.

At a meeting of the republican members of both branches of the legislature of the commonwealth of Massachusetts, and of republican delegates

from various towns of the commonwealth not represented in the legislature, held at the old court house, in the city of Boston, on Thursday evening, Jan. 23, 1823, the following report was unanimously adopted—

The committee consisting of one member from each congressional district in the commonwealth, appointed to consider whether any, and, if any, what measures ought to be adopted by the republican citizens of Massachusetts in relation to the next election of president of the United States, have had that subject under consideration and respectfully report:

That the time for electing a successor to the present illustrious chief magistrate of the United States is so far distant that it cannot now be ascertained what then will be the condition of the country, or who among its citizens can be most usefully called to that arduous and responsible station. But the great importance of the office then to be filled, and the momentous consequences of deciding who shall be the person to fill it, have commanded attention in every part of the union, and in various forms and by various authority, eminent men are held forth for the approbation and suffrage of the people.

Your committee are not inclined to favor the practice of nominating a candidate for the presidency by assemblies in the states, for this, among other obvious reasons, that the tendency of such nomination is to throw the election into the house of representatives, where, as experience has proved, it is liable to manifold abuse. In their view it is desirable that the attention of our fellow citizens should be drawn to a candidate, rather by the commanding influence of his character than by any local or sectional feelings arrayed in his support.

But as unanimity, to a good degree, is most desirable on this great occasion, and as the opinion of one section of the country must be made known to others, that a common sentiment and feeling may, in the end, be produced the committee see great propriety in the public expression of such opinion as prevails among their fellow citizens, with a view, not as partisans, to contend for the election of a favorite, but to disseminate information that may be necessary for an intelligent decision by the people.

The republicans of Massachusetts, actuated by a national spirit, have always avoided, as the greatest national evil, any measures which would bear a local or sectional construction. They have, with pleasure, given their undivided support to elevate to office those illustrious citizens of the south, who have, for the last twenty years, so ably conducted the destinies of the nation, convinced that they were worthy to sustain, and justly entitled to receive, the highest honors and utmost confidence of the people.

Among the candidates, now before the public, is a citizen of this commonwealth, and the committee believe it is not only due to his high character, but that it is respectful to their republican brethren throughout the United States, to declare the opinion which our political friends in this commonwealth entertain of his qualifications for the high office of president of the United States. By making such declaration, no determination is expressed to support the individual in question, at all events and under all possible circumstances. Such inflexibility of opinion might destroy that common principle of action from which is to be expected an harmonious and useful result.

By declaring to our friends, in other parts of the United States, our opinion and feelings, at the pre-

sent time, we mean to convey information which may influence their deliberations, and are not precluded from receiving and examining, with candor, their sentiments and wishes, in the hope that, by the interchange of opinion, the minds of the whole people may be eventually fixed on that man, who, in all his official relations, will most worthily sustain the character of an AMERICAN PATRIOT.

The committee, therefore, recommend the following resolution to be adopted:

Resolved, That we have unlimited confidence in the republican principles of JOHN QUINCY ADAMS: That we hold in the highest respect the uniform integrity of his public and private character: That we consider his exalted talents, his various and eminent services, his political experience, and his profound knowledge of the great interests of the nation, as pledges of the ability with which, as the chief magistrate of the American people, he would promote their prosperity and honor.

JONAS HOBLEY, *Chairman*.

Attest—*John Keyes*, *Secretary*.

EXTRAORDINARY OCCURRENCE. *Greensburg, Pa. Jan. 24.* A singular and distressing occurrence took place on Friday last, the 17th instant, on the farm of Mr. John Klingensmith, sen. lying on Brush creek, about four miles from the borough of Greensburgh. Mr. Klingensmith has, for several years, been boring for salt water. In the afternoon of the day above stated, while in the act of boring, the auger sunk rapidly several inches, when the water rushed up with great force, making a tremendous noise, and accompanied with a large quantity of inflammable air, generally supposed to be *hydrogen gas*.

A cabin had been erected over the well for the purpose of protecting the workmen from the inclemency of the weather; in which, unfortunately, a small fire had been kindled. The gas, as it arose, took fire and communicated to the building, which, in an instant, was enveloped in flames. Mr. Klingensmith, sen. Mr. Nicholas Long, and Mr. Philip Klingensmith, were in the cabin at the time. The two former were the first in escaping from the flames. The latter, in attempting to rush out of the cabin, stumbled and fell over the pumping frame: he called for assistance, when his father succeeded in rescuing him, but not until he had been shockingly burnt. The three were severely burnt in their faces, and on their hands and arms. We have been informed that they all are in such a situation, at present, as to justify the hope of a speedy recovery. The cabin was totally consumed.

The gas continued to burn on the surface of the water with a lambent and a bright flame, until 3 o'clock, P. M. on Monday, when it was extinguished by placing boards over the mouth of the well and covering them with earth.

Mr. K. has been boring at this well for more than five years, and has penetrated the earth to the depth of four hundred and eighty five or ninety feet. It is believed that he has at length arrived at a fine vein of salt water.

MEXICO. There is reason to believe that, if Mr. Turbide has not already laid down the imperial crown of Mexico, that he will have some hard fighting and much good luck to retain it. A very considerable part of the people were exceedingly opposed to him, as well for his usurpation of a throne as for his tyrannical conduct to individuals, and disregard of the rights of the people as represented in the congress, many members of which he arrest-

ed, &c. General *Santa Anna* has fairly taken the field against him, and two battles had already been fought—in of one which he gained a victory, though he was defeated in the other. He has been joined by *gen. Victoria Guadalupe*, who had been sorely persecuted by the emperor, and is represented as being one of the most virtuous and best beloved of the revolutionary generals. The following letter has been extensively published—

Copy of a letter addressed to don Augustine Iturbide, by citizen don Antonio Lopez de Santa Anna, general of the republican army.

VERA CRUZ, December 6, 1822.

Revered sir—You are well aware how much I labored for, and contributed to, your being crowned and proclaimed emperor; you are aware of my zealous endeavors to perpetuate the diadem in your family; encountering, cheerfully, fatigue, and sacrificing every thing for that object, so much so as to have become odious to my fellow-citizens, who thought me servile and a flatterer. You are aware, too, that I am not ignorant of every thing that has passed in the government and done by your favorites for your aggrandizement; finally, you are aware that I am fully acquainted with all the occurrences in relation to your person, and that I have had an agency in most of them, from the affection I have professed for you, and which I swear to entertain eternally. But you must be convinced that my love of my country has always led me to set aside every other consideration, where its safety and happiness is concerned.

To senior Davilla I was bound by the gratitude and friendship, from which I severed on account of that sacred duty. Thus it is I have felt myself under the necessity of separating myself from under your command; because your absolute government is about to fill with incalculable evils our beloved country, for whose emancipation I have undergone so much, having co-operated essentially towards its freedom. I now see liberty totally crushed and the whole nation convinced of it, by what has accrued to the congress.

In this state, and in circumstances so critical, being at the head of a province fertile in resources, with a body of resolute men, a large train of artillery and ammunition, and deriving assistance even from those who, from political reasons, ought to be considered our enemies. Urged on by sensible, wise, just and philanthropic men, excited by stimulants the strongest to my heart, by the safety of my beloved country, I gave the cry of "LIBERTY" on the 2d of this month, in the midst of an immense crowd of people, surrounded by more than 2000 bayonets and hailed by the most sincere acclamation.

The provinces, the town, the people cry aloud for their freedom, and they say that you have broken your oaths of Iguala, and that of Cordova—have trampled upon the laws and whatever is most sacred in society; that you have filled the kingdom with misfortunes, obstructed commerce, paralyzed agriculture, and have not encouraged working the mines; that you have unjustly persecuted the members of congress, banishing some, imprisoning others, so as to reduce it to what is called a junta constituyente, composed of a few of your favorites; that they yield to your views, and form a constitution that will enslave this continent. They cry out too, in consternation, against the seizure of the convoy of money in Malapa, convinced that, under your government, the sacred right of property will never be respected; finally, they understand, that there are neither means nor wealth sufficient in this

America, to support a throne with all that ostentation and dignity that an emperor requires.

My intention is, that a congress shall be assembled according to the rule laid down in public law, that they may, freely and spontaneously continue a plan of a government best suited and adapted to those dominions, and that they, without any restrictions, as real representatives of the nation, may form a just, wise and beneficial constitution, on the basis of religion, independence and union.

This congress will take care to reward justly your services, which have been so meritorious, assigning you a distinguished place in the nation.

May you, convinced of what I assert, take measures to renounce the crown and to abandon a command which is repugnant to our imprescriptible rights, and is the origin of our misfortunes. Deign to take into consideration these reflections, made to you by a friend, and do not expose your valued person and those of your amiable family, to the terrible catastrophe which your flatterers have prepared for you; and believe that what I say to you is dictated by the love I bear you, and that I am ready to sacrifice my existence to defend your life, which, that Heaven may preserve many years, prays your most obedient servant.

FOREIGN NEWS. By an arrival at New York, London papers of the 9th Dec. have been received—two days later than former advices.

It appears that the congress of Verona had not broken up on the 29th Nov. but it was expected that its sittings would terminate in a day or two thereafter. It was reported that the ministers of the allied powers would re-assemble at Paris to take care of the affairs of Spain! The proceedings of this body have not yet been made known.

Ireland is represented to be much disturbed and distressed. The proprietors cannot collect their rents from tenants who have nothing. An article from *G. Way* says—"The distress of this country is now at the greatest height. There are very few gentlemen of 2,000 to £5,000 per ann. (nominally), who can show their faces out of doors, for fear of being arrested. Provisions very cheap." Many houses are plundered, some destroyed by fire, and numerous murders committed in several parts of the island.

A steam vessel is to ply between Portsmouth and Bilbao—so that a traveller may pass from London to Madrid in about a week!

The annual produce of grain throughout Great Britain is reckoned at fifty millions of quarters; (400,000,000 bushels), out of these five millions are paid in tithes; eight millions are expended in seed; twenty-two millions remain to the farmers, and fifteen millions for market.

A man lately failed in London in consequence of a bad speculation in *butter*, to the amount of 130,000*l.*—nearly 600,000 dollars!

The following article is from the London Courier of Dec. 7. If the facts stated are true, a war between France and Spain would appear to be inevitable—it is impossible that the latter should submit to so great an indignity, and it can hardly be expected that France will withdraw the insulting propositions—if they have been made.

An answer to the despatches sent off to Spain on the 2d of Dec. was expected at Paris about the 13th to the 15th. The following are said to be the propositions of France to the government of Spain:

"The restoration of the king to his personal freedom, without delay, for it is now distinctly under-

stood that he is in a state of confinement in his palace of the Retiro.

"2. The restoration of the king to his sovereign rights.

"3. Such a change in the constitution of Spain as shall give to the nobles a great share of the power they possessed under the old regime.

"4. The exclusion of the present ministers from office, or, at least, most of the heads of the different departments.

"5. An amnesty for all persons, of whatever rank, engaged in the cause of the regency.

"6. A more strict regulation of the laws relating to the press.

"7. The possession of certain strong places on the frontiers of France, as a guarantee for the performance of any undertaking into which the Spanish government may enter."

A Paris paper of Dec. 6, has the following, said to have been copied from a Lisbon paper—

"Mr. Canning has submitted the following note to the Portuguese charge d'affaires at London:

"The undersigned is commanded to notify to M. —, that from all the intelligence that has reached the British government, there is nothing to authorise the idea, entertained by his most faithful majesty and his ministers, of the invasion of the peninsula.

"The undersigned feels no hesitation in assuring his most faithful majesty, that his Britannic majesty will never regard with indifference any attempt tending to affect the independence of Portugal; and that his majesty will be always ready to extend to Portugal the protection she is entitled to expect from so ancient an ally.

(Signed) CANNING."

The "ferocious Mina," as the ultra Paris papers call him, appears to be cutting the "array of the faith" into pieces. It seems probable that he will exterminate the priest-led marauders.

P. S.—Accounts from Havre, (France), to the 12th Dec. have been received at Charleston. They leave the question of peace or war still in doubt, but rather encourage an idea that the former will be maintained. Despatches were daily expected from Madrid that would determine the matter: but both France and Spain seemed to be much engaged in military preparations.

Mina, to attack the French to his standard, is raising an army on the frontiers who wear the *tricolor cockade*.

The pope has refused to receive a minister from Spain.

Death of lieut. Allen.

OFFICIAL ACCOUNT.

United States' schooner *Alligator*,
MATANZAS, Nov 16th, 1822.

SIR—By the unfortunate death of lieutenant commandant Allen, it devolves upon me the duty of communicating to you the result of an attack on two piratical schooners, by the boats of the *Alligator*. When about coming to this harbor on the 8th inst. we were informed that two American vessels were captured by the pirates, in a bay round St. Hycacos, about 40 miles to windward of this place. We immediately stood out, taking with us the captain of one, and the mate of the other vessel, who had been sent here to ransom them; as also a small American schooner, which the captain and merchants were fitting out.

Early on the morning of the 9th, we discovered several vessels to an anchor among the Stone Keys,

near the cape, and a schooner getting under way the water being shoal, we came to an anchor and manned the boats.

In the *launch*, captain Allen, captain Freeman of the marines, the master of the merchant vessel before alluded to, and thirteen men.

In the *cutter*, lieut. Dale, the mate of the other vessel, and ten men.

In the *gig*, midshipman Henly, and four men.

In the small merchant schooner, acting lieut. Cunningham, the master of the schooner acting midshipmen Ball and Jenkins, and twenty men, including merchant sailors; leaving the *Alligator* in charge of acting sailing master V. M. Randolph, and eighteen men. The result of which you will perceive by the following extract from the log book.

At 9 30, the boats came within gun shot of the chase, when she commenced firing with round and grape, having the red flag at her mast head; 9 40, came close up with her under a heavy fire from her long guns and musketry, when they deserted her for another schooner, which had been firing on us about pistol shot to leeward; left midshipman Henly and four men on board the prize, the launch and cutter giving chase to the second schooner; 9 50, being close under the stern of the enemy, the men in the boats having suffered considerably by their fire, so as to impede their velocity, many of their oars being rendered unmanageable, dropped along side of the prize which had kept away after us; cleared away for action, and got the killed and wounded on board; perceived a third schooner, full of men, in shore, both of which made sail, and ran off. Stood out again for the *Alligator*: at meridian, came too along side of her, and sent the wounded on board.

Killed, James Denny, (O. S.) Thomas White, (S.)

Wounded, captain Allen, (mortally), since dead.

Elijah Place, (S) do.

John Phillips, (O. S.) dangerously.

John Stevens, (B. M.) severely.

Daniel Green, (S) do. do. do.

Captain Allen did a few hours after the action. The merchant schooner grounded before doubling the point; and, notwithstanding the active exertions of Mr Cunningham, she was unable to aid in the action.

Force of the enemy. First pirate, a schooner of 80 tons, mounting 1 long 12 pounder on a pivot; 2 long 6 pounders, two 3 pounders, and 2 swivels; 35 men.

Second pirate, a schooner of 60 tons, 1 long 18 pounder, 2 long 6 pounders; 60 men.

Third pirate, a schooner of 90 tons, 1 42 pound carronade, 1 long 18 pounder on a pivot, and 4 long 6 pounders; 30 men.

Besides the first pirate, we have recaptured, on this expedition, five American vessels, which were in their possession, viz: one ship, two brigs, and two schooners, all of which I have ordered into Charleston for adjudication, under charge of capt. Freeman of the marines.

By the preceding details, you may, at once, perceive the gallantry and heroic enterprise of my much lamented commander, and the good conduct of all. I cannot conclude this communication without bringing to your notice captain Freeman, of the marines, who volunteered his services, and whose coolness and bravery during the whole transaction, excited the admiration of all concerned, and to whose services since I am extremely indebted.

I have the honor to be, &c. J. M. DALE.

Commanding U. S. schooner *Alligator*.

P. S. By the best information I have been enabled to collect here, 14 of the pirates are killed, and several drowned in attempting to make their escape from the prize, I have also to inform you that we pulled 10 miles in the boats before we came up with the enemy.

J. M. D.

Hon. Smith Thompson, secretary of the navy.

P. S. A gentleman who was introduced to me by Dr. Watson, (whose name I do not recollect), told me that he was with lieutenant Allen, after he received his mortal wound, till his death. That he was all this time cheerful, and appeared satisfied to have sacrificed his life for his country. The only expression of regret or mental pain was that he should leave his mother and sister destitute; but he reconciled himself to separation from them with the hope that his country would take care of them. Almost with his last breath he commended them to the justice and humanity of the nation.

Statistics of Scotland.

Through the exertions of the justly celebrated Sir John Sinclair, the most perfect statistical view of the state of Scotland has been presented that we have ever seen of any country. We present the following condensed views of the tables lately published, as well to afford information about the country to which they relate, as by way of example to others interested in making out similar statements.

Extent. The main land contains 26,014 square miles; the Hebrides 2,904; the Orkneys 440; the Zetland isles 880—total 30,238 square miles, of which the fresh water lakes occupy 638. The largest of these is Loch Lomond, having a surface of 45 square miles.

Climate. On the east coast there were 135 days of rain or snow, and 230 fair; on the west coast 205 days of rain or snow and 160 fair. On the east coast there were 207 days with the wind south west and west; on the west coast, 197 from the point from east to west by north, and 139 from west to south.

Mountains. The highest is Bennevis, 4370 feet. The highest inhabited place in Scotland is Leadhills village, 1,564 feet above the level of the sea.

Rivers. The Tay, the largest, derives its waters from 2396 square miles of territory.

Proprietors—with real rents of 2,500l. and upwards 396; from 625 to 1,250, 1,077; under 625, 6,181; estates belonging to corporations 144. Total proprietors 7,798.

Cultivation. Acres fully and partially cultivated 5,043,450; uncultivated, including woods, &c. 13,900,550—total acres 18,944,000. The natural woods occupy 501,469 acres, and the plantations 412,226. Of the productive soil, 1,869,193 acres are of loams. The amount of acres employed and of the value of the various crops, is thus estimated:

	Acres.	Per acre.	Amount.
1. Grass lands,	2,489,725	at L2	L,4,979,450 0 0
2. Wheat,	140,095	at 11	1,540,045 0 0
3. Barley,	280,193	at 8	2,241,544 0 0
4. Oats,	1,260,362	at 7	8,822,534 0 0
5. Rye,	500	at 6	3,000 0 0
6. Beans and peas,	118,000	at 6	708,000 0 0
7. Potatoes,	80,000	at 8	640,000 0 0
8. Turnips,	407,125	at 4	1,628,500 0 0
9. Flax,	16,500	at 8	132,000 0 0
10. Gardens,	32,000	at 15	480,000 0 0

Productive acres,	4,824,500	Produce, L.	21,176,073 0 0
Fallow,	218,950		
Total cultivated,	5,043,450;	average	
per acre, including fallow, &c. nearly,			
Uncultivated, 13,900,550, including woodlands,			
3s. per acre,			2,035,082 20 0

Total land produce, L.23,211,155 10 0

The live stock and their produce are thus estimated and valued:

- Horses, 243,489, value of their work when full grown, or increase in their work while young, yearly, at L.10 each L.2,434,890 0 0
- Cattle, 1,047,142 annual value of dairy produce, and annual increase in the worth of the feeding cattle, at L.6 each, 6,282,852 0 0
1,425,433 10 0
- Sheep, 2,850,867, at 40s. each, 1,140,346 10 0
- Hogs, 500,000, produce, 30s. each, 1,500,000 0 0
- Lesser stock, poultry, &c. 250,000 0 0

Total produce of live stock, L.11,143,175 10 0

This sum is included in the general estimate of land produce already given.

Minerals. What is called the "great coal field" of Scotland, is 600,000 acres; of which 172 are annually consumed—the product 2,500,000 tons, valued at 6s. 8d. per ton—of which the cost of labor is equal to 5s. 10d. per ton, leaving for the proprietor 10d. per ton. The labor costs 1,729,166, the rent to the proprietors is 104,166. The lime annually manufactured is 3 millions of bolls or 12 millions of bushels—it is worth 2s. 6d. per boll—and 100,000 acres are annually dressed with lime. There are 21 blast furnaces for iron, they make 32,760 tons a year, worth 47 per ton, and employ 7,650 persons. The lead produced is valued at 2130,000—total value of mineral productions, 21,597,653.

The fisheries—the salmon and fresh water, the white sea fishery, the herring, whale and shell fish do. produce a value of 21,300,000.

Amount of territorial productions.

- Gross produce of land, L.23,211,155 10 0
- Minerals, 1,425,433 6 8
- Fisheries, 1,300,000 0 0

L.26,158,808 16 8

- The rents of lands, mines, fisheries, kelp, &c. for one year, ending 5th April, 1813 5,011,779 11 11

- Amount of produce absorbed by the expenses of cultivation, and the profit of farmers, gardeners, and other dealers in the productions of the soil, also by colliers, fishermen, &c. L.21,117,028 18 1

Manufactures of Scotland.

	Value of raw material	Total value of manufactured articles.	Expense of labor and profit.
1. Woollen,	L.300,000	L.450,000	L.150,000
2. Linnen,	834,149	1,775,000	940,851
3. Cotton,	1,832,224	6,964,486	5,132,262
4. Inferior branches,	1,300,000	5,000,000	3,700,000
	L.4,266,373	L.14,189,486	L.9,923,313

Commerce. Ships 2,708; tonnage 231,273; seamen 16,300, exports 4,740,239; imports 3,671,158.

The poor. Number of parochial poor only 36,000; average cost of each 3l. per ann.

Population. In 1755, 1,265,380; in 1811, 1,804,824—an average of 60 persons to the square mile.

Peerage—at the union, 1707, or allowed since, 159—extinct 41; merged in other titles 10; forfeited 26—remained 82. Of these only 52 voted at the last election for peers in parliament.

Representation—from 35 counties 30; freeholders in the counties 2,429; landholders entitled to vote 9,511—together 11,940 persons, sending 30 members to parliament. There are 65 boroughs which send 15 members.

Ecclesiastical state. Synods 16; presbyteries 78; parishes 893; number of established clergymen 938. Persons of the established church 1,407,524; others of presbyterian principles 256,000; baptists, &c. 50,000; Scotch episcopahans 28,000; Roman catholics 50,000; methodists 9,000; church of England 4000; Quakers 300.

Liveneue—at the union, 1,1707, 160,000; net revenue in 1813, 14,204,097 Scotland, according to population, pays as three to one compared with Ireland; yet she has only 5,000,000 cultivated acres, whereas Ireland has about 15,000,000. The latter has also the best soil and climate. But the moral and physical resources of Ireland are not employed as those of Scotland are.

Naval Peace Establishment.

HOUSE OF REPRESENTATIVES, JAN. 2, 1823.

Mr. Fuller, from the committee on naval affairs, delivered in the following report:

The committee on naval affairs, to whom was committed the message of the president of the United States, transmitting a plan for the peace establishment of the navy of the United States, communicated at the present session of congress, respectfully report:

Before the late war between the United States and Great Britain, several acts of congress, at different periods, established the amount and character of the naval force which was then deemed commensurate with our national resources and adapted to the state of our relations with foreign countries, existing or anticipated. The changes, however, were so frequent, and the efforts to increase our naval strength were so incessant, that it was found, in practice, unnecessary to limit the number of vessels to be constructed, except by a due appropriation of our fiscal means; and had these been greater at the period of the war, there is no doubt that the policy of our government would have increased our navy in equal proportion, at least, with our other military defences.

Since that war, which so fully developed to our country and the world the vigor and efficiency of the American naval character, even when we possessed only an inconsiderable number of officers and ships of war, our government has but fulfilled the wishes of the nation in adopting, and steadily adhering to, a liberal plan for the "gradual increase" and early respectability of our naval power.

The act appropriating the sum of eight millions of dollars to be employed in constructing nine ships of the line and twelve frigates, with a subsequent modification, extending the time for the accomplishment of the object, is still in force; and the ships proposed are in such a state of forwardness, that there is reason to expect their completion and equipment within the time contemplated, and without requiring additional appropriations.

While such has been our policy in regard to the construction of vessels of war, the executive, not being restrained by any provision of existing laws, has continued to increase, by occasional promotions, and by new appointments in the inferior grades, the number of officers in our naval service; yet, though the present number, in some of the grades, perhaps, exceeds the indispensable complement of the vessels already built, it falls far short of such complement for those which are in a train of speedy completion. The committee have also adverted to the circumstance, that a much larger number of sloops and small vessels of war will be wanted to form a just proportion to the ships of the larger classes, in the event of a contest with any maritime power. They would remark, also, as proved by the experience of other nations, perhaps even more than our own, that ships may be constructed and equipped in far less time, on the approach of war, than is requisite to discipline and train a corps of officers, to whom the command of them might be safely entrusted. The committee, therefore, believe that it is not expedient to diminish the present number of officers in service; and they are disposed especially to refer to the discretion of the executive, the expediency of increasing, to a reasonable extent, the number of midshipmen, as a class of officers to whom our future navy must look for experience, discipline, and nautical science. Advantage might be supposed to accrue to

the public service, by striking from the list of officers some whose age or infirmities render them no longer useful; but a power of so much delicacy ought never to be exercised by legislation. If its policy or justice were admitted, the executive is the only organ of the constitution, which, in the discharge of such a duty, possesses the competent means of information, and which ought, therefore, to assume the responsibility. Yet, it is believed, on no slight grounds, that the corps of naval officers in our service yield to no equal number of any nation in correctness of deportment and sobriety of habits, as well as in nautical skill, experience, and characteristic boldness.

A considerable expenditure will be saved by the provisions proposed in the organization of the several naval stations; and the recommendation of the department of the navy is deemed, by the committee, to be founded on just principles, in making a distinction between officers on shore and those who are either in active service, or for the most part remote from their families and their homes.

The medical department of the naval service has been fully considered by the committee, and they have had recourse to all the means of information in their power to discover the nature and extent of defects acknowledged to exist, for the purpose of proposing, if possible, an effectual remedy. They are fully convinced that appointments in that branch of service have hitherto been made with too little discrimination, and that many have entered it, who, on a due examination of their competency, would have been rejected. They are equally convinced that the pay and emoluments of surgeons and surgeons' mates, though perhaps sufficient to induce young practitioners to engage for a few years, with a view to avail themselves of the superior practical advantages to be found in the service, are very incompetent to retain in service many of the most able and faithful of the faculty. The compensation for the most learned, experienced, and useful surgeon, even after a life devoted to duty, is but little greater than that of a lieutenant; and his slender compensation is not, like that of the latter, submitted to for the present in prospect of approaching promotion. Neither honors nor increasing pay encourage him to improve in knowledge, and signalize himself by superior merit. Though many of the surgeons in our navy are men of skill and eminence, it is feared that many will abandon the service in disgust, and that, of those who remain, some of the most valuable are retained by the hope of a more suitable provision being made by an enlightened country. The committee believe that the sections in the bill, which they have submitted, will place the medical corps of the navy on such a basis as comports with the true interests of the service.

These are some of the considerations which have guided the committee in proposing a naval peace establishment, of the character and extent provided in the bill which accompanies this report. They are not so sanguine as to expect that all its details, though generally founded upon the recommendation of the secretary of the navy, assisted by the practical experience of the board attached to the department, will meet the concurrence of the house. It may be proper to state, that the proposition of establishing higher grades of rank than have heretofore existed, may be deemed by some inexpedient at this time; and the committee are led to acquiesce in the recommendation of the department, more with a view to the future condition of our navy, and to the part it must hereafter act, in

any conflict with a maritime power, than from an opinion that its present circumstances render the measure indispensable. Even in peace, however, they are of opinion that superior rank, in the naval as well as in the military service, will be conducive to subordination and wholesome discipline; and the inconsiderable addition of expense which it involves, ought not to present an obstacle to the attainment of an obvious benefit.

The committee are far from intending, by the measure now proposed, to arrest the progress, or to retard the development of our naval resources, so far as may correspond with the just views of policy, and the sound discretion of our government; and they would hesitate to recommend its adoption at the present session of congress, did they not deem its tendency propitious to that progress, and to those views. But, in case it should be found otherwise, it will be perceived by those who shall hereafter be entrusted with the regulation of our maritime defences, and the error, when discovered, will, without doubt, be promptly corrected.

{The report has not yet been acted on.}

Thompson's Island.

Navy Department, December 29th, 1822.

Sir: The secretary of the navy, to whom has been referred the resolution of the house of representatives, of the 20th instant, requesting the president of the United States to inform the house "what appropriation will be required to enable him to fortify Thompson's Island, usually called Key West, and whether a naval depot established at that Island, protected by fortifications, will not afford facilities in defending the commerce of the states, and in clearing the Gulf of Mexico, and the adjacent seas, of pirates," has the honor to report: That the geographical situation of the island referred to in the resolution, has, for some time past, attracted attention and been considered peculiarly important, both as a military position, and in reference to the commerce of the United States.

The commander of one of our public vessels, cruising in that quarter, was, accordingly, directed, last winter, to touch at this island, and take possession of it as a part of the territory ceded by Spain to the United States, and to make such general examination as might be useful in forming an opinion of the advantages of the place, and the propriety of a further and more particular survey. From the report of lieut. commandant Perry, who was charged with this duty, it has been satisfactorily ascertained, that this position affords a safe, convenient, and extensive harbor for vessels of war and merchant vessels. His instructions, however, did not require him to make so minute a survey as was necessary, in order to judge of the extent to which this place might be safely and advantageously occupied and improved as a naval depot.

Captain Patterson has since been instructed to make a further examination and survey, and is now engaged in that business; his report may be expected before the adjournment of congress. There can be no doubt, however, of the importance of this island, and its contiguous waters, in various points of view. The harbor affords a safe and convenient rendezvous for our public vessels, cruising in the West Indies and the Gulf of Mexico; and the island is a very suitable depot for provisions and supplies. From the peculiar dangers of the navigation along the coast and among the Florida Keys, our merchant vessels are frequently driven, by distress, to seek a harbor; and, for want of one in our

own waters, are under the necessity of making a port in the Island of Cuba, which subjects them to considerable additional expense. This island, also, affords a very eligible depot for wrecked property, and which is highly necessary and advantageous, where the navigation is attended with so many dangers and difficulties. We are, at this time, in a great measure, dependant on the wreckers of New Providence, for the protection of our property in case of shipwreck. This not only gives employment to a great number of foreign vessels and seamen, but it subjects our merchants to heavy expenses. These are some of the obvious benefits of this position in time of peace; but its advantages in time of war, with any European power having West India possessions, are still more important, both as it respects the protection of our own commerce, and the annoyance of our enemy. An enemy, with a superior naval force, occupying this position, could completely intercept the whole trade between those parts of our country lying north and east of it, and those to the west, and seal up all our ports within the Gulf of Mexico. It may, therefore, be safely answered, to one branch of the inquiry made by the resolution, that, if this island is susceptible of defence, a naval depot established there would afford great facility in protecting our commerce, and aid in the suppression of piracy. But this department has not the means, at present, of forming any estimate of the appropriation necessary for protecting and defending this position by permanent fortifications, or of determining whether it is even practicable. It is believed, however, that it is susceptible of such defence, at an expense that would be justified by the importance of the place; but to form any tolerably satisfactory estimate of the amount, an accurate survey, and calculation by competent engineers, is indispensably necessary.

This island is considered so advantageous and convenient a place of rendezvous for our public vessels on the West India station, that it is intended to make it a depot for provisions and supplies, for the expedition against the pirates, lately authorized by congress, to be secured in temporary buildings, under the protection of a guard of marines. All which is respectfully submitted.

SMITH THOMPSON.

The President of the United States.

Seventeenth Congress--2nd session.

IN THE SENATE.

January 23. The following message was received from the president of the United States, by his private secretary:

To the senate of the United States:

In compliance with a resolution of December 12th, 1822, requesting that the president would cause to be laid before the senate, a statement exhibiting the amount, in the aggregate, of the goods, wares, and merchandise, exported from the United States to France, and imported from thence, in each year, from and after the year 1814 to the year 1820, discriminating in the exports between the articles of the growth, produce, or manufacture of the United States, and those of foreign countries; and, also, stating the national character of the vessels in which such exports and imports have been made, I transmit a report from the secretary of the treasury, which contains the information desired.

Jan. 22, 1823.

JAMES MONROE.

The message was read, and, with the accompanying documents, ordered to be printed.

The following message was also received from the president of the United States, and read:

To the senate of the United States:

To carry fully into effect the intentions of congress in making an appropriation of 5000 dollars, by the act of the 14th of April, 1820, for the survey of the Ohio and Mississippi rivers, from the rapids of the Ohio, at Louisville, to the Balize, for the purpose of facilitating and ascertaining the most practicable mode of improving the navigation of those rivers, orders were given, through the proper department, to the board of engineers, to examine and survey the said rivers, with reference to those objects, and to report their opinion thereon, which they have done, and which report I now communicate for the information of congress.

Jan. 22, 1823.

JAMES MONROE.

January 24. Mr. Eaton submitted the following resolution:

Resolved, That the secretary of the treasury be requested to inform the senate of any loans of money, to any amount, and the purpose for which the same have been made, from the treasury to any individuals or banking institutions, since the first day of January, 1818, and, if any, whether such loans, so made, have yet been repaid, or in any manner adequately secured, so that the government will ultimately be satisfactorily secured.

The president communicated to the senate a report of the secretary of war, exhibiting the expenditures for the contingent expenses of the military establishment for the year 1822.

The remainder of the day was chiefly occupied on local business, or matters that will hereafter appear in course.

January 25. The senate did not sit this day--(Saturday).

January 27. Among the petitions presented to-day, was one by Mr. Findlay, from the president and directors of the bank of the United States, praying certain amendments in the charter of the bank.

Agreeably to notice given on Friday, Mr. Lloyd, of Mass asked and obtained leave, and introduced a bill for the erection, in the burial ground at Washington, of a monument over the tomb of Elbridge Gerry, deceased, late vice president of the United States; and the bill was read.

The other business transacted will sufficiently appear hereafter. At an early hour, the senate went into the consideration of executive business.

January 28. Mr. Taylor, of Virginia, from the committee to whom the subject was referred, reported a resolution to amend the constitution of the United States, being a new draft as a substitute for the former one. [The resolution is long, and its substance being already given, we shall, at least, postpone the insertion of it].

A number of private bills were passed--the senate spent some time on executive business, and then adjourned.

January 29. A letter was laid before the senate by the president, from Mr. Rodney, resigning his seat in consequence of being appointed minister plenipotentiary to Buenos Ayres, &c.

The senate took up the resolution, offered on Friday last, by Mr. Eaton, of Tennessee: [as inserted above.]

Mr. Lowrie suggested that the resolution should be so framed as that the practice of the treasury, in regard to transfers of deposits, should be disclosed back to the year 1800. Mr. Eaton consented--and the resolution was agreed to.

HOUSE OF REPRESENTATIVES.

Thursday, Jan. 23. Mr. Lefevre offered the following resolution, which, from its nature, lies on the table one day of course:

Resolved, That the president be requested to communicate to this house the number of persons, and the amount due from each, whose compensation has been withheld or suspended in pursuance of the laws prohibiting payment to persons in arrears to the United States; whether the amount withheld has been applied, in all cases, to the extinguishment of their debts to the government; whether said laws have been enforced in all cases against securities who are liable or accountable for the payment of any arrears due; whether any accounting or disbursing officer, within the knowledge of the president, has given conclusive evidence of his insolvency; if so, is he still in the employ of the United States? [Agreed to next day.]

The resolution of Mr. Conkling, yesterday laid on the table, instructing the select committee appointed on the subject of making "French crowns and five franc pieces a legal tender in the United States; to inquire into the expediency of continuing in force the act concerning the mint, approved March 3, 1801," was taken up, and modified to read as follows:

Resolved, That the committee appointed on the 13th inst. to inquire into the expediency of continuing in force the law making the crowns of France and five franc pieces a lawful tender, be also instructed to inquire into the expediency of continuing in force the law, entitled "an act concerning the mint," approved March 3d, 1801; and whether it be expedient to make any amendment in the laws regulating the coins of the United States; and, also, to inquire into the expediency of making the gold coins of Great Britain, Portugal, France, and Spain, receivable in payment of debts due the United States, at their intrinsic value; and that the said committee have leave to report by bill or otherwise.

The resolution was then agreed to.

On motion of Mr. Sterling, of New York, the house took up the resolution, laid on the table some days ago, relative to the Canada trade, when the amendment proposed by Mr. Walworth to it was withdrawn, in order to give Mr. S. an opportunity of submitting his amendment, to read as follows:

Resolved, That the committee on commerce be instructed to inquire and report to this house, whether the provisions of an act of the parliament of Great Britain, passed the 5th day of August, 1822, so far as they impose certain duties upon the products of the United States, passing into Lower Canada, down the river St. Lawrence, or otherwise, with a view to exportation, are not repugnant to existing treaties between this country and Great Britain, or a violation of our right to the free navigation of the river St. Lawrence, or a free island trade with the Canadas; and what measures are expedient to be taken to obtain a repeal or modification of said act, or of any other act of parliament, so far as their provisions shall be found detrimental to our commerce, or repugnant to rights secured to us by treaty or national law, or what countervailing provisions may be expedient on the part of the United States.

Mr. Sterling supported the resolution in a speech of considerable length. He quoted the act of parliament, at large, imposing duties on goods from the United States exported to, or in transit through, Canada, saying--"It will be thus perceived, that this act of the British parliament asserts the right to tax, at pleasure, all our produce thus transported, and of course to make our commerce upon these waters an instrument of revenue, or entirely to destroy it by impositions of such enormous duties as would amount to an actual prohibition.-- And what, sir, is the nature and extent of our commerce, thus shackled and interrupted by this regulation? It may not be great, compared with that of the nation, but it is necessary and valuable to those interested, and whose rights are as much to be respected, and as strongly sustained, as though they filled a greater space in the eyes of the union. To show that this commerce is not inconsiderable, nor undeserving the encouragement of the government, Mr. S. read a statement of the exports from the lake ports interested, viz:

For the year 1816	\$2,552,324
Do. 17	1,981,871
Do. 18	1,356,039
Do. 19	1,493,052
Do. 20	1,562,661
Do. 21	1,180,991
Do. 22	1,228,963

A great share of this commerce consisted of the articles upon which heavy duties were laid by the act of parliament of the 5th of August last. Flour

and lumber were two of the most heavy and profitable articles in the list thus taxed, and virtually prohibited from being hereafter transported down the river St. Lawrence. Thus, it is seen, that this obnoxious act of August last, has a most destructive operation upon this commerce, and appears in the light of a bold assumption on the part of Great Britain to deprive us hereafter of the right to transport our products to market upon the waters of the St. Lawrence."

The resolve was agreed to without further opposition or debate.

Friday, Jan. 24. Many reports on private petitions, &c. were received, and variously disposed of.

Mr. *Newton*, from the committee of commerce, reported a bill for creating certain collection districts in the states of Kentucky, Ohio, Indiana, Illinois, and Missouri, and for modifying certain parts of the act of the 3d of March, 1799, entitled "an act to regulate the collection of duties on imports and tonnage;" which was twice read and committed.

Mr. *Wood*, after some remarks, submitted the following resolution:

Resolved, That the secretary of the treasury be requested to lay before this house, as soon, conveniently, as he can, a statement of all the cases in which the invoices admitted by the collectors of the customs in estimating the ad valorem duties, and the estimates of the value of the goods made by the public appraisers on the entry of the said goods from foreign ports, have been adjudged too low by a subsequent inspection under the seventh section of the act, entitled "an act supplementary to an act, entitled 'an act to regulate the collection of duties on imports and tonnage,' passed April 20th, 1818; also, the places where, and the persons by whom, the different valuations have been made; also, to state what has been the practical operation of the said seventh section; also, whether any, and, if any, what, parts of entry might be abolished without injury; and whether any, and, if any, what, alterations are necessary and proper in the laws for the collection of the revenue.

This resolution was agreed to without a division.

Mr. *Moore*, of Alabama, offered the following resolution, prefacing it with a number of explanatory remarks:

Resolved, That the committee on the public lands be instructed to inquire into the expediency of introducing a bill more effectually to prohibit receivers of public moneys and registers in land offices from purchasing public land, either directly or indirectly, in their own land district, at either private or public sale.

The resolve was then adopted.

The house took up the bill for the occupation of the mouth of the Columbia river. Many amendments were suggested, &c. The house adjourned without acting definitively on the bill—previous to which, on the motion of Mr. *Condict*, the committee appointed on the letter of Gales & Seaton, obtained leave to sit to-morrow during the sitting of the house.

The select committee appointed, on the motion of Mr. *Rocheater*, to inquire into the expediency of continuing in force the law making the crowns of France and five franc pieces a legal tender, in the United States; amending the laws regulating the coins of the United States; and of continuing in force "an act concerning the mint;" and also to inquire whether it be expedient to make the gold coins of Great Britain, Portugal, France, and Spain, receivable, in payment of debts due the United States, are Mr. *Rochester*, Mr. *Tomlinson*, Mr. *Alexander Smyth*, Mr. *Sergeant*, Mr. *Sloane*.

Saturday, Jan. 25. The house was some time occupied on the bill for the better organization of the circuit court in Louisiana—much debate took place—at last, being amended, it was ordered to be engrossed for a third reading.

The *Speaker* laid before the house a letter from the president of the United States, relative to the "convention concluded and signed at St. Petersburg, under the mediation of his imperial majesty, the emperor of all the Russias," transmitting there-

with the copies of the exchanged ratifications with the respective powers, parties to the treaty; which were referred to the committee of ways and means.

The *Speaker* communicated a letter from the secretary of the treasury, transmitting a report in relation to fines imposed on citizens of Virginia, for the non performance of militia duty, during the late war, made in obedience to a resolution of the 7th instant; which was read, and, on motion of Mr. *McCoy*, referred to a select committee.

The *Speaker* also laid before the house, a letter from the comptroller of the treasury, transmitting the following documents, viz:

1. A list of accounts, in relation to the old *internal revenue and direct tax*, which have remained unsettled, or on which balances appear to have been due more than three years, prior to the 30th September, 1822.

2. A similar list in relation to the *late direct tax*.

3. A list of accounts which have remained unsettled, or on which balances appear to have been due from the receivers of public moneys more than three years, prior to the 30th September, 1822.

4. A list of officers who omitted to render their accounts for settlement within the year ending the 30th September, 1822; which letter and documents were ordered to lie on the table.

The *Speaker* further laid before the house, a letter from the secretary of war, transmitting a statement shewing the expenditures of the moneys appropriated for the contingent expenses of the military establishment for the year 1822; which was referred to the committee of ways and means.

The house then again resumed the consideration of the bill for the occupancy of the mouth of the Columbia river, that being the unfinished business of yesterday, the pending question being on the indefinite postponement of the bill.

Mr. *Woodson*, of Ky. gave his reasons at some length on the general merits of the bill, and advocated the propriety of the proposed occupancy of that post.

Mr. *McKim* also submitted his views of the bill, and briefly commended the wisdom of the policy of protecting our commerce on the Pacific ocean, and on planting a military post somewhere on the borders of the Pacific for that purpose. He argued also against the impossibility of transporting thither a force commensurate to the protection of the commerce on those seas, and obviated difficulties which gentlemen had suggested would be found to exist on the passage of troops to that post.

Mr. *Cambreling* said, that he had not intended to trouble the house upon the question, but gentlemen had furnished such vast commercial details, and described such vast commercial advantages, as likely to result from the establishment of a military post on the Pacific ocean, he thought it proper to express his opinion, that one frigate on that ocean would afford a better protection to our commerce, than twenty fortifications on the coast. In truth, he said, the question for the house to determine, was, whether congress would appropriate one, two, three, four, perhaps, five hundred thousand dollars annually, to protect the India trade beyond the mountains. Gentlemen should reflect upon the consequences likely to result from the passage of the bill. He had, he said, a strong individual interest in the question. He was intimate with, and had a high respect for Mr. Astor, a gentleman not more distinguished for his wealth, than for his enterprize and intelligence. But, the interest of the nation was a paramount consideration, and, before gentlemen were ready to pass this bill, that

mighty question was to be settled, whether we should establish a government of any kind, and at any time, on the borders of the Pacific? For his part, he considered the question of such magnitude, he should not be prepared to vote upon it, until it had been discussed for at least five sessions. He, therefore, hoped it would be postponed.

The question again recurring on the indefinite postponement—

Mr. *Enstis* stated his opposition to this disposition of the bill—he dwelt some time on its merits, and thought it a matter of great importance, &c. Mr. *Breckenridge* opposed the bill—he thought the scheme a visionary one, and prejudicial to the public interest. Mr. *Rhea* also opposed the bill. It was laid on the table—76 to 61. Adjourned.

Monday, Jan. 27. Between 50 and 60 petitions were presented this day.

Mr. *Wright* offered the following resolutions of the legislature of the state of Maryland, which were read.

By the house of Delegates, Jan. 11, 1823.

Whereas a system of internal improvement, confined to great national purposes, with proper limitations, would be productive of eminent advantages to the people of the United States; would promote the general welfare, and tend to secure a more perfect union; and whereas doubts may and do exist whether the congress of the United States have the power to adopt a system; therefore,

Resolved, by the general assembly of Maryland, That the senators and representatives of this state in the congress of the U. States, be requested to use their best exertions to procure such an amendment to the constitution of the United States as will give congress power to adopt and execute a system of internal improvement, to be confined to great national purposes, with proper limitations.

Resolved, That the governor be, and he is hereby, requested to cause a copy of this resolution to be transmitted to each of the senators and representatives of this state in congress.

By order: JOHN BREWER, Clerk.

A petition was presented praying an outfit for John Cleves Symmes, that he might penetrate the polar circle, according to his theory of the formation of the earth. Mr. *Johnson*, of Ky. moved to refer it to the committee on foreign relations—Mr. *Archier* proposed to refer it to the committee on commerce, his view being to establish a trade with the interior inhabitants of the earth. It was laid on the table.

The engrossed "bill for the better organization of the district court of the United States, within the district of Louisiana," was read a third time, passed, and sent to the senate for concurrence.

The house then, on motion of Mr. *Bassett*, proceeded to the consideration of the amendments of the senate to the bill concerning the disbursement of public moneys.

On motion of Mr. *Tomlinson*, it was

Resolved. That the committee on commerce be instructed to inquire whether it be expedient so to amend the act entitled "an act to regulate the collection of duties on imports and tonnage," as to abolish the office of measurer, to provide that the duties heretofore performed by the measurers, in virtue of said act, shall be performed by inspectors, and prohibit the allowance of any additional compensation to inspectors for measuring.

After debate, the bill, as amended, was passed, and only wants the signature of the president to become a law.

Mr. *Floyd* moved that the house proceed to the consideration of the bill, now lying on the table, to provide for the occupation of the mouth of the Columbia.

Mr. *Chambers*, of Ohio, required the yeas and nays to be taken on this question, in order to de-

termine, by that test, whether the house were really determined to act upon the subject at the present session.

The question on taking up the bill was accordingly decided, by yeas and nays, as follows:

YEAS—Messrs. Allen, Archer, Barber, of Conn. Baylies, Bayly, Burrows, Carter, Colden, Conking, Cuthbert, Durfee, Eddy, Enstis, Findlay, Floyd, Forward, Hamilton, Herrick, Hill, Holcombe, Hubbard, F. Johnson, J. T. Johnson, Jones, of Va. Jones, of Tenn. Keyes, Little, McKim, McLane, Mallory, Metcalf, Moore, of Va. Moore, of Alab. Morgan, Nelson, of Mass. Newton, Pitcher, Reed, of Mass. Reed, of Geo. Rochester, Russ, Ruggles, Russell, Sanders, Scott, Arthur Smith, Alex. Smyth, A. Stevenson, Tattall, Thompson, Trimble, Vance, Van Wyck, Walker, Walworth, Whipple, White, Williamson, Woodcock, Woodson, Wright—61.

NAYS—Messrs. Abbot, Alexander, Allen, of Tennessee, Ball, Barber, of Ohio, Barstow, Bassett, Bate-man, Borland, Breckenridge, Brown, Buchanan, Butler, Cambreling, Campbell, of New York, Campbell of Ohio, Cannon, Casady, Chambers, Cooke, Condict, Conner, Cook, Crafts, Cushman, Dane, Darlington, Demison, Dickinson, Dwight, Edwards, of Conn. Edwards, N. C. Farrelly, Forrest, Garnett, Gilmer, Gist, Gross, Hall, Hardin, Harris, Harvey, Hawks, H.umphill, Hobart, Hooks, Ingham, Jennings, J. S. Johnson, Kent, Lathrop, Leftwich, Lincoln, Litchfield, McCarty, McCoy, McNeill, McSherry, Matson, Martocks, Mercer, Mitchell, of Penn. Montgomery, Murray, Neale, Nelson, of Md. New, Patterson, of N. York, Patterson, of Penn. Phillips, Pierson, Plumer, of Penn. Rankin, Reed, of Md. Rhea, Rich, Rodney, Rogers, Russ, Sergeant, Sloane, W. Smith, Sterling, of Conn. Sterling of N. York, J. Stephenson, Stewart, Stoddard, Swan, Taylor, Tod, Tomlinson, Tracy, Tucker, of S. C. Udree, Upham, Van Rensselaer, Williams, of Va. Williams, of N. C. Wilson, Wood—100.

So the house refused to take up the bill.

Mr. *Hemphill* moved to take up the bill for authorizing the president to cause to be procured surveys and estimates for certain roads and canals.

On this motion, Mr. *Walworth* required the yeas and nays, in order to ascertain, in that manner, whether the house was disposed to act upon the subject, at the present session, or not.

The yeas and nays were taken accordingly, and there were—For taking up the bill, 89; against it, 69. So the house agreed to take up the bill.

Mr. *Wood*, of N. Y. delivered, at considerable length, his views adverse to the bill, on the ground of its alleged unconstitutionality.

Mr. *Farrelly*, of Penn. delivered his sentiments in favor of the bill. When,

On motion of Mr. A. *Smyth*, of Virginia, the bill was again laid on the table for the present.

The *Speaker* laid before the house a letter from the president of the United States, communicating to congress information relative to that part of the letter of Mr. *Prevost* which relates to the establishment of Columbia river, and what information he had in his possession relative to arrangements made about the year 1814, by the Northwest company, with the proprietors of a settlement, made by the citizens of the U. S. at the mouth of Columbia river, by which that company became possessed of that settlement; which letter was read and ordered to lie on the table.

The *Speaker* likewise communicated a letter from the secretary of the navy, transmitting an estimate of the cost of materials and workmanship deemed necessary for the completion of the docks and wharves contemplated to be constructed at the navy yard, together with a model of com. Rodgers's marine rail way; which was read and referred to the committee on naval affairs; also,

Another from the secretary of the treasury transmitting a list of the several amounts of moneys which have arisen from the sales of public lands in the states of Ohio, Indiana, Mississippi, Illinois, Alabama, and Missouri, appropriated by law for opening roads and canals leading to said states; which was read and ordered to lie on the table; and, also,

Another from the secretary of the treasury, transmitting a statement exhibiting the amount of drawback, payable on merchandise exported from the United States, during the years ending on the 31st

day of December, 1819, 1820 and 1821, compared with the amount of duties which accrued on the same respectively; which letter was read and ordered to lie on the table. The house adjourned.

Tuesday, Jan. 23. The speaker laid before the house a letter from the governor of the state of Maryland, enclosing, in obedience to a resolution of the general assembly of the state of Maryland, a copy of the report of the commissioners appointed by the executive of Maryland and Virginia, to survey the river Potomac. Read and committed.

Mr. *Hemphill*, (leave being granted), presented a memorial of the president and directors of the bank of the United States, on the part of the stockholders of the said bank, stating certain grievances under which they labor, arising from defects and omissions in the act for their incorporation; which was referred to a committee appointed on the 20th inst. relative to banks.

Mr. *McLane* reported a bill making appropriations for the support of government, for the year 1823; also, a bill making appropriations for the support of the navy of the United States, for the year 1823; which were twice read, and committed.

Mr. *Watworth*, from the committee on military affairs, which was instructed to inquire into the expediency of allowing to officers of the army a salary or stated sum of money, per year, instead of pay and emoluments, as now allowed by law, made a report adverse to the proposed change; which was read and ordered to lie on the table.

Mr. *Cocke* then gave notice that he should, on Monday next, move for leave to introduce a bill to allow officers of the army a salary or stated sum of money per year instead of pay and emoluments, as now by law allowed.

Mr. *Stevenson* reported a bill relative to the claims of the heirs of Beaumarchais, which, after some debate, was referred to a committee of the whole, by a small majority.

Mr. *Cocke* moved that the house resolve itself into a committee of the whole on the bill concerning revolutionary pensions.

Mr. *Trimble* wished to know what was the pressing necessity for taking up this particular bill in preference to other bills on the table.

Mr. *Cocke* explained that this bill contemplates providing for those persons whose application to the war department for revolutionary pensions were rejected in consequence of the largeness of their property and who have since become poor indeed. The bill proposes to authorize an examination into their claims agreeably to the rules laid down by law, and to do away the effect of an opinion of the attorney general, (which Mr. C. contended was contrary to the actual laws), which determines that, when a claim for a pension is once rejected, no circumstance will justify a re-examination of it. He added, that a bill on the subject, precisely similar to this, passed this house at the last session, by a large majority. The 4th of March is the day of semi-annual payment of pensions, and, if the bill be not soon acted on, its effect will be postponed for six months longer.

Mr. *Trimble* having waved his objection, the house resolved itself into a committee of the whole, who rose and reported the bill to the house, when several amendments were offered and debated until half past 4 o'clock, when the house adjourned.

Wednesday, Jan. 29. Mr. *Poinsett* appeared and took his seat. Many reports were received and resolutions submitted—of no present interest to no-

tice. It was agreed, 63 to 62, that the hour of meeting should hereafter be 11, instead of 12 o'clock.

The house referred, 111 to 42, to take up the bill to authorize the president to cause certain surveys, &c. to be procured.

Several bills were read and referred, &c.

Mr. *Tad* moved that the house do in preference resolve itself into a committee of the whole on the bill for the more effectual protection of manufactures, (new tariff bill).

The question being taken on this motion, it was negatived—84 votes to 61.

The bill to amend the revolutionary pension act was taken up, a nended and ordered to be engrossed and read a third time.

Mr. *Tad* then again moved that the house do go into a committee of the whole house on the state of the union, with a view to take up the bill for the more effectual protection of manufactures. The motion to go into committee of the whole was agreed to; and Mr. *Tomlinson* was called to the chair.

After which it was agreed to take up the bill, as proposed by Mr. *Tad*, 82 to 54.

The first section being read, Mr. *Cambreleg* rose and made some pointed objections to that part of the bill that related to coarse woollens, and submitted a statement, (which was afterwards ordered to be printed). Mr. *Tad* replied to Mr. C. and made some general remarks on the subject, &c. The committee rose at the usual hour, &c.

THURSDAY'S PROCEEDINGS—JAN. 30.

In the senate—The president communicated a letter from the secretary of state transmitting copies of the digest of manufactures, prepared and printed by order of a joint resolution of congress, of the last session.

The day was spent in discussing subjects that have already been noticed, or will appear in their course.

In the house of representatives—a good deal of what may, perhaps, be called *miscellaneous* business was attended to. The bill supplementary to acts respecting revolutionary pensions was passed, by yeas 151, nays 14. The house, in a committee of the whole, further discussed the bill for the more effectual protection of domestic manufactures. Messrs. *Holcombe* and *Barnes* supported, and Messrs. *Tatnall*, *A. Smyth*, and *Cambreleg* opposed the bill—and then the house adjourned, Mr. *Cook* having the floor to-morrow.

[A more particular report of this day's proceedings will be given in our next, by way of record.]

Yesterday's *Intelligencer* contains a report of the committee to whom the investigation of certain charges against Messrs. *Gales* and *Seaton*, relative to the suppression of certain parts of a letter, or document, were referred. The whole affair occupied five of the heavy columns of their paper.

In respect to the paragraph suppressed or omitted, (which is crossed diagonally by pencil marks), the committee say they are "obliged to confess, (and they do it with regret), that they have obtained no satisfactory information," as to the person who caused it. They fully acquit Messrs. *Gales* and *Seaton* of any part or lot in the matter, and express their entire belief that it was not "caused either by the influence of the secretary of the treasury, or was done with his knowledge"—concluding with a resolution that they should be dismissed from a further consideration of the subject. We have not time nor room for a more particular notice of this affair just now.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 23—Vol. XI.] BALTIMORE, FEB. 8, 1823. [No. 23—Vol. XXIII. WHOLE No. 595

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

The communication from the Boston "Merchant," acknowledged in our last, is inserted in the present sheet. We have also one on hand from our correspondent "T" on the same subject, and on the balance of trade—which must be laid over for our next paper:

"FALSE CORRECTION." In some of the numbers issued last Saturday, in the first col. of page 339, line 24, "British cottons," was printed for *British bottoms*; and in page 340, what was meant to shew the states *decidedly* for a new tariff, were said to be "decided by for" such a tariff.

THE SUPREME COURT OF THE U. S. commenced its annual session at Washington on Monday last—present chief justice *Marshall*, and justices *Washington*, *Livingston*, *Duval* and *Story*. Judge *Johnson*, was immediately expected; but judge *Todd* was detained at home by sickness.

Besides some of the members of congress, who are occasionally in attendance, the following gentleman appeared as counsel: Messrs. Webster and Blake, of Massachusetts; Mr. Pitman, of Rhode Island; Messrs. Emmet, Ogden, Oakley and Wheaton, of New York; Mr. Cheves, of Pennsylvania; Messrs. Winder and Hoffman, of Maryland; Messrs. Clay and Rowan, of Kentucky; Messrs. Wright, Hammond and Whittlesy, of Ohio.

RODGERS' MARINE RAIL-WAY. We have read with much interest, the message of the president of the United States, on the subject of com. Rodgers' "marine rail way or inclined plane," and, though the article is a pretty long one, we intend soon to have the pleasure of laying it before the readers of the REGISTER, that they may with us pay a homage of respect to the veteran for services rendered to his country.

NAVAL. We have "an exhibit shewing the number of commission and warrant officers of each grade, necessary to command in active service, the vessels of war at this time belonging to the navy, including those afloat and those on the stocks and building."

The whole amount of vessels is thus stated—12 ships of the line, 9 of 44 guns, 3 of 36 guns, 1 steam frigate, 1 ship of 24 guns—for each of which there is assigned a captain; 5 sloops of war, with masters commandant; 2 brigs and 5 schooners, under lieutenants commanding. For the steam boat and small schooners now fitting out for a special expedition, there are required 1 master commandant, 10 lieutenants commanding, 23 lieutenants, &c.

The whole amount including the officers required for the navy yards, the board of commissioners, and the special expedition now fitting out, is as follows:

Captains 39; masters commandant 12; lieutenants commanding 18; other lieutenants 249; sailing masters 69; midshipmen including those acting as master's mates 687; surgeons 36; surgeons mates 97; pursers 47; chaplains 25; schoolmasters 12; boat-swains 38; gunners 38; carpenters 38, sail makers 30—without any allowance for sickness or casualties.

NEW WORK. Messrs. M. Carey & Lea, of Philadelphia, have just published a work under this title:—"Account of an expedition from Pittsburg to the Rocky Mountains, performed in the years 1819 and 1820, by order of the secretary of war, under the command of major Stephen H. Long."

It makes two handsome volumes, octavo, and is accompanied with a beautiful atlas, containing maps and prints elegantly executed. The compiler is Dr. *Edwin James*, botanist and geologist to the expedition, and the compilation is made from the notes of the author, and of major *Long*, Mr. *T. Say*, and other gentlemen, of the exploring party. It is a very valuable work, and abounds with interesting information of the manners and habits of the Indians, and the geography, geology, botany of the regions traversed, with ample notices of its animals, natural curiosities, &c. It will, no doubt, be extensively read. Those whose opinion is much to be respected, have spoken of it as being very superior in its composition to the usual works of its nature, which, of necessity, must have some dry details of facts, not subject to embellishment.

We present to our readers a short extract from the work:

"The Pawnee Loups, heretofore exhibited the singular anomaly, amongst the American natives, of a people addicted to the inhuman, superstitious rite, of making propitiatory offerings of human victims to *Venus*, the *great star*. The origin of this sanguinary sacrifice is unknown: probably it existed previously to their intercourse with the white traders. This solemn ceremony was performed annually, and immediately preceded their horticultural operations, for the success of which it appears to have been instituted. A breach of this duty, the performance of which they believed to be required by the great star, it was supposed would be succeeded by the total failure of their crops of maize, beans, and pumpkins, and the consequent total privation of their vegetable food.

"To obviate a national calamity so formidable, any person was at liberty to offer up a prisoner of either sex, that by his prowess in war he had become possessed of.

"The devoted individual was clothed in the gayest and most costly attire; profusely supplied with the choicest food, and constantly attended by the Magi, who anticipated all his wants, cautiously concealed from him the real object of their sedulous attentions, and endeavored to preserve his mind in a state of cheerfulness, with the view of promoting obesity, and thereby rendering the sacrifice more acceptable to their *Ceres*.

"When the victim was thus sufficiently *fattened* for their purpose, a suitable day was appointed for the performance of the rite, that the whole nation might attend.

"The victim was bound to a cross, in the presence of the assembled multitude, when a solemn dance was performed, and, after some other ceremonies, the warrior, whose prisoner he had been, cleaved his head with the tomahawk, and his speedy death was insured by numerous archers, who penetrated his body with their arrows.

"A trader informed us that the squaws cut pieces of flesh from the deceased, with which they greas-

ed their *loes*; but this was denied by another, who had been present at one of these sacrifices. However, this may be, the ceremony was believed to have called down a blessing upon their labors of the field, and they proceeded to planting without delay.

"The present mild and humane chief of the nation, Latelesba, or *knife-chief*, has long regarded this sacrifice as an unnecessary and cruel exhibition of power, exercised upon unfortunate and defenceless individuals, whom they were bound to protect, and he vainly endeavored to abolish it by philanthropic admonitions.

"An Ietan woman who was brought captive into the village, was doomed to the great star by the warrior whose property she had become by the fate of war. She underwent the usual preparations, and on the appointed day was led to the cross amidst a great concourse of people, as eager, perhaps, as their civilized fellow men to witness the horrors of an execution. The victim was bound to the cross with thongs of skin, and the usual ceremonies being performed, her dread of a more terrible death, was about to be terminated by the tomahawk and the arrow. At this critical juncture, Petalesharoo, (son of the knife-chief), stepped forward into the area, and, in a hurried but firm manner, declared that it was his father's wish to abolish this sacrifice; that for himself, he had presented himself before them, for the purpose of laying down his life upon the spot, or of releasing the victim. He then cut the cords which bound her to the cross, carried her swiftly through the crowd to a horse, which he presented to her, and having mounted another himself, he conveyed her beyond the reach of immediate pursuit; when, after having supplied her with food, and admonishing her to make the best of her way to her own nation, which was at the distance of at least four hundred miles, he was constrained to return to his village. The emancipated Ietan had, however, the good fortune, on her journey of the subsequent day, to meet with a war party of her own people, by whom she was conveyed to her family in safety."

BROOKS' GAZETTEER. A new edition of this celebrated work, considerably enlarged, and published under charge of that well known and able lecturer on geography and history, Mr. *William Darby*, is about to appear at Philadelphia. The parts that belong to foreign countries have been corrected or improved, and what relates to the United States has been newly written, especially for this work; and the whole is adapted to the present state of things. It shews the population of every county in the different states, as put down in the tables of census for 1800 and 1820, and has a classification of the population as inserted in those tables; and, in all that regards our own country, or other countries of North and South America, this Gazetteer must be considered as equal to any other that can now be published—Mr. Darby being devoted to the extension of geographical information—patient, laborious and persevering, as is shewn in all his works. The descriptive matter exceeds 1100 pages of closely printed octavo.

Of the utility of works of this sort, it is not necessary to say any thing—and we believe that that which at present interests us will not fail to meet the best expectations of the friends of the editor and publishers, and the public at large.

THE PIONEERS. It was announced in the New York papers, that this long-expected work would

be ready for delivery the next morning—and, by 12 o'clock on that day, the publisher had given out *thirty five hundred copies!* This is, indeed "something new," in the United States. From the specimens that we have seen of this work, it does not appear likely to fail in a comparison with the best product of the "wizzard of the north," as the author of the Scotch novels is called, by way of eminence.

"**THE SPY.**" In the legislature of Massachusetts, a petition has been presented by David Gray, praying compensation for extraordinary services performed in the revolutionary war. The Boston Centinel says—"It appears, from evidence produced by the petitioner, that he was employed during the revolutionary war to act as a spy, and is the identical personage so celebrated in the popular novel of the "Spy," under the name of Harvey Birch."

IMPORTANT. A letter from London, dated Nov. 23, published in one of the New York papers says—"A great object of curiosity is now preparing on the Thames—a new steam vessel, intended for Calcutta. Her engine and boiler occupies only one fifth part of the usual space; her furnace consumes her own smoke; will perform with one bushel what formerly took one chaldron of coals: her boiler is constructed to return its own steam, without one particle escaping, so that once filled it is enough for the voyage, which it is calculated she will perform in 36 or 40 days. The invention is American—PENKINS is the man, who does honor to his country.—In two months time this vessel will sail, (or go), for Calcutta."

LONGEVITY. During the year 1822, there died in the city of Charleston, four individuals who were more than 100 years old. Population 24,780.

In many countries, it is regarded as a matter of no small interest to ascertain and make due returns of the ages of all persons deceased, not merely to gratify a laudable curiosity, but for the purpose of establishing some points that may be important to the living. There is no general regulation on this subject in the United States, or in any of the states; yet, by examining the obituary notices contained in the comparatively few newspapers received at the office of the REGISTER, we propose to attempt a monthly collection of persons dying who had reached the age of 100 years or upwards, though entirely satisfied that these means are inadequate to furnish any thing more than a very partial view of the rightful aggregate of such persons.

Notices of the decease of aged persons as contained in the newspapers received at the office of the REGISTER, during the month of January 1823.

In Franklin co. Pennsylvania, Elizabeth Campbell, aged 104—several of her relatives had reached 100. At Troy, N. Y. Ann Fowler 100. At Tyngsboro' N. Y. Abigail Hadlock 104. At Somers, N. Y. Michael Makeel 103. At Rutland, Oswego, N. Y. Mrs. Buroy, 110. At Brunswick, Maine, gen. James W. Ryan 107—his wife is yet living, aged 94; they were married together 75 years before his death. At Georgetown, Col. Yarrow, a Moor, (supposed) 135! At the city of New York, a woman, a native of St. Domingo, 106. At Sargus, Mass. Mrs. Edwards, 101. In Edgecomb county, N. C. William Spicer, aged about 112. In Boston, William Homer, 116.

Mr. Jacob Mathies, aged 111, was lately married to Mrs. Sellars, aged 119, in Duplin county, North Carolina—so say the newspapers.

NEW YORK. The nomination by the governor of *Nathan Sanford*, as chancellor of the state, was unanimously ratified by the senate; but those of the judges of the supreme court were dissented from—for *Ambrose Spencer* 3 ayes, against him 28; for judge *Platt*, 2, against him 29—judge *Woodworth* was also rejected by a bare majority. *John Savage* has been appointed chief judge and *Jacob Sutherland* an associate; *Samuel R. Betts* who had been named, was rejected.

MORE GOOD NEWS!—Bills of the bank of the commonwealth of Kentucky, to an amount of seven hundred thousand dollars, were burnt at Frankfort on the 15th ult. in the presence of suitable persons duly appointed to see that the conflagration was properly made. A few more good fires like this, and we shall begin to expect remittances from our friends in Kentucky—whose arrears amount to a distressing aggregate at this time.

THE POTOMAC. A grand project is on foot to canal this noble river from Cumberland to the tide water. The cost is estimated at 1,500,000 dollars, and the plan is that the United States, and the states of Maryland and Virginia shall each take a third part of the sum. The affair is before the legislature of Maryland—but the state is too much reduced in its means to accord with the scheme.

THE ROANOKE CANAL, says the *Norfolk Herald*, is completed to the basin at Rock Landing, and there now remains no obstacle to the transportation of produce from above the falls of Roanoke to this place.—In one word, that work, which has been so long a subject of solicitude, anxiety and interest, is complete.

FIRE. There was a large and very destructive fire at Norfolk on the morning of the 31st ult. One person was burnt to death in the house in which it originated, supposed to have been suffocated by the smoke. Another was killed and several dangerously mangled and hurt by the falling of walls and chimnies. The fire was arrested by the blowing up of a building. One would think that the frequent fatal accidents that have occurred by the fall of chimnies and walls, would put the people on their guard against them, at a time of fire.

CASUALTIES. We have lately seen mentioned several cases of young ladies being burnt to death in consequence of their clothes taking fire. It may be well to repeat what has so often been said, that if the person, whose clothes are on fire, has not sufficient presence of mind to fall flat on the floor, whoever is present should first of all effect their prostration, and then use means to extinguish the fire, by rolling them up in a carpet or closely wrapping a man's coat, (if nothing more fitting is at hand), over the parts in a flame.

EXPLOSION. Six persons were killed on Thursday last week, and several badly wounded, by an explosion at Eden Park powder mills, near Wilmington, Delaware. Two horses were also killed. The building in which the principal part of the powder was deposited did not explode, or it is thought that the destruction would have been much greater.

BROWN UNIVERSITY, R. I. *Nicholas Brown* has erected during the last season, wholly at his own expense, an elegant brick building, four stories

high, 120 feet in length, 40 feet in breadth, and containing forty eight rooms, which he has presented to the corporation of the university, to be held by them, with the other corporate property, according to their charter. The corporation, at the suggestion of the liberal donor, have named the building *Hope college*.

CONVICTS—at Botany Bay. The London papers contain a long statement of a case the substance of which is as follows: a young man aged about 20, named *Magire*, son of a respectable gentleman at *Enniskillen*, was seized as a rebel in 1798, and acquitted on the trial. But immediately on his acquittal, he was seized, placed on board a transport and sent off to *Botany Bay*, where he has remained ever since, being refused liberty to return! The father neglected his business and died broken hearted, and the whole family appears to have been ruined in consequence of these tyrannical proceedings.

NAPOLEON'S MOTHER. *Rome, October 12.*—Who would have believed, thirty years ago, that a simple country woman of *Ajaccio*, afterwards rather unfortunate at *Marseilles*, would, in the year 1822, have made a solemn public testament in *Rome*, by which, after having constituted her grandson—a pretended king—her heir, she should leave a legacy of 150,000 crowns to each of her children, *Joseph, Lucien, Louis, Jerome, Elizabeth, Pauline, Caroline, and Hortense*, besides 25,000 crowns as a supplementary dowry to each of the four children of *Lucien*: *item*, a palace and splendid furniture to a brother now decorated with the purple and loaded with riches and honor?

TITLES. Letter from the governor of *Illinois* to the editors of the *Illinois Intelligencer*, dated *Vandalia, Dec 10, 1822*—

Gentlemen—Our state constitution gives to the person, exercising the functions of the executive, the appellation of *Governor*—a title which is specific, intelligible, and republican, and amply sufficient to denote the dignity of the office. In your last paper you have noticed me by the addition of "*his excellency*," an aristocratical and high sounding adjunct, which I am sorry to say has become too common among us, not only in newspaper announcements, but in the addressing of letters, and even in familiar discourse. It is a practice disagreeable to my feelings and inconsistent, as I think, with the dignified simplicity of freemen, and to the nature of the vocation of those to whom it is applied.—And having made it a rule through life to address no one as his excellency, or the honorable, or by any such unmeaning title, I trust, I shall be pardoned for asking it as a favor of you, and my fellow citizens generally, not to apply them to me. I am, &c. &c.

EDWARD COLES.

*Messrs. Brown & Berry, editors
of the Illinois Intelligencer.*

FOREIGN NEWS.

Great Britain. Lord *Byron's* "*Vision of Judgment*," has been pronounced a blasphemous libel, by the grand jury of *Middlesex*.

A band of smugglers has lately been broken up in *England*, whose chief had 200 men under his command. The income of the *marquis of Stafford* is rated at 1000*l. per day*, a great part of which is derived from the profit of canals.

France. The prince of *Conde* has placed 200,000 francs in the hands of a person for the purchase of hunting dogs. "*The Bourbons are restored.*"

The latest accounts go to shew that France will, at least, consider the matter well before she interferes, by arms, in the affairs of Spain. The "rumors of war" were subsiding. Yet many things are mentioned that bear a hostile aspect. The stock-jobbing and trading communities are now so much interested in these matters, that what might otherwise be regarded as credible intelligence is hardly worth notice.

The king has issued an ordinance which declares that "the Faculty of medicine at Paris is suppressed." By this act, 25 medical men of the first class are deprived of their places, and about 4,000 students of their source of information. The latter must now seek instruction at other schools. The students, it appears, are suspected of entertaining liberal sentiments, such as have prevailed in many of the German universities; and to be suspected even of thinking otherwise than is fashionable at the court, is one of the highest offences that Frenchmen, (rapidly approaching their old condition of "slaves"), can commit, in these "legitimate" times.

Spain. The priests of this country, being the chief instigators of revolt and murder, have been taken under the special care of the cortes. Many of them have been formally banished. 1,200 of them, besides monks and friars, had joined the "army of the faith." This force, when hotly pursued, finds a refuge in France, which Mina had as yet respected.

Turkey. It is stated in a way that inspires belief, that Chourschid Pacha had proposed an armistice to the provisional government of Greece—and they had agreed to one for six months, provided the Turks should evacuate Thessaly, and that all the fortresses that they held in the Morea, as well as that Arta and Prevesa, should be given up to the Greeks. These were regarded as very severe conditions and it is not known whether they have been acceded to.

It is agreed, that in the late campaign, the Turks entirely failed—both by land and sea.

Buenos Ayres appears to have settled down into a quiet and prosperous condition—in consequence, perhaps, of the government having "nearly upset the friars"—whose power, and that of the priests, they have wisely resolved to reduce.

Colombia. There was a dreadful gale at Lagaira about the 21st Dec. Nineteen sail of vessels, many of them very valuable, went ashore and were wrecked, the cargoes chiefly lost, and about 60 lives. The U. S. frigate Congress was the only man of war in port and the only vessel that rode out the gale, with the loss, however, of all her anchors save one. She has since arrived at Curracoa. It is asserted that the famous Spanish frigate Ligera has been lost; but the account is uncertain.

Com. Daniels, with his squadron, was cruising off Porto Cabello, and had captured the Spanish frigate Maria Francisco, of 32 guns and 400 men. 200 of them supernumeraries, from Havana for Porto Cabello. She is a fine vessel and had about 30,000 dollars on board. Daniels had, a short time before, captured the corvette Maria Theresa, of 29 9 pounders and 200 men, with 25,000 dollars on board, also from Havana for Maracaybo—she had two merchant brigs undef convoy, laden with provisions, which were likewise taken. As a reverse to this the Spaniards have captured an American ship from London for Lagaira, mounting 9 guns; which had on board 5000 muskets, 1400 carbines, 50 pieces brass ordinance, 400 lbs. gun powder, with a quantity of pistols, ball, &c. &c.

The reports of the success and condition of the contending parties at Maracaybo, Coro, &c. are so contradictory that we cannot make out the facts. Both parties are said to have gained some late victories. Bolivar, however, was advancing from the interior with a force that, it was believed, would soon capture Morales, whose escape by sea does not now seem practicable, from the superior naval force of the Colombians. Some British government vessels had proceeded to Maracaybo to demand of Morales the property which he had seized, to the amount, it is said, of near three millions, belonging to British subjects.

Rate of Exchange, &c.

MR. NILES—I have read the remarks of your correspondent 'T,' in answer to my former communication, on the subject of the exportation of specie and the rate of exchange. The courteous style of the writer demands my acknowledgments; and, although I have no idea of accepting his invitation to a correspondence for the winter, I feel bound, in civility, to furnish him the further explanations he has asked for. I will begin with the subject of exchange, as most easily despatched—for, after reading over the very diffuse remarks of your correspondent, with the utmost attention, I can make nothing of them, but that he referred to the nominal or custom house par, whilst my observations were directed to the real or true par. I undertook to shew that the custom-house par, or the par of common parlance, is merely a nominal par, and to shew what is the true, real, intrinsic, actual, and, if 'T' pleases, "practical" par. In doing so, I supposed I was meeting the question proposed; and I can hardly think, even now, that your correspondent, when propounding that question, had precisely the same idea of the par of exchange which he now expresses. His original question, as now explained, will stand thus: Is a rate of exchange, nominally 13 per cent. above par, but really and intrinsically at par, advantageous or otherwise, to the operations of commerce? Such a question, certainly, would never have brought me "upon paper." I cannot see the point or bearing of it, and cannot but think it would appear childish to attempt to answer it.—There is no discrepancy between my observations on the subject of exchange, and those expressed by Mr. Adams, in his very elaborate report on weights and measures. On the contrary, I will acknowledge their "fallacy," when such discrepancy is pointed out. Since the writing of Mr Adams' essay, the currency of Great Britain has become, and is now, truly and practically gold, not paper. The price of gold, in London, has, for nearly a twelvemonth, been below the mint price. Your correspondent is mistaken in calling \$4.44 the legal par, in any other respect than for the purpose of estimating ad valorem duties on importation. It has been long settled in our courts, and I presume in other states, that a person sued on a promise to pay £1000 sterling, must pay as many dollars as will buy £1000—and so of any other foreign currency. He is also mistaken, in supposing that the rate of exchange can never vary from the real par—or that an ounce of silver, in New York or Boston, should be always worth an ounce of silver in London. The variation is often 2, 3, and even 5 per cent. above or below the real par, although the expense of transmitting it is scarcely over one per cent. I have, then, only to answer, to the reiterated inquiry, that the present rate of exchange is as favorable to commerce as any given rate whatever. There is no im-

mediate connection between the rate of exchange and the success of commerce. Commercial enterprises are founded on the existing, or anticipated, rate of exchange—it is only unforeseen fluctuations which derange the calculations of the merchant, and may, therefore, be considered unfavorable to commerce. "I" reminds me that I omitted to answer his third question, whether "the exportation of specie, more than we import, combined with the present rate of exchange, promotes or retards the prosperity of the country?" Having expressed my views on each subject separately, it seemed to me superfluous to do more. I will only add, that I see nothing in these causes, singly or combined, unfavorable to our commerce or to the prosperity of the country. I can form no conception of a cause or causes "which can benefit commerce, and, at the same time, ruin the country."

I proceed to the more complicated and interesting subject—the distresses of 1819. "I" inquires what I mean by calling that year disastrous? I will inform him, by giving my views of the nature and cause of the embarrassments of that year, and trust they may not prove altogether uninteresting to your readers.

The great and moving cause of the paralysis of commerce in that year, was the change which took place in the circulating medium in Europe. For the correctness of the facts which I am about to state in support of that opinion, I refer to the report from the secret committee of the British parliament, on the expediency of the bank [of England] resuming cash payments, with the minutes of evidence before them,—made and published in May, 1819. I will first advert to the state of the currency of England, at the commencement of that year. The restriction on cash payments, by the bank of England, had been continued for one year, from July, 1818; to July, 1819—it was understood that the question of cash payments was to be finally settled in the interim. The governor of the bank publicly declared, at a quarterly meeting of the proprietors, on the 5th October, 1818, that, "if the bank did not return to cash payments in July next, it would not be the fault of the bank." There can be little doubt that this bravado was thrown out in the hope a clamour might be excited in the public, on account of the embarrassments likely to result from the measures then taking by the bank, in order to reduce the circulating medium, which might induce parliament to continue the paper system—indefinitely, perhaps. At any rate, the circulation of bank of England notes had been reduced, in the six months ending Jan. 1, 1819, upwards of three millions—and so great was the scarcity of money in January and February, that the best bills could not be discounted by the London bankers. It is stated by Samuel Gurney, a bill broker, on the 9th March, that "several times lately there was not a banking house in London that would part with £10,000 till the following day." We will now look at the state of things on the continent. The French indemnity loan, equal to 1,27,000,000 st'g. had been negotiated in the summer of 1818: Austria, Russia and Prussia sold out their proportion of this stock, and created further loans of their own, to the amount of 1,11,000,000 sterling, for the purpose of replacing a part, at least, of their paper currency with a new coinage. The gold and silver transmitted to Austria and Russia, in that year, is stated at 1,20,000,000 st'g; to Denmark 3,500,000, and a further sum, not estimated, to Prussia.* The

effect of this drain of specie was first felt at Paris, by the bank of France—the specie in their vaults was reduced, in three months, from 117,000,000 of francs to 34,000,000; in consequence of which they suddenly and violently reduced their discounts.—The shock was tremendous—in the words of John Irving, esq. page 133,—"the panic of Paris spread with instant and rapid effect to Amsterdam, to Hamburg, to Frankfurt, to Leipsic, to Vienna, and every other commercial place in the north of Germany; interest rose to nine and ten per cent." &c. &c.

The paper system of England, which had existed twenty five years, had communicated an artificial inflation to all commercial property. Speculators had been enabled to control the prices of all the staple commodities, and had run them up to unnatural prices, thereby exciting over-production and over trading. A few months of violent and continual pressure, acting simultaneously and sympathetically, in the cities of Paris Amsterdam and London, were sufficient to prostrate this fabric of speculation. Numerous failures, and to an immense amount, destroyed confidence and paralyzed trade. The result, as stated in my former communication, was a reduction in the value of commercial property, produce, manufactures and shipping; which has been estimated, by intelligent merchants in England, at 40 per cent. on the average.

The reduction in value was universal. Every merchant, in every part of the world, holding ships or merchandise, found their value sink in his hands, in a greater or less degree, not varying materially from the ratio I have named. The measures adopted in 1819, which have since been carried into effect for restoring a specie currency to England, have given permanency to these reduced prices, or, in other words, to this appreciation of currency, from which few articles have risen, although many have continued to fall—seeking their true level.

In the United States, this change was felt universally and severely, by the merchants—and, with the exception of New England, by all other classes of the community. We too, with that exception, having, since 1814, adopted a paper system, were beguiled by the semblance of prosperity which the nominal rise of property, but real depreciation of currency presents; and although we had, apparently, returned to a specie currency after the establishment of the national bank, it was only in appearance; the whole system was artificial: instead of reducing the value of property to a specie currency, the attempt was made to blow up a currency of gold and silver to the puffy co-sistence of the paper which preceded it. This experiment was made to succeed for a year or two, by the expedient of loans of specie obtained in Europe by the United States bank, and the system of accommodations to other banks, of tender credit, adopted by that in-

Waldmand, esq. page 76. as shewing an extreme case of exchange being above the real par:

Ques. Explain the nature of the demand for gold from Russia, to which you have referred in a former answer?

Ans. There was a profit of nearly 8 to 10 per cent. to be made in sending gold from France to St. Petersburg; a profit in the precious metals, in their transmission from one country to another, I believe before unheard of. When I was in Paris, I sent two parcels, one of 300,000 francs, and the other of 400,000 francs—there were corresponding sums sent by each carriage, by the two bankers with whom I undertook these operations. The expense of transmission was one per cent.

*I quote the following from the evidence of Wm.

stration. The electric shock of 1819, like the touch of the spear of Ithuriel, brought every thing to its natural and true dimensions. Real property, throughout those parts of the country which had adopted a paper currency during the war, was reduced in value 30, 40 and 50 per cent. This infinitely increased the commercial distresses of New-York, Philadelphia and Baltimore over those of Boston, which had stood fast in the integrity of a sound currency. Fortunately, and almost by miracle, as appears by the recent expose of Mr. Cheves, the bank of the United States, by a change of system, was enabled to weather the storm, and to preserve a specie currency in all the commercial cities, with the exception of Charleston and Savannah—who are contented to be within *hailing distance*, keeping their currency from $2\frac{1}{2}$ to 10 per cent. below par. The western states have given themselves up to the *terrible scourge* of a depreciated currency, without guide or landmark—it will, to be sure, work its own cure, but through toil, immorality and crime.

Having thus given a condensed general view of the disastrous year 1819, I am led, by the course of 'T's' observations, to the subject of the failures in Boston in June and July last, and to the pressure for money which preceded them. By "purifying the commercial atmosphere," I certainly mean the removal, by failure, of insolvent commercial houses—a pressure for money tends to expose the weakness and cause the stoppage of such houses. This effect is salutary, and such was its effect with us. Not a single failure took place where the parties were not *deeply insolvent*. As these failures were great in number, and their real importance has been very much over-rated at a distance, I may be allowed to state a few circumstances in relation to them. The merchants of Boston suffered severely by the fall of prices in 1819—their capitals were reduced, but their currency having, in a great measure, preserved them from over-trading, these capitals sustained them. There were no failures of any importance, certainly less than in any other commercial city, with which I am acquainted. The past year, however, has revealed the fact, that *three or four* respectable houses, although able to preserve their credit, suffered so severely in that year, as, after a few further losses in attempting to retrieve themselves, to cause their insolvency. The other failures were, 1st, *brokers*, who had speculated largely in stock of the United States bank, without capital to bear the loss on its sudden depreciation about the first of May—2d, *speculative traders*, who had raised an artificial credit, and entered into extensive and hazardous operations, without having possessed any, or, if any, very little real capital—3dly, and far the most numerous, *small dealers*, of various grades and characters, some the victims of the large speculators, but, mostly, the unskilful and imprudent, at least the unsuccessful competitors on the sharply contested field of trade, who are sure to accumulate in a long period of easy and unquestioned credit. Suffice it to say, that, although a peculiar stagnation of business existed, during the always stagnant months of July and August, neither these failures nor the pressure for money in May, produced any effect on the price of commodities, or the trade of the city; on the prosperous aspect of the place, on real estate, or on rents. There was no failure of any person having any connection with the importation of British manufactures. Let me add, that this city, *the most commercial*, in proportion to population, not only in the United States, but in the world,—(witness the amount of duties on imports the last year, amount-

ing to \$4,400,000, or \$100 to each individual inhabitant—and other views, more conclusive, may be given)—this city is, at this moment, as prosperous as at any period whatever. Let me also add, for the satisfaction of your correspondent 'T,' that no sensible addition has been made to the specie of our banks, from its lowest depression in June; the present return to the governor and council, made up to the 6th inst. giving an aggregate of \$517,000 against \$430,000, on the first Monday in June. Perhaps it will astonish 'T' to be informed that the *daily* business, transacted at these same banks, will exceed the smallest of these sums. I have extended this communication so far, that I have no time to apply the view, now taken, to the question at issue between 'T' and myself. He must admit that, if my present views are correct, my former "*conclusion*" is correct also—and I am ready to agree that, whenever his prophecy is fulfilled, that the year 1823 will prove more disastrous than 1819, I will yield him the palm.

After all, Mr. Niles, I shall trouble you again. I have something to say on the *balance of trade*—and I suppose the profound 'Necker' will think himself neglected, if I do not give him a single word in reply to his very complimentary notice of my former communication. A MERCHANT.

Boston, January 22, 1823.

Case of Messrs. Gales and Seaton, PRINTERS TO CONGRESS.

It is indispensable to the national honor and the public safety, that the documents and papers laid before congress should be faithfully printed, as well for the information of the members who immediately act on them, as for the intelligence of the people who have to abide by the consequences of such acts. One would hardly suppose, that any person was so base as wilfully to mutilate, or knowingly alter, the meaning of such papers—for there is a meanness in the proceeding so derogatory to the character of man, that we revolt at the idea of it. Still it is true, that a short time anterior to the late war, and for sometime after its commencement, several of the most important public documents were wretchedly *mangled*, and their *meaning* entirely changed by some publishers in the East, pretending to lay before their readers such documents *in extenso*, that they might judge the conduct of the general government. It was *only* by accident, in my attention to such matters, that I discovered four or five flagrant instances of the nature just stated—one case, I well recollect, contained a *new made* paragraph, on which the point of the whole paper was caused to depend—but I did not view the proceeding, at that time, in the light that I now do, and a thousand times since have repented that I did not specially point out such abominable impositions on a portion of the people of the United States, to lead them to rally round the "*freedom striped flag*," afterwards hoisted. But yet, I have thought that the house of representatives took up the subject in a wrong way—An *anonymous* charge has been made against Messrs Gales and Seaton—they ought to have ascertained its truth, if they thought it necessary, and *then* have appealed to the house for their own justification. What is the precedent established? If the house will thus take up the affair of *their* printers, they must, in like manner, consider all charges that may be preferred against any other of their officers, the clerk or his clerks, the sergeant at arms, the doorkeeper and the deputy door keeper, &c. and especially every

imputation that may be made against the character of one of *their own members*. Some of these are broadly called tools, others are designated as knaves—unjustly I hope, in all cases; but is congress to appoint committees to investigate any and every thing that may thus be preferred?—if so, there would hardly be time for any thing else, and witnesses might be dragged a thousand or fifteen hundred times to give testimony on cases that ought to be rectified through the press. All of our presidents and secretaries and highest public functionaries, have been and are subject to such imputations—will the house of representatives agree to “send for persons and papers” in respect to either of them, in virtue of *anonymous* accusations! Why then, in the case of the printers?

No one will blame Messrs Gales and Seaton for the feeling that they shewed on this occasion. Their zeal to exonerate themselves was essentially connected with a knowledge of *their own* honesty in the matter stated. Admitting, for the sake of the argument only, that they were totally destitute of moral principle—how is it possible to believe that they would sacrifice their great private business and valuable public employment to so pitiful an affair as this? It is impossible to suppose it, even on the proposition stated—for, if this thing had been wilfully done by them and for the *reason* insinuated, they would have sunk to the level of the lowest dregs of creation, and have become objects for “scorn to point her slow unmoving finger at.” On every account, I was satisfied that they were innocent of intent to do wrong—yet, *it was right that the fact of the omission should have been stated*, though the *motive and manner* of it may have been wrong. The result of the investigation is just what I expected that it would be—the perfect acquittal of Gales and Seaton, and the relief of the secretary of the treasury. The latter had communicated the *original* paper—it was before the house and became the property of the house; and any marks made upon it by him, *previous* to its transmission, would only have invited attention to that part—for there seems a natural curiosity in most men, nearly all men, to notice and to try to find out what other men would conceal—a propensity that cannot be blamed in a matter like the present. Yet a part, and the most material part of a letter, (if the letter was material at all), has *somehow* been omitted; and, before it came into the printers hands, was so marked that they did right in omitting—according to the testimony adduced, which appears to be conclusive on the subject. By whom the erasure was made, is yet wholly a mystery, and well justifies the committee in proposing that some member or members should be appointed to attend to the publication of documents in future. They may pass through several hands in the time of their transit from a department to the hands of the printer, and we have no idea that the latter should be made a “scape goat,” for every body. We printers have “sins of omission and commission” enough of our own; and, too often, are made, in some measure, responsible for the sins of others, in the ordinary course of our businesses.

We shall now give the report and some of the documents that accompany it—to wit, the deposition of Messrs. Gales and Seaton's foreman, the testimony of Mr. Dickens, a clerk in the treasury department, and that of the secretary himself. These may be sufficient to strengthen the report, and to shew the uncertainty that rests on the transaction, as stated in that report. We have not any private *hint* or intelligence about this thing, *pro* or

con, and, therefore, speak of it as it appears to deserve, from the face of the facts presented.

REPORT.

The committee appointed in pursuance of a resolution of the house of representatives, adopted on the 21st January, to investigate certain charges referred to in the letter of Messrs. Gales and Seaton, have attended that service, and ask leave to report:

That they have given to the subject all that consideration which the magnitude of the charge, and the reputation of those who have long been in the service of this house, and hitherto high in its confidence, seemed to require.

That, while your committee have been impressed with the importance of the charge to the reputation of the accused, they have not been ungrateful, that it involved, also, a gross violation of the rules of this house, and a contempt of its authority and dignity.

Nor have your committee omitted to notice, that the charge against Messrs. Gales and Seaton is enhanced, in importance, by imputing to them the criminal design of shielding, by the alleged omission, an important department of the government from a “just responsibility.”

To the investigation of such a subject, involving at once the confidence which this house and the nation shall repose in the information upon which it acts, the character of one of the first officers of the government, and the fidelity of the public printers, your committee have not proceeded without the most cautious inspection of the documents submitted to them, and the most solemn sanction to the testimony of the witnesses, upon which their opinion was to be founded.

The evidence taken in the case has been preserved, and is submitted entire at the conclusion of the report.

The charge against Messrs. Gales and Seaton, in regard to which they prayed this investigation, was contained in a communication printed in the Washington Republican, of the 20th of January, instant, over the signature of A. B. and was, in substance, as follows: (see document marked (A) and the paper annexed.) That, in printing the documents accompanying the report of the secretary of the treasury, of the 14th of February, 1822, in answer to a resolution of the house of representatives, calling upon him to exhibit a statement of his transactions with all those banks which had been made by him the depositories of public moneys received from the sales of public lands, that they had suppressed and totally omitted in the printed document with which they furnished the house, parts of those documents implicating Mr. CRAWFORD the most strongly.

The attention of your committee was first directed to an examination of all the original documents which accompanied the report of the secretary, above alluded to, and they find the following paragraphs, in the originals, entirely omitted in the printed documents which were furnished the house, to wit:

In a letter from Wm. R. Dickinson, cashier of the Steubenville bank, to the hon. Wm. H. Crawford, dated 3d April, 1819, and referred to in the original documents by the pencil mark, (A 5) the following paragraph is omitted.

“The difference of which you speak in your letter, of the 12th ultimo, between the sum mentioned in my letter of the 13th February, arises from the circumstance of your having extended your friendly disposition to this bank beyond what

"was dared by our board to ask. I mentioned only the debt to the branch at Pittsburg, whereas you have directed (as well as that mentioned) a transfer from the branch at Chillicothe, which debt this branch was taking measures to discharge. As soon as the transfer is made from the bank of Columbia, the entries shall be made in the books of this institution as you direct. I remark, however, in the statement which you furnish from the bank of Columbia, that "notes \$3,895" is entered, which I know nothing of, having never before heard of it."

The above extract in the original is included between lead pencil brackets; the whole is crossed with a pencil, and the words "what was dared by our bank to ask" are underscored by an ink line.

In a letter from John Sering, cashier of the Farmers and Mechanics' bank of Indiana, dated Madison, 24th August, 1820, to the secretary of the treasury, the following paragraph is included between pencil brackets, crossed by a pencil mark, and omitted in the printing.

This letter is referred to in the original documents, by a pencil mark in the margin as F. 6—"I would, however, inquire if the Mechanics' bank of Alexandria, as well as the Franklin, and Merchants' bank ought to be excepted." The words *Mechanics' bank of Alexandria*, are underscored by an ink line, and the word *out* written in pencil, in the margin, against the above extract.

In a letter, referred to in the original document, by the pencil mark, (L. 6) from Aug. Chouteau, president of the bank of Missouri, dated Saint Louis, 9th August, 1816, to the secretary of the treasury, the following words are crossed by a pencil mark; the word *out* written in pencil against them in the margin, and omitted in the printed documents.

"It is known to us, that the same money which has been received in payment, by the receiver at this place, is not identically presented for deposit at this bank."

In a letter, referred to in the original documents as (L. 5), from Leroy Pope, president of the Planters and Merchants' bank of Huntsville, dated 4th May, 1819, to the secretary of the treasury, the following paragraphs, included in pencil brackets, and crossed by a pencil, are omitted in the printed documents:—

"Your conjecture, in relation to your circular of the 11th July last, is correct; the important words, subsequent to the 30th of June last, are not contained in the copy received by us; and this circumstance satisfactorily accounts for the construction it received from the board of directors. We regret that any mistake should have occurred, but we rejoice that our decision is thus acknowledged to have been proper. Agreeably to your request, I return the copy heretofore received, and under which we have necessarily acted, and retain the correct copy accompanying your last letter."

In letter (M 5) of the original documents, from Israel Pickens, president of the bank of Tombigbee, to the secretary of the treasury, dated St. Stephens, August 18, 1819, two pages are sealed over with white paper; and omitted in the printed documents.

In regard to those parts of the letters (L. 5), (F. 6) and (L. 6) above extracted, and omitted in the printed documents, the committee are satisfied that they were thus marked by Mr. Dickens, one of the chief clerks in the department of the treasury, for the purpose of calling the attention of the secretary of the treasury to them, as containing information irrelevant to the subject matter of the call, and improper, in his opinion, to be communicated

to the public, on account of disclosures they made, or opinions they expressed, which might be injurious to the affairs of the banks or individuals to whom they alluded; and that the word *out*, in the margin of each of those three letters, was made by him as a guide to the compositor to omit them in the printing.

In reference to the matter concealed in the letter, (M. 5), by the white paper sealed over it, they feel themselves constrained to say, that it had no bearing upon the objects of the call for information, and might have been injurious to the interests of the individuals or the banks mentioned in it, had it been published at that time. They are satisfied, also, that such were the motives which induced Mr. Dickens, the clerk, to cover the pages with paper, which, he disclosed, was done by him.

The committee submit that they have been thus enabled to suggest, satisfactorily to the house, the causes which have produced the omission, in the printing of all the documents, except that of (A. 5), which they suppose to be the particular document referred to in the communication signed A. B. and, in regard to which, after an examination of all the witnesses, who were considered to be important to the investigation, and pushing the inquiries to the extent of the supposed powers of the committee, they are now obliged to confess, (and they do it with regret), that they have obtained no satisfactory information.

Had the same causes existed for the suppression of this particular paragraph, which actuated the clerk in the treasury department to mark all the others, your committee would feel no hesitation in presenting to the house the strong probability that it might have been done by that gentleman. But a recurrence to his testimony, communicated herewith, and marked (E) will satisfy the house that that probability is too much weakened to be made the ground work of the opinion of a committee of investigation.

But, whatever difficulties the committee may have encountered in ascertaining by whom the marks were made, and the paragraph suppressed, they have none in stating that the accused did not cause it. And they cannot do justice to the unanimous opinion which they have formed, from a careful consideration of all the evidence before them, without stating their strong conviction that neither Mr. Gales nor Mr. Seaton had any knowledge of, nor participation in, the suppression of the paragraph omitted in the letter marked (A. 5) or any other of the documents which were submitted to the house, in answer to the call so often attended to. In support of their opinion, upon this part of the case, your committee would refer the house to the annexed testimony of George M. Grouard, marked B; of Wm. Kerr, jr. marked C; of Mr. Burch, deputy clerk of the house, marked D; of Ashury Dickens, marked E; and of the hon. Wm. H. Crawford, marked F.

In regard to the other individual implicated in the communication attached to the letter of Messrs. Gales and Seaton, your committee do not hesitate to say, that there has not been any evidence submitted to them tending, in the slightest degree, to show that the suppression of the paragraph alluded to, was caused either by the influence of the secretary of the treasury or was done with his knowledge.

The interesting nature of the present inquiry has suggested to your committee the propriety of submitting to the house the expediency of appointing some member or members of its own body, in

every case, to superintend the publication of all documents which may hereafter be printed by order of the house.

In conclusion, your committee would beg leave to submit the following resolution, to wit:

Resolved, That the committee appointed upon the letter of Messrs. Gales and Seaton, be discharged from the further consideration of the subject referred to them.

(B)

Deposition of George M. Grouard.

I am foreman for Gales & Seaton, and have been for eight years past. I receive the documents generally through the messengers of the house. It is very rare that I receive any from Gales & Seaton. As soon as received, I number, enter them in a check book, and put them under lock and key, where they remain till they are placed in the hands of the compositors. I am persuaded no person had an inspection of these documents but myself. I noticed there were several erasures in these documents when I received them. It is my invariable practice to omit all the paragraphs erased, marked, or crossed. The marks and brackets alluded to were not made in the office. The paging was made at the office, as also the figures in the margin, to assist the compositor, and the word "out," in pencil, in the margin, was made, as I supposed, by my assistant, as an indication to the compositor to omit the paragraph against it. There was no reason for omitting the particular paragraph which did not apply to all the omissions. No hint was given me to omit the paragraph, from any person. I never knew Messrs Gales & Seaton to insert a word, or leave out a word, or wish me to insert any word, or omit any word, which was ordered to be printed or omitted. If original documents are sent to the clerk of the house, by the departments, they are sent to the office without being copied. The different departments have no particular mode of indicating what they wish to have omitted.

I do not recollect that any of the other departments have ever sent original papers with white paper pasted on any paragraph. I never read any of the passages erased in this case. I feel myself bound by the direction of any proper officers of the house, as to the mode of printing.

I have an indistinct recollection that there was some direction in the margin, to omit the passage stricken out, or marked; but that would have had no additional weight with me.

(E.)

Testimony of Asbury Dickens, clerk in the office of the secretary of the treasury.

Asbury Dickens, clerk in the office of the secretary of the treasury, testified—That all the papers in relation to banks, and the deposits of money in said banks, are in my hands. The general practice is to transmit copies when papers are called for.—When business presses, we are obliged to send the originals. When copies are made, they are made of the whole correspondence, unless there may be some things improper to be communicated. It is the general direction of the secretary, when information is called for, to give every thing that relates to the subject.

The papers, after selected, are laid before the secretary; and, in this case, he directed me to collect every thing in the office relating to the subject—they were selected, and submitted to his inspection. In this case, from the urgency of it, I took the originals and rough drafts.

Those passages which seemed to have no refer-

ence to the subject of the call, I marked with a pencil.

I have no recollection of having marked the particular passage suspected; and did not recollect there was such a passage. I only marked three passages, and them I recollect from the subject.

1st. (L. No. 6.) The three last lines but one on page 114 I marked as omitted; the reason for marking this was, that it did not, in my opinion, relate to the subject, and implicated one who had been a public officer.

2d. (L. 5.) The four last lines in page 143, erased, and five lines on the next page, I crossed them as not relating to the subject of the call; and they referred to another and distinct letter.

3d. Was a letter from Farmers and Mechanics' bank of Indiana to the secretary.

(F. 6.) I marked, to be left out, the three last lines, as implicating the credit of two banks, and as not relating to the subject of the call.

(M. 5.) The papers pasted over a part of the letter were not with a view to suppress the information; but, as it had no relation to the subject of the resolution, and was in relation to a quarrel between the bank of Tombigbee and the branch bank of the United States at Savannah, I thought it not proper to be communicated.

I now recollect the above passages, because I then thought, and I still think, the information ought not to have been communicated, and would be injurious to the parties if published.

I have no recollection of the letter (A 5), and should not have made the marks to exclude the information, because I did not think it ought to have been concealed. I see no reasons why it should be concealed.

I made the mark of the word "out," in the margin of letters (L 6), (L 5), (F. 6).

The whole of these transactions I was acquainted with at the time—the papers originally passed through my hands.

The papers remained some time before the secretary, while he was making the report, after I gave them to him, before he communicated them to the house.

The Steubenville bank was solvent at the time of deposit—the government has lost nothing by that bank—it now has deposits of public moneys and is solvent.

I never knew any mark or erasures to be made by Mr. Crawford, on papers to be communicated, after I had made such as I thought proper to make. After the report had been sent to the house, I recollect that I had omitted the reference to one of the documents which now appears in the report; and I came to the house and found the report had been read, and applied to Mr. Burch for the report and documents; he went into the house and said the report was not on the clerk's table, and he supposed some member had taken it to read; he went into the house again, and said he could not find them. While I was waiting, Mr. Cook came, with the report in his hand, and gave it to Mr. Burch, and asked for the documents. Mr. Burch handed to him a sealed packet, which was the same I had sealed at the treasury. Mr. Cook broke the seals and began to look over the papers, and said, "I suppose I may take them to my room." Burch assented, and Mr. Cook took them away. I then put in the reference (†), which now appears in the report.

FRIDAY MORNING, JAN. 24.

Mr. Dickens re examined.

The papers contained in (A 8) was a confidential communication from the bank of Steubenville,

of the state of the bank, which is made once a month by each bank, in which the private affairs were stated, and agreed by the secretary to be confidential.

The hand writing on (A 5) in red ink, is mine. I do not know when made, but I think it was made when the subsequent letter of 1st May was received, in relation to Brownville and Mount Pleasant banks. The letter of 1st May is not communicated, as will be seen by the printed documents.

(B. 1) The red ink is in my own hand writing, and was made at the time the correspondence was prepared for the house.

I made the brackets in (F 6), and made the red ink brackets in (B 1). I have not seen the papers since they were communicated to the house until yesterday, with the exception of seeing them in the presence of Mr. Burch & Mr. Cook. I never had any conversation with Messrs Gales & Seaton, or any person in their employment, in reference to the suppression of parts of papers in the printing.

I think the secretary would, if particularly requested, communicate these monthly statements of the banks to the house.

I cannot say that I did not make the marks upon the letter (A 5,) but I gave yesterday the reasons why I think I did not.

There never have been any documents transmitted from the treasury, which were marked as not to be printed, before this time.

I should think the marks I made a sufficient direction to the compositor not to print the parts included between them; and I think that, if the secretary should have been of opinion, that what I had marked ought to be printed, he would have erased my marks.

The secretary and myself had no particular consultation on the subject of these papers.

The paragraph in (A 5) does relate to the subject more than many others, and, I think, ought to have been communicated, though unimportant.

Saturday Morning, Jan. 25.

Mr. Dickens repeats the impression that he did not mark the paragraph in (A 5). It was not his intention to mark it, and he thinks he did not.

The word "out" was written by him upon all the three letters in his first evidence particularly mentioned.

When the correspondence with these banks was received, I filed away the whole of it.

I do remember having referred to (A 5) after it was received, and before it was communicated, for the purpose of making the reference which now appears upon it in red ink.

Many documents remain without being filed away in the office for some time after they are received.

When the call was made, I looked over all the letters, filed and unfiled, relating to the subject.

Since the first call, I do not recollect having found any additional letters, relating to this subject.

The documents communicated under the second call, were not laid before the secretary on the first call.

In the letter (A. 2.) although there is a paper pasted over a part of the original memorandum, yet the letter was communicated as it was originally sent to the cashier of the bank of Steubenville.

(F)

Testimony of the hon. Wm. H. Crawford.

I made no marks of any kind upon these papers, and I know of no practice in the office, which has ever authorized the marking of parts of original letters, in order that they may not be printed. No

such practice has prevailed, within my knowledge. I have no recollection that any marks were made upon these papers; but have an indistinct recollection that Mr. Dickens stated something to me, in relation to the correspondence with the bank of Missouri, which affected the receiver at that place. I gave no instructions to Mr. Dickens to mark any part of these papers, nor have I ever given him a general direction to mark any particular passages. There might have been marks and erasures in the documents submitted to me by Mr. Dickens, which escaped my notice, as my attention was more particularly directed to the contracts than the correspondence. In framing the report, my attention was not particularly attracted to the correspondence, as it contained nothing important for that purpose; the material facts being comprehended in the contracts and the statement furnished from the books kept by Mr. Dickens, which shewed the amount deposited in those banks, and the sum paid by them. I have no recollection of the letter pasted over.

There is nothing in the paragraph suppressed, which I should have wished to be withheld from the house. If I then knew that any part of the correspondence had been marked, I do not now recollect it. I never sanctioned the omission of any part of the correspondence. Mr. Dickens is not the chief clerk. Mr. Jones is the chief clerk, and calls for records or files of the office are generally referred to him, with directions to examine and collect all that are embraced by such calls; but in this case, I think Mr. Dickens was the person to whom the reference was made.

I never had any communication, direct or indirect, with Gales & Seaton, as to the manner in which they discharged their official duty, in this or any other case.

It is usual, when resolutions require information which the records or files of the office afford, to send copies; but when there is a press of business, the originals are some times sent, as in the present case.

The difference in the sum mentioned by the cashier of the bank of Steubenville, and that in my letter of the 12th March, 1819, may be explained by referring to the original draft of that letter, now in possession of the committee. Owing to some differences with the officers of the United States branch bank at Pittsburg, the cashier, in his letter of the 13th February, 1819, requested that the sum of \$24,568 51, then in the possession of the branch bank, might be considered as due directly to the treasury, and that it might not be collected through that office. The original draft of the letter, in the possession of the committee, directs that sum to be credited to the treasurer, on the book of the bank. Just before the date of that letter, the whole of the special deposit had been transferred to the bank of Columbia. When my letter was carried out to be copied, Mr. Dickens, who keeps the bank accounts, came to me and stated that there was about \$18,650 44 of the notes of the bank of Steubenville in the possession of the branch bank at Chillicothe, and which had been also transferred to the bank of Columbia, and proposed that the same direction should be given as to that sum, which I assented to, and directed my letter to be modified accordingly. The original letter, thus modified, was retained as a copy, and sent to the house with the report. This is the circumstance which produced the paragraph in the letter of the cashier, which was omitted in the printing of the letter, and which omission is now the subject of investigation.

The Proposed Tariff.

We have thought that our readers would be gratified in having a statement of what would be the operation and effect of the bill for the modification of the tariff of duties on imports, now pending in the house of representatives. The two following statements, prepared by different members, have been submitted to the house of representatives. We publish both the statements, that our readers may have an entire view of the subject.—*Nat. Int.*

Statement submitted by Mr. Tod.

Comparative statement of present duties, and those proposed, in the bill before the house of representatives—No. 222.

	Present duties.	Proposed duties.	Rate of additional duty
Manufactures of wool,	25 p. c. ad v.	30 p. c. ad v. minimum price of 80 cts p. sq. yd.	1-6th.
Do. cotton,	25 p. c. & minimum of 25 cts. p. sq. yd.	25 p. c. an additional minimum, of 35 cts. p. sq. yd.	2-3ds.
Do. silk,	15 per cent.	15 p. c. and minimum of 25 cts. p. sq. yd.	2-3ds.
Do. flax,	15 per cent.	25 p. c. and same minimum.	1-4th
Do. hemp,	20 per cent.	25 p. c. and same minimum.	1-4th
Printing types, cutters, pios, needles, buttons, moulds, japanned wares, fire arms, &c. and all manufactures, not specified, made of brass, iron, steel, pewter, lead or tin,	20 per cent.	25 per cent.	1-4th
Leghorn and silk hats,	30 per cent.	40 p. c. and minimum price of one dollar each,	1-3d.
Lead, in pigs, bars, and sheets,	1 ct.	2 cts.	double.
—, Shot,	2 cts.	3 cts.	1-2.
Do. red and white,	3 cts.	4 cts.	1-3d.
H mp,	1 1-2 cts.	2 1-4 cts.	1-2.
Tarred cables & cordage, Untarred cordage, yarns, twine, pack thread and seines,	3 cts.	4 cts.	1-3d.
Oil, linseed & hempseed,	4 cts.	5 cts.	1-4th.
Wool,	15 p. c. ad v.	25 cts. per gall.	
Copperas, cut,	100 cts.	200 cts.	double.
Iron, in bars or bolts, not rolled,	75 cts.	100 cts.	1-3d.
Do. round or braziers' rods, of 3-16ths to 8-16ths inch diameter,	150 cts.	300 cts.	double.
Do. slit, in nail or spike rods,	250 cts.	300 cts.	1-5th.
Do. sheets or hoops,	250 cts.	300 cts.	1-5th.
Do. spikes, lb,	3 cts.	3 cts.	
Do. nails,	4 cts.	5 cts.	1-4th.
Iron or steel wire, not exceeding No. 18,	5 cts.	5 cts.	
Do. exceeding No. 18,	9 cts.	9 cts.	
Blough plates and share moulds,	20 p. c. ad v.	1 1-2 cts.	
Anvils,	20 do.	2 cts.*	
Spades and shovels doc.	20 do.	250 cts.	
Screws, of iron or brass, exceeding 25 to lb,	20 do.	15 cts.	
Wood screws, not exceeding 1 inch, grocc.	20 do.	8 cts.	
Do. not exceeding 2 inch,	20 do.	14 cts.	
Do. exceeding 2 inches,	20 do.	20 cts.	
Glass, flint, cut,	30 cts,	6 cts. p. lb. and 20 p. c. ad v.	
Do. do. uncut,	20 cts.	6 cts. p. do. and 20 do.	
Do. window, above 8 by 10 sq. feet,	280 cts.	300 cts.	1-5th
Do. do. 10 by 12,	275 cts.	375 cts.	10-55ths.
Do. do. above 10 by 12,	325 cts.	375 cts.	10-65ths.
Do. black bottles, grocc.	44 cts.	200 cts.	3-8ths.
Do. all other articles, lb.	30 p. c. ad v.	5 cts.	
Duck, Russia, piece,	200 cts.	200 cts.	
Do Ravens,	125 cts.	125 cts.	
Do. Holland,	250 cts.	250 cts.	
Paper, printing, lb,	30 p. c. ad v.	8 cts.	
Do. wrapping & colored,	do.	6 cts.	
Do. writing,	do.	12 cts.	
Do. sugar loaf	do.	4 cts.	
Do. letter or folio post	do.	15 cts.	
Do. book-binders' band box and sheathing	3 p. c. ad v.	3 cts.	
Do. hangings printed	do.	15 cts.	
Do. all other	do.	6 cts.	

Statement submitted by Mr. Cambreleng.

An estimate of duties on certain articles, as proposed in the bill reported by the committee of manufactures, and a comparison with existing duties.

Manufactures of wool, 30 per cent.—minimum valuation of 80 cents per square yard.

This would operate heavily on plains and other coarse woollens, of about 24 inches in width, and which cost 8d. to 18d. sterling per running yard.—Take, for example, the most inferior, cost 8d. equal to 12d. per square yard. or cents 32 22.100
Add shipping charges, 1 11.100

Custom-house addition of 10 per cent. 2 33.100
cents, 25 66.100

It is proposed to estimate this square yard at 80 cents, and to charge a duty of 30 per cent on that valuation, making 24 cents on 25 2 3, or pr. ct. 93 53.100

The existing duty is 25 per cent. on 25 2 3 cents, making 6 41 100 cents, instead of 24 cents, as proposed.

The proposed duty on plains, of the best quality, which cost 18d. per running yard, would be, according to the same calculation, pr. ct. 41 56.100

While fine cloths, &c. would pay but 30 per ct. Colored printed calicoes, cost 15s. to 20s. sterling per piece of 28 running yards.

Take the inferior, cost 15s.; off drawback of exercise, 4s. 10d. leaves 10s. 2d. for 28 yards, or 43d. per running yard; being 7 22.100d. per square yard, or cents 13 37.100
Add charges, 63

Custom-house 10 per cent. 14
cents 15 40.100

It is proposed to estimate this square yard at 35 cents, and to charge a duty of 25 per cent. making 8 3 4 cents, or pr ct. 56 82.100

The existing duty is 25 per centum on a valuation of 25 cents, making 6 1/4 cents, or per cent. 40 58.100

Calicoes, which cost 20s. sterling, now pay, per cent. 27 6.100

The same, at the proposed valuation of 35 cents the square yard, would pay, p. c. 37 89.100

Fine cotton goods would pay but 25 per cent.—The existing minimum valuation of 25 cents the square yard on cotton goods, makes the duty on inferior white goods prohibitory.

On silks, various bounties are allowed in England, which it is now proposed to add to the duty of 26 per cent.

On manufactures of flax and hemp; osnaburgs, of inferior quality, cost, per running yard of 25 to 26 inches width, 6d.

Deduct bounty 1 1/2
4 1/2

Equal to 6d. 35.100 per square yard, or 11 75.100
Charges 60

Custom-house 10 per cent. 12 35.100
cents 13 60.100

It is proposed to value this square yard at 25 cents and to charge a duty thereon of 25 per cent.

Making	cents	6 25.100
It is also proposed to add to the amount of the bounty $1\frac{1}{2}$ d. sterling, the running yard, or 2d. 12.100 per square yard		3 93.100
	cents	10 18.100

Making 10 18.100 cents duty on 13 60 100 cents, or ad valorem 74 85.100

Should the section adding the bounty to the duty be stricken out of the bill, the ad valorem duty proposed, would still be 45 96 100

This article now pays 15 per cent. ad valorem, or about 2 cents per square yard, instead of 10 18.100 cents, as is proposed.

Brown linens, or hollands, bed tickings, twilled sacking, Silesian linens, &c. without adding the bounty, would pay 35 to 42 per cent.

Fine linens would pay but 25 per centum.

Linseed oil pays a duty of 15 per centum ad valorem; equal to 10 cents per gallon. It is proposed to increase the duty to 25 cents the gallon.

Glass ware, plain, now pays 20 per cent. ad valorem; 4 common tumblers, weighing 1 lb. cost, after deducting drawback, bounty and discount, 8 88.100 cents, including charges, and 10 per cent. custom-house addition.

It is proposed to charge 20 per centum ad valorem on this 8 88.100 cents, making 1 78.100
And a specific duty of 6

cents 7 78.100

Making 7 78.100 cents, on 8 88.100, or ad valorem *87 61.100

Inferior cut tumblers, weighing 37 lbs. to the hundred, cost, after deducting drawback of excise, &c. and adding charges, and 10 per centum custom-house addition, per 100 \$6 44

It is proposed to charge an ad valorem duty of 20 per cent. \$1 29

And a specific duty of 9 cents per pound on 37 lbs. 2 22

\$3 51

Making \$3 51 duty on \$6 44, or 54 $\frac{1}{2}$ per cent. 100 elegant cut glass tumblers, weighing 50 lbs. deducting drawback of excise, &c. and adding charges and custom house 10 per cent. cost \$42 05

Proposed duty of 20 cent. 8 39
Do. specific, 6 cents per lb. on 50 lbs. 3 00

\$11 59

Making a fraction less than 27 per cent. The existing duty is 30 per cent. ad valorem.

Seventeenth Congress—2nd session.

IN THE SENATE.

January 30. Mr. Dickerson offered a substitute for the resolution offered by Mr. Taylor, of Va to amend the constitution of the United States as it regards the election of president. [As we have no

*Should the bounty, as proposed, be added to the duty, the bounty being 5 cents per pound, the duty on plain tumblers, per lb. would be 12 78.100 cents on 8 88.100, or 143 92.100 per cent.

present prospect of any thing being done in this matter just now, we shall at least defer the insertion of this substitute, which occupies a considerable space.]

The bill to erect a monument over the tomb of the late vice president Gerry, was passed, and sent to the other house for concurrence.

The greater part of the day was spent in the consideration of matters regarding the public lands and land claims in the state of Louisiana—no matter of importance decidedly acted on.

January 31. Mr. Smith, of Maryland, agreeably to notice, asked and obtained leave, and introduced a bill making an appropriation, (of \$100,000 a year, for ten years), for the gradual armament of the new fortresses of the United States; which bill was twice read and referred.

Mr. Chandler submitted the following resolution for consideration:

Resolved, That the president of the United States be requested to cause to be laid before the senate a statement of the number and size of cannon, mortars and howitzers, necessary for the armament of the fortresses of the United States, which have been erected since the first day of June, 1815, as well as those which have been directed to be built and not yet completed, with an estimate of the sum necessary to defray the expense of purchasing such armament; also, an estimate of the sum necessary for purchasing such a quantity of shot and shells, of every description, as may be thought necessary for the fortresses before mentioned, designating the necessary armament for each fortress.

Several petitions of a private nature were presented and referred; and,

At an early hour, the senate went into the consideration of executive business and continued with closed doors until 3 o'clock; when

The senate adjourned to Monday.

February 3. Several communications were received—notice given of several resolutions that would be offered—some bills taken up and partially disposed of—the bill to regulate the entry of merchandise discussed, and that which provided for the accommodation of the circuit court, for the district of Columbia, in the city hall of Washington, ordered to be engrossed and read a third time.

February 4. The bill to provide for the accommodation of the circuit court of the district of Columbia was passed—ayes 21.

The resolution offered yesterday by Mr. Smith, of Maryland, to legalize the silver coins of Mexico, was taken up and agreed to.

Mr. Van Dyke, from the select committee to which was referred the bill, together with the substitutes proposed thereto, for abolishing imprisonment for debt, reported a new bill, embracing a number of sections; which bill was read.

The bill to divide the state of South Carolina into two judicial districts, was, after being amended, ordered to a third reading.

That for the relief of George Shannon, being refused a third reading, was as rejected.

Several matters about land and land claims occupied the rest of this day.

February 5. The bill to divide the state of South Carolina into two judicial districts, (with others of a private or local nature), were severally read the third time, passed, and sent to the house of representatives for concurrence.

The senate resumed the consideration of the bill from the other house, to make perpetual an act passed the 3d of March, 1817, entitled "an act to continue in force an act "further to provide for the collection of duties on imports and tonnage, passed the 3d of March, 1815, and for other purposes."

On this bill a debate arose, which occupied the remainder of the day's session.

It was, finally, on the motion of Mr. Van Buren, postponed to Monday next. Adjourned.

HOUSE OF REPRESENTATIVES.

Thursday, Jan. 30. The house met this day at 11 o'clock, pursuant to the resolve of yesterday.

Mr. Harvey, from the committee, made a report unfavorable to an appropriation for the erection of fortifications on Key West, on Thompson's Island—read and laid on the table.

Mr. Dwight reported in the case of Gales & Seaton—see page 358. The report was laid on the table.

Mr. Jennings submitted the following resolutions; which were ordered to be printed:

Resolved, That the secretary of the treasury lay before this house a statement, shewing the description and character of the collateral security obtained, in the year 1821, for 168,453 dollars, deposited in the bank of Vincennes, at the time of its failure; and whether such collateral security consisted in liens on real property, or in public or personal securities; if in liens on real property, the value of such property at the time of its acquirement, and what sum of money it will probably yield to the treasury, if sold on a credit of one, two, and three years; the present situation of the title to such real property; and all communications to and from the said secretary in relation to such liens; if in public securities, whether an assignment of the state debt of Indiana to the bank of Vincennes was not taken without any correspondence with any officer or agent of the state government; and, if so, whether such assignment has been cancelled; the time when, and by whom; and if not cancelled whether the United States be in a right of property in any portion of the state debt aforesaid which may remain unliquidated, and communications to and from said secretary, in relation to such assignment.

Resolved, That the secretary of the treasury inform this house whether the bank of Vincennes complied with its agreement with the treasury department to furnish quarterly a list of its debtors, and the amount owing by each; and, if so, the amounts owing to the said bank by Charles Smith's steam-mill company, upon each rendition of the quarterly lists aforesaid.

Resolved, That the secretary of the treasury inform this house whether or not any draft or drafts have been drawn upon said bank of Vincennes, under the direction of the treasury department, since the date of the letter of the secretary of the treasury to said bank, dated the 7th of July, 1820; and, if so, under what item of appropriation, in whose favor, the date of such draft or drafts, and the object for which the same were drawn. [Agreed to next day.]

The Speaker laid before the house a letter from the secretary of state, transmitting 1500 copies of the "digest of manufactures," prepared in obedience to a resolution directing the taking the census of the United States for the year 1820; which letter was read and ordered to lie on the table.

Friday, Jan. 31. On motion of Mr. Lathrop, of Mass it was,

Resolved, That the committee on ways and means be instructed to inquire into the expediency of enlarging the terms on which the commissioners on the sinking fund, under 5th section of the act passed March 3d, 1817, entitled "an act to provide for the redemption of the public debt," may purchase that portion of the public debt which will become reimbursable on the 1st day of January, 1825.

Mr. Wright moved that the daily hour of meeting of this house be twelve o'clock, instead of eleven, as recently agreed upon; which motion was decided affirmatively—ayes 75, noes 39.

The future meeting of the house will be at 12 o'clock. M. until further order thereon.

After other business, the house resolved itself into a committee of the whole, and took up the bill for the more effectual protection of domestic manufactures—

Messrs Cook and Mallory, decidedly supported, and Mr. Rhea opposed the bill—Mr. Baylies opposed the striking out of the first section, but was also opposed to some of its items.

The committee then rose and the Speaker communicated a letter from the comptroller of the treasury, transmitting a list of balances standing on the books of the fourth auditor of the treasury, which have remained unsettled, or appear to have been due more than three years prior to the 30th September last; which was read and ordered to lie on the table. And the house adjourned.

Monday, Feb. 3. This being "petition day," upwards of 40 memorials and petitions were presented.

A memorial was presented by Mr. Condict, of New Jersey, signed by many respectable citizens of that state, shewing the injurious consequences resulting from the importation of so great an amount of foreign goods, by paralyzing the industry of the nation, and draining the country of its precious metals, and praying for an increase of duties upon such articles as they believe can be furnished upon reasonable terms by our own manufacturers.

After stating briefly the leading objects in the memorial—

Mr. Condict proceeded to remark, that it was similar to some others formerly presented by him, and which, on his motion, had been referred to a committee of the whole house on the state of the union.

Upon further consideration, said Mr. C. I am induced to ask the house, to give another direction to a particular paragraph in the memorial, which suggested an increased duty on imported spirituous liquors, and an internal duty, or excise, upon domestic spirit.

I have long entertained the opinion, said Mr. C. that it would comport with sound policy, and the best interests of our country, to levy and collect a much larger portion of its revenue upon liquors consumed at home. And nothing prevented me from calling the attention of congress to this important subject during the last session, but the extreme reluctance which I have felt, and which many of my friends here have expressed, to the appointment of so many officers as would be required to carry a system of excise into effect.

In the committee of manufactures, of which I am a member, some conversation was had on this subject: but, considering it to be a question of revenue principally, it was thought by us to belong to another committee, and is not embraced in the bill, which is now under examination before this body. But, inasmuch as the subject is distinctly presented to us in this memorial, by a class of men, second to none for their respectability in society, their intelligence, their morals and devotion to their country, I deem it to be my duty, to solicit the serious attention of the house, and to give to the subject that deliberate examination, which it demands.

It is important in a financial, but much more so in a moral view. I have not before me, at this moment, any documents, shewing the quantity consumed annually, nor is it of any importance for the purpose of my argument to ascertain, precisely, the number of gallons. A duty of 25 cents per gallon, on the spirituous liquors consumed in the United States, would yield to the treasury an annual revenue, say, of 6 or 8 millions of dollars. A sum which, if faithfully applied, would rapidly extinguish the national debt; or which would be sufficient, in a few years, if economically applied to internal improvement, to connect the various sections of this extensive empire, by navigable canals and good roads.

"And upon whom would this tax fall? Invariably upon the consumer of the liquor. He could never carry the bowl to his mouth, without first 'casting his mite into the treasury.'"

Should it be objected, that the imposition of such a duty would lessen the consumption of the article, and that the treasury would derive but a limited sum from this source—I reply, God grant it may be the case, and I would then double the duty.

What is the crying sin, the besetting and the besotting sin of our country, which sinks us in our own estimation, and the estimation of the civilized world? What is it that degrades and debases man,

below the level of the brute—that unfits him for the duties of social and domestic life? What is it that carries strife and contention into every neighbourhood? What invades the domestic circle, banishing conjugal affection, and sundering every tie of endearment? What entails poverty and wretchedness and infamy, upon the innocent, literally visiting the iniquities of the *fathers* upon the *children*, unto the third and fourth generation? What is it that wrings the tear from the eye of disconsolate beauty, and reddens its cheek with blushes? What is it that which draws forth the midnight sigh from the lonely and broken-hearted mother, as she strives to cover her shivering infant, with her scanty rags, or stifles the cries of hunger, by the charities of her neighbour? what inflicts disease, in its most painful and loathsome shape? What bloats and deforms the human countenance, and effaces the image of the Creator from his creature? What is it that sweeps, “as with the besom of destruction,” more human victims to an untimely grave, than sword and pestilence combined? What fills your poor-house with paupers, and your hospital with invalids? What crowds your jails with criminals, and gives employment to the hang-man? It is *intemperance* in the use of spirituous liquors. And, if it be in the power of government to restrain this deluge of moral evil, and diminish the sum of human misery; if, by levying a tax, you snatch one victim from ruin, and rescue his helpless family from the depths of degradation, will you not exert the power?

And, Mr. C. asked, what measure could so *effectually* aid the productive industry, and promote the real prosperity of the country, as that which shall lessen the consumption of ardent spirit?

And who are the *consumers*? They are either the wine-bibbers, the men of wealth, who indulge in riot and luxury, and who can afford to pay, or, they are those miserable wretches, whom nakedness cannot shame; whose filth renders the kennel in which they wallow more filthy, the voluntary outcasts from society, and from whom society has a right to extort this pittance, as the only punishment which can reach them for the outrages they have committed.

There is no country where the means of intoxication are so abundant and so cheap as in our own, and the consequences are daily more apparent and more and more alarming. The rich bounties of Heaven, our precious bread stuffs and our delicious fruits, are converted into this fatal poison, disguised in a thousand forms, to allure us to destruction. It enters into every door, and the cup is presented to every lip. Whilst you tax the *tea*, the *coffee*, the *molasses*, the *sugar*, and the *salt*, used by every member of every poor family, you suffer the *whiskey*, the *gin*, and the *brandy* of the country, in their desolating progress, to blight its fairest prospects, “as with blasting and mildew.”

In every view which he could take of this question, Mr. C. said, he was led to this conclusion; that there is no fairer, or more legitimate object of taxation, than spirituous liquors; and that sound policy, good morals, and the public happiness, require that the arm of the government should be *felt*, in a tax upon the consumption of this article. And for the purpose of asking the serious attention of the house to so important a topic, he submitted this motion, *viz*:

“That so much of the New Jersey memorials, as relates to an additional duty upon imported liquors, and an excise upon domestic spirit, be referred to the committee of ways and means, with instructions to inquire and report on the expediency of

the measure. And that the residue of the said memorial be referred to a committee of the whole house on the state of the union.”

After some remarks on the subject and against the proposition of Mr. *Condict*, this memorial was referred to the committee of the whole on the state of the union—69 for, 54 against it.

The case of John H. Platt was, on the motion of Mr. *McLane*, chairman of the committee of ways and means, referred to a select committee.

Many bills were reported. Mr. *Plumer*, of New Hampshire, from the committee on the judiciary, reported a bill for the relief of Abraham Snyder, which was read twice, amended, at the suggestion of Mr. *Ruggles*, and ordered to be engrossed for a third reading to-morrow.

[This is the case of an individual confined for debt to the United States, the principal of which was only 13 dollars, but which amount was swelled, by the costs, to 140 dollars. The case is one in which the secretary of the treasury discharges from prison only on payment of costs. In this case, the individual confined is very poor, and wholly unable to pay either costs or principal].

Mr. *Cocke*, agreeably to notice, asked leave to introduce a bill by the title of “a bill to fix and equalize the pay of the officers in the army of the United States.”

[The bill proposes to provide that fixed compensations shall be given to officers, in lieu of pay, rations, forage, &c. and 12½ cents per mile, in lieu of allowances for transportation].

Leave was refused to bring in this bill, because the matter had been fully before the military committee—for the leave 55, against it 64.

The *Speaker* communicated a letter from the president of the United States, transmitting a memorial from the legislative council of the territory of Florida, on subjects interesting to the inhabitants of the territory, and, also, to the United States, requiring legislative interposition; which letter was read and ordered to lie on the table.

Also letters from the departments of state, of the treasury and war, containing various statements.

The house then, by unanimous consent, agreed to resume the bill to regulate the collection of duties on imports and tonnage, with the amendments proposed thereto in committee of the whole.

The bill was considerably discussed by Messrs. *McLane*, *McKim*, *Gorham*, *Cambre'eng*, *Ingham*, *Wright*, *Rhea*, *Tracy* and *Walworth*, &c. and a little before 5 o'clock, it was ordered to be engrossed and read a third time on Wednesday.

Tuesday, Feb. 3. After some other business—Mr. *Chambers*, of O. having made a good speech on the subject, proposed that the regular hour of meeting should be eleven, instead of twelve o'clock, each day. This was opposed because of the great quantity of business before the numerous committees, and the motion was laid on the table—ayes 94, noes 64.

The speaker, after laying before the house sundry other communications, presented the following message from the president of the U. States.

To the house of representatives of the United States:

In compliance with the resolution of the house of representatives, of the 12th December last, requesting the president to communicate to the house such information as he might possess with regard to any expedition prepared in the United States, and having sailed from thence within the year 1822, against the territory or dependency of any power in amity with the United States; and to inform the house whether any measures had been

taken to bring to condign punishment persons who have been concerned in such expedition, contrary to the laws;" I transmit to the house reports from the secretaries of state and of the treasury, with the documents mentioned in each. Those documents contain all the information in possession of the executive, relating to the subject of the resolution.

That a force, of a very limited extent, has been equipped in the ports of the United States, and sailed from thence for the purpose described in the resolution, is manifest from the documents now communicated; the reports from the collectors of Philadelphia and New York, will shew in what manner this equipment escaped their notice.

The first information of this equipment was received from St. Bartholomews, the place of its rendezvous. This was confirmed afterwards, from Curacao, with an account of its failure. Should any of the persons return within the jurisdiction of the United States, care will be taken that the laws, applicable to such offences, are duly enforced against them. Whether any aid was afforded by others to the parties engaged in this unlawful and contemptible adventure, in the ports in which it was planned, inconsistent with ordinary commercial transactions, and contrary to the laws of the United States, will be referred to the attorney general, on whose advice any measures in regard to them will depend.

February 4.

JAMES MONROE.

The message and documents were ordered to lie on the table.

Mr. Breckenridge, of Kentucky, submitted for consideration the following resolution:

Resolved, That the committee on military affairs be instructed to report a bill to establish a national armory on the western waters.

The resolution having been read—

Mr. B. supported his proposition in a speech of considerable length and with much zeal, shewing the importance of the resolution submitted. There was some debate on the subject—but the time having arrived when the rule in regard to original propositions had expired, the further discussion was postponed, on the motion of Mr. Todd, and the house resolved itself into a committee of the whole on the bill for the encouragement of domestic manufactures.

Mr. Duffee avowed himself averse to any considerable augmentation of the duties, yet was not in favor of rejecting the bill—he wished it made more perfect by its friends; Mr. Forward replied to Mr. D. and generally supported the bill. Mr. Gorham opposed it, and the committee rose about 5 o'clock.

Wednesday, Feb. 5. After some other business, of no immediate importance, but which shall be noticed in its progress—

Mr. Campbell, of Ohio, offered the following resolution:

Resolved, That a committee be appointed to ascertain by whom the suppression of the paragraph, in the letter of William B. Dickson, cashier of the bank of Steubenville, to the secretary of the treasury, dated the 3d day of April, 1819, and by him communicated to this house at the last session, was caused, with leave to sit during the sessions, and with power to send for persons and papers.

Mr. Campbell stated the reasons which induced him to submit this proposition.

Mr. Cook, in vindicating himself from supposed imputations, did not oppose the resolution, but concluded by moving the following amendment to it:

"And that the said committee be instructed to prepare and report to this house a digest of the evidence, if any such there be, shewing whether incurrent or depreciated bank notes were taken in lieu of cash, from any of the banks, in which the public moneys were deposited. Whether the public moneys have not been discontinued to be deposited in, branches of the United

States' bank, and placed in certain local banks, situated in the same towns or neighborhood, without complying with the directions of the law on that subject; and whether such transfers have not resulted in loss to the government; whether the public money has not been loaned to those banks, in which standing deposits were made, under the name of deposits; and whether such loans or deposits have not resulted in loss to the government; whether security was not neglected to be taken in some one or more instances for the punctuality of one or more banks, which proposed to give such security, and whether such failure has not resulted in loss to the government."

Mr. Campbell accepted as a part of his motion the amendment proposed by Mr. Cook.

On the above resolution there arose an animated debate, which excited a lively interest, involving some delicate questions, and being in its nature somewhat personal. The house adjourned.

THURSDAY'S PROCEEDINGS—FEB. 6.

In the senate—The president communicated to the senate the annual report of the commissioners of the sinking fund; which was read.

After some other business, of no importance now—The senate went into the consideration of executive business; after which they adjourned.

In the house of representatives—Mr. Rochester, from the select committee, appointed on the subject of the currency of the United States, made a report, accompanied by a bill making the gold coins of Great Britain, France, Portugal and Spain, receivable in payment on account of public lands; which was read twice and committed.

Mr. Cooke offered the following resolution, which was adopted.

Resolved, That the president be requested to communicate to this house a statement showing particularly whether the money appropriated for fortifications in the years 1820, 1821, and 1822, has been expended on the several fortifications, as required by law; whether the money applicable to one fortification has been transferred and expended on another; if so, by what authority.

The unfinished business of yesterday, being the resolution moved by Mr. Campbell, of Ohio, as amended on the suggestion of Mr. Cook, of Illinois, was taken up—

And the debate was resumed upon the general subject, which lasted until half past 4 o'clock.

Finally, the question was taken on agreeing to the resolution, and it was determined in the affirmative, 107 votes to 23.

The speaker laid before the house a letter from the secretary of war, transmitting statements, shewing all the contracts, which were made by the war department, in the year 1822; a letter from the secretary of the navy, transmitting the annual statements of the appropriations and expenditures for the naval service, for the year 1822, shewing the expenditures under each head, since the 1st January, 1822, and the unexpanded balances of appropriations, on the 1st day of February, 1823; and a report of the secretary of state, of the clerks employed in his department, in the year 1822, with the compensation of each; which were severally ordered to lie on the table. Adjourned.

CHRONICLE.

The U. S. brig *Spark* was lately left at Havana—she had lost lieuts. Nicholson and Newcomb, purser Fanning, midshipman Whattle, and Mr. Davis, captain's clerk, by the fever, since she left home.

U. S. Naval Fraternal association—officers elected at the session, held in Washington, for the present year: Captain Jacob Jones, president, vice Shaw, resigned; lieutenant col. A. Henderson, vice president; purser S. Butler, treasurer, and purser G. S. Wise, secretary.

Marriage. A daughter of Mr. Thompson, secretary of the navy, to M. de Bresson, secretary to the legation of France.

Rhode Island. N. R. Knight has been re-elected a senator from the state of Rhode Island, for six years from the 4th of March next. The opposing candidate was Elisha R. Potter, a federalist. There were two ballotings previous to a choice. 1st, Knight 39, Potter, 37, scattering 3; 2d, Knight 40, Potter 39.

Maine. John Chandler is re-elected a senator of the United States, from the state of Maine, for six years from the 3d day of March next, on which day his present time of service will have expired.

New-Orleans. From a paper of that city.—Noon, this day, [the 20th of December], accomplishes the 19th revolving year, since the flag of the United States replaced those of France and Spain in Louisiana. On such a day we may well look to what we have been, what we are, and what we shall be. To speak with candor of the old Spanish government, we may say that its despotic sway was hardly ever felt on the banks of the Mississippi—and there then reigned among the Louisianians an equality, in the endearing ties of social life, which we in vain look for at the present day. The country, it is true, was buried in a torpid calm, and her sons seemed unconscious of the advantages held out to them by God and nature.

The cession took place—thousands flocked to this modern Sidon, and property, of every kind, more than quadrupled in value. The old colonists found themselves, as it were, transported into a new world, where the love of gain was the ruling passion, morning, noon and night—pride stalked in, hand and hand, with avarice—national partialities mingled with religious differences—and too many of our fellow-citizens now find themselves, perhaps, mere sojourners in a strange land.

New-Orleans, notwithstanding, has improved wonderfully; her population in the proportion of five to one; her police, comparatively, as system to no system; her trade, from a few ships to a thousand; her exports, from zero to \$20,000,000 in value. She now, with her suburbs, extends nearly four miles along the river, and counts 50,000 inhabitants during the fall, winter and spring; whereas, before the cession, her population was but 8000, and the town covered a narrow strip about three fourths of a mile in length.—These advantages accrue partly through the unrivalled position of this city, and partly through the nature of our political and social institutions. The latter powerfully excite the master-passions of ambition and emulation, which in some shape or other reside in every breast. To the former we are indebted for what might prove a monopoly of the trade of ten states of the union, rich in the productions of their soil, and equal in extent, and by and by, in population, to many of the countries in Europe.

Behold our present condition. To contemplate what we may be, the stretch of the mind is infinitely greater; we must follow the progress of steam navigation to the foot of the falls of St. Anthony—to the Yellow Stone, and to the great lakes. We must calculate the riches likely to be reaped from the trade of the multitudes peopling the North West; and then we turn to the left with hopes no less aspiring.

Placed comparatively near the *debouchment* of all the great streams, but one which water the internal provinces of Mexico, New Orleans seems destined to serve as their store-house, from whence will issue, by every mode of conveyance, all the mer-

chandise which millions may want for luxury or use. The Arkansas and Red rivers can be made to bear steam boats to the foot of the dividing ridge of the chain of mountains in which heals the Rio Grande of California, and thus will be opened to us the rich provinces in the North West of Mexico; whilst to the south, caravans of mules, by land, and numerous small vessels by sea are employed in a trade mutually benificial. If we are true to ourselves, and act with spirit and liberality, it is believed there can be but little cause for apprehension as to the competition of other nations in the trade of Mexico. The actual condition of that country is such that it is nearly impossible to dispose of without loss, the cargo of any large vessel arriving from Europe, in either of the two or three ports in the gulf.

This is the state of things at present, and there is no prospect of any material alteration for many years to come. It therefore, follows that the merchant at New Orleans, who can expedite, at any moment, a small vessel, with a cargo which he is certain of disposing of without delay, must always have the advantage, as he runs little risk and his quick returns on his venture.

Loss of the United States frigate Chesapeake by bad gunpowder. From the Boston Patriot, January 29.—The facts set forth in the following petition, which has been presented to our legislature, shew the inefficacy of the existing law regulating the inspection of gunpowder in this commonwealth, and call loudly upon our legislature for its repeal.

To the honorable the senate and house of representatives of the commonwealth of Massachusetts, in general court assembled:

I beg leave, respectfully, to submit to your consideration a leading fact, showing how very important, in a national point of view, is the repeal of the gunpowder inspection law of Massachusetts.

The capture of the United States' frigate Chesapeake, during the late war, is due altogether to the inspection law of Massachusetts. From a source in which I have the fullest confidence, I have been informed that, of the eleven shot which had struck the hull of the Shannon under the water-line, not more than two or three had gone through her bottom.—Had her powder been good, the whole eleven shot would undoubtedly have gone through and the Shannon must have sunk.

And why was the powder of the Chesapeake bad? On this point, allow me to state a fact, which I have also from an unquestionable source. Soon after the capture of the Chesapeake, commodore Stewart went out to Tuft's magazine, to try some powder which he was purchasing for the U. States frigate Constitution; and then tried some of the very lots of which the Chesapeake had a part. These lots had passed the inspection law of Massachusetts, which then required, as it now does, the ball to be thrown 75 yards. It was undoubtedly on the faith of that law, on the faith of the reputation of the inspection laws of this commonwealth, that the gallant Lawrence ventured to trust to this powder, without trying it himself. Judge then of Stewart's astonishment, of his indignation, when he found that some of these lots threw the ball only 12, 19, 30, and 60 yards!!

For these and other weighty reasons, I, therefore, pray for the repeal of the inspection law of gunpowder, and that the quality may rest altogether on the reputation or the brand of the manufacturer.

JOHN PEDRIC, 3d.

NILES' WEEKLY REGISTER.

NEW SERIES. No. 24—VOL. XI.] BALTIMORE, FEB. 15, 1823. [No. 24—VOL. XXIII, WHOLE NO. 596

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

The editor having been absent from home for several days, respectfully offers that circumstance as an excuse for apparent inattention to any private communications, as well as for the omission to notice or insert several things that would, otherwise, have appeared in this sheet.

It will be seen by the congressional proceedings, that, on Wednesday last, after a most arduous and ardent session of about ten hours, the house of representatives, in committee of the whole, refused to strike out the first section of the bill for the further encouragement of domestic manufactures. For striking out 51, against it 77. This is thought by some to shew about the real majority of the house who are disposed to enact a bill of this sort.

Since the Missouri question, no matter has been so warmly debated as the principle of this bill—concerning which, (having heard a considerable part thereof), we shall probably offer some extensive remarks at a future day. The majority, at last, prevailed to establish the principle; still the fate of the bill is uncertain, on account of discussions that may possibly arise on its details. It is believed that the senate is favorable to the bill—and that, if they can get it in season from the house of representatives, it may become a law at the present session.

INTERESTING LETTERS. We have the pleasure to present three interesting letters from the three surviving ex presidents of the United States, on the subject of education, to which is added another from a citizen of Maine to the editor of the REGISTER. The last being *practical*, cannot be regarded as less important to the matter than either of the others.

NAVY HOSPITAL FUND. We have the usual annual report of the state of this fund. The balance at present due, and to be applied to the objects for which the fund was instituted, is \$149,742 10.

FORTIFICATIONS. A report of the chief engineer details the amount, quantity and cost of the work which has been done during the past year, on forts Delaware, Washington, Monroe, Calhoun, and at the Rigolets.

The sum expended on each was as follows:

Fort Delaware	\$25,030 06
Washington	27,029 45
Monroe	68,521 49
Calhoun, unexpended bal. 7,183 24	
of last year's appro. 43,989 65—	51,172 89
At the Rigolets	45,713 92

These amounts are made up to the 30th Nov. 1822. In respect to every work, there was a balance of the appropriation remaining unexpended. This is exactly as it should be—the emergency should be great, or the necessity imperious, when the amount of an appropriation is exceeded. Congress very often do wrong in giving too much or allowing too little—but it is the principle of our government that the legislative body should hold the "purse strings"—and we hope that it always will be, in all respects and as applicable to every expenditure. The secretary of war deserves well for his adherence to this saving principle.

Vol. XXIII.—24.

EQUALITY. The ship Magnet has arrived at New York with about one hundred tons of English wheat. Now, this is a most favorable circumstance to those who are opposed to the passage of any bill for the protection of domestic industry—they will say it is compatible with our rank as an independent nation, that, when wheat is dear in the United States and cheap in England, we should receive it from England; and that when it is cheap in the United States and dear in England, that England should exclude it, though thousands might perish with hunger for want of the supplies which we might send, at fair prices. This is the 'free trade' so much lauded and the operation of the dogmas of Adam Smith and others!!! Indeed!—I cannot apprehend how that man's heart is consulted, who will patiently submit to such rank injustice. Let us deal with all nations on reciprocal terms, or refuse to deal with them. We are as important to them as they can be to us—it is the character of a free man to feel himself as good as any one. The slave submits to arbitrary power and suffers oppression—but the eagle-spirit soars above and looks down upon both.

PRESIDENTIAL. An Ohio paper gives the following as the ages of the different gentlemen named for the presidency—Mr. Adams 53; Mr. Calhoun 38; Mr. Clay 40 to 42; Mr. Clinton 53; Mr. Crawford 58; Gen. Jackson 53. The writer thinks that no one less than 50 years old should be selected; and says that Washington was 57, Adams 63, Jefferson 56, Madison 53, and Monroe 59, when they severally reached the presidency. *What, of age?*

THE ERIE CANAL. It is computed that 40,543 tons of articles were transported, east and west, on that part of the canal which was navigable during the last season. Some of the principal things were, 184,522 bbls. flour, 17,663 do. salt, 9,495 do. provisions, 4,872 do. ashes, 506 do. oil, 93,174 bush. wheat, 46,892 do. lime, about 1,500,000 feet boards and timber, 775 tons gypsum, 194,398 gals. whiskey, with bark, wood and merchandise.

One horse draws 25 tons 25 miles per day—the boats at present used are of the kind called *Durham boats*, but others, built specially for the canal, are preferable and coming into use. The average freight of all articles is about 150 cents a ton, per 100 miles, exclusive of the tolls—merchandise pays 300, salt and gypsum 50 cents, produce, generally, 150. It is thought that when the transport shall reach 500,000 tons, which is soon expected after the work is completed, that the canal will hardly be able to sustain it, and if it should ever much exceed that amount, another canal must be made. The tolls of the late year, collected on the section that was used, amounted to from 60 to 65,000 dollars.

GENERAL JACKSON. On the anniversary of the victory of New Orleans, a splendid public entertainment was given to gen. Jackson by the people of Nashville. The following is the hero's reply to an address delivered on the occasion:

SIR—I feel sensibly the honor which has this day been paid me. Words fail in giving utterance to a proper sense of gratitude for the repeated tributes

of affection from my fellow citizens of Tennessee; doubly endeared to me on this occasion, as emanating in part from those who participated in the same scenes and encountered the same dangers, which you have so impressively described. I recognize around me the soldiers of Telledega, Tallase-hatchey, Enukfaw and Tohopeka; those who bled on the plains of the Mississippi, suffered in Florida, and triumphed at Orleans. That I have been the humble instrument in the hands of a Supreme Being to arrest the savage scalping knife, to give protection to a bleeding frontier, and to lead these citizen soldiers to victory, will ever be remembered with mingled emotions of pleasure and devotion. These acts, in producing beneficial results to my country, and in being duly appreciated by my fellow citizens, carry with them their highest value; for, to the patriot soldier, the approbation of one's country is his richest reward.

That the commemoration of this day may, for future ages, bring with it the recollection only of wars that have passed; that my country may long prosper in peace, and that my fellow citizens, in general, and you individually, as the organ through which their feelings have been this day communicated to me, may enjoy the blessings of happiness in this and in the world to come, is my sincere prayer.

NEWSPAPERS.—In the state of New York, there are, at present, 99 weekly newspapers, one published thrice a week, and 9 daily ones—in all 108. It is estimated that 164,060 are circulated weekly, and eight millions and a half a year; in value about \$270,000.

DEBTS. The legislature of North Carolina has abolished imprisonment for debts contracted after the 1st of May next.

MASSACHUSETTS—state prison. According to a report for the year ending on the 30th of September last, the average number of convicts in the prison was about 275. The number received during the year was 91, the number discharged was 83, of whom 14 only were pardoned, 10 died and 1 escaped. The amount received from the sales of stone was \$23,796; the amount for labor of shoemakers, weavers, brushmakers &c. \$9,844. The balance against the prison, on the accounts of the year, was \$3,374, besides the salaries of the directors, physicians, chaplain and warden, amounting to \$2,900.

REPRESENTATION IN MARYLAND. The following article is copied from the "Maryland Republican," printed at Annapolis. It is necessary to observe, for the information of persons out of the state, that *counties*, and not *persons*, are now represented in our house of delegates. Thus, Calvert county, with 852 voters, all told, sends 4 members, the number sent by Frederick, with 6,330; Anne Arundel county sends 4, and Annapolis city, (which is within the same), sends 2—together 6; the amount sent by Baltimore county and city. The present number of members is 80—Baltimore, Frederick and Washington now send 14 of them: but, according to population, (or even more so on account of taxation), they should send 39—and why the word "dominant" and "disfranchised" counties should be used, we cannot tell; not being able to discover why one man in Calvert ought to have the political weight of thirteen men in Baltimore.

Mr. Hughes.—As the inclosed statement may tend to exhibit existing facts, which are not generally

appreciated, and a proper understanding of those facts may essentially subserve the public interest in deciding the question of electing the governor by the people, as passed by the senate, which involves the principle of representation according to the numerical force of population, its early insertion is respectfully requested by
POLITICS.

January 27, 1823.

A statement of the probable number of voters in the several counties, and in the city of Baltimore, in the state of Maryland, founded on the census of 1820, together with an average, and an apportionment of representation to the said counties, on the principle of population.

POLITICIANS. This term is selected as conveying an idea of persons who have little, if any, regard for the welfare of the republic, unless as immediately connected with, or dependent on, their own private pursuits—who, as a great party leader said of himself, are men of "principle according to their interest"—who have respect to the "loaves and fishes"—who always bow to a "rising sun," and stand prepared to dance round the "golden calf." They are the opposites of *statesmen*. Now, the late Mr. Lowndes was a *statesman*—but the present Mr. ——— is only a *politician*.

There are little knots of these politicians every where, and at least two out of three of each gang are either office-holders or office-seekers, and each gives or takes the influence that he himself or his fellows may possess, to advance particular views or keep honest and honorable men in the back ground. Their proceedings are the antipodes of truth and justice. They are the "fag ends" of the human family. What other men call conscience, they regard as a matter to be bought and sold, as convenience or opportunity offers.

This race of beings is of the remotest antiquity. In the time of the Persian kings, the chiefs of them were generally eunuchs—and the chiefs at this day are, most commonly, something less than other men. Denied the respect of society from the paucity of their talents or their want of regard to propriety, they endeavor to find a substitute for it in cold-calculating intrigue or impudent assumption. They will allow only one side of a story to reach the public ear, if they can prevent it. Impartiality

is to them a crime, and hypocrisy a virtue. They are as centinels at the gates of palaces or places in which power is located, and their duty to each other is—that, when one makes an assertion, another is always ready to affirm its veracity. In general, they may be known by an affected knowledge of every thing—by the possession of fat offices for themselves; by their courtings of persons in authority—in a “feathering” of their own nests by pluckings of the “public goose”—by the holding of sinecures—by doing nothing but running to and fro to disguise truth or disseminate error. Yet they are a very unhappy set—they are always in terror of some explosion; and, when they look into themselves, their mind has the feeling of a man suffering under an amputation when the saw reaches the marrow of his bone! Those who can call to recollection the political history of our country for the last twenty-five years, will not want evidence of the right of what is here asserted. Those who will look round and see what is going on, will discover the reality of it, as easily as the light of the sun at its high and mighty meridian.

There is no present hope of exterminating the breed of those persons seeking “power and forgetting right,” though the public virtue may do much to keep them in check. Their grades are various. One set is content to dictate to a village, another will regulate the affairs of a county, a third wishes to manage the concerns of a city, a fourth aspires to a monopoly of the power of a state, and the tie fifth class of mandarins think that, by caucus or compromise, they ought to direct the matters that belong to the United States, especially as to appointments to office or the obtaining of contracts, which, indeed, is all that they care for! Perhaps, we must have such men—but it is right that their condition should be understood, even so far as this—that, when a poor man buys a couple of pounds of sugar, he shall say “there goes six cents to the support of Tommy, Dickey, or Harry, “esquire,” being the amount of the tax which he pays on the sugar. May it not be right—may it not be a great economy of time, to save us the trouble of thinking for ourselves—and why should not those who take on them this trouble, have a profit out of it? The generous man will not dabble in filthy waters—but as there is a great quantity of public dirt, perhaps such as these are necessary to wade through it.

Like the “Chinese shades,” one set of *migh-ty men* is let down to make room for another—which plays its part, and then also disappears in contempt; the public mind being surfeited with presumption, though the public purse may have paid severely for it. And so we have it “up-and-down,” see-saw, at “Uncle Sam” and his mothers, the several states. But this is the great grievance—one *leeching* is a full allowance for a generation. On account of our popular system, we have several—less, however, perhaps, as to the amount of *blood-sucking* than any other nation: still, there is enough of it—*quant. suf.* as the doctor says, when he consults his intellect by applying the head of his cane to the tip of his nose.

Is the reader curious to know where those people are located?—*Let him look about home.* He will find a set in his own immediate neighborhood, whether he resides in Maine or Missouri—Baltimore or Boston—in the village of *Shawangung* or *Osoloppis*. The facts are fitted to any meridian, and may be localized any where, the city of Washington being always regarded as “head quarters.” I could easily give a special application to these general remarks. I could mention the names of above a dozen persons

as fast as I could write them down, who receive more than as many thousand dollars a year for an average of less than an hour's real attention to business per day, and speak of five others, who long held *two* offices, of a petty character, but productive of about *three thousand dollars per ann.* to each of them—or fifteen thousand dollars for a gang of five. But I cannot descend to specialities—the people must do this for themselves, and manage their own concerns. And, when we see persons enjoying those great advantages, and behold others assuming all influence to themselves, we should seriously ask, what are their rightful pretensions to merit other than that of a certain long eared gentleman, who, it is said, (*if unseen*), can alarm even a lion by his braying? The error is, that we do not see these as we should do.

IMPORTANT DECISION. The president and directors of the bank of the commonwealth of Kentucky brought a suit, in the Adair circuit court, against Benjamin Lampton and others, on a note for money loaned at the branch at Greensburg.

The defendants, by their attorney, plead as follows: “That the writing sued on was illegal and void: for they aver that the bank of the commonwealth of Kentucky, at their branch at Greensburg, loaned the defendant bank paper, or notes of the said bank, signed by the president and countersigned by the cashier of the said bank of the commonwealth, payable on demand, and which bank paper or notes were issued and loaned by said bank by the authority and in pursuance of an act of the legislature of Kentucky, entitled “an act to establish the bank of the commonwealth of Kentucky,” and which notes, or bank paper, were transferred by delivery, and were bottomed upon the credit, loaned for the benefit, and issued in behalf of the state of Kentucky, and were bills of credit, within the meaning and prohibition of the constitution of the United States of America, article 1, section 10, forbidding the emission of bills of credit by any state in the union; and, in consideration of said illegal loan of said illegal bank paper, the defendant executed his note, with security, then, to the plaintiff, for the amount, according to the denomination of said illegal bank paper; and said note, executed by him as aforesaid, became due, and the defendant paid the call made thereon and the interest also, and executed the note, in the petition set forth, for the balance still unpaid of said illegal bank paper, as a renewed note, and a subscription and satisfaction of the first note aforesaid, and for no other consideration.”

The plaintiffs filed a demurrer to the plea, and judge Tompkins sustained the demurrer, and gave judgment for the amount of the note.

The defendants prayed an appeal; and, at the present term of the court of appeals, the cause was heard and the judgment of the court below affirmed. [*Argus.*]

CURIOUS LAW CASE. *Albany, Dec. 25.* A singular case of bigamy was tried at the present court of general sessions of this county. Fanny Edger, otherwise called Frances Edge, was indicted for having married John Butterfield, in August last, *she then having a lawful husband living*, to wit, George Edge. The first marriage to Edge was proved by Richard Waiting, esq then a justice of the peace, in January 1816, and the last marriage was proved by Stephen M. Conger, esq. also a justice, and proof was given that the first husband was still living. The public prosecutor here rested

the cause. The frail, but favorite fair one, then offered to prove in her defence, a *third marriage*, anterior to the marriage with Edge—and the rev. Mr. Stayer, of this city, was called as a witness, and proved that in February 1815, the prisoner was married by him to Francis W. Cook. That Cook was alive when the prisoner was married to Edge, was also proved. This singular defence was held to be good, inasmuch as it repelled the allegation in the indictment, that Edge was her *lawful husband*; and under the charge of the court, she was acquitted. The hymeneal chains appeared to sit very lightly upon this lady; as she shook them off upon any favorable opportunity that offered. Her acquittal would indeed seem to sanction the commonly received adage, that, although a party may be punished for a *second marriage*, yet that a *third marriage* renders the transaction *wholly innocent*; or in other words that the lady is *outlawed*. The district attorney however, threw out an insinuation, that although she had escaped this time, yet upon another indictment, she should be brought to justice.

Cultivation of tobacco.—A number of farmers on the river Huron, west of this place, have, during the past season, realized a very handsome profit from small portions of their farms, which they had appropriated to the cultivation of tobacco. The article brought them six cents a pound in the leaf. The average crop is said to have equalled the high expectations formed of the productiveness of the soil, and many are preparing to engage in the business more extensively. The crop of the last season, on the Huron, was about 15 perogee loads, averaging perhaps 700 pounds each.—*Det. Gaz.*

HAVANA. The whole number of vessels which entered the port of Havana, in the year 1822, was 1296—of which 386 were Spaniards, 669 Americans, 113 English, 61 French, 18 Dutch, 12 Hamburg, 7 Bremen, 7 Portuguese, 6 Danish, 4 Swedish, 2 Sicilian, 1 Oldenburg, 1 Sardinian, 1 Colombian and 2 pirates, prizes—presenting a grand total of 1296—including 141 vessels of war, of which 69 were strangers.

FUDAL SPLENDOR. Prince Esterhazy lately gave a great hunt in compliment to his friends, at which upwards of eight hundred peasants were employed for 15 days in enclosing and rousing the game. In the grand duchy of Hesse, the peasants being called out, on a like occasion, refused to serve as "*chiens de chasse*," or as pointers or hounds. The consequence was a law suit between them and the proprietor, to determine the capacity in which they were to perform service.

ELEGANT COMPLIMENT. Fontenelle, at the age of 97, after saying many amiable and gallant things to the young and beautiful madame Helvetius, passed before her without perceiving her, in order to place himself at table—"See," said madame Helvetius, "how I ought to value your gallantries: you pass before me without looking at me." "Madame," said the old man, "if I had looked at you, I could not have passed."

A SALMON TROUT, weighing 13½ lbs. caught in Cayuga lake, was lately sold in the city of New York for fourteen dollars.

TOBACCO OF UPPER CANADA.—A letter from Amherstburg Upper Canada, published in the Quebec Gazette, says: "There has been some stir this winter in consequence of the tobacco trade. Next

spring I think there will not be less than *one hundred hogheads* shipped from hence. The Lower Canada merchants will soon have to find us other markets than Montreal and Quebec, for the quantity will increase at least *ten fold* the year after."

TRAVELLING. From the Bedford, (Penn.) True American. From an account kept by Mr. Mollwitz, keeper of the turnpike gate, on the North mountain, between Loudon and McConnellsburg, it appears that there passed and re passed through his gate, from the first of December, 1821, to the 30th of November, 1822,

Broad wheeled wagons	1555
Narrow do. do.	3596
Two horse wagons	283
Single do. do.	609
Two horse carriages	130
Chairs and gigs	201
Single horse carts	38
Sleighs and sleds with two horses	144
Do. do. one do.	87
Riding horses	4766
Total horses	32,941
Cattle	4,340
Sheep	6,220
Hogs	2,820

SAILING CARRIAGES. A machine, invented by a gentleman of Christ college, Cambridge, was lately tried at New Market. In shape it is nearly that of an isosceles triangle, and it moves with the broad end forward, on four wheels. It has a boom thirty-two feet long, and an exceeding high mast. It will carry twelve persons at the rate of thirty miles an hour. To the axle of the hinder wheels is fixed a rudder. It can go on a wind, and tack as a vessel at sea, and is capable of being so correctly guided, that the pilot at pleasure can run the wheels over a stone—*Lon. Mag.*

MONEY. The following are the particulars of a curious bill, copied lately from an original record belonging to the borough of Thetford, Eng. It appears to have been entered on the record in the reign of Edward III. in the year 1336, and exhibits an account of the value of some articles at that time, being a bill inserted in the town-book of the expenses attending two light horsemen from Thetford to the army, which was to march against the Scots that year.

Two men chosen to go into the army against Scotland,	£1 0 0
For cloth, and for making it into two gowns,	0 1 0
For two pair of gloves and a stock or staff,	0 0 2
For two horses,	1 15 0
For shoeing these horses,	0 0 4
For two pair of boots for the light horsemen,	0 2 8
Paid a lad for going with the mayor to Lynn to take care of the horses, a distance of nearly 30 miles,	0 0 3
For a boy for carrying a letter to Lynn,	0 0 1
Expenses for the horses of two light horsemen, for four days before they departed,	0 1 0

THEOLOGICAL SEMINARIES. A long account of the seminaries at Andover, in Massachusetts, and Princeton, in New Jersey, is compiled for the New York Commercial Advertiser, from which the following facts are extracted:

And, ver, the whole number of students is one hundred and forty, all but eight of them being graduates of colleges.

At Princeton, there are ninety-five students, all but 22 of them being graduates of colleges.

Of 254 graduates, at Andover, (since 1808, when that seminary was established). 16 have died; 114 are pastors of churches; 36 are preachers, not settled, or are in other employments, as professors in colleges, preceptors of academies, &c. &c.; 39 are missionaries in this country; 17 are missionaries in foreign countries, and of 33, their residence &c. is unknown.

We find that, among the incidents to this seminary, there is a printing office, to which is given the name of the *Codman press*, after the name of the rev. John Codman, of Dorchester, who gave one thousand dollars to complete its founts of type.

It has beautiful founts of Hebrew, Arabic, and Greek type, from Germany, and is now procuring the necessary additions of Roman, &c. &c. It is under the care of Messrs. Flagg and Gould, who have already printed from it the translation of Thiersch's Greek tables, and part of the *Iliad of Homer*. They have also nearly finished printing the translation of Jahn's Biblical Archæology, and have in press the second edition of professor Stuart's Hebrew grammar, and the translation of Gesenius' Hebrew German lexicon. These two are expected to be published in the course of the ensuing summer."

DAVID GRAY. The New-England Galaxy gives the following short narrative of the life of David Gray, who has applied to the legislature of Massachusetts to compensate him for his revolutionary services. It seems the member of the legislature who presented the petition, did not say David Gray was the Hary Birch of the American novel called the Spy, but merely that his adventures were so similar, as well to justify the belief that he might possibly have stood as the original of that well drawn character.

"We have obtained a short account of the history of Mr. Gray. He was born in Lenox, in this state; served under col. Allen at Ticonderoga, in 1775, on which occasion he received a small present from col. Allen, on account of the gallantry he had manifested; was, in different regiments, actively engaged in service till 1777, when he entered the first regiment of Massachusetts, commanded by col. Vose. He continued in this regiment three years; and it is for this service that the house of representatives, on the occasion above mentioned, allowed him his full pay. On the second of January, 1780, he was transferred, by superior orders, to the quarter master's department; and at this time his uncommon adventures begin. On account of the intelligence he displayed in detecting a line of Tories and loyalists, which extended from Canada to New-York, he was made known to general Washington, and employed by him in secret service. For this purpose he was furnished with a pass, authorizing the bearer to pass all lines and outposts whatever of the American army, and also with a captain's commission.

"Gray went to Connecticut and Long Island; was introduced, as a trusty and useful person, to col. Robinson, at that time at the head of the loyalists, known by the name of the American Legion; and was employed by him to carry letters to loyalists in New-York, Vermont, New-Hampshire and Connecticut. Gray first delivered these letters to the commander in chief of the American army, and

then, by his directions, carried them to their proper addresses. He was employed a year in this kind of service. He was afterwards employed by general Clinton, and was sent by him to Canada with despatches; upon which occasion he made himself very useful to the American commander. He continued in this capacity of a double spy, assuming various disguises and adopting various expedients, both to conceal his American pass and the despatches which he occasionally carried from both parties, till September, 1781, when he was sent to New London in Connecticut, to inform colonel Ledyard, that, if the wind was favorable, Arnold would attempt to land there the next morning. Arnold accordingly appeared, and the fort in which Gray was stationed having been taken by the British, he had just time to escape, leaving his papers in the hands of the American commanding officer. This was the end of his services as a spy. At the disbanding of the army, he settled and married in Pennsylvania, and has lived there and in Vermont to the present time.

A PHENOMENON. From the *Albany Daily Advertiser*. On the farm of Israel Loomis, sen. in the town of Warren, county of Herkimer, N. Y. about 65 miles west of Albany, 11 miles south of the canal, and half a mile north of the third great western turnpike road, is a small spring or run of water, which, to all appearances never alters in quantity, either in wet weather or in dry. The water is perfectly soft and is considered the best in the region.

Now to the phenomenon.—Always, invariably, before northeast storms, this spring becomes turbid. This muddiness commences about twenty four hours before the storm, and continues from 4 to 10 hours, according to the power of the storm which is coming; this invariably takes place previous to the northeast storm, and at no other time. Previous to a moderate storm, however, this muddiness of the water does not continue more than two hours, and then runs clear again. There can be no possible error in this statement. The water is now conducted in aqueducts, and the spring is covered, so that no possible external cause could produce this effect. I have now stated facts as there are. The respectable aged people who have used the waters of the spring more than twenty years, tell me that they can predict a northeast storm as certainly as they can the rising or setting of the sun; and that, when the weather is perfectly mild, and the wind in the south or in the west, and no perceptible signs of any storm at hand, still, if their spring becomes muddy, they are perfectly sure that a northeast storm will commence within twenty four hours.

This spring is situated at the north foot of a small hill, which is the most northwardly spur of that range of hills whose waters feed the Susquehanna. The hill appears to be composed of clay and schist, and the spring pours out the water near its north foot, about two rods above the plain, where the limestone region commences. This water flows to the Susquehanna. Although, in a direct line, it is within 9 or 10 miles of the Mohawk river.

Whether this does or does not favor captain Symmes' theory of the earth, I shall not attempt to describe—but having stated facts as they are, I shall leave their causes to be decided by men who know more about subjects of this nature than

AN UNLEARNED TRAVELLER.

WHALE FISHERY. From the *Nantucket Inquirer*.—Abstract of two letters from the collector of New Bedford to Mr. Baylies, relative to the whale fishery.

In January 1822, it is stated that the number of vessels employed in this fishery, from the port of New Bedford, was 68. Tonnage 15,222, navigated by 1350 men and boys. Those employed exclusively in the spermaceti whale fishery were 36, tonnage 9921; navigated by about 800 men. The oil and bone brought from the Pacific ocean to New Bedford, since the late war, (to Jan. 5, 1822), are estimated at \$1,713,600. Annual value to New Bedford of the fishery in the Pacific, \$500,000, exclusive of profits arising from the manufacture of spermaceti candles. The capital employed is rated at \$850,000—the bills of some of the ships being as high as 32 or 33 thousand dollars each.

The annual value of the spermaceti whale fishery to Nantucket and New Bedford together, is estimated at \$1,500,000. The oil and bone brought into both places, between the termination of the last war and Jan 5, 1822, is stated to have exceeded \$6,000,000—and the number of seamen employed therefrom amounts to 2500—this fishery giving employment also to all the mechanics of both places. The most profitable whale fishing is said to be now in the North Pacific, between the latitude 38 and 48.

We subjoin, from an authentic source, the following statement of the number of ships belonging to the United States, at present engaged in the spermaceti whale fishery, the ports from which they sail, the number of men employed, &c.

		At sea.		In port.	Total.
Nantucket,	ships	75	8		83
New Bedford,	do.	39	5		42
Boston,	do.	4			4
Newport,	do.	2	1		3
Warren, R. I.	do.	1			1
New York,	do.	4	1		5
Sag Harbor,	do.	1			1
New Haven,	do.	2			2
Edgartown,	do.	4			4
Plymouth,	do.	2			2
New London,	do.	4			4
Falmouth, Mass.	do.	1			1
		139	13		152

Average tonnage, 300—total of tonnage, 45,600.
Average number of men, 21—whole number, 3192.

The quantity of spermaceti oil imported into Nantucket and New Bedford during the three last years is as follows:

	gallons.	gallons.
1820, Nantucket,	581,366,	N. Bedford, 417,438
1821, do.	719,052,	do. 617,935
1822, do.	799,974,	do. 372,424
	2,101,292	1,407,797
Making, in all	3,509,089 gallons.	

FOREIGN NEWS. From London papers to the 1st January, received at New York, we have the following articles—

Portsmouth, Dec. 21.—There appears to be no longer any doubt, that the ships about to sail under the command of sir Edward Owen, are intended as a reinforcement of sir Charles Rowley's squadron, at Jamaica, for the purpose of being employed in taking possession of the Island of Cuba, should Spain be forced into a war with France. The French have a small squadron of ships (including one line of battle ship) at Martinique, whose intention it may possibly become necessary to thwart. Should the deprecated event not take place, and sir Charles Rowley wish to return to England, sir Edward Owen may, in that case, hoist a broad-pendant, and

assume the command of the station for the next three years.

The annexed is from a Paris paper, of Dec. 27, is regarded as important in respect to the relations between France and Spain, and those of the "holy allies" with those powers. Several other changes in the ministry were expected.

Paris, Dec. 27. The following is what we have been able to collect as the most positive respecting the cause of the resignation of M. the duke de Montmorency: On Wednesday morning M. the duke of Montmorency, presented to the council of ministers, at which his majesty presided, the form of a note designed to be addressed to the Spanish government. This document energetically expressed the intentions of the sovereigns, members of the holy alliance, such as they were declared at the congress of Verona. The majority of the ministers having supported the note of M. de Montmorency, M. de Villele, in his turn, presented a note, the terms of which were milder, and which, having been submitted to the king, obtained the assent of his majesty.

M. the duke Mathieu de Montmorency, (who, in the deliberations of the congress, had specifically engaged to cause to be presented to the French cabinet the note exactly as it had been determined upon between the several plenipotentiaries), declared that he must, in case of modification, solicit the king to accept his resignation. M. de Villele, who, in the event of the despatch of the note of the duke Mathieu de Montmorency, must have solicited retirement, has been charged, *ad interim*, by his majesty, with the ministry of foreign affairs.

The rate of Exchange.

MR. NILES.—In pursuing this discussion, it may be assumed that the rate of exchange is what every one says it is, what every one knows and feels it to be, what the 'Merchant' admits—five dollars to the pound sterling, or 12½ per cent. above par, against this country. The fact admitted, it is well to inquire into the causes, and much better to begin with facts, and then draw inferences from them, than, by starting upon theory and reasoning, to endeavor to make out facts to correspond with them. We have seen that it costs us more to pay 7,1000 in London than in Boston, by \$555 56—from which the inevitable inference arises, that more money is remitted from Boston to London than from London to Boston—for, if the balance of remittance was to Boston, bills on Boston would be in demand in London. If the debt was payable in pounds sterling, then the value of the pound sterling; if in dolls. then the value of the dol. in Boston, would regulate the price of the bill in London;—whereas now the value of the pound sterling in London regulates the value of the bill in Boston—being \$4.44 in the latter, and \$5 in the former, instead of \$4.44 in both. Wherever the balance of payments is due, there the value of the article offered in payment must be fixed. If it is in the current legal coin of the country, the value is fixed by law—if in produce, bullion, or any thing, not a legal tender for debts, the creditor must fix the value at which he will receive it. This affords the true reason why a pound sterling costs five dollars. The debt due in London is so many pounds sterling, payable in one pound notes, sovereigns, or their equivalent in bullion—say dollars; dollars are not a legal tender; their value is not fixed, as with us, by law, but depends on the complicated relations of commerce; the person offering them in

payment, must put them, like his cotton, into market, and they produce him at the rate of five for a one pound note or sovereign. If the balance is due in Boston, it is payable in dolls.—if payment is offered in one pound notes, the holder must be contented to receive a credit for their market price: the dollar being no legal tender in London, or the one pound note in Boston, their respective values depend on, not the quantity of gold or silver they represent, but their price as merchandise—and, if this price is less than they respectively cost, it is so much loss to the merchant—he has the disadvantage of buying his note or dollar where it has a fixed determinate value, and disposing of it where it has none, but depends on many fluctuations. Thus, at the present rate of exchange, five dollars to the pound sterling, and the legal value \$4.44, the dollar costs here 4s 6d. but produces in London only 4s. This must be owing to the balance of payments being in favor of London; and, by means of this balance being due by our merchants, they must sell their dollars at whatever price the London merchants will pay for them. Here they cost 100 cents, there they sell for 87½—because we are in debt and must submit to the loss. If, on the other hand, they were in debt to us, the dollar would be worth to them 100 cents—as it is a legal tender for that amount in Boston. As the creditor can thus regulate the value of uncurrent coin, and does regulate it so that it loses to this country one-eighth of its legal value, and sells for one-eighth less than it costs, this fact, in itself, is conclusive evidence that the balance of payments is against, and that the amount of the exchange is so much loss to the country. That the actual rate of exchange is against us seems to be admitted—the principal difficulty is in ascertaining its cause; for those who, at once, admit the fact, at the same time assert that the balance of trade is in our favor. This is worth examination. It has, hitherto, been a received opinion, that the rate of exchange is intimately connected with the balance of trade, and there seems no good reason to doubt the correctness of this opinion: as the balance of trade is the general result of all our commercial operations, so, it seems to me, must be the rate of exchange. Following my usual course, I assume exchange to be 12½ against us, as between us and England. This rate does not depend on the balance of payments to England alone: If we owed in London \$10,000,000, and there was due to us in Hamburg, Amsterdam, Paris and Leghorn, \$8,000,000, a credit could be created in London to this amount by bills on those places—and a bill could be drawn on London, predicated on the receipt of those other funds; the rate of exchange, in London, would then be a compound of the different rates between London and the different places whence the funds are to be drawn to pay the \$10,000,000—between London and Amsterdam for 2,000,000; London and Hamburg for 2,000,000, &c. &c. and for 2,000,000, between London and Boston. England being the centre of all our commercial operations, the rate of exchange between her and us must be the aggregate result of our shipments, consignments, drawings and re-drawings, with all parts of the commercial world, where our intercourse extends.

Without going, at present, into the subject of the balance of trade, I assume the statistical statements of the treasury as correct: from those it appears, that the result of our trade with England is, imports \$23,180,000, exports, \$18,464,000—balance against us \$4,616,000: with France \$4,989,000 imports, exports \$5,527,000—balance in our favor

\$538,000: with Holland, exports 5,694,600, imports \$1,938,000—balance in our favor \$1,756,000: with the North of Germany, exports 2,132,000, imports \$990,000—balance in our favor \$1,142,000—leaving a general balance in the trade of these four countries of \$1,180,000 against us—for which we must provide funds. After absorbing the favorable balances, we are compelled to remit, not only our funded and corporate stocks, but are obliged to purchase bills of exchange to make up the balance. If it was in our favor, we should have bills to sell. Now foreigners can regulate the price of our public and corporate securities, the price of our dollars—but if our commercial operations created us a credit in London greater than our debts, we should have no occasion to make any other remittances. British stocks are not held by our merchants, or sold in our market, for the obvious reason that none are sent here—the course of payment being from us to England, she being the creditor. That the rate of exchange depends on the aggregate balance of trade will be at once evident, if we suppose the balance of the trade of the four countries above-mentioned is in our favor \$1,180,000, instead of that amount against us; our object would be to receive instead of paying that balance; we would sell \$1,180,000 of bills instead of buying them—there would be no inducement to make remittances to a place where we had already surplus funds; it would be reversing every principle of commerce and every rule of trade. I do not speak of what may be, but of what is—of the ordinary operations of trade, not of possibilities: the balance of trade may be against a country, and yet exchange may be in favor of it. England may owe us \$10,000,000, and yet our merchants may wish to invest 20,000,000 in British funds or a foreign loan—but this case does not exist, and if the Boston Merchant's questions my facts or reasoning, I must beg of him not to answer either by putting cases which do not exist. If he can, consistently with the existing state of things, account for the rate of exchange being so much against us, and the balance of trade in our favor, he will receive from no one more credit for the information than from myself. But the stretching one's ingenuity to put possible cases, is not a proper way of coming at truth: it always leads to error. Take the case as it is—reason from facts as they are, and truth will be the result: but it is not the result of suppositions which do not apply in practical operations. Suppose any thing, and every thing will follow. The preceding observations appear to me perfectly applicable to the present condition of the country, and I cannot see how the conclusion can be avoided, that the rate of exchange and the balance of trade are against us—yet it may be said the latter is not proved. T.

☞ An article on the balance of trade, by the same hand, is laid off for our next.

Public Education.

INTERESTING LETTERS

Laid before the legislature of Kentucky by the board of school commissioners, by the chairman, Mr. Barry, lieut. governor of the state.

Monticello, Quincy, July 21, 1822.

SIR—I know not that I ever received a letter with more pleasure than yours of the 30th June last, except the circular from your committee, which I received some days before.

*In these statements, specie is included both in the imports and exports.

The wisdom and generosity of your legislature in making liberal appropriations in money, for the benefit of schools, academies, colleges and the university, is an equal honor to them and their constituents; a proof of their veneration for literature and science, and a portent of great and lasting good to North and South America and to the world.

Great is truth—great is liberty, and great is humanity, and they must and will prevail. I have communicated your letters to as many of my friends as I have seen, and requested them to assist me in complying with your views. If the taper thread of life should continue to burn a little longer, I hope that you will hear more from me. At present, blind and paralytic, I am incapable of research or search. I can only give hints from memory. A law of this colony, almost two hundred years ago, obliged every town to maintain a school master, capable of teaching the Greek and Roman languages, as well as reading, writing and arithmetic in English. Those school masters were to be examined by the clergymen and magistrates; and the clergymen by those days were all learned men.—This law is in force to this hour, though not so punctually executed as it ought to be. I had myself the honor to be a school master from 1755 to 1758, in the town of Worcester, under this law. These school masters and school houses, are maintained by taxes, voluntarily imposed on themselves by the people, in town meeting, annually; and the ardor of the people in voting money for this noble purpose, is astonishing. In this small town of Quincy, consisting of not more than 1,400 inhabitants, I think they voted, this year, \$1,700, for the support of schools—more than a dollar a head for every man, woman, and child in this place. The principal school, which is not more than half a mile from me, pours out of its doors, at twelve o'clock every day, from one hundred to two hundred boys and girls, as happy as Scott or Shenton, has described them and their masters, in their romances. Besides this principal school, there are not less than four or five schools kept by women in different parts of the town, for children of both sexes, too young to be able to travel to the central school. Besides these town schools, there are academies under the auspices of the legislature, and others established by private munificence for teaching languages, arts and sciences, on a more enlarged scale. All these subordinate institutions are preparatory to qualifications of young gentlemen to enter the university. The universities and the schools mutually support each other; the schools furnish students for the college, and four years afterwards, the college sends the young men into the country to keep school.

I esteem myself highly honored by your circular and your letter of the 30th June. And am, sir, your very obedient, humble servant.

JOHN ADAMS.

Wm. T. BARRY, esq. Lexington, Ken.

Monticello, July 2, 1822.

Sir—Your favor of the 15th June is received, and I am very thankful for the kindness of its expressions respecting myself; but it ascribes to me merits which I do not claim. I was one only, of a band devoted to the cause of independence, all of whom exerted equally their best endeavors for its success, and have a common right to the merits of its acquisition. So, also, in the civil revolution of 1801, very many, and very meritorious, were the worthy patriots, who assisted in bringing back our government to its republican tack. To preserve

it in that, will require unmitting vigilance. Whether the surrender of our opponents, their reception into our camp, their assumption of our name and apparent accession to our objects, may strengthen or weaken the genuine principles of republicanism, may be a good or an evil, is yet to be seen. I consider the party division of whig and tory, the most wholesome which can exist in any government, and well worthy of being nourished, to keep out those of a more dangerous character. *We already see the power, instated for life, responsible to no authority, (for impeachment is not even a scare crow), advancing, with a noiseless and steady pace, to the great object of consolidation.* The foundations are already deeply laid, by their decisions, for the annihilation of constitutional state rights, and the removal of every check, every counterpoise to the engulfing power of which themselves are to make a sovereign part. If ever this vast country is brought under a single government, it will be one of the most extensive corruption, indifferent and incapable of a wholesome care over so wide a spread of surface. This will not be borne, and you will have to choose between reformation and revolution. If I know the spirit of this country, the one or the other, is inevitable. Before the canker is become inveterate, before its venom has reached so much of the body politic as to get beyond control, remedy should be applied. *Let the future appointments of judges be for four or six years, and renewable by the president and senate.* This will bring their conduct, at regular periods, under revision and probation, and may keep them in equipoise between the general and special government. We have erred in this point, by copying England, where certainly it is a good thing to have the judges independent of the king; but we have omitted to copy their caution also, which makes a judge removable on the address of both legislative houses. That there should be public functionaries, independent of the nation, whatever may be their demerit, is a solecism in a republic, of the first order of absurdity and inconsistency.

To the printed inquiries respecting our schools, it is not in my power to give an answer. Age, debility, an ancient dislocated, and now stiffened wrist, reader writing so slow and painful, that I am obliged to decline every thing requiring writing. An act of our legislature will inform you of our plan of primary schools; and the annual reports show that it is becoming completely abortive, and must be abandoned very shortly, after costing us to this day 180,000, and yet to cost us \$45,000 a year more, until it shall be discontinued; and if a single boy has received the elements of a common education, it must be in some part of the country not known to me. Experience has but too fully confirmed the early predictions of its fate. But on this subject I must refer to others, more able than I am, to go into the necessary details; and I conclude with the assurances of my great esteem and respect.

THOMAS JEFFERSON.

Mr. W. T. BARRY.

Montpellier, Aug. 4, 1822.

Dear sir—I received, some days ago, your letter of June 30th, and the printed circular to which it refers.

The liberal appropriations made by the legislature of Kentucky, for a general system of education, cannot be too much applauded. A popular government, without popular information, or the means of acquiring it, is but a prologue to a farce or a tragedy, or perhaps both. Knowledge will ever govern ignorance; and a people, who mean

to be their own governors, must arm themselves with the power which knowledge gives.

I have always felt a more than ordinary interest in the destinies of Kentucky. Among her earliest settlers were some of my particular friends and neighbors; and I was myself amongst the foremost advocates for submitting to the will of the "district," the question and the time of its becoming a separate member of the American family. Its rapid growth and signal prosperity, in this character, have afforded me much pleasure, which is not a little enhanced by the enlightened patriotism which is now providing for the state a plan of education embracing every class of citizens, and every grade and department of knowledge. No error is more certain, than one proceeding from a hasty and superficial view of the subject, that the people at large have no interest in the establishment of academies, colleges and universities, where a few only, and those not of the proper classes, can obtain for their sons the advantages of superior education.-- It is thought to be unjust that all should be taxed for the benefit of a part, and that too the part least needing it. If provisions were not made, at the same time, for every part, the objection would be a natural one; but, besides the consideration, when the higher seminaries belong to a plan of general education, that it is better for the poorer classes to have the aid of the richer, by a general tax on property, than that every parent should provide, at his own expense, for the education of his children, it is certain that every class is interested in establishments, which give to the human mind the highest improvements, and to every country its truest and most durable celebrity.

Learned institutions ought to be favorite objects with every free people. They throw that light over the public mind, which is the best security against crafty and dangerous encroachments on the public liberty. They are nurseries of skilful teachers, for the schools distributed throughout the community. They are themselves schools for the particular talents required for some of the public trusts, on the able execution of which the welfare of the people depends. They multiply the educated individuals, from among whom the people may elect a due portion of their public agents of every description, more especially, of those who are to frame the laws, by the perspicuity, the consistency and the stability, as well as by the just and equal spirit of which the great social purposes are to be answered.

Without such institutions, the more costly of which can scarcely be provided by individual means, none but a few, whose wealth enables them to support their sons abroad, can give them the fullest education; and, in proportion as this is done, the influence is monopolized, which superior information every where possess. At cheaper and nearer seats of learning, parents, with slender incomes, may place their sons in a course of education putting them on a level with the sons of the richest; whilst those who are without property, or with but little, must be peculiarly interested in a system, which unites with the more learned institutions, a provision for diffusing through the entire society, the education needed for the common purposes of life. A system comprising the learned institutions, may be still further recommended to the more indigent class of citizens; by such an arrangement as was reported to the general assembly of Virginia in the year 1779, by a committee* appointed to revise the

*The report was made by Mr. Jefferson, Mr. Pendleton and Mr. Wythe.

laws, in order to adapt them to the genius of republican government. It made a part of a "bill for the more general diffusion of knowledge," that, wherever a youth was ascertained to possess talents, meriting an education which his parents could not afford, he should be carried forward, at the public expense, from seminary to seminary, to the completion of his education, at the highest.

But why should it be necessary in this case to distinguish the society into classes according to their property? When it is considered that the establishment and endowment of academies, colleges and universities, are a provision not merely for the existing generation, but for succeeding ones also; that, in governments like ours, a constant rotation of property results from the free scope to industry and from the laws of inheritance, and when it is considered, moreover, how much of the exertions and privations of all are meant, not for themselves, but for their posterity, there can be little ground for objections from any class, to plans of which every class must have its turn of benefit. The rich man, when contributing to a permanent plan for the education of the poor, ought to reflect that he is providing for that of his own descendants; and the poor man, who concurs in a provision for those who are not poor, that, at no distant day, it may be enjoyed by descendants from himself. It does not require a long life to witness these vicissitudes of fortune.

It is among the happy peculiarities of our union, that the states composing it derive from their relations to each other, and to the whole, a salutary emulation, without the enmity involved in competitions among states alien to each other. This emulation, we may perceive, is not without its influence in several important respects; and in none ought to be more felt, than in the merit of diffusing the light and the advantages of public instruction. In the example, therefore, which Kentucky is presenting, she not only consults her own welfare, but is giving an impulse to many of her sisters who may be behind her in the noble career.

Throughout the civilized world, nations are courted the praise of fostering science and the useful arts, and opening their eyes to the principles and the blessings of representative government. The American people owe it to themselves and to the cause of free government, to prove, by their establishments for the advancement and diffusion of knowledge, that their political institutions, which are attracting observations from every quarter, and are respected as models of the new born states in our own hemisphere, are as favorable to the intellectual and moral improvement of man, as they are comfortable to his individual and social rights. What spectacle can be more edifying or more reasonable, than that of liberty and learning, each leaning on the other for mutual and surest support?

The committee, of which your name is the first, have taken a very judicious course, in endeavoring to avail Kentucky of the experience of elder states in modifying her schools. I enclose extracts from the laws of Virginia on that subject, though I presume they will give little aid; the less, as they have as yet been imperfectly carried into execution.-- The states where such systems have been long in operation, will furnish much better answers to many of the inquiries stated in your circular. But after all, such is the diversity of local circumstances, particularly as the population varies in density and sparseness, that the details suited to some, may be little so to others. As the population, however,

is becoming less and less sparse, and it may be well, in laying the foundation of a good system, to have a view to this progressive change, much attention seems due to examples in the eastern states, where the people are most compact, and where there has been the longest experience in plans of popular education.

I know not that I can offer, on the occasion, any suggestion not likely to occur to the committee.—Were I to hazard one, it would be in favor of adding to reading, writing and arithmetic, to which the instruction of the poor is commonly limited, some knowledge of geography, such as can easily be conveyed by a globe and map, and a concise geographical grammar. And how easily and quickly might a general idea even be conveyed of the solar system, by the aid of a planetarium of the cheapest construction. No information seems better calculated to expand the mind and gratify curiosity than what would thus be imparted. This is especially the case with what relates to the globe we inhabit, the nations among which it is divided, and the characters and customs which distinguish them. An acquaintance with foreign countries in this mode, has a kindred effect with that of seeing them as travellers; which never fails, in uncorrupted minds, to weaken local prejudices and enlarge the sphere of benevolent feelings. A knowledge of the globe and its various inhabitants, however slight, might moreover create a taste for history, an inexhaustible fund of entertainment and instruction. Any reading, not of a vicious species, must be a good substitute for the amusements too apt to fill up the leisure of the laboring classes.

I feel myself much obliged, sir, by your expressions of personal kindness, and pray you to accept a return of my good wishes, with assurances of my great esteem and respect. JAMES MADISON.

P. S. On reflection, I omit the extracts from the Virginia laws, which, it is probable, may be within your reach at home. Should it be otherwise, and you think them worth the transmission by mail, the omission shall be supplied.

W. T. BARRY, Kentucky.

TO THE EDITOR OF THE REGISTER.

MR. NILES. The remarks in the 21st volume of your REGISTER, on the splendid reports made in Virginia about their university, literary fund, &c. appeared to me correct, and I truly regretted that the exalted talents of the great and good men of that distinguished state had been more applied to *theorizing* than to *acting* on the most important subjects—and your having again lately referred to the same matters, I thought that I would send you the following facts and observations.

From the "splendid" reports above alluded to, I turned my attention to my own state of Maine to see what had been done for the encouragement and support of education, and could not help remarking the vast difference, (on paper), as to the apparent condition of the two states, and I thought that I could perceive an equal difference in the practical effect of their systems. Considering the great disparity between the wealth of Maine and Virginia, a great difference, in effect, ought to be expected and in favor of the latter. We have no literary fund about which to make a report, nor a mammoth university to talk of—yet we have not been unmindful of literature, though our legislature has been more zealous to diffuse useful education than to rear up a few great literary characters. We have, however, a flourishing college, in the full tide of success, with an established character, and rapidly increasing in means,

numbers and reputation, another has just gone into operation—both are under the fostering care of the state, and furnish ample means for the education of our youth. There are also from 20 to 30 academies endowed by the state, where our children receive the preparatory qualifications for the colleges—but our great efforts are directed to the common schools. The operation of our laws is silent, but effectual. Every town in the state is obliged to raise an annual tax, equal at least to forty cents on each of its inhabitants—and, according to the last census, the aggregate of this tax for the whole state is \$119,334—equal to the income of a capital of \$1,955,567, at the usual rate of interest. This tax is expended in the support of free schools; and, for the purpose of an equal participation of the benefit, each town* is, by law, subdivided into convenient school districts, and the money raised is disbursed among them in proportion to the number of youths between the ages of 4 and 21 years in each. These districts are made corporations for the purpose of building, furnishing and supporting school houses, which they are obliged to build, &c. At a moderate calculation, there is, throughout the state, one school house for every 200 of its inhabitants making about 1500 in the whole. These cost from 100 to 500 dollars each, averaging probably one hundred and fifty dollars, raised in addition to the regular school tax, and therefore make a capital of 225,000 dollars—to this should be added the annual repairs, say one thirtieth of the original cost: the whole expenditure, therefore, for the support of these common schools is equal to a capital of about 2,188,000 dollars. In addition, parents and guardians are obliged to furnish those under their care with such books as the superintending committee shall direct—in default of this, the books are supplied and added to the tax of the delinquent, if he is of ability to pay. The operation of these laws is not considered burthensome, and its provisions are cheerfully and faithfully complied with. The money being expended where it is raised, insures its careful disbursement. The law has also guarded this; for instructors are required to possess a competent skill to instruct youth in reading, in writing the English language grammatically, arithmetic, geography, &c. and it is made their duty not only to instruct in those branches, but to inculcate in their pupils good morals and decent deportment—to give them some knowledge of the value of our free government, &c. and they are liable to be dismissed by the superintending committee, for incapacity or negligence. One third of the whole tax raised is permitted to be expended in supporting school mistresses. These last usually keep school in the summer season, and instruct those whose labor is of little value—the masters keep in the winter, when there is more leisure, and larger scholars attend. The business of school-keeping has with us, from obvious reasons of policy, been considered respectable—hence our instructors possess the proper qualifications; and, from a competition, arising in a measure from the respectability of the employment, they are procured at a moderate expense. The support of summer schools probably average about *eight* dollars per month, and that of the winter schools about *twenty*.

Who can calculate the moral force of this system?

Yours respectfully,

R. M. J.

—, (Me.) Jan. 6. 1823,

*By which we mean a corporated district, about six miles square, into which the inhabited part of the state is divided.

Foreign Coins.

HOUSE OF REPRESENTATIVES, FEB. 5, 1823.

The committee, appointed on the 13th ultimo, and instructed, by a resolution of the house of representatives, adopted on that day, to inquire into the expediency of continuing in force, for a further term, so much of the act, entitled "an act regulating the currency, within the United States, of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France, and five franc pieces," passed on the 29th day of April, 1816, as relates to the crowns of France and five franc pieces, report, on that subject:

That, by the act of the 29th of April, 1816, these coins were declared to be a tender for the term of three years; the crowns, at the rate of 117 ⁶/₁₀ cents per oz., and the francs at the rate of 116 cents per oz. The former had been made a tender by two earlier acts, which had been allowed to expire. Foreign gold coins ceased to be a tender on the 1st November, 1819; and, on the 3d March, 1819, the act of the 29th April, 1816, was continued in force, so far as related to crowns and francs, until the 29th

April, 1821. On the 3d March, 1821, it was further continued in force, to the same extent, until the 29th April next. From assays lately made at the mint, the value of these coins, per ounce, has been ascertained to be greater than that of Spanish milled dollars, and of American silver coins.

It is believed the acts above referred to were passed with little or no opposition, and that no complaints have been made respecting their practical effects; and, when we take into view the increasing difficulty of fulfilling engagements by specie payments, which is the inevitable consequence of the acknowledged diminution of the aggregate amount of our metallic medium during the current year, the expediency of continuing crowns and five franc pieces a tender, for a further term, forces itself upon the minds of your committee more strongly than at any former period.

It is believed that the gold coins, both foreign and domestic, have been almost wholly exported. They have certainly been withdrawn from circulation to such an extent, that some very intelligent writers have asserted, with every probability of

being correct, that there is not now in the United States one gold coin for every thirty that were in the country five years ago. Without inquiring into the causes which have produced this extraordinary drain, it may be added, that they have, likewise, operated to rid us of American and Spanish milled dollars, to nearly the same extent, and have left in the country scarcely any of its usual metallic currency, except that which consists of the crowns of France, five franc pieces, and those silver coins which are of denominations less than a dollar.

In corroboration and illustration of the foregoing statement, your committee beg leave to subjoin a few well ascertained facts:

There is, and has been, for many months, an uninterrupted and rising demand, in your seaport towns, for all descriptions of gold coins and dollars, for the purpose of remittances to foreign countries. It is well known, that the former are never underrated in any country, whilst the Spanish milled dollar have a universality of circulation exceeding that of any other coin. The American dollar is received in the East Indies at from one and a half to two per cent. less than the dollar of Spain. There is very little foreign demand for five franc pieces, and none for crowns.

The balance of specie and bullion exported from the United States, during the fiscal year ending on the 30th September last, according to the custom-house entries, amounts to 7,434,634 dollars; but it is supposed that the law prohibiting the landing of specie, without a previous entry at the custom-house, particularly that which comes from countries where its exportation is forbidden, is sometimes evaded. Whether this surmise be true, and to what extent, the committee will not undertake to say; nor does any thing beyond an allusion to it fall within the scope of the present inquiry. But, when it is recollected that the amount of specie exports may also be underrated, from a portion of it going out of the country without entry, it requires no great stretch of credulity to believe, that the balance against the United States for the said year amounts to at least six millions of dollars.

There is no reasonable ground to suppose that the account current has assumed a more favorable aspect for the last four months; and there is less doubt that the said balance was made up principally, if not altogether, of gold coins and of dollars.

In consequence of the high rate of all foreign exchange, especially that of England, which has, for a long time, vibrated from 10 to 12 per cent., it has been confidently asserted, that some of the banks in the largest commercial city in the union, in conducting which, great skill and foresight have generally been discovered, have at this time on hand a greater amount of crowns and five franc pieces than of all other descriptions of specie; and that none of them have much gold of any kind, and scarcely a single American or Spanish dollar.

Your committee have no reason to believe that a better state of things exists in either of our cities, with the exception, perhaps, of Philadelphia, the proximity of whose moneyed institutions to the mint, affords them some little additional facilities in procuring coins in cases of emergency; and not including the bank of the United States, which possesses a decided advantage over all the others, on account of the revenue deposits: yet, notwithstanding such an immense advantage, this bank, at one time, found it necessary to import quantities of foreign coin, specially with the view to meet any possible exigency which might press upon it.

As one among the many proofs that might be adduced to show the extent and rapidity with which specie has been banished from the United States, the committee submit a statement, which they think will not be contradicted, that the specie in the Boston banks, which, in January, 1821, appears to have amounted to nearly two and a half millions of dollars, was, in June last, reduced to \$406,275. It is impossible to state, with any certainty, the comparative extent of the whole diminution in the United States; but many commercial men estimate that about one-third of all the specie in the country left it in the course of the last year.

Should the act of congress, making the crowns and francs a lawful tender, be suffered to expire at this time, and any serious or large demand be suddenly made upon the banks, they might find it extremely difficult, not to say impossible, to meet it. Such an event would be highly injurious; and it might, therefore, be dangerous to degrade their present metallic capital. Even now, with what they have in their vaults, they are frequently subjected to unpleasant embarrassments in providing for the demands which are occasionally made from one commercial place on another; and, it is believed, that, for nearly a year past, their principal support and credit have been derived from mutual forbearance, superinduced by mutual wants, and a community of interest.

To prove that these conjectures are not fallacious, the committee will not go beyond the banks in the district of Columbia, under the immediate eye of congress. By a schedule of the situation of the eleven banks in this district, contained in a report submitted to congress in April last, it appears, that, at that time, with capitals exceeding, collectively, 5,000,000 of dollars, they had an aggregate of \$955,712, in notes, in circulation; and only \$262,187, of specie, in all their vaults.

Under the present state of the money market, should it long continue as it now is, a formidable re-action must ensue, by the depreciation of all property, the withdrawal from circulation of most of the safe paper medium, and the consequent bankruptcy of very many of our most enterprising merchants.

Whether banks have been productive of more good than evil, it is not necessary to inquire: but it may be stated, that they are now so completely fastened upon the community, and their credit is so intimately connected with the moneyed interests of the country, and any shock they might experience would be so severely felt, that it would seem to be the policy of the general government to afford them support, compatible with the discreet exercise of its exclusive power to regulate coins.—Past experience, and present exigencies, clearly demonstrate, that we cannot yet dispense with the use of foreign coins, although it was confidently predicted, thirty years ago, by some of our statesmen, that their beneficial tendency would be superseded, by the operations of the mint, within the space of three years.

The committee are aware of the inconvenience of using a variety of coins, unequal in their purity; but cannot resist the conviction, that, as a temporary expedient, it would be wise in congress to extend its fostering care to the banks, by assigning a determinate legal value to the almost only coins now remaining in their vaults.

There is another consideration, which ought, perhaps, to be adverted to. If the act making crowns and francs a tender be suffered to expire, the banks, with the exception of those at Philadelphia, will

be compelled to transport those coins to the mint, at great expense, and some risk, for the purpose of being converted into American coins; and when that shall be done, their new character would give them an immediate passport to Europe. The committee, therefore, conclude, that, while it is admitted that the rate of exchange is heavily against us, the precious metals rapidly vanishing, stocks going abroad, property depreciating, and insolvencies multiplying, every inducement should be held out for the importation of specie and bullion, and for the retention of that which our capitalists now possess.

The committee have prepared a bill, continuing crowns and five francs a lawful tender, as heretofore, until the 4th day of March, 1825, which they ask leave to report

Treasury department, 30th January, 1823.

Sir: In reply to your letter of the 15th instant, requesting my opinion of the expediency of prolonging the continuance of the mint at Philadelphia, I have the honor to state, that, in my opinion, a due regard to the public interest, requires that that establishment should be continued for some time longer at Philadelphia.

The present state of the currency, also, justifies the conclusion, that the act of the 3d of March, 1821, continuing in force, for the term of two years, so much of the act of the 29th of April, 1816, as makes crowns and five franc pieces of France, a legal tender in the payment of debts, ought to be continued for a limited period.

I remain with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. Wm. B. ROCKESTER,

Chairman of the select committee, &c.

Seventeenth Congress—2nd session.

IN THE SENATE.

February 7. Several petitions and reports were received, of no importance to notice at present.

The senate took up for consideration the bill to regulate the commercial intercourse between the United States and certain British colonial ports.

[This bill suspends our restrictive acts of 1818 and 1820, and embraces a number of provisions growing out of the repeal of the late restrictive laws of Great Britain, in regard to foreign intercourse and trade with her American possessions.]

After Mr. *Barbour*, (chairman of the committee on foreign relations), had delivered a speech of much length, giving an historical view of the trade, &c. the bill was laid over till Monday.

The senate then resumed the consideration of the proposition made by Mr. *Taylor*, of Virginia, to amend the constitution of the United States, in regard to the election of president of the United States, and the substitute offered thereto by Mr. *Dickerson*, of New Jersey.

Mr. *Taylor*, of Va. rose and addressed the senate about an hour in support of his own proposition and in opposition to the substitute. He opposed the substitute, because, so far as it proposed a uniformity in the election of electors, by districts, throughout the union, it had a tendency to create an aristocracy of small states; to prevent an election of president by the electors, and to throw the election of president into the house of representatives, where the small states would have an undue weight, the effect of which might in time be to produce a revolution in our political system that would be fatal to the present equality assigned to the small states by the con-

stitution. Mr. *T.* laid down the position that the power of the federal government had increased, was increasing, and ought, at least, not to be extended; he argued against all measures which would have the effect to produce a national instead of a federated government, and opposed the substitute because it would tend to produce that result. He depicted many of the evils which would naturally grow out of the election of president by the house of representatives—the opportunity and the inducement which it would hold out to corruption; its bad effects on the general business of legislation, and the interests of the nation; the improper connection it would create between an executive thus elected, and those in the legislature thus acted on. The election of the executive by the legislative branch, even if pure, he deprecated as an unnatural and illegitimate connection of distinct powers and duties; his own amendment he thought would have the effect to keep the election of president where the framers of the constitution designed it should be, and where it ought to be—that is, in the hands of the electors elected by the people, and to prevent almost the possibility of an election ever becoming necessary by the the members of congress. All these, and many other arguments, Mr. *T.* pressed and illustrated with force and ingenuity. When he concluded—

Mr. *Dickerson* observed, that he was not in possession, at this moment, of the facts and materials necessary to enable him to answer the ingenious and impressive speech of Mr. *T.* now, if it should be in his power to do so at all; for he confessed that the remarks of that gentleman had produced much impression on his mind, as they had, no doubt, done on others. He moved, for the purpose of allowing time for reflection and investigation, to postpone the subject to Tuesday, which motion was agreed to; and

The senate went into the consideration of executive business; after which

They adjourned to Monday.

February 10. Amongst the petitions presented to-day was one by Mr. *Mills*, from lieutenant Robert F. Stockton, of the navy, late commander of the schooner *Alligator*, stating that, in the discharge of his duty, he captured and brought in for adjudication, two vessels, the *Jeune Eugenie* and the *Mariana Flora*; that, in defending the legality of the captures, he has incurred great expense, for which he prays reimbursement; and that the United States will take such order for the defence of the suit in the case of the *Mariana Flora*, as may be deemed just and proper; which petition was referred.

The senate resumed the consideration of the bill directing the payment of the Georgia militia claims for services rendered in the years 1792, '3 and '4, and on the question whether the bill should be engrossed and read a third time, it was decided in the affirmative, as follows:

YEAS.—Messrs. Barbour, Barton, Benton, Brown, of Lou. Brown, of Ohio, Dickerson, Edwards, Elliott, Findlay, Gallard, Holmes, of Maine, Holmes, of Miss. Johnson, of Ken. Johnson, of Lou. Kelly, King, of Ala. Lloyd, of Miss. Noble, Parrott, Smith, of Md. Smith, of S. C. Stokes, Talbot, Taylor, of Va. Van Dyke, Ware, Williams, of Miss. Williams, of Tenn.—28.

NAYS.—Messrs. Bardon, Chandler, D'Wolf, Eaton, King, of N. Y. Knight, Mason, Mills, Morrill, Ruggles, Van Buren—11.

Several bills were taken up, partially considered and postponed to different days; and a good deal of preparatory business transacted. Nothing decidedly acted upon.

February 11. Several petitions were received and disposed of.

Agreeably to the notice yesterday given, Mr. Smith, of Md. asked and obtained leave, and introduced the following joint resolution; which was read and passed to a second reading:

Resolved, by the senate and house of representatives of the United States of America, in congress assembled, two thirds of both houses concurring, That the following amendment to the constitution of the United States, be proposed to the legislatures of the several states, which, when ratified by the legislatures of three fourths of the states, shall be valid, to all intents and purposes, as part of the said constitution:

That congress shall have power to adopt and execute a system of internal improvements, confined to great national purposes.

After disposing of a variety of matters, to be noticed hereafter—

The senate resumed the consideration of the bill to regulate the commercial intercourse between the United States and certain British colonial ports: and, after some further discussion of its details, and some amendment thereof, the bill was ordered to be engrossed and read a third time.

Considerable time was spent in considering the resolution submitted by Mr. Taylor, of Va. and the substitute offered therefor by Mr. Dickerson, to which, after a short speech, Mr. Holmes submitted a resolution by way of amendment to the original motion, which was read and ordered to be printed. After which the senate adjourned.

February 12. The senate was chiefly occupied this day on the bill to extend the charter of the Mechanics' bank of Alexandria. Not decided upon.

The engrossed bill to regulate the commercial intercourse between the United States and certain British colonial ports; and the engrossed bill for the relief of Eleanor Lawrence, were severally read the third time, passed, and sent to the house of representatives for concurrence.

February 13. Several bills were partially considered, &c. That to extend the charter of the Mechanics' bank of Alexandria, after debate, was ordered to be engrossed and read a third time, as follows:

YEAS—Messrs. Barbour, Benton, Brown of Lou. Brown of Ohio, Chandler, D'Wolf, Elliott, Holmes of Maine, Johnson of Ky. Johnson of Lou. Knight, Lanman, Lloyd, Md. Lowrie, Morrill, Palmer, Parrott, Ruggles, Seymour, Smith of Md. Smith of S. C. Southard, Stokes, Thomas, Ware, Williams of Tenn.—25.

NAYS—Messrs. Barton, Dickerson, Eaton, Findlay, Gaillard, Kelly, King of Alab. King of N. York, Lloyd of Mass. Macon, Mills, Taylor of Indiana, Taylor of Virginia, Van Buren, Van Dyke, Williams, of Miss.—16.

After debate, the resolution, and its substitutes, to amend the constitution of the United States, as to the election of president, was postponed until Monday next.

HOUSE OF REPRESENTATIVES.

The discussion, on Wednesday, the 5th, in relation to the suppression of a certain part of one of the documents, was unpleasant—perhaps, we might say, not creditable to every one who took a part in it. There was a good deal of personality, and considerable roughness in the remarks of one or two of the members. But matters were much softened down the next day, time having been allowed for reflection, and a committee was appointed to make a further investigation of the business—though it appears most probable that no new light can be shed on the matter. We again express our regret at the course which this matter has taken, and must be permitted to deprecate the feeling which it has excited. It is right that the affair should be rigidly inquired into—but we cannot see any possible good to result from the feeling manifested. There is a great deal of sound sense and sober discretion in the house of representatives; but, among so many persons, collected from all parts of the union, it is not to be wondered at that there should be some Hotspurs, and others, of ardent minds, who would

rather “chaos might come again” than that their personal, private views should be defeated. The mere election of a private man to congress does not metamorphose him into a statesman.

Friday, Feb. 7. After other business—Mr. W. Coy, from the select committee, appointed on the subject of militia fines, (leave being granted), reported a bill vesting in the state of Virginia the right of the United States to all fines assessed for the non-performance of militia duty during the late war with Great Britain, within the said state; which was read twice and committed. [Ordered to be engrossed next day.]

On motion of Mr. Fuller, it was

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of reviving, for a limited time, the acts allowing pensions to the widows and orphan children of the officers, seamen and marines, in the public and private armed ships of the United States during the late war with Great Britain.

Several bills were received from the senate, referred, &c.

A desultory debate of considerable length occurred about the resolution for the distribution of the ‘Digest of Manufactures,’ &c. It appeared to be admitted that the returns had been very imperfect, and so the abstract must needs be. [We apprehended this, from the small amount of the appropriation allowed for taking the census and performing this service, as many of our readers will recollect.] A motion was made to deposit all the copies in the library of congress—that is, to suppress the work. In some parts of the union it appeared that these matters had been pretty well attended to—in others, they were almost wholly neglected, and from various causes. Finally, the resolution was laid on the table—65 to 63.

The engrossed bill, supplementary to, and to amend an act, entitled “an act to regulate the collection of duties on imports and tonnage,” passed 2d March, 1799, and to repeal an act supplementary thereto, passed the 20th April, 1818, and for other purposes, was read the third time and passed.

On the question to agree to the title of the bill, Mr. McLane moved to strike therefrom the words “and to repeal an act supplementary thereto, passed 20th April, 1818;” which was determined in the affirmative.

The bill was then sent to the senate for concurrence.

The house, then, in committee of the whole, resumed the consideration of the bill for the more effectual protection of domestic manufactures. Mr. Eustis was opposed to striking out the enacting clause, though he was not friendly to some of the items in the bill. Mr. Buchanan delivered an able speech in favor of the bill, and then the committee rose, &c.; and

The house adjourned.

Saturday, Feb. 8. Mr. Eustis, from the select committee appointed to inquire whether any legislative provision was necessary in the final adjustment of the accounts of Daniel D. Tompkins, late governor of the state of New York, made a report thereon, accompanied by a bill to provide for the settlement of his accounts; which bill was read twice, and ordered to lie on the table.

The following resolution, submitted by Mr. Rankin, would, from its nature, lie on the table one day, by a rule of the house:

Resolved, That the president of the United States be requested to lay before the house of representatives, at the next session of congress, the information heretofore requested by a resolution of this house in relation to the salt springs, lead and copper mines; accompanied by such other information as he may be in possession

*This acts expires, by its own limitation, on the 4th of March next.

of, or obtain, as to the probable value of each of them, and of the reservations attached to each; of the extent to which they have been worked, or are susceptible of being worked; the advantages and proximity of each to navigable waters; the origin, nature and extent, of any claims made to any of them by individuals or companies, together with any other information deemed important by him, in relation to such salt springs, lead and copper mines.

The rule, however, being removed by unanimous consent, the resolve was agreed to.

The *Speaker* communicated a letter from the secretary of the treasury, accompanying it with a statement in relation to the outstanding custom house bonds, bonds taken for duties on merchandise and debentures issued for drawback, nett amount of revenue on merchandise and tonnage, &c. and a statement of the whole amount of the unexpended balance of the sinking fund, distinguishing each year since 1817, all collated within specified periods; which letter was read, and with the statements, ordered to lie on the table.

The engrossed bill to revive and extend the time allowed for the redemption of lands sold for direct tax, in certain cases, was read a third time and passed.

The house resolved itself into a committee of the whole, on the bill for the more effectual protection of domestic manufactures. Mr. *Cuthbert* delivered a warm speech against the bill, and Mr. *Woodson* supported it, both at considerable length. When the committee rose, and

The house adjourned.

Monday, Feb. 11. Thirty-seven petitions were presented this day, and a number of reports received.

Mr. *Buchanan* submitted the following:

Resolved, That the committee on the judiciary be instructed to inquire whether there be any, and, if any, what, crimes not now punishable by law, to which punishments ought to be affixed.

In offering his resolution, Mr. *Buchanan* said it had been decided that the courts of the United States had no power to punish any act, no matter how criminal in its nature unless congress have declared it to be a crime, and annexed a punishment to its perpetration. Offences at the common law, not declared such by acts of congress, are, therefore, not within the range of the jurisdiction of the federal courts. Congress have annexed punishments but to a very few crimes, and those all of an aggravated nature. The consequence is, that a great variety of actions, to which a high degree of moral guilt is attached, and which are punished as crimes at the common law, and by every state in the union, may be committed with impunity on the high seas, and in any place where congress has exclusive jurisdiction. To afford an example: An assault and battery, with intent to commit murder, may be perpetrated, either on the high seas, or in a fort, magazine, arsenal, or dockyard, belonging to the United States, and there exists no law to punish such an offence.

This is a palpable defect in our system, which requires a remedy; and it is astonishing that none has ever yet been applied. My attention has been called to the subject by a distinguished professional gentleman now in this city. Mr. B. said he did not expect that any bill could be matured and passed into a law at the present session. If, however, the judiciary committee would take the subject into consideration, and report upon it to the house before it rises, it would call public attention to it, and ensure the passage of a bill at an early period of the next congress.

The resolution was then adopted.

Mr. *Cocke* laid the following resolution on the table:

Resolved, That the president be requested to inform this house whether any prize agents have neglected to render an account of their agency, and pay over all money in their hands: if so, who are they; what sum remains in the hands of each unaccounted for;

whether any of them are in the employ of the government, if so, has their compensation been retained?

This resolution, by the rules of the house, lies on the table one day. [Agreed to next day].

The engrossed 'bill vesting in the state of Virginia the right of the United States to all fines assessed for the non performance of militia duty during the late war with Great Britain, within said state,' was read a third time, passed, and sent to the senate for concurrence.

The house, in committee of the whole, resumed the consideration of the bill for the further protection of domestic manufactures—

Mr. *Hardin*, spoke an hour and a half against the bill. Mr. *Todd* supported it in a speech of about the same length, with great energy and point. After which, the committee rose and the house adjourned.

Tuesday, Feb. 11. Mr. *Newton*, from the committee of commerce, reported a bill to provide for sick and disabled seamen, which was read twice, and committed to a committee of the whole on the state of the union.

Mr. *Cocke*, offered the following resolution which, from its nature, lies one day on the table:

Resolved, That the president be requested to communicate to this house a statement showing the several classes of expenditures made during the years 1821 and 1822, out of the contingent fund of the Indian department, so far as the same may be susceptible of classification, stating particularly the amount of each species of expenditure, to whom paid, and when.

Other business not necessary to notice at present, being attended to—the house, in committee of the whole, resumed the consideration of the bill for the more effectual encouragement of domestic manufactures—when Messrs. *McNeill*, of N. C. *Hamilton*, of S. C. *Wright*, of Md. and *Montgomery*, of Ken. all spoke against the bill. Before the latter had concluded, the committee rose, and the house adjourned at 4 o'clock.

Wednesday, Feb. 12. Several reports from different committees were received. Among them, Mr. *Fuller*, from the committee on naval affairs, made a report on Rodgers' marine rail-way, or inclined plane, favorable to the object, concluding with the following resolution:

Resolved, That the sum of fifty thousand dollars ought to be appropriated for the purpose of constructing a dock and wharves for building, repairing, and constructing vessels of the United States at the navy yard in the city of Washington.

The resolution submitted yesterday by Mr. *Cocke*, about the contingent fund of the Indian department, being modified, was agreed to:

Mr. *White*, of Vt. offered a resolution which had for its object the setting aside a certain part of the product of public lands for general purposes of education. After some remarks, it was ordered to lie on the table.

Other business being transacted, the house, in committee of the whole, resumed the consideration of the bill for the further protection of domestic manufactures. Mr. *Montgomery* concluded his speech against the bill. He was followed by Messrs. *Reid*, of Georgia, *Crutcher*, *Rhea*, and *Mitchell*, of S. C. against, and Messrs *Van Wyck*, and *Woodcock* in support of the bill. The question was loudly called for several times, and at last taken—when there appeared 51 for striking out the first section, (or rejecting the bill), and 77 against it. The committee rose, and the house adjourned at about a quarter before 10 o'clock.

Thursday, Feb. 13. Mr. *McDuffie* appeared and took his seat.

Several reports were received and bills committed.

It was decided, 73 to 61, to take up the general appropriation bill. A good deal of debate followed

on different items, especially on an amendment proposed by Mr. *Trimble*, to insert a clause providing 25,000 dollars for the preservation and repair of the Cumberland road. Before it was decided, the committee rose, &c. and the house adjourned at half past 4 o'clock.

CHRONICLE.

Execution. A man by the name of William Gross was hung for murder at Philadelphia, on Friday, last week.

Explosion. The whole number of deaths by the late explosion of the powder mills, at Eden Park, near Wilmington, heretofore noticed, was 12. All the wounded have died save one. By the explosion of another mill near Lexington, Ky. one person was recently killed.

Public spirit. Stephen Girard, esq. of Philadelphia, has loaned \$233,850 to the Schuylkill navigation company, to enable them to complete their important improvements—noble works.

Died, on the 31st Jan. at Bethlehem, Pa. the Rev. *John Heckerwelder*, aged 80 years—worn out by his long labors in the missionary service of the United Brethren, and whose goodness of heart and extensive utility have rendered his name familiar to most of our readers.

The real estate of John Jones, esq. of New York, was lately sold, under the hammer, in that city, for the sum of three hundred and ten thousand, eight hundred dollars.

Canals. It is stated that the legislature of Delaware has appropriated 25,000 dollars for the use of the Chesapeake and Delaware canal company. This interesting work *must* yet, and soon, be completed.

Whale Oil. It is proposed to make whale oil out of the *sturgeons* that abound on Lake Superior!

Segars. 12,478,000 were imported last year.—The domestic manufacture, from *foreign* tobacco, was of much greater amount. The consumption, of all sorts, may be about 50 millions a year.

Baltimore inspections, for the quarter ending 31st December, 1822—125,544 bbls. and 11,001 half bbls. wheat flour; 4,324 bbls. and 314 half bbls. pork; 696 bbls. beef; 5,100 do herrings; 6,158 do. mackerel; 461 casks flaxseed; 354 large casks and 3,565 bbls. domestic liquors, with butter, lard, &c.

The pirate expedition. The Norfolk Beacon of Monday says:—The expedition destined to avenge the murder of the gallant ALLEN, and the multiplied outrages upon our lawful commerce, is under the orders of commodore David Porter, and consists of the

Sloop of war Peacock, capt. Stephen Cassin, bearing the broad pendant of the commodore.

Schooner Shark, lt. com. M. C. Perry.

Sea Gull, (steam galliot), lt. com. Wm. H. Watson.

Decoy, (store ship), lt. com. L. Kearney.

Grey Hound, mast. com. John Porter.

Jackall, lt. com. Thomas H. Stevens.

Fox, lt. com. William H. Cocke.

Wild Cat, lt. com. Cha's. W. Skinner.

Beagle, lt. com. John T. Newton.

Ferret, lt. com. Samuel Henley.

Terrier, lt. com. Robert M. Rose.

Weazle, lt. com. Beverly Kennon.

Cutters—Midge, Musquito, Sand Fly, Galley Nipper and Gnat.

Four of the small schooners dropped down from the navy yard on Thursday last, and anchored near the *Flag Ship*, off Fort Nelson; yesterday morning, they were joined by the other four schooners, and in the afternoon the *Shark* and the store ship *Decoy*, were towed down from the yard by the steam galliot *Sea Gull*, and all anchored near the Peacock. They form quite an imposing spectacle, and to-day or to-morrow, we shall have the pleasure to see them all "spread their white canvas to the breeze," and depart for the pirate coast.—Our best wishes go with them.

The steam galliot is greatly improved in appearance, and performed the duty of towing down the ship and schooner in a style and with a velocity that augured well of her adaptation to that purpose in the expedition.

The schooners mount one long gun on a pivot and two cannonades each, and, it is believed, will not, in point of sailing, dishonor the names by which they have been designated.

Virginia. The legislature of this state has passed an act granting a loan of \$60,000 to complete the buildings of the university.

The bill for ratifying the convention between the states of Kentucky and Virginia, has been at length finally rejected, in the legislature of the latter state, by the tenacity of both houses, in adhering to their disagreeing votes on the amendments to the bill.

The *compensation bill* has been rejected in the same legislature in the same manner. It passed both houses by great majorities. It was in a fair way to bloom into existence. But, alas! there came a frost—a chilling frost! The two houses *disagreed* about an amendment, touching the pay of a deputy clerk, or door-keeper, or something of that sort; and they *adhered* to their mutual disagreement.

[*Vat. Int.*]

SALT. The effect of opening our canal navigation on the salt trade, in the interior, is somewhat remarkable, as, notwithstanding the additional facility afforded to its transportation to the west by the partial completion of the canal, the price of that necessary article has increased instead of being diminished on Lake Erie and the countries bordering on or connected with its waters. A Sandusky paper states, that, on the 20th of Nov. there were not thirty bushels of salt in that town: and congratulates the inhabitants on their not being totally dependent on New York for that article, as two teams, loaded with it, had just arrived from Zanesville, with Ohio salt. Subsequent arrivals, from Buffalo, had not supplied the demands of the market, and the price of salt had risen to \$11 per bbl. or 2 dollars and 50 cents per bushel. These facts can only be accounted for, by that of the country which borders on the parts of the canal already navigable, furnishing a full market for the consumption of the salt that has been manufactured, and consequently diverting the supply which formerly was given to the lake trade. The price of salt on the canal has increased, during the last season, from increased consumption, owing to the reduction of price and the extension of a market; and the quantity manufactured, and, consequently, the revenue derived to the state, exceeds, we are told, the produce of any previous year. This increase must be progressive, and cannot be limited by causes that are to operate during any period that we look forward to.

[*New York paper.*]

NILES' WEEKLY REGISTER.

NEW SERIES. No. 25—Vol. XI.] BALTIMORE, FEB. 22, 1823. [No. 25—Vol. XXIII. WHOLE No. 597

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

☞ The "tariff bill" is considered as laid aside for the present session, which must soon come to a close. We have no foreign news since our last, but there are some interesting notices of events on hand which, (as well as many other things), are of necessity postponed.

☞ The editor of the New York "American," in his paper of the 8th inst. has presented what I must regard as an illiberal view of an article which appeared in the "Register" a few days before, headed "rights of men and things." Essays of that character, in my humble opinion, are not to be judged of by *partial* extracts from them, which may be rendered subservient to purposes in utter opposition to those *generally* aimed at by a writer on such subjects: but admitting, for the satisfaction of this *veteran republican* editor, that what he has been pleased to infer is that which was meant to be enforced in the article alluded to, why does he not reprehend more distinguished persons, *on the other side*, who broadly spoke of accomplishing what he *insinuates* that I suggested? Did not an "honorable member" of an eastern *peace* society, lustily cail upon, and earnestly advise, the people of another section of the country to *resist* the operation of a certain bill, if it should be passed into a law—and did not several other "honorable members" publicly declare that they would offer such resistance? Let the editor of the "American" take "the beam out of his own eye" that he may see clearly, and ascertain whether there is a "mote" in mine. Surely, he has read the debates in congress on the tariff bill—and, *if he is just*, he will not fail to reprove his *friends* for actually supporting the self same principle that he imputes to and reprehends me for.*

No possible good can result from a pursuit of this subject now, and we shall decline any controversy about it. It may, however, be well to suggest to the editor of the "American," that, by the course which he has taken on the matter at large, he is in no small danger of committing a political *felu de se*—of *putting down* the man who he labors to *put up*; whose general opinions on the great question are probably at variance with his own. *Verbum sat.*

COMMERCE, &c. We have a copy of the letter of the secretary of the treasury, transmitting statements shewing the commerce and navigation of the United States, for the year ending 30th Sept. 1822. The whole makes a book of 165 pages, and several heavy tables. We shall soon present a digest, or abstract, of this document, that may serve all usual cases of reference.

POTOMAC CANAL. We have before noticed the project of a splendid undertaking to unite the eastern and western waters by means of a canal adjacent to the Potomac, and to be fed by that noble stream. The cost of this work is estimated at 1,500,000 dollars—of which it was proposed that

*In the "American" received by yesterday's mail, the editor has partially, and very *coarsely*, complied with what is here suggested, as being right.

Vol. XXIII.—25.

the states of Maryland and Virginia and the district of Columbia, should each furnish one third.

Within the last two or three weeks, great efforts were made to induce the legislature of Maryland to take a lead in the subject—and a majority of the house of delegates seemed generally favorable to it, though they did not accord in all the details of the bill, about which the yeas and nays were frequently taken. Finally, the bill was withdrawn.

The progress of the bill caused much excitement in Baltimore. The people of this city are devoted to internal improvements, and have freely subscribed their money for the making of roads, bridges, &c. But they were unanimously opposed to this bill, because they thought it went to an appropriation of the funds, or credit, of the state to an object that would be rather injurious than beneficial to them—they believed, that the obstructions to the navigation of the Susquehannah should *first* be removed, and they especially objected to the Potomac canal because, as they understood the bill, the privilege was virtually denied them of *tapping* it so as to make a direct communication to their own city, if they pleased—though it was asked that the state should cede to the company, its whole right to the waters of the river.

The excitement above spoken of is not to be wondered at, when the condition of the state of Maryland and of the city of Baltimore, is considered. The funds of the state are not sufficient to meet the ordinary expenditures in the sum of about 30,000 dollars a year, and the city of Baltimore is burthened with a heavy debt, to pay the interest of which and perform the duties incidental to the corporation, the people are already too heavily taxed. The rate of taxation is now generally higher than it was some years ago, when the value of property or the produce of rents, was about *three times greater than it is now*; and the fact exists, that some large property-holders, who hitherto lived bountifully on their incomes, are severely put to it to meet the various demands upon them. Houses and lots seem as if they had no price among us—they cannot be disposed of unless at an enormous sacrifice of what was considered their value; their production is greatly reduced, but the requisitions of the local and state governments are increased. In the money concerns of Maryland, the voice of Baltimore ought to be heard: though we have but a *fortieth* part of the power of legislation in the house of delegates, we pay a *third* or *fourth* part of the taxes of the state, and whatever affects the finances of the latter, bears with extraordinary pressure on us. We are all willing that the Potomac canal should be completed—but we have no money or means to give to its accomplishment; and if we had, we would rather that such means were directed to an opening of the Susquehannah, a far more important matter to us than the canalling of the Potomac. The former would surely benefit us—the latter would not do us good, perhaps, injure us considerably. We are not jealous of the prosperity of Georgetown or any other place—but believe it is rightful and reasonable, that those who have to pay the taxes should designate the expenditure of their product: and it is natural, that such designation should be for the direct advantage of the taxed.

BANKRUPT BANK. It is right to caution our readers, that the New Hope Delaware Bridge banking company, are not, probably, worth one cent in the dollar; so great has been the amount of the deceptions of these who should have guarded the welfare of the institution! We may give some particulars hereafter.

PIRATES. Com. Porter has sailed. Matanzas is said to be filled with pirates—they lately attacked the Americans there with clubs and stones, and severely wounded several of them. Three of their vessels are said to be cruising between Point Yeocos and Havana. It was reported that they had lately captured two vessels, tied the crews to the rigging, set the vessels on fire, and consumed all together!

The fourteen seamen sent into Pensacola as pirates have been released, no overt act having been proved against them.

The British sloop of war Tyne has captured two piratical vessels off the south side of Cuba—thirty of the wretches were killed and seventeen carried to Kingston, Jam. for trial.

THE ACCURSED TRADE. A Portuguese boat of seven tons, 23 feet long, and the space over her water casks, (in which 30 miserable human beings were stowed), only 17 inches in height, was lately captured by the British and carried into Sierra Leone. Ten of the original number had died, and six or eight more perished just after the capture, presenting the most horrible spectacle that could be imagined—the wretched survivors were all placed in the hospital. They were intended to be transported to the Brazils, in a larger vessel. Who can blame men, thus used, for seeking their "liberty through blood and slaughter?" God is just—and long suffering; but the day of retribution will come.

Boston. *Bills of mortality for 1822.* Whole number of deaths 1263; greatest number in October 120, least in April and May, 77 for each month. Under 1 year 164; 1 to 2, 96; 2 to 5, 54; 5 to 10, 42; 10 to 20, 49; 20 to 30, 99; 30 to 40, 120; 40 to 50, 113; 50 to 60, 76; 60 to 70, 54; 70 to 80, 39; 80 to 99, 22; 90 to 100, 3. Still born 115.

Infantile diseases 244; consumption 166; dropsy 43; dysentery 31; intemperance 25; drowned 21; various fevers chiefly lung and typhus 102; old age 56; suicide 5; murdered 4; palsy 10, &c.

NEW YORK. Annual census of the humane and criminal institutions in the city of New York—1st January 1823.

In the orphan asylum 103 boys and 63 girls—166: increase since last year 30. In the city alms house 1717 persons, (of whom 85 are black and 25 maniacs)—increase 113. In the city hospital 147 patients and 92 lunatics—239, increase 24. In the debtor's prison 120—decrease 96. In Bridewell, 62 white men, 18 do. women; 23 black men and 22 do. women—125; decrease 16. In the penitentiary 342 persons of all descriptions. In the state prison, 442 white men, 17 do. women; 119 black men and 22 do. women—580; increase 27. Total present year 2292—ditto last year 2209—increase 83.

THE SAME. The interments in this city, for the year 1822, amounted to 3,231—to wit, 997 men, 695 women, 836 boys and 703 girls. Greatest number of deaths in August 370; least in February 229. Of one year old and under 793; between 1 and 2, 264; 2 and 5, 219; 5 and 10, 101; 10 and 20,

150; 20 and 30, 427; 30 and 40, 421; 40 and 50, 333; 50 and 60, 263; 60 and 70, 156; 70 and 80, 98; 80 and 90, 54; 90 and 100, 10; 100 and upwards, 2.

Diseases. Apoplexy 60; burned or scalded 21; casualty 38; cholera morbus 21; consumption 624; convulsions 168; diarrhoea 56; dropsy 74; do in the chest 30; do. in the head 141; drowned 56; dysentery 109; fever 50; do. yellow 165; typhus 95; all other fevers 81; hives or croup 109; inflammations of all sorts 243; intemperance 44; marasmus 31; old age 115; palsy 36; peripneumony 23; still born 205; tabes mesenterica 84; teething 37; whooping cough 35—all else under 20.

Of the cases of yellow fever, 45 were natives of New York city, and 10 of the state; 13 of Connecticut; 24 of England; 33 of Ireland—all others under 10.

The whole number of interments includes 396 colored people.

PENNSYLVANIA. The bill to alter the charter of St. Mary's church, in the city of Philadelphia, has been indefinitely postponed, (rejected), by the senate of this state.

PHILADELPHIA. *Bills of mortality for the year 1822 in the city and liberties.* Whole number of deaths 3591—adults 1945, children 1646. Under one year old 953; from 1 to 2, 243; from 2 to 5, 193; 5 to 10, 121; 10 to 15, 78; 15 to 20, 90; 20 to 30, 424; 30 to 40, 441; 40 to 50, 348; 50 to 60, 264. 60 to 70, 217; 70 to 80, 130; 80 to 90, 67; 90 to 100, 18; 100 to 110, four. Of the whole, 560 were people of color.

Diseases. Consumption 488; still born 257; debility 226; cholera 212; dysentery 191; dropsy 87—do. in the head 120—do. in the breast 36; fever 92—billions 127—typhus 135—remittent 96—all other 32; inflammations of all sorts, 264, greatest number of the lungs; old age 69; mania-a-potu 41; insanity 24; sudden 45; by cold, poison and violence 7; suicide 6; drunkenness 25, diarrhoea 58; apoplexy 41; drowned 48; hives 73; child bed 4; Hemorrhage 24; whooping cough 38; atrophy 29; catarrh 29; gangrene &c. 27; palsy 28; pleurisy 20—all else under 20. Greatest number of deaths in July 441; least in April, 210.

Returns were received from 107 practitioners of midwifery in the city and liberties; they reported the birth of 3021 males and 2701 female children; exceeding the number of deaths in the sum of 2131.

MARYLAND. The whole amount of this state's claims against the general government for militia services and supplies, during the late war, was adjusted at 318,141 dollars; of which 279,616 have been paid, 27,506 suspended, and 10,732 rejected.

DELAWARE. Each branch of the legislature of this state has protested the other, about the election of senators of the U. S. in the place of Mr. Rodney, resigned, and Mr. Van Dyke, whose period of service expires on the 4th proximo. The house of representatives wished to elect the two, the senate seemed willing only to elect one, at present; concerning whom ten fruitless ballots had been previously taken, nine gentlemen having been put in nomination. The whole number of votes given was 30—of which *S. H. Black*, at every ballot but two, had 14—on one of the ballots *George Read* had 12; but no choice could be made, a majority being required.

VIRGINIA. By a report from Mr. Jefferson, rector of the great university of Virginia, which is cal-

culated to accommodate about 2000 students, it appears that all the buildings except one are completed, that they cost 226,161 dollars; and that, in addition to this sum, it is estimated that the remaining building will cost 46,847 dollars. These immense funds are chiefly advanced by the state.

KENTUCKY is going on nobly in the work of burning paper money. There was lately another great purification of the currency by fire—\$1,400,000 in notes of the bank of Kentucky, besides the conflagrations of the paper of the bank of the commonwealth, have been committed to the flames.

CHARLESTON. *Bills of mortality for the year ending 31st Dec. 1822.* Whole number of deaths, 925; of whom 499 were blacks—537 males and 388 females. Greatest number of deaths in June 116; least in January 53. *Diseases*—consumption 156, convulsions 42, debility 60, diarrhoea 92, dropsy 79, billious fever 42, various other fevers 108, of which two were of the grade called yellow; measles 26, old age 59, sore throat 46, teething 24, &c. *Ages*—under 3 years 265; 5 to 10, 58; 10 to 20, 59; 20 to 30, 145; 30 to 40, 150; 40 to 50, 80; 50 to 60, 63; 60 to 70, 40; 70 to 80, 33; 80 to 90, 22; 90 to 100, 6; 100 to 110, 4.

WASHINGTON CITY owes much to Mr. John Sesford, for the statistical table which he annually publishes, shewing the progress of population and improvement, &c. in a very neat and conspicuous manner. The following is a brief abstract of his last exhibits.

During the past year there were built 113 new dwellings, 7 stores, 6 additions and 3 houses in the place of others. The total amount of dwellings, on the 1st Jan. 1823, was 3,346. The population of the city in 1820, was 13,247—probable population at this time, 14,856.

Noticing the improvements in the 4th ward, Mr. Sesford says—"the exterior of the west front of the capitol is completed, and the dome on the centre is enclosed, the capitol square is enclosed with an iron railing containing 20 1.8 acres—length of footway outside is 3.4 of a mile, and 185 feet—

Length of front of the capitol,	350 ft.	} Covering 1½ acres & 1820 ft.
Depth of wings,	120	
East projection,	65	
West do.	83	
Height of wings to top of balustrades,	70 ft.	
Do. to top of centre dome	120	
Length of representative hall,	90	
Height do. do.	60	
Length of senate chamber,	74	
Breadth do. do.	42	
Diameter of rotunda,	96	
Height do.	96	

The deaths in the city during the past year were 296—adults 197, children 139. Greatest number in September, 51; least in June and December, each 13. Of consumption 44; cholera 17—do. morbus 18—do. infantum 4; fever 34—typhus 4—billious 38—intermittent 3—puerperal 2; convulsions 16; cholice 11; worms 11; pneumonia 10; pleurisy 10—all else under 10.

TRANSYLVANIA UNIVERSITY—Officers of instruction 15; law students 44; medical 170; under graduates 121; preparatory dept. 51—total students 386. This institution is rapidly rising in importance: at its new organization, in 1818, it had only 60 students. Its benefit to the state of Kentucky is justly appreciated.

TRAVELLING. The line of mail stages between Albany and Utica, carrying six passengers, lately made the *voyage* from the latter to the former and back again, a distance of one hundred and ninety-two miles, in the space of nineteen hours, including 19 minutes at breakfast, one hour at dinner, and a like period lost in changing the horses—so that the average rate of travelling was more than eleven miles per hour.

GEN. JACKSON. The Nashville Gazette says there is not the least foundation in the assertion that the hero of Orleans has withdrawn from the list of persons named for the presidency. The same is reiterated in the Louisville Public Advertiser.

COM. PORTER. A splendid public entertainment was given to this valuable officer at Norfolk, on Wednesday the 5th inst. captain Harrington presiding, at which many excellent toasts were drank; among them the following—

Our constitution. An invaluable legacy.

"While stands the Coliseum, Rome shall stand."

"When falls the Coliseum Rome shall fall."

"And when Rome falls—the world."

The memory of lieut. William H. Allen. "A star fell in the midst of its brightness."

After the regular toasts were concluded, the president proposed the following, which was drank with enthusiasm—

Our distinguished guest, com. Porter.

Upon which the commodore rose and expressed his feelings in the following very neat and animated address:—

"Gentlemen.—On ordinary occasions the tongue can speak what the heart feels. But under the peculiarly gratifying circumstances in which I find myself placed, I can only desire you to imagine yourselves in the same situation, and to refer you to your own feelings, to enable you to understand what mine are at this moment. In the fullness of my heart I can say no more on this subject.

"There are circumstances of a truly flattering character in the honors of this day conferred on me—and of a delicacy purely refined:—This is the anniversary of my birth.—Some of those now present have known me from my earliest youth, and have been in the strictest habits of friendship with me. Many have served with me in trying situations, and all those now under my command have I believe, without an exception, volunteered for the service in which we are associated. I view it, therefore, as an expression of your approbation from my youth to the present hour, and as a pledge of your confidence in my future conduct.

"Whatever may be the result of our expedition—for we cannot command success—I feel a confidence that the pledge will not have been made in vain, so far as my efforts can contribute to the public interest—and to your honor, which is inseparable from it—and this confidence is established on the able support which I calculate on from those whom I have the honor to command.

"The cause we are engaged in is the most just and righteous, as we war against the enemies of mankind—monsters who disgrace human nature; we carry with us the best wishes, not only of our own country, but of the civilized world. And it is only necessary to pronounce *one name* to awaken our resentments, and inspire us with vengeance—a name distinguished in the annals of our country—a name synonymous with patriotism, courage and self-devotion—the name of ALLEN.

"Let then, "remember Allen," be our watchword. If it is honorable in our country to be the first to

take measures to exterminate those enemies of the human race, it is no less so in us to be the instruments of its will—a martyr was necessary to rouse its sleeping energies. The blood of Allen has sealed the pirates' doom—and humanity will shudder less at their punishment than at their crimes. Justice demands it—and the world will approve it.”

APPOINTMENTS. In addition to many appointments already mentioned, the following have been made by the president and senate of the United States.

William F. Steele, of Georgia, attorney of the United States for that part of the territory of Florida, known as West Florida, *vice* Tipton B. Harrison, deceased.

William Sebree, of Kentucky, marshal of the U. States for the same.

Chapman Coleman, of Kentucky, marshal for the district of Kentucky, *vice* John Thompson Mason, jun. resigned.

James Smith Wilcox, of Pennsylvania, consul at the city of Mexico.

Robert Todd, of Kentucky, consul at Acapulco in Mexico.

William Taylor, of Virginia, consul at La Vera Cruz and Alvarado, in Mexico.

Henry M. Brackenridge, of Florida, Judge of West Florida.

Greenbury Gaither, *George Murray*, *John de la Rua*, and *Joseph Noriega*, all of Florida, members of the legislative council of Florida.

Henry Crabb, of Tennessee, attorney for the district of West Tennessee.

Langdon Cheves, of Pennsylvania, commissioner, on the part of the United States, under the first article of the convention of 12th July, 1822, with Great Britain.

Henry Seawell, of North Carolina, arbitrator on the part of the United States, under the same convention.

TOBACCO. A late number of the *Federal Republican*, has a valuable “statement of the crop of Maryland tobacco, the growth of 1821, and the exports of the same in 1822,” of which the following is an abstract:

18,377 hhds. were shipped in the year 1822, from B. Itmore, in 50 vessels—viz: 6,127 to Rotterdam, 6,098 to Amsterdam, 4,749 to Bremen, 630 to Hamburg, 338 to Cowes and a market, 305 to London, 130 to Boston.

8,715 hhds. were shipped from Georgetown and Alexandria in 20 vessels—viz: 2,686 to Amsterdam, 828 to Rotterdam; 2,775 to Cowes and a market.

Total quantity, shipped in 1822, 27,092 hhds. There were on hand, 1st January, 1823, 13,380 hhds. viz: in the warehouses at Baltimore 8,456; in vessels loading there 924; in the warehouses on the Potomac 2,250; in ditto on the Patuxent, Bay-side, &c. 1,750—13,380.

Of the previous crop, there remained 8,238 hhds. on hand, on 1st January 1822—so the whole crop of Maryland tobacco of the growth of 1821, is shewn to have been 32,234 hhds.

HAVANA. In the year 1822, the enormous sum of \$4,311,862 was received into the treasury of the district, all which was consumed by the expenses save thirty dollars, and the people wonder what has become of the money! No public establishment has been made in consequence of the great disbursement—but there are many officers that were fed by them.

FRANCE AND SPAIN. We inserted a paragraph in our last stating that the duke de Montmorency had resigned his functions, as minister of foreign affairs, for the reason that his note, on Spanish affairs, had been rejected by the king, who accepted the *milder* one of M. Villere as a substitute for it. The London Courier, speaking of this note, says—“We have read it with all the attention in our power; we have applied to it all the considerations which such a document is calculated to excite; and we should believe our own judgment if we were to say we can discern in it any approximation to peace, unless, indeed, Spain does, of herself, what nobody believes she will do, and what, in truth, nobody can consider her in a condition to do; that is, put down the revolutionists, rescind the constitution, and restore tranquility in those provinces which are now torn by civil war. Either words have no meaning, or, in our apprehension, the language of the French government resolves itself into this—“if you do not abate the nuisance, we must.”

It now seems undoubted that the allied powers have resolved to interfere in the affairs of Spain—but to what extent cannot yet be determined.

From the Moniteur. We hasten to give to the public the first authentic document which it has been possible to communicate since the opening of the congress. So many interests are connected with the determination of the different cabinets on this great occasion, that it is of importance to make them known as soon as they are definitely adopted. *The president of the council of ministers, charged ad interim with the department of foreign affairs, to the count de la Garde, his majesty's minister at Madrid.*

M. Le Comte.—As your political situation may be changed, in consequence of the resolutions adopted at Verona, French candor requires that you should be directed to make known the views of the government of his most christian majesty to the government of his catholic majesty.

Since the revolution which took place in Spain in April, 1820, France, notwithstanding the dangers which that revolution presented for her, carefully endeavored to draw close the bonds which unite the two kings, and to maintain the relations which exist between the two nations.

But the influence, under which the changes in the Spanish monarchy have been brought about, has become more powerful, in consequence of the very results of these changes, as it was easy to be foreseen.

A constitution, which king Ferdinand, on resuming the crown, neither recognized nor accepted, was imposed on him by a military insurrection. The natural consequence of this transaction has been, that each dissatisfied Spaniard considers himself authorized to seek, by the same means, the establishment of an order of things more in harmony with his opinions and principles. The employment of force has created the right of force.

Hence the movement of the guards at Madrid, and the appearance of armed corps in different parts of Spain. The provinces bordering on France have been chiefly the theatre of the civil war. Thus it has become necessary for France to protect herself from this state of disorder in the peninsula. The events which have occurred since the establishment of an army of observation at the foot of the Pyrenees have sufficiently justified the foresight of his majesty's government.

Meanwhile the congress, which, since last year, had been looked to for deciding on the affairs of Italy, assembled at Verona.

As an integral part of this congress, France was bound to explain herself with respect to the armaments to which she had been compelled to have recourse, and to the manner in which she might eventually employ them. The precautions of France appeared just to her allies, and the continental powers adopted the resolution of uniting with her to aid her, (if there ever should be occasion), in maintaining her dignity and tranquility.

France would be satisfied with a resolution, at once so benevolent and so honorable, with respect to her; but Austria, Prussia and Russia, judged it necessary to add to the particular act of alliance a manifestation of their sentiments. Diplomatic notes are for that purpose addressed by these three powers to their respective ministers at Madrid, who will communicate them to the Spanish government, and in their ulterior conduct follow the orders which they shall have received from their courts.

For your part, M. Le Comte, in giving these explanations to the cabinet of Madrid, you will declare to it, that his majesty's government is intimately united with its allies in the firm resolution to repel, by every means, revolutionary principles and movements; that it equally concurs with its allies in the wishes which they form, that a remedy may be found by the noble Spanish nation itself for these evils—evils which are of a nature to disturb the government of Europe, and to impose on them precautions which always must be painful.

You will, in particular, take care to make known, that the people of the peninsula, restored to tranquility, will find in their neighbors faithful and sincere friends. You will, therefore, give to the cabinet of Madrid the assurance, that the succors, of every kind, which France can dispose of in favor of Spain, will always be offered to her for the purpose of assuring her happiness, and increasing her prosperity; but you will, at the same time, declare that France will, in no respect, relax the preservative measures, which she has adopted, while Spain continues to be torn by factions. His majesty's government will not even hesitate to recall you from Madrid, and to seek guarantees in more efficacious measures, if its essential interests continue to be compromised, and if it lose the hope of an amelioration, which it takes a pleasure in expecting from the sentiments which have so long united Spaniards and Frenchmen in love for their kings and for a wise liberty.

Such are, M. Le Comte, the instructions which the king has ordered me to submit to you, at the moment in which the notes of the cabinet of Vienna, Berlin and St. Petersburg, are about to be presented to the cabinet of Madrid. These instructions will serve to make known to you the views and the determination of the French government on this momentous occurrence.

You are authorized to communicate this despatch and to furnish a copy of it, if it be demanded.

Paris, December 25, 1822.

It is reported that, if the declarations of the holy alliance are not accepted by Spain, the ambassadors of Russia, Austria, and Prussia have orders to quit Madrid.

Balance of Trade.

MR. NILES—There is no subject whereon it is more difficult to unite opinion than the balance of trade. The country is arrayed on opposite sides. Mercantile men say the balance is in our favor—manufacturing men the reverse; and, as their minds are made up, in favor of or against manufactures,

so are their opinions on the balance of trade. One says the excess of imports over exports is the amount of profits; the other says it is the amount of the losses of the nation. To settle this great question, whether the excess of imports or exports is a balance for or against a nation, has caused much discussion among writers on political economy. Formerly, it was deemed an undoubted rule, that the balance of exports was a profit—but, latterly, the contrary result has been powerfully maintained. On which side the balance of reasoning is, I will not pretend to say; for it seems to me a simple question of fact. The balance of exports, or the balance of imports, may be the balance of profits, or not, according to circumstances—If the excess of our imports is paid for by our exports, then it is a profit by so much; if, on the other hand, the excess is purchased on a credit, and the country contracts a debt to that amount, it is a loss. So, if there is an excess of exports, it is a profit, if a balance is received in money or other articles of value—but if the exports do not produce, in a foreign market, the cost at home—if cargoes are captured or lost by the perils of navigation, either on the outward or homeward voyage, it swells the balance of exports, but not the balance of profits. The excess of exports may be a real loss to the nation—losses by capture or casualty too, may or may not be losses to the nation, according to their insurance being foreign or domestic. It is not, therefore, a question depending on reasoning or argument, but facts; upon all the complicated machinery and operations of commerce. The important question is not so much, what is the apparent difference between the aggregate amount of exports and imports, as how that difference arises, and that question must be settled by our custom house or treasury returns, which only exhibit the amount of imports and exports, but have no reference to the various contingencies on which the ascertainment of the real balance of trade depends. This want of official information makes it a difficult task to find out the relative amounts, which is increased by the various opinions of those who differ on the great question. I shall endeavor to ascertain the balance, by first settling what is the balance of trade? 2d. What are exports? 3d. What are imports? 4. What is the amount of each? 5. On which side is the balance?

1. I consider the United States as composing one partnership of shipping merchants; their stock in trade composed of all the shipping, all the exportable produce of ours and foreign growth or manufacture; the balance of trade is the balance of profit and loss at the end of each year; if they have on hand more stock than they commenced with, the balance is in their favor—if less, then against them: if the firm is in debt, if their real property has been incumbered, if they have applied their individual resources to meet or secure these debts—all those items are losses. The balance of profit and loss is the balance of trade.

2. Exports consist of the entire produce of our industry sent abroad—the productions of our soil, our fisheries, our forests, our manufactures, our shipping—the profits of freighting; exports in American vessels; the profits of circuitous voyages; imports of the produce of our distant fisheries, not entered at the custom house for exportation—and, if favorable, exchange on the balance in our favor.

3. Imports consist of all foreign articles introduced into the country—freight, whether in American*

*An objection may be made to this item; but it must be considered that freight enhances the value

or foreign vessels; the rate of exchange, if unfavorable, or the balance against us, and foreign insurance.

4. The amount of exports by the statistical tables of 1821, is, domestic 43,671,000; foreign 21,302,000—total \$64,974,000.

5. The amount of imports is 62,585,000 dollars. Exhibiting an apparent balance in our favor of 2,399,000 dollars—but the document furnishes evidence that this is not the real balance—the specie and bullion exported was \$10,478,000; imported \$8,664,000—balance against us \$2,414,000—making the real balance, as appears by the treasury returns, against the country. It will hardly be contended that the exportation of specie, beyond the amount imported, can constitute a favorable balance—for, if it would, then the importation of a balance in specie would be an unfavorable balance, involving this contradiction, that, if the operations of a firm yielded them, at the end of the year, a balance in money, this balance was a loss and not a profit. Our laws do not require the merchants to give an account of the stocks remitted to Europe, or of the bonds, judgments, mortgages, or other securities, to pay or secure debts we owe abroad. If these were entered on the custom house books, they ought not to be counted as exports of produce and swelling the balance of trade in our favor, but as evidence of the balance being against us, for which the bonds of the government and of individuals are held by foreigners.

The treasury statements may or may not exhibit the true balance of trade; if our produce exported yields no profit, and foreign goods are fairly valued, honestly invoiced and not smuggled, there can be but little difficulty in ascertaining it; but if our exports pay first cost, freight and profit, the two last items must be added. Whether they do yield this profit, is a fact which can only be ascertained by the experience and from the information of merchants. Those who have been, for thirty years, engaged in the shipments of produce abroad, would do a public service by stating, from their books, the result of their operations. My opinion is, that, in the aggregate, there has been a loss from the first cost—that the merchant's profits are, generally, from the inward not the outward cargoes. I am well aware of the extreme difficulty of ascertaining

of the article to the purchaser. Foreign articles are valued at the place whence imported; if imported in foreign vessels, they certainly cost the amount of freight in addition. American vessels are part of the stock in trade—their cost, repair, wages of seamen, port charges and duties, and charges of navigation, is an expenditure by the firm; if employed in exporting produce, the profits are as much the produce of our capital, materials and labor, as the exportation of cotton; if employed in importing foreign produce, the expenses add to the price of the imported goods as if imported in foreign vessels, with only this difference between the profits of freighting and the actual expenses of the vessel. In the East India trade, the outward voyage is mostly in ballast—the whole expense of the voyage, out and in, is therefore a fair charge on the homeward cargo, adding so much to the first cost in Canton or Calcutta: it seems, therefore, a fair item to be added to imports. I may have made omissions in the above classifications, for it is almost impossible to have every thing in one's memory while writing on these subjects; but I have endeavored to state all the items fairly on each side.

this fact in any other way than by an account of the various voyages for a long lapse of years—but am confident, that the result of the examination would be, that our articles have not produced, in foreign ports, more than first cost. Let our old merchants examine their ledgers—charge themselves with the outward cargo, and close the account at the port where it was sold—and the average results, for thirty years, will, at once, settle the question. There are merchants in all our sea ports who can do this satisfactorily. There is no fact which would give so much useful information to the country as this—to ascertain whether the profits of our merchants have been on the out or in cargoes—whether the failures and insolvencies are more owing to losses on produce shipped abroad or goods imported? As this is a mere question of fact, it cannot be elucidated by opinion or assertion. It will naturally be asked, if it is not profitable, why do merchants persist in this course of trade? It may as well be asked why they buy lottery tickets or build country houses—though the reason for doing either of these things may be a bad one, it is no proof that the thing is not done. Hope, flattering delusion, yet cheering hope, impels us on in all pursuits in life; the wisest of us do not profit enough by experience—our merchants are enterprising and adventurous; success encourages, losses do not dispirit them. We must then first settle the fact, and not attempt to make it out by inference—and it must first be ascertained that there do actually accrue profits on our shipments of domestic produce, before we take credit for them in making up the balance of trade. The same reasons will apply to all the other contingent items which constitute our exports or imports, which makes it impossible to state a correct account. The general improvement of the country, our progressive wealth and resources, are no evidence of a favorable balance of trade, though they have been, by many, deemed as such. That we have, on the whole, flourished for thirty years, is true—but it must be remarked that the greatest increase in population and wealth has been in those parts of the country which have the least foreign commerce. Our commercial cities have grown rapidly, but it remains to be proved that their growth has been owing to their foreign more than their domestic commerce—whether the fortunes, which have been acquired, have not been by selling to retailers their inward cargoes, rather than their profits in purchasing and shipping domestic produce—in other words, whether the wealth of the merchants has not been drawn more from the interior of the country than from foreigners. Merchants fail, but cities grow—the builder breaks, but the building remains; it only changes owners. The balance of trade may be largely against us, our merchants largely indebted abroad, and yet this may be the reason why the improvements of the country may progress. Foreign creditors are postponed in favor of domestic, in cases of insolvency—the effects are distributed among friends and those on the spot—they have been expended in buildings and other improvements, which add to the wealth of this country at the expense of foreigners. In counting national profits, this is no small item—rumor tells us that one merchant, in Philadelphia, imported, on credit, £125,000 sterling in goods, which went entirely to his domestic creditors. This was clear gain—not a very desirable mode of adding to our wealth I admit, but one which prevails to some extent. It is one of the items which counterbalances the effects of an unfavorable trade—its operations will continue. Money expended here by

travellers from Europe; brought here by emigrants, expended in the purchase of lands, of stocks, &c. &c. all tend essentially to countervail the balance of trade. The interior of the country will improve from its own resources—opening new powers of manufactures, internal commerce naturally increasing with the increase of population. In putting a proper estimate on all these causes, it will be at once evident, that the country may progress rapidly, nay, to an unexampled degree—yet it is not the favorable balance of trade which does it; it only proves that the resources of the nation are so great that it flourishes in despite of the balance of trade against it. What would it not do if the balance was in its favor? But, before we calculate too largely on the rapid improvement of this country, we must deduct the increase of its debts during thirty years. The addition to the national debt, the debts to banks and to individuals, are a charge on the improvements and property of our citizens. The amount of stocks held by foreigners, debts due to them, and property owned by them here, are all drawbacks on our apparent prosperity. Let the account be fairly stated, and it will be found that our wealth has not increased so much as has been generally imagined in the treasury report. There is one, and only one, other remark of the secretary of the treasury which seems, to me, rather inaccurate. He thinks that, in ascertaining the relative value of our exports and imports, we should add the same per centage, 10 or 20, as the case may be, which is added to the invoice of imported *valorem* goods. In his report on the finances, the *custom house* value of *ad valorem* goods is stated including the 10 or 20 per cent; but, in the statistical tables, prepared pursuant to the law of the 10th February, 1820, a different mode of valuation is directed:—the 10th section is as follows—“That all articles exported shall be valued at their actual cost, or the value which they may truly bear, at the time of exportation, in the ports of the United States from which they are exported; and that all articles imported shall be valued at their actual cost, or the value which they may truly bear in the foreign ports from which they are exported for importation into the United States, at the time of such exportation:”—page 9, laws of 1820. This rate of valuation excludes the 10 and 20 per cent. It is evident, therefore, that this addition ought not to be made to our exports in order to ascertain the balance of trade. From these observations, the reader will, probably, think with me, that, with the present means of information, we cannot accurately ascertain the precise balance of trade, depending on so many contingencies, and yet be convinced that there is, occasionally, a large balance against us: Though I admit that the custom house returns cannot, as at present made, exhibit the true balance, yet I believe that it is greater than the mere difference between the amount of exports and imports. It is certain that more money is expended by foreigners here than by Americans in Europe; that more money is brought here by emigrants; received here by legacies and intestacies; expended in the purchase and improvement of real estate; in the purchase of public or corporate stocks; more goods brought here on credit which are not paid for to foreigners, than is done in Europe by Americans—yet, with all these items in our favor, we remit specie, stocks, all our exportable produce, are still in debt, and obliged to pay the balance in bills, at a loss of 12½ per cent. With these acknowledged facts, can any one doubt that the balance is against us more than the custom house returns exhibit it?

Besides, we must remember that our merchants have no temptations to undervalue their exports, but foreigners have a deep, direct interest in undervaluing theirs, in order to evade the duties in our ports; and we know that frauds, of this kind, are carried to a great extent: this item must be added to the account. If any one can account for these things, and yet contend that the balance of trade is in our favor, I hope he will not withhold the information from the public. The attention of the Boston “Merchant” is particularly invited to this subject—his writings shew him to be intelligent; he understands the subject and must spare a little time to elucidate it; to explain how the rate of exchange is 12½ against us and the balance of trade in our favor—to tell us why we buy bills, export specie, stocks, &c. if we do not owe a balance? to inform us how we become in debt if our exports pay for all our imports? what becomes of our remittances, if not to pay debts? To inform us whether the American merchants are exchanging American for foreign stock, or are investing their money in real estate in Europe? Let us have a practical explanation on these subjects, a matter-of-fact statement of the actual operations of our merchants—let there be a delineation of the course of trade which we can all understand. But I protest against suppositions, as in the case of exchange—no calculation of *ounce* for *ounce*, unless it is the real basis of exchange; no calculations as to what the balance of trade may or might be, under circumstances that do not exist in fact.

These matters are of momentous concern to the nation—they reach the interest of every man in society, and deserve the deliberate attention of our rulers. There *is* such a thing as a balance of trade—the adventures of a nation, as well as of individuals, may be losing ones—our country is young but rising to manhood; its growth may be retarded by the supineness of the people or the indifference of government: but the day will come when all our public functionaries must answer to the voice of an injured, neglected and embarrassed country,—why have you suffered eight years of general peace to elapse without a single act of legislation, tending to adapt the internal policy of the nation to the mighty changes abroad, and our suffering interests at home? T.

Gold Coins.

HOUSE OF REPRESENTATIVES, FEB. 6, 1823.

Report of the select committee appointed on the 13th ult. in relation to the expediency of receiving certain foreign coins in payments at the treasury; accompanied with a bill making the gold coins of Great Britain, France, &c. receivable in payments on account of public lands.

The committee appointed on the 13th ultimo, having deliberated on the last point of inquiry embraced in the resolutions of instructions to them, adopted by the house of representatives, on the 23d ultimo, namely, “the expediency of making the gold coins of Great Britain, Portugal, France and Spain, receivable in payment of debts due the United States, at their intrinsic value,” ask leave, on that subject, to report:

The gold coins of Great Britain and Portugal, of their present standards, correspond almost exactly with our own: those of France are not so fine, and those of Spain still less pure.

Although no regular report of the assays of these coins has been made by the director of the mint since 1819, during which year the last act of con-

gress, declaring them a lawful tender, expired; yet, from numerous assays, made since on deposits, it has been abundantly ascertained that their intrinsic value is equal to that which was assigned to them, respectively, by the act of 29th April, 1816.

The committee assent, without hesitation, to the expediency of making them receivable in payment of debts to the United States on sales of public lands; but doubt the propriety of making them a tender on other debts, duties, taxes, or sums of money, which have or may become due to the government.

Notwithstanding it was stated, in a previous report of the committee, that the gold coins of every description and denomination, whether American or foreign, have, of late, been almost entirely banished from our sea-port towns, yet there is reason to believe, that, owing to the constant emigrations to the western country from Europe, and to the acknowledged want of confidence in many of their banking institutions, considerable sums of foreign gold have found their way into that country; and have been, and are, much relied on as part of the means of paying the debt there due for public lands.

The committee are assured, that very many of the purchasers of those lands, being persuaded, from long habit, that gold would, on account of its metallic preciousness, continue to be the safest and most in demand as a circulating medium, have studiously and carefully preserved it for the purpose of making payments to the receivers of public money on their land purchases.

The debt on account of sales of public lands is so large, that, it is believed, every facility and inducement, compatible with the just rights of the general government, should be extended by congress for its speedy reduction and final extinguishment, by actual payments.

It will be seen, by reference to the annexed communication of the 3d February, instant, made in reply to a letter addressed to the treasury department, by direction of the committee, that the secretary of the treasury has found it expedient to authorize the receivers of public money to continue to receive the coins, adverted to in this report, "in payments on account of public lands;" and that "*they are, in fact, now received by them.*" The reasons assigned in said communication for giving such authority to the receivers, are perfectly satisfactory to the committee; and strongly indicate the propriety, not to say necessity, of giving to that authority the sanction of law.

Treasury department, February 3, 1825.

SIR: In reply to your letter of the 31st ultimo, inquiring whether it would not be expedient to make the gold coins of Great Britain, Portugal, France and Spain, receivable in payments to the United States, at their intrinsic value, and especially in payments on account of the public lands, I have the honor to state, that it is deemed proper that they should be made a lawful tender in all payments to the United States on account of public lands. Upon the expiration of the act of congress which made them a legal tender in the payment of debts in the United States, the receivers of public money were authorized to continue to receive them in all payments on account of public lands, and they are in fact now received by them. This authority was given, first, because no doubt was entertained that the creditors of the government in the states and territories where the land offices were established, would receive such coins in preference to

the notes of the state banks established in those states and territories. And, second, because the refusal of those coins, and of the notes of the local banks, would have placed it out of the power of the purchasers of the public lands to make payment, as the notes of the bank of the United States, and of its offices, did not circulate among them, and the current coin of the union did not circulate in sufficient quantity to meet even a small proportion of the payments due by them.

In terminating this letter I feel it my duty to observe, that the relative current value of gold and silver differs materially from that established by the laws of the United States. The consequence has been, that the gold coin of the United States has always been exported, whenever the rate of exchange between the United States and the commercial nations of Europe has been in favor of the latter. If the gold coins of the United States should be made equal in value to sixteen times the value of silver coins of the same quantity of pure silver, they would be exported only when the rate of exchange should be greatly against the United States.

This subject was presented more fully in a report made by this department, upon the state of the currency, in obedience to a resolution of the house of representatives, of the 1st of March, 1819, to which I beg leave to refer the committee.

I remain, with respect, your most obedient servant,

WILLIAM H CRAWFORD.

Hon. W. B. Rochester, C. C. on the mint.

Treaty with France.

BY THE PRESIDENT OF THE UNITED STATES.

A PROCLAMATION.

Whereas a convention of navigation and commerce, between the United States of America and his majesty the king of France and Navarre, together with two separate articles annexed to the same, was concluded and signed at Washington on the twenty-fourth day of June last past, by the respective plenipotentiaries of the two powers; and whereas the said convention, and first separate article annexed to the same, have been duly and respectively ratified by me, and by his majesty the king of France and Navarre, and the ratifications of the same have this day been exchanged at the city of Washington, by JOHN QUINCY ADAMS, secretary of state, and the count JULIUS DE MENOR, charge d'affaires of France; which convention, and the first separate article annexed to the same, are in the words following, to wit:

Convention of navigation and commerce between the United States of America and his majesty the king of France and Navarre.

The United States of America and his majesty the king of France and Navarre, being desirous of settling the relations of navigation and commerce between their respective nations, by a temporary convention, reciprocally beneficial and satisfactory, and thereby of leading to a more permanent and comprehensive arrangement, have respectively furnished their full powers in manner following, that is to say: The president of the United States to JOHN QUINCY ADAMS, their secretary of state; and his most christian majesty, to the baron HYDE DE NEUVILLE, knight of the royal and military order of St. Louis, commander of the legion of honor, grand cross of the royal American order of Isabella the Catholic, his envoy extraordinary and minister plenipotentiary near the United States; who, after exchanging their full powers, have agreed on the following articles:

ARTICLE 1st.

Articles of the growth, produce or manufacture of the United States, imported into France in vessels of the United States, shall pay an additional duty, not exceeding twenty francs per ton of merchandise over and above the duties paid on the like articles, also of the growth, produce or manufacture of the United States, when imported in French vessels.

ARTICLE 2.

Articles of the growth, produce or manufacture of France, imported into the United States in French vessels, shall pay an additional duty, not exceeding three dollars and seventy five cents per ton of merchandise over and above the duties collected upon the like articles, also of the growth, produce or manufacture of France, when imported in vessels of the United States.

ARTICLE 3.

No discriminating duty shall be levied upon the productions of the soil or industry of France, imported in French bottoms into the ports of the United States for transit or re-exportation: nor shall any such duties be levied upon the productions of the soil or industry of the United States, imported in vessels of the United States into the ports of France for transit or re-exportation.

ARTICLE 4.

The following quantities shall be considered as forming the ton of merchandise for each of the articles herein after specified:

Wines—four 61 gallon hogsheads, or 244 gallons of 231 cubic inches, American measure:

Brandies, and all other liquids, 244 gallons:

Silks and all other dry goods, and all other articles usually subject to measurement, forty-two cubic feet, French, in France, and fifty cubic feet, American measure, in the United States.

Cotton 804 lb. avoidupois, or 365 kilogrammes: Tobacco, 1,600 lb. avoidupois, or 725 kilogrammes:

Ashes, pot and pearl, 2,240 lb. avoidupois, or 1,016 kilogrammes:

Rice, 1,600 lb. avoidupois, or 725 kilogrammes; and for all weighable articles, not specified, 2,240 lb. avoidupois, or 1,016 kilogrammes.

ARTICLE 5.

The duties of tonnage, light money, pilotage, port charges, brokerage, and all other duties upon foreign shipping, over and above those paid by the national shipping in the two countries respectively, other than those specified in articles 1 and 2 of the present convention, shall not exceed in France, for vessels of the United States, five francs per ton of the vessel's American register; nor for vessels of France in the, United States, ninety-four cents per ton of the vessel's French passport.

ARTICLE 6.

The contracting parties, wishing to favor their mutual commerce, by affording in their ports every necessary assistance to their respective vessels, have agreed that the consuls and vice-consuls, may cause to be arrested the sailors, being part of the crews of the vessels of their respective nations, who shall have deserted from the said vessels, in order to send them back and transport them out of the country. For which purpose the said consuls and vice-consuls shall address themselves to the courts, judges and officers competent, and shall demand the said deserters in writing, proving, by an exhibition of the registers of the vessel, or ship's roll, or other official documents, that those men were part of the said crews; and on his demand, so proved, (saving however where the contrary is

proved), the delivery shall not be refused; and there shall be given all aid and assistance to the said consuls and vice-consuls for the search, seizure and arrest of said deserters, who shall even be detained and kept in the prisons of the country, at their request and expense, until they shall have found an opportunity of sending them back. But if they be not sent back within three months, to be counted from the day of their arrest, they shall be set at liberty, and shall be no more arrested for the same cause.

ARTICLE 7.

The present temporary convention shall be in force for two years from the first day of October next, and even after the expiration of that term, until the conclusion of a definitive treaty, or until one of the parties shall have declared its intention to renounce it; which declaration shall be made at least six months before hand.

And in case the present arrangement should remain without such declaration of its discontinuance by either party, the extra duties specified in the 1st and 2d articles, shall, from the expiration of the said two years, be, on both sides, diminished by one-fourth of their whole amount, and, afterwards, by one-fourth of the said amount, from year to year, so long as neither party shall have declared the intention of renouncing it as above stated.

ARTICLE 8.

The present convention shall be ratified on both sides, and the ratifications shall be exchanged within one year from the date hereof, or sooner, if possible. But the execution of the said convention shall commence in both countries on the 1st of October next, and shall be effective, even in case of non-ratification, for all such vessels as may have sailed *bona fide* for the ports of either nation, in the confidence of its being in force.

In faith whereof, the respective plenipotentiaries have signed the present convention, and have thereto affixed their seals, at the city of Washington, this 24th day of June, A. D. 1822.

JOHN QUINCY ADAMS, [L. s.]

G. HYDE DE NEUVILLE. [L. s.]

SEPARATE ARTICLE.

The extra duties levied on either side before the present day, by virtue of the act of congress of 15th May, 1820, and of the ordonnance of 26th July of the same year, and others confirmative thereof, and which have not already been paid back, shall be refunded.

Signed and sealed as above, this 24th day of June, 1822.

JOHN QUINCY ADAMS. [L. s.]

G. HYDE DENEUVILLE, [L. s.]

Now, therefore, be it known, that I, JAMES MONROE, president of the United States, have caused the said convention and first separate article to be made public, to the end that the same, and every clause and article thereof, may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof, I have hereunto set my [L. s.] hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this twelfth day of February, in the year of our Lord one thousand eight hundred and twenty-three, and of the independence of the United States the forty-seventh.

JAMES MONROE.

By the president:

JOHN QUINCY ADAMS,
Secretary of state.

Sinking Fund.

REPORT OF THE COMMISSIONERS OF THE SINKING FUND.

House of representatives, February 6, 1823—Read, and ordered to lie on the table.

The commissioners of the sinking fund respectfully report to congress:—That the measures which have been authorized by the board, subsequent to the last report, of the 7th of February, 1822, as far as the same have been completed, are fully detailed in the report of the secretary of the treasury to this board, dated the 6th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as a part of this report.

DANIEL D. TOMPKINS, *vice-president of the United States.*

J. MARSHALL, *chief justice of the United States.*

JOHN QUINCY ADAMS, *secretary of state.*

WILLIAM H. CRAWFORD, *secretary of the treasury.*

REPORT.

The secretary of the treasury respectfully reports to the commissioners of the sinking fund, That the balance of moneys advanced on account of the public debt, remaining unexpended at the close of the year 1820, and applicable to payments falling due after that year, which balance, as appears by the statement B, annexed to the last annual report, amounted to \$1,880 89

With the sums disbursed from the treasury during the year 1821, on account of the principal and interest of the public debt, amounting, as per the last annual report, to 8,567,093 62

And making, together, the sum of 8,568,974 51

Having been accounted for in the following manner, viz:

There was applied, during the year 1821, towards the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this department, as per the annexed statement A, the sum of 8,403,563 49

In the reimbursement of the principal of the deferred stock	533,808 47
In the payment of certain parts of the domestic debt	54 45
In the redemption of the Louisiana stock	2,071,360 00
Do. of treasury notes	1,774 38
Do. of Mississippi stock	634,022 53

3,241,019 83

On account of the interest and charges 5,162,543 66

8,403,563 49

Of this sum there was short provided, consisting of unclaimed dividends on the public debt, not applied for by the proprietors, as per the annexed statement B, the sum of 34,588 98

8,368,974 51

That, during the year 1822, the following disbursements were made by the treasury on account of the principal and interest of the public debt: On account of the interest of the domestic debt, and reimbursement of the principal of the deferred stock 5,739,760 62

On account of the redemption of the Louisiana stock	5,294 12
Do. do. of Mississippi stock	23,388 94
Do. do. of treasury notes	277 00
In payment of certain parts of the domestic debt	438 99
Do. of the six per cent. stock of 1796	80,000 00
Do. of the six per cent. stock of 1820	2,000,000 00

Making, together, as appears by the annexed statement C, the sum of 7,849,159 67

Which disbursements were made from the appropriation of ten millions of dollars for the year 1822, and will be accounted for in the next annual report, in conformity to accounts which shall then have been rendered to this department.

In the mean time, the manner in which the said sum has been applied is estimated as follows: There is estimated to have been applied to the payment of the deficiency at the end of 1821, as per statement B, 34,588 98

In the reimbursement of the deferred stock	566,588 75
In the payment of treasury notes	277 00
In the redemption of Louisiana stock	5,294 12
In the payment of Mississippi stock	23,388 94
Do. of certain parts of the domestic debt	438 99
Do. of the six per cent. stock of 1796	80,000 00
Do. of the six per cent. stock of 1820	2,000,000 00

2,710,576 78

And in the payment of interest on the funded debt, viz: interest on the debt for 1822, is estimated at 5,151,268 26

Deduct this sum short provided, per estimate E. 15,685 37 5,138,582 89

\$7,849,159 67

A statement, F, is annexed, which exhibits the balance of the annual appropriation of \$10,000,000, unexpended on the 1st of January, 1823.

And a statement, marked G, of the funded debt on the 1st January, 1823.

All which is respectfully submitted, WM. H. CRAWFORD, Secretary of the treasury.

A.

Statement of the application, during the year 1821, of the funds provided for the payment of the principal and interest of the public debt.

I. Payments on account of principal.		
1.	Reimbursement of the deferred six per cent. stock	533,808 47
2.	Do. of certain parts of domestic debt	54 45
3.	Do. of Louisiana stock	2,071,360 00
4.	Do. of Treasury notes	1,774 38
5.	Do. of Mississippi stock	634,022 53
		3,241,019 83
II. Payments on account of interest and charges.		
1.	Interest for the year 1821, on the public debt, as settled at the treasury	5,124,896 42
2.	Do. on Louisiana stock	36,324 88
3.	Do. on temporary loans by bank of the United States	1,153 47
4.	Charge for advertising by the agents in London, credited in their settlement, per treasurer's report, No. 43,834	158 89
		5,162,543 66
		\$8,403,563 49

Treasury department, register's office, February 3, 1823.

JOSEPH NOURSE, Register.

B.

Statement of the provision made before the 1st day of January, 1822, for the payment of the principal and interest of the public debt, due on that day.

The demands to be satisfied on the 1st January, 1822, were as follows:

1.	Dividends payable by the com. of loans, including dividends due on that day, and exclusive of dividends no longer demandable at their offices	1,577,910 78
2.	Unclaimed dividends from the loan offices, payable at the treasury beyond the amount advanced for their payment	201,836 02
3.	Balance due the late agents in London, on the 31st December, 1821 per treasury settlement, No. 43,834	1,474 44
		1,781,221 24

The funds provided to satisfy these demands, were as follows:

1.	Cash due from commissioners of loans, deceased and out of office	1,217 65
2.	Cash in the hands of com. of loans in office, and applicable to dividends	1,623,422 42
3.	Cash advanced for treasury dividends over the amount payable	18,054 45
4.	Cash paid for bills purchased on account of the public debt, which were protested for non payment, and not yet repaid, as per note, (a), to statement B, of the last annual report	103,937 74
		1,746,632 26

Short provided \$34,588 98

Treasury department, register's office, February 3, 1823.

JOSEPH NOURSE, Register.

C. gives a list of the warrants and the following

RECAPITULATION OF EXPENDITURES.

Interest and reimbursement of domestic debt	5,739,760 62
Redemption of Louisiana stock	5,294 12
Reimbursement of Mississippi stock	23,388 94
Reimbursement of Treasury notes	277 00
Certain parts of domestic debt	438 99
Redemption of six per cent. stock of 1796	80,000 00
Redemption of funded six per cent. stock of 1820	2,000,000 00
	Dollars, 7,849,159 67

Treasury department, register's office, February 3, 1823.

JOSEPH NOURSE, Register.

D.

Estimate of the application, in 1822, of the funds provided for the payment of the principal and interest of the public debt, falling due in that year.

First—On account of the principal:

1.	Reimbursement of the deferred stock, estimated at	\$566,588 75
2.	Do. do. Treasury notes	277 00
3.	Redemption of Louisiana stock	5,294 12
4.	Payment of Mississippi stock	23,388 94
5.	Do. of certain parts of the domestic debt	438 99
6.	Do. of six per cent. stock of 1796	80,000 00
7.	Do. of six per cent. stock of 1820	2,000,000 00
		2,675,987 80

Second On account of the interest of the domestic funded debt

5,154,268 26

\$7,830,256 06

Treasury department, register's office, February 3, 1823.

JOSEPH NOURSE, Register.

E.

Estimate of the funds provided, before the 1st January, 1823, for the payment of the principal and interest of the public debt, which fell due before that day.

Amount short provided on the 1st January, 1822, as per foregoing statement, B.	\$34,588 98
Application, per estimate D.	7,830,256 06
	7,864,845 04
Amount of warrants issued on account of the principal and interest of the public debt, during the year 1822, per statement C.	7,849,159 67

Short provided on account of unclaimed dividends, 15,685 37
 Treasury department, register's office, February 3d, 1823. JOSEPH NOURSE, Register.

F.

Statement of the appropriation of ten millions of dollars by the second section of the "Act to provide for the redemption of the public debt," passed 3d March, 1817.

Application, per statement G. which accompanied the report of the com. of the sinking fund, of the 7th February, 1822, viz:	Appropriation of 1817	\$10,000,000 00
In 1817	Do.	1818 10,000,000 00
Do. in anticipation of the appropriation for 1818	Do.	1819 10,000,000 00
	Do.	1820 10,000,000 00
	Do.	1821 10,000,000 00
	Do.	1822 10,009,000 00
In 1818		a12,830,108 52
1819		7,169,891 48
1820		7,705,821 87
1821		8,628,514 28
Application in 1822, per the accompanying report		8,367,093 62
Balance applicable to payments after the 31st December, 1822		7,849,159 67
		7,451,410 56
		\$60,000,000 00
		\$60,000,000 00

Treasury department, register's office, Feb. 3, 1823. JOSEPH NOURSE, Register.

In addition to this amount, there was applied, in 1817, the sum of \$9,000,000, appropriated by the 3d section of the act above recited, and accounted for in the report of the commissioners of the sinking fund, of the 7th February, 1818.

G.

Statement of the funded debt of the United States, on the 1st Jan. 1823, with its redemption for 1821 and 1822.

Reimbursement of the deferred stock, in 1821	\$533,808 47	Amount of the funded debt on the 1st January 1822, per statement H, which accompanied report of Feb. 1822	\$93,957,665 14
Do. of the 6 per cent. stock of 1796, in 1822	80,000 00	Add 3 per cent. stock issued in 1822	143 02

Treasury department, register's office, February 3d, 1823. JOSEPH NOURSE, Register.

Seventeenth Congress--2nd session.

IN THE SENATE.

February 14. Mr. Johnson, of Kentucky, rose to offer a resolution. He said he had been anxious to present to the senate a proposition to enjoin upon the judicial committee a thorough examination into the organization of the courts of the United States, and to report such a change as would cure the evils resulting from the present system. He thought it was the duty of congress to take up the subject and give it a complete examination, and adopt some modifications which he was convinced ought to be made. But this session was a short one, and not the most favorable to the discharge of this duty. He thought that congress should turn their attention to the jurisdiction, as well as to the organization of the federal judiciary. The defining and limiting the jurisdiction of the courts depended upon a construction of the federal constitution, and required no other materials than those possessed by every member. But the organization of the courts was a matter of policy and expediency, and should be changed as time and experience might suggest. In order, therefore, that this subject might be before congress at an early period of the next session, with all the facts which could be obtained in addition to those in the possession of members, he had been induced to offer to the house a resolution which might furnish some useful information on the subject as to the organization of the courts. At present one half of the territory of the United States, if not half of the population, was under a district system, and the other half under a district and circuit system combined—and the circuit judges compose the supreme court of the United States. It was apparent, from this system, that, in the selection of these judges, we should consult, as much if not more, bodily powers than mental and legal acquirements; for the judges of the supreme court can only remain at this place something like 40 days annually, during which time, with the most industrious industry, more than one hundred cases cannot be disposed of, while they represent 10,000,000 of people, and 24 independent states, and the dockets in every part of the union swelling and increasing in magnitude. The western country had in part only the benefits of the circuit system. He thought that the system should be uniform; that every part of the United States should have circuit courts, or confined to district, and enable the supreme court to remain in session at this point such a period as will be more adequate to the discharge of their duties as judges of the supreme court. His object was to produce uniformity, efficiency, and impartiality in respect to every portion of the community. Mr. J. concluded by offering the following resolution:

Resolved, That the judges of the supreme court be requested to report, jointly, to this body, as early in the next session of congress as may be convenient, such facts and observations as their experience and reflections may suggest, relative to the present organization of the courts of the United States, pointing out its defects and inconveniences, if any, and suggesting such changes and modifications as will, in their opinion, combine most efficiency and economy in the administration of justice.

The engrossed bill to extend the charter of the Mechanics' bank of Alexandria was passed and sent to the other house.

Mr. Benton submitted the following resolution:

Resolved, That the committee on military affairs be instructed to inquire into the expediency of making an appropriation to enable the president of the United States to take and retain possession of the territories of the United States on the North West coast of America.

On motion of Mr. Benton, the senate proceeded to the consideration of the bill to repeal the seve-

ral acts reserving from public sale the lead mines and salt springs belonging to the United States, and to authorize the president of the United States to cause the lead mines and the salt springs, and the lands contiguous thereto, to be exposed to public sale.

Mr. Benton delivered to the senate a speech of considerable length in explanation and support of the expediency of the proposed measure; embracing much historical information, in regard to the extensive mineral country west of the Mississippi, and concerning the mines of other countries, the course heretofore adopted by the government in relation to our mines, shewing how unproductive and injurious the practice of leasing out the mines had been, the advantages which would arise from disposing of them entirely to the enterprise and industry of individuals, &c. &c.

Messrs. Dickerson, Lowrie, Smith, of Md. Barton, Van Buren, Taylor, of Va. Holmes, of Maine, Brown, of Ohio, King, of N. Y. and Johnson, of Ky. followed Mr. Benton, with their respective views of the expediency or in expediency of this measure, and continued the debate until past 3 o'clock. In the end, the bill was, at the request of a member, laid over to Monday.

The following messages were received from the president of the United States, and read:

To the senate of the United States:

In compliance with a resolution of the senate, of the 11th of this month, requesting the president to cause to be communicated to the senate an estimate of the amount of land in the state of Georgia, to which the Indian title has been extinguished by the United States, since the cession of a portion of the territory, of Georgia, to the United States, with a statement of the cost of such extinguishment, and also an estimate of the amount of land, within the said state, to which the Indian title still remains to be extinguished, and by what tribes claimed; I transmit a report from the secretary of war, which contains the information desired.

JAMES MONROE.

February 14, 1823.

To the senate of the United States:

In compliance with a resolution of the senate of February 3d, requesting a statement of the number and size of cannon, mortars and howitzers, necessary for the armament of the fortifications already built and intended to be built, with an estimate of the sum necessary for their construction, I transmit a report from the secretary of war, prepared in execution of instructions given him to that effect.

February 10.

The senate adjourned.

February 15. The senate did not sit this day--Saturday.

February 17. Several reports were received from different committees.

The president communicated a report of the secretary of war, exhibiting a statement of the expenditures at the national armories, and of the arms made and repaired therein during the year 1822; and the report was read.

The bill to regulate the duties on imports and tonnage, &c. was ordered to a third reading.

A bill for the relief of Jos. Forrest was rejected --19 to 17. Sundry bills were ordered to a third reading.

The senate proceeded to the consideration of executive business, and, at about 4 o'clock, adjourned.

February 18. After other business—

The senate took up the resolution offered by Mr. Johnson, of Kentucky, on Friday last; and, after some discussion, having been modified, on the motion of Mr. Mills, to read as follows, it was agreed to, viz:

Resolved, That the committee on the judiciary be instructed to inquire into the expediency of collecting and digesting in one bill all the acts of congress relative to the courts of the United States, and the administration of justice therein; and to report a mode of effecting that object, and also of effecting such changes, modifications, and additions, as will, in their opinion, combine most efficiency, promptitude, and economy, in the administration of justice.

On motion of Mr. Van Buren, it was

Resolved, That the senate will, to-morrow, at 12 o'clock, proceed to the choice of a president pro tempore.

[The vice president of the United States, after the most sedulous attention to the duties of his office during the session—having retired, as is usual, a short time before its close, to afford the body an opportunity of appointing a president *pro tem*.]

Other matters were discussed, but nothing decided.

February 19. A ballot was had this day for a president *pro tem*. Mr. Gaillard, of S. C. received 32 votes, Mr. Barbour, of Va. 6—scattering 2. The first named took the chair and made his acknowledgements for the honor conferred in his own handsome terms.

The bill from the other house for the settlement of the accounts of D. D. Tompkins was reported, by the committee of claims, without amendment.

The rest of the day was chiefly spent in the consideration of sundry private claims.

February 20. After some debate, the bill to provide for the settlement of the accounts of Daniel D. Tompkins was ordered to a third reading, with only two or three dissenting voices.

The other business transacted, will appear in course. Some time was spent in executive business.

HOUSE OF REPRESENTATIVES.

Friday, Feb. 14. Mr. Williams, of North Carolina, from the committee on claims, to which a bill from the senate, for the relief of Eleanor Lawrence, had been referred, reported the same without amendment; and the bill was then committed.

Several reports were received from different committees, and differently disposed of.

On motion of Mr. Metcalf, it was

Resolved, That the committee on Indian affairs be instructed to inquire whether any, and, if any, what abuses may have been committed by the late superintendent of Indian trade, (col. T. L. McKenny) in the purchase or sale of goods under the several laws formerly regulating the Indian trade; and that the committee have power to send for persons and papers.

Mr. Tod, of Pennsylvania, made a motion to discharge the committee of the whole on the state of the union, from the further consideration of the bill for the more effectual protection and encouragement of domestic manufactures.

This was a motion which was intended by the mover to bring the bill directly before the house for amendment, and eventually to obtain a question on its passage, more speedily and more certainly, than if the discussion were suffered to go on in committee of the whole.

The motion being, therefore, a leading one, it produced a little excitement in the house, on the part of those who are opposed to the bill in principle, and on the part of those who desire material amendments to be made in the bill. The excitement was not lessened, by a question of order having arisen, of a novel and somewhat important character, which was decided by the *Speaker*, debated, and an appeal from it indicated, though the question did not really present itself, the suggestion of

it being in anticipation only of what might occur in the course of the proceedings, should the motion of Mr. Tod prevail. The bill contains one blank: the 80th rule of the house is in the following words:

80. No motion or proposition for a tax or charge upon the people shall be discussed the day in which it is made or offered, and every such proposition shall receive its first discussion in a committee of the whole house.

The question which was raised was, whether a blank in one part of the bill, (for the amount of the duty on raw wool imported), could be filled in the house; not having been debated in the committee of the whole? This question the *Speaker* decided in the affirmative.

A good deal of conversation, *pro* and *con*, took place, as well on the question of discharging the committee, as on the point of order; in which Messrs. Colden, Tod, Gorham, Edwards, of N. C. Buchanan, Cambreleng, Williams, of N. C. Sergeant, Bassett, Hardin, Mallary, Newton, Cuthbert, and Tattall, took part.

In the course of the debate—

Mr. Colden professed himself friendly to manufactures, but not in favor of this bill as it now stands, believing that some of the duties proposed would be prejudicial rather than beneficial to manufactures; and was opposed to discharging the committee because the bill required much amendment.

Mr. Cuthbert denounced this motion as an attempt to violate the virtue and substance of the rule which is above quoted; to break down those barriers and guards with which the house had fenced itself around—and he appealed to every thing that is good and virtuous in the house, not to press upon those, upon whom this was to operate most severely, with this precipitation, with this ferocity.

Mr. Sergeant expressed his opinion, as the course proposed would, it was now known, introduce a question of order, on which an appeal would be taken from the decision of the chair, causing probably much debate, that it would be more advisable that the motion to discharge the committee of the whole should be withdrawn.

Mr. Tattall, believing that the operation of this motion, if it succeeded, would be in the nature of a gag law, required the question to be taken by yeas and nays, that the people might see what members on this floor were disposed to support a motion of that nature.

The question was taken by yeas and nays accordingly; and the votes were as follow:

YEAS—Messrs. Barber, of Conn. Barber, of Ohio. Borland, Breckenridge, Brown, Buchanan, Burrows, Campbell, of N. Y. Cassidy, Chambers, Condit, Cook, Darlington, Denison, Dickinson, Edwards, of Conn. Edwards, of Penn. Farrelly, Findlay, Forward, Gebhard, Gross, Harris, Hawks, H. Mphill, Holcomb, Hubbard, Ingham, Jennings, F. Johnson, J. T. Johnson, Little, McCarty, McKim, McLane, McSherry, Matalack, Metcalf, Mitchell, of Penn. Morgan, Murray, Patterson, of Penn. Pierson, Pitcher, Plumer, of Penn. Rochester, Rogers, Ross, Ruggles, Russ, Sergeant, Sloane, Sterling, of Conn. Sterling, of N. York, Stewart, Swan, Taylor, Tod, Tomlinson, Tracy, Trimble, Udree, Van Rensselaer, Walworth, Wood, Woodcock, Woodson—66.

NAYS.—Messrs. Abbot, Alexander, Allen, of Tennessee, Ball, Barstow, Bassett, Baylies, Bayly, Blackledge, Burton, Cambreleng, Campbell, of Ohio. Cannon, Carter, Colden, Conking, Conner, Crafts, Cushman, Cuthbert, Durfee, Dwight, Eddy, Edwards, of N. C. Floyd, Fuller, Garnett, Gilmer, Gist, Gorham, Govan, Hall, Hamilton, Hardin, Herriek, Hill, Hobart, Hooks, Jackson, Jones, of Penn. Kent, Keyes, Kirkland, Lettwith, Lincoln, Litchfield, McCoy, McDuffie, McNeill, Mallary, Mattocks, Mercer, Mitchell, of S. C. Moore, of Alb. N.ale, Nelson, of Mass. N.elson, of Md. Newton, Patterson, of N. York. Phillips, Plumer, of N. H. Poinsett, Rankin, Reed, of Md. Reed, of Gen. Rhea, Rich, Rodney, Russell, Saunders, Arthur Smith, Alex. Smyth, W. Smith, A. Stevenson, J. Stephenson, Tattall, Thompson, Tucker, of S. C. Upham, Van Wyck, Walker, Warfield, Whipple, White, Williams, of Va. Williams, of N. C. Williamson, Wilson—88.

So the house refused to discharge the committee of the whole, from the further consideration of the bill.

On motion of Mr. Tod, the house then resolved

itself into a committee of the whole on the state of the union, Mr. Tomlinson, in the chair.

Mr. *McLane* obtained the floor, and moved to take up the general appropriation bill, in the discussion of which some progress was made yesterday.

Mr. *Tod* intimated that it would be in order, if the committee should *refuse* to take up that bill, to take up the other bill, (the tariff bill), which is before the same committee.

The question on Mr. *McLane's* motion prevailed, 76 votes to 71 votes; and the house proceeded to consider the appropriation bill.

The question pending, was Mr. *Trimble's* motion to appropriate 25,000 dollars for the preservation and repair of the Cumberland Road. Much discussion followed. Mr. *Buchanan* proposed an amendment which had for its object to recede the road to the states in which the several portions lie. Messrs. *Warfield, Nelson, Ross, Cook, Wright, and Keyes* spoke against the amendment of Mr. *Buchanan*, and Messrs. *Phillips* and *White* supported it. The committee rose and the house adjourned at a quarter past 4 o'clock, without coming to a decision.

Saturday, Feb. 15. Many reports from committees were received and disposed of, and some things attended to which will sufficiently appear hereafter.

The *Speaker* communicated a letter from the president of the United States, transmitting all the correspondence in relation to the treaty between the governments of the United States and Great Britain, relative to the convention of the 20th October, 1818; which letter was read, and the letter and correspondence were ordered to lie on the table.

The general appropriation bill was taken up in committee of the whole—the question pending was the motion to insert \$25,000 for the preservation and repair of the Cumberland road. This was withdrawn by the mover, in favor of a special bill from the senate on the same subject. Mr. *Wright* renewed it—debate followed, and it was again withdrawn. The chief point that further engaged attention was the proposed appropriation for continuing the great western road. No decision had, before the committee rose and the house adjourned.

Monday, Feb. 17. Eighteen petitions were presented this day, and sundry minor matters disposed of. Several reports were also received.

Mr. *Trimble* rose, and said, if the motion he was about to make was not in order, or if any gentleman had a motion to make which would take precedence of his own, he hoped it would be waived, as a personal kindness to himself, and that the house would take up the bill providing for the adjustment of the accounts of, (the vice president), Daniel D. Tompkins, late governor of the state of New York. The question being put,

The house agreed, by unanimous consent, now to consider the bill; and Mr. T. moved that it be engrossed and read a third time.

[The amount of this bill is—that Mr. Tompkins' accounts shall be settled by the accounting officers of the treasury according to equity and justice. We shall publish the report on his case at an early day].

The bill was partially opposed—in the course of his remarks Mr. *Floyd* said—he hoped, indeed, it might be long before such another case should occur—before it should be necessary to have such a man to expend the money of the nation under similar circumstances; when the treasury was exhausted, the country in danger; when blue lights were along

our coast and the enemy on our borders. He entertained the deepest sense of the services of gov. Tompkins; he would be glad, indeed, to reward the signal patriotism of that man; and, if it were constitutional to do so, would agree to make him and ample donation for his public service. That, however, being out of the power of congress, he would provide, at least, for the equitable adjustment of his accounts, &c. &c.

And the bill was ordered to be engrossed and read a third time—*nem. con.* [and, in like manner, passed next day].

After other business—the appropriation bill was taken up in a committee of the whole, the question about the continuation of the location of the western road being before the committee. The item was stricken out—ayes 85. The item of 50,000 dollars to erect a marine rail way was agreed to, after some debate. The committee having gone through the details of the bill, rose and reported it to the house—which, soon after, adjourned.

Tuesday, Feb. 18. The house met at 11 o'clock this day; a quorum was not present, and a call required—but, before the roll was finished, a quorum appeared.

The bill from the senate to extend the charter of the Mechanics' bank of Alexandria, occupied much time—it was opposed on account of the supposed insolvency of the bank; but these doubts were removed so far that it was ordered to a third reading—66 to 51.

A bill for the relief of Samuel Howe was acted upon—he had been an express rider during the revolution, and it was proposed to place him on the pension list. The bill was rejected, and the principle established, that pensions would not be allowed for other than military or naval services.

The appropriation bill was proceeded in, and finally ordered to be engrossed for a third reading. The bill for the support of the navy was next taken up—the amendments were agreed to. After opposition to some of the items, (a motion to reconsider being rejected, 76 to 55), the bill was ordered to a third reading, and the house adjourned a little before sun-set.

Wednesday, Feb. 19. Many matters were attended to, not necessary to notice just now. A motion made by Mr. *Cocke*, and his remarks thereon, shall be inserted in our next, when some other things shall also be attended to.

The engrossed bill "making appropriation for the support of government for the year 1823," and the bill "making appropriation for the support of the navy of the United States," were severally read a third time, *passed*, and sent to the senate for its concurrence.

The bill from the senate to extend the charter of the Mechanics' bank of Alexandria, was read a third time.

After some remarks—the question on the passage of the bill was put and decided by yeas and nays as follows—

YEAS.—Messrs. Allen of Tenn. Bigelow, Borland, Breckenridge, Brown, Burrows, Campbell of N. Y. Cannon, Cassidy, Chambers, Golden, Cushman, Cuthbert, Dane, Durfee, Eddy, Farrelly, Findlay, Floyd, Forward, Fuller, Gebhard, Gorham, Govan, Hamilton, Hardin, Harris, Hawks, Hill, Holcombe, Hooks, Hubbard, Jackson, Jennings, J. T. Johnson, J. S. Johnston, Jones of Ten. Kent, Keyes, Kirkland, Lincoln, Little, McCarty, McDuffie, McLane, McNeill, NeSherry, Mallary, Matledge, Mattocks, Mercer, Mitchell of Penn. Moore of Va. Moore of Alab. Neale, Nelson of Md. Newton, Patterson of N. Y. Patterson of Penn. Phillips, Poinsett, Reed of Md. Reid of Geo. Rhea, Rogers, Saunders, Sloane, Sterling of N. Y. A. Stevenson, J. Stephenson, Tod, Tracy, Trimble, Van Rensselaer, Whipple, White, Williams of Va. Williamson, Wood, Woodcock, Wright.—81.

NAYS.—Messrs. Barber of Conn. Blackledge, Buchanan, Burton, Butler, Cambreleng, Campbell, of Ohio, Carter, Cocke, Condict, Counce, Crafts, Denison, Edwards, of Conn. Edwards, of N.

C. Garnett, Gilmer, Gross, Harvey, Ingham, F. Johnson, Lathrop, Leftwich, Litchfield, McCoy, McKim, Matson, Nelson, of Mass. New, Pitcher, Plumer, of N. H. Plumer, of Penn. Rankin, Reed, of Mass. Rich, Rochester, Rodney, Ross, Ruggles, Russ, Arthur Smith, W. Smith, Sterling, of Conn. Stoddard, Swan, Taylor, Thompson, Tomlinson, Udree, Upham, Van Wyck, Walker, Williams, of N. C. Woodson.—54.

So the bill was passed. [Having passed both houses, it wants only the approbation of the president to become a law].

The bill to make an appropriation for the preservation and repair of the Cumberland road, was taken up in a committee of the whole. After much debate, it was reported to the house, whose time it occupied until nearly sun-set, the matter in controversy remaining undecided.

Thursday, Feb. 20. Considerable time was spent on a resolution offered by Mr. Sloane, calling for information on various expenditures, to be laid before the next congress. After debate, it was laid on the table.

The house, in committee of the whole, was occupied on the bill for extending the time for location of Virginia military land warrants. It was recommitted. The house adjourned at 4 o'clock.

CHRONICLE.

The U. S. brig Spark. A Spanish schooner, called the Nimfa Catalana, has arrived at Norfolk, as a prize to the Spark. She is armed, and had a crew of about 20 men, 15 of whom were sent to the U. States with her. She is apparently a merchant vessel, with a cargo, and it seems pretty plain has committed some acts of piracy. Her captain, boatswain and several of the crew, are said to be recognized as having plundered the Nancy Eleanor, of Baltimore, a short time ago. All of the crew of this vessel, except Nicholas Gorgoll, the boatswain, have been discharged by judge Parker, on a writ of habeas corpus—no testimony appearing, but against him.

CITIZENS. It is pleasing to notice a communication from the Portuguese consul at Baltimore, addressed to "Portuguese citizens."

COMMERCE WITH FRANCE. We have received from Washington, (says a New York paper), statements exhibiting the amount of our imports from, and exports to, France, during each year from 1814 to 1820, which statements have been compiled by order of the senate, with the view, probably, of ascertaining, before they assented to the ratification of the commercial convention, what would be its probable effects on our trade. The statements are as follows:

	Imports.	Exports.	
1815,	\$3,614,434—Domestic	5,033,084	
	Foreign	1,853,859	
			\$6,886,943
1816,	15,071,821—Domestic	7,352,676	
	Foreign	2,225,660	
			\$9,578,336
1817,	5,572,059—Domestic	7,124,505	
	Foreign	1,695,232	
			\$8,819,767
1818,	9,634,682—Domestic	8,719,445	
	Foreign	3,346,577	
			12,066,022
1819,	7,483,543—Domestic	6,612,499	
	Foreign	2,729,549	
			\$9,342,048
1820,	5,073,893—Domestic	5,461,889	
	Foreign	2,134,854	
			\$7,596,743

THE MERMAID, about which so much was lately said, being brought to England, has proved to be what we expected that it was—a manufacture of the Japanese.

LIGHT HOUSES—From a source that may be relied on, we state the following:—In 1811, there were in the United States, 49 light houses, which consumed annually 48,000 gallons of sperm oil. The annual cost of transportation, and other incidental charges on this oil, was \$3,150. There are now in the United States 85 light houses, which consume annually less than 33,969 gallons; the expense of transportation, and other incidental charges, \$2,000—That the brilliancy of the lights is very much improved is admitted by all navigators. New light-houses are erected at 40 per cent less cost than formerly, and are built of more durable materials. These 85 light houses are lighted with 871 patent lamps and reflectors, and are located, 11 in Maine, 29 in Massachusetts, 3 in Rhode-Island, 6 in Connecticut, 7 in New York, 1 in Delaware, 4 in Virginia, 3 in Maryland, 2 in North Carolina, 2 in South Carolina, 1 in Alabama, 1 in Louisiana, 3 on Lake Erie, and 3 on Lake Ontario.

[Boston Gazette.]

THE SECRET TREATY OF TILSIT. The following curious document has been lately published in London, by Mr. Lewis Goldsmith, in some "observations on the appointment of the right hon. George Canning," as being what its caption denotes it to be—and may be regarded as a curious testimony of the moderation of the "high contracting" parties.

"Art. 1. Russia to take possession of Turkey in Europe, and to pursue her conquests in Asia as far as she thinks proper.

"Art. 2. The dynasty of the Bourbons in Spain, and of the Braganza family in Portugal, shall cease to exist. A prince of the emperor Napoleon's family shall be invested with the crown of those kingdoms.

"Art. 3. The temporal authority of the pope to cease; and Rome and her dependencies to be annexed to the kingdom of Italy.

"Art. 4. Russia engages to assist France with her marine for the conquest of Gibraltar.

"Art. 5. The towns in Africa, such as Tunis, Algiers, &c. to be taken possession of by the French, and, at a general peace, all conquests which might have been made by the French in Africa, during the war, are to be given as indemnities to the kings of Sardinia and Sicily.

"Art. 6. Malta to be occupied by the French;—and no peace ever to be made with England, unless that island be ceded to France.

"Art. 7. Egypt, also, to be occupied by the French.

"Art. 8. Vessels belonging to the following powers only, shall be permitted to navigate the Mediterranean, viz. French, Russian, Spanish and Italian; all others are to be excluded.

"Art. 9. Denmark to be indemnified in the North of Germany, and by the Hanse Towns, provided she consents to give up her fleet to France.

"Art. 10. Their majesties of Russia and France will endeavor to come to some arrangement, that no power shall, in future, be permitted to send merchant ships to sea, unless they have a certain number of ships of war.

(Signed) "KOURAKIN, [L. S.]

"Tilsit, 7th July, (25th June), 1807."

NILES' WEEKLY REGISTER.

NEW SERIES, No. 25—VOL. XI.] BALTIMORE, MARCH 1, 1823. [No. 26—VOL. XXIII, WHOLE NO. 598

THE PAST—THE PRESENT—FOR THE FUTURE.

EDITED AND PUBLISHED BY H. NILES, AT \$5 PER ANNUM, PAYABLE IN ADVANCE.

CONGRESS. An unusual portion of the present sheet is given up to an account of the proceedings of congress. This is always the case towards the close of a session—because then, the numerous committees have generally matured the business referred to them, the members feel the necessity of acting instead of talking, but the “wheels of government” may be kept in motion.

Both houses must rise on Monday—and thereafter, we shall have room and opportunity to notice many interesting reports, &c. submitted.

WASHINGTON'S BIRTH DAY, the 22nd of February, has become a national festival. It was honored at Baltimore on Saturday last, by one of the most numerous military parades that we have seen for several years, and the exhibit of some new and very fine volunteer companies. The flag of the U. States floated over the monuments and the public buildings, and was displayed by all the shipping in port. There were also many festive parties, with balls, suppers, &c.

POTOMAC CANAL. The legislature of Virginia, have a bill before them which creates a stock of 2,000,000, including the stock of the present Potomac company, whose debts are also to be paid—We shall be glad of the arrival of the time when the states of Maryland and Virginia can and will act jointly in this great undertaking, but as the water of the river equally belongs to either, nothing can be done without the consent of both. In relation to the junction canals contemplated, this bill authorizes each state to use the waters of the river for those purposes, *provided that in such use they leave enough for the purposes of the canal contemplated by the bill, and forbids them in any manner by any junction, to top the main canal.* It provides, also, that such junction canal shall by no means, either directly or indirectly, draw any water from the canal authorized by the bill.

The provision above stated was the great objection (besides the want of means), entertained in Maryland to the bill lately before the house of delegates, and for the reasons stated in our last.

CAUCUS, &c. A correspondent of the Richmond Enquirer, under date of Washington, February 19, speaking about the presidency, says “There will, probably, be a caucus next winter, and whoever has a majority of republican votes will, in all probability, be supported. There is, however, much speculation on this subject, a diversity of opinion, and not a little finessing.”

He has also this paragraph—“The tariff bill is resting on the table; possibly it is given up for this session. In the next, the accession of the manufacturing interests may, I fear, insure its passage.”

These are two things about which we shall, very soon, offer some *homespun* remarks, and especially respecting the former. If a caucus shall be held, who is it that will determine on “*republican votes?*” It is the “era of good feelings”—and all are federalists, all republicans, when gathered at Washington, whatever persons may be at home.—Almost every member of congress professes to be a

republican; and, by reason of the strange mixtures of things, I know very few, if any, who have a better claim to the republican character than others of his fellows; and the fact is, that, among those who were federalists, are some of the best and most liberal of the members; and some that were republicans seem to have lost much of that adherence to principles which formerly distinguished that political party. Who can draw the line between gentlemen professing the same thing, and frequently acting together on important questions? I do not believe that there will be a caucus—the public feeling is evidently against it. In the present state of our country, an illegal assemblage of this sort would only express the private wishes and shew the *personal views* of individuals; it would not, as formerly, bring about a gathering into principle, when men were given up to measures. And, if there must needs be a caucus, the members of congress are the worst of all men to hold it, and Washington the worst fitted, of all places, for its convention.

That the “tariff bill” will pass at the next session is morally certain, by an accession of power in the *farming interest*; men who plough their own soil with their own hands, and seek a prompt and steady market for the products of their own labor.

PIRATES OF CUBA. The pirates and their partisans are so numerous at Matanzas, as to have prepared a number of boats for the purpose of capturing the U. S. schooner *Grampus*, (then lying there), on the 18th of January. It is stated that they actually pulled-off from shore for the purpose,—but, when they discovered that all the officers and crew were not asleep, they concluded that “the better part of valor was discretion,” and retired. “*Catch a weazle asleep!*”—surprise an American vessel of war in an *enemy's* port? No—no!

Several new acts of outrage have been committed by these desperadoes; and, at Havana, some of the officers the U. S. brig *Spark*, attempting to go ashore, were saluted, as they approached the wharf, with broken bottles and stones, on account of the capture of the vessel lately sent into Norfolk. Plunder was selling at a low rate—gold watches for \$6; pieces of muslin at \$1; cochineal at \$100 per seer, &c.

After the *Spark's* boat had returned, capt. Wilkinson went on shore and remonstrated against the outrage—the governor assured him that such acts should be punished, and offered him a file of men to conduct him to his barge. A young gentleman, formerly of Charleston, S. C. but for sometime a resident of Havana, having observed to the mob that their “conduct was improper,” and added, “never mind, com. Porter will be here soon,” was assassinated on the night that followed, being cut and stabbed with knives in a most shocking manner.

Matanzas was, for sometime, as blockaded by a piratical schooner—some vessels were sent against her, a little fighting took place and the pirate hauled off. The Congress frigate was at Havana on the 8th of February.

The captain general has issued a “superior order” to prevent piratical depredations by the people of the island, and it appears to be in good faith. We shall insert it hereafter, though it will not avail

much. "The king pays me but 400 dollars a year," said a petty custom-house officer at Havana to one of my friends, "and I am compelled to pay \$500 for a dwelling house—I must live."

LOUISIANA. A motion has been made in the senate of this state to expel certain members from that body, on this ground—that the parishes of Feliciana, East Baton Rouge, Washington, St. Helena and Tammany form no part of the state of Louisiana! The district of country included in these parishes, was formerly a part of what was called West Florida, but added by act of congress, in the same law, we believe, that converted the *territory* of Orleans into an independent state by the name of Louisiana. The population of those parishes was returned in the official census of 1810 as in Louisiana, and the people thereof have paid taxes ever since the organization of the state, as citizens of the same—no person before dreamt that they were other than an integral part of the state.

The motion above alluded to was offered on the 22d of January last, and made the order of the day for the 1st of Feb. We are not yet advised of the decision, but it seems that a proposition to expunge the offensive resolution from the journal, had been postponed for three days—which shews that a majority was disposed to favor the project.

This strange matter appears to grow out of the contentions between what we must call, for the sake of distinction, the *American* and *French* interests in this state, which have proceeded to very unhappy lengths. The population of the aforesaid parishes is chiefly American, and the French party seems to have taken this summary mode to obtain a complete ascendancy in the legislature.

On this subject one of the papers has the following remarks: "Should the senate have the temerity to pass the resolution dismissing the Florida senators, it will terminate our political organization; should they violate the laws of the congress of the United States, solemnly acceded to by the government of Louisiana, we are at once involved in a civil war. The moment these senators are dismissed, our political compact is annulled: the law of force becomes substituted for it, and their last farewell to the senate will be but the precursor of anarchy. Foreign Frenchmen! are you prepared for these serious consequences? Are you ready to wage war against the laws of the United States?"

Since the preceding was written, we have received a New Orleans paper of the 30th January, in which it appears that on the 29th, the senate passed the following resolution *unanimously*—and so the controversy is at an end, for the present—Whereas a certain resolution had been introduced into the senate, to call in question the right of that part of Florida which is annexed to this state to be represented in the senate of the state: Resolved, that the right cannot be questioned, inasmuch as it is guaranteed by a solemn compact between the United States and this state."

Each party receded—that which got up the original resolution for expulsion, and the other which required its obliteration from the journal.

COMMON SCHOOLS. We have the annual report of the superintendent of common schools in the state of New York, in which a broad system for the education of youth is operating with excellent effect. The superintendent says it has "a decided superiority over every other in the union." Returns have been received from 52 counties, containing 649 wards or towns, the number of school districts is

about 8,000. Of these, 5,255 have reported, "shewing, among other particulars, that for the term of eight months during the last year, three hundred and fifty-one thousand one hundred and seventy-three children were receiving a common school education, being 18,194 more than were educated in 1821. The system has existed eight years, during which the sum of \$1,200,000 has been drawn from the treasury and raised by tax for its support: it is estimated that 3,000,000 more have been contributed by individuals, making a grand total of four millions, besides the appropriations for colleges and academies." "Even, in Connecticut," says the report, "which possesses a larger school fund than we do, and where the school system was established and in successful operation long before it was here introduced, the number of children educated in common schools is, *far less*, in proportion to its population, than it is in this state. It may, indeed, well be doubted, whether a parallel example of magnificence, successfully applied to a similar object, can be produced throughout the civilized world.

"If, then, these grand and important results have been produced in the short space of eight years, what may not be anticipated, when the liberal funds and appropriations provided and secured by the new constitution, shall have gone into active and productive operation!"

To shew the *power* of this system, the return exhibits the number of children between 5 and 15 years of age in the several counties or districts—in those in which 351,173 were schooled, the whole number was 357,029; difference only 5,856!

The grand total of the school fund is estimated at 1,656,636 dolls. in the making up of which about a million of acres of land, (now unproductive, but soon to be brought into cultivation), are valued only at 445,000 dolls. What will the fund be a few years hence?

PROGRESS OF OUR COUNTRY. We noticed, in our last paper, the present state of the Transylvania University, at which there now are 386 students. The National Intelligencer, in reference to this same subject, says—"Less than fifty years ago, the now populous and flourishing state of Kentucky had not a white inhabitant. Where the Transylvania University now stands, or near it, there ranged, in 1775, herds of thousands of buffaloes."

SEAMEN were lately much wanted at New York. Many of this class of citizens have changed the place of their homes, or entered into the service of foreigners. Thirteen dollars per month, and 10 dollars bounty have been offered at New York.

COTTON. Like the cotton raised by Mr. Dunham, on Long Island, some plants reared in Connecticut, though "covered with ice and snow, have matured with equal certainty as the same species at midsummer." So says a communication in the New-York "Statesman." There is no longer a doubt that it will grow in the northern latitudes, but the fact is not established whether, as a *crop*, it can be rendered profitable. Some experiments on a large

"It appears that the sum granted by the state to colleges and academies amounts to	\$1,265,579
To medical science	83,100
historical society	12,000
free schools in cities	26,000
common schools	1,232,900

Grand total 2,618,579

scale, we are informed, will be made in the present year. In *Illinois*, the cultivation is about to be very considerable; and we have before us a sample of cotton raised at Franklin, Missouri. It appears to have been cultivated as a crop. Dr. S. picked 10,272 lbs. off of 10 acres, before the 15th November, and expected to gather about 2000 more—say 1200 lbs. per acre—the amount also of the crop of specimen exhibited.

The staple of this cotton is a little shorter than that of the Louisiana product, and the seeds are thought to be larger; but still the quality appears to be good. The writer of the letter says that he has not used any cotton in his family for three years, except what was raised in his own neighborhood. He was lately a farmer on the Lower Mississippi, and seems to be well acquainted with the cultivation, which may be advantageously followed on the Missouri.

CUSTOM HOUSE BONDS, REVENUE, &c. Summary extracts from a report of the secretary of the treasury, dated 5th Feb. 1823:

Estimated amount of bonds, &c. 1st October, 1812 \$27,560,645

Bonds paid in October and November (per returns) 3,431,449

Outstanding 1st Dec. 1822 \$4,129,196

Payable in December 1822 2,339,055

In suit 1st December 1822 2,818,427

Payable in 1823 17,426,257

Do. 1824 266,409

The difference, 1,319,048 dollars, is for bonds given without surety, on the deposit of goods, and the period of the payment of which is not stated.

No 2. A statement, exhibiting the nett amount of revenue which accrued from duties on merchandise, tonnage, &c. of payments made into the treasury, and of expenses of collection of the same, during the years ending on the 31st of Dec. 1816, 1817, 1818, 1819, 1820 and 1821.

Years.	Nett revenue. Dolls.	Payments made into the treasury. Dolls.	Expenses of collection. Dolls.
1816	24,484,100 36	36,306,874 88	\$16,373 50
1817	17,524,775 15	26,283,348 49	744,810 66
1818	21,823,451 48	17,176,385 00	746,422 15
1819	17,116,702 96	20,283,608 76	782,925 40
1820	12,449,556 15	13,005,612 15	767,222 00
1821	15,898,434 42	13,004,447 15	693,167 13

No 3. A statement, exhibiting the balances outstanding of bonds taken for duties on merchandise imported, and debentures issued for drawback on merchandise exported, commencing on the 1st of January, 1821, and ending on the 30th of September, 1822; prepared in obedience to a resolution of the house of representatives, of the 9th of January, 1823.

Balances outstanding.

Am't of bonds in suit, Dec. 1, 1822, \$2,818,427 23

CUMBERLAND ROAD. Abstract of an official report from the treasury department, dated Feb. 19, 1823. Whole amount appropriated to road 1,718,846 36

Cost of surveying and locating	29,144 25
Constructing	1,544,882 70
Repairs*	16,160 19
Salaries to superintendents, &c.	53,034 61
Miscellaneous	2,457 45

Total 1,645,679 20

Carried to surplus fund 66,810 63

Advances unaccounted for 5,314 85

Due the U. S. 1,041 67

73,167 16

1,718,846 35

ARMORIES OF THE UNITED STATES. Statement of expenditures at the national armories, and of the arms made and repaired therein, during the year 1822:

For land, buildings, canals, repairs	13,286 43
manufacture and repair of arms	322,649 33
miscellanies	1,391 99
making patent rifles, (not completed)	8,010 73

Total expended \$345,338 48

Of which amount 182,141 16 was expended at Springfield, and 163,197 32 at Harper's Ferry.

Arms made—23,200 muskets, 1,440 ball screws, 2,200 nippers, 18,794 screw drivers, 1,320 spring vices, 62 pattern muskets, 42 sets of verifying instruments for patent muskets, 1,159 arm chests—and 220 muskets repaired.

Of the muskets 13,200 were made at Springfield and 10,000 at Harper's Ferry; the 1000 patent rifles, not finished, are making at the latter.

LEGISLATURE OF MARYLAND—House of Delegates, February 20. The bill to amend the constitution, as relates to the election of two more delegates from the city of Baltimore to the general assembly of this state, was read the second time, and the question put, shall the said bill pass?

The yeas and nays being required appeared as follows:

Affirmative—Messrs. Speaker, Massey, Linthicum, Smith, Stansbury, Orrick, Johnson, Worthington, Lloyd, Sheredine, Parker, Gerry, Carroll, Fisher, Norris, Chauncey, Allen, J. P. Kennedy, Purviance—19.

Negative—Messrs. Millard, G. Leigh, Stone, Maddox, Ireland, Estep, Howard, Skinner, Edelen, Rogerson, Garner, Lockerman, Martin, Jones, Teackle, Dennis, Steele, Willis, Hooper, Cosden, Hughes, Roberts, Meconiken, Wright, Slemaker, Riley, H. Kemp, Farquhar, Boon, T. Kennedy, Drury, Galloway, Williams, A. Lee, Duvall, Greenwell, Hoffman, Poland—38.

It is supposed that some of the gentlemen who voted in the negative, felt it a shame to allow Baltimore only two additional delegates, seeing that, according to population and taxation, the city is entitled to have sixteen delegates in the whole, or fourteen additional members!

*There is a note to this item saying "The charges for repairs are so blended with the expenses of constructing, that it is difficult to discriminate the actual expenditure under this head; the above is the only charge that appears exclusively for repairs."

It is very certain that no two gentlemen, though they should labor day and night, without allowing one moment to refreshment or sleep, can perform their other legislative duties and attend to the vast mass of local matters which the accumulated population of a city like Baltimore requires—yet we would not take two additional delegates if we could get them; we never will compromise with honor, nor bargain concerning a natural right. Let the evil go on—the time must come when justice will be done, and our most disgraceful constitution sink into the contempt that it deserves.

The house of delegates have also rejected the bill from the senate to provide for the election of governor by the people.

MR. MATHEWS, the famous English comedian, has instituted an action for damages, to the amount of \$10,000, against Mr. Buckingham, editor of the "Galaxy," at Boston, for having called him an "itinerant mimic," and for saying other things of him, which, though perhaps equally true, were offensive to the performer, whose great merit certainly is in his powers as a *mimic*—if we understand the meaning of the term, which Walker tells us is "a ludicrous imitator," &c. and such this person most assuredly is. Witness his account of his "youthful days," in which he describes his interviews with Wilkes, Macklin and others. He will not profit much by the procedure; and, perhaps, like Kean, he may make his "exit in a passion," at an early day—at which we shall not much repine.

It is subsequently stated, in a Philadelphia paper, that Mr. Mathews' design was not to prevent criticism on his performances, but to vindicate his private character, as charged with dealing in *smut* in his recitations.

CUBA. Correspondents of the Richmond Enquirer positively state that the rumor about the design of Great Britain to possess herself of Cuba, is entirely groundless. One of these, under date of Washington, February 19, gives the following statement:—"The British minister here, (Mr. Canning), waited some time ago upon Mr. Adams, secretary of state, and read to him a letter from his cousin, Geo. Canning, in which he speaks of the rumors as to Cuba; denies, in the most positive manner, any wish or intention, on the part of the British government, to obtain it, and expresses an opinion that it would be dishonorable in them to avail themselves of the weakness of Spain for any such purpose. It seems, too, that the minister here was directed by his government to read this letter to the secretary of state. No copy was furnished, and Mr. Monroe directed Mr. Adams to apply and know whether one would be furnished. It is said he has not had an answer, but that it will not. This is all the information our government has on the subject.

PORTO RICO. One of the privateers, alias pirates, belonging to this island, lately captured the American brig Essex, of Gloucester, from St. Thomas to New-Orleans, and, after abusing the officers and crew in the most dastardly manner, they run the brig ashore near Cape Roxo, under full sail, when an indiscriminate plunder took place, breaking up and destroying whatever they pleased. The brig was afterwards got off and carried into the bay of Roxo. The captain was carried to Mayaguez, where, after a mock trial, the vessel and cargo were condemned as good prize, when the people were turned adrift, &c. to do as well as they could in a strange country. The brig Adeline, of Boston,

bound to Curracoa, via St. Thomas, has also been captured and carried into Porto Rico—the people on board of her were flogged and basely treated, by the privateers' men.

STRANGE EVENT. What would lord Sheffield, (who "made a book" about the United States), say to the following, if he were now living?

A Cincinnati paper of the 31st Jan. contains the following details of a sealing and whaling voyage about to be undertaken from that place:—"The general plan of the voyage is this: Two vessels, each of 350 tons burthen, and a tender of 70 or 80 tons, are to be built in this place and fitted out for the Pacific or Indian ocean. The vessels are to be commanded by captains Mack and Moltrop, to whose enterprise and public spirit we are told the scheme owes its origin. An association has been formed and a board of trustees appointed to provide the means of building the vessels and overseeing and carrying on the work. The expense of the building and outfit is estimated at 80,000 dollars, with the privilege of extending it to 100,000. This is made into stock, and divided into shares of 100 dollars each, to be taken up by the citizens of this place and country generally. The building is to be commenced so soon as 40,000 dollars shall have been subscribed, and the time of sailing is limited to as early a date in the spring of 1824 as practicable. This presents a general outline of the plan, the particulars of which, as we have above stated, may be seen by those who feel an interest in its success, at the commercial reading room, adjoining the Cincinnati hotel."

NEW HOPE BANK. A committee of the New Hope Delaware Bridge company have published a report from which we learn the following particulars: On the 14th September last, William Maris, the president of the company, was indebted to it individually, and as a partner with others, in the immense sum of one hundred and twelve thousand and seventy nine dollars, being more than three times the amount of its active capital; of this sum Wm. Maris had overdrawn the office individually forty-four thousand nine hundred and twenty seven dollars. Of these debts and overdrafts the managers of the company "were kept in utter ignorance," and the information did not come from Wm. Maris. The committee states various propositions which had been made to Wm. Maris, which he had rejected, and various promises which he had made and failed to perform. There is little prospect that any of the notes will ever be paid. The legislature are now in session and it is hoped they will pass a law against *swindling*. This case, and the case of the Northern Liberties' bank, and many recent occurrences, call loudly for some prompt and efficient legislative interposition.—*Dem. Press.*

RE-APPOINTMENTS—by the president, by and with the advice and consent of the senate, the original appointments having been made by him during the late recess of the senate.

John McLean, of Ohio, commissioner of the general land office, vice Josiah Meigs, deceased.

Adam Lynn, of the district of Columbia, justice of the peace for the county of Alexandria.

John Coz, of the same district, justice of the peace for the county of Washington.

Re-appointments in cases where the original appointments were limited by law, and have expired, or will expire, before the next meeting of the senate.

Lewis Cass, governor of Michigan, from 11th February, 1823.

Andrew Scott, of Arkansas, judge in Arkansas, from the 3d March, 1823.

Jacob Beeson, of Virginia, attorney for the Western district of Virginia, from the 2d March, 1823.

Jephthah Hardin, of Illinois, attorney of Illinois, from 2d March, 1823.

Thomas G. Tharvon, of Maine, marshal of Maine, from 9th January, 1823.

Michael McClary, of New Hampshire, marshal of New Hampshire, from the 16th January, 1823.

John Conard, of Pennsylvania, marshal for Pennsylvania, from the 11th February, 1823.

John Nicholson, of Louisiana, marshal for Louisiana, from: 27th January, 1823.

Heman Allen, of Vermont, marshal for Vermont, from 14th December, 1822.

Oliver W. Ogden, of New Jersey, marshal for New Jersey, from 17th December, 1822.

Robert Crittenden, of Arkansas, secretary of Arkansas, from 3d March, 1823.

Jonah Thompson, *Jacob Hoffman*, *Robert Young*, *Amos Alexander*, *Abraham Fawcett*, and *James Carson*, of the district of Columbia, justices of the peace for the county of Alexandria, from 16th December, 1822.

Francis Peyton, *Newton Keene*, *Nathaniel Wise*, and *Jacob Morgan*, of the same district, justices of the peace for the same county, from the 17th April, 1823.

Thomas Peter, *William Thornton*, *Thomas Corcoran*, *Samuel N. Smallwood*, *Thomas Fenwick*, *John B. Kirby*, *Samuel H. Smith*, *Daniel Rapine*, *Nicholas Young*, *John Threlkeld*, *Daniel Reintzel*, *William Winters*, and *Joseph Forrest*, of the same district, justices of the peace for the county of Washington, from 16th Dec. 1822.

Richard S. Briscoe, of the same district, justice of the peace for the same county, from the 30th November, 1822.

Tench Ringgold, of the district of Columbia, marshal of the said district, from the 3d March, 1823.

FOREIGN NEWS.

Great Britain and Ireland. Several persons have been arrested at Dublin, charged with having conspired to kill and murder his excellency Richard marquis Wellesley, lord lieutenant of Ireland. They have been fully committed to prison. This outrage appears to have been contemplated by the *orange-men*, on account of the liberal opinions of the lord lieutenant. 'No popery' was the cry of the ruffians, and some accounts lead us to suppose that a conspiracy was formed which pretty nearly amounted to high treason!

Many things have lately happened, which seemingly indicate a change of the policy of Great Britain in regard to the Greeks. It is even intimated that they will be decidedly protected. The Greeks have, so far, shewn that they can protect themselves; but they must want supplies of all sorts.

An old resurrection man, it is said, had the singular good luck to pounce upon the field of Waterloo like another vulture, and to bring away as many teeth as sold to the dentists for £20,000.

The deaths within the city of London, from the 11th of December, 1821, to the 10th of December, 1822, amounted to 18,865, of which 3,608 died of consumption; 2,929 of convulsions; 851 of dropsy; 1,121 of fever; 757 of whooping cough; 1,308 of inflammation; 218 of insanity; 2,601 of old age and debility, and 604 of small pox. Of this whole number, 9,483 were males, and 9,382 females.

In the same period there were 23,373 persons christened, viz—11,986 males and 11,405 females.

Netherlands. There have been some serious riots in this country. The king has demanded 10,000 men that he may maintain his authority.

Spain. The "army of the faith" is yet in force in the north of Spain, though often defeated. One body is said to be 4,000 strong; and is reported to have gained some advantages over the patriots. General O'Donnell is at the head of this force.

The cortes are on the alert—making all possible preparation for events; there is no doubt, at present, but that the interference of the allies will be rejected, and that Spain will contend for the "right to manage her own affairs in her own way."

It is positively stated that a treaty of alliance has been concluded between Spain and Portugal.

Three ships of the line and two frigates were about to sail from Cadiz for Lina.

It is announced that the French government has given up the ex-general baron d'Eroles, and others of the "army of the faith," "who had taken refuge in their territory to escape the punishment of their crimes." This looks pacific.

Portugal. The queen, (sister of Ferdinand of Spain), has refused to swear to the new constitution—so she has been sent into retirement for the benefit of her health, under charge of ten physicians!—this measure has been adopted to prevent her expulsion, as a refractory person.

Italy. Canova, the celebrated sculptor at Rome, has left behind him a fortune of 7,000,000 of francs, a sum not far short of £300,000 sterling.

Germany. The disorders in the universities do not appear to have wholly subsided.

Rothschild, of Frankfort, had lately transmitted the value of 6,000,000 florins in gold, to Russia. The price of this metal has raised considerably.

Russia. It is stated that the Emperor Alexander, who was so zealous a patron of missions a few years ago, has shut the mouths of the Moravian missionaries at Sarepta. He has refused them the liberty to baptize or convert the heathen Calmucs, and has reduced them to be mere distributors of bibles—even one word in the way of commentary being forbidden. The prohibition extends to all Protestant missions in Russia.

Turkey. A letter from Hydra, dated Nov. 25, details the attack upon the Turkish fleet, in the bay of Tenedos, by fire ships, conducted by capt. Canaris, the intrepid officer who blew up the ship of the captain pacha on the coast of Scio, the scene of his barbarity. A more desperately daring adventure than this, seems never to have been undertaken. Two fire ships were carried into the midst of the Turks by Canaris—with one of them, he struck directly at the admiral's ship, of 84 guns—it was soon destroyed, and not more than 20 or 30 of the whole crew escaped—two frigates, lying near, shared the same fate. The other fire ship, though attached to a vessel of the line, failed to do much execution. A storm followed before the Turks had recovered from their consternation, in which they lost four frigates and twelve brigs, and one of their corvettes was captured.

On the return of the Greek division to the port of Psara, the Ephori of the isle, followed by an immense crowd of men and women of all ages, came down to the bank, where they received the captains and their crews with cries of "long live the heroes of Tenedos! honor to the brave! long live the illustrious defenders of our independence!" The president of the Ephorithen advanced and placing a laurel crown on the head of Canaris, said, "You

grateful country honors the conqueror of two of the enemy's admirals." The magistrates receiving him afterwards in the midst of them, and causing him to be accompanied by all his brethren in arms, returned to the town, followed by the people, who made the air resound with their cries of joy. In this order they arrived at the cathedral church of the Isle, where they sang *Te Deum*. This ceremony was succeeded by prolonged discharges of artillery. At the same instant, Mr. Hamilton, commander of the English vessel the *Cambrian*, entered the port, and demanded, on his landing, the cause of these rejoicings. Being informed of the fresh disaster of the Ottoman fleet, he desired to see capt. Canaris.

After the compliments, which captain Hamilton passed upon his courage and skill, he asked him how the Greeks prepared their fire ships to make them succeed so well? "As to preparing them," replied the patriot capt. "we follow your method, commander; but, to make them succeed, we have a secret which we keep concealed here, (placing his hand upon his heart); it is the love of independence which has enabled us to discover this secret."

The British and French now appear to be somewhat disposed to respect the blockade made by the Greek government.

The Turkish general Omar Urioni has experienced a signal defeat at Missolonghi, by which, it is said, that all Western Greece has been liberated. The adverse parties contended three days, when the arrival of a Greek fleet decided the controversy. Many Turks were killed, and they also lost three ships.

The London Sun, a ministerial paper, has the following conclusion to a paragraph respecting the success of the Greeks: "There is reason to believe that the opinion which has for some time prevailed, respecting the new policy of England towards the cause of Greece, is well founded. It is the obvious policy of Great Britain to procure the erection of Greece into an independent state, *if possible with the consent of Turkey*, in which case an alliance might be formed between Great Britain, the Greeks and Turkey, to protect the remaining dominions of the porte against the encroachments of Russia."

There are various reports of great disturbances at Constantinople—some say that the Janissaries had risen, plundered the treasury and caused the flight of the sultan, who had beheaded some of his late favorites.

Persia is still carrying on the war against the Turks—the latter were severely defeated on the 3rd of Aug. near Tabriz, with the loss of 15 pieces of artillery, all their tents, baggage, &c. The Persians, however, were afflicted with the *cholera morbus*, by which many died.

East Indies. A letter from Batavia, dated in Nov. says—

On the 16th inst. a tremendous Volcano poured forth stones and lava, from a mountain situated in the Benjean Regencies, about 200 miles from the city. Five thousand natives were buried by the stones and ashes. Three hundred have been found most dreadfully burnt, and but faint hopes are entertained of the recovery of most of them. This place was one of the most beautiful and highly cultivated sections of the interior of this rich island. Coffee and rice grew luxuriantly and plentifully there.

The same letter observes that "millions of new coffee trees" lately planted, are expected to yield fruit in 1823.

The Nerbuda, a great river of Hindostan, rose 20 feet in 36 hours, and overflowed 200 square

miles of cultivated country. At Surat, also, three fourths of the city was inundated, and 1000 houses swept away by the flood. From 1500 to 2000 houses at Boorhampoor were destroyed by the overflow of the Taptee, and many were lost.

Porto Rico. The Pancheta, captured and sent into Charleston and there released, has arrived at St. John's, where she was greeted by thousands.

Vengeance was sworn and several new privateers designed to be fitted out. An American vessel with a cargo of coffee, from St. Thomas for *New Orleans*, has been captured by one of them and condemned at Porto Rico!

Colombia. Santa Martha has been taken by the "Indians of the Cienega," and many of the inhabitants killed. Morales, with 800 Europeans and 4000 natives, is said to have evacuated Maracaybo and marched towards Caraccas, followed by Montilla, with about the same force. A battle was expected, and the supposition is that Morales must, at last, be destroyed, the patriots now having command of the sea.

It is said that the Colombian privateer brig *Eagle*, belonging to commodore Daniels, has made three prizes, one valued at \$100,000, another at 21,000, the third at 115,000—a considerable part of which is specie.

It is reported that Morales sent out a body of 150 for the purpose of taking col. Todd, our agent in Colombia, when in the neighborhood of Truxillo—but it did not succeed.

Mexico. There was a succession of earthquakes at Grenada about the 1st of December, most of the houses were thrown down or cracked—the ground moved like the billows of the sea, and persons walking on it became dizzy. For several weeks, the people were kept in continued alarm, and carried about images, one of which, they believed, had been found in a box that floated up the river against the current!

Gen. Santa Anna and Victoria yet held their ground against the emperor, and appear to have had some battles with him at Xalapa, &c. with partial success. But Vera Cruz was in the hands of the imperialists. The patriot chiefs have published a plan of government, the first article of which damps our zeal for their success—it is, that no other than the Roman catholic religion shall be tolerated.

Case of Daniel D. Tompkins.

IN THE HOUSE OF REPRESENTATIVES—FEB. 8, 1823.
Report of a select committee, appointed to inquire whether any legislative provision is necessary, for the settlement of the accounts of Daniel D. Tompkins, accompanied with a bill for that purpose.

The committee appointed to inquire whether any legislative provision is necessary for the final adjustment of the accounts of Daniel D. Tompkins, esq. beg leave to submit the following report:

The vice-president of the United States has several demands against the government, a part of which are opposed, not because they are unjust, but because they are not considered as coming within the rules of office, and can only be allowed when a law shall pass, authorizing the departments to admit and settle them.

These demands may be classed under the following heads:

- 1st, Interest on sums of money advanced by him to the use of the United States, from the dates of the advances to the time of reimbursement.
- 2d, Reasonable commissions for disbursing \$1,982,000, under the orders of government,

in the course of the late war, more than two thirds of which was procured by himself from individuals, and various corporations, under pledges of personal responsibility to make good the payment.

3d, Indemnity for losses incurred by the frauds and failures of sub-agents, to whom money has been advanced through his hands; and,

4th, Reparation for losses actually sustained in consequence of any failure, on the part of government, to fulfil its engagements, to send money, and advance treasury notes to him, to be deposited in banks, as pledges for the repayment of loans, taken by him at the request of the government for the use of the treasury.

To understand these claims and form a just opinion of their merits, it will be proper to recollect, that the claimant was governor of the state of New-York, from the year 1807, until the 28th of February, 1817, when he resigned that office to fill the one which he now holds. That war was declared between the United States and Great Britain, on the 18th June, 1812. That the frontier of New-York was sometimes invaded, and constantly threatened from the commencement of hostilities to the end of the war. That large detachments of militia from that state were called out upon requisitions of the general government, from time to time, from the spring of 1812, until the peace of 1815. That the system established to supply and pay the militia, was imperfect and inadequate to the emergency, and that, consequently, the governor of New-York, in addition to the novel and arduous duties devolving on his station, was compelled to execute extraordinary and perplexing services, belonging properly, to subordinate officers and agents.

The committee find, from the exhibits, as admitted on each side, that the governor did disburse \$1,982,000 for the government, in the course of the late war, for which he was held responsible, and required to account at various bureaux of the treasury and war departments. If the items of this aggregate sum had been passed, as they should have been, directly from the war department into the hands of proper disbursing officers, the suspended vouchers and rejected claims would have been adjusted by such officers in the usual manner, and the frauds and accidental losses must have fallen on the treasury, as, in fact, they did in every other case, save that of the present claimant. In all other instances the contractors, quarter masters, paymasters and public agents, accounted directly with the departments, and the treasury had to lose what they failed to vouch for, or make good: In this case, and this alone, the government held the civil and military chief of a state responsible for sums of money which were passed through his hands into those of the disbursing agents, a part of whom were acting, not for him or his state, but for the federal government and the nation.

In the year 1814, the governor was intrusted with the command of the military district, No. 3, including the state of New-York and other contiguous parts of the union. On the 15th September, 1814, a letter was addressed to him, by the acting secretary of war, now president of the United States, in which he says, "general Macomb, at Plattsburg, is in danger from a superior force marching against him, and general Brown is alike exposed to imminent danger. It is in the power of your state to make an exertion that will, not only save those armies, but crush the British force employed against them. May I entreat you to call out such a force in each quarter immediately, and hurry it

to the scene of action. I do not go into any detail, because you are too well acquainted with all the circumstances meriting attention to require it. Gen. Izard is marching to the aid of gen. Brown, but, as he takes Sackett's Harbor in his route, and depends on a conveyance thence by water by commodore Chauncey's flotilla, there is much uncertainty in his movement, I wish your measures to be taken independently of all calculation on him, since the expense attending them count as nothing, compared with the salvation of Brown's army, and of the post of Sackett's Harbor, which must also claim your attention. It is the object of the enemy to overwhelm us this campaign; and I have satisfactory reason to believe, that they indulge the presumptuous hope of penetrating from the lakes, by Albany, to the city of New-York. A vigorous and manly exertion is, therefore, particularly necessary on your part."

This letter calls for services of no ordinary character; the magnitude of which will not be diminished by recollections of the time. The condition of the treasury; the disasters of the year; the hostile array upon our borders of veteran legions, fresh from fields of victory in Europe, united to deepen the solicitude, and darken the prospect of the moment. At such a crisis, was the governor called upon to take the field in force, and check the adverse tide of war. The treasury was acknowledged to be unable to furnish the necessary funds. The governor was requested to call out an army that should "crush the enemy," and was obliged to raise the necessary funds, and to execute the service. He found the means of doing both, and, from that time to this, he has been struggling with embarrassments, produced by his engagements and responsibilities for the public.

The committee is satisfied that he made advances to the government: that he borrowed about \$1,382,827, from various corporations, to aid the national treasury and promote the public service. That those loans were procured by him, at the earnest intreaties of the president and the acting secretary of war. That, to aid him in procuring loans immediately, the government promised to send him treasury notes in *thirty or forty days*, which he was directed to pledge at \$110,000 for \$100,000. That, between the first of December, 1814, and the 17th of January, 1815, he found means to borrow \$1,098,500, (part of the foregoing sum), from several corporations, including a loan of \$400,000 from the corporation of the city of New York; for all which it appears that he had to make himself personally responsible by contracts; relying, on his part, upon the promise of government to advance the treasury notes, and take up his obligations. That a part only of the notes, (say \$850,000), were sent in proper time to relieve him. That the city corporation pressed him for the promised deposit, and for repayment, and that he was held up as a defaulter. That the failure of government put it out of his power to sustain his credit in the banks, for such large sums; that his previous attention to public affairs had compelled him to neglect his own; and that the heavy pressure of those loans produced a derangement in his private concerns, which brought upon him, as he contends, an actual and specific loss of sixty thousand dollars.

The peculiar and complicated duties which were devolved upon the governor, as civil and military chief of the state, and district referred to, and the special circumstances under which he was called upon to raise and disburse funds for the federal government, entitled him to expect an exact and

prompt performance of its promises, and a speedy reimbursement to relieve him from his embarrassments.

It is admitted that public moneys sent to him, or raised by him, have been faithfully applied to the public service, or kept in deposits in banks, or with public agents, ready to be used at any moment. That he served his country faithfully and effectually, is known to all. That he ran imminent risks to serve it, is beyond a doubt. That the treasury failed to fulfil its engagement with him, is no less certain; and it is manifest, that no citizen could sustain himself without loss against the heavy pressure of such large sums. That he foresaw the perils which afterwards assailed him, is proven by the honorable Rufus King, who conversed with him in the autumn of 1814, about "the condition of the public treasury; the unprotected state of the city of New York, and the inability of the general government to protect it; and urged, from the peculiar situation in which Providence had placed him, that it was his solemn duty to make great exertions and to assume great responsibilities. That the state, in a great measure, looked to him for its protection, and that he must call out the militia and find resources to pay them. That the governor had stated, in reply, that he was, already, committed very deeply, and that, if he should go farther in pecuniary responsibilities, he must do it at the risk of ruin; on which Mr. King solemnly urged him to go on, and do his duty, and if ruin was the consequence, to consent to endure it, and look to the honor and gratitude of his country." He did so—he performed all that was required, and more than was promised or expected from him. This is known alike to the committee and the country, and is recorded in the annals of the day. Your committee must repeat, that the governor foresaw the hazard he was running, that he took that hazard, fearlessly and generously as became a patriot, trusting to the honor and justice of his country.

On an examination and consideration of the accounts and claims, with all the attending circumstances, it appears to your committee,

1st, That it is no more than an act of justice to allow interest on all moneys advanced by Mr. Tompkins, on account of the public, from the time of his making such advances, to the time of his being reimbursed.

2d, That it would be just and equitable, to allow a reasonable commission on all moneys disbursed by him, during the late war.

3d, That he should be indemnified for losses sustained by him, in consequence of any failure on the part of government to fulfil its engagements, to send him money and treasury notes, within the time specified, to be deposited in certain banks, as collateral security for loans procured by him, at the request and on the account of government.

4th, That he ought not to be held responsible for losses incurred by any frauds or failures of sub-agents, to whom moneys were advanced through his hands.

With this view of the subject, a bill, accompanying this report, is respectfully submitted.

A BILL

To provide for the settlement of the accounts of Daniel D. Tompkins, late governor of the state of New York.

Be it enacted by the senate, and house of representatives, of the United States of America, in congress assembled, That the proper accounting officers of

the treasury be, and they are hereby, authorized to adjust and settle the accounts and claims of Daniel D. Tompkins, late governor of the state of New York, on principles of equity and justice, subject to the revision and final decision of the president of the United States.

Sec. 2. And be it further enacted, That nothing contained in the second section of the act, entitled "an act making appropriations for the support of government, for the year one thousand eight hundred and twenty two, and for other purposes," passed April twentieth, one thousand eight hundred and twenty-two, shall be construed to extend or apply to the said Daniel D. Tompkins.

Appointment of Midshipmen.

Report of the committee on naval affairs, on a proposition to apportion the midshipmen among the several states.

HOUSE OF REPRESENTATIVES, FEB. 17, 1823.

Mr. Fuller, from the committee on naval affairs, to whom was committed a resolution respecting the equal selection of midshipmen for the navy, from the different states, made the following report:

By the second section of the second article of the constitution of the U. States, the president is vested with power, by and with the advice and consent of the senate, to nominate and appoint all officers, whose appointment is not otherwise provided for by the constitution; thus giving him the exercise of his discretion, without any limitation as to place, to birth or residence, in such appointments. This latitude in selecting persons of suitable character and qualifications, must have been deemed indispensable, to enable the executive power to fulfil the high trust of providing for the "faithful execution" of the laws, and at the same time involves a responsibility which would have been considerably diminished by such a restriction as is suggested by the resolution. In appointing officers in the civil department, for the performance of duties which are local in their nature, the committee believe that a regard to the circumstance of residence, and of the political and individual relations of the persons selected, must frequently be among the considerations most important to a just decision.—Nor is there any reason to doubt, that a due regard to this consideration, in accordance with local predilections, and the spirit and genius of a free people, has guided the executive of the United States, as far, hitherto, as the public good requires.

In the army and the navy, less scope is afforded to the executive, in filling the higher grades of service, as long established usage limits the selection of suitable persons to an inconsiderable number, whose education and probationary character are deemed to render them the only subject of such selection. It is only in the appointments to the lower grades, from which, at a future day, the highest ranks of military and naval corps are to be filled, that the utmost latitude is afforded to the president for consulting the future interests of the country, by enrolling in her defence an adequate number of brave, intelligent, patriotic, and virtuous officers; and the committee are of opinion, that any restriction, by law, even if permitted by the constitution, would be highly pernicious in its operation, and might often result in the appointment of persons incompetent and unsuitable.

In regard to the appointment of midshipmen, the particular subject of the present inquiry, it appears, by the letter of the secretary of the navy department, accompanying this report, that a disposition suf-

sufficiently favorable to a general and fair participation of naval preference has constantly pervaded that department, and has been no otherwise counteracted than was unavoidable, from circumstances beyond its control.

The committee fully concur in the propriety and policy of enrolling in the naval service the meritorious young men of the interior states, whenever they manifest a solicitude to enter it; and they are persuaded that such a disposition on their part has always been encouraged, and will continue to be so, as far as a due regard to the constitutional discretion and responsibility of the executive will permit. They, therefore, recommend the following resolution.

Resolved, That any provision, by law, restraining the executive of the United States, in the selection of midshipmen, is inexpedient.

Navy department, 25th Jan. 1823.

SIR: In answer to the inquiry, in your letter of the 21st instant, whether any general rules are adopted in the department, by which the selection of midshipmen is made, particularly as relates to the residence, I have the honor to state, that the general rule, by which I have been governed in this respect, is, to apportion them among the several states, according to the ratio of representation in congress, when the applicants were unexceptionable as to character and qualifications for the service. The disproportion, however, was so great, that I have not as yet, been able to bring about an apportionment among the several states, according to the rule alluded to. But as, in all new appointments, due regard is had to the principle, the object will, before long, be effected. Whether it would be expedient to adopt, by law, this rule, leaving no discretion on the subject to the department, may well be questioned. Although the applicants, in the aggregate, are very numerous, yet there are some states from which there are but few; and if the department should be bound by law to conform, in all cases, to this rule, the selection might not always be of the most deserving and best qualified.

I have the honor to be, very respectfully, sir, your obedient servant,

SMITH THOMPSON.

Hon. Timothy Fuller,

Chairman naval committee, H. R.

Seventeenth Congress—2nd session.

IN THE SENATE.

The following is the substance of Mr. Gaillard's remarks on taking the chair of the senate, as president *pro tem.* on the 19th ult.—

Gentlemen: On taking the station with which you have honored me, I must be permitted to tender you my acknowledgments for so flattering an evidence of the continuance of your confidence and favor. Were my capacity to fill this place commensurate with your kindness or equal to the gratitude I feel, I might then reasonably expect to merit your approbation, which would be the highest reward I could obtain, and the most gratifying compensation for the cares and solicitude which must ever be attendant on the situation to which I am called. Forbidden, however, by a thorough conviction of my deficiencies, in many essential respects, to hope for so favorable a result, I must again throw myself for encouragement and support on your known liberality, and on the experience I have had of your former indulgence, and they will, I trust, sustain me in the attempt I shall make to discharge the duties devolving on me with fidelity and impartiality; be-

ing fully persuaded that I shall thereby furnish the most satisfactory testimony that can be offered of my high respect for this body, as well as of my esteem and personal regard for the individuals composing it.

February 20. The senate, on the motion of Mr. Williams, of Tenn. proceeded to the consideration of the bill to provide for the settlement of the accounts of Daniel D. Tompkins, late governor of the state of New York.

[This bill authorizes—first, that the proper accounting officers of the treasury adjust and settle the accounts and claims of Daniel D. Tompkins, on principles of equity and justice, subject to the revision and final decision of the president of the United States. Secondly, it enacts that the provision of the appropriation law of last session, which prohibits the payment of a salary to any individual while he shall appear to be indebted to the United States, shall be repealed, so far as it applies to Mr. Tompkins. See page 406.]

Mr. Eaton, was opposed to the second provision (above stated) of the bill; because, however highly he might estimate the services and patriotism of the vice-president, during the late war, he could not reconcile it to himself to extend to any individual a privilege, which was denied to all others similarly situated. It would have the appearance of favoritism, and might be so charged, particularly as it related to a person who held a high office.

Mr. Brown, of Louisiana, replied to Mr. E. in an animated manner. He did not think any such imputation could be made. A jury had passed on this claim, and had rendered a verdict in favor of the vice-president. Committees, too, in both houses of congress, had examined the case, and had reported in favor of authorizing what the bill proposed. There was a wide difference, therefore, between this and other cases of unsettled accounts with the government.

Mr. Morrill could not agree in the propriety of Mr. Eaton's objections. He adverted to the distinguished services of the vice-president during the late war, and argued in support of the justice of the bill.

Mr. Johnson, of Kentucky, supported the bill with much earnestness; and

Mr. Macon, opposed it, generally, on the ground taken by Mr. Eaton.

The question was then taken on ordering the bill to a third reading, and was carried, with two or three dissenting voices.

At the request of Mr. Williams, of Tennessee, the bill was, thereupon, read the third time, by unanimous consent, was *passed* and returned to the house of representatives.

[Our last paper contained other notices of the proceedings of the senate on the 19th and 20th February.]

February 21. Several bills were reported—The amendments to the bill, entitled "an act for laying out and making a road from the lower rapids of the Miami of Lake Erie to the western boundary of the Connecticut Western Reserve, in the state of Ohio, agreeable to the provisions of the treaty of Brownstown," having been reported by the committee correctly engrossed, the bill was read a third time, *passed*, and sent to the house of representatives for its concurrence in the amendment.

Some other minor matters were attended to and variously disposed of.

The senate, as in committee of the whole, then proceeded to consider the bill from the house of representatives, "supplementary to the acts to pro-

vide for certain persons engaged in the land and naval service of the United States in the revolutionary war."

[This bill provides for the restoration to the pension list, of the name "of any person who may have been, or hereafter shall be, stricken therefrom, in pursuance of the act of congress, passed the 1st day of May, 1820, if such person, so stricken from the list of pensioners, has heretofore furnished, or hereafter shall furnish, evidence, in pursuance of the provisions of said act, to satisfy the secretary of war that he is in such indigent circumstances as to be unable to support himself without the assistance of his country."]

Messrs. *Mills*, *Morril*, and *Lowrie*, spoke in favor of, and Mr. *Noble* against the bill.

Mr. *Lowrie* proposed, as an amendment to the bill, an additional section, providing for a reduction of 20 per cent. on the amounts hereafter to be paid to all revolutionary pensioners.

In support of this motion—

Mr. *Lowrie* observed that his remarks on this subject would take up very little time, for he was well aware that the friends of a measure sometimes destroy it by too much speaking. The expense of the pension list for four years, is as follows:

1819,	\$1,811,328 96
1820,	1,373 849 41
1821,	1,200,000 00
1822,	1,833,936 30
	6,219,114 67

One quarter of which is \$1,554,778 66 per ann.

There are 2,328 men who, under the provisions of this act, may be placed upon the list. This number, and no more, will be affected by its provisions. This is the utmost extent to which the bill goes, and by no possible construction can more be embraced. The expense of that number, supposing, what is not probable, that all will be placed on the list, according to the estimate of the chairman of the committee, (Mr. *Noble*), is \$223,000. The estimate I have made, amounts to \$350,000. This is 137,000 dollars beyond that of the chairman; and if it be erroneous, it is too large; and it is the utmost limit of the expense. Now, for the other side. By the present law, there are near 6,000 who may get on the list. Now, suppose but one half of that number be placed on the list. This may, and will take place, whether you pass this bill or not. If placed on the list, they will be entitled to back pensions from the time they were suspended by the act of 1820, which will be about three years. The amount, then, for back pension alone, for 3,000 men, will be 900,000 dollars. You have now the advantage and disadvantage of this bill, as it respects the treasury. The calculation, to my mind, is perfectly satisfactory. Any gentleman can satisfy himself by making a few figures; and, from this view of the principles of the bill, it is perfectly evident that the treasury will not lose by it.

But, sir, said Mr. L. I wish to look a little further into the subject. Our expense for this list is now between one million and a half and two millions of dollars. Whether this bill is passed or not, the list will soon swell to two millions of dollars. This is a large sum; and the question must be met, where will you get the money? Will you lay a tax to raise it? That, sir, would make us all pauze, in these times. Will you repeal the law? To that I will never consent. I then, sir, to relieve the pressure on the treasury, propose an amendment, to reduce the pensions 20 per cent. This would give each private \$76 80. That sum, sir, is worth as much

as 96 dollars was at the time of passing the original act. On the subject of reduction, I propose no measure to the pensioners which I would not vote for as it respects myself. For I neither will tax the people or borrow money, while any prudent reduction can be made. The present amendment will relieve the treasury from about \$400,000. That sum I would give to those who are not on the list. The money we now pay, I would still pay; but I would distribute it to more individuals. Numbers are not on the list, who have as good a right to be there as those who are now there. In doing this, we do more justice than by keeping the door closed against those who are now without. Still, sir, should the amendment be rejected, I will vote for the bill; and I do so under the full conviction, that, even without the amendment, it ought to pass. I offer this amendment for the purpose of saving the bill, as it is well understood that it will be rejected without it.

The amendment was agreed to—18 to 16.

Messrs. *Seymour* and *Lawman* spoke in favor of the bill, and Messrs. *Macon* and *Smith*, of South Carolina, opposed it.

Mr. *Lloyd*, of Mass. said he considered the amendment adopted by the committee, on motion of the hon. member from Pennsylvania, (Mr. *Lowrie*), as giving a death blow to the bill. As much as he might feel in favor of any other parts of the bill he could not vote for it, if that amendment were adopted, which he considered as a breach of faith. The government having entered into a contract to pay to these pensioners a certain stipulated sum during life, any reduction of that sum would amount to a violation of the faith of the government.—For this reason, he should vote against the bill as amended.

The bill was then reported to the senate, with the amendment.

The question on adopting the amendment was taken by yeas and nays, and decided in the affirmative, 23 to 22. The vote was as follows:

YEAS—Messrs. Barbour, Barton, Benton, Brown, of Lou. Brown of Ohio, Chandler, Elliott, Findlay, Gaillard, Holmes, of Me. Holmes, of Miss. Johnson of Lou. Kelly, King, of Alab. Lowrie, Macon, Noble, Palmer, Smith of S. C. Taylor, of Va. Thomas, Van Dyke, Williams of Tenn.—23

NAYS—Messrs. Boardman, D'Wolf, Dickerson, Eaton, Johnson, of Ky. King of N. York, Knight, Lanman, Lloyd, of Mass. Lloyd, of Md. Mills, Morrill, Parrott, Ruggles, Seymour, Smith of Md. Southard, Stokes, Talbot, Van Buren, Ware, Williams, Miss.—22

The question on ordering the bill to be read a third time, was taken by yeas and nays, and decided in the negative. 21 to 24. The vote was as follows:

YEAS—Messrs. Boardman, Chandler, D'Wolf, Dickerson, Findlay, Holmes, of Maine, Johnson, of Ken. King, of N. Y. Knight, Lanman, Lowrie, Mills, Morrill, Palmer, Parrott, Ruggles, Seymour, Smith, of Md. Southard, Stokes, Van Buren—21.

NAYS—Messrs. Barbour, Barton, Benton, Brown, Lan. Brown, of Ohio, Eaton, Elliott, Gaillard, Holmes, of Miss. Johnson, of Lou. Kelly, King, of Alab. Lloyd, of Mass. Lloyd, of Md. Macon, Noble, Smith, of S. C. Talbot, Taylor, of Va. Thomas, Van Dyke, Ware, Williams, of Miss. Williams, of Tenn.—24.

So the bill was rejected.

[On the motion of Mr. *Kelly*, who voted with the the majority, it was the next day agreed, 23 to 14, to reconsider the bill, and it was then postponed till Monday.]

February 22. Mr. *Parrot* made a report on the petition of Robert F. Stockton, late commander of the U. S. schooner *Alligator*.

The senate took up the following resolution, submitted yesterday by Mr. *Brown*, of Ohio:

Resolved, That the president of the United States be requested to communicate to the senate, confidentially, or otherwise, as he shall think fit, any information in his possession, which he may not deem improper to be communicated, relative to the present state and condition of the Mexican empire.

On motion of Mr. *King*, of Alabama, this resolution was ordered to lie on the table.

Considerable time was spent in discussing Mr. Taylor's, (of Va.) proposed amendment to the constitution of the United States, respecting the election of president, together with the several amendments to that proposition. Messrs. Taylor, Dickerson and Smith, of Md. spoke on the subject—and then it was laid on the table.

The senate took up the amendment of the house of representatives to the Cumberland road bill, and agreed, without objection, to substitute the word "public" for the word "national," as applied to the road.

On motion of Mr. Lowrie, the senate took up the joint resolution directing the printing of a number of copies of the journal of the revolutionary congress; and, after some remarks from Mr. Lowrie and Mr. Holmes, of Maine, to shew the great value and importance of the work, its scarcity, the impossibility of procuring a copy in the United States, &c. the resolution was ordered to be engrossed for a third reading.

Some matters about the jurisdiction of justices of the peace in the district of Columbia occupied the rest of the day.

February 24. Many things of minor importance were attended to—

The joint resolution directing the printing of a certain number of the journals of the revolutionary congress, was read the third time, passed, and sent to the other house for concurrence.

The engrossed bill to amend the act of last session for ascertaining claims and titles to land in the territory of Florida, was also read the third time, passed, and sent to the other house for concurrence.

Considerable time was spent on the bill to extend the jurisdiction of justices of the peace in the district of Columbia. The bill, being amended, was ordered to be read a third time, as was the bill for the relief of col. James Morrison.

The senate took up the bill to divorce John Wheelwright, of Alexandria, and Caroline Eliza Wheelwright, his wife.

[Mr. W. petitions for a divorce, on the ground of the insanity of his wife, at the time of his marriage, (though then to him unknown); of the increase of the malady until it became entirely settled and confirmed; of its having now continued for several years, and the belief, (in which he has the opinion of the physicians in whose care she has been long placed), that the insanity is incurable.]

A long and feeling debate took place on this bill—chiefly on these points: Whether the insanity actually existed at the time of marriage, so as to render the contract void; whether an affliction of this character ought to dissolve the marriage contract; whether, if it was entitled to relief, the tribunal appointed for the purpose of granting such relief in the state of Massachusetts, (where the marriage was contracted), was not the proper place for the petitioner to seek it; whether it was right for congress to grant divorces at all, (it has never yet granted one), &c. &c. It was agreed, on all hands, the facts being generally admitted, that it was a case of great hardship. Messrs. Barbour and Southard advocated the bill with much earnestness. It was opposed by Messrs. King, of New York, Benton, Mills, Holmes of Maine, and Chandler. Mr. Lloyd, of Massachusetts, without taking sides of the bill, spoke in corroboration of the facts set forth by the petitioner, and as to the great respectability of the connections of the lady residing in Boston.

The question being taken on ordering the bill to

be engrossed and read a third time, it was decided in the negative by yeas and nays, as follows:

YEAS.—Messrs. Barbour, Barton, D'Wolf, Dickerson, Eaton, Johnson, of Ky. Johnson, of Lou. Kelly, Knight, Lanman, Noble, Parrott, Southard, Talbot, Taylor, of Ind. and Williams, of Tenn.—16.

NAYS.—Messrs. Benton, Boardman, Brown, of Ohio, Chandler, Elliott, Fidday, Gaillard, Holmes, of Maine, Holmes, of Miss. King, of Ala. King, of N. Y. Lloyd, of Md. Lloyd, of Mass. Macon, Mills, Morril, Palmer, Seymour, Smith, of S. C. Stokes, Taylor, of Va. Thomas, Van Buren, Van Dyke, Ware, Williams, of Miss.—26.

So the bill was rejected.

February 25. On motion of Mr. Barbour, the committee on foreign relations was discharged from the further consideration of the resolution of the senate in relation to the territories of the United States on the northwest coast of America.

The committee on finance was also discharged from the further consideration of the petition of the bank of the United States—as were several other committees.

Three hours was spent about titles to land in Louisiana—and the bill was ordered to be engrossed for a third reading.

The annual return of the militia of the U. S. was received. The senate receded from its amendments to the bill to amend the collection act of 1799: passed the bill to extend the jurisdiction of justices of the peace in the district of Columbia, with amendments, and the bill for the relief of col. James Morrison: and that to select a site for a national armory on the western waters was ordered to a third reading. The rest of the day was spent on the bill to authorize the erection of certain light houses. The senate adjourned at 5 o'clock.

February 26. After other business—The senate resumed the consideration of the bill from the house of representatives, supplementary to the acts providing pensions for revolutionary services.

[This bill provides, principally, that the secretary of war shall restore to the list of pensioners the name of any person who may have been, or hereafter shall be, stricken therefrom, in pursuance of the act of congress of the first day of May, 1820, if such person, so stricken from the list of pensioners, has heretofore furnished, or hereafter shall furnish, evidence, in pursuance of the provisions of said act, to satisfy the secretary of war that he is in such indigent circumstances, as to be unable to support himself without the assistance of his country. The 3d section provides that provisions granted upon other and different schedules than those heretofore exhibited by the same applicants, shall commence from the time such schedules shall be filed in court. In addition to these provisions, a clause has been adopted in the senate, reducing 20 per cent. all pensions which have heretofore, or may hereafter be, allowed.]

On motion of Mr. Kelly, the 3d section was stricken out, and a substitute adopted, providing that no pension hereafter allowed under this act on claims heretofore filed, shall commence prior to the passage of this act; and that all other pensions hereafter allowed shall commence from the time of completing the proof.

The question was, at length, taken on ordering the bill, as amended, to be read a third time, and was decided in the affirmative, as follows:

YEAS.—Messrs. Barton, Boardman, Chandler, D'Wolf, Dickerson, Fidday, Holmes, of Maine, Johnson, of Ken. Kelly, King of N. Y. Knight, Lanman, Mills, Morril, Palmer, Parrott, Ruggles, Seymour, Smith, of Md. Southard, Stokes, Talbot, Thomas, Van Buren—24.

NAYS.—Messrs. Barbour, Benton, Brown, of Lou. Brown of Ohio, Eaton, Elliott, Gaillard, Holmes, of Miss. Johnson of Lou. King, of Ala. Lloyd, of Md. Lloyd, of Mass. Macon, Noble, Smith, of S. C. Taylor, of Ind. Taylor, of Va. Ware, Williams, of Miss. Williams, of Tenn.—20.

The engrossed bill to enable the holders of French, British and Spanish land titles, in Louisiana, not heretofore recognized by the government of the United States, to institute proceedings to try the validity of the same; and the engrossed bill to establish a national armory on the western waters, were severally read the third time, *passed*, and sent to the house of representatives for concurrence.

Mr. Smith, of S. C. laid on the table a resolution calling on the secretary of war to furnish, during the present session, sundry information respecting the number of pensioners, the date, states to which they belong, &c. &c.

Gales and Seaton were elected printers to the senate—40 votes for them, 3 for other persons.

The rest of the day was spent on the bill to extend the jurisdiction of justices of the peace in the district of Columbia, and in executive business.

HOUSE OF REPRESENTATIVES.

Wednesday, Feb. 19. Mr. Cocks moved the adoption of the following resolution:

Resolved, That the committee on the public buildings be instructed to inquire into the expediency of fixing, by law, the compensation of the architect, of the master carver, of the master of the stone work, and of the clerk and managers of the public buildings, in the city of Washington.

Mr. C. in offering this resolution, said, that it appeared from a letter which he had before him, from the superintendent of the public buildings, that officer had thought proper to reduce the compensation of the architect and master builder, master carver, and master mason, on the ground that their duties were lessened, &c. He had reduced the compensation of the architect 500 dollars per annum, and of each of the others 250 dollars. Against this decision, the architect had taken an appeal to the president, by whom the subject had been referred to the attorney general. The opinion of that officer on the subject, Mr. C. said, he had read; and, it amounted to this: that, if A employs B, he is bound to give B the same compensation as he first allows him, so long as he is engaged in the same business. These individuals are, therefore, reinstated in their former comfortable salaries. Mr. C. said he wished to fix, by law, without the necessity of resorting to the opinion of the attorney general at all, what shall be the compensation of these public servants.

Mr. Fuller suggested that the resolution was in an imperative form, differing rather from the ordinary shape of resolutions directed to committees. He preferred that it should take the usual shape of an inquiry into the expediency of making this provision.

Mr. Cocks, after some other remarks, accepted this modification of his motion; and, thus amended, it was agreed to.

Mr. Saunders, of North Carolina, submitted the following paper to the house, and moved that it lie on the table:

"The undersigned, members of the bar of the district court for the Alabama district, do certify that they are well acquainted with the general character of Edwin Lewis; that it is bad, and that they consider him unworthy to be admitted as a member of the said bar.

WM. CRAWFORD, district attorney.

NENRY HITCHCOCK, Att'y Gen. of Alab.

WILLIAM B. PATTEN.

A. G. RUFFIN.

A. V. BAGLEY.

Mobile, Alab. Jan. 15, 1823."

This paper having been read—

Mr. Colden, of New York, said he knew nothing of the parties in this case—of the signers of this

paper, or of the individual concerned. But he could not see the least propriety in having a paper of this sort presented, and placed on the records of this house, to the prejudice of any individual. He, therefore, moved that the gentleman have leave to withdraw it.

The Speaker stated that the motion now pending, was to lay it on the table.

Mr. Moore, of Alabama, was, like the gentleman from New York, very much surprised at this document being brought forward, and was at a loss to know the motive for introducing it. He considered the character of this individual as not being before the house. And, if a precedent was to be established, such as the reception of this paper would constitute, he hoped it would be when some solid and substantial reasons could be produced in favor of it. He hoped the gentleman would reconsider the matter, and withdraw that document. I profess not to know that individual, said Mr. M. but he ought to have justice at least, which a course like this is not calculated to allow him.

Mr. Nelson, of Maryland, asked if the committee on the judiciary had not made a report upon the charges preferred by Edwin Lewis against Judge Tait, and, if so, was not that report now lying on the table? [Being answered in the affirmative, Mr. N. proceeded]. Then, said he, it appears obviously proper, that, where it is made a matter of grave charge against a judge of the United States, that he has refused to admit the accuser to practice as an attorney in his court, and a report upon this charge is lying on the table, testimony of the character of the individual refused to be admitted, being directly relevant, ought to be received. Here, you have the testimony of the members of the bar to which he was refused admission, testifying to his character, and to his unfitness for admission to the bar. This, Mr. N. said, was the very best evidence the house could have upon the case. It seemed to him, under the circumstances, extraordinary, that the gentleman from New York should object to receiving this paper, which ought to be spread on the records, to shew to every libeller who comes into this house to vituperate high officers of the government, that the grounds and motives of their conduct will be exposed, and, when exposed, appreciated as they ought to be.

Mr. Saunders said he could not accommodate the gentleman from Alabama by withdrawing this paper, if he were disposed to do so; because, in presenting it, he acted under the instructions of the judiciary committee. Like the gentleman from Alabama, said Mr. S. I personally know nothing of this individual, and, from the little I have seen of his character, I wish to know nothing of him. But it seems proper that this paper should be received, because one of the charges addressed to this house, against judge Tait, by this individual, was that he had refused him admission to the bar. This certificate shews that he was not a fit person to be admitted. The certificate is signed by several of the most respectable gentlemen in the state of Alabama, one of whom, he had heard, is now speaker of the house of representatives of the state. Mr. S. would not now, however, discuss the subject to which this certificate relates. If the report should be taken up, it would then be time enough to discuss it.

The paper was ordered to lie on the table.

Thursday, Feb. 20. The following resolution, moved by Mr. Sloane, yesterday, was taken up today.

Resolved, That the president of the United States be requested to inform this house of the amount of money paid from the treasury, since the organization of the present government, for the follow-

ing objects, viz: building light houses, including the purchase of land on which they are situated, together with the lighting and superintending the same; erecting beacons, building, lighting, and superintending vessels stationed as lights in harbors, or on the coast; building wharves, piers, and sea walls, removing obstructions to navigation in rivers, or harbors; placing and superintending buoys; relief of distressed, sick, and disabled seamen; and for support of consuls and commercial agents abroad; the expenditure under each head to be stated separately.

The resolution having been read—

Mr. Gorham offered the following as an amendment to this resolution:

"Also, to inform this house what amount of money has been paid into the treasury since the organization of the present government from the duties laid upon imports and tonnage entering the ports and harbors of the United States, with the amount of hospital money received by the officers of the government out of seamen's wages, stating how far the amount of said duties and hospital money have exceeded the amount expended on the items specified in the first part of this resolution; also, to inform the house how many of the light houses now maintained by the United States were erected by the individual states, and where the same are situated."

Mr. Sloane received this amendment as a modification of his resolution.

The question being on agreeing to the resolution, as thus amended—

Mr. Wood opposed the resolution—he did not see any business on which the information could operate—Mr. Sloane said he did not expect any opposition to this motion, being a call for information merely. His object in calling for it was to throw some light on the exercise of powers by congress, which could only have been inferred by a construction of the constitution analogous to that which was contended for by the friends of internal improvement, of the unconstitutionality of which so much had been heard. That subject, if not discussed at the present session, would be at the next, and it would be proper to obtain the information necessary to enable the house to act understandingly upon it.

On the suggestion of Mr. Chambers, the resolution was so modified that the information should be communicated at the commencement of the next session of congress. Other amendments were offered, and the resolution was laid on the table.

[The other business transacted in the two preceding days, has already been sufficiently noticed.]

Previous to adjournment—The Speaker laid before the house a message from the president of the United States, communicating a copy of the convention of navigation and commerce between the United States of America and his majesty the king of France and Navarre, concluded and signed at Washington, on the 24th of June, 1822; which was ordered to lie on the table.

A message from the president of the United States, transmitting statements from the treasury department, shewing the amount of moneys advanced to agents, contractors, &c. since 1st January, 1817, which have not been accounted for, and the amount of loss sustained in each case, the securities taken, and the names of the sureties; which was read and ordered to lie on the table.

A letter from the president of the United States, transmitting a report of the secretary of state in relation to the commissioners appointed to survey land in Florida; which was read and referred to the committee on public lands.

A letter from the president of the United States, transmitting a report from the secretary of the treasury, in relation to the execution of the law of last session, respecting the trade with the Indian tribes; which was read and committed to the committee on Indian affairs.

A letter from the secretary of the treasury, transmitting a statement of the register of the treasury, of the appropriations and expenditure of moneys for the Cumberland road, &c.; which was read and ordered to lie on the table.

Friday, Feb. 21. Mr. Metcalfe, from the select committee appointed on the subject of Indian affairs, made a report in relation to the Florida Indians, concluding with the following resolution:

Resolved, That the president of the United States be authorized and requested to commence a system of operations for the gradual and ultimate effectuation of the objects contemplated; allowing him to exercise and pursue his own judgment, as to the manner or mode of doing it; and to communicate to this house, as soon as may be, after the commencement of the next session, the progress and result of his proceedings therein.

Sundry bills were reported, read, &c.

Mr. Russell, from the committee on foreign relations, made a report in relation to the act of the parliament of Great Britain, passed the 5th of August, 1822, concluding with a resolution recommending that the subject be referred to the president of the United States, and that he be requested to obtain, by negotiation with the government of Great Britain, such modifications of the act of parliament of the 5th of August, 1822, as may remove all just cause of complaint; which report was ordered to lie on the table.

On motion of Mr. Allen, of Massachusetts, the house took up the joint resolution requiring annual accounts to be laid before each house, of the expenditure of the contingent fund of the two houses of congress; and it was ordered to be engrossed for a third reading to-morrow.

The engrossed bill from the senate for the adjustment of land claims in the state of Louisiana, was read a third time, passed, and sent to the senate for its concurrence.

The engrossed bill for the relief of capt. Richard Hightower, was read a third time, passed, and sent to the senate for its concurrence.

An unsuccessful attempt was made to take up the bill for the relief of the mother of the late O. H. Perry.

After further debate, the bill extending the time for locating military land warrants to revolutionary soldiers, was ordered to be engrossed for a third reading.

The house took up the bill appropriating 25,000 dollars for the preservation and repair of the Cumberland road. Many propositions to amend it were offered, and negatived. The opinions of gentlemen were very much at variance about this matter—but, at last,

The question was taken on ordering the bill to be read a third time, and decided by the following vote:

YEAS—Messrs. Abbot, Barber, of Conn. Bateman, Baylies, Bayly, Blackledge, Burrows, Campbell, of New York, Campbell, of Ohio, Carter, Cassidy, Chambers, Colden, Condict, Conkling, Cook, Cushman, Cutburt, Dane, Durfee, Dwight, Eddy, Edwards, of Conn. Edwards, of Penn. Fuller, Gorham, Govan, Hamilton, Hardin, Harris, Hemphill, Hill, Hohart, Holcombe, Hubbard, Jackson, Jennings, E. Johnson, J. T. Johnson, J. S. Johnston, Jones, of Tenn. Kent, Keyes, Kirkland, Little, McCarty, McKim, McLane, McNeil, Mallary, Mercer, Metcalfe, Mitchell, of S. C. Montgomery, Moore, of Va. Moore, of Alab. Neale, Nelson, of Md. Newton, Patterson, Penn. Pierson, Plumer, N. H. Poinslet, Rankin, Reed, Md. Reid, of Geo. Rich, Rogers, Ross, Ruggles, Saunders, Scott, Sloane, Sterling, of N. Y. J. Stephenson, Stewart, Taylor, Tomlinson, Trimble, Udree, Upham, Vance, Van Rensselaer, Walker, Warfield, Williams, of Va. Woodcock, Woodson, Wright—90.

NAYS—Messrs. Alexander, Allen, of Mass. Ball, Bassett, Bigelow, Borland, Brown, Buchanan, Burton, Cambreleng, Cannon, Conner, Crafts, Denison, Dickinson, Edwards, of N. C. Farrelly, Floyd, Forrest, Forward, Garnett, Gilmer, Gist, Gross, Hawks, Ingbar, Latrop, Lettwich, Lincoln, Litchfield, McCoy, McSherry, Matlack, Matson, Mattocks, Mitchell, of Penn. Murray, New, Patterson, of N. Y. Phillips, Pitcher, Plumer, of Penn. Rantolph, Rhea, Roebester, Rohley, Russ, Russell, Sergeant, Arthur Smith, A. Smyth, Spencer, Sterling, of Conn. A. Stevenson, Thompson, Tol, Tracy, Tucker, of S. C. Van Wyck, Walworth, Whipple, White, Williams, of N. C. Williamson, Wilson, Wood—66.

So the bill was ordered to be read a third time to-morrow.

The bill making appropriations for the support of the military establishment of 1823 was next taken up—some amendments were made, it was

ported to the house, and ordered to be engrossed for a third reading to-morrow.

The house adjourned at half past 4 o'clock.

Saturday, Feb. 22. Many reports from different committees were received—a present notice of which is not necessary.

On motion of Mr. *Johnston*, of Lou. it was

Resolved, That the committee on naval affairs be instructed to inquire into the expediency of providing steam batteries for the defence of the river Mississippi.

Mr. *Taylor*, advertng to the rule adopted at the last session, the effect of which is that no business should be sent from either house within the last two days of the session, said that this rule, which he considered a proper one, seemed to require a different arrangement of the business before the house; with which view he moved the following proposition:

Resolved, That the business now depending before the house, and committed to a committee of the whole, other than upon the state of the union, be arranged by the clerk, under the direction of the speaker, in the following order:

1. Private bills originating in this house.
2. Public bills and resolutions, originating in this house.
3. Private bills originating in the senate.
4. Public bills and resolutions originating in the senate.
5. Unfavorable reports.

After some conversation between Mr. *Taylor*, Mr. *Bassett*, Mr. *Cook*, and others, the proposition was agreed to.

Mr. *Colden* moved to discharge the committee of the whole from the further consideration of the proposition for continuing the pension of the widow of the late captain Lawrence, but, as the motion could not be received without the unanimous consent of the house, and, a member objecting to it, Mr. C. failed in his object.

An engrossed bill for the relief of Charles Carr, late paymaster to col. Wm. Dudley's regiment of Kentucky militia; an engrossed bill for the relief of John B. Hogan; the engrossed bill, extending the time for issuing and locating military land warrants to officers and soldiers of the revolutionary army; and an engrossed bill making appropriations for the military service of the United States for the year 1823, were severally read a third time, *passed*, and sent to the senate for concurrence.

The engrossed joint resolution requiring from the secretary of the senate and clerk of the house of representatives an annual account of the contingent expenses of the two houses of congress was read a third time, *passed*, and sent to the senate for its concurrence.

The bill from the senate "making an appropriation for the repair of the national road from Cumberland to Wheeling," was read a third time, and *passed*, 75 votes to 45.

On a motion to amend the title of this bill so as to make it comport with the amendment yesterday made to the first section of the bill, by striking out *national* and inserting *public*, it was decided affirmatively—ayes 63, noes 56.

The bill was then sent to the senate for its concurrence.

The bill from the senate "to revive and continue in force the seventh section of an act entitled 'an act supplementary to the several acts for the adjustment of land claims in the state of Louisiana,' approved the 11th day of May, 1820, and for other purposes," was read a third time, and finally *passed*.

Mr. *Little*, (leave being granted), presented a memorial from eighty enterprising farmers and mechanics within his district, praying congress to pass the bill, now on the clerk's table, for the occupation of the mouth of Columbia river, intimating their wish to remove thither, for the improvement

of that country and of their own condition; which was ordered to lie on the table.

The house then took up the unfinished business of yesterday, being the bill making further appropriations for the military service of the United States for the year 1823, embracing certain Indian appropriations, and concurred in all the amendments made to it in the committee, except an item of appropriation of 90,000 dollars for the contingent expenses of the Indian department, and another appropriating 50,000 dollars for the extinction within the state of Georgia, made under the treaty of the Indian title to certain reservations of land ties, 1817, 19, and 21, with the Creek and Cherokee Indians.

Upon the item of appropriation of ninety thousand dollars for the contingent expenses of the Indian department, excepted by Mr. *Cocke* from the several amendments agreed to in the house to the above bill, a debate arose, in the course of which it was opposed by Mr. *Lincoln* and Mr. *Floyd*, and supported by Mr. *McLane* and Mr. *Vance*.

After debate—the question on concurring with the committee in this amendment was then taken, and agreed to.

A debate arose on the second excepted item of appropriation, of fifty thousand dollars for the extinction of Indian titles to land in Georgia; in the course of which it was opposed, on the ground of the inexpediency of the measure of making these extinctions, by Mr. *Allen*, of Mass. and Mr. *Metcalf*, and defended by Mr. *Tattnall*.

Mr. *Williamson*, considering this a very important question, required on it the yeas and nays; in which he was supported in his call.

The debate was renewed. Messrs *Montgomery*, *Reid*, of Geo. and *Gilmer* supported the amendment, and Messrs *Cook*, *Williamson* and *Ingham* spoke against it—the latter was replied to by Mr. *Metcalf*. But before taking the question, the house adjourned, at half past 5 o'clock.

Monday, Feb. 24. After the usual preparatory or incidental business,

The house, on motion of Mr. *Newton*, of Virginia, proceeded to the consideration of the bill to abolish the office of measurer in the several ports of entry in the United States. The bill is in the following words.

Be it enacted, &c. That, from and after the thirtieth day of June next, the office of measurer, as now established by law, in the several collection districts, be, and the same is hereby, abolished; and the powers and duties heretofore exercised and performed by the measurers, in the said districts, shall, from and after the said thirtieth day of June, be exercised and performed, by the inspectors; and such inspectors shall exercise said powers and perform said duties and services, for the daily compensation allowed to inspectors for services in aid of the customs.

A debate arose on the principle of this bill, in which those who defended the bill contended that a saving of twenty-five thousand dollars annually, would be effected to the government by passing the bill, without any prejudice to the revenue or to the public interest; while those who opposed the bill argued that a saving might accrue to the revenue by abolishing this office in the small ports, but that it would be detrimental to the revenue and prejudicial to the mercantile interest, if the abolition were to apply to the large ports of the United States.

Two or three motions were made, only with a view, by the movers, of obtaining further information on the subject, to lay the bill on the table, which motions were severally negatived.

Those who engaged in the discussion were Mr. *Newton*, Mr. *McKim*, Mr. *Fuller*, Mr. *Little*, Mr. *Burrows*, and Mr. *Hill*, in favor of the abolition of

the office of measurer, and Mr. *Cambreleng*, Mr. *Colden*, Mr. *Hamilton*, Mr. *Poinsett*, and Mr. *Morgan*, in earnest opposition to it.

Mr. *Hamilton* then proposed the following amendment to the bill:

Provided, That the provisions of this act shall not be extended to the ports of Boston, New York, Philadelphia, Baltimore, Charleston, and New Orleans."

The amendment was negatived.

Mr. *Cambreleng*, believing this to be an important measure, and being himself opposed to it, wished to record his vote upon it, and, therefore, required the yeas and nays on the question of engrossing it for a third reading.

Mr. *Condict* then moved to postpone the further consideration of the bill indefinitely; which motion was decided in the negative.

Some further conversation took place, in which Mr. *Johnston*, of Lou. Mr. *Little*, Mr. *McKim*, Mr. *Burrows*, Mr. *Mallary*, Mr. *Durfee*, Mr. *Burrows*, and Mr. *Tomlinson*, engaged.

The question on ordering the bill to be engrossed and read a third time, was decided as follows:

YEAS.—Messrs. Abbot, Alexander, Allee, of Tenn. Archer, Barber, of Conn. Bateman, Baylies, Bayly, Bigelow, Breenkenridge, Brown, Buchanan, Burrows, Butler, Campbell, of Ohio, Cannon, Cassidy, Chambers, Conkling, Conner, Crafts, Darlington, Denison, Eddy, Edwards, of Conn. Edwards, of N. C. Farrelly, Findlay, Floyd, Forrest, Forward, Gebhard, Gist, Gross, Hall, Hardin, Harvey, Hawks, Hill, Hooks, Jackson, F. Johnson, Kent, Keyes, Kirkland, Lathrop, Leftwich, Lincoln, Little, McCoy, McKim, McNeill, Nesberry, Mallary, Matlack, Matson, Mattocks, Merver, Mitchell, of Penn. Moore of Va. Moore of Alab. Murray, Neale, New, Newton, Patterson, of Penn. Phillips, Plumer, of N. H. Plumer, of Penn. Randolph, Reed of Md. Reid of Geo. Rhea, Rich, Rochester, Rodney, Ross, Russ, Saunders, Sloane, Arthur Smith, Alex's Smyth, Sterling, of Conn. Sterling, of N. Y. Stoddard, Swan, Taylor, Thompson, Tomlinson, Tracy, Tucker, of S. C. Udree, Vance, Van Rensselaer, Van Wyck, Whipple, White, Williams, of Va. Williams, of N. C.—99.

NAYS.—Messrs. Allen of Mass. Ball, Barstow, Bassett, Blackledge, Borland, Cambreleng, Campbell, of N. Y. Carter, Colden, Condict, Cook, Cushman, Dane, Dickinson, Durfee, Dwight, Edwards, of Penn. Fuller, Gurnham, Govan, Hamilton, Harris, Hemp-hill, Herrick, Hobart, Holcombe, Hubbard, Ingham, J. S. Johnston, Litchfield, McCarty, McLane, Morgan, Nelson, of Mass. Patterson, of N. Y. Pierson, Pitcher, Poinsett, Reed, of Mass. Ruggles, Russell, Sergeant, Walworth, Williamson, Wood, Woodcock.—47.

So the bill was ordered to be read a third time to-morrow.

The bill, entitled "an act, supplementary to, and to amend an act, entitled "an act to regulate the collection of duties on imports and tonnage," passed the second day of March, 1799, and for other purposes," returned from the senate with sundry amendments, and subsequently reported upon by the committee of ways and means, to whom the bill and amendments were referred, was, by unanimous consent, taken up, and the report of the committee, recommending the agreement of the house to some, and its disagreement to others, was concurred in, and the bill was then returned to the senate.

The *Speaker* laid before the house a letter from the president of United States, transmitting a report of the secretary of the navy, in relation to those prize agents, who have neglected to render an account of their agency, &c. and to pay over the money in their hands, &c. &c.; which letter was read and ordered lie on the table; and

A letter from the secretary of the treasury, transmitting information in relation to the debt owing from the bank of Vincennes to the United States; which was read and ordered to lie on the table.

The engrossed bills "to discharge John Burgin from imprisonment," and "concerning stamps," were severally read a third time, *passed*, and sent to the senate for concurrence.

The amendment proposed by the senate to the bill, entitled "an act for laying out and making a road from the lower rapids of the Miami of Lake Erie to the western boundary of the Connecticut Western Reserve in the state of Ohio, agreeable to

the provisions of the treaty of Brownstown," were read and concurred in by the house.

The house then resumed the consideration of the unfinished business of Saturday, the question pending being on concurring in an amendment of the committee of the whole appropriating the sum of fifty thousand dollars for the extinguishment of certain Indian titles to land in the state of Georgia, made to the bill making further appropriations for the military service of the United States for the year 1823.

The discussion of this amendment was renewed, and occupied a considerable portion of the day.—Mr. *Tracy*, Mr. *Hardin*, Mr. *Ingham*, Mr. *Cook*, and Mr. *Allen*, of Mass. speaking against granting the appropriation, and Mr. *A. Smyth*, of Virginia, Mr. *McLane*, Mr. *Jones*, of Tenn. Mr. *Reid*, of Georgia, and Mr. *Dwight*, in support of it.

The question was then taken on concurring, by yeas and nays, and decided as follows:

YEAS.—Messrs. Abbot, Alexander, Allee, of Tenn. Archer, Barstow, Bassett, Bateman, Baylies, Blackledge, Cambreleng, Campbell, of Ohio, Cannon, Carter, Cassidy, Condict, Conkling, Conner, Cuthbert, Dane, Durfee, Dwight, Eddy, Edwards, of K. C. Floyd, Garnett, Gist, Govan, Hall, Hamilton, Herrick, Hooks, Jennings, F. Johnson, J. T. Johnson, J. S. Johnston, Kent, Keyes, Kirkland, McCarty, McDuffie, McKim, McLane, McNeill, McSherry, Mallary, Montgomery, Moore, of Va. Nelson, of Mass. Pitcher, Reed, of Mass. Reid, of Geo. Rhea, Rochester, Ruggles, Russell, Saunders, Arthur Smith, Alex. Smyth, W. Smith, A. Stevenson, Tattall, Thompson, Tucker, of S. C. Van Wyck, Walker, Walworth, Whipple, Williams of N. C. Wilson, Wood—70.

NAYS.—Messrs. Allen, of Mass. Ball, Bayly, Bigelow, Borland, Breenkenridge, Brown, Burrows, Butler, Campbell, of N. Y. Chambers, Cook, Crafts, Cushman, Darlington, Denison, Dickinson, Edwards, of Conn. Edwards, of Penn. Findlay, Fuller, Gebhard, Gorman, Gross, Hardin, Harris, Harvey, Hill, Hobart, Ingham, Jackson, Jones, of Tenn. Lathrop, Leftwich, Lincoln, Litchfield, Little, McCoy, Matlack, Matson, Mattocks, Metcalfe, Mitchell, of Penn. Morgan, Murray, Neale, Nelson, of Md. Newton, Patterson, of Penn. Phillips, Pierson, Plumer, of N. H. Plumer, of Penn. Reed, of Md. Rodney, Russ, Sloane, Sterling, of Conn. Sterling, of New York, Stoddard, Swan, Taylor, Tod, Tomlinson, Tracy, Trimble, Udree, Upham, Vance, White, Williams, of Va. Williamson, Woodcock.—73.

The amendment being thus rejected—

The bill was ordered to be engrossed for a third reading.

Mr. *Taylor* moved that, when this house adjourn, it adjourn to meet at 6 o'clock this evening. In this motion Mr. T. was supported by Mr. *McLane*, and opposed by Mr. *Rhea*.

Before the question was taken on this motion—

Mr. *Edwards*, of North Carolina, moved that the house do now adjourn; which motion prevailed—ayes 60.

And then the house adjourned, at 5 o'clock.

Tuesday, Feb. 25. The *Speaker* presented a memorial of Enrico Caucisi, statuary, setting forth that he has completed a design of an alto relievo for the centre building of the capitol, representing the landing of Columbus on the new continent; as, also, one destined for the east portico of the capitol, and praying that he may be employed to execute these works in marble; as, also, to execute in marble the colossal statue, representing the genius of the constitution, which is now placed, of plaister, over the speaker's chair; which memorial was referred to the committee on the public buildings.

Many reports were received, of various character and variously disposed of, and sundry bills passed—all which will sufficiently appear hereafter; others were ordered to a third reading, &c.

After other proceedings, and several motions on the subject, the house proceeded to the election of a printer for the next congress—Gales & Seaton had 102; Andrew Way, jun. 43, and other persons 10 votes. So Gales & Seaton were elected.

The bill to abolish the office of measurer was passed, as well as that making appropriations for the military service of 1823, &c.

The subject of appropriations for fortifications then came up—there was some debate, but the bill was reported by the committee to the house, which adjourned to meet again at 6 o'clock this evening.

Evening session. After sundry propositions to amend the bill containing appropriations for fortifications, it was ordered to a third reading.

The amendments of the senate to the bill to extend the jurisdiction of justices of the peace in the district of Columbia, were laid on the table, and a good deal of other business attended to.

Wednesday, Feb. 26. Various proceedings were had, that will hereafter appear in the results.

Engrossed bills of the following titles, to wit: "a bill to amend the ordinance and acts of congress for the government of the territory of Michigan;" "a bill further to extend the provisions of the act, entitled an act supplementary to an act, entitled an act for the relief of the purchasers of public lands prior to the 1st July, 1820;" the bill "to provide for carrying into effect the convention of navigation and commerce, between the United States and France, concluded at Washington, June 24, 1822;" "a bill making the gold coins of Great Britain, France, Portugal and Spain, receivable in payments on account of public lands;" "the bill to continue in force an act, entitled 'an act regulating the currency within the United States, of the gold coins of Great Britain, France, Portugal and Spain, and the crowns of France, and five franc pieces,' passed the 29th day of April, 1816, so far as the same relates to the crowns of France and five franc pieces;" "a bill further to prolong the continuance of the mint at Philadelphia;" "a bill making further appropriations for the military service of the United States for the year 1823;" "a bill for the punishment of piracy;" "a joint resolution concerning Florida Indians," were severally read a third time, *passed*, and sent to the senate for concurrence.

The bill from the senate, entitled "an act to repeal so much of an act, passed the 18th day of April, 1806, as limits the price of lands in the state of Tennessee," was read a third time and *passed*.

The joint resolution from the senate directing the printing of the journal of the revolutionary congress was on its passage to a third reading—when

The committee, on motion of Mr. Blackledge, took up the bill making appropriations for the public buildings. All the items of appropriation contained in the bill were agreed to by the committee, except an item of \$20,000 for erecting a portico on the south front of the president's house.

After two unsuccessful efforts to fill this blank with 20,000 and 10,000 dollars, Mr. Ross, Mr. Floyd, Mr. Tracy, and Mr. McCoy, opposing this item in every shape, and Mr. Blackledge and Mr. Woodcock, supporting it—

Mr. Ball moved to fill it with *nineteen thousand dollars*, which motion was agreed to—ayes 54, noes 51.

The bill having been gone through with—

The committee rose, and reported the two bills as amended in committee.

The first of these two bills was ordered to a third reading.

The question was then on concurring in the amendments made to the second bill; when,

On motion of Mr. Ross, the item of \$19,000 for the portico to the president's house was excepted from the rest, and the question thereupon was required to be taken by yeas and nays. The other amendments being agreed to—

The motion to agree to the *excepted* amendment was determined by yeas and nays as follows:—yeas 81, nays 56.

After various debate, the bill was ordered to a third reading.

The house resolved to have an evening session, and adjourned to meet again at 6 o'clock.

Evening session. The *Speaker* laid before the house a message, received from the president of the United States, transmitting the information called for by the resolution of the 22th ultimo, of the number of persons, and the amount due from each, whose compensations have been withheld, in pursuance of the law prohibiting payment to persons in arrear to the government; which was ordered to lie on the table.

The bill from the senate "to regulate the commercial intercourse between the United States and certain British colonial ports," was read a third time, and finally *passed*.

The engrossed bill "to amend the act for organizing the government of the territory of Florida" was read a third time, *passed*, and sent to the senate for concurrence.

The bill further to regulate the post office department, was taken up in committee of the whole, and, at last, ordered to lie on the table of the house. Some other business was attended to, but a quorum was kept up with difficulty.

THURSDAY'S PROCEEDINGS FEB. 27.

This being the last day, according to the rules, of the two houses of congress, that any bill originating in either, could be passed and sent to the other for concurrence, a great many bills were passed in both houses—chiefly of a private or local nature, the mere recapitulation of which would occupy more time and room than is now left to us. The detail shall be attended to in our next. Each house had an evening session, and it was 11 o'clock before the house of representatives adjourned.

The committee on the suppressed documents made a report—leaving the matter pretty much as they found it.

CHRONICLE.

The Cyane was at St. Thomas on the 31st Dec. last, after having rendered much service on the Colombian coast. Her officers and crew had been much afflicted with sickness—140 cases of fever (and relapses), had taken place. The number of deaths is not stated; but at the day of the above date only 15 persons were on the sick report, chiefly cases of debility.

Died, at New Orleans, gen. F. Humbert, formerly distinguished in the army of the French republic, who landed in Ireland in 1798, and defeated gen. Lake, &c.

South Carolina. Mr. McDuffie has been re-elected to congress, by a large majority. For Mr. McDuffie 2054; Mr. Black 823; Mr. Lomax 420. Messrs. Wilson, Gist, Tucker and Govan are re-elected, and Mr. Warren H. Davis elected. One district to be heard from.

Louisiana. Henry Johnson has been re-elected a senator of the United States by the legislature of this state, for 6 years from the 4th March next. For H. Johnson, 42; F. N. Martin, 10; J. S. Johnson 6.

Mississippi. Thomas H. Williams has been unanimously re-elected a senator of the United States, by the legislature of this state.

SUPPLEMENT

TO

VOLUME THE TWENTY-THIRD

OF

NILES' WEEKLY REGISTER.

[This supplement was originally designed for the twenty-second volume of the REGISTER; but, for various reasons, deferred, and to be attached to the twenty-third volume. This explanation is necessary, though the change is without the least importance to the possessor of it.]

SUPPLEMENT TO VOLUME XXII.

AN ADDRESS

DELIVERED BEFORE THE

PHILADELPHIA SOCIETY

FOR PROMOTING AGRICULTURE,

At its annual meeting, on the fifteenth of January, 1822.

BY NICHOLAS BIDDLE, ESQ.

At a meeting of the "Philadelphia Society for promoting Agriculture," held 1st mo. 15th, 1822:

The annual address was delivered by Nicholas Biddle, esqr.

Whereupon, *Resolved, unanimously*, That the thanks of the society be presented to Nicholas Biddle, esqr. for his eloquent oration this day pronounced, and that he be requested to furnish a copy for publication. From the minutes.

ROBERTS VAUX, *Secretary.*

Mr. President, and gentlemen of the Agricultural Society:

I congratulate you on the return of this anniversary of our society. I rejoice with you that another year has been added to its long career of usefulness—and that, as the occupations of this day prove, we are prepared to resume our labors with undiminished zeal and increased resources. It is now nearly forty years, since a few sagacious and distinguished gentlemen, who had honorably served their country during the war, wisely judging that its prosperity in peace eminently depended on its agriculture, laid the foundation of this institution, the first, and, for a long time, the only agricultural society in America. From that period to the present day, its members have been unwearied in cherishing the best interests of the nation. An extensive correspondence with the enlightened farmers of Europe—the introduction of the latest writings—of the most improved implements—of new varieties of plants—and the best breeds of animals, gave them advantages which they have imparted to their countrymen with a liberality worthy of all praise.

From these efforts they have reaped an abundant harvest. They may find it in the distinction which their labors have acquired among the agriculturists of Europe—they may find it in the homage which every section of the union is offering to the society, by following its example—they may find it under a far more delightful form, in the satisfaction of having contributed to the advancement of their country, which has presented a scene of agricultural prosperity, such as was never before given to the hopes of men. These are natural and gratifying reflections. It will, however, better accord with the unassuming and practical character of the society, if, instead of indulging in personal feelings, we endeavour to make even this meeting not wholly unprofitable by an attempt, necessarily hasty and imperfect, to compare the situation of the best cultivated parts of Europe with our own—to observe the means of improvement which the examination presents—and to suggest such topics as may recommend the pursuit of agriculture in Pennsylvania.

In this inquiry our curiosity is naturally first attracted towards those distinguished nations in the south of Europe, who, after filling the world with their fame, have passed away, bequeathing to posterity some of the noblest works of genius, and the purest examples of human character. Undoubtedly, in all that remains of them, we may trace the evidences of strong attachment to rural life, and an exquisite perception of its enjoyments. Undoubtedly the cultivators of the soil were among the most distinguished citizens; and the pursuits of agri-

culture have rarely been embellished by so much eloquence, or sung with so much enthusiasm, as by the great writers of antiquity. Put this intellectual enjoyment of the country may well consist with an imperfect condition of husbandry. The natural feelings belong to all times, but science is necessarily progressive; nor does it detract in any degree from the merits of the farmers of ancient days, that, in an era of comparative infancy, in the physical sciences, they were not advanced beyond the knowledge of their age. I incline to think then that our natural reverence for ancient nations, has exaggerated the value of their agriculture, and that a deliberate examination of their history and their writings, is calculated to lower the general estimate of the scientific management of their lands.

Thus the most distinguished people of antiquity, the Athenians, were extremely attached to the country life; yet their agriculture must have been imperfect. Attica is a small ridgy poor district of land, about one-third as large as the neighboring county of Bucks, with a very light calcareous soil, so dry, that it would not yield pasture to support the cavalry employed in its defence, and so unproductive, that it did not afford grain enough for the subsistence of the farmers themselves. Its supplies of grain were annually imported, and its chief produce then was, as it is now, the honey from its hills, and the olive which delights in its thin dry soil.

Their great rivals occupied a larger, and rather a better country, but their habits and their institutions, estranged them totally from the cultivation of it. The territory of Sparta was divided into small lots, each yielding about 70 bushels of grain, with a proportion of wine and oil; and these were cultivated, not by the owners themselves, who disdained the pacific labors of husbandry, but by a class of people, half slaves and half tenants, who gave a fixed proportion of the produce to the landlords. Such a state of things must be inauspicious to agriculture; the frugality of the owner being satisfied by a very moderate production, and the depressed condition of the tenant, rarely giving him the means or the wish of improving his farm. The rest of the Greek states seem to have supplied their own consumption; but the observation of one of their best farmers, Xenophon, that agriculture is the easiest of all the arts, and readily acquired by a little attention to the execution, reveals better than any collection of facts, the true state of Greek husbandry; particularly as it is confirmed by the remains of all the georical writers of Greece, which have reached us.

We have ampler information with regard to the ancient state of Italy. The institutions and the manners of the early Romans must have been singularly favorable to agriculture. The extreme subdivision of the soil cultivated by the proprietor himself, seems to present the strongest incentive of necessity and interest to good husbandry. Thus the first allotment to each individual was two acres.* How long this limitation continued, is unknown; but, on the establishment of the republic, 245 years afterwards, the limit was fixed at seven acres.† This, like all unnatural arrangements which restrict human industry, gave way before the progress of wealth and inequality; for, in about a century and a half, a law prohibited the possession by any individual of more than five hundred. But the change of

*About one acre and a quarter, American measure.

†Four and one-third acres American measure.

manners, the infatuation of power, above all, the introduction of slavery, rendered it difficult to enforce these restraints, and the career of this inequality did not stop, till, as is confessed by Pliny, the extensive estates had destroyed Rome and the provinces, and one half of Africa was owned by six Roman families, whom Nero destroyed. In the progress of these changes, the best remembrances of the Roman power, as well as the highest advancement of its agriculture, are connected with the period immediately succeeding the formation of the republic, when the allotment of seven acres continued to be generally maintained, and it was deemed wrong in a senator to possess more than fifty. It was during this period, that the farm of Cincinnatus consisted of four acres, the other three having been lost by his becoming a security for a friend. It was then that Curius, on his return from a successful campaign, refused from the people a grant of fifty acres, declaring, that he was a bad citizen who could not be contented with the old allowance of seven.—We cannot doubt that this subdivision of the soil required good cultivation to satisfy the wants even of the frugal. But in the days which are cited as the most distinguished in her history, when Rome spread over Italy and almost all the ancient world—the substitution of slaves for free laborers had given a new character to agriculture. In that period almost all Italy was cultivated by slaves—not like that unhappy class of persons in our time, whose misfortunes are alleviated by tenderness, and whose increasing numbers are at once the evidence and the reward of humanity—but by male slaves brought from the provinces, whose waste, as they possessed no families, was constantly recruited from the remote parts of the empire. Their numbers must have rendered them formidable, for they seem to have worked like modern galley slaves, in chains; they must have been treated with great harshness, since, among other proofs of it, Cato recommends, as a matter of course, to every good economist to sell off his old waggons, and tools, and cattle, and his old and sickly slaves—and their labor could not have been very efficient, as the allowance for a grain farm of 125 American acres, a great part of which was of course in fallow, was eight men.

Accordingly, there are two facts decisive as to the general productiveness of land. The first is, that as the almost universal system of farming was by alternate crops and fallows, nearly one half the soil must have been always unemployed. The second is, that the average produce of Italy, in the time of Columella, was only four times the seed—two circumstances which do not now concur in any well cultivated country.

Nor do the agricultural writers inspire more favorable opinions. The works of Cato, of Varo, of Columella, of Virgil, of Palladius, and of the writers whose fragments are contained in the collection ascribed to Constantine, present, it is true, the most curious details of ancient husbandry. There is much excellent sense, much admirable practice, many processes which might furnish suggestions for modern improvement; but farmers who resort to them for instruction, will rise, I think, from the study, with an impression, that their agriculture was governed by practices rather than principles; and that there is wanting that knowledge of the processes of vegetation, the composition of soils, and the rotation of crops, which have given to modern farming its dignity and value. Even these useful practices too, are often disfigured by a fantastical mixture of superstition and empiricism.

When, for instance, we read in Cato a minute description of an incantation, by which the dislocated bodies of a farmer may be charmed back into their places—when Columella directs us to save our vines from mice, by trimming them at night during a full moon—when Sotio declares that an effectual mode of extirpating broom rape from the fields, is to draw on five shells the picture of Hercules strangling a lion, and bury one in the middle and one in each corner of the field—when Democritus will ensure us a thriving garden, if we bury an ass's head in the middle of it—and when no less than five of the most sober writers gravely describe the remedy by which the broom rape may be driven from all fields, and caterpillars banished instantly from gardens, which was to make a bare-footed, half-clad woman, with her hair dishevelled, walk three times round it—when these, and many similar directions are given by the great masters of the science, they must be received as evidences of its extreme imperfection. Indeed, no one who will compare the rude plough of the Romans with the admirable instruments of France and England, or will contrast the writings of Columella and sir John Sinclair, can fail to acknowledge how much science and the mechanic arts have contributed to agriculture.

We may derive more instruction from their descendants. So naturally do our recollections dwell rather on the past than the present Italy—so much more are we attracted by its ruins than by its prosperity, that we have not sufficiently admired its agriculture. Yet Italy is probably at this day the best cultivated country in Europe. It supports from its soil, a population greater in proportion to its extent than any other; and such is its admirable system of culture, so triumphant its industry, that, though suffering from the worst of all evils, oppressive and profligate governments—although a great extent of country, not less than two hundred miles long, and from twenty-five to sixty miles wide, is in a considerable degree lost to cultivation, by the malaria, which has depopulated the fairest part of the old Roman empire; still the absolute amount of its produce was never perhaps greater than at present. They have accomplished this, by substituting, for the long fallows of antiquity, a judicious rotation of crops, and by terracing the feet and sides of the mountains, so as to render them eminently productive. The minute division of the soil forms the peculiar feature of its agriculture. When the influence of Christianity had abolished slavery, the manumitted slaves, who were then the only laborers, became tenants, and have so continued to the present day.—Five-sixths of its population are small farmers, working the land on shares of one-half or one-third. These cultivators of a few acres have rendered their country so fertile, that, from one end of Italy to the other—from the irrigated meadows of Lombardy to the volcanic regions of Naples, if we except some parts of the pope's dominions—there is scarcely a single spot which does not produce the utmost which its situation and natural fertility admits. The eye rests with delight upon the magnificent prospects of Piedmont and the Milanese; on that busy scene of industry, which sustains a population of one person to every two acres—where three-fourths of its gross produce is disposable, and where the fields are constantly covered with a succession of varied and abundant harvests. The district near Vesuvius has a population of 5,000 souls to the square league, a proportion unknown to any other part of Europe: while still further south, in Sor-

rento, their rotation of eight crops in five years, and one of them a cotton crop, is pronounced by a competent judge to be "the best managed and the most productive of any in the world."

It is however rivalled, if it be not equalled, by many parts of Flanders; where, from a soil more fertile than Italy, though in a climate less genial, they extract from their land by industry and the application of manures, a rapid succession crops, probably not inferior to those of any other country. The details of Italian and Flemish husbandry—the Italian rotation of crops, and the Flemish management of cattle and manures—are worthy of attentive study by all in this country, who would improve in scientific farming. They would often suggest modes of culture, better adapted to our climate than the practices of England, which we are too prone to follow without making allowance for the essential difference between the seasons of the two countries.

The general cultivation of Great Britain is calculated to inspire a mingled feeling of admiration and surprise: of admiration at what she has accomplished, and surprise at what she has neglected.—She has many advantages: her exuberant capital, her commerce, her manufactures, furnishing to agriculture so large a body of domestic consumers, have enabled her to cover a large portion of her soil with a picturesque and beautiful cultivation, which no stranger can contemplate without satisfaction.—Yet a nearer inquiry excites astonishment, that this very success has not induced a more enlarged and better cultivation.

There is an extraordinary difference in the calculations of British economical and statistical writers on that subject; but the safest estimates show, that a proportion of from one-third to nearly one-half of the surface of Great Britain is waste and almost unproductive. Of these waste lands, it is again estimated, that one-fourth or one-fifth might be enclosed and cultivated, and the rest employed for sheep or for planting timber. The consequence is, that she does not raise grain enough for her own consumption; the average importations of wheat and wheat flour, during the last twenty years, having been about four millions of bushels a year, amounting to nearly thirteen or fourteen days consumption. Whether it be desirable to resort to the waste lands to supply this deficiency, is a question of their domestic policy, which it is for her alone to decide. But even a stranger may be allowed to perceive, that, without abstracting capital from other pursuits to reclaim waste lands, the deficiency of England might be readily supplied by the simpler process of a better husbandry on lands now under cultivation. "A very small portion," says one of her best authors, Dickson, writing in 1804, "a very small portion of the cultivated parts of the island has, even at this advanced period, been brought under a judicious and well conducted system of husbandry. Immense tracts of land, of the more rich and fertile kinds, may be still met with in different parts of the kingdom, that are managed in very imperfect and disadvantageous methods of farming;" and he adopts the calculation of sir John Sinclair, that thirty millions of acres are either in a state of waste, or cultivated under a very defective system of husbandry. Even still later, in 1812 and 1816, we learn from the valuable writings of Dr. Rigby, that some of the very counties which Dickson considers as the most perfect, are still very deficient: that in Essex the wretched system of fleet ploughing and whole year fallows is still pertinaciously adhered to—that Sussex is behind almost all others, at least half a

century—that in Cheshire the antiquated system of a century back still prevails—that Shropshire is subject to a very inefficient cultivation, and that, in short, "a great part of the kingdom is in a very lamentable state of agricultural unproductiveness." Some of these defects are the result of ignorance and prejudice. With all the splendid success of Mr. Coke, of Norfolk, in rendering his land nearly ten times as productive, he used the drill husbandry for sixteen years before any individual followed his example; and even now his improvements are supposed, by himself, to extend about one mile in a year. Other causes, however, are not wanting, and some that to us seem almost incredible. For instance, nearly one-half the arable land of England is held in common; its culture is therefore subject to restrictions either of custom or law, and the portion of each commoner is often so arranged, that he cannot cross-plough his land for fear of trespassing on his neighbor. These it may be easily imagined, do not produce more than half the value which might be drawn from them, by enclosure and exclusive possession. Again, the fault which is constantly deplored by her writers, and one that seems peculiarly strange where the economy of human labor is so well understood, is the superfluous expense of cultivation by the multitude of horses. It is at this day common in England, to see four, five, and six horses, following each other in single file, before a plough, in fields of a few acres, and in soils where two horses might easily accomplish the work; to see teams of four horses employed, where two would be quite sufficient; and this notwithstanding the successful introduction of the Scotch mode of ploughing as in this country. The consequence is, that England and Scotland are estimated to contain 3,500,000 horses, consuming the value of 450,000,000 of dollars, and the produce of sixteen millions of acres, being nearly one-half the productive lands of the kingdom. The condition of a large proportion of the tenants too, is, in many respects, unfavorable. The soil of England is owned by about 40,000 persons, and, a greater part of the leases are at will, or for a short term from five to nine years, the better policy of long leases not having yet become general. Lastly come the tithes and taxes; the tithes, which take from three-fourths of the occupiers of land in England one-tenth of the gross produce, even when the remainder may afford no remuneration for their labors—and the taxes, which, combined with the tithes, on an average, amount to more than one-half of the rent.

However consoling these views may be to our own faults, it is more agreeable to dwell on the pleasing side of English farming, and to derive instruction rather from their success than their misfortunes. And truly there is something admirable in the generous and buoyant and elastic spirit with which the genius and industry of that country have upheld its agriculture, under a complication of burdens, such as never before pressed on the soil of any country. By her peculiar condition—by the poor laws—the tithes—the taxes of every description, England was reduced to a condition which demanded every energy of the farmer, and tasked to the very utmost resource of capital and invention. On a moderate computation, an acre of the best farming land, in order to repay with profit the labors of cultivation, must yield about thirty or forty dollars: and accordingly it was made to produce that sum. By liberal investments of capital, by judicious and economical husbandry, they have extorted from a soil, not naturally distinguished

for fertility, and a climate inconstant and treacherous, an amount of produce which enabled the farmers of England and Scotland to pay a higher rent than is yielded by some of the finest soils of Italy. If indeed we were to select any district where skill and capital have been most successful against natural obstacles, I incline to think we should name the Lothians of Scotland.

That the example of these countries may not be lost to us, we should habitually compare them with our own. It is now about a century and a half, since the people of the United States have been principally occupied in reducing to cultivation their extensive forests. Their agriculture bears, of course, the impression of their circumstances. While land was cheap, and capital small and labor dear, it was more natural to reclaim new fields than to restore the old, and to diffuse over a wide surface of cheap land the greatest power of dear labor. The growth of cities—the creation of new classes of society—the increase of manufactures, have now concentrated our population, and by the formation of a permanent home market, are calculated to give a new character to our farming. In venturing upon that subject, it is fit to speak with entire freedom. The object of our society is our improvement. Instead, therefore, of dwelling upon the merits of our farming, which is in many particulars deserving of great commendation, I shall prefer the less agreeable office of indicating the means of its advancement, believing that the humblest exercise of patriotism is to praise our country without striving to improve it.

The condition of the soil of Pennsylvania may be examined, first, in relation to its uncultivated land, and secondly, with regard to its husbandry.

According to the opinion of a very distinguished geologist, Mr. Maclure, Pennsylvania contains more good land than any Atlantic state in the union; that is, she possesses a greater extent of that formation—the secondary—which forms its position, the course of its rivers, and the mineral deposits which belong to it, is best calculated to sustain a numerous population. These advantages it must not be dissembled have not attracted their due share of attention. I incline to think that the best portion of Pennsylvania, that which is destined to act hereafter the most distinguished part in our agriculture, has never yet felt the plough. It is indeed lamentable to see so much of this long-established state totally abandoned—to look at extensive tracts of rich country without a road or an inhabitant—to meet, almost in the heart of Pennsylvania, the Seneca Indians from New York, hunting through a wilderness of nearly a hundred miles in extent, with less interruption perhaps than they would have found two centuries ago. There are seventeen adjoining counties, north and west of the Susquehanna, containing an extent of more than 18,000 square miles, with a population of about six souls for every square mile. There are five adjoining counties, containing nearly 6,000 square miles, without one inhabitant to the square mile. There are three adjoining counties, more than 3,500 square miles in extent, with only one human being for every two and a half square miles. I seem to be speaking of some desert on the Yellow Stone, not of a fine region with in four days ride of Philadelphia, which was possessed in full sovereignty by Pennsylvania more than sixty years ago—an antiquity in this country—a period when the great empires of the west, Ohio, Kentucky, and Indiana, who will outnumber Pennsylvania in the next congress, were not among the prophecies of men. There is no example among the old states of a

wilderness like this. It has lost to the state half a million of inhabitants. It has condemned to barrenness a magnificent region, that should have been filled with wealth, with intelligence and power. If we cast our eyes over the map of the union, we may discern in Virginia, a district of country to which the nation has three times resorted for its chief magistrature. A large proportion of the corresponding part of Pennsylvania is one unbroken wilderness, the habitual hunting ground of savages. In the cause of this calamity we may learn a great lesson, not merely of agricultural, but political wisdom.—Something certainly must be ascribed to the unhappy controversy with Connecticut, which, after half a century of confusion, of concession, and of compromise, has but recently closed. But the greater part of the evil may be traced to bad legislation. If, when the state sold its vacant lands, they had been previously surveyed and marked, as those of the United States were, they would have been cheerfully bought and easily settled; but the unfortunate policy of selling the right to land, leaving the purchaser to find it, and the mistaken hope of peopling the country, by requiring paper conditions of settlement, instead of leaving it to grow with the natural course of enterprise—these have introduced a fatal spirit of speculation and of fraud, which thirty years have not yet completely repaired. Entire families were ruined by the madness of these delusions. In the inextricable confusion of interfering claims, the same lands were again and again sold by fraud or ignorance, till the maps of some of our counties exhibit a mosaic of conflicting surveys, which no science except law can ever bring into harmony. Then came the reaction of disappointment. Men turned with disgust from a scene of so much suffering, and dreading a lawsuit on the threshold of every man's property, abandoned in despair the attempt to settle lands so surrounded with uncertainty and trouble. There are now in Philadelphia—there are perhaps now listening to me, many owners of thousands, of 10, 20, and 50 thousand acres of land, which they have never seen, and of which they would scarcely know the existence, but from the periodical visit of the tax gatherer; lands which might be rendered magnificent possessions, surpassing, now in extent, and hereafter in value, the most splendid estates in Europe. There are others who, deceived by exaggerated estimates—seduced by well painted drawings of streams that have never flowed, except in the eloquence of the deputy surveyor; of groves of white oaks, and beaches and maples, luxuriating only upon the parchments of the land office, go on, year after year, paying taxes for lands, undiscovered and undiscoverable, or which, if they really exist, may be again paid for by one, by two, by three, I have known as much as four other claimants, residing perhaps in an adjoining street. In the midst of these conflicts, there grows up on the soil, either an honest settler always willing to purchase, or else some intruder, originally perhaps not ill disposed, till the absence of all control, and a gradual attachment to his new residence, begin to inspire hopes of wresting it from the owner. He then insinuates doubts of the title, defaces the marks of surveys, and, shunning the proprietor, till 21 years may ripen his possession into a title, lives on in anxious obscurity, festering, discontented and restless, imagining in every passing stranger, the approach of his most dreaded enemy. Such was once the too frequent picture of the condition of the interior of Pennsylvania; and even now, although it has nearly passed, its effects are still visible in the anxiety with which emigrants

go round our state, as if there were some infection here, and pass on to remoter and poorer fields, where their industry will at least be safe.

There can be no hope for the agriculture of Pennsylvania, till this source of disquiet is completely removed; and fortunately for us, time, in revealing all the errors of that system, has furnished the means of remedying them. Every owner of land may now ascertain whether there are other claimants to his land, and readily adjust their mutual pretensions. Every purchaser may now satisfy himself as to the title of the seller; so that, while suffering from our own improvidence, we may be allowed to console ourselves for it, by reflecting that, while the states around us have been peopled to their borders, Pennsylvania possesses an extent of well watered, healthy, rich, cheap land, convenient to both the Atlantic and western markets, which, however hidden from the world by her past mismanagement, now offers abundant temptations to industry, and will largely contribute to augment the population and resources of the state. To give to these advantages all their attraction, however, much more exertion is necessary than we have hitherto witnessed. There are few families in the city, who have not some connexion with the lands of the interior: there are many who have extensive estates there. To these I would recommend most emphatically, to visit and examine their possessions; to be seen, and felt, and known as the owners: to disencumber themselves at once of the burden of paying taxes for what does not exist, or might be worthless if found; to encourage every beneficial improvement, and, by all the means of conciliation and liberality, which they are, I know, equally able and willing to extend, identify their own with the growing interests of the new settlements. There is still another step. How many well educated young men are there among us, languishing in the long noviciate of some profession, or wasting in indolence the finest years of their existence, who, in the new counties of the interior, might lay broad and deep the foundations of a splendid prosperity for themselves and their families. They will be received with welcome by those whose fortunes they have come to share; and their new interests and new connexions, will soon render their situation as agreeable and distinguished as it will ultimately be profitable.

There is more satisfaction in turning from the wild to the settled parts of Pennsylvania. The old counties between the Delaware and the mountains, with the exception of Philadelphia, contain a population of about fifty to the square mile. Their mixed pursuits, their division into consumers and raisers of produce, as well as their access to the markets of Philadelphia and Baltimore, afford advantages not enjoyed perhaps by any section of the union. The soil, without being generally distinguished for fertility, is fitted for all agricultural purposes. The farms averaging probably from fifty to one hundred acres of cleared land—the taxes light—the farming implements, in general, good—and the best breeds of cattle within reach. Yet, notwithstanding all these elements of the most enviable state of agriculture, we must acknowledge that our farming is still very imperfect. If any evidence of this were wanting, it might be afforded by the actual produce and the rents of our lands.

It was stated two years ago, by one of the vice-presidents of this society, that the average crop of wheat in Lancaster county, which is considered the richest in the state, did not probably exceed fifteen

bushels per acre. Now the average of all France is more than eighteen bushels—the average of all England twenty-four—and in some counties, as in Middlesex and the Lothians, forty. With regard to rents, it is not easy to speak with accuracy. If we except the alluvial meadows near this city, which rent for nine or ten dollars per acre, I should not estimate the average rent of cleared land, with improvements, within the district just mentioned, at more than two or three dollars. In Italy, in England, and in Scotland, lands, not particularly favored by vicinity to markets, rent for from sixteen to twenty dollars, and in the neighborhood of large cities, from thirty to forty dollars.

The causes of this inferiority may be ascribed to two characteristics of our farming—a disproportionate capital and efficient cultivation. The first is a striking deficiency. Agriculture, though a very common, is not, I think, a favorite pursuit in Pennsylvania. It attracts few from the other classes, and its ranks are rather thinned by desertion than recruited by volunteers. The enterprising shun it for its inactivity; the gay from its loneliness; the prudent, from its unproductiveness; so that, although a great proportion of the wealth of the state is fixed in land, an exceedingly small capital is devoted to farming. We do often exhaust our means in purchasing a farm, leaving scarcely any resources for stocking and cultivating it. Now an English farmer, with a certain capital, rents a farm, as a manufacturer rents a house, and devotes his capital to extract from it the greatest possible produce. Accordingly his proceedings seem almost incredible to the possessors of large American farms. It has become a settled maxim of English husbandry, that, before occupying good arable land, a capital of from thirty to forty dollars per acre is necessary. On an estate of three hundred acres, therefore, a farmer begins by expending, in preparations, nine thousand dollars; and his annual disbursements, in labor, manure, and other articles, are about five thousand dollars a year. His operations are on a proportionate scale. To contract to pay a rent of twenty or thirty thousand; to expend in a single year, on lime alone, eleven thousand dollars; to pay two thousand dollars a year for rape-cake to manure turnips; to make a compost heap, costing four thousand dollars—such are the combinations of wealth and skill which produce good husbandry. These we cannot, and we need not, imitate. But they may teach us that we should measure our enterprizes by our means; and that an ill stocked farm can no more be profitable than an empty factory. Men praise the bounty of nature. It is much safer to rely on her justice, which as rarely fails to reward our care as to avenge our neglect. Our farms then, though small, are generally too large for our capitals; that is, we work badly too much ground, instead of cultivating well a little. In the estimates of finance, two and two do not always make four—in the arithmetic of agriculture, two are generally more than four. It is wonderful, indeed, how profusely a small spot of ground will reward good husbandry. There are in Italy hundreds and thousands of people, living on farms of from four to ten acres, and paying to the owner one-third, or one half, of the produce. The whole straw for the Leghorn bonnets, by the exportation of which in a single year five hundred thousand dollars were gained, would grow on two acres. There are in Switzerland some hill sides, formed into terraces, which have sold for two thousand dollars an acre; and in fortunate spots for gardening, as near London, a single acre will yield a clear profit of

from eight to nine hundred dollars a year. These examples may, perhaps, explain how, without the great capitals of England, and without diminishing our farms, we may gradually render them richer and more productive by judicious culture.

The characteristic merit of modern farming seems to be this: The old practice was to draw from land successive grain crops, and then leave it to recruit strength enough for a repetition of them. The modern system seeks to restore the soil, but by variety—to make one crop be followed by another, feeding on different parts or at different depths of the soil from the preceding. It has, therefore, for fallows, substituted root crops. These support large quantities of cattle, which, besides the direct profit from them, afford the means of returning sooner and more successfully to the grain crops.

Now, the defects of our husbandry have relation to this system.

1st. We have not studied sufficiently our soil, with a view to establish a judicious rotation of crops, nor adapted our cultivation to our climate. As an example, I doubt whether we appreciate our long autumn, the finest of all our seasons, to which husbandry as yet trusts so little, but which would often enable us to draw a second and valuable crop of roots after grain. From the result of personal experiments made with that view, which better farmers would, of course, practice more successfully, I incline to think, that there are few of our good fields from which we could not obtain considerable crops of roots, planted and gathered after harvest. Why indeed should we not, when they are constantly obtained in Spain, in Italy, in Flanders, and even in the climate of England and Scotland?

2d. We have not yet succeeded in diffusing widely the best breeds of cattle, from the excellent stock now easy of access to us all. There is no subject on which it is more true, that a liberal expense is the strictest economy. Natural peculiarities of form in animals, are either the cause or the indication of certain qualities. Judicious observers, by the union of similar animals, have given greater development to these qualities, and established, at length, distinct breeds with every decisive superiority over our ordinary cattle. These should be sought by good farmers, as their superior profits far exceed the additional price of them. But we are often tempted by the false economy of buying cheap animals, and we are frequently misled into the practice of pampering into a sickly magnitude, cattle which have no natural facility to fatten. This is a mistaken pride, productive of no immediate good, and the more to be regretted, since the capital actually lost in feeding bad animals might have imported good ones.

3d. We are deficient in the cultivation of roots. The cattle are left to feed almost exclusively on hay in winter, instead of being nourished on roots, more nutritious and cheap in themselves, and the culture of which is among the very best preparations for the succeeding grain. The extension, on a large scale, of the root culture, would alone, I am satisfied, give a new face to the agriculture of the state. In the use of these, as well as the general feeding of cattle, we should endeavour to adopt what is justly deemed one of the greatest discoveries in agriculture—I mean the old Flemish practice, known in England by the name of

4th. Soiling. In administering food to thoughtless persons, it would be deemed strangely imprudent to let them eat and waste at pleasure. We are more respectful or less judicious towards cattle. They are allowed to enter, without restraint, fields

of luxuriant vegetation, they lie down upon it; they trample it under foot; in wet weather their foot-prints commit injuries to the ground, which years cannot repair, and, what is worse than all, the benefit which they might confer on the land is almost totally lost. Instead of this wasteful system, the cattle are kept under comfortable shelter, and their food is brought to them. An acre of ground thus furnishes three times as much subsistence as when pastured, and the additional expense of cutting is abundantly repaid by the rich manures which are thus saved.

There is one other branch of farming, which has scarcely made its appearance in this country—it is 5th. Irrigation. This is, probably, the most profitable, of all modes of culture. Whenever the situation of land will permit of its being covered with a stream of water, the direct nourishment to the plant, the minute subdivision of the soil, and the deposit left by the water, all combine to produce an amazing fertility. In Lombardy, for instance, the irrigated meadows afforded four abundant crops of grass. In the dry climate of Spain, they are still more productive. It could scarcely be believed, where it not vouched by the personal observation of Arthur Young himself, that, in the watered fields of Valencia, there are actually cut, four, five, six, and seven crops of lucerne, from two and a half to three feet in height, and yielding ten tons of grass on an acre at each cutting: so that on a moderate average an acre yields no less than fifty tons of grass, and when broken up, gives three crops in the course of a year. It is not wonderful, then, that, in that country, the greatest efforts have been made to water their fields; that reservoirs have been constructed, canals cut, wells dug, and machines erected for raising water from the rivers, and that whole rivers themselves, instead of hastening to the ocean, have been made to pause and deposit their extraordinary fertility. To us the example is peculiarly interesting, since our climate resembles that of Spain in its dryness—the defect which irrigation is most calculated to repair. It is now almost an established law of this climate, that in mid-summer there shall arrive a critical season, during which the intense heat of our long days is not relieved by rains, and our crops, just as they are verging to maturity, are suddenly checked and injured, and some times destroyed, by the burning influence of the sun. But, instead of struggling to overcome this danger, our farmers, with a want of the characteristic spirit of the country, sit down by the side of the most magnificent rivers and unfailing streams, and lament the decay of their harvests, touching the river banks, without one effort to convey to these fields the water which is passing at their feet. In this finely watered country, we should surely be able to equal the improvements of Spain and Italy; and he will be a great benefactor, who shall exhibit a cheap and efficient mode of irrigation. If the first expense be beyond the means of an individual, it may be accomplished by the union of interested neighbours, and almost any expenditure would be justified by the success of a plan, which would at once render our fields twice, or five, or ten times more productive.

The prevailing opinion however is, that even with an improved culture, the high price of labor in this country renders farming an unproductive and hazardous investment of capital. This belief has contributed much to retard our husbandry. I myself think it entirely erroneous. My impression is, that a capital employed in judicious agriculture, would yield quite as safe and abundant a return, as

in most of the other pursuits of life among us, and probably superior to the profits of farming in other countries. For instance, the average profit on farming in England, with which we are most habituated to compare ourselves, is from ten to fifteen per cent. Now, in this country, the profits ought to be greater. The question might perhaps be decided by the single fact, that, while the greater part of our farmers live well and educate large families from small farms, the same class of persons in England, the renters of farms of about fifty acres, are universally allowed to be in a miserable situation; and on that account they were actually exempted from the income tax—a forbearance which describes, at once, the measure of that wretchedness which could appease or defy even the spirit of the exchequer. But the inquiry is sufficiently interesting to tempt us into a comparison, between the arable farms within reach of the markets of London and Philadelphia—their respective expenses and profits; that is, the prices at which they may be obtained and cultivated, and then the prices of the produce of them. The first naturally resolves itself into the heads of rent and taxes, and labor and manure.

The rent of land within twenty-five miles of London, varying as it does from two to fifty dollars, it is not easy to estimate with precision; but we shall err on the side of moderation, if we place the average rent of good arable land at ten dollars. The taxes and tithes, as they are stated by Sir John Sinclair, in 1821, would be fifty-three per cent. on this rent, say five dollars; making the rent and taxes on a farm of 200 acres amount to three thousand dollars. Now, if we except our alluvial meadows, the average rent of land within the same distance from Philadelphia, cannot, I think, be estimated beyond three dollars. Of tithes there are of course none; and the taxes of all kinds, judging from those of Bucks county, do not exceed twenty-five cents per acre; making the rent and taxes of a farm of two hundred acres six hundred and fifty dollars.

In the memorial of the English agricultural committee, of 1819, it is stated, that the tithes and taxes amount to one-third of the market price of agricultural productions. In this country they form a proportion so inconsiderable, that a single acre of good wheat will pay all the public demands on a farm of one hundred acres.

With regard to labor, I know it is against all our received opinions, but I incline to think that farm work in Pennsylvania is very little dearer, if it be not actually cheaper, than in England. The comparison is difficult, because at this distance we have not yet seen all the effects which the embarrassments of the last two years have produced on the rate of wages—because their nominal wages are generally swelled by perquisites, and because, in a country where every sixth or seventh person is legally a pauper, the poor rates are in fact only a disguised increase of wages. But, rejecting these considerations, and taking the average wages of day labor to be what it was in 1810, fifty-five cents (2s. 6d.) and a dinner—and it is not probably now less near London—even this does not, I believe, fall more than about twenty-five or thirty-five per cent. below the price of day labor in the same district near Philadelphia. But the nominal price of labor is a less true mode of comparison, than the actual expense of executing any given work in the two countries. Now, we have more long, clear, and working days, and our workmen—as I have spoken freely of our faults, I may be allowed to state our capacities—our workmen are better fed, more active, more intelligent, and more dexterous in their

labors. Not to speak of the axe, in all the uses of which they have no rivals, I believe that three Pennsylvania farmers, with their scythes fresh ground and their tough ash cradles, might stand before any wheat field in Europe, and challenge twice or thrice their number of reapers. This is no exaggeration. Sir John Sinclair, in his work, published as late as 1821, says, that three good reapers will cut an acre of wheat in one day. Now an American cradler will, in a field with the average crop of England, cut three, four, and even more acres in one day. He further calculates, that the cutting and binding of this acre will cost fifteen shillings, from which, if we deduct 2s. 6d as the wages of the binder, who performs his part in half a day, there remains 12s. 6d. or 2.75 dolls. per acre. Now, allowing a moderate average of work for a cradler,—three acres, and a high average of wages,—one dollar,—the American acre will be cut at the price of thirty-three cents, and the English acre at two hundred and seventy-five cents; and done as well too, for the difference, as to the shattering out of grain, between good cradling and reaping is, in fact, very little, and even that may be saved by cutting rather before the complete maturity of the grain—a system to which the best English practice is now approaching. So too, an English laborer, with a driver and four or five or six horses, will not plough more in a day than a Pennsylvanian alone with two; and no excess of wages to him, can balance the expense of a driver and two or three superfluous horses.

Again, reaping oats in Middlesex is stated to cost 8s. (1.75 dolls.) per acre. The same field in this country would probably be cradled for one-sixth of the expense. These details might be pursued into other departments of farming labor, and they would show, that an acre of ground may be prepared for seed, and the produce carried to market, at an expense, if not less, certainly not much greater, in America than England.*

The means of enriching land, by lime and other manures, are cheaper near Philadelphia than near London; and that most important article of husbandry, salt, is much cheaper here than in England, where the excise has almost banished it from their farm yards.

The prices of produce may be more readily compared. Of the great production of England, wheat, her farmers have the monopoly until the price rises to about \$1 85. This, however, being a scarcity price, is, of course, much above the ordinary price. In July last, the average of all England was about one dollar and fifty-three cents. At the same period

*These estimates may be supported by examples from other branches of industry. There can be no fairer measure of prices, for instance, than the expense of removing, by manual labor, a given quantity of earth; that is, of excavating a canal, though all the benefits of experience in that business are certainly on the side of England. Yet, yard for yard, a canal may probably be made as cheap in this country as in England. The latest British works of that kind is the Caledonian Canal, completed in 1820. There the average price in common earth was six pence or 11.9 cents per cubical yard. Now the contracts recently made, by the company for constructing a canal by the side of the Schuylkill, are in some cases as low as seven cents per cubical yard; in other and peculiar cases, as high as twenty-eight cents; but the average of the whole twenty-two miles, will not probably exceed 11.9-10 cents per cubical yard.

with us—a season of great depression—the price varied from seventy-five to ninety cents, and at the present moment, without any foreign demand, it may be stated at about one dollar and ten cents. The flesh markets are also considerably higher in England. But wheat forms only one-fourth of the crops; and in the articles of turnips and potatoes—in the root crops generally, the price is probably higher here than in England. The great staple of wool is certainly dearer. These elements will enable us to contrast, with our own, the condition of an English farmer, whose rent is three times as great, whose taxes are twenty times as great—manures more expensive—labor not much cheaper—and prices, on a whole rotation of crops, not much higher.

Yet they make their farms more productive; they pay higher rents. Near London or Edinburgh they can afford to pay for wheat lands twenty or thirty dollars rent per acre; and—what ought to shame us into better husbandry—in spite of all their burdens—in spite of a freight of 3000 miles, a commission to two merchants, and a duty of fifteen per cent. they reach our own market with their produce, and are always preferred to us.—But then they raise twice or thrice as much wheat, and probably five times as much of other produce. They have forty bushels of wheat, and fifty of barley, and sixty or seventy of oats, and twelve hundred bushels of turnips, and four hundred bushels of potatoes, all following each other with the least practicable intervals. They succeed better than we do, because, in fact, they are better farmers than we are. But the reason of the difference is, simply, that we will not bestow on our lands the same well directed labor, or the fiftieth part of the capital which they intrust to theirs. Whenever these have been applied, as in other countries, our soil has never refused returns as abundant. Of this the premium crops of our agricultural societies afford decisive evidence; and we have recently seen an experiment, which I mention as illustrating at once the judicious employment of capital, the productiveness of small spots of ground, and the benefits of soiling. The Pennsylvania hospital has, in its neighborhood, fourteen acres of ground, from which, during the last year, were soiled seventeen cows. Some of these, as their milk failed, were replaced by others. But an account of this expense, and of all the other charges, was accurately kept, and credited with the market price of the produce, either consumed in the hospital or sold at market. The clear profits amounted to more than two thousand three hundred dollars.

These calculations are, of course, not applicable to the remote farmers, whose markets are habitually less valuable, and who are now suffering under the extinction of the accustomed demands from abroad. Their embarrassments should, however, direct their industry to new channels; and there are, fortunately, now presented to the farmers of Pennsylvania, two distinct branches of industry, which may enable them to retrieve their losses, and give a new impulse to the husbandry of the state. I mean to speak of the growth of wool, and the cultivation of flax and hemp.

The consumption of woollens in the United States cannot be less than twenty or thirty millions of dollars, of which the greater part is manufactured in the country. It is needless to be exact as to the amount, since my purpose will be explained by the facts, that the domestic supply of wool is not equal to the domestic demand—that the manufactories of Pennsylvania receive much of their wool from

abroad—and the wool is at this moment probably dearer in Pennsylvania than in England, or perhaps in any of the wool growing countries; and this, while we possess the finest breeds of sheep, capable of an almost indefinite increase. These unhappy animals have been the victims of the most extraordinary caprice. When the war of the peninsula threw into this country some of the very best breeds of Spain, they were eagerly purchased at extravagant prices. But, in too many instances, the owners were deceived by calculations of their very small consumption of food; and they omitted to adopt for them, what, in the long winters of this climate, is indispensable, the turnip culture.—Large flocks were, therefore, crowded into narrow fields; where, as there was soon no other means of subsistence, their hunger forced them to eat the roots, and they were then denounced as utterly destructive to grass lands. Their inadequate supply of winter food too was soon exhausted, and they were then reproached for their voracity. Even this might be borne, while the war price of wool repaid the expenses of buying subsistence for them, but when peace diminished their value, without lessening their appetite, the owners, disgusted with a stock which they did not know how to manage, sacrificed them as rashly as they bought them, gave them away, and almost drove them away from their farms. Thus entire flocks of the finest merino sheep were devoted to the knife, for no other reason but that, contrary to the wishes and expectation of the owner, they would persist in eating. The extent of these sacrifices is scarcely credible. A very respectable butcher assured me, that he bought, for one dollar a head, a flock of merinos, among which was an imported ram, who, the owner declared, and I have no doubt truly, had cost one thousand dollars. That extravagance has now passed, and excellent merino sheep may be procured, well calculated to cover the interior of Pennsylvania with a most productive source of wealth. On the rich natural herbage of the woods they would subsist, without any expense, during a greater part of the year, and a small field of turnips would carry them through the winter. The only serious obstacle in the less populous districts is the wolf, and he is fast disappearing.

The culture of flax and hemp in Pennsylvania, has been hitherto limited by the imperfection of our machinery for working it, and by the inferiority of our dew-retting to the European practice of water-retting. Accordingly, our trade in flax consists chiefly in exporting the seed to the Irish farmers, who, after raising and preparing it, return it to our factories. It is selling the fountain and buying back the stream.

The society has been for some time engaged in endeavours to remedy this deficiency, and the result of the exhibitions this day inspires a confident hope of their success. We have just examined a machine, scarcely less important than the cotton-gin, by which all the expensive and troublesome labors of dew and water-retting are superseded; which will prevent the deterioration both in the colour and strength of the fibre caused by those processes; which will save the whole quantity—about one half—now lost in the ordinary method; and by enabling us to gather the flax before ripening, save the land from the most exhausting process of all plants, the seeding. By the general adoption of this machine, the farmers may increase their cultivation of flax and hemp—prepare it themselves—and provide a cheap supply for the whole consumption of the country. Nor is this all. As the flax

manufactures cheapen, their consumption will, of course, increase, till they may be made to regain that ascendancy in general use which they lost by the cheapness of cotton, and enable the farmers of the middle states to engage in a generous competition with the cotton growers of the south. This expectation may not be visionary. The great consumption of cotton is due to the machinery. Now this machine will greatly diminish the cost: and the manufactories of this country can, it is said, work flax as easily as cotton. If, then, the same facilities be given to flax or hemp, their prosperity may be equal; since they enter with great advantage into our rotation of crops, and the actual produce on an acre is twice as great as that of cotton.

If, gentlemen, I have wearied you with these details, you will ascribe it to the deep conviction, that nothing is more important to this community than to extend the taste for agriculture, from which the habits of the last twenty years, and the present depressed value of its produce, combine to estrange us. We, in Pennsylvania, have reached precisely that point where, with all the finest materials for good husbandry, one step only is necessary to ensure distinguished success. Why then can we not make this final effort? While all around us are roused into an honorable zeal for agriculture—while Virginia possesses so many societies devoted to her cultivation—while the most distinguished gentlemen from distant parts of Maryland crowded a few months since to their fine exhibition at Baltimore—while almost every county in New-York has its agricultural society and its cattle show, why is it that this Pennsylvania, this land emphatically of farmers, suffers herself to be outstripped in this generous career? Why is it that, although the legislature has assigned a fund for an agricultural society in every county, that, with the honorable exception of Bucks and Chester and Susquehanna and Franklin and Alleghany, whom I enumerate in justice to their spirit, the farmers of Pennsylvania have never yet found leisure to associate for the advancement of their own best interests? The establishment of these societies throughout the state, would be among the surest means of promoting its improvement. They inspire mutual confidence—they kindle mutual competition—they draw into notice the skill of experienced cultivators—they diffuse useful information—and, more than any other measure, they tend to improve and exalt the character of the farmer. The exhibitions, too, are admirable auxiliaries. By placing in their most attractive lights the labors of industry, they reward the deserving, while they stimulate the indolent, and enlist in the great cause of public improvement all the pleasures of social enjoyment and the enthusiasm of emulation. What, indeed, can be more exhilarating than the assemblage of a healthy, well clad, free, happy people, surrounded by the fruits of their well directed industry—the animals which display their kindness—the implements which attest their ingenuity? Who is there even on this side of the Atlantic, who does not read with more pleasure the accounts of the agricultural meetings at Holkham, than of the coronation at Westminster, or the assemblage of sovereigns at Troppau? Who did not feel more satisfaction at the exhibitions of Massachusetts or Maryland, than in the gaudiest displays of military power?

If I have failed to prove that the pursuits of agriculture may be as lucrative as other employments, it will be an easier task to vindicate their pleasures and their importance. I need not dwell on that retirement, one of the purest enjoyments of this

life, and the best preparation for the future—on those healthful occupations on the calmness of mind—on that high spirit of manliness and independence, which naturally belong to that condition. These are attractions which must have deep roots in the human heart, since they have in all times fascinated at once the imagination and won the judgment of men. But I may be allowed to say, that, in this nation, agriculture is probably destined to attain its highest honors, and that the country life of America ought to possess peculiar attractions. The pure and splendid institutions of this people have embodied the brightest dreams of those high spirits, who, in other times, and in other lands, have lamented or struggled against oppression—they have realized the fine conceptions which speculative men have imagined—which wise men have planned, or brave men vainly perished in attempting to establish. Their influence, in reclaiming the lost dignity of man, and inspiring the loftiest feelings of personal independence, may be traced in every condition of our citizens; but as all objects are most distinct by insulation, their effects are peculiarly obvious in the country.

The American farmer is the exclusive, absolute, uncontrolled proprietor of the soil. His tenure is not from the government; the government derives its power from him. There is above him nothing but God and the laws; no hereditary authority usurping the distinctions of personal genius; no established church, spreading its dark shadow between him and heaven. His frugal government neither desires nor dares to oppress the soil; and the altars of religion are supported only by the voluntary offering of sincere piety. His pursuits, which no perversion can render injurious to any, are directed to the common benefit of all. In multiplying the bounties of Providence, in the improvement and embellishment of the soil—in the care of the inferior animals committed to his charge, he will find an ever varying and interesting employment, dignified by the union of liberal studies, and enlivened by the exercise of a simple and generous hospitality. His character assumes a loftier interest by his influence over the public liberty. It may not be foretold to what dangers this country is destined, when its swelling population, its expanding territory, its daily complicating interests, shall awake the latent passions of men, and reveal the vulnerable points of our institutions. But whenever these perils come, its most steadfast security, its unfailing reliance, will be on that column of landed proprietors—the men of the soil and of the country—standing aloof from the passions which agitate denser communities—well educated, brave, and independent—the friends of the government, without soliciting its favors—the advocates of the people, without descending to flatter their passions; these men, rooted like their own forests, may yet interpose between the factions of the country, to heal, to defend, and to save.

There are many such men in this nation; and there was one, whom the old among us loved, and the youngest venerate—whom we may proudly place by the side of the master spirits of the best ages—the man whom his country's danger always sought at his farm, and his country's blessings always followed there—the model of American farmers. His memory is in all our hearts, and his example may well inspire a fondness for those pursuits which Washington most loved, and teach us that there is no condition in which our lives may be more useful—in which we may more honor ourselves and serve the country.

Common Schools in New York.

IN ASSEMBLY, FEB. 28, 1822.

Annual report of the superintendent of common schools.

In obedience to the act of April 12th, 1819, entitled "an act for the support of common schools," the secretary of state, acting as superintendent of those schools, by virtue of the second section of the act of April 31, 18.1, respectfully submits to the honorable the legislature the following report:

The duty enjoined upon him to make an annual report of all such matters as relate to his department, particularly in the apportionment of school moneys, in exhibiting estimates and accounts of the expenditure of those moneys, and in suggesting such improvements in the revenue and school fund, and in the organization and government of common schools, as he may deem of sufficient importance to bring to the view of the legislature, may admit of two general divisions:

1st. The progress and present condition of those schools.

2d. The improvements that may be fitly introduced, either in respect to their organization and government, or to the funds and revenue appropriated for their support.

Under the first general head, the secretary begs leave to refer to the abstracts and documents accompanying this report, marked A, B, C.

These will present the most decided evidence of the rapid progress of the common school system throughout the state.

In the short space of seven years, the number of children educated in those schools, and returned to the superintendent, has increased from 140,000 to upwards of 333,000, far exceeding the ratio of increase in population during the same period.

Thus, in the year 1816,	140,106	children were
	1817,	170,305
	1818,	183,253
	1819	210,316
	1820,	271,877
	1821,	304,559
	1822,	332,979

[taught.

Every county in the state, but one, has presented its report for the preceding year. Twenty-seven towns have made no report, and eleven have made imperfect ones. There are 6,865 school districts in the state, (an increase of about 300 since last year), of which 5,882 have furnished their returns. The number of children reported between 5 and 15 years of age is 349,258; and the proportion between that number and of those educated in common schools is as 32 to 35.

In 23 counties, the children that were sent to school exceed in number those between the ages of 5 and 15 years, while in the other counties the case is reversed. The average number of months in which common schools are kept is nearly eight. If we include the number instructed in other seminaries and schools, particularly in the cities of New-York, Albany, Hudson and Schenectady, and in Poughkeepsie, the whole will not be probably less than 375,000 that were receiving public instruction in the state, during the preceding year; being more than one fourth of the entire population of the state. A system that produces results so honorable to our legislators, and so favorable to the rights, interests and future prosperity of our country, cannot fail, if continued, to give additional strength and stability to our republican forms of government, to diffuse more widely the blessings of rational freedom, and to perpetuate the civil and religious privileges we enjoy.

It is also gratifying to state that the subordinate officers entrusted with the execution of the school act, in the different towns and counties in this state, have become better acquainted with their duties, and more prompt and faithful in the performance of them. Occasional delinquencies occur, but the examples are more rare than formerly, and less important in their consequences; and although it is to be regretted that, on account of the extensive range of the operations of this system over a population of more than thirteen hundred thousand souls, the regulations are perhaps necessarily complicated, and in some instances too obscure for general information, still it has overcome almost every obstacle, and the community yield a cordial assent to its general utility.

Perhaps the system might be simplified and improved; and the expenses now incurred for carrying it into effect, and the risks of loss in the public moneys, or in their proper application, might probably be diminished.

At present the public moneys are first paid, on the proper voucher from the superintendent, by the treasurer of the state, to the county treasurers, by them to the commissioners of schools in the several towns, by them to the trustees of school districts, and lastly to the teachers and other persons entitled to receive them. Whether these and other details are necessarily connected with, and grow out of the system itself, may be well worthy the consideration of the legislature, but certain it is, that, while they add to the expense, they increase the danger of malversation, and are liable to much abuse.

That a principal, if not the primary object intended to be attained by the establishment of common schools, was the diffusion of knowledge among those who could not procure it for themselves or their children, at their own expense, it is presumed will not be disputed; but it may admit of some doubt whether the tendency of the school act is not to exclude, in some instances, persons of the description just mentioned from participating in its benefits.

The tax imposed upon the school districts being defrayed only by those whose circumstances enable them to do so, may induce them to exclude others, who do not and cannot pay, from an equal share of education in the schools supported principally at the expense of the former.

The trustees, under the direction of the district, are the sole judges who shall or shall not be exonerated from paying the wages of the teacher; and although but few complaints have been made of the arbitrary exercise of this right, still it would be desirable to guard against even the possible abuse of such a power.

Another general remark may be here introduced, and it forcibly occurred in noticing the great inequality between the amount of moneys received, and the number of children taught, in some school districts, when compared with other districts of the same, or nearly the same population, in the same county.

In some towns, in which fifteen or sixteen hundred children are instructed, the sum of three or four hundred dollars only of the public moneys is expended, while in others, where the same amount of the public moneys, or even greater, is received, not more than perhaps half that number of children are educated, for the same time.

This great disparity cannot be altogether explained, either by reason of the difference in wages allowed to the teacher, or from any private donations which might be received in those districts; for in

towns, in which neither of these causes could operate to any great extent, the same disproportion was observable. Whether this evil can be reached by introducing a provision similar to one in the school law of Connecticut, passed in 1791, making it the duty of every society consisting of seventy families, to keep and maintain a school, for, at least, eleven months in the year, or by adopting the proviso contained in the *first general act*, passed in 1795, by the legislature of our own state, "for the encouragement of schools," in which the public moneys were directed to be paid in proportion to the number of children *actually taught*, or in what other manner, must be submitted to the wisdom of the legislature.

It may be also here remarked that a teacher of twenty children in one district may, and probably will, charge as much for his services as the teacher of forty children will in another district, in the same county; while the sums of money allowed to each district being regulated by the number of children of a certain age living therein, will be extremely disproportionate. What standard, therefore, ought to be adopted is a subject of some difficulty and importance, and, although the suggestions here made might be considered with more propriety as falling under the second branch of this report, yet, as they generally refer to the existing mischiefs in the system, it was thought fit to introduce them here.

Another and a very principal subject of complaint arises from the manner of imposing taxes under the act.

The farmer, whose land is mortgaged or encumbered, even to its full value, pays on it a tax, without any allowance or reduction whatever for the incumbrance with which it is charged, while the owner of personal property pays no more than for the surplus remaining after his debts are paid. As this objection is of a general nature, and applies to our whole system of taxation, it is thought necessary only to bring the subject to the notice of the legislature.

During the last session of the legislature, three new counties were erected and organized, and it became necessary, therefore, to apportion the school moneys among those new counties, and to re-apportion them among those from which they were taken.

The counties alluded to, were Erie, Genesee, Livingston, Monroe, Niagara, and Ontario. This duty was accordingly performed, as will more fully appear from the accompanying papers, marked O.

It was much regretted by the secretary, that he could not, at the same time, make a new apportionment of school moneys among all the towns and counties in the state, as it was apparent, from the great increase of population in several counties, particularly in the western district, that the census of 1814, had long since ceased to be a fair standard, either of actual or comparative population, and, consequently, that the apportionment under that census, had become manifestly unjust. An effort was made at an early day to procure from the proper officer, a copy of the United States census of 1820, but without effect, as will appear from the accompanying document, marked N. Recently, however, he has procured an exemplified office copy of that census, and has made a *new apportionment* of school moneys for every town, (those in Queens county excepted, owing to a *defect* in the returns), and for every county in the state, which he has now the honour to submit herewith to the legislature.

It will be observed, that, in this new apportionment, twenty-five counties will receive *more*, and

twenty-seven counties *less*, of the public moneys, than they did under the preceding apportion, and the aggregate difference in amount, is upwards of 6,500 dollars.

What effect this great and perhaps unexpected diminution will produce in the losing counties, the secretary cannot determine, but he has reason to apprehend, that the cause of education will suffer in the same degree, that the ability to support it, on the part of the state, becomes limited or restrained. Whether this anticipated evil requires any legislative attention, is respectfully submitted. But, while the appropriations out of the treasury remain stationary, and the population of our state is constantly and rapidly advancing, the results will necessarily be more unfavourable than they have heretofore been. This may be illustrated by stating the simple fact, that, under the apportionment of 1819, the sum of \$772 was payable out of the treasury for a population of every hundred souls, while, under the apportionment *now made*, it is less than \$583 for the same number.

2d. The improvements that may be fitly introduced, either in respect to the organization or government of common schools, or to the funds and revenue appropriated for their support.

As the comptroller, in his report, has furnished the necessary information with regard to the general school fund, it was only thought proper, in this report, to connect it with the local school fund, in order that a full view of both may be presented to the legislature.

By the term local school fund, is to be understood the lands set apart in the several towns in this state, called the *gospel and school lots*, and which are now appropriated for common schools exclusively.

Accordingly the secretary, in the accompanying papers, marked I, K, and M, has given a brief statement of each fund, and the different acts of the legislature, relating particularly to the lots just mentioned.

It will be seen from that statement, that owing to circumstances, not deemed necessary here to detail, there are several towns in this state more favored than others, with respect to the support of common schools. This fact, however, is not mentioned as entitled to any weight in regulating or diminishing the public bounty, for it is evident that, with all the revenue which the ability of the state can afford, education cannot be sufficiently promoted, although aided by the taxes specified in the school act.

Whether any general provision ought to be made with respect to the sale, or other disposition of the gospel and school lots, is not necessary here to discuss. The legislature will decide this question when the occasion shall demand it.

The revenue arising from the general school fund, not amounting to the appropriation annually made for the support of common schools, it becomes important to inquire in what manner the revenue may be made more productive.

That the acquisition of nearly a million of acres to the school fund, by the adoption of the new constitution, will, in a few years, enable the legislature not only to meet any deficit but even to increase the revenue, may be reasonably anticipated; but in the interim, some provisions may become useful and necessary, in order to meet a deficit amounting, probably, to, at least, ten thousand dollars a year. Several modes have been mentioned, in which the deficit may be supplied, and the payment of the revenue rendered more certain.

The consolidation of the several loans of 1792 and 1808, has been suggested as one; but if the counties are not to be made responsible for losses already occurred, the mode just stated may secure, but cannot, in any other sense, increase the fund.

Annual appropriations out of the treasury must then be resorted to, unless new sources of revenue can be pointed out and adopted.

A tax upon banks, for the property and moneys held by them; upon every commission issued to public officers, appointed by the government, and upon distilleries, already amounting to the alarming number of one thousand and fifty-seven in this state, have been heretofore suggested as proper sources of revenue, and are, perhaps, under every view, the least liable to objection.

Commissions were subject to a tax, not many years since; and it is not believed that it was repealed on account of its oppressiveness or inequality. Whether the legislature will also consider it expedient or necessary to direct the sum of money to be raised upon Orange county, which was heretofore lost to the state, in the manner set forth by the comptroller, in his report, must necessarily be subjects for their deliberation only.

But when we consider that the public treasury already labors under very many heavy contributions in support of canals, and other public improvements, and institutions, besides the ordinary expenses of government, and the liberal donations which have been made for other purposes, it may be deemed unfit to increase its burthens, unless the legislature provide other sources of revenue, or increase, in a corresponding degree, those that already exist.

This part of the subject is too ample for the limits of an ordinary report, and must, therefore, be submitted without further remark.

Should the legislature not be disposed to direct an entire revision of the act for the support of common schools, it may be expedient to submit to them amendments to several of its provisions. Others have occurred to the secretary, which he does not think it necessary now to mention in detail.

Such of them as are stated in this report, he has reduced to the form of an amendatory bill; and it may be proper here to allude, as well to them as to the mischiefs intended to be avoided by their adoption.

The 5th section of the act for the support of common schools provides for the mode of making an apportionment among the counties whose population cannot be ascertained from the census; but no provision is made in these cases in which the exact population of a county is ascertained, but not the exact population of each town in the county. The late United States census states the population of Queens county, but not the population of each town therein; it is, therefore, respectfully submitted, whether the power given by the 5th section should not be extended to cases similar to the one alluded to.

An amendment also appears to be necessary to the 20th section of the act. The penalty mentioned in that section, is directed to be sued for and collected in the name of the commissioners of the school district in which the offence shall have been committed.

There being no such officer as commissioner of the district, it is obvious that the trustees of the district were intended, otherwise the section is inoperative, and cannot be enforced for the want of persons authorized to institute the suit. Cases have occurred in which it became necessary to prosecute for the penalty, but for the want of an amendment it could not be done.

By the 25th section of the act, persons owning or holding any real estate lying within a school district, and who shall improve and occupy the same by their agents or servants, are, in respect to such estate, to be deemed subject to taxation in the same manner as if they resided therein. But if a person should own a farm extending into two or more school districts, and no part of it is improved or occupied by any agent or servant, but the whole is improved and cultivated by himself, it may be doubted whether such parts of the farm as lie out of the district in which he resides, are, under this act, subject to taxation in those other districts into which the farm may extend. To prevent litigation, therefore, and to provide for what may be deemed a *casus omissus*, a section has been prepared, and is respectfully submitted to the consideration of the legislature.

Although returns are required from the trustees of the Lancaster school in the city of Albany, and from several other similar institutions, yet from the cities of Hudson and Schenectady, no such returns are required to be made. It is proposed to place them on an equality, and to introduce a provision for that purpose.

Serious difficulties have arisen in relation to the protection afforded by the school act to collectors of taxes in the faithful performance of their duties. The 13th and 20th sections provide that every freeholder or inhabitant in a school district shall be summoned to the district meeting, either personally, or by leaving a copy of the summons at his place of abode, at least six days before the time appointed for the meeting. But it is declared that the proceedings of the meeting shall not be impugned for defect or want of due notice, "provided the omission to give such notice be not wilful or designed." It would be a serious hardship on a collector, who should be prosecuted as a trespasser for collecting a tax, to be obliged to prove in his defence one of the two alternatives—either that every freeholder or inhabitant was duly summoned to the district meeting which imposed the tax, or, that the omission to do so was not wilful or designed. Perhaps such collector may have been the only person who summoned the meeting, or some of the freeholders or inhabitants might have been summoned by him when no other person was present to prove the fact; or, he might not have it in his power to prove that the omission was not wilful or designed. In either case, it seems unreasonable to require the proof from a faithful ministerial officer, acting in obedience to a warrant apparently regularly and compulsory; and it might lead to injurious consequences, for it would impose upon the collector the duties of a judge, acting in a revisory capacity, over the proceedings of a district, to whose commands he was amenable, to whom he was subject for the faithful execution of his warrant. To avoid all questions that may arise on this point, it is respectfully submitted, whether such collector ought not to be protected in the fair and honest exercise of his official duties, by declaring it unnecessary to prove in his defence the manner in which the district meeting was convened.

In some parts of this state, the trustees of school districts have found it difficult, if not impracticable, to purchase a site of a school-house *in fee*, because the greater part, if not all, the lands in those districts, are held under contracts, and not by deeds. Some of the inhabitants who have paid their taxes, have threatened to prosecute the trustees or collector, for a return of their tax, on the ground that the money had not been applied to the purchase of

a site, according to the directions of the act. It is proposed to afford protection against such vexatious prosecution by the introduction of a proper clause for the purpose.

But no part, perhaps, of the school act, has given rise to more embarrassment and complaint, than those provisions which apply to the alteration of school districts, especially when they extend into two or more towns.

By the operation of the 12th and 13th sections, the commissioners of those towns, or a majority of them, are required to assemble together, and determine upon the proposed alteration; but as the commissioners of one of the towns may be hostile to the measure, they may defeat the object intended, by refusing to meet at all; and although manifest injustice might be thus committed, it seems doubtful whether there is any remedy under the existing provisions of the school act. A section is respectfully proposed to meet this inconvenience, by authorizing a district meeting, in that case, to determine upon the proposed alteration.

Although the superintendent of common schools is frequently consulted on the questions arising in towns and counties, and is required to give written legal opinions thereon, and to enter into a long correspondence with the officers entrusted, in towns and school districts, with the execution of the act, and with others, on the subject of their complaints, still there exists no legal authority to enforce any of his opinions, nor to put an end to the vexatious controversies submitted to his decision. The school act is already too complicated in many of its provisions, to increase the difficulty, by driving the parties into an expensive litigation, to settle probably a point of no great importance in itself, but which derives all its interest from the passions and prejudices of the parties concerned. It were better, perhaps, in such cases, to have a speedy decision, at the risk of being wrong, than to injure, if not derange, the whole system, by a long, oppressive, and procrastinated legal controversy. It is proposed, therefore, to provide a remedy, by giving the right of appeal to the superintendent, and that his decision should be final in the specified cases mentioned in the section submitted for that purpose.

The act also does not provide with sufficient clearness for the examination of instructors, proposing to teach in districts lying in two or more towns. As some difficulties have arisen on that question, a remedy is respectfully suggested to obviate future controversy.

Although the 36th section of the act directs the clerks of counties to make returns to the superintendent within a limited time, still that duty is imperfectly performed by some, and in several instances, neglected altogether. In 1816, ten county clerks, the next year five, in the year after eight, and in every succeeding year some of the county clerks were delinquent in this respect. It is proposed, therefore, to superadd a penalty to this section, in order to induce punctuality in the performance of an important duty.

By the act of March 23, 1798, [1st vol. revised laws, page 213,] the supervisor, in conjunction with three commissioners, to be chosen by each town in which a gospel and school lot is situate, are authorized to lease such lots, and to institute the necessary suits for gaining possession of them; and the moneys arising from such leases are to be applied to the support of the gospel, and of schools, in such towns. It is proposed to transfer this power to the commissioners of schools, and a clause is respect-

fully submitted for that purpose. The harmony of the system seems to require this amendment, and it is believed that it will promote the object of the legislature more effectually than under the present regulations.

By the 20th section of the act, "the freeholders and inhabitants of school districts liable to pay taxes, are authorized to vote at any district meeting. The construction given by the former superintendent to the latter qualification is, that it must refer to a *present liability* to pay taxes in money, but not requiring from the person offering to vote, that he had *actually* been rated or paid taxes. It has been stated, on good authority, that in the neighborhood of some manufacturing establishments, the privilege had been abused, and a construction was given so as to include all persons, whether taxed or not, or possessing property subject to taxation or not. It appears to the secretary that the section referred to requires a more clear and definite character, and, perhaps, an amendment, declaring that every freeholder, and also every inhabitant legally settled in the town, who had been rated on the assessment roll of the same town the preceding year, or in the year in which he offers his vote, shall be entitled to vote at such district meetings.

As the commissioners of schools, who had received the public money, have, in some instances, left the town shortly after, with the money in their hands, it may be advisable to require, either that security be required from commissioners for the faithful application of the money, or that the town clerk be, *ex-officio*, treasurer to the commissioners, upon giving the like security.

Some inconveniences are stated to exist in the election of officers in Lancaster schools, incorporated under special acts of the legislature. As the regents of the university were authorized, by an act of the last session, to incorporate schools of that description, it is respectfully proposed to give to Lancaster schools, of the former class, the right to surrender their charters, in part, and to receive from the regents others in their stead.

The secretary thinks it his duty to present, in his report to the legislature, a question which, in one school district at least, has excited much feeling, and may furnish a proper subject for consideration. The children of a *free black man* were refused admission into a district school, and the trustees sanctioned this act, on the ground, as the secretary has been informed, that they had absolute and uncontrollable power to refuse or admit whomsoever they should think fit. Whether the refusal arose from prejudices existing against persons of color, or from what other cause, he is unable to state. But it seems to him that some provision is necessary for the instruction of the children of a degraded race, although few in number, who ought to be emphatically entitled to the benefits of a common school education.

Another subject also has excited considerable interest in some parts of this state. The trustees of one or more districts have hesitated to give permission to pious and well-disposed persons to have public worship performed occasionally in the district school house, although so to be conducted as not to subject the school or its contents to any injury, nor the teacher nor scholars to any interruption in the regular hours of tuition. Whether any such provision by law ought to be made, is respectfully submitted; the secretary has discharged what he considers a duty, in bringing the subject to the notice of the legislature.

Some complaints have been made, that the parents of scholars, who had regularly been admitted into schools for a quarter, were denied admission in the succeeding quarter, to make up the time that, by sickness or accident, they were prevented from attending school the preceding three months, unless they paid a further sum of money for this privilege. The parent insists that the tax he pays being for the whole year, the benefit he should receive ought to be for the same period. The legislature will determine whether any, and what remedy ought to be applied.

As the increase of school districts is annually very rapid, it is proposed that authority be given to publish, as an occasion may require, additional copies of the school act, and amendments thereto, if any, and the instructions which accompany it. The number published in 1819 was eight thousand; but as they are nearly exhausted, a further supply will soon be necessary.

It has been suggested that the act, so far as concerns the city of New York, requires revision. The secretary is not sufficiently informed of the particular defects that are made the subject of complaint, and, therefore, thinks it necessary only briefly and generally to allude to it.

He cannot conclude this report without respectfully suggesting, that if the duties of superintendent are to continue united to those of secretary, it would seem reasonable, in his opinion, that some provision should be made for the payment of a clerk.

The letters and opinions which are written and copied during the year, and a variety of other similar labor that has accumulated in no small degree, and which will, probably, continue to do so as long as the population of the state is increasing in the ratio it has hitherto done, appears to indicate the propriety of the course suggested.

The following papers accompany this report.

Paper A. Abstract from the returns of common schools in the several towns and counties in the state of New York for the year 1821.

B. Summary of the preceding abstract.

C. Report from the city of New York.

D. Cities, villages and towns, for whose benefit special statutory provisions exist

E. New apportionment of school moneys, under the United States census of 1820, showing the population of each town and county, and the sums payable to each out of \$80,000, on and after the 1st day of February, 1823, together with a view of the increase of population in each county, and the gain or loss of each county in school moneys, by the census of 1820, as contrasted with the apportionment made in 1819, under the state census of 1814.

F. Summary of the counties that will gain by the new apportionment.

G. Summary of the counties that will lose by the new apportionment.

H. Sums payable to each county under the United States census of 1820.

I. Gospel, school, and literature lots.

K. General and local school funds.

L. Moneys paid out of the treasury of this state, for the support of common schools, since the year 1795.

M. Acts of the legislature concerning gospel and school lots.

N. Letter from D. Brent, Washington, 11th April, 1821.

O. Apportionment made in 1821 between the counties of Erie, Genesee, Livingston, Monroe, Niagara, and Ontario, by reason of the division of Genesee, Niagara, and Ontario.

P Form of a bill proposed by way of an amendment to the school act.

All which is respectfully submitted.

J. V. N. YATES, Secretary of State, and ex officio superintendent of common schools. Albany, February 26, 1822.

Board of Public Works of Virginia.

Report on the finances of the fund for internal improvement.

FEBRUARY 11, 1822.

SIR—I have the honor to inclose for your attention, authentic extracts from the journal of the board of public works, of the 8th and 9th instant, comprehending important proceedings on those days, in relation to the objects committed to their trust, which, pursuant to a resolution of the board, are now laid before the general assembly.

I have the honor to be, sir, your most obedient,
TH. M. RANDOLPH.
President B. P. works.

The honorable the speaker of the house of delegates.

The committee appointed to examine into the present state of the income of the fund for internal improvement, the probable income to be expected during the present year, and the charges upon the same, to be provided for during the present year, have performed that duty and report:

That there was reported to be in the treasury on the 15th day of December last, to the credit of the fund for internal improvement, the sum of

\$17,206 29

Subject however to a deduction for this sum paid on the 4th day of December last, on account of the map, and which, not being known to the board of public works, was omitted in the former accounts,

3,000 00

Real sum in the treasury on the 15th of December, 1821,

\$14,206 29

Since which the following sums have been received, viz:

From the Farmers' Bank, \$5,001 00
And, 62 50

\$5,063 50

From the Bank of Virginia, \$20,350 00
And, 1,383 00

21,733 00

From the Swift Run Gap turnpike Co. 102 50
From the U. States' Bank, 420 00

\$41,515 29

And since the 15th day of December last, the following sums have been disbursed, viz:

To the Cartersville bridge, \$ 1,000 00
To the dock company, 12,500 00
To the Dismal swamp canal company, 12,500 00

On account of the expenses of the board, officers salaries, &c. &c. 1,875 58

27,875 58

Balance now in the treasury, \$13,641 71

Paid into the treasury, by the principal engineer, for balance of the last year's accounts, 278 79

Amount now in the treasury, \$13,920 50

The income which may be expected during the present year, is as follows: viz:

From the town of Petersburg,	326 00
Now due from Valley Bank,	\$9,594 74
And,	3,300 00
	<hr/>
To become due from ditto in July, say,	12,894 74
Now due from the James River company,	3,300 00
To become due from ditto in July, say,	6,408 00
Now due from the North Western Bank for dividends due before Jan. last, say,	3,408 00
Due from do. for Jan. dividend,	\$2,425 50
	231 00
	<hr/>
To become due in July next, from do. say,	2,656 50
To become due in July next, from the Farmer's Bank, say,	577 50
To become due from the Bank of Virginia, in July next, say,	5,053 50
July dividend on the United States Bank stock, say,	21,733 00
Now due from the Little River turnpike company, say,	420 00
To become due from the Swift Run Gap turnpike company, in July next, say,	753 00
Now due from the Dismal Swamp canal company, for dividends on stock of the United States' Bank loaned them,	102 50
To become due from do. in July next, on the same account, say,	1,000 00
Interest now due from ditto for loan, interest to become due from do. in July next,	375 00
	750 00
	<hr/>
	\$74,978 24
The charges upon the income of the fund for internal improvement, to be provided for during the present year, appear to be as followeth, viz:	
Balance to be paid to the Cartersville bridge company,	\$1,750 00
Further instalments to the Roanoke navigation company, say,	12,800 00
Third instalment to the Swift Run Gap turnpike company,	11,500 00
Third instalment to the Leesburg turnpike road company,	8,400 00
Loan, in July, to the Dismal swamp canal company,	12,500 00
Charges of the board, officers' salaries, &c. &c. say,	5,126 42
On account of the map, say,	9,000 00
On account of the stock of the Monongalia navigation company, say,	3,500 00
	<hr/>
	64,576 42
Surplus beyond ordinary charges,	\$10,101 82

But besides the foregoing charges, the following sums are to be provided for, and set apart for the purchase of the certificates of James river loan, viz:

This sum received from the James river company, being the surplus of their income of 1820,	\$5,370 59
This sum appropriated from the income of the fund for internal improvement,	18,000 00
	<hr/>
	\$23,370 59

From which it appears, that there will be a deficiency in the resources of the funds for meeting the engagements of the present year.

It will be observed, that the foregoing statements vary from those which accompanied the last annual report (and which, as to the future income of the fund for internal improvement, was necessarily, in great part, conjectural), in several particulars.

The charges on account of the Roanoke and Monongalia navigation companies, are reduced by small sums, according to information recently received.

The \$3,000 paid on account of the map in December last, was omitted in the annual report, because not then known to the board of public works: the payments on that account being made by order of the executive, and not of the board of public works.

The January dividends upon the bank stocks are now entered as ascertained; and those of July are anticipated to be no greater than those of January. The unexpected deficiency in the income of the fund, arises almost entirely from the small dividends upon the United States' bank stock, and the stocks of the bank of Virginia and of the farmers' bank, especially of the two latter, whose stock constitute the principal part of the productive capital of the fund. It was supposed that those two banks would have given to individual stockholders 4½ per cent, per annum; and if so, the anticipations of the board of public works, as to the income of the fund from these sources, would have been fully verified, in consequence of the bonus paid on a large part of their stock: but they divided in January last at the rate of 3 per centum per annum only, to individual stockholders.

It appears to your committee, therefore, that if, (as the law requires), the said sum of \$23,370 59, be set apart, out of the income of the fund for the present year, it will be indispensably necessary to dispose of a part of the disposable fund, to meet the engagements of the board for the present year. In that case, the board would have to part with a productive fund; and the money so set apart, for the purchase of the certificate of the James river loan, would remain unproductive, until such certificates were offered for sale; and your committee are of opinion that no such certificates, or, if any, to a small amount only, will be offered for sale during the present year. The board of public works, in order to avoid this loss of interest, proposed in their last annual report, that the general assembly should authorize the investment of the funds appropriated to the purchase of the certificates of the James river loan, in some productive fund, until the same could be applied to their destined object: And it seems now to your committee that the best means of providing for the anticipated deficiency of the income of the fund, and to avoid the loss which would accrue from keeping so large a sum on hand unproductive, would be, to meet the other charges of the fund out of the ordinary income, and to transfer to the credit of the fund appropriated for the purchase of the certificates of the James river loan, 210 shares of the stock of the bank of the United States; which, at the now current price, would be equivalent to the said sum of \$23,370 59. The said stock to be sold as occasion should require, for the purpose of purchasing the certificates of James river loan, when such certificates shall be offered for sale.

Your committee have, therefore, come to the following resolutions:

Resolved, That it be respectfully recommended to the general assembly, to enact a law, providing,

That the president and directors of the board of public works do pass to the credit of the fund set apart for the payment of the interest, and the purchase of the certificates of the James river loan, 210 shares of the stock of the bank of the United States, in satisfaction of the sum of \$23,370 59, now due to that fund; and that the future dividends declared upon the said shares, be passed to the credit of the same account.

That, whensoever any certificates of the James river loan shall be offered for sale to the collector of the board of public works, at par, the said collector shall, by order of the board of public works, if in session, or of the members of the board, ex-officio, in the recess of the board, sell so many of the said shares as may be necessary to effect the purchase of the certificates so offered for sale.

That, for the future, so much of the annual appropriation from the income of the fund for internal improvement, for the payment of the interest, and purchase of the certificates of the James river loan as may not be necessary for the payment of interest, shall be invested, by order of the board of public works, in some productive fund, until the same shall be wanting for either of the purposes aforesaid, and then to be re-converted into money as aforesaid.

Resolved, That a copy of this report, and of the foregoing resolution, be submitted by the president, to the general assembly.

A true copy, from the journal of the board of public works, of the 8th of Feb. 1822

BERNARD PEYTON,
Sec'y B. P. Works.

Maryland—Internal Improvements.

REPORT TO THE HOUSE OF DELEGATES

Of Maryland, by the committee on internal improvement, to which was referred so much of the executive communication as relates to that subject.

The committee to whom was referred so much of the governor's message, as related to internal improvement, respectfully beg leave to submit the following report:

Your committee cannot but feel a deep conviction of the importance of the subject which has been submitted to their consideration, when they look over the vast field it presents to view, and reflect upon the intimate connection it has with the prosperity of the commonwealth. To improve the internal resources of a nation has always been considered, by the wisest statesmen, the surest method of promoting its strength and its happiness, and has, accordingly, enlisted the zeal of the most enlightened patriots of every age. It is rousing into active life the dormant energies of the soil; giving spirit to the enterprize of the citizens; turning to a more profitable account the labors of husbandry; creating new fibres in the body of the republic; infusing into it a more wholesome circulation, and, in its effects, "almost annihilating space;" thus, by bringing neighbor states into closer proximity; equalizing their mutual advantages, and restoring the balance which the partial dispensations of providence may have rendered necessary to the wants and the weakness of the less favored.

To a young state, these improvements are vitally interesting; a spare population becomes vested with all the faculties which render a more numerous one

efficient and useful; invention and skill supply the force of numbers, and the same advantages are afforded on a large scale, which result from the application of all kinds of labor saving machinery, to the details of industry, thus facilitating the work of civilization and refinement, and giving to the tardy gait of years, the strides of centuries.

To the state of Maryland this subject is presented with the most imposing pretensions. Situated in the very bosom of our great confederacy, she stands equally open to the commerce of the north and the south, and, from her fortunate proximity to the most important points on the western waters, possessing a control over the products of that region, which no rivalry can arrest from her enjoyment; a control which, at no distant day, must render her the mistress of the great western trade; the guardian of the gates through which the treasures of a boundless country shall find their vent, and which shall draw to her shores the riches of an incalculable commerce. In addition to this, the bounteous hand of nature has spread through her confines one of the most magnificent bays in the world, upon whose expanse, float securely to their market, the richest portions of her produce. The Susquehanna and the Potomac, washing her remotest borders, open to the industry of her citizens, the prospect of exhaustless treasure, while innumerable fertilizing streams between literally irrigate every acre, and afford an immeasurable supply to every demand for internal improvement.

These advantages have not been overlooked or unappreciated by the citizens of our state, and numerous efforts, founded upon private as well as public patronage, to facilitate and improve the means of internal transportation, attest the interest it has excited; and your committee rejoice to find that this subject begins still more to engross the attention of every intelligent portion of the community. In this, our state does but respond to the prevailing sentiment of the nation. Since the late war, there is scarcely a part of the union which has not directed its attention and its means to this question, and the result has been an improvement in the general aspect of the United States, in the course of a few years, which, considering the population and the wealth of the country, and the extent of territory upon which these improvements have been spread, is perhaps unequalled in the history of free nations. The state Maryland has, from the period of the revolution to the present time, evinced a most commendable disposition to lend her aid to every undertaking which professed to encourage those objects; and although at times an injudicious calculation may have thwarted her success or disappointed her hopes, still she has derived many and most permanent advantages from the well timed appropriations of her resources.

At the present juncture, much is required of her. The competition of formidable rivals, although, as your committee believe, it cannot subvert her strength, may, for a long time, retard the full and profitable exercise of it; and it, therefore, becomes a matter of the most urgent solicitude, that we should be in a situation to keep pace with the zealous enterprize of our sister states, who are at this moment contending with us for the prize of future power and importance in the commerce of the west.—Although that struggle be maintained with all the perseverance which self interest can supply, and the effective force which a nervous and a wealthy population can bestow, Maryland must nevertheless, by a discreet and intelligent expenditure of her means, aided, as she is, by a more than counterbal-

ing beneficence of providence, forever hold a successful mastery in the strife.

Your committee conceive that this subject is urged upon the attention of the state by other considerations. The present generation seem to be more imperiously called on for the adoption of a system of policy in regard to this question, than any other that has preceded them, and, perhaps, more than their successors ever may be. The tranquilized state of Europe; the establishment of what appears to be a more settled order of things; the general competition in every branch of trade, appear more decisively, at this time, than at any former period, to throw the several states of our union back upon their own resources, and, of necessity, to drive them to the contemplation of their intrinsic energies. The period is rapidly approaching, at which it is conceived a large manufacturing interest will be fostered in our country, and the attention of our population applied to furnish a substitute for a vast variety of the present commodities of trade, which, before the lapse of many years, must become the product of our own labor and the growth of our own soil. This consequence has been partially developed at the present day, by the entire change of our political relations with the states of Europe, and it is believed that, so far as regards the condition of this continent, that posture of things will be permanent. From this view, it is obvious that the labor of our country must be differently applied, and the current of our national means turned into new channels.

Your committee beg leave further to say, that in their opinion it is impossible to give a more profitable direction to the policy of the government, than by the application of its strength to internal improvement. A judicious effort in this way is always sure to produce a rich harvest of remuneration, and, it is believed, that every expenditure required by it, is completely reimbursed to the country, almost before its deficiency is felt. There is scarcely a turnpike road constructed, or a canal made, which does not, in the course of a very few years, yield to the community, however unprofitable it may be to individuals, a full recompense for its creation; and, indeed, from the facilities which the state of Maryland every where presents to this species of enterprize, and the increasing trade that must inevitably be the consequence, your committee do not hazard too much by declaring, that a well selected scheme, for the improvement of the means of internal transportation, must become one of the most profitable objects in which capital could be invested.

In the discharge of the duty assigned to them by the house, your committee conceive it necessary that they should present a general view of the most prominent objects of improvement, at present within the contemplation of the state, and, as the governor's message more particularly designates the river Potomac as a subject of attention, they would beg leave to make some remarks in reference to it.

The commission which was authorized by the resolutions of last session, to unite, in an examination of the river, with a similar commission from Virginia, have been delayed by the tardiness of the latter state, in the commencement of this work. Although the Virginia commissioners have been named by the executive of that state, obstacles, unknown to your committee, occurred to prevent the execution of the design entrusted to them, until the lateness of the season rendered it impracticable to proceed to any satisfactory examination of the state of the river. It is presumed, however, that all parties will be ready to progress in the contemplated

enterprize as soon as the approaching year may become most favorable to their purposes, and as the objects for which this commission was created, are of very interesting importance to both states, your committee would recommend a continuance of the resolutions; and, in order to apprise the executive of Virginia of the feeling of the state upon this subject, your committee would respectfully suggest the adoption of the additional resolution accompanying this report.

As to the improvement of the navigation of the Potomac, your committee would say a few words. This noble river, from its peculiar course, holding its way exclusively through the confines of the state, watering an extensive and fertile region; receiving the tribute of some of the finest streams of our country, among the rest, the Shenandoah, whose protracted channel sweeps through the most luxuriant valley in Virginia, must always be considered one of the richest possessions of our state, and eminently entitled to the attention of her citizens—Amid these advantages, it is the unfortunate lot of this river to present obstacles which must, for a long time, retard the course of improvement, and exclude the benefits of a commerce longing to seek that channel. It is remarkable for having the greatest fall, perhaps, of any river in the United States, where an ascending navigation is attempted, and the consequence is, not only an accumulation of rocks and rapids, which can only be surmounted by the arduous toil and disciplined skill of the boatmen, but a liability to extreme lowness of water, which has been known, in some extraordinary years, to have prevailed through the whole boating season, almost to the entire exclusion of that mode of transportation. These causes have operated to produce a neglect of the trade of that river, so far as to reduce it to an amount certainly insignificant when compared with the illimitable riches which might be collected on its banks. The state has already spent large sums of money in the fruitless endeavor to seize upon its treasures, and the reiterated attempts of a well organized and richly endowed company, give a striking demonstration of the futility of attempting to vanquish obstacles in their nature insuperable. The time, doubtless, will come, when the enterprize of the state, aided by an abundant treasury, and the keen edged activity of commercial wants, will devise and execute some project which shall yet put Maryland in the full and perfect enjoyment of this yet unconquered tributary. That day is certainly not at hand, and the slender supplies of the state, your committee conceive, would be lavished with a useless prodigality, upon any attempt to render the navigation of the *bed* of that river more practicable than it is; indeed every thing seems to be done which can be done in regard to that object. The channel has been cleared, canals have been constructed around or through all the important rapids, and the most considerable falls are provided with durable and substantial locks; the trade, nevertheless, still languishes under unsubdued impediments. The only method of improvement, therefore, which could be suggested, would be the construction of canals through all that part of the country in which the river presents the greatest body of obstacles; an undertaking which could only be achieved with the wealth of an empire.

Your committee are naturally led from these speculations to a contemplation of the resources of the state in another quarter. The river Susquehanna has been brought upon the public view with a renewed interest and the means of improving it

have been already submitted to this committee, upon which they had the honor to make a distinct report. They had the satisfaction to find the report promptly adopted, and the bill which accompanied it speedily passed into a law. This river stands in a very different predicament from that of which we have just spoken. It appears to be now satisfactorily ascertained, that every work which is calculated to improve the bed of the river, and render it more practicable to the purposes of navigation, must ultimately offer a rich remuneration to the state, in an increased supply of produce. The Susquehanna, unlike the Potomac, has, until it approaches within a short distance of the tide, a moderate fall, and rolls over a wide and comparatively smooth bed; is more regular in the rise and fall of its water, and in every respect is more propitious to navigation. Within forty or fifty miles of the tide, it passes through a range of country which falls with great abruptness to the Chesapeake, and presents innumerable ridges of granite, which, being broken in the bed of the river, offer almost the only serious obstacles which occur in its passage from the borders of the state of New York. Some late efforts evince the entire practicability of surmounting these difficulties, and there no longer remains a doubt that a judicious effort, applied to the improvement of this lower portion of the river, must be productive of incalculable benefit to the state. This once achieved, the products of an immense extent of country, reaching through the heart of Pennsylvania and penetrating into the interior of New-York, are at once poured into the lap of Maryland. For an estimate of the value of this commerce, even under its present disparagements, your committee beg leave to refer to the separate report already made by them upon this subject. The work, therefore, in the opinion of your committee, deserves the serious and immediate attention of the legislature, and it is hoped that the measures already projected by the spirited and meritorious enterprise of the citizens of Baltimore, will have the effect to demonstrate the importance of the design, to the great and permanent interests of Maryland, and speedily to enlist a more decided patronage in its favor.

The next object of concern in reference to the duties of your committee, is to be found in the execution of a design which was conceived as long ago as the year 1799, and as yet but partly accomplished, to effect a water communication between the Chesapeake and Delaware bays. A rout was, at that time, marked out by commissioners appointed by a company incorporated for this purpose, (the commission consisting of gentlemen of Pennsylvania, Delaware and this state), which was supposed to be the most eligible course presented by the character of the country of the peninsula, as well as by the convenience afforded in the supply of water. This rout extended from a selected point on the Elk-River to the Christiana, in Delaware, and the supply of water was to be obtained from a feeder, reaching from the upper district of the former. From the want of funds, as well as from other causes of less importance, this work did not progress further than the preparatory stages of the design, by the partial completion of nine or ten miles of the feeder, in which attempt the whole capital originally paid in, amounting to upwards of one hundred thousand dollars, was expended.

In the session of 1812, an act passed this legislature, expressing a design to co-operate in the original scheme, by a determination to subscribe for two hundred and fifty shares of the stock, whenever

the government of the United States, and the states of Pennsylvania and Delaware, should have subscribed, in their individual capacities, for amounts therein specified. Since the passage of that act no movement has been made towards the ulterior accomplishment of this work. As the interference of this state appears to be of doubtful policy, a bill has been submitted, which yet remains upon the table of the house, recommending the repeal of that act, before the performance of the conditions by either of the parties shall have placed this state under an obligation to redeem the pledge. Your committee do not hesitate to recommend the policy of this procedure, if circumstances, which may be unknown to them, have not before this occurred to render their withdrawal a violation of faith. In this recommendation, your committee deem it necessary to say, that they are far from being actuated by any sentiment hostile to the prosperity of the projected enterprise; that, on the contrary, they believe it to be a work from which a very respectable portion of the state of Maryland may derive essential advantages, in the choice it may present them of an intercourse with two of the most extensive markets on this continent, and also from the facilities afforded to a trade with an extensive manufacturing district, through which the intended canal is destined to run; but your committee conceive the propriety of the measure is urged by a consideration, in the first place, of the limited means of the state, at present applicable to such an enactment; that they may be called upon, almost without notice, to perform their stipulation; and, in the second, from a reference to the much superior interest in this undertaking in the government of the United States, and the states of Delaware and Pennsylvania, which, it is presumed, is sufficiently cogent to induce themselves to finish the work--this subject always having been one of favorite interest at Washington, and to the city of Philadelphia, a matter of such engrossing importance, as to induce a belief that she alone could enter, single handed, upon the enterprise. These arguments, no doubt, would have been better urged against the policy of the act of 1812, at the time of its passage, and may now appear to fall with ill grace from the state of Maryland. Your committee would, however, again repeat, that unless the withdrawal can be made without trespassing upon the proper expectations of the other parties, much less trenching upon their interests, they would reprobate the act and recommend an instant provision to be made for this anticipated demand, no matter what may be the embarrassments of the treasury, since they should regard it their duty to inculcate the propriety of the most scrupulous adherence to every engagement, (if such this may be called,) howsoever indiscretely it may have been made. In the present case, your committee do not perceive the existence of any such obligation, or that the state ever designed to bind itself to do more than good policy, evidenced even by a future state of circumstances, should require.

Such appear to be the most prominent objects of improvement in internal transportation by means of water, in the present contemplation of the citizens of this state. Every year may be expected to develop new schemes, and to suggest the awakening of some dormant power. Our country teems with the facilities of this kind of enterprise; and the wants of an augmented population, and a more extended culture of our soil, must, in a very few years, give rise to projects as yet unanticipated and unknown. There are many, however, rationally within the view of the present time; such as the

scheme of a connection between the Susquehanna and Potomac, by means of a junction canal, and its intersection at some middle point by another, leading to the city of Baltimore. This project is recommended by the command it would instantly afford to the state of Maryland, over the trade of the vast extent of country connected with the Susquehanna and its tributaries on the one side, and the Potomac and the Ohio on the other. The means of its accomplishment too, are considered as in no embarrassing degree difficult, while the revenue, it would undoubtedly afford to the state, or to individuals concerned, must be great beyond the reach of any ordinary calculation. Other schemes, looking to the same object, the concentration of this extended trade in the city of Baltimore, have, from time to time, occurred to view. Among these may be ranked, a canal extending from York-Haven on the Susquehanna, to that city, which it is supposed will eventually furnish a substitute to the lower navigation of that river; a canal connecting the Potomac with the Patuxent; another uniting the Monocacy and Patuxent, and many others affording the means of an union with the upper country. The late attempt of the state of Pennsylvania to direct a large portion of the internal trade, dependant upon some of the above mentioned improvements, to the city of Philadelphia, by forming a connection between the Susquehanna and the Schuylkill, through the means of the Swatara and Tulpehocken creeks, which undertaking is said to be now in a state of prosperous forwardness, certainly furnishes an additional argument for urging, at this time, a consideration of these subjects upon the state, and more especially, in regard to all such improvements as relate to the navigation of the Susquehanna. That cause will, doubtless, operate to give expedition to the labor of our citizens, since delay must not only be attended with present privation, but possibly the exclusion of all future hope of enjoying a rich and lucrative commerce, now about to be lured into the channels of a jealous and powerful competitor. In many of these improvements, it will likewise appear that the interest of the adjacent states is so obviously connected with our own, that we may safely confide in the expectation of their assistance in the undertaking. Thus every substantial work, calculated to open the sources of the Potomac river, and to connect them with the western waters, must be a subject of equal concern to the states of Ohio, Virginia and Kentucky, and would, unquestionably, insure their aid; while it is no less to be supposed, that the state of Pennsylvania would heartily concur in our labors on the Susquehanna. Indeed, your committee have every reason to believe, that, even now, a bill is before the legislature of this latter state, which, it is presumed, will meet with their approbation, providing for an immediate co-operation with the state of Maryland, in the plan of improvement for that river, suggested in the bill reported by this committee in an earlier part of the session, and passed by both houses.

The advantages of transportation by water, over the most improved methods of conveying produce by land, will always render the former the most important object of attention, and although the superior facility, on the score of expense, of making roads, may have a tendency to attract capital to that species of investment, yet this advantage is more than preponderated by the great disproportion between the two in the expense, the labor and expenditure of carriage, as well as in the bulk transport-

ed. There are many articles of produce, also, whose size and weight, compared with their value and the distance from market, prevent them becoming commodities of trade, so long as they are shut out from the means of water carriage; yet which, with this opportunity, may form no inconsiderable portion of the internal commerce of the country. There are others also, which, although of a more convenient bulk, are entirely precluded from a low market, owing to the expense of transportation. In regard to such articles, the uncertainty of their becoming a matter of profit, induces a negligent culture, and prevents them from arriving at that perfection which the activity of trade always communicates to an important staple. The difference of expense of transportation between roads and canals is, generally, estimated as one to six, and from that to one to ten, in favor of the latter; to this, also, may be added, the convenience in regard to size and packing of the burthen borne. In Mr. Fulton's report to the secretary of the treasury, in 1807, this subject is considered by him, and your committee would beg leave to make the following short extract by way of illustration: "I will now suppose," he writes, "a canal to have been cut from Philadelphia to Columbia, and its windings to make 100 miles, at 15,000 dollars a mile, or for the whole 1,500,000. On such a canal, one man, one boy, and one horse, would convey 25 tons, 20 miles a day, on which the following would be the expenses:

One man,	\$1 00
One horse,	1 00
One boy,	50
Tolls for repairing the canal,	1 00
Tolls for passing locks, inclined planes, tunnels and aqueducts,	1 00
Interest on the wear of the boat,	50
Total	\$5 00

This is equal to 20 cents a ton for 20 miles, and no more than one dollar a ton for 100 miles, instead of ten dollars paid by the road. Consequently, for each ton carried from Columbia to Philadelphia on the canal, the company might take a toll of six dollars, instead of one, which is now got by the road, and then the flour would arrive at Philadelphia for seven dollars a ton, instead of ten, which it now pays." A little before the above extract, the same writer had given a calculation in regard to the road. "From Philadelphia," he observed, "to the Susquehanna at Columbia, is 74 miles; that road, if I am rightly informed, cost on an average \$5,000 a mile, or 444,000 for the whole. On it, from Columbia to Philadelphia, a barrel of flour, say 200 weight, pays one dollar carriage; a broad wheeled waggon carries thirty barrels, or three tons, and pays for turnpike three dollars; thus, for each ton carried, the turnpike company receives only one dollar." This calculation, founded, as it doubtless is, upon a careful and accurate consideration of the question, demonstrates at one view the immense importance of the subject, and places the superiority of canals in the most prominent light.

From this communication, your committee would turn to the subject of the roads, upon which it is necessary they should say but very little. From the hilly and broken character of a great part of this state, as well as the difficulty of procuring a sufficient supply of water at the summit levels, it must ever be necessary to substitute turnpike roads in many of the important districts, in the place of canals. To this species of labor, the public spirit of our citizens has been long since applied, and

there is no state in the union more amply provided with excellent roads. The munificence of the general government has, in the space of a few years past, completed one of the most substantial, and best constructed turnpikes, perhaps, in the world, leading from Wheeling, in the state of Virginia, to Cumberland. This work is connected with the other roads forming a communication with the city of Baltimore, and has become the route of a very extensive trade. The line of communication, however, is interrupted by a space of about ten miles between Boonsborough and the Conococheague, which yet remains unpaved. It is indispensable this piece of road should be instantly completed. Your committee, however, conceive it unnecessary to suggest any plan for this purpose, as they believe the fullest reliance may be placed in the efficacy of the measure already submitted and adopted by this legislature. It is understood that the citizens of the upper counties of Virginia have projected a scheme to shorten the distance between the city of Baltimore and Cumberland, by making a road from Shepherdstown, on the Potomac, to the last mentioned point. Should this enterprise be carried into successful operation, the diverging point would most probably be at Boonsborough. That circumstance, however, your committee conceive should have no effect in retarding the operations of the state in regard to the proposed work, as, in any event, it is a matter deeply interesting to a very extensive and populous part of the country, who suffer, at particular seasons of the year, the most serious privations from the want of it.

While upon the subject of this road, your committee cannot withhold the expression of their desire to see some efficient arrangement made for the purpose of rendering the whole of this important line of communication free of toll, or subject only to such burthens as may be necessary to keep it in repair. The propriety of such a measure is urged by a multitude of considerations which have been so frequently submitted to the legislature, as to make it unnecessary to repeat them, and such appears to be the general accordance of opinion upon this question, that it is believed nothing but a deficiency of means has prevented the purchase being made long since. Your committee merely throw out this topic for the consideration of the house, as connected with the objects of their report, without pretending to suggest any plan upon the subject. Connected with this also, is the subject of a bill now upon the table for the purpose of authorizing congress to impose a small toll upon so much of the Wheeling turnpike as extends within the limits of this state; the object of this bill your committee believe to be politic, and they would respectfully recommend its passage.

Such appear to be the general topics within the range of the inquiry submitted to your committee. They have endeavored to convey a faithful outline of the subject, without aiming at an exhibition of the details, which a more complete elucidation might demand. It is with some hope of recommending even a more general application to these speculations, that they have progressed in their work, as they feel confident the subject cannot be too soon taken up or too much dwelt on by the citizens of Maryland, who are compelled to maintain, by the resources of ingenuity and artificial improvement, the influence and political consideration in the confederacy which a small population and a limited territory might deny them. In order, therefore, to keep alive the attention and the

zeal of the state upon this question, your committee conceive no better plan could be devised than the establishment of a board of public works. As this, however, is a matter for which the state may not yet be prepared, and which may require much more information in regard to the objects of internal improvement than your committee have it in their power to present, they would recommend, for the present, the institution of a committee, to be selected by the executive from among the most intelligent members of the community, with directions to report, either individually or collectively, to them, the most judicious course of improvement in reference to the roads, canals and rivers of the state, or such parts of them as may come under their notice. And further, that the executive be authorized, if they should deem it expedient, to cause surveys to be made and maps to be returned, of such districts, roads or water courses, as, in their opinion, may be necessary to the illustration of any proposed plan of operations. And that directions be given, that such reports be made, if possible, in time for the meeting of the next general assembly.

To this effect your committee have the honor to present resolutions accompanying this report.

All of which is respectfully submitted,

J. P. KENNEDY,
Chairman of the committee.

RESOLUTIONS ACCOMPANYING THE REPORT.

1. *Resolved*, That the governor and council be authorized and empowered, to take such measures in regard to the appointment, of the time and place of meeting, and the adjustment of other preliminaries attendant upon the execution of the duties assigned to the commissioners appointed in virtue of the act passed last session, for the examination of the navigation of the Potomac, conjointly with the commissioners appointed by the executive of Virginia, as they in their judgment shall deem most conducive to the prompt and wholesome execution of the said act.

Further resolved, That the governor and council be authorized to draw upon the treasurer of the western shore for any sum of money which may be necessary to defray any reasonable and necessary charges growing out of the said commission.

And further resolved, That the governor be requested to apprise the executive of Virginia of the wish of this state, that the said commission should proceed to discharge the duties assigned them, as soon as the season and other circumstances may render it most proper.

RESOLUTIONS, NO. 2.

2. *Resolved*, That the governor and council be directed to select, as soon after the passage of these resolutions as it can conveniently be done, nine of the most discrete and intelligent citizens of this state, as a committee for the purpose of reporting to the executive, either collectively or individually, as their convenience may allow, upon the most efficient, useful and practicable plans of internal improvement, in relation either to the whole of the state, or such parts thereof as they may think proper respectively to select. And that the executive be authorized to supply any vacancy in said committee which may occur during the term of their appointment.

Further resolved, That to each person selected as aforesaid, the governor and council be directed to transmit a copy of the reports on internal improvement, by the committee of the senate and house of delegates respectively, and also a copy of the following instructions:

"You are requested to communicate to the executive of this state, as soon as it may suit your convenience, not delaying longer than the period of commencement of the next general assembly, such information as you may have it in your power to afford, in relation to the subjects of internal improvement within this state. More especially confining your attention to a description of the general face and character of the country—the elevations of the most remarkable hills and mountains—the nature of their minerals, the soil and vegetable productions—the courses of the rivers and creeks—the nature of the country through which they pass, and the produce in which it abounds. The means of connection between important rivers; the facilities afforded to the construction of canals, roads or railways; the prices of labor; the respective average charges per mile in making roads or canals; the probable advantages to the internal trade and commerce of each district by making such improvements, and all such other information upon these questions as you may consider useful."

Further resolved, That the governor and council be authorized to procure such general surveys of the rivers, water courses or districts of country, as they shall in their judgment deem necessary to the illustration of the subjects of internal improvement, and that for the expenses of the same they be authorized to draw upon the treasurer of the western shore.

SENATE OF MARYLAND.

Report of the committee on internal improvement, to which was referred so much of the executive communication as relates to that subject.

The committee to whom was referred so much of the governor's message, as relates to internal improvement, beg leave to report:

That, whatever difference of opinion may heretofore have existed, as to the expediency of internal improvements, the time appears now to have arrived, when every citizen of the state of Maryland is solicitous that all proper means should be adopted to bring into life and activity every internal improvement of which the state is susceptible. That, fully aware of this feeling, your committee would respectfully suggest some distinct objects of internal improvement, which they cannot but regard as of the very first importance to the welfare of the state—that is: The improvement of the navigation of the rivers Potomac and Susquehanna—the cross cut canal, (as it is usually called), to unite the bays of Chesapeake and Delaware, and the making of a turnpike road from Boonsborough to Hager's town, with a view to join the great national road, lately completed by the United States, from Cumberland to Wheeling, in the state of Virginia.

With respect to the improvement of the navigation of the river Potomac, your committee are of opinion that every reasonable aid should be afforded by the state, to effect that desirable object, but when we find that the state of Maryland has already advanced one hundred and fifty thousand dollars for that purpose, without deriving the slightest benefit from it, they cannot but think it is time to pause before advancing further sums of money, except so far as to complete the surveys already made, or undertaken, to procure correct estimates of the expenses of effecting the proposed object, and the extent to which the improvement of the navigation of that river is intended to be carried.

And here your committee would remark, that some doubts of the value of this improvement has

been suggested to their minds by a perusal of the following extract from the report of the late Mr. Latrobe, dated March 16th, 1808, to Mr. Gallatin, then secretary of the treasury of the United States: "The trade of this canal, especially during the year 1807, has been so great, that there appears every prospect of its becoming a productive work in those years in which there is a considerable and equal quantity of water in the river; but on this circumstance it must always depend. The information respecting it, which can be obtained from the company on the spot, renders it unnecessary for me to say more upon it."

Mr. Latrobe's opinion, upon a subject of this nature, being, in the estimation of your committee, entitled to the greatest respect, they conceive that, before any further advances should be made for the improvement of the navigation of the Potomac, the doubts, suggested by this extract from his report, should be fully and accurately examined into, in order to enable the general assembly to form a more correct opinion upon the subject, than the information which they now possess will enable them to do. It appears, from a report of the Potomac company, that the total amount of tolls received by them, from the 1st day of August, 1799, to the 1st day of August, 1817, was \$162,379 95, or \$9,021 per annum, all of which amount, except the sum of \$3890 55, was applied to the further improvement of the river. The value of property brought down the river, during the same period of time, is estimated at \$7,002,370 62, cts. equal to \$289,000 annually.

As it regards the improvement of the navigation of the river Susquehanna, your committee, viewing it as a subject of great and boundless importance to the state of Maryland, have given to it their fullest and most attentive consideration. The attention of the citizens of Maryland has recently been directed towards it, and all, convinced of the vast utility and benefit to be derived from it, seem anxiously solicitous that some legislative aid should be extended towards it. Under these circumstances, your committee cannot but recommend it as a subject worthy of the deepest reflection and fraught with considerations of vital importance to the state of Maryland.

That particular district of country to which the benefits of the turnpike roads in Maryland are most immediately extended, lying between the Susquehanna, on the one side, and the Potomac, on the other, and extending north-westward of Baltimore, to the north mountain, comprehending the Conococheague valley, has been accurately measured on a map of the country, and found to contain 5000 square miles. Those portions of the country bordering upon the various tributary streams of the Potomac, westward of the south mountain in Maryland and the blue ridge in Virginia, have been also measured, and found to contain 10,000 square miles. But, when your committee direct their attention to that portion of the country through which the Susquehanna flows, they embrace within their view a field of greater and more enlarged dimensions. By an accurate measurement of those expanded regions, situated upon the Susquehanna, and its numerous wide spreading branches, they have been found to contain about 20,000 square miles, exclusive of 10,000 square miles more of adjacent country, lying upon other waters in the states of Pennsylvania and New-York, for the produce of which country, should the navigation of the Susquehanna be improved to the

extent contemplated, Baltimore must inevitably become the most convenient market.

From these estimates, it is abundantly evident that the trade of the Susquehannah, (flowing as it does through a country of vast extent and inferior in point of fertility to no portion of the United States), is a trade involving in its nature a very extensive, permanent and growing interest.

Were the navigation of the Potomac improved to the utmost possible extent, its trade must be considered but of minor importance when compared with that of the Susquehannah: the Potomac, flowing as it does through a country of comparatively small extent, and by no means celebrated for its richness and fertility. In addition to this it may be remarked that, to however great an extent the productions of the soil may find their way into the Potomac; however extensive the demand for foreign commodities at Georgetown and Washington, the state of Maryland can derive but little benefit from it. The advantages secured flow into a different channel: they go to fill other coffers—not those of the state of Maryland. But improve the navigation of the Susquehannah to the extent proposed, and you bring to the city of Baltimore a trade of incalculable extent and value, the benefits of which must be imparted to every section of the state, and which cannot fail richly to remunerate us for whatever aid may be extended to it.

The obstructions to the free navigation of the river Susquehannah, exist near tide water, that is to say, below Columbia. Above that town the difficulties are removed by Pennsylvania, and a boat navigation at present exists to near the N York line. The distance from Columbia to Port Deposit is 35 miles, 20 miles of which may be considered as tolerably good navigation, either in ascending or descending.

From Turkey Hill to Nelson's Falls, near Muddy Creek, a distance of 15 miles, the navigation is bad, and it is here that the principal obstructions exist, the removal of which are so anxiously desired.

Your committee have taken considerable pains to ascertain the value of the produce which has come down the Susquehannah for several years past; they have, however, only been able to procure an estimate of what has come down from last spring to December past: and they find it to be valued at \$1,121,250. The number of rafts and boats that came down the river to Port Deposit, during the same time, was 925 rafts of lumber, averaging 25,000 feet each, and 535 arks loaded with flour, whiskey, pork, &c.

The Susquehannah canal, commencing at the Maryland and Pennsylvania line, and ending at the head of tide water, is now completed and in good order for the passage of rafts. It appears to have full supply of water at those seasons of the year when the river is not high, and insures a safe passage for all produce that may come down the river to the mouth of the canal.

It is certainly of great importance to the state of Maryland, that this canal should be kept in perfect condition, and that the proprietors be protected in all their just rights.

The committee have only to state, in conclusion on this subject, that, when the water of the Susquehannah is high, boats and rafts frequently pass to the head of the tide water, without entering the canal.

The committee now come to the third object of internal improvement, to which they are desirous of directing the attention of the legislature, that is,

the canal to unite the bays of Chesapeake and Delaware.

In the year 1799, the legislature of Maryland passed a law, which, in the year 1801, was followed by similar laws on the part of the legislatures of the states of Delaware and Pennsylvania, incorporating a company, with a capital stock of \$400,000, for the purpose of opening a canal between the bays of Chesapeake and Delaware. In pursuance of these laws, subscriptions were received for nearly the whole amount of the two thousand shares at \$200 each. Surveys were made—engineers and workmen employed—a route selected for the canal through the isthmus which separates the two bays, and some material progress made in the execution of the work. But, unfortunately, after having gone thus far in the execution of this important object, and after having expended upwards of \$100,000 in the purchase of water rights, and in the construction of a feeder and reservoir, the work was suspended in the year 1803, in consequence of the non-payment of the subscriptions—and it appeared, daily, more evident, that the whole amount of the capital stock, even if subscribed for and collected, was a sum totally inadequate to the completion of so extensive a work. At this period also, the energy and spirit of the company began to subside, unaided as it was by further support and encouragement, or by that individual enterprise and activity which had enabled them, up to that period, to continue their operations.

By connecting the waters of the Chesapeake and Delaware, the contemplated canal will throw open an internal navigation of great extent, from the north west part of the state of New-York to the southern extremities of the state of Virginia.

The particular advantages which the state of Maryland would derive from this improvement, need scarcely be detailed by the committee. They will suggest themselves to the understanding of every reflecting man. In a national point of view, all will concur in the opinion of its importance, and, looking to an event which your committee is by no means anxious should soon occur, but which, in the opinion of the committee, may reasonably be expected to take place at some distant period, it may be regarded as an object of peculiar interest, as productive of the means of national defence, affording, as it no doubt will, a facility of transportation of troops, ordnance and military stores, from one part of the country to the other, the want of which was materially felt during our late war with Great Britain.

Beneficial, as it certainly will be, to the state of Maryland, the committee have thought it proper to direct the attention of the legislature towards it—but, viewing it as an object of national concern, and not alone productive of local advantage, the committee would remark that it is a subject to which the attention of the national legislature should be drawn.

The canal begins at Welch Point, on the Elk river, an arm of the Chesapeake, and is to terminate at a distance of twenty-two miles on Christina river, a branch of the Delaware. At low water, the depth of water in Christina river is 9 feet, and in Elk river 12 feet, within 100 feet from the shore.—The tide rises 4 feet in both rivers. No expensive aqueducts or bridges are to be made, and the principal obstacles have been already overcome. The supply of water, drawn from Elk river by a feeder, which is now completed six miles in length, and three and a half feet in depth, and which is itself a boat canal, united by a lock of ten feet high to the

main canal, is calculated to fill daily one hundred and forty locks, a quantity sufficient, on an average, for the daily passage of 24 vessels. The canal is 26 feet wide at the bottom, and 30 feet at the water's edge. It is intended for vessels of from 40 to 70 tons, drawing 7½ feet.—The banks being intended for towing paths, are 20 feet wide, one of which may be converted into a turnpike road, being raised three feet above the level of the water, and will, by increasing the height of the lock gates one foot, admit a depth of 9 feet water in the canal. The expense of digging one mile through rocky ground was 15,000 dollars, and that of digging the same distance through a level country, free from obstructions, 2,300 dollars, which gives an average of 7650 dollars per mile. The whole length of the canal is about 22 miles, and the whole cost is computed to be about 850,000 dollars. These estimates were made at a time when labor was comparatively high—it is presumed they would be much less at the present time.

This information of facts the committee have thought proper to furnish, in order to enable the legislature to form a correct opinion upon the subject.

The fourth and last object to which the committee have directed their attention, and which they have thought it proper to direct the consideration of the legislature, is the making of a turnpike road from Boonsboro' to Hagerstown, to join the great national road leading from the latter place to Wheeling, in the state of Virginia. Upon this subject the committee would remark, that this important object is now likely to be accomplished, in conformity with the law passed at the present session, and which your committee trusts will be carried into full and complete effect.

By order,

THOS. W. LOCKERMAN, com. clk.

Navigation of the Roanoke.

Report of the superintendents and board of directors of the ROANOKE NAVIGATION COMPANY.

To the directors of the Roanoke navigation company:

GENTLEMEN,—The undersigned, superintendents of the Roanoke navigation company, respectfully report, that the works, from the entrance of the canal to the site for the locks, comprising a distance of about 4 miles, are completed, with the exception of the guard lock. On the lower line of the canal, there remains to be cut about one thousand yards between the locks and the road leading to Moore's ferry. This ground is considered favorable, and can be finished by the laborers at present in the employment of the company by Christmas—It would have been completed by this time, had they not been interrupted in their progress by being taken off to repair several breaks which occurred during the last year on the upper line of the canal and in making other necessary repairs.

Messrs. Davis and Palmer, have been employed to cut from the road leading from Moore's ferry to Hudson's mill, a distance of 4,527 yards, which they are bound to complete by the first day of March next. From their habits of uncommon industry and good management, we have no hesitation in expressing it as our opinion, that they will finish the work within the time limited; the whole of the distance being already opened, except 713 yards. The remaining cutting to be executed is from Hudson's mill to Weldon, about 1,600 yards. The ground

along this route is of easy excavation, and we entertain no doubt of being able to finish it in all the month of April next.

The stone work remaining to be executed, consists of the locks, the aqueduct over Chocknot, and two small wastes. Mr. Houston, (the contractor), is now moving the stone for the locks from the quarry to the site where they are to be constructed.—The lock pits are opened, and a large quantity of materials for building have been collected together at the spot. He states, that, in a few days, he will commence laying down the stone, and will finish the work by the first of April next. The unfortunate breaches in the canal, before adverted to, have interrupted him in the transportation of the stone, and thereby retarded the progress on the locks, otherwise one of the chambers, at least, could have been completed by this time.

A contract was made, during the summer, with Messrs. M'Queen and Donnelly, for getting out the arch stones for the aqueduct; but they failed to execute their agreement, and we have still to find persons to undertake the work. If we can get the arch stones, and such as are necessary for the ashlar work, prepared by contract, we contemplate doing the greater part of the residue of the aqueduct with the laborers belonging to the company.

It has been before mentioned, that the guard lock is not yet built. A principal reason why it has not been constructed before this time, is a belief on our part, that the place contemplated for its location is not the most eligible; and we could not, during the recess of the board, alter it, without the sanction of the engineer of North Carolina or Virginia; neither of whom have we been able to see since the last meeting. As the proper location of this lock is of considerable importance, we would gladly avail ourselves of the assistance of the board in deciding this question.

The expenditures on the canal, including payments to contractors, during the last year, have amounted to \$54,637 68
Which sum, added to former expenditures, to wit: 186 097 10

Makes the total sum expended to the present time, \$220,734 78

In estimating the sum necessary to complete the canal, from its commencement to its termination at Weldon, we consider it a matter of sincere congratulation, and have no doubt it will be highly gratifying to all interested, to be informed that it is now reduced to a certainty that one more requisition, of very moderate amount, on the stockholders, will be abundantly sufficient to defray every expense in completing this important work.

(Signed)

CADR. JONES,
A. JOYNER.

Rock landing, Nov. 10, 1821.

To the stockholders of the Roanoke navigation company.

GENTLEMEN—The provisions of our charter require that we should make an annual report to you of the affairs of the company. In performing this duty it gives us great pleasure in being enabled to state, that they have never been in a more prosperous situation at any time than at the present. The important work in this neighborhood, which has engaged us so long, is drawing to a close. In the month of June next, we confidently hope to see its termination; our arrangements are made with that view, and we see no reason to doubt of success.

From the report of the superintendents, it will be seen that 3,313 yards of plain cutting, the lay-

ing of the locks, the building of the aqueduct over Chockoat, and some waste wiers, is all that remains to be done on the whole line of the canal.

The value of this work, inclusive of what may be due on outstanding accounts, is estimated at

	\$43,550 00
To meet this we have in the treasury,	14,172 99
Due from delinquents,	19 830 36
Due on bonds for negroes sold,	2 487 50
Other debts,	2,343 84
	38,834 70

Which leaves, to be raised by a new requisition, \$4,715 30

For information relative to the past year, we beg leave to refer you to the report of the superintendents, to our book, accounts and vouchers which are herewith laid before you. The treasury books will shew there has

Been received up to this time on 65 per cent. of stock and interest called for, \$234,908 00
There has been expended, 220,734 78

And that there is a balance of \$14,172 78

Of the sum expended, 188,339 dollars and 34 cents have been applied to this canal, the sluicing of the Dan and Staunton, and to the canal at Danville, and 32,345 dollars and 67 cents to the purchase of negroes; 38 of whom are still owned by the company. The vicinity of several well established market towns on James river, offers so many inducements to the planters on the waters of the Roanoke to carry their trade in that direction, that it renders it the imperious duty of this company to make the navigation of this river the best possible, if we hope to draw their produce this way. The present state of the river above this, although it has been used several years with great advantage to the people residing on it, is far from being a good navigation, though it is said to be better than what the James river affords at present; we purpose, therefore, as soon as our works shall have been finished here, to commence operations above, with the determination to make a good slack water navigation from these falls to Danville, on the Dan, and to the Long Island shoals, on the Staunton, not relinquishing the expectation of extending the same, in due time, to a much greater distance on both rivers. The funds we shall have for this object, is our negroes, the labor of whom will avail much, and the residue of stock not called for—say 35 per cent. on 390,600 dollars.

There is nothing other than the usual business of the general meeting, viz. the examination of our accounts, and the election of the officers of the company, to engage their attention, unless it is the circumstance that the state of North Carolina has not yet subscribed the 550 shares reserved to her, nor relinquished the right to do so.

CAPT. H. JONES, *president.*
DIRECTORS.

Rock Landing, Nov. 12, 1821.

Legislature of Pennsylvania.

Report of the committee on roads and inland navigation. House of representatives, Jan. 12, 1822.

Mr. Lehman, from the committee on roads and inland navigation, to whom were referred a resolu-

tion relative to a board of commissioners, respectfully report:

That the establishment of a board of commissioners, for the purpose of collecting useful facts in relation to the best method of facilitating and cheapening transportation, has for many years been considered as an imperious duty incumbent upon the legislature of Pennsylvania.

After the most mature deliberation, your committee must declare their conviction that nothing appears better adapted to assist the internal improvement of the state, which, next to a wise system of education, is most conducive to the highest and most lasting interests of society.

It would be a work of supererogation to descant upon the advantages of inland commerce: it is vivifying influence upon manufactures and agriculture is now universally acknowledged, and the experience of all civilized and flourishing states proves that easy and cheap conveyances must be the harbinger of an extended home trade.

Besides the incentives to make improvements, which Pennsylvania has in common with all other states, her peculiar situation, surrounded by vigilant and powerful neighbors and rivals, makes it not only expedient but absolutely essential to her future prosperity and grandeur, to apply the power of the whole community in order to preserve and augment the channels of trade. Without an extraordinary energy, this great state will be diverted from the path of true interest, of duty and honor; she will be arrested in her career of prosperity—the fond hopes of her illustrious founder—the hopes of her Franklin and other patriots be blasted, and the glory of Pennsylvania be bent down under the withering influence of supineness or parsimony.

To further the great object of improvement, your committee now report a bill providing for the appointment of a board of commissioners, to consist of three or five active, patriotic and intelligent men. This board, which will be subject, at all times, to the control of the legislature, and bound to discharge whatever duties may be prescribed, employed throughout the year on subjects relating to the development and application of the resources of the state, might, in the early part of the session of the legislature, make known all the wants of the people, in relation to roads, bridges and canals, or river navigation, designate the objects of the greatest importance, suggest methods of economizing the public money, and free from that turmoil excited in the minds of the members of the legislature, by the consideration and discussion of a variety of interesting questions; might contract their thoughts to this great object, and not only furnish, in the early part of the session, a well prepared and properly digested view of the state of the roads, bridges and water courses of the state, but suggest the most feasible economical methods of making new improvements, and present a view of the internal improvements of other states, and more particularly those which have a tendency to divert the trade and absorb the wealth of Pennsylvania. The value of this part of the duty of the board must be obvious to those who reflect that the members of the legislature, however enlightened they may be upon general subjects, are obliged to consider matters relating to internal improvement, upon information informally collected and drawn from interested sources, and to pervert a great part of the session to pass away before they can comprehend, (unless, indeed, they employ great labor and research), what the true policy of the state dictates in relation to its improvement.

The committee having mentioned the general object of the bill, will now proceed to state the more immediate reason by which they are induced to submit it to the consideration of the house.

It is well known to those who are conversant with the history of Pennsylvania, that the most patriotic and enlightened men, who have distinguished themselves in the councils of the state, perceiving that every wise nation avails itself of the benefits of cheap transportation, have felt and expressed there lively sense of the important advantages which must accrue to the state by having water conveyance, as well as roads, extending, if practicable, in every direction, and particularly from the shores of the Delaware to the Ohio and of lake Erie.

The real friends of Pennsylvania, who feel an anxious solicitude for her welfare and grandeur, however widely they may differ upon some interesting questions, unite in regretting that so little progress has been made towards the completion of this great work.

To those who feel inclined to adopt effectual means of creating a water conveyance throughout Pennsylvania, the questions that naturally present themselves are:

1st. Is it practicable?

2d. What would be the expense?

3d. Are the funds of the government adequate to the expense, or if not, would it be expedient to borrow money, or to adopt a system of taxation which would raise the necessary supplies?

However wonderful the fact, and although nearly 40 years have elapsed since the independence of the country, and as early as February, 1789, the supreme executive council of the state recommended the adoption of a general system of inland navigation, and, in March of the same year, a committee of the legislature recommended the same object: it does not appear to your committee that the questions can be answered with precision and true certainty by any of our citizens either in or out of office. It is true that Pennsylvania was the first among the states to construct a turnpike road, vieing in solidity and durability with the Roman highways: Pennsylvania was the first to employ a skillful engineer, and to expend large funds in attempting to construct an artificial canal. It is true that estimates have been made of the probable expense of making the Schuylkill navigable and of connecting that river with the Susquehanna by a canal; and the patriotic heart is gladdened by the reasonable prospect which is now afforded, of the speedy completion of those great links in the chain of water communication. But to what official report, or to what document of any description can we refer, to ascertain the practicability or probable expense of connecting Lancaster, York and Chester counties with the metropolis of the state by means of a canal—or of making a complete slack water navigation upon such parts of the Susquehanna and the Ohio and their branches as may form links of a chain of inland navigation throughout the state: where can we look for information respecting the nature of the ground, and the exact distance between such natural streams as may be navigable; the rise and fall upon the rivers as well as upon the intervening ground, or the number of locks which may be necessary to ascend and descend with boats: the quantity of water which is furnished by the natural springs and rivulets upon the summit levels, and whether it is adequate to passing the number of boats which the trade may require, and if that quantum of water is not sufficient, whether it is expedient to raise it by machinery, or to use

rail roads, as is done in many parts of Europe.—These facts must be ascertained with accuracy before the legislature can be competent to decide upon the important questions either of practicability or expense, so interesting to all who are anxious to maintain the present rank of Pennsylvania, or to restore her to her former proud station in the system of the confederacy. This is the only way in which a proper knowledge can be acquired for the formation of a general plan. It is already ascertained that Pennsylvania has the shortest portages of land carriage from the navigable branches of the eastern and western rivers: that she affords what may be called the natural channels through which flows the trade from the most populous and flourishing states of the west: that, from the characters of her rivers, if they were united by canals, the same boat would answer for the whole rout, and no unloading or warehousing would be necessary, and convenient opportunity of pilfering be given. It is to preserve the benefits of this great and increasing inland trade, "which finds work for the poor, and adds wealth to rich," which fosters every branch of industry—agriculture, manufactures, foreign commerce, and the fine arts: it is to preserve this main source of our comfort, our prosperity, and our strength, that your committee have made provision in the bill for those actual surveys and examinations, without which no correct conclusion can ever be drawn.

In the opinion of your committee the laudable efforts of intelligent and powerful rivals cannot be too frequently presented to the view of the legislature. On both sides of this state efforts are making to draw into other channels our trade and our wealth.—The canal which is nearly completed in New-York, and the whole expense of which is defrayed out of the state treasury, will enable that state to convey commodities between a sea port and the great western states, at about the fourth part of the present cost through Pennsylvania. The national road, which is free of toll, and the noble efforts of Virginia, to make improvements, (and who employs the agency of a board, similar to that contemplated by this bill), will enable those states to transport commodities cheaper than is now done by us. These facts, which your committee consider as incontrovertible, must necessarily rouse the energy of those who have at heart the future welfare of the state, and must satisfy all minds, free from prejudice, that, without a complete water conveyance from the eastern to the western limits of the state, or at least an improvement as respects an ascending and descending navigation of our rivers, and the connection of their head waters by canals or good roads, or rail ways, if canals should be found impracticable: that, unless efficient and prompt means are adopted to promote these important ends, Pennsylvania will soon have "fallen from her high estate," she will be "as a beam that has shone," and her more circumspect neighbors will be in the enjoyment of the vast advantages which the rapid growth in wealth and population of the western country, is calculated to confer.

With respect to the money necessary to carry into execution the objects of this bill, your committee will only observe, that the expense cannot exceed a few thousand dollars before the meeting of the next legislature, when the whole system can be modified or entirely relinquished, if, by any facility, the beneficial course pursued by Virginia, South Carolina, New York, and other states, should not answer the same useful purpose in Pennsylvania.

Your committee will conclude by imploring the

legislators of a state, so highly favored by the God of nature, not to allow an ill-judged economy or an illiberal parsimony, to prevent the acquisition of those important facts, so necessary to form correct and scientific plans for extending our great state improvement, without which our noble rivers confer but little benefit, and, as respects many millions of acres in Pennsylvania, the genial showers and quickening heat of heaven are lost, while, by the aid of such improvements, the mineral will be dug from the earth, the stately forest will be applied to its use, the improved parts of the state will flourish, old manufactures will be sustained, and new ones established, and the land which is now desolate will "swell with the future harvest." Then will fertility and abundance, and joy, be spread over the whole state, and all the parts be held together by strong ties of interest and affection; then will Pennsylvania not only maintain her present rank as an agricultural, a manufacturing and a commercial state, but rapidly increase in beauty, in populousness, in riches and in strength.

REPORT ON A FREE ROAD.

Mr. Lehman, from the committee on roads and inland navigation, to whom were referred some petitions relative to a free road between Philadelphia and Pittsburg, respectfully report:

That the reduction or extinguishment of tolls upon the great road extending from the Delaware to the Ohio, has at all times been a highly desirable object, and, since the completion of the national road from Cumberland to Wheeling, has become, in a great degree, necessary to the preservation of the great and increasing trade which Pennsylvania heretofore enjoyed with the western states. In the opinion of your committee, it should be a fundamental maxim of our policy, to make the carriage of commodities as easy and as cheap through Pennsylvania as through any other state, and an auxiliary step towards the accomplishment of this great object, is an exemption from tolls. It would appear, however, that regular and authentic information should properly precede any legislative enactment upon this subject; they therefore recommend the adoption of the bill annexed to this report, which makes provision for ascertaining the amount of stock held either by individuals or the state, in the different turnpike companies between Philadelphia and Pittsburg, and also the terms upon which waggons, with wheels of different widths, used for the transportation of commodities, may pass toll free.

Legislature of Georgia.

Report of the committee on education and free schools.

The committee on public education and free schools, to whom was referred a portion of the governor's message, and various communications from county academies, have found themselves engaged in the investigation of a subject of the first magnitude, involving the best interests of individuals, and the highest destinies of the republic. In a government like ours, which derives its moving impulse and its sustaining and restrictive energies from public opinion, in all its process through after time, it is impossible not to see, and seeing, not to feel, that public measures are to be conducted by enlightened wisdom, or abandoned to the profoundest error.—These principles, too obvious and important ever to have been overlooked, and perhaps too trite to need remark, naturally presented them-

selves to the minds of those who shaped the outline of our system of government.—Our statute book bears testimony, that, for forty years, the subject of education has engaged the attention of the legislature. It was not to be expected that a work of such magnitude could be accomplished in a day, even under the most favorable auspices—but, independently of inherent difficulties, Georgia has been embarrassed and retarded by obstacles peculiar to herself. But, instead of repining that we have done no more, may we not find cause of congratulation that we have done so much. The original endowment of a principal seminary and of subordinate branches, consisting of county academies, was a scheme, splendid in theory, and reflecting lasting honor on the state. If the enlarged and profound policy in which these measures originated, has not been carried fully into effect—if the patriotic views of its authors have not been completely realized, it will be seen that much, very much, has been accomplished, and that the deficiency is to be ascribed, in part, to that imperfection which is the common lot of all human contrivances, and, in part, to adventitious events, which could not be foreseen or controlled. Of the academies thus originally, but imperfectly endowed, by a thousand pounds each, in confiscated property, it is found that a very large majority are without funds. This has proceeded, in some instances, from the appearance of better titles to the lands so granted in endowment, and, in others, from the expenditure of the fund in the erection of buildings which have gone into decay for want of exertion and patronage; and, in others again, from the scarceness of the surrounding population.—Under these circumstances, it has been a result of mere moral necessity, that, while a few have prospered, the larger number have ceased to be useful. This, now, is the least promising part of our system of instruction. But who shall say that even from this, great benefits have not resulted to the people of this state—who shall say that these academies, though they may now be practically inoperative, have not been tributary to the counsels of the country, and assisted in kindling the flame by the light of which we are marching to high and commanding destinies. A deep sense of the necessity of education pervades the whole state. Speculative curiosity may enquire further into the causes, if she will!—The fact stands confessed, and offers gratulations to the mind of every statesman, and the heart of every patriot. Sure of her gains, learning must now increase her stock, and, being no longer liable to interruption, her advances must be progressive. The difficulties and delays which have been heretofore encountered, are retiring before the new and increasing resources of the country, and the invigorated influences of liberality and patriotism.—The great work was commenced in the year 1817, by the appropriation of the sum of \$250,000 for the encouragement and support of free schools. This is the corner stone of an edifice, which the people by their representatives, will hereafter finish.

In examining the means which may be made subservient to the purposes of education, your committee are of opinion that, at the present, they are not sufficient to carry into operation a regular system of schools.

To provide for the enlargement of those means, and to bring them into due proportion to the number and necessities of the population they are intended to benefit, will be all that can, or ought to be attempted. The original appropriation was directed to be vested in safe and profitable stock.

An investment of \$53,000 has been made in stock of the bank of Augusta, and of \$100,000 in stock of the bank of Darien. These investments have yielded an interest of \$33,036 66; so that this fund may be now estimated at \$283,066 66.

That this may be advanced to the sum of 500,000 dollars is a measure which your committee most earnestly recommend.

They are the more importunate, believing as they do, that the means are already within legislative control, sufficient for the effectuation of so important an object. But, for the greater certainty in this regard, your committee beg leave to furnish the estimates from which their conclusions have been drawn.

The fractions in the late acquired territory, at a reasonable estimate of *quantity*, will amount to 70,000 acres, and, upon a like estimation of value, will yield \$250,000. The Fort Hawkins' reserves are estimated at 20,000 acres, and at \$200,000. The fractions directed to be sold by act of the last annual session (including the amount of sales at Jefferson) are rated at \$100,000. Lots 10 and 100, received for purposes of education, are rated at 20,000 dollars, and land which may be disposed of at the Milledgeville reserve, at 20,000 dollars. Your committee are aware, that the fund for the internal improvement of this state, maintains a claim upon a portion of these resources, which cannot, and ought not to be resisted. Your committee will not attempt to resist it. On the contrary (although not entirely within their province), they recommend the advancement of this fund also to the sum of 500,000 dollars. Insisting, then, for the purposes of education, upon but the one half of the fraction fund, the one half of the Fort Hawkins and Milledgeville reserves, and upon the whole of the reserved lots, your committee fill up their contemplated appropriation and furnish an excess of eighty-eight thousand dollars. With this excess your committee propose to commence the regular endowment of county academies. Many of these have not, as yet, received the imperfect aid which was derived by some from the appropriation of confiscated property. Your committee consider it proper that the most destitute should be first provided for, but that every exertion and every resource should be directed to the suitable endowment and aid of all academies, dispensing their benefits within our borders, whether they be incorporated or not.

When the means herein before adverted to shall be realized, and the original appropriation advanced to the sum of an half million of dollars, the fund will, in its character and object, be measurably changed. Instead of being directed exclusively to the support and encouragement of free schools, it will embrace the encouragement of every institution within the state, which names the name of literature.

Your committee, therefore, beg leave to recommend the adoption of the following resolution:

Resolved, That it is expedient to advance the school fund to the sum of 500,000 dollars, and that the means and resources herein before adverted to, be, and they are hereby, set apart and directed to be applied to that purpose.

December, 1821.

Dickinson College.

Address delivered at the organization of the faculty of Dickinson college, at Carlisle, Penn. January 15th, 1822, by J. M. Mason, D. D. principal.

Gentlemen, of the trustees, and respected auditors,

I address you this day under circumstances of peculiar delicacy and difficulty. Dickinson college, which had long languished, and at last expired, is about being revived again. It comports with neither my inclination nor design, to institute insidious inquiries into the causes of its former failure. With great and good men you were favored in more auspicious times. For depth of learning, for accuracy of information, for splendour of wit, the name of Dr. Nesbit will long be remembered: and the memory of his successors, who followed him, although, it must be confessed, *haud passibus æquis*, will be revered and revered while piety is honored in Carlisle.

Many causes conspire to elevate and depress seminaries of learning, without great personal merit on the one hand or personal demerit on the other. Over the vicissitudes which have happened to this one, it would answer no good purpose to dwell; and it would savor too much of a vanity, which would but ill become those who are now entrusted with its management, to make boastful professions, and encourage high expectations of its future progress. Their labors have already been too highly appreciated; their powers have, perhaps, been too much applauded. The country has been taught to expect more from them than their talents and industry shall, probably, be found to justify; and they will have reason to think, themselves, happy above the common condition of men in their situation, if they shall not altogether disappoint the public anticipation.

The revival of a decayed institution, being much more difficult than the establishment of a new one, as the resurrection of a dead body is more arduous, and certainly more uncommon, than the production of a living one; and as all the success, humanly speaking, will depend upon the plan to be pursued, it may be due to the occasion to say a few words on a subject on which every body talks confidently, and few think correctly, while the million prate without thinking at all—the subject of *education*.

Education, if I mistake not, contemplates three objects, the evolution of *faculty*, the formation of *habits*, and the cultivation of *manners*.

1. The evolution of faculty—This, of course, implies, that there is faculty to be evolved. So that, like all crested power, education must have its materials from the hand of the Creator. Itself creates nothing. It only brings out qualities which pre-existed. It is a manufacture, and like all other manufactures, must have the raw material to work upon, or it can do nothing. Many well meaning people imagine that it is in the power of teachers to do every thing; and hard measure do they give them for not working miracles—for not converting a booby into a lad of genius. My friends, you must not expect that we shall do what the Almighty God has not done. That we shall furnish brains where our pupils naturally are without them. *Ex nihilo nihil fit*; whatever be the zeal and efforts of the instructor. If you look for *bricks*, your boys must bring the *straw*. "Pray sir," said a gentleman to another, who complained that his sons, who were, indeed, not of the race and lineage of Solomon, had not the advantage of early education, "pray sir, why cannot you give to those bricks," pointing to an opposite pile, "the hardness and polish of marble?" Because they are *bricks*, and work at them forever, they will be bricks still. Let a boy make the tour of all the colleges in the land, or out of it, if nature made him a dunce, a dunce he will remain; with the only difference of exchange.

ing his ignorance for *impertinence*. I know no more thankless and desperate experiment, than an attempt to educate the naturally stupid. It may well enough consort with the vocation of a pedant, who, provided he has a head to *hammer* upon, is well enough satisfied; but it is grief, and misery, and purgatory, to a man of any sense or feeling. Persons, with uncouth and rugged minds, would be employed far better in following the plough, drawn by their more intelligent horses, than in making themselves ridiculous, by endeavoring to obtain a liberal education. At the same time it must be acknowledged, that the seeds of natural ability are pretty equally distributed; and that fine minds are often lost for want of culture.

"Full many a gem, of purest ray serene,

"The dark, unfathomed, caves of ocean bear;

"Full many a flower is born to blush unseen,

"And waste its sweetness on the desert air."

Yes, among these lads who know no other use for their limbs, than felling the forests; and no other for their activity of mind and body than catching the wild turkey, the pheasant, or the deer, there are some master spirits who need nothing but cultivation to bring them forth into their peculiar action; who contain the rudiments of the statesman's skill and the patriot's fire, and may, according to their places, become the Washingtons, the Hamiltons, and the Franklins of future days. There are, among these simple rustics, men who, in former ages, would have.

"Wielded at will the fierce democracy,

"And fulmin'd over Greece to Macedon;

"And Artaxerxes' Throne."

O, could we but light upon these chosen spirits, these minds, which can balance themselves, and millions of other men! Could Dickinson present, among her sons, an array hostile, terrible, destructive, to all the legions of infidelity and misrule, she might well hold up her head amid the seminaries of the nation, and receive their homage, not less freely granted than richly merited.

But to return to the practical point. Faculty is not to be envolved without painful effort.

With those young men, who go to a place of education, as the other idlers frequent a watering place, where they may saunter away their time, out of their parent's observation, and have nothing to do but amuse themselves, and dash away as fine fellows, we wish and hope to have no acquaintance. The college ought to be, and by God's assistance *shall* be, a place of *work*. Let no idlers, no mimics, no mockeries of students, disgrace our classes or pollute our walls. Should such, unhappily, creep in, we trust that in a very short time we shall show them out. Our great business is to keep the youthful mind under a pretty constant, but not an unreasonable pressure—such a pressure as will insure tolerable accuracy. Let a lad 'get along,' as the phrase is, 'pretty well,' let his ideas on a subject 'which he is required to master, be only general and confused!—let his preceptor almost put the answer into his mouth, when he hardly knows which way to guess, and he is bribed to intellectual sloth. The season in which he should fix habits of discrimination, as well as of prompt acquisition, passes by—and though he bring to the college good native powers, he will leave it with a mind inert and unproductive. The idea of a medium between scholarship and no scholarship must be forever banished. The ideas of *doing* a thing, and doing it *well*, must be identified in the minds of both teachers and pupil—and the idea of doing a thing by *halves*, be equivalent with that of not *doing it at all*."

It is manifest that, upon such a plan, the pupil must, after all, be in a great degree his own instructor; and if he will not act upon this plan, all the power in creation cannot educate him. It is ours to watch, to guide, to direct him, to keep him from wasting the talents which God has given him. Further than this we cannot go. The main concern is still in his own hand. A habit of close application, which can be acquired only by his own industry, is the most precious fruit of a solid education. The quantity which a young man learns at college is next to nothing in the business of life. Let him get the habit of close attention, of painful and persevering application, and I will freely compound for the loss of all this college learning, and be little concerned, if I even knew that he should make no use of it during the rest of his life.

Yet, to this habit of painful and steady attention, a skilful instructor can contribute much. A great deal can be done by enforcing *punctuality*. By which I mean "that the performance of all exercises should be limited to a certain time, both sufficient and reasonable, and then be *rigorously* exacted. His pupils will shrink, they will solicit, they will complain. They may feel a momentary despondence, but there is in youth an elasticity which cannot be long depressed; and a generosity which the firmness of authority, tempered by a well adapted soothing, can work up to astonishing efforts." This is, therefore, a point upon no consideration to be given up. Labor will not be regular and ardent without the hard pressure of necessity. Let it be ascertained that there is no escape: that the thing *must* be done, and it *will* be done. Such an urgency upon the mind disarms temptations to trifling, and often to vice; keeps it bent on the matter and the period of duty; throws it into a strong action; and, perhaps, which is still better, into a sort of agony. Hence spring the finest and most magnificent effusions of human genius. There exists no more fatal enemy to diligence, improvement, and excellence, than the notion that "there is time enough."

II. I have said that education contemplates the formation of *habit*. By this I understand not merely intellectual habits, but those which entwine themselves with the moral character, and exert an influence upon all the dignity and happiness of future life.

It is no small libel upon some seminaries, and not the less so for being true, that youth there learn so many things which they should not learn, and that all faults are venial, if the understanding be well disciplined. I cannot conceive any greater opprobrium upon a seminary, than that a student should become vicious, as in general places of education mere reservoirs of immorality! What can be more shocking! To have them, on the contrary, *sources* of pure, refined, and exalted virtue, what can more contribute to the happiness of parents, to the peace of the surrounding neighborhood, to the glory of the land?

On this, which is a large theme, I shall briefly advert to two habits, which, though of apparently minor importance, mingle themselves with all the duties and occasions of life.

I. *Subordination to authority*. I regret to say that in all the departments of society, from the parental control to that of the government, this is held by our youth in too little esteem. Their ambition, very early evinced, is to be manly and to be free. They are, therefore, prone to spurn restraint, and to take their own way; esteeming that to be a noble spirit which acknowledges no superior; and that to

be true liberty which follows its own pleasure. That the prevalence of such a temper should produce wide spreading mischief, is manifest to every sound thinker; and often to the youth, themselves, when it is too late to undo the consequences. In the mean time it militates alike against the very constitution of our nature—against the most express commandments of God—and against those principles of action which, at all times and in every place, but, from peculiar causes, in the present day and in our own country, are necessary to the order of society and the happiness of individuals.

It militates against the very *constitution of our nature*. It is not for nothing; it is for benign and wise purposes, that our Creator has determined we should come into the world utterly feeble and helpless. The first friend whom the infant recognizes, is his mother. To her tenderness, her attachfulness, her patience, he, probably, owes more than to the kindness of any of his species. Under her gentle auspices the first buddings of his rational nature begin to unfold—To her is allotted the delightful province of teaching "the young idea how to shoot," of moulding the heart—of cherishing all its amiable and generous affections—of storing it with the "sweet charities" of life—of leading it in filial piety, to God the sovereign good. The rudiments of many a character distinguished for virtues, honored both on earth and in heaven, can be traced to the nursery and the lap. O, most charming employment! Rich compensation for the seclusion, the anxieties, the pains to which the sex is destined! O most refreshing abatement of the sorrows of that cup which has been assigned to woman for her priority in transgression!

Then comes the father, appointed by the divine mandate to be the head of the domestic establishment. His family is his kingdom; his children are his subjects; and he is the governor in his own house. These young subjects are submitted to his rule; he knows best, at least better than they, what is for their good. His authority is to be their reason for many, for most things, while they are quite young. And should they prove refractory, his superior physical force can, and should, constrain their submission. If, therefore, both parents perform their duty, their children, notwithstanding the dreadful drawback of human depravity, will generally grow up trained to obedience. Their habits will be incorporated into their character. They cannot become rude and disorderly without violating all the sense of decorum and gratitude; and breaking through, besides, all their early habits. The common sense of mankind is in accordance with all this. A rough, surly, ungovernable boy, there is nothing more common than to call an *unnatural child*. Thus are children, by the very condition of their being, made fit subjects for *order*, which "is heaven's first law." And he who requites his parent's care by vicious courses, by giving himself up to the service of iniquity, which is the essential *disorder*, though he should be one of the "fairest spirits" that ever "lost heaven," and should be plausible and seducing as Belial himself, deserves no other appellation than that of a *monster*.

The spirit of insubordination, moreover, militates against the *most express commands of God himself*.

His commandments are in unison with the constitution of his world. From the highest to the lowest, their tendency is to promote order. His very controversy with sin and sinners turns exactly upon this point, whether HE shall govern his own creation, or they shall do as they please: And, therefore, there is *no regulation of human*

conduct prescribed with more peremptoriness, and under greater variety of forms, than obedience to law. This broad injunction covers the whole ground of our social relations. "Children obey your parents in all things, for this is well pleasing to the Lord." The admonition is addressed to them when they are of years to reflect, and successfully to resist. No thanks to you, young people, if you obey when you cannot, and dare not disobey. Everlasting reproach be to your parents if they permit such early insubordination—but when you are grown to have some understanding of your own—when your physical strength enables you to defy both mother and father, then the voice from the excellent glory speaks unto you—"My son, receive the instruction of thy father," and adds, with unutterable tenderness, "despise not thy mother when she is old." So also with respect to servants—"servants be obedient to your masters according to the flesh." So likewise with respect to political government—"Put them in mind to obey magistrates.—Submit yourselves to every ordinance of man, for the Lord's sake, whether it be to the king, as supreme, or to governors, as unto those that are sent by him for the punishment of evil doers, and for the praise of them that do well."

A young man, therefore, who cherishes a temper of disobedience toward his superiors, plants himself down in a path where the machinery, established by his maker, must go, and will infallibly crush him to atoms.

Once more. This spirit of insubordination militates against those *principles of action* which, at all times and in every place, but especially in our own day and country, are necessary to the peace of society, and to the happiness of individuals. I shall waive the first part of this proposition for the sake of the second.

We live in a republican country. Its means of keeping up good government are entirely moral. The government of force it rejects as fit only for slaves. What then shall become of the public order, if our youth, who are shortly to be the governors, cherish a spirit of disorder? What of republican government and of our country, which has been called "the world's last hope?" Wherein shall we be able to compare with the governments of Europe, which we term despotic, if we ourselves exhibit a spirit of misrule, and hasten, by our own imprudence, the approach of that day when the coercion of the bayonet shall be necessary to bring us to our senses?

2. There is another habit of immense value in all the concerns of life—I mean the *proper employment and distribution of time*.

Of Time, more precious than rubies, and of which, of all the three score and ten years which form the limit of, by far, the greater portion of men upon earth, only the *present moment* is our own!

Young people always calculate upon futurity, and almost always neglect the passing hour; that is, they speculate upon that in which they have no interest, and squander away that in which they have. It would terrify men, beyond the power of expression, would they realize that the breath in their nostrils is all that they can claim! that the present pulsation of their hearts gives them no assurance that they shall have a pulsation more! Yet, upon this brittle, uncertain tenure hangs their computation for both worlds! How immense, then, the importance of learning to make the most of what they have! How can that be learned more effectually than by having the intervals of time filled up; and a constant pressure upon the mind to make every one of them

tell. Idleness is universally the parent of vice, and it is one of the most fruitful sources of juvenile corruption, that they have so many hours in which they have nothing to do. Your own famous Rittenhouse used to say that he once thought health the most precious of all human possessions! Is it not? exclaimed an astonished visitor; what then is it? "Time," replied the sage, "Time!" Instead, therefore, of having a great deal of time loose upon their hands, youth are most kindly and wisely dealt with by their having none, or next to none. And of how much value it will be, hereafter, to acquire the habit of being always busy, let those determine who are the most active and efficient men in the various walks of public and private industry.

3. I have said that education includes the cultivation of manners. I mean, by manners, all those lighter things in conduct, which, though they do not occupy the rank of *morals*, do yet belong to the embellishments and ornaments of life.

I hardly know how it has happened, that a "scholar" is become a common term for every thing unpolished and uncouth. Some men, indeed, by the greatness of their genius, and the immensity of their erudition, have attained a sort of privileged exemption from the common courtesies of society.

But the misery is, that the same exemption is claimed by those who have already rudeness, which they mistake for genius; and disregard of civility, which passes with them for erudition. Thus, if scholars are sometimes awkward and absent, every awkward inattentive creature calls himself a scholar. Just as, to use a comparison of the late Mr Gouverneur Morris, "because statesmen have been called knaves, every knave should, of course, suppose himself a statesman." Certain, however, it is, that no young men have enjoyed the reputation of being ill bred, unmannerly and vulgar, more than students of colleges. How is this? Is there any thing in the retreats of the muses to cherish ferocity? Do men necessarily become brutes, when the world gives them credit for becoming philosophers? Does the acquisition of science, especially moral science, involve the destruction of decency? So that, after a young man has left college, laden with all its honors, he has again to be put to school, in practical life, before he can be fit for the company of gentlemen and ladies? I blush to think that the place which, of all others, is supposed to teach a young man manners, is the *army*; that the kindness, the courtesy, the chivalry of life, should be associated with the trade of blood! That the pistol and the dagger should be the measure of morals and of politeness with *gentlemen*; and that, when they have trampled under their feet every law of God and man; and all that is dear to human happiness, and ought to be of high account in human society, is made the sport of momentary passion, they should still be allowed to pass for men of *breeding and honor*! "There is something rotten in the state of Denmark!"

The old adage, though not true in the extent to which it has been carried, is yet true in a great degree:

"Ingenus didicisse fideliter artes,
"Emollit mores, nec sinit esse ferus."

Let the "molles mores" of the sons of Dickinson, show that they have faithfully studied the "artes ingenuas."

This intellect, it is true, cannot be evolved; nor these habits formed; nor these manners cultivated without exact government. Let not my young friends be startled by the terms *exact government*. I do

not mean the government of brute force; nor the government of mere stern authority. I know that these methods have been sometimes tried, and have always failed; and I scruple not to say ought always to fail. Some men have imagined the youth of our country to be naturally ferocious, and have applied to them the same sort of means as they would have applied to an intractable beast. Some men have, again, supposed that there is no way of supporting their authority, but by distance, by austerity, by menace. I am neither disappointed nor displeased at their complete discomfiture. And I am free to confess that, if there be not something in the character and carriage of the governor, which, of its own accord, invites confidence and insures respect, all artificial substitutes will speedily prove their inefficiency.

With respect to the accusation which has frequently been brought against our youth, of their being more untoward and unruly than youth of other countries, at their age, and in their circumstances, I must take the liberty to call this a mere calumny. And must say further, that, when such conduct has been evinced, in any considerable degree, the fault has been, at least, as much in the governors as in the governed. I have been young myself, and have not forgotten my youthful feelings. I never could find in my heart, nor see in my fellows, the smallest disposition to act with any contumely towards a man who knew how to treat us as gentlemen; nor with any respect towards a man who did not. Let this rule be freely and fairly applied. I submit to all the consequences, and I think I may answer for all my colleagues. I am full aware of the peril of this declaration, and have no inclination to shun it. I can speak, and I hope may speak, on this occasion, without the charge of egotism, from my own experience. For more than twenty years I came into immediate contact with the children of a large congregation—for nearly fifteen years it was my lot to direct the studies of young men for the christian ministry—and, for five years of that period, I was called to the government of one of our most considerable colleges; and, in all the time, I never met with an instance of personal disrespect from a young person in any one of them. I have no fear of it now; for I cannot suppose that the youth of Dickinson will impose on me the necessity of making them a dishonorable exception.

What then is the government which ought to be pursued, and will perform such miracles among young men? One which is very plain, very simple, though unhappily not very common; and one which will carry the process through from a family up to a nation. The whole secret consists in being *reasonable*, being *firm*, and being *uniform*.

1. In being *reasonable*. Whatever you require must be such as cannot fairly be objected to—such as belong to the situation of your pupil, his duties, and his time of life. It is a very strong point gained to have his conscience on your side. You are not to demand what he is unable to perform. And if such happen to be his situation it must be altered accordingly. Great care must then be taken to see that your commands are reasonable—this matter being settled, I say,

2. That good government ought to be *firm*. Intreaty and supplication ought to have no more influence upon its proceedings, than upon the bench of the supreme court; and a youth should count no more upon its pliancy. I do not mean to assert that a teacher or governor of youth should never acknowledge an error; or that he should obstinately adhere to a thing because he has said or ordered it. He is

a miserable pauper whom the loss of a six pence will bankrupt; and, in intellectual matters, he is no richer who cannot afford to confess a mistake. He must not, indeed, do this often. But, occasionally, as *humanum est errare*, he may, by owning that he has been mistaken, doing it freely, doing it magnanimously, attach the affections of the youth very strongly to his person, and affirm his authority by those very means which would weaken it in an undecided and incapable man.

5. I add, once more, that a government, to be good for any thing, must be *uniform*. By uniform, I mean that it shall be habitually the same thing; that when you have its decisions at one time, you know where to find them at another; that it shall not be marked by whim; shall not be moved out of its course by gusts of passion; shall not, in a moment of good humor, allow to-day what, in a fit of ill humor, it will forbid to-morrow. Shall not, therefore, tease and vex the subjects of it by its fickleness and variableness. These should always know what to depend upon; and not see the elements of *order* disturbed and broken up by the prevalence of official *disorder*.

Against a government administered upon such principles, and marked in its several acts by courtesy, by kindness, by the frankness and dignity of gentlemen, I am persuaded that depravity herself could not muster up any thing like a formidable conspiracy.

Such, gentlemen, we profess to be our aim—and, in the prosecution of such an aim, we feel confident of your support—although we do not expect to have much, if any, reason to apply for it. We do hope, that an appeal to the understanding, the magnanimity, the conscience of the students, will effectually preclude these scenes of misrule, which have occasionally tarnished the history of other colleges—and that affection will do for us what the exercise of mere authority has not been able to do for others, attach the students more and more to the interests of their *alma mater*.

After all, young gentlemen, the students of this institution, her success is, in a great measure, in your hands. Have we deceived ourselves in expecting from you, a chivalrous sense of moral honor? a delicate, noble sensibility, to character, and all the decencies and elegance of character? a high respect for order and decorum, even in slighter matters? an ardent love of your studies, and corresponding industry? If we have not; if our expectations are well founded; if you shall bear us out in our hopes respecting you; then shall our efforts be animated, our labors sweetened, our success cheering; and Dickinson college revive from her desolations, a phoenix of renewed life, and spreading her lustre over your county, your state, your country—be a source of mild and enduring glory in ages to come.

University of Virginia.

To the president and directors of the literary fund:

In obedience to the act of the general assembly of Virginia, requiring that the rector and visitors of the university of Virginia, should make report annually to the president and directors of the literary fund, (to be laid before the legislature at their succeeding session), embracing a full account of the disbursements, the funds on hand, and general statement of the condition of the said university, the said rector and visitors make the following REPORT:

At their meeting in April last, the attention of the visitors was first drawn to the consideration of the act of the late general assembly, which authorized the literary board to lend, for the use of the university, a further sum of sixty thousand dollars from such monies as should thereafter come to their hands: and taking such view as could then be obtained of the expenses already incurred for the lands, buildings and accessory purposes, for the accommodation of the professors and students of the university, so far as already completed, or in a state of advancement, and the further expenses still to be incurred necessarily to complete those accommodations, they concluded it to be for the benefit of the institution to obtain the said loan. Application was accordingly made to the literary board; a sum of 29,100 dollars was obtained, and the further sum of 30,900 dollars is expected, so soon as the receipts of that board shall enable them to furnish it.

In the mean time the board deemed it incumbent to obtain, as early as possible, a correct statement of the actual cost of what was already done, and a probable one of that still to be done, estimated according to the experience now obtained. They therefore instructed their proctor to apply himself assiduously to the completion of the buildings generally, to a settlement of all accounts of the actual cost of those finished, and an estimate, according to that, of what would be the cost of those still to be finished. The completion of the buildings of accommodation, which are in four rows of about 600 feet in length each, as may be seen by the plan accompanying this report, has been pressed with as much effect as could be expected; inasmuch that there are now complete, and in readiness for occupation, six pavilions for the accommodation of the professors, 82 dormitories for that of the students, and two hotels for their dieting; and the others will all be completed in the ensuing summer. The accounts for the construction of those already finished have been actually settled; and the probable cost of the unfinished has been estimated according to the rates which the others have been found to cost.

The following is a summary view of the actual expenditures of the institution, from the beginning, of those yet to be incurred to its completion, and of the funds received, and still receivable, as nearly as can at present be stated:

	Dolls.	Cts.	Dolls.	Cts.
6 Pavilions finished, have cost	52,713	76		
17 Capitals for them, expected from Italy, are to cost by contract	2,052			
2 Hotels finished have cost	8,215	82		
82 Dormitories finished have cost	52,997	74		
			113,927	32

The following are nearly finished, and are estimated at the rates the others have cost, or at prices actually contracted for:

4 Pavilions	33,563	15		
4 Hotels	16,000			
27 Dormitories	11,952	21		
			61,515	36
Back yards and gardens			1,500	

Making the whole cost of the four rows of buildings of accommodation 176,912 88

The purchase of 245½ acres of land and the buildings on them, past compensations to the bursar and proctor, hire and maintenance of laborers, and all other accessory and contingent expenses,

24,607 77

Making a total for the lands, buildings, &c. complete,

201,550 45

To which add for interest on the loans, calculated to Dec. 31, 1821,

6,160 25

207,710 70

The funds applied and applicable to these expenditures, are:

The sale of glebe lands, 3,104, 09

A state certificate, No. 32, bearing interest, 176 77

Annuities of 1819—20—21 45,000 00

Loan of 1820 60,000 00

Loan of 1821 60,000 00

Subscriptions received to Nov. 27—21 24,676 37½

Balance of subscriptions (due 19,668 95, of which suppose 3000 lost) 16,668 95

209,626 18

From this would result a small surplus of 1915 48

207,710 70

According to the proctor's accounts for the present year (which, with the bursar's, are herewith enclosed, and) which contain minuter specifications of the expenditures;

To finish and pay for the whole of the buildings of accommodation, not yet finished and paid for, will require a further sum to be placed at his command of 53,494 79

The resources for this are
The balance of the loan of 1821, still to be received 30,900 00

The balance of subscription monies still due and separate 16,668 95

Cash in the banks undrawn, as per bursar's account, 2,501 23

Cash in the bursar's hands, as per his account 447 84

State certificate, No. 32, 176 77

From which would result a deficit, to be supplied from the annuity of 3,000 00

53,494 79

So far then as can, at present, be seen, (and we are now so near the end of this work, that there is room for little error), the funds received and receivable, will, within a small fraction, pay for the lands purchased, for the whole system of buildings of accommodation, and all necessary expenses. The building for the library, comprehending halls, indispensably necessary for other public purposes, and estimated by the proctor according to past experience to cost 46,847 dollars, will remain to be erected from the same fund of the annuity.

The anticipations of this by loans for expediting the other buildings, will have weakened it, by nearly one half its amount, by the sums of interest to which it is subject; and will consequently retard the commencement of its applications to the discharge of the sums borrowed, by annual instal-

ments, if such should continue to be the will of the legislature.

The buildings of accommodation will be finished, as before stated, in the ensuing summer, and will constitute the whole establishment, except that of the library. With the close of these works the accounts of their costs will also be closed. These will be first examined by a committee of the visitors, that nothing may enter into them not sanctioned by the board. They will then be finally submitted to the accountant of the literary board for the assurance of the public that the monies have been correctly and faithfully applied.

In the course of these works, as is unavoidable perhaps, generally in those of considerable magnitude, there have occurred instances of monies paid, not in direct furtherance of the legitimate object. The first was the case of a contract by the visitors of the Central college for a professor, while acting for that as a private establishment, and under an expectation of its immediate commencement. But that institution being afterwards merged in this of the university, and the enlargement of the plan occasioning that of the time of its commencement also, it became important that that contract should be rescinded. This was done on a just and reasonable compromise, and indemnification of \$1500. Another instance was the importation of a foreign artist for carving the capitals of the more difficult orders of the buildings. The few persons in this country capable of that work were able to obtain elsewhere such high prices for their skill and labor, that we believed it would be economy to procure an artist from some country where skill is more abundant, and labor cheaper. We did so, but on trial, the stone we had counted on in the neighborhood of the university was found totally unsusceptible of delicate work: and some from a very distant, but the nearest other quarry known, besides a heavy expense attending its transportation, was extremely tedious to work, and believed not proof against the influences of the weather; in the mean time we had inquired and learnt that the same capitals could be furnished in Italy, and delivered in our own ports for a half or third of the price, in marble, which they would have cost us here in doubtful stone. We arrested the work here, therefore, and compromised with our artist at the expense of his past wages, his board and passage hither, amounting to \$1890 56 cents.—These are the only instances of false expense which have occurred within our knowledge.

The two pavilions and their adjacent dormitories, begun and considerably advanced by the authorities of the Central college, were contracted for by them, when all things were at their most inflated paper prices, and therefore have been of extraordinary cost. But all the buildings since done on the most enlarged scale of the university, have been at prices of from 25 to 50 per cent reduction: and it is confidently believed that, with that exception, no considerable system of building within the United States has been done on cheaper terms, nor more correctly, faithfully, or solidly executed, according to the nature of the materials used. That the style or scale of the buildings should have met the approbation of every individual judgment, was impossible from the various structure of various minds. Whether it has satisfied the general judgment is not known to us. No previous expression of that was manifested but in the injunctions of the law, to provide for the accommodation of ten professors, and a competent number of students and by the subsequent enactments, imply-

ing an approbation of the plan reported by the original commissioners, on the requisition of the law constituting them; which plan was exactly that now carried into execution. We had therefore no supplementary guide but our own judgments, which we have exercised conscientiously, in adopting a scale and style of building believed to be proportioned to the respectability, the means, and the wants of our country, and such as will be approved in any future condition it may attain. We owed to it to do, not what was to perish with ourselves, but what would remain, be respected, and preserved through other ages. And we fondly hope, that the instruction which may flow from this institution, kindly cherished, by advancing the minds of our youth with the growing science of the times, and elevating the views of our citizens generally to the practice of the social duties, and the functions of self government, may insure to our country, the reputation, the safety and prosperity, and all the other blessings, which experience proves to result from the cultivation and improvement of the general mind. And, without going into the monitory history of the ancient world, in all its quarters, and at all its periods, that of the soil on which we live, and of its occupants, indigenuous and immigrant, teaches the awful lesson, that no nation is permitted to live in ignorance with impunity.

TH. JEFFERSON, Rector.

Nov. 30, 1821.

Penitentiary System.

STATE OF NEW YORK.

IN SENATE, MARCH 5.

Report of the committee on the criminal law, and the employment of convicts on the canals.

Mr. Hopkins, from the select committee to whom was referred so much of the speech of his excellency the governor, as relates to the criminal law, and the employment of convicts on the canals, reported as follows, to wit:

That the particular points and questions in the criminal law, which his excellency has mentioned, and to which, therefore, the attention of your committee has been required, appear to be the following.

1. Our experiment of a mild system of punishment, intended to prevent crimes and reform criminals, and the result of that experiment:

2. The doubt expressed whether we have not, in our anxiety for reformation, neglected the superior importance of prevention:

3. The improvements suggested to be made by the moral classification of offenders; by the adoption of solitary confinement; by the establishment of separate prisons for those who are doomed to severe punishment; by a graduation of punishments in solitary cells, and finally by abridging the duration of imprisonment.

The consideration of these subjects has led the committee to examine our whole system of punishment, whether considered as a means of prevention or of reformation; and the question of imprisonment, in particular, has led them to consider the prisons, and the means and objects of confinement in them, with the actual treatment of prisoners, and its effects; whether we have such prisons as are sufficient and proper; if not, whether we can and ought to build others; what will be the expense, and what ought to be the discipline observed in them; finally, what other punishments can, with a

proper regard to the state of public opinion, be now adopted.

For the more perfect understanding of these subjects, it seemed useful to examine the authentic history of our state prison system from the beginning, as it is contained in our legislative acts and reports, and in the reports and proceedings of successive legislative committees and special commissions, and in the reports of the treasury, and the detailed statements of the inspectors and officers of the prisons. Such documents, more especially for the last twenty years, have been examined by the committee, who are of opinion that they offer many results which cannot fail to be instructive.

It appears that since the year 1796, the whole amount of our appropriations for the building and repairs of the two state prisons, has been 535,189 83
And the total amount of expenditures for the support of the prisons, and incidental expenses, is 977,732 64

Making in all, \$1,512,922 47
The total number of convicts has been 5,069

Of which number more than half have been pardoned, that is 2,819

Of the whole number of convicts, considerably less than one-half are natives of this state and nearly one-third are from foreign countries; the rest, of course, are from the U. States.

The average number of prisoners, from the returns of the last six years, is 745. By the last returns the total present number in both prisons is 817. which is larger than that of any former year.

The actual expense of the criminals maintained in these prisons has been estimated, according to an average of the last six years for the prison in New-York, and of three years for that at Auburn, [the latter being a recent establishment,] and the committee calculate it as follows:

The New-York prison and repairs has cost \$253,346 00
Auburn do do 281,843 83

535,189 83

On which sum, to cover interest, repairs and insurance, the charge ought to be 10 per cent. per annum: say 53,518 93

Average expense per ann. of transporting convicts to prison, 9,704 00

do. the expenses of sheriffs, 9,250, suppose half for this object, 4,625 00

do. do. of district attorneys, N. B. As they have been paid the last three years by the counties, the average of those years is taken in a due proportion to the three previous years, compared with the sheriffs' bills, \$13,933—suppose half for this object, 6,966 50

Salaries of officers at the New-York prison, 12,989 67

Expense of guard at do. 7,531 33

All other expenses, [under this head come support and clothing,] 22,948 28

Collective amount of the three last items at Auburn, on an average of three years, 13,187 74

Total, 142,471 50

Which, divided by 745, the average number of prisoners, makes about \$177 81 cents per annum, as the expense of each prisoner.

For a few years after the first establishment of

Our state prison, the institution seems to have realized all the most sanguine hopes of its humane projectors. The name of it inspired some dread among criminals, and its government was conducted with a degree of zeal and attention, which often gives flattering success to new institutions, but which can hardly be expected to last always. Accordingly, in the report of 1803, we find that the labor of the convicts came within a small amount of the expense of their sustenance, and the inspectors express an opinion, "that no penal system in any state was less expensive, or more fully answered the intended purpose." But this report contains the first ominous intimation that "there will soon be a want of room."

For eighteen successive years since that time, the state prison reports exhibit a distressing struggle against embarrassments and difficulty, of every kind! They state the overwhelming number of convicts; their profligate and abandoned character; the impossibility of making their labor maintain them; pecuniary embarrassment in the affairs of the prison; enormous demands upon the public treasury, without the intermission of a year; new and fruitless endeavors to make labor productive; the fearful progress of the prisoners in corrupting one another; and, finally, fires and dangerous insurrections. The committee, in order to justify this general description, crave leave to go a little more into detail, and to quote particular examples, to justify their assertions from the official reports contained in your journals.

In 1804, the inspectors and agent mention a destructive fire; losses by bad debts; pecuniary embarrassment, and a balance for the support of the prisoners, of eleven thousand dollars beyond the produce of their labor.

In 1805, the number had greatly increased; the prisoners had cost more and earned less, than the preceding year, and of course the balance against their labor was increased.

In 1806, the officers complain that more room will be wanted. They state that the propensity to vice is much increased by indiscriminate confinement; and that "lessons of infamy," are inculcated and little reformation is seen; and they recommend that no person sentenced for less than five years, be sent to the state prison.

In 1807-8, the vices of the system seem to have developed themselves more fully. The number of prisoners was so great as to crowd the hospital with sick, and more than 20,000 dollars was wanted, beyond their labor, for their support. The report suggests the benefit of solitary confinement in the several counties, and complains of the great number of convictions which were actually cases of second offences, though not known to the court to be so at the time of trial. About this time, necessity introduced the regular practice of granting pardons to so many, as to make the total number of discharges equal to the commitments, and this has continued to the present time.

In 1809, was the first suggestion of another state prison in the interior of the state.

1810, the agent complains that the prisoners are so numerous that they cannot be employed to advantage; and yet in this year 130 pardons were granted; the number of convicts received, was 171.

In 1812, the report pressingly urges the evil of crowding so many convicts together; and remarks that the oldest and greatest offenders corrupt and demoralize the younger, and again urges the necessity of another state prison.

In 1813, another fire.

In 1814, it is stated many are committed for second and third offences; an account is given of the alarm of the citizens at the semi-annual visit of the judges, when forty or fifty of the best prisoners are usually recommended for pardon, and of course sent back into society.

In 1815 and 1816, the number of convicts continued to increase; and there is renewed urgency to have the bounds of the prison enlarged or a new one built. A suggestion is made, that there is no competent punishment for prisoners setting fire to the prison: and discouraging proofs are given of the hardened character of the convicts.

In 1817, was laid before the legislature the report of Messrs. Burt, Radcliff and Taylor, who, by a special act, had been appointed commissioners to examine into the concerns of our state prison, with liberty to visit that of Philadelphia. Your committee can do no more than to quote a very few of the observations contained in that important and very able report.

Those commissioners represented the want of room, and the consequent necessity of pardon, as one of the great evils of the establishment. They consider 450 as the greatest number that can be profitably employed at labor in the then prison.— They mention the striking fact, that of all those who had been committed for second and third offences, about two thirds had been discharged from their former sentences by pardon, and they admit that the system had failed of effecting the *great object chiefly in view*. They describe the prisoners as mutually corrupting and being corrupted by each other, and as leaving the prison more confirmed in their vicious propensities than when they entered it.

In 1818, the annual report avows that the system is "far, very far, from answering the end intended;" that humane and mild treatment has seldom reclaimed the vicious, and that we must have a better system, "not a mere plan of good living and of light punishment, but of dread and terror." The prisoners are described as the most "abandoned and profligate of mankind," and it appears that of such persons, the governor was compelled to pardon and send out about 280, in order to make room for 300 new comers. This year there was a dangerous insurrection, and a great amount of property destroyed.

In 1819, it appears that the late law for punishing offenders within the prison by whipping, had been applied in a few instances with salutary consequences.

1820, Messrs. Morse, Cooper and Campbell, who, by a joint resolution of the houses, had been appointed commissioners, presented a report upon the state prison, abounding in valuable facts and observations, which your committee have freely made use of. These commissioners admit that from some cause or other, "penitentiary punishments have entirely failed of producing the results originally anticipated from them;" and that crimes have multiplied to an alarming degree.

The prison reports of 1820 and 1821, do not vary essentially from all the foregoing, in their general character. The hope is occasionally and benevolently expressed, that the system will hereafter be so perfected as to answer the intended purpose.— But the obvious fact that it has not yet done so, is as plain from the report of 1821, now on the table of the senate, as from any previous document. In that paper the convicts are described as "desperate docs," with hearts "steeled" to moral feeling; and

of such prisoners, 240 have again been let loose upon society the last year by pardon.

It is just to observe that if the present system has failed of its object, that failure has not been for want of zeal and effort in the administration of it, directed by the wisdom and watchful care of the public councils for twenty-five years. It has been governed at different times, by persons of different religious denominations, and opposite political parties, and by successive "agents," all of whom, in turn, have been urged by motives of benevolence or rivalry, or the hopes of applause and advancement, to give it the utmost possible success. The history of their transactions is, for the most part, only a history of mortifying failures and disappointed hopes.

Neither have any exertions been omitted to remedy the defects, which, from time to time, have been observed, and to furnish motives to the prisoners for reformation. Expensive establishments have been formed for their employment at labor, by which they would acquire the means of an honest livelihood. Schools are established in the prison; a very worthy and pious clergyman is employed for their religious instruction, and rewards are reserved for the most deserving, derived from part of the avails of their labor. Classifications have been introduced according to their supposed moral characters; and finally, laws have been passed to exclude from the prisons, all who are convicted of small offences. Still the number of convicts is greater now than at any former period, and they are described in the official report as "*desperadoes*," and "*the most abandoned and profligate of the human race.*"

Upon the whole view of our state prison system, as *hitherto conducted*, your committee are compelled to adopt the conclusion, that so far as reformation is concerned, it has wholly failed; and not only so, but that it operates with alarming efficacy to increase, diffuse, and extend the love of vice, and a knowledge of the arts and practices of criminality.

In saying this, the committee do not mean to question but there may have been individual instances of persons who have led regular and moral lives after having been in the state prison. Whether any convict of a character habitually depraved, has, after his discharge, afforded evidence of a virtuous life, they have not learned, nor do they consider such questions (though sometimes urged) as important upon the present occasion. For that such cases, if they have existed, are not frequent enough to become an object of attention in the enactment of our penal code, is proven by all our experience; and upon *theory*, it would seem most unlikely that a thief, a counterfeiter, or a house breaker, should be reformed in consequence of being shut up in a spacious building, in ease and comfort, and in the society of many other thieves, and counterfeiters, and house-breakers. That a whole community of intelligent men should have expected such a result, exhibits one of those instances of public infatuation, of which examples are not wholly wanting, but which do not the less excite our wonder when the illusion is past.

The question how far this system has operated by way of *prevention*, is in a great measure included in, and answered by, what has already been stated. But as it is not unfrequently urged, that it has at least the praise of shutting out from society a large number of criminals who would otherwise be preying upon community, the committee think it right to go into some calculations, which will

show, as they think, that the number of convicts at liberty is much greater than that of those who are in confinement.

The entire number of prisoners who have been discharged by pardon, was before stated at 2,819. But of those, it is obvious that many would have been discharged by the expiration of their sentences, and that from the residue a certain deduction must be made for deaths.

The annual returns do not furnish the elements from which an *accurate* calculation can be made of the number of living convicts, according to the principles in use among those who calculate the probable duration of human life. But the committee have attempted to find the probable average time of the commitments for each year; in doing which, they allow twenty years each for the complement of the lives of those prisoners who are committed for life.

They further find, on an estimate of the deaths for twenty years past, that the average number of deaths is one to every twenty-seven prisoners each year, or a little less than 4 per cent.

Estimating, therefore, the commitments of each year by their average duration, and deducting deaths according to the aforesaid ratio, the committee calculate that the number of prisoners, who ought to have been in confinement on the 31st of December last, would be 2,080, and as no more than 817 were, in fact, in prison, it would follow that more than 1200 are at large. That is, for two convicts who are in confinement, there are *three* at liberty, who ought to be in prison, if there were prisons to contain them.

But to show more clearly the increase of our criminal population, it may be interesting to estimate, if possible, what would be the number if the same crimes were now punished in the state prison as formerly. In 1807, the inspectors stated that out of 190 committed, 114 were for small offences, and such as have not of late years, been the subject of imprisonment in that prison. This statement is the only one which the committee have found upon the subject. But if the number is now supposed to be in the same proportion as then, to higher offences, we shall find an additional corps of 1200, who are petty offenders; and the whole number of convicts would be about 3,300. But in 1807 the number of prisoners actually confined was 430, so that the increase since that time, is more than 700 per cent. while our population has only increased in the ratio of—

But without including the smaller offences, it is obvious that, upon the present system, the punishment of those who have been actually discharged by pardon for want of room, would now require two more state prisons, at an expense of half a million of dollars, besides an annual appropriation of more than \$100,000, in the whole, for their support.

In justice to our own state it is proper to observe, that more than half of our convicts are persons who come from foreign countries and neighbouring states; many of them probably attracted by the hopes of abundant plunder, and some no doubt, by the good reputation which our state prison cannot fail to have acquired in the community of felons.

What is the annual expense of supporting the convicts who are in prison, has been already stated. But if we turn our attention to those who are out of prison, and consider in what various ways they distress the community, by their thefts, forgery, fraud, and violence in all their forms; harassing the toils of honest industry, and exhausting its earn-

ings; rendering property insecure, and protection expensive; we must admit that the tax paid for the support of the prisoners, is one of the least evils of the extension of criminality.

Facts that are public and notorious confirm the committee in the view they take of this subject. Our newspapers teem with relations of crimes of every dye. Our cities, villages, and manufactories are frequently in flames; and to find secreted combustibles is no uncommon occurrence. It is understood that connected bands of horse stealers and counterfeiters, extend from Canada through several parts of the union. The mails of the United States no longer afford security. Felonies that affect the stability of our monied institutions are becoming common; and the forgery of bank paper is an art so perfected as to deceive the banks.

The committee hesitate not to state their opinion, that a government which fails to repress such a course of criminality, fails also in its highest duty—that of protection. They are equally clear in the opinion, that, after having for twenty-five years employed our sympathies and resources for the comfort of the criminal part of society, it is now our duty to look to the innocent; and that the industrious classes preyed upon by the convicts who are out of prison and taxed for the support of these who are within, and suffering from the insecurity of all their means and earnings, are now fit objects of our care.

In considering a system of punishments, the committee have had no doubt that the question ought to be simply "what will be most effectual for the protection of society under the given circumstances?" Punishments too severe are to be equally avoided with those that are too mild, for they equally fail of the object. But the committee assert the right of society to protect itself by any such means as may be most efficient; and they deny that the criminal who makes war upon mankind, has, in this respect, any rights which are not subordinate to the higher rights of the injured community.

Punishment is not for revenge; and, rightly considered, it has less reference to the subject of it than to the spectators. That punishment would be most proper, which, with the least suffering and pain inflicted upon the recipient, should make the strongest impression upon the public mind.

But to make any impression upon the minds of either convicts or the public, there must be suffering; and to make any adequate impression, such suffering as will excite feelings of terror; and the highest and best purpose of punishment is only there well answered, when the mode of punishment inspires the minds of observers, especially of youth, with a salutary horror of the consequences of criminality.

But whatever may be the individual opinion of the committee, they have borne in mind that nothing can be made effectual, which the public sentiment does not sanction. They have further considered the necessity of putting an end to that wasteful course of expenditure, which for so many years has exhausted the resources of the state upon prisons and prisoners; and they have concluded that more, perhaps, cannot usefully be done at present, than to begin a reformation which future legislatures may in their wisdom perfect, as time and experience shall enable them.

The most important alteration which they have to recommend, is the abandonment of labour as an engine of punishment, and the substitution of severe but short confinement, in cells, with solitude, silence, darkness, and stinted food of coarse quality. With the abandonment of labor in any prison,

may be give up a vast and expensive list of shops, implements, inventories of stock and bad debts, with the expenses of a guard; a separate agent may be dispensed with, and a diminution of, perhaps, half, effected in the expenses of rations for the prisoners. The necessary expense of keeping 1000 prisoners in one prison, will then be a small amount for each.

On the subject of expense, however, the committee have gone into some calculations, the results of which, they hope will not be too prolix to be submitted to the senate.

According to the report from the Auburn prison, the committee understand that, down to the last year, there have been constructed 285 cells for solitary confinement, at an expense of about \$22,000, making something less than \$80 for each cell.

An eminent master builder has been engaged to make an estimate of the expense of building cells in the yard of the state prison at New-York, and he has furnished the committee with a very detailed and satisfactory calculation, shewing that a block of 144 cells will there cost about \$24,000, or \$166 to each cell.

It appears by the Auburn report, that the rations for the prisoners, are furnished at 4 1-2 cents each, (not including the hospital,) and that they consist of a full supply of good provisions, equal to the army rations. Those at New-York are now furnished at six cents each, and the committee presume are equally sufficient in quantity, and good in quality.

It is believed to be no unreasonable estimate, if we suppose that prisoners in close confinement, without exercise, and intentionally stinted as to food, (and that food of coarse quality,) may be fed at half the above prices respectively. The experiments of count Rumford upon the economy of food and preparation would tend to the same conclusion.

In solitary confinement there need be very little or no expense for clothing; in a great majority of cases their own clothing will be sufficient, especially as the time of imprisonment is intended to be short.

But the greatest saving in both prisons will be in dispensing with the guards, which, in the two prisons together, now cost about 10,000 dollars annually.

Assuming these data, therefore, the committee offer the following calculation of the expense of keeping 500 prisoners in solitary confinement in New-York, and 500 more at Auburn:

<i>Estimate for 500 prisoners in New-York.</i>	
182,500 rations, at 3 cents	5,475 00
Hospital, suppose	1,000 00
Fuel, suppose	1,000 00
<i>Officers, viz.:</i>	
1 Agent and keeper	1,400 00
1 Clerk	600 00
Deputy-Keeper	600 00
12 Turnkeys, 500	6,000 00
Board of Physicians	250 00
Chaplain	250 00
	9,100 00
	16,575 00

Which gives to each convict an annual expense of	33 15
Add for the interest of the cost of a cell, at 7 per cent.	11 62
Making for each prisoner, which, however is exclusive of the fees of sheriffs and expenses of prosecution, and of the county expenses before conviction,	\$44 75

Estimate for 500 prisoners at Auburn.

182,500 rations, at 2 1-2 cents	4,106 25
Hospital, suppose	1,000 00
Fuel, suppose	500 00
<i>Officers, viz.</i>	
Agent and keeper	1,000 00
Clerk	600 00
Deputy keeper	750 00
12 Turnk-ys, at 350	4,200 00
Board of Physicians	100 00
Chaplain	150 00
	-----6,800 00

Which makes for each prisoner,	24 81
Add for interest of the cost of a cell, at 7 per cent.	5 60
Total amount of expense of a prisoner at Auburn, exclusive of the fees of sheriffs and expenses of prosecution, and the county expenses before conviction,	-----30 41

From this statement it would appear that the cheapness of living makes a difference of about one third in favor of Auburn; and it is also obvious, that if all our prisoners could be confined under the care of one set of officers, it would produce a further saving. But to countervail that saving, the expense of transporting the convicts (the greatest number of whom always come from the city of New-York,) must be taken into the account. Upon the whole view of this subject, therefore, the committee do not doubt but it will be the permanent policy of this state to preserve a prison in or near New-York.

There will always be a certain number of criminals whose arts and practices are so dangerous to society, that they ought never to be left at large. But if such convicts are imprisoned for life, it would be too vindictive to submit them to the severe treatment intended for other criminals, whose term of confinement would be shorter. They ought, therefore, to be allowed labor, but that labor should still be *severe*: and even then it should be allowed only as a favor, and upon the strict condition of their earning their subsistence.

Should the system recommended by your committee, go into operation, they hope and believe that the number of these prisoners for life will not be very large.

As the system so long and fully established in the New-York prison, will [with some increase of severity] answer the intended purpose, the committee think that the present manufacturing establishments in that prison should be continued. But they beg to be understood as recommending this, merely as a necessary *alleviation* of imprisonment for life, and not at all as partaking of the nature of punishment.

At the same time the committee think it desirable, that, so soon as the funds of the state will allow it, there should be built in the New-York prison a block of about 200 solitary cells, which may be done, either by taking out the floors and partitions in some part of the old prison, and replacing them with cells, or by a new building. So soon as this system shall have gone fully into effect in New-York, and the number of working prisoners shall have become considerably reduced, the committee suppose that the guard will be dispensed with, which will make a saving of nearly 7000 dollars a year. But as an additional security, they would make it *death* for any prisoner who is allowed to work, to break the prison, or escape from it.

On the whole, therefore, the plan which the committee would respectfully recommend to the consideration of the legislature is, that prisoners from any part of the state may be sent to either prison; those for life to New-York, at labor; those for limited terms of confinement, to the solitary cells, and of course to Auburn, except so many from the southern counties as there may be solitary cells for in the New-York prison.

As to the economy of this proceeding, there is one other consideration which the committee wish to present. It may be seen from the foregoing statements, that the average number of prisoners for six years past being 745, and the average expense of transportation \$9704, it follows that the average of expense upon the prisoners is at the rate of about thirteen dollars each, per year, for carrying them to prison. Now the interest of the money necessary to build a solitary cell, even in New-York, has already been shown to be but \$11 62. The committee believe that the expense of transportation may be diminished, and they intend to propose it. But on the other hand, if the terms of imprisonment shall be shortened, and numbers of those who are now at large shall be returned for second and third offences, as may be expected, it will probably follow, *at first*, that the number to be transported will be increased.

If this should be so, it would furnish an additional motive on the source of economy, for building the cells in New-York as soon as possible; because the annual expense of transporting the prisoners will still farther exceed the annual interest of the cost of cells for them. And the committee think it certain that the annual expense of transportation will be increased, till the efficacy of the intended system shall be felt in deterring criminals from crimes, or driving them off to other states and countries, from whence the major part of them came.

On this subject of expense the committee beg to be indulged in making another remark, to show how considerable, even at the lowest, is the cost to which a felon subjects the state.

The foregoing estimate for the annual expense of a prisoner in a solitary cell, in the New-York prison, is	\$44 75
Do. average of transportation,	13
Do. of other expenses by sheriffs, not susceptible of exact calculation, but suppose half of the last	6 50
Do. of district attorneys for prosecution, by calculation, according to the average of the last six years	18 00
Expenses to the county before conviction, including the charges of commitment, board in jail, compensation to poor witnesses, &c. &c. These charges are not susceptible of any calculation, but can hardly be conjectured to be less than	20 00
	-----102 25

Then it appears that every profligate who chooses to commit a crime, can subject this community to a taxation of more than 100 dollars for his support a year; and that our 800 convicts, whose support now comes to nearly 200 dollars each per annum, will still, after every practicable diminution of expense, cost as much money as would prepare 800 of the youth of our country for lives of public usefulness, by an education at the colleges.

The contemplated alteration in the method of punishment will require that laws on that subject should be re-modelled; and the committee think

they may be greatly simplified. They cannot perceive the reason of the many and various grades of punishment which we have enacted, when probably no human discernment can so graduate the turpitude of crimes, as to show why any given offence among so many, should receive such or such a particular measure of infliction, rather than one a little greater or a little less.

The committee, therefore, propose that for crimes above petty larceny, not punishable with death, there be but three grades of punishment; and accordingly they throw all offences, punishable by the state prison, into three classes, namely—the *highest*, and *lowest*, and an *intermediate class*, between those extremes.

They propose, also, that there be three grades of punishment in the cells, as particularly specified in the bill they intend to offer; and that the court passing sentence have power, according to the nature and aggravation of the case, to subject the offender to either grade of punishment, but not to control the *duration* of it, which is always to be fixed within certain limits, by law.

They propose farther, that convicts in the New-York prison, who are permitted to labor, should be subjected to a more rigorous discipline, with coarser food, but in plenty, till the net income shall meet the expenses of food and clothing.

The committee are fully persuaded that this object is easily attainable, and they recommend that it be imperatively required. And they here observe that a further reason for keeping all the laboring convicts in New-York is, that food of a coarse quality can always be there procured at a very low rate, whereas in the country no such selection of food can be made.

The committee recommend that no manufactures be carried on in the Auburn prison, unless perhaps to furnish the convicts with clothing.

They also propose that the laws should be so amended that convicts may be sent from any part of the state to either prison, according to the intended mode of punishment, and having reference also to the room which either prison may, from time to time, afford; and the better to enable the courts to know the state of the prisons in these respects, that returns of the number of prisoners, and of vacant rooms and cells, be furnished regularly to the clerks of courts.

It is hoped that these regulations if adopted, would enable the courts so to regulate the *place*, *duration*, and *severity* of punishment, that pardons will not become necessary for want of room in the prisons.

In pursuance of these ideas, the committee beg leave to recommend that a sufficient appropriation be made to finish the block of cells begun at Auburn, and not only so, but to finish it in one season. From the information of some very respectable and judicious men concerned in the government of that prison, the committee are satisfied that the necessary intermixture of mechanics and laborers with the prisoners while building is going on, tends to the destruction of all discipline; and unless, therefore, the cells are finished during the coming season, the operation of the system proposed, must be deferred for two years; and in the mean time it is probable that the prison will overflow with numbers. The views of the committee as to building of solitary cells in the New-York prison, also have been already expressed. When these improvements are once completed, the committee hope that our penal system may be so administered as to require no additional state prisons, and but a moderate annual expense. They cannot doubt that the operation of

the system will greatly diminish the number of criminals.

The committee are of opinion that the suggestion of the inspectors at Auburn, relative to the appointment by the legislature, of an annual committee to visit both prisons, is well worthy of attention. In this way, uniformity of discipline might be introduced, and the improvements in either prison be extended to the other. Besides which, your committee believe that the authority of a legislative committee would be more competent to introduce the necessary rigour of discipline and strictness of economy, than that of the local inspector can be.

The inquiries of the committee have most abundantly satisfied them that the practice of allowing visitants to see the interior of the prison and the prisoners, is of most injurious consequence. From the amount received for ticket fees, it would seem that nearly 8,000 persons in a year, or about twenty per day, had been admitted. This, to the prisoners, must be a continual amusement, besides the facilities which it cannot fail to afford for improper communications.

The committee recommend that all visitants be rigorously excluded, except in special cases, to be allowed of by the inspectors; and that spectators be only permitted to view the cells through gratings in the outer walls.

They recommend that in each prison a chaplain and physician be employed; that, on a proper certificate from the physician, convicts, whose health is suffering, may be released temporarily from the cells, the period of which release shall be added to that of their imprisonment; and that the prisoners be allowed such books of religious instruction as shall be authorized, on the recommendation of the chaplain, by the inspectors, but no other books.

The committee further recommend that provision be made for the building of solitary cells at the jails of the respective counties; and that the courts, in their discretion, have power to order criminals to be confined in those cells, and that the expense of their sustenance, not exceeding the expense of rations at Auburn, be a charge against the state treasury.

It appears that the officers of the New-York prison have for years supposed that they had not the power incident, by common law, to every prison-keeper, to correct his prisoner, within reasonable bounds, for misbehavior, and, on some application to the legislature, it has been alleged that this doctrine was indirectly countenanced.

If such is the doctrine, it is wonderful that the prisoners do not hold out at least a divided rule with their keepers in the prison. But, while the committee deny that the legislature have questioned the power, they recommend that a declaratory clause be enacted, confirming it.

The last important amendment, which the committee have to recommend, relates to the detection of former offenders, who are often indicted and sentenced for punishment, as for a first offence, though, when they arrive at the prison, they are recognized as ancient guests. In a neighboring state they have a regulation by which the attorney general is, in such case, to file an information on which the prisoner is put on trial, merely to receive the enhanced punishment due to him as a former offender. The committee recommend the adoption of a similar law.

In the bill which the committee have prepared for the consideration of the senate, are contained some additions to, and alterations of, the criminal code, which will best appear from the bill itself.

and they beg leave to observe that in the framing of that bill they have derived the greatest aid from a very able report upon the criminal law, and from a bill, which were drawn by a gentlemen now holding an executive office, and by him reported in the year 1819 to the assembly, of which he was then a member.

The committee have prepared a bill in conformity with the views herein expressed, and have instructed their chairman to ask leave to bring in the same.

Duty on Books.

In senate of the United States, January 8, 1822.

The committee on finance, to whom was referred the memorial of the trustees of the Transylvania university, signed by Thomas Jefferson, praying for a repeal of the duties on books imported into the United States,

REPORT:

That the act of congress of the 27th April, 1816, establishing the existing tariff, has included books among the unenumerated articles, at an *ad valorem* of 15 per cent.

The second section of that act exempts from duty "all articles for the use of the United States, philosophical apparatus, instruments, books, maps, statues, busts, casts, paintings, drawings, engravings, specimens of sculpture, cabinets of coins, gems, medals, and all other collections of antiquities, statuary, modelling, painting, drawing, etching, or engraving, specially imported by order and for the use of any society incorporated for philosophical or literary purposes, or for the encouragement of the fine arts, or by order and for the use of any seminary of learning."

To justify an encroachment upon this tariff, by the exemption of particular articles, we should consider its effects, and understand its bearing upon the general system. It is possible that the exemption required would be chiefly felt in the price of the article exempted, and the manufacture of paper and printing types; and that its influence would be imperceptible or trifling upon the other branches of enterprise and industry. It may then be considered in its operations upon the manufactures, the revenue and the consumption.

The constitution of the United States has placed authors under the protection of congress. Essential to this protection is the encouragement of printing. Could foreigners maintain a successful competition with the American publisher, the American author would experience embarrassment and disappointment; foreign books would inundate the literary market, and even his own productions from a foreign press might be made to impair, if not defeat his exclusive right.

The art of printing in the United States is rapidly advancing to its highest perfection.—Samples have already been produced, which will scarcely suffer by comparison with the best specimens of other nations. Still the art has to encounter embarrassments. Comparatively, our capital is small, labor high, and our skill not perfect. Such is our enterprise, that American competition has already done much to diminish profit and impede success. Remove this protecting duty, and foreigners, particularly the British, who speak the same language, whose labor is cheap, and skill matured, may overwhelm our market, and become the exclusive book makers for the United States.

Connected with this, is the duty on paper. The manufacturer of this principal article of the print-

er's consumption is protected by an *ad valorem* of thirty per cent. So long as this operates as a protection to the paper maker, it is a tax on the book maker. By this partial interference, you leave the burden, while you remove the equivalent.

The manufacture of printing types in the United States is of recent origin: such, however, has been its progress, that, in 1816, congress determined that the manufacturer required, and the consumer could sustain, an impost of twenty five per cent. But, inasmuch as this art may be considered as still in its infancy, the competition at home will not, for a long time, create a depression of the price, and this duty will, consequently, remain a tax on American printing.

In this view of the subject, it is apprehended that it would be unequal, impolitic and unjust, to single out this important branch of industry, strip it of all protection, and leave it to struggle with powerful competitors, to its serious embarrassment, and probable destruction.

But the protector of the manufacturer, and the burden upon the consumer, are not our only objects of consideration in establishing a tariff on importations. It is our principal, and, ordinarily, our only source of revenue. Flourishing as our revenues are said to be, it seems to be agreed that we have no money to spare. "Loans, which consume the future," have become necessary, and rigorous economy and retrenchment must be enjoined and practised, to prevent a recurrence to this pernicious expedient.

The exemption required would probably diminish the revenue beyond the amount of the duty repealed. Should American printing diminish, it would cause a corresponding diminution of the materials of consumption; and the import on paper and types would probably vanish almost contemporaneously with that on books. It ought, moreover, to be noticed, that in England there is a bounty or drawback on the exportation of British books of three pence sterling on the pound weight. Now, inasmuch as our duty is *ad valorem*, and their bounty is specific, not according to the value, but the weight of the books; their cheap editions may be imported into the United States at a premium which will about balance our duty of fifteen per cent. Their more expensive editions and all books in foreign languages, are chiefly wanted for our literary institutions, and for these, they are already free. The inquiry then is, what portion of the community requires this repeal? Every college, academy, and other seminary, and every corporation for literary purposes is now exempt. All members and students of these institutions are consequently exonerated of the burden of this tax. The question recurs, who is to experience the benefit of the exemption? Surely not the instructors nor students in the higher branches of literature, for they are already relieved; certainly not the members of our common schools, for ordinary British editions are compensated by a bounty; American schools books, are plenty and cheap, and those in foreign languages are not required for general use. And it is equally certain that our manufactories forbid it, and our treasury can scarcely afford it. None then but the professional gentleman who can afford to extend his library beyond the resources of American publishers, or the scholar of wealth and leisure, who would indulge his taste in selecting the most elegant and expensive editions of foreign authors, can be interested in its favor. And is it expedient at this time, to interpose this relief,

To tax foreign luxuries is a dictate of the soundest policy. Expensive and highly finished editions are as much a *luxury* as any other extravagant expenditure. A moderate duty on such books, to be limited almost exclusively to gentlemen of wealth, could never subject us to the imputation of an indifference to education. Few nations, perhaps, have done more for the diffusion of knowledge. In the endowments and support of primary schools we are second to none. Great Britain exacts an impost on all imported books, and allows a bounty on the exportation of her own. France exacts a specific duty of one hundred francs per hundred killogrammes on books in the French language. To those reprinted from French editions is added fifty per cent. and pirated editions are entirely prohibited. There is, however, a deduction of fifty per cent for *scientific memoirs*, and of ninety per cent. for books in the dead or foreign languages. Spain admits free of duty, books, maps, and charts, on the subject of navigation, when introduced for purposes of instruction. But *we* have surpassed them, and have not improbably exceeded the limits of a sound and enlightened policy.

With few exceptions, the English is our native and ordinary language. It is spoken as universally and purely as in England itself. But lately we were a part of the British empire; from thence we have derived many of our habits, customs and laws. We still esteem Great Britain eminent in arts, sciences, policy and power. Our principal and subordinate seminaries of learning are chiefly furnished with British books and our youth are taught by British authors, wedded to their own institutions, and exultingly proud of their country, constitution and laws. These means of a foreign influence have long been perceived, and have excited the jealousy of grave and intelligent politicians. Our government is peculiar to ourselves, and our books of instruction should be adapted to the nature of the government, and the genius of the people.—In the best of foreign books, we are liable to meet with criticisms and comparisons not very flattering to the American people. In American editions of these, the offensive or illiberal parts are expunged or explained, and the work is adapted to the exigencies and taste of an American reader. But withdraw the protection which our tariff affords, our channels of instruction will be *foreign*, our youth will imbibe sentiments, form attachments, and acquire habits of thinking adverse to our prosperity, unfriendly to our government, and dangerous to our liberties. Your committee, therefore, recommend the following resolution:

Resolved, That it is, at this time, *inexpedient* to repeal the duty on the importation of books.

Culture and use of the Bene Plant.

TO THE EDITOR OF THE AMERICAN FARMER.

Rose-Hill, 24th Nov. 1821.

SIR—A variety of causes have prevented that prompt attention to your Philadelphia correspondent, which the importance of his inquiry demanded, and the politeness of his address entitled him to.

In the winter of 1812 and '13, I resided, with my daughter, in Georgia. The soil, trees, shrubs, plants, course of crops, and mode of cultivation, were all different from what I had been accustomed to.—Every thing was new to me, except the manners and habits of the people with whom I associated.—They neither had big houses or big barns, but, like the inhabitants of Maryland, their hospitality was

unbounded, to all who either deserved or stood in need of their attention.

At the house of my valued friend John McQueen, esq. of Oatlands, the bene plant was first made known to me. It was about the last of Feb. that, dining with him, he requested my opinion of a bowl of fine cabbage lettuce; it deserved all the praise which I gave to the vegetable, as well as to the dressing when Mr. McQueen, smiling, informed me that the oil was of his own produce, from what made, and the value of the crop.

Captivated by the idea of introducing to the almost deserted, poor, sandy districts on the shores of the Chesapeake and Delaware, a crop which should be as lucrative as the wheat of our best lands, and flattering myself that I might be the instrument of stopping a ruinous emigration from these poor lands to the west, I procured and brought home with me about two quarts of seed.

This plant was first brought to the south by African negroes, who cultivate it in their patches as a valuable and important ingredient in their pottages, being first moderately roasted. The seed, from which the oil is made, is of the shape and about the size of the alkukeregi, or winter cherry, and is pleasant to chew, even in a raw state. The pod which contains the seed, is shaped like, and much about the size of, a tobacco pod. These pods do not ripen all at the same time, but in succession, like the cotton and oca; and, when ripe, must be gathered, or they will open and the seed shatter out; they may be easily gathered by children and infirm persons.

Experimentalist, as I acknowledge myself to be, the introduction of the bene appeared so desirable, that only a few seed was wasted, by attempting late in the season to grow it at this place. But in order to make the most of it, parcels were placed in the hands of Mr. Ridgely, chancellor of Delaware, doctor Sykes, a distinguished physician of Dover, and many others whose names are not recollected; all promised attention, but no report has ever been made to the public or me, respecting their success.

Mr. McQueen was with his family last summer, at the Saratoga springs, and he wrote from thence as follows:

"Upon my return home, I will send you half a bushel bene seed, and a box of oil that has been made ten years; we use no other kind, and think it as good as at the first. I think this plant will succeed in your climate, as the oca and tomatoes have done, as it seeds in time with us, if sown early in July.—Warm sandy soils would, I think, do best for it. I have seen it grow well upon very poor sandy land. I planted bene in 1799, my field was much mismanaged, (that year I was much absent,) and do not think it produced more than six or seven bushels per acre; but I should suppose from 10 to 15 might be expected. My crop produced about 500 bushels, for which I received two dollars a bushel, and then became interested in its manufactory. It produced two gallons of cold drawn oil per bushel; the seed when warmed and again pressed, gave nearly half a gallon more, which was kept by itself for inferior purposes. One cause of this oil's keeping so much better than olive oil, is that it is not heated in the operation. Olive oil, I understand, is boiled. Mr. Sully sent me word, it was the best oil he ever used for painting."

Invited to give an opinion, I will say, that all our sandy or light lands, or salt water of rivers, bays, or the ocean, from Florida to Long Island, in the state of New-York, will produce this plant to

advantage, greater always where the summers are longest; for, ripening in succession, it will continue to produce until checked by frost. When I speak of lands on the salts, I must be understood as meaning lands affected by a salt atmosphere; for it is perfectly understood, that heat and cold are not uniformly regulated by degrees of longitude and latitude. The moderate distance of eight miles east from the waters of the Sassafras, has destroyed every blade in a corn field, while at this place nothing was injured—and a few miles, say ten or twelve, equal care taken; peas and strawberries will be a week earlier upon salt water shores.

The whole of the peninsula of Maryland, Delaware and Virginia, from Dover down to the capes, is all more or less affected by vapours from the two bays and the ocean, and will, I think, produce good crops of bene. The warm river lands of Anne Arundel county, and from thence down the Chesapeake to the capes, diverging further from the rivers as you progress to the south, will all produce bene to advantage. The warm river and ocean land of New Jersey, which now produce such excellent crops of melons and sweet potatoes, are entitled to a fair experiment, for, in my opinion, the bene will, on them, prove a profitable crop; very rich land is not the most favorable, for it may not only run too much to stalk instead of seed, but it may grow too high for children to cut and collect the seed. It will require equal cultivation with corn, if planted in drills, from two to three plants in a hill, and the hills three feet apart.

To encourage the culture of this most valuable plant, a company should be formed in your city, which would distribute the seed, and contract to purchase for two or three years at a liberal price. The want of machinery, and of course a market, checked the culture in Georgia. There is a cautious reluctance in my fellow countrymen to attempt new crops or new modes of cultivation.

No period could be more propitious than the present for introducing this plant. Our grain is of little value, while a bottle of oil maintains its war price—offer to the farmer an encouraging price, *not to be affected by a southerly wind*, and I have no doubt, but that, in a few years, we shall export oil, equal, if not superior, to the best olive. In such a case, we shall all be indebted to the Philadelphia friend of the plough, for first proposing the subject through the medium of your valuable paper.

I now, sir, promise, through you, that nearly the whole of the seed which Mr. McQueen sends to me, shall be placed in your hands for distribution, and as I have already given my opinion of the quality of the oil, without any pretensions to correct taste, I will also send you one bottle of the oil for your own use, and one other bottle for the Philadelphia friend of the plough, and if you will instruct me how other distributions can be made, which may encourage the culture of this most valuable plant, your wishes shall be respected.

Half a bushel of seed, carefully managed, will plant a thousand acres.

I am your obedient servant, T. M. FORMAN.
J. S. Skinner, esq.

Military Expenditures.

Report of the committee on military expenditures, in the house of representatives, May 1, 1822.

The committee on the accounts and expenditures of the war department, report:

That they have examined the said accounts and expenditures, and they beg leave to detail the re-

sult of their inquiries and examinations, under the several heads of duty prescribed to them by one of the standing rules of the house

1. Whether the said expenditures are justified by law?

The committee have perceived no expenditure that is unwarranted by law, unless the extra compensation which is occasionally made to officers of the army, for services not within their regular official duties, may be considered to be of that character. It would at first seem that, although an officer in the monthly pay of the government is not bound to render every portion of his time to the public service, yet that he cannot perform such extra services without neglecting his stated regular duties; and that, most commonly, the time employed in the one is precisely so much taken from the other. But, on the other hand, it is represented to the committee, with some reason, that the practice of employing officers as clerks in the war department may, in several ways, be advantageous to the public. That, while they are better able, from their more accurate professional and local knowledge, to judge of the propriety and the economy of distant disbursements, they themselves are improved in a species of knowledge which every officer is occasionally required to discharge, and which is indispensable to the officers of quartermaster, paymaster, and commissary; and, at the same time, that these services are better done than they would be by an ordinary clerk, the cost to the government, in their extra compensation, ought to be considerably less.

The committee were also at first inclined to think that the money paid to the attorney general, under the sanction of the secretary of war, for an argument in a case submitted to arbitrators, was not warranted by law; but, on a reference to the act of congress which prescribed the duties of that officer, they find that they clearly do not comprehend the services rendered by him on this occasion, but are limited to the cases of the United States in the supreme court, and to giving legal counsel to the president and heads of departments. The reasons assigned for this disbursement, were, that the matter in controversy was of great magnitude, involving several hundred thousand dollars; that able counsel were employed by the opposite party; that no other counsel could be obtained, in whom the agents of the government had equal confidence; and that the compensation allowed was not greater than is usually paid for similar services. If the practice be deemed objectionable, the committee think that the remedy which will be most consistent with the public interest, will be to extend the duties of the attorney general by law.

2. Whether the expenditures are supported by vouchers establishing their justness, both as to character and amount?

In those cases in which the rate of the expenditure is fixed by law, such as pay, rations, and the like, the committee have been content with a slight inspection of the accounts. Where there was latitude for more or less economy, either as to quantity or price, they have been more particular in their investigation; but, where the disbursements were altogether discretionary, as in the case of contingencies, the committee have examined every voucher with the minutest accuracy. The result of their examination is, that the vouchers, in every instance, agree with the accounts; that, so far as the committee can judge, the items are, with some few exceptions, at the ordinary market rate as to price, and reasonable as to quantity. Among the

exceptions, we would mention the commutation allowance to officers employed in extra service, such as surveying Mobile bay, in lieu of transportation, quarters and fuel, and for making disbursements. This allowance was at the rate of \$1,472 for officers of the rank of captain, according, as it is said, to long established regulations, which the committee think was too large an addition to their regular pay. The character, too, of many small items in the contingent expenses of the war department, though sanctioned by usage in that and the other departments, appear to the committee to be highly objectionable, such as the purchase of books by the subordinate officers of the department, which have no connection with their clerical or bureau duties. The increased expense incurred for carpets, maps, engravings and newspapers, seem to be liable to a similar objection, though not of the same decided character.

3. Whether the disbursements have been made in conformity with the appropriation laws?

The committee know of no instance of an expenditure out of funds not appropriated therefor, except the \$60,000 expended on fort Calhoun be of this description. As the money appropriated for fortifications in 1820 was not specific as to the objects, it was at the discretion of the executive to expend it on such of the fortifications as he should select. But, if the appropriation act of 1821, which appropriated specific sums to the fortifications on the Chesapeake, at the time when the money, of which the above \$60,000 was a part, was believed by the legislature to be either expended, or about to be expended, in the Gulph of Mexico, be considered to have repealed so much of the act of 1820 as left the destination of the funds discretionary, then the expenditure of the \$60,000 on the fortifications in the Chesapeake was not warranted by law, and ought to have been returned among the unexpended balances of the preceding year. The committee deem it unnecessary to add any thing further on this subject, as the facts of the transfer, and the considerations which induced it, are exhibited to the house in the letter of the secretary of war, of the 19th instant.

4. What further provisions are necessary for the proper application of the public money, and its economical disbursement?

The committee, in the course of their examination, have not been inattentive to this part of their duty. They are persuaded that, under the most vigilant and judicious administration, there will occasionally be some mismanagement, some waste, some peculation; and the most that can be effected is to lessen the temptations and the facilities to these malversations; to provide for their early detection, and for indemnity to the public when detected. So far as concerns mere accountability, the committee consider the present system as unexceptionable and complete. But so far as regards economy, there has been considerable improvement within a few years, and there is probably room for still more. A brief statement of the course pursued in any branch of military expenditure, that of the quarter master's department, for example, may serve to illustrate the security which the public has against injury and abuse. The accounts for supplies are first transmitted to the quarter master general for investigation, who returns them to the quarter master, if he thinks them palpably wrong, or, in a doubtful case, transmits them to the third auditor with his remarks. They are examined by that officer with reference to the laws and regulations of the war department, or the contracts that may have been made. If there

are any items not embraced either by the regulations or contracts, they are specially referred to the head of the department for his decision. They are then reported to the second comptroller, and if passed by him, they are returned to the third auditor, who enters them on his books, and communicates the same to the party. The evidences of these transactions, through all their details, are carefully preserved, and so methodically arranged as to be readily referred to. If then there is any charge that is illegal or extravagant; if any defect in the vouchers, or any delinquency, they can be discovered without difficulty by one at all conversant with accounts.

With a view to economy, the committee have no hesitation in saying that contracts by the government should be confined to provisions, rations, wood, and such articles as have a stated market price to govern both the contractor and the agent of the government. But fortifications, and other permanent works, ought always to be built under the direction and superintendence of a capable and responsible public officer. Experience has shown that the contracts are seldom or never executed, unless they are advantageous to the undertaker.—Where they are not fulfilled, the contractor often proves insolvent, and when his securities are sufficient, the government has, in lieu of the work it contracted for, and the money it had advanced, a law suit that is always tedious and troublesome, and sometimes abortive. Nor can there ever be that security for the goodness of the workmanship or materials, in the case of private contracts, as when the work is conducted by a respectable officer.

The committee would further suggest, that where large sums are placed in the hands of agents and superintendents of the government, they should be required to deposit the same in some convenient and responsible bank, (to be designated by the head of the department), in the name of such person, as agent; that the money should be drawn by him in that character; and that he should send weekly or monthly statements of his bank account to the war department. Though such regulations would not always prevent the agent from using the public money as his own, it would have an evident tendency to lessen the chance of it, and to give early intimation of it when it did happen.

5. Whether any retrenchments can be made in the expenditure of the war department without detriment to the public service?

The committee addressed a letter to the secretary of war, on the 4th of March last, to inquire whether the number of clerks in the war department proper, as well as in the engineer, ordnance, and pay departments, could not be reduced; to which he replied that the number would not admit of further present reduction. His letter, with its enclosures from the engineer, ordnance, pay, and quarter master's departments, are hereto annexed, and marked A, B, C, D, and E. The present organization of the war department, by which its business is distributed into distinct bureaus, or sub-departments, requires a great number of clerks, but it has been found conducive not only to despatch, regularity, and the accountability of public officers, but, also, to economy of disbursement. The committee think that it would be a mistaken economy, which would, to save the salaries of a few clerks, run the risk of having this important branch of the national administration imperfectly executed. And although their compensation is somewhat higher than is paid in the neighboring states for similar services, yet it

is presumed the public will, in general, be compensated for their liberality, by the greater skill and respectability of its officers. None of the preceding remarks are meant to apply either to the Indian trade or Indian agencies, which have not much occupied the attention of the committee, as those subjects have been particularly submitted to several different committees of the house.

The committee think that it would check the irregular and improper disbursements to which they have before adverted, if the appropriation for the contingencies of the war department should be subdivided into specific sums for printing, stationary, fuel, and miscellanies, these several items not so materially varying in different years, as to produce inconveniences, as the advantages of specific appropriations are now universally admitted. And they also think that it would further the objects of such a change, if the disbursements were made for all the offices of the war department by one of its clerks, specially appointed for that purpose.

6. Whether any abuses exist in the failure to enforce the payment of the moneys due to the United States by public defaulters or others?

Cases of delinquency have of late years been very frequent, and much greater delay than seems necessary has taken place in recovering the money from the defaulters, and in conducting the suits against them to a termination. These suits are now placed under the direction of the fifth auditor of the treasury, but it has been suggested that it would greatly tend to hasten their decision, and thereby to prevent much loss to the United States, if they were placed under the direction and superintendence of the attorney general, whose duty it should be to correspond with the several district attorneys; direct the institution of suits against delinquents; attend to them throughout their progress; and aid by his counsel in removing such delays and impediments as may occur in their prosecution. These duties, which could be well performed only by a law officer of talents and weight of character, it is thought would be very advantageous to the national treasury.

The committee will now take occasion to remark, that the duties prescribed to them, to be completely executed, require much time and labor; and the more, because most of their examinations are made at the offices of the war department, to avoid the trouble and risque of removing so large a number of accounts and vouchers. They think it highly desirable, that the duties should be performed in the early part of the session, that the legislature may thereby be able to correct abuses, if they exist, and if they do not, to remove unfounded causes of distrust, and restore the public confidence; for, next to the evil of having a wasteful and corrupt government, is the belief that we have one. The committee think that this early investigation cannot be performed with that minuteness and accuracy which will make it useful, without increasing the number of the committee. Influenced by the preceding considerations, they offer the following resolution.

Resolved, That the standing rules of this house shall be so amended as that the committee on the accounts and public expenditures, relative to the war department, shall hereafter consist of seven members

Resolved, That the committee on the judiciary shall inquire into the expediency of enlarging the duties of the attorney general.

[A.]

DEPARTMENT OF WAR, March 8, 1822.

Sir: I have received your letter of the 4th inst.

relative to a reduction of clerks in this department, as well as in the engineer, ordnance, and pay departments.

The law of the 20th of April, 1820, allows to the war department twenty-three clerks, whose compensation is fixed at \$25,800.

Owing to the diminution of business in the section of bounty lands, the number was reduced last year to nineteen, whose compensation is \$23,400. As it is not calculated any further diminution of business will take place this year, a like number of nineteen, with the same compensation, will be necessary. Of this number, five employed in the section of bounty lands, are not more than adequate to the management of that branch of business of the department. Nine are employed in the pension office, and it is believed no reduction in the number of clerks can be made without injury to the public in that branch of the business of this department. Five, including the chief clerk, are employed in the war office proper. Of these, one is wholly employed upon Indian affairs, one in recording, one in keeping the register of letters received, and filing them, and one in keeping the warrant book.

In relation to the clerks in the pay department, I enclose herewith a report of the paymaster, by which it will appear no further reduction can be made in that department, consistently with the good of the service. It will also appear, by the same report, that a reduction from seven to three has already been made in that office since the late reduction of the army.

In relation to the number of clerks employed in the engineer and ordnance departments, I also enclose herewith, reports from the chief engineer, and lieutenant colonel of ordnance, by which the committee will see that the present number employed in those departments, are considered not more than adequate to the discharge of the business of their respective offices, and that they cannot be reduced without injury to the public.

It is proper to observe, that this department promptly reduces the number of clerks employed whenever the state of the business will admit of it, without regarding the number authorized by law to be employed.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

*George Tucker, chairman of the committee
on the expenditures of the war department, H. R.*

[B.]

ENGINEER DEPARTMENT,
Washington, March 6, 1822.

Sir: In obedience to your orders of yesterday, requiring "a report whether or no the clerks in this office can be reduced," I have the honor to state, that the number employed at this time is two, and both of whom are indispensably necessary for keeping up the files of this department, and copying the various reports, letters, and other documents, concerning the engineer service and the military academy. I therefore report, that it is my opinion that they cannot be reduced without manifest injury to the service. I have the honor to be, very respectfully, your obedient servant,

ALEX. MACOMB, maj. gen.

[C]

ORDNANCE DEPARTMENT, March 7, 1822.

Sir: In compliance with your orders, to "report whether the number of clerks can be reduced," I beg leave respectfully to state: That the business of the ordnance department having recently been

considerably increased, rather than diminished, it is not deemed that a less number of clerks than now employed, can be safely dispensed with. The causes are as follow—Since the law merging the corps of ordnance with the artillery, I have caused, agreeably to your orders, the accounts of all the moneys disbursed for the ordnance service, previously to their being laid before the second auditor for settlement, to be examined, and passed (if approved) by this office; a business requiring much time and care, for its proper performance; and which, it is expected, will produce beneficial public effects.

Your transfer, also, of the charge of the lead mine lands in the western and northwestern states, to this office, has added to its business concerns; and, from their regular and unproductive state in which those mines have hitherto been left, will require considerable attention and labor, to render them as productive to the United States, as it is hoped and believed they may be made.

The extensive correspondence carried on by this department, with every (the most remote) part of the United States; with the arsenals and depots; the national armories and private contractors for arms; the military posts and garrisons, &c. also give constant and great employment for the clerks now engaged. In fact, judging from the recent and accumulated business of the office, an additional clerk could find sufficient employment; and, it may therefore be inferred, that the public business would be seriously delayed and injured, were the present number of clerks to be reduced. With great respect, I am, sir, your most obedient humble servant,

G. BOMFORD,

Lieutenant colonel, on ordnance duty.

Hon. J. C. CALHOUN, department of war.

[D]

PAY DEPARTMENT, U. S. ARMY,
WAR OFFICE, March 7, 1822.

SIR: On your orders of the 5th instant, which I have just received, requiring me to "report whether or no the number of clerks in this office can be reduced," I have the honor to state, that, since I was appointed paymaster general, the number of clerks in this office has been reduced from seven to three. With these I have discharged all the current duties of the office; and, I believe, with close application, we shall be able to meet promptly, all the duties which may hereafter be required conformably to all laws and existing regulations. The compensation required for the clerks in this office for this year, is \$4,950 less than was allowed by the act of the 20th April, 1818; and, I am convinced, the number of clerks cannot be further reduced without embarrassment and injury to the service. For a more detailed report on this subject, I take the liberty to refer to the letter I had the honor to lay before you on the 26th of June last. I have the honor to be, with perfect respect, your obedient servant,

D. PARKER, paymaster general.

To the secretary of war.

[E.]

PAY DEPARTMENT, U. S. ARMY,
WAR OFFICE, 26th June, 1821.

SIR: Agreeable to your order, I have the honor to report, after having looked into the details, that, in addition to my own labor, I believe three clerks will be constantly required in this office.

One will be charged with the examination of paymasters' accounts in detail, and keeping the records

of remittances, disbursements, &c. One will endorse the letters received, enter them in a book kept for that purpose, and copy and record letters. The other must aid in the details of estimates, assist in copying, and such other casual service as may be required, for a prompt discharge of the duties of the department. I have not yet had an opportunity to discover the full strength of the gentlemen of the office; they all appear to be intelligent and competent. I contemplate this distribution of labor, reserving a full share for my best exertions, under the limit you have given me, of "the smallest efficient force, for the current duties of the office." I am convinced, however, this arrangement will acquire our constant attendance, and will leave us no idle time, during regular office hours. I am not fully certain, that we shall be able to discharge all the duties required, but I am the more willing to make the experiment, having always found, that the less the number of men employed, if competent to the work, the better the work is done.

The pay of the gentlemen should be equal to the labor required, and I anticipate in this the three best salaries heretofore given. Col. Towson stated to me, that Mr. Frye, Mr. Ramsey, and Mr. Andrews, were the three first to be retained. I am satisfied with those gentlemen, and the current duties, at this time, are fully within our grasp. A month, however, is not a fair experiment, and I have before informed you that the records of the office are not complete. There is no letter book from the 26th of March, to the 11th of October, 1814, an important period of war; and there is no letter book from the 9th of April, 1816, to the 18th of October, 1819. The rough copies of the letters are on file, and in boxes, and should be recorded in the letter book. One of the disbanded clerks, who had been but a short time attached to the office, is sick; the other three have great merit, they served during the war and ever since. They have not yet been able to make arrangements for other pursuits. I have therefore to submit, for your approbation, that I be allowed to divide the letter file referred to, give to each a book, and allow them three months, from the 1st of July, to bring up the records.

I have the honor to be, &c. &c.

D. PARKER, paymaster general.

The secretary of war.

Appropriations for Fortifications.

DEPARTMENT OF WAR, 10th April, 1822.

SIR: In answer to the inquiries of the military committee, contained in your letter of the 28th ultimo, I have the honor to transmit herewith, reports of the chief engineer and the third auditor, which furnish the information required. It is, however, proper to observe, that, by reference to my letter of the 2d of February, 1821, to the speaker of the house of representatives, transmitting a statement of the appropriations for 1820, (see state papers 2d session, 16th congress, vol. 6, No 91), the committee will perceive, that, although there was, on the first of January, 1820, \$400,000, under the head of fortifications, undrawn from the treasury, the treasurer, as agent for the war department, was overdrawn on the same day, under the same head, \$268,306 94, which was refunded to him when the sum of \$400,000 was drawn from the treasury, and put into his hands, as agent of this department, and which left a balance in the hands of the treasurer of \$131,693 06, after de-

ducting the sum which, (as appears by the last column of the above mentioned statement, was required to meet the disbursements of 1820), left \$100,000 applicable to fortifications in 1821; which was included in the appropriation for fortifications for 1821. In addition to the sum appropriated for 1821, it appears, by reference to the accompanying statement of the chief engineer that, on the first day of January, 1821, there remained unexpended, at the disposal of the superintending engineer on the Gulf frontier, a very considerable sum which was not included in the estimate of balance of appropriation for fortifications, which comprehended only the sum undrawn from the treasury, after deducting the sum over drawn on the treasurer.

For the reasons assigned in the letter from the engineer department, I was not apprized of the existence of this balance at the disposal of the superintendent, until after the adjournment of congress; the disposition and application of which, were submitted to the president for his direction, who ordered that it should be applied in the manner stated in the report of the chief engineer.

I have the honor to be, your obedient servant,
J. C. CALHOUN.

Hon. William Eustis,
Chairman of the military committee, H. of R.

ENGINEER DEPARTMENT, April 10th, 1822.

Sir: This report complies with your instructions to furnish, so far as depends on this department, the information called for by the following inquiries, contained in a letter, dated the 28th ult from the honorable chairman of the committee of military affairs of the house of representatives, viz:

"The amount of disbursements made on account of fortifications in the year 1821, specifying the amount on each, the time when, the persons to whom, the payments were made, and the fund from which they were drawn.

"The authority under which general Swift formed contracts for the construction of fortifications at Mobile and lake Pontchartrain, and whether those contracts are considered to be in force, and are acted upon at this time, and whether any, and what, losses have been sustained under those contracts."

The amount applicable to fortifications, remaining in the hands of the treasurer of the United States, on the 1st of January, 1821, as stated in a report of this department of the 9th of January, 1821, was \$131,693 06, of which \$31,693 06 being considered necessary to complete the disbursements of 1820, there would remain, for the service of 1821, \$100,000. To this sum was added, by appropriation, \$202,000, whereby the amount available for fortifications for 1821 was augmented to \$302,000. It was discovered, however, that of the sums placed at the disposal of the superintending engineer on the Gulf of Mexico frontier, for the service of the year 1820, a very considerable balance, amounting to \$104,000, remained unexpended at the close of the year. The accumulation of so large a sum, in the hands of the engineer, was accounted for by the unexpected inadequacy of the operations of the contractors, to absorb the sums, which it had been deemed necessary to provide to meet the engagements of the government under their contracts. Owing to the distance and the uncertainty of the mail conveyance, the engineer's report of the circumstance, although dated on the 23d of Jan. was not received here until early in March.

This balance being applicable to the service of the year 1821, it was determined to appropriate a portion of it to the Chesapeake, and leave the residue for the Gulf service. Directions were accordingly given for the transfer of \$60,000 to the treasurer of the United States, in order that it might be redrawn at Norfolk; but, in consequence of a misunderstanding, that arrangement failed. The funds being wanted immediately at Norfolk, it was desirable to avoid the delay that would attend the renewal of the arrangement. It was, therefore, proposed to effect the object in view, by directing captain de Russey, the agent for disbursements on the Gulf frontier, instead of transferring the \$60,000 to the treasurer of the United States, to transfer \$30,000 of it to the appropriation for the Rigolets, and the remaining \$30,000 to the appropriation for Mobile Point; then to draw from the treasury, on account of those appropriations, corresponding amounts to those transferred to them, and to issue them to col. Gratiot, the agent for disbursements at Norfolk, Virginia, but to charge them to captain De Russey, and to credit him on account of those appropriations, for his disbursements of the sums transferred to them as above stated: thus the books of the treasury would show the legitimate application of the sums so drawn from those appropriations, to exonerate capt. de Russey from accountability to the general appropriation for fortifications, whence was derived the \$60,000 transferred to the appropriations for Rigolets and Mobile Point, as he would now become accountable to the latter for the same, colonel Gratiot, to whom the accountability would then attach, was authorized to give receipts in favor of captain De Russey, for the sums issued to him in pursuance of this arrangement, and to disburse them on account of the general appropriation for fortifications.

This arrangement was submitted to the secretary of the treasury last summer, during your absence, and, being sanctioned by him, was carried into effect.

The contracts of Mobile and lake Pontchartrain were formed by general Swift, under the sanction of the war department. Previous to the year 1821, the appropriations for fortifications were made in a gross sum, without designating any special sum for any particular work. Under the authority of the general appropriation, the president having determined to commence the works in question, general Swift, then chief engineer, recommended their construction should be by contract, under a belief that they could be executed more economically by that, than by any other mode; this opinion was founded in part on the belief, that, in a country so destitute of resources necessary for the erection of such works, that the enterprize and individual interest of a contractor would be the best means of overcoming the difficulties which would be presented. The contracts were formed upon public notice, and upon the lowest bid. It is proper to observe, that those contracts were formed before the passage of the law prohibiting the formation of contracts, unless upon existing appropriations adequate to their fulfilment.

The periods stipulated for the completion of the contracts have expired in each case; that for Mobile Point, on the first of July last. There being very considerable advances remaining unliquidated at the expiration of the contract for Mobile Point, Mr. Tiltonson, and Mr. Gouverneur, securities for col. Hawkins who had died some months before the expiration of the contract, applied to the department for permission to execute the work on the original terms, to save themselves from the responsibility

which attached to them on account of those advances. The request being deemed reasonable and advantageous to the government, they were informed that, on making satisfactory arrangements for the execution of the work within a reasonable time, the permission requested would be granted to them. The arrangement has not yet been completed, and they have been informed, recently, that unless it should be made within a moderate period, a forfeiture of the contract would be declared, and the bonds, consequently, put in suit. The progress of the operations of the Rigolets' contract being very satisfactory, the contractor has been permitted to continue them, believing it to be for the public interest that the contract should not be forfeited, as there is every prospect of a successful execution. The work at Dauphine Island, under the management of general Starke, a gentleman of capital and business habits, who has been employed as the agent of the contractors, with the approbation of the department, was progressing, at the time of its suspension, by the withholding of the appropriation, to the entire satisfaction of the department; and, as it is understood, that he is willing still to fulfil the contract, should an appropriation be made, it is believed it would be for the interest of the government to continue the contract.

No losses have been sustained under those contracts, nor is it probable there will be any, as the security held by the government for their faithful execution, and the advances made to facilitate it, is ample for both.

In pursuance of your instructions to furnish the additional information requested by the honorable chairman of the military committee, dated the 6th instant, viz: "through what han! the contract for the works of Dauphine Island and Mobile Point have passed and who is at this time responsible for them;" I have the honor to report, that the contract of Dauphine Island is still in the hands of the original contractors, Messrs. Harris and Farrow, who, together with their sureties, are responsible for it.

The contract for Mobile Point was originally made with colonel Hopkins, and, at his death, with the consent of the department, was transferred to colonel Hawkins, who being also deceased, his representatives and securities are responsible for its execution.

Respectfully submitted.

ALEX. MACOMB,

Maj. Gen. Chief of Engineers.

The hon. J. C. Calhoun, secretary of war.

Naval Court Martial.

Proceedings of a general court martial, assembled on board the United States' ship Independence, at the navy yard, in Charlestown, Massachusetts, on Wednesday, the 20th day of March, in the year of our Lord one thousand eight hundred and twenty-two.

PRESENT:

Captain Thomas Tingey, president.

Captains Charles Morris,

Lewis Warrington,

Jno. Orde Creighton,

Thos. Macdonough,

Robert T. Spence,

John Downes, and

Wm. C. Aylwin, judge advocate.

Members.

Captain John Shaw appeared, and the following orders of the hon. secretary of the navy, for convening this court, were read:

Navy Department, March 2d, 1822.

Sir: A general court martial, to consist of yourself, as president, captains Charles Morris, Thomas Macdonough, Lewis Warrington, and Robert T. Spence, as members, and Wm. C. Aylwin, esq. as judge advocate, are hereby authorized and required to assemble, on the 20th day of this month, for the trial of captain John Shaw, upon the charges and specifications herewith enclosed, preferred against him by captain Isaac Hull, of the navy of the United States.

The members of the court and judge advocate, will be directed to report to you personally, in Boston, on the 20th inst.

I am, very respectfully, sir, your most obedient servant,

SMITH THOMPSON.

Capt. Thomas Tingey U. S. Navy, Washington.

NAVY DEPARTMENT, March 4. 1822.

Sir: To the general court martial, of which you are president, ordered for the trial of capt. John Shaw, and such other persons as shall be regularly brought before the said court, I have added capts. John Orde Creighton and John Downes, as members, and directed them to report to you in person, in Boston, on the 20th inst.

I am, very respectfully, sir, your obedient servant,

SMITH THOMPSON.

P. S. The court is to be convened on board the U. S. ship Independence.

Capt. Thos. Tingey, U. S. Navy, Washington.

The president, members, and judge advocate, thereupon severally took the oaths prescribed in this behalf by the act of congress "for the better government of the navy of the United States."

Captain John Shaw was then arraigned on the following charges, and specifications thereof, exhibited against him by captain Isaac Hull, of the United States' navy:

Charges, and specifications thereof, preferred against captain John Shaw, of the navy of the United States by captain Isaac Hull, of said navy.

Charge first. Treating with contempt his superior officer, being in the execution of the duties of his office.

Specification first. For that the said captain John Shaw, on or about the seventh day of October, in the year eighteen hundred and twenty, being then in the command of the U. S. ship Independence, lying in the harbor of Boston, did write and send a contemptuous letter to captain Isaac Hull, commandant of the navy yard at Charlestown, Mass. of the purport following, to wit:

U. S. ship Independence, October 7th, 1820.

Sir: Your interference with flag officers, and your intention, as you have informed me, to use every exertion to destroy that grade in our service, has induced me to make known to you my intention of opening a correspondence on this subject with every flag officer in the service, together with the hon. secretary of the navy, to whom I shall give, in the fullest extent, my opinion. I believe, sir, it is well known that stationary naval yard officers are adding yearly to the intrinsic value of their estates while the case is quit the reverse with a commanding naval officer afloat; and why, and upon what principle, you have decided to oppose this grade, in my opinion, can emanate from no other motives but ambition, and a desire to deprive us of the emoluments which, by law and our present naval regulations, we are entitled to.

If, sir, your ambition aspires to a broad pendant, allow me to assure you that the ship of the line which I now have the honor to command is entire-

ly at your service, in exchange for the command you now have the honor to hold.

The same proposition I intend making to the navy department, for the purpose of meeting your views and gratifying your feelings, as you were pleased to express to me this morning.

Allow me, sir, to acknowledge my perfect satisfaction of the candor you made use of in mentioning your intention: in the same spirit I assure you that I shall make use of all my personal influence, connected with the flag officers of the several stations, to suppress your position and opinion on this particular subject.

I am, sir, with due respect, your obedient servant,
JOHN SHAW.

P. S. Enclosed I send you a copy of my orders from the navy department to take command of this station.

Isaac Hull, esq.

Commanding the navy yard, Charlestown.

Thereby imputing to him, the said capt. Isaac Hull, unworthy motives in his interfering with flag officers, and in respect to his exertions to destroy a grade supposed by him, the said capt. Shaw, to be in existence in the navy of the United States.

Specification 2d. For that the said captain John Shaw, on or about the twenty-second day of May, in the year eighteen hundred and twenty-one, did write and send to him, the said captain Isaac Hull, being his superior officer, and then commandant of the said navy yard, a contemptuous letter, of the purport following, to wit:

Charlestown, May 22d, 1821.

[Private, confidential.]

Allow me, sir, to congratulate you on the signal victory you have lately gained over the broad pendant which, for several years, has been flying from on board the Independence.

The uneasiness and vexation it has so long occasioned to you are now happily removed, and the board of naval commissioners will, no doubt, receive your warmest gratitude; and the poor old flag, were it susceptible of feeling and capable of expression, would, no doubt, before this, have returned you its thanks for your kindness in being instrumental in its timely rescue from destruction by the howling of the winds and pelting of winter storms.

I have the honor to be your obedient servant,
JOHN SHAW.

Captain Isaac Hull,

Commanding the navy yard, Charlestown.

Charge second—Unofficer-like and ungentleman-like conduct.

Specification 1st. For that the said captain John Shaw, on or about the seventh day of October, eighteen hundred and twenty, being in command of the U. S. ship Independence, then laying in the harbor of Boston, did address a letter to captain Isaac Hull, his superior officer, of the the purport and effect set forth in the first specification of the first charge; thereby charging him, the said captain Isaac Hull, with improper motives in relation to his conduct referred to in said letter.

Specification 2d. For that the said captain John Shaw, on or about the twenty-second day of May, in the year eighteen hundred and twenty-one, did address to captain Isaac Hull, his superior officer, a letter of the purport and effect set forth in the second specification of the first charge; thereby evincing a mean spirit of revenge, alike disgraceful to an officer and a gentleman.

Specification 3d. For that the said captain John Shaw, on or about the fourteenth day of Jan. last,

on the Boston station, with a view to degrade and vilify the character of captain Isaac Hull, did put in circulation reports relative to the conduct of said captain Isaac Hull, as commandant of the navy yard in Charlestown, Massachusetts; by which reports he was charged with mal-administration of his office aforesaid, without ascertaining the truth of such reports, and without communicating the existence thereof to the said captain Isaac Hull.

Specification 4th. For that the said captain John Shaw, on or about the fourteenth day of January last, with a view to cause the correctness of the conduct of captain Isaac Hull, as commandant of the navy yard at Charlestown aforesaid, to be suspected and improperly drawn in question, and, without ascertaining the truth of certain reports in relation thereto, which he, the said captain Shaw, alleged to be in circulation, did wantonly address a letter to the hon. secretary of the navy, of the purport and effect following, to wit:

"U. S. ship Independence, January 14, 1822.

"Sir: It is with much regret that I inform you that there are reports in circulation, both in and outside the navy yard, Charlestown, relative to the mal practices and public plunder which have been committed there for several years past by that villain Fosdick, and that there is much said, with freedom, of others as coadjutors in this nefarious business. As to myself, I know nothing of the transaction, but will hazard an opinion that, if Fosdick's conduct should be strictly investigated, according to law, much real benefit might arise to the service, and much fraud be detected.

"I have the honor, sir, to be, respectfully, your obedient,

JOHN SHAW.

"The hon. Smith Thompson, secretary of the Navy."

He, the said captain Shaw, thereby endeavoring to implicate him, the said captain Hull, as a coadjutor in the nefarious business of said Fosdick, herein referred to.

Specification 5th. For that the said captain John Shaw, on or about the twenty-fifth day of January last, having been directed by the hon. secretary of the navy to make known the names of the persons referred to in the letter set forth in the preceding specification, did address to the said secretary a letter, of the purport and effect following, to wit:

"U. S. ship Independence, Boston, 25th Jan. 1822.

"Sir: I have the honor to acknowledge the receipt of your letter of the 19th instant, by which I am directed to make known to you, without delay, the names of the persons which were alluded to in my letter to you of the 14th instant, who, for years past, have been believed to be partakers in the system of fraud which has existed in our naval affairs on this station. The gentlemen in question, and to whom are imputed the crime of fraud, in part concerned with Mr. Fosdick, are captain Isaac Hull, commanding the Charlestown navy yard, and Amos Binney, esq. navy agent; and for the ground on which my communication of the 14th instant was founded, I beg leave to refer to you the official communication of lieutenant Abbot to the department, under date of the—inst.

Permit me, sir, to again remark, that I have no personal knowledge of any acts of impropriety imputed to either of the above named gentlemen, as they must have been committed before my arrival here.

"I must, however, beg permission to express an opinion, that an investigation of Mr. Fosdick's conduct, before a tribunal of men on oath, would expose a combination in the frauds of which he has

been detected in the administration of our naval concerns on this station.

"I regret that the numerous reports in circulation compel me to make representations unfavorable to the character of a brother officer; and I assure you, sir, that nothing but a sense of duty I owe to the service, and a desire to give those implicated by these reports an opportunity to acquit themselves, has influenced me to a measure, which my candid and open conduct must convince you could originate from no other but the motives I have assigned.

"I have the honor to be, &c. JOHN SHAW.

"The hon. Smith Thompson,

Secretary of the navy, Washington."

Thereby wantonly and maliciously insinuating, that if an investigation of the conduct of said Fosdick were had before a tribunal of men on oath, that he, the said captain Hull, would be exposed as a party in the fraud of said Fosdick.

Specification 6th. For that he, the said captain John Shaw, with the malicious intent of defaming the character and conduct of captain Isaac Hull, did, on or about the 22d day of Jan. last, write and send to the honorable secretary of the navy, a scandalous letter, of the purport following, to wit:

"U. S. ship Independence, Boston, 22d Jan. 1822.

"Sir: A report is now current among the officers of the navy, and has been long since circulated by many citizens of the country, that the frigate Constitution, under the command of captain Isaac Hull, when in Europe, during the winter of 1811 and 12, after landing Mr. Joel Barlow, (our minister), in England, proceeded shortly after, with despatches from that gentleman, to France; and that captain Hull received on board his ship several passengers, for which he charged from twenty to twenty five guineas each the passage. That he, captain Hull, was repeatedly employed in this way, and passed and re-passed between a port in France and Portsmouth, England, with passengers, for which he received as a fee of admittance on board his ship, a sum either in money or valuables, equivalent to that paid by the persons carried in the first instance.

"This circumstance can be fully proven, if deemed necessary, by several officers of the navy and citizens, now in the United States, who had the honor (if it can be called an honor) to be numbered among the passengers. One gentleman, who applied to captain Hull for a passage, and who, by the misfortunes of—, was without the means to pay for it, candidly stated his situation, and that his future prospects depended on success, but found his supplications entirely unavailing, until seconded by the offer of his watch, which the captain accepted and granted the passage as a mark of favor.

"I have frequently conversed on this subject with captains Crane, Sinclair, Bainbridge, and others, who corroborate the above reports. A course of conduction so derogatory to the character of an officer and gentleman (characters which ought to be inseparable) I feel it to be my duty as a captain in the navy to lay before you. If captain Hull is innocent, he has it in his power to call on the officers who served with him at the period referred to.

"I have the honor to be, respectfully, your obedient servant,

JOHN SHAW.

"The hon. Smith Thompson,

Secretary of the navy, Washington."

When, in truth and in fact, he, the said captain Hull, never did charge nor did he receive from any passenger, the sum of twenty or twenty-five guineas, either in money or valuables equivalent thereto, but merely received a sum sufficient to indemnify him for the stores laid in for the consumption of

such passenger: and when, in truth and in fact, he, the said captain Hull, was not repeatedly employed in passing and re-passing between a port in France and Portsmouth, England, with passengers, for his private emolument, as set forth in said letter: and when, in truth, the said captain Hull did not refuse to receive as a passenger a gentleman in misfortune, until he gave said captain Hull his watch for his passage, as set forth in said letter: and when, in truth and in fact, the reports set forth in said letter were never corroborated by captains Crane, Sinclair, and Bainbridge, and others, in conversation with him, said Shaw, as by him, in said letter, was alleged: and when, in truth and in fact, all the said allegations, insinuations, and reports therein contained, are utterly false and without foundation.

Specification 7th. For that the said captain John Shaw, during the months of December and January last, regardless of his duty as an officer, and character as a gentleman, did meanly listen to reports referred to in the preceding specifications of this charge, relative to the character and conduct of captain Isaac Hull, as commandant of the navy yard at Charlestown aforesaid; and, with a view to gratify a base spirit of revenge, did conspire with, and countenance, lieutenant Joel Abbot, of the U. S. navy, and others, in giving currency to said false and malicious reports.

Specification 8th. For that the said captain John Shaw, in the months of January and February of the present year, contrary to his duty as an officer, did expose to view, and suffer chaplain Cheever Welch, and other officers of the navy, to examine and peruse his official communications with the navy department, and the letters received by him from the hon. secretary of the navy, and, in particular, the letters set forth in the preceding specifications of this charge, in order that the reports therein referred to might be put and kept in circulation.

Specification 9th. For that the said captain John Shaw, on the twenty-seventh day of January last, regardless of the character and proper feelings of an officer and a gentleman, did enclose to master commandant Wm. B. Shubrick an unsealed letter, addressed to "captain Isaac Hull, commandant navy yard, Charlestown," enclosing copies of letters set forth in the preceding specifications of this charge, and written by him, the said captain Shaw, to the secretary of the navy; and with which letters the duty of said master commandant Shubrick did not require him to be acquainted. Thereby endeavoring to give publicity to the scandalous reports referred to by him, said captain Shaw, in said letters.

ISAAC HULL.

U. S. navy yard, Charlestown, February 14, 1822.

U. S. SHIP INDEPENDENCE,

Navy Yard, Charlestown,

Thursday, 11th April, A. D. 1822.

The court met pursuant to adjournment—all the members present. Captain Shaw appeared, and, being asked whether he was now ready to proceed on his defence, he replied that he was. Thereupon the defence was produced and read by his counsel.

The audience were then directed to withdraw, and the judge advocate summed up the evidence. The court proceeded to deliberate on the evidence adduced, as well as the several matters urged by the accused in his defence, and found that the first and second specifications of the first charge were proved, and adjudged him, the said captain John Shaw, guilty of the first charge, of "treating with contempt his superior officer, being in the execution of the duties of his office."

The court further found that the first specification of the second charge was proved; that the second specification, so far as it charges the accused with writing the letter therein referred to, is proved; and that the residue thereof is not proved.

The court also found that so much of the third specification of the second charge is proved, as alleges that captain Shaw put in circulation the reports therein referred to, without ascertaining their truth, and without communicating them to captain Hull; and that the residue of said specification is not proved; and that the fourth, fifth and sixth specifications of the second charge aforesaid, were proved.

The usual hour of adjournment having arrived, the court adjourned, to meet on board this ship to-morrow, at 10 o'clock, A. M.

U. S. ship Independence,
Friday, 12th April, 1822.

The court met pursuant to adjournment; all the members present.

The court resumed their deliberations on the evidence adduced, and the grounds of defence relied on by captain Shaw, and found that the seventh specification of the second charge was proved; that so much of the eighth specification thereof was proved as alleges "that captain Shaw, contrary to his duty as an officer, did expose to view, and suffer chaplain Cheever Felch, and other officers of the navy, to examine and peruse his official communications with the navy department" therein referred to; and that the residue of said specification was not proved; and they further found that so much of the ninth specification of said second charge was proved, as alleges "that the said capt. Shaw, regardless of the character and proper feelings of an officer, did enclose to master-commandant Wm. B. Shubrick an unsealed letter, addressed to "capt. Hull, commandant navy yard, Charlestown," enclosing copies of the letters referred to, and with which the duty of said master-commandant Shubrick did not require him to be acquainted," and that the residue of said specification was not proved.

The court adjudge him, the said captain John Shaw, guilty of "unofficer-like conduct," but not guilty of "ungentleman-like conduct," set forth in the second charge exhibited against him. And thereupon sentence him to be suspended for the term of six months, to commence from the time of the approval of this sentence.

THOMAS TINGEY,
President of the Court.

WM. C. AYLWIN, *Judge Advocate.*
Approved, 23d April, 1822:

SMITH THOMPSON.

=====
Case of Lieut. Abbot.

Washington, March 7, 1822.

SIR: I have the honor to enclose a charge, with the specifications, against Joel Abbot, a lieutenant in the navy of the United States—and to request that the case may be brought under the cognizance of a court martial.

In support of the charge and specifications, I beg leave to submit the following written testimony, viz:

Paper No. 1. A letter addressed by lieutenant Joel Abbot to the secretary of the navy, bearing date the 11th of January, 1822, enclosing a communication seriously implicating the official conduct of captain Isaac Hull, of the navy, and others.

Paper No. 2. A letter written by Joel Abbot to the secretary of the navy, bearing date 19th of Jan. 1822, touching the character of captain Isaac Hull and others.

Paper No. 3. A letter from Doctor Samuel R. Trevett, jr. to the secretary of the navy, bearing date the 23d of January, 1822, and enclosing a communication from lieut. Abbot to him relative to captain Isaac Hull and others.

Paper No. 4. A paper without date or signature, but in the hand writing of Doct. Samuel R. Trevett, jr. of the navy, containing information given by him to me, touching the conduct of captain Isaac Hull and others.

Paper No. 5. A letter from lieutenant J. Percival; of the navy, to me, dated 10th February, 1822, mentioning the proposal that had been made to him by lieutenant Joel Abbot, to withdraw the charges against captain Isaac Hull.

In addition to this documentary evidence, I beg leave to mention the following persons as witnesses:

- | | |
|------------------------|--------------------------|
| George Blake, esq. | Purser Deblois |
| Amos Binney, esq. | Charles F. Waldo, S. M. |
| Charles Bradbury, esq. | Henry Tolman, |
| William Parmenter, | Francis Wyman, |
| John A. Bates, | Francis McKenna, |
| Capt. Isaac Hull, | Thomas Child, |
| George Bates, | Wm. S. Rogers, |
| Robert Knox, | Robert C Ludlow, |
| Josiah Barker, | John Binney, |
| Aza Bucknam, | Abraham Walton, |
| James Bogman, | Stephen G. Clark, |
| Jonathan Pierce, | Zachariah R. Fuller, |
| Jeremiah Sprague, | Capt. John Sha -, |
| Capt. Wm. B. Shubrick, | Doct. S. R. Trevett, jr. |
| Wm. M. Caldwell, | Lieut. Henry Ward, |
| John Percival, | Jacob Mull, |
| Jacob Pearson, | Wm. Keating. |

I have the honor to be, with great respect, sir, your most obedient servant,
D. PORTER,
Navy Commissioner.

HON. SMITH THOMPSON,
Secretary of the Navy.

Charge and specifications against Joel Abbot, a lieut. in the navy of the United States.

Charge.—For scandalous conduct, tending to the destruction of good morals, in violation of the 3d article of the act of congress, entitled "An act for the better government of the navy of the United States," passed April 23, 1800.

SPECIFICATIONS.

1st. In that, moved by a spirit of envy or base motive, he hath, upon the Boston station, and within a year now last past, scandalously attempted to take from his superior officer, captain Isaac Hull, his good name.

2d. In that he has, during the time and on the station aforesaid, made numerous scandalous and false insinuations against the official character and conduct of his superior officer, captain Isaac Hull, calculated to stamp his name with opprobrium and infamy.

3d. In that he did, during the time and on the station aforesaid, on or about the 11th day of Jan. last past, address a letter to the secretary of the navy, covering a communication, written in his own hand writing, or by his direction and request, containing numerous, false, scandalous, and malicious charges against his superior officer, captain Isaac Hull, calculated to deprive the said captain Hull of his honorable fame.

4th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Isaac Hull has been concerned in a game of speculation.

5th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Hull was connected with a certain person of the name of Fosdick, in fraudulent transactions against the navy department; that the said capt. Hull protected by his official power and influence the said Fosdick while he was committing frauds against the government of the United States; that the said captain Hull knew of such frauds, and participated in the fruits thereof.

6th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Isaac Hull caused those "who ventured to oppose, to scruple, or reluctantly to acquiesce in the game of speculation, to feel the effects of his displeasure in their emoluments, their feelings, or in their situations;" and that captain Hull, with others having power in their hands, attacked every honest man "in the yard, considering every honest man" as a barrier to their fraudulent designs.

7th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Hull, having attached property of Fosdick's, to the amount of \$90,000, permitted, or caused, the liberation of the said Fosdick, upon the payment of \$58,000 only; thereby, scandalously and falsely, insinuating that captain Hull produced or caused the liberation of the said Fosdick, to the injury of the public interest, from base and sinister motives.

8th. In that he has, during the time and on the station aforesaid, scandalously stated as follows: "I have heard that copper has been seen in Boston, with the navy yard mark, and that the necessary measures have not been taken to recover it," which words, taken in connection with those which precede and follow them in the letter referred to in the 3d specification, are calculated to convey the impression that captain Hull knew of property having been purloined and taking out of the yard under his command, and where such property was after having been so purloined and taken out, and yet did not take the necessary means to recover it; thereby insinuating that the said captain Hull was guilty of gross neglect of duty.

9th. In that he hath, during the time and on the station aforesaid, scandalously and maliciously asserted that his superior officer, captain Isaac Hull, permitted incorrect surveys for several years upon the copper; "that proper surveys for several years have not been held upon the copper;" that an exact account of every other article has been taken, such as weighing of the iron, &c.; but the copper has not been so surveyed although returns have been made of it, and that it appeared to him "to be intended that this article should escape *too minute* an examination;" thereby insinuating that captain Hull was guilty of neglect of duty, and permitted, allowed, made, or caused to be made, erroneous returns of the copper, from base and dishonorable motives, with a view to conceal from the knowledge of the government numerous alleged frauds and speculations.

10th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that his superior officer, captain Hull, used or caused to be used, unjustifiable and highly reprehensible means in getting, attempting to get, or obtain for a certain person of the name of Fosdick, numerous situations in the yard under his command, with a view to more extensive speculation; that captain

Hull manifested a wish to place the said Fosdick in every subordinate situation in the yard under his command, which involved trust and responsibility for public stores, in order to give him a wider field of action, and afford him more extensive opportunities of committing frauds and speculation upon the public, in which the said captain Hull was to participate.

11th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Hull united in a combination with Fosdick and others, to attack, and endeavor to drive from the yard, every honest man.

12th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Isaac Hull was fraudulently concerned in a plot or contrivance to get Fosdick appointed assistant store keeper, to the exclusion of Mr. Waldo, and endeavored to get him appointed purser, to the exclusion of Mr. Deblois.

13th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Isaac Hull, and a certain person by the name of Fosdick, were concerned, together with the bucksters and shops outside of the yard, in a way that must have led them to become intimately acquainted with each other's character, and implying that they were both alike dishonest, and that the said captain Hull was so entangled in the concerns of the said Fosdick, that he was obliged, from considerations of personal interest, to cloak his frauds and wink at his obliquities.

14th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Isaac Hull, with fraudulent and artful intent, endeavored to prolong the investigation in the case of Fosdick, in order that he might receive \$300 for what might have been done in three months, but which took four or five months.

15th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Isaac Hull connected himself with Mr. Amos Binney in establishing a confidential clerk in a store near the navy yard, with a view to practice, conveniently, frauds and speculations upon the public.

16th. In that he hath, during the time and on the station aforesaid, scandalously insinuated that capt. Isaac Hull, still plotting and contriving with Binney to cheat and defraud the public, took in to his office, after the removal of Fosdick, a clerk brought up by Mr. Binney, still in the pay of Mr. Binney; and, with similar fraudulent intents, took another of Mr. Binney's clerks in the store keeper's office.

17th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Hull, by his example, encouraged others to depredate on the public, whereby Mr. Rogers, Mr. Ludlow, and Mr. John Binney, realized large estates.

18th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Isaac Hull was guilty of oppression in not allowing to officers chamber-money, firewood, and candles, allowed them by the department.

19th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Isaac Hull was guilty of disobedience of orders in not making to officers certain allowances, when he had a positive order so to do.

20th. In that he hath, during the time and on the station aforesaid, falsely and scandalously insinuated that captain Isaac Hull treated the officers of the yard, or some of them, with cruelty, and oppression, and harshness, when they made applica-

tion to him for certain allowances to which they were entitled.

21st. In that the said Joel Abbot, during the time and on the station aforesaid, after having acknowledged, in the presence of Geo. Blake, esq. that it was not in his power to sustain the charges he had made against captain Isaac Hull, or any one of them; that he knew nothing against the character of captain Hull; that he could produce no witness or witnesses to support the charges, or any of them, against captain Hull; after having been requested by his superior officer, captain David Porter, (charged and clothed with special powers to investigate the alleged charges against captain Hull), to name his witness and witnesses, and declining to name them, or any of them; and after having been further required by said captain David Porter, on or about the 4th day of February last past, to bring forward his testimony to support the said charges, or to withdraw them by 12 o'clock of the ensuing day, before breakfast, called on lieutenant J. Percival, of the navy, and did then and there scandalously and basely propose to the said lieutenant Percival to withdraw his charge against captain Hull upon conditions calculated, if accepted, to degrade the said captain Hull.

22d. In that the said Joel Abbot did, during the time and on the station aforesaid, scandalously combine with captain John Shaw, of the navy, to injure and defame the character of his superior officer, captain Isaac Hull.

23d. In that the said Joel Abbot did, during the time and on the station aforesaid, scandalously combine with surgeon Samuel R. Trevelt, of the navy, to injure and defame the character of his superior officer, captain Isaac Hull.

24th. In that the said Joel Abbot did, during the time and on the station aforesaid, scandalously combine with Cheever Felch, a chaplain in the navy, to injure and defame the character of his superior officer, captain Isaac Hull.

25th. In that the said Joel Abbot did, during the time and on the station aforesaid, scandalously combine with lieutenant Henry Ward, of the navy, to injure and defame the character of his superior officer, captain Isaac Hull.

26th. In that the said Joel Abbot did, during the time and on the station aforesaid, scandalously combine with Charles F. Waldo, a sailing master in the navy, to injure and defame the character of his superior officer, captain Isaac Hull.

27th. In that the said Joel Abbot did, during the time and on the station aforesaid, scandalously combine with captain John Shaw, surgeon Samuel R. Trevelt, jr. chaplain Cheever Felch, lieutenant Henry Ward, and sailing master Charles F. Waldo, all of the navy, and with others, to injure and defame the character of his superior officer, captain Isaac Hull.

28th. In that the said Joel Abbot did, during the time and on the station aforesaid, in a letter addressed by him to surgeon Samuel R. Trevelt, jr. of the navy, bearing date the 19th January, 1822, use the following words: "I am very confident that there can be established a connection between captain Hull and Fosdick, that must damn captain Hull if he is brought to a court martial." (the latter word erroneously written Marshall), which words were highly disrespectful to his superior officer, and highly scandalous.

29th. In that the said Joel Abbot did, during the time and on the station aforesaid, in a letter ad-

ressed by him to the honorable Smith Thompson, secretary of the navy, bearing date 19th January, 1822, use the following words: "I am acquainted with such facts and circumstances relative to the conduct of captain Hull, that I dare say that, if he should be brought to court martial, he must inevitably be disgraced;" and the following: "I beg leave to remark that things have got to such a crisis, that capt. Hull cannot remain on this station much longer without being himself or leaving others disgraced;" thus scandalously, and with deliberate malice, attempting to injure and defame the character of his superior officer, captain Isaac Hull.

D. PORTER, Navy Commissioner.

*United States' ship Independence,
Navy Yard, Charlestown, Mass.
Tuesday 7th May, A. D. 1822.*

The court met pursuant to adjournment, all the members present.

The reading of the whole of the record having been completed, the court proceeded to deliberate on the evidence adduced, as well as the matters urged by the prisoner in his defence—and, having fully considered the same, found that so much of the first specification is proved as alleges that the prisoner "that, upon the Boston station, and within a year past, scandalously attempted to take from his superior officer, captain Isaac Hull, his good name." The court further find that the second, third, fourth, fifth, sixth, seventh, eighth, ninth, tenth, eleventh, twelfth, and thirteenth specifications are proved—that the fourteenth specification is not proved—that the fifteenth, sixteenth, seventeenth, eighteenth, and nineteenth, specifications are proved—that so much of the twentieth specification is proved, as alleges that the prisoner, "during the time and on the station aforesaid, falsely and scandalously insinuated that captain Isaac Hull treated the officers of the yard, or some of them, with harshness when they made application to him for certain allowances to which they were entitled;" and that the residue thereof is not proved—that so much of the twenty-first specification is proved as alleges "that the prisoner, after having been required by his superior officer, captain David Porter, (charged and clothed with special powers to investigate the alleged charges against captain Hull,) to name his witness and witnesses, and declining to name them, except one, did, early in the morning of the fifth of February last past, scandalously and basely propose to the said lieutenant Percival, to withdraw his charges against captain Hull, upon conditions calculated, if accepted, to degrade the said captain Hull." The court find that the twenty-second specification is not proved; they find that the twenty-third specification is proved; the court find that the twenty-fourth specification is not proved—that the twenty-fifth specification and the twenty-sixth are not proved—that so much of the twenty-seventh specification is proved as alleges "that said Joel Abbot did, during the time, and on the station aforesaid, scandalously combine with surgeon Samuel R. Trevelt, jr. to injure and defame the character of his superior officer captain Isaac Hull," and that the residue thereof is not proved: The court thereupon adjudge him, the said lieutenant Joel Abbot, guilty of the charge of "scandalous conduct, tending to the destruction of good morals," preferred against him, and sentence him to be suspended from rank, pay, and emoluments, for the term of two years, from the time of the approval of this sentence: and that the finding of this court on the charge and specifications exhibited against him

and also the sentence pronounced, when approved, be transmitted to, and publicly read at, each of the naval stations in the United States.

THOMAS TINGEY,
President of the court.

WILLIAM C. AYLWIN, Judge Advocate.

Approved, May 15, 1822:

SMITH THOMPSON.

Indian Affairs.

A report of the secretary of war, of the measures hitherto devised and pursued for the civilization of Indian tribes, within the United States.

HOUSE OF REPRESENTATIVES, FEB. 11, 1822.

Department of state, 8th February, 1822.

The secretary of war, to whom was referred the resolution of the house of representatives, "requesting the president of the United States to cause to be laid before this house any information which he may have of the condition of the several Indian tribes within the United States, and the progress of the measures hitherto devised and pursued for their civilization," has the honor to transmit the enclosed table, marked A, containing the number of schools established under the patronage of the government within the Indian country; the number of scholars at each; the time of their commencement, where fixed, and by whom established, with remarks on their progress, present condition, &c. By reference to the table it will appear that there are eleven principal schools with three subordinate ones, in actual operation, and that three are in a state of preparation, and that the number of scholars, at the last return, at the principal and subordinate schools, amounted to five hundred and eight. On these schools there has been expended \$15,327 56, of which \$7,447 56 have been on account of buildings, and the balance, \$8,380, on account of the expense of tuition. It is made a condition of the subscription on the part of the government, that the schools should be established within the Indian country, and that the system of education, in addition to reading, writing, and arithmetic, should, for the boys, embrace instruction in agriculture and the ordinary mechanic arts, and for the girls, the common domestic industry of that sex.

It was thought advisable, at the commencement of the system, to proceed with caution, and to enlarge the sphere of operation, as experience should indicate the proper measures to be adopted, by which an useless expenditure of public money would be avoided, and the system adopted for the civilization of the Indians have the fairest trial. Experience has thus far justified those which have been adopted; and it is accordingly intended to give, this year, a great activity to the funds, of which a much larger portion may be applied to tuition, the necessary buildings at so many points having already been erected.

Whether the system which has been adopted by the government, if persevered in, will ultimately bring the Indians within the pale of civilization, can only be determined by time. It has been in operation too short a period to pronounce with certainty on the result. The present generation, which cannot be greatly affected by it, must pass away, and those who have been reared under the present system of education must succeed them, before it can be fully tested. As far, however, as civilization may depend on education only, without taking into consideration the force of circumstances, it would seem there is no insuperable difficulty in effecting

the benevolent intention of the government. It may be affirmed, almost without qualification, that all of the tribes within our settlements, and near our borders, are even solicitous for the education of their children. With the exception of the Creeks, they have every where freely and cheerfully assented to the establishment of schools, to which, in some instances, they have contributed. The Choc-taws in this respect, have evinced the most liberal spirit, having set aside six thousand dollars of their annuity in aid of the schools established among them. The reports of the teachers are almost uniformly favorable, both as to the capacity and docility of their youths. Their progress appears to be quite equal to that of white children of the same age; and they appear to be equally susceptible of acquiring habits of industry. At some of the establishments a considerable portion of the supplies are raised by the labor of the scholars and teachers.

With these indications, it would seem that there is little hazard in pronouncing, that, with proper and vigorous efforts, they may receive an education equal to that of the laboring portion of our community. Still, however, the interesting inquiry remains to be solved, whether such an education would lead them to that state of morality, civilization, and happiness, to which it is the desire of the government to bring them, or whether there is not something in their situation, which presents insuperable obstacles to such a state? To answer this inquiry, we have but little experience. There is certainly much encouragement to hope for the best, from the fact that the Cherokee nation, which has made the greatest progress in education, has also made the greatest towards this desirable state, but the experience which it affords is yet imperfect. They have adopted written provisions for their government, to a copy of which, with an extract of a letter from the rev. Mr. Steiner, a respectable Moravian, who has visited the nation at the interval of twenty years, and states the progress which they have made in that time, and which accompany this report, marked B, I would respectfully refer the house, as furnishing the best testimony of the actual progress which that nation has made towards civilization. The zeal of the Cherokees for improvement, and the progress which they have made, are further evinced from the liberal provision for a school fund, for which the last treaty with them, ratified on the 10th of March, 1819, stipulates, and the fact that there are now established in the nation six schools, (two of which are upon the Lancasterian system) containing in the aggregate about 230 scholars. Notwithstanding these favorable appearances, many obstacles, difficult to be surmounted, will impede the progress of the Indians to a state of complete civilization.

Without adverting to others, the political relation which they bear to us, is of itself of sufficient magnitude, if not removed, to prevent so desirable a state from being attained. We have always treated them as an independent people; and however insignificant a tribe may become, and however surrounded by a dense white population, so long as there are any remains, it continues independent of our laws and authority. To tribes thus surrounded, nothing can be conceived more opposed to their happiness and civilization than this state of nominal independence. It has not one of the advantages of real independence, while it has nearly all the disadvantages of a state of complete subjugation. The consequence is inevitable. They lose the lofty spirit and heroic courage of the savage state, with-

out acquiring the virtues which belong to the civilized. Depressed in spirits and debauched in morals, they dwindle away through a wretched existence, a nuisance to the surrounding country. Unless some system can be devised gradually to change this relation, and, with the progress of education, extend over them our laws and authority, it is feared that all efforts to civilize them, whatever flattering appearances they may for a time exhibit, must ultimately fail. Tribe after tribe will sink, with the progress of our settlements and the pressure of our population, into wretchedness and oblivion. Such has been their past history, and such, without this change of political relation, it must probably continue to be. To effect it, many difficulties present themselves. It will require the co-operation of the general government and the states within which the Indians may reside. With a zealous and enlightened co-operation, it is, however, believed that all difficulties may be surmounted, and this wretched but in many respects noble race, be ultimately brought within the pale of civilization. Preparatory to so radical a change in our relations toward them, the system of education which has been adopted ought to be put into extensive and active operation. This is the foundation of all other improvements. It ought gradually to be followed with a plain and simple system of laws and government, such as has been adopted by the Cherokees, a proper compression of their settlements, and a division of landed property. By introducing gradually and judiciously these improvements, they will ultimately attain such a state of intelligence, industry and civilization, as to prepare the way for a complete extension of our laws and authority over them.

Before I conclude, I would respectfully refer the house of representatives for more full and detailed information, in relation to the progress made by the Indians in civilization, to the report of the rev. Doctor Morse, which was laid before the house in pursuance of a resolution of the 22d January last.

All which is respectfully submitted.

J. C. CALHOUN.

To the president of the United States.

Extract from the report of the superintendent of the establishment, made by the American board of commissioners, &c. at Brainard in the Cherokee nation, dated October 1st, 1821.

There are belonging to the two schools taught in this place, ninety six Cherokee children of both sexes, about two thirds males. All of whom are boarded, and many of them clothed, at the expense of the establishment. Many promising children we have been obliged to reject or put by, until those now in school should be prepared to go out and make room for them, as we cannot accommodate and profitably teach more than we have had. Of those who attended last year, three have finished their course and left the institution, and six others have left the institution who could read and write. Twenty-four have entered the past year.

At the local schools we board but few scholars, not to exceed eight or ten at each school, and at present, not more than four or five at Taloney. As some of the scholars who board at home have a great distance to walk, they are not all constant attendants, and the number of those who attend at all, is not so great as when the schools first commenced. The average number attending the two local schools, the year past, has been between forty and fifty. Public worship is attended at each of those schools on the Sabbath, at which numbers of the

parents as well as children attend; and some have made a public profession of the christian religion.

The children of the schools continue to manifest an aptness to learn, a willingness to labor, and a readiness to submit to all the rules of the school. The Cherokees, we think, are fast advancing towards civilized life. They, generally, manifest an ardent desire for literary and religious instruction.

Extract from the report of the superintendent of the establishment made by the American board of commissioners, &c. at Elliott, in the Choctaw nation, dated Dec. 21, 1820.

Since the last report, 38 scholars have been admitted to the school. Ten have left, and one has been dismissed for misconduct. The number now in school is 74. Six more are considered as belonging to it, but are at home on a visit. Of the whole number 60 are males and 20 females. All these board in our family and are entirely under our direction; excepting that ten, who live in the neighborhood, go home on Saturday, and return generally on the Sabbath morning.

Fifty of the scholars now belonging to the school could not speak our language when they entered. These have all made progress in proportion to the time they have been here, and several of them now speak English fluently. Others, who have not advanced so far, can read correctly, and will soon acquire the spoken language. Sixty-five now in the school began with the alphabet. Twenty-eight of these can read with facility in the testament. All the scholars have been accustomed, from the first, to write their lessons on slates, and when advanced, to write on paper. Thirty-nine write a plain hand, without a copy. Nineteen others can form letters with tolerable accuracy. Ten have made some progress in arithmetic, and two, who were considerably advanced when they entered school, have attended to grammar and geography.

The boys, when out of school, are employed as circumstances may require, in the various business of the farm and family. Each one, who is of sufficient size, is furnished with an axe and a hoe. We cultivated the past season about fifty acres of corn and potatoes, most of which was planted and hoed by the boys.

The girls are in two divisions, and are employed alternately, in the kitchen, and in sewing, spinning, knitting and other domestic labors.

We acknowledge, with gratitude, the kind providence of God, in raising up patrons by whose generous aid, in co-operation with the government, we have been enabled to extend to so many children of the forest the blessings of civilization, and to lay a foundation for more enlarged operations. An increasing desire is manifested by the natives to have these advantages more widely extended. Many full-blooded Indians have made applications of late to have children admitted to the school. They are willing to submit them entirely to our direction. Strong desires are expressed to have other schools opened.

B.

Extract of a letter from the rev. Abraham Steiner, to the secretary of war, dated,

SALEM, N. C. 25th Jan. 1822.

HONORED SIR—I would not willingly intrude on your time, but, observing the agitation in congress concerning the Indian affairs, and fearing the benevolent and humane plan of government for civilizing the Indians to be at stake, I cannot forbear to say a few words on the subject.

I have been, many years ago, somewhat among the northern Indians; twice I have been among the Creek nation of Indians, but am chiefly acquainted with the Cherokees, among whom I have been seven times for a longer or shorter period. The last time I was among the Cherokees is two years ago. Just twenty years ago, I first saw and visited them, and I can assure you, sir, that, though I had expected to see some signs of civilization among them, that it far surpassed my expectation, comparing the people with the state I first saw them in. There were, and are now, established respectable schools in that nation, and well supported with scholars of both sexes, and it is only to be regretted that the several establishments must be limited in the number of scholars, for want of means, since the natives are highly in favor of schools, and offer more children than the several establishments are able to receive. Many of their youths can read and write, and I found among them, more especially half-breeds, as much knowledge as is commonly met with in persons in the same grade in civilized life. Besides the public school institutions, some of them support private schools in their neighborhood.

What interested me much was their advancement in agriculture, and their comfortable and decent mode of living, compared with former times. Surely, we cannot say that it is uniformly so, but it is among them, nearly, as it is among their white neighbors, some are industrious and advance in wealth and decency, whilst others go on careless in the way of their fathers, and remain poor beings. I have been with some who live altogether like our substantial farmers, in a very comfortable, nay, decent way, and their houses and furniture correspond with their advanced situation. In short, as far as I know, the Cherokees are advanced in civilization the farthest of the several tribes. This has been brought about not only by means of benevolent associations, who have instituted and continue the good work, but greatly by the friendly countenance, the aid and the measures pursued by the government, which have contributed so richly towards rescuing our red brethren, the aborigines of the land, from their degradation. There is now a fair prospect of success, and the time is hailed with pleasing emotions, as not far distant, when these sons of the forest will be useful citizens. Why let not the plan be fully tested? And why destroy the fruit of the plant before it has come to maturity, or nip it in the bud? The government being so much interested, I think it not irrelevant to say that the institution at Brainard is a very useful one, which is supported by the board of foreign missions, together with two other schools, on a smaller scale, at Taloney and at the Creek Path. The Baptists have also an establishment in the mountains, under the care of the rev. Mr. Posey.

The Moravian society at Salem, in North Carolina, have long since had, and now have, a mission establishment at Spring Place, not far from the Cone-saga river, near Joseph Vann's, on the great road leading from Georgia to Tennessee, where a post office is established. According to the latest accounts from there, from fifteen to twenty children are there educated at the cost of the society. They learn to read, to write, to cypher, and are also instructed in husbandry and useful arts. Many have gone forth from that institution evincing the usefulness of their instruction in their improvement. The rev. John R. Smith is the missionary and teacher at that place, and last year we paid a hand, a very moral character, to cultivate the land around the establishment, and to afford the youths an op-

portunity to be instructed therein; and for the present year, we have engaged another such character for the same purpose. About thirty miles further south, not far from the Coosa river, we have made, a year ago, another establishment, where the rev. John Gambold now resides as missionary. We expect to have an assistant for him soon as a teacher. At that place is a close settlement of Indians, with fine plantations, on which are waggons and teams, ploughs and all implements of husbandry, and some good buildings of hewn logs. Permit me also to notice, that a good portion of Indians have embraced christianity, and walk worthy of their high calling.

REMARKS OF MR. METCALFE, OF KEN.

(IN THE HOUSE OF REPRESENTATIVES),

Upon the subject of Indian civilization.

Mr. Speaker: I would not object to any direction which it might be the pleasure of the house to give to the bill for the purpose of affording an opportunity of a more full and thorough investigation of the amendments proposed by the committee on Indian affairs, were it not too late in the session for delay, and because it is important that the bill should pass, whether the amendment be adopted or rejected.

Perhaps, said Mr. M. an apology is due to the gentleman from Virginia, who, being a member of the committee, was not consulted touching the proposed amendment. This bill was not referred to the committee until yesterday, and as the session is nearly at a close, it was expected by all the warm friends of the bill, that the committee would not fail to report it on this day. My own duty on another committee, and the shortness of the time allowed, prevented the regular meeting, this morning, of the committee on Indian affairs, and therefore it was, that I consulted such of the members only as could be found in the house at the moment, and obtained the consent of a majority, to the amendment proposed.

Let it be recollected, said Mr. M. that, by the authority of the house, it has been made the special duty of this committee to inquire into the progress which has been made in the civilization and happiness of the Indian tribes, under the system which has been devised and pursued for that purpose. It is, therefore, my duty to communicate to the house the result of those inquiries. Here Mr. M. adverted to the 13th section of the act of 1820, by which the sum of 15,000 dollars, annually, is appropriated for civilizing purposes; for presents, &c. He objected to this expenditure, upon the ground that it was no longer necessary; that the Indians derived no benefit from it; and because no satisfactory account could be obtained of its application, to whom paid, or for what purpose. He then adverted to the act of 1819, appropriating the sum of 10,000 dollars, annually, for the instruction of the Indians in agricultural pursuits, and to educate them; and read a communication from the president, shewing (if the president was not himself deceived, as Mr. M. supposed he might be), that a considerable portion of this sum had been applied to the erection of buildings in the Indian settlements, which, in his opinion, ought not to be tolerated. And he also objected to the employment of Dr. J. Morse, and to the sum paid for his services, under the provisions of this law. But, said Mr. M. that we may know something of the situation of those people, and their numbers; that we may be well in-

formed of the nature and condition of the materials upon which we are about to operate, I will take the liberty of adverting to extracts from the report of Dr. Morse, which was referred to the committee for that purpose.

In New England there are nine tribes, 2,247 souls. In New-York ten tribes, 4,849 souls. In Pennsylvania thirty years ago, three tribes, 1,300 souls, number at this time not known. In Ohio, fifteen tribes, 2,047 souls. In Michigan and the N. W. territory, thirty-six tribes, 27,480 souls. In Indiana and Illinois, fourteen tribes, 15,522 souls. Southern Indians east of the Mississippi, twenty tribes, 66,487 souls. Total number east of the Mississippi, twenty tribes, 120,283 souls. North of Missouri and west of the Mississippi, thirteen tribes, 41,350 souls. East of the Rocky Mountains to the Mississippi and between Missouri and red river; or west of the Mississippi to the Rocky Mountains, thirty-six tribes, 105,021 souls. Between Red and the Rio del Norte forty-two tribes, 105,021 souls. West of the Rocky Mountains, eighty-seven tribes, 145,600 souls. Whole number west of the Mississippi 337,341. Total number in the United States besides about 5,000 in Florida, and ten tribes, (number not known), inhabiting the upper Mississippi, 457,642 souls.

Now, said Mr. M. how to civilize and refine, and christianize, these our red brothers and sisters is the question; a question truly of considerable magnitude, the solution of which appears to be attended with no inconsiderable difficulty. The past and the present history of this matter sheds a faint gleam of light, by which to guide us in future.—Here Mr. M. referred to Loskiel's history of the missions among the Indians in North America about 150 years ago. At that period the author informs us that much had been done for the edification and refinement of the Indians; that vast numbers of them were at that time a pious and exemplary people, rapidly increasing in civilization, and in christian knowledge. By reading their subsequent history, however, we are irresistibly drawn to the conclusion, that their spiritual fathers wrote with an eye to their own exclusive benefit and emolument, making those upon whom their heavy contributions were levied, the dupes.

Mr. M. now referred to Bouchette on Canada, giving an account of the condition of the domiciliated Indians of St. Regis, who, for centuries, had been blessed with resident Catholic missionaries as their spiritual fathers; and, instead of progressing in civilization and refinement, or in christian piety and virtue, were still a lazy, dirty, and degraded band of savages, unchristian, immoral, and vicious, in the extreme.

Mr. M. said he would now refer to the history of the various tribes, or remnants of tribes, in the interior of our own country, by reading extracts from the report of doctor Morse. The rev. E. Kellogg writes the following account: "The Passamaquoddies and Penobscots are catholics, and under the care of catholic priests, who receive a stated stipend from the state treasury. They have made no other than incipient improvements in any thing which pertains to civilized life; and are sadly given to intemperance." So much for the Indians in the state of Maine. Now for those in the state of Massachusetts. "All the Indians remaining in this state reside on their respective reservations at Marshpee, Herring Pond, Mariba's Vineyard, and Troy, on the south east part of the state, from 50 to 100 miles from Boston. The state, by a board of overseers, exercises a guardian care over them,

as to their lands and civil rights and privileges. And the corporation of Harvard college and the society for propagating the gospel among the Indians and others in North America, provide for their religious and moral instruction, having charity funds in its treasury, appropriated for the use and benefit of the Indians, the former 12,000 the latter 9,000 dolls. A stated missionary, the rev. doctor Fish, is supported at Marshpee. The rev. doctor writes that, "among them there are a few who are eminently pious; considerable numbers decent in their lives, and not a few shockingly profligate. The state of morals low. Intemperance, with its concomitants, is found among them. The number of pure blooded Indians is extremely small, say 50 or 60, and is daily decreasing. The mixture of blood arises far more from their connection with negroes, than with the whites; their number is diminishing on account of their vices." The rev. Mr. Thatcher writes as follows: "It is true we think we see but little good in preaching to these people. Did we not take into consideration the evils which we probably prevent, who would not be discouraged and give up the cause, saying I have labored in vain, and spent my strength for nought?" In Rhode Island it is said their condition is not quite so bad.

Of those in Connecticut, it is said "that the few now remaining in this state have made but few advances in any thing which pertains to civilization, and are gradually wasting away, after the manner of other tribes, now extinct. The state has assumed the care of their property, in like manner as the other New England states have provided for their Indians. They have such advantages of religious and moral instruction as they are willing to receive, which are few, and the effects proportionably small. Those Indians, especially at North Stonington, and at Groton, are said to be, with very few exceptions, intemperate and improvident; of course, poor and miserable. They manufacture mats, brooms, baskets, and so on, which they generally sell for ardent spirits." Such are the results of long experience, as we have it from the mouths of individuals who are employed to civilize and to convert them to christianity, and who are compensated for their services by public or private donations. Shall this government take up and follow the hopeless example?

"The Six nations, residing in the state of New York, in number 4,575, remain on their respective reservations, containing, in all, about 265,315 acres of land." "Many petty depredations, and thefts, and trespasses, are committed by them and the whites upon each other." To this testimony may be added that of honorable members from New York, who inform us that, instead of advancing in civilization, or in piety, they are rapidly degenerating into vice and corruption.

Of those in the state of Ohio, it is said: "The Wyandots came from the country near the Quebec, about two hundred and fifty years ago, when the French had dominion of Canada. They maintained a Roman catholic missionary among them. By these missionaries they were nearly all baptized, and nearly all the aged ones still carry crucifixes in their bosoms, under their shirts. Between the years 1803 and 1810 the presbyterians supported a missionary among them, on the Sandusky river. A few converts were made, who were put to death by the catholic Indians on account of their religion."

From this I infer that it is improper to impose a tax upon our protestant citizens for the support of Catholic missionaries, and equally as improper to

tax the catholic for the purpose of supporting protestant missionaries. To preserve our holy religion in its purity, we must let it make its own way, with the smiles and friendly countenance of the government beaming upon every sect and denomination, without giving pecuniary aid to any one. "The number of Cherokees, inclusive of whites, blacks, and mixed blood, is estimated at 11,500. In the treaty of March, 1819, they ceded a part of their territory to the United States. Among other reservations is one of a tract of land, of twelve miles square, to be sold by the United States, and vested by the president in the most profitable stock, as a school fund for the Cherokee nation."

For a population not half equal to that which is contained in a small county in one of our states, this appears to be an ample provision. Our own citizens, in any part of this union, would rejoice to have such a school fund as this.

The Choctaws, it is said, are also well provided for.

Now, said Mr. M. what are we told by that distinguished fellow citizen, whose keen and penetrating intellect, and whose long experience enables him to speak to us the language of wisdom, and to afford us so much light upon this momentous subject? [He then read from the Literary and Scientific Repository, the following extract of a letter from gov. Cass.] "The lessons of experience upon this subject are too important to be disregarded. In the zealous efforts which are now making to meliorate the condition of the Indians, we have much to learn from the history of the progress and result of the same experiment which was made by the Jesuits. We cannot bring to the task more fervid zeal, more profound talents, more extensive or varied acquisitions, nor probably a deeper knowledge of the principles of human nature. But, so far as respects any permanent or valuable impression, they have wholly failed. Very few of the Indians profess any attachment to the christian religion: and, of those who make this profession there is *not probably one* whose knowledge is not confined to the imposing rites, and external ceremonies of the Catholic church. A more vivid impression appears to have been made upon the Wyandots than upon any others; and they preserved for a longer term than any other tribe, traces of the indefatigable exertions of their spiritual fathers. But, even with them, superior as they are in intellectual endowments, and placed by their local situation in contact with a Catholic community, the subject is forgotten, or, if remembered, it is remembered only by a few aged and decrepid persons, like other traditional legends of their nation."

Upon these remarks, said Mr. M. no commentary can be necessary. I will now pass to one more extract of a letter, from Mr. Sibley, an intelligent Indian agent, of long experience among that people, to Dr. Morse, which I have taken from his report:

"I have noticed Indians observing with much apparent interest the effects of our agricultural skill, our fine gardens, abundant crops, and numerous comforts and conveniences. A very sensible Osage, the Big Soldier, who had twice been at Washington, once said to me, when I was urging the subject of civilization upon him: 'I see and admire your manner of living, your good warm houses, your extensive fields of corn, your gardens, your cows, oxen, work horses, waggons, and a thousand machines that I know not the use of. I see that you are able to clothe yourselves, even from weeds and grass. In short, you can do almost what you please.

You whites possess the power of subduing almost every animal to your use.' But, after this acknowledgment, on his part, of our superior skill in the various arts, and this candid expression of his admiration, he continues thus: 'You are surrounded by slaves. Every thing about you is in chains; and you are slaves yourselves; I fear, if I should change my pursuits for yours, I should become a slave.—Talk to my sons; perhaps they may be persuaded to adopt your fashions, or at least to recommend them to their sons; but for myself, I was born free! and wish to die free!! I am perfectly content with my condition. The forests and rivers supply all the wants of nature in plenty; and there is no lack of white people to purchase the products of our labor."

Such, said Mr. M. is said to be the language—such the sentiments of the Indians, generally. And what a commentary is this upon the speculations of the theorist; upon him whose fanciful notions give direction to all his actions. What a lesson to the proud presumptuous man, who never thinks of doing good to thousands, and tens of thousands of nearer, and dearer, and much nobler objects immediately around him, who are fairly within the sphere of his action, and in need of his assistance; but is continually casting ahead, before the light breezes of his own inordinate vanity, pretending to vie with his maker in acts of universal benevolence. Yes! of universal benevolence. How have his imaginary castles been upset and demolished by those plain, but irresistible and self-evident truths, which have fallen from the lips of an Indian.

When the forests no longer abound in game, nor the rivers with fish, in sufficient quantities for the sustenance and support of the Indians, he will abandon the life of the hunter for that of the agriculturist, and not before. As long as furs and peltries are in demand and can be had by following the chase, that long there must, and will, and ought to be, hunters; and, were it in our power, by forced measures, or otherwise, to withdraw the Indian from the recesses of the wilderness, from the pursuits of the chase, and learn him to become a tiller of the ground, what would be the consequence?—Would not the white man become a hunter in his stead? And thus, while, with such eager solicitude, we urge and press and force, if we could force, the Indians into a state of civilization, do we uncivilize, or, rather, savagize, an equal number of our citizens. Would not this be the inevitable result? No one, it is presumed, will, or can, deny the fact. And is it not a fact worthy of most serious consideration? I candidly acknowledge that, for my own part, I have no great partiality for such a change, or rather for such an exchange, even were it in our power to accomplish it.

But, I am persuaded that the civilization of the Indians, if effected at all, is to be the work, not only of time, but of necessity. Yes, sir, of sheer, of stern necessity: Slowly progressive in its march, and by degrees almost imperceptible, it will, within the time, and to such extent as their great and good Spirit shall direct, come to pass.

Let us be careful to throw no obstacles in the way. On the contrary, let us set them a bright example, and that example will have its attractions. We are much the strongest party; therefore, let justice, peace, and mercy towards them, be our motto. It is our duty to treat them with humanity and tenderness, and not to abuse the power we possess, by wielding it to their injury and destruction. And, sir, if we go beyond this, if we must and will draw upon our country's treasury to help them on,

let it only be done, when there is at least a reasonable prospect of attaining the great object we have in view.

Much of the treasure of this people has already been wasted in vain and futile attempts to civilize the Indians. I say wasted, because its application has had no good effect upon them, and has subserved no other purpose, except to fill the pockets of a few favored individuals, who are interested in deceiving us, and all of whom now unite in one general cry for more money—more money—give us more money and the public land, and the good work shall be done! Not that any good is likely to be done so as to be discernable to those who live in our day, and generation. Oh no! But perhaps some small traces of the good effects of our honest, and disinterested efforts, may be visible to those of our posterity a few centuries hence, who delight so much in looking back through the dark mists and shadows, as they are closing behind them—through the twilight of uncertainty, for the purpose of desecrating, and of contemplating the virtues, and the generosity of their ancestors; and of profiting, as individuals of a similar cast always have done, as they now do, and always will do—very little by any good example.

How various are the pursuits of various men.—One man is engaged, deeply and ardently engaged, in contemplating the scenes which have long since gone by, and over which time—bald pated time! is about to throw, or perhaps has already thrown, its impenetrable mantle, for the purpose of hiding those scenes forever from the view of mortals.

Another devotes his whole life most earnestly and zealously to the study of some plan, or scheme, or project, by which he fondly hopes to add very greatly to the future stock of human happiness, and of human grandeur, and of human glory, and thereby to procure for himself a name immortal. While, on the other hand, such men as myself, limited, extremely limited no doubt in their views, and fully sensible of their own weakness, without looking quite so much at the past, or pretending to form any very extensive plans for the future, confine their humble and feeble exertions, principally, to that, which, in their opinion, will redound most to the honor and interest of their compeers; especially of those upon whom their acts are to have an immediate, and certain effect—returning thanks occasionally, to be sure, for the good with which their ancestors were blessed, and praying for the good of posterity, but without once losing sight of what they consider a great, a paramount, and an indispensable duty, which they owe to the present generation.

Such men as these, Mr. Speaker, will necessarily inquire of you, how do we raise the revenue out of which this civilizing cash is to be furnished? They will not forget, that it is raised in part by an indirect tax upon articles of the very first necessity; and in part by taxing those articles from the use of which our citizens derive a very considerable portion of all their comforts, and of all their enjoyments; that it is a tax upon articles of necessary consumption, a matter of very doubtful policy at any time. For, in proportion to the increase of such a tax, do we depress our own productive citizens, and discourage and check the increasing population of our own country. Yes, of our own country! endearing name, but always lost sight of when we are chasing a shadow, or pursuing a phantom, from which no good is to be realized. He that will not provide for his own household, is said, by the highest authority, to be worse than an infidel.

SUP. TO VOL. XXII—8.

We have a numerous household, consisting of nearly ten millions of souls, for whom, if we do not provide, let us not deprive them of the means which they are industriously striving to provide for themselves.

The citizen of this republic who rears a numerous family in decency, were he to sit down and calculate the amount of taxes annually paid by him upon the articles of sugar, molasses, tea, coffee, pepper, spices, muslins, calicoes, cloths, and so on, an endless list, would be lost in astonishment. Yes, he would be lost in astonishment.

I know, Mr. Speaker, that we represent a magnanimous and a generous people. Of taxes they will not complain if imposed for humane, and benevolent, and useful purposes, and applied accordingly. But we are deceiving ourselves, and the people are deceived, in supposing that we promote the cause of humanity, or add any real substantial benefit to the Indians by this idle application of our money—this wanton waste of the nation's treasure. A word or two in relation to those Indians who are dispersed and scattered over that vast region of wilderness beyond the borders of our settlements. And here I do not mean to travel with you upon the waters of the Rio del Norte or along the shores of the Pacific. Nor do I intend at present to run across the path of my honorable and highly respected friend from Virginia, by disturbing his infant colony at the mouth of the Columbia; though I may hereafter stand at his back, when it shall become necessary to support him in opposition to the emperor Alexander. But, confining myself to the Indians on this side of the Rocky Mountains—what do they think of our civilizing systems? Let them answer for themselves. The words of a principal chief of the Fox tribes, as related by Mr. Sibly, will shew you their aversion to our laws, and the repugnance they feel to what we call civilization. "The Great Spirit, said Wah-hal-lo, put the Indians on the earth to hunt, and to gain a living in the wilderness; and I always find that, when any of our people depart from this mode of life, by attempting to read and write, and live like the white people do, the Great Spirit is displeased with them, and they soon die."* Here we discover that submission to laws, however mild and equitable in their provisions, is, in their estimation, the most intolerable bondage. The various cords and links by which, under the social compact, all civilized societies are united, they look upon as so many galling chains, as the very badges of slavery, and therefore not to be endured. These wild, but proud and lofty spirits, in dignantly spurn what they are led to consider a dull and ponderous load. Mr. Speaker, I know not how to hold the mirror up to nature. But little of my time has been devoted to the study of her laws. I cannot pretend to say, whether, in the organization and construction of the interior man, there is so great a difference that the white and red man cannot be brought to think and act alike, under similar circumstances. But I will say, that all our attempts to make them think and act alike under circumstances so dissimilar, is not only vain, but, if I may be pardoned for the expression, it is, in my opinion, an exceeding folly, if not presumption.

There are certain animals which, in their exterior appearance, bear as strong a resemblance to each

* The address of the Indian chiefs to the president, during the present session of congress, is well known to contain similar sentiments; they could not think of bruising their hands by labor.

other as does the white man and the Indian, and yet, by nature, they are wholly irreconcilable. Not to mention certain quadrupeds of this description, I will barely point to some of the feathered tribes. The wild duck, for instance—how soon it dives to hide from you! The partridge conceals itself while the shell is yet upon its head. But more especially the turkey. Do we not see, what we very properly call the wild turkey, often brought into life by, and raised with, those of the domestic breed, without ever having seen one of its own kind? And yet we find that, as soon as it arrives at sufficient strength and maturity, scorning the barnyard, though strewed with abundance, it leaves the roost of its companions, and, bounding aloft, it perches on the top of some distant towering tree—on the branches of the proudest monarch of the forest within its reach. This is repeated again and again. Wandering from the side of the gentle brood, he strolls in pursuit of other objects, which, though he has never seen, he is, by the irresistible force of nature, led to believe do somewhere exist. With desire keen and strong he seeks, and, if successful, he bids farewell, a long farewell, to all his old companions, and returns to them no more. And thus it is that whole broods have, from time to time, been brought into life and raised upon the farm, and have as invariably disappeared. Where are they now to be found? Though I will not indulge in the afflicting belief that such a destiny as this does really await our red brethren, yet I do most sincerely believe that such is the barrier which nature interposes between the two people, together with the powerful force of habit operating upon them, that all our attempts to civilize those Indians, who are dispersed and scattered in the wilderness, will be fruitless and unavailing. And, therefore, in plain and common language, I do most respectfully give it as my humble opinion, that we had better mind our own business—yes, we had much better mind our own business. And equally vain will be all our attempts to civilize those within the interior of our country, and surrounded by our settlements, unless we first remove certain artificial obstacles which we must see, and perhaps can remove. I mean, that we must radically change our present system of policy—the political relations existing between them and us. We may educate them, instruct them in agricultural and mechanic arts, furnish them with the implements of husbandry, and try to convert them to christianity; and, after all, unless we secure to them the benefit and protection of our laws and municipal regulations, and in this way engraft them, like so many twigs upon the stalk, or upon the branches of the stalk of the republic, all our efforts will be without effect.

If the states, respectively, in which the small tribes or remnant of tribes remain, will not consent to the removal of these artificial obstacles, and suffer our civilizing experiments to be fairly made, for one I despair of success; and, abandoning all our projects as idle, and even visionary, I will not vote my country's treasure to any such purpose. Encompassed around about by such a power as this, what can they do, while they remain, not independent communities, but dependent upon our will, and yet without the pale of our laws? Aliens in their own country, they can do nothing; they may recede, they cannot advance. If the government will give them, individually, a just and reasonable portion of their lands—of their respective reservations, laid out in its proper metes and boundaries, and take them under the jurisdiction and control of the

laws, gradually extending to them such rights and privileges as shall be reasonable, perhaps something may be done. Otherwise, viewing all our projects as a mere mockery, I am prepared to give it over.

In support of these views Mr. M. said he would refer honorable members to the inaugural address of the president, on the 4th of last March, and also to the report of the honorable secretary of war, during the present session of congress, as well as at the session of 1818. It is but right, said he, to give the Indians fair play. Encourage them to the exertion of their own faculties, of their own energies; but do not impose heavy contributions upon our white citizens, from which the Indians are, in truth, to derive no profit, no advantage, but which goes to the special and exclusive benefit of those who can, with the greatest facility and convenience, obtain access to your treasury.

SOCIETY OF UNITED BRETHREN.

IN SENATE, FEB. 22, 1822.

The following resolutions, moved on a previous day by Mr. Benton, of Missouri, being under consideration, viz:

Resolved, That the secretary of the treasury be directed to lay before the senate a copy of the patent (if any such there be in the treasury department) which issued under an act of congress, of June 1st, 1796, conveying to the society of United Brethren, for propagating the gospel among the Heathen, three tracts of land, of 4000 acres each, to include the towns of Gnadenhatten, Schoenbrunn, and Salem, on the Muskingum, in the state of Ohio, in trust to said society, for the sole use of the christian Indians formerly settled there.

Resolved, That the president be requested to cause to be collected, and communicated to the senate, at the commencement of the next session of congress, the best information which he may be able to obtain, relative to the said christian Indians, and the lands intended for their benefit in the above-mentioned grant; shewing, as correctly as possible, the advance or decline of said Indians in numbers, morals, and intellectual endowments; whether the said lands have inured to their sole benefit, and, if not, to whom, in whole or in part, have such benefits accrued.

Resolved, That the secretary of the senate furnish a copy of the above resolutions to the society of United Brethren for propagating the gospel among the Heathen, addressed to the president of the society, at Bethlehem, in Northampton county, in the state of Pennsylvania.

Mr. Benton said, that he would undertake to shew, by a dry detail of historical facts, the propriety of adopting them.

He said, it happened about an hundred years ago, that the followers of the sectarian Schwenkfeld were expelled, by the reigning elector from the electorate of Saxony; and about the same time a Dr. Spangenburg, theologus adjunctus in the university of Halle, lost his place in the university on account of some dispute with the divines. Being out of employment, these individuals united in a project to cross over to the British colonies in America for the purpose of civilizing and converting the Indians; and, addressing themselves to governor Oglethorpe, then in London, received from him the means of transportation to Savannah, in Georgia. Arrived at that place, they immediately commenced their labors among the Creek Indians; founded a church and a school at a place called

Irene, five miles from Savannah, and had the greatest success, according to the published accounts, in teaching and converting the natives. The noise of their employment and success drew others from Germany, and with the increase of laborers was duly extended the field of action. They spread to the north, and entered the colony of Connecticut, being invited, as the history of the mission reports, by the Indians themselves. Mr. B. said, that he could not gainsay the alleged fact of the invitation, nor was it material to the point in hand; but he could say, that such an invitation implied a contradiction of every spring of human action, there being no principle in the breast of man, either civilized or barbarian, which can impel him to invite another to make an attack upon the articles of his faith and the sanctity of his God. Be that as it may, Mr. B. said that the Brethren (for by that name they began to be known) established themselves in the village of Shekomeko, which, if it now stands, will be found between the rivers Hudson and Connecticut, some fifty miles west of Hartford. It was a principal town of the Mahikander tribe, and the Brethren immediately established a school and a church, and had the most wonderful success in teaching and converting. To do justice to their labors, Mr. B. said that he would read the account given of it by their own historian, Loskiel.

He read "In July the new chapel at Shekomeko was finished and consecrated; some of the elders of the congregation of Bethlehem being present. The congregation usually met every forenoon to hear a discourse delivered upon some text of scripture. Every evening an hymn was sung. A monthly prayer day was likewise established, on which accounts were read concerning the progress of the gospel in different parts of the world, and prayer and supplication made unto God for all men, with thanksgiving. The prayer days were peculiarly agreeable to the Indians; especially because they heard that they were remembered in prayer by so many children of God in other places. Both on those days and on all festival days, Shekomeko was all alive, and it may be said with truth, that the believers shewed forth the death of the Lord both early and late. One day above one hundred savages came thither on a visit, and one of the missionaries observed, that, wherever two were standing together, our Lord Jesus and his love to sinners, the cause of his bitter sufferings, was the subject of conversation."

Mr. B. said that the history went on to shew that the converted Indians increased in number and grace until they became an example to the people of Connecticut. He mentioned particularly the case of a certain justice of the peace, as related by Loskiel, who came to Shekomeko to find out whether any thing was going on there contrary to the laws of the colony, and who was made ashamed of himself by the godly walk and conversation of the Indians, and returned home rebuked and edified by their example.

Mr. B. said that, continuing to increase in numbers and to widen their theatre—the Brethren appeared in Pennsylvania among the Delawares and Shawnese, then in great numbers upon the Susquehanna river and in the neighborhood of Philadelphia. He mentioned Nain, Shamokin, Bethlehem, Nazareth, and many other places, as founded at this time and filled with converted Indians, and read from Loskiel to shew that a single congregation consisted of five hundred converts and that the schools were thronged with girls and boys, divided into regular classes, and making wonderful pro-

gress in their studies. He alluded to the opinion of Dr. Franklin about these establishments, but passed on to the Muskingum, on the Ohio, where the vanguard of the Brethren arrived about the year 1770. Here they founded the towns of Gnadenhatten, Schoenbrunn, and New Salem, and were proceeding with their usual success, as testified by the historian, when the settlements were broken up, and themselves dispersed by the troubles of the revolutionary war. It was not until after the return of peace in 1783, that they could return to their labors, and about this time they began to attract the notice of the American government, and to receive from it promises of aid, in consideration of their great success in teaching and converting the Indians. He read from Loskiel, to shew that the Brethren were now full of courage and confidence; that the schools and churches flourished; that the young especially exceeded the old; that their converts, in the whole, had amounted to 1500 persons, "which they considered to be a stock large enough to be a light of the Lord shining unto many heathen nations, for the eternal salvation of their immortal souls."

Mr. B. said, it was to these Indians that the resolutions referred, for their use that 12,000 acres of land was granted, and it was their present number and actual condition which he wished to learn. He said, it was about this time that the Brethren, with others, became incorporated, under the act of the general assembly of the state of Pennsylvania, by the name of "*The society of United Brethren for propagating the gospel among the Heathen.*" The usual privileges to sue and be sued, to have and to hold real and personal estate, were imparted to it, and it was to this society that the land in question was granted, in trust, for the sole use of the christian Indians of the towns he had mentioned.

Mr. B. adverted to the resolutions which he had submitted, and to the nature of the inquiry which they contemplated. He said, the grant conveyed nothing but the use of the land, and that upon a precise limitation. If the use had failed, the limitation had attached, and the ground returned to the grantor. He said it would have been idle in him to undertake to put the senate upon this inquiry, without being able to suggest a failure of the use; he therefore made the suggestion, but without going into particulars, hoping that the senators from Ohio, so much more competent than himself, would do the senate that favor.

Mr. B. said he was a friend to the Indians and an enemy to the abuse of charities. He believed that great abuses had been committed on public and private charity, in the name of humanity to Indians. He did not include all missionaries in this censure. He knew that the best men upon earth had engaged in that business from the purest and most disinterested motives. He knew that the early history of North and of South America was full of such examples—examples of men who, braving all dangers and hardships, died at the stake in flames and tortures, martyrs to their zeal to carry the light of the gospel into the darkest regions. Still he believed that great abuses had been committed, and he could hold it but little short of an abuse to attempt, at this day, with the experience of 300 years before our eyes, to raise money from the weak and credulous for the purpose of converting the Indians. He said we had the experience of 300 years, and every year of it would furnish illustrations of the truth of his position; but he would only go back two hundred, and that for the sake of a single example. Canada was then just discovered—the

French held it—Henry the IV. was then on the throne, and the Jesuit, father Cotton, was his confessor. This Jesuit conceived the design of converting the Canada Indians, and the first question with him was to raise the ways and means. Man, said Mr. B. is an excitable animal, and woman still more so, and above all, a Frenchman and a French woman. The Jesuit knew this: so he addressed himself to the ladies of the court and of the city of Paris. The effect was electric. High and low rushed into the project. Enemies in every thing else united in this. Mary of Medicis, wife of the king, and the marchioness Verneuil, his mistress, vied with each other in the profusion of their donations. The duchesses D'Aiguillon and Lesdeguieres, and the countess Guercheville, figured in their train. The gazettes of the day were spangled with the names and titles of female patronesses of missions. Money, clothes and valuable effects, flowed in upon the Jesuit. Young ladies were even sent to Canada to nurse the sick christian Indians, and that superb establishment in Quebec, the *Hotel Dieu*, was founded by the duchess D'Aiguillon for an Indian hospital. To repay so much liberality the Jesuit missionaries sent back the most wonderful accounts of their success. According to their reports the Six nations, and divers other nations, were converted, and the Island of Orleans, (below Quebec), contained six hundred Indian monks and nuns, regularly divided, male and female, into two distinct societies.* The zeal of the ladies rose to frenzy, and father Cotton had to moderate it.

Mr. B. said that the French Calvinists, all the while, insisted that the Jesuits were doing no good to the Indians, but acquiring much power and riches for themselves—for which they were, of course, stigmatized by the Jesuits as the enemies of the Indians. On which side the better reason was, might be guessed at from the fact, that, when the English government succeeded to the sovereignty of the Canadas, they found the Jesuits in possession of very few converts, and in the enjoyment of very large revenues; no less than forty-four thousand dollars per annum, which went to the British crown upon the extinction of the order some years ago: and there ended the charities of Parisian ladies in favor of converting American Indians.

But, Mr. B. said, it was not father Cotton and the ladies only who had tried this business and failed in it. All the kings of France, from the discovery of Canada in 1600, to the cession of that province and Louisiana in 1763, had made the same experiment, with the same wonderful success in the beginning, and the same miserable result in the end. In the reigns of these kings, the missionaries covered the valley of the Mississippi, and carried their adventurous zeal to the shores of Lakes Superior and Winipeg, and to the banks of the Saskatchewan river, every where converting nations, and building chapels, and bringing to their altars innumerable worshippers of the only true and living God. And yet, what is the present fruit of all this labor? If a traveller on the banks of the Mississippi should inquire for the monuments of that time, and of that work, he might be pointed to the walls of

a fallen down house in the village of Kaskaskia, and told "that was the Jesuits' college;" he might be pointed to a stream of water below St. Louis called *La Riviere des Peres*, (river of the fathers), and to another above, called *La Riviere des Moines*, (the river of the monks)—and informed that these walls and these names are the only vestiges which now remain of all the labors of that powerful order in this magnificent valley.

Mr. B. pointed to Lake Superior, and said it was the same thing there. The site of the chapel which contained 800 worshippers in the time of Charlevoix, was now unknown. Nay, more: the knowledge of the fact that missionaries had ever been there, was itself in danger of being lost. He had the authority of sir Alexander McKenzie, for asserting that this knowledge, even thirty years ago, was confined to the stream of tradition and to the memory of some superannuated old men. If such had been the fruit of missions patronized by such men as Henry the 4th and the duke of Sully, Louis the 13th and cardinal Richelieu, Louis the 14th and the great Colbert, led by an order who, for energy and devotion, have been styled the Janissaries of the papal throne, Mr. B. said, that he, for one, was ready to despair of any great success from our empty pockets and discordant forces.

Mr. B. said, that he had covered more ground than the terms of the resolutions required, and he had done so designedly. He had seen in a gazette of the city the copy of a constitution, and a list of the grand dignitaries of a vast society announced for the conversion of Indians.—The list embraced all presidents and ex-presidents; all secretaries of war, and treasury, and navy; all judges and governors, generals and commodores, preachers and school-masters, and all members, present and to come, of both houses of the congress of the United States. As a member of the senate, he found himself included in the list, certainly without his knowledge, and equally certain without his approbation. He had, therefore, made this exposition of his sentiments to shew that he did not countenance the views of the society. He was laid under a necessity of doing so, for the constitution and list is printed in this city; the elections are said to have taken place in this city; all is done, as it would seem abroad, in our very presence; and, if we do not except to the procedure, we agree to it: silence gives consent. And what impositions may not be practised? The ninth article creates a committee of ways and means—five the complement and three the quorum. This committee is enjoined "to devise and prosecute to effect the measures most practicable and best adapted to supply the society's treasury with the necessary funds to carry on its operations." This quorum of three are the soul of the society; they are to raise the wind! How? Nobody knows. Who are they? Nobody knows. What may they not do in the name of this redoubtable society! They may run subscriptions through all parts of Europe and America, and who could have the courage to refuse a mite to such a formidable array of beggars? The weak and credulous would give what was due to their children, their servants, or their poor neighbors, under the delusive idea that the great men whose names they saw were seriously engaged in converting Indians, and would faithfully apply all that was received to that object.

Mr. Brown, of Ohio, said, in answer to the call thus made on him, by the gentleman from Missouri, that he could only observe that he was unable to give an estimate, tolerably correct, of the value of the property in Ohio, possessed by the United Bre-

*"Le desir d'imiter la reine des vierges, faisoit embrasser le celibat a un tres grand nombre des filles; et la conduite edifiante de ces epouses de Jesus rendoit respectable, parmi les sauvages, un etat qui, peu d'annees auparavant, y avoit ete meprize."—Charlevoix, *Histoire de la Nouvelle France*, vol. 2, p. 55.

thren. He believed that the cultivated portion of their grant was comparatively small, and, to all appearance, the revenue derived from it could not be very considerable; he was uninformed what might have been the amount, as well as its application. The state of Ohio, for several years, exempted the land from taxation. In the course of the time, since the first Moravian mission was sent to the Tuscarawas (now fifty years or more), it would seem, from their own accounts, that their zeal for propagating the gospel had been so successful as to assemble a large congregation of Indians, whom they had converted to christianity, which congregation has now become nearly extinct; owing to massacre, wars and dispersion, together with many of the vices that usually attend a degraded community, so that the unfortunate Indians, in that region, under the special protection of the Brethren, have dwindled to a few families; comprehending, in all, perhaps, twenty individuals, inhabiting a wretched hamlet called Goshen, on the Tuscarawas branch of the Muskingum; exhibiting, like the persons of the natives, an appearance of squalid wretchedness. They have among them a resident from the society, and are said to cultivate a common field in a rude and imperfect manner. This remnant shows no symptoms of mental improvement; but, on the contrary, many marks of their degradation appear in their idleness, want, and habits of intoxication among the men. As the condition of these Indians, to whom the professed benevolence of the United Brethren has been extended, seems, said Mr. B. in no way improved, the ostensible object of that mission, in which Mr. Heckewelder spent above forty years, has totally failed.

Mr. LOWME, of Pennsylvania, observed that, on hearing the resolutions read, he had no objections to their passage. He was always in favor of information on every subject where there was any allegation of mismanagement, or, as in this case, a failure of the use. Of the present case he knew nothing on either side, and he should not have said a word, had not it been for the general remarks of the gentleman from Missouri, which appeared to him to have been perfectly gratuitous—at least, he was not able to see their application to the resolutions now under consideration. He did not like discussions of this kind to be brought before the senate, unless arising out of the business immediately before us. Should it become necessary to discuss this subject, he, (Mr. L.), believed it would not be difficult to give a very different view of the subject from that given by the gentleman from Missouri. Without denying the facts adduced, Mr. L. said he could produce other facts which would place the subject in another light, and he had long found it necessary, in coming to a correct conclusion, to hear both sides. If there have been mistakes on this subject, it is not surprising, and from those very mistakes information would be derived. It was likely that those engaged in this benevolent business had, at the first, kept too much out of view the necessity of teaching the Indians agriculture and the common arts of civilized life. The proceedings of the different missionary societies shew that this error is now corrected. He did not intend to engage further in the discussion. He would not have said a word had it not been that an inference in favor of such general remarks might have been drawn from the circumstance of their being permitted to pass in silence.

The question was then taken on the adoption of the resolutions; and they were agreed to.

INDIAN CIVILIZATION.

Letter to a member of congress in relation to Indian civilization, by the domestic secretary of the United Foreign Missionary society.

Respected and dear sir—Having understood by a letter from Washington, that the impression has been uttered on the floor of congress, that 'Indian civilization forms no part of the objects of missionary institutions,' and that 'the establishments at Brainerd and Elliot are a miserable farce,' I would respectfully invite your attention, for a moment, to the following facts and remarks.

The objects of the United Foreign Missionary society are to civilize and christianize the American Indians—and the managers are convinced, from their own experience, as well as that of kindred institutions, that each of these objects can be more easily and successfully attained, when combined, than when separately attempted. The history of eighteen centuries testifies, that no pagan nation ever became civilized to any important degree, until it had renounced its idols, and abandoned the whole train of superstitious rights connected with its idolatrous worship; and that no one ever became evangelized without acquiring, in some measure, the arts and habits of civilized life. Whether the object, therefore, be to civilize or christianize, both must be carried on with an equal and united effort. Under the impression of these truths the board, in forming their general principles, or system of operations, combined the two objects, as you will evidently perceive, by a perusal of the following sections:

First. At all the missionary stations under the care of this board, it shall be the object to promote, not only the knowledge of christianity, but also the arts of civilized life. Besides the branches of learning taught in common schools, the boys shall be instructed in agriculture and the mechanic arts; and the girls in spinning, weaving, sewing, knitting, and household business.

Second. In every establishment, it is expedient that there be a superintendent and an assistant, who shall be ministers of the gospel; a schoolmaster, a farmer, a blacksmith, a carpenter, and such other mechanics as shall be found necessary, all of whom shall come under the general denomination of missionaries. The number shall be increased as occasion may require. At every station there shall be either a physician, or a person acquainted with the practice of physic."

There are eight other sections, all of which are conformable to the two I have quoted.

The substance of these general principles was communicated to the public in the third annual report. In the same report it was stated, that, in the mission family which had just gone to the Osages of the Arkansas, there were two clergymen, one physician, two teachers, two farmers, a carpenter, and a blacksmith.

The fourth report, in relation to the family which went out last spring to the Osages of the Missouri, states as follows:

"Besides the superintendent and assistant, there are among the males of the family, a minister of the gospel, who goes out as a teacher, with the privilege of preaching whenever his health will permit, and the circumstances of the mission require, a regularly educated physician and surgeon; a person capable of manufacturing machinery, performing most kinds of blacksmith's work, and teaching sacred music; a carpenter and millwright, a shoemaker, a waggon-maker, and two farmers. The

females, collectively, are qualified to teach all the branches of industry pursued by that sex in this country; most of them have had considerable experience in teaching common schools; and two or three have taught in seminaries of a higher order."

In speaking of the mission at Tuscarora, the same report says:

"The whole of the nation now residing at Tuscarora, have taken a decided stand in favor of the christian religion. They have already made considerable progress in acquiring the arts and habits of civilized life. Having, in a great measure, abandoned the chase, as the means of subsistence, they depend, for their support, principally, upon the produce of their soil. They occupy comfortable dwellings; and, in passing through their village, you behold waggons, ploughs, and other implements of husbandry, arranged around their doors. Some of their youth have made considerable proficiency in the elementary branches of an English education. One of their young men, hopefully pious and of promising talents, is stationed at a seminary in this city; and another, perhaps equally pious and promising, at the foreign mission school, in Connecticut.

"From our missionary at this station, we learn that the Indians had recently manifested more than ordinary solicitude for the general improvement of their village and their nation. Among other efforts for this object, they are preparing to erect a new council-house and church, of larger dimensions, and of more convenient structure, than the one they now occupy. They have already furnished all the timber and boards required for the building; and they hope to finish it early in the ensuing summer.

"A school for the children of the tribe has been taught for several years by the missionary and his wife. As an additional teacher, the board have lately appointed Miss Elizabeth L. Brown, of Homer, in the county of Courtland. She will probably commence her labors in the course of the present month; and it will be her particular duty to instruct the young females of the nation in the art of sewing, knitting, spinning and weaving."

In relation to the Seneca station, the same report remarks:

"The property of the board in the Seneca village, consists of two dwelling houses and a school house, together with the use, for an indefinite period, of the ground on which they are erected. It is in contemplation to build an addition to the house now occupied by Mr. Young, for the purpose of accommodating the minister and of embodying many of the Indian children in the missionary family. It is also in contemplation to erect a workshop within an enclosure, of sufficient extent for the deposit of boards and timber; to furnish the necessary tools; and to give to the nation free access to the establishment, for the object of making and repairing their farming utensils and household furniture."

I might easily multiply these extracts; but enough have been given to show, in the first place, that "Indian civilization" constitutes a leading object of this society, and one, of which the managers can never lose sight; and, in the second place, that this subject forms a prominent topic in our annual reports. When the last report was written, it was not officially known to the board that the mission sent out to the Osages of the Arkansas had arrived at their destined station; and the numerous family, bound to the Osages of the Missouri, had not yet embarked at Pittsburgh. Of course, no account could have been given of the progress of civilization among those tribes. But the missions

among the Tuscarora and Seneca tribes, are of longer standing; and to strangers and others who have visited them, it is a matter of surprise, that they should have made such rapid progress in laying aside their savage customs, and acquiring the habits, arts, and industry of civilized life. During the last summer, they were visited by two very respectable gentlemen, (a physician and a merchant), and several ladies from Charleston, S. C. who were highly gratified with the good order of the schools, the proficiency of the scholars, and the general state of civilization and improvement among the Indians. They left behind them, for the benefit of the mission, a handsome donation, as a testimonial of the gratification they had received; and took with them to Charleston a number of elegant specimens of penmanship from the hands of the Indian youth. While passing through the city, one of the gentlemen called on me as the official organ of our society, and expressed the lively sense which he and his whole party entertained of the usefulness of our operations among those tribes.

At Tuscarora there is a regularly organized church, which contains *twenty-three* Indian communicants, whose life and conversation correspond with their religious profession. Our missionary in speaking of this tribe says—"On some accounts, this poor people are superior to any village of white inhabitants, with which I am acquainted.—The sabbath is almost universally regarded and honored among them. There is not a village in the state, where so large a proportion of the heads of families punctually attend the preaching of the Gospel." Again—"There appears to be among these Indians an increasing sense of the importance of education and industry. A large proportion of the families are industrious. During the past winter the children have been punctual in their attendance at school, and have made very encouraging progress."

The visit to Brainerd and Elliot, by a member of our press, (as stated in the letter which has called forth these remarks), was probably made in the infancy of that establishment. The uniform testimony given by the missionaries, and by gentlemen who have occasionally visited those stations, is of a very different character. They concur in representing those nations as making great and rapid improvement in civilization. An extract or two from the documents which first came to hand, will sufficiently support this remark. The journal of the mission at Brainerd, under date of the 1st of November, 1820, presents the following pleasing intelligence.

"The council, (of Indian chiefs), have made a law to compel parents to keep their children at school, when once entered, until they have finished their education, or to pay all expense for clothing, board and tuition. They have also given the superintendents of each mission authority to take out of their schools such children as they shall think proper, and with the consent of their parents, put them to such trades as are attached to the missions; and, when such children have learned a trade, they are to be furnished with a set of tools at the expense of the nation.

"They have also divided their country into eight districts or counties; laid a tax on the people to build a court house in each of these counties, and appointed four circuit judges. The Cherokees are rapidly adopting the laws and manners of the whites. They appear to advance in civilization, just in proportion to the knowledge of the gospel. It, therefore, becomes all, who desire the civilization of the

Indians, to do what they can to send the gospel among them."

In the spring of 1820, Adam Hodgson, esq.* a distinguished merchant of Liverpool, visited Elliot and Brainerd, on a journey from Natchez, on the Mississippi, to Richmond, in Virginia. An account of his journey I find in a London publication now before me, from which I beg leave to present a few passages, that you may learn the opinion of an intelligent foreign traveller, upon the subject now in question. After mentioning his arrival at Elliot, he adds—

"Soon after my arrival, we proceeded to the school, just as a half-breed, who has taken great interest in it, was preparing to give the children "a talk," previous to returning home, sixty miles distant. He is a very influential chief, and a man of comprehensive views. He first translated into Choctaw, a letter to the children, from some benevolent friends in the north, who had sent it with a present of a box of clothes. He then gave them a long address in Choctaw.

"As soon as the school was over, the boys repaired to their agricultural labors; their instructor working with them, and communicating information in the most affectionate manner; the girls proceeded to their sewing and domestic employments, under the missionary sisters. They were afterwards at liberty till the supper bell rang, when we all sat down together to bread and milk, and various preparations of Indian corn; the missionaries presiding at the different tables, and confining themselves, as is their custom, except in cases of sickness, to precisely the same food as the scholars. After supper, a chapter in the bible was read, with Scott's practical observations. This was followed by singing and prayer; and then all retired to their little rooms in their log cabins.

"In the morning, at day-light, the boys were at their agriculture, and the girls at their domestic employments. About 7 o'clock, we assembled for reading, singing, and prayer; and soon afterward for breakfast. After an interval for play, the school opened with prayer and singing, a chapter in the bible, and examination on the subject of the chapter of the preceding day. The children then proceeded to reading, writing, accounts, and English grammar, on a modification of the British system. The instructors say they never knew white children learn with so much facility; and the specimens of writing exhibited unequivocal proofs of rapid progress. Many spoke English very well.

"The immediate object of the settlement of Elliot, is the religious instruction of the Indians. The missionaries are, however, aware that this must necessarily be preceded or accompanied by their civilization; and that mere preaching to the adult Indians, though partially beneficial to the present generation, would not probably be attended with any general or permanent results. While, therefore, the religious interests of the children are the objects nearest to their hearts, they are anxious to put them in possession of those qualifications which may secure to them an important influence in the councils of their nation, and enable them gradually to induce their roving brethren to abandon their erratic habits for the occupations of civilized life. The general feelings of the nation at this moment are most auspicious to their undertaking. The community at large is most solicitous for civilization. In this they have made some progress; many

of them growing cotton, and spinning and weaving it into coarse clothing.

"Of three districts or towns into which its 15 or 20,000 souls are divided, one has appropriated to the use of schools its annuity, for seventeen years, of 2,000 dollars per annum, received from the United States for ceded lands; another, its annuity of 1,000 dollars per annum, with the prospect of 1,000 more; and one has requested the United States not only to forbid the introduction of ammunition into the nation, that the hunter may be compelled to work, but to send their annuity in implements of husbandry. At a recent general council of the chiefs, 1,800 dollars in money, and upwards of eighty cows and calves, were subscribed for the use of schools, and the total contribution of the Choctaws to this object exceeds 70,000 dollars.

"I was highly gratified by my visit to Elliot—this garden in a moral wilderness; and was pleased with the opportunity of seeing a missionary settlement in its infant state, before the wounds of recent separation from kindred and friends had ceased to bleed, and habit had rendered the missionaries familiar with the peculiarities of their novel situation.

"The sight of the children, also, many of them still in Indian costume, was most interesting. I could not help imagining, that before me might be some Alfred of this western world, the future founder of institutions which were to enlighten and civilize his country—some Choctaw Swartz, or Elliot, destined to disseminate the blessings of christianity and refinement from the Mississippi to the Pacific, from the Gulph of Mexico to the Frozen Sea. I contrasted them in their social, their moral, and their religious condition, with the straggling hunters, and their painted faces, who occasionally stared through the windows; or, with the half naked savages of another tribe, whom we had seen in the forests a few nights before, dancing round their midnight fires, with their tomahawks and scalping knives, rending the air with their fierce war-whoops, or making the woods thrill with their savage yells. But they form a yet stronger contrast with the poor Indians whom we had seen on the frontier—corrupted, degraded, and debased by their intercourse with English, Irish, or American traders."

I might, sir, conduct you with our interesting traveller, from Elliot to Brainerd, and multiply quotations to the same general purport; but, more than enough, I am sensible, has already been given, to convince a gentleman of your humanity and candor, not only that the disinterested efforts which are now making to civilize and christianize the Indians of our country, deserve not the opprobrium which is said to have been cast upon them, but that they merit the approbation and the support of the community. The present system of combining the two objects of civilizing and christianizing the Indian tribes, is already "in the full tide of successful experiment;" and I cannot but deeply regret, that a measure should find its advocates in congress, which appears to be calculated to give a powerful check, if not to erect an insurmountable barrier to both.

Upon this country, sir, rests a responsibility in relation to the Indian tribes, of deep and tremendous import. "Sovereigns, from time immemorial, of the interminable forests which overshadow this vast continent, this injured race have gradually been driven by the white usurpers of their soil, within the limits of their present precarious possessions. One after another of their favorite rivers has been reluctantly abandoned, until the range of the hunter is bounded by lines prescribed by his invader, and the inde-

*Of the house of Rathbone, Hodgson & Co.—
Ed. Commercial Advertiser.

pendence of the warrior is no more. Of the innumerable tribes, which, a few centuries since, roamed fearless and independent in their native forests, how many have been swept into oblivion, and are with the generations before the flood! Of others, not a trace remains but in tradition, or in the person of some solitary wanderer, the last of his tribe, who hovers, like a ghost, among the sepulchres of his fathers—a spark still faintly glimmering in the ashes of an extinguished race." Alas! sir, shall the sword of avarice, or the strong arm of civilized power, still pursue this unhappy people? Shall the unceasing and relentless force of emigration drive them from forest to forest, until the last remnant, struggling for existence, shall fall on the verge of the Western Ocean, or perish in its flood? Will not the voice of humanity prompt us to arrest this unremitted progress of extermination? Does not the glory of our country require, that we extend to those who still survive, the hand of friendship, convey to them the blessings of social life, and raise them to a high and happy destiny? And how, sir, shall this be accomplished? Break down the restrictions which have happily been placed upon Indian trade, and you will let loose upon the untutored tenants of the wilderness, a horde of selfish and unprincipled adventurers, to pollute, debase, deceive and destroy. But continue and enforce those restrictions—encourage and aid the missionary institutions of our country, and you will find a host of pious ministers, teachers, farmers, and mechanics, who will go forth to the work of civilizing the Indians, with no other motive than that of promoting their temporal and eternal benefit, and expecting and wishing no earthly remuneration for their privations and their toils. Adopt this course, and you will have agents who will carry on the noble designs of the government in relation to the Indian tribes, with a spirit of disinterestedness, perseverance and fidelity, which, in any other way, or on any other principle, cannot be found. Adopt this course, and with cheering hope you may look forward to the period when the savage shall be converted into the citizen—when the hunter shall be changed to the agriculturist or the mechanic—when the farm, the work shop, the school house, and the church, shall adorn every Indian village—when the fruits of industry, good order, and sound morals, shall bless every Indian dwelling—and when, throughout the vast range of country from the Mississippi to the Pacific, the red man and the white man shall every where be found mingling in the same pursuits, cherishing the same benevolent and friendly views, fellow citizens of the same civil and religious community, and fellow heirs to an eternal inheritance in the kingdom of glory.

I am, sir, very respectfully, yours, &c.

Z. LEWIS,

*Domestic Secretary of the United
Foreign Missionary Society.*

INDIAN ELOQUENCE.

The following speech was delivered by Shun-kah-kih-gah, (the Child chief) to major BENJAMIN O'FALLON, agent for Indian affairs on the Missouri, at Fort Atkinson, on the 10th June, 1821, on the subject of the Pawnee Loups, plundering and insulting some Americans on the Arkansas river:

My father—I have come, accompanied by the chief of the Republics and a few Braves, uninvited, to see you. Before I left my village, I was not certain that I should see you, but the interest of my nation and my feelings urged me to depart: on my way to this place, I was constantly uneasy, lest I

should not see you, and be obliged to return disappointed to my village; but God is kind, he enables me to see you, and my heart rejoices.

I did not leave my village in the dark, but with the knowledge of my people, and after having consulted my chiefs and warriors.

My father—I come to tell you truth, but it will be unpleasant to your ears; a part of my nation, the Pawnee Loups, have shut their ears against your words, and plundered, insulted, and perhaps killed your people. A few nights since they came to my village three times, with two of your medals, two flags and a quantity of goods, to dance the *calumet*, (make presents), and triumph at the expense of the whites whom they plundered. My heart was wavering; three times it was divided, but the recollection of your words, and my promise to you when you first visited my nation, induced me to send them off, preferring to go naked, sooner than to accept of clothing or any thing which had been stolen or taken forcibly from the whites.

My father—I come to tell you truth, and as red skins seldom tell the truth, I am in hopes you will listen with more attention to what I am going to say—before you came to this land, we had but a short acquaintance with your people; we looked upon them as the most favored, but the weakest children of the Great Spirit; and as those who first came amongst us, quarrelled about our skins as hungry dogs over a naked bone, we were in the habit of treating them as dogs—yes, my father, until you come among us, we considered ourselves to be the first nation on the earth; we had always appeared so conspicuous as almost to obscure the other nations around us, but when you came to this land followed by so many war chiefs and soldiers, whose glistening arms appeared like a long-tailed fiery son of heaven, I almost shrunk within myself; I thought I discovered my mistake, and, consulting the safety of my people, I opened my ears to your words, and became an American, and since I have been an American, my influence with my nation weakens, as you hesitate to punish every insult offered your people.

Before you came here, one band of my nation, (Republics), to which this chief belongs, were in the habit of ill-treating the whites, robbing and spilling their blood with impunity; but, after you came here, you visited their village, they cried for peace, and you discovered such a favorable change that you drew a veil over the past, which pleased me much, because I was in hopes that a period was put to our difficulties with the whites; I was in hopes that we would keep our eyes and ears open, to promote the peace and quietness of each other, but I have been most egregiously disappointed. I cannot express my disappointment at the conduct of the Pawnee Loups, who, when you reproached us for our cruelty to the whites, exultingly boasted of never having wronged them, have now went, and not only plundered and insulted them, but, I believe, spilt their blood.

My father—I believe that I can see farther than most of red skins; hence I see that your forbearance will increase the tears of the good, and the wickedness of the wicked; hence I see, my father, that our union is to be disturbed, and our trade and intercourse with you be interrupted; hence I see that a period is to be put to the peace and prosperity of my mighty nation, a nation that has triumphed over every thing between this and the setting sun. I feel for my nation; and, since I have left my village, forbearance will induce some of my

young men to follow the example of the Loups, and that they will ultimately suffer.

My father—Since I refused to permit them to dance the calumet in my village, they have been abusing both you and me; I felt myself so much injured that I could not forbear coming to see you, in hopes of being redressed. When I threatened them with you, they laughed and say it is not true; meaning, that they have heard the thunder of heaven, until they are no longer afraid of it. If you do not make an example of the Loups, I fear it will be impossible for me to restrain some of my young men, who are constantly mingling with them; the chiefs of the Loups, and some of their leading men, are disposed to listen to your words. They wish to hold you fast by the hand, but, unfortunately, the chiefs of the red skins are not like yours; they can punish their young men when they please. With their tongues, and by example, they endeavor to govern their people; and with their arms they endeavor to punish their enemies. I do not wish you to destroy the Loups, because they have some of my blood; but it becomes you, if you consult the interest of your people, my interest, and the interest of the land, to send some of your warriors against the Loups, not to destroy, but to make them atone for what they have done, which will induce them to listen to your words, the words of their chief, and respect your people.

My father—I have listened attentively to what you have said, and I believe it to be all true; when I return I will recount it to my people, word for word, as it come from your mouth. I will then go to the Loups, and tell them what you have told me to tell them, and then I will return to my band, and with the grand chief, (Long Hair,) who is my brother, govern it as well as it is possible for red skins to do under similar circumstances.

My father—Since I first heard your words, I have always been thinking of you; you appear to be always before me; whatever bad thoughts enter my head, and I lay down to sleep, you visit me in my dreams, and you chase them from me; what a pity it is that red skins have such treacherous memories. When they come to see you, they appear to be all attention, their ears burst open to hear all you have to say; but when they get out of your sight, like a dream they recollect the past.

My father—I am afraid of you, so are all red skins who have seen you; if they say not, *they lie*. Those who act wrong, are still afraid of you, but unfortunately they fear you as a *spirit*, not as a *host*. I have been told that the great American chief restrains those warriors, and that you, altho' a great chief, have not the control of them. If it be true, my eyes have not deceived me; I have often thought that if you could wield the destiny of nations, no wind coming over the neglected bones of your murdered countrymen would disturb your ears with their *cries for revenge*. It is the spirit of your neglected dead, seeking for revenge, which encourages the thoughtless red skins to follow up the blow, in hopes to exhaust your patience, and hasten the approach of the day of retribution.

My father—I have listened to your words, and have sense enough to know your good intent; but to give peace and happiness to this land, you must appease the spirits of the dead. They sleep by day, but they are constantly flying on the mist of night, to disturb and arouse the slumberous warrior from his bed; how long the present state of things will exist, remains for you to say; I am a red skin, and have not foresight enough to tell.

Scr. to Vol. XXII—9.

My father— I begin to fatigue your ears. I am almost done. I am a man of but few words, but my feelings have been strong on this occasion; and have perhaps carried me farther than usual. I am going to return; you may expect to see me at the time proposed, accompanied by the chiefs and principal men of my nation. I wish you to recollect that I only aspire to be your friend, and wish to *live* in your estimation.

Domestic Slavery.

HOUSE OF REPRESENTATIVES, MARCH 27, 1822.

In committee of the whole on the bill to provide for the delivering up of persons held to labor &c. Mr. Colder's motion to strike out the enacting clause being under consideration—

M. COLDER said he had not come to the subject with so much preparation as he could have wished. He had not expected that the bill would have been taken up at this time. In order to remove any impression that he was influenced by prejudices and misguided sympathies, he begged leave to state, that he wished to go no further on this subject than the constitution would permit him. He would go further. He did not believe that universal emancipation in this country was possible. Would to God it was. Before he could determine whether the bill ought to pass, it was necessary to inquire whether it was reasonable for the holders of this species of property to ask for any remedy beyond what was provided by the law of 1793. Where was the man who could ask a legislature to go further than that law did—when a person, who is under an obligation to render service and labor to another, no matter whether white or black, may be seized without any warrant and dragged before a magistrate. Sir, as extensive as were the powers given by this law, what was the practice under it? Negroes under color of this law have been seized and dragged before some magistrate, fit for the purpose, in some remote corner, a certificate has been made out, and the wretches, manacled, are carried and sold to the West Indies. The law has been made the means of supplying the market with slaves. This was not mere fiction.—In the city which he, in part, represented, from a public street, a man, with a family, a respectable man, differing in nothing from the other citizens, except that his color was a little dark, has been seized, and, under color of this law, sold to a distant part of this union for a slave, till, at length, humanity restored him to what was his country. But let me examine further the existing law on this subject. Any person claiming a right to the labor and service of one who has escaped into another state, can, without any warrant, lay his hands on him, and carry him before a magistrate, and, upon proof to the satisfaction of such magistrate, either by oral testimony or affidavit taken before a magistrate of the state from whence the fugitive is alleged to have escaped, a certificate is to be granted, which is a sufficient warrant for removing the said fugitive from labor, to the state or territory whence he or she has fled. And is not this enough? The gentleman from Maryland thinks not. He will please to recollect that no distinction is made in the provisions with respect to color. Let me put a case. I do imagine, sir, that an individual, from a remote part of the United States, comes with a certificate from a magistrate, that I am bound to his service for a certain number of years; suppose that the requisite evidence and certificate is obtained in some obscure corner of the state where I reside,

What prevents my being carried through the union fettered and manacled like a slave. And, after this has been done, what is my remedy? Why the scoundrels who have done it incur a penalty of five thousand dollars! And is the value of liberty in this country to be estimated at five thousand dollars? Are we about setting a price upon liberty? Sir, is this to be endured. The gentleman from Virginia thinks that any evil which may arise, from entrusting the execution of this law to inferior magistrates, may be prevented by the states passing a law prohibiting these magistrates from carrying the law into execution. But they must first remodel their courts of justice; and is it reasonable to subject them to all this inconvenience?

Mr. Wright said that the gentleman from New York appeared not to have read the bill. He hoped he would do himself the justice to read it. He would find all his important objections vanish. We have gone further than the constitution requires us. The constitution declares that fugitive slaves shall be delivered up, upon claim of the party entitled to his labor and service. But the bill requires the party to produce proof before he can make his claim. He appreciated the sincerity of those who were anxious to become the guardians and protectors of the negroes. Their affection of piety did not deceive him. He had heard of a man who was so pious that he stole a bible. Gentlemen at the north were mistaken about the manner in which slaves were treated. He wished they could be present at the meeting between him and his negroes, when he should return home. We keep them better—they are fed better than the peasantry at the north. In Md. we sell nothing we need; but the Dutch eat nothing that they can sell. The gentleman from New York has told us a frightful story about a negro being seized, manacled, sold to distant slavery. He did not know whether such things might not be done at New York. But he knew that if any person should attempt to do such a thing in Maryland he would raise a hornet's nest about him. The gentleman thinks the present law affords all reasonable security to slave holders. Why, that law has served little else than to encourage kidnapping. He had known many a villain instigate a negro to run away for the purpose of getting a reward for bringing him back. Mr. W. thought the bill placed sufficient guards against the abuse of the powers which it proposed to confer. The person claiming a fugitive slave was required, before he went in pursuit of him, to give a bond conditioned to bring such slave before the justices to whom application had been made for a certificate. The honorable gentleman from New York, (Mr. Colden), pays us a very poor compliment to suppose we would treat as slaves persons who are not slaves. If he thinks there will be one case of abuse under this law, let him use his ingenuity to make the bill better. Let him guard it in every possible way. But, Mr. Chairman, we do not kidnap. We often set slaves at liberty. I have manumitted a great many myself. If the gentleman knew how we treat them, he would not have made the remarks nor the motion. Would he have them all manumitted? That, sir, would be dangerous to the country and not at all beneficial to them. I have known those, who were fine fellows while they were slaves, as soon as they were free, become the most abominable villains and end their crimes on the gallows or in the penitentiary. The constitution guarantees to us the services of these persons. It does not say slaves; for the feeling of the framers of that glorious instrument would not suf-

fer them to use such a word on account of its incongeniality—its incongeniality to the idea of a constitution for freemen. It says "persons held to service or labor." This bill goes further. It is more particular and explicit than the constitution or former law. According to that we can go any where after slaves and catch them where we can. What has been the consequence? People have been killed in redeeming their property. In New Jersey, sir, most disgraceful scenes have taken place, and I hope her representatives will do something now to blot out this stain upon the character of that respectable state. How do those who keep these slaves from their owners treat them? Sir, they keep them hard at work; and if they complain or flinch, they threaten to send them back to their masters, where in fact they are better clothed and fed. How can the provisions of this bill be more just? If any person should be unlawfully seized, he will have trial and redress, from the person claiming and arresting him, before a court. He will never want for able and zealous counsel to argue his case in Maryland.—I know the enthusiasm of the young bar there to defend the oppressed. I was myself counsel to an abolition society; and I can assure the gentleman from New York that he will not find any where more readiness to protect the injured than there is in Maryland.—Mr. Chairman, I hope some means will be provided to arrest fugitive slaves without danger to their owners. Two gentlemen from Baltimore went after a negro whom they seized and identified; but, in bringing him away, they were seized upon and slain, and the slave set at liberty. I ask for the protection of the constitution. We have a right to our slaves, whether we treat them well or not; but we do treat them well—it is for our interest to treat them well. Why do those quakers take such care to keep their horses well, (for I never saw a quaker have a poor horse)—why, Mr. Chairman, do they keep their horses fat? Because they are more able to work.—For the same reason we keep our slaves well, and so will every man who knows his own interest. I do hope that the gentleman will assist us by his ingenuity to perfect the bill so as to put a stop to these unpleasant occurrences.

Mr. Nelson, of Virginia. I am really surprised at the warmth with which gentlemen opposed this bill. When I see the gentleman from New-York, who usually speaks and acts in so calm and temperate a manner, delivering himself in this vehement and impassioned language, I give up all hope of a candid and fair discussion of the bill before you. He seems on this occasion to be not less excited than my ardent friend from Maryland, Mr. Wright. I regret that a course should be pursued which will revive, upon a smaller scale, the question which has heretofore fearfully agitated this house and this nation. The gentleman speaks of chains, racks and tortures, in discussing a bill whose object is to restore harmony, and to remove the causes of dis-sension. Let us discard these feelings; I call upon this house to discard them. Let us go peaceably and deliberately to work to provide for the recovery of our property without the violation of the law. What does this bill propose? That the officer of the state where the fugitive is found shall arrest him; that he shall be brought before a judicial tribunal; and the question of identity there settled. Is the old law better than this? Is anarchy better than government? Is it better to have a civil war, for I shall not go further than the gentleman from New York, if I say civil war), than to have an orderly and peaceable mode of enforcing the rights

which we have under the constitution? If confusion, anarchy and civil war be better than peace, then gentlemen are justified in refusing any further protection to our right in the labor of persons bound to our service.

Mr. *Chambers*, of Ohio. This is a bill calculated to electrify the feelings of this house and the nation. It revives the question of personal liberty; I shall endeavor to be cooler than the gentleman from Va. who has just set down. I will call the attention of the house to this bill and to the constitution. If they agree, then I must own that I do not know either of them. I have not, till to day, examined the bill, and perhaps other gentlemen are in the same predicament. I am sorry the bill was laid on the table this session. It is calculated to excite afresh those angry feelings which are hardly yet subsided. This bill gives power to seize persons upon the testimony of a single witness, and upon the warrant of a justice of the peace, who may be as corrupt a scoundrel as exists. There is no chance for bringing an action for redress upon the spot where the outrage is committed. This comes very near a suspension of habeas corpus.

Mr. *F. Johnson*, of Ky. moved that the committee rise.

Mr. *Woodcock*, of N Y. would vote for the bill if properly amended, but in its present shape should vote to strike out the first section. He hoped the committee would rise to give the friends of the bill an opportunity to amend, so that the principle might be fairly tested. Several voices, "try the principle."

Mr. *Johnson* withdrew his motion.

Mr. *Colden* concurred in the sentiments of his colleague, Mr. *Woodcock*.

Mr. *Woodcock* moved to rise, and the motion was carried—ayes 61, noes 40. The committee had leave to sit again—Ayes 77.

Internal Improvement.

The following communication from *Condy Raszet*, esq. was addressed to the chamber of commerce of Philadelphia, and published by their request, as a document containing important information to the citizens of Pennsylvania, and highly honorable to the patriotism, intelligence and good sense of the author.

STUBENVILLE, Ohio Sept. 5, 1821.

SIR—In making a communication which may, perhaps, be interesting to the merchants of Philadelphia, I know not to whom I can with more propriety address myself, than to the president of the chamber of commerce. During a short visit to this country, to which I was led by business, I have devoted some attention to the trade of the western states, particularly with the view of ascertaining the influence which the completion of the *New York grand canal* would have upon those portions of them which border on the lakes. The result of my observations has been a conviction, that the importance of this great work not merely to New York, but even to *Philadelphia*, and other cities, is not duly appreciated by the great body of citizens who are ultimately to be benefited by it, and I have thought that some information upon the subject, derived from personal observation and from conversations with intelligent men, might be acceptable to those, who, during the last session of our legislature, manifested so laudable a zeal for the internal improvement of the state.

The canal in question, when completed, will extend from the Hudson river, near Albany, to Buffalo, at the northeastern extremity of lake Erie, a distance of about 350 miles, and will thus open a cheap water communication between New York and those immense tracts of country which border upon the great lakes Erie, Huron, Michigan and Superior, or which are watered by the numerous rivers which flow into them. The country also bordering on lake Ontario, by means of an inconsiderable portage, will also be connected with the canal, and even a portion of those states, whose natural outlet has hitherto been the Ohio river, will, by means of canals and locks on their improvable streams, find New York to be their most profitable market.

Without, however, extending our views too far into futurity, and anticipating things which cannot exist until population and improvement shall have rendered productive the vast regions of which we have spoken, let us confine our remarks to those events which may be looked for within a short period of time. It is ascertained, *beyond a doubt*, that, by the canal, the expense of transportation from Cleveland, in Ohio, which is 200 miles west of Buffalo, to the city of New York, will not exceed *one dollar per barrel*, and intelligent persons at Erie, are of opinion that, from that place, it will not be more than *fifty cents*. *One half of a cent per pound* may, therefore, be considered as the *maximum* of freight between New York and any point on the shore of lake Erie, and thus will that country be placed upon a footing, as to the expense of carriage to market, with those counties which are situated at the distance of one hundred miles from Philadelphia. The whole population on the lake, between Cleveland and the town of Erie, and of the western counties of Pennsylvania, which are immediately interested, are literally alive to the subject, and foresee, in the completion of the canal, an accession to their wealth and population, such as they have not before witnessed.

But it is not merely those who reside on the very borders of the lakes that are to be benefited by the canal. If a sure market for the produce of the country is opened at the principal towns on the lakes, at the *New York prices*, less the expense of transportation, and a moderate profit, which will assuredly be the case, its influence will be extended for a hundred miles and more into the interior. Turnpike roads, which can be made cheaply in this country, will extend themselves like arteries from the lakes, and some of the improvements in inland navigation, which are already attracting the attention of the people of Ohio, will be commenced.

An excellent turnpike has already been completed in this state, of upwards of forty miles in length, extending from Warren to the mouth of Ashtabula river; and between Cleveland and the river Ohio, the Cayahog, which empties itself at the former place, could be connected by a canal of 8 or 10 miles in length with the Tuscarawas, the main branch of the Muskingum. By these artificial aids, transportation to the lake will be effected, even by land, at the rate of *half a cent per pound* for 100 miles, and although this charge might amount to a prohibition upon some of the rude products of agriculture, yet there are others which would bear a land carriage of double the distance. Flour, salted beef and pork, hams, bacon, butter, lard, cheese, pot and pearl ashes, flax, linseed oil, whiskey, clover seed, deer skins, tallow, honey and maple sugar, would be exported in great abundance, and in return therefor, an immense market would be opened for coarse

salt, salted staid, mackarel, and other fish, queen's ware, iron, nails, lead, shot, fish oil, paints of all kinds, rice, mahogany, burr mill stones, salt petre, and the unlimited variety of foreign commodities and domestic manufactures, which usually make up the assortment of a country store. I have specified the foregoing articles, because, from their bulky nature, they are those of which the consumption is chiefly affected by a low rate of transportation. There are some of domestic, and many of foreign origin, which have always borne the expense of land transportation. Wool, bees-wax, feathers, ginseng, tow and linen cloth, and furs, are amongst the former—Dry goods, hardware, fancy articles, and certain groceries, amongst the latter; but in proportion as the means of exchanging one for the other are afforded, will a greater quantity of the one be produced and a greater quantity of the other be consumed. so that twice or thrice, or ten times the amount of goods may be sold to certain parts of the country, than there used to be, when a small part only of their productions could be sent to market. In fact, there are no limits to the commercial demands of a trading people but what are prescribed by their own inability to purchase, and just in the degree that the cheapness of transportation multiplies their saleable products, will their trade be extended.

New Orleans, as you know, has heretofore been considered the natural market of the western country. It must, no doubt, ever continue to be so for a great portion of its products; but the great glut to which it is liable at a season of the year when produce perishes by keeping, renders a choice of two markets an object highly desirable for all those who are so situated as to be able to command it. By casting your eye upon the map, you will perceive that the upper parts of Indiana and Illinois, and the whole territory of Michigan, must look to the lakes, and even the inhabitants of their middle sections, may find it to their interest to open communications with those great waters, through their numerous rivers. The head waters of the Scioto and Miami rivers are not distant from others which empty into lake Erie, and it may reasonably be expected that a connection between some of them will be opened before many years. The project of cutting an entire canal from Sandusky bay, south, to the Ohio river, which is not 200 miles distant, is a favorite one with many of the citizens of this state. *There is not an intervening hill, it is said, and abundance of water could be derived from the Scioto and Sandusky rivers, as feeders.* Such a work would at once open to the New York market, the whole of the fertile state of Ohio, which already contains a population of more than half a million of souls; but it is an undertaking to which the wealth of the country is not adequate. The subject also of connecting lake Erie with Le Beuf and French creeks, by a canal of fifteen miles in length, to be constructed between the towns of Erie and Waterford, is now agitated in the western part of Pennsylvania, and, if the measure be as practicable as it is represented, there can be nothing to retard its execution.

The country through which the grand canal passes, is said to be thickly settled, as is also a great portion of those parts of New York which are adjacent to the lakes of Ontario and Erie. The north-western corner of Pennsylvania is not very densely peopled, but is gaining population every day, with the improvement of the roads, which are going on there pretty rapidly. Ohio contains on the lake shore, and for 40 or 50 miles south of it, within

the bounds of *The Connecticut Reserve*, an extensive and industrious population, chiefly composed of emigrants from Connecticut, who have given to some part of this tract, in twenty years, an appearance which would do honor to a country of double its age. To the westward of this reserve, comprising the northwest quarter of Ohio, is an extensive body of public lands, which have not yet been sold, as the Indian title was only extinguished so lately as the year 1818. This *New Purchase*, the name by which it is known, including within its limits the rivers Sandusky and Miami of the lakes, is represented to contain a body of lands of the first quality, and, as it will soon be in the market, is already attracting the attention of emigrants, as holding out stronger inducements to settlers than are presented at any place, to which New Orleans is the only accessible market. The facilities to emigration, which will be afforded by the New York canal, cannot fail to people the lake country in a most rapid manner; for, although the soil in general is not as rich as that which is to be found in a more southern latitude, yet the produce of an acre will command more of those comforts of life, which must be brought from a distance, and which constitute the chief incitement to industry. I mention these things to show, that, as soon as the canal is finished there will be an immense trade ready to pour in upon New York, and that every succeeding year will witness its extension.

Having thus endeavored to point out the importance of this great chain of water communication to our sister city, the next question which presents itself is, cannot Philadelphia become a partaker with her in these great benefits, and thus derive, from the exertions of New York, advantages little inferior to those which will be enjoyed by her own citizens? I answer in the affirmative, and that the evident course to be pursued by our capitalists, is to continue the grand canal from the city of New York, across the state of Jersey, and thus connect the Hudson with the Delaware. This measure has been frequently spoken of, independent of its connection with the grand canal, as one calculated to promote the prosperity of the two cities, and a law incorporating a company for the purpose has been already enacted by the legislature of New Jersey. By such a canal, New York and Philadelphia would be brought so near to each other as to constitute but one market, and traders from the lakes and elsewhere, would have no inducement to give any preference to one city over the other, except that which should be dictated by the mercantile maxim of selling where they could get the highest price, and of buying where they could do it cheapest. If New York, from the extent of her capital, from the economy of her navigation, or from the advantage of her local position, should be able to deal upon better terms, she would undoubtedly monopolize the trade; but this never can be the case, for the cheapness of transportation, which could hardly exceed five or ten cents per hundred, would produce such an equalization of price, that the difference between the two cities would, at no time, be greater than what is oftentimes found between the stores of two merchants in the same city.

But there is another circumstance which would operate in favor of Philadelphia, by the construction of the Jersey canal. Owing to the ice, the navigation of the grand canal will be wholly interrupted between the middle of December and the first of May, as I am informed, and possibly that of lake Erie a little longer. A great portion of the spring supplies of foreign goods must be sent out in March

and April, and land carriage must be resorted to. This indeed will always be preferred for those valuable commodities, to the cost of which a trifling addition is made by the expense of two or three cents a pound, for it will be found that the risk of damage and loss by change of carriers and by accident on the water, will more than counterbalance the saving in the freight. Assuming this as granted, it must appear evident that, upon equal terms of dealing, foreign goods will be purchased at the place nearest the residence of the purchaser. The whole of western Pennsylvania, a part of the state of New York, and the whole of the western states, are nearer to Philadelphia than to New York, and a turnpike road between the former place and Pittsburgh is completed, whilst one from the same city to Erie is in progress. I am also informed that a turnpike road, in continuance of the one from Philadelphia to Meadville, is in contemplation, to run from the latter place to Cleveland. These improvements will give a decided preference to Philadelphia, with many of those merchants residing on the lakes, who have hitherto looked to New York alone for their supplies.

I am aware of the views entertained by some of our fellow citizens, of opening a communication between the New York canal and the Tioga river, a branch of the Susquehanna. This measure, it has been thought, after the completion of the Union canal, which will connect the Susquehanna with the Schuylkill, would intercept a portion of the descending produce, and draw it to Philadelphia. There can be no doubt but that this would be the case to a certain extent; but no upward navigation could be relied on during the summer, without an extensive system of locking on the Susquehanna and Tioga rivers, and Philadelphia would, therefore, lose its share of the return trade in those bulky commodities, which afford employment to her tonnage, and rent for her warehouses.

Whilst I am on the subject of internal trade, it may not, perhaps, be irrelative to say a few words upon the commerce which New Orleans is destined to share with the Atlantic cities. In former years, the great bulk of the surplus productions of the west, descended the Ohio and Mississippi rivers; but, owing to the difficulty of the ascending navigation, few commodities were received in return, and the proceeds of the descending cargoes were remitted to the eastern cities, to be there invested in foreign and other merchandise. As relates to exports, as has been remarked, the same course must necessarily continue, at least as relates to the great mass of the productions of Kentucky, Indiana, Illinois, and the more southern and western states. As it regards, however, the *return trade*, the case is materially altered.

The expeditious and cheap navigation of the western waters, by the introduction of steam boats, enables the country, at least as high up as Cincinnati, to support itself from New Orleans with many of those articles which used to be derived from Philadelphia and Baltimore, or which could not be procured at all. Sugar, coffee, brandy, spirits, claret, salt, iron, salted fish, foreign fruits, and many other articles more valuable, are now brought to Louisville, in 14 or 15 days, at a freight of about 1 to 1½ cents per pound. As the capitals of the merchants at New-Orleans increase, this trade will be extended by consignments made to the principal towns on the rivers, where already wholesale dealers are established, which will, in a great degree, obviate the disadvantages experienced by New Orleans on account of the unhealthiness of

its climate. As a steam boat can descend from Louisville to New Orleans in 5 or 6 days, an order for merchandise can be executed in much less time than if transmitted to an eastern city, and as the market of New Orleans, like that of the West India Islands, is liable at times to be overstocked with merchandise of every description, the western merchants can, occasionally, be supplied from thence, upon better terms than at Philadelphia or Baltimore. Even the article of tea is occasionally brought up from New Orleans, which, it must be evident, could not be afforded there as cheap as in the cities into which it is imported direct from China, but upon the principle of forced sales. But, although this ascending trade is daily increasing, it must continue to be chiefly confined to those commodities, the cost of which, compared with their bulk and weight, is inconsiderable, and can never engross the great mass of those valuable articles, which constitute, by far, the most profitable and extensive branches of commerce. The products of China and India, the dry goods, hardware, and fancy articles of Great Britain, France, and of many other countries of Europe, as they can be afforded, from the greater competition of capital and tonnage, in the Atlantic cities, cheaper than they can be at New Orleans, so the wholesale dealers of the west must ever find their account in drawing them from the former.—Some trade, however, to which we have been accustomed, must inevitably be lost, and it is, therefore, the more incumbent on our merchants to facilitate the opening of every channel, which may afford a value to the surplus products of the west, and a vent for the commodities which they may import from abroad.

Of the New York grand canal, about 100 miles are completed, and are now navigated. Two horses can draw upon it a boat, carrying from 60 to 100 tons, at the rate of four miles an hour; and there is every reason to believe that the entire work will be accomplished within two, or certainly three, years from this time.

If the foregoing information should be interesting to my fellow citizens, I shall be amply rewarded for the labor of collecting it.

P. S. Since writing the foregoing, I have conversed with an intelligent fur trader, just arrived from Mackinaw, who is acquainted with the geography of the country on the west side of lake Michigan.—He states that the head waters of the Illinois river approach so near to that lake, that, in the spring of the year, boats, carrying from ten to fifteen tons, can descend to St. Louis, which is not 200 miles distant by land, without any portage whatever, and that an intelligent officer of the army assured him, that 100,000 dollars would open a complete navigation between lake Huron and the Mississippi, through the Illinois. My informant also stated that a complete water communication exists, with the exception of three miles portage, between the same two waters, by the Fox and Quisconsin rivers, the former of which flows into Green bay, a harbor visited during the last month by the lake Erie steam boat, with a party of gentlemen from Buffalo. It is true those north western regions are not yet peopled, but what will not the enterprize of our citizens attempt? It would hardly be credited, and yet it is true, that a contract was made some time ago at Mackinaw for the supply of 200 head of cattle for the use of the *Hudson's bay company*, to be delivered at Bigstone lake, near the head waters of the river St. Peters, which is, probably, 1500 miles or more from St. Louis, in the neighborhood of which they were to be procured.

Circulation of Money.

FROM THE DEMOCRATIC PRESS.

Mr. Binns—I send you a curious calculation of the effect of the “circulation of money,” which I request you will insert in your paper. It displays, “with a pencil of light,” the vivifying effect of even a small sum of money, briskly circulating from hand to hand, in promoting industry and happiness, by the advancement of the internal trade of a country.—Your readers can readily draw a contrast between the beneficial results herein stated, and the paralysing ones that would flow from a transmission of the sum to a foreign country for the purchase of any of the articles herein presented in any stage of the progress.

A Friend to National Industry.

The circulation of money, is the frequent transition of money from hand to hand, as a remuneration of mutual services. A mere exchange, or transfer of money, deserves not, in our judgment, the name of circulation, and cannot produce any of the results we expect from the circulation of money, unless it be transferred as a reward or remuneration of mutual services.

The following instance seems well calculated to illustrate the true nature and complexion of the circulation of money, and the advantages derived from its momentary possession in the course of social transactions.

A. Pays to his butler ten guineas, as the monthly amount of his board and other wages. This money is for the butler the net reward of his labor, and the twelfth part of his yearly income. The whole sum is, therefore, for him clear profit,

£. s.
10 10

B. The butler, pays with this money a bill he owes to his shoemaker. For the latter, such part only of this sum constitutes a net gain, as he receives as the price of his labor,

4 4

C. The shoemaker, pays away the whole sum to the leather-cutter D, whose profit consists in,

5 5

D. The leather-cutter, pays his tailor's bill, amounting to ten guineas. The tailor's disbursements being previously deducted, his profit amounts to

6 6

E. The tailor, pays the ten guineas to his mercer, whose profits being generally computed at 20 per cent. he gains for his subsistence

2 2

F. The mercer, pays away the money to his grocer; ten per cent. being his usual profit, he gains

1 1

G. The grocer, pays a half year's rent to his landlord, amounting to 10*l.* 10*s.* This rent is not a clear gain, but a gross revenue. Repairs, interest on borrowed money, ground rent, &c. being previously deducted, there remains no more than three guineas, which he may expend for his subsistence,

3 3

H. The landlord, pays with this money the interest to his creditor I, which is for the latter a clear gain

10 10

I. Pays the ten guineas to a sadler for repairing his carriage, whose profit consists in

4 4

K. The sadler, pays his butcher, whose clear gain amounts to

3 3

L. The butcher, pays his lawyer, for whom the whole sum of ten guineas, excepting a small difference, would prove a neat profit, but

M. The lawyer goes in the evening to a gambling house, and loses the whole sum;

What he, therefore, might have expended for his subsistence, becomes now entirely a contribution towards the subsistence of the gambler,

10 10

N. The gambler, requests a bye-stander O, to give him a bank note of 10*l.* and 10*s.* in silver, for his ten guineas, which he does—profit

0 0

O. Being a bad paymaster, finds himself necessitated by the threats of his linen-draper to pay a bill, which has been out-standing so long, that the interest has absorbed the whole profit

0 0

P. The linen-draper, being requested by one of his neighbors to stand sponsor at the christening of his child, makes him a present of the ten guineas

0 0

Q. This neighbor, puts the ten guineas into the spare box of his child, and thus the circulation of this money is suspended for a long time.

60 18

In this instance ten guineas pass, from hand to hand, eleven times with profit, and four times without any profit to the receivers. The four cases of a barren or fruitless transfer might have been easily multiplied, but they are fully sufficient for our present purpose.

In the eleven transfers of this money from B. down to K. and to N. the ten guineas produce 60*l.* 18*s.* as a contribution towards the subsistence of the receivers, and enable them to supply as many wants of their different ways of living, as in this country can be supplied with 60*l.* 18*s.* And if we contemplate the subject in a more extensive point of view, we may say, that, in every transfer of money, as a remuneration or price of labor, the whole amount of the ten guineas is to be considered as contributing towards the living of many other persons, besides the immediate receivers of that money.—

When E. pays ten guineas to his mercer F. although the latter gains only two of them, yet the other eight guineas are likewise to be considered as the price of all the labor employed in the manufacturing of the clothes, &c. The grocer, whose profits amount to one guinea only, has long before expended the other nine guineas, which constitute the price of labor of an unknown number of persons, employed in the culture and production of his commodities, in the shipping of, and trading with them. In this point of view, 115*l.* 10*s.* may, therefore, be placed to account, instead of 60*l.* 18*s.* as a reward for useful services or price of labor, forming part of the subsistence of an indeterminate number of men.

Those 115*l.* 10*s.* form, in consequence, the whole produce of this circulation of ten guineas or of this series of occupations of freemen, rewarded with money. The productive class of the people had no immediate share in the 60*l.* 18*s.* which, in the above instance, eleven persons earn from each other in the eleven transfers of money. Their share is comprised in the 54*l.* 12*s.* which are to be added to the above sum, when the whole produce of this circulation is taken into the account. Yet the whole of these 54*l.* 12*s.* does not fall to their share, but as much only as they receive, as price of their labor, included in the prime costs of the commodities or materials of industry, which form the objects of this elevenfold transfer of money. An indirect share in the 60*l.* 18*s.* is also secured to them, since all the different receivers of the above ten guineas will be obliged to employ some part of what they earn from each other, in the purchase of provisions or materials of industry.

To trace the results of the circulation of money

through all the various branches of the trading intercourse of men, would be a task as foreign to our purpose as disproportionate to the room we can allot to theoretical discussions. We shall, therefore, confine ourselves to point out a result of the circulation of money, for the productive class of the people, which has escaped the observation of Smith, Stewart, Pinto, and other celebrated writers on this subject, and yet seems extremely important.

It is evident, that the circulation of money occasions a two-fold labor in the production of the provisions, which are necessary for the support of society. The first labor is that by which the husbandman gains the surplus of produce, or overplus of his own consumption; the sale of which, to such persons as have only money to offer in exchange, brings this money into his hands, and enables him to purchase the services and commodities which he stands in need of. Without the use of money, a husbandman, after having obtained by barter the services and commodities he wanted, sits quietly down, well convinced, that, by the mutual exchange of services and commodities, he has conveyed nothing into the hands of his fellow-citizens, where-with they might encourage him to additional labor. The husbandman, who exchanged flax, wanted by his neighbor, for wool, which he needed, will consume this wool for the supply of his wants. His neighbor will also consume the flax and not offer it back to him in exchange for corn. Or let us suppose, that the husbandman rewarded the man who wove his wool into cloth, with provisions; in this case the weaver will consume the latter, and thus have nothing left, the offer of which might encourage the husbandman to additional labor. Thus the husbandman labors but once for the weaver, and the weaver but once for the husbandman. But where money circulates, the husbandman does not exchange the overplus of his produce for that of his neighbor, but for money, wherewith he can pay the weaver and all other industrious members of society; who, with the money thus earned, encourage him to that second or additional labor, by which the productive class of the people gains back the money spent for the supply of the secondary or subordinate wants. And thus begins a circulation from and to the husbandman, which, while it invites him to an increased display of his productive powers, multiplies also the means of subsistence, and fructifies population in its purest and most prolific source. 11.

Female Patriotism.

The *Washington Reporter*, of the 31st Dec. 1821, contains an address delivered on the 17th of the same month, by Mrs. *Katherine Duane Morgan*, at a public examination of the *Franklin School*, recently established in that borough. The good sense and truly republican sentiments that may be found in the subjoined extracts from the address, will, we presume, recommend them to the attention of our readers.

After some prefatory remarks, Mrs. Morgan proceeds thus:—

“Observe our sex, how they persevere in relation to any circumstances attending the decoration of their persons—do you, or can you, suppose that perseverance was granted for this purpose? most assuredly not. Then, if nature has not only gifted them liberally but sufficiently for the glorification of our Father in Heaven, in whom lies the error? The immediate response must be—in those who

are entrusted with rearing and instructing the tender and susceptible minds of children. Alas! I must here lament the disgraceful neglect of the morals and minds of females. Mothers, by their instructions and examples—yea, and fathers, by their smiles of approbation, rivet on the pliant minds of their offspring, a love—I am almost tempted to say, an idolatrous love of extravagance and show in dress; which, implanted in infancy, “grows with their growth and strengthens with their strength,” till, at length, instead of endeavoring to attain knowledge that would enable them to pass through the world happily and usefully, sacrifices to vanity, that which, in many cases, should be appropriated to the liquidation of just debts.—In order to gratify this inordinate passion for finery, which so unhappily and generally prevails amongst us, even poverty’s gripe has been pressed more closely; and the very constitution impaired, (“for madness rules the hour”) from want of proper nutriment. Meeting with a group of females, according to custom, the subject of crapes and Leghorns was introduced; one of the ladies mentioned that she had just seen Mrs. *Dasher*, (the model of our belle monde, going down street in an elegant new crape and an all-conquering, virtue-possessing Leghorn, which was trimmed in the tip of the mode, and cost *only* \$22! what a happy woman Mrs. *Dasher* must be, said the lady—she certainly must be, thought I, especially as she has a large family of children, and her husband applied last court for the benefit of the insolvent law. Her attendant was that popin-jay of fashion, young *Dandy*, who, as rumor goes, has not in the world \$100 worth of property, either real, personal, or mixed: his ruffles are of the finest cambric, and the other articles of his attire are of equally costly materials; he makes sufficient money by his business, perhaps, to discharge his washer-woman’s bill, and pay his barber—what a prime, useful and exemplary member of a republic he is!! The next persons spoken of by our junco, were the two Miss *Simpers*, who in beauty are surpassed by few; their parents are in very indigent circumstances, their father is almost coatless; and their mother is obliged to resort to divers—out-of-the-way—extraordinary contrivances, to decorate her daughters; for what? all who know them, know they are ignorant and vain; and that well would it have been for their own peace and the respectability of their parents, had the same pains been taken to improve the interior of their heads which have been bestowed in adorning the exterior, with braids, plaits and curls. Their situation is known to every one—none are deceived but themselves—some pity, more despise them. The last exemplification of this kind of greatness, this levelling system in appearance, regardless of the purse or consequences, to which I shall advert, was mentioned by one of the coterie, and is furnished by the wife of Mr. *Weak*, an industrious and decent man. Mrs. *Weak*, moderate soul, must have a crape robe; for her cousin’s husband had brought one over the mountains for his wife, and, of course, she ought to be allowed to get one also; for who is her cousin more than she is, although her husband does keep store! The good natured *Weak* already owed for a Leghorn bonnet which his wife had purchased: contrary to all his remonstrances, to have it she was resolved, and he of course must pay for it. Poor fellow! “You have paid too dear for your whistle!” the storekeeper frequently demands payment, but in vain; the unfortunate mechanic cannot get money for his work; and the merchant cannot take

such trade as the tradesman receives. The consequence of his wife loving crape and Leghorn better than her husband's peace, or her own duty, is that suit is brought, and judgment confessed on the justice's docket: he endeavors to make up the money by offering for sale various articles of barter, received in payment for his work, at half he had allowed for them; but his efforts are fruitless—the stay permitted by law has elapsed; nay, even the last day granted the constable to return the execution, has arrived; what now is to be done? why, poor man, he sells the watch that he had purchased shortly after he became a journeyman—it had cost forty, but all he could get was twelve dollars; this paid the balance due on his wife's *summum bonum*, and the justice and constable humanely agreed to take the costs in trade or work.

The enquiry—What is to be the final scene of all this extravagance, which has become a national calamity? it is not foreign from, but immediately connected with, or rather a part of the business of the instructors of youth. Although the constitution very properly guarantees the right of voting regardless of property, does it follow that all must dress in an equally expensive manner? National considerations apart, common sense would say, let each individual clothe himself as best suits his circumstances and his comfort. What rational enjoyment can a father or mother, laboring under the pressure of debt, have, even in the magic charms of cambric and broadcloth, or crape and Leghorn, when viewing a large, helpless and ignorant offspring, and knowing that, if time gave the mandate to the pale messenger to strike at his bosom, and send his spirit to the realms of final settlement, his children, having been taught to set an undue value on dress, and to estimate all by external appearance, would be in a worse situation than that of common paupers. Mistaken father—to have so lost sight of your duty! Infatuated mother—the unfortunate victim of an erroneous education! Thrice hapless progeny—what misery and mortification have thy falsely calculating parents been accumulating for you! Rouse ye guardians of Columbian youth—rouse from this shameful torpor—this insanity befitting bondmen and bondwomen, who can have no object for honorable exertion; but disgraceful to the sons and daughters of a republic!

Would I were possessed of the eloquence of Hortentia, who nobly plead in behalf of the Roman women before the Triumviri, you should be reminded of the history of women, to be the distant and humble imitators of whom, would at least be one step towards real respectability. Shall the half suppressed smile of self sufficient ignorance, abash virtue? Are we not to act correctly, because the more wealthy have not set us the example? Shall the arrogance of sordid wealth, acquired, perhaps, by ignoble means, and unassociated with one solitary estimable quality, drive us from the paths of duty? Shall we thus prove ourselves to be no less their inferiors in understanding than in fortune? It may, with too much truth, be said of many affluent citizens, and their families,

"So much they hate the crowd, that if the throng,
"By chance, go right, they purposely go wrong."

Our country gives us freedom to act independently. Are we not failing in our duty to that country, in not judging and acting for ourselves, as far as reason directs? Let us turn to the pages of history, and learn our duties, as daughters, wives, mothers, and allow me to say as *patriots*, from the great Cornelia, mother of the noble Tiberius and

Caius Gracchus; from the virtuous Volumnia, the mother of Coriolanus; from Octavio, the upright wife of Anthony; from the heroic Lucretia; from the brave and tender Portia, who, in the hour that was even a trial to man, was trusted by her husband, Marcus Brutus, and was found worthy of his confidence; from the lovely and pathetic Licinia, wife of Caius Gracchus; from Chelonia, who affords a striking example of the affection of a daughter, and of the noble constancy and love of a wife in the day of sadness and calamity; from the venerable and generous Archidomia; from the patriotic Agesistrata, the noble mother of a noble son—the murdered Agis; from the intrepid and sagacious Timocle, and from a constellation of others, whose virtues have furnished history with some of its brightest pages. So that woman, if the faculties of the head, as well as of the heart, with which God has endowed them, are tutored by wisdom and friendship, may not only cease to be the contemptible, helpless and ignorant mortals they are too frequently found, but may become ornaments to the world, and benefactors to mankind; instead of the evanescent butterflies of a day, or the gaudy dolls of an hour—they become as Heaven designed them—the instrument of God's benevolence to man, implanting virtue in infancy, cherishing it in youth, and adding fresh vigor to it in manhood. Let us, by our merit, endeavor to gain the same influence over our husbands, that the Spartan women, of old, possessed with theirs, which was so great that it became a matter of astonishment to the women of other countries. The secret which enabled them to rule, as it was termed, was imparted by Gorgo, wife of Leonidas, in her answer to a woman of another nation, who asked, "how happens it that you women of Lacedemon are the only women in the world who rule the men?" "Because," replied Gorgo, "we are the only women in the world who rear and instruct the children so as to make them men." If they performed their duty as mothers, as wives, and as patriots, with such affectionate solicitude, and admirable ability, could their husbands withhold from them their respect and their gratitude? One of the earliest lessons they taught their children, was that

"A day, an hour of virtuous liberty,
"Is worth a whole eternity in bondage."

Does our conduct tend to impress that noble truth on the mind of the rising generation? I am constrained to say most certainly not—what woman, arrayed in all the pomp of imported fashion, (concealing beneath its gaudy trappings the shackles designed by England, not only to enrich herself, but to enslave our sons), can expect to persuade our youth that she is anxious to hand down to them the constitution, pure and free as we have received it from the illustrious band that conceived, planned and carried it into execution? surely none can be so wild, or so unthinking, as to expect credit on such terms, for patriotism!

Happy would it be, had we a Solon amongst us; or a law somewhat similar to one passed by him, declaring "any one infamous who stands neuter in time of sedition," and that "he shall forfeit his country, his house and his estate." We are not guilty of sedition, 'tis true, but we are guilty of what will (in my opinion) as certainly destroy the liberties of this nation, unless the American women, hand in hand,

"With aiding patriots stem the raging tide,"

Which, if unchecked, will soon sweep, in its current, our liberties, and our laws, into the noxious whirlpool of aristocracy, the boiling ocean of

monarchy, or the still more dreadful dead sea of despotism.

As society is composed of every variety of materials, and as persons, more censorious than wise, necessarily form a portion of the compound, I am not unprepared for being condemned as being a politician, or as improperly interfering in what is called men's business; but, surely, every female in the country, who has male relations, (throwing philanthropy altogether out of view), feels, or ought to feel, a great interest in the durability of our present form of government. Would I not be offering one of the greatest insults to the understanding of any American female, to suppose her indifferent whether our country be governed by a representative system, or by that disgraceful monster, that open violator of the most sacred ties established by God and man, George the fourth, who, if we may judge from his conduct, intends to lay claim upon the score of services, to being third in command in the Pandemonium, for he has rivalled even Milton's

"Moloch, horrid King, besmeared with blood
Of human sacrifice, and parents' tears."

For myself I can offer in extenuation, if extenuation is thought necessary, that I have not only a father, sisters and brothers, but a husband and seven children, and all these ardently loved relatives, I would rather see hewers of wood and drawers of of water, under this government, than peers and peeresses of a nation governed by such a monarch as George the fourth. Not to speak of other governments, the constitution of England, which is the object of servile admiration to many of those who attach odium to the woman guilty of loving her country, its liberty and laws, yes, the constitution of that very England supposes women not only capable of thinking rightly on public affairs, but of wielding the political destinies of the nation. I cannot for a moment seriously believe that any of you would hesitate to relinquish your superfluities, rather than see our children deprived of their liberty, and who, if they should imitate the noble, brave and wronged sons of the land of the shamrock, wreathed harps and sweetest melody, in endeavoring to gain their patrimony, would be punished by the confiscation and sale of their property, to defray the expenses of a war waged to subdue the "rebels." Such is the conduct of England, yes, such, and even more atrocious, has been her conduct ever since the reign of Henry the second, in the eleventh century, to the inhabitants of that land of genius and enthusiasm, hapless Hibernia, the native and ancient seat of hospitality and honor.

And what better have the United States to expect?—Can you imagine she will act towards us with magnanimity or good faith? Ask the young Napoleon. Alas! weeping, he will point to the indignant surges bursting upon Helena's rocky sides, as though they wished to hide in ocean deep this sable mark of English faith and honor. Would she act as a civilized enemy or as a barbarian? Let the burning of the United States' capitol, containing the national library, be undeniable testimony of her civilization!

Would she observe the laws of humanity or of nations? Receive the answer from the insulted ghosts of our countrymen, sighing in the midnight blast for revenge, and shrilly shrieking in our ears, "let the youth of Columbia remember the massacre of the American citizens at Dartmoor."

Mrs. Morgan here recommends, in energetic terms, the necessity of substituting American for

foreign goods; and, after adverting to the evils which have, in various instances, resulted from indulging in "luxury and misguided ambition," she concludes this subject with the following impressive/appeal:—

"I address myself to you, women of this heaven-favored land, in the name of the good and brave, who died for what I fear none of us justly appreciate—the independence we enjoy, and let me beseech you not to lend your aid in depriving posterity of that liberty, which heaven designed for all. Remember that you will be called to account for sins of omission as well as those of commission.—Add not then, I implore you, to the list the sin of not supporting the liberties of the commonwealth."

Obituary Notices.

GENERAL STARK.

FROM THE NEW-HAMPSHIRE PATRIOT, MAY 13.

The immortal Stark is no more! He surrendered his mighty soul to the God who gave it, on Wednesday, May 8, 1822, aged 93 years, 8 months and 24 days; his last illness was short but extremely distressing—fourteen days previous to his death he sustained, as was supposed, a paralytic shock, which discovered itself in choking and inability to swallow while eating; after this he ate no more; and, during his remaining time, he was speechless, although it was apparent to his watchful friends and relations who stood around him, that he retained his senses to the last. Until the last attack, he had ever been able to walk about the house, and in pleasant weather out of doors.

His funeral obsequies were attended by a large concourse of people, at his late residence in Manchester, on the bank of the Merrimack, on Friday last. Rev. Dr. Dana, of Londonderry, addressed the Throne of Grace in a fervent and excellent prayer. His remains were interred with military honors in the cemetery which, within a few years, had been enclosed at his own request: it is situated on a mound, being the second rise from the river, and can be seen for a distance of four or five miles up and down the Merrimack.

John Stark was born at Londonderry, N. H. Aug. 28, 1728, old stile, corresponding with April 17, N. S. His father was a native of Scotland, and was educated at the university of Edinburgh; married in Ireland, and emigrated to America at the beginning of the last century. He made his first settlement at Londonderry, but soon after removed to Derrifield, (now Manchester), and settled on the east bank of the Merrimack, near Amoskeag falls. On the breaking out of the seven years war, John Stark, then 21 years of age, his brothers William, Amos, Eastman, of this town, and John Stinson, of Londonderry, while out on a hunting excursion on the upper branches of this river, were surprised by the Indians. Stinson was killed on the spot; Eastman and John Stark were taken prisoners, and William Stark escaped. Stark was conducted by the Indians to St. Francois, and from thence to Montreal, where, after remaining four months in captivity, he was purchased by Mr. Wheelwright, of Boston, and returned home by way of Albany.—Soon after he engaged a company of Rangers, of whom he was first commissioned lieutenant, and afterwards captain. Here he found a field suited to his daring and adventurous spirit—he remained in this service until the close of that war, during which he retained the confidence and friendship of the British general lord Howe, until the death of

that nobleman, who was killed while storming the French lines. In that sanguinary and doubtful contest, Stark was always found cautious on a march, vigilant in camp, and undaunted in battle—and it was probably owing to the experience he here acquired, that invariable success attended, so far as he was concerned, his battles of the subsequent revolution, which separated these states from Britain.

At the close of the French war he returned to his father's house, was soon after married and remained in the enjoyment of domestic life, until the report of the battle of Lexington spread, like an electric shock, through the country. When this report reached Stark he was at work in his saw mill at Amoskeag falls: he stopped his mill, went immediately to his house, took his musket, and, with a band of heroes, proceeded to Cambridge. The morning after his arrival, he received a colonel's commission, and in less than two hours he enlisted eight hundred men! On the memorable 17th June, at Breed's Hill, the British soldiery first felt the destructive hand of the backwoodsmen of New-Hampshire. Stark, during the whole of this engagement, evinced the most consummate bravery and intrepid zeal for his country, and his name and heroism will live forever in the annals of that eventful period. The night after this battle, the works on Winter Hill were commenced, and so zealous were the soldiery, that on the morrow they presented a bold and commanding front, that kept the British in awe, and prevented further depredations.

After the British evacuation of Boston, Stark went to the northern post to assist the retreating army from Quebec. On the arrival of the army at Ticonderoga, the important point of Mount Independence was assigned to his command, and the arduous task of fortifying that peninsula.—After the British quit the lakes, he joined general Washington in Pennsylvania, preparatory to the battle of Trenton. And here it may be important to notice an event which was related on the day of his funeral by a venerable companion in arms then present, and in whose veracity the most implicit reliance may be placed. It is well known that, just previous to this important action, the American army was on the point of being broken up by suffering, desertion and the expiration of the term of enlistment of a great portion of the troops. A few days previous, the term of the New-Hampshire troops expired: Stark was the first to propose a re-engagement for six weeks—he, for the moment, left his station as commander, and engaged as recruiting officer—and it is added, that not a man failed to re-engage. He led the van of that attack—and the event is well known. Seven days after he was with general Washington at Trenton, when Lord Cornwallis, with 12,000 men, nearly hemmed them in: by consummate address the impending fate of the Americans was avoided—Washington fell on the enemy's rear at Princeton, and so broke up the British plans, that the enfeebled American army was enabled in turn to hem up the British in the environs of New York.

In 1777, the overwhelming force of Burgoyne drove the Americans from their strong post at Ticonderoga—universal alarm prevailed in the north at the rapid approach of the British. Stark was found ready to meet and conquer them. He voluntarily marched to Vermont, and, at the head of undisciplined, but ardent troops, he immortalized his name by planning and consummating the attack at Bennington—the most extraordinary and most expected event of the whole revolution, in

which two different corps of British, Hessian and Indian "invincibles" were attacked and beaten in rapid succession, the first in their redoubts, and the second while coming up to the relief of the other. This victory, from a state of the lowest depression, inspired Americans with the highest confidence; Stark, with myriads of other volunteers, joined general Gates at Saratoga, and by his exertions aided in the overthrow of Burgoyne. He was of the convention which negotiated the British surrender, but was decidedly averse to any other treaty than a surrender at discretion.

The following year the northern frontier was assigned to his command with a feeble force; still, his old friends, the militia, prompt at his call, presented such an attitude as secured the frontier from assault. In 1779 he was at Rhode Island and principally employed with general Gates in surveying the country from Tiverton to Point Judith to guard against attack. Late in the season, however, he joined Washington with the northern army, who was enabled to make good his winter quarters. In the year 1780 he was with Washington at Morristown and in the battle of Springfield; that season terminated with general Lincoln's disaster at Charleston and the treason of Arnold. In 1781 he again had charge of the northern department, and kept the enemy in close quarters with a small body of militia; the surrender of Cornwallis this year closed the war.

For the materials of this hasty sketch, our obligations are due to major Caleb Stark, his eldest son, who participated with his illustrious father in many of the perils of the revolution.

At the conclusion of the war, general Stark, like the Roman Cincinnatus, retired to the pursuits of domestic life, mingling with the industrious and hardy yeomanry of New England, and aspiring to none of the honors or emoluments of public office, but reaping, in common with his countrymen, the fruits of that immortal struggle, which made us a free people. For the last few years of his life, he enjoyed a pecuniary bounty from government—a free-will offering of the nation to one of its most distinguished defenders.

Such was general Stark. The last surviving general officer of the revolution, the first and most intrepid hero of our state, of whom she may justly boast as unsurpassed in cool and determined bravery. He has gone the way of all the living. His character in private life was unblemished. His manners were frank and artless, though tinged with an eccentricity peculiar to his family alone. To sum up all, he was that "noblest work of God, an HONEST MAN."

TIMOTHY WALKER.

The same paper contains an obituary of the hon. *Timothy Walker*, of Concord, N. H. another patriot and soldier of the revolution, who died at the age of eighty-five. The united ages of six of his contemporaries, who acted as pall bearers at his funeral, amounted to five hundred and seven years—the oldest of whom was ninety-two and the youngest seventy-five.

Judge Walker was a native of Concord, and the son of the first clergyman settled in that town. He was graduated at Cambridge, Mas. in the year 1756; and at the time of his death must have been among the oldest alumni of that university.

"At the commencement of the revolution, (says the writer of the obituary), a period of much doubt and peril, when most men were agitated and many

trembled for the fate of the colonies—Walker was found among the most active and animated supporters of the revolution. He feared not the result of the contest—his enthusiasm was on the side of freedom and his country. In almost every town of the country there were many still loyal to the British crown, and who, though in common with their fellow-citizens they felt its unhallowed oppressions, were yet willing to endure them. To counteract their exertions, was required the utmost vigilance of every friend of liberty. At this critical moment, when the alternative presented of abandoning the country, or arresting her inbred enemies—when personal friendships must be sacrificed at the altar of freedom, and the charities of private life be broken off in watchfulness of public enemies, Walker was eminently useful.—Through his patriotic vigilance and that of his co-peers, the opposition was silenced and subdued. His firmness and energy gave him a conspicuous rank among the worthies of that era. He was entrusted with various duties by the government, and in 1776, was a member of the committee of safety for the state, who, in the recess of congress, exercised the powers of that body. He commanded a regiment of minute men in New Hampshire, was afterwards paymaster of the New Hampshire forces, and served a campaign at Winter Hill, under general Sullivan. He was a member of the convention which formed our excellent constitution, was afterwards frequently elected to the legislature, and was ever found an understanding advocate of the country. He was for several years chief justice of the court of common pleas, and was respected for his uprightness and candour.”

Thus are the pillars of the revolution, one after another, in rapid succession, crumbling into dust; and the inevitable day must soon arrive, when the few surviving patriarchs of that memorable and glorious era must descend to the tomb. But their names, their achievements, and their virtues will live after them; and happy will it be for our country, if the principles, of which they were the stern and strenuous advocates, shall, at this period of new doctrines and new fashioned republicanism, be deemed worthy of imitation by their successors.

MAJOR DENNY.

Died, at Pittsburgh, on the 22d July, 1822, in the 61st year of his age, major Ebenezer Denny, a revolutionary officer. He was born in Carlisle, Pennsylvania. At the age of 16, he sailed from Philadelphia to the West Indies, in a letter of marque, and, during an eventful cruise, evinced a prudence and courage above his years: He attracted the notice of the ship's officers, in a severe action with two British armed vessels, off Martinique, and was promoted to the command of the quarter deck.—But his native sense of justice recoiled from that service: he soon afterwards received, unexpectedly, a commission of ensign in the Pennsylvania line, and shared with that “line of Ireland,” in the hardships and forced marches of '81. In Wayne's engagement with the British infantry, in sight of the whole army of the enemy, near Jamestown, on the 6th July, all the officers of his company, except himself, were disabled the first fire. He was at the siege of York, and the night the redoubts were stormed and taken, was in the detachment detailed to cover the approach of La Fayette. After the capitulation, when a corps of the allies were ordered to take formal possession of the enemy's forts, he was selected to carry the American standard on

the occasion, and plant it on the British intrenchments. He was at the evacuation of Charleston, and suffered severely from the fever prevailing among the troops in the Carolinas.

In '84, when congress authorized the raising of ten companies to garrison the western posts, he was re-commissioned, was appointed adjutant of the 1st regiment, and performed the duties of brigade major, and frequently of quarter-master, in Harmar's campaign. When major-general St. Clair took command of the army, he was appointed his aid: in the defeat of the 4th November, '91, the remains of the wretched and devoted army were indebted for their preservation, in a great measure, to the active and efficient assistance he afforded the commander-in-chief.

He was present at the treaty of fort Washington, and assisted the United States' commissioners on the occasion, when 300 Shawanee warriors were shaken from their treacherous purpose, by the self-possession and commanding address of gen. G. R. Clark. In '94, he commanded a battalion of men at Presquisit, to protect the north-western frontier of Pennsylvania, and favor gen. Wayne, by cutting off the intercourse between the “Six Nations” and the hostile Indians.

In the late war, the government applied to him to supply the north-western army with provisions: he did so in a manner that justified their confidence, and with an energy and efficiency which received the acknowledgments of gen. Harrison; the progress of whose arms were greatly facilitated by these obscure but vital services.

In the execution of his own contract in Pennsylvania, he forgot the contractor in the patriot, and made heavy sacrifices to furnish troops assembled on sudden emergencies, at remote points, when the want of notice released him from any obligation to supply them. In the settlement of his accounts, he withheld nothing but his application to be remunerated for such losses. He commanded the first volunteer company raised west of the mountains—a troop of horse; and enjoyed the confidence of his fellow-citizens in many civil offices of trust and honor.

He was a man of sound, manly and practical understanding, pure morals, plain and simple dress and appearance; his manners and conversation were frank and singularly unpretending, and his integrity proverbial.

FUNERAL PROCESSION.

From the Goshen Patriot, July 22, 1822.

On Saturday, the 20th, the battalion of cadets from West Point, to the number of 210, encamped in the village. They were received and treated with as much respect and attention, as could reasonably be expected from so small a village as Goshen. On Sunday, about 100 of them attended church in a body, and made a very handsome appearance.

On Monday morning, the 22d, the people began to assemble in crowds, at an early hour, to witness the public solemnities which were announced to take place on that day. At ten o'clock the preparations commenced. The cavalry, the infantry, the cadets, the mourners, the clergy, survivors of the Mink sink battle, officers and soldiers of the revolution, military officers in uniform, civil and judicial officers, gentlemen of the bar, medical society, masonic brethren, &c. &c. all collected and moving from different points, at the same time, to join the

procession, formed a most sublime, interesting, and solemn scene.

Under the judicious management of major Worth, marshal of the day, and his aids, all confusion and disorder was prevented, and every branch of the procession took its appointed station in the line without the least interruption.

The procession was formed immediately after 12 o'clock. The bones of the brave men, who fell a prey to the merciless savages and painted tories, at the battle of Minisink, having been deposited in two plain mahogany coffins, at the house of James W. Carpenter, were brought out, shrouded in black, surrounded by 16 grey-headed officers and soldiers of the revolution, as pall bearers, and placed each upon a separate hearse drawn by two white horses.

Thirteen of the sons of those who fell on that disastrous day—major Tusten, capt. Barker, H. G. Wisner, esq. Moses Thomas, esq. Michael A. Jones, Jonathan Bennett, Samuel Bennett, John Little, Alsop Vail, Samuel Vail, Jared Mesher, Wm. Baker, and John Knap, followed as chief mourners, and besides them there were a long train of remote connections.

All things being ready, the mournful music struck up, and the line moved off with a slow and solemn step. Both sides of the streets were lined with spectators, from one end to the other, nearly a mile—every house was full, and every sloop was crowded. The whole procession, which was something like a half a mile in length, moved with great regularity and precision, and minute guns were fired, and the bell tolled during the march.

When the procession arrived at the place of interment, the battalion of cadets first encircled the vault, which had been hewn out of a rock on the south side of the church—next to them were drawn up, in succession, the different societies and the military; and then the citizens, who had only been spectators. A stage was erected near the vault, where the solemn services were performed. Here we beheld an interesting spectacle—gen. Hathorn, who commanded that unfortunate expedition, as a colonel, forty-three years before, now verging upon eighty—on his left, major Poppino, who was an officer under him in the same battle, now 96 years of age, and Thomas Waters, about 60, also in the same battle. Although 96 years of age, major Poppino walked with the procession, and was one of the pall-bearers.

As soon as the procession was formed around the vault, the solemnities were opened with prayer, by the rev. Mr. Fisk. The rev. Mr. Wilson then delivered an address upon the occasion. He first took a view of the scriptural authority applicable to the case—spoke of the removal of the bones of Jacob, of Joseph, and of others, recorded in scripture—he gave us a history of the battle of Minisink, and the circumstances attending it—and concluded by calling the attention of the multitude to the resurrection of the dead and the day of judgment.

We understand it is the intention of the committee of arrangement to solicit a copy of Mr. Wilson's address for publication.

After Mr. Wilson concluded, the coffins were let down into the vault. Mr. Wilson then took general Hathorn by the hand—introduced him to the multitude, and read a short address, which the general had prepared, on occasion of his being appointed to lay the corner stone of the monument, but which, in consequence of his age and infirmities, he found himself unable to deliver sufficiently loud to be heard. Gen. Hathorn and Mr. Waters went down into the vault and laid the corner-

stone. Prayer was again offered up, by the rev. Mr. Cotter.

Three volleys of musketry were fired over the vault by the cadets, which closed the ceremonies.

The number of persons assembled on this interesting occasion has been variously estimated—but the best founded calculations we have heard, makes out 2000 carriages of all descriptions, averaging five persons each—and this is perhaps not too high, for most of them were two horse waggons, crowded full, some with eight or ten in—besides these, there were great numbers on horseback and on foot, so that the whole could not have fallen much short of twelve thousand.

As soon as the funeral was over the people began to disperse—no accident happened—and the whole day was spent in a manner becoming the occasion.

Although some may be disposed to make light of this business, and call it a mere catch-penny trick for the benefit of tavernkeepers; yet not so with the patriot and philanthropist—many a manly tear was shed on this occasion—we saw the big drop roll down the furrowed cheek of the grey-headed patriot, at the recollection of the past and the present; and there were few that attended the solemnities whose hearts were not solemnized.

We have here given a simple statement of facts—we attempt not to embellish—it is not an occasion which requests it. We have done our duty—the memory of the brave and the unfortunate have been honored. Better late than never.

The cadets remained at their encampment until Thursday morning, when they took up their march for Montgomery, thence to Newburg, and on to West Point. They conducted themselves with decency and propriety while here, and the people were much pleased with their uniform appearance, their military discipline, and their band of music.

British Political Catechism.

Dedicated, without permission, to his most serene highness Omar, bashaw, dey and governor of the warlike city and kingdom of Algiers; the earl of Liverpool, lord Castlereagh and co. by an Englishman.

Question. What is the present state of old England?

Answer. It exhibits the two extremes of human condition; wealth and extravagance on one hand, and want and wretchedness on the other.

Q. How does this appear?

A. The state pensioners are wallowing in luxury, and paupers are pining on alms; the ministers are all confidence, and the people all despair; the military are superbly clothed, and the poor are in rags; the court is feasting, and the cottage is fasting.

Q. What is the cause of this unnatural state of things?

A. It arises from various causes.

Q. Which is the principal?

A. The unequal and very imperfect state of our representation, in the commons' house of parliament.

Q. How is the house of commons constituted?

A. In some instances one man sends two members; 12 are returned by eleven electors; 90 are placemen and pensioners; a majority of the whole house are returned by 154 lords and commoners; 306 are sent by 165 individuals.

Q. How is the inequality of our representation manifested?

A. In this way; Newton, in Hants, has one elector and two members, but Manchester has no representative;—Midhurst, in Sussex, has one elector and two members, but Sheffield has no representative;—Old Sarum, in Wilts, has one elector and two members, and Birmingham has no representative.

Q. Is the constitution silent on this subject?

A. Far from it: *magna charta*, the *bill of rights*, and the *act of settlement*, are all very explicit upon it.

Q. In what light are these pillars of the constitution to be considered?

A. They are the supreme law of the land; and are as binding upon every branch of the government, as the common law is upon the subject?

Q. What does the act of settlement say in reference to this doctrine?

A. It asserts, that "all the kings and queens who shall ascend the throne of these realms, ought to administer the government of the same according to the laws, and all their officers and ministers ought to serve them respectively, according to the same."

Q. Ought every man to be represented in parliament?

A. The law of the land says, "that every man in England is supposed to be present in parliament, either by himself, or by his representative; and that representation shall be co-extensive with taxation."

Q. How, then, ought taxes to be raised?

A. The law of the land says, "that money shall not be taken out of the pockets of the people, in the shape of taxes, without their consent, or the consent of their representatives."

Q. Is it allowable for government to bribe, or otherwise influence electors?

A. The law of the land says, "that elections shall be free and unbiassed."

Q. Are placemen and pensioners eligible to serve as representatives?

A. The law of the land says, "that no person, who has an office or place of profit under the king, or who receives a pension from the crown, shall be capable of serving as a member of the house of commons."

Q. What is the constitutional period for which parliaments were originally chosen?

A. The law of the land says, "that parliament shall be annual."

Q. Is it legal to buy or sell seats in the house of commons?

A. *The law of the land* says, "that seats in the house shall not be bought or sold."

Q. Has any one ever been convicted of this?

A. In the year 1809, a cabinet minister was found guilty of bartering for a seat in an *honorable assembly*; for which he was punished by an expression of horror from the chair.

Q. In how many ways, then, has the constitution been violated?

A. In the unequal state of the representation—in raising taxes without the consent of the people—in bribery at election—in allowing placemen and pensioners to sit in parliament—in extending the duration of parliaments—and in trafficking for seats in an honorable house.

Q. Of what is that man guilty who breaks the law?

A. Of *disloyalty*.

Q. How does this appear?

A. From the word *law*—in the French language *loi*—fidelity to which constitutes loyalty.

Q. Who, then, is the most loyal man?

A. He who is the most faithful supporter of the laws of his country.

Q. Of what is he guilty who violates the constitution—the supreme law of the land?

A. Not of disloyalty only, but also of treason against the state.

Q. WHICH is the next powerful cause of our present distress?

A. The next cause—arising out of the preceding one—is the enormous taxation with which we are loaded.

Q. What is the amount of the taxes which are now required?

A. Seventy millions a year.

Q. How are these taxes distributed?

A. More than forty millions a year go to pay the interest of what is called the national debt.

Q. What is the amount of this debt?

A. One thousand millions.

Q. How soon might one count this debt, if it were all in one pound notes?

A. By counting sixty hours each week, at the rate of sixty notes in a minute, one might perform it in a little more than eighty-nine years!

Q. How has it been incurred?

A. One part of it in fighting *against* the Bourbons, and the other part in fighting *for* them.

Q. When will this debt be liquidated?

A. Never.

Q. How long will the interest of it be paid?

A. Not long.

Q. How are the other taxes disposed of?

A. In the payment of the civil list, placemen, pensioners, and sinecurists; and in defraying the ordinary expenses of government.

Q. Have all those who are in the receipt of this money rendered any important services to the state?

A. Many of them are only known to the country by the vast sums which they receive from it, or by the great injuries which they have inflicted upon it.

Q. Who are they, and what do they receive?

A. Take for a sample—

Lord Arden, who has, (per annum),	£39,000
Earl Bathurst,	33,000
Earl Camden,	23,000
Marquis of Buckingham,	23,000
Earl Cathcart,	14,000
Duke of Manchester,	14,000
Duke of Richmond,	12,000
Earl Hardwicke,	11,000
Lord Lake, }	10,000
Hon. Thos. Knox,	10,000

Q. Are any other demands made upon the country?

A. Yes; poor rates and tythes.

Q. What is the amount of the poor rates?

A. In 1815 it was about ten millions; but, from the increased and increasing distress of the poor, it is believed that, in the present year, twenty millions will be found insufficient.

Q. What will be the amount of tythes this year?

A. About six millions.

Q. Are they necessary to the support of the church?

A. The *church* may require them; but *christianity* does not.

Q. Is the church of England poor?

A. Not very: the bishoprick of

Durham, is worth, (a year),	£24,000
Canterbury,	20,000
Winchester,	18,000
York,	14,000

Ely, 12,000
London, 9,000
And some others a few thousands less.

Q. Do the people of any other country pay so much in taxes, &c. as we do?

A. No: the people of the United States of America pay, annually, from four to five millions sterling, in taxes of every description.

Q. How much is that per head on the whole population of the United States?

A. About twelve shillings; or *three pounds* for a man with a wife and three children.

Q. What is the average amount of taxes on each individual in this country?

A. About eight pounds a year, or *forty pounds* for a man with a wife and three children.

Q. Do the people of the United States pay any poor rates?

A. No.

Q. Do they pay any tythes?

A. Not any.

Q. Have they, then, no established church to support?

A. Nothing of the kind.

Q. Do the French pay any poor rates?

A. No.

Q. Nor tythes?

A. No.

Q. What is the plain inference from these facts?

A. That as our burthens are heavier, so are our distresses greater than those of any other country.

Q. By what other means has our ruin been accelerated?

A. By engaging in unnecessary and unjust wars.

Q. For what purpose did William Pitt enter into a war with France, in the year 1793?

A. To destroy liberty abroad, and to establish despotism at home.

Q. How much has the war against France increased the public debt?

A. Upwards of seven hundred millions.

Q. How much has the public expenditure been, in one year, during the late war?

A. In 1812, the total amount was one hundred and twelve millions, three hundred and four thousand, three hundred and ninety-two pounds, three shillings and seven pence.

Q. What have been the immediate effects of this war?

A. An advance in the price of land, and of the necessaries of life; the ruin of our trade at home, and of our commerce abroad.

Q. Why was not land reduced to a peace price, when peace was made?

A. Because a system of extravagance and increased expenditure was engrained on the war and retrenchment became the most difficult of all duties.

Q. But was it not reasonable to expect that the diminished demand for agricultural produce, consequent on the peace, would cause an immediate reduction in the price; and that this would affect the value of land?

A. This result was intentionally prevented by an infamous *corn bill*; which in its operations has kept up the value of land and the price of bread to pretty near the war maximum; whilst labor has been kept down to the peace minimum.

Q. Will the high price of the necessaries of life affect our manufacturers?

A. Very materially: for if to the usual value of labor we add the increased price of food, the cost of our manufactured articles will be proportionately advanced; and the British merchant will, in con-

sequence, be unable to come in competition with any other in the foreign market.

Q. What is to be expected, as the natural result of this state of things?

A. The manufacturers must inevitably suffer: first the employer and then the employed: the former will remove the disadvantage from himself, as long as possible, by controlling the wages; the latter must submit to his fate.

Q. But, may not the time come when both must suffer?

A. That period is now arrived, and both are fast sinking together; the one into splendid ruin, the other into degrading pauperism.

Q. But may not this distress be alleviated by some temporary expedients?

A. If by expedients are meant soup shops and subscriptions, experience has pronounced them to be worse than useless, and perfectly deceitful.

Q. What is the amount of the subscription lately set on foot at the London tavern?

A. It is now very near 42,000*l.*; which is about 3,000*l.* more than lord Arden receives every year for doing nothing; and would afford to every poor individual in the country about two pennyworth of soup.

Q. Have not some persons received more?

A. Yes; but others have got nothing.

Q. What do the poor want?

A. *Wages*, not alms; *work*, not charity.

Q. Suppose, then, government were to adopt a system of *retrenchment*, would not this give us some relief?

A. Ministers have already deceived us with pretensions of this sort; they have fallen foul on a few little mole hills, and have left the mighty mountains untouched.

Q. In what, then, can a remedy be found for the extreme distress under which we suffer?

A. In a radical reform of the commons' house of parliament.

Q. But how can a reform in the representation alone relieve us?

A. By restoring to the people their constitutional share in the government; when they will be enabled, by their representatives, to prevent all unnecessary wars, to abolish all useless places, to compound for all unmerited pensions and sinecures, to diminish exorbitant salaries, to reduce the whole expenditure of government, and to make such laws only as will promote the welfare of the country and the happiness of the people.

Q. Why is this measure never supported, if it will answer such valuable purposes?

A. This measure has been, and is still supported, by the real friends to the constitution and to the welfare of the country.

Q. Who are they that have defended it?

A. The great lord Chatham was one who was so convinced of the necessity of it, in his time, that he publicly declared, "if the house were not reformed *within*, it would be reformed *from without*, with a vengeance." And his son, William Pitt, assured the same house of commons, "that, without a reform, no honest man could be a minister."

Q. Why, then, did not Mr. Pitt support the attempts for parliamentary reform when he was minister.

A. Because he was too young and too weak to resist the blandishments of power, at the first; and because he afterwards discovered that his influence and authority were a thousand times greater in a corrupt house of borough-mongering syco-

phants, than it would have been over the real and faithful representatives of the people.

Q. Does it not seem, from this, that no minister will consent, freely, to a radical reform?

A. It does appear so; but such an event does not entirely depend upon any minister: the sovereign, or the regent acting in his name, can, at any time, change all his ministers, and can form an administration composed of such men as are friendly to reform.

Q. But is it likely that the regent will be induced to separate himself from those who enable him to gratify all his desires?

A. This must depend upon circumstances; if the alternative should ever be—as there is much reason to apprehend it will—that he must either be separated from the enemies of reform, or from the people, he surely will not hesitate to decide in his own favor, and consult his own safety.

Q. What, then, should the people do?

A. They should, one and all, petition the regent to adopt such measures as will restore to them a constitutional share in the government—a voice in their own house—by giving them a full, free and fair representation.

Q. But is it not in the power of a wicked minister to withhold such petition from the prince?

A. It must be confessed that this is too often the case. If, however, *this whole nation* should address the throne, it is hardly to be supposed that any man, however abandoned, would incur the responsibility which would necessarily attach to such infamous conduct.

Q. Are not those who petition for reform liable to be called jacobins, and to be stigmatized as factious, designing men.

A. Yes; but it is only by those who are interested in the support of a corrupt system, and by their ignorant friends. Reformers are the truly, if not the only, loyal men.

Q. Has it not been said, that public meetings have a tendency to disturb the peace of society?

A. Happily, they have an exactly contrary effect: they serve to convince the lawless orders of the people that they have friends who feel for their distress, and who labor to remove them: and thus the poor and ignorant are prevented from recurring to those illegal measures which appear to them the only remedies within their power.

Q. Is it necessary, then, that petitions should be as numerous as possible?

A. Yes; every county, city, town, village, and hamlet, every honest man in the empire, should assemble on constitutional ground, to petition for constitutional reform.

Literature.

In senate of the United States—January 3, 1822.

The committee on finance, to whom was referred the memorial of trustees of the Transylvania University, praying for a repeal of the duties on books imported into the United States,

REPORT:

That the act of congress of the 27th April, 1816, establishing the existing tariff, has included books among the unenumerated articles, at an *ad valorem* of 15 per cent.

The second section of that act exempts from duty "all articles for the use of the United States, philosophical apparatus, instruments, books, maps, statues, busts, casts, paintings, drawings, engravings, specimens of sculpture, cabinets of coins, gems,

medals, and all other collections of antiquities, statuary, modelling, painting, drawing, etching or engraving, specially imported by order and for the use of any society incorporated for philosophical or literary purposes, or for the encouragement of the fine arts, or by order and for the use of any seminary of learning."

To justify an encroachment upon this tariff, by the exemption of particular articles, we should consider its effects and understand its bearing upon the general system. It is possible that the exemption required would be chiefly felt in the price of the article exempted, and the manufacture of paper and printing types; and that its influence would be imperceptible or trifling upon the other branches of enterprise and industry. It may then be considered in its operations upon the manufactures, the revenue, and the consumption.

The constitution of the United States has placed authors under the protection of congress. Essential to this protection is the encouragement of printing. Could foreigners maintain a successful competition with the American publisher, the American author would experience embarrassment and disappointment; foreign books would inundate the literary market, and even his own productions, from a foreign press, might be made to impair, if not defeat, his exclusive right.

The art of printing, in the United States, is rapidly advancing to its highest perfection. Samples have already been produced, which will scarcely suffer by comparison with the best specimens of other nations. Still the art has to encounter embarrassments. Comparatively, our capital is small, labor high, and our skill not perfect. Such is our enterprise, that American competition has already done much to diminish profit and impede success. Remove this protecting duty, and foreigners, particularly the British, who speak the same language, whose labor is cheap, and skill matured, may overwhelm our market, and become the exclusive book makers for the United States.

Connected with this, is the duty on paper. The manufacturer of this principal article of the printer's consumption is protected by an *ad valorem* of thirty per cent. So long as this operates as a protection to the paper maker, it is a tax on the book maker.—By this partial interference, therefore, you leave the burden, while you remove the equivalent.

The manufacture of printing types in the United States is of recent origin: such, however, has been its progress, that, in 1816, congress determined that the manufacturer required, and the consumer could sustain, an impost of twenty-five per cent. But, inasmuch as this art may be considered as still in its infancy, the competition at home will not, for a long time, create a depression of the price, and this duty will, consequently, remain a tax on American printing.

In this view of the subject, it is apprehended that it would be unequal, impolitic, and unjust, to single out this important branch of industry, strip it of all protection, and leave it to struggle with powerful competitors, to its serious embarrassment, and probable destruction.

But the protection of the manufacturer, and the burden upon the consumer, are not only objects of consideration in establishing a tariff on importations. It is our principal, and, ordinarily, our only source of revenue. Flourishing as our revenues are said to be, it seems to be agreed that we have no money to spare. "Loans, which consume the future," have become necessary, and rigorous economy and retrenchment must be enjoined and prac-

tised to prevent a recurrence to this pernicious expedient.

The exemption required would probably diminish the revenue beyond the amount of the duty repealed. Should American printing diminish, it would cause a corresponding diminution of the materials of consumption; and the impost on paper and types would probably vanish almost contemporaneously with that on books. It ought, moreover, to be noticed, that in England there is a bounty or drawback on the exportation of British books of *three pence sterling on the pound weight*—Now, inasmuch as our duty is *ad valorem*, and their bounty is *specific*, not according to the *value*, but the *weight* of the book, their cheap editions may be imported into the United States at a premium which will about balance our duty of *fifteen per cent*. Their more expensive editions, and all books in foreign languages, are chiefly wanted for our literary institutions, and for these they are already free. The inquiry then is, what portion of the community requires this repeal? Every college, academy, and other seminary, and every corporation for literary purposes, is now exempt. All members and students of these institutions are consequently exonerated of the burden of this tax. The question recurs who is to experience the benefit of the exemption? Surely not the instructors nor students in the higher branches of literature, for they are already relieved; certainly not the members of our common schools, for ordinary British editions are compensated by a bounty; American school books are plenty and cheap, and those in foreign languages are not required for general use. And it is equally certain that our manufactures forbid it, and our treasury can scarcely afford it. None then but the professional gentlemen who can afford to extend his library beyond the resources of American publishers, or the scholar of wealth and leisure, who would indulge his taste in selecting the most elegant and expensive editions of foreign authors, can be interested in its favor. And is it expedient, at this time, to interpose *this relief*?

To tax foreign luxuries is a dictate of the soundest policy. Expensive and highly finished editions are as much a *luxury* as any other extravagant expenditure. A moderate duty on such books, to be limited almost exclusively to gentlemen of wealth, could never subject us to the imputation of an indifference to education. Few nations, perhaps, have done more for the diffusion of knowledge. In the endowments and support of primary schools we are second to none. Great Britain exacts an impost on all imported books, and allows a bounty on the exportation of her own. France exacts a specific duty on one hundred franks per hundred kilogrammes on books in the French language. To those reprinted from French editions is added fifty per cent. and pirated editions are entirely prohibited. There is, however, a deduction of fifty per cent. for *scientific memoirs*, and of ninety per cent. for books in the dead or foreign languages. Spain admits free of duty books, maps, and charts, on the subject of navigation, when introduced for purposes of instruction. But we have surpassed them, and have not improbably exceeded the limits of a sound and enlightened policy.

With few exceptions, the English is our native and ordinary language. It is spoken as universally and purely as in England itself. But lately, we were a part of the British empire; from thence we have derived many of our habits, customs and laws. We still esteem Great Britain eminent in arts, sciences, policy, and power. Our principal and

subordinate seminaries of learning are chiefly furnished with British books, and our youth are taught by British authors, wedded to their own institutions, and exultingly proud of their country, constitution, and laws. These means of a foreign influence have long been perceived, and have excited the jealousy of grave and intelligent politicians. Our government is peculiar to ourselves, and our books of instruction should be adapted to the nature of the government, and the genius of the people. In the best of foreign books, we are liable to meet with criticisms and comparisons not very flattering to the American people. In American editions of these, the offensive or illiberal parts are expunged or explained, and the work is adapted to the exigencies and taste of an American reader. But with draw the protection which our tariff affords, our channels of instruction will be *foreign*, our youth will imbibe sentiments, form attachments, and acquire habits of thinking adverse to our prosperity, unfriendly to our government, and dangerous to our liberties. Your committee, therefore, recommend the following resolution:

Resolved, That it is, at this time, *inexpedient* to repeal the duty on the importation of books.

Constitutional Arguments.

SPEECH OF MR. R. M. JOHNSON, OF KEN.

IN THE SENATE, JANUARY 14, 1822,

On the following amendment proposed by him to the constitution of the United States:

Resolved by the senate and house of representatives of the United States of America in congress assembled, That the following amendment to the constitution of the United States be proposed to the legislatures of the several states, which, when ratified by the legislatures of three-fourths of the states, shall be valid, to all intents and purposes, as part of the said constitution:

"That, in all controversies where the judicial power of the United States shall be so construed as to extend to any case in law or equity, arising under this constitution, the laws of the United States, or treaties made, or which shall be made, under their authority, and to which a state shall be a party, and in all controversies in which a state may desire to become a party, in consequence of having the constitution or laws of such state questioned, the senate of the United States shall have appellate jurisdiction."

Mr. Johnson said, the constitution of the United States contains a clause, prescribing the manner in which amendments may be obtained. This is conclusive evidence that the wise men who framed it were of opinion that experience would develop imperfections in the system, which might require a remedy. The models of antiquity, with all the improvements of modern times, in relation to confederated governments, were before them. The Amphictyonic council, by which the republics of Greece were united; the Achaean league, which so long governed the cities of Achaia; the confederation of the Germanic empire, and the Belgic confederacy, which prevailed in the provinces of the Netherlands all furnished examples for their improvement.

The history of these confederacies, said Mr. J. shed a light upon the subject, by which they profited. In some, the consolidation of power was so great, as to weaken the members, and endanger their liberties; in others, the federal power was not

sufficient to preserve their integrity; and disunion and carnage were the effects of their imbecility. In establishing the principles of this confederacy, it was intended to guard against these two extremes, by so dividing the powers betwixt the general and state governments, as to rest on the isthmus between consolidation on the one hand, and discord, on the other; and so to define the attributes of each as to produce harmony in all their operations.

When the struggle for independence, which had been their bond of union, was past, and clashing interests began to provoke animosities, it was obvious to all, that, under the articles of the old confederation, the general government was too feeble for the purposes of national prosperity; and all concurred in the sentiment, that some change was necessary. The only question was, how great that change should be? The difficulty, and the sole difficulty, was, to determine the proper distribution of power. How to divide the sovereignty betwixt two distinct governments, deriving their authority from the same source, each supreme within its own legitimate sphere of action, and yet so to regulate and define the power of both as to produce perfect concord, was the great political problem to be solved by the statesmen of that day. It was not to be expected, that the first experiment would perfectly effect this object. If it was anticipated by any, disappointment has followed the utopian delusion. The highest tribute of respect, however, is due to the wisdom of the patriots who framed the constitution, in so arranging this complicated machinery of a sovereignty within sovereignties, as to admit of that degree of harmony which has prevailed; but there is a limit to the intellect of man. All that wisdom and patriotism could do, they have done; but imperfections, which human sagacity could not foresee, were to be developed by experience, and the corrective applied by mutual consent.

It is admitted by all, that the states and general government possess co-current powers; that they also possess powers exclusive of each other; and that the federal constitution prescribes limitations upon both. In this complex system, disorders are to be expected; some, of an incidental nature, not easily controlled; others, that admit a remedy. After an experience of thirty-two years, it becomes our imperious duty to begin this inquiry, relative to the conflicts, between the federal judiciary and the sovereignty of the states. These conflicts are become so frequent and alarming, that the public safety demands an investigation, that it may be determined where the error lies. Unless we point out the real difficulty, and ascertain the just claims of each party we shall be overspread with Egyptian darkness. When the parties are not agreed upon the line which divides their powers, the question is, which shall preponderate, and which shall concede? The states claim authority which the federal judiciary denies; and the federal judiciary exercises powers which the states do not acknowledge to be legitimate. There is no umpire to decide betwixt them; and the difficulty is, to determine which shall submit. It is contended on the one part, that, as the general government was instituted for national purposes, its claims to the highest supremacy must be superior to those of the states; and that it is an essential attribute of national sovereignty, that its judiciary shall be the judge of its own powers, and shall have authority to overrule every other tribunal, according to its own sovereign will and pleasure. But this argument cuts like the two edged sword, and furnishes a position quite as strong in

favor of the states. It is not denied that all power not delegated to congress, nor prohibited to the states, is reserved to the states respectively, or to the people; that the states are also supreme and independent within the orbit of their powers. If, then, it is the attribute of sovereignty to judge of its own powers, where is the sovereignty of the states, if that judgment must be submitted to the federal judiciary? The argument is precisely the same in both cases, and may be called an argument in a circle.

It is contended by some of the states, Virginia for instance, that the states have *superior* claims to an exclusive decision in all cases of conflicting power. The states are the original fountain of power, a portion of which they have delegated and vested in a general government, for objects common to all. The general government is the creature of the states, and exists by their permission. Then, as it is a principle universally acknowledged, in religion and morality, that the creator is superior to the created, so it is contended that the states have the indubitable right of exclusive decision in all cases of conflict, whether they respect a violation of the delegated powers, or the exercise of that authority which is reserved to the states respectively, or to the people. To say the least of it, there is much plausibility in this argument. But it involves a difficulty as to the manner in which this right of decision shall be exercised. If each state shall decide separately, confusion would probably arise from contradictory decisions on the same point, in different states; but even this objection may have more plausibility than substance. Should the states attempt to exercise any of the specific powers granted exclusively to congress, or to arrest the general government in the exercise of power expressly delegated, the consequence might be unfortunate; but, in reviewing the conduct of the states, and marking the particular points of contact, it does not appear, from the history of our government, that the states have, in any one case, attempted this, though the federal judiciary has assumed a guardianship over the states, even to the controlling of their peculiar municipal regulations. If the states have the right of decision, there is a difficulty in giving their decision an efficacious operation. If it belongs to them collectively, there must be a regular method of ascertaining and promulgating their decisions.

In the cases of collision between Pennsylvania and the general government, much was said and written respecting the rights of the parties, and the necessity of a tribunal that could remedy the evil. It appears, from the decisions of her state courts, the periodical publications and official documents of that day, that Pennsylvania recognized and claimed an equality of right with the general government, to decide in constitutional cases affecting her sovereignty; that, in serious collisions, an umpire was necessary; and that no tribunal was more proper than this body. This doctrine is universally acknowledged as a correct maxim betwixt civilized nations, and is sometimes resorted to for the amicable settlement of disputes betwixt them. Assuming the Pennsylvania position, and the conclusion is irresistible, that the parties, being equally sovereign within their circle of power, it is a flagrant outrage to justice, a violation of every principle of equity, for one to arrogate to itself the exclusive power of judging in all cases of disagreement.

Let us now inquire into the safest and most satisfactory method of determination when these con-

licts arise. We are not left entirely to the conjectures of reason on this subject; the light of experience illuminates our path. Under all circumstances, and in every condition of society, there is a rational mode of settling differences. When they arise betwixt friends, a candid exposition of the grounds of difficulty is always the most honorable, and presents the fairest prospect of a happy result. They teach forbearance towards an enemy—much more in a case like this, where the parties are friends. We must forgive, not only seven times, but seventy times seven. This political controversy we should gladly cover with the darkest shade of oblivion; but, unfortunately, the doctrine of federal supremacy is the basis of encroachments—and the principle is established by a judicial tribunal which knows no change. Its decisions are predicated upon the principle of perfection, and assume the character of immutability. Like the laws of the Medes and Persians, they live forever, and operate through all time. We have a memorable example, in the history of the reign of Ahasuerus, of the immutability of their laws, and the manner in which the cruelty of an unrighteous edict was prevented by a countervailing decree. Haman, the prime minister, intoxicated with that inordinate love of power, which is but too common to mankind, to wreak his vengeance upon Mordecai the Jew, because he refused to bow the knee to him, procured from his sovereign a decree, which he published in every province of the empire, authorizing a general slaughter of the Jews on an appointed day. When the monarch saw that the preserver of his own life and the companion of his own bosom, were both involved in the calamities which awaited that devoted people, he would gladly have revoked his decree; but every thing done there was immutable, and the decree must stand. Yet he found means to counteract the effect of what he could not change, by issuing another decree, which authorized the Jews to bear arms in their own defence. The consequence was, that the meditated calamity was averted, and its author was suspended upon the same gallows that he had erected for the intended victim of his haughtiness. But no decrees of the sovereign people, no earthly tribunal, can avert the evils which may grow out of a supreme judicial decision. It constitutes the common law of the land; it forms the basis of future decisions, and justifies similar encroachments to the end of time. It is omnipotent in its character, and irresistible in its march. All obstacles must yield to its demands; all nature must obey its mandates—the mountains must bow, and the valleys rise, before it.

If your neighbor offend you, remonstrate gently with him alone; if he refuse to hear you, take one or two witnesses to certify the case; if he still continue obstinate, bring him before the whole congregation, where all the power resides, and there let justice be decreed. If one nation injure another, a similar course may effect a settlement. When negotiation fails, an umpire is sometimes chosen, and, in the last resort, the force of arms will decide where no tribunal can be had. But, in the case of conflicting power between the states and the federal authorities, which party must yield? Force is out of the question. The states are at least equal in the right of sovereignty, if not in the power of enforcing it; and it is unrighteous to demand submission from them without an investigation of their claims by a disinterested tribunal. Shall the weaker be compelled to yield? Right and power are not synonymous; and we should recollect that the race is not always to the swift, nor the battle to the

strong. Difficulties thicken upon us as we advance and demand interposition. It cannot be denied, that serious collisions have taken place in our system, which call for investigation. If any of the principles established by the federal judiciary operate as an encroachment upon state rights, it should be recollected that the evil is without limitation of time. An oppressive law may be repealed, and, when the oppression is felt, the repeal is certain; but here is no repeal, no corrective, no end. We may look coolly on while the work of consolidation is progressing, which must ultimately swallow our liberties; or, we may mourn the threatening desolation, without the power of arresting its progress, unless we provide a constitutional check. If in every collision the federal judiciary has been correct, and if it never shall err in future, yet the provision for appeal will be not only harmless, but beneficial. It will allay those apprehensions, and satisfy the minds of those who are disquieted with needless alarms. It will restore that confidence upon which our system of government is founded, and preserve that harmony which is essential to its prosperity. At this time there is, unfortunately, a want of confidence in the federal judiciary in cases that involve political power, and this distrust may be carried to other cases, such as the lawyers call *meum et tuum*. It is the opinion of many eminent statesmen, that there is a manifest disposition, on the part of the federal judiciary, to enlarge, to the utmost stretch of constitutional construction, the powers of the general government, at least in that branch, and by consequence to abridge the jurisdiction of state tribunals. I do not assert this to be the fact; but, if it is not, we should adopt some method, if practicable, to remove these ill-founded suspicions. The desire of extending our own power is a universal law in our nature, to which the just and the unjust, the wise and the foolish, are all subject, though in unequal degrees; and I do not design in any way to impugn the learned members of the bench, when I admit the possibility of the same propensity remaining with them. It has found its way to elevation in other countries, and to prevent its influence here, some rational method should be devised to define and regulate that power. Political power, properly divided into co-ordinate branches, and judiciously regulated, produces happy results—but, when sovereign and irrepensible, it carries in its train the wreck of human happiness; desolation marks its bloody progress, for with it moral and physical power are always blended. The blessings of a good government furnish themes of rejoicing and praise; but the curses of a bad government, bring sorrow to the heart. The history of nations furnishes us with instructive lessons, while we trace the hand of tyranny in the fall of empires; but the love of power is a principle still in operation, and no premonitions can teach us moderation. It begins with childhood, and does not cease with age. It is the belligerent principle which predominates in the social circle, and genders strife where perfect peace should reign. It is the prolific source of war with independent communities, which has spread desolation over countries and stained the whole world with blood. Uncontrolled, it is inordinate ambition; properly regulated, it is emulation. If we did not know this to be the character of man, delineated in all his history, we might indulge the hope of everlasting repose, under our mild institutions. Happy would be our lot, if every department should confine itself to the faithful performance of its own functions, carefully avoiding all interference with others, or even the

exercise of doubtful power; but the history of the present times furnishes us with memorable examples of the reverse, and teaches us to anticipate no such repose. We must take human nature as it is; and to be secure from danger, it is necessary to provide against the encroachment of power in one department upon another, and, in all, upon the rights of the people.

It is a principle interwoven, both in the theory and practice of our government, that every department which exercises political power shall be responsible to the people. Here lies our safety and our strength. Representation and responsibility must go hand in hand—bone of her bone and flesh of her flesh. The republics of Greece and Rome were ignorant of the force of this principle, and practised it to a very limited extent. After the abolition of monarchy in Athens, the *Archons* were elected annually by the people. The *Ephori* of Sparta were elected in the same way, and the Romans elected their *Tribunes*; but all those were a kind of executive officers. In each of those governments the people, *en masse*, were assembled to decide on public affairs, and each state had a senate permanent in office and independent of the people. In modern days the principle of representation has been but very imperfectly understood among the nations of Europe, except in England, where it was introduced as early as the ninth century, in the reign of Alfred, and has been perpetuated in some form to the present time. But, though the theory of representation and responsibility has been taught there, the practice has been but imperfectly regarded. It has been so limited and so defective in its operation, that its benefits are almost entirely lost and the forms only preserved. In the United States alone, whose government presents to the world a model of excellence, and is the anchor of hope to man, the theory and practice are united in every department of the government except the judiciary. This exception may satisfy the mind, that it was never designed to confide political or legislative power to that department, especially the power of repealing laws enacted by the legislative departments, both of the general government and the states. The execution of the laws is the only power intended to be confided to the court; and this will furnish ample scope for the exercise of discretion. If the judges were content to confine their decisions to cases affecting property and punishing crimes according to the laws, few would complain of their irresponsibility. If bad laws are enacted the people will correct the evil; and if, by an incorrect adjudication or misconstruction of law, individual injury should be sustained, yet the fundamental principles of our government would not be endangered.—On this principle alone can this kind of independence of the judges be tolerated with safety in a free government. The members of the legislative department of our government are directly responsible to the people and to the states—which responsibility is carefully preserved upon the principle that the trustee may possibly abuse his trust; and, to remedy the evil, the people have wisely reserved the power in their own hands. When the sedition law was enacted, this remedy was applied. The president of the United States, the governors of states, and the members of their legislatures, all hold their offices for limited terms, that they may feel their responsibility to the people, from whom their power is derived, and for whose benefit it is exercised. Why are they not all elected for life, or during good behavior? The reason is obvious. Because they exercise political power, which may

be abused. By corruption of motive, or by the indulgence of sentiments unfriendly to liberty, they may betray the trust reposed in them; and their amenability to their sovereigns, the people, is the only sure safe-guard of the rights of man. It then follows, inevitably, that the judiciary should be confined to the decision upon the laws, or that the judges should feel the same responsibility; and, if this is not done, some tribunal should be established, responsible to the people, to correct their aberrations.

It may be denied by some that the judiciary exercises legislative or judicial power. If a judge can repeal a law of congress, by declaring it unconstitutional, is not this the exercise of political power? If he can declare the laws of a state unconstitutional and void, and, in one moment, subvert the deliberate policy of that state for twenty-four years, as in Kentucky, affecting its whole landed property, even to the mutilation of the tenure upon which it is held, and on which every paternal inheritance is founded; is not this the exercise of political power? All this they have done, and no earthly power can investigate or revoke their decisions. If this is not the exercise of political power, I would be gratified to learn the definition of the term, as contradistinguished from judicial power. If the exercise of such tremendous powers be legitimate, their acts, like those of all other trustees of power, should be subject to the sanction or revocation of the people; if not by a direct responsibility, yet by an appeal to a tribunal that is responsible. If, on the contrary, this exercise of power is an act of usurpation, the case is yet more alarming; for the judges hold their offices *during good behavior*, and a bad opinion is not bad behaviour, and the opinion of a court is a law, and above all other law. A judge can be removed by impeachment for treason and other high crimes and misdemeanors; and, in case of impeachment by the other house, two-thirds of this body must concur to effect his removal. The difficulty of removing a judge in this way is such that it will seldom be attempted; and experience tells us it will more rarely succeed.

The passions and propensities of human nature, with all their imperfections, are alike common to every rank and condition; and to prevent their ill effects in a little number, where any particular excitement is more likely to become general than with a large body, responsibility is necessary, or competence in some other body to reverse their destinies. Judges, like other men, have their political views. One may be friendly to consolidation; another may err on the opposite extreme, and a third may prefer that happy mediocrity, which is always safe, and generally salutary. When these are associated upon the bench, and each under the influence of his own partiality, there will inevitably be as different conclusions among them, where state sovereignty is involved, or the extent of federal jurisdiction is called in question, as if they were members of a legislative body. Why then should they be considered any more infallible, or their decisions any less subject to investigation and reversion? Besides the differences arising from political prepossessions, the various structures of the human mind will produce a variety of opinion. One may take an expansive view of a subject, and base his decision upon truth and justice; another may be, what is sometimes called a *technical judge*, and though of equal integrity, may conceive it his duty to stick to the bark of the case, and confine himself in all decisions to the forms of judicial proceeding. This

difference in the organization of the mind must necessarily result in a difference of conclusion. Courts also, like cities and villages, or like legislative bodies, will sometimes have their leaders; and it may happen, that a single individual will be the prime cause of a decision to overturn the deliberate act of a whole state, or of the United States; yet we are admonished to receive their opinions as the ancients did the responses of the Delphic oracle; or the Jews, with more propriety, the communications from heaven delivered by *Urim* and *Thummim*, to the High Priest of God's chosen people, from the *sanctum sanctorum*. Other causes of difference might be multiplied to a tedious extent; but enough has been said to shew that judges, who, like other men, are subject to the frailties, the passions, the partialities, and antipathies, incident to human nature, should not be exempted from responsibility on account of their superior integrity, learning and capacity; or, that their decisions should be subject to revision by some competent tribunal, responsible to the people. It is believed that this is the opinion of that great and good man who penned the declaration of independence, and who now enjoys, in the shades of Monticello, the blessings of the principles which it contains.

It is not pretended that judges are worse than other men. I am proud to say, that no country was ever blest with more talents or integrity upon the bench than this; but the judicial history of all civilized nations confirms the allegation, that, under the same circumstances, judges are just like other men. The theory of our judiciary may teach us that "a judge is just, a chancellor juster still;" but experience teaches us, that perfection resides no where in this world, no, not even on the bench. We have borrowed from Great Britain the idea of judicial independence. Previous to the reign of William and Mary, the judges were tenants at the will of the monarch. The king, who was "more wise, more just, more learned, more every thing," was considered the fountain of justice, and it was his prerogative to administer it to the people. In early times he dispensed justice in his own person; but this being too laborious, he appointed his judges and fixed their compensation. The tenure of their office and the amount of their salaries were alike dependant upon his pleasure. The creature was responsible to his creator both for existence and support; and interest and necessity conspired to induce obedience to his will. The judiciary thus became an instrument of cruelty in his hands. The legislature, the army, and the court, on many occasions, were alike the implements of royal vengeance, to sustain the divine right of kings. It was the judgment of a court that doomed the immortal Socrates to drink the hemlock. When the Roman tyrant could no longer use a hired soldiery to immolate the victims of his jealousy, he resorted to courts of law. When Henry the eighth, of England would exercise a cruel despotism under the forms of a free constitution, the army, the court, and the parliament, were the potent engines that sustained him. When Mary, his daughter, compelled the protestants to seal their testimony at the stake, the court gave sanction to the murderous deeds. Her sister and successor, Elizabeth, created the court of high commission, and formally invested it with inquisitorial power. She also supported the arbitrary edicts of the star chamber. The puritans, because obnoxious to the free exercise of the prerogatives of the crown, were imprisoned and dispersed by process of law, and the judges were the supporters of her despotic power. When

she would destroy her unfortunate kinswoman, the queen of the Scots, the judges were instructed to condemn her, and by their sentence she came to the block. This horrid deed was covered by the cloak of judicial proceedings. When Charles the first determined to change the religion of Scotland, he made use of the court of high commission to effect the object. By the same judicial power, the advocates for the doctrines of the reformation have so often been divested of their religious privileges, and doomed to seal with their blood that religion which bore them triumphantly through the vale of death.

Those facts are not exhibited to derogate from the character of the judiciary, but to shew that no truth is more universally established in history; that no proposition can be more plainly demonstrated than this, that judges may oppress the people—that power cannot be safely confided any where without the guarantee of responsibility.

The occurrences to which we have adverted, transpired previous to the memorable era in the British annals, under William and Mary, when the judges were commissioned by their monarch to hold their offices during good behavior, with salaries fixed by law. This system was consummated in the reign of George the third, by providing that the commission of the judge should not be vacated upon the demise of the king. But, even in Great Britain, the judges are less independent than here; for, by an address of a majority of both houses of parliament, they may be removed; here, an impeachment for malconduct by one house, sustained by two-thirds of the other, is the only thing that can effect their removal. Nor is their power so transcendant in Great Britain, as to repeal an act of parliament by declaring it unconstitutional and void. We have improved upon their system of irresponsibility, and enlarged their powers, without any of the reasons or benefits which exist with them.— Their object is to render the judges independent of the monarch, that they may protect the people from lawless acts of his despotic power. In this country the people are the king; and the only object of rendering the judges independent of their sovereign authority, or the only benefit which can result from it, that I can conceive, is to protect the people from their own oppressors, themselves. We have given our authority to the judiciary to control us, lest we shall enslave ourselves. We transfer the power to them, because we fear the consequence of holding it ourselves; and surrender our liberties, our lives, the disposition of our property, to the judiciary, to escape the danger of oppressing ourselves.

Are we choosing guardians to control us, and prevent us from destroying ourselves in our fits of lunacy? A maniac may surrender his rights for the preservation of his person from the freaks of his own madness; but the American people are not mad. Experience has proven them to be the safe depositories of their own power. They have wisely reserved it to themselves, and as wisely exercised it, except in this case; and it is believed that they may now safely make their voice to be heard in the judiciary. Why should they hold the controlling power in every other department of the government? *Vox populi, vox Dei*; but, if the voice of the people is the voice of God, what must the superior voice of a judge be? If, under a monarchical government, an independent judiciary may stay the hand of despotic power and protect the innocent from punishment; in this nation we have no monarch, no subjects. The government and the peo-

please one; and we ask not the guardian care of our superiors to bind our hands so that we cannot wound ourselves.

But has this change in the judicial term, from tenancy at will to that of life, essentially changed the character of decisions in Great Britain? History records the mournful fact, that, since the reign of William and Mary, the courts of Great Britain have invariably yielded obedience to the monarch's will, in criminal prosecutions. The banishment and death of many of the most distinguished of the friends of liberty will confirm the declaration. The honored names of Muir, Gerald, Margatot, and Emmet, with many others that time cannot bury in oblivion, must remain the monuments of this independence of the British judiciary, which we are so proud to imitate. In controversies betwixt individuals, the effects of the change may have been salutary; but he who has depended upon the judiciary to protect him from royal malediction, has leaned upon a broken reed.

The nature and the object of the federal judiciary are subjects worthy of investigation. The salary of the judge may be increased, but cannot be diminished; and his term of office is perpetual. He may receive a reward for pleasing the legislature, but he can suffer no removal or abatement of compensation for displeasing them. Is this independence designed to give the court power to arrest the executive in a career of usurpation? Certainly not; for the people have reserved this power to themselves. Nor is it to prescribe bounds to the legislative will; for every legislator is held responsible to his constituents. Both the president and the members of congress are dependant on the will of the people; and the people have made them feel their power, when the judiciary were giving sanction to unconstitutional measures. It was never intended by this irresponsibility to give the federal courts power to limit the prerogatives of state legislatures, because they are subject to the same sovereign will of the people, who could not have designed to clothe a small number of select judges, however honest or enlightened, with the power to control that sovereignty which it was their pleasure to vest in their state authorities, where they could have the means of regulating it at their own pleasure, without danger of anarchy or despotism. Such control, vested in an independent magistracy, would be entirely hostile to every principle of self government; and the people do not fear themselves. All power rests in them, and they are responsible to no earthly tribunal for its exercise. They never intended to transfer it to those who might abuse it with impunity. They deem it safer where nature and nature's God have placed it—in themselves; and they cannot recognize a principle so obnoxious to free men, as that which gives it to others because they themselves are unworthy to hold it.

The real object of an independent judiciary, in this country, must have been to embody the best experience in legal knowledge, and produce uniformity of decision in legal questions relative to property and crimes. The science of politics is still in its infancy; and its perfection depends on principles which the progress of republican government must yet develop: but the science of jurisprudence is more established, and composed of principles which never change. The one is mutable, the other immutable. There is, therefore, not so great necessity for the same kind of responsibility in the judiciary, if their powers are confined to the proper object of their office—that of defin-

ing questions of law; but when they transcend those limits and bring to their bar every other department, both of the federal government and the states, it becomes necessary to ordain some tribunal that may guard against an abuse of their power. They assume the right of deciding upon the constitutionality of the laws of the union and of the states, and of setting them aside at pleasure.—Some of the learned in law have acquiesced in this assumption of power; but the great body of the people cannot approve it. If the constitution had provided that the judges should form a council of revision to decide upon the constitutionality of the laws of congress, and even of the several states; and that no law should be binding without their sanction to its constitutionality, and that these judges should hold their office during good behavior, without any authority in the people to remove them or revise their decisions, I venture the assertion, that the constitution would have been rejected by every state in the union. If they can declare a bad law unconstitutional, they may also declare a good law void upon the same principle. If the legislature shall pass a bad law, or refuse to pass a good law, the people will elect others in their place to remedy the evil; but the judges are not accountable to the people for their opinions. A legislative body may be changed at the pleasure of the people; but, over the court, the people hold no right of change, no power of coercion. From what source is the power which they exercise derived? From the constitution? No; that is as silent as death upon the subject; and it is doubtful whether one man of a thousand in the nation would vote so to amend the constitution as to confer this power. Is it in the theory of our government? No; it is in direct hostility to the theory of our government.

The constitution of the United States, the laws of the United States made in pursuance thereof, and treaties made under the authority of the United States, shall be the supreme law of the land; and the judges of each state shall be bound thereby, any thing in the laws or constitution of any state to the contrary notwithstanding. The senators and representatives in congress, the members of the several state legislatures, and all the executive and judicial officers, both of the United States and the state, shall be bound, by oath, or affirmation, to support the constitution. Judges, in common with other officers, being bound by oath, a duty is said to be created in them to decide upon the constitutionality of the laws of congress, state laws, and state constitutions; and when, in their opinion, repugnant to the federal constitution, to declare them null and void. Would it not be equally the duty of congress to declare the opinion of the federal judiciary null and void, in every case where a majority of congress might deem it repugnant to the constitution? For instance: the legislature, after full discussion upon the constitutionality of the measure, shall pass a law involving the best interest of the country in peace or in war. The court shall express a different opinion; and, upon every question arising under it, act in conformity to their own opinion, that the law is unconstitutional and void. Forty-eight senators, one hundred and eighty-eight representatives, and the president of the United States, all sworn to maintain the constitution, have concurred in the sentiment, that the measure is strictly conformable to it. Seven judges, irresponsible to any earthly tribunal for their decisions, revise the measure, declare it unconstitutional, and effectually destroy its operation. Whose opinion shall prevail? that of the legislators and

president, or that of the court? The court must admit that wise and good men may conscientiously differ in opinion, upon such a decision, or their own reversion will fix upon every other department of the government, the conviction of perjury; and, if any honest difference of opinion may exist, I would ask, which has the right to overrule the other? If congress were as scrupulously tenacious of their own powers, they would decree, and would deem it their solemn duty to decree, that such a decision of the court is unconstitutional and void. In that case, who must yield? and where would the confusion end? But the principal danger arises from a collision of the federal judiciary with the state sovereignties. The judges have exercised some caution in relation to acts of congress. They have generally acted upon the laws as they received them, leaving it with the members to account to their constituents for their measures. Nor have they had any temptations to do otherwise. The support of federal authority must, from the very nature of their situation, be a point for them to maintain rather than abandon. The supreme court has even decided, that congress is sole judge of the measures necessary to carry into effect the specific powers delegated by the constitution. Had the same delicacy been observed by that tribunal when state laws have been the subject of construction, it is probable the examination of judicial encroachment upon their sovereignties might never have been commenced. But a comparison of the cases will show a disposition widely different in the reversal of state laws, which proves the strong bias of the federal judiciary in support of federal power. A bias equally strong may probably exist on the other side in the state tribunals; and, in case of disagreement, which tribunal shall prevail? So far as my observation extends, the superior courts of the states would not be disgraced by a comparison with the supreme court of the United States, in capacity, integrity, and legal acquirements. It, therefore, appears to me, that justice requires an intermediate tribunal to decide betwixt them. I know of no clause in the federal constitution that gives the power to the judiciary of declaring the laws and constitution of a state repugnant to the constitution of the United States, and, therefore, null and void. No express grant, nor fair construction contains it; and, I presume, every gentleman, in and out of congress, will agree with me, that the states never designed so to impair their sovereignty as to delegate this power to the federal judiciary. But they have assumed it, and, to counteract the evils which must result from this assumption, a responsible tribunal of appeal should be provided.

The short, though splendid, history of this government furnishes nothing that can induce us to look with a very favorable eye to the federal judiciary as a safe depository of our liberties. When a law was enacted in violation of a vital principle of the constitution, that which was designed to secure the freedom of speech and of the press, the victims of its operation, looked in vain to the judges to arrest the progress of usurpation. If this power could ever be exercised to any good purpose, it would be, on such occasions, to declare the law unconstitutional, which aims a deadly blow at the vital principles of freedom; but, so far as the transactions of that day are detailed in our public records, it appears that the judiciary was a willing instrument of federal usurpation. That law was executed in all the rigor of the spirit which dictated it. The turbulence of faction found no moderation there; and the people found relief only in

their own power. The exercise of their elective franchise removed the evil, and this is their only safe dependence.

Let us now look at the conduct of the states, and the cases in which the supreme court has declared their laws unconstitutional, though the cause had been sustained by their own tribunals. The constitution delegates to the general government certain specified powers; all other powers are retained. If one instance has occurred in which any state has shown a disposition to weaken the bands of the union, let it be proclaimed in Gath, let it be proclaimed in the streets of Askelon. Congress shall have power to lay and collect taxes, duties on imports, tonnage and excises. Has any state ever opposed the exercise of this power, or denied its existence? No, not in one solitary instance. But in the case of the United States' Bank, *McCulloch vs. Maryland*, the federal judiciary has decided that the states have not the power of taxing this bank, or such part of its capital as is employed within those states, though it is acknowledged that the power of taxation, except in cases specified in the constitution, is concurrent with both governments. The constitution limits the exercise of this power to the general government. No duty shall be laid on articles exported from any state—no capitation or other direct tax shall be laid, unless apportioned among the states, according to the census taken under the constitution—all duties and excises shall be uniform throughout the United States. The constitution also limits the power of taxation to the states. No state shall lay duties on exports, imports, or tonnage. Congress has pursued its course, under these limitations, without any molestation from the state judiciaries; but the federal judiciary has imposed an additional restriction upon the states unknown in the constitution, that the states shall not tax the stock of a bank chartered by congress, and this decree must be received as a new clause of restriction added to the constitution of the U. States, by an irresponsible judiciary. Congress shall have power to borrow money; to regulate commerce; to establish a uniform rule of naturalization, and a uniform system of bankruptcy; to coin money; to determine the standard of weights and measures; to punish counterfeiters of the evidences of the public debt and current coin of the United States; to establish post offices and post roads; to constitute tribunals inferior to the supreme court of the United States; to define and punish piracies and felonies committed upon the high seas, and offences against the laws of nations; to declare war; grant letters of marque and reprisals; to raise and support armies; to provide and maintain a navy; to provide for calling out the militia to suppress insurrection, repel invasion, and execute the laws of the union.

Now, sir, among those who may be disposed to arraign the conduct of the states, or to accuse them of being turbulent and refractory, I challenge them to point out one case in which any state in the union has denied to congress the right of exercising these powers, or a single instance in which any of these powers have been usurped by a state. It has been the opinion of some of the states that these powers have been abused, and, in some instances, that they have been transcended by unwarrantable construction or implication; but in no case has a state resorted to any other means of redress than those pointed out in the constitution.

There has never been an opposition of any kind, by a state, to the exercise, by the general government, of the powers expressly delegated, except in

the late war, when Massachusetts refused to place the militia of that state under the command of officers designated by the president of the United States. In that case the court did not interfere; nor did congress deem it politic to take any measure in relation to the subject. The sources of difficulty in these conflicts lie, almost exclusively, on the other side.

The constitution contains limitations of power upon the states, and the judiciary has pronounced them trespassers upon those limitations, by declaring their laws null, as unworthy of regard. What is the nature of these limitations? No state shall enter into a treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; make any thing but gold and silver a legal tender; pass any bill of attainder; *ex post facto* law; keep troops or ships of war in time of peace; or engage in war. Let me now ask, in what respect has any state violated these prohibitions? Suppose any state should enter into a treaty with a foreign power, grant letters of marque, coin money, raise an army, build a navy, or engage in war, contrary to these prohibitions. Could the court interfere? Is this the omnipotent power to which armies and navies would yield, and by whose almighty decree discordant elements should be made to harmonize? No, sir; its decrees would be impotent. This is not the guardian power that can save us when the bonds of union shall be broken, and that friendship which now unites us shall lose its charms. The subject would not be tangible to the judiciary. Some mightier power must be exerted, which congress alone could prescribe, and the arm of the executive alone could wield. The constitution has not pointed out the course to be pursued in such an event, and for this obvious reason—the union was formed upon confidence, upon integrity of principle, upon the sentiment of self-preservation; and it rests upon the honor and the interest of the states to maintain it. The limitations upon state powers were pointed out as a rule on which they engaged, upon that honor, to act; and, because they are themselves the proper judges of their duty in relation to these prohibitions, it was not necessary that any constitutional remedy should be provided in anticipation of their violation. They have a common interest in maintaining them; and, if they are violated by any state government, the people of that state, who are the common source of power to both, and have a common object to gain in the support of both governments, will correct the evil. If this should be an intellectual guarantee; if neither their interest, nor their honor, nor their pride of character in the estimation of all the world, would restrain them, they would yet be responsible to all the other states, and subject to such proceedings as the wisdom and policy of congress should dictate; but the judiciary would be idle spectators, without the power of interference.

No state shall emit bills of credit. This prohibition has not yet produced collision; but it is fairly to be presumed, from the principles established by other acts of adjudication, that, if the measures of certain states, relative to banks, were brought before the court of the United States, they would be declared unconstitutional and void. Nor would it be any matter of surprise should the supreme judiciary yet, by such a decision, obtain control over the policy of a whole community, relative to a circulating medium for any special and necessary purposes, though it might not be pretended that such currency was made a legal tender.—Kentucky has incorporated a bank for necessary

purposes. The crisis of the country demanded it, and the people have sanctioned it with a unanimity almost unparalleled. If the constitutionality of this subject were brought before the federal judiciary, I have little doubt that the law would be declared null and void; and the state, by such a decision, of persons neither interested in her policy, nor responsible to her citizens, deprived of the power of relief in these times of overwhelming difficulty.

In Great Britain, the king can do no wrong. Here, I suppose, the court must be king, and the states must submit to the doctrine that the judges can do no wrong. But, whether the states are right or wrong, the judges have no right to control their sovereignty; and a government, where this principle exists in the latitude contended for, is not worth maintaining. The fact is, that the courts were never organized for this purpose, to control the states and prescribe the limits of their powers.

No state shall pass any law impairing the obligation of a contract. This is the clause which has furnished the pretext for the federal judiciary to declare state laws unconstitutional. Like that clause which stipulates that no state shall pass an *ex post facto* law, it was not intended to give the federal judiciary authority over state laws, and between a state and its citizens. In both cases the constitution recognizes a principle of morality, founded on justice and religion. The states have pledged themselves, in the federal constitution, not to pass an *ex post facto* law, nor a law violating the obligation of a contract. Does this clause enlarge the powers of the federal judiciary? Certainly not, any more than that which provides that a state shall not go to war. Each state is the judge of its own honor and the keeper of its own conscience, and in both cases the court is alike incompetent to correct the evil. If it belongs to any branch of the general government, it is certainly to any other rather than the court; but, in my opinion, it is a point to be settled betwixt the legislature and the people of such a state. Suppose a state should pass a law to punish as a crime, an act which was lawful when it transpired. If the state judiciary should sustain it, the victim must suffer: for the federal judiciary could not interfere. The remedy is with the people of the state, and not with the general government. But, according to the construction which the federal courts have assumed, they might rescue the criminal from the sentence of the law, and bring him before the supreme court of the United States; and thus a pretext would be furnished for usurping jurisdiction in all criminal as well as civil cases arising under that prohibition. If the court has jurisdiction in one case, it has in both; but the fact is, the jurisdiction is legitimate in neither. The doctrine of control over state authorities arises from a supposition of abuse of power; but in what case has any state manifested more ambition, more love of power, more domination, than the general government? In what respect, and for what particular act, is the general government entitled to more confidence than the states? The powers of congress are limited by the constitution, and, if they transcend their powers, shall the state judiciaries interfere? They may, upon the same principle that the federal judiciary may interfere if a state shall transgress; but no state has been so forward in the exercise of power. They have left it where the constitution leaves it, and where the federal courts ought to leave it—with the people. If an umpire can be appointed to settle differences that may arise upon these points, the evil will be

arrested, but, if not, the independence of state governments is lost.

The states are entitled to confidence and it is reposed in them by every branch of the general government, except the judiciary. Here, and here alone, do they meet the opposition which is due only to transgressors. The constitution leaves with the states the power of fixing the time and place of holding elections for representatives in congress, till the general government shall deem it expedient to interfere. The election of senators is confided to the states, without power in the general government to prescribe any limitations. The state legislatures have heretofore regulated the manner of choosing electors for president and vice-president of the United States. All this shows that the whole system is founded on confidence, and that this confidence is still unimpaired in the mind of congress, and in no instance has it been betrayed. Even if a state shall be unmindful of her duty in this respect, the judiciary can never bring her to a sense of propriety.

The union is the idol of the American people.—It is regarded by all as the bulwark of safety; sacred as the ark of the covenant; and their indignant frowns would drive into obscurity the man who would attempt to weaken the bond. In adverting to particular instances in which the state authorities have been set at defiance, the case of New Hampshire shall first be noted.

In 1759, the king of England granted to Dartmouth college a charter of incorporation, without limitation of time. Education was the object; and New Hampshire was then a British colony. After the revolution, when New Hampshire had become an independent state, the legislature, by a donation of land to this college, recognized it as a corporate body. Since the adoption of the federal constitution, the legislature modified the charter, without the consent of the corporation, and the supreme court of that state sustained the act of the legislature. The cause was then taken before the supreme court of the United States, and the act of the state of New Hampshire was declared to be unconstitutional and void, on the ground that the charter of the king of England to the trustees was a contract within the meaning of that clause of the federal constitution which provides that no state shall pass a law impairing the obligation of a contract, and that the modification of the charter was a violation of this clause. By this decision the principal literary institution in New Hampshire is placed beyond the control of the legislature of that state; and an act of the British king cannot be changed by the state that has become independent of the edicts of that monarch. I will here leave the free sons of the north to vindicate their own conduct in pretending to be so independent as to presume to touch the consecrated act of their former sovereign, and proceed to the great and enterprising state of New York.

It is certainly correct in the judiciary to shew no respect to particular states, in the exercise of this high prerogative of controlling their destinies; and in the case which I am about to notice, we have a striking instance of their impartiality. I allude to that in which the supreme court set aside the bankrupt law of the state of New York, on the ground that it violated contracts. The court admitted the right of a state to pass a bankrupt law, and that such a law could not be controlled but by an act of congress contravening its execution; but that it must contain no provision impairing the obligation of a contract. The court then delivers this opi-

ni^{on}, which must be an omnipotent and immutable decree: that any such act of a state, which will release from the contract the future acquisitions of a bankrupt, is a violation of the obligation of a contract, and therefore unconstitutional; that, as the bankrupt law of the state of New York contains such a provision, it is unconstitutional and void. By this decision, it appears the state has a constitutional right to pass a bankrupt law, provided the state shall never exercise that power; but, if the power is exercised, the right is forfeited and the law is void: for the very essence of a bankrupt law is, that the bankrupt, on making a faithful surrender of his property, shall be released forever, both in person and in his future gains. To make this decision the more imposing, the court have also settled this point, that it is immaterial whether the contract in question was executed before, or subsequent to, the passage of such law—whether prospective or retrospective; in either case, the provision is unconstitutional and void. I presume the supreme court could scarcely have considered the extent to which this decision must inevitably lead. They acknowledge the right of a state to pass a bankrupt law—they deny the right of a state to exonerate from the former claims of his creditor, the property which the bankrupt may acquire after his conforming to the requisitions of the bankrupt law. If the decision is correct this exoneration does not enter into the essence of a bankrupt law. The consequence then is, that a bankrupt law, which congress may pass, containing this provision, will also be unconstitutional, for congress has no express power to impair the obligation of contracts; and none even dreamed of a bankrupt law without this provision. A state may pass a bankrupt law, and congress may pass a bankrupt law—a state shall not violate the obligation of contract, and congress has no power to violate the obligation of a contract. But the federal court has decided that a law to secure the bankrupt in the enjoyment of his future acquisitions of wealth, is unconstitutional; therefore, a bankrupt law, though passed by congress, containing the common and most important provisions of bankruptcy, must be unconstitutional, a violation of contract, and of no effect. The right of passing a bankrupt law, carries in it the right of exonerating the honest and unfortunate bankrupt, in every way, from future prosecutions on account of past transactions. It is a subject which addresses itself to the wisdom and discretion of the legislature, when, and upon what terms the principle shall be established; and, like other acts of sovereignty involving the deepest interest of the community, it will always be exercised with judgment and caution. It is the practice of many, if not all the states, to exempt, at all times, some part of the property of a debtor from execution; and I have not heard that the right was ever called in question; such as necessary parts of household furniture, the tools of a mechanic, and the farmer's implements of husbandry. But, if it is a violation of contract to limit the control over a debtor's property for the payment of debts, then this practice is unconstitutional. For the same reason the Virginia system, which exempts from sold landed estates for debt, is unconstitutional; nor can it be important whether the system existed previous or subsequent to the contract, according to the doctrine established by this decision. But it is the general opinion that the supreme court would give full operation to these provisions, if they should be established by a law of congress, and, in case of a bankrupt law, release the future gains of the bankrupt. Many

petitions are before us for the passage of a bankrupt law; and thousands of unfortunate debtors are waiting, with great anxiety, for the establishment of a general system that will release their future earnings from the claims of their creditors, on the surrender of all their present living. How disappointed will they be if you give them a uniform system, but in it extend not one solitary advantage beyond what they now enjoy. One misfortune must plunge the man of business into ruin, and no earthly power can so extricate him, as that he can save his future earnings from the merciless grasp of his creditors, to supply the calls of nature for his dependent family. But it is the state sovereignty that is a subject of judicial control; let congress adopt the same measures, and they will be federal—the case will be entirely altered.

I will now come to the smaller state of New Jersey, though not the less entitled to high consideration and respect. If patriotic devotion to the national welfare in peace and in war—if generous sacrifices to the cause of independence constitute a claim of merit, no state in the union is entitled to higher marks of honor than New Jersey. But let us notice the admonition which the federal judiciary has given this state, to retrace the steps which she has ventured to take before consulting them. In 1759, while a British colony, this state granted certain lands to the Delaware Indians, to hold in perpetuity, without being subject to taxation, but with an injunction that these lands should never be sold or leased by the Indians. In 1801, the legislature of New Jersey passed an act authorizing these lands to be sold, but without a clause expressly repealing that part of the act of 1759, which exempted them from taxation. In 1804, that clause was repealed, and the lands afterwards taxed in common with other property in that state.

The proprietors refused to pay the tax, and suit was brought against them, in which both the inferior and superior courts of the state decided in favor of the legality of the tax. The case was then carried into the supreme court of the United States, and there it was decreed, in opposition to both the legislative and judicial authority of the state of New Jersey, that the law was in violation of a contract implied in the original grant to those Indians, therefore unconstitutional and void, and those lands forever free from taxation. Now, sir, what can be more dangerous to the existence of liberty, than power lodged in a body, in no way amenable to the state for its exercise, which may set at defiance the whole constituted authority of that state, and even subvert her system of taxation upon her own domains? Was it for this that Jersey bled at every pore to resist the authority of taxation without representation—that she might submit to the same deprivation at home without the power of repairing an injury or of arresting its progress? And such is indeed her forlorn condition, and that of every state in the union, if the federal judiciary may prohibit them from taxing one part of their domain, and thus impose upon them the necessity of doubling the burthen upon other parts to make good her revenue. Such power, vested in an independent, irresponsible tribunal, may eventually swallow up the states, and leave their governments but a shadow, unless some other tribunal shall be established, amenable to the states or to the people, with power to overrule their decisions when erroneous. New Jersey is worthy of higher regard than to lie at the mercy of an irresponsible judiciary. I am proud to acknowledge the respect which I feel for her, on account of her disinterested pa-

triotism, conspicuous on all occasions; and especially for the part which she acted during the revolutionary struggle. The monuments of her glory in resisting the foes of liberty greet the eyes of the traveller with gratitude and delight; while the names of Princeton, Trenton, and Monmouth, associate with these sentiments of veneration for the character of Jersey. It is very evident, that the state granted those lands as a personal benefit to the Indians, and exempted them from taxation upon the good old principle of the revolution—a principle ever dear to Americans—that, as the Indians were not permitted to participate in the government of the state, they ought not to pay taxes for the support of that government; but when the lands were afterwards sold to those who were entitled to a representation, it was correct that they should contribute their proportion to the expenses of the state. But the supreme court has overruled the decision of the state, and established the principle, that there may be representation without the right of taxation. The conduct of New Jersey, in my mind, needs no apology; but, if necessary, I leave it with the learned members from that state to vindicate her from the charge of covenant-breaking which this decision fixes upon her.

The next in order that presents itself, is the respectable state of Pennsylvania, with whom the idea originated, of constituting this body a tribunal, to decide upon controversies, when that serious conflict existed between the two governments, in what is commonly called the *Olmstead case*. Her conduct was firm, but temperate. Congress must not mistake the motive that dictated the course which she took. She yielded, not because she was convinced, or alarmed, but because she was unwilling to use the militia which was ordered out, to shed the blood of her own children. It was the love of order. Pennsylvania is like the rock in the midst of the tempest—she is not to be shaken—she is slow in her anger, but mighty in her wrath—her blood runs slowly, unless aroused by a sense of injury, or by a serious attack upon the first principles of self-government. If such a state of things should ever exist; if Pennsylvania were assailed by foreign aggressions, or domestic usurpations, you would find her like the angry lion; and it would be as vain to attempt to move her from her ground by force, as was the command of Great Conute, the Danish monarch of England, to compel the waves of the ocean to stand still, and not encroach upon his majesty. Pennsylvania, as to the union, occupies a central position, and serves as a ballast to keep all parts steady. Among her people you see the gallant Irishman and his descendant, the silent and observing Quaker, the industrious and solid German, who, mixed together, constitute a population who know how to estimate and defend their rights. The particular merits of the case alluded to are too well known to need repetition; but to the magnanimity of the state we may ascribe its peaceful conclusion.

Let us next come to Maryland, and notice the case of *McCulloch*. In relation to this case, I shall be happy to hear, in what way this state shall be justified by her distinguished representative, who has had the opportunity of viewing distinctly the various grounds taken by the federal judiciary in the construction of its own constitutional powers. It is the case of the United States' bank, before alluded to; a case in which I deem it my privilege and my duty to dissent from the court in some of its positions. I will here observe, that I have no personal complaint against that institution, nor any

motive whatever to speak harshly of it. So far as I have had any dealings with it, the conduct of that bank has been marked with an honorable liberality, and my acquaintance with its president enables me to say with confidence, that for correctness, integrity and capacity, he is entitled to the rank which he occupies among our most distinguished citizens. But it is the principle of judicial decision that I would refer to. The court has determined that this bank has the right to locate a branch in a state without the consent of that state; that the charter of an incorporation does not involve a distinct sovereign power, but is the instrument of carrying into effect the power which originates it; that congress might adopt such means as they shall judge proper to carry their power into effect, and that the question, what means are most suitable, whether a bank or other means, is not a subject of judicial, but political investigation; that when, for the exercise of this power, congress shall deem it expedient to locate a bank, or to authorize the location of any of its branches in a state, such state has not the power to impose a tax on such bank or branch, as shall be located within its jurisdiction; with this reservation, that the principle does not extend to the real estate of such bank, nor to the proprietary right of the citizens of that state. This decision, though plausible at first view, will be found highly exceptionable upon closer investigation. The right of taxation is acknowledged to be concurrent with the states and the United States, except where constitutional restrictions are imposed; and no one pretends to say that the constitution gives any exclusive privilege to tax banks, or contains any prohibition upon that power. If the establishment of a bank by the United States is a means of exercising sovereignty, the establishing of a bank by a state is equally so; and if a tax, levied by a state upon a branch of the United States' bank, is a violation of the sovereignty of the general government, a tax levied by the United States upon a state bank is a violation of the state sovereignty.—But, during the late war, the general government did impose a tax upon state banks, and the act was sustained; now, when a state levies a tax upon a branch of the United States' bank within the limits of its jurisdiction, the law is declared to be unconstitutional, because it is an encroachment of sovereignty. The plain doctrine involved in this decision is, that the states are bound to respect the sovereignty of the United States, but the United States are not bound to respect the sovereignty of the states. The powers of the general government are omnipotent, but the powers of the states are whatever the court may please to prescribe. Such is the practical effect of this decision. The general government may tax a state bank, but a state may not tax a branch of the United States' bank within its jurisdiction; because the general government is sovereign, and the state governments are subordinate.

Ohio and Kentucky are involved in the same predicament with Maryland. The general government laid a tax upon the state banks of Kentucky, and the tax was paid. Kentucky, in turn, laid, not an extravagant, but a moderate, a reasonable tax upon the branches of the United States' bank in that state, and the court of appeals of the state decided that it was constitutional. The decision was able, and the arguments on which it was founded, were conclusive; but they considered it wise to acquiesce in the decision of the supreme court of the United States, and suffer, for the sake of harmony, this violation of their right, till they may be peacefully

restored by constitutional interposition. It may have been impolitic to have imposed this tax; but the right cannot be relinquished while the reciprocal right exists on the other side; and unless some remedy is provided to counteract the mischief that must arise, no one can predict where it will end.

In relation to the state of Ohio, I am not so ready to say that her proceeding was correct. It was at the instance of many of her distinguished citizens, that the bank located branches there; and the object of the tax was evidently to drive them back, or destroy them. I contend for the right of taxation, (not of imposing penalties), a right which belongs to the essence of sovereignty, whether the stock belongs to citizens, to foreigners, or to the United States; and the charter of the proprietors cannot impair the right. But, if Ohio was wrong, yet the proceedings, in relation to her, were an unwarranted breach of her sovereignty, and a violation of her rights as a state. She was prosecuted, and placed into the custody of the marshal—She was imprisoned and bound in chains by the federal judiciary—Her treasurer was taken by a process from the United States court; the keys of the treasury taken from him, the doors of the strong box opened, and the money taken from the coffers. But the attitude which she assumed under these proceedings, was such as to sustain her native dignity of character, while she submitted to the constituted authority of the union. It is not my intention to enter into a minute detail of the transactions, or to attempt a vindication of her conduct; but leave that to those who are better acquainted with the facts. The legal and constitutional principles involved in the case, are sufficient for the present purpose. The constitution intended to guard against the liability of a state, in certain cases, to be sued; and it appears to me, that this is one of those cases. A state can be sued only by issuing the process against its official organs, or agents; and in this way were the proceedings brought against Ohio. If we admit that, in every step, the state was wrong, yet the principle is the same; for if a usurped jurisdiction may interfere when a state is wrong, the same usurpation may also prevent her from doing right; and, right or wrong, a state is not amenable to the federal judiciary for her conduct. Ohio has evinced great ability, in contending against this dangerous principle, and in vindicating the correct and only safe doctrine on which our union can be perpetuated.

These are some of the cases in which the laws of the states have been declared unconstitutional, and the sovereignties that ordained them prostrated by the federal judiciary; and we owe it more to the patriotic forbearance of the states, than to intestine commotions have not been the result, than to a conviction in the minds of those states, that these proceedings were sanctioned by justice or by the spirit of the constitution. A remedy is necessary—a tribunal, responsible to all the states should be constituted with appellate jurisdiction, and in its decisions all will acquiesce.

In the case of *Colien versus Virginia*, the conduct of the supreme court has also been a subject of much animadversion and dissatisfaction. The most exceptionable part is the construction of their own power, which gives them jurisdiction in the case. The constitution provides that, in all cases in which a state is a party, the supreme court shall have original jurisdiction; nothing is said of appellate jurisdiction in such cases; but here, when the state was a party, the supreme court exercised, not original, but appellate jurisdiction. It would seem, by

this clause of the constitution, that it was never designed that a state should be brought before the supreme court of the United States by writ of error; especially, when she had been a party to the same case in her own courts; no, not even with citizens of other states or foreigners. The 11th amendment to the constitution provides, that the judicial power of the United States shall not be so construed as to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another state, or by citizens or subjects of a foreign state. This amendment was introduced in consequence of suits brought against Massachusetts and Georgia, soon after the formation of the general government.— Yet, the supreme court assume, not only original, but appellate jurisdiction in the case of *Cohen*, under that clause of the constitution, which provides that the judicial power of the United States shall extend to all cases in law and equity arising under the constitution, laws, and treaties, of the United States. The argument runs thus: that, although they could not exercise appellate jurisdiction where a state is a party, provided the controversy arose under any other laws, yet, when the controversy arises under the constitution, laws, or treaties of the United States, they may assume appellate jurisdiction. The plain meaning is, that the jurisdiction of the supreme court shall be confined to cases arising under the constitution, laws, and treaties of the United States, and that subject to the restrictions imposed in the other clause, confining the court to the exercise of original jurisdiction over states, and in the amendment relating to the suability of states; that is, in all cases thus arising, they may exercise jurisdiction, but when a state is a party, their jurisdiction must be original; and if commenced or prosecuted by a citizen of another state, or of a foreign state, they have no jurisdiction in the case. I have no doubt that this is the construction which ought to be given it; but the court has given a latitude of construction to the restriction which absolutely enlarges their jurisdiction, so as to embrace states and every thing else, when the controversy arises under the constitution, laws, and treaties of the United States, to the exercising of a guardian power over the states, even to the revision and repealing of their laws; and to controversies arising under state constitutions and laws, even affecting their criminal code; for the case of *Cohen* was of this last description, and the jurisdiction was also appellate. But I shall no longer dwell upon a case that has itself been the subject of a volume. [Mr. J here concluded his remarks for this day, reserving, by the leave of the senate, what further he had to say until another day.]

After Mr. Johnson concluded his remarks—

Mr. Otis begged the indulgence of the senate for a few minutes, before the resolution was laid by for the day. He did not rise now, he said, with an intention of taking any part in the debate generally. Though he felt not the power at this moment to do justice to the subject, yet it would not be difficult to shew that, so far as the gentleman from Kentucky had proceeded in his attempt to sustain his proposition, he had failed to exhibit sufficient reasons for the proposed amendment. Mr. O. thought it incumbent on every member who introduced a measure of so grave and solemn a character as an amendment to the constitution, to shew that it was justified by the abuses and inconveniences arising from the want of it, or that it was called for by some universal expression of public opinion.

Neither of these reasons in favor of the measure had occurred. The senate were told that the supreme court had committed acts of injustice—not intentional, indeed—but that it had erred in cases wherein the states of New York and New Hampshire were parties aggrieved; but we do not learn, said Mr. Otis, that either of those states were dissatisfied, or have sought redress in any mode; but, on the contrary, that they have acquiesced in the decision of the court.

But, Mr. O. said, he rose to avert only a reference to a particular case, introduced by the gentleman from Kentucky, in support of his proposition, but which, Mr. O. said, would altogether fail as an illustration of the position taken. He had not understood the gentleman from Kentucky as denying the expediency of some tribunal to decide controversies between the United States and a single state, but as recommending a course of amicable and accommodating measures in all such cases. But the case alluded to by him to justify this course was not fortunate for any purpose of illustration. The honorable gentleman had adopted the supposition that Massachusetts, during the late war, had denied the constitutional right of the United States' government to call forth the militia. This allusion had been made, indeed, with much delicacy, but he could not on that account permit the error to pass without explanation. Mr. O. denied that there had ever been any controversy between the general government and Massachusetts as to such constitutional power, or any disobedience, in fact, to the lawful requisition of the general government, though such an impression was very general and had sunk deep in the public mind. But the fact was, that the militia of Massachusetts had always been in readiness to obey the call of the general government in the emergencies contemplated by the constitution, when ordered into the field. Their controversy turned upon the right to take the command of them from their own officers. When the war took place, the whole militia were put in complete readiness, (by order of the state, and in compliance with a requisition from the general government), to take the field. They were promptly placed in a state to obey the orders of the general government. In some cases they were placed under the immediate command of the United States' officers, and in all cases were ready under their own officers. Whenever the occasion should justify it, he was ready to shew, from every document and record, and from uncontrolable evidence, that the troops of Massachusetts were always ready to perform the orders of the president of the U. States. There was, then, no subject for the coercion of the strong arm of the union in the state of Massachusetts. A regular army of the United States was what they wanted; and, had an army been marched into that state to enforce the laws of the union, according to the supposition of the gentleman from Kentucky—the question being asked, Where are your militia? the answer would have been, Here they are. All they wanted was an army with officers, and not officers without an army.

Had the honorable gentleman come with his laurels, and followed by troops, he would have found the militia of the state ready to join him, and no constitutional controversies to settle at the point of the sword. Massachusetts had shrunk from no part of her duty in the late war—she had contributed her full proportion of men and money to carry on that war, as it would be easy to shew in due time and place. He concluded the few remarks, which he studiously confined to a particular point, and

which he had made at that moment, as it dispensed him from undertaking to go fully into the debate, which he should not do, unless it took a wider range than he anticipated, saying that, although he was not then prepared for the institution of a tribunal for the settlement of controversies between the U. States and a single state, as proposed by the hon. gentleman, yet, if he would enlarge his motion so as to enable it to take cognizance in law and equity of the claim of Massachusetts against the union, it would go farther than any thing he had heard to reconcile him to vote for it.

Mr. HOLMES, of Maine, did not rise, he said, to enter into the merits of this question. He admitted that when a proposition of so solemn a character as an amendment to the constitution, came before the senate, from so respectable a source, it ought to have a solemn consideration; but he rose now merely to offer an amendment to the proposition. His friend had very ably pointed out the inadequacy of the present independent judiciary, but had failed to convince him that the senate would be a proper tribunal to create as an appellate court. He would agree, however, that the judges of the courts of the United States were too independent for the public good; the constitution in this respect had gone too far and experience had proved it.—Experience had shown that when the states come in conflict with the union, the judges lean to the interest of the general government, and usurp powers which do not legitimately belong to them. While he admitted this, however, he was not willing to confer additional and anomalous powers on this senate. He would keep in view the maxim which taught us to keep asunder the executive, the legislative, and the judicial powers of government. He was much afraid of that thirst for power which was inherent in the human breast; and that it would be dangerous to impart this mixed and incongruous power to the senate. The theory of our government was, that every branch ought to be responsible to the people—not too much so, he agreed, but sufficiently to feel and be sensible of it. Many of the states had applied this principle to their judiciary, so that when a judge exercises his duties improperly, and deserves to have the public confidence withdrawn from him, there was a mode provided by which he could be displaced. There was, Mr. H. knew, a mode provided by the constitution for bringing the judges of the United States to account; but he meant to contend, that the responsibility was too remote, so much so as to amount almost to none at all. There must be some intention to do wrong; some wilful malversation in office, to give ground for an impeachment; and even then they would always find a minority, of one-third and more of the senate so good natured as to say, that the error charged on the impeached officer, was one of the head and not of heart, and thus the power of impeachment amounted in fact to nothing.—It was in this, Mr. H. said, that the constitution was defective. It was proper that the president should, on the address of a majority of the two houses, have the power of removal. Perhaps it might be better to require more than a mere majority, and to say that two-thirds should unite in the address for removal; else, in party times, the power might be made subservient to political hostility. His proposition, Mr. H. said, went to this—it would bring the judges to a proper and salutary dependence on the power from which they emanate; and when the people, by their representatives, should say that a judge ought to be removed, it would, in all probability, be for good cause, and there ought

to be a power lodged in the president to carry their wishes into effect.

Mr. H. concluded, by moving a substitute for the proposition, conformably to the views he had submitted, as heretofore stated.

IN SENATE, JANUARY 15, 1822.

Mr. R. M. JOHNSON, *in continuation*.—In order to understand perfectly well the mystical influence of the clause in the constitution of the United States, declaring that no state shall pass laws impairing the obligation of contracts, it will be necessary to devote a few moments to the examination of the defects of the articles of the confederation, which led to the adoption of the federal constitution. Let us keep a vigilant lookout for the evils which sprung from the conduct of states in impairing the force of obligations. Mutual defence against common danger, induced the old congress to submit to the states, (during the revolutionary war), the articles of confederation, as early as the year 1776. Many of the states acceded to the articles of confederation—others hesitated—and it was not until March, 1781, that Maryland acceded; when they were ratified by all the states, as the form of government for the United States.

Self-defence and self-preservation, a sense of duty and love of country, bound the states together, by the acts of the old congress and the articles of confederation as soon as adopted. When the danger was over, by a happy conclusion of the contest, and even previously, the defects of the confederation began to unfold themselves. The old congress turned their attention to this subject as early as February, 1781, previous to the surrender of lord Cornwallis. At this time, a motion was made by Mr. Witherspoon, of New Jersey, the object of which was to give the old congress the right of controlling the commercial regulations of every state, and the exclusive right of laying duties upon all imported articles, with the consent of nine states. In April, 1783, the old congress entered into a resolution, recommending the states to vest congress with the power, to levy certain duties upon certain specified articles, to raise a revenue to discharge the debt of the revolution, and current expenses. At the same time, a proposition was made to change the rule by which to ascertain the proportions of money to be advanced to the common treasury by each state, from the value of landed property, which was the standard fixed by the articles of confederation, to that of population, which has been fixed by the present constitution.

The power of regulating trade with foreign nations, and the power to raise a revenue by the right of levying duties on merchandize for a limited period, occupied the old congress every session, in various shapes and modifications, always accompanied with an able recommendation to the states, by way of reviewing the ground, until it was finally recommended to the states to appoint commissioners for the purpose of agreeing upon a system that would sustain the general government. We discover men of great distinction laboring in this work. Mr. Jefferson, Mr. Gerry, Mr. Chase, and others, as a committee, presented a proposition to congress, on the 30th of April, 1784, to recommend to the states to vest congress with the power to restrain commerce, except in American vessels, and to regulate it with foreign nations, under certain conditions and limitations. On the 3d of March, 1786, we find congress employed in revising the acts of the several states, regulating commerce with each other, and with foreign states, recommending alte-

rations in the systems, and advising the states to adopt them. In July, 1785, we find a committee, composed of col. Monroe, Mr. King, and others, who recommended the states to vest congress with the power to regulate trade and commerce, and to amend the articles of confederation in such manner as to grant that power.

Such was the extreme difficulty in obtaining an adequate grant of power to regulate commerce, or to raise a revenue for the objects of the union, that the great and wise men of that day, in every part, were laboring in the state legislatures to effect the wishes of congress, by inducing them to ratify and confirm their recommendations relative to trade, commerce and revenue. It was on the 30th of November, 1785, therefore, that Mr. Madison brought the subject into the house of delegates of the state of Virginia, and introduced a resolution by which seven commissioners were appointed by that state, to meet commissioners from the other states, to consider how far a uniform system in their commercial regulations might be necessary to their common interest; and to report that system to the several states for their ratification. This measure may be considered as the foundation of the federal constitution. Other states adopted the same measure; and, on the 11th day of September, 1786, the commissioners from New York, New Jersey, Pennsylvania, Delaware, and Virginia, convened at Annapolis, in the state of Maryland, and came to the unanimous resolution to recommend a convention of delegates from all the states, to meet at Philadelphia, on the second Monday in May, 1787. The old congress recommended the same measure, and the states adopted it. In the able state paper which was drafted by the commissioners, recommending the convention, a summary view is given of the defects of the confederation. The regulation of commerce and the raising of a revenue, were the great objects that required federal power. It is stated that, no doubt, other objects would require attention; but, in the proceedings of the old congress and the state legislatures, up to the formation of the federal constitution, we find these great objects, and these alone, occupying attention.

I have given this minute account of the origin of our government, to ascertain the nature of our present difficulties. It is most wonderful that this mighty evil, arising from the practice of the states, in passing laws impairing the obligation of contracts, was never thought of, nor mentioned in any public document on record in the archives of this country, as one of the causes why the articles of confederation required amendment. No, sir, neither directly nor indirectly; yet, in this our day, it would appear that this evil, impairing the obligation of contracts, was the primary motive for vesting the general government with strong national powers. Not satisfied with the absolute control over trade, commerce and revenue, the states must be held to their good behavior, and give bond that they will not impair the obligation of contracts; and the execution of this trust is left to the federal judiciary.

The state of Kentucky has abolished imprisonment for debt. It was an act of the last session of their legislature—a body of men who would do honor to any age or any nation. This very act was of a character to give them never-dying fame. Crime alone, in my native state, can deprive the freemen of personal liberty. The unfortunate captive is released from his confinement; and though deprived of property by the vicissitudes of fortune, he can walk abroad in the strength and confidence of free-

dom, and exult in the fact that he is a citizen of Kentucky. The Jews had their jubilee—every fiftieth year the jail-doors were thrown open; but, in Kentucky, this new epoch of legislation has proclaimed a jubilee, not to terminate with the fiftieth year, but limited only with time itself. Yet, sir, I find the same legislature have passed a law *extending the prison bounds* to the limits of the county, under a belief that the federal judiciary will declare this law, abolishing imprisonment for debt, unconstitutional; as impairing the obligation of contracts.

The fund upon which executions shall operate is a regulation of a political character, and subject to the absolute control of the legislature. That fund may be extended or contracted at the will of the state. Land may be made subject to the payment of debts, as in Kentucky, and, *vice versa*, as in Virginia, it may be exempted. The body of the debtor may be made subject to the execution as in Virginia, or, *vice versa*, it may be released, as in Kentucky, by the recent act to abolish imprisonment for debt; and yet, such have been the doctrines of the federal courts, that serious apprehensions were entertained by the legislature of that state, that this humane system would be disregarded by the federal judges.

I hope to be indulged with a few remarks relative to the progress of this principle, which has confined the body of the debtor. In ancient and modern times, personal liberty in free states has been well secured from violation, as one of the most sacred rights which belongs to a freeman, except in the case of the power of the creditor over the debtor. To the disgrace of every age in which such cruelty has been tolerated, the most barbarous practice has prevailed, of placing the liberty of a citizen, no matter how worthy, at the mercy of a creditor, without even *prima facie* evidence of fraud or criminal conduct. In the first stage of this tyrannical system, the creditor had the absolute power and control over the life and liberty of the debtor. He might sell him for life, as well as his wife and his children. In case of cruelty, or even assassination, no punishment was inflicted for the horrid deed. Nothing was more common than to inflict the most cruel corporal punishment; and it is no fiction to state that the right of the creditor gave him a claim upon the dead body, and to deny sepulchral rights and funeral ceremonies, until the relatives or friends of the deceased should pay the debt. This was, in fact, the case in the celebrated republic of Rome. We are informed by history, that the laws of the Twelve Tables contained this degrading principle. Some few years after the abolishing of monarchy in Rome, by the expulsion of Tarquin the Proud, and while the exiled monarch was invading the Roman state to regain his power, civil commotion was so great, in consequence of the attempt on the part of the creditor to exercise his unnatural power over the liberty of the debtor, that, to save the commonwealth, the senate had to resort to the appointment of a Dictator, who had the control of all power without any responsibility. This dangerous expedient adopted by the Romans, and which continued in case of great dangers and alarm, had its origin in this despotic and anti-republican principle of placing the freedom, the personal liberty of one citizen, at the will of another. The Romans fought, and the Romans conquered. This restored public peace and tranquility; but, like all nations who are afflicted with war, the people were not freed from debt, but greatly involved. The creditors, no longer alarmed at foreign invasion, enforced with

rigor their claims upon their debtors. They enslaved, imprisoned, scourged, and chained, in the character of debtors, the brave defenders of the state. The people were alarmed. They saw the lives and liberties of their fellow-citizens at the mercy of a moneyed aristocracy. During this state of things the commonwealth was invaded—the body of the people refused to arm in its defence—those who were called upon to volunteer their services, exposed their limbs, galled with fetters, and torn with the stripes of their merciless and cruel creditors. These distractions again compelled the senate to resort to the appointment of a Dictator, to save the country. The enemies were again repulsed; but a part of the army separated themselves, and camped three miles from Rome, in a mutinous state, on the Sacred Hill. The military oath which they had taken, alone prevented them from marching against the capital of the state. They refused to serve a country where the unfortunate was not protected in his personal independence. It was on this occasion that the tribunal power of Rome was created. It is sufficient to astonish the human mind to think that the power of the creditor could ever produce such effects; and we should not readily believe them if we had not the uniform history of those times to establish the melancholy fact.—Our surprise will not be so great if we view attentively the condition of this country after the war of the revolution and the late war. The same rigor, on the part of the creditor, and with the same power, where a third of our population stood as debtors, would have produced as great commotion.—Nations are afflicted with calamities like individuals, and, like individuals, the body politic is subject to disease. When pecuniary embarrassments arrive at their highest point—when the inordinate desire after wealth destroys the finer feelings of the soul, and infuriates the creditor in the collection of his debt against the unfortunate, no calamity can be more signal; and, while we subject the whole property of the debtor in the discharge of his debts, the calamity should be mitigated by releasing the body from the degradation of imprisonment. The spirit and love of liberty have already relaxed the rigor of this system; and, as certain as the progress of liberty, and the triumphant march of christianity, so sure will this principle of universal emancipation of the person from pecuniary claims, prevail in all the countries of Christendom. Where the principles of liberty denied to the creditor the right to enslave his debtor, either for life or for a term of years, he was authorized to take his body by the *ca. sa.* and subject him to perpetual imprisonment. Next, the prison doors were opened, and the prison bounds were given, confined to a small space. These bounds are enlarging, and the time will come when they will extend to the bounds of the universe. Contract is founded upon confidence and upon property, and property is the only fund upon which contracts can rightfully operate. Take the property, but spare the body of the debtor. This is the voice of justice, of indulgence, of forbearance, of moderation, and of that clarity which breathes in a certain parable of Holy Writ. When the Lord called his servants to an account, he found one in debt ten thousand talents, and he was unable to pay. He ordered him to be sold, his wife and children, (which was according to the Roman law.) The servant fell down before his Lord, and said, Have patience with me, and I will pay thee all: then the Lord of this servant was moved with compassion, and loosed him, and forgave him the debt. This was better than a bankrupt or insolvent law to

the debtor. But, as an evidence of the necessity of law to control his inordinate desire for wealth, we find that this servant debtor found one of his fellow servants who owed him a hundred pence, and he laid hands upon him, and he took him by the throat, saying, Pay me what thou owest! and when his fellow servant fell at his feet, and requested indulgence, he would not grant it, but cast him into prison till he should pay the debt. The signal punishment which followed this cruel conduct will be remembered—he was given up to the tormentors. This measure, to abolish imprisonment for debt, may be classed among the relief measures of our state; and, as we have seen other acts of relief declared unconstitutional, perhaps this may be so declared; and thus the power of legislation will be arrested from the hands of the states, and vested in the judiciary. When judges, honorable, intelligent, and upright, can so far forget the judicial character as to give such a desolating and anti-republican construction to their powers, it will be time for the people and their representatives to awake from the slumber into which they have fallen. No matter what respect may be due to the judicial character, I hope the people never will submit to such usurpation.

Impairing the obligation of contracts.

This subject is worthy of particular notice, as it has been a source of so much complaint against the exercise of judicial power. The constitution of the United States contains a positive prohibition, on the part of the states, to pass *ex post facto* laws, or laws impairing the obligation of contracts. The one applies to crimes and the other to civil matters. The exercise of this power, on the part of the states, would be a flagrant outrage upon the fundamental principles of humanity, morality and justice; and the conduct of the states furnishes *prima facie* evidence in their favor against the charge of exercising such power. The character of a state is involved in the question, and the charge cannot be presumed, but must be conclusively demonstrated. We have a right to conclude, in the investigation of this subject, therefore, that a very plain principle of morality, inserted in the constitution, has been obscured, and the prohibition misunderstood. The consideration of character alone would be sufficient inducement to examine into the nature of this prohibition; but it becomes a more serious duty to make this examination, upon the ground that the construction given to this part of the constitution of the United States, by the courts, limits, to an alarming extent, the sovereignty of states. From judicial decisions it would appear that the states were in the habitual exercise of the practice of passing laws impairing the obligation of contracts. The states have not, however, yet been condemned for passing *ex post facto* laws; but perhaps this arises from the fact that the federal courts have not yet assumed the jurisdiction over crimes, under this part of the constitution which prohibits the passage of *ex post facto* laws; and it may arise from this very circumstance, that it has not been proclaimed to the world that the states have equally transgressed this limitation of power. An *ex post facto* law makes that a crime to-day which was innocently done yesterday; or increases to-day the punishment of a crime which was committed yesterday. To give this retrospective operation in the punishment of acts which were not forbidden by the law when committed, or in the increase of punishment of crimes previously perpetrated, is the essence of tyranny and barbarous cruelty. This is a plain principle, well understood, not likely to mislead, unless

we begin to refine upon the subject, and enter into metaphysical disquisitions as to the essence of *ex post facto* laws. In that event, I should not be surprised if we were to find an abuse of this prohibition in every change of proceedings in criminal prosecution. The time of altering the court might be considered *ex post facto*, inasmuch as it might diminish or extend the time that the prisoner had to remain in jail previous to trial. Although the preparatory steps, in such case, have never entered into the essence of the punishment fixed for crimes, yet, with as much propriety, may the judges declare the laws regulating criminal proceedings *ex post facto*, as they have done in respect to the remedy in civil cases, in collection of debts and in enforcing contracts. Of this character also are the statutes of limitation; and they have been declared to impair the obligation of contracts. Thus it is evident, that when we leave this plain and fundamental principle of morality, contained in the constitution, as to *ex post facto* laws, and laws impairing the obligation of contracts, we are all upon the wide ocean of uncertainty, and every principle of self-government is in hazard. What is the plain import of this prohibition of the constitution? It is this, that you shall not declare to-day that contract void, in whole or in part, which was made yesterday under the sanction of law. You can no more do this than you can punish to-day what was lawful yesterday. If a party stipulates to pay in horses, the law shall not provide that he may discharge the debt by a tender of wheat. If a party stipulate to pay one thousand dollars for a hundred acres of land, the law shall not permit him to pay only five hundred dollars and keep the land. It is evident that such laws would impair the obligation of the contract. When we confine ourselves to this obvious principle, here expressed, we shall meet with no difficulty. But, permit the judge to enter into his nice theoretical and metaphysical disquisition of moral principles, as applicable to the systems of states, regulating the proceedings in civil cases, limitation law, and the like, and we shall meet no difficulty in finding judges who will prostrate all such measures, which the people have solemnly declared to be expedient.—The fact is, that the people, by their representatives, have the right to exercise sovereign control over the collection of debts, the enforcing of contracts, prescribing the remedies, regulating the sessions of the courts, enlarging or contracting the fund upon which executions shall operate. In a word, a sovereign state may refuse to constitute courts of justice to enforce the execution of contracts, without violating the limitation of power contained in the constitution. In all civilized communities, courts of justice do exist, and will exist, as a matter of general policy, and a wise measure of the sovereign power of the state, and not upon that narrow principle of impairing the obligation of contracts. As an evidence of the sovereign authority of a state, who will deny the right of the supreme power of the community to suspend law process, and close the courts of justice, in case of sanguinary war for independence or existence? This principle is expressly recognized by the constitution of the state of Kentucky. If this be not a fair exposition of the federal constitution: in this respect let us see if the contrary doctrine will not lead us into difficulty and absurdity, from which we cannot as easily extricate ourselves.

A contract is made in Virginia, where land is not subject to the payment of debts. But suppose Virginia should pass a law making lands a fund to discharge debts, without any discrimination as to pre-

vious or subsequent contracts; would this law impair the obligation of such previous contracts?—Again: a contract is executed in Virginia, and the debtor removes to Kentucky, where landed property is not shielded from sale in payment of debts—upon a rendition of a verdict against the debtor, can the creditor have his *fieri facias* against the land estate of the debtor, or must the laws of Virginia operate as to the remedy in making the money?—Again: a debt is contracted in the state of Ohio, and the judgment is obtained in the courts of Kentucky—when the execution issues, must the property be sold under the laws of Kentucky, or must the property be sold for a certain portion of its value, according to the laws of Ohio? A debt is contracted within the state of New-York, and the debtor is prosecuted to judgment in the state of Kentucky; does the contract carry with it the redemption law of New-York, or must the *lex loci* of Kentucky govern? If the remedy be the essence of the contract, then it follows that the Virginia debtor would carry with him a shield to his landed estate; the debtor of Ohio a protection of his property to a certain portion of its value; the New-York debtor would have the benefit of his redemption laws; and the Kentucky debtor would carry with him, to other states, the benefit of his replevin law, and his endorsement law. So of every other state in the union. Yet the absurdity of such a system has never been contended for; which proves that the remedy constitutes no part of the contract. It is strange, however, that the doctrines of the present times should lead to these conclusions. If the remedy prescribed by a state to govern controversies, is a part of the contract, then the legislature cannot change the term of holding courts. As it respects previous contracts, the terms of holding the courts cannot be increased from three to four, nor reduced from three to two, annually; and if the public good required this change in the sessions of the courts, it must apply to subsequent contracts, and you must have courts permanently fixed, to enforce previous contracts: and such is the chaos resulting inevitably from this novel, refined doctrine, as to the limitation of sovereignty, to keep it from impairing the obligation of contracts; and these evils result from a departure from the evident meaning of the constitution, which prohibits the passage of laws impairing the obligation of contracts. The judge may, in his discretion, draw the line of demarkation between these cases and others which he may deem a violation of the constitution; but it is nothing more nor less than discretion, without any fixed principles of certainty to govern him. This law loses the character of certainty, a principle by which all freemen acknowledge to be governed. Upon the same construction of the constitution, the legislature of a state could not extend the prison bounds, by which previous contracts would be affected: and, in fine, if the remedy given by the law to enforce contracts be a part of it, then it would follow that no suit could be maintained against the delinquent party, out of the jurisdiction of the state in which the engagement was entered into; and a simple removal from one state to another would forever release the obligor. Cases of this character might be multiplied indefinitely, to show the extreme danger in attempting to limit the right of a state to make its laws conformable to the wants, the necessities, and condition of the country. The regulation of civil proceedings, and the remedies prescribed by law, must necessarily rest with the sound discretion of the sovereign power of the society; and although we may doubt their expediency, yet we cannot deny their validity,

without a total subversion of the principles of the American revolution.

The decision of the supreme court, upon the occupying claimant laws of Kentucky, prostrates the deliberate policy of that state for a period of about twenty four years, and affects its whole landed interest. The effect is to legislate for the people; to regulate the interior policy of that community, and to establish their municipal code as to real estate. It is worthy the serious inquiries of the nation to ascertain whether Kentucky has, by any act of her own, divested herself of this essential attribute of sovereignty. If she has not, an inquiry equally solemn remains, as to the remedy for this serious encroachment upon the first principles of self government. It is very difficult to discover, from an examination of the decision of the supreme court, upon what identical ground they have acted, in declaring these laws unconstitutional. The court, it would seem, has declared the occupying claimant laws a violation of the state constitution, and therefore void.

The novelty and dangerous tendency of this doctrine, would incline us to doubt whether this was the ground: yet the court say, that the compact with Virginia is made a part of the state constitution; and as these laws are violatory of the compact, they are unconstitutional. They do not, in any part of their decision, declare, or even intimate, that the compact between Virginia and Kentucky is such a compact as is recognized by the constitution of the United States; nor is there the most distant allusion, that those laws are a violation of the federal constitution. We are driven to the conclusion, that the supreme court has undertaken to decide, that these laws of Kentucky are a violation of the state constitution. If this be the case, then here is another tremendous march in the assumption of power—leading most directly to consolidation, and the consequent annihilation of state supremacy within its appropriate sphere of action.

It is sufficiently alarming to yield to the federal judiciary the exclusive right to judge of its own powers, and those of a state, when it is supposed that such state has transcended the limitations contained in the federal constitution. But if it be admitted that the federal judiciary may declare state laws a violation of a state constitution, then indeed are the states wholly at the mercy of the general government. Then, indeed, are the states tenants at will; and it is the exercise of forbearance if permitted to act. Then, indeed, they possess the external ensigns of independence without the reality.

The judicial history of our country furnishes a case in which, it was fondly hoped, this sacred principle was solemnly decided, that the federal courts could not declare state laws a violation of state constitutions; that such a question belonged exclusively to the states; that this principle was the inevitable result of the acknowledged doctrine, that a state is supreme within its own sphere of action; and, that no earthly tribunal can rightfully control its acts, but the people of the state or its authorized agents. These principles result from the decision of judge Chase.

I consider the supreme court bound by the laws and judicial decisions of each state, when confined to their municipal regulations.

The occupying claimant laws of Kentucky were enacted upon a solemn investigation of their merits, as to expediency and constitutionality. The inferior courts and the court of appeals of the state, have as solemnly declared them constitutional, and consistent with the provisions of the compact.

But suppose the supreme court has predicated this opinion upon the ground that the compact with Virginia was such as the constitution of the United States recognized as binding between states. Let us for a moment examine this position. The federal constitution declares, that no state shall enter into a compact with another state without the consent of congress. To give jurisdiction to the federal court in this case, and on this ground, the party claiming the benefits of the constitution must show how, when, and where congress has given assent to the compact. The journals of congress do not furnish any such consent. The act of congress admitting the state of Kentucky into the union, as an independent state, gives no such consent. It is a simple admission of Kentucky into the union, with certain specified boundaries. Congress cannot give consent, verbally, to any measure. We must furnish record evidence of every act of the national legislature. The nation is not like an individual in this respect. Every measure of congress must have the high sanction of record evidence, and that must be deposited in the archives of the government.—In this case we have no such evidence; and we cannot infer it by implication; nor can we resort to verbal testimony to prove it. We then have a right to conclude that congress left this compact exclusively to the parties, without negation or affirmation; and having thus left it, the federal judiciary had no jurisdiction. It belonged exclusively to the state of Kentucky and its judicial decisions, and Virginia alone had a right to complain. In such an event, the mode was pointed out by which the parties were to settle the questions of violation: "That in case any complaint or dispute shall at any time arise between the commonwealth of Virginia and the said district, after it shall be an independent state, concerning the meaning or execution of the foregoing articles, the same shall be determined by six commissioners, of whom two shall be chosen by each of the parties, and the remainder by the commissioners so first appointed."

We will now examine the case more particularly, and see what grounds exist to pronounce those laws a violation of the compact—"That the proposed state shall take upon itself a just proportion of the debt of the United States, and the payment of all the certificates granted on account of the several expeditions carried on from the Kentucky district against the Indians, since the first day of January, one thousand seven hundred and eighty-five." This part of the compact engrafts within it a great fundamental principle of moral obligation. It is a principle of common and statute law—a principle of the laws of nations—a principle of universal law, and the law of eternal justice, that the titles to real estate must be determined by the laws of the state under which they were acquired. The supreme court have avowed and asserted this principle, yet, strange as it may appear, in evading the plain import of this clause in the compact, and thus declaring our state laws void, they say that Virginia must have intended something more than the recognition of this great fundamental principle. This reasoning violates the rules of construction, which are as well settled as the principle which has just been stated, viz: That, where a statute, or any instrument of writing, is worded in clear and precise language; where the meaning is evident, and leads to no absurd conclusion, such a compact needs no interpretation—nor is any admissible. But the court, in violation of this elementary rule of construction, have declared that it would be absurd to suppose that Virginia intended nothing more than the asser-

tion of this great moral truth. They have abandoned the plain import of the words. They have eluded their force, and have penetrated the wide field of conjecture to search after their meaning; and have forced a construction which thwarts the wise, humane and equitable policy of our state in regard to occupying claimants of land.

This dangerous practice, whenever adopted, leads to judicial usurpation of legislative power. Every compact may become an endless source of misunderstanding; and extraneous considerations must govern the discretion of the judge. Indeed, sir, the more precise the terms, the greater the danger to be apprehended; since the court will not believe that such a wise body of people as Virginians, could have only intended to assert a great fundamental principle of acknowledged justice. It might be contended, with equal firmness, that the declaration of our independence intended not a recognition of great fundamental principles of self-government; but that something else must have been designed. The same fallacious doctrine may be applied to the federal and state constitutions, including their bills of rights. They all contain, assert, and recognize the great fundamental principles of free government. The same may be said of every treaty which has been concluded between the United States and foreign powers. Yet, because they assert great fundamental principles of maritime law, or laws of nations, they cannot mean to recognize them; but they must have intended to recognize some extension or limitation of the principle—or some entire different thing.

It is evident, not only from the words of the compact, that nothing more was intended than a recognition of this great and acknowledged principle; but the very next clause in the compact is a confirmation of this idea. "Nor shall a neglect of cultivation or improvement of any land, within either the proposed state or this commonwealth, belonging to non residents, citizens of the other, subject such non-residents to the forfeiture or other penalty, within the term of six years after the admission of the said state into the federal union."

Why was it necessary to provide that Kentucky should not declare a forfeiture of the real estate of a non-resident for a neglect of cultivation within the period of six years? If the seventh clause will prevent the regulation and judgment of the right of claimants under the occupant laws, *a fortiori*, it would have inhibited a forfeiture of real estate for want of cultivation. It is, therefore, evident that Virginia recognized the sovereign power of the state of Kentucky over such subjects; and nothing can restrain it but an express prohibition. It is equally evident that, if such limitation had not been expressed, the decision of the supreme court would have answered the same purpose—not for six years only, but for ever.

It is highly dangerous in a free country, to divest the people of such power, and to permit the courts to establish systems of policy by judicial decision. I see no difference, whether you take this power from the people and give it to your judges, who are in office for life, or grant to a king for life.—I contend that the people have the right to make laws to govern themselves. At all events, it would be unsafe to call upon irresponsible agents to govern them. The court has nothing to do with the policy of a measure; they are bound to execute the laws; and this is peculiarly their province.

It is derogatory to Virginia, to suppose that she intended to impose upon Kentucky so far as to limit the exercise of her sovereign power, in such a man-

ner as not to be able to control the internal policy of the state. If, by the compact, the laws of Virginia, at the time of our separation, must govern without any modification, then, indeed, you could not increase the taxes upon landed property held under titles from Virginia. Of course you must tax the citizens unequally, and place the burthen of taxation upon those holders of real estate who derive their titles from Kentucky; and thus create a privileged class in the bosom of the state. If the laws of Virginia, at the separation, must govern, then you cannot subject lands to the payment of debts where the title is derived from Virginia.—One half of the landed property of the state would be subject to the payment of debt, because held from Kentucky—the other half would be exempt, because they held under Virginia grants. Here, again, we have another privileged order in the bosom of the state. This is an inevitable consequence from the opinion of the supreme court. For they say, whatever law of Kentucky narrows the rights of the landholders, or whatever diminishes the interest of the landed estate, is a violation of the compact.

Now, sir, to subject land to the payment of debt, narrows the right and diminishes the interest of the landholder, as much as to say, that he shall pay for valuable improvements made upon his land before he shall oust the occupant and take possession of the premises. The speculators who command the funds, may go to work and purchase for a song the claims of original proprietors of land, in all cases where it has been sold under execution, and the supreme court must dispossess the *bona fide* purchaser under execution, and give it to the speculator. Then, sir, we shall witness confusion confounded. Then sir, the decision of the supreme court will cause Kentucky to take a retrograde movement of twenty-four years; and she must commence again with the lesson she has learnt from the decision of this court. This is not declamation—I wish it were—it is an awful reality.

The supreme court declares that the object of the occupying claimant laws, is to compel the rightful owner to relinquish his land, or pay for all lasting improvements previous to notice; they therefore create a direct and permanent *lien* upon the land for the value of those improvements. That, to secure the rights and interests of those lands, it is essential to preserve the beneficial, proprietary interest of the rightful owner in the same state, in which it was by the laws of Virginia at the time of the separation. This is the language of the supreme court. The system creates a *lien* upon the land for the payment of valuable improvements made thereon before notice. This doctrine of giving a *lien* upon property, under certain equitable circumstances, is as ancient as the knowledge of justice, and amongst the first principles of jurisprudence. Where landed property is sold, and a bond given for the conveyance of title, and where actual possession goes with the sale, the original proprietor has a *lien* upon the land until the purchase money is paid. And even where a transfer of the legal title has been made, the same *lien* exists, in the hands of all subsequent purchasers who are apprized of the fact of the default of the party in the payment of the purchase money. This *lien* is not limited to real estate, but attaches also to personal property in the hands of a *bona fide* creditor, in a variety of cases. Yet, this ancient doctrine must not be extended to the *bona fide* occupants of land for the work and labor which he has performed for the benefit of the successful claim-

ant. No, this is unconstitutional, in the opinion of the supreme court.

The only plausible objections to the occupying claimant laws of Kentucky are, the time fixed at which the successful claimant shall pay for valuable improvements, and when the occupant shall be subject to rents. The fact is, that the doctrine of notice alone is involved in the real question. By the common law, or rules of chancery, the successful claimant has always been liable for the value of lasting and valuable improvements previous to notice. The time, when notice should begin to operate, has been limited to the commencement of a suit, and sometimes previously, by written notice of the adverse claim. After notice, the occupant was considered a *mala fide* possessor, subject to rents, and made improvements at his peril. This is precisely the principle of the occupying claimant laws of Kentucky. The only difference is this, that; instead of leaving it with the court to say what knowledge of the adverse claim should operate as notice to the occupant, our law of 1797 has designated and fixed that period. By this act, the commencement of a suit was the point of time when notice began to operate. The law of 1812 fixes the time of notice from the judgment of eviction. The first law has been declared void, although it would be very difficult to point out any substantial departure from the rules of chancery which have governed the courts of Virginia. The law of 1812 changes the rule, so far as to limit notice to the judgment of eviction.

We will consider the objections urged against this law, which establishes the principle that the occupant shall be paid for all lasting and valuable improvements up to the judgment in favor of the successful claimant, and an exemption from rents until that event has taken place. If this principle has nothing to justify it, then, at least, the policy of the measure may be questioned. But, I think, it will be most evident, that the peculiar condition of our state, and the peculiar system of its land laws, furnish the strongest proofs of the justice and expediency of the measure. The common law principles were not applicable to the landed property of Kentucky. In Great Britain, whence we derive the ancient doctrine of notice, they had no independent conflicting claims to real estate, derivable from the same sovereign power. Their grants are unique and identical for a certain tract. The true boundary of those grants may sometimes produce a difficulty and create a law suit. Their disputes respecting real estate, generally, arise from conveyances, derivable from the same original title; and claimants frequently contend upon the rights of heirship, ancestry, &c. In these cases, the same original record is a guide for all the parties who claim the estate. In this state of fact, the commencement of a suit operates as notice to the adverse claimant; and from that period, is subject to rents as a *mala fide* possessor, and is entitled to the value of lasting improvements only to that period.

This, I presume, is also the true state of facts as regards almost every state in the union, except Kentucky; and hence the common law, or chancery rule, may apply to all such cases. In Kentucky, citizens may, and do hold different grants, of equal dignity and authority, to the same identical tract of land from the same government. Both claimants having paid the same price for the land to the commonwealth. Virginia opened a land office, to expose to sale that district of country, now the state of Kentucky. No survey was made, laying it off into sections, &c. but each individual had an

equal right, on paying the state price, to obtain his land warrant to be located when and where his judgment might direct him. When the warrant was located, a survey was the next step, and the legal title was consummated by the issue of a patent. In this way Virginia sold a much larger quantity of land than was contained within the boundary of Kentucky. Kentucky being then a wilderness, and infested with savages, it followed, as an inevitable consequence, that the claims of individuals interfered with each other—sometimes partially; and, as the claims were of unequal quantities, the larger might, and frequently did, include the smaller locations. Thus the claims of half a dozen persons covered the same tract of land with grants of equal dignity, but not of equal validity. But the misfortune was, that this validity did not depend upon record evidence alone—verbal testimony is admitted, and that scattered throughout the states of Virginia, Kentucky, &c. This extraordinary state of things might happen, that a subsequent entry and subsequent patent might succeed against a prior entry and elder patent. Sometimes the elder location and a junior patent might prevail against a junior entry, and an elder grant—and sometimes a junior entry and an elder grant might succeed against an elder location and junior patent. Where both entries are good, the elder location is paramount—where both are bad, then the elder grant prevails.

It will be discovered, from this state of the case, that the occupant took possession of the land, not as a trespasser, but as a *bona fide* proprietor; upon a title for which he had paid a fair equivalent to the commonwealth of Virginia, and held a grant for it. And here is the true reason why the occupant was not considered as a *mala fide* possessor, until a judgment of eviction was rendered against him by a competent tribunal.

The law was enacted to suppress, or rather to accelerate the termination of controversies in regard to the landed estates of the country—to encourage agriculture; to strengthen the state by population and cultivation; and to protect the *bona fide* occupant from injury, in providing a remedy by which he should be paid the value of all lasting improvements made upon land, of which he should unfortunately be divested. If the elder location, or the elder grant, had given the paramount title in all cases, as in other countries, then no difficulty would have existed as to fixing the time of notice at the commencement of the suit; and the occupant might have been considered as a trespasser from the service of the writ. The institution of suit would have apprized the occupant of all the facts necessary to ascertain the comparative goodness of the conflicting claims. But I have already shewn that such was not the state of fact in Kentucky.—On the contrary, the goodness of the location depends on the identity of the objects called for to designate the land intended. It is necessary to prove the existence of the calls in the entry at the time of the location. This identity is not sufficient; but these calls must have possessed such notoriety at the time, that a subsequent locator might have appropriated the adjacent residuum by reasonable diligence in his search after the calls of the prior entry. The greatest difficulty arose from the last requisite, as to the degree of notoriety which the objects called for should possess, to enable the subsequent locator to appropriate the adjacent residuum. The point has never been reduced to any thing like mathematical or moral certainty; but must depend, even at this day, very much upon the

wisdom and discretion of the judge. These are two great principles arising out of the land laws of Virginia. Other principles, as novel and as difficult, have grown out of the same system, amounting to some hundreds, in the modification of the various rules by which the courts have been governed. It is a science new and difficult; a branch of jurisprudence unknown to any other age or nation from the earliest dawn of civilization.

This view of the subject will, I think, present many considerations in favor of the propriety and justice of this measure; and, moreover, will demonstrate the fact, that the compact was never intended to deprive the legislature of our state, from adjusting the equitable claims of the contending parties; for, in the adjustment of such claims, the right, title, or interest, in the land, is not involved. The laws of Virginia, as to right or interest in the land, have governed the case throughout; and when the dispute has been settled, then, and not till then, does the law provide for a case extrinsic from the right or interest in the land, and changes the common law principle of notice, so as to meet the peculiar condition of our landed property. This decision of the supreme court is not the only cause of complaint with Kentucky. As early as 1807, the legislature declared, that no suits involving the right to land should be commenced after the first day of January, 1816. Yet I am informed, by a letter from Kentucky, that the circuit court of the United States for the district of Kentucky, has likewise declared this law a violation of the compact with Virginia, unconstitutional and void; making another inroad upon that ancient and universal principle of law, that the remedy including the statute of limitations, is no part of a contract; and that it devolved upon the sovereign discretionary power of a state to control the remedy, without having heretofore been considered as impairing contracts. It appears to me that we have arrived at a perfectly new era in the history of jurisprudence.— Yet this decision, as well as the former, is in direct hostility to the supreme court of our state.

The federal judiciary have declared unconstitutional and void, the laws of New Hampshire, New York, Pennsylvania, Maryland, Virginia, Ohio, Kentucky, and, in the case of the Yazoo speculators, the laws of Georgia. The district courts of the United States, in the interior of the country, have recently introduced another dangerous innovation, repugnant to the general sentiments and best feelings of the mass of the population which it affects, in the assumption of admiralty and maritime jurisdiction over our own internal trade upon the rivers of the west, more than a thousand miles from tide water; a jurisdiction which, in every country and every age, has been confined to the ebbing and flowing of the tide. These last cases are quite as glaring as those which have been before noticed; but time would not permit me to dwell upon them, nor indeed upon any considerable proportion of the cases in which the judicial arm has stretched itself beyond the province of the body which sustains it. At one period, they declared the common law of England the law of the United States in their confederated capacity, and sustained the doctrine on several occasions in criminal prosecutions, by inflicting punishments under it upon persons who had not violated any law of the country; and by this construction the extent of their jurisdiction was threatening to become boundless. But the indignation of the people, who, with one voice, condemned the proceeding, began to be felt, and the doctrine is suffered to become obsolete. Where

there are such strong indications of a disposition to extend their powers to the utmost stretch of constitutional construction, and without any power, either direct or indirect, to arrest its progress, it is evident that some interposition is necessary. It is dictated by necessity. The preservation of harmony requires it. The security of our liberties demands it; and, while the sound of freedom is melodious to an American ear, I shall console myself with the assurance that some constitutional provision will be made, if not at this time, certainly at some future day not far distant.

The amendment which I propose may not be the best that can be devised; but the necessity of some remedy is obvious; and various propositions have suggested themselves to my mind, either of which might prove efficacious.

1st. To limit and define the jurisdiction of the courts.

2d. To subject the judges to removal by an address of both houses of congress.

3d. To vacate their commissions after a limited term of service.

4th. To vest a controlling power in the senate of the United States, or some other body, who shall be responsible to the elective franchise.

On mature deliberation, the proposition which I have submitted, appears, in my opinion, the best calculated to effect the object desired; but on this point I am not tenacious. I am content to leave the selection of the mode to the wisdom of others, without giving a detail of the reasons why I consider the senate a tribunal to which the ultimate decision may be confided.

I have endeavored to examine, with freedom, the principles of our government, and have concealed neither my feelings nor sentiments. In animadverting upon the exercise of the judicial power of the United States, I have endeavored to avoid, as far as was consistent with freedom of discussion, every expression that might convey the idea of hostility, or personal disrespect to the judges. I feel nothing of that; and if I did, an occasion like the present would not be chosen to express it. It is a duty which I owe to my country, to express my sentiments freely upon public measures, which I trust will ever be discharged; and so far as individuals are concerned, I shall be as ready, at all times, to applaud as to condemn. Whatever may be the result of this investigation, I have done my duty. The perpetuation of our rights is worthy of all that vigilance which the object requires. Contrast our condition with that of all other nations, and every day's experience will confirm the sentiment, that we are God's most favored people. The wisdom of our sages, and the blood of our heroes, have confirmed to us the liberty of speech and of the press, and established the sacred rights of conscience. It is a duty which we owe to Heaven who gave them, and to posterity, whose guardians we are, to transmit these rights unimpaired. They are blessings worth more than all the blood and treasure expended in obtaining them. Our example is animating other regions; and the light of freedom here has shone to the eastern bounds of Europe, and to the southern climes of our own continent. The sun of liberty, after a long dark night, has emerged from the western horizon, and is now borne upon his wings to illumine the chambers of the east. His animating beams are again displayed on the plains of Marathon, where the modern Greeks are now emulating the deeds of their ancestors. To sanctify this continent from the pollution of despotism, our brethren of the south

are moistening the gardens of freedom with their blood. The horrors of war are cheerfully encountered, and every privation is endured with manly fortitude, to establish the principles for which we once braved the dangers of the field. If these blessings are worth obtaining at such expense, they are worth preserving; and I trust that the same spirit which actuated the patriots of the revolution, will ever excite to vigilance the heirs of their inheritance.

Congressional.

MR. FINDLAY'S SPEECH,

On the prohibition of foreign spirits.
IN SENATE—MARCH 1, 1822.

Mr. Findlay, of Pennsylvania, rose to submit a resolution to instruct the committee on commerce and manufactures to inquire into the expediency of prohibiting the importation of spirits; and as the resolution contained an important principle, it might be proper to give a brief exposition of his views in submitting it to the consideration of the senate. He said he was induced to believe that an abundance of domestic spirits for the consumption of the country could be furnished of as pure and wholesome a quality as those imported, and that the interests of the agriculturists, in the middle and western states, would be promoted by the prohibition.

He presumed it would be admitted, that agriculture was of greater public utility than any other pursuit, and, without intending to make invidious distinctions between it and other branches of industry, or to convey any reflections on the constituted authorities that had preceded us, he might be permitted to observe that he believed our statute book contains no evidence of any direct encouragement having been afforded to the agriculturists of those states, (which he would, for the sake of distinction, call the grain states), while it was well known that large sums of the public money had been expended for the encouragement and support of commerce, and some protection extended to domestic manufactures, by subjecting articles of foreign manufacture to the payment of duties, by both of which he freely conceded that agriculture had been *indirectly* aided, but not to the extent it merited. The distillation of spirits, he said, might be considered as a branch of manufactures, and one that was protected by duties on foreign spirits, but the existing duties did not afford a sufficient protection to the grain states, the growers of the raw materials for the manufacturer. He said it was not within the constitutional powers of the senate to originate a bill to increase these duties, and if they were augmented they might probably serve to encourage smuggling, without answering the purpose intended; that their total exclusion from competition with the domestic spirits would afford a more ample protection to the industry of the grain states, and the only effectual one which, he believed, congress had in their power to extend to them.

He took it to be a fact, susceptible of demonstration, that the value of the products of the grain states, was depressed equal to the cost of the foreign spirits (not including the duties) that were consumed in the United States.

He said it appeared, by Seybert's statistical annals, that the quantity of spirits imported, calculated on an average for ten years, ending with 1812, was 7,512,415 gallons, and the average of the exportations for the same period was 679,332 gallons, leaving an excess of importation over the exportation of 6,833,193 on the average calculations for ten

years; that it appeared, from other official documents, that, in the year ending on the 30th of September 1819, there was 583,789 imported, and 353,116 gallons in the year ending on the 30th of Sept. last, a small part only of which was exported; that he had not had access to any documents which might have shewn the quantity imported in any other year since the publication of the annals referred to; from these documents it appeared that the quantity of spirits imported was diminishing, and might not average as much since that period as it did in the ten years alluded to, but from which consumption of foreign spirits in our country, subsequent it might be inferred that the annual average of the quantity to that time, could not be less than four millions of gallons.

A few hundred thousand gallons, however, said he, in the estimate of our annual consumption, are not of much importance in the present view of the question. Neither is the precise value of the quantity, which nearly amounted to as many dollars as there were gallons imported. He said the importing of spirits was not like importing materials, to which we might, by industry and skill, add a value, and thereby increase the general wealth of the nation; but the value of the amount imported was drained from the productive labor of the country, without any thing being left in return. Part of them, he said for aught he knew, might be used in the brewing or adulteration of wines, which he would not dignify with the name of a manufacture, and which, instead of being protected, ought to be discouraged. But, if it should be continued to be tolerated and persisted in, domestic spirits might answer for the purpose. If, said he, the consumption of domestic spirits were substituted for that of foreign, the amount of their value would at least be saved to the nation, and the farmers in the grain states would find a profitable market for the rye and corn, and for many of their fruits, which were perishing on their hands.

Mr. F. said he was aware, that many objections might be made to the contemplated prohibition; and which, if he could fully anticipate, he did not conceive that this would be the proper time to endeavor to obviate them. He would, however, remark that it had been alleged by respectable citizens in some of the states, as appeared by various publications, that the more one nation purchases from another, the more she would sell of her own products.—He said there was a fallacy in the position, in the extent, at least, to which it had been assumed by some. He admitted, that, in commerce between nations who supplied one another, not with the necessaries, but with the luxuries of life, the position might probably be sustained, but such was not our situation. Our exports, said he, not including those shipped on debenture, principally consists of raw materials for manufacture, bread stuffs, and other articles, ranked amongst those of the first necessity, the demand for the greater part of which was limited by the natural wants of man; and he could not, therefore, discover how, nor by any process of reasoning arrive at the conclusion, that, by our purchasing foreign spirits, or any article imported, it would tend to increase the demand for, and consumption of, the staples of the grain states.—He was ready to admit, that, by navigation acts or treaties, the products of one country might be excluded from, or admitted into certain ports on more or less advantageous terms than similar products of another country; but this could neither add to nor diminish the general demand for articles of the first necessity, as this was limited by the laws of

nature, which artificial regulations could not control. If, he observed, there were no navigation acts, nor commercial treaties, and the individuals of each nation permitted, without restraint, to exchange with the individuals of any other nation, the surplus products of their industry, then every individual would, of course, direct his industry to such objects—the surplus of which he could exchange to the greatest advantage, and thus, by the citizens or subjects of every country pursuing their respective interests, those of the whole might be promoted.

But, said he, other nations having introduced navigation acts, and adopted other regulations of trade, so that the commerce of the world was restricted by various ways, it is incumbent on us, and more especially at this time, when the products of the farmers, in the grain states, do not find a market abroad sufficient to reward their labor, to adopt countervailing measures, so as to afford them a market at home, and thereby protect this valuable branch of our industry, and which, from the bounties of divine Providence to our country, might be done with the happiest effect.

From the diversity of our climate and soil we had it in our power, by duly encouraging the development of our internal resources, to furnish, among ourselves, without supplies from abroad, all the necessaries, and many of the superfluities, of life. If this should not be conceded to the extent which he had stated, there could not, at all events, “be a loop on which to hang a doubt,” but that the distillers of the grain states could furnish a supply of spirits, not only sufficient for the consumption of the country, but large quantities for exportation, if it should be required. Then why, he asked, should we, under such circumstances, permit foreigners to supply us with spirits which diminishes the demand, and, consequently, reduces the price of agricultural products? They do not act in this way towards us. Foreign nations guard, with peculiar care and strict regulations, every branch of their internal industry, and do not suffer others to compete with them on terms by which their own interests can be affected. But we permit them to supply us with the proceeds of their industry to the exclusion of encouraging our own. While this system is continued, it must tend to impoverish the middle and western states, instead of promoting the general welfare, the great and ultimate object of the constitution.

He said if the proposed prohibition, which was a measure he considered the grain states entitled to, should be deemed, by gentlemen from other quarters of the union, a concession, he for one would be ready, as he then was, to extend complete protection to the industry of the eastern and southern states, and by thus protecting the industry and consulting the interest of the different portions of the union, all sectional jealousy would be destroyed, the interest of the whole promoted, and the various parts linked together by ties of interest and reciprocal dependence that could never be rent asunder.

It might be said, he observed, that, if the measure was adopted, the countries from which we imported spirits might be induced to employ their industry in the production of bread stuffs, and thereby affect the interests of the grain states, which it is the object of the resolution to protect. He did not apprehend that this could be effected to any great extent. It was well known that the countries from which spirits were imported already produced as much grain as their capacities for its production would admit, and but a small portion of

which is distilled, as it appears from our public documents. The greater part, probably nine-tenths, of the imported spirits, are produced from other materials than grain.

Mr. F. said he was not insensible to the fact that the adoption of the measure might reduce the revenue so that it might be inadequate to meet the engagements of the government, but, in this event, we must either face the alternative of retrenching the public expenditures to the amount of the probable deficit, or the house of representatives, to whom it properly belongs, devise ways and means to supply it. The latter alternative, he observed, would be much more advantageous to the grain-growing states than the present order of things; for, as they would be furnished with a market for their rye and corn, which were at present lying useless in their granaries, (especially those who are distant from the sea-ports), they might be able, to pay taxes which they could not do under existing circumstances.

He said it might be alleged that the predilection for foreign spirits was so great and strongly confirmed in our country, that, if they were excluded, the consumption of domestic spirits could not be substituted in their place, and, of course, the object of the resolution would not be attained. For his part, he said, instead of considering this as an objection to the measure, he did not anticipate from it such a favorable result. It was one which no good citizen would regret, as it would tend to improve the public morals, and produce some of the good, without any of the evil effects of a sumptuary law.

Mr. F. concluded by observing that the subject was susceptible of more amplified and clear illustrations, but it would not, at this incipient stage of the business, say more respecting it.

MR. BENTON'S SPEECH,

On the Fur Trade Bill.

IN THE SENATE—APRIL 24, 1822.

[The bill and amendments propose to place the fur trade on liberal principles; opens it to all American citizens, and none others; vests in superintendents of Indian affairs, and Indian agents, the power to grant licenses, for two years with the near tribes, and seven years with the remote tribes beyond the Mississippi; subjects to seizure and forfeiture the goods of all traders who carry ardent spirits to trade with the Indians; and repeals the section of the former act, which subjects the trader's license to be recalled without notice or proof of misconduct.]

Mr. Benton, of Missouri, spoke in support of the bill and these amendments.

He considered the fur trade as an object of national concern, and entitled to the notice of the senate. He spoke of it in two points of view;

1. As a branch of commerce;
2. As the means of controlling the Indians.

On the first point, Mr. B. quoted several books to shew the value of the fur trade, as carried on under the Spanish government, at St. Louis; under the republic at the same place; and by the British trading companies on the waters of the Mississippi and Missouri, and on the lakes and rivers out towards the arctic region.

The work of Perrin, a French writer, sent by Napoleon to examine the resources of Louisiana, about the year 1800, estimates the furs, robes, and peltries, taken on the waters of the Missouri, at 600,000

livres tournois, annually, and those taken on the waters of the upper Mississippi at 1,200,000; the latter being almost exclusively in the hands of the British.

The work of major Stoddart, written in 1804, states the value of this trade, at St. Louis alone, to have averaged \$203,000 annually, for fifteen years before the transfer of the province, amounting, in the whole, to upwards of \$3,000,000 in that time.

Mr. B. exhibited a table, which shewed the value of the trade for the year 1816. It was taken from the office of the superintendent of Indian affairs at St. Louis, (governor Clark), and embraced all the business done within the limits of the United States by the American and British traders, and by the United States' factories, and amounted to \$441,220; of which \$29,800 was exported by the way of New Orleans; \$122,020 was taken up the Ohio river into the Atlantic states; \$253,400 was taken through the Canadas, on the line of the Illinois river, the lakes, and the St. Lawrence; and the remainder, \$31,000, was consumed in the country.

Mr. B. referred to sir Alexander M'Kenzie's history of the fur trade, and Winterbotham's view of America, to shew the value of this trade, as carried on by the North West and Hudson Bay companies. The first had amounted, annually, for forty years, to a million and a quarter of dollars per annum—fifty millions in the whole; and much of it taken from the territory of the United States. The second, being a monopoly for a long time in the hands of crown favorites, produced but a trifle, say 140,000 dollars annually, until the late earl of Selkirk purchased the charter, and came in person to push the trade. The two companies are now united. The name of the North West is merged in that of Hudson's bay, under whose charter the trade is now carried on with increased activity, and with such prospect of emolument, that the stock of the company is quoted, in the latest London papers, at 100 per cent. advance.

Mr. B. said, that the trade in the hands of American citizens had not increased for some years. A rivalry had existed between the *private* traders and the *government* traders; and the latter, having the ear of the government, had been able to prejudice the former without doing any thing themselves proportionate to the capital of 300,000 dollars, which was placed in their hands. He had not precise data for fixing the amount of the private capital now embarked, but would estimate it at 120,000 dollars for the waters of the Upper Mississippi, and 200,000 dollars for the Missouri and its tributaries. These sums were intended to cover only the stock in trade; the expenses in boats, boatmen, provision, clerks, interpreters, &c. was a distinct item, and a large one, amounting, in some instances, to 75 per cent. upon the capital.

Mr. B. said, that this view was sufficient to shew that the fur trade, as a branch of commerce, was entitled to the notice of the statesmen and to protection of the government; yet he had only presented a limited view of its value; he had confined his observations to the waters of the Upper Mississippi below the Mandan Villages; he had not carried the eyes of the senate to the Rocky Mountains, and shew them there the richest fur region in the world, belonging, by law, to the citizens of the republic, and possessed, in fact, by the subjects of the British crown. The republic owns the section of the Rocky Mountains between the latitude of 42 and 49 north, say 500 miles from north to south, and, on an average, 300 wide; the summits of the ridges penetrating the region of perpetual snow;

the valleys rich and beautiful, covered with grass, clover, wood, and wildfruits, finely watered; abounding in horses, buffaloes, antelopes, and the most valuable of the furred animals, not excepting the ermine; in a word, presenting all the characteristics of the Alpine region in Switzerland, before it was cultivated. The republic was indebted to the enterprize of Lewis and Clark for the discovery of this rich region. Several companies of American citizens had attempted to avail themselves of that discovery. Lisa, who, with 250 men, ascended the Missouri to its source in 1808, and was expelled by the hostilities of the Blackfeet Indians, supposed to be instigated by the North West company,—Messrs Hunt and Crooks, with 60 men, who crossed to the Columbia about the year 1811, and were compelled to abandon their enterprize, by the events of the war, which soon after broke out; and a company of 100 men, headed by major Andrew Henry, a companion of Lisa's in the expedition of 1807-8, now ascending the Missouri, and who will, in all probability, be attacked by the Aricara's, the roving bands of the Sioux, or the Assiniboins: tribes intimately associated with the British fur companies.

Taking the trade of the mountains into the estimate, Mr. B. computed the capital it would annually employ at a million of dollars, and that it would give employment to 2000 men. The British companies traded upon a greater capital, employed about 2500 men, and were at this time bringing out 300 regular troops from England, to be stationed convenient to the northern bend of the Missouri, which approximates to the line of their forts and trading posts on the rivers of the Western lake.

The nature of the capital would estimate the value of the trade to the country. It would consist, in good part, of articles of home growth or production—powder, lead, shot, axes, hatchets, knives, guns, tobacco, and course fabrics of wool and cotton: many of which would be got in the west, convenient to the trade, and would give a spring to the industry, which now languishes for want of aliment to feed it.

The nature of the proceeds would still further enhance the value of the trade. It would give, in return, articles of the first value and necessity—the common furs, universally in demand as the chief material for making hats, and the richer kind, esteemed, both at home and abroad, as an article of dress: worn by monarchs for magnificence, ladies and city gentlemen for beauty, and by travellers as the best defence against frost, and commanding in foreign parts, China, Japan, Germany, and Russia, twice or thrice their value in the American market.

Mr. B. contrasted the value of the fur trade with the commerce carried on with many foreign powers, and for the protection and preservation of which the republic keeps up expensive establishments of embassies, councils, and ships of war, and which consume less amounts of *American* produce, and give in return articles of incomparably less value. He particularized the commerce of Russia, which consumes \$147,000 of American produce, (taking the year 1821 as the criterion), and gives in return raw hemp or its fabrics, to the prejudice of the growers of hemp in the western states; the trade with Sweden, which takes \$154,000, and returns iron, to the manifest injury of our own districts which produce that metal; with Portugal, which takes \$147,000, and sends wine, to put our whiskey out of countenance, and discourage the grain growers; and all the ports in the Mediterranean, Levant, and Adriatic seas, taking in the whole, but 615,000

dollars, and sending back articles of taste and fancy, of little or no substantial use. Mr. B. considered all this commerce as a miserable object compared to the fur trade; yet the latter was neglected, and the richest part of it left to the quiet enjoyment of the British, to the great prejudice of the western states; while the former was cherished, at an annual expense of more than half a million of dollars, in ambassadors, consuls, and naval armaments; and the slightest interruption to it would be considered, by all the Cis-Alleganian states, as just ground of complaint and remonstrance on the part of the republic.

Mr. B. spoke of Mr. Jefferson's idea, suggested in his instructions to Lewis and Clark—the *practicability of taking the furs of the Rocky Mountains direct to China, upon the line of the Columbia river and the Pacific Ocean*. He said the problem had been resolved; it had been done; it was done by the company which crossed the Mountains in 1811, and there was no difficulty in it. The Columbia river was of easy navigation, a good harbor in its mouth, and the Pacific Ocean void of peril. The region of the mountains, so formidable to the progress of Lewis and Clark, is now traversed by various and easy passes. The first and main ridge is crossed upon a good road, made by the buffaloes and Indians, leading from the falls of Missouri to the forks of Clark's river, (150 miles); points between which the first discoverers travelled about 1200. The next bed of mountains, on which they found snow twelve feet deep in June, is now turned upon the right by descending Clark's river two or three degrees, and then passing west, over land, through an open level country, to Lake Wayton, whence issues the navigable Lautau river, entering the Columbia at a short distance, and avoiding the falls and rapids at the foot of the mountains. Mr. B. had no doubt but that East India goods would enter the valley of the Mississippi upon the same route. He would not discuss the question now, but he would say, that the sea between America and Asia was peaceful; that the tide flowed up the Columbia 183 miles; that the river was deep and gentle, periodically flooded; that the land carriage was short and easy, over a region which furnished snow for sleighs six months in the year, and convenient to the fine horses on the plains of the Columbia; that the longest part of the route was in the descent of the Missouri, (2,575 miles from the falls to the Mississippi), which, being down the stream, was nothing; that the articles to be brought in were of little weight, great value, and small bulk—such as were once carried some thousand miles upon camels, and constituted the wealth of merchants whose opulence is yet seen in the ruins of Alexandria and Palmyra, and upon every line of which the commerce of Asia had ever flowed.

On the second point.

The fur trade is the true means of controlling the Indians. The history of these states, when colonies, and ever since, is full of the proofs. The king's governors always operated upon the Indians through their traders. The French authorities in Canada, and in the valley of the Mississippi, did the same, and they both operated successfully upon them. The consequence was, that, in every war between the French and the British, the Indians came in more as principals than auxiliaries, and always took the side of the power to whom their respective traders belonged. In the war of the revolution these truths were too recent not to be known, and too convincing not to prevail. The congress of 1776, to gain the good will of the Indians, ad-

ressed themselves to the American traders. They even advanced money to purchase goods, to be sold without profit to the traders, to enable them to carry on their trade, and to preserve their influence among the neighboring tribes. The sum of 40,000 pounds sterling was voted at one time, (January, 1776), for this object; and the goods distributed to the traders at 2½ per cent. on the cost and freight. Our enemies, the British, acted upon the same principle, and with more success, because they acted with more perseverance, and had greater means at their disposal. In the late war the same results were seen. A trading house in Pensacola directed the Creeks against us; the agents of the North West company led a dozen nations against the frontiers of Ohio. The republic had comparatively but few on her side. The reason was, that she had no traders among them to gain their affections; only factories, "*to improve their moral and intellectual faculties—to convert them into farmers and christians;*" charitable institutions, without doubt, but so little capable of controlling the warlike spirit of the savage that the factories were themselves the first objects of attack on the breaking out of hostilities.

Mr. B. would not fatigue the senate with further remarks on this point. He only wished to revive the recollection of the policy observed by our ancestors, when Indian affairs were better understood than at present. He trusted that he had said enough to sustain the positions which he had assumed in favor of the fur trade, and shewn that its importance, both as a branch of commerce, and the true means of governing the Indians, entitled it to the national protection.

The bill and amendments are calculated to give it some protection. They repeal the 7th section of the act of 1802, because that section gives to superintendents and agents the power to recal the licenses of traders, *without shewing cause, and trying the truth of it*. He had heard of no license improperly recalled, but it might happen; and a trade so valuable, in which so large a capital would be embarked, should not be subject to a sudden suspension at the will of any man. They, (the bill and amendments), authorize licenses to be granted for seven years. Heretofore they were limited to two. This period was fixed when the Mississippi was the boundary of the republic; it is no longer an adequate time, when that river, ceasing to be the *ultima thule* of the trader, has become his starting point. The British companies have just had their license (charter) extended twenty-one years, and the Russians twenty; and seven years is sufficiently short for the American trader, who goes to the Rocky mountains to contend with the former, and to the Columbia river to contend with the latter. The section intended to be repealed left the trade open to British subjects; it was obliged to do so under the 3d article of Mr. Jay's treaty; but the late war had abrogated that treaty, and it was worth a war to get rid of it. The treaty of Ghent had not revived the odious privileges of the 3d article, and it was the bounden duty of congress to avail itself of this advantage, and to exclude British traders from the navigation of the Mississippi and the trade of our Indians. The bill and amendments propose to do so; they confine the licenses to American citizens, and the goods of those who have no licenses will be subject to seizure and confiscation. The bill facilitates the acquisition of licenses to American citizens; by vesting the power to grant them in officers stationed at convenient points for carrying on the trade. The governors of Michigan and

Arkansas, as superintendents, have this power. All the agents have it. A superintendency is established at St. Louis to exercise it; and this facility will give to that town the advantage which its geographical position has always claimed, and which the improvidence of Mr. Jay's treaty had conferred upon Montreal—the advantage of being the *entrepot* of the American fur trade.

Mr. B. said there was a further protection due to the fur trade, not now contemplated by the bill before the senate, and he regretted to say, not countenanced heretofore by the congress. He alluded to the military expedition to the Upper Missouri. His local position beyond the Mississippi had given him an opportunity of gaining local intelligence, and, presuming upon this, he would differ in opinion from the majority of the congress which had stopped this expedition. He applauded the policy which selected the Mandan villages for a military post, which intended to place on that point of approximation to the British establishments of lake Winipee, an adequate force to overawe her traders, and encourage our own in carrying their commerce to the region of the Rocky Mountains. He considered this expedition as a branch of that enlightened system of national defence which, embracing the vast circumference of the republic, and seizing at once all the commanding points on the lake, the gulf, the maritime and the western frontier, endeavored to provide for every part an efficient and appropriate defence. He knew that a waste of money had taken place in the ascent of the Missouri, and he was willing to go all lengths with the senate in correcting that and the like improvidences in other places; but he utterly protested against the justice of seizing upon a *circumstance* to defeat a *plan of national defence*, so honorable to the administration which had formed it, and so well calculated to secure posterity, as well as ourselves, from the calamities of a country engaged in war, and open, upon an hundred lines, by land and water, to the invasion of the enemy's arms.

Mr. B. had heard objections, founded in motives of humanity, to the system of trade which the bill contemplated. These objections were,

1. The destruction of the Indians by ardent spirits.
2. Impositions upon them in the sale of goods.
3. Exciting them to wars.
4. Retarding their progress towards civilization and christianity.

He replied to these objections:

On the first—Mr. B. admitted that ardent spirits were the bane of the Indians, and destroyed more of them than the sword; but denied that the regular traders committed this destruction. He imputed the mischief to the peddling traders, called by the French, "*coureurs de bois*," a class of running gentlemen, who had no permanent interest in the friendship of the Indians, and cared not what injury they did them. Not so with the regular trader. He visited the same tribe annually, with a large adventure of goods, and depended upon the good will of his customers for his success in trade and the safety of his life. To him nothing was more dreadful than a gang of drunken Indians—all their passions unbridled, and their unborn appetite for blood-shed and pillage left without the restraint of the least discretion. In such situations they kill even one another upon the slightest provocation, the most ancient grudge or imaginary insult. The traders are in double danger. Their property is a tempting prize, and the color of their skins revives the recollection of that long list of injuries which the red men has re-

ceived from the white.* But the bill does not leave the evil without a remedy. The trade in spirits is prohibited; bond and security are exacted from every trader. Authority is given to agents, superintendents, and military officers, to search any package, upon suspicion or information that spirits are carried out to trade, and seize and forfeit all the goods, if any be found, and to revoke the license of the trader and put his bond in suit.

Mr. B. said that this was the true remedy for the evil; it went to its root; it was the first remedy that ever did so; and the senate would do him the justice to remember that he had suggested it, and he should do the regular traders the justice to say that he had received the suggestion from them.

On the second—The apprehension is imaginary. It is in proof before the senate, that the Indians are good judges of the quality and prices of the goods in which they trade, and of the value of their own furs and peltries; that, dealing always in the same articles, they are less liable to be imposed upon by their traders than white people are by their merchants. Besides, competition is the best security against imposition, and the bill affords that security. It lays open the trade, upon easy terms, to all American citizens, and the number of traders will be sufficiently great to reduce the price of goods to the lowest rate, and to insure the highest price for furs and peltries.

On the third—Mr. B. believed this to be a modern discovery—one of the notable conceits for which the senate was indebted to the superintendent of Indian trade at Georgetown. He had met with it himself, for the first time, in those morsels of eloquence with which this officer annually regaled "the intellectual faculties" of congress. He considered it, however, as one of the forlorn hope in that troop of bug-bears which was annually conjured up for the service of the factory system and which had no existence except in the fertile brains of the superintendent. Mr. B. would refer *him*, not the senate, to *Loskiel*, a writer on missions and Indian customs—a writer with whom the superintendent must be intimately acquainted, and whose authority as a christian, he could not dispute. He would there see, (page 99), that *peace* is indispensable to the operations of a trader; that, in war, he is pursued as an enemy, and killed as a prize; that all debts which are due him are cancelled by the hatchet; and that he cannot even return for along time after peace is restored, without danger of being robbed and murdered.

On the fourth—Mr. B. considered this objection as a member of the same family to which the last one belonged. He did not think it an easy business to convert Indians into farmers and christians. Hunting had too many attractions to be voluntarily abandoned either by the savage or the civilized man. The *Pawnee* chief spoke truth to the president, when he told him "that he would never bruise his hands with digging in the ground, while he could find a buffalo to hunt or a horse to steal." He spoke the language of all barbarians. They despise agriculture. War and hunting is their passions, and labor is left to the servile bands of women and slaves. When the objects of the chase are extirpated—when the forest no longer furnishes animals for food, and skins for raiment, then, and not till then, *necessity*, the true principle of civilization, compels the hunter to turn farmer, forces him to

*The expression "Long Knives" is as familiar now upon the frontiers of Missouri as it was upon the frontiers of Virginia a century ago.

dig in the ground for his bread and his clothes, gives him a fixed habitation, ideas of separate property in the soil, and thus providing for the wants of the *body*, leaves the *mind* free to imbibe improvement. The trader facilitates this process by promoting the destruction of the game; and if American traders are not permitted to do it, the English traders will. Restraining the one leaves the field open to the other; and, such is the anti-national and preposterous effect to be produced by shutting the fur trade against our own citizens on motives of humanity and religion.

Mr. B. said that the bill contained two other provisions highly just and necessary: one introducing a better system of accountability in all expenditures of the Indian department; and the other transferring those expenditures from Georgetown, in this district, to states and cities convenient to the Indian tribes. Under the former law the factory superintendent was the organ of government expenditure, and Mr. B. had shown on a former day (debate on the abolition of the factories,) the enormous abuses which were committed in purchasing in the *east* the articles which abounded in the *west*. The superintendents and Indian agents, under the new provision, will make the expenditures, and will purchase every thing, even British dry goods, cheaper on the banks of the Mississippi and Ohio, than they have been usually bought by the superintendent in this district.

Mr. B. left the bill to the decision of the senate, trusting that they would feel an additional motive for passing it, when it was seen to be the best which the government could adopt for controlling the Indians, and tended to distribute a part of the public expenditure to the west, and to encourage one branch of its drooping commerce.

MR POINSETT'S SPEECH,

IN THE HOUSE OF REPRESENTATIVES,

On the resolution declaring the justice and the expediency of recognizing the Independence of the Nations of the South.

I shall offer, said Mr. Poinsett, no apology to the committee for addressing them on this occasion. I have resided so long in the countries we are now called upon to place in the rank of nations--am so intimately acquainted with the causes and character of the revolution they have undergone, that I feel it to be my duty to convey to the committee, as briefly as I can, the information I possess on this subject.

Sir, if ever there was an occasion that justified a revolution, that called upon a people to recur to first principles, and to seek relief from the abuse of power, by an appeal to arms, this was one. The revolution of the Spanish colonies did not arise from a mere question of abstract right, but from actual suffering and grievous oppression; from causes radical and certain, though gradual in their operation; causes that would have inevitably produced the revolution without the violent crisis to which the mother country was exposed, and which only accelerated that event. It was felt in their government, in the administration of justice, in their agriculture, in their commerce, and in their pursuits of happiness. Governed by viceroys responsible in name, but, in fact, as arbitrary as the king of Spain himself; who commanded, not only the military governors and intendants of provinces, but presided over the tribunals of justice, let any one imagine what government the miserable colonist must have enjoyed under European

Spaniards vested with such powers, and who had nothing to dread but an examination of their conduct before a tribunal two thousand leagues distant from the theatre of their injustice. The colonist could not even enjoy the natural advantages by which he was surrounded.

The eyes of a jealous and suspicious government constantly watched the progress of his industry. No sooner did a settlement betray symptoms of prosperity, than it became the subject of oppressive legislation, and was overwhelmed by a swarm of officers, who, like locusts, destroyed the fair prospects of the harvest. The trade was not only confined to certain specified articles, but to a few favored towns. Rich as these favored regions are, and capable of bringing forth the productions of every climate, possessing great facilities of internal and of foreign commerce, they were reduced to indolence and penury by absurd and oppressive restrictions on their industry, on their trade, and on their private enjoyments. Without a market for their produce, it rotted on the ground. I have seen the most fertile districts of that fine country barren and desolate--I have seen the inhabitants, surrounded by all the beauties of nature, destitute of the ordinary comforts of civilized society. To those who have followed the progress of this revolution, and compared it with our own, the difference must appear striking, and, from the civil dissensions that have agitated those countries, it has been argued by some that the Spanish Creoles were incapable of enjoying the blessings of liberty--were unfit for self-government. In making this comparison between the two countries, it ought never to be forgotten that our civil and political institutions, our habits, our customs, our laws, our rights of property, scarcely suffered any alteration by the transition from a colonial to an independent state. The principles of free government, republican principles, had deep root in this country before our revolution; and if they have grown with our growth, and strengthened with our strength, they were as well understood then as now. The Spanish colonies had never been entrusted, as we had, with any part of the internal administration, and were ignorant and unpractised in government. The means of education, I mean of a liberal and enlightened education, were withheld from the Creole; printing presses were to be found only in a few of the larger cities, where, under a rigid inspection, a gazette and an almanac were permitted to be published. The policy of Spain repressed the advancement of knowledge in her colonies--ignorance and superstition were the powerful means employed to keep them in subjection. The despot is aware that those who possess knowledge will struggle for freedom, and will achieve it--for knowledge is power. Dread of religious toleration, and of what was worse, of spoliation, excited the clergy to oppose the revolution. The influence they exercised over the minds of the people, was unbounded, and, had not a few virtuous, well enlightened priests, espoused the cause of liberty, the colonies would still have been dependent. The aristocracy formed another and a powerful obstacle to the progress of this revolution--a class that abhor every constitution founded on an equality of rights--a class that would rather be deprived of those rights, than see all participate in them; that prefer any state of suffering rather than see power exercised by their inferiors. I speak now of the mass of titled men in the colonies. Some few were distinguished for their zeal in the cause of independence.

Another, and a very essential difference between the two countries, consisted in the number of Europeans, who had distinct privileges from the Creoles, for oppression did not there fall equally on all. They were, to be sure, the smaller party; but the wealth and power they possessed, their union, their influence, the habitual respect in which they were held, their ideas of their own superiority, rendered them a very formidable body. They were aware that their proud pretensions had aroused against them a feeling of indignation; that the oppressive measures they had promoted against the interests of the land, had produced hatred and an eager thirst for revenge—and common interest and common danger united them against the Creoles. They could not suppress the revolution, but they retarded its progress and procrastinated the contest. If, therefore, we regard the little advancement of these countries, their ignorance of the principles of government, their civil dissensions, and the procrastinated struggle for liberty after all opposition had ceased on the part of Spain, it impresses us more strongly with the urgent necessity that existed, of shaking off the colonial government. It was the government that placed obstructions in the way of agriculture and commerce. It was the government, that, forgetful of its primary obligations, suffered, nay, encouraged the daily violation of the rights and properties of its subjects. It was the government, in short, that sought to keep the people in the profoundest ignorance, as the means of keeping them in subjection. A revolution proceeding from such causes, was not to be prevented by empty declarations of abstract rights, such as were made by the mother country when struggling for her own existence. The decrees of the different governments established in Spain during that period, were magnificent in promise. The colonies were told they had the same rights as the mother country, but were treated as if they had none. They were deluded with hopes that were never realized, and were mocked with the semblance of a representation. Deputies assigned them, not elected by them. At no time was there more procrustian violence and oppression, than during the interval between the invasion of Spain and the insurrection of the colonies.—These causes operated alike on all, and the revolution commenced without previous concert, almost at the same moment, in every part of this vast continent. It has triumphed not only over the opposition of the mother country, but over civil dissensions and the storms of party. In Caracas, where the revolution first commenced, its success was retarded by one of the most awful events recorded in history. The city was almost entirely destroyed by an earthquake, on the anniversary of their revolutionary movement. The clergy availed themselves of this event, and assisted by the superstition of the people, re established, for a short time, the royal authority. The brave and patriotic Bolivar kept up the spirit of the revolution. His active exertions renewed the struggle for liberty, and his zeal and perseverance restored his country to freedom. By his conduct and valor, the most formidable armament ever sent across the Atlantic, has been destroyed. His efforts have united Caracas and New Grenada into one republic, and he has spread the principles of independence, and of free government, to the shores of the Pacific.

Buenos Ayres has triumphed over the repeated and formidable efforts of the mother country to subdue them. They have had, besides, to contend

against a powerful party of royalists in the interior provinces. The wealthy Creoles of that country could not be easily roused to take an active part in a contest, the issue of which was uncertain. No doubt they preferred a national government, and freedom of commerce; but that wish was not strong enough to vanquish their love of repose and indolent habits, to urge them, in short, to long and painful sacrifices. The royalists are still in possession of some of the finest provinces of La Plata.

The interior provinces of the viceroyalty of Lima, are still in the hands of the royalists; were, I should have said—for it is reasonable to expect that the example of the capital will be followed by the provinces. Chile, agitated for some time by civil dissensions, and overrun by the army of the royalists, has at length established tranquility at home, and not only driven out the invaders, but carried the war successfully into their strong hold. The revolution in Spain is due to the efforts of this brave people. Mexico, where the revolution commenced at an early period, and where, after a desperate struggle, it appeared to be quelled, is now independent. The spirit of the revolution continued to exist among the people. Hidalgo, and the gallant men who fell in the first revolutionary movement, did not perish in vain.

To prove the utter inability of Spain to recover possession of these countries, it is only necessary to take a view of their vast extent, of their population and resources, and to compare them with those of Spain, agitated as she now is, by intestine commotions, and, for many years past, regarded as the country of Europe the most destitute of industry, of commerce, and of enterprise. The mere recital of the names which distinguish the Spanish colonies in America, extending over 79 degrees of latitude, with a space of at least 1900 leagues, interposed between its most distant settlements; the vast extent of their mountains, their magnificent rivers, the varied productions of the soil, the riches of their mines, impress us at once with the magnitude of their resources. Buenos Ayres, comprising the finest provinces of Peru, the rich mines of Potosi, and the fertile province of Cochabamba, with a population of one million and a half; coining annually upwards of five millions of dollars, exporting ten millions, and importing about the same amount. Chile, the garden of the world, possessing the most fertile soil, productive of all the fruits of Europe, and of the tropics, equally rich in the precious and in the useful metals, with a population of more than one million, coining about three millions of dollars annually, exporting four millions, and importing more than three millions. Lima, I mean the viceroyalty of Lima, including Cusco, the ancient capital of the Incas, with a population of 1,200,000 souls, coining annually five millions of dollars, importing ten millions, and exporting thirteen millions. New Grenada, containing not less than two millions of inhabitants with a trade of more than six millions of imports, coining annually three millions of dollars. Caracas, with a million of inhabitants, and about the same resources as New Grenada. These two countries have since been united under one government, the Republic of Colombia. Guatemala, the country which comprises Costa Rica and Nicaragua, and bounds on New Grenada, a fertile and well cultivated country, containing one million and a half of souls. New Spain, or Mexico, contained in 1808, a population of five millions nine hundred thousand—a population not likely to have been diminished since that period. Coining at that time twenty-

three millions of dollars annually, importing twenty millions, and exporting between twenty and thirty millions. The detached governments contained nearly a million of inhabitants, making an aggregate of 15 millions.

I will not detain the committee by going into an examination of the resources of each particular state. It will be sufficient for my purposes to particularize those of Mexico. The whole annual agricultural product of Mexico was estimated at 29 millions of dollars. The annual product of the precious metals at 23 millions; the annual product of the manufactures at 8 millions; the exports at 22 millions; the imports at 20 millions; the revenue of Mexico, for customs and taxes, amounted to not less than twenty millions.

If, says baron Humboldt, the political strength of a nation depended only upon the extent of country, and number of inhabitants, New Spain might rank with the United States. Such was the state of those countries under all the disadvantages of the colonial system, for I have purposely taken the statement previous to the revolution. Thus we see that the total population of the Spanish colonies exceeded fifteen millions; the imports were never less than sixty millions, and the exports seventy.

The estimated population of those countries is more likely to fall short of the truth, than to exceed it. The census was taken for the purposes of taxation, which induced the inhabitants to conceal their real numbers. And here let me remark, that this population is more effective; and the proportion of whites greater than has been generally supposed. The most favorable statement ever published of the population of Spain, previous to the late wars, made it amount to 10 409 879. A population much thinned by wars, and pestilence, and famine, within the last ten years. The exports of Spain amounted to about sixteen millions of dollars, and the imports to between fourteen and fifteen millions. Let me ask, then, whether it is probable that Spain, with not quite two-thirds the population, with inferior resources at all times, and those much diminished by this defection, can reconquer countries at a distance, some of them of two thousand leagues, and none less than one thousand? The history of Spain herself is an answer to this question. With a courage and energy, that a determination to be free alone could give, Spain repelled the hosts of France that invaded her territory; weak in numbers and resources, when compared to France, they successfully resisted the utmost efforts of that power to subdue them. One word, sir, on this subject. It is too much our custom to speak contemptuously of this brave and high minded people; they were long bowed down by an iron despotism. But other days have dawned on that fair country; after resisting with unexampled resolution, foreign usurpation, they have resolved to be free. Their sufferings, from the vices and defects of long servitude, ought to excite our sympathies, and their efforts to establish free and liberal institutions, entitle them to our respect.

It has been supposed by some, that the independence of these colonies would injure the prosperity of the United States; possessing a more fertile soil, and raising the same productions, they would drive us from the markets of Europe. It has been said that colonies are safer neighbors than free states, and that so long as they were bound down by the oppressive restrictions of Spain, they would neither be dangerous rivals or formidable competi-

itors. It is unwise, therefore, in us to offer them any encouragement. Not only the best feelings of the heart revolt at such a conclusion, but it is manifestly false; it is our interest that they should be free. With an extensive line of coast, with numerous navigable rivers, facilitating their internal trade, with a population of more than 15 millions, almost without manufactures, with a demand for one hundred millions of dollars, and without the means of carrying on their foreign commerce, these countries present a market for the skill and industry of our merchants, which promises the greatest advantages. Let any one look back and observe how the demand has every where increased with the increasing produce.

The wars and revolutions which have lately afflicted Europe, are known now only by their beneficial effects. Effects to be seen in the amelioration and extension of their agriculture, in the increase of their towns and villages; in the augmentation of manufactures; in the benefits of education; the desire of freedom, and in the general welfare and prosperity of the country. It is impossible to pass through any part of Europe, at present, without being struck with the improved condition of the people. An improvement which, as it advances, will augment the demand for all the productions of the west. The intercourse of the provinces of Spanish America with these countries, will augment their means of information, and will enlighten them on the subject of government, on public welfare and private happiness. With the increase of knowledge, will arise free and well organized institutions, the refinements and various wants of civilization. This cannot fail to produce a demand for all the manufactures of this country, and for all the objects of trade. I had intended to have entered, fully, into the importance of our political relations with these countries. I fear, however, that I should exhaust the patience of the committee were I to attempt it; and I feel that I should exhaust my own strength. I am compelled, therefore, however reluctantly, to waive this part of the subject. The question for the consideration of the committee is, whether we shall now adopt a measure called for by every motive of feeling and of policy, at a moment when it may give us weight and influence in those countries; a measure by which we shall at once assume the station that becomes our character, among the great republics of this hemisphere; or whether we shall wait the slow and unwilling consent of Spain, or the uncertain policy of the other powers of Europe.

The latter have refused to co-operate with us. It does not accord with their avowed principles to countenance any resistance against the abuse of power, however flagrant and unjust. In all ages Spain has been slow to acknowledge the independence of those countries which have been driven to rebellion by her oppression. It is not probable that she will pursue a different policy with regard to her colonies in America. In this particular, and in this alone, I differ from the report now under consideration. It proves incontestably the right and the expediency of adopting the measure recommended by these resolutions. It is a clear and convincing argument, highly honorable to the committee, and, as I entertain great deference for their opinion, it is with reluctance I differ from them in this particular.

The committee think it manifest, from the report of the committee of the Cortes, "that Spain had not only renounced the feelings of an enemy towards the colonies, but had been prepared a year ago to

consent to their independence, but for *particular occurrences.*" They are led to this conclusion from the terms in which the committee speak of "the measure demanded by the crisis, as one indicative of a new and glorious revolution; that it was demanded by America, and by the true interests of the Peninsula; that, from it Spain might reap advantages, which otherwise she could never expect; and that the ties of kindred and the uniformity of religion, with commercial relations, and those emanating from free institutions, would be the surest pledge of mutual harmony and close union."

I agree with the committee, "that no measure short of a full recognition of unconditional independence could have deserved the character nor been capable of producing the effects ascribed to it." But, sir, what say the documents on your table? "The American deputies, disappointed in their expectations, presented propositions, in substance, Mr. Brent tells us, the same as those that at first met the approbation of ministers, and which would have been adopted, but for particular occurrences. These propositions contain no demand for an acknowledgement of Independence; but merely for permission to establish an internal administration, dependent upon the mother country; freedom of commerce and equal rights with European Spaniards. This was, in substance, the measure first proposed by the committee of Cortes, and which was subsequently rejected by the king, "as a violation of the constitution; that public opinion was not prepared for it; that it was against the interests of both Spain and America." Something less favorable must be intended by the king, when he says that "his government, urged by the Cortes to propose the measures they may think most proper for their welfare, or a consideration of the state of these countries, they will do so immediately, and with the utmost generosity." No, sir. The recognition of the independence of the Spanish colonies would be opposed by the interests and by the prejudices of the Spanish nation. Independently of the revenue derived by the crown from those countries—a revenue of more than 8 millions of dollars, the patronage they afforded was immense. Places in Spanish America were the reward of services, and the means of corruption. The aristocracy, who profited by those places, and who regarded them as the means of maintaining their splendid establishments in Europe, will abandon, with reluctance, the prospect of wealth America presented. The clergy will exert their influence to prevent it.—America was to them a source of ambition and of profit. The possession of America extended their spiritual dominion, and augmented their temporal wealth. The merchants, who, by a code of laws, framed in the spirit of restriction and oppression, monopolized the trade of the colonies, will oppose their recognition; and the people generally will not consent to relinquish, without a desperate struggle, the dominion over the colonies, connected, as it is, with their most pleasing recollections of national honor and glory.

It is in vain to say that they are really independent. The Spaniards will not abandon all hope of recovering possession of them until they are recognized by the powers of Europe. It is well known that there are many of the former inhabitants of St. Domingo, now in France, who still cherish the hope of being restored to their estates in that island.

These motives will operate powerfully upon the Spanish nation, and, it is to be feared, will not only prevent their recognition of the independence of

these countries, but lead them to view this measure, on our part, as an unfriendly, perhaps, as a hostile act. They certainly have no right to do so according to the laws and usages of nations.—But the resentment of wounded pride is not always restrained by considerations of national law.

But, sir, this risk, even if it were less remote, ought not to deter us from adopting the resolutions on your table. It is a measure called for both by justice and policy. The conduct of the government, in relation to this contest, has given the best evidence of our respect for the rights of Spain. So long as that nation made an effort to recover her dominion over her colonies, the United States abstained from recognizing their independence. But now, when all opposition has ceased on the part of Spain; now that those countries are free from the intestine commotions which divided them into factions, and rendered it difficult to distinguish which was the legitimate government, it would be unjust to withhold it.

I hope, therefore, that the committee will adopt the resolutions now under consideration. It is due to the rights of the free and independent governments that expect it at our hands, and due to our own character and station.

MR. McDUFFIE'S SPEECH,

IN THE HOUSE OF REPRESENTATIVES—APRIL 16,
On the bill in addition to the "Act to reduce and fix the Military Peace Establishment.

Mr. McDuffie said, the gentleman from New York, (Mr. Woodcock,) had presented to the committee a project, by which he promised to realize extraordinary results. But he thought the gentleman would experience the fate of all projectors; and that his calculations, by which he had deceived himself, and unintentionally misled the committee, would be found, upon examination, to be altogether fallacious. He said, that he, too, had consulted documents, and made calculations; and, though he admitted that his were partly conjectural, as all calculations must be on this subject, yet he would venture to say that they approached as near the reality as those of that gentleman. The gentleman proposes, said he, to effect an annual saving of four hundred and forty or fifty thousand dollars, by consolidating the regiments of artillery and infantry. This consolidation would have the effect of destroying the existing proportion between the officers and men, and of disbanding considerably less than one half of the commissioned officers.—Now, said he, the whole annual expenditure for the pay and rations of all the commissioned officers in the artillery and infantry, amounts only to but little more than three hundred and twelve thousand dollars. If to this we add one hundred and twenty thousand dollars for contingent allowances, it will amount to something less than the gentleman proposes to save by a partial reduction! By what principles of calculation, a part could be made to cost more than the whole, it was for the gentleman to explain. But, Mr. McD. said, he had minutely calculated the pay and rations of all the commissioned officers proposed to be disbanded, and they amounted to less than one hundred thousand dollars; and if even fifty per cent were added for contingencies, the gentleman's four hundred and fifty thousand dollars would dwindle into one hundred and fifty. But, said he, it is a very mistaken supposition, that even this sum will be saved by the proposed consolidation. The gentleman has entirely overlooked the fact, that all the

subordinate officers of the administrative branches of the staff, are filled by details from the subalterns of the line. What gentlemen improperly denominate the supernumeraries of the army, are not, therefore, unemployed. They are efficiently and profitably employed in performing those functions, by which the expenditures of the army have been so extensively economized since the present organization has been fairly in operation. He would not pretend to speak with absolute precision, but he should hazard nothing in asserting, that at least one half of the subalterns of the line, which the gentleman's amendment would throw out of service were engaged in the performance of staff duties—duties equally indispensable to the efficiency and economy of a military peace establishment; and for which officers must be provided, to whatever point of depression we may carry the general reduction of the army. What then, said he, will be the consequence of disbanding the officers detailed from the line to perform these duties? A saving of expenditure? No, sir, but a change of the officers who are to be the objects of it. And the only difference would be, that we should have those duties badly performed, at the same expense, by officers who have no rank in the line, divested of all military pride and military experience. To this extent, therefore, he said he might safely say that the scheme of consolidation would produce positive and uncompensated evil; change without improvement, and derangement without economy.—But, said he, there is still another source of delusion in the gentleman's calculation. His professed object was to bring back the relative proportion between the officers and men, to the standard of the peace establishment of 1802. But, if he will extend his calculations a little further, he will find that his amendment will reduce the relative number of officers much lower than it was even in Mr. Jefferson's peace establishment. In that establishment there were sixty-four men to a company of infantry, and fifty-six to a company of artillery, making an average of sixty men to a company.—Now, if we divide the whole number of the present peace establishment, by the number of companies proposed to be retained, we shall find that each company will contain ninety men; fifty per cent more than the number that constituted a company in Mr. Jefferson's peace establishment. If, then, we do not carry the consolidation principle farther than it has been carried in any former administration, it will be found that this magnificent scheme of saving will almost entirely vanish. In fact, said Mr. McD. the gentleman has alarmed himself, and perhaps the committee, by exhibiting the fearful aggregate of more than fourteen hundred officers; not reflecting that two thirds of this number were officers of the ordnance and engineer corps and non-commissioned officers. No man would propose to abolish any part of either of those corps, for, if we had not ten privates in the army, it would be on all hands admitted that they must be retained. The whole number of commissioned officers in the artillery and infantry, upon which alone the amendment can operate, is four hundred and twenty-seven.

But, sir, said he, I have now done with the calculations of the gentleman from New York, and must solicit the attention of the committee to topics of infinitely greater importance. The gentleman from Tennessee, (Mr. Cannon,) seems to be quite alarmed at the idea of having any military knowledge in the country in time of peace, and exhorts us to place our entire reliance on the militia in the event of a war. These fatal and delusive

doctrines, he said, which were but too extensively prevalent, demanded the most serious refutation. A great question is now presented to us, and we should approach it with a gravity proportioned to its magnitude. We are called upon to determine what shall be the policy, the permanent and settled policy of this government in time of peace, in reference to those great national exigencies which must inevitably grow out of our relations with the other powers of the world. The theory of our government is almost completely adjusted; and the embarrassing difficulties which have been experienced in the practical operation of our system, have almost entirely passed away. But that remains to be determined, which is not less important, whether, by a liberal and enlightened policy, we shall sustain the high rank in the great society of nations, for which Providence seems to have formed us; or, by disregarding the dictates of wisdom, and the impressive admonitions of our own experience, sink into feebleness and contempt, putting to hazard all that is dear to us, and all that is interesting to the friends of human freedom throughout the world. There is not, said he, on earth, a nation occupying so important and responsible a station as the United States. The only established republic in existence, she is charged with the maintenance of those great principles, which are destined, as I firmly believe, to overthrow every despotism in the civilized world.—Sir, they do not know the people of this country, who suppose them to be actuated by a spirit of narrow parsimony, and that they will not cheerfully bear all the burdens necessary to sustain the character of the nation, and vindicate her rights. It is a slander upon them to suppose that they will not pay the price of their liberty, by making the sacrifices necessary to defend it. You could not offer a greater insult to an American, to ask him whether, when the rights and the honor of his country are assailed, he would count the cost of defending them.—I beseech gentlemen to consider the character of the people they are about to disarm. No people on earth are more high minded or more prompt to resent an insult or an injury. They possess, in an eminent degree, that lofty sense of national honor, without which no nation can be either respectable or happy. And it is for this people, rising rapidly to greatness, and having in their political institutions, as well as in their commercial relations, never ending sources of jealousy and collision, with the great powers of the civilized world, that we are called upon to adopt a policy which nothing could justify but the prospect of an eternal peace. By a strange infatuation, we seem to be so prompt to adopt measures that may produce war, as we are reluctant to prepare for it. What a scene did we exhibit but the other day, when the question of recognizing the independence of Spanish provinces was presented to us? How did we then reason?—Were there any cold calculations of probable danger? We saw nothing but a brave and oppressed people, who had been for years struggling with difficulties, which they had at length almost surmounted. We were asked if we would receive them with a fraternal embrace and introduce them into the society of nations? The heart of every American responded in the affirmative. Then, indeed, we were all Americans. With a noble disinterestedness we unanimately adopted a measure, to which we were stimulated by no prospect of gain, and which may seriously jeopardize the peace of the country. I will not say that I believe it will produce a war with Spain. I incline to believe, on

the contrary, that it will not. But it would be blindness to say there is no danger. For, though Spain is feeble and distracted, and could promise herself nothing from a war with this country, yet, with the encouragement and secret aid of other powers, she might carry on a desolating war upon our commerce. And there is one power in Europe that will be prompted, both by political feeling and commercial interest, to foment a war between this country and Spain. It cannot be disguised, however we may lament it, that America and Great Britain are destined to entertain towards each other feelings of rivalry, approaching almost to hostility and hatred.

Every historical recollection and every anticipation of our future greatness, all that is past and all that is to come, warns us that these two nations, the dis severed members of the same empire, are destined to be the Rome and Carthage of modern times. From sources the most authentic, from every respectable writer and respectable witness, we are assured that there is but one thing in which all classes and all political parties in Great Britain concur; and that is, a deep and settled feeling of hostility to the Americans. The very name is execrated. And what is the fact in relation to ourselves? What is the first lesson which the father instils into the infant mind of his son? It is, that when he grows up to be a man, he must fight the British. I do not mention this with the view of being responsible for its philosophical correctness, but for the purpose of showing what the fact really is, in relation to the mutual feelings of the two countries. And will any man flatter himself that those feelings, unlike all the other strong sentiments of the human heart, will remain forever inactive? But upon mere commercial principles, Great Britain has much to gain from a war between the U. States and Spain. Such a war would throw the whole of the carrying trade, and most of the direct trade now enjoyed by us, into the hands of G. Britain. For, however contemptible we may consider the naval power of Spain, her privateers and ships of war could so annoy our commerce, that the enhanced price of insurance would drive our shipping from the ocean, and leave Great Britain in the undisturbed enjoyment of a monopoly. Sir, said he, it is under these circumstances that we have recognized the independence of the Spanish American provinces; a measure in every respect just and magnanimous, but certainly not characterized by a cold and calculating prudence. And yet this is the moment gentlemen have selected, with what consistency it is not for me to determine, for destroying entirely the utility of the army, considered as a preparation for war. For I shall hereafter show, that the present organization of the army is of the very essence of a peace establishment; viewed in reference to war, the only object which can justify its maintenance. But we are told that the militia are capable of defending us, and that this nation ought to be taught to rely wholly upon that species of force. Sir, I do declare, upon my conscience and before God, that there is not, in my opinion, amidst all the heresies incident to this young nation, a more fatal delusion than this. We may trace its origin partly to an injudicious and indiscriminating application of general maxims against standing armies in time of peace, and partly to our classical recollections. Greece and Rome, the nations of antiquity with whose history we are most familiar, and whose achievements we most admire, were nations of soldiers. War was their trade; rapine and plunder the sources of their public and

private revenue. The whole mass of their population was trained, by perpetual wars, to the use of arms. In a word, the whole nation was a standing army; and such was the rude simplicity of the art of war, that not only was every citizen a soldier, but almost every soldier was capable of commanding. Hence the provision in the Roman laws that prohibited the consul from commanding the armies of the republic two years in succession, was productive of no great inconvenience, though in the organization of modern armies, such a regulation would be utterly absurd and ruinous. And hence, also, the absence of standing armies, distinct from the great body of the community. The defence of the republic was left, not to untrained militia, but to citizen soldiers, drawn out by conscription or voluntarily rushing to their favorite pursuit. But the habits, the pursuits, the propensities, and the entire structure of modern society are precisely the reverse of all this. Our occupations are essentially peaceful. Each individual is dedicated to the pursuit of his own private interests, and in this way, most effectually contributes to the grand aggregate of national wealth, power and happiness. This is eminently the case in the United States; and the very essence of the freedom of which we are so justly boastful, is the security and the safety with which the citizen pursues his occupation. Now, if we abandon the idea of defending the country by a standing army, we must be inevitably driven into the conscription system—a system wholly inconsistent with the state of our society—a system at once intolerably oppressive to the people, and absolutely insufficient for the great purposes of national defence. I understand the gentleman from Tennessee (Mr. Cannon) to admit, distinctly, the consequence which I have stated as resulting from his position, and to maintain the policy of the conscription system. I think a slight examination will dispel this delusion. One would suppose that no man would deny the general proposition, that, whether the country shall be defended by conscripts or regulars, they must be trained and placed under the command of skilful officers. To deny this, would be to set at defiance every dictate of reason and every lesson of experience. War, in its present state, is the most complex and difficult of all arts. There is none so extensive in its elements and so infinite in its combinations, requiring so perfect a union of theory and practice. There is scarcely any limit to the increase of physical power which an army may derive from training. There was, perhaps, never an army on earth, not excepting those of Frederic the Great or of Napoleon, that might not have been visibly improved by longer training and more experience. Then, how perfectly idle is it for us to imagine we can, with untrained militia, led by inexperienced and unskilful officers, encounter with success the disciplined troops of other nations? This would be denying the efficacy of experience and practice, in an art whose whole power depends upon them. While then other nations keep up a certain state of military skill and discipline, it would be madness in us to neglect it. Then what is the consequence? According to the views of the gentleman from Tennessee, we must train, in time of peace, our entire population. This result cannot be avoided. And thus, instead of a standing army of six thousand, we should substantially maintain one of nearly as many millions.

Sir, such a scheme, besides that it would be harassing beyond endurance, either in peace or in war, is utterly visionary and impracticable. You cannot

to a nation of freemen, of the education and habits of the Americans, to the exact and slavish discipline of soldiers in time of peace; and if you could, it would be the most expensive and ruinous preparation for war that could be devised. Disregarding the great principle of the division of labor, it would disturb all the relations and pursuits of society, and render peace but little preferable to war. So that we are driven back to the question, Whether we shall maintain a military peace establishment, organized for war, and susceptible of the utmost expansion in that event, or rely upon the militia, without training and without competent officers for the first two or three years of every war? We have heard much of the bravery of the militia, and no man will go farther than I will in doing justice to their gallantry and devotion. I rejoice in the exalted character of my countrymen, and indulge the proud belief that there is not on earth so brave and so generous a population. But they will not thank gentlemen, I am sure, for that sort of kindness which praises and then sacrifices them. When the country shall be involved in difficulty and embarrassment; when our soil shall be contaminated by the foot of an invader, who can doubt that every American would nobly and fearlessly encounter every danger, and sustain every burden, demanded by the safety and honor of the republic? But what is the just inference? Because they are brave, shall we send them to be slaughtered in an unequal conflict with the trained legions of European despots? Because they are devoted, shall we offer up their blood in disastrous and unprofitable battles, where all their heroism cannot save the arms of the republic from discomfiture and disgrace? Sir, it is a cruel policy thus to tax the noble virtues of this people—to graduate the sufferings and the sacrifices to which you expose them, by their disposition to sustain them. And after all they shall suffer, they will not even have the consolation to reflect that their sufferings have saved their country from desolation. You may find victims in abundance ready for the altar; you may build a wall of the dead bodies of our slaughtered countrymen, but you cannot, by that means, secure and defend the country. What, sir, was our experience in the late war? The blood is hardly cold that was so wastefully shed in that contest, and we are called upon to disregard its solemn admonitions. Even here, in the seat of legislation, we are surrounded with monuments, at once of the Gothic ferocity of our enemy and of our own disaster and disgrace; and before the marks of the spoiler are effaced, we seem to have lost all recollection of what we have suffered. After the experience of the late war, there was but one opinion among the statesmen who had been most active in its prosecution. They were convinced that the honor and safety of the country demanded that we should assume a respectable attitude of defence. The nation demanded it. And, sir, if the present administration, regardless of the lessons of our past experience, had not pursued their present policy, but left the country unarmed and defenceless, how heavy and awful would have been their responsibility in the event of another war!—The blood of the brave, the tears of the widow, and the cries of the orphan, would have risen in judgment against them. I do most solemnly protest against this cold hearted economy, which, to save a dollar, would sacrifice the life of a freeman. I protest against this vacillating policy, vibrating from one extreme to another, and which, to avoid those burdens we can easily bear in peace, causes

millions of money and currents of blood to be squandered in vain in time of war. This is the fatal weakness against which every nation ought to guard. We are too apt to imagine that what now is, will always continue, and to neglect, consequently, all preparation for the storm till its desolation has commenced. This is the weakness of children. But even they will not put their hands a second time into the fire, and I trust we shall not act less wisely. I will venture to assert that no nation ever suffered as much as did the United States in the late war, if we take into consideration the duration of the war, the geographical position of the country, and its latent capacities for such a conflict. And how unjust is that policy which throws the whole weight of suffering upon that disastrous period which is least capable of sustaining it. In war we tax the people though their commerce is destroyed, and the productions of their industry perish on their hands. And yet in peace we are to make no preparation to mitigate the shock.

But preparation is not only necessary to enable us to prosecute a war with success, but it is the most effectual means of preserving peace. We invite aggression by being unprepared to repel it. No truth is more fully established than this, by our own experience. What was the condition of this nation before the late war with Great Britain?—From about the year 1806 or '7, no high minded nation ever suffered so deeply and patiently. It was unmixed and unmitigated suffering—the privations of war, without its consolations. Why was it inflicted, and why did we endure it? Because, sir, we were not prepared to redress our wrongs. Our enemy knew this. He was as well apprized of our situation as we were ourselves. And how did he reason? Why, said he, "I will cut off this branch of their trade and see how they will bear it." And we, making a cold calculation of profit and loss, said, "This is not worth defending by war." Finding us tame and submissive, he lopped off another branch of our trade, and we still submitted, because a war would cost more than we could gain by it. And thus one aggression prepared the way for another, until we reached the lowest point of national degradation. At length the wounded spirit of an indignant people called for war. And what were we then told upon this floor? That, though our commerce was swept from the ocean, and thousands of our citizens were held in disgraceful bondage, we ought to submit patiently, and trust to the magnanimity of our enemy, because we were unprepared to defend our rights and avenge our wrongs. If we had commenced a formal preparation for war, I doubt not the enemy would have retreated. And if we should hereafter pursue this wretched policy of preparing for war, after we have received the injury which justifies it, we shall be the sport of every nation that can gain by destroying our commerce. For they will continue their aggressions until we are prepared to obtain redress, and then will abstain until we have again disarmed ourselves. That Great Britain did not pursue this course, I ascribe to her firm belief to the very last, that we would not go to war unprepared. But, unprepared as we were, we rushed fearlessly into the conflict. The nation resolved nobly to hazard every thing to redeem its character. And what confirms my views of British policy, the edicts by which our commerce was annihilated, and which were the prominent causes of the war, were soon repealed after it commenced. But, having commenced the war, we determined

to persevere until our rights were secured. By the favor of Providence we succeeded; but when I look back upon the sufferings we endured, and the perils we escaped, I pray to God that I may never see my country again involved in a crisis so awful.

But we are told of the dangers of a standing army in time of peace. Sir, if a standing army is at all dangerous, it is not in peace, but in war, that our fears should be excited. And the more unprepared the nation is at the beginning of the war, the less military knowledge there is diffused thro' the country, the greater will be the danger. When a country is weakened by disasters, and humbled by disgrace; when all the ordinary means of safety have failed, then is she driven by desperation to confide the utmost power, and offer the most unbounded homage to some great military chieftain who shall rise up to redeem her from approaching ruin. Then, sir, even gratitude is dangerous.—What was the fact in the late war? The military engrossed all the admiration, the rewards, and the honors of society. No one was heard of but the brave and heroic defenders of the country. But how are they now treated? With cold neglect and cruel contempt, as mere outcasts from society. Yes, those to whom in the hour of danger we almost bent the knee of homage, scarcely receive naked justice at our hands. If this is wise, it is certainly not consistent. But it shows clearly that our army is not dangerous in peace. The only objection to an army in peace, is the expense of maintaining it; and I shall now proceed to show that, whether we regard economy or the efficiency of a peace establishment, the present organization ought to be preserved. In this view of the subject, the question is, what organization will, at a given expense, give us the greatest capacity for war? It must be admitted by every one, that the success of modern wars principally depends upon the skill of the commanders. And it is equally clear that, to form officers, much time is required, in comparison with what will be sufficient to train common soldiers.—We have been told that, in the late war, the officers of the former peace establishment obtained no distinction.

Gentlemen are mistaken in point of fact. Have they forgotten the names of Scott, who was among the first to carry the terror of our arms into the frontier of the enemy? Of Gaines, whom we shall long remember as the hero of Fort Erie? and of thirty others who signalized their skill during every period of the war? But even if the fact were as gentlemen suppose, I would not admit their inference. No historical events could convince me that, as a general rule, officers can be created without much study and long experience. To be sure, as gentlemen say, we have materials enough to make officers, if this could be done by the mere imposition of hands, or the investiture of a red coat. I know we have had many such officers; but we have found, from experience, that a red coat does not always give assurance that there is an officer and a soldier under it. Gentlemen really talk as if we had only to stamp on the earth, and not only armed men, but trained armies, would rise up to defend us. The hero of New Orleans has been held up as a prop to a falling argument. But Jackson is a man of extraordinary genius, and nothing can be more unwise and unphilosophical, than to draw general conclusions from a military prodigy. Taking it for granted then, that skilful and experienced officers are indispensable, and that it is the work of years to make them; it will follow that the ex-

tent of your capacity for war depends upon the number of competent officers. Hence the importance of maintaining in peace the skeleton system, by which the military establishment can be promptly increased to double its present number without appointing a single new officer, or changing in any respect the organization of the army. It will only be necessary to place a new recruit by the side of each regular soldier, and by this simple operation the work is completed. And it is admitted that in three months raw soldiers, thus thrown in, can be adequately trained. Thus our present establishment give a capacity for war, equal to what we should derive from 12,000 men upon a war establishment. Nothing is more certain than that the present organization is the most economical, as it gives us a given military preparation for little more than half the sum it would cost, if the regiments and companies were kept full, as proposed by the gentleman from New York. While on the subject of economy, I will advert to a single fact, to shew the effect of false economy. I believe it can be shown that fifty millions of dollars were wastefully expended in the last war, for the want of such an organization as we now have. If this sum were converted into a permanent fund, the interest of it would maintain, forever, a much larger peace establishment than the present! Yes, sir, the fact cannot be too deeply impressed, that in a little more than two years of war, the mistaken system into which gentlemen would now carry us, besides the cost of blood, subjected the nation to the actual loss of a sum which would support an army of ten thousand men for as many centuries. I do then beseech gentlemen, by every consideration, to reflect upon the consequences of the proposed reduction. I beseech them, by the lessons of history, by the bloody record of our own disastrous experience, and above all, by the precept of the Father of this republic—a great and venerable name, destined, I firmly believe, to reclaim us from a downward and degenerate policy, where even reason shall fail. For, of all the great men in America, Washington alone will be found, “in war and in peace,” to have been “wise unto salvation.”

Governors' Messages.

Extract from the Message of GABRIEL HOLMES, governor of the state of NORTH CAROLINA, addressed to the General Assembly, at Raleigh, November 1, 1822.

GENTLEMEN,—Called together to consult for the general welfare, from among our fellow citizens in the various counties of the state, and well acquainted with their interests and wishes, you have ever been viewed as a most interesting body. It is with peculiar satisfaction that I once more witness your meeting, confident as I am, that under the guidance of our excellent constitution, you will steadily pursue the common good. Chosen from among the people for your knowledge of their interests and devotion to their welfare, we may with safety rely on your patriotism and firmness; never to abandon or neglect them, or suffer yourselves to be warped by sectional prejudices and local views, losing sight of the good of the whole.—For let us ever bear in mind, that the good of the whole, if not immediately, will always eventually prove the good of every individual.

I beg leave to call your attention, in a few observations, to some of the most prominent objects which claim your deliberation, without pretending

even to name many things which your wisdom will suggest as requiring legislative interference. But it will be found, that by effectively promoting a few objects of fundamental importance, others, which are highly desirable and useful, will follow of consequence, or at least with much less immediate aid.

The improvement of the navigation of our rivers—an object which has for some years occupied much of the attention of the legislature, and excited a great deal of interest throughout the state, will no doubt again come before you. It is a desirable thing to all, that every facility within the power of the state should be afforded to our internal trade. It gives excitement to industry, and produces individual and state wealth; it improves the agriculture of the country, by making it the interest of every man to add to the productiveness of his lands. As it enhances the value of the farmer's lands, it makes him content to live and labor on his fields, rather than abandon them for a trifle, and rove in quest of wealth in countries more convenient to market. It diffuses knowledge among the people, by throwing open the avenues of communication, and affording free scope to the interchange of opinions, and the circulation of useful information; and so intimately are the operations of government connected with the agriculture, the arts, and the commerce of the country, that the farmer, while his interest leads him to avail himself of knowledge within his reach relating to his avocations, will necessarily be led, in proportion to his opportunities, to a knowledge of the nature and administration of his government; taught to estimate his national blessings; to watch with an intelligent eye the conduct of those in office; and to guard against the artifices of designing and intriguing men. In fine, so general and extensive is the influence of convenient channels of intercourse, that there are but few objects of legislation of common interest, with which the subject has not some important relation.

It is therefore unnecessary to say, that I feel a deep interest in the internal improvement of the state, or to endeavor to impress more deeply on your minds its very great importance. The laudable zeal which you have so long manifested in this grand project, is an evidence that you are sensible of its importance, and will not neglect it. But as to the particular objects which should be first effected, there has, I know, been a diversity of opinion. We have, I think, all seen, that had our limited funds been originally directed to a few points of primary and more general importance, and not dispersed in small portions throughout the state, the result would have been more beneficial to every section. Had we begun at the mouths of our rivers, and proceeded upwards, every step would have given additional impulse to those immediately interested in the work, and this impulse would have continued to spread until the whole state would have felt it. For example—if the channel of the Cape Fear, between Wilmington and the Bar, could have been deepened so as to admit vessels that could cross the Bar, to come up to town with their loads, and to go out with the same freight, without the aid of lighters, it is easy to perceive to what great extent the effects would have been experienced, both in stimulating the navigation company to vigorous exertions in clearing the river higher up, and in affording better prices to the planter for his produce, and lessening the cost of salt and other articles. But the truth is, that by dividing our strength so much in attempt-

ing to effect every thing at once, we have effected, comparatively, nothing, and it is to be feared that few facilities to trade exist now that did not exist before the commencement of our improvements. And what, but the one before assigned, can have been the cause of the failure of our works? We have for several years had the services of an able engineer, who has explored our rivers, pointed out the various obstructions to their navigation, and given instructions in what manner they were to be removed; a zealous and intelligent board of gentlemen have been watching over every project, and pushing them forward by all the means in their power, and still our progress is so gradual as to be almost imperceptible. The reason is obvious. We have not concentrated our money in sums sufficiently large to effect the objects to which they have been applied. If a remedy is still within our power, it is for your wisdom to devise and apply it. I have already said more than I had intended, designing only to call your attention to the subject. The interest which I feel in improving the condition of the people, the sovereignty and strength of our country, will, I trust, claim your forbearance, and excuse the freedom and candor which I have used. The report of the board of internal improvements will shortly be submitted to your honorable body, which will afford you every information with regard to our public works.

Before we leave the subject of internal improvements, suffer me to call your attention to a subject which has hitherto been too little regarded, and to which some of the foregoing remarks have reference. I mean the opening and improving of our roads. While we are expending the public treasure in improving the navigation of our rivers, we owe it to those who live remote from navigable streams, and who, in many sections, find it necessary to go to market by land, to open roads which may intersect and unite at convenient points, and lead to good markets. By this means, too, we should keep in our own state a great deal of produce which at present enriches other states, and draw capital to our market towns, which our own produce has helped to centre in theirs. Although it is desirable that every man should have a convenient channel to carry his surplus produce to market, even though he should be adding to the wealth of another state, yet it is but justice to ourselves, that while we expend the public wealth, we should, at least, give our own markets a fair competition. While our treasure is employed in public improvements, it is, surely, desirable that those improvements should be so directed as to repay us. It is, therefore, of the highest importance, while we open rivers which lead into other states, and give the farmers inducement to carry their produce away, that we should likewise make roads to our own market towns, give our merchants a fair competition, and add to our wealth; and this is still more desirable, when we consider that it would be to the manifest advantage of the planter, by giving him a choice of markets. I might point out particular roads which seem to claim your prompt assistance; but the circumstance that some of you come immediately from them, and are, therefore, much better prepared to explain and enforce their importance, renders it useless. Your own discernment will follow the subject throughout its extensive bearings, and your wisdom and attachment to the common weal, are a sufficient guarantee that you will give it your mature deliberation, and adopt such measures as are practicable and conducive to the great ends in view. The improvement of roads

and rivers would soon enable our citizens to get out of debt, and would be the surest means, by affording a strong motive to industry, of keeping them from the ruinous and visionary schemes of speculation. Talk not of banks—of an increase of circulating medium, as a means of extricating them from their embarrassments. It will only “put off the evil day” of payment. Our countrymen, taught in the school of sore experience, begin to see the wisdom of economy, and to feel the necessity of retrenchment. They are in the very situation, then, to return to habits of industry and morality; and they will do it, and will soon rid themselves of debt, if you will offer them every inducement, and every facility in your power. They will presently get into the good old ways of certainty and safety, and will be content with a more moderate increase of wealth.

By a judicious and well conducted plan of internal improvements—by opening, so far as our resources will permit, our roads and rivers, always taking care to begin with such works as are of most general utility, the effects of which would be most extensively experienced, we should go far towards accomplishing another most important object of state policy, viz: the improvement of the agricultural condition of the country. The planting community are the very strength and sinews of the government, and in proportion as they are suffered to languish, must the government become feeble and inoperative, and all other objects of public utility experience a depression. The effect of roads and navigation on agriculture, will always be mutually felt, and if the legislature would give to agriculture even a small share of direct aid and encouragement, there is no doubt the effect would be reciprocated in a much higher ratio. With the increase of agriculture, indeed, every thing else is made to flourish. Wealth, knowledge, and virtue conspire to make us happy, and perpetuate the inestimable boon of freedom and independence. Contentment smiles in the cottage, and wealth diffuses its genial influence to all around. There is an inspiring beauty and harmony in the aspect of a well cultivated country which seem to be reflected from the countenances of the people; and I never presented to my imagination a more delightful image than that of flourishing fields, cultivated by free and happy people. Born in the country and raised a planter, I have always felt a degree of enthusiasm in contemplating this object, bordering, perhaps, on extravagance. But its importance is by no means diminished by the coolness of deliberation; its consequence, indeed, is the more obvious and home felt; for the practical and universal necessity goes into every man's door, and is experienced alike by all classes of society. Why our agriculture has been so long neglected by the legislature, and is so far behind hand with respect to some of our sister states; and whether it be not high time that you should extend to it your fostering care, appear to me to be enquiries well worth your attention. Their solution I leave to your own wisdom, and the remedy or remedies, to your own judgment, far better than mine will suggest. If the reclaiming of our exhausted lands could be commenced by offering premiums, or by any other better means, the beneficial results, I apprehend, would soon appear. Could you induce farmers to make experiments on their lands in new methods of cultivation, and the introduction of articles not of common growth, and which have been found to be profitable, not only as valuable articles of produce, but as enriching the soil, a

very great improvement would, without doubt, be thereby effected. But to you, gentlemen, with confidence and with pleasure, I submit the subject, without pretending to dictate to your wisdom or believing that I can add to your zeal for the common good.

In connection with this and the subject of education, to which I must beg leave to invite your attention at the present session, I would mention one defect which appears to me to exist generally in the education of our young men of liberal advantages: They know little or nothing of agriculture, and are not taught to hold it in proper estimation. The consequence is, that they nearly all devote themselves to the learned professions, and leave the calling of husbandry, equally as respectable and more useful, to those whom they consider their inferiors. By this defect, and these consequent mistaken notions, we lose the talents and influence of many a young man who lags and withers in one of the professions, when he might be an ornament and guide in the quiet walks of agriculture, and constitute one of that most excellent and useful class of society, *good citizens*. It is truly melancholy to witness the crowds of drones that hang upon the rear of the learned professions, burdens to themselves and burdens to society, because they are useless—and many of them, perhaps I might say a large majority, men of talents, but unhappily misapplied. I trust, if they are beyond the saving influence of the legislature, that you have it still in your power to prevent their accumulation, and to diffuse the talents of our state into more extensive usefulness. Should the legislature even practically unite in the important truth, that it is of the last moment to the stability and security of our republican institutions, that all kinds of useful knowledge should be extended to our youth, the poorest as well as the richest; it is to be hoped that they will not overlook the article of agriculture; and in the present flourishing state of our University, when its wealth has received such an addition in western lands, its number of students such an increase, its buildings receiving such improvement and extension, and its able faculty and trustees are so zealous and indefatigable in raising its reputation and extending the sphere of its usefulness, it appears to be an auspicious period to introduce the subject of agriculture within its walls, and lend it your aid. Were you even to devote a considerable sum of money to this purpose, how manifold would be the interest which the people would receive in its advantages. Young men of liberal education would leave the University with proper ideas of the dignity and usefulness of agricultural avocations, and with much useful knowledge relating thereto. They would go into the different parts of the state, and devote themselves to agriculture, and associate in societies with men of more limited opportunities, where their knowledge and their influence would be widely diffused and give a life and vigor to agriculture, of which we can easily form some conception. But I would not have you suppose that this subject is altogether neglected in our University. We have there a professorship of chemistry and mineralogy, which bear an intimate relation to agriculture; and it gives me much pleasure to state, that I have been informed that the gentleman who has charge of that department of instruction, takes a lively interest in the improvement of the agriculture of the country, and devotes a part of his course of lectures to that subject alone, and loses no opportunity of imparting to his pupils every article of knowledge which

will be of service in the business of life. I am happy that I have it in my power to make known the fact, that our University is not confined to those studies which, though of the highest importance in a liberal education, have no immediate relation to the concerns of life. I have said the more on this subject, because it derives additional importance from the fact that we are, and from our geographical situation must continue to be, an agricultural rather than a commercial people. I trust that this fact, and the intrinsic importance of the subject, will lead you to a serious investigation of it, and (for it is surely practicable,) to give it your aid and protection.

With regard to education, although we have been considering an important part of it, you are by no means to stop here. Our constitution has made it your duty to encourage and foster every kind of useful learning. Its wise and patriotic framers, who were about to burst from the thralldom of oppression, and who were sensible of the enslaving influence of ignorance, ordained it to be their own duty and that of their sons, to whom they were soon to bequeath the inestimable legacy of freedom, to diffuse learning among the people—and they, no doubt, looked forward, in pleasing anticipation, to the period when their posterity should have schools and academies erected among them—when knowledge, at least of the more ordinary and indispensable kind, should be within the reach of the child of the poorest citizen—when “all useful knowledge should be duly encouraged and promoted”—the people acquainted with their rights, sensible of their national blessings, and therefore determined to perpetuate their institutions; and to keep the soil which their fathers had purchased with their blood and treasure, the land of freedom and the asylum of the oppressed. I fear gentlemen, if those venerable fathers were to rise from their tombs, they would reproach us with supineness and neglect, and would not listen to our plea of want of power. We shall never know what power we have until we exert it; and it holds in political as well as physical strength, that it is increased by exercise. To all these subjects, then, which appear to me, I am sure, in a far more important light than my limits or language will allow me to express, let us give heed, and timely heed. Let us do something, however little—it may prove in time as a grain of inustard seed.

But whilst we are sedulous to obtain these grand objects, we should not lose sight of the fact, that these and all our blessings and privileges are liable to invasion from abroad. We have experienced the injuries of foreign nations before, and we have no reason to conclude that this is never to be the case again. It is therefore important that we should direct our attention to the training of our militia. Our militia system, as you well know, is still very defective. Let us ever recollect the advice of our political father, to prepare for war in time of peace. By far the most important part of this preparation consists in training up a body of men that will always be ready in case of war; to send into the field an efficient force. It seems to be the policy of the general government to reduce the standing army of the United States, as being too expensive and dangerous to the republic.—Whether this be sound policy or not, it certainly increases the importance of having a well organized militia. At present it is difficult to discover what advantage is derived from our system and practice, except in a few remarkable instances, where individual exertion and spirit presents a

cheering prospect amid the surrounding gloom, and shows what may be done by proper endeavors. This is a subject of no small moment, and I trust will receive a share of your deliberations. It is to be hoped that we may never become a nation of soldiers by profession; or neglect the delightful arts of peace, while we pay some regard to those of war. And while we prepare for our enemies, we should cherish towards them generosity and forbearance, adopting the sentiment, “be able for thine enemy rather in power than use.”

Extracts from the Message of JOHN BROOKS, governor of the state of MASSACHUSETTS, to the legislature, transmitted Jan. 1, 1823.

Gentlemen of the Senate, and

Gentlemen of the House of Representatives:

I embrace the present moment to offer you my congratulations on the commencement of a new year, and on your reassembling to engage in the important duties of legislation.

Although no form of government is so rational in itself, nor so well calculated in its operations to render a people happy, as is that of a representative republic; yet there is none that demands greater wisdom and integrity in its administration. The public interests require continual watching; and the changes which time and the progress of civilization and the arts gradually effect, are to be met and provided for with discriminating care. That Massachusetts should have sustained an honorable career from the humble condition of an obscure colony, through the lapse of two centuries, and under various forms of jurisprudence, to her present elevated standing in point of population and wealth, of learning and the arts, is to be referred, under the favor of Divine Providence, to the judicious adaptation of her laws to the multifarious wants and circumstances of the people. Different degrees of increase and prosperity, indeed, have marked different periods of her progress. But under events and aspects the most inauspicious, improvements have never been stationary. An invincible progression in numbers, and in moral and political strength, has never ceased to encourage her hopes and indicate her course. Recently, however, under the present order of things, a freer scope has been afforded for developing her moral and physical faculties.

A short time only had elapsed after the first founders of Massachusetts had begun their settlements, before political and commercial jealousies on the part of the British government became apparent; and at every period of her colonial existence her interests were sacrificed to the avaricious and domineering spirit of her parent country. But a course of conduct thus selfish and oppressive, though designed to impede the growth of the colony, and to insure its dependence on and subservience to Great Britain, ultimately defeated its own purposes. Subjected as the colonists were, to the unbending rigor of the colonial system, a limited commerce only was allowed them; and even the stinted share of traffic they were permitted to prosecute, was encumbered with regulations far less calculated to remind them of their filial relation, than of their inferiority and subjection. Incentives to extensive enterprise were thus denied to her merchants, and the accumulation of capital, which a liberal commerce only can effect, was rendered impracticable. But while made to feel the weight of power, and to submit to the humiliation of colonial restrictions, they were led by a very natural

train of thought, not to investigate the nature of magna charta and the constitution of England merely, but the broad principles of all legitimate governments founded on the natural rights of men; and ultimately to form an estimate of the value of self-control. In the meantime, habits of industry and economy were formed, and the skilful management of their circumscribed interests was acquired; and thus the colonists became fitted for acting their part well as subjects, and to sustain with honor the separation that awaited them.

But the acquisition of independence failed to fulfil the public anticipations. The states by mighty and united efforts had become independent and free. Peace soon disclosed truths which had hitherto been but partially believed, that the boasted union of the states under the confederation, had resulted from the pressure of common danger, and that something was yet wanting to complete the revolution and insure the general welfare. The vital defect, nevertheless, was long felt and deplored, before the national will ordained a remedy. The beneficial effects produced almost instantaneously, by the operations of the national government, were wonderful and incalculable. The sudden restoration of public and private credit, the animation given to enterprise and industry, in the various branches of political economy, and the general amelioration in the condition of the people, which, I presume, are in the recollection of most of you, were occurrences which transcended the hopes of the most sanguine. Massachusetts shared largely, for a while, in these results. But the regular order of peaceful commerce was destined to derangement. A long series of astonishing phenomena ensued, involving the destruction of governments, the extinction of nations,—and a change in the habits and occupations of a large proportion of the human family in the civilized world. The citizens of this state, observant of the character of the times, and yielding to the allurements of emolument attached to the neutral flag, availed themselves freely of their neutral rights. The preternatural excitement however, effected in one branch of enterprise, left others to languish; and commerce, after suffering unexampled vexations from the belligerents, was driven from its ordinary channels in times of peace, and, eluding the sober calculations of the experienced merchant, became the subject and the victim of chicane and speculation.

But notwithstanding an incalculable accumulation of wealth under the American flag while its neutral character was maintained, it was not until since the late war, that terminated with so much glory to our nation, that the individual states have been permitted freely to explore and cultivate their respective resources. And it is worthy of remark, that although seven years of peace have elapsed, yet time scarcely sufficient has been allowed to surmount the embarrassments necessarily arising from an abrupt transition from a state of war to a state of peace, and from a spirit of deep speculation and adventure, which had been generated by the peculiar circumstances of the times.—From causes to which it is needless now to advert, Massachusetts has felt less severely, or with greater facility recovered from those embarrassments than some of her sister states, although her maritime position and vocations expose her to the deepest suffering on the occurrence of foreign war.

From every just consideration, therefore, she ought to cherish a love of peace; it being a condition most congenial to her moral feelings, and most

favorable for the cultivation of her means of enjoyment and greatness. The fisheries, one of her great sources of subsistence and emolument, must in time of war be annihilated; although in a time of peace they give lucrative employment to thousands of the hardiest of men, and constitute the greatest and most permanent nursery of seamen for our gallant navy, which is the pride of the United States, and the support of their commerce and honor abroad.

The martial energies of our country have never been questioned; and her ability to sustain the arts of peace is now fully demonstrated. To you, gentlemen, as representing the feelings of the people, the appeal may be safely made, as to the result of the experiment in this commonwealth. The enemies of the revolution represented us as possessing neither the intellectual, nor the moral, nor the physical elements, for constituting and supporting an independent government. But what are the facts? Our naval and military triumphs, our commerce, which, under the fostering care of a paternal government, has spread over the world, and is now gladdening the human heart in every clime; and above all, the contentment, the good order and social happiness enjoyed by more than ten millions of free citizens, give the answer.

Among the public evidences of the success that has attended the exertions of the people of this state in internal improvements, and which are sure pledges of continued prosperity, we may refer to the general aspect of the country, as connected with agriculture and rural economy; to the number and admirable structure of our bridges, to the goodness of the roads in every part of the state, and to the various and expensive canals and locks on the Connecticut and Merrimack rivers, and more especially the Middlesex canal, that unites the latter with the waters of Boston harbor. If it were necessary to adduce further proofs of the successful enterprise and industry of the citizens of this community, we might also refer to their navigation and tonnage, which are now presumed to be exceeded in amount by only one state. And it is apprehended that we should not deviate materially from the reality, in assuming that, with a population equal to about one-twentieth part of the population of the United States, Massachusetts contributed, in the year just ended, nearly one fourth part of the whole amount of revenue derived from commerce to the national treasury. While these considerations serve to evince the importance of the commerce of this state to the Union, it should induce us to appreciate our resources, and by every possible effort to augment their value.

While the distinguishing results now noticed are primarily derived from the fisheries, and from other natural advantages peculiar to our local situation; it is cheerfully conceded that those advantages are called into more effective operation by the powerful energy of the United States' code of commercial law. The coincidence of the means of raising revenue, and of giving impulse to national industry, is happily illustrated in the existing tariff. If our national commerce be extensive, if the products of our agriculture are furnished with a ready market, and if our manufactures are multiplying and improving with a rapidity hitherto unknown, we can scarcely too highly appreciate the wise policy of the national government: unless the authority of facts and experience be discarded, we cannot hesitate to acknowledge its soundness and efficiency. And although the existing laws respecting commercial revenue may be, and unques-

tionably are, susceptible of a more perfect adaptation to the manufacturing interest, and might be made, in point of revenue, more productive, yet the strongest conviction rests on my mind, "that the interest of every part of the Union requires that this subject should be touched with the greatest caution," and not without a clear foresight "of the effects to be produced by the slightest change."

The facilities for sustaining extensive manufactures are scarcely less distinguishing for this community, than are our advantages for commerce.— Facts are fully illustrative of this truth. By recurring to the laws of the commonwealth, it is found, that one hundred and forty-nine acts have, at different times, passed the legislature, and are now extant, for incorporating manufacturing companies, with an aggregate capital amounting to more than sixteen millions of dollars; and it is presumed to be within your knowledge, that nearly all these establishments are now in successful operation.— In reviewing the diversified concerns of the people of the commonwealth, I feel entire confidence that your deliberations will result in measures calculated to promote their best interests.

By recent accounts from Europe, and some of the prisons in the neighboring states, a machine, denominated the "tread or stepping mill," has been introduced into some of the penitentiaries, as a mode of employing convicts. How far this new description of punishment may have answered the expectations of those who have had recourse to it, I have not been sufficiently informed to assert. It is favorably spoken of; and on a subject that has hitherto disappointed, in some measure, at least, the hopes of the humane every where, every hint indicating improvement, seems to merit consideration. Referring you, gentlemen, to that part of my communication to the legislature on the 10th of January last, relating to the state prison, I recommend the subject at large to your consideration.

In conclusion, I should feel myself wanting in respect to you, gentlemen, and to my fellow citizens generally, were I to omit expressing, on this occasion, the heartfelt satisfaction that has been derived to me from the reiterated expression of their confidence. To one who had devoted the first moments of manhood to the service of his country and the cause of freedom, such tokens of remembrance and regard, are peculiarly grateful; and they have been more precious to me, not only as they indicated a generous approbation of humble efforts to be useful, but have sanctioned the immortal principles which originated and perfected the revolution. But conscious that the claims of nature to exemption from the care and anxieties of official responsibility cannot be resisted with impunity, I deem it an imperative duty to announce my determination to decline being considered a candidate for re-election to the office of chief magistrate; devoutly imploring the benediction of Almighty God on all the interests of the commonwealth, and tendering to you, fellow citizens, my sincere wishes for your personal happiness.

JOHN BROOKS.

Council Chamber, Jan. 1, 1823.

LEGISLATURE OF NEW YORK.

The two houses of the legislature of this state formed a quorum yesterday, when the session was opened by a message from his excellency the governor, of which the following is a copy:

Gentlemen of the Senate, and of the Assembly—

The situation in which we are at present placed

is peculiarly interesting and highly responsible; and while addressing the first legislature convened under our new constitution, from a situation to which, by the favorable opinion of my fellow citizens, I have been elected, and in obedience to the commands of that constitution, presenting and recommending for their consideration some of the various subjects which will necessarily claim their attention during this their first session, I feel, sensibly, such peculiar interest and high responsibility.

In the performance of the duties of my station, I am satisfied that I shall receive every requisite aid and support from your united exertions for the public good; and while we have this object only in view, whatever difference of opinion shall exist relative to the adoption of means to promote the welfare of the people, by whom we have been selected as agents, and entrusted with power, I feel a confident expectation that the judgment of charity will be extended towards each other for the motives by which we are governed, and I claim the kind indulgence of my fellow citizens for the errors which I shall unintentionally commit; and while society must be governed by the limited capacity of human beings, subject to the conflicting temporal interests and frailties of human nature, errors will unavoidably occur, and even correct measures and conduct be pronounced erroneous.

Resting in the consciousness of a correctness of my motives, and relying on the support of a superintending Providence, I shall endeavor, to the utmost of my ability, to promote the welfare of the people, and the best interests of the state.

There has been only one period since the declaration of our independence, that the legislature of the state of New York have been called upon to perform such high and responsible duties as at this session will devolve upon you; and when we reflect upon the conduct of those who formed the first constitution of this state, and organized a government, every well ordered mind must be led with gratitude to bow before the throne of grace, returning fervent thanks to the God of heaven and of earth, who raised up for us in that time of need, men eminently endowed with great intelligence, integrity, and superior, I had almost said inspired, views of the rights and liberties of man. The checks and balances of the old constitution of this state were admirable, when judged with reference to the time in which it was adopted, just emerging from a state of colonial dependence, and while desperately, and almost convulsively struggling to break the fetters of transatlantic despotism; almost every man in the community at that time possessing high ideas of the necessity of a strong executive power and great legislative independence; and although we have amended what we have deemed its errors, and what, in the present improved state of the community, were really such, yet the candid mind cannot but admire and applaud its great comparative excellence.

I could not, gentlemen, withhold, at this time, and on this occasion, the expression of my affection and veneration for those men, great in intellect and honesty, several of whom were personally known to many of us, who, having placed and seen their country in prosperity and the enjoyment of liberty, have gone to sleep with their fathers until the great day of retribution.

This government has, by the late amendments, been adapted to the present feelings and views of the community, the only proper standard by which a good government can be formed, and no time for

its reorganization could be more auspicious than the present. The peaceful state of the country, and absence of any asperity in party contentions, will enable you to obtain the benefit of each other's candid views of every measure; and although it is obvious, that in the enactment of laws in compliance with the new provisions of the constitution, and the reorganization of the government, many unexpected difficulties and embarrassments must unavoidably occur, yet, by mutual forbearance, when you may differ in opinion, and by great attention and circumspection in the adoption of measures, these will vanish.

To you, as the first legislature assembled for the purpose of reorganizing this government, clothed with plenary powers to apply the provisions of that constitution, and limited only by its articles, the people look for wisdom, prudence and self-government; and I do not hesitate to indulge a confident expectation, that their hopes will not be disappointed.

The principal portion of your time and attention will probably be devoted to passing such laws as have become necessary under the existing constitution. I have, therefore, thought it proper to confine myself to such prominent subjects of legislation, as will probably, under such circumstances, be presented to your consideration.

Among the various and highly interesting subjects claiming your attention, the most important is the arrangement and organization of the judiciary. It is one that ought to be approached with great caution, but with full and competent decision. It must be acted upon with firmness, yet with the greatest discretion. Its responsibility to the community fully retained, and its independence amply secured, so that no executive, legislative or other influence, can be brought to bear upon it in such a manner as to have a deleterious effect upon its deliberations or decisions. The division of its labor so made, that it is within the reasonable limit of human power to attend to its duties, that the execution of the laws may be enforced, justice extended to all and denied to none—its pecuniary support provided for, with such liberality, that the most intelligent and best men may not feel as if they are doing themselves and their families injustice by accepting the most responsible and highest public stations in the gift of the government. The supreme court, now to be composed of three judges, is to receive its most considerable aid in the discharge of certain of its duties by the establishment and appointment of circuit judges, pursuant to such division of the state into judicial districts as you may deem it advisable to make, and upon whom that important branch of our jurisprudence, the holding of courts of oyer and terminer, and *niis prius*, will principally rest. Those judges may also, at the will of the legislature, be considered and made assistants to the chancellor. The powers given to them, and the duties they are required to perform, as specially stated in the constitution, with such as may be assigned to them by law, are of a character deeply interesting to the welfare of the state.

It will become your province to divide the state into districts, according to the 5th section of the 5th article of the constitution, and to invest them with such additional powers as you may deem proper, and may fall within the range of legislation.

An able, faithful, and impartial judiciary is not only the greatest ornament of the state, but the best security against tyranny and oppression; on its intelligence, firmness and integrity, the lives,

the property, and liberties of the people, in a great measure depend. This state has never failed duly to appreciate its importance as blended with its prosperity and honor—and while we are careful not to indulge in large and extravagant compensations to our public officers, it will not be denied, that the independence of our judges is promoted in no small degree by the permanency and adequacy of their salaries—thus enabling them on the one hand, to devote their whole time and attention to the discharge of their judicial duties, and on the other, to be above the reach of any temptations to neglect them. This consideration derives additional force, from that part of the constitution which disqualifies them from accepting, or being candidates for any other office from the legislature, or the people, during their continuance in their judicial stations.

While on this subject, permit me also to remark that legislative provision appears to be necessary with regard to the powers vested in the court of probates by the old constitution, and with regard to the manner of vesting them under the new, and of regulating appeals therefrom;—whether such regulations will render provisions concerning the office of surrogate necessary, must be submitted to your wisdom and discretion.

It will be requisite to declare by law the time and manner of electing militia officers, and of certifying their election to the executive.

The attention of the legislature has frequently been called to the important and interesting subject of regulating the militia. It has become more interesting because of the variety of opinion which always have, and still do exist, in relation to the necessity of attention to it. But I have always entertained the opinion that it is not possible to maintain a government perfectly free, without a reliance on a militia for defence against insurrections and sudden incursions, and for volunteer aid in the formation of armies, when we may be afflicted with war; and in order to accomplish these objects, unremitting attention ought always to be paid to the organization and discipline of the militia. I therefore recommend a full examination of our militia laws to your consideration.

There are at present a very considerable number of officers for whose appointment no constitutional provision exists, other than a general power delegated to the legislature, to regulate the manner of making such appointments, and to limit their duration. Among these are the office of surrogate, auctioneer, commissioner to take acknowledgements of deeds, justices in cities, and some others not deemed necessary here to enumerate, but which will, doubtless, in the discharge of the duties imposed upon you by the constitution, receive their proper share of your labors and attention.

That part of the constitution which declares that the proceeds of all the public lands, with certain exceptions, belong to the school fund, and shall remain perpetually and exclusively appropriated to the support of common schools throughout the state, requires attention.

The tracts thus set apart for that purpose contain nearly one million of acres. Most of these lands, however, remaining unproductive at this time, I submit to the legislature whether the wise and patriotic intentions of the framers of our constitution will be best promoted by allowing them to remain in their present state, or to direct a sale of the whole or a part equal to a principal, rendering an interest sufficient to make good the annual deficiency in the present school revenues. The

subject of education is interesting to the happiness of every government and people, but more especially to a republic, having for its basis and permanency the intelligence and virtue of the people. To recommend it to your anxious care is, I have not the least doubt, anticipating your intentions.

During the recent elections under the new constitution, difficulties have arisen at some of the polls, with regard to the true construction to be given to the article which defines the right of suffrage. The intention of the makers of the constitution ought to be realized, and it is with you, as far as may fall within the scope of your constitutional powers, to pass explanatory laws enabling the inspectors correctly to ascertain the citizens entitled to vote, and thus prevent improper exclusions by hasty and unadvised decisions during the election. The right of suffrage is of the highest value to the citizen, as all our civil institutions, and the purity and correct administration of our laws, in a great measure depend upon its legitimate or constitutional exercise; any forced construction, therefore, whereby this right might be unjustly refused or usurped, ought to be guarded against by the enactment of laws, conformably to the spirit and intention of the constitution.

The criminal code which has so frequently attracted the attention of the legislature, may still be considered, in many respects, susceptible of important improvements. During the last autumn, whilst engaged in my official duties as one of the justices of the supreme court, I visited the prison at Auburn, and from the representation of the inspectors, connected with actual observation, I am perfectly persuaded, that experience there, authorized by a late statute, has fully demonstrated, that solitary confinement without labor, and where the prisoner is restricted in his diet, limiting such imprisonment in its duration, according to the nature of the offence, presents the best means of reclaiming the offender; and, according to the benign intentions of our penitentiary system, of fitting him for future usefulness, in case he should thereafter be restored to society. I recommend this highly interesting subject to your serious and mature deliberation, in the hope that you will come to such results as will effectually insure the important object intended by the introduction of this humane and valuable principle into our criminal code.

It gives me much pleasure to state that the canal system, so wisely adopted and successfully pursued in the state, promises to realize the expectations of the community. The convenience already afforded to the inhabitants, by the facility with which the products of the country may be brought to market, has exceeded the most sanguine hopes of its warmest supporters.

From a general view of the state of the treasury, it appears that the receipts during the year ending the 30th November, 1822, were \$915,705 39; which together with the sum remaining in the treasury on that day, amount to \$1,032,919 42. The payments during the same period, were 924,094 89; leaving a balance in the treasury of 108,824 53; of which, however, only \$27,453 66 can be applied to the ordinary expenses of government, the residue being appropriated for specific purposes. The public debt on the 1st of Dec. 1822, amounted to \$5,423,500, of which 4,243,500 are for monies borrowed to complete the canal.—Several specific sources of revenue, such as the duties on salt, sales at auction, the commutation for the tax on steam boat passengers, and the canal tolls, are appropri-

ated to the extinguishment of the canal loans and the interest thereof. It has not yet as been found necessary to resort to any other sources of revenue to meet the payment of the interest, the principal being irredeemable, by the terms of the loans, for several years.

The difficulties existing between this state and the state of New Jersey, concerning our territorial and jurisdictional limits, still remain unadjusted, and it is very desirable that measures should be adopted to terminate a controversy between two sister states, which in so great a degree interrupts the harmony and intercourse that ought to exist between them: whether the aid of the congress of the United States should be required in this delicate affair, or whether it is not more discreet and proper that a further attempt should be made at negotiation, or compromise, in the appointment of commissioners, are subjects affecting the character and interests of the state, and must be submitted to your wisdom and discretion.

Before I conclude this communication, I submit to you the propriety of directing a revision of all the public statutes of the state. The adoption of the new constitution has rendered many of our statutes inapplicable to the present state of things, and many others, particularly in our penal code, are distributed into so many volumes, though relating to the same subject, that references to the different laws are rendered extremely difficult.—In a new revision these difficulties might be removed, by condensing into one statute each subject of legislation, and arranging them under proper heads, so that the people at large might clearly comprehend them; besides, much might be gained by omitting several obsolete statutes now appearing in our statute book. Various other improvements might be suggested, but they will readily occur to the legislature, should the subject receive a discussion. Whatever other matters are necessary to be submitted, will be communicated by special message.

Notwithstanding the commercial metropolis of this state has during the summer been visited by one of those afflicting dispensations of divine Providence, which not infrequently prove the scourge of a dense population, we have reason to be thankful that the pestilence has been stayed, and health, and business resumed their wonted influence in that city.

By a report or communication of the mayor of the city of New York to the common council, made on the 25th of November last, and by that officer recently transmitted to me, it is proposed to erect a public hospital for fever patients, at a convenient distance from the city, to prevent the spread of the disease; and to which, it is confidently expected, persons will, without reluctance, suffer themselves to be removed, as the situation would be more healthy, and afford them pure air, good nurses, and the best medical advice and attendance. While an establishment of this sort would be of the greatest advantage to the metropolis, it would have the additional recommendation that its doors would necessarily be open to receive nonresident patients who might take the infection while in the city; and it being manifest that such a measure must essentially contribute to alleviate the distresses of a portion of our fellow citizens, if not prevent the ruinous consequences of the disorder to the city and country altogether, and thus, in a precautionary, as well as philanthropic point of view, promote the welfare and prosperity of both, their interests in that respect being mutual. It is submitted to your

consideration whether some legislative assistance ought not to be afforded to encourage so humane and useful an undertaking.

I congratulate you also, fellow citizens, upon the prosperous condition of our country. We have maintained peace with all nations; our foreign relations have continued undisturbed, and the high reputation of our national government is still the theme of every patriot, and the admiration of the world.

The prosperity of our state, in its agricultural, manufacturing and commercial relations, and the many other blessings which by divine Providence we are permitted to enjoy, call for our most sincere aspirations of gratitude and praise; and while I shall earnestly pray for their continuance, I pledge myself to unite with you in every measure to preserve the honor, secure the rights, and perpetuate the freedom and happiness of our beloved country.

Albany, Jan. 7, 1823. JOSEPH C. YATES.

Franklin and Adams.

At a public meeting lately held in Albany, to take measures in aid of the cause of the Greeks, the honorable Mr. Van Ness, in a speech which he made in support of the question before the meeting, alluded to the foreign aid received by this country in our struggle for independence, in the following terms:

"What would America have done in 1775, without the loan of arms and ammunition, which a few merchants generously advanced on the credit of a government which was then supposed by many as ephemeral in its existence, and that it soon would be crushed into nonentity by the strong arm of power. Dr. Franklin, with the powers of argument, like his own electricity, at once clear and irresistible, satisfied the Dutch merchants of the propriety of the loan; and his memory will be honored by every patriot forever."

The learned and venerable Judge Vander Kemp has addressed a letter to Mr. Van Ness to correct an error of fact in the passage above extracted, the material of which is as follows:

"The fact is, the compliment you intended to pay, is justly due to *John Adams*, and not to *Dr. Franklin*. Nevertheless, he was there respected, admired as a patriot, and still more as a philosopher. The Dutch were tolerably well informed of the situation of the thirteen States; they considered America as the future temple of civil and religious liberty—as the altar for the purest sacrifices of arts and science—as the refuge for all that was wise and good in sinking Europe.—But except that Franklin obtained a *secret claim by private correspondence*, he had no share whatever in persuading the Dutch to send their money to America, or even to provide it with ammunition and arms. The latter was owing to enterprising Dutch merchants, ready to send a vessel to hell (as one of them told Frederick Henry) at the risk of singeing her sail, if there was a prospect of advantage. Amos Tean dispatched three vessels with such cargoes, on his own account. The first, that the Dutch were well acquainted with the practical situation of America, was not the work of Franklin, but effected by the pensionary Van Berckel, the undaunted Baron Vander Capellen *tot de Pol*, and that brilliant luminary, John Luzac. The patriotic labors of two of our eminent statesmen, governors Trumbull and Livingston, were published in Dutch by *Junius Brutus*, who, in a concise manner, drew a parallel between the republic of America and that of the United Provinces—laid open the basis of their confeder-

ation—answered the objections, and gave the preference, if any was due, to that of the thirteen United States. Thus, individuals defended our noble cause in public prints and the state assemblies.—Individuals eternized our achievements with gold and silver medals—but the nation, as far as it deserved the name of republican, favored the American cause. The majority of the merchants in Holland; the majority of the freeholders in Friesland; the most eminent men in talents and wealth, promoted our triumph. While many opened their purses liberally, a few drew manly their sword.

"Franklin did not procure to America the Dutch loan; but his courtesy and kindness towards me can never be forgotten: *it was John Adams, by whose skilful negotiations this loan was obtained, and would have failed without him.* John Adams had, during his long residence in that country, gained the hearts, esteem, the confidence of all with whom he conversed. Merchants, nobles, patricians, men of talents and learning, surrounded him, listened to him, admired him, and were instructed by him. The Capellens, de Gyzelaer, Van Berckel, John Luzac, P. Pauls, Calkoen, the Van Staphorst, the Willinks, and de Neufvilles, were among them.

"His affability, republican firmness, integrity, and patriotic virtues, gained him their affection—acquired him their public encomiums and festivals, and made him master of their purses, notwithstanding the intrigues of a powerful court. Scarce was the loan opened, when Capellen Van de Pol signed 30,000 *gl.*; Capellen Van de Marsch 30,000 more, and many patriots smaller sums of their scanty revenue. John Adams loved and revered the Dutch. He taught them to respect and admire the Americans more and more, and the Almighty crowned their wishes and heard their prayers for our final success in the consolidation of our glorious independence. I know you will thank me, sir, for correcting this error. Thou art an American, with some Dutch blood in your veins. You are willing, sir, to give honor to whom honor is due. I cordially unite with you in gratitude to that worthy patriot, Benjamin Franklin, and you will not withhold the praise due to John Adams. I remain, with esteem, yours sincerely.

FR. ADR. VANDER KEMP.

Oldenbarneveldt, 30th Nov. 1822."

BATTLES WITH MICE.—A French paper of Oct. 8, has a curious account of the ravages of mice on the borders of the Rhine. It had already had occasion to speak of them before, and they were then stated to have attacked the seeds, and done much mischief. In the circle of Lower Rhine, in consequence of a public recommendation to construct ditches for their destruction, 44,053 had been taken in 8 days in the environs of Wurtzburgh, without their numbers appearing to be diminished. In the neighborhood of Kreuznach, the authorities required of the inhabitants a weekly tribute of a certain number of these animals; and while the men of property hunted them in a kind of chase, the poor were hawking them about the streets in bags, at 20 kreutzers (15 sols) a hundred. [It was an archbishop of Mentz, Hatto II. who is reported in history to have been eaten by rats, for his cruelty during a famine, to the poor, whom he lodged in a great barn, and burnt them all in the night, saying, that those were the rats that devoured his corn. Pursued by these divine executioners from place to place, he fled for shelter to a castle on an island in the middle of the Rhine, where they swam after him, and never left him till they had eaten him alive.]

Law Cases.

OPINION OF JUDGE TUCKER,

Pronounced in the circuit court of the county of St. Louis, Missouri.

Stephen Glasscock }
 vs. }
 Enoch Steen. }

The plaintiff having obtained a judgment of this court against the defendant, sued out a writ of *capias ad satisfaciendum*. To this a return is made, in substance, as follows: "That the sheriff did not take the body of the defendant, because he had entered into bond with security for the payment of the judgment, at the end of two years and a half from the date."

The plaintiff moves for an *alias* writ of *capias ad satisfaciendum*.

The defendant relies on the statute of the last session of the legislature of this state providing for the stay of executions.

The plaintiff contends that the statute is unconstitutional and void:

1. As impairing the obligation of contracts;
2. As authorizing a tender of property instead of gold or silver;
3. As delaying the administration of justice and right.

The statute enacts that proceedings shall be staid for two years and a half, on all executions, whereon the plaintiff shall not endorse that he will take property in payment at two thirds of its appraised value, the defendant giving bond with security for the payment of the debt, or pledging real property therefor. Where this is done, the sheriff is directed to release the person or property taken in execution.

Let us take up the objections to the law in the order in which they stand, and consider

1. Whether it impairs the obligation of contracts?

Authorities on this question are rare, but as far as authority may govern on such a point, they are conclusive.

A law essentially similar to this was passed in North Carolina in 1812. By the supreme court of that state it was pronounced unconstitutional and void, in the case of *Crittenden vs Jones*, (*American Law Journal*, vol 5, page 520) as impairing the obligation of contracts. In deciding that case it is shown by the court that the practice of passing such laws, was the evil against which the constitution meant to guard, in prohibiting the states to pass laws impairing the obligation of contracts, and that it was so received and understood at the time.

In the course of his argument the judge observes, that "the right to suspend the recovery of a debt for one period, implies the right to suspend it for another, and as the state of things, which called for the first delay, may continue for a series of years, the consequence may be a total stagnation of the business of society, by destroying credit and confidence among the citizens."

I believe it would be difficult to find an instance in which such a state of things has not been kept up by such remedies, and has not continued to increase until they were laid aside.

The same judge tells us, on the authority of history, that no sooner had the use of such expedients ceased, in consequence of the adoption of the federal constitution, than "public credit was reanimated, the owners of property and the holders of money freely parted with both, well knowing that

no future law could impair the obligation of contracts."

In the same book, (page 507), judge Washington says, "What is the obligation of a contract? It is to do or not to do a certain thing; and this may be either absolutely, or under some condition, immediately or at some future time or times, and at some specified place. A law, therefore, which authorizes the discharge of a contract by a smaller sum, or at a different time, or in a different manner than the parties have stipulated, impairs its obligation, by substituting, for the contract of the parties, one which they never entered into, and to the performance of which they of course never consented.—The old contract is completely annulled, and a legislative contract imposed on the parties in lieu thereof. That a law which declares an existing contract to be void, impairs its obligation, will, I presume, be admitted by all men who can understand the force of the plainest terms; or, if not so, I should be curious to know in what manner the obligation of a contract can be impaired. And if this be the effect of such a law, in what respect does it differ from another, which declares that a debt, consisting of a specified sum, and due at an appointed period of time, shall be discharged at a more distant, or indeed a different time, or with a smaller sum? The degree of injury to the creditor may not be so great in the one case as in the other, but the principle is precisely the same."

Such is the language of authority on this subject. In a late case, judge Haywood, in Tennessee, has pronounced on the same principles, that such a law impairs the obligation of contracts, and is therefore void; and he too bears the strongest testimony, from his own observation, to the tendency of such laws to increase the evils they profess to remedy. And here we find the reason of the constitutional provision.—Human ingenuity cannot imagine any other motive for it than to prevent laws of this sort. The object was two-fold.

1. To protect the people of the several states from the errors of a short sighted policy, goaded by distress, and rushing blindly upon measures, the evils of which are not to be foreseen, but by those master statesmen whose services the local governments might not be capable of appreciating, or at all times have at their command.

2. To preserve peace among the states by insuring the free collection of debts, the obstruction of which is numbered among the causes of war.—That this was in the contemplation of the framers of the constitution is manifest. See the *Federalist*, pages 37 and 431. In the latter passage the author speaks of the "fraudulent laws which had been passed in too many states," and of the "constitutional guards" which had been provided against them. Where shall they be found, but in this clause? and where do we find the motive to this law, but in the alledged necessity to do something to keep all the money from being carried out of the country? Or, in other words, to keep the merchants of Philadelphia from recovering their debts here. But for the federal constitution, the law in question would justify, and might produce, an appeal to arms. The constitution forbidding that, sought to render it unnecessary by declaring that the states should not make laws impairing the obligation of contracts.

In opposition to these authorities it is contended that the occasions of justice require that the legislature should be at liberty to avail themselves of the light of experience, in adapting remedies to rights, and in regulating the proceedings; that

this has always been practised; that the actual remedies, therefore, afforded by existing laws, although, perhaps, in the contemplation of the parties to a contract, cannot be regarded by them as the essence of it; and, consequently, that to change the remedy is not to change the contract. Were this argument as conclusive as it is specious, it would not weigh much against the clear and strong evidence of an universal practical contemporaneous exposition, and would only show that the convention had illy chosen the terms which they used.—But what does argument prove? That to change the remedy is not to change the contract; to destroy the remedy is not to destroy the contract. Granted; but this does not prove that to impair or destroy the remedy does not impair or destroy the obligation of the contract.

The moral obligation of a contract is in the conscience of the party. With this the law can have nothing to do. It can neither increase nor diminish it. The only obligation on which the law can act, is the legal obligation, and it can only act on that by giving or withholding sanctions and remedies. It is in these the legal obligation consists. To say, therefore, that the law shall not impair the obligation of contracts, is to speak, of course, of their legal obligation, which alone the law can impair, and is to say that it shall not impair the remedies in which alone that obligation is to be found.

It is a part of the history of the constitution that this clause at first contained a prohibition to 'alter contracts.' The phrase was doubtless changed, because a nonen's consideration would show that contracts cannot be altered by any power but that of the parties themselves. Abolish the remedies, destroy the evidences; forbid the execution; yet the contract remains. It is registered in heaven, and must continue the same forever.

The contract itself, therefore, and the moral obligation of the contract are alike impassive to the power of the law. And yet we are told that we shall construe the constitution as if intended to protect what cannot be assailed; as carefully guarding contracts on that side, where the very nature of things interposes an impassible barrier, and leaving open the only avenue by which danger can enter. The law does not deal in abstract morality. It does not say merely that a man ought to pay his debts. It says he shall pay them, and declares its readiness, and provides its remedies to oblige him to pay them. If it takes away these remedies, and refuses to oblige him to pay, it surely takes away all the obligation it can create or destroy.

The objection is here urged that this construction would make the existing remedies unalterable as to existing contracts, however necessary to the purposes of justice the modification might appear. The answer to this is obtained by asking "what are the purposes of justice?" To ascertain and to enforce the rights of parties. We look to the laws to enforce our rights. Its remedies are ready, but we must first show the case which entitles us to the use of them. He who is interested to dispute our pretensions has a right to be heard. Justice requires this, and prescribes some delay. It is fairly a matter of discretion to say how much is necessary. But when legal investigation is gone through; when the enquiries of justice are answered, it is no longer a question of much or little. It is then ascertained that the demands of the party ought to have been long since satisfied, and instead of prescribing farther delay, instead of withholding appropriate remedies, and clogging

rights no longer questioned, with new and unexpected conditions, justice may rather be supposed to lament that she had not been more lynx-eyed in the discovery of truth, and that her authority had been so long suspended during the process of investigation. In every instance we are obliged to do some injustice to avoid a greater; to deny a right for a season, lest we should precipitately enforce a wrong. To modify remedies, therefore, in this view, is not to impair the obligation of contracts, it is to regulate the means of ascertaining them. If enforced a soon as ascertained, the wilful denial of right cannot be imputed. As soon as it is known to be right, it is no longer denied. But the modification of remedies does not stop with the judgment. This is true. Justice is not only watchful not to award what is wrong, but to see that her behests are obeyed. How long a time shall be necessary to carry them into effect; how long it shall be before the acts of her ministerial officers, done in virtue of her authority shall be finally inspected, and ratified or annulled, is again a fair matter of discretion. Remedies may also be modified as to their form. About this justice is indifferent. But justice requires that they shall be effectual. *Prima facie*, all final process is so. The attachment in chancery has been found as efficacious as the *ferri facias* at common law; and the immunity of land from sale for debt is seldom inconvenient, where the writ of *capias ad satisfaciendum* is backed by strong jails. Some one of these writs may well be taken away, and adequate remedies remain. A due respect to the obligation of contracts requires adequate remedies, and requires no more. It leaves the legislature free to choose whether the performance shall be compelled by imprisonment, or extorted by sequestration, or accomplished through the intervention of an officer, by actual seizure and sale, but it does not allow that that which has been long due, shall not be paid for two years and a half to come.

And this is the answer to what has been said of the power of the legislature to take away the *capias ad satisfaciendum*, from which is inferred, as of course, a power to change its operation. No matter what remedies they take away, if they leave others which are adequate, the constitution is not violated, for the obligation of contracts is enforced. Not so where they render all inefficacious.

But the court can only act by writs given by law, and these might be all abolished.

Let this be so—and if power constituted right, the argument would be unanswerable. But it would only prove that there is a mode by which the legislature might violate the constitution without the co-operation of the judiciary. The same thing may be said of the alleged power to repeal the law establishing the terms of courts. Such laws would execute themselves. Evading the authority of the courts they would only defy that of the people and of God. But here the courts are called upon to act. Their judgment is unquestioned; their process issues; its mandate is disregarded; and they are required to ratify what is done, and excuse what is omitted. If they do this, they too become parties to the violation of the obligation of contracts.

2. But it is farther objected, that this law contravenes that provision of the constitution of the United States, which prohibits the states from making any but gold and silver a tender in payment of debts. To make any thing else a tender, is commonly understood to mean that the creditor shall take that or nothing. The evil is in forcing

it upon him. Both in that case and in this the means used, do not amount to absolute compulsion. Nothing more is done than to withhold the debt, and drive him, by necessity, to agree to take something else in discharge of it.—Where the alternative is to take the thing tendered, or lose the debt, the law is sure of producing its effect, and, therefore, in the certainty of the mischief, differs from one which holds out inducements not so strong; but where they happen to be adequate to the purpose, the mischief is the same in quality and degree. The evil of tender laws is the denial of rights, unless the party will accede to terms for which before there was no stipulation. Why shall he recover at all? Why any specific sum? Because the other party contracted to pay. But the other party contracted to pay also at a certain time, and this is as much a part of the contract as the sum. Both are equally the objects of his rights, and both are secured by the same engagement. On what principle can we impose conditions on the performance of one part of the contract, and not on the other. I can see no difference between compelling the party to wait for his money and compelling him to lose a part of it, unless he will accept the tender.—In neither case do we literally tell the plaintiff that he shall lose his debt unless he assents. We only measure the degree of compulsion by the probability of opposition. If a loss of 10 per cent, or a delay of two years and a half will not do, we may as well try 20 per cent. loss, and five years delay. We still keep clear of the letter of the constitution, according to the above mentioned construction, for this is not yet precisely what is generally called a tender. The thing tendered is not offered as an equivalent for the thing to be lost. We may go on to 99 per cent. or 99 years, and still there is said to be no legal tender. But constitutions are not to be so expounded. The comprehensive views of such instruments do not admit of that technical nicety which pares down words to their narrowest meaning. They must be interpreted and administered in their spirit, and in doing this we must say that the constitution forbids, that a creditor shall be compelled to take any thing but gold or silver in payment of his demand, by any denial of justice in whole or in part. Construe the instrument literally, and it forbids the *tender*; the very *offer*. But we know there is no evil in the offer. The interference of the legislature to enforce it is the thing prohibited, and there is no exception in favor of one mode of interference rather than another. In every case the party is not absolutely obliged to take the thing tendered. If he prefers, he may lose his debt. But he will hardly make this choice. Nor would he choose to lie out of it for fifty years, or twenty, or ten, or five, or perhaps for two and a half. If so, he will take the property, and then we are told it has not been made a tender. The highwayman, in like manner, may say he does not rob his victim. He only presents his pistol, and demands the purse, which the other may refuse to give, if he prefers to be shot. He will hardly make this choice. Nor would he choose to be stabbed with a sword or dirk, or to be beaten with a cudgel, if the robber had no other weapon.—This would depend on his strength and courage. But where is the difference between the different weapons, when they have served their turn. To make a man give up his purse by saying, 'you shall be shot,' 'you shall be stabbed,' 'you shall be beaten if you do not,' is robbery; and to make a man take property in dis-

charge of a debt, by saying, 'you shall lose it, or 'you shall not have it for twenty years, or ten, or five, or two and a half, if you do not take it,' is making it a tender.—There is no more harm in the mere offer than in mere begging. The offence in the one case, and the wrong in the other, are found in the means of enforcement. No matter what their nature or degree, when the end is accomplished the mischief is done, against which the law, in the one case, and the constitution, in the other, sought to protect us.

3. A third objection to this law is taken from the constitution of this state, which declares that "justice and right ought to be administered without sale, denial, or delay."

The question meets us at the threshold; "What is delay?"

We may find the answer in the history of this clause, and we may find it in the nature of the thing itself.

This clause is taken from magna charta, in which the king, whose courts are the fountains of justice and right, declares that he will not deny, or sell, or delay, justice and right to any.

The reason, as we learn from the contemporaneous history of England, was this, that the king had been accustomed to interfere in the administration of justice, and to issue his mandate to the judges to stay proceedings against those whom he chose to protect.

"These words," says lord Coke, "have been excellently interpreted by later acts of parliament, that, by no means, common right or common law should be disturbed or delayed, no! though it be commanded under the great seal, privy seal, order, writ, letters, message, or commandment, whatsoever, either of the king or any other, and that *justices shall proceed*, as if no such writs, letters, order, message, or other commandment, had come to them."

We see here what this provision was intended to prevent; and may justly conclude that it was copied into our constitution for the same purpose.—The only question is this: "On whom was it intended to operate?" On those who, but for this restriction, would have had power to delay the administration of justice and right, or on those who had it not? On the former certainly. That is, on the legislature. Give any other direction to the operation of these words, and they are wholly superfluous. The kings of England indeed acted by particular mandate, and the legislature acts by general laws. But the evil is not less for being universal. There it was bounded by the particular case of the individual whose interest was favored; here, when the views of an individual are to be favored, the whole frame of the government must be disordered, and all the streams of justice choked up.

When we look to the nature of the thing itself, we are again told of the occasional necessity to nodify remedies.

This cannot embarrass us, unless we shut our eyes to the distinction between deliberation and delay. I have already, incidentally, remarked on this. But if the argument is unsatisfactory, if deliberation is delay, then deliberation itself is unconstitutional, for "justice shall be administered," says the constitution, "without delay." Let it be so; let justice be done. But what is justice? What are the facts? shall we take the plaintiff's word for them, or send for the defendant, and witnesses, and a jury? The constitution guarantees all this, this then is not delay; yet time is lost; and

shall the defendant then be received to say that because he has thus long been indulged, because he has baffled justice by a disengenious denial of truth for a time, that, *for this reason, AND FOR NO OTHER*, he shall be indulged two years and a half longer.

An extreme case is here put. The legislature, we are told, might set the terms of court fifty years apart, and this, it has been argued, would be constitutional. It would be a most unconstitutional abuse of the constitutional function; but there would be no courts to pronounce upon it. It would, in truth, be not so much a violation as a destruction of the constitution. It would be a dissolution of the government; yet it is sought to justify this act, by likening it to that.

But within such limits as the legislature may be expected to allow themselves, in prescribing the forms and seasons of deliberation, there is always room to suppose that less time than is allowed would be inconvenient. But when deliberation is gone through, and right is ascertained, there is no pretext for delay beyond the physical necessity of allowing some time to do what is commanded, and the obvious propriety of preserving a controul over ministerial officers, acting by the authority of the court. Beyond this point all hesitancy is gratuitous, and is delay within the meaning of the constitution.

Now what is here done? The cause is tried; the rights of the parties are investigated; truth is developed; justice is ascertained; judgment is pronounced finally and irrevocably; and execution has issued. The process of the court goes forth as formerly, commanding the sheriff to do that which has been pronounced to be justice and right. A *co-ordinate* member of the government steps in, and commands him not to obey the process, and the court is called on to yield an active compliance to this degradation of its authority and delay of justice and right. Shall we do so? Can we regard our oaths, and obey the mandate of any earthly power, commanding us to delay the administration of justice and right, ascertained by legal investigation, and witnessed by the record?

It must not be. The law is clearly unconstitutional and void, and the motion must be sustained.

In making this decision, I have not questioned the power of the legislature to modify or take away any of the writs known to the law, provided that adequate remedies are left. I shall not question that the "*capias ad satisfaciendum*" is the most exceptionable and can be the best dispensed with. But here I have no choice. They all remain, but the legislature have said that none of them shall be executed. I have been forced to decide whether the constitution shall be obeyed, when it says that justice and right shall be administered without delay, which cannot be unless such final process as is known to the law be enforced. I have no hesitation in saying that it shall be. Technical difficulties shall not deter me from the performance of this duty, nor will I seek to evade it by technical sophistry. Let right and justice be done.—*Feb. 1822.*

=====

Opinion of the same, delivered at the same sitting of the court—on loan office certificates.

The state of Missouri }
vs. }
William Carr Lane. }

The legislature of this state, at their summer session made all debts due to the state, or to any

county, and all fines, and the fees and salaries of all public officers, payable in the certificates of the loan office.

The defendant was convicted of an assault and battery, fined and committed to custody, until the fine and costs should be paid. Having paid his fine, he now tenders the amount of the costs in loan office certificates, and prays to be discharged.

This motion is resisted on the ground that these certificates are "bills of credit," within the meaning of the constitution of the United States, and that the provision, prescribing that costs shall be payable in that currency, is unconstitutional and void.

To this objection two answers are made.

1st. That the legislature have the right to prescribe the fees of clerks and sheriffs, and a full constitutional competency to reduce them at pleasure, and to make them payable in any article they may think proper.

2d. That the certificates of the loan office are not "bills of credit."

In discussing the first point, let us assume that the certificates of the loan office are "bills of credit" within the meaning of the constitution of the United States.

In what does the evil of such bills consist?

It consists in throwing into circulation a currency destitute of intrinsic value, or of value less than the nominal, and in the destruction of confidence in public faith, resulting from the obvious truth, that a government which anticipates its revenue without measuring the degree of anticipation by the extent of its credit, and fills the channels which should bring wealth into its coffers, with evidences of its own debts, deprives itself of the means of meeting its engagements.

It is not necessary that I should go into any reasoning to show how these things are evils. It is enough for our present inquiry, that they were so considered by the authors of the constitution, and its most enlightened commentators.

I shall at present only glance at the vast and fluctuating inequality which they must produce between the domestic medium, and that in which foreign debts must be paid; the insecurity to the holder of such paper; the gambling spirit which will be employed in speculating upon it, according to the occasional predominance of confidence or doubt, and the reckless and desperate extravagance into which the holders will be tempted.

These are the mischief's which, as we learn from history, and from writers on the constitution, were imputed to "bills of credit." They plainly shew that the evil was less in their existence than in their circulation; and we find accordingly, that the issue, and not the creation, is prohibited.—We must admit, indeed, that unless permitted to circulate, they will not be created. But it is equally clear that it would have been in vain to prohibit the creation, if the circulation were permitted. Such a prohibition could not have been enforced.

The issue of 'bills of credit' does not consist in the single act of their delivery; for if no means were provided to enable the holder to apply them to valuable purposes, no one would care to have them.

It would seem therefore that the arrangements and contrivances intended to give them an exchangeable value, and to promote their circulation, enter into the nature of what is called issuing them. The principle of these are not likely to become subjects of judicial investigation, because

each individual is, for himself, willing enough to carry them into effect.

Men will always be ready to pay their taxes and fines in such paper, and it is not to be expected that the ministerial officers of the government will object to receiving it for debts due to the state.

Whatever we may think, therefore, of such regulations, they must pass unquestioned, unless in the end the legislature itself should doubt the constitutional duty, and the constitutional right, to pass laws and make appropriations for the redemption of unconstitutional pledges.

It is only when private rights are assailed that the judiciary are called upon to interpose the shield of the constitution.—And this may well be, although the attack be made on private rights resulting from public duties.

Whosoever the operation of an unconstitutional law becomes detrimental to the interest of an individual, in such a way as to bring that matter to the view of a court; as soon as it is pronounced to be unconstitutional, its operation, as to him and the matter in controversy, must cease. The constitution prohibits the issue of bills of credit, and by an implication of the strongest necessity, if not by the very force of the term issue, prohibits all contrivances to promote their circulation and to give them currency; all regulations for that purpose are therefore contrary to the constitution and void, and such rights as (but for their operation) would be perfect, continue unimpaired.

There is another point of view in which the unconstitutionality of the regulation in question would seem to be independent of that of the loan office itself.

Supposing the loan office constitutional, still its paper is not gold or silver, and nothing but these can be made a tender in the payment of debts. It is here contended that the very thing owed is paper—This is clearly a mistake. The fee bills of the officers continue to be taxed in dollars and cents, and the law has no where called this paper by these names. If they were put to their action, they must necessarily sue for so many dollars and cents. If they should demand so much loan office paper, the action might be defeated. How then can we say that the debt is in that which must not be demanded and cannot be recovered; or that we can, consistently with the constitution of the United States, permit a tender of paper when the judgment is for specie: The demand once ascertained, and judgment rendered, it is like any other judgment. It is a new debt and the court cannot look to its origin.

Waving this last view, which may savor too much of technicality, we return to the conclusion drawn above, that the mischief of bills of credit is in their circulation, and that all contrivances for their circulation is contrary to the constitution.

This brings us directly to the question, whether the certificates of the loan office are bills of credit, within the meaning of the constitution of the United States.

Before I proceed to examine this, it is proper to remark on one or two points which incidentally present themselves.

Great pains have been taken to circulate an idea, that the judiciary of this state are interested to declare the loan office unconstitutional. The absurdity of this notion is so glaring, that its folly almost excuses the wickedness of the attempt to unsettle the confidence of the public in the tribunals by which this question must be decided. That all

public officers were interested, that the law should not pass, is unquestionable.—That those whose salaries were fixed by the constitution, should view with indignation an invasion of their chartered rights, by cutting off the springs from which alone the funds for their payment could be supplied, was to be expected. But now that the law has passed, to imagine themselves interested to affect the depreciation of the only currency in which they can hope to receive their salaries, would be foolish in the extreme. Two years nearly must elapse before any thing else can find its way to the treasury. Whether their object be to make the best of their oppressed and calamitous situation, or to conciliate those on whose good pleasure their tenure of office is to depend; it must be their individual interest to give currency to the medium in which they are to be paid, and to countenance the law creating it.

These remarks are not made as the ground of merit in the opinion I am about to pronounce.

He must be an unworthy pupil of the common law, on whose judgment, in the investigation of a great question of common right, personal considerations would weigh even as a feather.

Another topic on which I wish to touch is this. The monstrous doctrine that courts, though convinced of the unconstitutionality of a statute, are still bound to carry it into effect, is the natural offspring of misrule and the parent of anarchy, but seems to be not without its advocates among men whose years and services entitle them to such respect, that indignation is sunk in astonishment.

If the judges are expected to enforce laws which violate the constitution, the oath to support it is a mockery and an insult.

If the statute and the constitution are at variance, one is void. The statute and the makers of the statute, are both the creatures of the constitution, which alone gives authority to enact them, and cannot be understood to give authority to enact what it forbids.

The constitution is the supreme law of the land, and while it creates a legislature to enact statutes of a general nature, which may be repealed by the legislature, it expressly declares, that the enactments of the constitution shall not be repealed by that body.

If the authority of the constitution is not to be regarded, when it prescribes the mode in which constitutional amendments are to be made, why shall we regard that part which prescribes the manner of enacting ordinary laws.

If the legislature is not bound by the constitution, which gives them the power of making laws, the people will not be bound by the laws.

The judiciary and the legislature are both the creatures of the constitution, and co-ordinate. Can this be? if the legislature can destroy the constitution, and the judges, at the same time, bound to support, but not at liberty to do so?

The constitution of the United States is a compact between several states—Shall it be in the power of one of the parties to avoid it?

The result to which these considerations would lead, is stigmatized as an assertion of judicial supremacy; but there is no such claim in this department. There is here, as elsewhere, the right and duty which devolves on every officer, not merely ministerial, who is called upon to give effect to the acts of others; to disregard them if unconstitutional in his opinion. It is, the necessary effect of being the last to act.

For this doctrine we have the high authority of Mr. Hamilton in the *Federalist*, page 421. His language is this, "Some perplexity respecting the rights of the courts to pronounce legislative acts void, because contrary to the constitution, has arisen from an imagination that the doctrine would imply a superiority of the judicial over the legislative power. It is argued that the authority which can declare the acts of another void, must necessarily be superior to the one whose acts are declared void: as this doctrine is of great importance in all the American constitutions, a brief description of the grounds on which it rests cannot be unacceptable.

"There is no position which depends on clearer principles, than that every act of a delegated authority, contrary to the tenor of the commission under which it is exercised, is void: no legislative act therefore, contrary to the constitution, can be valid: To deny this, would be to affirm that the deputy is greater than his principal, that the servant is above his master, that the representatives of the people are superior to the people themselves. That men acting by virtue of powers, may do, not only what their powers do not authorize, but what they forbid.

"If it be said that the legislative body are themselves the constitutional judges of their own powers, and that the construction they put upon them is conclusive upon the other departments, it may be answered, that this cannot be the natural presumption, where it is not to be collected from any particular provisions in the constitution.—It is not otherwise to be supposed, that the constitution could intend to enable the representatives of the people to substitute their will for that of their constituents. It is far more rational to suppose that the courts were designed to be an intermediate body between the people and the legislature, in order, among other things, to keep the latter within the limits assigned to their authority. The interpretation of the laws is the proper and peculiar province of the courts. A constitution is, in fact, and must be, regarded by the judges as a fundamental law. It must therefore belong to them to ascertain its meaning as well as the meaning of any particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity, ought of course to be preferred; in other words, the constitution ought to be preferred to the statute.—The intention of the people to the intention of their agents.

"Nor does the conclusion by any means suppose a superiority of the judicial to the legislative power. It only supposes that the power of the people is superior to both. And that, when the will of the legislature declared in its statutes, stands in opposition to that of the people, declared in the constitution, the judges ought to be governed by the latter rather than the former. They ought to regulate their decisions by the fundamental laws, rather than by those which are not fundamental.

"The exercise of judicial discretion in deciding between two contradictory laws, is exemplified in a familiar instance. It not uncommonly happens that there are two statutes existing at one time, clashing, in whole or in part, with each other, and neither of them containing any repealing clause or expression. In such a case it is the province of the courts to liquidate and fix their meaning and operation; so far as they can by any fair construction, be reconciled to each other, reason and law conspire to dictate that this should be done; where this is impracticable, it becomes a matter of ne-

cessity to give effect to one, in exclusion of the other. The rule which has obtained in courts for determining their relative validity is, that the last in order of time shall be preferred to the first. But this is a mere rule of construction, not derived from any positive law, but from the nature and reason of the thing. It is a rule not enjoined upon the courts by legislative provision, but adopted by themselves, as consonant to truth and propriety, for the direction of their conduct as interpreters of the law. They thought it reasonable, that between the interfering acts of an equal authority, that which was last the indication of its will, should have the preference.—But, in regard to the interfering acts of a superior and subordinate authority, of an original and derivative power, the nature and reason of the thing indicate the converse of that rule as proper to be followed. They teach us that the prior act of a superior, ought to be preferred to the subsequent act of an inferior and subordinate authority; and that accordingly, whenever a particular statute contravenes the constitution, it will be the duty of judicial tribunals to adhere to the latter and disregard the former.

It can be of no weight to say, that the courts, on the pretence of a repugnancy, may substitute their own pleasure to the constitutional will of the legislature: This might as well happen in the case of two contradictory statutes; or it might as well happen in every adjudication on any single statute. The courts must declare the sense of the law; and if they should be disposed to exercise *will* instead of *judgment*, the consequence would equally be the substitution of their pleasure, to that of the legislative body. The observation, if it proved any thing, would prove that there ought to be no judges distinct from that body."

He presently after remarks on the independence of the judges, that, "it is equally requisite to guard the constitution and rights of individuals, from the effects of those ill humours which the acts of designing men, or the influence of particular conjunctures, sometimes disseminate among the people themselves, and which, though they speedily give place to better information, and more deliberate reflection, have a tendency in the mean time to occasion dangerous innovations in the government and serious oppression of the minor part of the community."

He afterwards adds, that "it is easy to see that it would require an uncommon portion of fortitude in the judges to do their duty as faithful guardians of the constitution, where legislative invasions of it have been instigated by the major voice of the community."

I humbly, but confidently trust, that this portion of fortitude will seldom be wanting in men bred up in the nature of the common law—and that calculations upon their want of firmness will be always disappointed.

I might well rest myself on this authority, but do not wish to pass, without animadversion, a still wilder doctrine which is sometimes advanced. It is said, by those who do not believe themselves, but are content to take their chance of being believed by weaker men, that the constitution is not a thing fixed and permanent, but fluctuating with the changing will of the majority which first created it; that it binds while it pleases, but no longer. But whence comes the right of this majority to bind at all, but from the consent of the minority to be so bound; from the consent of each individual to be bound, when in the minority; by others, for the sake of his equal chance to bind others, where

he may happen to be in the majority? And where shall we find this indispensable consent but in the constitution, that very instrument which expressly qualifies the consent, by declaring that in certain cases, and for certain purposes, the will of a mere majority shall not bind.

Constitutional restraints on the power of legislation are so many stipulations of the whole community, that that necessary power shall not be exercised for certain purposes. They are restraints imposed by general consent on the majority for the time being, for the benefit of the minority. Of what avail are they, if an occasional majority may disregard them? this doctrine, professing the spirit of democracy, which refers all legitimate government to the consent of the governed, assumes the right to government, not only without their consent, but in violation of the express engagements of the governors. It results in manifest usurpation, and affords a new illustration of the incontestible truth "that where law ends, tyranny begins." If there be a single individual in society, for whom there is no law, there is no safety for any; and if the power of legislation be placed in the hands of men, who, in its exercise, are subject to no law, despotism reigns, and property, liberty and life are insecure; property is always attacked first, the rest are sure to have their turn.

I have said thus much because I am anxious to rescue from the impending general destruction of principle, one which is the strongest safeguard of all the rest, and is always most vehemently assailed where the most mischief is intended.

We come then to the interpretation of the phrase, bills of credit in the federal constitution.

I know of no one thing, originally known, and precisely distinguished from all other things of the like kind by that name, as far as my very limited means of research enable me to go in seeking its origin. It was first applied to the very frequent, but variously modified issues of the American governments of the Anglo American colonies, known in common and popular language as "*paper money*," such appears to have been its received meaning at the date of the federal constitution, and among the authors of that instrument.

Mr. Madison, in the *Federalist*, uses indifferently in the same passage the words 'bill of credit, paper money, paper medium, and paper currency; the subject is frequently touched on in the course of the work, but most always in such a way as to shew, that the constitutional provision on the subject was one which needed not to be vindicated or explained.

It seems to have been understood and approved by every body, and is, in general, only referred to, as one of those valuable principles, the loss of which should not be hazarded, by too anxious an adherence to objections on points of less moment: the passage I have mentioned is too striking to be omitted.

The extension of the prohibition, (to coin money,) to bills of credit, must give pleasure to every citizen, in proportion to his love of justice, and his knowledge of the true springs of public prosperity; the loss which America has sustained since the peace, from the pestilent effects of paper money, on the necessary confidence between man and man; on the necessary confidence in the public councils; on the industry and morals of the people, and on the character of republican government, constitutes an enormous debt against the states, chargeable with this unadvised measure,

which must long remain unsatisfied, or rather, an accumulation of guilt, which can be expiated no otherwise than by a voluntary sacrifice on the altar of justice, of the power which has been the instrument of it. In addition to these persuasive considerations, it may be observed that the same reasons, which shew the necessity of denying to the states the power of regulating coin, prove, with equal force, that they ought not to be at liberty to substitute a paper medium in the place of coin. Had every state a right to regulate the voice of its coin—there might be as many different currencies as states; and thus the intercourse among them would be impeded; retrospective alterations in its value might be made, and thus the citizens of the other states be injured, and animosities kindled among the states themselves. The subjects of foreign powers might suffer from the same cause, and hence the union discredited and embroiled by the indiscretion of a single member! No one of these mischiefs is less incident to a power in the states to emit paper money, than to coin gold or silver. The power to make any thing but gold or silver a tender in the payment of debts, is withdrawn from the states, on the same principle with that of striking paper currency.

In this remarkable passage we find that the prohibition to issue 'bills of credit,' which, in the constitution, is placed between that to 'coin money' and that to 'make any thing but gold and silver a tender in payment of debts,' is referred to the same principle which occasioned the other two. The argument drawn from the mischiefs to be avoided, can only apply to such paper as might be issued on the credit of any state to serve the purposes of paper money, and will equally apply to all such paper in whatever form. It may be remarked too, that of the different names here given to 'bills of credit,' three are currently and commonly applied to the certificates of the loan office, even by those who most warmly advocate their constitutionality. The expediency of the issue has been contended for on the alledged necessity for 'something to serve the purposes of money among ourselves,' for a 'domestic currency,' a 'domestic medium' of paper. The phrase, 'bills of credit,' has not been used by the advocates of the measure, for an obvious reason. But this caution proves nothing, any more than the particular phraseology of the certificates, which contain indeed no promise to pay, but merely a pledge that they shall be receivable in payment. It is impossible to take any practical distinction, between a promise to pay, what never will be paid except by way of discount, and a promise to discount. If there be any difference, it is, that paper, which can only be discounted, will be more surely and eagerly thrown into the channels of revenue, and will more effectually destroy the public credit, by intercepting every dollar in its way to the treasury, than if there were a chance of receiving any thing for it, after the opportunity of paying it away for taxes had passed. The only difference, therefore, which can be discovered between these certificates and the old paper money of the states, is one which might aggravate one of the greatest mischiefs with which that was chargeable. It may be admitted, however, that where a state has issued paper to near ten times the amount of her annual revenue, this difference can be of no importance.

It is interesting to look at the evils which had been ascertained by experience to flow from "bills of credit" and compare them with those which we experience.

We are told of their "pestilent effects, on the necessary confidence between man and man." The effect with us is such that all confidence is utterly destroyed, inasmuch that no transaction is made on credit, and the few who might command the confidence of others, dare not trust their own resources. Those who have money, fear to use it in purchases which they would gladly make, and which might relieve the necessities of others.

The functions which credit formerly performed in contracts, must now be performed by money, and thus a much larger sum than formerly is necessary for the intercourse between man and man, while a great part of what is actually in the country is withdrawn from circulation.

We are told of the "pestilent effects of paper money on the necessary confidence in the public councils;" of this too we have the fullest experience.

The mere project of a loan office reduced the auditor's certificates to twenty-five per cent. discount. The certificates themselves have never been above thirty-three and a third; they are now taken in payment of goods at fifty, and forty five dollars, in specie, may sometimes be had for one hundred of paper. This is the work of a few months.

We are told of the 'pestilent effects of paper money on the industry and morals of the people.' On this subject let us look to the listlessness, the broken-hearted indifference to exertion, which, under the pressure of great pecuniary distress, (the strongest incentive to exertion, where every ray of hope is not excluded), pervades the hardy population of this fertile country. Let us look, for its effect on morals, to the criminal docket of this court at this term; offences, the offspring of wantonness, of folly, of desperation, of a cultivated contempt for the rights and feelings of others, and disregard for the opinion of the world, and disrespect for what men have been accustomed to hold respectable, and in short of a total deprivation of the moral sense, and dissolution of moral obligation, encumber our proceedings and disgrace our records.

When those considerations, which induced alike the prohibition to "coin money" and to issue 'bills of credit,' are spoken of, we are told that the intercourse among the states might be impeded. This was one of the alleged advantages of this measure.

Kentucky had got the start of us in the paper money system, and her citizens, finding there was nothing else to be had at home for their products, brought them here and sold them to us at reduced prices; the advantage of this to the consumer was overlooked, and we determined to adopt the paper system, to exclude the commerce of Kentucky.—This purpose has been accomplished. The price of produce has been so reduced, that that of Kentucky comes here no longer.

Instead of the practice of nations foreign to each other, to exclude each others products in order to improve the market, we have destroyed the market to exclude foreign products, and the farmer and consumer both suffer. The supply of necessities was formerly great, and the price was consequently low: the supply is now becoming scanty, but the price is lower than before. This was an evil worth guarding against. The constitution of the United States ought to guard us from it. We have renounced its parental care, and sought our own destruction. Its parental authority alone can save us.

We are told that retrospective alterations in the

value of the currency might be made; of this too we have had some experience.

There was first an issue of two hundred thousand paper dollars, with a pledge to give it value, that one tenth should be annually destroyed. The strong implication that no more should be issued was disregarded, and, in a few months after, one hundred thousand were added. The depreciation to fifty, from thirty-three and a third per cent. discount, was the consequence.

The borrowers, who had paid their debts with it at the latter rate, could not overlook the advantage of discharging with three dollars a debt, for the loan of that which had served them the purpose of four. The injustice to those who had thus received in payment was disregarded. It was natural to suppose they were creditors, and when a state resorts to expedients of this sort, creditors are not apt to be favored. The proneness to this injustice in small communities, in times of general pecuniary embarrassment, was one of the mischiefs against which the constitution sought to guard us.

"A faction" (says Mr. Madison, in the Federalist) "is a number of citizens, whether amounting to a majority or a minority of the whole, who are united and actuated by common impulse of passion, or of interest, adverse to the rights of other citizens, or to the permanent and aggregate interests of the community."

The remedy he proposes, and the only one he admits to be practicable, is the extension of the government over so large a number of people, and so great an extent of territory, as to render such combinations impracticable. To illustrate this he says:

"A rage for paper money, for an abolition of debts, for an equal division of property, or for any other improper or wicked project, will be less apt to pervade the whole body of the union, than a particular member of it."

Surely Mr. Madison could not have recommended the constitution to the people, with the proud confidence in its excellence, if he had understood it as leaving it in the power of the local legislature of a remote corner of the union to adopt measures which he has stigmatized with an asperity so foreign to the general mildness of his character, deportment and style.

It is apparent then, from our own experience, that the certificates of the loan office are within the mischief contemplated by the constitution in the prohibition of bills of credit.

They are equally within the letter—they are bills—they are issued by the state—they are issued on credit of the state; and though in terms they are evidences of debt, yet in fact they are advances of the credit of the state. Not that the state in fact receives credit in the transaction, for credit in one sense implies confidence. But the machinery of government is put in motion to exact from the whole community a sort of 'forced loan.' I have already said that I know of no one thing originally, and precisely distinguished from all other things of the like kind by the name of a bill of credit. I have already referred to the origin of the phrase, and am at a loss to think of one of more comprehensive fitness. It seems to be a new arrangement of known words, adopted as the general name of all evidences of debt issued to those to whom no debt was due, for the mere purpose of communicating credit. Such may be granted by an individual, without injury to any one but himself, if he be solvent—not so when issued by a state. They then become inevitably a circulating medium varying in

value with all the fluctuations of the public councils, and, if issued to an amount near equal to that of one year's revenue, are sure to derange commerce, unsettle confidence, and impoverish the treasury—they are therefore forbidden. The name is remarkable for its comprehensiveness and precision. Most others might have seemed to interfere with the power of the states to give bona fide evidences of actual debts. The common and popular phrase 'paper money,' would have been inaccurate—the paper is not money, though it is so natural to those, who use it as such, to call it so, that even the legislature speak of paying fees and salaries in it, without saying whether it is to be taken at par or not.

In short, we see in the certificates of the loan office all the mischiefs which occasioned the prohibition of bills of credit, and all the circumstances which gave rise to the adoption of that name, and are constrained to pronounce them within the meaning of that prohibition; the loan office itself an unconstitutional institution, and all statutory contrivances to promote the circulation of the paper, unconstitutional, void, and of no effect.

RELIGIOUS WORSHIP.

(Reported for the Steubenville Gazette.)

At the term of the supreme court of Ohio, in Columbiana county, October, 1821, an action of trespass and false imprisonment, brought by one Shade against Kerns and several others of the Methodist society.

The defendants, by Mr. Wright, their attorney, put in the following plea as a defence to the action, viz.

"That, at the time and place mentioned in the declaration, the defendants, with others, were assembled together for the purpose of religious worship and transacting other business belonging to the society of Methodists, to which they belonged; and, being so assembled, and in the performance of said duties, just before the said act complained of by the said plaintiff, he, the said plaintiff, entered the said religious assembly, and then and there turbulently and riotously disturbed the said assembly in the devotions and exercises aforesaid; whereupon the said defendants, to prevent said disturbance, seized, arrested and detained the said Shade in custody, for the space of six hours, as by law they might; they, the said defendants, in said seizure, arrest, and detention, using no more force than was necessary for the effecting said object; which is the same identical trespass complained of in the declaration, and none other or different."

To this plea, the plaintiff, by Mr. Laird, his attorney, put in a demurrer, (which admits the facts pleaded to be true, and relies on their insufficiency in law.)

The defendants' counsel relied upon the third section of the law of the state for the prevention of certain immoral practices, vol. 18, reprinted, page 44, which is as follows:—"That if any person shall at any time interrupt, molest or disturb, any religious society, or any member thereof, when meeting or met together for the purpose of religious worship, or of performing any other duties enjoined on or appertaining to them, as members of such society, the person or persons so offending may be arrested and detained in custody not exceeding six hours at any one time, and shall be fined in a sum not exceeding twenty dollars."

The cause was tried in the court of common pleas, before the president, Tappan, and his as-

sociates, at August court, and before Judges Peas and Hitchcock in the supreme court, to which it had been brought by appeal. The counsel contended that, at common law, as well as by the statute, every religious society had a legal right to protect itself in time of worship from disturbance, and to arrest and confine, during the continuance of the meeting, any person who should be so lost to all sense of propriety and decency as to persist in interrupting and disturbing them—that in such cases they were not bound to send for a justice of the peace or other magistrate, make a complaint, and obtain a warrant for arrest, because the delay attending such course would render totally inefficient the protection intended by the legislature, as, in many cases, no magistrate or constable would be at hand, and the congregation prevented from pursuing their worship, which the law was intended to guard against; and if the disturbance took place on Sunday, the most usual time of assembling for worship, the meeting would certainly be broken up, as no court could lawfully be held to try the offender on that day. That the right to arrest and detain was intended to protect the worshipper while at his devotions—while the fine of twenty dollars was intended as a further punishment of the offender. It was admitted that the fine could only be imposed by the magistrate in the usual way.

The court of common pleas adjudged the plea a good defence, both at common law and the statute. The supreme court sustained the demurrer, and adjudged the plea bad, inasmuch as the statute did not authorise the *disturbed religious assembly to arrest and detain the offender*, but had entrusted the exercise of that power to a magistrate on view or complaint, as a *punishment for the offender*!—The court said that at common law such society would have a right to protect themselves by confining disturbers, while they continued refractory, or until the meeting broke up; but that, as this plea appeared to have been drawn under the statute, it could not be sustained.

It is not the object of the reporter to comment on these decisions; their effect will be obvious to most thinking men; but to make it public in order that the people, if they are dissatisfied, may bring the matter before the legislature now in session. The construction of the law, given by the highest court in the state must be considered as correct and binding, unless the legislature shall declare its own meaning unequivocally.

From the Richmond Enquirer, of Dec. 6, 1821.

GENERAL COURT OF VIRGINIA.

As the case of the *three seamen*, who sued for a *habeas corpus* to discharge them from the mittimus awarded by a *state magistrate* under an act of congress, has excited considerable interest, both here and elsewhere, we have applied for a copy of the opinion of the court, and now submit it to our readers:

Ex parte William Pool and others on a writ of habeas corpus.

On the 31st of October, 1821, William Pool, Matthew Thompson and Asa Wilson, presented their petition to the superior court of Henrico county, setting forth that they were imprisoned by the jailor of the said county, and that such their imprisonment was not authorized by law; they therefore prayed a writ of *habeas corpus ad subjiciendum*, which was awarded. By the return to that writ, it appeared that the petitioners were

sailors, who had regularly signed a contract, within the intent and meaning of the act of congress, passed the 20th of July, 1790, by which contract they had agreed to perform a voyage or voyages, not yet finished, or the contract concerning it altered or otherwise dissolved; that the petitioners had deserted from the ship or vessel, and being brought before Joseph H. Mayo, a justice of the peace for the county of Henrico, before whom the facts aforesaid were proved, the said petitioners were committed to the jail of the county aforesaid, until thence discharged by due course of law. In addition to the facts stated in the return, it was proved to the said court, that the petitioners are citizens of the United States. Whereupon, with the consent of the petitioners, the questions arising upon their case were adjourned to the general court, for its opinion, whether the petitioners ought to be discharged from the custody of the said jailor.

Upon the case thus stated, the following questions have arisen and been argued at the bar:

1. Had the superior court of Henrico jurisdiction to award and discharge, under a writ of habeas corpus, in cases where the petitioners are confined under colour of the authority of the United States?

2. Is that part of the act of congress, passed July 20, 1790, which directs the justice of the peace to commit the petitioners under the circumstances before stated, made in pursuance of the constitution of the United States?

3. What is the legal effect of the contract made by the petitioners with the master or commander of the vessel mentioned in the return; and how is the same affected by the commitment set forth in the case?

Upon the first question, it is the unanimous opinion of this court, that the writ of habeas corpus may be properly issued by a state judge, on the application of any party, who, by proper affidavit, shews probable cause that he is unlawfully restrained of his liberty; that the question whether the law authorizes his confinement, is to be decided by the laws of the state, considered as a member of the United States; that we are to consider all persons lawfully restrained of their liberty, who are confined in obedience to the constitutional laws of this state or of the United States. In the practical application of these principles, the state judges will not discharge a party, whose commitment is regularly made, with a view to a prosecution in the courts of the United States, for an offence actually committed and cognizable therein; neither will the judges of the state courts, as such, admit the party to bail. Whether they will look beyond the warrant of commitment, when made by any other than a judge of the courts of the United States, and inquire into the fact, is matter of sound discretion to be regulated by the circumstances of each particular case. But it is the opinion of this court, that the state courts and judges have concurrent jurisdiction with the courts and judges of the federal court, in all cases of illegal confinement, under colour of the authority of the United States, when that confinement is not the consequence of a suit or prosecution pending in the courts of the United States, in which the allegation upon which the commitment is made, will be tried. As therefore the commitment in question is connected with no such regular suit or prosecution, it is the opinion of this court, that the superior court of Henrico had jurisdiction of the questions arising in this case.

In considering the second question proposed, the

general power of the congress of the United States, to authorize the arrest and commitment of offenders against the laws of the United States, by persons, designated as holding offices under the state governments, has been brought into review. It has been contended that the congress of the United States possesses no such constitutional power, because the warrant to arrest, and the decision upon evidence, that the accused ought, (by the laws of the United States), to be committed for trial in the courts thereof, are judicial acts; that those who perform them, exercise a portion of the judicial power of the United States, which power, can, constitutionally, be exercised by such courts alone, as have been, or may be established by the constitution of the United States, and laws made in pursuance thereof. And it is farther contended, that the commitment, ordered in the present case, is embraced by the principles of this objection.

Upon the question, how far, and in what manner, a justice of the peace of the state of Virginia may decide that a party, brought before him, shall be committed to jail for trial, and to order his commitment accordingly, without exercising the judicial functions, with which he is clothed by the state, there is a diversity of opinion among the judges of this court, and we have come to no definitive conclusion, whether the act of commitment, as required to be performed by the act of congress, called the judicial act, be strictly ministerial only, or partaking, in part, of the judicial character, as those acts would be characterized by the the common law and laws of Virginia,—but a majority of the court are of opinion, that, whether such acts of commitment be strictly ministerial or not, as they would be defined by the common law, they are not such acts as the constitution of the United States intended to vest exclusively in the courts therein provided for. While it is admitted, that we may fairly refer to the common law, and to the sages thereof, for aid in determining what is the precise meaning of the first section of the third article of the constitution of the United States, it is perfectly manifest, that a literal adherence to the common law definition of juridical power, followed in every case, would impose a meaning on the article in question, which never entered into the heads of the framers, or any one practically engaged in carrying the constitution into effect. To state a single instance, the administration of an oath. If any one act, as an auxiliary to the administration of justice, has been uniformly called by the common law writers, a judicial act, it is this one of administering an oath; and yet, can any man in his senses believe, that the framers of our constitution intended, that every custom-house officer, commissioner of the revenue or excise, commissioner to take depositions, commissioner in bankruptcy, and to settle various other incidental and occasional matters, should hold his office during good behaviour, and at stated times receive for his services a compensation not to be diminished during his continuance in office? Most or all of these officers and special commissioners have been authorized to administer oaths, and have done so, without an insinuation that they were exercising the judicial powers of the union. The remark made on this part of their duty, applies equally well to various other things of a seemingly judicial nature, which they are in the constant habit of doing. The commissioners to decide upon the claims on the Louisiana fund did exercise, and the commissioners now deciding on the claims on the Florida fund, must exercise quasi judicial powers; a general view of

which subjects is sufficient to shew that the term judicial power, as used in the constitution of the United States, must be understood to mean what those terms imparted at the time; not by resorting to any rigid, technical definition, but to their natural import, understood with reference to the subject matter in allusion to which they were used. Thus understanding the terms, we are of opinion, that the constitution directs, that all the regular and permanent duties, which properly belong to a court in the ordinary and popular signification of that term, shall be performed by the courts, described in the constitution; the judges of which courts shall hold their offices during good behavior, &c. There is, therefore, nothing in the constitution which prevents a ministerial officer or other person, by law directed to do and perform any act, which may be necessary to bring an accused party before a court, possessing the judicial power of determining on his guilt or innocence. We are, therefore, of opinion, that commitments made under the aforesaid act of congress, by the persons therein described, are lawful and right, provided they pursue the authority under which they act. But we are not to be understood as affirming that the congress of the United States can give jurisdiction to, or require services of any officer of the state governments as such. The direction may be the opinion of the court; but what we have affirmed and do affirm, is, that congress may authorize any citizen of the United States, to perform any act which the constitution of the United States does not require to be performed in a different manner.

We are then to inquire, what is the legal effect of the contract made by the petitioners with the master or commander of the vessel, and how that is affected by the commitment complained of? The first question here presenting itself is, by what authority but the congress of the United States define the obligation of the contract in question? The answer is, that, by the 31 clause of the 8th section of the 1st article of the constitution of the United States, the congress have power to regulate commerce with foreign nations, and among the several states, and with the Indian tribes.—And by the 17th clause of the same section, they have power to make the laws necessary and proper for carrying the power first mentioned into effect. It is believed that the regulation of the seamen, to be employed in the merchant service, may be assumed to be necessary without entering on the controverted ground, to which it is supposed that these words, necessary and proper in some cases, lead. It is not perceived that this commerce, over which the congress possess the entire control, could otherwise be carried. The right then to give a rule on this subject being established, the question recurs, what is that rule as it relates to the case before us? The answer is, that a seaman, who regularly signs a contract, is, by the law, bound to specific performance, and may not elect to pay damages for non-performance, as in ordinary personal covenants: nor is this effect of an engagement for personal services unknown to the statute laws of Virginia: the law is to be understood to be the same, in respect to apprentices, to servants, under the act of 1785, and to foreign seamen, under the act of 1805, as well as to soldiers belonging to the army, and sailors belonging to the navy.—These are all mentioned together, because we know no difference between the effect of an engagement, constitutionally defined, by act of congress, and one defined by the laws of this state.

In any of the cases above supposed, as well as the very case before the court, the master or commander, as the case may be, may, by himself, or with others, his assistants, pursue, and, by force, bring back his deserted apprentice, servant, sailor, or soldier. The particular provisions of the act of congress, which authorized the interference of the justice of the peace, may be said, in some sort, to be a restriction upon the rights of the captain, since, impliedly at least, it would seem to deny the right of using the house of correction or common jail for the purpose of safe keeping his deserted sailor, without having the case examined by the person authorized by the act of congress; but, perhaps, the better opinion is, that the act of congress designed to give the jailor, who might act as an assistant to the captain of the vessel, a protection against the charge for false imprisonment, should the sailor, in truth and in fact, not be under the obligation charged upon him. The imprisonment directed by the act of congress, is for no determinate period, is not inflicted as a punishment, and is not directed with a view to any trial, for any offence whatsoever. We cannot, therefore, regard the execution of this part of the act of congress, as the prosecution of a public offence. And while the powers exercised by the magistrates are, at first view, of a seeming judicial character, and would, perhaps, be so defined by the common law, we are justified in saying that the case did not present such a judicial question as was necessary or proper to be carried into court, by formal process; using the term court, in the sense we have before stated it to have been used, in the constitution of the United States. If the nature of the duty required to be performed, rendered it doubtful in the minds of some, whether it were necessary to carry it into a regular court, or to be tried by a jury, the legislature of the state of Virginia, in the act of 1805, answers the question almost, if not entirely, in the words of the act of congress, and directs the same proceedings; it is true, that the act of 1805, provides for the case of foreign seamen only; this is explained by the fact, that the language of the act of congress does not apply to contracts, made without the jurisdiction of the United States, as to which the *lex loci* would give the rule. But both laws ameliorate the condition of the sailor; first, by requiring the contract to be reduced to writing, and, secondly, by requiring the consent of the justice of the peace, before he shall be thus restrained of his liberty. We understand the nature of a sailor's engagement, to bind him to specific performance, by the commercial laws of the civilized world. By the laws of Westbury, a sailor, who received part of his wages and deserted, was to be hanged; and when a sailor engaged himself to two captains, the first had a right to take him from the second, and compel him to go the voyage: These laws, with those of Oleron, now form the basis of the maritime codes of Europe, and, in some degree, are supposed to be adopted by the constitution of the United States, as they were certainly resorted to by our courts of admiralty, previous to the adoption of the federal government; and it has been again and again determined, by the courts of admiralty in this country, that the act of congress alters the general maritime law, only so far as it gives a new rule, and the rights, as well as the obligations of the mariner, are clearly subjects regulated by these maritime laws, and acted on every day in the courts of admiralty. The act therefore which has been done in this case, might well

be done by individuals appointed by law, or persons designated by general description. If, therefore, Joseph H. Mayo, (being one of the persons designated), has pursued his authority, his act must be effectual to every legal intent and purpose. The commitment is made in precise conformity with the act of congress, and petitioners have not suggested, that the facts on which it was grounded do not exist; they must, therefore, be remanded to the jail of the county of Henrico, there to remain until the vessel to which they belong, and named in the proceedings, shall be ready to proceed on her voyage, or the captain shall demand their discharge; which is ordered to be certified to the superior court of law, for the county of Henrico.

Judges Semple and R. E. Parker dissented from that part of the foregoing opinion, which determined that persons, exercising functions under a law of the United States, were not officers of that government, and to be appointed as such; and judge Daniel, concurred in the court's opinion, for reasons somewhat different from those assigned.

HALVES OF BANK NOTES.

Martin, vs. Bank of the United States.—This was an action brought in the circuit court of the United States, held in Philadelphia, in October term, 1821, before *Bushrod Washington*, chief justice, for the recovery of five hundred dollars, the halves only of which had been received by the plaintiff, from his agent in Cincinnati, the corresponding halves being lost. The notes were remitted after the publication of a notice by the directors, that the bank would not pay cut notes unless all the parts were produced. The demand of the plaintiff was for the full amount of notes.

On this subject the judge laid down the following principles of law:—

A bank, or promissory note, is the evidence of a debt due by the maker to the holder of it, and nothing more. It is also the highest species of evidence of such debt, and in fact the only proper evidence, if it be in the power of the owner to produce it:—But, if it be lost or destroyed, or by fraud or accident, has got into the possession of the maker, the owner does not thereby lose his debt, but the same continues to exist in all its vigor, unaffected by the accident which has deprived the owner of the means of proving it by the note itself. The debt still existing, the law permits the party, when better evidence is lost or destroyed, or not in his power, to give inferior evidence, by proving the contents of the lost paper, and if this be satisfactorily made out, he is entitled to recover.

If the evidence be not lost, but is merely impaired by accident, or even by design, if such design be not to injure the maker or to cancel the debt, the principle of law is the same. Cutting a bank note in two parts, does not discharge the bank from the debt of which the note was but the evidence, nor does it even impair the evidence itself, if, by uniting the parts, the contents of the entire note can be made out. If one of the parts of the note should be lost or destroyed, the debt would be no more affected than if the entire note had been lost or destroyed. In the first case, the difficulty in proving the right of the owner to the debt is diminished; but if the whole note be lost, it may have got into the hands of a bona-fide owner, and therefore the loser may not be entitled to the debt of which it was the evidence. But against the real owner of one-half of the note there

cannot be any opposing right. The finder or robber of the other half part cannot assert a right to the debt, because he cannot prove that he came fairly by the evidence of it.

The question is whether it was competent to the bank to notify the holders of her notes, that, in case they should be voluntarily cut into parts, she would not pay them, unless all the parts should be brought together.

But, upon what principle is it that one party to a contract can prescribe terms to absolve himself from its obligation, without the assent of the other? I know of none. If the bank could dictate to the holders of her notes the condition stated in this notice, upon the performance of which, and not otherwise, she would pay them, she might, with equal authority, prescribe any other condition, and declare in what case she would pay, and in what she would not. The note is the evidence of an engagement by the bank to pay a certain sum of money to the bearer of it, and the general law of the land declares, that if such note or a part of it should be lost or destroyed, the debt shall nevertheless be paid upon satisfactory proof being made of the ownership and loss. Thus sanctioned, these notes pass from hand to hand: and if the bank can, nevertheless, discharge herself from her obligation to pay them, unless both parts of the note be produced, or unless the note be produced entire, (and there is no difference between the two cases) then the arbitrary declaration of the bank must be stronger than the law. This observation applies with equal force to every other species of contract, where one of the parties to it attempts to prescribe to the other the rules of evidence by which alone he will be governed.

If the court is correct in their opinion upon the first point, it follows that the law as much compels the bank to pay the owner of half a note, where the other half is lost, as to pay in the two cases supposed; and so, the right of the bank to prescribe terms in the one case, if admitted, would be equally valid in the others. There can be no difference, unless it be that in the one, the notes were voluntarily cut, and in the other they were torn by accident; but the owner of the debt being also the owner of the paper which is the evidence of it, he had a legal right to cut it, and by doing so, he could not impair its obligation, unless he intended to do so. In all these cases, the note is cut with a view to the security, not to the destruction of the debt, by dividing the chances of preserving the part of the evidence of it, in case the other parts should be lost. The defendants do not forbid or condemn the practice, even if it could, for a moment, be admitted that they had a right to do either. That is not the *gravamen* stated in the notice—it is the production of one of the parts for payment unaccompanied by the other part. That is the case in which the bank declares she will not pay, and in which the law pronounces she shall pay.

I am of opinion that judgment should be entered for the plaintiff.

Peters, (justice) delivered his opinion, entirely concurring with that of judge Washington.

Judgment for plaintiff for the full amount of the notes.

UNCHARTERED BANKS.

In the court of appeals [Virginia]—Feb. term, 1822.
WILSON vs. SPENCER.

Judge Roane delivered the resolution of the court. This is an action of debt, brought in the county court, by the appellee, upon a single bill. The defendants pleaded two pleas, stating, in substance,

that that bill was given to the president of an unchartered bank, established contrary to the provisions of the statutes in such case made and provided, and that it was given in consideration of bank notes, emitted by the said bank, in equal violation of those statutes. These pleas were demurred to, and the facts therein stated, are consequently admitted. The county court gave judgment for the plaintiff, on the demurrer, and that judgment was affirmed by the superior court: from which judgment of affirmation, an appeal was taken to this court.

It is not easy for this court to perceive, on what grounds this judgment can be justified:—Although the act of February 24th, 1816, (2 rev. co. 111) was not in force, when this bill was given, the act of 1805 was, (see 2 rev. co. pa. 111, ch. 207, § 2.) and the bill was given for a consideration utterly prohibited by that act. It was given for a consideration, prohibited under severe penalties: and the cases cited for the appellant, incontestably prove, that any contract founded on an act forbidden by a statute, under a penalty, is void, although it be not expressly declared to be so; and that no action lies to enforce it—Whatever might be said, in relation to an action brought to recover the amount of the bank notes, given as the consideration of this bill, in favor of the holder against the bank,—in favor, as might be argued, of an innocent indorsee, or holder of the said notes—it is clear that no action will lie, on a bond given to secure the payment thereof, in favor of the bank—the party more emphatically offending against the policy of the act.—It is this last mentioned party who is now asking the court, to give its aid to violate the provisions of an act of great public policy and utility. There can be no ground for such a pretension, unless we consider the act of 1805, as repealed at the time, and as having no binding force or authority.—In relation to a law of this importance and character, and of such long-standing in our code, we ought not lightly to imply such a repeal. It should be shewn to be repealed, either expressly, or by a strong and necessary implication.—The only ground on which that inference is attempted to be supported in this case, arises from the suspension of the act of Feb. 24th, 1816. That act was additional to that of 1805, and created further penalties and forfeitures for its infraction: but it left the act of 1805, in full force. In making a further declaration, in the act of 1816, that notes, bills, &c. issued contrary to its provisions, should be null and void, it cannot be inferred, that those made contrary to the act of 1805, are valid. The suspension of the former act does not necessarily carry with it the repeal or suspension of the latter: nor did a particular provision of the act of 1816, § 7, specially prohibiting suits, by the banks therein contemplated, interfere with similar prohibitions, resulting, on general principles of law, from the inhibitions contained in the act of 1805. A suspension of the act of 1816, therefore, did not suspend, repeal or interfere with the provisions of the act of 1805: nor does a recognition, contained in the suspending act, of a right in the banks, therein mentioned, to close their transactions, in conformity with the provisions of the act of 1826, annul or apply to the prohibitions contained in the act of 1805. That suspension left the banks aforesaid, on the ground they occupied, before the passage of the act suspended; but did not place them in a better situation; and, far less, as was argued, did it legalize and charter those associations. It left those banks free to arrange their matters, if they could, without suit; and unaffected by the severe and additional restraints and penalties of the act of

1816. It did not mean to interfere with the original act, when it only purported to suspend, in part, another act, more effectually to suppress the circulation of notes, emitted by uncharted banks. The suspension only operated up to the point embraced by the last act, and did not go beyond it.

Under the admission that the prohibition in the act of 1805, is not repealed, the counsel for the appellee concedes, that in regard to individual cases, the law would be decided against him: but he claims an exemption for his clients, on the ground of the extent of this confederacy to infringe the laws, and of what he is pleased to call, a disease of the body-politic.—There may be cases, in which the still voice of the law may not be heard, nor the power of the civil officer be competent to execute its judgments.—That, however, is an extreme case, partakes of the nature of a revolution, and, in point of magnitude, is not shewn to exist in the case before us. But where would gentlemen draw the line in such cases? we know of no such boundary in the case before us. All that we know, is, that certain associations of individuals have set them selves up, in open violation of the laws, to exercise a high function of sovereignty, at most only confided to the power of the legislature.

We are, therefore, unanimously of opinion that the judgment, in this case, is erroneous, and that it should be reversed, and entered for the appellants.

=====
COUNTERFEIT BANK NOTES.

Extract from the minutes of the superior court.

EASTERN DISTRICT, GEORGIA, }
Superior court, January term, 1822. }

State } Indictment,
vs. } Passing counterfeit bank notes.

Calvin and others, }
By CHARLTON, judge.

Bills of indictment have been found against the prisoners, for offences which may subject them to an imprisonment in the penitentiary for a longer period than the term mentioned in the 16th section, 11th div. of the penal code. That section is in these words, "Every person charged with a felony, or any offence which may subject him, on conviction, to an imprisonment in the penitentiary for the term of three years, shall be furnished, previous to his arraignment, with a copy of the indictment, and a list of the witnesses who gave testimony before the grand jury." After the arraignment of these prisoners, their counsel applied for copies of the indictment, as a matter of right, under this section of our penal code. I was then of opinion that the application came too late, for, though the language of the section was imperative and mandatory upon the prosecuting officer of the state, yet it was right, *ex debito justitiæ*, only previous to arraignment. In other words, that the prisoners might refuse to be put upon their arraignment until furnished, as this section directs, with "a copy of the indictment, and a list of the witnesses who gave testimony before the grand jury;" but that the neglect or omission to demand this copy of the indictment and list of the witnesses on the arraignment, was a waiver of the right, and left it discretionary with Mr. Solicitor General, after arraignment, whether he would or would not furnish a copy of the indictment and list of witnesses.

This section of the penal code was borrowed from the criminal law of England, in relation to treason; and the opinion I expressed, when the application was made in behalf of the accused, has since been

strengthened and confirmed by reference to English authorities—By the stat. 7, W. 3, E. 3, it is enacted, That the prisoner shall have a copy of the indictment, (which includes the caption), but not the names of the witnesses, five days at least before the trial, that is, upon the true construction of the act. *before his arraignment*; for then is the time to take any exceptions thereto, by way of plea or demurrer—Post 229, 230: Dougl. 590 By consenting to the arraignment, the prisoner admits that he has had a copy of the indictment, or waives the benefit he might otherwise claim under the section referred to, of the penal code of Georgia. The statute of William also directs, in cases of treason, [it enumerates], that the prisoner shall have a copy of the panel of jurors, two days before his trial. This statute is as imperative as the law of this state, and still it has been decided, “if there is any objection to this copy, it must be objected to before the plea. For the copy is given the prisoner to enable him to plead; therefore, by pleading, he admits that he has had a copy sufficient for the purposes intended by the act.”—4. state trials. 668 A similar concession is involved under our system of criminal law, by neglecting or omitting to demand copies of the indictment and list of witnesses, on the arraignment; for, at that period, the prisoner pleads orally, which it is the duty of the clerk to place upon the minutes. One of the counsel for the prisoners, Wayne, has since expressed his acquiescence in the decision of the court, and has referred me to a case in Salkell, in support of it. The doctrine now, on this point, is settled, and will remain unshaken until subverted by legislative interference. Another motion has been made by Mr. Solicitor, before me, at chambers, to permit him, by order of court, to endorse upon these bills of indictment, the names of five additional witnesses, one of whom could not have given testimony before the grand jury, because he was then in Charleston.

The motion is opposed and resisted by the counsel for the prisoners, upon a variety of grounds, by Wayne and Cuyler, because of its hostility to a decision of this court in a case tried at the last term, in which it is said the court determined, that no witness could be examined at the trial of the accused, whose name is not on the indictment among the list of witnesses who gave testimony before the grand jury; by Mr. D'Lyon, because the decision in the case referred to, was subsequently acted upon and confirmed in Gates's case, to whom a new trial was awarded, at the same term, upon the objection, that a witness was sworn and examined on his trial, whose name had not been endorsed on the bill of indictment among the list of witnesses who gave testimony before the grand jury; and because, adding these names now, would operate as an amendment or alteration of the record, which could not be done in a criminal case; by Mr. Wilde, because indictments were not within the statutes of Jeoffail; and these additional names upon the record would, as contended for by D'Lyon, operate as an amendment; and because the motion, if acceded to by the court, deprives the prisoners of all the kind and merciful benefits the penal code intended for them—the principal of which was, that the prisoner might have time to inquire into the characters of witnesses.

Mr. Habersham, of counsel for the prosecution, did not believe that the decision of the court in the case referred to, went to the extent urged by the counsel for prisoners; and if it did, it ought to be considered as a *msi prius* adjudication, which, given under the impulses and suggestions of the

moment, amidst the heat of forensic discussion, was always liable to errors; and if it contained any upon the ulterior and grave reflection of the court, it was its bounden duty to correct those errors, by its judgment delivered *seriatim*. It might be done on this motion, and the public justice required that it should be now conclusively settled and understood, whether, under a sound construction of this section of the penal code, witnesses, upon whose testimony the state might rely for a conviction, were prohibited from being sworn and examined before the petit jury, because they were not found in the list of witnesses who gave testimony before the grand jury.

Mr. Bond, the solicitor general, said this motion could not be fairly viewed, if it was thought that it assailed the beneficent intention of the legislature of Georgia. The intention of the law was, and its reason was, to enable the prisoner or the accused, to enquire into the character of the witnesses; that this motion, if granted, afforded an opportunity of making such inquiry, and that, therefore, the intention of the legislature (which is directed to be the foundation of every exposition of the penal code) being ascertained, this motion could not be considered in violation of it. It was also urged in behalf of the motion, that the application to record the names of these witnesses, did not militate against the decision in the case mentioned, because the witness in that case was rejected upon the objection, that no sufficient notice had been given of the intention to place her name on the indictment, among the names of witnesses, who had given testimony before the grand jury; and that the distinction was supported by a decision of my predecessor. Upon the weight of these reasons in support of, and against the present motion, I have now to decide—1st. Whether such was the intention of the legislature, as it is contended for by the solicitor general; and 2dly, whether that intention, as contended for, is in accordance with the decisions of this court.

1. As to the intention of the legislature.

It has been mentioned (and therefore I am at liberty to say), that the penal code of Georgia was framed by Mr. Harris and myself, under the appointment of the then governor of the state. We felt anxious to adapt the criminal law of our ancestors to the republican institutions of this country; and with that feeling as the pole star of the duty confided to us, we endeavored to place the accused upon as high a scale of dignity as was dictated by the wide difference between a citizen of a republic and the subject of a monarchy. We consequently infused into the system (which the legislature of Georgia did us the honor to adopt) every principle of mercy and indulgence, which that contrast suggested. We placed a citizen of Georgia, or any person committing an offence against her good order and government, (which inflicted upon him or her, a penitentiary punishment for the term mentioned in this section of the code) upon the same footing as a subject of England, charged with treason. We considered that the best men, under the soundest impressions of moral, religious and political obligations, might commit the crime of *treason*, who would, from their souls, abhor and be the first to punish the unfortunate creature who had committed the offence of *petit larceny*.

Under this impression, we also thought (at least I did) that the privileges intended by the statutes of England, to persons charged with treason, ought to be extended to persons charged with felony, which subjected him to a penitentiary offence

In short, that reason required the same indulgencies to the one that were awarded to the other. In *foro cæli*, there could be no distinction. Hence the introduction of this sect into the penal code. It was an adoption of the humane provisions of the British statutes, in relation to treason, which ought to apply to an American citizen, charged with a felony. The statutes of England to which I allude, are the statutes of W. 3, c. 3, and 7, Ann, c. 21. The statutes of W. require, as before stated, that the prisoner shall have a copy of the indictment before his arraignment; and the statutes of Ann, that the prisoner shall not only have a copy of the indictment, but a list of the witnesses to be produced, and of the jurors impanelled, with their professions and places of abode, the better to enable him to make his challenges and defence.

The reasons of the indulgencies are, that the prisoner may enquire into the characters of the witnesses and qualifications of the jurors.

These were the reasons which influenced the framers of the code, and, as I presume, the legislature of Georgia.

2. As to the decisions of this court.

I certainly decided at the last term, in the case so repeatedly pressed upon my recollection, that a witness who had not been sworn to give testimony before the grand jury, could not be sworn and examined on the trial of the accused, before the petit jury. My reasons for this decision was founded upon the reason assigned by the British law, that the accused ought to have an opportunity of inquiring into the character of the witness. The sudden and unexpected presentation of the witness prevented this inquiry, and therefore she was rejected. This was the decision in the case, and it must, or ought to be, remembered by every person who heard the opinion. But suppose that notice had been given by Mr. Solicitor, that he intended to apply for a witness's name, to be recorded on the bill, which notice allowed time for inquiry as to character, was not this a compliance with the requisition and object of the penal code? My predecessor has said that it would be, and, *cessante ratione, cessat et ipsa lex*. Mr. Wilde, of counsel for the prisoners, has pressed upon me the maxim *stare decisis*, that it is better erroneous decisions of the court should be adhered to, than to be dependent upon the contrarious, oscillating opinions of this court.

I answer, *stare decisis*—and, upon that maxim, this case, under the present motion, shall be decided. It is therefore ordered, that the name of the witnesses mentioned in the motion of Mr. Solicitor, be recorded in the list of witnesses on these bills of indictment, who gave testimony before the grand jury.

MARINE COURT, NEW-YORK,

APRIL 29th, 1822

Timothy Laye, vs. Alexander Cartwright.

Interesting decision, as to the captain's right on board a merchantman, to chastise his seamen; also, of the mate on board the same, and when and how he may exercise that right.

This was an action of assault and battery, alleged to have been committed by captain Cartwright, the defendant, master of the ship South Carolina Packet, recently from St. Croix, upon Laye, the plaintiff, who was steward of the ship. I appeared in testimony, that on the outward voyage the cook was sick, and Laye, being the steward, was

next in order, assigned by the captain to act in his place.

One morning he spoiled the breakfast by his slovenly cookery—burnt the rice, so that it was not eatable; and boiled the mackerel and potatoes together, in dirty water, and in a dirty kettle, which had not been cleaned after the preceding day's cookery. The captain, for his punishment, lashed him up by his thumbs to the main shroud, and there kept him about two hours. Finney, the first witness, made out the punishment to be severe and cruel; he said the plaintiff could not stand fairly upon his feet, and was so far suspended by his thumbs, that when taken down, they were swollen to that degree, he could not use them, in consequence of the severe infliction. The exact truth of the case, however, seemed to be, that the plaintiff was not so tightly bound by the thumbs, as to occasion any great degree of pain; and could stand perfectly upright and free upon his feet; and that none of the crew heard any complaint from him whatever, after he was let down; the single witness aforesaid, only excepted. It was also alleged, that the captain committed another assault and battery on the plaintiff, on the return voyage.

Edward Burr, Esq. conducted the defence, and summed up to the jury in a handsome style for capt. Cartwright. Mr. Rose addressed the jury on the part of the plaintiff. Mr. Justice Swanton, who presided at the trial, then proceeded to recapitulate the testimony, and charge the jury upon the law of the case. The questions to be settled by the jury, his honor remarked, were, first, whether the chastisement which the captain inflicted, was unnecessarily severe and disproportionate to the offence. That the captain of a vessel had a right to inflict chastisement on one of his crew, when the conduct and due management of the vessel rendered it necessary, was not to be questioned, and it would appear, that, in the present case, the conduct of the steward was reprehensible, and justified some chastisement. It was in evidence, that the steward of a vessel should understand, and when called upon by the captain, in a case of necessity, such as sickness and the like, perform the duties of the cook, and so, next to him, in case of necessity, one of the crew, or the crew in rotation. The steward here had certainly not done his duty, and the captain, as he had a right to do, tied him up by the thumbs to punish him. If, however, the punishment was excessive, the jury must find a verdict against the captain. It had also been proved, that the captain, on a certain occasion, had kicked the plaintiff after he had ordered him, and while he was going down the companion way; but it appeared, moreover, that as he was going down, the plaintiff loitered and talked back to the captain. On this latter point, it might be doubtful, whether the plaintiff should not recover, as the kicking, if they believed the witness, did not appear to be necessary; but the jury must decide according to their own view of the case. The jury retired about twenty minutes, and returned with a verdict not guilty.

Another cause then came on of the same plaintiff, against Thomas Roland, the mate, also for assault and battery, and involved still nicer points of law. Laye, in this case, alleged that the defendant had, in several instances, during the voyage, violently beaten him. There was no testimony that Roland the mate, had struck him, or kicked him in three several instances; and had there been no contradictory testimony, or had the jury placed the fullest reliance on the plaintiff's witness, a verdict

for a considerable amount might have been found for the plaintiff. That he had been struck by the mate, there was no question; and the point of law raised, was, whether the mate, under the circumstances, had a right to chastise him.

Mr. Rose, for the plaintiff, contended strenuously, that the mate had never a right, in any circumstances whatever, to strike a hand at all; but must, in all cases of his misconduct, report him to the captain, who might chastise him, if the circumstances of the case demanded punishment.

Mr. Burr, on the other hand, contended (and the court charged the jury accordingly,) that there certainly was circumstances in which the mate was just ifed in striking a hand, to enforce obedience. For instance, when the captain was sick, or on shore, and it was necessary for the mate to compel some duty to be done immediately. In such cases it would be justifiable. So, even if the captain were on board, and the mate superintending on deck, and some necessary duty on which the salvation of the ship depended, was to be done instantly. There the mate would have a right to compel instant obedience by blows. Generally, however, his honour remarked, when the mate might have time, without danger to the vessel, to report the delinquent or disobedient man to the captain, that he might deal with him, he would not be justified in inflicting punishment himself. The jury, after about half an hour's absence, came in with a verdict of six cents damages for the plaintiff, and costs.

The details of the testimony in the forgoing cases, are not particularly given. A due understanding of the points of law involved, is all that is considered of essential importance. Many have been of opinion, that a master of a merchant vessel has no right, in any case, to flog a hand on board, and that the mate certainly never could exercise such authority. The law on those points, however, will be found correctly given as above; and when it is added, that the able counsel for the plaintiff, himself, conceded that such was the law, and did not for a moment attempt to contest it, so far at least, as regards the captain of a vessel, the public may look upon the opinions of the court, in the two cases as above expressed, as speaking the law of the land with entire correctness.

FROM THE NATIONAL GAZETTE, OF JAN. 1822.

Decision of the supreme court of Pennsylvania, in the case of the corporation of St. Mary's church (Roman Catholic) in the city Philadelphia, on a proposed alteration of its charter.

Tilghman, chief justice;—

"The trustees of the Roman Catholic society worshipping at the church of St. Mary," have proposed certain alterations of their charter, the lawfulness of which has been submitted to this court, by virtue of an act of assembly, passed the 20th day of March last. This corporation was instituted by an act of assembly, passed the 13th of September, 1783, and consequently was not authorized to procure an amendment of its charter under the general provisions of the act of 6th of April, 1791, entitled "act to confer on certain associations of the citizens of this commonwealth, the powers and immunities of corporations or bodies politic in law." It was necessary therefore to resort to the supreme power of the legislature, by whose authority, expressed in the act of the 20th March, 1821, this religious society was empowered to improve, amend, and alter the charter of

incorporation, granted by the act of 13th September, 1783, in the same manner, and with the same privileges and powers, as corporations established by virtue of the act of 6th April, 1791.

We must examine the last mentioned act, therefore, in order to understand what is our authority and what our duty on the present occasion. And, on reference to it, we find, that, in the first place, it authorizes any number of persons, citizens of the commonwealth, who have associated themselves for any literary, charitable or religious purpose, to acquire the rights of a corporation on such terms and conditions as they may think proper, provided the instrument of incorporation be submitted, first, to the attorney-general, and, afterwards, to this court, and both express their opinion in writing, "that the object, articles and condition, therein set forth and contained, are lawful." It is then provided, by the second section, "that as often as the corporation, established by virtue of that act, and the successors thereof respectively, should be desirous of improving, amending or altering, the articles and conditions of the instrument upon which they were respectively formed and established, it should be lawful for such corporations respectively, in like manner, to specify the improvements, amendments or alterations which should be desired, and the same to present to the attorney general and supreme court, who should, in like manner, certify their opinion touching the lawfulness of such improvements, amendments and alterations."

On application for amendments, under this act of assembly, difficulties may arise, which do not seem to have entered into the contemplation of the legislature. When a society wishes to be incorporated, an instrument is prepared and signed by the members of the society individually, so that the unanimous desire of the signers appears clearly to the court. But, when alterations are proposed, the case is different. It is scarcely possible to prove that every *individual*, who has rights or privileges under the charter, has assented to the alterations. And yet, the expressions of the act are, that it shall be lawful for the said corporations, *in like manner*, to specify the improvements, &c. This is all very well, and every thing goes smoothly, while there is no difference of opinion in the members of the corporation. But, suppose there should be a difference, and that what is proposed by one party, should be objected to by the other.

A difficulty of that kind arose, when many of the members of this religious society of St. Mary, in their individual capacity, applied to the court for an alteration of their charter, at the last March term, and were opposed by the trustees in their corporate capacity. The court then decided that it was not authorized to certify its opinion, touching the lawfulness of the proposed alteration, because the proposal did not come from the trustees, in whom were vested the corporate powers of its society. The reasons which induced the court to come to that conclusion, appear, in the opinion which was then delivered, and it is unnecessary to repeat them.

Since the last term, new trustees have been elected, who differ in sentiment from their predecessors, and now the proposal for alteration comes from the trustees, under the seal of the charter.—But another difficulty is started up.—This corporation consists of eight lay, and three clerical members. The laity are for an alteration, but the clergy dissent. What is to be done in this predicament? Is the court bound to consider the proposal, for alteration of the charter, as the act of the corporation, because it is presented under the

corporate seal; or may it look beyond the seal, and inquire in what manner, and by what authority it was affixed? undoubtedly it may and it ought: suppose amendments should be voted at a meeting of the corporation, not lawfully convened, and some of the members who were absent, should dissent. Suppose a meeting lawfully convened, and then the majority should force the minority to retire, after which they should pass a resolution for amendment. Suppose, by the constitution of the corporation, a certain quorum should be required to do business, and a number, less than the quorum, should pass resolutions for amendment, and affix the seal. Or suppose the constitution provided that the assent of certain members should be necessary, and the others proceeded to act without their assent. In all these cases it is too clear, to admit of argument, that the court would do flagrant injustice if it suffered the seal to preclude an examination of the truth.

In the case before us, irregularities are complained of, and the power of the lay members to propose amendments, altering the fundamental articles of the charter, against the will of the clergy, is denied. It will be necessary, therefore, to analyse the charter, to consider the power possessed by the different members, and examine how that power has been exercised. But I will previously remark, that should the rights intended to be secured to any persons, by the charter under consideration, be effected by the proposed alteration, the act of assembly, by virtue of which we now sit in judgment, should be liberally construed for the protection of those persons. For the people of the United States, and of this commonwealth in particular, have shown a high regard for chartered rights.—One of the grievances set forth in our declaration of independence was, that the King *took away our charter*; and, in the case of "the college, academy, and charity school of the city of Philadelphia," the legislature of Pennsylvania set memorable example of good faith and integrity. During the heat of the revolutionary war, the charter of the college was prostrated by an act of assembly, passed the 27th Nov. 1779, for an alleged breach of charter committed in the year 1764. It is worthy of observation, that the legislature which passed this act was friendly to learning, and, though it destroyed the college, erected in its place, a seminary founded on a larger plan and calculated to be more extensively useful, on which it conferred valuable endowments. Nevertheless, when the warmth, which probably occasioned the destruction of the college, had subsided, and the people had time to reflect calmly on the injustice of taking away a charter, *without trial*, the act of 1779, so far as it affected the college, was repealed, with strong expressions of disapprobation.

To return to the charter in question, which bears date the 13th Sept. 1783, it is to be observed, that so long ago as the 23d Jan. 1760, the legal estate of the lot on which St. Mary's church now stands, was vested in Daniel Swan and others, *in trust for the members in unity with the Roman Catholic congregation*. This appears by the declaration of trust, of Swan and others—and it is presumed that this property has been legally vested in the present corporation, (although no deed of conveyance appears to have been given in evidence), because it is mentioned in the charter. Between the years 1763 and 1770, St. Mary's church was built, and since the year 1800 it has been much enlarged. The expense of these buildings was defrayed by individual subscriptions, and it is supposed that

the ground was purchased in the same manner.—It is in evidence also, that the clergy were not backward in contributing. The act of incorporation, after a recital that the members of the religious society of Roman Catholics, inhabiting the city and vicinity of Philadelphia, and belonging to the congregation worshipping at the church of St. Mary, had requested the legislature to pass a law to incorporate them, and enable them to manage the temporalities of their church as other religious societies had been enabled to do, proceeds to incorporate them by the name of "the trustees of the Roman Catholic society, worshipping at the church of St. Mary, in the city of Philadelphia," and authorizes the trustees to lease, sell, or otherwise dispose of, the real estate, except the church called St. Mary's, and the lot of ground, grave yard and appurtenances thereto belonging. The act then appointed three priests (then pastors of the church) and eight laymen, as the *first trustees*, and declares that the *future trustees* shall be and consist of "the pastors of the church for the time being, *duly appointed*, not exceeding three in number, and of eight laymembers of the congregation worshipping in the said church, to be appointed and elected in the manner therein after directed," as follows:

The lay-members are to be chosen by ballot, and "every member of the congregation holding a pew or part of a pew in the church, and paying for the same not less than fifteen shillings by the year, and not being in arrears for the said contribution more than six months, is entitled to a vote. The election is to be decided by a majority of the votes thus qualified. It is to be annual, and the lay trustees, so chosen, are to continue to be trustees until the next election.—"And if the pastors of the said church, *duly appointed*, shall on any day of such election, exceed the number of three, they shall, among themselves, agree which three of them shall be trustees for the ensuing year, and shall openly declare, in the presence of all the electors so met, at the time of concluding the said election, the names of all the said trustees and members, who shall be so appointed and chosen trustees of the said corporation, and their names shall be entered on the books of the said corporation, for that purpose to be kept, and the said trustees so appointed and members so chosen trustees as aforesaid, shall be and continue trustees until the close of the next election." Those trustees and their successors are to meet, from time to time, and transact the business of the society, "of the time and place of which meeting due notice shall be given to all the trustees, at least one day before, at which meeting the *eldest pastor present shall be president*, and if seven of the said trustees shall attend, they shall form a quorum or board, and shall have power, by a majority of voices present, to make, ordain, and establish such rules, orders and regulations, for the management of the temporal business, the government of their schools, and disposing of the estate of the said corporation, as to them shall seem proper."

This is the substance of the charter. Let us now see what proceedings have been had, in order to procure the proposed alteration.

The election of the present trustees took place the 24th April, 1821. At that time there appeared to have been three pastors; the right rev. bishop Conwell, and the rev. Mr. Cummsky and Mr. Hayden. The board met the day after the election, present the three pastors before mentioned, and all the eight lay members. The rev. Mr. Cummsky was declared president, and took the chair. At that meeting the lay members entered a protest

against the appearance of the bishop, or of Mr. Hayden, at the board, or their participating in the transaction of business, for which they assigned their reasons. They add, "that they do not intend to oppose the continuance of the bishop, or of the rev. Mr. Hayden, at that meeting, but they cannot consent to recognize either of them, in any official character, or consider them entitled to exercise any of the functions or privileges of a member."—It does not appear that the bishop ever attended the sittings of the board after that meeting, but the rev. Mr. Cummysky, against whom no protest was entered, attended, and presided at meetings held on the 25th, 26th and 30th April, and on the 3d and 8th of May, being the only pastor present. He was present too at a meeting on the 14th May, at which was also present the rev. Mr. Hogan, a Roman Catholic priest, whose faculties had been withdrawn by the bishop on the 12th December, 1820, and had not been restored to him.

It is stated in the preamble of a resolution passed by the board, at a meeting on the 28th May, that the rev. Mr. Hogan "had resumed his station as pastor of the church, and, according to seniority, took the chair, at the meeting on the 14th May, and presided over the board, and the rev. Mr. Cummysky having also attended that meeting, was placed, in order, on the right hand of the president's chair, but thought proper, during the sitting, to express his disapprobation and dissatisfaction at being superseded, and afterwards fully confirmed the same by absenting himself altogether from the board, although several meetings had been held, and had also absented himself from St. Mary's church and neglected discharging his pastoral functions."—After this preamble it was resolved, "that the rev. Mr. Cummysky cannot any longer be considered as a pastor of St. Mary's church, and consequently not a member of the board of trustees of said church, having voluntarily vacated his seat at the said board, and neglected and refused discharging his pastoral duties in the said church."—At this meeting no pastor was present, and Mr. Cummysky, having been served with a copy of the resolution, never afterwards attended.

The resolution for making the alterations in the charter, which are now before the court, was passed at a meeting held the 9th July, 1821, at which were present the rev. Mr. Hogan (and no other clergyman) and seven lay members. Before this meeting Mr. Hogan had been excommunicated by the bishop. The counsel for the lay trustees have denied the right of the bishop to excommunicate Mr. Hogan, or even to withdraw his faculties, without trial, and on this subject there was much learned argument on both sides. But I shall give no opinion on this point, because I think it unnecessary, and therefore improper, as Mr. Hogan is not personally before the court, and especially as proceedings in nature of *quo warranto* have been commenced against him, to try the right by which he claims to exercise the office of a trustee of St. Mary's church. In my view of the case, it is immaterial whether Mr. Hogan was a lawful pastor or not, because even though he were, yet he was not the sole pastor; and if there were other pastors, who were unlawfully excluded from the sittings of the board of trustees, by the lay members at the time when the resolution for alteration of the charter was passed, their proceedings cannot be valid.

That there was such an unlawful exclusion, of at least one pastor, (the rev. Mr. Cummysky) I can have no doubt. As to the protest against the bishop, and Mr. Hayden, it is contended that it was no

exclusion, but only a denial of their right to sit as trustees, to which they were not obliged to pay any regard. It is said too that there was no intention to exclude them forcibly, and it may be so. It must be confessed, however, that those gentlemen were placed in a very delicate situation considering the nature of their offices; decency forbade their entering into warm altercations with the laity, and there are some expressions in the protest ("that there was no intention to oppose their continuance at that meeting") which rendered it rather doubtful, what treatment they might expect, if they appeared at another meeting. I give no opinion on this part of the case, and shall confine my observations to the exclusion of Mr. Cummysky only.

It was not denied that he was a pastor *duly appointed*, as I think it was not asserted that the lay members of this society had ever before exercised, or even claimed the right of *appointing or removing* a pastor. When the charter speaks of pastors *duly appointed*, it refers to the rules and discipline of the Roman Catholic church. Something was said, in the argument, of the danger of a foreign head of an American church. But our laws have expressed no apprehension of any such danger, and if our Roman Catholic brethren do, in their conscience, believe, that the power of *conferring*, or of *withdrawing* the sacred rights of the clergy, has been handed down in sure succession from the holy apostle St. Peter, to the present pontiff, Pius the 7th, the people of the United States of America have seen nothing in this belief, either criminal or dangerous to civil liberty. Neither has it been remarked, that, during our revolutionary struggle, or on any trying occasion since, the members of that church have been less patriotic than their fellow christians of other denominations. Their priests, therefore, are entitled to, and will receive the same protection as other clergy.

Questions, concerning the rights of the Presbyterian clergy, have several times come before this court, particularly in the cases of *M'Millan* (in error) *v. Birch* (1 Bin. 178), and *Riddle, &c. v. Stevens* (2 S. & R. 537). In the latter case, these were my expressions, and I adhere to them:—"Every church has a discipline of its own. It is necessary that it should be so, because, without rules and discipline, no body, composed of numerous individuals, can be governed. But this discipline is confined to *spiritual affairs*. It operates on the *mind and conscience*, without pretending to *temporal authority*. No member of the church can be fined or imprisoned. But he minister or lay man, he may be admonished, reprov'd, and finally ejected from the society. So may he retire from it at his own free will. Under these restrictions, religious discipline may do much good, without infringing civil liberty." And, in the same case, it was the opinion of the court, that according to the laws of the Presbyterian church, it was not in the power of the congregation to remove their minister; but that the presbytery alone could do it, with a right of appeal, first to the synod, and, in the last resort, to the general assembly.

From all the evidence which we have had of the rules of the Roman Catholic church, the lay members cannot remove their pastor. How was it then, that Mr. Cummysky ceased to be a pastor of St. Mary's church, or by what authority did the lay members of the corporation declare, that he had forfeited his office of trustee, which belongs to him *ex-officio*, if he remained pastor? The reason assigned is, that he had absented himself from the meetings of the corporation, and neglected his duty as pastor. For neglect of pastoral duty, they had

no right to condemn, or even to try him; and as to declining to attend a few meetings of the corporation, that surely could not amount to a forfeiture of his trusteeship. He was never called to explain or justify his conduct—no charge was exhibited against him—He never resigned his office—but, upon the principle of an *implied* resignation, he was expelled from the board. In this proceeding, the respectable gentlemen who compose the lay part of the corporation (and I know that among them there are men truly respectable) certainly went too far in so important a business as an alteration of *fundamental articles*; not only has every member a right to be present, but every member should have explicit notice, that the subject of amendments was to be acted on. I am decidedly of opinion, therefore, that the resolution in favor of an alteration of this charter, passed in the absence of Mr. Cuminsky, was unlawful.

Here I might stop—But another question of much importance to the peace of this society, has been brought forward, and wishing sincerely for its peace, I think it my duty to give an opinion on it. Suppose the three pastors to be present, and a vote in favor of amendment to be carried by the lay members, who make a majority of the board, the pastors dissenting and protesting against it, would that be a case in which this court ought to sanction the amendments? In considering this question, I shall avoid all technical and nice distinctions, and endeavour to ascertain the real nature and intent of the charter. It is to be presumed that the act of assembly, which incorporates this religious society, was drawn in conformity to their desire, and the structure of the corporation plainly shows, that the greatest harmony and confidence subsisted between the laity and their pastors. The laity were to elect eight members, to whom were to be added their pastors for the time being, not exceeding three in number, *duly appointed*; that is appointed according to the rules of the Roman Catholic church. These 11 trustees were to meet together, with power to transact all the temporal business of the church—*seven* made a quorum, and all questions were to be decided by a majority of voices present. But it was provided, that the oldest pastor present should preside.

We have here then, two distinct classes of people, each deriving its power from a source different and independent of the other. The laity being by far the most numerous part of the society, were entitled to a majority in the corporation, and they had it. But the clergy, tho' fewer in number, were entrusted with a degree of power, which, if prudently exerted, would always give them sufficient influence. No provision was made for an *alteration of their charter*, because no alteration was intended. It by no means follows, therefore, that a majority of the whole number of trustees, can alter the charter, because a majority could manage the ordinary business of the society—and this will be more evident, when we consider the nature of one of the alterations now proposed, which is nothing less, than to strike the whole body of clergy out of the charter—to annihilate them—How can it be supposed, that any thing like this was in the contemplation of those persons who may be called the *founders* of this church; those who purchased ground and built the chapel? Having taken such anxious care to place their pastors in a reputable situation in the body corporate, can it be imagined that they intended to leave it in the power of their successors to expel them? And if it was not so intended, how can it now be done?

I grant that, if the clergy had consented; if even

a majority of the clerical trustees had consented, there would be no good objection to the alteration. Because, although the charter does not provide for it, yet, in the nature of things, it must be supposed that all human institutions may in the course of time require alteration. And when the question for alteration comes on, there is no rule so convenient, as to decide by a majority: That is the rule of the common law, applied to corporations—The civil law requires two thirds—I agree, therefore, that in corporations, where there is no distinction of classes, a majority of the whole corporation would be sufficient. But where there are different classes, the majority of each class should consent, before the charter can be altered.

I have mentioned before, that the act of March, 1821, authorizing this society to alter their charter, referred them to the act of April, 1791, for the mode of doing it; and I have also said, that the act of April, 1791, does not seem to have contemplated a difference of opinion in the corporation, with respect to the propriety of the alteration, because it has made no express provision for such a case. We must therefore act upon such principles as best suit the nature of the case. Had it not been, that the clergy exist as a distinct body of men, in this corporation, I should be for certifying the opinion of the court, in favor of the amendments or alterations, required by the majority, at a meeting regularly convened. But as the case is, I think there should be a majority of both classes. I cannot believe that the legislature would have acted on any other principle, or that it intended to vest this court with power to act on any other principle. For the clergy have valuable rights secured by this charter,—the right of taking part in the management of those funds, from which their support is derived. These are rights of which the law takes notice, and which the courts are bound to protect. On these conditions was the charter prayed for and accepted, and one is authorized to say that it would have been accepted on any other conditions. The clergy and laity were both before the legislature, and both were parties to the grant of incorporation.

But the laity have no cause for alarm, should no alteration of charter take place—Should the clergy be so imprudent as to throw unreasonable impediments in their way, they may always put them down by a vote of 8 to 3. Such is the power of the lay members, that, if exercised with prudence and moderation, it will insure the accomplishment of all reasonable plans. But if matters are pushed to extremity, great difficulties may arise. The lay part of this congregation is greatly divided, though the majority appears to be with the present trustees. But if such measures should be taken, with the fundamental principles of the Roman Catholic church, it may be a serious question what is to become of the real property of the corporation. From what has appeared to the court, the ground on which the chapel stands, is held in trust for a *Roman Catholic* congregation.

The site of the old chapel, (which has been enlarged,) was conveyed to the rev. Mr. Harding, in fee simple, in the year 1763, "for him to build and erect a chapel thereon," (these are the expressions of the deed:) whether there has been a formal conveyance from him or his heirs, to the corporation, I know not—It appears, however, that it was supposed to be held in trust for this society, because the charter provides that the trustees shall have no power to sell it. But the charter was granted to a religious society of *Roman Catholics*, and before the charter, the ground and chapel was held in trust

for a religious society of *Roman Catholics*.—Now if a majority of this congregation should insist on employing pastors contrary to the rules of the church, and the minority should choose to persist in remaining *strict Roman Catholic*, in the sense of the word at the time of that incorporation, what is to become of the chapel and ground adjoining? That is a momentous question, on which I have not formed an opinion—but I mention it, in order to show this congregation, that there are cogent reasons for reconciliation. On both sides of their unfortunate division are found men of the most respectable character—on both sides there probably have been faults, and, with the exertion of that christian charity which is incumbent on both, there may yet be a reunion.

As my opinion on the matter of law submitted to the court, is in favor of the pastors of this church, these reverend gentlemen may, perhaps, not thank me for going out of my way, when I offer a few words for their consideration. It is scarcely possible that the Roman Catholics of the United States of America should not imbibe some of that spirit of religious freedom which is diffused throughout the country. If those who govern that church exercise their power with great moderation; if they are not too forward in assuming the direction of temporal affairs; if they consult the reasonable desires of the laity, both in the *appointment* and the *removal* of pastors, in all human probability they may long retain their dominion. But if things are carried with a high hand—if, trusting to the authority of the church, they disregard the wishes of their congregations, it is easy to foresee how the matter will end. That church possesses neither property nor temporal power in this country. The laity have both. In a struggle, therefore, between the two orders, the issue cannot be doubtful.

With respect to the proposed alterations of the charter, I am of opinion, that, under the circumstances of the case, the judges of this court ought not to certify that they are lawful.

Opinion of the chief justice and judge Duncan, delivered February, 1822, by chief justice Tilghman.

Commonwealth,
at the instance of Wm. Hogan,
vs.
Israel Deacon.

It appears that the rev. William Hogan, who has been brought before us, on this habeas corpus, is detained by the keeper of the prison of the city and county of Philadelphia on two commitments by alderman Badger, dated 18th January, 1822. In one of these commitments it is said, "that William Hogan was charged on oath with having, within the said city, on the 13th January, 1822, prevented and disturbed, by his presence and acts, the regular Catholic worship at the church of St. Mary's; and the celebration of mass by the clergy of said church." And in the other it is said, "that he was charged on oath with intending, within the said city, unlawfully to disturb the pastors of St. Mary's church in the celebration of divine service, and to excite and promote, by his acts and attendance, noise and disturbance in the said church, so that the pastors thereof might be prevented from performing divine service therein." Our habeas corpus act, gives us power to investigate the truth of the circumstances of the case, and determine whether, according to law, the prisoner ought to be bailed, remanded or discharged. We have therefore indulged the parties with an investigation of the circumstances of the case, to an extent which would have been un-

warrantable, had it not been, that a great number of people took a warm interest in it, for although, in form, it is a prosecution by the commonwealth, vs. William Hogan, yet, in fact, it is a dispute between the members of a large religious congregation, touching rights which they consider of very great value. From the extensive field of argument which was occupied by the counsel on both sides, we may suppose it was their expectation that we should now give a decided opinion on the merits of the controversy; but, on mature reflection, we think that such an opinion would be unseasonable and improper. The question is, whether William Hogan should be discharged, remanded or admitted to bail; if he is not discharged, he may be bailed, because he is charged with a bailable offence. There is not a doubt but the disturbance of the public worship of any religious congregation is an indictable offence. This has not been denied; indeed it is a principle in support of which every religious society has an interest.

We should not be justified, therefore, in discharging Mr. Hogan, unless we were satisfied, *without doubt*, that he has not disturbed the public worship in St. Mary's church. But this is more than we can say, and more than we ought to say, considering that the parties are at issue on many contested facts. Not only is the behaviour of Mr. Hogan in St. Mary's church, on the 13th January last, to be taken into consideration, but also the laws and discipline of the Roman Catholic church in the United States of America; much of which is only to be known by parol evidence. It would be unwarrantable, therefore, in us, who are now acting in a course of summary proceeding, to decide, without the assistance of a jury, facts in which the vital interests of this church are involved. We have no hesitation in saying that William Hogan cannot be discharged, but must enter into recognizance, with proper security, for his appearance at the next mayor's court. But a more important question remains. The counsel for the prosecution have insisted on his being held to security for his good behaviour, in order to preserve the church from future disturbance. We should have no doubt of the propriety of rigorous security for Mr. Hogan's good behaviour, if it were the case of a man who had behaved rudely and notoriously in church, and threatened to do so again. But it is not so. He used no force or violence of any kind, nor did he make any indecent noise. It is in truth a very singular case. Mr. Hogan is a Roman Catholic priest who once, without doubt, was a regular pastor of his church, and claims to be so still, and in this claim he appears to be supported by a majority of the congregation. But his faculties have been withdrawn by the bishop of the diocese, and he has been publicly excommunicated. Under these circumstances he appeared at the altar in the vestments of a priest, and refused to withdraw when required by the bishop. His presence, as is contended by the prosecutors, prevented the celebration of mass according to the rules of the church, and, therefore, the public worship was interrupted; on the contrary, this rule is denied by those who support Mr. Hogan, and they say, moreover, that the proceedings of the bishop in withdrawing his faculties, and excommunicating him, were irregular and void. I wish to draw a veil over the scene which was exhibited in church, and therefore will not describe it. It does not appear, however, that either party had a deliberate intention of exciting tumult, or of disturbing the public worship by violence.

We see plainly enough that each intended to assert and preserve its rights without breaking the peace, and the avowed object of this prosecution is to decide, whether Mr. Hogan has a right to perform divine service in St. Mary's church. It might seem hard, therefore, if we were to assist the prosecutors, in a mode of proceeding which would either confine Mr. Hogan in prison until the trial of the indictment, or prove ruinous to him and his securities, in case he could find security, and the trial should go against him. If the prosecutors are right, the bare appearance of Mr. Hogan at the altar would be a forfeiture of the recognizance for his good behaviour. We think, therefore, that the justice of the case will be best attained by not requiring security for good behaviour. To this then there can be but one objection. What is to become of that part of the congregation who cannot, in conscience, be present when mass is celebrated by Mr. Hogan. This would indeed be a very serious objection if they had no other place of worship. But fortunately they have, the church of St. Joseph is open to them; this trial may be expected to come on in March; now if those who are opposed to Mr. Hogan will, in the mean time, do, as they did once before, on our recommendation, abstain from going to St. Mary's church, it will be conduct, which cannot detract a particle from their rights, conduct of which no christian must be ashamed, and even their adversaries must commend. For it can be attributed to no other motive, than a sincere desire to preserve the peace, and I may add, the character of their church. When this right is decided, we still indulge the hope, that this congregation may be united as brethren. For surely in a christian congregation, the hope of reconciliation cannot be desperate; upon the whole, we order that William Hogan shall enter into a recognizance for his appearance at the next mayor's court, to answer the charges that have been made against him, himself in the sum of \$500, and two good sureties in the sum of \$250 each.

Immediately after the delivery of this opinion, Mr. Hogan entered into recognizance, with security, and was discharged.

FROM THE RICHMOND ENQUIRER OF DEC. 11, 1821.

An important decision was made in the court of appeals on Tuesday last, in the case of Lewis vs. Fullerton. We have applied for a copy of the opinion, which we now submit to our readers.—While that decision is very important to our citizens, bordering on the state of Ohio, in relation to the emancipation of their slaves in that state, it contains some important principles, bearing upon the decision of the supreme court, in the case of Cohens vs. Virginia.—It decides that the laws of one country attempted to be asserted in another, are with an exception that they do not violate any moral principle in that other, or the policy of that other, or any right or interest derived under the law of that other.—This limitation of the *lex loci*, in relation to the force of the laws of the District of Columbia, within this commonwealth, arising under the case of Cohens, goes to cut up their authority by the roots. The authority of their laws cannot be asserted in that case within this commonwealth, without encountering all of these objections.

LEWIS AND FULLERTON.

Statement of the case.

This was an action brought by Lewis, an infant, in the supreme court of Cabell, against the repre-

sentatives of his former master. His object was to recover his freedom which he claimed on the ground that his mother Milly had become entitled to her freedom prior to his birth, on some of the grounds stated in the opinion of the court—One of these grounds was a deed of emancipation, executed in her favor by that master, (John Rodgers), within the state of Ohio, and which did not conform to the provision of the laws of Virginia, on the subject of emancipation—Rodgers, a resident of Virginia, had gone into the state of Ohio to reclaim Milly who had run away from him; and she sued out a writ of habeas corpus against him, in one of the county courts of that state, and was discharged from his custody, in the most summary manner. This discharge is also relied on as another ground of the plaintiff's claim. After this, and when Rodgers was, probably, under some degree of coercion, he executed in Ohio the deed aforesaid, and she at the same time indented herself to him for two years; and was brought back by him into the state of Virginia, where, after this time, the plaintiff was born.—The superior court gave judgment, upon a special verdict, for the defendants, and, on an appeal, their judgments was unanimously affirmed by the court of appeals.

Lewis vs. Fullerton.

The court is of opinion that there is no error in the opinions of the superior court, impeached by the 2d and 3d exceptions. The reasons in support of those opinions are so clear and self evident, that they need not be adverted to.

Nor is there any error in the other opinions of that court, objected to by the appellant, and which go to the merits of his title.

The appellant claims his right to freedom on three grounds:—1st, on the right to freedom alleged to have been acquired by his mother, prior to his birth, by having sojourned within the state of Ohio, and as is further alleged, been there employed by her master: 2dly, on the ground that her right to freedom was prior to his birth, established by the judgment on the writ of habeas corpus stated in the record:—and 3dly, he claims it under the deed of emancipation contained in the proceedings; and which was also executed prior to the birth of the appellant. It is readily conceded that if his mother's right to freedom was valid and complete, prior to his birth, on any of these grounds his right to freedom follows as a necessary consequence.

Under the first inquiry we must throw entirely out of view the subsequent residence of the mother within the state of Ohio, with the alleged consent of Rodgers her former master. Whatever may be the effect of a residence therein, for a great length of time, and with the assent aforesaid—whatever may be the effect of this circumstance in relation to a person who may thereby have become one of the permanent members of that state, the residence now in question is of a far different character.

There is no evidence in this case of the mother's residence within the state of Ohio, prior to the appellant's birth, but that she was once seen, on a Sunday, working at a sugar camp therein, in the absence of her master, and without any evidence that it was with his permission. In reference to this evidence, the court below was asked to instruct the jury, that, if they should find that she was employed by her master within that state, in making sugar, or any other local service, not merely transitory, and for however short a time, they must find a verdict for the plaintiff. The judgment of the superior court refusing to give that instruction, was, in our opinion, entirely correct. Such an occupa-

tion for a short time, and even for the benefit of the master, and probably in his presence, could never operate an emancipation of his slave. It could not so operate, when the *animus revertendi* strongly existed in him, both in relation to himself and to his slave. There is indeed but a shade of difference between such a residence as this, (if indeed it can be called a residence), and the mere right of passage through the state: and such a construction as that now contended for, would whittle down to nothing, the right of the citizens of each state within every other state, guaranteed to them by the constitution. Such an occupation cannot be said to carry with it evidence of the assent of the master that she should cease to remain his property, and become a member of the state of Ohio, without which the regulations of that state, on the subject of emancipation, cannot attach.

As for the 2d ground of claim, under the judgment upon the habeas corpus, it has been truly answered, that judgment has not affirmed the mother's right to freedom. Even if it had, and this mode of proceeding was legalized by the laws of that state, (as it seems not to be by the laws of this), in favor of a slave against his master, those laws are not found in the case before us: and even if they were, it might well be questioned whether the judgement aforesaid could have concluded the right of the master in the present instance. The right of our citizens under the constitution, to reclaim their fugitive slaves from other states, would be nearly a nullity, if that claim was permitted to be intercepted by a proceeding like the one in question; a proceeding of so extremely summary a character, that it affords no fair opportunity to a master deliberately to support his right of property in his slave. Such a proceeding ought not, therefore, to be conclusive on the subject.

As to the deed of emancipation, contained in the record, that deed, taken in connexion with the evidence offered to support it, shews that it had a reference to the state of Virginia. It is stated to have been made by John Rodgers, a resident of the state of Virginia; and the testimony shews, that it formed a part of a contract whereby the slave Milly was to be brought back, (as she was brought back), into the state of Virginia. Her object, therefore, was to secure her freedom by the deed, within the state of Virginia, after the time should have expired, for which she indented herself, and when she should be found abiding within the state of Virginia.

If then this contract had an eye to the state of Virginia for its operation and effect, the *lex loci* ceases to operate. In that case it must, to have its effect, conform to the laws of Virginia. It is insufficient, under those laws, to effectuate an emancipation, for want of a due recording in the county court, as was decided in the case of *Givens vs. Mann* in this court. It is also ineffectual, within the commonwealth of Virginia, for another reason. The *lex loci* is also to be taken, subject to the exception, that it is not to be enforced in another country, when it violates some moral duty, or the policy of that country, or is inconsistent with a positive right secured to a third person or party by the laws of that country, in which it is sought to be enforced. In such a case we are told "*magis jus nostrum, quam jus alienum servemus.*" Hubs. 2. tom. lib. 1 lit. 3.—2 Fonb. 444.—That third party in this case, is the commonwealth of Virginia: and her policy and interests are also to be attended to. These turn the scale against the *lex loci* in the present instance.—For want of being emancipated agreeably to the

provisions of our act on that subject, the duty of supporting the old and infirm slaves would devolve upon the commonwealth. That burthen is only to be borne by the master, in relation to the slaves "so emancipated;" that is, emancipated agreeably to the provisions of the act—(1 rev. code. pa. 434).—Even yet, and notwithstanding a late alteration of the law upon this subject, that burthen must be born by the commonwealth, at least for a time.

For these reasons we are unanimously of opinion to affirm the judgment.

From the Charleston City Gazette, of Jan. 25, 1832.

The following opinion, for its novelty and importance, is worthy of being circulated through the medium of the press. Every case which decides the indefeasible rights of the citizen, and proves the protecting power of the constitution, enlarges and strengthens the foundations of our civil liberty. Slight innovations, if unresisted, become precedents; and are imperceptibly increased, until little less than a political convulsion can restore the institutions of the country to their pristine purity. The recognition and application of the principle, that all power is derived from the "mighty hands of the people," must be grateful to every friend of the great political experiment of a representative democracy.

S. & M. Allen, }
ads.

The State. }

This was an application to the court of sessions, in Charleston, spring term, 1831, for a prohibition to restrain the tax-collector of that district, from enforcing an execution, which he had issued against S. & M. Allen, for the sum of ten thousand dollars, being a tax imposed by the last clause of the appropriation act of 1820, which is in the following words: "That a tax of ten thousand dollars be, and the same is hereby, imposed upon every person or persons, who shall, after the passing of this act, open or keep open any office for the sale of any lottery tickets, or who shall sell within this state, any lottery tickets in any other lotteries than those which are authorized by the law of this state.

And it shall be the duty of the tax-collector, in the district where such lottery offices are opened, in default of the person or persons keeping such offices, to return the same and pay the tax imposed by this law, to issue his execution as in other cases of defaulters." Some short time after the passage of this act, the office in question was opened for the purpose of selling lottery tickets. The proprietors having refused to pay the tax, this execution was issued—application was then made to the court in Charleston for a prohibition, which was refused by the presiding judge, and this was a motion to reverse that decision, and for an order that a prohibition should be issued.

NOTT, justice, delivered the opinion of the court. In support of this motion, the two following grounds are taken:

1st. That the tax was not due at the time the execution was issued.

2d. That the act, subjecting a person to an execution, without any legal trial and judgment, is unconstitutional and void.

In determining the first question, it is not pretended that this court can set limits to the discretion which the legislature may exercise in selecting the subjects of taxation. Neither is it denied, that they have the power to fix the time when the tax shall become due, and to prescribe the mode

by which it shall be collected. We are merely to give construction to the law; to declare what the legislature have done, and not what they can or may do. It is admitted that this is an annual tax—it is necessary, therefore, to fix a period when it shall commence. If the act had fixed a time when this particular tax should be paid, there would have been an end to the question. But as there is no particular time mentioned, we must look to the general provisions of the law in relation to other subjects of taxation for the construction with regard to this. And as far as we are able to trace the acts of the legislature back, it appears that the first day of October has always been the period to which the assessment have been made to relate.

The quantity of land and the number of negroes owned, the amount of money at interest on that day, and the amount of professional income received during the year, terminating at that period, have always constituted the basis of taxation. To this rule there has been at most but two exceptions.—One is the tax upon stock in trade, the amount of which is, by an express provision of the act, to be estimated on the first day of Jan. The other the tax upon theatrical exhibitions, shows, &c. which, by a similar provision, becomes due whenever it shall be demanded by the clerk of the court, and which, from the nature of the tax itself, must have been an execution, because it is to be paid per diem, and not per annum. Whenever a new subject of taxation is introduced, it must be governed by the general provisions of the tax of which it is a part, and not by the exceptions, unless the nature of the tax should tend to a different conclusion. Indeed this is the only practical construction which can be given to the law; for the tax-collector is required to complete his collections and settle his accounts by the first of May, after which, according to his construction, a person might erect as many lottery offices and sell as many lottery tickets as he pleased, with impunity. In answer to this, however, it is said that the tax collector might proceed at any time, when an office should be opened, to collect the money, and to issue an execution for that purpose, whenever the tax is withheld, in the same manner as is directed in the clause relative to plays, shows, &c. But the act gives the tax-collector no such authority as is given to the clerk in the clause alluded to. When he has closed his accounts, there is an end of his authority for that year. It is also further contended, that, unless he may demand the tax whenever the office is opened, it may be altogether evaded, because it might not be open on the 1st of October. But I do not know that it would be necessary that the office should be open on that day to render the proprietor liable to the tax. Professional income is not received on the first day of October, yet the person is liable to be taxed for the amount of income received during the preceding year. But suppose that by this construction the tax may be eluded, it is no more than may be done with respect to almost every other tax.—Suppose a person should purchase lands and negroes on the second day of October, and sell them on the last day of September following, or should lend money and receive it back in the same manner, it will be seen that he would receive the annual profits of his lands, the labor of his negroes, and the interest of his money, and yet evade the tax. But that results from the terms of the law itself, and not from the administration of it. The assessment of this tax could not have had relation to the October preceding. First, because the law of the act is prospective; and, secondly, because this office

was opened after the passage of the law. I am therefore of opinion, that the tax was not due, and that the execution was prematurely issued. This view of the subject, so far as regards this case, dispenses with the necessity of giving any opinion on the other ground. But as the tax collector may feel authorized to proceed to collect the tax at the end of the year, unless an opinion is given on the other ground, the court has thought it best to decide the whole case.

The second ground presents the two following questions for our consideration.

First—whether, supposing this to be a tax as it is called by the act, the collector can enforce the payment of it, in this summary manner, or whether the fact on which the relator's liability is predicated, must first be established by the verdict of a jury, and second, whether it must not be considered rather in the nature of a penalty than a tax, in which case it is still more confidently contended, that the part of the act authorizing the tax collector to issue an execution without a trial by jury, is unconstitutional and void. The clause of the constitution, under which the relators claim this privilege, is in the following words—"No freeman of this state shall be taken, or imprisoned, or disseized of his freehold liberties, or privileges, or outlawed, or exiled, or in any manner destroyed or deprived of his life, liberty or property, but by the judgment of his peers, or by the law of the land."

In order to a correct decision of the first question, it is only necessary to settle the meaning of the words in the constitution, "*the law of the land*," and on that subject little more need be said, than to refer to the commentaries on magna charta, from whence they have been copied. Dr. Sullivan, in his lectures, after commenting upon various parts of magna charta, says, let us next consider the end of this part, which is an exception running through the whole, "*nisi per legale iudicium parium suorum, vel per legem terræ*," that is, *by the common law*, which does not in all cases require a trial by peers. Sul. sec. 490. In page 491, he observes "the statute (that is magna charta) speaks in the disjunctive, *per legale iudicium parium suorum aut per legem terræ*." Now the *lex terræ*, *the common law*, in the universal practice of it, allows these exceptions &c. And, in pages 493 and 4, he enumerates several cases, where the courts of law may proceed to give judgment *per legem terræ* without the intervention of a jury—as in all cases where a person makes default, or confesses judgment, all cases of demurrer and special verdicts, cases of contempt &c.—and concludes with the words of lord Coke. The due process of the law is *lex terræ*—see also the case of *Zilstra vs. the corporation of Charleston*—1st. Bay, 390. To these may be added the confinement of persons for safe custody, who are accused of high crimes and misdemeanors, all cases in the courts of equity and in the courts military, maritime, and ecclesiastical, the proceedings of which are carried on without the intervention of a jury; distress for rent also, is another case within the exception. And last, though not less satisfactorily established, distress for taxes. All these, and many others that might be mentioned, are carried on by the well known and established principles of the common law, or *lex terræ*, without the aid of a jury. This method of collecting taxes, is as well established by custom and usage as any principle of the common law. A similar practice prevailed in all the colonies from the first dawn of their existence; it has been continued by all the states since their independence, and had existed in England

from time immemorial. Indeed it is necessary to the existence of every government, and is based upon the principle of self preservation. I do not consider it as deriving any support from that provision in the constitution, that all laws then in force should continue so, until altered or repealed. I cannot believe that the authors of that instrument intended to give effect to laws, the provisions of which are in direct hostility to the constitution itself. That clause was introduced, I presume, through abundance of caution, to remove any doubt which otherwise might have been entertained, whether all existing laws might not have been prostrated by the abolition of the old constitution. I think, therefore, that any legal process which was originally founded in necessity, has been consecrated by time and approved and acquiesced in by universal consent, must be an exception to the right of trial by jury, and is embraced in the alternative, "*the law of the land*"—such I consider to be the summary proceedings allowed in the collection of taxes. And I should think the proceedings in this case authorized by the law of the land, if I could consider the sum required to be paid, as a tax—but, the second question presents the case in a very different shape—the sum of ten thousand dollars is imposed upon every person who shall "open or keep open any office for the sale of lottery tickets, or shall sell any lottery tickets," &c. It is not laid upon the property, it is not laid on the person, nor on the income. It is not measured by the value of the property, nor the amount of the proceeds derived from the office, but is in fact a penalty on the act of opening, keeping open an office, or selling the tickets; it is not limited in its operation within any definable bounds, but may be ramified into as many ten thousand cases as there are persons concerned in the act of selling. The act also in substance declares its object to be the suppression of vice. It appears to me, therefore, as much a penalty as the sum of one hundred pounds, formerly inflicted upon a person who should be convicted of killing a negro. And the question is whether it is to be considered a tax, merely because the act has called it so. If the nature of the thing can be changed by merely changing the name, every penalty may be converted into a tax. And there can be no doubt but that the numerous assaults and battery, and other misdemeanors with which our courts are crowded, would have been fruitful sources of revenue to the state, but it would be a commutation much more friendly to the civil list, than to the liberty of the citizen. And if they had not been willing to have renounced the one to have secured the other, the article of the constitution now under consideration, need never to have been penned. If it is to be considered in the nature of a penalty (and I can have no other view of it) it is a direct and manifest violation of the constitution. It is the last clause of the act, and, in all probability, was introduced near the close of the session, a period of time, of all others, the least propitious to that due deliberation with which the acts of that body are usually marked. I cannot believe that there was an individual member of that legislature, who would deliberately consent to authorize a tax gatherer, at his arbitrary will and pleasure, to adjudge a man guilty of an act that would subject him to a penalty of ten thousand dollars, and issue his execution, either against his goods or his person, for the amount, without even the semblance of a trial. I have already shown what is to be understood by the law of the land; the constitution intended to impose a restraint upon the legislature as well as upon the other departments of the government; and it would have been idle to

impose upon them a restraint which it was in their power to remove, by performing the very act which it was intended to prevent. The constitution, says judge Patterson, is the form of government delineated by the mighty hand of the people, in which certain first principles of fundamental laws are established; it fixes the limits to the exercise of legislative authority, and prescribes the orbit within which it shall move; it says to the legislature, so far shalt thou go and no farther. Our constitution prohibits the legislature to "deprive any man of his liberty, except by his peers or by the law of the land." Yet, this act gives to the tax-collector authority to adjudge the person accused guilty of the act charged against him without a trial by jury, or in any other form, and to enforce the payment of the penalty by imprisonment, if he has no property out of which the money can be made. And if there is any principle of constitutional law by which it can be justified, I have yet to learn where it is to be found. I do not contend that the legislature could not impose such a penalty, (or lay such a tax, if that phraseology is more agreeable, though I think it incorrect), nor that they can prescribe the mode of compelling the payment of it; but that the liability of the party must first be established by a jury of his country, and not by the arbitrary fiat of an individual. The motion therefore must be granted.

ABRAHAM NOTT.

B. F. HUNT, for the motion.

HAYNE, attorney general, contra.

LIABILITY OF BANKS.

From the Washington City Gazette.

The following case, recently decided in the circuit court, is on a point of general interest to the community:

James Gettys
vs.
Bank of the Metropolis. } Trover, to recover a note drawn by Henry Drain in favor of Patrick Dowling.

It was proved that the note had been deposited in the bank of the Metropolis for collection by Patrick Dowling, who endorsed the same; that an order was afterwards given by Patrick Dowling to the bank to deliver the note to the plaintiff, having assigned it to the plaintiff, who received the note, endorsed his name on it, and left it in the bank for collection; that the note was protested when it became due, and, more than a month after the protest, Patrick Dowling called at the bank and demanded the note, describing it as Henry Drain's note, of the teller of the bank, who, not knowing any thing of the parties whose names appeared on the note, delivered it to Patrick Dowling. The amount of the note was afterwards settled between Henry Drain, the drawer, and Patrick Dowling, and the latter thereupon delivered up the same to the former, who destroyed it.

Under the above circumstance, the court, (on the prayer of Mr. Jones, counsel for the defendant), instructed the jury that they must be of opinion, from the evidence, that the bank had been guilty of gross negligence, and had not used the caution and circumspection which a prudent man would use in the management of his concerns, and that an actual loss had been sustained by the plaintiff by such negligence, before the plaintiff would be entitled to a verdict—

Verdict for the plaintiff for the amount of the note and interest.

DISTILLED SPIRITS.

United States, } District court
 vs. } for the district of Massachusetts,
 Rix. } June, 1821.

The case was an information by G. Blake, esq. district attorney, against 18 pipes of distilled spirits—T Rix, claimant.

This information was founded upon the provisions of the 41st and 43d sections of the act of congress of March 2, 1799, "regulating the collection of duties on imports and tonnage."

By the first of these sections it is, among other things, provided, that the surveyor, or other chief officer of inspection, at each port of the United States, shall give to the proprietor, importer or consignee of any distilled spirits, wines or teas, a particular certificate, (the precise force whereof is prescribed in the same section of the act), which certificate shall accompany each cask, chest, vessel or case of distilled spirits, wines or teas, wherever the same may be sent, within the limits of the United States, as evidence that the same has been lawfully imported.

By the other section, to wit, the 43d, it is, among other things, provided, "that, if any casks, chests, vessels or cases containing distilled spirits, wines or teas, which, by certain preceding provisions of the act, ought to be marked and accompanied with certificates, shall be found in the possession of any person, unaccompanied with such marks and certificates, it shall be presumptive evidence that the same are liable to forfeiture; and it shall be lawful for any officer of the customs or of inspection, to seize them as forfeited; and if, upon the trial, in consequence of such seizure, the owner or claimant of the spirits, wines or teas seized, shall not prove that the same were imported into the United States, according to law, and the duties thereupon paid or secured, they shall be adjudged to be forfeited."

With reference to the several enactments here referred to, it was alleged in the information,

First, that the casks of distilled spirits in question were of such description as were required by the act to be marked and accompanied with the usual certificates. And,

Secondly, that, on the 29th day of April last, they were found, by the seizing officer, in the possession of a person unaccompanied by such certificates, and hence, according to the words of the law, that they were liable to forfeiture.

In answer to these allegations, the claimant filed two several pleas, viz:

1st. That the casks of spirits in question were not, at the time of seizure, of such description as were required by the act to be marked and accompanied with certificates. And,

2d. That they were not found in the possession of a person unaccompanied with certificates, as alleged and set forth in the information.

Upon each of these pleas (the seizure having been upon the land) an issue was taken to the jury.

On the part of the United States it was then shewn, by the testimony of sundry witnesses, that the casks in question were filled, at the time of the seizure, with a species of distilled spirits; and that each of them had been regularly marked at the custom house in Boston, in conformity with the requirements of law, as containing *foreign gin of the first proof*, imported in *ship Packet, Turner, master*—all the original marks and numbers remaining as at first, without any change or obliteration. It was furthermore proved, on the part of the prosecution, that the claimant, being present at the seizure,

was requested by the seizing officer, to produce the certificates which were required to accompany the casks; that, in answer to this demand, the claimant declared that he had the proper certificates, and that he would go to his house for them, and bring them down to the custom-house for the inspection of the collector. The seizing officer requested him to do so, assuring him, at the same time, that he would go immediately to the custom-house in order to meet him there. The casks were, accordingly, removed by the seizing officer to the store usually employed by the collector as a place of deposit for merchandise under such circumstances; and thereupon, the seizing officer went to the custom-house, according to the arrangement which had been previously made with the claimant, as above stated, in order to wait there his arrival with the certificates. It appeared, however, that the claimant did not, on that day, nor at any time afterwards, produce the said certificates at the custom-house, as he had proposed to do; and in fact that nothing further was heard of any such documents, either by the collector, or any other person representing the United States, in behalf of the prosecution, until they were produced before the district judge on the second day of June following, when an application was made to the said judge, by the claimant, for a delivery of the merchandise, upon giving bond for the appraised value thereof, in conformity with the provisions of the law in such cases.

Such were the circumstances of the case as disclosed in evidence by the district attorney at the opening, in behalf of the prosecution; and these facts it was insisted, on his part, were sufficient to afford *prima facie* evidence in support of the two material allegations in the information.

The original *custom-house marks* upon the casks appearing to be such as are usually required and employed in designating foreign distilled spirits at their entry, upon importation, it was contended, were not only evidence, *prima facie*, but absolutely conclusive, as against the claimant, that the spirits contained in said casks were such as were required by law to be marked and accompanied with certificates; and hence that the averments in the information, so far as related to the question involved in the first issue, were supported.

With regard to the second question, it was insisted by the district attorney, that the nonproduction of the usual certificates, upon demand, at the time of the seizure, and the omission to exhibit them, for such a length of time as that before stated, must be considered as sufficient legal evidence, that the casks were, in fact, unaccompanied with the proper certificates, within the true intent and meaning of the words of the statute; and hence, that there existed presumptive grounds for the seizure and for forfeiture, so far as to devolve the burthen of proof upon the claimant, and to make it incumbent upon him to shew, according to the express terms of the law, "that the said casks of spirits were imported into the United States according to law, and the duties thereupon paid or secured."

It being the opinion of the court that such was the legal operation of the evidence already adduced on the part of the prosecution, the counsel for the claimant immediately exhibited, before the court and jury, sundry documents, (there being seventeen in number), purporting to be the original certificates which were issued from the custom-house, at the time when the casks were entered there and marked; and, upon examination of these certificates, (no question having been made as to their genuineness), they were found to correspond

respectively with the marks upon seventeen of the eighteen casks in question, so as to admit of no doubt that they were originally intended to accompany each of the casks respectively, in conformity with the directions of the statute.

Here it was contended by the counsel for the claimant, that they might safely leave their case; that the production of these certificates at the trial was sufficient to satisfy the law, upon both the points in issue; as shewing, *conclusively*, not only that the casks, in the proper *acceptation* of the word, were accompanied with the necessary certificates, at the time of seizure, but also, that the spirits which were contained in them, (at least in seventeen of the eighteen), "*had been duly imported into the United States and the duties thereupon paid or secured.*" On the other hand, further evidence was now introduced on the part of the United States, shewing very clearly and satisfactorily, that, notwithstanding the apparent conformity between the casks and the certificates, yet that the contents of the former, at the time of the seizure, were essentially different from what they were at the time of their being marked, and at the issuing of the certificates; that the spirits now contained in the casks, instead of being *genuine Holland gin*, of *first proof*, according to the purport of the marks and certificates, were, in fact, a species of mixed, adulterated spirit, composed, (in the opinion of the witnesses), partly of foreign and partly of domestic manufacture; and although not much reduced, merely as to *proof*, yet so affected by the mixture as to have lost about fifty per cent of the market value of the article as at the time of its original importation. Upon this evidence, it was contended by the district attorney that, in legal contemplation, the certificates must be considered as having lost, entirely, their original force and efficacy; that, by changing the contents of the casks, without obliterating the marks thereon, and surrendering the certificates, as is expressly required by the statute in such case, the claimant had been guilty of a fraud upon the law; and had thus, by his own wrong, forfeited all the protection and benefit which were intended to be given to him, by the official documents here alluded to.— Upon a careful examination and comparison of the various minute provisions of the statute, in relation to the subject of *imported spirits*, it was argued by the district attorney, that, in requiring the *marks and certificates* here referred to, it was much less the intent and policy of the law merely to designate and identify thereby the particular casks or vessel containing the *spirits*, than it was that the officers of the revenue, in different parts of the United States, might be enabled, by the aid of these indications, and by a comparison of the actual contents of the cask, wherever found, with the marks and certificate accompanying it, to ascertain the fact of its lawful importation, and that the duties thereupon had actually been paid or secured at the custom-house. Hence it was insisted, that if, by the voluntary act of the party, the contents of the casks had been essentially changed, so as no longer to correspond with the description given by the *marks and certificates*, it was quit immaterial to consider whether this change had been effected by the introduction of other foreign distilled spirits, or of domestic spirits, or by whatever other kind of mixture; for that, in either case, the original purpose of the certificate was defeated, so that the claimant could not now avail himself of it as a portion of legal evidence, having even a tendency to prove that the present contents of the casks had been "*lawfully imported, and the duties secured.*"

Upon these grounds it was argued by the district attorney, that, even if it had appeared in evidence at the trial, that the *certificates* now produced in court, were found accompanying the casks, at the time of seizure, still that, by reason of the change of *contents*, and their consequent non-conformity with such *certificates*, the latter must be regarded as a mere nullity, having no more force than waste paper; and thus that, in legal contemplation, the case was precisely the same, as though the casks had been found, literally, "*unaccompanied with any certificates whatsoever.*"

This construction of the act having been fully sanctioned by the opinion of the district judge, and the counsel for the claimant being unprepared with any other evidence, besides that which was supposed to result from the beforementioned certificates, in order to prove that the spirits in question had been regularly "*imported into the United States, and the duties thereupon secured,*" the cause was committed to the jury upon the foregoing facts and circumstances; when the opinion of the judge, upon the several points which had arisen at the trial, was expressed to the effect following, viz:

1st. That, even if the certificates now produced were genuine, and found, in every respect, to comport with the marks and contents of the casks, still, that the circumstance of their non-production, upon the demand of the seizing officer, and their being kept back for such a length of time by the claimant, must be deemed sufficient in point of law to maintain the "*averment that the casks were found unaccompanied with the proper certificates,*" so as to justify the seizure and to raise a legal presumption of their liability to forfeiture, which could only be removed by the production of satisfactory proof on the other side, "*that the distilled spirits contained in them, at the time of seizure, had actually been imported into the United States, and the duties thereupon paid or secured.*"

2d. That a person having in his possession a cask of *distilled spirits*, which has once passed from the custom-house, and is accompanied by the *marks and certificates* required by the law in such case, has no more right, without first obliterating such marks and surrendering the certificate, to change, essentially, the contents of such a cask, than he has to alter the marks, or to erase and falsify the certificate itself—that, to do this, in either case, is to tamper with an important public regulation; that it must be regarded as a fraudulent act of the party; and, like the forging or falsification of a deed, or any other instrument, must forever debar him from the privilege of resorting, afterwards, to the original voucher as affording the evidence of his rights.

3dly. As a conclusion from the foregoing positions, it was laid down distinctly by the judge, that if, from the strong proofs which had been produced on the part of the prosecution, it should be the opinion of the jury, that any part of the spirits contained in these casks were of foreign manufacture, or, in other words, were such as were required by the law to be *marked and certificated*; and that the contents of the casks, at the time of the seizure, were *essentially different* from what they were when the certificates were issued, then that the certificates ought to be rejected as wholly inapplicable, as affording no evidence whatsoever that the spirits had been legally imported and the duties secured. In fine, that whatever might be the inconvenience or injury resulting to the claimant from this construction, it was such, and such only, as had been brought upon him by his own indiscretion or fraud, in attempting to pervert the purposes of an impor-

tant public document; and that he had, therefore, no reasonable grounds for complaining of any hardship.

The foregoing statement having been intended only for the purpose of making more generally known a *judicial construction*, which has been given, for the first time, perhaps, to certain important provisions of our revenue laws, which appear hitherto to have been but little understood, or, at least, regarded, by a portion of the traders in this and other districts, it would be foreign from the object to enter into an examination, at this time, of the views that were taken of the case by the jury, who sat at the trial. Suffice it to say, that their verdict, which was a special one, was drawn up in such a form as will afford an opportunity for a full and deliberate revision hereafter, before the appellate courts, of all the important legal points which were involved in this inquiry.

In the mean time, it is presumed, that, in regard to cases of the description here alluded to, the revenue officers of this district will be governed in their proceedings by the principles which were laid down by the district judge.

The execution was conducted by George Blake, esq. district attorney. J. T. Austin and D. Webster, esq's for the claimant.

=====
FROM THE FLORIDIAN.

In the case reported below, the governor, according to the Spanish custom, appointing an assistant or law adviser, selected Mr. Mitchell, by whom the decision of the court was pronounced.

The heirs of Vidal vs. John Innerarity.

A petition was filed in this case, praying the court to have John Innerarity cited to appear and show cause why the decrees of don Jose Callava, late governor of West Florida, should not be carried into execution. Upon the return day of the citation, John Innerarity, the defendant, appeared, and prayed time to prepare his defence, which was granted him. At the expiration of the time allowed, he, through his counsel, prayed for further time, which was also granted. The court having met on the day appointed for the hearing, and the case being called, Mr. Acre,* of counsel for the defendant, filed a plea to the jurisdiction of the court, which brings up the question, not only whether this court can legally entertain the suit, but whether there is a competent tribunal in the country to try the case. In support of his plea he took the following grounds—First, he conceded that the governors of the Floridas acted in a judicial capacity, and had done so time out of mind, until the promulgation of the constitution of the cortes of Spain, some time in 1820; and, as the constitution of the cortes was in force in Spain at the time that the sovereignty of Spain over the Floridas was ceded to the United States, it was a part of the law of the Floridas. By that constitution, the judicial power, before exercised by the governors, was taken from them and given to other tribunals; and, as a deduction from these premises, governor Jackson could not sit as a court, only having the powers of the governors of the Floridas, the captain general of Cuba, and the intendant, as limited and prescribed by the constitution of the cortes, published some time in 1820. Mr. Brackenridge, on the part of the petitioners, contended that the Spanish government, of which

the judiciary is part, has ceased, although the laws and usages are still in force. The error of opinion on this subject, he said, arises from not distinguishing these things. The powers executed by the officers of Spain are retained, not the officers; and an entirely different distribution made of them, to which the president was authorized by the act of congress. That the Spanish constitution is not in force here, because not promulgated until Spain had parted with the sovereignty, and because it merely provides a form of government; it is not, therefore, applicable to us. He contended, from the act of congress, and the governor's commission, it was undoubtedly the intention of the president to give the same powers as had formerly been exercised by governor Claiborne, in Louisiana, on taking possession of that country, under similar circumstances. The constitution of the cortes, he said, must not be referred to, to ascertain the powers of the captain general, intendant, and governors of the Floridas—for, in that case, he went on to show, that the country would be left without civil government of any kind. According to that constitution, the captain general is only a military officer, and the governors of the Floridas are military officers under him—as intendant, he would have no power.

The very able and satisfactory discussion this question has undergone, by the gentlemen of the bar, by which the court was not only delighted, but instructed, has stripped it in a great measure of its difficulty—it, however, remains one of the first importance to the rights of the people of this country; and, as such, has received the most anxious consideration and attention of the court. Judicial power is an important trust—its execution often painful, and it does not hold out sufficient attractions to cause it to be sought after, especially by those who are duly and truly impressed with its awful responsibilities. It now becomes necessary for the court to inquire whether there exists sufficient judicial power in this country, since the change of sovereignty, to carry into effect the decrees of the late governor of West Florida; if there is, where is it vested? It was not seriously contended that jurisdiction did not rest somewhere; but the difficulty, on the part of the defendant's counsel, consisted in pointing out the tribunal. By referring to the act of congress, entitled "An act to carry into effect the treaty between the United States and Spain," the 2d section of which is in these words, "And be it further enacted, that, until the end of the first session of the next congress, unless provision for the temporary government of the said territories be sooner made by congress, all the military, civil, and judicial powers, exercised by the officers of the existing government of the same territories, shall be vested in such person and persons, and shall be exercised in such manner, as the president of the United States shall direct, for the maintaining the inhabitants of said territories in the free enjoyment of their liberty, property, and religion: and the laws of the United States, relating to the revenue, and its collection, subject to the modification stipulated by the fifteenth article of said treaty, in favor of Spanish vessels and their cargoes, and the laws relating to the importation of persons of color, shall be extended to the said territories. And the president of the United States shall be, and he is hereby authorized, within the term aforesaid, to establish such districts for the collection of the revenue, and, during the recess of congress, to appoint such officers, whose commissions shall expire at the end of the next session of congress, to enforce the said laws, as to him may seem expedient."—There is no stipulation in the treaty that the

*Mr. Acre did not furnish the court with an abstract of his argument—possibly some points of it may have been omitted.

sovereignty of Spain over the Floridas should continue to force one moment after the signing of the treaty, and certainly not after the time limited by it for its ratification—in morals and good faith, the sovereignty was, from that time, in the United States, *de jure*, and Spain had only the government *de facto*. The act of congress to carry into effect the treaty, had relation back to that time, as is fully expressed in the ratification, not only of Spain, but the United States; and the United States are only bound to maintain the inhabitants of the ceded country in the enjoyment of their liberty, property, and religion.

We will here read the commission given by the president to major general Andrew Jackson, and see what powers it has pleased the president to invest him with, which commission is in the following words, viz:

“James Monroe, president of the United States of America, to all to whom these presents shall come, greeting: Whereas, the congress of the U. States, by an act, passed on the 3d day of the present month, did provide, that, until the end of the first session of the next congress, unless provision be sooner made, for the temporary government of the territories of East and West Florida, ceded by Spain to the United States, by the treaty between the said parties, concluded at Washington, on the 22d day of February, 1819, all the military, civil, and judicial powers, exercised by the officers of the existing government of the same, shall be vested in such person and persons, and shall be exercised in such manner, as the president of the United States shall direct, for maintaining the inhabitants of said territories in the free enjoyment of their liberty, property and religion: Now, know ye, that, reposing special trust and confidence in the integrity, patriotism, and abilities, of major general Andrew Jackson, I do, in virtue of the above recited act, appoint him to exercise within the said ceded territories, under such circumstances as have been, or may hereafter be, prescribed to him, by my instructions, and by law, all the powers and authorities heretofore exercised by the governor and captain general, and intendant of Cuba, and by the governors of East and West Florida, within the said provinces respectively, and do authorize and empower him, the said Andrew Jackson, to execute and fulfil the duties of this present appointment according to law; and to have and to hold the same, with all its powers and privileges, until the end of the next session of congress, unless provision be sooner made for the government of the said territories, so ceded by Spain to the United States. Provided, however, and it is the true intent and meaning of these presents, that the said Andrew Jackson, or any person acting under him, or in the said territories, shall have no power or authority to lay or collect any new or additional taxes, or to grant or confirm to any person or persons whomsoever, any title or claims to land, within the same.

In testimony whereof, I have caused these letters to be made patent, and the seal of the United States to be hereon affixed. Given under my hand, at the city of Washington, the 10th day of March A. D. 1821, and of the independence of the United States of America the forty-fifth. JAMES MONROE.

By the president:

JOHN QUINCY ADAMS.”

From this commission we collect the fact that it was the will and intention of the president to invest governor Jackson with all the civil, military, and

judicial powers exercised by the officers of the Spanish government over the Floridas, before the change of sovereignty, as he was empowered by the second section of the act of congress before recited—with such limitations, and subject to such instructions, as it might please the president from time to time prescribe. The said powers, given as aforesaid, are limited only by the following instructions and reservations of the president, which are, that the governor of the Floridas shall have no power or authority to lay or collect any new or additional taxes, or to grant or confirm to any person or persons whomsoever, any title or claims to land within the same. From the exceptions themselves, we arrive at the conclusion, that all the civil, military, and judicial powers are given—with this further exception, such parts of them as are conferred on others—for all the above powers are vested somewhere, being absolutely necessary to carry on the government.

The argument of the defendant's counsel against the jurisdiction of this court is predicated on the supposition that the constitution published by the cortes of Spain is in force in this country; and, if we can show that it is not, it totally fails. We will here give a succinct history of this constitution, and show that it is not in force.

Some time in the year 1812, Ferdinand VII. king of Spain, was a prisoner in France; the cortes, during the king's exile, framed the constitution and published it in Old Spain; some sections of Old Spain adopted, and others rejected it. But it was never promulgated in any of the trans-marine provinces of Spain, or any decree under it, during the time of Ferdinand's absence, so far as we have been able to learn, after diligent research and inquiry. On the 4th day of May, 1814, Ferdinand VII. having previously returned to Spain and assumed the royal functions, by a solemn decree, promulgated over his whole empire, dissolved the cortes, annulled all their decrees, and made it treason in his subjects, or any of them, to attempt to carry the constitution or decrees under it into effect. In this situation the government of Spain remained at the conclusion of the treaty between the United States and Spain, signed by their respective plenipotentiaries on the 22d day of February, 1819. The ratification of this treaty was unaccountably delayed on the part of Spain till the 24th of October, 1820. By the 16th article of the treaty, it was to have been ratified in six months next after the 22d of February, 1819, viz: on the 22d of August, 1819, or sooner, if possible. And in the ratification, Ferdinand VII. by the consent and authority of the general cortes of the nation, declared that the ratification should be as valid and firm, and produce the same effects, as if it had been done within the determined period, viz: the time prescribed by the 17th article. This of itself is sufficient to exclude the idea that the constitution of the cortes is in force in this country. If any thing else is wanting, we have the fact that the constitution of the cortes was only promulgated in the island of Cuba some time in the month of January, 1821, (about three months after Spain had parted with the sovereignty of the Floridas), and, if it was promulgated in these provinces, it must have been after that time, and long since Ferdinand VII. in ratifying the treaty by the consent and authority of the general cortes of the nation, had parted with the sovereignty, &c. It cannot be seriously contended by the defendant's counsel, that any act of Spain, after the ratification of the treaty, could be considered in force in the country ceded, by virtue of the procla-

mation of the executive of this country. Such a construction and such doctrine is incompatible with the sovereignty of the United States over the Floridas. But it is said the proclamation declares that all the laws and municipal regulations of Spain are in force. It must be remembered that the first part of that section of the proclamation alluded to, states that the government of Spain has ceased, and that of the United States has commenced. These words qualify those general words relied on, and limit them to mean only so far as is compatible with the change of sovereignty. As well might he contend that Spain can legislate at this time for the Floridas. Legislation, being one of the attributes of sovereignty, must exclusively belong to the sovereign power. Can it be seriously contended that the constitution of Spain is in force here, as one of the laws and municipal regulations, continued in force by the proclamation of the governor, founded on the act of congress to carry into effect the treaty? We have now clearly proved, we believe, that the constitution of the cortes is not in force here. By the second section of the act just referred to, the president of the United States is authorized to have the civil, military and judicial powers exercised in *such manner* as he may direct; for, it cannot be contended that he has not authority to place the judicial power wherever he pleases.

We will now proceed to show that the president did not consider the constitution of the cortes as in force in this country; and for which purpose, it is only necessary to refer to the president's instructions, contained in the governor's commission; wherein he takes from him the power of granting or making concessions of lands, or confirming those previously made.

Now, if he considered the constitution of the cortes in force in this country, to have given these instructions, or expressly to have limited his powers in these particulars, would have been useless and unnecessary, as the constitution of the cortes took away from the captain general, the intendant, and governors of the provinces, the power of granting lands. Therefore, on conferring on maj gen. Jackson the commission of governor of the Floridas, to exercise the powers of the captain general and intendant of the island of Cuba, and governors of the Floridas, he did not intend that those powers should be limited and prescribed by the constitution of the cortes, but that he should exercise them as they were exercised on the twenty-second day of February, eighteen hundred and nineteen—the day on which the treaty was signed. We, therefore, think governor Jackson has the power to carry into effect the decrees of the late governor of the Floridas. The counsel for the defendant, in his very able and ingenious argument, suggested that, as the president had appointed a judge of the United States for West Florida, possibly his tribunal might have jurisdiction of this case. He admitted, however, that he could not have jurisdiction, unless it was positively given him by statute, or the express instructions of the president. From the commission read, and the deductions already made, it fully appears that the jurisdiction of this case had been conferred on the governor, and cannot be presumed to be given to the judge. Having seen the commission of the judge, he is expressly required, by instructions contained in it, to consider himself as governed by the laws of the United States: and the inquiry now is, What laws of the United States are extended to the Floridas, taken in contradistinction to the Spanish laws in force here. From the second section of the act,

intituled "An act to carry into effect the treaty between the United States and Spain," before read, we find that only such laws as relate to the revenue and the importation of people of color are extended to the Floridas.

And as these subjects have been expressly accepted, and taken out of the general powers of the governor, it is fair to presume that these subjects, and the cases arising under the two laws of the U. States, expressly extended to this country, are alone the legitimate objects of the judge's jurisdiction, until the contrary be shewn from any instructions he may have from the president of the United States. In short, the judge's jurisdiction is not defined by any act of congress, and he can exercise no jurisdiction that is not expressly given him by the president's instructions.

In conclusion, we will add, there are technical objections to the plea filed in this case. In a plea to the jurisdiction of this court it is necessary to shew that there is another court in which effectual justice may be administered. The plea under consideration wants that requisite, which alone ought to be sufficient to warrant this court in taking jurisdiction, lest there might be a failure of justice. We are perfectly satisfied that this court have jurisdiction, and therefore over-rule the plea, and order the defendant to proceed to shew cause, if any he has, why the decree of don Jose Callava, late governor of West Florida, should not be carried into execution.

From the Charleston Courier, Oct. 31, 1821.

S. R. Cannon, }
 Indorsee, } Tried before judge Colcock,
 vs. } at Branwell, April 7, 1821.
 James Beggs. }

This was an action of assumpsit on a note, in the following words, viz: "due Thomas Newman, esqr. on demand, three hundred and ten dollars—1st Nov. 1810, signed by defendant and indorsed to the plaintiff. On this note there was a credit for \$109, 56, paid 5th Dec. 1815."

The only question in this case was, when interest should commence. His honor the presiding judge charged the jury that interest would only commence from the time of a demand made, of which the only evidence was the payment on the note, from which it may be inferred or presumed, a demand was made, and the jury found interest from that time only.

The plaintiff appealed, and will move for a new trial.

1st. Because his honor erred in charging the jury that a demand was necessary to entitle the plaintiff to interest.

2. Because this note or due bill, (differing from common notes payable on demand,) acknowledged a debt due at the time, and therefore ought to have carried interest since, (as it is submitted), the demand had relation to the *payment of the principal*, and not to the *accruing of interest*.

There being a difference of opinion on this subject, I have been led to investigate it with some diligence, and the result is, that I am confirmed in the opinion given below: That the plaintiff is entitled to interest only from the time of the demand. Mr. Chitty in his treaties on bills, speaking of interest, says—"when interest is made payable by the bill, &c. itself, there is no doubt of its being recoverable, and as, according to several cases, in general, payable on all liquidated sums from the instant the principal is due, it is recoverable on all bills of exchange and notes of hand, payable at a

day certain, or *after demand* if payable on demand—6 modern rep. 138—5 Vesey jun. 803—in some cases it is said that interest is payable from the date of the note, &c. He then observes, “but it is generally understood that a bill or note carries interest only from the time of the demand of payment, unless the delay was occasioned by the defendant; as being out of the kingdom at the time it was due;” and then follows the reason on which the doctrine is founded—“For interest being in the nature of damages for non-payment, it would be unreasonable to suffer the holder by his own laches to acquire a benefit, and to subject the drawer, acceptor or indorser, to damages, when they were guilty of no default.” Chitty, p. 318, 295; and for these positions refers to high authority; which, upon examination, will be found to support them. In 7 Term. Rept. p. 124, Farquai vs. Morris, in a case on a bond in which no time of payment was mentioned, and no interest reserved, the court said the debt is due at the date, and interest must be calculated from that time. The first position is also to be found in the case of Thomson vs. Ketcham—7 Johnson, p. 189, 192. But these were not cases payable on demand; nothing was said as to any time or place of payments; and, in speaking of liquidated demands drawing interest, the same thing is meant; where two sit down to adjust an account and strike a balance and it is done, and the balance acknowledged, without saying any thing about payment, the debt is due immediately, and interest allowed from the time. In 2 Black. Rep. p. 761, Blaney, assignee of Bradley vs. Hendricks, et alios, which was a case on an account stated, it was decided that interest from the date be allowed; and in that case Gould, Blackstone and Nares say, interest is due on all liquidated sums from the instant the principal becomes due and payable.—Therefore, in all bills of exchange, notes of hand payable at a certain day, (*or after demand*, if payable on demand) interest is due. It is then apparent that a note, payable on demand, is not considered as carrying interest from the date, and is distinguished from cases where no time is mentioned. But it is contended that it should carry interest from the date because it is a debt due in presenti through solvendum in futuro. I ask if this is not equally the case with every note of hand in which the maker says I promise to pay one year after date for value received; is not this as much an acknowledgment of debt immediately due; there is a promise to pay and acknowledgment of value received; the debt then exists at the date of the note; but, in such case, interest is allowed only from the time the note is payable. Why not apply the same principle to the due bill which is also payable at a future time, (viz: on demand); is it not a bill of exchange; here the note was immediately transferred by Newman to Cannon; it was a draft on himself payable on demand; had it been on his banker there would have been no doubt that interest would not be allowed until the demand—why? because it is said the drawer undertakes to demand—so, in this case, I say the payer, by the terms of the contract, or due bill, undertakes to make the demand.

Justices Richardson, Gannt and Bay concurring.

To reconcile the above decision with what appears, at first sight, inconsistent with it, viz: that a note or due bill, payable on demand, is barred, by the statute of limitations, in four years from date, and not from demand, it is only necessary to copy a part of the opinion of the late judge Grimkie, in

the constitutional court at Columbia, in the case of Woodward vs. Admors, of Drennan, April term, 1815—“This was a summary process on a note payable on demand, dated, 12th December, 1803, but never sued until Feb. 1811, and the only question was whether it was barred by the statute of limitations. The defendant pleaded that he had not promised within four years. The rule is that, in indubitatus asst. this plea is good, for the nature of the action shews that a debt was due at the time the promise was made, 12 Mod. 444; but if the duty had arisen from a collateral matter, which created no debt till demand, then such plea would not be good, but should the actio non accrevit infra sex annos, 1 Esp. 156, B. N. P. 151, Ballant. Limit. 216, 217, (a.) The time of payment is part of the contract, and if no time be expressed, the law adjudges that the money is payable immediately.—This is the positive rule of the common law, and is a general principle in the construction of contracts—8 John. 189. I am of opinion that the motion be not granted.”

NEW AND NICE CASES.

From the Richmond Complier of Oct. 25, 1821.

In the year 1813, Mrs. Eve Wright, of the city of Williamsburg, by her will, emancipated all her slaves, in number then about 20; of which there were then 9 or 10 adults; the others were infants.—The executor of Mrs. Wright, imagining that there could be no question but that the will gave unconditional freedom to these people, furnished each of them with a copy of the will, and endorsed a certificate on the back thereof, that the bearer was one of those emancipated by the will, and stating also the age of the individual.

These people removed to Richmond between the period of Mrs. Wright's death, in 1813, and the year 1819. In the latter year, they were brought before the overseers of the poor as persons who had been emancipated, and remained in the state more than 12 months; and according to the act of assembly, (1st revised Code, page 436), had forfeited their right to freedom.—The overseers of the poor, however, decided upon the terms of the will, that they were not absolutely free, but had an inchoate right to freedom, and discharged them.

These persons were then arrested as slaves going at large and hiring their own time, (see revised code, page 442), and brought before our hustings court, who, upon hearing counsel, decided they were not slaves, but free persons, and, therefore, not to be proceeded against in any other character, and directed their discharge.

In 1820, to place the right of these blacks to freedom beyond question, the executor of Mrs. Wright executed deeds of emancipation to all of them; and the greater number of them have resided in Richmond up to this period.

The police of the town have recently taken notice of their situation, and they were a few days since directed to appear before the mayor—upon enquiring into the condition of those who remain, it is found that there are 16 or 17 persons, whose right to freedom is brought into question; and they may be thus classed: three who are adults and were so at the death of Mrs. Wright, and have forfeited their right to freedom—eight who are infants and were in being and emancipated by the will of Mrs. Wright—five who are infants and who have been born since the death of Mrs. Wright, and who are descendants of two females included in the first class as having forfeited their right to

freedom—two of these were born before their mothers had incurred this forfeiture, *provided* the will of Mrs. Wright gave them freedom; and three after the forfeiture had been incurred, but before it had been declared.—If, however, the will of Mrs. Wright did not give an absolute but only an imperfect right to freedom; then since the execution of the deed of emancipation by the executor, one only of these five infants has been born, and that before its mother had incurred the forfeiture.—Of these latter persons, two are infants in their mother's arms, and if the mothers are declared and sold as slaves, and the children considered as free, the mother is to be separated from her infant child not more than seven or eight months old. The right to freedom of the infants included in the 2d class, is reserved by the act of assembly, until twelve months after they respectively arrive at the age of 21 years—(see 1st revised code, page 436, section 61st.)

The only difficulty in the case, relates to the infant children born since 1813. Their counsel intended, on the 13th inst. to move the hustings court to have them registered as free born blacks. The act of assembly is silent in relation to persons in this situation, and speaks alone of "emancipated slaves" and "emancipated infant slaves."—Upon this motion to have these persons registered, the following questions arise:—1st. Ought the court to permit this register? If they do, they virtually decide these persons may continue to reside in Virginia, as of right;—And this leads to the 2d inquiry: Whether a child, born between the period of the emancipation of his or her mother and that at which, by remaining in the state, she forfeits her right to freedom, is entitled to remain in Virginia, after he or she arrives at the age of 21 years, for a longer period than 12 months, without forfeiting his or her liberty?—A third question also arises: Can a child, born after the forfeiture of freedom accrues, but before there is any legal and judicial declaration thereof, thus remain?

It is contended, that the child follows the condition of the mother at the time of *his* birth; that in both the 2d and third queries, the mother was absolutely free at the time of the birth of the child; that being so, the child was born free; never was emancipated; never was a slave to be emancipated; that this act of assembly is a highly penal one and must be construed strictly; that the forfeiture of freedom by the mother was intended as a punishment for remaining more than 12 months; that this punishment is entirely personal and cannot be visited on her unoffending offspring; and, lastly, that all the descendants of the emancipated slaves must be taken and considered as the descendants of a free person, until, by some legal and judicial determination and act, the condition of the emancipated person is changed.

The motion was not submitted by the counsel for the blacks on *Saturday*, being, at the request of the attorney for the commonwealth, postponed until the next court, without prejudice to these persons.

Mr. Robert G. Scott appeared for the blacks, and Mr. Upshur for the commonwealth.

===== CASE OF A SLAVE.

From the Village Record, November 21, 1821.*

The trial of *John Read*, for the murder of *Peter Shipley*, came on at the late sessions of the court of oyer and terminer, in this county. The case, from the particular circumstances attending it, had ex-

cited an unusual degree of interest. The prisoner had been tried in May last for the murder of *Samuel G. Griffith* and acquitted.

On Monday the 5th inst. the trial commenced before his honor judge *Darlington*, president, and judges *Ralston* and *Davis*, associates: counsel for the commonwealth, *Dick*, assisted by *Barnard* and *Duer*; for the prisoner, *Bell* and *Tilghman*.

The following is a brief, and, we believe, a fair statement of the case.

Read, the prisoner, a black man, two or three years ago, came into Pennsylvania from Maryland; said he was free, although an attempt was made to hold him in slavery; frequently declared himself afraid of kidnappers, and often went armed. He married in Pennsylvania and has one child, hired a house in Kennet township, and worked about the neighborhood.

On the night of the 14th Dec. 1820, his wife was from home; he was alone; lay down, but felt uneasy and could not sleep; got up and made a fire; about midnight he thought he heard persons walking about the house; one at length rapped smartly at the door; he asked what they wanted? the person answered they had authority to search, and had come for stolen goods. *Read* told them to go away, he believed they were kidnappers; if they were not, he had no stolen goods, and if they would wait till morning, they might search. Soon after they began to force the door, he rolled a barrel of cider against it, told them if they attempted to come in he would kill them. They prized the door off the hinges, and it fell over the cider barrel: at the instant he heard the click of a pistol cocking; then said *Read*, "it is life for life," one of the persons said, "rush on him *Shipley*, damn the negro, he won't shoot." A person attempted to enter, he shot him; another attempted to come in, he struck him with a club; the man fell on his knees, as he rose, *Read* struck him once or twice; then seizing his gun, he ran to the neighbors and told them the kidnappers had attacked his house; that he had killed two—asked for more powder, as he was afraid they would pursue him. He made no attempt to escape. After being arrested and in custody, one witness testified that he heard *Read* say, that, after he got out of the house and to the fence, on looking round, he saw one of the men trembling; that he went back and beat him until he thought he was quit dead.

When the neighbors came upon the ground in the morning, they found Mr. Griffith lying on the bed, in the black man's house, dead. Mr. *Shipley*, the overseer, for whose murder the prisoner was now on trial, had got up, carried him there, taken his pocket book, and watch out of his pocket, and put them in his own, and then went to a neighboring house about 100 yards off, and prevailed upon Mrs. *Harvey* to let him in. There he languished eight days and died.

The club was found in the house close by the cider barrel, two pistols loaded, one of them cocked; a whip and pair of gloves were found at the door; a pair of handcuffs and a rope were found in the pocket of Mr. *Shipley*; a third pistol in the pocket of Mr. Griffith. There were but two wounds upon Mr. *Shipley*.

It appeared sufficiently clear, that *Read* was the child of *Maria*, formerly an African queen, recently a slave, and no proof of his manumission was shewn. He was claimed by Mr. Griffith, from whose service he had absconded. Having learnt where he was, Mr. Griffith, his overseer, Mr. *Shipley*, and two assistants, *Minner* and *Pearson*, came to the house

* Published at West Chester, Pennsylvania.

occupied by Read about midnight, and made the attempt which resulted in the death of both Mr. Griffith and Mr. Shipley, as related.

The principal points disputed were, whether Mr. Griffith intended to take Read out of the state without taking him before a judge, in violation of an act of assembly.

2d. Whether Read knew his master.

3d. What right could Read, as a slave, acquire of self-defence in Pennsylvania.

4th. Whether he returned, as stated that he confessed to one witness, from the fence and beat Shipley.

It is impossible for us, our limits do not admit it, to go into the particular arguments, in relation to the facts and the law, as will be perceived, when we state that the cause began on Monday the 5th, and continued until Tuesday the 14th—occupying the court and jury nine and ten hours each day.

It was fully and ably argued. Mr. Dick, for the prosecution, took up about one hour and a half in a sensible and argumentative address. He was followed by Mr. Bell, on behalf of the prisoner, in a maiden speech, distinguished for clearness, method and force. Mr. Tilghman, for the prisoner, began to speak on Monday afternoon at three o'clock, and spoke until half past 7. The deep and fixed attention of a crowded audience, for four and a half hours, shewing the power of genius, in in chaining in fetters of eloquence the human mind. The courage and humanity of Mrs. Harvey in rising at the mid-hour of the night, although alone, and taking in a stranger, who was moaning at her door for assistance, were adverted to, with much force and beauty, accompanied by the quotation from Walter Scott:

"Oh, woman! in our hour of ease,
Impatient, coy, and hard to please,
And variable as the shade
By the light quivering aspen made:
When pain and anguish wring the brow,
A ministering angel thou!"

Mr. Duer began his argument in conclusion, on the part of the commonwealth, on Tuesday morning. He contended that the master had a right, under the law of congress, at any time and place, and at any hour, by himself or his agent, to seize his slave; that the slave had no right to resist his master; that his house was no protection—that, therefore, the master and the deceased Shipley, his overseer, were in the exercise of a legal right, and Read, in resisting, in the perpetration of a wrong—that Read must have known his master, and that, therefore, the killing, in resisting the legal attempt to arrest him, was murder in the first degree. Mr. Duer spoke for two and a half hours.

Judge Darlington then summed up the evidence, and laid down the law in a charge of an hour and a half.

He adverted to the delicacy of his situation, having been on the other trial attorney for the commonwealth—but remarked that his regret was considerably diminished, by the consideration that the jury were the judges of the law, as well as the fact, in the case before them. He gave a full and lucid exposition of the whole law on the subject. In respect to the construction of the act of assembly of 1820, on which much reliance was placed, he differed from the opinion of judge Ross, delivered at Norristown. The counsel for the prisoner had contended that, by this act, the attempt to take any person claimed as a slave out of the state, without taking him before a judge to prove his right, was declared a felony; that, from the time and circum-

stances of the attack, no doubt could exist but that it was the intention of the party to take Read out of the state in violation of that act; that they were, therefore, in the commission of a felony, and Read was justified in resisting to the death.

The counsel for the commonwealth maintained, that this act was intended to prevent kidnapping or man stealing; that it did not apply to a master, who intended to arrest and reclaim his runaway slave, whom, by the act of congress, he was authorized to arrest or seize, when and where he could.—But judge Ross had decided that the act had reference to masters seizing their slaves, and taking them out of the state, without going before a judge. Judge Darlington was of opinion that such was not the construction, inasmuch as the law so construed inflicted the same penalty, 7 years imprisonment in the penitentiary, upon the acknowledged master, reclaiming his slave and taking him away, as upon the kidnapper, who should attempt to carry off a freeman; and this opinion was confirmed by the construction of the supreme court of the old act of assembly in relation to the same subject.

He then examined the evidence, and weighed it with great perspicuity and impartiality, expressing his opinion that there was not conclusive proof, that Read knew his master or overseer; and intimating very clearly, that the witness who testified that the prisoner confessed he returned and beat the deceased, until he thought him quit dead, was mistaken.

The jury immediately, on the court opening in the afternoon, returned to the box with a verdict of manslaughter.

The next day he received his sentence of 9 years imprisonment in the penitentiary.

Doylestown, Penn. March 19. During the second week, a cause was tried which interested the feelings and excited the strong curiosity of the farmers—of the millers—indeed, of the community at large. *Wm. Williams*, of Buckingham, came into court to claim damages of *Thos. Paxson*, for obstructing the water on his own premises; diverting it from its natural course, and using it to the injury of the said Williams.

The principal facts are these:—Williams owns a grist mill, turned by a light stream of water, which passes thro' the plantation of Paxson, immediately before it falls into Williams' mill pond. Some three or four years since, the predecessor of Paxson pulled down his old barn, thro' the yard of which the stream in question was conveyed, and erected a new barn, a few rods distance from the old one, but on the opposite side of a public highway.—Paxson changed the course of the water, conducted it across the highway, thro' the yard of the new barn, for the convenience of watering his cattle, &c. and occasionally, by damming, flowed part of the water over his meadow; but delivered the surplus into its natural channel, where it passed the line of his own land, on its passage to the mill of Williams.

Abraham Chapman and Jona. Condy, esqs. were counsel for the plaintiff; Levi Pawling, and Jos. Pickering, esqs. for the defendant; and most learnedly, with great ingenuity, faithfulness and zeal, did they advocate and defend the respective interests of their clients.

The principles of law which appeared to be clearly established, were, that the owner of the soil, had a right to every thing over his land, from the heavens to the centre of the earth; that he had a right to use the stream of water for any purpose his convenience might require, on his own land—delivering

them into their natural channels, when they crossed his lines: he must not divert them from their courses into limestone vaults, or other sinks, where they would be lost to the adjoining proprietors; nor must he waste the water, nor abuse his privilege in any way, to the manifest injury of his neighbor below; as, for such malicious abuse of privilege, he would be amenable to the laws, and subject to the payment of heavy damages. An intelligent jury received the judge's charge, and, after an absence of about two hours, returned into court with a verdict for the defendant.

[*Trenton Federalist.*]

THE CASE OF JUDGE CLARK.

FROM THE NATIONAL INTELLIGENCER

We proceed to give a statement of the facts in the case of Judge Clark, of Kentucky, who was formerly a representative in congress from that state, and is a citizen of the most respectable standing. Though it is true that this is a case immediately concerning the interests of that state only, it is of so much importance to the general principles it embraces, as to bring it home to the bosoms of all. It is for this reason we allot so much space to it.

The following is a copy of the opinion of Judge Clark, which reached Frankfort at the moment that the legislature was in session:

FROM THE WESTERN CITIZEN.

Opinion delivered by Judge Clark, at the Bourbon circuit court.

Williams vs. Blair, &c.

The object of this motion is to quash a recognizance, entered into by the defendant, with security, before the clerk of this court, upon a judgment previously obtained by the plaintiff against him.—The contract was made on the 12th day of November, 1819, and for the payment of \$219 67½ to the plaintiff. By the terms of the recognizance, the defendant is allowed the period of two years to pay the debt and costs, and for that time execution is to be staid.

The motion is made by the plaintiff upon the grounds, that the law, authorizing the recognizance and stay of execution, is a violation of the constitution of the United States, and of this state, and therefore void. The act authorizing the proceedings, passed the 25th day of Dec. 1820, is entitled, an act to regulate endorsements and executions. By this law the defendant is entitled to a stay of execution for two years, upon entering into a recognizance with good security before the clerk; unless the plaintiff will agree to receive, in satisfaction of the judgment, notes on the bank of Kentucky or its branches, or notes on the bank of the commonwealth of Kentucky, or its branches.

In deciding this question, I am not unmindful of the delicate situation in which a judicial officer is placed, who, in the course of his official duties, is compelled to determine the constitutionality of a law made by the legislature of the state of which he is a judge, and the heavy responsibility he must incur, by permitting passion or prejudice to influence his opinion.

I was particularly anxious to avoid a decision of this question at this time; the same question is depending before the appellate court, and will probably be decided in a short time. The opinion of that court would give uniformity of decision to the circuit courts. The opinion of this court can have no influence except in this circuit. As the question, however, is pressed, whatever may be my wishes, it is my duty to decide it.

SEP. TO VOL. XXI—20.

The 10th section of the 1st article of the constitution of the United States, among other things, contains the following provisions—"No state shall coin money, emit bills of credit, make any thing but gold and silver coin a tender in payment of debts, pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts."

The people of the United States have, by this section of the constitution, placed the private contracts of men out of the reach of legislative control, nor can a state constitution, by its provisions, diminish, in the slightest degree, the obligation of obedience on the part of the state legislature, to this clause of the federal constitution. As to the subjects thus enumerated, the states have parted with their sovereign power, and a legislative act, which in the slightest degree impairs the obligation of a contract, is absolutely void and inoperative.

The convention that formed the constitution of Kentucky, sensible of this, have made all its parts harmonise with these great provisions in the constitution of the United States; for the 18th section of the 10th article, declares that no *ex post facto* law, nor any law impairing contract, shall be made. The 13th section of the same article declares that right and justice shall be administered without sale, denial or delay.

It is under these provisions the constitutionality of the endorsement law must be determined.—To a correct decision, it is necessary to know what is meant by the term "contract," and what, in legal understanding, is the obligation of a contract?

A contract is a transaction in which each party comes under an obligation to the other, and each, reciprocally, acquires a right to what is promised by the other. From this definition, it is evident that, when one party, by covenant, agreement, or otherwise, stipulates to do a particular thing, as the payment of a sum of money, by a particular time, the other party acquires a right to demand a performance, and the obligation of the contract is, that performance shall be agreeable to the terms stipulated.

It needs no argument to prove, that a law to release one party without the consent of the other, in whole or in part, from the payment of a sum of money which he has stipulated to pay, or a law to change the day of payment to a shorter, or a more distant day, would impair the obligation of the contract. It is equally clear that if one party, without the consent of the other, is permitted to do the thing in a different manner, or at a different time from that agreed upon, and thereby mitigate at his own will and pleasure the terms of the contract, the obligation is not preserved.

Test the case under consideration by these principles, and how does it stand? The defendant, by his writing, promised to pay the plaintiff the sum of \$219 67½, by a given day; the terms of the contract gave him a right to demand the payment of the money agreeably to the promise, and the defendant was under a legal, as well as moral obligation, to pay what he contracted to pay. The endorsement law, however, intervenes between them, and, without consulting the will or the interest of the plaintiff, declares, that the defendant may, if he thinks proper, have two years in addition to pay the money, and during that time the process of law to enforce justice is denied. This, according to my understanding, is a palpable violation, not

only of the spirit, but the letter of the constitution.

The laws that exist when a contract is made, conform to all the essential parts of the contract, a part of it. For example, the rate of interest fixed by law, when the contract was made, shall be the rate of interest at the time of performance, notwithstanding a different rate has been fixed by law in the interim. And it will not be contended that the legislature possess the constitutional right of increasing or diminishing the rate of interest upon contracts made before the passage of the law.

When the contract under consideration was made, the law not only subjected the estate of the debtor, but his person, to execution in satisfaction of the debt. It is a principle of the common law, and coeval with the existence of courts of justice, that the property of the debtor shall go to satisfy his debts; and parties, in making their contracts, have an eye to the property as a fund out of which the debt can be made, and the law considers it as much a part of the contract, that the estate of the debtor shall be subject to execution in payment of the debt, as if it were in terms so expressed in the contract. The law, therefore, when the contract between these parties was made, annexed to it as an implied part of the contract, that, upon failure of the defendant to pay, his property should be liable for the debt.

It is contended for the defendant that the law in question affects only the remedy and not the right, and that it is the peculiar province of the legislature to prescribe the rules by which contracts shall be enforced, and redress had for injuries occasioned by fraud or negligence. This proposition is certainly correct, provided the right is left unimpaired; but the legislature in prescribing the remedy, must keep within the pale of the constitution, and if the remedy prescribed will (as in this case) impair the contract upon which the action is founded, or divest an individual of a vested right, the law will be unconstitutional and void.—To prove that this law affects the remedy only, the statute of limitation is referred to by way of analogy, and it is contended that, by the settled course of decision in this state, as the limitation laws go to the remedy only, this case is virtually settled. The analogy between the cases is not perceived. Limitation laws do not go to the essence of the contract; the remedy only is affected. It is only a rule of evidence founded upon the presumption, from the lapse of time, that the debt has been paid or the duty performed. Very different is the endorsement law, which declares that, unless the creditor will agree to receive, in payment of his debt, the notes of the bank of Kentucky, or the notes of the bank of the commonwealth of Kentucky, the debtor shall have a right to replevin for two years; when it is manifest, that, by such replevin, the legal obligation to pay the debt is destroyed or suspended, and for that time the performance is enlarged and the terms of the contract essentially changed.

By the 10th section of the 1st article of the constitution, before referred to, the legislature of this state had no power to make any thing a legal tender in payment of debts but gold and silver coin. Yet the endorsement law declares that the creditor shall be delayed in having justice administered to him for the space of two years, unless he will relinquish his right to demand gold and silver, and accept of paper in discharge of the debt. There is, in principle, no difference between this law, and one extending the right of replevin for fifty years;

the difference is in expedience only; for if the legislature can authorize a replevin for two years, it can be extended to fifty. Indeed, upon the principle of the endorsement law, a law authorizing a debtor to pay his debts by instalment, or in property, would be constitutional. This would be really reducing the constitution to a dead letter.

How idle would it have been in the convention who framed the constitution of the United States, to have declared that no state should emit bills of credit, make any thing but gold and silver coin a tender in payment of debts; pass any bill of tender, *ex post facto* law, or law impairing the obligation of contracts, and at the same time leave with the states the power of doing, indirectly, what they declared should not be done directly. The acknowledged wisdom of that body forbids such a supposition.

The section in favor of personal security, and private rights, was added, as will be seen by a reference to the history of that time, to protect the citizen, not only from endorsement, suspension, instalment, and property laws, but all laws which interfered with the private contracts of men. The frequent interference of the state legislatures with the private rights of individuals, the property laws of some, and the suspension laws of all, had, in a great degree, impaired public faith, and destroyed the regular course of business.

It is urged in argument for the defendant, that, if this law was in violation of the constitution, the court had no right to determine, and to quash the recognizance. The second clause of the 4th article of the constitution of the United States furnishes the answer—it is in these words: "this constitution, and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges, in every state, shall be bound thereby, any thing in the constitution or laws of any state to the contrary notwithstanding."

A case analogous to this, has been decided by the supreme court of North Carolina. During the late war, the legislature of that state passed a law providing that any court rendering a judgment against a debtor for debt or damages, between the 31st day of December, 1812, and the 1st day of February, 1814, should stay the execution until the first term of the court after the last mentioned day, upon the defendant's giving two freeholders as security for the debt. The supreme court of that state declared the law unconstitutional upon the grounds that it impaired the obligation of contracts. The court, in giving its opinion, says, "whatever law relieves one party from any article of a stipulation, voluntarily and legally entered into by him with another, without the direct assent of the latter, impairs its obligation, because the rights of the creditor are thereby destroyed; these are ever correspondent to, and co-extensive with the duty of the debtor.

The opinion I have expressed on this subject, I am aware, is different from that entertained by some of the most enlightened and patriotic citizens of this state: And I believe the general court, composed of two judges, at the last term, were of opinion that this law was not within the prohibition of the constitution, and so decided. The opinion of that court, though highly respectable, is nothing binding on this: I am therefore unwilling to yield my fixed and settled opinion upon this great con-

stitutional question to such authority, however imposing it may be.

The judgment of the court is, that the recognizance be quashed, and the defendant pay the plaintiff the costs of this motion.

HOUSE OF REPRESENTATIVES OF KENTUCKY.

Saturday, May 18, 1822.

Mr. *Slaughter* moved the following preamble and resolution, which was adopted, and a committee appointed accordingly, viz.

"Whereas this house is informed that judge James Clark has, at the present term of the Bourbon circuit court, whilst acting as judge of said court, given a decision in contravention of the laws of this commonwealth, called the endorsement and replevin laws, and therein has grossly transcended his judicial authority and disregarded the constitutional powers of the legislature of this commonwealth: Therefore,

Resolved, That a committee be appointed to inquire into the decision of the said judge, and report thereon to this house."

Tuesday, May 21.

Mr. *Slaughter*, from the committee appointed to take into consideration the decision of James Clark, a circuit judge, in relation to certain laws of this state, reported as follows:

The committee to whom was referred the resolution touching the conduct of judge James Clark, in relation to a decision delivered by him in the Bourbon circuit court during the present term, upon the replevin and endorsement laws of this commonwealth, beg leave to submit the following report and resolution:

Your committee have ascertained, to their satisfaction, that judge James Clark, did, at the present term of the Bourbon circuit court, in the case of *Williams vs. Blair*, upon a motion to quash recognizance entered into by the defendant with security before the clerk of said court, upon a judgment previously obtained by the plaintiff against him, deliver an opinion which was immediately published in a newspaper called the *Western Citizen*, a copy of which opinion, believed to be correct, they herewith exhibit as part of this report. In this opinion the court sustains the motion to quash the recognizance, and the judge, in his general reasoning, intimates an opinion upon other subjects, not strictly before him. The principles and doctrines assumed in this opinion, are, in the opinion of your committee, incompatible with the constitutional powers of the legislative department of this government, subversive of the best interests of the people, and calculated in their consequences to disturb the tranquility of the country, and to shake public confidence in the institutions and measures of the government, called for by the condition and the necessities of the people. That the judicial department has a power, beyond control, to defeat the general policy of the state, deliberately adopted by the representatives of the people, within the pale of their authority, is a position which your committee are not prepared to admit; and, therefore, think it is the duty of the legislature to avert the evils about to be inflicted on the commonwealth, by the only appropriate remedy within their power. Your committee, upon a full consideration of the whole subject, submit for the consideration of the house the following resolution and address:

Resolved by the general assembly of the commonwealth of Kentucky, (two thirds of each branch thereof concurring), that the hon. James Clark, one of the circuit judges of this commonwealth, ought

to be removed from office; and that the following address be presented to the governor, in order that his removal may be effected:

To his excellency John Adair, governor of the commonwealth of Kentucky.

According to the provisions of the constitution, the senate and house of representatives, (two thirds of the members of both houses concurring therein), present you this address, requiring you to remove from office the honorable James Clark, one of the circuit judges of this commonwealth, for the following cause, which they have caused to be stated at length on the journals of their respective houses.

[Here follows the above opinion.]

Mr. *Wickliffe* moved to dispense with the rule of the house, to refer to a committee of the whole the papers relative to judge Clark, and make an order citing him to appear at the bar of the house on Friday next, and shew cause why he should not be removed from office.

A long discussion arose on these propositions, involving, in some degree, the merits of the main question, in which Messrs. Pope, Fletcher, Worthington, Yancy, Luckett, Allea, Wickliffe, Kincaid, Bruce, Cosby and Catlett, participated, when the rule was dispensed with, 63 to 32, the papers referred, and an order made for judge Clark to appear and shew cause why he should not be removed from office.

Friday, May 24.

The speaker laid before the house a letter from judge James Clark, as follows:

Frankfort, May 24th, 1822.

Sir: I have attended here on this day in consequence of a summons from the honorable body over which you preside, to answer an accusation against me. The summons was not served on me until Wednesday evening last at Paris, where I had been for some time engaged in the discharge of my official duties: It will be therefore perceived, that I have had no time allowed me to respond to the charges. I respectfully request that time be given me, until Monday next, to present my defence in writing.

I have the honor to be, &c.

JAMES CLARK.

The hon. Geo. C. Thompson, &c.

Time was given accordingly.

Monday, May 27.

The speaker also laid before the house a letter from judge James Clark, covering a response to the charges against him. The reading dispensed with, and it was referred to a committee of the whole.

The house then resolved itself into a committee of the whole, Mr. Yantis in the chair, and took up the charges against judge Clark, together with his response. The report of the select committee, the opinion of the judge, the resolution for his removal, and the response to the charges were read.

Messrs. *Slaughter*, *Shannon*, *Worthington*, and *Allen*, addressed the committee in favor of removing the judge, and were answered by Messrs. *R. C. Anderson*, *Pope*, and *Cosby*. During the discussion, which occupied the whole day, Mr. *Pope* offered the following resolution as a substitute for that before the committee, which, however, was subsequently withdrawn, viz:

Resolved, That, as the decision of judge James Clark is subject to revision in the appellate court, it is unnecessary and inexpedient for the legislature to interfere.

The committee then rose and reported the original resolution to the house as follows:

Resolved by the general assembly of the commonwealth of Kentucky (two-thirds of each branch thereof concurring) that the honorabl James Clark, one of the circuit judges of this commonwealth, ought to be removed from office; and that the following address be presented to the governor, in order that his removal may be effected, &c.

Mr. Yancy, offered a few remarks in support of the resolution.

The question was then taken, and there were, for removing the judge 59, against it 35. There not being the constitutional majority of two-thirds, the resolution was declared to be rejected.

The following are the Yeas and Nays:

The following is the clause of the constitution of Kentucky, under which legislative proceedings took place:

"3. The judges, both of the supreme and inferior courts, shall hold their offices during good behavior; but for any reasonable cause which shall not be sufficient ground of impeachment, the governor shall remove any of them on the address of two thirds of each house of the general assembly: Provided, however, that the cause or causes for which such removal may be required, shall be stated at length in such address, and on the journal of each house. They shall at stated times receive for their services an adequate compensation, to be fixed by law."

It only remains to add, that the key to the unusual excitement caused by this opinion is to be found in the fact, which is stated in the Louisville Advertiser, that this opinion of judge Clark was supposed to have an indirect bearing upon the charter of the bank of the commonwealth.

A majority of the senate is said to have been opposed to the proposed removal of the judge.

Response of judge James Clark, to the charges exhibited against him in the house of representatives, at their extra session in May, 1822.

To the honorable speaker of the house of representatives.

Sir:—I have received a summons from the honorable body over which you preside, to attend and answer an accusation against me. I have also seen a copy of the report and resolution of the committee raised upon the subject, by which I am fully apprized of the nature of the accusation, and to which I beg leave to offer the following response.

I did, during the last term of the Bourbon circuit court, in a case in which Williams was plaintiff, and Blair and others were defendants, give a decision upon the laws of this commonwealth, usually styled the endorsement and replevin laws, in which I held, that the law which gave to the defendant a stay of execution for two years, upon his entering into a recognizance, in the clerk's office, with security, to pay the money at the end of that time, unless the plaintiff consented to receive bank paper in payment of the debt, was unconstitutional and void; which opinion has made its appearance in all the public prints, especially in the Western Citizen, printed at Paris, at the earnest solicitation of the editor and other citizens; and to that I refer for what the decision contains.

This decision was given after the most mature deliberation which I was able to bestow, and from a firm conviction of the correctness of the principles there mentioned; and I must have been not only faithless to my own conscience, but to the constitution of the United States and the dignity due to the judicial office, had I expressed any other opinion, under the conviction I had upon the subject.

I should be sensibly alive to an accusation hinting corruption, or arraigning my motives, and would meet it with a bold and flat denial; but I am gratified to find that no such ground is taken in the report and resolution. The grounds there assumed, are, that I have maintained principles and doctrines incompatible with the constitutional powers of the legislative department of this government, and subversive of the best interests of the people; and that I have intimated an opinion upon other subjects, not strictly before me. In reply to these two allegations, I must respectfully insist that I have done neither.

In support of the correctness of the opinion delivered, I have nothing farther to add, except to say, I am wholly at a loss to find, in any part of it, an intimation of an opinion upon any subject not necessarily growing out of the case before me.

As I understand the report, it is based upon the ground, that I have no right, as a judicial officer, to refuse to carry into execution, what I may conceive to be an unconstitutional act of the legislature. I shall firmly, but respectfully, contend, that I have this right, as well upon principle as upon precedent.

The constitution of the United States, under which this decision was given, declares itself to be the *supreme law of the land*, and that the judges in every state shall be bound thereby, any thing in the constitution or laws of any state to the contrary notwithstanding. 2d clause, 6th article, C. U. S.

Permit me respectfully to ask, why is this solemn charge expressly directed to the judges in every state, and not the legislature, if the judge cannot decide a law of a state to be against that instrument? The charge is futile and inoperative, a mere dead letter.

It would be a phenomenon in jurisprudence, to bind an officer by a solemn oath to effectuate the provisions of the constitution against conflicting

laws of his own state, if the very act of passing these laws is to seal his lips, and annul the obligation imposed upon him to see that the constitution is not violated.

This provision evidently supposes that, from some cause or other, provisions might creep into the laws or constitutions of states, repugnant to that supreme law. If this supposition is not contained in the expressions referred to, it will be difficult to assign an adequate motive for placing them there.

If every law of the state is to be taken, from the mere act of enactment, as accordant with the constitution, it was more than simple in the convention to require the judge to disregard that which he was bound to consider right. The judge then, in the case of discrepancy between the two, must speak and decide; and severe indeed must be his fate, if, for doing so, he is to be censured or disgraced by the constitutional authorities of his country.

The constitution of our own state adopts the same principle. It closes the last article with these emphatic expressions: "To guard against the transgression of these high powers, which we have delegated, we declare that every thing in this article is excepted out of the powers of the general government, and shall ever remain inviolate; and that all laws contrary thereto, or contrary to this constitution, shall be void."

The same observation will apply here, which I have used with regard to the constitution of the United States. The instrument itself supposes there may be transgressions against it, by the functionaries of government; hence it declares that this section is to guard against them. It provides against laws enacted by the legislature, (as all laws must be), which are contrary to the constitution. What wisdom could there be in providing against unconstitutional laws, if none such could exist? If the bare enactment sanctions them, and proves them to be agreeable to the constitution, then the convention provided against nothing at all, or there must be numerous void laws in force, the constitution notwithstanding, and no functionary of the government dare to say they are void.

The official oath of the judge, imposed as well by the constitution as the laws of this state, requiring him to support the constitution of the United States and of this state, does not permit him to stand by mute, or effectuate the provisions of laws which his sober judgment tells him are within the prohibition of the constitution. Embarrassing indeed, on a contrary hypothesis, would be the situation of every judge, and no one could hold the office, unless he could satisfy his conscience, by the opinion of others, that his oath is not violated.

The history of our country accounts for these provisions in the constitution. The combination of legislative, judicial and executive powers in a monarch, and the omnipotence of a British parliament, were the complaints of the revolution, and the dangers against which we struggled. Upon the achievement of independence, the states adopted forms of government, in which they generally declared, that these different departments should be kept separate, both as to men and powers.—Hence arose the natural result, that one department would not, and could not effectuate the unconstitutional acts of another; and previous to the constitution of the United States, or of this state, many decisions by the judiciary had taken place, refusing to carry into effect unconstitutional laws;

and it was in reference to, and in full sanction of this authority in the judges, that these causes were introduced in both constitutions. It was for the purpose of charging the judges still to remain on the watch-tower, and guard against every invasion of the sacred instrument. If this is not the allusion and design of these provisions, I am incapable of ascertaining their meaning—for I am at a loss to know upon what principle of logic it can be maintained that the judge is to be bound by the constitution, as the supreme law of the land, and also by the acts of assembly, and yet, when they come into collision, reject the supreme, and effectuate the inferior rule. This authority of the judiciary has been exercised ever since the revolution, and is considered, by all jurists, too well settled to be shaken.

In pronouncing a law, which is incompatible with the constitution, to be void, the judiciary does not assume a superiority over the legislature. It merely affirms the paramount obligation of the fundamental rule. It announces only that the will of the people, as expressed in their constitution, is above the will of any of the servants of the people. To give, on the contrary, efficacy to a legislative act, which violates the constitution, would be to proclaim that the will of the legislative servants of the people was above the will of the people themselves.

If we consider the subject upon the score of authority there cannot exist a doubt; and I refer to the printed reports of all the states, many of which I have not at this time an opportunity of consulting. For a contemporaneous construction of the constitution upon this subject, I refer to that excellent book, called the Federalist, page 246.—The power, and indeed the duty of the judiciary, to disregard all legislative acts prohibited by the constitution, is fully discussed and recognized by that great statesman, Mr. Madison, who was one of the framers of the federal constitution. I also refer to a letter of the late col. George Nicholas, of this state, to his friend in Virginia, justifying the conduct of the citizens of Kentucky as to some of the measures of congress. He was personally known to some of the members of the honorable body over which you preside, and his great worth and constitutional learning known and duly appreciated by all. The 34th page contains the following remarks.

"The complete independence of the courts of justice, is peculiarly essential in a limited constitution. By a limited constitution, I understand, one which contains certain specified exceptions to legislative authority; such, for instance, as that it shall pass no bill of attainder, no *ex post facto* laws, and the like. Limitations of this kind can be preserved in practice, no other way than through the medium of the courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the constitution, void. Without this, all the reservations of particular rights or principles would amount to nothing.

"Some perplexity respecting the right of courts to pronounce legislative acts void, because contrary to the constitution, has arisen, from an imagination that the doctrine would imply a superiority of the judiciary to the legislative power. It is urged, that the authority which can declare the acts of another void, must necessarily be superior to the one whose acts may be declared void. As this doctrine is of great importance to all the American constitutions, a brief discussion of the grounds on which it rests cannot be unacceptable.

"There is no position which depends on clearer

principles, than that every act of delegated authority, contrary to the tenor of the commission under which it is exercised, is void; no legislative act therefore, contrary to the constitution, can be valid. To deny this, would be to affirm that the deputy is greater than his principal, the servant is above his master; that the representatives of the people are superior to the people themselves; that men acting by virtue of powers, may do not only what their powers do not authorize, but what they forbid.

"If it be said the legislative body themselves are the constitutional judges of their own powers, and that the constructions they put upon them are conclusive upon the other departments, it may be answered, that this cannot be the natural presumption, when it is not to be collected from any particular provision in the constitution. It is not otherwise to be supposed that the constitution could intend to enable the representatives of the people to substitute their will to that of their constituents. It is far more rational to suppose that the courts were designed to be an intermediate body, between the people and the legislature, in order, among other things, to keep the latter within the limits assigned to their authority. The interpretation of the laws is the proper and peculiar province of the courts. A constitution is, in fact, and must be regarded by the judges as a fundamental law. It therefore belongs to them to ascertain its meaning as well as the meaning of any particular act, proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity, ought, of course, to be preferred; or, in other words, the constitution ought to be preferred to the statute—the intention of the people, to the intention of the agents."

In the case of Vanhorn's lessee against Durrand, (2 Dallas), judge Patterson, in delivering the opinion of the court, says, a "constitution is the form of government, delineated by the mighty hand of the people, in which certain first principles of the fundamental laws are established.—The constitution is certain and fixed; it contains the permanent will of the people, and is the supreme law of the land; it is paramount to the power of the legislature, and can be revoked or altered only by the authority that made it. The life giving principle and the death doing stroke must proceed from the same hand. What are legislatures?—Creatures of the constitution; they owe their existence to the constitution; they derive their power from the constitution; it is their commission, and therefore all their acts must be conformable to it, or else they will be void. The constitution is the work or will of the people themselves in their original, sovereign and unlimited capacity. Law is the work or will of the legislature, in their derivative or subordinate capacity. The one is the work of the creator, the other of the creature.—The constitution fixes limits to the exercise of legislative authority, and prescribes the orbit in which it must move. In short, gentlemen, the constitution is the sun of the political system, around which all legislative, executive and judicial bodies must revolve. Whatever may be the case in other countries, yet, in this, there can be no doubt, that every act of the legislature repugnant to the constitution, is absolutely void." See also, upon the same principle, the cases of Marbury vs. Madison, 1 Cranch 137; and Fletcher vs. Peck, *ib.* 87; state of New Jersey vs. Wilson, 7 Cranch 164; Sturges vs. Crowninshield, 4 Wheaton 122; Dartmouth college vs. Woodward, *ibid* 518.

The reports of decisions of our own court of appeals furnish many decisions in which that court has disregarded acts of the legislature, because they were, in the judgment of that court, in violation of the constitution.

It was not until the year 1801, that the decisions of our court of appeals, except in land cases, were published. In that year, and in the 64th page of the printed decisions, in the case of Stiger vs. Rogers for the commonwealth, that court decided a law, giving a summary remedy and damages against a man for detaining public property, unconstitutional, and refused to act under it. And in the next case in the same book, Enderman vs. Asby, a law, giving a summary trial and damages against a person who dealt with a slave without the consent of the owner, was held void, as it deprived the accused of trial by jury. In 1802, and page 150 of the same book, in the case of Caldwell vs. the commonwealth, so much of a law as gave damages against Caldwell, for detaining money which he had received as clerk to a board of commissioners for granting head right claims to land, was, in like manner, held to be unconstitutional and void.

Shortly after the passage of the law which authorized the issuing executions against securities in injunction bonds, appeal bonds, &c. in case of a decision against the principal without any suit against the security, the constitutionality of that law was questioned, and the court of appeals held, that it was a violation of the rights secured to the citizens by that instrument; and those provisions have remained dead letters on our statute book ever since.

In the case of Morgan against the register of the land office, (Hardin 609), decided in the year 1808, when that court was composed of judges Edwards, Trimble, Wallace and Bibb, on a question whether the court would award a *mandamus* to the register, the following opinions are expressed:

"Ours is a government organized by assigning to the different departments their respective limits. That each department shall be confined within those limits, is essential to the nature and existence of the government. That the constitution is supreme and controls and binds down every department, is one of those plain propositions, no longer contested among those who regard the principles upon which written constitutions are constructed.

"By the same rule, therefore, by which the legislature would be restrained from giving to this court a jurisdiction not warranted by the constitution, this court must feel restricted in the exercise of such jurisdiction.

"If the issuing the *mandamus* is an original, and not an appellate jurisdiction, this court has not the right to issue it, and the legislature cannot give it, they being equally bound by the constitution, as the fundamental and paramount law, controlling every legislative act which is repugnant to it."

In the year 1815, in the case of White, &c. vs. M'Bride, the sheriff of Mercer county, (4 Bibb, 61), the opinion of that court, delivered by judge Owsley, held the law which authorized the imposing fines by a court martial on the Shakers, for not attending ordinary musters, unconstitutional and void, as the religious tenets of that society forbid them bearing arms; and the property seized by the sheriff for such fines was restored.

In the year 1818, the same court, in the case of Carson vs. the commonwealth, (1 Marsh, 250), held that so much of the law which authorized the county court, without the intervention of a jury, to hear and decide the charges against those who

failed to give in a list of their taxable property, was unconstitutional, and the cause was remanded for trial by jury.

In the year 1819, the case of *Banks vs. Oden*, (1 Marsh. 551), in an opinion delivered by Judge Rowan, the right and duty of the judiciary to disregard an act of the legislature, within the prohibition of the constitution, is expressly asserted by that court. The same doctrine is maintained and discussed more at large, by the same judge, in an opinion delivered by him in the case of the commonwealth vs. Morrison and others, (2 Marsh. 99.)

A still latter decision, in the case of *Ely vs. Thompson, &c.* declares unconstitutional the law which authorized a summary trial and punishment, by a justice of the peace, of a free person of color, for an assault committed on a white person; and the justice and constable, who acted under the law, were held liable to an action of trespass.

These form a portion of the causes which have come before the court of appeals, involving the constitutionality of laws passed by the legislature; from which it is clear, that, notwithstanding the changes that time has made in the members of the court, it has always been held the bounden duty of the judges to decide whether a law was or was not constitutional, whenever the rights of the litigants presented the question; and that it has always been held, that the constitution was supreme, and the judges bound by their oaths to enforce it, and to protect the rights of the citizen against laws passed in contravention of its provisions. Lamentable indeed would have been the situation of the citizen, in many of these cases, if the judges had felt themselves bound to enforce the laws, until the legislature should have thought proper to repeal them.

If further illustrations of the general and received opinions of our public men, upon this question, were wanting, I might refer to many decisions of inferior tribunals, in accordance with the view I have taken; I might, in particular, mention the decisions of many justices of the peace, and of our circuit courts, that the first law increasing the jurisdiction of justices of the peace from five pounds to fifty dollars, was unconstitutional, because it deprived the party of trial by jury; and, in consequence of these decisions, the law was amended so as to provide for a jury trial before a justice of the peace.

I might also refer to the proceedings of the general assembly, at their last session, against Judge Mills. One of the charges against him was, in substance, that he had refused to permit the counsel for the person tried for wearing concealed arms, to argue before the jury, that the law prohibiting the wearing concealed arms was unconstitutional, and therefore void, although the judge had been, in the progress of the trial, called upon for his opinion, and had determined that the law was consistent with the constitution. But least I weary your patience, let these references suffice.

After this train of decisions, and many others which might be referred to, I was not prepared to expect, that I should be arraigned before the representatives of my country, on a charge of having travelled beyond my official duty, when I was expressing the solemn and conscientious convictions of my best judgment, on a matter of private right, depending before me in a regular judicial proceeding; one in relation to which I had taken time to deliberate, from the preceding term, and one in which I was pressed for a decision.

It is true I was informed, that the same question was depending in the court of appeals, and that a decision was expected; but it is well known, that when new questions are argued in that court, the causes go off on other points, and the questions are left open for further investigation. To have held up an opinion, deliberately formed in a cause depending before me, and to have left for another tribunal the responsibility of meeting the question, would have been not only a dereliction of official duty, but, in this particular case, a delay, if not a denial of justice; and I have now reason to believe that I was mis-informed as to the probability of a decision of that question by the court of appeals; for I have not been able to learn, since I came to this place, of any case in that court, which presents the same questions decided by me, which have given rise to this proceeding.

Let it be recollected, that I am the judge of a subordinate court only; that my decision is subject to revision by the appellate court, and that an appeal has been entered, and the cause now in progress for the decision of that court. Can it be proper, does it comport with the constitution of our state, that the general assembly should take up a question depending before the appellate court between two citizens, in a matter of private right, and by a prosecution against the judge who rendered the decision, because that decision was in favor of one of the parties, throw the whole weight of their influence and power in the scale of the other? It cannot be disguised, that a direct resolution, instructing the court of appeals to reverse the decision, would not be better understood.

I may here ask why it is, if, since the organization of our government, few years have elapsed without some of the laws passed by the legislature being declared unconstitutional, no instance is to be found in which the general assembly have been asked by any member to exercise this power of removing a judge from office, for their judicial encroachment, as it is now termed? Have our statesmen, heretofore, been less vigilant, less wise, and less devoted to the interests of our country, than those of the present day? Shall those men who assisted in forming our constitutions, those whom we have heretofore boasted of as the pride of our state, and patterns for emulation, be cast in the shade by the doctrines advanced on this occasion?

If I am told that I have touched on a favorite branch of the law, with the general assembly, and that they should be careful of its preservation, and make an example of the first judge who dared to differ from them in opinion, I reply, that other judges have had parts of this system of laws before them, before they came before me, and have held them unconstitutional. At the March term of the Hardin circuit court, in the year 1821, Judge Booker decided the laws which authorized the sale of property on a credit unconstitutional and void, in two cases, in one of which James Hodgins was plaintiff, and Small and alias defendants; in the other, Reid and Miller are plaintiffs and Schlater and Gilman are defendants. Judge Oldham gave a similar opinion, in the Jefferson circuit court, at the April term, 1821, in which Barbour was plaintiff and Hansford and Barret were defendants. And in the same year, Judge Broadnax gave a similar decision, in the Union circuit court, in a case in which Casey and others were plaintiffs and Moore was defendant.

Those decisions have not only been given on a branch of the same system of laws, but upon a different section of the same law brought before me in the case which I decided. These decisions were

publicly given, have been generally known, and the records containing them, seen by many. I cannot, therefore, persuade myself that I am to be made the first victim, for pursuing doctrines so long in use, so matured by experience, and so entirely incorporated in our constitutions and in the political and judicial histories of our country.

I will not detain you by descending upon the happy results of the doctrines contended for, as evinced in many cases which have arisen under our government in the progress of time, nor on the consequences that are to be apprehended from enfeebling the judicial department of the government. If for a difference of opinion between the general assembly and the judges, where their motives cannot be impeached, they are to be removed from office, is it not to be apprehended that they will, in future times, become the subservient creatures of the predominant party in the general assembly, and their decisions upon constitutional law become as fluctuating and changeable as the varying temper of the times?

Conscious that, in the decision I have rendered, I have done nothing but my duty, whether the conclusion I have come to be right or wrong; and resting on the integrity of my motives, which have not been impeached by my accusers, I commit my case to the intelligence and integrity of the representatives of my country, without troubling them further on the subject.

I request that this may be considered my response to the report and resolution of the committee, and shall trouble them with no further defence.

JAMES CLARK.

Frankfort, May 27th, 1822.

=====
Court of King's Bench, Westminster, April 27.

FREEMAN vs. THE EAST INDIA COMPANY.

The solicitor general moved for a rule to show cause why the verdict in this case should not be set aside and a new trial granted. He stated that it was an action of trover tried before the lord chief justice, at Guildhall, to recover the value of a quantity of indigo, now lying in the warehouses of the East India Company. The indigo in question was part of the cargo of the ship *Cerberus*, bound from Calcutta to England, which was wrecked off the Cape of Good Hope—but from which the indigo, with other goods, was saved by the exertions of the master and mariners. The captain, acting *bona fide* for the benefit of the owners, caused all the property saved to be surveyed and put up to public auction, where the indigo was purchased at the market price of the commodity in London. It appeared that the wrappers were wet, but none of them were taken off to ascertain whether the indigo had received injury. Before the arrival of the goods in England, the price had risen, as fairly speculated on by purchasers; and in consequence of this rise the owners of the vessel sought, in this action to maintain that the captain had no authority to sell, and that therefore the purchasers had no right to retain. The lord chief justice was strongly of this opinion, and the jury confirmed it by their verdict.

The solicitor general now contended that the captain had a right to sell, and that the sale was therefore, valid. In general, indeed, a captain was, a mere carrier, but under some circumstances he was compelled to assume the character of supercargo and agent. It might be necessary for the interests of the owner, or, where the cargo was insured, of the underwriters, that the captain should have

this discretionary power in cases of wreck. There was no difference in principle between this case and that where goods were damaged, or where they were of a perishable nature; and it would be absurd to contend that where some small portion, as a single package, for example, was uninjured, the captain was bound to transmit it to his owners. At all events, here was a sale in market overt, which transferred the property, even if the captain had no right to sell it; for it would be most prejudicial to the interests of commerce if a purchaser, buying goods at the public custom house from one who had all the appearance of a general authority to sell, should be liable to have his bargain wrested from him, because, in offering to sale one particular lot, the captain had exceeded his powers.

The court, however, were unanimously of opinion that the direction of the lord chief justice was right. A captain might hypothecate the ship and cargo, but beyond this he could not proceed unless there was an absolute necessity for sale. In cases where the goods were perishable, or where the materials of a vessel wrecked were alone saved, or where it was a sale of part of the cargo which was necessary for the purposes of the voyage, the character of agent was forced upon him, and he might unquestionably sell. But here the voyage was ended by the wreck, the goods were not perishable, and might and ought to have been transhipped to England. A sale in market overt, would indeed change the property, but with this one important exception—that it would be of no effect if the purchaser was acquainted with the infirmity of the contract. The rule was, therefore, refused.

===== Imprisonment for debt

ABOLISHED IN KENTUCKY.

An act to abolish imprisonment for debt and subject equitable interests to execution.

[APPROVED DEC. 17, 1821.]

Sec. 1. *Be it enacted by the general assembly of the commonwealth of Kentucky*, That all laws which authorize a *capias ad satisfaciendum* to be issued against the body or bodies of any debtor or debtors, shall be, and the same are hereby repealed.

Sec. 2. Hereafter no person or persons shall be arrested upon any original or mesne process, or required to give bail, unless upon an affidavit being filed with the clerk of the court, or justice of the peace from which such process is to be issued, stating that the plaintiff or plaintiffs verily believes, that the person or persons against whom such process is about to issue, will leave this commonwealth, or move his property out of the same, before judgment, or otherwise abscond, so that the process of the court, after judgment, cannot be executed; and, upon such affidavit being filed, the clerk shall endorse that bail is required, and in what sum.

Sec. 3. From and after the passage of this act, any person or persons who may have been committed to close jail, or to the bounds, upon order requiring bail, or upon any *capias ad satisfaciendum*, may, upon giving reasonable notice of such application to the person or persons at whose suit he or they may have been committed, or to his, her, or their agent or attorney in fact or at law, if any such be in the county, if not, upon filing notice in like manner in the office of the clerk of the court whence such process issued, apply to a justice of the peace for his discharge, and upon such justice being satisfied, that the person or persons so applying

tice shall issue an order to the jailor, to discharge such person or persons from custody; and upon such person or persons being discharged under the provisions of this act, the plaintiff or plaintiffs, or person or persons beneficially interested in said demand, in the execution of which the person or persons so discharged, may have been in custody, may have a new execution against the property of such person or persons so discharged, without suing out a *scire facias* to revive his judgment.

Sec. 4. When any person or persons arrested under an order requiring bail, or a writ of *ne exeat*, shall desire to be discharged from custody, by taking the oath prescribed by the acts for the benefit of insolvent debtors, it shall be lawful for such person or persons upon giving reasonable notice to the party at whose suit he or they were arrested, his agent or attorney, if in the county, if not, upon filing such notice in the office from which was issued the process by virtue of which he or they may be in custody, of the time and place of such application, to apply to a justice of the peace for his or their discharge; and upon rendering a schedule of his or their property, and taking the oath aforesaid, the justice of the peace shall issue an order to the officer in whose custody such person or persons may be, to discharge him or them; and the property contained in such schedule, shall be vested and disposed of in the same manner, and the same proceedings shall be had thereon as are now authorized in the case of insolvent debtors.

Sec. 5. When any estate, real, personal or mixed, is held or covered by mortgage, deed of trust, or other incumbrance, all the right, title and interest which the mortgagor or grantor has in said estate, shall be subject to execution and sale, in the same manner as estate of the like kind now is, when the owner thereof has a legal title to the same; and the purchaser or purchasers shall take said estate subject to the *bona fide* lien, or claim which the mortgagee, *cestui que use*, or other claimant may have upon said estate; and the sheriff or other officer making sale thereof, shall convey to the purchaser or purchasers thereof, all the right, title and interest which the defendant or defendants in the execution may have to the same: *Provided, however,* that when any mortgaged or trust estate as aforesaid, in lands or tenements, shall be sold under execution, the mortgagor, grantor of the trust, or trustee, *cestui que trust*, or other person to whom a beneficial interest may have been reserved out of such estate, may redeem the whole or any part of the same at any time within two years from and after such sale, by paying to the purchaser or purchasers of such estate or any part thereof, his, her or their purchase money and interest, in money equivalent in value to that for which the property sold for at the day of sale: *And provided,* that when the estate sold as aforesaid is personal and movable, the purchaser or purchasers of such personal property shall give bond with good and sufficient security, to be approved of by the officer making the sale, in the full amount of the value of the property sold, conditioned not to remove said property or any part thereof out of the state, nor otherwise dispose of the same, until he, she or they shall pay off the mortgage, satisfy the trust, or discharge any other incumbrance to which said property was liable and subject at the time of the sale. Said bond shall be made payable to the commonwealth of Kentucky, and shall be returned to the office from which the execution issued by virtue of which the property was sold; and upon the condition of said bond being broken, the party

injured by such breach may sue for the same, in the like manner as suits are authorized to be maintained upon other public bonds or officers' bonds; and the said bond may be sued upon as often as the condition thereof shall be broken.

Sec. 6. Whenever an execution of *feri facias*, founded upon any judgment or decree, or upon any bond having the force of a judgment, shall issue to the proper officer, and be returned as to the whole or any part thereof, in substance, that the defendant hath no effects in his bailiwick to satisfy the same, the proper court or courts of chancery shall have jurisdiction on bill filed to subject to the satisfaction of such judgment, decree or bond, any choses in action belonging to the debtor, and also any equitable or legal interest in any estate, real, personal or mixed, which the debtor may be entitled to, and to that end may bring other parties before the court, and make such decree as may be equitable, under the jurisdiction hereby conferred: *Provided,* that nothing in this act contained shall be construed to extend to those articles in possession of a defendant which are exempted by law from execution.

Sec. 7. If the defendant or defendants, mortgagee, trustee, *cestui que trust*, or other person to whom a beneficial interest may have been reserved out of said estate, should not redeem the said estate so sold, within two years, according to the provisions of the fifth section of this act, that it shall be the duty of the court from which the execution, decree or order of sale issued, under which the sale was made, upon motion, of which ten days' notice in writing shall be given to the original debtor and the person who may be in possession of said estate, to award a writ of *habere facias*, if the court shall be satisfied that the estate has not been redeemed, and that the estate is not possessed by any person having a right in law and equity to the same.

Sec. 8. If the person or persons authorized by the fifth section of this act shall not within two years redeem said estate, so sold, according to the provisions of said fifth section of this act, that then and in that case, he, she or they, shall be liable to the purchaser for all damages he, she or they may have committed, after said sale, on the premises.

Debate on Manufactures.

IN THE HOUSE OF REPRESENTATIVES—JAN. 29, 1823.

The bill "for the more effectual protection of manufactures" being under consideration in committee of the whole; and *Mr. Cambreleng* having, as heretofore noticed, questioned the accuracy of the comparative statement of the present and proposed duties, submitted by *Mr. Ton*—

Mr. Ton, of Pennsylvania, observed, that he was not disposed to take the advice of the gentleman from New York, (*Mr. Cambreleng*), and withdraw the bill for the reasons given: that the proceeding was a novel one, and this call for information by the gentleman, not because he wanted it himself,—but, because he thought he could give it to others,—that there could be no getting on with business, if such reason was sufficient to stop its progress. It may every day happen, that a gentleman, not a member of a committee, introducing a bill, may know more of a subject than the committee themselves; and as possible it may be for a gentleman to suppose himself capable of setting right the ignorance of others, in a matter known as well to them as to himself. *Mr. T.* said, that the duties proposed on the coarse goods pointed

out by the gentleman from New York, (Mr. Cambreleng,) were supposed by the committee to amount to a prohibition, and so intended. Mr. T. said, that on the part of the committee of manufactures, he would attempt a brief exposition of the reasons which weighed with them in proposing an increase of duties on some foreign articles.—It was not solely nor chiefly for the benefit of the manufacturer, that they wished to give an efficient preference to domestic industry, at least as far as respects articles of common indispensable use, the materials of which are the product of our own soil. He would not say that all parts of the country were equally interested, but he believed that while the provisions of the bill were of vital importance to some great sections of the country, they could never be injurious to the interest of any part.

We possess, said Mr. T. the materials inexhaustible, of iron, lead, glass, and the almost unlimited means of producing wool, hemp, flax and cotton, and surplus provisions to feed workmen enough to supply manufactures for a whole continent. Yet, disregarding all these advantages, we have paid, or must pay, to foreign nations, for the last two years, taking both together, one probably being a year of importation about as far above, as the other has been below, the common average—

For woollen manufactures	\$19,044,014
Cotton do.	14,716,615
Linen do.	6,084,954
Hemp, and manufactures of it	3,892,262
Iron, and manufactures of iron	8,259,698
Lead, and manufactures of lead	1,102,341
Glass and earthenware	2,354,069
	<hr/>
	\$55,453,951
Average for one year	\$27,726,975

Exceeding, by above eight millions of dollars, the yearly expenses of government and the interest of the national debt—and which sum is exclusive of all re-exportations. This enormous tribute, said Mr. T. we pay for articles that we might have at home without any cost to the nation—articles, to the composition of which, a portion of the cottons excepted, not one shred nor particle goes from our country, fabricated by workmen who are not permitted to eat, drink or wear, any produce of our soil. And we, robbed of our money by foreign industry, contending with all the mischiefs of a diminishing and beggarly supply of the circulating medium of commerce, some of our people even petitioning against the grievance of paying postage on letters, and struggling with all the evils of debt and dependence, in order to give wealth and power to foreign governments, profit a d employment to foreign manufacturers, and to supply a market to foreign farmers for their provisions, while one half of our own are absolutely worthless, and perishing on our hands for want of consumers. The immensity of amount of the necessaries of life requisite to sustain the workmen, with their families, employed to fabricate the foreign goods which we consume, it would be superfluous to attempt to calculate. But the inevitable distress and ruin consequent upon a system like ours, and falling upon those sections of the country, whose only surplus production worth mentioning, is grain, and whose only means of paying for foreign manufactures is with grain and its immediate products, may be made evident; as may, also, the necessity of applying some considerable part of the surplus productions of our soil to the only profitable use they can be applied to; that is, the support of the home

manufacturer. It may be assumed that the case mentioned is the case of one half of the Union, whose only surplus production of the soil, worth naming, is grain. Whether this estimate of one half, exceeds or falls short of the fact, cannot be material to the validity of the inference. Then, from the great extent and fertility of lands brought under cultivation since the year 1790, taking into view the great improvement in mills, roads, canals, and in the science and practice of agriculture; taking also into view the acquisition since, of the extensive and fertile territory west of the Mississippi, we may safely calculate that the capacity of our country for producing grain, if not the actual produce itself, is more than quadrupled during the last 32 years. Probably, to state the increase at six-fold, would be nearer the fact. Yet, in the year 1790, before the general war in Europe, we exported, in wheat, rye, and corn, and flour, and corn meal, reducing what went in bushels to barrels, at the usual rate of five to one, 1,280,325 barrels. This account, as to part of the items, includes, to be sure, the exports for about a month beyond the year; but that is unessential; the exportations of 1790 were not beyond the common average of the times, nor nearly equal. Taking the average of five years, from 1790 to 1794, both inclusive, we exported the yearly quantity of 1,421,325 barrels. Yet, in the present time, with all our immense increase of means and extension of territory, we have exported, in grain and flour, in the year 1822, 1,098,768 barrels only; and, in the year 1821, 1,360,453 barrels of beef and pork; the exports for 1790, were 89,066 barrels, and the average for five years from 1790 to 1794, was 132,894 barrels a year. The same articles, in 1822, 166,962 barrels; and, in 1821, 133,534 barrels. If, said Mr. T. foreign nations would consent to take our flour and provisions in pay, or part pay, for their wares, the consequences of our present system might not be so intolerable; yet, when they persist in rejecting every thing of the kind from us, that equal protection which is due from the government to every class of citizens, prescribes the necessity of providing them with the means of procuring the manufactured necessaries of life in exchange for the only articles they have to sell.

As to the particular duties, he said, imposed on foreign manufactures by this bill, the first paragraph adds five per cent to the existing duties on woollen goods, with a *minimum* price of eighty cents per square yard; yet excepting from the operation of the minimum, those most common necessary articles of blankets, flannels, worsted and stuff goods. Whatever other objection may be made to this item, there will probably be none on the score of inequality; for wool is, or may easily be the production of every part of the country.—The manufactures of it are used in every part.—No one will say, that our country is incompetent to supply itself with every description of this necessary article, even if the duty were prohibitory, instead of a trifling addition.

The duties on cottons are left by the bill as they stand by the existing laws, except a *minimum* price of 35 cents per square yard on checked and striped cloths. The chief motive for this, is to stop a pernicious fraud now perpetrated upon us by foreign manufacturers, counterfeiting our cottons, and palming upon us, under the guise of American, a most vile fabric, thereby discrediting our factories and cheating our people. The duty of twenty-five per cent, imposed by the bill on manufactures of silk, flax and hemp, is the very same that is

recommended by the secretary of the treasury, for the purpose of revenue; with the addition, as to hempen and linen cloths, of 25 cents per square yard, similar to that on cottons. Leghorn and silk hats are placed at forty per centum, being an addition of one third to the present rate of duty, with a *minimum* price of one dollar each, for obvious reasons. They are chiefly articles of mere fashion.—We imported during the last year, hats, caps and bonnets, to the amount of more than seven hundred thousand dollars. Above six hundred thousand dollars worth of these commodities came from Leghorn and Malta. All the wheat which they will ever receive from us in ten years, cannot pay for one year's supply of the straw we get from them. On lead, and the manufactures of lead, an addition is proposed of one cent per pound to the present duty, because we have it in our country in the greatest profusion. In the vicinity of the Mississippi and Missouri rivers, particularly the former, there are miles in extent, where, take up the earth without selection, 100 pounds of it will produce more than eighty pounds of the metal, with fuel at hand in abundance. Besides, the people of that part of the country are indebted to the government for lands, or desirous of purchasing, and have no other means of payment; so that the immediate profits of giving efficient protection to this manufacture, will centre in the public treasury. On hemp the bill raises the duty from thirty dollars to forty-five dollars per ton. It is an article which, the committee believe, must be protected, and the cultivation of it encouraged at any expense, for the sake of the public. It is an article, the skilful culture of which requires practice. Materially to increase even the quantity raised at home, cannot be the work of one nor two years. We have already built, or are building, twenty-four large ships of war. Our whole domestic supply of hemp is not sufficient to equip one of these ships, and never can be under the present system of importation. What, Mr. T. asked, would be the consequences, and what disgrace to our legislation, in case of a war with a nation that furnishes this necessary article, or with any other nation which might have influence enough to stop this importation? We might, when war comes, as prudently rely altogether upon our enemies for a supply of cannon for our navy. On bar iron, the addition proposed is only five dollars per ton, and that only on hammered iron, without touching the rolled. It would, Mr. T. thought, be hard to give a satisfactory reason why so low a duty was inserted, when it is notorious that the country is more than able to supply all that is wanted, of as good quality, and generally better than the imported.

It has been objected already, and will no doubt be repeated, that, by adding to the duties on foreign articles, we but add so much to the price to the consumer, enabling the home manufacturer to pocket the difference. As to all manufactures, said Mr. T. of which we possess the raw material in abundance, the rise in price, which, he admitted, may happen at first on some things, will be certainly followed by a permanent reduction; if we may be permitted to judge from the experience of foreign countries, or from what little experience our laws have hitherto permitted us to acquire in our own country on the subject. Many articles, even now, it is believed, are furnished by our own workmen better, to a degree beyond the extent of the duty, and cheaper than imported rival goods. On this head, one article, that of coarse cottons, has been often mentioned, and cannot be too often

mentioned, because it is the only manufacture which has ever received from our laws the same protection which other nations give to their domestic industry—a prohibitory duty. Besides, it is the very article and the very duty selected by the enemies of protection to manufactures from all quarters, as a specimen of pernicious legislation, as oppressing the poor and plundering the farmer, for the purpose of giving to the manufacturer a premium for laziness, or a privilege of extortion. There can be no mistake in this matter. I will, said Mr. T. read the very words of the Salem protest, made to our predecessors on the subject: “The duty upon East India cotton is indeed enormous, and practically amounts to a *total prohibition*. The coarser fabrics of cotton in the British East Indies cost about six cents a square yard, and were formerly imported in large quantities into the United States, and supplied the poorer classes of citizens with necessary, though humble clothing. The tariff directs all such cottons to be estimated at the cost of twenty-five cents per square yard, and levies upon them, therefore, a duty of one hundred per cent, or a sum equal to their original cost.—During the years 1802, '3 and '4, the average imports from the British East Indies was about three millions and a half of dollars, of which, a little short of three millions were goods paying an *ad valorem* duty, being principally white cotton goods. In 1807, the goods paying *ad valorem* duties from the same place, had increased to upwards of four millions. In the same year, fifteen ships were employed in the trade, from the town of Salem alone. In the past year, two only have been so employed; and, for the four last years past, no cotton piece goods have been imported into this town for home consumption, the duty alone amounting to a *prohibition*. The sacrifice of this branch of the trade alone, has very seriously affected the whole mercantile community engaged in East India commerce—and has been no where more sensibly and injuriously felt than in Salem. It has operated, too, as an excessive tax upon the poorer classes of the community, who have been compelled to buy domestic fabrics to supply their wants, at higher prices, which their narrow means could ill afford. It has, also, annually, struck off from the revenue of the government the whole duty upon seven-eighths of the importations of East India cotton, that proportion having been absorbed by the domestic consumption.” Thus far the Salem memorial. The memorial from the United Agricultural Societies of Virginia, presented about the same time, on the same subject, contains the same protest in still stronger terms, against this doubling of the price of coarse cottons, for a bounty to the manufacturer, to the injury of the poorer class of the community, by whom goods of this quality are exclusively required.

Now, said Mr. T. if the consequences thus threatened have actually followed; if the poor have been plundered, and the farmer laid under tribute to the manufacturer by this prohibitory duty on imported coarse cottons, then we may believe, with the gentleman from N. York, (Mr. Cambreleng,) that the protection of our coarse woollens, by duties upon the imported, will only augment the price to the poor consumer. But if the very reverse has been the effect of giving to our own manufacturers a monopoly of the article, and the price has been diminished even in a greater degree than the duty has been raised; let us expect the same, or nearly the same good effect from similar duties on other imported wares, which we can make as good, or better at

home. What then is the price of coarse cottons, since the monopoly given to our factories by the prohibitory duty of 1816? We have the proof on our own files, and the fact is notorious to the whole country, that we now have, and have had constantly, since the exclusion of foreigners from our market, that necessary article, at a price which, taking into view its superiority in quality, is now reduced to one half, Mr. T. would say to less than one third of what we formerly paid for the same goods, when they were imported from foreign nations; and this Mr. T. believed would turn out to be the fact, even after making every allowance for the reduction in price of the raw material. Then, said Mr. T. it appears, that the oppression upon the poor man, by excluding foreign low priced cottons, has come in substance to this, that he can now purchase for five dollars, clothing, which before cost him ten; and, if he lives near a factory, may have constant employment and wages for himself and family. And the farmer, who was to be plundered by the manufacturer, has not only the same advantage of purchasing cheaply, but the still greater advantage, if he lives near enough, of a constant market for the surplus products of his farm.

MR. HOLCOMBE'S SPEECH.

SECOND DAY.

Mr. HOLCOMBE, of New Jersey, rose and addressed the house as follows:

I rise, Mr. Chairman, with peculiar embarrassment, to offer myself, for the first time, to the house on a subject which has been so often discussed, not only upon this floor, but in every town, and village, and city in the Union, that the very name of tariff has become odious to many ears—a term of reproach, and almost a by-word. But, notwithstanding these facts, it is a subject of the deepest interest, and is yet popular with a great majority of the American people. It is my intention to advocate the bill. And let it not be insinuated of me, as it heretofore has been of others, that interest stimulates the discussion. The feeble connexion which I may once have had with manufacturing establishments is forever dissolved, and I now stand in my place as a common representative of the citizens of the United States, to defend one of the most interesting questions of national policy, as I conscientiously believe it to be, that can possibly be agitated at this time, upon this floor.

The true manufacturing question, or the policy of founding the commercial interests and permanent revenue of this country upon its manufacturing industry, is not novel. It is, indeed, coeval with the government. Allow me, Mr. Chairman, to call your attention for a moment to the early history of the tariff. Soon after the peace of '83 had recognized our right and rank as an independent nation, the creation of a revenue, adequate to the necessary expenditures of the government, became a subject of interesting inquiry to the politicians of that period. A resort to direct and indirect taxation was inadmissible, and, indeed, impossible. The precious metals had deserted the country—a circulating medium was wanting. From customs alone, it was evident, the country was to derive its revenues. And the insufficiency of customs, accruing from a commerce supported wholly by agriculture, was certain and palpable. The wretched and ruinous state of our colonial commerce was yet vividly recollected; and the inferences from it were irresistible; and hence, in the numerous systems of revenue and tariff, which

were projected at that period, the protection of manufacturing industry formed an essential—nay, an indispensable provision. The report of the secretary of the treasury, Mr. Hamilton, is still familiar to the public. And it cannot be questioned, had the principles of this celebrated paper (for its details were remarkably defective) been adopted into a system of permanent policy, we should have forever avoided the necessity of publishing to the world the degrading and extraordinary fact, that, after a course of unexampled, and almost uninterrupted prosperity, for thirty years, the commercial revenues of the most enterprising people in the world, were insufficient to meet, in the time of profound peace, the necessary expenditures of the cheapest government upon earth. But the fact is notorious—it has become history.

It was my intention here, Mr. Chairman, to have rapidly reviewed the history of the tariff from the commencement of the wars which grew out of the French revolution to the present period; and to have accounted for the bitterness and hostility which distinguish, otherwise, the most liberal and enlightened of the statesmen of our country on the subject of the tariff. But presuming that the committee is entirely familiar with the subject, and fearful of trespassing upon your patience, I shall call your attention immediately to the following propositions, which I mean to defend:

1st. The protection of manufacturing industry, by means of commercial restrictions, is indispensably necessary to develop and sustain the wealth and power of nations.

2d. A further and liberal extension of the tariff (perhaps such as is contemplated by this bill) will increase the American manufacturer to supply, hereafter, not only domestic consumption, but to compete profitably with other nations in foreign markets.

Upon these general principles I shall defend the bill. I do not profess to be familiar with its details. Nor is it particularly necessary, after the able and luminous exposition which they have received from the honorable gentleman who reported the bill.—I wish, however, my opinions to be distinctly stated, and fully understood. The manufacturing interest of this country is no longer a subject of partial legislation and contingent protection; but constitutes, at this moment, one of its great interests, and is equally entitled, with commerce and agriculture, to the most effectual and permanent protection. And it further appears to me to be the obvious policy, as well as the imperative duty of the government, (in order to protect this great interest,) to commence, immediately, a system of prospective, but ultimately of entire exclusion from our shores, of every article of foreign fabric, the material of which we either possess, or can abundantly create. My object is to award to our manufacturing interest the same certain and exclusive protection which we have long since awarded to our commerce and agriculture.

I will proceed to the consideration of the first proposition. That the protection of manufacturing industry, by means of commercial restrictions, is indispensably necessary to develop the resources and wealth of nations. The testimony of history, in sustaining this proposition, is ample, uniform, and conclusive. I now appeal to its strongest facts.

At an early period of modern Europe, several nations became wealthy and powerful, by introducing and protecting, within their respective territories, manufacturing establishments, as the basis and sources of an extensive and enterprising com-

merce. Of these, the most distinguished were Genoa and Florence, Venice and Holland. Venice, won from the waters of the Adriatic sea, became the mistress of the south of Europe. And Holland, reclaimed from the marshes of the German ocean, continued for centuries the pride and wonder of the north. Time and revolution it is true, have swept away their former institutions, and merged, in many instances, their very existence in the nations around them. But their examples will forever remain in history, as brilliant memorials of what the genius, industry, and enterprize of free communities can effect, when aided and protected by enlightened legislation.

But the most extraordinary example which the world presents, of the policy and results of protecting manufacturing industry, is unquestionably that of England. I am fully aware, Mr. Chairman, that the example of England is trite on this subject, and revolting upon this floor. But I will detain you but a moment. And, in hurrying you to the point which I have in contemplation, if I cannot carry you over this barren subject by new paths, I will at least remove from those already beaten, as far as I am able, every thing offensive and annoying. But of England—never before existed a nation so wealthy and powerful,—a comparatively barren island in the northern ocean, has become the garden of the world. A nation, destitute of mines, by her admirable policy, has diverted to her shores the gold and silver, the wealth and tribute of every climate and region under heaven. There is no sea but what is visited by her marine. And the standard of her sovereignty waves in every quarter of the globe. Never before on earth was swayed a sceptre like hers, so mighty and efficient, so fearful and tremendous. The genius of the great Napoleon, with Europe at his feet, sunk beneath its influences. And the power of the Roman empire, in its proudest days, was feeble in comparison with it. And whence, Mr. Chairman, has this great supremacy among nations been derived? By what means or magic has it been achieved? Simply from the policy of protecting—of effectually protecting, the industry of her citizens from all foreign competition; of adopting since the days of her revolution the principles of the bill which I have now the honor to advocate. Let me not be told of the vice and misery of her manufacturing districts; of her taxes, her poor houses and paupers. These are all acknowledged. But they are the necessary, the unavoidable consequences of her ambitious and interminable wars—the immediate results of the operation of her national debt. Extinguish this, and you collect at this moment around the laboring population of England more of the comforts and necessities of life than have ever yet fallen to the lot of any other people, with the exception of our own citizens, in the world.

The policy of Spain is the reverse of that of England. Here the doctrines of the author of the *Wealth of Nations*, the unrestrictive system, has been, for ages past, in full and free operation. And what has been the result? The finest country in Europe, into which the gold and silver of Mexico and Peru, and the wealth of both the Indies, have flowed in a full and uninterrupted stream for three centuries, has gradually sunk from the elevation of her imperial grandeur, below the level of the secondary powers of Europe, and at length into utter bankruptcy. Recollect, Mr. Chairman, that I speak with reproach only of her commercial system—of her wretched tariff. And I avail myself, with the highest satisfaction, of this opportunity of expressing,

in the presence of the representatives of the American people, my admiration of the sublime and interesting spectacle which the Spanish nation at this moment presents, and has been, for years, exhibiting to the world. At a period the most unexpected and unhopéd for, the entire population of this extensive and beautiful region, arose, at once, into new life; and, bursting asunder the chains which the superstition and tyranny of ages had riveted around them, erected, on the ruins of the sternest and gloomiest despotism upon earth, a government of virtual representation and constitutional liberty. Imperishable be her institutions! and may the spirit of revolution, which was first enkindled upon our altars, and which has gone forth from her borders, be unextinguished, until every despotism in Europe be overturned; and the rights, and independence, and happiness of every nation and people, and kingdom under heaven, be established upon the only basis which the progress of enlightened opinion shall consent to regard as legitimate,—the basis of liberty and equality!

But to return to the subject. Look for a moment beyond the Pyrenees. At the convention of Paris, France was exhibited to the world fallen, degraded and in chains, at the feet of the sovereigns of Europe. Her great chieftain in captivity; her armies beaten and dispersed; her pride and military spirit humbled in the dust. She seemed forever struck from her commanding attitude in Europe, and to have retrograded at least half a century in the politics of Europe. And such indeed were the confident predictions of statesmen and essayists, particularly of the politicians of this country and Great Britain.

Now mark the result! Before these very predictions had reached the extremities of the world—before the armies of their deliverers had ceased to outrage the presence of the French people, a system was already in operation, which instantaneously insured the regeneration of France. Embarrassment disappeared from every department of the state. A new army was organized; a formidable navy created; a splendid and expensive government and court established and supported; and the immense tribute of foreign indemnification extinguished with a celerity that appeared like the operation of magic. And in less than six years from the period of her signal overthrow, France arose again to her former elevated standing, the same great, efficient and distinguished nation as before. And to what causes, Mr. Chairman, are we to attribute this sudden, this extraordinary regeneration? Was it because the vine covers her hills, or the olive her vallies? Was it because her soil was the richest—her climate the healthiest, or her population the most ingenious in Europe? No, sir! it is her admirable commercial system, to which we are to look for the solution of the question. A system which protects the industry of France,—and secures to her own citizens the distinguished blessings which the bounty of nature hath lavished upon them. A system, sir, an approach towards which, is indicated by the bill under consideration.

An imaginary line separates the kingdom of France from the Netherlands. But if the Andes had arisen, or oceans rolled between them, their respective boundaries could not have been more distinctly, or strongly, or palpably marked! On the one side is a population, active, industrious and happy—on the other, poor, indolent and wretched. France protects the industry of her citizens—Holland has departed from the system of her forefa-

thers, and by means of her new doctrines, paralyzed the energies of the most industrious people in Europe.

It is unnecessary to pursue such facts farther.—History, both ancient and modern, without a solitary exception, attests the truth of the proposition which I have attempted to illustrate, that the protection of manufacturing industry, by means of commercial restrictions, is indispensably necessary to develop and sustain the wealth and power of nations.

Allow me now, Mr. Chairman, to call the attention of the committee, for a few moments, to the second proposition.

A further extension of the tariff (perhaps such as is contemplated by the bill upon the table,) will enable the American manufacturer to supply not only the domestic consumption, but compete profitably with other nations in foreign markets.

The manufacturing question is very different from what it was ten years ago. It then was, whether we should foster and promote our infant establishments. It now is, whether we shall sustain and extend our matured ones. It then was, whether we could manufacture any article as profitably as we could purchase it. It now is, whether we cannot, by additional protection, sell profitably abroad, as well as in the domestic market, the fabrics which we produce.

This may probably be regarded as a new, as it certainly is a very interesting view, which this national question begins, legitimately, to present.

But, are its objects, Mr. Chairman, visionary or unattainable? If the uniform testimony of every nation which has existed, be not entirely delusive, and the experience of a thousand establishments in our own country, which have struggled into existence in despite of every species of depression, be not utterly fallacious, they are already within our reach.

Packages of American goods are at this moment shipping to the South American markets. The rise, indeed, and progress of these southern republics, may be regarded as particularly auspicious to the policy I am advocating. Commercial treaties will shortly be concluded between them and us; and, from the precedence which we have taken in recognizing their independence, we shall constantly be entitled to the regard and privileges of the most highly favored nation. And, from the genius of their population, and the infinite variety of their productions, there is no question but that an extensive and profitable market may be opened to our marine, if we will permit our merchants to adventure it.

I am fully aware, Mr. Chairman, how lightly these remarks—speculations, if you please, are regarded by many to whom they are addressed.—But, I recollect, and the house well remembers, when congress was first petitioned to protect our cotton manufactures, with what keenness and derision the idea was contested, that we should ever be able, or at least for a long series of years, to manufacture such articles as profitably as we could purchase them. And yet, sir, in the shortest possible period—shorter, indeed, than the most sanguine friend of the tariff could have ventured to predict or imagine,—the muslins of India disappeared, and our fabrics, substantially better, cheaper, and equally abundant, forever superseded their use. And will not the same splendid results crown similar acts of legislation, for the protection of every article of legitimate manufacture in this country?

The progress which we have already made in manufactures, is a fact as surprising as it is congratulatory, if we regard, for a moment, the feeble protection which has been awarded them; and the difficulties which, at every step, they have had to oppose and vanquish. It is, seemingly, but yesterday—and, indeed, it is little more than thrice three years since, it was as universally believed throughout our country, that we were as incapable of competing profitably with the foreign manufacturer, as of combating successfully the “mistress of the ocean,” upon her own element. The success of Waltham, however, and unnumbered other establishments, which adorn the valleys and villages of our country, have dissipated, effectually dissipated, the one delusion; and the *gallant Hull, triumphant over all his enemies, has forever buried the other, with the wreck of the Guerrière, in the depths of the Atlantic.*

I will now, Mr. Chairman, briefly examine; or rather, I will glance over the principal objections which have been urged against the manufacturing system in this country: It has been denounced and held up to public odium, as a system calculated to benefit the few at the expense of the many. Experience, in every country heretofore, and in this country, as far as the experiment has been made, has proclaimed, in the most unequivocal manner, the inconclusiveness of the objection.

The spirit of the bill is, and its ultimate operation must be, to destroy, (by multiplying rival establishments,) not sustain monopoly; to lessen, (by promoting competition,) not increase inordinate profits; to advance the interests, not of individuals, but of the community. And that such, indeed, will be its eventual operation, may be strongly, if not conclusively inferred, from the hostility manifested towards it, by the manufacturers themselves; by the proprietors of such establishments as have been enabled, by means of large capitals, to withstand the shock of European competition, and continue to realise profitable dividends. And in fact, objections like the one under consideration, might be urged with as much force, and more propriety, against the navigation of the North, and the agriculture of the South, and every other great interest of this country, which depends upon the exclusive protection of the government. Yes, sir, in free communities, competition destroys monopoly, and profitable markets insure abundance. And, were it possible at this moment to exclude from our shores every article of foreign fabric, the material of which we possess in abundance, there is scarcely a doubt, (such is the infinite industry, skill, and enterprize of our citizens,) that, in half a dozen years—nay, possibly in a much shorter period—we should be as cheaply and as abundantly supplied as at present. But the more correct policy, unquestionably is, to obtain these ends by more progressive means.

Another objection which has been urged, with great force and plausibility, against the manufacturing system, is its supposed tendency to contract commerce, and, of course, to lessen the revenue.—And this indeed, Mr. Chairman, the impairment of the revenue, is the most formidable objection which the manufacturing system has ever had to combat on this floor, or in this country. Direct taxation, in all its forms, is so odious to the American people, that, rather than submit to its exactions, they will tolerate any system of revenue, however ultimately ruinous it may prove.

But is the objection entitled to the consideration which it has received? No, sir. It is an axiom in

political economy, utterly incontrovertible, that the interests of the revenue are advanced by whatever tends to promote domestic industry and wealth.—Such is the idea—its exact expression I have forgotten. Examples, without number, might be adduced in confirmation of this doctrine; but, fearful of trespassing upon the patience of the committee, I cannot pause to collect them, and will merely observe, in passing, that manufacturing establishments create—understand me, sir, *create*—purchasing *communities* of foreign productions, which directly advance, in proportion to their population, the interests of the treasury. The costly bonnets of Italy, and the silks of France and China, find, already, an extensive market in our manufacturing districts. And the consumption of the ordinary necessities of tea, coffee and sugar, are doubled and trebled in a community whose expenditures may be always accurately rated, by their capacity to purchase. And thus, sir, the injury which the revenue sustains, by the lessened importation of one article, (the article manufactured at home) is fully, if not more than repaired, by the increased consumption of others. And such is, and must forever continue to be, the obvious and necessary operation of every legitimate manufacturing establishment in our country.

Another objection to the manufacturing system (and this is the last one which I shall notice,) is its alleged operation upon the morals of society, in inducing vice and misery.

Whatever truth this objection may have in its application to the limited extent of European countries, and the crowded and peculiar population of their cities, it is entirely lost in its bearing upon the manufacturing establishments of this country, which are scattered over an immense territory, and whose population bear, and will forever continue to bear, small relative proportion to the rest of the community.

Manchesters and Birminghams, those theatres upon which such fearful scenes of vice and misery have been exhibited, we have no right to apprehend will ever arise amongst us. Our immeasurable territory forms our everlasting protection. Oppression may reach, but not permanently, the American laborer. He is a freeman, who possesses the right and capacity of changing his residence and employment, whenever his disposition may lead him to pursue his happiness elsewhere. For him there is a land of promise and refuge blooming in the west.

The European, on the contrary, is a slave, who is chained, by the severest fate, to a single spot, and compelled, by the sternest necessity, to pray for the wretched privilege of earning his daily and scanty subsistence. For him there is no transition, but from the workshop to the poor house—there is no refuge but the grave.

But, even in England, where this objection applies with its full force, and where man is exhibited in *masses of misery*, as the suffering population of her manufacturing districts have been aptly and strongly termed—yet even here, (unexpected as the fact may be,) we are assured by her ablest statist, that vice and pauperism characterize more certainly her agricultural than her manufacturing population. At any rate, it will not be denied, in our country, wherever such establishments have been successfully located, that instead of vice and crime, and pauperism gathering in their circles, the country has flourished around them, and the comforts and independence of the people been constantly advanced.

Why has the tide of emigration from New England ceased to flow? Is independence no longer to be won in the wilderness of the west? Or is its frontier still swept and desolated by the savage? No, sir. The motive for emigration is extinguished. New England has become, or partly become, a manufacturing district—and the poor man has again found, around the home of his fathers, *constant employment* and *liberal wages*—those certain and inexhaustible sources of the happiness of individuals, and the wealth and glory of nations,

A few moments more, Mr. Chairman, and I will cease to trespass upon the indulgence of the committee.

The situation of our country is truly felicitous. Blessings, indeed, of every kind, surround us.—Glory has crowned the past; and the future is glowing with the most brilliant destinies. Never were there institutions in politics, more admirable than our own. They embrace the wisdom of every age and the perfection of every system. And, independently of the blessings which we have created for ourselves, what has not the bounty of nature lavished upon us?

Our mighty rivers, our capacious bays, our inland seas, indicate capacities for commerce which have never been surpassed, nor equalled. Our mountains abound with coal and iron—the agents and materials of our future manufacturing superiority. And the extent and variety of our soil, productive in all the great staples of commerce, aided too by facilities for internal communication, which are as gratifying as they are unbounded, will forever distinguish our agriculture.

To promote the industry of this great nation—to develop its resources—to mature, sustain and extend its existing interests and institutions, are the objects of the present bill.

Our manufacturing industry, let me repeat again, is no longer a subject of partial protection, or contingent legislation; but constitutes one of the great interests of the country, and is fully entitled to the most efficient and permanent protection. Let the bill, therefore, Mr. Chairman, pass; pass without embarrassment or amendment. Go further; and resolve, from this moment, to exclude from your shores every species of foreign fabric which you can profitably manufacture at home. Nay, sir, go one step still further: and, as intimately and essentially connected with your manufacturing policy, establish a liberal and enlightened system of internal improvement, accommodated to your immediate wants, and commensurate with your future necessities, and which has been urged upon your consideration by the voice and will of your constituents, as fully, and unequivocally and universally expressed, as they ever have been upon any question of great national expediency. And there is no state of prospective wealth and independence which we cannot reach: There is no eminence of national power and glory unto which we will not attain.

MR. TATNALL'S SPEECH.

MR. TATNALL, of Georgia, addressed the chair—he expressed himself as fully sensible of the liberality and friendly politeness of the honorable gentleman from Massachusetts (Mr. Baylies,) in yielding the floor to him, on the present occasion. The object of that gentleman was to take up the bill in detail, for the purpose only of changing some of its features. *I am willing to receive this bill in no shape. I am therefore not inclined to enter upon the discussion of the propriety of any amendments that may be*

contemplated. I am altogether opposed to the system which it is intended to uphold; and am desirous of testing, at once, the sense of this house, whether it is prepared to enter upon the policy, so boldly recommended upon this occasion, of encouraging our domestic manufactures by the imposition of duties completely prohibitory of foreign importations.—His objections to this bill were two-fold; first, because of its operation in relation to the people generally of the United States; and secondly, because of its bearing upon the particular district of the country from which he had the honor to come.—He would briefly state his general objections to the policy of this bill; and, in the course of the few remarks with which he would burthen the attention of the committee, he would endeavor to take some slight notice of the arguments urged in its favor. In the first place, said Mr. T. I would remark, that to authorize us to pass this bill, gentlemen should not only convince us that it is calculated to benefit the manufacturing interests; but they must also place it *beyond a doubt*, that the other classes of laborers in our country will not be injuriously affected. The capacity of the government to benefit may be unlimited. Not so its power to injure. It may have a right to advance the interests of manufactures. It can have no right to interfere with the prosperity or check the progress of agriculture and commerce, particularly as the two latter cover a space, in importance, of incomparably greater extent. As far as he could inform himself, and as far as his reflection upon the subject extended, he was satisfied, that instead of its being proved that the agricultural and commercial interests would not be injured, it was clear to his mind that the contrary would be the effect. Nay sir, (said he) I am satisfied that this has already been the case to a partial degree; *I know*, at least, it has been so in regard to *agriculture*, in the quarter of the country in which I reside. He could not therefore give his assent to the bill. On the contrary he felt it his duty to raise his voice against it—he regarded it as unjust and grievous; unjust, as it is *partial legislation*, intended to benefit a few; and grievous, as it promises to seriously afflict the interests of every other portion of our community.—No burthens should be imposed, but for the support of the government, and these should bear equally upon the shoulders of all. Any other principle is oppressive and unjust. If you give a bounty to one class, you must take so much from the *common stock*. You cannot encourage *all*—for to take from a common stock to encourage all, would be preposterous. To be just, therefore, you must not interfere. The attention of the government must not be directed to a single object. Nineteen twentieths of the people of this country are engaged in agriculture and commerce, either directly or indirectly. Is it just then to pass a bill which shall cramp their efforts or lessen their profits, simply to benefit the remaining twentieth? Sir, said Mr. T. this is a matter of too serious consideration to be disregarded by this committee. Gentlemen may deny the fact of injury to these interests. They may make long speeches in this house, and write long treatises out of it—but they will argue and write in vain.

I assert the fact of injury, and I do so upon the very best ground. I call upon gentlemen to show me a *single instance* of the agricultural or commercial portions of our country acquiescing in such an opinion as they advance. *Every man is supposed to understand his own business best*; and if this maxim be correct, there can be no doubt what effect a

system of bounties and protecting duties will have upon these portions of the national community. No sir, the *only proofs* to the contrary are to be found in the feeble whinings and flimsy arguments of some of these very manufacturers themselves. Pass such an abominable bill as this, and depend upon it, sir, a whole nation will thunder disapprobation in your ears. I say *abominable*, and hope that I may be permitted to pronounce it so. Those who know me, know that I am not inclined to be personally offensive upon improper occasions. It is not my fault, sir, (said Mr. T.) if, in condemning the *fruit*, the goodly character of the *tree* also should be supposed to be implicated. The agricultural portions of our country, as well as the commercial, *have not been silent* on this subject. They have frequently laid before you their strong protests against the system upheld by this bill. And are we to dictate to them what measures shall be adopted to promote their own interests? If our community could be compared to a family of children, ignorant of their own good, and incapable of providing for their own wants, then indeed it might be well enough to stretch forth the parental care of the government. But, as freemen, we must acknowledge that our government is founded upon a contrary principle. *We think the people capable of managing their own concerns. Our government is an agency, not a guardianship.* He would grant that it is the *only* government established upon such a principle.—But it is no less true on that account. Let the people, therefore, alone. When they find they cannot live by agriculture or commerce, let them try something else. But he entreated they might be allowed to do as they please. If they prefer the plough to the shuttle, or the spade to the needle, why, in heaven's name, let them alone. It is not necessary, in order that all their wants might be supplied, and all their interests be defended, that gentlemen should officiously interfere to compel a part to leave the active pursuits of husbandry for the purpose of sitting cross-legged on a tailor's board. Depend upon it, sir, (said Mr. T.) the people of this country are sharp-sighted enough to do what will conduce to their benefit. There is no nation in the world having to an equal degree the intelligence, enterprize and calculating qualities of this nation. The people of this country will never extend their industry in any direction further than they may find it conducive to their profit. If then the interests of the country are arrayed in opposition to this manufacturing scheme, why should we attempt to aid its operation? When it becomes the interest of this nation to become a manufacturing nation, then will the object of gentlemen be accomplished. Gentlemen must wait until natural effect is produced by the *natural cause*. It is idle to attempt to force it. You might as well attempt to compel from the tree the production of its fruit at an immaturity of age, when nature forbids it.

Where, sir, (said Mr. T.) is the necessity of taking any step at all on this subject? Why are we attempting an innovation on the system which wisdom has hitherto pointed out to us? Look at this nation—in infancy indeed; yet with all the strength of manhood; the growth of but a few years, and yet spreading over a vast empire, and enjoying in every portion of it, plenty, if not opulence! Why should we change our policy? Have we not increased in population and wealth, in a degree unexampled in history? And is this entirely owing to any great superiority of our climate or our soil? Is France, is England, is Italy, unblest in these particulars? No, sir; but France, England, and Italy,

want the happy influence of our free government, and the bright sunshine of our liberal policy. We have none of their restrictions; none of their monopolies, and none of their aristocracies, that feed like a canker upon the prosperity of their people. Adopt, however, the system proposed, and said Mr. T. it requires no prophet to predict that, in a few years you will have each of these evils, and then your prosperity will be withered and your country will be ruined. Depend upon it, sir, said Mr. T. we cannot with safety attempt the diversion, by artificial means, of a part of the stream of labor, without materially affecting the depth and force, and utility of the whole stream. We must have an eye to the general interests of the country, otherwise we shall find ourselves like Spain, with the materials of wealth in our possession, yet poor, degraded and impotent. Give space for the activity of every branch of industry, and we may flourish; limit it, and we must decay. Enterprize is the very soul of industry; but enterprize must be unshackled; it must move through your country as free as the winds that visit it.

It is not necessary for our prosperity that we should become a manufacturing people. Why should a different policy be pursued by nations, from that pursued by individuals in society? Does every man weave his own stuff, and make his own coat? Does he tan his own leather, and make his own shoes? No, sir, we all gain by interchanges of labor. To flourish as a nation, we need not do every thing.—Let us furnish materials; let others fabricate them. With them mechanical labor may be cheaper. With us the agricultural pursuit may be the most profitable. Let us, therefore, employ them as our mechanics. In regard to the application of mechanical labor, said Mr. T. I have my doubts if we can cope with them. Foreign, i. e. European nations, have a surplus population. This is not the case with us, and will not be as long as we shall have immense forests still waiting for the axe of the husbandman.

Mr. T. remarked, that it was the common cant of the day to call every act in favor of manufactures, an act to promote domestic industry. Such a title was imposing; and although men of sense and discrimination were not to be won by names and titles, yet still with the mass of the people such an idea was calculated to produce a feeling favorable to the bill. Gentlemen, said he, would make us believe that a portion of the industry of the country had been *slumbering* for years past, and that it had been roused into action by their exertions. This is not the case. Their exertions, at best, only tend to give a new direction to industry. It is taking from one class to add to another; it is perhaps making, or, (if gentlemen prefer the term,) manufacturing a sickly manufacturer out of a sturdy husbandman. Keep away the inducements, which you would hold out, and you leave to its free exercise the industry of the one class; hold them out, and you encourage the labor of the other. In either case, taking the correctness of the position as granted, and you find domestic industry exercised. The only difference is in the subject of its application.

Mr. T. was also opposed to the bill from its oppressive character. The imposition of protecting duties operates as a bounty to manufactures. Now, sir, said he, the consumer, in every instance, pays this amount. Where he consumes domestic articles, he pays it to the manufacturer; and, in addition to this, he is saddled with the expense of the government. And who, pray sir, are the consumers? Or, in plainer terms, who form the great mass of

your population? The manufacturers? No, sir; they form but an inconsiderable portion of your population. The benefit then is enjoyed by the few, and the burthen by the many. Is not this tyranny? Yes, sir, and tyranny of the most shameful kind! The creation of these manufactories by legislative acts, and the forcing, as it were, this class upon our national community, was as odious in his view, and as grating to his feelings, as would be the quartering and distribution of a military body among a peaceable community. In either instance the feelings of the community are in opposition. In either instance their integrity is violated, their comforts are curtailed, and their interests are assailed. Both cases are equally abhorrent to our nature as free-men.

Mr. T. also thought every principle of policy was opposed to the bill under consideration. A strong reason against one of the principal features in the system proposed, is that all competition in the market would be destroyed—consequently, the purchaser would be at the mercy of the seller. It does really seem to me, said Mr. T. that some gentlemen, when acting in this hall, are entirely forgetful of the plain common sense principles which govern them at home, not only in their private individual capacities, but as members of the community. Is there one of you, said he, that is dependent upon a market, for the daily supply of your families, that would consent to give an exclusive privilege of furnishing that market with meats and vegetables, to one or two monopolists, or in short to any limited number? Would you not strenuously oppose such an arrangement, and in short, do not the regulations of all your markets, strictly guard against such a monopoly, and even go so far as to prevent persons from purchasing any considerable quantity of articles, so as to materially affect the influence which a competition would produce? And, in the name of common sense, where is the difference in this case? The principle is the same. Principles are immutable. The effect in that case, (were these regulations not enforced,) would be to make you pay double for your supplies. The effect in this case will be the same. Would you deem it an argument against such salutary regulations, that a contrary procedure would certainly enrich the few sellers in your markets? Would not you, and the great mass of purchasers, feel indignant at the suggestion? But here, in this hall, where wisdom is most needed, forsooth it must be least used! The plain principles of common sense are here below our notice. We are too refined for these. We cannot condescend to use them. Nothing sublimity will answer for our purposes. We must have some splendid theory to govern us here!

Sir, said Mr. T. these fantasies should be expelled from these walls. They are only calculated, by heating our imaginations, to mislead our judgments. There is no essential difference in the two cases which I have just assimilated to each other. The subject to which you apply the principle for which I contend is precisely the same in its character, only differing in extent—the one is a small community, the other a large one—the one a city, the other a nation.

Mr. T. said, he confessed he did not wish to see the manufacturing interest thrive to any great extent in this country, even if it could do so without the assistance of the government. The history of England, and the little experience we have had in this country, serve to convince us that the benefits of such an interest is confined to a very few. They reach not the mass of individuals employed in the

pursuit, but are confined to a few, a *very few capitalists*. In fact none but great capitalists can conduct the operations. Gentlemen may deny this; they may say that great means may be required, yet the *combination* of many individuals may furnish these. He would answer them, by saying, these will always dwindle down in number to a very few, however numerous they may be at first. In fact, said he, a large number of persons is not calculated to manage any concern. It will always be the object to reduce the number of proprietors as low as possible, as who will confide in others as implicitly as in himself? We all like to have as complete a control as possible over our own affairs. What is the consequence then? the greater capitalists eventually monopolize the whole. Now sir, said Mr. T. it is the policy of our government to discourage every thing which has a tendency to limit the possession of wealth to a *few*—yet this evil has always attended manufacturing countries. He appealed to the present state of England; he appealed to our own country for the truth of the remark.

The owners of these establishments will be wealthy; but who are the persons who will perform the labor? Why sir, a population more fit for the fetid atmosphere of despotism than for this free country; a poor, weak, servile set, ready to go or come at the beck of each lordly proprietor; prepared to obey in every particular, whether to weave a yard of cloth or give a vote at an election. A population, in short, as slavish in reality, as the negroes of the southern states. The gentleman from New Jersey (Mr. Holcombe,) appears to think differently. He seems to regard this class of the community with singular respect. He tells you that New England is, and has for some time past been, a manufacturing nation; he repels (what he deems) the foul aspersion cast upon a manufacturing community, and he points as in triumph, to the achievements of the gallant Hull! Sir, said Mr. T. I fully sympathise with that gentleman in the feelings which he pours forth, and the admiration which he expresses in regard to this distinguished warrior. But, let me ask the gentleman, does he expect to find a Hull—does he expect to find a hero of this gigantic mould within the sickly circle of a manufactory? No, sir. He must look for him through the expansive fields of your agricultural community, or on the boundless wave of the ocean! Genius or valor must not be fettered by restraints, or circumscribed in action. Sir, I shall not attempt to depict the population which we should have in the event of our country becoming filled with manufactories. I shall not attempt to draw the contrast between these wretches with which gentlemen are proposing to fill this nation, and the other classes of their countrymen, the sturdy yeomanry, who, during our late contest, breasted the invasion of our enemy, and the brave and enterprising seamen who lighted up every sea with the splendor of your stars! Every one must see the difference which will exist; every one must see the degeneracy which will ensue. The preservation of *individual independence* among our citizens is essential to the continuance of our free institutions. If we have, as yet, in the northern states, (and I am willing to believe it,) escaped contamination, it is only because the *agricultural influence* is happily still greatly predominant. This influence will daily, however, become less operative. The present state of the manufacturing class, in the largest manufacturing country in the world, affords of itself testimony of *this certain result*, too powerful to be resisted. For my part, sir, said Mr. T. I could with

pleasure witness the combustion of almost every manufacturing establishment as they may be erected. I might deeply sympathize in the loss of individuals; but the individual's loss would be the public's gain.

Mr. T. had another objection to the encouragement of manufactories. It is their interest to promote a war. A state of war is favorable to a more complete monopoly. They thrive most when the country suffers most. From the wealth of their proprietors, their influence over the government and its measures, would be as dangerous as it would be extensive; and God help us sir, said he, when a moted aristocracy (as a gentleman once forcibly remarked on this floor,) is to "ride rough-shod" over our country.

Another effect of this system, is the influence which it will have in reducing our revenue, and in introducing direct taxes, oppressive in their effect and odious in their character. Mr. T. said he must differ from some gentlemen in regard to its influence upon our revenue. He was confident the calculations upon our revenue would fail, for he was sure the almost total exclusion of foreign articles must be the consequence. We must then resort to direct taxation; and as the expenses of our government are multiplying every year, we may expect to have a taxgatherer daily spying upon the privacy of our dwellings. The train of evils, sir, will be great; direct taxation, serious injury to agriculture, the stagnation of our commerce, and the consequent destruction of our navy! These are evils which (with due deference to others who differ,) he could not think existed merely in his imagination. And are we, said he, prepared to encounter them? He could easily understand how an individual should sacrifice himself for the benefit of his country, but the doctrine was not a good one, in his view, which required the sacrifice of a country for individuals. Are we again, he asked—he *emphatically asked*—are we prepared to encounter these evils? Look at the extent of the public debt. It is a disgrace to our country, and a standing libel upon the economy of our government. And do we ever expect to pay this debt by extending bounties to manufactures, and excluding the importation of foreign articles? If we do, said he, we must adopt a different kind of "*sinking fund*" from that with which we have been so long gulling the good people of this country.

Another objection to this system of bounties, or prohibition of foreign importations, (for it is all the same thing,) is, that the government cannot *secure* to the object intended to be benefited, the benefit intended. You may give bounty upon bounty; the state governments will impose tax upon tax—and where is this to end? The consumers of the articles manufactured, have not only, therefore, to give the manufacturer a profit for his labor, and to defray the expenses of the general government, but they have also to support the expenses of the *state governments*. As fast as your general government confers a benefit, your state governments sponge it up by taxation. This fact already exists. The manufacturing establishments in our country are already taxed by their respective state governments. The sooner, therefore, we retrace our steps, the better.

Besides sir, said Mr. T. I am not certain that the manufacturing establishments in our country *require* the aid which is now asked. They have many advantages over foreigners. The raw material is cheaper; the expense attending the shipping and unloading, and the freight and insurance, are se

much gain to them; and, besides this, the duties imposed for the support of the government (which are now greater than the revenue requires,) are added. These advantages, he thought, should be deemed sufficient; and so, indeed, he was informed they were. I am told, said he, the manufacturing interest *does not* need any thing further from the government; and I am led to believe that those who are now calling for assistance, have either *local difficulties* to contend against, or are too impatient to be rich, to await the slow progress of a gradual laborious accumulation of wealth. The husbandman must "toil and sweat" for his daily bread, and must be contented with a very moderate profit; but these gentry must, with a stroke of the political wand, have a mine of gold at once at their command! That some of these applicants for legislative aid, stand in need of assistance, he could readily believe; and that many of them want CAPITAL AND INDUSTRY BOTH, he could readily suspect. But he would reply to them as he would to any lazy beggar who relies more upon the aid of others than upon his own industry and enterprise—he would say, "*go and work, and if one kind of employment will not support you, try another.*" If, however, he was not mistaken in this particular, and that the manufacturers generally throughout our country were to be regarded as petitioners for the further extension of favors, it proved them to possess a degree of modesty truly remarkable! Just after the war, they prayed for relief; they appealed to your sympathy, and assured you they only wanted a law of temporary operation in their favor. That was granted. They next asked a *continuation* of that law—that was also granted: and now, emboldened by their success, they ask you for a further encouragement in the shape of additional bounty! And this, too, when it is undeniable that, in all the establishments properly and ably conducted, the profits exceed those of *any* other description of labor in the country. He was credibly informed that such establishments yielded 7, 10, 15, 20, and even, in one instance, as high as *thirty* per cent.! Neither the agricultural nor commercial interest of this country yields a profit of more than five per cent. The agricultural interest, in the quarter of the country in which he himself lived, does not yield *that*, and this is supposed to be the most thriving part of our agricultural community. He alluded particularly to the *cotton planters*, on the seaboard of South Carolina and Georgia.

He really hoped that the committee was not prepared to treat this present unreasonable application in any other manner than with marked disapprobation.

I am not, Mr. Chairman, said Mr. T. unfriendly to ALL manufactories. To those which furnished materials, *essential* in a time of war for our national defence, I would extend every necessary protection of the government. The general interests of the country are here concerned, and we ought all therefore be willing to yield up something for their support. It is a tax paid for our defence. He would however, draw a strong line of distinction between the *essentials*, such as powder, cannon and arms of every description, and the *mere necessaries*, such as clothing and other materials of comfort, a scarcity of which might produce inconvenience, but could not be fatal.

Mr. T. here took occasion to remark, that the statement made by the honorable chairman of the committee on manufactures (Mr. Tod) of the comparative rates of the present and proposed duties, was calculated to mislead a common observer. On

a subject of such great national importance, and on which the feelings of the various parts of our country are so highly excited, he could not but think it wrong to produce such a statement as had been presented under the direction of the honorable chairman, as a manual for the use of the house.—The statement presents a view of the subject in three distinct columns, under three distinct heads, viz: '*present duties,*' '*proposed duties,*' '*rate of additional duty.*' Now, for example, said Mr. T. with regard to *coarse woollens*, one would naturally look under the *third* column for the '*rate of additional duty.*' This is there given as '*one fifth*' whereas, upwards of *90 per cent* will be paid Under the head of '*proposed duties,*' indeed, are to be found the words '*and minimum price of 80 cents per square yard.*' But this is not sufficient; the calculation should have been *extended out entire*, and not in a partial manner.

If the omission was unintentional, the carelessness was culpable; and if intended, it was uncandid, unjust and highly reprehensible.

I have now sir, said Mr. T. stated my general reasons against the bill before us. I have, however, some *local* considerations which weigh with me in strengthening my opposition to it. I must, therefore, intrude a few moments more upon the attention of the committee.

The operation of this bill, sir, would be oppressive in the extreme upon the southern district of this country. I mean the slave-holding states. The articles which are most wanted by them, are those upon which the *highest ad valorem* duty is enforced. I will instance coarse woollens and cottons, whose *minimum* value is made to bear particularly upon the character of goods needed by the southern planter. Iron and steel, articles necessary for his plantation purposes, are also highly taxed—so, also, are cotton bagging and osnaburgs—the latter material being used by the planter for the summer clothing of his negroes.

Such, sir, is the tendency of the bill before you; such will be its unjust pressure upon a portion of the country already greatly distressed. This distress is not imaginary. Of its real existence any gentleman can readily satisfy himself by casting his eye over the advertisements of any southern newspaper. It is felt, and sorely felt, in every quarter, and by every class of agriculturists in the south.—We do not, said Mr. T. complain upon slight occasion. No, sir, the southern states have never been querulous in their character. Whenever the national benefit has been the object, they have freely yielded up all that you have required. They went to war to protect from search the merchant vessels of the north—they went readily to war to protect the seamen of the north from British impressment. They could gain nothing *local* by the late war.—The general national honor, and the local interests of the north, were all they yielded their treasure for—were all they bled to preserve. You heard no complaint during the war, you have heard none since, where the improvement of the public revenue furnished the *only* ground for imposing additional burdens upon them.

We have in the south no antipathy to the use of domestic articles. Furnish us with goods at the same price with foreigners, and the people will give you the preference. But it is impossible the southern planter can ever afford to give you the price at which you offer at present to furnish your goods. To compel him, therefore, to buy at your market, is TYRANNY; and the taking advantage of his necessities, to exact from him a higher price

than the value of the article, is ROBBERY; and robbery of the most impudent kind! What, sir, are we to have our property thus pitifully filched from us? Are we to be stopped, as it were, upon the public highway of our industry, and robbed of our little earnings? Will you adopt a system so fraught with distress to a whole country, to fatten a few monopolists? Are you prepared, by passing this infernal bill, to add a poverty which is already wearing one portion of our country to the bone, for the purpose of supplying the appetites of a few pampered nabobs? Such a policy is disgraceful to a free people. It is inconsistent with our institutions, and will be destructive of our happiness. And is it thought that we will tamely submit to this treatment? No, sir, we cannot. *By heaven, sir, we will not!* The principle of compulsion is abhorrent to the nature of freemen. *We must buy at the market pointed out to us!* Sir, said Mr. T. it is a tyranny which I pronounce execrable, which it would be disgraceful in us to submit to, and is disgraceful in others to attempt to inflict. Sir, said Mr. T. I cannot consent to become the victim upon which the greedy spirit of a moneyed aristocracy shall feed! No, sir, if I am to yield my liberties up, let it be to some man distinguished for superior genius and generous ambition, whose views are not confined to the sordid accumulation of wealth. Let it be (if you please) to some foreign Napoleon, whose fame is decked with the splendor of a thousand victories! If I am fated to kneel before majesty, let me at least see something that I can admire; let me not have to bow down and humble myself before the 'golden calf!'

Mr. Chairman, (continued Mr. T.) I will not trouble the committee with any further remarks.— If I have been deemed too warm, I hope my feelings will be attributed to an honest source. I view the system which gentlemen are attempting to establish, as subversive of the general interests of the nation, and as cruelly oppressive to some portions of our country. I regard it as not only *impolitic*, but as *tyrannical*—and, where impolicy and tyranny are the prominent features of any bill presented to this house, I trust it will not be deemed incumbent upon any one to treat it with respect or forbearance.

I will close my remarks, sir, with moving to strike out the *enacting clause* of the bill now under consideration.

MR. CAMBRELENG'S SPEECH.

Mr. CAMBRELENG, of N York, thanked the gentleman from New Jersey, (Mr. Holcombe,) to whom he had listened with great pleasure, for directing the attention of the committee to the early history of this government. In the proceedings of the congress of 1789-90, there were circumstances peculiarly applicable to the present question and to this discussion. We find the patriots of that day debating for days—nay, weeks together, whether the duty should be five or seven and a half per cent, so cautious were they in legislating upon the essential interests of their constituents, so anxious to guard the rights and privileges of their fellow citizens from unnecessary encroachment. At the present day, gentlemen talk familiarly of 90 and 100 per cent, and of prohibitions! But the times are changed. The wise and deliberate legislation of other days is no longer in repute. We are unconsciously assuming magnificent attributes; fancying ourselves wiser than the ten millions of freemen, whom we represent, we boldly undertake, by abrupt and violent laws, to control and direct, at

our caprice, their capital, enterprise and labor.

He again thanked the gentleman for reverting to earlier times, for, since then, another important change had occurred in our legislation. The superintendence of commerce and manufactures was once confided to one and the same committee. In those times they marched hand in hand together. But now we have a committee on manufactures, which, not satisfied with the care of that branch of industry, with unsolicited liberality, condescends to preside over, enlighten and govern the three great interests of agriculture, manufactures and commerce.

Mr. C. said he would further direct the attention of the gentleman to the period, when the encouragement of manufactures in this country was considered as incidental to the collection of revenue. In a revision of the tariff, the first object was revenue; the second, so to regulate it as to favor, wisely and moderately, the manufactures of the country. But now, for the first time, we are presented with a tariff, which, so far from having a view to revenue, aims a direct blow at some of its most productive sources. For the first time is it, with a full treasury, broadly proposed to tax the people of this country, for the sole purpose of fostering a few manufactures, and these acknowledged to be among the most flourishing branches of industry in the nation.

I regret, said Mr. C. that whilst the gentleman from New Jersey was eulogizing the beneficial results of the restrictive system; admiring the splendid spectacles exhibited in foreign lands; and visiting, in his course, the numerous monarchies of Europe,—I regret that, whilst he was ranging the elevations of the Pyrenees, he had not for a moment rested upon the Alps; that, while he mourned over ruined republics, he had neglected to notice free and happy Switzerland. The gentleman had contrasted the policy of Spain and Venice. He had enlarged upon the present ruined condition of Spain—but he omitted to tell us what had become of the wealth and power of desolated Venice!

The gentleman from New Jersey had particularly directed our attention to the splendid example England now presents to the world of the triumph of the restrictive system. The gentleman had altogether mistaken the origin of England's wealth and power, and he had omitted to tell us, that, through the agency of this very system, the wealth of the nation had been the more rapidly transferred from the mass of the people to the hands of a few: he had omitted to tell us, that the weight of this artificial system, a system of excise and restrictions, is now pressing heavily upon the middle and poorer classes of the people of England. I trust, said Mr. C. that we shall never see this nation exhibit such an unnatural association of splendor, wealth and power, with misery, want and taxation. Yet, sir, notwithstanding these fatal, but necessary consequences of excise and restrictions, are we constantly admonished to look to England, and to imitate a policy, productive of all the evils which can afflict and subdue mankind. But, continued he, in relation to her wealth and power, had the gentleman marked the present condition of England attentively; had he looked to the existing foundations of her wealth and power, it might have occurred to him, that all the consequences of her system are not yet revealed. It might have occurred to him that this magnificent structure might vanish with the destruction of her artificial system, and leave her, on a larger scale, the picture of ruined Venice.

The gentleman from New Jersey, said Mr. C. has reiterated the *old* argument, (repeated yesterday by the chairman of the committee on manufactures) that we are indebted to the tariff of 1816 for the ample supply and low price of manufactures.

Those who fancy themselves able to guide the destinies of nations, and to watch the approach of political storms with a prophet's eye, believe that there is some magic in their laws, and attribute to them alone the changes which are perpetually occurring in the industry of nations. Elevated in their views, they overlook the simple, natural and manifest causes, which lead evidently to the results they perceive. Thus it is, that gentlemen, in this instance overlook the facts, that the raw material has fallen from 33 to 10 cents per pound; that the wages of the laborer have also diminished; while the genius of Arkwright has been gradually spreading its creative influence throughout the christian world. This country was designed by nature, if ever country was, for this manufacture; the raw material is here in rich abundance, and the chief impediment to the prosperity of the manufacture had been removed, in the substitution of machinery for manual labor. He proceeded to observe, that the 25 per cent minimum valuation of 1816, whilst it created a monopoly, which congress did not at that time intend, was altogether needless as an encouragement to the manufacture. But, said he, uselessly or not, the minimum valuation had been adopted; the faith of the nation was pledged to the manufacturers for its continuance. He would be now unwilling to abolish it, but he should have been more unwilling to have established it originally. Its existence had a tendency to keep the manufacture from falling as low in price as it would without it; and the 10 to 20 per cent annual dividend upon the capital employed, is proof incontrovertible that *capital is still flowing into that channel, and that the supply of the manufacture is not equal to the demands of the country.*

But granting all that gentlemen require; granting that the tariff of 1816 has produced, of itself, this result, as to cotton manufactures, with what propriety can they urge it as an argument in favor of a prohibitory duty on woollens and linens? Is there a prospect here of a like success? Has machinery been so entirely substituted for the labor of man in these manufactures? Have we the surplus population to authorize us to make the experiment? Have the manufactures of woollens and linens, in other countries, sprang up like the cotton manufactures as it were in a day, under the genius of Arkwright? No, sir, they are the slow work of time and experience. Before gentlemen tax the people of this country with duties of 50 and 100 per cent, they would do well to deliberate on the experiment they are about to make—on the formidable and permanent monopolies they are about to establish.

But let us waive all argument for a moment, and call the attention of the chairman of the committee on manufactures to the bill itself, which is certainly at war with the very principles in which it is said to be founded.

The object of the bill, as expressed in the title, is "further to encourage certain manufactures."—Is it to encourage the manufacture of cordage that the chairman of the committee proposes nearly to double the duty on hemp, the raw material? Is this duty to encourage one of the most important and extensive manufactures of the country, the mainstay of commerce and one of the great instruments of war? Is it to encourage manufactures that

it is proposed to double the duty on lead? Next we have bar iron, midway between a raw material and a manufacture. In 1790, Mr. Hamilton doubted the policy of imposing any duty at all on this article. It is used as a raw material in the most extensive and valuable manufactures of the country; for all implements of agriculture and for ship building. Is it proposed to increase the duty on bar iron, to encourage these essential manufactures? It was unnecessary to go further into detail. He would, however, suggest to the chairman of the committee the propriety of amending the title of the bill, that it might accord with its principles and provisions. That it might be entitled "A bill for the further encouragement of certain manufactures, and for the destruction of many."

And what, sir, said Mr. C. are those weighty causes which have produced this call upon the house, at a moment of profound peace, of general prosperity, and with a full treasury, to tax the people of the United States, further to encourage branches of industry, the most flourishing and profitable in the country? We are, with prophetic gravity, informed that the country is on the verge of ruin; that exchange is against us; that our specie is rapidly leaving us, and that there is an alarming *balance of trade*. We are deluged with the essays of those devoted to the cause of manufactures, to persuade us that nothing but the intervention of congress can save the country from approaching ruin. And these grave arguments were yesterday reiterated by the chairman of the committee on manufactures. This, sir, is not the first nation which has been ruined by these speculations. These speculations on specie and the balance of trade are among the superstitions of mankind; they have occasionally, for two centuries, afflicted even statesmen with the most gloomy apprehensions. There is no novelty in the lamentations of the day. If the gentleman from Pennsylvania (Mr. Tod) is fond of such researches, he will find the originals in many a French and English quarto. France, impoverished, desolate and wretched, at the close of the wars of Louis XIV. is supposed by one grave historian, to have been brought to this verge of bankruptcy and ruin by the exportation of specie to the East, and the balance of trade! In Europe, and particularly in England, rapacious ministers have, from time to time, made use of these superstitions to impose additional taxes on the people. Here, they have been introduced to answer the purposes of personal ambition and individual interest. Their consequences might be fatal to our confederacy: exciting an unnatural jealousy between the north and the south—between our fellow citizens in the west and those on our Atlantic border; creating perpetual hostility between brethren of the same great family, who should pursue their labors in harmony and fellowship. Mr. C. proceeded to observe, that it must be in some measure idle to speculate on the exchange between two countries, in one of which silver is the currency established by law; while in the other it is a mere article of merchandise. The existing premium upon specie bears no proportion whatever to the existing and nominal rate of exchange.

But our specie is leaving us. Gentlemen do not perceive that specie is performing eternal circles in executing the offices of trade throughout the world. They lament its departure from the country, but never enquire whence or how they came hither? They seem to derive no consolation from the knowledge, that the specie we have, whatever be its amount, was obtained through the agency of

that commerce whose interests and rights this bill proposes to trample upon.

But the most alarming evil we have yet to notice—the *balance of trade*. It is unnecessary, said Mr. C. to fatigue the committee with detailing the manifold errors of those who undertake to ruin the nation, through the frightful agency of this apparatus; and he would leave it, with a remark or two. According to this novel system, we are debited with our imports, and credited with our exports. The entire value of the commerce of the nation is omitted in the account. And who, but one inspired, can estimate with accuracy the millions which commerce is annually adding to the wealth of the nation, through its labor, its freight and its profits? Who can estimate the value of all these to the most enterprising of commercial nations? These millions, which it is impossible even to estimate, are annually added to the amount of our returns, and, according to the theory of gentlemen, augment the balance of trade against us. In a ratio to the increased activity and prosperity of our commerce, is this unfavorable balance of trade nominally augmented. Thus, by a singular perversion of all calculation, the signs of our prosperity are changed into alarming omens of approaching ruin to the nation. In years of peace and prosperity, this nation has always, in the aggregate, imported more than it has exported: and such must inevitably be the case with every nation, where commerce is worth pursuing.

But these, said Mr. C. were unprofitable speculations; and he should not have indulged even in these remarks upon them, but for the perseverance with which they had been again enlisted in the debate. These are not the serious arguments against which we have to contend: we are called upon, said he, by an authority, and one which he highly respected,—by the highest authority in the nation, *to tax the people of this country with a system of restrictions, because, however wise in the abstract, other nations will not adopt the free system.* What he deemed to be the error here, is not, in this maxim, but in the application of it, as he would show, to the bill to which reference was made.

As this continued Mr. C. is the boundary between the two parties, and as we here approach the point in which the question turns, he would ask the particular attention of the committee. It was the more important, because the best interests of the nation depended upon a wise discrimination between two classes of restrictions, which gentlemen were perpetually blending together, although they were entirely different in their operations on industry.

Sir, said Mr. C. there are two classes of restrictions: the one, external in its character, and *defensive*—the other, internal and *offensive*. He was very far from contending against the propriety and wisdom of the first class. It is one of the great duties and attributes of every government, to watch over the interests of the nation confided to its care; and whenever a foreign government passes a law, or issues a decree, calculated to agitate the industry of our country, or to throw its capital and labor out of existing, into new channels, it becomes our duty, as it is unquestionably our right, to meet such law or decree with rigorous and prompt restrictions. But gentlemen are bound to show us this foreign law or decree, when they call on us to perform this duty. Whenever they do so, we shall be ready to go with them, hand in hand: we shall never be behind them in any measure truly intend-

ed! to protect the industry of our country from injury, through the act of any foreign government. And now let us apply this well established principle to the bill in question. What are its prominent features? A large increase of duties is proposed on iron, hemp and woollens. Had the high authority to which he had referred, communicated to the house the knowledge of any foreign decree or law, touching these articles? Has the chairman of the committee on manufactures, the knowledge of such decree or law? There is no such decree or law in existence. And yet, we have been called upon to adopt these measures, which nothing but some such necessity could require or warrant.

Mr. C. then proceeded to shew what were the laws of Russia, Sweden and England, relating to hemp, iron and woollens. Russia, he said, grants no bounty, she charges, whether wisely or unwisely, an export duty on hemp. Sweden grants no bounty, but charges an export duty on iron. The very reverse of the causes which should authorize counteracting restrictions. England grants no bounty on woollens; and there is no *new* law or decree of England granting a bounty on any one article embraced in this tariff. The bounties on linens and glass are of ancient date; some as old as the reign of Queen Anne; and these the British government would willingly abolish, but it cannot. But, even if it could be shewn that a bounty was granted, he should contend it was for the benefit of this country, unless it was under a *new* act, and calculated to disturb some *existing* branch of industry in our own country. He again called on gentlemen to point out the foreign act or decree calculated to disturb any existing branch of industry in the country, and he, for one, should be ready to meet it. Such would be of an external character, and strictly within the province of the national government, whose right and duty it was, he repeated, promptly to counteract every hostile movement of a foreign government.

But when a foreign people, without the assistance of their government, simply through the agency of nature, or from the experience of ages, from their wealth or population, are enabled to supply our wants at a cheaper rate than they can be supplied within our own country, it would, he submitted, be unwise in us, as legislators, to attempt the unprofitable experiment of creating or sustaining the home supply, through the instrumentality of restrictive or prohibitory laws. Here we leave the class of defensive and wise restrictions behind us: we reach the class of offensive and unprofitable restrictions. It is not upon foreign governments we make war; but we commence a speculative and blind warfare upon the knowledge, ingenuity, enterprise, and industry of mankind; and the expense of this experimental war, we raise by heavy taxes upon our fellow citizens. This is that famous system of *internal restrictions*, which favors some branches of industry at the expense of others, and capriciously transfers capital and labor out of existing, into new employments: and this is the essential principle of the bill in question. Gentlemen should recollect that the industry of the country is at all times sufficiently agitated by the natural and political vicissitudes incident to nations; and that the abrupt transfers of capital and labor, the consequence of these agitations, ought never to be multiplied by legislation. Such is the experimental system: a system harmonious with the forms of European governments; springing from, and matured through, a necessity for taxation.

But, said Mr. C. whatever may have been the sys-

tem or practice of European monarchies in this novel mode of sporting with the rights and property of men, we should recollect that we are legislating for a confederacy of free states, associated for the purpose of common defence. He was not disposed to discuss the meaning of words, or to say much of constructive or incidental powers. He was aware that all constitutional doubts were generally received by the house with levity. He regretted to see it—he regretted that, in the short term of thirty years, there seemed to have arisen an increased desire to enlarge powers of the national government. He would remind gentlemen, who were disposed to indulge in this magnificent scheme of government, that, during the short period of our political existence, we had witnessed the growth of many incidental and constructive powers, of a gigantic form. He would warn those who were disposed to give this creative character to the constitution, to forbear, lest the weight of these mighty limbs should bear down the venerable trunk, from whence, we are told, they derived their origin. He believed with the gentlemen from Virginia, (Mr. Smyth), that it was never contemplated by the framers of the constitution, to confer on this confederated government the absolute power to make one section of the Union tributary to the other, or to bind the Atlantic states in a vassalage to those which might arise in the west.—Had the broad principles now assumed been advocated in the convention which framed our constitution, we should not now be assembled to deliberate or legislate.

This is an untimely call upon the nation to make sacrifices for the benefit of particular branches of industry. The lamentations which we hear, are but the subsiding echoes of the calamities incident to war. Agriculture, manufactures and commerce were necessarily subjected to the agitations arising out of the former restrictions, the violent convulsions of our late war, and the abrupt transition from war to peace. When peace returned, all were depressed; but all are now rapidly recovering under its genial influence, and the industry of the nation is gradually approaching that regular and settled character, which most contributes to the happiness and wealth of the nation. It is not necessary for us to disturb the people of this country by furnishing new inducements to speculation and ruin. No revision of the tariff, at least on the principles recognized in this bill, is required by the country. We have been constantly changing and augmenting our duties during the last thirty years: this fluctuating policy is injurious to all classes. All that our manufacturers require, is more uniformity and stability in legislation: the rate of duty is not so important as its permanency.

He trusted the government would guard the rights and interests of every branch of industry in the nation; that it would ever continue what its framers intended it to be—parental in its character: and that it never would become, by an abuse of its powers, express or incidental, absolute and despotic.

Rodgers' Marine Rail-Way.

Message from the President of the United States upon the subject of Commodore Rodgers' Marine Rail-Way, or Inclined Plane.—Jan. 27, 1823, read and referred to the committee on naval affairs.

To the House of Representatives of the United States—

I transmit herewith, a letter from the secretary of the navy, containing one from captain John Rod-

gers, president of the naval board, accompanied by a description of the Inclined Plane, Dock, and Fixtures, for hauling up ships, and an estimate of the cost of materials and workmanship necessary for the completion of a dock and wharves, proposed to be connected with the Inclined Plane constructed at the navy yard, Washington, and recommend the same to the attentive consideration of congress.

It is confidently believed that this invention combines advantages so highly useful, as to justify the appropriation required.

JAMES MONROE.

Navy Department, Jan. 17th, 1823.

SIR: I have the honor to submit to your consideration a letter received from captain John Rodgers, president of the naval board, accompanied by a description of the Inclined Plane and Dock, and a specification of their properties and advantages for building, preserving and repairing ships of war of every class.

I have carefully examined the subject detailed in these papers, and fully accord with the president of the naval board as to the utility and great importance of the Inclined Plane and Dock, for the purposes mentioned in the specification; and I recommend the same to your favorable consideration, with a view to obtain your sanction to an application to congress for an appropriation of a sum of money sufficient for the construction of a dock and wharves, in connection with the Inclined Plane erected in the navy yard, Washington.

I transmit, herewith, an estimate of the cost of materials and workmanship deemed necessary by Mr. Doughty, the naval constructor, for the completion of the dock and wharves contemplated to be constructed at the navy yard, if the same shall meet your approbation, and an appropriation be obtained for the object.

A model and draught of the dock and wharves are deposited in this department, and they will be submitted to examination, and the several parts be fully explained by captain Rodgers, at any place that may be designated as most convenient for the purpose.

I have the honor to be, with great respect,

Sir, your most obedient servant,

SMITH THOMPSON,

The President of the United States.

Washington, 23d Dec. 1822.

SIR: The accompanying description and specification as to the properties and advantages of the Inclined Plane and Dock, for preserving, building and repairing ships of every class, are respectfully submitted to your consideration. The invention is of so much national importance, in my estimation, as to induce me to request that you will be pleased to examine it particularly; and, should the result of such examination, produce in your mind the same conviction that it has in mine, I would, respectfully, request of you to lay the subject before the President of the United States, who will dispose of it in such a manner as the best interests of the nation may, in his opinion, require.

The experiment made at this yard, under many disadvantages, has established the fact, that a ship of any magnitude may be hauled up on an inclined plane, and placed under cover, perfectly protected from the sun, rain, &c. without incurring the least risk; and universal experience proves, that a vessel placed in such a situation, may be preserved for almost any length of time. The frigate Potomac, the vessel hauled up, may be seen under a house at

the navy yard, where she may be preserved, *without further expense*, until she shall be required for actual service.

The whole plan, which is shown in the drawings herewith, embraces a dock and wharves on each side, in addition to the inclined plane and house, as now erected in this yard. Such dock and wharves would afford all the advantages and facilities of any other dock now in use, intended for the repair of vessels, while they can be completed for less than one sixth of the expense of such as are used by other nations, for similar purposes. It is believed that the sum of \$40,000 would be sufficient to complete the dock and wharves.

From various experiments made since the Potomac was hauled up, it has been satisfactorily ascertained, that by using friction rollers, as suggested in the specification, the time required and power necessary to haul a ship up, may be diminished so far, that the expenses of the operation would not amount to a sum worthy of any consideration.—With a plane having the inclination of the ways on which ships are ordinarily built, 130 men with three three-fold purchases, (falls of ten inch rope) would, I am fully persuaded, be sufficient to haul up, at the rate of four feet in a minute, the largest three decker in the world, and this too, without straining her in the slightest degree.

I have the honor to be, with great respect,

Sir, your most obedient servant,

JOHN RODGERS.

HON. SMITH THOMPSON,

Secretary of the Navy.

General description of "Rodgers' Marine Rail way, or Inclined Plane, Dock and Fixtures, for hauling up ships."

Two walls, of stone or brick, solid or arched as far as high water mark, or a double tier of piles, firmly driven and so braced transversely, diagonally and horizontally, that each pile by which the plane or rail way is supported, shall receive its necessary proportion of the weight it is intended to bear in a perpendicular direction, without in any degree being liable to the effect of lateral pressure, which is to be carefully guarded against. These walls, or tiers of piles, are erected or driven parallel to each other, at such distance apart, depth and height, and projecting so far into the water, as to adapt them to the largest size vessel proposed to be hauled up for repair or preservation, or to be built and launched. They are raised or driven so as to form inclined planes, (precisely) of the same height and inclination. The inclination may be as much as half of an inch to a foot, or more if necessary: though the greater the inclination, the greater must necessarily be the purchase to haul up a vessel. Above high water mark, on fast ground, strong pillars of stone, or substantial wood piles, must be used, and the walls or tiers of piles may be extended at pleasure.

On these walls or tiers of piles, two platforms or rail ways are erected, fixed and braced so as to be immovable, the inner sides forming clear uninterrupted parallel lines, of 20 inches width, more or less, and constituting what is called the ways.—These ways may, and for very heavy vessels ought to be, plated with iron, or other metallic substance. The surface may be perfectly smooth, or grooved so as to admit cylinders on the male and female groove, or friction rollers. The sides of the cradle, which move on these ways, and come immediately in contact with them, ought also, for very heavy vessels, to be plated underneath with iron,

or other metallic substance, and may be perfectly smooth, or grooved so as to admit cylinders on the male and female groove or friction rollers, adapting them to the ways, and easing the friction. The inner sides of the ribbands to be fixed with friction rollers, and the outer sides of the slides plated with iron, or other metallic substance—or the outer sides of the slides may be fixed with friction rollers, and the inner sides of the ribbands plated.

In the experiment made of hauling up the frigate Potomac, it was the object of the inventor to demonstrate the correctness of the principle at the least expense, consistently with public utility. He was fully apprized of the various means, hitherto discovered and used, by which friction and the attraction of cohesion might be overcome; but he was at the same time sensible, that the adoption of those means would unavoidably involve additional expense. Perfectly confident of success without them, from a full persuasion that the principle was correct; a confidence arising from his own long and deliberate reflections on the subject, and from a successful experiment on a small scale, he made the experiment of hauling up the Potomac in the presence of the President of the United States, senators and representatives, heads of departments, foreign ministers, and a numerous concourse of citizens, without any apprehensions as to the result, using only for both slides and ways, wood of perfectly smooth surfaces. He well knew that two soft yielding bodies, pressing against each other with a weight equal to 1,700 tons, would occasion great friction and cohesion. Yet, notwithstanding these great disadvantages, the experiment fully confirmed his anticipations, and the ship was hauled up with comparative ease and perfect safety.

By rail ways or inclined planes, thus constructed, ships of every class, from a first rate down to a schooner, may be drawn up with ease and convenience, under a house above high water mark, either for preservation or repair; or a ship may be built under a house, having such ways attached to it, and launched with more facility and ease, and at the same time without any of the risks of straining or hogging her, incident to every mode of launching now in use.

They have important advantages over the docks now in use, of hauling up for preservation one or more ships, according to the extent of the plane; while, at the same time, the space between the rail-ways, at the outer part of the planes, projecting into the water, forms a complete wet and dry dock for repairing vessels of every denomination, with the greatest ease, convenience, and expedition.—To make the outer part of the plane a dry and wet dock, nothing more, it will be observed, is necessary, than to build a narrow wharf on each side, 20 or 30 feet wide, according to the depth of water and strength required, parallel to the inside of, but embracing both tiers of piles, so as to form a gun wharf on one side, and a spar wharf, or wharf for any other purpose, on the other side, of such dimensions as may be required. The inner part of the dock thus formed, ought to be faced with stone, by which means it will be rendered permanent.—In the experiment already made in hauling up the frigate Potomac, of 1700 tons weight, including the chains, beams, &c. confining the cradle in which she was suspended, there was nothing to give efficiency to the piles on which the planes or rail ways rested, but wooden braces or shores to prevent lateral pressure; of course, the two wharves before mentioned would, in addition to them, not only render the work permanent, but insure it against

the effect of lateral pressure. In some situations, building several successive planes abreast of each other, at the required distances apart, might be found expedient, and probably more economical, than to give them great extent in length. For instance, three planes properly constructed, the centre one proportionably stronger than either of the others, because it would have two ways, one on each side, would admit of one or more vessels abreast, and there would be a saving in the cost.

FOR HAULING UP.

Beam pieces of sufficient size and length, and scarfed in the middle for convenience, are placed athwart the vessel, through each lower gun-deck port, projecting sufficiently from the sides of the vessel so as to embrace, with firmness, the sides of the cradle on which she is drawn out of the water; and to effect this by uniting all parts firmly, blocks under the beams, of size to corresponding to the sheer of the vessel, are placed so as to make the plane of the lower surface of the slides of the cradle correspond with the surface of the plane on which she is hauled up. To these beams, blocked and wedged according to rise and fall of the tide, or length of piles, and secured both above and below, as well as laterally, by braces connecting them to the vessel, so as effectually to prevent their yielding, in any degree, from the position they are meant to maintain, and connected underneath by the slide part of the cradle, on each side the cradle is firmly attached.

The cradle consists of various parts, shown in the drawings; and among others, the following:

The slides, which come immediately in contact with the ways.

The wooden braces, or shores, auxiliary to, and supporting the chains, to sustain the upper works of the ship, independent of the chains; thereby relieving the chains of the weight of all that part of the ship above the lower gun-deck beams.

The vertical slings, composed of chains of iron, of strength adapted to the size and weight of the vessel to be hauled up. They embrace the vessel from her keel to her lower gun-deck ports. They are shackled to the keel-straps, and are thence taken up to the beams, to which they are attached by a strong screw shackle by screws and wedges, or by wedges alone: the latter is, probably, the better mode. Strong beam stirrups are shackled to the chains, admitting of wedging, &c. to tighten the chains. The keel-straps pass under the blocks, to which they are firmly bolted or screwed; the blocks prevent the keel from galding; they have each a jog on one side, and are let down so as to jog, alternately, starboard and larboard—so that, when the chains are secured or wedged to their proper positions, the vessel is perfectly steady on her keel. All these fixtures are put on when the vessel is afloat.

The vertical slings, which form so essential a part of the cradle, and constitute so great a portion of the expense, if made full large for a frigate, will answer for hauling up a 74 or 100 gun ship.—The height of those ships being so much above the rail way, admits two or three tiers of shores or wooden braces, from the sides to the end of the cross beams, instead of one, as is used in a frigate—thus taking off from the slings all the weight of the vessel above the lower gun-deck.

The purchases for hauling up a vessel may be multiplied at pleasure; but it would not be advisable to apply any main purchase that should not embrace the whole body of the ship, so as to avoid every possible injury from a strain on any particular

part of the ship. The main purchases used in hauling up the Potomac, embraced the whole body of the ship. The side purchases were attached to the slides.

Steam or horse power may be used in hauling up; though men will be found abundantly sufficient—and they are manageable, and will be generally the cheapest.

Iron chains may be used instead of rope for the main purchases; though either will answer well.

The wharves heretofore mentioned being finished, a coffer dam is formed across the entrance of the dock, (or, in this state, more properly a slip.) The gate made, hung, and shut, the water is pumped out, the foundation laid for the vessel, and the dock will be complete.

Sloops, or other small vessels, if similar docks and planes are not constructed for their particular use, may with facility be repaired, or preserved in the docks and planes intended for larger vessels.

Small vessels may, and perhaps large vessels might, be hauled up, upon skids, with or without rollers. It is thought, however, for vessels larger than a sloop of war, that a rail-way will be found greatly preferable.

Advantages of Rodgers' Marine Rail-way, or Inclined Plane, Docks, and Fixtures, for hauling up ships.

For repairing ships, this invention combines all the advantages of a dry dock.

For building, no preparation hitherto known is equal to it: because, while it furnishes all the facilities of a building slip, upon the most approved construction, it has in launching, a decided preference over every other means heretofore practised. A vessel built on the inclined plane may be launched without incurring the slightest risk of hogging. She would descend the plane gradually, bearing equally upon it until she becomes completely water-borne. There can be no plunge, as is the case from a slip.

For the preservation of ships not wanted for immediate service, it is confidently believed that no plan can be superior to it. A ship, when built, may be suffered to remain on the stocks until she is wanted; or a ship afloat may be taken up with perfect ease and safety, and placed in a state of preservation under cover, protected from the sun, rain, &c. and all the evils thence arising.

It may, then, safely be affirmed, that this invention combines all the advantages of all the various and most approved means heretofore used for repairing, for building and preserving.—That for launching, it is greatly preferable to any plan heretofore practised or made known; and the experiment made in hauling up the Potomac, has demonstrated beyond all question that any ship, however large, may by the means embraced by this invention, be taken out of the water, and moved up on fast land, any distance required, with perfect ease, and without incurring the slightest risk of straining the ship, or otherwise injuring her in the slightest degree.

All practical men concur in the opinion that many and great advantages arise from building ships under cover; and that mechanics can, in the same period of time, taking the year throughout, do more work when under cover, and protected from the scorching sun and rains of summer; the piercing cold, frost, snow, sleet, and rains of winter, than they can possibly do, exposed to all these disadvantages, will not, it is presumed, be contended by

any person of any experience. Mechanics will work under cover for reduced wages: at 12½ per cent less wages they can make more money—because they lose no time.

They can perform at least 20 per cent more work throughout the year, under cover, than they can do if exposed to the weather.

By building under cover there is, then, a mutual gain on the part of the mechanic and his employer. The mechanic makes more money, and his employer gains in reduced wages and in having 20 per cent more work done in the same time at such reduced wages. Suppose the wages of mechanics, building in the ordinary way, to amount to 100,000 dollars; by building under cover you save 32,500 dollars, or 32½ per cent, whatever the wages may amount to.

This, however, is not all. The gain of time is a highly important consideration; and this the employer gains. In time of war the gain of a single day, and sometimes the gain of an hour, is all important.

On examining the invention, it will be found that none of these important advantages have been overlooked. It embraces them all, and in the best and most improved way.

A ship built under cover is known to be far more durable than one built in the ordinary way. If circumstances would permit her remaining under cover until she should become thoroughly seasoned, or should her timbers be thoroughly seasoned before she is built, there would be no computing her increased durability. Her repairs there in twenty years would, probably, not be equal to 75 per cent of her original cost; whereas, built in the ordinary way, they might, in that period, be safely estimated at 150 per cent more than original cost.

If the system of building under cover had been adopted at the commencement of the navy of the United States, say in 1798, there would have arisen by this period, a saving, certainly not less than *five millions* of dollars, arising from the increased durability imparted to the vessels by building them under cover; exclusively of the saving of 32½ per cent in the first cost of the vessels, as heretofore stated.

In the United States we have no docks; nor have we any way of preparing our ships for repair, but by heaving them down; a process tedious, very expensive and highly dangerous, particularly to large ships, which are always, in a greater or lesser degree, injured by it; nor is it possible to place a vessel hove down in such a situation as to enable the mechanics employed in her repair, to work on her to the best advantage: much time will unavoidably be lost.

The advantages and economy of docks, upon the principle of this invention, in repairing ships, when compared with the ordinary mode in the United States of heaving down, are innumerable. The vessel can be taken into dock with perfect ease and safety, and there placed in the position most favorable for her thorough examination and repair, from her keel up. Every facility to a minute examination and repair, and every advantage to the mechanics in performing their work, is afforded.—Putting aside the risks and the loss of time in heaving down, it may be safely stated that the labor of repairing in a dock of this description, would be at least one third less than the labor of repairing a vessel hove down.

Docks upon the principle of this invention are preferable to the docks in ordinary use; because when the ship shall be taken into dock, and the gates or entrance way closed, there would not be

more than half the usual quantity of water to pump out. Their cost, too, is infinitely less, while their durability will be equal.

The cost of the rail way, and house over it, if the whole should be charged to the invention, would not exceed the expense of heaving down a 44 twice, if the additional labor of repairing in this way be included; nor would it exceed the cost of repairing a ship, built in the ordinary way, after remaining five years in ordinary afloat.

The rail way, with the house, dock, and all the fixtures for hauling up, would not, it is confidently believed, cost exceeding 100,000 dollars. It is indeed believed that 95,000 dollars would be sufficient to construct them of sizes sufficient for the largest sized ship; and this estimate is predicated upon an extent of rail way sufficient to admit of one such ship being laid up in ordinary in a state of perfect preservation above the dock; while the dock would admit the repair of another at the same time.

One dock at each navy yard in the United States—and one set of fixtures for hauling up at each, would probably be sufficient for some time to come.

The fixtures for hauling up; that is, the cradle, composed of vertical slings, beams, &c. particularly described in the specification and drawings, may be estimated to cost 8,000 dollars; the actual cost of the slings, beam, stirrups, and keelstraps complete, being

\$6,989 28

And the beams and blocks estimated at

\$8,000 00

But the whole cost of the rail way and house should not be charged to this invention, because they furnish conveniences which must be provided, whether the rail way and house be erected or not. Among these conveniences may be enumerated a shelter for masts, spars, boats, water casks, guns, &c.; also two wharves. For these conveniences, which may fairly be estimated at one fifth the cost of the rail way and house, the invention is justly entitled to credit.

For the preservation of ships not wanted for immediate service, the invention claims justly, it is conceived, pre-eminent advantages, by providing the most effectual means of preservation, and by reducing many hundred per cent the annual expense of taking care of them.

It will, it is presumed, be at once conceded, that no better plan of preserving ships than that of taking them out of the water, and placing them in a situation perfectly dry, under cover, protected from the sun, rain, snow, sieets and piercing winds, yet admitting a free circulation of pure dry air, can be devised; and that no argument can be necessary to sustain a position so self-evident: It is proper, then, to proceed to show the annual saving in expense.

In estimating the value of the annual saving, we must consider—

1st. The annual expense saved in the care necessary to be taken of them.

2d. The annual deterioration avoided by placing the vessels in a situation where, like the furniture of a house, they can sustain no injury.

Suppose a navy to consist of twelve ships of the line, twenty heavy frigates, and twenty sloops of war; that, of this navy two ships of the line, six frigates and ten sloops, are all that is required for active service; leaving ten ships of the line, fourteen frigates and ten sloops, to be laid up in ordinary, and preserved until they shall be wanted for service.

The following table shows the cost, at this time,

in the United States, of keeping in ordinary, afloat, one ship of the line, one 44, and one sloop. It also presents an estimate of the annual deterioration, which is confirmed by experience. It then shows the annual expense to which, if laid up in ordinary, under cover, as is provided for by the invention, they would be subject; and, deducting the amount of these expenses from the amount accruing, if in ordinary afloat, the annual saving is shewn in each class of vessels.

Rate of vessel.	Number of men required.	Afloat in ordinary.					Under cover, &c.		
		Pay, rations, repairs and contingencies.	Medicines and hospital stores.	Whole annual expense.	Annual deterioration.	No. of watch-s.	Annual expense.	Annual deterioration.	Whole annual saving.
		dolls.	dolls.	dolls.	dolls.	dis.	dolls.	dolls.	
74	25	9,932 50	250 9,182 50	10,000	3 900 0	18,282 50			
44	18	6,302 75	269 7,002 75	6,000	2 600 0	12,402 75			
Sloop	10	3,564 50	100 3,664 50	2,500	1 300 0	5,864 50			

The number of men, stated in the above table, is the number at this time allowed. Some of them are, however, occasionally employed on objects not justly chargeable to the ships. We will therefore make a deduction from the expenses above stated, proportioned to the services rendered on objects other than the ships—twenty men for a ship of the line, fifteen for a forty-four, and seven for a sloop, would probably be sufficient to ventilate, and to keep the ships clean, dry and tight. On this ground, instead of the annual saving, as above exhibited in the table, a reduction in the saving is admitted, so as to bring down the annual saving,

In a 74, to : : : : \$16,000
 In a 44, to : : : : 11,000
 In a sloop, to : : : : 4,500

Then the saving annually in keeping ten ships of the line, fourteen frigates, and ten sloops, under covers, such as are provided on the marine rail way, would be—

10 ships of the line, at \$16,000	\$160,000
14 frigates	11,000
10 sloops	4 500
	<hr/> \$359,000

In making this estimate, the temporary sheds erected over vessels afloat in ordinary, for the preservation of their upper works, the wear of cables, &c. have not been taken into consideration. These would form a considerable item, for which the invention should have credit, because it provides a much more effectual covering for the whole body of the vessel, than the temporary sheds, which protect only their upper works, and renders the use of cables utterly unnecessary.

It has been stated above, that one dock at each navy yard in the United States, would probably be sufficient for some time to come. But economy would probably suggest the having three docks at each yard; one for the largest sized ships; one for frigates; and one for sloops of war: so that a vessel of each class might be repairing at each yard, at one and the same time.

A dock, as heretofore observed, with an extent of rail way, admitting one ship of the line to be laid up under cover, and another to be repaired at the same, together with a house over the whole, and all the fixtures for hauling up, would not cost exceeding \$100,000.

A dock, &c. adapted to a frigate, would cost considerably less; and one adapted to a sloop of

war would cost still less. Though in one for the largest size ship, any vessel of inferior size may be repaired.

Docks with rail ways, &c. of size adapted to vessels still smaller than sloops of war, would probably be found advisable. Their expense, compared to the value of the vessels, would be inconsiderable.

By a system of docks for repairing, connected with rail ways and houses for building, and for hauling up and preserving vessels in ordinary, adapted in their dimensions to the several classes of vessels, you would, at all times, be enabled to build to every advantage; to repair most effectually and economically, and to keep in a state of perfect preservation and constant readiness for service, all vessels not required for immediate service, together with their masts, spars, boats, water casks, guns, &c. all under the same cover, ready to be put on board at a moment's warning. You may thus calculate your actual naval force, with as much precision as you could count your muskets in an armory.

Advantages of "Rodgers' Marine Rail-way, dock, and fixtures, for hauling up," briefly enumerated.

In building ships.—A saving in labor of at least 32½ per cent; a durability so much greater, as to be equal in 20 years to at least 75 per cent, and a great gain in point of time.

In repairing.—When contrasted with the plan of heaving down—every risk is avoided, 33½ per cent gained in the labor—a more perfect examination, repair, and greater despatch also gained.

In ordinary.—When contrasted with vessels in ordinary afloat; decay effectually guarded against—ships kept in a state of perfect preservation, so as to be prepared for service at the shortest notice, and so great a reduction in the actual annual expenses, that they would not be more than one-twentieth part of what they are at present.

In launching.—Hogging and every possible risk effectually guarded against.

The inventor, after having made every inquiry in his power, as to expenses of the navies of other countries, and examining minutely the expenses of our own navy, has no hesitation in expressing, in the most decisive terms, his opinion, that, by adopting in its full extent the proposed system, the United States would save, annually, in time of peace, a sum fully equal to one fourth of the annual expense now incurred in building and repairing ships of war; and that the expense of keeping them in ordinary, afloat, would be reduced so far, that they would not exceed one-twentieth part of the expenses at this time incurred.

With a plane having the inclination of the ways on which ships are ordinarily built, 140 men with three three-fold purchases, (falls of ten inch rope,) would be sufficient to haul up, at the rate of four feet in a minute, the largest three-decker in the world; and this, too, without straining her in the slightest degree.

From the best estimate that can be formed at this time, it is believed that a dock can be attached to the rail way and house, as now constructed in this yard, and completed, so as to give all the advantages of a wet and dry dock, for the sum of 50,000 dollars, as shewn in the estimate herewith, prepared by Mr. Doughty, the naval constructor. It is, however, believed that this estimate is too high, as labor and materials of every description appear to be estimated at from five to seven per cent higher than will be found to be the actual cost.

Estimate of the cost of the materials and workmanship of a Dry Dock, to be built within the "Inclined Plane," as per draught and model.—Prepared by Wm. DOUGHTY.

WHARVES.

26,400 cubic feet of logs	a 25 cts.	\$6,600 00

Philadelphia Water-Works.

Report of the Watering Committee to the Select and Common Councils of the city of Philadelphia.—Jan. 9, 1823.

The great work at Fair Mount, with which the watering committee have been entrusted, being now brought to a conclusion, so far as it is contemplated at present to extend it, the committee think it will be acceptable to the councils, as well as to their fellow citizens, to have a detailed account of

the nature of the work, its value, with its cost in time and money.

The small and expensive supply of water by the steam engines, induced the watering committee, in the fall of 1818, to inquire into a more economical means of furnishing the city, which it was found could be obtained by the erection of a dam and other works at Fair Mount, on the river Schuylkill, if permission could be had from the Schuylkill Navigation Company, who had an act of incorporation for the improvement of that river, and if the right of White and Gillingham to a water power at the falls, about five miles above the city, could be purchased. Both these objects, it was found, could be obtained; the first, by an agreement with the Navigation Company, to erect locks and a canal on the west side of the river, opposite Fair Mount, at the expense of the city; and the other object, by a purchase from Messrs. White and Gillingham, of their water power, for 150,000 dollars.

When arrived at this stage, the subject was submitted to the councils of the city, who unanimously approved the measure; and, with a feeling of public spirit, (which, while it relied upon the good sense of their fellow citizens for support, in the prosecution of so important a design, was nevertheless willing to encounter all the responsibility of commencing it,) appropriated 350,000 dollars to the object. The same disposition has been continued in subsequent councils, to whose steady support the watering committee are indebted for their own regular progress for the execution of their important task.

On the 19th April, 1819, the work was commenced by capt Ariel Cooley, with whom a contract was made for the erection of the dam, the locks and canal, the head arches to the race, and the excavation of the race from a solid rock, for the sum of 150,000 dollars. This work is a monument to his memory; and he had nearly completed it when he was taken off by a disease, supposed to have been contracted by his exposure to the sun and night air, at the closing part of his work. His talents, his integrity, and his general worth, will long be held in grateful remembrance by the citizens of Philadelphia.

It will be proper in this stage of the report, to state the nature of the work that was to be accomplished, and to expose certain of its difficulties. The river is above nine hundred feet in width—one fourth of which, at the bottom, on the eastern side, is supposed to be rock, covered with about eleven feet of mud; the remainder is of rock. The greatest depth is thirty feet at high water; and it gradually shoals to the western shore, where the rock is left bare at low tide. The river, whose average rise and fall is six feet, is subject to sudden and violent freshets.

Mr. Cooley determined, where rock was to be found, to sink cribs, formed of logs, about fifty feet up and down stream, by seventeen or eighteen feet wide, which were sunk and filled with stone, and securely fastened to each other above low water, having the up stream side planked from the bottom to the top; and the space immediately above filled to some extent with earth, small stones and other matter, to prevent leakage. In that part where mud was found, the dam is made of quarry spalls and earth, and raised about fifteen feet higher than the other part of the dam, which is an over-fall for the water; the base of this mound is at least one hundred and fifty feet, and its width on the top twelve feet; and the whole of the top, and of the up-stream side from the water edge, is paved to

the depth of three feet, with building stone, to prevent washing by water and injury from ice. Between the mound dam and the over-fall, there is sunk on the rock, in twenty-eight feet water, a stone pier, twenty-eight feet by twenty-three feet, which supports the end of the mound, and protects it from injury by ice or water. The contraction of the river by the mound dam, suggested to Mr. Cooley the idea of forming the dam in a diagonal line running up stream, and when nearly over to run the rest of the distance at a right angle toward the shore, so as to join the head pier of the guard lock, on the western side, by which means a large over-fall was created, and the rise above the dam, in cases of freshet, considerably abated. The whole length of the over fall is twelve hundred and four feet; the mound dam, two hundred and seventy feet; the head arches, which will presently be mentioned, one hundred and four feet, making the whole extent of the dam, including the western pier, about sixteen hundred feet, and backing the water up the river about six miles. The water power thus created is calculated to be equal to raise into the reservoir, by eight wheels and pumps, upwards of ten millions of gallons; the lowest estimate of the quantity of water afforded by the river in the dry season, is four hundred and forty millions per twenty-four hours, and, as it is calculated, allowing for leakage, waste, &c. that forty gallons upon the wheel will raise one into the reservoir, the quantity raised would be eleven millions of gallons per day.

On the west side of the river there is erected a head pier and guard locks, whence there is a canal extending five hundred and sixty-nine feet, to two chamber locks, of six feet lift each, by which the boats ascend or descend; and below these locks there is a canal into the river four hundred and twenty feet long. The locks are built of dressed stone; the upper canal is walled on the east side, and on the west is rock; the lower canal is formed of the stiff mud of the river and covered with stone. The whole of the outer front of the locks and canal is protected by a wall on the upper part, and on the lower with stone thrown on the bank to prevent washing. On the east side of the river the whole of the bank was a solid rock, which it was necessary to excavate to the breadth of one hundred and forty feet, to form a race, and a site for the mill houses, running parallel with the river. The length of the mill race is four hundred and nineteen feet; the greatest depth of the excavation sixty feet, and the least sixteen feet; the gunpowder used, alone cost the contractor upwards of 12,000 dollars. At the upper part of this excavation were erected the head arches, three in number, which extend from the east end of the mound dam to the rock of the bank—thus forming a continuation of the dam.

On the west of the excavation are erected the mill houses, forming the west side of the race, which is supported on the other side by the rock rising above it seventy or eighty feet perpendicularly. The south end or wall of the race, is also of solid rock; and the mill houses are founded on rock, so that nothing can be contrived more secure in all respects.

The race is about ninety feet in width, and is furnished with water through the head arches, which allow a passage of water of sixty-eight feet in breadth, and six feet in depth, to which the race is excavated below the over fall of the dam, and of course room is allowed for a continual passage of four hundred and eight square feet of water: These arches are on the north of the race, and the mill

buildings being on the west, the water passes from the race to the wheels, which discharge the water into the river below the dam. The gate of the centre arch is upon the principle of a lock gate, and admits the passage of boats, &c. into the race; at the south end of the mill buildings there is a waste gate, eight feet wide, by which (the upper gates being shut) the water can be drawn off to the bottom of the race. A ground plot and elevation of the works are annexed, upon reference to which the situation of the dam, locks, mills, &c. will be seen at a glance.

The mill buildings are of stone, two hundred and thirty-eight feet long and fifty-six wide. The lower section is divided into twelve apartments, four of which are intended for eight double forcing pumps—the other apartments are for the forebays leading to the water wheels. The pump and forebay chambers are arched with brick, and are perfectly secure from the inclemency of the winter. Those now in use are kept warm by means of two large iron stoves heated to great advantage and economy with Schuykill and Lehigh coal. A gallery will be erected, extending the whole length of the building, from which all the wheels may be seen at one view. The centre part of the buildings is one hundred and ninety feet by 25 feet, with circular doors to the pump chambers, and a range of circular windows over the arch ways of the wheel rooms; on a line with the cornice of the central part is the base course of two pavilions, with doric porticos, which terminate west front. One of these is used for the office of the committee; and the other is the residence of an old and faithful servant of the corporation, who has the general care of the property at Fair Mount. On the east front, immediately over the pumps and forebay rooms, is a terrace, two hundred and fifty-three feet long, and twenty-six feet wide, paved with brick and railed, forming a handsome walk along the race, and leading by steps at the end to the top of the head arches, mound dam and pier.

In the erection of the mill buildings, Mr. John Moore was employed as the mason; and to his care and skill we are much indebted, not only for the excellence of the work in appearance, but for its substantial properties; it being ascertained that in the whole extent of the foundation along the race, under a six feet head of water, there is no leak.—Mr. Frederick Erdman, the carpenter, also deserves particular notice, for his part of the work, which has been most faithfully done, and to our entire satisfaction.

It has been from the commencement determined for the present, to erect only three wheels and pumps, which are now completed, and with them the most important part of the duty of the committee. The first of the wheels is 15 feet in diameter, and 15 feet long, working under one foot head and 7 feet fall. This was put in operation on the 1st July last; and it raises one and a quarter million of gallons of water to the reservoir in twenty-four hours, with a stroke of the pump of four and a half feet, a diameter of sixteen inches, and the wheel making eleven and a half revolutions in a minute. The second wheel was put in operation on the 14th of September last; and is the same length as the first, and sixteen feet in diameter; it works under one foot head, and seven and a half feet fall, making thirteen revolutions in a minute, with four and a half feet stroke of the pump, and raising one and one third million of gallons in twenty four hours. The third wheel, which went into operation on the 24th of last month, is of the same size as the se

cond, and works under the same head and fall, making thirteen revolutions in a minute, with a five feet stroke of the pump, and raising one and a half million of gallons in twenty-four hours. It is not doubted that the second wheel can be made to raise an equal quantity; thus making the whole supply upwards of four millions of gallons in twenty-four hours. For the calculation of the water power, and the application of it to the pumps, with much valuable information in other matters connected with the works, we are largely indebted to Mr. Thomas Oaks, a gentleman of science and practical knowledge, now employed as the engineer of the Schuylkill navigation company.

The wheels are formed of wood, and put together with great strength. The shafts are of iron, weighing about five tons each. The great size and weight of the wheel give it a momentum which adds greatly to the regularity of its motion, so necessary to preserve the pumps from injury under so heavy a head as they are required to work, which is a weight of 7900 lbs. the height ninety-two feet.

The wheels being sunk below the usual line of high water, it might be supposed that they would be obliged to stop at that time; but this seldom happens except in the spring tides, at the full and change of the moon, which upon the average stops them about sixty-four hours in a month. It is found that they are very little affected until the back water is about sixteen inches on the wheel. The excellence of the work in the wheels and gates, with the whole arrangement of the mill works, does the highest credit to Mr. Drury Bromley, whose attention has been most assiduous, and whose skill is of the first class.

The pumps are the work of those ingenious engineers, Messrs. Rush and Muhlenberg. They are placed horizontally, according to a design of Mr. F. Graff, and are worked by a crank on the water wheel, attached to a pitman connected with the piston at the end of the slides. They are fed under a natural head of water, from the forebays of the water wheel, and are calculated for a six feet stroke—but hitherto it has been found more profitable to work with no more than five feet. They are double forcing pumps, and are connected, each of them to an iron main of sixteen inches diameter, which is carried along the bottom of the race to the rock at the foot of Fair Mount, and thence up the bank into the new reservoir. At the end of the pipe there is a stop-cock, which is closed when needful for any purpose. The shortest of these mains is two hundred and eighty-four feet long; the other two are somewhat longer. The reservoir next the bank is one hundred and thirty-nine feet by three hundred and sixteen feet, is twelve feet deep, and contains three millions of gallons. It is connected at the bottom with the old reservoir, by two pipes of twenty inches diameter, with stop-cocks. This reservoir contains four millions of gallons. All the water being raised into the reservoirs, one hundred and two feet above low tide, and fifty-six feet above the highest ground in the city, is thence conveyed to the city in a mode which will be pointed out when the committee speak of the iron pipes.

On the 24th of October last, the steam engines were stopped, and it is believed will never again be wanted. The satisfactory test to which the dam was exposed on the 21st of February last, by an ice freshet, which rose eight feet above the overfall of the dam, and which is supposed to be the greatest that has been ever known in the Schuylkill, has quieted all fears as to its safety, and done away all the objections that ever could be raised to a resort

to water power, where nature had kindly done so much.

In another report, the committee will submit the usual estimates for the coming year: in this place, they deem it proper to state the cost of the whole work done since the ordinance passed, April 18th, 1819, viz:

Purchase of White & Gillingham	\$150,000
Erection of the dam, locks, head arches, race, and piers, including estimate of damages for overflowing by the dam	181,000
Three pumps	11,000
Mil] houses, mills and other work connected with them	74,250
Iron raising mains	4,480
New reservoir	8,600
	426,330

A comparative view of the advantage of water power over steam power, will close this part of the report.

By an estimate made by Mr. Graff, and exhibited to councils, with the report of the committee on water power, on the 5th of Feb. 1818, it appeared that the cost of working one steam engine and pump for one year was 30,858 dollars; and it has been found, that with this expenditure, not more than 1,600,000 gallons could be raised in 24 hours; a very inadequate supply for the population of the city, consisting of above sixty thousand souls—without a gallon being afforded to the adjoining districts, containing an equal number, and for whom until the present period there was no provision except by means of wells. If, therefore, it were required, at the same rate of expense, to raise an equal quantity with that at present afforded by three wheels, the cost would be upwards of 70,000 dollars; but estimating the cost at only double that of one engine, it will amount to 61,716 dollars.—From this is to be deducted the interest on the capital expended in erecting the water power and works, which was 426,330 dollars, and was principally borrowed at an interest of five per cent, and amounts to 21,316 dollars annually, and also the expenses for wages, fuel, oil, &c. estimated at 1500 dollars annually, amounting together to 22,816 dollars, which being deducted from the sum of 61,716 dollars, leaves a clear annual saving of 38,900 dollars, equal, at an interest of five per cent, to a capital of \$778,000.

As before stated, it is not doubted that the water power is sufficient to work five wheels and pumps, in addition to the three in operation, which would raise an additional quantity of more than six millions of gallons; and estimating the saving on this quantity in the same ratio as before stated, the amount would be 193,000 dollars more, equal to a capital of upwards of two millions of dollars, and showing the whole saving or profit to be 142,000 dollars annually—a sum nearly double the amount of the city taxes, exclusive of interest on the city debt, which will soon melt away by the operation of the sinking fund.

The uses and importance of this water, it is impossible sufficiently to value. The additional cleanliness of the city; the supply of the neighboring districts, for culinary purposes, as well as for purposes of refreshment; the great advantage in cases of fire; the ornament of fountains in the public squares so wisely provided by our great founder; the benefit to manufactures, and the establishment of water power in the city for various purposes,—may be named among the advantages of this new

work; but above all are we to place its effect upon the health of a great and growing community,—which, of itself, would justify a much greater expenditure.

Necessarily connected with this subject is the distribution of the water, after it has been raised to the reservoirs, and the committee therefore detain councils a little longer, whilst they show what has been done on that head.

The former inadequate supply of water, derived through the wooden pipes of conduit, from Fair Mount, and the constant vexation and expense, occasioned by the bursting of those in the streets, had long turned the attention of the committee to the propriety of substituting iron pipes, but the experiments which had been made were not encouraging, and therefore it became desirable to get information from abroad; several attempts were made without success until the summer of 1818, when, through a respectable house in London, Mr. J. Walker, an engineer of much eminence, made a report which was submitted to councils, with a report from the committee, on the 11th of November, 1818, and both were ordered to be printed.

At the same time some of the iron pipes were procured, and the information derived was so satisfactory that it determined councils to commence the work with laying down a large iron main from Fair Mount to the junction of Chesnut and Broad-streets. An appropriation was made of 70,000 dollars for this purpose at that time, and other appropriations equally liberal, have since been added for iron pipes.

The work was commenced at the old reservoir at Fair mount, into the bottom of which there was inserted a bell muzzle pipe of thirty inches diameter, tapering off to twenty-two inches; this size pipe was continued along Hunter-street, which was filled up to a proper level for the purpose, at the expense of the city, and thence on the old canal bank as nearly level as possible, to Callowhill-street, 2661 feet—the pipe was then diminished to twenty inches diameter, and continued along Callowhill to Broad street, and thence along Broad-street to Chesnut-street, 6009 feet. The opening into the reservoir is closed when required by a stop-cock—The whole quantity of wooden pipes from Fair Mount and through the city, was about 32 miles in extent; all of which in process of time will have to be removed, and iron substituted; but in the mean time the committee have deemed it right to lay down some important mains, even where the pipes do not actually require taking up: for instance there is placed a ten inch iron main on the south side of Chesnut-street, extending from Broad to Water-street; and contracts have been made for pipes of the same size to be laid next season, on the north side of Chesnut-street, which will thus furnish an ample supply to both the north and south part of the city.

In High-street six inch pipes are laid on the south side, from Broad street to Water-street, and are nearly completed on the north side, and will be entirely so early in the spring. Front-st. from Chesnut-street, with an eight inch iron main is laid to Union-street, and will be completed early in the season from High to South-street—the pipes for both the abovementioned sections being all prepared. Walnut from a little west of Sixth-street to Water-street, is laid with six inch iron pipes, and some other streets are laid partially where it was found to be necessary: the whole quantity of iron pipes now laid is 35,205 feet, and in no instance has a leak been discovered. The contrast between this

and former experience with the wooden pipes is highly gratifying.

The straight pipes are made in lengths of nine feet each, with what are called spigot and faucet joints: other pipes, of a circular form to pass round corners, are made of different lengths, as may be required, with easy turns, by which it is obvious the passage of the water is much facilitated. A drawing of the different kinds of pipes is annexed.

The laying of the pipes is very easy, care being taken to keep them firm in their bed—the hub, or large end of one laps about four to six inches over the small end of the other, leaving a space of from one fourth to one half of an inch all round, which is first caulked in with a ring of plaited hemp, to prevent the lead running into the pipes; then a pair of nippers, with a joint in the lower part to fit all round the pipes, and having an opening on the top for the lead and another for the escape of the air, which will be shown in the annexed drawing, is affixed next to the opening on the outer part of the pipe, so as to prevent the lead coming out in front, which is further secured by a ring of clay outside of the nippers, and formed into a cap at top, into which melted lead is poured, forming a ring of lead three or four inches in depth. When the lead is cold, the clay and nippers are removed, and it is then upset with a hammer and chissel, which completes the joint.

Although the iron pipes cost more in the first instance, yet with the experience this city has had with wooden pipes, there can be no hesitation in adopting iron in preference to the latter. The cost of iron pipes, it may be satisfactory to mention, is as follows:

22 inch pipes, per foot	\$6 25
20 do do	5 00
16 do do	3 33 1/3
10 do do	2 40
8 do do	1 66 2/3
6 do do	1 10
4 do do	64
3 do do	45
1 1/2 do do	40

These prices do not contain the prices of lead, laying, &c. as the difference of situation makes so material an alteration. The 20 and 22 inch main cost seven dollars and forty-two cents per foot, on the average, but this includes the filling up of Hunter street, &c.

The greater part of the pipes now laid or in hand were made in the United States, and the committee have never imported any when they were to be had here, except as samples, for the benefit of our manufacturers. In the first contract for the large main, only one offer was made that could be accepted, and after the acceptance of the contract the person who proposed for it preferred making only the twenty-inch pipes, which induced the committee to import the 22-inch pipes. Since that time none others were imported until the last summer, when one of the contractors failed in his performance, owing to an accident to his furnace, and the other contractor could not undertake to make more during the season, in which the committee had made arrangements to complete High and Front-streets. An offer being made to contract for the quantity thus deficient, to be obtained from England, an engagement was made for the deficiency, and the contract has been fulfilled. The sum paid to the manufacturers here for iron pipes, and those now contracted for amounts to 97,814 dollars and 20 cents, and the cost of those imported amounts to 16,940 dollars and 31 cents.

The committee cannot close this report without presenting, in the most distinct manner, to the notice of both the councils and the city, Mr. Frederick Graff, for many years superintendent of the water works, whose taste in the design and whose judgment in the arrangement of the works at Fair Mount, with his indefatigable zeal for the public interest in every department, have attracted the regard and thanks of the committee, and entitle him to those of the councils. All which is respectfully submitted.

By order of the committee,

JOSEPH S. LEWIS, chairman.

January 6, 1823.

Portraits of Hawley and Hancock.

From the life of James Otis, by William Tudor, esq. of Boston

HAWLEY.—The legislature of this year (1766,) received an addition of three eminent members, who were returned to it for the first time: Joseph Hawley, John Hancock and Samuel Adams. Major Hawley, a representative from Northampton, acquired a very remarkable influence in the public councils. Perhaps Massachusetts can boast of no citizen in all her annals more estimable. He continued in the legislature until 1776, and during that period, it has been said, that no vote on any public measure either was, or could have been carried without his assent.

Joseph Hawley was born 1724, educated at Yale college, and followed the profession of the law in Northampton, where he died in 1788, aged 64 years. As a lawyer, he possessed great learning,—able as a reasoner, and a very manly, impressive speaker. He was at the head of the bar in the western counties of the province. He had studied with diligence the principles of law, as connected with political institutions. This had prepared him for a clear perception of the effects that would have resulted from the execution of the ministerial plans against the colonies; and caused him to take the most ardent and decisive part against the stamp act, and the whole series of arbitrary measures which followed it. The adherents of the administration dreaded him more than any individual in his part of the country, and as usual endeavored, although most completely in vain, to injure his character. They succeeded indeed, in this official persecution, in throwing him over the bar, to which he was however soon restored.

The almost unexampled influence acquired by major Hawley, was owing not only to his great talents, but to his high minded, unsullied, unimpeachable integrity. His enemies sought to undermine his reputation, by calumniating his motives, as was their manner towards every distinguished man on the patriotic side. They said his conduct was factious and principles ruinous, and that the only object which he and his coadjutors had in view, was to bring themselves into power under a new order of things. The imputation of selfish, sordid views was insupportable to a man of his character. He therefore at once resolved and pledged himself never to accept of any promotion, office or emolument under any government. This pledge he severely redeemed. He refused even all promotion in the militia; was several times chosen a counsellor, but declined; and would accept of no other public trust but the nearly gratuitous one of representing his town. A modest estate which descended to him from his father and uncle, was ad-

quate to support his plain style of living, and he had no desire to accumulate wealth. His character was so noble and consistent, that his fellow citizens reposed unhesitating confidence in his integrity; they believed that all the honors and wealth of the mother country would be insufficient to corrupt him; while they saw daily that he sought nothing from his own party. His talents, judgment and firmness came in aid of his reputation for disinterestedness, and gave him on all occasions the power of an umpire. The weight of his character was sufficient to balance all the interest which several gentlemen of great respectability in the western countries exerted in favor of the administration. The country members followed his opinions implicitly, and the most powerful leaders in the legislature would probably have been unsuccessful if they had attempted to carry any measure against his opinion.

The ascendancy which was allotted to him by the deference of others, was a fortunate circumstance for his country. Never was influence exercised with more intelligent, devoted and inflexible patriotism. He made up his mind earlier than most men, that the struggle against oppression would lead to war, and that our rights at last must be secured by our arms. As the crisis approached, when some persons urged upon him the danger of a contest, so apparently unequal, his answer was, "we must put to sea,—Providence will bring us into port."

Major Hawley did not appear in the legislature after the year 1776, but he never relaxed his zeal in the service of his country, and was ready to contribute his efforts to the public service. By his private exertions, he rendered assistance at some very critical and discouraging periods. At the season when the prospects of the American army were the most gloomy; when the Jerseys were overrun and the feelings of many were on the verge of despondency, he exerted himself with great activity and success to rally the spirits of his fellow citizens. At this time, when apathy appeared stealing upon the country, and the people were reluctant to march on a seemingly desperate enterprise, he addressed a body of militia, to urge them to volunteer as recruits. His manly eloquence, his powerful appeals to their pride, their patriotism, their duty, to every thing which they held dear and sacred, awakened their dormant feelings and excited them to enthusiasm.

On another occasion he rendered a service of much higher moment, and may be said not only to have prevented, but to have radically destroyed an incipient insurrection. At a time when the burthens and distresses of the war had produced great discontent, and even disaffection in some quarters—and Samuel Ely, a notorious demagogue, had by his factious and treasonable efforts, gone far to organize in the western part of the state, an almost open resistance to the government, delegates from a large number of towns met in convention at Hatfield. The legislature sent Messrs. Samuel Adams, Stephen Gorham, and general Ward, as commissioners to meet them, and avert, if possible, the threatened danger. It was a moment of peril and anxiety. Major Hawley was a delegate from Northampton. At the opening of the meeting, the elements of mischief were visible in all its malignity, and seemed ready to burst into open fury. Hawley with the deepest solicitude, which in great minds is the certain foundation of coolness and self-possession, addressed this convention, consisting of two hundred. His spotless and lofty integrity, be-

fore which even the most callous demagogues shrunk abashed, prepared the way to that triumph which his masterly talents achieved. Argument, satire, pleasantry, alternate appeals to their passions and to their reason,—all managed with consummate address and irresistible energy, gradually subdued their inflamed, refractory humor, and finally moulded them entirely to his will. They not only renounced all their dangerous intentions, but agreed to sign a humble petition to the government, promising future obedience, and praying for an act of indemnity for the past; and, to make the victory more complete, and to show the danger was entirely destroyed, they were brought, with the exception of five persons, to sign the petition, excluding Ely, the leader of the disturbance, from the indemnity.

Major Hawley was a sincerely religious and pious man—but here, as in politics, he loathed all tyranny and fanatical usurpation. He was, near the close of his life, chosen into the senate of Massachusetts. Though he would not have taken the trust at any rate, he seized the opportunity to give his testimony against the test act, which, till a recent period, was a stain in the constitution of that state. In a letter upon the subject, he asked if it was necessary that he should be called upon to renounce the authority of the king of Great Britain, and every foreign potentate? and whether it could be expected, that, having been a member of the church for forty years, he should submit to the insult of being called to swear that he believed in the truth of the christian religion, before he could take his seat.

With all these powerful talents and noble feelings, he was not exempt from a misfortune that occasionally threw its dark shadows over them.—He was subject, at particular times, to an hypochondriac disorder, that would envelope him in gloom and despondency. At those seasons he was oppressed with melancholy, and would lament every action and exertion of his life. When his mind recovered its tone, the recollection of these sufferings was painful, and he disliked to have them remembered.

Major Hawley was a patriot without personal animosities; an orator without vanity; a lawyer without chicanery; and a gentleman without ostentation; a statesman without duplicity, and a christian without bigotry. As a man of commanding talents, his firm renunciation and self-denial of all ambitious views, would have secured him that respect which such strength of mind inevitably inspires; while his voluntary and zealous devotion to the service of his countrymen, established him in their affection. His uprightness and plainness, united to his affability and disinterestedness, gave the most extensive influence to his opinions; and, in a period of doubt, divisions and danger, men sought relief from their perplexities, in his authority, and suffered their course to be guided by him, when they distrusted their own judgments, or the counsels of others. He, in fine, formed one of those manly, public spirited, and generous citizens, ready to share peril and decline reward, who illustrate the idea of a commonwealth, and who, through the obstructions of human passions and infirmities, being of rare occurrence, will always be the most admired, appropriate and noble ornaments of a free government.

JOHN HANCOCK, the son and grandson of eminent congregational clergymen, was born at Quincy, near Boston, in 1737, and graduated at Harvard

SUP. TO VOL. XXII.—24.

college in 1754. His father died when he was a child, and he was then adopted by his uncle, Thomas Hancock, the most opulent merchant in Boston—a man of enlarged views and public spirit, who bequeathed some considerable legacies to different institutions. This benevolent uncle took the entire charge of his young relation, and received him into his counting house on the completion of his education at the University; and, after a few years, sent him to England, to see that country, and to become personally acquainted with his correspondents. He died of an apoplexy in 1764, leaving his nephew to succeed to his very extensive mercantile concerns, and heir to the largest estate in the province. This sudden possession of wealth turned the eyes of the whole community towards him; his conduct under this trying prosperity, secured universal esteem and good will. It made him neither giddy, arrogant nor profligate; he continued his course of regularity, industry and moderation. Great numbers of people received employment at his hands, and in all his commercial transactions, he exhibited that fair and liberal character which commonly distinguishes the extensive and affluent merchant.

The natural influence which he acquired from his habits and his possessions, rendered him extremely popular, and he had been often called upon to act in the affairs of the town. At length he was placed in the legislature,* and this event decided his future career. The stake which he pledged in the large fortune under his control, was a proof of his sincerity in the principles which he professed, which had great weight with minds of the common order, and was quite obvious to even the meanest capacity. He was gradually engrossed by political concerns, and very early became highly obnoxious to the administration. Their enmity was shown in several attempts at insult and oppression, such as seizing his vessels,† calling upon him for excessive bail, &c. all of which only produced more decisive testimonies of popular attachment to him, and a closer conviction in his breast of the intolerable abuses with which his country was menaced.

In the legislature, Hancock was upon every important committee—so that all leading measures had his sanction, though he seldom wrote any of the reports. He had the full confidence of the patriotic party, as they believed him to be unchangeably devoted to their cause; yet, on one oc-

*“I was one day walking in the mall, and accidentally met Samuel Adams. In taking a few turns together, we came in full view of Mr. Hancock’s house. Mr. Adams, pointing to the stone building, said—‘this town has done a wise thing to-day.’ ‘What?’ ‘They have made that young man’s fortune their own.’ His prophecy was literally fulfilled—for no man’s property was ever more entirely devoted to the public. The town had that day chosen Mr. Hancock into the legislature of the province. The quivering anxiety of the public, under the fearful looking for, of the vengeance of the king, ministry and parliament, compelled him to a constant attendance in the house; his mind was soon engrossed by public cares, alarms and terrors; his business left to subalterns, his private affairs neglected, and continued to be so to the end of his life.”—*MS. letter from President Adams to the late W. Tudor, esq.*

†The insolence of the commissioners of the customs led them to offer those impolitic and vexatious offences, which were the immediate cause of much popular excitement.

case, there was a difference of opinion between him and Adams, on some proposition of Hutchinson, in regard to removing the general court to Boston, which created a temporary schism in the party, and a long alienation of friendship between those eminent men. They were reconciled to each other, several years afterwards, and filled the two first offices of the state together, during a considerable period.

General Gage issued a proclamation, in June 1775, a few days before the battle of Bunker Hill, offering a pardon to all rebels, excepting Samuel Adams and John Hancock—"whose offences (said the edict), are of too flagitious a nature to admit of any other consideration than that of condign punishment." This virulent proscription, which was intended to ruin them, widely extended their fame. A few others, it is well known, were secretly proscribed, and would doubtless have fallen victims to ministerial vengeance—but Adams and Hancock were the only two expressly excepted from all hope of pardon, and irrevocably denounced. The alternatives to which their fate was restricted, embraced the two extremes of human disgrace and glory! they were either to be execrated and executed as traitors, or they were to aid in establishing a nation, and to be honored as the benefactors of their country and mankind.

Hancock was president of the provincial congress of Massachusetts, until he was sent as one of the delegation from that province to the congress which met at Philadelphia, in 1775. In 1776, he had the honor to be president of that immortal assembly which signed the declaration of independence.*—He continued in congress till 1779, when ill health forced him to resign. He was an usually chosen governor of Massachusetts, from 1780 to 1785, when he was succeeded by Mr. Bowdoin for two years. In 1787, he was again elected to the same office.—He was also made president of the convention for the adoption of the federal constitution, and continued to be chosen governor of the state, till his death, which took place Oct. 8th, 1793, in the 56th year of his age.

Few persons have enjoyed greater or more invulnerable popularity than this distinguished patriot; and there are not many men who have been so truly entitled to this kind of favor, which, unfortunately, is not always an unequivocal testimony of merit. His character and his fortune rendered his influence of great importance, and he threw the whole weight of both into the scale of his country. If he had kept aloof, and devoted himself to the care of his property, he might have accumulated a vast stock of wealth; but he so disregarded his own affairs in his attention to public engagements, that had his estate not been very large, he would have died as poor as any of his colleagues. He was consulted, when it was contemplated to burn the town of Boston, in order to force the enemy to evacuate

*Without reference to general views, a signature to that instrument, was, to the individual, on personal considerations only, of the most momentous import. The only writing, however, which appears trembling, is that of Mr. Hopkins, who had been afflicted with the palsy. Hancock seems to have had in mind an official proportion in the dimensions of the name; and the force with which it is written, shows that it was never intended to be erased. Those who are fond of relics, may be glad to know, that the pen with which these signatures were made, was preserved, and is now in the cabinet of the Massachusetts historical society.

it. He answered that although the greater part of his fortune consisted of buildings within the town, yet, if its destruction would be useful to the cause of his country, that this circumstance should be no impediment to its being set on fire immediately.

The greatest fault in his character, was a peevishness and irritability that often grieved his friends, but which was forgiven on reflecting, that this failing was not owing to a bad heart, or a mean spirit, but to perpetual ill health. His constitution was naturally feeble, and he was for many years afflicted with the gout. The greater portion of his life, indeed, was past in physical suffering—his mind rose superior to this misfortune in the discharge of his public duties: and as he never relaxed from these, while it was possible for him to continue his efforts, his family and his acquaintance, bore with indulgence a natural consequence of infirmities, under which a less powerful mind would have sunk entirely.

In private life he commanded the esteem of those persons who differed from him in political opinions. His beneficence never failed. In his exterior he exhibited the characteristics of a gentleman—dressing with elegance, according to the fashion of the day; keeping a handsome equipage, and being polite and affable in social intercourse. He was renowned for his hospitality; strangers who were entitled to it, received a ready welcome, and a large circle of acquaintance became frequent guests at his parties, which were distinguished for all the requisites, *material* as well as *personal*, which are necessary to convivial enjoyments, among the refined classes of civilized society. He possessed many valuable qualifications for public life, a knowledge of business and facility in despatching it, and a ready insight into the character of men. As an orator, he was not remarkable; he seldom made an elaborate speech, and the only discourse of his in print, is the oration on the 5th of March, 1774.—But as the president, moderator, or speaker of an assembly, whether it was a town meeting or a house of representatives, he was not surpassed by any person of his time. His voice was powerful—his acquaintance with parliamentary forms accurate, and his apprehensions of questions quick; he was attentive, impartial and dignified, and in these situations, inspired respect and confidence wherever he presided.

Towards the close of his career, as parties grew up under the new constitution, some respectable men were dissatisfied with his administration as governor, but the amount of his popularity as signified by numbers, was not perceptibly diminished. In the adoption of the federal constitution, though president of the convention which discussed that instrument, he did not at the beginning take a very decided part; yet, towards the close of the session he lent all his influence, which was very important, to procure the ratification of the new system.—There were still, however, strong prejudices against him, arising rather from a dislike to particular individuals who surrounded him, than to his own proceedings. Men who were lukewarm or inimical to the federal government, obtained an ascendancy over his mind, which was invidiously manifested at the last journey of Washington to Boston, in 1789. The governor was unfortunately persuaded to start some ill timed questions of etiquette respecting his meeting with the President, which was wholly unexpected by the latter, and tended to mar the pleasure of his visit. At that moment of joyous enthusiasm, when infancy and age were exulting, the one, that it had been born soon enough, and the

other, that it had lived long enough to see the beloved chief: when the people and the magistrates, both sexes, and every profession, poured forth in processions, with overflowing hearts, to greet the most venerated man in the nation, this coldness of the governor inspired universal dissatisfaction.—He himself regretted this mistake, and subsequently endeavored to remove its impression. In fine, his talents may be estimated to have been rather useful than brilliant or profound; his habits and appearance were those of a gentleman; his feelings and principles those of a patriot; his morality and benevolence those of a sincere professor of christianity; he abandoned the care of private interest to devote his time to the welfare of the public; his bodily infirmities could not subdue the energy of his mind, and the part which he took having been adopted from a sense of duty, was inflexibly sustained: he outlived the proscription of his enemies, to be cherished and honored by his fellow citizens, and his name, which stands the leading signature in the national charter, is conspicuously and indelibly stamped in the history of his country.

Speech of Mr. Phillips.

SHARPE vs VIALLS, clerk

The speech of C. Phillips, Esq. as delivered at the court of King's Bench, in an action between *Sharpe v. Vialls*, clerk, to recover damages for a malicious prosecution, for stealing *beef and bread*—value, two pence—on Thursday, December 12th, 1832, before the Lord Chief Justice, and a special jury.

My lord, and gentlemen of the jury.

The jury had heard from my learned friend, that this action was brought to recover compensation in damages, in consequence of a prosecution, maliciously preferred—that is, preferred without any probable cause to warrant it, from the absence of which, malice, though not distinctly proveable, was still presumable and inferential. I need not state to you, that the grounds ought to be strong indeed, to warrant any man, in putting another on his trial on a charge of felony. The principles of constitutional law are too well known in England, to require any statement on the subject. My charge to day, against the defendant, is, that he did institute such a prosecution against my client; not only without any probable grounds to warrant it, but upon grounds the most absurd, the most cruel, the most oppressive, and the most capricious,—a proceeding not only repugnant to his character as a clergyman, but detestable in the eyes of every human being. Gentlemen, I feel, however, that I have much to combat, in advocating the cause of humble poverty, against pampered oppression—I have to charge that oppression upon a character, where the virtues, and the charities of life, are presumed to dwell—I have to fear, also, lest the language which I must hold towards the individual, may be misconstrued into any disrespect, to his venerated profession—most assuredly I mean no such a thing—but when I find a man in lofty station, struggling to prove, that he owes his rank rather to fortune's blindness, than to personal deserving, and when I find him hiding the world's heart under a religious garment, it is my duty to overcome the pain, which the exposure gives me—a duty, to the rank, such conduct has dishonored—a duty to the church, thus more endangered by its own professors, than by all that infidelity can urge against it.

I shall proceed to detail to you the facts—hear them if you can with gravity—think of them, I trust you will not, without indignation. The plaintiff is a poor man, living by the labor of his hands. The defendant, Mr. Vialls, is a clergyman of the church of England, of ample fortune, and its usual attendants, a large establishment. It happened that in October of the last year, the defendant was employed in the garden of Mr. Vialls, as undergardener, and on the 31st of that month, it being Sunday, he dined with his aunt, at Camberwell. They had a small round of corned beef for dinner, and, upon his departure, his aunt, with much hospitality, pressed him to accept a slice of it. He accepted it, returned home, and placed it in an open tool box in the garden, the usual depository for the under gardener's dinner. About 11 o'clock, the Parson went to take the air in his garden; he proceeded with the sagacity of an old pointer to the tool-house, and made a dead set upon the poor man's beef. [Laughter.] He was not contented with the title of it, or he might perhaps, have pleaded prescription [Continued laughter.] But he swept it at once, entire and whole, into his breeches pocket. [The laughter here was loud and prolonged.] Out of the Doctor's own lips, I shall prove this ludicrous disposal of the beef. The poor man was earning an appetite, which it seems, breakfast could not take away from the Parson. The Doctor proceeded directly to his house—he dived at once into the kitchen. "Follow me," said he to the astonished cook, "follow me to the larder, and bring the carving knife with you." [Laughter.] The cook followed with tremulous apprehension, the scullion retreated in silent consternation. Arrived at the kitchen, he cast a look at a round of beef which had already done duty in the family, cut a measured slice from it, with much caution, performed the like operation upon a loaf of bread, and then stalked away without uttering a syllable. "Lord bless us," says the cook, "how hungry my master is—breakfast just over, he's taken to the luncheon." Not for a luncheon, however, was the beef intended; all that day, and all that night, it was the Parson's companion, and next morning the cook received a summons to attend his dressing room; there, spread out in state, he showed her the slice he had cut off the round, and the beef he had manœuvred out of the tool-box—so cut to match, that you could scarcely distinguish between them. "Won't you swear," said the Parson, "that these two slices are from the same round?" "It's impossible that I can," said the cook, "beef's beef all the world over." "I can," said the parson; "here's a slice that came off my round, and I'll swear it did, because I found it in the tool box." "Your round," said the cook, "was safe in the larder; the door was locked, and the key was in my pocket." There was a reason too, which the Doctor assigned for claiming the beef, and which, as it has at least, the merit of originality, I shall mention. Indeed, he repeated it before a jury.—I know the beef to be mine from its complexion! Gentlemen, perhaps he might. I dare say there was a lily whiteness about the fat, and a modest saltpetre aurora like redness about the lean, familiar to the eyes of a Doctor of Divinity.

Gentlemen, the next appearance of the cook was before a magistrate, where she distinctly swore to the utter impossibility of any access to the beef, without her knowledge, and she solemnly denied that such access was ever afforded. The cook having failed, the butler was resorted to. The Parson produced to him the slice from the round, and asked him whether it was not his property? "No,"

said the butler. "God bless me," said the Parson, "what a fool you are, not to swear to beef!" He then produced the slice from the tool box. "At all events, Joe, you will have no hesitation in swearing that this, and the other, came from the same round?" "N," replied Joe, "I'd rather say they did not, because the one is much drier than the other." The old mathematician, when he solved the problem, and exclaimed *eureka*, never felt one-tenth portion of the parson's extacy—"It's the same, Joe, it's the same—it's only drier, because I carried it in my breeches pocket."—[Laughter.]

His next resource, gentlemen, was the plaintiff himself. The plaintiff was bewailing the robbery of his dinner, little foreseeing he was to be considered a thief, he told at once, that he got the beef from his aunt at Camberwell; but parson Vials was not to be satisfied, nor would he even make enquiry. Day after day, the man came to his work, and day after day, the parson beset him, tormenting him hourly with the same questions; at length his patience was quite exhausted, and he said, as I am told, in the presence of the butler, "sir, I told you the name of my aunt, and where she lived; I'll answer you no more upon the subject: I am ready to prove my innocence before any tribunal in the world." In the mean time, gentlemen, the beef was hourly affording the parson another opportunity of lecturing upon the mutability of human affairs; in other words, it was getting musty; despatch was necessary. The parson sent it down, with a strict command that some of the servants should dine on it. The butler rejected it, as he was to be a witness; and the kitchen maid swore she'd not make her stomach a receiver of stolen goods; and the unfortunate cook will tell you that she boiled it herself, in order to prevent a robbery in the scullery.—[Laughter.]

Will you believe, gentleman, that upon these grounds, against the speaking evidence of the man's daily return to work, against the oaths of his own servants, against common sense, merely because he had a cold round in his larder—this prop of the church, who keeps his lordly mansion, his equipage, and his retinue, determined to prosecute this helpless peasant, on a charge of robbery? A charge so laid, as to subject him to transportation. Did you ever, gentlemen, hear of such a case as this? I remember to have heard of one, and but one, which occurred in another country. It was not in Ireland, gentleman, though Mr. Gurney's smiling would seem to say so. It happened in America about fifty years ago. Johnny Hook, gentlemen, was a Highlander. He lived in one of the most economical parts of Scotland, until he arrived at years of discretion, when, of course, he emigrated.—[Laughter]. He arrived in America about the period of the revolution, having brought with him, from Scotland, a little stout bullock, which I dare say, he thought an apt emblem of his countrymen.—[Laughter.] Patriotism is said to be a hungry quality, and unappily for Johnny Hook, the American army encamped in the very field where his bullock was grazing. The bullock was soon sacrificed to the appetites of the invaders of the field, and the setting sun beheld but its last rib in existence. At the conclusion of the war, Johnny set off from the farm, and brought his action against the commissary general, for the price of his bullock. The defence was conducted by the inspired Patrick Henry—a name immortal in America, and, which should never die wherever talent and genius are held in estimation. He touched the chords of the juror's hearts, and when he had pictured before

them the perils, and privations which the American army had undergone, the achievements and victories they had obtained, he exclaimed with a feeling which soon became contagious. "But who is this man who disturbs a nation's devotion, and at the very moment when they are, with uplifted arms, returning thanks to the God of battles, exclaims, beef, beef, beef!"

In America, the name of Johnny Hook will never die. Genius has touched it, and made it immortal—but what was Johnny Hook, when contrasted with parson Vials?—as a candle to the sun. From the moment that the parson glanced his keen, wordly tithe-discerning eye into the poor man's box, his very imagination appears to have become possessed. Throughout all creation he could see nothing but beef! This rounded world, with all its rich varieties, was in his mind nothing but—a round of beef; his roses and his lillies became transformed into bullocks—not a text could he think of, except the flesh pots of Egypt. Beef became to him what ale was to Boniface, his diet and his dream, his garment and his pillow,—in short, whether the parson was eating or thinking, dreaming or preaching, it was all the same—he saw nothing, said nothing, thought of nothing, but beef, beef, beef! The disease, innocent at first, became at last malignant—it excited all his sympathies, and he avowed by his holy hatred of persecution—by his love of christian charity and forbearance—by his abhorrence of all sinful appetites in the poor—by his reprobation of all luxury out of the pale of the church—that he'd grind the devoted beef eater to the dust! If he relented but for a moment, the mutilated round swam across his memory, and with it came the train of its perfections. Oh, it was a round fit for a rector's appetite—a round the very corporation might have envied—a round to bid defiance to the whole common council after a fast day—

The round was a picture for painters to study,

The fat was so white and the lean was so ruddy.

And then his Roman indignation burst into soliloquy—"I'll make an example of the miscreant—I'll make it a city business—I'll have the monster tried at Hick's Hall—I'll retain a judge to prosecute him—the deputy recorder shall prosecute him—I'll go further, the court of Aldermen shall be on the Bench, and he shan't have even a chance, for I'll have him indicted five minutes before dinner—the rascal shall become a perfect pythagorean, and take a distaste to the whole animal creation.—[Laughter]—even in Botany Bay, he won't have the hardihood to look a bullock in the face." [Continued laughter.]

So far this may appear a jest, and as such so far you see I have not been unwilling to treat it. But what will you say, when I tell you that he actually put it into practice? What will you say, when I tell you that he took three whole days to deliberate, and then, though the poor man returning to his garden to his daily work as usual, actually had him arrested on a charge of felony! Yes! when the poor peasant, with all the boldness natural to innocence, day after day presented himself before him—when he was bending in toil over the sluggish soil of its more insensible proprietor, he had him arrested on a charge of robbery! And who did this—a man of wealth—and a man of God!—the very "Dives" of the Bible, "faring sumptuously every day," and grudging to poverty even the crumbs from his table! Who was the magistrate before whom he brought him? A Sergeant-at-law—his own father-in-law!—the son-in-law accused, and the

father-in-law committed him; and, indeed, they were right not to let the glory of the achievement go out of the family.—Imagine, gentlemen, you behold the spectacle—the parson sweating to the complexion of the penny worth—the butler endeavoring to coax him into reason—the cook maintaining the inviolability of the larder—the serjeant threatening to bundle her out of the office, until at last amid the Babel of the contes', and the alternate ascendancy of "beef!" "Church!" "New-gate," and "Botany Bay!" he was confined to five hours imprisonment by these twin ornaments of law and divinity.

At length his friends heard of his situation—he was then necessarily admitted to bail, and bound over to meet his charitable "pastor and master" at the sessions. Let us pause here, gentlemen, and reflect on the situation of my client, during the interval. Turned out of his service, on a charge of robbery—that robbery, the robbery of his own master—unable to procure employment under the doubt—obliged to spend the last shilling of his little savings, amounting to twenty pounds, in preparations for his defence—with many weeks before his innocence could be vindicated, and with the certainty, that even in a case of an acquittal, the fact of his having been tried, would cling to him forever—weigh these sufferings of a poor man and an innocent man, and then say what a rich man and a guilty man, should pay for their infliction. The interval, however, might have had its value—it might have awakened in the prosecutor some compunctions of humanity—did it do so?—no, for four weeks did he brood over the serpent egg of his malignity; for four weeks, night after night, did he lay his head upon his pillow, after praying to the Almighty (if such men ever pray), to be forgiven on the terms of his own forgiveness! I will suppose for a moment, the worst against my client—I will suppose that this charge might have been true, and that the poor man, goaded by hunger, and tempted by opportunity, had taken the rich man's beef, "value one penny"—ought he not, as a minister of the gospel, to have forgotten and forgiven it—ought he not, as a man, to have thanked the power that placed him above temptation, and dropped a tear for the unfortunate! But when it was false, false on the very face of it—and adopted upon grounds which even a drivelling idiot would have discountenanced, and stubbornly persevered in against the combined oaths of every one consulted, in what terms shall we express our disgust and indignation?

At length the long expected sessions came—at ten, to a moment, the parson was in attendance; day after day he missed not a minute—and at least for half their period, upon the steps of the prison house, was this sleek emblem of orthodoxy to be seen, elbowing the thieves and convicts as they passed, and piously preparing to add an innocent man to their number. He was saved all trouble in procuring his attendance—he surrendered himself at once, not attended merely by his bail, but by the indignant crowds who had known him from his infancy, and who now pressed forward to attest the industrious honesty of his life. The cause was called on, and without compunction did this reverend clergyman, upon no other grounds except those I have stated, depose to a charge of felony against my client! His wealth—his rank—his character—his sacred station—all were thrown into the scale against the poor man. What mattered it that he had risen to industry with the morning sun, and that its brightest noon could not reveal a speck upon his character. What mattered it that he had

smoothed the sorrows of a parent's age! There stood a minister of the gospel—a man whose functions placed him above suspicion; there he stood, with the very book in his hand from which he should preach the forgiveness of injuries, burning on my client the brand of an ungrateful felony! Awful to the poor man was that moment; his country, his liberty, his character, (the poor man's only wealth,) at hazard; the little world in which he lived—all were witnesses of his shame and degradation. If he were convicted, the utmost penalty of the law must have fallen upon him, and fallen justly, because to the civil crime, a breach of trust was added; even on an acquittal, pains and penalties must have followed—the expenses he was put to! a fearful issue!—but what did it signify to this follower of the apostles? The poor man might have rotted in a dungeon, but he had a splendid palace in which to riot. The man might have tossed upon a bed of straw; but he had his silken canopy and his bed of down. The poor man might have traversed the returnless ocean; but he had the luxuries of life around him—the hoarded coffer and the groaning board, to some souls, the poet tells, afford ample compensation for the scorn of mankind.

Gentlemen, do I use strong language! I am not ashamed to do so in this rascally transaction. I mean not to use measured language. Though when I meet a minister of the gospel, with the patent of his election stamped upon his life—humble amid the homage which his merits gains him—poor like the dying Fenelon, from his charities—pious, not in his preaching, but in his acts—a link, as it were, between the earth which he instructs, and the heaven, to which he leads, teaching the happiness of the one and typifying the purity of the other—though I can admire such men even in my inmost heart—yet I will not extend my reverence to that vermin sanctity which burrows its way under the foundations of the temple, and eats the bread of the shrine it has endangered. Gentlemen, I need scarcely tell you the result of the prosecution. The prosecutor swore, as might have been expected, to the identity of the beef—to the identity of the bread—and after establishing his full claim to the pennyworth, he called up his household to corroborate him. One of them has been turned out of his service since, the other has a second opportunity to-day. What they swore then—I take for granted they will swear now; and if they do, I defy any man of conscience to say that this man had probable grounds for his prosecution—recollecting, as you will, that all was communicated to him before the sessions—nay, before the arrest. What was the result? The jury rose indignantly, interposing between the accused and the mortification of a defence—he was at once acquitted.

Parson Vials departed happy, I would have supposed, in the escape of innocence, if he had since offered the slightest compensation—if he had even tendered the expenses to which his caprice had put my client; but he has not done so; he chooses again to come before the public, again to meet, I trust, the merited rebuke of an honorable jury. The only point in which such a man can be made to feel, is his purse; and I hope it will at last be opened to the claims of the poor. The trial over, my client and his prosecutor both departed; the one to his lordly mansion, the other to his home of desolation—the one exclaiming, *populus me sibilat*—the other ruminating on all the woe to which poverty is subject, and the wickedness which

may thrive even under a consecrated garment.—The day of retribution, however, is at last arrived; and at your honest hands I confidently claim it—I claim it, not merely for expenses incurred; for imprisonment endured; for character involved; for oppression exercised; but I claim it in addition, for the agony of mind which the plaintiff must have suffered when he saw himself attainted before the world as a felon. But if I wanted an aggravation in this case, do I not find it in the station of the defendant; in that education which should have meliorated his heart; in that wealth, of which, as a clergyman, he was but the almoner of heaven; in that sacred office which should have pressed on him the assumption of benevolence? What would the world say, and naturally say, when they saw such a prosecutor? Would they not say, that glaring indeed must have been the guilt which forced him to depose to it? Would they believe that it was assumed upon the grounds too ridiculous for credulity; grasped at, at first, with a disgraceful promptitude, and afterward pursued with as disgraceful a perseverance, got up by a kind of family arrangement; dragged before the public against all evidence; against the daily return of the accused to work; against the impossibility of access; against the dissimilarity of the article; against the unanimous testimony of every witness who was examined. Gentlemen of the jury, I shall leave this case to you. If you think that innocence should be accused; character involved; expense accumulated; imprisonment endured, and felony imputed, upon grounds like these—dismiss my client; but if you hold probity in respect, though clothed in rags, and oppression in horror, though it be robbed in lawn,—I call on you to say so by your conscientious verdict.

The jury instantly returned a verdict for the plaintiff—damages £50.

The Plymouth Pilgrims.

From "*Collections Historical and Miscellaneous, and Monthly Literary Journal,*" published at Concord, New Hampshire.

An account of the voyage of the Plymouth Pilgrims, from their leaving Leyden, in Holland, till their arrival in New England, and settlement of Plymouth.

[Collected by the reverend THOMAS PRINCE, principally from governor Bradford's History of the Plymouth people and colony, from 1602 to 1646, in 270 MS. pages in folio. It is greatly to be regretted, that this first and valuable history of the pilgrims, was never published, and still more that the manuscript is now supposed to be lost beyond recovery. It was deposited with Mr. Prince's valuable collection of papers in the library of the old south church in Boston, and was either destroyed or carried away by the barbarians of the British army, who converted the old south church into a riding school.]

On the deck then the pilgrims together knelt down,
And lifted their hands to the source of each blessing,

Who supports by his smile, or can blast with a frown,
To him their returns of thanksgiving addressing.

His arm through the ocean had led to the shore,
Where their perils were ended, their wanderings were o'er.

All hushed were the breezes, the ocean at rest,
Was bright in the radiance that linger'd at even,
The prayer of the pilgrims arose from each breast,
Each tongue uttered forth hallelujahs to heaven.
The arm of Jehovah had led to the shore,
Where their perils were ended, their wanderings were o'er.

UPHAM.

"About the 21st July, the English voyagers at Leyden leave that city, where they had lived near twelve years; being accompanied by most of their brethren to Delph Haven, where their ship lay ready, and sundry come from Amsterdam, to see them ship'd and take their leave: they spend the night in friendly, entertaining and christian converse. And July 22, the wind being fair, they go aboard, their friends attending them; at their parting, Mr. Robinson falling down on his knees and they all with him. He with watery cheeks commends them with most fervent prayer to God; and then with mutual embraces and many tears they take their leave, and with a prosperous gale come to South Hampton, where they find the bigger ship from London, Mr. Jones, master, with the rest of the company, who had been waiting there with Mr. Cushman seven days. Seven hundred pounds sterling are laid out at Southampton, and they carry about 1700 pounds venture with them; and Mr. Weston comes thither from London, to see them despatched.

July 23. King James gives a warrant to his solicitor, sir Thomas Coventry, to prepare a new patent for the incorporation of the adventurers to the northern colony of Virginia, between 40 and 48 degrees N. which patent the king signs or Nov. 3d, styling them the council for the affairs of New England and their successors.

July 27. Mr. Robinson writes to Mr. Carver and people letters, which they receive at Southampton; and the company being called together, theirs is read among them, to the acceptance of all, and after-fruit of many. Then they distribute their company into the ships, and with the approbation of the masters, choose a governor and two or three assistants for each, to order the people and provisions.

Aug. 5. They sail from South Hampton, but reach not far before Mr. Reynolds, master of the lesser ship, complained she was so leaky he dare proceed no farther; upon which they both put into Dartmouth, Aug. 13, where they search and mend her, to their great charge and loss of time and fair wind, though had they staid at sea but three or four hours more she had sunk right down. About Aug. 21, they set sail again; but having gone above a hundred leagues beyond the land's-end of England, Mr. Reynolds complained of her leaking again; that they must either return or sink, for they could scarce free her by pumping; upon which they put back to Plymouth; where, finding no defect, they judged her leakiness owing to her general weakness: they therefore agree to dismiss her, and those who are willing to return to London, though this was very grievous and discouraging. Mr. Cushman and family returning with them, the rest taking what provisions they could well stow in the larger ship, resolve to proceed on the voyage alone.

Sept 6. They make another sad parting, and the greater ship sets sail again; but about half seas over meets with cross winds and many fierce storms—which often forces them to hull for divers days together, not being able to bear a knot of sail; make her upper works very leaky, and bow and wrack a main beam in the mid ship; which puts

them in such fear, as the chief of the company enters into serious consultation with the ship officers about returning: but a passenger having brought a great iron screw from Holland, they with it raise the beam into its place; and then committing themselves to the Divine will, proceed.

Nov. 6. Dies at sea, Wm. Butten, a youth and servant to Samuel Fuller, being the only passenger who dies on the voyage.

Nov. 9. At break of day, after long beating the sea, they make the land of Cape Cod, whereupon they tack and stand to the southward, the wind and weather being fair, to find some place about Hudson's river for settlement. But sailing this course about half the day, they fall among roaring shoals and breakers, and are so entangled with them; as they find themselves in great hazard, and the wind shrinking upon them at the same time, they bear up for the cape, get out of those dangers before night; and the next day into the Cape harbor, where they ride in safety.

Nov. 11, *Saturday*. Being thus arrived, they first fall on their knees and bless the God of Heaven, &c. But their design and patent being for Virginia, and not New England, which belongs to another jurisdiction, wherewith the Virginia company have no concern; before they land, they this day combine into a body politic by a solemn contract,* to which they set their hands, as the basis of their government, in this new found country; choose Mr. John Carver, a pious and well approved gentleman, their governor for the first year: and then set ashore fifteen or sixteen men, well armed, to fetch wood and discover the land: who, at night return, but found neither house nor person.

Nov. 13, *Monday*. The people go ashore to refresh themselves, and every day the whales play round about them, and the greatest store of fowls they ever saw. But the earth here a company of sand hills; and the water so shallow near the shore, they are forced to wade a bow shot or two to get to land; which being freezing weather, affecteth them with grievous colds and coughs, which after proves the death of many, and renders the place unfit for settlement.

Nov. 15. While the shallop is fitting, captain Standish, with sixteen men well armed, set out on the cape to search for a convenient place to settle. William Bradford, Stephen Hopkins and Edward Tilly are of the number adjoined to the captain for council. When they had marched a mile southward, they see five or six savages, whom they follow ten miles till night, but could not overtake them, and lodge in the woods. The next day they head a great creek, and travel on to the valley, wherein is a fine, clear pond of fresh water, a musket shot wide and two long. Then they come to a place of graves; then to the remainder of an old fort or palisado, which they conceive has been made by christians; and then into a harbor opening into two creeks, with a high cliff of sand at the entrance, the western creek being twice as large as the eastern. Near which they meet with heaps of sand, dig into them, find several baskets full of In-

dian corn, and taking some, for which they purpose to give the natives full satisfaction, as soon as they could meet with any of them; return to the pond, where they make a barricado and lodge this night, being very rainy: and the next day, wading in some places up to the knees, get back to the ship to the great joy of their brethren.

Nov. 27. The shallop being fitted, twenty-four of their men, with Mr. Jones and nine sailors; thirty-four in all, set forth on a more full discovery of the aforesaid harbor. But the weather growing rough, and the winds cross, they are soon obliged to row for the nearest shore, and then wade above their knees to land. It blows, snows and freezes all this day and night; and here some received the seeds of those fatal illnesses that quickly seized them. The next day, they sail to their designed port, but find it unfit for shipping, land between the two creeks; and marching four or five miles by the greater, are tired with travelling up and down the steep valleys, covered half a foot with snow, and lodge under pine trees. The next morning, return to the other creek, and thence to the place of their former digging, where they dig again, though the ground be frozen a foot deep, and find more corn and beans, make up their corn to ten bushels, which they send, with Mr. Jones and fifteen of their sick and weaker people to the ship; eighteen staying and lodging there this night. Next day, they dig in several such like places, but find no more corn, nor any thing else but graves; discover two Indian wigwags, but see no natives. And the shallop returning, they got aboard at night; and the next day, Dec. 1, returned to the ship.—The corn they found happily serves for their planting on the spring ensuing, or they would have been in great danger of perishing. For which they gave the owners entire content about six months after. Before the end of November, Susannah, wife of William White, was delivered of a son, who is called Peregrine, being the first born since their arrival, and, [as Mr. Prince concludes,] the first of European extract in New England.*

Dec. 4. Dies Edward Thompson, servant of Mr. White, the first that dies since their arrival. Dec. 6, dies Jasper a boy of Mr. Carver's. Dec. 7, Dorothy, wife to Mr. William Bradford. Dec. 8, James Chilton.

Dec. 6. They send out their shallop, with ten of their principal men, viz: Mr. Carver Bradford, Winslow, capt. Standish, &c. with eight or ten seamen, to circulate [circumulate] the bay, and find a better place; though the weather is very cold and the spray of the sea freezes on them, that their clothes look as if they were glazed, and feel like coats of iron. This night they get to the bottom of the bay, see ten or twelve Indians ashore, busy a cutting upon a grampus. By reason of the flats, they land with great difficulty, make a barricado, lodge therein, and see the smoke of the Indian fires that night about four or five miles from them.

Dec. 7. This morning they divide their company, some travelling on shore, eight others coasting in shallops by great flats of sand. About ten o'clock, the shore people find a great burying place. Part thereof encompassed with a large palisado, full of graves, some paled about, others having small poles turned and twisted over them. With-

*In allusion to this contract, the following toast was given at the second centennial anniversary of the landing of the pilgrims at Plymouth, which was celebrated at that place, Dec. 22, 1820: "The solemn contract of the pilgrims in Cape Cod Harbor, Nov. 11th, 1620—and the several editions of it—1776, 1780, 1783, 1820—may it never become obsolete!"

*He died at Marshfield, July 22, 1704. The first born in Massachusetts colony was Elizabeth Patch, who died at Salem, Jan. 14, 1715, aged 87. The first in Rhode Island colony was Mary Godfrey, who died at Newport, April 14, 1715, aged 77.

out the palisado, were graves also, but not so costly. Then they came to four or five wigwams, but see no people. Towards night, they hastened out of the woods to meet the shallop, and making a signal for her to bear into a creek, she comes in at high water to their great mutual joy, having not seen each other since morning; but found no people nor any place they liked: and at night made another baricada, and lodge therein.

Dec. 8. At five this morning they rise, and after prayer, the day dawning, and the tide high enough to call them down to the shallop, they suddenly hear a great and strange cry, one of their company running towards them, and calling out *INDIANS! INDIANS!* And, therewith, arrows come flying among them. Upon discharging their pieces, the Indians soon get away, the English following a quarter of a mile shouting, return to their shallop, having left six men to keep her, and not one of the company wounded, though the arrows flew close on every side. Upon which they gave God solemn thanks; then sail along the coast about fifteen leagues; find no convenient harbor, and hasten on to a port, which Mr. Coppin, their pilot, assures them is a good one, which he had been in, and they might reach before night. But after some hours sailing, it begins to snow and rain. At mid-afternoon, the wind rising, the sea grows very rough, they break their rudder, [and] it is as much as two men can steer her with a couple of oars. And the storm increasing, the night approaching, and bearing what sail they can to get in; they break their mast in three pieces, their sail falls overboard in a very grown sea, and they are like to founder suddenly: yet by the mercy of heaven, they recover themselves, and the flood being with them, strike into the imagined harbour: but the pilot being deceived, cries out, *Lord be merciful! my eyes never saw this place before!* He and the mate would have run her ashore, in a cove full of breakers, before the wind; but a steersman calling to the rowers, *about with her or we are cast away;* they get her about immediately: And, Providence showing a fair sound before them, though it be very dark and rains hard, they get under the lee of a small rise of land; but are divided about going ashore, lest they fall into the midst of savages. Some therefore, keep the boat, but others being so wet, cold and feeble, cannot bear it, but venture ashore, with great difficulty kindle a fire; and after midnight, the wind shifting to the N. W. and freezing hard, the rest are glad to get to them, and here stay the night

Dec. 9. In the morning, they find the place to be a small island, secure from the Indians. And this being the last day of the week, they here dry their stuff, and fix their pieces, rest themselves, and return God thanks for their many deliverances, and here the next day they keep the christian sabbath.

Dec. 11. Monday. They sound the harbour, find it fit for shipping, march to the land, see divers cornfields, and running brooks, with a place they judge fit for habitation, and return to the ship with the discovery to their great comfort.

Dec. 15. The ship sails for this new found port, comes within two leagues of it, when a N. W. wind comes fair, and she arrives in the desired harbour. Quickly after the wind chops about; so that had they been hindered but half an hour, they would have been forced back to the cape again.

Dec. 18. Monday. They land with the master of the ship and three or four sailors; march along the coast, seven or eight miles, but see neither

wigwam or navigable river, but only four or five brooks of sweet fresh water running into the sea, with choice ground formerly possessed and planted; and at night return to the ship. Next day, they go again to discover; some on land, and others in the shallop, find a creek into which they pass three miles and return.

Dec. 20. This morning, after calling to heaven for guidance, they go ashore again to pitch on some place for immediate settlement. After viewing the country, they conclude to settle on the main, on a high ground, facing on a bay, where corn had been planted three or four years before; a sweet brook running under the hill, with many delicate springs.—And a great hill they intend to fortify; which will command all round whence they may go across the bay to the cape. And here being in number twenty, they rendezvous this morning; but a storm rising, it blows and storms all night, continues so tempestuous for two days, that they cannot get abroad, and have nothing to shelter them.

Dec. 21. Dies Richard Britterige, the first who dies in the harbor.

Dec. 23. Saturday As many as can, go ashore; cut and carry timber for a common building.

Dec. 24. Lord's Day. Our people ashore are alarmed with the cry of savages; expect an assault, but continue quiet. And this day dies Solomon Martin, the sixth and last who dies this month.

Dec. 25. Monday. They go ashore again, felling timber, sawing, riving, carrying; begin to erect the first house, about twenty feet square, for their common use, to receive them and their goods: and leaving twenty to keep a court of guard, the rest return abroad at evening. But in the night and next day, another sore storm of wind and rain.

Dec. 28. Thursday. They go to work on the hill, reduce themselves to nineteen families, measure out their lots and draw for them. Many grow ill of grievous colds from the great and many hardships they had endured. *Dec. 29* and *30*, very cold and stormy again; and they see great smokes of fires made by the Indians, about six or seven miles off.

Dec. 31. Lord's Day. Though the generality remain aboard the ship, almost a mile and a half off; yet this seems to be the first day that any keep the sabbath in the place of their building. At this time we therefore fix the era of their settlement here, to which they give the name of Plymouth, (the first English town in all this country, in a grateful memory of their christian friends, they found at Plymouth in England, as of the last town they left in their native land.

Prince's N. England Chronology.—pp. 70—80.

Note. The landing of the Fathers at Plymouth, according to Old Style, was on Dec. 11, but the anniversary is observed on the 22d annually. The face of the rock on which they landed was, in the year 1775, taken from its original bed, and placed by the side of a "liberty pole, which at that time was erected near the court house, and where the rock still remains. It is distinguished by the name of "*Fore Fathers' Rock.*" The base of it yet continues in open view, in its original situation, at the head of the longest wharf in Plymouth, built on the precise spot which uniform tradition assigns as its site. There is a tradition as to the person who first leaped upon the rock, when the families came on shore, December 11, 1620: it is said to have been a young woman, Mary Clinton.— See Coll. Mass. Hist. Soc. 2d series vol. III. p. 174.
