ABBREVIATED RECULATIONS.

ABBREVIATED RECULATIONS.

1 Books can be kept out: Quarto (4°) 1 weeks; Octavo (8°) 3 weeks; less size (12°, 16°, 18°, 12 weeks. [The sizes of books are designated in the Catalogue]. Fine, Leents par week, if kept lovers, unless such book shall be designated by a Seven Days' notice, on which the line shall be five cents per day, if kept dwertone.

2 Any book detained beyond the time limited will be sent for, at the expense of the deliminent.

3. Only 2 books per week allowed.

4. No hook is to be lent out of the loanschold of the subscriber.

5 Any subscriber detected in untillating or writing in a book will be jumished according to the laws of this State, which impose a fine of not less than five dollars for such offence.

6. When residence is changed immediately inform the Librarian.

7. Subscriptions may commence at any time, but will gendinate on the first day of the same month the following year.

8. Subscriptions are not transferable.

9. Every book mist, under penalty of twenty-live cents, be returned to the Labrary at such time as shall be publicly announced.

10. No brook will be delivered except from numbers placed upon the earl furnished for that purpose, which must be presented whenever a book is returned.

NEW YORK, THURSDAY, FEB. 11, 1875,

Volume 4, Number 3, 147 Chathau at, (Clly Hall sqr,t.

Selected for Forest and Stream. By Guyon, WAITING.

THOU of the samp lead,
And boson fairler than the blowtesea foam;
O, Spring, in what waste desert dost thou stay,
Whilst leaves await thy procence to unfold?
The branches of the line with fruct are gray,
And all imprisoned is the crocus' gold;
Conty, sweet Enchanters, come!

Though in the sombre west

Thy shir half lift his cryst—
Fule Phosphor fronting full the withered moon;
Thy violets are sepailtered in snow,
Thy dailest winkle never in the snin,
Rude winds throughout the rained forests blow,
And silent is the dove's melodious moan;

Enchantress, lasten soon.

White are the country ways,
And white the tangled maze,
Love of the exlip and the creeping thyrre;
Bare shakes the poptar on the suffer ridge;
Cold glooms the spectral initi above the flood;
Hearse forrents stream beneath the lyted bridge,
And tighenings strike the darkness of the whod;
Enchantress, bivss our clime.

No bloom of dewy morn,
No freshly blussoured thorn
Gladdens the importunings of sad eyes;
The day reastes drearly through cloud and sleet;
Over the watered meadows and stark vales.
The night comes down, impetators and firet,
And ships and chies shiver in the gates;
O fair Enchantress, rise.

Arise, and bring with thee
The rathe bad for the tree.
The healing sanishine for the trampled grass;
Loose tendrils for the bunghs which bless the caves.
And shield the swallows in the rainy hours.
The pendant farms a writch the bungang heaves.
And faint scruts for the wind-stirred line flowers;
Einchautress, breathe and pass.

Men knew and kissed of old
Thy garment's glinering full—
Thy radiant footprint on the meather waste;
Earth shidled at the advet, ultars horned,
And ringing cymials bade the hearth be gay;
But now, in santess suitudes hurried,
Thos lear'st the world unto relactant day;
O haste, Enchantess, haste!

The lark shall sing again,
Between the sau and rain.
The brown bees through the flowered gastures ream,
There shall be music let the frozen woods,
A gurgling carol in the rushing brook,
As oder in the half unbosomed bad,
And dancing fox-gloves in each forest mock;
Then come, Euchanters, came!

-Chambers' Journal.

For Forest and Stream.

Bambles on the Cexas Grontier.

NE bright morning in January I found myself on Morgan's ferry boat, crossing the Father of Waters, and in a few minutes was at the depot in Algiers. Ifere taking the train for Brashear City, I was soon ratiling away at a rapid pace through a country full of interest to a traveler whose journeyings have heretofore only led bim through the Middle and New England States. Broad acres of sugar cane take the place of wheat fields; the sparkling dashing trout brooks give place to the dark, sluggish waters, where the alligator lurks for its prey. The palmetto, with its long green leaves, waves in the breeze along the banks instead of the alder. Grand old magnolias, resplendent in the wealth of their emerald foliage—dark and sombre forest of funeral cypress, draped in Spanish moss—luge junipers, graceful bays, dense canchrakes, with here and there an immense prairie, where the tall grass, as It bends in the breeze looks like an ever restless sea. These and many other strange sights present themselves to the observing eye as we whirl over the iron track. At noon we reach Brashear City, a place of considerable import-

ince on account of being the terminus of the Lauril T. Railroad and the landing place of a number of steamers plying on the Gulf of Mexica. Having engaged a passage to Brazos Suntingo, I step on board the trim little steam ship Gussie, 900 tons, Capt. Furwell communding. After n short delay in transferring freight and baggage from the tralu, we cast loose and steamed down towards the Gulf, The scenery is at first attractive from its atter dreariness; the scenery is it first oftractive from its inter disuriness; but one som lifes of the clernal sameness. You take up a book and read for an hour, and then take a look, and it seems hard to realize that that old cypress standing far out in the stream, the outer sentiacl of the somire grove beyond, is not the same that you passed a half a scure of miles away. At nightfall we have passed through all the torthous channels with the unspeliable names given them by Mr. Lo (the poor Indian), and enter the broad matters of by Mr. Lo (the poor Indian), and enter the broad waters of by Mr. Lo (the poor Indian), and enter the broad waters of the Gulf. Soon the gong sounds, and a rush is made for the supper hube, where we find Mr. M., the geninl nurser, presiding in place of the Captain. After supper we sit on deck and enjoy the luxury of a good smoke, and all an early hour turn in. In the morning, we who have our sea legs on turn out early und enjoy the glorious suncise. At breakfast there is a small attendance. The day passes quietly along; we see no sails to relieve the monotony of sky and water, and one shivers at the thought of being wrecked in such a desolute highway. At moon we notice slight indi-cations of a Norther, that dreaded storm of the Guif. A three P. M. we are in full sight of Polat Isubel, and at half just four we nuchor off the bar to wait for the pilot to take us over. The Norther is freshening up, and we see the pilot hoat, after two trials, give up the attempt to get over to us; so we have to make ourselves contented, trusting that we shall ride the night out in sufety. The stunneh little Gussie rolls every way but clear over. We turn in early, and at daylight the next morning we are up and anxions lo get ashore. The sky is clear, but there is a heavy sea on, and we watch the shore chosely to see if the pilat is going to starl out. He makes two ideffectual trials, and gues back, and so we leave off watching and go to break-fast. On our return to the deck we see the boat starting again, and in a few minutes we see the most starting again, and in a few minutes we see him pass safely through the long line of surf. Soon he is alongside, and we poss over a line and let him drift astern, as the sea is running too high for her to lay alongside. We fill up one boot, and lower it; a few strokes, and she has landed her freight. Another one is lowered, in which your humble correspondent takes passage. As we pull up alongshile and watch our chance to get aboard, as the wave rises we jump, and some of us land full length on deck. In the next boat there are a number of failies and children, and as they come up we lend them a helping hand, and soon have them all safe. Putting the ladles, children, and some of the male passengers in the little box of a cabin, we cost off lines, hoist sails, and start for the shore. Just hefere we enter the surf we butter down the hatches, while those who remain on deck hold ou to whatever they think will her remain on deck hold ou to whatever they think will heat save them from being washed off; and now we enter the foaming, holling waters. One huge wave lifts us high up in the air, and as we sink down again into the depths a huge roller dashes in over the stern and literally deluges us; another, and thank God we are safe through. I release my hold immediately and go to work taking off the hatches (as the crew have their hands full), so as to give the poor pent up ones a breath of fresh air. They need li, for as they reach the deck they all look as though they could not have stood it many minutes longer. All had been deathly seasick, and they were in a had plight. In a few deathly searck, and they were in a half plight. In a few minutes we were up to the wharf at Brazos Santlago; here we took a little tug to go to Point lashel. Just as were nearing the pier the tug ran aground, and we had to be transferred to a sail boat. We soon after reached the pler, which, as it was very high, and the tide very low, we had to do some tall climbing to reach the top. At last we are all safely landed, and on the shore find sundry and divers conveyances walting to take us up to Brownsville, twentyeight miles distant. Our little party (made up in the steam-

er) consisted of Mrs. O. aml child, Mrs. B. and child, Maj. O'C., two Spanlards, and myself. We selected a team which we thought looked as if it would bring as up shout the inickest. Ains, approximes are very described, especially to harse flesh. Our team was samething of a cross between on ambulance and a male wagon, the motive power being a mule and a mostang at the pule, and three mustangs hornessed abreast diedad. At a short distance we harded up at a bouse to get some funch to take along—a splendid institution, by the way, excellent for a release had, but a most diabulleal arrangement for the jown to backle. After layling in our complexity and solve the special contents of the tackle. After laying in our commissury we started off in Soon one team aloud of us broke down, and we had to lay alongside and repair chanages. First one team would get stalled and then another. Our turn came at last in a great quagmire; but we got out. At another place we stalled, and all the male passengers had to alight and foot it through and and water knee deep for half a and foot it through mind and water knee deep for half a mile. Our route look as across portions of Hog Wallow, Jackass and Palo Alto prairies; nothing fan mud, water, and gross, white here and there a Spanish bayonet bush for the eye to rest upon. At sunset we halted at the Reaca de la Pidma (hartle ground Mexican war), and at a small hamlet—here called a picul eye had some excellent coffee and contains a like. Polyachal was started on acoust. caffee and goat's milk. Refreshed, we started on again, The moon rose bright and respleadent, thiting the tail grass The moon rose bright and respicablem, thiting the tail grass with silvery light. At half past seven we entered Browns-ville, having been eight hours going twenty-eight miles. At Miller's Hotel I found Don Benito waiting for ms, so bidding my fellow travelers adien we crossed the Rio Grande and lamiest in Mexica. At the landing we took a back and drove up to the Heride City, (Monmorse). Ou reaching Don Benito's house, I fannst there was a built going on at El Tentro de la Reforma, and mathing must do but I should, go. My baggage not having arrived, Don Benito kindly placed bla wardradre at my disposal; but your carespondent being Datch halft he can'd anterest suit, either in pudot of law or fact, such echad to brosh up. sult, either in judnet of low or fact, on he had to brook up the best he could and go. The theatro is a very pretty little one. The floor had been hald flook with the stage, little one. The floor had liven laby floor with the singe, and covered over with canvas. An excellent string hand gave us some good music. The dark eyed senorites moved with hewitching grace through the mazy dance. This three pleased my foury most, from its grace and easy statelliness. During the intermissions we samited through the lathing gracellars some particularly line, clears. the latibles, smoking some particularly line eigars.

At half past four Sauday morning I left and turned in pretty well tired out with my day's travels. At half post six Sauday murning i rose and taak a walk. My domical was directly opposite the Plaza—n saudl square which, la all Spraish tawas, is the rallying paint. The trees were all small, none being over thirty feet high. I was particularly struck with the note of a large black bird, about the size of our crow thick bird. This one, and a smaller one, were very tame, and feel in thecks in the streets, like our pigeons. After breakfast I judged Don Bealto, and went up to the market. The market was a mivelty to me, with its huge giles of real peppers, beef cut in long strips, curious earthen ware, strings sweet potatoes, and peanuts having the appearance of suffering from small pox. Matamaras claims a population of 20,000, but I think it can stand a very leavy discount. None of the houses are ever two stories; the best are built of a light calared brick; oil the windows have iron gratings. Some of the streets are paved with octagonal blocks of maquite wood. The once charming private gardens have gone to decay under the blighting effects of many revolutions, and marght marks their place save here and there a stately date paint, with its feathery of the empire, had an earthwork thrown up around the entire city, with here and there a small brick fort, which enables the city to be held by a small garrison. At each roadway a guard and a customs officer is stationed. All cals, fire alarms, etc., are made with a hugle. The garrison consisted of only one regiment while I was there; the privates were all dressed in coarse linen or cotton, and wore

sandals in place of shoes. Properly officered, there are no better troops in the world; they are always in light marching order. A forced march with them is something almost incredible, and would throw "Sheridan's Ribe" in the

After a few days longing around between Matamores and Brownstelle, we commenced making preparations for a hunting trip on the American side, and on Monday, every thing being fixed, we started off at the Octobe in good stelle. Our party considered off Don Bruito, Don Remon, Br. C. and beson, a bright, small history, but the good of the property of t

close as I thought, and after an hour's walk I came to the conclusion that I had lost my hearings. So I sat down to amoke, and cogitate over the situation. I then started again, determined to find my way out. This was easier said thou done, especially for one not well skilled in woodcraft, and particularly in a country like this, where one sees trees almost identically the same; the giant cactus before you looks exactly like the one you possed a few minutes since; the little glade before you is the counterpart of the one just crossed. It is of no use to follow any of the innumerable cattle paths, for they were made by stock that range, I ter miles and miles away. I looked at my watch, and found that I had already been three hours from camp, and foll pretty sure that Don. Benito would soon return and make inquiries about me; so I sat dawn and studied more carefully the sun. Soon thinking I had sulved my difficulty, I made another start, and before long heard three shots ahead of me and more in the rear. I concluded—and, as it proved afterwards, I was correct—that the shots in front did not come from our party, unless, imbed, it was that Dr. C. had altered his lutended course, so I turned to the rear In the direction of the other shots, and soon heard several more. I then fired my revolver three times in quick succession, and almost hefore the noise of the last report had died out I heard two shots from a shot gun, which I knew must be in answer to mine. I then walked rapidly, and an occasional firing being kept up I kept my course very straight, and after a sharp walk for half an hour I struck a trail that I knew I had crossed the day before. Hearing some one enting wood, I went to the spot and found a Mexican plying the axe. Mustering up the best Spanish I could, I asked him if I was on the right truit to Don Modesta's; he replied "Si, senor," and theu rathed off a lot of Spanish, not a word of which I anderstood.

In a few minutes I entered camp, and was greeted with a shoul of lengther. I found that Don Benit

stool. I spoke to him, snying Non intenda Espagnol, which I stood.

In a few minutes I entered camp, and was greeted with a shout of lenghter. I found that Don Benito had returned, and becoming alarmed at my long absence had started off four or live vaqueros on horseback to ham me up, and had the rest firing at a target with the rifles, which oncounted for the firing I had heard. I suggested that they had hetter put me in leading strings next time. I paid my respect to some of Don Ramon's excellent milk punch, and whitel very patiently for dinner, which was on this day io he something extra. It was much of a novelty to me, and would no doubt be to many of your realers. We were to have a pensackie. A fat young heifer is selected and securely field, then thrown down on the side, the throat cut, the blood caught in a pan, salt stirred up in it; the hide is then removed from one side, and the desh is taken off in long strips and lung up. After one side is stripped, the limit is then taken out and thoroughly cleansed, and the choice pieces of meat and the blood put in; the stomech is then securely fied and covered with some coarse bogging and then put in a large hole in the ground; over this is put some of the large holes of the exclus, and the bole filled up with earth, and then a rousing fire of pursquite wood is mode over it, and it is left to cook for four or live hours. When done it is taken up, the stomneh opened, and the contents served up in a lunge pm. This, with some hat to tilbus (a thin cake made of fine corn meah), makes a royal set out. We must not, however, lorget the morlo, a same compounded of sliced onions, flery red peppers, and vinefair. One never lorgets the first taste; you leel like you had swallowed a red hot stave, and that your eyes were the natural ontlet for some boilling spring. Just as we set to, Mr. E. rule over from his nurble und joined us, and insisted on our breaking up camp and going over to his ranche, where game was more abnudhat. After dinner we amused on selves in target shoot

ACROSS NEWFOUNDLAND.

INTERIOR EXPLORATIONS-FLORA, FAUNA, AND GEOLOGI-CAL FORMATION.

[Continued from February 4th.]

CHAPTER VD.

CHAPTER VI).

CTOBER 27th,—The Western territory is entirely primitive. No rocks appear hut granifite. The only soft speat, which vary in quality according to situation. In the valleys some patches are very similar to the savanna peat in the pastward, but as the peat ascends, becomes shallower and lighter until it terminates at the sammit of the mountains in a mirre matting; lichens occupy every station, on the peat, among the other plants, and on the bare rock. The Arbitus and lichens occupy the highest resting places for vegetation on the mountain tops. The trees, all vegetating upon pent, are often forced in this region to assume new features. The harch in particular will grow in spite of the nipping blasts, and where it is not permitted to rise creet on the mountain top, as it does on the lower stations, it creeps along the ground to leewant, whore neither the birch nor spruce can exist. It is thus sometimes only a few inches in height, and many feet in length. The spruce fir thickets are often only a few feet in height, the trees hooked and entangled together in such a minore as to trander it practicable to walk upon, but impossible to walk through them. In an extensive flat, barren track, that lay on our left, there are a number of small, conical shapad granite hills, clad with sombee spruce, which resemble islands in an ocean of meagre vegetation. Yet there are here the remains of extensive forests, destroyed by tire, where mow there is not a tree within many miles. Neither reptile nor serpent of any kind had yet fallen under our notice, nor had the Indians ever seen or heard of any noxions animal being in the island. It may therefore be concluded that there are none of this class, common on the neighboring islands and continent, here.

Were the agriculturists of the coast to come here, they would see herits of réindeer, fat on natural produce of the country, sufficient for the supply of provision to the fisheries, and the same animal fit, with a little traiting, to draw sledges at the rate of twenty unl

the interior, now in waste, at once a well-stocked grazing country, could be done through the means of employing qualified herdsmen, who would make themselves familiar with, and accompany these berds from pasturs to pasture, as is done in Norway and Lapland with the reindeer there, and is Spain with the sheep. When taken young these deer become very domestic and tractable. Were the intelligent resident inhabitants of the coust, who have an interest in advancing the country internally, to adopt a plan for offecting this object, under their own vigilinee, benefits and comforts now unthought of could be realized. Norwegians or Lapland Finns could be easily introduced into the interior, if the Indians were unwilling or until.

We met many thousands of the deer, all hastening to the castward on their periodical migration. They had been dispersed since the Spring, on the mountains and barren tracts, in the West and northwest division of the interior, to bring forth and rear their young amidst the profusion of lichens and mountain herbage, and where they were, comparatively with the low lands, tree from the persecution of thes. When the first frosts, as now in October, nip vegetation, the deer immediately turn towards the bond and East, and the lirst fall of snow quickens their pace in those directions, as we now met them, towards the low grounds where browse is to be got and the snow not so deep over the lichens. In travelling herd follow herd in rapid succession over the whole surface of the country, all bending their course the same way in parallel lines. The herds consist of from twenty to two hundred each, counceted by stragglers or piquets, the animals following each other in single files, a few yards or feet apart, as their paths show; were they to be in close bodies, they could not graze freely. They continue to travel south-eastward until Febrauly or March, by which the returning sun has power to solten the snow and permit of their scraping it off to obtain lichens underneath. They then turn round towards the

waters which unite lakes, the deer unavoidably concentrate in travelling. At those passes the Indians encomp in purities, and stay for considerable intervals of time, because they can there procure the deer with comparatively little trouble.

After the first great fall of snow, although the acclivities had been for a few days laid bare by the mild weather, the summits of the mountains remanned covered, and the snow lay in bunks in the valleys. Light snow showers atterwards accessionally fell, spreading the vell, and thickening the white mantle of Winter in every direction. We suffered much at night from the inclemency of the weather. This trees were here generally so stanted and scanty that we could hardly collect enough of brushwoul and roots to keep a very small fire failwe, and then we were anavoidable exposed. At one time, for three nights in succession, we entit not find a dry spot of ground to lie upon. In such situations the want of sleep nitended the want of schere, and it was a contest between frost and fire which should have the supremacy over our bodies. Although we could slow the extremely over our bodies. Although we could slow to support the system under the exhaustion mil bad of painful latigue which we had to undergo. For any part I could measure my strength—that it would not obey the will not drag along the frame beyond two weeks more. Still it was cheering to hope that space of rime would carry us to the west coast. Ever since we left the last porty of Indians, my Indian disputed with me about the course we should pursue, he obstinately insisting upon going to the southward. Perhaps he had a secret desire out to pass too near the Red Indian convery, or he many have heard that some of his tribe were encauped in the direction he was inclined to go. As a separation might have led to serious consequences, I submitted from a cessity.

Oetober 28th.—The small lakes were sufficiently frozen over for us to walk upon them. As we neared the sont he directions on theirly and southerly of each other. Most

on a wrong course. This small party consisted of eight individuals—one man, four women, and three children; one an infant, was strapped or laced to its cradle, and placed apright against the side of the vigroum, as any piece of domestic furniture might he. They had left St. George's Harbor three months before; since then, had been in the interior, and intended to spend the Winter at Grent. Cod Roy River in St. George's Bay. As every hour was precious towards the final accomplishment of my object, I proposed to my Indian host to accompany me to St. George's Bay; my offer was agreed to and a stipulation made to set off in two hours. In the absence of this Indiau, who told me his name was Gabriel, his family—consisting, as already observed, of females and children—were provide for themselves. For this purpose two guns and ummunition were left with them. One of the young women was a cupital shot; during our halt with them she left the camp and shot a deer close by. Having partaken of the hest piece of venison the interior could produce, together with smoked deers' longues, we set off. Owing to our enfrebled condition, this man's vigor and streugth were enviable.

(To be continued.)

(To be continued.)

For Forest and Stream

SHOOTING ON THE COAST OF ENGLAND

A BOUT seven years ago, I was stopping in an Euglish village, situated on "The Waste," of English historic renown. One sharp, frosty afternoon, as I was strolling along the road, smoking a pipe, and watching the blue snoke fade into air, I was accosted from behind, by the

ling along the road, smoking a pipe, and watching the blue smoke fade into air, I was accosted from behind, by the following words:—

"Oloa sur! where going to?"

"Oh, Jabez! it is you? how are you?" said I, as I turned round and saw the village fisherman, duck shooter and general "Jack of all trades" of the place. "Auything doing down shore?"

"Well, yes," said he; "there's some good sport down there just now. I made a pretly middling good bag of it yesterlay. I recommend you to try a day before this frost lets ap."

"All right, Jabez, I'll think about it." By this time we were apposite the village public house. We walked in, and taking a seat at the bar-room table, Jubez gave me some ascful hints, and very interesting and important information as to the time of the tide, the location of the creeks, and strongly impressed on my mind the necessity of steering home as soon as the tide turned, as if not, I should he too late for the ducks returning from their day spent inhand.

Accordingly, in the evening, as I was smoking my cigar, I proposed to my brother Ned that we should take a day beyond the lank after wild fowl.

"All right," he said; "I was thinking of proposing it myself."
"I guess we had better sling our rifles on our backs, as I hear, that there are some stray swans down this hard

"I guess we had better sling our rifles on our backs, as I hear that there are some stray swans down this hard Winter," he continued.

Whilst finishing our weed we concluded to rise at ahout seven o'clock, and retired early, thinking of the morrow's sport. We wrre up in good time the next morning, eager for the fray, and demolished a very huge hreakfast, after which, letting our retrievers, Bang and Sling, out of their kennel, we set off on our expedition. Confoundedly cold it was, but walking fast, by the time we reached the bank we were in a perfect glow. Before proceeding farther, it may be well to describe the sort of ground we were going to shoot over:—

it was, but walking fast, by the time we reached the bank we were in a perfect glow. Before proceeding farther, it may be well to describe the sort of ground we were going to shoot over;—

The hank, so frequently referred to, is an embankment of engineering construction, crected some years ago, at the time of the reclamation of land from the sen—a necessity to keep the water from again flowing over hand that hefore helonged to it. Beyond this bank the shore was flat for about four miles, and at low tide perfectly dry, with the exception of large creeks running about in all directions, the outflow of all the sea and inland water into the oceau. The first mile and a half is covered with a coarse grass and samphire; the remainder of the distance down to the sea is hard, black mul, with quicksands here and there, and running about in all directions in the grassy portions are little creeks about three feet wide, not at all pleasant when it is known that the exact edge of them is ungetatable through being covered with a sort of weed. This is the description of the exact ground when discernable in Summer, but what it booked like in the depth of Winter is quite another thing; but as we had arrived at the foot of the hank, I will describe what we saw on the top.

Chambering up it when about three feet deep in snow is no easy matter, and we should, anyhow, have paused on its samapit to get our breath, but I think perfect astonishment reigned supreme in both our minds for the first few minutes that we gazed on the unexpected and wonderful sight that then net our view. There had heen several beauty snow storms we knew, but we expected that the title would have taken it off each day as it fell, but such was not the case. The tide up to that time had not risen so high as to come within a mile of the bank. The snow had partially thawed and then frozen, making blocks of snow ice, and the next fall of snow drifting land also thawed and then frozen, tusking a lange ice burrier all along of about a mile in depth to be passed befo

it hard to retrieve, as the goose heing only winged fixed it's beak into the dog's tlank, which, if his howls were to be taken as evidence, was most excessively implement to him. Fearing lest he should forget himself, and so injure the phimage, I hurried to his assistance, but, sufortimitely, when within about ten yards, I stambled and came down a cropper, causing my nose to beleed freely and severely bruising myself all over. I slit some pieces from my handkerchief, with which I effectually plugged my nose und proceeded on my junracy for the reliet of Bang. Little did I expect the old dog would have behaved himself so well, for, although he had held the bird for quite a time, he had hardly ruffed the feathers—a thing I was very auxions about, as the singular fact of the bird being solitary, had impressed me with the idea that it was a rare specimen; and when I got up to it I found I was right, although until I had shown the bird to some accepted authorities, I hid not know that I had been fortunate enough to shoot an Egytian goose. I soon afterwards succeeded ha killing, some carlew, and just before getting to the open ground I brought down a heron.

I think few people ever have felt a greatur sense of relief than I did when I had got clear of the snow-lee, and was able to walk on comparatively firm ground with quick-sand only to hank out fur.

Here we, both of us, kept up a pretty lively bang I hang I small game being plentiful, sand birds, stait, sea suipe, ta

emflew, and jost before getting to the open grown of the show-lee, and down a heron.

I think few people ever have felt a greatar sense of relief than I did when I had got clear of the show-lee, and was able to walk on comprimitely firing ground with quick sand only to hak out for.

Here we, both of us, kept up a pretty lively bane; I hang is small game being pleutiful, sand birds, stait, sen snipe, (a large kind of stait,) and smulry other small sea birds, giving us some fun. At last I began to feel with the court of game to carry, (although I aftewards ited all unwand from the effects of my fall and a good heavy weight of game to carry, (although I aftewards ited all unwand if the bank, where we hatended to make the court of game to carry, and breed and unwait fleet," a binocushive expression for waiting for the flocks of ducks to pass over on their way to the sea after their day in the country, where they feed. Ned commenced to walk toward me, and cousequently we soon joined, and of course we cross examined each other as to our aport so far, I told him and showed him what I had, and in teturn, I found that he had nailed a heron, six brace of carlew, a stray mallard, some gulls, and, like me, a quantity of stait and other small fry. Bang some grew lired of his bank, which was too much for him to scrannile over the ice with, so I had again to shoulder it, pitching into my brother pretty roundly for having proposed bringing our rides, as we had not seen a single swam all day, although I saw some in the market of the "Post town," Boston, a few days afterwards, but in such staved condition as to make them not worth shooting.

I need not weary you by no account of our journey back to the bank; sulfice it to say that after a heavy piece of work for nearly as hour, we arrived liber after many adventures, such as suddenly finding ourselves in one of the tiny little creeks I referred to hove, sitting down rather unexpectedly, and all that sort of thing. The next thing on the programme was to take our position under th

HOW INDIANS HUNT

IT is generally supposed that the Indians never make use of their dogs when hunting, but do their own driving on foot. There are, however, some tribes that use dogs saccessfully in the clase. The Chippewa Indians surround some favorite feeding ground of the deer, and one Indian turns the dogs bose in the centre of the enclosed space. Some of the dogs are well trained and hunt independently of each other, and it often impens that several drer are killed at one drive. The number of hunters engaged in a drive is limited, according to the number of runways to be manned. Large parties often "split" up and hunt in localities adapted to their numbers. Sometimes the Chippewas still hunt singly. They have trails cut through their hunting grounds, as nearly parallel as they can make them, so that when they are hunting there are no dead sticks to crack, and alarm the game, or any twigs to obstruct the hunter's view. Many Indians foolishly

chew their bullets until they become so rough that they can scarcely force them down their rilles. I told one limited that to chew his rille bulls was "bad medicine," and that they would go erooked. He took a ball from his ponch that was badly nourred and pointed to it, saying: "Good medicine—heap kill deer." I tried to show him by signs that he was wrong in his belief, but could not convince him of the fact. Mr. Lee then took a cartridge from my helt, and after having looked at it, and turned it over about twenty times, he looked up quickly and gave a grunt of sutisfaction, and said: "Big shoot—heap kill mattan!" (bear.)

and after having looked at It, and turned it over about twenty times, he looked up quickly and gave a grant of (beart.)

The cartridge referred to was one of Surp's 4-cal, with patched ball and eighty grains of powder. My real friend soon left me, evidently musing ou the big cartridge. As he was leaving, I saw him look at one of this small balls and quickly put it in his pouch, as if he was disgusted with its small size.

In a hudslo country the Gros Ventres, Sioux, Assloboines, Arickarces (Rees) Plegaus, Pawuces, and Utes, surround or corrall a herd when hunting. In some pinces I have seen Indians keep a herd of builtdo corralled for three days. They keep their sentinels out on rises on the prairie about a mile or two, (according to the lay of the ground,) from the herd, and should the buffalos anke a "break" they are inmediately headed and generally turned back by oun or more Indians. Hunting the buffalo is the chief sport of the Iudiaus. In fact they are never so happy as they are when hunting the buffalo is the chief sport of the Iudiaus. In fact they are never so happy as they are when hunting thes buffalo is the chief sport of the Iudiaus having fast horses, or in other words, horses that will calch buffalo, the a leather lu their animals' hells, and should an Indian have a horse that can easily overtake a boffalo, he puts an additional feather in his pony's forelock as mark of great speed. Some of the Sioux Indians punch holes in the back edges of their ponies' cars and the flem fall of hright-colored sifks and worsteals, which are left pendant to fly in the breeze. Horses me vained necording to their feathers, and should an Indian wish to bay a horse he immediately asks its owner It the pony can eatch a buffalo. Undans seldom hunt alono far from their villages. First, it is against the rules of their tribe—and secondity, they are alread of losing their senips. Shouth an Indian go huntlog "on the sly" and he found on howed here the buffalo each individual has two pooles, one of which he leads; they are r

compty his Winchester. Bulls are soldom killed by the Indiaus, as the flesh and silken robes of the cows are the desiderata.

When the chase is over the hunters claim their game and dress it as follows:—The skin is removed and the quanters severed from the body. The leg bones are cracked and the matrow saved for making penticau. The brains of the cows are also used for eating and launing. The tiesh is taken from the animal in flakes and pilet on to the poor little ponies until they are heavily lended, then Mr. Lo mounts on top of the meant, and the ill-used little bensts stagger newly under their double leads. The entroils are partially cleaned, looped on a stick, reasted over a camp three and then growliff devoured as it bits. If a party of Indians are ant huming in an enemy's country the equaws are "permitted" to do all the strudgery of preparing the meat. Early in the season few skins are used, except for making teepies or lodges. When the Winter coat of the hulfulo is about half grown then the Hulfaus commence tanning robes for trading and for their own use. A Uto Indian will sell a good robe for five dollars. The Indians in unrithern Montana ask eight and ten dollars for indian. The Chippewas are the best trappers I have seen mining the different tribes. I have known one young Chippewa back to tend forty traps. The majority of the about ness are cool lazy to trap. In conclusion, I would say, incrus, as a class, are good hunters but poor shots. They are patient, and will wait in a coulé on the trial of a band of antelope all day, if necessary, to obtain a shot. In the timber they are equally good at fluding game, and watch runways and watering places nutil game is killed. Indians will not tramp after game if they can get it by watching.

Moccanal

Little Elk Ricer, Minnesota, January 27th, 1875.

HIDES.—American hides have now become a large and permunent article of export to Europe. American leather is in staple demand in Europe also, and is shipped in large This results from the enormous Increase in the stock of eartle since the war. In Kansus, Texas, Colorado, Nebraska and Wyoming a farmer can double his capital in twenty months in beef cattle, and the business requires little beyond the guarding of the herd. In all the border States innucine herds of cattle are raised on what is called "the range," that is the open public domain, the owners not being possessed of an acre of land. It is from these limitless multitudes of cattle that our markets are supplied with beever, and even this demand scarcety does more than carry off the increase. The prospect appears to be that our country is destined to become the greatest producer of hides in the world. The interest has not yet developed itself West of the Rocky Mountains, except in southern Cah foruia, where it is beboming immease.

SEA Moss .- Considerable business is done at Kittery, Me., SEA Moss.—Considerable business is done at Kittery, Me., in collecting and drying sea moss, which is collected in dories, in the neighborhood of Whale's Back and White Island. Rakes are used, which at half tiple teat the moss from the rocks. It is taken to the beaches and hedded and bleached. It has to be turned like hay. When arred it is packed in barrels and scut to Boston, selling at six cents per pound. Large quantities are used by browers a settling ale.

Hish Culture.

This Journal is the Official Organ of the Fish Cultur-ists' Association.

DISTRIBUTION OF FISH

THE recent lecture of the Hon. Robert B. Roosevelt, hefore the New York Geographical Society, upon the Distribution of Fish in the United States, has not recelved that attention from us which it merited, owing to pressure upon our columns. Alluding to the rapid progress which had been made in the science of fish culture, the speaker contrasted the present knowledge of the habits of fish, and the necessary condition of life for different kinds of fish, with the ignorance upon this subject at the not illstant period when attention was first directed to the necessity for the preservation of fish in our streams, and repopulating them with the kinds that had become scarce Now it is no more difficult to raise fish than to raise chick ens, when proper methods are pursued. A reason given for the searcity of salmon and trout in New England waters, Is the existence of numerous dams which prevent the mi-gration of the fish at Spring and Fall, the Yankees in their zeal for mannfacturing having Ingnorantly destroyed a great source of wealth, which cost nothing to produce. Salmon are not found this side of New England. Hendrick Hudson reported having seen salmon at the month of Hudson River; but Mr. Roosevelt declared that Hendrick was mistaken, and that the fish that he saw were probably weakfish.

Shad can live in water of much higher temparature than treut, and are found in all the rivers running into the Atlantic from Florida to Connecticut. They have already a peared this season in the streams of Florida and Georgia, and will successively he taken in the streams of the Southern and Middle States, coming northward as the warm weather approaches. The speaker declared shad to be the fish for "the people," while trout and salmon were "for us aristocrats." He then instructed his audience in the art of "boning shad." "boning shad." One might as well take one of the small birds and cut it into bits across bones and all, as to cut shad in the way it is usually done. Every fish has its "system" of bones. The shad has its "system." One series is connected with the spine; from the fins are other series; and when attention is paid to the manner in which the bones are placed, it is easy to separate them from the flesh

In the rivers flowing into the Pacific, are fish belonging to the salmon family, though differing from the New England salmon in some particulars. A marked difference of the Pacific salmon is the fact that it lives in much warmer water than its Eastern eousin. It is therefore proposed by the Fish Commissioners to take advantage of this fact, and introduce this salmon to the Atlantic rivers south of New England. In return, the Atlantle coast will send to the Pacific rivers the shad, which now is not found in these waters.

The national fish of America is the black bass. Wholly unknown in European countries, it exists solely with us, where its vigor, enterprise, restlessness, and independence, Its athletic but not altogether comely appearance, makes it rather representative in its character. It is self-reliunt, and when placed in new waters not merely makes itself at home, but appropriates the locality, explores its farthest recesses and devours its aboriginal inhabitants. Its natural distribution was through a few of the lakes of New York, but mainly in the northwestern States. but mainly in the northwestern States. It has, however, heen acclimated in many other pouds and lakes, where it now flourishes extensively. A younger brother, the Oswego or grass bass, is more common, and being less partien-lar in its choice of habitat, fills often in countless numbers the muddy and weedy pouds and streams which the true black bass disdains. These tish, together with the pike perch, (lucioperea,) a variety of which is called the Ohio Susquehanna salmon, people the waters of our land from New York to the Rocky Mountains, and exist here and there also in some of the streams of the South Atlantic States.

They have certain marked differences of habits; the They have certain marked differences of habits; the black bass loves bright, pure, lively water, not as cold as the tront streams of our spring-producing hills and mountains, but free from foul matters held suspended in it, and with motion either of current or from the winds. It deposits its eggs on rocky or pebbly ledges. The pike-perch lives in the great lakes, and rarely, as in the case of the smaller specimen, the Ohio salmon, remains even in the larger. specimen, the Ohio salmou, remains even in the larger rivers; while the grrss bass loves muddy, weenly shores, along which it lays its eggs. None of these varieties are susceptible of artificial cultivation,

Very many Interesting facts were given in regard to fishes, the subject being handled by one who was evidently in love with it. No mention was made of the recent discoveries that the "songs of sirens" are to the ascribed to certain musical fish. So we cannot tell if our speaker would feel regret at having a welrd and beautiful romance destroyed, or be delighted at the discovery of charming ac-complishments in his pets. He did not explain what per centage of "brain food" was to be found in the several varicties of fish, though he seemed assured that his audience, like himself, would look on fish and see that it "was good for food." Nor did he give his hearers any Items showing Ash to have contributed to the poetry of life. The amber gris, from which is prepared the delicate perfume, found floating on the waters principally of the southern hemisphere, is supposed to be produced in the intestlnes of the

spermaceti whale and some other kinds of fish. shores of the Mediterranean Sea where are the salt basins, there are minute ereatures inhabiting the water, which when it is evaporated to the point of yielding salt, die, and yield in their death a perfume like the odor of violets, while a beautiful rosy tint covers the surface of the water. Many fish exhibit exquisite tints of color, both in their living and their dying, Nature having left none of her orders of life without grace and beauty. The energies and enthusiasm of an Agassiz have opened a wide field of research among the denizens of the water. And the labors of the Fish Commissioners are utilizing the reientific knowledge, and teaching the people how to "make two grow, where was one before," Art assisting Nature.

Was the poet a prophet when he cricil-"Oh ye gods and little fishes!"

AMERICAN FISH CULTURISTS' ASSO-CIATION

THE Convention of American Fish Culturists was called to order at 11 o'clock on Tuesday morning, at office of its Vice President, G. Shepard Page. The the office of President, Ilon. Robt. B. Roosevelt in the chair. 45 members were present, and before the morning adjournment a large number of names were added to the list.

Mr. Roosevelt took occasion to formally open the session hy a brief address in review of the progress of Fish culture during the year that has chapsed since the previous meetduring the year that has empsed since the previous ince-ing. He rejoiced that this great economic interest was everywhere advancing, and failing nowhere; success in every direction. Mr. Green's expedition to Michigan in quest of grayling and their eggs, was a success to be proud These fish had been transported to the New State Hatch House at Caledonia, and under the supervision of Mr. Collins, these eggs have been hatched, and there are now fish three inches long, the product of this venture.

of Mr. Collins, these eggs have been hatched, and there are now fish three inches long, the product of this venture.

Sturgeon were formerly very large and very abundant in the Hudson River, and a valuable item of food. It is very prolific, producing millions of eggs, nevertheless the manufacturers of what is known as "caviare," or the the dried roe of fish, have so decimated the supply, that it has been impossible for the Fish Commissioners to procure eggs even for propagating purposes; the more particularly because the eggs used in making caviare are taken before they are fully ripe.

A new fishway, the invention of Mr. Brewer, of Muney, Pa., has been placed in the Mohnwk river, four miles below Schencetady, by way of testing its value, and the result has shown it to be in the estimation of the Commissioners, the hest, most convenient, least expensive, and the most easily adapted to the dam, than any yet invented. We shall give a description of this fishway in our next issue. During the year we have received and distributed black bass, shad, white fish and salmon trout among a greater number of lakes and streams of the State than the public cum have any conception of, and waters that were once totally exhausted and larren of any kind of fish or fish food, are now repopulated and fruitful.

Experiments are always doubtful, and thus the experiment of planting shad in fresh water has not yet proved that these fish can be thus neelimated. It is true that large shad have been taken in Lake Ontario, the Genessee, and other rivers where young fish were placed. It is neer tained that small fish will grow, and large ones will live, under the changed conditions of food and water, but it remains to be seen whether they will deposit their spawn and propagate therefrom. The problem is not yet solved. So also with the introduction of salmon from the Paelife,—the small fry have thriven and grown to large maturity, but we cannot yet determine whether they will multiply and propagate here.

Our greatest triumplin success has

and he produced in ahmdance,—a very important fact, inasmuch as it is one of our most valued and delicious food fishes.

The Secretary Mr. Collins, then read the minutes of the last meeting. After which followed a paper by Fred. Mather, Esq. on "Poisouing and Obstructing Waters" which will be printed in our columns next week verhatim. He showed that our streams are poisoned by chloride of lime from paper mills, dyestaffs from cloth works, and the fishways are not brill into the dams, as is required by law. Our haw prohibits the pedlution of waters under heavy penalty, but is rendered a unillity and inoperative by the exception it makes in case of running water that furnishes power for mills. Mather had seen dead fish in the Hudson 12 miles below Alhany, douhless killed by the chemical works nhove, and on the shad grounds of the Connectical river below the dam, where are two paper mills and a cloth mill. He estimated that 5 tons of chloride of lime and dyestall was discharged from these mills cach day. Sewage from cities was another means of pollution that demanded attention, a cause of damage most inexcusable, inasmuch as there were numerous processes of ntillizing it as manure, or precipitating it altogether. The British Parliament has a proposition now hefore it to correct this aluse in the Thanes. The process of doing away with sewage by earthonization was a most excellent one, and might be applied with advantage. Rivers are also often polluted by the percolation through the soil of nanures placed on the land. He said that, if our rivers were only as pure now, as when our fathers first settled the country, we should have the same ahundance of fish in them now as then.

The Committee on nominations reported in favor of the old hoard of ollicers, who were duly elected.

Mr. Green in referring to Mr. Mather's paper on the impregnation of waters by deleterious matter, coincided with that gentleman, and gave an interesting description of his own experiences.

Dr. Edmunds alluded to the stocking of the Connectleut

Dr. Edminus alluded to the stocking of the Connecticut and stated that as far as his knowledge went no great loss of fish has ensued. He advocated the making of new and more stringent laws on the subject. Mr. Bowles gave an interesting account of his trip to the Au Sable, and the capture of the grayling. He read an interesting letter from Mr. Norris regarding the acclimatization of the grayling in

Eastern waters. Mr. Bowles continued the recital of his experience on the Au Sahle, and commented upon the clearness of the stream, whose fish could be seen in the bottom in water of 20 feet depth. He camped each night in a different place, and found the fish so plentiful as to debar sport. He considers the grayling, although the flesh is white and tender is not equal to the trout for the table. With regard to grayling and trout in same stream Mr. Green stated that as the trout spawn in Fall and grayling In Spring, when the grayling are small and standing on their "tail ends" the trout will "go for him and take him sure."

In Spring, when the graying are sman and standing on their "tail ends" the trout will "go for him and take him sure."

Mr. Collins had experimented with grayling eggs and hatched them at same time as trout, when the grayling were so small and puny that they hid in the gravel, and it was difficult to say that there was fish there. The same food was used and they ate it before sack was entirely absorbed. The experiment as such was successful, and he succeeded in saving 90 per cent. Mr. Mather for many reasons prefers the grayling to the trout—and considers it a question as to which are best for table; require less food and care than tront. The discussion was continued by Mr. Green and Mr. Mather. A telegram was received from Mr. Whitcher regretting his not being able to come, but the Dominion was worthily represented by Mr. Wilmot who gave a most interesting description regarding his experiences, and referred particularly to the great increase of salmon of late years.

Professor Theo. Gill, of Washington, made some interesting remarks regarding the classification of fish, with reference more particularly to the grayling.

Dr. Milner discussed the white fish of the lakes, their mode of feeding, etc.

The subject of grayling was renewed by various gentlemen interested in the subject. Mr. Bowles said this fish was found in Bavaria with a mouth like a sucker. Mr. Hallock alluded to Capt. Bendire as having met graying in Montana; he considered him good authority.

On motion of Mr. Bowles the meeting adjourned to meet at same place and hour on Wednesday. As we go to press on Wednesday our report cannot be completed in this issue.

FISH CULTURE IN VIROINIA .- A bill is before the Virginia Legislature to secure the appointment of Fish Commissioners for that State. It empowers the Governor to appoint two competent persons, who shall continue in office for two years and be known as commissioners of fisheries. They are to inspect all the streams of the State with a view of stocking them with the best food fishes; to consult with the Fish Commissioner of the United States, and of the several States, as to the best modes of constructing fish ladders, propagation, &c., and examine into the feasi-hility of cutting a channel around the Great Falls of the Potomac, or constructing fish ladders at that point to ailmit the passage of fish from tide water into the Upper Potomae and into the Shenandoah, and also inquire into the expediency of constructing ladders to admit the passage of fish over dams or other obstructious in the Upper Potomae and Shenandoah, or elsewhere in the State, make an estimate of cost, &e., and report to the next Gen-

eral Assembly of Virginia.

They are to select proper locations for the propagation and culture of such food fishes as it shall be decired desirand culture of such food fishes as it shall be decuted desirable to introduce into the waters of the State, obtain the accessary ova, and erect suitable houses and devices for hatching them and protecting the small fish until fit to be distributed, and then to distribute them among such waters of the State as shall be deemed proper; are also to have the power to take fish from any of the streams of the State for the purpose of propagation and investigation; and are to make an annual report to the Legislature. The act appropriates \$2,500 to carry out its provisions and pay the necessary expenses of the commissioners.

A gentleman who has lately visited the Bucksport salmon breeding works, informs us that two men are now busy there attending to the work required in changing the water, earing for the eggs, etc. Several million eggs are on hand at the present time. Near the close of February on hand at the present time. Near the close of February a large number of the little fish will be placed in the lake and stream and look out for themselves. The works appear to be quite snceedsful, only a few eggs spoiling, the greater portion hatching all right. Nearly all the fish live, though a few dead ones are taken from the ponds.

The work of stocking the "Twin Lakes," at Salisbury Ct., with salmon trout was begin in good earnest on the 20th of January, on which day Ernest S. Pease, the artist, placed the results of the hatching of the first five hundred ggs sent out by Seth Green on the first fifty cent venture. Placed in the gravelly part of the lake where no grass or weeds give shelter to their enemies, it is hoped that they will make their way to deep water without much loss. Of the "millions," we hope to see "in it," some 3,000 are still the "millions," we hope to see "in it," some 8,000 are still on the hatching screens, and as soon as the yolk sacks are absorbed they will be set at liberty to forage for themselves. Ben. White, of Sheffield, Fred. P. Miles, of Snilshury, E. S. and J. L. Pease, of Twin Lakes, were the pioneers (pecuniarily) in the good work; and it is to be hoped that they will take their reward by hook and crook in the near "by and bye." Another year, the work of stocking the tront streams near by will be pushed with vigor.

Fish Culture in Illinois.—A bill is before the Legislature of Illinois to appoint a Fish Commissioner for that State. In order to secure the full henfits of the Government's work, Illinois ought to have a Commission that would look into the matter and study it. As it is now all the fish that inland towns receive, save a short time in Winter seasons, is the coarse and illfavored buffalo, that no person living along the hanks of a running stream ever pretends to eat. The denizens of the prairie are practically without fish, when hy a little attention they might have excellent bass and pike for the greater part of the year and at a price much less than they now pay for pork and beef. The present bill only contemplates giving the Commissioner \$3 per day and expenses. A modest sum enough in all conscience.

Hatural History.

For Forest and Stream.

T is a well established fact that the attention of observant minds has ever been, to a greater or less degree, attracted to the wonders of the insect world from a very remote period. We meet with numerous references to in seets in the most ancient records which have been preserved to us; and in the oldest of these the judustry and foresight of certain insects, and the ravages of others, are especially brought under our notice. Nor is it at all difficult to account for this. The spleudid lines of namy insects, the remarkable forms of others, and the curious habits of all, are well calculated to excite the admiration of even those who know nothing of them scientifically; while the extensive injuries committed by associated bands of creatures, individually so insignificant, could scarcely fail to confer importance upon an enemy against whose invasions the snl ferers must have felt themselves to be altogether power

The publication many years ago, in England, of Kirly and Spence's invaluable work on entomlogy gave a new direction to the study of insects, and taught their collectors that there was a higher purpose to be attained than the mere admiration of "Bright troops of virgin moths and fresh born butterflies."

It showed beyond a doubt that the external forms of these creatures are the least curious and least instructive sources of interest attaching to them, and the popular style of the work at once seeured for it an elevated rank in scientific literature, which, notwithstanding sundry nnavoidable minor errors, it will ever retain.

In view of the acknowledged merit and standard excel-lence of this work, I shall not besitate to borrow from its valuable and interesting pages such illustrative passages as may tend to further the object of these papers—the familiarization of the popular mind with the idea that the study of insects is neither a frivolous nor an unprofitable mode of occupying time.

The science of entomology is considered and claimed by many emineut students as equal, if not superior, to those of the other branches of natural history. They have shown the sources of pleasure opened to the entomologist, from the inexhaustible nature of the subject, the infinite variety

many emineut students as equal, if not superior, to those of the other branches of natural history. They have shown the sources of pleasure opened to the entomologist, from the inexhanstible nature of the subject, the infinite variety and beauty of the insects, their curious habits, the instruments of attack and defence with which they are provided for their own protection, as well as those expressly intended for the construction of habitations for their progeny, and, above all, the religious instruction to be drawn from these wonderful little creatures.

The lords of creation plume themselves upon their powers of invention, and are proud to enumerate the various useful arts and machines to which they lave given birth, not aware that "He who has tanglit man knowledge" has instructed these despised insects to anticipate him in many of them. The builders of Babel doubtless thought their invention of turning earth into artificial stone a very happy discovery; yet a little bee had practiced this ant—using, indeed, a little different process, on a small scale, and the white ants on a large one—ever since the world began. Man thinks that he stands unrivalled as an architect, and that his buildings are without a parallel among the works of the inferior order of animals. He would be of a different opinion did he attend to the history of insects. He would find that many of them have been architects from time immemorial; that they have had their houses divided into various compartments, and continuing staircuses, gigantic arches, domes, colonnales, and the like; nay, that even tunnels are excavated by them so immense, comparted with their own size, as to be twelve times bigger than that projected by the engineer of the Thames tunnel at Gravesents, who were doomed, to unsightly whitewash and rush carpeting, are ignorant all the while that before they or their ancestors were born, even before the boasted Tyrian dye was discovered, a little insect had known how to hang its walls with tapestry of a scarlet more infliently su

since "He who is wise in heart and wonderful in working" is the inventor and fabricator of the apparatus of insects. There is no exaggeration in these statements, though to the careless observer of these it would seem so. The little stone-making insect first alluded to is a member of the family of muson bees, all of which build their houses of artificial stone, formed principally of graius of sand, selected with great care, one by one, and formed into masses with their own viscid saliva. With these masses of sand, transported singly in her jaws to the site of the building the little architect constructs a number of cells, he each of which she deposits an egg, together with a supply of provisions, to be ready for the young burve on its exclusion; the vacuities between the cells are filled with the same materials as the cells themselves are formed of, and the whole is finally covered with a coating of coarse grains of sand. The mass of cells thus finished looks more like a splash of mid thrown on the wall than anything else, and is so hard as not to be easily penetrated with a kuife; but, hard as it is, certain parasites contrive to pherce the structure with their boring instruments, and to deposit their eggs in the cells; the larve proceeding from these intruders devour the provisions stored up by the industrious cell-builders, whose care for the sufety of their offspring is thus frastrated.

Another family of bees includes the upholsterers, which exercate burrows in the earth tor the reception of their

whose cire for the sufety of their offspring is thus frustrated.

Another family of bees includes the upholsterers, which exervate burrows in the earth tor the reception of their eggs. These burrows they line with an elegant apestry of leaves and flowers, cut from the living plants. One of these bees selects the brilliant searlet petals of the poppy for the drapery of her rooms. After having excuvated a burrow about three inches in depth, and polished its sides, she flies to the poppies, cuts oval pieces out of their flowers, and returns to her cell with these portions an ent out carried between her legs. The petals of poppies, before they are fully expanded, are much wrinkled; the hee manages to smooth out the wrinkles and otherwise fit the pieces to the place they are to occupy. Placing three or four coats at the bottom, she overlays her walls with the brilliant tapestry, proceeding from below upwards until the whole is covered. An egg is then deposited, a supply of food provided, and the apper portion of the lining folded so as to envelop the contents of the cell, the mouth of which is closed last of all with earth. The proceedings of the other upholsterer bees are equally curious; they usually select the green leaves of trees for the lining of then burrows, which are filled with several thinble shaped cells, placed one within the other, the rounded end of one fitting into the mouth of that uext below it.

(To be continued.

-The American Museum of Natural History is Central Park has secured Mr. E. G. Squier's valuable antiquarian

POMPANO AND CREVALLE.

SMITHBORIAN INSTITUTION, WASHINGTON, D. C., January 29, 1875.

Syltheorian Institution, Washington, D. C., Junuary 29, 1875.

Editor Forest and Stream:

A few words of explanation may resolve the doubts and confusion, which appear to prevait among some of your readors respecting the Pordpano and Crevalle.

Our more common fishes rejoice severally in exceptionally large numbers of English names; on the other hand the mander of names is little larger than, if as large as, the number of fishes. The nomenclature, then, is adjusted in this way: The same fish is on different parts of the coast known by different names, while the same name is transposed in the different places to other fishes. This is the case with the two fishes in question. There is not, and never has been, among naturalles, the slightest confusion of the Uorso Crevalle (Carangus hippos) and the Pompano (Trichynotus curofinus) with each other. Mr. Clarke is the error in his statement that Holbrook confounded them. Holbrook bith described and figured them, one (Crevalle or Pompano) ander the name Bothrodaemus pompanus, the other (Horse Crevalle) is Curant defenser; the former is, however, at some places (as at Charleston) called Crevalle; others Cavall, and at others Pompano. The Carangus is also int some places called Crevalle alone; at others (where the Pompania is called Crevalle) "Horse Crevalle," Acc., Holbrook simply committed errors in the scientific nomenclature of the species.

Mr. Clarke, in respect to the description of the Cavaill (i. c. Crangus hippos)" Is the fish by full to the Cavaill in scientific discussion and weighting of testimony). The identification of the Cavalli of Pompano with fishes found northward near Holmes' Hole, was made, however, by the naturalists of the United States Continussion of Fish and Fisheries, and If they are not to be trusted for distributing what the fish is, or is not, whose matherity will Mr. Clarke accept? The specimens which have been identified can at any time be examined at the Smithsonian Institution by Mr. Clarke, and the scientific world may then have the b

SEVERAL MOOTED QUESTIONS.

ROYALTON, Vt., February 1, 1875

ROYALTON, Vt., February 1, 1875.

EDITOR FOREST AND STIREM:—

I had written a short article for you louching the curious blunders of one of your Simborn correspondents, confounding the Pompano with the Cavaili, when I was pleased to find myself anticipated by two other correspondents. There is a striking external resemblance between the Pompano and Cavaill of smallar size. I have often caught the latter in the Bay of Mobile, and thrown them away, when the former were bringing one dollar aplece in the market.

Another correspondent seems to rank the turkey inzzard with some of our best fowls for purity of oder. If the cacteris are paribus in other respects, I know not why we may not get a new sensation by serving the hird on our inflex. I think he has smelled with the eyes, and confounded the hird cirching in graceful orbits high up in the pure ether, with the homely thing rafe in his hideomenses of form and odor, feasting upon the tainted garbage of the city. I once shot a buzzard upon the spot—then an open field—where naw stands the heautiful village of Eutaw, the county seat of Green county. Vt. It was before metallic pears bad come into use. and I shot the bird for its quills. I boiled those quills and sub-

jected them in every deodorizing process I could think of, but in vain. The scent of the bird bring round them, ettll, and it was not the scent of

the rose.

Another correspondent speaks of the predactors and domineering illaposition of the English sparrow. Having occasion last Snumer to spend an horr or two in the depot at Binhugion, I amused myself watching the social confision of access of those pel chatter boxes that had appropriated the upper part of the building to their own use, placing their nests high up among the iron gluders and haves of the roof. A gentleman informed one that a few pairs that leren inraced loose in the town, and at once enfonting thin the building, which was already in possession of the damestic pigeon. Were was declared at once and the little "hamilti" carried the day, driving out their pompons adversaries, and may hold middle undefinited domintor.

SUSPENDED ANIMATION BY FREEZING.

BOSTON, Feb. 1, 1875.

In the aquarium in the windows of Messesger Brothers, 55 Hrandeld street, are four far-chaking smelt, swimming about as Ilvely as the front and other fish that keep them company. These smelt were purchased in the market one day best week, frozen soild. When Messes Messenger bought them the dealer soild they had been caught the previous day. The four frozen shill were thrown his of the quantum, and In less than an hour were apparently as happy as though never taken from the water.

I cut the above from the Hoston Post of Feb. 1st. Have hene stopping at the Bromfield Hums, and saw the fish every day. Mr. Messenger folia me that they were but lightly frozen. One of the fish shows signs of the dreaded fragues. They have very kindly given them to ma for my exhibition of fish at Buffalo Feb. 10th to 17th.

Just how fur fish life can be suspended by freezing is an interesting problem. If frazen soild, it would seem as if the disease would be problem; and past recovery.

Free Mattern

The following letter would seem to give valuable toatl-

The following letter would seem to give valuable testimony upon the question rulsed by Mr. Mather:—

POTNAM, CONN., Fob. 3, 1875

I have been much to make some of my friends believe that a fish after larving been freezen stiff and solid can be thanved out, and, so to speak, be brought to life. Having tried this experiment upon a much some very constitution.

ought to life
ching tried this experiment upon a purch sonn years ugo, I knew
of I affirm, but would be pleased to heat from you or some of the
S. correspondents relative to similar experiments.

FREAKS OF NATURE IN DEER.

New York, Junuary 28, 1873.

NEW YORK, January 49, 1874.

Eintun Famist and Streat:—
Allow me to mid number doe with horns to your list—John Choney has, among his many victims, also killind a doe with horns. The horns were about four or live luches long under the "spike" order. In speaking with him about the peculiarities of dear, he told me that among those he had killed were some entirely out off the common order. Among these was one old back who had never changed his roat, and was killed late in the Fall, as red as a cherry. At another time a disc was captured which had her full growth, and was still equited like in fawn. But the strangest of all was the river he drove to Sandy Raiph. Thony took the dug and went in the Howard Hill to start, while Raiph went to the river to watch; he had gone but a short way when his dog took the river to watch; he had gone but a short way when his dog took the river to watch; he had gone but a short way when his dog took the track, and with senercely a turn put the discretizable fute the through he discretize that, together with the natural pair of horns, there was mothur spika graving straight from the forchead, and still another from where the left type should hel.

This is a well authoritated fact, and Mr. Choney and Ralph are still alive to prove it. Yours,

NO GALL IN DEER.

Children, Cal., January 28, 1875.

Entron Porest and Stheam:—
In your Issue of January 7th, 1 notice (your correspondent from Birch Camp, Minn., in writing of diseased fiver in deer, says: "I observed that the gall of the doe was wanting." Now, what I waith to know is, did he ever find a gall in a deer of any kind? I have killed doer on the prairie, and in the pineries of Minnesota, and in the Slotra and coast ranges of California, and I have my distriber in kill that possessed at gall. I lithik that "J. H. B." is not a very close observer. Yours leak.

Paging:

Patri

It is known, and has been so stated in our paper, that deer have no gall. J. H. B. is a young student who is acquiring knowledge by the toughest kind of experience on the remote frontier, collecting specimens in mild Winter, and shivering alone in a sharty with the thermometer ever so many degrees below zero. The fact that he has made the discovery for biuself that deer have no gall shows that he is a close observer. Be charitable. We have all got to learn .- ED.

WHITE CALIFORNIA QUAIL

Nicasio, Marlon county, Cal., January 29, 1858.
Entrum Finiest and Stream:

As many of your residers are interested in ablinces, I send you the description of a California quail shot in this vicinity. This spectago is a unite and partial ablim, having a white spot on the lower part of throat circle, about one-half luch square; on the breast below are white finith ers; right wing, six primaries, and coverts jure white; left wing, four outer wing coverts white; middle and inner two, half waite; nall of hind toe on left foot white. This bird has been mounted by Mr. Chas A. Allen, of Nicasio, and is in good plumage.

Thimas II. Estx.

Twin Lakes, Canaan, Conn., February 3, 1875

Khiton Forest and Stirkam:

Mr. E. Sherman Pease, of Twin Lakes, Conn., has lately caught a for that puzzles our oldest, as well as youngest inhabitant who has "never seen such afore." It is me gray as a bay lying, trimmed around with foxy red, with black points to nose, care and tall, white under the throat and belly. Now, whether it is a "sliver gray" worth \$150, or only Shalberti gray, at \$1.50, is what we would like some writer for Forest and Stream to decide. Mr. Pease being in artist, as well as trapper, has made a painting of the variabil, which, with one of an ofter now on the casel, may find its way to the Spring exhibition, and the mosted point be settled.

Graves.

Probably a "cross-fox."-ED.

-"Pray, Miss Primrose, do you like steamboats?" in-quired a gentleman of a fair friend to whom he was paying his addresses. "Oh! pretty well," replied the lady, "but I'm exceedingly fond of a smack." The lover took the lilnt, and impressed a chaste salute on the lips of the blush-ing damsel.

The Rennel.

THE ORIGIN OF THE DOMESTIC DOG.

THERE appears to be a wide difference of opinion among naturalists as to the stock from which our dogs of the piesent day came. Some have it the wolf, others the jackal, or fox, while not a few claim that the dhole, or wild dog of India, is the source from which sprang all the varieties. In our opinion It can not be declared with any degree of certainty what the parent stock was. Certain it is that to no one animal can the paternity of these useful ruces be credited, as they are so widely dif-ferent in form, color and other characteristics, and minn could never have developed and brought together such vast differences, opposite natures and shapes as can daily be seen in domestic dogs, unless the original species were in possession of the radiments. Neither could food, climate, or any contrivuuce whatever so completely ulter the nature, docreuse the scenting powers, render the coat, short, tlong, or curly, lengthen or shorten the limbs, unless separate types and formished the material.

Ancient has relief and monumental delineations, picture the dog as distinct in its characteristics thousands of years ago as at the present day, and fossil remains have been repeatedly discovered so little resembling either the wolf, jackal, or fox, and so different in type, as to be classified with the spaniel, terrier, hound, bull dog, turnsput, pointer and pag; and as these, or a part of them, we know to be made dogs, or in other words hybrids, the species must There been fully as numerous then as at the present time.

There are numerous species of wild dogs differing from

one another ulmost as much as our own domestic animals of to-day. Granting that the spuniel, grayhound, and tertier, spring originally from the wolf as some argne, why not point out first why the male dogs are so dissimilar? and again, why the wolves of different countries are unlike, and which species of wolf is the true and only one? Without wishing to conflict with the opinions of those so much more learned on the subject than ourselves, we would ask, would it not be much more reasonable to suppose, williout positive proof, that the origin of the domestic dog can be referred to numerous aboriginal species, crossing with the wild varieties, as we know our dogs will frequently do, in-cluding the wolf, jackal, and the fox if we like; elimate assisting and man aiding by judicious intermixing and breeding, until the present high standard of this useful ani-mal has been reached?

The Indiau dogs may be traced to the prairie wolf, and in Asia the native domesticated dog to the jungle dog. Whatever may have been the originals of the partly tamed canines of the aborlgines of the different sections of the globe, it is probable that the primitive dog, like other ani mals, was very different from any of the present races.

THE WHIP IN BREAKING.

THE WHIP IN BREAKING.

Boston, Mass., February, 1875.

Editor Forest and Stream:

The questions most frequently asked me by parties who come to visit my kennel are, "How do you make your dogs mind you?" and when I maswer that I scurcely use the whip at all, the reply is uniformly, "Well, I cannot see how you manuage without it." This is just the mistake (and it is a great one) which many breakers make, especially if they are amateurs of but little experience. They seem to think ibut the only way to get an idea into a dog's mind is to whip it in, just us the old time pentagogues considered the birch the best mental stimulaut on the royal road to knowledge. Years ago I was no wiser than the rest; but fortunately both for myself and my dogs, I soon learned that the whip was my warst enemy. While I used it I never had a well broken dog, and more than this, I can say that I have nover seen one thus trained which was not either cowed in spirit, or made a sulky, negligent worker. The great secret of perfect breaking is to teach the dog that you me his master, and at the same time to so stimulate both his love for sport and his love for yourself that whether in or out of the field he is constantly studying your wants, and finding his greatest pleasure in ministering to them. A breaker need never expect to bring out a dog's full capacity for good work if, instead of awakening his sympathy, he unreasonably and unmercifully thrashes him for every trivint fault, upon the principle of "showing him who is master." Yet so tenacions are some men of their dignity that they assert it by lashing their dogs, and so are served, if served at all, with the heartless work of a slave, rather than the cincertal service of a sympathizing Iriend.

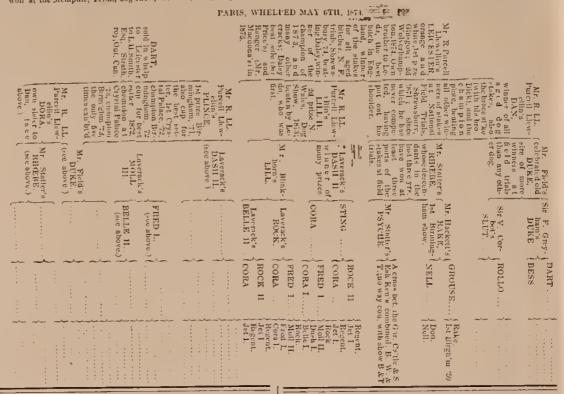

Gol. Hutchinson, in his able treatise on breaking, strougly recommends the use of the check cord, and though satisfied that as a whole his system is much more complicated than it should be, years since I leanned to agree with him fully in his opinion of the cord, and consider it now, with its di

ner in which I work my dogs so as to avoid it as much as possible,

I object to the whip because at best there are few men cool enough to use it properly. It is too handy, and in a noment of passion the pup is so severely punished that instead of understanding that he has done wrong, he becomes frightened by the pain and the violent manner of bis muster, attempts to escape, and if successful is often ever after a confirmed ranaway. Again, I am satisfied that it effects a thing which the cord will not do better and without any danger. I have seen many naturally fine young dogs ut-

PEDIGREE OF FIFLD TRIAL SFTTER DOG, PARIS,

PARIS was imported by owner in Utero from the kennels of R. LL. Porcell Lieweillin, E-q., of Willesley Hall, Ashby-de-la-zoneti, Lei-cestershire, England, and is owned by Mr. L. H. Smith, Strainboy, Onlario, Canada. Pails is own brother to Mr. Bryson's Munde. Mande won at the Memphile, Term, dog show, October, 1801; let prize for best active puppy; also extra prize for the best dog in the show.

terly ruined by a single injudicious thrashing, and I have yet to note the first case where the cord has done barm, even in the hands of a climbey operator.

After a dog has been thoroughly broken, then the whip can be used to advantage in certain cases. In all instances of evidently wilful hisobedience I use the lash, and smartly too, (since one good thogging is far more effectual than, and saves a dozen slight ones.) At the same time I witch my dog critically, and never allow castigation to go be yond the limit of reasonable punishment, lest I awaken an angry, obstinate resistance to my will, that either induces suflemess or develops a sly couning by which the dog tries to get his own way the moment he is at liberty. Before I let the dog go I talk to bim, but more in the tone of warning than reproof, and findly send him off with a gravely spoken caution, and as soon as I see that he is trying to make up for his fault by good work, I encouring him by a pleasant, cheerful word that places us again upon our ordinary sympathetic basis.

I never go into the field with a broken dog without having my whip in my pocket, since, as I have said, circumstances may arise where it is really needed, but I frequently avoid its use for an entire senson by what I deem only proper vigilance. By this I mean watching my dog carefully at all times, never taking my eve off of him if it can be avoided. By such watchfalness I can tell the moment when he strikes a trail, and if he appears in the least earcless or excited, I can by a word check him and prevent the commission of a graver fault deserving the lash. This gives me the most perfect control over my dog, since he soon learns that he is constantly ender my eye, and that the slightest fault will be instantly detected; nor is such supervision difficult, as by practice it has become so habit and as to be almost involuntary, and besides the advantage it is to me in hundling the dog, it keeps me constantly on the alert, and prevents my being surprised by a wild bird rising mexpected

CANINE RAILWAY FARES.

SHAROPEE, Miun., Feb. 2, 1875.

Shakopee, Minn., Feb. 2, 1875.

Entror Forest and Stream:—

In your issue of the 7th of January honorable mention is made of the officers and employés of the Missouri, Karsas and Texas Railways, and they are very favorably compared to other companies whose inter lack of attention or regard for the sportsman and his dogs bave carned for our railway, as a general thing, an unfavorable opinion, to say the least, abroad; while among our American sportsmen a feeling savoring very much of deep disgust towards those who are guilty of this lack of accommodation and civility is becoming yearly more apparent. But, as I can gladly testify, there is one company hereaway that will approach the standard of deceney and respect that you have unanimously voted to the Missouri, Karsas and Texas Railway, and whose officers and employes like unto them are more or less attached to those pastimes where the dog and gun are prominent, that is the St. Paul and Siony City Railway Company. In fact, I have reason to believe that

nearly, if not quite all, the companies whose rai?roads centre in St. Paul and Mankato are great respectors of limiting dogs, and whose employes on the trains generally look upon the owners of such minimals as just about O. K.

We are very glad to learn these facts, and hope that the reform already initiated will become general. Our eastern roads will do well to fall into line a nace. The tariff system for dogs, so recently adopted by the Missouri, Kansas and Texas Railway, should be adopted everywhere with rates to correspond. A uniform charge of one cent per mile for carriage is not excessive, but the rates already adopted are somewhat less, as will be seen.—ED.

-It is now said that hydrophobia can be cured in this way:-"The bite must be bathed as soon as possible with warm vinegar and water, and when this has dried, a few drops of muriatic acid poured upon the would will destroy the poison of the saliva, and relieve the patient from all present or future danger.

WAWAYANDA,—In FOREST AND STREAM of Dec 24th, W. P. Ansonin asks where he can procure a setter dog. If he will write to A. Hughes, No. 20 Nassau street, N. Y., he will hear of one that is considered very good, and for sale at a fair price—\$50.

S. L. SAVILLE, 106 Wall strent. Room 5, thus black and tan fox bound og; would like to that some one with opposite sex desiring good dag to reed.

Aus-Address "Peter," care of J. L. Northrop, Newton, New Jersey.

Miss E. A. T. W., Saratoga Springs.—I wish to know if you could tell me of any person from whom I could procure a Muliese dog; also the a-nal price of such a dog?

Ans—We have no knowledge of such a description of

dog in this country.

S. E. P., Cleveland, Ohio.—1s a cross from setter to spaniet good or handing, or are they liable to be wild?

Ans—Such a cross would not be equal to a setter for any purpose; they would be serviceable for rabbits or

squirrels, and could be made good duck retrievers.

Q.C., Philadelphia.—Please give me your advice in selecting a dog, whether a setter or pointer! Which is the kinder, neater about the conseand yard, more gentle with children, and more retentive of what staught? Also, would you advice a dog or slut?

Ans—1st. The setter is generally a neater and kinder dog about the house. The pointer retains his breaking longer, and is generally the most stendy when hunted but seldom.

2d. A dog, by all menns, unless you want to preed stock.

THE PIKE.-A writer referring to this voracious fish,

The Pike.—A writer referring to this voracious fish, snys:—

"Tho pike is undoubtedly the longest-known and most widely-diffused fish in the world. It inhabits the inland waters of all northern countries. It was a favorite fish in the tays of the Roman Empire, and has been eaten in Germany and Poland from time immemorial. It is known to live to a very great age. Rzaczushi, a Russian writer, says that he knew of a pike that lived to the age of ninety years. One was taken in a lake in Snabia, Germany, in 1479, having a ring attached, on which an inscription mentioned that the fish was placed in that water in 1280, anking its age 199 years. It weighed three hundred and fifty pounds. This ring is still preserved at Mannheim. In seining a pond near Newport, England, one was taken weighing a hundred and seventy pounds. In Persia they are also said to grow to a great age and size."

—This is the way a colored preacher at Richmond arranged his hearers for untual convenience: "De fore part up de church will please sit down so de hind part ob de church can see the fore part, for de bind part can't see de fore part ef de fore part persist in stamm' before de hind part to de utter exclusion of de hind part by de fore part."

Feb. 17.

YACHTINI: AND BUATING—NEW YORK YACHT CLUB.—
A general meeting of the club was held on Thursday evening of lust week, Vice Commodore Douglus in the club.,
After the minutes of the last meeting had been read the rights of an owner to vote whose yoch had not been registered in accordance with the by-laws, it being understood that the owner of the schooner. Waterwitch " had not complied with this regulation. Upon a vote being taken the representation was allowed. After a call of yachts by Messrs. Draper, Krebs and Minton, it was found that the following geutlemen were elected to fill the various allices for the cusuing year: Commodore—George L. Kingsland; Vice Commodore—William T. Garner; Rear Cammodore—S. Nicholson Kane; Secretary—Charles A. Minton; Treasurer—Sheppard Homans; Measurer—A. Cary Smith; Fleet Surgeon—L. de Forrest Woodruff, M. D.; Regatin Committee—William Krebs, R. K. Cooke, J. Frederick Tams; House Committee—Fletcher Westray, N. D. White, George L. Jordan, W. H. Pendleton, J. G. Beresfard, George W. Kirld, H. N. Alden.

Mr. E. Bouche, of the English cutter yacht Fiona, with several others, was added to the membership of the club.

On mation of Mr. Diekerson, Thursday, June 17, was appointed as the day for the sailing of the next annual regata, and the sum of \$3,300 was appropriated for defraying the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses appertaining the cost of prizes and all other expenses apper

Mr. Flint, of Collins Point, opposite Gleu Cove, has of-fered to present the Club with an aere of ground at that phase, providing a suitable club-honse was erected thereon. phase, providing a suitable club-house was erected thereon. A proposition was submitted by Commodore Garner to the effect that he would erect a building of ample dimensions at Stapleton, S. I., if a rent of \$2,000 per annum and taxes are guaranteed him for a series of five years. After much discussion a committee was appointed to investigate and report on both offers.

On motion of Mr. Coston a committee of three, consisting of Messrs. Coston, Dickerson and Center, was appointed to confer with the American Lloyds regarding the subject of registering all yachts of the club.

A letter received fram the officers of the proposed Centennial Exhibition in Philadelphia was read, asking the club to take part in an international regatta, in which prizes to the amount of \$100,000 will be offered. The matter was referred to a committee, to report at the next regular meeting.

As the rules now stand, in all future regattas yachts will be required to sail to the westward of bnoys 8½ and 10, and to the northward of bnoy 5½. A special meeting of the club is ordered for this evening, 11th inst.

— Ponghkeepsic, as the headquarters of the principal ice-boat clubs, is preparing for the annual regatia which will come off as soon as opportunity offers, when the races for the ladies and champion pennants will be decided. The Peughkeepsic Club extends a cordial invitation to New York yachting men to witness their sport.

IGE-BOAT RECATTA.—The New Hamburg Ice-Boat Club held their annual races on Saturday last. The ice on the river stretching as Iar north and south as the eye could reach was a foot or more in thickness and as smooth as glass. The course was 12 miles in length. At quarter past twelve the following boats came into position for the first

Bont.		Owner.
Zero		Peter Le Roy
Flying Cloud.		rving Grinnell
Zig Zag		Jucob Le Roy
Burtle	,	J. R. Lauren
	P. A.	

Every loat earried three men, who were muffled up and stretched flut on buffulo robes laid on the bout. Only one man staticued on the cud of each windward runner plank, to keep the boat from lifting, being exposed to the intense cold and piercing wind. The Zephyr had the best of the start, but unfortunately soon after her jib-stay paried, and she was cut of the race. The Quickstep rounded the flug first, followed by the Flying Cloud, Zero, Zig-Zag, Phantom and Bertie in the order named. The Quickstep passed the home flug first, winning the prize, a silver cake basket. The boats came up in the following order:

The state of the s			
Boat, .		М.	
Qidekstep	15	54	-00
Flying Cloud	12	54	30
Zig-Zig	12	55	-00
Phantom	12	55	30
Yame	1.3	E of	10.

Coming home the Bertie's runner-plank was broken, and at put her out of the race.
The following boats entered for the second race

Owner, John E. Losee Irving Grinnell Ircling Grinnell Charles Le Roy

The Magic earried the money of the belting division, but the Qui Vive came in first and received the prize, a pair of silver and glass preserve dishes. The Whiff was second. The day's sport concluded with a ruce between the first-class boats named by non-active members who do not own boats. The following boats entered:

Boat.		Backer.
Quickstep	••••	.Charles Van Anden
Z12.411g	* T * * * * · · * * * * * * * * * * * *	John Losee, Sr
Defug	• • · · · • · · · • • • · • • • • • ·	Withan Drike
Phontom	*** ***********************************	George Jankson
Zenhve	•• ••••••	A. VBG Wyck

In this race the Zephyr sailed splendidly. Although she started last she was ahead at the six-mile flag, having run that distance in fifteen minutes. The Flying Cloud was

second, Bertie third, Ziz-Zag fourth, and Phantom last. They reached home in the following order and time:

Boat.		В.	M. 5.	1
Zephyr		1	59 15	
Fiving Cloud		. à	00 30	ı
Zig Zig	And the second second second second	5	91 40	н
Bertle		5	01 15	

The Phantom was so far behind, her time was not Inken. The Zeidnyr won the first prize, a silver fruit-lish, and the Flying Cloud the second prize, a scientifically graduated thermometer.

The Judges were Charles Hasbrouck, Charles Van An den, and Henry M. Van Wyck, and during the day the distinguished Arctic Explorer, Dr. I. I. Hayes put in an appearance and expressed himself as delighted with the sport.

Mr. Bishaq, the canoeman, when heard from last week, was at Georgetown, S. C., and making very fair progress.

The St. Augustine Yacht Club have thoroughly organized for the season, under most favor the anspices and with an enlarged membership list. Their Club room has been handsomely decorated and made comfortable.

Massachusetts Rowing Claus.—The President of the City Point Rowing Association of Boston, has by request, Issued a call, requesting each rowing club to send a committee of three members to meet in convention this week in that city for the purpose of forming a Union association.—It is reported that another occanic yacht race, similar to that of last year, is to take place off the Isle of Shoals, N. 11., about June 25

Rational Pastimes.

— Au interesting walking anatch for a purse of \$1,000 a side was discussed at the Rink, Sixty-Third street and Third Avenue on Saturday evening last. The contestants were Wilson Reid, a cartman, and S. D. Davis, a letter-enrier, attached to station C. Messrs. Stafford and Burnton acted as judges, and Mr. D. M. Stem, of the Athletic Clule, as referee. The termination was rather unsatisfactory from the fact of Davis going out before the fifth mile had been completed, when Reid went on and won as he liked, displaying considerable ability as a walker. Several hundred tersons, comprising large delegations from the Athletic clubs of New York and adjoining eities were present, and not the least interesting fostore of the performance was the abilities as walkers displayed by referce and judges in accompanying the men throughout the entire distance.

— The members of the base ball cleven of the Boston

- The incubers of the base-ball cleven of the Boston Chib are to report at hendquarters on March 15th.

The Judiciary Committee meet in Philadelphia March Ist, at the Albletic Club room, and on Wednesday, March 3d, the Professional Convention will be held in Philadel-

-Boyd, Hastings, and Pike led the score of the Hartford to in 1874 in the average of base hits—the best lighte club in 187 being 1.74.

-McMullin, Fisler, and Auson led in the Athletic club. The best figure was 1.90-Al Wright's Egures.

-McVey, Barnes, and Gco. Wright led in the Boston nine, the best figures being 1.61.

—Start, Allison, and Higham led in the Mutual elubbest figures, 1.60.

The Hartford Post of February 3d had a two column article on base ball which was very readable. It was beaded the "Loiterer's Club."

-The ery is still they come. The latest item is the Baltimore is to have a professional club, which John Widters is to manage. A New Ocleans pitcher has been en gaged.

Billiards.

A LADIES' BILLIARD MATCH.—A grand match at billiards, given under the patronage of ladies high in the social circles of the metropolis, is to take place at Tammany Hall on Thursday evening, February 18th. The entertainment is for the benefit of the Home puthic Hospital Fair Association, and the programme includes a four hundred match at the French game between the brothers. Dion on the one side and Garaier and Daly on the other. The French expert will also give an exhibition of funcy shots. Evening dress will be the rule for visitors. The affair is under the patronage of the following committee of hadies:—

mage of the redowing	committee of works.—
Mrs. Park Godorn,	Mrs. E. B. Phelps,
Mrs. Egbert Guernsey,	Mcs. W. Nellson,
Mrs. Charles Waltims,	Mrs. W. T. Helmith,
Mrs. C. S. Groot,	Mrs. A. B. Darling,
Mrs. W. S. Hancock,	Mrs. E. G. Bartlett,
Mrs. T. F. McDowell,	Mrs. J. W. Dowling
Mrs. N. H. Wales,	Mrs. J. A. Jumison,
Mrs. E. P. Fowler,	Mrs. C. P. Crushy,
Mrs. O. H. Palmer,	Mrs. E. H. Chuplu,
Mrs. F. Mucy,	Mrs. J. W. Barrow.
Mrs. Howening	

It is to be a very select affair, and an exceptional billiard

The American Tourney in England. - Bell's Life, of

The American Tourney in England,—Bees Trye, of January 23d, says;—
"Very little else has been doing lately last exhibition matches, in which there has been enough form shown to convince one of the rapid advances that are heing made by our young players in the fuscinating game. On Mouday next the great tournament on the American principle is to commence at Bennett's Romas, Oxford street, a few doors towards the Marble Arch from Regent circus. The affair has been well indvertised, and as it is to be entried out on such strightforward principles we have no doubt it will be a great success.

will be a great success.

THE CLEVELAND THURNEY.—The meeting of billiardists closed on February 4th, with the success of Eagene Carter, as the winner of the gold badge. Thomas Gallaber winning second prize, and Howing and Thutcher third and fourth. The grand average of the tourney was three points to an ioning and a fraction over. The best single average was 11 by Gallagher. If also made the highest run—76—of the fourney.

- At the sale of tables—Phelau and Collember's make, of some years ago—at Van Cleaf's "Novelty Raoms" Brooklyn, last week, the highest price brought at the auction was \$67 for the six-pocket pool table. The others went as low as from \$50 to \$50.

-Roberts and Bennett won the prizes in the American tournament in London, on February 2d.

— Howard Slade's Palace Billiard Hall was opened in Buston on February 6th. It is one of the most superbly appointed billiard establishments in America.

appointed billiard establishments in America.

— "Whist" and "seven-up" are now quite popular with the billiardists, the games being played with the balls used at 15-ball pool. At billiard ball "whist," the four highest balls—1%, t4, 18 and 19, crunt as the "honors," and every hall holed counts a "trick," As there are 15 balls (tricks") seven are required to make ap a "book" on either side, Instead of six as at cards, the 15th being the hold ball (card.) There is more exercise about hilliard ball "whist" than at the game with pasteboard, and more "minise"—ane not having to keep so unifornly silent to at earl "whist." At billiard ball "seven up," the 15 and I bulls are, of course, "high" and "low" respectively, the 9 ball counting as "Jack." Game Is made from the balls as they run.

as they run.

The games we have mentioned are a great deal played at the "Delfersonion Billierd Parlor," 17 Chatham street, a resort much patronized by lawyers, and the fagged out editors, reporters and empositors of Printing House Square, after their wearing toil of the day,

NEW YORK, THURSDAY, FEBRUARY 11, 1875.

To Correspondents

All commonications whatever, whether relating to business or literary correspondence, must be addressed to The Forest and Stream Published Company. Personal or private letters of course excepted. All communications intended for publication must be accompanied with ead name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded. Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts. Bocretaries of Clubs and Associations are orged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of merful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our communs a bargable medium for advertising announcements.

The Publishers of Funcet and Stream aim to nerit and secure the patronage and countrannice of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no deprayed lastes, nor pervert the legitimale sports of land and water to those base uses which always tend to make them ampopular with the virinous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Sajarday of each week, il poseible

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HABBIS, Business stangager,

THE FUTURE AMERICAN RACE.

EARNED physiologists, ethnological scientists, and acute physicians, have been indulging in predictions concerning the characteristics of the race which is to occupy the United States in the future. Their speculations bave led some of them to argue that the white race cannot occupy this great land, except for a limited period, as all efforts at colonizing it by preceding races failures.

The mound huilders left no trace of who or what they were, except the terraces scattered so widely over this continent; the Aztecs are known only by the temples they have left to mark their meteoric path through life, and few pleasantly poetleal traditions or superstitions, while the present Indians have not even raised anything larger than an isolated rocky cairn to indicate to those that would

follow that they ever existed.

The latter race is following its predecessors in the most rapid manner, and ere another half century has rolled away the greater number will be among their rude forefathers in eternity. It has been supposed by some scientists, that the present red man is the descendant of a much higher type, and that his deterioration is due to the elimitie ects, hivariant forests of this country, and the case with which food can be procured without the necessity of much lattor or thought. That the tribes of the red race are the vegetable men of the world, If we may so term them, is evident from their low nervous power, the facility with which they can bear hunger for a protracted period, their stoical indifference to suffering which would kill the most pule face, their opposition to all progress, either physically, socially or morally, and their cruel and sauguipays nature. They were, apparently, placed here to occupy the soil until some higher and more powerful race should supplant them, and cause it to bloom with fertility and teem with abundance.

But, though all preceding races have occeriorated on this continent, it does not follow that the present dominant one should, especially when it has all the resources of civilization, a vigorous energy which surmounts all obstacles, and an intellect materially subtle in the highest degree, to aid it in its onward march of progress and subjugation.

Preceding races were entirely isolated from all contact with other peoples, except those as rule as themselves, hence they sunk into a state of mental and physical lethargy which finally became such an incubus that they fell beneath its crushing weight. The present has communication with all portions of the world, and is constantly urged on to greater deeds and more exalted positions by the contests and ambitions of other nations; hence no soporlife stupors can ever pervade it.

A theory advanced by one physician-namely, that after a few generations the natives of this country become tall and angular, with large motive and small vital power, with sharp but not broad minds, and with sybaritical rather than stoical principles, does not seem to be sustained by facts, at least not by facts complete enough to support the assertion. One cannot make a general deduction from a particular premiss, and certainly this Æsenlupius cannot assume that angularity is a characteristic of all the American people because it is of a few, or that high moral principles are ignored for the more convenient and selfish. If the latter assertion was true, then the early decadence of the race, when ouce the blood of Europe ceased to flow hither, would be a truism, for all students of history must know that when once mere selfish convenience, guided by no ethical principles, is substituted for justice, virtue and honor, it is the death knell of that people and nation. Any one, no matter how learned, who argues, then, that because older races failed to perpetuate themselves on this continent the Caucasian also must fall, reasons from a false premiss, and so also does he who by a leap goes from a limited fact to make a general deduction, without considering for a moment the modifying circumstances, even though he only argued from one particular to another.

It is all very well for some presumed scientific student to use a sophlsm and lay it down as an undenlable truth, but il does not follow that it should be accepted without proof. Au isolated fact here and there is not sufficient to establish its verity, for they may be the exceptions of the contrary, hence we assume that the arguments used by the ethnolo glsts who predict the early extirpation of the dominant continent through low vital power, sybaritical tastes and the effect of climate, are unreliable and untrustworthy, and founded more on speculation than positive facts deduced by laborious investigation.

MISSIONARY WORK AMONG THE GUNNERS.

IT will gratify those who are recognized as pioneers in Fish Culture and Game Preservation, to know that the great objects for which we are laboring have taken such hold of the public as to result in the organization, within the past twelve months, of probably not less than one hundred societies for the Protection of Fish and Game, We have not attempted to keep an exact record of the same, or obtain available statisties, but have the names of seventy. These are included in 25 States and the Provinces of Ontario and Nova Scotia, Canada, and are distributed

Maine 1, New Hampshire 1, Vermout 1, Massachusetts 5, New York 10, New Jersey 2, Pennsylvania 10, Maryland 1, Virginia 1, Illinois 9, Wisconsin 1, Michigan 3, Missouri 4, Tennessee 2, Kentucky 2, Ohio 3, Minnesota 1, Georgia 2, und the States of Indiana, Kansas, Nebraska, Colorado, Minnesota, Alabama, Mississippi and Florida, each 1, Nova Scotia I, and Ontario 2. Among the rest are include I the State Sportsmens' Associations which have been formed, or are in process of organization in Maine, Massachusetts, Missouri, Ohio, Illinois, Indiaua, Wisconsiu, Michigan, tucky, and Tennessec, as well as the State Fish Culturists' Associations formed in Maryland and Illinois.

These 100 societies represent a quota of 4,500 men, by no means an insignificant accession to the Grand Army of Protection, and sufficiently indicate the sense of the country upon the important questions involved. Moreover, guarantee ultimate and complete success. The time is not remote when game will be abundant in all those parts of the country not densely pupulated; fish will swarm in our waters; and the Close Seasous he respected like the Sab-buth of New England. The direct effect of the growing sentiment in favor of protection, and the respect for gam laws and close seasons, is shown in the visible increase in the quantity of game and fish within the past two years. No doubt a wholsome fear of punishment under prosecu-tion, inspired by the judicial decisions that have been rendered in those cases that have been tried, has contributed to the result; but the fact remains, that nearly all kinds of game, excepting woodcock, have not been so abundant for years as during the one just closed. The searcity of wood-cock is accounted for by the severity of a freezing Spring season, and some persons deplore a speedy this delicate bird as quite prohable. Nevertheless, we find that Nature, when not interfered with, invariably follows her laws of compensation and supplies a void in one place from a superabundance elsewhere; just as in England last December, when persistent hunting and stress of weather had nearly exterminated the woodcock, a blast from Norway opportunely blown, drove great flocks of these birds from their northern breeding grounds into the depopulated districts. Just so we shall doubtless learn, in due course of season, that our woodcock have multiplied in some localitles in proportion as they have decreased in others.

Now, the creation of all these protective associations is cool. The mere moral weight thereof is great, to say nothing of the direct effect of their active efforts. Their organization ought to be encouraged and promoted. They

will constitute a valuable detective and police force all over the country, to discover and prevent wrong doing; and their usefulness may be felt and exerted in other ways. Nevertheless, the mere organization of ever so many clubs can not of itself destroy the evils and secure the benefits which we strive for. Much preliminary work remains to be done before we can institute and perfect such comprehensive laws as we require, and secure their unobstructed and effective operation. We need to persevere in prepar-ing the public mind to accept and approve a judicious system of game laws, such as the selectific and best informed men of the country are now contemplating, and their enactment will come afterwards. We have much labor to perform in respect to adjusting interests that seem to clash; in determining and defining the rights and privileges of sportsmen, land owners, and veudors, and the constitutionality of laws to govern them; in removing prejudices; in instructing the ignorant as to our object and aims, the economic value of game protection, and the necessity that requires the institution and observance of close seasons. We are to wrestle with the avaries and strategy of unsempulous game dealers; to correct morbid tastes and unnatural appetites, and lop off the pretensions of would-be epicures with much wealth and no hrmins, who would serve up peacock's tougues and salmis of linuet wings to excite the admiration of envious guests. must be taught that garde out of season is not only unpal-atable and unhealthy, but unfashionable. Nature has ordained certain fruits and viands in their season, which, eaten out of season, lose their relish. The luxuries of the Summer season lose half their zest it eaten in an arctic temperature. Stronger food is needed—carbon, to keep up the latent fires that heat and invigorate the body. Unseasouable venison, grouse and trout are as unsatisfying to the true epicnre as are the sour and vapied hot house peaches and strawberries of Winter; dry, tough, juiceless, and insipid then, but most toothsome in the richness of their prime, and more appetizing for the abstinence that intervenes.

A great missionary work has to be done among the unlet-Thus far we have operated only among the intelligent. The great mass of those who shoot—the small farmers, bushrangers, and frontiersmen, (to say nothing of the negroes at the South, who all use guns,) have not the instincts of sportsmen. They have no conception of the purport and value of close seasons, or the intent of restrictive laws. They never see the papers, and cannot read. They do not recognize the laws of reproduction, or consider the source of supply. They kill does that are heavy, birds with their broods, and shoot indiscriminately at all living They regard protective clubs as invasive and the game laws as a tyrannical encroachment upon their inherent rights.

Now, a very large proportion of these men are open to argument and conviction; and could they be brought to comprehend the beneficent operation of these laws, they would acquiesee in their observance and enforcement. We have ascertained this by experiment, in several instances. It took years for the proprietors of the "Long Point" enterprise, on Lake Erie, to convert the prejudices of the native residents in the vicinity, but now desire no more carnest and efficient allies. Their profits in fur and feather have increased four fold. Upon such rough woodsmen, stardy in their blows, but honest in their nature, a good word or a good example often has great in-lluence, and we believe that an appeal to their sober judgment and the dissemination of proper among them would work wonders toward reform; and we would therefore suggest that judiciously prepared circuliars be printed and disseminated throughout the country by the agency of the numerous sportsmens' clubs and pro-tective societies, appealing to the farmers, market hunters, and backwoodsmen, to protect and spare the game and fish in designated close seasons, setting for h in simple language the reasons therefor and the beueficent advantages

SOME STIR IN CHINA

THE slumbering interest in the affairs of Chiua which followed the treaty of Teiu Tsiu, the extinction of the Tae-ping rebellion, and the embassy of Mr. Burlingame, has been re awakened by the announcement of the death of Tooug-Che, and the reported suicide of his youthful It must be a source of congratulation to Prince Kung and the Empress Dowager, who seem to have once more assumed the reins of government, that no foreign war, or great internal strife occurs at this time to harrass and fetter them. How different was the aspect of affairs when poor old Hein Fung returned from his temporary banishmeut on the Tartar frontier and breathed his last amid the ruins of his Summer palace of Yuen-min-Yuen, desecrated by the "barbarian" victors, but beautiful even in its ruius.

For incongruities and anomalous political situations, China, at that period, finds no parallel in the history of the world. Far away at the North, where the muddy waters of the Pei-ho mingle with the clear waves of the Gulf of Petchole, the guns of the ships of Britain and France were thundering at the Taku forts. The treops—red-legged enfants perdu, searlet-conted infantry, and the wild, irregular squadrons of Fanes and Probyns Sikh envalry—were marching on Peking. At the South, the routine of com-merce was unchanged, and to cap the climax of incongruity, at Shanghae the troops of their antagouists were proteeting the Imperialists from the attacks of the Rebels. So

closely was the town beseiged that the rebel camps were in sight, and the men of war in the river were shelling them over the houses of the foreign settlement. The fate and future of China were indeed housing by a single thread. In possession of Peking, the allies were masters of the situation and able to dictate terms. The Rebels, pretending Christianity and secure of the sympathies of the missionaries, clamored for recognition. Diplomacy was almost at fault, but traditional policy and respect for the 'divine right" prevailed. Content with the opening of the Yang Tsze Kiang and the prospective benefits of the new treaty, troops and plenipotentiaries withdrew from the capital. The 'Fae-pings were handed over to the tender mercies of "Chiaese" Gordon, now Governor of the Sou-dan, who succeeded and reaped the fame of our own New Yorker, Ward, in the command of the disciplined native troops. The Yang Tsze was opened and foreign settlements formed as fur interior as Hankow.

Fifteen years have elapsed and what is the result? The embassy of Mr. Burlingaine seemed like a ray of light slied through the clouds of idolatry and superstition which had covered the land for ages. It flickered and went out. The barriers of pride and self-esteem have grown higher than before. Long rows of splendid honses, all untenauted, line the bunds of the river ports. The trade, from which so much profit was anticipated, has relapsed into untive hands, and our real intercourse is where it was before.

The young wife of Toong che may have swallowed the conventional opium pill or ball of gold-leaf, but the secrets of the Imperial Yamun are gnarded as closely as those of the Zenana. Snicide is a most common occurrence. That blasplicmous wretch, the Tac-ping Wang, who, for fourteen years, humbagged the missionaries and almost strangled the government, applied the torch to his own palace, and with his hundred wives perished in the flames. That she should have sacrificed her life for love of her husband seems absurd to anyone acquainted with their If she has really done suttee, it has been through solicitation to meet some political emergency; but the truth will probably never be known. The appointment of so youthful a successor to the throne indicates a return to the policy of prevariention and delay which so long prevailed in their intercourse with other nations. But now that the opium traffic is firmly established no cloud on the horizon indicates the probability of disturbance. For whatever the pretext, the introduction or extension of the trade in opium has been the end of each war in which the English have taken a part. Were it not for China the produets of Benares Malwa and Patra would go a begging for a market, and the Indian budget be minus the immense revenues derived from the periodical sales of the drug at

GAUDY NESTS.-We cannot build nests us the birds do, (except the poetical nests ou the sea shore with French roofs and modern inconveniences,) but it is not impossible to influence their color by simple devices. The birds that to influence their color by simple devices. The birds that are so busy in Spring time, are not embarassed by trade union strikes or labor movements. Like Mr. Briggs, of Leache's immortal pencil, "when they want a thing doue, do it themseives," but they cannot make bricks without straw, or nests either, and many a tussle do they have with door mats, the ends of clothes lines, or the horse hairs caught in the stable fence. Among them aimost everything is gathered. The swallows are mortar makers in noisy groups by the puddles in the roads, the yellow birds gather lint and wool, while the sparrows seek hair. The gather lint and wool, while the sparrows seek hair. The robins are pleased with twigs for framework, with a medley of finer stuff for the repose of egg and fledgling, while the superb oriole haugs his swinging cradle, his unpatented baby jumper, to the swaying elm or willow by a skillful mesh of strings, bark and fine grasses. The latter take to artificial supplies as kindly as squaws

abandon porcupine quills for beads and tinsel. One that built near us cribbed a fishing line, and wove it most deftly into the nest, snell look and all, and escaped injury

the æsthetic in our Summer companions, supply them with material. To any visitors in the South, we would bint, bring home Spanish moss, and the birds will gladly move it into their nests. We did so, and our robins made nests and lung them with festoons of moss, and then are now marked and are with festoons of moss, and they are now marked and unusual objects in the bare trees

For the orioles, cut crimson, orange or blue yarn into short pieces, and scatter them about on the ground and shrubs, and there will be found in June nests like gay purses hanging under the shade of the huge trees that orioles seek. How far other birds will use colors will be known by experiment. Many will undoubtedly use any colored wool, cotton, hair or grass, but none will show from below like the hanging bird's nest. These we have seen made very gay, indeed, and the experiment is easy and interesting. interesting.

THE AMERICAN TEAM FOR DUBLIN.—There is not the slightest doubt but that the amount of money requisite to pay the expenses of seuding the American Rifle Team to pay the expenses of seuding the American Rule Team to Dublin next June will be promptly raised. Nevertheless, we think it an act of courtesy to the Messrs. Hawk and Weatherbee, of the Windsor Hotel, to say that quite in advance of the appeal to the public, and as long ago as October 11th, those gentlemen beaded a subscription by a contribution of \$250 for this very purpose. Several members of the leave had been their gnests, and this token of bers of the team had been their gnests, and this token of appreciation on the part of the proprietors was a very gracePRESERVATION OF GAME.

REGULAR MONTHLY MEETING OF THE NEW YORK ASSOCIA-TION-INTERESTING PROCEEDINGS.

HE regular monthly meeting of the New York Asso ciation for the Preservation of Gume was held at the residence of Mr. Benjamin L. Swan, Jr., No 5 West Twentleth street, last evening, the President, Mr. Royal Phelps, in the chair. The Secretary, Mr. Thomas N. Cuthbert, read the minutes of the previous meeting.

A letter from ex-Governor Dix was submitted, in which

A letter from ex-Governor Dix was submitted, in which he regretted his imbility to be present, but desired that the association might take into consideration two great abuses -shooting birds in the Spring as they go East to breed and shooting from batteries in Great Bath and Shinecock bays,

Mr. E. Floyd Jones, of Greenport, Suffolk county, de sired to call the attention of the members to the propos law for the protection of English and bay snipe thought it unnecessary, as the number of that kind of birds killed in New York State were but few. In the South and West they are shot in great numbers during the Winter and Spring months, and are sent to the New York market for sale in great quantities. All snipe are migratory, and the proposed protection will only benefit the market hunters out of the State. If the law could be extended to cover the whole of the country, and the same he enforced, the writer would heartily approve of it. The communication was referred to the Executive Com-

Mr. Gaston Fay, of Brackmere, Centre Moriches, L. I., ealled the attention of the association to the practice of "dusking" ducks, that is, the shooting at or killing of any ducks or wild geese before sourise or after succest. This euston, which prevails on the bay where the writer lives, does more to injure the Antunn shooting than any one thing that can be named. Dasking is followed in Angust, September and October, and is practiced only on ducks which feed on the edge or sedge of meadows. The law should be anguled so as to prohibit the shooting from should be arrended so as to prohibit the shooting from May 1 to October 1, instead of September 1, as it now ex-

ists. Referred to the Executive Committee.

Mr. John Hays, against whom proceedings were instituted for selling venison out of season, in a communication stated that he was ignorant of the provisions of the law and asked the suit to be discontinued. Granted on payment of costs. Mr. Whitchead, senior counsel for the association, advised that other suits of like character were pending against many dealers. He also read a recent de-eision of the Court of Appeals, rendered by Chief Instice Church, affirming the judgment of the lower courts in the ease of the club against Joseph Raccy, convicted of selling

In this connection Mr. Whitehead advised that the penal ties against Mr. Racey amount to nearly \$3,000, but he had not been able to obtain satisfaction in the matter of judg-The club, however, intend to push matters in this ease to the fullest extent under the law,

Mr. Seth Green, who was present, was elected an honorary member of the association.

Adjourned to meet on the second Monday of March, at the residence of Mr. David II. Haight, No. 284 Mudison

The decision is herewith appended.

ROYAL PHELPS, RESPONDENT,

ROYAL PHELPS, Responden!,

JOSEPH H. RACEY, Appellant,

We concur with the conclusion arrived at by the General Term. With the policy of the statute in question we have no concern, but that the acts complained of, viz: Having in possession certain grave birds after the list of March, although killed prior to the prohibited linn; or brought from another State where the killing was not prohibited linn; or brought from another State where the killing was not prohibited; is within the restraint of the statute there can be no doubt. The seventh section declares that no person shall kill or exposs for sile, or beyon in his or her possesson, after the same has been killed, any qualt between the kill day of January and 20th of October, under the penalty of \$25. Laws of 1871, p. 1669.

clares that no person shall kill or expose for sale, or base in his or her possession, after the same has been killed, any quall between the 1st day of January and 20th of October, under the penalty of 325. Laws of 1871, 1609.

The eighth section contains a similar provision relative to ruffed grouse, or partridge, and punnated grouse, or profession at the language is the between the 1st day of January and 1st day of September. The hinguage of these sections is plain and unumbiguous; hence there is no most for construction. It is a familiar rule that when the hanguage is clear courts have no discretion but to adopt the meaning evolent it in parts. The mandate is that "any person having in his or her possession between evrian dates certain specified game killed, shall be lable to a penalty." The ilme when, and the place where, the game was killed, or when prought within the State, or where from, is not made marerial by the statute, and we have no provert or make it so. But if the intent in his respect was doubtful, section thirty-three would remove it. That section provides that persons selling, or in passession of game, shall not be limble to the penalty up to the 1st day of March, provided they prove that it was killed before the prohibited time, or outside of the limits of the Stale where the killing was not prohibited. Pruvision is made by this section for the cases supposed not to be within the purview of the seventh or eight beaction, but it is clear that the Legislature for his assignment of the state constitution for the case of the first provisions and the purview of the seventh or eight provisions of the game after the 1st of March, and the inhibition is absolute.

It is admitted in this case that the defendant had pussession of the game after the 1st of March,

to one iniversed in the mysteries of the subject to be sunccessarily stringent and severe, but we cannot say that those involved in this asthmark foreign to the object sought to be definined, or outside of file while discretion vested in the Legevalance. It is also urged that the statue to question yield the Legevalance, it is also urged that the statue to question yields that provision of the constitution of the United States which authorizes Congress to regulate commerce awong the States. It is wanceessary at consider have far the exercise of poar of Congress made this provision would interfere with the sate and poar of Congress made this provision would interfere with the sate and poar of Congress and the provision would interfer with the sate and possession of game, either as a southern occasion of the sate and problid the sate and poar of Congress has passed on the subject. States cannot pass kows to respect to solderly expressly profilined by the constitution, and this my take which conferred upon Congress which, until exercise by the States conflicts with the passes of functions of the Gavernment; but there are many powers conferred upon Congress which, until exercised, as regarded as distribution and may be exercised by these States within their badis, among which the passes of functions of the Gavernment; but there are many powers concurrent. The capture of the states of the state of any interference of the states of the state of any interference of the States, the authority is an elaborate examination of the privar of the States, the authority is an elaborate examination of the privar of the States under this clause of the constitution. One of those causes involved of right of state to require in because for the safe of a parkage of give language of the state of expression of the state of a parkage of give language of the state of examination of the privar of the States and another State, in which Timey,

U. H. SICKLES

-The great "homuza," which set the people of San The great "homuca," which set the people of San Francisco nearly cruzy and sent mining stocks my with a bound, proves to be very much of a humbug, porphyry or something clse being mixed up with lt, and a fearful crash has taken place in the stock market. On the 4th of January, as we learn by the San Francisco Bulletin, the Ophir mine was seiling for \$315 per share, but on the 37th lt had fallen to \$155; California, in the same time, fell from \$780 to \$220. Consolidated, Virginia from \$715 to \$340. Supage to \$370; Consolidated Virginia from \$715 to \$540; Suvuge from \$190 to \$100; and others in about the same ratio. The aggregate depreciation in the leading stocks in the time named was \$97,303,100, and the shrinkage in the minor ones would swell the total to \$190,000,000, which is a prefty severe squeeze to occur inside of three weeks.

Woodland Carriog.-If our realers wish to learn the lubits of the woodland cariboo, so abundant in Newfoondland and portions of the Dominion of Canada, and how to hant them, let them read the chapter which we print this week under lead of "Across Newtonniland," Our paper is brimfull each week of information as rare as this; people say.

Rend also the leading article that treats of sport on the frontier of Mexico and Texas.

-Our friends at Boston and vicinity can see some very fine specimens of Michigan graying and Cultornia samon in the aquarium at Messenger Bros., 55 Bromfield street, In that city. The grayling, especially, will be objects of great enriosity to nearly every one who has not seen them. The Bros. Messenger are very enthusiastle sportamen. At the same time their love for natural history is the means of bringing many interesting facts and objects incidentally to the notice of the public. It might be inferred that they were artists also, since, as first class eaterers, they devote themselves so assidnously to the palate. Ha! how!

Geese Adriff.—Schooner M. A. Jones, while returning

to Gloucester from the haddock grounds on Friday last, when about thirteen miles south of Thocker's Island, fell in with six taine geese on an ice-cake, floating out to sea. They had probably been several days affout, and were nearly famished. They were taken on board and properly cared for.

-Among other indications of a severe Whater, the appearance of seals in the Lower Bay, and of a unputer of buld eagles hovering over the harbor and alighting on the ice floes in the bay in search of food, may be taken as the most significant. As the steamer State of Indiana was passing down the bay, off Clifton, Staten Island, one day last week, a number of scals were observed from her decks, lying usleep on a large cake of ice.

-The mean temperature at New Smyrna, Florida, for the month of January was as follows:-7 A. M., 61 degrees; 2 P. M., 68 degrees; 9 P. M., 62 degrees. On January 4th the increury stood at 81 degrees; on the 28th, 80 degrees; 29th, 82 degrees.

-The age of a horse may be judged by his teeth, but can be more nearly determined by his (y)cars

- HENRY S. Dow, editor of the Lumberman's Journal, and a prominent journalist of the Northwest, died at De-troit on Friday from the effects of a large dose of morphine accidentally administered.

THE VALUE OF FISH BONES .- The Moniteur Industrial Belge states that German manufactures are purchasing the fish bones gathered along the Norwegian shores, which re-These bones make a fine fertilizer, and, when pulverized by suitable machinery at the points of collection, are readily transported. The same journal suggests the more extended utilization of the bones from the establishments in Newfoundland, and estimates the product which could be obtained from American fisheries at £20,000,000 a year,

Shot Gun and Bifle.

GAME IN SEASON FOR FEBRUARY

FOR PLORIDA.

Deer, Wild Turkey, Woodcock, Quall, Snipe, Ducks and Wild Fowl

Under the head of "Game, and Fish in Seasin" we can may specify in general verms the several varieties, because the laws of States vary evenue, that were we to altempt to particularize we could do not be thun publish those entire sections that relate to the kinds of gome is question. This would veguive a great amount of our space. In deep nating your we are guided by the laws of nature, upon which all legis lation is founded, and our readers would do well to movide themselve with the bass of their respectives States for constant reference. Otherwise our alternate oasses them will only create confusion.

GAME IN MAIGHT. -The approaching close of the open season is chenpening gume of almost every description. Prairie hens are plentifid at 50@75c, per pair; ruffled grouse, 75cm\$1; quull, \$2@2 50 per dozen; cauvus-buck ducks, \$2@3 50 per pair; red-hends, \$1@1 50; mallurds, 75±@\$1; widgeon, 75 cents; brant, \$1@125; wihl geese, \$1@150; Guinea fowl, 75e@\$1 per pair; wild turkeys, 25 cents per pound; rabbits, 50 cents per pair; hures, 50@ 75c.; Bay snipe, 75c@\$1 per dozen; plover, \$2@2 50. We have seen in market a few of those beautiful and delicions little birds, the Canada bunting, selling at 75c@\$1 per dozen; also a few spruce grouse and monatain grouse, the lutter from Wisconsin.

-Wild fowl were never known to be so unmerous as they are this season in the vicinity of Newbern, North Carolina, and good shooting will be had there all the season until warm weather comes again.

-Woodcock are now laying in the vicinity of Norfolk, Virginia. Next month suipe shooting will be good at Great Bridge.

-The Staten Island Shooting Association, with head quarters at Port Rielmond, offer a reward of twenty dollars for information which will lead to the conviction of any person violating the laws for the protection of quail, woodcock, rabbits and hares,

NIGHT SHOPTING .- Our esteemed correspondent, H. C. Magoon, of Nebraska, who is a veterin hunter, sends in some valuable hints on shooting at night. He does not approve of the very general use of the rifle at such time, because it is almost impossible to see the hind sight, let alone the front one, if the muzzle is covered by an object, prefers a double barrelled shot gun, one barrel to be loaded with ball and thick buckskin patch and the other with buck shot clambered, four chambers being better than three. Last Full Mr. Magoon accomplished the exceptional feet of killing two deer at a right and left shot, with his gun loaded in this manner.

— From our spirited contemporary Der Waidmann published in Leipsic, we learn that ou the 6th of this mouth the sportsmen of the Empire were to celebrate the unqual feast of Dianu at Berlin on an unusual scale. Delegations and contributions of trophies of the chase were expected from every portion of the German Confederation, and we shall look with interest for a report of this unique gather

ing.

Canada, Quebec, February 6, 1875.—I never saw so many pharmigan in our unrivers as this Winter. A large number of cardsoo and some moose hove been killed near Quebec. Our Winter has been uncommonly severe.

J. M. Le M.

Panis, Ontario, February,5.

EDITOR FOREST AND STREAM:

Panis, Ontario, February, 5.

Editor Folest and Striem:

This being the close of the seasou for almost all kinds of game in the provinces, those Nimrols who wish to keep their breech-loaders in active service, have to do it almost entirely at the expense of the bires; and by the way, I think it is very pretty sport. Have had some grand fundring the past few works with the hounds hunting the aforementioned interesting little animal, but it remained for Wednesday of the past week to crown my efforts with success as regards that particular pursuit. For upon that day, accompanied by a friend and one very staugely and reliable hound, we started in our entire going about twe miles west of this point to a swamp in Burford, for the purpose of scenring, if possible, an old hare, that has here-tofore defied the most streamous efforts put forth by numerous and smadry persons for his capture. We hasteued to put our dog into the swamp inpon our arrival there, and in less than ten uninutes time he had started the gentleman, and then the fan commenced. It seemed as if they must have traveled over every foot of ground in that, very large swamp, and it would seem at times as if you could hear the hound give tongue a nrile away. We took stands, and cut across, endenvoring to heal him off, but all to no purpose, for it seemed as if he never traveled twice within a space of a hundred or more yards, and it was not until almost dark, and after it had been run for more than four hours; that I finally had the honor of bagging the rascal.

Yery truly yours,

F. B. Farensworth,

Flound, New Swayma, February 5.—Upwards of a lundred out the run here.

Very truly yours,

F. B. FAINSWORTH,

FLORIDA, New Smyrna, February 5.—Upwards of a liquided settlers are on the way here from the West to locate on the Hulifux River,

Cummings, of the New York Sun, is stopping at the Oceau House at New Smyrna.

I see you, as well as others, call everything in this section Indian River. Now, as you cross the water-shed south of the Matauzas you strike the Halifux River, which extends to Mosquito Inlet, and for twelve miles south of the Inlet it is called Hillsborough River; thence for some fourteon miles it is called Mosquito Lagoon; this is seperated from Indian River by a strip of land at what is known as the Hali Over, a canal of eight handred yards in width; thence Indian River to Jupiter. It is all known as the Indian River country, but Indian River proper is twenty miles or so south of this place. All these rivers are nothing more may less than indiand seas.

We are having capital weather for sportsmen. Sheephead fishing prime. Yours truly, Geome J. Alder.

Shapshooting.-Mr. Lewis, the well known gan dealer and rifle-maker, of Troy, New York, is to soon shoot, on a bet of \$50 that he can kill a turkey at one mile, with a rifle of his own make, inside of the cost of the turkey (\$2.50) at ten cents per shot, or in twenty-five shots. Last year he did it at 1,200 yards in the 14th, we believe, Mr. Lewis ought to enter in the American team for the International mutch at Dublin next June. He will be needed.

-Col. Wingate, to whom was presented the commemo-rative cup known as the "Leech Cup," has lurned it over to the Amateur Rifle Club, to be shot for on the following terms, according to a resolution adopted at a meeting of the executive committee of the Amateur Rifle Club, held January 23d, 1875:—

January 23d, 1875:—

Resolved, That in order to commentorate the recent victory of the Annerica team in the International ritle united, and us n mark of respired to the down, the sliver cup presented by Major Leech be kinnin as the "Leveb Cup," and be slid for upon the first Suturday of June in each year at Credimor upon the following conditions, viz;—Ride, and in exceed fro pounds in weight; minimum gull of trigger, three pounds. Matches to be open to all vilizens of the United Stotes, and all members of the Amaicur Ride Club, Irrespective of citizenship. Sights, aminimition, and marking to be in necordance of the printed regulations in forzy at Creedimoor. Ranges, 809, 800, mil 1,000 years. Namber of shots, officeed in each range by each competitive. Position, any; in artillicial rist to be used for either the ridy or person of the shorter. All matches to be under the supervision of the Annere Rith Club. The winner to hold the end during one yen, and to be entitled intring that period to the title of "Chinaphion of America," and, in unbilion, to receive from the cup nill be required, before seeming it, in give security for its safe return in shoulder is vilia; to be his only private property. Winners of the cup nill be required, before seeming it, in give security for its safe return in shoulde its vulne; to be upproved by the executive committee.

— We learn that Col. Wingate having received an official

- We learn that Col, Wingate having received an official request, has consented to act as nu pire for the Colifornia team in the coming match at Creedmoor. The Californians are to be congratulated upon their good fortune in having obtained such able representation,

CONGRATULATIONS TO THE AMERICAN TEAM

The interest that has been taken in the recent International Rifle match is strikingly shown by the following letter from the American Rifle Club of Lima, Peru, recently forwarded through Mayor De Gress. This Club was organized by the well known Henry Meigs, the Railroad King of South America, together with a number of the most preprinted than the recent internal control of the most preprinted than the recent internal control of the most preprinted than the recent internal control of the most preprinted than the recent internal control of the control of the control of the recent internal control of the contr most prominent Americans in Lima, shortly after the International match.

SECRETARY'S OFFICE AMERICAN RIFLE CLUB, LIMA, November 16th, 1874

Secretary's Office American AntiLima, November 18th, 1874

To Col., Georgy W. Wingate,
President of the American Ride Clib, New York.

Str—The American Ride Clib of Lima cannot allow this opportunity to pass without expressing in yon, as the representative and President of the Amarem Rifle Association of New York, our sincere congruntiations for the brilliant vietory achieved by the valiant marksmen under your guidance over worthy nutugonists. The range of your rifle was not so limited but that every hit made in the tweets strayk also the chord of American sympathy in Pern
Accept, sir, as a proof of our homage to an association now the envied model of the world, and which numbers amongst its members the foremost riflemen who have drawn trigger, the accompanying certificale constituting you an honorary member of our club. Be pleased to learn that the same token if appreclution, however slight it may be, from a body endeavoring to emulate the example offered by the contending hernes at Creedmoor, has also been extended to the Captain of the Irish train.

We have the bonor to remain, sir, your most obedient, faithful servants.

Chooray Secretary.

To which Col. Wingate responded as follows:—

Geotlemen—I have daily received your favor of November lith, 1874, with the engineed certificate of theorems membership in your club, and I have no hesitation in saying that no occurrence with the intermitional rille match has given memore sincere pleasure than this very unexpected and handsome compliment, which is the more appreciated as coming from my connitrymen in a foreign limit. The Annteur Rifle Club accepted the challenge which led to the match with many misgivings as to their right to spouk for American ridemen. They have throughout recognized the responsibility, at times almost painfully, that rests upon thom as representatives of their country, and have spaced no pains or precasitions to see that no discredit should rest upon it. Thry feel mannally gralified at their triumpli, which was won against obstacles that few are arrore. But they feel still more an at Budding their hithers so warming acknowledged by yourselves unit other members of the club, as well as myself. I desire to make my most sincere acknowledgement for your kin i wishes, and trust that your own success as riffemen will be all that you have described for us.

G. W. Windate, President Amuteur Rille Club, To which Col. Wingate responded as follows:

THE SHELL QUESTION,

EDITOR FOREST AND STREAM: HANNIBAL, Mo., February, 1875.

Hannibal, Mo., February, 1875.

Editor Fonest and Stream:—

Thave been an attentive reader of the letters brought out by the shall discussion us well us the gan subject, brought up by "Side Lever" and others. Now and then some old expert sneets at the ideas of the tyros, forgetling that they were once in that same class. Let all give their experience and offer their suggestions. The crude ideas of the beginner often draw ont the views and results obtained by the veteran, a high might never have been given had they not been provoked by some absurd statements. Intelligent discussion tends to improve; and although gan and shall manufacturers may saille at the sintements made and conclusions drawn by the sportentan, they may now and then find that the user of an article, if he be a careful observer, may discover findis that the nanaffacturer has not. The theoretical mechanism may be apparently right, but full in protected working.

One correspondent states that I claimed that a gentleman had trouble in extracting his shells, because he was using paper shells and had the trouble as mantioned, and that it would not have occurred had been using methodores. I wrote advisedly, and knew of what I write, and reassert what I before stated. When the correspondent from Mischschipf states that the fault was in the extractor, I would be pleased to have him suite how he knows—that he ever see the gan? Suppose I admit that the extractor was faulty, which I do not, how down he know that one side of the base did not part coopeny with the paper, and being prospect and is he prepared to say that had the party been using metal shells they would not have extracted without party been using metal shells they would not have extracted within a party been using metal shells they would not have a shell her and odout proves their worthlessness. That all metal shells are made without a fault, twould be absurd to claim, mill when I faul a fault in any, either metal or paper, I am very ready to state it; and if all would do so, the manufacturer

is light and the cap extracts hard, and when the primer is left on for a time after firing it corrodes, and then its somewhat difficult to extract. When the recess is small, by trimming the sides with a knife, it is rasily enlarged. The primers should be punched off on return from the day's shoot; and it is an excellent idea to put in the cap box a piece of sponge or cloth saturated with oil; by so doing a cap will seldom ever stick. I am like Dr. Cones, willing to concede to paper shells all that can be claimed for them, but will do by them the same as I to by the metal point out their imperfections in the hope that the makers will improve them.

Dr. C. covers the whole ground when he states that "theoretically metal shells are dangerous, but practically they are not." So good an authority as the, ought to convince the most tunid, and this has been the most prominent abjection.

It is very noticed for the Doctor to take the side of paper shells, from the fact that the cost and expense, and trouble of tonding does not out any figure with film, and as I have before stated, for such the paper shell is all that is required. Yet, in the words of an old sparteman, "It is a sound maxim that even in our pleasures we should practice a judicious economy."

The Doctor complains of the trouble of carrying the empty shells and the rounde of reliading, and yet many a good spiritsnum saves und re-loads his paper cases, and it is much more trouble than to reload metal

heads his paper cases, and it is much more trouble than to reload metal ones.

That nietal shells somethines are not interchangeable between gims of the same culiter is true, but it may be a debatable question whether or not the non-uniformity of chambering is more the fault than that the shell would byt fit two sizes. The metal shyll made by the U. M. C. Co. are more unform in size than any paper shell I were saw. I have a line gan, by a first-class maker, that would not take some paper shells that I have had, and would not close on some that could be inserted, on account of the thickness of the rim, a fault comploined of in untal shells; and it may be a mooted question whether it is the fault of the gan or the shell. If the gan had been countersank a filtle deeper, or the rim had been a little thinner the gan would have clased: which was at fault? The Draper shell particularly have very thek rims, and will syldom lit, unless the canneter-link is deep. Facts and figures are asked for as in the superiority of the shooting qualities of the notal shell. I give in instance from memory as the record which I have kept for a long time I could not put my hand on when wawed; the charge was 4 drs. and 1½ oz. No. 6 St. Louls shot; average of six shots 40 yds. 30 in. circle, 144 with paper, 1624 with menal. The peateration I do not remember exactly, but it was from 18 to 20, the best with the inetal shell. This was show with a gan chambered to use metal shell, and not as are the majority with which lests are made, regulated to shoot with paper shell. I have a 12 gagne 34 b. No. 14 gan that makes a penetration of 49 sheets of Petrit's paper pads with W. & P. No. 6 shot, 40 yards, and when any gan using paper shell to ats it I hope to hear about it.

Since my last on the shell question, I havy had some unpleasant experiences with paper shells. Once on a match turn I find six are eight.

shell lears it I hope to hear about it.

Since my last on the shell question, I havy had some unpleasant experiences with paper shells. Once on a match funt I had six in eight missifires from them; again I was not after turkeys, and finshing a raffed grouse I changed a shell for one with smaller shot, and put in a paper one; a little snow rathled down as I opened the gan and scattered about the action, some of it probably getting on the shell. I did not have occasion to open my gan again and lattle high on my return, when I found myself in the same fix that Dr. C. did with his netal shell, but did what trespectfully suggest to him and all others to do when caught in that way—take the fore end off at ones, and then the barrels will come out of the action without proble. The ment shell I had in one barrel came out readily, but the paper one I had to drive out with a wash rod; and so firmly was it insteared in, that it fore in two; the lower half and the charge being pashed out, leaving the upper balf still fast in the gun. It is not difficult to imagine in the apper balf still fast in the gun. It is not difficult to imagine in the apper balf still fast in the gun, it is not difficult to imagine in the apper balf still fast in the gun, it is not difficult to imagine in the apper balf still fast in the gun, it is not difficult to imagine in the apper shell usually comes out with the utmost case.

The chambers of many gans are now so tapered to make the point of

The chambers of many gans are now so tapered to make the noint of the shell fit tight and prevent the escape of gas, that they must be very clean, and the shell not swelled at all, or it will stick. I have two gaus of the same callber, but there is so much difference in the size of the chambers that a paper shell will not interchange after having been once used in the larger one, much less a metal one, and I can't see that the fault is in the shell, as they with laser in the smaller chamber before help fired.

helig fired.

When I first used a breech loader I had one in which there was no square shoulder, but a gradual taper from the fall size of the chamber to the barret size, the taper being about five-eighths of an inch long. I used paper shells, not filling them full, and cut the shelt the length of the churge. I was umbate to obtain the penetration desired, and began to study the cause. It soon occurred to me that too much windage was caused by gas excaping past the powder wind when it passed from the end of the shell to the taper of the chumber. As stated by "Side Lever," I then commenced to use metal shells and a forced wail to obviate it.

end of the shell to the taper of the chumber. As stated by "Side Lever," I then commenced to use metal shells and a forced walt to obviate it.

All of the gains that I examined at that time were chambered in the the same way; and it occured to no thot this was one reason why more powder was required for a B. L. Biam for a M. L. I opened a correspondence with various gammakers on the subject, and also wrate the matter up in T. F. & F., (Forest and Starka at that time not having made it's bow to the public.) I stated that I believed were a sportsum withing to confine himself to metal shells be could get the best results by having a gain chambered with a square shoulder the thickness of the side of the shell and have the caliber of the burrel and shell precisely the same. Then as perfect a cylinder mould be obtained as in the M. L. I did not say a straight cylinder, as suggested by "Side Lever," for it is the exception and not the rule that a stratght cylinder will do gain shouting, but with such a gain wire contraiges and back shot could be used as well as In a M. L. There would be no whichage, and less powder would be required; there would be less recoil, and I believe excellent shooting rouble brobtained by using a forced road. To prove that I had fulth in it, I ordered a gain from an embent English maker, built as stated above, During the building of it I met the maker and told blim that he might try and find a happy medium for the gange of harrel, so that either paper or metal shell could be used; and also suggested that the chambers oneth in he made the exact length of the shell, and he using a paper case there should be a square shoulder the thickness of the shell, and then u gradual taper to the gange of the borrel, and that the paper shell onghit not to be cut off, but used full length. When my gain came to band it had a square shoulder, but the caliber of the barrel was smaller than that of the metal shell, leaving a projecting edge over the end of the shell. This I had taken off, giving a long tuper to

-It is noticeable, notwithstanding the freezing weather, that Miss skaters are very numerous everywhere in the neighborhood of ponds and water courses

BOW AND STERN AT CAPE ANN

HARTFORD, JANUARY 20, 1875.

Editor Forest and Stueman.—

I have read your valuable paper slucy its start, and have been very much pleased with the many wondyrful and time (f) adventurer of your correspondents with their big bags of grouse, durks and "sele," but I never have read anything where I was sufficiently acquainted to make any comments myself until several niveks ago, when I read a lyttur headed "Cooting at Cape Ann." Then, says I to myself, "Doctor, you have been cooting, and at Cape Ann, too; but beyond that your expertivace don't agree with the other paily, not to any darming extent," and as had sense letter has excited con-derable confroresty between the "north mid south" shore men, I thought I would left you my experience at Cape Ann. Now I have been rooting at Cohassel and wichtig; woully every senson for fifteen years, but a year ago last October some integrated people, led by a gray-feaded old stince from Chylsea, Massa, in duced me to go to Cape Ann, telling the would find where her, and I went. One Monday infermions we londed on Stratismonth Islami, with three boats and any unified tumber of decoys, guns, &c., intending to stop a week or tev days, If the birds flew well. Some one of the party had been down previously and engaged quarters for us with the light konse keeper, who eridently expected to keep us on baked coots; but we did not discover this for some time. Well, as I said hefore, we lauded Monday and arrunged our boats, decoys, and anckors for they anckor born and stern at Cape Ann, and lead loaded an unlimited number of shells, preparatory to an early start and great slaoghler the next morning. But a severe storm came up in the night, which lasted until the Fiday following our landing. We got up early, but concluded to cafr fee hours midlit eloud stop raining, and us readed all that day and the shore. Our landing, We got up early, but concluded to cafr fee hours midlit eloud so trick the should stop raining, and us readed all that day and the shore. Our landing, which has early in the readed and wond on game, o

SUMMER WOODCOCK

ROCKY DELE, COHASSET, January 30, 1875.

ROCKY DELL, COMASSET, Jaimary 30, 1876.

EDITOR FORRET AND STREAM:—

In reply to "Sanez," I will say I do not agree with him. We had better enforce the laws we have than try to make new ones. What do the game laws, as they exist now, amount to in this or this State? Are not parliridge, quall, and robins shot continually when I aw is on? I go in for a law that, when the offender is reported to selectmen of the town, they will be obliged by the State law to fine bim. I will venture to say that now not one in one thousand of the poor birds that are shot in close season are reported. As to woodcock, I would have It Angust 1st, but not later. They are large enough then in average seasons, hist year being an exception. After September 1st we shore shooters have no time for anything else but dicket; so our land shooting must be done before that time. The following has been of great use to me for Summer woodcock shooting. It may be a new idea to some. We all have a favorite spot where we hunt these hirds. What we do is this: Hire the farmer who owns the land where we shoot to plow for a mile in length, one hundred feel wide on the first rising land from the mendow, following the direction of the stream. Plant this with corn (in rows, not hills), as the deep furrows between the rows make the best birding ground, and the high corn keeps the ground damp. If there no any birds near, you will find them there. We pay the difference between what the farmer calls a good crop, and what he gets out of it, and he keeps every one else from shooting over it.

S. K., Ju.

The above suggestion is worth following. It forms a bond of sympathy and creates a sort of compromise be-

bond of sympathy and creates a sort of compromise be tween the sportsman and the farmer, besides seenring better sport.-ED.

GAME PROTECTION IN CANADA

GAME PROTECTION IN CANADA

Petersono, Ontario, Camada, Jamary 30, 1875.

Editor Forest and Stream:—

On Wednesday evening tast, the 27th inst., a very interesting mynting took place at the Huffman florase in this town, buying for its object the formation of a Fish and Game Protective Society for and nijbin ibe county of Peterlino. Aftergitt o'clock a goodly number of gentlemen had assembled, and among those from a distance are noticed Major Boulton and Mr. Itwin, of Lakedeld; Junnes Golborne, Esq., of Burleigh; and James Stewart, Esq., of Burkelm, The meeting was openat by appointing Mr. William Eastland in the chair, who, by a lucid minimer explained the object in forming such a society, the duties devolving upon the members, and the benefits to be derived by thy fullifint discharge of those duties. He cloved bis remarks by calling on the gentlemen pivaent to assist in forming a fish and game protective club, so large in numbers and officered by men so realous in carrying out the law, that in might strike terror thio the hearts of all the proachers and pol hunters within offit mites of the town of Peterbovo. A membership list was opened and eagerly signed by all in the room, after which the election of officers look place as follows: President, John Lindkine, Esq.; Vice President, Mnjor C. A. Boullon; Screetary and Treasurer, C. A. Poel, Esq.; Connsel, E. H. D. Hall, Esq.; Committee, Messrs. H. Calcutt, H. T. Strickland, E.J. Toker, G. B. Spranle, Win. Eastland, James Stewart, Buckhorn; James Golborne, Birleigh.

Major Boullon asked if the propagation of fish in our waters was one of the objects of the society, as he thought great good would result by taking this subject in hand. The other members gave the suggestion their hearity support, and thought pleciculines should form a part of the society's work. Mr. II. Calcutt said that he had obtained from S. Wilmot, Esq. of Newcaelle, last Spring, a few thousand salmon fry and put them in Stoney Lake, with the view of stocking that and connecting lakes with that f

point.

After appointing a special committee to draft by laws, &c., the president closed the meeting by expressing the wish that all woold endeavor to obtain as many members as possible. The next meeting will be hild at the Hoffman House, on Wednesday evening, the 10th of February, when the report and draft of by-laws of the special committee will be submitted. Thanking you for so much space in your excellent journal, I am, respectfully,

P. S. —Forest and Stream was recommended to members of the so-

ciety as a journal of valuable information on all ambjects that worth come under their notice, and one ever ready to do all in its power to fur-ther the objects of such an organization.

GROUSE ON STATEN ISLAND.

STATEN ISLAND SHOOTING ASSOCIATION, PORT RICEDIOND, Pebruage, 1878.

EDITOR FUREST AND STHEAM :-

EDITOR PUBLIST AND STIERMS.

The Staten Island Shooling Association have just received from Mr. Andrew Brink, hying in the northern part of the State, fourteen grouse, (Bonasa simbellus), and elvern large harve, which will be furned out in the Island sometime during Mark. It is doubtful if the former will remain in the use the island sometime during Mark. It is doubtful if the former will remain in the use, though we have some large traits of timber, and in many places very dense. Some years back they were here in large numbers and array in the old residents toll of the happe times they have had in pursuit of them. I can remomber to my time of harbig seen thou in the yielalty of Which Hogne, but they are none extinct. Should are be successful to harbig these birds stay on the Island, ree shall have at least fifty of them sent ins from Penneylvania. We shall put out about 100 quall, which are now to their way from Viginda, a gift of one of the linest sportsmen, Cupt. Peter Van Name.

We trust the New York Society for the Protection of Gadiv and Fish will surceed in inving their bill passed, making it unlawful to shool may kind of sinpe may ployer during their Syring flight. It will save the modeoock with us, as there is not a man coming from the city built that will kill their when after English salpe, (Gallinago wilson), should they like it their path.

THE FOX GUN,

WESHAM, Muss., February 2, 1875.

Wernam, Muss., February 2, 1875.

Editou Forest and Stiean:—

The item in a recent innuber of Forest and Stiean regarding the "For" gim, has proposed so many letters of virquiry that I renture to answer them through your columns.

The gim, as stated by your missiver, is a "side action," as dt sligguished from the common tip-up or break down action, swinging upon an iningivary centre by an lingenious piece of mechanism. As my object is mit to praise the gim above my other, or even to compare it, I will not draw any comparisons, but inverty state that the objects sought in a breeck loader—symmetry, simplicity of construction, strength of inechanism, rapidity and ease of toulling—seem to be combined in the Fox gim. Not the lenst consideration is the vase with which It can be inken apart and eleaned. There are no pins, hinges, or bolts to be lost or disarranged; but by pushing in the ejector and a pressure of the flugors of the light but by pushing in the ejector and a pressure of the flugors of the viet hand, the barrels me divinched from the stock at once. It is opened by a pressure of the flumb of the right hand und a fulf turn of the wrist of the left, throwing the breech in such a public. That it is opened by a pressure of the clumbers with more facility than in the therap. The halaure of the gim in loading is preserved, requiring no antikward halamering to keep it in piece.

But fer of these gims are in the market, the company engaged in their manufacture having cho-en to await the rerdict of the sporting public, before farming out any considerable number. That verdict has been from a member of one of our United States exploring expeditions, who had shot his Fox gim over 1,500 times with one to your expedition in Florida hast Whiter, was every may satisfactory. It has been pronounced by experts the strongest and least high to war of any breech loader examined by them. For the laformation of the wany sportsmen who have sent on's skonling.

The company vigaged in the manufacture were men of menns, liverified wi

demand can be supplied.

Entrop Funest ann Stream:

In your last number of Feb. 4, 1875, confaining "My First Buffulo Hunt," I notice a small error which, if not corrected, adight draw upon me some first criticism. This error will hest by corveted pythinps by following the text of my contribution; it is as follows:
"You will then staffun me in the heart of the Chochin and Chickasan nations, at Fort Towson, upon the Klamecchy River, six nules from Ited River, the dividing line of Texas, and at present the best place to hunt the buffalo."

The buffulo has long since receded west from Fort Transon. In Western Texas, I destred to say, he may yet he found, and and monotoned Tonson. Yunes truly,

Sea and Biver Hishing.

FISH IN SEASON IN FEBRUARY

Tront (black have), Drum (two species), Kingtish, Striped Bass.

Figu in Market.-Fish have been very scarce during the past week, in fact an almost total suspension of the catch has been the result of the intense cold and floating ice. Corl, haddock, pollock and lorsk from Maine and Massachussetts in limited quantities are selling at 8 cculs per pound. The above varieties, with the herring from Newfoundland, we are informed by Mr. Blackford, cousti-Newfoundhand, we are informed by Mr. Blackford, constinted the fish food for the power classes during the next orty days of fasting. A few specimens of the larger bass are coming in from the upper Hadson and selling at 25 c furbot from Newfoundland are worth the same. Red mappers from Florida diffo; grouper from the same place toc.; Ogeochee River, (Geo.) shad plenty at 60c.; Neuro River, (N. C.) shad at 75 cents to \$1.50 each; splendid ellows, some of them weighing 5 pounds each. Smelts carce at 20 cents; bluefish, 15 cents; salmon from Leonis, whitefish, 18 cents; fresh mackerel, 20 cents each; spanish mackerel, 40 cents; salmon, 45 cents; Pickerel, 0 cents per pound; large king fish from Key Wesl, 15 ents.

—A fishing crew on the south side of Long Island took, 400 pounds of codfish one day this week.

—A vorrespondent at Twin Lakes, Salisbury, Ct., writes between the great sport in this region during the income of spanish in time become as consistent as the treatment of the bluck, or while after the solid only be when the south fisher, but it will only be when the fish from the solid of the solid only as the solid of the solid Into the fish food for the power classes during the next forty days of fasting. A few specimens of the larger bass are coming in from the upper Hudson and selling at 25c Turbot from Newfoundland are worth the same. Red snappers from Florida ditto; grouper from the same place Stappers from Fibrita anno; grouper from the same place 20c.; Ogeochee River, (Goo.) shad plenty at 60c.; Neuse River, (N. C.) shad at 75 cents to \$1.50 each; splendid fellows, some of them weighing 5 pounds each. Smelts scarce at 20 cents; bluefish, 15 cents; salmen trout, 20 cents; whitefish, 18 cents; fresh mackerel, 20 cents each; Spanish mackerel, 40 cents; salmon, 45 cents; Pickerel, 20 cents per pound; large king fish from Key Wesl, 15

4,000 pounds of codfish one day this week

February 3d:

the Winter months. It is not unusual for strings of twenty or thirty 'picks' to be taken of a morning. Two small boys living near by have caught quite 200 pounds of pickerel and perch. It is estimated that many sleigh bands have heen sleighed off the smaller lake by the raral 'spartsmen' during the present season, and the womber is that there are any fish left to each; but the humense ferceding and freeling ground of wearis and rushers give the pickerel and percha chance for their lives. The fish are mostly small, selding over a pound in weight, and our anglers sigh in value for the old days when a five pounder roughly grace his table whenever he dropped them a line of invitation. The larger lake (Waushining) has not been fished much as yel, but yesterday—February 2d—a stranger land hance fiventy, seven the pickerel in return for a morning's fishing, and another party lands from the same day. All surfes of 'tibs' ary used, from the three cross sticks to the single tath and weighted wire down to the primitive livig laid over the lade, an which is hitched the line and flag to drop when a bite cocurs. But the lift that mises the flag he sight is preferred by experts, and many morn lines can be seen, how with that contrivance."

—The business onthock for filoncester, at present writ-

with that contrivance."

—'The business outlook for Flourester, at present writing, is of quite an encouraging nature. In the heading branch, that of the lisheries, the old stack of cuitish is rapidly moving off, and at present iduications will be entirely out of the market ere the new catch is ready for shipment; consequently that portion of the fleet naw ahout starting, and the larger part which will follow in the course of a week or two, have every prospect of a quick demand for their eatch. Several bankers sailed yesterday, and next week some farly sail of Georgesmen will be off. There is no lack of ball, and some good fares may be expected about a furthight hence.

The bankers have come along more freely the past week, averaging light fares of halibut. The whole number of vessels arriving has been ninetwen—tour fares from the Western Bunks, seven from La Havre Bunk, two from Gvorges, and six herring fares from Newfoundland. The total amount of halibut brought in was 74,000 pounds; and selling for from \$18 to \$13 per cost. Collish have sold at \$2 per cwt. The vessels all report very rough weather.—Gape Ann Advertiser, Feb. 5t...

THE COMING BLACK BASS ROD.

THE COMING BLACK BASS ROD.

Entror Ponest and Sthrau:—

The black base and his mode of capture has been altogethal too much neglected, if not entirely ignoved, by most of our articles upon thin "genile art." I regard the black base as one of our gained dalays, and with satisfalle inskile the sport afforded by him to not surpressed by the person of any other member of the himsy tella, excepting, possibly, the satisfalle may be required and the person of any other to realize black bases deling in the perfection, sulfable inskile must be employed. Fishing for knock front with a bead pule for a rod and a event for hall, is not exceptional spiril in the lote member of the levin; neither left to the for black hase under the same conditions—and this bridge me to the subject of a black base rod.

Until which the past feer years such principle of other south, the individence of the Middle States, or the tomarance pole of the South, the albert of beauting offered by the dealers. Fire years ugo—and perhaps II is the same in some localities to the a person entering a lackle shap in a Western form and impulsing for bases lockly would be presented with a rod from function to elected for the middle black, as the tomarance one to two pands; in brises red as large as a paper coller has, with a handle like a coffee util evank; a line like a chilk line, and a large ingularly book; buth a slide bend—and all this formfable array of clamps apparatus to in builty with such a Horswighting and noble for one the base! Ifgad! the base should be pursued with works and control to his more freward regenerally and noble for one the base! Regard to his more freward regenerally in their trails condition as a fermal by the leade, and who possessed antiferent large mily, constructed back hase to his fairly regarded as a wint not supplied in black hase rode, as affected by the large and who possessed antiferent large mily, constructed high one in the sanifered by the large and who possessed antiferent large inly, constructed high and considerably

he adopts the proper rod, which "coming rod" I will now endeavor to

be adopts the proper rod, which "coming rod" I will now endeavor to describe.

I start out with the proposition that a first-class American, single-banded trout fly rod is, per se, the very perfection of rods and the chef d'arer of the rod maker's art. Such a rod to shout tweive feet long, and is made of spilt bunboo, or a combination of ash and isneewood; if of the former, should weigh from seven to inhe conces; if of the latter, from almo to tweive ounces. With such a rod, property bandied, either line, leader or hook may part, but the rod will remain injact. It combines all the essential qualities of a good rod, viz: balance, lightness, strength, clusticity, and phancy. A satinon rod is only a trout rod enlarged, proportionately, in every particular, and made to be used with two hands instead of one. Now, if all fish were enight with the fly there would be no need for other rods than the trout and salmon fly rods; but as such, introdunately, is not the case, we are compelled to adopt a the rods in necordance with the mode of fishing, the character of the fish to be enaght, and the khol of bait to be used. But whatever may be the followed in the construction. Let the rod conform as nearly as possible to the typical rod—is, the trouf fly rod—as is consistent with the mone of service required of it. If we follow this rule ne cannot go very far astray.

to the typical rod-1, d., the front fly rod-ns to consistent with the manner of service required of it. If we follow this rule we cannot go very for astroy.

Acting upon this principle, then, I have found in my experience that the essential qualifies or attributes of a good black luss rod for balt fishing, are just the same as the typical rod for balance, weight, strength, and classifely, with a happy methan of pilancy, televren a trout by rod and a troot balt rod, which can hardly be expressed in words. But fishing at the rod anner of the rod makes it correspondingly heavier, and in order to mainfain the same relative weight, we must cut down the length of the rod by taking off from three to four fem, thus reducing the rod folight or nine feet in length, which is found by experience to be far superior to toger rods for black hass fishing. As a long, withy, willowy rod is best for casting a fly, so is a short, stillish rod brist for casting a minnow. With a rod of fulls character and an ever running, multiplying reel, it is an easy matter to east from lifety to farty yards. The shanding of the red upon the but must be a comprising the tween the share and double handed fly rods; for though the rint is used almost entirely with one hand, set there are emergeacles when both hands must be assed, for occasionally a six pound buss, or a fifteen pound pickeret will be hooked; or an imasually both or fierce fighting bass may get the advantage of one and take to the weeds. It is also essential to have pleaty of room for the hand below the reel in easting, as the thomb must control the mining off of the flue, and prevent the reel from overmining, as the fancy may dictute; I prefer standing guides for the first and second joints, and rings for the tip. The rod that I am now using is eign feel and three inches long, is in three joints; the first joint or had second joints, and rings for the tip. The rod that I am now using is eign feel and three thechs long, is the asset of the rod first joint or had second of white ash, a

If this article should hidnee any brother fisherman to throw uside his heavy, comborations, arm-wearying rod, and try one more in accordance with the true spirit of gendine sport; in findine him, so to sprak, to throw uside his old "Queen Anne" moskel and adopt the modern breech lending shot gun—or, to carry the simile still further, in persuade him to discard the sabre and bickle on the rapter—I shall leet that I have not occurred by the subject of the consolower.

Our readers will certainly feel indebted to the author of this communication for the vulnable suggestions contained therein, and no doubt eagerly await the promised articles to come.-ED

FISHIFG FOR TOM CODS (Morrhua Californica) IN THE BAY OF SAN FRANCISCO.

Entron Fonzat and Stuzam:—

This also, deficate little lish for the table, even to those of epicarean tastes, has been very pleutiful in our bay and in some of its creeke for these two last spars, and has afforded much imposement, if not great sport, for our anglets. It frequents near the hottom for its food, and is readily caught with a rather stout hand line and a tolerably heavy sloker and small hooks, say two or threo, and No. 4 or 5 in sizes, fastered on near the stuker about nine inclines apart from each other. This line should be about sixty to righty feet in length, to be thrown out from the wharf as tar as it will go. The best halt are mussed or sand norms, to be purchased near the flouing grounds, and which are obtained from the pites under the wharves, or in the swamp sinds near the shores of some parts of the bay. Or this much sought after inhablant of our Phellic maters and its bays and inlets, may be magled for successfully with a common rod of a medium length, faraished with a small stized life and a common multiplying reel, also in much lighter sinker than the one recommented for hand line flishing. This can be thrown out at far as convealence will inland of, and to any one used to manipulating skillfully a rod, real and thre, is a mode much preferable to the hand line process, and much phensanter, because it enables you to sit in ease on the wharf without having to get an every time a fast le hooked and cast out again, as with the hand line, and you can what the flish quickly up by means of your reet while in a sittleg posture. Singularly enough flores Tom cols have been in enormous numbers, attoribed much more exciting sport than the Tom cods. Whether these latter will continue to namp the relign of the former henceforward, thus atone can prove. As with the smetts, two or three Tom cods are sometimes taken it one hand. Both these kinds of its our exactions that the too mode event to take forty of them in one or two hours.

The Pou cods run to the largest schools when the tide whater is flontin

The Poin cods run in the largest schools when the tide water is flowing only moderately fest and rather middy, but not too much so. They him best in those parts of the mater on which the sam is shiring. There is the same remarkable difference in this flash's bitting as in others. Generally the caten is good, but there are a few days that are nearly or entirely blank. They feed against the running fide, both on the chb and flow. At this thus they are full of spawn. Their roc, both hard and soft, is considered a great delicucy with some persons. They are the same fumily of fishes as the frost that (Meriongus vulgnyis) of the East or Atlantic.

E. J. Hoopen.

—The English cricket season for f875 will open on the 3d of May, with the anunal meeting at Lord's, and, as usual, a dinner will be the great feature. An English cricket match without its accompaniment of a dinner is something unknown in the anuals of the game.

—Young Rollins, a well known amateur player of the Prospect Park cricket club, is now an inmate of a launtic asylum. He has never recovered the shock to his system from his shipwreck two years ago.

The Colleges.

THE COLLEGE ROWING ASSOCIATION.—The Yale Record has an article on the subject of the Intercollegiate Rowing Association, the burden of which is, that by the recent action of the Boating Convention at Hartford in admitting Union and Ifamilton to the college regutta of this year, the number of colleges now entitled to row at Samtoga is increased to fourteen. It seems that the number has now reached a point where to increase it rembers that selection of a suitable course a matter of much difficulty; and with this in view, the mere sending of a delegate to a convention should not entitle a college to a represention in a regutta which it has for years ignored. Let the constitution be amended as to read, that colleges failing to row in two regattas shall be debarred from rowing in a third without special action on the part of the convention.

CORNELL UNIVERSITY, Feb. 6, 1875.

EDITOR FOREST AND STREAM.

Connell University, Feb. 6, 1875.

Editor Fonest and Stheam.

The excitement over the Inter-collegiate Literary contest, and our success in the same, has subsided, leaving the hope that next year all colleges and universities may be represented, and that a truly National Inter-collegiate contest may take place. The successful contestants for the Shakspeurian essays, Messrs, Fitch and Chick, on their return to Itliaca, were given an oration by the citizens. Speeches of congratulation were made, and Mr. Fitch received a copy of Boydel's Shakspeare, and Mr. Chick an addition in 12 vols. of the British Poets. Would that this feeling of friendly interest and good will might be universal throughout the land, and that Town and Gown might be synonyms of mutual good will, instead of, as in some places at present, mutual antagonism.

All ont door sports, as a matter of course, in these days of zero rale, are suspended, and accordingly, the gymnasium is well patronized, so much so as at certain hours to materially impede each other. There are somewhere in the neighborhood of twenty-five men pructicing regularly on the weights, and from them we expect to be able to select a fair, if not extra "'varsity" crew next Spring. There is also much probability of a Freshman crew, and a single scaller, representing Cornell at Saratoga next July, in addition to the "'varsity" six. The Navy composed afthe Tom Hughes and Sprague Boat Clubs is la first rate working condition. The government consists of five directors from each club, and a Commodore elected by the two clubs jointly. This manner of working has been tried only a short time, but it seems to work admirably. The government for the ensuing year is—Commodore, D. O. Barte, '77; Directors, Tom Hughes, C. C. King, W. M. Sturges, '75; A. M. Ensign, '76; M. E. Huvilund, '77; A. W. Smith, '78; Sprague, W. C. Hayes, R. Russel, H. J. Rice, '76; Perry Clark, '77; A. L. K. Volkman, '78.

The old saying, "Competition is the life of trade,"

The old saying, "Competition is the life of trade," seems to hold true yet, although with a slightly different termination in this case. Two years ago every effort was made to get a suitable room in town for a gymnusium, but without avail, so some members of the faculty and the students set their heads together, and the result was a gymnasium building fairly equipped, upon the hill. Immediately after this some of the town people set their heads together, and the result is now a fine gymnasium in town; so between the two we are likely to get all the exercise and training we desire, and perhaps in the course of two or three years we may turn out some good gymnasts.

Last Saturday, Jannary 30th, at the senior class election the following oilleers were elected for "class day":—Pres., G. 11. Fitch; Orator, P. 11. Perkins; Essayest, H. W. Sackett; Historian, A. F. Shaw; Prophet, C. W. Raymond; Ivy Orator and Poet to be elected to-day. Arrangements are being made at present for a Junior exhibition on the 1st of May uext, the appointments for which will be given in determent.

of May uext, the appointments for which will be given in due time.

Friday evening, January 29th, we were favored with one of those grand musical treats for which the Thomas orchestry of New York are eelebrated. The entire troupe, sixty pieces, were present. It was as near perfection as human beings can expect.

A few words in regard to the Poultry and Faney Stock Exhibition, which took place in Journal Hall the 19th to 23d of Jun., may not seem out of place, as we belong to the special Natural History class. There were about 400 coops and eages in the hall, mostly poultry. I noticed some very fine game, and silver spangled Hamburg fowls, the 1st prize pair of the latter birds being offered at \$35. There was a gigantic broaze turkey cock, several coops of Chinese ducks and geese, a beautiful pair of wild geese, and several Africans of the same species. But the crown of this part of the exhibition was a large white goose who (?) had wadded, and puddled, and hissed through the sunshine and shudow of seventy-one years, quite an intedilavian. The Crève-cent's and La Fliche's were in goodly number, as well as the black Spenish, but the Brainah's counted by scores. Of bautann's there were some twelve or more varieties, among them some exceedingly beautiful birds. There were a few cages of English lop-cared rabbits, a dozen or more ferrets, a noble white-headed eagle, a score or more of beautiful pigeous, and a magnificent silver pheasant, valued at \$70.

On the dog bench were nine beautiful setters, all good dogs, and some quite extra. In particular 1 noticed two

or more of beaulitut pigeons, and a magnineent silver pheasant, valued at \$70.

On the dog bench were nine beautiful setters, all good dogs, and some quite extra. In particular 1 noticed two chestnut and white dogs, and a brown and white bitch. The first dog was a magnificent animal with a long, deep, almost massive head, inclium height and well proportioned; hair fine and silky, legs well fringed and a fine feather; he looked as if he would be able to perform an extraordinary amount of work. His ears were rather too short and too much rounded, otherwise, as far as external appearances, he was an extra nuimal. The second dog was only sixteen months old and of course not fully developed; he was, however, much like the first, except smaller, and with fluer and better shaped ears. The bitch was my beau wideal of what a setter bitch should be—small; rather thick set; finely proportioned; although rather thin from having but just weared a litter of paps, three of which were on the beach; head long and slender, yet large brain; eye very intelligent; coat silky and flue and well tringed, evidently an animal worth owning.

YALE COLLEGE, New Haven, Feb. 6, 1875. EDITOR FOREST AND STREAM:—

YALE COLLEGE, New Haven, Feb. 6, 1875.

EDITOR FOREST AND STREAM:—

The past week has been a lively one. Monday ushered in the Glee Club concert. This organization was never in better practice. The programme included the famous though new Blue Danube, waltz chorns, a new warble and a Rhine song. These were the most noticeable features of the evening, along with the tenor solo by Frank Jones and "Bohimkus." This lutter was given in an luimitably funny manner, and was encored five times. The club deserve great credit for their efforts. With Thresday evening came the annual Junior Promenade Concert. Great prepations are made each year to excede if possible the one given by the preceding class. This year great pains were taken with the internal decorations of Music Hull.

Boating and base hall dags. Troprice of victories at these departments of atheleties were arranged very bacomingly on the sides of the galleries. The "black dag" of '76, which once thoated definitly from the college chapel steeple was put in a prominent place, and attracted much attention. The stage was neatly and tastefully decorated with flowers and hot house plants, and presented a very enclanting appearance. At 9:20 Bernstein's orchestra of New York commenced the overlure, and in a short time first Lancers was formed. The music was all that could be desired and the programme just what was suitable. The festivities lasted until 2 o'clock, when the lights were extinguished, and the promannade of '76 was over. The toilets of the ladies far excelled any seen here for some time, while Redeliffe furnished a very delightful supper, Mention should be made of a pretty waltz by G. B. White, formerly of '76, which was repeated owing to a hearty encore.

On Weilnesday morning at 11 the Seniors held a

On Wednesday morning at 11 the Seniors held a "German" at Delta Kappa Hall, and the Juniors at 3 o'clock did likewise. The figures danced were both novel and pretty. With these impromptu dances the festivities of the week closed very appropriately. Now the prospect is dull enough.

dull enough.

The aspirants for base bull finne will go into active training next week. There is every prospect of a fine nine next year, and one that will work hard to sustain our victories of last season. With a view of affording facilities for the practice of batting, the pitching alley has been considerably widened, and now there is plenty of room for such practice.

A greater number of men are rowing as candidates for the Howard University crew than ever before,

The Horse and Conrse.

-Pienie, one of Count Lagrange's race horses now in training at Newmarket, England, some months ago bad a broken leg set by a veterinary surgeon. The horse is now perfectly soun 1 and will probably figure upon the race course during the coming season. So perfect a cure is said to be auprecedented.

A Coursing Club in Sacramento.—On the evening of the 16th ult., a Coursing Club was permanently organized at the Pacific Hotel Saloon, corner of K and Fifth streets. The gentlemen present were C. Brady, Geo. Whitton, E. M. Skaggs, Thos. Harris, M. Shean, C. Mahoney, John B. Smith, Jas. Condon, Thos. O'Brien, P. Conlan, Ed. O'Connel, R. M. Doyle, Hugh Kelly, J. McMahou, Wm. Maharry and Andy Larkin, The following officers were elected:—H. S. Beals, President; P. Hanlon, Sceretary; J. J. Cadogan, Treasurer. From the interest manifested there can be no doubt that Sacremento will have cause to be proud of this organization. be proud of this organization.

—It is reported that after the race in San Francisco between Occident, the California wonder, and Judge Fullerton, Budd Doble and Hickok will visit the East and enter these horses, together with Goldsmith Maid, for all the valuable free for all purses in the trotting circuit. Much curiosity will be excited to see the distinguished Mustang, and if these flyers, together with Smuggler and some of the others of the first division should meet, it would be productive of more enthusiasm than even now exists in trotting circles.

Dew Qublications.

MAGAZINES,

Hearth and Home this week contain a sensonable and nell executed wood cut, entitled "The Captured Valentine." The miscellany is also up to the asual standard.

In Appleton's Journal is contained the capital illustrated sketch of Livingstone's last journey, as well as serial stories by Mr. Webster, and the author of "The Wooing O't." The contents of the Editor's Table will be found interesting.

The Overland Monthly for February makes its long journey across the confluent on time. The Kenrage and Alabama story is told once more. Mr. Stoddard, whose entertaining latters from Haly are being read with Interest, contributes a sketch, and the ubliquitous Josanius Miller a short poem. "A Sage Brash Alihi" is a characteristic sketch, introducing the types peculiar in the Pacific slope, first introduced to us by Brett Harte.

The American Agriculturist for this month contains an interesting paper on the horse's hoof, with suggestions as to the best mode of shocking. Also a large number of articles of rathe to the farmer gue horliculturist, with all agrams and drawings fully explaining them

The Manhattan and De La Sulle Monthly is a magazine edited by John Savage and issued from the press of the Catholle Protectory of Westeliester. The current mumber contains an excellent assortment of miscellareous mutter, the contributions of its talented conductors and other able prifers.

The American Naturalist for the current month contains a variety of articles of greaf interest and value to the zoologist and lover of natural history. Dr. Elliott Cones' and Mr. A S. Packard's papers on the "Breeding of Certain Birds," and "Life Illetories of the Protozoa and Sponges" respectively, are the most ontertaining, and the latter is praintedly illustrated.

Messrs. D. T. Curtis & Co., Boston, Kitchen and Garden Inrectories for 1875 have reached us, and contrin complete evialogues of all familiar flewers and reeds, as well as many novelties. In flowers, everything from the Antichinum popularaceum to the Trifolium atropureum, and in seeds, from the asparagus to the equash, will be found. As complete, catalogues and price lists they fare perfect.

Changing the Colors of Flowers.—Chemists have long been familiar with the changes affected in the color of blue and purple flowers by a kalis and acids. European horticulturists have recently tied some interesting experiments in this way on living flowers. The effect of tobacco smoke (continuing some ammonia) way first observed on the violet petals of Hesperis matronalis and Theris umbellata, giving them a greenish lint. The suggestion was carried out by pouring ammonin in a dish and inverting a funnel over it. Flowers placed in the finunel-tube were rapidly changed—thue and purple, to a fine green, the deep carmine in pinks to black, and white blossoms to yellow. Red and white particularly blue and green. Violet flowers were changed to red when sprinkled with water containing a small portion of nitre acid. A similar result took place by inclosing them in a box with muriatic acid gus. Dipped in water, most of these preserved their new colors several hours, and gradually returned to their original tints.

returned to their original lints.

Death of a Famous Cow.—Our readers of course remember the New York Mills sale of "Duchess" stock, a little over a year ago. The price then obtained, \$40,500, for one animal, has never been equalled in the history of stock breeding. The cow which commanded this wonderful price died a short time after, and now another of the royal breed has followed. The Paris Kentuckian of the 20th of January says:

On Saturday last the Fourth Duchess of Oncila died at Hon. T. J. Megibben's. She was purchased by Megibben & Bedford, October, 1873, at Campbell's New York Mills sale, for \$25,000. She leaves a bull calf, three months old, by Fourteenth Duke of Thorndale, said to be one of the finest Dukes in the country.

It would seem as if \$40,000 cows and \$25,000 heifers were not very safe investments.

—The last natural curiosity story comes from Portlandville, Dakoia. Some people who were drilling a well struck a eavily about thirty feet down, from which hot steam burst, and has been escaping ever since. It warms the country round about so generally that the snow has melted away and the wild animals of the country congregate at the place at night for the comfort of it.

—A Frenchman roasts coffee, grinds it to flour, moistens it slightly, mixes it in twice its weight of powdered while sugar, and presses it into tablets. One of these can be dissolved at any time in hot or cold water, making at once the very perfection of coffee; and it is claimed that a pound of the berry will go much further by this than by any other preparation of the beverage.

—The bright brass work used up m car ornaments and fixtures does not blacken or turnish as household utensils of the same metal do when not constantly polished, because after the brass is polished at the factory it is covered with a thin transparent varnish, such as shellae in alcohol; this protects the surface, otherwise it would tarnish as soon as a brass bettle.

—There are now more than fourteen hundred varieties of pears in the Jardin des Plantes, at Paris. The collection was begun in 1792, and in 1793 there were only one hundred and eighty-six varieties of all kinds

—A span of 200 feet of the iron bridge on the Inter-colonial Bailway, at Meta-pedia, was blown down in a heavy gale last week.

BIG INVENTION.

Lloyd, the famous map man, who made all the maps for General Grant and the Union may, certificates of which he published, has just havented a way of getting a relief plate from steel so as to print Lloyd's Map of American Comincal—showing from occan to ocean—on one entire sheet of bank note paper, 10x50 inches large, on a lightning press, and colored, sized and varalished for the wall so as to stand washing, and malling anywhere in the world, for 25 cents, or anvanished for 10 cents. This map shows the whole United States and Territories in a group, from surveys to 1875, with a million places on it, such as towns, elties, villages, mountains, lakes, rivers, streams, gold mires, railway stutims, &c. This map should he in every house. Send 25 cents to the Lloyd Map Company, Philadelphia, and you will get a copy by return utall.

HURST'S

Stereoscopic

Natural History

For Object Teaching in Schools,

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

ns, and various Animals and Blatts in grousque andes, never horvever volotion; their valural histinets, We offer these views wot us pletures only, but as dies from nature. One of the great moving elemis in our modern system of education is object ching. The interring fidelity of the sieveoscope ansfers the automis and birds from their natural bitat to the rooms of the student, and the lirestic of a homes, where they cannot fall to leave a lasting pression of the form, color, habits, and locality of its specimen.

An experience of more than twenty-five years as subternist of the New York State Cubinet of Nut if Itistory, and in gatherine this large collection of the and foreign specimens, coables Mr. Harst to notine in every view the locality of the specimen it is appreniate rocks, woods or water, and coloration the originals.

TESTIMONIALS,

CORRELL UNIVERSITY,

I must congratulate you upon your great success in
this new educational enterprise. If we can arrang
our annuscinents so as to make them impart listing
tion to the mind, it will be a step 10 univence in edu
cation.

tion to the mind, it will be a step to univance in education.

Washinoton, D. P., March 18th, 1870.

I min much pleased with like success you have met with in giving to the stuffed specimens a very decided importance of life.

I hope you may be able to confinue the Serles, and I have not doubt they will furnish interesting means of information and instruction in regard to the wild animals of New York.

State House, Boston, Mass., March 18th, 1870.

I have examined carefully the "Steroscopic Studies of Natoral History," and judging by the first ten numbers, should say tint they will prove of very great value, both is object besons for students, and was most interesting sith for the parlor Steroscopic. The delimentions, position, and color of the different groups and the general froatment are most perfect. I cardially recumined them to the public attention, and trust you will meet the encouragement which you liave carned.

EDWARD A. SAMUEL,

Curator of Zoology in Mass. State Cabinet.

DEWARD A. OANGER.

Curator of Zoology in Mass. State Cabinet.

PEABOUY ACADEMY OF SCIENCE.

SALEM, Mass., March 19th, 1870. }

I have shown your bicreoscopic views to the Directors of the Academy and the editors of the Anaevican Xuluralist, Dr. Packard and Mr. Murse.

They concur with me in praising their trathfulness and the tante which you have displayed in surrounding the specimens with named objects and scenery of characteristic fitness. They are certainly better fitted, not only as parlor and drawing room filustrutions, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

Connell University, Pirestnent's Rooms, {
 Thaca, March 19th, 1870 }

I have received the Stereoscopic views of objects in Natural History, and have enjoyed thrm greatly. They have surprised sil who have seen them by their wonderful ildelity, both as regards the animals and their surroundings; and I illust they can not fail to be of great service to the sludy of Natural History, first by attracting students to it, and wext by perfecting them in it.

ANDREW D. WHITE.

H. W. COLLENDER

STANDARD AMERICAN No. 738 BROADWAY

American Wild Fowi Shouting.

BY JOSEPH W. LONG.

Describing the haunts, habits, and methods of shooting wild fowl, with instructions concerning guiss, blinds, boats and decoys; the training of water retrievers, dec.

This book is written in plain English, and in a most attractive style. A broad, and at the same time never a better than the same time in the country. The habits and feeding grounds of the country. The habits and feeding grounds of the millards, blue-winged teal, pin-tuil, wood, gadwell, and coveller; wd-headed, buffle headed, and withey kinks of ducks, grees, swans, &c., have been enrefully and lugenlossly studied and given to the reader.

In thirty chapters the author has furnished Information for the young, as well as for the practical sportsman. "A look for googtsman by a sportsman "—4 arow."

"A luost for sportsmen, by a sportsmen,"—Argw.
"A luost for sportsmen, by a sportsmen,"—Argw.
"Tetls where to find game in the murning, in the afternoon, and in the evening."—Sim.
"Almost indispensible to the sportsman."—Arca

For Forest and Steeam SEASONABLE VALENTINES.

PRIMERO.

The Violet's blue, the Rose is red,
And so is thy Nose, with cold in the head;
You really had better have staid in bed
Than brave this Wintry morning.
But by-and-bye, in the balmy Spring,
When flowers bloom and birdles sing,
Will I wed thee with a golden ring,
In all a bride's adorning.

SECONDO.

I'm coming, Love, to meet thee, along the silent street,
At even lush, amid the slash, with goloshes on my feet.
The corner lamps are all blown out, and all is mystery;
Tae brave police, he takes his ease, in corner grocerle,
So join me, Love, my dainty Love, to ramble in the Park;
It is so nice to fall on lee and simmble in the dark,
Lean lovingly upon my arm, I'll gaide thy frozen feet,
Don't use your veil, wind, snow and hall; no one will we meet.
Now can we seek sweet solitude, to speak our heart's desire,
But pretty soon, we'll give up spoon, and seek an open fire.

L. W. L.

For Forest and Stream FAIR LIES.

T STOOD on a snow-clad bank,
Where the Summer wave had flowed,
And a silvery path from shore to shore,
Now, gemmed and radiant, glowed.

With a cold and treacherons glow, For a deep, dark pit torked atlaneeen The glittering arch below.

I stood on the cataract's brink,
Where it langhed its life away,
And a rainbow bright as a scraph's crown
Danced in the shining spray.

And below the glorious crown, A whirlpool yanwed with jaws of death An lundred fathoms down.

I basked in a woman's smlte, She was fair as a child of light, And her glauce was bright as a light-house gleam To a mariner at night.

But her heart was chilled and dead.
And the smile on her cold, purer. And the smile on her cold, sweet face Was a wrecker's inrid tight to him Who won her false embrace.

J. J. ROCHE.

For Forest and Stream

Rambles on the Texas Frontier.

[CONCLUDED FROM LAST WEEK.]

THE next day we rose early, and eat a hearty break fast, which, by the way, was another novelty. It consisted of the head of the heifer killed the dny hefore. consisted of the head of the heifer killed the day hefore. This was nicely roasted in the ashes with the skin on. When done the skin was removed, and the tongue, the brains and the meat on the jaws served up with coffee and tortillas. It was a capital rellsh. After breakfast we went out and shot a few partridges. In the afternoon we drove across to Mr. E.'s ranche. A ride of a few miles brought us to Don Cornelies, where we stopped a while brought us to Don Cornelies, where we stopped a while, then taking him along, we were soon at our destination. The house was a decided improvement on any we had seen, as it boasted of a fireplace, a plank floor, was crited on side and top and had two rooms in it. It was prettily situated on a little elevation surrounded by trees, and in front was a pond dignified by a grand name, "El Laguna de los on a little elevation surrounded by a pond dignified by a grand name, "El Laguna de los coyotes." There not having been any heavy rains for the lake was nearly dried up. We spread several years, the lake was nearly dried up. We spread our blankets out doors, unpacked our traps and then went into the house, where we soon had a rousing fire.

to find here a small library of standard works, and many photographs of distinguished Europeans. We sat up ve late playing euchre, and after the final rubber, we took parting glass of some superb brandy, and then rolled up in our blankets. At surise the next day we rose, and after dividing our party, we started out after large game, agreeing not to fire at anything smaller than turkey. Don Benito, Mr. E. and myself went in one direction. edge of a large prairie we saw three large sandnill cranes but did not get a good shot at them. We soon struck into a nopalerica, a dense thicket of cactus, some of which was fifteen feet bigh, with a spread of thirty feet. A coyote bounded some bounded across our path, but we let him pass; then we came across a small drove of Jarilas, (the peccary, or wild hog.) which we did not disturb. On coming out to the prairie agaiu a doe bounded up almost from uuder our feet. Her pace was accelerated, not stopped, by a snap shot from a Remington rifle. We did not get another shot, and returned to camp, where we found the others had been more suc-cessful, having brought in a fine buck and a doc. After diuner the Dr. and myself went ont, and at a short distance from camp the Dr. shot a magnificent coyote, the largest we had ever seen. The next day we saddled up and went to some ponds after ducks. Dr. C. and Mr. £. took the buggy, while Don Benito, Don Ramon and myself were well mounted on fine horses. Two of these horses had performed some remarkable journeys, the one I rode having on one occasion made 160 miles in twenty-four hours, while the one Don Ramon rode had several times gone 120 miles in twenty-four hours. At the first small pond we killed two mallards. On the way to the next we had a brilliant ontburst of speed across the prairie, and my skill in horsemanship not being at par, I had all I wanted to attend to in keeping my seat, especially as I had my gun in one hand and had on my cartridge belt, a navy revolver and a large hunting knife. Just before getting in sight of and a large hunting knife. Just before getting in sight of the lake the dogs stood a covey of partridges and Don Benito and Dr. C. dismounted and went to work. I did not join, as I thought they would soon be through; but as they seemed to be having an lively a time, I finally dismounted and joined them. Just as I was coming up to them I saw a Mexicun eagle swoop down and carry off a wounded bird. I let him have my right barrel and he tumbled over and dropped the bird, but soon recovered himself and flew off. I was soon up with the Dr., and we had self and flew off. I was soon up with the Dr., and we had some royal good sport. The ground could not have been better—a small open prairie with hardly a tree on it. Just as Dr. C. had dropped a fine bird a large black hawk flew to pick him up, but I stopped his flight with an ounco of No. 7 and he fell at my feet. He was a splendid specimen, in full feather, and the sinews on his legs were like ribs of steel. We soon used up that covey and then wasted method. We soon used up that covey and then started another at the foot of a large nopal, and scattering them, we picked them up one by one. One bird sprang up almost under my feet, and as be crossed, I fired, the load of shot cutting his head entirely off. A little further on Dr. C. bowled over a jack rabhit, and in a few seconds another streaked it acros the prairie. He was a long way off, but I thought I would salute him. The shot struck him on the flank and he tumbled over, then rose, then fell, then started off. Just at that moment one of the dogs saw him and put chase—and a lively time they had of it—first the dog would tumble over the rabbit, then the rabbit over the dog, till finally I went up and knocked the rabbit on the head. The jack rabhlts and the smaller variety, similar to our hare, are a great pest to anyone who prides himself on the thorough training of his dogs, for they are so very abundant that the dogs are constantly starting them up, and it is almost impossible to keep the dogs from notleing them. In going after partridges no one thinks of shooting them. As we had taken up so much time with the partridges, and As we had taken up so much time order, we went back to intending to go after deer in the evening, we went back to our horses and gave up the ducks. We found in our our horses and gave up the ducks. We found in our absence that Don Ramon had winged and secured a blue It seemed singular to meet in so lonely a spot a gentleman who had been thoroughly educated in Germany; and have done fearful work with one's fiesh. I have always

regretted that I could not have had him mounted, for he would have been a gent in any cattinet. In crossing the pinirie I was struck with the magnifying properties of the ntmosphere. I saw, at a distance, an animal lying nuder a hush that I took to be a coyote, and I was strengthened in my belief by the Mexican boy riding near suying: "Mira, los coyotes," Putting my horse to a gallop, I dushed up, and as the animal rose, I fired u load of bucksbot and tumbled over, not a coyote, but a big jack rabbit. On our return to the ranche we picked three dozen good phunp return to the ranche we picked three dozen good plump partridges and had them served up in a variety of ways for dinner. While at dinner one of the servants brought in an armadillo which he had just caught. It is a singular looking animal, and one very sehlom seen in manageries. Its flesh is said to be deliente. After themer Dr. C. killed one lunck and one of our guides two does. I, heling the Junul of the party, killed nothing, except time. I sulght have been more fortunate if I had understood what my gulbesuid, for as Ewas stalking a buck and three does, the guides said, for as I was stalking a buck and three does, the guide said to me ia Spanish that "there was one close to me ou the left," hut not understanding I kept on, and the back to my left became frightened and started off, whileb, of course, alarmed the ones I was in pursuit of. The day had been a very warm one, and we did not put on our couts, while the vaquere leading us had on only light cotton pants and sbirt, and the latter garment proving too warm, he stripped it off and field it around his walst. Returning to camp we took our supper and had a good clat. Don Benite and myself having been much unneyed the night before by the dust, but moved our blankets in the house before by the dust, bud moved our blankets in the house and slept on the floor. This night the dust being settled down we thought we would move out again, but just before doing so I took a look at the sky and told Don Boulto that he had best stay inside again, as the sky looked as though a storm was coming up. At 10 P. M. It having turned cold we made up a little fire and then turned in.

About midnight a norther spring up and oh! how the wind whistled and howeld through the trees and however. wind whistled and howled through the trees; each moment seemed to add fury to the blast, and each moment it grew colder. Pretty soon we heard Dr. C., Dan Ramon and little Fred chattering away and piling on all the space blankets. We called out for them to come in; they said they were not cold, oh, no I they were only awakened by the breeze. At daylight we rose, and the nutsiders came breeze 1 At daylight we rose and the nutsiders can in and hugged up the fire and would not arknowledge that they were cold. We piled on the wood, and as soon as it was light we went out to see how the servants were getting along; found them hud-lied up around a huge fire and grumbling mucho frijo! We soon had some hot coffee and hard tack. In a few minutes it began to snow and to freeze, so that by eight o'clock the ice on the pond was nearly half an inch thick. After breakfast Dan 1 enito and myself went out to get a back log for our tire, and picking out a big mosquito tree we went to work entting it down. Hot and hard work we found it, cutting with a dull axe, wood that was as solid and tough as lignum vitag, but at last we had our back log on the fire. but at last we had our back log on the fire. At len o'clock I proposed to go out and shoot some flucks, but i could not get anyone to join; all voted that it was too cold. having my previous experience of getting lost luttre Monte, I concluded it best not to go and run the risk of getting lost In a blinding norther. After an hour or two's work chink ing of the cracks to keep out the bittng blasts, we played euchre aml kept up a pleasant conversation, which as each one of us was from a different section made it very agreeable. one of us was from a different section made it very agreeable. Kentucky, Ohio, Rhode Island, Virginia, and the City of Mexico, were represented. Our poor servant being thinly clad hugged the fire closely. Huving often been in New England in mid-winter, I used to laugh at the idea of a Texas norther being so very cold, but this day in a very professed one with a very professed one Inspired me with a very profound respect for a norther. Just Imagine each pore in your hody being penetrated by an leicle, and the marrow in your bones being put through an letter, and the marrow in your bones being put through a patent lee cream freezer, and you have an idea of the penetrating chilliness of a stinging norther. At an early hour, after piling on all the blankets and putting on an old fish net to tangle up the coarsest of the cold, we turned in and

were soon lost in pleasant dreams. In the morning, after a good hearty breakfast, Don Benifo and myself took our guus and went out. Just as we entered the prairie, we came across some long billed care the prairie, we came across some long billed care the prairie, we came across some single band it almost entirely frozen over. We secured two malarits, and in skirting around the pond we started some sulpte and had some good sport effects on the prairie but they have here to skirting around the pond we started some sulpte and had some good sport effects on the prairie but they have here to skirting around the good shot. On retracing our steps we came across a small flook of earliew, and here Don Benifo made a good shot with a Purdey C F. B. L., No 12. A cardew rose as fally edited, him, kept on but being nearer, saw that he was hit, and I went and picked him had as he struck the edge, he fold, and I went and picked him had as he struck the edge, he fold, and I went and picked him had as he struck the edge, he fold, and I went and picked him had as he struck the edge, he fold, and I went and picked him had as he struck the edge, he fold, and I went and picked him had as he struck the edge, he fold, and I went and picked him had as he struck the edge. He fold, and I went and picked him had an extract the went out and shot a few small rabbits. The next day we started on a deer him. Dr. C. and I went tugether. The Doctor took his stalking pony. We went for a couple of united with the property of the

sights. The place seemed to he all life, eighteen or twenty steamers were at the warves loading and inloading, freight trains coming in, emigrants lounging around the streets awaiting departure of Texas steamers. At 2 p. m. onr train was off, and at dask 1 landed at Cassidy's in New Orleans. Stopping over here for two days 50 as to he present to witness Marili Gras, 1 pussed the time very agreeably in looking around the town. After enjoying hugely the grand pageants of the carnival in this Paris of America, I bude my friends good bye and securing a berth in a very constantable sleeping car on a Northward bound train, I was soon on my way to the loved ones at home and my frontier rambles were at an end.

ACROSS NEWFOUNDLAND,

INTERIOR ENPLORATIONS-FLORA, FAUNA, AND GEOLOGI-CAL FOUNATION.

[Continued from February 1Ith.]

CHAPTER VIII.

CHAPTER VIII.

CTOBER 30th.—Rain, snow, and wind, in the early part of the day compelled us to stop and encamp. We shot a hare, the first we had killed; it was white, except the tips of the ears and lip of the tail, which always remain black. The hare of Newfoundland is the Arctic lare, Lemus Arcticus. It sometimes weighs fourteen pounds and upwards. There is no other kind in the Island. The grouse, during severe snow storius at night, allow the snow to drift over them, and thus covered, obtain shelter. While in this simation a silver thaw sometimes comes on, and the incristation on the surface becomes too thick for them to break through in the morning, and immense numbers of them perish by being in that manner enclosed. When we were croosing a lake on the ice my Indian fell through and with great exertion saved himself. While he was struggling my new friend Gabriel stood still and laughed; due did not look for assistance, nor did the other evince the least disposition to render any, although he was, compared with my position on the lake, near to him. Upon my remonstrating with Gabriel about his manifesting a want of feeling towards Joe, when perishing, Joe himself replied to me, "Master, it is all right; Iudian rather die than live owing his lite to another." The other limit acted in sympathy with the self-dependent sentiment.

October 31st.—We travelled over hills and across lakes alrout twenty miles, fording in that space two rivers running north-easterly, and which are the main source branches of the river Exploits. This large river has therefore a course of upwards of two bandred miles in one direction, taking its rise in the south-west angle of the Island, and discharging at the north-east part. The Indians are all excehent shots, and the two men now with me displayed admirable skill in killing the deer at great distances and techniques and the southern extremety of what is said by my Indians to be the nost spattern lake of the interior frequented by the Red Indians, and through which was the main source

miles or upwards, which part of the journey must he performed on foot, hecause uo waters of any magnitude intervene. I named the lake in honor of His Majesty George the IV.

November 1st.—For nearly twenty miles to the westward of George the Fourth's lake, the country is very bare, there being scarcely a thicket of wood. During this day we forded two rapid rivulels running southwest to St. George's Bay. Deer had hitherto passed us in innumerable straggling herds. But westward of George the Fourth's lake, and particularly as we neared the coast, very few were to he seen. While asceuding a mountain, I felt myself saddenly overcome with a kind of delirium, arising I supposed from exhaustion and excessive exertion, but faucied myself stronger than ever I was in my life. It is probable, under that influence, that if the Indian who last joined had not been present, I would have had a reneontre with my other Indian.

In the evening (1st November) about eighteen miles west of George the Fourth's lake, from the summit of a snowy ridge which defines the west coast, we were rejoiced to get a view of the expansive ocean and St. George's Harbor. Had this prospect barst upon us in the same manner a mouth earlier, it would have created in my mind a thousand pleasures, the impression of which I was now tocallous to receive; all was uow bowever accomplished, and I hailed the glance of the sea us home, and as the parent of everything hear. There was scarcely any snow to be seen within several miles of the sea coast, while the unountain range upon which we stood, and the interior in the rear, were covered. This ran ge may be about two thousand feet above the level of the sea, and the snow-capped montains in the north-east are higher. The descent was now very precipitions and craggy. A rapid river called Flat Bay River, across which we were to ford, or if swollen, to pass over apon raft, flowed at the foot of the ridge. It it threatened rain, and the sun was setting; but the sight of the sea urged us onward, By shiling down rill c

the owners not having yet returned from the interior after their fall's lunnting. The honese of the European residents lay on the west side of the harbor, which is here about a mile wide, and uear the cutranee; but a westerly cale of wind preventral any intercourse across. Having no food for uearly two days, we ventured to break open the door of one of the houses—the captain or chief's, as we understood from my last Indiau, and found what we wanted—provisions and cooking atensils. The winter stock of provisions of this provident man, maned Emanual Gontgont, the whole having been provided at the proper season, consisted of six barrels of pickled fish, of different kinds, viz young halibuts and cels, besides dried cod fish, seal oil in bladdiers, and two barrels of maize, or Indian corn flam.

November 3d.—We were still storm-stayed in the Indian house, in the midst of plenty. It seemed remarkable that the provisions were entirely free from the ravages of rats and other vermin, although left without any precaution to guard against such. There was a potato and turnip field close to the house, with crops still in the ground, of which we availed ourselves, although now partly injured by frost.

November 4th.—A party of Indians arrived from the interior, male and temale, each carrying a loud of furs. Our landford was amongst them. Instead of appearing to notice with displeasure his door broken open and house occupied by strangers, he merely said, upon looking round and my offering an explanation, "Suppose me here, you take all these things."

We crossed the harbor, and were received by the residents—Jersey and English, and their descendents—with open arms. All European and other vessels had left this coast a month hefore, so that there was no chance of my obtaining a passage to St. John's or to another country. There were too many risks attending the semiling to sea any of the vessels here at this season, although I offered a considerable sum to the owners of any of them that would convey me to Fortune Bay on

I might obtain a passage to Europe by some of the ships that had probably not yet sailed from the mercantile establishments there.

After a few days I parted with my Indians—the one, who had with painful constancy accompanied me across the Island, joining his countrymen here to spend the winter with them, and return to his friends at the Bay of Despair in the following spring; the other, having renewed his stock of animulation and other outfits, returned to his family which we had left in the interior. Having now crossed the Island, I cannot help thinking that my success was in part owing to the smallness of my party. Many together could not so easily have sustained themselves; they would have multiplied the chances of casualties, and thereby of the requisition of the attendance and detention of the able. It is difficult to give an idea of, or to form an estimate equivalent to, the road-distance gone over. The toil and deprivations were such that hired men, or followers of any class, would not have endured them. At St. George's Bay, as at all other parts of Newfoundland except the towns, the country is nearly as destitute of pallas and roads as at the time of the discovery of the Island; the intercourse between the settlements, being by water, during bad weather is entirely suspended. I remanced at St. George's Bay Harbor under the hospitable roof of Mr. Phillip Messervey, the principal inhabitant, to rest and recover from the fatigues and deprivations of my journey, and from a hurt received while descending the mountains to the coast.

For Forest and Stream, HUNTING BEARS.

HUNTING BEARS.

I WAS invited two years ago this Fall by an old deer and bear hunter to come and hint for a week or two. I accepted the invitation, and one charming October morning, started for Mr. B.'s, but before I had goue very far I began to worry as to how I should bring the bearskins, &c., home, as I was on foot. I finally came to the conclusion that I would hire a wagon and team from one of Mr. B.'s neighbors.

By the way, Mr. Editor, can you tell me when it is a "close season" for bear, (I suppose it is during the higging,) as I dou't like to kill them out of season?

On reaching Mr. B.'s, I found that he had gone to town, but would soon be home; so I look my gun and went into the woods after gray squirrels. Speaking of squirrels reminds, me of a hunt I had once with a friend who was a novice in the art. I gave him all the shots at first, but after he had missed four or five times, he said, very innocently, "I thought gray squirrels were a great deal bigger than they are." After a few more unsuccessful shots he got disgusted, and said: "Now, see here, W., you're trying to take me in; these are not squirrels at all, but are the shadows of the leaves." He shot at them as they were running; so any one who has been squirrel shooting will understand his comparisons. When Mr. B. came home he was delighted to see me, and said that one of the boys had seen a large bear that morning. After supper I said to him: "Mr. B., you promised to tell me how yon lost those three fingers from your right hand."

"I'll tell you now," said he. "About ten years ago I had a bear trap in a laurel thicket some five or six miles from here. One morning I took some of the boys and dogs and went to look at the trap. When we got to the edge of the thicket I told the boys to stry there, and leaving my rifle with them, took the dogs and went to look at the trap if found a half-grown bear, and thinking I would have some fin, I let him out and set the dogs on him. Unfortunately they were all young dogs but one, and the hear soon whipped th

killed him."

We went to bed soon, and early next morning, after a hot and hearty breakfast, started for our bear. Mr. B., placed me on top of a steep, stony bank, and told me to stay there, and I could get a good shot at him. I stood there for nearly an hour, hearing the dogs barking, now here and now there. Presently I saw something, (it afterward proved to be a stray yearling,) moving in front of me, and, at the same time, I beard the brush crack behind me. I thought, of course, it was Mr. B., as he told me be

would come that way, and so I said, without turning round, "I believe there's the hear now." Not getting any answer, I turned aud saw, within twenty feet of me, a big brown bear. Like a fool, I shot both bartels at him without taking aim. I was so taken aback—elemoralized—that I missed him. I put out down the bank, and as the small stones came rattling after me, I thought it was the hear. Suddenly, as I went through a thicket, something eaught me Irom behind. "O for a hodge in this vast wilderness" was probably my thoughts, but I will not say so postively; in fact, I think that even an example in short division, (and one that was in short clothes, too.) would have been too much for my brain just then. At hast I turned—and lot it was an innocent thorn bush that had caught my stiffly extended cont tails. I now became very valorous, (the bear not being in sight,) and put several ounces of powder and between two and three pounds of shor into each barrel of my gan, and proceeded toward where I had left brain. By the time I got there the others had come up and killed him. After skinning him we went bank to the house, where one of Mr. B's sons asked me to let him try my gun. I consented; and he want-down into the meadow to shoot at a mark. He happened to staul in front of an open window of the room in which we were sitting. We soon heard a noise which caused Mr. B to shant to the girl to "shut the windows, as we were going to have a thunder storm." The words had barely left his lips when the aforementioned boy came sailing through the open window and alighted on the table. His arms were extended to embrace some one (a tree, probably) as he came by, and, as he lit on the inkstand, he observed, pensively, "Put me in my little bed."

The above is a little exaggented—but the gun kicked.

I had a pleasant week of hunting, and, when I left, the doctors said that as the boy was young he would in time recover.

For Forest and Stream A TEXAS PANTHER HUNT,

A TEXAS PANTHER HUNT,

THERE seems to be a difference of opinion among the natives us touching the punther and the Mexican lion, or cougar. In fact, one can frequently hear of congars being killed, but when it is sifted down to a tine point it generally turns out to be no more than the panther. In conversation with an old Texau recently, and at whose residence I had some years since seen the skin of a punther stuffed, I learned that he had seen an animal more of a grayish color—as he expressed it, "about the color of a coon, and shagry about the shoulders." "I had just come up," he said, "out of Red River Bottom, and kinder met it coming into the breaks. I tell you it looked at me savage. I had no gun, or I should have tried him one pop, as he passed in a trot withiu forty yards of me. I took him to be heavier than the panther, but not so long."

About four years ago I had some business with Mr. M., then living in Sivel's Bend, on Red River. After supper we were talking around the fire, and among other subjects that of wild cats and panthers was taken up. M. being an old settler, soon had my hat crawling off my head from the effect of the hair standing ou cud, and wound up with "I say, R., I believe there's a panther in the bluffs now, for I heard a noise up the river a few nights since like some person in distress, and as there's no nue living up there I have coucluded that it was a panther."

I replied that I would like to get a shot at one, just for the name of the thing.

Upon hearing some dogs barking down in the bottom, M. remarked that the boys were 'possum hunting, and guessed they had found one. Soon after I had retired, I heard the dogs barking again, but this time they seemed so much flereer that I felt sure there was something larger than an opossum. I was soon confirmed in this opinion by the boys bursting in at the door, ont of breath, exclaiming—"Mr. Air. M., git git-git your gan; some great big thing down yonder up in a tree!"

"Pshaw, it's a wild cat. Why didn't you cut down the tree!"

"No, n-

thing down yonder up in a tree!"

"Pshaw, it's a wild cat. Why dida't yon cut down the tree?"

"No, n-o, I tell you it a in-t; it's too big!"

M. called ont—"R., get up, quick, I guess them dogs have treed that panther now. You get a gun over at the uigger cubin and come on. I'll take the rifle and run down there, lest it should jump ont."

So saying, he seized his gun and darled out into the dark like au arrow. My hair began to crawl again. In my hurry I got my pants on wrong side before, and had to take them off. In fact, my mind was more on glaring eyes, long claws, and a right in the dark than it was upon making my wardrobe. Harrying over to the aforesain nigger cabin, I was furnished an old Springfield misket of the U. S. A. style. Upon inquiring It it was londed, old Unele B. replied:—

"Yes, massa; I ben lurkey huntin' dis cben wid it."

"Bud" and I now started on double quick for the scene of action. "Bud" followed a trail about half a mile through a tangled undergrowth of vines, green briars, and thorn bushes so dense that we could not pass through any where else. On nearing the river we came to an open sand beach covered with cultomwood; turning down the river about two hundred yards brought us to the dogs, burking at the foot of a large tree on the edge of the jungle. M. was out in the thicket, as he said, "to keep him from jumping down." On nearing the tree, he called me to come round to him, and in doing so I had to literally craw upon my hands and knees. The young moon was just setting, and the uight was still and clear; but the leaves on the trees made it so dark that we could scarcely see anything, except against the sky.

When I got to M. I raised up, and was shocked at beholding so large au animal, almost directly over our heads, and not more than thirty feet from us. I can see the bold ontline yet, as he stood with his hind feet on one limh and fore lect on another, some five feet apart, and his long tall swaying back and forth as he looked down upon us. I now hegan to realize the situation,

river with a tremembus yell. The panther had run down, and the dogs ran to us; but when the panther ran off the dogs followed. From the report of my gnn, I guessel I had done but little execution, as there was hardly half a charge in it. I was vexed at myself and the negro too. M. and I gave vent to our feelings by yelling as loud as we could. The panther had turned, and was coming directly toward us. We made briars crack getting ont of there, you bet. When within about firty varils from us it ran up another tree. We now seen "Bud" to the house after ammunition for my minsket, unit, while consulting what was best to do, with a tremendous crash the panther fell to the ground; the dogs pounced upon it, but let it go about as quick. It soon quit growling, and the dogs come out to water.

water.

We followed the dogs into the thicket, and it made my flesh crawl when I put my band upon it to help M. drag it out. We now called to "Bud" to bring my horse, and when he arrived we had quite a struggle to get it on him. Next morning we skinged him, and found that two buckshot and three turkey shot had entered just behind the foreshoulder and lodged against the skin just under the spine. I verily believe there was no more shot in the gan. We did not measure him, but the settlers suid he was "n big in." I still have his hide, dressed with the hair on, and doubtless prize it as highly as the Arrapatice limitan (referred to by Monmouth) did his.

Cooke county, Texas, January 1st, 1875.

A BEAVER DAY.

UR camp was located in a sheltered ravine, some twenty yards from a clear spring creek that wound along through the gorge before us, while just across its peebly channel the grante and marble ledges were plied skyward, streaked he grant there with the rarest colored lichens and mosses. The fir and the uslar, which seemed to be clinging for life to the marble beings, formed a striking contrast to the clear sugged heiges, formed a striking contrast to the clear might be used and above att in their magnificent proportions, humaling, it montraile adence, a sing that was clearly intenged with the heavy rour of the catamet in the distance.

In all respects our lucation had been sageclossly chosen in our limiting and dishing we had here successful, and our enjoyment was complete. We had scaled the theirs peaks, catching hazy glimpses of the far reaching with the warm Indian Summer noon-day sun as we scanned the warm Indian Summer noon-day sun as we scanned the rocks and rapids that lined the Sturgeon River, and hat not least, we still had in our hirder a generous supply of provisions and necessaries, together with grun and rod products—venisou, trout and partridges—already secured, and the wood and water of this be untiful location teemed with plenty more that could he readily added to our store when needed. Verily, it would seem that annel such eigenfant the model of the country of the past freedom from care, the clear, exhilatating mountain at door the country of the past freedom from care, the clear, exhilatating mountain at and bounteous fare had generated a spirir within us that made the masterly style of abordynal inactivity utterly out of the question, and so we planned for the morrow a visit to three beaver traps we had set a few days after locating our camp. Accordingly our lancheou, shooting and ishing tackle were packed, and, after an early breakfast, we wore under way. We had aftered the pand, and of one when the dam was repaired. The two remaining traps were set at the botton of the pond, and crowed to th

-"Now is the Winter of our Discontent."

Mish Gulture.

AMERICAN FISH CULTURISTS' ASSO-CIATION.

THE association resumed its session on Wednesday at the office of its Vice President, Mr. George S. Page, No 10 Warren street, Hon. R. B. Koosevelt in the chair. Amonz the gentlemen present were H. J. Reeder, Fishery Commissioner of Eastern Pennsylvania; T. B. Ferguson, Fishery Commissioner, Balthnore; Dr. William M. Hudson, Fisher v. Commissioner, Connecticut; M. C. Entmunds, Weston, Vt.; Grorge Shepard Page, B. F. Bowles, Springfield, Mass.; C. Van Winkle; Walter Arnold, Toronto, Ontario; Prof. Spuncer F. Balri, Washington; Dr. Milnor, United Bales Fishery Commissioner; Eugene G. Blackford; Prof. G. Brown Goode, of the Smithsonian Institute; A. S. Collins, I aledonia, N. Y.; Samuel Wilmot, Newcastle, Ontario; Seth Green, Rochester; A. G. Roorbeck: W. F. Parker, Meriden, Conn.; T. C. Banks, Charles Hallock, B. Phillips, Rudolph Hessel, Prof. Gill, Dr. Salter, N. Pyke, N. W. Park, Detroit; Charles B. Evarts, Vermont; C. H. Raymand, President of the Morris County Sportsman's Club: Prof. Heary Marton, Stevens Institute, Hoboken; Prof. Bickford, American Museum of Natural Histery.

The proceedings commenced with a recital by Mr. Reeder of his experiences with the two species of black hass known as salmoides and nigricans. A distinction had been made, he sald, with regard to the geographical location of these fish; the general impression being that the salmoides are found in Southern waters, while the nigricans are confined to Northern rivers. Careful examination has led him to the camelasian that this geographical distinction was a mistake, although the difference between the two kinds of huss was distinctly marked. Alluding to the scarcity of this fish in the waters of Pennsylvania, which had originally been stocked from the Potomac, he remarked that he seconnted for the circumstance in this way: In the early part of July, after the beds were prepared and when the spuwn was there, they had severe storms, which flooded the streams and carried down mud and various kinds of debris. Their theory was that the sediment

would be very likely to happen. That on the other hand, if the river had been overstocked it was possible that the natural supply of food being exhausted the fish had eaten

would he very likely to happen. That on the other hand, if the river had been overstocked it was possible that the natural supply of food being exhausted the fish had eaten their yrang.

Mr. Rreder thought the explanation was hardly sufficient, loasmach as there was a large quantity of minuows and other fish on which the bass could feed.

Prof. Baird made a brief statement as to the action of the United States Commission. Their operations, he said, had been principally connected with shad and salmon. Shad were quite plonty bind in the Hudson and Connecticut rivers, and they had been able to transfer a large number of fish to the West. The aggregate distribution was between two and three millions, some of which were carried to Ohio, Michigan, Wisconsia, Iowa, Minnesota, and Massachusetts. The German Government had forwarded them 250,000 eggs of the Rhine salmon through Mr. Hessel, but nearly all of them died, and in the same wa their attempt to Introduce American shad into German waters had also failed. The eggs were forwarded in charge of Mr. Mather and Mr. Anderson, but after eleven days they slid died. The salmon stations in California and in Maine land, Prof. Baird saib, been considerably enlarged. About 6,000,000 of eggs and been taken in the McCloud River, of which 1,000,000 or thereabout had been turned into the Saenamento River. About 2,500,000 of California salmon of hast year's production were now in the streams for which they were intended. The Back-port settlement, he captained, had also been more successful than usual.

Air. Green, in reterring to the failure of the New York Commission to carry the shad to Germany, stated that the boxes in which the eggs were placed were made of tin and zinc, which is not reterring to the failure of the New York Commission to carry the shad to Germany, stated that the hadding of whitefish for 135 days by the use at cold water and ace, when necessary, and the occurred to him [Mr. Reeder] that this system might be made effective in the tanasportation of his across the

It with ice.

The subject of establishing an aquarium in New York, on the principle of that at Brighton, was introduced by Mr. Eagene G. Blatchtord. He represented that the study of ichthyology was attended with difficulty, and arged that an oppartunity should be given for observing the habits of Lsh an their natural element. This matter had been advocated in the Times, Appeton's Journal, and Foigest and Stokem, and, in the hope that it would be favorably enterlained, he would present a resolution on the subject. The them moved a resolution expressing in effect the belief of the rish Cultinists' Association that an aquarium in the city at New York would be a great benefit to science generally, and ienthyology in particular, and giving its lavorable countenance to any public or private measure in that direction.

direction.

Mr. Wurd, of Appicton's Journal, said that having heard that Mr. Saville Kent had severed his connection with the Brighton Aquarimu, he wrote to Mr. Kent with the view of getting his opinion as to the establishment of an aquarium in Central Park. He [Mr. Ward] thought if they could obtain Mr. Kent's services, and the indorsement of the public, the matter would be tairly in the way of progress. The idea he had in his mind was to agitate the question in New York so that some gentleman might be willing to come forward and endow an aquarium building

in Central Park. The financial panic then intervened, and everybody was calculating what money he had to keep rather than what he had to spend. As far as he knew, there was no special scheme on foot.

Prof. Baird thought a stock company would he desirable as well as profitable, although it would be more desirable that it should be one of the public institutions of the city. The stocking of such an aquarium would he a very simple matter. He would willingly give the use of all his trawls, nets, etc., used in his coast work, and could furnish un abundance of specimens. The Central Park anthorities, he helieved, would facilitate the matter by every means in their power, and other attractions might be added to the aquarium.

Mr. B. Phillips, in advocating the establishment of an

their power, and other nuractions might be added to the aquarium.

Mr. B. Phillips, in advocating the establishment of an aquarium, referred also to some of the discussions which had occurred the previous day in relation to the impregnation of water to such an extent as to after the character or flavor of fish. This appeared to him to be an abstract science, something in the nature of the dilettanteism of pisciculture. His friend, Mr. Blackford, however, in asking for an aquarium, only asked for what would be of the greatest possible utility in the study of icthyology.

Mr. Blackford's resolution was unanimously adopted by the association.

colture. His friend, aft. Billekter, what would be of the greatest possible utility in the study of icthyology.

Mr. Blackford's resolution was unanimously adopted by the association.

Mr. Wilmot, of Ontario, Canada, read an interesting collatement from reports which he had submitted to the Canadian Legislature on the subject of fish culture. He divided his statement into three parts. First, he insisted on the enaetment of judicious protective laws; then he answered the question, which he said was frequently asked by the skeptical, as to why fish should be produced by nrtificial means instead of allowing them to breed in the natural way, and lastly he pointed out the way in which the nrtificial process obviated the numerous difficulties which he set the natural breeding of fish. After referring to the general importance of piscienture, he strongly urged the necessity of legislatures making laws for their protection during certain seasons of the year, especially during the close or spawning season. The sea fisheries, he said, did not require the same protection as those inland. On the subject of natural and artificial breeding of fish, he took the sulmon as an example, pointed out the way in which the spawn was deposited in the natural process, showed the various ways in which the eggs were destroyed, such as failure in impregnation, attacks by fish insects, aquatic hirds, etc., and contended that not more than one per cent, ever come to be mature fish. On the other hand, he showed that from the care taken in the artificial process, and the way in which the eggs were protected from danager of all kinds, the percentage was more than seventy-five or eighty per cent.

A resolution was here introduced with the view of binding fish culturists to sell spawn at certain rates, for the purpose of uniformity of prices; but most of the members of the association were opposed to it, and it was directed to he laid on the table.

Mr. Green submitted some remarks on the subject of restocking our used up streams. He commenced f

ment would possibly assist. Black and oswego has almost wall eyed pike he suggested as the proper food for inland waters.

Dr. G. H. Colton Salter, for many years United States consul at various ports in China, cutertained the association with a recital of some of his experiences with the fish aud fishing in that kingdom. In a country so deusely populated as China, where for ages the ingenuity of man had been tested to the atmost in supplying the wants of the pipulation, it was but reasonable to suppose that the science of pisciculture had attained a high degree of perfection. Some of their fish are not dissimilar to our own. The samit is identical with our shad, and the Doctor had eaten them on the Yang-Tsze, 1,000 miles from its mouth. The large lakes of Ting-ting and the Poyang, communicating directly with the Yang Tsze, afforded excellent fishing and breeding grounds.

Prof. Gill, of the Smithsonian Institute, furnished the association with a scientific discourse concerning the divisions of the various families of fishes found in American waters. With reference to the matter first brought forward by Mr. Reciler as to the geographical distinction of the species of bass known as the sulmoides and nigricans, he said that in his experiences the latter were found even further South than the sulmoides.

During the day several oil paintings from nature of trout, satmon trout, California salmon, and grayling (the work of Mr. Robert Wiseman) were exhibited.

After some formal resolutions, the tbanks of the association were tendered to Mr. Page and the other members of his firm for placing the room at the disposal of the society. The meeting then adjourned.

-The pressure upon our columns this week prevents us from publishing a report which we have on hand of a lecture delivered by Hon, Theodore Lyman, State Flsh Commirsioner of Massachusetts, last week, before the Massachusetts Anglers' Association.

We have also some valuable official communications relating to fish culture in Switzerland and Austria, prepared especially for Forest and Stream by Mous. Edward Guyer, of Zurich, which we shall print next week.

A letter from Mr. N. W. Clark, of Northville, Michigan,

will receive our notice.

-Mr. H. L Leonard, of Bangor, has just returned from his trip to Sebec lake, whence he took 200,000 salmon eggs from the Bucksport hatching works. Mr. Leonard has charge of the hatching house at Sebec, and states that the transfer was entirely successful.

MEETING OF FISH COMMISSIONERS.

MEETING OF FISH COMMISSIONERS.

THE first annual meeting of the Fish Commissioners of the various States was held Thursday at the Fifth Avenue Hotel. Among those present were Professor S.F. Baird, of the Smithsonian Institute, Washington; E. M. Stillwell and Henry O. Stanley, of Mainc; A. C. Fifteld, of New Hampshire; M. C. Edmunds, of Vermout; E. A. Brackett, of Massachusetts; Wm. M. Hudson, R. J. Pike, and James A. Bill, of Connecticut; J. H. Burden, of Rhode Island; R. R. Roosevelt, of New York; J. P. Clark, of Michigan; B. P. Howell, G. C. Anderson, J. R. Shotwell, of New Jersey; H. J. Reeder, of Pennsylvania. There were also present: C. G. Atkius, of Maine; T. B. Ferguson, of Marylaud. Sanuel Wilmot, from Ontario, Associate Fish Commissioner of Cunada, represented that Dominion in the conference. Annong others present, not members, were Mr. Milner, and Professor Gill, of the Smithsonian Institute. The editors of Foneer and Smithsonian Institute. The editors of the purpose of devising means of co-operation; that through discussion of tishing interests more knowledge of the subject might be disseminated and that the Commissioners might be better known to each other and with the plans of the different States.

Dr. J. W. Milner read a long paper summarizing the present condition of pisciculture and giving suggestion for the most effective action looking to a restoration of the fisheries. He considered that the extension of railroads throughout the country had opened much more extensive markets, that the enterprise of dealers in finding new sources of trade had increased the demand, and that fishermen, incited thereby, had greatly improved their nets and given increased energy to their occupation. Besides the increased capture of fishes for food the establishment of industrial enterprises in the vicinity of streams had acted to decrease the supply, through a pollutio

It was suggested that the question of legislation be referred to Professor Baird, with another suggestion that the proposed action take the shape of a memorial to the Senate in relation to international waters between Canada and the United States, and be submitted to the Commissioners for their signatures.

Professor Baird said that there were two parts to such a movement; one related to legislation, the other to joint action in the matter of hatching. If his appropriation from Congress was sufficient, Professor Baird would not hesitate to join hands at once in a fish propagating measure with the Canadian authorities.

Commissioner Edmunds introduced the following resolution, to be presented to the Congress of the United States:

Commissioner Edmunds introduced the following resolution, to be presented to the Congress of the United States: Whereas, There is a great decrease in the supply of food fishes of our sea coast and in the international waters on our northern frontier, therefore be it resolved that the Fish Commissioners of the several States humbly petition your hoursalle body to take some action in relation thereto.

Prof. Baird suggested that his name should not be introduced in the matter, the menorial standing hy itself. He thought it was only necessary to draw up the menorial in the usual form, asking Congress to consider suitable laws for the protection and multiplication of the fishes on the northern border. The motion was then carried, and the Convention adjourned subject to Prof. Baird's call, the place of meeting to be named by him.

The Maine State Association for the Preservation of Fish was incorporated last week, with John II. Kimball, Bath, President; Wm. S. Badger, Augusta, Vice President; J. W. Clapp, Secretary and Treasurer; a board of fifteen directors, also a committee of three, were elected. The annual meeting of the association is to be held at Augusta on the third Friday of January each year.

—A dispatch from Sioux City, dated February 2d, reports that on the morning of that day Fish Commissioner Charles Haines deposited 5,000 young California salmon in Floyd River, and intends putting the same number in the Big Sioux. Both rivers empty into the Missourl within the city limits

—Messrs. E. M. Stilwell, and H. O. Stanley, of Dixfield, have been reappointed as Fish Commissioners of Maine. Both gentlemen bave proved very zealous and efficient.

-At the close of the late exhibition of the Mass. Poultry Association at Boston, Mr. Fred. Mather was presented with an elegant silver mounted fishing rod by Bradford and Authory, dealers in fishing tackle, &c., for his fine display of fish and fish culture.

POISONING AND OBSTRUCTING THE WATERS.

[From Proceedings of American Fish Culturists' Association.]

BY FRED, MATHER

From Proceedings of American Fish Culturists Association.

BY FRED. MATHER.

FROM all over the land there is a murniur of complaint about the pollution of our creeks and rivers by manufacturing companies, dyeing establishments, saw mills, and the like; and while the General Government, States, and individuals are working to restock our nearly exhausted rivers, lakes, and streams, this pollution is allowed to go on unbeeded and unchecked.

The murnur is gradually getting louder, and will ere long, we hope, reach the cars of our legislators in a tone loud enough to attract their Inmediate attention

The flowing waters, and the large lakes are part of our public domain, and no man, or hody of men, should be allowed to defile them; yet it has been done almost without protest for years past, and will continue to be practiced for years to come, unless the attention of the people is called to it in a manner that shows to them that their vital interests are affected by it, and that the efforts of their Fish Commissioners, who are trying to increase their supply of food, are being continually thwarted by the greed of a few men, who, to save themselves the expense of draining their polsonous refuse into the soil, where it might be rendered harmless in Nature's laboratory, make severs of our brooks and rivers. So also the dweller ou small streams is cut off from his supply of fish, which have all ways ascended his brook, by the miller who has just built a dum across it lower down. The State of New York has a law covering the latter case, but it needs enforcing sauly. It provides that "every person building or maintaining a dam upon any of the dividal waters of this State, which dam is higher than two feet, shall likewise build and maintain during the months of March, April, May, September, October and November, for the purpose of the passage of fish, a shuiceway shall be protected on each side by an apron at least one foot in height, to confine the water therein."

The penalty for non compliance with this act is \$25 for e

The last clause emasculates the whole section, and makes a mockery of all legislation on the subject. I have seen the dead fish in the bayous (or creeks as they are improperly called) below Albany on the west side of the Hudsou from the refuse of the Analine works, which came in through the city sewers.

It is a light matter to poison a large river like the Hudson, and do it thoroughly from end to end, a fact that we may be devoutly thrankful for; but in times of low water in that river I have no doubt that the baleful influence of Albany's dye and chemical works extends to the shad hitching grounds, ten miles below.

In the report of the Maine Fishery Commission for 1873, page 13, they say, in speaking of the shad fishery on the Kennebee:—

In the report of the Maine Fishery Commission for 1873, page 13, they say, in speaking of the shad fishery on the Kennebee:—

"A careful exploration by Mr. Brown for the spawning ground of the shad at Topsham and Brunswick discovered that they had been driven from their old haunts by the refuse turned into the river by the Perkins paper mill."

Last season while at Holyoke, Mass., I made a few enquiries to learn if possible to what extent, if any, the shad grounds on the Councetieut were affected by the refuse of the mills immediately above, and on the same side of the river with them. Being then engaged in transporting shad fry from there to the tributuries of the Mississippi and the Great Lakes, for the United States Fish Commission, I had no opport mily to investigate the effect of the poisons, but developed the following facts in regard to their amount. Just below the great dam, and within five hundred feet of the fishway, are three large factories the first of these is the Carew Paper Company; second, the Hampshire Paper Company; third, the Glasgow Gingham Company. The first two discharge from one to two tons of chloride of lime per day, each; while the amount of dye stuffs, etc., emptied into the river by the latter will probably make the entire amount of villainous ingredients, foot up to between four and five tons per day of chloride of lime, acids, and dye stuff. The fishery and spawning grounds are about half a mile below, in a hend where the greater portion of this unust be earried. This, in connection with from thirty to forty mills on the other side of the river, which are discharging (or were in July last) into the canals, or river, the same substances in greater or less quantity, must have a terrible effect upon the fish, especially those yet in the embryo stage.

A well informed angler says: mbryo stage.

A well informed angler says:—

"They say that fish that are poisoned with chloride of ling weather."

lime will recover; but it is not so, except perhaps in very slight cases. There is so much water in the Connecticut that a large fash may get out of a poisoned streak in a short time, but not such development of the water. That the substances mentioned new imperiaps several time, but not such that one water. That the substances mentioned not seem period of the consideration, is the amount of such poison as compared to speak, by vordinary sewage from cities I am not prepared to speak, by vordinary sewage into factories using dyeling and bleachline chemicals. That this is regarded as poisonous to fish in England is evident by the following stricle from "Land and Water" of Nov. 14th, 1874—

"Crax River Pollution.—Vague rumors have reached me (not through an exactly official channel) that the sewage now running into the Cray is to be carried in a sewer or sewers to an outfall about two miles north of Dartford. Now, though I am in no way connected with, and have no claim to the attention of, the sanitary suthorities who have the condition of the contract of the probable that this bill will deal with mouths an every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to believe that Parlianent will pass a comis every reason to be clieve that Parlianent will pass a comis every reason to be clieve that pass and the pass of the pa

Another writer in the same paper says:

"The surface of our rivers appear as if covered with oil or other fat substance. May this not be caused by the manures now put on the land, making the fish so shy and timin! It would be worth the while of our Fishery Commissioners to inquire Into it while at the pollutious inquiry."

This subject is new to us, but is well worthy our attention. So far, we have bent our energies to producing this in vast numbers, with but little consideration of the many delicate conditions necessary to their future growth; and, in my opinion, if the rivers were as pure to-day as when our forefathers landed on Plymouth Rock, there would now be the same immense shoals of salmon, shad and alewives ascending our rivers that there were then, multiplied tenfold by our methods of artificial propagation.

FISH PORTRAITS .- At the Fish Culturists' meeting last week Mr. Robert R. Wiseman, of Utica, exhibited four exquisite oil portraits of fish, painted from life at the Caledonian Huteb House, now under the supervision of A. S. Collins, Esq., who rendered him very material assistance. They represented the salmon, salmon trout, speckled trout and grayling. The latter was an object of much interest, and, we learn, secured several orders for copies. Mr. Wiseman is a naturalist as well as artist, and has devoted much time and attention to the study of fish and game

-Seth Green regards the instinct of salmon fry to return to their native streams, as an insuperable obstacle to the successful introduction of Pacific salmon into eastern waters-which remains to be proved.

-It is said that a benevolent lady up town, who is a compositor's wife, Intends presenting each of the printers in the city with a pair of woolen mittens, so that they can have warm fingers and pick up the type better this freez-

GREAT FOSSIL BIRDS FOR CENTRAL

THROUGH the favor of Mr. C. F. Holder, of the Museum of Natural History at Central Park, to whom our readers have been indebted for valuable and entertaining articles relating to the great fossil kird of New Zealand, called the "moa," we have been furnished with a photograph of the collection of skeletons as they stood in their section at the Canterbury Museum, at Christ Churck, New Zealand, from which we reproduce in our engraving this Zcaland, from which we reproduce in our engraving this week all their anatomical features, together with such adjacent objects as will enable us to comprehend the gigantle size of these hirds. We learn also from Mr. Holder that involces have been received at the Central Park Museum, advising of the shipment to New York of those self same skelctons, and they are now on route.

About a year since Dr. Haast, the director of Canterbury Museum, Christ Church, New Zeahand, communicated with the trustees of the American Museum in Central Park with reference to the exchange of specimens of auturul history. He sent a list of species of the remarkable fossil birds that had lately been found near their colony, and intimated a desire to part with certain duplicates by exchange. The British Museum were advised of the opportunity us well; but the American Museum "stood not on the order of going," but went at once, and cubical a telegram to New Zealand direct, saying:—"Wo will take Consequently the New World Museum is alone in possession of the most extraordinary collection of fossils yet brought to the eye of science, excepting those retained at New Zealumi. It is expected that the birds will urrive here in the course of a few weeks, as they were shipped about the middle of December. The invoice gives the following items. In ten cases are contained as follows:—

No. 1 contains complete skeleton of Dinornis munimus, No. 2 contains complete skeleton of Melonornis datiformis, No. 3 contains complete skeleton of Egypapteryx rheides, No. 4 contains complete skeleton of Dinornis gracitis, No. 5 contains complete skeleton of Egypapteryx gravis, No. 6 contains complete skeleton of Palaptoryx gravis, No. 7 contains complete skeleton of Melonornis castarious.

No. 8 contains complete skeleton of Palaploryx elophan-

topus.
Nos. 9 and 10 contain separate bones of all the above species, and those of Dinoruis ingens, D struthioides, and D. robustus, Aptornis didiformis, and Harpagornis Moorei.

The complete skeletons are very handsomely mounted, and so arranged that they may be readily taken apart for study or transportation.

There are enumerated with the specimens not complete: bones of all the species, young as well as adult-the tra-cheal wings, stones taken from the region of the stomach,

cheal wings, stones taken from the region of the stonach, several diseased hones, etc., etc. It will be seen that there are here five distinct species (eight specimens) complete as skeletons, besides five other species less perfect.

We have already given a detailed account of the discovery of these birds In former numbers of Forest and Stream. It is interesting, but this connection, to know that the eggs of a great bird of this family bave bet u found in Mahagascar. A east of one in the American Museum, Control Park, measures fourteen inches in length. Central Park, measures fourteen inches in length.

-A Staten Island correspondent states that in feeding pound from he finds they prefer raw beef to worms, glass-hoppers, or anything else, and argues that anglers will therefore do well to use beef for bait in fishing for trout,

FLUKES IN DEERS' LIVERS.

PHILADELPHIA, February 12, 1875.

PRILADELPHIA, February 12, 1875.

Entror Forzet and Stream:—
"Pacific" does an injustice to your intelligent correspondent "J. II.
B." whom I know to be, as you remark, a close observer. His discovery that the billiary ducts of the deer are infested with "flokes" idistorna hepaticum, or fusciola hepaticul) is a most interesting and valuable one. It has been dealed by some veterinary surgeous that this parasite is indigenous or even exists in this country, and that our sheep could not be infosted with it, except through imported subjects. But I have detected it in my own sheep, in which it existed as an accompaniment of the rot, and I have also found it in a flock at Babylon, L. I. Now that it has been found in our nitive deer (and I expend it will also be found present in the fiver of the indiclope as well, and probably in that of the Rocky Mountain sheep); the fact that it is more widely prevalent among our sheep than has been supposed or admitted, may be recounted for. The discovery is of great interest, not only to sportsmen, naturalists, and veterlnary surgeous, but to farmers, who are very much concerned in the knowledge that it is indigenous, and their flocks may be subject to it wherever deer, antelope, rabbilis, or butters of the "flokes."

That there is no more deadly disease than that known as the "flower rot" or the "rot" to which sheep are subject, makes it very important for us to know as much as possible of the natural history of the parasite to which the disease is attributed, or by which it is always secompaned. Sportsmen should all be close and necurate observers, for they have many opportunities of gathering valuable facts in natural history. Neverthele-s, there are very few who can tell you have many teeth a deer bas upon the lower jaw more than the upper, or whether the deer bas in gall bieder or not. How few, too, ever search the viscera of the animals they kill for parasitos.

RE-ANIMATION OF FROZEN FISH.

RE-ANIMATION OF FROZEN FISH.

PHILADELPHIA, February 19, 18;5.

Editor Forest and Stream :-

Editor Forest and Stream!—
Noticing remarks in your sense of Feb. 11th on Suspended Animatian by Freezing, I would say, I am in the against measurement in this city, and have opportunities to observe this phenomenon. During a severe cald spell, which insted from Saturday until Threeday, I had enspended in my show whidow a small globe, containing about a half pint of water and a small gold fish. Upon opening the store on Monday morning I funnd the water frozen solid, with the fish lying on list side on the bultom of the globe. It remained to this condition till Threeday noon, when the ice having melted, it regained its equilibrium and swam about with its accusioned activity. This happened since with the same fish, in the same globe, and in the same situation; and today it swims about as neual. I have long been familiar with the fact of the undergoing suspended autmation, and furnish these details for the substaction of your correspondent A. H. Mowry. Yours truly,

[We have several letters to print on this subject,—Ed.]

DAVENPOUT, MASSACHUSETTS, February 2, 1875.

EDITOR FOREST AND STREAM:-

EDITOR FOREST AND STREAM:—

A few days since a bald or white-headed eagle, (Halicelus leucocephalus,) was shot at Rowley, Mass., by Edward Richardson. A slight description of these birds may not be out of pluce; they are large and powerful, with a strong curved beak and sharp claws; their plumage is of a deep brown, with the exception of the head and tail, which are white. These brautitul birds are occasionally seen soaring in wide sweeping circles far above, though no motion of the wings is visittle; they rise higher and higher till lost from view. They seltom breed, except in retired spots near the sea or other large body of water, where they build a bulky nest of large sticks, twigs, sea-weed and moss, which is nearly flat, and is generally placed in the fork of a dend tree. Instances are recorded of their breeding far inland. J. A. Allen says that "this species sometimes breeds on Mount Tom, almost twenty miles north of Springfield, Mass." These birds are rare in New England. There are one or two fine specimens in the Museum of the Peabody Academy of Science, at Salem, which were shot in Essex County.

CALAIS, Me., February 1, 1875.

Editor Forest and Stream:—

In reading Nimrod's account of the white bread eagle catching his own

Editor Forest and Stream:—
In reading Nimrod's account of the white head eagle catching his own that (which, by the way, is not uncommon, I was reminded how one well fishing for himsell, instead of letting the fish hawk do his fishing, and caught a Trivar, or something worse. Two fishermen were attending their wells on our river, when they observed a white band engle strike something upon the surface of the water, and the same lettant it gave a scream of distress, and with outstretched wings it was most suddenly laken under the water. After fall ten minutes, it appeared upon the surface appearently lifeless. It was taken into the bost, and after a time begin to show signs of life; in about an hour it stood upon its feet, was brought to me and kept allve thirty-two days, in which time it nevar partock of a morsel of food, although supplied with abnodance, and after so long a fact it appeared errorg and well, and its body is fulle plump. The fishermen could not tell what the eagle caught, or what caught the eagle—possibly a large seal. Yours truly,

Geo. A. Boardman.

Nowman Propert and Stream:

Noticing "L. W. L.'s" communication in regard to the Corythus Enucleator, I would say that about once in they enrist they are quite plenty here; at other times quite rare. I shot thirden one day recently, and so is my usual custom, examined the contents of their slomachs, and found they contained pine hads exclusively, although shot amongst birches. I have seen them among spruce, but never saw them enting the hads. Will E. D., of Montreal, please give a more defaulte description of the shid described by him in your last issue? Most respectfully,

G. W. Cuttedner.

The Lennel.

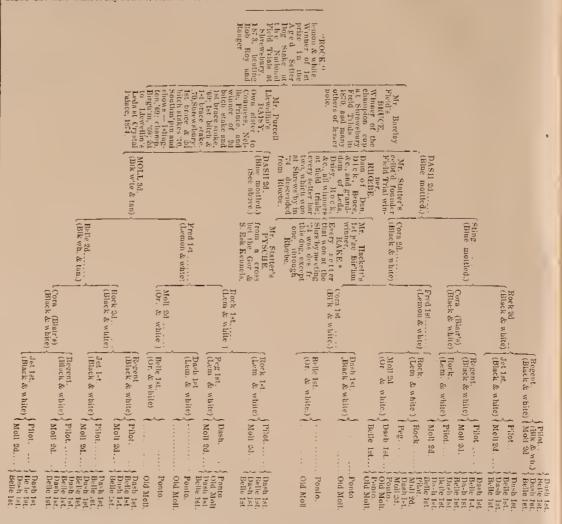

ROCK'S PEDIGREE.-We publish to-day the perigree of Mr. Luther Adams' celebrated dog "Rock," recently arrived on this side of the Atlantic, and whose history was given some weeks ago in this journal. The pedigree of Mr. Hackett's first prize Birminghum setter Rake, a descendant of this same strain, was printed in our issue of January 21st, and is therefore omitted here

KENTUCKY BENCH Show .- The first unnual exhibition and fournament of the Kentucky State Sportsmen's Asso-clation will be held at Paris, Ky., May 18th, 19th, and 20th— prizes for class shooting and bench show of setters and pointers. We shall print programme and rules in our next

-A letter from Mr. E. W. Hope, of Riverside, La Grange, Missouri, renewing his challenge, will appear next week.

PEDIGREE OF FIELD TRIAL SETTER DOG "ROCK."

"ROCK" was bred by Barclay Field, Mark Lane, London; Imported and owned by Luther Adams, Roston. This strain of select has clear pedicree extending back for more than eighty years through the Lavernck blood, and has now the most successful prize winners at shows and field trials of any strain of setter in threat Britain.

GENTLEMEN'S SPORTING KENNEL OF NEW YORK

THE idea of establishing a kennel for the gentlemen sportsmen of New York originated with Dr. Strachan, of this city, and is supported by Messrs, Bennett, Dong las, and Lamson, gentlemen whose wealth and enterprise give fair promise of developing it into something of which American sportsmen may be proud. Dr. L. has been long known as the promoter of fine breeds of pointers and setters, some of which were imported to this country by the late Sir Frederick Bruce, the British minister, who was an enthusiastic sportsman. The Doctor has done a great deal in past years in a privale way to advance the interest in in past years in a privale way to advance the interest in fine breeds of dogs. His dogs have never been in the market, although perhaps he has given away to gentlemen sportsmen a large number of very valuable specimens, and claims to have some of the finest pointers and setters in the country in his possession. Of late they have increased to such a number that the plan of starting a gentleman's breeding kennel was suggested by bim, and the aforesaid gentlemen readily took up the scheme; the chief object being to breed upon scientific principles, and by enreful being to breed upon scientific principles, and by careful selections to establish strains of dogs which cannot be improved in any country. A systematic book of pedigrees will be kept, and no dogs allowed to live or go from the kennel not likely to bring credit npou it. The object will not be to sell dogs, but after a time there will always be a few surplus dogs, by which the public may benefit.

The kennel is to be situated in Orange county, under the care of Dr. Strachan's trainer, and subchristed shot. Deals

care of Dr. Struchan's trainer and celebrated shot, Dock Stuntt, whose fame in woodcraft untl as a breaker of dogs about thirty, including five separate strains of setters and pointers, amongst them Mr. Bennett's black, tan, and white brace of Gordon setters, for which he paid \$1,000 in gold brack, the setters and the brack of in England. The bitch has at present a beautiful litter of half a dozen puppies

IMPORTING AND INBREEDING

Boston, Feb. 8th, 1875.

Eniton Fonest and Stream:— The perusal of not article in last weeks' "Sportsman," printed from Burgess' Book on Dogs, which is in press, bas suggested a query to my mind which I think you are able to give an answer to, namely, whether the practice of inbreeding to the extent to which it is done by the best English dog fanciers, and notably by Mr. Laverack, bas not been carried about as far as is advisable. It was the careful consideration of the Laverack bitch Fairy's pedigree that raised the doubt in my mind as to whether a new strain would not improve the stock.

The pedigree of this bitch, imported and owned by Mr. Raymond, is given in full for eight generations, or rather stretly speaking for six; but the breeding of some of the dogs who appear in the list, or rather first generation of this pedigree, is carried back two generations further, in the accompanying pedigree of "Pride of the Border." From this pedigree it appears that Parry runs right back for eight generations, to the same two—namely Ponto and Old Moll.

Take the case of ber grandam, Bell 2d; her dam and sire were own brother and sister, i.e., Rock 2d and Cora, cut of Jet 1st, by Regent; so that in-

stead of fear grandparents, she only had two, and they were brother and sister, nor of Mail'2d by Pilot, so that Betle only had two great-grandparents Instead of eight, and her great-grandparents, being brother and sister, her great-great-grandparents instead of eight, and her great-grandparents, being brother and sister. Her wook ing Dash 1st and Bell 1st, who lastly were brother and sister by Ponto, out of Old Moll—these last representing what, without any in-breeding, would have been thirty-two great great-great grandparents.

The tamily of his bitch Fairy carried back eight generations, which without in-breeding should consist of 255 individuals, does, In John of fact, coasist of mischere, viz.—Ponto, Old Moll, Moll, 2nd and 34; Pilot, Rock, 1st and 2nd; Peg, Dash 1st and 2nd; Bell, 1st and 2nd; Regent, Jet, Cora, 1st and 2nd; String and Patry. Now, without wishing to et my opinion against that of men who have made a study and occupation of this matter, it does seem to met that in this case in-breeding has been carried, I will not say too far, but far enough, and I think that if were fortunate enough to own such dogs as Pairy and Pride of the Boder, who is about the same descent, I should try very hard to find eomething worthy of being crossed with them.

There is no fact in medical science beiter established by etalisde carefully collected by good observers, than that the progeny of blood activity of the stock. It is will known, also, that a single pair of goats or rubbits, and that form of low viladity and imperfect untrition which is known ses erofula. On the other hand, I know that describe hand a problem, and that form of low viladity and imperfect untrition which is known ses occolad. On the other hand, I know that describe has seen on the depreciation in the quality of the stock a pond, but are these not the two extremes, and is it not probable that is use of higher in the animal scale and approach for the men and the seanch and the such a pair of thoroughbred Laveracks, there will be very apt to be

P. S -Since writing the above, I see that very strong ground is taken

againsi "Incestuous breeding," at least 83 far as the horse goes, in an editorial article in the Turf, Field and Farm of last Friday.

[The views our correspondent advances in regard lo im rted dogs, and the inbreeding of setters and pointers ported dogs, and the inbreeding of selfers and pointers, will be sustained by skillful experienced sportsmen. The rough heavy covers of this country require a more rugged dog than such as are generally imported from England where inbreeding is, in our opinion, often carried to too great an extent. We have on several occasions, however, succeeded in getting out from England and Ireland, and have seen in the hands of others, some exceedingly valuahave seen in the hands of others, some exceedingly valuable stock dogs which, crossed with our native stock, produce strong ranged stylish dogs, able to stand any amount of work they may be called upon to do. We are fully convinced after over forty years experience that we have strains of setters in this conutry, the Gildersleeves for instance, which have been kept pure, and these dogs crossed with some of those recently imported would produce such stock as is required for our shooting.]

DROPPING TO SHOT.

Entron Forest and Stream:

In Capitain Bogurdus' excellent summary of forty years of field sports, I find the first objection that I have ever met with in print, or from any sportsman, to the almost universal practice of requiring the heatest and excited dog in come to a down charge at the shot. Sportsmen will by more maily to accept his conclusions as correct when it is more generally known among them that one of the marching regulations of the British troops in India forbids any man lying down in the sanshine during the mid day half; the fearful prevalence of smistroke occurring during the very hours of test, before this regulation was enforced, was its cause.

The sportsman knows that game thrown on the ground hecomes tained much earlier than when hung at some moderate beight above in. The intense rays of the san in the clear dry air of our and prairies seldom raise the temperature of the air above 110° or 113°, but the ground subjected for hours without shelter or escape to these rays will force up the thermometer to 140°—perhaps even higher. Now, the dog lying ou this hexleit couch, exposed to these same rays, is very much in the same coudillon as the Eastern shad or Western while fish, when lumnd to the heated plank and set apright before the sportsman's lire. This, a simple philosophical fact, explains the reasons of the effects which bave led Capitalis Bogardas to his just conclusions. The practice, humiless perhaps, maler the watery skies and upon the grassy ments of England, from which we got the custom, is fatal on Western prairies, and probably throughout most of the contry over which our sportsman follow their game. It is a singular Instance of the persistence of a custom transplanted to a country into which it should inver have made entrance.

M. C. M.

SEAL.—What can I do to prevent the hair of my seller from coming ont? It starts bad, and makes the folks lots of extra nork in the house. If you can inform me of a remedy I think you will do much to advance "doggy!" relfare and reap many thinks from the ladles, who often are obliged in cold weather to have them in the house.

Ans.—Keeping your seller to

Ans.-Keeping your setter too much in a warm place causes his hair to fall off.

causes his hair to fall off.

J. J. S., New Brighton, Pr. —I have a valuable pointer dog, affecen months old. He bind the distemper last May, of which I thought he was cirred. I hunted him nearly every day during the scason, und he appeared lively and ireli, and is so yet, with the exception of eyes bloodshot, and scratches as though be had flens, but has wone. I used castile soan and acetate of lead as a ivash, but does not seem to do much good. Can you adrise a remedy? If a flue bred litted have pups to a cur dog und should be afterwards bred to a good dog, would the offspring be of any account? I received a pointer pup of good stock, but I notice he has very large fore feet which are webbed; is it not something antisum?

Aus—1st. Keep your pointer in a confortable clean place.

Intege fore feet which are webbed; is it not something unusual?

Aus—1st. Keep your pointer in a comfortable clean place, feed very little ment, feed corn bread or mush, and give him a tra spoon full of done of sulphur two or three times a week. 2d. Yes, but in the best kennels in England such bitches are sometimes discarded from the kennel. 3d. A ponter pup with such feet we would not consider worth breaking.

Sakono, Bergen Point.—I have a valuable selfer what seems to be affected with pula in his head and left ear, which I think to be canker. He will shake his head frequently, and violently scratch the same of two with his hind paws immercifully. The reason why I am interest is, he shows no signs of pain when the ear is squeezed near its root, and seems inther to enjoy il. I can discover nothing musual about his head or inside of the enr. He has been troubled about three weeks. By giving me your upinion and what I shall do to relieve him, you will confer a great favor upon one of your earliest subscribers.

Ans.—Your setter, in all probability is effected with con-

Ans.—Your setter, in all probability is effected with con-ker. Dissolve 20 grains of sulplante of copper in 8 oz. water, and work some of the solution into the ear effected as well as you can, three or four times, and a cure will be likely to be effected.

CHALLENGE CUP.- We offer for competition a silver cup for the best pair of setter puppies—dog and bitch—under nine months of age. Puppies to be shown at this office on Wednesday next February 24th at midday. We would respectfully ask the following gentlemen to act as judges: Hornce Smith, Theo. Morford, A. Gubner, R. Robinson, George Lamphenr, Eugene H. Shorb, and Fred. S. Undertill

BLOOMING GROVE PARK.—A special meeting of the Blooming Grove Park Association was held Saturday, Feb-13th, at No. 37 Park Row, Col. Sanders D. Bruce, President, in the chair,

The objects of the niceling were briefly stated to be the discussion of arrangements for the coming season, and proposed disposition of shares for leited for non-payment of

posed disposition of shares for leited for non-payment of annual dues.

A committee was appointed to attend the annual election at the Park in March, and the nomination of officers for the eusning year was unade.

A communication from Prof. Vauger, of Switzerland, on the introduction of a new species of large brook trout, was read by Mr. F. S. Giles, and the Secretary directed to communicate with Prof. Baird on the subject.

Mr. Hallock offered some suggestions respecting the sowing of wild rice in the lakes.

From the report of the Secretary it appears that the introduction of black bass into the lakes has been very successful. The herd of deer was increased by eight fawns last Spring. The Blooming Grove stream has been restocked with trunt, and new works commenced. Ruffed grouse are ahundant. The paths from the lake to the club house have been grailed and trained.

A committee was appointed to arrange for the annual dinner, and the meeting adjourned.

Sea and River Hishing.

FISH IN SEASON IN FEBRUARY

Trout (black bass), Dram (two species), Klugfish, Striped Bass,

-Fish in Market.-The continued cold weather has operated to make fish dearer than they were last week. Codfish have advanced to 15 cents per pound; blue fish are worth the same price; haddock, 12 cents; salmon front, 20 cents; white fish, 20 cents; smelts, 20 cents; sheepshrad from Charleston, 28 cents; sea bass, 20 cents; shad, 40 to 60 cents; hallbut, 20 to 25 cents, stripped bass, 30 cents; ecls, 25 cents; turbot, 25 cents.

-Fishing for bass is proving a profitable pastime at Prekskill just now.

-The attention of our readers is called to the advertisement of salmon fishing privileges to lease in the river Romaine, district of Gaspe, Cunnda. The fish there run as high as fifty pounds weight, and the river is one of the must accessible and itesirable to be offered. We will give any information on application. The chance should be jamped at.

We would also call attention to the salmon leases advertised by Mr. Whitcher, the Fishery Commissioner of Canada. The demand for these rivers can be estimated by the fact that only fourteen leases are advertised this year against thirty-seven last year. In the course of a year or two leases will command a premium; and as they may run for nine years, it will be well for our anglers to avail themselves of the opportunity now offered.

-The Cape Ann Advertiser notices a pelition to repeal the law providing for an Inspector General of fish, on the ground that he is useless, and a tax upon the lausiness. It says a deputy fish inspector's brand on mackerel had some significance, and the buyer could frely upon it in the purchase and selling of fish, without opening the packages. That time has gone by now, as the brands are counterfeited by dealers south and west, the fish oftentimes repacked, by dealers softh and west, the list oftentimes repacked, and poorer qualities substituted in barrels branded the best. The office has become a sineeure, mixed up with polities, and given to men who know nothing of the business. As a class, those engaged in the mackerel and pickled fish business are hourst and pains taking, but it is very difficult to the class ratio problem. cult to counterbalance the other class who make it a business to defraud.

The number of fishing arrivals at Gloucester for the week ending February 11th, was twelve-four from Grand Bunks, two from La Have, one from Western Banks, four herring catgoes from Forture Bay, and one from New Branswick. The number of halibut brought in was 135,000 codfish 70,000. Halibut has sold at \$12 and 10½ per cwt. Codfish \$2. The cold weather has since closed up the harbor, and seriously interferes with the operations of the shore fishing fleet and the sailing of the Georgesmen. There are fully fifty sails ice bound, and perhaps as many more are caught in the ice outside. It is a hard case for the fishermen whose experiences may be best realized by the condition of the schooner F. J. Babson, which arrived last week. The Cape Ann Advertiser says:-

Cape Ann Autertiser says:—

"She was about as badly iced up as any vessel ever seen in this port, and large crowds visited her during the afternoon. Her bows were one solid mass of ice, presenting curious and fantastic shapes as it hung from cut-water, bowsprit and bulwarks. Her decks and stern were also covered; the jib-stays and shrouds having an ice covering which readered them the size of a stove pipe. Half-way up her masts the icy covering extended, the whole presenting a sight well worth witnessing."

—The fishing in the Bay of Opinto Lake Counter the seen in the Bay of Opinto Lake Counter the seen in the Bay of Opinto Lake Counter the seen in the Bay of Opinto Lake Counter the seen in the Bay of Opinto Lake Counter the seen in this port.

-The fishing in the Bay of Quinte, Lake Ontario, during last week has been very good. Bass and pickerel have been taken in large quantities by the fishermen, who catch them from their fishing bouses through holes cut in the ice, the honses being placed near the bars, the place where fish are most plentifully to be found. Most of the pickerel caught are of a very large size, some weighing five or six

-Salmon fishing commenced on February 1st in the great mujority of rivers in England, Ireland and Wales, although fishing is prohibited in some rivers before March. April, and May, respectively. In Scotland the rivers were opened both for net and rod fishing on the 11th February; the Tweed and Tuy, however, opening on the 1st and 5tb March, respectively.

-An Augusta letter to the Portland Press says: The Indians have been here this session in greater numbers than for many years previous. They came from the Penobscot ribe. A part of them desire to have all special laws relative to their elections abolished. The "red man" is no more a part of the present Maine Indian. Those who have been here are good appearing men, talk English fluently, read, write, and some of them wear the latest style of slove-pipe hats and other fushionable clothing. One of them, Jee Nicollet, believes in encouraging home industry. them, Jee Nicollet, believes in encouraging home industry. Addressing Senutor Atwood the other day, he said, "Senator, you report bill no killum moose for five years?" Yes. "You report bill no killum deer five years?" No. "Very well." says Joe, "make 'um law no killum theer for five years except by Imilian when he campium out. Last Summer Massachusetts fellows come. Hire me to go with um six weeks. Killum two deer weighing 140 pounds, spend \$1,500 in Maine. I get um \$500. Good thing to get \$1,500 for two deer, all spent in Maine." Joe is undoubtedly a protectionist.

I ask this question because t hear that gin five guns are bringing nothing, or almost so, in the market? Ann. We can form no idea of the value of your gun without seeing it. Although central five guns are preferred, the pin five is about as service this in the brands of any spartenan. By advertising your gun in our paper, you would, in all probability, and a customer at a fair price.

nil probability, and a customer at a fair price.

W. S. J., New Raven.—Can you tell me if there is any point in the Adlrondack country where can be had full hunting and dishing, and where the lintel accommissations are suitable for listles' comfort and emiscalence? Ans. Hardert's and Marthe's on Stranacs, unit Fast Smith's an St. Regls, are the heat for limits, and all vecellent. You can go by may of Keeseville or Plattsburg in one day from Lake Champinia. Send to W. R. Wallace, of Synavise, N. Y., for this new Guida Book.

Send to W. It walling, or synapsies, N. 1., the has how Gulda Book, Sarit Louis — Be good whough to describe brivily "Pritchind's Revolving Guldes" for fishing rods, referred to in "Plahing in American Waters," and your opinion of those imports, based office upon your own or the experience of some of your university tenders and currespondents. Ans. The revolving guide is a gulda working around the rid on a swirel, doing away with the under guide, which is so librity to fool the line. They are better adapted for dyen water than any other description of fightnes.

line. They are better adapted for even water than any other description of fishing.

Major B—In a late number of the Fillest and Stream you gave the address of a firm in New York that furnish pack hishests—f wrote them for a price Pst, but have received no answer. Can you tell me what they cost? Ans. The firm you abandaned the againty. Whure, he Virginia or Kentucky, can I go for fishing into I may game can be shot in this spring? Ans. We would always neconsisted the Blackwater rigion in Virginia or Kentucky, can I go for fishing, and if any game can be shot in this spring? Ans. We would always neconsisted the Blackwater rigion in Virginia. English online.

Padmachene, Lawrence, N. Y.—Please inform me of the liest kind of waterproofing for a chivase a kinapsack? Something that will not have a tendency to rot the canvass. Ans. Take half a pound of sugar of lead and half a pound of pawdered alma, allowave them in a backet of raturate, then pour off the fluid with the dissolved ingredion's late another evest. Stept the canvass throughly in the solution, letting it stay for a considerable time. Hang it up to dry, but do not wring it. The water of a rain storm secues to hang to it in globules and does not go through it.

A. B. C., Boshin,—If you will phense answer the following questions In next number of Forest axis Strikam, you will oblige a number of your subscributes: In an off fail that disoling match to it allowable to use a "hip rest"—that is, to red left ethow on befining an in an infalled treat for the preson or the rifle; but he may hold his weamon in the way that he thinks he can hold it steadlest. Am I right, or not? Is the hip rest ever used at Creedinoot? Ans. Creedinon rules any "no objection for a competitor using hip set, if the latile diger in it lie tell hand is in front of the projection in front of lock." The file rest is transited in the accompetitor using hip set, if the latile diger in it lie tell hand is in front of the projection in front of lock." The file rest is transited in the accompet

used at Greedmoor.

J. H. B., Davenport, Jowa, —I would like your added in the matter of a breech leader. It has the rehounding took, which I regard as abled piece of mechanism, but an elegant humbug. The first line I tred the gun my rehounding locks missed from more than forthern times. Next morning I used these same metallic carridges, they all explained and killed, thus going off after two strokes of hummer. I had the gluingers aftered, filling off the shoulders to give better reach in the cupsion benefit. It strikes me the constant strain in the spring minimaling to hilf cock and keeping there, weakens his forcus and makes hi helicitor. Are, The rehounding action cannot worken the strong hof the main sping of your books. They must have been in idealy timpering with, or of factor quality originally.

THE CHICAGO FIELD -We are pleased to note a marked improvement in our Western contemporary, the Chicago Field since the change in its management, and trust that it may live long and prosper. The West needs a representa-tive, and the Field more nearly meets the bill than any tive, and the Field more nearly meets the bill than any sporting paper in that section has yet succeeded in doing. We recognize several able writers among its contributors, and the information it gathers from its inner resources is such as we shall be happy to reproduce with acknowledgment, for the benefit of our Eastern readers. It would be well if the Field would drop its affly, "Stream," as its uso is prefulfeint to itself and us by creating confusion among the craft—a fact that was long since recognized by its carller managers. Field commences its second volume this week, and is to be cularged.

THE INTERNATIONAL MATCH

THE attention which is being attracted to this event A on the other side of the water is shown in an official announcement to the effect that the North Bull Ranges, near the city of Dublin, or Curragh, better known for its historical associations in connection with racing, have been named as the locations, on one of which the return match between the Irish and American teams is to be shot.

the match is to occur during the annual meeting of the Irisb Rifle Association, and at the time of the selection of an "eight" to compete for the Elcho Shield at Wimbletion, it is expected that the Irish riflemen will muster in force, and that a team will be formed from among them which our men will find it difficult to defeat.

The great prize of the Irish meeting is the Abercorn up, in competition for which the largest scores will influence the selection of the team, and as the present representiative of royalty, in the person of the Lord Licutenant, ls Captain of the team and will be present greater celat will be given to the meeting. It must be remembered that the frish team of last year was selected from a very few who were qualified to compete, and who could also spare the time necessary for a journey to this side of the water. Not only will our representatives bave to meet a selected trant from among a much larger number of riflemen, but on their own grund, which is a point not to be under-rated. The recent match at Creedmoor has given an imp-tus to long range shooting throughout our own country, and it is no longer confined to this section. In the selection of a team to visit Irelaud it is not improbable that men from the South and West may appear, giving us, as well as our competitors, something new to think of and

One thing, however, is beyond a question-that is, that our men will meet with the warmest hospitality, and whether they win or not, a warm and cordial reception awaits them. The public are looking with great interest for the issue of Major Leech's book, to which we have before ullinded, for a detailed description of the experiennes of himself and companions while in this country.
We have compiled with his request to furnish him with such data as lay in our power regarding the Western Hunt of the Irish Feam, and are indebted for a proffer of personal courtesies to be extended during the anticipated visit of our representative team to Dublin.

THE UNITED FISH COMMISSIONERS.

THE meeting in this city last week of the Fish Commis-A sioners of the different States and Canada, for the purpose of comparing notes on fish culture and determinthe best method for future procedure, will tend materially toward systematizing their efforts to increase our fish food, and thereby give direct practical application to their efforts. Harmony of purpose, intelligent understanding, and unity of uction are indispensable to positive success in the important undertaking in which they are engaged. With these in view, the title of "United Fish Commission." would be an appropriate designation for their honorable and influential body.

When the American Fish Culturists' Association was first organized the best informed among its members had comparatively little knowledge, theoretical or acquired, of the business they had undertaken, and no conception of its difficulties or its magnitude. To learn first how to propagate fish in quantity, and then to restock our depleted waters, was the knowledge they hoped to acquire by an interchange of views and experiences. The institution of State Fishery Commissions was a new thing then, and the number of those State officials very few, such Commissioners constituting a minority in the membership of the Association, whose composition was made up chiefly of novices in fish culture and dabsters in lehthyology. A year ago its exclusiveness as a consociation of fish culturists was thrown off, and a vote was passed to admit any person interested in, or identical with, its objects; and under this concession the membership has largely increased. Although its functions are of a specific character, its operathough its functions are of a specific character, its opera-tions and sphere of usefulness are necessarily limited, because, as constituted, it is simply an advisory body. It can merely discuss, suggest, resolve, and recommend. It is a sort of Senatus Consultum, by which the Commissioners of each Individual State bave been bitherto in a great measure guided. Such progress has been made of late, however, in the art of fish culture, and so extended is the knowledge that has been acquired and imparted by the scientific investigations carried on under the direction of the United States Fishery Commission, that this important interest has grown up out of its nursery just as the fry and fingerlings have outgrown the hatching house. The numher of State Fish Commissioners has increased largely ever within a year, until now it aggregates no less than forty-niue, representing eighteen States.

The general Government has increased its annual approprintion to an amount proportionate to, if not commensurate with, the growth of this interest. It piaces vessels, officers and apparatus at the disposal of the chief Commissioner every year. The co-operation of the several States in the universal work of repopulation has, therefore become necessary. Something more then a resolved that come necessary. Something more than a merely delibera tive and advisory association of promiscuous and irre-sponsible persons is required, and the consociation of the Fish Commissioners into an executive and administrative body is the natural outgrowth and result. The institution of this intelligent and honorable body is a guaranty of thorough work and complete success that is most gratify-Informing work and complete success that is most grainying and assuring. It marks un epoch and a long stride forward toward the attainable end. Complete success would not be possible without some such union and cooperation. The next movement must be toward a unification of the protective laws, so far as climatic conditions will permit and where these laws cannot be made unionally permits and where these laws cannot be made unions. will permit; and where these laws cannot be made uniform, they must be in reciprocal harmony. It will be a useless waste of time and money to restock our streams and forests with fish and game unless adequate laws are enacted for their protection and continuance. The whole country is indebted beyond estimation to those gentlemen who have instituted the annual meetings of the Fish Com-

Arctic Days .- Were it not for proximity to human aid and human babitation, the dwellers in many portions of this so-called temperate zone of ours might, so far as me-teorological conditions and natural surroundings are concerned, as well be in the Arctic circle, at this time, disporting with the playful seals or the great Polar bears. Indeed, even here in New York a number of the former amphibious creatures have, for the first time in many years, paid us a visit, and a few days ago a party were ascending the North River on an ice cake, vainly endeavoring to take their bearings from Trinity Church steeple. Our harbor, filled with ice fields and miniature icebergs, must look familiar to Arctic explorers, while from neighboring States we hear of the thermometer indicating a temperature equaling in severity anything recorded in the experiences of Drs. Kane and Hayes. The suffering among the crews of the vessels of the fishing fleet has been dreadful from lack of provisions and fuel and stress of weather. Thirty or forty schooners have been frozen in of weather. Thirty or forty schooners have been frozen in off Provincetown, Mass., and the revenue cutter Gallatin brought into Boston s number of the men whose hands and feet were so hadly frozen as to render imputation necessary. One man was so firmly frozen to the rigging as to be removed with difficulty, and he died before reaching shore. The Gallatin has as yet been mable to regain the treat to render further resistance, and we may expect the fleet to render further assistance, and we may expect to hear of further suffering. In our own neighborhood the formation of frequent ice bridges across both North and East rivers has been something unprecedented

On February 5th ice covored the ground in Jacksonville, Florida.

QUAIL.

THE severity of the weather and the ice-bound condition of the earth having caused many anxious doubts as to the safety of the quail, the reports of the teamsters, wood cutters, and fox bunters will be received with general satisfaction. Their concurrent testimony is that here, lu the lower couuties of New Jersey, the birds are plenty, and, wherever seen, lively, and to all appearances in good condition. This, however, should not diminish the efforts to increase our stock, by the importation as ish the efforts to increase our stock by the importation of birds from other sections. My experience has been that other advantages accrue beyond the mere increase of numbers. In the Winter of 1871 a friend, a well known sportsman of Philadelphia, gave me fifty pairs of North Carolina quail. They were put (each pair in a separate box) in a large second story apartment, occupied as a drying room for the pots or crucibles used in making glass. The mortality was triffing, and the birds, upon being turned out, bred beyond the most sanguine hopes. The shooting the following Fall was the best ever had in this neighborhood.

The progeny of these birds cld not develop that fine instinct of self-preservation which prompts our Jersey quail to take to the thickest cover attainable; but in very many instances, on being flushed, scattered in the stubble and clover fields. Mr. W. B. Rosenbaum, late the President of the West Jersey Oame Protective Society, to whom my friend sent, at the same time, a large number, found that these birds not only habitually fed farther from the heavy cover than the natives, but constantly affected the open country. This is a very important consideration, as it is well known to sportsmen that in seasons when serub oak acorns are plenty our birds live almost entirely in the cover. This was the ease in a marked degree last Fall. The finest stubbles were hunted with little success, while the rabbit shooters were constantly reporting that birds were plenty "in the scrubs."

In wintering birds, it is better to keep them indoors. This assertion is founded on a mishap which befel the writer of this within a few weeks. In the latter part of last December I again became indebted to the friend formerly mentioned for fifty pairs of quail, obtained by him while shooting in North Carolinu. The loss consequent upon transportation was considerable, but there remained, including fifteen pairs presented me by a friend in New York, whether were hirds. As the reconstruction was York, ninety seven birds. As the room formerly used was not available, I decided to build a coop, and to allow the birds to live upon the ground. It was built eight feet by ten in size, the top and three sides inclosed, the southern exposure having two rows of slats, one within the other, so near together that the openings were hardly three quarters of an inch wide. There was also a partition, making the rear a withdrawing room, in which the birds invariably roosted.

On the morning of the 13th of January "Charley," the man who bad charge of the birds, came to my house with the announcement that the quail were all dead. The name of a personage believed to be at the bottom of all such ocof a personage believed to be at the bottom of all such oc-currences arose almost to my lips, but I listened in sad si-lence to Charley's story. A mink, weasel, or some other "varmint" had got into the coop and killed every bird. I visited the scene of slaughter, and examined both birds and coop. The former, but yesterday the prospective pro-genitors of so many fine covies, lay stark and dead, not a feather ruffled, not an ounce of flash removed. They were feather ruffled, not an ounce of flesh removed. They were all found to be bitten either through the head or neck. One of the slats was slightly gnawed, but it seemed incredible that an animal capable of such an amount of destruction could have entered the opening, much less escaped, gorged with the blood of so many victims. After a week during which the premises bristled with steel traps, a week during which the premises orisited wito steel traps, box traps, and choakers, and several respectable tom cats paid the penalty of their adventurous dispositions, the felon was caught. He proved to be the common mink. There had been a slight fall of snow the evening before his capture, and he was "back-tracked" to a cranberry bog more than a mile from the scene of the tragelly.

Although measures were at once taken to obtain a new snpply, the loss will not be easily repaired, the birds baving been in perfect health and coudition, and promising to breed exceptionally well. I trust the recital of my ill fortune may not prove uninstructive to your many readers, all of whom are interested in the preservation and propagation of the sportsman's prime favorite, the quail.

Winslow, N. J., February 2d, 1875.

W. C. H.

GAME PROTECTION IN ILLINOIS.—The executive committee appointed by the State's Sportsmen Association of Illinois are doing their duty well. They have about twenty different suits against the commission men and restaurant keepers for selling game out of season, but the shooting, a la Bergh. Nevertheless, the spottsmen are not afraid, but will push them to the wall. They have the law on their side, while the dealers are without any. It is not likely that the judicial decisions in Illinois will be different from those rendered in New York as respects the ferent from those rendered in New York as respects the sale of game of other States in season in those States.

The members of the Maryland Association are also after the game dealers and restaurateurs of Baltimore, and have arrested Mr. Samuel Little, proprietor of Guy's Monument House, for violation of the game laws in furnishing his guests with game out of season.

-A dog twenty-eight years old died in New Milford, Coun, last week;

THE "BIG HUNT."

WHEN we first published the announcement of what VV is now popularly known as "The Big Hunt," we gave the information merely as a maller of news, little lireaming that it would attract such general interest as it has done, or evoke so decided a spirit of opposition to the expedition. We have already published a large number of letters from prominent gentlemen, and to day add a few more. Several others have been omitted only hecause they advanced no different views from those already expressed. advanced no different views from those already expressed. We have opened our columns freely to all who wished to use them, because the project is a novel one, and involves material points that may well bear discussion. The two leading objections to the hunt are that the time selected is unseasonable, and the proposed party so large that it will scour the country of game. We have attempted to clicit such facts as will determine the truth of the first objection. Mr. McCarty, the projector of the expedition, disclaims any intention to shoot out of season. He is now on his way to Europe to take charge of a large number of gentlemen who, he says, are booked for the expedition; and his statement is verified by letters that we have seen. Several Americans have also engaged to join the expedition in sundry capacities, either as photographers, artists, reporters, or mere pleasure seekers. It does not appear, from present indicatious, that the party will reach its hunting ground in advance of the season. Neither do we apprehend that any great slaughter will ensue. It will be fortunate if game enough is shot to keep the larder in meat. From the letter of our Fort Sill correspondent, printed to day, it seems that the district to he visited is seldom traversed. It is impossible that the party will advance with such cometlike velocity and sweep of front as to exterminate the game. None of the frontiersmen that have written seem to fear any such result. The advance will be slow, and possibly tedious. Our Fort Sill letter intimates that the route is nearly impracticable, but McCarty assures us that the author writes under a misapprehension. He avers that

the is going to northwestern, and not southwestern Texas, and will not touch the Indian Territory at all.

We have never cucouraged this expedition, or given it our endersement—would not join it if we could, and abhor "a crowd." Nevertheless, from personal knowledge which "a crowd." Nevertheless, from personal knowledge which we have of some portion of the ground, we maintain that no barm will be done, and that comparatively little game. will he shot, in season or out of seasou. We have no pe-cuniary interest whatever in the venture, and no personal interest different from that of our numerous correspond-

CAZENOVIA, February 1, 1875

EDITOR FOREST AND STREAM

CAZENOVIA, February 1, 1875.

EDITOR FOREST AND STREAM:—

The pros and cons in your columns have been upon the merits and the desirability of encouraging the invasion of English sportsmen; and some ill temper has heen evinced in portions of this correspondence.

Aly own views, which I have hesitated to advance, are very simple, but in my own mind definite. I would not make any rule applicable only 10 this case, but would extend to our English cousins, who are usually bold, adventurous, and excellent sportsmen, the same privileges any sportsmen are entitled to who respect game laws, and bring with them the love for all that sportsmen value.

This rule among true lovers of wild life, to be respected and adhered to by all who seek the influences that render so pure and elevating real woodland sports, should be; "No Big Hunt," no going into the "Aisles of God's first temples" in boisterous crowds, driving away the quiet sceltsion, and leaving a trail like that of an army; no desolation of a land of forest or prairie, and no mercantile brokerage of the favors of woodland and stream. It conceals the issue to mix up any personality or nationality.

The destruction of fish and game in unreasonable quantities is not justifiable in any case. The "Side Hunts" where all the men and boys in a neighborhood scour the woods and destroy everything that will count, from chick-adeedees to skunks, are uncivilized; so are English battues; and so are the drivings of herds of huffaloes over cliffs by Pawnees and Modoes. Many of the large hunting clubs that go to the Adirondacks leave a sad mark. Their riffe balls are in every tree, their names on the rocks, and their bottles in every stream, and the vicinity of such a camp is well escaped by enduring the miles of tramp and carry that deter them from following with their impedimenta of luxuries.

"Chacun son mauvais gout," let those go in crowds to the

ries.

"Chacun son mauvais gout," let those go in crowds to the wild wood who like it: let those court nature in crowds who do not value her sacred mystery of still life, hut let all who want game to hecome abundant, waste not that they want not, and set their hand and seal against all manner of gregarious and commercial hunting.

L. W. L.

Since writing the above, the following letter from Mr.

gregarious and commercial hunting.

Since writing the above, the following letter from Mr. Batty has opportunely arrived to corroborate our views:—

Hartonn, Todd county, Minn., Fohtnary 9, 1875.

Editor Forest and Stream:—

Much has been said lately in regard to the "Big Hunt," which is to come off next Summer. I do not see why individuals should try and cry it down, calling parries about to engage in it poachera &c. I think that some persons who denounce the bunt, probably know fittle or nothing of the country Mr. McCarty proposes to visit, and they imagine that thousands of buffalo, elk, deer, antelope, mountain sheep, &c., will he ruthlessly slain. No doubt he hunters will kill considerable game, yet they will have to work for what they obtain in Cotardo. I do not think what game will be killed will be a mite, compared with the amount killed annually by the different tribes of Indians during the close season. There is plenty of game in the West for all, particularly in some localities where Mr. McCarty proposes to tisk. A party cannot travel over the "Western wilds" and enjoy themselves, except in the Summer time. In many places the snow lies on the mountains until tate in Jane, and falls early in the Animan, giving the pleasure seekers hut a comparatively short time to make long excursions into the mountains. One cannot organize a party, fit out pack trains, &c., and have time to lle over at all the different camps of interest and explore the country during a few weeks in the Autumn. If some of our Eastern sportsmen would give their attention to the poaching which is going on about them, and not find fault with a few gentlemen who propose to hunt in an Indian country where game is plenty, they would do good, and add to the pleasures of the sporting fraternity where it is most needed.

Joe, H. Batty.

FORT SILL, INDIAN TERRITORY. January 25, 1875.

Fort Sill, Indian Transform.

Jenuary 25, 1875.

A few statements from one acquainted with the country in Texas, over which McCarty's Big Hunting Party is to Iravel, may not be nawelcome, so I give you my idea of his route, together with some strictures on his letter contained in your issue of the lith instant. I quote from the letter: "Our quali hatch in February, our wild inricey in March, our grouse in the same month, usually hatching two broods per annum, and the buffalc calves in April. No hunter even shoots a buffalc cow with a calf, or so old bull, hat only young beifers and bulls, and they are unisances to the berdsman of southwestern Texas." Again: "This, you see, takes us that the middle of June, when wild lurkeys and qualt are full grown, fawns have lost their spots, and buffalc calves are brown. After hunting through western Texas for fifty or sixty days in quest of buffalc and other varieties, we will reach Pueblo, Colorado, &c., &c."

Now to facts: "Our qual!" do not "batch in February," and seldom, if ever, do the coreys break up until March. Our wild turkey do not hatch in March. I have never found a nest carlier than the first of May, though they may hatch sometimes a little earlier. The turkeys are not it to ktil before August 1st, and instead of being full grown, are about the size of a prairte chicken at that time. Our grouse hatch about May Instead of March, and August 1st they are about haif grown. "Emaily hatching two broods per annum." This is a much mooted question, it is possible the qual do, but it is not positive, by any means. That grouse and turkey do not, I am certain, unless their first next is destroyed. "The buffalo calves in April." This is correct enough, only they don't turn brown until Fall. "No hunter ever shoots a huffalo cow with a calf, or an old bull." The dickens they don't I as quot tunning is done in the Winter, acow, if killed, is always with coff. As to killing old buils, most of sportsmen never get a chance to kill anything else. "This only young helfers and butl

only young neries and obust, and nory are missances to the nertoman escalable select. Texas at would be cured of sore eyes, if so afflicted, at the sight of a buffalo. They are as seldom seen south of the Concho as sharks in Croton Reservoir.

"Fanns have lost their spots, and colors are brown," (middle of June.) The fawns are not fawned before May 1st, and are not fit to kill, and the colors, if brown, are not in Texas at alt, but considerably northwards. "After hunting fifty or sixty days in quest of buffalo and other variettes of game me will reach Pueblo. Colorado." Now, I'll mager they won't do anything of the kind, and shall now proceed to prove it.

Taking Fort Offlith as an initial point, d an straight lines to either El Paso, Fort Sumner, Fort Buscom, N. Mexico, or Pueblo, Colorado, and you have the entire as yet unexplored "Stinked Plain" to ross. This was crossed in 1872 for the first time by troops, the same year by troops from N. Mexico coming east, and the tower portion by troops the same year. I personally know that Cot. McC. did not accompiny either of those expeditions. I know, further, that be can't take a party across there now, and I am equally certain that he was nerer mest of Double Mountains, about seventy miles went of Fort Griffin; that far it is alpial asaling. Now, supposing the Col. says. "But I'm not going that way, but further north towards the Canadhan." In the first place, such a sized bantling party would not be allowed to cross the Indian Territory; they would have to keep sonth of Red River until they passed the Iouth meridian, and then northwest. Is it practicable? Yes, it can be done; but, good thander I what a pleasure trip it would be, starting in June. The place, such a sized hantling party would not be allowed to cross the Indian Territory; they would have to keep sonth of Red River until they passed the Iouth meridian, and then northwest. Is it practicable? Yes, it can be done; but, good thander I what a pleasure trip it would be, starting in June. I have good to make t

built.

And then by Mackenzie'a trail to Fort Bascom. "Ait aboard, all right Mr. Mate, cast her toose and let her skit."

1872 McC. remained at Fort Richardson, Texas, over a month, to get an escort of troops for a party who already numbered seventy men. This to go over a country that was constantly scouled by officers with small detackments. When at last they cut foose they remained whont a menth and only got as far west as Double Mountain.

Without any ill will to such a funt, or its originator, the time of year selected is ridiculous, and the originator cannot make it a success. You see, I have confined myself to Texas, I do so became I know whereof I speak. I have no doubt some of your contributors can pick up McCarty where I drop him—somewhere on the staked platns—and show other objections to his trip.

B

EDITOR FOREST AND STREAM:

Equal rights for all, should be our motto for our guests, as well as for those to the manner hero. As long as we permit no individual to destroy several thousand buffalo, if so inclined, within a year, a few animals, more or less, are of little consequence. Game needs protection only white breeding, natural enomies and diseases being far more destructive than hunting. Is it not incongroons to talk of protecting game in local-liteawhere the frontiersman can hardly protect his scalp?

SAML. A MXAD, JR.

DEATH OF A HERMIT NATURALIST.—James Gately, well known as the "Hyde Park Hermit," died ou the 2d inst., near Dedham, Mass., from congestion of the lungs, brought near Dedham, Mass., from congestion of the lange, mass, on by neglect. The hut in which he lived is about five feet square. Gately was visited a few hours before he died, and was found curled up on the floor. The snow feet square. Gately was visited a few hours before he died, and was found curled up on the floor. The snow had leaked through the roof, and every article was completely frozen. There was no fire in the stove, nor had there been, apparently, for some time, and the hermit himself was in an emaciated and filthy condition. He said that he had had nothing to eat or drink for five days previous. The sum of \$1,031 92 was found sewed up in the root that covered his hady. He has left a large collection rags that covered his hody. He has left a large collection of stuffed animals—quite a museum in itself—which will probably go to the town of Hyde Park. Gately was sixtyfour years of age, a native of Cheshire, England, and was the eldest of a family of six. His father was the owner of a vast tract of land in Cheshire, and his wealth was fabu-lous. He is still living, so far as is known.

For Forest and Stream STATE SPORTSMEN'S CONVENTION. WISCONSIN

WISCONSIN STATE SPORTSMEN'S CONVENTION.

MADISON, Wis., Fehruary 5th, 1875.

A T the annual meeting of the Wisconsin State Sportsmen's Association, held here dering the last three days, much of great importance to the tuture of this State was very thoroughly and carefully debated and voted upon in regard to the protection, preservation and cultivation of holb fish and game. The true sportsmen of the State are awakening to the necessities of the hour, and from their exertions during this meeting there will soon be in the deld one of the most powerful and influential arganizations that our country can hoost of.

The following biflers were elected for the ensuing year and the third Monday in January, 1876, at Madison, selected as the day for the next annual meeting: R. H. Strong, President; J. P. McGregor, Flrst Vice President; E. Burdiek, Seroud Vice President; M. T. Bailey, Recording Secretary; L. M. Wyatt, Corresponding Secretary; W. Corning, Treasurer.

The President appointed the following as Executive Committee for the year: Gen. Harndon, Madi on; William Beck, Milwankee; H. B. Harshaw, Oshkosh; C. Henung, Waupon; J. C. Neville, Green Bay.

The following were elected delegates to attend the National Convention at Cleveland, in Jane; H. N. Sterman, Beloit; S. S. Woodward, Eng Chire; Fred Poud, Montello, Alternates—Col. R. M. Strong, Barabno; C. Henning, Waupon; E. Burdiek, Madison; W. Corning, Portage; Mr. Noble, Enu Claire.

A committee of three was appointed to issue an address to the farmers and sportsmen of the State explaining fully the meaning of "protection," and the hencits that will certainly accrue to them by their hauding together now.

A committee was appointed to receive and accept the name of every known sportsmen in the State as a member of the association. The dues and assessment tring only oue dollar, they expect to secure every name sent in as an active working member. The clah membership free is len dollars. Names were presented of about seventy-five gentenmen who had signified their willin

Your representative, (J. G. True,) was made an honorary

Tour representative, (3. G. True,) was made an honorary member by unanimous consent.

Taking into account the adverse conditions of politics and weather, the meeting was a success in every manner possible, and will do any amount of good before the next one occurs. Many thanks are due to members for kindnesses shown to me.

There,

FROM ANOTHER CORRESPONDENT.

The Convention met February 2d, President R. H. Strong in the chair.

The following gentlemen were present as delegates from the clubs numed: J. H. Noble, Eac Chair Clink, R. M. Strong, Barahoo, Skillet Creck Club; J. P. McGregor and W. W. Corning, of Puckaway Club; William Beck and R. M. Strong, Caw Caw, of Milwaukee.

An address was delivered by the President, and a paper from Fred Pond, of Montello, was read by the Secretary, who also offered the following resolution, on behalf of Mr. Poud, which was anlopted:

Resolved, That a vote of thanks he tendered to the FOREST AND STREAM, of New York, American Sporteneon, of West Merliten, Conn., and the Field and Stream, of Chicago, for generous co-operation in aid of tuts Association and its objects.

The following resolution was next offered:

Resolved, That the Field and Stream, of Chicago, as the curnest allocable of Western State associations, by adopted as the official organ of this Association.

Laid on the table.

On motion, the Fish Commissioners of Wisconsin were admitted as members ex officio, without fee.

A committee of five on legislation was then appointed, os follows: Gen. N. F. Lund, Elishu Burdick, J. P. Mc. Gregor, William Beck and R. M. Strong,

The following persons were elected members on the individual list: R. H. Strong, Baraboo; Gen. Henry Haruden, Madison, and Fred Pond, of Montella.

Mr. McGregor offered the following resolution, which was adopted:

was adopted:

Resolved. That this Association will heartly co-operate while the Fish Commissioners of this State in their efforts to increase the production of fish in our waters, and to product his from destruction at measurement times, and by improper means; and that we will personally and collectively endeavor to irraw the estimation of our people and our Legistance to the great importance of this matter.

Yours truly,

[Much of this correspondent's excellent letter is embodied in the above letter, and is therefore omitted .- ED.]

-The members of the Boston club expect to have a club room worthy of the boys who have won the championship during the past three years. The amount of funds necessary to earry out the project is not, however, fully made up. If the Bostonians do not give their model club appropriate headquarters they will act very small indeed. Eucourage honest play, gentlemen, hy making all its surroundings attractive. ings attractive.

Che Rifle.

RIFLE CHALLENGES.

THE CALIFORNIA CITALLENDE.

WE published in our issue of January 21st the formal acceptance by the California ritlemen of the terms of the challenge of Company D, Twelfth Regiment, N. Y. N. G., to shoot against any military tenm in the United States at 200 and 500 yards. We now publish the articles of agreement for the match, that have been forwarded from this city and submitted to the Californians for their approval. A muster toll has also been transmitted, a copy of which has been handed to us. By comparing it with the roster of the California company we perceive that it has only thirty-six names, while the latter has rightly-nine, a discrepancy largely in their favor, as it gives them a greater number of men to select from. Nothing further remains to be done, except for the Californiums to sign the articles of agreement and designate the day of the

match.

"D" Co, 12m 18pr'y, N. G. S. N. Y., New York, Feb. 2nd, 1875. [
Gentlemen—Your favor of Drec, 28th was duly received.
Herewith we family on a Muster Roll of our Company, showing its membership on thee, 1st, lust.

Also we hand you Artlebs of Agreement for Match, which, If norrect and satisfactory, please have copied, signed by your committee, and return to us.

and salisfactory, please have copied, signed by your committee, and return to us.

Sergt Win. C. Reddy, who was on Dec. t, and Is yet, a number of this Company, expects to be commissioned as Captain of one of the Companies in our Regiment—should be be so nonimissioned, will you consent to his shooting with our team, if desired?

When we accepted your challengs we did not anticipate this, but we helieve the spirit of our understanding to be that any man property on the rolls on Her. 1, 1874, is eligible to shoot, antivithstanding he may be enbasquently hounced with a promotion. We hope that the forthcoming match will not only promote military practice, but a more intimate acquaintance with the most renote of our National Gourdsmen.

Very Respectfully,

H. B. Shirm, Captain,
Juny H. Womn, 1st Serg.,
APHILLES WOOD, SERG.

Thos. J. Dankay, Private,
Michael Fahler, do,

Committee for D Company.

THE ONTARIO BIFLE CHALLENGE.

It will be seen by the following letter that the Canadians do not despair of bringing about a rifle contest between their team and the American tentu:

Hamilton, Ontario, February 15th, 1875. EDITOR FOREST AND STREAM:-

On the 1st inst. I mailed to Col. Wangate a letter, a copy of which is hereunder appended. Not having received any acknowledgment of it I fent that I addressed it incorrectly, and that it has not fallen into the proper hands. I shall be glad if you will publish it in your widely esteemed journal, and trust that we may have your kind assistance in arrang-

and trust that we may have your kind assetting for and carrying out the proposed match.

Yours, very truly,

J. J. Mason, President Ontario Any-Rifle Association.

Hanilton, Ont., February 1, 187 GEO. W. WINGATE, Chairman of the Joint Committee of the Na-nal Rifle Association of the U. S. A., and the Anntenr Rifle Chib of

New York:
DEAN SIM-During the shooting season of 1874, I endeavored, unsucces-fully, to arrange a match between a "team" representing the Onter to Any-Rufe Association, and the Irish Team, and subsequently between the former and the gullant "Team" by whom the Inter were defeated. In order that there may be ample time for its consideration—and I trust for its acceptance—I now renew the challenge in the follows.

Competitors—The marksmen who are 10 be selected to represent the United States in the International Match, at Dublin, in June uext, on the one side, and an equal number of representatives of the Outario Any Ride Association on the other side.

Torgets, Scoring, &c.—As at Wimbledon, either in 1873 or 1874, as may be bereafter agreed upon.

Ringes.—809, 900, and I (000 yards; fifteen shots at each range.

Rifles.—Any not exceeding ten pounds weight, but nithout telescope or migalfying sights; minimum pull of trigger three pounds.

Place.—Any, not involving artificial rest.

Place.—Creedmoor.

1 shall be gial to receive a reply at as early a day as possible.

Yours truly, J. J. Mason, Pres. Ont. Any Rifle Association.

THE AMERICAN RIFLE ASSOCIATION OF WESTCHESTER COUNTY.—It was not the intention of the directors of the above association to have held a match until they could have it opon their new range, but we are informed that in response to a general desire of its members, and many whers, they have concluded to hold a prize meeting on the 22d inst., Monday next, at their temporary range, Mount Vernon. There will be two matches, as follows:

De Peyster Badge, value, \$300-Presented by Gen. J. W. De Peyster. Conditions-Open to any member of the National Guard; military rilles only; distance, 300 yards, on new range; shooting from shoulder, off hand; must be

won three times before property passes; seven scoring shots, two sighting shots; entrance fee, \$1.

"All comers match"—Four prizes, ranging in value from \$50 to \$5. Open to any rifle within the rules; distance, 200 yards; shoulder shooting, off hand; five scoring shats, two sighting shots; entrance, fifty cents to members, \$1 to

Subscription matches, or pool shooting, will be added to be above. For the accommodation of visitors stages will the above run to and from the depot an arrival of trains. Excursion trains leave the Grand Central Depot at 9:05 A. M., 10:10 A. M., 15 M. and 2:20 P. M.

-The joint committees of the Amateur Ritle Club and —The joint committees of the Amateur Ride Club and the National Rifle Association held a meeting on Friday lust at 194 Broadway, Col. George W. Wingate in the chair. Among those present were Gen. J. B. Woodward, Gen. M. T. McMahon, Col. A. H. Gildersleeve, Capt. Henry Fuiton, and Mr. A. Alford. The minutes of the previous meeting were read and adopted. Col. Gildersleeve, in behalf of the committee appointed tα solicit subscriptions from members of the National Guard, reported progress. Gen. M. T. McMahon reported that he had beld several conferences with Mr. J. T. Bird in reference to the several conferences with Mr. J. T. Bird in reference to the proposed dramatic performances for the benefit of the American team, and the result was the selection of the Academy of Music on Saturday, April 3. He also recom-mended that the National Guard he solicited to provide gratuitously a band of music for the occasion. ing subscription circular was presented for distribution to interested parties:-

interested parties:—
We, the undersigned, being desirons of uniting in the subscription performance to be given at the Academy of Masic on Saturday, April 3, 187%, in aid of the purse to be tendered the American rifle team, for the purpose of defraying a portion of their necessary expenses in maintaining on British sail their late victory over the Irish team, defined by subscribe and agree to pay the sums set opposite our respective names, on condition that we shall receive, upon payment thereof, two reserved seats for said performance, for each \$5 hereby subscribed.

It was announced that Myssrs. J. M. Bradstreet & Sons

upon payment thereof, two reserved seats for said performance, for each \$5 hereby subscribed.

It was announced that Messes, d. M. Bradstreet & Sons had affered to do all the printing relating to the enterthinment without compensation.

The important subject as selecting a team for the international match was fully discussed; some of those present arguing that to allow present members of the team to retain the places gained in the competitions at last year, would prevent many from competing. It was concided by the majority that the present match was not entered into merely to test the shooting of American marksmen, but in response to a direct challenge. A compromise was finally arranged by the adoption of the following resolution:

*Resolvid**, That the sub-committee be instructed to make such changes in the plan for the selection of the American team for 1875 as in their judgment shall seem best, and report the same to this joint committee.

*Col. Wingate read a letter from Mayor A. B. Leech, Captain of the Irish team, in which he says:—

"We have an annual match shot in Ireland for the All Ireland, or Leech Challenge Shield, open to Irish clubs only. I have, however, reserved to myself the right to alter the conditions now in favor of admitting the Americans. The ranges are 1,000 and 1,100 yards; each team to consist of four men, and the shield to remain in the custody of the winutug team until the next match."

The meeting then adjourned.

The meeting then adjourned.

-In spite of the inclement weather several members of the international ritle team, including Messrs. Fulton, Gildersleeve and Bodine have indulged in practice during the past week, the grounds selected being adjacent to the Remington works at Ilion, and on the North River near Poughkeepsie. It is gratifying to know that the old form remains intact, and although we have not received the individual scores, we learn that they were fully up to the work of Creedmoor practice

PROVINCIAL RIFLE ASSOCIATION OF NOVA SCOTIA. This Association held its annual meeting at Helifax last week. Over forty members were present. A balance of over \$500 was reported in the hands of the Treasurer. At the shooting matches last year 122 members competed. It was decided that the commander of the Wimbledon team be selected from Nova Scotia, and that the Association have a voice in the election. A delegate was appointed to look after the interests of Nova Scotia at the annual meeting of the Dominion Association at Ottown, who was instructed to ask for the appointment of Col. Lanrie, (President P. R. A.) to the command of the Wimbledon team, and in the event of his being unable to accompany them to England, that Col. Mckinlay be named in his place. A resolution A resolution was passed to the effect that none but qualified members

of the militia be allowed to compete in the matches of the Association, excepting members of those battalions which were forbidden to drill during the past year by orders from headquarters. Major Yeomans was thanked for his service the range last Summer, and Gen. Williams for the handsome prizes he presented to the Association. The following gentlemen were elected by ballot to form the Council; President, Secretary, and Treasurer to be appointed by the council:—Col. Lanrie; Lient. Colonels Bren. ner, Pallister, McKinlay and McPherson; Majors Ritchie, C. J. McDanald, Yeomans and Murray; Captains Bland, J. B. Graham, Nelson and Sandford; Lientenant McInkis.

Forkst City Rifle Association.—This organization, whose headquarters are at Cleveland, hold a meeting on the 22d instant, when a gold and silver champion needs will be shot for. A proposition having been made the clob to remove their headquarters to Enclin, where new build. ings and the free use of ground will be provided, the mem bers have taken the subject into consideration.

THE INTERNATIONAL MATCH OF 1874 .- A very useful and interesting work is that just issued by the Messrs. Remington, descriptive of the International Rifle Match at Creedmoor September 26th, 1874, with diagrams of turgets and copy of by laws of the Amateur Ritle Club of New York. It contains copions extracts from the Army and Nuvy Journal and the Forest and STREAM.

Gen. Thos. C. Scoble, late Secretary of the Ontario Rifle Association, and at present Inspector of Prisons for the Dominion, was in the city yesterday on business con-nected with Canadian rifle matters and the annual shoot at Wimbledon.

-A rifle clab is about being established in Chiengo. The projectors have scut here for information regarding our organizations of a similar description.

—The marksmen of Huntingdon county, Penn., propose to hold a rifle tournament in Huntingdon, on the 22d of February. The marksmen of adjourning counties are invited to purticipate. A Remington rille is the prize,

Game Bag and Gun.

GAME IN SEASON FOR FEBRUARY.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quall, Suipe, Ducks and Wild Fowl

Under the head of "Game, and Fish in Seasin" we can only spect by in general lepths the several varieties, became the lives of States vary so much that mere we to intempt to particularize we could do in less than publish those entire sections that relate to the kinds of game in question. This would regain a great amount of our space. In degranding game we are guided by the hinse of unture, upon which all letislation is founded, and our readers would do well to provide themselves with the love of their respective States for constant reference. Otherwise, our attenuts to assist them will only create confusion.

GAME IN MARKET.-Prairie hens are plentiful at 60@75c. dozen; ruffled grouse, 75c@\$1; quail, \$2@2 50 per dozen; canvas back ducks, \$2@2 50 per pair; ruffled grouse, \$5c@\$1; quail, \$2@2 50 per dozen; canvas back ducks, \$2@2 50 per pair; red-heads, \$1@1 50; mallards, 55c@\$1; widgeon, 75 cents; brant, \$1@1 25; wild geese, \$1@1 50; Guinea fowl, 75c@\$1 per pair; wild turkeys, 25 cents per pound; rabbits, 50 cents per pair; hares, \$0@ 73c.; Bay snipe, 75c@\$1 per dozen; places, \$2@2 50. Carilago, from Canada is calling at \$25. plover, \$2@2 50. Cariboo from Canada is selling at 25 cents per pound.

-The first annual meeting of the Game Protection Society of Nova Scotia was held in Halifax last week. The Secretary's report suggests that eariboo should receive protection, and describes the state of the river fisheries as being decidedly bad. The following gentlemen were elected for the ensuing year:—President, Robert Morrow, Vice Presidents, Lieut. Col. Clerke, and E. G. Stayner; Secretary, Fitz Cochran; Treasurer, M. B. Almon (both reelected); Council, Capt. Todd, 87th R. I. F.; M. B. Daly, J. W. Lellern, Chan (Bergen) J. B. Feisherle, Pr. Lev. J. W. Jackson, (New Glasgow), L. P. Fairbanks, Dr. Jen-uings, F. H. D. Vieth, B. Smith, (Kentville), L. G. Power, C. A. Stayner, Andrew Downs, C. B. Bullock, and C. J. Stewart, (Amberst).

-A meeting of the Massachusetts sportsmen will be held Thursday forenoon, 18th inst., at the Bay State House, Worcester, to take measures to inaugurate a Sportsmen's Association, under the jurisdiction, and in harmony with National Sportsmen's Association of the States

—A Sportsman's Club has been organized in Columbus, Ga., under the title of the Georgia and Alabama Sporting Clut. Sixty members signed the roll. The following officers were elected:—R. W. Ledsinger, President; Gunby Jordan, Vice President; F. M. Gunky, Secretary and Treasurer; Executive Committee, D. W. Johnson, E. B. Seley, Conner Builey, Henry Bruce, W. S. Holstead. Drafts of bills will be made and presented for legislative adaption, preventing the killing of any doe or fawn between January and August, or buck between March and May and between September and November. From March 15 to October I will be the close season for ruffed grouse, quail and wild turkey.

—The Sportsmen's Club of Western Pennsylvania, located at Pittsburgh, Penn., have elected the following officers for the ensuing year:—President, Robert Dalzell; Vice President, D. C. Phillips; Treasurer, John A. Harper; Secretary, O. F. Whorton; Assistant Secretary, Dr. N. McDonald. Board of Directors—John Caldwell, Jr., John C. Brown, F. H. Kennedy, Dr. Fundenberg, E. J. Unger. The Club is one of the most flourishing in the country, having very handsomely furnished rooms and a good surplus of cash in the treasury.

TORONTO, February 11, 1875

TORONTO, February 11, 1875.

EDITOR FOREST AND STREAM:—
I send you below a synopsis of our monthly shoots for the year 1874, exclusive of our annual club match, the full particulars of which will be found in Forest and Stream, Volume 3, No. 9, page 140.

Our annual club meeting for the election of officers and other business came off on the last Thursday in December, 1874, when the following gentlemen were elected office bearers for the ensuing year: J. Mangham, Jr., president; Chas. Pickering, vice president; Alex. McGregor, secretary and treasurer, re elected; and an Executive Committee, consisting of Messrs. J. Chapman, W. London, J. Morrison, W. Bugg, to gether with the other officers. S. Herring, taxidermist for the club.

It was decided at this meeting to offer two pizes for the two highest aggregate scores during the year, the six highest scores only to count. The prizes to consist, the first of fifty dollars (gold) and the second of twenty-five dollars (gold). Our club is now pretty strong, numbering forty-five members, every one of whom owns a gui-nearly all breech londers—and every meeting night we elect from five to ten new members. Last year the winner of a prize was barred from winting another, although he could shoot at every match; but if he made the highest score it dill not count. This year it is arranged different. If a shooter wins a prize he is landleapped back two yards, and if he should still be fortunate enough to win another, two yards further back he has got to go. We use pigeons, snowbirds and blackbirds, when in season; for pigeons the lowest distance is 21 yards; snowbirds and blackbirds, 18 yards.

We always have weekly shoots, but the club match only takes place once a nionth. The prize consists of a case of stuffed birds, valued at seven dollars each (gold). The following is the result for last year. I am sorry I cannot give you the names of the makers of gins which each membera uses.

BELOIT, Wls., February 10, 1875

EDITOR FOREST AND STREAM:-

I take pleasure in sending you the score of a pigeon shoot which took place on the grounds of the Beloit Driving Park (H. N. Sherman, secretary.) The score is as follows:—

HINTS FOR THE HUNGRY.

Cazenovia, February 12, 1875.

CAZENOVIA, February 12, 1875.

Buton Forest and Stileam:

Learing Washington for the South there is not much to be reported favorable to the evayside links in general, but there is one to be mentioned as exceptional. Your correspondent had the link from some Southern residents, and was grateful therefor. The point is Flemington, seventeen miles south of Wilmington, N. C., and about half way from Washington to Charleston. The recommendations are—proximity to the road, a linkurious table of plain good things, bright, open failwood frea, and kind, interested people. We intended to stay over one train, but remained longer, and had a pleasant day on Lake Waccamaw, where there is good fishing and shooting. We went on with regret, and haque again to find ourselves there to enjoy hearing the order given to the "neufranchised African" of "more hot cakes, simusons," and such hot cakes are not found often. To our friends who go South with deas of a dozen courses of clein plates, diager bowls and French southerly, and would see Florida from round from laundaulets, we would give Pinche's counsel to young people contemplating interrage—"don't"—but to those who go to meet the tardy sun, to become brown and hearty, and carry ready good humor, we would say linger in one of these old style Southeern towns, and you will find much to praise.

L. W. L.

TROUBLE THREATENED.

Helena, M. T., January 29, 1875.

EDITOR FOREST AND STREAM:-

Editor Forest and Stream:—
Say you! I am a long way off, and the roads are bad. The merenry has been hanting a hole and found it, and pulled the boic in after it, so that the wood pile had to go and hunt for it, leastways that has left in a furry. Dan't you shot my pup:, unless you want to get into a "placed difficulty," and really it is not worth your while making cripples of yourselves for such a small matter. I don't know how many I will have to lackle if you don't send Forest and Stream; but send ine the fighting weight of the smallest of your staff, and then I will coasider the propriety of going into training, provided us aforesald. A prominent army officer and myself are making a collection of birds, freezing them and forwarding them to Dr. Elllott Cones. Yours, WM. G.

A BIG DAY AMONG THE GEESE.

KINSEY'S ASHLEY HOUSE,

BARNEGAT INLET, February 6, 1875.

On account of having two large steamships on our beach our gunners bave had other business to occupy their time. As the daily popers have given the full particulars of the disasters, I will merely add that the fron steamer South Carolina was on our shouls four weeks, undergoing severe thumping part of the time, havied some five hundred yards over the sand, and yet custained no injury; in fact would have been able to resume her trips the day she floated, were it not for a little scrubbing and painting. While the twooden attender Mediator, nearly new, ou the same shoul, broke in two seven hours after striking the bar. This much in favor of fron hulls.

To-day, the above business belog over, our gunners returned to their legitimate business, and I have to report the best day's shooting by two men known for years. Joel Ridgway and Samnel Perrine, Jr., killed twenty-five geese, none less than ten pounds, and seven which putted the cases at fourteen pounds; six red heads, two widgeons, seven black ducks, one brant. This shooting is imprecedented. I have known more fowl killed on our point, but never with two gons. Three other gunners came in with three geese, one hrant, and eleven ducks. They all agree they never knew as many geese in the bay as at present.

—In the Gulf of St. Lawrence last week upwards of 1,000 fishermen's nels were carried off by the ice that was blown off shore, but fortunately most of them were recov-

Dachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

RIGR WATER, FOR THE WERK

ICE YACHTING.-The yachtsmen of Ponghkeepsie met with some discouragement on Saturday last in endeavoring to continue their regalta. The wind in the forenoon was to continue their regalta. The wind in the forenoon was so light as to prevent a start. After dinner, however, there were some indications of a breeze, and at 2:42 the bonts Qui Vive, Magie, Puff, and Whiff were started on their journey. The Puff carried off the first prize, and the Whiff the second. Some idea of the state of the wind may be formed from the fact that the Puff was 39m. 30s, in doing the distance, while the Whiff accomplished the same distance last week in 28m. 30s. The ice is in splendid condition, and the yneltsmen not despondent.

—The New York Yacht Club have accepted the offer of Vice Commodore Garner to build a house for the use of club on the Eastern shore of Staten Island, near Stapleton. club on the Eastern shore of Staten Island, near Stapleton. The house is to be erected in the Spring, and will be 60x85 feet, and two stories in height. It will stand on the end of a pier running 450 feet into the bay. Directly in front of it will be the anchorage for yachts and the starting point for yachts. A want long felt will be supplied by the erectiong of this building; a lounging place for members, and a spot from which start and finish can be witnessed by those who have neither time or inclination to accompany the yachts on their entire trip. The old days will be revived when thousands assembled on the Elysian Pields to see the graceful Julia come leading the fleet past the winning stake hoat; and visions of the stately Maria, the graceful Huze, and Mr. Rutherford's Una will crowd themselves upon the memory of the old yachtsmen. A retrospective upon the memory of the old ynchtsmen. A retrospective view of our ynclits and yachting for the past twenty years would be full of interest, as well as instructive to the younger generation of yachting men, and we propose cre lie season shall have fairly commenced to review some of the ohl contests, and, as far as the change in course will permit, draw comparisons between them and more recent events. As a preliminary, the sketch of the America's ever green victory will be printed ac't week,

Eastern Yacht Club.—At a meeting of the Eastern Yacht club, held in Boston Thesday evening, the following were elected:—Commodore, John M. Furbes, Azalea; Vice Commodore, John Jeffries, Jr., Haleyon; Rear Commidore, Edward Burgess, Nimbus; Secretary, H. B. Jackson; Tressurer, P. T. Jackson; Measurer, F. D. Child. Regatta Commiltee, John Heard, Wm. M. Whitney, Stanton Whitney, B. Joy Jeffries, and R. H. Stevenson, Value Carlo Annual Process.

YACHT CLUB ANNIVERSARY.—The South Boston Yucht Chib celebrated the eighth anniversary of their organization Tuesday evening, 9th instant, by a social guthering of its members and their guests, among whom were officers of the Lynn and Charlestown and East Boston Yacht Chibs, at their Club House at City Point, South Boston. A splendid supper was served at nine o'clock in the Atlantic House, opposite the Club House, under the the supervision of its landlord, ex-Commodore Fred. Wright. Commodore Roberts presided at the table.

-The colors won on the 15th of October, on the Harlem The colors won on the 15th of October, on the Harlem River, in a three mile straight-away mee, in fatt-meed stells, by the Analostans, from the Nasem Boat Club, the erack organization of the New York, have been lately received try the former club. They are as handsome a set of colors as one can desire to see, being made of fine silk; the club flag, blue and white, having a blue stripe diagonally in gold letters, "Harlem River, Analostan & Nassm, October 15th 1874," the staffs being tipped with heavy gold eagles. In a word, the flags are in every respect worthy of such gentlemen as compose the Nassan Club.

The Massachusetts Rowing Association was organized last week in Boston, the following houts being represented in the eonyention: Boston, Shawmut, Lukennan, Friendship, and City Point, all of Boston; Riverside, of Eunbridge; Neptune, of Lynn, and Lander, of Salem. The following officers were chosen:—President, F. F. Biblier; Vice President, J. W. Fazer; Secretary, J. M. Flynn; Corresponding Secretary, C. O. Breed; Treasurer, James D. Shay; Directors, J. Desmond, W. Liddy, M. W. Carr, J. M. Henry and W. J. Higgins.

SCHUYLKILL NAVY. - We would eall the attention of Sec retaries of Rowing Clubs to the accompanying letter. The Regalta of the Schnylkill Navy is one of the most interest ing events of the season, and a reciprocal arrangement with regard to dates, etc., will not only prevent confusion, but and in keeping each other posted as 10 malches and open events.

HEADQUARTERS SCHUTERILL NAVY, FAIRMOUNT PARK, PHILAS, Feb. 15, 1875. (

EDITOR FORZET AND STREAM:—
The Committee having charge of the "Schuylkill Navy Regalta, open to all Amateurs," are preparing and in a sbort time will be ready to lesue their Circular with Copies of the Rules.

If the Secretaries of all clubs will be kind enough to forward their addresses, it would greatly oblige and assist, 1

Very Truly Yours,

JOHN GILLINGHAM, Sec.

Box 2013, Pilla.

SCHUYLKILL BOATING NOTES

Phyladelphia, Feb. 15, 1875

PHYLADELPHIA, Feb. 15, 1875.

White the rivers are teo bound, and weather reports show lower temperature, there is no lack of neityley among the boat-funiders, and bonting men. The todders to their shop, the rowless in the gynthasium magneparing for the coming season. In this city the foot tink is on lively as on a tace day, and it is largely shout the treatening, which is on longer spacken of in the "proposed" regain. It is assured. The Schnykhill navy kaving agreed in lear all the running expenses, and the Commodure loss gutranteed that finds for prizes shall not be wanting. The present Naval Barac Is not backing in sing, and that committee will have their plans matured in a few neeks.

It is greatly to be hoped that the College Association will hold their regatta here in '75, and if the only disjection indeed (as ever suppose will be the case) is for rowing in hems, the difficulty can be neel. Alloud soven miles from Falmonint, and faint from the start of the Nathonal Contree, is Flat Rock Dang a here todingen the high liftle is a course as long as Piciney, straight as Sarainga, and white emergh for all the sixes they will remy.

sween miles from Patrucenni, and four from the start of the National Course, is Plan Rock Dung, abore bolderen the bigh fills is a course as long as Patrney, straight as Saratoga, and with enough for all the sixes they will touch.

There is little flowly that Exterd and Emphridge will each send a crew, and an International Callege freet here could line the banks of the Schnyldill critis such a crust as has never winessed a host near in this rountry. The spirit of "millshness" with which the bunks of the Schnyldill critis and at the ontset, rapidly disappeared when they realized a lost the "distribution of a Cambridge incase. The Schnyldill Navy should feel groud of the stand they have always taken on this "distribution." It was from the regative of 1872 that the National Annierr Association growther. The conting senson proadless to apan cells to counting senson proadless to apan cells to count receive a large mander of entries. The open regative in distribution of entries and them is go by default; the unsurcessful contestants cell count to retrieve their burstals, and many chibs cell wide to will be likely to allow them in go by default; the unsurcessful contestants cell count to retrieve their burstals, and many chibs cell wide to will be a growing though for the most part a generous rivalry, and they are making great preparations for the Full Regate. In the meaning their the meaning the treatment of the National Berlitton, as they describe their hands and them, as they decreased the described in the start man the treatment of the National Berlitton, as they decree they are making great preparations for the Full Regate. In the meaning their formation on the river; they are making great preparations for the Full Regate.

A feeling partity freely expressed, has reep thin auture the content of the prominent of the National Regate and the start of the Regate and the Regate and the Regat

least the will considerably introggic time now, enough the down server.

The College Club of the University of Connsylvania, having fieldshed and abund paid for their hambonic house, are arxious to july the Navy, so we may be looking up their doings shortly.

The Pacifics have but in hulter of new members, and during the hist weeks if the best rowing season, introduct divid, it was no meanimum thing it see their dears upon three days in the week. Furlings they will become active, in within case nothing class will be surprising.

The University Chiloto not seem to prombe much in the ropy of rowing, but their representative promised a \$1,000 for the Contournal which is very much to the parawse, as their promise is as good as "well wheat. Altagether, from the present lookout, you are likely during the caming months to hear from,

"Secretas."

—Land and Water says that Suther has taken Boyd's challenge to scall a mile on the Tyne for £200, on March 20th. This will give the Tyne men a feeler as to whether their youthful champion is all to tackle the older scaller; Lunaden daso has ged a match on with Baguall on March 6th; there is no stipulation as la locals. Lunaden has a rosy chance. The Thames matches are progressing fairly, and promise a busy season, as there seems to be a multitude of cliques in the locating world, and the more the fends the more the matches.

-The Officers of the New York Rowing Club for 1875 are:-President, John D. Prince; Capacin, George Rives; Secretary, F. J. De Peyster; Treasurer, F. L. Leland.

The Golleges.

-The Yale erew have met with a great misfortune in —The Yule crew have met will a great mistorline in the accident which inppened to Mr. Wood of the Scientific School last week. Mr. Wood was considered one of the ablest boating men the college has ever produced, and lubeing deprived of his assistance next July Capt. Cook meets with a loss which is almost irreparable. The accimeets with a loss which is almost irreputable. The accident occurred while coasting near the college computs; one of the infortunate gentleman's legs were broken, and although the prospect of imputation, which was at one time immittent, has passed, his physician says his hoating days are over. Mr. Wood has pulled in several victorious crews and was one of the University crew of '74. His loss and that of the three Sophamores who were suspended last Mechanical and particles the college of four fine conventor. Wednesday, deprives the college of four fine oarsmen, re-ducing her prospects at Saratoga and rendering her boatlng men somewhat despoudent.

-Union College wishes Harvard to change her college color, since Union College adopted the magenta in 1800 and has retained it ever since.

-The new editors of the Harvard Advocate are J. N. Byrne, A. H. Latham, E. S. Martin, L. Swift, and G. E. Woodberry, literary editors; and W. N. Swift, financial

—Several speelmens of ore from the new gold and silver mines of Newburyport, Mass., have just been assayed in the Yale laboratory. The richest specimen thus far yielded, per ton of the ore, ten dollars' worth of gold, sixty-five or seventy of silver, and fifty per cent. of galena, all together

about \$140.

Onr Nine has voted not to go to Saratoga. Games with Yale and Princeton will be played before the end of the college year—one game with each of them here; the second at New Haven and Princeton respectively; the thrift on some neutral ground.

We are informed that the following men are candidates for places on the University Crew:—Thaver, James, Otls, all of L. S. S.; Wetmore, '75; Taylor, '77; M. F. Stiles, '77; Loring, '78; Yates; '78; Morgan, '78; Brown, '78.—Harvard Advocate.

-The Yale Scientific School has a magnet which weighs half a ton and will lift ten tons, the gift of Mr. Wallace, of Ansonia, Ct., long known as a manufacturer and scientist.

PRINCETON COLLEGE, Feb. 11, 1875.

EDITOR FOREST AND STREAM:-

PRINCETON COLLEGE, Feb. 11, 1875.

Editor Forest and Stream:

Since my last communication the boating interests here have received a new impulse. At a recent meeting of the boat club it was announced by the treasurer that about \$1,000 had been contributed by various alumni of this college, many of them being residents of New York city, within the past few weeks, for the purpose of defraying the expenses of the "University" during the coming season, including the necessary expense at Saratoga. It will take about \$1,500 to cover the entire expense, but the deficit will be made up easily, either by private subscription, or by donation. It seems now as though that there are good reasons for believing that Princeton will take that position at the close of the next Inter-Collegiate regatts which her rank as an athletic college seems to make it necessary that she should assume.

A new crs in boating will take place in the Spring. We purpose having a regatta of our two in May, at New Brunswick, in this State, which is about seventeen miles distant, on the Rarlian River. The regatta will consist of races between the different class crews, and perhaps one or two single races, as well as exhibitions of rowing by the University and Freshmen crews. The date has not been decided upon yet; probably some day in the latter part of the month will be chosen. The crews and ball nine continue their gymnasium work with unabating zeal. They remain unsaffected by the epidemic which has been so common here for some time past.

RENSSELARR POLY, INST., TROY, N. Y., February 13, 1875.

Thov, N. Y., February 13, 1875.

This Institute pays little attention to manly sports, because we have not time enough to go into long training, or for work in the gymnasium. We have had no large donations; the amount altogether not exceeding 3300 at most; so you see that we cannot have anything very elaborate. Our future, however, seems brighter, and we hope yet to be represented at Saratoga. We are organizing an Institute Rifie Club, and are to have rifle practice weekly, if alt goes well. The bont club has quite a number of members, and we hope to get the whole Freshman class in if they will hny one of Watts' six-oared paper shells.

Bational Pastimes.

SCOTTISH GAMES.

MUSIC AND DANCING.

AUSIC AND DANCING.

A SIGHT, to many wonderful and emphatically extravordinary, may be witnessed in New York at least twice a year on the two great gatherings of Scotchmen arrayed in the fantastic but picturesque dress of the Scottish Hichlander. The two occasions are the annual games and annual ball of the New York Caledonian Club. Other clitics are no doubt equally favored. Boston claims to have the oldest Scotch club on this continent; Philadelphia has a strong organization, and every other city, In Canada and the United States, of any importance, has a Caledonian club, no some other society representative of the Scottish fraternity. New York is now specially alluded to, on account of the pre eminence which, by numerical and financial strength, its Caledonian club has reached. Its gatherings are the grand re-unions of the exiled sons of the 'Land o' Cakes,' and finely represent our Scottish population. The peculiarities of these festive seasons are marked and sufficiently striking to merit some comment.

The ball, which came off a short time ago, had all the features which give it its distinctively Scottish character. There were tartan kills, pipes and reels, and plenty of enjoyment. It would be a mistake to suppose, however, that nothing was danced at the ball but such steps and figures as could be traced to ancient Caledonia. The Scot of out day has too much partiality for the cotillion to sympathise fully with the poet, when, in the true antiferance." At the same time he has not lost his love for the 'born pipes, jigs, strathspeys and reels, "which the same poet commends, and which are peculiarly Scotch. Besides the dances most admired, and which always have a place in the programme of Highland gatherings, are the Sword Dance or Oilli-Callum and Highland Fing. It would he a hard matter to find the origin of any of these belonged both to the early savage and religious life of the Gael; and it excelled any modern dunce in the combination it dem nded of strength and grace. This is illustrated by all Seotch d

as the "threesome" or the "foursome" has the preference. They differ in time and necessarily in the steps given by each performer in the intervals between "reeling." It is impossible to give any idea of the "steps" used in any of the dances mentloned. Like the music of the bagpipe, which generally accompanies them, they baffle description. But this may be said, that more fun can be extracted from what Scotchmen call "a guid ganging reel" than from all the quadrilles and waltzes of a ball programme. In the ease of the foursome reel, the parties stand in a row, the men on the outside looking towards each other, and the girls on the inside, each looking to her partner. The "reel" consists in the four passing each other on the right and left alternately, and taking up the position above described, after in this way describing the figure eight. Then the "stops" are performed according to individual taste or knowledge, and theu again comes the reel. When danced on board a steamer in a heavy sea, as is frequently the case at excursions, it is very exhilarating. If couples lose each other, and sets get mixed, its matters little. Everything is sure to turn out 'all right in the end. Generally a vist amount of decorum characterises the opening of a reel at a country fair or festive guthering. The first figure is sailed through with the gravity and stiffness of mutes at a funeral. But by and by the duncers warm to their work, and an occasional shrill "hooch" may be heard from an enthusiast whose blood is already beginning to tingle. Less eeremony is shown in reeling, and the music admits of no loss of time. Faster fly the restless feet, and steps of the most confusing complexity are gone through with a rapidlty which defies the eye to follow. The rising color and heaving breasts of the dancers are evidences that things are becoming interesting. Partners are actually trying to rival each other in the wondrous flectness of their movements. The piper is getting purple in the face, and you almost hope that it n.ay be his norm

"The piper loud and louder blew.
The dancers quick and quicker flew;
They reel'd, they set, they cross'd, they clecklt,
'Till tika carlin' swat and ricket:
And—""

And—"
But the rest of the quotatiou is inappropriate under ordinary circumstances. Everything like statcliness has disappeared long before; men and girls are in the cestacies of the last few galloping sets; time and tune both have changed and new steps of more bewildering intricacy dazzle the looker on, as he watches, or tries to watch, the feet which are almost as invisible as the spokes of a rapidly revolving wheel. From every direction the uniform shout of exultation, "hooch," is beard, and, in the panting rally, "kiss yer lasses!" follows with breathless heartiness. When it is over the dancers walk demurely to their seats, or liuger on the floor or ground for the formation of another set.

set.

Such a scene as this may not have been reproduced to the letter, at the Coledonian ball, but it possibly shows the kind of school at which many of the daneers there learned to "recl." This dance is generally the first item on the programme of Scottish games in this country. As many men as choose participate, generally all in Highland costume.

programme of Seottish games in this country. As many men as choose participate, generally all in Highland costume.

The accompanying music is usually performed on the great Highland bagpipe, which is possibly the ouly purely national instrument in the world. In European countries, at least, all others are found to be common to many nations; the Highland bagpipe is used in Scotland alone. It has been much maligned, bondly excerated, and abundantly ridiculed; and yet, historlans can be found to lovingly trace its development from the pastoral reed of primitive times to the chanter, and lastly to the chanter with bag and drones. It has been praised as enthusiastically as it has been enreed. If shut up in a small room with it, in the hands of a piper with leather lungs, its strains can scarcely be described as didlect, though there can be no doubt of their being inspiring, in a way. On the other hand, beard at a distance in the midst of proper surroundings, the pipes have a charm all their own. Some of the most daring warlike feats of the Highlander have been attributed to the bagpipe. Ancedote could be piled on ancedote to illustrate the wonders which its music has worked, and when a writer shall arise to treat of music from the utiliturian point of view, the fact may be remembered that the enstom was once prevalent in Scotland of playing the pipes in the harvest field behind the slowest reaper. All things considered, it is not wonderful to find it written ahout in the following ultra-enthusiastic manner:—"Even Highlanders will allow that it is not the gentlest of instruments; but when far from their mountain houses, what sounds, however melodious, could thrill round their heart like one hurst of their own wild native pipe? The feelings which other instruments awaken are general and undefined, because they talk alike to Frenchmen, Spaniards, Germans and Highlanders, for they are common to all. But the bagpipe is sacred to Scothand and speaks a language which Scotsmen only feel. It talks to them of home and all the

—The annual match between the Toronto and London curling clybs was played February 11th on the Adelaide street rink, three rinks aside. A gold medal, given by Major Walker, was contended for, and it is expected that a gold medal will be competed for hereafter at the annual matches between these two clubs. Total for Toronto, 84; London, 54; majority for Toronto, 30.

London, 54; majority for Toronto, 30.

—A meeting of the stockholders of the Elm City club, of New Haven, was held in that city February 11th, on which occasion the following gentlemen were elected as officers of the new club:—Carlos Smith, President; Julius Tyler, Jr., 1st Vice President; H. L. Bradley, 2d Vice President; W. S. Arnold, Manager and Correspouding Secretary. Directors—W, W. Wurd, George W. M. Reed, Alfred Thomas, W. S. Arnold, Charles Websier, and Eli Hill. The by-laws of the Boston club were adopted as governing also the New Haven club. The whole fifty shares of the club have been taken up. This week Mr.

Arnold was in Philadelphia and Brooklyn engaging players. The club will have a very fine ground.

The club will have a very line ground.

—The Bridgeport club—T. B. F. U. S.—it is said will not join the professional association this senson, but will remain as they were last year—co-operative amateurs, which means a nine with amateur as well as compensated players in it. Nichols, the pitcher of the T. B.'s, says that he has received a liberal offer from the New Haven club, but is undecided as yet, as he has a good position in Bridgeport, most of the nine working in the same establishment.

The Hattfords will have a new uniform for 1875. It will be of white flannel, trimmed. The shirt will have on the breast the name "Hartford," in plain blue letters. The stockings and belt will be blue, and the cap is to be of the jockey pattern, white, with blue cord and large white vizor.

The subject of a walking match between K. Payson Weston and Prof. Judd is being much disensed, and the preliminaries are said to be arranged. Mr. Barnum, with his usual generosity, has offered the use of the hippodrome, and \$5,000 in money to be awarded to the man who walks the greatest number of miles in six consecutive days. It having been reported that this walk (?) was to be under the supervision of the New York Allictic club, we can state by authority that such is not the case, and that association does not indorse either of the men for this performance.

—At Wood's gymnasium, on Saturday evening, a large number of gentlemen assembled to witness a display of athletics, as well as feucing and sparring. The exhibition was extremely creditable and entertaining. Mr. Wood is one of the old landmarks of our city, and has attended to physical culture for two or three generations.

—A prettily played game of hase hall was played on the ice at Prospect Park on February 12th, with the following score:—Burdock's side, 19; Bunce's side, 12. Umpire, Mr. Chadwick. Time of game, 1 hour and 10 minutes. First base by errors, Burdock's, 13 times; Bunec's, 7 times. Runs earned, Burdock's, 2; Bunee's, 0.

Thos. J. Gallagher, winner of the second prize in the late Cleveland tournament has challenged Engene Custer, who took 1st prize, to play for the gold championship badge, for the required stake of \$250.

The contest between Rudolphe and Vignaux will occur at Tammany Hall, in this city, on Monday night next, February 22. Vignaux has the advantage of baving been practicising almost uninterruptedly while Rudolphe was in Chicago.

-At Corinthian Hall, Roebester, N. Y., on February 24, Charles Effler of Albany and Byron Gillette of Corning are to play the three-ball game, 400 points up, for \$400.

—Mr. D. M. Martinez, of Philadelphia, visited New York last week. He played a number of games. His score was: Martinez 3, Makenzie 2, Drawn 1; Martinez 0, Mason 4, Drawn 0; Martinez 3, Alberoni 1, Drawn 0. The games were played at the Cafe International, and excited great interest in consequence of the beauty of the game and the rank of the contestants. Our readers are probably aware of the fact that Mr. Makenzie is champion of the United States, and that Mr. Martinez is considered the strongest player in Philadelphia. Although not a match, Mr. Martinez is to be congratulated on his score with the champion.

Bew Bublications. MAGAZINES.

The Nassau Literary Magazine is conducted by the Senior Class of Princeton College. The February Issue contains a number of articles, all written with marked literary ability, and judicionally selected. The editorial matter is pointed, and the department devoted more particularly to current cullege topics, entertaining and of value. Princeton appears to be awake as to the necessity of good hard work, by way of preparation for the great regatta.

way of preparation for the great regatta.

In Fur, Fin and Feather, Mr. Charles Suydam furnishes us with a compilation of the game and fish laws of the various States, as well as much useful information regarding hunting and fishing localities. Its value to the sportsman is at once apparent, as he not only finds the close time in different districts, for game of all kinds, but where and how to find it in reason. A number of interesting anecdotes of hunting adventures furnish variety.

The Maritana Marthly is not devoted to the chimping

The Maritime Monthly is not devoted to the shipping interests, as might be supposed from its title, but takes its name through being issued from the maritime province of New Branswick. Literature, science and art are its objects, and the current number contains articles well calculated to support these pretensions. Quaint old George Fox and his Quaker followers are ably described. Mr. George Forbes writes of his journey to the Valley of the Platte, and as Mr. Forbes lives in a place with the remarkable name of Kouchtbauquac, we do not blame him for going West.

Professor Welis is so well known in connection with Professor Wells is so well known in connection with Phrenology that mere mention of his Illustrated Annual of Phrenology and Phisiognomy Implies that the subject must be ably treated. The paper on Horae Phrenology is interesting, and the sketch of Pete Hyachuthe Loyson, with his child in his arms, snegestive.

Johnson's Dental Miscellany contains papers of great value to the profession; but the sight of the norrible parapherentla connected with it produces incipient toothache, and we close the book.

The American Grocer has added a "Home Department," which will in future cater to the literary wants of the family, as its other columns do to the basiness necessities of paterfamilias. After papa has studied the prices current for Muscovados and Young Hysons, mamma and the children will dad interesting stories and foreign correspondence to amuse them. The idea is novel, but an excellent one, and should make it popular.

The Galaxy for March comes thus early to hand with its usual variety of interesting contents.

BIG INVENTION.

Lloyd, the famous map man, who made all the maps for General Grant and the Union army, certificates of which ha published, has just invented a way of getting a reflef plate from steel so as to print Lleyd's Map of American Continent—showing from ocean to ocean—on one enlire sheet of bank note paper, 40x50 inches large, on a lightning priss, and colored, sized and varnished for the wall so as to stand washing, and mailing anywhere in the world, for 25 cents, or invernished for 10 cents. This map shows the whole United States and Territories in a group, from surveys to 1875, with a million places on it, such as towas, cilles, villages, mountains, takes, rivers, streams, gold mines, railway stations, &c. This map should be in every house. Send 25 cents to the Lloyd Map Company, Philadelphia, and you will get a copy by return mail.

Natural History

For Object Teaching in Schools,

PARLOR ENTERTAINMENT. We are prepared to furnish the first slaty numbers

Animals and Birds of North America.

To these will be added a second series of foreign speci-mens, and various Animals and Birds in grotesque at-titudes, never honever violating their natural instincts. We affer these views not us platures only, but as undles from unitre. One of the great moving el-ments to our modern system of education is object eaching. The innerting fidelity of the steeco-cape ransfers the animals and birds from their natural nabitat to the ruoms of the student, and the firestle of pur homes, where they cannot full to leave a Insting impression of the form, color, limbits, and locality of ach specimen.

inpression of the form, continued in pression of the form, and age appendix of the New York State Cabinet of Nat-Zaxihermist of the New York State Cabinet of Nat-rial History, and in gattering his large collection of lative and fureign specimens, enables Mr. Harst to ombine in every view the locality of the specimen

TESTIMONIALS.

TESTIMONIALS.

CONNELL UNIVERSITY,
ITHACA, March 14th, 1810. 5
I must congrutulate you upon your great success
this new educational enterprise. If we can arran
our annusements so as to make them unpart instrution to the mind, it will be a slep in normace in eceaction. EZRA CORNELL-

tion to the mind, it will be a slep in norance in education.

Washington, D. U., March 18th, 1870.

I am much pleased with the success you have met within giving to the stuffed specimens a very decided appearance of life.

Those you may be able to continue the Series, and I have no idoubt they will furnish interesting means of information and instruction in regard to the wild animals of New York.

SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.
I have examined carefully the "Steroscopic Stuffles of Natural History," and judgling by the first ten numbers, should say that they will prive of very great mine, both as object lessons for students, and as a most interesting suite for the parlor Stereoscope. The definentions, position, and color of the different groups and the general treatment are most perfect. I condularly resommend them to the public attention, and trust you will meet the enromragement which you have carned.

EDWARD A. SAMUEL,

Currator of Zoology in Mass. Slate Cabinet.

PEABODY ACABEMY OF SCIENCE,

PEABODY ACADEMY OF SCIENCE,

SALEM, Mass., March 19th, 1870. }

I have shown your Stereoscopic views to the Directors of the American Muturalist, Dr. Puckard and Mr. Morse.

They concer with me in praising their truthfulness and the tarte which you have displayed in surrounding the specimens with natural objects and scenery of characteristic titiess. They are certainly better fitted, not only as parlor and drawling room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

A. HYATT.

colleges, than anything we have yet seen.

A. HYATT.

Connell University, President's Rooms,
I have received the Stereoscopic Views of objects in
Natural libstory, and have enjoyed them greatly.

They have sarprised all who have seen them by their
nonderful fidelity, both as regards the animals and
their surroundings; and I think they can not fail to be
of great service to the study of Natural History, first
by attracting students to it, and next by perfecting
them in it.

These Stereoscopes are sold wholessic and retail by

American Wild Fowl Shooting.

BY JOSEPH W. LONG.

Describing the haints, habits, and methods of shooting wild fowl, with instructions concerning guis, blinds, boats and decoys; the training of water retrievers, &c.

This book is written in piain English, and in a most attractive style. A broad, and at the same time accurate view, is laken of thick shooting in all parls of the country. The habits and feeding grounds of the mallards, bine-winged teal, pin-tail, prood, gadwell, and coveller; red-headed, buffle-headed, and other kinds of ducks, grees, awans, &c., have been carrfully and ingeniously stuffied and given to the reader.

In thirty chapters the author bas furnished information for the young, as well as for the practical sportsman.

"A book for sportsmen, by a sungismen "— 4 rans."

matter for the following sportsman, "Argus." A book for sportsmen, by a sportsman, "Argus." Tells where to find game in the morning, in the afternoon, and in the evening, "Sun." Almost indispensable to the sportsman."—Attachlan.

"Almost indispensable to the sportsman."—Arcodian.

SIZE OF TARGET 12 FEET WIDE BY 6 FEET HIGH.

Score of SEVEN CONSECUTIVE SHOTS BY CAPT. HENRY FULTON, J. R. P., at Montreal, Canada, August 14th, 1874, with a "REMINGTON" were engaged the best shots in United States and Canada; best all competitors.

Fleare take notice this target was made in an official match, not at private practice.

"The match decides several disputed points, as near as they can be decided; first, that there is no perceptible difference in accuracy between breech loaders and in the future; third, that the Remington rifte stands at the hoad of all others for accuracy, as it does in simplicity of mechanism. The Remington riftes in the match in the International match, six muzzle loaders, and twenty-two points ahead of the same number of muzzle loaders, and twenty-two points ahead of the same them the future; third, that the Remington riftes in the match in the International match, six muzzle loaders, three Remington, and three other breech loaders for his official report, ree Army and Navy Journal, Oct. 36, 1874. Fulton's score 17] out of 180; highest score ever made.

THE SONG OF STEAM

The following fine poon by George W. Catter, of Covington, Ky., Black wood has pronounced "the best tyric of the century."]

HARNESS me down with your fron bands,
Be sure of your carb and rein,
For t scorn the strength of your purly hands.
As a tempest scorne a chain.
How I laughed as f tay conceated from eight.
For many a countless hour,
At the childish boasts of human might,
And the tritle of human power,

When I saw an army upon the land,
A only upon the seas,
Creeping along, a small-like band,
Or outling a wayward breeze;
When I saw the pensant reel
With the foll that he faintly bore,
As he furiest at the tardy wheel,
Or folled at the weary our;

When I measured the panting courser's speed,
The flight of the carrier dove,
As they lore a law a king decreed,
Or the lines of impatent fore,
I could but think how the world would feet
As these were outstripped alar,
When I should be bound to the rushbig keel
Or challed to the lighting car!

Hat had had. They found me at last,
And they havined me forth at length.
And I raished to my fictone with a thunder blast,
And haughed in my from strength!
Old then yo have a wondrous change.
On the earth and occum wide,
Where may be a trule a raise. Where now my flery armles
Nor walt for wind and tide

Harrah | turrah | the waters o'er,
The monitain's steep decline;
Thuc-space-have yielded to my powerThe world | the world |s mine!
Therivers the sun hath carllest blest,
Or those where his beaus decline;
The glant streams of the queenty West,
Or the orient hoods divine.

The ocean poles where'er I sweep
To hear my strength rejolce,
And monsters of the bring deep
Concer trembling at my voice,
I carry the wealth and ore of earth,
The thought of the God-like mind
The whild lags after my going forth,
The lighthning is left behind.

In the darksome depth of the fathomiess mine My tireless arm doth play.
Where the rocks ne'er san the sun's decline Or the dawn of the glorious day.
I bring earth's glittering Jewels up Froia the bidden caves below,
And I make the fountain's graults cap With a crystal gush o'erflow.

I low the bellows, I forge the steel I thow the betoms, I forge the steet
In all the shops of trade;
I baumer the ore and turn the wheel
Where arms of strength are made;
I manage the furnace, the mult, the mint—
I curry, t apin, I weave,
And all my doings I put to print
On every Saturday eve.

I've no mosete to weary, no breast to decay, No tiones to be "taid on the shelf,"
And soon I lutend you may "go and play," While I manage the world myself.
But harness me down with your trou bands, Be enre of your curb and reta,
For I scorn the strength of your puny bands. As the tempest scorns a chain.

-That part of Boston Harbor known as Dorchester Bay was the scene last week of some exciting sport, trotting on the ice. The largest turnout was on Friday evening, the day before the thaw. A straight course of a mile and a half, between City Point and Squantum, was lined with

Hunting in Manilla.

AST Tuesday night I arrived home from my expedidition, the particulars of which I will give you la detail. I was oway eleven days. A earriage came to the office for me at half past twelve o'clock on Saturday, and jumping in with my friend P. J., who is a Portuguese in our office, we left for my house to get my clothes, etc. I immediately donned my shooting rig, hunting knife, icc. We then drove to the house in which we put, cracked p bottle of champagne with noor D., who has been seenly for some time past, and who was to leave for bome two or three days after we left, and wished him a speedy passage home and a safe return.

I don't think I ever told you that three of us, some time

back, ordered a dozen carrier pigeons from England, eleven of which arrived safely here. They are all prize blobs and have flown between Belgium and England. This we have kept secret, as it is a speculation on our part, and we intend establishing a line between the Provinces and Manilla, and between Manilla and Hong Kong. They have been at our house some three months, and are heautiful birds and are getting ou well,

As we were going inland some distance, we thought it would be a good opportunity to try them for the flist time, and accordingly, luving had a little wicker basket mole, I put in a pair and took them with me in the carriage. We felt doubtful about their returning, as the hirds generally bave to be born in the place to which they are flown. natance, if there was a line of parrier pigenns between New York and Boston, there would have to be a cote in each of those cities; and if a message was to go from New York to Boston, they would have to carry bleds that were born in Boston on to New York, and as soon as they were let loose they would return to Boston, and vice versa. But I argued that as the birds had come all the way from F land, there was no chance to get back, and as they had lived with us for about three months, and had been well taken care of, in all probability they would return. All the others said they would not, and we had several bets, so that it was to be an interesting trial,

After a pleosant drive of three quarters of an hour, and after nearly demulishing the carriage by the borse rouning us into a buffalo and afterwards into a stone wall, we furiled the Marlquina River, which runs through the pictu resque village of the same mane, and the coachman applying bis whip, we dashed up the tank on the Morlquina side, and soon pulled up at the country house of my friends, the T.'s, who are all hunters, and it was here that we had decided to make our rendezvous. The whole of the bottom of the house is one large stone floor, level with the street, and as soon as we entered we were greeted by our fellow huntsmen. There were some tifteen horses, all our fellow hintsmen. There were some lifteen horses, all saddled, about seventy-five dogs, and lots of Indians in their hunting clothes. Our jurty was seven, including myself. We went up stairs, had something to eat, drink, and a cigarette, and as it was about four o'clock decided to start immediately for the mountains.

As we rode through the level rice fields, it was a gay

looking eavalcade, and the fact of not having to go to office for several along, and the thoughts of shooting some deer, made me feel very jolly. We jogged along until we reached the mountains, and then begun the work, for the road was so steep that we frequently had to dismount and road was so steep that we frequently had to dismount and walk. We thus went on for about two hours, crossing rivers, walking and riding, and at last arrived of the top of a mountain, the view from which was superb. In the far distance by Manilla and Manilla Bay, with all its shipping, which looked like small toy ships, and on our left we could see the whole of the great inland take, and all around the base of the mountain Innumerable little pueblos, or, more correctly, mustbodies.

eorecily, pueblocitos.

After a couple of bours more riding, sluring which nothing of note occurred, we arrived at the top of another mountain, much higher than the first, and as soon as we

got over to the other side saw away below us the valley of Bosotoso, where we were to pass the night, and as it loud been dark some time, and we were revenous with our ex-creise, the lights glimmering from the windows of the enttages held with several most welcome her the city furget that descents ry soon. For hos, a stour we kept going slown, dawn, down, is if it were to a hottamless plt, having, of course in walk all the way. At tost, when we could get an our horses, we all so, and tiled through the little will are. little village. All the people papped their leads out of the windows and gazed at as curiously. I night as well add here that white men schlum go to this place, and a lew years look all the luhublimus were bandlith and multiws, who lived by pllingo and intuting. On the outskirts we come to the little stone church, and, dismounting, we went into the padre's house, and were recolved by him very gra-

into the padre's house, and were recolved by him very graciously, and, like a good fellow, he put the house at our disposal. After looking after our cattle, and sceing that the pigeons were comfortable, we had a hearty disner, and spreading out our mots on the floor, lost Saturday lorever. The next morning we were up nurly, and, swallowing a cup of chocolate, had our houses saddled and had a bettue a short dislance from the convent. I had a shot at two deer, and wominded one badly, but there not being any digstear me it gut off. No one clse killed any. The dogs, bowever, killed a hour.

As some as we came back, I declided to throw up one of the pigrous, aml accordingly I wrate a long letter, teling I', altaut nur trip su far. Semar G., who is also the editor of one of the dalbes hern (Monilla supports four), wrote a posteript, to be published. I then wropped this up in a small piece of thin clost, and field it in the leg of the ten pigeon. The fellows were all very much interested, and more hels were unde, and the Indians turned out in see the We went out in a crowd in front of the church, and, being the centre of an admining assembly, I threw the pigeon lote the nir, and much to my shagrin, she lit on top of the church, with the message danging from her foot, and began hobbing her head bud looking at us in the most indocent way. There was a tremendous laugh at my expense. I remembered having fend that these pigeous genrally flew in pulse, and that perhaps the hen was wuiting for her mate. So I doubled my tees, and bringing out the cock, threw him into the air, and he lit on the church ton. I threw a stone at them, and the pair took wing together, and made four or five huge circles uroning too stage, which bigher and higher each turn, mill they looked very small, bigher and straight for Manilla. I might being so high up, but started stringlit for statums. I higher as well state bere tbut when D Joined his at Sun Aclero he said that the pigeons had arrivest off right, and that there was much rejaicing in our house at the success of our experiment. I think now that we are sure to make a good thing of it,

After a hearly plinner wo started from the convent at about three o'clock, bidding good bye to the pairs. Filing through the village again, we took the mountain path to Son Acidro, tuving some guides in front, and among them a little child about six years old, who rap about of us the whole distance, I suppose something like twenty five order. There was nothing of note whout this part of our journey except the road, which ascends a high mondain in one part, and up which we had to walk, holding on to our horses tails in order to belp us up. The path was so steep and narmy that two bases could not pass each other oull, and it was cut into the mountain so that the banks on either side were higher than our heads. We must now bove been thousands of feet above Manilla, and it was delightfully coal. Fire whole trip from Manilla is ascending. At about sunset we arrived at the top of a tremendant mountain, and going to the other side found a heautiful whiley at its base, and we found out from the guides that this was our linating ground. The valley was entirely surrounded by high mountains, and booked very ferile and green, clumps of woods being scattered here and there. It seemed the beau ideal of a hunting ground. seemed the bean ideal of a hunting ground.
You must remember that when we lett Bosoboso we left all

Irace of civilization, and were truly in the wilderness. After descending autit about une o'clock (thank gomlness there was a moon), we came up with shouts und yells in front of a lunge tree, under which were our lunts, which we had ordered to be built. Here we found more Indian luntsmen, and a great many dogs; and the cook, who had gone up the alsy before, having expected us, we soon had dinner, and afterwards I fell so sleepy with my two dugs exertions that I tumbied on to my unit, which my looy land arranged, and was soon fast assleep. The next morning (Monday) we were up leight and early, and having supped my cup of chocolate I strolleal around to take a servey of the premises. The camp, as I said hefore, was situated under a large tree, and looked very picture-que. There were three buts, with floors raised from the ground about two feet, and were made of bamhoo. The floors were made of pit bamboo, and were even and nice; in front of each hut was a table and henches, and running along side of the enump was a pure mountain stream, the water of which was nice and cool.

We were turned out early next morning by hearing the camp in a stir, to go on our second battue, and having soon polished off a substantial menl we started out and made for the hills out the other side of the valley. In Boochoso I had hirded a boy about elighteen years old to go with me and do odd jobs, and I then had two boys, as of course. We formed a battue, and the others shot three dry and see that the course of the

iny rifle, and brought him down beautifully, viping the eye of Senor C.

We thus went on shooting day after day, and I am glad to say that six fell to my gan alone. The most remarkable thing that I saw was mee duy when we were hunting in Landtio, the next valley to ours, across the mountain. I was stationed on a tremendous ridge on one side of which, the woods came right to the top, and on the other was a steep precipice some live or six humbled feet deep. I heard the dogs conding towards me in the woods, and vished to the place where I thought the deer would came ant. A large doe broke cover, and came right for me with five or six dogs after her. I did not dure to fire, for fear of killing the dogs, and when she was within twenty feet of the I jumped up and yelled to turn her off, and as she turned I let her have one barrel, and so instantaneously dhi it kill her that as her front free tunched the granul her hind ones went right over, causing her to turn a complete somersault in the arr; she tell right over the precipice, where we got her alterwards.

This valley is on the Pacific coast, so that you see we reached the other side of the islaml. This place we also found to be very picturesque, and the stream which runs through the valley is said to contain a great quantity of gold. In this place we found lots of tiles, and could not think how they came there, until afterwards we heard that the Jesuits had an establishment there, which they gave up one hundred years ugo. Their principal otject was gold. We found their old read, which led to Bosoboso, but it was in a bad state.

On this expedition I saw one thing which I never believed, although I have read of it otten. One morning, when I was on my station for deer, I wanted a smake, and asked the boy if he had any matches, and he said that he had forgotten them. As we were far from the others, he said he would get some fire. He drew out his kuife and cut down a dry bamboo. He then cut off a piece about a foot long, just between two joints, and split it. Then he made a slit in the lop part of this, and cut a small noteln across it. You understand that the slit I sprak of went through the wood and the notch nearly so. He then cut another piece, being flat and long, and picking up some thry leaves put them under the noteln and slit, and got me to hold the hamboo at each end firmly on the ground, and taking the second piece of wood put the edge into the noteln and began to saw away, first slowly, and then, as soan as it began to suoke, rapidly. After about five seconds he stopped, and I was much surprised to see some little scrapings of wood all in a glow. The boy then pieked up a small stick and poked this little coal through the crack in the bamboo, and lifting this latter up I found the finder on fire and got a light. I tried this myself, and found it quite easy; so if any ever danbts a person's being being able to get the from rubbing two sticks together, tell them, with my compliments, that I have alone it myself.

While in the mountains we met a family of real savages, who afterwards came and lived at our camp. They have no harses, but live like wild beasts, in the woods.

I rapioyed the expedition very much, and feel better for it. In all, we killed eighty-seven deer and boar, several of which, of course, were killed by the dogs. One of our party also killed a wild cat, whose skin I now use for a rug. I have only given you a very rough account of our expedition, as, being mail day, I am very lany, but thought that even a hurried sketch might interest you.

ACROSS NEWFOUNDLAND.

INTERIOR EXPLORATIONS-FLORA, FAUNA, AND GEOLOGI-CAL FORMATION.

[Continued from February 18th.]

CHAPTER IX.

[Continued from Fibruary 18th.]

CHAPTER IX.

S. T. GEORGE'S HARBOR, although barred, may be entered by vessels of any burthen. There is no other ship harbor fetween Cupe Ray and Port an Port; but there is good macharage in the rondstead ketween Cual Roy Island and the matur Island near Cape Auguille. None of the either harbors can be entered even by small crafts when the wind librus strong westwurdly.

Notember 16th.—Being now much recavered by the various attentions at St. George's Harbor, during my stay of ten days, I set out on foot to the southward alming the sea shore, accompanied by two of the young Jersey residents, in hopes, by walking and loating, to renche Fortune Bay, a distance of upwards of two hundred miles, before all the vessels for the season had sailed for Europe. We slept, as intended, in a deserted salmon fisher's hat on the shore being mindle to reach any halditation.

Notember 17th.—We forded the manths of several minor streams, and that of the North of third Barasway River, it having no harbor as its estimary. In the evening reached the secand Barasway River, a distance of newary form mites fram St. George's Blarbur, and where reside the nearest inhabitants. Our walk all the way was on a samy rocky keach at the bottom of cilifs washed by the sea. The cilifs are formed chiefly of red samistone, red ochre, blirachy, and gypsann, sixty or seventy feet and inquards in langta, with a deep bed of red allivaid earth everywhere super-imposed. The gypsam is of the compact kind, with hard nodules throughout; the bade sexual min the sea, in which stand water-woru projections, sometimes of grotteque forms. A few miles North of the Barasway River, and deposit, owing to the great hardness and darabotity of which its centering respindes, a wall running into the sea. Opposition, with the sea of hard and the red to the condition of the Barasway River, on the Bary River, &c.

In the immediate vicinity of the Barasway, inne lest instead about two miles up the sean of project of the great wall and the form

November 23d.—We doubted Cape Anguille and reached Cod Roy. Owing to the shelter and anchorage for ship, ping at Cod Roy, and to its immediate proximity to the line fishing grounds about Cape Ruy, it is the central point of the French lisheries in Summer.

of the Prench fisheries in Summer.

Anormbor 28th.—Hawing awaited at Coal Roy five days in vain fur an abatement of the strong northwest wind to permit of our putiting to sea in s. 16th. It set out in floot to the southward by the sea shore. Great God Roy River in about six mies Soulin of God Roy Island. Coal is found on the South bank six or seven miles from the sea. The chief attraction for the Indian here is the abundance of ecils and trout. From Cod Ray River to Cape Ray it presents down to the sea. The downs near the seasilore are raised into hillocks, and in the rear they are level.

November 20th.—Chipe Rey.—Hawing slept the previous night in the Winter house of one of the families at Little Cod Ray River, we to day walked round Cape Ray, here leaving the French-Shore and entering upon American Newtoundland, or that division of the coast on which the Americans have a right of fishing and drying their fish. Ou the shore North of Cape Ray lay several wrecks of ships and their cargo of timber. Ou the very Cape there resides dring Summer a person of the name of Win.—Windson, with his family. We found him in his Winter hat in a spruce wood two or three miles to the eastward of the Cape. He wore no envering on his head, even where exposed to the inclement weather—Batter, nided doubt less by how those the Inferior animals here with fur heady hands of Cape Ray law should be a compared to the cape, and cousist of a group of grantle mountain seemingly about two thousand feet in length. Thesenery monge them is sublime; the steep sides of the wedge-shaped valleys appear smooth and striped at a distance owing to the cruothied rocks and blocks detatched by frost their hands of the cruothied rocks and blocks detatched by frost their hands of the cruothied rocks and blocks detatched by frost their hands of the cruothied rocks and blocks detatched by frost their hands of the cruothied rocks and blocks detatched by frost their hands of the cruothied rocks and blocks detatched by frost their hands. The cruothied rocks and

Here ended a four months' excursion of toil, pleasure, pain, and anxiety, succeeded by the delight of being again restated to society, which was enjoyed with the gentlemen and fumilies of the mercantile establishments at the Bay of Despair and Fortune Bay.

It was impossible to reach St. John's, and I took passage at Little Bay, in Fortune, by the ship "Duck," sailing on the 28th December, and arrived in Dartmouth, in England, on the 10th February, 1823.

NORTH CAROLINA HUNTING RESORTS

To those among us who have been accustomed during the past fifteen years to look north for our sport, the Winter is a time when we oil up our guns, repair our tackle, read the FOREST AND STREAM, and do little else him sigh for a return of warm weather when we can frequent our accustomed haunts with confirm and pleasage. But if any such wish to take a trip during January, or any Winter nouth, I challenge the country to produce a locality that will exceed in attractiveness that which surrounds Weldon, North Carolina.

The accessibility of Weldon is a great advantage. You

Morth Carolina in the Morth of the Morth of

heads, and mineing as they go," then imprave the golden appartunity.

But the visitor to Weldon may wish to go more into the interior, and away from settlements. The surrounding examtry can be easily reached from Weldon, either by raif or the Roanoke River. On the latter are two kines of houts which make trips down the river about twice a week. If anyone does not mind being away from letegraphic communication he will be umply repaid by a trip. If a party is made up to go, they can take a cook and servants, and all the necessaries from the Weldon Hotel. A stay of a week would be rewarded by as many deer as you could wish, and wild turkeys in abundance.

A boat is a necessity to epable sportsmen to bunt either side at the river. There are several small places on the Roanoke where one can be accommodated, and from which daily excursions can be made.

Garcysburg is a good place to stop, and is three miles from Weldon on the railroad to Norfolk. The proprietor of the leatel, W. P. Kre, knows all the hest stands for deer, and where every gang of tirrkeys works around him. He owns the limiting privilege on aheart for thousand acres of lainf, and nuckes it his business during the Whiter mouths to hint with sportsoen, or alone. "What is your accupation?" said a didge recently whom Mr. Kre was called as a witness. "Homeworn" was the stardy reply. He will hant in his immediate vicinity, or take a party flow the river. I drupped it on him to dilance one day; six sat down to the table, and the following were the ments: Shoulder of pig cold, shoulder of pig lot, large veidson stew, broiled chicken and baked quall pie.

The Weldon Hotel, under the care of its genial and urhane proprietors, Messrs, McLaurie & Russell, is fast winning a name which hitherto it never enjoyed. Though young men, they have bad experience in the hatel fusiness in the North. They canne to Weldon hast Fall, and brought with them one of Delmonicu's cooks. Travelers pussing floough Weldon will do well to remember this, and improve the twenty minutes for breakfast or tra, which the change of trains allows. For invalids it is sometimes very desirable not to travel at night, and such can bere find comfortable heds, and there take the morning trains, arriving at Wilmington or Wushington at night. The charming wife of the senior proprietor will give personal care to any hadies who may specially niced it. Among those spending the Winter in tic Weldon Hatel is the disputed and enlitivated wife of Secutor (and General) Ransom, and her family of children.

This much for the traveling public, and now for sportsmen. I will say that Mr. Rassell kept Marthu's lintel in the Adirondacks one year, is a crack shot with a rile, and owns one of Lewis' make, of Troy. Dr. McLaurie has a fixed make, of the secure of this country, and whatever yon propose to do after you get there, you want first to buy your ticket for

Woodland, Larm and Garden.

FOREST TREES-FOR CULTIVATION

PAUL, a furmer on the Western Prnirie.—What you propose to do has been successfully rurried out to considerable extent in the West. Thu practice of raising this tree from the seed is the itest always. You can safely transplant them when small. I have recommended the taking up of the tree in question—the red cedur—when quite small, size from six to righteen inches, and reset in rows, in good ground, runding from East to West. Pheat them eight inches upart, in rows, and cultivate by keeping clear from weeds. In much exposed situations, where the plants are exposed to fed sonshine, it is best to shelter them by a low fonce made from boards. This is to lean from an upright position slightly to give a more extended shade. Several of these shade fences may be needed in large fields, say one to every eight rows. Shade is always beneficial to young plants of the evergreen species.

Let your plants remain in the seed row three years, care being had to prevent an accumulation of rubbish mmang the plants.

Upon removing them from the nursery, at two or three years of age, your transplanted plants will have attained a

Let your plants tenian in the section of rubbish manang the plants.

Upon removing them from the nursery, at two or three years of age, your transplanted plants will have attained a hardiness of habit that will carry them through the first senson with entire safety. In planting trees for forest use, or shelter fence, etc., you are to always follow the suggrestions of the out-door world all you can; from Natare you daily receive innumerable hints as to the future of your earnmon agricultural work.

Set your red cedars four feet distant from each other in rows, and they will grow, with the ordinary usage generally bestowed upon Indian eorn.

I have land very good success in raising and cultivating many kinds of evergreens, and the above method, or an large or small plan, will give satisfaction. You will notice wherever you find a grood manile grove borbared by the red cedar, as often found in many heations, that the westerly Antumn winds senter these cal calar seeds, the maple leaves cover them, the Winter snows press them down, and the Spring runshine brings thom furth in great numbers. Now having followed our hint thus fur, go on and modic your oursery for your fature cedar forest, your fence stock, or your sheltering row. You are in the passession of all the information I run give you, with the assurance that it is not a theory, but the result of a well-known, tried fact.

Check the Chestanut AS A forest tree.

THE CHESTNUT AS A FOREST TREE

THE CHESTNUT AS A FOREST TREE.

A WESTERN agriculturist reminds us to day that "we have an unanswered request of his, numb hast Octaber, laying round among our papers," and desires us to make the "aurende honorable" by no answer to his letter at our "curliest convenience." Regretting much our having overlooked his paper, we would place before him the following as answers in part to his inquiries:

Chestnut wood is a good, firm timber; hard and possessed of mach vitality during its growth from the sapling to the tree. The chestunt is at the present time reclanded a scarce wood, and it is comparatively a cossly would being used largely in cabinet work, and particularly Summer furniture. Fashion as well as utility therefore adds to the value of the chestant would, and in price the same has a steadily advancing value.

Let any man possessed of one hundred acres of land, such as many of our western furners leave, which is lying comparatively ille—lord which they do not know what to do with—plant it out with clastant. Let them wait at the facthest twenty-five years for a crop, which they will not have to do, and they will pronumee tids jute of work the most remunerative they ever performed within a like given time. As the chestant grows very rapidly, and dourishes exceedingly well on soils that are entirely insulted for the growing of ordinary form crops, we have not to wait for a place to plant our forms chestnat forest; we have not the tedious prospecting for a place to plant our tree, or drop our chostnut. We have not hand in great abundance acres and acres of the forestless printles of the West.

Here is our planting ground, here is the future bope for the chestant woods of America. After planting out a forest of chestant trees, you will not have to await for a long period of time for a market for yoar wood, a peculiar value at this time being attached to this wood for loterlor fanish, and the decoration of fushiomathed welling houses. The great broatty of its grain will carry it as a commercial wood for and while. In fact, the real and true value of the chestant will scarcely be known for flity years to come. It is destined to be one of the most valuable woods grown for decorative work.

As a timber tree for railroad ase, the chestant has always been in great demand; the chestont iles of our western growth are not anknown in the far off Pseldie, or along the delies of Deaver and the overland roates. Time tany bring some new and now anknown material into ase, and displace the well known "chestant tie" of the day, but we think our western farmers can venture to plant electant forests for at least twenty-dw years to come without fear of any indiscovered rival.

Therefore, we say go schead, western farmer, plant ont your twenty-five fifty or one hundred acres in chestant, and you will find one gond crop of timber from hund salted for the growth of these trees worth more than twenty poor crops of wheat or cron. In order to have a good chestant forest, you should procare as soon as possible after ripering the chestants you are to use for year seed. Those you can plant out as soon as you phrase after they are gathered, you should procare as soon as possible after ripering the chestants you are to use for year seed. Those you can plant out as soon as you phrase after they are gathered, you should exceed by prefet they sand and placed in a warm celler ripering the chestants you are to use for year seed. Those you can plant the sprinkling the soft lands in dry soos and larying below the frost in dry said. They may also be mixed with three times their ladk in dry sand and placed in a warm celler, we have a good a

The Golleges.

THE NEXT COLLEGIATE REDATTA. — The Amberst Student takes the lanck track as respects its opposition to sending a crew to Suratoga. It thinks that what is sanc tianed by the Professors can be burne by the students. It

tianed by the Professors can be burne by the students. It says:—

Amherst has dechied to row next. Summer, even if the regutache at Suratogn. It may be well in state why she has taken this action. As is well known, hist year we strongly and tieredy paposed Suratogn as a suitidde place for the reguta. Believing we could lest support am action in convention and best gain our ends by not rowing, we voted not to send a crew to Suratogn. This year we are as much opposed to that place as ever. But we have hestanted about the expediency of golog as far as we did lost year. A few mantles since, a meeting of rollege presidents was held at Hunover, N. H. They applied bouting, thought its influence on the various colleges goad, and did not express any regrets that the reguta had been carried from New England to Suratogn; and they were the presidents of New England colleges. Of course it is not for us to critices the thoings of such a venerable holy.

We said hast year, we did not believe the bifinences at Suratoga were such as to anke the contest a "clean, high-toned, gentlemanly affair." If the influence of boating is goad, of course we must have been mistaken. The contest hast year was quite gentlemanly, high-toned would be no name far it, and clean—well, from what we can discover, John Morrissey did all he could to prevent students visiting his "hell," and hence, not much more than link of those there pryed into the "Eleushihan mysteries." That influence must have been good which would lead caddegehred men to return the olfers of gentlemen and accept those of gumblers. Still we may be mistaken. We Intend to see for anreselves. We want to flight Staratoga, and he allo to back up our arguments with an assembly, where the monkers have just ability (nough to count.)

—The Harvard Clob held its alinth annual digner on Friday night at Delmanico's. Among the prominent persons present were:—Mr. William M. Evarts, President Eliat, Dr. John C. Stone, Professor Theyer, Dr. Sexton, of the Louisville University; Hon, John Bigelow, Mr. Gardaw and Mr. James H. Carter. Mr Joseph H. Choate presided, After a short opening speech by Joseph H. Choate, President Eliot responded to the toast of "Alma Mater," and spake of the glories of the old college, referring to the many prominent people present as a test of what the hostitutiae had accomplished. The Ban. John Bigelow responded to the toast of "American Literature;" Judge Howland spake on the toast of "The Boned" and Dr. J. C. Stane on the "Medical Profession." Peter B. Olney answered to the toast of "City Polities," and sparrel neither side in this lumorous criticisms. Dr. Bellaws was down for the answer to the toast to "The Clergy" and James H. Carter to that of "The Bar." Mr. H. H. Sedgwick was one of the speakers and Professor Thayer answered to the toast of "Theyer naswered to the toast of "Theyer pleasantly, and the company did not separate until a very late hour. The Harvard Club held its ninth annual diamer on

Hish Culture.

REPORT OF THE PENNSYLVANIA FISH COMMISSION.

THE commissioners of this State, in addressing Gov. Harranit on the result of their labors during the past year, dwell upon the difficulty they would experience during the short period of their term of office, in restoring the fisheries which have hecome depleted by reason of excessive fishing and wanton destruction. To remedy evils which have necessive the early days of the Communication for a restoration is helpond a doubt. Yet this improvement, notwithstanding the womberful discoveries recently made in the art of propagating fish, will be much returbed if they are not supported by the necessary legislation to prevent the pursistent slaughter of fishes now so common throughout the State.

The money appropriation is ample for the purposes of proquanton and introduction, but the work will, as a matter of course, progress slower it done while the different streams are being fished to their utmost capacity than it would should fishing be restrained by laws which, while not compelling a cessation, will restrict it within reasonable limits

A rever penalty must be attached to the use of such destructive implements as fish backets and set retained.

strems are being fished to their atmost capacity than itwould should fishing he restratured by have which, while
and compelling a costation, will restrict it within reasonable fluits

A every penalty must be attached to the use of such destructive implements as fish baskets and set nets. Under the acts of 1870 and 1773 no proubly is attached to the
rection of the former implements, and it is simply the
duty of the sheriff within whose balitycle at ish ha ket
has been erected, to bestroy it when brought to bis notice.
It was recommended to the last Legislature to unke the
use of those backets a misdemonary hat unfortunately unnerion was tuken. The commissioners now carnestly arguentian, and set forth the destructive relarancer of the fish
baskets as fullows;—

"Of all implements for the wanton distruction of fishes
which have et er bran constructed by human skill, the one
nost worthy of condemnation is the ordinary dish backet.
Those instruments of extirpation are placed in the midchannel of the river, with long arms of wings mule of
stone, extending up on either sade towards the shores.
Beery living creature carried by the current is swept into
these backets. Young shad are pendiculy delicate. A
blow which displaces a scale will result in the death of the
lish, so that scarcely a young shad which succeeds in going
through the shats of the basket will live, while unlinous are
stopped upon the backet, and there allowed to the. Instonces have come to our knowledge where in 1870 and
1871 parties owning backets were obliged to shoved out with
a wooket scope the young shad which succeeds in going
through the shats of the basket will live, while unlinous are
stopped upon the backet, and that the thought in one night
he had thrown from his lish backet more than a cart boal
of voung shad." It is not probable that one survived. Is
hany wonder, considering those face, that our streams
have become depopulated? Since the progressive steps
which we have not villa some lifticulty on necount of the pecuform t

yet such legislative enacturent is suggested as may be required.

The most difficult duty of the commissioners was in the creation of fishways to allow the trously of shad agross the dams of the Susquobamm. Although there is not to sloy a fishway in the porth (that is known to treely carry shad, yet in the Fall at 1873 they completed one which they believe will the altimately successful. During the Spring and Sommer they carefully observed its working, and have in down that targe numbers of suad passed through it during high water in the susquehamm. Al least 3,000 were saught in that river above the Columbia thin during that senson. During the Fall large quantities of young shod which had been notiched above the dam were paustantly seen making their way down the river to the sea. They therefore heaver they have attained a measure of success in the accretion of their fishway never before reached in the bistory of taken any other country, and that having so altered and reconstructed the floor of the tishway as to sait both high and box ones.

sit at all sensons.

I be commissioners regret that the streams of their State have become so depopulated of such a valuable tost as the shar, but believe that with proper exertions on their part, anded by their legislators, that the tion will show come when the fisheries of the Delaware not Susquehanna will yield as much as ever before. This result is to be brought aroun by printeral propagation and proper regula ions by Lisa as to catching shoot. The mode of reproduction is described, and the oftendings of artificial over natural propagation mode apparent by the statement that by the natural process a pair of lenisle shad, yielding 100,000 eggs,

produce only 2,000 fish, while by the actificial process they will yield 98,000. The great difficulty by contend with is the fact that you can only strip the spawn from the fish that would deposit it within an hour or two from the time of heint taken. Thus it will be seen that at times many lauks of the net are made, and a large number of shad taken without a single fish heing in a condition to be strippy. By the meuns of artificial prepagation, the increase of shad in streams that were more depopulated than the shad streams of our State, have been known to yield more abundantly than at any known period in their fish male as abundant in the waters of our State, to which migratory fish have access, as they have ever been known to be.

Under the direction of State Suprintendent John P. Greveling, assisted by Mr. Edward II. Bhame, formerly assistant to Soft Green, a station for the purposes of artificial propagation was established at Little Wishington, Laucester county, below the Columbia dam. Owing to the peculiar character of the escoson, the results were not as satisfactory as could have been wished for; but they succeeded in Intelher 3,003,000 shad.

A number of requests for legislative enactments, which were also recommended in the last report, are repeated, and it is to be hoped that New Jersey will join in making such appropriations as will enable the commissioners to idesomething this year towards the increase of stand in the Delaware River.

The increase is dlowing to the introduction, by private enterprise, of a few fish into the waters of the Juniara, in the store of the streams of the State with base during the commissioners commences about the middle of July and extends until the 1st of November.

During the past year they have continued the experiment of the Patiet's stope with the states of the State in the States of the State to which unaufromous fish have necess. They have continued this experiment but with the states of the State to which unaufromous fish have necess. They were rescented to the

ar catching any of these fish will impart to them such internation.

Considerable attention was given to studying the habits of the grayling, and considering its adaptability as a profit-nihe field fish; tent it was a question in the mimbs of the commissioners whether the stocking of their waters with the grayling would be sufficiently profitable to warrant them in making an expenditure for the purpose. They are no more prohific than the brook trout, while as a food fish they are not subdicate.

The experiment of hatching sulmon trant and depositing them in the deep large pools caused by the erection of dams on the rayers, was tried, and 100,000 eggs were parchased of Mr. Green for the purpose. The result is looked for with much interest. The work of restocking the many streams of the State with brook front is one of such rangulated that the cammissoners have not deemed it advisoble at this early stage of their lubors to madertake it. They recommend, however, such legislative conclument as will more effectually protect this pet of the ejecure and the sportsman.

The report concludes with an expression of flunks for the manifest interest taken by the people of the State in the successful ison of their work. A great deal of most interesting and valuable information contained in the report was given by Mr. Reader at the meeting of the Fish Unlargists' Association, and having been published in our isone of last week is omitted in this

ANGLERS' ASSOCIATION OF BOSTON.

THE Massachusetts Anglers' Association were recently treated to an interesting and instructive lecture from the Hou, Theodore Lyman.

the Hon. Theodure Lyman.

The speaker remarked that just after the war the subject of protecting the fisheries had been agitated, and he had involued into the General Court of till for the encouragemen of the cultivation of useful lishes, to the great astonishment of the members. Shorn of its more important features, the foll was finally passed; but now public sentiment was such that there was no difficulty in influencing the requisite legislation.

In referring to the causes which are supposed to have bed to the ulteged diministion of the fish supply, the speaker took up the subject of trawling, which be thought had been improperly mimed. It first cause to this part of the country from the Irish Galway fishermen, a very hardy hody of men, who encounter many hardships in the procedure of Spain, have used trawls from time immemorial,

under the name of the palangre line, and introduced he not from books into France. The Catalines also first intruduced the soft from books into France, which are now used on the Grand Banks for catching end. The speaker then threw on a large slate a sketch of the trawls, are said they were introduced into this country many years ago. Alona 1850 there hag no to be a considerable outery against this trawling. Not willistunding the trawlers, the hubbele had hurcassed in Bosbu Buy. In 1830 inadock in the lay was comparatively a searce fish; in 1850 it began to be pleatiful, and up to within two or three in 1850 it began to be pleatiful, and an included at one half cent a pound, and 300 tims of fish, of 2,000 panulis in the lon, have been brought in hy the trawlers in one day.

Mr. Lyman Illustrated the wonderful productiveness of mackerel and codfish by statisties, and described the ocean as a vist, teeming workslop, in which the fabrics are practiced and reproduced, and almost hefore perfection action in pieces, to be absorbed in other fubrics, and in turn to build up new ones. The possible extinction of the schickeries was considered; but it is extremely difficult to practice and indicated and massisfactory results, from the impassibility of obtaining reliable striistics regarding the product and number of men employed bull? a century slore. In England in investigation was held in 1855, resulting in a fund of whallde information on the subject. A third investigation was that of this State in 1870, when a long impiry into the prapricty of using weirs, trips, etc., resulted in no definite action on a subject evidently ill understand by the people under the weir stopping all entrance of alexivors into the buy to spawn in the brooks which there that outled, it was found that three times as many were caught in the buy as in the weir, which it was thanght would proclude entrance and so in the case of the striped lines. Here, then, we have it find the theories, so well claharated, are found to he worth outling.

The oce

Hybrid Fish.—Dr. L. J. Fitzinger has been prosecuting some experiments upon the bustnid forms of Salmonido, now so extensively cultivated in the fish breeding establishments of Germany, and which, as is well known, attain to maturity and produce completely formed eggs. However, as the result of a careful series of experiments, he assertained under artificial impregnation that these eggs never develop beyond the period of the formation of the eyspecks, after which they speedily perish. The hybrids upon which the experiments were prosecuted were obtained from the female from (Trutta Lucastris) and the male subling (Swino Solvilinus); and from the lemale saibling and the male tront (Trutto furro). He thinks that the intertility of the eggs from these hybrids may be considered as an established fact. In the same article reference is under to what is called the silver trout, or Salmo Schieffer Multeri, and the opinion expressed that this is a sterile form, but that it is impossible to say from what species it is derived, or whether it is constant.—Tribune.

MASSACHUSETTS ANGLERS' ASSOCIATION, -At a meeting of the ossociation, held at their rooms in Boston on Wednesday evening of last week, the committee on legislative matters submitted a report recommending that the association should endeavor to procure legislation that should ax the limit of the size of lobsters to be caught at twelve incloss, and should require that any person having in his possession lobsters less than twelve inches should be punished by fine or otherwise, and that all female bibsters cangit with the spawn attached—the so-called herry lobsters—be returned alive to the water; that the association should endeavor to procure the passage of a law in regard to trout, so that the possession of a dead front during the close time should be prima fine evidence of a violation of the statute; all of which was abopted, with the exception of that portion referring to "berry" lobsters. The question of trawling and seining was next considered at some length, and referred for further consideration. Vice President S. W. Hathaway occupied the chair in the absence of the President, Dr. Ordway, who was quite severely injured by a railroad accident a few days previous.

FISH PRESERVATION IN MAINE,-The corporators of the State Association for the Prescryation of Fish met at Augusta on the 12th inst. The act of incorporation was accepted. The following officers were elected: John II. Kimball, of Bath, President; William S. Badger, of Augusta, Vice President; J. W. Clapp, Secretary and Treasurer. A hourd of fifteen directors, also an executive consmittee of three were elected. The annual meeting of the association is to be held at Augusta ou the third Friday of lanuary of each year.

-Dr. John P. Ordway, President of the Massachusetts Anglers' Association, was very severely injured by the red-road accident at Readville last week

INSTINCT OF SALMON.

ROCHESTER, February 20th 1875.

Entron Forest and Stielm:

I don't know where you could have got the idea that I suid the young California sulmon would not return to the same stream that they were put in I four that some person has put that in your head. I never said they would not.

Yours. Setti Green.

If Mr. Green will refer to the New York Times, Feb. 13, he will see what parparts to be a conversation with him about the habits of sulmon. We based our sharement on that. However, we don't say that it signifies one way or the other; though we should fancy that if the instinct of the Pacific sulmon were only strong enough, they would go the Pacific sulmon were only strong enough, they would go home overhaul, instead of taking the old route via Capo

Matural History.

INSECT LIFE-No. 2.

THE lahorious industry of the white nut, its patient purseverance and wonderful building operations, inford material fur instructive and interesting study to the maturalist, us well as to thuse the most casually interested in the wonders of Nature or the operations of her myriads of tiny creatures. That such diminitive insects (for they are searcely a fourth of an inch in length), however numerous, should, in the space of three or four years, he able to creek a huilding twelve feet high, and of propurtionable hulk, cuvered by a vast dome, adorned without by numerous pinuncles and turrets, and sheltering under its ample arch myriads of vaulted apartments of various dimensions. and constructed of tillterent materials—that they should, moreover, excavate in different directions, and at different depths, innumerable subterraneau roads or tunnels, Iwelve or thirteen inches in diameter, or throw an arch of stone over other roads leading from the metropolis into the adjoining condry to the distance of several hundred feet—that they should project and finish the (for them) vast interior stair-cases, or bridges, Intely described—and finally, that the millions necessary to execute such herculean labors, per-petually passing to and fro, should never interrupt or in-terfere with each other, is a miracle of Nature, or, rather, of the Author of Nature, far exceeding the most hoasted works null structures of man; for did these creatures equal him in size, retaining their usual instincts and activity, their buildings would soar to the astonishing height of more than build a mile, and their tannels would expand to a magnificent cylinder of more than three bundred feet in diumeter, before which the pyramids of Egypt and the aquedacts of Rome would lose all their celebrity and dwingles in the perfect of their cylinder. dle into nothing.

Another interesting study is found in the nest of the Another interesting study is found in the nest of the commun wasp. This is generally formed in an underground envity, usually in a bank. It is oval in shape, about sixteen or eighteen inches long, and twelve or thirteen broad. A well-peopled nest will contain at least 16,000 cells, similar in shape to those of the honey bee, and, like them, disposed in combs or layers; but, unlike those of the bee, the cells of the wasp do not contain honey, are not formed in double layers, and do not consist of wax, but of the same substance is the external envelope of the nest. What is this substance? No other than paper of a grayish color, which the insect instinctively knew how to manufacture frum the fibres of wood, detuched by their jaws from posts, rails, or other places, long before the art of making paper, as we now see it, was discovered by man; and the pastebant mests of another wasp, a native of Ceylou, vie in whiteness, sulidity, and polish with the most superior article of that description ever fabricated by the most celebrated manufacturers.

The spider alluded to as having forestalled the diving bell, forms her carious habitation at the bottom of the wader. She soins a number of longe threads, which are ullached to the caves and stems of water plants; over this framework she next spreads a transparent varnish, impervious to water; then, by ascending to the surface, she manuges to carry down into the clumber thus formed a bubble of air, and fills the clamber by repeating her visits to the serface a sufficient number of times to effect its distrution, each time carrying down a bubble of air.

On the under side of the leaves of pear trees may often be seen, in Spring, a number of spine-like projections, about a quarter of an inch high, and not much thicker than a pin. These are the silken tents of a little caterpillar, which preys upon the parembynan, or pulp of the leaf. The tent is attached to the leaf by a number of silken threads; but should any extraprilinary violence threaten to disturb the perfect she throug common wasp. This is generally formed in an underground envity, usually in a bank. It is oval in shape, about six-

monuce to the world the discovery for the first time of an animal which, for the first five years of its lib, existed in the form of a screen; whileh then penetrating into the cartle, and weaving a strond of pure silk of the finest texture, contracted itself within this covering, into a hosty without external atouth or limbs, and resembling more fluor anything else, an Egyptian memmy; and which lostly, after remaining without toud and without antion for three years langer, should, at the end of that period hurst its silken rerement, stringle through its cartlidy covering, and start into they a winged bird—what would be the sensation, do you think, of this strange piece of intelligence? After the first dombts of its trath were dispelled what astanishment would succeed! Amongst the braned what surmises, what hivestigations? Amongst the vulgar what enger ruriosity and sunacement! All would be interested in the history of such an hitherto unleared of phenomenous, even the most torpid and indifferent would flock to see such a prodigy." And yet, without exciting much surprise, this is what is going on continually under our very eyes. With divers modifications of minur impurf, it is the course through which have passed the countless hosts of broots, many of which were firmly believed to be the result of spontameous generation—an absurd blea, by no areans explanded in our own day.

—Prof. Theorems Gill, of the Smithsonian Institution, and Dr. Elliott Cones, U. S. A., are engaged upon a systematic revision of the manumals of North America.

HYACK AND KYACK.

U. S. NATIONAL MOSEUM, WASHINGTON, February 16, 1875.

Under "Answers to Potrospondruts" in your Issue of Pedanaty 11, I deserve a query from a Potthand correspondent in regard to the mame "hynek," as used in Nova Scotta movements. If "Cost" will take the trouble to talk with Potthand shormen to a bill dual the onne in common used his rery door. All along the coast of Maine and south as fan is Provincetown, the mane "kynek," and "keynek" me applied to a funcion variety of the ubserfle of Nove England (Pomobleus perula haveanes). The ratiety of names given in this one species by Maine Asbermen is quite remarkable. I once saw a fisherman take a number of them founds gille et, thour thron that three pills, and potenties for them founds gilled, thour through the phase of the province them flatered kinds, and after a superficial gluces thought libe right. A more careful study failed to reveal any satisfactory distinction, but shored me on achat grounds he say rotted them; those which had been rathed and had bot the scales from their shock, leaving the blue skip exposed, in called "one backs," at "kiacks," those which had been rathed and had host the scales from their shock, leaving the blue skip exposed, in called "one belies," or "cat thrus-bers," a plant, well shaped individual invoval grafia. "The strongly curved the, exposed, has called "one belies," or "cat thrus-bers," a plant, well shaped individual invoval gail an "discrife," "The Storet was miscally the blue backs of the excises specimens, and described from them a new species, along cythonolog, or the blue back along. (See Praceelings of the thiston Society of Natural History, vid. 2, p. 219).

The species is quite paxzing to its proteur rauntions, but is readily recognized by the shope of the lover angles of the correction and sub-orbitat bones. Quite a considerable number of species seen funded upon this lish by early naturalists, and the symmymy is still slightly confused. In the Provinces, Pomolobus parada horagins from places, but "Glundrug," in his Declaration of the Connection University in the flucks o

SUSPENDED ANIMATION IN FROZEN

FISH.

SUSPENDED ANIMATION IN FROZEN FISH.

BOTTOM FORCET AND STREAM:—

t notice in the last dommer of your interesting paper an article headed "Suspended Animation by Freezing." I have seen such lish. In my youthful doys Illived near a pond in the headed county, Conn., and many a fine string of fish I took from that pond by lishing through the ice with hive bait. On a chandy day (and I regarded cloudy they the loss for fishing in Winter, as well as in Summer), if the prother was so cold as to form fee brainful the lines, so as to mace-state breaking it mony, often, the fish, when ranght and left on the lee, would freeze still in a few minutes, usually with their mouth smil glis classet. Such I often noticed would, even if apparently trozen through, review if played in cold vater, after bring fuzen for several boars. If they do not freeze soon ofter bring cought out if the sam shares on them much) I think they will not review, and large fish I think will bear much more freezing than small ones and live. I have cut open gekesel that opperated to be frozen through, and the heart, on being exposed to hear, would not for a few manurus quite muidly. During my district school theys, Standays were my days for dishing in the Whiter, and I often set my them. Friday evening, if there was a prospect of the greather being favorable the next day to fish, in order to be ahead of others; for fishermen nern negativing to be first an the best places on the pond for fishing; and if the lee was very thick, much time and labor ground to savyi by using holes receibly out. Fish negativesk the bait heat in the maning (perhaps for the reason that those near the honks would soon get thinmed ont). Having no Old Probabilities to consult in these days, I often formit the wealthey very cold. The wind blay and it know they, but I had set my flots he centing previous, and onst needs go and take them up. Getting no carly breakfast, I was some nony to the pound. On the first the first bat the that for home, a half a mile oway. Activing of bome I pout

WATERVILLE, N. Y., Frituary 19, 1875.

EDITOD FOREST AND STIERAN:—
Reading an article in No. 1, vol. 4, reminded me of an inchtent of my boy hunting and fishing excursions at Tampion, those of county, Mose, in the February of 183—"we hoys" made an excursion to Prospect Hill Pond to fish through the Ice. Next morning 1 turned out of bed early and got a toh and holf filled it with water, in which I placed as many of the fish as a give wanted for the family breakfast, to take the 'fised' out of them. When I went to prepay them I called the whole household to see my fish awhuning about to the water in the table Now fknow those fish were taken by our party, left on the Ice till they never frozen staff, taken home in baskets with our traps and these, and thawed out the next morning, as naturated above, a hen they were likely fish. The fish we caught were white and red perch and pickerel.

DEER AND DEERS' HORNS.

DEER AND DEERS' HORNS.

EDITOR FOREST AND STIERM:—

I have seen several atticles in Fourst and Stier in consenting horns upon does. They are monstruction in and after the quiestion is come settled that such things do occur, the public should be carteful and pursue the subject no toucher, includes it by the efforts to accertain the cause.

It is the common helicit that between the agen of two and styler secting years the under of the common deor (Critics Vierlatanic) gates one thin, or judit, on he seat upon each of his horns. If this idea is core or, not a fentral New York minst have more than one infect of deer as closely resembling each other as not to be distinguishable, except by the hornship gate of the principal of the country, N, Y, be a party of which I was one—I think so large a deer must be more than two joins of age. I am informed by gathles and residents of that richinity that large "spike horn" deer are not reven in seminon. At other thics, in the same vicinity, I have killed its or reciging from more hundred and captive to two bindred and fine pounds, it resembles from more hundred and captive to two bindred and fine pounds, therefore hearing from three to due thurs, or points, and each of them is a rulled large.

seeighing from much multist and eighty to two buildred and time points, and each of them is a utiled large.

I know if two instances others does ivere taken, that too them is not lively, in early of instances others does ivere taken, but too them is now highly, in early of intring the deer, when taken, but too them is now highly, in early of intring the deer, when the same number (free), and the others had now points on the inher, and the others had now point, or resplice, on one sides and true points on the other, took of these district when it has been and troubles of the others them. My theory is, that the size and manber of points of the flowing of a mature idea depends more input in sometime of an interest of a mature idea depends more upon the remaining of the interest of a mature has often suggested itself to me, and I have down to each of the satisfy my soff input. It is more of our voodence assert that of other to a belief of the spike hieres. Many of your realists are probably shield of give same light in the matter, and I believe you, M. Killing, that Judge Camin, of Illings as multiply upon the feer question. Willing that so ith deep points; beard of those ofth six. De large bonds grow normally?

To be contested for only by members of State Association, residents of Kentucky.

RAILHOAD FARES FOR Dans .- We have a letter from Mr. Theodore Gray, conductor on the Pittsburg, Fort Wayne and Chicago Bailroad, on this anhicet, which pre-sents the employees' side of the question in a forcible light. He says that our proposition of a tariff of one cent per mile on all dogs is much more than baggage masters, to whom the perquisites go, expect, and that they are very glad to get it. "These same buggage masters," he says. "are a whole souled class of men who are sportsmen at heart, and would take care of a good dog for no compensa-tion; but there are many would be sportsmen who burden their with instructions as to inferior dogs, and are not willing to pay anything. The buggageman appreciates the true sportsman as his best friend, (fluancially,) and is willing to du all he can for the comfort of himself and dog." We shall be glad to hear from Mr. Gray again.

Mr. Hope's Challenge.-Mr. E. W. Hope, of La Grange, Mo., does not wish to be included among those to whom some revent strictures of ours might apply as to insincerity in Issning challenges for field trials. He is ready at any suitable time to make good his offers of hist November, which we printed. He sent us the subjuined

RIVERSIDE, La Grange, Mo., February 2d, 1875 Editor Forest and Stheam:—

RIVERSIDE, La Grange, Mo., February 2d, 1875.

Editor Fourst and Stiean:—

I offered to hack a certain matched pair of dogs in my possession against uny matched pair in the United States, allowing any dogs tried against mine a month's advantage in age, and expressed myself willing to go wherever game one plentiful emough to make the affair a success. My own blen of the nature of the match was about this: that same gentleman accepting the shallenge would also, with his friends, accept an invitation in visit me, and ending the frial, a week or so of good shooting would be the result. I have no thorough belief that the pair of dogs that I naw nor the best, for that would be foolish, though I may think they are hard to heat.

Cumberland stands as high, if not higher, thou any county in England for setters, and being a native of that county, on one of my visits to England binost entirely for the purpose of buying setters, I naturally took advantage of an extended acquaintance among sportsmen gamekeepers, and before acquaintance among sportsmen gamekeepers, and before the total set of the dogs in question, being the hest dogs that I could get or hear of. From this poir of dogs I have naised not less than forty, and I consider that Dosh and Bang are the likeliest pups that have come to hand; and living in the conotry, on the Mississippi, where game is plentiful, I think that in breaking and practice I should have some advantages over most Eastern men, at least.

Now, in order to prove that I am not full of a new hobby. I will say that for years, long ere dogs here attracted the amount of attention they appear to now, I was devoted to the kennel. At the age of fifteen I commenced shouting game on the Scotch moors, and shortly afterward lecame a subscriber to the Cumberland fox honads and the Carlisle otter honals, following them steadily for years, and have hred nearly every variety of sporting dog; and in return for the present of an Irish water spanicl, I sent from here and American Bred deer honal of my own strain w

Speaking of Mr. Hope's dogs, a correspondent writes

ROCKFORD, Ill., February 12, 1873.

Tokefold, his, reordary is, islo-Entror Forest and Stream;—
Thave just received from the well known Kennel of Mr. Ed W. Hope, of Riverview, LaGrange, Mo., a hundsome half grown section. I made the arrangement for securing it through the kindness and assistance of your special correspondent, Mr. Basker. I have board so much of Mr. It.'s celebrated dogs that I am more than pleased to procure this flue Spootshax.

-William Jarvis, of Chremont, N. H., has sold his imported setter slut to a gentlemm in Kentucky for \$175. She has had a litter of nine since Mr. Jarvis imported

ANSWERS TO CORRESPONDENTS.

Belle.—I noted in your paper a sport time ago a statement from some purpy in Detroit that the black and tan Gordon setter Belle, which was on exhibition at the late dog show in Detroit, mus purchased by Mr. Bronkes, of Stantord, Comp. I beg to state that I was the purchaser of Belle, and that I have her in my possession at present, and am gind to state is getting on as well as can be expected at her may home.—Jas. Glen, Jr., London, Ontario.

Our Detroit informant was probably in error, and we are glad to know that the famous Belle has fallen into the

hands of Mr. Glen.

J. E. D., Waverly.—As a purchaser and reader of your valuable paper, i white to give a him to any one raising a pop, as to the diseasc called dog distemper. My method is to give, say at six weeks only a ride charge of powdes (common sun powder) every six days north six months old. I never had a dog disease it all genterity healthy, and believe the above to be a panacca for the lift of which so many valuable dogs either lose mose or due.

Aus-Your reincily is certainly worth a trial. You may find a purchaser for your dog by advertising in our

of thins.

J. K. V., Philadelphia —I have a young polater blick about two years old, very much frombled with a thaking of the head and the lower port of each of her ears. She has a flide sure, which is constantly kepthroken by this motion. She has but thinly recovered from the distripution but as she had this habit of shaking her head several months before the distemper came on, I do not attribute it to that. It might have come from a cold. What do you think is the triuble, and what treatment would you prescribe?

A us—The shocking prizes from the itching of the healing

Ans—The shuking arises from the itching of the healing sore. To stop this, take common adhesive plaster are shoemaker's wax, and keep it over the wantal until healed.

thire, Tray.—Not long ago, in looking at an old-book of Hawker's, it saw that he says he has used vacelaathin for the prevention of dishemper in dogs, and says that he seed it with success from 181810-1838—1wenty profit—and never fost any dog by that disease.

Ans—This remedy, although not in common use, is well

worthy of attention and experiment on the part of breeders of fine dogs. See previous numbers of FOREST AND STREAM.

STREAM.

S. S., Sinkopec.—Setter pap six months obt; bud supposed distemper, and after dosing with an admixture of sulphur and emprover, because apparently well, but in mount ten days after showed signs of sickness again. There was marght perceivable the matter with the eyes, although occasinally blew a little matter from the mose; soon began to sweat all over, and bands full of water were scooped up from back and sides, with a canadam dripping followed from the hody and bees: and during at this time had a reraction appetite, and yet would look thin nod prortly; was kept in a warm place and had passages regular, although its ortinating was continual almost. I gave a receipt from Dinks, Mayhow & Hutchinson—some pills, composed of one grain coluntel, two grains antineg, live cridus withe, followed up in three hubrs by teaspoontal of "No does a more happy effect, but sum after the pup green were first, smelling and allly and scratching and clowing out half from its hady, gradually growing weaker, nath the poor thing sink grouning to the ground, when owere had to kall it. The stench was so strong as to become per keely unbearably.

Ans-We presume the above is a severe case of distemper. We shall print next week a table of the symptoms of distemper, as prepared by a member of the British Medical Association.

CONSTANT READER, Cettar Rapids, fown.—Can you refer not to some responsible dog imported from ordinar I could purchase a Lawrinck of Gildersleeve buch, from right to thirteen months old? Would like unings and white, or pure orange for culor. If you should know of any such for safe please state price.

Ans—The Gildersleeves are an American strain of settings. You will require a communication on the subject.

ters. You will receive a communication on the subject.

J. M. M., Philadelphia.—I have a small spaniel bitch three years old, which, up in width the last three weeks, was remarkably fat, so much so that sho could not stand my fangue, frequently giving out after a few square's walk, although she was very active and rager at the outset. At the time named she began to show symptoms of suffering, was very settly, walking shout the house with the tongen banging out, treating heavily, and occasionally giving yent to sharp cries as if suffering from acute pula. The need was an oliva near the head.

Aus-Feed lightly, and give as much exercise as possible.

The Borse and Course.

NOTWITHSTANDING the severity of the weather the note of preparation has been sounded in the racing world, and owners of thoroughbreds are making calculations for the coming season.

The ball opened at Savaunuh on the 2d inst., where a number of old favorites, and others as yet unknown to fame, made their first appearance in public. Survivor was tame, made their first appearance in public. Survivor was probably the best public performer present, and carried off bis two races hambly. The weather, bowever, was unpropitious for fast time, and we see nothing in the reports which have reached as to throw light upon future events. The next meeting of importance "eventuates," as Mr. Dan Bryant would say, at Baltimore on the 25th, 26th, 27th, and 28th of May, and the Maryland Jockey Club are to be constitutated upon the very respectable number of contricts.

congratulated upon the very respectable number of entries received for the stakes to be run for in the closed events of this and the Fall meetings. The Bahimore Cup being a new event, as well as a larger spin than owners of the present day appear inclined to include their horses in, has but sixthe appear are mediate to making their noises in, has but six-teen nominations, but the Dixie Stake, the most popular as well as the most important event of the meeting, has the hurge number of seventy-floree cutries. Upon the running of the three year olds in this stake the usual prognostica-tions will be formed with regard to similar stakes at Jerome Park, but it is probable that some of our more prominent stables, while semling a representative to Pimlico may still have a "dark one" in the reserve for the home meetings

Ou the 1st of Murch the entries for the majority of the events to be run for at Jerome Park, Long Branch and Saratoga, during the Summer, will close, and owners and trainers are called upon to make their selectious

Prohably at no previous period have the same number of horses been in training in this vicinity, and the advent of horses been in training in this vicinity, and the two or three more gentlemen of wealth and leisure upon the turf will give to our racing the celar and popularity it the turf will give to our racing the celar and popularity it will give an Great Britain and the Continent. We question, however, whether it will ever be accompanied by baueful and peraleious influences which there surround it. Our people, particularly among the working classes, are essentially non-betting, and the introduction of betting lists and all the parapherualia of small wagering will never reach that point as to require the legislation which has been found necessary across the water.

Among the stakes to close on the 1st prox, are al Jerom-Park life Fordham Handicap, Westehester Cup, Grand Joekey Chib Handicap Steeplechase, Juvenile Sukes, and Joekey Chib Handicap Steeplechase, For the Fall meeting the Post Stakes, a four nulle dash, with \$2,000 indied money and the annual sweepstakes for three year oils to be run at the fall meeting of 1876. Al Moumouth Park there are eight events, and at Saratoga seven, to close on the sum oily the relative for Jerome Park should be addressed to Wheatly, Secretary American Joekey Club, Madison average and Twenty seventh street, New York. Those for the Moumouth Park Association to W. E. Raynor, Long Branch, N. J., and those for the Saratoga Association to Cheatly, Pordham, N. Y.

For strength, both as regards home breeding and careful importation, Mr. Belmont's stable, although having lad, perhaps, more than its share of the vicissitudes of racing, lass generally led the van in the Northern division. At present there are in training at Bahylon seventen horse, of which mo less than eight are the get of Kentney Count d'Orsay and Silk Storbings, as five year oils lead the string, while of the rest, Rhadamanthus appears to shand must prominent us a public performer, and is at the shan eight and particle by Parancson, in breeding gues for might, should be heard from.

Dur imported colts, however, have not as yet distinguished themselves on their first appendances, and a little study into the doings of fashionably bred youngsters on their particularly, and provide the provides of the century, who has not yet produced a respectable win ner, and whose fee originally 150 guineas has been reduced to 50 guineas. It is a recognized fast among breeders that however successful a horse has been out the currse, he must produce winners to be popular at the stud.

Mr. Sanford hos divided his stable this year, training part of his horses in New Jersey, and part at his breeding furn in Kentucky. The every green there that but of the contury at this or any former period. Autong

-The famous four-miler Thad Stevens, has been sold at — The framing foll-filler Final Sievens, has been sold another in San Francisco for the moderate sum of \$1,100. A) one that Thad could have been sold for \$12,000 or \$15,000, but since his defeat by Katie Pensu last year it was plain to be seen his running thrys were over, and consequently his value has decreased. He will probably now be kept exclusively for breeding purposes.

Sea and Biver Hishing.

FISH IN SEASON IN FEBRUARY

EDUTERNY WATERS, Tront (black hass). Dring (bro species). Kingdsh. Striped Bass.

FISH IN MARKET.-The break in the severe weather that has prevailed of late has resulted in a better supply of fish, although it is yet too soon for us to experience the full benefit of the change. Codfish are still only in moderate supply, and sell for ten ceuts per pound; (refrigerated) blue fish fifteen cents; do. salmon forty-five; halibut twenty cents; white smelts from Maine, twenty-five cents; black smelts from Mirimichi fifteen cents; whitefish twenty cents; haddock twenty ecuts; turbot twenty cents. Savau nali shad forty-five cents each; North Carolina shad \$1 25 each; black bass twenty cents per pound; striped bass twenty-five cents; blackfish fifteen eents; salmon trout twenty cents; pickerel twenty cents.

-Shad fishing on the North Carolina sounds will be in full blast by 1st March.

full blast by 1st March.

—From Watertown, N. Y. we learn that on February 22, some young men living near Musculange creek, a small stream flowing into Black River Bay, near Dexter, N. Y. went to the creek on Saturday and cut holes in the ice for the purpose of fishing with hooks and lines. The instant list the holes were cut they become literally filled with bullheads and the men began secoping them out by the dozen. At noon there were about one hundred and fifty persons on the ice, and others coming. It is estimated that about four tons of fish have already been taken. Two men in three hours took ten handred pounds of fish from two holes twelve inches in diameter. There seems to be an exhaustible school of them.

—The accumulation of lee in the Great South Boy has

-The accumulation of Ice in the Great South Bay has interfered seriously with the oyster fisheries. The

ice, extending to the hottom, has carried the system off the ground with the fide. Thousands of bushels have been lost in this way, and all the oysters murketed from that neighborhood are taken through holes cut in the ice.

neighborhood are laken through holes cut in the ice.

Of fishing in Calorado, Mr. J. H. Butly writes:

At the Twin Lukes the fishing is tolerathy good, but the fish are small. Should a party fit out with a pack train when at the Twin Lukes, and follow the Arkinsus River in its head at Teamesser Pass, and then strike the head waters of Eagle River, and follow it down natil ocarly apposite the mountain of the Holy Coss, they can entele front to their hearts content, and probably kill some yik and mountain slicep. The treat of the Eagle River run large, and large flivs or spinning tookle should be used to take them. Another party wishing to had grizzlies can go by pack train from the bakes up Twin Luke Creek about but miles to the fork, and then follow the left humach of the creek to the fork, and then follow the left humach of the creek to Elk Mountains there is an old Ute trail going to Rock Creek and to the snow ranges of the Rocky Mountains, where grizzlies are common during the Sunary. There were trails brading by Rock Creek and Eagle River, which were made by the U. S. Geulogical Survey, under Dr. F. V. Hayden in 1873. I have fished the Eagle River thoroughly, and can recommend it as a first-class steam for large trout, I cought eighty there in three hours will grasshoppers for buit, with a greet saphing for a pole. Many of my fish weighed two pounds each, and I hot but few lish that would not turn the scales at twelve onnees.

—The mound report of L. Muddocks, Secretary of the

Many of my fish weighed two postude each, and I hot but few lish that would not but the scales at twelve oraces,

—The annual report of L. Muddocks, Secretary of the Maine Oil and Gumun Association, shows that the number of thrms engaged it the annufacture of purgle oil and gumun in that State bist year was fourteen, with a lotal capital of \$316,000 invested in factories and \$390,500 in fish gear. Thirty-seven vessels and twenty-two steamers were employed; 501 fishermen found employment at sea, and 304 men at the works. The total catch was 621,861 barrels purgies, of which 10,400 harrels were sold for built; 1,931,637 gallons of ail, and 19,295 tons of guana were transfactored. The products of the fishery shows an increase of nour; than thirty per cent, over the previous year.

The fishing arrivals for the week ending Feb. 18th, were ten—four from the Grand Banks, two from Georges, two from New Sutabland, and two from New Brimswick. Total amount of halling throught in, 140,000 pounds. Schwinger Glenwood, of this port, Caplain Merry, arrived at Boston on Tressley, with 30,000 pounds of landock, which were sold far \$5 per cwt, her stock amounting to \$1,500. The Storry Flog, Star of the East, Zephyr and May Queen arrived on Wednesday, with good fares.

The scarcity of fresh fish the past fortnight has consed a heely bemand for frozen forting, and the vessels which have recently arrived feam Newboundland and New Brimswick are disposing of their vargoes in Boston and New York at very temmerative prices. No disasters have occurred thus far to the heering fleet, and business bids fair to prove quite successful this season.

Schwiners John S. Presson, William H. Foye, Howard and Flying Scad arrived from the Grand Banks yesterday. They brought in good fares of balliant, the Presson baving \$50,000 pounds, the others 30,000 cach. They were quite kly sold at \$11 and \$8 per cwt.

Two of the Folly Cove fishermen came in on Sunday, one with a thousand pounds of cod and the other with 90 pounds. They sold quick at five cents a

—A Belluire, Ohio, correspondent gives some useful hints to those who purpose fishing the Nepigon the coming

hims to those who purpose fishing the Nejugot the coming sensine. He says:—

"Universelve on the point once or twice, when worked up somewhat by an according fish story in your paper, to tell you something of some winderful front a party of five of its took from the pools and rapids of the Nejugon last July, and especially of viewer that weighted just forly-four pounds, inken at the foot of the first rapid as it swirts around a slowl head, not a quarter of a mile from where therefore roles out of Lahr Nejugon, and some chalactor above the "Big Fulls." The angler who misses the fulls and the upper waters misses seeing the finest security and viteling the largest train. My experience (s, that the region of waters about a mile behing the falls, and at the lived of Lang Partuge, farmishes the finest sport and the eather eiter. If the angler bas the nevor to cance it over to the rocky Island lying just helow the head of Lang Porlage, for may have a famous time. Dur proty made the trip several imper. It is a big risk for fish and fun, and if an our should by any chance give very, the most convenient place to look for the cance and cargo would have to and loope of fluding nuthing."

MOLYCHUNKAMUNK.

PHINAM, COMM., February 10, 1875.

Putnam, Coun., February 10, 1875.

Editor Forest and Stream:

Having been much interested in reading the adventures of numerous correspondents in the Forest and Stream, I wenture (no pun intended) in contribute my share to the general fund, if "ye Editor" abrill down it worthy of publication.

At a little part "high twelve" of a larght September day in 1873, party of four ruinst usen "might have been seen" wending their way lowerd the rullway station in one of our thriving New England villages, encantiered with sundry traps and accontinents, edgestive of the gentle art of vehich Sir Lank Wallon was the Typical follower. The writer being one of the four aforesaid, is for ced by an ungovernable impulse to chronists some of their adventures.

The party comprised & & Bill, the Cal., and myself, which latter personage was, some few days luivr, yelept Dr. by the Cot., owing to a little elementation of the four aforesaid in comp, whereby he was invessibled to exercise the ingentity by the construction of a fundamened undical instrument from the letrale of his bult tod. The first two were familiar with the Malne (whither we were bound) and Adrondack wilderness, while the last two were more acquainted with the Virginia and Cinolina woods and swamps, leaving spent three or four years knotting and being limited in those localities. The residy will indevatind from the foregoing that we telt fully able to cope with the hardships of camp life for two or three weeks.

The mouth of the river where it empties into Lake Mollychunkamonk was our destination, at which we arrived by boat, rail, tackboard, &c., two days bare. We were fortunate to find a vocant log camp, which better than the brik one brill by Ed and Bill some year or two provious, withe we lad intended to occupy; so we took possession sans cereovovic, it being late in the day when we arrived, we proceeded to catalish nursivelyes in house kerging, and ild on fishing antil the next norming, when yithe and the first after a few minutes' play, was landed in the bust—a fi

The routine of camp life being so generally understood by your readcrs. I will refusil from giving details of ours on this occasion, only remarking in passing that upon your humble servant, as the youngest of
the party, devotred the duty of keeping the camp fire burning at highl,
which mees dated a middight excursion each right, he scartly ralment,
that to return to our mattern. The Cot, though a naview with the fly red,
by nonneaus an unskillful one, was one day thereing from a large rock
on the shore and struck a noble fish. Not having his net at hand he
was in somewhal of a quantary, but resolving in do or die, he proceeded
to tain! Mr. Salvao Fontiantis like l'at playest the flidle—by undir
strength. The gare a strong guil, after having recled the line up short,
when snapi rent the rod in three pleases, and shout the same thus the
Cot, made a large two. The water up to but middle, and secaing the three,
succeeded in landing its ability which proved to be the largest one cought
duiling our stay, tipping the scales easily at three pounds.

Our catch was not remarkable, as the water was mursually tow, so that
the fish were not running much, but we contribed to bring out all we
want d for our elves and friends, bosiles theing on them (the ship, not
our friends), while is camp. Iff it was illilizant to change our lover gar
ments Sanalay manning, for the fine protrailing from our fiesh. This to
builted in the little of the protrailing from a fire or limiting Mt.
Observatory.

We embatked at about the A. M. one day, after having down the

ments Sunday maning, for the fins protrailing from our fired. This to be taken as we took our stand, cova grama and a. Perkage I ought to call this fin is here, but shall have to relate our experience in climbing Mt. Observatory.

We embatked at shout inter A. M. one day, after having dyawn the blankel nerves the entrance to our camp, with a nucleo attacked, infuriable calleys that the family were newsy, and pulled for the "old roll" at the mount of the stream that flows from the Rebardson pound, distinat about two wiles. The wind was dead ahead, and lates of it, but an insh breeze pownibel, iself usually will, and we landril near the old mill in a little less than an hour. Here an brind a party from—Podunk—the spakes man of which, attred in keep hyserhes and writirelle, met is a see banded nod eccorted us to their camp. This gentlemma-Smith, we will call bild, dithough that wis infinite same, any more than Publink was his resilience—individual was bild sample his polana, of which I almost lide, dithough that we should sample his polana, of which I almost lide, who had twenty gallons of warlins klads. "Your see," saws smith, "the buys are terribly afful of bugs and worms in this ive lake water, so we have to put sowething in to kill bins." We sampled, and then sauthows a faw administ to sawke and compare nules, when we dieded our lobas by the accent. As you look from the did nill the mountain appraise short wile asvey, but also; in kills indice, in his many athree causes by the sam when we streak that his minner, as by many athree and protection. Soon after leaving the second point has first pend, around that to the second, and all! not reling ground; having like our the form which we would see the mountain, we were condition as to our discretion. Soon after leaving the second point has relined to the second we would see the mountain, we were condition as to our discretion which we had been an administ his production, that make animal news to our discretion which we had been animal himself did not appear. In th

This account having alverdy exempled the limbs foliability, and the pringht stripply to a close. A few days of the subsequent Jame was spent by the writer at the Middle Darwand viel sity, some incliners of which, if agreeable to you, will be related at a future day.

Answers To Correspondents.

antiject.

J. tudiavapoils, find —Can you, ovany of your correspondents, tell me what fish is the "croppte" of the Missistippi Valley. It is a Percol (telnicality) "equal to the best black bass in quality, out not so game a fish." From isocuraria description I have triviaght it must be the Pomaray Steerate of till, but I have not been able to get appelments. It is not the six spined bass (Hyperistical). Ans. The "cropple" does not belong to the hose family, but to a Percold. They are cought in myrtadis back of St. Louis, and in various posts of the Southwest, especially in Kentucky. They do not compare with the base as a table fish.

Canera, Flendington, N. J.—Do you know any one that has veri lest of Pennell's strik of finols, and files for trust in this country, and with what success? Ans. It in not. Where in the city car I get an iron Dutch over? Ans. It must know; they are mady by Scoville & Johnson, Macquette, Mich. Last sensen I used the waterproofing for various, such as you recommended, had one light shower, not very gift to test. Will they would be otherwise the source process again for like senson. Will they would be otherwise the source process again for like senson has? Ans. Hardly in this case, it illinearly the canwass should be treated rach senson. What files would you recommend far April and May trout fishing in like Staty Ans. Core thing and blue dim. Cawyon give me the address of R Abadinoudely Pennell? Longeman, Green & kongsonan, Lombon. What kind of this rin you consider the best? Ans. Waterproof silk.

R. P. Pitra.—Would you give me some information in reference to Long Leke. Franklia country, N. Y.; if there is good fishing and what kind of first? Is it in large lake? Any late or outeted Historice from Malone; if it destablis place togette? What is the best thind? Are the surroundings are historical or vill? Ans. Loon Lake is a point this country of and being where and trout are alived into Reave River. It is still beginding the form the roots to Rig Manuse Lake. The surroundings are meessarity wild, but Kirck Shoully, a will know shelter, is a lifting beauty rots of the Shovities and

rolls of firsthures. Heat time will by in June. See Wullace's Adirow dask Guide.

F. R. P., Montello, Wis —What is the address of Lot The Sportles, and shortle many and address of the outer forman sporting journal pull listed? Dryon know of a sporting journal valied The Rhodented Sporting News? It such a paper is published, please give not the address, Ann.—La rie Sportles, Nr. I Rue Pann, Paris, Dec. Relation, Leipsic, Rivathan Sportless, Nr. Rue Pann, Paris, Dec. Relation, Leipsic, Rivathan Sportless, Nr. I Rue Pann, Paris, Dec. Relation, Loudon, W. C. J. W. W., Instan. Will you answer we through your paper the fall awing quantients: 1. If it interis a slot gui to live builded from 11? 2—Where I van get a palve lin et decays? 3—Is there good shoulding in the Pall at Castleton, Vermont? Ans. If excassive charges are not used it will not hard your shot guin. Price list of decays from 11. C. Squires, Nr. I Constituated seed. Three should be good ruffed groups shooting at the point you mention; also aquitrels.

E. J., Pinsburg.—Will you please inform me if there is a guinnaker

Fall at Cavileton, Vermont? Ass. If excessive charges are not need by will not harty nor shot give. Price placed be good ruff of groups shooting at the point you mention; about, it is not be good ruff of groups shooting at the point you mention; about, it is not been into the first work of the rame in Brebon twenty-flev pears ago, but he has free under for rame in Brebon twenty-flev pears ago, but he has free mended within a house of the mane of the rame in the first place of shooting five the huncils of the 35 Ward Shooting Chily Ass. The English rules are published in Bogardas' Pried, Cover and Trap Shooting; Yot sain at this office.

I. W. L. Carenavia, I am pudiably off for Carolina next month, Thinking of Ashville, N. P., will I find any good fishing? How when for the carried and the control of shing of Ashville, N. C., son Fontser and Strukar May With, page 211. Very good fishing I Good sulps shouting near the Bridge below Nivfolk; ducks there now, and also in Carolina, and around Newboyn, N. R. Advertisements should be sent in by Saturday of each week, if possible
CHAILES HALLOCK, Editor.
WILLIAM C. HARRIS, Business Manager.

GAME PROTECTION IN CANADA.

THE subject of game protection is receiving increased attention in Canada. Although for several years fish has been made the subject of fostering care, but little had been done for game, there being no clubs that were strictly protective in their objects, while the laws were very imper feet, little respected, and quito inoperative. A year ago the Novu Scotla Protective Society was organized, and has now become a strong body, having already accomplished much good, especially in the preservation of the mose, which was fast disappearing. Several prosecutions have been made by it, and the offenders punished. Last month the "County of Peterborough Fish and Game Protection Society" was founded in Outario; the proceedings attend-ing its organization were printed in this journal at the time. Its members include some of the leading men of the Province, and there is no doubt it will accomplish great Ontario is one of the chief game districts cust of the Rocky Mountains, and would now more than abound in game were it not that deer, cariboo, and moose have been so recklessly slaughtered for their hides, while its waters have been systematically drained to supply the provincial markets. To us of the United States the preservation of the game there is most important, as well as the enforcement of laws that will prevent game and fish being shipped across the line and sold here claudestinely, or in open deflance of our enactments. The Peterborough so ciety, and all other societies that may be instrumental in amending the existing laws or instituting new ones, should see to it that they be made to correspond as nearly as pos sible with those of our own States adjoining the border, so as to prevent game being shipped out of season from their territory into ours. This is a very important point to consider. Uniformity of laws is quite possible and wholly practicable, inasmuch as the climates do not differ so materially as to occasion any marked variation in the times of breeding. If the periods of close time are not made simi lar, efforts toward protection will produce little benefit.

We are glad to observe that the fishery officials are on

the alert for offenders. Last week Mr. H. Calentt, Fishery Inspector, made a raid on some parties who were spearing fish on Pigeon Creek, and summoned them before T. Matchett, Esq., Justice of the Peace, Omenice. They were fined and their effects, consisting of buffulo rabes, horse blankets, spears, and decoy fish, were confiscated.

A private letter from a member of the Toronto Gun Club informs us that they are about to wage war with a number of our game dealers in this city for holding and exposing for sale a number of barrels of speckled or brook trout, it heing entirely out of season.

SALMO SALAR BREEDING IN FRESH WATER.

M ESSRS, THOMPSON & TAGG, Fish Culturists at New Hope, Bucks County, Pa., have succeeded in hatching salmon in their waters from Canadian fish furnished them by Samuel Wilmot, of Newesstle, Ontario, The original progenitors were taken from streams that llowed into salt water, and from their ova salmon have been hatched in the fresh waters of Pennsylvania, which at the expiration of three years growth, bave in turn furnished ova from which young salmon have heen batched. This is a most interesting and satisfactory result, showing that access to salt water is not Indispensable to reproduction. But the most singular fact in this connection is, that whereas the original breeders, as furnished by Mr. Wilmot, weighed 60 lbs., their progeny weighed but three pounds when they matured and spawned !

Now, it has long been a disputed question whether or not the hundlocked salmon of the Sebec and Grand Lakes of Maine were the true salmon. So competent an authority as W. II. Venning, Esq., Inspector of Fisheries for Nova sectia and New Branswick, assumes that they are not. [See Hallock's "Fishing Tourist," pp. 101, 105.] Hitherto the great disparity in size of the adult fish-the landlocked salmon averaging 21 pounds, and seldom attaining four pounds in weight—has been adduced as presumptive evidesce of distinct species; for, while the latter are spawners, the grilse, or two years old fish of the salmo salar, often attain a weight of eight or nine pounds, and yet do not reproduce, three years being required for maturity. It might be interred, therefore, that confinement to fresh water dwarfs the true salmon, while it does not destroy its feeundating powers, or prevent its reproduction; hence that lundlocked salmon (confined to fresh water,) are but dwarfed salmon (salar) and identical with them. We are well aware that exception will be taken to this

We are well aware that exception will be taken to this conclusion by eavillers, who are cognizant of the fact that the landlocked salmon of Maine are not deharred from salt water; that fishways have been provided, over which they can come and go at will, and therefore, if they were the true salmon, they would follow the hubits of the true salmou and visit the salt water periodically; and furthermore, that, until the erection of dams "landlocked" the fish above, and obstructed the passage of the salmo salar from the sea below, the St. Croix River was a fine salmon stream, frequented by both the true and the so-called dostream, frequented by both the true and the so-called de-generate salmon, which, under precisely the same condi-tions and opportunities had very dissimilar habits; and hence will maintain that they must be distinct species. Perhaps they are: but one thing is sure, and that is, we can now manufacture landlocked salmon out of the true salmon by merely cutting the latter off from salt water. That is to say, by confining the true salmon to fresh water, as hus been done at New Hope, we can obtain a non-anadromous fish weighing only three pounds, that will reproduce its kind when it is three years old, (the usual period of maturity,) and identical in its structure and markings with a progenitor twenty times its weight—in fact, a perfect counterpart, but a diminutive of the other. Certain it is, there is no difference in the generic characteristics of the true salmon and the landlocked fish of Maine. There is no perceptible difference in the early runs of these fish, though variations occur as the spawning season approaches.

The instinct of salmon to make periodical visits to salt

water, and even to return to their native stream, is so strong that if Messrs. Thompson & Tagg will attack their tags, (the suggestion of a pun here is inevitable,) to some of their grown fish, native now to the Pennsylvania waters, and give them free access to the sea via the Delaware River, and these same fish should return again next Spring, and the next Spring thereafter, much increased in size each year, it will settle the question definitely whether the true almon lose their anadromous instincts and are dwarfed by being confined to fresh water. If, ou the other hand, they should decline to go down stream, with every opportunity afforded, as the landlocked salmon of Maine do, the fact would go far to prove that the latter are identical with the

The success of the gentlemen named in propagating salmon in fresh water is a matter of congratulation, for it solves a problem of great importance. We are informed by Mr. Andrew Clerk that he expects soon to have one of these full grown spawners on exhibition in his aquarium at 48 Maiden Lano, where it can be seen by those who are in terested in this result.

NEW FIREARMS. - From La Chasse Illustreé, of Paris, we learn that an effort is about being made in France to form a congress of eminent gunmakers, sportsmen and others interested in guas, for the purpose of uniting upon a weapon which shall be adopted as possessing the best qualifications requisite in a gun for sporting purposes. Many eminent manufacturers, among them Messrs. Werney-Caron, Feres and M. Gerest, have given their support to the project, and disciples and followers of Saint Habert from all parts of the country are expected to be present. Aside from the more important discussions regarding guns, the meeting of so many confreres is looked forward to with interest.

BIRDS IN EXTREMIS.

THE severe weather appears to have extended South as well as East, West and North. From the former quarter we hear of much suffering among the birds, and the Bultimore Sun reports many lustances of countibulism among them caused by cold and the want of food. Thousands, it says, bave been frozen and starved to death. Hun dreds of others have been found blind and unable to navi. gate from loss of sight, and helpless from cohl and want of food. Strange to sny this blindness is caused by the hungry birds picking out each others eyes on the roost during the night, where they fight with desperation and in their starving condition eat each other. Many wild ducks have been captured while stupified by cold. This, however, is not so very nucommon, as some varities are often found in localities where extreme cold is nausual, completely stupe fied from cold. This particularly applies to teal, who are probably found farther South than the majority of other ratory birds.

Robins, cut off by ice and snow from their usual Winter food, or having eaten the available supply, are seen in great numbers in the suburbs of Baltimore picking up anything that will satisfy hunger. The holly trees have been stripped of their berries by them, and one humane gentle man has fed both the robins and the Euglish sparrows un til his horse has become a resort for all the hungry little wanderers in the vicinity. Surely they should compensate him when the Spring time comes, with their songs of glad-ness, and make his home merry with their cheerful twit-

The pigeons in that city have also suffered severly from the cold, and on one day last week the harbor was filled with large numbers of crows who fraternized with gulls, and foined with them in the search for food. gulls, and joined with them in the scarcii for food. In some localities, where choice morsels were east overboard from vessels, the cawing of the crows and the hoarse screams of the gulls made most discordant music, yet they sang amicably together, if not harmoniously.

From the West we hear that the game birds are coming to grief with equal rapidity. A letter from Valparaiso, Indiana, dated February 15th, says the cold weather is killing off the quail and pinnated grouse by hundreds. The snow is about a foot deep and the thermometer ranges from ten to twenty degrees below zero. Last December the prospect seemed remarkably good for the coming season, but the unexpected and almost unprecedented cold has upset all enleulations, and there are grave doubts as to the supply of birds. All live quail and grouse in the hunds of dealers should now be cherished as seed corn in times of prospec-

That birds and animals, in the extremity to which they are reduced by cold weather, will resort to inhabited districts for shelter and food, is shown by a statement which we find in a Boston paper, to the effect that no less than fifty ruffed grouse were found collected in an old barn in Hopkinton, Massachusetts. It has been suggested that brush shelters be erected at suitable points where quait, grouse, and other birds inhabit, and grain be thrown underneath, so that at least some of them may be saved from cold and starvation. Hunger banishes natural timdity.

The other day, in the Province of New Brunswick, four cariboo leisnrely walked into the yard at Aulae Station, on the Intercolonial Railroad, while the guests were at dinuer; the severe weather having doubtless driven them from the woods in search of sustenance

WONDERFUL NATURE

THE work of biologists and students of the natural sciences in general during the past ten years has produced a complete revolution in our ideas of life and the means by which nature accomplishes her mission of creating into new beings the old matter that may have fallen hack into its original particles. These investigations of the laboratorial labors of nature have not been confined to the great students of science alone, for we know several modest, retiring, persevering, and perhaps occentrically inquisitive types of humanity, who are constantly attempting to learn more than is good for them about the work of recreation. Though their discoveries may not be as important as those of Darwin, Tyndall, Huxley or Owens, and their intermeddling experiments with dead issues may not always bring them the honors they merit, any more than Paul Pry's disinterested interest in the affairs of his neighbors brought him; yet they are nevertheless entitled to much consideration, and any assertions they make should be treated with a proper degree of respect. Their investi-gations are frequently carried out on a line and principle different from the great masters of science, and from this very fact they obtain results which their better known companions cannot, for the reason that their mode of procedure is different. But this should not prevent us from accepting their discoveries in all honesty, and making them known to the gaping world that is always ready with open

mouth to swallow every great wonder of science.

Take for instance a fact said to have been lately extracted from nature by Andrew Murray, Esq., agent of the Eric Railroad at Niagara Falls, and we can prove by it that the theory of evolution is a cheat, that the Presbyterian idea of preordination is correct, and also that the proverb, "Like produces like," is founded on positive and unvarying truths.

This gentleman, who is well known in his section as a close investigator of all subjects appertaining to biology and natural history, has been experimenting with a lemon, and the result of his labor is startling by its unexpected

character. He cut a lemon in two halves, placed upon each half the spittle of a dog, and then put both pieces in the cellar until they were covered with fungus. He then examined this fungus with a microscope and found it alive with flerce little animals that devoured each other like so many cannibals. Pleased with his discovery, be treated mother lemon in the same way, except that he put upon it the spittle of a horse. An examination proved that this inter fungoid growth was purely regetable, and that not even the least vestige of animal life was seen upon it. Take these facts and what do they reveal? A startling dischosure—one which scatters like chaff before the wind the absurble theories of Darwin.

sure—one which scatters like chaff before the wind the absurd theories of Darwin.

These facts discovered by the patient research of Andrew Murray, Esq., prove that herbivorous animals cannot produce fungoid growths swarming with canubidistic animal-rules, and that carulvorous animals can. Carry the argument further, and what does it express? This, that as the latter class of the brute creation live on meat, that their remains, or extracts of their living bodies produce animal life, whereas that the former, which thrive on grass and bods and kindred matter, produce only vegetation. Does not this prove that nature made her laws from the first, and that they are immutable; and, therefore, that this Darwin. that they are immutable; and, therefore, that this Darwinian theory of an oyster developing into a man is an absurdity so ludierous as to merit only our laughter?

True, the converse also may hold good, judging from the lemon, that vegetable will produce animal life, provided it is covered with some product of an animal. But in this is covered with some product of an animal. But in this case it is the latter product which grows, and not the extract of lemon, as that can be used only to feed the animalcules. This extract of lemon has been recommended to sick people, but then animalcules may require it as much us the human family. We could carry on this argument indefinitely, and prove many remarkable facts from it, but as our intention was merely to call attention to the great discovery of Mr. Murray, we forego may more analyses at present, but we may be able to take it up at an early day, when further facts have been gleaned, and prove by it that we require a new theory of the creation besides that of the scriptures or of Darwin!

Why would it not simplify the whole matter by saying that dog spittle was placed on half a lemon at the time of the creation, that this begat animaleules, that unimaleules raised Cain, that Cain went to a farmer's garden and stole apples, and that he was caught aml transported to Chicago where men were developed in all their glory and greatness, until they became the lords of the earth, and the wiblest speculators in the world-in wild-car?

OUR WESTERN GAME COUNTRY.

NE effect of the discussion that has been evoked by the omnouncement of the "Big Hunt," through the Western country, has been to elicit some general information as respects the vast territory that lies between the two fromtiers of our civilization, that is altogether new to most of our readers. The conditions of that section and our East are so wholly dissimilar, and the distances out there and the universid scope so illimitable, compared to ours, that rur stortsmen here can base no correct judgment upon general premises. Blessed with an experience of our own (confined to a three months trip to the ''Divide,') that antedates by fifteen years the epoch of trans-continental rail-roads, when the fastest express was old Bill Bent's "cow-train," we have been conscious that those who opposed McCarty's cuterprise had struck the wrong trail, nevertheless we wished to leave the question open to whatever ob jections might arise, so that uo one should be unpleasantly compromised in the matter, ourselves jucluded.

Quite possibly this subject—bas—become—trite in the esti-

Quite possibly this subject has become trite in the estimation of many; yet, if in our scomingly too frequent allusions thereto, we can interpolate facts that edify, and impart information that will be serviceable, our most sagacious readers will not take exceptions thereto, but be glad of the apportunity to learn. With this preamble, we offer herewith some testimony, vouclosafed by an old Western surveyor and mountain nam, well known throughout the West and a large portion of the East, the truth of which connot be gainsaid:—

Gainebylle, Cooke county, Texas, February 11, 1873.

West and a large portion of the East, the trails of which connot be gainsmid:—
Gainswills. Cooke county, Texas, February 11, 1873.

Editor Borest and Stream:—
As you ask what I libits of the Big illunt, I will state: First—There is a mistaken idea among the sportsmen of your vicinity in rogard to "slaughtering game." My observation has been that the staughtering operation is on a small scale. On an extended trip of five weeks, during last April and May, into the game region of this State, I found thin game (even buffslo) astonishinely wary, and It required the greatest canding to surprise them. My idea had been that I would have no trouble staughtering attelope, deer, and buffslo, but I found the deer two hundred miles west of this, apprendly wilder than in the scalements. And untelope—Pshaw! They were always in the lightest ground, and "heads up." In five weeks I killed one buffulo, and if any one of our company of eighteen user "to the maior bourt" killed more that one I am not mare of it. The swas in the vicinity of the junction of the Double Mountain Fork of Brazos River—the same locally spoken of in the programme of the Big Hint. There were tens of thousands of buffulo to be eeen, and the young calves would sometimes follow our horses line camp; but the old ones ran off at lang range. We could have chased them down on our horses, lint after it few chases it was plinity visible that if we did not stop it, we would have to walk back to the sottlements, and the thoughts of such a tramp, with perlaps a bond of prowling Comanches harrassing our rear, soon ended the chase.

Second—After the first few days of excitement and buffulo beef, the sportsman wears off the wire edge, and is content with just enough to eat, and the yearders over the "wast expanse" until it becomes weary with wondering what is beyond, and he seeks his mess to crack jokes, "reglenish his larder," and recount the inorting ramble.

Third—I think thus these who oppose the expedition are hardly aware what an extent of unexplored territory lies

States, or perhaps. North America, for scientific research and investigation. On all stifes of this territory that have been developed, the "precious metals" have been found to pay a greater or less per reint. One man hoots at the idea of fluiding new races of men. I would just like for him to produce his sathority to show that they may not be there. I tell you, sir, the expedition, hashead of being secrided at, should be complimented and assisted for making such a sacridee. It requires men of nerve and indomitable energy to push into such a field of danger. There may be glants in the land; but let us go over and possess it. They would not have the assurance that Joshua had on entering the lamit of Canana, "that their hear! (the inhabiliants of that country) melted, neither was thore spirit in the long more."

Fourth—I do not know what Providence filled that country with buffulo for, unless it was for men to subsist upon in passing through it, as it is certainly more convenient than handing in wagons for hundreds of unites. I think our State would furnish an escort of rangers to such an expedition, if they needed say. I have scarcely seen any of our citizens bin what fan ored the Big Hint, and it does seem to no that if use an stand of, the sportamen on the east side of the Meslastippi might not to gramble.

(6. 11. R.

This event appears to be attracting considerable attention abroad, and our sporting contemporaries on the other side of the water all countin notices of it. Der Webbentan of Leipsic in its issue of February 1st mentions that large Lelpsic in its issue of February 1st mentions that large numbers of sportsmen have joined the party and are waiting to sail. It also gives a detailed description of the purposes and objects of the expedition, and describes its object to be the shooting of every kind of game from the lordly huffalo to the sportive jack-rabbit. The curroun is also described as consisting of Comonche Indians, trappers, hunders and English mi-lords, as well as a bound to snothe the tired fragges of the sportsman to require. White winds the tired frames of the sportsmen to repose. While wish the expedition every success, it is not songuine that It will so result.

THE IRISH RIFLE ASSOCIATION

E have this week an arcount of the meeting held at Dublin to receive the report of the international rifle match, and the speech of Major Leech upon the occasion. His kind expressions of regard for Americans, and hearty appreciation of the efforts made for the entertainment of himself and friends is very pleasant to read, and bespeaks a most cordial reception for our "Team" when they visit, in June aixt, the green shores of the Emerald Isle. The proposed invitation to the captains of the Engrand lish and Scotch teams to send a representative to Dublin on the occasion of the infernational untel is a graceful Shield, which has hitherto been competed for only by members of Irish rithe clubs, a still greater expression of

good feeling.

The gullant Major also hoped that the English authorities would invite the Americans to Wimbledon to conquete for the Elcho Shield; and, should time permit, the crack of a "Readington" or a "Sharp" may yet be heard at the headquarters of match shooting in the old world. The inheadquarters of match shooting in the old world. The in-vitation of Major Leech to our men to be bis guests while on Irisb soil is characteristic of his warm hearted countryoren, and the suggestion that the final match be shot at Philadelphia during the Summer of 1876 promises to add one more to the many attractions of the centennial.

CABLE IRON TESTS.

THE experiments of Commander Benidslee, regarding the testing of iron as to its strength and durability have not only proved of value to our own Navy depart ment, but are altracting the attention of those interested in the subject across the water. In the course of his experi-ments Commander Beardslee has discovered that by a process of his own, by combining scrap iron, old boiler plate and other comparatively worthless material, he has been able to produce iron of the very best description. He has succeeded also in improving the quality of inferior iron and reducing various qualities to a uniform strength. He los invented several useful experiments for testing the strength of iron, particularly cludu cables, as in the cable the greatest and most uniform strength is required. In commenting upon this important subject the Washington Republican says:-

Republican says:—
The standard adopted throughout the world as the strength of cluim cables is the so-called British Admirally brenking strain, being a steady, uniform strain in the direction of the fibres of the metal. This less is found to be defective. Experience proves that an Iron that will stand this severe strain wilbout brenking—when subjected to and den shocks, breaks readily. It is also shown by experience that it is these sudden shocks, such as that produced in paying out and hauling in caddes, and the pitching of the vessels when at anchor, and the slucking of bridges of iron, and especially the shock to guns in the repeated discharges, which breaks it. Commodore Beardslee's experiments are directed more especially in the producing a quality of iron which will reson these shock tests. To accomplish this, he has invented and is using a very simple and accurate machine. Some of the results of his experiments are us follows:—

which with tests and is using a very simple and accurate machine. Some of the results of his experiments are as follows:—

A cable constructed of our and a half inch iron sustains the British Admirally breaking strain of 135,000 pounds. A link made of this improved iron withstands a strain of 160,000 pounds. For a cable of two inch iron the British Admiralty test is 257,000 pounds. A llok of this iron was carried to a strain of 266,000 pounds, breaking the nuchine, with no apparent effect upon the iron. The experiments with the machine for the shock tests are remarkable. This machine is something like a pile-driver, raising a weight of 90 pounds to a height indicated by a scale of feet, and letting it full upon the bur of iron. Some of these tests as witnessed are as follows:—A bar of two and three sixteenths inches of iron, such as has been furnished and used under a contract for cable, broke short off with one five feet blow of this machine. Another har received althow of three feet fall, with no sign of injury. A second of these feet has been furnished althow of three feet laroke it like glass.

This same from after going through this know process of mixing and working and subject to the shock lest was as follows:—A 2-loch bar should four 30-foot blows outlier bur, some diameter, broke off at the lifth 30 foot those.

The extremes shown are from one 5-foot blow to the 20 foot blows upon the same diameter of iron. This new process can be made to show greater sucress than this, even in withstanding eight or ten 30 foot blows, in the squadity would require so much labor in unking as to reader it to expensive for use.

The effects of these experiments are to produce iron from comparatively worthless metal of as good quadity and as cheap as the best; and being much stronger than urilinary from great reduction can be used in the weight of atmoment and after asset for which hom is applied.

An ibout of local interest in this connection is, that under the operations of Commander Beatslake, and by bis system of emphying mechanics, ha is making four follows of cathe per day at each large, at a cost of lobar of \$3 per fathous, whereas, noder the old system of his officer asserts that if sultable appropriations he monther two mades and a half futhous per day cost \$1.80 per fathous. This officer asserts that if sultable appropriations he monther can employ large numbers of men now aut of employment, returning to the Government dollar's worth of or ork for every dollar thus paid ant, and can manufacture rubbes and other materials of this interoved from at rates for helow those now poid for such material, thus saving expense to the Government and supplying work and norms at sufestscare to many families now destitute and suffering.

Share Talled Guorse.—We are in recelpt of many

SHARY TAILED GROUSE.-We are in receipt of many letters from our putrons and correspondents empiring where plunited grosse may be obtained for breeding purposes, and if they will breed in confinument. In reply to such impairies let us say that although this variety of grouse such impairies let us say that ulthrough this variety of grouse can be procured in any quantities, yet we are fully convinced that the sharp fulled grouse, which are to be found in great abundance in Wheenish and Minnesatu, are dechiedly better adapted for the above purpose. Their imbits approximate much mener to those of the ratical grouse, and consequently they would readily take to the tidekets and symmps and praceet themselves, where we have no doubt they would some increase to such an extent as to afford all legitimate shouters excellent sport. Moreover, for the table, there is not a better bird, in our applation. The hibits of the plunded grouse keep them so much ex-The hights of the plunated grouse keep them so much exposed in the open places that they are generally shot off before they have time to breed.

GAS LUBITING BY ELECTRICITY.—This subject has ex eited the Interest of several of our correspondence, who have impaired whether any city was lighted in this way, and effected the statement that a part of Sidem, Mass., was so lighted. We are now indebted to a Philadelphia cor-respondent for further information. He writes:—

respondent for further information. He writes:—
Enrous Funker and Sankau:—
In your looks and Sankau:—
In your looks and sankau:—
In your looks and shakury 28th last, "8 the gas lighted up by electibity.
&c? It may be interesting to your currespondent to learn that offour six months ago became a paper reported that after many fulfines an apparatus had been lawened and successfully trood at the elty of the blotters.
Buthen, by which all the street hamps were simultaneously lighted, and also exchinguished at the suma moment. A description of the apparatus, was not given. The report stained, however, that presours was employed as the means in praduce the desired effect, instead of effectivity, which had fulled, and is subject to many drawbacks. Now, such arrangement, may be very well adapted for the purpose of dimentaling in one moment that streets of a city; it remains, however, in the rem, whether it would not interfere with the interest and convenience of partles using gas in their dwellings and establishments at times when it is not used in the streets. On title point the report sail untiling.

Preprint a sum of the print sail untiling.

Picusonat.-We were favored had week with a call from Mr. Stanley James, the English author, who arrived on the White Starsteamer "Advlatle." He contemplates making a tour through the Southern States, and has engaged to writing a scries of letters for our contemporary "The South." Mr. Junies has contributed occasional articles for Foiglest and Strigam, and it is not unlikely that he may fuvur our readers with a random sketch during the perbut of his

FRANK COMAN'S SKULLERY,—The cereutric cilitor of "Prink Comin's Paper," published at Greensburg, Pa, is an enthusiastic maturalist, and rytshing to enlarge his callegtion, mivertises to exchange yearly subscriptions for Skulls of all kinds—parathers, with eats, wolves, house, morieus, wessels, wolverines, atters, tadgers, racrooms, bears, beavers, gaptiers, potenjdats, mouse, elk, birds, reptiles, listies, and variants in general. A great hallocanical to subscribe is thus held out to students of antical tistory. Contributions may also be expected from been hidle players, (skulls of buts,) and from oarsmen, especially of the Schnylkill Navy, who doubtless have many spare sculls on the shelf, to say nothing of sculpius, scullious, sculpturs.

—Several successful experiments have been made at

Newport, R. L., with can torpiches upon the ice in the harbor, by officers and employees of the torpich station. Dwing to the great thickness of the ice the columns of sprny did not reach the height of over twelve feet, lad the surface was for a long distance completely shattered.

-From a dock of 31 white Legharn fowls, 29 hops and 2 rocks, Mr. E S. L. Dolliver, of Gloucester, Mass., last year matted \$119.52, an average profit of \$4.12 to each

-Visitors to Florida can now go from Jacksonville to St. Augustine by steamer to Tocol, and return the same day, having three hours in the "Anchent Chy."

La Masan —Among the mony words with which the English sporting vocabulary has puriched the French language, we have to record the latest addition at la masch. The Journal Official des Courses sur Trot devotes nearly a column to a description of a bran mash.

The Rifle.

THE IRISH RIFLE ASSOCIATION.

MEETING AT DEBLIN-MAL LECEU'S REPORT-THE IN-TERRATIONAL MATCH AND THE WESTERN HUNT-ACK NOWLEDGMENTS, THANKS, &C.

T is well understood that Mxj. Leech, the galbant Captain It is well uningestion that May, faceth, the garbon Captum of the "Trish Team," is coeraged in publishing a letailed review of the "Trian's" visit to America last Autumn, which will include the "International Match," the "Western Hunt," and the Major's own personal experiences. We observe, however, in a copy of the Duldin Moil, which Maj. Levels has grandarsly posted to us, thus this report has been partially unticipated in an address delivered by him on the 5th instant, before a cannel of the "Irish Rille Association," in Dublin, at which his had ship the Lord Mayor president. The occasion of the meeting was "to receive the report of the recent Interestation." Rifle Match in the United States and for fixing a day to hold the annual meeting of the members." We condense to suit our limited space. Mr. Leech said:—

hold the annual meeting of the members." We condeuse to suit our limited space. Mr. Leech sud:—

My Lord Mayor, the duty has devolved on me of making some remarks on the visit of the Irish Tran to America, which originated in a challenge sent by me in the mouth of October, 1873, to the Americans, at a time when the Irish were champions of Great Bribain; and ofter a somewhat lengthened correspondence, which was carried on to the carl in the Irishdiest spirit, the terms of the match were agreed upon and all arrangements made for the stort. [Here follows allusion to the generosity of those who contributed to definy the expenses of the trip.] By a curious coincidence both the English and the Scottish Presstreated the underlaking with a sileare which would have been chilling, but for the worm advocary of our own newspapers. Our arrival at New York was amounced by the Press there in a spirit of cardiolity and friendship that make us field donce that we had come to visit friends. Deputations from public leadies received us on arrival, and conveyed us in carriages provided for the purpose to our house. The chilis, the theatres, all places of public resort were opened to us, colectainments were got up in our house. The chilis, the theatres, all places of public resort were opened to us, colectainments were got up in our house. The corporation of New York. The rity of Brooklyn gave a splentife luriagnet in our houner; the citizens vied with one another in trying to make us feel happy and at home. The account of the match and its results has been well told in the prints of the day, and then, indeed, the English papers could not ignore us. The result of the motteh and its results of the motteh ran scarcely be considered a defent. This true we lost it by furre points, and, perlongs, I may say, as unmy of the Americans did to me, that the Irish lunked to such a return match in Dublin, which phollenge was ally neverted from our friends never that the match to feel that our countrymen appreciate the native that the levisb team

reception here will be of a character suitable to the occasion.

THE MAJOR'S TRAVELS AND THE TEAM'S WESTERN HUNT.

While in America I took the apportunity of visiting Canada, where I received unch rivility, and I afterwards traveled to Bullalo, Detroit and Chicago. In this latter city I paused for some days, and again met some of my Irlends of the team, &c., who had accampanied Mr. Hallock, the editor of the Foursy and Struck newspaper, or a trip to the praines organized by that gentlemen for some hig gome shouting, as well as a trip to Denver and the Rocky Mountains by others of the team, who were most kindly freated by Mr. Archer. Lord Massarcene accompanied a Mr. Banks on mouther game shooting expedition. In Chicago I had the honor of leging presented to President Graut and his family. A more courteens gentleman or nacre mustentations family I did not meet with hall America; and to the officers of the President's stuff my thanks are due for touch coursesy. I troveled to St. Lamis and New Orleans. Here a deputation from the New Orleans Rifle Club visited me; and at the request of some of the gentlemen I visited their range, when one of their number, Dr. Beard, presented one in the, name of the club with this gold needal, a prize that was won by Major Slajdey, who waived his chain it of it hat a view to its presentation. I need scarcely assare yon have much I while such delicate attention. I then proceeded to visit the great Cive of Kentacky, and so on to Louisville. In the revening I was seretuaded with a band of music and vertila addresses. I have since received a written address from this commany. Thence I went to Checimati, and then a very long journey awaited me through Virginia and over the Allecheny Mountains to Washington, Baltimore, Philadelphia, and lock to New York, where all the civilities that were aftered to us on our arrival were repeated to me on my returu, with this difference, that I was received now as an old friem. In New York I was unanimously elected an honorary director of the National R

I did not imagine the notice which was offered to me in America was extended to me on other than public grounds; and in my representative espacity as Captain of the Irish Team, I availed myself of every public apportunity that was allumied to me in arepting the American courtesy on

Tenni, I availed myself of every public apportunity that was allumled to me in arcepting the American courtesy on these grounds.

To make our meeting in June here in Dublin as worthy of the visit of the Americans as possible, I propose that we invite the Captain of the English International Team, and that, in like manurer, an invitation of a similar character leesent to the Captain of the Scattish Team, each to send a representative team here to meet the Americans. If would be a graceful compliment, that I feel both England and Scotland will have pleasure in paying to America. I have invited the Captain and the American team and his men in reserve to do me the honor of being my goests shring their stay in Dutdin in June med. I may also whil that the prize of the "All Ireland Chollenge Shield," hitherthe completed for by representatives of rifle clubs in Ireland, will be opened on the occasion of the visit in June in the Americans, and to no other nationality. By the rules of that match I have reserved to myself the right to after them from time to time, and I now see fit to the so on this occasion only. I feel that we are called upon to extend to only visitors all the privileges we muselves possess at this meeting, and I may not without hope that the Wimbbedon outhorities will also invite the Americans in send a team to Wimbledon to empete for the Elelin Shieht.

Whoever may win the united here in June, I propose that the return match be shot in Philadelphia, in compliment to America, during the centenary year 1870. There touch the no mure fitting uccasion for doing honor to America than at the celebration of the one humbreth amiversary of no independence which England has long since recognized.

The Lard Mayor said, as far as in his power he would embeaver in compensate with the association in giving their

stry in the magnetistate state. The lard Mayor said, as far is in his power he would emleavor to co-operate with the association in giving their warm-hearted friends in Atoriea the welcome they so richly deserved; and he hoped that although the American Tenm were to be guests of Alajar Leech upon the areasian of the coming match upon frish soil, they should not be left altogether with hinz, and he, for one, should endeavor to take them from him, and he was sure that other friends should do so likewise.

Though were voted to the Mayor and Corporation of New

Thouks were voted to the Mayor and Corporation of New York, the Mayor and citizens of Brooklyn, to Colonel Church, the Chairman and the (Juncil, of the National Rille Association of America, and to Colonel Wingate, the President, and the Amateur Rifle Club.

With respect to the address from the city of Louisville, a sub-committee consisting of Messrs. Johnson, Righy and

Foster, were appointed to prepare a suitable reply.

The Hon. Secretary was requested to address a letter to
the New Orleans Rifle Club in acknowledgment of the conresses paid to Major Leech in his representative ca-pacity as Captain of the Irish Team, and to Mr. Hallock, the editor of Foigest and Stream newspaper, thinking him for his kindness in organising a shaoting expedition to the prairies, and also to Mr. Parker, editor of the American partsman for his attention.

Friendly telegrous, that had been received from Ontario

and Buston the day before the match, were read. mittee was appointed, with Major Leech as Chairman, to make all accessary arrangements for the meeting in June.

Major Leech exhibited a gold medal which had been presented to him at New Orbans by the New Orleans Rifle Club, and the beautiful gold badge which he had received from the National Rifle Association of America

THE INTERNATIONAL MATCH.

SOL WINGATE presided on Fridny last at a meeting of the joint committees of the National Rifle Asse ciation and Amnteur Rifle Club, held at his office, No. 194 Broadway. The committees lu question were those ap-pointed to make the arrangements for the international match to be shot in Ircland in June next. It will be seen that the challenge from the Ontario Any-Rifle Association was necessarily referred to the Amateur Rille Club, the committees in session having been appointed for the specille purpose of arranging the preliminaries of the interna-tional match. The minutes of the previous meeting having heen read and approved, Mr. Henry Fulton, of the subcommittee on the selection of the American team, submit-

led the following report, which was approved:

Resolved, That the American team to shoot the intermetional match at Dublin, Ireland, in 1875, consist of a capmin and nine men, who shall be selected from native boru eltizens of the United States, as follows:

First—The standing of competitors shall be determined from four cansecutive scores of forty-five shots each, each score made in a single day, (without sighting shots,) consisting of lifteen shots at 800, 900 and 1,000 yards.

Second—The members of the American team of 1874 shall be allowed to stand upon the four sectes made on their four last competitions at Creedmoor in 1874, coding with the Bennett match, provided they signify their clootion so to do, in writing, to the Secretary of this committee on or before the 1st of April, 1875.

Third—All other competitors shall be required to shoot

tee on or before the 1st of April, 1875.

Third—All other competitors shall be required to shoot in four competitions, at times to be herenfter designated. The nine competitions, including the members of the team of 1874, standing upon their scores, who show the highest aggregate in their four scores thus made, or upon which they stood, as above provided, shall constitute the team for 1875, and be given their rank thereon, respectively, according to their scores, subject, however, to the following provision: That such members of the team of 1874 as do not receive a place upon the team of 1875, under the foregoing rules, shall be allowed to challenge an equal number of the said team of nine, as above selected, connecting with the ninth man, to two competitions, to be under the direction of this committee, and the victors in these two competitions shall be members of the team.

Fourth—Should any vacancy or vacancies occur in the

Fourth—Should any vacancy or vacancies occur in the leam, as thus selected, before the day of sailing, it or they shall be filled by placing therein the competitor or competitors whose score or scores are next in order of myrit,

as shown at the end of the four competitions ahove provided.

rided.

Fifth—The captain shall be chosen by a majority vote of the nine men constituting the team as suon as practicallile after their selection, in accordance with the conditions berein provided.

Resolved, That this committee elect as Superintendent of Firing a practical rilleman, who shall act as captain of the team until the captain is elected.

Resolved, That the team of 1875 shall be required to engage in such private practice on the range as this committee may direct.

The four highest scores of the American team referred to in the foregoing resolutions were as fallows:

THE AMERICAN RIFLE ASSOCIATION OF WESTCHESTER COUNTY - Washington's birthday was celebrated by the abuve association in a series of matches at their temporary range near Mount Vernon. A large number of New Yorkers were present, and participated in the exercises. Representatives of the Seventh, Ninth, Twelfth, Seventy ninth, Sixty-uinth, Eighth, and Twenty-seventh infantry, and Third envolvy, were also on the ground. Three matches were in mogress during the day. Target No. 1 was tended. were in mogress during the day. Turget No. 1 was reserved for the De Peyster Badge Match; turget No. 2 for the "All Comers," while No. 3 was used for pool shooting. Below we give a summary:—

HE PEYSTER BADOK MATCH.

Badge presented by Gen, J. Watts de Peyster; value,

\$300. Description.—It is to be of gold, having for a ground work a sno, with alteraring rays, which gather in an outer vicele, and are there chartered so us to form an eight pointed soar, upon the blazoned here of the soa Apollo stands in his charred of the sno, an Indian with how and arrow on one side, and an American ritherma upon the other, but of whom stand upon a onse formed of weapons of war at ancient, methavial, and

Conditions .- Open to any member of the National Guard, in uniform; adding ritles only; showing from shoulder, off food; distance, 200 yards on temporary range, 300 yards on new range; must be won three limes before properly passes; seven scoring shots, two sighting shots; entronce, \$1

The leading scores were as follows:-

Nume and Regiment.	late		Sci	ure		- 1	otal
1 P. Rufddas, Saventy-first	Reiningloid	4:	2.4	3	4 8	3	23

THE SUBSCHIPTION MATCH.

Entrance, \$1; entrance money to be divided-one third to association, balance between three highest scores; distance, 200 yards, shoulder shooting, off band; five scoring

The number of entries in this match was eighty-five The shooting being of a pool character, many renewed attempts were made to gain the stakes. Hon, C. M. Scheiffellen entered about twenty times, and succeeded in taking a double portion of the money. E. H. Madison, of the Twelfth Regiment, received \$19 20 for the highest score. The principal scorers were as follows:

Name	Score.	Total
E. H. Madison	3 3 5 5 8	350
C. M. Schetfellen	25435	19
C. M. Scholtfellen	54883	18
E. H. Sandloid	3 5 3 2 4	17
S. F. Kennedy	13333	16
J. J. O'Kelley	44288	14
Thos. Duke	15804	16
A. W. Peck	43540	16
T M Henderson	1233	15

Among the noticeable features of the day was the

promptiess of the announcement of the residt. The entries closed at four o'clock, and at twenty minutes just the winners were notified of their success. This is due to the indefinitigable exertions of Col. Underhill, the President; George Oscar Starr, the Spectary, and Mr. H. E. King, the Officer of the Day. Among the gaests we unticed Grantlydec, Major B. A. Valentine, Inspector of Rifle Practice Fifth Brigade Spuff; Hon. C. M. Scheiffellen, member of Assembly for the district of Westchester; Capt. Presentl, and Hon. H. Ohlell, member-elect of Congress. The ritles and Hon. H. Odell, member elect of Congress chiefly used were Remington's.

-Several members of the Amateur Ritle Club, including —Several members of the Amateur Rule Club, itechning Messrs, Fulton, P. E. Sandford, and Crumch, passed the 22d at Creedmoor, making scores fully up to the average. The range was in a very moist condition, and the shooting conflued to the 500 and 800 yard ranges. Wu give the elevation and wind guage on that day, and in view of the importance of these particulars in assisting to heigh shooting to a condition of mathematical precision, we shall publish similar recovers at all seasons when they are obtained by lish similar records at all seasons when they are obtainable.

-The Messrs. Remington have forwarded Major Leech one of their match rifles, ordered by him before leaving this country. The rifle, we know, will speak for itself as a this country. specimen of American workmanship and skill.

Game Bag and Gnn.

GAME IN SEASON FOR FEBRUARY,

Fine Photnon.

Deer, Wild Turkey, Woodcock, Quall, Suipe, Ducks and Wild Ford

Under the head of "linus, and Fish in Search" we can only specify in general terms the reveral undeles, because the laws of States energy in much that were we to attempt to proficularize we could do no less than publish those eather sections that relate to the knots of yame in question. This would require a great amount of our space. In it of prading given we are guided by the laws of nature, upon which all levissiation is founded, and our readers would do well to provide themse we with the laws of their respective States for constant reference. Otherwoles, our attempts to assist them will only create confusion.

GAME IN MARKET -Game is scureer as the close of the senson approaches, and prices have advouced accordingly senson approaches, and prices have advanced accordingly. Antelope from Omala are coming in plentifully, and selling at 18c.@25c. per paund. Pinnated Grouse (Prairle Chickens) have advanced to 65c.@75c. per pair. Ruffed Grouse are quite scarce, and bring \$1 25@\$1 50 per pair. Quali have advanced to \$3@\$3 75 per dozen. Canvas back Ducks, \$2@\$2 50 per pair; Red-heads, \$1@\$1 25; Malacts, 75c.@\$1; Widgeon, 50c.@75c.; Brant, \$1 25@\$1 50; Wild Geese, \$1@\$1 50. Squabs are selling at \$3 75@\$4 50; Rabhits, 50c.@75c. per pair; Hares, 50c.@75c. Canada Buuting are in great ahundance at 75c. per dozen.

Look out for geese and duck shooting now all along the coast from Norfolk to Moutauk Point.

-There is great excitement among the sportsmen at Bacnegat latet over some unprecedented geese shooting. The following large amount of geese and ducks was killed in three days last week at Barnegat Inlet, near Kinsey's Ashley House:

Ashley House:
Friday, February 12th—J. Birdsall, 23 geese, 16 ducks; Joel Ridgway, 8 geese, 9 ducks, 1 brant.
Saturday, 13th—William Iuman, 4 geese, 3 ducks; Soper & Inmau, 8 geese, 16 ducks; John Soper, 2 geese, 8 ducks.
Wednesday, 17th—Joel Ridgway, 14 geese, 6 ducks.
Predmore & Clayton, 10 geese, 15 ducks; William Inman, 1 goose, 12 ducks; Soper & Inman, 6 geese, 14 ducks; Parker & Clayton, 20 ducks; Jessic Birdsnfl, 12 geese, 2 ducks; Jarvis Ridgway, 0 geese, 8 ducks; J. T. Mills, 3 geese, 6 ducks.
This is the best shooting ever known in these waters, and our readers will recognize the names of some of the

and our readers will recognize the names of some of the

of the gunners.

The well-known reputation of the gentlemen who have recently organized the York (Pn.) Sportsmen's Society for the Protection of Game, is a guaranty of itself that the laws will hereafter be strictly enforced in that district. We have given in a previous number the names of the officers for the current year.

—Fremont, Nebraska, has its sporting club, made up of good men and true. Officers are:—President, D. M. Welty; Vice President, Geo. Maxwell; Secretary, H. J. Reveillac; Treasurer, F. Jenewein.

-The "Central Association for the Propagation and Pro-tuction of Game" was established in New Jersey last year for the counties of Middlesex and Somerset. Its officers are:—President, Edward Howe; Secretary, A. P. Lanning, By act of the Legislature, each members is invested with the powers and immunities of constables, to make arrests without process. This is a good feature, making members efficient, and keeping them on the alert to discover of

—A large herd of buffalo are reported to be wintering in Dukotah in the vicinity of Devil's Lake, hetween Fort Totten and Jamestown, on the Dakota or James River. Estimates put the number at 1,500. They go about in one herd, and from the best calculation have wandered from the region of the headwaters of the Saskatchewan, nearly 1,000 miles distant. 1,000 miles distant.

-The Tremont Shooting Club of Boston has a member-ship of about 100 and a balance of \$500 in the treasury. At the annual meeting, held at Young's Hotel, on Tuesday evening of last week, the following officers were elected for the ensuing year:-President, Joseph Tonks; Secretary,

Thomas H. Snow; Treasurer, Osburn Stemms; Executive Committee, C. P. Keeler, S. B. Newton.

SPIGNO SNIPE SHOPTING.—A carrespondent of Turf, Field and Firm writes from Snekville, New Brigaswick:—For the last four years the breeding snipe have been scarce with us; perhaps the April shaping in the United States may account for this. The snipe that breed in this province leave for the Snath towards the end of September, and us our shouting commences about that line we depend on the shipe that come in from the North or their journey to the Snath.

In snipe are shot here in the Spring; the small brees even would cry shape at sach a proceeding. The birds are ready to nest in a few days after their arrival here in the Spring;

—"Blue Stone," of Algunos, writes to us of a five days' trip to Canula recently, in company with a Triend, during which they killed five deer, one of them a back weighing 250 panuls. By way of variety, they fished for pake through the ice, taking thirty-eight in one day, varying from 24 to 24 pounds in weight, and 1,200 pounds in all. These are what migid be called satisfactory results.

Маssaphesetts State Scortsmen's Association —On 19th list, an enthasiastic convention of sportsmen was held, at the Bay State House in Worcester, for the purpose of forming an association with the above title. About 100 delegates from various parts of the State were present, and the subject of active legislathor booking to the protection of fish and game was discussed with much interest. A constitution and by-laws were salopted and the following afficers elected:

President, John Boyden, of Worcester: Corresponding Secretary, Dana K. Filch, of Worcester: Recording Secretary, B. F. Bowles, of Springheld; Transurer, E. C. Whitney, of Marlboro', Executive Committee—John Boyden, B. F. Bowles, George Drluno, of New Bedford, L. Admus, Boston, and Joseph M. Hoyt, Lynn. Committee on laws and Legislation—The Hon. E. H. Lathcop, of Springfield, J. Cahm, Jr., New Bedford, and A. W. Curtis, Spencer,

The following were elected delegates to the National Sportsmen's Convention to be keld at Cleveland, Ohio: John Boyden, Lather Admins, of Buston, the Hun. E. H. Lathrop, George Delano, and T. L. Sturtevant, of Birmingham.

The proceedings were very harmonisms, and many valuable papers were read, eliciting animated disensions.

Miranus, Abdoms, Pelr. 19, 1875

ROITOR FOREST AND STREAM!-

In your misuers to correspondents, issue of 11th, your say, "No close reason for quait and torkeys in Virginia." I am confident you will, upon examining the law, find that you are badly inistaken. Being a native of that State 1 stouch be glid to see the error acknowledged.

[We examined the law of Virginia, as given in Far, Fyn and Fonther, and based our statement on that. Who will send us a true copy of the Virginia Game Law?—Ed.)

LAMINATED STEEL BARRELS.

NR. 24 KLM STREET, BUSTON, Feb. 9, 1875

EHCTHR FOREST AND STHEAM !-

In your lesses of the 4th t perceive here currespondents dispute the position taken by myself, that the buriels imported here are rerought termed laminated steel, as are other partions also adjected to. My challeathin may be lengthy, but the lamportance of the subject may possibly need a little forbearance on your part in thus occupying valuable

termin many he lengthy, but the langerormoe are the subject may possibly norder a little forbearance an your part in thus occupying valuable space.

My letter of the 23d January anticipates, I hallove, a good deat of what has been written by O. A. C. and T. H. Marsh, inco little mace ventilation by discussion will assist the solution of the difficulty. O. A. C. mentions firstly, that it is an infinity true of sivel and from, which is used in less tarrels. Now I cruteful that the captonition of subclastices of megant deasity is amhestrable in a gan harrel; first, that may great inequality of deasity of nathrees, which carbon certainty introduces, must make fixed apparent in the Interior of the indee, surreparticularly by oxidization. If it foce not share this, then the addition of steel is minocessary and the rom burd compal at least for the purposes of rodsing corrosion; moreover, the increased risk in maniputation must not be long-ting corrosion; moreover, the increased risk in maniputation must not be important seconally, the well of from and steel is not to design sheet, this is in portant; seconally, the well of from and steels and to form the form of welding the steel input to the barrel, this was combilined an important objection, with the previously mentioned face of the dillectence of temperature requisite to effect a midy during the welling operation, seems in me sufficient evidence against the general ross of steel will trunch the manifecture of four risk. T. H. Marsh, urgos that it is only inferim makers who adopt this system; it may therefore form a fixed before an adopt of the process of constantiality, then risks here will dos apply to T. H. Marsh. The different entities of steel mentioned as being asset in the preparation at living of steel fixed in the steel after the purcess of constantiality, then risks here will disc apply to T. H. Marsh. The different entities of the four manifest and humaned is an adoption, and then the purcess of constantiality. Here are also an adoption, the form and the

this manner. But what does this admission likewise lead us in think? Why, or that by any means the name of stool can be introduced to cataly a stool foring guardle. Still, to satisfy the necessities of the guardle. Still, to satisfy the necessities of the guardle stool by heating, a clding. Ac., and will just mention that some pears look, when the cold draw it stool burrels means tried. It nots in this receive forms to have introduced and subjecting nor redshing heat that in their being cold draw it as a considered the advantage. It or stands this heating, redshing and continuous handmering with more precision and restainty than does steel, consequently its superficity.

T. H. Marsh speaks of Kugush damas us being recognized by white and dark lines. He may not be not acc that the black and white hours, not it is beausd in Burningham, can be referred our above any horsels, and is generally not upon the horsels when they died by monotous grave, in superfections in the metal, and is backed upon in this country with admiration, believing it betokens sirel, which, in wells, a would be un important problems in the same heatinghous, and bearboot principally by the action of radiate. The thir paragraph states that tax met's humbard stool gives good results at the before zero. Very possibile, if the materials it the four zero. Well possible, if the materials it the four sero, it is not a bring to the provide the four sero, which has not provide toy are sized, much be no guarantee as in the effects of possibile, if the materials it the his better. Are they steely even general the surguistion that a four horrels sound climate change, and which has not provide they are sized, much be no guarantee as in the effects of a metal to the generally introduced for public use, as before the leady of a metal to the generally introduced for public use, as before the land horse of first the effect, and have land to generally introduced for public use, as stony, but find his hours in a four form had not a fron can, by the sound of the

MORE SHELLS.

KINTING POREST AND STREAMS-

The pursition whichier appears metal shells are preferable means in he aging the infinite of your many correspondents, and the "procumitance" are energethenly discussed in the spectament's clubs, many strong arguments being infranced by the friends of each. But few, horizons, it may of the netters on this subject seem to have made thorough justs by actual experiments.

may of the writers on this subject seem behave made thorough hosts by actual expartments.

Incling the past year I have devoted mucletime to this and other matters periodiling to the goa, and one day while conversing with the "Squited" (these was laden you entheed thin from our quited "fillings"), he requested no in sould you the result of any expartments, and, yielding to his solicitations, I send the figures of one day's nock. I have many more lattles, but nearly the same conditional reached in each case, both with the 12 and 8 gaings gains, this one will around.

The gain used was a 12 gaings, 24 finch burrel, neight, 8 pounds; chain burrel for either paper or metal studie. The plath brown junger and the Drique triuss shells are a need. Product, Dupant's No. 1 tracking, very carrier; Start, Sparks' No. 7, 317 in this cancer; target, 23x.8, nm square inches. The 30 in heritely, I believe, contains about 70s square laches. Penatratian pais made of ticks magazines, can in hall, one part to half cale the penetration of the paper, the ather for the metal shell. Capute shells could be this manner, next to purpose a thin No. 11 card with their may at Can (depending aport the amount of shot to be used tool. Paper shells tooled in this manner, next to purpose a thin No. 11 card with their more at Can (depending aport the amount of shot to be used to 1. Metal shells; on purcelor at thin No. 11 card, the no No. 10 "plate edge," and on short a for the metal short, and the inflor following gives the average of the three shorts, an atthough like table imposers to inflicate tout eight, there ever trainty from shorts dred.

Shell.	Puwdet.	Short.	Distance	Penetu Hon.	Pattom.
Paper	a druchms	Louise	25 yards	67	229
Metal	3 itraclins	1 mone	\$5 yeets	61	211
Paper	3 ilriclino	1 onnie	40 yurila	35	Tos
Metal	a rtuction»	Lottics	40 yanls	85	115
Paper	3) druction	1) known	25 yands	6H	967
Metal	at deachma	I≨ unuca -	25 yarda	69	213
Paper	31 detection	B onne	40 yurds	39	190
Metal	ti drachma	I) mace	20 yarda	31 _	_ 60

It do not close that my exp, rise was prove conclusively the superlivity of paper shells; but they show that in this gad, at least, but the terra and power ather may be received by disc tree. I can foss no a protective for them for acony mesons - principally for their nearmest, cleared bases, security will while they rebut the charge, and the availing a having in early frome, after a hard day's training, for same bulk as and his last in the murrhing.

A talstake is made by termy in reimpling town with great force a half line or neare of the shall, as without doubt it has the same effect as hard rearming if this shall in nearest leaders, crossing aughessant needl and poor patters. This is readly availed by placing one, too, or three thicknesses (depending upon quandly of provider and shot need over the provider, which, with tho shot, will did the shell within an eighth or quarter of an inch, enough to firmly secure the charge.

None of these suggestions are need theories, but the results of many and repeated experiments—though that on "inde for localing" is good in all cases, but that every owner of a gain most find by actual and recorded tests the heat cloage and manner of fouling. Beping to beer mote on this subject from brither sportsmen, themany, a sincerely,

BRODGERS, Fobruary 16, 187*

BRIDGETS, Fibruary 16, 1877.

I want to grandle at the hubit our sporting papers have of publishing thems of laterest" that may have occurred to Norway, Paragonia, or the Santiwich Islands. What do we care about telader its Laphind, annish to Anstralia, or the National grands in the Anstralia, or the National and a littling Certainly not own confluent can furnish more assetut knowledge, and subjects are not wanting, that will yield interesting spiriting items connected with done matters. If sport mere, in their laters reporting localities for dising and luming, trivial give more advice with regard to the means of reaching ruch localities, it would often mailie offers to share a portion of their good fortune, which a true sportsman would not, I taluk, object to.

— Bell's Life in London is reperhiting its original descriptions of interesting sporting events, many of which possess unusual interest from the fact that they were reported for that paper alone, it being the only one which at the time paid special attention to sporting matters. The last number which rumes to as contains the account of the famous America's victory over the yachts of the Royal squadron in the race for the Queen's eng, and the subsequent match with the Titania, and it is not without a thrill that even at this late day we read the account of this signal victory, which not only gave renewed impelus to yachting on tory, which not only gave renewed impetus to yachting on toth sides the water, but in England wrought an entire rev-olution in model and rig. Of her first appearance the above

manned Jonital says:

"Until the America came over, the few who were aware of the fact that there was a flourishing club at New York did not regard it of the slightest cusequence, or as at all likely to interfere with their monopoly of the glory of the maniest and most useful of all sports. The few trial runs the America made after her arrival proved she was possessed of great spearl, and that the owners were not so little justified as at first they had been thought in offering to bark on mutried vessel against any guest in our waters for the large sams of £10,000, or for a cap or piece of plate. As the slay of the floyal Yncht Spaadron's grand match drew near the entries become numerous, and 1851 will be ecclebrated for the largest number of starters for the Deby and fact the 2100 cap respectively that were perhaps ever known. The conducts of the Americans since their arrival in the Sodent had been bold, marily, and straightforward—qualities which Englishmen respect wherever they are broad to the same proposed wherever they are broad of the longer speed wherever they are broadly on the low black hall of "the Youkee," and spoke dealtifully of the channes of her comparison the parlos' to the attic, and the old "salts" on the loads goed institution of the control of the large cutter in heating in to wing out the unit in tacking; while more were of opinion that the Arabea wantle carry off the eng. "Motor of the large cutter in heating in to wing out the grantest difficulty the little town gave space caught to the multimities that came from all quarters to winders with the grantest difficulty the little town gave space caught to the multimities that came from all quarters to winders and every facilities to meet the demands of their guests. Among the visitors were mony strangers—Frenchmen and epithement of the repulse of the impartance of their contrived, with the grantest difficulty to slight manifoliated such as the part of the formatic parts of the repulse of the formatic parts of the formatic parts of the format

respect to the Queen not the less becaming because it was bestowed by Republicans. The steamers, as she passed on, renewed their cheering.."

Although a protest was entered claiming that the America had not sailed the proper course, it was promptly overruled, and the well won any awarded to Mr. Stevens. Subsequently a match was sailed with the Titania, and won by nearly an hour. The later history of this remarkable vessel is still fresh in our minds—her sale to the British, and subsequent capture as a blockade runner during the war—her appearance in the race for the same Queen's cup when Mr. Ashbury tried so hard to carry it back to England. She is now the property of Mr. B. F. Batler, and will probably be seen next summer at Nantucket, the Isle of Shoals, and more pretentions Newport.

—Yachtmen have taken advantage of the ice in Dorches.

-Yachtmen have taken advantage of the lee in Dorchester Bay, Boston Harbor, to re-measure their different regatta courses, which have hitherto been the subjects of contention as to actual length.

-The Lynn yachtsmen are induging in ice hoat cruis-

-The Schnylkill Navy Regatta is set down for June 16th and 17th.

—The yacht Annie, Thomas, master, of the New Yorl Yacht Club, is now ernising on the Indian River, Florida

—The yacht Eva of the New York Yucht Squadron, with her owner, Mr. E. Burd Grubb, and party of friends on loaded, arrived at St. Augustine on Monday last. She experienced heavy weather between Cape Hatteras and Savannah. The party purpose remaining on the coast hunting and fishing all Winter.

-CENTENNIAL AQUATICS.-The following is the programme of the International Regatta referred to in our cel-umns last week, intended to be held on the Schuylkill

umis hist weak, intended to be held on the Schuylkill River at the Philadelphia Centicunial, in 1876:—

First.—Grand International race for faur-cared shells, for the charapiouship of the world, to be followed by races in pair-carel and single shells, under the same conditions.

Strond.—Grand contest of the American College Clubs, for the intercollegiate champiouship of the United States.

Third.—Grand International collegiate contest between American must foreign antiversities, for the amateur collegiate championship of the world.

Fourth.—Grand national contest by the members of the National Amateur Association of the United States.

Fifth.—Contests in boats of every character, to be participated in by the professional oarsmen of America.

Sieth.—Contests in boats of every character, to be participated in by the professional oarsmen of the world.

Eight London, Eng., clubs are to send crews: a Liverpool club is to be represented; Mr. Gesling, the champian of the Scine, is to bring over a crew, and all the prominent American parsmen will participate. It will certainly be the great aquatic event of 1876.

--Fred. Espy, of Pittsburg, Pa., who built the best boat

-Freil, Espy, of Pitishurg, Pa., who limit the best boat ever rowed by Scharffe, has just finished a hoat for George Brown, which was ordered by the Halifax (N. S.) Rowing

CENTENNIAL REGATTA.—The Naval Board of the Schuylkill Navy, accompanied by a number of invited guests, have been to Flat Rock Dam, Schnylkill River, and surveyed the rowing course, to show boating men, and especially collegiate organizations, that it is the best course in the world, and every way suited for the international contests to take place in the centennial year. Upon measuring the course it was found to be 700 feet wide and three and a half miles long. The result is considered extremely satisfactory by hoating men in this city.

BISHOP'S CANOE VOYAGE.

GREENWICH SHIOTING PARK, BEBT SAVANNAH, GA., February 19, 1875.

EDITOR FOREST AND STHEAM:-

Editor Forest and Stiem:—

I reached this place, on St. Augustine Creek, five miles below Shvannak, at two o'clock, P. M. to-day. The welf-dooking Binaventhre cemetery adjoins the Park. St. Augustine Creek flows from the Savannah River about five ntiles below the city, and forms an important connection of the interior water courses, or inside phisages, to Brinswick, Ga, and to Fernandina, Fla.

Leaving the Waccannaw and Peedee River system, the paper cauce, "Maria Theresa," proceeded on her voyage southward by why of Winyah Bay, Mosquito Creek, rice plantation ditches; the North and the South Santher rivers, Alligator Creek, and other recess to Bell's Bay, where the canoe rested three Sandays store on the deck of the U. S. Coast Survey Schooner "Caswell."

The Monday following was spent to proching the trees of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the case of the U. The Monday following was spent to proching the Coast Survey of the Coast Survey of

camoe rested three Sandays since on the deck of the U. S. Coast Survey Schooner "Caswell."

The Monday following was spent in working through Bull's Bay and Bull's Narraws to Little Bull Inlet, where I stept on the floor of a descreted house through Monday night. The next they the camoe followed creeks, along the Inside of the beach, crossing Price's, Dewce's and Breach intets. At dusk I emerged from the marshes at Sullivin's Island and heheld in the deepening gloom across the smooth waters of the harbor, the walls of Port Sumber rising from its foundation of gunific cidies. An hour later my came was safely quartered at the Monot Pleasant Hotel, about five miles below Charleston. I was about to proceed on my journey when many kind tay intlones from clitzens of Charleston Uniform embers of the Chamber of Commerce, the Carolina Chain and Ashley Grange. To those wha know what Charleston hospitality.

Frossing the brinad Ashley River one fine morning, the came entered Mappao Creek and followed it to the Stano River, and thence to the Dahow River, where I reached Johassee Island, the rice plantating of Ex-Gov. William Aiken, of South Carolina. It was my privilege to empoy the soclety of the proprietor of Johassee, and to examine its five thingsind acres—a plantation that yielded a rice crap from sixteen hundred acres with a net profit of fifty thousand doltars a year before the war.

From Johnsee I followed creeks and rivers nast Hutchinson's Island.

From Johnssee I followed creeks and rivers past Hutchinson's Island to St. Helena Sound, nurned up Bull River by mistake. In the darkness of olefu, histead of prossing its white mouth to the wider Coosaw. It was in a region of marshes where no complete place could be found. As the came ascended the wider river, chee to the grassy murshes, the masts of a bark humed out of the mostly uicht. A kind voice invited me abount, and I became the guest of Captain Johs, Bergeland, of Finland, who was foutling his viewed with phosphate from the Pacific Co.'s uines, between the Coosaw and Bull River.

The Joy following was pussed in experimental Geography, limiting a pussage from Bull River into the Coosaw, ria two creeks, which were connected by a short canal. I waited three hours at the end of the canal for a depth of eight inches of water to be supplied by the tide; then passed through to the Coosaw, and speut the night at the Coosaw mines

(phusphate) mills. Following the Copsaw up into Broad Rivar, I skiring the right bank to the end of the Murshy Islands ten inter without seel a house on that side of Broad River, then crossed the heat of the cound to Skutl Creek in a flerce gust of wind which meanly swamped in

Att. McIntyre, of New York, has the Senbrook Plantation on Hitton Mr. McIntyre, of New York, has the Senbrook Plantation on Hitton Head Island, where I passed the night Continuing on through Skini Creek to Calibogue Saund, the wind and diving gons musted not so hard that I eaved days of and canne by truning into Bird Island Creek, the bravy waves following noe far into my port at refuge. Three master ecoloules at negroes lease the abandonced sea island ection plantations of Bird Island. Not a white man could be found. So I went into the leasting his iness by reading a cook house 9x10 feet of one Cuffy, and the chired man. Time—multi the gale vius over. Terms—"any ting do white Yaukee man pleases to gib an old alger." Down by the creek grew mehes in abindance. I cut enough of these to make a ket in the cook house, and spent the afternoon and evening in house keeping and cooking.

cooking.

The gale expended itself during the night, so I was able to leave acthemoraling to a dense fog for Savaranah, Cooper River, "Pull and be it—a Creek," Walls Cot, Wright's lifver and the wide Savaranah were followed to St. Augustine Creek, where your correspondent is enjoying the hospitality of a German gentleman, and from which he sends you this list of interior water passages on the route to Florida.

N. H. B.

Bational Pastimes.

-The Philadelphia Mercury says:-

The Philadelphia Mercury says:—

The Atlantics, of Brooklyn, were the unluckiest nine in the arena last season, weakness in two important positions (eatcher and second base) lending to a succession of defeats which more than offset their brilliant victories. They commenced the season of 1874 with Pearce, Ferguson, Dehlman, Chapman and Booth of their old team, and new players in Bond, Farrow, Hodes and Hall. Caplain and Manager Ferguson played no less than twenty different men on the nine, trying as eatchers, Farrow, Hodes, Knowdell, Kessler and Fleet, the latter being most successful; while at second base was played Hall, West, Farrow, Clinton, Fleet, Martin, and, lastly, Sweasy, the latter best filling the position. Among the most undeworthy victories of the Atlantics, last season, may be mentioned the 9-2 and 5-0 games with the Mutuals, the 9-3 and 6-3 games with the Bastons, and the 4-2 game with the Atlantics. They also defeated the Maple Leafs—the Canadian champions—by a second of 15 to 1. The Atlantics were at times terribly demoratized, as witness the three defeats administered to them by the Bostons, by scores of 15 to 4, 14 to 0 and 29 to 0, the 17-3 and 9-1 games with the Philadelphias. The Atlantics played a tie game of ten innings with the Bostons, each scoring 3 and also played ten innings with the Mutuals.

—The Professional Base Ball Association will hold their annual convention on Monday March. 1st. in Philadelphia,

—The Professional Base Ball Association will hold their annual convention on Monday March 1st in Philadelphia, on which day, too, the Judiciary Committee of the Association will meet so as to report the result of their proceedings at the convention. The Committee of Rules will meet the morning of the same day to prepare the new code. The clubs sending delegates will include the Boston, Hartford, Mutual, Atlantie, Albletic, Philadelphia, St. Louis, and Chicago.

The Prospect Park ball fields are to be governed by a new code of rules this season, giving Brooklyn organizalions precedence.

new cone of fines lins season, giving Brooklyn organizations precedence.

—Washington's birthday was enjoyed to a great extent in Braoklyn. Besides skating on the inner lakes, there was curling and ice boat sailing on the large lake, and in the afternoon a ball match took place on the ice between clevens of the Park and Capitoline Lake. Park, 3; Lake, 13.

—The Washington club has been reorganized for the professional campaign of 1875 under the management of Mr. A. Y. Childs. The team will unclude Ressler, from the Helmes, of Reading; Park, Allison, and Banker, of Easton; Hally and Terry, of Philadelphia; and Nevius and Jay, of Washington.

—Pike's brother, the fine centre fielder of the Concords, will play in a Boston amateur club this season.

—The annual meeting of the Professional Association will be held on the morning of Monday, March 1st, at the Athletic club rooms, in Philadelphia. It is advisable that every professional club should send a delegate.

—The Athletic club have engaged Richmoud, the cap-

-The Albletic club have engaged Richmoud, the cap-tain of the Shibe nine, to fill up their team.

—The Allietic club have engaged Richmoud, the captain of the Shibe nine, to fill up their team.

—The Reds have added Latham to their champion team. He is said to be an excellent first baseman.

—Charlie Gould has been engaged by the New Havens to play first base and captain the nine. He is a good player, making his reputation as first base for the celebrated Red Stockings of Cincinnali, in the season of 1869-70. The club has appointed as directors Carlos Smith, W. W. Ward, Alfred Thomas, George W. M. Reed, W. S. Arnahl, Chas. Webster, and Eli Hills. Mr. Arnold, of Middletown, has signed a contract as manager with the club at a sulary of \$1,200. The nine will probabily he as follows:—Banker, c., Nichols, p.; Gould, 1st. b.; Doescher, 2d. b.; Jackson, 3d. h.; Geer, s. s.; Tipper, l. f.; Ryan, e. f.; and Britt, r. f.—Middletown, Conu., is to have a first class nine this season. Their players are us follows:—S. Daniels, c.; Ctaig, p.; Inglis, 1st. b.; Hulihan, 2d. b.; A. Daniels, 3d. b.; Myers, s. s.; Murphy, l. f.; Foster, c. f.; and Hall, r. f.; seorer, J. D. King.

Montreal Thistle Curling Club.—The final compe

Montreal Thistle Curling Club.—The final competition for the "Mnir Tankard" took place last week at Montreal. Our correspondent, Mr. James Esdaile, won it with a score of 38 points in the three days pluy; Mr. Ross heing second with 37, Melnlyrc 36, N. W. Thomas 31, James Greenshields 30, and J. L. Craig 28. The cup becomes the properly of any one winning it twice in three successive years. It cost in the neighborhood of \$350. Mr. Esdaile was fortunate caugh to win it both this year and last, and thus keeps it. This is a splemlid prize, and "well won is well shot."

—In the contest for the Callendar Cup at Tammany Hall, Feb. 22d, between Vignaux and Rudolphe, the former was the winner. Score—Vignaux, 600; Rudolphe, 556. Time of game—four hours and fifty-five minutes.

—This was the fifth match for the Callender Cup, which

—This was the fifth match for the Callender Cup, which was first won try Garnier at the Irving Hull Tourney of 1873. The following games have since been played for it:
—Dec. 6, 1873, Garnier and Dion; Jan. 30, 1874, Garnier and Ubassy; April 3, 1874, Garnier and Duly, all of which Garnier won; Dec. 1, 1874, Garnier and Rudolphe, of which Rudolphe was the winner.

TESTIMONIALS.

COUNCIL UNIVERSITY,
ITHIACA, March 14th, 1870.

I must congrabilate you upon your great sucress in
this new volucitional enterprise. If the can arrange
off numeriment so as to make them langar highrac
tion to the inland, it will be a step in anymace in edu
cation.

EZRA COUNCIL.

tion to the inlind, it will be a step in advance in editeration.

EZRA COUNELL.

Washington, D. C., March 18th, 1870.

I am much pleased with the success you have usel with in glving to the stuffed specknens a very decided appearance of life.

I tope you may be able to continue the Series, and there will furnish interesting means of information and instruction in regard to the uild aumilia of New York.

Spencer F. Balkd.

State House, Bustins, Mass., Murch 18th, 1870.

I have examined currently the "Sternscope Studies of Notitial History," and judging by the lirst ten numbers, should say that they will prove of very great value, both as object lessons by sundents, and as a most interesting suite for the parlot Streeoscope. The definentions, position, and ewor of the different groups and the general treatment are most partner. I containly recommend them to the public attention, and thus the variety of the different groups and the general treatment are most partner. I containly recommend them to the public attention, and thus you will mave the envoyingment which you list you will mave the envoying man and the parlocation.

Connell University, President & A. RYATT,

Connell University, President & Brown,

Itiliaes, March 19th, 1870

I have received the Styreoscopic Views of objects in
Natural History, and have enjoyed linen greatly.
They have susprised all who have seen them by their
womberful idelity, both as regards the animals and
their streamdlings; and I blink they can not full to be
of great service to the sludy of Natural History, first
by attracting students to it, and uset by prifecting
them in it.

American Wild Fowl Shooting.

By Joseph W. Long.

Describing the haintis, habits, and methods of shooting wild find, with histractions concerning guns, blinds, boats and decoye; the training of water retrievers, &c.

The book is written in plain English, and in a most attractive style. A broad, and at the same time accumule view, is taken of duck shooting in all parts of the country. The habits and feedlog grounds of the unshirds, bine-tringed (eal, pin-tall, wood, gadwell, and coveller; ted-headed, hulle-headed, and other klads of ducks, gees, swans, &c., have been carefully and lagentonsly studied and given to the reader.

In thirty chapters the authur has for asked information for the young, as well as for the practical sportsmant.

For Forest and Stream.

RUINS IN MEXICO AND CENTRAL AMERICA.

A RUINED city! In the hear!

Of the deep witherness of woods II stands immured—where seldom foot Of passing traveler intrides.
The groves primeral, year by year Above the spot renew their bloms. Year after year cast down their weight Of foliage in these desert tombs.

Altar and idol here arise
Inscribed with hieroglyphics strange;
Column and pyramid sublime,
Defaced by centuries of change.
Here idols from their pedestals
Displaced by roots of mightiest girth;
There, by a close-embracting branch
Half lifted in the air from earth;
Or from their stations prostrate thrown,
Their huge proportions strew the ground,
With vines and brambles overgrown,
With interlacing creepers bound.

No sound of life! save when at eve The indian's hatchet cleaves thro' wood, Or trips the Indian damed by, Stoging to cheer the sollinde. No sound, save when the solbing breeze Sighs thro' the forest's dun areadrs, Or shell call of the red macaw, Or parrot's gabble in the glades; Or whea the cluatering monkey troop Glide o'er the tree tops in their race, Like wandering spirits of the dead, Haunting the skadows of the place.

Rgypt's colossal skeletons
Of temples and of wondrous shrines,
In the unwatered sands repose,
Where hot the sullry Summer entics;
But forests lonely and intense
Enshroud these rolns from the sight,
And with their tungled barrlers guard
The hidden secrets from the light.
Tradition has no tale to tell,
And science no record to give
Of those who rear'd these aucient walls—
Of the lost race that here did live.

All desolute these rains rest,
Like hark that in inid ocean rolls,
Her usme effac'd, her masts o'erikrown,
And none renodulug of the souls
That once sail'd in her, to relate
From what tar-distant port she came;
Whither she sull'd and what her late,
And what her mition and her usme.
Int only may conjecture guess
The fataled story of this place,
And from these crumbling rains gain
Some knowledge of the vanish'd race.

The wanderer from foreign land With awe beholds each mystle spot, Ruins of unrecorded years, The relice of a race forgot. Beneath tach gray, sepulcitral cairn lie delives to find like heathen bones, The statues of imperial kings, The broken monuncutal slones. All round are scalptur'd pedestals Mid skitered cohunus wide outspread, Where heighty roots of forest trees spring from the ashes of the dead, Thal in their growth kad level'd low The pyramids the soll that strow.

Here flowering creepers, glossy vines, The shatter'd monoliths o'erswept, And flowers 'mid painted potteries And shapely urns luxuriant crept, The dust with authoue treasure teems, Weapons and ornaments of yore, Great wases carv'd in arabesques, Idols, that heatben tribes adore.

Out in the green savannah lands. The prostrate stones in masses lay, coloreal heads with staring eyes. And fractured limbs of granite gray; The rules of a race extinct. The hieroglyphs of language dead, Memorials of rites long lost, The arms, the wealth of empires fled.

The stranger's voice with swe is still'd, lits soul with fascination fill d, when musing in that silent mood, with sad, gray plains extended round, amid the hum of insect life, 'Mid trees with scarlot blossoms crown'd, 'Mid all the bloom and solemn pomp of trople nature's wondrous place, Amid the temples and the graves Of s once haughty, vanish d race.

For Forest and Strea

Notes of a Gruise in Gentral India.

S OME four years ago I was stationed at Secunderabad, in Central Iudia, a large military cantonment close to the city of Hyderabad, the capital of the Nizam of the Deceans dominions. This prince has a nominal sway over a large province extending from the river Kistna on the south to the River Godaveri on the north; in reality, the country is governed by a very able prime minister, who, in turn, is under the influence and advice of a representative of the British rule. As the city of Hyderabad contains a large population of turbulent Mahomedans, Arabs, and others who would rejoice at any chance of a row, it is considered advisable to back up the moral influence of the British resident hy a material force; hence, some eight or ten thousand troops are quartered at Secunderahad, a few miles from the native city. No British officer or soldier is allowed to enter the latter without an express permit, however, and thus there are no collisions between them and the

Once Secunderabad was considered a joily station; that was a good many years ago, when there was more sport round the station, and more sociability amongst the Euglish residents, according to those who had known it in those days. When I was there it seemed a very dreary place; the halo of romance which surrounds life in the East had disappeared after a close acquaintance with it, and the various drawbacks stood out in bold relief—the heat, the narrowness and stiffuess of the small society of the station; the monotony and want of interest one felt in a country which can only be looked on as a place of exile, where the white man cannot live and thrive. Of sport, there was little; the game for some miles round the station had been cleared off. I pursued my favorite amusement under difficulties; certainly it was a bad place for a man with a turn for aquatics; still I did manage to do a little hoating. About five miles from my "bungalow" there was a large tank, a term applied in India to a collection of water formed by damming up a water course and so making a reservoir. In a dry and thirsty land like the plains of India, great ingenuity is displayed in making a tank wherever there is a possibility of water collecting, and the surface of the country is dotted all over with them, some of considerable size. The "Hoo sain Saugor," the name of the large tank near Secunderabad, was a lake of some extent, being shout teu miles in circumference, and having a "hund" or dam shout a mile long. To this sheet of water I used to repair occasionally, and paddle about in a small canoe I had brought over from Burmah with me just to feel myself afloat, and keep my hand in. Oue day, while I was cruising about, I saw a little boat drawn up on the bank, and immediately landed to examine such a curlous phenomenon as a little centre-hoard sailing hoat on the side of au Indian tank. She was about fourteen feet long, of Euglish build, with the maker's name, and the pince she hailed from, "Southampton," on a brass plate on the fore part of

a rocky islet in the middle of the tank. I longed for more extended waters to crulse in, to sall in company with after craft, and especially for a smell of the "briny." To find the requisite water was the difficulty. There was a river certainly, the Moosa, which flows past the city of Hyderabad, but it possessed the peculiar characteristics of most small Indian rivers, and was a raging terrent in the wet senson, and a mass of sand with a trickling rill in the dry. Some hundred and twenty miles to the north was the Godaveri; happy thought, I might cart the bent out to this river, sail or float down it to the Bay of Beegal, and come back by way of Masulipatom. This would be a grand cruise, and forthwith I set about getting as much lalarmation about the River Godaveri as I could ga?her from a Gazetteer of the Central Pravinces, reports af survey, &c. From these sources I learned that the River Godaveri takes its rise on the eastern slope of the mountains, called the Western Ghants in the Bombay Presidency, from a spring amidst rocks in the sacred town of Nasslek, according to Hindoo bellef; then it traverses the peninsula of Hindootan from West to East, and empties Itself into the Bay of Bengal near the town of Coconada. About \$30 miles from its mouth it is joined by the River Pranhita, coming down from the North, the two together form a river of tolerable size, even in the dry setsod. A supendous scheme for making the river navigable from the town of Kampice, on the Pranhita, about slxty miles above its junction with Godaveri, to Coconada, had been devised. Between these towns there are no regular falls in the river, but its course along its sandy bed is interrupted in three places called "barriers," by strata of rock, through which the stream makes its way in a series of cataracts and rapids in the dry season, when the water is low. In the wet season there is a very strong current, but meataract or rapid worthy of the name. The first barrier, 100 miles from the meuth of the Godaveri, is comparalively short, the

The country through which the Godaverl flows is wild and consists for the most part of jungle. Forty or fifty miles above its month it pusses through the range of bills called the Eastern Ghants; here the scenery is heaulful and wild, mountains covered with forest rising above the river. Reading and hearing accounts of the river from men who had been there increased my desire to take a cruise down it. In my imagination I pictured myself sailing down past wild and romantle scenery, potting occasionally at deer and bison on the banks, for game was reported to be very alundant. Having planned the cruise, I hegan to make preparations some time before the period when I could obtain leave of absence. The first thing was to get the boat in order, so I had her carted up to my "bungalow" and proceeded to clean her out, paint her and stretch canvass over the deck, so as to make it water tight. I even sent to Bombay for gold paper, had a ribbon gilt on her top strake and her name painted on a seroil, I called her the "Phantom," after the Colonel of the regiment and his wife, (his Christian name was Thomas, and her's Frances.)

When she was made beautiful to the eye, I took her

(his Christian name was Thomas, and her's Frances.)

When she was made beautiful to the eye, I took her hack to the tank and launched her. I expected she would leak a little after having heen so long out of water in the dry weather that then prevailed; but the rate at which she filled and sank directly she entered the water, rather astonished me. Hoping she would "swell" and tighten after a few days, I ieft her, but when I tried her again there was

I. McLELLAN.

only a slight Improvement in the rate at which the water came in; the cleaning and drying to which she had been subjected, must have opened all the seams and splits in the plancks, and washed ant the dirt which had acted as caulking. The first duty of a boat is to keep ant the water, and finding my craft so lamentably deficient in this respect, I set to work to remedy it as best I could, by pitching the seams, covering the worst splits with copper sheathing. Set After a heal of cobiding, I succeeded in getting her sufficiently staunch to keep the water below the flooring hoards notice twelve hours without builing; having accomplished this, I thought she would do. I had alrendy spotted a homod curf in one of the engineer's yards as the very thing to curry the hoat apon, for she had a bram of six feet three inches, much too wide for any ordinary cart. I made arrangements to horrow this, promising to provide wheels for it. Then I proceeded to fit myself out with an equipment of things that would have almost suffleed for a journey hato the heart of Africa. As I look back on that cruise now, I wounder at the trouble I gave myself, the quantity of useless gear I took with me, and how I mismoninged things generally; but one learns by experience in leaning cruises as well as in everything clse. I took the precention of getting a "perwannah," or passport from the Nizam's government, a document directing the chief men of villages, districts, &c., to aid the Sahib (lord) traveling through the country. If he required bullacks, men or supplies, the seal and official character of this gave it great weight in the eyes of the mitves, and I found it very useful to me.

All my preparations being complete, I marshalled my

through the country. If he required bullecks, men or supplies, the seal and official character of this gave it great weight in the eyes of the nutives, and I found it very useful to me.

All my preparations being complete, I marshalled my forces one morning in the beginning of November, just when the miny season was terminating, and set out. First went the hirge eart currying my boat, suppurted on spfin hamboo placed under the bilges to break the julting from the rate on the road. This was drawn by a team of four bullocks; then came I wo small bullock earls, one with my lent, the other with baggage of all sorts, amongst which was the small Burnecse canoe that I mentioned before. My servants followed these, and after I had seen them all start, I set off myself, mounted on a broken down Arab that had seen better days, but was good enough for the work I wanted him for. I proposed marching to the village of Madeopore, on the right bank of the Godaveri, at the junction of the Pranhita, with the former, and baunching my bout here, to cruise down the river with a small boy as servant, and send my lent, horse, &c., back to Secunderahod. Mideopore was about 180 miles from lie station; there was a road to it often used by travelers and said to be tolerably good. I was used to Iraveling in India, having had the experience of previous marches to guide me, but the difficulties of getting along with a centre-hoard sailing loat on a reart about twice the breadth of an ordinary one, were new and varied. The third day after leaving Secunderabal my troubles began; the road by through cotton soil, and it had rained heavily the night betore. The consequence was, that the eart sink up to the axles, and the wretched bullocks could scarcely move it. After working land all day, when I pitched my lent at night I found we lead accomplished about five miles. Then there were sandy leds of water courses to be crossed, where the water had accomplished about five miles. Then there were sandy leds of water courses to be crossed, where the wat

when marching after nightful; the jungle was too thick to hunt them with any chance of success at that season of the year.

At lost, after eighteen days hard work, I reached the village of Madeopore and saw the Godoveri, but could not get down to the bank with the carts on account of the swimp and jungle. Another day's march had to be made, then I camped on the bank, and a broad expanse of sand met my view, which below me was a shoal, swiftly tlowing river, about hulf a unile wide. A mile or so to the left the Prunhita joined the Godoveri, seeming the larger river of the two. On the left bank of the former river, four toiles distant, was the small station of Sironchin, where there were two or three English residents, the chief magistrates and representatives of the government, for a country extending some bundreds of uniles north nad west. I determined to go to this station, have a rest after my long march and flud out what I could about the river, the clamees of sport, &c. Next morning, therefore, I got the boat down to the water's edge, gave her a coating of tar, and launched her, in some doubt about how she would he have after the joiting she had had on the road. To my great delight she did not leak more than usual, and I turned her hend ap stream to row up the Praudita. Night came on helore I had got very far, so I thought I would defer my visit till next day.

Next morning very early I launched my little cance and puddled up stream. Soon after entering the Pranbita I got into a still colar reach with very little carrent, high land covered with jungle on my right. After puddling about ince and half miles I came to the ruins of an old fort overlanging the river and looking very picturesque in the morning sun. This in old days had been the stroughold of milling morning sun. This in old days had been the stroughold in the cauntry round, and even shown light to the British force sent to reduce him. A little further on there was a large "scow" moored alongside the hank, and fustening my cance to this, I landed a

ont of the way sort of place. He insisted on my coming lo stay with him, and as I had lo go back to my camp to get my baggage, sent for an elephant for me, thus ruising me literally and figuratively in the eyes of the populace. Ilaving returned to my camp I sent my buggage to Sironchu by cart, rowed up myself in the centre-board, and found it na casy work pulling a boat of that kind against a current of from two to four miles an hour. However, I sucreeded in reaching Sironchu, moored my boat under the ohl fort and rested from my lahors. My friead told me all about the Godaveri, and that a commissioner was expected in the course of a week or two to examine and report upon the engineering works then in progress, the utility of which was now being questioned, the cost teing so great and the advantages rather problematical. Three steamers of light draught, of an American model, had been imported piecement, put together, and then plied between the barriers; but there was no passengers, and no freight worth meutioning.

laid there was no passengers, and no retright with a Sironchia making expeditions np the river and into the neighborhood, but getting of the year for anything his saine and duck, and there were an swamps or jueles in that part of the earn of the year for anything his saine and duck, and there were an swamps or jueles in that part of the earn of the year of present of the year for anything his saine and duck, and there were an swamps or jueles in that part of the eatherty. One morning the chief commissioner arrived from Kamptee and there were an unwinned excitement in the little station. The great man was pleased with everything, as he well might be, and had an interview with a native chief, who had come some 200 miles to pay his respects. There was some difficulty to be got over in the reception of this rajah, who was independent, and somewhat averse to the payment of sundry rupes as tribute, but his was event untilly got over, and an entertaiment was given him, which adforded the chief and his tribe intense gratification. When these festivities were nearly over I determined to commence my voping down the river. Accordingly, one morning I collected everything I thought I should require, took a small native boy with me to ne as cook, and make himself generally meful; and having stowed my ship carefully, set sail and turned her bow down the river, a light breeze carrying me down the long reach and into the Godavert. Now the current because quicker, carried me between enormons beds of sand, and occasionally grounded me on a shoal. After I had gone about twenty miles a made my boat fast to the bank, figged up an awaling and for the payment of the

man in such a plight; he commiserated my misfortune, and extended the shelter of his roof to me. With the help ad same of the workmen I grappled for my boat, (the water being some seven fathoms deep, with a very swift current, it was impossible to dive for it,) but with no result. I never saw anything more of her, or of my outfit. Perhaps she continued her trip dawn the river the next rainy senson, and may now be resting on a soud bank near the great dam at Rajahmundry in peace after all her travels. I continued my cruise down the river in a steamhout in company with the Commissioner, who was inspecting the works when my accident occurred, and who very kindly not any gave me a passage, but also got me some compensation for the loss of my craft and outfit. Still I much regretted the mult I made of my cruise, though if I attempted the Godaveri again, it would not be with a centre-board boat.

SPORT IN CANADA—A TRIP TO HOLLOW LAKE.

THURSDAY, the 17th of September, we had an early breakfast at Cobocook. Leaving Toronto the previous day, we took a stage and set out fur a ride of fourteen miles to Moore's Palls. We started at seven. The stage is such by corntesy only, being merely a wagon without springs, need for drawing ore from the iron mine. A long pole each side of lbe frame running to the driver's seat, will a board fail across, served as a resing place, and one or two loos bourds at the end kept the rest of as in position where the road did not pass over the bare granite or cordurey. And such cordurey you hardly can imagine a cordurey and such cordurey you hardly can imagine a cordurey and such cordured you have the rest of as in position where the road did not pass over the target granite or cordurey. And such cordurely and intelled, and the horses stumbled a cort step on all tseemed almost a miracle lint they fild not break their legs. But every movement was sure, and they stepped instinctively, as it were, from one log to the next without fear.

Three hours travel brought us to the falls, where we found the boat waiting at the foot of Guil Lake. It was a long, flat boatomed concern, wide enough for two, and carried a snil; but the wind having gone down we were oldiged to paddle or row all the way up to the entrance of Guil River, thence to Minden, a distance in all of eleven miles, with very hard and slow work. The clouds of the morning settled into a steady rain. I got my rubber ever from my beg, lighted my apie and looked happy, the moisture soaking through my hat and running in streams down any face. We had our duner at Minden, went to the post and telegraph offices, sent our last dispatches to the outside world, and at time of clock took another stage for old Andrew Barnan's, our grade's brosse, who, with his brother. If the soak and the party arrived blooked happy, the moisture soaking through my pape and looked happy, the moisture soaking through my distributed by the fore the party and

as he sat there bolt upright, almost immovable, guiding the canoe with his paddle. The shores are wooded. Never has the woodman's axe been heard in its grand old forests, and as we wended our way between the islands, and one eyes discovered new beamties, our enthusiasm was wound up to the highest pitch. Finally the sun went down, and the moon cast its long line of trembling silver through the deepening shadows of the lake. Everything was quiet

and peaceful; nothing was heard but the gentle plash and ripple of the cance as it slowly moved abung. At a distinct of the cance as it slowly moved abung. At a distinct of the cance as it slowly moved abung. At a distinct the cance we fired some shorts to tell them that we write on the way, that the discounts has to tell them that we write on the cance we discount the cancel of the cancel o

bosom of the lake. By the aid of an opera glass, it proved to be the Hollow Lake mail. They came ashore, bringing Toronto papers from three to six days old—a perfect golsend—with letters and telegrams.

The next day we made a couple of partages into Round Lake, passed the morning in the milst of bewitching views of bills and mountains, redected in deep shade of the rucks on the water, killed another dear, and slowly made our way back to camp, meeting a canoe which that devoted the day to tishing, and had been rewarded with twenty-four of the finest speckled tront.

In the following day's hint we had our usual good fortine, and brought in a small deer about they miles off, which was shoe, and the dags put in again, but without success, the wind chunging round to the east, and the gutle cring clouds foretelling a storm. We quickly unde our way home. It slid not rain that alght, late arrly next they it seemed as if the windows of traven were opened; the rain came down in Hoods. It being Sunday we remained quietly reading during the day, only stopping long enough to cat a hearty meal every few hours. All hight long the rain came down in torreats, but portially ecased toward morning. We were roused at three o'clork, and commenced to pack our camp, langgage, and tents. We were not ready to embask before seven o'clock. The canoes looked hundsomely as we left in a hody, and we tast monty ingering glances behind as we retraced our route, passing through the different lakes. Brandy Rapids lonked brantifully. These rapids take their uame from the reddishing of its waters. The river alrove the rapids is charming, the trees or brush meeting and interlocking from either bunk searcely a foot above our heads. At laid past four we reached our last portage, and stopped to rest at the settler's, where we got the team for the two mile porting as before. While waiting for the ream, and getting really for our last paddle for the shay, sitting in the caldin, the settler's, where we got at the team for the two miles proring as before.

Woodland, Harm and Garden.

MARCH

MARCH.

"The spirit of the gentle roach wind calls
From his line throne of air,
And where his whispering voice in music falls,
Beauty is budding there."

EVERY month has its approprinte and pleasant thities,
the amateur as well as the practiced culturist will
do well to look over his floral log book for the coming season. Look over your library, and see if you cannot mid to
it some valuable and useful work as an aid to your future
operations in the useful, theoretical, and practical nursuits
of your yearly labors.

In accordance with the request of a number of the realers and patrons of Fotiest and Stream, we shall hereinfter present them with a paper at the beginning of each
month upon the month and its special daties, or appropriate
work in the various departments of flowers, fruits, and
shrubs; and we may talk a little with them upon the freuniture subject of kitchen gardening. The kitchen department, though so often set at the rear of the house, and
treated as a back door affair, not to be introduced within
the scope of work designed especially for the parlor and
boudoir, is nevertheless one of the great adjuncts of good
living—au object of physical as well as mental importance.

A good dinnert. How much really and truly depends on

living—an object of physical as well as mental importance.

A good dinner! How much really and truly depends on a good dinner. Never approach a bank president for a loan from his bank, or a discount of a large note, upon an empty stomach. If he has not dined, invite him to a fine, well cooked repast of fresh vegetables from your own garden. Then you will at least scenre for yoursaff a respectful hearing—tact and good sense must do the rest; but never ask a cross, langry bank president for a loan of money. We have a vast respect for the man of large ro tundity of form who is favored by providence with a gued appetite and an easy digestion.

In our cogitations, or chit chat, with our readers month by month, we bope to give them many hints by urging upon them subjects for study and investigation, some of them out of the common course of agricultural discussion, yet all pertinent to the wants and inquiries of such as may be pleased to read our wide awake journed. We do not hesitate to say that much information of the greatest hapance to many students of floriculture is lost to them every year from the want of an agricultural, sportsmau's, and piscatorial journal like Fouest and Stueau Letters come to us from all parts of the country aftesting to this fact, and asking questions of much integorance to them selves and other readers. A young lady from Mobile writes us:—"I would cheerfully pay ten dollars for your paper rather than be without it. I go to it with full con-

fiblenco in its truthfalness, for 1 have always found it true to the letter, and some of our Southern plants being very difficult to grow. I find I can make them there well under your very plain instruction."

This is of course very gratifying to us, and "alles our pen" for several.

the letter, and some of our Southern plants bring very difficult to grow. I that I can make them there well under your very plain instruction."

This is of course very gratifying to us, and "after our pen" for extra exertions in your helalf. How far and how with the improvement circle of the world can be made to extend we cannot say in view of the past, yet how great a work yet remains for us to perform. Our youngest readers can learn more from the contents of our columns. Every had and young lidy whim perioses a number of our paper will be sure to that within its versatile leaves just a little period that was penned for them—that adapts itself to their every day wants.

Now here may be the solution of the dry question of a dry fact, and this fact is rolled up perhaps in an apple tree leaf of last Autumn, and you take it with the rosy apple the servant has just presented to you. Young like is too full of animal spirits to sit quietly by the fireside and thenk of nothing. Books, papers, and the like are very neressary. Facts, though dry to them, come even from the dried leaves, and there is a vast world of instruction in this little web covered worm you have unredled from the old dried uppe had. Of these i propose to talk with you, and familianize you with the apple, its history and propagation, and also its manceous mendes, and the mancer of extermination. I shall talk with you as to how you can grow them, and all this has the amaner as to give a heighter glow to the eyes of the youngest searcher after the beautiful in the most comman things of life. With every week we would if possible present some they woulder from the great latioratory of the world for the amasement and instruction of the lumblest student.

In these papers we shall emicavor to treat of every subject within the entire range of agreeditual, insect, and plant life in such a paper for the content of the limited red for the undergon of benefit to all the readers of our popular journet.

The Flower Seed Catalonues.—With every and, we had almost said, we receive the illustratual eathlog as of our scalemen and florists. We feel that our thanks, as well as the thanks of all our friends, are due for these timely little monitars of the flowers yet to bloom. The real value of such catalogues must be seen at a glance to be invalinted, while the fuste and allely displayed in their dress and embelishment prove the very loss latroduction to the publishers. We can promise whenever we find anything rare and curbins in these catalogues to give them to nur readers.

Olatrop Quita.

ANSWERS TO CORRESPONDENTS.

Answers to correspondents.

Mino S., Greenfield, Mass.—There is nothing to prevent the carrying out of your idea except the cost. The use of glass for an outer covering or roof to a common dwelling louse is by no means new. In london it has been used for years. A firm, substantial support of rafters, set so that your glass—which should be thick, clear, and good sized paines—would be directly upon thouse, you are to take into consideration the fact that all the room over your chambers is in he devoted to your greenhouse, and consequently your chambers should be covered with a clac roof, projecting over the windows, and so constructed so as to carry off the superthouse, and so constructed so as to carry off the superthouse where, and the greenhouse upon the top of your dwelling can be kept without great rost for either heating or other appartequaces. Such a garden wo would like, and it would be a source of pleasure to any person possessing it. Such an arrangement would equalize the temperature of the upper mone, while by servening the sun from the roof the great heat that is so often a source of disquict in the Sammer would be many degrees warmer than if the roof was exposed to what and cold. We hope to hear from our correspondent agala.

A. M. G., Phainfield, N. J.—The clover seed sent to good.

to hear from our correspondent again.

A. M. G., Plainfield, N. J.—The clover seed sent 14 ceived. The insect is the Asopia costatus. This moth is the golden fringed anoth, and its 1870 was found in great amobers in Maryland, and destroyed much clover in the stuck. The worm found in the seed sent is a small yellawish worm, ritheel and partially transparent. Of itself the insect might not lapare the growth of the seed, but the brood is a most dangerous one to encourage ar 10 propagate. We should not buy, sow, or use such seed.

We should not buy, sow, or use such seed.

M., Ruxbury, Mass.—The Insect you sent last week is quite unknown, yet is considered with some convern by tonselectures. It is the capet fly worm, and is bound under curputs, on which it is believed in freed. The worm is long, white, and cylindrical, and is divided into twelve separate parts, or segmentary rings. After unbute examination we think this fly does not propagate rapidly, and that campling will be found a good preventive for its depredictions.

OLLIPOD QUILL.

"Calamink," in Chicago Field, suggests to those who go to California by rail to get a canteen at Omaha and ill at with milk, and suspend it on the outside of the rar win dow by necans of a stick (haid crosswher) and a string. It will kneep sweet until you while to replenish. By this means you avoid the alkali water which is injurious, especially to children. Hang your Inneh basket he the same way, and you can knep roust turkey, whicken, game, ment, etc., the entire distance. You want two or more coffee caps with handles, as you do not always feel like eating break fast at the stations, and ten rents worth of coffee grocured at the counter will suttlee in aiding the braich basket.

User I. Recent.—If you get a fish bone in your throat, and sticking fast there, swallow an egg, taw; it will be almost sure to carry down a hone easily and ectually. When, as somethines by accident, corrosive subliment is swallowed, the while of one ar two eggs will neutralize the poison and change the effect to that of a do-e or calomel.

FOR CHILBLAISS.—Cut up two white turnips, without paring, into that slices; just the slices into a me cup with three large spoonsful of best bird; let it summer slowly for two tunits, then much this through a sieve; when independ I on a soft linen cloth, and apply to the carloism

Mish Qulture.

[From Proceedings of American Fish Culturists' Association.]
AQUACULTURE AND FISH PROTECTION.

BY SAMUEL WILMOT, NEWCASTLE, ONTARIO.

IN submitting this paper, on some of the points in fish culture, to the American Fish Culturists' Association, now assembled, I shall endeavor to be as brief as possible; yet there are so many interesting subjects connected with the science of aquaculture that it will be almost impossible to control the matter without affecting its general interests. My object at this time, however, will be to touch upon the importance of the science as a whole, and to show why there should be judicious laws passed to preserve fish at certain sensons, and also endeavor to answer the question so frequently put by the skeptically inclined. Why resort to artificial breeding of fish; why not allow them to breed in their own natural way?

When we consider the importance of this new branch of industry, both as a means of producing cheap and wholesome food, as well as individual and general wealth among the people among whom it has been introduced, it is gratifying to find that a knowledge of its principles Is grallurally becoming more and more generally diffused, so that we may safely look forward to the time when no country can be found wherein the science of pisciculture is totally neglected.

Independent of the pleasure and instruction which fish

we may safely look forward to the time which he can be found wherein the science of pisciculture is totally neglected.

Independent of the pleasuro and instruction which fish culture, on a small scale, has afforded to amateurs and others who have employed their time and means in adding another luxury to their tables, much profit hus been realized by utilizing springs and small streams of water on private properties. And in both the old and the new world we may see that various governments have chosen the most scientific and practical men of the day to find means whereby the vust areas of water, which cover three-fourths of the curth's surface, may be made to produce inexbanstible supplies of food and riches; so that, through man's intelligence and industry, aquaculture may become the successful rival of its sister art, agriculture.

The introducing and acclimatizing of many of the better and scarcer kinds of fish has been achieved through the instrumentality of this new agent. It is now an indisputable fact that some of the kinds of fish that were transported in the egg state from Scotland to Australia and New Zeahund are found to be acclimatized to the waters of the Southern Heurisphere, where they were hitherto wholly unknown.

Dotted in the egg state from Scotland to Australia and New Zealand are found to be acclimatized to the waters of the Southern Heuisphere, where they were hitherto wholly unknown.

In a similar manner fish fry and eggs from the waters of the Atlantic const have been successfully enried across the continent by tho overland route, and planted in those of the Pacific coast, and vice erzea. Through the praiseworthy efforts of Prof. Baird and Livingston Stone, the salmon of the Pacific coast are being sown broadcast into the rivers and streams of the Eastern States of the Union. In Canada, also, there has been iutroduced certain hitherto unknown lishes from Britain. These offonts, successful in their application, are only the forerunaers of what will yet be largely brought about through the study of practient fish enture. And no doubt when the science becomes more generally diffused, the importation and expertation of the more valuable kinds of fishes will form no ineonsiderable traffe between countries whose interests may require an improvement in the branch of commerce.

Prantee has always taken a very great interest in the artificial propagation of fish as an easy means of producing cheap food for her peopla. The immense grounds which were laid out, and the buildings which were erected at Hunningue, are strong and couvincing evidences of this fact. And although by the fate of war the province in which the large French piscientural works were establishment in another portion of her territory. Prussia is also extending the works which came into her launds by the act of cession.

In Great Britain the euterpriso has been entered into with great zeal, and with rourked success, large fortunes having been amassed by individuals from the increased productions of old tishery grounds through artificial methods of propagation. In other countries of Europe, and throughout allows the whole of the ohl world the science is making its beneficial effects felt by the masses of the people in the greater supply of wholesome food.

No

his Republic.

It may not be amiss to state that, within the same period of time, in no country has fish culture made greater progress than in the Dominion of Canada. From its first inception at Newcassle, in the Province of Outario, it has made rapid strides throughout America. Its operations there have cusured the artificial propagation of the more important commercial fishes of this country, and at the present time, through the wisdom of the Canadian Government, there are no less than five saluon breeding establishments tounded within its territory, all of which are in practical working condition, each with a capacity for containing many millions of ova. Other institutions of a

similar nature are also in contemplation of being huilt during next season by the Canadian authorities.

Reference being made here to the Neweastle fish breeding works in Ontario, it will not be taken in the light of self-laudation for me, the sole originator of that institution, to state that from it has sprung all of the national and State fish breeding establishments on this continent.

Fish culture having now become both a popular and successful industry in the United States and Canada, it is of importance that it should be vigorously carried on. The once many famous rivers in both of these countries have now become very much reduced in their supplies of salmon and other fish. This falling off is also experienced in the countless lakes and their innumerable tributaries everywhere throughout the land. Both demand early attention in order to prevent the linal extermination of an article of food which it is now almost impossible to sustain in the mutural way alone. A judicious application of the natural and artificial methods of propagation, together with thorough protection during the close seasons, would soon reproduce in those waters a large supply of tish, both for domestic purposes and foreign trade. The outlay required to achieve this object will be found to be trifling indeed in comparison to the ultimate benefits that would assuredly flow from its application.

domestic purposes and foreign trade. The outlay required to achieve this object will be found to be trifling indeed in comparison to the ultimate benefits that would assuredly flow from its application.

Having made a few remarks upon the question of fish culture in a general way, it will not be amiss to refer to the necessity of wise legislation for the protection and preservation of fish at certain seasons of the year, more particularly during the close or spawning season.

The sen disheries, from the unlimited field which they cover, and the extensive area in which the natural production of fishes is curried on, do not require such peculiar laws for their preservation, or for close seasons being set apart for spawning, as are necessary in the inland fisheries.

There is a period when fish are in season, and when they should be taken by legitimate means. There is another period when they are out of season, and then should be protected by all legitimate means. They are in season after they have fully recovered from the prostrating and exhaustive effects of spawning, and when found upon their feeding grounds putting fat upon the body. At this time, though the eggs and milt are in the ovaries, they are so minute as to take little if any nourishment from the system, all of the food taken forming fat and muscle. They are out of season when they have left their feeding grounds, and have reached their spawning beds, and are in the act of spawning. The eggs and the milt at this period having absorbed from the body of the fish most of the fat which had been previously put on, becomes enlarged to the full size, und are mature and ripe for being deposited.

In the egg will be noticed a fatty substance, resombling small globules of oil, which is provided by nature for the nourishment and growth of the embry offish during inenbation, and is the food contained in the sac attached to the young fry for several days after energing from the shell. This defain of fat from the parent fish into the egg and milt, and the prostrati

prey apon them, a fungoid growth sets in, and great numbers die.

Mankind, from his overweening selfishness, is not satisfied with killing these fish in the earlier sensons, when they are fut and wholesome, and well adapted for food and connucree; but would (were it not for an interposition of some kind) relentlessly pursue and kill them up to the close of the year, whilst in the very act of spawning, and in the foul condition just related. It is also to be noted that at this time salmon, from their sluggishness, and from having resorted to the smaller streams, on shallow, gravelly beds, become more easy prey for their lawless pursuers, who, caring nothing for nature's command to 'increase und multiply,' nor object to fond and unwholesome food, kill indiscriminately, with every sort of device, every fish that may be found. This barbarous practice, having hitherto so generally prevailed, has in numerous instances totally exterminated many of the better kinds of fish from most of the waters of the older settled parts of Cumada and the United States.

Many persons are very skeptical as to the actual necessity

of the waters of the older settled parts of Canada and the United States.

Many persons are very skeptical as to the actual necessity for close seasons, or any other protection for fish, and consider legislation on the subject altogether superflous. They know nothing of their habits and nature, beyond the fact that they form delicious food, and cannot therefore see why they should not be taken and eaten at all times and in all seasons. In order that seasonable and wholesome fish may be had in our markets and at our tables at all times and at all seasons, nature has made this wise provision, namely: That the spawning season is not at the same time of year with all fish; some kinds of hish collect in shallow waters and in livers to deposit their ova in the Spring mouths, and others in the Fall. By this means a succession of fish can ho taken in season throughout the whole year. It culy becomes necessary, then, that wise and discriminating regulations should be made to assist the laws of nature, to give to the people of this country not only for the present time, but also for the future, a bountful supply of wholesome fish food.

From the few facts just mentioned respecting the nature of salunon and other fish, and the tendeney in man to destroy them, it is easy for any person possessing ordinary intelligence, and not selfishly prejudiced to the contrary, to infer how necessary and important it is that all fish should be protected by proper legislation at proper seasons, and also that all persons should be legally prohibited from killing or selling that which is foul and unfit for food.

(To be concluded next week.)

PROPOSED LAWS REGULATING FISH-ING AND FISH CULTURE INSWITZER-

EDITOR FOREST AND STREAM:

Enclosed you will find a manuscript copy of my plan for a law regulating the culture and catching of fish in the Swiss Confederation. A great number of the propositions were fixed by the Baron of Washington in Austria, and will be used when the federal laws relating to this question shalt come under discussion. I make it a condition, therefore, that the German copy I send you shall not be used, except for an English translation in your paper, Funest and Stream, with the view to promote the, until now, little interest shown by the public in this very important question of mational economy. Most truly yours.

Edwand Guyen, Fishery Commissioner.

In drawing such a plau, the first question to be considered is as to whether or not the Swiss constitution, as well as probable treaties of the Confederation with the adjoining States, having jurisdiction over the waters, accord the requisite authority to persons to develop fish culture; and whether or not the means of enacting such a law are at hand. With the probable adoption, however, of the new constitution, this question, the regulation of which is by the new constitution vested in the General Government, finds a most natural and simple answer. That which consequently remains to be considered in the preparation of such a law is the ordinances touching the fishing privileges, the means of protecting the culture and the catching of fish, and the control of the fish market.

The Fishing Privileges considered.

I. (a) Fishing rights may be practiced by those entitled.

such a law is the ordinances touching the fishing privileges, the means of protecting the culture and the catebing of fish, and the control of the fish market.

The fishing rights may be practiced by those entitled to fish, being either the owners of the waters or proprietors of fishing facilities, and their representatives; these, however, only to the extent to which they may be practiced exclusively in navigable waters in a continuous distance of twenty kilometres. According to a formula, which ought to be published, the authorities should be empowered to prepare a specification of all fishing grounds within their territory, and the existing privileges, and to permit all persons to inspect the same; they are to be held in evidence continually, and to them should be added copies of all documents concerning the laws. Protests may be taken to the next superior tribunal. The insertion in said specification is to be made without reference to the consideration of any legal contest. The proper authority, within whose jurisdiction the waters may be, or the greatest portion of the expause, measured at its ordinary height, is to be a competent one. These fishing grounds are to be used according to a so-called lease of the same for at least twelve years' (four harvests) duration. The unrestricted catching of fish and crubs is to be prevented. All fishing privileges are, in this sense, to be regulated by the proper authorities, and the rents are to be distributed proportionally.

(b) The legal authorities are also to effect such agreements among those entitled to fishing privileges as would insure to the culture of fish a future benefit. All requisite uneasures are to be adopted by a majority of those entitled to such privileges, and to be sanctioned by the proper authorities. A majority is understood to mean a majority of such as are privileged at the measurement of the ordinary height of the water's surface, and not a majority of those entitled to privileges.

(c) Every person, when fishing, must be provided with the e

year.

(d) The number of permits, to be issued in a certain territory in which the waters may he, are to be fixed by the proper authorities.

(e) Records are to be kept by the authorities of the issuing and acknowledgment of these permits, the continuing numbers, and the name of the persons and description of the waters. All persons are to be allowed to inspect such records.

records.

HOW THE CATCHING OF FISH THERE IS TO BE FORBIDDEN.

II. (a) Every permaneut arrangement (apparatus for catching fish—cel pots, fish pots, and bow nets), and the use of stationary nets, which do not allow at least one half of the width of the water's surface, measured at the lowest water marks, in right angles, and taking into consideration the places flowing from lakes and tributary streams, so as to leave the fish a passage in the centre of the waters free and muobstructed from surface to hottom; also, any obstruction of the highway of navigation for shipping, bonting, and lumber rafts, or anything else that may be detrimental or dangerous to the water and shore guard structures. ing, and lumber raits, or anything and shore guard structures.

(b) The use at one time of several of such arrangements or nets which are not at least 150 feet apart.

10) The construction of bow nets, fish pots, and other traps in dams and sluices.

(d) The use of traps of any kind and description, the opening of which, when wet, have not a diameter of at least three and a half centimetres.

(e) For the catching of ground and hait fish smaller nets may be used; but they must not have a diameter greater than 120 centimetres.

(f) The use of fish traps or fish boxes, the lathes, boards, and poles of which at the opening through which the water runs are not at least three and a half centimetres apart.

(g) The use of nets which are dragged along the bottom of the waters.

of the waters.

(h) The herding together of fish in traps by disturbing the water, or at night time by the use of lights.

(i) By poisoning or stupefying the fish.

(k) By wounding the fish, as in traps with springs, by forks, poles, guns or torpedoes.

(l) lee fishing without special permission of the authorities.

The fishes below must not be caught should they not measure at least twenty centimetres from the point of the head to the outer extremity of the caudal:—

Brook trout, Trutta farro.
Grayling, Thymatlus vulgaris.
Salmon, Salmo salvelinus.
Teuch, Tuna vulgaris.
Crucian, Carrassius vulgaris,
River perch, Perca fluviatilis.
Carp, Cyprinus carpis.
Barbel, Barbus fluriatilis.
Rencke, felchen, or white fish, Coregonus Wartmannt, Bodeurenke, Coregonus fera.
Bream, Abranis bruma.

- 26 Sturgeon, Accipenser ruthenus, Burhot, Lota vulgaris.
- Arnaul, or Schill, Bicioperca sandra.

Eel, Anguilla vulgaris.
Pike, Esox lucius.
Salmon, Trutta salar.
Salmon, or pike trout, Trutta lacustris.
Salmon, Trutta trutta.
Salmon, Salmo hucho.
Shad, Siluris glanis.

Salmon, Salmo hucho.

The same restrictions should apply as a matter of course to all of these fishes when spawning, or in a weak state, as well as to crab less than ten centimetres in length.

Should such fishes (the catching of which is altogether, or at a particular time, forbidden) he accidentally caught, they should be replaced in the water immeliately.

The following fish must not be caught during these intervals, or if caught they must be replaced in the water:—October and November, salmon and sea trout; November, Bodenrenke; November and December, brook and river trout, Renke and salmon; December, rutten; March and April, aschee; April, huchen; April and May, river bass, schiele, and pike; May and June, carp, barbel, bream, and sturgeon; June, waller, walse, and gareisel; Inly, tench.

Catching crabs is forbilden from October 1st till April 30th. Nets, bownets, fish pots, and all similar arrangements for the catching of a particular kind of fish must be removed or he made inoperative for the season, during which such fish are protected by tuw. The catching of all other fish, not particularly mentioned, by means of nets of any kind is also forbilden, as well as the removal of spawn or the young brood from the waters, and the removal of the spawn from the female.

In aid of pisciculture and the transplanting from one body of water to another, as well as for food of those fish sought to he raised, the removal of the spawn and the catching of smaller tish way be permitted with special permission of the anthorities. The use of spawn or young for other purposes is forbidden.

These regulations are applicable to neighboring bodies of water, and only to such exteut as they are practised in an activities.

These regulations are applicable to neighboring bodies of water, and only to such extent as they are practised in an adjoining State.

REGULATIONS OF THE MARKET

Such fish, the catching of which is restricted absolutely or temporarily, must not be shipped or sold by fishermen, nor others. This should also apply to the use of such fish in eating houses.

Such fish as may be caught for scientific purposes during the time they are so protected, and such fish as are taken from ponds, (to which these regulations do not apply when cannected with another hody of water,) or such fish as were scientifically raised, can only be offered for such during the specified time, when they are accompanied by evidence from the proper authorities, who must specify the day they were caught and the hodies of water from which they were taken.

PLACES WHERE PROTECTED.

PLACES WHERE PROTECTED.

Of such bodies of water as may be of importance to pistculture, certain portions may he designated, appropriated
or reserved by and with the sanction of the authorities, and
under the guidance of experts, for the purpose of spawning. Such portions of the water may he designated by
certain murks. At these places the catching of fish is to
be entirely prohibited; and in the erection of water works
engineers must be cautious not to jujure such spawning
grounds.

At these places designated.

canals are obliged, when letting off the water, to notify the person bolding the fishing franchise therein at least forty-cight bours in advance, and in urgent cases at once; and should there be more than one person, the nearest must be notified first. Every person holding such franchise is permitted to destroy in his grounds all birds of prey, fish-hawks and otters which may be obnoxions to him, and he is also allowed to kill wild fowl, such as geese and ducks at any time; and domesticated ducks and geese when in choice fishing grounds at spawning time, may be removed immediately.

To see that these haws are not violated themands the attention of our authorities, so poline and other officials are authorized to see to their preservation.

Persons using unlawful contrivences for the capture of fish are to have their appurtenances condistanted the first time; and if they repeat the offence, their franchise is to be withdrawn temporarily, or for all time, as the authorities may see fit.

BREWER'S IMPROVED SCHUTE AND FISHWAY .- This lishway, which was highly recommended at the late meeting of fish culturists in this city, is constructed in the bottom of a schute of any desired width hy means of timbers, so as to form either equilateral or isosceles triangles, forming a zigzag course, hy which means the rise or grade in a stream, caused by either natural or artificial obstructions, is easily overcome

The water, as it enters the fishway, strikes it at an acute

angle, packing the water at each angle. Two distinct currents are formed. The one over the top, and the other in the passage way formed by the angles. The upper end of the fishway extends into the dead water in the pool of the dam. The water enters the passage way between the angles with very little farce or current, and being continually broken by the augles in its descent it these not accelerate its force; consequently the weakest fish or smallest minnow can ascend the fishway without difficulty. Fish can ascend it without stopping, or they may rest at any point in it.

This fishway does not form any pools or edities, and there is sufficient pressure on the nose or head of a fish to incite it to move on. The passage way formed by the angles has sufficient current to keep it clear of sediment or dirt of any kind. The thoating ice and driftwood forced down by freshets will float above and clear of the passage way for fish, consequently it cannot be injured by any such means, and a triangular pier at the head of the fishway would turn either floating ice or driftwood outsides of it.

This fishway can be constructed on a grade or rise of one foot in ten, on the face of the schute, with its zigzag course, making the uscent for lish very easy, the lineal distance short, and consequently elvenpening the cost of construction. The greater the volume of water flowing over and through the fishway the more perfect will be its operation.

certain marks. At these places the catching of fish is to be entirely probibiled, and in the erection of water works engineers must be cautious not to injure such spawning grounds and the catching of frogs, should be prohibited. Exceptions roay be allowed in catraordinary cases by the authorities. Owners of tended the probabilited from permitting such to enter these states. Exceptions roay be allowed in catraordinary cases by the authorities. Owners of tenders are called to damage from the person for whose benefit they were established. Any malicious or willful disturbance of the fish when spawning, or any injury to the apparatus for the culture or catching of fish is prolibited, and pusishable according to law. Find the culture of the fish when spawning, or any injury to the apparatus for the culture or catching to be thrown into such fishing grounds as a repostory for such reduce of the fish. Should, however, the interest of the State or commerce demand these fishing grounds as a repostory for such reduce the protection of the fish. Should, however, the interest of the State or commerce demand these fishing grounds as a repostory for such reduce the protection of the fish. Should, however, the interest of the State or commerce demand these fishing grounds as a repostory for such reduce the protection of the fish. Should, however, the interest of the state of commerce demand the fishing grounds to the purpose of the protection of the fish. Should, however, the heather of the protection of the fish. Should, however, the three three the state of the owner, when the necessary measures are relatively of little expense to the protection of the fish. Should, however, the three thr

Encouraging information has been received regarding the increase of the alewife (A'om tyrannus), and efforts made to restock the streams along the coast. The advantage of the culture of these fish is not conduct to the meroquestion of profit, but also to the service they render in attracting the sea fish in shore.

Over 6,000,000 shad spawn were taken and distributed. With a view to obtaining reliable information regarding the mander of shad caught in nets, it is recommended that a law be passed requiring dishermen to report to the commissioners the number and variety so taken, and their market value, as or before the 1st day of September in each year. The intelting at South Halley was continued online the direction of Prof. Baled and the Connectical compulsisoners, and the superintendence of Chas. Smith. Total eath of tish, 3,016; spawn, 44,500,000.

The enforcement of the law for the protection of souths has resulted in an immense hacrease in the number of these fish—a goilsend to numbers of people out of supplyment this Winter, who have been able to make a humboune livitional by catching them. As high as eighty dozen have been taken with a single real in one day. To the Massachusetts Anglers' Association (composed of several hum dred of some of the most Influential men in the State) mainly belongs the credit of enforcing the law for their protection.

chusetts Angleer' Association (composed of sweral luminarily belongs the credit of enforcing the law for their protection.

The artificial hatching and rearing of trout continues with increasing interest. But many who are engaged in this pursuit have experienced much disappolatment and young fry soon after they begin to freel, causing swaroloss. This trouble does not arise from artificial feeting the female, there can be no difference between tids method of impregantion and that produced is the ordinary way.

The cause of this martality is undoubtedly lack of proper final; for trout, to be healthy, should have not only admind, but a certain amount of vegetable and inherent family. Young troot laws generally heen reared, for the first year at least, in tanks and runways. Of these two forms, the tank is the least desirable; runways are sometions successful, but this success despends entirely upon the antiruo of the soil through which the trench is cot, and whether the water supplying it contains a sufficient number of small insects to vary their food.

Two hundred and seventy-one thousand salmowwere lattered at the State hatching house, being a lass of only four per cent, of the gags received. THE PINE GROSBEAK—(Pinicola Camadeaus).

Weshean, Mass., February 26, 1875.

Editor Forest and Stream:—

The correspondents of Forest and Stream, "L. W. L." and "E. D.," who make menthm of this bird in the number of Frbriary fth, have chronicled greity much all we know of the species—its habits, general color, and his unsuspicious nature. Its general rolor is carantic rel, mingled with asty and whife is the inale; the teniable pleasing blending of a she, brown and olive. The young hirds of the first year—lhose must an altregular visitor, at not frequent appearance, as swellines years clapse between Its visits. This year they are unusually pivrifful in Massechus Its, as are tenissociales and conceiners from the polar regions, the pine facilities, some bunding, rel and white wing crossbills and red poll floates. Mr. J. A. Allen, well known for this studies in ornithology, ascribes field appearance there to a scarcity of food in their horsel homes; but It is mis no mentant his remonlings are not soundly breed, that they sometimes arrived before severe weather, and that they were generally very less upon their appearance.

Now, I make that they ally riskl as when the weather north of as is reported as very sovere. Their poor condition may be accounted for by their long journey from breeding grounds to mic regions. They are plentifar with as now. A most pleasing feature of the Whiter hundscape is which choser like the grosberks, upon the pendant boughs, and like been feed up in the bulls of the trees. Doubtless "L. W. L." meeds and to be reminded at those heanifful, gurralous, chattering birds of the some feed up in the bulls of the trees. Doubtless "L. W. L." meeds and to be reminded in those heanifful, gurralous, chattering birds of the some feed up in the bulls of the trees. Doubtless "L. W. Like herm they are remarked of the sample of the sonable manufestal of the canny for the principal sonable that they fine of the

EAGLES.

PORTLAND, Me., February 19, 1875.

PORTLAND, Me., February 12, 1815.

Editor Forest and Stream:—

The interesting inclient narrated by "Nimrod," of an eagle capturing a fish with all the skill and dash of an eagrey, is, I think, not one of very common occurrence. I do not believe the eagle to be "devoid of skill, darling, or artirity," but allo believe, as expressed in a former article, that it will not "make an effort to capture fiving game, if dead can be found." Very probably, if a dead cat be put into a cage of eagles, and a live cat also, the living animal will be first attacked; but I believe that, should an eagle in its natural haunts discover a dead cat and a living one at the smace moment, the dead animal would first become the prey of the eagle. In contrast to the charming narrative of the capture of a mild swim by a pair of eagle's, written by Mayne Reid in "The Young Voyageurs," may be narrated very many incidents that give evidence of the eagle's possessing bad qualities fout other individuals of "poner and during" do not possess.

Andubon, describing the babits of the white-headed eagle, says: "It frequently gives clause to the whiteres, and forces them in disgorge the cambinate of their stormechs, when it alights and devours the fifthy mass," and gives an illustrative incident that occurred in Natchez in December, 1920; and this occurs "frequently" where fish, flesh and fowl are very abundant.

In allusion to "Roamer," "Nimrod" says: "I think your correspond-

and grees in flustrative includent three cash, flesh and fowl are very abundant.

In allusion to "Roamer," "Nimpod" says: "I think your correspondent wrong in his statement that the eagle trill not capture live food, if he can find dend; for it is only when driven to the last stages of hunger that he will salitate himself with carrion." In support of my riews I will quate the opinion of Andubon, and a fannous letter of Benj, Franklin. Analubon says, in his description of the white-headed eagle, eaffer me, kind reader, to say how much I griere that it should have been relected as the emblem of my country. The opinion of our great Franklin on this subject, as it perfectly colleides with my own, I shall here present to you." Then follows the quotation from one of Franklin's letters: "For my puri, I wish the bald eagle had not hear closer as the representative of our country. He is a bird of bad mural character; he does not get his living honesily. You may have seen him perched on some ifead tree, where, too lazy to dish for himself, he watches the labors of the shifing hawk, and when that diliqent hird has at length takin a fish, and is bearing it to his most for the support of his mate and young ones, the baid ragle pursues him and takes if from him. With all this hipustice he is a reak country, the little king bird, not bigger than a sparrow, nitacks him boldly and drives him out of the district. He is, therefore, by no means a proper emblom for the brave and honest Cinclumit of America, who have driven a the King birds from our country, though exactly fit for that order of knights widen the French call Chevalle, at America, who have driven with the French call Chevalle, at America and mone cock, and report the result?

FLUKES IN DEERS' LIVERS.

New York, February 20, 1875.

New York, February 20, 1875.

Bintor Funest and Stream.—

During the past month I have expected that every succeeding number of Foliest and Stream would contain is their from some of its aumi rous correspondents, giving full information relative to the presence of parasitive in the liver of our common doer. My observations, extending over a period of seven years, and the examination of certainly and humitred different specimens, has the following result relative to the deer of Northern Wilcomen and Mredignat. From January to April, four oil of every live deer kind contained from one to half a dozen parasites imbided to the liver; while from July to Northeber none were visible. Late in November I have discovered them, I am early stage of development, when they vould have ecouped observation not specially discoved to them. A month later they could scarcely toll to attract the nutice of any one dressing a after. In February they present the appearance of a lage after about one luck in dument r, and the field about them is discovered and apparently much decayed. I never noticel that their presects one sind one and by age at each of human their equally in all specimens shrifting the Winter and Spring. I have frequently conversed with particular time are always formed by these para live (worms) in Winter and Spring, but receiver in the dome in early summer. My oil guide—Handand, at Oreen Bay, a hunter of great experience and a minute observer—Indoced flits theory. Very respectfully.

Perengono, Canada, February 28, 1875

Entron Furest and Stream:—
As there have been several articles in Forest and Stream with reference to suspended animation in this by freezing, I will trivily relate my experience: Having had a small fish in a glass globe, containing about six quarts of water, in the dining room, I found if frozen solid after one of those server nights are had in Jimuary. It remained so nearly all the next day, when the fre having melted, the fish was as lively as ever. I have also heard of parties here who purchased bass, &c., that had been roughly in our back lakes, that had been frozen for several days. When put into water to flow (preparatory to cooking them) they have summabant as if in their matter traters. Yours truly,

A READER.

THE FOSSIL REPTILES OF NEW ZEA-LAND

BY ANGLO-NEWZEALANDER.

NE of the most interesting discoveries, from a seign-tific point of view, made in New Zealand during late years, is that which has brought to light the fossil remains of a Reptilian fauna belonging to the Mesozoic epoch. The remains have all been obtained within a limited area, some fifty wiles in extent, at the northern extremity of the Camberhary plains. They comprise portions of furly-three imlividual reptiles, mostly of gigantic size, and all of aquatic habits, and belonging to at least thirteen distinct species. These species resolve themselves into two distinct groups, the first embracing the genera Plesio-saurus, Manisuwus (so called by Dr. Heetor after Mani, the fraditional discoverer of New Zealand), and Pogeotylus, all of these being true Enaliosaurians; and the others comprising the large crocodillian forms provided with swimming paddles, Leiolon (of Prof. Owen), and Taniahasaurus (Hector), a new genus so named in allusion to Taniwha, the fubled sea monster of the Maori. In addition to the allove, a single vertebrae was collected by Dr. Haest in the lower Mesozoic strata of Mount Potts in Camerburry which appears to be referable to the genus Enthyosaurus, A single vertebral centrum, in a matrix of dark colored micaceous sindstone, from the Rangitata district, is referred by Dr. Hector to Telthyosaurus austratis; and in summarizing the results he refers to the extraordinary variety and interest of these fossil remains, which prove that the ocean during the appear Mesozoic peciod was, in the Santhern as in the Northern Hemisphere, tenanted by huge Sanrians, performing the functions in the animal economy that are now Talfilled by the predaccous Cetacea and marine Carnivora.

Contemporaneous with these discoveries in New Zealand, we find that similar skeletons of these Saurian monsters of the micient seas are being found in the erctaceous strata of Kansas, in North America. A full account of these will be found in Professor Cope's published reports on the subject.

The Bennel.

WATER SPANIELS.

UNDER the head of "Spanicls, their Varieties and Peculiarities," in the Turf, Field and Farm of February 12th, the writer states that "the Irish water spuniel is not a desirable breed for this country, as they will not stand a cross with any other breed; and famed as they are at home as retrievers from the water, the best of them at home as retrievers from the water, the best of them would make but a sorry figure retrieving a dead duck from the Gunpowder River when roughened by a northwest gale," The first statement was probably made on the authority of Mr. McCarthy, a noted breeder of this strain of dogs. Still, there is a difference of opinion on this subject. Idstone, in his work on dogs, says: "I should hesitate very much to say anything on report in opposition to such an authority;" but goes on to state that "he was looking for some liver-colored retrievers for American sportsmen, and when nearly discouranced ers for American sportsmen, and when nearly discouraged with looking in expectation of finding what was required, there was brought to tim for sule three dogs and one bitch One was black, only about twenty-three inches high, with a good long head, of the right substance and power, a 'whip' stern, with short curls, a bare or short conted forehead, and the remainder of his body was coated with curls ulso; his cars were a trifle heavy, and he had no white. The other two were of the same form, with similar coats, only one was durker than his brother, and that neither was of that dark purple or puce-liver so conspicuous in the genuiue breed of Irish water spaniels." He says: "These dogs were by an Irish water spaniels." He says: "These dogs were by an Irish water spaniel of Mr. McCurthy's genuiuc breed, answering all the points insisted on as being those of his class: His appearance was an exact index of his character. He learned anything directly. In water he was of course proficient, and it seemed more his clement than land. He would work awong review relief. was of course proficient, and it seemed more his element than land. He would work among water rushes and sedge for "flappers" with a resolution and daring that could not be surpassed. In partiridge shooting there were very few equal to him. All the qualities I found in the half-bred brish water spaniels I bought and forwarded to America, and so well pleased were the parties that received them, they ordered the dog and bitch—which at the time I rejected—purchased and forwarded to them. An attempt has been made to resuscitate the breed, (Irish water spanhas been made to resuscitute the breed, (Irish water spanins been finde to resuscrette the oreen, (frish water spaniels,) but although Mr. Bullock's Rover is a good, useful spaniel, he has no pretension to rank with the Irish brigade, led by Mr. Lindoc's Rake and Blarney, and Mr. Skidmore's no less beautiful and justly celebrated Doctor and Duck "

By this it appears there is a difference of opinion on the the subject of crossing the pure breed Irish water spinich to secure really good retrieving dogs for this country. perseverance and intelligence used by those in my possession in the retrieving of ducks from the soft and miry mursh, the heaviest billows on Lake Koshkouong, or the tall and heavy rice with which many of our Western lakes

abound, convinces me that there is not the equal of this breed from which to produce just such dogs as the sports. men of this country desire for duck shooting. The purebred ones are acknowledged not excelled in beauty or intelligence by any breed. I might enumerate many instances where they have seemed to evince almost the intellect of the human race, but I have already laken much of the valuable space in your paper. I cannot close, however, without suggesting that in all hench shows a class should be opened for this particular breed, that sportsmen may become better acquainted with them.

HYDROPHOBIA AND DISTEMPER MADNESS.

DISTEMPER madness is often mistaken for hydropho. D bia, and a comparison of the symptoms of each disease as given by no less an authority than Dr. E. P. Philpots, of the British Medical Association, will be read with interest and advantage by owners of dogs. Gennine hydrophobia is extremely rare. We quote:—

hydrophobia is extremely rare. We quote:—
A person hitten by a hydrophobic dog is more or less tertain of contagion, and as some as the discuse is contineted either by man or dog so sure must death casue from it. With regard to distemper moduless the case is quite different. A person litten by a dog that his this discuse suffers merely from the heal effects of the hite, which effects are, of course, in proportion to the severity of the bite, or simple lacerated wound, as it may be termed; the dog also, as a rule, recovers. To facilitate the differential recognition of these two discusses, the fullowing table is given:—

NADMERICAL.

Definition—A fatal form of mail ness communicable from the fower ness and communicable from the fower ness nun-communicable in man; characterized (us wharacterized by familing at the drawn of the name denotes) by an inlense and fread of water.

Summpries—None.

Premouthery Symptoms—Beglitum facilities and the facilities of the familing at the days better hand, loss of spirits, and the facilities of the familing the family appearance that the family was all values—When let already his master by wagging list laid y Volently insone only on the approximation of males.

Fig.—Absent.

Foam at the Lips-Absent.

Fils-Present in a marked degree in most cases.
Foam at the Lips-Yery much; the dug leates it in the surface of the water he wintly tries in drink (the foam is caused by futtle efforts to think or smallow.)
Water-liss no effect upon htm.

Waler—Sprinkled over or near him causes violent convulsions. Thirst—Absent. Hawiling and Barking—Absent. Musicular Affection of the Throat Causing Inability to Swallow Anything—Absent or not observable. Causes—None. [A spectic zymothe poison.]

Prognosis—Very bad, almays fatal, no chance of recovery.

Terminations—The symptoms do not vary to amy great extent toward the termination.

Puthology—Intense inflammation of the brain, extending to the throat and times.

Prophylactic Treatment—None.

The hydrophobic dog is a sullen unimal, merely appears a little "out of lumor," and is only actually mail on the approach of water; but in distemper unadness the animal really is mad in every seuse of the term. He bites and gnaws and snups, and chews anything that he thinks will cause him to vomit. The hydrophobic dog has no fits, (except on the approach of water,) and he does not foam at the mouth; but with the dog mad with distemper there is a succession of fits, one of which may cud his life; his saliva, some of it of a frothy nature (foam) drihbles and exudes from his mouth, and water sprinkled over him has no effect upon him. The hydrophobic dog hates the sound, the sight, the thought of water; he will fly from it mully; but the dog mad of distemper rushes to it to assauge his lhirst, but this he cannot do, as spasm of the cosmingus will not allow his swallowing. The hydrophobic dog's eyes are "fishy," dull and sullen looking; the dog ill of distemper maduese has bright green and savage looking eyes, and he howls and barks. Dogs never recover from hydrophobia, but they do from distemper madness, if the fits be not severe. Vuccination does not prevent hydrophobia, but it does distemper madness.

LAVERACK'S SYSTEM

Morristown, N. J., February 23, 1875.

Edition Forest and Stream:—

The interesting and well considered communication under bend of Tockennel, in your Issue of February 18th, over the signature of "Doctor," fairly merits attention at the famils of one irbo has practicully expressed by confidence in Mr. Laverack's system of breeding the selter. And the writer may be excussed for here saying that the hangliful argument and courteonsly expressed conclusions which characterize "Doctor's" reflections upon this subject, have presented the first lemptation to publicly comment upon may of the criticisms of the imported Laveracks, and the gentleman whose name they bear, that have appeared in the field sportsman's press. Were the distinguished and successful breeder of those dogs conveniently near to review your Boston correspondent's remarks upon their pedigrees, an ablor pea, guilled by far greater experience, had rendered this reference to "Doctor's" minimal versions nunecessary, and perhaps presimptions.

In a perfectly fair and superjudiced manner "Doctor" submits the in quiry whether, judging from the psedigree of the imported offich Fairy, Mr. Laverack's plan of breeding has not been curried about as far as advitable, and whether a new strain would not improve the stock. From a merely theoretical point of view this question would appear to demand an affirmative ansiver. But how often we see the most logical theories compelled to yield to unreasonable and slubborn facts.

Mr. Edward Luverack is admitted to be high air hority apon the setter. He has devoted mure line, more careful altenion, and more judicious experiment to the breeding of this dog than any other living man. The progeny of his keanels, inbred and interbred, have teen carefully and exhaustively testest for generation after generation. In late years, since the histody generation of field trials and beach shows, the direct offspring to the sixth generation, of Pinto and Old Moll, have competed with repeated sincess for the prizes awarded. In England to

scendents, without a cross, of the original Parlish dogs, and all hothers or sisters of Fairy. Mr. Licerack nowhere claims that his dogs are notice than the best (and their record would appear to mark them as good as anyl; but he does say—than which no heter evidence of their high form of rimility and perfect natrition need to a sked: "If is a fact that I have rue dogs of this breed for three weeks stally from nine A. M. 10 server P. M., and others possessing the same idead have done the same." When it is understood that by "rimiding," is bree mener freight field public at ride ranges in the open, only stopping to point, and to drop wide the shooter reloads, with, it is to be trusted, an hear's rest at large time, the shooter reloads, with, it is to be trusted, an hear's rest at large time, the shooter reloads, with, it is to be restricted and whilehomenshift in the relation of these dogs, their wide cord and whilehomenshift indicate and the relation of the time of the stop of the relation of the same large times as they exist, it is respectfully sidentited that the valuable qualifies pressessed by these dogs, the inharitance and development of six generations of highly educated sellers, their such parce of secret, their spent, summelness, endannee, their affectimate gentliness and high contage, inflied with wonderful heavily of form and further, would scoreely indicate that the truly "ameful consideration of the larversek hich Fishy's publifiered" entirely suit-des the impairy as in whether or not "in this case indicating has been carried, Unit and say, too for, for far far enough without to best the experiment of testing, have in America, the results of the truther that the experiment of testing, have in America, the results of the carried.

inhurshing has been entired. I will and say, here in America, the results of its confinances.

Such a ranthumical of Mr. Larreack's system has, under his personal ahiter, already here intempted, and its consequences will, it is hoped, he schmilted to the ordered of public trial in the time. This carrying out of Larreack's method it e, uniting Pulty with Prole of the Border) is a tribute honestly due to his own highly surce-sful diccory and practice of trreding. Not need this hoped for proceedant theory and practice of trreding. Not need this hoped for proceedant incory and practice of trreding. Not need this hoped for proceedant of the part Larreack though interfere with the plan spoken of in "Doctor's" communication "to impense on own stack, and by judicious breeding stabilish a strain of dogs switch for not own ner." Furturately it is to be expected that both theorets will, at no very detant day, he thoroughly tested. Pride of the Roader limits as the emmated with one of the puresthred, best hocken, need helders, and most beautifully unde orange and white sector briches ever bred in the State of New Jersey. Pairy's pargeny and Nellie's, both by Pride, will receive impartially the feel possible handling, and it is paracelly looped that the soon coming future may decide the question as in which shall be the type—to again quote "Doctor"— of "dogs that rand not be equalled by the tworld."

It is not intended to again intrude this subject upon your valuable space out of a future of the theories advanced by "Doctor." to whose letter this too lengthy intitle is intended in the type—to achieve letter this too lengthy intitle is intended in the a situ acknowledgment than a reply.

Very respectfully.

—The Gordini pure Mora, imparted directly from the

The Gordon page Mona, imported directly from the estate of the Dake of Argyle, in England, by Mr. L. L. Read, of Louisville, was raught in a coon-trap last week and instantly killed. This is a great loss to Mr. Read, as he valued the dog at \$1,000.

ANSWERS TO CORRESPONDENTS

A. P. V.—How have Mr. Reymond and other gradtemen succeeded at caporting their degs? I understand that the resonces will not early them.

Aus—Rodiger, Rieman & Co., European and East Indian Express, No. 48 Broadway, will carry dogs at moderate rides.

Diaymes, Perth Amboy —Can you inform no whether dogs with their tails out run into prizes at a bench slow? Also if you think it advisable to cut setter pup's lails?

entsoner paper ranse. Do not cut your setter's tail natil he is sufficiently grown for you to judge if it will be required.

Hunsier, Chester, Pa.—What is a spainger spaniel?

Aus—The springer is one of the many varieties of spaniel, chirtly distinguished by his temler and discriminating nose and extreme tractability. They are heavier and slower than the cockers, and not equal to the same amount

of wirk.

Sancho.—Year receipt to "Sancho, Bergen Pond," In his week's lasting for emiker in soiler's ears, is undoubtedly a good one, but allow methosically an area of the soil year of remedy 1 applied to a valuable frish setter of mine, and that is—two or three drops a day, for a few days, of Ihrdem oil. It till his timer positive ente. This needing, together with the one you give, if tried by southern taxing their days those affected, (and it seems to not they are the only ones) cannot but prove effected.

Ads—We believe our remerly to be an infallible one, but any correspondent's is well worth a trial.

our correspondent's is well worth a trial.

F. L. Y., Breelly, N. J.—What is the urigin of the Giblersheeve setter, who has the pure stock, and where have they been worked in this country; what are their characteristics as to size and color? I observe your natice of the proposed establishment of a gentlement's sporting keonel. This is one of the needs of the age, and I am glad to see the dide conceived by gentlement of such standing as insore it to be a

Ans-In our issue of December 31, on page 325, Vol. 3, you will find an article on the Gildersleeves, which will

you will find an article on the Gildersleeves, which will supply the information you desire. They are of full size, and generally orange and white in color.

G. M. T., Ju., Quebec.—Is there any danger to be apprehended from skinning or preparing the skins of wild annuals poisoned by strychulaet. There seems to be a general aversion to louching an aducal killed in this may, and many valuable skins are lost from fear of the consequence of accidentally wounding oneself white performing the operation of ekinning, or from the contact of braised or chapped hands to the raw skin of Best of the minual. I tend lately of a man who, while whittling a cutk, cut the fleeby part of his thingh, and fird from the effects, exhibiting all the signs of polsnaling, and it was supposed that the cork being impregnated with poison, soficient was conveyed to the wound to cause death. Accepting this as the case there would seem to be some formulation for the very general opinion on the subject. Where are the phosphorescents?

Ans-Prussic acid excepted, strychnine is beyond doubt Ans—Prussic acid excepted, strychime is teyond doubt the most violent poison among inedicines. The regular dose for a buman being is 1-16th to 1-12th of a grain three times a day. It differs from other narcotics in the fact that the system does not so soon become habituated to its impressions, so after its effects are experienced it is not necessary to go un increasing the dose. One grain and constructed pressions, so after its effects are experienced it is not necessary to go un increasing the dose. One grain, and sometimes less, is liable to produce fatal results. Pelletier & Caventon, with 1-8th of a grain of the pure alkali, killed a dog in thirty seconds. The quantity required for killing unimals, therefore, is small; and notwithstanding that it is impidly absorbed, (as after leaving here sivallowed it has been found in the urine, the blood and tissue of various organs,) and that the blood of an animal, under its influence, produces similar effects in another if transfused. fluence, produces similar effects in another if transfused

Yet we do not believe it possible for any serious consequences to nrise from accidentally wounding oneself, or from the hands being braised or chapped while preparing the skins. In the human subject, in cases of ammirosis, it is sprinkled on the idistered surface near the numbrosis, it is sprinked in the disserted shifted their temples in quantities of from \$10 \$ in grain, and sametimes even in grain, while the dose internelly, it will be remembered, is from 1-16th to 1-12th of a grain; nor is there danger from the dead animal itself. In preparing the skin of in animal rhying from the hite of a rattlesanke or a radid dag, or the skin of a glandered horse, there is every degree of the purson since either one is an animal poison. danger of the poison, since either one is an animal poison, leeing absorbed by the nearest lymphatic glamis, and yet such a case may not necessarily terminate fatally, since the such a case may not necessarily terminate fatally, single the paison may remain in the local parts surrounding the lymphatic glands. But we should prefer not to run the risk. In regard to the death referred to from enting the finger while whittling a cork, while we think such a thing prossible, owing to the absorbent powers of cork, yet we are disposed to take the statement cum grano salis. Gangrene may have supervened from the ent, as it might have accurred from a wound under other circumstances. There are no things known as phosphereseents. We presuma you mean phosphereseence, which is the praquety possessed by certain hodies of being luminous in absurity under particular circumstances. It has been accasionally witnessed in man when suffering from a wasting disease and near in man when suffering from a wasting disease and near

The Borse and Course

The Hippodrome races continued up to the last night to be the great attraction, and those present were treated to the fustest time yet recorded on the sawhust. Messrs, Walton and Mace are entitled to credit for their skillful management, and Winter racing nuder cover will in future be looked upon as a legitimate sport. On Saturday night the lar, g. Pilot succerded in celipsing naything in the way of time yet made, beating Dan Costello in six heats, of which the last three were trotted in 2,39, 2,40, 2,42. On Monday trotting and racing gave way to pedestrianism, and the gay Luncashire bases are followed by the irrepressible Weston and the persistent Judd.

There has been comparatively little betting an the

There has been comparatively little betting on the leading Spring events during the work, and while the favorites have advanced to shorter odds, no new candidate for leading honors has succeeded in displacing them.

—From Kentucky and Tennesses we hear of great pre-parations for the coming campaign, and the increase in the number of horses in training corresponds with the similar condition of affairs at the North. The meeting of the Nashville Blaod-Harse Association is fixed for the last week in April and first week in May, and promises to be very successful.

The racing stud of Count La Grange, the Fretch turf-naa, includes 103 larses in training among which are sixty-eight two year olds. Vasca da Gama, a full bracher to the St. Leger winner, Peru Gamez, being by Beadsman out of Salamanca, was sold when a yearing for 1,300 guineas. Two weeks ago, being a three-year old, he was sold by nuction for seventeen guineas.

guineas. Two weeks ago, being a three-year old, he was sold by nuction for seventeen guiners.

—Disqualification by death is a question now agitating racing circles an hoth sides the water. Mr. Lorillard's three-year old calt Vassal was entered for his engagements by Mr. Abner Turner, who, since the transfer of the colt has died. The rule says: "All nominations in stakes are void by the death of the subscriber, except where a horse is sold with his engagements, and a written ackstawledgment from hoth purchaser and seller has been delivered to the Clerk of the Course previous to the death of the original subscriber." As to written notice of the transfer was filed, the nomination is void. An unfortunate lact, as Vussal had been lacked for the Withers Stake, and the race is deprived of some of its interest. The English rule is even more pointed. It says: "All uominations are void by the death of the subscriber." An effort is being made to have it changed to conform with our rule, but Admiral Bons, who is a thorough bull-day where turf interests are concerned, claims that the rule as it stands is the only sufeguard against fraud. The Admiral has lately given a written opinton in the case of Mr. Behaam's have Gray Phanet, and his ruce against time. The horse was allowed a running start, whereas it is customary to start running houses from a stand-still, and time them from the dropping of the fing. The Admiral ladds that it should be treated as a lasinile in a race of greater length. Looking at it as a time lest and record, we disagree in toto with the gallant sailor. The time necessary for a horse having a standing start to get under headway and fairly in his stride is all saved to the one passing the string or score at full speed, and the difference must be one or two seconds at least. However, as the time record in running races constitutes no har, the matter is of but little consequence.

Death of a Celebrated Race Hoese.—Lard Clifden, whose success at the stun, as well as on the course, had

DEATH OF A CELEBRATED RACE HOUSE.—Lard Clifden, whose success at the stud, as well as on the course, had placed that in the very front rank of sires and facers, filed on the 7th of February. The extent of his awaer's (Mr. Gee) loss may be conneived from the fact that £11,000 was refused for the lawrse hist Spring. Lard Clifden was fooled in 1860, and was got by Newminster ont of The Slave, who survives her renowned son. He was favarite for the Derby of '63, and was only beafen by a short head by Maccaram, after one of the most memorable "Darby's" on record.

—King Tom. by Lexington, has been sold by Mr. Maccaram,

-King Tom, by Lexington, has been sold by Mr. Mc-Peters to Mr. Jarvis, of Canada, for \$2,000.

-The sorrel trotting mare Jenny Lind, who in 1856 won a trotting race on the Union Course in 2:37, died recently, in the twenty-eighth year of her age.

-Mr. S. B. Allexander, of Charlotte, N. C., has clusted the thoroughbred stallion Abilel Koree from

—At the Torauto Winter races two horses, Ohio Girl and Red Dan, cullided, the shaft of the latter's sleigh pourtaing to the depth of nine inches in the mare's chest. Red Dan was also bully injured, but will recover. Ohio Girl is still living, but will probably die,

-Mr. Shick, the great lankingker of Melhauthe, Anterdia, made the jeculiar let of £1,000 to five drinks against Nimbelson, for the Melbourne Cup, and lost it. The bet was told.

—Although not properly a "horse note," the recent vehicipede match in England, brtween the Hon. Keith Folconer and Mr. H. P. Whiting, particles to much of the untire of fast time us to warrant a registry under this head. The distance was twenty the miles, and the race was wen by Mr. Whiting in the remarkable time of I hour, 41 minutes and 163 seconds.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.
WILLIAM C. HARRIS, Business Manager.

NORTHWESTERN TEXAS. - The Topeka Commonwealth publishes two letters from a correspondent at Fort Sill, I. T., announcing the arrival of Gen. Miles at that post, and describing the trip of his command over the Llano Estacado, or Staked Plains. As a portion of the ground covered has been mentioned as included lu Col. McCarty's itineray, the description is interesting. On the 28th of December Gen, Miles broke camp on the Canadian River and traveled due sonth to the Tule, the north branch of the Red River, and across the Staked Plains, a distance of over one hundred miles. Here the course was changed to the castward, and a thorough scout of the country made. Four or five hundred Indians-Comanches and Kiowas-were driven into Fort Sill, and the march, made in the dead of Winter, over Fort Sill, and the march, made in the dead of Winter, over a country never ventured upon by whites at this season, is one of the most cemarkable on record. The sight of the Wuchita mountains was a glorious relief from the terrible monotony of the Staked Plalus, which, almost unendurable at any time, are particularly so in Winter, when the question of how to keep from freezing is an important one. Buffulo ching were not to be lade, and the only fuel question of how to keep from freezing is an important one. Buffalo chips were not to be had, and the only fuel was that hauled in the wagons. From the headwaters of the Red River to Wachita mountains the conutry is rough and broken, and almost destitute of vegetation. ls a kind of red clay, which seems to produce only the mes quite brush. The creek bottoms are narrow, and almost destitute of timher. The country to the north and south of the mountains is entirely different. The writer describes it as like arriving from a desert to a paradise. Their greatest altitude does not exceed 600 feet; the surface rocky, and no timber is to he seen on them from the southern side. Numerous small streams of pure water gush out from either side. These streams are all supplied with an abundunce of timher—waluut, oak, hackberry, hickory, and other varieties. The country breaks off into rolling prairie, ami is covered with a rich growth of vegetation. The severity prevailing elsewhere has extended this Winter to the Wachita country, but the climate generally is mild, equable, and free from malaria.

-The St. Augustine (Florida) Press of February 20th notes the following arrrivals in that city:-Admiral Jame Alden, of Washington, Mrs. Abraham Lincoln, and E. R. Wilhur, Esq., of the N. Y. Forest and Stream. The Press says:—"Mr. Wilhur is making a tour through the State, and working generally for the interests of the valuable paper he represents.

NEW ENTERPRISES

IT is a peculiarity of our people, particularly those who settle in hitherto unopened districts, to ignore the well worn paths of industry, and hy the introduction of new schemes and pursuits, to seek to find a rapid road to com-A paragraph in the San Francisco Bulletin, to the effect that the Angora goat enterprise in California has not realized the wonderful profits anticipated, and the total failure of the attempts at sericulture in the same State, are strong cases in point.

At the first introduction of the Angora, the most extravagant expectations were formed as to the results to follow Enormous prices were paid for rams, and even graded goats, lifted but a stage above the common native variety, were bought with avidity. Cashmere shawls were to be brought within the reach of every one, and the gossamer fabrics of Rummer por Chudah were to he as common as the products of the looms of Paisley. But alas! these anticipations were not to be realized; either the goats did not produce as was anticipated, or dealers found themselves nnable to use the fleeces in competition with the natives of the East, and those who engaged in the husiness have been obliged to sell out and betake themselves to the drudgery of farming as a means of livelihood.

Six years since the Legislature of California passed a bill giving premiums for the planting of mulberry trees and the production of silk cocoons. Hundreds went into the enterprise. Large areas of ground in every favorable lo-cality from Sacramento to Los Angeles were planted with the different varieties of the Morus family. Eggs of the silk worm were procured from China and Japan, and probably a million or more dollars invested in the business. Barring some little difficulty in the way of disease among the worms, caused by feeding on young and immature leaves, everything flourished; the State paid the bounty, and it appeared that a bonunza had been found in silk culture. Eggs and cocoons multiplied, but remained on hand. The French and Italian manufacturers who were awaiting with cagerness for the new market did not appear. There was no machinery in the State to reel the silk from the co coons, and no skilled labor to do it had the machinery heen forthcoming. The business languished, flickered, and went out. The State Legislature reseinded the hounty, and the impecunious silk growers were glad to grub out their mul-berries and plant potatoes in their place.

It is now proposed to grow the tea-plant extensively in the same and other States, and enthusiasts would have us believe that we can soon dispense with the Chinese leaf, and on our own soil produce the delectable beverage that

cheers without inebriating.

The moral of all this is, that our people, while rushing into these enterprises which promise so weil, on paper, overlook the great question of labor upon which in reality success hinges. Admitting an equally favorable condition of soil and climate, the fact yet remains that in such indus-tries as require large numbers of laborers, either skilled or the country which can furnish the labor at one or two dollars per month can never fear competition with that wherein it commands from thirty to forty. Added to this, is not the practice to follow these pursuits, particularly silk culture, on the large scale with which it has been at-tempted in California. In China and Japan each family in certain districts produces a modicum of the raw mate rial, which is gathered by collectors on their periodical trips. The lahor also falls on the women and children, and is only a portion, not a speciality, of the family life

No one who has not seen it in operation can realize the amount of detail connected with tea culture. The picking of the leaves, the sorting afterward, the rolling to exude the juice, and the subsequent firing of those sorts intended for exportation. Most of the work, so far, is intended for exportation. Most of the work, so far, is earried on by children; the picking, and particularly in the green tea districts, (so ealled,) where so many different kinds go to form a *chop*, the sorting is done usually by girls, whose manipulation is more delicate. The wages of these people is about six cents per day, and for the men who make the bayes fit the leads in them and print and who make the hoxes, fit the leads in them, and print and paste the characteristic figures, perhaps a trifle more.

These same remarks apply equally as well to the Angora goat experiments. We have neither the labor or the machinery to work up the material when produced, and exportation is out of the question. The finest cashmere shawls, erroneously called camels'-hair, are made by hand, and each one represents, perhaps, the labor of years on the part of one family. If the settlers in our new States and Territorles will confine themselves to feasible and valuable enterprises, endeavoring to produce only those things for which there is a certain market, the sooner will they attain the competence at which they aim. The fahle of the hare and tortoise holds good in agricultural as well as in other pursuits of life, and haste to become rich by new and untried experiments is more likely to lead to poverty and disgrace.

-Hurst's Stereoscopic Studies of Natural History, which we offer for sale, are much sought for by sportsmen for the special purpose of using as copies to paint decoys from. As they are copied and colored from life, there can be nothing more suitable.

-Our correspondent "B.," on p. 409, is mistaken when he says N. W. Clark is one of the State Fish Commissioners for Michigan. It is John Clark, Esq., of Ecorse, that is the Commissioner.

CONICAL BASE SHELLS.

THE entertaining letter which we publish this week from our valuable correspondent, Mr. Wilkinson, of the Patent Office, Washington, will possess much interest for those gentlemen who, through our columns, have ventilated their supposed inventions of conical bases for shells, It may he a matter of surprise to them to learn that their theories on the subject are neither new or original, and that the question had been agitated as early as the year 1690. Furthermore, that patents to the number of fifteen or twenty have already been issued from the Patent Office for alleged improvements on the same invention. would suggest careful experiments, and inventors must hear in mind the rebuffs and discouragement which almost invariably follow any attempt to improve upon old

WASHINGTON, D. C., February 18, 1873

WASHINOTON, D. C., February 18, 1875.

Editon Fonest and Sterami.—

Permit me through your columns to answer an logalry that comes from sportsmen in different parts of the country. If I thus aid to answering similar letters sent you about the same matters, why, so much the helter.

Epiron Ponest and Stream:

Permit me through your columns to answer an loquiry that comes from sportsmen in different parts of the country. If I thus ald to maswering similar letters sent you about the same matters, why, so much the better.

Singularly enough a score or so of intelligent sportsmen, some of them from places as distinct from each other as Mahie and lowa, have shund tancously conceived the dea that it would be of immense advantage, hi both shot gone and ritles, to have a conical base for the powder to rest upon, and that this base could be easily and cheaply supplied to the ordinary metal or paper shell contridige. This seems the more remarkable when we know that this matter of the conical base has been agitated for rather more than a hundred years, and that during the last ten years a score or more of patents have been sessed in this country for various methods of attaching the conical base to the metal or paper take, of which the shells are made.

Still more remarkable is I when we find that as yet the whole thing is a mere matter of theory and speculation, and that no reliable and carefully conducted experiments have given any data upon which to base claums of superiority for this base over others. The fundamental idea seems, from a record of the matter, to have been to secure a constantly increasing area of combustion for a part of the length of the chamber, and for the purpose of lessening the recoil. Stonchenge, accepted, I think, as good anthority, states that he has repeatedly tried breeches of varying shapes, including the conical, rith the same barrel, charges, &c. and with a constant result, which seemed observe to establish the fact that the peculiar form of the base was limitaterial.

Many a sportsman has written that he has found that such cartridges shout better by one fifth or one-skith, or something of that sort, but if any of your coaders can refer to any reliable experiments anatomatically demonstrating the point, he will confer a great froor a pon sportsmen who, having conceal

Sometimes the breech is made double concave, the nippte forming an integral part of it, thus making of the three pieces a single one, which le then secured in the tube. See patent of Logan and Eldridge, Dec. 7th,

then secured in the tube. See patent of Logan and Eldridge, Dec. 7th, 1869, No. 97,537.

The various methods of cheaply giving a base of this form to the paper shell include molding the base of papier-mache, or any analogous material, and dropping it to the base of the tube.

One method is to take a strip of paper, which has one straight edge and the other running at a smull angle from the first, so as to give a constant but gradual increase of width. If now this paper be coiled upon itself, commencing at the narrow end, it will leave a cone-shaped depression in its centre. This paper thus coiled is to form the inner hase of the paper shell and rests upon the usual flanged metallic head. See patent of D. E. Williams, No. 108,543, Oct., 18th, 1870.

In addition to the above the following patents have been granted for shuilar devices:—

See English patent of Schneider, No. 2,203 of 1861, and American atonts of J. Ryder, Nov. 5, 1867; E. C. Dunning, No. 34,713, March 18, 362; W. H. Wills, No. 45,292 Nov. 20, 1861. See Engire patent of Schneider, No. 2,203 of 1861, and American patents of J. Ryder, Nov. 5, 1867; E. C. Dunning, No. 34,713, March 18, 1862; W. H. Wille, No. 45,292, Nov. 29, 1864; S. Crispin, No. 42,329, April 12, 1864; T. L. Sturtevant, No. 53,501, March 27, 1865; Depew & Slatcher, No. 97,615, Dec. 7, 1869; F. Wohlgemuth, No. 96,373, Nov. 2, 1869; S. W. Wood, No. 132,227, Oct. 15, 1869; S. W. Wood, No. 141,011,

Slatcher, No. 97,615, Dec. 7, 1865; F. Wonigemuth, No. 90,615, Nov. 2, 1869; S. W. Wood, No. 132,227, Oct. 15, 1869; S. W. Wood, No. 141,011, Oct. 28, 1813.

Any one desiring can order copies of these patents from the Patent Office and thus post binuself more fully.

Enough has here been given to inform sportsmen that the chances are very small of obtaining any very broad patents for applying control bases, and that the best he can do will be to experiment upon the cheapest and most practical ways of doing it, providing that he has first satisfied himself upon the question of the utility of such forms of bases.

bases.

As the reader may by this time imagine. I am not a practical "shootist," and have no pet theories to advance. Personally I had raiber, as I did last Summer with a salmon of twenty five pounds fast to my line, run for half an hour up and down banks among sharp rocks, and now and then up to the waist in the ice cold waters of a Canada river, than to shoot a steamer load of the nohiest of game.

A. G. WILKINGON.

-Green peas, tomatoes and cabhage are plentiful in Florida, and we hear of an occasional water-melon as far South as Enterprise.

SHOT GUN TRIALS

THE competitive trial of guns made by Messrs. Green-crs against those manufactured by W. & C. Scott & Son, is the subject of much comment in the English press, The guns used were bored on the American principlesaid to be better than any hitherto in use-giving clos of pattern with peuetration. Mr. John Rigby, of Dublin, who will be remembered in connection with the international rifle match, was present at the trial, and in a letter to the Field compliments our American made shot very highly. He also speaks of the Importance of adopting some uniform method of measuring the charges in experimental cartridges by the space they occupy, irrespective of the different qualities of powder and shot. Land and Witter offers a twenty-five guinea cup for competition to the trade, one day in April next, the conditions of which will shortly be made public. Now would be the opporungainst those of British manufacturers on their own ground—not for the value of the prize, but that, by comparison, they might mark, learn and digest to an extent which would result in our having a home-made article of excellence, without having to send across the water for guns, which, by accumulated duties and other expenses, rank among the extravagancies. The following is a table of the results of the Greener-Scott trial, and Mr. Rigby's letter. The totals represent the average:

ME	BSRS. G	REENE	ra's 12	BODE 6	gus.		
	Right Barrel.			Left Barret.			
	Group from centre of pad.	Selected E	Penetration.	Group from centre of 3	Scleeted 3	Penetration.	Total of both barrets, pattern and pene- tration.

The trials of shot guns reported in your last number which I attended at your request, impressed upon me the importance of adopting some more uniform method of measuring the charges in experimental cartrilges than that hitherto generally in use, namely, by the space that they occupy, irrespective of the different qualities of shot and The charges in the charges in the control of the different qualities of shot and the charges in the charge of the different qualities of shot and the charge of the charge of the different qualities of shot and the charge of t

metherto generally in use, namely, by the space that they occupy, irrespective of the different qualities of shot and powder.

The shot used was of two kinds—chilled No. 6, and Walker & Parker's London make, same number. I find these to average as follows: Chilled, 270 to the ounce, or weight of a single pellet, 1.02 grains; Walker's, 205 to the ounce, or weight of single pellet, 1.65 grains. Nevertheless, the chilled shot is slightly larger, the diameter of the pellets being 1033 in one case, and 1025 in the other. It follows from this difference that a charge of (nominally) 14 ounces measured with same measure for each shot would contain about seven pellets less of chilled shot, and would be deficient in weight nearly the one-sixteenth of an onnee.

The same remark applies even more strongly to the powder, as, owing to a difference of make, (and not to the size of grain.) a 3-drachm measure of Pigon & Wilkes' and Lawrence's powder, No. 3 grain, will, similarly filled, give about 34 drachms of Curtis & Harvey's No. 6. It is evident, therefore, that these inequalities render much more complicated than it otherwise would be the comparison of gun trials where different powder and shot are used.

The lower specific gravity of chilled shot is due to the greater amount of alloy added to the lead to harden it, and not to the method of manufacture from which it derives its name. I had recently an opportunity of inspecting the process at the works of Ois Le Roy & Co., at New York, who claim the invention and are the patentees in America. The metal is dropped from a moderate height, about fifty feet, and no shot tower is requisite. The peculiarity of the process is in the device used to retard the fall of the drops of metal until they are sufficiently hard to strike the water without injury. To effect this, a current of air is driven by a powerful fan up the shaft, in which the shot falls, and its resistance is sufficiently and even, but is not so hard as that manufactured by the Newcastle firm, and called by them chill

-Mr. J. Wallace, 10 North William street, has very generously mounted for us, free of charge, a splendid pair of canvas-hack ducks which we have forwarded as a present to the Hannibal Shooting Cluh, assome small acknowledgement of their couriesy extended last Fall to our worthy representative, M. M. Barker. The birds are very hand-

VIROINIA GAME LAW.—Several persons having made inquiries relative to the provisions of the Game law of Virginia, we have sent to the secretary's office for a true copy, which we append herewith:

copy, which we append herewith:

It shall not be lawful to hunt, shoot, or otherwise cause the destruction of partridges, pheasauts, or wild turkeys in any of the following counties, viz.: Rockingham, Richmond, Alexandria, Clarke, Fauquier, Rappahannock, Princes George, Westmorehad, Loudona, Goochlami, Northampton, York, James City, Orange, Caroline, Lanisa, Princess Anne, Madison, or any county that way so elect by its Board of Supercisors, from the first day of February to the first day of October of each year, or of any woodcock from the first day of July of each year.

It shall not be lawful for any person to catch any of the game mentioned in the preceding section in nets, traps, or pens, in said counties, for the purpose of selling such game, for the period of two years next after the passage of this net.

act.

No person who is not a resident of this State shall be allowed to shoot, or take with nets or traps, for sale in or ont of this State, any of the game mentioned in the above section, in any of said counties.

Offenders may be arrested by any citizen or citizens of this commonwealth, with or without a warrant.

FISH PICTURES. -Mr. E. Shernou Pease, of Twin Lakes Cunaan, Cl., whose paintings we lave before noticed with favor, has just filled two orders for Eagene Blackford, of Fulton Market. They are studies from life—one representing a bluefish, with squid in his jaws, just handed from the surf on a sandy beach, and the other a group of bright, amber-hued trout, with the usual accessories of rod and creel. The portraiture of the trout, in delineation and cobir, is very portrature of the trout, in institution and constructive perfect, but the merit of the work is somewhat obscured ("killed" is the word) by the tinge of yellowish green that pervades the picture. Unless the trout be very dark colored, it is a great mistake to introduce the yellow basket, brussy reel, amber-colored rod-but, and the straw green of the grasses, that many artists seem to think essential to the constant of the regitive they wish to convey. Mr. the grasses, that many artists seem to think essential to the completeness of the reality they wish to convey. Mr. Pease will take care not to fall into this error again we feel certain. However, strictly treated as a tront study, this last effort of Mr. Pease has been enviably successful, Mr. Blackford should be satisfied.

POTOMAC SIDE NATURALISTS' CLUB.-This society held its annual meeting at Washington last week. The paper of the evening was by Dr. Foreman, and referred to the use of the boomerang of Australia, and a similar shaped weapon among other savage tribes. The well-known peculiarity of this weapon is its retrogressive action, which brings it back nearly or quite to the point whence it was thrown. The Moqni Judians of Arizona use a somewhat similar instrument for killing small game, but it does not return to the hand of the thrower. Sir Samuel Baker and Dr. the hand of the thrower. Sir Samuel Baker and Dr. Schweinfurth both mention seeing this weapon in use among some of the African tribes, and recent travelers, have found it extensively used by the wild tribes living near the base of the Himalayas. The Australian form of boomerang is mentioned in "Ovid's Metamorphoses," and the wood of which it was formerly made is alluded to by Pliny in his natural history. Pliny in his untural history.

A SPORTSMAN'S FLORIDA OUTFIT.—Our correspondent "Piseco" sends the following item. His thoughtfulness is worthy of gratitude: Washington, D. C., February \$6, 1875.

is worthly of gratitude:

Machington, D. C., February 26, 1875.

Editor Forkst and Stream:—

A friend on his way to Florida stopped over a day with me, and talking over the necessary outlits for the Florida trip, read to me from his memorandum book a liel of his stores. I conid'nt help giving the renders of Forkst and Stream the benefit of it. Perhaps you may go down yourself some day. We quote:—

One round trip ticket.
One box bine pills.
One box bine pills.
One box bine pills.
One box Dailey's olument.
One bottle Griman sails.
One bottle Griman sails.
One bottle Griman sails.
One bottle Larille's goul remody.
One bottle Killinger's limment.
One half pound slippery elm.
Ten pounds oatmeal.
One bottle whiskey.
And not feeling well this evening, thave just supplied him, by request, with a dose of casior oil. Won't be have a good time?

Piezen.

THE SPORTSMAN.-We have received the first number of a new paper called The Sportsman, to be published in this city, whose columns, eschewing general literature, politics, agriculture and science, are lo be devoted to the further-ance of sport alone. The editor is evidently an fail on turf topics, which, from the copy before us, we judge is to he a specialty. We bid our new colabrateur welcome in the ranks and wish for him the success ever merited by energy and parseverence.

The new Windsor Hotel, at Montreal will be completed on the 1st of January, 1876, and will cover 62,600 feet. It will be leased at seven per cent, on the outlay for fect. It will be leased at soven per cent, on the outlay for ten years, by Mr. J. Fulton, Jr., late of the International Hotel, Niagara Falls, who engages to pay taxes, keep in repair, and furnish it in a style equal to the finest American hotels, also taking \$10,000 stock in the company. The plans will he prepared by Mr. W. Beyington, of Chleago, who designed the Pacific and Sherman Hotels of that city.

The sale of Ruffed Grouse, Pinnated Grouse and Quail, which was permitted up to the 1st March, is now prohibited under severe penalties. Dealers will be wise, and not make themselves liable. With the exception of Wild Fowl, and Bay Birds, March is a close season for

The Rifle.

-The National Ritle Association held its regular monthly meeting on Tuesdey. The proposed change of targets at Creedinour was the most important matter discussed, and a committee was appointed to report upon it.

-A meeting of the Ritle Clubs was held on Friday afternoon, Columb Wingate to the chair. General McMahon reported that arrangements were complete for the amateur theatrical entertainment to be given at the Academy of Music next mouth. Various improvements at the Creedmusic next month. Various improvements at the Crestinoper Range were suggested. A letter from a Ruthe Club in New South Wales expressed a desire to shout at Creedinoor. Another letter was road from Mr. Miblimay, Secretary of the National Rifle Association, Wimbholm, England, extending a hearty web-ome to the American Team on their proposed visit.

-It will be seen by the letter published below that Cel. Wingate has replied to the challenge of the Ontario Any-Ride Association, to the effect that the Amateur Ride Chih will provide a team to meet the Canadaus at any time prior to May löth. It could scarrely be expected that the team selected to go to Ireland should first shoot a match here, which, if bost, would thin their prestige and reduces the interest in the more important event, and if won, could be productive of but little kindos to a team supposed to be the best the country could produce. We say this without prejudice to the Outurlo ridemen, and are confolient that foemen worthy of their steel (or lead) will be forthcoming to try friendly concludens with them in May.

blent that foemen worthy of their steel (or lead) will be fortheoming to try friendly concludens with them in May.

J. Moson, Esq., Ontario, Canada:

Dear Sin—In parameter of the request contained in your letter, I trought your childness of the Anastear Rifa Chil and Nathanal Hille Association of New York, and the 20th bot the the Chil and Nathanal Hille Association of New York, and the 20th bot the delay, as I veride you, having been caused by pressure of business and family aratters). That committee were of the aphilon that as they were only appointed for the purpose of arranging for the international match they but no purpose of arranging for the international match they but no purpose of arranging for the Child or Nathanal Rifa Child That committee and on some day and alleved match at the Anastear Rifa Crecimona, at any those prior in Soy 13th, 1855, on the isome proposed in your challenge, (under the Winterlon rules of 1859) and will provide a team for that purpose. In whose at the fact that the boards with me to represent the United States in the caming international match will soil in June, and that those or he are to puricipants in the match will soil in June, and that those or he are to puricipants in the match will soil in the caming and will provide a story and the contra, and will probably come from other parks of the camity, and will not be analyst the contrary, and will not be analyst the contrary, and will not be such that the same parties, and will include the least shots of the Anastear Rifa Chib.

The letter of Capt, Mildminy, Secretary of the British.

-The letter of Capt, Mildmay, Sperctary of the British National Rifle Association, to Col. Whigato, relation to the

The letter of Capt, Mildmay, Secretary of the British National Rifle Association, or Col. Whighte, relative to the American Team visiting Wimbhedon, is as follows:—

12 Padd Mard, East, S. W., Fabraary 9, 1875

Dear Sip I have been a long time inferior reglying in your letter, and my only apology is that I was anxious to be able to send you an answer to come in your questions relative in ritles, for the Connell which met and long ago (their first meeting since the Wimbhedon ion) though they talked over the question referred in by you, touble not matherake to come in any declaion in the matter, and it has been referred to a committee, which will submit it to the next neeting of the Connell, in the get of March. I cannot, imperar, wall so long before answering one part of your letter, the subject of which could never be a matter for discussion, and that Is, the aupunocoment that we are the hoosed at Wimbledon this year by a number of American riflemen. I not sure I need and tell you that the Connell bave received this announcement orth great pleasure, and that we, as well as our riflemen. I not sure I need and in our meeting the heartlest weltnine. As soon as our regulations and prize lists are published to shall less in the list of the department of your tellow country our hads. When the line approaches for the department of your tellow country our fixing that you find of you if you will toroish me with a list of their names, or with their manber, in order that we may be acquired for suppaiding them, and making other arrangements for their shoulds. Our meeting will open on the 12th of July, and will last as mould, fin received in goor kind letter, and assuring you that not line will be less in for worlding you all necessary and requested information and instructions, I am, dear str, Yours Italy.

To G. W. Magate, N. Y.

-Twenty-six different kinds of breech-bashers are now in use in the various European armies. Many of these, though hebriging to the same system, are made in different patterns, such as the Remington rithe in Sweden, Deumark, and Greece; the Vetterll rifle in Switzerland and Italy; the Suider in England, Turkey, and Holland, and the Dreyse in Germany, Romanha, and Montenegro. The rifle with the smallest calibre is the Vetterli, of 10.4 millimetres. The calibre of the new German Manser rifle, and also of the Werder rifle, as used by the Bavarian army, is 11 millimetres. The new Dreyse rifle, which is now being tried in school of musketry at Spandan, is regarded as being in many points even superior to the Manser. The average rapidity of fire of the above rifles is twelve shots a minute, including the time occupied in taking aim. and Greece; the Vetterll rithe in Switzerland and Italy; the including the time occupied in taking aim

THE AUSABLE VALLEY RIFLE CLUB .- This club organized at Reeseville, Essex county, N. Y., a short time organized at Reeseville, Essex county, N. Y., a short time since and is now in successful operation, with an efficient membership, and the following are the offliers:—J. L. Purple, President; Willis Mould, Vice Preshlent; F. Madden, Secretary; G. S. Potter, Treasurer. A fine target range has been secured, and on every Wednesday P. M., despite the intense cold, the members meet and practice,

Game Bag and Gun.

GAME IN SEASON FOR MARCH.

Sulpe, Bucks and Wild Fowl.

Under the head of "Hame, and Kesh in Seasin" for can only specify in general terms the reveral varieties, because the laws of States rays so much that were we to alternate to another thin publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating the four entire publish that is founded, and our readers would to well to movible themselves with the laws of they expected. Otherwise, our alternate to mersal them will only over a constant reference. Otherwise, our alternate to mersal them will only overle confusion.)

GAME IN MARKET,-Thy commencement of the whise senson for quail and grouse has reduced the variety of senson for quail and grouse has reduced the variety of game in market, and added to the prive of such descriptions as remain. The first English suipe of the senson have been received and are selling at \$4.50\(\phi\)\$5.00 per dates. Physer are worth the same, and the little buy suipe and Canasha bunting 75\(\phi\)\(\phi\)\$1.00. Wild Turkeys 30 cents per pound; canvas back duck \$2\(\phi\)2.50 per pair; red heads \$1.25\(\phi\)\(\phi\)\$1.50 mullards \$5\(\pi\)\(\phi\)\$3. \$1 25@\$1 50; mullards 75c@\$1 00; widgenn 62c@75 cents; brant \$1 50@\$2 00; wild geese \$1 00@\$1 50 each. Bubhits 80c@75 cculs; heres the same; squirrels 6c@10 cents each. Antelope 25e@30 cents per pound,

Sea fowl along the New England coast are suffering for food in consequence of the frozen lays and estuaries cal ting off their supply of food, which they obtain in shallow water. Sportsmen say that ducks are so poor as to be almost worthless.

Plenty of divks are reported now on the Polymae and Chesapeake Waters. Several New York sportsmen have gone lo Havre de Grace, Md.

-The slaughter of grent numbers of deer is reported from the country around Calnis, Mc.

-Caribini have become a favorite game in Nova Scotia since the killing of moose is prohibited. A large number have been taken the past season. The flesh is not considered as entible as moose meul.

-Three sends were killed in Jamaica Bay, Long Island, during the late cold weather. One of them was shot on the ice by Alonzo Smith near the Oceanus Club House, and weighed 187 pounds.

The South Side Sportsmen's Club, of Long Island, have elected the following officers for the ensuing year:—President, John K. Hackett; Vice President, Charles Bunks; Secretary, Samuel Shaw; Trensurer, William M. Johnson; Counsel, John E. Devlin; Exceutive Committee, Samuel Shaw, F. S. Stakknecht, Joseph Allen and Wm. M. Fliess.

—A sportsmen's club has been formed at You. Mr. This State, and the following gentlemen have been elected of fleers:—President, the flon. Joseph Mastin; Vice President, Dr. Charles W. Torry; Secretary, J. H. Keeler; Treasurer, H. A. Sims; Counsel, A. J. Prime; Executive Committee, Edwin L. Thomas, Joseph Reeve and Joseph O'Brien.

Edwin L. Thomas, Joseph Reeve and Joseph O'Brien.

Pennsylvania, Hamburg, Feb. 17th.—The destruction of rabbis in this section of Berks county was unusually great this season, but the law forbidding their destruction has been enforced since the 5th of the present month. The great fall of snow, and the intense cold weather during the present Winler, here, is almost unparalleled in the history of vid Berks, and the destruction of young trees from the effects of rubbits peeling the bark, is a great drawback to nomology, many of the best trees being oftentimes entirely ruined from this source. These carnivorous quadrupeds must with no mercy from the hands of our sportsmen. That partridges are ugain nearly exterminated in this section, is a fact which causes us much displeasure. The laws should have been enforced to the number extent, in which case we doubt whether we would be in the present lamentable predictment. English sparrows are abundant in this town, and afford the citizens containal gratification and numsement. Game of all descriptions, with the exception of this herein noted, is scarce, and for genuine sport we select the deer hunting grounds of Centre county, also in this State, where our desires are usually fulfilled.

Perk Ninon. PERR NINON.

LARGE SALE OF FUR.—A resident of Adams, Jefferson countly, New York, has just sold his Full cullection of furs ha house in Leipsie, Germany, it consisting of 60,000 markents, 3,000 pounds heaver, 2,000 marten, 250 fisher—amounting to almut \$35,000. It weighed over six tons. These goods were all bought within two months by this mun and his brother, principally in Canada. Many of the goods were brought out by his traders from beyond white civilization. He has also sold to different parties in New York for home consumption other skius, such as minks, etc., in value about \$20,000 worth.

Missount St. Louis Etc. 22—Pin tail decket here

etc., in value about \$20,000 worth.

Missouri, St. Lovia, Feb. 22.—Pin tail ducks, the first to come northward, are reported in the marshes opposite the city. This morning a heavy south wind has set in, a sure sign of increasing temperature and good duck showing in a few days. Snipe shooting this Spring will be some two weeks later, but good generally, as all the snipe grounds are covered with water.

AD. PAUL.

Kansas, Delphos, Feb. 22.—Our Winter still continues very severe, and unless gronse return in the Spring we shall be sadly in need of game birds. I found them (gronse) frozen in their beds quite often, and the few that attempted to winter in this section are satily less, in consequence of cold and starvation. Along our creeks, during the Fall, covery of quait could be flushed every 100 yards, but recently in the course of a two miles stroll I found only one broad of eight, and it is very doubtful if they survive the Winter.

G. II. B.

-We printed last week the results of some very interesting experiments, and shall give others from time to time.

These practical tests are what we must rely upon for testi-Comparative merits of different guns can be judged of in this way to a very great extent. We append herewilb some results obtained here by a well known expert, in experimenting with muzzle and breech loading

We may state here that we have several very valuable fruly yours

communications awaiting publication in our issue of March

Entron Forest and Stream:

The other day t tested the comparative merits of inazzle and breech landers, using a fine to have ut even kind. The mazzle loader shot as far mut as strongly with two drachms of powder as the C. F. B. L. with four drachms of same powder—(14 oz. of shot in each case)—and placed as anny shot in the importanget. This quite disappointed me and upset my previous incloses on the subject. Some of the distances to the target were 135 yards, and the shot struck with such force as in flatten on a stone well behind the larget. Was not this a great distance for a shot gun to crypt?

stine will formly be larger.

I shot over a hard frozen field of snaw and was thereby embled to trave the distance to which the winds and wire cartildges were entried. I would recommend this mode of shooting ever snow where gracificality, as the experimentar is thereby condict to see and take notice of why becomes of the different parts of his charge as they be scattered ever the Youts.

Youts, Manaattan.

DITTMAR'S WOOD POWDER.—So much inquiry is being made as to the value of this new explusive, that a committee of four gentlemen have very kindly volunteered to make for us a series of thorough experimental tests, that make for us a series of thorough experimental tests, that the results thereof may be given to the renders of Forest and Stream. We have supplied them with a can of the powder and some brass and paper ammunition, and await their report with some impatience, but with full confidence in the qualities and desirability of the powder. One objection, we four, to its use, will be its peculiar color and approximate the property of the product of the product of the powder. pearance, which so resembles sawdust as to render its use and handling dangerous, even by the most thoughtful; while ignorum and careless people will be more likely than mot to throw a handful of it into the fire. It ought to be dyed bluck.

We append herewith some results obtained by a Washington correspondent who has kindly favored as therewith. His testimony is reliable, and therefore valuable:—
Washington, D. C., February 25, 1875.

EDITION FUNEST AND STREAM;-

I first trived different claurges, in order to see what would best said my un, (a No. 12 Scott & San breech loaden,) and found that your corres oudent, who that give his experience, cyldenily did not use a sufficient

charge.

The only drawback in the use of the Dittmar powder will be difficulty in measuring uniform charges, owing to its extreme lightness.

One charge was canyfully measured and deposited in a sancer, then covered with water and placed near a stove overalght; by which means the water was evaporated, leaving the powder of a somewhat darker ap-

penrance.

This charge was afterwards fired, and to my surprise, the result showed not perceptoble difference in its shooting quartities.

I am so well phased with the result of my experiments that I intend using the Ditimar powder exclusively in the future.

Yours, &c.,

R. tl. B.

PORT RICHMOND, February 23, 1875.

The regular shoot of the Association came off on the 22d Inst., on the farm of Mt. Win. M. Crane, when a number of matches and sweeps were decided, in which over four hundred tirds were used, and which drew together some five or six hundred people. I give hyrewith a few of the scores made;—

Respectfully,

SPRING SHOOTING ON LONG ISLAND.

GREENPORT, February 29, 1875.

Greenpoat, February 29, 1875.

Editoit Forest and Stream:—

Fowl shooting in Pecoule and Gardiner's Bays is good in the Falt season, but very uncertain and unsatisfactory in the Spring. These bays are now sewled up with lee, but a week or two of mild weather will reopen them. There are a few coot and old squaws here in the few patches of open water, but not sufficient to make good shooting. There are some geese and wild lowi tound Gardiner's Island and on Montank in Spring, but they do not offer much sport. As the Great Pond, near structor's, on Montank, is now open to the Inthux of tides, the grass there is destroyed, and fowl scarce at all times. I think the grass there is destroyed, and fowl scarce at all times. I think the place in Summer, say from the middle of July, would be good for bay suipe and plover shooting, and later for ducks. I wonfit recommend ginniers in Spring togo to Slinuerocok Bay, stopping at Van Squite's, or at William Foster's, where they would find the geese and broad bills, and good accommodations. If they should establish themselves at Cauce-place on that bay, they would be handy enough to the shooting is the bay, and convenient also to coot shooting in Pecoulc Bay, starting from Cauce-place, there would probably be good shooting on any moderate day for coot and old squaws and shellbacks. The bay sulpe shooting in Spring at Shinnecock Bay is sometimes good in the month of May. I have in former years found good accommodations at very reasonable rates at Josh Corwin's, Tiana, west end of Shinnecock Bay, and handy to the beach for hay snipe. But I think the sport in Barnegal Buy is better still for duck and snipe. The gunners will find good accommodations at Bill Chadwick's, and by writing to him through Point Picasant P. O., he will inform when the bay is open and the fowl on the wing. But I have stopped also at Mrs. Ortley's, which is two miles south of Chadwick's, and t think it a much better location for sport, and besides the best plotts and meadows betting to her, and her prices ar

PIGEON SHOOTING.

PIGEON SHOOTING.

Entror Forest and Stream:—
In the New York Times for January 31st, 1875, there is an article entitled "A Day with Mr. Bergh," which was well written and interesting but I cannot agree to the last lines, which are as follows:—
"Between the last lines and the natural.
"First come gladistarrial wathfiltions, then buil fields and puglifstic encounters, must dog fights, then cock lights, and lastly pigeon shooting."
The writer of the above should have added, "And we do have in people so list as to tayout nitribys to slaughter vicatures who have human blood in their velns (and thursfore must be relatives) by the thousand." It would not he necessary for him to add that these "retatives of ours" we known by various names, such as "jeests," "tornwits," &c., and same-times as "to tunnibr with these mangaines."

Now, aniety, this gentlemma has no right to compare gladiatorial, buil, alog, and cuck fights with pigeon shouting. If all the wounded hirls are killed immediately (and I suppuse such is the case) there can be no harm in it I think. The writer of the above did not specify what kind of pigeon shouting he meant, but of course it was tiny shnoting, now, I will compare lifts method with others that I have seen. If is unneally and fifty are killed and winned, there is the end of it. This Fall I saw two men trapping pigeons in a buckwheat field; they had the pigeons under a large net, while they caught others with saindler ones. I fild not stop to watch them, but came back sown and found them twisting the nicks of the birds and putting them. In bugs and throwing the large in a wagan. I could see immbers fluttering on the ground, and could see and hear others moving and intering feoble cries in the bags in the dead by the time they get to Bultimore," said the would

I have been to pigeon roosts where all high! I could hear the wounded birds infiltering and unking most piteons noises, and where I rould not walk three steps without either stepping on a wounded hird or else hear them slowly and patnfully get out of my way. Let the render who has never been to a roost read Fenimere Cooper's "Chulu bearer," or "Pionevre," until one gets sick at heart at such cruetty; but it is necless to falls to the syones of near and boys who go to these slaughters. I know two men who killed 220 birds in one might, and the next day went over the same ground and found 87 more, most of whom were wounded and still alive.

the same ground and found 87 more, most of whom were wounded and still alive.

Which is the worst of these? Surely trap shooling is the height of humanity compared with the others. It is certainly more landable for spintsmen to wish to kill their ginus sclentifically, than to by like a granter whom a friend of infine advised twishoot whain shot when he wanted to hit anything. I heard a man say a short time ago that he once saw eighteen quair under alog and klited all at one shot before they could scatter. No sportsman would do that, for it is not only cruel but its wot sportsmanlike, but the same man who would not do this would shout it trap pigeons. If the wounded birds are not kitled at once, then it can be suid to by a cruelty. Still, as Pope says:

"Tie with our judgments us our watches, note
Go just wilke, but each believes his own."

ALAEOHANY

LOADING GUNS.

RUSSELVILLE, Ky., Frutuary 8, 1875.

EDITOR FOREST AND STREAM !-

Russelville, Ky., February 8, 1875.

Editor Forest and Stream:—

t notive in your issue of Junnary 25th on article relative to loading gans, which covers part, but not: if of the ground. Your correspondent "Royal," in laying so much stress upon the government of charges by the weight of the gau, has lost sight of a minh more important considerable, viz: the ealibre. While the recoil of a six and a half pound gan, 10 bore, is impleasant, when charged with four drachms of powder, it is much more so when the same charge is fixed from a gan of like weight with upone. The smaller the lore of the gan the less the charge of both nowder and shot required, is a general rule, and all owners of gans should keep libs in mind. Of course light gans will not stand as heavy charging as heavier ones; yet "Royal" will find that one number in the bore will more than make up the difference of one pound in the weight. "Rin al" is certainly correct when he says that overcharging is a foe to sleady shooting. I remember very distinctly my first day's shooting this season, as an illustration of this. I had bought a new gan, and the idealer from whom t got it bear me some shells ready loaded (I uses the paper shell) with It, ult of which were overcharged. I i xamined the contexts of one before going out, and thought them too heavily hinded, but with the addition of a few which I charged myself in my belt, I started out. Never will I forget that day's shooting and its effects. After exmansing the stock of shells which it had loaded myself, with pretty fair success as to game, I began on the others. Then came my experience as to overcharging, with a vengence. Two qualis ont of three which rose before meduling the entire day were splendidly missed, and my shoulder besten black and bine by the excessive recoil of my gan. I we a 12 hirry, seven and a halt pound gan, and charge it for quali or sulpe with 31 threadms of powder and 1 ounce of shot. Were I shooting ducks I shooting ducks I

SUMMER WOODCOCK SHOOTING.

This matter of regulating Summer woodcock shooling is somewhat complicated by the fact that in several of the Western States there is no Full shooting whatever, and unless the sportsman shoots in Summer he cannot shoot at The subjoined letter bears upon this subject:-

all. The subjoined letter bears upon this singlet;—

Hannial, Mo., February 3, 1875.

Editor Fonest and Stream!—

To abolish Summer woodcock shooting may be necessary to save the birds from extinction in the Eastern States; but in many places in Missouri and other Western States, to provent Summer shooting would prevent it allogether, as the birds migrate from their breeding grounds, and excepting now and then a bird, do not return in the Fall. Along the Missleshppl bottom the birds milse in considerable minsels, and but lew are killed in the Fall; and while the pursuit of thom in the Summer requires considerable tortitude to brave the minsquitoes and extreme hout, it seems to be a kind of connecting link between the sensons for shooting. I believe that the close season for grouse in Himols, Missouri and Kainsas, ought to be extended to the 20th of 30th of Angaet, and for quali until the 15th of October. The open season should be extended in thin its to February 1st, and Kawas laws should close at that time. I trust that this matter will receive earnest attention at the next meeting of the National Association. My reasons for extending the close seasons are—first, that now there are many less than half-grown coveys when the season opens and they are very easily taken. 2d—that there are, especially in Kansas, thousands of grouse kitled that are spoiled by the bot weather, and are of no benefit to any one. Such killing is just as necless slaughter as the killing of buffalo and leaving them to the crows and coyotes. In the efforts minde to save birds killed in the hot weather, many are sold that are not fit for she table. I know that many partles go to Kansas and shinghre birds by the handreds that, with the exception of what five they may use, are thrown away. I think if was stated that twenty-four tons of guine were ordered thrown into the river at one time last Full by the St. Louls Board of Health. The sportsmen mist take hold of this matter at once, and in earnest, or their occupation, the Othello's, will be

PAPER AND BRASS SHELLS

PAPER AND BRASS SHELLS.

Nawark, N. J., February, 1875.

In your estimable paper a few weeks since an article quipeared, in which the writer sold "harse shelt are a nulcance to load." I must offer with him were yet metrally on this point, as it werinkling in the least, as hell women than a paper one, and when the last I ran load a lirase shell women than a paper one, and when the state I ran load a lirase shell are provided to your review of the part of the provided of the part of

SHELLS.

SHREWSBURY, Fehrmiry 23, 1875.

Surewsbury, Fehrmry 23, 1875.

I have been much interested in reading the caudid and able commanication from your correspondent "Herbert," upon shells and gaus, and am particularly struck with this experience in regard to the expansion of a paper shell from moisture, rendering his gain useless for the time. The finbility to such accidents may not be great, but the possibility exists, and the risk of inving the present form of paper shells rendered worthless, from becoming wet from the many withings sportsmen are liable to, I think is sufficient to justify the demand that they should be made waterproof, and I trust this desimble feature will receive the attention of parties sugazed in their manufacture. I can indorse "Herbert's" remarks in regard to the opportunity for improvement in the immunfacture of the Sturlevanf bruss shell, which I think, as now maile, is far from whaf if should be.

what it should be.

The German Sunoting Club of Savannah,—This association was regularly chartered about three years since, and has some two humbred and fifty members. Persons from any mation may become members if their characters are good. This ride is strictly caforced. Four months since, a stock company, composed of nearly fifty members of the society, purchased the Greenwich Park, adjacent to the beautiful Bonuveature Cemetery, about four miles from Savannah, and situated upon St. Augustine Creek, which flows from the Savannah River. These grounds can be reached by steamers, taking the inland route to the coast towns of Georgia, and North Eastern Florida, also by a shell road from the city. The property contains seventy acres of low land and thirty one acres of high ground, sheded by live oaks, magnolias, cedars, and pines. Since the 18th of March, 1874, Mr. John H. Kelwig has land charge of the park, and under his superintendence the new haildings have been creeted, grounds laid oul, &c. The buildings now completed are a dauce hall, 60x120 feet, inside, with eighteen feet posts, with piazzas ten feet wide. A shooting gallery and shooting house 24x100 feet, with largets six hundred feet from the building. The "spreath eag'e target" is sevenly five feet above the ground, is curved out of wood; is four and a half feet high, with six feet spread of wings. The man who shoots away the last piece

of this womlen eagle is the "King" for the year. The keeper's lodge, 40x40 feet, with ampde plazzas, and pretty gardens surrounding it, forms a pleasing jieture among the moss festioned live oaks which are the glary of the park. Besides bath house, but room building, and a fine templa alley, there are stables, horse sheds and a small village of our-huidlings upon the graunds. The Germans and their American friends gather in this pretty jurk upon the milde hinff at the river with their wives and children to celebrate fested days, and to interchange the pleasant sacial courtesies of life away from the missgand dust of their city streets. The "Shooting Festivals" are on the 19th, 20th, and 21st of April of this year, and again in July, tharing mum day and night. The Eagle Shooting King gives a half on the last night of the April festival, which is the grand event of the season.

hast might of the April (1987),
this season.

The grounds are open for gie nies and similar gatherings during the Summer season. A ruitrond from the city will soon be completed, which will bring passengers near to the shooting park. We hope to be able to again visit Savananh, and during the "Shooting Festivals" of April mext, when we may be adde to describe to your renders, the many and curious sports of those days.

Sea and Biver Hishing.

FISH IN SEASON IN MARCH.

Grouper. Rockilsh

supplies waters, Trunt (block bass). Drum then species). Kinglish.

FISH IN MARKET.-Fish continue very scarer, and if it were not for the improved facilities for refrigerating and transporting them from distant points, there would be a tish famine this week in New York. There can be seen now in Fulton Market, at Blackford's, shad from the St. John's River, Florida, shad from the Ogeochee River, and shad from Neuse River, N. C., some of them weighing five pounds each; red sumper from Fernandina, Florida, 20 cents; grouper from the same place, 20 cents; sea bass from Charleston, 20 cents; blackfish from Rhode Island, 15 cents; Long Island smells, (the most delicious of any of the were not for the improved facilities for refrigerating and Long Island smells, (the most delicious of any of the various kinds.) are commencing to come in in small quantities at 25 cents; shad sell for 50 cents to \$1.50 cach, necording to size and quality; halibut 20 cents; cod and haddock very scarce a; 12 cents; turbut from Newfoundland, 20 cents; salmon trout from north of Canada, 20 land, 20 cents; salmon front from north of Canaca, 20 cents; pickerel from Lake Ontario, 20 cents; bass from New Jersey coast 25 cents; lobslers, none in market, as the ice has carried away all the pots, and it will be some Hune before the dishermen can replace them; Spanish maskerel 50 cents; fresh mackerel 20 cents; flounders 15 cents frozen salmon 45 cents; California salmon brought across the continent by Mr. A. Booth, of Chicago, the same gentleman who brought over the first that ever came to this market, is now being received. Mr. Booth deserves much credit for his enterprise in this direction,

-Our Massachusetts friends report smelt fishing as con timing good, and smelts as running large in size. One gentleman caught in Weymouth River through the ice, with hook and line, (scining or netting is not allowed in Mass.) thirty-one, which together weighed nine pounds. One pair caught together at the same haul weighed eight ounces each.

Herring are very plenty at Perry and Eastport, Me., and many men are employed catching them and selling them on board vessels there localing with them. It is estimated that about \$75,000 will be paid for herring this Winter in Eastport and vicinity. A good business in herring is also being done at St. Andrews, the buy being full of herring.

of herring.

—Quite a quantity of frozen boilog were found on the south shore at Little Compton, R. I., a few days since. They were in excellent condition for the table, and were highly prized by the fortunate finders. It is supposed that they came into shoal water in search of food, and were chilled by the unusually severe cold. Nothing like it has occurred in that neighborhood since the cold Winter of 1857, when immense quantities of tadog and other bottom lish met a similar fate and drifted on share in such quantities as to be secured by the cartload for manure, and the keeper of the lightboat at the Hea and Chickens reported the sea as being literally covered with them. It was said that for two or three years thereafter there was an unusual searcity of bottom tish.

FISHING AT PRESQUE ISLE.

Emz, Pa., February 15, 1875

EDITOR FOREST AND STREAM:—
Our harbor affords glorious fishing in Summer, Presque Ish, which forms it, being full of littly takes or punds, in which the fish spawn. Maskinonge, pike, black hass, &c., abound, it heing a common occurrence for a skillful fishermum to take furty or fifty bass. Our greatest annoyance is the poachers, who seine the pombs in Presque isle, tapluring greal numbers of maskinonge, from a fnot to eighteen inclusting. The bay is now covered with ice, and immense numbers of perch and herring sie caught through holes of in it. Last week, a party fishing through the ice caught twenty-five or thirty black hass—an unhead of thing here up to this time. In May and June, a fish cailed blue pickerel are caught in thousands with hand iliues from a boat anchored over what are called the Banks. They run from afteen to itsenty inches in length, and are very greedy, taking the bait almost as soon as if strikes tha water. The pound net fishermen have been working here two seasons, last season thirteen pounds heing set within four miles of the iown. They do an immense husiness, but are ruining our fishing, I fear.

Presque isle is seven miles long, and varies in width from one hundred yards to two miles, is filled with ponde from one-elighth to one-half mile long, and is heavily timbered, there being a heavy fine for cutting down timber or bushes. The U. S. Government have control over if and grand the timber carchilly. The only buildings on the island are the light-houses. The poods are filled with lihea, wild rice, &c., and there are large cranberry marshys, on which graw all the other berries which attractgame. If the pot hunters and gill not fisherone could be kept away, we would have one of the finest sporting grounds in the contry. In the Spring and Fail ducks are plenty, and salpe, plover, rabbits, &c. are in shundance. It would make a fine preserve for a genfleman's club.

THE ENGLISH GRAYLING

New Yorks, Felt, 1855.

Entron Funest and Strikan:—

I wish to draw the altentian of my brother experts to the habits of the grayling. I find, on permission your vulnable paper, there is a alterably of opinion respecting this fish.

In my early alays, say some two or to clve years ago, I have caught a greaf number of them, ranging from three to eight points earth, in the River Wye, England. Observe that this river abnorms with salmon and tront. I have seen from theeding on their younger brethren, but they exchew the graving. Whether it is the grayling's big showed in that among the front, or whether his flavor is unpleasant to them, f cannot say, but each is the fact, as f have frequently observed.

From the comformation of the month of the grayling, t presente he does not prey upon fish. I never succeeded in taking one with namon, live, done or attificial, may yet with sulmon spawn, worms or gentifies. I have only taken them with a very flus leader, and the smallest steel fly, natural or artificial, (fibratise a the fly red or point). They are a very sky fish, milke the front, which will dosh af the fly the moment it strikes the water. The grayling will gently suck fite ball under the water, family making a ripple on the surface. Yet they are a very game the when headed, upon to salmon or front in their play, and not giving in without a stringtle.

I am artisfied if any gentleman where to purpagate grayling, fint by abserving the following means strictly, they can do so with each. Select a good clove, gravelity bottom, free from and my producinely swift ear rent, as pure in water supply as it emanates from the sping. Then will get along in with any row multimer them the pring. Then will grant against tamerbes, at any organization that pollute the water. This serving flore conditions you have your grayling and front in by same stream, and the trune in the lighter flavor from the pring. The water.

I have seen on hong island manatern streams streams and contributes that pollute the water.

water.

I have seen on Long teland muncrons streams that matter has made for the grayling, where I not certain he would do well and thrive hea goodly size.

II. Pineason

We have received from Capt. J. M. Coventry, of Nonwe have received from taght at at. Covening, for Non-velle, Canada, specimens of a dozen different kinds of flies, such as are used especially for grayling in England. They are: the Idac dam, larra's ear, yellow hare's ear, silver dam, red tag, furnace red tag, yellow spinner, yellow thin, grey spider, red spinner, quill grat, and yellow upright. They are very disclusive, smaller, thus, the graphest from these spater, rea spinner, intriguet, and years alregat. They are very diminutive, smaller than the smallest trantities used by most American anglers, and are dressed in the most exquisite unnuer. We have observed that English anglers almost invariably use very small flies in angling for trout. For saluon, on the contrary, very large flies are required in some streams. In England the grayling countries into season in September, and is best in mid Winter, if the water can only be funtal in gual nugling ariler. This blacker on the back the lighter the senson of the fish. The largest fish are taken by sluking and drawing with the urtificial grasshapper, which is under by simply winding green worsled round a piece of lend with a brank in rentro and putting two pieces of split straw on the slite fastemal with yellow silk. It is a very killing method.

Fishino Matteus—The number of fishing arrivals for the week ending February 25th, was seventeen, eight from the Banks, seven from Georges and two from New Brinswick. The total amount of hatibut brought in was 220,000 pounds; codfish, 375,000 pounds. Hatibut have been said from \$8 to \$11 per cwt. for hest quality. Most of the fures have come out in rather poor condition in consequence of the long homeward passage. Georges cod, round, are seiling for \$2 per cwt.

Schooner Juliu S. Pressian. Cant. Greenler, which well

Schooner Juliu S. Pression, Capit Greenleaf, which mrt veil from the Grand Bimts on Thursday first, weighed off 59,500 pounds of Indibut, and stocked \$1,975.56—the largest fare and stock of the senson thus far.—Crow shared \$136.14

The Georges fleet which sailed in the early part of this month, are coming along with good fares. Schmaner Markot Grines, Capt. Davis, arrived in Tuesday with 90,000 pounds of cod, having been absent but nine days. A large partion of her fore were said to frish lish dealers, for immediate consumption, at \$2.62 per cwt. The acrival of the new eatch is quite thurly, as the old stock of through are all disposed of, and there are but few Bank remaining in first hands.

The crew of the lishing steamer Bella, and Justic, and

The crew of the fishing stranger Bells and Hattle, numbering thirteen men, divided, at Portsmonth, over \$1,000 as the result of one they's fishing asst week.

The ice blackade is fast being broken an since the mild weather set in. Some farty sail wern got out on Manday and Tuesday, and others will some be on their way. The fog is rotting the ice in the inner harbor, and all that is now needed is a martheaster to take it out to sea.—Caps Ann Advertiser, Feb. 26.

Rational Pastimes.

The fifth annual convention of the Professional Base Ball Association was held at the Athletic club rooms, Philiadelphia, on Munday, March 1st. The respectability of the delegates, and the good feeling which prevailed, reflected credit on that class of the frateroity. The best part of the day was occupied by the session of the Indicinry committee, which, by the way, should have been held a month earlier at least. The cases need on were those la relation to the expulsion of Radeliffe, Stearns, and Bayd from their respective clubs, and the highlity of the contracts signed by Miller, Force, and McMullia. They decided that as Radeliffe's case, not having heen brought before the committee, he should be reinstated, and they also reinstated Stearns, while Boyd, whose position was the least censurable, was left out in the cold. In the case of the contracts, they sent Force back to Chicago, and Mullin to New Haven, and did not touck McMullia, as no chim was made to the latter's services by the Athletics. To the credit of the Hartford club, they released Miller from his contract, and permitted him to play in St. Louis, thereby restoring the entente conflude between the two clubs. At the convention at night the clubs represented by delegates were as follows:—Athletic, Charles Spering; Atlantic, B. Van Delft; Buston, H. Wüght; Chicago, W. Hulbert; Centenoial, E. H. Haylaurs; Hartford, M. Bulkley; Mutual, A. V. Davidson; New Haven, W. S. Arnold; Philadelplaa, G. Conconnon; Reil Stockings, A. Blong; St. Louis, C. O. Bislop; Washington, A. F. Childe; Western, W. O. Trimble.

The officers elected and the committees appointed

were as follows:—President, Mr. Spering; Vice President, Mr. Bishop; Sceretary, Mr. Childs; Treasurer, Mr. Wright, Judiciary Committee—Messrs. Hayhurst, Trimble, Cancannon, Van Delft, and Bulkley. Championship—Messrs. Davidson, Wright, and Bulkley. Rules—Messrs. Wright, Arnold, and Ifhirlburt. The entry fee was reduced to \$10, and the Philadelphia, Chicago, St. Louis, Western, and Centennial clubs paid their fees on the spot. No championship match can count unless the cluh playing has paid the entry fees.

The changes in the rules are but few, and the most important are those throwing the home base and striker's position back so as to leave the home base and striker's position back so as to leave the home base on foul ground. Wides were done away with, balls being called in the order of every third ball; all balls not delivered over the home base, and for the striker, to be regarded as unfair, and every third such ball to be called. The delivery of the ball to the bat is to be by a swing of the arm, made so that it shall swing nearly perpendicular at—not "10," as a typographical error liad it—the body, the hand swinging forward, not to be raised higher than the hip. This does away with every delivery, save that of the legal underhand throw, such as that of MeBride, Spulding, Cummings, Matthews, and the other regular pitchers. The sile underhand throw was made with the hand above the hip. Two foul strikes put a player out now instead of three. Some other amendments were made in the wording of the rules, but not changing the meaning. The convention adjourned in meet in New Hayen at three P. M. on the first Wednesday in March, 1876. After the adjournment the delegates were entertained at the Continental Hotel by the Athletic club. Harry Wright was appointed a committee of one to confer with the Amateur Association, at their convention, so as to insure the preparation of one code of playing rules as near as possible.

The amateur convention in December adjourned to meet March 17th. As that is St. Patrick's Day, the

Chudwick's book, published by DcWitt.

The Walking Match.—E. P. Weston and Prof. Judi started at 12.12 A. M. on Monilay morning on their walk of five hundred miles. Whether the distance is accomplished or not, this match will settle the reputations of both men as walkers. Although the different uthletic clubs have declined to take official cognizance of the match, a sufficient number of members have volunteered from each to permit of a coutinned watch being kepl night ami day. Weston failed in his attempt to walk 115 miles on the first day for the extra \$1,000 offered by Mr. Baruum, but walked 100 miles in 22 hours, 40 minutes and 22 seconds, actual walking time, and had completed 108 miles at the end of the first 24 hours. Judd retired after having walked 85 miles, which distance he proposes to make his average throughout tha six days.

—More amaleur clubs will onter the assens in 1977 the

-More amaleur clubs will enter the arena in 1875 thau er before known, and a brilliant season is fully an-

—Enclosed ball grounds will be numerous in 1875. The Cregar club, of Camden, and the Gloucester, N. f., city club have bought a lot in Gloucester 400 feet square for base hall purposes. They propose to enclose it, and fit it up with seats and good accommodations. It is a stock affair. This is professional business, remember.

The Colleges.

Vale College, New Haven, February 20, 1875.

Editor Forest and Stieal's—
All college is excited over our recent ill luck. By a decree of the Faculity three of our prominent boating men have been suspended for one year. Shortly after this, news came of Fred Wood's injury while consting. Wood has rowed in two university races, and is accounted an excellent careman. It is but too pinin now that he will be unable to occupy his place in the Yale crew for 1875. But the faite of the enspended men bus here better than we could have hoped for. They are to be allowed to remain in town, and will practice and row with the crew as usual. Although these mishaps did cast a damper upon our ardor, still we will be fully prepared to do and dare at the next regatta which is to be bold at Saratoga. We hope for success this time.

One of our hell men has also been suspended, but he has also been granted leave to remain bereahouts, and will play with us in the coming season. In this department we will work hard to keep the supremacy. The nine is not yet selected—that is, definitely. When it is announced you shall hear of it. In this connection I was surprised to see in your letter from flarvard that she (flarvard) had decided not to go to Saratoga this year, and that the games with Yale and Princeton would be played "two there, one here, one at Princeton, and two on neutral ground." This statement is surely premature, as Yale has agreed to nothing like it. We desire to play at Saratoga, the same as last year, and we will adhere to our intention. Why Harvard, so willing last year to go to Saratoga, should wish to force this change, we cannot see. Perhaps her ainc is not as strong as it night be; but this is a mere conjecture. We cannot see why this hunovation should be made, as it is eminently fitting and proper that the colleges prominent in base ball should exhibit their prowess and mettle along with the boating and athetic sports. Our position is taken, and we mean to live up to it untit some good reason is put forth to recommend

Pigeon Snow.—The National Columbian Society have held their second annual exhibition during the past week. 500 birds were on exhibition, including many from Eng land, Scotland, and Germany. Several specimens of pouters, carriers, tumblers, barbs, and Antwerps were pronounced by fanclers to be unusually fine. \$250 was offered and refused for one pair of pouters.

Nachting and Boating.

-From the election of Mr. E. Boucher as a member of the New York Yacht Club, it is surmised that it is his intention to visit our waters during the coming season with his cutter yacht the Fiona. The alvent of this craft will be an epoch in our yachting annals, as heing the first visit of one of her class and rig; and some curiosity will be excited to see the stranger. While ranking in class with our larger sloops the Fiona differs from them essentially, both in model and rig. The larger deep and research our larger sloops the Flona differs from them essentially, both in model and rig. The large, deep, and narrow craft, weighted down with ballast, is still in vogue among our English cousins, and in their eyes a centre-board is an abomination. We predict, however, that this visit, if made, and the information gained thereby, will have much influence in effecting some radical changes. We have not influence in effecting some radical changes. We have not yet taught our cousins all we know, and the America's flat board-like suils which they copied so readily, may soon be followed by the introduction of the despised centre-board. There is this to be said, however, that on the other side of the water a greater portion of the yachting is deep water sailing, where the question of departs in a few sailing. sailing, where the question of draught is not of so much importance as with us; still, for small craft the centre-board is invaluable. It renders the question of "stays" one of almost certainty, and for our unrivalled "cat" rig, enables one man to handle a boat, where two or three would otherwise be necessary.

Perhaps the most striking difference in rig between the English entters and our sloop yachts is in the arrangement of the head sails. These usually consist of a stay sail, jib and flying jib, with the usual varieties of "balloons" and "spinnakers," with as much out board gear as is carried by a schooner. With all this weight forward, their narrow beam und cargo of hallast, they are, as a rule very wet in a sea way. The Faun o' Fuirlie (i o Fiona) is a fair specimeu of this class, a deep craft with heavy displacement. Her performances in English waters have been equal to the best of their yachts, but over our courses we fancy none of our first class sloops would have much to fear from her. The Fiona's extreme length is 75 fect, ber beam on deck The Fiona's extreme length is 75 fect, ber beam on deck 15 feet 10 inches. The Gracic of the New York Yacht Club is 71 feet in length with 20 feet 6 inches beam; the Vision 66 feet, 8 inches, by 20 feet beam. These measurements show the disparity in the matter of beam belween the vessels of the two countries. In smooth water our yachts, particularly before the wind, would probably walk away from their deeply loaded antagonist, but "outside," in a seaway, the "hold" of the deeper vessel would probably tell to her advantage. Should the Fiona contest for like Queen's Cup, the present interpretation of the deed of gift would make it necessary for one vessel of her own class to meet her, and the honor would probably devolve on one of the sloops above named, or on the Vindex, also a keel vessel, and one, as regards beam, more nearly approx. keel vessel, and one, as regards beam, more nearly approximaling the English model.

The Yawl is a nondescript rig, in point of fact a sloop, with a "jigger," or small mast in the stern, the sail on which is of service in going to windward, but adds nothing to the beauty of the vessel.

Our steam yacht fleet is increasing numerically as well as in the size and beauty of the vessels. The finest specimen was taken from the fleet when the government purchased Mr. Smith's America. Mr. Jacob Lorillard is now building one at Leuox's ship yard, South Brooklyu, of 104 feet in length, beam, 13 feet 8; inches; at plank-shear, 15 feet 8; inches; depth of hold, 5 feet; draft of water, 4 feet 8 inches. She is to have a double compound engine, dimensions. sions not given; the cranks of this engine are not at right angles, but in line with each other; the boiler has water tubes and large heating surface. The screw is four-bladed, 4 feet 8 inches diameter by 9 feet pitch. Her speed is expected to be at least eighteen or twenty miles per hour.

-THE YACHT AMERICA.-In our last weeks' issue we should have stated that Col. Jonas H. French is half owner of the yacbt America with General B. F. Butler. The America is now hauled up at Newburyport, Mass., and her owners contemplate some important alterations and improvements on her to be finished before the yactting

Yachts' Running Gear.—All the running gear of a yacht should be composed of three sizes only of cordage, as it can then be all utilised, and as the blocks will also be of only three sizes, the halliards, sheets, etc., will be certain to render easily. Four stranded rope is the best, as it is neater to the eye, renders better through the blocks, and is pleasanter to handle than ordinary three strand rope is. Always keep the end neatly whipped.

To Whiten Decks.—Dilute murialic acid with four times its bulk of water and wash the deck with the solution. Swill well afterwards with clean water.

-The St. Augustine (Florida) Yacht Club is under axcellent headway and management, with an increased list of members, which now numbers seventy-two. We give the

names of the officers of the club:—Commodore, J. S. Ho. mans; Vice Commodore, D. Edgar; Secretary, R. F. Armstrong; Treasurer, O. Bronson, Jr.; Measurer, C. F. Crary; House Committee, S. S. Mortou, C. H. Royce, A. J. La Farge, Regatta Committee, S. E. Morse, A. J. La Farge, C. F. Crary, R. H. Bartou; Judges, J. S. Homans, E. Harvey; Starter, T. R. Glover; Time Keeper, L. R. Edgar, Several very attractive regattus took place during the month of February. The Grand Regattu Day was February 25th.

—Vice Commodore John Jeffries, Jr., of the Eastern Yacht Club, has advertised his schooner yacht Ifulcyon for sale. She is centre board, 121 tons o. in., 84 feet over all and 23 feet 10 inches beam, and is well fluished in every respect, fore and aft. She is a buat any yachtman would be proud of, and has a good record, having taken prizes in every race in which she has entered since 1872.

be proud of, and has a good record, having taken prizes in every race in which she has entered since 1872.

—The Brooklyn Yacht Club held their regular monthly meeting on Wednesday evening last at the club rooms, Court and Moutague streets, President P. W. Ostrander in the chair. The new constitution and by-laws were read and adopted. Under the latter the stated meetings of the club are to be held on the second Wednesday of the month, instead of the last Wednesday, as heretofore.

The club appointed Saturday, June 19, as the day on which the annual regatta will be sailed.

President Ostrander presented the prizes won last year during the June regatta and the club craise. The fortunate gentlemen who received these emblems of victory are as follows:—

Olub Prizes, June Regatta.—Schooner Tidal Wave, William Voorhis, large silver goblet; sloops Undine, Brasher and Fowler, Iwo silver goblets; Schemer, Charles H. Hall, six silver egg eups and spoons; William T. Lee, Charles A. Cheever, large silver goblet.

Flag Officers' Prizes, June Regatta.—Schooner Tidal Wave, large size bronze card receiver; sloops Undine, holometric burometer; Schemer, pitcher and cups.

Union Prizes, June Regatta.—Schooner Comet, William T. Lee, large silver pitcher and cups.

Union Prizes, June Regatta.—Schooner Comet, William II. Langley, clock and barometer combined; sloop T. B. Asten, John R. Platt, marine clock; Kaiser, John B. Norris, large music box; Brooklyn, Ira Smith, Iady's gold watch.

Commodores' Prizes.—Schooner Comet, two silver goblets;

Commodores' Prizes.—Schooner Comet, two silver goblets; sloop Qui Vive, Thomas Clapham, Indometric barometer. These were won in the race from Newport to Vineyard Haven, sailed June 29th.

Haven, sailed June 29th.

—The first yaeht race of the season took place at St. Augustine, Florida, on the 6th instant, under the anspices of the Yacht Cluh, between the Seminole, Cricket and Enchantress—three of the largest boats in the bay.

ICE YACHTING.—The yachtsmen of Boston had glorious sport on the ice last week. Dorchester Bay was frozen into one solid smooth sheet of ice. Some ninc or ten boats entered in the regatta, and started from off Commercial Point, Dorchester, with a standing send off. The Nonpareil sailed the course of over five miles (nautical) in six minutes and fifty seconds. This time is almost unprecedented. She carried four men for a crew, namely: Mr. George Bradford, Mr. Samuel Fitzgerald, John F. P. Robie and Earnest Slinsky, besides the skipper.

THE ENGLISH UNIVERSITIES BOAT RACE.—The training for this great event in the rowing world is now fairly under way, and the final selection for both crews have been as follows:—

J. MeD. Courtney, Pembroke, bow; 2. A. P. Marriott, Brasenose; Sinclair, Oriel; 4. J. M. Boustead, University; 5. H. J. Stayner, St. John's; 6. A. M. Mitchinson, Pembroke; 7. J. E. Moss, Brasenose; J. P. Way, Brasenose, stroke; A. H. Hall, Oriel, coxswain.

CAMBRIDGE.

J. E. Peabody, First Trinity, bow; 2. A. S. Charlesworth, Third Trinity; 3. A. E. Phillips, Jesus; 4. W. G. Michell, First Trinity; 5. G. C. Dicker, First Trinity; 6. J. A. Aylmer, First Trinity; 7. S. A. Doualdson, Third Trinity; H. E. Rhodes, Jesus, stroke; G. A. Davis, Clare,

-Mr. Bishop writes us from Savannah under date of

Feb. 24th, as follows:—
"I leave St. Anguetine Creek to-day for Fernandina and the St. Mary's River. The sun was not seen here for twenty days during January, and we have rain two or three times a week, which makes it unpleasant to row among the marshes where but few good camping spots can be found. I am yours as ever.

N. H. B.

Aew Bublications. MAGAZINES.

The Popular Science Monthly for March is received, and contains much that is interesting to the general reader, as well as the student. Mr. Fitzgerald has an entertaining illustrated paper on the "Habits and Color Changes of the Chameteons," and Mrs. Sarah Hackett Stovenson, in her "Lessons in Biology for Young Beginners," dissects the lobster, and serves him with a scientific mayonaise.

The Sunny South is a new weekly journal devoted to literature, recently established at Atlanta, Ga. From the eoveral numbers we have received we should say, that in typography and generat appearance it is nexceited among papers of its class, and its original contents—white comprise the targer portion—do credit to the literary talent of the South. Each number contains two or three engravings, which are executed and printed in first-rate style, and we are confident that the Sunny South only needs to be known to our people to find a large circulation through the North. J. H. Seals, Publisher. \$3 a year.

Scribner's Monthly and the St. Nicholas, from the same publishers, are both at hand for the month of March. In the former the interesting illustrated sketch, "The Canons of the Colorado," is continued, and the St. Nicholas is full of entertainment for the little oves. The publication of easy French stories in the vernacular is a good feature.

Le Moniteur De L'Elevage is a magazine devoted to sub-jects connected with the horse, and has for its aim the improvement of the animal. Its table of contents comprise articles on this rope, and its enggesions as to the best mode of improvement by judicions crossing of strains of blood, are worthy of attention.

We have received Prof. S. B. Buckley's First Annual Report of the Geological and Agricultural Survey of Texas. It is a thorough compendum of the geological and agricultural resources of the State, and of great value to those who contemplate a removal to its con-

PREVENTING WATER PIPES FROM BURSTINO.—The following plan for prevention of
the bursting of water pipes during frosty
weather hus been invented in England. It
is well known that when water freezes it
expands, and that the farce is so charmous
that no pipe can resist it. This invention is
intended to give the water a chance to expund without bursting the pipe. It attempts this by securing in the inside of the
metal pipe a space equal to the difference
of volume between water and ice, so that
when the water freezes it occupies the space
reserved for it, instead of exerting its force
on the pipe and bursting it. This is practically earried out by passing through the
water pipe a small India rubber tube, specially made for the purpose, and of such a
diameter that the space inside it is a little
more than equal to the increase in volume
of the ice. The India rubher tube is always
kept full of air, so that when the water
freezes it finds the necessary space for expansion, for by compressing the air tube it
displaces the air and takes its place. When
the ice mells the tube again expands, beromes filled with air, and is ready for an
other frost, and so on for any number of
times without requiring attention.

BIG INVENTION.

BIG INVENTION.

Lloyd, the famous map man, who made all the maps for General Grant and the Union army, certificates of which he published, has just invented a way of getting a relief plate from steel so as to print Lloyd's Map of American Continent—showing from ocean for one entire sheet of bank nole paper, 40x50 inches large, on a lightning press, and colored, sized and rarmished fur the wall so as to stand washing, and mailing anywhere in the world, for 30 cents, or invarnished for 25 cents. This map shows the whole United States and Territories in a group, from surveys 10 1875, with a million places on it, such as fowing, cities, villages, mountains, takes, rivers, streams, gold mines, railway stations, &c. This map should be in every house. Send Socents to the Lloyd Map Company, Philadelphia, and you will get a copy by return mail.

THE POWDER CO., HAZARD

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric" Powder.

cos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

os. I (finer 'o 3 (coarse). In 1 lb. camplers and 6 l lb. kege. A fine grain, quick and clean, for apland and prairio shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

(os. : ffue) to 5 (coarse). In 1 and 5 lb. canlslers and 61 and 124 lb. kegs. Burns stooly and very clean, shooting remarkably close, and with great principation. For field, forest and water shouling it make any other brand, and it is countly serviceable for muzzle or breech loader.

Hazard's "Kentucky Riffe."

FFFG, FFG, and "Sen Shooting" FG, in kegs of 25 124, and 61 lbs, and cans of 5 lbs. FFFi6 is also packed in t and 4 lb. canisters. Burne strong and maist. The FFFG and FFG are favorite brand for ordinity sporting, and the "Sea Shooting" FG is the standard Rifle poinder of the country.

TESTIMONIALS.

Connect University,
ITHACA, March 14th, 1870.

I must congrabilate you upon your great success in
this new educational enterprise. If we can arrange
our amusements so as to make them lungart instruction to be usind, it will be a step in advance in education.

EZRA CORNELL.

tion to the mind, it will be a step in any since in education.

Washington, D. 12., March 18th, 1870.

I am much pleased with the success you have not within giving to the stuffed spectanius a very decided appearance of life.

Those you may be able to continue the Syrles, and I have no doubt they will furnish interesting means of infurmation and instruction in regard to the wild animals of New York.

SENCER F. BARRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.

I have examined carefully the "Steroscopic Studies of Natural History," and judging by the first ten numbers, should say that they will prove of very groat value, both as object lessons for students, and as a most interesting solte for the parlor Sturenscope. The defineations, nosition, and color in the different groups and the general treatment are most pyrfect. I conflictly recommend them to the public attention, and trust you will meet the enveringement which you have earned.

EDWARD A. SAMUEL,

Curator of Zoology in Mass. State Cabluct.

PEADOPY ACADEMY OF SCIENCE,

PEABODY AOADEMY OF SCIENCE,

SALEM, Mass., March 19th, 1870.

I have shown your Sterroscopic views to the Directors of the Academy and the editors of the American Naturalist, Dr. Packard and Mr. Morse.

They concur with me in praising their irrithfulness and the taste which you have displayed in surrounding the specimens with natural objects and securery of characteristic fitness. They are certainly better fitted, not only as parlur and drawing room illinatrations, but as educational illustrations for the use of schools and

ax contestional missistations for the use of sentions and colleges, than anything we have yet seen.

A. HYATT.

Cornett University, Priesident's Rooms,
Ithaca, March 19th, 1870 |

I have received the Stervoscopic Views of objects in Natural History, and have enjoyed them grently. They have surprised all who have seen them by their wonderful fidelity, both as regards the animals and their surroundings; and I think they can not fall to be of great service to the study of Natural History, first by altracting students to it, and max by perfecting them in it.

American Wild Fowl Shooting.

American Wild Fowl Shootings
BY JOSEPH W. LONG.

Describing the hamits, habits, and methods of shooting wild fowl, with instructions concerning game, blinds, boats and decoye; the training of water retrievers, &c.

This book is written in plain English, and in a most attractive style. A broad, and at the same time accorner view, is taken of duck shooting in all parts of the country. The habits and feeding grounds of the country. The habits and feeding grounds of the malbrids, blue-winged teal, pin-buil, wood, gadwell, and covelber; ied-licaded, build-handed, and other kinds of ducks, geere, swans, &c., have been carefully and ingeniously stanlided and given to the reader.

In thirty chapters the muther has furnished information, for the young, as well as for the practical sportsman. "A bunk for sportsmen, by a sportsman."—Argus.

"Tells where to find game in the morning, in the afternoon, and in the evening."—Sim.

"Almost indispensable to the sportsman."—Arcadan.

THE FISHER MAID,

BY MIS. EUNICE B. LABBERTON.

THE wind was cain, the tide was low,
The sails all flapping hung,
And crabs came eldling o'er the sand,
The tangled kelp among.
With maked feet a fisher maid,
Fog-browned as jotly tar,
Sped joyfulty to clutch the craft
Aground upon the bar.

The waves in wrinkles crept along,
Like time to childhood's view,
When days are weeks and weeks are months
And pleasures ever new.
With lengthened fingers on they came,
Grasping the murky shore,
Wille peril to the fisher mild
Was all the song they bore.

And billows rose and billows fell
With -cething, foaming crest,
When "Hard to leeward!" rose the cry,
With "tack to son-con-west."
In white capped glory wild they tossed
A lift to sheet and spar—
No longer was the "Mary Ann"
Aground upon the bar,

Enclasped 'mid winding shrond of foam,
A will the breakers hore
To where the tawny fisherman
Bent, dragging nets ashore;
And dames in gowns of Scottlish plaid,
With 'kenchlefe white and bine,
Gossliped of nelgabor's weal or woe,
And vowed the gosslp true.

Now often when the tide is out,
And salls bang flapping low,
When crabs come sidding up the sand
Where tangled sea weeds flow,
The sailors see a phantom maid
Fog browned as Jolly iar,
Speed Joyfelty to clutch the craft
Aground upon the bar.
Rochster, N. Y., March, 1876.

Going Down to Yericho.

CAMPING AT THE POOLS OF SOLO-MON-BATHING IN THE DEAD SEA-FALLING AMONG THIEVES-FISH-ING IN THE JORDAN-EXPEDIENTS OF AN ANGLER.

DY C. A. KINGSBURY,

IT was on the 17th of May, 1867, as I find on referring to my note book, that we turned our backs upon the city of Jernsalem, and started on our trip to the Dead Sea, the Jordau, and Jericho. Mounted on good horses, and taking only such articles in the shape of haggage as were absolutely essential for our comfortable shelter and subsistence, we were well prepared to carry out our intended plun of making this side trip with as much dispatch as possible, consistent with exercial observation. We did not take the ancient and usual route of travelers, by the way of Bethany, but turned our horses' heads towards Etam, and just as the sun set we pitched our tents by the pools of Science.

What a place to camp! Tradition makes this the "garden enclosed," where Solomon made his kingly experiment in horticulture, of which he says:—"I plunted me vineyards, I made me gardens and orchards, and I planted trees to them of all kinds of fruit; I made me pools of water to water therewith the wood that hrlugeth forth trees," I will not stop to moralize, but it must be admitted that whatever may have been the result of his experiment in other respects, these three magnificent pools, which remain in a good, state of preservation to the present time, are worthy of their royal builder. The most easterly one is

about six hundred feet long, two hundred wide, and fifty deep. It would flont the Great Eastern, or the largest ship of war that ever ploughed the ocean.

Taking an evening bath in these gigantic hath tubs, we enjoyed a night of most refreshing sleep, and early the next morning started for the old city of Hehrou, visiting the valley of Eschol, and taking our moonday lunch by the side of a cool spring, slanded by the famous terchinth known as "Ahraham's Onk." It is a magnificent tree, twenty-three feet in girth, and if it be not the identical tree under which the patriarch communed with his Creater and outerlained heavenly messengers as his guests, it ator, and entertained heavenly messengers as his guests, it is at least the only surviving representative of the oaks of We found the vineyards here most thrifty and Mamre. luxuriunt, still producing mammoth clusters of fruit, rival ing those marvelous bunches horne away upon the shoul-ders of the sples in the time of Calch and Joshua. From this spot to Hebron is about two miles, and we felt that every step we took was upon ground trodden by patriurchs and prophets. Here "Isauc went out to meditate in the field at eventide, and lifted up his eyes and saw his heartiful cousin Rehekah, from Mesopotamia," and he took her into his mother, Sarah's tent, and also became his wife. It was just here, too, that green eyed jealousy drovo Hagar into the wilderness, and he soon becomes "a wild man whose hand will be against every man, and every man's hand against him." How literally the angel's prophecy has been fulfilled, and how exactly Ishmacl's deacendants have maintained their peculiar disposition and habits, the East ern traveler knows too well.

On our way to the city we discovered a wolf feasting on the carcass of a mule. He was a fierco looking animal, of reddish hrown color, and about the size of our grey wolf. He made good his escape, although with a rifle he could have heen secured as a zoological specimen. We examined the principal objects of interest in the ancient city, huilt "seven years before Zoan, in Egypt." The chief object of interest to the traveler is the cave of Machpelah, containing the sacred dust of Abraham, Isaae, and Jacoh. As a description of this most interesting repository of the illustrious deud does not come within the scope of this communication, I would merely state that it is most zealously guarded night and day by a set of fanatical and lasselent Moslem seldiers. No christian dog is allowed to enter the cave, under penalty of death. The writer, in his auxiety to gain a certain point of observation, was threateued with instant death if he took another step. Not wishlug to remain at this old city for an indefinite period of time, even though my houes might he laid so uear the tomb of the patriarchs; I very quietly hut most unhesitatingly withdrew to a place of safety. On our return to El Burak—as the pools of Solomon are now called—we started up some fine covies of the common partridge of Palestine, which is the Greek Perdix saxatilis. It is a beautiful bird, about the size of our ruffed grouse. Its legs and beak are a bright red color, its flight is swift and strong, and it is so wary in its habits as to render it difficult to shoot. When in season, I am told it is a great delicacy. Some of the Emcers and chiefs of the country hunt this hird with the hawk, and keep up the ancient sport of falconry with no small degree of pride.

Tired and hungry, we reached our tents in the dusk of the evening, and spent our second night at the pools of Solomon. The next day we visited Bethlehem, and at ahout also in the evening pitched our tents on the hank of the Kedron, under the towering walls of Mar Saba. What a world of interest gathers shout Bethlehem, with its manger, its magi, and shepherds. Its history, in moral and religious aspect, is without a parallel. The influence of the great event which transpired there some two thousand years ago girdles the world and extends through all time. We must not stop longer in the city of David, however atrong the temptation. The road from here to Mar Saha passed over high rocky hills and through deep, dark valleys. It was here that the fair and ruddy son of Jesso the Bethlehemite kept bis father's sheep. With these very

pehbles he practiced his simple sling, and attained that uncring skill in the use of his favorite weapon. It was among these hills and vales that he performed those hrave exploits of his youth which he related before the king of Israel in order to convince him of his ability to meet and hring down to the dust the bisolent champion of the Philistines. Hear his story:—"And David said unto Saul, thy servant kept his father's sheep, and there came a llon and a hear and took a lamb out of the flock; and I went out after him and smote him, and delivered it out of his mouth, and when he rose against me I caught him by his heard and smote bim, and slew him. Thy servant slew both the lion and the hear." The triumphant result proved that his confidence was well founded.

At Mar Saha we found our guard of six ragged, suspicious looking Bedouin soldiers, engaged by our dragoman before leaving Jerusalem, to escort as from this point to Jericho, and to protect us from the hostile Arabs who live east of the Jordau, and who do not scraplo to rob the unprotected traveler. They were armed with long guns and spears. The following morning we were hospitably enter-tained by the monks of the convent, who took us through this ancient and singular structure, showing us the chapel, with its costly decorations, and many other objects of great interest, including the vault containing some fourteen thousand skulls of martyred monks. No traveler is admitted without a letter from the Greek patriarch at Jerusalem, and no woman is ever allowed to eater the convent upon any conditions. There is an interesting tradition connected with the location of this convent castle. Spint Subas, the founder, was a man of remarkable sauctity, and at an early age devoted himself to conventual life. After traveling over Palestine he came to this wild and dreary spot A. D. 483 in search of a suitable place where he might find religious retirement from the lustling world. He discovered a cave in the rocky ravine of the Kedron, which he concluded would suit his purpose. Upon examination, he found it to be the den of a lion, and in actual possession of the fleree monarch of the wilderness. The saint, it is said, very politely gave him to understand that he wanted to occupy the premises for his own hendquarters. The animal quietly took the hint, and left his lair to its new occupant and its higher destiny. This cave, which is now oue of the cells of the couveut, is pointed out to the traveler as the one formerly occupied by the distinguished founder. No one can form any just conception of this religious fortress, with its lofty, frowning walls and its wild and deso-late surroundings, high, rocky cliffs, and deep, dark glens, without seeing it with his own cyes.

The rock pigeon (Columba schimpiri) was very numerous along this part of the Kedron, making its nests and rearing its young in the caves and fissures high up the precipitous rocks. There were also flocks of a species of grakle, with hright yellow wings, which the mouks feed with dally eare, receiving in pay for their kindness genuine autes of melody. Among their pets are three foxes, which come every evening and hark under the couvent walls for their supper, and a wolf, which comes down from the wilderness and crosses the ravine of the Kedron to get his flaily ration of bread, which is lowered down hy one of the mouks. During the day we started up one of the foxes, which was similar to our red fox, and seemed to rival him in speed.

The rido from here to the Dead Sea, which was over a dreary waste of sandy plains and hills, occupies some five or six hours. The sun was intensely hot, and we suffered greatly from the hurning heat and excessive fatigue. Only a few days hefore an adventurous hidy beloaging to an English party died from the same causes while passing over this route. The neglect of our dragonan to take along a sufficient quantity of water greatly added to our distress. Onr limited supply was soon exhausted, and no good water could be obtained until we reached the Jordan. At length we came to a rock-hewn reservoir, some lifteen feet in depth. The water was of most questionable appearance, but if it had been as pure as that of Jacob's well we had

nothing to draw it with. But we were in great straits, and so, without loss of time, one of the Arah soldiers laid off his rags and jumped down into the turbid pool. Throwing him a leather bottle, similar to those used in the country some two thousand years ago, he filled it, and, clambering up the nearly vertical walls, placed the coveted treasure within my reach. We family upon examination that the contents fairly quivered with minute animal life, but too thirsty to be fastidious, we made our teeth serve as a strainer, and eagerly, and I may say gratefully, too, quenched our mging thirst. One needs to travel in this country in hot weather to learn the value of pure, epol waler, and to realize the full force of its symbolic use by the sacred writers.

er, and engerly, and I may say gratefully, too, quenched our mging thirst. One needle of travel in this country in lot weather to learn the value of pure, enol water, and to realize the full force of its symbolic use by the sacreal writers.

Greatly relieved and refreshed, we pursued our journey, as we came in sight of the Dend Sea, we noticed that peculiar hazy appearance of the atmosphere reminding us of Indian Sanamer in our own country, and we found ourselves subject to that singular optical illusion sometimes produced by a very transparent and highly rarihed atmosphere, in which listant olijects appear quite near. At a certain point, when we were some five miles distant, it seemed as if we were within haif a mile of the share, and lakes on our glole, we prepared to take a bulk—and previncisly hatfield in numerous seas, lakes, and rivers, han previncisly hatfield in numerous seas, lakes, and rivers, han never did I rajoy such in both as this. The spreaffer gravity of the water is such, from its folding in solutions so large, a proportion of salts (twenty six and a haif per cent.), that one thous upon its surface like a cork. At the time there was only a rentle ripple upon the sea, and being a good swimmer I at once struck out into deep water. Journal of the atmosphere is the shore, and taking Dr. C., one of our purity, who could not swin, lay the hand, led him out into the sea where the water was many tathoms deep. At first he was quite relactant to foliow me; but he soon agained confidence on finding there was no danger of shaking, and he culoyed the above bath as much as it he had been an expert swimmer. Should the bather allow the water to get into his eyes or mouth he would suffer a considerable batheureat to his enjoyment, on account of its extremely sait, bitter, and riritating nature. No fish can live in this sea, but various kinds of ducks abound here at certain seasons of the year. The water bath in the Bod Sea. The much vanuel Turksh hats of Alexandria, Cairo, Damascus, and Crostantinople (1 can r

Jerisho, as did a certain man some two thousand years ago, "who was stripped of his raiment, wounded, and left half dead."

After the excitement of this unpleasant little episode had somewhat subsided, we sat down on the bank under the shade of a weeping willow, and took our moonday lunch. There was a deep, eddying pool just in frant, into which I threw some crambs of bread, which were eagerly taken hy some kind of fish. The water was turbid, which prevented my seeing what kind or size they were. I felt a strong destre to capture a specimen of the finoy bribe from the lordan, and expressed my regret that I had not sapplied myself with lishing tackle for the purpose before leaving Jerusalem. One of the party replied, "Why yes, Doctor, I wounder that such a fisherman as you are did not think to bring along some hooks and lines." I felt and confessed that it was a great oversight. It would have given me so much pleasare to have caught even a single fish in this river of world-wide fame, so frequently mentioned in the Book of baoks, and so intimately associated with the sacred incidents and early history of christianity.

We were at the reputed ford of the braclites, who, after forty years of wandering in the wilderness, crassed over at this very spot to enter apout the possession of their long sought promised land. Here the devout pilgrim comes from all parts of the world to bathe his weary limbs in Jordan's sacred waters. In view of these circumstances, with such a throng of interesting associations and memories crowding upon you, was it my wonder—I submit the question to any man of practical experience and true sympathy to such matters—that an angler's cathusiasm should be kindied, and that be should be led to make a desperate effort to captare, by some sart of hook or crook, one or more of the scaly demices of that listare stream, whose mystic waters retired at the approach of the ark of the covenant,

were parled "hither and thither" by the prophet's mantle, and were consecrated by the baptism of the world's Redemer? Was it not consistent with the strictest propriety that I should covet a fish from the dardan; that I should exclaim, O! that I had Peter's hook, with which he caught, under his Master's guidance, the fish in whose mouth he found the piece of silver far tribute money? I would try my luck at this spat. Perchance I might take a lish of the same kind, for these waters mingle with the waves af the heantiful Genessarette. Had I even one of the old nets of Zebedee, ansportsmanlike as it night seem, I would try the plan of the old fisherman of Guillee, and gather in both good and bad, so I might obtain an ielithye specimen for examination.

licantiful Genessarcite. Hail I even one of the old nots of Zeiede, ansportsmanilica as it night seem. I would try the plan of the old isherman of Gulilee, and gather in both good and bad, so I might obtain an ichthye specimen for examination.

Jast as I was at the point of despair a hoppy thought came to my reliel. It occurred to me that when I was a small loy I had caught tront with a pin hook from my grantfather's mill point in my native New England. Why could I not use a similar implement now? I had in my pocket a small pin cushion, containing some black plan. I took one, and ben't it into the shape of a genuine Kirhy. Prince Rupert, Sir Humphrey Duy, and other distinguished antipers did not disdain to make their own dish looks in certain cases, and why should not I, an humble member of the ungling fraternity, do the same, especially in such a shift as this? But what was I to do for a line? Then I remembered having given to one of our party some lays hefore a short pince of lineky hadrat thread to mend his riding whip. I called for this, and unwinding it tied it on the hook. Our dragoman carried it double barrel shot gun, and from him I got a few short for sinkers. But the line was yet loo short for any practical use. Careful searching Iranghi to light a piece of catton twine around a paper of crackwas purchased at Jeusalem. Splicing this is the petent thread made a line of quite respectable length. Cutting a tamarisk stick for my off off as improvising fishing trackle moder angeter? What if the leid on the line, and with some feeling of triumph called the attention of my campanions to the result of my efforts at improvising fishing tackle moder angeter? What if the food was not as delicate as the eight oance. Norris, or as clastic and graceful as Leonard's spit handlers?

In view of the temporary and frail character of the tackle, I instructed our other fan, almost of what is the partic what is a subject of the same kind, and are nucle covered and in the provision of the proper of the provision of the prov

thing is certain—in our case it proved to be a most edible fish.

We reached Jerieho that evening, and pilched our tent by the side of the stream whose bitter waters were sweetened by the prophet. We had the fish cooked for our sapper, and they were pronounced excellent. The hook and line devised under peculiar difficulties, and which served so well its intended purpose, I have ever since valued as an interesting sonveair of my visit to Palestine and the Jordan. I at oure honored it with a place in my portemonaic, where I have carried it ever since. Knowing the interest and pleasure that true anglers take in examining all novel, improved, and efficient varieties of fishing tackle, I propose to euclose the precious relic for the curious inspection of the able and honored editor of Konest and Stieram. I call it a precious relic, implying that which remains after what has been lost. I was going to say, I send you the identical hook, line, and sinkers, but there is a little stabborn fact which stands in decided opposition to such a statement, and thereon hangs a tide, which I will venture to relate as a brief sequel to this already too lengthy communication.

It was during the subsequent Summer, while spending a few weeks in the vicinity of Lancaster. New Hamishire

ft was during the subsequent Summer, while spending a ft was during the subsequent Summer, while spending a few weeks in the vicinity of Lancaster, New Hampshire, that a party of tour took a pleasant drive up the Connecticut Valley passing through Colchrook to Dixville Notch, that wild an desolate mountain pass which is regarded by some geologists as more Alpine in its character than any other pass of the New England mountains, and whose grandent has made it quite tamous as a place of resort for summer tourists. The party consisted of the Rev. R. Newton, whose sermons to children, published in so many languages, have given him a world-wide fame, Mrs. K., with her friend Mrs. B., and the writer. On the second

day we reached the Notch, entered its Titanic gateway, and examined with emotions of awe and wonder the wild confusion of rocks and the impressive and mysterious desulation. We find taken our ample lunch with that enjoyable relish which comes from a morning ride and pure mountain air, and hud barely turned our horses' heads towards Colebrook, when we halted to admire the beauty and drink of the ice cold water of a swift bubiling brook. It was one of the head sources of the Mohawk River, which empties into the Connecticut at Colebrook, and in whose waters that enthusiastic angler, the late Rev. Dr. Prutt, of Pulladelphia, for many Summers cast his fly with su much success. It had such a frunty look that I betrayed a wish for the opportunity to try my skill, when Dr. N. expressed his surprise that I had not duly prepared myself to take buck a fine mess of trout for our supper. I had not anticipated such an opportunity, and had made no preparation. Trecollected lind I had my Jordan hook and his in my portemonaic, and at once resolved to test its efficiency with the Salmo fontivalits. Suiting the action to the thought, I tied it to the end of an ahler rod, and put an the hook a piece of roasted beef for lait. The stream crossed the road just in front of the horses, and stepping cantiously to the bridge I drupped the hook just below. Quick as a flash it was shart distance, leaving the ladies sitting in the carriage the meantime, and, marvelous as it may seem, in about half an hour I had added twenty-two more to my catch, making a fine string of twenty-seven trout, sufficient, as we judged, to make a supper for four hungry lonrists. Well satisfied with our prize, we drove on until we came to where the stream crossed the road again. Just at the upper side of the bridge was a deep, shaded pool that loaked so inviting I could not resist the temptation to try the virtue of the Jordan tackle once more. With baited hook I carefully approached the spot, when no sooner had it touched the water than the pool seemed fairly ali

For Forest and Stream

GEESE ON LAKE CHAMPLAIN

GEESE ON LAKE CHAMPLAIN.

A T the month of the An Sable and extending along Champhain for about three miles is a lorge marsh, altording numerons lurking places for wild lowl, and, in years when the water is high and the marsh covered during October and November, the different varieties of ducks and Canala gerse liner visited it in great numbers.

We had been stopping at a farm house alanat six unlies from the lake, during the early part of November, and had hunted the ducks with good success, but only two or three geese had we killed, and, as only a few days intervened before we must leave the happy linning graunds, we decided to take one more turn at them. Our plan was to himt them by moonlight. We felt very confident of saccess, and pictured in our minds our boat loaded with geese. We started out about three o'clock in the afternoon, and at three mile walk brought us to the river, where we were to take a beat for the remainder of the distance. The river at this point is broad and smeath, and in stiking contrast with its course whout two miles farther up, where roating and boiling it plunges amid walls nearly two hundred led light, and often but fifteen feet apart.

About four o'clock we reached the lake and rowed on a short distance to look for ducks, then risting an our oars we surveyed the scene before us. Arross the lake, which is here twelve miles wide, the peaceful vales of Vernmar extended to the base of the Green Mountains, Mt. Mansfiell and the Camel's Hump towering above the rest. Not far away Mt. Tremblean, the Eastern terminus of the Adiron-ducks, rises proudly from Champhin, while peak after away Mt. Tremblean, the Eastern terminus of the Adiron-ducks, rises proudly from Champhin, while peak after and fire on the lake were large flocks of duck, while plover ran to and fro on the sandy shore, so rouning ashore, we bagged some of them, and thou decided on one arrangements for the night. We were very large flow with two young trappers in their bough-house, up the river. I was to go to a long point ab

After a half notic of this kin-t of work, I thought it would be hetter to try the edge of the marsh where there were no trees. Acting accordingly I had planged along in the noul and water until I thought I mass he near the carry, and I went to cetter the whonls, when to my surprise I found water intervening, and deep at that. I that a few matches with which to make a torch, but they proved to be damp. I started to go back but found the man hyriding and deep. It was half got into such a fax? I attempted to go on and was quickly mired. Sinking showly but steadly, I became excited—the idea of drowning in a mod puddle, and all my future usefulness spooled? I thoundered about desperately and at last brought up on an old stump, and from that by leaps I reached a solid footing. Wel, muldy, and shivering, I fotton my boat and was soon out into the dark stream heading for the bright enum fire at the laak below.

We had a merry time that evening after we had taken our supper steaming from the roaring fire, and we piled up the lag logs mutil the river shoue like a stream of gold beneath its blaze, and now and then a duck coming around a pinin near, frightened by the unusual proceedings, would give a quack and take inpidly to wing. The young trappers sat on a log skinning a large pile of muskrats.

We huilt another fire at the cutrauce of our boughlouse and then toubled in. The stars shoue through the half company above, and no sound was heard except the cry of some coon in a neighboring tree, or the honk of the wild geese at intervals, and, when the last spark of fire splutlered and went out, we were all fast in similer. I avoide with the cracking of the fire and found the Dou up and sitting on a soap box, communing with his pipe. He told me if was one o'clack and to go to sleep again, as the moon would not rise until livo. It was no use, however, so I sbivered through a long hour, and found then paid they for the moon uppeared, we roused the buys and set off. Silently the youth puddled as down to the lake, and we heard t

it so.

We gave it up and started for home. When our friends saw us coming up the road they wondered where the geese were. But although our success was not great, I leave it to the readers of Forest and Stream, the true sportsmen, to appreciate our pleasant experiences.

Charles H. Crow.

WILD TURKEY TRAPPING AND HUNT-ING.

NORFOLK, Va., February 20, 1815.

EDITOR FOURST AND STREAM:-

Norfolk, Va., February 20, 1875.

Bitton Fouest and Stream:—

It may be interesting to some of the readers of your paper to learn how "we down le Dixle" manage to capture the wilty, silty, wild turkeys—the finest of all forest game. They have been very plenty in this tortion of Virginia the present—eason, from the fact that the least Summer was a remarkably dry one; about all the young that were hatched were raised, noon having heen drounded or drugglet to death by heavy nilus about katching senson. There are several modes adopted for their capture; balting and trapping is one. In this mode, first find out where the turkeys was - This all always he found to be unfrequented places and mear some swampy or large forest growth, where they may flad high trees to resort to when alarised by the approach of huntsmen and to most in a right. Having found such hunts and feeding grounds, the bilter scatters geas, wheat, or corn about in small quantities in tifferent marked places, and occasionally visits are made to the places in see if the bait has been exten. If so, and by turkeys, it is easily determined by the signs of scratching away of the leaves in all directions in search of more food. If the balt has been eaten, re-balt at once. They will snow begin to resort to such places for food. Having once gotten them to do so, them make a pien of old weather beaten fence rais, or something of the sort, using nothing to make the pen of new of fresh cut stuff, as they are very cautions and will not venture near it. Having gotton the rails on the spot, dig a trench eighteen inches deep and about as wide, and four or five feet long with a slope from the outer end, deepening to the middle; then lay across it the rail. Lay one rail as the wildly of the pen und two rails as the length (ordinary fence rails, ten to eleven feet tough, building the height of eight on ten rails as weight to keep the top down is always necessary, for when inhurned at the approach of the trapper It will take a good amount of weight to ten rails and leve

Yet another mode of bunting is in use, viz: hunting with dogs— pointers or setters are best, because more easily trained. The dogs and and flush the inrkeys. Taking to the high trees, keeping an eye on the

dogs while they are rounting around backing at the intrkeys up the tree, they being so much engaged in watching the dogs the huntarin can come up in shouting distance and kill his game. This mode is adupted by an another of my friends, with whom I spent a few days thring my late trip. This friend has killed about a dogen title season up to Indianary; but take it whatever way they may, a good fat wild turkey is no meningame to take home, whether after patient waiting or a long tramp.

Reverons, F. F. V.

ANOTHER FELINE GONE

DEER PARK, Md., February 16, 1875.

EDITOR POREST AND STREAM:—
Still another that goint from among us; his name was "Publish" (selectific name unknown). He was noted for his philanthrupy and targe introduced. One of the best traits about him was like love for children He would say: "Others may like the stemmess of manhood, arthe gentleness of wannakind, but the unresteding softness and sweetness of children lis far more to my taste. He was also in the habit of saying to himself, "If Mary had a little lamb I don't see why I should not have one, oo." One day not long since he was seated on a nick moralizing this: "Even the greatest of us are often unappreciated, and it is so in my case; I think PH emigrate and go to Texas."

He rose from his scat, and was about to go boine to his graveyard, when his foot slipped and he fell over a rifte hall, cutch had been placed there by a Mr. II.—, who immediately came forward and assisted him to rise. As a reward for his friendly as-sistance, the late lareneted presented Mr. II. with a work of bisentified "Denial Process," which Mr. II. found to be very interesting and full of strange engrossing putter, which was difficult to shake off, it was a handsmine elition, bound he calf (Mr. II.'s calf). It was also found, on opening his will, that he had left his Winter overcost to Mr. II., which, upon measurement, proved to be seven feet five inches long. He was butted in the family graveyard, and his epitaph was taken from Charles Lamb.

Poor Puntheri may all his faults be forgiven, and may he he waffed to hitse by little cherab boys, all heads and whige, with no "hadres" to reproach him with his subinnary infamilies.

Woodland, Harm and Garden.

THE CLEMATIS AS AN ORNAMENTAL FLOWER.

THE CLEMATIS AS AN ORNAMENTAL FLOWER.

THERE is probably ao form of plant life which can be applied to su many beautiful variations as the running vines, the various honey-suckles and clematis. How attractive are they when clustered around our rural homes. How beautiful and hasting are the lessons they impart. They were created for lessons of wisdom and instruction. In many instances it may be said with truth that "tash on governs all I things," hat plants we are sure to leave out of this classification. Years ugo the Clematis, or Virgin's bower, was called the reigning helte, or fashionable flower, in all the floral circles of Europe. Great prices were in those days exteemed light in exchange for the rick cluster of the old Jackmaunis with its wreath of crimson blossoms, or its varying violet and purple; it is indeed a rare old plant, revelling in many quaint old memories of the past. Among the stories told of the esteem in which this jackmannis species was held in the olden times we have only to recall the common fact, that growing at the foot of a fower of Melrose Abbey was a remarkable viue of this plant, whose graceful tendrils completely covered the whole turret of the tower, throwing far and wide its fragrance and beauty. Says a pigir in from afar: "I Tode many miles to bedoit this wonderful plant. In mute admiration, I received anew a lesson of the wisdom of God, who maketh even the illies of the field glorious." "To me this was a loral treat never to be forgotten."

Carrying out he idea, how shall we improve upon the suggestious of nature, how to make more heautiful our own surroundings?—First, we are to study the unture of the plants we are to use in our landscape. The place, and listee of constry, its capabilities, from much or little water, natural and artificial. Haviog ascertained just the capabilities of our soil we ner to consider the unture of the vines and plants we are desirous aff using as ortuanents or embelsioned a bout our doubt the support of the plants are agained with the surrounding o

tion.

Another old favorite has reddish purple blossoms, and is called viticello renosa. This is a light veined, beautiful and delicate plant. Among the numerous claimants for favor I name one from Florida, that has well sustained its home recommendation, even in our colder summers, and is Florida plena, very double, creamy white, with a delicate green

rosette in the centre of flower; it is a slender growing vine and tords hooking to once in three or four days.

Lady Hourtle—grayish little, this grareful folloge, deep grown, hardy, every way desirable. This is one of the jacknowns' seedlings.

Thomas Moore—one of the most magnificent of the varieties, very nairly resentiating the passion theory, it is when in flower a mass beautiful sight, has deep violet colored thowers in great masses.

Twisseddings from the jackmannis deserve a place in this collection, for they are all three classed as hardy phants; once planted out they need but little care except to cover the roots with fine unnuare in the full, and when Spring cames manner the same and turn up, and tin up the vines.

Mrs. Moore is a plant of humense juopartions; some of the flowers are from right or ione luckes in diameter and almost joure which in color.

James Bateman is a new clematis that blooms for a succession of weeks, flowers bright like.

In another paper we shall give another very ideturesque manner of cultivation of the clematis in cannection with other flowers.

Oldfrod Quille.

ANSWERS TO CORRESPONDENTS.

Maria, M. S., Nyack, N. Y.—The frigarent of feru leaf you sent cantains the insect that destroys it. Atropos, one of the little "death watch" class, is very minate to itself, yet it makes quite a ticking noise, from which it receives its name. Your herburian, it much infested with flois and other parisitic luserts, of which there are many preying upon the green and dry ferus, stands the dusted with pawdered corrusive sublimate—a dry pulsan—put, say 4 oz. spirits at which in a lattle, and half tea squonful of the dry powder in a hottle, let it stand for a day or two, and use when you prepare your herbarian—with a small brush put this solution carefully aver onch fern ienf before you dace the same to your kook, noil you will never have any trouble from laseets preying upon the same.

EVELINE MULER, Whrchouse Point, Chan.—The following are among good phats that will home into flower in from June to September. Should be enrefully shown in April. Of the yellows—nxulis trapacoloides. A flue plant for edging. Leftosiphon intens and latens; saavitalla procumbeus. This is half hardy and very pretty. Tropacolout, Ten Thomb.

conclicus. This is that analy.

Too Thomb.

Labe—Clarkla elegans and supinus venustus

Scarlet—Trapucation, Tion Thombs and varietles.

Blue—Neurophila insignis, supinus vanus, whellavla

gramlidare, and examinated spectrus.

Purple—Harris underlain.

Rose—Silene peudala.

I. S. Providence, R. L.—You can prevent the ravages of mice among your young trees by giving them a good canting at a preparation made by the admixture of equal parts of pine tar and fish oil. Throughly warm this composition, and with a brush give the trees a good band of from a foot to afteen inches in width, teginning close to the ground. This remerly is a sum protection from unler, and if you choose you can apply the same at any time during the Winter when the ground is free from snow around the frees.

The Borse and Compse

The racing on the other shie of the water may be said to have fairly confidenced, but butting in the principal events remains dull. Camballa is installed as favorite for the two thousand guineas, but the "talent" appear to be in difficulties us to a selection for the Derty.

-Sawdust trulling is resumed at the Hippodrome this week under the director of Messes. Mace and Walton.

week under the direction of Messrs. Mace and Watton.

—W. F. Harper, of Whodford county, Kentucky, sold a few days since to Colonel McDaniel, of Princeton, N. J., the broad mare Sally Watson, by Ringgold, in I and in languarted Ohn Athol, and a yearling chestnat diliy to Imported Glen Athol, than Sally Watson. Colonel McDaniel has also parchised from Major B G Thomas the chestnat mare Orange Girl, live years obl, by Colossus, dam Sally Watson. Orange Girl is in food to Langtellow.

-The Nashville Blum Horse Association has christened a new four-mile-race to be run in 1876, the Lorillard stake.

-II. P. McGrath will ship in a tew days from Lexington, mares Susan Ann, eight years old, out of Boxum, by imported Chesteritchi, and Sarong, eight years old, nat of Greek Slave, to Chestant Hill Stud Farm, near Philadelphia, to be bred to Leanington.

-Mr. Charles Bathgate sold for a low figure his tratting colf, Speed, two year old, by Volunteer, full brother to Volunteer Maid, to Mr. Blamly, of Ohio, a few days ago.

At the annual meeting of the Iludson River Driving Park Association, held a few days slace, it was resolved, to try a manimous oute, that the capital stock he increased to \$100,000. The following officers were elected for the ensu-ing year:—President, Margan L. Mutt; Vice Presidents, J. O. Whitchause, J. F. Whishaw, William Butler, William B. Dinsmore, B. Ray, J. Mackla; Secretary, J. G. Frost; Treasurer, J. H. Weeks.

The celebrated white trotting genting, Crown Prince, was sold on Wednesday last at anchon, for \$3,000. Dan Mace was the purchaser, and it is supposed he was acting for Mr. H. N. Smith.

-Mr. John livewins, of Wulfsail, England, announces that he is ready to match his trutting horse Jack, to trot twenty makes on a turnpike tend, against any horse in America for £300 a side. He says that he is aware that it would not be worth any one's while in trot for \$1,500; but that some thousands of pounds would be won er lost in bets on the race, which would compensate for the smallness of the stakes. He also says that he will allow a fair amount for expenses.

mount for expenses.

—Katic Pense, the great four-miler, who lowered the colors of Thad Stevens, appears to be inviacible annu g the Pacific slopers, and as good at half-mile heats as the longer spins. She recently bent Chimanan in such a race; bust heat, 49} seconds; 100 paunds up. They must have misty weather at the Occubent, for in the last heat the starting post could not be seen on account of the log, so no time was taken.

Mish Gulture.

EARLY FISH CULTURE.

W E have before us a pamphlet, published about twenty years ago in Brussels, entitled Traité de Pisciculture Multiplication Artificielle des Poissons, hy M. Holtz. Some of the engruvings we reproduce, with a translation of their descriptions. We have selected those devices which are explained in streams or pands without the processity of employed in streams or ponds without the necessity of hatching houses, as this kind of apparatus is most suitable for the development of the ova of Spring spawners, com-prising, as they do, some of our most important food fishes. The comparatively short period required for the development of their eggs renders it necessary to hatch them in the waters from which the parent fish are taken. The writer, after describing the devices used by M. Coste and others in hatching houses, which are too familiar to our fish culturists, and which have been, he some particulars, Improved upon by Messrs, Green, Stone, Clark, and

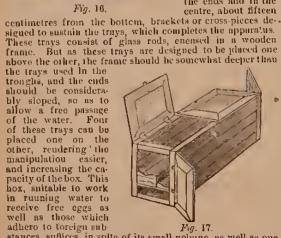

fig. 14.) Different methods vide against the inconveniences above mentioned, by employing wicker plats or baskets, with or without floats, (figs. 15 and 16,) following the habits of the fish in incubation. M. Coste has also constructed an incubating box, which should remedy all the inconveniences presented by the modes hitherto used. This box, fig. 17,) which is a perfect improvement on that of lacoby, is about one metre in length, one and a half metres in breadth, and the same in height. Its bottom and sides are altogether of wood. The lid, placed on hinges, is divided transversely; in the ceutre of each is a square oponing of fifteen or twenty centimetres, covered with wirework, and each end is closed by a frame, whose opening, a little larger than of the lids, is the divided with

Fig. 16.

receive free eggs as well as those which adhero to foreign substances, suffices, in spite of its small volume, as well as one of greater size, and can be maneuvered where it would be difficult or prejudicial to use sieves. To watch what passes, to clean the wire work where seiliment obstracts the bars, one can open the doors or lid, as he desires, without drawing off the water, without disturbing the trays, and without touching the eggs. Whether it is attuched to a floating frame with cramps, or to stakes stack in the earth, it should present to the current one of its earls, if the current be moderate, or one of its angles, if it be too rapid. A bed of pebbles and fine sand placed at the hottom receives the young, which descend there as they hatch, and offers them favorable conditions to their interior development, until the moment arrives to open the doors either to set them free, or transfer them to rivulets where their food is distributed. Those of small size can escaps through the wires and disperse in the waters where they are born When the hatching is completed, the trays are withdrawn from the lox, in order to clean it easier and care for the young which remain. In using any of the above apparatuses in still water, one must cover the bottom with aquatic herbs. These vegetables prevent the water from becoming corrupt, and are an inexhaustible source of oxygen, so useful in the development of the embryo.

gs of American Fish Culturists' Association.] [From Proceedings of American AND AQUACULTURE AND TION. PROTEC-FISH

BY SAMUEL WILMOT, NEWCASTLE, ONTARIO.

[Concluded from our issue of March 4th.]

Having explained the great necessity for passing laws in relation to the preservation of fish at certain seasons of the year, it will be necessary now to meet the question, Why resort to artificial means for the propagation of fish; why not allow them to produce thelr young in the usual way?

In contrasting the artificial with the natural method, the superiority of the former over the latter system will be easily understood, even by the great masses of the people, who are as yet wholly uninformed as to the novel science of artificial fish culture, not long since introduced into the country.

ensily understood, even by the great masses of the people, who are as yet wholly uninformed as to the novel science of artificial fish culture, not long since introlineed into the country.

It has been advanced by naturalists of an early period, and upheld by eminent writers of modern times, that not more than one per cent, of the ovaluid in the natural way ever hecomes a living fish. But in the present day it is possible, by artificial propagation, to rear from eighty to ninety living fish from every hundred eggs, which larger increase is netually needed for restocking the waters of the country with fish of such various kinds as may be required in various places, and for supplying in part the increasing demand in the markets of the country for fish food.

As we have chosen to illustrate the necessity for legal enactments for the protection of fish by introducing the salmon, we shall continue to take the same fish for an example while we explain the medus operandi of laying and hatching out of the fish spawn in the nutural way, and relate the many difficulties which beset the eggs at the time of their deposit by the parent fish, and through the process of incubation, and until they are hatched out in the rivers or other waters. It may be observed that these operations are performed at different times and places by the various kinds of fish.

Salmon, after leaving their feeding grounds, will, after the somewhat lengthened migration previously mentioned, reach their spawning grounds far up river, or, in some instances, if very late in the season, near at hand above tideway. A snitable gravelly bottom, rapid part of the stream, is selected, where the female fish commences by writhing movements of her body to displace the stones and gravel in order to form the bed in which she may hay her eggs.

In this work she is very much aided by the swift current of the water, which helps to move the gravel down stream that is being displaced by the exertions of the fish. In this way a hollow spot is dug out, and a small hillo

and the stones in the act of failing are by the action of the fish, assisted by the swift water, earried down over the eggs, thus partially covering them, and hidiug many of them from sight, and also from many of their numerous enemies.

This operation of spawning will take from two to three days to a week, and sometimes longer, depending much upon the lateness of the season, and also the flow of water in the stream at the time. Should the season be dry, and the water low, the fish will rest in the deep pools below, waiting for the water to rise in the rapids, that they may be enabled to get upon the shallows to form their beds.

All this time the eggs are maturing, and at last, late in the season, unable to retain the ova any longer, they will rush up at the first freshet, and in some iustances by the whole of their eggs in one or two nights.

During the time in which the female is engaged in depositing her eggs, she will generally be accompanied by a male fish, who performs very little, if any, of the labor in forming a bed; he is constantly hovering about just below the female, and when she is in the act of laying her eggs he will run alongside, and, by a muscular movement of his body, ripet some of his milt, which, if perchauce it touches the egg, impreguates it.

It does not necessarily follow that the female shall be accompanied by the male in the act of spawning, for often it is found that she will lay her eggs without the presence of a male fish. It frequently happens that whilst she may be deeply engaged in her work, several male fish will be fighting together to gain the superiority of place. Whilst thus engaged, the female, bent upon her work, is depositing her own without the vivifying fluid coming in contact with them. Whilst this operation of laying the own is going on, the bed is generally surrounded by various kinds of small, predacious fish, watching every opportunity to prey apon the eggs to be laid to the trout alone, for young salmon (parrs), clubs, cels, and almost every other kind of small

them.

Add to this a great number lost by decay, for all those which have not received the vitalizing lluid die, and, becoming putrid, there grows upon them a species of fungus, which, spreading its grasping web, catches in its poisonous folds any adjoining eggs, killing them at once. This insidious growth works great destruction to the semi-inculated egg. Clusters of a bundred and more are thus sometimes found in the crevices of the larger gravel in a putrid state. This great scourge of the ova is very difficult to overcome, even in the purest water, and where the greatest attention is given to prevent its growth.

Another great loss of the ova takes place during the long and inclement Winter months from the formation of anchor lee, which, in shallow parts of rivers and streams, prevails

to such an extent as to become one solid mass, in many instances forcing the stream out of the channel in which it flowed during the Antumn. The eggs thus baving lost their covering of water, become frozen and die. Great destruction is also caused by the shifting and shoving of ice from the effects of heavy freshets. Whole sections where salmon beds had been made are sometimes swept away, and become so changed as to leave no vestige of their original formation.

The remnunt of the eggs which may have escaped destruction from the above mentioned sources will in April and May hatch out and become young fry. At this time they me helpless in the extreme, lying prone on their sides, with a large bag or amhilical sac attached to their bodies. In this stage of their existence they remain ubout five or six weeks, until by a process of a absorption, brought about by the increased warmth of the water in Spring, the sac hitherto attached to the body disappears, and the little fish, now symmetrically formed, hegin to roam about in a lively manner in search of food. From the time of emerging from the shell up to the present time they are still an easy prey for their immerons enemies.

The difficulties above enumerated, which beset the egg from the time when it was laid up to the pariod of its hutching out into a young fish, though somewhat namerons, are by no means all that it has to encounter. There is to be added the destruction by aquatic birds, polluted water, deleterious substances of various kinds, which are constantly thrown into the streams from mannfachtring establishments, saw dust and runbish from saw mills, washings from baru yards and turnpike reads, natural and antificial manures, and other foreign substances used upon the soil in farming, draining, etc. All flowing more or less at times into the streams froeign and reads, natural and antificial manures and other foreign substances used upon the soil in farming, draining, etc. All flowing more or less at times into the streams foreign and any delete them, as t

it not for the ruthless and burbarous manner in which they are foul and unclean for food, and of the time also in which they are foul and unclean for food, and of the time also in which they are in the act of Jaying their eggs for producing their young.

Having now shown the manner in which the own are laid by the parent fish in the uatural way, and having described the numerous sources from which great destruction results to the egg by that system, it, will be necessary to fully explain the method adopted by the artificial propagation of fish.

For this purpose we will commence at the time at which the parent fish shall have reached the spawning grounds in the river or other water, and when the own and milt have become mature the eggs are then taken from the female bethe operator in as gentle and careful a manner as possible. There are three methods practiced in securing the act fish, male and firmale, for this purpose. One is to ear them by means of nets whilst they are upon the shallo and if found ripe at the time to then and there exect extract the own and milt from them. This will be found difficult procedure, both in the netting of the fish and alin the uncertainty of afterwards fluding them perfect ripe for spawning, and should not be adopted unless it b impossible to procure them by other means. Another plains to each such numbers of the adult fish as may be required at the time of their migration up rivers during the Summer months, by means of small meshed nets, and care fully put them into ponds or enclosures, and there securely kept until they become mature for laying their eggs. To the method, which from the beginning has been used at the Newcastle establishments in Ontario, is by erecting reception house alongside of the stream (through which a sufficient sexes are placed in different peass, so that they can be more readily noticed and selected for manipulating purposes. When they are found to be ripe, a female in taken out of the water and held over a tin pan or other vessel, and the eggs are extr

should any sediment or other deleterious substance settle upon the ova during the time of hatching, it is immediately washed off by sprinkling water upon them with an ordinary gardener's watering can. By this means they are kept clean and free from fifth of all kinds. No frost is allowed to penetrate the building, and the flow of water is regulated at pleasure by taps leading it into each of the series of troughs throughout the entire building. At the entrance of each trough performed screens are placed to prevent the possibility of small fish entering them. In this thoroughly protected state the own are kept until the young fish emerge from the shell, generally in April and May, after which tin ealso, and until the ambilical sac is wholly absorbed, they are carefully watched and protected.

In May and June the fry will have become beautifully

civers or other waters which are required to be restocked; or at this time they may be placed in ponds of living water, and regularly fed until they become parts, and afterwarps smolts. At this latter stage they make their first migration to the sea, or other large hody of water, where they become grise, and afterwards salmon.

The modus operandi pursued in the artificial impregnation of fiell eggs and the rearing of fry being somewhat minnelly lescribed, it only remains now to draw a contrast between the natural and the artificial methods of propagating the part of the latter there is no pussibility of losing either the egg of in the latter there is no pussibility of losing either the egg of in the latter there is no pussibility of losing either the egg of in the latter there is no pussibility of losing either part or artificial hed in which they were placed by hand, as would be the case when Inid by the parent sis in the rough rapid waters of rivers and streams. In the one case a few woments will suffice to relieve the fish of the whole as went to easily a stage of the part of the wind weeks, sometimes, are occupied in the prostrating effects of laying the eggs.

It will appear equally clear that overy egg put in the pan or vessel must necessarily come in contact with some portion of the vitalizing fluid of the male, and become impregnated, whilst great numbers that are hald in the streams by the female, without the presence of the male, are wholly horders of preducions fish, but of the male, and become impregnated, whilst great numbers that are hid in the streams by the female, without the presence of the male, are wholly horders of preducions fish, but of the predict of the latter of the part of the p

Hatural History.

INSECT LIFE-No. 3.

HARVEY'S aphorism-omne nivium ex ono-is no less true of the most minute insect than of the giganticostrich. On the score of variety, in fact, the advantage is rather on the side of the insect; for while the chick, tage is rather on the side of the insect; for while the chick, when it breaks the shell of its prison is, in all respects, a bir, and as such is fitted to inhabit the same element as its arent, the young insect frequently passes the preliminar stages of its existence in a medium which would be faul to its perfect progenitor. The common gnat, for example, deposits its eggs in water, attaching them side by sideby means of its long hind legs in such a way as to form a perfect life boat, which no rough treatment can the property of sink, it being doubtless essential for the welfare of the future progeny that the eggs should float on the surface of the water and not sink in it.

surface of the water and not sink in it.

The two next stages of the gunt's existence are passed in the water. Every one is well acquainted with the little, active, wrlggling creatures, with large heads, which during the Summer months abound in water, and especially rain water, when freely exposed to the air. These are the larvæ and pupæ* of gnats. The larvæ, as soon us they leave the floating egg, dascend into the water, there to await the arrival of the period for assuming their winged, aerial condition. But although they thus exist in a different element, yet the respiration of atmospheric air is absolutely necessary to their existence; and the means of obtaining it are accordingly provided in the shape of a enrious apparatus situated near the tail of the larvæ. The rious apparatus situated near the tail of the larvæ. The larvæ suspends itself from the surface of the water by means of the extremity of this breathing line, which is capable of being opened out into a stellate form, and thus, while used as an organ of respiration, also nots as a buoy.
When the little creature wishes to descend it closes the hairs at the end of the tube, and on reascension they are again upened.

After two or three moultings, the larvae of the gunt be comes a pupa; in this state food seems to be no longer nec-essary, but fresh air is indispensable to its existence, though essay, but it water. Unlike that of the larve, the respiratory apparatus of the pupa consists of two tubes, placed behind the head instead of being situated in the tail, which in the pupa is fin-shaped, and appears by its motion to assist the animal in maintaining its position at the surface of the water.

The next operation—that of assuming the perfect state is a most interesting one, which we have witnessed with admiration many times. It is well described in Rennie's "Insect Transformations," and this account being very ac-

is a most interesting one, which we have witnessed with admiration many times. It is well described in Rennie's "Insect Transformations," and this account being very accurate we give it entire:—

"About eight or ten days after the lurve of a gunt is transformed into a pupa, it prepares, generally towards noou, for emerging into the air, raising itself up to the surface so as to elevate its shoulders just above the level of the water. It is scarcely got into this position for an instant when, by swelling the purt of its hody above water the skin eracks between the two breathing tubes, and immediately the head of the guat makes its appearance through the rent. The shoulders instantly follow, enlarging the breach so as to render the extrication of the body comparatively easy. The most important, and, indeed, indispensable, purt of the mechanism, is the maintaining of its upright position, so as not to get wet, which would spoil its wings and prevent it from thying. Its chief support is the regosity of the envelope which it is throwing olf, and which now serves it as a tife bout till it gets its wings set at liberty and trimmed for flight. The body of the insect serves this little bnat for a mast, which is ruised in a manner similar to movable masts in lighters, constructed for passing under bridges, with this difference, that the guat raises its body in an upright direction from the first."

"When the naturalist," says Remmur, "observes how deep the prow of the tiny bout dips into the water, he becomes anxious for the fate of the little mariner, particularly if a breeze prevails, for the least agitation of the air will waft it rapidly along, since its body performs the duty of a sail as well as of a mast, but as it bears a nunch greater proportion to the little bark than the largest sail does to a ship, it appears in great danger of being upset, und once laid on its side all is over. I have sometimes seen the surface of the water covered with the bodies of guats which lad'perished in this way; but for the most par

nlty which it retaius after having winged its wny above the element where it spent the first stages of its existence.

The dragon flies, or "horse stingers," as they are erroneously called by the country people, also deposit their eggs in the water, where they are inteched; and the young, like those of the gnat, pass the two first stages of their life in that element. The larvæ is furnished with a very curious respiratory apparatus, by which it is chabled to sustain an intermittent pumping up and discharge of water, thus serving at the same time both as an organ of locomotion and of respiration. But this is not the only curious circumstance connected with this larvæ. The under lip of the month in the larvæ of insects is very smalt; but in that of the dragon fly it is very large, and of a most extraordinary structure. It is by far the largest organ of the month, which, when closed, it entirely conceals, and it not only retains but actually seizes the animal's prey by means of a very singular pair of jaws with which it is furnished. Conceive your under lip (to have recourse, like Réammur. on another occasion, to sueb a comparison) to be horny instead of fleshy, and to be clongated perpendicularly downwards, so as to wrap over your chin and extend to its bottom—that this clongation is there expanded into a triangular convex plate, attached to it by a joint, so as to bend upwards again and fold over the face as high as the nose, concealing act only the chin and the first mentioned clongation, but the month and part of the cheeks; conceive, moreover, that to the end of this last mentioned plate are fixed two other convex ones, so broad as to cover the whole nose and temples—that these can open at pleasanc transversely, like a pair of jaws, so as to expose the nose and month, and that their inner edges, where they meet, are cut into numerous sharp teeth, or spines, or armed with one or more long, sharp elaws—you will then have as accurate an idea as my powers of description can give of the strange conformation of the

"We have four stages in the life of an insect-four states which is necessary to understand, the egg (ovum), which is motionless and preparticulated the grub flarge, which is active, but without wings: the chrysalis (pupa), which is quite motionless, and not observable to all lessets; and the perfect insect (imago), which is active, has wings, and does not grow. into the speciators were they to see you first open the two inpper Jaw plates, which would project from each trapple like the blinks of a horse, and next, having by menus of the joint at the chin let down the whole apparatus, and an covered your face, employ them in seizing any food that presented itself and conveying it to your mouth. Yet this proceedure is that adopted by the larver of the dragon lly provided with this strange organ. While it is at rest it applies close to and covers the face. When the lasect would make use of it they unfold it like an ara, catch the prey at which they aim by means of the manifolize form plates, and then partly refold it, so as to jubil the prey to the mouth in a convenient position for the operation of the two pairs of juws with which they are provided. Réquiring the table of the two pairs of juws with which they are provided. Réquiring the table of the two pairs of juws with which they are provided. Requiring the face of the f

Chara Animals.—In some parts of California, the Ban Francisco Chronicle says, is a plant called the "rattle weed" (from the rattling of the seeds in the dry pod), which, when cuten by animals, produces instance, or to speak more accurately, it appears to decrange and befog their instincts, and, judging from their actions, illls them with delusions. When thus affected many of them die; but whether draft is the direct effect of the poison, or whether it results from their inability to procure water and food, is as yet unknown. Several hundred horses have lately died from the effects of this weed in the southern part of Monterey county, and a correspondent of the Chronicle, who lately lost fifty horses on one ranche from the same cause, describes the symptoms that were observed in the ill fated animals previous to their decease.

They became, he says, crazy, forsook the land, and wandered off one by one over the plain, paying no attention to their mates or anything else. They were too muddled in their brains to seek for water, and most of them died of thirst. Although they were wild, and had never been handled, any person could walk up to them on the plain and hit them with his hand, when they would jump, perhaps straight up in the nir, perhaps some other way, and get off as though they were trying to leap a fence every step. They seemed to retain their sight, yet would not turn aside for anything. The poor of mented beasts would walk over a precipice as plucially and deliberately as a San Francisco tree luncher would advance upon a whiskey bottle.

FERTILE ALBINORS.—The St. Louis Republican of March 3d, publishes the following fact:-

"A year ago a pair of white quails were netted in the Western part of Audrain county and were purchased by G. H. Ribble, Esq. They were very much like the ordinary quail with the exception of belug pure white. Mr. Ribble kept them until last May and then formed them loose in the woods. Nothing more was heard of them antil early in the Fall, when they were discovered on the Lackland farm with an interesting family of thirteen little chicks, all as white as themselves. They are yet in that vicinity, our sportsmen, by common conzent, leaving them unmolested."

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, †
NEW YORK, Mar. 5, 1875.
Animals received at Central Park Menageric for the week ending

Animals received at Central Park Menagerie for the week ending March 6th, 1875:—
One Black Spider Monkey, Ateles afer—Hab Peru,
Two Vulpine Phalaugers, Phalaugista vulpina. Hab. Australia.
One Coalimandt, Nanua narica. Hab. Mexico.
One Armadillo, Busypus escrinchus. Hab. Brazil.
Cne Sand Turile, Testudo—Hab. Hayil. Piezented by Capitain S. G.
Parker, steamship Andes. W. A. Cokklix.

-The annual diuner of the Blooming Grove Park Association was partaken of in good form at Delmonico's last Thursday, the 11th instant. We notice the return this week of the late President of the Association, Fayette S. Giles, Esq., after a long absence in Switzerland.

The Hennel.

THE RAYMOND LAVERACKS.

WE present our realers with an excellent and faillful portrait of Prule of the Barther, one of the pair of Laverack settets purchased through the offices of Capt. John Taylor, (our then kennel editor,) and imported in July last by their present owner, Mr. Claudes H. Raymoud, of Fux Farm, Morris Plains, N. J.

Pride of the Border was heed by Mr. Laverack, who shot over him three sensons, used him most successfully as a stud dug, and sold him, as above stated, to come to America. In color he is white, with liver markings, stmin-

ing back to the celebrated breed of setters at Edmond Castle, near Carlisle, England. In form he shows to a conspicuous degree the Laverack points: head having a high, bony ridge at hack; neck, shoulders, and loins exceedingly strong and well knit; hocks deep, flat, well let down, and curved; feet ent-like, and thoroughly clad with thick har between the toes. In disposition he is gentle and affective that the latest properties of games. Not tionate, and full of eagerness in the pursuit of game. Not yet perfectly broken to work in our close covers, his style of going—rangy, high-headed, untiring—appears admirably suited to our open shooting in the West.

This dog's breeding is known to be pure for over eighty years, through generations of famous progenitors. He is a pure English setter, his "forhears" for that period certainly having in their veins no drop of black and tun, colley, forhound, harrier, pointer or other cross, so frequently sus-

pected in clogs of setter blood; and he bids fair to be as celebrated through his progeny as from his ancestry. His puppies have taken several prizes in England during the past year.

past year.

We understand that he has already been bred to one of the finest native-bred bitches in New Jersey, and others will probably be selected for pairing with him. With the engrafting of such "blue blood" upon our best stock in this country, the time cannot be far distant when our American setters shall rival the best, and even be sought for, as are our finely bred cattle, to improve the stock in

Our portrait of Pride of the Border was drawn by Mr. E. Forbes, untl is a striking likeness. Our next issue will contain a picture of Fairy, the Laverack bitch, imported

PURE LAVERACK SETTER DOG, PRIDE OF THE BORDER.

PEDIGREE.

Bred in 1869, by Mr. Edward Laversck, Broughall Cottage, Whitchurch, Shroughlive, Rugland. Imported in 1874 by his present owner, Mr. Charles H. Ravmond. Pirde of the Bouler is a white with liver murhings, straining back in color to the ochroted breed of setters at Edmond Castle, near Carlisle, and is sire of Mr. Laversck's prize stock day, Bine Prince, and of many other winners throughout Prystal Prainers, and elsewhere.

For Fairs, Montus Plaine, N. J., January 1, 1875.

BREEDING OF SETTERS AND POINTERS.

MARYLAND, February 5, 1875.

Entron Forest and Stream:—

I have been reading with great interest the many articles on dogs that are to be found in your excellent paper, and would like to mention a few of the conclusions that I have come to in regard to the breeding of set ters and pointers. The rage seems to be at the present moment to import these dogs from England, and while this may, to neerlah extent, improve the breeds that we now have here, still the fancy may do harm, by discouraging the broeding of our present stock (and libs. I hold, would be a great disadvantage to the country, as I claim that we have as good breeds of pointers and setters in this country as they have today in England—that is, for all the requirements of sportsmen in the field, but perhaps not to pedigrees. Now this question of length of pedigrees a tack apon which we may split, as I hold that many dogs with a long pedigree, if not well tred, or too much inbred, will prove worse breeders than some with very short pedigrees. A fipe flog with a pedigree is not to be despised, but a long pedigree and a pour dag is to be fought shy. It was said many years ago by an English breefer of shart hours that the Americans did not care so much about the cattle as the long pedigrees—the longer the helter for them. The writer has seen dogs of both breefs, bred in this country, that would work all day without running in on the hinds, and that invariably bred well, that had very short pedigrees. Now I hope the breeders of such aboys will not begin to think that it is heat to give up their dogs and get those with long pedigrees, for they might make a serious mistake. There are a great many strains of blood in this country that are very saluable, and that perhaps could not now trace back to the original importation, but that nevertheless have been kept

pure, and have acquired by a number of years of breeding and of use the habits that we required in a sporting dog, and as a number of your correspondents suggest, in this we are different from the English. Our dogs have learned to face the briars and busines, to huntin cover or in field, and stannelly point the game, whether out of sight of owner or not, and to work on all the different game the master may hunt; also to be careful and rantions. Perkups we have lost some of the speed, but in few cases do we require as much as in England; and besides we mant a dog here that will do everything, even to retrieving. While the English dogs can probably be isomet food all this, they are not so taught there, and the hubit of retrieving is more bred into our dogs than theirs. Of course, when I touch upon the subject of inbreeding there will be many different upinhous; but I think that it is dangerous, when carried too far, and that frysh blood is necessary to keep up the stunding of dogs or cattle; that inbreeding will make them weak in constitution, lossen their fertility and their perceptive faculties. My experience as a breeder of logs is simily, but in regard to the breeding of cattle I have had some experience, and have had many opportunities in see the results of the experiments of others, and I have come to the conclusion that it is dangerous to inbreed to any great extent with cattle, and I think it would be much more dangerous with dogs, as they possess more inful and reasoning powers, and the bligher upon the scale the animal is, the more danger there is in inbreeding. Now for our dogs we cannot afford to seach the stanian to a long predicted. Not that I think it is necessary (a) presents to just in a cross of cold blood; but then't breed for laveracks, or Gordons, or this breed, or that, but hered for laveracks, or Gordons, or this breed, or that, but hered for laveracks, or Gordons, or this breed, or that, but hered for laveracks, or Gordons, or this breed, or that, but hered for laveracks, or Gordons are th

fear the experiment of change of olimate will be futile, as against the fatal mistake of continuous close breeding. When will this fully end of breeding for pedigree, with the only object of keeping your papers straight? If a mix with the bland of old Airdlee or Harthinger produces a Loman, a Mazurka, or a Londen Duchesant a new type, breed class enough to keep the type; but rest assured. Messes. Short Horn Breeders, that close breeding, long continued, will entail barrenness, cold, consumption, and all the evils entile are heir to."

If close breeding does this for cattla, what will it do for dogst. Therefore I cantion the breeders of Amorica to beware of this rage for pedigrees. Even your ranimals pure, but don't give up a good one because you cannot trace it back on puper to some celebrated dogs in England.

There is another danger in this rage fur judigrees and importing dogs, and that is that the pedigrees do not belong to the dogs. In an article published in Land and Water fur Nov. 7, 1871, and I would say here that I wish you would publish that article and the editorial comments entitled "A Yankee in Search of a Setter," I find the following paragraph: "They all that the binesis blood in Britain. Most of them would, as a matter of special grace, on account of my heing a foreigner, and agreeing to take the dugs out of the country, so that rival breeders by no chance could get a drop of their roy at blood, seil me a brace for the trifle of one or two bundred guines, more or less. The marvel of it was that each man's dogs were the best in the land, and all his neighbors had were curs. Some things bother are—several of the kenne's had in their dogs which did not look very nuch akin, so little akin, ladeed, that but for the counter's most solemn asservations, one given to suspicion might have thought just a few had possibly here brought in to keep the assortment good. Then again, I saw now and then a log whose antedim vian mother tway, in her days of sweet pup expectancy, have seen, not a spotled brothest goo

estate, may have owned a hrevet husband in a curly retriever. Of course I never dared to thin such arrant heresy."

What does the oblite say? Does he proceed to chastles this presumptive Yankee? No. He says: "There are considerable numbers of good diags here in this country, but still greater quantities of trash; very firm of the former are sent abroad. Where the latter go we know not, unless they are shipped off to America, as one occasionally hars of dogs with hing pelligrees (?) at low prices, said to be suitable for the American market. It is probably this kind of aximal that our transdantle consins are. Introducing into their kennels; if so, we shall not he at all surprised if in a few years their estimation of English epitring dogs becomes entenderably diminished."

Is not this of werning to us to be careful how we import dogs from alread, without knowing well twho we are dealing with, and these it not muce than that that pedigrees are easily witten? Therefule I say to the preders of both severa and pentiers, don't by to much stees on pedgives, but time your standard of excellence and then hered for that, being careful muc to herest too close, for close threating will injure your surely. It is injuring the last and hordlest breed of withe in the worth—vtz: the short hurn, and it will injure your dog to a greater valent, as they are higher in the arimal scale. Yimes.

Nativicano.

FATTHERI, Dog,-We hear now of another instance of affection and devotion on the part of a dog. "Bubby's" master was friendless, and "Bobby" was the only mourner who followed him to the nameless grave in the old Grayfriars Churchyard in Edinburgh. Paying no attention to the notice "'Dogs not admitted," day after day he crept to the grave, and though starming, shivering and cold, he would not go away. Kiml people supplied his rations, but for eight years he crept at night to the churchyard and slept upon the tomb. Bobby is now deceased, but the faithful berrier has received the honor of an obituary notice in a unudhly magazine.

Dod's Funeral.—The Colorado Register gives an account of the death amb burial of a Newfoundland dog, oine years old, owned by a Mr. White, of Georgetown:

A handsome casket, silver mounted, was made, and the remoins inclosed therein. As he lay in state, stretched out at fall length, his head reposing as naturally as life upon his paws, scores of people who had known and loved him rame to take their hast farewell. At 10 o'clock Thursday morning Mr. S. W. Nott drove up to the Barton with a four-horse sleigh, and the remains were transferred to it. The horses were appropriately adorned with streamers of empe, as also the pall benters who took charge of the ceremonics. Six large dogs, bearing crape streamers about their shaggy necks, were rouged in double file in reac of the sleigh as mourners, and the solemn cavalende moved slowly away to the cemetery. A gentleman made a few lonching remarks on the life, character and nobility of the deceased, and was followed by one of Georgetown's prominent lawyers, Mr. N. Messrs, L., P., and B., pall-bearers, then lowered the body to its final rest.

ANSWERS TO CORRESPONDENTS.

Young Somer, Utien, N. Y.—1st. Are my dogs too young to train; they are pointer jups, five months old? 2d. One of my dogs has two extra toes on his bind feet; they set like the spars on a young cock. I want to know if it is antisable to cut them? 3d. Which is considered the hest marking, dark liver or white liver?

Ans—1st. Your pups are not too young to commence their training. 2d. The dew claws should be removed.

Dark liver color is generally preferred.

F.B. G., Montreal.—I have a pup-six months of d, about cighteen inclusingly, color liver and white with small dark snots showing through the white, thir closs and wavy, tall long and slightly feathered, auzzlerather pointed; in fact she was given to me as a water spaniel, but seems to me rather too slightly built, and too high on the legs. What is she?

Ans-Your log is probably a cross of pointer or setter

S. M. W., Fon dn Lac, Wls.—What breed of dogs is best adapted to fallowing and bringing to hay only wounded deer, and where can such be procured!

Ans-Any strong hound could soon be taught to do this work, even if it was not instinctive.

W. H. P., Charlottelown, P. E. I.—I have a pointer pup three months old that has had the test of treatment and proper diet, that is suffering from a complaint new to me. A part of his intestlace are protrading three inches, more or less. Please give me your opinion and advice as to made of treatment?

Aus-Obstinute constipation will sometimes cause this trouble; light diet and gentle exercise, aided by nature, are the only remedies likely to bring relief.

Sea and Biver Hishing.

FISH IN SEASON IN MARCH.

BOUTHERN WATERS. Trout (black bass). Drum (two species). Kinglish.

FISH IN MARKET.-The benches this week show a lair supply of all descriptions of fish except cod and haddock, supply of all descriptions of fish except cod and haddock, which varieties continue scarce. Savannah Shad are worth 40c. each; North Carolina do., 50c. \$1 50, according to size; Hudson River Striped Bass, 20c. \$25c. per pannd; Red-snapper, 20c.; Whitefish, 18c.; Salmon Tront, 20e.; California Salmon, 40c.; Frozen Salmon, 40c.; Halibnt, 20c.; Long Islami Smrtts, 25c.; White Perch, 15c.; Cod and Haddock, 10c. \$12c.; Codfish Tongues, 15c. per nound. pound.

- The milder weather of the past few days admonishes us of the approach of the angling season for front, which opens, legally and metophorically on the 15th instant; but if any person can get anything but cold comfort out of the tossing of artificial flies among the bergs that now line our ice-bound coast, he must be an angler whose enthusiasm nothing can cool. Let us be prefent and abide the haloyon

—On Friday, 20th ult., a gentleman fishing at the mouth of the Wissinickon River, for suckers, caught seven black ass, weighling over ten pounds. We are glad to hear the

fish are there, but law-abiding citizens will remember that the Pennsylvania State laws inflict a pennity for entelding bass, 17001, &c., from March 1st to June 1st.

-- Large numbers of bottom fish are being thrown up on Cape Cod shores. Nothing like this has been known since the cold. Winter of 1857, when todog and other fish were frozen and drifted ashore in such immense quantities that they were carted off for manare. There was a remarkable scarcity of bottom ash for two or three years after this.

-Lobsters promise to be plenty this season. The break ing up of the ice along share exposes quantities of chains, which are now being guthered. The ire-bound syster fixet has just reached New Haven, after being excluded several

weeks.

—The fishing arrivals for the week emling March 4th wate Iwenty-four—Iwenty-one from Georges, Iwo Irou the Grand Books, and one from Newfoundhool. The Georgesmen all bring in good fores, averaging about 60,000 pounds of endfish and 2,000 pounds of haldon. A considerable of endfish and 2,000 pounds of haldon. A considerable quantity of cod have been sald fresh to the deders at \$2.75 per cwt., and holibut have sold at \$10 and \$50 per cwt. Bank holibut have been in light receipt. Two fares, about 45,000 pounds, buve arrived, which were sold for \$8 and \$5 per cwt. The schooner Marlon Grimes, Capt. Davis, which arrived from Georges last week, weighed off \$5,000 pounds of endfish and 1,891 pounds of halbout. She had 4,559 fish in number, which averaged twenty pounds each. Her net stock amounted to \$1,870,39. Cook's share, \$134,05; bigh line, \$104,50. Time absent, nine days.—Cape Ann Advertiser, March 6th.

— Hambreds of men and boys have been engaged for

- Humbreds of men and boys have been engaged for weeks cutching young salmon from the whirves of Oakhard across the buy from Sun Francisco, and some six eight miles distant. They weigh from one to four pounds and are captured with book and line. The solvent of these fish at sucle a place is unprecedented, and great numbers linve been taken.

- Mr. H. L. Leonard, the well-known fly-rol manufacturer, is now making an exquisite trout-rod of Culcutta bamboo, 114 feet in length, intended as an exhibition rod for Messrs. Abbey and Imbrie, of 48 Mablen Lane, who are his sole agents. The reel-mounting is to be of solid gold, 5% inches in length, with an unethyst at the end. The ferules at the joints are also to be of solid gold, as are the guides for the line, these being wound with gold and silk thread and jewelled. The handle will be wound with two colors of cone, and the whole complete, with the gold and precious stones, will cost about \$2,000.

CANADA, Charlottetown, P. E. I., Feb. 28.—Trunt and smell fishing through the ice is all the rage here at present. I caught thirteen dozen inside of two hours on Friday, the 26th of this month.

W. H. P.

FLORIDA, New Smyrna, Feb. 28.—Many parties of sportsmen have gone to the Indian River. Messrs, Lawrence, Smith, Weight, Dr. Fox, and Hullfurd and Schwartz, naturalists. Among the number are Messrs. Benson, Pierpont and Inck of Brooklyn; Messrs, Coates, of Rhode Island; Cummings, Bailey and Hope of New York, are basy with gan and rod. Steepshead, piglish, whiting, &c., in great numbers have been taken, all in fine condition. The relifish or chimnel bass are just beginning to run. I have only taken Iwa as yet.

Sam'l C. Claur.

Answers To Correspondents.

Allowymous Commissible into Notleed,

JACOBSTAFF.—The Kennel Chib Stud Book, edited by F. A. Pearce Esq., is now issued, and for sale at the office of The Field, Lambon.

E. D. M., East Boston.—Where can I obtain a vopy of a French paper called La Ghase Rivates? Ans. August Brentano, 33 Union Square, N. Y. We have mailed you a copy.

T. W. B., Brooklyn.—1s the first two weeks in September a good time to visit the Addrondacks for deer building! Ans. Excellent. Would that be loo late for jack shooting? Ans. No. Will front rise well to flies then? Ans. Yes.

flies their? Ans. Yes.

J. W. W., Boston. —I would not advise your correspondent to go to Castleton, Verniont, either for the or fowl. I have tried the ground well, but with most most forestactory results. It is much peached and snared, in and out of season. —Yours, if A. W., of floston.

S. D. D. —Please inform me, if possible, how to bronze copper, such as well un powder dasks, and addige? Ans. Probably a trade secret, but you may get the Information by addressing the American Phish Company, No. 52 Beckman street.

J. M. C., Waterbury. —How can I make a slik trout line waterposaf? Ans. Soak it belief threed oil, and strip off superflone preparation by drawing the line through the thank and larger. Singe off frayed fibres in an alcohol lamp.

S. D. D., New York. —Please inform me where them is a good locality for shooling for five or more, who are willing to compount and cough it next Full; some sput that can be reached conveniently from New York.

Ans. For general purposes of shooting and fishing, the Adirondack region offers the most Inducements.

L. H. D., Rudson.—Please inform me of a reliable house in New York.

L. H. D., Rudson, —Please inform me af a reliable house in New York that deals in the W. & C. Scod & Son gan? Ann. Win, Read & Suns, Famelt Hall, Boston; Schupler, Hartley & Graham; Barton, Alexander & Waller; H. C. Squlres, of New York; Alexander McCamas, of Raldmare; John Krider, of Philadelphia.

C. C. B., Cleveland, Dhio, "Will you please answer through Fungs's AND STIEAM (or hand this to some manufacturer of the utility where t can get an extri large lated eage, and oblige? Ans. Address Rupite Wire Works, No. 105 Fulton street, or Globe Wire Wirks, 85 Fulton street. Send dimensions, plan, and descripting of hint intended for.

street. Send dimensions, plan, and description of bird littended for.

C. A. S., Shikupeo, —Can a gun barrel for breech or muzzle loader, by
be used as a salved gun, be obtained; if so, please state whom to address for information? Ans. None of our desiers keep gun barrels suit
able for your prepase. Had belief address one of the manufacturers
who advertise in our paper.

If B., Rochester, Minn.—Who is the maker of the "Grant gun," ceu,
fire, breech loader, that I see by reports of pigeon matches is used by
Livingston, of New York, and Peters, of Plubwielphila? Are they fighpriced gune? Ans. Supplier Grant, 571-81, dames afterd, bondon. His
guns are as high-priced as may made, and rank with the best.

J. D. Washington.—Will you please before, more where I can send and

ginia are no high-priced as any hung, and rank with the west.

d. D., Washington,—Will you please before now one where I can send and hug hird's eggs? Please tell rue of two at three dealers. Can you nell me a paper that advertises bird's egg dealers? Ans. A. Lechevallier, Montreal, C. E.; C. J. Maynard & Co., Newtonville, Mass; John Wallace, 19 North William street, New York. 23. Functor's Journal.

W. C. D., City.—1st. What is the best ball in use for brook front early by the season, when worms or grubs curred he procured? Ans. Raw best 2a. In what part of Malue can good deer shooting by found in the tober 1. Ans. Most anywhere in the Arosstock region. Read waters of the Kennobec are in a good droc country. Consuit flees of Fourst And Stream for copious information.

L. H. D., Umison.—Will you please Inform me where I can get a good is unlimated sized wazzle localing gun for \$10 or \$30, and what is the best size bore for general use, and what the wants of the best waker? Ans. You can get a very good monable healthy, gun, for the price year member. No. 10 is the best size for general shooting. We do not discriminate between makers; look at an advertising cultums.

E. M. New Haven.—Where can trout fishing in had about April 1st, either north, cast, west, of south? Ans. Thou I should shing may be had near New Haven at Twin Lakes, Caustin, Lifethed comby, and at the head waters of the Namile. 2d. Whow can I did a fair weeks, subjection in Islands, Chesapenke, and Singma, Del. Take Narfolk steamer 63 rades in Cherry Sinne.

J. T. W., Minenta.—I have a fine muzzly touding gun, which I would

Islands, Chesapenke, and Smyrna, Drl. Take Norfolk steamer 63 ratios we Cherry Sinne.

J. T. W., Mineula.—I have a fine mazzly toading gan, which I would tike to have altered to a breech toader. Pay II he so altered and he as good a gin maif it was originally a breech loader? Do you recommend. Clark & Sneider to wher I, and if so, can't by sont them safety, and how! Ans. We would recommend an exchange instead, The alternition would cost from \$25 in \$50, arrording to the quality. Clark & Sneider will that bred! Send in them by wapress.

R. P., Diea —Your correspondent inquires about Loon Lake to Franklin county, and your answer refers him in a small point near flewer River. Loon Lake is one of the head waters of the west branch of the Sarawae River, and the moth mod south from Matare passes near it. It is three athes long, and has two small inlets. By addressing L. Y., all medical information can be obtained, —W. E., of Ruchester.

C. G. T., Beacon Palls.—I have an Russiated price list in my posses alon from Henry C. Squires, of your city, wherein he makes mention of a wyapon called by "funnier's pat' is a good, practical fivearm, also the weight and rangel. Ans. The hunter's pet is a rifle with nekeleting breech, intended for target practice. It weighs 51 punnis, and is easily curried in a swall space.

C. L. W., Weston, VI.—What are concentrators and were cartifulges? The part of the model of the model.

curried in a small space.

C. L. W., Weston, VI.—What are concentrators and wire cartializes? Through the medium of Foreign and Strikan we backwoodsman land burned a good deal about breach harders and shells, but corfess our legaration as to the above. Any, Concentrators are sections of curridges or shells biserted in the abell to produce class shorting. Wire cartridges are waven who receptaches to which shall are invived with brace dots, the object being to raise the shall be half together or "ball" for a circular distance, thus carrying closer and further.

object being in yourse the shot in bold together or "ball" for a circlin distance, thus carrying closer and further

Legors, Rollimore. —What is the heat roate from here to the Lake Simcoe region in Cannala? Ans. All raff via Turanto. 2. Where can good goldes and locats be precured? Ans. At Italia Ecart, at hower can good goldes and locats be precured? Ans. At Italia Ecart, at hower can good like, or al Orillia, in the appareaul. 3. Is the troot or his kines ashing a cacellant. 6. What is host season or month togo, and is it necessary to comp, and can any arresonandation be half. Ans. July; first-close the lets. 5. What is host peace or month to go, and is it necessary to comp, and can any arresonandation be half. Ans. July; first-close the lets. 5. What is host pinti to go for Ans. Go Conclushing Hated, from whence you can visit both Simcon and Canchiching Lakes.

Sussement, Buffalo,—Do you know of any mathod by which the heads of dish, or the whole dish, may be preserved; some way that will not be inconvenient for a troot dishermon, when in the woods, a three days tramp from clyfigation? Looking aver my the of Fourier and Steriera t wotes your communication to H. G. D., Haboben, Oct. 1833. This suggests the idea of any being alide to bring out specimens of my catable. Ans. Skin pair dish reaffully, but do not a particular national and alina; or make a pickle in a small ling of a weak solution of carbotle acid; my remaining desh can be scraped off after words, and the Rish set up by a taxidermist.

G. W. B., Now York,—I. Where can a copy of Wallace's "Unide to the addition of an all should be a carbotle and conveniences."

carbotle acid; may remaining flesh can be scraped off afterwards, and the field set up by a taxidermist.

G. W. B., Now York,—I. Where can a copy of Wallace's "thirds to the Aditiondacks" be pareliased, price, &c., and does it contain a map of that region? Ans. Calmobian Book Co., Syracosa, N. Y., price about \$3, but they will issue a chapter edition soon; it contains map. 2—14 the book "Frank Forrester and His Friends" known by any other third is it the "Warstek Woodlands!" Ans. They are distinct works, 3. What the Therean's hooks treat of, piles, and where published? Ans. Jas. R Oegook & Co. publish severed life works. You probably diade in "Wolden, or life in the Woods," "Excessions in Field and Forest," or "Maine Woods!" price \$2 cach. Thurean is own of our sweatest writers on we allumit topics. 4—in your issue of Aganth, 1811, No. 20, Vol. 2, you mention "Brooch Londer, by Witson." Where can a capy be get, price, &c.? Ans. Write to Orange, Judd & Co., No. 245 Broodway; price about \$1.50.

C. H. L., New York,—hy missed to your problem in Forest and Scilean of Feb., 25th, 1 reply:

Led 3 a — the length in feet of each losp the fex iskes,
Than 7 a — the length in feet of each losp the fex iskes,
Than 9 x — the number of leaps the found takes,
Than 9 x — the number of leaps the found takes,
Than 9 x — the number of leaps the found takes,
Than 9 x — the number of leaps the found takes,
As the distance the hound goes, diminished by the distance the first goes, after the bound starts, was equal the distance to be gained by the hound.

onad, 44 n x -- 27 n x 180 n where 15 x -- 180 9 x -- 30

3 x - 30 n x - 73 9 x - De

Answer.—The bound takes 72 leaps and the fex takes 108 leaps, after the bound starts, or 108 leaps in all.—E. C. S.

Advertisements should he sent in by Saturday of each CHARLES HALLOCK, Editor. WILLIAM C. HARRIS, Business Manager.

THE CULTURE OF SEMI-TROPICAL FRUITS

WITH the increased attention given to this subject, W and the rapid settlement of Florida and the Southern counties of California, it seems not improbable that before many years are past we may he drawing our supplies of fruit from within the limits of our own houndaries. this in view the ratification of the proposed treaty of reciprocity with the Hawaiian Kingdom threateus an injus tice to our fruit growers. Already the culturists of Los have petitioned their representatives in Angeles county Congress, protesting against the admission of the fruits of Hawaiia free of duty, and it seems but reusonable that the protection afforded by tariff to the iron merchant, the woolgrower and the shiphuilder, should be extended likewise to the horliculturist and the farmer.

Whatever the result however, the occupation of fruit growing, particularly when applied to the more uncom-mon and semi-tropical varieties, is of such a fascinating character, that duty or no duty, protection or free trade, will alike be ineffectual in checking or preventing the increasing interest in this pursuit.

It is not everyone, however, who has the patience to wait for the hearing of those trees which require from ten to fifteen years to mature; but if we may judge from the assertions of those who have reached this happy period, the truthfulness of which we have no reason to doubt, the profit is far in excess of anything which can be realized from any similar occupation. There must be, however, to this, as well as every other picture, two sides, and the he ginner caunot expect success without first meeting discouragement and partial failure. In Southern California the culture of oranges, lemons, limes, etc., is carried on only in certain localities, and such as can depend with certainty upon the means of artificial irrigation. In fact, the whole mode of culture, the country itself, and the people who follow it, are so different in character as to denot actually require a separato description, and is possible that the hints from actual experience gained in one locality may not be without value to some of those who nre following the business in another.

In California, Los Angeles county and its county town of the same name, logother with the neighboring valley of San Gabriel, is the home of the orange in that State. proprietors of orchards, however, do not confine them-selves to this fruit alone, and while in Florida we hear also of the guava the paw-paw and the banana, in California we

have the lemon, the lime, the fig and the English walnut growing side by side with the aprieot, the peach, the apple and the pear. The finest oranges are grown at San Gabriel on a soil of decomposed granite, where the Sierra Madre range gives protection from the north winds. We assert, and we say it boldly, that they are unsurpassed, even if equalled, in the world for size, and when allowed to remain sufficiently long on the tree, for sweetness and flavor. In the mission garden at this place there are trees planted by the pagree from seed brought from Mexico, which now, all the places is consistent when the pagree from seed brought from Mexico, which now, all seventy years old, are in full bearing, and producing on an average of 2.000 oranges each year. Whether it is from a average of 2,000 oranges each year. Whether it is from a difference in the quality of seed however, or from the extra care given to the cultivation, the fruit from the trees planted at a later period, far surpass them in size and quality. Most of the orange trees in Los Angeles county have been grown from seed procured from Tahiti or the Sandwich Islands As a rule the fruit comes true to the seed, with such modificutions as may be caused by locality and care. It is somewhat common, however, to hud the orange on to a species of almost worthless fruit known as the "China lemon," by which three years of growth are saved, but at an expense of longevity if not of quality. The Sicily lemon, however, when thus propagated, is much easier to raise, as with the lime, it is, when in the earlier stages of growth, much more susceptible to the influence of frost than the orange and less likely to recuperate after being cut down. The lime, the most difficult of all to bring to maturity, is also the most profitable. Unlike the other trees, they seem to be continually bearing, and we have heard of three trees in one garden producing each year the enormous sum of one hundred dollars each. There are nurseries in Los Angeles, where immense quantities of semi-tropical fruit trees are grown, to an extent, in fact, that were it not for the numbers destroyed after transplanting hy carelessness and in-experience, the husiness would soon be overdone. These trees can be hought of all ages, from one to four years, at prices varying from ten cents to two dollars and a half each. The greatest error and the most common is in planting both seed and young trees too deep, in the first instance preventing the young germ from breaking through the carth, and in the other depriving the roots of the air which seems necessary to their existence. After the danger of frost, which is not past until the trees have assumed their hard hark, the altacks of the gopher are the most to be dreaded. This destructive little pest, which is sometimes confounded with the ground squirrel, which he has no way resembles, is something between the mole and the rat, boring in the ground and gnawing at the roots of the trees, sometimes without giving evidence of his presence until the mischief is irreparable. He has been known to eat through a six year old tree in a single night, so that the pled over on heing touched. His habits are so bowever, that when his hole is found, by using a tree toppled over trap, his capture is almost sure. He is a most pugnacious little fellow, and the Mexican boys have a very ingenious way of catching him. A noose is placed over a hole, and when Mr. Gopher shows himself at noon, as he invariably does, the concealed boy pulls the string and makes him prisoner. The string is then fastened to his tail and he is lowered into another hole. A fleree battle ensues, and hoth gophers, griping each other like bull dogs, are brought to the surface. For six months, or more frequently eight, not a drop of rain falls; the country becomes parched and burnt and the trees can only be kept alive by artificial irri-The scarcity of water will always keep the cultivation within certain limits, as ju low wet lauds which would not require irrigation, the orange will not grow. season the squirrels, who honeycomh the ground in every direction, become almost desperate for food, as do also the rahhits and hares. Young vineyards and orchards, if not carefully watched, are completely destroyed. Away from these the excrement of horses or cattle is eagerly devoured, and we have known them to cat the bark from a tree fifteen years old, as high as they could reach. The vitality of the orange tree, however, in congenial soil, is wonderful: by carefully covering the places where the hark has been removed, the trees seem to experience no harm. They can be transplanted after coming into full bearing by careful pruning and trimming off the bruised roots, and actually improve their fruit by removal from cold and damp soil to a richer and warmer one. Ten years is allowed a tree to bear from the seed, but from this time both yield and profit increase in rapid ratio. It is the dis inclination to wait which has prevented many of the residents of Los Angeles from reaping fortunes similar to those acquired by their more far sighted neighbors; but the introduction of a different class, the patient, slow-plodding agriculturist of the East is awakening them, and the husiness of semi-tropical fruit growing promises to assume au interest and importance second only 10 lhe production of wheat and wine.

CHAS. W. HUTCHINSON.-There are so many Governors of States, General officers, and other important functionaries, who are first class sportsmen that it may seem superer-ogatory to individualize, nevertheloss, we cannot join in the very general expression of satisfaction that the well known and honorable sportsman, Chas. W. Hutchinson, Esq., has recently been elected Major of Utica. reception accorded to him last week in Utica evinced a certain wholesonicuess of good fellowship which is redundant among sportsmen everywhere, although we would by no means be understood to imply that none but sportsmen participated. The welcome was enviable, and the ententie cordial (and other cordials) everywhere prevailed.

OPENING INLAND WATERS.

LETTER in another column from a correspondent at Good Ground, describes the cutting through the narrow bar of sand which separates Shinnecock Bay from the ocean, and the opening of a channel, which promises to he permanent, of 160 feet in width and from 20 to 30 fect in depth. The inlet to the bay having been closed for many months, the water therein had accumulated until it had attained a mean level eight feet above that in the adjacent ocean. A channel such as described would afford a for vessels of considerable size, and through its means the bay may yet prove a harhor of refuge for some unfortunate eraft forced, by stress of weather, to seek its shelter. It is, unfortunately however, but too frequently the eract that the control of the stress that the stres passage the ease that the opening or re-opening of similar places to the influence of tide-water is followed by the formation of saud-hars at their entrance, which materially affects their utility. Still, it is not improbable that proper observation might lead to the discovery of numerous places on our coast where, by taking advantage of like circumstauces, harbors of refuge might be formed or old inlets re-opened, the value of which would more than repay the slight cost of the undertaking.

The immense power possessed by a body of accumulated water was lut too infortunately displayed last year in Massachusetts; but there are other instances where this almost irresistible force has been turned to good account in the interest of science and discovery. It entered largely into the construction of the Suez Canal, and Sir Samuel Baker, in his last journey to Equatorial Africa, was obliged to cut his way through the dense sudd, which had entirely obstructed the Bahr el Giraffe and prevented his entering the White Nile. For a portion of two years his army worked at the immense masses of paphyrus and floating vegetation which filled the river, whose presence was only known by the strong current running heneath; and it was only when the expedient of damming had been resorted to that a passage could be effected. Moreover, the waters, when again set free, so extended the channels be had cut as to carry off large masses of the sudd and render navigation once more practicable.

Sportsmen may congratulate themselves that the good people of Shinnecock Bay have succeeded in freeing the hay of the surplus water which has interfered so sadly

with the shooting during the past season.

PROTECTION OF GAME.

The regular monthly meeting of the New York Association for the Protection of Game was held last evening at the residence of Mr. David H. Haight, No. 284 Madison avenue, Mr. Royal Phelps in the chair. After disposing of the preliminary business, Mr. Hallock submitted the following petition :

lowing petition:—
We, the undersigned baymen and sportsmen, residents and visitors of South Oyster Bay, Seaforth and vicinity, do most respectfully solicit the co-operation of the New York Association for the Protection of Game in altering the laws in relation to duck shooting to correspond with the old enactment—that the close season for ducks should extend from May 1 to October 20. Further, we protest against any laws being passed prohibiting Spring snipe shooting. So few in number are killed that we do not consider the subject worthy of legislation.

The petition, signed by twenty-seven gentlemen, was re-

The petition, signed by twenty-seven gentlemen, was referred for consideration to the Committee on Game Laws. Mr. Hallock also presented the following communica-tion from Mr. F. J. Boswirth, of Brighton, England:—

In the name of justice and in the interest of every sportsman in America, I appeal to you to use your efforts to stop the terrific slaughter and wholesale exportation of the pinnated grouse (prairic hen) from Iowa and other Western States, to the ports of Great Britain. The game dealers assure me that they are now arriving in tons, and I know whereof I speak when I assure you that they seem to be here, in countless thousands, all victims of the trap—uot a shot hole in one of them. Through the local, State, and national organizations the system of trapping, I believe, can he stopped. The game dealer has displays here of hundreds of birds in the morning, to be soon exhausted by anxious buyers, when fresh harrels are rolled out and other hundreds take the places of the first, repeating itself from day to day, and are sold at one half the price of the English, Scotch and Norway game. If this destruction continue, how long will it require to sweep this beautiful game bird from our prairies?

In conclusion Mr. Phelps avowed that his attention had

In conclusion Mr. Phelps avowed that his attention had been called to the same subject. Ho had been notified that at pier No. 38 North River, there were 178 barrels of pralraie chickens awaiting shipment to England, and that, as this was the close season for birds, he desired to act in the premises as the law allowed. He had taken the advice of the counsel to the association, however, and found that he could not scize the birds while in transitu, but had ascertained that they had been shipped to this city by one P. B. Wearr, of Chicago. The matter rested with the associa-tion ordering that the game societies of Chicago be notified of the action taken by the New York organization, with a view to a partial or total suppression of the traffic.

The petitions and affidavits of several small game-dealers

against whom suits had been commenced for selling veni-son out of season, requesting the leniency of the association in view of the circumstances of their cases, were referred to the Executive Committee, to take such action as they may deem proper.

On motion it was resolved to remit the annual dues of Mr. Hayes, the late efficient Secretary, who is prevented by Illness from attending the meetings of the association. Mr. C. E. Whitehead, counsel of the association, announced that he had obtained three judgments against the property of Joseph Racey, the dealer who had been proceeded against for selling game out of senson, but found that Racey possessed no property. He then obtained an execution against Racey's body, and had him confined in jail for five days, when he was brought before Judge Donobue on habeas corpus. The Judge released him on the limits on bail; but should circumstances require such action Racey's bondsmen could be proceeded against. He had commenced six suits against small dealers for selling prairie chickens, quail and venison, since March 1, and twelve similar suits were in the hands of the Secretary. Considering the extraordinary watchfulness of their detectives, this he thought indicated pretty well how generally the law was observed. No game was sold in this city out of season. People could gel it in New Jersey, loat not in this city. On March 1, thousands of prairie chickens were sent out of this city to Boston and other places throughout the country, the dealers being afmid to keep them in New York. This was another instance of the necessity of having uniform game laws in all the States. If a uniform law existed people would not be buying my large quantities of game during the last days of the season, and transporting it over the border to other States. In relation to the suits commenced by the association against dealers in game in Albauy, he had only to say that two of the parties gave in their adhesion to the association, while a third, who went to trial before Judge Westbrook and a jury, obtained a verdict on the defense that what he sold was not quail, but curlew, with the bills cut off. On this defense the jury gave a verdict for the defendant, which was another instance of the difficulty of gelting a verdict in such motters from a jury, no matter how clearly the case may be made out. The feeling there was that the dealer being a well-known citizen was persecuted by a wealthy association. However, he thought the association had every reason to son.

The meeting then adjourned.

To Correspondents,-The necessity of patience, both on the part of contributors and publisher, as regards the early insertion of articles intended for publication in the early insertion of articles intended for publication in the FOREST AND STREAM will be best appreciated by a glance at the subjoined list of accepted favors, which will be printed as rapidly as our space and a judicious selection will permit. The wide range of territory and topics embraced in the annotation, is a curiosity in ilself, as well as an indication of the wide spread popularity of this paper and the personal interest which its supporters luke in it:—Our Crolse, by "Leidlaw": A Prairie Wolf Hunt, by "Jacobstaff": Im-

current number

We will add that the articles by Messrs. Stillwell, of Maine, and Thompson, of Pennsylvania, contain facts of great importance to scientists and fish culturists. We shall print these in our next.

We have in type a synopsis of the Maine Fish Commissioners Report, which is unavoidably deferred until our

OUR WEST FLORIDA EXPEDITION. - Circumstances of a eculiar nature, accidents and obstacles interfering with the writing and transmission of letters, have prevented the receipt and publication during the Winter of prominent correspondence from our Floridian Commissioner, "AL FRESCO." The expedition, however, has proved a complete success, and much new and valuable information has been gained which we shall proceed at once to place before our readers. The first instalment will be given in sue of March 18th, and the rest will follow weekly until the entire narrative shall have been consecutively printed. The information will not be impaired by the delay, and will he of great benefit to all who purpose visiting Florida

A New FIRM .- The old firm of J. C. Conroy & Co., long known and esteemed as a leading house in the manufacture of fishing tackle, has been succeeded by the new house of Conroy, Bissett & Malleson, at 65 Fulton street. They have paid special attention to their stock of new goods, embracing every variety of wares known to the trade and required by the sportsman. Among many of the specialties may be noted the McGinnis rods, Mullaly files, etc., known in the market as most reliable and serviceable articles,

A GRAND GAME PRESERVE IN ILLINOIS, -A number of prominent citizens of Otterville have formed an association for the protection of game and fish and enforcement of the for the protection of game and fish and enforcement of the Game laws in Jersey county. The following named gentlemen have purchased of George I. Foster a tract of lami six miles above Grafton, known as Phinny's Landing, on the Illinois River: Hon. Wm. McAdams, John Buckles, Richard Chapple, Lewis McAdams, and Samuel Darlington. They have nearly finished a comfortable house on the premises, and expect to have their share of culoyment. the premises, and expect to have their share of enjoyment during the hunting and fishing season. One of the members writes to us as follows:

during the hunting and fishing season. One of the members writes to us as follows:

"We have good fishing in the Illinois River sometimes, but have no such game fish as tront, salmen, grayling, or even black leass. In some localities we have green bass, but I have had poor success in getting anything to rise to use the property of the lakes we have crappie and leass, with, sometimes, use pike, quite easily allured by a minnow. In both the Mississippi and Illinois Rivers we have catfish, rousing fellows that require all your skill and strength to land them. The Illinois River, at its mouth, is a deep, slinggish stream, in which are great numbers of these that would be objects of curiosity to many. We saw some this ermen draw a large seine and bring to shore a greal number of strange creatures that most foreithly brought to my mind the illustrations of the remains of fossil tishes from the Devonian, or Old Red Sandstone—gars of two or three species, including the great alligator gar and huge cartinginous stargeous, and "shovel fish," as the Ilshermen call them. These latter fish somewhat resemble a cartish, with the exception of au extension of the upper juw into a long flat paddle-shaped heak of hard gristle. They weigh sometimes fifty pounds, and have not a single bone about them. Soure fishermen have presented me with sarmy singular fishes, which I have preserved. One of them is a cartilaginous fish, covered entirely with a peculiar bany armor. It somewhat resembles a stargeon, and doubtless is related to that family. It was a great cartiosity to the fishermen, and I shall send it to some one conversant with such matters for recognition. One of the objects of our association is to make an effort to introduce new fishes into our waters.

In the vicinity of the mouth of the Illinois River there is

sinch matters for recognition. One of the objects of our sasceintion is to make an effort to introduce new fishes into our waters.

In the vicinity of the mouth of the Illinois River there is good deer hunting. In the marshes and lakes uear our camp we have suipe in their season, and ducks mast of the year. In the corn fields and stubble we have an abundance of quail. On the brushy hillsides there are ruffed grouse, known here as "pheasants." Gred numbers of geese and brants irequent this vicinity, and many are killed as they pass from their feeding grounds in the fields to the sandbars and lakes. Notwithstanding the almost unprecedented lawe remained with us, and are here now. There are a number of phaces in the Mississippi, near the mouth of the Illinois, where the current is too rapid and the shallow waters too turbulent to freeze at any time. Both gress and ducks (mallards) frequent these open places.

Besides the advantages presented in this vicinity for hunting and fishing, we have one of the finest fields in the West for collecting geological specimens and Indian relies. Within ten miles of the Illinois River are outeroppings of all the rocks that lie between the coal uncasures and the Lower Silurian, and includes both of these formations. Many are the pleusant lays I have spent among these rocks, hammer in hand, never fuiling to find something interesting. If any of the readers of the Forest and Stream wish to exchange for some of my duplicate fossils, I will be happy. I have some particularly fine trilobites (Calemental Bumanbachii) from the Upper Silurian.

The vicinity of the mouth of the Illinois River was, in the past, a great resort of the aboriginal inhabitants of this country. There are hundreds of mounds of various kinds. Curious relies of these people are often turned up by the plow or washed from the hillsides. I always endeavor to secure such of these relies as come within my reach.

For the last twenty years most of our party have maile lisi our hunting ground, camping in the Spring and Fal

A BEAUTIFUL SIGHT.-The officers of the United States steamer Endeavor, stationed at St. Augustine, eclebrated Washington's birthday by illuminating the old castle of San Marco. The Florida Press says that the materials for the bouffres, within and without the fortification, had been prepared, and at a certain hour a flood of light suddenly blazed forth from the old forl, illuminating the city and surrounding country with the light of day. Never before, surrounding country with the light of day. Never before, since the old buccaneers danced by the light of burning caravals, had St. Augustine witnessed such a sight. The light was so brilliant as to dazzle and bewilder the guests to an extent which wrought optical delusions on every side, Some funcied they saw the Spaniards of old stalking about in glittering armor, and one lady addressed the veteran cavalier, Ponce de Leon, on the subject of the Fountain of Life, but the indignant hidalgo vanished into air.

DEATH OF A VETERAN SPORTSMAN. - Died at Princeton, N. J., on the 4th ult., Mr. Archibald T. Clow, in the fifty-seventh year of his age, widely and favorably known as a skillful and energetic field sportsman, an excellent shot, well-skilled in wooderaft, and an indefatigable walker. In the management of his dogs (a very desirable accompany) plishment) he had few superiors. Among his other good qualities, he was always honorable and courteous toward qualities, he was always hoursall, and ever desirous to his shooting companions in the held, and ever desirous to give them a good day's shooting. The large number of give them a good day's shooting. The large number of his fellow townsmen who followed his remains to their last resting place testified to the good repute in which ho

On Friday the Joint committees on our side, having On Friday the Jank committees on our side, having charge of the arrangements, met at hu Broadway, Col. Wingate in the chalr. The committees appadated to salicit subscriptions from the Stock and Produce Exchanges, National Gunri, etc. reported favorable pagaress, and Mr. Alford, of Mesars. Remington & Sons, submitted a consumption of the pagarety of nicathor from Mr. A. E. Doughis, Vice President of the Hazard Powder Company, Inclosing a check for \$250. Mr. Alford also reported that he had sold 500 tlekets for the Music April 3d. The following programme of the match was then diseased, and was finally adopted:

was then discussed, and was fluidly adopted:

Programme of the international rifle match between the riflemen of the United States of America and the riflemen of Ireland, represented by a term to be chosen from the members of the Irish Rifle Association, to take place in Ireland on June 29th, maless some other day is subsequently agreed upon, on the following terms, viz:

Team—Each term to croasist of me more than eight or less than six men, at the apilion of the Americans, whose decision will be amounted on the day next preceding the match; the American team to be composed excinsively of riflemen born in the United States; the Irish team to consist of men qualified to shout in the Irish eight at Winheledon.

dedon.

ttttles—Any not exceeding ten pounds' weight; minlutum all of trigger, three pounds. The Americans to shoot with rilles of bone fide American manufacture; the Irish to had with rilles of bone fide Irish manufacture. Sights, manunition, targets, and marking—To be according to printed regulations in force at Winddehou in 1873.

Reages—Eight hundred yards, also lumified yards, and ne thousand yards.

one thousand yards.

Number of shots—Fifteen at each range by each com-

elous practics—The American team to be allowed that t the range for practice for at least two days before

the match.

Position—Any; meartificial rest to be used either for the rille or person of the shoater.

Targets, range, and all necessories for carrying out the match in devider on the Irish; the Americans and Irish to choose a referee to act for their respective teams, and the two referees shall manually select an imagire, to whom, in case of difference of opinion, they shall refer, and whose decision shall be tind.

The terms of the match to be signed by the President of the Amateur Rille Club, on heladf of the American rille-men, and by Arthur Blennerhayset Leach, on behalf of the Irish rithmen.

Irish rithmen.

Duplicate codes of this programme to be exchanged and all necessary arrangements to be complated on or before the first day of June, 1875.

Should either team fidl to make an appearance on the day and hour agreed upon for the match, the team then present may claim the championship.

—Educand Johnson, of the Irlsh Tema, has sent a chal-lenge for an imlividual match to Captain Fullou, the champion of the American Trans. In the International match at Creedinoor last September Fulton made 171 points, while Johnson, who was very unwell, made but 150. new challenge is for twenty rounds at 1,000 yards.

-Owing to a press of matter we were analde in give a full report of the meeting of Directors of the National Rifle Association in our tssuo of last week. Ward presided, and General Waodward, McMuhon and Medinesars, Calonels Campe, Gildersleeve and Wingate, Major Scuttle, Captalus Storey, Casey and Fulton, and E. A. Sanford were present. The Trensurer reported a balance of \$1,498-44, with \$5,500 due on degrand from the State. The Range Committee announced that the range was now ready for any wishing to practise. They recommended the raising of the embankument, as threats of an injunction had been unde by parties awaling properly behiad the targets. Such an injunction at the present time, the targets. Such an injunction at the present time, it was thought, would endanger the existence of the association, as it would check all shouting for an Indefinite length of time. It was moved and earried to put up a fence about eight or ten feet high along the top of the embankment, of sufficient thickness to stop any with balls, at a cost not to exerce \$2,000.

The puestion as in whether the Sixtendard.

binkinent, of sufficient thickness to stop any wild balls, at a cost not to exceed \$2,000.

The question as in whether the State should pay the markers used in official practise was raised. The tailful mea claim that as the practise was raised. The tailful mea claim that as the practise was ordered by the State it should bear all expenses. On motion of Gea. Woodward, it was resolved that the names of the delinquent regiments be seen to the Adjutant General, and that he be requested to deduct the amount from the annual appropriation of \$700 to each regiment.

Much regret was expressed at the withdrawal of Colonel Church from the position of President, and after residutions to this effect had been passed be was elected a permacent homerary director.

The Executive Committee were ordered to make up a programme and arrange a date and prize list for the opening Spring match. The after of a \$150 rife was announced from Remington & Co. The selection of a design for lifemembers' badges was elected in favor of an emblem offered by General McMahou. General Shaler and General Woodward having became directors ex-ollicio by virtue of their position in the militia, and Colonel Church having resigned, left the board three members short, and it was ordered that the election to fill the vacancies take place at the next meeting.

The 200-yard refreshment-stand was ordered to be reconstructed and fitted up as a barn. The Secretary was directed to revise the list of life-incurbers, many of whom could not now be found.

The Joint Committee on the International match reported progress, and made a call for united effort to insure the success of the present plans for raising money. Preenationary measures were ordered for the insurtion of the item of \$15,000 in the Supply Bill, at Albany, for the encouragement of ritle practice.

The proposed change of largets at Creedmoor, to correspond with the new style in vague at Wimbhelm, was the last topic discussed by the hourd. Captain Fulton urged it strongly as a mere matter of uniformity throughout the world. Smaller associations were adapting the new circular target, and would take the precedence of the National Association If the all targets were retained at Creedmoor. If espoke on behalf of ritlemen and all who had used the new larget. Colonel Wingute left the chair to rebut the argument of Mr. Fulton.

The ritlemen of America, he suid, had not us a body arrived at that stage af perfection when finer rule divisions were needed on the face of the target. Creedmoor was were needed on the face of the target. Creedmoor was essentially for the use of the National Gaurd, and last Summer's practice showed that, far from being too large, the largets were actually too small. Llentenant Fulton in conclusion argod that the new targets were in use in Cannala, were adapted in Ireland, and that uniformity was a very vital point. General Molineax moved to put the question off for rereashleration, and it was so ordered by a tie vote, General Wandward, presiding, voting in favor of delay. A special cummittee at two were ordered in tepart an the matter, Colonels Wingate, Giblersleeve and Canap and Cuptain Fulton and Majur Smith belng appointed.

The summary of rifle practice at Creedingar by the Fifth Brigade thuring the past senson, indicates the fullow ing results: Number liring at 200 yards, 842; score, 4,154; number thring at 500 yards, 200; score, 1,327; total, 5,481; average per man, 8,60. The number who missed the larger at 200 yards' distance was 213.

-Gov. Tilden has tendered to Col. Wingate the position on his sinff of Inspector General of Ritle Practice. Adjt. Gen. Townsend has also pressed the matter very strongly. Col. Wingute, an account of business engagements, and deferred acceptance, but has now determined to assume the

-The American Rifle Association, Mount Vernon, N.Y., held a meeting on Tuesday evening, March 2d A commu-nication was received from a friend of the society presenting a jeweled ring, valued at \$300, for competition, upon the same combilions as those observed in the De Peyster match. A representative budge was also adopted, to be worn by the members of the association. The trophy will consist of representations of the several varieties of weapons

—A bill has been reported in the Assembly by Beneral Husted, by the provisions of which rifle practice will be under charge of the Inspector General of the State, and the General Inspector of Rifle Practice will report to him. An inspector of eithe practice is added to each regiment, with the rank of captain. A majority of the voters is made necessary to the election of an officer, and field officers are given a vote in the election of any field officer—a privilege from which they have been hitherto debarred.

-A bill is now before the Legislature of New Jersey providing for the establishment of a range like Creedmoor where the National Guard may take practical lessons in the use of the rifle.

—Major McKinley, of thilifax, N. 8., has been appointed commanding officer of the Canadian Wimbledon learn for 1875. The appointment gives general satisfaction.—

THE CALIFORNIA MATCH.

THE articles of agreement in the match between Co. D of the New York Twelfth Regiment and Co. E First Cavilry N. G., have been signed by the latter company, and returned to this city. The Californians have granted and returned to this city. The Californians have granted the request that Sergeant W. C. Reddy, who might possi-bly he commissioned pending the matter, should be considered eligible for appointment if so desired. letter shows the scores many ...

SAN FRANCISCO, February 25, 1875.

Ban Francisco, Fedurary 25, 1813.

Button Forest and Sturam.—

During the visit to this port hast October of 11. B. M. ship Tenedos a number of British burn residents of this place challenged the Fenedos officers to match a brom at rife snouthing against them. This challenge was accepted by the gallant tars, the brins being, each lean to consist of ten men, to shoot at 200 and 400 yards, seven scoring and one sighting shot at each range; position, shunding, at 200 yards, 400 yards, kneeling; (Hylbe system) targets same as regalation of N. R. A., of New York. The Teachies to use Suither Enfeld breech toater, mil. r.de, callier .5.7, the San Franciscons, Sharp's military rife, cal. 50, minimum pull of trigger, 6 lbs. Time; on the return of the ship to this port from a cruise to the Sandwich Islands. Saturing, 20th lost, brought the Tenedos hack to purt, when immediate preparations were made to carry out the programme, the results being shown below. Three infliers and seven pully officers compused the team of the Tenedos, under the leatership of guiner J. Hamilton. The San Franciscons were captained by Mr. C. Nush who, owing to one of his team failing to appear, was obliged to enter the lists himself to camplete the number. This is notable as being the first team match shot on this caust at longer distances than 150 yards. Day, clondy in the amorting; later, clear wind light from V1 and V11. light, dail; ningether fine day for the purpose. On the return to the city, the San Franciscons presented to F. House, who made the best score for Tenedos, a must budge, commemorative of the event.

Game Bag and Gm.

GAME IN SEASON FOR MARCH.

Uniter the head of "Game, and Fish in Seasin" are can imposed by in general terms the several varieties, because the laws of States ways so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of notire, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET. -The variety of game on sale is necessurily limited, and prices remain about the same as our last week's quotations. Antelope from the Western prairies is received in fair quantities, and sells for 25c, per pound. Wild Geese are in very fine condition, and sell at \$1 50 each. Brant are worth \$1 50 per pair; Canvas-back \$1 50 cach. Brant are worth \$1 50 per pair; Canvas-back Ducks, \$2 50@\$3; Reil-heads, \$1 75@\$2; Mallards, \$1 25; Bluck Ducks, 75c.@\$1; Widgeon, 50c.@75c.; Wild Turkey, 25c.@30c. per pound; Wild Pigeous, \$3@\$3 50 per dozen; Squabs, \$4 50@\$6; English Snipe, \$4 50; Plover, \$4 50; Bay Snipe, 75c.@\$1; Cauada Bunling, \$1; Curlew, 75c, per pair; Rabbits, 75c.; Hares, 75c.

-Notwillislanding the unusual severity of the season, large numbers of migrating waterfowl have persistently remained in certain localities this Winter, when according to instinct and custom, they should have wended their ways southward to more congenial climes. The Quincy (Mo.) Herald alludes to the fact that two large flocks of mallard ducks have made their Winter quarters in one of the lakes above that city, and during the coldest days of January large flocks of mailards could be seen on every air hole in The river, or found in the corn fields seeking food. Wild geese were also abundant, and with the ducks, made short work of the honest granger's corn shocks when his back was turned. Along the Illinois River and in the Salt Creek and Sangamon districts, ducks and geese have been quite and Sangamon districts, ducks and geese have some sports-numerous all Winter. In January three Chicago sports-men killed ninety mallards on Salt Creek in one day, and a German is said to have "crawled up" on a lot of "green-heads" packed in a small sheet of open water in a pond and shaughtered thirty-two of them with the two barrels of a ducking gun. This conduct of the ducks is, to say the least, quite unusual, and open to explanation from some of

-A bill is now before the New Jersey Legislature to make the open season for woodcock from Ortober first to January first, and ruffed grouse November first to Janunry first.

-The annual meeting of the Hartford Game Club was held at a room in the Hartford Club House on Tuesday held at a room in the Harthord Carlo Trible on Theship evening, March 2d, and the following afficers were elected: President, Mujor F. W. Russell; Vice President, Hum. H. C. Robinson; Trensurer, William M. Hudson, M. D.; See-retary, J. S. Parsons; Counseller, Charles J. Cale, Esq. Executive Committee—Composed of the above officers and two active members, Lyman B. Jewell and George C. Jurvis, M. D. It was voted that the Executive Committee be authorized to issue a call for a State Sportmen's Assu-

ciution.

Long Island.—Good Ground, March 5th, 1875—Our inlet is open. The buy hus been clused for nearly six months, duringing the shooting very materially hist Fall, on account of the water being a great deal higher than when the inlet is running. On the 28th of February list, it was decided to let the waters of the buy go into the old Atlantic. Arcordingly on the above that whout three hundred people engargated on the beach for the purpose of letting it go, and a mighty rush of water there was, the bay being eight feet higher than the accan. The water having such force as local a channel through the beach 160 feet wide and from Iwenty to thirty feet in depth, it bids fair to last for all time to come. We shall again have our regular rise and fall of the tides as heretofore. The native spurtsmen say that our duck and gouse shooting will be the best we have had for many a Spring past, as the feed for the hirds is excellent and plenty. The ice is beginning to get out of the bay and in a few days van will hear of some good they's work being done. I think we will be able to begin shooting by the 15th of march.

M. V. B. Squires.

GREENPORT, March 6th.—We have been fairly ice-locked.

ing by the 15th of march.

M. V. B. Squines.

GREENPORT, March 6th.—We have been fairly ice-locked and snow-hound. Long Islam! Sonnal is one solid sheet of ice from this shore to Connecticut. Peconic Bay and Gardiner's Bny have been sherted over with think ier for weeks, but are now partially open, and a few coots, old squaws, whistlers, and black ducks were killed in the open water. Wagons and sleighs have been passing from Sag Harbor to this place over the ice, a distance of nine miles, a feat almost unprecedented. As soon as our waters re-open 1 presame we shall have the Spring flight. There is an island in our Peconic Bny called Robbin's Island, and there a few weeks since two of our guinners killed a large number of black ducks. Near it lies Seconae Bny, where aften there is good sport to be laid with black ducks and shelldrakes, and sometimes geese. It lies between Peconic Bny and Shldnecock Bay.

Isaac McLellan.

Delaware—Smyrna, March 8th.—Notwithstanding the

DELAWARE—Smyrna, March 8th.—Notwithstanding the unusual protructed cold Winter, we have had no snow, consequently quail are all right here, and judging from the numbers left over, there should be an abundance of them next Fall. A few snipe have made their upperrance, but are mere skeletons; yet from the first to the middle of April they are found here in good condition, and quite abundant.

J. H.

MISSOURI, Hannibul, Murch 2d.—Only len above zero this A. M. and an ineb of snow. Ducks are coming soon, ulthough river not open above St. Louis. You will see a smoke looming up from the West some day, and then you may know there is war amongst the mallurds. G. W. D.

GEESE AND BRANT AT BARNEGAT.

KINSEY'S ASHLEY HOUSE, BARNEGAT INLEY, March 4, 1875.

EDITOR FOREST AND STREAM:

BARNEGAT INLET, March 4, 1875.

EDITOR FOREST AND STREAM:

I suppose that some of your renders think that the glowing accounts of our wild fowl shooling here are much exaggenated. To convince such of their truth I will tell why we are having such time sport and geese are so abundant. We have been ice-bound here since New Year's; our bay completely closed, and no open water trom the head of the bay to the "old numsion," a distance of about forty miles. At this point—where the tay cuters the occan—the thie in the inter rons so strong that It very seldum Inceres over, and consequently all the final that remained over must come to this particular sput to feed. Suffice it to say, a large proportion did so and we have get them. Our genners these themselves in winte, and in their while boats drop atongside of an icroberg (after placing their decoys) and the excitement begins. The geese are in splendid condition, as their long necks with allow them to feed along the edge of the flais; but the black ducks are having a sorry line of It. As far shouting them, we don't think of It. They are nothing but bones and frathers. Hunger at last has tained them, and they look far nothing but spots to feed at, and consequently come right fun our decoys, when before the cold weather they had one eye on the decoys and the other on the surroundings. I fully believe from seventy to righty could be killed any day we might gan furthern exclusively. Broad hills and diving ducks are in good condition. Whenever we have had a molecule day or two, brant take a look tho to talet. The fluts (their feeding ground) bring coverel so long a time with ice, the young grass, too, has sprouled, and as soon as they are increased you will hear of some big brant shooting. A few nights ago in a fog hundreds of hrant were hovering around the light-house, be wildered by the light. We succeeded in killing elght, the distance from the ground to the top of the light-house being hin grast fur much execution. Two committed enicide by fly

TRAPPING AND SNARING.

Maniboro, N. J., February 26, 187

Mariboro, N. J., February 26, 187

Editor Forest and Stream!—
I noticed an article nations since in your interesting paper from your correspondent "Check Cord," in reference to "Trapping and snaring" in New Jersey. I was not aware this basiness was carried on so extensively in many portions of the State until the implica-ant experience of the past hundra sesson brought it right home to nie. My attention was particularly directed to this matter during a hundra trip down in Ocean, county last Fall, and to some extentials down in Cape May county where even the worthy "Protective Assuchation of West Jersey" has not entirely raddested the evil. My further in-law, who is a minister, has been in the habit of spending a portion of his vacation with merafter the close senson expires. We generally drive diwin its some point in Baringat Bay, some fifty miles distunt; have an excellent pair of horses and a very roundy, covered wagon, with simple accommodation for does, gains, &c., have friends an route with whom we stay a few days trying the quall, &c., and then go on to the shore for wild fowt, enjoy the view of hay and ocean and the luxury of sea food. We bud very poor shooting on

on tway down this season, killing only two or three dozen quall in five or six days's handing, and two or three woodcock, and as many rabbits, that cruid not get out of the way. In over easy so many raps and stance in all my life. In some places you would not go over a hundred yards without meeting from one to two dozen of every description, both for fur and feather. There were the figure 4 trap and box trap, and the snoods, marle of fine brass wire or hair, or small cord; also a quare ten of small infalls, mado to trip when the game was teeding beneath ill, and the quall trap, made of old fieling schoes, or something of that kind. Some infort feinds kindly acted as goldes for us, or we could have been driven away so often that our sport i could have been at an end, so we were tabl. The farmers every generally did not allow attangers to shoot, but kept the game for their boys to trup. We spent a Sabbath in this neighborthool, and the dominio being invited to preach, he did so, and in this way we became perty well acqualuted with the good people, and itsy allowed its privileges we could not have enjoyed under inher circumstances. We told some of them we could not do them much damage, to do our heet, as game was scarce and wild, flying to inaccessible places that abound down among the pines, after one or two sints.

We anticipated much bester aport at the shore, but were again doomed to disappointmen. The cuntioned milk weather but brought no flight of ducks from the more outlown feeding grounds, only a terv inferior varieties. We persoreringly tried them for two days. The first day dwe guns only secured a dozen runal species. The next day we went out more for the sail than with the expectation of doing anything with our decays. We enjoyed a most delightful ripd down too beautiful by, and accasionally knocked over a duck that seemed too lazy to get out of our years. The more day and accasionally knocked over a duck that a seemed too lazy to get out of our years.

Our gamer that we took along with no as galde was

trely thestroyed many fieary flocks of hirds. This is a "philin unvariabled tale."

My trig do on to Cape May county was much more pleasant, and I met with much better success. My friend and inyself, including what was killed by our guinner, made the very respectable bag of forty quall and sulpe in two days. The weather was very pleasant and quall were quite plenty for that there (Dec. 1st) of the senson. It is impossible to kill any very great amount of game there, it never saw so many impassable green orier sivening and such thickets of laurel, holly and cedar, where it is utterly impossible for dog or gan to get at them. My observations here were, that there is much yet for the West Jersey organization to do, but nothing in comparison with East Jersey, where no organization wasters. My friend who accompanied mo had quite a good deal of finish my expense. He resides in Philadelphia, and was obliged to get himself a shooting license to hunt over in Jersey. He told me very gravely, although t was a Jerseyman, I would be arrested at the ferry with my fine string of game. He end it was necessary for some one to blentity me, and that he did not hiend to know me or to have anything todo with me when the police approached, and that he would enjoy my emburrassment in walking up to the mayor's office to the greatest extent. I took it very coolly and prindently slipped my game into a haul bag I had invite me. No one molested me, and I then had the langh open him far histing to pay five dollars to cross the river to shoot a few innocent birds in much abused Jersey, and hoped he would some time get the worth of his money.

GUN BORING.

GUN BORING.

NEW YORK, February 17, 1875.

New York, February 17, 1875.

Editor Forest and Stream :—

My first letter, ditted in October all, seems to have cuiled forth quite a storm and different upinions as to the relative murits of the various styles of borling, "Under Grip's" letter being among the most conspicuous. The remark he makes that the contriversy is likely to occupy much time and space is the only one in which I fully concern; but as he has made me such a prominent mark for bis missiles, I feel constrained, by your permission, to take just "one more shuft." He names a style of horing practiced by a guinniker in Boston, and says he had shells made to fit this boring, front what I can find making the pian virtually the same as the one I advancated. Does it make any difference if the shootler of the chamber is heveled and a shell made to fit this boriou, front what I can find make any difference if the shootler is square and the shell likewise? or, in other words, if you cut an applie in two, won't the parts fit together again, whether the cut is straight or diagonal? I guess so, "U. Q." seems to chave the idea that I suppose the gas must escape buckwards through the joint hetween shell and barrel, whereas every one knows the expansion of the shell prevents that, "U. Q." says, moreover, that if I look at a number of gains of different maker has a general principle on which he bores, making the necessary deviations, twitch are generally slightly as the case requires; therefore different maker will have different applies. Now let "U. Q." examine a sumber of gains of the same maker, and he will be convinced I am right. He condemns himself right away; for in a sentence or so after he says his Boston man has a formula. Tolley bores his gains with a beveled shoulder and long taper; Scott a nearly square shoulder and long taper; Scott a nearly square shoulder and constant in the I am not, nor bare I ever been, connected with any guinaker, being only 4 "tyro" tas "Herhert" says) of at least fifteeu years' experience (I' lu guins and practical gonning

shells have had so many enemies is, that the shells have been carelosaly loaded, without seeing that the wads were made to sit squarely on both powder and shot and ends improperly creased or truest over. In my last I made an objection to the creaser, and I will state my reasons. It takes great care to make the crease of exactly the same depth all reads, it almost huposable to do it as it should be, and if it is not done, the place where the shot waith easiest moved will state first. The powder wait, having less resistance to overcome in that sput, will follow, and the shot is forced up or down, or adeways, as the case may be, by the escaping gas at the muzzle of the gun. If any one doubts this left him crease deeper on one side, or if be uses metal shells, let him take a little abeliac varieth and run it round one side of the shot wad.

Some object to the paper shell because, they say, they stick after the illacharge. I have used a good many of Eley's shells, both brown and green, thave never tried the bine) in all kinds of wenther without a sitek or a missfire. I've had them so ivet on the outside that they looked like blotting paper; but they acver missed or stock. When they sitek the extractor is generally to be blained more than the shell, and when missfires occur the plangers will be found too short, or the mainsprings too weak. However, my only objections to the metal shell at present are, the room they take up, over one-quarter more than the paper ones, and the dislike I have to carrying a lot of slelgh bells about me when I hunt. Be it known I nerorwaste my time reloading paper ones. The mutal ones are not so difficult to clean, and I don't mind then on that score; but I think the very small gain in shooting is more than counterhalanced by the annoyance of carrying this "sounding brass" hone again. I find the easiest and hamilest way to carry paper shells to the field is to put about an equal number in the pockets of your cont, use from the right hand one are carried? No, he must have a helt or vest mad

A REVOLVING BREECH LOADER.

A REVOLVING BREECH LOADER.

SHARDER, Minn., February 2, 1875.

Enition Forest and Stineam:

In holding over back numbers of the Forest and Stieram to ecasionally read articles on the partition, or catamount, which has fed me to believe that these animals are more immerous in the wilds of Northern New York than may inther partition of our country, unless we may except the fasticesses of fair Florida, and that they are comparatively maknown in our Northwestern Stilles. Nevertheless, wild cars and lynx do abound here, and somethines they show a bold front, and night pass for something larger in the rai line than we are supposed to be possessed of, as the following from the Shorx City Journal sufficiently proves;

"Settlers living in the frontiers are subjected to inflam ridds and other dangers, but no never before heard of nine wildcat raiding a hones and cleaning it mit. Such, however, was the case about ten they ago. A large without interest a Derman's longer may be visited interest as Derman's longer may be for the cabin comprised six possess—the mother and live children. The tailor was a mile distinct in the limber, chapping mood. Upon the appearance of the emitmed in the infoor, which mass and aling alar, the mother buttle, use field the house by another longer, and ran to where the name was it work, while in small ring and the immette pussy give the intrader buttle. Upon the return of the German and hits family, the boast had left and taken refuge in a tree in few rolds from the house. The old tille was taken from the concer, and ty a least shot, the cat was bringly to the ground with a build though is brain. The dog and the passy viewe built found hashe effect in a soft with their entitles to the mile concer, and the interest of the control was the interest of the control was the mile control of the control of a very large size and had been frequently seen in that section."

In a ribe control of the control of the wilds ago, in which the merits of breech and nuzzle landers was discounted ago, in which the m

Inside of the house, with their entirely tota mutual decatarecurve, inside of the house, with their entirely also and had been frequently seen in that section."

In a ritle controversy a few days ago, in which the merits of breech and muzzle loaders were discussed, a "good one" was told pertaining to the first start-in of the hreech loader, which I'll just add here before closing. Our old friend Nathan lived in Connection in those days, and had a chum up in Hartford, who I'll dub here, for shurt, "the Squire," and he was a great fancier of gons, especially new gons. Naw, the Squire had lately purchased one of Call's braic new five-shooters, for which he plunked down a cand \$150 in coin (greenbacks did'nt florrish in those thnes), and as Nathan had gone over there he was hadded to be sure and come around on the morrous and see the great rife "shute." Nat consenting, on the following morning called around, and in the time, with the huppy and lickled Squira, regained to a neighboring orchard, and while the Squire loaded up—"Now for insiness," as he expressed It.

Nathan prepared the target, which done, the Squire having got the gun ready, blazed as ay, and areay went the astonished Squire end over end; but quickly regaining lost eet he bawled out: "Look nut, theref Unete Nati the daru thing's gone off, and busied, by crackey!" As the barrol came off the shock and went end over end, Nathan, who was watching the performance, coolly replied: "Yes, I see it coming, but I rather guess t can get out of the way."

This was a set-hack on Cott, sure as you're horn, as the Squire immediately went back on the breech hadding system, and many of his more infinitest friends and admirers were disposed to keep sky of them also.

-The schooner yacht Tidal Wave, of New York, Com I amilton, Bernuda, St. Thomas, Santa Cruz, St. Kitts, Nevis, Mount Serratt, Guaduloupe, Dominica and Turks Island, and at last accounts the yacht was en route for St. Angustine via Nassau, N. P. Why the example of Commodore Voorhis and Mr. Grubb is not followed by the motiore Voorhis and Mr. Grubb is not followed by the owners of some others of our large yachts we are at a lost to conceive. With all the attractions of Florida and the genial Winter climate of the West Indies, why these magnificent vessels, large enough for Liverpool packets, should be kept for a little Summer bay sailing, is past our comprehension. In every quarter of the globe an English yacht is to be met with, and the additions to science and geography made in this manner is by no means inconsiderable. Who ever has not read Lord Dufferin's "Letters from High Latiludes," has still a treat in slore, not only from the description of an intrepid yachteman's adventures, but the genial

and interesting accounts of those almost terra incognities Spitshergen und Jan Mayan.

Spitshergen and Jan Mayan,
—The members of the New York Yucht Club held a special meeting at their club rooms, Madison Avenue and Twenty-seventh street, last week to discuss the proposed amendments Io Article 4 of hy-haws and article 10 of consitution. The horner was designed to do away with the representation of the awayers of yarlits by proxy, and was passed by a large majority. In the latter it was proposed that instead of the names of candidates being pasted at heast ten days before being ballotted for, they should be referred to a committee appointed for the purpose, for their report. This immembreal was approved by all present, and will be presented at the next general meeting of the teport. This immendment was approved by all present, and will be presented at the next general acceting of the club for approval.

and will be presented at the next general meeting of the club for approval.

— The annual meeting of the Atlantic Yucht Club was held at the Club tooms in Brooklyn last Manday evening. There was a large attendance both of yachtsment and members, and much interest taken, as it was the election of efficers for the year and the present shall afficers had dreclined a re-election. The hollowing officers were cheered annuimously:—Mr. George A. Thayer, schooner Triban, Commodore; Mr. Latham Fish, schooner Agnes, Vice Commodore; Mr. William Choper, shap Orion, Rear-Commodore; Mr. John B. Morgan, Recording Secretary; S. W. Knowles, Treasurer, H. H. Hogins, Curresponding Serretary; M. Christopher T. Lipp I, Treasurer, and the hollowing members trustees:—George A. Thayer, Latham Fish, John H. Rhodes, J. R. Maxwell, S. W. Kimwles, Lilward Arnobi;—Committee on Membership,—John H. Morgan, Wm. Peet, Wm. R. H. Berbe; Regatta Cummittee—J. L. Marcellus, H. R. Hogins, Christopher T. Lippit, The Regular of the year gained as the past few years.

The Club lins in the last year gained largely in its roll of membership and late the Williamsturgh Yucht Club the following officers were abstabled as a products.

—At a meeting of the Williamsturgh Yucht Club the following officers were elected to serve during the ensuing year;—Commodore, A. Barker; Vice Commodore, A. Conklin; President, T. W. Berves; Secretaries, Charles E. Lycka and William A. Bardell; Trensurer, Itemy Miller, and Measurer, Andrew J. Brash.

lin; President, T. W. Rervey; Steretatics, Charles E. Lycka and William A. Bardell; Trensurer, Henry Miller, and Measurer, Ambrew J. Brush.

Kew Yachts at Socth Bosch.—During the Winter months the bont builders around the yachting readezvous at City Point, have and been laying on their nars. Messes, Huleinias & Pryor have built a new bout house an Ward's what fine and lay feel over all. U.K. Pettengill, Eaq., the owner of the Wafer Which, has purchased her. Pierce Bro's, have also built a bout of the same muthl as the Mahel, which they built. She was built to order for C. A. Hastheys Esq., Also a 16 feet centre-board, Newport, Jor J. M. Haskell, Esq. They also have in hund a twenty-free feet shop, centre-board, modeled after the Relie, huilding for F. it. Peshady, Esq.

The Lawley's have built at 6 feet centre-board, Newport, for W. H. Gibbs, Esq., to be called the Idyl, and are builting another of the same size, to order for M. J. Kibey, Esq., who is going to sell his Queen Mah. They have also built and delivered two others of same size and style, for the Huageound Bro's, of Salem. On their whart is a twenty-seven feet life boat, built for the Humann Society, and Is now awalting the arrival of air tanks which are coming from Entrope.

The sloop Wanderer, belonging to Charles Russ, Esq. is in their shop, anthergolng haprovements in the shapit of a new centre-board, after original designs. It is tradrap hare, as well as alt, thus giving more surface of board under water. They are also to make a new hollow mast for Commodore Drams' Fanny. It is to be lighter than one of the same character used bust senson.

E. Harris is building at his shop a heat same size and style of the Mabel, for sale. The Mahel, so after alluded to alove, is the property of Commodore Relacts of the South Boston Yacht Club, and was built by Pierce Bru's, last Whiter. It is not surprising that yachimen and builders should endeavor to duplicabe ker model, as her recard last season was unrivaled, (see Fourset and Stephen and the rece.)

Beyende

BEVERAY YACHT CLUB.—The oilliers by 1875 are:—Commodore, William C. Lating; Vice Commodore, William C. Lating; Vice Commodore, Wilter Burges; Secretary and Treasurer, Walter Lloyd Jeffries; Measurer, Henry W. Lumb; Regatta Committee, Charles H. Williams, Edward B. Rossell, W. D. Hodges, Walter Burgess, Walter Lloyd Jeffries.

—At Keyport, N. J., Mr. F. W. J. thurst is building a cutter-yachi, which will be completed in time to take part in the June regular of the New York Club. She is 50 feet ked, 55 feet 6 inches on deck, 16 feet 6 inches beam, and 5 feed death of held. 5 feet depth of hold.

—Mr. William H. Langley, of the New York Yachl Club, will luve his schooner yacht Comet thoroughly overhauled early in the senson. It is suid be intends to enter into another race with the Magic, for the schooner challenge cup of the club.

The sloop Sadie, Rear Commodore Davidson, B. Y. C., will be thoroughly overlauded at Greenport, flong Island, and put in readiness for the season.

-Mr. Willoughly, of Saratoga, is having a sloop yacht hull by Alonzo Smith, at Islip, Long Island. Site is 50 feel in length, on deck, and will be wruted the Windward and enrolled in the New York fleet.

The sloop North Stur, Mr. Alexander Taylor, Jr., New York Yucht Club, is to be overlanded and refitted for the coming season.

The schooner Arlel, Commodore Swan, S. Y. C. is now undergoing alterations at Northport, Long Island. The vessel is being lengthened, and other changes are being made that are expected to materially increase her speed.

—A sloop yacht, about fifty feet in length, which will be named the Mad Cap, is now being built for Mr. James R. Rusk, of Staten Island, by Albertson Brothers of Philadelphia, and will be added to the fleet of the New York Yacht Club,

-The sloop White Wing, of Mr. A. Perry Bliven, Brooklyn Yacht Club, will be partly rebuilt this season.

—The machinery will soon he placed on hoard the new steam yacht being built for Mr. Ricker, at Keyport, New Jersey.

The Jersey City Yacht Club, has elected Dr. J. H. Vondy, Commodore; R. E. Ricker, Vice Commodore; Thomas M. Manning, Secretary; A. B. Reynolds, Treasurer, and A. B. Hughes, Measurer.

— A new yacht club has been organized in Philadelphia on the Cerinthiau plan, the members of which are to do all the work of crew &c. Particulars bereafter.

THERE ANNUAL REGATTA OF THE ST. AUGUSTINE YAPHT Chips.—While with us the cold blasts of a fingering Winter render the picture of a cosy fire more alluring than the slippery deck of a yarht, the citizens of St. Augustine and their northern visitors have been holding a regatta, which in point of number of entries and interest, would have done credit to some of our own pretentious or would have done recent to some of our lower percentages of garizations. Although only three years old the St. Augustine Club has 73 members, and a fine fleet of yachts, and under the able management of Mr. H. S. Homan's, of the N. Y. Yacht Club, and one of the awners of the Schooner Foam, it has rapidly grown into prominence and fuvor. The club-room adjoining the pier has been recently fur nished and decarated, and is now one of the chief attract tions of the place. 'The regatto day was made u genuine holiday by all the people. Cal. E. Bord Grab of the N. Y. Y. C. kindly placed his handsome schooner for at the dispusal of the Committee, who stationed her 200 yards from the wharf. The following are the entries and prizes:—

MR. Bisuop's Canox Voyage.—We have another letter from Mr. N. 11. Bishop, dated March 2d, at a point near Fernandina, Florida, and detailing his lrip from Savannah touthward. This we shall print in our next issue; uo room n this. We have also a valuable latter from the same source, giving much information as to the tunting and fishng along the coast.

THE CENTENNIAL REGATTA.-The London correspond-

THE CENTENNIAL REGATTA.—The London correspondent of the Ediuliargh Rodsman says:—

"No less than eight of our rowing clabs have promised of send crews to take part in the international boat races which are to be rowed next year on the Schuylkill River at Philadelphia. These are the London Rowing Club, the Phanes Club, the Leander Rowing Club, the Hex Aquatic Association, the Kingstan Rowing Club, the West Landon and North London clubs and the Ina Club. The Royal Treester Club, of Liverpool, will also send a four-oared rew, and M. Gesling, the well-known Parisian rower, is kewise to go with a crew. Invitations to join in the conest have been sent to the Oxford and Cambridge rowing lubs, but they have not accepted them."

lubs, but they have not accepted them."

—The Harlem Regatta Association held its annual meeting on Monday last, President H. G. Meeker in the chair. The clubs represented were the New York Athletic, New York Rowing, Nassau, Dauntless, Gramercy, Harlem, and familus Clubs. An election of alliers for 1875 took place, ith the following result:—President, H. G. Meeker, New York Athletic Club; Vice President, H. G. Scott, New York Rowing Club; Secretary and Treasurer, R. Neville, fantilus Boat Club; Committee, F. G. Brown, Nassau toat Club; E. J. Atiason, Gramercy Boat Club; H. W. Yockwell, Dauntless Boat Club; H. M. Kuapp, Harlem towing Club, and the officers exofficio. An amendicant was made to the constitution by which clubs loved on the Harlem River should alone be eligible for tembership. The question of the day for the regatta was formally discussed, and it was suggested that Baturday, the 26th, would be the most suitable.

-At the annual meeting of the Union Boat Club, of Boston, held last Monday evening, first inst., the following Board of officers was elected for the ensuing year:—President, Henry B. Riee; Vice President, Albert G. Baxter; Capthin, Charles H. Williams; Lientenant, Henry L. Morse; Treasurer, William M. Rice; Secretary, Edward B. Rolbins; Directors, Edward N. Fenuo, Edward C, Ellis, R. Heher Jones.

—The Jamaica Plain Boat Club, Jumaica Plain, Mass., held its annual juceting Tuesday evening March 2d, and the following named officers were elected for the ensuing year:—President, Austin Gorham; Secretary, Edward L. Lincoln; Treasurer, Dudley Johnson; Directors—William Brewer, George Blatch and George Hastings. The club hopes to give several interesting regatus the coming season.

-Now that the great coursing event of the season has been decided, the Oxford and Cambridge hout race, to occur on the 20th inst, is the event which agitates the mind of the British sportsman. Both crows have taken up their usual quarters on the Thames Betting on the race is

—It is reported that the Atalanta Boat Club of this city contemplate sending a crew to England next Summer to try a contest with the Englishmen.

—The hoaling men of Princeton College have engaged quarters at Arnold's Sulpbur Springs, on Saratoga Lake,

—The Schnylkill Naval Board last week adopted a revised constitution, hy-laws and rules, again endorsing the national definition and laws of hoat-racing. The College Club applied for admission and the application was favorably received and referred to the Committee as required by the constitution.

Rational Pastimes.

WESTON'S WALK .- Although Weston did not complete his allotted distance of 500 miles within the six days, (437 only having been accomplished,) the powers of endurance he exhibited in continuing to the last, was simply remarkable, and stamp him as the most wonderful pedestrian of The mlle walk in 11 minutes and I5 seconds on Salurday evening, after a six days' tramp was a remarkable performance. Under the strictest scrntiny Weston has performed very nearly all that he claims to be wittin the lim-Its of his capabilities, and we are pleased to know that the most captions of his crities are willing to make the amende and accord him the merit his perseverance deserves.

—Of the Columbia College crew only one of the old members remain. Goodwin, Cornell and Rapallo are out of college. Timpson has gone into business. Rees is out of the School of Mines and Griswold is studying hard to skip Junior year.

HARVARD UNIVERSITY, March, 1875.

Hanvard University, March, 1875.

Editor Forest and Stream:—
The societies have elected their officers for the second half year, and seem to have succeeded in putting the right men in the right place.
The cliese chib have continued their tournament during the past month with quite good success, and have decided to accept the challenge sent them by the Uxbridge Club to play them as soon as possible.
The Foot Ball Committee have voted to try and arrange matches with the teams of other colleges. Although the rules of the Harvard Foot Ball Association differ in many points from those of Yale, Columbia, Brown, Princeton, Wesleyan, and others, they liope to make some satisfactory arrangements, either to play part of the games by the rules of one college, and part by those of the other; or to play some game between the two, and comformable to rules or modifications of rules taken from rules of the colleges. We hope the feeling existing between members of different colleges may be intirely overcome when we come to know what good fellows can be found in the various colleges.

M.

SCOTTISH GAMES.

DHESS AND ATHLETIC SPORTS-NO. 2

THE most striking feature of Highland gatherings in this country is the singularly pictaresque, but outre garb in which the Scot arrays himself for the occasion. The Caledonian Club of this city holds its great annual celebration on the first Thursday in September. The grand murch from the club room presents to our citizens one of the most stirring and unique spectacles imported from Enrope. It is a sight made suggestive and interesting by its association with historical memories. The sound of the pipes, the array of chief, chieftains and clausmen, the waving of tartans, seem like the realization of a clumpter of from "Waverly," or a page from Scottish history.

competer or from waverty, or a page from Scottish history.

The Highland costume as now worn, and as reproduced in America, cannot, in all its minute details, be claimed to he the exact counterpart of that of the ancient Gael. But according to the authorities it is certainly a compound of those varieties in the form of the dress, which were separately worn by the Highlanders in the seventeenth century. Each of these parts, again, can be traced back to the most remote autiquity, almost if not altogether to the period when

" • • Fingul raised his mighty arm, And Ossian's harp rang to the breeze of night."

And Osslan's harp range to the breeze of night."

These parts are the "Breacan," or belted plaid, the Higbland shirt, and the sbort Highland coat. The kilt, sparrow coal, shoulder plaid, hose and shoes with buckles, not to mention the belts, claymore, dirk skene dhu, pistols, and "meeshin' mull" suspended by a silver chain from the shoulders, are a modern conglomerate which only in essentials represents the original simplicity of the costume. With every addition which taste could suggest or dandyism devise, the normal pancity of the dress is to the eye of the stranger its lasting reproach. The full-dressed Highlander is inevitably associated with "cutty sark." Burns bad only to array ber in a kilt instead of a "sark," and his lament—

"In longitude, the salrly scanty."

"In longitude the sairly scauty."

Would have been anuecessary. Her situation would have been compreheaded at a glance, and she would probably live in literature as the "lass wi' the plulaheg."

There is a provision, however, in the constitution of all Caledonian Clubs, that the perpetuation of the ancient dress of Scotland shall be one of the objects of their organ-

ization. The desire is a landable one. It gives men of the nineteenth, century a means of measuring their advance from savage thery by their superior taste in the choice of their nether integuments.

A question has been asked whether all the Scotsmen in America bave an ancestral right to wear the kilt. Hundreds of them hear lowland names. Would it not be better for them to resuscitate the knee-breeches of the "Sassenach?" The question is irrelevant. Scotland and the kilt are invariably associated, and the association comprises the full value of the costume to the Scot alroad.

It may be added that the kilt is now schlom met with in Scotland. Some deluded Englishmen think it incumbent apon them to then it when visiting that country, and the natives, therefore, on seeing the old Gaelie costume, are wont to ascribe the wearer to a more southern nationality. From these tremarks untst he excepted the army. Some of the finest regiments belonging to it, including the famous "Black Wateb," or Forty Second, still retain the Highland uniform. uniform,

The games in which Caledonians in America engage include most of those practised in Scotland. Some of the latter re-appear, however, in a modified form only, and others bave fallen into complete or comparative desuctude. There are no opportunities here for the hunting gatherings which were one of the chief Highland diversions when the claus were at peace. Every reader will remember the scene in "Waverly" representing a meeting of this kind in a corner for political intrigues.

Wrestling, or gleachd, is an old pastime now less popular, and seldom witnessed at American expositions of Scotland. Sometimes it assumed the form of contending for a short stick held by both antagonists. Another form was when the competitors sat upon the ground foot to foot holding the stick between them. The trial here was to raise each other from the ground.

stick held by both antigonists. Another form was when the competitors sat upon the ground foot to foot holding the stick between them. The trial here was to raise each other from the ground.

Single stick and cudgel play were formerly taught as a preparation for the management of the broadsword. Neither enters the Highland games as now understood.

The same remark applies to the clack cuid fr, which consisted in lifting a large stone almost two hundred pounds in weight from the ground and placing it on the top of another stone four feet high.

The clack-neart, literally stone of strength, is the modern "putting stone." This is out of the leading games at our Highland gatherings. The stone of shot is held in our lamb, the arm being doubled so us to bring the weight almost behind the ear. It is delivered by pushing the arm straight from the shoulder without any swing. The competitor can either toe the mark or take a short race, which consists of one or two hops on the right or left leg, according to the hand with which the athlete holds the stone. The distance reached, measured from the toemark to the spot where the stone or shot strike the ground, determines the winner. In olden times the clack-neard used to lie at every chieftains door, and strangers were complimented by being asked to throw. It was also used when chieftains visited each other. At such times their clansmen mingled and tried their skill at running, leaping, wrestling, putting, fencing, and oceasionally fighting.

"Throwing the hammer" is mother of the most attractive items on the programme. Formerly a common sledge lummer was used, and smithics, we are told, were in Scotland often let to take care of themselves while the smith and his customers tested their relative merits in this pastime. The athlete stands at a mark and after attaining the necessary direction, usually the opposite to that in which he is looking.

"Thosing the caber" is balancing a heavy beam or young tree on the two hands and leaning it against the chest and shoulder in a vert

competent must kick it and fall to the ground upon the same foot.

Running, leaping, burdle-racing, vaulting with pole, and sack-racing are all too well known to require description. Sports of this kind have claims upon notice which cannot be gainsaid. That they form a good physical training for like young is evidenced by the fact of their introduction into Princeton and others of the American colleges. They supply exercise for every muscle, and impart strength to every limb. As performed at the Scotch gatherings they furnish a spectacle which cannot elsewhere he found. To the Caledonian they bring memories of youth, and of the village green; and to strangers the strength cultivaced and the manly spirit displayed make the scone with all its strange surroundings of costnue, music and dance, the memory of a lifetime.

MAGAZINES.

American Naturalist for March contains in the The American Arterials and the American Three Different Modes of Teelbing Among Selachians," almost the last work of the lamented Agassiz, which gives it peculiar interest side from the merit of its entire table of contents. The papers are all unusual merit and rare interest.

From Saint John, N. B., we have the Maritime Monthly for the current month. The "Origin of the Acadians" carries us back to the days of the "forest primeval," and Mr. Jack's "From Stanley to Mirimichl" is suggestive of Summer ramblings and the excitement of fly-fishing. The Maritime displays evidences of energy and talent.

ny-nang. The Maritime displays evidences of energy and laient.

The Overland is scarcely up to the usual mark this month. We miss a certain esprit which generally marks its pages. The eccentric and uniquitous Joaquin Miller contributes a poem addressed "To the Lion of St. Mark." The first part of Mr. Severence's "Thorpe, Cavalier," is sufficiently exciting ss to make us wish it had been completed in one number. The criticisms in current literature in the Overland are always good, but we have rarely read anything more severe than its remarks upon Brel Harle's "Echoes of the Foot-hills," which, coming as they do from his own foster parent, have double force.

The Agriculturist is always good, and the March pum-

The Agriculturist is always good, and the March num-ber will be found full of papers on topics of great interest to the farmer and country residents generally. The pictorial work is a great feature, and one from which many neeful hints may be taken.

LEXICOGRAPHY.—If we have not yet produced that great American novel to astonish the world—which, with Mrs. Stowe lo mind, we do not so soon acknowledge—we have still enough to be proud of in that wonderful produce of American scholarship—Webster's Dictionary. There has before been no such dictionary of any language—not even as the result of those years of labor which the whole French Academy, a congregation of the best scholarship in France, spent upon the lexicographical standard of that nation.—V. Y. Mail.

BIG INVENTION.

BIG INVENTION.

Lloyd, the famous map man, who made all the maps for Gooeral Orant and the Union army, certificates of which he published, has just havenied a way of getting a relief plate from steel so as to print Lloyd's Map of American Continent—showing from occain to occan—on one entire sheet of bank unterpaper, 40x30 inches large, on a lightning press, and colored, stzed and varnished for the wall so as to stand washing, and mailing anywhere in the world, for 30 cents, or unvarished for 25 cents. This map shows the whole United States and Territories in a groop, from surveys to 1875, with a milliou places on it, such as towns, cities, villages, mountains, lakes, rivers, sircans, gold mines, ratiway statiuns, &c. This map should be in every house. Synd 30 cents to the Lloyd Map Company, Philadelphia, and you will get a copy by religinmant.

TESTIMONIALS.

CONNELL UNIVERSITY,
ITRACA, Merch 14th, 1870. {
I must congratulate you upon your great success
this new educational enterprise. If we can arran
our aminements so as to make them impart instrution to the mind, it will be a sop in advance it ed
cation.

EZITA CORNELL.

Washington, D. C., March 18th, 1870.

I am much pleased with the success you have met with in giving to the stiffed opecimens a very decided spiperance of life.

I hope you may be able to continue the Series, and I hive no durint they will furnish interesting means of information and instruction in regard to the wild animals of New York.

SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.
I have examined curvefully the "Storoscopt Studies of Natural History," and judging by the first ten numbers, should say that they will prove of very great value both as object tessors for studeois, and ose most interesting suite for the parlor Stereoscope. The defineations, position, and cloor of the illuferent groups and the general treatment are most perfect. I condially recommond them to the public steeding, and trust you will over the encouragement which you have earned.

EDWARD A. SAMUEL,

Curator of Zoology in Mass. State Cabinet.

Curator of Zoology in Mass. State Cabinet.

Pranody Academy of Science.

Salem, Mass., March 19th, 1870.

I have shown your Stereoscopic views to the Directors of the Academy and the editors of the Anacrican Naturalist, Dr. Packard and Mr. Morse.

They concur with me in praising their trothfulness and the tatte which you have displayed in eurrounding the specimens with natural objects and secoery of characteristic fitness. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

A. HYATT.

Cornell University, President's Roome.

I bave received the Stereoscopic Views of objects in Natural Illatory, and have enjoyed them greatly. They have surprised all who have seen them by their wonderful fidelity, both as regards the sulmals and their surroundings; and lithink they can not full be of great ervica to the study of Natural Bistory, first by stracting students to it, and next by perfecting them in it.

Andrew D. White.

American Wild Fowl Shooting.

BY JOSEPH W. LONG.

Describing the limits, habits, and methods of shooting wild fowl, with historichins concerning gues, blinds, boats and decoys; the training of water retrievers, &c.

This book is written in plain English, and in a most attractive style. A broad, and at the same time accumits view, is taken of dick shooting in all parts of the country. The habits and feeding grounds of the mallards, bine winged teal, pin-tail, wood, gmiwell, and coveller; ted-headed, huffle-beaded, and other kinds of lincks, grees, swains, &c., have hear eartfully and lingenlossly sholled and given to the reader.

In thirty chapters the suthur bas fruitshed hisfornistion for the young, as well us for the practical sportsman.

of FIFTEEN CONSECUTIVE SHOTS BY COL. JOHN BODINE, AT CHEEDMOOR, IN THE "BENNETT MATCH," Oct. 3, 1874, with a

REMINGTON Breech Loading, Long Range Challenge RIFLE,

The Highest Score on Record,

Please take notice, this Target was made in an OFFICIAL MATCH, not at private Practice.

Extract from the "Army and Navy Journal" Official Report, Instel Oct 8, 1874

"The match decides several alloquated poluls, as near as they can be decided; first, that there is no perceptible difference in accuracy between breech londers and mazzle landers, but that if anything the former are the best, as they are certainly the quickest; second, that in our clear climate we may look for even better shorting in the future; third, that

THE REMINGTON RIFLE Stands ahead of all others for Accuracy,

AS IT DOES IN SIMPLICITY OF MECHANISM, THE REMINGTON RIFLES IN THE MATCH SCORED THREEN POINTS AHEAD OF THE SAME NUMBER OF MEZZLE LOADERS, AND TWENTY TWO POINTS AHEAD OF THE SHARP'S BREECH LOADERS IN THE SAME TEAM."

In the International march, six impezie loaders, three REMINGTON, and three other breech loaders were used. Capt. FULTON, Col. BODINE and L. L. In the International match, six marzie loaders, three REMINGTON, and large out.

HEPBURN need the three REMINGTONS.

For full official report, see Army and Navy Journal, Oct. 3d, 1874. FULTON'S SCORE 171 OUT OF 180; MICHEST SCORE EVER MADE.

MY LAST FISHING DAY.

Telling of the days now flown,
Telling of the days now flown,
Bringing back my boyhood's home,
Dreamlike to cheer me on,

Tell mo that I could but se The rippling stream and forest glen, Embowered by the old osken tree, Where oft I've strolled, and leteurely Cast the tempting balt with glee.

Off have I watched with an angler's eye, And lifted 'gainst the eddying stream; Rerling, skipping with the fly, Watching patiently to desery Some wavelike motion breaking by.

When sudden starts the numble prey From out the sheltered, shaded nook, And stealthly takes the bait away, Instinctive turns the other way, Forting the line to my dismay.

No forthing rod to clear the line, Too deep for wading boots to go, in vain 1 struggle with the twine, Hoping, perchance, ere I upine, To capture at the abbling time.

Oh severed line! Oh hapless day! t bade adden till ebbing lime; Reimming to the cot not far away, t heard the low toned voices say: A subfirt's come to spend the day.

The ebb tide cume, I left the prey
Near the old oak tree, where the illac bloomed;
Abit well I remember the conscript day,
The call of the higher for battle array—
My hast view of home, my last fishing day!
C. N., M. D.

For Forest and Stream,

Three Weeks on the Magnetewan.

SEVENTH DAY IN CAMP, -NO. 4

THREW off my blauket and stepped into the bracing I nir, just as the grey dawn was breaking in the East, and in good time to see the sunrise. With all Shesbeep for a hash the morning wash was soon over, and while everything around was as yet asleep and still, I started to climb upper end of our island that rose abruptly from the water and was comparatively free from trees, from which point I could hest obtain my view. Some years ago a careless Indian set fire to the brush here and it left this end rather hare, as you see, but you can find a good seat among these rocks; so sit down and light your pipe with me and be patient, for it will be lighter soon and warm enough within an hour. This is the best spot on the lake from which to scan the shores for deer; far away off on our right is a good marsh, but small, and another one behind us, and this in the east facing us is the best one they say for jack hunting in either Ohmic or Shesheep!

The horizon is all grey now, and those streaks of faint yellow and gold are but the advance colors of what is to come; everything was sombre and misty when we started up here, and you can see plainly now how fast those colors form; you can count the streaks of light that shoot up into the sky from behind that hill, for they resemble in form an "aurora" on a Winter's night, but they are transient only, and the crimson and gold will spread out like a sheet of flame when the sun comes nearer the summit. The lake is like glass and reflects the trees and sbruhs, as a mirror would your face, if the picture could only be transferred

Here comes the breeze that dimples the lake in the open,

but hardly stirs the leaves below us there; our mirror is but hardly stirs the leaves below us there; our mirror is broken into little atoms by it, but we wou't mind, for youder nondescript insect has been inspired by it luto attempting to cross to youder point, and it will be more fun to watch him. He is bulky like a May bug and flies like a miller near the water—too near ultogether, if he wishes to reach the shore, for these fish are wide awake and hungry, as you can tell by the occasional rise off youler in deeper water, where the ——there! Didn't I tell you so? That bass pulled him nuder without hardly a spring. That long flight was fatal to his life, but then he was perhaps a necessary meal to the fish, and the links of the chain connect, for one's death is the other's life, and I'll wager you two to one that Ned and I can take the cance and within ten minates bring that very fish out of the water with my inita-tion bee and have him for breakfast; but you won't take mo up, so we'll stay here and watch a little longer.

Turn around and see the red thish on the woods behind as; it is deepening every minute, for the sun will come over you line soon, and these bright colors will vanish, to be repeated in the west to-night. You will scarcely believe that the top of the hill there is not solld earth or rock, but all that outline is formed by the heavy follage of trees, and the sun will come over it like rising out of a plt. What a peaceful, quiet scene ho will shiue on here! uo smoke or noise of may kind; not even the tinkle of a cow bell or bark of a dog will rise on the air, for we are in the wilderness, and the only human life ou this lake, or for anght we know, within twenty miles circuit, Is here. Far away in the city and settled country he will be hailed with joy by those who have tossed on a sick bed through the long night and vainly desired his rising; from out of many ouses his glory will be shut to day, for there are those who looked on his radiance yesterday for the last time, and the common idea cannot reconcile death with light, but he will

Can you realize, friend, the number of times the light you and I are now looking on has shoue and faded over this lake? The rim of the san is half over the horizon line, and the day has begun in carnest, but Ned won't have the breakfast ready for half au hour at least, and he would rather get it without our assistance; so sit still here until he calls and let us talk about what interests us both—namely, the process and progress of creation here around

You remember that Agassiz, before he died, proved to us that the hills at the lower end of Lako Champlain, hi New York, are the oldest in the world, and by the water marks in the rock couvinced himself that land was visible there, after the great flood, in the vicinity of White-hall, long hefore the ark rested on Mount Ararat, and that in regard to existence, America was really the oldest You think it impossible that a man can take a continent! piece of rock and say, this was formed at such a time, and this piece at another, going back to a period that cannot easily he understood, and yet be certain of what he says! It does seem strange, but if a man will only think when he is in the wilderness, these marvels are easier comprehended What ages have come and gone since this beautifully defined, almost perfect landscape, was a chaos and animal and vegetable life nuknown! Yet creation is progressing around us this morning as much as it was millions of years ago, if we could but detect it. When life camo into being it required light, and it came, and ever since the sun has ellmbed over yonder hill, varying its course only with the seasons, and never halting save once, when the fight was raging in the valley of Gibeon centuries ago! See, friend! take up a handful of this soll; does it dirty your hand? never mind, bring it close to your eye and tell your hand? never mind, bring it close to your eye and lear me what you detect there! You say it is nothing but small particles of black dry mould, with a few specks of gritty substance. Rub it hard on the back of your hand and it is transferred there, only to be taken away by water. "Notb-thing but dirt" you say, and never think that at least ouc-third of it was onco as hard as the flint in the rock you are sitting on, and the rest is what was once vegetable and animal matter! Think of the time that has passed since that one-third was solid stams, and what farre was neces-sary to reduce it thus, and tell me if your life in compari-son does not seem shorter and briefer than was that of the bug we saw sumpped up by that fish before the sun came up. His life begon possibly three or four months ago, and ours may last three score years and ton, yet the comparison is but as one second to a million years!

"Extravagant metuphor!" I hear you say. Very well; think so if you will, but gealogy does not lie, and we know by that that organic life existent here ages before man was created and sln crept with him into the world. By the time nature into worked far less wonders than transforming rock to earth, you and I will have fully comprehended the great mystery, not only of life last of whatever has existed or will exist in the agest o come, which no man can number.

There's Ned calling "breakfast," and we must go down, There's Ned calling "breakfiet," and we must go down, but we'll have plenty of time this afternoon, for, according to my count, this is the Sabbuth—Snuday, or Seventh Day, as I call it, and I, for one, am going to bit the lish and game alone to-day and do nothing but lie in the shude and rest, with my plue and thoughts for company, unless you care to do the same. I don't think Nod would object to a "lay off," and he's got his opinions of matters in general, so we'll have a good time——"All right, Ned, we're comine!" coming!

"I say, Ned, isn't to day Sunday, or don't you keep track of It here?'

"I always do, but it don't make much difference; you came in on Tuesday, and camped that alght at the upper fall, you remember, and we've been here four days; so I take it to morrow 'll he Mountay, but wbut sball we do to lay? I was thinking of tuckling that pickerel up youder," nodding his head toward the apper end of the lake. "He's forget the prick of the spoon by this time, I'll warrant,

and will take hold ugula this morning."

"We'll try him this evening, Ned, but I would rather keep still until noon, at least. I'll tell you what I'd like, keep still until noon, at least. I'll tell you what I'd like, if you will, and that is for you to paddib down to Fliat-off's and give them one of these quarters of meat; they'll bo gial of it, and we can kill another deer to morrow with an easy conscience; you needn't be away over three or four hours; I'll be cook und get dinner."

"Well, I'm willing; but you mustn't get uncasy if I stay a little over that; I'll be back by one, and we'll give that pickerel a brush at samlown. I'll tell Flintoff you sent pickerel a brush at sundown. I'll tell Flintoff you sent hlm the meat?" so saying Ned unbooked the gambrel from him the ment?" so suying Ned uniforced the gambrei from the limb, and leaving me to clear away the remnants of breakfast, which was specifily done, carried the quarter down to the heach, hild the cames in the water, and after coming back for his gun, departed down the lake on his errord, leaving me to watch him as long as his slight. With the venison in the how, and himself kneeling in the stern, with his rifle close at hand, the came shot forward under his sweeping paddle until he was but a little dot in the distance, and then, as he entered the morrow gap of the outgoing river, the point shut him out of sight and I was

There is always a subdued feeling comes over one when left without a companion in the wilderness. When your left without a companion in the wilderness. When your guide goes away on some planned excursion, to drive a deer or examine some particular ground, and takes even the dog, leaving you to listen for signals, or losit down on some ohl windfall and wait his return, alon't you always fall to watching the ground squirrels, and clouds, and birds, and think what a great world it is, and would be, even if your lumens: self were taken out? for where you chance to stop for only a minute you that life and pleasure and pain under your feet that Is as real as your own; you feel a little smaller than when you started, for by the time your companion returns, you think you understand nature a little heller, and perbaps you do! little helter, and perhaps you do! Well, after Ned was gone I went up to my favorite spot

under the little pine, and lying down in the shade, looked out over the lake and fancled I could hear the bells calling from the steeple of the church that was miles away, and see the people wending their way through the street, but It was the call of the jay in the opposite woods that I heard and the drifting flecks of white clouds in the water llmt I saw instead. As the sun came up higher, the leght wind went down, and by ten o'chick everything was still, except that a gull would flap by occasionally like a white restless spirit, poising itself opposite the camp to drop down on some bit of refuse in the water, at which first, the raven, that at times made evening hideons near our eamp, would be. I shot at this hird once with my ride as he came overliead, and since that no chance of a meal would tempt ldm lack, at least not in our presence; but he would sit on some of the trees on the opposite point and put in his word at every chance at every chance-

OThere's no breeze upon the fern,
No ripple on the lake,
Upon her cyrie nods the erne,
The deer has songht the brake;
The small birds will not sing about,
The springing trout lies still

shore, was Ned.

I met him on the beach and we proceeded to "land" the canoe.

"I thought you was asleep, as I dhin't see you when I come up," said he. "Was I gode long?"

"What's all that over there on the point," said I, pointing. "Are we going to have society up here?"

"That's what brought me back early, as I expected you'd worry some. It's John Maquabee with his squaw; he's come up for deer, and you bet he'll get 'em—as many as he wants. We'll go over this afternoon and see them; he's brought his papooses along, for I seen the boy down below there in the canoe."

"How long will they stay here?"

"Not over two nights, as he only hunts with a jack; he came up from Omic this morning. We must go down there next week to see where he lives with the rest of 'em. There used to be fifteen or more, but I heard this Spring some of 'em were going huck where they came from, up the Nipissing way. You start the fire and I'll clean these fish I got coming up. I came along too fast to get more, but they took the spoon right well, so I guess will try that big fellow again along about sundown. If you get a good hold of him there'll be fan, I tell you."

"There now," exclaimed Ned, as we made the eircuit of

the fish to hook himself, I swining it forward and hackward gently, thinking every minute to feel the fierce strike.

"There now," exclaimed Ned, as we made the circuit of the weeds once without a bite, "I believe he was pricked too hard before and won't take it. Go back again and if he won't this time I'll give it up."

Drawing in the line we took a short circuit out into the lake and returned at the right spot. To understand this, remember I was in the bow with the line, and Nrd in the stera, the only way to troll in a canoe when you wish to hold the line and not puddle. As we crept along an the return trip I was losing laith with every stroke of the puddle, but when the weeds were nearly past, the line suddlenly tightened as if attacked to a log under water, and with my exclamation the canoe swing round, thus presenting me with a clear field for the tussel. Of course the boat was turned so as not to foul the line and Ned knew enough not to back or sheer off nearer the weeds, but willing turning I felt he was watching me closely. Although the weight of line in the water lessened the "pull" ou my hand I knew I had the fish I was after. The next thing was to bring him in. When I pulled on the line it straightened out like the hawser of a tug, and water would run off in drops, and although I had confidence in the cord I very much dombted the spoon. Down would go the fish, now to the left, then to the right, and but for Ned's steadiness would have easily drawn our light eraft over the water.

"Can't you draw him a little? you'll never get him that way," quoth Ned as the fish came to the top and made the water foam with his struggling.

"I might as well draw on a sung, Ned; let him thrash' a little and then you puddle up while I hring in the line; he's shaking his head like a terrier now; that hook'll never hold him."

"Hit him with the paddle if he comes up near you, but

hold him."
"Hit him with the paddle if he comes up near you, but hang on to the line; you've got to drown him or kill him.

someway before you lift him in. I believe we could'nt halance her if that fish was in here alive."

"Now then, slowly," as I commeuced to drop the slack line in the cance. "Look out if he tries to get under, if he does that he's gone sure, or we're upset. I cau!—Here he is alongside," I shouted; for the fish, as they will sometimes do, had swam back on us so quick that I had but just noticed the slack when I could distinctively see his bulky form not three feet from the surface and almost under the boat. His long flat head was savage in its appearance, and I had just time to mark the cruel gleam of his eye when there was a quick downward plunge, a flap of his tail almost in my face, and in a second I was hamling in the resistless line and looking at the bent hooks, for our great fish had excaped for the second time, and my spoon was nearly spoiled.

"It will have to be a hig hook to bring that fellow out," said Ned. "That last turn of his'n was what fetched him clear, and no wonder, for the hook's almost straight. Did you see him good—how long was he?"

"Three feet casy, and thick as my leg. See how my hund is chafed?"

"If eld weigh near eighteen or twenty pounds then if he was that length. Let's start for camp; it'll be sundown before we get there now."

"There must be fish of coormous size in these lakes," said I, on the way. "Don't you think so?"

"I can't see why there should'nt he; they aint fished but little, and there's pleaty of room and feed for 'em to grow. I never ketchied but one very big one; that'd weighed abnut twelve or thirteen. I don't call him so very big, but I got hold of him by accident. If a man fished more for these big ones he'd have all he could do. You ought to come up in the sprung of the year for these big tront, you like to fish so; the water's ton warm now for 'em to bite well. Easy on the rocks now, till I step out, so—that's it," and out we get, and bringing the canoe after, turn it up ou the beach and then get mar supper, and after that bring oot our pipus; and while the shado

"Whereabouts was that? down at Miller's?"

"Twas away down on the Lawrence when I guided duckshooters," said he, sweeping his hand southward and sitting np. "Parties of from two to a dozen woold come along at a time, women and men, and stay according to the flights. This man was up one October before any ducks came to speak of, and used to go trolling justead. I see him shoot loar or five times at odd ones and he war'nt no green one at that I tell you. Wel', Hurst's little gir died when he was up. Hurst was the Englishman that kept the tavern where the gunners stayed, and they saked him to have service at the house. Most all of us, company and hired men weut, and this man stood out by the window of the room and preached, while some of us had to stay out under the trees on account of the crowd. I was curious at first, but when he left off I was sorry it was over,"

"Beeause it was different from anything I ever heard, he

on account of the crowd. I was curious at first, but when he left off I was sorry it was over,"

'Why?"

'Because it was different from anything I ever heard, he talked of the trees and clouds, and what he called goodness of this life, and then what the other life would he. It seemed as if I could talk just like him, only I could at seemed as if I could talk just like him, only I could at make the words fit in. He said the way a man would be fixed after he died depended on how he used his life here, and how much better it was to be fond of the country and that life than live forever in the city and not see it at all,"

'Yes, hat t'want that I mean. He spoke of the girl that had just died, and what she was at that minute; he said he helieved she was there with us, only we couhl'nt see her, and it made me feel cold all over to hear him talk so, but I guess I did'nt understand it right. Just before he stopped, he told us how a man or woman should live, so as to be right, when they come to die, and, as he said, not to be afraid of the 'tterror by night' or the arrow that llew by day. Did you ever hear the like of that?

I had I heard it? Was not my heart, as he spoke, full of the memory of au old man, who, when disease had left him blind and lame, and tortured daily to an extent that few could stand, drew such consolution from those words—

'Thou shult not he afraid, etc.," that for a certainty, death had no sting for him I

'I think I have, Ned, was that all?'

'I cau't tell you much more. I thought what a great thing it would be to talk like that, but I moved up here soon afterward and forgot it until one night I was camping all aloue up at Horn Lake and lay down to sleep near the edge, by my boat; the night was still enough then, but alout mininght there come up a thunder storm that went awoke me up and I was kinder skeurt at first, as any man would be. The thunder hanged away, and I could see plain now and then for the lightning, while the lake—Well! I dou't want ever to see water thrash tround more than that d you ever see."
"What did he say about the child's spirit at the funeral?

"What did he say about the child's spirit at the funeral? That she was present unseen?"

"That was it, and I never thought of such things; so it seemed to be queer talk to me."

"I don't want to get into an argument with you, Ned, but see here; suppose you and I were ou the lake there in deep water, and we should capsize and go down, tell me what your idea is, of what would come after. Don't you think we would comprehend everything there is to be in the future the instant the breath is out of our bodies, or would we be as it were asleep, for an udefinite period of time until a great trampet's blust would call us back to life with a hundred million million or so of other meu?"

1 I was taught that when I died my soul would go to pur-

I was taught that when I died my soul would go to pur-

gathry, to be released in time when I had suffered for what I had done wrong here, but I don't understant it elear."

'Nor any one else, Ned. 'This is Sunday night, and we may as well talk of these things as any other suldiect, if you don't object. I feel no more hesitation in speaking of the end of this life than of my going home to Philadelphia. Some men would laugh at the idea, but no rompanion suits me as well as the man who will teach me how to better myself in the way of learning about it with the same freedom that he would use in telling me how to hold my gun steadier, or throw my fly further. I say the man who is always running this talk down is not the man to enjoy a trip like this."

'I don't see how it's possible for a man's body to be raised after so many years," said he after a little silence:

'If I kill a bear or wolf and let the carcass lay on the ground I can only find a few bones next year, and after a few years, nothing. I suppose it will be done by a miracle when the time comes."

'Miracles are done away with now, replied I, and I can't believe they will be used to bring a man's boues together after death. It is said that our bodies will be raised incorroptible, but I take it that means the higher body, and the instant I am dead my flesh is to me what last year's horn is to a buck, after shedding, of no further connrection whatever. If I have to be killed at nine to night, my new life would instantly begin at the next second, but how or where is something I don't care to know."

''Did you ever see any of them fellows that say as how they had seen spirits from _______.

''That'll do Ned. If you start that question I'll pass. The night's too short, and I want to sleep without dreams; so I'll go and get some wet leaves for the 'smudge,'" and taking the dipper I went down for some water to sprinkle some moss and weeds to raise a smoke. Night reigned supreme. I stooped and filled the basin and then started back; from a higher point I could see aeross to the Indiun eamp, but except the smouldering

For Forest and Streum.

A PRAIRIE WOLF HUNT,

A PRAIRIE WOLF HUNT.

In the early days of my pedagoguchood it was my fortune to become the presiding genius over as moticy a crowd of untained colts as I believe ever assembled to gether under the roof of a log school house. Situated on the Western frontier, on one of those beautiful rolling prairies, the country around was justly noted not only for its magnificent crops, bouncing pretty girls, and sterling boys, but game of many kinds and in great abundance was scattered through all its parts. I soon discovered that if I was sent there to 'teach the young idea how to shoot,' some of them, with the ride, at least, could far outshoot me. Many of my pupils were men grown, and among them were several celebrated shots, and few that were not my superior in sports that required severe muscular strength or emitrance. Our school was known as having on its role the best wrestler, the fleetest runner, and the swiftest skater in all the region around.

It was early in the fifties when I first went West and became a 'school marster,' and how well I remember my astonishment the second day on my arrival at the school as the larger boys came in, to see them stack their gams in the corner, with a score or more pinnated grouse (prairic chiekens, they called them). I said nothing at the time, but I soon ascertained that it was the eastom for the boys, many of whose homes were somewhat seattered over the prairic (some coming five or six miles or more to school) to bing their shooting irous, away from the younger children, and the game beyond the reach of proviling dogs, I soon fell into the practice of carrying my double barrel back and forth, for I 'boarded around,' you know, and many a good bag have I made of a morning and evening. Quail were very abundant; haves so pleutiful that no one thought of shooting them; grouse in sufficient qoantities, and the ducks—midlard and tend—why the ponds (sionglis, they call them) were alive with them; then came wid geese, ami the sandidli cranes, a bird that will soontimes reach the height

though every year growing searcer, were yet sunicious, numerous to trouble the farmers' poultry yards and sheep peus.

It was towards the closing days of the term—the sloughs were still in a satisfactory condition, and able to bear up, for the Spring sun had not yet broken up their icy coverings—that I was waited on by a committee of the larger boys and asked if I would not give them the next Thursday as a holiday, or at least hold school on a Saturday in place of that day. Why so? "Because we want to go to the wolf hunt." Humph! I wanted to go, too. It seems the wolves had been unosually nodacioos in several of the sheepfolds, and a regular organized hunt was planned for their extermination, as well as for a good time among the boys. The matter was soon arranged, and early on the morning mentioned, with some thirty or forty of our party, we started for the point designated for us.

The plan was something like the following:—Word had been sent out several days before to the different towns and villages scattered over the country to elect their captains for the grand hunt, to form their portion of the ring that was to close op to a certain ceutre indicated by a flag or a tall staff fur oot on the prairie. These rings are sometimes twenty and thirty miles in diameter, and it takes an early start, with rapid traveling, to close up in time. The different captains, on ficet horses, ride back and forth keeping the line in order, and as they close up they drive everything betore them.

Atter a smart tramp of a few miles, we began to see

ing the line in order, and as they close up they drive every-thing before them.

After a smart tramp of a few miles, we began to see seattering parties on our right and left, that gradually grew more unnerqus, until an almost nubroken line was formed on both sides, ail heading towards a distant point, but

which point was as yet far from view. Of course the captains and many of the privates knew pretty well where this was. Shots were heard every tow and then along the line as the grouse, as they whirred up from the tall grass, or a fox, seudded off in the distance. Then we had glimpses of larger game disappearing over the knots of the rolling prultie, and word ran along the line that severul deer were ahead; then a wolf or two was signalled, and the excitement increased. The orders came along more frequently—"harry up, harry up." With hearts beating wildly, and nerves string to the highest pitch, we came in view of the flag, and then of the advancing portion of the other side of the circle far in the distance.

We could see the affrighted animals—deer, wolves and foxes—harrying hither and thither, while humireds of grouse were charging back over our heads. Shots were following thick and fast, the excitement growing more intense as the shouts and yells along the line grew more hourse and vigorous. The captains, riding as for life, shouted "close up, close up," the deer will break in a minute." And so they did. Here they come, as a dozen charged down on a broken spot in the line. Like sheep, they all came following their leader. Several were killed, but the most of them went hy like a whiriwind, bounding clear over our heads. One fell some twenty rods back of the line, earrying with him a nusket, to which was attached a bayonet. The deer jumped over the man, but as it went by he made a thrust, unil fortunately penetrated the animal's side; but so great was its speed that it tore the whole thing from the min's hands and run the distance named before it fell. This was said to have been an netual occurrence.

As we approached nearer, word came along the line

the animal's side; but so great was its speed that it tore the whole thing from the man's hands and run the distance named before it fell. This was said to have been an netual occurrence.

As we approached nearer, word came along the line to cease firing, as it was becoming dangerous. It was astonishing to me that during so much reckless excitement more casualties do not occur. This time we got off with one man having a bullet in his leg, and another had his horse shot from under him.

On one side, to the left of the flag staff for some distance, was a slough, or at lenst a large indentation in the prairie. This was the centre. We were ordered not to fire another shot until word should be given, when we should have closed up to the rim of this bowl on the plain, something like a quarter of a mile in diameter. As we got over the knoll, and looked across at the other side of excited faces, and then down below, what a sight was hefore us! A dozen or more tawny, dirty, lank looking creatures rushed here and there in wild confusion, and with lolling tongues and protruding eyes sought in vain to escape; but no mercy was shown the cownrdly lamb stealers. Soon the word came, "Give it to them," and a hundred guns belehed forth their coutents at the panting victims. In a short half hour all were down, and the hunt was over; but not so the fun. Then commenced the greetings and hearty hand shakes among the boys, and cheers for this and that hero who had distinguished himself in the hunt. A wagon drove on the ground from some mysteriods quarter, having as cargo a barrel of metheglin (honey whiskey), and another loaded with beer, pies, and huge cakes of ginger-hread, orange yellow, and ribbed ("rock ribbed and ancient as the sun," I came near saying), as we used to see it in our earlier days of "general trainin."

After shooting the flag down, which seemed always to be the first thing, targets were put up, and the of hand shooters Iried their hand, or rings were formed here and there, and famous wrestlers essuiged to win new

TO CANADA FOR FIFTY DOLLARS,

THE MEGANTIC DISTRICT.

UR friend, Fred Beverly, has given us, in a most pleasantly written article, entitled "Florida for One Hundred Dollars," the kind of information requisite for a party going into the woods for the first time, and it is so eminently practical that it will bear repetition, though in a different form.

party going into the woods for the first time, and it is so eminently practical that it will bear repetition, though in a different form.

In the following article I shall pre-suppose that, at least, two persons make the trip in company. I will also assume Boston as my starting point. The region, which is to be the Mecca of the pilgrinage, lies directly north of the States of Vermont and New Hampshire and extends thence northerly and easterly to the St. Lawrence and the Province of New Brunswick and the State of Maine. The country is very billy, almost mountainous, and abounds in linkes and streams which, in their turn, abound, in general, in fish; principally trout, lake trout and bass. In many of the numberless streams of this region the salmo fontinatis is to be found in abundance; true, in the sumiler streams, they are small in size, but this is owing, I think, to the character of the streams, and their great number. In the larger streams, and the linkes, they will be found weighing from one to five pounds; the latter weight being enough to test the skill of the augler to the utmost. In many of the lakes that clumsy kinsman of the trout, salmo confinis, will be found, and though not affording the sport of his more graceful relative, he will be found no mean autagonist, nor unworthy addition to the bill of fare. Indeed the lake trout of the smaller lakes are as far superior in point of flavor to the trout of Superior, as the latter are superior to the sturgeon. The gamey bass are found in great numbers and have been taken in certain waters as high as seven pounds in weight, though this is an unusual occurrence. In some waters the pike and the dare, or pickerel, abound, and are taken at certain sensous in great numbers by spenring. The dare is by many estecmed as affording most excellent sport, and as being a superior table fish, but personally I cannot endorse this opinion. Parts of this region, as the wilder portions of the countes of Wolfe, Megantic, Dorebester and Bruce, are seldom visited by angler or to

trouble of the trip. A sportsman who is much more familiar with this region than the writer, and who spent the most of one Sammer in exploring the streams and lakes in the victuity of Luke Meganite and the sources of the tribular of the stream of Bitty delicated to the tribular of the stream of Bitty delicated to the tribular of the stream of Bitty delicated to the tribular of the wilder regions of this country, but will remark, or possent of the sum of Bitty delicated to the the wilder regions of this country, but will remark or possent of the stream of Bitty delicated to the wilder regions of this country, but will remark or possent of the St. Prancis, but of the sport to be obtained to such a trip I cannot personally, give any assurance. I will assume as an objective point the Brompton chins of reached a about the same of butter pains which may be reached a about the same of butter pains which may be reached a about the same of butter pains which may be reached a thought the stream of the ground, they can only be reached by one road, and that clarger lakes counting paid of the same of the ground, they can only be reached by one road, and that clarger lakes counting paid of the same paid of t

dition, to have an old pair of blankets, &c., the expenses would be materially decreased.

In quoting railread fairs I have given those of the Passumpsic indroad as belog the most direct rente, and parties traveling after alout July 1st, could avail themselves of the excursion rates to Newport; return thekets being issued for \$13. A party could thus go to Niwport, thence to Shirhronke, and return by way of Magog; thus enjoying the sail and the lake and arriving at Newport In wesson for the evening train. I may mention in this connection that I have assumed the travelyt to make his journey by the evening train, that going and returning; as otherwise hotel hills would be incurred at either Sherbrooke or Newport. By taking the evening train from Baston he will arrive, or should arrive in Sherbrooke next day in ample senson, If his supplies are on hand, to get his tent pitched the same will be ample time to camp the same night.

In the natter of empt mensils, the introding camper would do well to appropriate an old Intehet, If such can be appropriated, and emplay it, at his first besure moment, in digging a diter, it need not be more than three inches deep, around the tent and so arranged that the water will run oil stone or two corners. Should it rain leavity, he will not regret the precaution nor the time so spent.

In conclusion I may remark that the prices at all arricles mentioned, except the lanke kettle, are from actual estimates, and I will funish, if required, either to Fourser And Stram, or any gentlemme writing any, the nameaud addresses of responsible dealers who will furnish gunds at the prices I have quoted. In addition, I would say that, where there is a mad communication by sluge, trunsplorts flour may be land at an average ace of dive or six cents a mile; so that purities desiring to visit any other part of the country than those i have moned may make their estimates accordingly; and there is a small pocket map, which wanhil materially assist the traveler, published by his paper. Montreal, and Smit

The Horse and Course

THE SPRING RACES.

THE SPRING RACES.

The nominations for the various events closing March 1st, and to be run for at Jerome Park and Saratoga, show an undiminished interest in melag affalias. The Farilium Handicap has 53 catries, among which are Kadl, Preakness, Mate, Springbak and Survivor. The Westchester Caphas 21, including Shylack, Falladden and Soca, The Javenile stakes 31, all as yet unknown to fame. The Joekey Club Handicap Sweepstakes 26, with Countess, Lizzle Lucas and Grinstead in the list. Ten gentlemen have subscribed to the Post Stakes, four miles, to be run at the Foll meeting. The annual sweepstakes for 3 year adds (76) has 19 nominations, all the leading stakes being represented. For the Saratoga events, the Flash Stakes for 2 year olds has 30 entries; the Saratoga Cup 23, comprising the heat horses in the country. The Sequel Stakes 22, and the Summer Handicap 28, of which many will be deshard out when the weights are announced. The various sweepstakes for 2 and 3 year olds, have also been well tilied.

The Pacific Joekey Club-will give their annual purse of \$30,000 (an increase of \$5,000 over last year) in November next. In connection with this colossal event, the California Confederacy for the Importation and Improvement of Thoroughbred Horses propose senting their next, William Shear, to Enrope almost the 20th at March, to purchase a fiyer to compete for the prize, as they object to Ensura horses carrying off all the money. We doubt if they get a long illstance horse for such manaey as they will care to pay. There are more than 161 different trothing courses in the country, and more chan 157 communities in the land luterested in trotting meeting of the Marylami Joekey Club commences on May 25th and lasts four days.

ested in trotting races.

—The Spring meeting of the Maryland Jockey Club commences on May 25th and lasts four days.

—The American Jockey Club linve opened a stake called "The Home Bred Produce Stakes," for the produce of marcs covered in 1875, to be run at the Fall meeting 1878.

The Berting.—Cheshpeake and Aristides are rach at 6 to 1 for the Withers' Stake. Hyder Ali still remains the favorite at 5 to 1 for the Belmont stakes, and at 7 to 1 for the Travers stakes.

—The Board of Appenls of the National Association for

myorite at 3 for 1 for the Belmont stakes, and at 7 to 1 for the Travers stakes.

—The Board of Appeals of the National Association for the Promotion of the Interests of the American Trotting Turf, is now in session at the Everett House in this chy—137 cases are before them far idension. As an example of the growth and importance of this Association we would mention that in 1870 it numbered 51 association we would mention that in 1870 it numbered 51 association we would mention that in 1870 it numbered 51 association are present to arrange the dates for their meeting, but the report will not reach us in time for this week's base.

—The North German Guette says the French Government has ordered the purchase of 10,000 cavalry horses in Germany. The Gazette hopes the German authorities will take steps to prevent such purchases.

—The great event at Croydan, England, the united grand steeple chase, was won by Lancet.

At the Croydan, England, Spring races on the 3d inst., Mr. Walker's b c. Industrians, by Blair Athal, won the Grand International Hurdle Race. Nineteen horses started and the odds against Industrious were 12 to 1.

Mish Qulture.

From Proceedings of American Fish Culturists' Association.]
STOCKING DEPLETED WATERS,

BY SETH GREEN

Lex Theeler N:—I have been worrying my brain for the last twelve years in studying out the art of fish out-ture and the best way to stock our depleted waters. In the year 1877 I commenced flabing as a bustness, and follower it and it 1860. I land sometimes as unany as one inmalred in the property of t

ANNUAL REPORT OF THE COMMISSIONERS OF FISHERIES OF THE STATE OF MAINE.

THE comminissioners, in presenting their eighth report, dwell with enthusiasm apon the cordial manner in which their efforts have been seconded by the people. A larger edition of the report has enabled them to diffuse a more general knowledge of the native fishes of the State, as well as of the madronous fishes which visit her rivers. They look apon fish enthure as not only an important and wealth-producing interest, but also as a resource of private imhistry for securing food not second to that derived from the production of the domestic animals and fowls, and the grain products of the fields.

The error of allowing the river highways traversed by these acean visitors to be obstracted is severely commented upon. Prevision provides the means for civilization and enture. Subsistence must be insured beyond the chance production of a system liable to be varied by the elements. Fish enture, they chim, is a settled fact, and every acre of land will in the future be looked to by its owner to yield its crop of fishes as much as his tilled fields their annual products of roots and cereals.

The instict of appetite is the guardian of life. The necessities of a remote population still demand the sanitary requirement of its "Quintal of Fish." Once it was taken at the river side. The yearly store of salted salmon or shad ar alewife may be no longer had; the dried fish of trade, at first at a very low price, for a time supplied the want. Soon an unaccountable scarcity of our ocean fishes so raised the prices that fish became a luxury, and uot a homely uced. The system of checks and bahauces, Nature's law of equivalents, may not be lightly meddled will by man.

homely need. The system of checks and balances, Nature's hiw of equivalents, may not be lightly meddled with by man.

Kansas and Nebraska are now making an appeal to the sympathy of their fellow-citizens of our republic for bread to save them from famine caused by the grasshopper. Should man, in his thoughtless disregard of the laws of Nature, distroy all the fish that inbubit our waters, the result would be final to all growing vegetation, as well as to animal life. No so powerful check upon the insect tribe as our fly-feeling tishes and birds. Thoughtless legislation is aloue to blame for the present scarcity of fish and the enhancement of the cost of living by raising the price of other necessities in the precise ratio of their deficiency.

(If the actual apprathans of the commissioners, the report says that 200,000 salmon eggs were received from the Bineksport salmon breeding works. In addition to these, 250,000 were received as a glift from the General Government through Prof. Baird. These were duly distributed between the Penmaquan, St. Croix, Pisentaquis, Sebee, Madomak, Georges, Androscoggin, and Penobscot rivers. The reports from the various localities where the salmon fry were deposited are of the most favorable description. Some of the streams are said to be fairly swarming with the young lish, but unfortunately there is no law to protect them, and legislative action is requested.

Lambers, but seldom over seven pounds in weight; the average weight is one and a half pounds. Sebee Lake is also famous for them. At Reed's pond, twelve miles from Bangor, an the Calais River, they have in the past been caught weighing as high as twenty-two pounds. These fishes of Reed's pond have not only been very much thinned out by the merciless slaughter of them on their spawning beds by the class of drunken roughs who live by pot hunt-

ing and poaching, but to fully as great an extent by being deprived of access to their natural spawning ground in swift running waters. It is a necessity of this fish to have access to running afrated water as well for spawning as for health. The Reed pond salmon have been so driven by the the erection of dams on most of the brooks and streams that empty julo this lake to reek other spawning places, that many of them will deposit their eggs on sand bars in the poml itself; these eggs never latelt, as a certain amount of motion and circulation to the water seems absolutely essential to that process.

Prof. Agassiz has said that thirty years ago he supposed the land-locked salmon to he a demoralized salmon, that some eause had prevented access to the occan, but subsequently changed bis opinion, and concluded it was a different species.

some cause had prevented access to the ocean, but subsequently changed bis opinion, and concluded it was a different species.

The young of both Salmo salar, as well as of the landlocked, or fresh water salmon, are marked by dusky grey bars, which gradually fade out and entirely disappear in the second year. Upon stripping off the skin of the adult fresh water, or land-locked salmon, these bars will be found still visible upon the body of the fish, while on the Salmo salar they are not apparent. The young of both tishes are so similar as not to be distinguished apart. Two thousand young fry, hatched from eggs presented by Prof. Balird to the State of Maine, were transported hfty miles by wagon and five miles by boat, and turned into Kennehago stream, above the dam, without the loss of a fish. The Kennebugo emptles into the Mooselnemagnalic, one of the Rangely lakes.

The trout of Sebago and Rangely lakes are pronounced to be pure, unmistakable Salmo fontanalis, or brook broat, developed by an unlimited supply of appropriate food and an unrestricted range in the purest and caldest water. The commissioners think that the introduction of the Salmo oquassa, or blue back trout, as a slock fish to waters inhabited by the Salmo fontinalis and land-locked salmon, would largely herease the numbers of the latter fishes. The blue back is to Rangely what the myriad smelts are to Sebago Lake and Reed's pond. Mr. C. T. Richardson, whose long experience on Rangely waters entitles his opinions to much respect, says:—

"The blue back stays in deep water in the lake from near the middle of November until the middle of October, when

much respect, says:—

"The blue back stays in deep water in the lake from near the middle of November until the middle of October, when they come up the brooks and streams to spawn. The male brook trout visits the spnwn bed and prepares it for the use of the females before the females arrive; the blue backs go up in pairs, male and female, using spawn beds cleared, used, and vneated by brook trout. The blue back is not considered a biting or game fish, yet I have caught a hushel and a half in a day with a baited hook; they are mostly caught in dip nets."

The introduction of black bass has been successful in some localities, but a disregard of the laws and the use of nets in others has rendered futile much of the labor of the commissioners. They have also met with the most determined opposition on the part of mill owners and others in their efforts to establish fishways on the various rivers, resulting in vexatious law suits. An ungent appeal is made to the State legishiture as to the necessity for a more uniform system of fishery laws, partleularly as regards the close time. At present the law of close time commences the 15th of September on Schoodie and Grand Luke waters, 15th October on Brassm and Mooschead waters, and the 1st of October for the rest of the State, creating endless confusion.

The report is voluminous, but a most cutertaining and

The report is voluminous, but a most cutertaining and admirably gotten up document, and we regret that we have not the space to give a longer abstract of its interesting contents.

For Forest and Stream.

LAND-LOCKED SALMON OF MAINE.

LAND-LOCKED SALMON OF MAINE.

In your paper of the 25th of February you call attention to the results of experiments tried by Messrs. Thompson and Tagg, of New Hope, Pennsylvania, in breeding Salmo salur in fresh water, etc. The land lorked sulmon, or Salmo gloveri, is represented by you as a dwarfed fish, and the inference drawn that hence it is a Salmo salur dwarfed from not being allowed to go down to the salt water. The land-locked salmon of Maine, as taken in Reed's pond and in Sebago Lake, is by no means a dwarf fish. They have been taken in the former of the weight of twenty-two pounds. Within a year a male fish has been taken in Sebago Lake of the weight of seventeen pounds, a female fish of eighteen pounds, one of thirteen pounds, a female fish of eighteen pounds, one of thirteen pounds, and one of eleven and a half pounds. As 1 have hall occasion to remark in our last report, these fishes differ in their size in the various waters in which they are bred, as do our brook trout. I can take you to ponds in Maine, on some of our mountain sibes, where you may fill a eart with trout, the largest of which will not exceed half a pound in weight. I can take you to the Rangely lakes, where you will see trout of ten pounds in size, and yet they are true Salmo fontinalis. What is the rule, or law, or cause, that governs the size of these fishes? Probably as much the adaptability of the food to the requirements of the young fry on the spawning beds as its hunndance. Mr. War. Wilson, an intelligent farmer on the Mirimichi, near Buiestowa, N. B., who used to purchase and salt largely the salmon in his river in former days, when they were pleuty, told me that he could distinguish the salmon that were bred on the Clear Water, a small tributary of the Mirimichi, from their diminutive size, not one ever exceeding cight pounds in weight. A forty pound fish was at that time by no means rare on the Mirimichi. Now whence this difference in size? They all went down and up the same river, to and from their great pasture, the

I will close my already too long letter by referring you to the opinion, expressed to me at Cambridge some two years since by Prof. Agassiz, in reply to my question, "that he regarded the land locked sudmon as a distinct species, and not (to use his own expression on that occasion) "a demoralized salman." In our last report I have given a hastily-written sketch of this fish, as found in the various lakes of Maine, as also a description of what I believe to be the same fish us the "silver lax," or silver salman, as taken in Lake Wenera, in Sweden, and where Prof. Agassisz had previously informed me of its existence.

E. M. Stillwell.

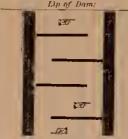

UTILITY OF FISHWAYS.

NEW YORK, March 4, 1875.

New York, March 4, 1875.

Lam glad to see the question of fishways brought up again by the publication of Brown's plan, in your paper of the 4th inst. Other branches of aquaculture have made great progress, but this adjunct of the new instancing the propagation of fish, that I think it like duly of every one possessing any knowledge of any practical morking plan of fish latthers to impart the information. I fluvrifore send you below's the actual result from the fishway erected on the Teteagouche River, in New Bracswick, of maich I published a plan in your paper of August 13h, 1874. As this structure has now proved its claim his consideration by several years of success. I now repeat the main points before published.

The Teteagonche is a stream about twice the size and volume of the Bronx River, and had been for twenty years obstructed, all the time of the erection of this fishway, and is now obstructed by a mill dam about thirty feet high, so that salmon had atmost ceased to frequent the scanty into or three miles of lower river left them; a few did continue to ran ap from tide water this short distance to the foot of the dam. Tho dishiving (costing about \$200 only, and constructed of heavy beams and plink) slopes at about an angle of \$5^{\circ}\$ into the pool helow the dam, is about six feet wide, four feet deep, and the descent of water is broken as an anal by barriers, thus:—

River Pool below the Dam.

On the spron of the dam, at the top of this fish inchier, is a reception shouse, ten feet square, six feet deep, high enough to admit a man, and with a shiling barred gate at the entrance and another at the other end. Salmon mostly run at eight, and for this and other other end. Salmon mostly run at eight, and for this and other other end. Salmon mostly run at eight, and for this and other other lor the small diring the day) water is let into the fishway only at might. Each morning, after counting the fish which was have ascended during the darkness, the miller lifts the upper gate and the salmon pass on up stream. Owing to the smallness of the river allow, the inhabitants were, at first, able to see and kill many of the now comers; but now the gates of the reception house are kept shut down, and no salmon are allowed to rue up the river until the September floods, which raise the appears the property of the reception to the short fish that the first plan of detailing the fish until the Auturna floods in the short stretch of water below the dam, where they can be so easily protected by the local grardinus, or the miller, instead of scattering them for fifty miles up river to be killed by the selfters in every pool where low water in Summer may have caused them to congregate, as a good one, especially for small rivers.

This is a kirstory of only one successful like hear accessed to convent one one, per-

If any one things settled, it is that no one has the right to deprive the Massachusetts Commissioners fought our State, if mill owners won't fail won't. Can't we do to same in our State, if mill owners won't. The Massachusetts Commissioners fought our State, if mill owners won't. The Massachusetts Commissioners for the same in our State, if mill owners won't fail won't we have do to the same in our State, if mill owners won't listen to law and reason?

If any one thing is settled, it is that no one has the right to deprive the If any one thing is settled, it is that no one has the right to deprive the If any one thing is settled, it is that no one has the right to deprive the

listen to law and reason?

If any one thing is settled, it is that no one has the right to deprive the dwellers on the upper part of rivers of their supply of fielt, which formerly were there cought. Besides, the young California salmon pat into the Hudson and its afflinents during the past few years, will probably go down to suit water this Spring with the Ice, and be returning this Antunn. Cannot a fishway be made at Troy and other daws, to enable them to pass up when they return? No time us to be lost; the cost will not be too large for the funds now in the lands of our commissioners, and altogether I look you will arge the lamnediate erection of all necessary aids to the ascent of both shail and salmon.

This plan of Mr. Briwer looks well. Can you tell us whether it has actually succeeded anywhere yet? The Teteagouche plan I know is a success, and it is very cheap, not patented, and is used in many places. If we are ever to put the discovery of artificial removed.

in Caunda.

If we are ever to put the discovery of artificial purpagation to any simultical good on a large scale and make it of commercial importance, we must have fishways that fish will use. Let something be done! Aquicultural conventions are necessary and well enough, but the people want cheap fish, and plenty of them, to follow their deliberations.

Yours,

Manifattan.

4:872—about 400 calmon passed through reception house.

The suggestions of our correspondent are very opportune, and should receive the prompt attention of our Fish Commissioners.-Ep.

THE NEW HOPE SALMON.

NEW HOPE, Pa., March, 1875.

New Hore, Pa., March, 1875.

Yhar informant is mistaken in regard to the age of the salmon (salar) hred by Thompson & Tagg, of New Hope, Pa. They are now in their fifth year. I will give you a part of our experiments with salmon. Our first purchase was 4,000 eggs from Samnel Wilmot, who said it al some of them were taken from salmon which, in good deep, would weigh thirtly pounds. The loss in halching was 250. The first year they were in a pond trenty-seven feet long, four feet wide, and two and one half feet deep, where they did well. I then noticed many were losing their dorsal fin; it looked as if hitten off. I could discover no disease. There were now about 3,000. They were changed to a pond one handred and triventy-fire feet long, eithern feet wide and four and one half feet deep, fed with water after It had left other ponds (as I found they did not require as pure water as trout, where they grew to be fourteen to twenty-two inches long, and perfectly healthy. Last Spring a maskrat went

through the bank and one half of thrue escaped, and I presume are in the Delaware River, as I have seen name in the creek since list. September, I presented H. d. Reeder with a few, who had them on exhibition at the State Fair. I presente he has them yet alive. J. II Deare had a few handred, which have rione viell in his point. The habitice, last August, were placed in a lake with from at viva to trouty-true fect of viator, where I expect them about to religh from her to ten points. I know positively those to the takes sparning in December, and Loften see hamilieds of young salmon in the lake. I have also taken source by manipulation. In 1873 I received from Wilmot. 5,000 eggs in balt index; sured 90. Last read he seed me 15,000, and he such ball order I did not such as the Polyakari all forms a sulmon, half of which will be placed in the Delaware River during the Sammer, free of any charge; the habities of any learner, before the law. We have sulmon to their fifth, third, second and its types, perfectly healthy.

The Brutleburo (VI.) Phenix says that the dishway at Turner's Fulls is now in process of construction, and the State Commissioners have argently invited the Agawam Chind Company to construct one over its dum in the Westfield River at Mittineague.

—The Maine State Association for the protection of fish was organized February 12th, 1875, by the election of Julia II Kimball, of Bath, President; Wm. 8. Badger, of Augusta, Vice President; J. W. Chapp, Augusta, Secretary and Treasurer; Directors, J. H. Kimball, Wm. 8. Badger, Wm. G. Davis, E. M. Stillwell, Samuel D. Loawitt, Charles G. Atkins, Seth. D. Wakefield, Ferguson Haines, Edwin Reed, Mannesseh Smith, Henry O. Stanley, Warren Johnson, Seward Dill, W. W. Sawyer, Samuel E. Smith.

Matural History.

FROZEN FISH AND SPAWN.

A S I sent you the account of the four smells that were thawed out by the Messenger Bros., of Boston, and given to me, I will now record the result of this experiment. The freezing was done on the 29th of January, and on the contract of the strong of the The freezing was done on the 29th of January, and on the 30th they were thawed. Two of them showed signs of fungus in three or four days; these I treated to many sult baths, without effect. They were exhibited at Boston until February 4th, when I took them home. One died on the way, and unother a week afterward. The remaining two appeared at the poultry show at Buffalo from January 13th to the 20th—one died on the less day, and the survivor followed on the 25th, just twenty-six days after the thaw-

How much cold front spawn will stund is illustrated by the following, which I clip from an article of mine published in the Live Stock Journal of Pelecuary, 1873:-

lished in the Live Stock Journal of February, 1873:—

"While on the subject of freezing, I will say that I have had a trough, that had accidentally been left unrevered, freeze from both sides, so that all the current was continued in the middle. I supposed, of course, that all my engs we cept those in the narrow strip that was left unfreeze were spoiled, but found to my great fay that they were and. I covered the trough and let it thaw gradually without disturbing anything, and found that although the water was frozen so that the gravel would lift with the ice, that out of 20,000 eggs there were only 700 killed, or three and a half per cent. These were frozen so solid that the tissues were ruptured. I learned from this that a trout egg, although eneased in ice, is not necessarily killed, and that it will stand a temperature some below the freezing point."

Pried Mayura.

SUSPENDED ANIMATION.

Danvens Port, Mass, Murch 11, 1875.

Envron Forget and Stream:—
Haring read with interest several articles on the subject of single-deal animation in frozen fish, which have appeared of late in your excellent paper, I will add my mite to the general fund. Similing early is the morning for a day's sport in pickerel itsiling, we have after bind this half (minnovs) frozen still before reaching the mind, but by placing them near a fire and allowing them to reawth fill the lee melts, most if I them will return to animation and swim about briskly. When dropped upon the lee they freeze quickly. I have balled hooks with attainors that have laid upon the lee upwirds of an hour, and have heen surpubed to see them swim away soon after they were put into the miner. Pickerel dropped upon the lee while one is banking brooks offen freeze stiff, but upon being placed in pond water, animation returns in a few moments, and they will swim about as full of vigor as ever. Yours, A. F. G.

Hartford, Town Co., Minn., Feb. 25, 1872.

Hartford, Town Co., Minn., Feb. 25, 1872.

Entron Forrst and Stream:—
I love just received a copy of your juper, (Feb. 11th.) in which "Pacific" says: "I think that "J. II. B." is weth very cline observer," Now, I cannot see on what grounds "Pucific" should make such a state near. He is quile welcome to his kumble opinion, knowever, and I simil not strive to change his ledicf. I am not ignorant of the fact that all of the croistoe are said to have no galls; yet, there are lumitated at people who read the Forrst and Stinam-whit are not rootingless and naturalists—who are not aware of the lart. I have examined many of the Cerus macrotic, Antilocogna Americana, and for Cerus Marte Manytains, in 1873, I killed two male deer dues, and family their livers curtained the so-called finks worms. I also found thou in the Ortenomian to the emitry of State. While cultecting in the Sweet Grass Hills in Northern Montain during the past Autuum, I killed and examined the somacles of male and female Oris nondana, but found and examined the somacle of male and female Oris nondana, but found and examined the somacle of male and female Oris nondana, but found no purasites. I have examined and, female, and the young of the "Prays therm" and have yel to observe a flake in them. These payasites are wost community found in animals of the genus legis. I have found then in Legis sylerality found in animals of the genus legis. I have found then in Legis sylerality found animals of the genus legistes of the Legis Canadensis, at communic Canadian hare. When these parasites are valent from hares they are found the liver, lungs and intestines of the Legis Canadensis, at communic Canadian hare. When these parasites are valent from hare they for found alleking closely to the onter surface of the animals. I think the "ro" is common to hares as well as slever. I have from the larger manumals. I think the "ro" is common to hare as well as slever. I have linen told by line fines, the office of the order an

GALLINAGO WILSONII

Entror Forest and Stream:

I desire to communicate to you a very singular and musual circumsiance, ridgh I know will preva interesting to your readers. It is the shouling of a Wilson's, or English surjue, forthing O Wilson's a very musual time of the year. It is not minimal time one is shot lete in the Antonia, long after all the ideas have left us. The one relief I speak of its start by James I. Wahlem, on his form at Merbandrewills, N. Y., on the little of the cally is a very good noodrock ground in Summer, being a stream with many springs moving inhere, and is covered with a growth of tusines, adverse and other years, true doubt was at that time therefore and frozen that a subject could possibly live in. The bird cas a flue male, in prefer tolunage, and strange to say, very ful, no much so, that it was a difficult me to skin. It is arounded, and is to underston the pleasest to send you move when faitshed if you distreany further information of the above, you may emmanicate retireme, and t will, nith pleasure, trapond. Yints very truly.

THE POMPANO QUESTION.

NEW SWIGSA, E. PARRICDA, Feb. 25, 1875.

MINTER FOREST AND STREAD:—

On the St. dated liver I found your paper of Fairwary 11th containing the communication of Mr. Theodore Hill, volutive to the pompone quosition, Mr. Gill sreats to have been mind slainfeet in a my presumption by medilling with delity matters. He make if I doubt the ability of the U.S. Fish Commission to identify the asks if I doubt the ability of the U.S. Fish Commission to identify the asks if I doubt the ability of the U.S. Fish Commission to identify the asks if I doubt the ability of the U.S. Fish Commissioners or Professors.

I find hrew hearing stories all along the Fluribe coast from Jackson with the belief in the belief they and spound to hear like flying fish, and of their being taken as far worth as induced field, and telling assured by resident delicemental the pompone performed an anchorage from the industrial three starties. As to directing a species relatifished by Mr. Gill and the program of the industrial three starties. As to directing a species relatified by We work fully. If Mr. Gill independent the necessaries of the invescibiliting perch off Summishing, I should be applied to awallow the peach; such is my retrevence for authority.

Mr. Gill finds finite reported the necessaries of the tree-charlest the two species, pamparae and cavalli. Dr. Hulbrook wrote under the dentical, and Mr. Gill adults that Dr. Holtmok committed errors in momentature.

Mr. Gill alightes in general legans to my "errors." Perfects over the filters.

schmidic name of the species. Amount of the literator and identical, and Mr. Gill admiles that Dr. Holtrook committed errors in manufacture.

Mr. Gill alimbes in general letters to my "errors," Perhaps one of them lemy statement, ifor which I think he has already relucked me, that this nurse shork, (aromonus,) needs on the coast of E. Plarida. Now the negative lestimany of even a Pratessor can hardly avail against the positive lestimany of a dozen winesses who have sent the species here, myself among the number—that he is no new-corner, either, no curpet-larger, but an aid Finrillan, since Capt. Bernard Romans writing in 1773 of the Natural Illatory of Florida, mentiona that oil was made here from the livers of nurses and charks.

Mr. Gill remarks that I have much to learn before I fully understand the continuion of names builtiferent parts of our coast. Perhaps, althoughout an ichlyologist, Unive, as an angler of diffy years experience, fashed in as many waters as Mr. Gill himself, and am welf awarn of the confusion of names that prevails from Canada to Flarida, and from New York to the Bucky Monntains. I might say that even a Prafessor may not have extransived all lemma knowledge, and that, therefore, he should deal lentently with the errors of those less learned than himself.

S. C. Charke.

-Two cariboo, shot in Maine a fortnight ago, have been sent to the Philadelphia Zoological Garden.

The Rennel.

THE RAYMOND LAVERACKS.

W E give below the portrait of Fairy, the Laverack setter bitch, Imported in July 1874 with her mate, Pride of the Border, whose portrait appeared in our last issue. So tighly was this animal valued that as soon as it was understood she could be bought, many sportsmen, both in America and England, cagerly offered Mr. Laverack her published price. But through the enterprise and promptness of our editorial correspondence she was secured for her present owner, Mr. Charles II. Raymond, of Morris Plains, N. J. After accepting through this office assurances that

Fairy was bought, Mr. Lavernek in the most honorable manner returned a draft for a larger price, which had been sent him too late, by other parties. He also refused a cash offer of £200 sterling from parties in England, saying in both cases that his word had been pledged to Mr. Raymond. He soon after sold her litter brother, Fred IV, for the price last mentioned.

Fairy, in color, is what is termed a lemon and white Belton; rather small in size, as are most of her strain; very compactly built; strong, active and full of energy. She has great speed, high courage and wonderfully keen scenting powers. So satisfied was he with her abilities and endurance, that Mr. Laverack states that he challenged Ranger, the champion of the English field, to a three day's trial, hut her sale prevented the match. Trained on the open hill-sides of Scotland, Fairy ranges too widely for our dense

cover shooting; but she has been handled on our quail and already has acquired a knowledge of their habits, working a bevy most carefully and pointing with admirable staunch-

The undeniable advantages of the Laverack system of breeding the setter are practically demonstrated in the fine physical powers, keen scent and vital energy of this imported bitch. Mated with Pride of the Border, she has now a large litter of hearty, strong whelps, which promise everything that can he desired. Bred in this country, their inherited strength, speed, nose and courage, ought, with careful American training, to make them for our uses, superior to any imported setters.

Our portrait of Fairy was drawn by Mr. E. Forbes, of Brooklyn, and is n very correct and lifelike picture.

PURE LAVERACK SETTER, FAIRY.

descended from the pure blood (supposed to have, at that period been pure for 35 years) of the late Rev. A. Harrison's, near Carlisle, who hred Old hat time he has kept up a continuous, strain of pure blood. Old Moll and Ponto were both Blue Beltons, consequently. Mr. Laverack having had

ENGLISH POINTER AND SETTER FIELD TRIALS

are pleased to? publish the following letter from Mr. Ebrall, the Sccretary of the National Pointer and Setter Field Trial contests, to be held at Sbrewsbury, England, which are under the presidency of his Grace the Duke of Westminster, K. G.:-SHUEWSBURY, Feb. 24, 1875.

MY DEAR SHE-Knowing the great interest you take in field sports of every kind, I forward you out first notice of the above meeting for 1875; also a paragraph which was cut from our local paper, the Shrewsbury Journal. I will forward you a programme as soon as ready. Hoping to see some of your dogs entered this yoar,

I remain, sir, yours truly,

We feel sorry that the Secretary has given our sportsmen such short notice as to the date of entries, &c., as it will now be impossible for any dogs to arrive in England in

now be impossible for any dogs to arrive in England in time to take part in these excellently managed sports. We trust that these trials will put an end to the much vexed and unpleasant controversics as to who owns and breeds the better strains of the English pointer and setter. If we are in speak for ourselves, and we think we may add, for the sportsmen of America, we should be much gratified to see a thorough contest between the justly renowned dogs Ranger and Countess; also the pointers Belle and Drake, to in braces against two others of equal merit. The

Shrewsbury Journal says:—
"It must be gratifying to sportsmen and owners of first-class dogs to see the deep interest the committee are taking every year to give them the opportunity of competing in the field for valuable prizes

before the best judges in the country. The great success that has attended these meetings shows that they are increasing every year in popularity, and that they are becoming a national pastime, and an inducement to keep up the high breed of the pointer and setter. The winning dogs at these trials become every year more valuable. As much as 300 guineas have been given for a brace, and we understand Mr. Macdonna refused 500 guineas for his champion dog Ranger. We compliment the Secretary, Mr. Ebrall, for the ability and zeal he has displayed in conducting these meetings so successfully."

OUR DOG SHOW.-We have been asked frequently of late why no notice was taken in our columns of the puppy show held at our rooms some weeks since. In reply we would say that the "Show," was bardly considered such, but more in the nature of an impromptu gathering, the notice having been so short as to prevent gentlemen living at a distance from sending their dogs to compete. With this view we had some delicacy in attracting attention to it and must confer to content and must confer to content. it, and must confess to some surprise at the result of so feehle an effort. Of those pups exhibited, the hrace of all red setters owned by Mr. Jacob Pentz, of Newark, N. J., by Rodman's Dash out of Mr. Pentz's Flora, were certainly extra fine, and well described the premium which was unanimously awarded them, and in fact it would have been a difficult matter for any one to produce a finer brace of young setters. We feel that an acknowledgment is due to those gentlemen who were present, among whom were Col. Skinner, the veteran field editor of Turf Field and Farm, Messrs. Edmond Orgill and Nicholas Saltus, owners of fine kennels in Brooklyn, Baron Gubner, of New

Utrecht, the owner of the famous red setters, Lisga and Mike, Dr. Alex. R. Strachan, whose kennel is based upon the fine importation of setters and pointers made some years ago by Sir Frederick Bruce, Mr Theo. Morford, the owner of the famous keunel of orange and white setters, Mr. Frederick Underhill of Newark, N. J., uoted for his rare hreed of English Beagles, Dr. Rowe, whose late importation of setters and pointers are becoming very prominent, and Count Shorb, the owner of the famous red setter Jack.

On the next occasion of this character we shall give such notice as will enable all owners of fine dogs who may desire to compete, to be present.

Coursing.—The great coursing event of the year was decided at Altcur, near Liverpool, on February 17(b, 18th, decided at Allcur, near Liverpool, on February 17th, 18th, 19th. Sixty-four subscribers contributed each £25, and had the priviledge of running two dogs each. The dogs are drawn by lot in pairs, the winners to run against each other until but one is left undefeated. The favorites were badly beaten, and the Waterloo cup, the chlef prize fell to Mr. F. Hutchinson's bl. and wb. b. Honeymoen.

Wisconsin Benor Snow or Does.—At the Madison, (Wisconsin,) State Poultry Exhibition, which closed 5th March, Inst., a prominent and important attraction was the Bench Show of Dogs, to encourage which, (placing no intrinsic value upon the prizes, of course,) we offered a Forest and Stream subscription to the owner of the best setter, pointer, and bound respectively, as designated by the judges. We now learn the result from the Secretary of the Association, Mr. Richard Valentine, who is well known to our readers for his efforts to introduce our pinneted grouse into England, to whom, it seems, two of the prizes fell. We have no doubt that his success will emphasise the adage: "Well earned is well deserved." We trunsgress no law of eliquette in printing the following

JANESVILLE, March 9, 1878

BOTWN FOREST AND STREAM:—
It looks a little cheeky in the Sucretary to take two of your special premium subscriptions to F. & S., but the triange rests with my senter tho and bound Nero. I knew they were good dogs, but had no blea they would "scoop" the State. The other subscription was won by my friend J. C. Hinthcock, of Oconomowoc, Wisconsin, Jue's mother has this day presented me with twe as put to pupples as you ever saw, out of d. It Whitman's orange and white impuried Grouse, who is father to doe, Grouse trick first as a breeder at Chicago last year. I never saw a son of his that was a poor one.

V.

"JEFF" AND "FLY."—A San Francisco paper, the Bulletin, we think, thus notices the arrival in that city of a pair of dogs consigned to a prominent citizen, who is the pur-

tio, we think, thus botices the arrival in that city of a pair of dogs consigned to a prominent citizen, who is the purchaser:—

"By the overland train, a few days since, there arrived in our midst, without any flourish of trumpets or ostentation, in fact very quictly, a very aristocraric and distignished couple, buving in their veins the best blood of Old England. The gentleman was tall, dark and possessing all the characteristics of the hear-blead of a hero for a sensation novel. There was a quiet dignity and numistakable high-bread air and manner about him that indicated familiarity with good society and repelled familiarity. His eyes, large, black and of penetrating character, glanced huguidly over the gaping hoodlums, who gathered around, while the lady—fer of course there was a lady in the case—strank timidly to his side for protection from the rude admiration that greeted her. She loo, was a bruncite, with soft, melancholy eyes and a wealth of silken tresses that fell in graceful waves about her. They traveled in a private ear, with some other aristocratic stock from Kentneky, under the modest name of Jefferson. Mr. and Mrs. Jefferson, late of Philadelphia. It was observed that Mrs. Jefferson, late of Philadelphia. It was observed that Mrs. Jefferson had reasons of her own fur shriuking from the public gaze. The next census will explain. Those who traveled with them were delighted with their affathe manners, all ceremony being put uside. They are from the kennel of Horace Smith, Est., of the Fonest and Sturam, a news paper published in New York, and are called "Leff" and "Ply," and competent judges do say that they are the handsomest brace of black and tau Gordon setters that ever came to California. The sire of Jeff is Fritz, a noted Gordon setter owned by Edward Howe, Esq., President of Princeton National Bank, Princeton, N. J., and completent published in New York, and are called "Leff" and "Ply," and competent judges do say that they are the handsomest brace of black and tau Gordon setter, sent out f

ALLEOHENY CITY, Feb. 15, 1875.

EDITOR FOREST AND STREAM:—

In one or two of the list issues of your valuable paper there has been a rather Indiscriminate rebuke to will railroad men, meticularly to the huggage masters of all railroads. This is particularly to the case in the complaints of excessive charges an diagonith the exception of one road somewhere in the West. You give their charges as the same on all diagons wore than baggage masters nok for. There is not one road in the Northern States that charges this bigh tariff, look at the charges from New York to Chicago on all of the leading trank lines; the tariff is a fraction over a half cent per mile, and as it is the baggagemn's perquisite, they are, as a class, very glad its get it. Yow say that not any of this money goes but the Company's till, that it is given to them for their charge. It is not very pleasant to be cooped up in a baggage carloadred down with baggage, and then some city gent comes along with a mongrel with more instructions than there are words in Webster's Dictionary concerning his welfure, and probably he has already same half diven dogs with him, and gives the same instructions concerning them alt. Now I would say, inke the train baggagemen as a class they are a whole-souled set of men; ready to used your wants, whatever they may be in the dog hne. They look upon the sportsman is thorbest friend, (financially.) There is not one exception in a hundred to this rule. I have truveled over a great many roads and have never as yet found one baggageman with the disposition to extort from me anything more than was just and right. This particular road you speak if has a good set of employees, no doubt. Their dog clurges are higher in proportion tina may road east of Chicago.

Your letter has shone the baggagemen. Being myself a thorough sportsman, and viorer of the dog and gan, is my reason for taking up the coe for for the baggagemen, as a she relating to lake care of all dogs for a reasonable compression. Hopping you will give this publication, the remain yours most respec

ANSWERS TO CORRESPONDENTS.

A. H. G., York, Pa.-Where can I purchase the work on "Setters and Pointers," withten by Elbert S. Cyrman?

Ans-The book is not for sale. Write to Mr. Carman,

Ans—The hook is not for each.

Newton, N. J.

J. A. W. New Haven,—Will yowkindly inform me what I can do for my profester bitch. When she was last in heat (December) she was not lived, but her hag is now full of inits and greatly distended. I have tried milking, but it does not seem to relieve her. As I can find no parallel care in my book, I am ut a fees what to do for her. If you can suggest any method of drying her up so that she will be in condition for Spring side shooting, you will greatly oblige mes.

Aus.—The trouble you mention is by no means uncommon. We have had a case in our own kennel recently, Buthe the tests with diluted spirits of camphor,

Osean, Hants Falls.—What is the trouble with my blich's foot or leg? After coming down starts she holds one of her hind legs off the ground and exhibits great paln in the same, which fasts for ten or afteen minutes, then she appears free from pain and walks on it the same as the other; have examined the foot and leg but cannot find anything wrong with either. What can I do for 11?

Ans—The trouble must be from a sprain, but if is impossible to prescribe without seeing the dog. Try an embrocation of warm water.

G. W. G., Hartford —I have a valuable pointer that has had sure vyes ever sluce he was whelped. He is fifteen wouthe idd, and was himfed nearly every day last season. I notifice that after a hard day's work his eyes would be very weak and discharge a great deal of neather. He has not had the distemper. Can you tell my what I is, and if there is any cure for it?

Ans—An application of caustic, or a weak solution of sulphate of zine may help your dog; but the trouble frequently becomes chronic, and is then incurable.

Answers To Correspondents.

Amorymons Communications not Noticed,

W. A. R., Gulva, Ili,-"Forty-four Years of a Hunter's Life" is out of

LOUISVILLE, - The weather has provented the losts of Dittinge's Wood awder. The results will appear in our columns.

PROBLEM.—We have received several correct solutions of the dog and fox problem, which was answered in our last issue.

S. A. T., Reudolph, Mass.—Will you please send me the address of the secretary of that rifle club now forming in Chicago? Ans. Im ti. True, 106 Madison street, care of J. M. W. Jants.

H. G., City.—Please inform me when tront calching is allowed on light, and pad what ball is used? Ans. March 15th. Files and

CHEVALUER.—There is a paper published at Paris, France, called L Explorateur, in which much information is published from all parts of

F. K. G., Norwich.—What is the best bind of a receptacle for carrying lunch to prevent his becoming stagnant in warm neather? Ans. A tin bux bored with holes, or a wicker basket.

bux bored with holes, or a wicker basket.

Proc. Elliott Cours, Smithsonian.—We are on the track of a librelfooted ferret away out in Origin, near Comp Thirney, and will let you
know when we learn that the speciment's secreest.

A. L. R., Now York.—Will you please Inform me have to make litrel
line, and oblige? Ans. Imported linesed oil, builted for eight or ten
kours mutil it atabas the consistency of hot malasers candy.

A. D., Sing Sing.—Which has the best reputation as a gin marker,
Will, Greener, or his son, W. W. Greener? Ans. Will Growner is stead,
and his son, W. W. Greener, is the only maker of the mane.

F. C., Flint, Mich.—Samples of corduray sent by mall. The emidten
alic metal buttons are commonly used on shooting coats, but as they are
apt to scratch the stock of a fine gim, we should prefer plain covered
ones.

Miss N. P., Bradford, Mass.—I have a tailaide in my aquarina. Will it, in due time, become a frog? Ans. Your, tadjude will gradually acquire legs, drop his caudal appendage, and southe your slowders with bis evening song.

S. V. V., St. John's School, Sing Sing, "Curv you tot mir know the price of one of those rifles culted the "Hunter's Pet," and also where tean obtain the same? Ans. 32 callbre, price §20; sold by H. C. Syntres, No. 1 Coartlandt street, N. Y.

T. S. F., Montreal.—Can you inform me if I can get cartridges with explosive bullets for a small breech loading rille, chambered for long cartridges of .32, and if so, where? Ans. Yes; at either of the gan stores advertising in our columns.

J. K. L., Baffulo.—Would you kludly inform me whether there are any out fishing grounds in Cattaraugus county, N. Y.; if so, what kind of share to be caught? Ans. Cannot give you may information of prac-

Iten value.

J. H., Boston —I am about to have a set of drecoys made. I wish to know how many drakes I ought to have in the following: 40 campus backs, 20 mallayds, 20 red heads. 30 tibe hills? Ans. It is of very little consequence. About equal proportions would be as well.

P. G., New York —Will you kindly inform are where I can present a canvas knapsack, and the probable cost? Ans. Schuyler, Hartley & Graham, No. 10 Maden Lane, will self you a canvas knapsack for 25c., formerly sold for \$3.50. One such as used by milita for latter price.

Run, Brooklyn,—Can you wame a place on king I sland where there is good traut fishing, free to all persons, near to the chy, so that we can go out in the morning and get back in the evening? Ans. The only free streams that answer your conditions are those in South Oyster Bay Station on South Side R. R

INQUARER, Ottawa.—Address Samuel Wilmot, Esq., Newcastle, Oul., on the subject of stocking the lake you speak of. From your description we should think it well adapted for trunt, sud it would be well to try the experiment. Mr. Whitcher, of your town, could also readily inform you.

P. T. B., Prekskill.—Which are considered the best hunting and their ing grounds, the region around Mooschend Lake, Me., or the Aftrondacke? Are J. D. Dougall's guos considered first-class? Ans. The regions you name are both good, and it would be difficult to discriminate. Dougall's guns are derivedly inst-class.

Dongall's gans are derifiedly litst-class.

R. D., Packerville, Conn.—Please inform me. If "Shot Gun and Sporting Rille," by Stouchenge, is a recent work, and dwes it treat those subjects as they are to-day; also if his work on shooting is a new limb? Ans. A new edition of Stonchenge is advertised; the last was lewerlin 1882. Mr. Greener's second edition has been published.

D. W. C. Baston.—Will you kindly give me the length, weight, and material of the rod which you offer in your list for three subscribers; also make position on the lint are the red bands? Ans. 12 forthis length, 4 joints, 12 oz. In weight, made of ash and lancewood; red band ten inches from lutt.

A. R. H. Montreal —I see in a late number of Konvey, the Sanstan.

inches from aut.

A. B. H., Montreal.—I see in a late number of FORERT AND STREAM & mention (quite viaborate) of Waller Brackett's salmon pictures. Can you tell me if there are any copies for sale, and if so, what the set would cost delivered here? Ans. We know of no place where they are waw sold, except at the studie, 41 Tremout street, Boston; price \$9 the set.

sold, except at the studie, it Triving the street, Boston; price \$9 the sat, J. D. C., Troy.—My dishing rinks have become hose where the brasses are fastened on the ends; also the wire and silk used for typing on the rings. Can you tell me how to remedy this? What is the bird point or varnish to nee on the rods to preserve the wood? Aris. Use affeliae varnish. If your rod is a good one, take it to a tackle dealer for repairs. You can't whip your rod properly until you have been laught.

You can't whip your rod properly until you have been laught.

H. T. E. B., Chittenango.—For a year or so past, we could not catch trout, but this Spring the probablon is up, but at what due I cannot find out satisfactorily. Can you send me the wave of a book thut gives all the came laws of this Stale? Aus. "Pur, Fin, and Feather," published by Chas. Suydam, 61 Warren street, N. Y., contains the game laws of nil the States. The trouting season opens April 1st in all parts of New York State, where special exception is not made.

Fair Play, Good Ground, L. I.—In the village of Riverhead there is a taxidermist. Under the plea that the law allows it, he almula quall and partridge the year round, and all other birds, young or old, and has there cooked for his table, all under preferee that he is after specimens; so I

have been beformed. Please tell us what the law is in segard to this? Ann. If it can be proved that he shoots for the taide out of scawen, and not for science, he can be prosecuted.

To C. —I wish to go to the Adiroulacks fishing with a party of fuller, Bo so kind as to tell me what would be the best time for that perpose? And July and August is the height of the season at Paul Smith's, Martin's and Healtel's. If you wish in compout and want warm weather, take the Inter-part of August, after the fly time is over. The latter part of May, though odd, is really the best time for angling, before the flea make their appearance.

make their appearance.

Phothecipes, Philadelphia.—Can you give me the name and address of the corresponding accretary of the State Association for the Protection of Gaine in New Jursey, Mithred Search an association? Ann. There is no State Association in New Jersey. Address R. T. Miller, Secretary West, derey Gaine, Principle Society, or Chas. II. Raymond, Morris, Jown. Secretary Miteris commy Spartsman's Club. These are the two principal associations in New Jersey.

Spreedom associations in Accordance any was who embaling birday In these and a Mr. Decker in Chicogo who does it? Ans. A Mr. A. M. Decker, of Chicogo, is a taxisly mist, and we believe embalies birds. Another embalines is E. U. Cvane, of through Haplits, Mich. He embalines birds without removing the flysh, and his process is which thought of in the West. His work is seen in many of the public institutions of Michigan.

Michigan.

H. L., Syrachae, N. Y.— My hoat is made of white pine and black walmut, and has never been painted, only offed and varnished. As I do not
wish to paint it, can you fell the what to use to make a good finish and
lo stop it from leaking. Is there anything better than varnish? Ans.
If you do not wish to paint, varnish is the next hast thing, Chinese word
off would be better, but we doubt if it is to by precured. Putty the
spans and similpaper afterwards. See answer to P. O. Doll, in this

redimin.

16. D. M., New York—It a fore shapa I expect to receive from England is fore physiciants mot over a slower) and as 1. Intend to trif licen shown for strending purposes, I suppose they over not dutiable? Can you inform mo the proper present to apply to far a permit to pass them through the Castum Hame? Ans. Breeding unfinals imported by citizens of the fulled States are few only relied for their arm use. See Treasury Decisions. Probably will not be on the manifest, and will be passed when applied for.

cishins. Probably will not be on the numifiest, and will be passed when applied for.

If M. J., City —What is the best place by the vicinity of this city for dishing the first two vecks in June, striped bass preferred? Is flavoring a good place? What you be cought then bestdes blandshi? Who ls or good near to thire for two weeks? Ans. Striped bass generally banks their appearance off the coost of Rhode Island early in tone. At thermogat they run later. Hareful, have, sheepshead, workills and finitegers the principal state Barnegat, and are very shoulant. The Ridge way Brothers are favorite haymen, but there are a dozen other excellent raws, at Wavelung and Barnegat village.

A. J. A. New York.—Please inform several of your solveribers the cause and remedy of the spongy excesseness on the legs of cage blads, particularly Rughish robbis, alghitugales, and gubilindess. Bird dealers attribute the cause to other age at unclean cages, but as this discuss allers comparatively young little, t am sure that it cannot be the former, and by we duly about in the thorough cleansing of our cages and perchea, we are combined that it amone to the latter cause? Ans. The excenseences you monthm and on lag by imperfectly or improperly made parchies. Wrap the purches wills extract ways for word. The Chinese three followed this plan for eight hundred years.

ness have followed this plan for eight hundred years.

P.D. DEM., Browleyn.—Would common plane for, such as factacilly rooting, be a good thing to apply, while hot, to the scanes of a small boat (Pf feet long by about three meross the widest part of notion)? What should be the illineuslans of a centre-losent tot such a foot? Ans. Do not use for my gave host. After coulding with cutton prepared for the purpose, and sold by ship chandlers, partly the scanes of your doot. When test put in the water the so-cling of the planks will force some of the purpose, from the scane; hand your lond out and rub smooth with sand paper. Your centre-long is should be one third the length of your boat, and the centre of the trank about be one third the length of your boat, and the centre of the trank about be set inches forward of the centre of the ked.

T. W. G., City.—Con. you. Inform the where I can get a monkey.

countre of this keel.

T. W. G., City.—Con you inform the where I can get a monkey jacket, at failing cont, hinavy water pronful? Ten years ago there need to be men golds the rounds of the whaves and shipping who, for a dullar is so, would take the contata's not sufficers' courts of beneve or henry right, and reader them parterproof, or antificerily so for all proceeding agreement neither changing coint or showing sign of anything having been done to t. I have used in value of lare befind any man who did he Apply to Waterprouding Company, 35 belt street. 3d Anticlops from the West, I see, is exposed for sale, and price quoted by you. Is there one chose senson farred discrand another for anticlupe, and if so, what is the senson? Ans. As the game have af New York made no mention of anticlupe, that animal does not seem to come within their stape or operation. The law of Cohrado, passed last year, furbid a the killing of anivlops he were dan. Ist and Ang 1st, but there are other healthes to which no law versies, so that it is impossible at breatent herevent their exposure in our markets.

S. C. Me., Atlanta, G. — f towe had many disputes with my friends as

on la prevent their exposura in our nurkets.

S. C. Mc., Atlanta, G.: —I tave had many disputes with my friends as to whother we have any train in the fresh waters of the Southern Status, south at the streams of the Sine Riggs. I undutain that the Soctomorphila and the streams of the Bine Riggs. I undutain that the Soctomorphila nont other mothern waters. Will you speak authoritatively on the subspict, as your nurseer is in the final withinst Ans. There are no mountain train (solonofon fonds) in any bocalities of the Southern States that the south of the Routhern States and the States and Cavilla, Gougha, and Abdusina, more of which contain minutain troat. 2d. Will grouss of any those spitian broad and remain in the Southon States—than is, the cotina States? Awa? Gronsa are matter in Resworf, Arkansas, the Indian Territary, and other States where catter is grown. 2d. What rod is the best for trying the artificial fly on the black bass? Ans. See Feiger Anis States. Pole 19th, 1873; also present unimber.

-The West Jersey Game Protective Society Inevechased 2,000 live quail in North Carollus, which will be Jersey as soon as the Spring weather will permit. Also, through the efforts of a few gentlemen of Primeton, N. J., 400 live quality have been procured from the South and are already distributed among the farmers in that yieldity, are turned out, and are doing well.

-If the aspirations of the Bulbling Association had only here directed toward the erection of the Washington Monument, the latter would now be nearly 500 feet high, or within a few inches of the highest building in the globe, and patriots would rejoice.

-George L. Mathewson lately returned to Lyndon from a deer hant in East. Haven, Vermont, having secured five deer during his absence. He says there is a deer yard in that town five miles long, where the snow is completely trampled down, like a door yard. He believes there are 200 fleer within fifteen miles of that village.

WILLIAM C. HARRIS, Business Manager.

THE BIG HUNT-FINIS.

E have received what purports to be a letter from Capt. F. Randolph, of the Army and Navy Club, London, England, giving an outline of Mr. McCarty's proposed grand hunt in the West pretty much as it was originally printed or announced in the Forest and Stream last December. Indeed, we should fancy both letters were by the same writer. The programme looks very attractive on paper, even to us who have surveyed the ground aud conditions so often, and no doubt, if carried out secundem artem, might be made very enjoyable to the members of the expedition, with little or no detriment or damage to the Redskins and buffaloes of the plains. Capt. Raudolph has evidently not read the numbers of Forest and Stream consecutively, or he would not have sent to us to publish as news that which has been so thoroughly ventilated and discussed in its columns, taking it for granted that a bona fide Capt. Randolph is the writer. Of course, it is unnecessary to print this repetition of what has been said before. We only quote from the letter that "hundreds are anxiously awaiting the arrival of Col. McCarty in London to submit their names for his approval" (to be attached to the personnel of the big hunt), the "interest in which is drily increasing." This sounds very much like an auction, though it may be only a bid. We do not propose to discuss further the merits of the case. Our correspondents have expressed their views freely pro and con, and the expedition has been discussed solely on its merits, assuming that its conduct was in competent and upright hands, and leaving the character of its projector entirely out of the question. We do not We do not choose to join in assailing a character of which we perchoose to join in assailing a character of which we personally know nothing, though we consider it our duty to advise our readers that prejudicial reports are aftout respecting the business integrity of Mr. McCarty, which, having been published, it would be unwise for us to ignore. Our personal knowledge of the gentleman has been confined to the slight intercourse that attended the publication of the Rig. Hunt, programme. Nothing however, that here of the Big Hunt programme. Nothing, however, that has been said to his detriment need necessarily involve a prejudgment of this new enterprise of his, which may or may not prove a success, quite independently of early picty or a certificate of good moral character. We shall watch its development with no abatement of interest on account of What has recently transpired,

THE POLLUTION OF RIVERS.

THE agitation of this subject, which was so ably discussed by Mr. Fred Mather before the Fish Culturists' Association, and by various correspondents through our columns, has been considered of sufficient importance in Great Britain to be incorporated in the Queen's to the Houses of Parliament. Nor is it the first time, by any means, within the recent history of that country, that legislation has been evoked in the same direction. Existing aels, however, apply more to the consequences of pollution by sewage than to the deleterious effects caused by the waste of large manufactories, and it is to the correction of this latter abuse that legislation is now to be directed.

If a means can be devised by which these conflicting in-

terests can be reconciled in our own country, and the sewage and waste of manufactories be utilized, either in grand desideratum will have been reached, and one of the inost serious obstacles to the propagation of food fishes be removed. We shall watch all such efforts with interest. Pure water is not only essential to the existence of fishes, but to the health of mankind. He who deliberately pollules a stream, spreads disease and poison among his fellow

"A Mountain Man, Wagn!"-The arrival of our long absent friend, J. H. Batty, at our office last Friday, in full panoply of beads and buckskin, fresh from the Western plains, brought to mind the border times of twenty years ago, when the old trappers and mountain men returned weather-worn and greasy from their annual hunting trips, and were welcomed with earouse and fandango. We say, it recalled those days to mind, though neither fandange poor it recalled those days to mind, though neither fandango nor firecalled those days to mind, though dethier randings nor flagon extended its boisterous welcome to Mr. Batty; but we doubt if ever there was seen in this city a better repre-sentative of the ruddy, clastic, fearless class of heroes of border renown who fought red-skins and tempests, and those exploits have now become almost as traditional as their race

Mr. Batty has been for the last year sojourning in the Far West. Accompanying the Commission to survey our boundary along the 49th parallel, under Mr. Archibald Campbell, he remained with that party until the completion Campbell, he remained with that party until the completion of the work in Octoher last, subsequently establishing a camp near Moore's Lake in Northern Minnesota, and within the limits of the Chippewa country. In this heavily timbered, rolling district, he remained during all the cold of the past Winter, trapping, shooting and collecting specimens of rare birds. The thermometer for three days stood at 45° below zero, and for three weeks ranged from 21° to 45° below. The snow was about three feet deep on the level and the country filled with wolves, driven there by the searcity of game in other districts. Mr. Batty there by the searcity of game in other districts. Mr. Batty there by the searcity of game in other districts. Air. Batty has brought with him over 200 fine specimens of antlers, comprising everything from the spike buck to the grandfather of all bucks; also specimens of the great horned owl, Acadian owl, barred owl, goss hawks, three toed wood, pecker, sbarp-tailed grouse, deer, black bear and wolf. The animals trapped were mink, wolves, (Canis occidentalis,) foxes, raccoons, etc. Game on the whole was scarce, the Chippewas having killed a great deal and the pot-hunters being very abundant. A fine ruddy complexion indicates that the cold and hardsbips bave in no way affected our friend's physical condition.

QUEENS COUNTY AGRICULTURAL SOCIETY.—At a meet ing of the Board of Mauagers of the Queeus County Agri-Ing of the Board of Managers of the Queeus County Agricultural Society held March 6th, it was resolved that the Horticultural Exhibition of the Society take place on Wednesday and Tbursday, June 16th and 17th next; the Exhibition holding two days instead of one as formerly. In addition to the Horticultural Show there will be held a "Sales Fair" the chiest of which is to effect sales of live task of Fair," the object of which is to effect sales of live stock of all descriptions. All members of the Society and breeders of improved stock generally are expected to contribute animals which may be either for sale or for exhibition.

A few premiums will be offered for horses.

The show of dogs which proved so attractive at the last annual fair, will be one of the main attractions at the Spring exhibition. They will, if possible, inaugurate a grand plou-ing match, which will probably take place during the ex-hibition. The result will be to establish better plows, better plowmen, and better agricultural horses. The Fourth Aunual Fair wil be held Sept. 28, 29, 30. The Thirty-The Association's headquarters are at Little Neek, Queens County, Samuel Willets, Secretary.

GAS LIGHTING BY ELECTRICITY.—A correspondent sends GAS LIGHTING BY ELECTRICITY.

additional information on this interesting subject.

SALEM, March 1, 1975.

EDITOR FOREST AND STREAM:—

I see In your paper of February 25th a communication from "L.," Philadelphia. Perhapa a little further information may be of Interest. A portion of Ward Three of this city is lighted by electricity. There are twenty-seven lights, employing a wire of some two miles' length, are lighted by one person in fifteen secends, and extinguished in eight seconds. By means of the construction, if in order, they light in rotation all right; if out of order, it is immediately known by a tell tale, and the spol found out. This style of lighting has been in successful operation for six or eight months without any break down. This method is the palent of J. P. Tirrell, of Chelsea, I think, and was patented Aug. 27th, 1872, and is now known as the U. S. Electric Light Co of Boston, Mass. The details would be too lengthy to explain, but further information, I presume, will be cheerfully furnished by addressing the company as above. Yours truty,

Our patrons are eautioned against seuding money to ns by mail. Send only drafts, checks, or Post Office Or-

A FISHY PROBLEM.

WHEN the following questions came to us, we pereived at once that we should get beyond our depth if we attempted a solution, and very sagaciously, we think, turned the matter over to Prof. Milner, of the Smithsonian. Mr. Milner has waded through the whole subject, and hence his knowledge cannot be regarded as superficial. In so, disposing, of the matter heavy the superficial. superficial. In so disposing of the matter, however, we did not immediately waive all pretension to scientific at-tainments, but suggested that the rain water or surface water which collected in these holes might contain the elements of life, out of which fish were evolved at length, after the necessary numerous and tiresome mutations Having so ventured, we retired precipitately from the field with nervous alarm at our rash intrusion. Our presumption, however, has evoked the following very interesting information, which shows that mud-boles may sometimes become fountains of knowledge;

Bermingham, Mich., Feb. 14, 1875.

EDITOR FOREST AND STREAM:-

Editor Forest and Stream:—

I am importaned by several to ask of you the solution of the following:—On Luther Stauley's farm, within a quarter of a mile of this village, are two water holes, one made by scraping and plowing out; the other where the clay was taken from in making brick. Neither has any inlet or outlet; yet, in both places are numerous fish, bullheads, (cat fish species,) sbiners and a small fish resembling the bream, with flat and yellow sides; also chubs, such as are used for buit in bass and pickerel fishing. Can you give us a philosophical, geological and logical solution as to how and when these fish came there? Some of the fish are in my aquarium, perhaps twenty five in number.

Yours, J. Allen Bigelow.

United States Commission, Fish and Fighenius.

United States Commission, Fish and Figheries, Washington, Feb. 28, 1875.

EDITOR FOREST AND STREAM:-

Editor Forest and Stream:—
Your question I find to a considerable extent what you name it, "in puzzler." The starting point for an investigation of the matter would be thuroughly reliable observations of the presence of fields in excavated holes where there was no probability of there having been any communication with waters inhabited by the species, no likelihood of their having been transported by the hand of man, and no evidence of subtranspan water-yelns.

their having been transported by the hand of man, and no evidence of subterranean water-veins.

The question has come up in my experience before, from a statement made to me at Sault Ste. Marie. Michigan, that sticklebneks had been found in the deep wheel-tracks of a road after a heavy rain.

As there is a long reach of level land lying along the American side of the Sault Ste. Marie River, and as I had collected the species from a half dry dlich in the vicinity of the same road, there was nothing very remarkable in finding the fishes in the wheel-tracks after a rain that had probably been heavy enough, either to overflow the ditches or to make runlets from the wheel-tracks into the ditches which the fishes were able to ascend.

probably been heavy enough, either to overnow the discussion to make runlets from the wheel tracks into the ditches which the fishes were able to ascend.

The fact that certain species are able to retain life, buried in the mud, through a more or less long period of drouth, is well known. I have day out buildheads, (Amiurus atrarius,) and sunfishes, (Pomatis,) from the dry beds of cloughs in the Illinois prairies, where the surface of the mud had begun to crack under the drying heat of the same and other species at the surface.

The fishes of the plains of Iudin have a supposed babit of æstivation to the hot seasons of drouth. Francis Day, the inspector-General of the fisherics of India, says: "A curious phenomenon in Iudian fresh waters, and one which has never been satisfactority explained, is the sadden appearance of healthy adult fish after a heavy fall of rain, and in locallities which for months previously had been dry. When pieces of water lohabited by fish yearly dry up, what becomes of them? On January 18th, 1869, when examining this question, I was taken to a tank of perhaps an acre in extent, which was then almost dry, having only about four inches of water in its centre, whilst its circumference was smift-clay, from which, and not nearer than thirty paces to the water, five live fish were extracted from at least two feet below the surface of the mud. All were lively and not in the slightest degree torpid; these were covered over with a thick adherent slime. If when the water fuiled the fish inless a fresh supply was obtained from some other source, whish the distance from other pieces of water at which they re appear, excludes, in many instances, the possibility of migration, which must always, to a certain extent, be regulated by distance, time and other local circumstances."

There are other references to this habit in certain species from Ceylon and Australia.

stances."

There are other references to this habit in certain species from Ceylon and Australia.

The descent of fish in a rain shower, which has been asserted at different times, would, when it occurred, distribute fishes into waters where they fell. An evidence of this phenomenon may be found in the Zoology of New York, &c., Part III, by James E. DeKny. On page 170, in referring to a supposed species of the toad fish, (Batrachus celatus,) he says: "In the Summer of 1824 a number of these fish were found in the streets of New York, after a heavy shower; and many idde speculations were bazarded in the papers of the day as to their origin. An eminent lebthyologist spoke of them as unknown to our waters and not described in the hooks on lebthyology. The speculation is an exceedingly curions one, how fishes could be elevated into the almosphere and by what means kept alive after they are raised. Showers of ish are not uncommon, and are susceptible of an easy solution. They are raised by whist winds or waterspouts; and the tenacity of tife in the species under consideration accounts for their being found alive."

Mr. W. H. Dall, of the Smithsonian Institution, relates a similar phaenomenon in Boston when at school in 1862.

That fish might be drawn into the almosphere and carried for a distance is not unlikely, as in the tornado of May 22, 1873, in lowa and illinols, planks, straw, grass, hay and all sorts of light articles were carried in the spiral coils of the "funnel-shaped cfomi" wherever it was seen.

I have not, as you see, made an attempt to decide positively as to the

seen.

I have not, as you see, made an attempt to decide positively as to the mode in which fishes found their way to the waters which Mr. Bigelow describes, but have merely suggested the means by which the presence of fishes in such locations night be accounted for.

Yours truly,

James W. Muner.

THE WOOD POWDER QUESTION.

DENDING the results of the trials with Ditimar's wood powder, kindly made at our request by several gentlemen, we gladly give space to the letter below, describing various tests of the Schultze powder against the black grain. The result shows decidedly in favor of the latter; but wo apprehend, from various reports which reach us, that Mr. Dittmar's will be found to be a superior article to that which is now attracting some attention on the other side of the water. If "Algona" would like to continue his experiments, substituting the Dittmar powder, we will gladly furnish him with a supply from our office:—
CINCINNAT), March 8th, 1873.

CINCINNAT), March 8th, 1873.

Having noticed many inquiries in your paper lately concerning the mer its of wood powder, I thought. I would give you "my experience" will this new explosive compount. All the experiments below quoted were made with Schulize's twood powder. As you will see by the dates, Car Ditmar's powder was then nuknown to the market. Sometime, if the weather ever does moderate, I hope to give Dittmar's powder a chance The first experiment took place on April 30th, 1874. Gun No. 1 was Dougall, pin fire, 12 gauge, barrels, 30 inches; weight, 64 gounds. Gu. No. 3 was a gun of the some excellent make, and of like dimensions, but was a central fire, and weighed 7 pounds. "The charge of both guns was 3 drachms wood powder and 14 onnce No. 7 Tatham's shot, equal, on as is a ceutral fire, and weighed 7 pounds. The charge of both gons was frachus wood powder and 14 onnee No. 7 Tatham's shot, equal, on an erage, to about 327 petiets to the load.

Gun i	No. 1.	Gine 2	Vit 2.	
Right.	Left.	Right.	Left,	Averages.
118	128	145	158	
116 109	116	1:17 j	185	No. 1-119
100	131	13li	171	No. 2—100
313	375	448	314	

The next dote is May 6th, 1874. Then we used gun No. 2 only. Her I made a trial of black powder (Laflin and Rand's Orango No. 7 Light niog) and Schullze's powder side by side, with this result:—

Black F	owder.	Wood I	owder.	
Right.	Left,	Right.	Left.	Average.
191 201 178	184 16; 202	155 159 189	173 178 176	Black—186 Wood—165
570	517	463	527	

I have forgotten to mention that these targets were made at a distance of 40 yards, 30 inch circle.

of 40 yards, 30 inch circle.

On examining our results, we find that the average of the black powder exceeds that of the wood powder by only 21, which shows that the wood powder is not so very inferior after all. Let us look farther on.

On May 23d I tested the same brand of Laffin and Rand's with Depont's Ducking No. 2. I will not give the targets. I found that Dupont's grain, being the finer, better suited a No. 12 gun. Both brands seen to have the same predefation. With the Laffin and Rand, at 100 yards, 34 drachms, 14 ounce No. 5 shot, I put 20 pellets in a 30 inch circle. White with the same charge and distance, with Dupont's I only got a target of 13 pellets.

3 pellets.

On July 30th, with a charge of Laffin and Rand's, 3 drachms and the once No. 7 shut, I made a larget of 241 in a 30 inch circle.

On August 4th I made another trial between wood and black powder; ame canditions as before:—

Wood	Powder.	Black Po			
Right.	Left.	Right,	Left.	Average.	
143	69	256	256		
1(0)	185	162	274	Wood-141	
146	162	222	189	Black-226	
479	366	610	719		

This gives another victory for the black powder by a majority of 85. The shot of both the right and left barrels was 256. This I consider remarkable, not only on account of the coincidence, but becane of the great number of pellets each contains. But not to take my valuable space with figures, allow me to give my conclusions.

I betteve that wood powder has not the strength of good black mowder. In a gun capable of shooting as strong as the one I used, wood powder should be used on quail and snipe exclusively. I think the wood powder with which I experimented was the strongest of any in creation. If it was not, I have been misled as to the merits of this compound. I await with anxiety the report of your committee examining Dittmar's powder, for if they make Dittmar's powder a stronger explosive than Schultze's all my experiments go for nought. Schultze's powder, I am satisfied, is too weak for ducks at tong ranges, although I have seen some wonderful long range shots male with it. For pigeon matches this brand can be safely used up to furty yards. I have killed birds instantly at twenty-one yards with this powder, and have merely ruffed feathers with it at eighty yards. As acquaintance of mine made with his own bands a tuh full of wood powder from Schultze's recipe. He used this on ducks, and for a time effectually eclipsed all the black powder of his companions. Gradually a change took place, and within a month or so the black powder devease. I do not think this decrease of power is due to the damp, ness of the atmosphere, but rather to some change which takes place in the constituents of the powder, from the manner in which they see compounded. This, however, I will not affirm until I have proven by experiments which I am now conducting. As I have now had my say, I will stop before I put on paper some of my theories, to which I see I am drifting.

-The bill introduced in the legislature of New Jersey for the preservation of fish in the Passaic River and its tributaries is one of much importance in its bearings upon the future fish supply of a large portion of the State. facts are these:-The rivers mentioned in the act are in habited mostly by small fish, the larger ones having been taken in the nets with which they are dragged; these nets are owned by a few persons only, and a large proportion of these, besides taking very small fish for use, throw away those which are too diminutive on the banks or on the ice to die, instead of replacing them in the streams for propagation, so that angling in them is almost a thing of the

The head waters of these rivers have recently been stocked by the State commissioners of fisheries with choice fish, but without special legislation to prevent the catching of them in nets it will be of little avail; hence it is of the greatest importance that the bill should pass. It is emphatically a measure for the people—its only intent being to prevent fishing in these streams with anything but hook and line.

The law proposed is a most stringent one, and the details are so carefully guarded that if passes it will not remain a "dead letter" on the statute book, but will be rigidly en-

SOUTHWEST FLORIDA.

BEING NOTES OF A TOUR OF EXPLORATION-BY OUR OWN COMMISSIONER

Tills is the 25th of February, and I timl myself the guest of that prince of hotel keepers, J. B. Togni, of the Metropolitan Hotel, Jacksonville, Florida, I am convinced that you expected a few paragraphs descriptive of the Southwest coast of Florida from "Al Fresco," at an earlier day, and I deem it advisable to offer an explanation for my apparent neglect. I am somewhat of an old fogy, and compelled to wear glasses, and as these were hist over-hoard in Charlotte Harbor, I could not direct my pen, and in consequence your readers have not suffered from my pen

On the 5th of last December, I left New York on the steamer Gulf Stream for Charleston, in company with Frank and Harry, to whom I shall refer in the future. My boot, (the Sprny,") with necessaries for the trip was shipped at Philadelphia for Savannah.

On the night of the 7th, Hatbras favored as with quantum suff, of wind, and a cross sen without any foot. Although an old sea dog, I was forced to succumb to the remedial measures of old Nep. After many voyages we fancy that we are competent to express an opinion regarding the saw going condition of steady ships the saw going condition of steady ships the saw going conditions of steady ships the saw going conditions of steady ships the same going the going the same going the same going the same going the going the going the same going the going the going ing the sen going qualities of steam ships and salling sels, and have no hesitation in stating that the Gulf Stream is remarkable for many good qualities in a heavy We reached Charleston on the 8th at 9 P. M., and at 11 P. M. found ourselves in one of the comfortable state-11 P. M. Jouint outselves in one of the comfortable staterooms of the good steamer, Dictator, en route for Savanmali. The latter place we reached on the 9th at 6 A. M.,
and at 12 M. left for Fernandina, and arrived at the latter
place at 1 A. M. on the 10th, where we landed the
"Spray" and her crew.

We have visited Florida on many occasions, and have
tested the sea going qualities of the Dictator and City
Point, plying between Charleston, Savannah, Fernandina,
Jacksonville, and Palatka, and can unhesitatingly recommend them to the traveling public. The traveler who

mend them to the traveling public. The traveler who patronizes one of these boats will find large and pleusantly furnished forward and after cabius, large staterooms, good beds, clean linen, an excellent table, and last, though not efficient, courteous and attentive officers and servants To those who are anxious to escape the bulletings of old mother ocean, we would say, take a sleeping car on the Λ . & G. R. R. from Savennah, and Jacksmeville can be reached in a pleusant manner. Upon reaching Savannah the travin a pleusant manner. Upon reaching Savannah the traveler will find the Lizzie Baker advertised to take the inside route to Florida. The statement is only true to a certain extent, as the Lizzio B, is compelled to take the outside route from Fernaudina Harbor to the river St. John, which is the most dangerous portion of the route, and as the Lizzie B, is not as well adapted to cross the St. John's har or to contend with heavy seas as the Dictator or City Point, we unhesitatingly advise the tourist to take passage on one

Having shipped our fature home, the Spray, on a ear, we left Fernandina on the morning of Friday the 11th, and at 5 P. M. found ourselves at Cedar Keys. We traveled over this road in February 1873, and compliment the management upon the improved condition of the road bed and motive power. One great drawback to Cedar Keys is the absence of a good botel, and we are satisfied that a well enducted house, with a good table and properly cooked food, would induce many tourists to visit this locality. Fishing, hunting, and shooting in the neighborhood is good; the bathing excellent, and the climate superior to that of Jacksonville. It seems to us that parties interested in the railroad would materially benefit themselves by erecting a first-class hotel at Cedar Keys.

We expected to leave Cedar Keys for Manutee on the 12th, by the steamer Emille, but owing to the detention of the steamer Clyde, plying between New Orleans, Cedan Keys and Havana, our departure was delayed until the 15th. To while away the dull hours, we proposed engaging in piscatorial pursuits, but were informed that "it was too warm for sea trout to bito," Placing no dependence in the statement of the local authorities, I was resolved to test the matter, and secured several hundred minnows and proceeded to the railroad dock. With live bait we cought sea trout (weak fish) ranging from two to six pounds, as fast as we could hait and land them. On many occasion we landed a brace weighing from four to five pounds each, The first day we filled a flour barrel, and the second abandoned the sport when we had captured 120 pounds. Around the dock see has and porgies can be caught with cut bait, and sheephead with fiddlers. On the points and about the reefs a few miles from town, superior red and grouper fishing can be obtained at Cedar Keys. The sportsman will find unbounded hospitality, and conricous attention on the part of the inbahitants. Invitations to join hunting and fishing expeditions were showered upon us, but we were forced to decline. From this point the tourist may take a steamship to New Orleans, Tampa, Punta Rassa, Key West, or Havana. For the purpose of crulsing along the coast, or general sporting purposes, suitable hoats with experienced sailing masters can be engaged at from four to six dollars per day. Persons desiring information, wishing to secure boats or the services of sailing masters, may address Messrs. Willard and Raoux, or the post master, J. F. Jackson. These gentlemen would only be too happy to furnish any information required, as well as assist sportsmen in every way upon their arrival. If these gentlemen are called upon by the disciples of the roll and gun, we will guarantee them a bearty welcome, and any

assistance required, At this point we were introduced to a gentlemm named Affred E. Janes, residing at Homosassa, who lavited us to spend a fortnight at his residence. In a future communication we shall refer to his bospitality and the attractions of his lacality.

At Cerbir Keys we lustituted numerous enquiries regiral-At Ceron Roys we distinted numerical empiricas regarding Brousing, the county sent of Lavy rounty, distout thirty miles from Ceder Roys, on the line of R. R. to Fermandian. Fore from New York to Brouson by Ifermout Belighe's line (via Fernandian) \$25. In the meight carbon line was a look, and of Bronson deer are plenty, also durkeys, brant, duck, and aparticum be found in abundance. Chunky Poud is distant from the village about two miles; it is about two miles long and one wide, connecting with a number of smaller pouls which extend for a distance of about nine roites. These ponds contain largem and trout (bass) in cudless made. These ponds contain laceum and trout (bass) in cadless madbers—the latter ranging from one to lifteen pounds. Persons'visiting, or desirons of visiting Branson, would do well to call upon or communicate with Mr. G. Levett, the county clerk. The lattel at Branson van accuminolate of tent visitors; board \$7 per week. Dr. Johnson would necommodate two or three, and Mr. Levett, the same number; board \$5 per week. As a guide to the bast lishing points, the visitor can seeme the services of James Prinhen, and for deer and turkey hunting, J. L. Tunlon of W. B. Kinsey, bers-the latter ranging from one to lifteen pointels. Per-Kinsey,

We spent several days very pleasantly at Cerbir Keys and made numerous nequalitances, and la camelading I cannot refrain from referring to a local institution. One evening at 9 P. M. Messes. Wilhird & Raidix invited us to visit the rear of their store, where we found a purthor of the shell of a holler, supported by brick plers; under the boiler was a large fire, and on the top thereof two harrels of Center Kowe bysters. As the large made the professional the supports of Cedur Knys' nysters. As the limit opened the dysters the crew of the Spray went for them, and I must positively decline mentioning what proportion of the oforesult nysters the Sprayites deposited henvith their belts.

At. Phieseo.

[By one own Carroquoideid.]

NOTES FROM MICHIGAN,

THE weather has moderated almost shown to a thaw, with a deep snow still extant. "Mercy bells, high ing girls, tool princing steeds inviting," so I gladiy accepted a proffered ride to the fishing banks of Sugimmy Buy in company with that obliveterm hunter, dadge Completh, and the acides enthusiastic C. C. Fitzhagh and his bruther D. 11., of grayling celebrity. Notwithstanding his alis-claimer to the honor of first introducing this ''coming lish' to the public, he connot whally divest bluself, through his innate modesty, of a large share of the credit which a gen-erous public is ready to averibe to deserved though modest

We took the ice four miles bellio mouth of the eiver, where visions of numerous cobbis opened upon us to the limit of sight, and multiplied by aid of a field gloss. After rolling to scaward five fulles further, we alrew up to the "Grand Central," is hotel and grovery combined, where we disemborrised from our sleigh and took a survey of the level and fishing buts, extending on all sides to the horizon. One would hardly helieve the number of these seven-by, nine simulies, which all up the space or area of vision. Eleven humbred would not be an exaggeration. I attempted to count them with a glass, and gave up in despulr. They are coslly fitted up, with a stove in one corner and a hunk or two to accommodate its occupants; and is they have stood the test of this server Winter, they were man very comfortable. Each lands is bented about a rife shot apart, so as to give the ilsh a wide berth. A hole is made through the ice in these structures, thirty faches in diameter on the top, flouging to sixty at the louton, the thick-ness bring thirty inches. The doors are close to observe the light, and over these looles the fishermen lodd their rev olry through the still watches of the day, with polecd spear in hand watching the wary ilsh, lared by the wooden lish bait to within reach of the merring aim of the foe, who are often rewarded by a twenty counter, and occasionally some reaching lifty pounds, though the average is not above twelve. These solution trion, or Mackinow tenni, as they are called here, are only ranged right or ten aides out In the boy, while within that distance the pickerel, or woll-eyed pike, is the sole reward of their labor; the first bringlng, at the eatch on the ice, seven and a half rents, and the latier four and a half. Wholessle dealers are, as everywhere, on the abert, and readily buy up all as fast as enuglit, to be immediately shipped to market be a frozen state. Phis trade will soon be over as the Spring approaches and the brenking up of the ice commences, when these little habitations will be seen moving heatily adopt our shale, to remain for another senson. Thousands of lumbermen have been thrown but of employment, and have taken to this means of livelihood. Like the victims of the grassboppers in the West, they have turned to the chase, and the market

in the West, they have turned to the chase, and the market is thereby glutted with game.

Speckled troat are reported to be pleuty in the streams running northward, the head waters of which are reached by the Jackson, Lansing and Saginaw Rallrond, say 115 miles from this city, to its present terminus beyond the Au Sahle. Short carries may be necessary, but no more than could be expected on any fishing expedition. The great desire is to see our "editor in chief" out in this section during the season, and many includes the hope that he may make himself visible in these quarters, where he can (they say) plant himself in a well equipped boat and fish the grayling down the Au Sable 175 miles to its mouth. I need

not inform him that he will fimil a hearty welcome hy as true men as ever cast a line, with hearts and purses open to make him glad. I do not say this of my own free will and accord, but because the same has been liberally expressed by many readers of his piscatorial emanations.

Deer are not found to any extent north of the Au Suble, except in the vicinity of Thunder Bay and along the western shore of Lake Huron. For the further protection of this genus, a petition is before the legislature of this State changing the limiting season from the months of October, November, and December, and substituting in lieu thereof the words "from the 15th of September to the 1st of De-cember." This is made necessary from the fact that hunters from other States have been making raids on this spe-cies of game for Eastern markets to such an extent as to cies of game for Eastern markets to such an extent as to cause alarm in our midst. From two stations alone on the railroad 1,700 were stipped last year. Another chanse in the petition is to change or lessen the number of days of transportation from thirty to ten, so that express and railroad companies will be debarred from transacting such wholesale business as heretofore, respecting game. Also, is a like petition before the touse for the protection of grayling. As it is found, that their sansyning season is not as As it is found that their spawning season is not as supposed—the same as the brook trout—they find it essential, in order to protect this "coming fish," that new laws must be made to meet the exigencies of the case, and so snys yours truly,

Bay City, Michigan, March 4th, 1875. BARKER.

The Rifle.

THE INTERNATIONAL RIFLE MATCH

THE joint committees of the National Rifle Association and Amateur Rifle Club held a meeting at the office of Col. Wingate, on Friday afternoon last, that gentlemen in the chair, at which were present Gen. Woodward, Col. Gildersheeve, Captuins Bruce and Fulton, and Messrs, Alford, Bird and Philips. The following subscriptions were announced as laving been received. From A. T. Stewart, \$500; John W. Masury, \$25; Gen. Franklin T. Stewart, \$500; John W. Musury, \$25; Gen. Franking Townsem, \$100. The Chairman announced that he had alisposed of tickets to the amount of \$100. The First Di-vision staff have engaged a box for the benefit performance at the Academy of Music, April 2, at \$100, and have also taken 300 admission tickets, at \$1 rach. Royal Phelps has contributed \$100. Mr. Bird, President of the Murray Hill Dramatic Association, who will offer the performance, aunounced that he had sold \$900 worth of tickets, and also mentional that thus far \$2,500 worth of boxes and tickets had been disposed of by the exertions of eight gentlemen only, in an moufficial way. The Chairman also mentioned that the proposed match between Canada and American riflemen was number discussion, and that a meeting of the council of the Ontario Rifle Club would soon be held and the matter closed.

Col. Wingate also mentioned that he had received au offer of a challenge from a rifle association at Poona, East India, dated January 26, in which Mr. Adam Smith, Hononury Secretary of the Poonn Rifle Club, speaks of the re ccipt of the news of the American victory at Creedmoor in September last, and asks about the rifles used by the Amerlseptember list, and asks monetons times usen by the Americans, and concludes by saying. "I should be glid to know if we can arrange a simultaneous rife mutch between India and America towards the Fall-of the year, six or eight on a side, ten shots at 200, 400, and 500 yards, with 577 bore ritles on one day, and ten shots each at 800, 900, and 1,000 yards, on the following day, with mutch ritles, the whole in any position. I should be glad to hear from

you on the subject, &c.,

The Amateur Club special meeting was ordered to be held at the First Division Remlezvous, 11 West Thirteenth street, on the eve of March 17th. The Secretary reported that Mr. J. F. Luther had offered to present a hands me gold badge to be shot for by the members of the Amateur Ritle Club during the coming season on the following terms: Distance, 800, 900, and 1,000 yards; position, auy; two sighting aud five scoring shots at each rauge; weapon any rifle under the the elub rules.

RIFLE TOURNAMENT.—A competition at short range was begun yesterday at Mr. Conlin's gallery, No. 930 Broadway. The ostensible object of the tournament is to select a team of twelve men to compete with a similar number at short ranges; but the practice, as well as the instruction gained, cannot but prove beneficial even to those who aspire to proficiency at the longer distances. The tournament will remain open for thirty days, during which time Mr. Conlin will take pleasure in making marksmen of those who desire it, and who are in possession of the requisite eye and nerve. With regard to the match for the short range championship, it can easily be arranged when the team has been selected, and a challenge made through our colinuus will meet with acceptance from a source of which we have present cognizance.

Dominion Rifle Association.-This organization has held its annual meeting and appointed a term to represent it at Wtmbledon. Twenty picked men have been selected, of whom Nova Scotia sends eight. Under the fostering care of the Governor General and the liberal manner in which he has dealt with the Association, rifle shooting is in a very flourishing condition in the Dominion. Its mode of selecting a team, although probably not resulting in as strong a one as it would be possible to pick out, still has the advantage of opening competition to the entire force,

CREEDMOOR SPRING MEETING .- The Board of Directors of the National Rifle Association have decided to hold their Spring meeting on Thursday, Friday, and Saturday, May 27th, 28th, and 29th. The following is the programme

allopted:—
Thursday, May 27.—Directors' match, open to all Directors and Honorary Directors of the National Rifle Association; distance 200 yards; two sighting and five scoring shots; entrance fee, \$1; prize, Directors' gold badge. Second match, short range; two sighting shots and seven scoring shots; entrance fee, \$1; prize not determined.

Friday, May 28.—Third match; Leech Cup; distance, \$00, 900, and 1,000 yards; no sighting shots; no previous practice on the day of the match; fifteen shots at each range; the trophy to be held for the space of one year by the winner.

Saturday, May 29.—Fourth metals, williage a local second.

Saturday, May 29.—Fourth match; military short range; distance, 200 yards; two sighting and seven scoring shots; prize not determined. Fifth match; military long range match; distance, 500 and 600 yards; two sighting and seven scoring shots at each distance; prize, a Remingtou Long Range Creedmoor Rifle.

-The Callao South Pacific Times of February 16th, gives the following account of an exciting match between the American and Prench rifle clubs of Lima, Peru, which took place at the range of the former in the Piedra Lisa Gardens, in the presence of a large and enthusiastic hony of spectators, among whom were the Governor of the ilepartment and many other persons of note. The challenge was sent by the Americans and was promptly accepted by the Frenchmen,

the Frenchmen.

"The team was composed of eight of each club, the Americans having only twenty members to choose from, while the Frenchmen had cighty. The prizes were oue Remington rifle, given by the American Club, for the club making the best score, and a beantiful silver medal properly engraved, on one side in English and on the other in French, given by both clubs for the highest individual score. The Frenchmen won the toss, ami chose that the Americans should begin. After the third round the Frenchmen were fourteen ahead, but after the fourth the Americans were seventeen ahead, which lead they kept till the tast, winning the match with a score of 385 to 292 of their antagonists. The turgets were two feet round and six inch unliseye, ruleil every iuch and numbered 1 to 12. The number of shots for each contestaut was ten. The silver medal was won by J. H. White, Esq., of the American Club."

Game Bag and Gun.

GAME IN SEASON FOR MARCH.

Sulpe, Ducks and Wild Fowl.

GAME IN MARKET.-The milder weather has resulted in GAME in Market.—The milder weather has resulted in increased supplies of canvas back and red head ducks, and a consequent reduction in prices. The former are worth \$2 25a\$2 50, and the latter \$1 50; mallards, \$1 25; black ducks, 75e.; widgeon, 50c.a75e.; wild geese, \$1 50 each; brant, \$1 50 per pair; wild turkey, 25e. per pound; wild pigeons, \$3a\$3 50; squabs, \$4 50a\$6; English snipe, \$4 50; plover, \$4 50; bay snipe, 75e.a\$1; Canada bunting, \$1; curlew, 75c. per pair; rabbits, 75c.; hares, 75e.

-Duck shooting is now in full blast near Havre de Grace, and on the Susquehanna, Potomae River, Chesapeake Bay, and other localities in the latitude of those

-Jack Rabbits abound in Utah. Lately a party of six hunters killed 168 of them in two hours, on forty acres

hunters killed 168 of them in two hours, on lorty acres of ground.

Greenfort, L. I., March 16th, 1875.—I have just received a letter from Mr. W. S. Foster, an old and experienced gunner on Shinnecock Bay, at Chrituek, and other places, and I wish to give you the substance of what he writes. His gunning home is at Pond Quogue, on Shinnecock Bay, Good Ground P.O., L. I. Billy says that he has just returned from a three months' eampnign at Currituck, N. C., "but owing to moderate weather, low tides, and decrease of ducks, we had rather poor sport. There are now right clubs between Buck Bay (head of Curritnek Sound) and Great Gap, chiefly gentlemen from New York and Boston, and yon may add to the list some three hundred native professional gunners, so that there are small chances for a duck to pass into the marshes without being killed." He adds that the new inlet just opened in Shinnecock Bay is hut four feet in depth, so it would be dangerous for craft drawing more than that depth to attempt to enter. But he says that the julet is improving, and thinks that there will be a good chance this Spring for geese and ducks, which are now coming in in considerable numbers. He says if any gunners wish for a little sport at his place with the will see that they are well cared for, as he has "good accommodations and plenty of live geese decoys on hand, and the best meu to go with the coming sportsmen." Yours truly,

Long Islann Sound, New York, March 8th.—As I know

Yours traly,

Long Island Sound, New York, March 8th.—As I know it will stir the blood of ull old duck shooters, I beg to report the following:—

"At sundown, March 4th, my son Charles Henry Meigs, accompanied by his brother-in-law, Charles Campbell, crawled down upon a large flock of "broad bills" near the bonse of his father-in-law, Mr. J. Campbell, at "Mannaropeek" on the Sound, and, at one discharge of two double guns, bagged twenty three (23) fine birds, and counted seven other wounded birds which escaped capture!

Beat this who can! with four barrels in this latitue!

Chas. A. Meigs.

Lowa Redfield, lova Mar. 3.—We had a terrible Winter on

Iowa, Redfield, Iowa, Mar. 3.—We had a terrible Winter on Iowa, Redfield, Iowa, Mar. 3.—We had a terrible Winter on quails: pretty much all perished except what few collected about feed yards. Iowa sportsmen should see that they have full protection for at least two years to come. We have had guus in order and shells loaded for the last two weeks in expectation of geese and ducks, but "mary a one" have we seen yet. It has only begun to thaw here.

O. H. HAMPTON,

Mississippi—Corinth, March 13th.—We had a heavy snow storm here on the 7th inst., which brought before it a great many pintail ducks. They filled the ditches and ponds, and even settled down in the open fields. Every ham and boy that could get a gnn was ont after them on Monday. The next day the sky cleared up, the sun stione bright and warm, and the pintails departed from whence they came, having left many of their winged comrades dead on the field. Snipe are plenty, but fearfully wild, getting up out of shot, and 'scaiping the whistling charge of No. 9's. A few woodcook have put in an appearance. My friend Dincan and I gave bob white a parting salute the other day, and bagged twenty-seven in four hours. The voice of the gobbler will soon he heard in the had, when we hope to bag a few. Weather cloudy and warm; mercury to-day 63. Streams higher than for years.

Texas—Gainesville, March 5th, 1875.—Some fishermen

bag a few. Weather cloudy and Guyon.

Streams higher than for years. Guyon.

Texas—Gainesville, March 5th, 1875.—Some fishermen and trappers have been catching fish and beavers at the mouth of Fish Creek, on Red River, eleven miles Northwest of this place, during the Winter. This county has been settled thirty years and those are the first beaver that have been eaught I think. I have seen their sign along the river ever since I have been in the county. I moderstand that a forty pound cat fish was taken recently. Mr. W. T. Perry, who lives two miles west of town, went turkey hunting a few days since, (heing on horse back; as we most always hant here) and took his hounds along (the black and tan fox hound, better known here as "Flop-ears,") and without shooting chased down and caught three wild turkeys before night. Turkeys are frequently caught here in the Summer time with greyhounds, but this is the first case I have heard of their heing caught in the Winter time and with common hounds. Black bass have just put in an appearance on our streets.

—The Cuvier club, of Cincinnati, now embraces 260 members. Its officers are:—L. A. Harris, President; J.W. Beesley, W. B. Smith, and T. J. Stephens, Vice Presidents; Thos. A. Logan, Corresponding Sectretary; J. F. Blackburn Recording Secretary; Theo. Marsh, Treasurer.

Blackburn Recording Secretary; Theo. Marsh, Treasurer.

—The County of Peterboro Fish and Came Protective Society of Cannda, held their first annual meeting on Wednesday evening, March 3d at the Huffman House, Peterboro. The President, John Ludgate, Esq., took the chair at cight c'elock and opened the meeting by calling apon the Secretary to read his report. The election of officers then took place and resulted as follows:—John Ludgate, President; Major C. A. Boulton, First Vice President; William Eastland, second Vice President; C. A. Post, Secretary and Trensurer; E. H. D. Hall, Conusel; Special Committee, E. J. Toker, John E. Hammond, G. B. Sproule, Robert Walton and Richard Meade. A general committee was also appointed, consisting of a number of the leading gentlemen sportsmen of the town and county, whose names gnarantee the society as firmly established, and that they mean business from the start. Two parties have already been proseented by the society, convicted and fined; the one for killing deer during the close sensou, and the other for selling speared bass. The society's membership list has now upward of seventy names, and its future prospects are all that could be desired.

GUN TRIALS

No. 24 ELM STREET, BOSTON, Feb. 24, 1875.

EDITOR FOREST AND STREAM:-

EDITOR FOREST AND STREM:—
Frequently, in your columns, as well as many of your contemporaries, the question crops up of shells for breech loaders, which the best, paper or brass, numerous opinions being offered as to the merits of either. Belleving that brass shells, more particularly through facility for repeated re-loading, must altimately take the precedence, still it is not for the purpose of specially advocating the claims of either that dictates my remarks, but more for the purpose of securing uniformity during trials in testing the advantages of either one or the other, and decidedly in the case of shells intended to be re-loaded.

case of shells intended to be re-toaded.

A pair of barrels, when put together, with hardly an exception, converge towards the muzzle. The thickness of the breech necessitates that this be the case. Now, breech loading actions at the face exhibit a plane, or, in other words, a straight line right across. It must be evident, under such circumstance, that the axis of the bore, or chamber, is not in a position true with the face of the action, and, therefore, the base of the shell does not lay solid with the breech piece. This I conshirt, at least, with best work, should be more studied than it is at the present time, and would save much of the difficulty that is frequently experienced with re-toaded shells, also saving many chances of variable results.

present time, and words are body as saving many chances of variable results.

In some guns this error is much more palpable than others. In second and third quality work, where barrels from the grinder's hands are left heavier, when coming to the filter's bunds so as to give them the apparent sweep out of the centre, are pulled close together one-third from the breech end, the barrels thus converge still closerthum an ordinary straight line from breech to mazzle. To prove this, lovert a pair of new cartridge cases and it will be found that to have them that at the side where the two barrels join, leaves them below at each of the opposite sides of the barrel. When the explosion takes place this part of the case has of course to extend itself till it fin-bes with the breech plece. Solidity is thus lost, and also betokening a still more unequal base if the cartridge after re-loading is inserted in a different manner. This, when the rims are only the depth of the shell rim, prevents the run from closing properly. The only feastble remedy for this is, that the breech plece must at its face make opposite each barrel an exact right-angle coincident with the axis of the lore, thus producing the appearance of a very obtuse angle. To hollow it does equally as well. In my own case, in using this shape of breech plece I have always found the best results, and the trouble of using re-toaded shelts reduced to the minimum. It enhances more labor to the huliding of the gan, but when we see that the shell question is baring so much discussion on both sides of the Atlantic, it to just as well that we may bave as perfect a gun as can by skill be proceived.

I remain, &c.,

D. Kirkwood.

A CARD TO MOOSE HUNTERS.

NEW YORK, March 8, 1875

Entron Forest and Stream:

As this is the season when moose limiting is most successful, owing to the hird crust chich covers. The deep since in the North Woods, and makes it in easy midter to overtake those great, uscainly animals, I wish to say a few words formouse hunters. It must be home in midd that every full grown covernouse, when heavy, as they are now, carries two calves, and therefore the cows should be spared at this season. The mont of the young cows is in course ranch better vating than that of old builts, but the law provers moose during their breading season, and it should be respected. Your correspondent "E.," January 2811, says flutamoose are more plenty in Maine than usual. If now all hunting and killing of citos, will their imbore calves, could be stopped, there might again be good muose hunting in Maine.

As the Furrest and Stream circulates among sportsmen "down East," I hope that these few lines may proven the hunters with reup a rick reward next full hunting moose on the lates and rivers of Maine and New Brenswick.

The Maine moose law is defective because it contains no appropriation for wardens, and the provisions for en-

no appropriation for wardens, and the provisions for enforeing it are feeble. -- ED.

CONCERNING BORES.

MONTREAL, Murcle 5, 1875.

Montreal, Murch 5, 1875.

Bottor Forest and Stream:—

In your number of Murch 4th "E. O. II." complains that in my advice as to charges for shot gains, in your paper of 28th Junuary last, I have made no neution of bores. Now, I can only say that the boro has very little to do with the charge fill you get under 14. As to "E. O. II." statement that in 12 hore of a given weight recoils more than a 10 bore of same weight, it is directly contrary to my own experience of the past season. I shot hast Pall with two central fire breech loaders, one a 10, the other a 12, each weighing one or two onness over eight pounds. I must say that with the same weight of powder and lead the difference to recoil was imperreptible; if there was any difference, the 10 bore pashed a little harder of the two. "II." talks of a 10 bore, 6; lbs. weight, with a charge of four drachms. Should be shoot any such charges in so light a gain lie will some thay be a subject for a coroner's inquest. "Ten bores are rarely made lighter than eight pounds, and instally run from 3; in 10 pounds; 12 bores may be made doten to 6; pounds, but are even then investicable. A 16 hore would be more suited to that weight. I must egalu repent, that the charge most suited to a guin deponds to a fir greater extent on the weight than bore of said guin. I have shot for six-lean or scenteent years, and have used gins from about 22 gainge (obt that locks) up to No. 5, which latter used to throw three onness of shot and to elve ilmichans of powder (weighing aliont 28 lbs.). As soon as the weather curus in the couple of my friends are going to help me with a sories of experiments to test the following gains: 10 bors, 30 lach latters; No. 5, is a new Parker that has not been fired. We Intend also carefully testing with hoth paper and metal shells, and will use charges from three and continue up to five drachms of powder and one once in one and thin ounces of shot. When we get through the trial I will send you a review of the performances of all three gans. I have written

ADIRONDACK SLAUGHTER.

ADIRONDACK SLAUGHTER.

FENTON HOUSE, NO. FOUR, Lewis county, N. Y.

EDITOR FOREST AND STREAM:—

I read an article in your paper on deer slaughter in the Adirondacks, and I desire to say a word in condenuation of this unsportsmanlike practice. I reside in the Adirondacks, and know whereof I spoak, and I fully concur with "II. B. J.," of North Adams, Mass., that not one-fifth of the deer that are killed are shot by sportsmen. In the ciclisty of my residence, on the ponds and lakes of the Benyer River and its witheraries, nearly one hundred deer were killed ast Fall, infer all the sportsmen had left the woods, by frappers and malers, but more by the old fogies that live wear the wilderness and make some pretentions to fox hunting, and therefore keep hounds, and late in the Fall, whom the ground begins to freeze, so that deer run to water much more readily, they go in large purities into the woods with their kounds, and as it requires hut little practice and skill to bunt in this way, they manage to simighter a good many deer. I know of one party that killed appeareds of twenty deer last Fall. I have seen racks for drying and jerting vention forty feet long, mado and used by those deer exterminators. In 1871, aided by prominent sportsmen of the State, I procured the passing of a law by rear Legislature prohibiting the driving of deer with dogs, and a heavy penalty for killing a deer in any of the waters of the State, driven in by dogs. But this haw was perhaps too stringent, as it cut off the sportsman, as well as the others. Now, what we want is a law prohibiting hunting deer with dogs after a certain season; say tho 18th of October. As there are but few deer killed by still hunting of the years, the passing of such a law, with ample provisions for its enforcement, would be the means of protecting the deer from the wholesale alangher late in the Fall. I call upon all true sportsmen to use their influence to secure the passage by our present Legislature of the State, of such game laws as shall most effectually prot

COOT SHOOTING AT CAPE ANN

ROCKPORT, Mass., February 25, 1875.

ROCKPORT, Mass., February 25, 1875.

Editor Forest and Stream:—

I have read with interest the various letters of correspondents concerning coord shooting at this place, and being a resident here, and having orgaged in that sport every season for the last four years, I desire to put my linger into the controversy.

I sun particularly amused with the pleasant letter of the "Doctor," in your issue of the 13th inet. Allow me to say I think I know something of that crowd—"five men, three dories, seven guns—one coot and one crow." I happened to anchor my dory close by Strattsmotth Island during the very time the "Doctor" and his friends were enjoying the hospitalities of its worthy light-keeper, and although the sea was a little choppy, we had very good sport, and if I remember aright, I had the pleasart of seeing the "Doctor" and his party duly armed and equipped, engaged in doing skitmish duty on the rocks, which duty chiefly consisted in a due observance of our sport, and in expressions of regret that the weather would not permit them to come out. We are always auxieus when our country friends visit us for coot shooting. They are usually mortally afraid to engage in the sport, unless the sea is as smooth as a barn floor. We always do console them by saying, "it is and a very good week for coots," or something to that effect.

Vote "Cepe Ann a failurel" Why, the truth is, coole are not to be

shot on Cape Ann, but just a little way off its shores, and if the Doctor and his friends had pursued their sport there, they would have daily brought in their spoth with appetites which would have caused them to pronounce baked cost and Cape Ann turkey the greatest delicacles in the world.

It is a mistaky to say that they auchor bow and stern at Cape Aoh. I agree with "A. H. B.," of Boston, and say that I arrest saw a doty so nuchotest. We frequently anchor our decoys head and tall, the leval line of the decays lining made fast to the killock flow of the dory; thus they can be drawn in near the dury, are payed only as occasion may require, and where a bird is shot we have only to unfasten the huny line and the dury is clear, and after securing our game return to, our husy, take it in, and maky fast.

take It In, and make fast.

I have to disagree with "S. K., dr.," of Cohasset, in his dislike to a dury. We would be the story the best and safest cruft for sen shooting. The rong is sea and breakers of Minot's Ledge are not more eviebrated in song and story than those of Avery Rock, which livs not more eviebrated in song and story than those of Avery Rock, which livs not more eviebrated in song and story than those of Avery Rock, which livs not more equally sequentially the sen "S. K., Jr.," will dut no tea at Stratesmonth Point when he comes here, as I hope he will uvest season. We lay seemely in miredorys at another to very rough weather, and fundereds can testify that at times when the life-brats are brought into requisition, the doty is as frequently seen leading the way to the scene of the wreck as following in their track.

I slectrely advise the "Doctor," and all who would essay the sport, not to make too elaborate preparations for coot shooting. The nature of the sport does not often admit of it. Take your gan, decoys and amounthing, and be on hand yourself. "Too many cooks spoil the broth" is a true saying. A large party, with ample preparations, may afford a good time generally, but the result dill usually show as many crows as coots. Very respectfully.

Sea and River Hishing.

FISH IN SEASON IN MARCH.

southern waters, Troid (black bass), Drim (two species), Kinglish,

FISH IN MARKET. - With exception of the opening of the troat season and an increased supply of cod and haddock, there is very little change to report in the fish market. Trout are worth 50@\$1 25 per pound, according to the locality from which they come. Cod and haddock 10e@12 cents. Savannah Shad are worth 40c. cach; North Carolina do., 50c.@\$1 50, according to size; Hudson River Striped Bass, 20c.@\$1 50, according to size; 50c. @\$1 50, according to size; Hudson River Striped Bass, 20c. @25c. per pound; Red-snapper, 20c.; Whitefish, 18c.; Salmou Trout, 20c.; California Salmou, 40c.; Frozen Salmon, 40c.; Halibut, 20c.; Long Island Smells, 25c.; White Perch, 15c.; Codfish Tongues, 15c. per pound.

—The frouting season opened on Long Island last Monday, the 15th ult., Hough the ponds didn't open, and the streams, but partially released, flowed with a sullen gurgle under the little shelves of ice that claus to the river mar-

streams, but partially released, flowed with a sulfen gurgle under the little shelves of ice that clung to the river margins along the water line. A large number of professionals go down annually as a religious duty—just as some persons sit up to watch the "old year out and the new year in." These went on Saturday and assisted at the opening ceremony. Among them were faces that were familiar when the present generation were boys; and when they met when the present generation were boys; and when they met to exchange spiritual consolution on the Sunday that kappily intervened, the scene was very affecting. Capt. George Gelsion was one who wanted to go, but he could not find his rod. This was unfortunate, as the Captain is always present at openings, especially of oysters. The weather was unusually favorable for this season of the year, being warm and "mnggy," and when morning broke, the South Siders broke for the "Willows," while the Wintonians took to the outlet of Stump Pond. Those less favored, who had to depend upon the Creeks at South Oyster Bay, where Conk Vandewater used to exalt his horn, made for the out-Conk Vandewater used to exalt his horn, made for the out-let of Massepiqua, away down the road, but found that a uegro boy had netted out the three trout that were in there a half hour before daybreak, and went leach to breakfast

a nan nour before daybrenk, and went take to breakfast quite disgusted, vowing that the close season ought to be continued to 1st April. "So say we all of ns."

On Tuesday the anglers returned to the city, but didn't bring any trout. All the trout in town that were visible were on the slabs of Engene Blackford and Middlelon & Carrenn at the market. These had come by were a transfer. Carman, at the market. These had come by express train during the two or three days previous, all the way from Canada and from the artificial front works of the fish breedcanada and from the artificial front works of the fish breed-ers. There were splendid specimens from Sam. Olcott, of Wolcottville, Ct.; from B. B. Porter, of Oakland, New Jersey; J. Fearon Mann, of Lewiston, Pa.; H. H. Thomas, of Rindolph, N. Y., and from the Cold Spring works of Livingston Stone, at Charlestown, N. H. These latter were long sucuted fish, which we took occasion to com-pare with other trout of equal sizes and weight, and found that their heads were one fourth the length of their bodies, and measured three and a quarter inches to two and a half of the other varieties. There were trout of almost every hue and shade, some of them alive and swimming in tanks, and others that had been alive, but would swim no more. On the whole the display was very fine. We acknowledge the gift from Mr. Blackford of several pounds of these delicate fish, embracing all varieties, the long headed fellows included. We have felt an increase of brain power ever since we ale of them.

-We have been much interested in examining an assort —We have been much interested in examining an assort-ment of flies of the Mullaly pattern, the peculiarity of which is, that the bend and barb of the hook are concealed between the wings, thereby closely imitating the natural fly, and rendering the deception more perfect. Trout are always suspicions of "polats," and the oldest trout now living never saw a natural fly with a barb to its tail. Of course this invention or improvement, does not apply to hackles and palmers and other wingless flies, but we think it a good one as far as it goes, and we hope soon to lest its quality and efficacy upon the wary old fontinals

that have survived the lares of seven Snomers. Mr. Mullily, the inventor, now of the N. Y. Board of Assessors, seems to have a most versatile genins for new contrivances. Some time ago he invented a huge itinerant steam warming pan for melting the some from the streets as fast as it falls, thereby keeping them upon to traffic; if he could only operate one of these machines in connection with his dshing apparatus, and open op the frazen ponds and streams to the hopotient anglers where gard the files of March with melanchaly, be would confer a favor upon the fraternity which they would never coase to remember.

—Mr. C. F. Orvis, of Manchester, Vermont, has adopted a click to his heautiful new reel, which makes it aloud as perfect an instrument as angler could ask for. This reel possesses several advantages that do not belong to reals af he old pattern.

-Shall tishing is becouning an important branch of indastry at Palatka, Fla. From Iwelve to afteen hundred white shad are shipped weekly to Savannah and Charleston.

-The receipts of salmon at the Loudon markets thos for this season, are less than one half those of last year.

-We call attention to the ulvertisement this week, of

—We call attention to the udvertisement this week, of a valuable salmon river for sule, more Quebice. An approximity of this kind is seldone offered.

—The Sacramenta Union says that salmon front are uscending Temescal creek from the buy to spawn. They can't jump up the dom at the Humboldt Park House at Temescal, and hence full in easy prey to men and hays who go for them at that point. During the last mouth muc has been caught weighing seven and a half pounds, one four and a half, and a dozen weighing all the way from one to three pounds. Why don't the Plsh Commissioners creek a lishway?

pounds. Why don't the Fish Commissioners erect a lish-way?

Fishing Matters,—The number of fishing arrivals for the week ending March 11th was forty-num—twenty more from Georges, twelve from Grand Banks and eight from New Brunswick. The Georgesagen have landed almost 800,000 pounds collish and 35,000 pounds hallful. The bankers have brought in good force, on aggregate of 400,000 pounds hallful, which knye been sadd for \$10 and \$74 per ewt. for best quality.

Schooner Carl Schnerz, Capt. Neil 8 McPher, which arrived from Georges on Friday last, torought in the largest fare ever landed at this port, but her stock was not as large as has been unde by some of the theat in former years, on a less quantity of fish, owing to a falling off in the price. She brought in 0,170 fish in kumber, which weighed of 107,200 pounds, also 3,800 pounds of hallfult, her grass stock amounting to \$2,580. Gaole's share, \$143-05; high line, \$130-25; average share of crace, \$105-01.

Sch. Amtrew Leighton, Capt. Olsen, which arrived from the Grand Banks on Monday, weighed off 75,000 pounds of hallbut and 7,000 pounds collish, her stock amounting to \$4,177. Crew shared \$165, coak's share \$190. Thine alessent five weeks. This is the largest fore and stock of the season thus far.

A large fleet of Georgesmen have been detadued in part meanly a fortnight in consequence of the prefered small of

sent five weeks. This is the largest fare and stock of the season thus far.

A large fleet of Georgesmen have been detadaed in part nearly a fortnight in consequence of the protracted spell of easterly weather. Yesterlay, there was a change of what and the vessels were emided in get out once more. What with the ice embargo lost mouth, and the detention by storms and head winds this mouth, the liket are larving quite a hard time of h, and the stock of Georges could brought in thus far is less than half as large as that of hast season up to this time.

Sel. Edward Grover, Capl. Wheeler, arrived from the Grand Banks on Wednesday with 45,000 pagnols halling, having made the trip in three weeks, a remarkably short time considering the rough weather. Last year the schooner Lizzie K. Cherk, Capt. Marris, made a trip in seventeen days, and brought in 85,810 pagnols halling, and stocked \$1,676—the shortest Grand Bank [r]p on record.—Cape Ann Advertiser.

CATCHING YOUNG SALMON, OR GRILSE, IN SAN FRANCISCO BAY.

IN SAN FRANCISCO BAY.

Red to receive the second of the continue of salimon in our bay. This is taking place at the Long Whard at Oakland, across the barber, and also at that of Alamedia, a short distance to the southwest of Oakland. Anglers cross on the Central Pantic Company's ferryhoat, either hands them at the wharf, or taking the cars on the conveys them to Alameda, which is about one mile from his wharf three. These lish being found in our buy is a very remarkable chemistocia, as I cannot find from the "takest intubitant" that it hosewar happened before, except new and then, when one or two have been laken while angling for another. I have never taken one to this way, but has Summer I did rapture two brook front. This new feature begins the Summer I did rapture two brook front. This new feature begins from his placing to attributed in the good effects of closa seasons. These young salmon, fresh the from the season exceeding the back and thin with any sould salmy, or places of this, or unassel worms for halt. During the past four weeks the catch at these two what we has interessed an univit that this has now become a special branch of dishing line, the mander taken dully with rode averaging from skilly to eighty, weighting from one to five pointile each. This success has caused considerable required along ungles, or would be angless, some of whom have assected that they are a new species of salmon litherto noknown on this const. Others clain that it is a species of salmon from. But all this is meetly the effect of ignomice in the multitude, who bardly know with any degree of real schence one than the multitude, who bardly know with any degree of real schence one than the mail tude. Who hardly know with any degree of real schence one than the mail tude. Who hardly know with any degree of real schence one than the mail tude. Who hardly know with any degree of real schence one than the mail tude. Who hardly know with the tite Britan the transfer of the same fish my young number and to the law with the list of

very slight success. The general mode is either to iroll or to angle for them with rod and line, with a light sinker about half way, or rather tess from the bottom; but I have found about three of four feel from the surface of the water the hest. Three of four rather small chooks are used on the line. They are a dettelous fish for the taile, without heing like fell grown salmon, too rich and uity, but just sufficiently so for most palates.

E. J. Itoopen.

Dachting and Boating.

All communications from Secretarize and friends should be mailed no later than Monday in each week.

BISHOP'S CANOE VOYAGE.

THE PAPER CANOE AMONG THE SEA ISLANDS.

BROUGHTON ISLAND, NEAR DANIEN, GA., March 2, 1875.

EDITOR FOREST AND STREAM:-

EDITOR FORBST AND STREAM:—

From the German Shooting Park, on St. Augustine River, near Savannah, I rowed to Liberty River, and by means of a short "ent off" through the marshes, entered Crabb Crieck, following it to the broad Skiddaway River. Then through Skiddaway Narrowa, (where the tides from two water courses meet,) into the Burnside River, and through its wide month into the stately Vernen I proceeded on towards the sica, approaching Oseabaw Island as far as the month of the while Little Ogeochee River, where the strong head winds drove meashore on Green Island. For two nights and a flay I waited in camp for the tempest to Inbiside; then, before sunrise one morning, pushed on to the Great Ogeochee, ascending it to Bear River, which broad thoroughfare took me down to St. Catherine's Sound. This sheet of water was crossed to Newport River, up which I rowed to Julisson's Creek, and followed it to Sapelo Sound. The iniet was crossed with some difficulty, after which I reached Chocolate Plantailon, and lodged upon the floor of a negro'e cablu. The following day the paper cause arrived, via Mind River. Teaketile and Doboy Sound at Doboy Island, where I passed the Sabbalb day ashore among porthermers, Canadums and negroes, who compose the population of this busy little scaport on the marshes. Monday, March Isl, was a wtudy day. After following the Darien River to and through the "three miles cut" to head of Altamatia Sound, I was forced back through "the cut" by the tempest. There is no camping-ground among these extensive marshes, so I proceeded up the Darien River to and through the South Brauch of the Altamatia River. I had reached a point shoul finar miles from Darlen, on my way towards St. Simon's Island and Sound, when the wind strengthened to a gate and forced me across the river mile a port of refuge on Broughion Island. The only occupant of the plantation house, heade the servants, was its owner, Captain R. F. Akin, who most pourieously invited me to stay with him mall the wind would abate. On his well-

the field as well as in the office. Capiain Akin is an experienced hunter, and is an expert in all that relates to "fin and feather" in these waters. Capiain Akin's party of four hunters killed during a five days' hunt, within the past month, twenty-five deer on a neighboring island. In my next letter I propose to describe his principality, Broughlon Itsland, and the opportunities offered to our sportsmen in the frozen North to enjoy yachting, fishing and shooting among the beautiful seatishnids on the coast of Georgia.

N. H. B.

Mr. Bishop goes up the St. Marys River to the Okcofeenokec swamp, and from there will had his canoe to the Suwannee River, and will then go down that noble river to the Gulf. He will then go to Cedar Keys, and thence by rallroad to Fernandina on his return to New York.—Ed.]

—The Woodside Rowing Club, of Newark, New Jersey, have elected the following named gentlemen as officers of their Association for the ensuing year:—Frederick W. Leonard, President; Harry S. Magrane, Vice President; R. Smith Carler, Secretary; George G. Nevers, Treasuer; and John H. Osburne, Captain.

The Colleges.

BOATING AT DARTHOUTH COLLEGE.—A lively interest in boating is fell by the students of all the departments. 'The members of the College crew have been in training during the term, and at present are at work in the gymnasium. Five of last year's crew—Enton, Mitchell, Rubinson, Eager and Westgate, will pull again this year at Saratoga.

—The new Yale College boat-house will be a large one, 83 feet on the water front by 75 feet deep, and will have room for 100 boats. It is intended to provide general rowing facilities for the students, and will be supplied with all necessaries to that end. The total cost—land, building, furniture, &c.—is estimated at \$15,500, of which \$12,000 has been subscribed, though the amount puld in is smaller. Among the contributors to the fund thus far are Win. M. Evarts, H. B. Claffin and W. W. Phelps.

—The Hirvards have declined to play any college championship games at Saratoga this Summer.

—The Bostons will commence coaching the Harvards in May, and about that time the Hartfords will be helping the Yale nine to beat the Magentas.

PRINCETON COLLEGE, March 11, 1875.

EDITOR FOREST AND STREAM:-

The athletic interests here are now as great and as absorbing almost as they are during the pleasanter mouths of the year. Though there is no chance for actual practice in the field and on the water as yet, there is a very great amount of preparation being made, which caunot fait to enable the ball nine and the crews to fulfill in some measure the flatter.

enable the ball nine and the crews to fulfill in some measure the flattering promises they now give.

Owing to the efficiency and foresight of Captain Nicoli, of the University, quarters have been secured at Saraloga for both crews. The University will be quartered at Jas. Arnold's, and the Freshmen at Thomas Arnold's. The houses of the Arnolds' are situated at Sulphir Springs, on the south side of Snake Hill, and nearly opposite the starting point of the new course recently buoyed off. One important advantage galued in the selection of the above quarters is, that both crews will not be obliged to row a long distance in order to reach the starting point, and then will be freed from the recurrence of certain treatment of, to say the least, not a very humane character, which a rival crew favoted (?) one of them with last Summer.

least, not a very humane character, which a rival crew favoted (?) one of them with tast Summer.

Though we have had great fulth all Winter in the crew selected to represent us at the coming regata, our confidence has been increased recently on account of the eulogies hestowed upon it by an experienced oarsman with visited us a few days sluce. The purport of his remark was somewhat to this effect, that no crew which rowed in last year's race was superior, if equal, to the one that will represent Princeton in July, at Saratoga. The author of this opinion spent several days at Saratoga last Summer before the regata, and then was very familiar with the material and skill shown in the various crews there.

This may seem to savor somewhat of concept on the part of Princeton; yet, anyone who will take the trouble to visit the gymnasium here, at the lime devoted to their exercise, I do not hesitate to affirm, will be forefully impressed with the fine physical appearance of the crews, as well as with the regularity and power thry show. In their rowing. This applies more particularly to the University.

The ball nine continues faithful in its daily practice in the gymnasium, and is rapidly acquiring the art of quick and accurate throwing. Besides this exercise, both the ulne and the crews are daily dritted in calisthenics, and in the beavy work of the gymnasium as well. The most notable feature thas far discovered in the practice of the nine, is the improved elyle of Mann in pitching. Having acquired increased rapidity in delivery, the latter bas heen able to imitate to perfection the peculiar atyle of Cummings, of the Philadelphia nine.

The Glee Chib gave a concert on Tuesday eve, 2d inst. The targe number present, and the frequent encores fully attested the high estimate to which the club to held here. It purposes giving concerts at New York, Brooklyn, Orango and Philadelphia during the approaching vacation.

Kalional Pastimes.

—The annual meeting of the Young America Cricket Club was held March 8th, at Longstroth Hall, Germantown, Mr. E. M. Davis, Jr., in the chair; Mr. C. E. Motgan, Jr., Secretary. Mr. George Newhall stated that he thought it wands be advisable for the Young America Club to make preparations to compete during the coming season for the challenge cup, won from the English cricketers by the Philadelphia twelve, last year, at Halifax. At the conclusion of the address the following offleers were elected to serve for the ensuing year:—President, E. M. Davis, Jr.; Vice President, T. P. C. Stokes; Secretary, S. Waln Vaux; Treasurer, S. L. Wright. Also a Board of Managers.

Treasurer, S. L. Wright. Also a Board of Managers.

—The Amateur Association held a convention at Boston on Wednesday, March 10th, which was attended by clubs from Maine, Massaehusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania. A revised constitution was adopted, and a code of rules which as regards the playing rules of the game were identical with that of the Professional Association. Amateur clubs are forbid paying their players except for traveling expenses; an open door to semi-professionals. The next convention will be held in Philadelptiin. The election of officers resulted as follows:—President, H. W. Lamb, of the Beacon Club, Boston; Vice President, J. H. G. Myers, of the Flyaway Club, of New York; Secretary, C. W. Blodgett, of the Arlington Club, New York; Treasurer, M. J. Dillon, the Confidence Club, New Roehelle, N. Y.; Judge Advocate, H. C. Cogswell, of the Atlantic Club, Jamaica, N. Y.

—The New York Athletic Club held its annual meeting on Friday of last week, and re-elected all the officers with the exception of the treasurer. The floorishing condition of the Club and the popularity of its members, renders the prospect of the coming season, in the way of running and athletic sports, a very inviting one. The officers are: Henry Knowlton, President; Richard C. Fellows, Vice-President; Walter K. Collins, Treasurer: W. E. Sinchnir, Secretary; R. Wm. Rathbone, Captain; A. H. Curtis, First Lieutenant; G. C. Barnette, Second Lieutenant; and C. H. Pierce, H. P. Egleston, and J. R. Brahams, Trustees.
—The annual tournament of the Quetec Skating Club took place this week and was a decided success. The backward race, the one and three-legged race, and the barrel race were well contested, and convolsed the audience with laughter at the Iudierous figures cut by the participants. Col. Strange acted as referee, and his estimable lady distributed the prizes at the close.

The Clandeboye Snow Shoe Club hebt their annual tramp on Friday last. The day was exceedingly stormy, but the hardy Clandeboye's boldly faced it, and made good time to Unot's at Charleshourg Heights. In the evening a dinner was held there at which speaking, toasting, and general good feeling prevailed. The officers of the Club are as follows: President, Mr. C. P. Bickell; Secretary, Mr. H. J. Lemesurier; Treasurer, Mr. F. Duggan. The Club make an imposing appearance in their white blanket coats. They are all fine stalwart muscular fellows and a pride to Quehee.

—The new stock company nine of St. Lonis, which is to be the rival leam of the St. Lonis Club "regulats," begins

The new stock company nine of St. Lonis, which is to be the rival leam of the St. Lonis Club "regulats," begins business with a capital of \$12,000 and a team of local players, which includes Seward, McCall, D. Mon, Malhall, McSorley, Redmond, J. Blong, A. Blong, and Morgan, the substitutional Craft and Hante.

The various professional places of the charging being the company of the charging the company of the charge of the charg

—The various professional nines of the championship arena will all have answered to their names at roll call by the 20th of March, and as soon as the snow and frost have left the fields out door practice will commence. In the meantime, pedestrianism and gymnastic exercise will be the order, and hand ball practice—the best training possible—where hand ball courts are at command.

—The Union Grounds will this season again be the leading professional ground of the metropolis, and the Capitoline fields that of the class of amateur nines who partly play for gate money, while the legitimate amateur nines will play on the free ball fields at Prospect Park.

—There will be a great rivalry this season between the professional clubs of the West. The St. Louis clubs are bent on whipping the Whites of Chicago, while the "regulars" of the St. Louis nine are going to try and wipe out the local "Red Sox" team. In the meantime the Westerns of Keokuk will try the mettle of all three.

of Keokuk will try the mettle of all three.

—The Professional Association book, published by De Witt, will be issued about the twentieth, and Beadle's book about the same time.

—It will be late in May before the Maple Leaf Club, of Guelph, Canada, will be able to get to work this year, as the season is very backward.

—The total number of games the professional clubs entering the arena will have to play this season is over seven hundred. Last year eight clubs found it difficult to get through with two hundred and thirty games. This year thirteen clubs have to play ten games each with every other club.

—The Kniekerbooker Club, of New York, held their

—The Kniekerbocker Club, of New York, held their thirty-first annual election last week, and on March 8th the Excelsiors, of Brooklyn, held their twenty-first annual election. The former club will play at Hoboken Mondays and Fridays, beginning in April, and the latter will play a game at Englewood sometime during the Summer, that being about ali the interest they now take in base ball.

being about all the interest they now take in base ball.

—The Star base ball club of Syracuse rates as the champion organization of Syracuse, and this season they have adopted the plan of raising a cash capital of \$500 to defray the expenses of the season. Their nine this season will include McLean, of the Pulnams, of Troy, as pitcher; C. H. Brown, of New York; F. Sperry, of Cortlandt; Van Bracklin, of Oneida; J. S. Smith, of Ithaca, and Esmoud, Dunn, Lumbend, Young, Ferrer, and Grace, of Syracuse. They will play at the Driving Park grounds.

—The moving back of the striker's position in base ball.

-The moving back of the striker's position in base ball will greatly reduce the chances for fair foul hits.

—Col. Fitzgerald, of the Philadelphia City Item, offered prize of a gold medal worth \$250 for the winning club the season, provided the ten men rule was adopted.

Aew Qublications.

We have received a copy of Birds of the Northwest, a handbook of the ornithology of the region drained by the Missouri River and its ributaries, by Dr. Elliott Couer, U. S. A. 'The amount of hibliographical matter in this work, as a cottection of synonymaic tists, and in the abundant references, is very great, and will do much toward lightening the weary tahors of future workers in the same field. Dr. Conea is already so well known as a scientist of the first rank, that his name is a sufficient guarantee of the value and ability of his work. As a work of reference and classification it is an addition to our anthorities in avi-fauna, the value of which cannot be overestimated.

The Great Southwest issued in the interest of the

The Great Southwest, issued in the interest of the Missonri, Kansas and Texas Railroad, contains so much information regarding the district which it represents as to be worthy of notice. The present number is illustrated by sketches of various hulidings in Sodnila, the "Queen City of the Prairies," and we look with astonishment upon villas and handsome public buildings on a spot where a few years ago existed only a few rude shantics. The directions to sportsmen are also of practical value, and the road have established a tariff of dog fares amounting to about a cent per mite.

The Live Stock Journal for March has reached us, und as usual its table of contents is full of articles pertaining to the various branches of agricultural industry. The piscatorial department, under the direction of our friend Fred Mather, its an interesting feature. Wo destre, however, to call the attention of the editor to the fact that Mr. Chas, Hallock is the author of the "Fishing Tourist." not Thad Hallock, as stated in answers to correspondents in February number.

The Medical Record for the current week contains a paper on Hydrophobia, which will be found of much interest, as well as other valuable information.

The Northwestern Poultry Journal, published at Minne-apolis, is a recognized anihority on maners periaining to fowls and pets. The rapidly increasing intercal in 1bo raising of fine poultry bus opened a new field of literature, and roosters are now sold with pedigrees as long as a thoroughbred's.

FISH STORIES.-In our issue of the 23d

Fish Stories.—In our issue of the 23d instant we gave an extract from the Parls True Kentuckian, to the effect that "a fish duck had been killed recently with eleven fish in its stomach, the united weight of which was over two pounds." An old gentleman of eighty-six, who for many years followed the occupation of a fisherman and pilot, snys that some years ago, at Nanducket, he saw seven shoul ducks taken from the stomach of a monk fish that was not over three feet long. The ducks were fresh, and must have been captured by the fish within a few hours, prohably while they were diving for outssels. These ducks generally average from three to four pounds, undressed.

The same gentleman says he once caught a halibut that had the tails of six dogfish protruding from its mouth when taken on board the smack. But the strangest slory remains to he told. Some fifty years ago Capl. Eben Gardner, of Nantucket, was, in company with a number of others, fishing for codfish off "Sconset, and lost overboard moopen jack knife, on the handle of which his name was cut. The water where it was lost was some seventy or eighty feet deep. When the boats had landed on the shore, and the fish were heing dressed, the identical knife, lost some hours previously, was foun I in the stomach of a cod, caught from a boat that had heen fishing at some distance from Capl. Gardner.—Boston Traceller.

BEST BOOK FOR EVERYBODY.—The new illustrated edition of Webster's Dictionary, containing three thousand engravings, is the best book for everybody that the press has produced in the present century, and should be regarded as indisponsible to the well-regulated home, reading-room, library, and place of business.—Golden Era.

THE HAZARD POWDER CO..

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and clearliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb, camsters and 6 f lb, kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

sign. I (fine) to 5 (coarse). In 1 and 5 b, canisters and b) and 12 b, kees. Burns dowly and very clean, shooting remarkship close, and with great principality. For field, forced and water shooting it minks any other brand, and it is equally serviceable for muzzic or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 124, and 64 lbs. and cane of 5 lbs. FFFG le also packed in t and 4 lb. canisters. Burns strong and matst. "The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Angler's Guide & Reference Book. BY CHARLES HALLOCK.

ILLUSTRATIONS, CROWN 8vo, CLOTH \$2 00.
This is just the book for the season, furnishing very complete information of value in the selection of fishing localities.

"Mr. Charles Hallock is one of the few gentlemen who write a book mainly for the reason that they have something to write about—have something to tell the public which the public desires to know. The shortest routes to pleasure are laid down, and correct information is given as to the best means of conveyance, the expense of the trip, the secrets of the commissariat, &c. The author has avoided the use of technical terms, and thus made his volume all the more acceptable."—Turf, Field and Furns.

TESTIMONIALS.

CORSELL UNIVERSITY,

ITMACA, March 14th, 1870. }

I must congratulate you upon your great success in
this new educational enlerprise. If we can arrange
our ammeeurents so as to make them impart instruction to the mind, it will be a step in advance in education.

this new educational enterprise. If we can arrange our amisements so as to make their impart instruction to the mind, it will be a step in advance in education.

Washington, D. C., March 18th, 1870.

I may be pleased with the success you have met within giving to the stuffed specimens a very decided appearance of life.

I hope you may be able to continue the Series, and I have no doubt they will furnish interesting means of information and instruction in regard to the wild animals of New York.

State Hillse, Boston, Mass., March 18th, 1870.

I have examined executly the "Steroscopic Studies of Natural History," and judging by the first ten unubers, should say that they will prove of very great value, both as object lessons for students, and as a most interesting suite for the parlor Steroscopic. The delimations, position, and color of the different groups and the general treatment are most perfect. I cordially recommend them to the public attention, and trust you will meet the encouragement which you have carned.

EDWARD A. SAMUEL,

Curatot of Zoology in Mass. State Cabinet.

Peanody Academy of Science, 1 have shown your Steroscopic views to the Directors of the Academy and the editors of the American Muturalist, Dr. Packard and Mr. Morse.

They concur with me in praising their tutbfulness and the taste which you have displayed the surrounding its specimene with natural objects and scenery of characteristic fitness. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, thus anything we have yet seen.

A. HYATT.

Connell University, Pacsident's Rooms, 1 I have received the Steroscopic Views of objects in Natural History, and have enjoyed them greatly. They have surprised all who have seen them by their wonderful illicity, both as regards the animals and their surroundings; and I think they can not fail to be of great service to the study of Natural History, first by attracting atudents to it, and next by perfecti

SportingReminiscences of Illinois.

N the Forest and Stream of December 24th, I noticed a short letter, in which the writer states that Rock-ford is a landsome city of 14,000 souls, situated on Rock River, in Northwestern Illinois, that the the Indian name for this river was "Sianissippi," and is the name selected for "our club just formed for the protection of fish and

In the Spring of 1838 I was admitted as a member of the legal profession, and had just arrived at my majority. Having read and heard the most glowing descriptions of the great. West, on the 3d day of May, 1838, I took a steamer at Pittsburgh, intending to go to Northern Illinois. At that time the danger of steamboat traveling was the all absorbing topic of conversation. A few days previously the steamer "Moselle" had been torn to atoms at Clucinnati by the explosion of her boilers, which resulted in the death and margling of about 150 passengers. This great calamity was the subject of discussion in every company, but more especially by nervous steamboat passengers—so when about to leave the Port of Pittsburgh, all the travelers on the boat were enseoneed on the upper deck at the stern of the boat at the farthest possible distance from the lailers.

At the end of about two weeks I found myself at St. Louis, and at the end of another I was at Galena. The only notable event which occurred on the Upper Mississippi was the capture of a splendid buck while attempting to swim the Mississippi from the Illinois to the Iowa side, our Captain having dispatched two men in a skiff in pur-

After prospecting the lead mines and smelting furnaces at Galena, I started for Rockford, traveling in a four borse Post coach over the almost uninhabited prairies, occasionally seeing a prairie wolf skulking in the bigh grass of the sloughs, or a sand bill crane stalking on the prairie. Nearly the whole distance from Galena to Rockford was prairie, We traveled through the blg prairie, for thirty miles. West of Rock River, not a tree or a strub to be seen, the gently undulating surface of the country reminding me of the calmly rolling waves of the sea. In the coach was a young Irish girl, who a month or more previously, after a long and tedious journey from her native Island in a sail ing vessel, had landed in New York. Our ride over this great prairie was so dull, so wearisome, so monotonous, not a tree or a shrub to be seen for so many long and te journey from Galena, a passenger saw and spoke of the forest in the dim distance, the poor Irish girl with the same feelings she experienced when she first saw the Jersey coast from the vessel, after her long cruise, artlessly and innocently, but enthisastically exclaimed, "laud ho." That evening, the third day of June, 1838, I found myself at Rockford, on the East bank of Rock River.

Two rival villages were then competing for supremacy, and for the location of the County Court House and other and for the location of the County Court House and other public buildings, one on the East and the other on the West bank of Rock River. The proprietor of the proposed site on the East bank was one Haight; of the West bank, the firm of Kent & Brinckerhoff. The latter were brothersin-law, who having failed in mereantile husiness in the city of New York, in the great financial convulsion of 1837, had migrated to the Rock River Country to commence business anew, and to recover their lost fortunes.

business and what of recover their loss fortunes. After a long and angry controversy the county seat was finally located on the West side of the river.

At first I was completely enamored with the country; the beautiful rolling prairies were studded all over with wild flowers, which grew most luxuriantly. One week the prairie would be all over white when a certain white flower would predominate; a fortnight afterwards it would be all blue when another flower would predominate, and so on throughout the whole Summer, when each successive

flower in its season would be in the ascendant, thus giving to us in regular succession all the various colors of the rainbow, hetween early Summer and Autumn. Rockford was from the third day of June until the eightcenth day of December, 1838, and having comparatively little else to do, I passed my time principally in the pleas-nres of hunting and fishing, in both of which that Summer was most eminently successful, as any other novice might have been. It was about six years after the termina-tion of the Black Ifawk war, but even at that time on traversing the prairie on the East side of the river I could discern plainly and follow easily the track of our army which marched along the river against Black Hawk and his army of Indian warriors, the wheels of the heavy den baggage wagons having cut through the soil of the prairie. The country then was very sparsely populated; East Rockford was a small village; West Rockford a much smaller one. Of course there were few sportsmen, but there were some; nearly all the pioneers of the country mother Earth. As to game, the princers of the country were lusbandinen, intent on digging a living out of old mother Earth. As to game, the prairies were filled with pinuated grouse, the thickets with ruffed grouse; and as for Rock River, it was literally alive with fish of the most magnificent proportions and of the greatest variety. were abundant, as were also wild goese and ducks in their

For some time after my arrival at Rockford, I apursed myself by fishing with the rod and line, killing all the hass and pickerel I desired. One evening after fluishing my afternoon sport and about to start for the village, I discovered lying on the bank a huge fishing pole, which had been used evidently by some stalwart rustic. The but was a part of a kiekory sapling, to which was spliced a long pole. It was of immense weight considering the use for which it was intended. I affixed a line to this pole, baited it with a minnow, and fastening the but firmly in the ground, covering it with great heavy stones, I threw the baited line into the river. On the next morning I returned and found that I had hooked a mouster fish in the night; the but of the rod was sticking firmly in the ground where I had placed it, the rod was broken at the point where it was so strongly spliced, and the fish had made good its escupe. At the time it was believed that this was the work of one of what we then called the Mississippi cat fish, for we then thought that such immense cat fish as were then found in Rock River could only be grown in that great

During that Summer a friend of the writer constructed a drop line, or as it is called in this section of the country, a "uight line;" attached to it were perhaps forty or lifty books, which being baited, the line was stretched neross the river in the evening. The next morning my friend went to the river to raise bis line and to witness the success of bis enterprise, when to his great surprise he dis-covered that the fish had literally carried off the whole line, and he never saw a hook or a thread of it afterwards. This was the first, last, and only night line set in Rock River during my sojourn in that country. And yet an-other mode was resorted to in order to capture the fish in Rock River, which I am asbamed to relate, for it was so destructive and so very unlike the true sportsman. Verily I believe that if old Isaac Walton had been present, he would have hung every one of us up to the first tree. Op-posite the town of Rockford, and above the rapids, the river bottom was smooth and free from all obstructions. We procured a seine of very considerable length, by a single draw of which we would supply the whole population of the town with fish sufficient to last them for several days. The modus operandi was as follows:—The seine was placed on the stern of a skiff, one man plied the oars, while another would drop the scine into the river, the oarsman would drive the skiff up stream, thence toward the middle, and thence down and around until he would laud on the shore a little distance below the starting point; the seinc was then drawn by parties at either end slowly toward the shore, and when within twenty or thirty feet of the bank grassy lawns and picturesque villas of Ravenswood and

the excitement began. Such a kicking and jumping and splashing. There was the monster Mississippi cat lish, weighing from lifty to eighty pounds, the large sturgeon from three to four feet long, the "lonfalo," weighing as digh as forty pounds, and bass, pickerel, "red horse," and other tish without number. But we did not destroy all these. The taste of the then residents of Rackford was very refined and delicate, and the three last named lish, hass, pickerel and "red hurse," were the only ones used. All the rest were thrown back or rolled into the river.

I write these lines that the "Simulssippl Sportsman's Club," of Rockford may know what a grand old river they have for pisciculture, and how by enforcing the game laws, in a few years, they may have and enjoy the sports of the iden-

I feel to-night as though I could write a volume upon my experiences in the Rock River country, during the Summer and Fall of 1888. But I must close this article without giving you the particulars, or a detalled statement with reference to a gaug of horse thieves which extended their operations from southern and middle lillings into the wilds of Wisconsin in the Summer of 1838, each one having his station on the line; low the people of Whan go county formed an anti-horse thief society to break up the gang and defend themselves against their depredations; how the muttering complaints of the people cumulated in 1839; how the President of this society was shot down one evening at twilight near his own barn; how the people, to the number of three hundred, rose, armed themselves, parsued the supposed nurderers, overtook and captured them in the hig prairle. West of Rock Elver; how they tried and condensed the father and two sons to death; how the two sons are given affirm inheres he which to say their sons were given fifteen minutes in which to say their prayers; and how a simultaneous illscharge from number less rifies was made at the two sons, so no one person could be charged with their death; and how after tho death of the two sons, the pursuers agreed to pardon the fgray halred father upon his pledge to go West of the Mississhppi and father upon his pledge to go West of the Mississhipi und never return East of that river. The obler citizens of Rockford will remember the tragedy of the Driscoll family. A very graphic description of this occurrence was written at the time by a gentleman of Rockford, and published in the Pittsburgh Gazette, then called by the venerable Neville B. Craig, and which would be read with great interest by the present inhabitants of Winneleago county.

Nor can I tell you of how I saw the remains of "Big Thunder," an Indian chief, (f think that was his usue,) on an eminence in the prairie near Belvidere, buriet above ground, according to the custom of his triba, nor haw a Chicago surgeon passing through the country cut off the dead chief's head and carried it to that city as a trophy, or to ornament his office. Nor how the inimitable Col. Strude, a geatleman of the rarest wit and burgor, always bolling over with hilarity and joeoscaess, a Kentuckian by birth, and a practicing lawyer in northern Illinois, participated in the battle at Stillman's run, South of Reckford, who at the time of that great stampede made good his escape over the prairies, and who said that at every lengthe saw a big Indian behind each stump and tree in the prairie.

Pitteburyk, Pennsylvania, February 15th, 1875.

For Porest and Stream,

OUR CRUISE.

WE three had met on an East River pler, ahreast of which a trim little schooner with her mainsall shivering in the wind, by heaving uneasily with the tide shivering in the wind, lay heaving uneasily with the tide as if anxious to he off. A few moments sufficed to place the party and their effects safely on deck; then, with the young flood under her, the sheets started, a steady hand at the helm, and as jolly a crew as ever broke a biscuit, the "Nellie" started on her voyage. Gathering speed as she went, the Navy Yard with its crowd of vessels and the clink of busy hammers, the ship yards of Green Point, the

Astoria, and the "wood of Jones," where Dutchmen most do congregate, were soon left far helimit.

In an hour after, having sufely weathered the sunken rocks and treacherins currents of Hell Gate, and passed the frowning Intitlements of Fort Schuyber, our pretty barque was tossing on the blue waters of the Sonmit.

The grey shades of twilight had gradually deepened into the darkness of an Autominal night, the stars had began to peep out one by one in the sky, when, rising from the table, I went on deck to take my trick at the helm. The which, which at the start had been quite fresh, gradually died out with the sun, until there was only along tenough to give us steerageway. With my arm resting carclessly on the tiller, now gluncing at the suils, and man peering alead through the gathering durkness, I gradually tell into a reverie, when, suidenly, a stream of light struck full in my tace, and the portly farm of my friend, John M., homning up through the caldi hatch brought me back with a cheerful hail, from the realms of fancy.

"How fares it, skipper?" said he. "As G, is too busily eagaged to talk, I thought I would came up and have a sanke and clut with you."

"And right welcome you are, brother conneillor," I replied. Having laughingly connaented upon G, 'a amnivorous propensities, after a few moments musing, he continued:—

"I have been thinking of the changes which time makes

phed. Inving language, commonents musing, be continued:—

"I have been thinking of the changes which time makes in the position of things around us, and of the little girch that was wont to gather round the hearthstome of the old homestead. Father, mother, brothers, sisters and play-nates, how quiedly some grew old and ripe, and then dropped hato the grave; how gortly others stole away in all the freshness of youth to the home of the dead, and bow the rest have floated down the currects of life and are lost to me amid the mists and shadows of time. 'Change! Change! I' is the war cry of the world, and has been ever since the first tree was felled, and the first ray of aunshing glimmered in the fastnesses of the primeval forest. 'Onward!' Is the watchword of this people, 'Onward!' over the rade cubin of the early settler; onward over the hearth stones of many an old homestead, obligerating the ancient landmarks with the releathess touch of modern Improvement. 'Onward!' over everything primitive that as little children we were wont to love, and that comes drifting along down the currents of memory—bright visions of the returnless past."

"Of vid a word of lie in that, anyhow; but, share, masther

"Divid a word of lie in that, anyhow; but, shure, masther John, dear, what would become of us that does the diggin' and such loike, if yees was to sthop that same march of improvement?"

and such loike, if yees was to sthop that same march of improvement?"

This unromantic interruption proceeded from a Celtic follower of John's, who called himself cank and steward, but was, in reality. Jack of all work an board. The passession of this valuable heardman was the result of an accident, and thereby hangs a fule that will lear repeating. Some seasous ago our party were on a shooting excursion, and the day being dull, we concluded to drop in share and wait for the birds to come over as. Scarcely were our arrangements completed and the "stools" placed when we sploid a gaint, red-haired Paddly erecping cautiously along shore to get a shot at them. Expecting some fun, we lay perfectly still, till having attained what he considered an easy range, his piece was raised, carefully sighted, and then came an explosion, which made every timber of the boats rattle; the water was hished with foun, and the headless bodies of half a dozen wooden direks attested both the accuracy of his alm and the capacity of the old masket to entry shot. Shouts of laughter, blended with execratious, greeted this bloodless exploit, when Pat, instead of expressing contrition for the damage done, exclaimed, with a much injured ar:—

"Arrah I why didu't yees tell me? sure it was the only charge I had."

There was no gainsaying this; a bargain was rutified on the spot, and thenceforth "P. O'Shaughnessy, Esu." he-

charge I had."

There was no gainsaying this; a bargain was ratified on the spot, and thenceforth "P. O'Shuaghnessy, Esq." hecame an indispensable adjunct to our shooting parties. And truly he was a genning son of the land of "Punch, Priests and Pointes," conscaling, mader assumed innocence, a shrewd and cautious nature. Any man who could put the "comether" on Pat, to use his own expression, lad "to shep wid both eyes open and get up before the hards."

Ilaving finished our pipes, and the watch being up, we went below and turned in, in be awakened at carly dawn by the voice of our skipper ringing down through the butch, with, "Rouse out and hit, lads, the birds are in the wing."

by the voice of our sampler ringing thatch, with, "Rouse out and but, lads, the birds are in the wing."

A busty toilet performed, we were soon on deck, and there a sight greeted us which will but soon be forgotten. The sum was brescoing the eastern horizon with strenks of golden light; the air, though sharp, was pure and heaving, making the blood bound joyonsly in this veins; while aboad, astern and under our lee, the black heads were dancing in the swell of the sea like the corks of some mighty seine. It was a sight that would have roused more shuggish natures than ours; qulckly our snowy canvass was spread, willing hands heaved the windlass, bringing the light anchor inbourd with a firk, when the lively craft, freed from her moorings, bowed as if in salute to a pull that struck her, and dushing the spray in clouds from her bows, bore gallantly down upon the prey. "Luff ap! Luff!! Sharp!!!"rang out Missing's clear stones from firmard; "and luff it is, sir," was the responsive growl of the old sea-dag at the behn. "There they rise," was may the cry, followed by the sharp crack of the pieces. A dozen or more white breasts stained with bland were seen floating around us. Scarcely had the cchoes died away when "Boo-loong!" roared Pat's piece or ordance from astern.

astern.

"Intail do you mean, scaring the birds in that way?"
wrathfully exchaimed the conneillor. "What were you shooting at?"

"Divil a know I know, sur, but it's dead unyway. Didn't it sit there just forminst use, blinkin' its eye and slinkin' its head, just durin' me to shoot; and would yees have me sblanthered by a dumb baste of a burd? More be the same token."

the same token."

Jack got out of patience. "Get into the boat at once, you within, and park up those birds, and mind, now, if I bear that Columbiad of yours again, 1'll pitch you and it

overboard."

Grundling and growling away went Pat, soon returning with the ducks and a mass of feathers ami bones, which he informed us, with a trimphant air, was his game; it was an aucient loon which pant thus dearly for an insult offered to the blood of au O'Shaughnessy.

But why fax your patience with a repetition of such scenes! Three days passed quickly away, and our lockers

being well filled with game, we concluded to vary the mon-

being wer interest in the country by a run on shore.

The bright glow of aftermon was fading into the mellow shades of twilight, when our party, after a long trump, slopped to rest on a headland overlooking the bay.

The exchanation, "how beautiful?" harst simultaneously.

trainp, stopped to rest on a mendand overlooking in our lips.

The exclamation, "how beautiful?" Intest simultaneously from our lips.

The sun just dipping behind the western hills, more clearly defluing the deep shadows of the valleys, the broad harbor spread out before as like a horge mirror, and the abd woods, so weird and dark, standing in built relief against the evening sky, formed a scene that me lapse of time could efface from memory's log brook.

A week him now been registered on the calendar, and it being decided to start on our return voyage, the gams and accontinuents were duly packed, deck and boats cleaned up, and invitations extended to our slare friends to take diamer on hoard, and in a parting glass with us, good speed homeword. A right merry party gatheted around the table in our little cabin that night. Wine, wit and music sped the fleeting homs, and the morning watch was well aigh speat are the last reveller departed.

Among the many things said and snug, this little squibs so strack my fancy that I noted it in our log; and thus rous the verse:—

Three men and a butletog ugly,
Two gams and a rerier home;
They'd better stand out in the multibree,
And set themselves up for game.
But, and it see by the cocking
Of that red-famed l'addy's eye,
He's been sulping too much, for yam, str,
Any such game to try.

"Whist Jamsey, me hoy, kape alsy, And hould the big building in; Here's a blondy big cloud of yaller legs "That made a pepperth"." "Clup, bung!" speaks the single barret— "Flip, boung!" roars the old Queen Anne; There's a Plady stretched out to the mire, A kleked over, knocked down man.

The buil-dog's eyes stick out,
And the terrier's backs begin;
The Pudity files out of the bog-hole,
And then the discorrin' conces in:
"Whist! Jamsey, ye immlering blangard,
I know ye're the Divit's own son;
How many fingers boad, thin,
Dul yez put in the blastet old guns*

"Row many fingers! be Jabers?
I nivir put in a one;
De ye ithink l'it he ultipit raminin'
Me Bugies hito the gon?"
"Welt, give me the powder, Jamesry."
"The powtherl as sore as yer born,
I put it ult in the old market;
As I'll blyfr a powther horn."

IN THE WILDERNESS OF MAINE.

I HAVE read with much interest the articles of General Sherman in Fourer and Spream, recoming a lortnight's visit to the Adirondack Wilderness; though, for myself, I prefer a less formidable outlit, and in the tollowing sketch will attempt to show wherein we differ in this respect, when seeking a vaention in the forest:—

In the first place, there are but two is our party—namely, an old hunter called "Uncle Nathan," born and brought up in the woods, and always uneasy when away from them, and Fred, who is always Fred, wherever he is known, either along the banks of the Kennebec, or in "Old Middlesex." I leave Boston at right o'clock one September morning, by Eastern Raifroad via Partlaud and Kennebec to Skowhegan, 225 miles in all; thenre by stage fifteen miles to Solou, where we have supper, then on again eight miles and our day's work is done. We gu to sleep in lingham 248 miles from Boston. Early the next morning a drive of three miles brings me to "Uncle Nathan's" hospitable home, where our preparations commence. My amile consists of a pair of flaunel shirts, two or three pair thick woolen hose, yarn, thread and needles; a pair of thick woolen pauts, with a lew pieces for patches; a good comfortable vest that can be ladtoned to the chin; a shart jacket like a "reefer," with plerty of pocket room; a soft, hight felt hat, and moccasins.

can be futtoned to the chin; a short jacket like a "reefer," with plerty of pocket room; a soft, hight felt hat, and moccasins.

They get wet easy? Yes, but so do hob-nail shoes, or, worse yet, cavalry hoots, neither of which would I recommend; but they dry much quicker, are more easily kept in order, and above all, they don't gall your teet. My blanket is a little heavier than an army blanket, and a little higer, sewed up like a bag, with both ends open, yet long enough to cover hoth feet and head. With sach a contrivance, one can't get nucovered, no matter how much he rolls.

I pack all these into my kunpsack, which is made of a new seamless meal bag, cut the required size, and little with a set of Uncle Sam's old army straps, the shoulder and back straps sewed on just as they were. This will bold from lifty to one hundred pounds, and carry all that is necessary for anyone, and has served use through many thousand miles at travel. Others may make pack males of themselves if they choose, for the sake of carrying delicactes into the garden of boundful nature, but for my-selt, I go mup the woods for a change, a thorough radical change. It would take the pleasure all away were I to see tine houses, find accommodating parters to carry my baggage and a table gramming under the display of a variety of them, live like her in simple style, and thereby gain health and strength. I like good bugh living as well as anyone, but if we indulge in such, we must spend a nooth in the woods every year, living on simple tood to counteract its evils, for an evil it is.

Now for the larder: First, and most important, is saft pork. Then comes ten or chocolate, saft, pepper, Horstord's Bread Preparation, flour and beaus. Our cooking attensite are also as few as passible. My Iry-pan is my own luveurion and not patented or applied for, and this is how it is made: Buy at ten-inch compressed tin plate, and they feet of the color, tasted the ends in the holes, and if you want a plate there it is. If you desire a fry-pan just cut a long st

tienlar, unly be clean. Smulries comprises a small axe, (2) the is larce colough, matelees in two separate places, to guard against archibus. I always make it a point to put on guard against archibus. I always make it a point to put wet, a little linituent or pain killer, bottle Arnold's backen, wet, a little linituent or pain killer, bottle Arnold's backen, some asticking plaster, and a few bandages, a compose, castile soup, towed, salve, a few units, count, stand life, cut oil, and waste for gan. Then, of carrier, I have my trusty gain and rod with uncersory implements. I curry a patent has a title or shot barrel in it at will," as a countrymus said, while "Unele Nathan" bus a double-barrel pucce-one barrel a rille and the after for shot.

Slinging our packs on our backs, Cucle and I grasped our caus and axes, and with our roals fastened to our pucks, ammeters at walking in the woods, night found as twenty through the miles hag. While cutting wood and tiller, which we nected all night, as we were on the shorter of a large pond into miles hag. While cutting wood and could have uncertainty of the shorter of a large pond into miles hag. While cutting wood and could have shot many unce. As we could not use the grouse till benchfast, and we wanted something for supper alicer our long junnt, I took as small piece of pork and cut a slim switch, to which I fastence, a lew feet of him and thook, with a piece of pork for but. Now, don't hage's at the property of the pro

it's always beams fur a Sunday moming's breakfast with ine—when I can get them. We get our leans ready Saturday afternoon. A hole is dua in the ground, into which we throw some live cools and holidar fire, and occasionally throw in small stones. When we are ready to bake our heans, we dig out our "hean hole," leaving a good hat button and set in our port lightly covered, and then completely cover our pot with the collection of live coals and hot stones, and hand down with cold sahes, the desideratum being to keep out all air. In the morning our dish is fit to set before a king, if he is hungry, or if he is not. Well, that's how we lead our beans, and that same evening had to cook one of our docks, only we had to put in a fresh sapply of coals; and lustead of a put we just wet the duck's feathers and wrap him in damped moss. Of course we stuffed him, and at dinner it would make your mouth water to see how quick a nice cooked duck will go out of sight. No juice lost in steam, all tender, and just done to a turn, fullowing the kuif en tevery cut.

The next morning we pauldle down to Black Narrows and climb Mosquito Mountain. The sun wus well up so that it lathed the west shore of the pond in a flood of light. The musquash were out basking in its heams, and we would paddle up to them so as to be nobe to strike them with our puddles. Just around the narrows we started a flock of Idue winged teal, out of which we got five. Back of the west side of the narrows is a bug, and proceeding cantiously, we had just rounded a sharp turn when up went seventeen black ducks. I got but one, as Uncle Nathan was paddling. Hanling our canoe out of water we first picked two quarts of crauberries, an addition to our larder, and then started for the mountain. At first our course lay through a cedar swamp, then through rock mapples till near the summit, where spruce and fir, small hirch and lowarf cedars stood in thick clumps. Before petiting through the swamps we found a small bealen road, which, ou following, led to some fir and henho

for flucks, and the bog is headquarters for caritou. Nathan once killed here in one day seven caribou, all of which were marketed.

We proceeded cautionsly, Nathan taking the lead, while I loitered behind, picking baxberries, which grew ahundantly on the ledge. Cleancing to hook up, I saw Nathan holding our dog 'Jack' by the collar, who was struggling desperately to get awny, and pointing toward the South Pond, he whispered, 'Look !" I did so, and there, within twenty feet of the edge of the water were four large otters at play. They made me think of kittens, jumping and frolicking with each other, running a short distance and theu sliding down their ''gorge'' into the pond, there chasing each other about, making the water fly in all directions, and then out again. A noise from the dog started them and caused them to sit up on their himlquarters. They sauffed the air a moment, and then made directly for us. We were about ten fect from their road, and the wind blowing from them to us; and as they always travel in their roads, we knew if they passed us we had a good chance of capturing them and making our experse account come out on the credit side. On they came, playing leapfrog as they ran, or ruther slid toward us. With my ride at half-cock in my left hand, and resting ou my right knee, I held Jack frum sight by my right hand. Nathan was on his knee with rifle at shoulder.

Alas! by some strange coincidence, both our caps snapped! 'The otters took the alarm, and scuttled toward the water. Nothing remained lint to club them with our gains, and so we all three, dog and all, went for them tooth and mail. Such a scuille you never saw. One otter tambled into the pond, and another into a hole in the bands, and the only one we saved was one that Jack caught by the stamp of the tatl. Then came a tassle of the most desperate character, first one on top and then the other, the otter hissing and the dag growling, until at leugth Nathan ended the combat with a rife bullet into the otter's head. We now went to the canoe, a

which I wished as a specimen for mounting, but he mounted too high for me. At last, on the fourteenth day we started out for civilization, much heavier builded then when we came in, for we lind a goodly bug of fish and game, which we forwarded to friends in Massachusetts, and determined next year to spend a mouth on some one of the rivers in Maine, when you shall have my experience, if this proves as satisfactory to you as it this to E.

For Forest and Stream, ND AND CURRITUCK SOUND, KNOTT'S ISLAND

A VERTy stanneh, commotious and seaworthy steamer is the Old Dominion, plying between the port of New York and Richmond, etc. Norfolk and wher southern localities, on the far famed and historic James River. In such a vessel the trip is one of confort even in rough weather a vessel the trip is one of confort even in rough weather and pleasant skies on our journey thither.

We speut one night in Norfolk and the next morning at 0 o'clock embarked with all our impediment, thogs, guas-powder and shot, bateau, &c., on the river steamer Cynet, en route for Knox Island and Currituck Inite. The Cynet was a peculiar nondescript looking craft, and unite a Mississipp that boat, and on first appearance did not promise on more intimate acquaintance-chipy and though a real peak Bay canala you pass through an extremely lat and unitureresting country, threaded by an occasional winding and totations river.

Knott's Island, where we arrived al about 4 p. m., werny and fagged, is entirely destitute of scenic or pleuresque attractions. Its dimensions are about seven miles in length expressed by the property of the propert

CATERING AN ADIRONDACK DINNER.

L AST Summer, on the harders of a picture sque lake in the heart of the Adirondacks, might have been a bark each occupied by Mossh, (the guide.) myself and "Socard," the best dog in the woods, in my escimation. One morning, doring the last of October, I was nawakoned by a cheery vaice calling, "Breakfast ready, sir." This atmospherement brought my scattered faculties together and I was upon my fret in a trice, teady to do justice to even the honcellest fare. What was my surprise on emerging from the initianal looking across the fire, to see not a streak of dawn to curreliorate the slamment, thinking for the mannent that breakfast and haylight were symply more, for beyond the circle of the light all was complete clarkness. "For thander's suke, Matsh.) what time is it?" I asked to a vexed time.

minnent that trenkfast and theylight were sympositions, for beyind the circle of drelight all was complete tarkness. "For thinder's sake, Marsh i what time is it?" I asked in a vexed time.

"Half just four, sir; promises in he a splendid day for funting, and I thought if I and yim could only welcome them fellers with a carenss hanging up there by the gambrels, we'd feel hirther."

By "them fellers" Marsh meant a friend of mine who, it was expected, would appear with his guide within a day or two from Tapper's Lake, where we had been camping for two weeks without having shot a door. So Marsh thought it would be a pleasant surprisa to entartain them with a venison steak on their first appearance. In camp, to prove true the many stories which had been circulated about our goad lack by friends and visitors. Finding his thoughts so hospitably bent my anger was humeilately rininged into a thorough appreciation of, and sympathy with, his wonderful energy in the matter of breakfast.

We dispatched our marining used with baste, took our rilles, called old Sumil to follow, went dewn to the boot, shoved all and made nor way to the local of the lake without hiss of time. There Marsh landed, and leading the diag, struck off into the woods, while I quietly rowed to an island a few roals distant, altended in such a position that from its highest bank a complete view of the lake cam be abtained. Landing, and pusition that from its highest bank a complete view of the lake cam be abtained. Landing, and pusition that from its highest bank a complete view of the lake cam be abtained, and leading and arranging everything for a hasty but quiet departure, I climbed the bank and made myself as confortable as possible, under the circumstances, for it was latter rold, and severa shet storm set in, pierciag enough to freeze the marrow in one's bones.

but heard fram. No somer had I done this thou a several sheet storm set in, piercing enough to freeze the marrow in one's bones.

Smittenly all thoughts of weather and discomfort were put in dight, however, by the deep lazy of the hound, which canar full and clear across the water belief I had dreamed that he could have here storted. Listening attentively, the dag seemed to be coming neuter, and I expected every second to see a deer spring Into view, when to my surprise and disguist, I heard the sound grow fainter and more distant, until it was admost impossible for the ear to follow. Taking a hist took, thinking that they's sport ended, suddenly I perceived what appeared to he a thread here rusting quietly along he tho water near the bank. To get a shot at that deer it was necessary for me to watch the movements clustely. After swimming a short distance to madding an analysis of the land, she changed her course to me diagonally series the lake. Walting a few moments, I can down to the load, jumped he as not selessly as possible, and rowing arroand the heard if the behand, readd discover an dow. The wind and had drave so thick and lost that objects could not be distinguished mare than lifty free away, and I was obdiged to stop rowing constantly and stand up in the bout to findge what course it was heart in take. After tee minutes had pulling my expected as were resumbed by the sight of a fine hook with magnificent actions within good shooting distance before I bearned by his load pulling and the surging of the water that he was aware of my proximity. The heave fellow was swimming for his life and evidently would dis gome?

After getting him turned towneds the middle of the lake, I raised my rille to the, when, imagine my astunishment at having the "old shooter" go off before a sight had been taken.

taken.

The secret of all this haid in the fact that my tamils were so still and numb that when it seemed as if the linger was simply teaching the trigger, it was pulling a "betle too hard."

Kow came undher tengh race, to head that old back off befare he could reach solid battom. He swam like a streak; the water rolling heavily off his sales as if he were an old man-o-war. Finally I managed to get him turned again, and taking mure care this time to draw a deliberate aim, drave a leal square into the back of his head. Then pulling laim into my cranky Adirondack load, which is a task attembed with considerable dilliculty and thanger of a rapsize, went ashare and get the dag, who had "roune in" during the melée, and then rowed to the head of the lake, where Marsh, sented on a hig, was awaiting patiently a development of affans.

It is with a feeling of salisfaction that one returns to camp with deer and dag, knowing you have raptured your game without the assistance of a guide to riber watch arrow you to it, when it lirst cames into the water.

B. C. D.

SHELLAC VARNISH .- This varnish is made by putting a quantity of shellac gum into a bottle ar other close vessel, adding alcohol sufficient to cover the gum, and keeping the adding alcohol sufficient to cover the gain, and keeping the vessel in a warm place for one of two days, during which period, if the alcahol has not been votered to excess, the gain will have because dissalved and the liquid will be ready for use as a varialsh. Shellac variatsh will riskst dampness and water much larger than any other variatsh. By minging about one anime of fine lamp black with a pint of tide variatsh, it will make an excellent variatsh for bouness and for farmers' leads, after the leather has been ofted, as it will dry in less than an hoor, and will not black one's leads. It will not make the leather lard it oil or grease is applied before the variatsh.—Herald.

-At Dexter Park, Chicaga, one day last week, a party of sportsmen were shouting snowbirds from a trap, when, one of the birds being crippled in the wing, another from a flock that was passing averhead, swaqqed down, and seizing him carried him out of bounds over the fence.

Hish Gulture.

[Prom Proceedings of American Fish Culturists' Association]
FISH CULTURE ON THE YANG-TSZ
KIANG-THE SAMLI, OR CHINESE SHAD.

BY G. H. COLTON SALTER, EX-UNITED STATES CONSULTO THE TREATY PORTS OF THE YANG TSZ KIAND, CHINA.

IN 1862 I occupied 150 days in going from New York to Shanghai in the Ocean Charger; to-day, thanks to the steam lines, we can connect the two cities in forty to forty-five days. As we approach the China const we find the water very muddy, caused by the vast flow of the Yangtsz, carrying with it an immense amount of parthy deposit. In fact, islands are formed and new shoals are discovered every year, necessitating constant surveys of the channel.

I should call the Yang tsz Kinng not only the great shad

I should call the Yang tsz. Kinng not only the great shad of such majestic praportions the "Child the other; so wast and of such majestic proportions the "Child the feeler semiliar" I have explored it in my little yacht, the Fantsolner, alout 110,00 miles from its month.

I so the Mississippi with shad, as in view the the Child States. Fish Commissioner, has in view the sturking of the Mississippi with shad; but the question has arisen, Will the shad ascend the river to any great distance in view of the very maddy churacter of the water? I reply that the Yang tsz. Kiang is "very muddy, the color of nick pea sonty, yet the sometic (shad) we found there in great numbers. They are of superior llavor, of great size, are ledd in great favor by both rich and poor, and are sent from the river to all parts of the vast empire in large vessels, made of eartheu ware, called caps. The Chinese large a very ancient enstant of sending the first large shad of the senson to the Euperora. Peking, and the custom remotered the size of vere (eilver), thout \$150 gold.

The people of China hold in great reverence anything in the way of lish, desh, or fowl, which contributes largely to their support, and they useribe especial virtue to the medicinal properties of the cil of the shad, considering it almost a specule for affections of the air passages, and, in its early stages, a positive cure even for constauption.

I will remark here that agriculture is looked upon In China as a most exatted calling. Once a year the Emperor visits the Temple of Agriculture, in Yelong, a building on a stependous scale, takes a golden plangt and makes a long item. This radie east main is incared to convey to the majestic propers and they sphere so when the place discinuture. They give it this place because the proper study of it, the constant stocking of the lakes, the rivers and sireans with fish, any philist the vast population—estimated by many geographers at 500,000.

The food of the same and sireans with fish any philist the vast population—estimat

ment, liquids and solids being saved and sold. In the valley of the Yang-tsz, under this system, three crops are raised during the year; in fact, in no other way could the vast mass of people exist.

I may mention as an equally curious, instructive and interesting fact, the artificial incubation of fowls, carried on in every village of the empire. You meet flocks of ting geese and inlicks going to water led by little boys, with the familiar humbno wand, and mother flock of small chicks, numbering a hundred or mare, giding to pashure led in the same way. In fact, there is wonderful accord between the heasts of the field, the birds of the nir, the fishes of the sea, and the average Climanan, who, patient and pludding, talks to all these creatures of God's vast domain, and brings himself to their keyl, or they rise to his, in a way utterly naknown to the mote fiery or more aggresive Caucasian.

The amount of phosphorus contained in certain fishes used for food has led many scientists to assume that a fish diet has a tendency to increase the activity of the brain, and hence is the only saitable diet for persons who tax the hrain cells for long and continuous periods. This, I think, was a favorite theory of the great naturalist, Louis Agussiz, and many persons believe that he was the author of the theory. I found in China that the literary cluss helieved that a farinaceous and fish diet was more suitable for them them one composed of flesh; that while the former supplied the waste of the system as well as nonrished it, the latter made the blood gross and heavy, and hence unfitted the system for severe mental toil.

I once visited a high official, living on the borders of the famed Thing-ting Lake, the great lake of China. His houce was about 800 miles from the Pacific Ocean, in the very heart of the empire. After partaking of his generous hospitulity, and smoking the pipe of friendship, I asked him if the Chinese philosophers of the meicant days attributed my special projecties to a fish thiet us in thin in the Chin

PROFITABLE FISH CULTURE.

BALTIMORE, March 6, 1875.

EDITOR FOREST AND STREAM :-

Balthmore, March 6, 1875.

Edition Forest and Stream:—

In perusing the reported proceedings of the American Fish Culturings' Association at its last meeting, the conviction grow upon me that this organization is not working so directly in the line of its legitimate purpose, nor an efficiently in any direction as we might reasonably expect. The separate organization of the Fish Commissioners, subsequent to our last convention, may fairly, we think, be Taken as indicating two things; first, that they did not consider the existing body as organized directly in their interests; second, that they were not adite salisfied to work through it in behalf of those interests. We think their conclusion well grounded and their action when, and we are inclined to believe that it will not only benefit them, but in as well. It will remove the chief obstacle that has stood in the way of our legitimate work. Our constitution prescribes that the object of the association wholl he "to promote the cause of fish culturies," and the unfilling and encouraging of the individual interests of fish entirely and the individual interests of fish entirely and the continuation hearing upon its practical successes; the interchange of friendly feeding and indercourse association is encouraged to the property of the continuation. The entire is a culturists." There can be no doubt, I think, that some of these objects have been greatly neglected, and that the time of the association has been too brighty occupied with topics that more properly belong to Fish Commissioners. Reports and speeches, which are nero aumanties of State and national work, however excellent and Interesting, do not, in any perceptible degree, assist in solving the problems with while the individual related and autonal work, however excellent may be to the public, they contain little that is new to the intelligent fish culturist has been problem, and the problems with while the findividual cannot but return from the needly disappointed when lives reports by all means, but thro

Before closing this I may just say that it was my intention to attend the incerting of our association, but that circumstances prevented. I hope that when we come together next year the legitimate ends of the association will be kept more steadily in view, and that the discussions will bear more practically upon them. Yours truly, ALEX. KENT.

ABSTRACT OF THE FIRST ANNUAL RE-PORT OF THE STATE FISH COMMIS-SIONERS OF MINNESOTA.

ABSTRACT OF THE FIRST ANNUAL REPORT OF THE STATE FISH COMMISSIONERS OF MINNESOTA.

SITUATED as this State is, upon the great water shed of the continent, and having within its borders the sources of the waters of the Mississippi, the St. Lawrence, and the Red River of the North; and being located upon the northern border of the ecuntry, where the annual average temperature of the water of our lakes is about 43°, it has the waters hest adapted to the production of fish in the largest quantity and of the very best quality.

A careful estimate taken from Township maps of the State shows that it has of inland lake surface, (exclusive of rivers and of the portions of Lakes Superior and Pepin, within its borders no less than 1,801,840 neres of inland lakes alone. Assuming that the State contains 83,500 square miles—or 53,440,600 neres; it will be seen that it has nearly three and a third acres, of water to every tunulred neres of land. The capacity of this vast water surface to produce food is practically unlimited.

Since entering upon the duties assigned them the Commissioners have confined themselves to an acquisition of a knowledge of the subject, to correspondence with other Commissioners have confined themselves to an acquisition of gas allotted by the U. S. Commissioners.

On the 4th of August 80,000 young shad fry were deposited in the Mississippi at St. Puni, and at the foot of the rapids at Minneapolis. On the 7th of Cotober 160,000 California salmon eggs were received, and from the care given them by Hon. E. Rice and others, they have now ready for distribution from 40,000 to 50,000 handsome young salmon.

Being desirous to introduce the white fish intu Lakes Minnetouka, White Bear, and other large lakes in the denser populated districts of the State, they made an effort to transfer the fish alive from Lake Superior to these waters. For this purpose they made arrangements, and Messrs. Day and Lutham left St. Paul for Bayfield, the nearest necessited power than the contraction of the lake sish rive, the bis

TROUT AND WITTE FISH.—B. B. Redding, of the Fish Commissioners, and J. G. Woodbury, their Superintendeut, passed through the city Saturday, en ronte for the Summit from Berkeley with 13,000 young brook tront, half of which where to be planted in the north fork of the American River, at Soda Spring, while it was designed to place the remainder in Prosser Creek, which empties into the Trackee. These trout constitute one-third of the number hatched at the State Intching establishment at Berkeley from 50,000 eggs received not hing since from New Hampshire. The other two-thirds have been placed in streams in different portions of the State. One hundred thousand white fish eggs arrived a few days ago from the Government latching establishment at Niles, Michigan, but it was found when they reached Berkeley that a large number bad batched ont while en ronte and died. The young fish obtained from the eggs remaining will be introduced into Tulare Lake. It will be recollected that a large number of whitefish were planted in Clear Lake two or three years ago.—Sacramento Record-Union.

Matural History. INSECT LIFE-No. 3. HY KEURA.

T is very difficult, without actually witnessing the suc-A cessive stages of the lives of such insects, to realize the curious fact that the little merry dancing gnals, whose the curious fact that the little merry duncing gunls, whose serial gambols all have observed; and the quick-darting dragon-flies, with their iridescent glistening wings; and the gay ephemerae, whose serial life is to terminate in a few hours from the period of their assuming it, were once the inhabitants of an element which would be fatal to them in their now perfect form. Yet, are there many insects whose lives are passed under similarly opposite conditions; and still more numerous are those whose progress from birth to maturity is characterized by changes of structure equally curious, which, however, are act so strikingly marked, in consequence of their occurring in situatious and under circumstances less opposed than those we have been considering.

been cousidering.

Every resident in the country is well acquainted with the common cockchafer, or May-bug, but few, perhaps, are aware that the form in which they are most familiar with it—that of a large heetle—is the ultimate one of several

slages of insect life. Four years* before the May-bug makes its presence unpleasantly known to us by dashing in our faces during our rural walks on the superb evenings in our faces during our rural walks on the superb evenings we sometimes have in May, it was carefully deposited in some field or meadow, in the form of an egg, it company, perhaps, with hundreds of similar eggs, by a May-bug like itself. The putent having performed this daty, would soon cease to exist; and towards Antama, the eggs would give birth to numerous minute whitish grahs. Between this period of hatching and the third Antama, the grabs increase greatly in size and east their skins three or four times, each time burrowing deeper than their usual feeding level, as they likewise do in Winter, when they become turpid. In the third Antama after they are hatched the grabs prepare for assuming the pupa state, by burrowing to the depth of about a yard; and in a little chamber at the linton of those burrows they remain inactive until the

gravis prepare for assuming the papa state, by barrowing to the depth of about a yard; and in a little chamber at the buttom of flower barrows they remain mactive until the following January or Frommry, when the perfect beetles emerge from the last covering they are to east off; but for ten or twelve days they remain quite as soft as when in their first stage of existence, and do not venture to leave their subternmean asylum until May, when they may be seen crawling out of the ground in great numbers and soon taking flight. In the perfect state the inseels live upon the leaves of trees, but the voracious grubs devour the roots of grasses, sometimes destroying whole acres of the linest pasture, and as Kirhy and Spence will observe, they "andermine the richest meadows, and so loosen the turf, that it will roll up, as if cut with a turfing spinde."

Statements from sources which entitle them to credence have from time to time appeared of the extensive grass, but also eat the roots of corn. The rooks are their most determined enemies; for they not only follow the plough for the parpose of devouring the grabs of the cockeder, which, among others, are sometimes turned up in the farrows in great numbers, but instinctively, as it were, pitch upon those mendows and portions of meadows where the grubs are parsaing their subtermneau work of destruction, root up the grasses with their strong beaks, and feast luxuriously upon the rich repast thus laid bare, as if to revenge themselves upon the cause of the charge midservedly brought against them of doing an injury to the farmer by up rooting his grass, when, in reality, they are conferring upon kim one of the greatest benefits by destroying an insidious enemy.

*ADr assuming the image, or perfect state, their life is extremely short, some being disclosed after smasel, laying their eggs and dying before smarke, many not living more from three bours. In the Sommer evenings you may have seen he dides near rivers, or unreface, in yould stoke inserts sourming around the street gas-lampa and the following norming found thousands, yes, millious of them dead upon the ground surrounding the lampe piet. Different species uppear at different seasons of the year. Iteaumer first discovered them in August 1738, while in most temperate countries they generally appear in June-benec, muny ealt them June-bugs.

HABITS OF THE WOODCOCK,

Danspring, N. Y., March 1, 1875.

HABITS OF THE WOODCOCK,

DANSTILEA, N. Y., March I, 1875.
EDITION FOREST AND STREAM:—

The woodcock that have been in the Southern States since the latter part of November will be with an again by the full moon of this month. They travel as far north as Canada, and through every State to our time, amond the great lakes, and as far northwest as Fort Union, on the Missouri River. In the month of September the shooting is eplendid in the northenu part of Dakota, and along the Mississippi River north of Dibuque. At Red Lake they are also in abundance. They commence traveling sonth about the first of October, and by full moon they are in this vicinity. At all the lakes they can be found, and the shooting is perfectlou, especially in Minnesott, ducks, goese, awan and crane being very plentiful. A few spotismic travel in steamhoats up not dawn the Mississippi Riber, noaking it a historic woodcock, ruffed and phonoted gronie; goese and ducks for the St. Lours and Chicago markets. About the first of April they build their nest in this section which is roughly formed under a me fallen free or dead busiles, or by the side of a decayed stump, and lay from three to fire ggs nearly as large as a plagon's. They are of an olive color, with light, pale brown spots. They generally hatch two broods, and if not disturbed will sit in the same uset the second line. The first brood is taken vare of hy thu tock bird, and after the second is fully grown they take but broods to the best feeding grounds. Thry should be left alone until September. July should pe should be abotished in view November 1 who were failed to the basiness the bird cannot fly as a game bird should fly nntil be has notified and received list Autumnat colors. In 1870 I bagged sixty-tiew woodcock in two days' shooting in the mouth of vectober; the bird-vect fail, analy of them origing eight on a stronger on the wing the space of the proofs, and the baw will be enforced if any one is detected shooting woodcock during the Summer colors. In 1870 I bagged sixty-dive woo

net appear among us until they get ready to build and sit; then they visit our lakes and swamps agito. The largest and fattest birds that have ever bagged have been to this locality, and I have hunded them for forty years. I bagged my first brace to Pennsylvania, in 1835. In the Antonia of 7-1 weighted twelves birds, and they turned the scale six and a balt pointde. I shot several this senson that neighted nine onness fully, and my nephery shot one that weighted ten unness. The feeding grounds here are small, but are superior for noodcock and super. My nephery also shot a grouss that neighted for noodcock and super. My nephery also shots a grouss that neighted for noodcock and received to theiry-fire namers. Woodcock generally weight being from meethalf to seven onness, and the English bird from more to sixteen onness. I had one sout to me from England that weighted one pound one onness. I had an sent to me from England that weighted one pound one onness. The rich and heart in have it in my collection. The plunings of the two birds is very different. Ours is more delicate in finner and juiciness. The rich and heart yand in this healty coners the Antonia birds to be so fine and fat. They are not confined to suction, for under the braces and turf and in the thickets and speu bogs they find many worms and layereds.

juichness. The rieb and fatt. They are not confided to suction, for under the heaves and turf and in the thickets and spen bogs they find many worms and largets.

When boung, they make a shall, heavy sound, until they grasp their pilze. Busing their bill into the nir they seem to suck the narm steadaly, when, with a quirk motion of the head, it albappears, and the mark is commenced for another mursel. They have five at the helps bery rapidly and their real for a few minutes. They have five at the helps bery rapidly and their real for a few minutes. They have five at the helps bery rapidly and their real for a few minutes. They are greedy, unsocial and solling, bery makes it very sensitive, so that no woom can escapa, if within two luches of the surface. They are greedy, unsocial and solling, From the fine the first reg. Is laid until the brood is hatched, is generally four news. I have seen the male bird at this time rise almost in a line, probably three limited feel, they commence chelling, making a reay singular note, sounthing like the sulps, but much foinder and desper, they rapidly descending to the place whence he started he commence yielding an analysis of the place whence he started he commence yielding an analysis of the young brood is four birds. I have seen five on the sulps of the ground in the commence with the content of the young brood is four birds. I have seen five, but seldom. When the moutting season communices the procedock separate, and do not come together again until they get ready to migraps. I have seen the male bird with the first brood tumble and flutter along the ground and over the dead braves for a short distance, and then take pring, fly in a circle, and return to the hen, and in a few moments offer a few clincks, and the young would come out of their hidding places and be under his protection again. He would singular and allow me to pass with his after feet of him. Wherever there is good buring a side hill is his choice for bonne. If the weather has been sky, you will always dud

Sintes. Smoorer shooting kills off all the old birds portspoils the Antunin sport.

This game hid is harrassed more than any other; after being functed all Summer and Autumn, when he returns south they are not content with hunting during the day, but at alght toke the negro and touch, and rulted he is feeding "shoot thus not the sport," and call that sport. The Winter here has been very server, many shows, but light; but if the Spring opens early, and not too net, there will be plenty of game most Autumn.

SAND HILL CRANES.

FORT WAYNE, Ind., March, 1875.

FORT WAYNE, Ind., March, 1875.

EDITOR FOREST AND STREAD:—

It may not be out of place to give through the columns of the Curest AND STREAD in little bit of outnired bistory which has frequently father under my notice, and perhaps of almost every Western man, respecting the habits of the sand bill crane. Like every bird of that species, they are found of the water, but not wholly confined to it. They frequent the banks of their sand marches and make predutory dights and exemisions into cultivated fields of grain, greatly to the annoyance of farmers, who contrive oll sorts of ways to kill or trap them. They are meaning as crove, and it is schime you can get a sbut at them. Those and are often seen on the prairies of lilinols, or are sinne years ago, and it was amusing to witness with a field glass their family intless and sportive proclipities. School boys let loose from school could hardly go through a greater variety of gyunasties than a flack of young sand hill cranes. Hopping on one big, then on both, and all in it, in one grand jubiles. Now and then one may be seen equanting hown, and others playing leap frog taking times juniquing over and frollything sometimes for an hour, all joining in the dance. I have felt like taking a hand with them many times, but on the test approach of but get the signal is given and the sky is darkened with their light. Their social habits are othernize piculiar. After having muted, the birds pincered to habit up in the marsby ground partially covered with uniter, a tanneated cone of fursh, sitcks, grass and mod, to the height of their legs, on the top of which the female deposits only two eggs. Their they sh, alternating as convenient, with their legs projecting straight out beddid, to sometimes down by the side of their myst to the ground. After healing as convenient, with their legs projecting straight out beddid, to sometimes down by the side of their myst to the ground. After healing them, each taking one mader its fostering care and tolding them at a respectable distance u

ENGLISH SPARROWS ON L. ISLAND.

ENGLISH SPARROWS ON L. ISLAND.

EDITOR FOREST AND STOEAN:—

There seen papers on the Passer domestleus lately in several scientific periodicals, also in the Fodest AND STOEAN. To be to mid a tew observations in addition to what has abready appeared. In New Haven, Come, and Neonth and adjoining towin in New derecy, the English epartowe bave nearly exteriorizated in some localities on long Island they have performed a like service, yet to many places they are fast becoming a natisance. They fight and emopies our quite birds, which are driven away from gardens and are continually re-attacked by the apartows which they appear where the P. domestices abounds. Near my rededence there use several small houses erected on poles, which were formerly occupied during the brieding season by bluebirds, honore wrens, great crested flycatchers, &c. Last Spoing the sportows attacked the innates of several bounes, pushed their eggs from the nests to forground, or else hallt their own usel on top of the eggs of the more peaceful native birds. A part of the great crested flycatchers, Melitar chast criticis, fought the foreign introducts for mearly three doys, but they were finally competted to cereat and give up their house when their nest had been partially built. While the birds were pressing forward during their migration new comers would safty arrive and inspect the honse, but were soon surprished and beaten away by the pugnacious sparrows. There are small peach trees in my garden which have bird houses on them, whell were taken possession of by the sparrows. When the trees in which have bird houses of wards the house of wards the part of locality footing then the particle of he was parrows that sit near their houses doring the pariod of locubation and cuard the immediate locality feel-ously. If the spartows could be confident to the coy limits they would

prove a lightfit to the public; but indea they advance to the country and collect in hundreds, as to the case in localities on it, bug island, they become a unitanic.

GERMINATION OF SEEDS.

GERMINATION OF SEEDS.

VITH the greatest care taken of garden sends some will fail to geraduate from various equass. Many and very slight are the sechbattal contingencies that prevent the granduation of our clorished seeds. To gand against loses trilling accidents emission to start prevent the growth and perfection of seod plants, we may cannerate a cold dry atmosphere, from much moisture, too shallow cavering of seed, or two deep covering, rain, and contlinity of cold, and we come naturally to the bact canciloring, which he, "they won't come up and we don't know the reoson why." Many gardeners who grow seeds for market crops, generally plant many more seeds than they orant for their crops provided every seed geraduated, but they do not, house this water act are. Too much water will exclude air, so you must have a bidancing power as a regulator. Some seeds we find, such as peas, will geraduate at quite above those blue of the care is wide the color bride require an almost Summer that to develope and bring them foroverd. Being cooted and well wrapped up in a temporon conting they often miss vegetating from a too isladiow, rether than not deep planting. Planted too deep not not shallow, rether than not deep planting. Planted too deep to too shallow, is equally bind to germination. You will find it an invariable rele that seeds when be meaning to sufficient edges of the planting of the point of the planting of the planting of the planting of the planting of the pla

GIANT TREES IN CALIFORNIA,

It has been supposed that the Sierra sequoias, or hig trees of Culifornia, were confined to a few small and isolated groves like those known to murists by the names of Calaverus, Todhumne, Merced, and Maripasa, scatteted at considerable intervals along the Western slope of the manutains for a distunce of sixty miles. It was known that a collection of hig trees larger than any of those in the Muripasa and Calaveras regions exists in Fresno County, where Thomas' Mill has for several years been sawing this redwood off the Sierra to supply the market of Visalia, but it was discovered last Summer that this banky of big-tree timber is not pruperly a grove, but a torest extending far not less than seventy miles in a northwest and southeastward direction, with a width in some places of ten miles, and interrupted only by the deep canons which cut across the general course of the forest, and reduce the level to an elevation below that at which the tree is found in a wild condition, although when cultivated it thrives in all our valleys.

general course of the forest, and reduce the level to an elevation below that at which the tree is found in a wild condition, although when cultivated it thrives in all our valleys.

Different persons have traced the forest from the bosin of the Tale River, in latitude 36° 20°, across those of the Kawesh and Kings to that of the San Joaquin. The elevation has not been carefully mensured, but is supposed to vary from 4,000 to 6,000 feet. At one point, and one only, this forest is accessible by a wagon mail, and that is at Thomas' Mill, forty-eight miles from Visalia. Unlike the graves further north, this forest consists mainly and in some places almost exclusively of the big trees, and there are also a multitude of small ones in all the ages of growth, some just sprouting, and others saplings only two or three feet through. The largest stunding tree us yet measured is forty feet in diameter; a charred stump—the tree itself having disappeared—measures forty-one free across. A tree twenty-four feet in diameter, four feet allowe the ground, is precisely the same thickness sixty feet higher. A fallen frank is hollow throughout its length, and the hale is large enough to drive a horse and buggy seventy-two feet in it as in a tunnel.

This forest is so extensive, the timber is so abundant and excellent in quality, and the demand for it is so great in the barre valley at the fout of the anomation, that it cannot be withheld from the axe and the saw mill. The wood is similar in general character to the Coast sequeia, or common red-wood, straight in grain, splitting freely, even enough in grain for furniture, and harsn' eriar to oak in its keeping qualities in positions exposed to alterations of maisture. The Sierra sequeia thes not thraw up sprouts from its stump as does the redwood, and can therefore be felled out more readily. It was wise in Congress to make a reservation for pleasure purposes of the Marinosa Grove, which is near Yosemile, small and conveniently accessible to tourists by the present routes of travel;

GROWING RAILWAY TIES.

Rochester, N. Y., March 8, 1875.

Rechester, N. Y., March 8, 1875.

Emiton Forest and Stueam:

As one of the purposes to which your excellent puper is devoted is the purposer to the first ender that subject that t believe is original and has not, to my knowledge, been before prantulgated. Everybody knows that railroads require interests unrount of wood animally for fuel and lies. The substitution of coal as fuel may diminst the demand in that direction, but wood uppears to be the only thing that will be used fur thes. These latter repairs to be renewed every eight or ten years, and in consequence like area of land necessary to supply the demand is so great that it has became an object of solicitude to civilized governments at over the world. As railrands are subject to law, I thinh no appellensian need be felt if the people will but multiman their rights. In this country, at least, the falliand campands have passession of from one hundred to one hundred and lifty feet in width of land along their lines. If each company would either evoluntarily, or by compalision, plant trees on this land, now barren, they could benefit themselves and the public. Certain trees set out when flist a railroad is started would be mently large enough for the when those first laid were rotten, and by continuing the system each milroad could have its own never fulling supply of firs. The great piles of old, useless the flat are now burned as a missance, or allowed to slowly decay, would make excellent manure for the growing trees, and through nature's process renew themselves forever. It tails to be jected to the proposed plan that the trees growing near the track could be liable to be blown draw and cause accidents. All danger from this source can be obtained by planting deep rooted frees and cutting off those branches ruffaing foward the track; moreover the patential danger inentimed could not be a title of what actually exists from other causes, I say nothing of the incidenal benefits that could result from a general adoption of the system, such as breaking beavy w

The Ronnel.

TRANSPORTATION OF SPORTING DOGS.

t From long experience we can concur with the remarks of our correspondent as to the haggage masters, and the treatment of dogs in the section he mentions,

Entror Forest and Stream:

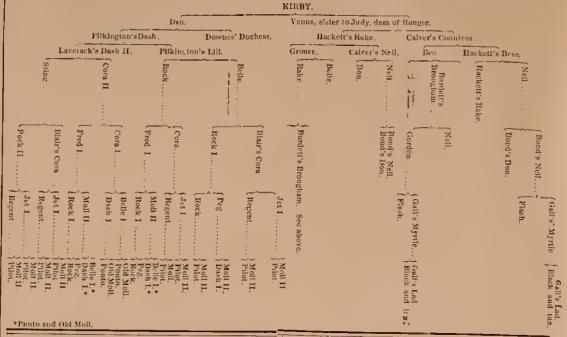

Indianapolis, Ind., March, 1873.

Entror Forest and Stream:

I have been considerably asterifished at the tone of several letters published in recent numbers of your paper upon the subject of fires charged on railroads for the transportation of building dugs, and the want of coursesy and alterition of the employers to sporting parties and their degs. The authors of the articles must have been unfortunate in the extention of their routes, or biandered upon some narvorthy and surly employee, or they certainly could have inever reacted the conclusions they express. In this section of the brond West the fairs for huming dogs are conceded by all—even the officers of railroads—to the baggage masters, and as a rule they are among the most contributes and accommodating men engaged in the railroad service. A sportisman has only to make letting with flent, and tills is not a diffiguil task. During an experience of a dozen years that has taken me area most of the railroads in bullman, and many to tiling and tillnots, on hunting exercisions, I have alteray found that my dogs were among the most officers of the Tallroads in the Indianapolism of the railroad words and lifty cents or one doffar given to the baggage master slivays accured for them a comfortable transport as far as ho went. No charge is demanded by the baggage master, but the

PEDIGREE OF KIRBY.

KtiiBV is a handsome block, white and tau blich, was heed by the Rev. J. Camming Macdona, Hilbre House, West Kirby, Cheshire, England, and was imported in April, 1874, by "Mohawk," who owns her, as also her full brother Milo. This strain of sother has a clear pedigree, extending back for more than eighly years through the Laverack blood.

compensation is teft to the sportsman, and is generally determined by the distance to be tracersed, and if there is a good warm spot in the car near the store on a cool day, or a cond place on a varied ay, "Mase" and "Ned" always get them. These attentions, so grateful to the dogs after a hard day's trant, can only be secured by personal compensation. Far one, I do not want my dogs to be put on the scheidle for which I sm to pay before entering the cars. When even this is the case, they will be carried and kicked about as so much extra baggage, and this inlight embunger the personal safety of some one, by bringing into vigonous action the flexor and extensor muscles of my arm or teg, if practiced upon my dogs. Let the matter rest just where it is, for the comfort and safety of the dogs, as these while best he secured by compensating the baggage master.

CHOOSING A DOG.

EDITOR FOREST AND STREAM:—

What kind of spiter of pointer is hest sulted to my shooting? is a question well worth the consideration of every sportsman in purchasing, importing or hreeding a dog for bis own use. Many of the readers of the Forest and Stream commence and end their shooting each year on woodcock, with an occasional eneck at ruffed grouse. Others live in a prairie clickens are the main shooting. Others again take it out in quall. Each of these kinds of shooting requires a different style of dug. If not a difference in his broeding. If the owner would have him a star in his profession, and I am strongly of the ophion that, with the exception of chicken shooting, we require a fifter-pit character of work from a dog to that which is found to answer best in England to day. A crack dag on the moors of England and Scolland would be very apt to make his mark amany phanetal grouse, for the same wide range is absolutely increasely in both cases; but be certainly would not be a very satisfactory dog to shoot quall or woodcock over, mult be had had months, if not years, of work. The painter is certainly not to be found as frequently in England as of yore, improvements in agricultural mechinery by shortening the stubile having turned him out of many a field, where once he was of all importance, and the setter, on account of his rougher coat and better protected feet, is more satied to the line healther covered moors; and I would rather risk my chance of procurings pointer in the United States to-day than in England, though I have imported two. Shortd ony miscellaneous shooting he cut down to shappy quall and woodcock — which is preliv since to happen within the next tony years—I firmly believe that I would take more than ordinary quants to persecure the old fashioused Spanish pointer, or a dog with a large preponderance of Spanish blood. It is true that the cream of his phone of day, the ordinary of the extentihal is required on an English stubble, for In nine cases out of iten you can decide what periods of t

CURE FORCANKER

BERGEN POINT, Murch 13, 1875.

Limits to tell you that the prescription to cure canker, which you so kindly gave me through the columns of your valuable paper, has proved a wonderful success. It has cured my setter with only three applications. I noticed the suggestion of Harlem oil, but did not use it, as I found the twenty grains of sutphate of copper, dissolved in eight ounces of water, applied by aid of a small syringe, had the desired effect. Thanking you for your kinduess, and eith a hearty recommendation of your prescription to all sportsmen interested, believe me, sincerty jours, Sancho.

Dud Breking.-Mr. Edward Hope, of La Grange, Mo. wishers to recommend to the sporting fraternity the services of William Lawrenceson, as a capital breaker of setters, pointers, refrievers, and field spaniels—a most thorough paiustaking, and honorable man. Address William Luwrenceson, La Grange, Missouri,

THE EDMOND CASTLE KENNEL

RIVERBEAD, La Grange county, Mo., March 18, 1875.

RIVERIERA, La Grange county, Ma., March 18, 1875.

RIVERIERA D. STREAM:

In my letter which, through your kindness, appeared in Forest and Stream of the 25th of February, I expressed a strong opinion in favor of Combethind setters. In reading the history of Pride of the Border, which accompanied his portrait in your last issue, I see it olated that he strains back in the celebrated bread of setters at Edmont Castle, near Carlisle. I will now state that my favorite dog, Gronse, he father of Dush and Bang, &c., I purchased out of the Edmond Castle Kennel, where he was born, raised and broken, never leaving that estate unit I brought him to America. Yours truly,

EDWARD HOPE.

PLUCKY DOG.—A fox hunter in the Western part of Crawford county set his hounds on the trail of a fox last week, and a few days after was notified from Titusville that both dog and fox were safe in that eily, the lytter dead and the other pretty well tuckered out. They were found in a field just outside of Titusville, the fox lying dead on the snow and the dog beside it unable to walk. The owner said tho hound started on the trail on the Friday before he was found—Morday—and it was his opinion that the dog had chased the fox fully two hundred miles, until Reynard fell exhausted and his enemy lay driwn beside him. That hound is some dog, no doubt; but the fox was also a steady goer.

The Borse and Course.

FAST TIME.—The b. g. Pilot trolled a mile at the Hippodrome on Monday evening in 2 min. 35½ sec., the best time yet made here and equal to 2:20 on a mile track. Mr. Nixon's benefit on the same evening was not ovation which must have been gratifying to that gentleman in more ways

-The Spring meetings for the Eastern Trotting Circuit have been agreed upon in accordance with the following programme, which calls for \$12,000 from each association:-

POINT BREEZE PARK ASSOCIATION—May 25, 26, 27 and 28.—Entries to close May 17.

—Thormanly, another of the fashionable English sires, died recently at Newmarket. He won the Derby in 1860, netting for his owner, Mr. Merry, £80,000 in tets in addition to the stake, which that year amounted to £6,200.

-The Lincoln Handicap, which is run at the first regular meeting of the racing season in England, was decided on the 17th, being won by The Gunner, who started at the long odds of 30 to 1.

—The Grand National Steeplechase, the great event of Eugland in the jumping line, run over the four and a half mile course at Aintree, near Liverpool, was decided on the 18th inst. Again an outsider was victorious, Pathfinder, a gelding, who started at two odds of 16 to 1, turning up as winner. Jackal was the favorite at 6 to 1, and his victory would have been very pleasing to Americans, as his dam, Maggiore, was bred in this country; she being by Lecompte, out of Evergreen, by Glencoe. The Grand National was won first by Lottery in 1839; the value of the stakes this year, to winner, £1,350.

—The French papers announce the ileath, after a long and painful illness, of M. Adolphe Fould, one of the most active members of the French Jockey Clith, and one of the most generous patrins of racing on the Continent. He was the eldest son of the late M. Achille Fould, Muister of Finance under the Empire, and his large fortune enabled him to perform important services to the turf of his native country; his sound findgment gave great weight to his apinious on all questions of importance, and his knowledge of breeding was almost unrivalled. He had a large and well-appointed stud at Tarbes, in the south of France, as well as an extensive training ground about five miles from Tarbes,

SPARE THE BIRDS.

THE fact of the threatened extinction of fur bearing seals on our Pacific coast having been brought before being on our rache coast having been brought before the notice of Congress, recalls to mind the probable exter-mination of gay plumaged birds through a similar source of demand; and while the adornment of our wives, sisters and daughters is a question which is likely to defeat the action of both legislators and philanthropists, it is sad to think of the wanton destruction which follows the inex-orable demands of fashion. In the case of the seals our sympathics are not so entirely aroused, as their skins form garments which protect the wearer from the cold; and moreover, we never see them in life, or in the character of household pets or familiar visitants, the harhingers of sunny skies, cheering with song and encouraging by indus-Who can read without almost shuddering fact that in London one house alone has received 40,000 humming birds, and that in South America, from whence the most are imported, these gems of bird life are becoming almost exterminated to gratify the caprices of feminine vauity.

Examination shows that the innoceut and joyons hum-

ming bird is by no means the only species that is jursued with like avidity for the same object. Every bird whose gift of glorious plumage makes him a mark for the adorument of a lady's hat, is eagerly sought for in the market, and the coming fashion of ornamenting dresses also, is inereasing the demand and corresponding slaughter. Such birds as the pheasant, the gorgeous mallard, and even the little blue-winged teal, all of which are much sought after, are protected by law during certain seasons, so that they may not only increase and multiply, but their flesh can be used as food, and in most of our States the smaller hirds which do not come under the lead of game, are protected in a similar manner; but in other countries, where they find the warmth lacking with us, musuch protection is

International law looking to the protection of the seals is now under consideration, and we hope soon to hear of similar action for the benefit of the birds. Naturalists

should agitate the subject, or soon their occupations in the field, at least, may be gone, and future generations may yet gaze with equal astonishment upon the skeletons of the minute humming bird and the gigantic moa. It is almost impossible to concelve of the immense number of bright plumaged birds which are destroyed each year in the Brazils alone, for their heads and feathers. The latter are made late flowers and trimmings, while the poor little heads should suggest a blood stain to every woman wearing hat or cap so ornamented.

The Baroness Burdett Coutts, celebrated alike for wealth wurm-heartedness, has addressed that depository of all British grievances, the London Times, on the subject, and through its columns appeals in those who regulate the constantly varying fashions, to encourage the delicate designs of pattern in the ribbon trade, or the beautiful art work in artificial flowers, which affords bread to so many toilers of both sexes; or any of those multiform devices in ornamentation, payment for which brings comfort to many a humble home, and to encourage which would be to seatter the means of eujoyment in directions to which it has long since

The London Society for the Prevention of Cruelty to Animals, have, through Lord Cuchrane, who has recently visited the South American Republics for the purpose of inaugurating a statue of hismatel, the great Admiral, sent a petition to the Empress of Brazil on behalf of her small and brilliant subjects, the birds, hereign of her to see the and brilliant subjects, the birds, hegging of her to secure for them a close senson, that they may have some time in which at least to propagate, safe from the attacks of rap acions traders. The annual income derived by that country export duties, to say nothing of the employment afforded to thousands of persons in the preparation of bird skins and the manufacture of flowers from their feathers, will, we fear, militate against any immediate action, in spite of the fact that near prospect of absence of material will bring both income and occupations to an cuil. But the women of South America are experts with the needle, and their embroidery has a world wide reputa-How much better for them to engage in the imita tion of the pretty ereatures on silk, in colors which would almost rival the life tiuts of the birds, and yet retain a beauty and brilliancy, which in their case, are quickly dulled when the spirit has left the wonderful structure given them by the Creator for a body.

SOUTHWEST FLORIDA-NO 2

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN COMMISSIONER.

E left Cedar Keys Tuesday evening on steamer W Emilie, Captain Lefferts, and arrived at Manatce on the morning of Wednesday the 16th. This vessel makes weekly trips between Cedar Keys, Manatec, Tampa, Punta Rassa, and Key West. Tourists and sportsmen will find this steamer an excellent and comfortable sea boat, and her commander an old and experienced sailor; one who commander an old and experienced sailor; one who is ever attentive to make his passengers confortable. In referring to the able and obliging captain, we must not neglect mentioning the efficient, courteous, and gentlemanly purser. To those who wish to enjoy a balmy atmosphere, an equalde and salubrious climate, and a sea voyage over a calm occan, we would say, take an excursion ticket on the Emilie from Cedar Keys to Key West and return.

We are surprised that Mr. Clyde, owner of the Galveston line of steamships touching at Key West, and Mr. J. K. Roberts of the Southwest Florida Coast Line, do not arrange with the Penn. R. R. Company, to issue excur-sion tickets, good for the round trip. If this arrangement could be effected tourists could leave New York by steamer during the pleasant automnal weather and lay over at Key West or intermediate points before reaching the grand ob jective point of Florida—the city of Jacksonville. The return trip to the North could be made by rail, thereby avoiding the unpleasant storms that prevail on the Atlantic coast during February and March. This arrangement would enable invalids to enjoy the superior climate, and sports-men to participate in the unrivalled fishing and shooting of the Southwest coast at a reasonable outlay of time the Southwest coast at a reasonable outlay of time and money. To popularize the ronte, we are convinced that it would pay interested parties to publish, for the benefit of tourists and aportsmen, a small guide descriptive of the route, climate, best points for fishing and shooting, where to obtain guides and boats, necessaries for outfits, etc. We have long maintained that the Southwest coast needs but to have its adjuntages known to be conversited. have its advantages known to be appreciated.

We launched our future home, the Spray, at Manatee, and for the benefit of others we shall describe the boat and outfit. Possessing a limited knowledge of the coast, were convinced that a boat of an ordinary yacht model was not adapted to our wants, as she would draw too much water for the navigation of creeks, bayous and shallow rivers, and ground on the mud flats and oyster hars so extensively distributed in all the bays of the coast. A flat bottomed or bateau modeled boat was not adapted to our wants, as she would prove unsultable for outside work, and wants, as she would prove unsulfable for outside work, and would not work well to windward. Before purchasing we examined a mumber of boats in New York and Philadelphia, but failed to find what we required. Continuing our search, we visited Barhington, N. J., and found the Spray for sale, and she was jurchased. Having traversed nearly three degrees of latitude, and two and three quarters of longitude in the Spray, we are in a position to form an opinion, and would unhesitatingly advise intending tourists to secure a hoat of similar model, as we found her in every way adapted to a boat journey on the southwest const. Length of Spray 21 feet; beam 7 feet; ent rigged; centerhoard; form of bottom, midway hetween hateau and yacht; deep scag forward; decked over forward? feet; moveable cabin 6ft. 6in. This form of hull supplies room for stowage, light draught of water; rows well; is remarkably stiff;

and dry and comfortable in a sea way,
Outfil, two pairs of oars; canvas awning to stretch over Outfil, two pairs of ours; canvas awning to stretch over boom, and fasten to serew eyes in each quarter (thus protecting after part of boat), anchor and cable, palm, needles and sail twine, lantern, lampwick, lard oil, five gallon water keg, hucket, hroom, spade, ave, saw, screw driver, gimlet, hammer, oyster kulfe; compass, binocular glass, small stove, frying pan, coffee pot, tin stew pan, tin cups and plates, knives and forks, nails, screws, screw eyes, tinned 10oz, tacks, whetstone, matches in tin boxes, soap, towels, combs, hair and tooth brushes, pens, paper, ink. towels, combs, bair and tooth brushes, pens, paper, ink, postage stamps, envelopes, two feel chests, sugar in round wooden boxes with lids, pickles, cheese, pepper, salt, ten pounds best Java coffee in tin box, six cans coadensed milk, forty-eight pounds best lard in eight pound tin cans, picture for respect, best check, best larger than the company to the content of the company to the content of the content ninety-four pounds best pilot bread, fifty pounds best breakfast bacon, two lams, two boxes red berrings, old brenkfast baeon, two hams, two boxes red herrings, ohl boots, shoes, slippers, and elothes, blankets with quantum suff. of old calica and newspapers, powder, shot, wads, caps, eartridges, gun eleaning apparatus, Colton's and Drew's maps of Florida, one Winchester and Remington rifle, one breech and two muzzle loading guns, hunting knives, fishing rods and tackle; three pounds arsenie in tip hox; diarrhee mixture, lead and opinm pills for dysentery, purgative pills, and adhesive and court plaster, in tin cans tobacco, nipes, one bottle of ltrandy, and one of apple inck. tobacco, pipes, one bottle of hrandy, and one of apple juck. Verily, a long list of plunder, but everything absolutely necessary for such an expedition,

Our numerons necessaries were stowed, and we visited a neighboring saw mill to secure spring mattresses. The proprietor sawed us four boards § of an inch thick, and three pieces one inch thick and four inches wide. To arrange our sleeping appartment at night, we placed the stove in the cock pit; the 1x4 pieces athwart ship, and the boards forward and aft. At night we anchored the Spray as far as possible from land, placed the soft side of the boards uppermost; arranged our blankets; secured our awning, and sleet as only men can sleep when inhaliant to halve slept as only men can sleep, when inhaling the balmy and invigorating atmosphere of Southwest Fiorida.

Munatee is a pleusant village of several hundred inhabitants, situated on the Manutee River, eight miles from its mouth. At this place, the tourist will find two or three boarding houses, where fair accommodations can be obtained for two dollars per day, or forty dollars per mouth. This place offers to the invalid a pleusant Winter elimate, but to the sportsman few attractions. On Saturday, the 19th, we hoisted sail and bade adiew to Manatce. Leaving the mouth of the river we took a westerly course for the striped buoy in Tumpa Bay, and from buoy, a Southwest course to the tripod on Anna Maria Key, from a point near the tripod a Southeast course to Pulmasota point, the catrance to Sarasota Bay. Between these points the chaunel was filled with mullet, and hundreds of large sharks were revelling in the superabundant supply of delicious food.

Entering Sarasota Bay, we were greeted with a South-easter with some sea, but the Spray worked admirably, and proved herseif an excellent sea boat. Night approach-ing, we made a harhor under the lea of a long sand bar, and after cooking our supper we laid our weary limbs on our spring beds. At ten P. M. the wind hanled and we found our position an uncomfortable one, compelling us to lioist anchor and seek a better harbor. The night being dark, I handled the lead, and stationed Harry at the helm. With the lead we kept in the channel and made trucks for the southern end of Sarasota Bay. At 11 P. M. we sighted two passes in the distance, one of which we had reason to believe would carry us to sea, and the other into little Sara-sota Bay. We objected to a night adventure on the guif with an uncomfortable sea running, and as we had been in-formed that the entrance into Little Sarasota Bay was blocked up with dangerous coon oyster reefs, except a narrow boat channel, we deemed it best to seek an anchorage, and having found shelter from the waves under the lea of

nextensive grassy flat, we came to an anchor.

Next morning we took a survey of the surroundings, and found that we had anchored at the southern end of great Sarasota Bay. We noticed a house near the beach, made Sarasota Bay. We noticed a house near the beach, made a landing, and were gratified to find that the residents were from Brooklyn, N. Y., and named Bennett. Being unacquainted with the coast farther South, and aware of the fact that a trip of thirty-eight miles to sea was before us, we deemed it best to secure a pilot. Benuett, Jr., was acquainted with the coast, and offered to pilot us, but could not leave until Bennett Sr. returned from Manatee with their boat. The elder Bennett returned on Mondaynight, and we arranged for an early start on Tuesday morning. Sailing about three miles across the bay, we entered Sara-sota pass, a channel of about 500 feet in width leading from sota pass, a channel of about 500 feet in width leading from the bay to the gulf. Approaching the entrance we discovered two channels, one teading direct to the gulf, but bounded on each side by extensive sand bars; the other a swamp channel turning short to the South, around the North point of Casey's Key, and protected seaward by an extensive sand bar. We chose the latter, and soon found ourselves on the gulf with a fair wind.

A reference to Drew's and Colton's maps will lead the intending tourist to believe that the will find the available.

tending tourist to believe that he will find five available passes between Little Sarasota, and Little Gasparilla inlets. But these maps are unreliable as far as the South.

west coast is concerned. If we had relied upon these maps, and attempted this portion of the coast without a pilot, we would have experienced disappointment, if not something worse. The distance between the passes referred to, is thirty-eight miles. At noon the wind died away, and we were compelled to resort to an ashen breeze. Wednesday morning at daylight, we sighted Little Gasparilla pass. At low tide the pass is about 150 feet wide, with two entrances, one leading in from the South, and the other a swash channel which lugs the North point. We other a swash channel which lugs the North point. We chose the latter, and at sunrise we anchored inside the pass discharged pilot, and enpurred a mess of sheephead for breakfast. After breakfast we got under weight for our objective point, Luke Ochecobee. Possessing no knowledge of the route to be traversed, and anticipating difficulties during the journey, we resolved upon pushing ahead, and on an return make a enreful examination of bays, rivers and keys

and keys.

From Little Gusparilla to Great Gusparilla passes, the distance is about (wound a quarter miles. To keep in the channel the island must be kept close aboard. When Great Gasparilla Pass opens, the traveler must follow the channel as though he intended proceeding to sea, and at the southern point of Little Gasparilla Key, he will sight at the solution point of Entire Gisphrina Key, he will sight a channel tending in an East-Southeast course, which must be followed to clear a long and extensive sand bar, extending from the northerly point of Great Gaspurilla Key. Rounding the point of the sand bar, a channel with six to nine feet of water will be found leading in a Northeasterly direction, which must be followed. Three miles from the direction, which must be followed. Three miles from the pass (Great Gasparilla) an island will be approached, and this must be left about 100 yards to port. From this island a coarse South by East must be steered to within 200 yards of the inner portion of northern point of Lacosta Island. Having crossed Boca Grande Entrance, and reached the reint referral to some light may's reducted by a will the point referred to, some lisherman's palmetto lints will be sighted, where fresh water can be obtained, and a safe harhor found,

harhor found.

Boen Grand Entrance is nearly a mile wide, with deep water and a rapid tidal current. If a strong southerly wind is blowing against an elb tide, a fromblesome sea will be encountered at this entrance, and the tourist must govern his movements accordingly. Along this coast the tides differ from those of our northern States. Instead of two tides in the liventy-four hours, but one flood and one ebb will be found. At this point I may remark, that the bays North of Tampa are remarkable for extensive and and grassy flats, and coon oyster bars, rendering payingtion. Rorth of Tampa are remarkable for extensive and and grassy flats, and coon oyster bars, rendering navigation difficut to the uninitated. The water in all the bays is very clear, and if too much sea is not running the tourist can pick his way through the intricate channels by observing the color of the water. A day's experience in one of these hays, with a few experiments in stepping overboard and pushing his boat off oyster bars and mud flats, will educate him sufficiently to graid the accessity of the former. ucate him sufficiently to avoid the necessity of the frequent utterance of language not adapted to easy polite.

"AL FRESCO."

CLOSE TIMES AND OPEN SEASONS.

WE print herewith our Annual Comparative Table of Close Sensons for all kinds of game and fish in each State of the Union where protective laws exist, so that the reader can determine at a glance, without the trouble of hunting through volumes of codified laws, just what particular bird, animal or fish is excepted, or prohibited from being caught or killed at any given mouth of the year. Its usefulness and labors avine character are apparent, and the usefulness and labor-saving character are apparent, and the convenience it affords to sportsmen renders it alone worth the subscription price of the paper. This table has been prepared with nunsual pains and regard for correctness; and all available anthorities within our reach have been compared together, and any discrepancies adjusted by reference to the original ensetment. Imasmuch as many legislatures are now in session with proposed amendments to the game laws pending before them, this lable may require revision when they adjourn; if so, we shall reproduce it hereafter in its corrected and complete form, so that it may adequately serve our sportsmen throughout the next Fall and Winter shooting. and Winter shooting,

THE SANDWICH ISLAND TREATY OF REPPROCITY. - As an item of interest to those of our renders who are engaged in the cultivation of semi-tropical fruits, we would say that the Senate in ratifying this treaty, have so amended it as to strike out the word "fruit" from the list of Hawaiian products to be admitted free of duty into the United States, and substituted therefor the word "bananas." Thus proteeling by existing tariffs, which remain in force, the oranges and similar fruits from southern California, Florida and Louisians. The many provision of the treats is the and Louisiana. The main provision of the treaty is that admitting Hawaiian sugar to our parts free of duty. The amount thus excluded from our revenue while of considerable importance to a toy kingdom like Hawaii, would not be sufficient to pay the lobby expenses of a first class bill. A few American planters are thereby subsidised, but their hospitality is so open-handed and their welcome to the traveler so warm hearted, that we can scarcely grudge them their increased prosperity.

The East River Medical Association have appointed Dr. William Faulds Thorn, the well known philanthropist, to prepare an essay on "Mabaria, its nature, evolution, and effects on the human system." Dr. Thorn prepared an essay on "Health in Country and Cities," which received a price of \$100 from the American Medical Association. prize of \$100 from the American Medical Association.

[From our own Correspondent]

NOTES BY THE WAYSIDE,

I reached this place after a snow bound sujunra in the city of Grand Rapids, as it were from the Irigid mountain top to the fertile valleys of the plain. Stopping at Kulumazoo on the Grand Rapids and Indiana Railrond, leading directly sunth, I found Winter strong and vigarous, even though "lingering in the lap of Spring," and not until I reached the State line dld I ferl the hopeful promise of the vertal season with its huds and blossams.

Whatever sufferings I had undergone through a long amb dreary Winter, I could furget it all in the early prespect of nce again seeing the genial rays of the sun, pouring into the busom of the earth its life-giving influence, lifting the mautle of ermine from her couch, and tabling nature arise from her slumber to meet Spring in its noming that the untions of the earth might rejoice therent.

Here the ground is thinly clud with snow and this is rap idly passing away. A few days more and the frost will come out of the ground, and the whistle of the snipe will be heard in the wind to gladden the hearts of the sports-men. The horn of the hunder is already heard to summon the clan to the field on the approach of the winged invaders from the north.

The sports of the field and stream are thuly appreciated here, and many are the numbers devoted to its unally pas-time. A goodly number of fine dogs of unquestionable strain may be seen, indicating, in no small degree, the spirit of sportmurship.

An association of gentlemen has been formed called the Kankakee Sportsmuu's Club, consisting of S. Tinn, Junies Harper, W. H. Chamberlain, J. C. Eckurt, G. Simons, D. R. McFeely, and J. P. Harper, for the purpose of extend ing these pleasures, they having purchased a happy limiting around of seventy neres westward on the Fort Wayne ing ground of seventy acres westward on the Fort nnil Chicago Railruad, some eighty miles, on the Kun-kukee River at Davis station, where they have creeted a club house with all the appurtenances thereto belonging Near by is located a Pittsburgh club house, organized for the same object, where it is to be supposed many a sore and weary soul has sought relaxation from the cares and perplexities of a busy life to bud into health and vigor in the sylvan shades of Knukukee.

In the field and shade are found wild dueles in every variely, having plenty of wild rice and celery to feed on, together with geese, brant, sand hill crane, which, by the by, is excellent enling, grouse, chicken, quail, snipe, who decok, and reed birds. Of the fish there are the bass, pihe, pickerel, jack salmon, and musealonge.

If this is not the happy lunnting grounds of Mr. Lo, it is the one he wished for, with the exception of the presence of the pale faces, the bane of his life on earth, and his curse after, if human proclivities follow in train.

The turf is by no means neglected. There are always ome moving spirits to agilute the mass. Here, as elsewhere, There are always Mr. Silas Tam has been mainly instrumental, as I was credibly informed, in fitting up a trolling park which is said to be the fuest half-mile track in this section of the country; and although in operation but one season, has paid from the earnings 79 per cent, of the costs of construction, This is doing extraordinarily well, and speaks valumes for the enterprise of its management, as well as for the good

Hark! Do I hear a whistle? Yes, but not the voice of the jacksnipe nor the luttle. The train is coming. I must hie BARKER.

Fort Wayne, Ind., March 11, 1875.

ART.—We desire to call the attention of sportsmen who may visit the Acodemy of Design to a picture, by Mr. R. M. Shurtleff, entitled "The Still Hunter," A panther R. M. Shurtleff, entitled "The Still Hunter." A punther cruiched in the notch of a large maple tree is watching with cat-like eagerness the approach of a dar, who, scenting un unseen danger has hultril, and with erceled ears, seems to suiff the tainled air. Aside from the delicious freshness of the scene, the coloring of the houry old tree and the bright mys which have struggled through the glude, and light up the masses of ferns and undergrowth in which the doe is standing, the drawing of the animals is so faithful, and the form and position of the punther so well expressed, that the situation is grasped at once and one fears for the safety of the gentle doc. Another look, however, and we see that the alertness of the deer is equal to that of the fierce brute who cronches so low behind the protecting trunk. As an animal painter Mr. Shurtleff is destined to take high rank, and as his Summer lount is in the Adirondacks, the adjuncts for his pictures are found in sputs where Nature as yet unadorned by man's disfiguring hand holds to her own original loveliness

-The announcement that Col. Henry T. Chapman, a well known connoisscur of Bruoklyn, is about in dispose of his entire collection of paintings, statuury, etc., has caused a finiter of sensation amongst the devotees of art, as be is known to possess a selection surpussed in rarily and beauty by few on either side of the occau. The collection includes studies from the bunds of Curot, Rouss Vibart, Isabey, Andreas Aschenbach, Tamucois, Merle, and many others, besides gems from B. C. Kock-Kock, Schaus, A. F. Tait, etc. The sale will take phase in April at the Lenvitt Art Gallery.

-The annual reception of the Twenty-Second Regiment takes place Monday evening, April 5th. Governor Tilden and members of his stall will be present.

Che Rifle.

THE INTERNATIONAL MATCH.

"Sander's News Letters," of the 4th instant contains a repart of the minual meeting of the Irlsh Rifle Association, at which was received and adopted the report of the above mulch, the substance of which was cantained in Major Leech's spread printed in our issue of Feb. 25th. Apropos of the coming mulch, a committee consisting of the Lord Muyar, the Earl of Kingston, Maurice Brooks, Esq., M. P., Sir. Jumes Mackey, and twenty ather gentlemen, were up-pointed to make arrangements for the reception and enter-tailment of the American Ritle Term point the occasion of tainment of the American Ritle Team upon the occasion of their visit in June. Mr. Walkington of the Ulster Rifle Association, said that if the American visitors went to Belfust when they came over, they would get as worm a reception us in any part of Ireland. Major Leech hoped that their American visitors would get as cordial reception there as had been given the Irish temm and their friends in America. The Lord Mayor said that he had received the ntmost kindness and hospitality in America on the occasion of his visit there, and when the American team would be receiving invitations to North, West and South, he hoped they would allow the Lurd Maym of Dublin to show them same Imspitality.

The prespects of our riflemen are therefore of the most flattering kind as far us entertainment is concerned. It only remains for the clerk of the weather to so modify or hasten his Spring opening as 10 permit of practice at Creedmoor, Old Winter has lingered in the hip of Spring longer than

the cency and regard for the public comfort calls for,

-The Aunteur Ride Club held a meeting on Wednesday of last week as a committee of the whole on ways and means, apropos of the International Match. Subscriptions contiune to flaw in. The ilrumatic performance at the Academy of Music is expected to net anywhere from \$3,000 to to 15,000, which, with the amount now in hand, should surely suffice for all expenses connected with the trip. The larget question is to be fully discussed at the annual meeting of the club in April,

-A subsequent meeting of the joint committee of both clubs was held on Friday, when Gen. Knox was appointed in fill the vacancy caused by the continued absence of Mr. J. G. Bennett, and the draft of a circular was prepared and adapted, to be issued to the public, annuancing the entertainment on behalf of the American team, and fixing the prices of proseenium boxes on that occasion at \$100; balcony boxes, \$50; artists' boxes, \$30, \$20, and \$10; reserved sents, \$2 50, and general admission, \$1.

—The Separate Troops Cavalry Rifle Club held a meeting last Monthly night, and cheeted the fullowing officers for the cusning year:—Capt. Karl Klein, President; Major George Acry. Vine President; Churles A. Nugel, Scentary Juhu P. P. Münter, Treasner; John Peltear, Commissary; Finance Committee, First Lieut. M. Hehlt, Second Lieut. Churles P. Kopf, and Private Adam Warner.

-Mr. Conlin bas kimily shown us a very hundsome searf pin nmde of oxydised silver and cuamel by Ed. Johnson, of the Irish leam, it being a faithful representation of the Rigby builet, and presented by Mr. John Rigby to Mr. Conlin. This beantiful and appropriate little trophy is to be awarded to the gentleman doing the best average shoot ing at the tournament now pending at Mr. Conlin's gallery, and competition should be grently stimulated by the prospect of its possession.

Game Bag and Gun.

GAME IN SEASON FOR MARCH.

Snipe, Ducks and Wild Fowl

GAME IN MARKET. - The variety continues limited and prices for most descriptions are unchanged since our list report. A few English snipe have been received from the report. A few English snipe have been received from the neighborhood of Long Branch, and sell for \$5, per dozen, Retrigerated snipe \$3-75. Wild pigeons from Ohio are very plentiful at \$2@2-50 per dozen; squabs \$4-50@\$6; canvas-backs \$2@2-50; red-hends, \$1-25; mailards, \$1-25; black ducks, 50c@75; widgeon, 50@75 cents; wild geese, \$1-50 each; brant, \$1-50 per pair; wild turkey, 25 cents per pound; plover, \$4-50 per dozen; bay snipe, 75c@\$1-00; Canada hanting, \$1.; rabbits, 75 cents; hares, 75 cents.

Shire,-The first snipe shot in this vicinty this Spring were killed near Ling Branch the early part of this week

-The warm weather of last week brought some snipe to the vicinity of Philadelphia, and one gun secured three of the new comers.

-At Fuirfield and Upper Sandusky in Ohio, wild pigeous have appeared in numeric numbers and quantities are finding their way to this market.

-An association of sportsmen has been formed at damaica, Long Island, for the protection of game and enforcement of the sume.

Unfortunate Shooting Accident.-At pigenn unteh held lately on the grounds of Mr. James Bryce, at Madison, N. J., one of the contestants, Mr. Hopkins, was seriously injured and nearly lost his hand by the hursting of the left barrel of his gun, a muzzle lowler, One of the pieces struck the unfortunate gentlinen in the face, and his fingers were severely becrated, as the explosion occurred at the breech of the gun,

Long Island.—Good Ground, March 22, 1875.—Inlet remains good and the birds are getting quite plenty. A few Whiter geese have passed here; a good many geese in the bay; we expect to have good goose shooting in a few days as it is time for them from the South.

New Jensky.—Kinsey's Ashley House, Burnegat Inlet, March 18.—Joel Ridgway killed sixteen brant, nine gesse and four ducks last Friday; on Monday five gesse, two ducks; and on Tuesday eleven brant, two ducks, all from a sand hox on the bar near the Clum Island. On Wednesday Mr. Alexander Hazard, of Philadelphin, killed three geese, four ducks; seven gunners on Wall Sedge Point, names unhnown, killed fourteen geese; Joel Ridgway killed fourteen hrant.

Manyland.—Muirkirk Farance, March, 16.—The snipe are just coming, I shot one this afternoon; I saw about a dozen but they were very wihl; expect to have some good sbooting next week.

C. E. C.

-Wild pigeons are now roosting near Deer Park, Mary Jand.

land.

Wisconsin.—Montello—The severe weather and terrific snow storms in this State, combined with the trapping of lawless scalawings, have produced a scarcity in the numbers of quall and granse from which they will not soon recover. These game birds, being driven from their coverts by the deep snow and intense cold, snaght a refuge around the farm varils, and in two many instances, may will fearful staughter at the hands of the farmer. It indeed seems stronge that any man will wantouly destroy-the birds which came to tim for protection and fond in a half stauved condition, when they are worthless for food and are on the eve of the breeding season.

Pued.

Recovery Grove Park—The following gentlemen were

BLOOMING GROVE PARK.—The following geullemen were elected Directors of the Blooming Grove Park Association at its annual election held March 19th, at the Club grounds in Pike county, Pennsylvania:—Edward R. Wilbur, Geo. II Glenney, Sanders D. Bruce, D. M. Smith, G. C. Scott, Dudley Field, Charles Halbeck, Josep's Dove, George S. Greene, Jr., Fayette S. Giles, and Thomas N. Rooker. Permits for trout and tass fishing, also grouse shaoting and deer hanting at the purk can be obtained by application to Sanders S. Bruce, President, 37 Park Row; John Avery, Secretary, Room 21, City Hall, N. Y.

—A sportsman's club has been organized in Piltshurgh under the title of the Eight Ward Hunting and Fishing Club. Forty members signed the roll; the following officers were elected:—Alexander McIlwain, President; John Knowland, Vice President; J. A. Renolds, Secretary; William Shore, Trensurer; Executive Committee, George W. Gilespie, Sannel Shore, Jr., William Moore, and John Knowland. This club has some very good men in it who will enforce the game and fish laws of the Stale.

SHOOTING NEAR NEWBERN, N. C.

NEWBERN, N. C., March, 1875.

Newbern, N. C., March, 1875.

Button Forest and Sturam:—
Newbern is easily teached from New York by rail or by water direct, or by water via Ballimore and Norfolk steamers. To gu to the lake region, lunters will take the cars at Newhern, on the Atlantic and North Caroling R. R., for Havelock Station, only sixteen inlies distant. In the vicinity of Havelock Station is a beavely wooded country, viet pine uplands, and swamps where guin, inaple, and other trees grow in danse profusion. Fire miles from the stailon is Lake Ellis, a round lake of about three miles in diameter, and mearly connected with it are four or five other sheets of water. Some of these lakes are open water, others mile grown up, like Lake Ellis, with grass, through which is punt can be easily poshed. Lake Ellis was once a deep sheet of water. Years since, its former owner thinking to make it into a rice plantation, dug a canal to drain it, six ailles long, to the head of Sloemi's Creek. I saw a large number of ducks in the grassy bottom of the lake, mostly mallards. The dry sivamp known is Long Lake, to the south and west of the above chain of ponds, is an excellent place to hain for hears, panthers and wild cals. The pine tidges in that vicinity offer excellent iterr lunning. As but fen persons about Newbern himt in these forests, there are but few guides to be had; in fact the whole country will prove a new field for Northern sportsmen, who are auxions to "rough it" ituring the Winter months, on ground nearer to the Northern Sinces than Florich. Salting down the Neuse River from Newbern, the yacutismin will pass several good shooting points, one of which—Sloemi's Creek, about eighteen miles from the city—is a resorl for various species of ducks. Back of Sloem's Creek a colored man shot thenly one iteer during September and October. In those woods colored guides can be build for 75 cents to \$1 per day, funding themselves in provisions. Black ducks and Canada geree are from the city—is a resorl for various species of ducks. Back of Sloemi's Cree

procure bouts, &c., to explore this large field, while is yet to be worked up by Northern sportsmen.

The following information I obtained at the city market: One handred species of fish are caught and brought into Newbern during the different seasons of the year. One hundred tons of fish and been sold or shipped during eight needs from the Newbern wharres, which were chught in the rivers and sounds adjacent to the city. On the Priday before New Year's day six shall, the first of the season, had been cought, and were sold in the market. How does this compare with the season further North? Oysters of the finest sorts are sold at 80 cents to \$1 per gallon, or for 40 cents to 70 cents per bashel. Venison, at relait, is offered at 10 cents per pound.

The steamer City of Dallas, Mailory & Co., of 153 Maiden Lane, New York, takes passengers out and back on an excursion ticket, with ample accommodations, meals, &c., for \$22 per bead. Uninters will avoid from ded quarters at the Newbern hotels, and will find good accommodations at very reasonable charges. The broad Nense River, the great Pamlico and Cove Sounds, afford grand cruising grounds for yachts at all seasons of the year.

B.

CONICAL BASE SHELLS AGAIN.

REDFIELD, Iowa, March 9, 1875.

REDPIELD, lowa, March 9, 1875.

Entrin Forest and Stream:

Metal shells may be easily and effectually filted with conical tases of plaster Parls, inixed with enough water to form a thick paste, or rather dough. Put sufficient of It in the shell and mould it to the proper form with a stick having a conical end. The plaster will jur loose in some of the sledls, but holds firmly in most. As to increased weight, it is a mere trifle. In using such shells I find pattern and penetration about the same, but the recoil is much lessened. Of conse a cap expeller shaped like the new base must be used.

O. H. Hampton.

RECOIL OF GUNS

NEW YORK, March 2f, 1875

NEW YORK, March 2f, 1873.

Editor Poinest and Stream:— Much be shore said and written in regard to the recoil of guns. It is very doubtful if there is a man in America who has done more shooling than myself. About the year 1825 I turned my allention to field sports, and have been hammering away with guns of different makes and sizes ever since, and I cannot remember of ever owning one which caused any meanwhence in the way of recoil when it was properly loaded and placel in proper position to shool. The trouble arises in this cases out of len, when the recoil is painful, from the gun being overhanded or improperly held. Shooters would feel no inconvenione from fils cause, even if abooting as many as one hundred shots in a day; but I never would have made in one day the same number of shots at in deal mark, even if I had been offered the best gun ever made for diding it.

I do not believe that any of those professional pigeon shooters whin shoot such heavy loads, sometimes one hundred shots per day, could continue to stand belind the gun and shoot one hulf the number of shots at a dead mark with the same amount of powder and shot. I do not prevent to say that all guns are allke in regard to recoil, as It has the first professional pigeon shooters who may prevent to say that all guns are allke in regard to recoil, as It has the first professional pigeon shooters who may prevent to say that all guns are allke in regard to recoil, as It has sugment thing the rouble about recoil in guns arises from the causes above given.

Horace Saith.

SPORTSMENS' RECIPES.

NEWARK, N. J., March 5, 1875

NEWARE, N. J., March 5, 1875.

Entron Forest and Stream:—

I send you a few recipes which I have gathered from different sources. I do not claim them all as original, but I ilu claim that they are all good and practicable, as I have constantly used them for the years or more. My first is a simple method of cleaning brass shells, much weeded, I should judge, from the may the subject is agitated in your columus. Rub the shells with a mixture of two parts sulphurly neld, two parts water, and one part pulverized bi-chromate potash, and then wash them in hot water. This will reader a green and corroded shell as bright as new without injuring it to the least; but this recipe is of no use to those who like a verde antique appearance inside and out of their sivils. To prevent a gun rusling in sea alt, lacquer them on the coliside with a very lith wormish of shelke and alcohol. This should he laid on quickly with a brush, and will be almost imperceptible. A dose of the same util not hurt the mountings, but will effectually prevent their rusling, even If the gun is dipped in salt water; and remember that no matter bow carefully you clean the loside of the barrels after a day's shooling on life coast, you will do well to which your gun for a day's rive and remove the rusly which is found to form, which, if neglected, will cat in mix leave an unity mark. Blue olimment is the best preventive of rusl I know of, and is cheup and castly applied by mixing it in sperm oil and passing it through the barrels a few fluies with a rag. Sperm oil 1 consider best for gun tocks, but I never put a drop on them, thunking it much better to wipe if on with a scrap of chanols. The rust which is sometimes found on the bright part of tocks is easily removed with a slip of oilstone, and the gounded oil and dirt with an oil toothbreal dipped in benzine or naptha, which evaporates and cannol furt the metal. Many are afficted with gun stocks which they consider too light in color. Let them get a few crystals of per manganate of petash, dissolve th

BRIDGEPORT, Conn., March 15, 1875.

EDITOR FOREST AND STREAM :-

At Cameton's Park, on Saturday, March 13th, a match between Mr. Frank Burrit, of Straiford, and Lewis Abbott, of Bridgeport, to shoot 25 birds each, for \$50 a side, was decided with the following score, Long Islaud rules to govern:—

to my for birds.

J. Burrit ... 0 1 1 ii 1 0 0 1 -4 | J. Gates 0 0 1 ; 0 1 1 1-5
L. Abbott ... 0 1 0 0 1 1 ii u -4 | J. Brogden ... 1 1 0 0 0 0 0 0-2
Same itme and Place; Sneepstakes, 5 blids each; \$2 to enler; Whener to
pay for birds.

H. Warner ... 0 0 0 1 1-2 | J. R. Giles ... 1 0 0 0 0-1
P. Warner ... 0 | 0 0 0 -1 | J. Bogset ... 0 1 0 0 0 0-1
Ad Gawes ... 1 0 | 1 1-4 | S. Booth ... 1 0 1 1 0-3
E. Biship ... 0 0 0 1 1-2

Judge for Abbott J. Brogden; Judge for Burrit, Lewis Smith; Ross Peck trapped for both men.

The shooting being done in a blinding snow storm it was very disagreeable for the shooters and the small number of very disagreead.

Sports there.

There is another match made between the same gentlemen; with send you notice when they shoot.

Yours respectfully,

Sport,

Sea and River Hishing. FISH IN SEASON IN MARCH.

SOUTHERN WATERS. Trout (black ha-s). Drum (two species). Kinglish.

FISH IN MARKET.—The slabs in Fulton Market have Fight in Market.—The slabs in Fulton Market have been more plentifully supplied during the past week. The trout are, of course, the great attraction. Canada brook trout is selling at 30 to 50 cents per pound; Long Island, do., \$1; Massachusetts and New Hampshire cultivated trout, 75 cents. At Blackford's we saw in boxes and barrels over 3,000 pounds of wild trout, which were selling rapidly at 30 cents per pound. Those who prefer the live ones from the aquarium are accommodated at \$1 50 per pound. Prawns, as large and handsome as were ever seen pound. Prawns, as large and handsome as were ever seen pound. Prawns, as large and handsome as were ever seen in our market, have commenced to arrive from Savannah and sell at \$2 per gallon. Shad, from North Carolina, are in increased supply at 90 cents for roe, and 50 cents for male fish. Striped bass from the Hudson are worth 20 cents, and from James River 18 cents. Cailfornia salmon are cheaper, say 35 cents per pannd. Turbot 15 cents; hallbut, 15 cents; white perch, 15 cents; scollops, 50 cents per quart. No lobsters in market.

RARE Fish.—Mr. Eugene Blackford, of Fulton Market, has forwarded to Professor Baird, of the Smithsonian Insti-

tute, two specimens of flounders taken on the Banks. One of these is exceedingly rare and will replace the only and dilapidated specimen in the possession of the Institute. If our fishermen and fish dealers would all take some interest in forwarding to our scientific builtes the many specimens of rare lish which must pass through their hands, they could add greatly to our store of knowledge.

- The first Nova Scotia salmon of the senson has taken at Ingram River, Halifax County, 21 miles Halifax.

— P. S. Hamilton, erstachile a Government Officer Commissioner of gold mines, we, and afterwards editor of the Académ Recorder, has been appointed inspector of Inland and River Fisheries for the Province of Nova Scotia.

Fishing Matterns for the Province if Nava Scotin.

Fishing Matterns.—The mumber of fishing arrivals for the week cuding March 18th, was thirty; twenty three from Georges, five from the Grand Banks, and Iwo from New Brinswick. Total amount of Indibut brought in, 470,000 pounds. The Georgesmen have averaged gnad faires, the total receipts of the week being about 1,100,000 pounds.

potnes.

Schooper Chester R. Lawrence, Capt. Thos. Hodgdon, which arrived from the Grand Banks on Monday, weighted off 126,566 pounds of halibut and 5.480 pounds of codfish—the largest fresh fare ever landed up to that time at this part, and stocked \$4,708.20, the fish selling for \$6 \(\) and \$3 per cwt. for white and gray. On both trips he has brought in 147,946 pounds of halibut and stocked \$6,802.-22.

Schooner Gertie E. Foster, Capt. Edward Morris, also arrived an Monday, bringing 114,000 pounds of halibut, the second largest fare, and stocked \$3,937-66. Time also sent twenty four days. 'Capt. Morris has lamled 152,000 pounds of halibut in both trips, and stacked \$7,300-84. Schooner John S. Presson, Capt. William H. Greenleaf, arrived from the Grand Banks on Wednesday, with am other large halibut fare. Her fare was sold for \$3-75 per cwl, by the trip, and she bids fair of making the largest stock of the three schooners, in two fares. All three of the allove vessels belong to Messrs. Clark & Somes, who are meeting with an unusual streak of good luck this season.

who are meeting with an unusual streak or good lack can scason.

The Western and Grand Batak fleet are filling away for their salt trips, and some lave already sailed. Some fifty vessels will engage in this branch of the fisheries this season, most of which will be underway by the middle of April. But few if any vessels will engage in the Cape North fishery this year, as it has never proved very profitable in former seasons.—Cape Ann Advertiser, March 10.

MARYLAND.—Deer Park, March 15th, 1875.—It looks very much like Spring here now; roldus, blue birds, black birds, dee., are here in large numbers. There is but little snow on the ground, as the warm weather and rain of the past few days have melted it. The streams are more swollen than I ever knew them to be, but if this kind of weather continues our trouting season will open very favarably.

Attrontany.

BLACK BASS TACKLE.

ANOTHER ROD

EDITOR FOREST AND STREAM:—
In a former communication I promised to say something about a black base rod, which has neighbed constitentate favor and some reputation among the anglers of Wiscoosia and the northwest, and known as the "Welles' Rod."

"Welles' Rod."

This rod is formed by taking from six to eight feel from the small end of a light, studght and well-syssomed cane pute, and dividing this partion into two joints, to which is added a short wooden but about there buckes in length, for attaching the rect. Reel bands and fremers are then fitted, standing guides put on, the rud treated with a coal of sheline randsh and it is complete.

Illied, slanding guides put on, the rad freated willian coal of shelher raintsh and it is complete.

It originated several years ago in this way: The question of shorter rads for thack hass alsoing was being egitated, and same of our sparts were were cutting down their bass tols. Several gentlemen, however, desiring to test a slort tol or a cheaper scale before aftering their fine rods, induced Mr. J. C. Welles, of Milmanhee, to make several tods in the above description. They were found to misurer remarkably well, and to be much superior to the larger rods in vogae.

But while they are cheap, Jight and enthempty serviciable, they have, to my mind, some very serious objections. In the first place, they are very hamply and misymanetical in fatur, the short, slinkly but importing so suddenly and alruptly to the came joint, gives the rad a very my kivard and unlinished appearance, and entirely destroys the balance of the rod. Now, "a thing of beauty is a joy foverer," and one can apprehate this quality in a alshing rod, is well as in a harse, a yacht or a gum. In the next place it is too stiff and unyleiding, except at the extreme tip: the bead not being equally distributed along the entire rod, as it should be; and this fault, from the nature of the rod, cannot well be ubbulied. This tenishly an insuperable alligerion, for it precludes that inco discrimination in feeling your lish when he is taking the balt, and that delicate manipulation of him after be is hooked. The owners of this rod, honever, are very enthislastic in its praise, and it is, at lenst, a step in the right direction for a more "perfect bass rod."

THE PRANKPORT BEEL

THE FRANKFORT REEL.

Of equal importance to the rod, in bass fishing, is the reel. The ordinary multiplying rect has here in use for so many years, and is so well known, that a description of it is unnecessary; but there is a reel manafactured at Frankfort, Ky., which is the reel par excellence for black bass fishing. It is known by the various ammes of "Frankfort," "Myck & Milam," or "Kenfucky" reel; and as this reel is not so universally known as its merits deserve, I will give a brief history of it.

Some tiventy live years sgo there besig a domand among the auniture fishermen of Kenturky and Ohlo for a better reel than was furnished by the trade, Mr. Meck, a watchmaker of Frankfort, Ky.—to whom Mr. Milam was then an apprentice—determined to produce a reel which would meet the requirements and solicitations of his sporting friends, and after considerable study and many experiments, the "Frankfort reel" was produced, as perfect than as the today. Mr. Milam was nown afterward taken into partnership by Mr. Meck, and the firm of Mrek & Milam soon became famous throughout the West for their excellent for all they could manufacture.

The demand continued to increase until they found a ready sale for all they could manufacture.

The reel is made by hand from the fluest materials, and as carefully and correctly in its fittings as the movement of a watch. The bearings and pivote are of the fluest temper, and the entire revi is as perfect in workmanship, and as fluely salusted as is possible for skill to reader it. Contrary to a current opinion, this reel is not more compiled thought and the fourthines, in this reel is not more compiled the than the ordinary notherlying red, and contains but the same number of wheels, it, in all the production of the fluest in the was superfectly and simultily that a small stroke of the flugger upon the flues that the read is not the small three with the with out a blanker handle.

They are made with on without an alarm or click, and a drag or rubby.

They are made without without an alarm or click, and a drag or rubbyr, and where one or both of these adjuncts are used, it does not at all com-

plicate the working of the reel, as they are operated by dist shifting buttons on the side of the reel, and are not in the way by the least. The reed is, in fact, so simple and perfect in its details, that it has not been improved upon since it was first invented. They not made all German silver or biass, in six sizes, No 6 being the largest—the best size for black base lishing in No. 3.

The cost of this reed is necessarily high—in comparison in the widinary creeds—from its mode of constructive and materials employed, but it will last a lifetime with ordinary care. There are reds that have been in quefur faceuty-fire years—among the first once made—which are no good as near to day. I various express up distriction far tids reed move strongly in tash that he shifting as the invention has been as great a boson to the openism on the fishing as the invention has been as great a boson to the openism of lishing as the invention has been as great a boson to be sport similar by the form there has taking it a hard braided silk life. The smaller sizes being large enough. A braided line if the would be still better if it visual he procured of assimilar size than be at present mann factured, as they are more viscely hratified than the silk lines, and von-sequently do not about as an unfartity for trust lishing, does not ansays for black base fishing, as it does not high the close and improve for silk lines with the fire running of the line in easing. The water proof silk lines with the fire running of the line in easing. The water proof silk lines with a dot all for cashing, on account of their kanking propensitive, which is an abutrable for twent lishing, does not ansays for black base fishing, as it does not high to have fishing the sild, it colds are inclined to loose in a three silmilar town of sing rather sild, it colds are inclined to loose in a three silmilar county when making a cast, instead of running off freely turn after him. Twisted these will be silly like and the light, and have shown the different wilder.

and chagain.

NARTING.

Having in a former utility described the short imas rod, and in the present communication given a brive described the short imas rod, and in the present communication given a brive description of the reel, line and hook it is now in wider to put them together and make a cast. If army the rod, reed and line is vealiness, its in a small surivel and the smalled size ringed stoker, and a Sproat head hook. Now selvet a influence for rive inches in length, hook it through the lower lipsand out at the mestall, in assume prefer, out at the sacket of the vye, reel up likeline to the sloker, leading the minion was or two feet from the tip of the rod, then group the rod lunevillately below the ved with the right hand, with the family upon the coll of the upon the reel, to control he troubling at of the line as in striped base 8-bing. Now make a succepting coast to the left or right as you desire, keeping a gentle processor upon the reel with the thanh, to prevent its orientance, and stop it such earlier the red with the thanh, but with patterns and personnent myone will some overcone all the difficulties and hereans an expect bose fisher. This coating of vourse by two here are unplieded entirely with much and, for that is the object of the light and and definite tackly. Having mapited the necessary prathebucy, the base fishing is lightest sense, whereas, before, with a lively red definite and comments of the self-lightful spead of base fishing is its highest sense, whereas, before, with a livery rod and claimsy tackle, it me, at heat, a laday of lone.

SALMON OF THE RESTIGOUCHE.

DEE SIDE, RESTIGNIEUE, Murch 18, 1825.

DEE SIDE, RESTIDUTENE, Murch 18, 1875.

Entron Funestann Stream:—

Invarid have written you long ere thus, but seeding that a correspondent to deveryon the Restignache angling scare has feal, which heling pretty over the mark, he saved me the trauble. I also save in your valuable paper notices of where asimon could be tak a with nucleit onace rid and fifty yords of lace, and the tat the rate of thirty per day. This had a tendency to wake no think Beatlgauche waven timeth. However, Mr. Stewart, of Montroal, but duly, hunted twenty one, averaging eighteen posmis, in and slay. I was surry to say I think he mard a domkle budger, and any size be had an eighteen foot Sertbuer. Mrs. Shaniford Fleming landed a twenty-six pound fish at Indian Hause Poul, a place you know well. Several farty pounders and one forty-live were killed up on the militarity one forty six and saveying farty five user takes on the Matapealla by Mr. George Stephens and party. In all, some seven innufred fish were killed by the illbown to seven and felenda. Owing he a very larger min of ten and twelve pound fish, the aveyage, so fin as I could find mit, was not equal to serially play the lift dove use a few bilg ones," as the score of a certain pasty will known for his successful papagation of the king of fish, taken at feel book, last Summer, healther. Twenty-five, twenty accent twenty inly and feet busy from the first week in Angust.

I see compliables from anglets who ga fishing late to that manth, say-

all a time when the best fishing was over, it being the first work in Angust.

I see complaints from angle is who go fishing late by that munth, sappling: "Can't get a rice; no lish; all practice out?" I have had some verperione by the practing line, and am aware three is fruit in B, but unless in small rivers where the peaks are shallow the proacher cannot take all the lish. The principal canes in my uplating is stood rate, fish will not rise. On this river after 24th Anguel I is only by chance you can value a fish. If you do get one is will be lately from sait water, and the late was fish. If you do get one is will be lately from sait water, and the late was fish on to no up far values a freshol is by the stream. This silmies to enhance as for trout, they will the all any time, the ravenous raceals. By the by, who infarmed you that Nouvelle front would average five payment? I don't say that such trout way not be evanged, but believe me, they are the exception, not the rule, and any person coming here with such expectations will depart a "wiser man." In support of my theory I may mention a cheamstance which occurred not long ago: In the iniddle of Angust, 1872, Mr. George Stephen, the late Mr. Sheddow, and an English friend tried the Matapedia from the forks downward a distance of thirty-arx indice, for salmon, pulselpaily for sake of the filterd who wever find taken one, without even a rise. Of course their reason was, not a fish by the river. Meeting Mr. Stephen, I thin him is enough ejecul another day, I would take this to a pool in Popingulich River, where I would guarantee salmon. On our way up we vaught some griles, gut to the pool begind time, tried it for an hour not a rise. After suppor Mr. Stephen lithted, quite dileately, of rouse —that I had made quite a substake, and that the river was no better than its own. Drelving some of the near to provide a lithe, they hark, I made a first.

the friend, at second cast, hooked and killed a ten pound fish, the only one we got. I will now go a little forther and use (provided the water is low) to show on the mult. Hestigonthe solution that can be counted by the bondred, leaping continuity, after the 22th of August, and out tous will take the most leaping or plainest hy fit your hook. I have undoubt your McImbell correspondent threw over many a good fish that had escaped the powher, from this cause, as the says he commenced the 31st of August. I find uonly more blind lish in our river than ason. Of course the horeased mather now in the clear gloves a little chance to observe them. It is coused by being for a fine in the giff net, the twins hurting the crye, particularly a large fish, of course the fish afterwards escaping. Note asal here are all giff inter, seven line or order. No doubt the fish that escape are injured, still they generally recover. It is the only proper method for enhance still thoughout all point small 24 inch nets should be adopted in all solution these the whole from one half pound up. Much as the giff met has been adopted its proper singly.

I much to say my fish therefore it get to proper singly.

I much to say my fish therefore is successful this season. I hald down over 80000 eggs, and will lefug out over ninety per cent. Considering this is only my second trial, to be a fair percentage. These Seth Green can be be only my second trial, to be a fair percentage. The season for which placehellarists will be familially, particularly in a dry season. I had down for which placehellarists will be fair percentage. The Seth Green can be be only my second trial, to be a fair percentage. These Seth Green can be be only my second with the familial, particularly in a dry season. I had show for which placehellarists will be familially particularly in a dry season. I had should like but in visit Dre Sildy some July. I mu, ele, your obedient servant,

Dachting and Boating.

All communications from Secretaries und friends should be mailed no later than Mondoy in each week.

— At the annual meeting of the Mutual Boat Club Association the tallowing adhers were duly elected:—President, Charles H. Thomas; Vice-President, Eugene P. Gross, Captain, E. Stanlay Foster; Recording Secretary, E. Miggail; Corresponding Secretary, George P. Whitney; Treasurer, F. H. Weed; Board of Trasters, Col. R. S. Olinn, James A. Shatluck, jr., Robt. K. Olinn, James R. Mills, George D. Weitlman.

George D. Weldman.

NATIONAL ASSOCIATION OF AMATRUR OAUSMEN.—The Executive Committee of this Association have issued a cir, enhar athlressed to anunteur clubs throughout the country-calling their altentian to the desirability of their joining the organization. Any regularly organized Rowing Club may become a member by subspling the Constitution, and remitting the annual fee of \$5 to the treasurer. The Association has an invitation to hald the Regath of 1876, in Centennial Philadelphia, where our American crews are promised a trial of skill with their Trans-Atlantic cousins.

The Massachusents Rowing Association have voted to

— The Massachusetts Rowing Association have voted to hold two regaltas in each year, suitable prizes to be offered, to be open only to members who have been connected with the clubs at least three months prior to the contests. The Executive Committee was authorized to define the term "amateur" and "professional," and appointed a committee of five to arrange a programme for the first regalts.

-The Malta club are preparing for the season by the reliase of a new double scull.

—Gov. Hartrauft and Mayor Stokley have signified their willingness to Commodore Ferguson to serve the Honorary Committee of the International Regatta in 1876.

—Mr. George B. Maule, of Easton, Monmouth county, N. J., wishes to place himself with some of our crack crews for the coming scasou. Mr. Maule was formerly stroke our in the Winehester four, of Cambridge college, England.

- The Chester Boat Club (formerly the Friendship) of Boston, Mass., will put the following four on the water next season: James Peabody (bow), C. F. Doherty, Jas. Doherty, E. F. Kelley (stroke.)

Dolerty, E. F. Kelley (stroke.)

— The officers chosen by the Analostan Boat Club of Washington, D. C., are as follows: President, W. O. Averyy Vice-President, L. S. Sievens; Corrosponding Secretary, E. S. Maunder; Recording Secretary, E. N. Callan; Captain, J. L. Robertson; First Lautemant, John R. White; Second Lieutenant, Theodore Mosber, jr.

— The N. Y. Heralt of Saturday suggests a "graduate prize" for the Centennial Regatta—a race for the graduate of all colleges.

SCHUYLKILL NOTES.

PRILIADELPHIA, March 22d, 1875.

EDITOR FOREST AND STHEAM:—
On Thesday last there seemed to be a certainty of the immediate opening of the boating season; the ice was broked up, and going away rapidly. There is a lively rivalry among the different cluts as to who shall get the first row of the season, and this time, as for several years past, the honor fell to the Undine—At three o'cluck their double scall gig Fawn was started from their slip. At the 'connecting ridhead laridge' the douting cakes had jammed, necessfutting a carry of about one hundred yards. From lare to the head of Peters' Island the river was clear, and the crew search the first three toiles. Later several singles of the same clab, a double of the College, and a pair of the Vespers god as far as Girard avenue. Now the river is again closed, but a few warm days will permanently open the sazoon.

the Vespers gad as far as Girard avenue. Now the river is again closed, but a few warm days will permanently open the season.

It will saon be time for the crews for the June regalta to begin to get to work, and as the Crescent-Undine eight cared race is fixed for the shird or fourth Saturday in April they will be among the first to go into regular practice.

We are story to hear that the Crescents are going to sell their "eight;" but it is a good boat, with a good record, and some one will get a bargain. Their house is erowded now, and they part with her for the sake of room,

Another of the Pennsylvania's crew of last year—Henderson, No. 3—has left that club and joined the Quaker Cities, who will certainly present a strong team—McBeath, Henderson, Adams, and West. They have no lack of substitutes, there being four men lesides, any one of whom will do to go in in rase of a treak down in the regular crew. We notice the curpenters already at work getting ready for the extension to their house, which will be necessary to accommodate the two fours, a gig, and a shell, which Feuron has nearly ready for shipment.

Pleasonton, no hing daunted by his failure, is going in again, and has engaged Frank Killsby to coach him at sentls. Stick in it, "Flip."

There is a grawing probability that the Vespers will take their did place in the Navy sametime this Spring, and if they do no doubt the Bachelors will fadlow. This is much to be desired, as the Philadelphia clubs would then present a solid front.

The committee having charge of the open regatta—June 16th and 17tk—hehl a meeting to taky, and elected John

The committee having charge of the open regatta—June a solid from.

The committee having charge of the open regatta—June 16th and 17th—held a meeting to day, and elected John Heckley, Jr., permanent chairman. They appointed subcommittees on prizes, tug and stake boats, and reception, with Mr. Krumthaw obsirman of the latter. Their circulars are promised by April 1st. The Buchelors are having a new loar oured gig built by Byrou, and the Philadelphias a double scull by Meleaffe.

Our Park commissioners are after an appropriation of a round million, which they are likely to get. Then the nusightly piles of dirt between the boat houses will give place to grass and flowers, and the entrance to the park be no longer an eyesure to visitors, perhaps.

There are some rumors of a bridge at Edgeley; but we hope that is only rumor, for a bridge there would spoil the course for a time at least. Truly yours.

BOATING IN LOUISIANA.

New ORLEANS, March 10, 1815.

EDITOR FOREST AND STREAM :--EDITOR FOREST AND STILLAM:—

Now that we are feeling the graile influence of Spring, visits to the bool house are becoming frequent, and the discussion of each applicant's fitness for the representative crows is the theme of interest. If I understand the hoys, there is to be an inaugurat race in May, to open the season with, lessides, the ich ampliouship race is September.

The State Rowing Association is to be re-organized on a more liberal basis, so that our neighbors on the Guif or Atlantic may be represented at our regular.

The Otenna Rowing Club elected offerers for the considerable of the contraction of the

al our regulta.

The Orbans Rowing Club vected officers for the ensuing year last Tuesday with the following result:—

Summel Royd, President; B. D. Wood, Vice-President; R. H. Browne, 2d Vice-President; Jances McKeon, Captain; Theo. J. Wells, Secretary; J. B. McConnell, Treasurer.

The President unit Vice-President do not "ply the sprace" themselves, but are great favorites with the boys, nevertheless; and the boys know why.

The Captain, also, Is a selection which pleases all; he has stroked the crew in some good races and may yet show the colors of his club on front.

front.

The Howard Club will send a boat load of good-locking fellows to represent them, and the crew that leads them in a race must have muscly and lates in good order.

Councily, of the Pelicans, noised quite a bryeze in his club some Sandays ago by healing the champion crew of his nwn club in a race down the Bayon St. John to the lake; he will organize a good crew for May and Soutember.

the bayon St. John Club are keeping quiel; Thefr best crew has been much and September.

The St. John Club are keeping quiel; Thefr best crew has been much weakened by the toss of Dixon, tkird stroko; perhaps they intend glying the boys a surprise.

The Riverside has the same crew that won the pynnant at Carrollton on the yyeutful 14th of September, with thy exception of Geason; they are at work every opportunity they have to row. Diamond says he will make it warm for any crew that leads him in September.

The Loudslanes are so badly stituted that I never have an opportunity of seeing thym or learning of their atovements.

Not singued, of Pitesburg, is building two pair cared hoats for the Circians, which is the only item in the way of new boats that I know of When I see them shall let you know how they build in Pitesburg: 11th then

Bational Pastimes.

The Professional Association book, with the revised code of playing rules governing that class, will be in print on the 25th inst. Besides the professional records, the work will contain all the games played in Eagland, and a sketch of all the players who took part in the tour. The took of averages will also be issued at the same time, and by the first week in April the Constitution and By-laws, with the Secretaries report of the Amateur Convention proceedings, will appear in print for the first time. These rules govern every club curulled on the books of the Amateur Association, about sixty odd. The professional code governs only the thirteen professional clubs in their Association. There is now but one playing code, the Amateurs leaving endorsed the professional rules with one exception out that is in the case of balls striking the balsman's person. The professional code makes all such limbs dead, as do the Amateur rules in one section, but in another part of their rules they make them called balls. This admits of a double ruling by Umpires.

Fast Walking.—On Saturday evening a walking match between Wilson Reid and Daniel O'Leary was decided at the Hippodrome. Reid, who is a cartman of this city, tess appeared but once before, beating Davis. a letter-carrier, ten niles at the Rink. O'Leary came from Chicago nn-known aml unheralded, and has not only made a record as a first-class pedestrian, but gained a host of friends by this unassuming demeanor. Reid, although possessing good style, was entirely onlywalked, withdrawing at the end of the fifteenth mile. The walking was in every respect first rate, both men making the second mile in 8 min. 6 sec. O Leary walked the twenty miles out, completing the distance in 3 hours, 11 min, and 15 sec. A match is now on the tudis between the winner and Mullen, one of Weston's optiondam antagonists.

—The Brooklyn Chess club held their annual meeting an

The Brooklyn Chess club held their annual meeting on March 17th, when they elected officers and closed up their tournament. The officers elected were:—President, Mr. Turner; Vice President, Mr. Davis; Secretary, Mr. Munoz; Treasurer, Mr. Noyes. Directors—Messrs. Perrin, Horner and DeGraat. The prizes awarded in the tourney placed Mr. Perrin as the first, Mr. Horner second, Dr. Barnett third and Mr. Spence fourth. Next on the list were Messrs. Rebinson, Phillip, Thayer and Elwelt.
—The following is the score of the games played at the Cafe International up to Saturday:—

Finst Class.—McKenzie won 3, lost 0; Delmar won 1, lost 1; Barnett won 1, lost 0; Alberoni won 3, lost 3; Masson won 1, lost 1.

Second Class.—Limbeck won 5, lost 1; Wiesner won 2.

SECOND CLASS.—Limbeck won 5, lost 1; Wiesner won 2, lost 1; Goldmarck won 2, lost 1.

The Colleges.

—Harvard graduated its first class in 1637; William and Mary in 1692; Yale in 1702; Princeton in 1748; University of Pennsylvania in 1753; Columbia in 1754; Brown University in 1764; Dartmouth in 1769; Rutgers in 1770. Harvard has a living graduate of the last century in the person of Horace Binney, the Nestor of the Philadelphia bar, who recently celebrated his 95th birthday. The oldest living graduate of Yale is Rev. Thomas Williams, of Providence, who is 96 years old and a member of the class of 1800.—
Independent.

—The Yale Chess Club has been for some time engaged in match game with Cornell University. Ou the twenty-fourth move a dispatch was sent to Cornell announcing a check mate, whereat the Yule chess players are greatly elated.

check mate, whereat the Yale chess players are greatly clated.

The English University Race.—This, the first, as well as the most important event of the boating senson, was decided on Saturday last, on the usual Thames course, from Putney to Mortlake, resulting in a victory for the Oxford crew. As indicated by the betting, this result was somewhat foreshadowed, the Oxonians having recovered some of the old form which for the past five years land descried them. The particulars of the race as received by telegraph are somewhat confusing and contradictory. Cambridge is said to have taken the lead on the start, pulling a quicker stroke than the Oxford, but the advantage was only held as far as the crab tree, a distance of a mile and a balf. Here the Oxford stroke quickened the time, and at Hammerswith Bridge, two miles from the start, the boats were even. At Corney Beach, Oxford was ahead, and at Brame's Bridge, three and a half miles, the dark blue had increased the lead to six lengths. The steering in the Cambridge boat was very bad, and when the jindges' stand was passed amidst the most vociferous cheering, Oxford had widened the gap to ten lengths. This race, which was originally rowed in 1829, has now been pulled thirty-two times. Had Cambridge won, the number of wins would have tied, as each university would have had sixteen to her credit. Oxford is now two wins to the good. The usual scenes incident to the contest were fully represented. The struggling erowds of under graduates shouring themselves hoarse; the crowds lining the tow-path and hoth river banks, crowding on barges and boats of every description; the fleet of pulling steamers behind the boats, and the presence of royally in the persons of the Prince of Wales, and other members of the Royal family, all combined to make a scene only equalled by a similar one on the 'Darby' day. The time made is reported at 22 minutes 2 seconds, which is 32 seconds faster than last year, and 27 seconds slower than the year previous. In our issue of last week we gave

the names of the crews and their weights.

The College Regatta.—Capt. I. E. Euslis, Chairman of the Regulta Committee, former stroke of the Wesleyau crew, and now of the Atalanta Boat Club, has been engaged during the Winter in anchoring buoys through holes in the ice, for the use of the coming contestants in this race. Over 300 have been planted in this manner, each of which is to be ornamented with flags, the design being to form so many lanes for the 13 boats expected to start. Hard work has been the order of the day among the college men all Winter. Amherst, Brown, Cornell, Columbia, Dartmoulli, Harvard, Hamilton, Princeton, Trinity, Union, Wesleyan, Williams and Yale, are the contending colleges. Of these Amherst, Brown, Hamilton and Union, did not send crews to Saratoga last year. The prizes will be a silver eng given by the citizens of Saratoga to each member of the winning crew, in addition to the customary colors. It is too early as yet for proguostications, even as regards the formation of the crews.

— The Harvard University Boat Club has decided to

ation of the crews.

— The Harvard University Boat Club has decided to have their club races on Saturday, May 29, in the following order: single sculls, double sculls, four oared, and six oared; the six oared race to be followed by a race between the University and Freshman crews, the University to be hundicapped. It was also voted that programmes of the races be printed, giving the order and names of the crews, for distribution on the day of the race.

—The Jasper club of Maubattan College, have elected Mr. M. J. Cousiding President, and O. A. Hopkins as Secretary, whose address is Manhattan College, N. Y. The new nine of the Washington club, Mr. Childs says, will be as follows:—Blackburn, C.; Stearns, P.; A. Aliison, 1st b.; Terry, 2d b.; Ressler—not Kessler—3d b.; Fay, s. s.; Parks, I. I.; Holby, c. f.; Mincher, r. f. This is a good leam.

Wensten's Unabbidged Illustrated.—"Vlewed as a whole, we are sounded it that no other living tanguage has a dictionary which so fully and faithfully sets forth fits present condition, as this last edition of Webster does that of our written and spoken English longue,"—Harper's

"SAM."

WELL, now, I'll tell ye, str:
D'ye see
Tital lug rock, cluss by lite old dead tree?
Me aud my brotter Jim came down that day,
The cows was astray,
And we sot on the rock to rest a spell,
Listenui for old brindle's bell.
The sun was jest gittin' a lectle low,
It was coolish-like, an' we started to go;
Jim he chucked a cml 'et terbacker
Inter the water,
And by-gum, mister!
You jest ofter
Seen the splush.
An alt fired big trout made a dush,
Grabbed that cleaw, an' then put
Quicker'u lighterin' under the old root.
Jim, he streaked it leme for a pole,
And I watched the bole.
You'd better believe he come on the jump,
An' throw'd in by the stunp,
I kinder kept back, ready to toller,
Then I heard Jim holler,
Hurruh Sami I've got blim; he's a whale!
An' then we had it, head au' taft,
With lust front,
Till we was inckered out.
Ile welghed risin' three pound,
An' dad showed him round.
That's his pichare ye see drawed
On the wall
On the wall
Of the Invern hall;
Me' I was ten last Fall.

To

The

end the doctor inserts in his mouth and draws. Should blood not flow sufficient to satisfy the patient, it can easily be farmished by the doctor's pricking his teeth.

It is a common practice to bleed themselves in the arm They understand bandaging above the point of opening the vein, and cut with a flint when a lancet cannot be procured. When I first came here they wanted me to bleed them. This I refused to do, and tried to convince them that it was not good for them. Then they would want to borrow a lancet. I did lead mine to au Indian but the largest restriction in the convence of the convince of the convence of the convenc but the lancet never came back, so now I have a good excuse for neither bleeding or lending lancets.

The promise I made of giving an account of the graduating of the Indian M. D.'s I will not be able to fulfill this time, in the absence of facts which I have not yet been attle to obtain from my interperter, owing to his not having suffi-cient knowledge of the English language to convey intelligently his meaning, so will defer this part until I can understand more of their native tongue to explain more

The Indians will not manufacture enriosities for sale until they suffer from hunger. Then they will work to satisfy their appetites. Among the animals are deer to abundance, and occasionally a moose. Ofter mink, musk-rat, bear, black and cinnamon; foxes of all kinds, wolverines, weasels and wild cats, are the principal furthearing animals, of which the muskrat is the most common. Thousands of dollars worth of their skins are brought in by the Indians every year and sold to the traders on the reservation. Bears are quite plenty, and at some seasons do much damage to the settlers on the frontier by stealing pigs, calves, &c. In the Summer of 1865 bear were so plentiful on the Upper Mississippi country that every barn In the Summer of 1865 bear were so door was ornamented with sufficient skins to cover them, They are sometimes of enormous size and will fight savagely when wounded or cornered. The swamp wolf and the prairie wolf are also very numerous. A few years ago a bounty was offered for their sealps, which thinned them out

But a few years ago buffulo ranged in large gangs a short distance from us, but settlements and railrowls have driven them West. Of the feathered tribe we have the wild duck of every kind in abundance; also geese, swam, pelican, partridge and prairie chickens, in large quantities. It is not uncommon to shoot from fifty to one bundred in a few

The fish are very similar to the fresh water fish of New York, only are taken in much larger quantities. I dare not—(in order to preserve my reputation for trathfulness)—attempt to tell you the number of fish I caught with a hook and line in a single day, as you would certaluly call it a fish story. One species we have in Leech Lake worthy of mention is the Lake Superior white fish, which is the finest lish I ever ate. They are only caught late in the Fall with nets, and in the Winter are speared through openings in the ice; they weigh about four pounds each. We also have the muskallouge weighing as high as thirty pounds, which are caught with a book; they are very they are very ht. They regamey and make exciting work when caught. T semble very much the common pike except in size.

The squaws catch large quantities of white tish as the cold weather commences; they string them on sticks by running them through the tail, ten on a stick; they are then hung on a scaffold near the wigwam until about the holidays. When they are frozen hard, they are taken down and stored nway. Then they have all the fish they want during the Winter, and some Indians have nothing else to cat except some corn or wild rice which they may have stored. Should a thaw occur while they are hanging, the air is scentcd for a long dis-tance with their putrid bodies, but the Indians like them

The Indians nearly all left here about the 1st of December on their Winter hunt. They are now returning and are very numerous. They lie around and gamble and smoke until the 15th of March, when the squaws start for the sngar camp, and the Indians then start on their Spring band, which will keep them away until the last of May, when they return and do undring during the Sammer. The squaws plant and tend the corn and potators.

About the mildh of September they commence to gather rice, which grows in the shallow parts of the lakes. We often see ten or fifteen neres of it in a hody. When growing it looks somewhat like onts, but the stalks are ten or twelve feet long, according to the depth of the water. About the lirst of June, in passing their plantations, the rice is not visible, but about two weeks later. it looks like a field of grain, and is of a dark green color, and so thick that the water cannot be seen. As soon as the rice commences to ripen then comes the struggle lectween the ducks, geese and Indians, to see who shall have

The Indians enter the rice delds in their cances, pushes the cause through the ries while two others take handfuls, head it over the sides of the cause, and with the other hand they beat out the gralu into the boat, which is then dried, put luto copper kettles and purched, then stored into burrels or toxes and beaten with a stick intil the lasks come of. When winnawed it is ready for cook-

I have just returned from an Indian dance, and will give a description of it. I have often wished I could have my friends with no to witness and enjoy the sport. The weather being quite wild, word was sent tround that There would be a dance at the trading post, and that two dogs would be killed and served as a feast. They had a barn to draw together about 150 spectators. They had a barn cleared out and a stove put in it. In the centre sation the ground eight men around a drum, which resembled a tamborine, and was two feet in diameter; this was held tamborine, and was two feet in diameter; this was held just off the ground by springs on each side. Each man has a stick alcont sixteen inches long, with a rag tied around one end of it. Outside of this ring sat a ring of squaws, and around the walls of the building sat the dancers and spectators. All sat on the floor. In one part of the room, in pans and juils, were the bolled dogs enturp in jacces, a large pain of bread, pails of bolled rice and soup. About one-full of the Indians were smoking and the other half were tilling their pipes.

Occusions of this kind call for all of their adornments, which are julied on without regard to location or appropriateness. Furs, feathers, hells, beadwork, paint and ribbons of all hurs are brought into service. It will be imhons of all hims are breaght into service. It will be impossible to describe the costumes without taking each separate one, as they differ so much. Some wore common separate one, as they future so minch. Some work common felt buts, some a few bunds tied around the load, and ocarly all had their leads adorned with engle feathers with their faces pointed in every concelvable manner and color. I might us well say that I am only speaking of the men. The women take no part in these dances except to sing. Some wore finance couts, and most of them were called shirts, with all the bendwork that they possessed being around their necks or festened around their walsts, with a breach clout of heavy black clath, and a strip of hear skin over this. Their leggins and moccosins besides, and some earried swords or war clude, or tomalanwks, &c.

The musicians in the centre connecuce to sing unil heat on the dram, while the squaws join with the tenor. It is a monotonous chant but so peculiar that a white man cau-not sing it. After a few moneats up jumped an Indias, who doffed his blanket and connected to dance; then another and another, until twenty-five were dancing at once. In the dance the feet are scarcely raised from the florr, the knees are bent and their boiles sway to and fro, keeping time with the music. Sometimes they go half way across the room in a kind of half marching and half dancing gait, which is kept up about live minutes, when the music stops and all squat down in their places, guther their blankets around them, fill their pipes and smoke. After a few minutes the musle begins again, when the same set, or others who feel inclined to dance, rise and go through the same performance. During the full in the

r Forest and Stream. Indians of Leech Lake.

T W. A.

YOU will doubtless ask, "Where is Leech Lake?" If you will take a good-sized map of the United States I will lead you thither. First find the Mississippi River. Now trace it up, up, farther yet, to within one day's journey of its headwaters, viz. Lake Itasea, and then you will find me in the centre of the Chippewa Indian Country. Here I am comfortably located as U. S. Physician to the Leech Lake millogers and Lake Wungebegoehleh hand of Leech Lake pillagers and Lake Winnebegoshish band of the Chippewa Indians. The nearest white settlement is at on the Northern Pacific Railroad, seventy-five miles south of here.

would naturally be supposed that up here in this northern climate we are freezing to death, but this is not so. The Winters are long but not severe. Snow seldom so. The Winters are long but not severe. Snow seldow falls to a greater depth than from eight to twelve inches, but remains all Winter, never thawing; the sun shines out very bright nearly every day. Once this Winter the thermometer touched 38° below zero, but it usually stands 10° above. When the sun shines out so brightly a stranger would think that it would melt all of the snow away before night, but such a thing as an icicle is not seen here during the Winter in all this cold. Men go about their business as in warm climes, but, perhaps, with a little more energy.

The Indians are particularly exempt from disease, and although I have the eare of about 1,700, yet a case of severe sickness I rurely see; and in the few that are siek the vis medicatric naturn is quite prominently observed. They have their own doctors, or medicine men, as they are called, and a regular college in which they graduate, some account of which I may give, you in another letter. some account of which I may give you in another letter. It is amusing to listen to their theory of disease, and they think that if the facts do not correspond with their theory, so much the worse for the facts. The Indians have the utmost confidence in the medicine men, and will often give everything they possess to them to be cured, and the doctors make it a rule to get their pay in advance, a plan that their more enlightened brethren in the profession might adopt with a profit of an increased bank account. The Indians are great hands for taking physic, salts, castoroil, pitls, &e.; have a pretty good idea of counter irritation and cupping; this last they use for headache. They searify with a piece of fint. For the cup they have a plece of cow's horn about four inches long. The small dance a chief usually gets up and makes a speech, in which he recounts their exploits on the war path against the Sionx or Dacotas, and how many scalps they took. After tide an Indian jumped up with a pad of dog meat and distributed it around. He stood in the centre of the room looking around to see who desired some, when he took a piece in his hadd and tossed it to them. The individual would catch it with the skill of a base bull player. The sonp and rice was passed in large pans, which was drank out of the pans or caren with the kand, with the linger crooked in a peculiar manner to serve as a spoon; then the pan was pussed to the next until all were served. It is needless to say I did not take any.

A couple of large pipes, with stems about four feet long, and decorated with ribtons and tassels, were filled with tobacco, lighted and then passed to everyone in the room, who took a few whiffs.

This is the peace pipe, and the smoking of it indicates good fellowship.

February 27th, 1875.

For Forest and Stream

"NUMBER FOUR" AND ITS SURROUND-

"NUMBER FOUR" AND ITS SURROUND-INGS.

A MORE appropriate name for this locality would be "Fenton's," or "No. One." It has been No. Four long enough, and all the time improving. This number means notting in particular, as we never heard of No. Three or No. Six, but No. One means something, and I think this delightful resort for the health or pleasure seeker is entitled to the distinction. My flest acquaintance with it extends as far back as 1853. There are doubthes those who visited it earlier, but I have never found or met them, nor can I now name one, unless it be the kind friend who introduces me to the favored spot. I have visited it seven times (on three occasions a month at a time) during five proprietorships. First, in the little red house which still holds its own, and more, I found the senior Mr. Fenton, a most geniul man, the worthy father of the worthy son. We were his only gnests. The next time the geounds had passed into the hands of Mr. J. B. Lewis, who now kreps a hotel enroute at Bench's Bridge. Then Alexander Peircey was the occupant; Fenton and Green followed; and now Fenton & Himman are the proprietors. The house stands alone in fisulory; just as no acqler's home, neverthing to my beau ideal onght to stand, though one or two dwellings for guides have lately been udded. Hammond says in recommending a visit to the Chazy, "Intry not a moment at Saratoga; there are people there. Stop not at Whitehall, pleasant though it be, there are people there too." I have never yet visited the Chazy, but have passed by Saratoga and Whitehall aften enough on my way to the lakes to make up for it. Fenton's large and commodious house commands from its rear porch and empola a fine view of Beaver Luke, a vust amphitheate of hills and montain ranges. On the well is inscribed or printed "The best water in the world." No doubt of it, for this best water is found all through the region; but I miss elsowhere the inscription, "The most salubrious air in all creation."

Suppose we take an excursion. All ready? A pleasant

sinscribed or printed "The best water in the world." No doubt of it, for this best water is found all through the region; but I miss elsowhere the inscription, "The most salubrious air in all creation."

Suppose we take an excursion. All ready? A pleasant descending walk of half a mile, partly among wild trees, brings us to the lake and wharf, where boats are ready and waiting. Don't jump in, but he cureful. With or without guides, as you please, (they are not required here,) let us row up to the lish hole, as it is called, the hage bosin of waters formed by the rushing Beaver River where it descends mightly" in Spring time down among the rocks. The noise is like rolling thunder. I have heard the roar and seen the foun at the remote end of the lake. For the particular manner of its descent I may refer you respectfully to Southey's description of the way the waters full at Lodore. He is very Init, graphie, and explicit. From the bay, out into the lake, all along the near shores to the right, onward and upward. "There are no fish in this lake," but I lish for them nevertheless, and catch them all the more. I remember when with Mr. Lewis, heavy rains had swedlen the bake not river very high, and I was waitfor the water to subside, he asked me one moruing if I felt like "taking a turu". I told him I did, and also that I would take my line along. "That, he said, would be entirely uscless. I took it, however, thinking it wand be entirely uscless. I took it, however, thinking it wand be entirely uscless to fish without it, and two half pound speckled and one laker was the reanit. Afterwards under the Peireey administratiou I had faith to try it alone. The day was favorable, and hope was inspired. So attaching a fresh minnow to my hooks, I struck out und let down for a dranght. I had not fished hen minutes in deep water before a five pounder was on my line, which in about twenty minutes was on tho saure. As a paperached the handing, I I found a party there who were about starning on a cruise. They surrounded my with th

brought up at Montreal. It was a gala-day there. The eity was filled with music and triumphal arches to welcome home a regiment from the Gromea. Sunday was St. Peter's day, and I heard then and there, in French and English, in Roman, and in Protestant that "Thou art Peter, and on this rock will I build my chare'," and all because the pesky flies in this rotunda wouldn't let me fish among item in peace. I have eaught many an elegant trout here since among the rocks, and the flies have learned for the most part to let me alone. I was boasting here once with a feiend, when Chanucey Smith and another with his boat put in appearance. We hailed them with the shibboolcut what luck? which the old triapper behi up on enormous fox fresh from the trap that morving. It is said he is still in possession of a rife, with which alone, he claims to have shoet 1,200 deer, at latest accounts. This is the man who fleures so extensively in the Perry Smith and Wallace book, page 155. Whoever refers to it will find a specimen of his writing, lds signature and his advice. The document appears to be signed by A Little Whiskey, but it is not. This is only part if his advice. The last time I met him he seemed very happy, going home with a single trout, whilch he had caught "for the old woman." There comes in Sunday Creek, so called, it may be, because there is good fishing in it on Sunday's, or because that is the favorite day for visiting it. Who kunwas I counce fished it on a week day, and caught about 150 with flies, two or three at a time, with the design of pickling them, which I also did. N. B.—Trout well spiced and pickled are very good for the table.

Descending the river from the lake we pass a large islan I on the right, and soon after a spot on the left where I have been a bridge there formerly, and the beam-ends of the Tile water-logged timber is very annoying to august the warman and the point where Allier Creek comes in is called "The Bridge." No bridge is there, or sign of any unless it be a submerged beam, which saggests

shell, stern foremost and nobody in it, tossed on the raging waters among the rocks, making it safe descent to the river below.

"All aboard for second falls," and soon we were gliding pleasantly along, and continued so to do, till we came to abrupt twists and turns, where the river was condensed in its channel, when friend and myself tock lite shore, and steadfastly pursued our way through the adjoining woods, till after a while turning a point, we were surprised to his cover Mr. Fenton in the boat hovering on the verge of a heavy fall, preparing this time to go over it. He used his oars as a hawk would his wings when about to make a swoop. Steadily, steadily, till his position was just as he desired, when instantly he enreed his forward way, and at the foot of the falls commenced a series of nolens rolens circumgyrations which were not in his programme. Involuntarily he described circles one after another very amusing to behold, and constituting again a "royal sight to see." Below this point the river soon becomes impassable for boats, being coudensed into a narrow channel of solid stone, and rushing with mad impetuosity to leap a precipice. So securing our boat, we all proceeded afool over a stone povement, and among branches of wild trees to the High Fulls. The prospect there is very circumseribed. In no direction except vertically, can the eye see far; but I cannot give the dimensions of the depth and height. Mr. Fenton extended himself back upward on a rocky shelf just large enough to hold him, which overhung the chasm, and addressed a line to the inhabitants below, if any were there; but there was no response. No progeny bewailed the loss of their progenitors, nor anxious mother knew that her juvenile was out.

But I wish while returning to tell you sonething about

but there was no response. No progeny bewailed the loss of their progenitors, nor anxious mother knew that her juvenile was ont.

But I wish while returning to tell you something about Crooked Lake, the trail of which commences at First Falls. We read in "Bahes in the Woods," page 263 that "this lake is straight as an arrow; hence its very appropriate name." I am surprised at this statement. The lake is straight as an arrow as first seen from the landing, and as the shauk of a hook is straight. But would you call the beud of a hook straight? The lake is thus shaped, very much like a hook, long, straight and crook-ed, i.e. like a crook—and "hence its appropriate name." O, I have had choice sport in this lit le lake, so competely seefuded and isolated from the world. I was first piloted to it by the senior Mr. Penton; but this visit being late in June served chiefly as an introduction. It was not late for good fishing. But I have since visited it often, and never without reward. One morning with Mr. Agan, Mr. Lewis, and others, in May '66 I visited it. The boats then were dugouts, and the party filled the two which the lake contained. I recollect several incidents connected with that excursion, Mr. Lewis with his men had taken a very different direction from Danfred, (the guide) with his. As be approached as afterwards, he called out reproachfully to Danfred for taking us to that part of the lake, asking what he meant. A large trout immediately pulled in was his only reply. Mr. Lewis paddled firster towards us, and It was lu that part of the lake that we all had best luck. At time of lunch we drew up to the island. Mr. Lewis' boat first arrived, and his men called to us to know how many. We answered "ten." Promply they responded "eleven," But we were not In yet, and they were. Another moment and we too had eleven, and so were even, though the largest

were with us. We returned home that day with sixty weighing forty pounds, thus averaging two thirds of a pound cach. This was great success for that lake, and to the best of my knowledge and helief has never been surpassed—since at least, though I know not what may have happened long kefore. 'The next day some returned and caught thirty-five. Unless re-stocked, it is not likely that the lake will ever do as well again, as the fishing there has greatly degenerated in latter years.

After this I revisited the lake with Mr. Lewis, when It was Iwo late to fish, but we had meunorable sport with a deer. Mem. No gim. We espied him in broad day at a distance of a quacter of a mile. Immediately I laid down my rod, took position, and lecame a statue. No sound was to be heard, or motion observed as we made for him. When the deer raised his bead Mr. Lewis did not even paddle; when the head was down, that was all be did. In this way we gained steadily on him till I could have reacked him with my rod, for he was not a rod away, We gazed at him, and he at us, for several minutes. He even approached us. A klackbird in the bushes disturbed him more than we; till at lenght when we were satisfied, ke upiniled and skedaddled. In '70 with Mr. Fenton I visited the lake with gim, and we returned loaded down with ninety pounds of venison, having shot at night a nottle back. Last Spring it was my good fortune to take from this lake the largest trout on record ever caught from it, weighting two and three eights of a pound. I have caught far larger ooes aften elsewhere. The next fish caught there may weigh more. Still I do not object as an augler to hold so innocent a belt, or sprig of lainer, till some brother of the angle takes it fairly away. My daughter being with me this time, at Namber Four, a lady bidding her gaod night hopen she would rest well, and in the morning "catch one bigger than your father." So I rejoice with trembling.

Ween Forest and Stream. trembling.
Utica, February 1875.

For Forest and Stream.

DEER HUNTING ON GRASSY POND

I VENTURE to send you a few incidents connected with a trip through Northern New York during the Summer of 1873.

VENTURE to send you a few incidents connected with a trip through Northern New York during the Summer of 1873.

Joe, George, Lyme, my brother Hack and myself, were in camp in the 2d of August, about six miles merth of the junction of the Cedar and North rivers, on the shore of the third and the largest of a chain of heuntiful lakes, seven in 1 multer (Chain Lakes.) Our guide Harvey was a jewel, a thorough woodsman, and no matter how much we required of him, his face always wore the same genial smile. We hall had glorious luck fishing in all the ponds and streams in the vicinity, and had killed numberless partridges, but had failed, as yet, to get a deer, though we had hunted every night for a werk. But one night as Grorge and I came in from a fishing excursion, Harvey saill it on me, "Hack and I are going to try Grassy Pond to night; I saw to-day that lots of the 'critters' had been in there. Don't you want to go along;"

Tired as I was, I threw down my hasket of fish and began to prepare to accompany them. Just at dusk we got into our cance, and paddled down through third and second hakes; then skondering our guns we struck into the deasest, darkest forest you can imagine. After a tramp of whoth two miles, through what seemed a succession of wind-fulls, we suddenly came to a beautiful little sheet of water as smooth as glass. Creeping carefully down to the shore, we stepped into the cance and pushed noiselessly out. Hack was to leave the first half of the night and I the second; so paddling aeross to an ole camping ground, I stepped out, and after starting a little smudge, I lit my pipe and sat down to await events.

The night was bright enough so that I could discern quite plainly the whole surface of the little lake. I could see the dark object, which I knew to be the cance, gidding slowly along. I lay there watching and listening for nearly and sat down to await events.

The night was bright though have to conclousness by a slight noise on a point which jutted out about sixty rods from me, and in a few mome

Well ! I've gol two; now you go and try your lick," said

"Well! I've goltwo; now you go and try your luck," said Hack.

So picking up my gun, I was soon in the canoe, closely scanning the shores and listening for the slightest sound. We had proceeded in this way a short distance when "crackle," "crackle"—"crash!" wrnt something, and turning quickly, a sight met my eyes that, I think, I never shall forget. Hack was evidently embravoring to get warm, as he had a fire shirted that threatened soon to assume forminable proportions, and he, himself, was just coming into sight staggering under nearly a whole tree-top. By this time the fire had Idazed up so that the whole pond was as light as day. I felt the canoe begin to tremble, and glanching around, I saw Harvey nearly convulsed with laughter.

"There he comes with another snag—ha! ha! ha! We might as well give up hunting now—he! he! but we'll pay him off."

So paddling directly to shore, where they had killed their last deer, he stepped out and dragged the carcass into the canoe and pushed off.

"Now light up, and when I paddle you up to shore, fire your gun into the bushes."

I tild as requested; bluzed away into the bushes, and as soon as the canoe touched store, leaped out with the jack; Harvey followed, and after busying ourselves on shore for a while, paddled tack to the fire.

"Did you get him?" said Hack.
"Come and see," was the reply.

"By George!" said Hack, "he's bigger than either of mine, 'sint he?"

It being still nearly three hours before light, we "turned in." I was awakened just at light by Harvey, wha said "we must go and get the other dear and get rendy to start for camp." So after getting the one that was in the canoe down to the end of the pond nearest the lakes, we started for the others, which they had hung up the night betore. As the canoe struck shore, Hack leaped out in a moment, "Where's my deer?"

"By George! I guess the bears or wolves have got him," Harvey managed to say, and then we could control ourselves no louger, and the mountains echaed again with our peals of laughter, in which, as soon as he lound that his lacer was safe, Hack joined.

Ilalf an hour after llack was plodding along some distance behind the rest, with a saddle of venison on his shoulders, which, to make more secure, he had tied on. Our trail ran along in one place, just at the foot of a high ledge of rocks, at one end of which was a large hornet's uest. To avoid this Hack struck up onto the hill, intending to go around it, but, after some hard walking, he found himself on the edge of this ledge, with the trail thirty feet below him. So sitting astride of a fallen tree, he attempted to climb and slide down. When ahout half of the descent was made, his pantahoons caught on a knot, and being of stout miverial, suspended him in mid-air, with the venison hunging from his shoulders. In this position he hung for soon moments, when the eloth happily giving way, he reached

For Forest and Stream, FISHING—THE "COMING ROD," AND SOMETHING MORE.

I WAS much interested, as doubtless were many others, in pernsing the article in your recent issue on the "Coming Bass Rod."

It must be confessed that the pleasure of the sportsman consists not more in the quantity of game killed, whether of "Fur, Fur or Feather," than in the skill and nicety with which the thing is done. The instruments with which a man wurks, must be taken into the account; since, for the time being, they become a purt of the man himself. We know that long compuniouship with an old ride, an old rod, horse or dog, hegels an attuchment not easily studered. Natty Bumpo with his Long Tom, is not a solitury exception in history or in fact. To reason here, "is treason against nature," Your correspondent has a pet roil—his ecompunion for more than twenty years in Summer tramps down mountain gorges, along mendow streams, and on rivet hanks. It never betrayed a trust. In form, action, reaction and endurance, it is unrivalled. It was manufactured by MoBride, the most expert rodsmaal ever knew. His humble cottage was on the banks of the far fumed Caledonian Springs.

It was here I first learned to east the line—slow process—often discouraged—practical teachers. They will ever have

tion and endurance, it is unrivalled. It was minutaethed by MoBride, the most expert rodsman I ever knew. His humble cottage was on the bauks of the far-fumed Caletonian Springs.

It was here I first learned to cast the line—slow process—often discouraged—practical teachers. They will ever have a warm place in my heart's memory. Now this rod must he our Summer compution till the joitrney ends. Having hegun with it, we must cud with it. Still, we would advise those in the initialory stages of the act to heed the suggestions of the inventor of the proposed "bass rod." "Words fitly spoken"—yes, there is a "litness" in the time, no less than in the thing. There is more than a molety of geunine satisfaction arising from the proprietorship of a well finished gun or rod. It has much to do with a man's spirits, elevating or depressing, whether he finds an opportunity to use then or not. It lightens the jaurney—quickens the vision—assists the hearing and gives intrepidity to the man. If I may be allowed the expression, it socializes itself with yourself. It keeps whispering how we could do it, and how we will, if the opportunity offers. You don't say anything to your real living comraile about these silent correspondences, for lear he may think there is a speck of vanity under the belt; but you do respond, unwittingly it may be, with an oft-repeated grip of genuous pride.

Niew, whether a hass-rod can be made in general conformity to that "typical" or model "rod," remains to be seen. We hape it is so; and, for other reasons than those suggested by the idealizer of the fortheoming rod. Trout are diminishing—bass are multiplying—they are found in almost every latitude, and from the Atlantic to the Pacific Ocenu. They are a beautiful fish—fond of their untive clement, and, will struggle to retain a foothold or firm hold within the limits of their liquid realm as persistently as their more princely relatives.

Right here the question comes up whether the deeply scated prejudice on the part of grace and heauty to his "potent

We remarked that the pre-heralding of the "coming rod" was timely. Since 1850 progress in the construction of guns, and the art of gunnery, has more than kept pace with implements of art in agriculture and commerce. This is owing in part, no doubt, to the fact that these are our defences lu case of need, and, when all other methods of arbitrament have failed—an Important part of the muni-

tions of war. We may also add, that the opening up, by milway extensions, of vast regions of territory unknown to our fathers, abunding in large gnme, has helped to call out and practicalize the inventive genlus of thousands in this direction.

this direction.

During this same time but little has been said and less done to equip the angler for his sport—sport, which to him has all the fuscination and challeges the numost skill of the chase. If then, there is a demand in this line of pleasure, honor to him who shall do anything to meet the exigencies of the case. Now is that time to agltate the subject. True, the rivers amb buys are now locked fast in fet ters of ice; but if it is true that "the thing that heth been, it is that which shall be; and that which is done, is that which shall be done; and that there is no new thing under the sun," then may we expect that some anseen power will nahar the icy doors and the waters will flow again as freely and as invitingly as in days of yore. Get ready your model rods.

Ye would not have the general reader, or gentle reader, take for granted that rod, red and line, will of themselves

take for granted that rod, reel and time, will of themselves insure auccess.

"Pray," asked a novlee in the act of painting," Mr. Opic, with what do you mix your colors?" "with brain, sir," was the tart reply—full of meaning—contains volumes of detail. In point is the old story of Sir Joshua Reynolds when solicited by one of the fraternity to look at one of his pletures. After looking it all over with the mind of a finished artist, said he, "capital composition—currect drawing—the color, toue, chiaroscuro excellent; but—luit—it wants—hang it, it wants—but l'mapping his fingers; woulding in "that," it was maning in the way thing which unkes the cond of a pleture, if if has any. The thing wanted in both case with the two answers. The thing wanted in both case with the two answers. The thing wanted in the beautiful of the way the wanted of rules in better, if for the time the mind is untrummeled of rules in better, if for the time the mind is untrummeled of rules in better, if for the time the mind is untrummeled of rules in better, if for the time the mind is untrummeled of rules and the lamb frolies, and the eagle mounts towards that and the lamb frolies, and the eagle mounts towards that and the lamb frolies, and the eagle mounts towards that an end is a proper to the said of his sporting propensities," "bitering a way time, auding in, and electing propensities," "bitering a way time, auding in, and electing propensities," "bitering a way time, auding in, and electing propensities," "bitering a way time, auding in, and electing fish. We are almost certain he was not. Of all pursuits, that of the sporting has not influenced in falled, and an labora apiness for idicenses and sleeping, but no one records that he was apt at catching fish. We are almost certain he was not. Of all pursuits, that of the sporting his continuous and promption of the family manifest of human affalrs, two qualities are resential to greatness," proper and promption of the family manifest of the propension of the family manifest of the prop

RATS.—To banish rats plant asphotel near the harn or stable where they are, or put some lu their holes. Rats have such an aversion for this plant that they will quit the premises where it is. If they are in drains or in cellars, scatter sulplinate of iron (copperas) into their runs. The copperas should not be dissolved; it is our hest and cheapest disinfectant. The sulphuric acid burns their feet, and they leave in a short time without dying. This will be appreciated by every housekeeper that has had to endure the stench of a dead rat.

AMONG THE SEA ISLANDS OF GEORGIA

BROUGHTON BELLSON

THE history of Broughton Island begins with its conveyance to Lord John Howe by King George of England. The Island was settled and a portion of It planted with indigo about the year 1731. During 1736 It was sold by the sware for fifteen thousand pounds sterling. Its present owner, Capt. R. F. Akin, purchased Braughton with its dive ar six thousand acres some three years shree, and bus thoroughly repaired the Bood-gates, embaukments, and bus thoroughly repaired the Bood-gates, embaukments, and bus thoroughly repaired the Bood-gates, embaukments, and busidings, purtlag the rice planutation of 497 nervs of drained and dyked lunis Into first-class condition, so that with a sufficient supply of labor an average crop uf nearly 25,000 lunihels of rice cas be raised. These large impravements, together with the erection of a steam rice-thrashing and cleaning utill, umple enclosates for stock, &c., &c., have cost the present awner some seventy dive thousand dollars during the past three years.

Broughton Island might well be enfled a principality. It is us large as a small German duchy, and the lumiting, shooting and fishing grounds in its lumiedlate velating afford the greatest variety of sport to the hospitable owner and his guests. He is a buchelor and owner of several properties. Many a Northern man, befare and since the late unhappy war, bus partaken of his hospitality. The south branch of the Allamaha River forms the boundary of ane side of the Island. It is a wide, strang river, which allows atcomers drawing ten teet of water to approach the putantation landing. During the Winter season of the treshets, the rich seddment from the upper country heling held in suspension by the river maters is allowed to depastited like the fee erop and the winters from the river enter through the onlinakments and flood the land. The food-gates are opened and the winters from the river enter through the contraction of the land. The food-gates are opened and the winters from the river enter the work the river of the plantality of the

ditteen days, a sweating process, then hardens and becomes flisty.

The Broughton Island plantation possesses a fine new steam-thrushing and cleaning mill, through which the rice pusses before it is it for market.

The wages of theld hands are \$20 per month with rations. House ruom is furnished to his hands by the planter with out charge. The average crop of rice is forty bushels to the acre. A good crop will amount tellity, and even to sixty hushels per acre. On a well improved plantation the cost of cultivating and making a crop of the ts whout \$36 per acre.

cost of cultivating and making a crop of free a moor per acre.

Having examined the books of the Broughton Island phantation I find that the profits on the craps taked are about one hundred per cent on the capital invested in unking the crap. Most planters pay for the money they borrow twenty per cent per anatum, and unless excellent managers, that it impossible to make the business yield anything more than a living. Where a planter is not compelled to harrow at higher rates than seven per cent, it has an enterprising man and possesses a flist class plantating in goal order, even with the demoralized later of the Southern States, he finds rice planting still a very profitable business.

in good order, even with the demonance man of the Southern States, he finds rice planting still a very profitable husiness.

Near Broughtou, Altamaha Sound, and the rivers and creeks which empty into it, turnish most excellent fishing grounds throughout the year. You can take you choice in the matter of salt or tresh water sport. In the Samud are immense numbers of sen bass, spotted hass, dram, sheepshead, "young dram," whiting, cronker, weak fish, yellow tails, besides oysters, clams, crabs, shrimp, prawn, terraplu, &c., &c.

On the wide rivers which form the houndary line of Broughton, you will find terrapid, soft shelled turtles, bream, trout, rock fish, perch, (three or four speckes,) and many other kinds in their sensor. The updands in the vicinity of the Island offer excellent sport to the way of deer, coon and fax hunting. Ducks and other wild towl frequent the sounds and rivers. Will turkeys, pattridges, English supe, wondeach, turtle daves, with hares in ahundanee, must not he forgotten in minking up a list of the shooting resources of this part of the deorgia coust. The time is not distant when Northern men passessed of capital will no longer ensist the occur anumally to compet a severe Nurthern Winter, but will purchase a Winter house in their own country among these lovely sea Islands where land is cheap, and a good hylog can be obtained at a very reasonable cost. An estate like Broughton Island, with all its improvements, can be purchased at one third of its real value before the war, while abandoned estates are considered worth but very little money.

OVERLAND WITH LIVE SHAD,

BY LIVINGSTON STONE,

OVERLAND WITH LIVE SHAD,

BY LIVINGSTON STONE,

ARLY the next morning after the accident to the first California aq-arium ear in 1873, I received a telegram from Hon. Spencer F. Buird, the head of the United States Commissioner of Fish and Fisherles, to eome East with my men, and without telay to take out a lot of live shad to California under the auspices of the United States Fish Commission. At six o'clock in the afternoon of Wednesshay, June 26th, I left the New York State shad hatching camp at Casifeton, on the Hudson, with 40,000 young shad, packed in circht ten galbon cans. They had been just taken from the shad hatching loxes in the the river by Mr. Monroe Green, and appeared very lealthy and lively, but they looked so full and edicate that it seemed almost a hopeless 1-sk to undertake to carry them alive 3,000 miles and deposit them in a river at the other extremity of the continent. There were four of us in all at the statt—Mr. H. W. Welsher, Mr. W. T. Perrin, Mr. Myron Green, and myself. Mr. Welsher accumpanied us as far as Omaha, and the success of the expedition is largely owing to his skill and experience. The remaining three went through to California with the shad. Beside the eight cans containing the fish, our outfit consisted of one similar can filled with water for a reserve, two or three pails and dippers, a thermometer, and the apparatus for changing the water. This mpparatus and its use demands a few words of explanation. The requirements demanded for keeping young shad alive in transit are radically different from those involved in carrying any other fish, but they always scatter indiscriminately through all portions of the water containing them instead of drapping to the hotton of their can and remaining quietly there, as is the cassom with my young trout and salmon. In consequence of this, the water cannot be dipped out and throwing and throwing away the fish with it. It becomes uccessary therefore to reparate the fish from the water before renewing it. To accomplish this the apparatus i

To make constant changes of water.
 To keep the temperature of the water within specified timits.
 Po avoid sudden changes of temperature in the cans commining the

To svoid any agisation of the water in the cans. To furnish constant supplies of water containing minute nata

6 To goard vigilantly against the use of water in the least degree un-

4. To avoid any agitation of the water in the cans.

6. To furnish constant supplies of water in the least degree any abolescents.

Any tailure to fulfill the above conditions will be immediately followed by fatal results. In our case, the water was changed every two hours night and day for the first half of the trip, and almost every hour for the last balf. As we bind eight cans of fish, and were seven days and nights on the way, we made almost a thousand changes of water. The labor, of convae, was almost incessint. It was like walking a thousand miles in a thousand hours.

It has been ascretained that a lower degree of temperature than 62° Faluenticit, or a higher degree than 75° F. is unfavorable to young shad. It becomes necessary therefore to keep the water in the cans between these two points, viz: 62° F. ami 75° F. Most trips with shad are made in woon weather, and in a warm climite, and the inmin difficulty is to get the water coil collinate in crossing the high ridges of the continent. Indeed, at one point on the Rocky Mooutains it sawed in the day time, although almost the last of July, and at these high altitudes the nights were always very cold. To keep the temperature of the water any no a sute point under these circumstances, in a cold car with no fire in it, and with reserves of water which themsetives were cold, was no easy matter. Sudden changes of temp rature are very injurious, and sometimes fatal. It we could have simply put a piece of ice in the caus, or have parted in some warm water when it became necessary to depress or raise the temperature, the work of keeping it right would have been comparatively simple; but to be ourged to granie it as we did, by a slow process of preparting the water with those irons. (c) To warm the reserve water used for a change by placing a vessel of it in the water heated by the irons. (d) To make the change with the prepared reserve. (e) To continue altering the temperature of the water alting taster than you can possibly raise it, two de getes at a time, by

paratively slander cens, instead of in broad and shallow, vessels, as with troat and salmon. These can specific the relative to a marker before a control prevented from galaxing the water. In supplying the fresh reserve, care is taken to place the water and the state of the control with water. By these presentions, the motion of the train again is almost entirely prevented from galaxing the water. In supplying the fresh reserve, care is taken to place the water and the control of Prof. Baird, Mr. James M. Milner, we had not trouble from the unction of the train against the water. To furnish the fish with constant supplies of water containing minute natural food is obviously necessary after dependent of the state of the stat

cans at 66°.

We arrived at Evanstown, Utah, about 2 o'clock p. m., on Monday, and took on a reserve of river water. It was clear and comparatively good, with a temperature of 57°. as we descended Weber canon, towards Great Salt Lake, the weather grew warmer, and we descended to Ogden

without mishap, reaching this point at half past five Monday afternoon, with the fish all in first rate order. Here f left five thousand (5,000) of the shad, as fresh and as lively as when they left the Ilndson, in the care of Mr. Rockwood, of Salt Lake City, who deposited them in the Jordan river, a few miles above its outlet into Great Salt Lake. We also took on here 50 gallons of water, from the Weber river, and started westward again on the Central Paeific Railroad. We had now only 460 miles to run to the beginning of good water at Humboldt, and only 314 miles more from there to Saeramento. We thought we had reason to feel encouraged, and our spirits rose accordingly. The terrible strain of the past five days of anxiety began to slacken; but the next night was the most abrining and critical of the whole journey. The temperature of the cans was standing at 65°, or within three degrees of the limit of danger, our reserves of water stood at 60°, or two degrees telow the limit. The night came on extremely cold, there was no stove or place for a fire in the car, and the lemperature of the caus was falling every moment. In the day time hot water could have been obtained by telegraphing ahead, but at night this was quile impracticable. The situation was exceedingly alarming. Through Mr. Perrin's foresight, however, at Ogden, we made a favorable beginning of the night. While I was busy arranging for the transfer of the shad for Sult Luke, and attending to indispensable matters which absorbed all my attention at the Ogden depot, Mr. Perrin an discavering that there was uo stove in the Central Pacific Express car, with ailmirable foresight, went into the kitchen of the depot restaurant, and got permission to heat some water on the stove, by which we obtained eight gallous of hot water and got a good start.

I also took the first opportunity to go forward into the postal car, and obtain permission to heat water on the mail

there was no stove in the Central Pacific Express car, with admirable foresight, went into the kitchen of the depot restaurunt, and got permission to heat some water on the stove, by which we obtained eight gallous of hot water and got a good start.

I also took the first opportunity to go forward into the postal car, and obtain permission to heat water on the mail car stove during the night. The danger was now apparantly averted, and It being my night for sleep, I having been up the greater part of the night previous, retired, leaving Mr. Green to remain on duty ill midnight, and Mr. Perrin from midnight till daylight, when I was to go on.

Mr. Perrin and Mr. Green deserve the entire credit of taking the shad through the critical night that followed.

On Monday, at daylight, I joined the car again, and it made my blood run cold to hear of the dangers that had passed the night before. The water in the cans now stood at 63°. We were on a descending grade, the sun was quite warm, and by ten o'clock, at Curlin, Nevada, we had the water up to 66°. The sun and nir grew warm, and by noon the temperature in the cars rose to 70°. We had now descended 1,000 feet, and it was so warm that we hegan to neight gallous of hot water and turity gallous of cold water. The water, which was from a spring, was very good indeed, and had a temperature of 65°. In three hours more, to our great consolation, we began climbing the Sierra Nevada, with all the bai water left behind us, and were only fourteen hours from Sacramento City. The rest of the journey was comparatively free from anxiety or danger, or any marked eveuts. Ahout surrise on the morning of Wednesslay, July 2d, our hist day, we crossed the summit of the Sierra Nevada, and began descending the Pacific slope into California, the water in the cans now stuming at 65° to 66°. At nine o'clock we took on twenty gallons of water, with a temperature of 60°, at Aita, California, and 55° to 66°. At nine o'clock we took on twenty gallons of water, with a temperature of 60°. It seemed

Bildorn River water, Nebraska, Saturday, Jame 28th.—Soft, but rolly, in one shad in a tumbler containing three tablesponnsful at four P. M. te appeared to like it. Was a live and doing well of midnight. Showed gits of distress towards morning. At sourise was just alive; at seveu w. M. on Sunday was dead.

Big Spring water, Nebraska.—Clear, but a little hard. Put one shad in tumbler cannalating three tablespoonsful of water at eight o'clock Sunay morning. Showed signs of distress at moon; was alive at two P. M.; ted soon after.

a tombler cannatable three tablespoonsful of water at eight o'clock Saudomborn, morning. Showed signs of distress at hoon; was alive at two P. M.; died soon after.

Laramic River water, Wyoming Territory.—Not quite clear. Put several shad in a tumbier full of water at seven P.M. on Samiay. Appeared to like it at first, but afterwards to suffer some. At midnight were in considerable oistress. At one A.M. Monday isorning they began to die; at four A. M. nearly all dead; at situate all thead.

River water, Evansonen, Utah Territory.—Somewhat rolly. Put two shad in a rumbler full of water at three P. M. Monday, June 30th. Did well in it.

Humbodd Spring water, Humbotdt, Nevada.—Put several shad in tumbler at five P.M. on Thesday, July 1st. Seemed to like h. Appeared well most of the night. in a great deal of distress at daylight; dead to the forenoon.

West of Humboldt all the water is good, and it is not excessary to test it. We took on water cast of Omaha at

West of Humboldt all the water is good, and it is not necessary to test it. We took on water east of Omniha at Albany.

I will close this account of the overland journey with the slind, by saying that considering all the liabilities to accident and deby which are inchlent to railway travel, especially encumbered, as we were, with a dozen cans and pails weighing in the aggregate half a ton, I think we were surprisingly fortanate in getting along as well as we did. We made onnerous changes of cars and transfers of our freight, from one train to another, often in the greatest confusion and herry, with trunks flying about our heads and feet, and milrond employees pushing and thrusting us and intreams out of their way. We were often ordered array by buggage masters and express agents, though we could not with safety leave our charge for a mouch, and at times, especially at the junctions of the great lines of railways, where we were hardly left a place to stand, and where, at the same lime in all the confusion and crowding, we felt obliged to take on water, and even to change the water in the rans, it seemed as if some disaster must certainly come; either that the fish would be injured, or that lice cans would be upset or left behind, or that some af us would be left, or enter the wrong train, or something of the sort happen.

Yet, though it seems almost incredible, not an accident or delay, or drawback of any kind happened. We did not have a fish from any contingencies of any sort, nor meet with a moment's delay, but entered Sacramento City with all our fish alive, just on the moment that we were due to reach it by the 11:30 P. M. train we took from Albany on Wednesday the week before.

Livingston Stone.

DISTRIBUTION OF FRY.

ROCHESTER, March 21, 1875.

ROCHESTER, March 2, 1875.

EDITOR FOREST AND STREAM:—

We have distributed about four bundred thousand salmon front per week for the last three weeks, and shall probably close up next week. We have in New York State 47 inland lakes; 200 are suitable for salmon tront. Last Sammer I heard of many heing caught, and next Summer you will hear of a great many heing caught in lakes that we put them to three and four years ago. I consider it a perfect success. We hear a good report from a great many lakes and rivers that we have stocked with bass. There are a few inlatakes made in putting fish in waters not suitable for them. But there is no need of it, if the partles will read our circular carefully. It gives a description of the different kinds of waters adapted to different kinds of fish, and one of the circulars is sent to every applicant for fish. It is impossible for natio know every water in the Sinte, and if paties will read the circular carefully there is no need of any mistakes. We have distributed a great many bass of all klods fiths Wilnter. Our report will be out next week for 1875, and any partles wishing will be sent one by addressing the understgned at Rochester.

Yours,

The circular referred lo was printed in Forest and STREAM a few weeks since. - ED.

TROUT BREEDING.

OARLAND, N. J., March, 1875.

TROUT BREEDING.

OARLAND, N. J., March, 1875.

Eniton Ponest and Stream:—

I do not expect to present anything new to practical fish culturists, but will give my experience and belief in the theory of Improving the breed of our brook trout, or, as Livingston Stone says, our "doincestcated trout," the true Salmo fontinalis. I believe it possible that we can enlarge the size, lighten or durken the color, and perhaps improve the flavor of cultivated troat. It is well known that in brooks that empty into the same river and run parallel through the same geological formation, stud where they produce the same food, the same kind of water plants, and have about the same tall—in fact as near allike as possible, yet you find the trout in them different in size, color and shape. No species of lish vary so much, that I am aware of, as the Salmo fontiarits, bence no species of fish are so susceptible of improvement. Two years ago this Spring, while in the State of Maine, I had shown to me a few thousand small fry from the celebrated Rangeley Lake trout, which, according to their age, were minch larger than I had seen at any other fish culturist's establishment in six or seven different States. The Rangeley Lake trout are no doubt the largest in size of any lound cast of the Mississippt River, and prominenced by the late Prof. Agassiz as the true Salmo fontianals. A little more than a year ago I ordered several thousand spawn if the Rangeley Lake trout, which were placed in my hatching house at the Crystal Spring Fish Farm, Oakland, Bergen county, N. J., and butent dout in water at 52°. When first hatched they were the same size as my Jersey trout, but hefore the sac was fully absorbed they were nearly one-third longer, and continued to outgrow them, although treated and fed in the same manner. Up to the present they have continued to take the lead, and are the targest trout of their age that I ever saw. One year from the time they were batched many measured soven and a half inches in length. This Winter I obtained more of t

—A correspondent writes:—

The Mohawk Anglers' Association, at Luttle Falts, N. Y., of which Hon. Wm. J. Skinner is President, and Watts T. Loomis Secretary, was formed for the purpose of protecting, multiplying and introducing fish into the Mohawk and its fributaries. This club has commenced several sults for penalties, but have been anable to enforce but one. Witnesses became suddenly forgetful and could not remember on the stand what they early did before. We have introduced into the Mohawk the California siduon two seasons; titls past Winter 50,000; last year 20,000, I believe, and a fen safanon troat, but fear we shall not receive much benefit from the salmon as they cannot pass Cohoes Fulls on their return from the sea. We design, however, to continue until we tearn of a surety that it is a failure. We are endeavoring this Winter to pass a law probabiliting neitling in the canals, a point heretofore uniouched by any law, as our Justices of the Peace interpret it,

Respectfully. W. T. S.

Matural History.

THE AMERICAN WOODCOCK.

BY RECAPPER.

W HAT sportsman of much experience does not know of this tine game bird? Does not the very name of the hird call to mind recollections of glorious moments when first we heard the welcome warning, "mark cock;" and do we not remember how quickly we turned from the scottered covey in youder woodside, that we were just nonscattered covey in youder woodside, that we were just proposing to follow up, to hag the rure and much more highly prized bird? What to us was the squeak of the suipe or the boom of the ruffed grouse, then? The time has been, alus, that is no more, when in almost every state of the Umon'woodcock were to be found in abundance; but now, more time for a fact that is no more in the found in abundance; but now, except in a few very isolated localities, anything like a large bag of these glorious game birds is not often to be made. Some of the reasons of this change for the worse are in a measure unavoidable, and of these the clearing up of our wide woodlands and deep bogs is the principal; there are yet, and will be for years to come, large tracts of forest and swamp not available for agricultural purposes, where the woodcock, if properly protected during the breeding season, would multiply to an extent snarce ever

As is well known, this bird winters in the Southern States, passing to the Middle and Eastern States to breed, then Northward to month, returning in Antumn over the same route, and stopping according to the state of the ground and the milduess of the weather for a longer or shorter puriod.

Those who are in favor of shooting this hird while with us in the Summer, argue "that if we do not shoot them then, the chances are largely against our shooting them at all." That this is a graud mistake is to me very plain, for I have shot the woodcock in Antumn in sections of the

country where they were never disturbed during the Summer, and have found the birds quite plenty.

The woodcock is not by any means so slupid a bird as swisslam by experience, and also, I believe, to transmit that wirdow to bis future generations.

The woodcock is not by any means so slupid a bird as some would have us believe. He is very ready to hearn wisthom by experience, and also, I believe, to transmit that wisdom to his future generations.

Within three miles of the room in which I am now writing, there is an extent of what was formerly one of the best pieces of woodcock of the State, but it is so no longer, though the character of the ground is in nowise changed. Every Spring the woodcock come there to breed, though not in such numbers as in former years; but they seem to have learned that it is no longer safe to tarry there after the young are able to make any extended dights, and the consequence is that instead of staying there, as formerly, till moulting time comes runnd, they puss on at once to the Northward. A few birds are of course to be formed on that ground through July, but I believe them to be only the later broods.

Two years since, in the mouth of June, and about the middle of the month, myself mula friend, while on a visit of inspection to those grounds, started in one meadow alone over thirty cock in about me hour's walking. On the 5th of July following we went to that same ground and found only three cock, yet the ground was as good, the feed, to all appearance, as pleaty as it had been two weeks previously, and no one find been there to ponch upon the birds. So notorious is the fact of this early departure of the birds, that very few—even of the market shooters—think it worth their while to look for woodcock there after the middle of June. Before that time they are still, in favorable seasons, killed in respectable numbers by these fellows.

It may be asked if we have no game laws in New Jersey? Certainly we have, and there is now a new law, nowatting the action of our legislature, which, if passed, will make it an offense to kill woodcock except between the 1st of couch and the 1st of Junuary, and the fine to be \$50 for each and every offense. Now this is just as it should be, and I have no doubt the law will pass, and there the

an occasional high couraged bird will stop there till Coristmas.

Just what has taken place in the above loculity has taken place in many similar ones throughout the country, and there is now acither Sunnace or Antumo cock shooting there, while in more seeladed and favored localities cock still abound in Antuma. By all means, then, let us put a stop to the killing of this bird in Sammer, for unless this is those, and that, too, right specifity, there will be others who will complain as boully as myself.

Nineteen out of twenty sportsmen shoot woodcock over setters and pointers, and although (with dogs that are under perfect command) they show great sport, I cannot think them fully calculated for this work, and I am glad to see that the sporting papers are now speaking favorably of the spaniel not only for cock shooting, but for covert work. Although I have never shot over one of these dogs, I believe, from what I have heard, that they will become very popular here.

Woodcock, though a covert loving bird, do not, even in Autumn, always stay there; and although for the most part

feeding in moist grounds, they are at times found quite far from any water. In Monmouth county. New Jersey, I have found them in Autumn on the very tops of the highest hills in heavy timber, and, where there was no moder-brush, feeding upon the harvay of luseries accreted in the rotten stumps of fallen trees. On examination, the toles made by their hills in the crumbding word routh be ploinly seen, though of cause in the saftest places only. Whether this is merely a local bable or not 1 am not prepared to say. I have also killed woodcock in open bog mentows in Annuan, though most writers tell us that they invert go there at that season of the year.

Although this bird is, to general, very well alide to direct his course through the thickest of corn safely. I have sometimes seen thru, when suddenly flushed, the foul of the corn, and in one or two instances get completely laugled and come to the ground, and once I know a woodcock to kill itself by flying against the house in which I then lived. Strangely enough, this happened at night, when these birds are supposed to see best, and when most of their traveling is done.

Strangely enough, this hupaseural at hight, when these litris are supposed to see best, and when most of their traveling is done.

Taken altogether, the woodbook is a very recentric bird, and I lithik it is this very crevatricity that makes them so unch admired as an object of pursuit by the sportsum. That they have been plenty in times past are all know, and that they would be plenty in times past are all know, and that they would be, is equally certain. How best to attain to that most desirable end is now the problem for sportsmen to solve. I whit for obler and where ones to speak.

There are many theories as to what becomes of this bird at moulting there, and each of these has its advocates. I am inclined to thatk, with Herbert, that an the breaking up of the floods in August each bird intukes himself to the hills and mountains, and scertfing binself in some so-cluded thicket not too far from some spring or mountain runnel, there awalts the coming of his now plumage.

I have occasionally shot this bird in Now dersey lare in August, when well in the moult, and in such times have found them paide as often on open larg membors as in the cover. It would almost seem that this bird can tell when the trigger is about to be drawn on thin. Often have I soon them flashed within a fow yards of the gun, when he there is about to be drawn on thus. Often have I soon them flashed within a fow yards of the gun, when he then they would, just at the refrider mement of drawing the trigger, give a sudden twist up or down, and if the shot was a close one, excapt thereby. As the sportsman rannot, of course, foreser this occurrance, he is very likely to unies his bird. I know not if it be funcy on my port, but it always seemed to me that at such times the rack skines of through the alr with a peculiarly exulting look in that round black eye of his, and with a junctiness of manner that seems to say to the discomfited shooter, "wiperl yanr eye that line, old mun."

Certainly, cock shooting is flow eport where the birds abound, and a

POMPANO AND NURSE.

IN FOREST AND STREAM for Jaduary 28th Mr. S. C. Clarke remarks of pompano (Botheologiaus pampanus) und the cavalli, or crevalle (General defensor), that [his own words] "the two species much resourble each other, and are even confounded. Even so mearnten writer as Hulbro as does so. When, however, [we] tend of pumpanus being taken with the look in great mumbers, and of their jumping into houls, and their occurrence as far north as Hodnes' Hole, I think the cavall is indicated."

Inasmuch as the Ishermen of the North, who had taken pompanos, did not know what they were, and the hieutification was made by naturalists of the fish commission, and as this determination had been published by them, and several accounts have been based on that determination, it was presumed by myself, as well as several others, that Mr. Clarke repudiated these hierithrations, and thus reflected upon our ability to determine the Ishus, although he mentioned no names. In this helief, I wrote my lefter published in your paper of February 11th.

As Mr. Clarke tenies having telected upon us, and appears to have been unaware of our determination, I will at once confess that, under such circumstances, there may have been unaware of our determination, I will at once confess that, under such circumstances, there may have been unaversory accribity in my criticisms, and I offer an apology therefor. Mr. Clarke, however, does not correctly represent the state of the question, and I will therefore give in parallel columns the definitions of Hobbrook, who, be it remarked, even uses the same names that Mr. Clarke himself does, and I therefore an unable to indets and link be could have made the miss statements he definite may perpendent the base of the state of the pusting, and I will therefore give in parallel columns the definitions of Hobbrook, who, be it remarked, even uses the same names that Mr. Clarke himself does, and I therefore an unable to indict.—

Mr. Clarke explains:—'I built been litering stories all

Mr. Clarke explains:—"I had been hearing stories all along the Florida coast, from Jacksonville to the Indian River, alont pompanos being taken in great numbers with fly and spoon, of their jumping into boats like flying fish, and of their helug taken as far morth as Holmes! Hole; and being assured by resident thehermen that the poppinio partformed no such antics, I came to doubt all these states."

Did Mr. Clarke's informant call the flsh "pompinio" or "crevalie?" On this hinges the point of los story. But it must still be remembered that with the confusion of usings might have been transferred the confusion of habits attributed.

As to the community being found in Florida, that is out of the question. Mr. Clarke rays—"Now the negative testimony of even a professor can hardly avail against the possi-

tive testimony of a dozen witnesses, who have seen the species here, myself among the number." True! But where is Mr. Clarke's "positive testimony?" I have no doubt but what Mr. Clarke might find even a dozen dozen dozen witnesses in Florida to the occurrence of a fish which they call "nurse;" but I do most emph dically deny that the fish they call so is a somniosus. The so-called "nurse" of the West Indies (and presumably of the Florida coast) has nothing to do with the genus somniosus, and is, in fact, more different from the nurse of the northern seas than is a torse from a thinoceros. The nurse of the West Indies is a species of the genus ginglymostoma.

This is simply number example of the confusion which popular names may lead one into. Mr. Clarke, hearing a fish called "nurse" in Florida, and finding such a name connected with the scientific appellation (somniosus) of a fish in the north, at once jumps to the conclusion that they are the same species! The two belong not only to different species, but to different genera, and even widely sepurated families.

SUSPENDED ANIMATION.

SUSPENDED ANIMATION.

LOWER BRULE AGENCY DARGTA, February 28, 1878.

Entron Forest and Stream:

Derota, February 28, 1878.

Entron Forest and Stream:

In the question of sup-inded animation of fish by freezing, pot forth by Mr. Fred Mather, of Boston, the following is offered as additional evidence of the fact: Lale in the Fall of 1870, when ground was broken for the new ship canal at Sault Ste. Marie, Mich., it was found necessary to drain a pond (artificial) in which some superior specimens of Salmo fontinalls were sent by the superintendent of the canal. Two of these, each neighbour for the pounds, fell into the hands of the Commanding Officer of the Sanit, who placed them temperarily in a barriel of water in his yard. The following night the weather changed and a long period of errors cold followed, during which the water in the harrel froze solid, and remained so till the following Spring. When it thewed the fish were taken out alive, and apparently none the worse for this severe hibernation.

Win. E. Doudigert, U. S. A.

The Kennel.

BLACK TONGUES IN DOOS -A well known owner of fine dogs having mentioned the fact that several black spots are visible on his dog's tongue, reminds us that the common breed of Chinese dog which is found throughout the Empire has this peculiarity. Not that we would insimate that the dog in question has the slightest taint of celestial blood, but as an interesting fact in canine-ology and one which is of much value to the Antipodean sportsman. So marked is this characteristic that when fine dogs imported at great cost from England, through carclessness or other causes have come in contact with the native species, their progray bear the unmistakable signs of the mesalliance to the fifth and sixth generation, even after re-crossing has removed every other indication of tainted blood. In addition to the annoyance caused by this intermingling of species, which, with heedless servants, it is sometimes almost impossible to prevent, the importer of fine clogs has much more to contiud with. The climate itself is very fatal and two scasons is about all the work which can be expected from the best bred dogs

The Blenheim Spaniel.—Head round, but rather prominent skull; ears pendulous, well coated; eyes large and bold; a deep stop; lower jaw projecting or undershot; snort black nose; neck fine; shoulder thiek, and chest the same, very full of coat, which is in general termed the mane, but we cannot subscribe to a mane being earried on the chest, but prefer to term it a fulness of bosom coat; short legs, well feathered; hind quarters and buck level, showing no weakness at the loins, and being well feathered on all under parts; tail well llagged, not carried above the level of the buck. The marking is a great point in this breed. There should be a while strenk down the forehead, and in centre of this strenk the rich spot about the size of a shilling of a golden hue. Side of jaws freekled, and muzzle body-color, more white thau yellow golden, not too heavily marked anywhere.

POINTS IN JUNGING.

A VICTIM OF THE MEASIES.—The measles are visiting the Uptim, Mass, families now, and the latest victim is a pet dog in the family of George Walker. Major was a valuable Newfoundlander, who regularly "took" the disease from the children, having a cough and every symptom that attends this sickness in the lumma family. They doctored him, and he got along nicely for a few days, but he preversely ran out in the snow, which apparently gave him a chill, the measles struck in, and death closed the scene.—Times.

-"Dog Whlp's" Imported field trial setter dog Lucetta, will be put to public stud. His owner deems it necessary to make this statement in anwer to many letters of enquiry for his services.

L. II. S.

The Rod and Gnn Club of Springfied, Mass., have voted to hold a bench show of dogs the last week in April. We shall publish the premium list as soon as received.

NAMES CLAIMED.

EDITOR FUREST AND STREAM:- WEST TROY, N. Y., March 29, 1875. Epiron Firest and Stream:

I would like through your columns to claim the name of "Gipsey Quoou" for my orange and white setter bitch, out of Brosna, imported in whelp to Ranger, by Mohank, whelped Sept. 14th, 1874. Also the name of "Mac" for my white and black dog mhelp, out of "Mohawk's" Kirby by Mr. Raymond's Pride of the Border, whelped Oct. 1st, 1874. I would like the opinion of some breeders as to the mating of these two, should I succeed in raising them. We have for Brosna pine Irish; for Ranger, Laverack, Gordon and Irish; for Kirby, one-half Laverack, enequateer Gordon, and one quarter Irish; and for Fride of the Border, pure Laverack. It is my opinion the different theod would be so distributed as to produce the best result. Enough Irish to make them ton h, and chough Laverack to tone flown the Irish and make them ton h, and chough Laverack to tone flown the Irish and make them to h, and chough Laverack to tone flown the Irish and make them tas beadstrong. They are beautiful whelps, of great range, good nose, and will point stanned, are very tractable, and splandil retrievers.

Yours truly,

1 B. Fireins

Woodland, Harm and Garden.

THE FIRST GERMS OF SPRING

THE FIRST GERMS OF SPRING

PLANT life and animal life are stirring in the forest, are seen in the wayside woodlands. How sweet the first putting off of Winter, the first germs of Spring time. How quietly and glowingly the first harbinger of Spring, the little muse ear of sweet memory, puts forth its short covyms. How pearly white are its shining leaves. Here beneath the shelter of these old rocks, how lovingly the trailing arbutus erceps; here are some of its sweet blossoms actually peeping up from under that patch of snow. The hereiolore frozen rivulets are beginning to trickle in golden drops, and the sweet flag, the adder's tongue, and the violets are awakening to the first genial warmth of this coul mouth. What a contrast in appearance the whole woodland seene presents! The snowy mantle of old Winter has been gently removed, and the huge trunks of fallen trees, which a few short weeks since were covered with snow, now reveal themselves covered with the grey moss, the green moss, the changing lichens, and the numerous orchids and parasitic plants of the forest. These are the first barbingers of Spring—the early promises of a Spring time near at hand. Last, but not least, are the little ferns, with their delicately peneilled leaves spread out upon the old rustic logs. Look how very lovely is that tuft of the Canis minor, or little dog fern. With pleasure I transfer it, together with two native orchids, to my basket for future use and closer examination. These harbingers of Spring remind us of the month and its duties. Here a little rabbit gaily trips neross our pathway. How fearless he seems. He quaintly turns his head from side to side, lakes a hop or two, creets his long ears with a final bound, and is soou lost in the dense underbrush of the forest. Here is a fine specimen of our New England hare. He is in a great hurry, it seems. He quickly passes the line of our vision, perhaps going to attend a convention of the fur bearing animals. Here is a nice large grey squirrel, and he is at a great hurry, it seem

insect, which he swallows quickly, and so repeats until his appetite is satiated. Hark! you hear at a distance the whirr of the ruffed grouse, or the serenm of the jay. Other game you meet in the more deuse wooillands, for those I have described are only the occasional tenants of a country woods, such as are often seen on a fine morning in the early days of April. They are the first reminders of a busy seasou, which will soon in all its glowing, flowering beauty burst upon us. They are the monitors of the coming months, when the violet, the pansy, and others of the flowery tribe take up their carly march in a succession of the months. They are the germs of the coming Spring time, the floral attendants of the rich cereal, the golden corn, all of which, in their times and seasons, with their peculiarities of culture and value, will be set before you.

OLLIPOD QTILL.

ANSWERS TO CORRESPONDENTS.

C., of Arlington, Mass.—The peculiar features of the flow of the grape vine say, or pressure of sap, as it is called—are the luteness of its flow in the season; it seems to be governed by up rule, and moves independently of the weather, its greatest flow being from June to July. I have found even in November thinming of grape vines quite a flow of sap, in some cases, so much so as to eause drippings. It's flow depends much upon the warmth of the san. I have examined several grape vines in very exposed situations this week, and I find them thus far, notwithstanding the extreme cold of this Winter, doing well and alive, and will, doubtless, live; so you need fear no greater percentage of loss than you have had with your vines in years past.

Makta Balle, Newton, Mass.—The action of eamphor on plant life is as a stimulant. The reason your plants died was from the fact that you gave too large a quantity of eamphor and not sufficient water. It has been proved by numerous experiments that this drug has a direct effect on plants when it is judiciously used, enusing the flowers of various plants to revive and continue in bloom for several days when they had been almost given over. An experiment made by myself gave me full confidence in the efficacy of eamphor, as applied to bouquets of flowers to prolong life. I cut tulips, gladiolus, and three kinds of iris, and placed a like number of each in eamphor water and pure spring water. Those in camphor water lived and were in hrillant flower four days after the others had died.

James, Portland, Maine.—The book you wish to obtain is not an agricultural wark, but a work upon ornamentation, being a series of plates published in 1714-15 ninher Louis XIV. You will find ninch information upon this subject in Appleton's Journal.

Sea and River Hishing.

FISH IN SEASON IN APRIL.

bring 50 cents

Figure 18 Mainer,—The pleasant Spring weather of the past few days has been the means of producing a decided improvement in the fish market, resulting in largely increased supply and corresponding falling off in prices. Especially is this the case with coil and haddock, large quantities now being caught along the Rhode Island, Long Island and New Jersey cansls, and salling this week for 7 cents per pound. Halibat is worth 16 cents; striped bass from Potomac River, 20 cents. A few Drlaware shad arrived on Tuesday morning and were sold at 75 cents each; Chesapeake shad are selling at 60 cents, while very fine large Norfolk fish can be had for 50 cents. Shrimps are worth 50 cents per quart; prawns same price. Smells tapering off in supply, bring 20 cents per pound. Large quantities of Canada brook trout are selling for 30 cents per pound, while the cultivated from sell for 75 cents to \$1 25 per pound, according to the breakty from which they FISH IN MARKET.-The pleasant Spring weather of the \$1 25 per pound, according to the lucality from which they come; live trout \$1 59 per pound, in limited demand. A few green turtle are in market and sell for 20 cents per pound. California salmou arrive twice a week and sell at 40 cents per pound for the whole fish, while choice cuts

-The shad fishermen planted their first poles on Thesilay morning just above Robin's Reef Lighthouse.

-Sportsmen visiting Nova Scotia this season will find excellent tackle in Halifux, at the repulable houses of J. S. Egan, 23 Upper Water street and John H. Symonds, Granville street. Flies adapted to the waters of the Iowa Provinces can be best selected there.

NEW York—Adirondacks, March 25th.—Adirondack weather unfavorable yet, snow in the woods three feet deep; ice in the lakes very thick. The probabilities are that the Spring fishing will be late, unless we have a decided thaw—a continued one—which awing in the fickleness of the weather in this latitude is very uncertain.

-Mr. P. H. M. Van Yyck, of New Hamburg, writes March 21st:

March 21st:—

"I think that my frind Peter Levy and myself are the first parties that ever took shad with a tly in the Iludson. Yesterday a fisherman in hoisting a pike net caught a couple of smelt, a thing never heard of at this point before. A great many striped bass weighing from eight to twenty-four pounds have also been emight through the ice during the Winter, (with ice nets). This I think is caused by the water becoming so extremely salt by the protracted alrouth the past Winter that the salt water fish run up further than usual."

i usual."
-We have heard much of the charms of sporting in Texas, and have no doubt that they are enjoyable to a degree. There is a certain spice of variety in the experience that gives a zest quite unknown to many who live else-

gree. There is a certain spice of variety in the experience that gives a zest quite unknown to many who live elsewhere. For example, our frequent correspondent who writes from Gainesville, a gentleman wholly reliable in his statements, recounts the following incident which will verify the "charms" aforesaid. He says:—

"I will relate what happened to a citizen of this county some years ago while fishing in eastern Texas. He was accompanied by another gentleman, but they had separated and were fishing out of sight of each other. He had his rifle with him, and as the sith had got on him and the mosquitoes had became troublesome, he concluded to move, and in doing so came across the track of a panther that had just crossed this creek. Dropping his rod and bringing his gun to a poise, he followed the track down the creek loward his friend, who was sitting out over the creek on a log. Imagine his feelings when he came near enough to see the man quitely fishing and the punther standing on a leaning tree directly over his head, with his eyes fixed upon his victim and his tail twisting. Mr. Editor, would you not have taken the buck fever? I think I would. But not so with our hero. Almost instantly the rifle covered the paather's heart, and he dropped in the creek almost on the fisherman's head, and frightened him so budly that he fell off the log into the creek. 'What a fall was there my brethering!'

Startling as this incident is, we can almost match it by an adventure of our own on the Roquette River, Adirocalacks, in the Summer of 1872, we think. We were en routs to Long Lake, and had just passed the Cold River, where the lunge willness stretch out over the water, Uncle Steve Turner at the oars, and we in the stern sheets, facing up Turner at the oars, and we in the stern sheets, facing up stream. Scauning the vista ahead, as is natural, we saw what seeteed to be an immense outgrowth or protuberance upon one of the projecting limbs that stretched out over the river some eight feet above the surface, and about two rods in advance of us. When Uncle Steve's attention was called to it, he had no sooner turned, than a huge punther gathered itself up, and wheeling about, jumped full diffeen feet over the ablers that fringed the hank and vanished anto the woods. Had the creature not been opportunely discovered, he would have dropped into the boat.

—The value of the Canadian fisheries for 1874 is set

discovered, he would have dropped into the boat.

—The value of the Canadian fisheries for 1874 is set down at \$20,000,000. This is exclusive of the scul hunt or whale fisheries. It is also exclusive of the United States and French catch. It simply represents the value of the fish caught in Canadian waters by Canadian fishermen, and embraces returns from Nova Scotia, New Brunswick, Quelbec, Prince Edward Island, Newfoundland, and the Magdalen Islands. The French catch on the shores of Newfoundland is supposed to average \$1,000,000 per annum. The United States catch in Canadian waters is estimated at \$10,000,000 per annum. The number of persons engaged in the Canadian fisheries it set down at 250,000.

BASS FISHING IN FLORIDA.

EDITON FOREST AND STREAR:—

I know you strive to render your paper bold instructive and interesting to your many renders. I know also that nothing is more interesting to sport many renders. I know also that nothing is more interesting to sport many renders. I know also that nothing is more interesting to sportsmen than to learn where good sport may be had. Hence I cheerfully contribute at this opportune season the following data, shouling dists, where bly bass have been caught by me, and secondly, riby, I am sure they can be caught again.

First—Every steambast capitain who goes up the St. John's River, Fia., will be able in point out where old Fort Butler was situated, some afficent utilice above take George, and out the south side of the river. About five milles above this ajou, and on the south slde of the river, another small river will be found emptyling into it, between marked emburkments, having a wild or ange grove on the our side and on the other small trees and bushess. This river was called the thirth We kiwa when I fished in it; its mouth is quite open and prominent, and I think about teight roils across; its waters are clear and coo, and pass out into the St. John's over a smooth and shelly bottom. Its depth lessone ten fret or more, and its western bank good for camping and lamiting heavy their with pole and line. Plaid directly across it mooth, and if you hit the proper time, I will warrant you fish that will make your aims ache to limide.

Second—Why I am sure they can be easieth now: The reader will at

elght reas across; in water are clear and con, ann pass out into a such obne sower ten fred or more, and its a victor bank good for camping and landing feavy lish with pole and line. Pish it directly across its month, and if you litt the proper true, I will be dead to the clear the proper true, I will unrarent you do that will make your aims ache to landle.

Second from my description of place that here at the month of the direct river, mess be a magnificular place for the big base of the great St. John's source from my description of place that here at the month of the direct river, mess be a magnificular place for the big base of the great St. John's source from my description of place that here at the month of the direct river, mess be a magnificular place for the big base of the great St. John's source from hundred intest in length, in place mills broad, deep, adounting he small dot, high pals, Sc., is congregate annually for spawning and other perposes. But the proof of good deshing lies not in appearances always, to these are often very deceptive, as the fisherman well knows. No-better proof lies in the actual trials unde here by my-self and on other—Private Dougslers, of K Coupany, Second E. S. Dargoons. He was the "Peter" of his company, and deded for over alxy men; and when I think of these times and recell the faces, at this company, and deded for over alxy men; and when I think of these times and recell the faces, at almost makes my owner and the second better faces and the little price, so as to reveal the second behind the cartains. I will any, that it is suffered to the second behind the cartains, I will any, that it is suffered to the second behind the cartains, I will any, that it is suffered to the second behind the cartains, I will any, that it is suffered to the second behind the cartains, I will any that it is suffered to the second behind the cartains, I will any that it is suffered to the second behind the cartains, I will any that it is suffered to the second behind the cartains, I will a

Figure Matteus.—The number of fishing arrivals for the week eming March 25th, was fourteen, seven from Georges, three from the Grand Banks and four from New Brunswick. The Georgesmen are bringing in lighter fares on second trips, averaging about 35,000, an aggregate of 250,000 for the week. Indibut have also arrived less freely, the receipts amounting to 260,000. The New Brunswick vessels have come home this week without fares, no herring having been taken there the past mouth. The scarcity at this time will make it bad for the Western Bank fleet now fitting away on their sull trips, who were depending on these arrivals for a supply of bait.

The fishing season has openial quite disastrously, sixty-five lives and six vessels having becaulost in its prosecution up to this time—quite an increase over the losses of last year for the same period, when there were eighteen lives and four vessels lost, two in the Newformilland and two in the Grand Bank tishery, the crews of three of the vessels being saved. Increase of loss of life, up to this time, torty-seven. Of the vessels lost this season three were employed in the Grand Bank and three in the Georges fishery.—Cape Ann Advertiser, March, 26th.

THE BORING OF SHOT GUNS

WE had purposed continuing the reports of English of gans bored on the new, or American principle, by which Messrs. Scott, Greener, Dougall, and other makers claim to have achieved such wonderful results in the way of pattern and penetration. The approaching "trial," however, instituted by the London Field, is calcu lated to be so thoroughly exhaustive that we prefer to wait for its completion before going further into the merits of the subject. The conditions of the "trial" are too voluminous for us to reproduce in full; briefly, they are as fol. lows:-Each maker can enter three guns; an adjustable rest is to be used. Guns of from eight to twenty guage will be allowed, the latter size to be allowed a latitude of one eighth ounce shot. In the second round No. 5 shot will be Every gun to be fired into a pit five substituted for No. 6. times from each barrel before trial, and no wiping out to be permitted until after the contest. The further conditions regarding powder, shot, wads, and pads are not materially different from those in force at previous trials. The Field gives cops of the value of 40 gainess and £10 respectively, besides bearing all the expenses of the trial.

The result of this competition, for which the preparations

are so elaborate, should be conclusive, as far as the work of the competing makers is concerned, but the question of the desirability of the method of horing, by which this close shooting is to be obtained, is by no means determined. Of all the voluminous correspondence published on the subject, the letter of "Enquirer," in the Field of February 27th, written from St. Louis, is the most to the point, and while predicting that the American system will come into general use in England, he claims that it will be at the expense of efficiency in the gun. If we are rightly formed, Mr. Greener, senior, many years since a lopted this system of "choke boring" in order to produce close puttern, but after a time discovered that it was at the expe of the gun made, for it stands to reason that the gradual narrowing of the bore of the gun towards the muzzle, by which concentration of the charge of shot is procured, also produces greater friction and consequent wear and tear. Indeed, it is not improbable that with our American made

guns, which shoot so admirably at first, the subsequent rattle and shaking to pieces is produced by this very cause. The Roper four shooter has an attachment which screws on the mazzle of the gun, to produce this effect; an exterior concentrator, which, however, is adapted only to single burrels. 'The letter from our correspondent, "Royal," however, is adapted only to sinwhich we publish elsewhere, gives a further trial on our side of the water, and we shall look with interest for the results of the grand Field trial.

The withdrawal of Messrs, W. and C. Scott & Sons from this trial will deprive it of much of its interest, but their reasons for so doing, as related to us by Mr. W. M. Scott, their representative now in this country, are so well founded that, while regretting the absence of guns of their neknowledged make, we cannot but approve of their deel-sion. The intricacies of the gun trade are so different in England from anything which exists in this country, as to require some explanation in order to be understood. The Messrs. W. and C. Scott & Sons are not dealers, in the common acceptation of the word, but manufacturers on a large scale, who furnish many of the retail dealers with gans, the latter using their own names and stamps. Therefore, would be not unlikely that in a trial of this nature their acknowledged guns would come into competition with others of their own make, but which purported to emanate from other dealers. The embarrassment of the situation is obvious, and the Messrs. Scott have done wisely in with-The embarrassment of the situation drawing. On this side of the water, however, this cause does not exist, and we look forward to seeing them again at the head of the list in our next home trial.

ICE PHENOMENA OF NEWFOUNDLAND

S HOULD any one wish to study the striking phenomena of ice-fields and icebergs, let him go to Newfoundland, and during the first four months of the year he will flud around its coasts ample materials for such studies. During those months the great Arctic current—"a river in the ocean"-which sets out of Davis Straits, is laden with icebergs and ice-floes, of which Baffin's Bay is the factory. Even so early as January these ice-masses begin to show themselves off the consts of Newfoundland; but February and March are the favorite months for the transport of the east ice crop from the place of its growth to the bosom of the Gulf Stream. A river of ice, from one to two or three hundred miles in breadth, and from fifteen hundred to two thousand miles in length, then flows slowly and majestically past the shores of Newfoundland. The iey stream is not continuous, varying considerably at different times, according to the season, and the manufacturing and exporting energy of the ice works. Neither does this frozen river follow the same track invariably, as the direction of the prevailing winds determines whether it shall press closely on the shores, choking up bays and harbors, and, at times, establishing an ice blockade, or be broken up and driven off many miles out of sight of land. A few hours of easterly wind deflect the great ice current and drive it in on the shore; while before a westerly wind it speedily vanishes, and the greeu waves are dancing where, a few hours before, the ice-fields were spread, grim and ghastly. Still the ice-laden stream stendily pursues its way, bearing on its bosom thousands on thousands of icebergs, and transporting ice-fields hundreds of thousands of miles in extent. Here sails the towering neeberg, its white pinnaeles glittering in the sunbeams, or reflecting tremulously by night, the stars from its gleaming snow-white peaks. There, when the winds are hushed, the ice-field spreads its ridges and furrows, wrapping old ocean in a huge winding sheet, and gliding along in silence deep as death. But when the storm rises, and rends the glittering sheets, by ocean's swell, into floes and piles them up in hummocks, dashing them against and over each other, then the llunders awake. Theu begins, for the poor mariner, lbe reign of lerror. With a mighty swing, an icefloe a million tons in weight is hurled against a huge iceberg which is like an Alp afloat, Its summit being 250 feet above the waves and its base 1,800 feet below the surface. The blow makes the ice mountain shiver but cannot overturn it, and the floc is rent and turn, with a noise like thunder, into a thousand fragments which are piled ou one another, or strewn over the ocean, far and wide. Or, perhaps, two enormous fields of ice, under the influence of opposite rotatory motions, rush together in a death grapple. The struggle is frightful, but it is only for a moment. The weaker yields, and with a noise londer than llunder, is crushed boneath the waves, while fragments of the weightier giant are piled to the height of thirty or forty feet on the back of his conquered foe, as though to bury him deep in the fathomless sea. In these collisions, ice wenty or thirty fect in thickness is rent in enormous fissures and heaten into fragments. The ocean is covered with rolling masses, hard as floating rocks of granite, as this tournament of the ice-giants proceeds. the unhappy vessel that is caught in this drifting "pack!" Perliaps the night comes down dark and stormy, while the choking, blinding suow-drift is hurled on the wings of a fleree nor'easter, and the spray beats perpetually on the deek, freezing as it falls. No situation more trying to human courage and endurance can be imagined. The straining and groaning of the sbip's timbers, while the huge blocks of ice strike her, as if hurled from a catapult, mak ing the masts quiver at each blow-the uproar all around. as the blows of the ice-giants resound-the rush and roar of the snow storm overhead; these make up a scene enough to appall the stoulest heart. It is amid dangers

such as these that the seal hunters of Newfoundland pursue their perilous calling, and undismayed by all the terrors of the scene, they boldly steer their vessels into the hideous tumult in pursuit of their prey:-

"Men must work and women unist weep, Though the harhor bar be mounting!"

The vast numbers in which icebergs are borne past the shores of Newfoundland are almost incredible. On a clear day, from the summit of a hill overlooking St. John's, one hundred icehergs, great and small, can sometimes be It is impossible to imagine a more strikingly beautiful object than one of those stately wanderers of the deep, huge and solitary, proudly and defiantly sailing on-wards, regardless alike of wind and tide, borne irresistibly nlong by the deep-sea current. The waves that dash in foam against its sides shake not the strength of its crystal walls, nor tarnish the sheen of its emerald eaves. Sleet and snow, storm and tempest are its congenial elements, leefloes come in its way, and are shivered to atoms; storms rage but it heeds them not. Proudly it llings back the billows from its projecting erags and primacles, which gleam like cliffs of chalk or white marble. We fancy that nothing could avail to destroy such a giant mass, and that it may sail on for ever. But all the while the rays of the sun are playing on its surface and silently penetrating its substance; and the warm breath of Spring is loosening its joints and relaxing its strength. Streams begin to pour down its great sides. Huge crags drop down with sullen plunge into the ocean. Large pieces become detached and float away in independent existence. Presently it becomes top-heavy, loses its equilibrium and turns on its sides or reels completely over with a (hundering crash, making the sea boil into foun, and eausing a swell that is perceptible for miles. Woe to the luckless vessel or boat that may be in too close proximity when this ocenrs. At times the berg cannot recover its equilibrium, and continues rolling and tumbling like a lunge porpoise, dropping fragment after fragment, in its uncouth gambols, till the whole mass falls asunder like a wreek. These rolling icebergs, which are peculiarly dangerous, are ealled "growlers" by the seal hunters. Or the berg may right itself by complete inversion, and sail onward, reduced in dimensions, and enveloped in mist, until it reaches the warm waters of the Gulf Stream, where it is finally dissolved. Seldom are any ice-Stream, where it is finally dissolved. bergs ever met with farther South than 40 of North Even when the Summer warmth is but slight, it is surprising how rapidly the smaller bergs which get aground dissolve under the influence of the sun's rays. As the Summer advances they become very brittle; and then a slight degree of violence is enough to rupture them. sometimes happens that during a storm the seamen try to moor their ship for safety under the side of an iceberg. In planting an ice-anchor in its surface, when in the brittle stage, even the blow of an axe will sometimes rend the lugo mass asunder, and the fragments falling on the vessel will crush her like a nutshell, and send the ill fated mariners to a watery grave. It is a perilous matter to make friends of such treacherons voyagers. The safest plan is to keep a respectful distance from the monsters. Many a gallant ship has met her doom by striking on an iceberg during the darkness of night, or when enveloped in thick fog.

The utmost vigilance is required in invigating the ice-laden seas around Newfoundland. The submerged part of an iceberg has often sharp angular points projecting, on which should a vessel strike a fatal wound may be inflicted It sometimes luppens, too, that a fragment of ice, 200 feet in leugth, has an iceberg resting on each extremity, and keeping it sunk at a certain depth below the water; ships may then sail between the hergs and over the snnken fragment, but it is a perilons undertaking. Should one of the bergs shift its position, and set free the sunken floe, it will rise to the surface and hurl the ship into the air with a tremendous force, leaving her a shattered wreek Should a vessel be eaught between two bergs, or between a floe and a berg in motion, she could no more resist the pressure than a wine glass could withstand the effect of a

ball discharged from an Armstrong gun.

The majority of the bergs coasting along Newfoundland are of no great size, but occasionally some are seen of vast dimensions. Captains of vessels have more than once ported meeting with bergs half a mile in length. T might seem an exaggeration; but one was seen by Ross, in Baffin's Bay, two miles and a half long, and fifty feet high; nine times as much of the berg being under the water as above the surface. The weight of this berg was estimated at 1,292,397,673 lons. The visible portion of an iceberg is only about one-ninth part of the real bulk of the whole mass; so that if one be seen one hundred feet high, its lowest peak must he 800 feet below the waves. But bergs are frequently seen 200 and even 300 feet above the sea; and these, if their sub-marine portions sank to the maximum depth, must have reached the enormous total height of 2,700 feet; that is rather higher than the Cheviot The bergs aro of all shapes as well as all sizes, sometimes rising into pointed spires, sometimes taking the form of a conical hill, sometimes having domes and pin-The most general form, however, is with one high perpendicular side, the opposite side very low, and the in-termediate surface forming a gradual slope. When of this form the higher end is generally to windward. Some have been seen containing prodigious caveras, and some with hollows, having vast accumulations of snow. Their appearance is that of chalk cliffs, with a glittering surface and emerald green features. Pools of azure-blue water lie on their surface frequently, or fall from them in cascades,

From these reservoirs vessels often obtain supplies of water peculiarly sweet and agreeable.
The incheres which coast alo

he inchergs which coast along the shores of Newfoundland have a course of not less than 2,000 miles from the place of their birth to that of their dissolution. entirely of laud formation, and consist of partially dissolved snow frozen. The large glaciers along the coasts of Greenland, which project their masses into the Bords, are the parents of the icebergs. From the seaward face of the glacier, as it is pushed farther and farther into deep water by the pressure behind, masses are detached by fracture which float off as bergs. They often bear, embedded in their substance, also headlers and great fracmants of cooks. which float off as bergs. They often bear, embedded in their substance, elay boulders and great fragments of rock torn from the sides of the Greenland hills, and drop these as they melt at the bottom of the sea, or on the sub-marine Newfoundland, thus belping to build new isles and continents.

SOUTHWEST FLORIDA-NO. 3.

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN COMMISSIONEIL.

I N my last communication I referred to a spade as a portion of our outfit, and mentioned the fact that a supply of fresh water could be obtained at the fish runche on the northern end of Lacosta Island. To the lourist, a supply of fresh water is indispensable, and if his hoat is small the quantity carried must be limited, and how to obtained a supply is an important matter. Nearly all the islands and keys are supplied with fresh water, and the tourist will be in-formed that this indispensable fluid "can be obtained almost anywhere on the islands or keys by digging a hole near the beach." Water of fair quality can be obtained on most of the islands and keys if the proper site is selected for the well. In digging for water, the experienced invari-hly select a locality where there are no mangrove bushes, for wherever this growth is found, water will be impreg-nuted with sult. On the bay side of most of the islands and main land a low growing bush or tree will be found with circular shaped leaves four inches wide, and the searcher for fresh water should prospect near this growth, as fresh water will generally be found near the surface. We dug a well on the northern end of Little Casparilla, forty feet from the beach, and curbed it with an empty barrel we picked up on the beach. From half flood until half ebb the water was very salt, but at low tide we found it pulatulde. After finishing our well, we explored the is land, and found about its centre a lagoon several hundred

yurds in length, containing excellent water.

From the fish ranche on the custern end of Lacosta Island, we started across southeast by south three miles, and found ourselves abreast of the northern end of Useppa lsland. At 6 P. M. we landed on the eastern side of the island at the foot of a large shell mound. To the south of the large mound we found two wells of excellent water, and on the north side some very large figs with a full supply of superior limes. Searching farther we discovered a luxuribunana paleh, but the fruit was not ripe. This island is over one mile in length and one third of a mile in width at the widest point. In the centre of the island, will be found several large shell mounds, the largest about sixty The southern extremity of the island is covered with live onk and mangrove trees. From the mounds to the northern end the island is clothed with a luxuriant From the mounds to growth of live oak and palms, and is the highest land to be found on any of the coast islands south of Cedar Keys. In front of the mounds deep water will be found within a few yards of the shore. This island had been the home of a couple for several years, but as the female part of the population deemed it proper to clope with a fisherman, the masculine portion became guilty of arson and retired from the beautiful island of Useppa, leaving behind him some bricks, charcoal, and the remains of a cooking stove.

This island is distant two miles from the Gulf, from which it is separated and protected by Lacosta Islami; dis-tance to the main land, fifteen miles. Owing lo its climatic tance to the main land, fifteen miles. Owing lotts climatic advantages, elevation of the land, and protected situation, it is the most eligible site for a Sanitarium in the South. Frost is unknown, and before the chilly northwest wind can reach the island, it becomes temperate by crossing the warm waters of the harbor for a distance of twenty miles. In this section the much le by decaded, postherence and the In this section the much to be dreaded northeasters of the coust, do not bring rain, and have none of that searching chilly nature that characterizes them on the Atlantic side. Useppa is truly the winter bome for the invalid suffering from pulmonary disease—excelling in climatic advantages Bermuda, Nice or Madeira. We predict that the day is not far distant when a large holel will grace the shell mound on this island, and invalids in hundreds will inhale a life restoring atmosphere unequalled by that of any part of the world. The Winter season in this section is remarkable for the small amount of rain and the equable temperature. At Punta Rassa twenty miles north of Useppa, at a much less favored portion, the highest range of the thermometer for the years of '72, '73, and '74, was 95, and the lowest 40. The observers stationed at the Punta Rassa favored me with the range of the thermometer for the year 1874, and I shall merely give the highest and lowest ranges for the

various months: -			
Highest.		Highest.	Lowest
January79	42 July	91	70
February84	50 August	91	70
	55 September		67
March	55 October		64
April			50
Миу 90	59 November .		39

We spent several weeks at Charlotte Harbor and the Caloosahatchie River, and did not see a drop of rain during

that period, and found the climate invigorating and delightful. This section of the State is not affected by those sudden transitions of lemperature which are so mapleasant farther north, or on the Atlantic coast. For sportsman Useppa offers many attractions, as the neighboring syster reefs and low islands are frequented by count less numbers of suipe; the adjoining islands are well stock ed with their, and the waters of the lang teem with fish of a superior quality. On our return we called at this island to secure a supply of water. I engaged in capturing a mess of fish, and in a short time with fiddlers for buil, landed the following: cavalli, sheephead, red and black grouper, porgy, sea hass, angel fish, and cutfish.

Soon after our arrival at Useppa, a fishing schooner named the "Breaker," enne to an anchor, and we hourded her, as we fancied we might patch up some information. The Captain was named William Smart, and resided at Key West. He had been navigating the Southwest coast for twenty-seven years, and appeared thoroughly posted with regard to every island, key, channel, pass, bay, creek, river and shoal on the coast. During the survey of Charbotle llurbor he had been engaged in the capacity of pilot, and thuring the last limina war he was employed in the Quartermaster's Department. He informed me that he awned a fast sailing sloop of five tons measurement, in every way adapted to the anvigation of the Southwest coast. He stated that he would fit her up, so as to comfortably accour modate a party of six sportsmen; supply stove and conking utensels, and two Mystic built skiffs. He and his son (an intelligent youth of sixteen,) would sail the craft, conk and render themselves generally useful. For all this ill-ant and services, the Captain would charge four dollars per day One great recommendation in any estimation, is the fact that Captain Smart is a tectotaller. A party of four or six could charter this craft, take steamer at New York, and on arrival at Key West take possession. The tourist could visit the keys, islands, buys, capes, rivers, creeks, lurthors, pusses and main land—in fact all the more important lunting and fishing points between Key West and Cedar Keyswhen the party could take the ears for home. Having had a limited experience of climate and hunting and fishing on the Southwest coast, I wish to continue it, and would only be too happy to join from three to five congenial spirits in the Fall of 1875 to charter the sloop referred to, and do up in a thorough manner sections that I have merely prospected, and others that I have not visited.

Leaving the fishing ranche on the north end of Lacosta Ishuid, and steering a course northeast by east, eight miles, a deep bay without islands, sboals, or mud banks will open up. From this point a course north by west, twelve miles, will reveal the broml entrance to Peas Creek, which stream emi be ascended for eighty miles. Reliable parties who have visited and who reside upon this stream, have assured me that its banks present a fine field for deer and turkey bunting. Crossing the head of the bay, six miles in a west-erly direction from Peas Creek, the Myokku River will From statements received I have reason to believe that the Myokka is the home of the alligator, the place where the big fellows live, exist, and have their The limited time at our disposal would not admit being. The limited time at our disposal would not nample of our visiting these attractive streams, but we hope at ome future time to examine them and perforate a few of those gigantic santians.

Leaving Useppa a course soutbeast by cast must be steered until the southwest portion of Pine Island is aheam and distant one mile, then east by north until Punta Rassa bears north by east three quarters of a mile. From this point a northerly course will bring the dock at the tele-Leaving Useppa four miles astern we sighted a small "coon oyster" island. It presented a singular appearance, and an examination with a glass revealed the et that it was literally covered with snipe. Four shots furnished us with more than enough for an extensive snipe stew, and an examination of them revealed the fact that we had bagged six distinct species. The tide was low and the island was surrounded by an extensive mud flat mixed with broken shells. The shallow water was literally alive with sheepheed, weakfish, redfish, pompano, cavalli, grouper, &c. In the deeper water there roamed dozens of voracious sharks, who in pursuit of their prey would venture into the challow mater. into the shallow water until a portion of their bodies was exposed. Frank amused himself for over an hour in the water and mud hunting sharks with a shot gun. They appeared to be unacquainted with man, and exhibited no fear. They were so intent upon securing a meal that they could be approached within a few feet. Desirous of reaching our goal we reluctantly left this piscatorial paradise, and made sail for Punta Rassa, where we arrived on the even-ing of the 24th of December and telegraphed to loved ones Compliments of the season. All well. Depart for in-or to-morrow." AL FRESCO. terior to morrow."

THE NEW SURVEY .- We are indebted to Lieut. Geo. M. Wheeler of the engineer corps U.S. A. for a copy of his report upon the Geographical and Geological explorations and surveys west of the one hundredth meridian, together with the accompanying maps. As the explorations of Lieut. Wheeler embraced the country traversed by the wonderful cañon of the Colorada, as well as other regions heretofore almost "terras incognitas," the additions to our knowledge of the conditions and resources of our country are almost incalculable. In fact the labors of this gallant officer have brought him prominently before the general public for several years past, and a common subject of remark is, "why is he still Lieutenant."

THE CONNECTICUT STATE ASSOCIATION FOR THE CONNECTICUT STATE ASSOCIATION FOR THE PROTECTION OF FISH AND RAME.—At the named marting all the Hartford Game Club, held on the 25d off, in the representatives present formed themselves into an Association with the above tide. A constitution and bye laws, founded mainly on those of the Chin Sinte Society, were adopted, and the following gentlement cliented as offlicers.—Hou, F. W. Russell, of Hartford, President, Johnson T. Platt, of New Haven, and A. C. Holdes, of Brulgeptott, Vice-Presidents; J. S. Parsons, of Hartford, Treasurer. The following delegates were aumounted to the mational confedility; i.e. with all Hullson, of Hurthon, Treasurer. The following delegates were appointed to the mational convention to be bell at Cheveland, Phio, in June — H. T. Boughton, Waterlury; W. F. Parker, West Member; A. C. Nohle, Bridgeport; Henry B. Harrison, New Haven; F. W. Russell, Hartford, The President, Hon. F. W. Russell, announced the following committees, the Rules and Resolutions of the following committees. and Regulations and Game Laws—Hon, 41 C. Redinson, Hartford; John W. Wehster, Waterbury; A. C. Hobbs, Bridgeport, On Fish Culture—Rev. E. L. Wells, South part; Han, Heury B. Harrison, New Haven; R. O. Cheney, part; than, Henry B. Harrison, New Haven; R. O. Chenry, Smith Mainchister. Some thing was spent in the albenission of unitiers of laterest to the association, 8 aring sulpeshooting, woodenck hunting, snaring game, and the protection of fish. The farmers of the State were invited by vote, to assist the association in securing its objects by consenting with their special contents. operation with them.

How to PREVENT CARELESS HANDLING OF FIREMUMS. The Ohio Legisluture has passed a sensible law to the effect that any person who intentionally, without malice, shall point or aim any flueura at any person, shall be guilty of a misdemeanur, and upon remyletion pay a fine if not more than five, or less than tifty dollars; and any person who shall discharge, without injury to any other person, any fireurin while so utund, shall be liable to a line of our hundred dollars, or imprisonment for three mouths, in both; and any person so injuring or unduring unnther person, without malice, shall be then they dullurs and imprisoned for two years. We have long advocated the passage of an act of this description and trust that the Legislaturs of other States will follow the example of their brethern of Ohio. The careless hundling of theorems is the Legislaturs of inter states will follow the example of their brieflern of Ohio. The circless hundling of theorems is the fruifful cause of needlent, and the most severe publish-ment should follow its practice. The obt excuse, "I thought it was unlanded," comes too late to save the victim, and the only remedy for the cyll is in let it carry soheavy a penulty as to check it entirely.

We are glad to learn that Dr. Ordway, President of the Massachusells Anglers' Associathur, is impraving from

LIST OF ACTS

RELATING TO VISH AND BAHE, NOW PENDING REPORT THE ASSESSED

from the pursuage of this act.
Forthitding the calculus of fish from Chambanque Lake between the lat of December and 20th of May
Prohibiting all dating in Cayaga cannuty, except with bank and line
Prohibiting fishing in Dak Orderal Prok, in the countless of Genero-

Prohibiting fishing in this Orchard Prock, in the countless of Trenescound Orleans, save with bank and line.

Amending Chapter 731 of the Laws of 1871, by prevent shooting wild gerre, brant, or duck from any boat or vessel, recept upon the waters of Chartampa Lake.

Amending the above Chapter, and probabiliting the shooting of any goose, with thick, or brant between the 15th of May and Lie 15 October. Also making the close time for quall from January 1st to October to Also making the close time for quall from January 1st to October to 1st to October 20th

Prohibiting all bridge, save with backword live to the

Also unking the close time for rolled unit planufer groups read annumy 1st to October 20th

Probability all desiring, save with book and line, in Henraye, Senson, or Canamingum Lakes, or in their lutels or outlets, or in any rivers, lakes or streams whally or partly in the countless of Schayler, Steahen, Senson, Uthemang, Yntes, Tompkins, or Outarin

Probliditing the catching of data, save with book and time, in Findlay's and Chantampure Lake.

Probliditing dishing within eighly rods of any dishuay established by the Schayler.

Protecting fish la Genesee filter, Alleghany county, battreen May 1st,

Protecting non in General received, Augmany of the Great South Sa, and March 1st, 1878.

Prohibiting the use of pound near in the waters of the Great South syster Buy or Long tetand, under pountry of \$5.

Protecting shall in the Hudson River between the 18th of June and the of March.

Prohibiting the enterling of their to Summer Hill Lake, Cayaga

Producting shalling the Hubban River between the 15th of June and 15th of March.

Producting the entening of Bah in Summer Hill Lake, Caying county, for two years, and entiscipitently between January 1st and May 1st for ten years.

Including St. Lawrence county in the liew reliting to iteer.

Permitting the carelings of fish in Ontologia and Ouelda Lakes by net and seline from September 1st to Junuary 1st.

Producting the use of fykisher ast nets, or nots of any kind, in the north and county points of Little Sandy Preck, Hawego county, for a period of five years.

Producting the taking of fish by any bosons from Hoffman point, in the town of Clavernck, Polombia county, for two years.

Altering the law of 1871 as regards thesein Lake, by making the close time as regards selices and nets, from July 1st to September 30th, instead of March 1st to August 31st.

All the above Acts have been read twice, reported favorably upon by the Committee on Internal Affairs, and referred to the Committee of the Whole.

The game laws of Malue have been so amended as to publish the kill-ing of moose before October 1st. The law of 1871 regarding dish has been so amended as not to apply to the St. Crobe River.

NOTES FROM FLORIDA.

ST AUGUSTINE, Pla., March 26, 1815

ST AUGUSTINE, Pla., March 26, 1815

HI remember correctly, I promised to send a few particulars of the grand yacht race held here recently, but failing to do so, principally for the want of time. I noticed, however, that the Fourer and Singar contained a very good account of the day's aport. The yacht clubs here had numerous races, but the season is about over now. Travelers sie beginning to go northward, and in a few weeks things in Florida with be quief. As a matter of information, would say that the R. E. Lee Hase

Ball Clob, of Jacksonville, held their first meeting of the season at Jacksonville on the 12th first, and W. H. Lucas was re-elected president, Peter Jones, vice president, George McConnibe, Ireasurer, and B. L. Knight, secretary. Last season this clib and the Garden City Base Ball Club of Tallahassee, Fla., played for the championship of the State, and when the season closed they stood one game each, so that the third game will be played this season. Bath are excellent clubs, and practicing hard for the coming contest, which will undambtedly take place at Jackson-ville. The talk about building a mammoth hotel here this Summer is ceasing. No prospect for a new hotel as yet. The travel this season to imprecedented—an immense lucrease. The weather is charming; thermometer has reached a point as high as 87 degrees reveral times this Spring. All the vegetation is garbed in green, except the range leave, which are show white with those fragram blossoms. By all imparances the orange crop will be large this counting Fall, also peaches, figs, and grapes. Yours respectfully.

(Cl. 22:41.)

The Rifle.

-The Joint Committee of the N. R. A. and A. R. C. met on Friday last. The Chairman read letters from Major Leech, the Chairman of the Irish Rifle Council, saying that the "All Ireland Challenge Cup," subject to competition among the counties of Ireland, would be open to a selected four from the American team, the entrance fee being £5 per squad and £1 per man. There was also an assurance of a hearty Irish welcome in store for the American visitors. Colonel Gildersleeve moved the appointment of special committee of three to supervise the contest for places on the team. It was finally agreed to add two members to the sub-committee so as to permit a division of the labors, and General Shaler and Captain Casey, of the Seventh, were made the additional members. The Com-Seventh, were made the additional members. The Committee having charge of the Academy benefit reported that Othello had been selected as the play for the evening. Roxes have been sold to the amount of \$1,500. On the adjournment of the Joint Committee a meeting of the Ex-ecutive Committee of the Amateur Rifle Club was held to ecutive Committee of the Amateur Rifle Club was held to consider the Canadian challenge. A letter was read from Captain J. J. Mason, President of the Ontario Any Rifle Association, withdrawing his challenge of Fehruary the American team, and repeating it to the riflemen of the United States, through the Ameteur Rille Club. On motion of Captain Fulton it was resolved that this last challenge be not considered in its present form. It was said that if the Ontario Club will challenge the Amateur Club a mateu can be brought about, or if the riflemen of the whole Dominion of Canada will challenge the riflemen of the United States the Amateur Club of New York will be happy to accept it on their behalf.

-The National Rifle Association held another meeting on Saturday evening, at which it was suggested that members of the N. G., should appear in uniform at the Acadenry benefit

The Sub-Committee appointed by the Joint Committee of the National Rifle Association and Amateur Rifle Club, to arrange the time for the four competitions for places on the team to take part in the International match, have deeided upon the 17th, 21st, 24th and 28th of next month.

THE ONTARIO CHALLENGE.

Hamilton, Ontario, March 22, 1875.

Col. Geo. W. Wingate, President Amateur Rifle Club, New York, on behalf of the Riflemen of the U.S. A.

Dear Sir:—I fully understaind the difficulty in the way of a match between our Association and the team that is to be selected to represent the United States of America in the fortheoming coutest with the marksmen of Ireland, and which, I confess, would partike rather of a personal than a national character.

We have been and are still anxious to meet our consins across the border in a representative match, and having withdrawn my letter of Feb. 1st, 1875, addressed to you as Chairman of the Joint Committee of the Amateur Rifle Club of New York, and the National Rifle Association, I now address you as President of the Amateur Rifle Club, on behalf of the riflemen of your country, generally, proposing a match under the conditions hereinafter set forth, which conditions are, of course, subject to such alterations as may be hereinafter mutually agreed upon. While, admitting that the Amateur Rifle Club ranks amongst its members many of the most prominent riflemen of the United States, still a match between it and an association such as our own, could not be called a representative match in the proper sense of the term. Our practice rarely commences before the list of May, and this year it will in all probability be still later; it would therefore be impossible for us to fix a date for a match each rape; before the 27th ult., namely the 15th of May. The conditions I propose are as follows:—

Competitors, eight on each side; targets, scoring, &c., as at Wimbledon, either in 1873 or 1875, as may be agreed upon; ritles, any not exceeding 10 lbs. weight, but without lelescope or magnifying sights; minimum pull of trigger three pounds; ranges, 800, 900 and 1,000 yards; 15 shots at each range: position, any, not involving artificial rest; place, Creedmoor; time, between 15th of June and 15th of October, 1875. Further details could be arranged hereafter.

Yours, very truly,

President

To the above letter Col. Wingate has replied to the effect that while the National Rifle Association and Amateur Rifle Club have exerted themselves conjointly in procuring from among the ritlemen of the country at large, a team to represent the United States in the International match, the challenge of the Ontario Club must be responded to by the Aniateur Rifle Club, and the match made with that or a similar organization, as neither he or the club feel authorized to accept it on behalf of the ritlemen of the United States.

-The De Peyster badge which was first shot for at the meeting of the American Rifle Association on February 22, is now completed and will shortly be on exhibition probably at the manufacturers, Messrs. Tiffany & Co's.

—The 17th, 21st, 24th and 28th days of April have been fixed upon as the dates of the four competitive matches for places on the American international team. All native-born riflemen of the United States are invited to compete at Crecilmoor on those dates.

The New Manual.—Riflemen will be pleased to learn that a new edition of Col. Wingate's useful little book is about being issued which will contain everything new pertaining to rifles and rille shooting, as well as all the Creed-

-Major Cotton, of the Kingston School of Gunnery, is be second in command of the Dominion Wimbledon team this year.

—Toronto riflemen object to the Ontario Rifle Associa-tion matches being held in the last week in June, as several of the crack shots will then be on their way to Wimbledon.

Of the wonderful effects produced by the modern rifle In the hands of men skilled in their use, we meet with ex-In the hands of men skilled in their use, we meet with examples nearly every day. Sir Samuel Baker and his little band of "forty thieves," made their perflous journeys in the heart of Africa, surrounded by myriads of savages, all by the aid of the "Sniders," with which they were armed. Now from South America we hear of like results in the Argentine Republic during the recent revolution which devastated that fair land. From the Buenos Ayres Weekly Shindard we take the following description of one of the engagements:-

Sandurd we take the following description of one of the engagements:—

The enemy fired as they came on, but our men waited till they were within the 200 yards post, and poured in such a steady fire of Reaningtons that the enemy staggered and wheeled about. Colonel Arias was so certain of his rifles that he ordered his tnea not to fire on retreating batallions. When the enemy's infantry left off charging, the cavalry of Muchado came to the fight and dismounted within 500 yards, then drove away their horses, drew swords and rashed forward with great intrepidity to storm Arias's line. But when they got to the 300-yard post it was a ne plus ultra for them. The Remingtons caused such havoc that they turned and fied.

After the battle General Mitre wrote to Arias—"I leave you half a dozen wounded. Do me the favor to pick them up, as protected by the law of nations."

Times have changed wanderfully in the last dozen years, and the power of the National Government has been increased a hundred fold, thanks to the successive improvements introduced by Gen. Mitre himself, when President of the Republic, and multiplied under the recent administration of Dr. Sarmiento. Railways, telegraphs, and Remington rifles have promptly put down a revolution which ten years ago would have probably succeeded. The movement has been interly stamped out in seventy days, although headed by the general of most prestige in these countries, supported by a great portion of the army and navy, and counting on the sympathy of some of the ricbest Argentine families in Buenos Ayres. Ten years ago the revolution ary army would have carried all before them, and the Government would be beginning to collect means of defence on the 70th day from the outbreak.

Without at all detracting from the sleepless activity of Col. Alsina, the valorous conduct of Col. Arias, the discipline of the troops, and skillfulness of the campaign on the part of the Government, it is unquestionable that the speedy wind up of the rebels is due chiefly to railways, telegraphs a

Game Bag and Gun.

GAME IN SEASON FOR APRIL.

Sutpe, Ducks and Wild Fowt.

Huder the head of "Game, and Even in Season" me can only specify in general terms the several varieties, because the laws of States vary so much that vere use to attempt to particularize we could do no less than publish those eather sections that relate to the kinds of game in question. This would require a great amount of our space. In designating gaus we are guided by the laws of nature, upon which all legistation is founded, and our renders would do well to provide themselves with the laws of their respective States for condant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.-No new feature is presented this week, the supply being confined to the few descriptions yet in season. English suipe are being received from the W and to some extent from New Jersey, the vicinity of Camand to some extent from New Jersey, the vicinity of Cam-den being the principal point of shipment. They sell at \$5 per dozen; refrigerated suipe \$3 50a\$3 75. A few hrant are coming in from Long Island, as well as ducks and geese. Brant are worth \$1 50a\$1 75 per pair; geese \$1 50 each. Wild pigeons continue very plentiful at \$2a\$2 50 per dozen; squabs, \$6 per dozen; canvas backs \$2a\$2 50; redheads, \$1 25; mallards, \$1 25; black ducks and wid-geon, 50a75 cents; wild tarkey 25 cents per paged. genu, 50a75 cents; wild turkey 25 cents per pound; plover \$4 50 per dozen; bay snipe 75c.a\$1. per dozen; antelope from Omaha 25 cents per pound.

from Omaha 25 cents per pound.

Long Island, Good Ground, March 23d, 1875.—The hall was opened for the Spring shooting by Mr. R. B. Smith, of Smithlown, L. I., on Monday 22d ult., killing with his own gun and doing all the shooting himself, fifty-six whistlers and broadbills. Mr. Hurlbert, his associate from New York on same day, killed twenty-four. Theice being still on the buy they had their blind rigged upon the ice and made of ice at the edge of quite a large sheet of water. A few days more and the ice will be goue and then all hands will have a chance for some geese and ducks, and gentlemen wishing some good sport will find the Bay River House a good place to stop, and all necessaries for shooting at land.

N. V. B. S.

NEW JERSEY, Newark, Murch 25th, 1875.—Mr. Ed. Van Pelt killed five geese and seven black ducks on Friday 19th on Newark Bay, and on the 16th instant Mr. Wessler shot three Scolopax Wilsonii in East Newark. I have heard of a

great many "English" being seen on that day only; none since.

HARRY C. McD.

MARYLAND, Deer Park, March 26th, 1875.—Pigeons are coming in in vast numbers, more than have heen seen in the Spring for many years past. They are very fat, and in fine condition, but are very wild. Several people are trapping them, intending to keep them for trap shooting. Ducks are also here in small numbers. I heard that a gunner from Cumberland got eleven yesterday; they were mostly redheads and broadbills.

Allegiany.

Ducks are also here to small gunner from Cumberland got eleven yesterday; they were mostly redheads and broadbills.

VIRGINIA.—The Alexandria Gazzette of Mirch 27th says wild ducks are more nunerous on the river now than for some time past. Many are killed and as the demand for them is light they sell at cheap rates. Jack snipe are becoming abundant in the marshes and low grounds in the neighborhood, and sell at twenty-five cents a piece. Robins and black birds are also plentiful but are poor, sell for little or nothing and should not be killed.

Kentucky, Midway, Ky., March 24th, 1875.—Our Spring is backward. At this time last year we had good bass tishing to this time until English snipe made their appearance, 18th; not very abundant as yet, but six to len brace can be had in a few hours hunting. We are trying to protect our streams from seining, &e., and have succeeded having divers parties presented to the Grand Jury, and we will put them to the extent of the law, which is defective and hard to convict under. Ducks are making their appearance. Our Spring shooting is very meager, suipe remaining only a few days on their way North.

Respectfully, J. Sutton.

Wisconsin, Janesville, March 28th.—Duck shooting will open at Koshkonong in about two weeks, and as the ice is very heavy and will break up late and thus keep the ducks near the shores and on the river, we expect it to be unusually good.

R. V.

Missouri, St. Louis, March 24th.—We are having cold disagreeable weather, so that I have had no fishing as yet this Spring, nor much shooting. Several single hunters have had great success in killing mailard ducks and brant during the last week in some wet prairie a few miles northeast of our city.

DUCK SHOOTINGO . THE CONNECTICUT

OUR correspondent, Doctor, of Hartford, gives us some incidents of a ducking excursion of his to Saybrook Point, at the mouth of the Cunnecticut River, a fortnight ago, where he had very good sport. Saybrook Point is reached by the Shore Line or Counceticut Valley R. R. There is a good hotel within forty rods of the depot.

reached by the Shore Line or Counceticut Valley R. R. There is a good hotel within forty rods of the depot. He says:—

"The ducks had been quite plenty for some time, the severe cold weather having driven them from the upper part of the Sourd to the mouth of the river where the strong currents over the bar kept the water comparatively open. Gunners residing in the neighborhood had been shooting from twenty to fifty per day, chiefly broadbills, with a few black lucks and redheads. On the morning after my arrival I pushed my float out over the ice about 100 yards until I reached the open steamboat channel, and scalled down with the current, past the light house, which is about a mile below the det ot, and out to the breakwater, at long stone affair extending out into the Sound some 3,000 feet. Here I began to fix my decoys. All the way hown from where I first started I had seen ducks flying and swimming, and I started up several hundred from under the lee of the breakwater. The ducks were very tame. I had scarcely got my decoys overboard hefore six birds splashed down within twenty feet of me. I let go one barrel at them, and missed the whole lot clean. Presently I succeeded in anchoring my decoys so that they would swing down with the current about fifty feet away from my float, which I pulled up against the stonework. I searcely was seated when the ducks began to come singly and in flocks of three or four, which made splendid shooting. They would come down the Sound, and seeing the elear water would swim around the outer end of the breakwater where there were acres upon acres of ice churning and grinding in the strong Southwest wind, and would then see the decoys and come down to them without hesitation. It was just beginning to get calm when I heard a louid shouting in the direction of the shore and on looking back could see a native with an old gun and a mangy pointer crawling with difficulty over the rough stones towards me. He got ont to where I was after some time and adjectives, and st down back of my flo

COOT SHOOTING.

Cohasset, Marcu 20, 1012.

Entron Forest and Stheam:—
I thought the dory matter about settled, as scores of old shooters have said to me since the articles appeared, that they thought I find the right side of the question. In reply to 'H. N. W., "I will suggest to him that he take a vote next Fall in favor of boats or dorys on his side of the bay. I will do the same on mine, and report to Forest and Stream next December. As to Avery Rock, I have been there and know it; but outside of Cape Ann I wonder how many ever heard of \$\frac{1}{2} \text{ A dory is a good see boat for fishing; for shooting, good for nothing. The hardest, roughest work done in small boats is by pitots boarding vessels on dark, stormy nights. They don't use dorys. One thing in their favor, they are cheap—cost one-third of a good boat, and as for their out living a pitot's cance, let us hear from others on the subject. Respectfully. S. K., JR.

— Despite the stringent game laws of Nova Scotia, moose are being killed, by Indians principally, many of those slaugtered being cows, heavy with calt.

DUCKING ON THE POTOMAC

WASHINGTON CITY, March 19, 1873

EDITOR FOREST AND STREAM:—

It has been sometime since I wrote to you, and write now to let you know what we have been doing in the way of sport. The Potomac has been frozen twice to its month, an even! I hink that has seldom if ever happened byfare. During the last freeze! I went to Acquita Creek with a gentlemen, as I was informed that a good hole in live ice was upon and that ducks were in abundance. We reached there about two o'clock and found about two acres of water containing about two thouseand ducks, most of them being carvass backs, with a few red becks, blark boods and dippers. This was a sight that I have offen wished for, and could hardly contain myself at the thought that I was going to have shooting that could may! happen once or in lee in a lifetime, where the prospects were so good ami the ducks so numerous, for, while with wasting this sight, and in less than fifteen minites after our arrival, or, to use the fashlonuble phraser, after the first sight of the Big Bonanza, we saw come in ann a tight 1 we flocks of canvars bucks containing about fluy ducks each. About titls time the owner of the farm came and said he had good shooting about four days previous, and the ducks bad nat been disturbed since been, and we could to have all the shooting that mortals could wish. He they took us to his boat, a small sloop, and showed us about 140 paler of ducks, most of them heling canvass backs. Some of three ducks registed over seven pounds per pair, but I also noticed that some few were very poor, and supposed them to have been cripples. Well, we issuiched our boat, containing fifty deceys, two Scott breech loaders, two pairs of blawkers, and how had has hankels, sheets and pillows of kay. You, no donth, will want to know what has blankels, sheet and pillows of kay. You, no donth, will want to know what has blankels, sheet and pillows of kay. You, no donth, will want to know what has hinkels, sheet and pillows of have to make proper distance in the water, make your bed, so that you will not have to make

notified.

The lee left the river about two weeks ago, and now, in front of the city, the river is alive with ducks by the thonward. Plenty of good shooting has been had, but now the ducks have become wild, and it is almost impossible to get within two hundred yards of them, and they have been decoyed so often that it is uselyss to set out decoys. I regret to say that the scarty game laws that we have are a mility, its they are never enforced; but I trivil that before mother year passes we will have such Congressional action taken that no one will dare to violate them but once.

once.

I only learned yesterday that a party had shot about forty woodcock a few days ago, which were sold to a dvaler for forty vants a plece, and this dvaler fells them to the various foreign legations in this dvaler fells them to the various foreign legations in this dvaler fells them to the various foreign legations in this dity. I should say that the woodcocks are at present laylog, so you can imagine what our game prospects will be in the future unless these pot hunters are visited with the law, and not only this, but all who have birds in their possession out of senson. Can you not, to our distress, send to Congressagain from your city the flow, R. B. Roosevelet file is not only an honor to your city, but is a friend to this city.

Snipe unde their appearance about ten days ago, but becoming cold again they have ceased their filght. The various dshing shores have commenced openations, and in a week's time we will be sealing your plyinty of our Potomae shad.

DVKE.

BLACKSBURG, MONTGOMERT CO., VA., Murch 22, 1875.

BLACKSBURG, MONTGOMERY CO., VA. | Murch 22, 1875. |

Editor Forest and Stream:—

Although upon the summit of the Alleghanivs, nearly 4,000 feet above the tevel of the sea, we have very good sithe shooting here. Lest Spring I bagged one aftermoon thirty-five sinhe and one blue wing within three quarters of a mile of the town. The birds are in fine coudition, do not breed here and are therefore in season. On Saturday—day before yesterday—I look pay gun to look in soone onarsity spots on the farm belonging to Virginin Agricultural College to see whether sinpy were intiving here yet. I found five and hagged them all. At one point user a large spring I flushed two birds and killed them hoth with one barrel as they were crossing each other in their flight. My but would have covered them both as they fell; distance, fifty-one yards. To-day twas out again; saw cleve birds and killed name. I flushed three birds in a dilch, They all strung only in a five skimming along the water; I fired at the leading bird and killed hoth it and the one next to and some six or vight feet behind it. The third fellow daried aside at the report of the gun and got behind a thorn binsh, and whyn he came again in view was apparently ont of shul, but I fired at him and brought him down quite dwad; distance, eighty yards. I have shot snipe for twenty years, and killed many hundreds of them, but wever byfore killed two with one barrel, I am now shooting a Clarke & Snelvy No. 10 gun; length of barrel, thirty inches; weight, eight and a hulf pounds; brass shell; three dracbus No. 2 Hazard powder; ten ounces No. 8 (vvry infyrior) Wythaville shot. In the Summer of 1863, about 10th of fivity, near Warrenton, Va., I killed three woodcock with two barrels. I was on horseback when the dog came suidenly to a point, just in front of the horse. Dismonwing quickly, just as my foot louched the ground I flushed five woodcock, which sweed to exater in all directions among the toaple saping. I quickly brought down one with my first barrel, and turning to look f

MORE GUN TESTS.

MONTREAL, March 13th, 1875.

Thave been amusing myself the past week testing the comparative shooting howers of several of my own and Irlends' gins. One of my shooting howers of several of my own and Irlends' gins. One of my shooting howers of several of my own and Irlends' gins. One of my shooting howers of several of my own and Irlends' gins. One of my shooting howers make two of my Gibbs gins and a W. Seoti, also a Webby. The result clearly proved the Pinker to be at uncommonly good hand shooting gon, giving above an average pinttern, with first class geometalion. The Parker wight was induced by several my be summed in this points, and all three for bove, the Seoti was heelve from eight points, and all three for bove, the Seoti was heelve from eight points two ounces weight. The result of the Irlah my be summed in this half a drachin to a drachin more powder; the shorter Gibbs, and take half a drachin to a drachin more powder; the shorter Gibbs, and take half a drachin to a drachin more powder. To lest the question of shells, I used metal to A.'s, and Ely's paper; also, paper cartridges intraved in or reament, and paper consect. In the Pirker the host patterns were made by the ordinary Ely shell, ends turned in. In the Gibb's gins by the creased cartridges. For contentione in hundling, and nextness combined with cleanliness, I must certainly throw my vity in favor of the paper abell. The metal ones are undoubtedly much easier chinaled, inture more bulky. Of course, they have an innivitied marking in the capiness, but to aven who may not assore one or two thousand shells to be pare Ely's brown, at \$10 a Houssial, are fulfalled, inture more bulky. Of course, they have an innivitied mixely more convenient to hundle. I was much pleased with the performance of the Purker, and, though I have a good many gime, have ordered one as a evennican for fulfalled of becape in the treation of the purchase, and they have a londing to the part like a Hilling objection when a wire brish to be had. I willose the scores. All alt target thirty inch circle, forly yards:-

LAWS GOVERNING DUCK SHOOTING.

CENTRAL NEW YOWK, March 18, 1875.

Editor Forest and Stream:—

I write in the report of the proceedings in your paper of the last meeting of the New York Association for the Protection of Gume, a polition from Long Island sportsmen to waske the close seasow for duchs from May 1-4 to October 20th. I lafer that the petition is latential in apply only to Long Island. Elsewhere throughout like State tant in elined to think that the law, as it wow is in regard to duck shooting, is generally satisfactory, and any alteration extending the close sensor would be objectionable.

Coopparatively few at the water fowl that cross this State in their informatively few at the water fowl that cross this State in their informatively few at the water fowl that cross this State in their informatively few at the water fowl that cross this State in their informatively few at the water fowl that cross this State in their informatively few at the water fowl that cross this State in their informative enough elsewhere to hant successfully with decays. A few blue wing wat and black ducks, the wrost namerons of the kinds found in this locality, begin to arrive about the set of September. Before the wildlife of October the tend have gone further south, and the frost having lopped the wild rive, the black shocks—naturally the wildest of all the duck kind—threafity are not reasily approached within the reach of shot guiss. Coots, shell drakes, and other upon water ducks arrive later into diminitary long here, lenving as soon as shot at a few times. After the 20th of Oct, the weather in this Initiate for the retualider of the Fall name here years to the time is inn windy and unploasant to hint divks, except where decays can be used to advantage. The last half of the Fall name here years to the state of the Fall name here years to the state of the Fall name here years to the state of the State sevent have here they are solved on the spiring the heavy of the first ha

SNOW SHOEING.

CUMBERLAND Co., N. S., March 17, 1875.

CUMBERGAN Co., N. S., March 17, 1875. Editor Forest and Stream:—
To "Framp, Va.," who impaires about evow shove, f will say: f can leach bim to walk with ease and speed in one hour, so that he can iff made of the right stuff) march thirty niles, varying from aftern to thirty pounds of dinnage, every day in the week, and do it with more ease than he can twenty-five niles on the less troad by his State. Of course this means good snow shooling, and no matter him bad, one can make affreen miles per day. In Summer transping my limbs feel it woost, but in Whotry, on "shows," will about the same lead diways, the shoulders the from the constant strain of the ingging, but not the finitis. We account for it in this way: The stride is were uniform, no twitching of the ancles, springly and clastic under the foot, and which ut all, the very long steps, the average among experts in timber limbs being thirty-six inches, and often forty-five and forty-eight. The choes are not unwheldy, only weighing from three to five pounds per pair, nor la it required to

spread the feet far spart, as would seem, for in walking they pass one over the other. If "Tramp" was only down here since the mouse with the quantity of soon we have, where you can run me down in half an hour, be would certainly films that they are a good institution; but thanks to the law that now protects them, they are not much molected. Eas.

ALLEGRENT CITY, Pa., March 23, 1815

—Au association of sportsmen and others has been formed in Januaica, L. I., having for its objects the profestion of game and the enforcement of the laws relating in lunning and listing, with the following officers:—President, G. H. Creed; Vice-President, John Flynning; Severthry, Win. T. Elmyndorf; Trensurer, Geo. W. Damen. Exventive Committee—John H. Surphin, Albert Wilkinson, John M. Crane, John B. Fwelick, James P. Darcy, Win. S. Cogswell, and Thew. Rogers. It is proposed in have a snort rifle range, say 200 yards, for rilla practice and inregel shooting. Arrangements have been made by some of the members to stock a mader of farms in this whichly, (say 700 we 800 usres.) with quail, and they is have the exclusive privilege of shooting over the grounds, those rajoying the privilege to by to the expense of stocking and preserving the same.

The Borse and Gonrse.

[From our own Correspondent]

NOTES FROM KENTUCKY.

ONE should not come to this city without visiting the NE should not come to file city without yishing the Woodhurn furu, belonging to A. J. Alexander, Esq., the great stock rulser of Kentusky. It is situated about thirtyen miles from here, on the Lautsville Railroud, at Spring station, in Woodfard exacty. It is made the able numgement of L. Brwolliend, Esq., who has because removed as the respirator of stock breaders. Mr. Alexander is spending the Winter in Florida, thereby leaving the whole charge of his extensive interest with Mr. Broad-

The farm exutains something in the neighborhood of three thousand acres of the cylchrated blue grass hard, with hardly an acre unavailable. His stock of horses numbers 260 head, coming which is found, the famous old thorough-260 loval, among which is found the famous old thorough-hred Lexington, now twenty-flve yours add, and as frisky as a colt. He is in excellent trim, and has not hooked bet-er for some years. Of the floroughbred stufflow, next-in order couses Imp. Australian, chestant, forded in '58, got by West Australian; then Planet, chestant, by Revenue, forded in '55; Astersid, buy, feeded in '66, by Lexington, and Glan Altol, chestant, forded in '99, got by Blair Altol, all of which were abone worth a trip from New York is

The short horns number seventy, and the Alderneys thirty, among which one some every the unknown, valued at thirty, among which are some very line unloads, valued at from fifteen to forty thousand dellats. His amound sale will take place on the 23d of June, when, as usual, a large galbering from all quarters will be expected. A greater spirit has never been exhibited throughout the country than at present, and it is expected that a big rush or ruid will be usuale on Lexington thring the sale, not only in this, but at all others that take place during the season, the catalogues of which will be furtheoming and published in the praper channels in good time.

The first annual exhibition and tournament of the Kentucky State Sportsmen's Association will be held at Parls on the 18th, 19th, and 20th of May next, when prizes for class shooting will be given. A bench show of setters

and pointers will be a feature in the exhibition, already ex citing much attention with the fraternity, and it is anticipated, and, indeed, they intend to make it, the first display of thoroughbreds ever brought together in this country. I don't see why they may not. I have never seen so many or such fine stack in all my travels. The moment I crossed from Cincinnati into Covington I felt the true inspiration such as I never felt before. It pervalled the atmosphere, and was manifested in that good old fashioned hospitality for which "old Kentuck" is justly famous. for which "old Kentuck" is justly famous. Come when or where you will, "act well your part, and there the honor lies." Bring along your gun and dog, make a few misshots, put your faith in "the hoys," and you will be at home with the "Hunters of Kentucky."

Lexington, Ky., March 25th, 1875.

The National States of States and Stat

The Nottingham Spring Ifaudicap was won by Castle Wellun.

-Racing commences in New Orleans on Saturday 3d

—Spindrift is now owned entirely by Joseph Donahue. The same turfite has purchased the bay mare Countess, by Kentucky out of Lady Blessington, full sister to Count D'Orsey, from Mr. Belmont. The mare was cheap at the price, \$1,000.

—The stakes of the Lexington Association at the comine Spring meeting were closed on the f5th ult. The Phenix Hotel Stakes for three-year ohls, one mile and a half, has fifteen nominations. The Citizens Stakes for three-year ohls, two miles, eleven entries. Two-year old sweepstakes, half a mile, fifteen cutries. Mile heat sweepstakes for three year ohls, eight entries, and a post sweepstakes for all ages, a mile and a half, five subscribers.

THE CHALLENGE FLAG FOR ICE BOATS.

Any of our readers who may drop into Tiffany's will be well repaid for their trouble by inspecting the model of an see bout on exhibition there, together with an elegant silk permant 30 fret in length, held by the New Hamhurgh Ice-Bout Club, but which is now offered for competition to all Ice Yacht Clubs in Enrope and America under the follow ing conditions. The following rules of competition have been adopted:—

1. 'This flag is always to be considered as a challenge flag, and never to become the judividual property of any Chih winning it.

1. This hag is always to be considered as a channel and never to become the individual property of any Club and never to become the individual property of any Club winning it.

2. The Club hobling the Flug is liable to be challenged, during its ice yachting season, by any organized Club in this country or Europe, the challenge to be in the name of the Club, and sent through its secretary, in writing, to the servetury of the Club so challenged; and such challenge, or challenges, must be accepted, and sailed for in the order in which they have been respectively received. The Club receiving the challenge must immediately appoint a committee of three for this race, who shall appoint the day, start the bonts, take their time, settle all questions connected with the race, and proclaim the winner; and from the elecision of this Committee there shall be no appeal. The Club challenging need not enter more than one boat if prefetred. The Club holding the flag can oppose with one or more boats at its option.

3. Any challenge, for any other purpose, that may exist unsettled between the Club challenging and the Club challenged must be sailed for before the race for this Flag can take place between them.

4. All ruces for this Flag, shall be sailed over the annual regatta course of the Club challenged; but if the ice on such course be in no proper condition for sailing upon, the race shall be sailed over the nearest neutral course, sail course to be selected by the Committee uppointed for this tare.

5. No Club can challenge the Club holding this flag more

Faire.

5. No Club can challenge the Club holding this flag more than once during each ice yachting season.

6. All races for this flag shall be sailed for according to the sailing rules and regulations of the Club holding it.

7. This flag is a silk pennant, 30 feet long, with the words, "lee Yacht Challege Pennant of America," in gold letters on the blue ground, and it shall always be known and sailed for as the "Ice Yacht Challenge Pennant of America," Inving Grannell, Commodore, N. H. I. B. C. P. A. M. Van Wyer, Secretary.

BEVERLY YACHT CLUB.—At a meeting of the Beverly Yhebt Club, held Saturday evening, the old table of allowances was discarded and a new one adopted resembling greatly that of the Dorebester Yacht Club, but arranged for yachts of thirty feet water line and under. The following dates were also fixed on for the regatlas of the senson:—1st, Tuesday, July 6th, at Beverly; 2d, Monday, July 26th, at Nahant; 3d, Saturday, August 14th, at Swampscott; 4th, Saturday, September 4th, at Beverly.

Boston Yacht Club.—Members of the club are subscribing liberally towards the fund being raised for the purpose of repairing damages caused by the ice. It has been decided tomove the Club House fifty feet inland. The first yacht launched at City Point, South Boston, this, as well as last season, was the sloop yacht Sunbeam, Captain W. S. Nickerson. Several others are fast approaching readiness to enter their natural element. The yacht Elsie, belonging to the Boston and Dorchester yacht clubs has been purchased of her late owner, Captain BOSTON YACHT CLUB. - Memhers of the club are sub-

H. M. Martin, by Captain E. W. Sears, and will now be added to the flort of the South Boston Club. She is a fine keel schooner 28 feet long, 25 on water line, 10 feet beam, well found in every particular.

CENTRE BOARDS AND KEELS.

PEHTONE, 11t., Feb. 5, 1675.

Editon Forest and Stream.—
I have noticed at different times in your paper, I think, and also in the "Aquatic Munithy," a good deal about centre-hourds es, keels, and wish to add my intee of information, or, perhaps, I should say, give my opinion as to their relative merits. My blees are based on what I have seen in regaties, and in salling hoals of hold kinds. I think that centre-hords have all the good qualities of the keel-boat in going on the wind, and are decidently helter in running free. Indeed I mm not sure that a centre-hoard will not lay closer to the wind than a keel, for with the hoard down, there is more surface under water to resist the pressure of the wind stdrways than in a keel, and therefore they do not make as much breway.

the wind skidways than in a keel, and therefore they do not make as much breway.

The only disadvaniage which a centre-hoard has is, that the hox takes ap a great dwal of room, and prevents the possitifity of a roomy cabin, unless to a large boat. But, after all, I don't know as this is a disadvanlage, for the hux is taken advantage of 10 make a table, the leaves of which are let down against the sides when not hause, and the room, which would be taken up with a table, is saved.

As to right would always right a hoat of from thirty to forty feet over all as a sloon, preferring 10 have my canvas in one or two large salls, viz... jib and mainsait, lo three or more smaller ones; and any boat maler thirty feet should always be rigged as a sloop or cut.

I remember a queer contrivance used by a friend of mine. When running before the wind he took a jib lopsail and made the head fast at the heef of the mainboom, and bauted the tack out to the end, bringing the outhant aboard and belaying to the jibs short housing tear, then bringing the sheet aboard and belaying to the jibs sheet puts, the said set contenting tike a water sall, and a good doul of which was saved. Perhaps some of your readers have irred this, if so, I am sure they found it an advantage.

Putladelphia, Murch 29, 1875.

Philadelphia, March 29, 1875.

EDITOR FOREST AND STREAM .-

Philadelphia, March 29, 1875.

Editor Forest and Stream:—

The breaking up of Winter here promises to wake things up. Duck shooters were out in force last week, but got but few on the Delaware; the flocks, what few of them there were, flying high. The suipe shooters made a pretty general start this morning, expecting the warm weather of the past three days to bring them on freely in numbers. A few—very few—were shot on the marshes above Richmond, Phila., on Sunday. Numbers of ducks are being brought up from the Susquehanna.

The houting season opened fully on Saturday, most of the clubs bring represented. Commodire James M. Ferguson, on account of business engagements, finds it impossible to make his intended visit to England this Spring, to again arge the foreign clubs to enter in the Centeunial Regatta.

Mr. T. B. Patterson, Jr., of the Crescent club, who has

again large the locks.

Regatta.

Mr. T. B. Patterson, Jr., of the Crescent club, who has been in Enrope for a year past, has been officially appointed to the same task, and will visit the amateur clubs both in Great Britain, and Ireland and the Contineut during the coally Summer.

SCULLS.

Rational Pastimes.

—The visit of the American Twelve of Philadelphia to the Halifax Cricket Tournament and their daings thereat, are now collated in the next book form. J. B. Lippincott & Co., of Philadelphia, are the publishers.

-The Excelsior club of Brooklyn proposes to discurd the name of base ball in connection with the objects of the

—The Matual team for 1875 will he as follows:—Catcher Hicks; pitcher, Mathews; first base, Start; second base, Nelson; third base, Gerhardt; short stop, Holdsworth; left field, Gedney; centre field, McGee; right field, Booth; reserve player, Hatfield.

The first game of the season in Philadelphia took place on the Parade Ground on March 27th. After playing seven innings Mason's side won by a score of 7 to McKenna's 5, the score being small for an opening game.

—The Mutuals and Atlantics hegan practice in McQnade's Hand Ball court on March 29th.

—The Philadelphia clab will place the following nine in the field in their first match game:—Snyder c., Fisher p., Malone, 1b., McGeary 2b., Meyerle 3b., Fulmer s.s., McMullen l. f., Schulfer c. f., Addy r. f. This is a strong

—The Centonnials will play the Philadelphians on April 19th at Twenty-lifth street and Columbia avenue. In the interim Gloucester will be the scene of practice games.

—The Athletics have engaged the Chestnut Street Rink for ball practice nutil they can play on the field.

—The Centennials have leased the ground at Twenty-fourth street and Ridge avenue, occupied in 1863 by the Keystones and Gearys, but which of late years has been used as a horse market. The ground is easy of access by the street ears, the Union line, the Bidge avenue and the Thirteenth and Fifteenth street lines running by it.

The Shibes, of Philadelpia, will present an unusually strong nine for 1875, in fact the best they have ever placed on the field, selected from the following excellent players: Creamer, Coons, Reynolds, Fonser, O'Neill, Lutz, Weaver, Wetzell, Borden, Honscholder, and Mooney.

Wetzell, Borden, Honscholder, and Mooney.

—The Philadelphia Mercury says:—"Dick Bigham, the White Stocking's new cutcher, was recently arrested in Chicago on the charge of having heaten and seriously injured a man named Conly. Dick was let off with a flue of ten dollars, but Billy Trucy, who was also concerned in the affray, was placed under \$100 bail." This is a good way of opening a season, truly. Fine or expulsion should be in order.

—The Centennial nine is as follows:—McGinley, c.; Bechtel, p.; Abudie, 1h.; Somerville, 2b.; Craver, s. s.; Trenwith, 3b.; Treney, l. f.; Warner, c. f.; Lovett, r. f. and change pitcher; Radeliffe tenth man, to play third or change enter with McGinley or Cruver.

The Gavet testimonial at Tammany Hall ou Good Friday, through bad management, only netted the widow about \$300. If it had been arranged for a good night it would have yielded \$1,500.

-On March 26th, G. C. Wolfe, of Richmond, defeated W. H. Hayes, of Petersburg, for the billlard championship of Virginia.

—The professional hilliard tourney for prizes, amounting to \$1,500, will be commenced at the Assembly Billiard Rooms on Washington street, Brooklyn, on April Ist, continuing until the 14th, Vignaux and Uhassy play the opening games, followed by the brothers Dion.

—Skating on dry ground is blecoming a fushionable re-creation in California, as it is in Europe. In San Francisco and all the large cities rinks have been constructed, with fluors of asphalt or some rough surface, for the use of the drawing room roller skates; and as these can be used Sum-mer and Winter, they are much enjoyed.

Connelli University, March 29, 1875,

CORNELL UNIVERSITY, March 29, 1875.

Emtor Forest and Stream:—

The mild weather of a fortulght ago caused many of our hosting men to anticipate a speedy opening of the lake, but they are still obliged to seek their practice in the gymnasium. We are now using a new sivice of rowing machine, in place of the old pulleys and weights, consisting of friction plates held logether by a regulating screw, with a swrep attached, which takes the place of the oar. In recovering, the sweep must be feathered as in actual rowing, or it cannot be poshed back, as if it is not formed into position again at the heginning of the stroke the plates do not produce friction, and the same result takes place as in pulling an oar through the str—no resistance. Rowing with them approaches the nearest to rowing in a boat to that of any machine we have ever fried. The water machine, which we have also been testing, can be made to give a greater resistance, but no feathering is required, hence the fore arms and wrists get very little of that practice which the actual rowing is sure to give them, and which the friction machine gives them to perfection. A combination of the good features of the two would, in my private opinion, give the ne plus ultra of a rowing muchine.

The men for neither the University nor Freshman crews have been definitely picked out as yet, nor will they be in all probability until the lake opens, and practice can be resmed upon the water. The quarters known as the Snipbur Springs Honse, near Snake Hill, have been secured for our crews at Saratoga.

I see by the Forest and Stream that we shall be close neighbors to the Princelon crews. I trust that the "orthodoxy" of Princeion will flud no reason to complain of the proximity of our "raw recruits."

J.

Aew Qublications. MAGAZINES.

The Galaxy, under the able direction of the Messrs. Church, continues to retain its strong hold upon the public mind. In the April number the article descriptive of the Lennox property, and the wonderful appreciation in the value of real estate, contains much that will be of interest to the city reader. The contributions of various popular and able verters continue to make it readable and entertaining.

Scribner's Monthly, as an illustrated monthly magnzine, Scribner's Monthly, as an illustrated monthly magnizine, is making giant strides in progress and improvement, much of which is undoubtedly due to the ability and popularity of Dr. Holland. The current anmher is even beyond like average. Mr. King has an article on Baltimore as the "Liverpool of America;" we presume he ranks New York as the London, but what will Philadelphia and Boston do about tr?

The St. Nicholas, from the sume publishers, is an excel-lant and healthy periodical for the young folks. Miss Lonise Allcott's name is alone a lower of strength in this direction. Her "Eight Cousins" is very interesting, but we must protest against the curelessness of part of the lattlesson in geography. Assam tea does not come from China, nor is oplum one of the principal productions of that country. India supplies both articles.

Perhaps the most important paper in the April numher of The Popular Science Monthly is that of Prof. Tyndall on "The Atmosphere in Relation to Fog Signating." The experiments have been exhaustive, and result in the iolal overthrow of many old lime theories. The Prof. advises the mariner when he hears a fog signal to assume that it is not more than two or three miles distant, and if he errs, to err on the side of safety.

The Wisconsin Lumberman is a magazine devoted to the lumbering interests of the Northwest, and besides much valuable matter in statistical form, contains many pleasant skelebes of woodland

Infe.

The Nassau Literary Magazine, published by the students of Irlineton College, contains creditable papers on various subjects. The prize essay by Mr. Wooten on M. Guizot, is exceedingly well written and entertaining.

CURE FOR COLDS AND HEADACRE.—"Mohawk" has found a new prescription for colds and catarrhal headache. He says:—Take of Norwood's tineture veratrum one drop on a small lump of sugar every two hours, and a three quarter quinine pill every three hours.

Choup.—Croup can be cured in one minute, and the remedy is simply alam and sugar. The way to accomplish this is to take a knife or grater and shave off in small particles about a teaspoonful of alum; then mix it with twice its quantity of sugar, to make it palatable, and administer it as quickly as possible. Almost instantaneous relief will follow.

—"Calamink," in Chicago Field, says that "quall have become so plenty in portions of California, that many countles have petitioned to be exempted from their operation, as they ent up the grapes, and are destroyed by hundreds of thousands with corn soaked in strychnine. The different varieties of wild geese are very destructive of the wheat crop in many localities. They pull it out of the soft ground in the rainy season, and eat it, roots and all. I see that in Colnsa county and vicinity the damage last Spring was estimated at over two hundred thousand dollars."

—Seven hundred head of sheep belonging to Dr. Thomas Pollock, of Apache Creek, Colorado, were killed the other night by a compound of salt and strychnine, sprinkled in a corral hy some unknown sconndrel.

-Every species of snake may he permanently driven away from an infested place by planting geraniums. In South Africa, the Caffir people thus rid their premises of

—A student who evidently enjoys Hebrew has kindly given us directions as to how it should be read:—Turn the book apside down, open at the end, put it in one corner of the room, stand on your head in the other corner, begin at the hottom line and read backward.—Middletonen College

THE HAZARD POWDER CO.

GUNPOWDER.

Hazard's "Electric" Powder.

For Forest and Stream

Waters of Northern Michigan.

N Mouday, September 6th, 1874, your correspondent found himself at Cheboygan (ubout 2,000 people), situated on the north shore of the southern peninsula of Michigan, about sixteen miles south of the island of Mackinaw, from which it is separated by the straits of the same name. His affairs at Cheboygan having been satisfactorily adjusted, and having till Thursday morning to meet eogagements at Grand Ropids, he gladly accepted the invitation of Mr. John McKay for an excursion through the chain of lakes extending southwesterly to Petoskey, on Little Traverse Bay. Belold us, then, say at 1:30 P. M. September 7th, embarked upon the staunch tug Eva English, escorted by a deputation of good men and true from Cheboygan. We are equipped with guns, trolling liues, culfee pots and frying pans, and fully supplied with creature comforts necessary for the journey. The passenger list shows the following names:—W. S. Humphrey, attorney-at-law; E. Nelson, of Nelson, Strahn & Co., lumber dealers and manufacturers; Sumnel Leavitt, ditto; George Nelson, ditto; Mr. Speneer, mine host of the Benton House; W. H. Flanaghan, tipsmith and sportsman; John McKay, contractor, all of Cheboygan, and your correspondent, with A. J. Rogers, captain; Thomas Reynolds, engineer, and Messir. Niffin and Wheeler, "general utility," make up the "erew."

Our course is bill flown thus:—Down the Cheboygan River three miles to the west branch thereof; through the same two miles to Mullett Lake, and theuce through farther lakes and connecting streams forming the "inside passage" from Cheboygan to Little Traverse Bay. McKay and self propose to remain with our friends and the tug for as much of the journey as her heavy draft will permit. When the bottom of the streams rises to the top we propose to commit ourselves to the tender mercies of Indian guides and small loats. There is ample depth to all the lakes, but it is expected that the English will find bottom in the river or creek connecting Mullett and Burt lakes.

We have been fortunate in finding at Cheboygan a couple of Indians bound for "Indian Village," and one of them will act as guide from that point westward. We steam rapidly down the Cheboygan through the slack water connecting the extensive saw mills (of which there are several en route) with the docks at the lake shore, where the lumber is transported to the lake vessels out into the open waters of the river, past the confluence of the west brunch with the main channel, and so over the course already indicated. At the confluence we are about ten niles from lake Cheboygan, the head of the main river. I am told that the Cheboygan Lake and river both afford the finest of muscalonge as well as bass and pickerel tishing, but as we are upout the tug, traveling at good speed, we have no opportunity to cast a line. As we proceed, our guides follow in their hoat, towed by the tug. The party upon the latter divide the time between shooting at ducks from the how, playing "ynker" in the little cablu, and firing early peaches and other edibles at the guides in their boat at the farther end of the tow line. The latter sport is more satisfactory to all the parties than the former, although it must be confessed that the wild fowl have almost entire immunity, as the puiling of our steam pipes generally raises them at very long range, and the shooting, while it amuses us, don't hurt them much. In this connection it may be observed that by far the most successful shooting of the day was done with the rifle. Indeed, I found that the Cheboyganites are admirably skilled in the use of this arm.

As we enter Mullett's Lake, guns, etc., are laid aside, and we ahandon oursleet of the contemplation of its beauties. An oblong sleet of water of courter the state of its content of its beauties.

As we enter Mullett's Lake, guns, etc., are laid aside, and we ahandon ourselves to the contemplation of its beauties. An oblong sheet of water of say ten miles in length and five in width at the maximum; its waters clear and deep, and the shores adorned with the greenest of forests, with here and there a bare space showing the site of a saw milt, or a clearing with cultivated fields and primitive improvements. This and the other waters over which your

correspondent passed possessed a beauty for beyond the power of bis pen to describe. From Mullett's Lake we enter Portage River, and sail screnely on for about three miles, when our further progress is stayed by the increasing shallowness of the water. The white sandy bottom is clearly visible, and in a few moments our keel grates harshly upon it. The captain makes gallant efforts to force her over the bar; but the attempt fails. We prepare (McKay's boat is therefore dropped astern of the larger and clumsier craft of our brethern of the forest, and our stores are duly transferred to the same. With mutual good-byes and good wishes for a prosperous voyage, we part from our friends on the tug, they to return home, we to push on through the Indian reservation to Little Traverse Bay.

As we approach the entrance to Bort's Lake our trolling lines are thrown out, but the sun is already far down the horizon, and our spoons have lost their attractive glitter, so we take nothing for our pains. We row steadily across Burt's Lake, and at about 8:30 P. M. reach "Indian Village," situated upout a point near its western extremity. Here we camp for the night in the cabin of our big guide, "Louis Sheboston," the bappy husband of three wives, and putative father of thirty children. We are too hungry and tired to scrutinize our immediate surroundings very closely, and devour with a relish the potatoes and well-cooked pickerel set before us by our hostess. On entering honis' cabin we were surprised to bear the strains of a melodeon oue brave making frantic efforts to "pull music out of bis chist," as the sailor said when he first saw a piano played, while several male companions formed an admiring eirele around him. These simple people are all Roman Catholies, still rallying under the honner of the French Jesuits, planted upon these shores over 100 years ago, if tradition be true. In passing, it may be said that the Indians of the southern peninsula of Michigan have attained to somewhat the same degree of civilization as their white hretbren, the "Loggers," employed in these forests, the advantage probably being in favor of the Indian, to the extent that when sober he is peaceable and honest. In fact, it would appear that whiskey is literally his evil spirit. Whiskey, or other kinds of fire water, only will be steal, and only under its influence, if at all, is he quarrelsome. The advice given to your correspondent by his white com-rade on this trip may as we'll be repeated for the benefit of future travelers through this wilderness:—"Take care of the 'bug jnice,' or they'll sleal it all, but have no fear for property."

At bedtime we were invited to repose upon a double bed in the large inner room of the eabin, and inwardly praying for deliverance from lugs, fleas, and other varmints, are soon in the arms of Morpheus. At daylight we arise, and after a cooling draught fresh from the spring, and a thorough enjoyment of the gorgeous beouty of a sunrise upon Burt's Lake, we take to our host and catch a fine pickerel for breakfast. But the clear light of day has opened our eyes to many things which were obscured from our vision to visit the quaint little Indian chapel and its burying ground, both having many rough decorations, evidently the handiwork of the Indians themselves. The crosses at the heads of the graves are allorned with wreaths and other offerings of curions form and workmanship, the material being mostly bright colored paper and rags, and rudely painted sticks. At 7:30 we part from our friend Louis, and leave the village under the guidance of one boat, propelled by the strong arm of our Indian boy (John by name), and within a few minutes strike the mouth of the little stream connecting Burt's Lake and Crooked Lake, not, however, without some searching for the channel, which is almost completely obscured by reeds and long grasses. There is enough water here, however, to float a very much heavier eraft than ours; in fact, a large boat with a stronger motive power could readily have passed over and beaten down the rushes which so seriously obstructed our progress. Presently we have fairly entered the creek and the fishing begins. We are making for the railway train, to leave Pe-

toskey at 8:20 P. M., and row without regard to the trolling, which is, nevertheless, good, as the fish—both hass and pickerel—prove exceedingly abundant. The current is rather strong, but our Indian is a perfect little stram engine, and pulls on almost without intermission till 10:30 A. M., when we camp, and McKny, os chief each, propers our second breakfast. Bread and butter, sweet pork and fresh fish, washed down by a few raps of ten, revive as greatly, and we presently resume our junracy, not, however, until we have been overtaken by a cannow which is commanded by our hostess of the night before, and unmant by two of her stont sons, with several "little Indian lays" and girls as passengers. They are bound for little Traverse Boy, and so we have them man at hand for the remainder of the day. I can see that ancient dame now, sitting in her canoe, a picture of elenginous content, made tterice happy by the gift of the drippings from our fried pork. The duest of fish they have always in alundance,

The day wears ob, and aur indian pulls co, with occasional help from bis passengers. As we pass through the narrow stream, now overshaldwed by forest trues, and again hordered only by marshy shores, rovered with whill rice and tidl rushes, we occasionally rulse a wood duck, and now and then a mallard or two. Towards two P. M. we enter Crooked lake; truly a well deserved mann, but a respectable sheet of water notwithstanding. While the castern half is too shallow for fishing, the abmatance of rice affords on excellent feeding ground for wild ducks of the several varieties to be found in these intitudes at this senson, and we see great annulars of them. About add way in the lake, as we pass from east to west, the waters sublenly deepen—showing as great a depth, probably, as any of the lakes we have passed over—we again throw on our trolling lines, and catch here the "big Idack hass" of the day. At five P. M., having remelted the further, or western shore of Crooked Lake, within about seven miles af Petoskey, we again ramp and refersh the inner man. From this point we propose working through a small stream to Round Lake, the western shore of which is within three quarters of a mile of Little Traverse Bay, to the waters of which we will port our hout and pull down to Petoskey, four miles, there to take the evening express for the south, illaving arranged with the two stout Indian hals (Mrs. La and family still shand by us) to help port the bont, we pash on, warned by the rapidly setting san that there is no time to lose if we would catch the train. About midway between Crooked Lake and Round Loke the stream becomes a narrow and tortions that we find I expedient to get out and walk overland dess thom a mile), leaving "John" to pole the bout through. Reaching the lake shore we walt some time at the manth of the little stream, and no Juka oppearing we get mixions, and McKay starts up stream to "help him out." A few minutes later your carrespondent takes an effort in the same direction, and in the shallow waters, right

We work the boat down to the lake, and sood raw across its clear waters, taking another the base on the trolling spoon as we go. With the belp of our waiting porters we carry the boat over and drop her into Little Traverse Hay, and after a stoot pull of about four miles arrive at Petoskey just in those to catch the evening train. The weather had been charming throughout, and the trlp in all respects a delightful one. Our only regret is that we had been too greatly hurried by business considerations to take proper time or row at the right speed for trolling. The halmy atmosphere, the surpassing loveliness of the lakes and their surroundings, and the great abundance and excellency of the fishing, had offered fascinations hard to withstand; but while successfully resisting these temptations to remain, we resolved that the season of 75 should see us revisiting

these scenes with time to stay. Should we be spared to carry out this invitation, you may expect that we will drop a like to the Forest and Stream as well as to the fishes. Meantime, it may be as well to state for the information of such as might feel tempted to see "how it is themselves," that since the writer's visit the channel through the connecting streams has been improved, so that vessels drawing not to exceed thirty-six faches can now run from Cheboygan to the western shore of Crooked Lake at a point seven miles from Petoskey, on Little Traverse Bay, the northern termini of the G. R. and I. roilroad. Further, some of the solid men of Cheboygan propose building two small boats for this route, to be ready for the Summer senson of '75. But even should the latter expretation not be realized there will be no difficulty in procuring at Cheboygan and Petoskey gnides and boats—either or both—lar the tour of these lakes. In the Summer senson a small steamer runs regularly between Mackinaw and Cheboygan, and the passage across the strains is a very attractive rune in pleusant weather. By means of this boul, Mullett and Burt's lakes could readily be reached by those not wishing to go further. The lakes are all of amplest depth. The mly obstruction to steam pavigation has hitherto heen the shullawness of the connecting streams, which is now in a great measure obviated, as ahove stated. From the steamer landing on Crooked Lake stayes will carry passengers to and from the railroad. The passenger department of the Grand Rapids and Indiana railroad company will issue about May 1st a Summer excursion book, containing full ond complete information as to routes, gnides, and all facilities to be afforded for the tour of this and other chains of lakes on the southern peninsula.

The dimensions of the lakes' I have mentioned are, approximately, as follows:—Mullett's Lake, say ten miles long by five at the widers (Cheboygan, six miles by four; Bart Lake, ninc miles by tive; Chooked Lake, seven miles long, averaging three quar

BOBCAYGEON, via HOLLOW LAKE, TO MUSKOKA.

BOBCAYGEON, via HOLLOW LAKE, TO MUSKOKA.

YOUR correspondent, "E. W.," has brought vividly to may remembrance the most pleasant trip which I made along with Dr. R. and my son in 1886 to Hollow, or, as it is called by the Indians, Kohwennhajewagamog Lake. We took another route to reachit, however. Leaving Toronto by the evening train for Purt Hope, then by the steambort from Limbsey down the Seugog River and Sturgeon Lake to Bohenygeon, at which place we hirred a team and ifrory along the roud lending north to Minden on Gall River, which we reached about nine clock that night.

At that time the Bobraygeon roud was in very fuir order, and now I suppose it is much improved, so that I think it would be preferable, although a little longer, to the miserable roads "E. W." had to traverse. At Minden we met our guides, and making a fortage of a mile the next morning, we took the water on Minnatoin Lake, then possed through Twelve Mile Loke and Bushkonk Lake to Barnaon's, reaching this about noun. Afterdimer we again started and made a short portage to Little Kushing Lake, where we took in the camp traps, which had been sent by team along the Bobcaygeon road from Minden so us to cualde us to travel light.

From this our route was the same as that taken by "E. W." to Hollow Lake. Hollow Lake is indeed "glorious beyand description." Its nuncerous deep hays, its long promoutories covered with red pine, the saccession of rounded hills envered with varied lollage, its wonderful echnes, and its fine troading, reader it an induirable resort for the sportsman and tourist. It was in Juar when I was there, so that I cannot speak trom experience of derr Inuting, but I was then informed that the der abounded all around in such numbers that they were huntral in the Fall simply for their hides and bollow. We left Hollow Lake by a long bay which stretches out to the Wrst, and male a portage of nearly three miles to the South Muskoka, which is the outled of the lake and empties into Lake of Bays. While writing for the men, who had node

ing lake, and these would run from one to three pounds cach.

Leaving Zach Cole's, we traversed the south side of Luke of Bays and Trading Lake, camping about half way. We took quantities of trout by trading as we puddled along, and the next day, while waiting for the men to cook diamer at the antiet of the lake into the Muskoka River, we had an hour's glorious sport, taking twenty-eight fish, which, as near as we could judge, weighed about sixty pounds. We hooked fish, which, we judged, must have weighed four or live pounds, but in our engerness to land them, broke our tine rolls and lind to fall hack upon bush rolls. I never sow, except at Nepigam, which I subsequently visited, any trouting like this. We Ilshed with minnow boit, which had been furnished by Zach Cole, and when it was exhausted, with worm. Our route home was down the Muskoka to the South Falls, thence by wagon to the head of Lake Conchicing and Lake Suncoe, and hy rail from Belle Ewart bome.

I would aid a recommendation of the Barnums, whom we found most willing and active and trustworthy guides, Toronto, March 22, 18775.

J. H. R.

For Forest and Stream WHITE RIVER.

"Beneath it sweeps,
Thy current's calmness; off from out it leaps
The flowy darier with the gittering scales,
Who dwells and revels in thy glassy deeps;
While choice some scalinged warrolly calls
Down where the shallower wave still tells is babbling tales."

The aboy darler with the pittering scales. Who dwells and revels in thy glassy deeps; Who consults the mup of Arkansas will find that White River is made up from unurrons small streoms that rise in the hilly country, in the Northwest purt of the State, and in Southwest Missouri. The general course of the river from the Missouri line to Jacksonport, Arkonsas, is Southeast; here Block River joins it, mul from thence it runs almost south until it mingles its waters with those of the mighty Mississippi. It is a remarkably long stream, and steamtoots ascend it as far as Forsyth, Missouri. To me it has an intrrest beyond the purposes of navigation. I have taken its finny inhabitants with the book, bright and fresh from its sparkling waters; shot the mulling and that has they rose from its glassy surface; hunted the singgry bear in its staughed came brakes; the bounding deer in its undulating woodlands, and have bagged Boh White in the rich fields almag its fertile bottoms.

Before its junction with Black River the water is cold and clear, and it abounds in a variety of fish, firm and fluely flavored. Opposite the town of Jurksanpurt along sandy bar extends some distance into the river, and off this bar some sphendid fish may be taken. They are the black loss and striped bass; each kind readily takes a minnow or small craw fish. The way in which we assully fished for them, was with a bing line, recl, sinker on end of line, and two hooks attacked to the main line by leaders or snoots; a cane or lamboo pole complyted the outfit. The the wrighed from one to four pannds, and could le taken very fast. I took there one morning before breakfast twenty-two, averaging alout a pound and a half each. There is also a fish called by the natives a "juck sulmon;" he belongs to the pickerel family, and is a game fellow, and would fight hard if he hind a chauce, but he acver gets it. He laves deep still wate

native."
"How do you know"? I askeil.
"I can always tell them," he said, "by the way they hold on to a hottle."

Sperits is a une qua non in Arkansas. You take it in the Sperits is a sine qua non in Arkansas. You take it in the minning to keep out the militia, at noon to get up an appetite, and at night to get you over the futigues of the day. It is also taken between times for divers and sundry reasons. It is reckoned a sovereign remedy in measles, "to bring 'em out," and to cure the ague, when taken as "hitters," and is said to be un admirable corrective after a too free indulgence in "bar meat" or huffalo fish, and is sometimes taken on the principle that "the hair of the dog is good for the bite."

the bite."

A native lead the measles in his family; the spirits had departed forever from his barrel. He went to a neighbor to borrow a juglul of the needful.

"I hav'et a drop," said the neighbor
"What," said he of the jug, "no sperits? Why it was only the week before last that you got a barrel."

"That is all very troe," said the neighbor, "lent what is one barrel of sperits in a family of thirtsen children and parry cowy"

narry cow?"
Little Red River empties into White River fifty or sixty

one barrel of sperits in a family of thirtsen children and narry cow?"

Luttle Red River empties into White River fifty or sixty miles helow Jacksoapart. It ahounds in fish of several varieties. Once when fishing at West Point with Dr. Arnold, we took nearly two hundred pounds of fish in half a day. We used small eraw fish for bait, and the fish taken consisted of hlack bass, drum, eadisb, bream, and white perch, the latter the largest I ever saw.

Red River is deep, rather clear and with very little enrent. In the vicinity of Jacksonport game is abundant. The river in Winter is full of ducks of varioos kinds, and the small lakes, pounds, sloughs, and lagoons, absolutely swarm with them. Geese are quite plenty, and occasionally a swan is seen. Bob White is there in full mmbers in the plantations. A few wookcock, and an ahundhoce of snipe in scason. East of town, twelve or fifteen acides, deer are plenty, and I have had some magnificent sport haoting them between bayous Cache and De Vlew. Between these bayous there is a belt of post oak harrens, almost unimbrided. The deer there are not much hunned, and lie well when approached on horseback, and when hunted with hounds do not run off, but tack and dodge for hours. I got ten sbots there one day, but you are not going to he told how may deer I bagged. My powder case crooked. Another time two of us had hunted until the middle of the afternoon, and killed nothing. The hounds were tired down, we, disgusted; riding near a small field a hound opened on a trail. I stopped and encouraged him, when he got over the fence. The fichl was abandoned and grown up with bushes and tall grass. My companion called to me to come on, that the hound was truiling a cat, but by this time some of the other hounds had crossed the lence and were giving tongue on the trail. Happening to look ahead just then, I saw D—, who was some distonce in advance, square himself in the saddle and bring up his gun to his shoulder. A puff of smoke, and the leavy report tollowed, then another puff sud repo

throad up at the wrong time for him and "knocked him out of a shout."

Adam's favorite steed was a horse of the female persuasion, that he called Blaze; he would ride nothing else. Now the aforesaid Bluze had a mule colt by her side, and if that mule colt did not, according to Adam's statements, knock him out of killing fifty deer, I'm a Jew—an 'Etarw Jew. We would put Arlam at a stand, and the deer, grobled by a kind providence, or that unerring instinct that prompts them to go in the safest places, would invariably run out by kim. We would listen with bated breakt the shot, but listen in vain. After the hounds were clean gone we would go down to his stand and ask Adam why the thunder be had not shot. His invariable replay was, "that dasted mule colt knocked me out of getting a shoot. He heard the hounds coming, run right down and turned the deer too far off to shoot."

If he went to drive, the colt would get in his way; and one day Adam said that the colt and a dig luck ran by deer too far off to shoot."

If he went to drive, the colt would get in his way; and one day Adam said that the colt and a tig tack ran by him side by side, in thirty steps. "Why did at you shoot any way, Adam?" asked some one. "Because the blasted male colt was on my side."

I never hanted West of the river but once. I had often hear importance has a man on that side to some over and

when I saw him again he had changed his course and was running down the fence. I gave him the other barrel; he disappeared in the hushes, but I heard him crash against a sapling, and knew I had made venion of him. There were three deer in the field; they got up and were slipping out alread of the hounds; the two does some distance in udvance of the linek. D—killed a doe with each harrel, and his tiring turned the buck buck by where I was. All the deer were in fine flesh; the huck one of the largest 1 ever saw killed.

I have bagged two deer several times in a day's hunting, and one day three, two backs and a yearling deer. A quick steady horse was indispensable as we shot altogether from the saddle.

In the dense cane along the river were found bear, wild cat, and occasionally a panther. Ducks could be larged by the score by stalking them—under cover of the switch cane—along the bayous, lakes and ponds, and by flouting for them in the river. I killed eight mallards at a shot with one barrel, and one with the other; they were in a small pond in the cane. Bob White were plenty in the fields and by well to the days; suipe were numerous and execedingly gentle. * * * * * * * * * *

I never limited West of the river but once. I had often hern importaned by a man on that side, to come over and hant with him. So one day at sanrise Adam and I got into a skiff, and taking our guus and saddles, and some of the best of the pack, pulled across. Horses awaited as—a whode lot full—Adam took an old sorrel that looked as if he would stand the report of a eannon. I saddled a pretty black mare. Our host was on a well tried horse, as he expected to do most of the driving. After going a mile or more, the hounds commenced trailing. We had not reached the designated stands, and rode hard to get there. Adam's horse proved to be a match for the one that I chabud Crane rode to see the blooming Katrina. The trail was getting hotter. Then came a lairst of free, wild music—the pack in full cry. They were coming right down on us. I stopped and Adam galloped on to reach the lank of a hayon. Soon I found that the deer would run out to him; a moment more and the heavy report of his gun resounded through the forest, and before the reverherations had died away, Adam's horse rushed by, as rushed Lord Marmon's steed from Flodden Field.

"Blood shot lds eye"—he was a one-eyed horse "His nostrits spread"—and fall tou—
"The foose retu hanging from his head,"

Whether the "saddle and housing were bloody rid," or not I could not tell, as he had run clean out of them. Adam contrary to his usual costom had brought something to the ground—himself.

Adam contrary to his usual costom had brought something to the ground—himself.

After following the pack for some time, (the deer after getting tired communes tacking, and I had been knocked out of a shot twice by the unstendiness of the mare) I heard them coming right down a glude toward me, slipped from the saddle, and walked o few paces away. Presently I saw the deer coming down the edge of the glade and when he was within about sixty yards he saw the mare and stopped. I fired at him as he stood with his breast toward me. He turned square off at the shot, and I let fly at his broad side as he went. He ran on a hundred yards and fell into the bed of a dry slaugh. Knowing he was hard hit, A. followed on foot to keep the hounds from his homs. After cuting his throat and getting the hounds off, I looked back to where I lad fastened the mare, but she was gone. I felt inclined to offer almost as big price for a horse as did Richard the Third. How far it was back to the river I knew not, having followed the chase on a half broken filly for hours, in all its devious windings. After waiting for more than an hour I heard a horn in answer to mion, and H. came ap. He had seen nadding of rither Adam or the horses. We got the deer on he him his saddle, and struck out for the river, five miles off. When we reached the house we found Adam quietly smoking his pipe, and old one-eye and the mare gunwing a siphing as calmly as if they had never heard a shot. As we pulled hack across the river—in the red light of an Autumn sun set—I asked Adam how it happened that he was thrown from his horse. He gave a savage pall on the oars that saddle on him in the lest fifteen years."

Guyon. Corruth, Miss., March 1875.

—One evening the past week a young gentleman, residing in a Maine village, invited a young buly to go on a sleigh ride. When the gent called for the lady he was obliged to wait three hours for her to get ready; and during the ride they bul quite an animated discussion in regard to her turdiness, which ended in his ordering her to get out of the sleigh, which ske did and walked home—a distance of three miles.

—It is estimated that the value of produce annually raised in this country is \$2,500,000,000, of which amount nearly or quite one fiffth, or \$500,000,000, is lost from the attacks of injurious plants and animals.

For Forest and Mream, GRIZZLY BEAR HUNT IN CALIFORNIA

GRIZZLY BEAR HUNT IN CALIFORNIA.

I'm was the grizzly bear we wanted, and the fame of having slain one, which prompted our little party of the to make a seventy mile journey, from Najan City, through Napa Vulley to Clear Lake, to the north, towards Oregon and the wild Indians in the primeval forest. Although twenty years have clapsed since that memorable Spring murning, yet, in my mint's eye, I gaze again and again on that wandrous vale—that very land Benibit. The valley's bright, thirty five miles, was mar fast day's journey, and Monni St. Helena our first night's cataping granml. Each man well mounted, and with a complete outlit, and Iwn puck mules, constituted nur forces; four trusty ritles and one shot gin our arms; like latter for small game more especially, but well recommunded for close quarters and dangerous prusimity with old grizzly. Nor was the "little nown jug" forgulietu, but I assure ymn, Mr. Editor, a trond smile of scorn rippled over the blushing faces of our faithful friends, who guthered to give us a good "send off," for their enstom was, ien gallous old rye to twenty pounds crackers. From this point we found gune in abundance, and during the day killed a noble eight pronged buck; and finding considerable hear sign, made our seemd emmp, lunging for an encounter with O. G., all of us being novices in that kind of game.

At day break we were about fairly slarted when old limin, fo our unbounded joy, put in a distant appearance, quietly ferding on claver. An excided chase followed; giving spur we overheated him quite winded, from running through the tall clover, tougue out and heading for the thick underbrush, in which we could not prevent his going, but he carried with him a bullet from each of us. After dismounting, re-loading and holding a canucil of war, we abreast entered the bush, determined on a broadside, but to our quick surprise and great relief, we found the old fellow dead. He proved to be the "oldest inhabitant, white with age, scarred in many a battle, and a monarch of the woods. We

of pottage restored his vigor and a pipe his speech, which was like this:—

"Harily got up that next little sapling five feet from the ground when five monsters followed the bloody trail and found the deer, and had a row over it; sighted the hig me with a good rest, and only six rods off—knew I could kill him sure—fired, and over he tumbled down the steep hill; expected the rest to scare and run—not any—lhey 'winded' me and one made for the sapling, and I had buck-fever coming on bad. I was horror-strack, and for the first time realized the danger of being up the wrong tree with a grizzly going for a prur fellow; poured in powder and dropped in a bullet and fired at him on the hill side on a dead level. He raised on his haunches snuffing the air, back towards me, and within forty feet; saw the bullet strike between the shoulders, distinctly saw the hair curl—down the hill he rolled—good for number two. Loaded quick with a patch this time, nerves growing steadier, saw number three seated on a hillock fifty yards away and gave him what he wanted—he left that knob and I left that sapling and got on a frightened horse, I tell you. Here I am, but you must not get me in another such scrape." We confirmed his statement in the morning.

During that three weeks we saw 17 grizzly bears, 4 elk, of which we killed one, about 400 deer, saw 60 of them in one herd, killed only one now and again to replenish our larder; have, rabbits and coyotes constantly in sight, and no trouble to flush large bevies of the beautiful California quail, for they were as thick as "the leaves of Valambrossa." Every brook teemed with speckled trout, uneducated ones it is true, and simpletons, jumping for the fly dangling above the water.

Need I say we had a jolly good time, and returaed stout

it is true, and simpletons, jumping for the fly dangling above the water.

Need I say we had a jolly good time, and returned stout and rugged? A natural "transfusion" of blood, so to speak, took place; we could eat and sleep, the two great essentials which make existence desirable. Those only who have experienced it can appreciate the refreshing sleep of camp life, unconsciously enjoyed on hemlock langles, and those only who have partaken of the delicacies of the forest can properly estimate the ravenous appetites to be appeased and the afterpeated satisfaction of being able to digest a good square meal; think of the delicious browning of the tender bits on the forked stick in front of the glawing embers. Experience is our tutor, and the palate aur monitor, and we are disposed to langle at Prof. Blot's Boston lectures on the culiuary art, eminently preferring, for a time at least, the habits and customs of the American woods to all the arts of the French capital.

Butler, Pa., March, 1875.

C. E. H.

—A Hamden, Ct., correspondent complains that quail and partridge have been exposed for sale in the New Haveu market within a week. This should be seen to.

—The Game and Fish League, of New Hampshire, held its annual meeting in Manchester ou Tuesday. Joseph Kidder, Esq., delivered an appropriate address.

STILL HUNTING.

ROM Charles Fenton, Esq., proprietor of the lintel at No. Funt, I ultimized the following facts regarding still hunding deer. Mr. F. is an old hundre, and has been proceed to that line, and as many persuas in more processed that line, and as many persuas in more processed to the processor of the processor of a sume to him and the robles. And give it as near as pussible in his near work of the and locate and processor of a sume to him a deer's hand and organs and imaginations, fransfarming every laun, duels and locative object on the waster into a deer's head and organs and imaginations, fransfarming every laun, duels and locative object on the waster into a deer's head and deer is driven in by the deer, they may be however my luck never ran that way, or the deer either. Another mode for killing deer is addient and girth lunning, or more properly termed "librating." This kind of hunting is very exciting, meant by "still lunting," mit indeed it would be such a specific properly termed "librating." This kind of hunting is very exciting, meant by "still lunting," mit indeed it would be such to appropriate name. But what is meant in the Allemdarks by the team, is with rithe in hund and about, to pentertate the deepths of the farests; in hunt out the deer in his unitive entire the such as a such as a

snow. Hanging him up and dressing hlm, I moved on again. After traveling about half an hour, I was surprised by seeing a large linck jump up and rin away. I had struck on to him hefure finding his track. I pursued him two himrs; started him twice more, but did not even see him rin. I then gave him up and went in search of other tracks, and in the course of half an hour found another large back's linck. He appeared to he guing very slowly, and I followed for about half a mile. My hopes were not realized, for I came apun his soft bed, which he had sublendy left no the rin. I knew then I had started him without even cutching a glimpse of him. Weary and disheartened, I followed on and soon allscovered by the way he run that he had not seen me, only heard no cuming, and would not probably rin far hefore he would stop and watch to see if anything was parsuling him. Cambig up a high hill and lanking across a ravine anto a ledge, I saw him huming up with his tall ubsel tready for a jump; quick as thought my ritle flew ht my shoulder, and at the same moment its sharp report reverberated from hill to hill. A termendants leap high in air, a tush forward, with moralsed tall, told that the bullet had taken effect. (A deer, if mortally wounded, it is carried raised). Climbing up the ledge where the back land stond, I saw him stretched upon the snow dead. He had run andy about I went yards before he fell. With a light heart I dressed him and started homeword, and so heek would have it, I leid not traveled noure than a quarter of a mile when I came upon another track, which, to all appendince, had not been unded more time and hur; and as heek would have it, I leid not fraveled noure than a quarter of a mile when I came upon another track, which, to all appendince, had not been made more time and hur; and as her was I mistaken, for I saw her (it was a large dee) rise and of her heal, stretch up her neck to its utuois he had, and should her way hame, where the arrived at dark, and although thenched with min, well satisfied with

Normalia, Valimin 18, 1875.

The interfibed in make a descent in some hind but as yet unknown furner thing at a near Dam Neck, in Pitheses Anna county, in order to test the universities of stray natives from that Winter quarter as it bulps and seld, and it is indeed that this post of the chie resistant plating the attack make suitable preparables for an inhance at six A. M., on the 17th has,"

As of course all chie orders are quarterally obeyed, so faily had the wagawand poin at "He's" there at the hour specified, only in find "Phy" song it bed. Now, the chie, knowing him of aid, but secured as whom there for this beneall, but as it was most carefully placed upon an inevension surface, of course it refused to act, and the whole expedition was delayed until some a ft. I in was properly clad, and what note own integer, fully filled up. However, Rod abo was non-picked up and the column put in motion, and under the streng hatteness of hickory, in law three possing through the village of Kempoville, and ever roads of no super excellence, reached its destination.

Dun Nock is simply a consewny and short bridge over the stream, or rather filted, connecting the apparant extreme nurthermust water of the king with the lower pand, which in turn runs into face. It is some three miles, law had not a conservery and bridge as at Dam Nock, from which it is some three miles, law had not properly for some large, respectively for some Hidge. These whores are all fresh and four nearly gardled with the overal and three materials in the direction of Curriture Somal, and the North Frodina But had writers in the direction of curriture sound of Somal Bridge. These whores a coll fresh and from range, respectedly for son, which by routing up the ground repose soft necessary and the formal proper himself and the remaining the proper himself in a first range is an interesting and the more of the sparse who have humanily, and the may say Curtinally, fully loveding and the may have being the round of the sparse whe

sould. 2 Orthyometia Carolinus, t Rulius Virginiunus, and 1 sungina socials.

Billy secured 38 subjects and the ratt; Plp. 18 suppe, the 2 sors and the other hird, and itself the remaining 50 subjects an ending a trip most enjoyable, and it is thought successful. Of enumen the "cockles of the hearts" of deany friends were rejoined, and intheir guinners were moved to a definate become members of the "Snoot," and to prove the pudding by clowing the big.

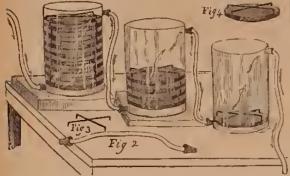

It is about twenty-six miles to Sand Bridge, which is near the centre of the subject massions, and Mr. Forks, who lives thing, accommodates a lewithders, and dambless would receive "subjects" also, though windid not know that he consented in entertain when the trip was projected. The subjects said to be aboundant until May; no sacistance is needed to find the ground, nor ten dog at all a necessity. The guinner units previde transportation, as there is no public conveyance to that neighborhood.

—One objection which are "old fogy" has to the modern largesh lording gun is, that it is so easily lorded that one is tempted to shoot at everything that comes in sight, thereby scaring away multitudes of migratory birds that would remain longer with us, if they were not shot at so incessantly, There is some force in the argument.

Hish Gulture.

HATCHING APPARATUS.

E presented to our readers in our number of March 11th several engravings showing forms of hutching apparatus used in France and Germany, as described by M. Koltz. We now give cuts of one of the more recent forms, having advantages over most of those hithering. used. It is a hatching jar designed by T. E. Ferguson, of Baltimore, one of the Maryland fish commissioners, and has been successfully used by him for the past year. simply a glass jar, provided with a round hole near the top and one near the bottom, on opposite sides; a series of these jars may be connected with each other, and with the water supply hy means of rubber tubes, as in figure 1.

The tubes are inserted into corks, which are provided with holes for the purpose, and the corks fit the holes in the jurs, (figure 2.) The water is introduced at the side and bottom of the first jar, and flows from the top of the first to the bottom of the second, and so on through as many jars as may be employed. Each jar is provided with a stand made of two pieces of wire, bent as in figure 3, crossing each other at right angles, and soldered together, or joined by a wrap of wire. The stands should be sufficiently high to raise the first tray above the opening through which the water is introduced. The eggs are placed on circular the water is introduced. The eggs are placed on circular trays, which fit the jars neatly, and are made of wire cloth, the edge projected by a rim of tin. Each tray is provided with a wire frame of similar construction to the stand above described, (figure 4). These frames serve the double purpose of handles, by which the trays are lifted, and of feet to sustain the tray placed above. Five or six lrays are feet to sustain the tray placed above. Five or six trays can be placed one above another in each jar. The wire work should be varnished to prevent oxidation. A box of thin wood ar waterproof paper, made to fit loosely over the jar, with slits at the sides to allow the tubes to pass through, can be used as an extinguisher to keep the light out, and us a cover to the jar. This completes the appa rains, which is peculiarly adapted to annateur and im-promptu fish culture. The water which supplies an aqua-rlum may be led into the first jar, which can be used as a filter if necessary, the trays being covered with flanuel, from thence pass through the next far in which the eggs are placed, thence into each succeeding jar, and allowed to discharge itself into the aquarium. We give Mr. Fergu-

discharge itself into the aquarium. We give Mr. Fergusou's letter, which will further explain the apparatus:—

Entor Folder and Stielam:—

In reply in your inquiry as to my success in linching salmondae in magnatum, I send a sample of apparatus used by the for the past two ecasons in tastelling front, salmon front, and salmon our in my flurary over my aquarium. A giance at the jar discloses what is giding on, and by smaply assaming the cork from the lower hote sediment or young behave his crited are removed at any time cutthout disturbing the trays. The my outside the sed that it will explain itself. I have hatched as many as 1,500 eggs to the jor.

The New Jehrsty Fishery Openations.—We mather

THE NEW JEUSEY FISHERY OPERATIONS.-We gather the following from the Woodhury, N. J., Constitution, of the operations of the fish commissioners of that State for

the cperations of the lish commissioners of ihat State for the past year:—

The report of the State Commissioners of Fisheries for the past year gives a very encouraging exhibit of the progress which has been made in stacking our rivers with four fish. During the last two years, of 600,000 California salmon raised at Troutdale, 188,000 were placed in the Delawase, which also received 77,000 of the Madice salmon. To the Ravitan River 47,000 Sacromeuta and 31,000 Maine salmon of ere assigned. Ten thousand Maine salmont went to the Hackensack, and 88,000 were placed in the Passaic. Large nombers of the lishes referred to in these statements have found their way to the main rivers, and were seen there last Sammer. They will not start for the sea until this year (some remaining in the river even longer), and they may be expected back the following year. So fat, the largest salmon caught in New Jersey caters, of which we have authentic recent, was one captured in the Ravitan near New Brunswick. The weight was fourteen addices, and the fish was taken with a fly. This must have been one of the hat placed by Dr. Slack in 1872. Two others were caught at New Brunswick. Two good sized salmon were taken below Laudb riville, but the weight and size were not mited. Some have been seen lately in the Muscaneteong Irom six to eight inches to length, and one of the commissioners has a specimen six inches long, taken by Dr. Slack from the stream.

Helms V. Heringe, warden af Gloucester county, reports among other things as follows:—"The past season for shad and herring has been very good. The number at shad has been greater, and the size larger, than any season for shad and herring has been very good. The number at shad has been greater, and the size larger, than any season for the past six or seven years. The gillmen have averaged 2,500 tish to a nea, long an excess of over thirty-three per cent, over last year, while the shore fisheries have not done so well as in past seasons. The largest sland that came under my notice weighed

ABSTRACT OF THE FIRST ANNUAL REPORT OF THE WISCONSIN FISH COMMISSIONERS,

TillE amount appropriated by the Legislature to be need in propositing or ritheal peter guides on the first point in the first of the better guides of the was limited to \$500, all of which was expended under the direction of Prof. S. P. Bairt, United States Commissioner of Fisheries. Of the fry of the 'spawn of that year, several thousand were placed in the lakes at Mulison, and also several thousand in Grueva lake. As near as can be estimated, 20,000 salaton, harched at the private haliching house of H. S. Dousman, Esq., at Waterville, in Wankesha munty, were dictributed in these waters, One but and the thousand symmetric Baird. These were sent direct from Sant Prinnesson to Boscobel, in this State, and came unattended as express nature. Mr. Pulmer, one of the commissioners, and who owns a private intelligible point of program guide the prof. 19,000 had been distributing process. From these space he hatched some 61,000 fry, in excellent commissioners, and who owns a private intelligible to the waters of Grant, Crawford, and Lafayette counties. The resulting the report, 19,000 had been distributed in the waters of Grant, Crawford, and Lafayette counties. The resulting the report, 19,000 had been distributed in the waters of Grant, Crawford, and Lafayette counties. The resulting the report, 19,000 had been distributed in the manuacy the clabs and rivers of Shelogyan, Fond due. The State is asked to make a suitable appropriation of memory to cause the 6th enumissioners to prepare a pracer site and creet a state hatching house. These sites are not abundant in the State. They must have a fair scope item, practiced, recursive mer valvaye centre, living water of proper tem, rature, and a full sufficiency for the accommodation of handleng ranner valvaye centre, living water of proper tem, rature, and a full sufficiency for the accommodation of handleng ranner will be properly and hatch off the fair sufficiency for the accommodation of particular the sufficiency for the accommodation of particular the sufficiency for t

Massachisetts Anolers' Association—The annual meeting of this association was held at their rooms in Bostou on Friday evening, April 2.1. Vice President S. W. Huthaway, Esq., occupied the chair, and George B. Brown was Sevictory pro tem. The following officers were nomimously elected for the ensuing year:—President, Dr. John P. Ordway; Vice Presidents, Hon. Thomas Tulbot, John F. Mills, S. W. Huthaway, Hon. Chas. Levi Woodbury, C. Whiren Gordon; Trensurer, Charles Stanwood; Recording Secretary, George B. Brown; Corresponding Secretary, Charles E. Pierce; Librariau, William F. Story; Executive Committee, James P. Richardson, S. M. Johnson, Walter M. Brackett, James Walker, Benjamin P. Ware; Committee on Membersbip, D. T. Curtis, E. Delauo, H. M. Forristall.

order of the President, came in during the meeting, and was enthusiastically received. It was the first time he had attended a meeting sluce he was injured at the Readville railroad accident in February.

D. T. Curtis, Esq., informally exhibited to the members some of Frank Good's oil tanned moceasins; also a sample eight onnce black bass roll made by Churles F. Orvis, of Manchester, Vt.

DISTRIBUTION OF STATE FISH.

In reply to certain inquiries relative to the distribution of fish in New York State, through the Commission, we are authorized by Seth Green, Esq., to print the follow-

Rottun Funcer and Stream.—
A statement of the distribution of salmon and all other kinds of first will be published in Fish Reports. We have not done distributing, and if any purities want any salmon for stocking any public waters, they can have them by addressing

Rothester, N. Y.

NEXT SEASON'S OPERATIONS OF THE FISHERY COMMISSION IN CALIFORNIA.—Mr. Livingston Stone expects to leave for California on the 9th instant. His instructions are on arriving at San Francisco to proceed to Oregon to investigate the salmon of the Columbia River till about the 1st of June, then to return to California and take salmon eggs on the McCloud River next Summer and Fall, and next Winter to investigate the salmon of the Joachin River,

CALIFORNIA BROOK TROUT.—Ten boxes of California California Brook Trout.—Ten boxes of California brock front have been received at the New York State batching house, the gift of the Acclimatation Society of the Golden State. They are of about the shape and flavor as our own brook trout, but lack the vermilion spats. We believe this to be the first arrival of the kind in this part of the United States.

-Mr. Seth Green advises us that young grayling four inches long may now be seen at the Caledonia Hatch House. They are the first and only grayling ever hatched in this country except in the natural way.

Matural History.

PHOSPHOROUS IN FISH.

PHOSPHOROUS IN FISH.

RVE NECK, March 27, 1875.

EDITOR FOREST AND STREAM!—

Just alx months ago hast Saturday, I determined to sacrifice the flesh pols of New York for the sake of science. Forthwith I proceeded to carry my determination into effect, so I packed my my duds, kissed Betsy Ann and our three marriage certificates, junqued abourd the train and evas soon on my way to that great land of fish—Nova Scotia.

Immediately on my arrival in Yarmouth, N. S., I confined cayself to a steady diet, consisting exclusively of fish and ood heer oil, my object being to settle the question whether a steady diet of fish acould permeate the human system with phosphorous, and invigorate the brain to the extent chimical by some scientists. I have ascertained to my entire satisfaction, and I herewith present to the scientific cordit the graind result of my self-sacrificing investigations. At the end of the six months sheady diet, my body has become completely permeated with phosphorous; to such an extent has the phosphorous become absorbed in my system than Belsy Ann and myself are seriously considering the question as to whether it is not a duty I owe to mankind to tense myself for a term of months to some large match factory. I would be healmake to such a concern. We have not bonglit amatch since my return. Belsy Ann has a bundle of splinters prepared, and during the evening, when I am around hanging pictures in my night gown, she occasionally jabs one into me, as the opportunity offers. These splitters, when dried, are far superior to any store matches at len cents a tox.

There is one inconvenience attending my phosphoreseent state. I dare not go out nights. I tried it once, but the boys thought I was a conflagration, and before I could make them maderstand the nature of the case, they had nearly drowned one with water, and hid telegraphed to Port Chester and Mount Vernon for tkeir fire engines. But what a tonething domestic secue it is to see me squatting at a Trace in the middle of our centre table, surrounded by my

ers so."

That fish contain a large amount of phosphorous, and that a steady diet of fish cult cause said phosphorous to permedie the kniman system, I believe I knive abundantly proved, but that said phosphorous does not invigorate the brain must be the inevitable conclusion of all cho read strengths.

THE GRASSHOPPER PLAGUE AND THE PRAIRIE CHICKENS.

Geological Surcey, Montreal, March 3t, 1875,

CEOLIGICAL SURCEX, MONTREAL, March 3t, 1875. I MONTREAL, March 3t, 1875. I MONTREAL, March 3t, 1875. I motio; that the newspapers are calling attention to the possible connection between the wholesale destruction of the pridric chickens for export, and the alaming increase of grasshoppers in the prairie regions, On this subject I can spenk tadly cuth reference to our own northwest territory and here I have no doubt the princip chickens must exercise a greater or tess influence on tide pest. From the time the young grasshoppers coate out in the Spring, till the lins) old ones disappent in the Fall, itesse insects contribute the facorite food of the chickens. When they are abundant their crops are generally stuffer full of them. On opening the crop of a newly killed chicken I have seen the his] swallowed grasshoppers jump off, rejoicing in their intexpected deliverance. After the prairies generally have become brown and withered, the grasshoppers are attracted to any injent group pitch of grass which has spring up where a fire had been. The chickens know where has beginning the birds. Previous to 1857 the grasshopper plagae that not elsed the Real River settlements for nearly farry years; but in the last seven years there has been only one examption from their visitations, and the probability is that the young "hoppers" will again devour the crops the piesent Spring, the eggs taving been deposited in great numbers last Altiumn.

Editor Forest and Stream:

Entror Forest and Stream:—
tread with much interest the various letters which appeared in your journal on the resuccitation of frozen fishes. The tom cods, which are caught in such quantities through the ice at Three Rivers and elsewhere, and sold frozen by the bushet here and all over Lower Canada, will often revive when thawed out in cold water preparatory to cooking.

Your truly,

ROBI. BELL,

-A splendid petrified head of a walrus has just been found on Sable Island, off the coast of Nova Scotia, and has been presented to the Provincial Museum. These animals once made this island a headquarters.

Hybrid Duck .- A duck was shot near Sacramento reeartly, which combined the uppearance of a teal duck and a sprig-tail, being about the size and having the bill, back and tail of a sprig, which its head, breast and wings re-

FIGURE OF A SALMON IN FREESTONE.—On Thursday last, at a real freestone quarry, Cumberland, in splitting a black of stone 3\footnote{t}t. long by 14in, while, they found the figure of a salmon ahout 2\footnote{t}t. long. The color is of a real-salmon, almost as plain as if it were alive. The stones are in the possession of Mr. Duere, the manager of the Deurlan Colliveres.—T. G. (Cockermonth, in London Field.)

[We saw it stated in a Halfax, Nova Scotia, paper of late date, that a half a sulmon, or a fossil fish of the size of a salmon, had been found in the coal measures of New Glasgow.—Ed. F. & S.]

APRIL-THE VIOLET.

APRIL—THE VIOLET,

I HAVE just returned from a walk heside the quiet brooks of an old deep woodlawa, and if anything gave rich and far pervading odor of the humble violets. He have the pervading odor of the humble violets. He have the horse the pervading of the humble violets. He have the horse they are they ar

ANSWERS TO CORRESPONDENTS

Winth Thylno.—One of our friends writes us that he was, last year, much troubled on a portion of his garden with slags, or shell-lap smils. They infested his homators and eathlage plants, in some cases completely covering them. He applied a circle of bran, (when or ree) about four lookes around the plants. After dark the songs were found in the bran in great numbers and gould be easily the stroyed, they were killed hi great numbers. We have often killed these slags by the application of strong salt water around the hill; three times will be all that is necessary to completely rout them.

M.—Add subhur to your subjects, and sharound discon-

completely rout them.

M.—Add sulphur to your sultpetie and charcoal dust; apply one quart to each plum tree near the rout.

New Zunnas,—Wo have received a purkage of rare seed from Paris, from an oblifriend who is loterested in the success of the Forest and Stream. Among other rare and valuable seeds are four new zinnias, of which much is said by those who have seen them in libissom last year. One is called the quill variety, and if full as beautiful as claimed, will prove a great accession to our American gardens. This seed is good, and after a cureful trul we shall give a full description of these new varieties, with our collection, treatment, and the results.

Ellen M., Troy, N. Y.—Your question, and all other information necessary, will be answered in the course of a few weeks. It is too long to give in a short answer.

Olding Quill.

NEWFOUNDLAND RAMBLES.

Hanson Gnacz, Murch 1, 1875.

Entron Forest and Stream:—
The distance from Bonavists to Catalina is whout jen infles, more or less, as the lawyers say. On leaving Bonavista, as we ascend the first portry, gentle, wooded till of our road, inclure and take a parting look at the lown, with its beautiful church, next houses and green fields, and then for a flue wife to Catalina. Our road is generally level and interspeed with thick modes here and there bounding its sties, diversified with miniature savannah tracts of lairly, where we see the exploration, or cotton grass growing. Owing to fires in the whole, considerable tracts of burnt mod may be seen. I have seen many flocks of patridge in this road. In feegy, drizzling weather I have seen the hints, oft and young, walking tike childens on the road before me, and one entitle early but them with a stone. Indeed I have seen people kill them in that way. But the ding and the gibb is the proper may. "What are you doing?" said a friend to the capitaln. "I'm watching Bang," a fine setter dog.

who rose the partridge, which mere duly and lawfully shot. But we are at Breuten Bridge. This la called after one of the former judges of the Supreme Court. Here flows a fina river, shiring in the Summer sam. Its banks are beautified by a thick growth of tarled trees, with the criticaling spince and fi). It's cald work furiling river, yet believes to be done. In this case, thanks to Breuton's Boldge, it has not be done. We said down on the bridge to inaction, and re-inityarated, after a walk of about three miles Catalina is lefere us. The presence be somewhat rocky and untariting. All Catalina is the fore us. The presence he harbor. There is a fine English church in Citalina, also a Wesleyan church, gerelied on the top of a rocky bill. There is also a neal little Catholle rhurch. There are some increanille resultishments here, and canadier able trade. The place is large, and a great many houses for an onlipost. There are ratious years, and there is any fillin hous Sidoa, anchored safely in the mortheast arm, a most contact de place in a gale of which myertheless had it is another and it fine real not the "tower rocks," to arold which dower land the most here and it for each of the done is and prepared or before a fact of a lating entrance. After a walk of nearly ten police, we are glid to get on binard our beat and take donier and a reel, and prepare for a latit further murth to mirrow. One content for the prepared on the at and take donier and a reel, and prepare for a latit further murth to mirrow.

The Rennel.
