THE COMING BENCH SHOW AT SPHINGFIELD.—We desire to call the attention of all awares of this lags to the fact that the Dog and Gon Club of Springfield, Mass., will give a Bench Show of dags at the City Hall in that city on Wethership 28th hist. The list of prendums, which will be on a liberal scale, will be published in this paper aext week, and copies will also be sent on application to the Secretary. [Security will be one of the largest which has nocurred of late, and the manes of the gentlemen who have the matter in hund are guarantees of succe

BISMARCK.—David Brooks, Esq., of Philadelphia, the owner of the famous setter Bismarck, unde us a short visit recently, and favored us with an extract from his diary, showing what he had done in the way of shouting la lowe in September last. It is well known that in the month of September the pinnated groups legla to pack, and do not lie so well to the dog as they diversible the season, and when Mr. B. reached the grounds to shool the birds had been gonsiderably thinned out, were quite the birds and when Mr. B. reached the granuls to shoot the birds had been considerably thlaned out, were quite wild not not disposed to lie well; yet, with the the nose and caution of old "Bis.," Mr. B. lagged from his pobots as follows:—Sept. 11th, six grouse; Sept. 12th, elght grouse; Sept. 15th, twelve granse; Sept. 16th, thirty two granse; Sept. 17th, for y grouse; Sept. 10th, fifteen grouse; Sept. 23d, twelve granse; Sept. 23d, forty-one grouse; Sept. 23d, nonly four grouse; twenty-four grouse.

—The Suffolk county, Le I., Agricultural Association, has prepared a hill "for the most effectual protection of sheep from logary by dogs," which is intended to apply to the whole State, city as well as country. Under it, no person can keep a slog without first obtaining a yearly license of \$1 for a make and \$3 for a female, under a penalty of \$10 for each offsuce, and all unlicensed dogs are

—The aunouncement in our last week's issue regarding PDog Whip's" imported field trial setter dog Lelcester, should have read "will not be put to public stud," instead of

DOG FARES.

HOPHERTER, March 18, 1875.

Einten Finerst and Stheam:—
In your bears of Murch 18th, 1875, we see the article signed Theodore Grey, conductor F. F. W. & C. R., complaining of the reliable to all rational men, particularly baggings innaters, claiming that it is not ist, and that one cent per mile on dags is more than bagging masters as k for, the experience has been quite different. On the F. F. W. & C. R. t., on which Mr. Grey is a conductor, in a barn pull live cents per mile on each doc, and five cents per mile on each than two cents per mile. The gentleman thinks it not very placeaut to the compact of the interest per mile. The gentleman thinks it not very placeaut to be consected up to it daggage car. It may be pleneau, or not but there seems to be a great strift among ratifical employees in get there. The crosse is ordered in a great many ratingles, and has never been charged more than was just and right. This induntatedly lating, the being one of the raticol family; but for a string rating in and asso how they will do for the . Respectfully,

[a. 41, Oatman, and Calendar and Calen

Our correspondents onust either hu mistaken, or refer to a period previous to f860, as since that thus; we have traveled on the P. F. W. & C. R. and paid a tariff price for our dogs which was perfectly reasonable. The same applies to other roads in the West and Northwest.—Ed.

KENNEL NOTES FROM GEORGIA

BAYANNAH, GA., Maich & L. 1975.

SAVANNAM, Ga., Match 34, 1975.

Since the organization of our gains laws a much greater interest has been taken in the way of procuring fine dogs then ever before. Capitalis J. P. White hins, at a great expense, purchased from Wo. G. Parker, of M. Paluther, H. a hose, log and blich, at fine trish setters, which he intends to keep for inceding purposes only. The dog, Yock, Is a splendid looking arbad, being of almost the dimensions of the celebrated Ground setter Kent, first and white in color, and one of the must gowerfully musched dogs. I ever saw I was out with Capitalis White few days ago when he took him out for a short out trises him he would work. He quartered his ground in insguiteent asyte, head high up, seenting this also and out as a count be, and backed up the other dogs finely. Open, the blich, has, I belli ie, been kept for breeding purposes only, and has already been served by Yock. Sho is much smaller than he, but a very one his long dog and one that would attract attention anywhere. Capit. White deserves great praise for making such a radicable addition to his kennel, and it is to be hoped he will receive the reward he merita from our sportamen who do not what to rend away from home of raine dogs.

Mr. Connerat, the gentlemanly beasurer of the Georgia Game Association, has a romarkably flue young pointer bileir which is going to take a prominent idace in the ranks of our best dogs next season, as will two very fundaome setter pupies belooging to Caphun While. Major Alden has a very bandsome young orange and white setter, sired by the celebrated one-eyed dog. Samba, owned by Mr. Foreman Taylor, of N. J., out of as fine a purely lived bitch owned by Hornee Smith, Esq., of New York, as can be found in the country. Many other parties have also first-lines young dogs. There is sume talk of a bench show of dogs being got me under the anaptees of the Georgia Game Association, and if there is, there will be many fine dogs exhibited, and the result of which I will write you.

Georgia.

DOG LOGIC AND DOG LAW.

Mamon, N. C., Murch 28, 1675.

Editor Forest and Stream:—

Theard a prefly good dog story the other day, and us it was related by one of the hwyers engaged in the case, I presume it is true. Mr. Afound a valuable dog heliocoling to a neighbor, on one of this sheep, and shou it. Mr. B.— such this for damages. The jury was indicated principally of old hinters, and Mr. B.—'s coanset appealed most of feetively to their sympathics, as the result will show. He fuld them visitions and codotes shout dogs, of their affection for their masters, A.c., and wound up with: "Gentumen, has not lingland's groups these said that the who has no soul for music, no love for the sweet roncordance of forhounds, is all for meason, strategems and spoils?" (The judge interrupted, and asked where he rould find the quotation.) "Your Honor, this is not a question of law, but one of polite learding, of which this Court is supposed to know noticing." He riosed, and the jury gave him a verdict of \$335. Ymrs. 35. H. M., M. D.

"MOHAWK" CORRECTS FITCHITT.

NEW York, March, 1875.

Entron Forkét and Stream:

In your last tesue, Mr. Fitchitt, speaking of the breeding of the whelp be got from me, stated that Kirby is one-quarter frish, which Is a missiake. Kirby is one-half Laverack unit one-half Gordon, with not a brog of find blood in her. Neither has Rauger my Irish in him. Cutver's Chunters, the dam of Judy and Venus, dains of linger and Kirby, is in Gordon, not part frish, as Mr. Fitchitt is laboring uniter the impression she is. The glad the wholge are doing to well, and have no doubt that they will be an honor to their ancestry, breeder had have no doubt that for few men know so well took to Iraha a dog as Mr. Fitchitt (who does it for binnelf enjly), and their blood is the bluest of the blue.

And now, Mr. Edilor, let the correct void. I had you to hake for a cold, or catarth headyche, one drop of Norwood's threfore of verstram every two hanes, and a three grain—not three-quarter grain—jolit of quintine every third huar. Yours,

Monawk.

A distinguished physician has opportunely sent as the following letter, which we trust no one will avertook. We fear Mohawk's remedy is dangerous unless in the hands of a skilled practitioner. - Ep.

WASHINGTON, D. C., April 3, 1875.

Washington, D. C., April 3, 1875.

Editor Forest and Stream;—
I see by your last Issue that "Mohark" has discovered a cure for colds and catarrh, or headache, and for his kindness to letting his prescription be known be merita the thanks of every sportsman; but I wish to say a word in regard to Norwood's thirther of recurroun dyidl which be advises. So long as the dose-viz., one drop- is taken, no harm will result, but let no one act mon the supposition that if one drup will care in a critain time, ten, twenty, or sixty drops will care so much quicker. The medicine is a deadty polson, and should be handled with great care, and never he left where children unight gri hold of it. Perhaps "Mohawk" will further oblige by informing us what a "three quarter quimine jull" is; whether three quarters of a grain, onnee, or pound.

Yours,

Pills,

Game Bag and Gun.

GAME IN SEASON FOR APRIL

Snipe, Ducks and Wild Fowl.

Under the head of "Game, and Kien in Sea. "" we can only specify in general terms the several varieties, because the hours of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that rate to the kinds of game in question. This would regain a great amount of our space. In designating game so my guided by the laws of nature, upon which all legies tation is founded, and our readers would do well to provide themselves with the lines of their vespective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.-English snipe are coming in freely from the West, but shooters in New Jersey and Maryland shores are as yet meeting with Indifferent suc The birds are selling in market at \$4 50 per dozen; plover the same price; cunvas backs bring \$2.50 per puir; red heads, \$1 50; mallards, \$1n\$1 25; black ducks, \$1; widgeon, 75c.; brant, \$1 75n\$2; geese, \$1 50n\$3 ench; wild pigeons, \$1 50 per dozen; squabs, \$4 50; rabbits, 75c. per pair; large the same. Antehpe continues to come forward from Omahu, and sells at 25c.n30c. per pound.

-We have this week received from M. V. B. Squires, of Good Ground, Long Island, a great goose, admost as big as one of oneselves. Evidently the donor does not wish as to think there are no geese on Long Island. We don't know how much this fellow weighs—we should sny eighteen pounds—but it has had its own way as long as it ever will, and now we expect to make nway with it as soon as dinner lime can reasonably come round. Long has it sung the meloilies of "Old Mother Goose" beside the salt sen waves of old Scalionk, but its voice is now lrushed in death and its transmigrated spirit expects us to sing all of its praises that yet remain unsung; which we shall do with a reliable on the time houored principle that "what is sauce for the

chance u day of sport should yield them rich returns, they'll thank us for it, just as we thank Squires for thee, great goose! We'll have thee cooked, by hevings!

—On Friday last Dr. Glenney, Mr. John Avery, and Mr. G. S. Greene, Jr., with their guides, shot fifty-five bront and six ducks on Barnegal Bay near Long Beach Club House. This is a very large bag of brunt, and Cupt. Charley $\operatorname{Cox}_{\epsilon}$ one of the oblest gunners on the bay told the gentlementhat the largest number he would remember as being shot by one purty in a day was Hrirty-four. If any of our readers wish to try their luck in this locality let them gabown within the next three weeks, and they will find snips on the calm days and brant in the windy days. On Thursday Mr. Greens shot seven English snipe on Barne-

Thurshay Mr. Greene shot seven English suipe on Barnegul meadows. English suipe were just coming on.

—As to where to find good snipe shooting, the Turf, Field and Farm says;—"Commencing with Currituck, is North Caralina, suipe will be found in abundance about Norfolk, at Hampton, at Aquin Creek on the Patunine, three hours from Wushington; at Nottinglam, on the Patunic, the hours from Wushington; at Nottinglam, on the Patunican Bultinory; at Spesutia Island, and, indical, all around the bond of the Chesapeake Bay—all of these places are easily reached by rail and boat, but such is the ancertainty of finding this lickle bird anywhere in the migrating season that it would be advisable for the sportsman, before setting mrt for a given place, to ascertain before; and, by post or otherwise, whether the birds are positively there or not. O

setting airt far it given passes, whether the birds are positively there or not. On the land, Good Ground, April 5.—Last week a committer of reliable gentlemen was appointed to examine the sleph of our inlet, about which there has been some dispite, and they found it to be fully 10 rods wide, and averaging from the bay side out over the bar from seven to eight feet, with very strong tides. They expressed the opinion that it would remain open, for several years to come. No should the fishery will be better this coming Summer than it has been for several years. The goose and duck shooting is unusually gnost, the shooting commenced March 22d and will be good until the 15th of May. Two gentlemen visited Pon Quogne from New York a few days since, and in 3 days' shooting received 204 broad bills and whistlers. April 1, Capl. J. Priry and J. Foster killed 6 geese and 4 black thicks on Frishay. April 2, they shot down 53 geese, recovered 41, and two small buys picked up 7, which were stranded on the leeward share on account of the heavy wind blowing at the time. The balance escaped crippled. On Saturday the same gentlemen killed 9 geese and 1 red head, and other small ducks. Our old goose shooters at P. B. use live geese for deenys. Those wishing good shooting will meet with success by upplying to M. V. B. Spairrs, proprietor of the Bay View House, Pon Quogue, L. I., who can furuish all the necessaries for shooting.

M. V. B. S. Massachusetts, Salem, March 31, 1855.—A bunch of

M. V. B. S.

Massachusetts, Salem, March 31, 1875.—A bunch of gress wild north to-day. Blue birds, robins, black birds and sparrows are along, but the senson is very bunkward, and so, of coarse, are the birds. One woodcock was picked up on the railroad by a section hand; it probably killed itself by coming in contact with the telegraph wire; such is often the case. I hear of a crippled snipe being seen, but nothing definite. Bay dacks, or "whistlers," and such, are quite induced in which the everything labad is solid yet.

New Jersey Kinggis, Adder Hause, Barroy Color

New Jersey, Kinsey's, Ashley House, Barnegat Inlet, April 2.—Solomon Loper, Jessie Birdsall, with two gentlemen from New York, killed ta-day in a seaweed bunch 55 brant, 2 broad bills, 3 black ducks; wind blowing a gale from southward. Nearly all the geese are leaving and the brant will soon follow. brant will soon follow.

PENNSYLVANIA, Philadelphia, March 30.—I wrote you yesterday that parties were off early after suipe. I find large strings of them coming in, and gunners report the marshes thick with them.

J. G.

Virginia.—The Norfolk l'irginian of March 23d states that three gentlemen bagged 150 suipe near that city within tweaty four hours, this Spring.

tweaty-four hours, this Spring.

The Potomac.—The lower Potomae is represented to be alive with ducks, in unusually prime condition. The shinghter among them exceeds that Inflicted by sportsmen for years, and the proportion of canvas backs is very much greater than for many seasons. Mr. "Dick" Nicholsmajust returned from a trip as far south as l'ort Tobacco, where he bugged a dozen ducks, a swan, and forty mek suipes, reports that Mr. George Sheckels and parly, whom he saw at Glymont, will return with four hundred ducks, mostly canvas backs. It seems an anomady in the condition of our markets that the luscious canvas back duck easts less than the imponderable jack snipe. — Washington Herald.

Herald.

NORTH CAROLINA—Marion, March 28th.—The senson is buckward up here in the mountains, and but few snipe have arrived. I killed one yesterday, and stuffed and mounted it.

G. H. M., M. D.

INDIANA - Palparaiso, March 31st. - Splendid duck shoot-

ing here.

Missount, Honnibal, Mo., March 29, 1875.—A party of five of our sportsmen, together with Mr. Colbura, President of Detroit Club, returned yestermay from a week's shoot and brought in as evidence of their sport, 559 ducks, (most all mallards,) and five geese. Their shooting graunds were about twenty miles below this place, near the river. Snipe are just beginning to come in.

R. B.

stransmigrated spirit expects us to sing all of its praises that yet remain unsung; which we shall do with a reliable on the time honored principle that "what is same for the goose is sauce for the gunder," and no questions asked. This we solemally swear, over the drad body!

"Gaosey, goosey gander?"

"At the sweet bird, feather or no than art a spirit of health, (thou comest in such questionable shape,) or art thou but a faney of the diseased brain? why? wherefore, and whereas? It was Good Ground, indeed, thou traversed once, and they say thy kindred still hover there in northward flight, lingering for a day that they may make hrave dishes for those that feast as only sportsmen can. Well; be It so! We'll tell the neighbors, that they may likewise know where thy kindred most do congregate, and if per-

Burnogroup, Conn., April 3, 1975.

SAVANNER, Gu., Norch 20, 1875

SAVANNAB, GB., Nacch 20, 1875.

Button Forest and Stream:—
Yesterday afternoon unite an exciting pigeon shooting match came off at the old Schutzen Park, ketween Danlel R. Rubertson of New York, and C. H. Westeat of this city, for \$100 a side, and resulted in favor of Rubertson, while is an old experienced pigeon shouler, while this was Mr. Westruit's first altempt. Messrs. W. M. Davidson and H. C. Steqhens neuralns judges, J. P. White and Paul Hasketins shot judges, and Alex. Irving as referee.

Mutch at 25 birds each, 21 yards risa, 80 yards houndary, 14 oz shot D. R. Rubertson...111001011101011101011100-11
C. H. Westenn...000011111111110100110101010100-11

—A pigeon match was shot at nine birds at Statlroy, Canada, on Good Friday, for a French mantelpiece check, presented by Mr. L. H. Smith, of Strathroy. The prize was won by Mr. George Billington, who made an excellent score, killing his nine birds in good style. There were eleven entries; scores ranging from four to nine.

—A monster pigeou shooting lournament at Ningara Falls, Canula side, is promised for the coming season.

CANANDAIGUA, N. Y., Murch 29, 1875.

Edition Furest and Sturam:—

1 noticed in your table of Close Seasons, published in your issue of March 25th, you condited to mention the protection of wood stack in this State, from January 1st to September 1st, which fact you will find by referring to Sec. 2 of Chap. 390, Laws of 1874. You will forgive the correction, please, and call the alterition of sporteness to the change.

Yours respectfully,

1. 3. 8.

PROTECTION OF MOOSE.

Pontland, Me., March, 1875.

POTITAND, Me., March, 1875.

Editon Forest and Stream:—

An item in regard to the game laws of Maine, under the henting "List of Acts," in your number of April 1st, is likely to give a wrong impression. The act far the protection of moose (khap. 12) approved February 16th, 1877, prohibits the taking or killing at moose before October 1st 1880, with a penalty of \$100 for each and kilted in violation of this act. Any person selling, or having in possession any mouse meal or link, is also liable to the same penalty, unless such meat or hide he in his possession at the time of this act taking effect. The tiem referred by an also the law as given in the list of Forest and Stream for March 13th, would imply a close season, whereas it is total prohibition for five years. Fortunately for the proper observation of this law, moose are not easily taken, even on the sty, and are much less abundant than is poor whisky.

FELIX

Sea and Biver Hishing. FISH IN SEASON IN APRIL.

Salmon Trout, Salmo confints.

FISH IN MARKET. -FIS'2 of all description continues in good supply. Potomac shad sell for 50 cents. On Tucsday the first North River shad of the season made its appearance, but in a week a full supply may be expected. Live cod is worth 8 cents; haddock 8 cents; hulibut 18 eents; lobslers 15 cents; striped bass are arriving from the Potomac in large quantities and sell at 15 cents; California salmon bring 40 cents. San Domingo green lartle are coming in market in small quantities, and are worth 20 cents per pound. Canada trout 30 cents; caltivated, ilo. r pound. We saw at Mr. Blackford's a magnificent lot of trout, averaging in weight 2 pounds, and in such fine fat condition as 10 make an epicure's mouth water. These fish were raised at the Wild Wood Trout Parm at East Freelown, Mass. The supply in the aquarium has been replenished with some very handsome trout from Furman's ponds at Muspeth, L. I. Shrimps are worth \$1 25 per gallon, and prawns from Savannult, \$1 50.

-The angling season may now be said to be fairly open. They are ealthing salmon in Nova Scotia, where the rna begins in March, and trout on Long Islaml, where the conditions are more favorable than elsewhere in this region for an early east of the fly. There the streams and points are wholly clear of ice, and scarcely a vestige or indication of Winter remains. Many professionals have already taken a hack at the fontinals, and the number of eager anglers is increasing daily. From all accounts good labels in taken to the formula of the country good labels in the formula of the country good. increasing daily. From all accounts good lack invariably attends their efforts, and the trout respond playfully to the invitations dexterously thrown aut to them. Mr. Reynul has tempted the trout in the creek of the South Side Club; Strong has tried the water at Suffolk; and on the 29th and 30th March Messrs. Abbey and Gelston took sixty-five fish from Minell's Paul at South Oyster Bay, the largest weighing a pound a half. There is very little free fishing, although it is possible to lift a fish from the creeks nt South Oyster Bay when the tide favors, and at Carmair's and the like places, the public can always have a privilege at a dollar per pound. The best fishing ground of a semi-public character is the stream which Amusa Keith has so plentifully stocked, where one can obtain a privilege at a moderate rate per diem, and take away all the fish he cau catch. His address is at the Pavilion Hotel, Islip.

The best three-ply east for this season is an Abbey stretcher, green thake dropper, and cow dung for the hand

Although the streams of the interior are not yet open for angling they are nevertheless rapidly purging them-selves of ice and snow water, and a forteight will doubt best find amony of them in fair order. The ice still remains bss find anny of them in fair order. The ice still remains solid in all the interior lakes—two feet thick at Chutanqua; three feet thick in the Adironlacks; four feet in Lake Pepin, Minnesota. Some reports will be found below, and these we shall give from week to week, keeping our renders as thoroughly posted as pussible. We lieg our correspondents in all quarters to forward us prompt information on these points for the general good.

-We are receiving constant reminders in various ways of the stir that is taking place among the nuglers, who are everywhere making busy preparations for the approaching season, risking advice as to the selection of tackle, and where to go, and the condition of the water. The tackle shops are occupied constantly in filling orders, and the building Spring everywhere wears a roscote lone. Chapman, the celebroted "spoon maker" of Theresa, New York, whose advertisement so frequently makes a display in our columns, is reaping a harvest, they say, by the sale of trolling tackle which will presently be in active demand for ervice, as soon as the ice in the lakes breaks up. The trolling season for salmon trout lasts only three or four weeks, and those who wish to avail themselves of this rare sport will line to take the month of May for it. The ice in the Adirondacks and the Moosehead Lake region of Maine usually disappears by the close of April, and though thick cuough now, it is dissolving rapidly, and there is every prospect that the season will be so later than usual.

Speaking of the Adirondacks, E. R. Wallace, of Syracuse, is revising his Wilderness Guide, and onling a corceet map, which we believe hos been prepared by Mr. Ely from recent surveys of Verplanck Colvin, Esq., in behalf of the Sbete. This guide and map ought to meet with a larger sale than Marray's book. No person visiting the Adironducks should fail to purchase it.

Our readers bave lead some intimation lately of the "coming bass rod;" well it has come! Yesterday we received by express one of those beautiful rods made by Chis. F. Orvis, of Manchester, Vt., and which we believe to be unsarpassed by any worden rod made. Its length is nine and a half feet, in three nearly equal parts, the but of ash, and the widdle joint and tip of hance wood. It has a good stiff back, which is wanted in bass lishing, and we first assured would please that well known Western expert, "Oconomowoe." Mr. Orvis, however, must rig his rods with standing guides, and not rings, if he expects us to make a successfull east, "over our head," you know. This roll is a beauty, and we should feel proud to be its maker. The cost, as advertised, is \$10.

Two packets of flies have been laid on our table for ex amination. One from Couray, Bissett and Malleson contains a dozen flies of the Mullaly pattern to which we referred recently, as having the barbs of the hooks concentral between the ivings. They are attracting considerable attention from their novelty. Abbey & Imbrie sent us some "blue bottles," which is early, considering the coolness of the season. We shall say nothing about them, as they can do their own blowing, -in the meat shops.

By the way, Messrs. Abbey & Imbric have on exhibition by the way, messis. About a finance have on exhibition in their aquaritum at 43 Mablen Lane, some pretty specimens of salmon raised at New Hope. Pennsylvania, of which we wrote recently. There is a three year old grilse and three smolts of the salar variety, and a pretty little part of the quinnut tribe. They will well repay juspection

-Walter M. Brackett, Esq., of Roston, has recently completed duplicates of his celebrated salmon paintings, cu-tilled the "Rise," the "Luap," the "Struggle," and "Lami-ed," which were sold in England for several thousand dollars, and they will be exhibited uext mouth at Sacdecor's new gallery in Fifth avenue. This same artist wishes to procure a salmon trout (confinis) for a study for his canvas. Who will kindly send him one?

—A correspondent of the New York Times, signing himself "W. L. W., of Bay Shore, Lond Island, presents some very strong arguments, supported by facts, against the passage of the proposed law to prohibit the use of poundnets in the Great South Bay. The argument advanced in favor of the law is that the nets are set in and across the inlets, capturing all the fish, and preventing their passage into the bay. The objector decides the assertion. He says, to set acts in the inlet is simply an impossibility. One might as well try to set one across Hell Gate in the East Rivet. There is not a pound net within two miles of the Rivet. There is not a pound net within two miles of the inlet, and so far from their use causing a diminution of the fish, they have never been so abundant for five years past us they were last year. The fish chiefly caught in these nets are weakfish, porgies, moss-bunkers, and Spanish

— John Commings, of Utics, N. Y., has presented Sette Green, the great By caster of America, one of his hest split y rmls. Seth pronounces it one of the hest pro-and best made rods he has ever seen—one that bamboo tly rads.

-Messrs, Shattuck and Jones, of Fanueil Ifall Murket Boston, have had on exhibition a mouster codfish, weigh ing just ninely-six pounds, which was caught on the Middle Bank, about twenty miles off Boston Light. New Hamestine, April 1st.—Last year the free broke up at Winnipesaukee of March 20th, and but little snow remained in the woods in the most secluded places. This year it date the tee was still firm and about three forthick. The extreme rold wenther of the Winter has had the effect to prevent much fishing through the ice, so that the fancy inhobitants of the lake have been left to quiethole and increased chances of reproduction.

(Consequent —I.S. Brook was of Williamstin County.)

Connecticut.—J. S. Brookway, of Williamattic, Coun, eaught a trout somewhere in that State, hat week, which measured twenty-four inches and one half long, and sever inches deep, and weighed six pounds and a quarter. It was trolling for pickered with a minmov at the time. The tish type sold at the Parker House, in Boston, for \$5. The Worcester Press is our authority.

FLORIDA, New Surgroa, March 19.—Two or three game associations are forbing in this Soud. Will notify you when fully organized. Weather very marm; itshing very good for sheepshead, bass, bluefish, &c. Most of the guests are leaving now. Mr. S. C. Clirke, your correspondent, is still here and husy fishing.

G. J. A.

LOUISIANA, New Orleans, March 29.—Cronker, red fishing is good in Lake funtelentrain, in front of Mandeville. One day last week I caught 100 croskers in two hours from a bont with a hand line, to gether with two red fish and two sheepshead.

gether with two real fish and two succession.

California, San Francisco, Morch 23.—Next Thursday, April 1st, our trout senson commences. We have still a few fine trout streams within a day's ride of this city. The gribe, and larger salmon fishing in the bay still hobbs pretty good. A few have been taken of seven, ten and eighteen pounds weight, by rod fishing. When these fish disappear from these grounds, hitherto unfrequented by them, I will let you know. Some say about twenty years ago salmon were in these same waters in goodly numbers.

E. J. Hoopen.

them, I will let yon know. Some say about twenty years ago salmon were in these same waters in goodly nambers.

E. J. Hoopen.

Fishing Matters —The number of fishing arrivals for the week ending April 1st, was forty-seven—forty-four from Georges and three from the Grand Banks. The Georges-men leting is good fares, averaging about 50,000 pounds cod and 1,000 pounds halibut. Total receipts of codfish, 2,000,000 pounds. Bands halibut in monbrate supply, the receipts of the past wreek being about 195,000 pounds, which have met with quick sale, mostly at \$9 and \$4.50 per civit, for white and grey. The receipts of Georges cod thus for, this senson, are not more than one-third as large as those of last year, for the same period, and the ourket is very firm in consequence.

The Newfoundland and New Brinswick frozen herring flert have completed their season's work. The business has been prosecuted without loss of vressel properly, and but two lives lave been saccificed. The herring have met with ready sale at renunceative prices, and the season, as a whole, has proved a profitable one to the litert. The second trips of a partion of the New Brunswick flost proved unsuccessful, owing to the failure of the late catch there, the vessels belag obliged to return without enroges.

Au Eastport, Maine, dispatch says:—The trozen herring business is over for the season, and has born very inght and most of the nets having been laving been very light and most of the nets having been laving been very light and most of the nets having been laving been very market week. Some thirty sail of sciners will ran fresh mackered to the New York market. There is yet a considerable slock of last year's mackered on hand, which will necessarily affect the price of the new salt catch. Last season, the new mackered came in on mentally market, and were in good demand at \$10 and \$12 per harret.

The seal fishing fleet will be so hate in arriving on the scaling grounds, this season, that the eatch will unhoubedly be small.

ENGLISH GENTLEMEN IN VIRGINIA.

VIRGINIA, despite her worn out and devastated lauds. V seems to hold out to Englishmen the same attrac-tions that originally invited their honorable kiusmen to colonize her broad domnin; for we note the recent settlement within her territory of many English gentlemen of good family, as well as the industrious efforts that have been made for some years past to induce the emigration thither of English emigrants of the working classes. pecial effort is being made at the present time by J. S. Stanley James, Esq., formerly of the London News, and other gentlemen of note, to promote this object through a company organized for the express purpose of re-colonization; and they have shown their sincerity and carnestness by purchasing lands themselves, introducing stock and various improvements, and settling down to iborough work of restoration. It is natural that their example should produce the effect desired.

dnee the effect desired.

One of these new settlers in whom we are naturally most interested is Capt. J. M. Taylor, lately Field Editor of Forest and Stream, who, with his brother Farnworth Taylor, has purchased a tobuceo plantatiou and farm near "Blacks and Whites Depol," in Nottoway county, formerly owned by the Sydnor and Baker families, and known for years as "The Refreat." The lands are situated in the heart of the best hunting grounds of the State, and are equi-distant from Richmond and Lynchburg, and in the county adjoining the one selected by Mr. James for his operations. Captain Taylor departed for his new home last week, and has taken with him some good stock, together with some dogs of the Raymond-Laverack, Maedona, Rowe, and Horace Smith breeds of pointers unit setters, and also a and Horace Smith breeds of pointers und setters, and also a pointer from the celebrated Waddell kennel, so as to perpetuate these splendid animals in the fine old State of Virginia We take pleasure in wishing Capt. Taylor and his brother every success in their new undertaking, as we understand they go as private gentlemen only, and do not wish on any account to engage in the politics of the State. We are pleased to state to our subscribers and are pleased to state to our subscribers and friends that Capt. Taylor will represent this journal in the Virginias as its special correspondent, and will be happy to make arrangements for geutlemen sportsmen for the Fall wild fowl shooting on the James, York, and other rivers; also deer, quail, turkey, &c. on the uplands.

Mr. Stanley James has also written us a letter giving some

account of his operations in Prince Edwards county, which will be read with interest here and abroad. Prominent among his efforts will be the introduction of English game.

We print:—

FARMYLLE, Vs., March 22, 1875.

Editor Forest and Stheam:—

Messis. Walter and Richard Powys, some two years ago, hought a fine plantation within five miles of this flourishing city. Mighty hunters and abbletes in the "old country," they are great supporters of every kind of true sport in this section, which is largely settled by Englishmen. Mr. Walter Powys will be known by name to many readers of Fonest and Stheam as the celebrated cricketer and instable bowter of Cambridge University. Last Spring he went to England for the express purpose of pluying in the University Match, the great event of the cricket year, and the score showed what good work he did for Cambridge. When he returned, in the early Fall, he brought out with him thirty-two couples of English rabbits, and the same number of pheasants. These were turned loose on the plantation, and seem to have become easily acctimated and promise to largely increase and multiply. Half of the rabbits are of a very peculiar breed, being in color almost a true black. These were procured by Mr. Powys from Hawkstone, the beautiful seat of Lord Hill. In this Shropshire paradise the black rabbits awarm like ants, and at a distance are mistaken by strangers for crows. They were introduced at Hawkstone some years ago from an unknown source, and are only to be found there to England. Their fur is very fine, and the skibs in Lordon fetch two to lirre shiftings each, Messrs. Prowys have thus, perchance, introduced a fruitful source of food and revenue in the future—although an old English fariner, settled in this section, who has felt the evil of the game taws in Great Britain, declares that "future generalions will curse the name of Powys, fur first introducing the rubbit into Virginia." Mr. Watter Powys, on his next trip to England, will bring back with him some hares, pariridges, and English song hirds. This unleavor, it is to be hoped, will, in a few years, alter considerably the (at precent) rather monotonous sport in Prince Edward county, although it is h

INTERNATIONAL GAME LAWS.

A "'International Association" is now in process of A N "International Association" is now in process of formalion under the auspices of leading scientists of the United States and Canada, with the view to devise the best means for ; roteeling the game and fish of both countries, it being obvious that nothing but the most intelligent discussion can ever reach the great desideratum so long sought for. The names of several hundred have already been filed as pledged to its support, the majority of whom have never before lent their aid to any similar object. Among these are such scholars and geographers object. Among these are such scholars and geographers as Prof. F. V. Hayden, Dr. Yarrow, Profs. Cope, Gill, and Herbert Marsh, of Toronto; S. B. Buckley, State Geologist of Texas; Prof. Robt. Bell, of the Canadian Geological gist of Texas; Prof. Robt. Bell, of the Canadian Geological Survey; Gen. Waul, of Texas; Wright Rives and S. Ledyard Pheips, of Washington; Col. G. W. Wingate, Dr. Janeway, U. S. A., Judge Clinton, of Buffalo; J. L. LaConte, of Philadelphia Zoological Society; Judge Wesl, of North Carolina; M. G. Ellzey, Esq., of Virginia, men who are familiar with the geography, elimate, flora and faunn of Amerlea; so that it seems probable that an intelligent discussion of the habits of our creatures and the means of preserving them may at last be seemed, and a plan of close sensons devised that last be secured, and a plan of close sensons devised that

will be comprehensive, suitable, and sufficient.

Iuasmuch as several of the most prominent members of the "National Sportsman's Association" are included within the ranks of the "International," an identity of international of the statement of interests and co-operation of forces is at once established that must be productive of only the happiest and most vulnable results. The former organization, acting in its capacity of an administrative and executive force, with powerful ramifications from end to end of the country, will be a powerful ally to dissemminate the knowledge and enforce the laws which the learner is all hours which the learner is all t enforce the laws which the International hope to impart aud devise

It is probable that a call will be issued within a fortulght for a Convention to be held at such future time as may seem best for the general good. Next week we shall print the circular letter by which this powerful "International" urmy of prolection has been recruited, and the names of the gentlemen under whose auspices it was issued. There seems to be a general enthusiasm in behalf of the move-ment and a uniform acquiescence in the belief that our efforts for protecting our game have at last taken proper and practicable shape.

Spring Vegetables.—The first green peas of the season are arriving from Savaunah and sell for \$2 per peck. Asparagus, both from the South and California, is quite plentiful at 35 cents per buneb. Bermula is supplying us with new potatoes and tomatoes, the former worth \$1 20 per peck, and the latter 50 cents per quart. Strawberries are being received in limited quantities from California and a few brought by the Allegretti Refrigerator Company from Florida; they sell for \$1.75 per quart. Loug Island is providing very fine mushrooms at 50 cents per quart, and also water cresses at 25 cents. Boston lettuce sells for \$1 per one dozen heads.

-Prof. Robert Bell, of the Canadian Geological Survey, who has been engaged for several years in exploration of Manitoba and the regions Northwest of it, will next Summer turn his attention to the unexplored region north of Lake Huron and east of Lake Superior. The researches of Prof. Bell have added much to our geographical knowledge of British America, and we have no cloubt that the information to be gained in this new section will not only be interesting but valuable.

ART .- The Spring Exhibition of the National Academy of Design opens to day and will close on the 29th of May. Experiments with Steel and Iron.—We sometime since called atteution to the experiments and discoveries made by Commander Beardslee of our Navy in the manufacture of iron suitable for chain cables and other work required to stand immense strains. Congress having made an appropriation for the purpose of continuing and perfecting these and other experiments, the President, after due consultation with the Secretary of War and the Secretary of the Navy, has appointed the following board of officers as is provided for in the act, viz. Lient. Col. T. T. S. Laidley, U. S. A.; Commander L. A. Beardslee, U. S. N.; Lient. Col. Q. A. Gilmore, U. S. A.; David Smith, chief engineer, U. S. N.; Gen. Savoy Smith, civil engineer; Prof. R. H. Thurstou, of the Stevens Institute of Technology of Hoboken, N. J. The board is a remarkably strong one and will, no doubt, be able to demonstrate that American material is superior to foreign, and also furnish EXPERIMENTS WITH STEEL AND IRON.-We sometime American material is superior to foreign, and also furnish American engineers the data necessary to use constructive materials intelligently and economically. We note, also, that one of the cables made by Commander Beardslee has been forwarded to this city to be placed on board the frigate Tennessee. We have every reason to congratulate Commander Beardslee upon the success which has thus far attended his efforts, and also upon his present appointment, which must be an immense relief from his late ardous duties.

OPEN AIR LITERATURE. - The "Kentucky Lico Stock Record," which is now entering the third month of its existence, seems to have jumped into a hig opening which no one discovered before. Mr. B. G. Brnee is undoubtedly at home in Lexington where his paper is published, and his numerous friends gather around him. His journal of sixleeu pages is not so large or printed in such fine type as to discourage the reader from its thorough perusal, and so, one finds much useful information that would otherwise escape his notice; besides, it is not all devoted to horse and hog and such like stock. Another relief which the general reader has, is that six of its pages are devoted to advertisements, and so everybody is happy all round.

The sporting journal published at Chicago, now called "The Field," but originally "Field and Stream," has become a very creditable paper under its new management, and hears every indication of healthy growth, and elicit.

and bears every indication of healthy growth, and ultimate success as a representative of Western sports and sports-

men, which it aspires to be.

Our neighbor, the "Turf Field and Furm," needs no special comment here. It is always meritorious, und enjoys its substantial success with an otium cum dig. that is seldom

disturbed by passing events.

The "American Sportsman," printed at West Meriden,

The "American Sportsman," printed at West Meriden, Connecticut, has changed its name to "Rod and Gun." Several changes have recently taken place in the editorial department of "Wilkes Spirit of the Times."

The editor of "The Sportsman," published in this city is spoken of as being an fait on Turf topics.

The "Canadian Gentlemen's Journal and Sporting Times," of Toronto, is a live and spicy paper, (in its way,) considering the natural torpidity that belongs to denigens considering the natural torpidity that belongs to denizens of Aretic elimes. It copies bodily editorials and correspondence ad lib. from Folest and Stheam, every week, and seldom gives credit. It has done so for eighteen months.

THE GREAT SOUTHWEST."—We do not refer to the district itself, but to the paper with the above little, which, although published in the interests of the Missouri, Kansas and Texas Railway, contains much valuable information regarding the country through which this road passes. The current number contains, among others, a description of the town of Chetopa, Kansas, a point at which the Irish Team remained a week during their western hunling trip. Prairie chickens, quail, rabbits and hares abound. Along the river are many sloughs and low marshy meadows, where duck greeks spine ployer and engles can be desired. where duck, geese, snipe, plover and curlew can be found in countless numbers. Chetopa, however, is but one of in countless numbers. Chetopa, however, is but one of the many points along the road where the sportsman finds an abundance of game. The Neosho Vulley, Parsons, and New Chicago are similarly favored, and it is a question which surprises and pleases the visitor most, the sporting facilities or the evidences of refined civilizathe sporting facilities of the evidences of refined civiliza-tion in the shape of handsome public buildings and private residences. Where a few years ago stood only a frontiers-man's log hut, are now school buildings and villus. The wonderful growth of our country is nowhere more marked than in Kansas and Northern Texas along the line of the

-The Brooklyn Union, which has been for several years trying to demonstate, at great expense, that the City of Churches can support two secular daily papers, has at last passed into the hands of strangers, and, being lifted from the mire of domestic alliances, will probably succeed. Its the mire of domestic alliances, will probably succeed. Its new purchaser is Henry Martyn Smith, Esq., who built the Grand Pacific Hotel at Chicago after the fire, and for twenty years recognized as one of the leading journalists of that wicked city of the plains. If he caunot make the Brooklyn Union go it must die beyond resuscitation or redemption. Already the paper shows the evidences of marked editorial ability, and a munipulation and use of the materials collected by the daily news gatherer such us only a born editor could be accused of. We wish it the success which it deserves under its new management. Anybody by the name of Smith ought to do well.

-A letter from Col. McCarty dated at Lomlon, March 20th, says that he has 141 geutlemen engaged 40 join his hunting expedition, but that the party will not start until July 1st.

Music.—In these days of comparative failure of Italian Opera, when impressarios are seeking release from contracts, and disconsolate song birds wing their flights to native and more congenial climes, it is pleasing to note the success and enthusiasm which greets the home bred article. Miss feelogg has organized a company which both in this city and Boston, has met with well merited recognition. Madame Jennie Van Zandt, who is the "right hower" of the troupe, and whose merits as an artisto are well known, was the recipient of a benefit and ovation on Thursday hist, the warmth of which must have been equally gratifying to the lady and the singer.

-Fuyette S. Giles, Esq., late President of the Blooming Gruve Purk Association, sailed for Switzerland in the steamer "Amerique" last Saturday. He gave a parting entertainment on board to a few friends.

SOUTHWEST FLORIDA-NO. 4.

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN

PERSONS undertaking a heat cruise on the sonthwest coast should provide themselves with the published charts of Charlotte Harbor. These show the soundings of Boca Grande, and Caloosa entrances; and San Carlos Bay to the mouth of the Caloosahatchie River. Outside of these localities the tourist will be compelled to pick his way unless he is well supplied with this world's goods and can engage the services of a pilot. Occasionally an old coaster will be met with, from whom some valuable information can be obtained regarding the navigation of localities the wauderer may wish to visit—and sucb opportunities should be taken advantage of.

We may remark at this time that we found our outfit deficient in several important implements. This being our first boot ernise in this section, and having a large amount of plunder to stow and transport we were somewhat excusable for leaving behind three important werpons, to wit: a harpoon, grains, and turtle peg. The two former are well known, and can be obtained in fishing tackle stores; but as the turtle peg is seldom seen in the North I may at some future time give a description of it. In cummerating on a former occasion the articles composing our outlit, I neglected to mention a Spanish cast net. I purchased one before leaving the North, but found it entirely useless. It was made of cotton twine, eight feet wide, and with but six pounds of lead to sink it. Fur use in southern waters a net should be made of the best gilling twine, twelve to fourteen pounds of lead; a cast act of any other description will prove ascless, and had better remain in the North to decorate the window of some fishing tachle store.

Punta Rassa has been very approprintely termed the "jumping off place of all creation." At this point the tourist will find two large wooden buildings, and some pulmetto huts, and a large and substantial dock. The first building is a large structure resembling a warehouse, and is the residence of two operators in charge of the Inter-Colonial Ocean Telegraph wires and station at this point; and also of two observers representing "Old Prob." North of the telegraph huilding is a large wooden structure belonging to Capt. Henry, and used as a post office and lodging quarters for the employees of Capt. H., and those engaged in shipping cattle. The palmetto huts belong to a gentleman who has an extensive fishery at this point. This is the point where eattle are shipped from southern Florida to Key West and Cuba. The operators and observers at this point treated us with great courtesy and attention, and we are prompted to thus publicly express our thanks.

are prompted to thus publicly express our tbanks.

Finding nothing to interest us at this very uninteresting point, we left on the morning of the 26th for the Caloosabatchie River, and found the entrance a difficult piece of navigation. By advice we took the boat channel, and were favored with a head wind and ebb tide; a narrow, crooked channel, bounded and obstructed by mud flats and coon oyster bars. After one hour's beating we made one thou sand feet, and surmounted the difficulties incident to the navigation. We ultimately reached the widest part of the river, and found it to be a grand stream, nearly equaling in size the St. Johns between Jacksonville and Orange Mills. We found the shores high and clothed with pine timber of fair quality as far up as Fort Myers. At 6:30 we moored to the dock at the last named phace—25 miles distant from Punta Rassa. This was an important military post during the first and second Indian wars. At the termination of the late unpleasantness some malicious persons destroyed by fire all the buildings but one. At the present lime the place contains a population of about 100 persons, nearly all of whom are engaged in cattle missing or herding in southwest Florida. We found the residents courteous and hospitable and ready to oblige us in any way. As an evidence of the tropical character of the climate

As an evidence of the tropical character of the climate at this point I need but refer to the fact that the wanderer will find eleven cocoa nut trees growing on the margin of the river and producing fruit. We see no reason why tropical fruits and plants should not be profitably cultivated on the banks of the Caloosahatebie. If we were young and disposed to make ourselves a home in a new country, we would without hesitation locate on the banks of this stream. The winters are pleasant, and the summers not uncomfortably worm. Northern people entertain the opinion that "the range of the thermometer in southern Florida must be much higher than in the North!" but this is a mistake. To illustrate this position I shall select at random a few statistics from Blodgett's excellent and reliable work on Climatology; and for the purposes of comparison again refer to observations at Punta Rassa for the year 1874—

thereby illustrating the highest and lowest thermometric ranges:-

	Land speculators r	esidii	ıg a	t l	Bay	-								

Land speculators residing at Bay Bisenyne who have axes to grind, and those who have visited the Indian Rivereountry, go into cestacies over the superiority of the climate of the Southern Atlantic coast, and syread their opinions broadcast over the land. Brinton in his excellent work an "Florida and the South" remarks: "The highest Winter temperature observed anywhere on the mainland of the United States was at Fort Dallas on the Miami River, and at New Smyrna, some miles north of it, both on the east coast of Florida. Furthermore their range is less than mywhere else. During four years that the army officers watched the thermometer at Fort Dallas the highest point reached by the mercury was 95°, the lowest 35°; a range therefore of 60° in four years." The highest range of the thermometer for the last three years at Punta Rassa was 95, and the lowest 40, a range therefore of but 55°. From these data we are inclined to believe that the climate of the southwest coast will favorably compare with that of the Miami and Imlian River sections.

In Southern Florida ealm, warm and sweltering nights,

In Southern Florida ealm, warm and sweltering nights, during the Summer months are unknown, but on the contrary a refreshing breeze exists, and blankets become almost a necessity. During the nights of July and Angust when northern people are suffering from a cahn and sultry atmosphere and praying for a refreshing breeze to enable them to sleep! The residents of Southern Florida sleep soundly, and are refreshed by cooling and invigorating zephyrs wafted from old mother ocean.

During the Winter months in Southern Florida rains are unfrequent, but in Summer when vegetation is active, maisture demanded, and frequent rain storms desirable and required to favor vegetable growth and cool the atmosphere, such rains are of almost daily occurrence. From the time we left Sarasota Bay until we reached Clear Water Harbor on our return, we did not see a drop of rain. For the purpose of rendering our statements more clear and authoritative, we shall quote from Blodgett's Climatology, some data showing the mean annual precipitation of rain and melted suow at a few points in the United States:—

To those contemplating a change of location, more especially if they intend engaging in the cultivation of the soil, we would arge the advisability of considering climatic conditions, as tending to health, langevity, hoolify contents, and pecuniary results. We often hear the adjection arged that the climate of Florida is concruiting and delalitation, and that produce settling there became large as a second ting, and that people settling there become lazy as a se-quence of ellmatic conditions. We whill that an exces-sively high thermometric range associated with a chose moist atmosphere, will relax and delidited the human system, but these conditions do not exist in southwest Flori-do; and the emigrant will not become indefent incless he is constitutionally hazy. The residents of the South are after referred in as wanting energy and perseverages; but when such references are made we must remeather that during the reign of King Cuttan to labor was unfashhmahle, and the reign of King Cutton to layor was untushinname, and that slaves were plenty and ever ready to minister to the wants of the white, either adult or child. Cynics, who are ever ready to assail the South and Southerners, must re-member that the male portion of nor northern population have been educated to some ralling in early life-that labor and netivity have become a second nature with them. Falu-cation loss more to do with netive baldits than ellunte. We often hear ungenerous and censorious praple refer to the "indolent unture of the Southern people," but if they bring late review the manhets engaged on the Confederate side during the late appleasantness, and the results attained by a comparatively small number of half starved and halt armed men, they will be forced to confess that luziness and indolence alid not characterize the Confrdence armies from '61 to '65. In the South toalsy the female particular the of those who were intended by a wise and learning and labor from the words who were included by a wise and labor from the find the words and false problem. of those who were intended by a wise and heneficent Crea tor to become helpmates of man. In our many wanderings in the Southern States we have fact with numerous Northern people who, after years of residence in the South were as netive, industrious, and enterprising as before they left a more inhospitable cliques. I am prompted to write as I do in consequence of having daily and hourly listened to that do in consequence of having daily annthourly listened to thin nukind, unjust, and consorious criticisms of Northernets—persons who sloodle extend the hund of synquatry and speak words of kindness to a suffering and struggling pengle. I am a Northerner, but must confess, that I am allogosted with the want of Christian charity that characterizes amny bigated prople of my section: "Let us have peace," and to bring about this linleyan state let us treat the Southern people as we would be treated—extend to them the hard of brotherhand, and use words of reproach and kindness, instead of censore and words of reproach and condemnation. To those who intend visiting the South as tourists or sportsmen I would say, be generous, be kind, be honest, and a "true Southern welcome" and unhanneded hospitality will greet you everywhere. From the manishod to the pulmetto hat.

In our Northern States we have thousands of persons who are suffering from rhemmitic, pulmanary and chronic diseases, whose health would be improved and lives prolonged, if they could be induced to settle in the gradel climate of Florida. Independent of hemaliting themselves they would advance the interests of the trader branches clinging around the parent stem.

The old Romans used this pregnant expression: Initations sandibus hyems—" Winter, the foe of the aged." Mothern research proves its currectures. An entineat statisticiac, calculating from nearly 55,000 cases over 00 years of ago, discovered the startling fact that the deaths in January were within a fraction twice as many as in July. Such a statement reminds us of the significant expression of another distinguished observer, who had chosely studied the relation of mortality and temperature, and wrote: "Wuves of heat are waves of life; and waves of each."

I am fully prepared to admit that some localities in the State are very unhealthy, and that undurious diseases occor to a great extent in certain portions of the State, but I likewise contend that certain sections of the State cannot be equalled by any portion of the world for leadinfulness; and some of the latter localities will be funded on the southwest coast.

Army returns are generally the most reliable, and exceedingly important when we come to estimate the sanitary advantages of any given section. During the Florida war the soldiers were exposed at all sensons in various portions of the State, and only those who have visited the pealinsula can form any idea of how terribly ardnons must be campaigning through the swamps and everglades of the State, Yet, according to the army medical statistics, the greatly mortality from disease in the army there, was only 26 per 1,000; and the average of the army elsewhere was 35 per 1,000; while in Texas it rose to 50, and on the lower Mississippi to 44 per 1,000.

At Freeco.

—The National Rifle Association have resolved to adopt the form of target in use at Wimbledon, viz., the circular disc, retaining four of the old first class targets for the use of the international team. The Amateur Rifle Child have elected Capt. II. Fulton President; Col. Jua. Budiac, Vice President. Full reports of the meetings in our ne. t issue.

The Rifle.

THE INTERNATIONAL MATCH.

At a unveiling of the joint committee, held list Friday, it was resolved that the days for preliminary practice to choose the American international team should be the 17th, 21st, 24th, and 28th of this month, at cleven o'clock A. M. The following letter to Col. Wingute from Major Leech was read:-

Dustan, Pebruary 5th, 1875

was read:—

Dublin, Pebruary 5th, 1875.

Mr Dran Colonel:—

At our meeting of Council two days agu, entwented for the purpose of considering the best line for holding our annual rifle meeting here, the return match with the Americans was the chief topic of discussion, as we are all aware that the later to June the match takes place the more convenient it will be for the Americans, and the Wundbedon meeting, commencing a week later—manely, on Monday, the 12th of July—enables the irish Rifle Association to hald its meeting later also. Finally, ours was fixed in deference to you and our other triends for the latest possible time—namely, Tuesday, 22th June, and three following days, the International match to take place on the 23th. Your shooting friends will thos have the opportunity of entering for all our competitions. I will also favite representative terms from England and Scotland to compete on the 23th, if agreeable to you, and not otherwise, and I will thank you to be me know your wish is in this respect as soon as possible.

yna to bet me know your wishes in this respect as soom as possible.

As to the match for the "All Treland Challenge Shield," phease to say it any four of your man will compete in that match, the ranges are 1,600 and 1,100 yards; twenty shots each at each distance; two righting shots for each man at each range; each team to consist of four men. The club thus represented by the team of four pays 25 antiance, and each competitor 21 besides; the money, less twenty-free per cent., is divided smongst the members of the winning team. With kind regards to all our friends, believe me, my dear Colonel, yourse very sincerely,

ARTHUR B. LERCH.

our friends, believe me, my dear Colonel, yours very sincerely,
ARTHUR B, LERCH.

ARTHUR B, LERCH.

ARTHUR B, LERCH.

ARTHUR B, LERCH.

No. 124 BROADWAY, NEW YORK, April 2, 1875.

TO THE RELEMEN OF ARERICA:—
A challeinge having been extended to you by Major Leech, on behalf of the riffernen of Ireland, to shout a return match in Dublin, an June 28th, 1875, the Amaieur Riffe Club of this city bave accepted it in your behalf. The following programme has been agreed upon, as being substantially that of the last international manch:—

Programms of the International mach:—

Programms of the International rifle toatch between the rillemen of the United States of America and the rifleruen of Ireland, represented by a team to be chosen from the members of the Irish Rifle Association, to take place in Ireland on the 29th of June, 1875, on the following Jerms, viz:—

Team—Each team to consist of not more than eight or less than six men, in the option of the Americans, whose decision will be unnounced on the day preceding the match. The American team to be composed exclusively in riflement born in the United States. The Irish team to consist of men qualified to shoot in the Irish eight at Winkiedon.

Rifles—Any not exceeding ten pounds weight, intuinium pull of triger three pounds. The Americans to shoot with rifles of born file American manufacture. The Irish to shoot with rifles of born file American manufacture.

Notic Ammunitions, Targota, and Marking—To be according to print-

ican manufacture. The Irish to shoot with ritles of bond fide Irish manufacture.

Nights, Amminitions, Targots, and Marking—To be according to printell rigulations in force at Wimbledon, 1873.

Ranges-8-0 yards, 1991 yards, and 1,100 yards.

Number of shoits—Fifteen at each range by each contpellior.

Privious Functioe—The American team to be allowed the use of the range tor practice for at least two days before the match.

Position—Amy, to artificial rest to be used rither for the rifle or person of the shooter. Targete, range, and all accessories for carrying out the match to devolve an the Irish. The Americans and Irish to choose a referre to act for their fram, Mr. Leech will act in the capacity of referee for the Irish team, and the respective referees shall mutually school on many trop, to whom, in case of difference of opinion, they shall reter, and whose decision shall be final.

The forms of the match to be signed by the President of the Amaleur Rifle Club on beball the rifletinen of America, and by Arthur Bleiner-based Leech, on behalf of the Irish team.

Duplican cupies of this programms to be exchanged, and all necessary arrangements to be completed on or before the lat day of June, 1875.

Should either team fall to make an appearance on the day and hoar agreed upon for the match, the team then present may claim the championship.

In nuking this step the Amaton Rifle Club do not claim that they include manon their weighter.

arrangements to be completed on or before the list day of Junie, 1875.

**Should either team fall to make an appearance on the day and toor agreed upon for the match, the team then present may claim the championship.

In taking this step the Amatour Ride Club do not claim that they include among their roembers the best riblemen of America; but only assume to act as your representatives, for the purpose of placing the matter in such a single as to promit all who prove themselves competent to composit, irrespective of their residence or membership.

The targets and scoring used in the match will be in accordance with the rules of the National Ride Association—12, largets six feat high, by tactive wide, having a black hullsey ethree test equate, surrounded by the "centre," six leet spaner, the cast of the kinget constituting the "outer;" buillaryes counting four points, centres thrice, outers two. Any slights allowed but telescapie, magnitying, and such as conceal the tagget so as to prevent the danger signal from being seen. Any ammanition may be used. Any position will be allowed which can be taken on level ground without a ribicial rests.

The teant shall consist of a capitaln and nine men, who shall be selected as fullows:—

1. The similing competitors shall be determined from funr consecutive scores of furty-five shots each, each score mode in a single day, without sighting abous, consisting of fifters shots at 8 8, 100, and 1,00 yards.

2. The members of the A nerican team of 1875 shall be allowed to stand upon the four scores made in their four last competitions at Creationar in 1854, ending with the Bennett match, provided they signify their circuous so to do in withing to the secretary of this committee on or her force the left April, 1853

3. All other competitors shall be required to shoot in four competitions at Creationar in 1854, ending some hier stores, who shaw the thickest aggregate in their house containing to their secures, subject, however, to the following provided,—

1 the land the competitor

By order of the Join! Committee of the Anneter Rifle Clab and the Number Rifle Association

Lestic C But ex, Secretary.

-Mr. Freligh, of the Bowery Theatre has offered the use of his house and diamatic corps for a representation any afternoon except Mondays and Saturdays, the fund to be a gift to the American Rifle Team,

A CLOSELY CONTESTED RIFLE MATCH IN CALIFORNIA. -One of the most sharply contested matches ever shot on the Pacific coast was decided at Alameda, opposite San Francisco, on Saturday, the 20th ult. The contestants were fifteen men selected from Company E, First Regiment, the same that now has the match preding with Company D, Twelfth Regiment, of this State, and a similar unmber from the Emmet Guard, of Virginia City, Nevada. The "bonauzas" were ready to stake any part of the Comstock lead, but finally \$1,000 was agreed upon as the sum to be shot for. The match was governed by the rules of the National Rille Association. Each man was ulbowed five shots, and before firing these he was permitted to take two sighting shots. Some contented themselves with one, while the greater number took the two. The distance was 200 yards. The Creedmoor turget was used. 200 yards.

As the match was shot at a short range the result, which will be found below, does not throw much light upon the more important event to be decided on the 26th of June. The shooting, although close, was by no means first class, and the Company E team must do much better to beat the New Yorkers. The following are the scores:-

THE NEW TARGETS

THE article below, which we take from the Army and Analy Journal, so ably represents the pro side of the question, that we cannot resist the temptation of giving it in extenso, trusting that it may bring forth an expression of opinion from some of those who are opposed to any change from the form of target now in vogue

question, that we cannot resist the temptation of giving it in extenso, trusting that it may bring forth an expression of opinion from some of those who are opposed to any change from the form of target now in vogue:—

The discussion in the last meeting of the Board of Directors of the National Ride Association as to a change in the targets and system of murking in use at Creedmoor has develtped the fact that there are differences of opinion on the advisability of the step among the directors themselves, and leaves the matter open to argument. So long as the Association was a unit on the subject, even in appearance, our desire to secure uniformity in ride practice in the United States, rather than to insist upon change in minor matters, forbid the advocacy in our columns of any system other than the one already in use at Creedmoor. Now that the matter is opened to discussion, and especially in view of the near approach of the International Return Match, the conditions are altered. Uniformity itself demands a change in the marking at Creedmoor. Our rithemen are to control at Dublin on the new Wimbledou targets, with the new marking and it will be a matter of vital necessity to familiarise them with those targets in advance. Otherwise, the change in appearance, the change in seoring, the change in the accuracy required, may prove very injurious, especially to the lower-scoring members of the learn, always the casiest to demoratize. For the convenience of the great public, who, judging from the past, will take an intense interest in the prospects of the coming match, it is well that thera should be a means of ready comparison, during preliminary practice, between our scores and thuse of the Irish, English and Scotch teams. Last year, while the Irish seores before the match were published, few people understood them, and none but experis were able to compare them, and then not directly, with those of our own team at practice. Made as they were on a different system, comparison is easy. At present, England and all t

In the new Wimbledon targets these anomalies are hanished. The shot nearest the centre of the target makes the hest score as a rule. The time may come when the enormous bullseye of the first class target may be further subdivided; and when it does come, the nation that leads the way to the finest shooting will compet the rest 10 follow or he left behind. The new targets conduce to finer shooting. Their only limit is in height, to six feet, the assumed height of a man. They possess the good points of the old—rapid marking—and something just as valuable, accuracy of judgment. The fact that they are advacated by Captain Fulton, the champion hang range shot of the worth, is only another point in favor of that gentleman, and we are glad that the weight of his word is found on the side of progress.

The Academy of Music was fairly packed on Saturday evening last, on the occusion of the benefit tendered to the American Teum by the lending amuteurs of this city. Willout heing invidious, it may be questioned which was the most attractive, the performance, or the magnificent ensem-ble of the house. However, considering the barn-like proportions of the place selected, the performance was excel-tent, and the grand object of a contribution to the neces-sary fund, fully accomplished.

sary fund, fully accomplished.

—Col. Wingate, the new Inspector General of Rille Practice, was in Albany Thursday hobling a conference with the Adjutant General on the mode of ritle practice to be ordered of the militia during the coming Summer. Instead of the parades by regiment the soldiers will praceed to the range in companies and squads under completent instruction, and every member will be required to undergo instruction. Those making a certain average will be denominated and receive a badge as marksmen, and the range of Creedmoor with be thrown open to the National Guard, when in uniform, without charge on certain days of the week,

The Borse and Course.

—Weather like the present delights the hearts of owners and trainers, and a continuance of it will snow put the various courses and tracks in condition for training purposes. The horses taving engagements in the earlier events at Jerome Park are being backed treely, olds against the favorites being rapidly reduced; all of which gladdens the hearts of the brokmakers.

—Among the three-year-old events that clused on the 1st of March is the Annual Stakes, a dash of two utiles, to be run at the Full meeting of the American Juckey Chu in 1876. As most of the entries are engaged in the two-year-old stakes, to be run this year, their performances will be writched with interest, and the table helaw, which contains the manes of all in this division, with be of value. The table is taken from the World:—

A anisital tentting hurse	unid	1	Inn	116	Is no	dbas	. Lan

—A spirited trotting hurse, said to be half brother he Smuggler, while being driven in Springfield on Saturday by Col. Dickey, his trainer, dashed through a plate glass window in the Union affice, receiving injuries which resulted in his death. Col. Dickey was severely injured. The horse was owned by George Cook.

The middle circuit have arranged their dates as follows:—Fleetwood Park, May 18th, 19th, 20th, and 21st. Goshen, May 25th, 26th, and 27th. Pleetwood Park well also give a second Spring meeting, claiming June 14th, 16th, and 18th. The meeting at Paterson will probably commence June 8th, and that at Kingston June 22d,

—At Paris, Kentucky, on the 5th inst., Mr. Goldsmith's fine stuffion. Abdulion was instantly killed. While going around the track, during the stuffion show, he was met by his full brother, John Bright, and the shaft of the sulky drawn by the latter vintered his breast and come out ment the top of the shoulder, reasing death in a few minutes. His loss is greatly deplored, as he was considered one of the best horses in the United States. He was valued at \$20,000.

-Citizens of Philadelphia have subscribed \$100,000 for a race course, to be called Hunting Purk, the becation selected being on Indian Queen Lane, Germantown, some five or six miles from the city.

—Chiengo follows suit with a new racing park of eighty-five acros, he he hold out on the west side of Chicago, with in a noile and a half the city limits.

The meeting of the Board of Appenls of the Notional Trotting Association, set flown for first Theshay of November pext, to be held in tadianaphils, has been chonged to Cincinnati. A sutisfactory settlement has been made between the present organization and the committee of Western turfinen which recently met at Chicago. The comprunise resulted in the appointment of referees from Illinois, Ohio, Iowa, Indiona, Kentucky, and Michigan, disjunct cases in such States to be investigated by the referee, who will report to the President.

—Mr. James McConk, of S.in Francisco, paralleged.

—Mr. James McCook, of Sin Francisco, purchased recently in Kentucky, to be taken to the Pacific Slope, Pot Malloy, \$2,500; Resolute, \$1,300, and Shetwood, amount paid not named.

-The Minnesola quadrilateral have fixed upon June 15th as the opening of their synson. The vaces to commence at Mankato up that day, to be followed at Stillwater on the 22d, and winding up at St. Paul on the 30th. The Mankato meeting is to lost two days, and the others three, Purses aggregating \$16,000 are aftered.

Duchting and Bouting.

NEW YORK YACHT CLUB -Mr. J. F. Loubat, owner of the Enchantress, now in European waters, has presented the N. Y. Club with a cup of the value of \$1,000, to be suited for under the combitions given below. At a general meeting of the club the matter was referred to the regulta committee to arrange details with Mr. Loubat. At the same meeting forty-one new members were added to the roll of the club:-

To the Commodore, Officers and Members New York Yacht Club:—

GENTLEMEN: Should it be agreeable to the New York Yacht Clult, I should be most happy to present the club with a \$1,000 cnp, to be sailed for on the second Thursday of October, 1876, by schooner yachts of 100 tons and upwards, belonging to any organized yacht club in the

world.

All yachts to be measured by a person appointed by the New York Yacht Club, according to the club measurement; time allowance to be the same as that for His Royal lighness the Prince of Wales's Challenge Cup yacht race, i. e., twelve seconds per ton; the New York Yacht Club regulations to be adhered to; no entrunce fee. Course, from off Owl's Head, New York Harbor, to and around the Sandy Hook Lightship, leaving the same on the sturboard, thence to around the Lightship on Five Fathom Bank off Cape May, N. J., and return to the Sandy Hook Lightship, leaving both on the port hand.

The owner of any vessel winning the prize will be required, before the prize is delivered, to sign a declaration that the sailing regulations have been strictly conformed to. I remain, gentlemen, your very obedient servant,

J. F. Loubar,

Steam Yacut.—We have received a handsome cut of

STEAM YACUT.-We have received a handsome cut of The United States steam lender Barancas, built by the New York Safety Steam Power Company for service at Pensacola, Florida. This beautiful little steam yacht is 6t feet long, and 10 feet 10 inches in beam, with a speed of 11 knots. For eruising in Florida waters she is just the vessel needed, and we would suggest to such of our friends who may propose a visit to Florida next Winter to look at the plans and models of the N. Y. S. S. P. Co., where they may find something which, without being expensive, will

mid greatly to the pleusare of their visit.

—The Vernon Club of Savannah will send a crew to Charleston in May to contend for the champion flag.

-The St. Angustine Yacht Club held its fluid festival of

the season on the 27th of March. The Winter has been very enjoyable, made so in great part by the presence of General Grabb and Mr. Homaus, of which latter gentleman the St. Augustine Press is moved to say:-

man the SI. Augustine Press is moved to say:—
"We regret to state that the worthy Commodore of the club, Mr. J. S. Homaus, left for the North on Thursday hist. We trust that he will return to us another season and that the yacht club which has done so much for the entertainment of visitors under his good management, may continue to prosper."

—We are individed to Mr. J. H. Black, the Photographer who so skillfully reproduced Mr. Bracket's salmon pictures, for a series of views representing the dumages done to the floston Yacht Club house at South Boston by the ice during the past senson. The views also include some of the vessels belonging to the ice yacht fleet, and can be seen by those interested, at this office.

Commodore R. B. Forbes has presented to the Boston Yacht Club a series of handsome, and in some instances, historic pictures, for the adormnent of their club house. The building is to be moved back some tifty feet or so, and fully repaired, the requisite amount being subscribed by the members.

 $-\Lambda$ llst of vessels curolled in the Beverly Yaubt Club will be printed bext week.

—The Tarolinta, of the N. Y. Y. Chili, with Mr. Kent and friends on board, arrived at St. Domingo on the 19th March, sailing again on the 23d for Kingston, Jamalea, from whence she proceeds to Havana and then home.

—The New York Club has in course of construction a handsome club house on the water at Suphrian, Staten Island, about 425 feet from the shore. It will be rightly feet long by thirty wide, two stories high and covered with a donce-shaped roof. The house will be entirely fluished and ready for occupancy early in June.

—The following officers have been elected by the Jersey City Yucht Chrb:—Dr. J. H. Vomly, Commodore; R. E. Ricker, View Commodore; Thomas M. Manning, Secretary A. B. Reybidd, Treasurer, and A. E. Hughes, Measurer.

—A sloop-yucht, to be called the Windward, is bring built by Aharza Smith, of Islip, Long Island, for Mr. Willoughby, of Suratoga. She will be fifty leet hing, and is intended for corollment in the New York Yacht Club.

—A new yacht to be called the Daisy, is being furit for W. H. Brebe, of the Atlantic club. The Brooklyn club fleet will soon be augmented by the addition of a sloop of forty-two feet, owned by Mr. Huntley.

—The Williamsburg yacht club has elected the following named officers:—Commodure, A. Barker; Vice-Commodure, A. Conklin; President, T. W. Reeves; Secretaries, Charles E. Lyelke and William A. Bardell; Treasurer, Henry Miller; Measurer, Andrew J. Brush. The most important yachting events of the coming senson will be the New York Yacht club regatta on June 19, and the Atlantic Yacht Club regatta on June 22.

New York Yacht club regatta on Jime 17, Brioklyn Yacht club regatta on June 19, and the Atlantic Yncht Club regatta on June 22.

—Messrs. Alberston & Bros., of Philadelphin, are now building a sloop yacht, mensuring fifty feet over all, fur Mr. James R. Busk, of Stateu Island. She will be added to the New York club, and will be named the Mail Cap.

The Yacht America.—Through the countesy of the London Field, we are able to answer many empiries made relative to the history of this famous craft subsequent to her victories and sale in England. After her purchase by Lord de Blaquiere she was used for a while for cruising, and in 1865 was hanled up in Pitcher's yard, Northflert, ou the Thames, where it was found she had the dry rot. Mr. Pitcher gave Lord de Blaquiere a few hundreds for her and rebuit her. Her frames were taken out one by one, and replaced by frames of English oak, and she was replanked up to the water line with clui, and above with hurd wood. Mr. Pitcher said some time since that he did not think a piece of the old timher was retained in building her. The rebuilding occupied a long time, as Mr. Pitcher only worked at her to fill up odd moments. When the ished he had some dilliculty in disposing of her. At leugth, in 1860, she was bought by Mr. H. Dreie, who cut down her unin mast 6tt, and foremast 5tt, on account of the mast heads being rotten; her gaffs were lengthened, to keep the area of sail as avarly as possible the same. She was renamed Camilbi, and sailed for the West Indies. On returning in 1861, she sailed in an open match at Queenstown, and, although she came in first, a smaller vessel got the prize. She next sailed a private match against the Alarm, English schooner, of 248 loos, and was braten partly through mismanangement, by 37 min. After this she went to America, and was scuttled in 8t. John's River, Gulf of Florida, to avoid a Februal cruiser, her erew getting on shore. She was raised and her subsequent history is well known to our renders.

New Yacht Club, Hamilton, was held, and th

—The Atabuta's four is now said to be Downs, Johnson, Gunster and Eustis—a strong crew, on which great hopes are built. 'The Waverly four will comprise Williamson, Howell, Lefman and Coster.

-Comen, of the Columbia winning crew of last year, bas joined the New York Rowing club.

-Ed, Smith and Dick Bainbridge are to raw Curtis and Yates a double scull race. The contest will take place on the Harlem some time during the Summer. Curtis and Yates are Western men and Smith and Bainbridge are New Yorkars.

-The Atlantic and Nautilus clubs will have new houses next sea

race, and any boat departing from its own water will do so

race, and any boat departing from its own water will do so at its poril.

VI. A boat's own water is its straight course, parallel with those of the other competing hoats, from the station assigned to it at starting to the thish.

VII. The referee shall be sale judge of a boat's own water and proper course doring the race.

VIII. No fouling whatever shall be allowed.

IX. It is the province of the referer when uppenhal to—but not heface—to obeyide a foul, and the boat decided by him to have fouled shall be rabed out of the race.

X. In the case of a foul, the referer, if appenhal to during the race shall direct the non-feathed hoat it row, which shall in every cose row over the remainder of the course had arder to claim the race.

XI. It shall be considered a foothwhen, after the race has commenced, any competitor, by his name, and, or person, comes into contact with the hoat, any, or person, of questler competitor, natives, in the upinion of the referey, such contact is so light as not to influence the race.

XII. If, in any race in which more than two bests start, a foul takes place, and the hoat adjudged by the amplier to have been fouled reaches the winning point attend of all other errows, the race shall be decided as the boats come in, disqualifying the foot committing the foot; but in case the boat fouled over the race shall be raved love ugain between the heat decide which heat has committed the roll, the race shall be rowed over forhed and all the ather boats which come in decide which heat has committed the foot, the race shall be rowed over by nell the boats; unless, in either of the best two cases, the referre shall decide that the boat which came in liest bod a sufficient lead at the fool to warrant the race legist bod a sufficient lead at the fool to warrant the race tirst had a sufficient lead at the foot to where the rice heing assigned to it.

ring assigned to it.

If the facts, as decided by the referee, be such that the
nee must be rowed over, in part or in whole, accordor this ruly, the Regata Committee must estain the
ags until the race is rowed over and the winner thus
evided.

asy mind the fixed is lowed over sint the winner thus devided.

XIII. A claim of foul (which must be entered by this caption of the crew considering itself foutbil, and not by any one in his helidf) must be under to the referre, previously to the crew fouled getting ont of their bont.

XIV. Every boal sholl dhidle by its nevidents, but not such accidents as are directly caused by another bont.

XV. In the event of a dead losal taking place, the same crew shall content again, or the crew or crews refusing shall be adjudged to have lost the roce.

XVI. No bust shall be altieved to accompany a competitor for the purpose of directing his course or affording him other assistance. The hoof receiving such direction or assistance shall be disqualified, at the discretion of the referee.

The jurisdiction of the referent extends over the race is specified to start until its fluid from the thin the race is specified to start until its fluid formlantken, and his devision in all cases shall be fluid and without appendance of the reference shall be discounted to the direction of the reference shall be disqualified.

XIX. Boats shall be started by their sterns, and shall have completed their course when the bows reach the fluish.

XX. The referee, if he thinks proper, may reserve his decision, provided that in every case such decision be given on the day of the race.

-The following suggestions are from the Regutta Com-

— The following suggestions are from the Regulta Committee of the Rowling Association of American Colleges to the Surntaga Rowling Association:—

1. In connection with Article 16, to make sure of mellicient police that the S. R. A. sociars twelve Metropolllou police with a purper offleer cluthed with proper authority for the performance of their inities.

2. That, prize or gain to real and over the following.

for the performance of their duties.

2. That prizes or rank to cost not over the following amounts:—University Rara, \$450; Freshmen Raca, \$300; Single Senll, \$100, to be given by the bulies of Saratoga.

3. Press tickets to grand stand to be given only to those bringing proper creditatinls.

4. To have a computent builder to inspect grand stand previous to the regath.

5. To decorate the grand stand with colors of the colleges and to cover the stand with an awallag.

6. Tickets for grand stand to be taken up at each entrance.

trance.
7. To scenre John Morrissey's ogreement that no pool tickets shall be sold at his club house or pool rooms.
8. Regulating livery charges.
9. The enlargement of the road on the Grand Stand grounds and arranged so that a separate road can be provided for the entrance and exit from the grand stand grounds.

Rational Pastimes.

SCOTTISH GAMES.

HOLE. -No. 3.

—The Allahre and Nauthus clubs, will have new houses next season.

—The Allahre Bont Club, of Jersey City, have elveted the following officers for the ensuing year:—Joseph Rapsell, President; W. H. Curtis, View-President; James Reed, Treasurer; H. Offerman, Recording Secretary; Geo. H. Hadley, Corresponding Secretary.

RACING RULES OF THE R. A. A. C. ADOPTED JAN. 13, 1875.

For the convenience of those interested io boaling we copy these rules from the Fale Record:—

I. All races shall be started in the following manner:—The starter shall ask the question: "Are you rendy?" and gravity of the Scotchman are fittingly represented by a series of sports of which golf is one of the chief. It is claimed to be to Scotlind what cricket is to England and Dave the signal to start, which shall be the word "go."

II. If the starter considers the start unfair, be shall at once recall the boats to their stations; and any boats refused to the race.

III. Any boat not at its post at the time specified shall be liable to be disqualified by the referce.

IV. A start shall be considered unfair if, during the liest enstrokes, any of the competing bonts shall he disabled by the breaking of an oar, or any other accident.

V. Each boat shall keep its own water throughout the

to carry them even across the southern border into the neighboring kingshom.

Like curling, or the Highland games, of which we recently wrote, golf is made yearable by its antiquity. Its name is derived from the clut with which it is played, German kolbe, Dutch kolf, and for that reason some writers have been inclined to attribute to it a continental origin, and an introduction into Scotland at a very early date, which history does not mure exactly define. Investigations in a different direction, however, lead to a very different result, which has the merit of cantaining the hirth of the game to the land where it grew and flourished.

The game of "shinny," or "shinty," is all but universally known among juveniles. It is known in Scotland under a variety of names, including the two just mentioned, and a multitude of others, such as "harling," "hummy," "earrick," "handy"—a name impurted from Ireland—and others. This game was known to the Scotlish Highlanders as cluich-blad or camanachd, and was conducted on the same principles as those which govern it to day. The ball, which in Argyllshire was made of wood, and in Budenoch of hard and firmly twisted hair, was driven by the opposing parties to opposite goals.

At the same time another game called cluich-dhesog flourished among the Highlanders, and though it is somewhat simpler in form, seems directly suggestive of the Lowland golf. The contest lay between two or mure who, with clubs, struck a small hard ball, the object heing alternative, viz: either to decide who could reach a certain distant spot, or who could put the ball into a hole with the fewest strikes.

It would appear, therefore, that the Highland ebrich-bhal

detant spot, or who court press.

It would appear, therefore, that the Highland chieh-bhad shirty and chieh-chicog are simply the originals of the Lowland shirty and golf. To give the latter, therefore, a continental origin, it would be necessary to assume its introduction flux that the towlands of Scotland, and its subsequent special of the chief population of the north. This supposition, it he Getter that the form of the chief production of the north. This supposition, the Getter is would be men in the subsequent special of the chief in the chief which the men in the lowland is borne in aiml, that the form in which the his his met with in the lowland.

When golf first hecame prevalent as a pastine in Scotland is uncertain, but it was played by all classes we carly as the reign of James I. Historical mention is made of it in councetion with Challes I, who knew the game and practised it, and on his visit to Scotland in 1611 was playing it on Leith Links, when new was brought to him of the outbreak of the rebellion in Ireland.

Golf requires causiderable space for its practice, and is commonly played on grassy downs, which, in Scotland, go under the name of "inks." Those of Musselburgh and St. Andrews are the best known in connection with the switch and the substitute of the ashiftent player, who there is less desirable in the eyes of a skillful player, who there is less desirable in the cytes of shurp irregularities of surface, even a "use links, a series of shurp irregularities of surface, even a "use links, a series of shurp irregularities of surface, even a "use links, a series of shurp irregularities of surface, even a "use links, a series of shurp irregularities of surface, even a "use links, a series of shurp irregularities of surface, even a "use links, a series of shurp irregularities of surface, even a "use links, and the surface, and the him of the promoter of the section of the decided hy the character, si

occasional stroke at a white gutta pereha ball, but the game is pre-eminently one which cannot be judged until it is played. There is a great deal of nice judgment required, and in the shorter shots near the hole, there is a rapidly recurring cause of excitement, in the strife for the "hole," which foreshadows the greater one for the "round" or the

game.

Golf is possibly the last game in the world for a middle-aged man, or one desirous of fuding a relish for mild exercise. There is mathing violent about it, and skill is always hetter than strength, even for a long "drive." Those who play it say that it pussesses a growing nawer of fascination, and in weather when hand exercise is precluded by the heat, a game of this kind, if once introduced, would be a boon to both young and old of all classes.

—We give below the full score of the first regular match of the season, played at Riverton, N. J., April 3d, between the Athletic and Riverton nines. The score is rendered in full in order to show the form of the new score of a match for 1875, the different calmins giving time at the hat, runs, hase hits, number put out, times assisted, and errors accredited to each individual player:—

5. Double play-Moore and Bell, f. Umpire, Mr. Wm. Warnock, of the Athletics. Time of game, the 30m.

-On April 3d the Philmlelphia club played a nine of Gluncester city with the uppended result: -1 4 0 0 3 0 2 5 3—18 0 0 9 4 3 0 1 2 0—9

—The St. Louis club have arranged the following games May 1st and 4th, with Red Stuckings in St. Louis; May 6th and 8th, with Chicago in St. Louis; May 11th and 13th, with Western in Krakuk; May 19th and 23d, with Chicago in Chicago; and May 25th and 27th, with Westerns of Keokuk in St. Louis.

—The Mutuals and Atlantics are practising hand ball at McQuade's ball court in New York until the Union Ground is fit to play upon.

-The Centennials pluyed their opening game last Wednesday at Gloncester, scoring 21 to 3 in four innings.

nesday at Gloncesler, scoring 21 to 3 in four innings.

—The Athletics, on Thursday and Friday last, defeated strong picked nines, the score heing 25 to 0, each occasion. Sutton was unable to play on account of a lame arm, and Richmond played faultlessly at third, both days, Fister taking second, and Hall putting in an appearance at left field. In the game on Thursday last, Borden, an extremely swift pitcher, gave the professionals plenty of practice.

The St. Louis Rode defeated the Atlantics of St. Louis

—The St. Lonis Reds defeated the Atlantics of St. Lonis last Monday by 24 to 7. This speaks well for the "Red Sox" boys.

—The new rule in relation to pitching probibits the high underhand throwing of last scason, as it says that "The hall must be delivered to the bat with the arm swinging nearly perpendicular at the side of the body, and the hand swinging forward shall not be raised above the hip."

—Mr. Chudwick has in press a new work entitled the "Base Ball Umpire's Guide," containing complete instructions for Umpires in both umateur and professional games. It will be out in the latter part of April.

—Mr. John MucNamee, an American seulptor residing al Florence, has just finished a model, the subject being "Base Bull." It represents the mude body of a youth, full of action, with hands extended and eyes upraised, as though about to "capture a fly." When the statue is finished it will be forwarded to this city for exhibition at the Centennial

the Centennial.

—It is proposed to have a meeting of college graduates at Philadelphia during the centennial, a scheme not only feasible, but very desirable. Representatives from nearly a dozen colleges have already met and taken measures for the formation of a Centennial Alumnia Association. The Yale Record says that "a circular has been drawn up which will be sent to all colleges soliciting their co-operation. We believe that this will include not only the American institutions, but England and Germany will also be appealed to.

Daniel O'Leary, of Chicago, and John De Witt, of Auburn, N. Y., are matched to walk a hundred mile race for \$1,000 at the Autrican Institute Building, on Saturday the 10th inst. O'Leary allows De Witt ten miles in the hundred. It will be remembered that O'Leary's first appearance in this city as a pedesteian was at the Hippodrome, 20th ult., when he distanced Nelson Reed in a twenty-five mile contest for \$1,000.

—The Amateur Championship medals offered by the New Jersey Athletic Association will be contested for on the 4th of July. The events include a hundred-yard run and a one-mile walk. The club games will take place at Ridgewood, May 31.

Ridgewood, May 31.

—Alex Samuells, the cuterprising proprietor of the Billiard House, Brooklyu—the fashionable saloon of the city—has afforded the critzens of the City of Chareless an opportanity of seeing the champion experts of the country—"they are seven," as Wordsworth says—in a series of regular contests for prizes of the value of \$1,500. This tourney began on Thursday, April 1s1, and it will continue until the 14th. More suitable arrangements for the convenience of the players and spectators could not have been made than those completed for this tourney, every seat in the large assembly room where the games are played commanding a full view of the table, while the hall is fully ventilated, a desideratum of usually arrived at, at these hilliard rutertainments. The series of contests began on Thursday with Messrs. Vignaux and Ubassy, as the first competitors, and to the surprise of the champion's friends, the veterau bore off the honors. The next game introduced the brothers Diou as contestants, and in this encounter Cyrille got the better of Joseph. On Friday night

Messrs. Rudolphe and Daly entered the lists, and the Frenchman found it a comparatively easy task to defeat his American adversary, Duly evidently not been in playing trim. On Saturday night the play was very interesting, the games proving lo be a surprise to the spectators, inasmuels as the defeated players on both games started off with winning leads, Daly leading Ubassy in the first games by a large score and Cyrille Dion, Vignaux. But both Ubassy and Vignaux won after up hill work, some very brilliant play being shown by both. On Monday Gurnier and doe Dion played together, the Frenchman defeating the Canadian, and Ubassy, who had won two games, added a third victory by defeating Rudolphe.

SUMMARY.

SUMMARY.

First game—Ubassy vs. Vignaux, 300 to 280; winner's average, 7, 13, 41; best rons, Vignaux 65, Ubassy 52.

Second game—C. Dion vs. Joe Dlon, 300 to 154; winner's average, 16, 12, 18; best runs, J. Dion 103, C. Dion 60,

Third game—Garnier vs. Daly, 300 to 150; winner's average, 15, 0; best runs, Garnier 02, Daly 40.

Fourth game—Rudolphe vs. J. Dion, 300 to 238; winner's average, 7, 27, 39; best runs, Rudolphe 46, J. Dion, 37.

37.
Fifth game—Ubassy vs. Daly, 300 to 273; whener's average, 8, 14, 17; best rms, Ubassy 52, Daly 38.
Sixih game—Vignaux vs. C. Dion, 300 to 183; winner's average, 9, 1, 11; hest runs, Vignaux 64, Dion 48.
Seveuth game—Garnier vs. J. Dion, 300 to 225; winner's average, 9, 21, 31; best runs, Garnier 53, Dion 31.
Eighth game—Ubassy vs. Rudolphe, 300 to 287; winner's average, 9, 1, 11; best rms, Ubassy 111, Rudolphe 45.
The full score to April 6th stood as follows:—

Players.	Games Played.	Games Won.	Games Lost.
Uhasay	3	3	0
Garmer		ž	ő
Viguaux		1	1
C. Dion		j ,	2
1 Dian		· ·	2

The table played on is of oiled walnut and elegantly carved. It is from the well known factory of 11. W. Collender.

THE AMATEUR PERFORMANCE,-We trust that the committee of the National Rufle Association and Amateur Rifle Club, in making due acknowledgement to Mr. J. H Bird and the ladies and gentlemen who assisted in the excellent representation of Othello at the Academy on Saturday evening, will also consider the services of Prof. Eberhardt, of the Grand Conservatory of Music, who at his own ex-pense organized an efficient orchestra and gave his own services as conductor.

TESTING THE VALIDITY OF THE GAME LAWS.—Ira Hatheway, a restaurant keeper in Pittsburg, Peun, was arrested at the instance of the Sportsmeu's Club of Pennsylvania, for serving his customers with trout in violation of the game laws of Pennsylvania, which prohibit any one having them in his possession before April 1 and after August 15. Hatheway put in a defense that the trout were emight in Canada The case is now on before the courts, and we await the result with interest.

-The R. I. State Association for the Protection of Game and Fish held their first annual meeting at Providence, April 2d, and elected the following officers for the ensuing April 2d, and elected the following officers for the ensuing year: - President, Rev. F. M. Hemperly; first Vice-President, Dr. P. S. Redfield; second Vice-President, Aaron Peirec; third Vice-President, Captain Edward Hammond; fourth Vice-President, S. S. Foss; fifth Vice-President, Dr. P. E. Day; Secretary, W. B. Grover; Trensurer, Chas. F. Pope; Advocate, Hon. E. C. Clarke. Managing Board—H. T. Root, Newton Dexter, B. C. Allen, A. A. Saunders, M. D., G. W. Barlingame, Fred Drouu, J. H. Barden, W. E. Taber, W. P. Morton. There was a large attendance, and much interest in the objects of the Society is being awakened throughout the State.

-John Kidd, of Rock Springs, Sweetwater county, Wyoming Territory, writes to say that trout are very plenty in most parts of that territory. "I have seen places," he says, "where one man could not bait fast enough for another man that held the rod. They will bite at anything in the shape of meat, but grasshoppers con-stitute their favorite diet." The stories he tells of game are equally exciting. What an elysium for a market are equally exciting.

—The West Medford (Mass.) Shooting Club was permanently organized on the 26th instant. Its avowed purpose was pronounced to be "to assist in the execution of protective game laws and to promote judicious legislation." The following were chosen officers:—President, Dr. C. E. Sanborn; Vice-President, C. M. Barrett; Secretary, Wm. S. Sargent; Treasurer, J. E. Ober

—One of our correspondents has a nephew who goes to school in Dansville, N. Y., and the boy, like bis uncle, has a taste for natural history. "That's all right." Well, one day the uncle asked the youngster to translate the words tetruo umbellus, the Latin synonym for ruffed grouse, and the youngster asked his teneher, the justruetor in languages. "Thut's all right." And the instructor told him that the words, translated into English, meant "big nm-brella," which was all wrong. The several facts embraced in the foregoing were communicated to us by the boy's uncle, who seems to think the teacher deficient in capacity to teach the dead languages.

-Clams are now found in considerable quanties on the castern shore of San Francisco Bay. Some small ones having been brought from the East among oysters imported for planting, they are increasing as prolifically as they do in their native waters of the Aliantie, the conditions being peculiarly favorable as to their growing and propagating.

Thost Culture.—To persons about to commence the business of piscen itere, Seth Green's little book on "Trout Culture" will be found of inestimable value. Practical in description, and emanating from the father of the business, it contains such links as will be found of most beneat, as well as being the result of long experiment, and practical experience.

THE HAZARD POWDER CO.. GUNPOWDER.

Hazard's "Electric" Powder.

ios, 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square caulsters of 1 lb, only.

Hazard's "American Sporting."

(os. I (finer to 3 (coarse). In 11b. cansiters and 6‡ lb. kegs. A fine grain, quick and clean, for uplinid and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting,"

Nos.: (fine) to 5 (course). In 1 and 5 lb. canisters and 61 and 12 lb. kees. Burns sloudy and very clean, shooting remarkably close, and with practical preceduation. For field, furest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech londer.

HINTAR'S "ROUMERY Rifle."

FFFG, FFG, and "Sea Shooting" FG, In kegs of 25, 124, and by the and cans of 5 lbs. FrFG is also pucked in 1 and 4 lb. consisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER, GOVERNMENT CANNON AND MUSKET POW-DER; ALSO SPECIAL G RADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MAN-UFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office,

1 Volume 1, Number 10.

Roughing it in Minnesota.

BY HAVILAND.

ER chicken," said the farmer to us, us we three, F. H., and "yours truly," sat smoking our pipes at the close of a hot, hard day's work among the grouse on the uplands near Wadena, Minn., "you want to go to Parker's Prairie; take in the putterldges an' ducks on the way, then eirele off towards Millerville, an' the Mormon settlement at Clitherall, come back by way of Otter Tail and Deer Creek; it will take a week, an' I'll go with you for three dollars a day an' found,"

Promptly on time the honest granger was on hand, with

u span of raw-boned horses and a heavy lumber wagon, into which we stowed our baggage und dogs. There were Grouse and Yunk, the two pointers; Billy and Tasso, the setters; and Carlo, the eurly haired Irish retriever, good for everything, and to be counted on under all circumstances; then we added to our party mine host of the Wadena Honse, Mr. P., who thought the trip "would do bis ager good," and so rattled off over the prairie en route for the finest shooting ground the Stale affords. The ride for the first dozen miles was devoid of any in-terest; the sun was hot, the horses slow and the driver prosy; but a bottle of "Hostetter," opportunely opened at a wayside brook, had its salutary effect upon the horses, and for a few miles we drove along at a lively rate. About noon we stopped for dinuer at the "Half Way House," a log shanly near a "sloo," or pond. With the aid of Carlo we secured half a dozen teal hefore dinner, which con-sisted of the inevitable fried pork and saleratus biscuits. The pleusant smiles of the good looking bostess, however, helped to make this ture palatable.

The six miles that intervened between the "Half Way Honse" and Parker's Prairie led through a heavy, hand-some growth of hard wood, somewhat grown up with brush some growth of hard woon, somewhat grown ap work on what wood, and turning the dogs loose, we began work on what wood, and turning the dogs loose, i.e. ruffed grouse. These wood, and turning the dogs loose, we legal with our winter the granger called putteridges, i. e. ruffed grouse. These birds were very pleniful, nearly full grown, and flew up in dozens every half mile. The dogs seurried around half wild with the sport, racing headlong at times, regardless of rall or whistle, then pointing as steadily as in the open, each one doing his best. We hunted each side of the road, the wagon moving slowly along, and as we came out of the woods, and struck the prairie, we had as fine a lot of ruffed grouse as ever a sportsman gazed upon, and five woodcock that we picked up out of a small "sloo" in the timber. The sun was just going out of sight as we came out of the timber, and a more beautiful seene it would be hard to find, even in Minnesola. Far away on either hand stretched the broad rolling prairie to the timbered hills in the distance, and there with lakes and ponds, their grassy dotted here edges green and soft as velvet; the patches of timber scat-lered about glowing with all the colors of the rainbow; the smoke from the settler's homes rising into the still, cool nir, ontlined against the many tinted sky, touched and kindled by the last rays of the sun into wavy pillars of gold; the air overhead fleeked with flocks of geese, and long, straggling lines of ducks, going from the stubble fields to their resting places for the night; the whole confields to their resting places for the hight; the whole constituting a perfect picture, such as no other country, or no other season, can hope to exhibit. As we sped rapidly along in the gathering twilight, the lines descriptive of the season, penned by one of the truest sportsmen that ever lived, came to our memory:—

"It is a brithant Autumn time, the most brittiant time of all, When the gorgeous woods are gleaming ere the teaves begin to fall; When the maples boughs are crimson, and the bickory shines like gold, When the noons are sultry hot and the nights are frosty cold.

When the country has no green but the sword grass by the rill, And the willows in the valley and the pine upon the hill; When the pippla leaves the bough and the sumach's fruit is red, And the quait is piping loud from the buckwheat where he fed.

When the sky is blue as steel and the river clear as glass,
When the mist is on the mountain and the network on the grass;
When the harvests are all housed and the farmer's work is done,
And the woodland is resounding with the spaniels and the gun "

Nowhere in this wide world except among one's own kindred can one get us warm, as open-handed a welcome as he can among the settlers of the frontier States, and such a welcome we received from Henry Viels.
"Does Viels live here?" was the first query, as we drave

up to his door.
"He does," was the reply from a broad-shouldered, darkcomplexioned man,

"Have you room for three or four sportsmen for two or three days?" was the next momentous question,

"Well, if I haven't room I'll make it; come in, gentlemen,

and make yourselves at home."

And at home we were, for as long as we chose to stay and if we did not eujoy ourselves at Victs', it was our fault. The best the house afforded, the best the country afforded, was ours; Victs himself was up early and late for our benefit, and during the day driving his oxen and or our benefit, and during the day driving his oxen and wigou over the prairie, wherever we chose to go, and never got out of sorts, except when one of our purty played out and had to stay at home one day. Mrs. V., blonde-haired and rosy-checked, did her atmost to second her husband's endeavors to make his guests feel at home, and with the help of our wood ducks and milled grause, got us a smok iug supper, which was properly taken eare of. After supper the chances for sport having been thoroughly disensed and the dogs properly taken care of, we turned in to enjoy a long and blissful slumber, well carned by a thirty mile ride in a lumber wagon over a rough wood road.

The morning broke clear and beautiful. It had been

frosty enough to get the grause into large coveys, and soon after daylight we were among them, using the setters in the forenoun, pointers in the latter part of the day. There is no use telling the of-told tale of grouse shooting on the western prairies; sufflee it to say, the birds were in myriads, the dogs worked well early or late; the weather was every duy like one of Emerson's "charmed days," and we shot grouse on the uplands, ducks and goese on the ponds, ruffed grouse in the thickets, more than we could use, more than we could give away, till the time cume to bid our kind friends good bye.

There is only one objection to Parker's Prairie as a resort for sportsmen; it is so far from the railroad that one eannot dispose of the game he kills, neither can it be given away, as every settler can kill at any time, (almost in his door yard,) all the grouse and ducks he can consume; con-sequently the killing of game there as a sport degenerates into needless butchery. As a place to break young dogs and spend a few days in luxurious idleness among the hosand speint at the days in described made and ag the sopre pitable settlers at a moderate cost, we know not its sopre in the State. There would have been a railroad through in the State. There would have been a railroad through this prairie before now, to connect with the North Pacific and Canada Pacific Railroad, had not the bought-up engineer who surveyed this country said in his report that the prairie was a shaking bog, and that a railroad could not sibly be built across it.

When the time came for us to leave, we hired a new driver, Jim Kasson, a larmer, who, with others, helped make our stay among them pleasant, and to whom we are indebted for many favors and much valuable information. He is a capital good fellow, full of fun, a keen sportsman, and a good shot. With him we left Parker's Prairie and and a good shot.

started for Millerville and home. The ride for nine miles was a repetitiou of our brst day's experience, only Ilm was a different man to the frowzy old genius who first took us in charge, and kept us laughing at his keen wittlelsms and dry remarks about everybody and everything. About noon, having passed over Indiana Prairie, where Hicks bought some tame ebickens of a rure breed, Millerville bove bought some tame coickens of a rare breed, Millerville bove in sight. Jim put the lash to his horses, and exhorting them "to shin up and have a little style about them," he dashed up to the door of the only hotel the town can boast of, greatly to the surprise of the quiet villagers, and the manifest happiness of a host of white-headed school children, limpiled into the house, while headed be headed. dim piled into the house, whip in hand, his hat on the back of his bead, his blue eyes gleaming with fun, and ordered "dinner Ior ten men and sixteen dogs," concluding his

order with the remark that "that's the kind of a hairpin i ma,". The hostess and a "fraulien" started for the i am," The histors und a "fraitheil" started for the kitchen, and Potter made a straight wake for the bir, as the "felt a chill coming on." F. went over to the school-house and soon returned mittering something about an "old fossil," where he expected to find something different, and then, with his hands full of game, started to help the "fraulien" get danner, which he succeeded in doing to his own immense satisfaction, coming uround promptly when the meal was ready fact an appearance by the the mral was ready, (not an amusual chromatuace, by the way,) spouting Dutch, and smelling leady of a schieffind drink called "kimmell." The diract was first rate, and Jim observed, as we took our seats at the table, that the "old lady mare'n throwed herself gittin' up this dinner;" three kinds of game, roust pork, fish fried, boiled and pickled, and hulf a dozen unknown dishes that made F. usk, as he passed them, "how are you on the confidence gamey

The sky was growing dark as we left Millerville, and the wied blew decody as we climbed the "Leaf Hills," a range of small bluffs that divide Otter Tail county, mostly wooded, affording line cover for rulful grame; but we could not stan to my our respects in these birds, as the rain began to come down, and it was dark when we passed the hills, and came onto the desolute what-swept prairie in a hawling starm. To add to our wors, we had lost a a linwling starm. To add to our woes, we had lost a favorite dog; the team begun to show sigus of futlgue, not one of our purty had the least lifes where we were, the cold rain poured down, the flerce what blew its best, and, crouched in the wagon, we let the team go where they would. About nine o'clock we saw, away to our left, a flekering light, and heading our panies in that direction, we drove up to a settler's, who told as where to go to fluid the stopping place at Clitheral Lake, and verring about, feeling better, with Joe's rich voice pealing out in the the stopping place at Clitheral Lake, and verring about, feeling better, with Joe's rich voice pealing out in the misty atmosphere to the time of "If you want to get rich," we soon heard the low wash of the waves as they broke on the share of the lake. A hulf mile further on we saw indistinctly through the storm, a gloomy-looking house in a gloomy-looking grove. After battering at the door night it cautiously opened, and a sour-faced man, in unswer to our questions, hesitatingly admitted that he "kep" tuvern." As it was "Holson's choice," we crawled out of the wagon, our questions, levitalingly animitted that he "kep invern.

As it was "Holison's choice," we crawled out of the wagon, and were among the Mormans of Minnesota.

The sour-faced man, who looked ghoonily at us, and sighed when P, asked him if he kept anything that would

be good for a chill, was joined by two or three athers, morose looking men and buys, who, when we asked for our fire and something to rat, said it was too late for super, and it rained too hard to go for wood. If Jim, our muln. per, and it rained too hard to go for wood. Jim, our military, could not stand this, and guve the sour-faced man to understand what he thought of him as a hotel keeper in plain language, interspersed with some "sahre cuts of Saxon speech" that were doubtless new to that locality; and then, regardless of frowns and matterings, started for the kitchen, where we now heard his merry voice and an occasional "te-bee" from the female Mormons he had diseovered there. He soon returned with his arms full of dry wood, and a promise of supper, which, after a long delay, we were informed was ready; and such a framt as that repast was! Saleratus biscult, ranchi butter, stewed pump-kin, and some nameless abominations in a shie dish, which a high-shouldered priestess insisted on our enting. Then, preceded by the sour-fueed individual, bearing a tallow dip, and sighing every time anybody spoke to him, we were put late a liat attic, on some corn husks, alive with were put into a hat hine, on some continuous, artee with wermin, and so wore the night away. Breakfast was a repetition of the supper, except that the "yaller" biscuits had been warmed over, and, a tough old rooster had been steered up, spurs and all, for our benefit.

The Clitheral Mormous are a small band of seceders,

who, while living closely up to most of the regulations of the Mormon faith, incline more to the teachings of Joseph Smith than to Brigham Young; do not believe in polygamy, own everything in common, are "hostile to the whites," and to all intents and purposes are as good Mormons as if they

lived on the shores of Salt Lake Instead of Clitheral. One golden rule they observe most religiously: "If you meet a stranger take him in," and they took our unfortunate party in, most decidedly, when we came to pay the bill for the wretched accommodation afforded. Then they attempted another game, which, fortunately, did not work. During the storm on the prairle a young and valuable pointer strayed away. We spent Italf a day looking for him in rain, and left word to have him sent out to the rainton, if found, for which service we would pay liberally. An hour or so after our departure the dog made his appearance, and a week after, half starved, and looking as if he had been flogged within an inch of his life, he was cent out to the station, with orders to "collect twenty-five dollars or keep the dog," Yank, the pointer in question, is sufe in his owner's kennel, and the twenty-five dollars has never been paid i

his owner's kennel, and the twenty-five dollars has never been paid?

Glad enough were we to get away from Clltheral; and we drove along all day, stopping accasionally to take a few shots at plover or grouse, and at evening rame to Otter Tail eny, where, under Bill McArthur's hospitable courge, we felt that once again ''our lines had fallen in pleasant places.'' After support we took a stroll around the deserted village. The wind was blowing fresh; the waves rolled high on the sandy beach, far tun on the yeasty lake some squaws, in a burch canner, were setting their gill nets, three or four blanketed Indians stood on the share, and a flock of infinaked Indian children were practising with how and arrow in the dusty street. In western parlance, "there's a good lay-out" here for a town; a headiful lake, with its shores broken and diversified with wooded hinffs and headlands in front, and the rolling prairle behind it. Years ago it was a trading past of considerable importance. Fortunes have been made and faitunes gambled away here in the flush times; the sandy streets have been staired with the blood of the dusky antives, and the bluffs around the town have ecboed to their wild wboops as they danced the scalp dance, only a few years ago, with sculps acedy taken, and too often from the head of some unfortunate settler. When, a few years ago, the surveyors of the N. P. R. were running their lines all over the country. Otter Tail toole a new start, properly went up at once, corner lots could not be had at any price, buildings were put up, heavy stacks of goods were brought in, but the road was built ailles to the north, and the ambitions city "went lack," and is now, like too many paper towns, "played out."

We called, of course, on Donald McDanald, a weather-

coold not be had at any price, buildings were put up, leavy statcks of goods were brought in, lant the road was built affects of the north, and the ambitions city "weat lanck," and is now, like too many paper towas, "played out."

We called, of course, on Donald McDmadd, a weathermate hale old Scotchman, known all over the north and northwest as "Old Mac." He is certainly a character, a blood relation of the prominent Canadian funity of that name. He left Montreal when a boy, und joined the Hudson Bay Co. at Lachine, forny years ugo, and remained in their employ for years, visiting the far northern regions, berousing conversant with the different Incian languages, and well versed it their peculiar habits. Becoming tred of the wildcrness life, he left the Company without leave and engaged in business at St. Croix, trading with Indians, and as he ediposed a monopoly almost, he suon, to use his own wurds, "got mackle gold," having projectly and cash worth \$20,000, which he lost in a series of games of poker, hasing a week; and, without need, we next hear of him at Fort Ripley, where he worked till he got money enough to take him hack to the hunting grounds of the North, whilther he went and slayed for some years, notwithstanding the efforts of his old employers, the H. B. Co., who, jealons of his indiance among the Indians, and thea, as now, grasping in the extreme, had a stunding offer of one hundred pounds for him, dead or nive. He simmisted about this bleak courty for x long time, trailing with the Indiana and gambling with anyone who came along, with such success that he was able to come Sunth again, and located at the Hall Way House, between St. Pail and St. Anthony. Hotel keeping was too drill music for the old egoguer, and he sold out for an "old shot gun and half a keg of whiskey," moved to Crow Wing, opened a trading post, and on his opening night lots \$40,000 in gold to one into. When the game closed, at daylight, Mac went into his cellar, and for large and played to the way of the played by the revision

ground, the other in the air, thirty yards to the left. How he did it "deponent saith not." He was very much excited at the time, and it was useless to argue with him. When it got so dark that we could no longer see to shoot, we tied up our dogs, put the guus in their cases, and without further incident, arrived in Wadena in time for the train for home, well pleased with our long trip.

OFF THE LINE.

OFF THE LINE.

The line was our line of traps, extending for miles through the forest, over hills and mountains, by pomls and streams and they meded our care at some point constantly, as the storms of snow broke down our dead falls, and the weasel and other pests were continually robining our traps of hait. There was not much excitement "on the line," as it was soon an old story, varied only hy the different degrees in which we had been successful in enticing lur into our traps. At times we would strike unifur a short hand, and then we would love plenty of excitement, as well as hard work. I propose to tell you some of our experience "off the line."

We had a line rounding along the east base of Bates Mountains, through the notch meross Pierce Poul, over Otter Poud Mountain, and our again to the river. This line had unmerous small branshes, built according as we found signs. The line had paid pretty well, in fact, very well, and greatest trouble being to keep the line baited, as weasels and other pests were unusually numerous and bold. We had killed or scared off all the bait in the inmodulate vicinity of the line, and as our provisions were short we determined to look up something for both bait and provision, and to that end started trom "Camp Desolation," on Pierce Pond, one morning, taking with as our dinaers only. We had a short branch line some three miles long to look to first, but the recent storms bad spring or clogged all our traps, and it was late when we got through. We left our line and struck for Otter Pond Mountain, on the west side, und, circling around the mountain ou that side, we soon found signs of deer, name some three miles long to look to first, but the recent storms bad spring or clogged all our traps, and it was late when we got through. We left our line and struck for Otter Pond Mountain, on the west side, und, circling around the mountain ou that side, we soon found signs of deer, name some two mounts before. The signs consisted of browsings, and we judged the time when made by the con

where we had rift the deer half an hour spent in that codeavor we found that the deer hal gone. We had bree
deavor we found that the deer hal gone. We had bree
nearer to them the night before than we thought, and had
started them.

Perhaps some of your readers have an idea of a deer or
moose yard, as they guther from pictures, representing the
snow all tramped down solid, in an uneven spinee, with the
bushes all exposed for the deers' food, the snow forming a
wall, as it were, to prevent their escape. I have just such
a picture in my mind now. It is in Newhonse's 'teapper's
Guide, page 79, and is as unmatural as anything can well
be. Their yard is simply their feeding place, with a thousand paths through it, tracking over the ground back and
forth in every direction. When Winter overtakes them they
have some leeding ground in mind, and go there, not envering any more ground than is necessary, and enlarging the
yard—i.e., tuaking more paths—as the Winter progresses.
Their old paths or yards look as though a log lad heen
drawn through the snow, and a little snow had fallen into
the rut; that is all a yard is. But it gives a novice stronge
fredings the first time he visits one. I don't feel competent
to tell how I behaved in ry first deer yard. I know this,
that after emptylug my six shooter the deer had not lost
any shlood, and I didn't get that theer.

But to resume, finding our game gone we concluded to
follow. Now it was a test of pluck if we came up with
them. No creeping, and giving the deer no chauce, but put
your legs against his, and give bim a fair fight. We followed the fresh slot right up the mountain, over it, down
through dense thickets mad tangled windfalls, where the
deer, in vain endeavors to brush off their pursuers, land
run, then into dark cedar swamps, then over a hard wood
knoll, and into the thicket nigain. So the race went on, or
rather the pursuit, for we did not hurry any. After having traveled thus for some two mines, we found where a
buck—n very hirge one—last turned out from

was hut a moment and I heard his music; another moment and there was the back coming right on toward me. I can't tell how I felt; all I remember was that I made up my mind to kill that deer, rille or no ride. While I was making up my mind the buck was lessening the distance between us rapidly, hastened by the langry hound at his heels, and when I had minde up my mind to have him he came with a bound to the stream directly apposite me. How I longed for my rife! "Spry" had the back by the hock just as he launched out for a spring to my side of the stream, where I stood motionless, axe in hand, and as he sprang the dog's extra weight brought him down into the stream; the fall loosened the dog's hold, and the huck sprang for the hank again, followed by the dog, which gripped him on the hock again, bringing him in his knees before me. With a jump I was at his side. Swhiging my axe to strike him in the head, I struck, and at the momentary feet went from under me, my axe went through the air, and I fell right across the buck's neck. The dog, seeing ne thus, guve up his claim, which relieved the buck's hind legs. The first intimation I had of the fact was when he struck me with both hoofs in the small of my luck. I carry the marks now. I don't know as that had anything to do with the savage plunge I made at his thront with my bowie knife, but before I could get off the burk his hind legs had completely stripped my pants into shreds, covered my legs with blood, and ruffled my mail up into the nineties. All foolish; but I know more about deer now. Experience has knocked out all faith in the gentleness of deer, even when narrated by a clergyman, as exhibited in the Adirondacks.

I stood a moment trembling all over from excitement. The buck minde a few springs, and then fell dead. Nathan arrived in time to see the closing scene, and said that when he first saw me he was fearful I would get bindly pounded, and so I did. I got the huck, and hid three days in camp too sore to move; but then there would be no enjayment if ther

PISCATORY REMINISCENCE.

A BOUT fishing, Uncle John thought he knew all that was worth knowing; and if anybody questioned his knowledge or skill, he was ready to go into a long agrument to prove his claims to both. He was a professional fishermun; so he said, and so he thought; and what was mare, was certain that he knew every foot of fishing ground from "Slade's Perry" to the "Stone Bridge," and trom "Cedar Island" all along shore to "Benver Tail Light." He would not allow the possibility of his being mistaken, for what he knew, he knew, he would say, and you could no more argue him out of his notions than you could lilluminate a sunbeam, or catch a whale with a cod line. Reason with him, you could not, for he would annihilate all your arguments with the unanswendde logic, "What I know, I know," and anchored on this argumentum ad hominem, his position was invuluerable. But how sare Uncle John was of what he knew, the following little piscatory reminiscence will illustrate:

One benatiful day in the month of April, some two years ago, being in a fishing mood, and anxious to try my luck, I started with my good friend, the Doctor, for what was recarded by those who didn't know so much as Uncle John, the best fishing ground in the vicinity of Fall River. On reaching the shore directly opposite the lishing ground, who should we find but Uncle with his host anchored on the spot we were seeking. From the manner in which the old fisherman hegan to decry the ground, we were satisfied that he "knew what he knew," and one thing was, that this was the place for good fishing, and he did not intend that we should know it. Understanding this, we pleasantly salited the old gentleman, and asked, "what larky" and received in answer, "Nane—nane at all; there are no fish here ond his isn't one on 'en, I have fished the bay over and over, and know every spat in it worth knowing, and this isn't one on 'en, I caught one or two here yesterday, but it only happened so. There are no fish here to-day and may never be again. I haven't had my fingers tickled with

haven't had my fingers tickled with even so much as a nibble."

It was flood tide and we were anxious to get on the ground before the full, so we tried to hargain with the fisherman for his boat and buit, the latter of which consisted of about a quart of lively "fishflers," a kind of crab the readers of the Fortese and Stimman know all about indoubtedly; if not, will Mr. Editor please to enlighten them? Now, Uncle John was as fond of the "simmas" as he was of fishing, and a latte more so. Indeed, this was his weakness, and you have him. So in order to make sure of the boat, we told the old gentleman we would take all the fiddlers he could catch for the thay at fifty cents a quart. This was enough, and he handed the hoat over to us, remarking that he could make more by eatthing fiddlers at that rate than by fishing in such water.

We took possession of the boat and Uncle John started for the bait, and before his old hat was out of sight the Doctor and I were anchored upon the coveted fishing ground. In no time our hooks were overboard, haired with the delicious morsels we had purchased of the "uld fisherman."

with the delicious morsels we had purchased of the "uld fisherman,"

Soon I experienced at my fingers ends that peculiar sensation so encouraging to a fisherman; tirst a middle, then a jerk, then a pull, as though something was bound to carry away bait, hook, fishing tackle and all. I gave a jerk and found I had hooked something, and hand over hand went at it, and directly there lay on the bottom of our hoat as pretty and as plump a seven pound tauting as Uncle John of any other man, professional fisherman or otherwise, could wish to see. The Doctor fallowed my example, and in no time we were langhing over the sate limiting of another beautiful black fellow of about the same weight. The sport bad commenced; the lish were plentitul and hingry, and in forty minutes twenty-eight of these plump and delicions dwellers of the vasty deep were floundering in the bottom of our hoat, the smallest of which weighed two and one-half pounds, and from that up to seven pounds.

Soon we saw Uncle John returning from bis entables.

Soon we saw Uncle John returning from his catch of flddlers, tin pail in band, and nearly empty it proved to be. We reached the shore about the same time the old

gentleman did and commenced unloading our fish, having heen careful to cover the largest of them with the remnants of an old swine we found in the boat. Scarcely had we hegan to land our finny captives before the old fisherman exclaimed, rather groffly and in tones evidently of surprise, "Well, I declare, you have done pretty well!" We kept an throwing out the fish, and when the two seven pounders reached the shore, it was too much for Unele John, who "gurssed he knew what he knew," and he cried out with all the solemn emphasis of a man who felt that he had heen sold. "What a darned fool I was!" What more he might have said we know not, for we interrupted him by snying, "Uncle John, my time you want to give up twenty-eight fish like these for a quart of tiddlers, we are the men tor you; and laughing heartily, we left the old disherman to think over his knowtedge of good fishing grunneds, and wentled our way home, delighted with our half day's spirt and its result. Now every time we meet Urole John we jocosely remind him of this piscatory traininiscence, and the old man will shake his head and say, "sold ugain!"

THE LEECH LACE INDIANG gentlemen did and commenced unloading our fish, having been careful to cover the largest of them with the remnants

THE LEECH LAKE INDIANS.

FUR ANIMALS AND FURS-GAME-PASTIMES-WARDINOOD,

VILD ducks breed in this vicinity as well as wild geese. Young geese are ensily tamed, and soon as gentle as domestic geese; we have one at the

Agency.

Juffans very soldom catch mink alive; they use the ordinary rat trap, which usually breaks their legs; hesides the place of capture is so far from the settlements, and the Indians have no way of transporting them, which renders it very dithicult to obtain one alive. I understand that attrapps have been often made to tame them, but not with surcess. They are sometimes found in bonses of settlers and the frontier picking up any thing that they may like to cut, and then run to their hole to return again when haugry, but they cannot be handled. They frequently live about a houte all. Winter if numolested. The for eatch (except musk rats) is over for this Winter. The skins are forwarded to wholesale dealers. Furs cannot be bought here.

here. When the ludians start out on the Wiuter hunts the traders (who are regularly licensed to trade on the reservation) fit them out and wait for them to pay when they return with their furs. When the traders get enough to make a few bules they are sent to the wholesale dealers in St Paul, to pay for goods which the traders purchase in the Fall. I have a few times attempted to purchase mink skims for myself, but before enough of the same color could be procured, maths would destroy those I had; so I gave it up. I append the latest price list, viz:—

FURS AND SKINS.

Fail. I have a few times attempted to purchase mink skins for myself, but hefore enough of the same color could be pracured, moths would destroy those I had; so I gave it up. I append the latest price list, viz.—

Fush And Sand. Sand.

balls in his right hand while singing, makes several contortions with his arms aml body, places rapidly one hall under each mocensin, which are arranged in a row hefore him. Now the opposite player takes the wand and looking intently in the eyes of his opponent, makes a point to strike one of the mocensins then another; findly lurns over two of them, if the marked bull is found, the moceasins and bulls are passed over to this side and the opposite player proceeds as the other did, placing the hulls under the uncensins. If he misses turning the mucensin having the marked ball he pays four sticks, and the game goes on mult the bull is found. When the twenty sticks have passed over to the opposite player, a separate stirk is stuck in the ground as a tally, and so un until the number of tallies agreed upon are won by one shle or the other. Sometimes they choose to tarn hat one moceasin, when if they hoose, they pay six sticks. The skill in the game is for the player not to indicate by his face, or expression, the location of the ball, and his opponent's object is, when he makes a feint to turn the moceasins, to read by his opponent's countneance whether the marked bull is muler it. The drumming, howling, nod rattling goes on uncensingly. Ahout this time, when the Inflams are in from the hunt, we can hear this drumming in five or six locations all day and night, in the wigwams situated around the Agency. In the Summer senson they play on the grass, and when one of the party becomes fatigued he rolls himself up in his blanket and goes to sleep, the others cantinuing the game. Yesterday, while returning from the trading post, I saw a lot of Indian boys playing on the snow banks; two or three of them had nothing on but a calico shirt and a hreastpia. They seemed to be enjoying themselves finely, with no appearance of suffering from cold, at though the thermometer marked 0° above zero. I cannot account for their apparent freeioun from suffering from cold andess the amount of dirt on their feet and legs served the purpos

HENRY McMahon M. D. Leech Lake, Minnesota, March 17th, 1875.

For Forest and Stream

HARRISBURG HEARD FROM.

THAT Harrisburg is the capital of the old Keystone State, and within a few hours ride of the best hunting grounds in the State, is a well known fact. But that it is also the home of many, "mighty hunters," is not so universally known.

ing grounds in the State, is a well known fact. But that it is also the home of many, "mighty hunters," is not so universally known.

To those who are disposed to doubt the truth of this assertion, I can only say, that could they witness the amount of game, including deer, bears, turkies, &c., that—(during the season)—is unloaded from the cars at this point, they would have to admit that the sons of Dauphin County are as formidable in the chase as they were terrible in war. [See History of the Building of Fort Washington,]
The deer lunning season of 1874 was the most successful known for many years. But while more that the usual success attended the efforts of the majority of lunting parties from this place, many a good fellow started for the mountains with a light heart and ponderons knapsack, and after days of Herendean toil, returned weary and worn, bringing nothing back but tired limbs and torn garments as trophies of their sojouru in the wilderness.

Of the latter unfortunate ones, I propose to write, hoping more for sympathy than admiration from the thon-sauds of readers of Forest and Stream, In the early part of last Fall arrangements for a hunt on a grand seale were completed, and but for the difference hetween theory and practice many a noble back would have been non est. Ere said grand hunt was over the gentlemen who were to distinguish themselves on this (to them) memorable expedition were as follows:—

Juo, Alleu, Jr., newspaper correspondent and agent for several titerary works of great merit; James Wells, traveling engineer of the great Peun. Central Railrond; Genrge Hacket, James McKee and Martin Leonard, alias the "Blaeksmith," all first class engineers of the same great road, and last and least, J. O. Boggs, clerk in a wholesale coffee house.

We left Harrisburg as heavily an equipped and sanguine

"Blacksmith," all first-class engineers of the same great road, and last and least, J. O. Boggs, clerk in a wholesale coffee house.

We left Harrisburg as heavily an equipped and sanguine a party as ever started for the monatalus, and after two hours ride, were safely landed at "Anderson," the nearest railroad slation to the doomed valley, where we intended to "cry havoe, and let hose the dogs of war." Here, as per our arrangement, a tenm was waiting to haul our plunder to the top of the second monatain, from the sum int of which a railroad of very peculiar construction runs down the "Licking Creek Valley," the objective point of this never to be forgotten journey. Our ascent was painfully slow, for the horse, in addition to being false, was wind-broken. At last, however, by pushing the wagou and applying the hickory to the horse, we reached the summit. We transferred our baggage to the only car operated on this remarkable road, and were soon safely landed at the base. Shouldering our tremendous loads, we struck boldly out into the wilderuess. A few hours tramping brought us to an old cabin, which we intended to occupy. An hour's work made it very conifortable, and building a good fire, we turned our attention to getting supper. It was soon ready, and each of us did ample justice to the meal. After supper, by which time darkness was stealing over these vast solitures, we reptenished the fire, and in its cheerful light we sunked and discussed the prospects for the morrow. After due deliberation a plau of action was agreed upon, and we lay down to sleep that night, feeling confident that the old log-cabin would form the base of a series of brilliant operations that would inevitably result in the almost total extermination of the deer in this famous valley. The next morning, long before day-

light we had finished our breakfast and the first gray dawn found the "Blacksmith" and Hacket posted on crossings, where they sneed to let up living animal pass and live. "Thus far shalt thou go, but no further," was their motta, while Atlen, Wells, Mickre and the elects were each burrying nawly to perform their respective parts of the day's programme. So far all worked admirably, every man performed his part, but the deer failed to perform theirs; that is, instead of running where we had arranged that they should run, they persistently avoided the theoretically fatal crossings occupied and guarded as aforesuld. They were deaf to all our entractics to sun, if only far a second. The "plaintive bleat" and the "sharp shull whistle" were alike unfeeded. The day were away and the night found as back at the cabia, tired and hungry, and of course disappointed. A good supper, however, and the avviinfle smalle, greatly revived our spirits, and the evening was pleasantly spend, notwithstanding our disappointment, and we all agreed that the "camp thee" is the ne plus ultra of the phassness of the chase. What memories rluster armund it! What heart can remain indifferent to its lamber rilable charms! Many were the stories that were table that night, amf full of hape for the morrow, we buy down to sleep unce mare.

charms! Many were the stories that were tall that night, and full of lape for the morrow, we lay down to sleep amenative.

Next morning, by daylight, we were again an the "ware path." This day's laint began and ended as the first. This sharp crack of the titles and the tremembors roar of the double shot gan reverberated among the grand old monutains and awakened velices her miles around. Plenty of hair, but no liboal was shed by the deer.

The third day's hant began and ended is the two previous ones, but it was reserved for the fourth day to witness the climax of our misfortanes. We awoke to find the rall pooring it torrents, the faces of all lanked grave, but after hearing J. A., Jr., relate some of his exploits on jost such days is this, we resolved to try it again, let it rain as it would. Messes. Wells and Hacket, however, did not seem in a harry for the fray. They fingered long over their breakfust that morning, and we left thrue. All day we crawled through the dripping thickets, and fell aver the rocks, which the min had minde very slippery. The "Blacksmith," in one of his namerous fulls, disarranged the sights on his ritle, which sail mishap was ant discovered until he missed a their standing within sany range. He merely knocked off a tanneh of halr, when, but for the accident referred to, would have kilhed the elect, turne is a good shot. And again, while in the act of liring at another that was leisurely approaching him, a large hint of the tree under which he was standing, brake with a hond crash and fell within a foot of him the deer and the "Blacksmith" took approaching him, a large hint of the tree under which he was standing, brake with a hond crash and fell within a foot of him. The deer and the "Blacksmith" noty stopped when he reached the ratio. When the dier stopped, history sayeth nat. When we met that evening at the cobin we were greatly disappointed to find Messes. Wells and Incket gone. There is a limit to human endurance, mental and physical.

Wells and I lineket gone. There is a limit to human endurance, mental and physical.

They had succumulated to the demonstraing influences of bad luck and wet wrather, and packing their traps they had sadly and silently stale away, and no doubt by this time were doing their best on a famor run. We missed them that night, but a lecture by J. O. B. on the great value of potatoes as food, as demonstrated in the case of J. A. Jr., and some choice voral amise by the "Blacksmith," rembred in his nwn "prendiar and infinitabla" style, embled us to pass the evening vary agreeably.

Before we went to sleep, harrower, we manived that the fates were against as, and that the lest thing we rand do would be to imitate the example of the "departed" and go home. Accordingly, the next marning after enting as much as passible, we packed up, and hidding adher to the cabin that had sheltered us so well, we started for a point where a path crossed the maintains in Granville, a stather on the P. R. R., and the site of old Fort Granville, an Important post in colaminal days. This was several miles eastward of the eabin, and with the amberstamling that we were to meet at the point mentioned, we sequented; Allen and McKee intending to tand along the creek, while the "Blacksmith" and the "elerk" tank the foot of the mountain running parallel with the creek.

Eneumbered as we were by the wright of our knapsacks, it was lampassible to walk with that light contlants.

"Blacksmith" and the "relerk" tank the foot of the monntain running parallel with the ererk.

Encumbered as we were by the wright of our knapsacks, it was lappossible to walk with that light, cauthous step so appears to successful deer hunding. But, contrary to our expectations, we came suddenly on a bago flock of turkies. The veritable "Blacksmith" tred, but without effect, and they scattered in every direction. The "Blacksmith," after taking a position bedoind a lag that made his huge white knapsack the most considerous object in the vicinity, began to call them, disdaining the ose of any mechanical arrangement to lure turkies to their destraction. He depended entirely on his voral powers to me complish that object. To have heard that call was well worth a day's travel, so perfearly did he influte a tarkey (of some unknown species,) that the ones we were after fled in terror from that awful sound. We started once more, and after a long, tiresome tramp, reached Granville. In summing up the met proceeds of this "this hunt," we found it to be as fullows:—Six gray squirrels, four wild pigeons and six quarts of chestants, the latter J. A., Jr., procured by climbing a tree and cauting off the top. In justice to the parties who flare in this accumul, they have to say that they are all genial gentlemen and hunters of enoughershle experience, which is experally true of J. Allen, Jr., for unary indeed my the deer that have gone down at the crack of his trusty Ballaul. And for many years and a Thanksgiving Day has passed that the tuble of Mr. Wells was not graceal by a reasted wild tarkey shall by his own lamis. And all the rest of the party have shall their first deer in days gane by, and the almost hexcansable result of this great tant, proves the truth of the old saying that "the best bid plans of men and mine oft gang agive." But glarious Autumn will come again, and perhaps can give a better account of ourselves when we relure.

A HEART WOUND NOT FATAL.—C. L. Ford, of the University of Michigan, informs the Medical Record that a so vero wound of the heart is not necessarily fatal, as instanced in the case of a deer which was shot the past Winter, hav ing a bullet in its heart that had evidently holged there a year previous, as indicated by the chantrix. The shot had traversed the muscular structure for three luches nearly parallel to the septimn. "The whole indication," he says, "is complete recovery from the injury done at the time.

Mish Gultune.

MARVELS OF SALMON LIFE,

TT is well known that salmon ascend their native rivers at certain seasons of the year to spawn. At the United States salmon breeding establishment on the McCloud River, in California, it is an object of the commissioners to capture these fish at such times in order to secure th apawn for artificial propagation; and in order to facilitate this effort a dam and bridge were built last Summer under this ellor; a dum and bridge were built last Summer under direction of Livingston Stone, Esq., the superintendent, across the river to prevent their passage to their usual spawning beds above. Mr. Stone has kindly favored us with advance sheets from Prof. Buird's forthcoming report for 1874, describing the assault of the salmon last August upon these obstructions, and their wonderful but ineffectual efforts to pass them. Much has been said of the mar-vellous leaps of the salmon, and the assertions that have been mule as to the length or height of these leaps have generally been regarded as ower true tales; but the official

vellous leaps of the salmon, and the assertions that have been mute as to like length or height of these leaps have generally been regarded as ower true tales; but the official statements herewith printed establish their verity, and impel us to wonder at the muscular force which enubled these fi-h not only to lrap over the thm, but to "strike with vlolence" persons standing upon it. We quote:—

"About four o'clock in the afternoon a few days after the passage of the salmon was obstructed, and before the corrals were made, it was announced that the salmon were making their first assault upun the dam. The whole camp collected on the bridge to witness the attack. It was a sight never to be forgotten. For several rods below the bridge the salmon formed one black writhing mass of life. Piled together, one above another, they charged in solid columns against the bridge and dam, which trembled and shook continually under beir blows. Not dannied by their repeated failure, they hed stack after attack upon the fence, one cultum succeeding as another fell back. Encouraged by their numbers, and urged on by their irrepressible instinct, they entirely disregarded the observers on the bridge, and struggled their very host to pass the unworted distruction. Finding the fence impassable, many fell back a little and fried to jump the bridge. This several surrepelad in thing, sametimes violently striking the men on the latidge in their leaps, and sometimes actually jumping between their feets, For an hour and a luff this force assault rontinued, when, exhausted by their efforts, and discouraged by mony failures, they fell back to the teep hole just below the rapids, arrested for the first time to their proverse up the river since the McCloud formed its channel. The ludians who were watching their moven e is were will with excitement over the scene, which, even after a resilience of centuries on the river, was new to library and their repressible to their spuwn.

"When the sulmon had made their natural habint and surroundings, the

TRANSPORTING LIVE FISH. - The London Field of late date contains diagrams of an apparatus in use by the German Fisheries Association for transporting fish on long journeys, which consists of a long cask mounted on wheels, the motion of which works an aërating bellows, so that minual lator is dispensed with. There are iron or wooden tunnels utrached to the spokes by an open fork, and secured Imppels attached to the spokes by an open fork, and secured by a cotter, and when the wheels revolve the tappels strike upon and set in motion a swinging lever, and a connecting wire attached to the lever works the bellows. Should it be desired to work the acrating bellows at a quicker rate, without increasing the speed of the vehicle, this can be necomplished by adding to the number of tappets. The bellows can be worked by hand in case the apparatus remains stationary for any length of time, and the barrel can be easily removed from the frame at any time. It is a useful

THE BLUE LIGHT. - Orders have been issued at Wash. Ingion to fit out the United States steamer Blue Light, which has been laid up at New London, Conn., for the use of Prof. Spencer F. Baird, United States Fish Commission. er. Commander L. Bearnslee, United States Navy, will be assigned to the command of the vessel. He has had command of her for two years past.

FISH COMMISSIONERS FOR KENTUCKY, -The Kentucky State Sportsinen's Convention, which meets at Paris on the 10 h instant, will recommend the appointment of State fish commissioners by the legislature. Kentucky is sailly in need of protection for her itsh and game, such prohibitive laws as it has being practically a dead letter.

NEW HAMPSHIRE FISH AND GAME LEAGUE.

NEW HAMPSHIRE FISH AND GAME LEAGUE.

THE annual meeting of the Fish and Game League of New Hampshire was held at Manchester last week. This is a powerful and intetligent body, and its services are much needed in the Grantle State, where the protective laws have hitherto been very lax and Inefficient. Its work thus far has been thorough and sagacious. Last April a year ago a very competent committee was appointed on "Restocking the Merrimack and Connecticut rivers," and also a sub-committee to cunfer with the legislature on the subject; speedal fish commissioners were appointed in all the counties of the State except Grafton, Merrimack, and Rockingham, who were desired to eo operate with the State commissioners in their labors; a Committee on Bird Laws drafted an elaborate hill, stating what birds should be protected, and at what seasons, which was presented to the legislature and passed with slight modifications. The principal changes made by this law were the termination of the close season for woodcock on the 4th of July instead of the 15th of August, as formerly; the omission of the Wilson's snipe from the list of protected birds; the clause relating to the suaring of ruffed grouse, and the one against the expansing of poisons for any purpose. Care was taken in the prepural poisons for any purpose. Care was taken in the prepural poisons for my purpose, Care was taken in the sometimes arises from that source. It may be interesting to know the kind of opposition which this bill met, and which any proposed changes of a similar nature are liable to incur. Some oppose any laws favorable to sportsmen because the dogs used in hunting sometimes kill sheep. Others object to any protection to that noble game bird, the ruffed grouse, because it cocsumes the buds of their apple trees in Winter, thereby, in their opinion, injuring the crop of apples for the creating senson. A very few would prohibit the use of the gon during the latter part of Summer and the earlier half of Autumn, in order that they may net a few pipers

PACKING SALMON EGGS.

COLD SPRING TROUT PONDS, CHARLESTOWN, N. H., April 8, 1875.

EDITOR FOREST AND STREAM

The picking of the California salmon eggs this year has been made the object of so each criticism that I beg to enclose the following noises on each pict for publication:

The California salmon eggs were packed for shipment this year on the

subject of so unen criticism that I beg to encrose the following noise on the aubject for publication:—

The California salmon eggs were packed for shipment this year on the same general plan that was adopted last year. The packing boxes are made two feet square and one footileen. At the bottom of the box wise placed a thick layer of moss, then came one thickness of mosquito bar, then it layer of riggs, then insignite bar again, then other encoessive layers of moss, netting, eggs, and neitling, and so on to the middle of the box. Here a firm weoden partition was fastened in, and the packing renewed above the partition in the same manner as below. The cover was then screwed on the tap, and mother box packed. When two boxes were ready they were placed in wooden crutes, mind large enough to allow a space of three luckes on all sides of the boxes. This space was filled with hay to protect the eggs against changes of temperature. The cover being put on the crale and the marking done, the eggs were ready to slip.

low a space of three luches on all sides of the boxes. This space was filled with hay to protect the eggs against changes of temperature. The cover behing put on the crale and the marking done, the eggs were ready to skip.

This plan of packing seems, he spite of many severe criticisms that have leven made upon it, to work remarkably well. Of the eggs sent in 1873 to Great Sait Lake, distant a thousand miles, only three per cent, were lost. Seth Green reports a loss on the 200,000 eggs consigned to him in 1873, in only eleven per cent. In both the transportation and hatching. Mr. James Tuompson, of New Hape, Pa., writes as follows of the eggs sent kim this season: "The 150,000 salmon eggs shipped from California, arrived in splendid order." The entire loss on this fot its transportation and hatching was only six per cent. These facts seem to show that the packing is all right. The trouble with those who found fault with it is, that they do not understand whint it is that kills the eggs in the lots that do not go well. The mischlef is not in the packing, but in the high temperature to which the eggs are exposed in transit. I will agree to take any of those hits of eggs to New York, and back to California in lits packing, without serious loss, if I can have entire control of the temperature of the crates. But what can be expected of eggs that are packed in a hot climate to begin with, are compelled to travel a whole day la a temperature often much shove 100°, and then for several days eliter where the weather keeps them warm naturally, or where the care containing them is artificially heated to an excessive degree, as is the case with the express care, which convey the California salmon eggs, and when In addition to all this they are delayed by negligent express agents several days beyond the regular time?

I challenge any one, whatever may be his ingennity or skill, to pack salmon eggs so that they will make the overland journey safely under these circumstances. If the eggs were not destroyed in any other way, t

ade ready. Fifth—General economy in regard to expense should be sludied, as

with such a large number of eggs, even a small additional expense per thousand makes a large bill in the aggregate.

Not method that I have been made aware of combines these advantages better than the one actually employed this season in packing the California eggs.

Livingston Stone.

Hatural History.

INSECT LIFE-No. 4

BY KEURA

THE very extensive class-colcoptera, or the beetle trihe-to which the eockehafer belongs furnishes many other examples of insects exceedingly injurious to agriculture, both in the larva and perfect states. the different kinds of weevil which attack grain, both while growing and when stored away in the granary—the turnip fly, the wire worm, which is the grub of one of the little slender beetles allied to the exotic fire flies, and many others, an attentive study of whose habits in their various stages would probably suggest remedies for the injuries inflicted by them. On the other hand, the same class furuishes examples of insects conferring benefits upon man, either by preying upon other insects whose ravages interfere with his comforts, or with the supplying his necessi-ties, or by removing decaying substances which would otherwise become offensive to the senses. Of the former description are the larvæ of the lady birds, which do good service by destroying the aphides infesting the hop. Of the latter, in a small way, is the sexton, or burying beetle, which actually consigns to the bosom of mother earth the body of any small unimal it may meet with, not, however, with a view of conferring a beuefit upon the "lords of creation," but in order that its own pringery may be provided with a fitting nidus, and that they may find a sufficient with a fitting ridus, and that they may may store of provision on emerging from the egg. Au exceedingly pleasing description of the proceeding and his mate, from the pen of an observer, who, we regret, and his figure, from the pen of an observer, who, we regret, now writes no more, appeared some years ago in the "Entomological Magazine," with the signature of "Rustieus, of Godalming," and is quoted by Mr. Newman in his "Introduction to the History of Insects," from which we here

tomological Magazine," with the signature of "Rustieus, of Godalming," and is quoted by Mr. Newman in his "Introduction to the History of Insects," from which we here extract it:—

"The sexton beetle is ahout an inch in length. It is of black color, and so forid that the hands smell for hours after handling it, and if it crawls on woolen clothes which are not washed the smell continues for several days. The sexton beetle lays its eggs in the bodies of putrelying dead animals, which, when upracticable, it buries in the ground. In Russia, where the poor people are buried but a few inches below the surface of the ground, the sexton beetles avail themselves of the bodies for this purpose, and the graves mre pierced with their holes in every direction; at evening hundreds of these beetles may be seen in the church yurds, either buzzing over recent grives or emerging from them. The sexton beetle in this country seldon fluids so convenient a provision for him, and he is under the necessity of taking much more trouble. He sometimes avails himself of dead dogs and horses, but these are too great rarities to be his constant resort. The usual objects of his search are dead mice, rats, birds, frogs, and moles; of these birds and ruts are most commonly obtained. In the neighborhood of towns every kind of garbage that is thrown out attracts these beetles as soon as it begins to smell, and it is not nutsual to see them settling in our streets, enticed by the grateful odor of such substances. The sexton beetles hunt in couples—male and female—and where s x or eight are found in a large animal they are almost sure to be makes and females in equal numbers. They him they seen tonly, the clause being mostly performed when no other sease would be very available, viz., in the night, when they have found a bird great comfort is expressed by the male, who wheels round and round above it like a vulture over the putrelying circass of some giant of the forest. The female settles on it at once, without this lestimonial of satisfaction. Th

nose elevated with a kind of jerk which sends the earth forwards. After the grave is thus filled up, the earth is trodden in, and andergoes another keen scrutiny all around, the bird being completely hidden. 'The beetle then makes a hole in the still loose earth, and having buried the bird and his own bride next buries himself.

"The femals having laid her eggs in the carcass of the bird in numbers proportioned to its size, and the pair having enten us much of the savory viand as they please, they make their way out and fly away. The eggs are hatched in two days, and produce flat, scaly grubs, which run about with great activity. These grubs grow excessively fast, and very soon consume all that their parents had left. As sum as they are full grown they cease eating, and burrowing further in the carth become pupe. The length of time they remain in this state appears uncertain; but when arrived at the perfect state they make round holes in the ground, from which they come forth."—Neuman, p. 53.

Of the unwearying ladustry shown by these beetles some idea may be formed by the result of experiments conducted by M. (Heilitch, as quoted by Kirby and Spence, from an interesting article in the "Acts of the Berlin Society" for 1752. M. Gleditch found that "in fifty days four beetles had interred, in the very small space of earth allotted to them, twelve carcasses, viz., four frogs, three small birds, two fishes, one mole, and two grasshoppers, besides the entrails of a fish and two morsels of the lungs of an ox. In another experiment a single beetle buried a mole forty times its own bulk and weight in two days." To this account the authors add the following pertinent remarks:—

"It is plain that all this labor is incurred for the sake of placing in security the future young of these industrious insects, along with a necessary provision of food. One mole would have sufficed a long time for the repast of the heetles themselves, and they could have more conveniently fed upon it above ground than below. But if they had left

EAGLES AND GAME COCKS.

EDITOR FOREST AND STREAM:—

I would willingly comply with "Roamer's" request to put a good game cuck against my white headed eagle, but that is now impossible, since the old build head has gone where all good eagles go. I think the bird must have died of old age, as he had the apparatance of being rery old, though not so old, pythajas, as the one that lived at Vlenna 104 years in confinement. I have not find mine so long. Does "Roamer" imagine that the best game cock that ever buttled for victory, no matter how well heeled, could stand for an instant against a white headed engle? For alshough the game cock has the counge that can date "Thy deadliest form that death can take, And dare it far the daring's sake,"

yet it goes for anaight when majohed with the eagle's provess.

I have bred game forels for a dozen years, of the best strains there are, merely for my own amusement, never baving sold them, and many a fine bird has sent forth bis last challenge for battle lieueath the piercing eye and lowering mien of my eagle. Did "Roamer" over bear the story of the American game cock (a white headed eagle) pitted against the champion of Sannatm?

Now, in regard to the white headed eagle having been chosen as the tembern of our great and glorious country, we have nothing to do with final. Perhaps the country is not so much honored by the representation as is the bird by being the representative. I cannot, however, think that the white headed eagle was chosen on account of any particular merit of the species, but rather on account of the paculiarity this bird has of so early assuming the with the ead, giving I a bald appearance—like our country, young my years, but old in the trials and battles for independence, I believe that our forefathers generally did things with clear heads, and we have the first the tall they greatly erred in honoring the bird in question. But perhaps the ant might netter suit the fastidious, and bave been a more wortby representative, as it is hudustrious, minds its own business, and we have. I

fer frum "Roamer's" former letter that this eagle was a cannot, numbering and cowardly bird.

I do not regard it at all of uncommon occurrence for the white headed eagle to capture its own prey, whether from the land or water. "Roamer" of course knows that the bald eagle is not considered a trac eagle like the golden eagle, and although denominated a lishing eagle, lives equally well from the offerings of the sea and land, in fact I find it stated in Prof. Baird's "Birds of North America" that the baid eagle preys "for much the greater part on living animals."

The within headel eagle is one of the swiftest of all the eagle tribe, and being fully aware of his own power of whig, oftentimes performs strange deeds in mid air that rather surprise us here below. It is rather inconsistent to speak of the eagle's having courage enough to rob the powerful osprey of his booty, or to cause the vulture, more frightened than injured, to cast forth his plunder, and yet to set forth the idea that this same eagle has not the courage to attack or beat off a bird "not bigger than a spurrow."

sume eagle hus not the courage to attack or heat off a hird "not bigger than a spurrow."

Why, it is not the courage tint is wanting, but the eagle in his strength regards this little bird as too insignificant to pay any attention to, and so permits it to culpy its harmless sport. I think it really unfait to cast abuse upon the eagle because be conquers in mid air birds nearly or quite his equal in size, and does not molest the harmless sport of birds the sparrow's size. Truly I regard this as his great reliceming trait, and were it the apposite he would indeed be a mak coward.

On the whole, friend "Rouwer," take the baid cagle day in and day out, I think him not so bad a hird after all. My golden eagle now reigns suprome in bis solitary confinement, and is ready for a cat, small dog, or chicken. He is a magnificent specimen, of full size and pluninge. His feathers shine with the gloss of health, and be bids fuir to has many a day yet. Yours very truly,

PINE GROSBEARS.-The pine grosbeaks, to which we have made frequent reference the past Winter, were seen as far south as Meadville, Peun., which is remarkable, in-asmuch as these birds are inhabitants of Aretic America, and are only seen within the United States in very severe

and are only seen within the United States in very severe Winters. The Meadville Republican says:—

"In the mule bird the legs are black; bill brown; general color carmine red, not continuous above, however, except on the head; the feathers showing brownish centres on the back, where, too, the red is darker; portions of the breast, sides, wings, and tall ashy brown; wings with two white bands across the tips of the greater and middle coverts. The female is ashy in color, brownish above, tinged with greenish yellow beneath; top of head, rump, and upper tait coverts brownish gamboge yellow, with tail and wings as in male, though not so dark; the size of the birds is a little larger than the blue bird, and not as large as a robin. They appear in yards or gardens to feed on berries that may remain on the vines or bushes in flocks of eight or ten, with seldom more than one or two male birds in each flock."

The Rennel.

THE SPRINGFIELD BENCH SHOW.

E print below the Circular and List of Premiumns of the Springfield (Mass.) Dog and Gun Club, for their first annual Bench Show, to be held at the City Hall in that city on the 28th and 29th inst. We trust that the energy displayed by the gentlemen who have organized this event will be duly rewarded by full lists of entries. The cups are of solid silver, handsomely designed and fit to grace any sportsman's sideboard as mementos of the occasion.

CIRPULAR.

The great interest and rivalry shown of late throughout the country in the importation and irrecting of dogs of superior blood, especially of dogs for sporting purposes, will render an exhibition of such animals highly useful and interesting.

The Rod and Gun Club of Springfield desire to bring about such an exhibition. The club is some baying buying buying the presents organized and because the first production of the country of the country

highly useful and Interesting.

The Rod ant Gun Chib of Springfield desire to bring about such an exhibition. The club is young, baving bren recently organized, and has never liven richly endowed. Therefore it does not feel itself able to offer very high premiums. But it is hoped and believed that the opportunity offered of seeing a good many fare dogs together, to compare their respective mults, to effect sales, etc., will induce the owners of dogs to bring them to this Show.

This Bench Show will be open to all dogs. In the distributions of premiums, preference will be given to dogs for sportling purposes, but dogs of every breed and variety are cordially invited to the exhibition.

An entry fee of two dollars each will be charged for all does mentioned.

thitlon.

An entry fee of two dollars each will be charged for all dogs mentioned in the premium list.

Owners are requested to give notice of their intention to exhibit dogs as soun as possible. Entries can be made at any time previous to and on the day of exhibition. Entry fee to accompany nomination.

The rules and points used by the judges will be those of the Lomion Kounel Chab, except that a dog with mutilated tail or cars is not barred.

Dogs from all parts of the United States are eligible. If in the opinion of the judges no dog in any class is worthy of a diret premium, It shall be in the discretion of the judges to make such award as they may deem proper.

All cummunications, and applications for entries may be addressed to Robert O. Morris, Secretary, Springfield, Mass.

Class lsr.—Setters, Laurenck.—For lorst dog, one year old and up-ward, a silver cup: second best dog, diploma; best bitch, one year old and upward, silver collar; second brest bitch, diploma; pedigree re-quired; best dog may, under one year old, diploma; best bitch pup, di-ploma; pedigree required.

pioma; pedigree required.

CLASS 20.—Setters, Gordon.—For best dag, one year old and upward, silver cap; second best dog, diploma; pedigree required; byst bitch, one year old and apward, silver collar; second hest bitch, a sliphoma; pydigree required; best dag pip, under one year old, diploma; best bitch pup, ninter one year old, diploma; pedigree required.

CLASS 30.—Setters, English, IskA and Nutice.—For best dog, one year old and upward, silver cup; second best, diploma; with or without pedigree; best dog pup, under one year old, diploma; best bitch pup, diploma.

pediagree; best dog pip, under one year our, apronar, best bitch pip, ur plomin.

Cl. Abs Ath. — Pointers, English. — Por best dog, one year old and upterly the pediagree required; best bitch, one year old and inputed, silver collar; second best bitch, diploma; best dog pip, under one year old, diploma; best bitch pip, diploma; best dog pip, under one year old, diploma; best bitch pip, diploma; best bitch, diploma; best dog pip, onder one year old pediagree required; best bitch, one year old und upward, silver collar; second best bitch, diploma; best dog pip, onder one year old, diploma; best blich pin, diploma.

Cl. Abs Bri. — Pointers, Multer.— With or without pedigree. For heat dog, one year old or upward, silver collar; second best, diploma; loe pich, one year old or upward, silver collar; second best, diploma; loe pich, under one year old, diploma; best bitch pip, under one year old, diploma;

ploma.

Class The —Fox Hounds, Bragles, Harriers, Dachshunds,—For best day in this class, one year old and upward, silver collar; second best, diploma; best blich, one year old and upward, liploma; lest day pun, ander one year old, diploma; best blich pup, under one year old, diploma; best blich pup, under one year old, di-

under one year out, unpoints; best bitch pup, inder one year old, diplying.

Class Stir.—English or Irish Retrieurs, Clumber Spaniels, Cockers, Springers.—For best due in this class, sun; year old and upward, silver critur; second best, diploma; best blich, one year old and upward, diploma; best dog pap, under one year, diploma; best blich pup, diploma Class Priz.—Terriers. Societo, skye, Donde Dimonat, Rough Coated, Pug, Black and Tan Toy.—For best dog in this class, one year old und apwards, collar; second liest, diploma; best blich pup, diploma.

Class Hru.—Neufoundlinds, St. Bernards. Collies, Dubratunes, Spitz, Blubein Spiniets, Poolies, Haidon Greybounds, Greybounds.—For best dog in this class, one year old and upward, diploma; best blich one year old, diploma; best blich pup, a diploma.

Class Hru.—Mautiffs, Bulls, Bull Terriers.—For best dog in his class, one year old and upward, diploma; best blich pup, under one year old, diploma; best blich pup, diploma; best blich pup, diploma.

In addition to the prizes mentioned above, Forest AND STREAM offers a cup of the value of twenty-five dollars for the best specimen of dog or bitch, either setter or pointer, without regard to strain, on exhibition.

—We would suggest to gentlemen who may desire to send dogs to the Springfield Show, that if they will send uotice of such intention to this office in ample time, we may be enabled to make arrangements for a special car for their transportation.

—We kope that the railroad companies will be sufficiently magnanimous to allow dogs en route to the Springfield Beach Show to occupy the smoking car, if properly accompanied. In this connection we would call attention to the fact that baggage men of the Atlantic and Pacific Railroad Company have been instructed to collect as fares for dogs, fifty cents for the first 100 miles or fraction thereof, and twenty-five cents for each additional 100 miles or fraction thereof; for each gun, twenty-five cents for the first 100 miles, and fifteen cents for each additional 100 miles. It will not be long before dog rights will be fully recognized in all respects, legal and otherwise.

ANOTHER FINE IMPORTATION.—Mr. J. H. Whitman, of Chicago, Western Passenger Agent of the Grand Trunk Railway, writes us that by the Allan steamer Scandinavian, which arrived at Portland, March 31st, he received from J. S. Skidmore, Esq., of Nantwick, England, the Irish water spaniel bitch Liffey, heavy in pups by one of his prize dogs.

Mr. Skidmore sends her as one of the heat of those advertised in our paper. She is by Young Doctor, out of Bridget, both first prize winners at Birmingham, Crystal Palace, &c. She is of a very tlark liver color, without any white. Mr. Whitman is well pleased with her, as he has a dog of the same breed, a splendid dog for ducks.

-The State Sportsmen's Association of Kentucky, which as organized in September, 1874, is composed of members of the various clubs throughout the State. The membership amounts to over one humbrat. The lirst tournament takes place at Paris, Ky., in May 18, 1875—to continue five days. Besides the placou matches, there will be a Beuch Stane of pointers and setters.

The oblination progress amounted to appear the moviement.

The object is to secure unautuity amongst the sportamen of Kentucky and current of action in regard to the preservation of game, the passage and enforcement of game laws, and legislation requisite to protect the fine bred dogs which are being imported into the State.

DOCKED TAILS AND BENCH SHOWS.

WEST TROT, April 3, 1818.

DOCKED TAILS AND BENCH SHOWS.

West Thor, April 3, 1878.

Edition Forest and Stieran:—

As I understain' it, one of the rules pertaining to Bench Shows excludes entry for prizos to a day having been disclosed. Such being the case, is it not going to have a tembercy to bessen the interest which would otherwise be fold in these shows, if this rule order modified? The majority of our best days are owned by spartsum, and inheren our of teachy dodock the fulls of their days, and it is to my opinion a great blee sing to them. A case just now overas to me. I met a friend with his system few days since, and I naticed bis day carried the full as if it had not healed since has season's shooting, and was getting wome. I suggested taking a little off, which he said he would the ne soon as the aveator permitted. This dog was hunted all through the Fall with a soor all, caused by switching about the linesh, and has suffered all whiter with it. It might perhaps have came in contact with same poten, but any dog is liable to do the same. No apertained he gaing to sacrifice the comfort of his day for the purpose of cotring him at a ship thow. Thus it will be seen the majority of our best dags will not be represented. I am the possessor of a blitch whelp by Rauger, also a day show. Thus it will be seen the majority of our best dags will not be represented. I am the possessor of a blitch whelp by Rauger, also a day show will sumpare favorably with anything learn saw in the day line. I should very much filte to enter them at the Watertown show, to be held under the supervision of "Mohawk," but they are also and Kirhy, which will sumpare favorably with anything learn saw in the day line. I should very much filte to enter them at the Watertown show, to be held under the supervision of "Mohawk," but they are also and they not suffer from it. Cannot this ruln be mailled somewhat, so not permit dogs that have of docking as short as to disligate a day, that short enough to prevent these from whipping their our England they have bey littl

propriety of excluding setters and pointers from brack shows in consequence of docking, yet we do not think, with him, that all such dogs are either benefited or beautiwith him, that all such dogs are either benefited or beautified by docking. In regard to pointers, we are convinced, from long experience, that judicious docking not only improves their appearance but avoids the cruelty of working them with sore tails. With setters, however, it is very different, the tail being so much better protected by the feathering. A sore tail from hunting is an exception, yet there are many setters having talls out of proportion in learnth, and some with an authoristic excels over the conlength, and some with an awkward crook near and all such can be much improved in appearance by Judicions docklug, a course we have always parsural; yet we have bred some pointers, and many setters, which required no docking, their talls being just about the proper proper-

no docking, their talls being just about the proper propur-tion and shape, and any alteration of them would have marred their beauty.

The tail of a dog is a prominent feature, and should al-ways be so considered in a beach—show. We call the at-tention of our correspondent to the fact, that at the brach show of The Rod and Gut Club, to be held at Springfield, Mass., on the 28th inst., the rules and points—used by the judges will be those of the London Kennel Club, except that a dog with a mutilited tall or cars is not doexcept that a dog with a mutilated tall or cars is not de-

IRISH RETRIEVERS.

The following letter on the shove subject is from the pen of a gallant officer of Her Majosty's service, whose experience as a sportsman entitles his remarks to great weight. We hope to hear further from him on kennel subjects gen-NEW BRUNSWICK, April 7, 1875.

erally:—

New Biumswick, April 7, 1675.

Edition Fourest and Stream:—

My fancy was a good deal tickled by the engalities of a gentleman in your issue of let in-t., who has two due Irish tetrievers, but does not exactly know what to do with them.

As retrievers are epoclal favorities of mine, and I have been in the habit of he uking my own for soveral years in Englin I and class where, I will give you my vajorities of what can be do see with them.

To begin with, a retriever ought to come to heel the moment he sees the master has fire gun with him, he should mark where the game fells but never attempt to fetch it till ordered; whe tool it in saced was!" he should run up to the place where the game fell and if dead, flud it stone by seent; if only wounded, he should quickly fit off the foot out man follow it mp, baving engined it, he should him fing it back to him master with not ruffling a feather, and give it into his hand. When he is perfectly steady at this work, he should be made to him to everte and rough ground; he will not set like a politice or setter, but puts the gine up, standing afterwards the told to retrieve. If a clever dog, he will generally manage to drive the game towards yin, not from you.

After the first of the season in England a ad Scorland, a geod retriever is, to my opinion, the best dog a man can ne, and I should into his it must be the same in most parts of the Stries. I know I felt the want of one a few years ago, when solpe shouting in Ludsiana. This re is no more companionable dog; he does not want to be forever ranging like a sector, but remains near you at all times.

This morning, while out riding, I accidentally dropped my whip Nell, being engaged with a bone, did not notice what had happened till I called

her attention to it. She then picked if up and gave it me, sacing me the

trouble of dismonstring.

1 had one dog he England who shrays accompanied me when trout fishing; he used to take rhorge of my basket, carrying it from point to point; and if my line got cought in anything in the exact that he could bring out, he would do so.

There are a great many different strains of those dogs, some of which are very faulty; so, before taking the trouble to train one, I should addisc ancone to make suce that his pup is lateliligent, tender-monthed, mult, and has a first-chas nove.

DOG FARES.

EDITOR FOREST AND STREAM

Edition Forest and Sturam:—

Dog fares on Pri, Central, Philadelphia to Philishing, are \$1.20 cach; on the Urice lines between Pittsburg and St. Louis, \$1.20 for each dog, or from Philadelphia to St. Louis, the regular fare for one dog is \$6. On ronds west of St. Louis the fare averaged the same.

The curr given the dogs by baggaze masters, feeding, watering, transferring to other roads in the hight, and other incressity altention, was excellent and all that could be directed. We were fastinhously particular as to the proper care of our riogs, and through all the various laggace men's hands redich they passed there may nothing to except to, but everything to commend.

The gentleman to whom we are included for the above.

The gentleman to whom we are indebted for the above The gentleman to whom we are indebted for the above information, Mr. C. S. Bonteher, has prepared for private circulation a little hook entitled "Notes of a Western Hunting Trip," being an amusing and exceedingly interesting account of a luming expedition in Missouri, Kunsa, and the Indian Territory in the Winter of 1874. The illustration are applied of the property of the proper trations are unique and remind us somewhat of poor Squibob's attempts, but the information contained in the book is very valuable to sportsmen ineditating trips in the same direction.

Game Bag and Gun.

GAME IN SEASON FOR APRIL

Snipe, Ducks and Wild Fowl.

GAME IN MARKET .- Every week reduces the variety exposed for sole, and the assoriment on the stalls is of the most meagre description. Ducks have ceased to come from most incagre description. Ducks have ceased to come from Southern waters, and the canvas backs, red heads, etc., on sale are refrigerated birds. Brant are in better condition than any variety now received, and sell for \$1.75@\$2 per pair. Widgeon, broad bills, etc., are being received from the East end of Long Island in large quantities, but are in very poor condition; they sell for 75 cents to \$1 per pair. Geese are also killed in large quantities in the same locality; price \$1.50 each. English snipe from the West are coming in freely, but New Jersey and Maryland are supplying few birds; the former bring \$3@\$3.50 per doz., and the latter \$4@\$1.50. Player \$4. Wild pigeons are worth \$1.25@\$1.50 per doz., and, as the nesting senson soon begins, but few more will be received.

—A new Game Protective Club is now being formed in

-A new Game Protective Club is now being formed in Washington City by the most respectable chizens, who will wield an influence that will ensure the enforcement of the present laws or secure the passage of new ones, if necessary. Violation of law is more imprudent and recknecessary. Violation of law is more imprudent and reck-less in the District of Columbia than most unywhere else. —According to the Dallas (Texas) Herald, Mr. Hedgeman

Brown recently killed "two hundred and afteen rice birds at a single shot. He fired one barrel of his gun only, which was loaded with fine bird shot. We wonder if the gnn ovus one of the one and three quarter inch bores used by market shooters on the Potomac?

—On the 14th of January, 1875, a sportsman's club was

formed at Ferrisburgh, Vermont, the chief object of which is the enforcement of our game and lish haws. There is a broad field for missionary work in this line there, and the club hopes to accomplished some good.

-The "Sank County Sportsman's Club" of Wisconsin, was organized at Buraboo last mouth. It will encourage legitimate sport and protect gume. Its officers are R. M. Strong, President; Win. P. Barrett, Vice President; Muir

Pointou, Secretary; Geo. Mertens, Treasurer.

—The Hunters' Glub of Lexington, Ky., was organized in 1870, and comprised originally twelve members, but n short line since the number of members was increased to fifteen. Besides the usual contests in field sports, the club fifteen. Besides the usual contests in field sports, the club has quarterly matches at the trups, in April, July, October and December. The club has, since its organization, been matched in contests at the trups with the Frankfort Club, which it heat; and in a home und home match with the Nimrod Club of Bourbon, of which the Hunters' Club won the match at Lexington, and lost that at Paris. It also beat the Woodford Club in a number at gyros.

NEW JERSEY.—Kinsey's Ashley House, Burnegat Inlet, April 10.—Ducks are leaving fast and what remain are wild. Brant still thick, Joe Predmore killed nineteen on Monday; Theodore Predmore eighteen same day. Quite a number of geese licre yet, but searcely a day passes that we do not see more or less flocks take their long flight to the northward. In alcont lea days more and there will be nothing left but cripples.

Messennesses 6.4.

nothing left but cripples.

Massachusetts—Salem, April 9.—Yesterday being "Fast Day," of crurse we had to try the snipe, and I have the pleasure of inforucing you of the first and only bird taken this secson thus fur hyone "bighly esteemed colored brother," Chas. Fuller. For the benefit of those who shoot at Newburyport, I would say the grounds are not yet in shooting order. Woodcock are along but not numerous. More anon from "Teal,"

Essex Co., April 10.—Streams open and ice breaking up in the lakes and ponds. Numerous detached flocks of wild ducks passing over, low down, and manifesting an inclination to alight. Wild geese have been in the Essex ponds; don't know of any being shot.

ILLINOIS.—Duck shooting on the Calumet is unusually good just now, and large numbers of sportsmen are encamped about the lakes, as well as along the Illinois River. Large bags are frequently made by the more skillful shots, but the game is extremely shy.—Chicago Field.

Wisconsin, Baraboo, April 6.—Pigeons are flying here and good bags have been made.

R. M. S.

-A reliable geutleman of this city has hunded us the following abstract of len duys' shooting at Bayou Teche, trish Bend, St. Mury's Purish, Louisiana, and vouches for

its accuracy:—

—A pigeon shooting contest of unusual interest and under peculiar conditions as to rules came off on Wednesday last at Dexter's, the grounds of the Long Island Shooting Club, near East New York, L. I. The event was a match between Miles L. Johnson, of Rohinsville, N. J., and Dr. B. W. Talbot, a veterinary surgeon, of this city, fifty birds each, thirty yards rise, sixly yards boundary, 14 oz. shot, five traps, and \$250 a side. In addition, it was stipplated that the gin should be held below the elbow until the bird was on the wing, both barrels allowed; that each should find, trap and hundle for the other, and that, instead of alternating the firing, ten birds should be shot at in succession. Each used ten bore gins, made by W. & C. Scott & Sons, of London. The birds were good, and the "gun below the elbow" business bothered both men. The following is a summary:

Denten's—Grounds of the Long Island Shooting Club, near East New York, L. I., April 7, 1875—Pigeon Shooting,—Match of \$500, play or pay, under the Long Island rules, with special provisions, fifty birds each, thirly yards rise, 60 yards boundary, 14 oz. shot, five trups, gnu to be below the elbow until bird is on the wing, both barrels allowed, find traps and haudle for the other, and ten birds to he shot in succession.

Miles L. Johnson (B.)—0.10** 0.10** 0.10** 1.11** 1.10** 0.10** 0.10** 1.11** 1.10

LOTISVILLE, Ky., April 9, 1875.

LOTISVILLE, Ky., April 9, 1875.

Editor Forest and Stheam:—
The shooting match came off yesterday at Greenland Race Course according to jungramme, between Capt. Burton Bray, of Burding Green, and Col. L. C. South, of Frankfort, 100 single birds, \$100 to the best shot. The wind mus blowing a stiff breeze, but with all that a very good score was made by the rictor. At the seventieth round Capt. Bray there up the sponge, the score standing: Bray, missed 65, killed 43: South, missed 6, killed 63. The match seems to have been for the champion ship between the 1mo benfiftes, and rrill hardly be considered as deel sice, inasinned as Capt. Bray bad hardly recovered from a term of illness, thereby being minible to meet the expectations of his friends as a good shot, and had taken the prize agrifust Col. South on two occasions before this, but I don't believe any one can get army with Col. South of thout a desperate refact.

B.

SUMMER WOODCOCK SHOOTING.

POICTLAND, ME., March 25, 1875.

EDITOR FOREST AND STREAM:—

I see by your imper of Jairnary 23 that I have at least done one service to sportsmen by my answer to "Clerck Cord," (i.e.; I have stirred up "Sancz") to give lids views to the public, and (withough differing from high and glad of R, for I knine that to be a keen lover of gira, dag and rod. I am still "copin to concliction" on the woodcock question, but do not think "Sancz" quite sane when he allocates "a general close there on gime birds for New England from Jinnary 1 to October 1;" and I think his mords convey more than he mems, and that "Sancz" intraself will own he does not mish to debr himself and friends the placause of an August day's sport on oil Scarborough acarsis smong the yellow shanks, dowltchers, goldmand upland plorer. We have each trad many a good day's sport there in the three atomihs preceding Detobre, and Ire, at least, has made too many unrighted bugs to wish now to forewear those days forerer.

al least, has made too money enriched bigs to wish now to forewear those days forerer.

"Sanez" says, first: "I think we should flud better sport and more bints if let alone until the first of October;" and secondly, "and one day's sport or a necitor Antonia day is corth more than a month of Summer stroottag." As to "firstly," I Ildink you are remag, "Sanez," but us to "secondly," I second you most kernily, as to the playsure, but mosers one binnestly, O, "Sanez!" when do ne, pour fellores accay "flored Rast" here in Maine, get the most of those poetleally "arellor Antonia days?" Is it out in Septrather? and although a few come norm and then in October, are they not like angel visits, ten and far between? Now, there are tro ways of looking at this question of the proper close time for croodcock: First, looking at his question of the proper close time confectle. Maine, or not at all, it appears to me utilis light: If the close time is January 1 to October 1, as "Sanez" suggests, I must keep, pay tax or feed and traic my dog during a micle year for the privilege of using him three weeks. The first feet lines I mert sacribed my sport to my dog, as his year's abstinence will have rendered bin crid and excited. The bulgace of the three creeks—after my dog bas steadled down to honest mork—I can enjoy and make the nost of, provided I have nuthing else to do. But suppose there is some other good sportsman

here beside "Sauez" and myself, who cannot decote so much of October as marks the stay of woodcock with us, (say three eccks,) to seeking and shooting them, and suppose his business uffairs are such that ut the most be can only spare one day not of a ceck for his gun and dog, how fares it with him? Why, be will get three days moodcock shooting per amoun, (for on arerage years recodeock shooting is over here by October 21st.) and those three days that this poor unfortunate dors gri are barely enough—not enough to get this dog well broken into his work. Secondly, looking at what is best for both game and sportsmen throughout the whole continent opens up a whiter field for discussion and more room for doubt. Spraking "firstly," it would be unsurer enough to "Sanez's" proposition he say that the Atlantic States almost unauthously have fixed the close time on proodcork about the same as our own, viz., January 1 to July 4, and indicturily is morth more at this stage of our game laws and of public sentiment than conformity to ail the actual requirements of the game to be protected. But speaking "secondly," I am in same doubt whether or no ne, in Maine and Northisen Nore England, ought not to sacrifien our proodrock shooting—brief as 11 is—for the henceft of our neighburs and the country at large, and might be medicined to say "yea," did to believe it could be of avail. Prehaps the three is coming, and I believe it is, when the people of this whole country will realize the ralue and importance of game, and of respecting and abserving all lars for its protection; yet, I know too neil, as do all who are interested in this matter, that that time has not come as yet, and that me must teach prople the importance of and necessity for striet game laws before they per reacted, in order to hace them and in mach. Commence in the chase times too short rather than too time, first you runse a feeding of opposition and thereby defrat oil lines on the subject. A modecan haw, cell enforced and haring the sympathy of the whole communit

ling the shooting of gains but of breeding season and relice fit for the table.

The fact is, legislation can do much, but not everything in this matter of protecting the decizens of our fields, forests and streams, and it can do most and best by fullowing the laws of initure as to close time, by probibiting the killing of far, the or leather during its breeding season, each according to its own season, and and go heyoud that. Do not attempt to these the lines too closely to try and regulate to a day the least possible time within which this or that game may be killed, but rather to learne all the liberty to the spurtsman that comports with safety to the game, and above all, do not attempt to promint the killing of game in herful sportsmanlike manner when the game is at for the tube andsing good condition, as by so doing you are templing and provoking violations of the tary and endangering the tife of the line fiself, or will at least faul that public sentiment and supporting it, the law will be read shingher. The time any coan when some of our game briefs are threatened in its total extinction; then, and not notif then, will it be well to extend the close times beyond their natural limits, but, menuminile, let overly sportsman it our fate land da what in him lies to anysken the whole pengir to the Importance of lineing and obeying game laws. Organize associations in every torm and Sute, and reliablish an a sound hasis an association to harmonize all laws, that one births may be protected from their Florida feeding grounds to their Northern breeding places.

Mac.

BIG GUNS ON THE POTOMAC.

Washington City, Murch 29, 1875 Editor Forest and Stheam:-

Washington City, March 29, 1875.

Editor Forest and Stiean; in the case of proodcock shooling, our poor prospects in the future for gaore, (and I can mude add, for anything that has midgs or flus, as you call preceive before I finish this letter,) mises me rise en masse and hare Congress, at its next session, to pine a stringent game law. To illustrate, I saw in a restandant crintow, this work, a bunch of bliris consisting of thice birds and red birds. Nox, I do not suppose that there is a game hay to existence that dues not have hearf penalties for any one shooting these two hirds. These blirds are not fit for fool, but are guarded both by the hare and by certry farmer as destroyers of insects and large; and in sour sections in this vicinity, I am happy to say, that any farmer eatching my one shorting threse birds respecially the latter, would inlied a panishment on the violator, hay at no lare, that he crould remember for some time in the future, and so much so that they would acoud his place in the future, though it constitutes that they would acoud his place in the future, though it constitutes that they would acoud his place in the future, though it constitutes a pair or two of these songsters to dired! In its ricinity.

In order to carry out our prospects to regard to fish, I med only add that I was informed two days ago by one of the most skillful and streeses in followers of Isaac Walton in this vicinity, that me future than alrent I'ro creeks ago a being bacing life, and all the semifluince of belonging to the human race, rem to the ricinity of the Falls, (nor great biass dishing place), our a hole in the ice, over an assoon the lask raind come to the hole to get air be could scoop them up critic a small sum of morney, or out of pure cassedness, dis bring is inflored to destroy the fish in this cantor may. I have had been able to find out as yet from he disposed in them, but emphase the world soling is inflored to destroy the fish in this cantor may. I have had form any of the curious game birds, provi

re hare never prospered slace the Penitentiary and abolished in this district.

Henried a ferr days ago that a party of geothemen came here from the North to enjoy our direk shooting, for which the Potonne kas such a high reputation. They decided to go to Giymont, about eighteen indes troot erre, is direks, especially causes harks, are so inbunded. Thirt trip from here to those most hare roused the bighost expectations, for the electrodinary contains plenty of direks. Thry coursed in a short time and said three mere plenty of direks. But there are a cound Glymont three theekers with hig gurs, that is to say, much gans that shout from one in three points of shot at a discharge. The first of one big gun, let alone three, tolls the whole tale, for it is incursified to shoot direks where one of three gurs is in ass. You will always the pleaty of direks at this place, as the rired is three index while and two-thords of it is mater from three to ten leet deep, and it is this shallow mater that contains so much callisheria, the food of the mayes ballow mater that contains so much callisheria, the food of the mayes ballow fairs from certify do not be darks then the allisheria, the fact of the mayes ballow first enace, are object to get good shots foring the day, where it directly direct to our handred and twenty durks; but soon the darks brare their foe and it is impossible for in limit triapproach them. The hig guiner has then to should then just after sundaying or before surfix in the neutring. To not this they get between the direks and the

land, and by ilds means they can most airsys obtain a shot. If the night be clear, then they will notice before dark where the ducks are fredine, and then, whenever the moon gets an hour high, or the same trom moon down, (depending upon which side of the river you may be on) they get between the shore and the ducks, and by this means they have a full view of all the ducks without their seeing the bont. One shot at incite, while nalwey at night, will sware them more than a week's constant shooting in the day time with a small gan. Between here and Alexandria, (distant five miles,) the river is and has been fur the last two news filled with ducks, and if you were here Locald show you now from two to dive thousand between these two points, and yet, you might try all day and secure, periaps, one or two. There has been four large gunes with the Wilder at Four Mile Run, phoor built-way from here,) and just as soun as a banch of ducks alight, they will try and creep up on them; but if they dual this impossible, they deter hall hight, or just before suntare, when you will thin a navid engagement is going on. We have no law against these higgains, so you see our condition, and if at any time we go duck shooting we go fur from this place.

DUCK SHOOTING ON THE HUDSON,

DUCK SHOOTING ON THE HUDSON

Edition Forest and Stream:

I notice that the pytition to allow duck shooting on the ilinison with swivel gans is again incore the Legislatine. Undonbyrdly you are already aware of the fact. I do not favor, but oppose that petition, yet is it not objectionable as a fare probibiting shooting from boats, or making September a close time in this locality for duch shooting? These amendments may do for Long Island, but I do not believe they are winted viscowhere. Darks are mated by the 1st of May, and I have seen them in Notthern lown with young by the middle of May; yet this amendment would indicate that it is more objectionably to shoot thom in September than in May. Yours very truly,

Dr. W. H. H.

FERRISBURG, Vt., March 26, 1875.

Entring Forest and Stream:

In your paper of the 18th that, is an item stating that "George L. Mutherson lately remined to Lyndon from a deer hunt in East Haven, Yi, having seemed two deer during his absence. Ho says there is a dear yard in had lown five miles long, where the snow is completely traingled down like a door yard. He believes there are two hardred deer within fiven miles of that village." I am afraid there are not troo hundred deer within the limits of Vermont, thanks to just such barbarlans as this same G. L. M., who wandonly slaughtered the helpless and balf-starved animals by bundreds, in a Winter of deep and crusted snow some forty years ago, when the deer witches. If there are any honorable sportsment in that partion of our beloved State—which one may well doubt, when such a mardetous exploit is boosted of—the wonder is that they did not mount this G. L. M. on the shapest rail that could be found, and escort him with all honus beyond the horders of the State, after moleting him in the face of \$250, to which he hald himself liable by killing a deet in Vermont at may season, under an act passed Nov. 8th, 1865, which makes a tine of \$50 the penulty for killing any animal of the devekind found ranning at large within this State, or assisting he sneb killing, or haulting, or worrying may such animal. Nothing but a sarage love of stangliter could prompt one, not starving, to kill deet toward the close of a Winter of such almost unprecedented severity as the past bas been, when the past bas been, when the pool bears must be unjected by corrections of fair play and true sport, do give this fellow the seoughing he deeveree.

Yours truly.

Horden, N. J., April 9, 1875.

Hoboken, N. J., April 9, 1875.

Editon Fourst and Stream;-

Hodden, N. J., April 9, 1875.

Editor Forest and Stream:

As your valuably and Interesting paper is about the only sporting paper rend in this section of the country, I have taken the liberty of addressing, through your medium, some udvice to several German pot limitives hiving to West Hodden. They are out on the Hacketsack and vienity the year through, and nothing escapes their gons. Not long since the writer saw several woodcock in Secaucus Woods; one week uffer, (being yesterday the 8th.) they were all gone. Come to make enquirive in regard to the uniter, I found that this same party had been them and shot them all off for specimens to set up, as they said. The game keepers live in the same street with them, and must know of the frameaction. Are the laws of New Jersey so loose that they allow fatelgaves to come over here and exterminale game in their breeding spision? I have repealedly read of centlemen wishing the close season from January 1st to October 1st, or the woodcock would in a few years lie non est; but, Mr. Editor, I think there are more killed in the close sous on than there are in the mouths of July and August, as for instance, July 1st, 1874, I took my brace of setters in said Secaucus Woods to show them grouse. I was carprised to find so many points in different blrds. I went there on the 4th at emrise, and beat the wholeground and never gat usingle point; they had all been shot off on the 3d. I would say, Mr. Editor, that this party of pot hunters are now watched, and will not be allowed to shoot sone or rail on the Hoboken meadows in July, as they did last year, while on their nests hatching.

Yours, HUNTING COAT.

HUNTING COAT.

Buston, March 25, 1875.

Buston, March 25, 1875.

Editor Porest and Stream:—

Considerable ingeninty has been displayed in the Invention of various siyles of hunting conts, cartridge belts and vosts, and game bags. Now, presunding the sportsman carramot to array himself in the toggery of utiligative of the home guards on dress parady. I would like to recommend a partificular styly of coat. It consists simply of a coat mady in sack painting, of stout duck or corduror, having as many small pockets iniside or out us may please the fancy of the inerrer, and then a pocket in the back in many prease the fancy of the inerrer, and then a pocket in the back mining from the holtim of coat up to the arms, leaving inputings for the hand at each side near the upper corners. Such a parket van be introduced in anyold suck coat at the expense of inventy-five conts and an hour's work with the needle, and serves a variety of uses. It is never in the way, and always with you when needed. If on a fishing exertein, it will hold a drinking cup, lines, fly-book, or limit along," and nothing will be lost out while jamping, or in contact with the brush. In fact its great safety is the important teature. I would rather have it than all the other pockets in my clothes, when carrying the gun it is more caparious and less troublesome than a game bag, and thirty poonds of game in it will not pull painfully on the shoulder. Then again, if the day's spurt has not been crowed with rejectable success, you have not the martification of an empty game bag daugling under your raturs as you meet your coursides on your return. You all know how that is yourself.

SAN FRANCISCO, Cal., March of volume Entropy Figure 1 and Stream:

A spiritsmens' viall was organized here on the 28th inst., under the name of the Amateur Pigeon Shooting Club of San Francisco, with the following officers: President, Mitchell Wright; Vice President, John Mustorson; Secretary, I. P. McSweney; Treasurer, T. F. Misgill. We have agreed to have the first match on the 18th of April, of which I shoultake pleasure in sending you an account. With best wishes for the success of Forkst and Stream, whose principles have won for Inelf the respect of all true sportsmen, I remain your humble servant,

I. P. McSweeney, Secretary.

METAL SHELLS.

Bartinar, March 25, 1875.

Entron Figurat and Strkam:—
I he leave, for the satyly of those using brase shells with the screwed top, to engest in the manufacturers of them a simple and valuable improvement, which is, to have the orifice through which the pin strikes the percussion caprimined out sufficiently large to adult of the vap being placed upon the nipple atter the shells are loaird, without unscrewing the platy to place thy cap, as they is great danger in screwing it on, of the cap, if at all long or fall slow, becoming wedged. In the too small orifice in the top of case, and mainly with same. The friction thus created thave known to explode the cap, and in one case the shell bursted and dreadfully matured the band of an acquaintance. After this arcident Liumedintely but the orifice in my shells made larger, and find it can now use eafely Eley's waterproof caps, which was great improvement over the short and more indifferent caps, usually used with these shells.

BORING GUNS.

BOSTON, March 23, 1875.

BORING GUNS.

Bostos, March 23, 1873.

Entitud Ferret and Stream:

I nollee "Side Lever's" letter of February 17, and conclude he must bave real my communication with extreme carelesances, or not at all, as he pretends to quote from 11 the following: "U. G. says that If I look at a namber of guns of different malvers," &c. (mack the Rollectastasfyecties). His whole refutation of my argument on that particular point fails to the ground on the simple statement that I did not nee the word the indictast in that cuntext, and in publit of fact it does not occur in the entite article. The word actually used conveyed simply enough my meaning, and the Iden—or tailen the fact—which I wished to present was, that no one of the notinerous English makers, whose guns are moto of less us tensively for Falo by our importers, had any special method of chambering to which they invariably and carefully adhered, simply because they believed if to be the &c. I have seen aw reason to vinuee my option on this polot, but on the contrary am quite confirmed in it, by life more extended observations which geutlement of the opportunities than mine have since mady. This ovents, too, in very fine guns. It is not impossible that this arivers from the proverbal carefessness with which almost every article is made, when intended for open, general sale in the American market; but whatever may be the causer, the fact remains all the same. I never previended that "my Bookon man," as S. is. somewhat facetionely styles our well known gunnuker. Mr. Whit. R. Schaefer, but no formula. Qulte the contrary. He not only has one, but one that both he and bis enstomers have proved to be good; likeviote he stick to it, buring big guns on that plan and no other, and that, ton, with all possible care and nicely. That Myssients, our neighbors across the nater, do not do it, is the very lining I complain of.

The art of gun making is by no minue, at this late day, a close curporation; no oue non "knows it all," and good gains are made on several different plans.

CREASING SHELLS.

Ruitor Forest and Stream:

I noticed not long stace a stalement that the creasing of the shell affected the shooting very untrivially. I consider that the rolling over of the end of the shell will vause the wad to bend ingether, consequently jum be shot, and while Increasing the recoil, vary the pattern just he proportion to the amount of rolling. It endwavered to get something that would at the same time fusion the wad, and yet not jum it or increase the recoil. Since I make my marbine, Mr Hull, in the creaser, has given to sportsmen something similar; but as a matter of course (f) I do not think it quite the thing. My marbine was made to be played upon a luader, and consists of a shurl, hollow cylinder with a heyeled plug in one coil. On one side of the cylinder is similar a short arm, with a dye at one coil, which works through a sill in the cylinder upon the herylof the plug. The shell is hadred, pressed ture the open end of the cylinder till the wad is firm against the end of the ping, the arm forced hiwn, and an indentation made just in fund of the wad; the shell can then be tormed and as many indentations made as whiled. These methylatious form very hitle resistance to the wad in shooting, and yet they have, with me, always held the wad firmly in place while in my pocket. Shells creased with this marbline perform much befter than by any other method which I have ever tried, and I have no doubt it is on account of the hitle resistance, about the same as in a brase shell, which the shot ment will he essaping from the barrel.

In the last mumber of Forest and Stream year mention a slyle of tying tiles invented by Mr. Mullaty. I trust this haven tion (f) has made been pairated, for in the Sammer of 1872, while camping on heaver litter, in the North Woods, my guide criticised the lying of my fles, saying that the right way was to have the "hock lurned up instead of down," as he expressed it. He suid lind was the way he slively eithed fles, and that he capit way he alway as to have the "hock lurned up instead

We regret that want of space prevents our giving the diagrams of our correspondent's attachment. With regard to the Mullaly fly; that gentleman's invention may be the same as the one mentioned by "II," or quite different, and yet in either case original as far as Mr. M. is concerned. And unless the guide has patented his fly, the first appli-cant will be the one entitled to the benefit,—ED.

Captain J. M. Coventry, of Canada, formerly of H. R. M. 15th Regiment, Infantry, says in a prevale latter to us that the hollow point builet of the Martini Henry Express ritle makes the most awful wound in an animal, and drops it stone dead whenever hit in the body. This gentleman killed right carlbon early in March, and has trapped \$1,000 worth of firs the past Winter. This is turning sport to valuable account. Captain C. has a flyn young carlbon, which he is taming to drive.

ARTIFICIAL INCUBATION.

WE have so many applications for information regard. VV Ing artificial incubation, and us to where it can be seen in practice, that we are pleased to be able to present something definite on the subject. Mr. S. Leonard of New Orleans, in a letter to "Our Home Journal," of that city, describes his process, which was perfected after a series of experiments made in Uniontown, N. J., under the patrou-age of Dr. Preterre, the distinguished dental surgeon and amateur, of No. 159 Bowery, this city. The incubator con-sists of a tight and dry cask with the head out. The chines of the cask rest on three bricks placed in a triangle, leaving a space in the centre. Ou oue side of the cask, close to the bottom, is a hole 6x8 inches, to receive a wooden pipe same dimensions and four feet long, resting on the ground. The pipe has a little gate at the exterior extremity, which

is used to ventilate the inculator when necessary.

The heat of 104° necessary for incubation is obtained by horse manure, which is piled three feet thick around the cask or incubator, and over three fect of the wooden pipe. The head of the cask has a cover, closely fitted, and in which are six holes with movable plugs, to regulate the degree of heat. The recipient or trap for the eggs is placed in the centre of the cask, and is made like a seive with a wire bottom. On top of it is a thermometer, which indicates naturally at all times the degree of heat in the incubator

At 104° the eggs are placed for incubation, care being taken to move them gently with the hand at least once a day, like the natural mother. During the period of twentyone days care must be taken to keep the required degree of heat, which can be regulated by the draft, given instantly by the ventilator in the wooden pipe, or by removing one or more of the plugs in the cover of the incubator.

As fast as the chicks are hatched they are removed to an

artificial mother, for the making of which several patterns are adopted, the best we have seen being that of Mrs. Cheshire, of Acton, Middlesex, Eugland. This consists Cheshire, of Acton, Middlesex, Eugland. This consists of a tank for the reception of water heated by a spirit lamp, and having under it a frame on which is stretched strong canvas, to which are seven strips of finnnel reaching nearly to the bottom of the apparatus, the whole affording the requisite warmth and protection to the chicks.

In China, where artificial incubation is carried on to a

greater extent than elsewhere, cotton wool is the principal agent used. Frames are raised in tiers over an oven-like I though young in years, is nevertheless sturdy and capable.

structure of brickwork in which a steady heat of the neces sary temperature is continued. The eggs are placed in the frames on the wool and covered with the same material, and the room kept darkened. Ducks are much more easily hatched by the artificial process than chicks, and more successfully reared afterwards, as they take naturally to the water and find their natural food slong the margin of the streams. Even when full grown the ducks are still herded and curefully tended by a man who acts as herdsman. A boat is their usual resting place for the night. As twilight approaches the herdsman throws open the sides of the heat places are larger to the larger place. of the boat, places a plank to the water and whistles to his ltock. The ducks come trooping from every direction, each with outspread wings striving to be first, as the keeper, who stands by the plank, invariably whips with a bamboo rod the last duck in.

BOYTON'S LIFE-SAVING APPARATUS.

OUR cousins across the water are so chary of awarding O the faintest meed of praise to anything American, or any invention the product of "Yankee" skill and ingeunity, that when the epidermis of distrust is once pierced and that true-heartedness which lies beneath, freely reached, it is doubtful which gives the grenter satisfaction, the ac-complished feat, or the frankness with which merit is

Capt. Boyton, the last individual who has succeeded in as-tonishing the "Britishers," is an intrepid diver, who, while acting as Coast Guard at Athentic City and vicinity, is said to have preserved from drowning no less than seventy persons. His first feat with the life-saving dress with which his name is now identitied, was to leave the steamer which carried him across the Atlantic when off Cape Clear, on the Irish coast, and on a tempestuous night, swim or paddle a distance of thirty miles until the waves washed him ashore at Trebuska Bight, Skibbereen. So fierce was the gale on that night that for hours no mail hoat crossed the Irish channel, and great destruction was done on the coast. One can scarcely conceive a more horrible position; tossed from one huge breaker to another, on a rock-hound coast the darkness of the night adding to the uncertainty and desolation of his condition, while each lifting wave showed him nothing but a long line of threatening cliff. Making his way along the shore he fortunately struck upon the

ouly safe landing place for miles around.

The dress itself is an india-rubber suit of peculiar pattern, containing compartments which can be inflated at will, and enables the wearer to carry signal lights and flags, rockets, an axe and bowie knife for sharks, and a paddle

Arriving in London he gave exhibitions of his appuratus on the Thames, to the amazement of the Cockneys, and on the 5th of this month had the honor of appearing before the Queen in Cowes harbor, where he was personally thanked by Her Majesty and the life preservers ordered for the royal vacht.

It remained for him on Saturday last, however, to attempt a feat, which, although not carried out entirely according to the programme, was sufficient to demonstrate not only the adaptability of his contrivance as a life preserving dress, but his own wonderful powers of endurance Taking the water at Dover at three o'clock in the morning, he started on a pleasant little swim to Boulogue-sur-mer, on the French coast. At six o'clock in the evening he had traversed a distance of fifty miles and was within five of Gris-nez, the nearest point of the French shore, lying opposite that of Britain at South Foreland. Here the captain of the steamer which, with the press representatives on board, accompanied him, declined proceeding or piloting him further, and contrary to his own inclinations took him on board. He was not fatigued, and his clothing, him further, which was worn under the marine suit, was quite dry. Probably there is no better indication of the success of his performance than the enquiries made to the London Field and other papers regarding the dress and where it can be procured.

We would like however, to note our protest against the growing practice of exhibiting the national flag on every occasion. When the American Eagle screams himself hourse in after dinner speeches there may be a reason and excuse for it, and we can even pardon a circus rider or ballet dancer who ekes out the weakness of his performauce by appealing to the audience through the medium of the national colors; but Sergeant Bates and the company of patriots who thrust the flag in the faces of foreigners on every oceasion, are nuisances which should not be tolerated, putting the question of good taste on one side,

OPEN AIR LITERATURE .- In our article last week, noticing briefly the status and movements of our sporting contemporaries, we omitted any allusion to a most worthy knight errant, the Germantown Telegraph, which, though sangit etrain, the Germanious Teagraph, which, though not regarded as a sporting paper, has for many years devoted a portion of its space to topics pertaining to the sportsman's craft. Long before most of the journals now existing came into being, the editor of the Telegraph was prominent in the field, and old fogies who taught their children now grown up to study its column as they children, now grown np, to study its columns, its they would study the orncular leaves, the babbling brooks, and sermonizing stones, look to it to day for weekly informa-tion on fishing and shooting matters, and regard its ulterances always as authority.

We heg our contemporary to forgive our omission of last week, and to stand god-father for our bantling, which,

NEW YORK ASSOCIATION FOR THE PROTECTION OF GAME,

THIS society held its regular monthly meeting on Monday evening at Delmonico's, Royal Phelps Esq. in the chair. After the minutes of the last meeting had been approved, the Secretary read the allidavits of Lewis Kneiving and John II. Robinson, against whom suits for violation of game laws had been brought, praying that the same might be discontinued. Mr. Charles E. Whitehend, counsel of the association thought that in certain cases elemency would have the same effect as though the suits had been pushed to trial. ofr. Palmer usked whether any convictions had been obtained this year, and thought an example should be made of some offenders. The President stated that he had paid out large sums of money to the detectives, without receiving any flues in return. Counselor Whitehead stated that he had brought suits against three prominent dealers and restaurant keepers and would them vigorously.

In the case of Kneiving and Robinson it was resolved to discontinue the suits, the offenders being unable to pay costs, but in the case of other ollenders the counsel of the association was directed to press the suits.

The Secretary called attention to the wholesale destruction of ducks by "dusting," on the Great South Bay.

The Executive Committee was instructed by a mannimous vote to procure an amendment to the Game Laws preventing the shooting of ducks between sundown and sun-

Mr. Colburn offered a resolution authorising the Executive Committee to procure the passage of an amendment to the game laws authorizing the destruction of all traps, snares, or nots whatever found in the State. The resolu-

tion was adopted,

Mr. Whitehead reported that he hadfiled a suit in equity to set aside the conveyance of property of Raccy, the market man, against whom the association had procured three judgments.

A series of resolutious in enlogy of the late William J Huys, ex Secretary of the association, offered by Mr. Whitehead, and seconded by the President, were mami-

mously adopted and placed on the records.

Mr. Charles Hallock introduced the circular of the International Association for Protecting Fish and charge, object of which is to provide a co-operative system of Game laws in the United States and Canada. The Advisory Committee of the association includes the names of many of the leading scientists in America. In organizing national Association for Protecting Fish and Game, the the International Association, the following conditions have been studied:

1. Geographical Representation.—Securing an intelligent representation from every part of the continent, from the Atlantic to the Pacific, and from the great northwest to the Gulf of Mexico.

Atlantic to the Pacific, and from the great northwest to the Gulf of Mexico.

2. Economic Interests.—A sweeping recognition and representation, by and through its members, of all the economic interests that come within its scope, including finvial and freehold tights, fish culture, game propagation, sportsmen's prerogatives, and practical natural history.

3. Distribution of Fauna.—To obtain through its representatives a thorough knowledge of every game bird, animal, and fish within the limits of cach State, Territory, and Province, its habits, food, breeding season, range, and period of migration.

4. Nomenclature.—To define and classify each species scientifically, designating it by a specific name, so that intelligent legislation can be secured for its protection.

5. Segregation.—To group each identified species, as far as practicable, within a defined latitudual or climatic zone, the respective zones to be determined by existing State boundaries.

6. Uniformity of Laws.—Laws governing class sensons to apply uniformly to each species throughout the entire area of its geographical range, so that there may be no diversity between the laws of contiguous States lying within the same parallels of latitude.

These conditions heing satisfied, enforcement of the laws will be much facilitated agreefully as regards the provi-

These conditions being satisfied, enforcement of the laws will be much facilitated, especially as regards the provisions that apply to trapping, the sale and transportation of game, trespass, and the rights of land owners and finvial proprietors.

The meeting then adjourned.

-A hill is about being introduced into the British Parliament looking to an international agreement and enforcement for a close time for seal-fishing. It is recommended that no seal be killed before the 6th of April or after the 30th of June, and in view of the fact that the present course of killing old and young, dam and calf alike, is leading to rapid extermination, such action is not only judicious but a positive necessity. Nothing hut legal enactment, rigidly enforced, will save, not only seals, but other representatives of fur, fin and feather from utter extinction,

THE CENTENNIAL.-The one hundredth anniversery of the hattle of Lexington occurs on the 19th inst., and is to be celebrated in appropriate style on the old battle field. The presence of President Grant will add eclat to the occasion, as he purposes spending the Sunday previous either at Boston or Concord, and being on the ground by 10 o'clock on Monday forenoon.

-On the 25th of March the Sioux City, Minnesota, rail-roads were opened after having heen blocked up ten days by the snow. A Shakopee correspondent gives us a specimen of some of the drifts. He states that the six miles cut on the prairie west of St. James, 1,600 feet long, ten feet wide and eight feet deep, contained 128,000 cubic feet of solid

SOUTHWEST FLORIDA-NO. B.

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN COMMISSIONER,

ENROUTE we were repeatedly assured that we need not encumber our boat with a large stock of provisions, as a fresh supply could be purebased at old Lauier's store, at Fort Meyers. Early the next morning after our arrival I visited the store for the purpose of adding to our stock of hard tack, but found a total absence of the staff of life. Fearful that our supply of sugar would give out, I purchased four pounds, for which I paid one dollar. One of the residents kindly spared me one bushel of potatoes, and I paid therefor one dollar.

At this point I met Dr. McCallam, formerly of South Carolina, but who bas settled thirty-five miles farther up the river. This gentleman informed me that be had half a barrel of flour at his camp, and if I would accept a portion it was at my disposal when I reached his palmetto hut, Here was an awkward position—a limited supply of breadstuff to carry us through a long journey, and none to be obtained nearer than Manatee; but we could not consent to impose on the Doctor, and leave him short of flour, so we concluded to go for the sweet potatoes, and hurry over our route.

To any one attempting a trip to Charlotte Harbor, or up the river, I would say carry, or have transported by the steamer Einclie to Punta Rassa, a sufficient supply of provisions for the return trip. They can be stored at the telegraph station until wanted. Uncle Sam has not supplied the residents above Punta Rassa with mail facilities, and advantage is taken of every opportunity to forward letters and papers to persons residing on the river. Dr. McCallam requested us to take charge of the letters and papers addressed to persons at or near his settlement, and we of course consented.

Anxious to reach our objective point, we left the fort at eight A. M. Commencing three miles above the fort, for a distance of nearly three miles the navigation is rendered difficult by islands and mud banks. At the lower, or western end of the first island an extensive mud bank will be found, and the channel will be discovered on its north side near the northern bank of the river. Soon after entering the channel several stakes will be noticed on the port side and one on the starboard side of the channel. Opposite the upper end, and to the north of the first island, a small circular one will be discovered, which must be left to star-The next two islands must be kept to port, when koard. a projecting point, studded with tall cabbage palmettos will be sighted on the northern bank of the river. Beyond this point another island will be observed, which must be left on the port side. If attention is paid to these directions, and the shallow water on either hand of the channel looked for, no great difficulty will be experienced in navigating this troublesome locality. Above the upper island navigation is easy to Fort Thompson. The river in the neighborhood of the upper islands is famous for its well developed alligators. We devoted about an hour to their destruction, and killed eight—the smallest of which measured over ten fect. Above the islands the river narrows to a few hundred feet, and somewhat resembles the St. Johu's above the Devil's Elbow. To within about two miles of the telegraph station the banks are low, and are covered with mangrove bushes, cabbage palmetto, and live oak trees, with an undergrowth of ferns, some of the fronds measuring eight feet in length. If the tourist is a disciple of old Isaac we would advise him to drop a strongly geared spinner overboard after leaving the islands, for if disposed he can have his time fully occupied in landing cavalli rang ing from two to twenty pounds. During our ascent of this stream we daily and hourly regretted the absence of a Grains (fishing spear), for we felt tempted to capture some of the large poinpino that exist in countless numbers in this stream. We have seen a dozen of these huge fellows "brenking water" at once within fifty yards of the boat, hut as they refused a bait their capture was impossible.

Late in the afternoon we reached the Caloosahatchie telegraph station, forty miles from Punta Rassa. At this

point the line crosses the river, and the wanderer can communicate with home for the remarkably low price of two hundred and fifty cents. We received more than a hearty welcome from the gentlemanly operator in charge. Disposed to keep our teeth inoving, we purchased from this gentleman two bushels of excellent sweet potatoes. Here e met a son of old Ireland, and were favored with a true Hibernian welcome, and an invitation to visit his residence and see the "ould woman and the hairns." He stated that he had two acres of superior sugar cane under cultivation, and that he was about to make his first attempt at the man ufacture of sugar. He assured us that if we would favor him with a visit he would present us with stalks of sugar cane fourteen feet long. Ascertaining that his residence was two miles distant, we were forced to decline. The was two miles distant, population of the locality consists of three families, including that of the operator and our Irish friend. Irishmen are to be found everywhere, and are ever ready to ex tend the hand of welcome to the wanderer. We deeply regretted that we could not visit our new made acquaint auce and discuss at his ingleside the merits of the Cove of Cork and the demerits of the Head of Ould Kinsale; but the bareness (not of our exchequer) of our bread box stimulated us to push ahead. After supper, we fried a supply of sweet potatoes for the next day, and left our water keg with the operator. At this point the water was almost fresh, and we deemed it best to make room in our crowded boat.

Dr. McCallam's clearing being twenty miles faither up the river, we made an early start the next morning after our arrival. During the day we amused ourselves benting and rowing up the tortuous channel. Above the Cabosa hatchie telegraph station the banks of the river bremmer. bigber, and are studded with live oaks and majestic palms For miles in many places the bunks are nearly perpendicular, and range from ten to eighteen feet high. bank rich high hammocks extend back from the river for a distance of oue quarter to one balf a mile. Back of the cammocks rich pine land will be found, and beyond this the open prairie country, which will be described at some future time. Above the telegraph station the intending emigrant will find an admirable climate, excellent health, superior land, a noble river, and everything to induce a man to settle. The day is not far distant when this river will be bounded with happy homes, orange graves, farmand tropical productions, and the evidences of education, christianity, and civilization. We have at various times visited almost every portion of Florida, from the Apala ebicola to the Atlantic, and from the Gulf to the northern boundary of the State, and we are forced to give this sec-tion our unqualified recommendation as the most desirable place for the pioneer. I admit that the region is wild and unfrequented, but the time is near when navigated by steamers, and residences, school houses, and churches will arise as if by magic.

Night overtook us, and as we were auxious to reach Dr. McCallam's residence we furled our sail and resorted to an ashen breeze. We had rowed but a sbort distance when we heard the welcome bark of a dog, and soon after the pleasant sound of hunan voices. We hailed, and were pleasant sound of hunan voices. We hailed, and were met at the landing by five human beings. The welcome we received in this wild spot will long be remembered. We found one gentleman from New York, who had settled on a section next to that of Dr. McC.'s, and four from Rubway, N. J., two miles above, at "Camellia Point," We announced the fact that we carried the mail, and the joy ous shout that arose on that river when the settlers receiv letters and newspapers from bome beggars all description, Aware of the fact that Dr. McCallum and his companion in this wilderness had but a limited supply of the necessa ries of life, we positively declined a pressing invitation to stop and partake of the hospitalities of his lackwoods As soon as we announced our intention of proceed ing to the Jersey settlement, the Jerseymen pocketed letters and papers and followed us to the river bank. They took our boat in tow, and while rowing and paddling the yelled and laughed as joyous men never laughed and yelled before. After proceeding two miles, we reacted their camp and landed. We found them comfortably settled in a pal metto but, and apparently more than pleased with their We started early the next morning, and were escorted for several miles by our new friends. It is a gratification to the wanderer to meet with a welcome in the wilderness, and annoying to refuse hospitality when kindly and courteously tendered.

and courteously teudered.

During the course of the the foreuoon we sighted a "gator" about seven feet long reclining on a grassy bank enjoying the sanshine. I handed Harry my Winchuster, and requested him to shoot. He did so, and the 'gator quivered and dropped his head. Harry expressed satisfaction at the result of his unidea shot, and wondered what effect had been produced by the half. I suggested that we should land and examine the critter. We did so, and Harry seized the brute by the tail and attempted to turn him over. Like a flash the dead 'gator doubled on himself, and endeavored to seize him by the band. As a result the pair stepped into the river, and the celerity with which Harry scrambled up the bank will never be forgotten by those who witnessed it. Before the ugly customer could get away I gave bim a pill in his brain, and he turned his paws heavenward. Thus ended the only 'gutor scrape worthy of record.

As we proceeded the river gradually narrowed, and above the former site of Fort Donaud the overhanging live onks gave us some trouble. Still farther up the river wo met with shallows and annoying sand bars and drift logs. Having rowed all day, we found ourselves tired at five P. M., and came to an anchor.

At Freeco.

QUAIL AND PINNATED GROUSE IN ENGLAND.—A writer in London "Field" is convinced from sundry experiments, that it is useless to attempt to introduce the pinnated or prairie grouse into Great Britain, the characteristics of their native American ranges being totally different from any tract of country in the British Isles. He is of tho opinion, however, that ruffell grouse might he introduced with success, and also the quail (ortyx Virginianus.) With regard to the latter, he remarks that they are to a certain extent migratory, in Autumn following the courses of the streams from bigh to low ground, and working their way again to the uplands in the Spring. This means that they are prompted by instinct to move to localities where they are more likely to find food and avold inclemencies of weather. The only way to ensure success in acclimating them to new localities is, to turn them out in large number in various parts of the country selected. This suggestion is worth noticing here.

A writer in the "Fancier's Journal" says that "prairie chickens are more easily tamed than any bird of which I know. I have bad them, in the short space of five or six days from the time they were caught, to cat from my hand. They will breed while confined, and do well, if provided with suitable run. It is my intention to breed them this season, and the following are the plans I propose to adopt:

My poultry house is built in the shape of a crass, having a centre building with four whags, each wing has a yard attached, forty feet square, enchosed with a lattical fence, six feet high, so arranged that the fowls can pass from the house to the yard, or the yard to the house. I will make the house as private as possible, in order that they may use it for laying and hatching, as they are stay the first season, and do not like to have their nests exposed. The tool should cansist of corn, wheat, torries, and lands, with plenty of grass. They are used, widdle young and in their wild state, fould of hisects, and in earler to satisfy this natural craving I propose to give them the run of the yard, that they may be supplied with this kind of food, as well as gravel."

Glie Bifle.

THE AMATEUR RIFLE CLUB,

ELECTION OF OFFICERS AND PRESENTATION OF MEMORIALS ON THESHAY EVENING.

THE minutal meeting of the Amateur Ritle Club was held at No. 7 West Thirteenth street last Tucsday evening, Cid. Wingate, the President, in the chair. The report of the Trensorer showed a balance in the treasury of \$627. Col. Giblersdeeve, in helialf of the American teour In the late International match, next presented to the retiring President a bundsome bronze statuetta, entitled "Victory, or the Messenger from Marithma," It represents in the most spirited manner a noda figure of a Greeian soldier raising blurself from the ground and waving in his right hand a sprig of burrel, representing the Greek begend of the massenger who, histening with the glorious mass of Marathan, fell dend at the City (Intes, lint In falling waved adoft the palm of victory to signal the result to his countrymen. On the base is a silver plate be aring the inscription, "Presented to Cat. Geo. W. Wingata, Captain of the International Team of American Rillemen, by the members thereof, as a manuarial of the victory over the celebrated team of Trish rillemen, Creedmoor, September 26, 1874. In responding Col. Whogate sald:

sing the inscription, "Presented in Cot. Geo. W. Wingsta, Captain of the International Team of American Ribanea, by the members thereof, as a momerial of the victory over the celebrated team of Irish ribemen, Creedinoor, September 26, 1874. In responding Col. Wingsta and one pleusure than to revelve at year loands this beam ifful and appropriate gift. It is but selshom that one has an opportunity of representing ble country to such it has been done with success forms in episode to which we all will loak with pride and pleusure. Few lot those engaged in the straight know the earliet we felt about the success of this natch—the hopes that we hardly dared acknowledge us or sources imprived at seel campetition, the fears that soam presention ought be condited which would present the termination of excitences of this natch—the hopes that we hardly dared acknowledge us or sourcess. I shall greserve this broaze not only as a token of your friendship, but as a remembrance of those scenes of excitences that we wenthrough with together, and booking at it is after days, perhaps it will laring leach to nee not only the fares of my friends now present, the kindly words that you have spoken, but the triff limit has been under the desired that which it was all felt when the while first a committee to select a suitable testimenial for the Secretary and Treasurer, Mr. Parleanks. The mothon was carried, and the President of a tomismic gold mutting case, stem-winding watch and chain, which is referred to elsewhere. Mr. Alford mived the appointment of a committee to select a suitable testimenial for the Secretary and Treasurer; also a clause; permitting the members of the club to have free access to the books. Cedame Wingste then stated that having held the position of President since the organization of the club, in felt that the intended and miknown body into a vigorous organization of President, Col. John Budice; Serreinty, Mr. W. R. Congidarys of the confiders of the club for the easily year, with the collowing result; Presiden ness the meeting then adjourned.

Cherimoon.—The "Challenge Shell Badge" was contested for by the members of the Seventh Regiment Rifle Club on Saturday last. Only a small number were present, and, owing to the strong wind prevailing, very poor shooting, with small scores, was the result. Left General Guide Sergeant Conglitry was the winner.

THE AMERICAN REFLE Assuranteen.—The directors of the above association have held two needings in relation to their new range. On Friday of this week they hold another meeting, when the matter will be definetly settled.

THE TARGET QUESTION

EDITOR FOREST AND SCHEAM -

Referring to your request for an answer to the long article from the Army and Navy Journal on the subject of target, it may be proper to state that the main reason it gives for the change—"that the coming International match is shot at the new target; that the team neight in practice at them lest they should become demorratized, etc., practice at the first transfer of the team is to shoot at the old targets, not the new; and at the last meeting Capt. Fulton kimself moved to decline Majac Leech's offer for

refered and the property of the train is to shoot at the old targets, not the may; and at the last marting Capt. Futton himself moved to decline Major. Levech's offer for a change.

The same error exists in regard to "the adoption of the new targets by all English speaking colonies." On the contrary, almost, if not all, the Canadian (who are almost the only English-speaking colonies we know of) matches last year were shot on the old style, and no official change has yet here amoranced.

The only object of this letter is, not in criticise the article in question, but to state the grounds of upposition to the clouge, which seem to have here unisunderstood.

They are based on the fast that the National Rife Association is organized like that of England, to develop military shouting. That with the solbitor a slight deviation to the right or left is minimportant—indeed almost inevitable with open military soglits—the main unint being to secure the proper elevation. Thus the Prussians make their bullseye extend the whole width of the target, as also do our American officers commanding the Expiring army, and the English Red Ecolor of 1858 substituted square bullseves for the round ones formerly in use.

The sixe of the bullseye has been settled by calculation based on the average "mean deviation" of a utilitary rifle, and has here made just large mough to allow for the errors of the piece. To reduce its size to any extent would be to introduce lack in the place of skill, and they bave not been so foulish as to try that at Winnfledon.

The introduction of the "inner" as an extra sublivision on the target is agood thing. Whether it will work well on the iran targets in use at Creedinnor is a question, os involves the handling of another disc by the marker, and their substituted when they changed their targets at Winnfledon, we can be an experse being £1,000.

Outside their ounaer of indicating hits, the expense being £3,000.

Outside their ounaer of indicating hits, the expense being £3,000.

Outside their ounaer of ind

It is true that this can be obviated by going closer to the target, but this in turn is objectionable where the targets are arranged as in Creedinoor, and none can practice at 200 yards if any are firing at a shorter distance.

Also, while if this change had not been made, we would have lost the advantage of compuring our scores with Wimbledon (which more but those greatly interested in rifle practice ever do); the change itself destroys at a blow all the data obtained from three years' practice at Creedinoor. The standing of regiments, the scores of teams, the scores of prize winners, which are at least as important to as as the scores at Wimbledon, are henceforth of no value.

value. I mention these facts not to criticise the action taken by the National Rifle Association in changing the targets, because, under the circumstances, it was so clearly wise for them to the sor that the vote was manimous, but, as requested in your article, to give the grounds upon which the change was opposed, in the first instance, by many thoughtful riflemen.

MILITARY RIVLE.

THE INTERNATIONAL MATCH —General Dakin has asked to be allowed to studd upon his last years' record in the competition for places on the International beam, and his request has been granted. A similar favor has also been conferred on Mr. L. L. Hepburn.

The committee met again on Friday. In consequence of the bad weather preventing practice at the range the

of the ban weather preventing practice at the tange the dates of the four competitions were extended a week, the first to open on April 24 instead of on the 17th. The dates now read April 24 and 28, May 1 and 5, with May 8 and 10 for shouting off challenges. It was resolved to require of each person competing for places on the tenn a pledge that should be be successful, he would take part in the internal transfer. the international cautust.

Major Arthur B. Leech, the captain of the Irish team, sent a letter, which was read, acknowledging the receipt of the formal challenge and unmouncing that the American team must become the guests of the Itish people during their stay in the country, and that no refusal to this proposition would be accepted. It had been announced officially by the Reception Committee that the fellows of Trinity College, Dublin, would entertain the two rifle teams at a formal bunquet in the callege hall during their visit.

The following resolutions were ununimously adopted:

Resolved, That the thanks of this committee be cordially extended to Mr. John H. Bird and the ladies and gentlemen composing the Amateur Dramatic Troupe, who so faithfully represented the characters in the play of "Othel-

lo" on the evening of the 3d inst., at the Academy of Music, for their coluntary services and for the pecuniary benefit derived therefrom; and

Resolved, That this committee acknowledge the meritorious services remlered by Prof. Ernst Eberhard and his skilled performers of the Conservatory of Music, No. 112
Fifth avenue, including Miss Alina Kopp and Signor R. Buunglorm, on the sance occusion, and the committee begs to express in this form its most cordial thanks and its high appreciation of their abilities.

The Academy beautiful extericipment method 22, 500

-The Academy benefit entertainment netted \$3,500.

-At the last annual precting of the Amateur Rifle Club —At the last annual meeting of the Ainacen time Craps. Henry Fulton was presented with a watch as a well-mrrited token of recognition of services in the late luterarticual match. The watch—a gold hunting ease, stem wimher, is the linest finished timekeeper ever made by the celebrated "New York Watch Company," of Springfield, the celebrated "New York Watch Company," of Springfield, Mass. On the gold cap is the fallowing inscription:—
"Presented to Capt. Henry Fulton by the Amateur Rifle Club as a memorial of his remarkable achievement in the International match, Sept. 28th, 1874. Score 171 out of 180." And H. F. in monagram on the case. The chain is of solid gold, heavy plain links, with drop for the scal, which is of a heautiful and appropriate design for the day it communicates, being two iniciatore Greedmoor rifles, copied from the one he used, crossed and made of platina and gold; between them a long range target with the scores datted, and an only stong beneath all. The whole was made expressly to order by Messrs. A. Runrifle & Co., of Broadway and Chambers streets, and reflects great credit on their skill and taste. In presenting the watch, Col. Gildersleeve, chairman of the committee, acknowledged, in handsome terms, the kindness of Mr. Geo. B. Jaques, the junior member of the above firm, (and a veterun of the Seventh Regiment) in abling in the selection, his painstaking in getting it up, and favor shown in the price.

—The annual meeting of the Irisk American Rifle Club

-The annual meeting of the Irisle American Rifle Club will be held at No. 243 Broadway to morrow at four P. M. A board of officers will be elected for the casuing year.

Sea and River Hishing.

FISH IN SEASON IN APRIL.

Trunt, Salmo fontinalis.

Salmon Tront, Salmo confinis, Shad, Aloss.

FISH IN MARKET. - The slabs exhibit an abundant sup ply of all descriptions. The fish pur excellence of the senson, the famed North River shad, has put in its appearance in such marrities as to be within the reach of everybody, the the behaver and the Potomac, bring 55 cents. Large schools of stripped bass linve made their appearance in the latter river and have been received here in large quantities; in one shipment over thirty of the fish averaged fifty pounds each, dressed weight. Halibut are worth 18 cents; coil, 7 cents; hablock, 7 cents. Lobsters are now being taken near Fisher's Island, in the Sound, and may be had for 12; cents per pound. Crawnsh, or fresh water lobsters, an eagerly sought for by our German friends for their krap soup, may be had for \$4, per 100. California salmon is in abundant supply at 35 cents per pound.

-Last week we made a flying trip to the regions about the ancient villages of Islip and Sayville, Long Island. We use the word "flying" in the Pickwickian sense, of comrse, as Long Island is not celebrated for its railroad facilities. Yet, to give the devil his due, the Flushing, North Shore and Central did make the trip one way on time; and as for equipment—well, we know of at least two rouds out of New York which cannot compare with it in this respect. Notwithstanding the drawbucks incident to a late seasou (and the morning after our arrival we had to break the ice in the creek to get a least out) the fighing in the wicinities of in the creek to get a boat out) the fishing in the vicinity Sayville and Islip has been remarkably good thus f Probably the largest fish taken were those by Mr. W Terry of the former place, in Terry Creek, the stream which runs from Mr. R. B. Roosevelt's dam to the bay. On the 17th ult., Mr. Terry killed one trout weighing 2 lbs. 102 oz.; one, 2 lbs. 2 oz.; one, 1 lb. 9 oz.; one, 1 lb. 101 oz., the four aggregating 8 lbs.; also two on the same day weighing nearly a pound each. On the 19th Mr. Terry caught one nearly a pointd each. On the 19th Mr. Terry caught obtained weighed 2 lbs. 2 oz. All were taken with a live minimum for hait. The dam below Mr. Rooseveit's pond hail been partially carried away, and possibly some fish had recaped, but those caught by Mr. Terry, from their appearance, were unboubtedly from salt water. We drove over to Mr. Amasa Keith's "slimity" on the stream above the to Mr. Amasa Keith's club-house, and although the day was most unpropitious, by the skillful piloting of the proprietor, we managed to secure a fair basket of fish. It is a pleasure to wade this becatiful stream, with its hard bottom of sand and gravel, and when Mr. Keith's improvements are finished, with the fucilities for both natural and artificial spawning at his

ommand, the property should be very vulumble.

Mr. John Stellenwerf of the Lake House, Islip, is prolably the most persistent fisherman about those parts. His own pond adjoining the house has afforded some fine sport with the fly this season. Here there is ahundant room too got the sport with the fly this season. for easting, with no undergrowth to cause the use of "cuss words." On the 15th alt. Mr. Stellenweif eaught, in salt water, in Great river on Halsing Lane, twenty-seven trout, averaging § 1b, each. On the 22d he took forty-nine; on the 24th, twenty-me; on the 26th, thirty-six; on the 27th, three, weighing 4 lbs. (from the pond); on the 30th, sixtyseven fish—this last day's work was accomplished on Mr. Keith's stream. The largest fish taken at the club-house this season was by Mr. Griswold, and weighed 2 lbs. 6 or

Great preparations are being made by the Southsiders for the reception of their summer guests, and the season promises to be an unusually brilliant one.

-Those gentlemen who wished photographs of Brack ett's Salmon Pictures can have them by culling at this fice. Price \$8 per the sett of four—"The Rise," "The Struggle," and "Landed."

Our readers are directed to the advertisement of Messrs. Aldrey & Imlaio, announcing their intention to lease the privileges of the salmon river St. Marguerite to a clab. Under this arrangement the angler can enjoy even greater advantages than if he were the sole lessee. We are persually acquainted with Messrs, Russell and Powell, and with the river, and recommend this opportunity as one senione offered. The Marguerite is a branch of the famous river

The Graylind.—We have received a copy of Professor James W. Milner's "Notes on the Grayling of North America," which contains also descriptions of new species of Corrgonus and Argyrasomus, a comprehensive pany life containing all the information available on the subject. The fact that the grayling, since its discovery in accessible waters in our country has enlisted so much of the interest of sportsmen and scientists, gives particular value to this pamphlet. We have endeavored to place before our readers everything in relation to this fish which has been brought to light, and up to October, 1873, had collated most of the information which at that time had been made public. The interest thus awakened has led to tauch discussion as to the merits of the grayling, and whatever may be decided as to its qualities for the table, the question of its gameas to its qualifies for the table, the question of its game-ness has been placed beyond a doubt. Mr. Milner, whose scientific attriuments amply qualify him for the task, has put together in his paniphlet all the information concerning this fish that is available, and we recommend our readers as may be interested in the subject, to peruse it.

Our Philadelphia correspondent writes:-The fishing at Gloucester commenced on Saturday, but the catch of shad is not so good as might be expected. Delaware shad are plenty in our markets, but they are caught farther down the river. The first load of sturgeon arrived on Monday last. There seems to be a great many gunners after snipe, but we fail to find many birds at the game stores.

-The most remarkable fishing in California, of which we have heard, is the instance vouched for by an exchange, which states that Henry Harrison killed with a club in five inches of water in Wild Cat creek a true blue brook trout weighing five pounds and a quarter

Figure Matters—The whole number of fishing arrivals for the week ending April 9th, was fifty-live—fifty from Georges and five from the Grand Banks. The receipts of Georges cod inve been about 2,500,000 pounds, and the vessels average about 1,000 pounds halibut. Bank halibut have been in light supply, the receipts being some 100,000 pounds, which have sold quickly at \$10 and \$6 per ewt., for white and gray.

Schooner S. R. Lane, Capt. Solomon Jacobs, whose arrival with a large Georges fare we alluded to lost week, weighed off 123,115 pounds codfish, and 862 pounds halibut, and stocked \$2,544. As the record now stands on Georges fares, the S. R. Lane is high line in largest quantity of fish landed in one trip, and the Everett Steete on stock, the latter vessel in 1865 stocking some \$300 more than the Lane.

The receipts of Georges cod up to this timo are not much more than one third as large as those of last senson sturing February and March, from the fact that most of the vessels, owing to the ice embargo, this year, have made but two trips against five last senson, during the same time. There is quite a scarcity of bait at present.—Cape Ann Advertiser, April 11th.

—The herring have made their appearance at Yarmouth

-The herring have made their appearance at Yarmouth and other Cape Cod ports, which is good news for the fish-

The lobster fishermen of St. George, Me., are busily employed in their avocation, but, owing to the extreme searcity of lobsters, cannot make much money, notwith-standing they are commanding high prices.

—A telegram from St. Johns, Newfoundland, says the steamer Greculant has arrived with a full cargo of 25,000 seals. The captain of the Greenland reports the steamer Iceland also to be loaded.
—Salmon are selling to the London market at 2s and 6d, or sixty cents per pound.

HOW TO PRESERVE FISH FRESH.

NEWCASTLE, Ont., April 5, 1875.

Newcastle, Ont., April 5, 1875.

Editor Forest and Stheau:

As I have no doubt many brother fishermen, as well as myself, have ere now regretted the impossibility of shelt friends at bonic enjoying in anything like perfection the ephendid tront and other fish which they, in their campling experience, have found it difficult in make neemly, allowing, through the medium of your widely circulated and popular paper, to lay before them my experience in the preservation of field. Take your fish and split it open (if large, say three pounds and upwards, in the back); wipe it clean, but don't wash it; lay it in your keep or tarrel, skin down, then sprinkle over much tayer of fish a mixture composed of one-half sail and one-half Muscovado sugar, putting on whom one half the quantity usually used in sailting fish. On arrival at hunce I would advise to re-pack, using a very small quantity more of the same mixture.

The above plan I have pursued on the Nepigon, in July, have brought the fish home and used them for three months afterwards, and find they do not get an sailt as to require freshening defore cooking, merely tequiring rusing in fresh water; neither do they tuse their flavor, nor become dry, as trout always do when sailted in the usual way. I have not yet tried this method on salmon, but hope to do so on a fishing hour irropose making to New Boinswick in July maxi, and have no doubt I shall find them as much improved thereby as are the trout. Years,

-There have been 10,000 visitors to St. Augustine, Florida, during the past Winter season, with whom fish ing has been quite popular,

THE BLACKWATER REGION.

DEEB PARK, MD., April 3, 1873

EDITOR FOREST AND STREAM .-

Bettor Forest and Stream.—

I tend you the following information on the Blackwater region, the cost of getting there, the route, &c:—

The fave from New York to Deer Park is about fifteen dollars; it is the same from New York to Deer Park is about fifteen dollars; it is the same from New York to Wheeling, W. Va., so if you buy a ticket to the lutter place it can be disposed of all Deer Park in Oakhand for a couple of dollars. Messes, Conk. Son & Johlins, of 47d Broadway, Issued tickels last Summer from New York to Deer Park and return for \$19.80. It can easily be ascertained whether they will do so again.

All trains of the Baithnore & Ohio Rallway stop here in the Summer Most of the sportsmen who have been over this route to the Blackwaler hare started from Oakhand, but the "Glades Hotel," (fumous for its tuble and general excellency,) was hurned to the ground last Fall. The distance from Deer Park in Oakhand is but six miles, and those who prefer to go on the old road cao go from here.

Thure is a large bottel here owned and operated by the B. & O. R. R. It is a first-cluss house, newly built, with "all madern improvements;" the changes are from \$3 to \$3.30 per duy.

The sportsman need not burden himself with much luggage; let him bring his roil and gain, and if the latter be a breech lander, his cartridges also, for he cannut get them here. Other kinds of anomantion, Dilmar's wood powder and athers, all kluds of shot, wads, &c., he can get; also tolerably good lines and fies. A blanker will not be maiss, us cold alghts are the (10 he Irish) "order of the day." Coffee pots, frying pans, &c. can also be had here. It will not be necessare to take much fool from here; and a couple of bams, some bursin, coffre, sagar, &c., will be supplied al very reasonable rates. Good guides can be had for \$1.50 is \$1.75 per day; they will do the cooking, &c. Horses will cost somewhere in the neighborhood of \$1.50.

There is a tract of land called the "Dobbin Estate," where parties generally stay. It has upon it a good frame ho

Dachfing and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

YACHTING ON THE LAKES.—The International Yacht Club, having its headquarters at Detroit, are preparing for a vigorous campaign during the coming season, its list of yachts and members leaving increased in an unprecedented wachts and members leaving increased in an unprecedented manner. The following officers have been elected for the coming year:—Commodore, K. C. Barker; Vice Commodore, W. H. Burke; Rear Commodore, George S. Duvis; Secretary, P. H. Van Bureu; Treasurer, A. G. Lindsay; Mensurer, D. Reatime; Executive Committee, W. G. Thompson, E. Brush, Edward Lyon, J. V. Moran, and L. D. Racker; Regat'a Committee, A. H. West, L. L. Hotchkiss, A. Brush, and E. Locke.

The Cora, Commodore Burker's flagship, was built by P. McGiehnu, builder of the Meta and Kaiser Wilhelm, at Pumrapo, New Jersey. We saw the Cora while on the stocks, and admired her lines. The by-laws of the club provile for six regaltas during the year, one in each of the months of May, June, July, August, September, and October, that in June being the graud event of the season. The following list will show of what the fleet consists, and how, in numbers at least, it compares with our Eastern or ganizations:—

Yacter Club for Bioucester.—The Cupe Ann Advertiser is trying to arouse the population of Gloncester and the Cape generally, to the advisability of organizing a Yacht Club. To us it seems a mystery why it has not been done long since. With splendid cruising grounds chose at hand, a fine fleet of boars for a nucleus, and a population almost web-footed, the Cape should be able to support a club which would, through its fleet, do honor to the community.

ENGLISH AND AMERICAN YACHTS.

EDITOR FOREST AND STREAM:—

That there is a wide difference believen English and American yachts, so far in their general model is concerned, is well known. Each nation clings tenaciously to its own style, and each has its own good reasons for so doing. The English yachts, as a ride, are of great depth and small beam, being very deficient in this linst respect when compared with the average American yacht, which has great beam and does not draw much wiler. Of course the fact that many of our yachts bave centre boards is a purtlal explanation of this, but even our keel hours will be found to draw much less water than those of English huid. The natural explanation of this is, that in England most of the prenting is done in deep water and pretty cell out to sea. It is here that dight counts and great beam is a discount. In our country, horcever, must of the races take place in harbors, where the full brackt of the whild is not obtained, and where the water is comparabledy smooth. Under these circumstances, and with a stiff breeze blowing, our yachts travel along at a high rate of speed, while those from the other side of the water, with their great volume under water, would make slow work of it. But lake it in a heavy breeze, with a bigh sea running, and I donate very much if the result would be the same. True, the New York Yacht Club have many races which take them into rough water, and their busts "cleaned out" the Livonia and Cambrin, which were considered anning the fastesi of the English clippers. But there have not been enough races between the two to decide which is the fustor, the English, or the American model. Apart from speed, here is no doubt that a deep boot is the best and most camfortable in rough weather, being very steady, while one of the fini-hottomed persuasion rattes and flops about in a manner by no means pleasant. Not that our yachts behave hadly when it blows heavy, for several of them have made the trips to England, and have done credit to their builders; but they are not equal to those de

The difference between the American and Euglish yachts was commented upon in our columns a few weeks since

YACHTING NOTES FROM BARNEGAT

HARNEGAT, N. J., April, 1875.

EDITOR FOREST AND STREAD:—
As pleasant weather approaches, our yachtsmen are bringing ibeir craits out of Winter quariers, preparatory to overhauling, and naturally incomeries of their different varbs are being overhauled also From conversations gathered there will be ambrevous races and plenty of excitement this summer. In calling over the bames of the different yachts I find no less than 78 from Tones River to Ildenegat, a distance of eighteen miles, counting no yachts less than 18 ft. keel—from 23 to 23 is the prevailing size. Theiry-one of that number half from the village of Tones River, and aftern from Barnogat. Several new ones will make their appearance this Spring, and mraneous changes have liken place in the ownership of others. The Tomes Theer Yacht Club will give their first regalating dame. Their prizes generally smoonn in value from \$20 to \$250. The club numbers but into yachts, jet all are entitled to pater. To hold the challonge cup, valued at \$400, is the height of all the capitans' ambition. Mr. Charles Potter, secretary of the club, and own of its most enthusiastic members, has purchased no fres than five yachts—to hold the sand cup being his sole object. He has not bought the sancy little Vupor, whiner of the cup in four races, and although sonns ten years aid, le a tangle customer to teckle. Mr. Joseph Condrick will bring out tils new yacht, Iterale Turner, when her qualities are to be iested. The Great Roothson, whener of the cup in one regatal has Sammon, will be disposed of at a fatr to be given at Barnegat in sid of a new huit. She is put up in \$800.

A FAMOUS YACHT.

In glancing at the pages of a very ageil journal we find therein a sketch of a yacht which was famous in her time, for site attracted, probably, more attention than any of our modern clippers that have prossed the stormy Athantic. The writer of the article, Col. J. S. Sleeper, knew the charoling boat which he describes, and as his feelings about her are of the kindly enthusiastic order, he presents a picture which to us seems in the highest degree romoric. The owner of the Cheopatra's Barge, for such she was called, was Captain Geo. Crowninshield, of Salem, Mass called, was Captain Geo. Crowninshield, of salem, famo and forlune in the war of 1812, he having proved a purfect scourge to the British merchantmen in the well-known

courge to the British merchantmen in the well-known privateer America.

After the close of that war he returned home, and having no family he concluded to still roam over the element he loved so well, and with this object in view, he called for models of a pleusure yield from all the shipbuilders in Massachusetts. He finally adopted one designed by Becket

In Barcelona, Castanos, the Captain General of the Province, with all his suite and other noblemen, visited the yacht and were samptaously entertained. During the few days while the vessel remained in port it was computed that twenty thousand persons of both sexes and all combitions went on hourd. Indeed Captain Crowinshield was in a manner compelled to leave the harbor sooner than he intended art wished, in consequence of the rush of people to tread the deck and examine the eakin of this wannerful curiosity! When the brig left the port boats followed laden with men, women and children, imploring the Captain to return and allow them to came on hourd the vessel and gratify their longings to examine her interior.

While the Chapatra's Barge was at Civin Verchia, the scaport of Rome, the enthosity of the Savereign Pontifi was excited in relation to the floating womber and her unwonted poission. He necepted an invitation to visit her, and was accompanied by many dignituries of the Church and other persons of distinction.

Indeed, the appearance of the Chapatra's Barge in any port in the Mediterranean scenned a signal for jubible and rejuicing. The effect of her presence was magical, Captain Crowninshield had abundant reason to be proud of his yurbt, and to rejuice in baving undertaken the trip across the weter. And while he realized all the gratification be anticipated from his cruise, the darling wish of his heart to gratify others was also realized.

Captain Crowninshield was absent from this country about six months, four of which were passed in visiting planes and examining objects of interest in the Mediterrancen. He returned to Salem on the 4th of October, 1817, perfectly satisfied with the result of his expedition. He announced his intention to make, in the course of the next senson, nuother trip across the Athurtic, pass through the English Channel, the North Sea, the Categat, Baltic and Gulf of Finlant to St. Petershurg, stopping at the principal ports on the route.

The Cleopatra's Barge prived everything

home.

But "the vanity of human wishes" has often been said and song. Captain Granninshield never departed on another earthly craise. In less than six weeks after his return from the Mediterramena, and while reposing in the subnon of the Gleopatra's Barge, apparently in the full cipyment of health, with a prospect of many years of prosperty and usefulness, he was struck with apoplexy, and died on board his heantiful yacht!"

DORIES AND PILOT CANOES

NAHANT, MIRS., April 5, 1875.

NABANT, Mass., April 5, 1875.

Entron Forest and Stream:

In regard to the comparative ments of duries and pillot's emocs for cost shooting. I think both parties meal straightening out. As I have for the last I woulf years anomally devoted considerable three each Full at South Share and Uppe Ann, and curried a great many parties from here cooting, and keep hath kinds of loats and am boatkeeper for Station to of the Humans Surley, and have had occasion to hoard vessels off Nabant In very cough weather. I think I can prove to both parties that I was right in any aparties. I consider the deep the safest hoat in the hands of a fastorman in the roughest menther, and will the hanger at anchor off Avery's Ruck, and keep dryer than any pillot's came that ever was made, but they are the light and quick motioned for goo's shooting. This is particularly the case when the wind is against the tide, making a short chap sea. I always use a gifted's came thirteen feet long, and have been at Avery's Ruck mornings gunning, when, on account of the rangh weather, I have been obliged to shift inside and leave the dory there.

I would say to "S. K., Jr." that the reason pilots do not use duries, is because they are had touts for broarding vessels in rough weather, but when it the open sent they are the safest lunds made. The pillots are not used to them, while the Cape Ann fulks use them altogether, out that makes all the difference.

V. L.

Oniox Rowino Association.—This flourishing bouting organization held its mound meeting in Jersey City a few evenings since and cheeted the following officers:—President, J. J. Toffey; Vice-president, F. C. Fry; Treasurer, P. W. Leuning; Secretary, Geo. McKichine; Captain, Idaha Kase, Jun.; Log Keeper, E. H. Harrison. The selection is an excellent one, the gentlemen anned being among the leading citizens of Jersey City. The cuptain und stroke is an old college oursoman, and although somewhat severe and strict as regards work, will bring forward a good crew if the men will second his earnestness. The club have a fine boat house at the foot of St. Paul's Avenne and are in possession of a barge, one pair oared gig, one four-oared gig and one single shell, with two new boats, naw building, to be added about the middle of May. A brilliant future is before the "Orions" under their popular and genial captain.

PHILADELPHIA, April 12, 1875

PHEADLEMIA, April 12, 1875.

EDITOR FOREST AND STHEAR!—

STURDAY was the flyeliest day we have had on the Schnytkill this season. Tom Fearon was out whith tot of new boats. A new gig for the Quakers carried their crew tenunifalty, but no be not than did their new four oared shell. Their cooling crew were out, except West, (bow) and minde a creditable appearance. For the Vespers, Fearon brought a double and a single, the latter for their graining sculter. Jas, Mingus, If Mingus can sustain the regulation eartied last year, we do not see a that for thin here except McBeath. The Crescents had their eight out, preparing for the 24th. The Undhes have their southhost every day, and on Tuesday will have their crew together. By next week we will have seen enough of the two crews to form some idea of who will a lit. Scells.

— Sadler, the champion of England and R. W. Boyd, rowed a skiff race on the afternoon of March 22, ever a like course on the Tyne for £200. Boyd won by half a

-A large portion of the swamps of Florida are said to be capable of producing 500 bushels of frogs to the acre, with alligators enough for feucing.

-Paul Boynton performed experiments in Boulogne Tuesday in the presence of 20,000 spectators.

One robin with a lary rake and another with a pitch-fork, were around yesterday trying to discover straw enough to build a nest with.

The Colleges.

RACING RULES OF THE R. A. A. C

RACING RULES OF THE R. A. A. C.

WE last week published the racing laws of the College Association, as originally adapted. We now print them as amended at the late convention held at Springfield. A computison will show some changes worthy of note, and repleted necessary by the made adopted in laying out the routes:

1. Any host not it is post at the time specified shall be liable to be disqualified by the ampire.

2. All rares shall be started in the following manner:

The starters shall usk the question, "Are you rearty?" and receiving an reply, after waiting at least three seconds, shad give the signal to start.

3. If the unspire considers the start false he shall at once recall the crows to thair stations; any boat refusing to start again shall be disqualified.

4. A start shall be considered false if, thering the first len strokes, any of the competing hoats shall be disabled by the breaking of an our, or any other accident.

5. Each boat shall keep its own water throughout the race, and any boat departing from its own water shall be disqualified.

4. A hoat's own water is its Imoyed course from the station assigned in it at starting to the finish, and the unprire shall be sole judge of a heat's deviation from its own water shall be sole judge of a heat's deviation from its own water shall he sole judge of a heat's deviation from its own water shall he race.

7. Nu fouling whatever shall he allowed; the boat com-

u. A hoat's own water is its imbyed course from the station assigned in it at starting to the finish, and the unpire shall be sole judge of a huat's deviation from its own water during the race.

7. No forling whatever shall be allowed; the boat committing the ford shall be disqualified.

8. It shall be considered a foul when, after the race has commenced, any competitor, by his two our, boat, or person comes into contact with the our, boat, or person of another competitor, unless in the opinion of the umpire such contact is so slight as not to influence the race.

9. A claim of foul must be made to the numpire by the competitor himself previous to his getting out of the hoat.

10. The ampire, when appended to, but not before, shall decide all questions as to a fund.

11. In the event of a fond, the umpire shall have the power, (A) To place the bouts, except the hoat committing the fond, which is disqualitical, on the order in which they came in, provided that the fouled boat come in first, or that the first boat hud a sufficient lead at the time of the foul to warrant the race being assigned to it. (B) If the fouled boat obes not come in first, or if mable to decide which boat is in error, to order such of the leading boats to row over again as in his opinion are entitled to another competition.

12. Every boat shall abide by its accidents.

13. In the event of a dead heat taking place the same erews shall contend again, or the erew or crews refusing shall be adjudged to have lost the race.

14. No boat shall be allowed to accompany a competitor for the purpose of directing his course or affording him other assistance. Any boat receiving such direction or assistance shall be disqualified at the discretion of the unique.

pire.

15. The jurisdiction of the impire extends over the race, and all matters connected with it from the time the race is specified to start until its final termination, and his decision in all cases shall be final and without appeal.

16. Any empetitor refusing to abide by the decision, or tendlow the directions of the ampire, shall be disqualified.

17. Boats shall be started by their sterns, and shall have completed their course when the bows teach the fluish.

18. The umpire, if he thinks proper, may reserve his decision, provided that in every case such decision be given for the day of the race.

19. If in conformity with rules 11 B or 13, a second race is ordered, it shall not be called on the day when the first was rowed.

The College Regatta.—The delegates from the clubs forming the Ruwing Association of America assembled at Springfield on Wednesday the 7th inst. The following colleges were represented, Bowdoin being minitted during the session:—Amberst—R. M. Smith, G. W. Clonk; Bowdoin—Oliver C. Stevens, John M. Burleigh; Brown—J. W. C. Joslyn, W. C. Greene; Columbia—J. K. Rees, E. S. Rapallo; Cornell—L. F. Heublein, A. M. Eusign; Dartmouth—S. B. Wiggias, J. Foster; Harvard—W. J. Oris, L. W. Clark; Princeton—R. J. Hall, J. C. Drayton; Trimity—W. J. Roberts, J. D. McKennan; Union—A. V. V. Raymond, V. V. Fanchot; Wesleyan—J. E. Eustis, H. H. Downs; Williams—J. F. Herrick, M. P. Washburn, Yale—C. H. Ferry, S. C. Bushnell. Hamidton did not send delegates.

A revised set of racing rules, which will be found in A revised set of racing rules, which will be found in another place, were adopted. Numerous amendments were made to the constitution, as follows. By Mr. Ferry,

another place, were adopted. Admissions and additional were made to the constitution, as follows. By Mr. Ferry, of Yale:

"That the name of this association shall be A Rowing Association of American Colleges.

"No college elabor clubs, other than those now members and those which have been members of this association, shall be hereafter admitted as members, and any college which shall fail to be represented in three consecutive regultas of this association shall he deharred from future membership.

"Any college not represented in either the University or Freshman race of the regulta immediately preceding the amount convention of the association, shall not be considered a member of the association, shall not have a vote in any succeeding convention until it shall have gained its full membership by such representation in the regulta immediately preceding such convention.

"No college which is not represented in either the University or Freshman race of any regatta of this association shall be allowed to compete in the other races of this regulta.

regutta.

The Regalta Committee shall cousist of three members, who shall be graduates of colleges belonging to this association, to be elected by a majority vote of the members present.

There shall be an annual meeting of this association held on the first Wednesday in December, at such place as the association may decele upon at its annual meeting of the year inamphiately preceding.

The implies and judge at the annual regatta of this association shall be chosen at the annual meeting of this association.

By Mr. Herrick, of Williams: That no trainer or coach be hereafter allowed to train crews for or in races of this

association, except graduates or under graduates of the colleges represented. And any crew receiving aid or instruction from any trainer, coach, boatkeeper, or janitor, who is a professional carsman, shall be disqualified. Thanks were voted to Mr. James Gordon Bennett for his generous donations of the past two years, and also to Mr. Wm. Blaikic for his earnest efforts in promoting attletics.

Mr. Wm. Blaikle for his earnest efforts in promoting althetics.

It was decided to hold the single-scull and Freshman race on the first day (July 13) of the regatta, and in case of rungh water and postponement on the first day, the University rure to have precedence. The races were ordered to be called not later than 11 o'clock A. M. The positions of the crews were drawn for, and resulted as follows, numbering from the west shore: 1, Williams; 2, Cornell; 3, Amberst; 4 Bowdoin; 5, Brown; 6, Columbia; 7, Wesleyan; 8, Princeton; 9, Dartmouth; 10, Yale; 11, Trinity; 12, Harvard; 13, Union; 14, Hamilton.

The Freshman and single-scull entries will preserve the same intuition as their respective colleges have drawn in the University race, moving up over the blank lines. The following colleges announced that they would send representatives for the Freshmen and single scull races: Freshman—Autherst (?), Brawn, Columbia, Cornell, Dartmouth, Harvard, Princeton, Yale. Single-Sculls—Bowdoin, Cornell, Dartmouth, Harvard, Williams, Yale.

A private session was then taken to discuss the selection of an umpire. Mr. James Watson, of New York, was chosen to act in that capacity, with full power to appoint his own afficials, in conformity with Racing Law, No. XV. The Convention adjourned, to meet at the Massassoit flouse on Dec. 1, 1875.

HARPARD UNIVERSITY, April 12, 1875.

House ou Dec. 1, 1875.

Handard University, April 12, 1875.

Empor Forest and Stream:—
The school bis advanced far enough for out of door exercise, and the crems—Vireity Class and Club—are at work in their boats. The Buse Balt, Cricket, and Foot Balt Club have received an answer to their chalthing to play Columbia; they will not play this Spring, as they have been answered that Yale '77 will accept the Harvard Balt Team have been answered that Yale '77 will accept the Harvard Club shall play a series of games with Yale. It has not yet been decided challenge to play foot ball, if Harvard will agree that the '77 Buse Ball Club shall play a series of games with Yale. It has not yet been decided to play on any such terms, as the foot hall and base hall interests are an inely distinct, and the one has no power to accept or refuse any challenge for the other. It is not probable that Harvard '77 milt refuse to play Yule '77, if Yule wishes to send in a challenge. Tononto Chicket Club.—Being one of the many readers of your popular paper, and knowing the interest you take in the many athletic associations throughout the country, I submit to you the result of our annual meeting of the Toronto Cricket Club held at the Rossin House this evening. The following are the officers for the ensuing year:—Col. F. W. Chmberland, Presdt.; Thos. Swinyard, 1st Vice Presdt.; R. H. Bethunc, 2nd Vice Presdt.; Mujor Draper, 3rd Vice Presdt.; R. B. Blake, Secretary and Treasurer. Committee:—Messrs. J. O. Heward, W. Pickering, R. W. Wand, H. Totton, J. L. Gordon, D. R. Wilkie, J. Goldie, H. J. Campbell, C. H. Sproule. There were one hundred new members proposed, and G. P. Shears, Esq. elected unanimously an honorary member. It is the intentiou of the club to send a picked team to play the respective clubs of Philadelphia, St. Louis, Detroit, &c. during the coming senson. The club is in a most flourishing condition, and anticipate an exciting season of the manly game of cricket.

—At the annual meeting of the Beaver cricket club, of

-At the annual meeting of the Beaver cricket club, of Toronto, last week, the following gentlemen were elected officers:—W. H. Harris, President; W. J. Halworth, Vice President; T. H. Hudson, Secretary and Treasurer; R. H. Dee, captain; O. Nicol, W. Barr, F. Henley, and J. Ormiston, committee; after which thirty new members were proposed. The club now numbers upwards of eighty

members.

—The now noted "Force case," the bele noir of the professionals this Spring, husled to the breaking of the entente cordiale between the Boston and Athletic clubs, the disruption of friendly relations having become a serious detriment to the interests of the professional class this season. The facts in brief are these. The Judiciary Committee of 1874 decided that Force's services for 1875 were due to the Chicago club. To this decision the Athletics appealed to the convention, who sustained them by a majority vote. They then placed the matter before the committee of 1875, who decided that Force's services belonged to the Athletics. The dispute, and some comments thereon by Harry Wright, brought out letters and statements from the Athletics and the Judiciary Committee of 1874. Finally, the action of the Fresident of the association, in appointing three Philadelphians on the new committee, including himself, led to a circular being addressed to the clubs of the

association, urging them to join the Boston club in bringing about the reorganization of the committee; but this has not met the approval of a majority of the clubs, nor did it deserve to, worded as it was. There is but one way to end this trouble and to withdraw the discordant wedge which is splitting the fraternity, and that is to call a special meeting of the association in June next, and at that neceing revise the constitution so as to appoint every delegate on the Judiciary Committee.

The Athletic pine played a gene with the German

—The Athletic nine played a game with the Germantowns on April 10th, and they won by a score of 32 to 2, the Germantown nine scoring singles in the sixth and until innings. They also beat the Doerr club by 26 to 3 on April 10th

—The Philadelphia nine defeated the Gloucester city team on April 9th by 11 to 0; and they beat the Cregars by 17 to 2 on the 6th.

The Centennials whipped a field nine at Philadelphia on April 10th by 13 to 6.

April 10th by 13 to 6.

—The Western of Keokuk heat the Minstrel nine at that city by 25 to 2 on April 7th.

—The Mutnals opened play April 10th against a field nine on the Capitoline grounds, and wou by 10 to 7 only. Umpire, Mr. Chadwick.

—On April 17th the Bostons will play the Harvard college nine, and on the 19th the New Havens in Boston, and the same nine in New Haven ou the 20th. They then go to Washington to play the "Child's" none, of that city, but from all accounts it is not likely to be "child's play."

—On Saturday the New Haven nine played a match g of seven junings with a picked nine, which resulted victory for the New Havens by a score of 7 to 0.

—The game in Boston on Saturday letween the champions and the Beacon nine resulted in favor of the former by a score of 10 to 6.

-In the opening game on "Fast Day," at Boston, the Red Stockings defeated a field nine by 8 to 0.

The opening game between the two well known clubs, the West Ends and Wood's Museum nines, was played Friday afternoon at Oakdale Park. Wood's nine, 4; West End, 3.

—Allen Brown has walked 500 miles in six days at Nashville, being, it is claimed, the first pedestrian who has accomplished the feat without a charge of trickery.

—Daniel O'Leary, of Chicago, and John DeWitt, of Albany, commenced a walk of 100 miles at the Rink on Friday evening last, O'Leary finishing the distance at 9:38 on Saturday evening and winning the match. DeWitt walked but sixty miles. O'Leary appears to be the coming pedestrian, and efforts are being made to get a match on with Weston. The great "ped," however, will not hook at any thing tess them \$20,000, which savors very much of the bluff game. lduff game.

—The professional billiard tourney in Brooklyn has progressed very nearly to a close, the score of Monday night's games leaving but four of the original twenty-one games to be played. The full score up to April 13th is as fol-

Weduesday night's play will decide the ownership of the first prize, but there will be ties for the others.

SCOTTISH GAMES

QUOITS .- No. 4.

A LTHOUGH the game of "Quoits" cannot be claimed as peculi r to Scotland, either in origin or practice, it is played to such an extent in that country that it deserves a promineut place in the list of Scottish games. It is further deserving of this position from the partiality shown it by Scotchnien abroad, and more particularly, by such of that nationality as have found their way to Ancerica.

To follow the usual course, and fluid for the game a beginning and a history, would enteil a somewhat laborious research. All the Scottish games previously noticed in these columns are possessed of the certificate of respectability conferred by a more or less remote antiquity, but all fall short of the lioary elevation to be assigned to quoits. To reach the time when men first engaged in this pusting we must traverse universal history, and brave the danger of losing ourselves among the mists which envelop the legendary history of Greece When we have reached the limit of advance in that direction, we learn that even the gods condescended to throw the discus. A distinction is, however, here to be observed. The discus was a round plate of wood, stone or metal, varying, when of the latter materials, from ten to twelve inches in diameter. It was held in the right hand by the outer edge, so as to let it rest on the forearm, and was cast with a swing of the arm and twist of the body. It was thrown edge foremost, and he who threw it farthest was the winner. The story of Apollo killing Hyacintlus, his young and favorite papil, by accidentally striking him on the head with a quoit, is one of the most familiar tales of mythology.

The game of quoits, though probably rightly traced to the ancient throwing of the discus, differs from it in several essential particulars. The quoit is a ring—not a plate—of iron, thick on its inner edge, and brought to a sharp edge on the outside, so that when pitched it may stick into the ground. The shape of the quoit varies according to the taste of the player in several minor particulars. Some are m

passing the forefinger along the outer edge. It is then delivered with a swing, forward and apward of the aria, and leaves the hand with a rotatory motion, cittler flat or at an angle, to suit the exigencies of the game.

The ground is the next thing to be outleed. Sometimes plose on unprepared turf, or turf simply sacked with water. "Chy ends" consist of a patch of eby round each hole, of an high or two in depth, and extending to about eighteen inches or two feet in diameter. The object, of course, is to give the quaits a better chance of lying where they first strike, and the matter, in a match, is determined by prearrangement between the proposed routestants.

The game is one which requires very considerable strength and a course of steady practice. In Great Britain it may be said to be nonhood's sulestitude for boyhood's indulgence in pitching pennies or neckless bottons. In Scotload the game is a great favorite, especially anong the working classes, in whose ranks its devatees are mainly to be found. Its great stronghold is in the west, centering in Glasgow, and extending through the mining districts to the eastward of that city. It seems indeed to have a peculiar fascination for miners, as we find it zealously practised in other coal regions, such as Lochgelly in Fifeshire. Its prevalence is, however, very general, and it fluids many enthusiand, and even in the stately english listeff.

There can be little doubt that the game was introduced into the United States from Great Britain, and jodging from the manber of Scotelimen who are addoted to it, it seems not improbable that the first pair of imported quoits were brought to our shores by some Scot, who had Jodging from the manber of Scotelimen who are addoted to it, it seems not improbable that the first pair of imported quoits were brought to our shores by some Scot, who had Jodging from the manber of Scotelimen, who are addoted to it, it seems not improbable that the first pair of imported quoits were brought to our shores by some Scot, who had Jodging

rymple at New York. It will be played for this year at Yonkers.

In this match no clay is used, the distance is eighteen yards, and there is no regulation as to the weight or size of the quoits used. In regard to the latter point, "Stomehenge" says:—"The quoits are light or heavy, occording to the strength of the player; and in playing a match it is usual to specify the weight." In the curler's match, just noticed, it is different; each player uses the quoits which best sait bino. The consequence is, that a man playing with small quoits may be "ried" with one using quoits of the size of a moderately sized barrow whired. A manifest mixmiling lies with the latter. Weight tells when an opponent's quoit, lying dangerously near the "pin," has to be knocked out, and size gives a corresponding advantage when the conditions are reversed. Some modification of the existing rule seems desimble, if practicable without destraying the harmony of the game, or keeping out any players who would otherwise enter.

Outside of the Grand National, the health and strength fostered by the game have given it considerable prominence. The programme of Caledonian games invariably includes one of quoits, and with so many features to recommend it, it cannot do otherwise than increase in favor with all classes of the community.

Binds of the Northwest. By Dr. Elliott Coues, U.

fall short of the hoary elevation to be assigned to quoits. To reach the time when men first engaged in this pasting we must traverse miversal history, and brave the danger of losing ourselves among the mists which envelop the legendary kistory of Greece When we have reached the limit of advance in that direction, we learn that even the gods condescended to throw the discus. A distinction is however, here to be observed. The discus was a round plate of wood, stone or metal, varying, when of the latter materials, from ten to twelve inches in diameter. It was held in the right hand by the outer edge, so as to kit irest on the forearm, and was east with a swing of the arm and twist of the body. It was thrown edge foremest, and he who threw it farthert was the winner. The story of Apollo killing Hyacintlus, his young and favorite papil, by accidentally striking him on the head with a quoit; is one of the most familiar tales of mythology.

The game of quoits, though probably rightly truced to the ancient throwing of the discus, differs from it in several sensing the property of the author of a classification of a work calculated, as favorite papil, by accidentally striking him on the head with a quoit; is one of the most familiar tales of mythology.

The game of quoits, though probably rightly truced to the ancient throwing of the discus, differs from it in several sensing the property of the discus, differs from it in several sensing particulars. The quoit is a ring—not a plate—of iron, thick on its inner edge, and brought to a sharp edge on the ontside, so that when pitched it may sitck into the ground. The shape of the quoit varies according to the taste of the player in several minor particulars. Some are sent of the player in several minor particulars. Some and correct them in accordance of the action of the action of the contribution of the contribution of the work, as often the property of the contribution of the correspondingly conceave. Others are made with both in, and the property of the discusting the pr

searcity, not only within the region mention d, but throughout the general area they inhabit.

By his examination of the general ornithological literature involved in the study of the abore cited points, the author has achieved one import not result, and that is the complishin of they extensive spinonymaile lists, which, in concertion with a rear unmber of miditional references, make an extensive index to the iterature of the subject. The contents of the more allowed in the parts be risining to the parts, although not intended for general resuling, cell be found to be highly interesting. To sportsmen—especially the parts perialing to the game birds of the country—It will prove to be not only entertaining, but instructive, and the volune will nothoubbuilty become, to a nuch greater extent than the author imagined when he samed it such, a "band book" for the scholar, the sportsman and the public. Although the nothor has been compelled from man in space to abbreviate much that he would have otherwise detailed, yet his happy style has emilted him to instit into earn before and most enighteenthy portions of the work a fixed multon that urriess the attention of even the minificated, and acakens in him an interest in a book which he before though could have on charous for him. The ambor's horoughout the mork are graphic and full of beauty. We upone the following as a paragraph indicating how schones can, like Mr. Wegg, sometimes drop into poetry:

"A beautiful sight it is to see the enancred little pressing suit with all the pount and circum stance of their milliant contribuses. The firm and stately trend, with hody exect and context shape this played to hest advantage; the uphering nanga, the modean of the plumes, that travay like the standard of kingths certain; but home disputers, and he may return a standard of kingths certain; he hashing eyes beyone can, filter ourses standard of kingths certain; he hashing eyes beyone the more strain to more intens, almiring his bearing, foschasied by the course, but regard to t

age. In conclusion we must not mult to mention mother important pottion of this work. We refer to the columniums finlex, allich to the curacy and completeness, shows the usual care and thoughtahous of the nuclear.

A REN WITH THE HOUNDS.-Here is about as concise

A Ren with the Holds.—Here is about as concise a description of a fox cluse as can be stated in technical terms. We copy from the London "Field."

"Tuesday, the 16th, the Tipperary hounds neet at Feth ard. Drew Kilnockin and Furry Hill klank; then called on Rathkenny for its seventh lind this season. We were not hing in suspence, for a brace were space in foot—one a very interesting looking lady—but Maiden gat his haunds settled on to his lordskip; for fifteen adoutes they rattle him roand the covert us only good hounds can do; then away through the woods and over the braok to the next road. Here the fox ran the road to lathkenny bridge, bridge, bore to the right for Drongan, then wheeled to the left for Carbally; here the huntsman and his good little mare, who were lending at the time, came to grief over a harge double. They lay side by side a few seconds, but were soon up and going as merry as ever. The hounds ran through Shannicoyle Wood, then near to Ballandsky, bore to the left to Kilkennybeg, tried the earths at Sloginstown; Buding them stopped, he steered on to Peppertown, and being so hard pressed he disappeared in a large drain. So we left him to congratulate himself on his narrow escape, after showing us as grand a fifty five minutes as ever a man saw—forty minutes in the open. Every one now turned for home, for forty minutes over this heamiful stiff country without a check is enough for any horse. Every hound was up, and were dreaming over their good deeds on their benches soon after three P. M. We have only been stopped one day by frost, and have had a capital season,"

The Horse and Connse.

put her weight upon the fractured leg once more.

New Orleans Races.—The Spring meeting of the Louisiana Jockey Club commenced on Saturday, the 10th inst., having been postpowed on account of the weather, and was in have been confined during this week. The first race, two miles over eight hirdles, resulted in a dead heat hetween Limestone and Capi, Hutchlasin, who divided first and second amony. The second race, the Pickwick stakes mile heats for three-year olds, \$1,000 added money, and Faunie F, wan first and third leats and manney. The third race was two miles for all ages for a parse of \$500. The race was wan by Bonaventure, heating Univary, Granger, Stamperle, etc.

—The postponement of the Spring meet-

The postponement of the Spring meeting of the Louisiana Jockey Club has necessitated the patting forward of the Galvaston Jockey Club meeting until Suturday, 24th inst., and three days of the ensuing week.

—Active preparations are being made for the Spring meeting of the Galveston Jackey Club on the 24th inst.

—The Pacific Joe key Club lucve formally offered a purse of \$30,000 in gold for a four-nile and repeat race, apen to the world, to be ran at distributing in November next; \$15,000 to the first larse, \$6,000 to the second, \$5,000 to the third, and \$4,000 to the fourth. Horses from Europe will be allowed \$1,500 for traveling expenses, and from east of the Rocky Mountains \$1,000.

—Sisson Girl, dim Brown, Commodore, and Pullerton are under training in San Francisco.

Francisco.

—Previous to the breaking up of the ice in Merrymeeting Bay, mear Bowdoinlum, Me., Col. H. S. Russel's stuffion Dread maght trotted on the ice a unital against time for \$100. The match was made for the horse to but 2.30. He was incompanied by the running horse Eagle, which he distanced quite easily, and won the race in 2.28\$. The time was the fastest ever made by a trotter in saven years old.

—The columnated trotting with a seven years old.

seven years old.

—The celebrated trotting gehling Occident was to have arrived at Philadelphia on Balat Dable's palace lorse carsonar time this week. He will be trained for the coming campaign at Pain Breeze Park. The presence of Occident in the free-facult division this Summer will add greatly to the zest of our leading trating meetings. He is said to have lost his unstendiness ender the skillful manipulation of Dalde, but if Fulletton remains in California, and Goldsmith Mail has retired, there must be a "coming horse" to compete with him.

—A new disease has developed itself a-

—A new discuse has developed itself among horses near Albany. The horse's breast and forelegs are covered with lumps, which must be joinful, as the united exhibits signs of sickness and severe suffer-

-The report that the filly Vandelite had gone wrong is contradicted.

—Chesapeake, Aristides, Calvin, and Aaron Pranington are in spleudid condition, and their owner expects to win the leading exents at the Lexington meeting next month.

The great rolt Acrohat will make his first appearance this season in the Monmonth Cup, and his principal antagonists will be Ballankeel, Vandalite, Preakness, Mar, Attilla, and Reform. If these horses reach the starting just in good condition one of the most exciting races ever witnessed in this country will ensue.

**Extra Pages has recovered from her

this country will cusue.

-Katie Penso has recovered from her long illness, and will be able to participate in the tarf events of the coming season.

-The track at Monmouth Park is now be good condition for training, and horses are being gulloped regularly.

-A bill to prevent pool selling and hetting was presented to the New Jersey Legislature, but did not pass. It was in tended, doubt less, for the benefit of Long Branch.

Cariboo Junting in Hova Scotia.

A BOUT the first of the present year a friend and I arranged to have a few days in the woods after cariboo, and as it may interest some of your readers, I enclose ceonnt ef our hunt.

an account of our hunt.

Having heard that good sport was to be had in Cumberland county, our first step was to communicate with an Indian hunter from whom we had received the information, and on his expressing his approval of our scheme we set about our preparation. My friend, whose experience in hunting matters is considerable, took charge of the commissariat, consisting of salt pork, canned fish, biscuit and tea, with a multitude of minor necessaries, which were put in packages suitable to carry, as we expected to have to tea, with a multitude of minor necessaries, which were put in packages suitable to carry, as we expected to have to back our loads before we reached the hunting ground. After several delays, caused by the "Intercolonial" being blecked with snow drifts, we finally started on the 12th of January. The snow, which in Halifax had a crust that would bear a man, was quite soft away from the coast, and as we approached the station (where we left the rail) it presented a white soft carrier, with the forces and church. sented a white soft carpet, with the fences and stumps just showing on the surface. We therefore anticipated pretty heavy snow-shoeing.

At the station we were interviewed by Joseph, the brother of our correspondent, who was in waiting to conduct us to the presence of the hunters, Abraham and Jacob. considerable debate with them as to which grounds would give us the best sport, we finally decided to go in about twenty miles by the road and then strike into the woods. Our party now consisted of my friend and myself, the two Mickmack hunters (Abraham and Joseph), and the boy Joseph, to keep camp, cook, and ehop wood, the latter no casy task when the thermometer ranged from fifteen to twenty degrees below zero. When we packed ourselves with our rifles, snow-shoes and provisions into a large sleigh, we made a pretty fair load, and very soon found that it was to be up cosy matter, to get also there there is no the state of sleigh, we made a pretty fair load, and very soon found that it was to be no easy matter to get along through the snow over a road little broken. The Indians had frequently to tramp after the team as it struggled through the heavy drifts. We arrived at the first stage of our journey about dark, and after an hour's rest we again started. The most difficult part of the road was now to be traversed. We were provided with fresh horses and a stronger sleigh, and dashed off in good spirits but soon found our peece level. dashed off in good spirits, but soou found our pace cheeked, as the roads, not having been traveled on since the last storm, had from four to five feet of deep snow on them. Through this the powerful horses plunged and struggled; but as we came to an exposed part of the road, where the drift had packed more solid, they stuck fast, and finally laid down. Our driver showed himself equal to the emergency. Freeing the exhausted animals from the sleigh, he urged them through the drift, and then, when they could get footing, a drag chain was attached to the sleigh, which, freed from its load, and all hands pushing, soon worked through. Our next halt took place at a clearing to which we had wandered off the road, and as no trace of the high-way could be found, the Indians were sent off on snow-shoes to recover the lost direction, which they soon succeeds in the state of the same of ceeded in doing.

Presently the welcome sight of a farm house, with a cheerful light showing from its windows, and volumes of smoke and sparks issuing from the chimney, showed that our journey for the night was at an end. Here we found smoke and sparks issuing from the chimney, showed that our journey for the night was at an end. Here we found the Indian (Jacob) who had preceded us, and having roused the inmates from their beds had got on a rearing fire prepared for our comfort. In its cheerful warmth we soon forget our fatigue. We learned from our host that the signs of game were numerous, and he thought we had every prospect of a successful hunt. The Indians stretched themselves on the floor before the fire, and we retired to hed, our minds full of the anticipated sport. In the morning we made an early start, with our kit packed on a sled, and after a pleasant tramp of about six miles through the forest we arrived at our camp. This structure, which had

been built by an Indian hunter, was about twelve feet by ten; three feet from the ground it was built of hewn logs, packed with moss; from this foundation poles about two inches thick were placed nine inches apart, sloping together inches thick were placed nine inches apart, sloping together at the top to ferm a cone; on the poles are stretched pieces of birch bark, commencing at the hottom and working up, each piece lapping the one below. This is continued to within about a foot of the top, which is left open for the smoke to escape. Cross poles are put around the eamp, and the upright poles lashed to them, which effectually binds the structure. A piece of canvas serves for a door. This does not seem a very comfortable dwelling to inhabit, with the thermometer below zero, as it was during our stay, but we did not find it inconveniently cold, except when the fire was allowed to get low. The douestic arstay, but we did not find it inconveniently cold, except when the fire was allowed to get low. The domestic arrangements were very simple; the cook, with his utensils, took possession of one side of the camp, the two hunters the space opposite the door; we stretched ourselves opposite the cook, and in the centre was built the fire, a very important part of our arrangements. A few boughs of the spruce tree were spread to lie on, and everything was complete.

Having settled everything in the camp and left Joseph snow-shoes were now made to play an important part, as it was impossible to go a dozen steps without them, the traveling through the woods being very different from sheeing it on the level road, and many a toss and plunge headfore most into the snew had to be horne as the top of the shoe caught in the hidden branch of some low spruce; or the traveler, climbing over the fallen trunk of some giant of the forest, finds snow-shoes very inconvenient for that kind of exercise. We hunted about three hours that afternoon, and found several moose yards, a term applied to the section of country which one or more of these animals had selected as a feeding ground. Moose are very lecal in their habits, and while the food holds out will stay in one locality until disturbed. As the season for killing moose has ity until disturbed. As the season for killing moose has been closed for a term of three years in our Province, we of course did not hunt up the yards, and therefore returned to camp without seeing any sign of cariboo. The next day we took another direction, making an early start. It was snowing pretty heavily, the going being very bad, so that our order of march was in Indian file, the hunters taking turns at leading or breaking the way, the rest following in their footsteps. We soon came on more moose signs, and presently started an old bull moose out of a clump of firs. He dashed off through the deep snow leave. clump of firs. He dashed off through the deep snow, leav ing a track which the Indians were ready to follow if we ing a track which the Indians were ready to follow if we gave the word. They were in a state of excitement, like bounds that scented blood, and their excited looks, and quick, excited talk in their own language, showed that the law would not restrain them if left to their own devices. However, as we came for cariboo, not moose, forward was again the word. We hunted all day, and after a weary tramp of about twelve miles turned our faces towards the

The woods were full of snow in every sense of the word, for not only was the ground covered for four or five feet, but having fallen without wind the spruce and fit trees were heavily laden, and at the least shake deposited their were heavily laden, and at the least shake deposited their heavy burdens on the head and shoulders of the luckless traveler below. We returned to camp about dark, and when I say we felt tired, it would fail to express the sensations we felt as we erawled into our primitive shelter. Abraham consoled us with "feel better bimo by, after get our tee".

The next day we separated, my friend and Jacob going In our direction, and Abraham and 1 in another. We had not gone far when more moese signs appeared; we crossed several yards. At last Abraham said, "You like see moose?" Replying that I would, he examined the tracks earefully, then made a wide circuit through the woods, and then faced in the direction we had started from. He motioned me to be careful how I walked, and presently, ex-tending his hand, whispered "There moose!" The animal (a cow moose) was lying down about thirty or forty yards from us. She slowly arose, and after tossing her head and from ns. She slowly arose, and after tossing her head and thapping her great ears, disappeared as suddenly and noise-

tlapping her great ears, the property as a shadow.

"Fat barren cew; geed fresh meat; better than salt pork;" was the reproachful remark of Abe as we turned to the property way. We returned to the property and resumed our way. from the moose and resumed enr way. We returned to camp without success, to find the others had done no hetter. We held a counsel as to our next move, as we had decided that their short of the state o camp without success, to find the others had done no hetter. We held a counsel as to our next move, as we had decided that there were no carihoo in our vicinity. Several places were suggested, and the final decision was to go farther in. As an early start was necessary, the Indians set about making a "taboggan." This useful article in the woods is simply a very light frame sleigh. The tree of which we made it was growing in front of our camp at dusk, and by ten o'clock it was a taboggan. The enly tools used were an axe to fell the tree, a knife te shape the pleces, and a small auger; with these they turned out a very neat and serviceable taboggan, or hand sled. We prepared to start early in the morning, taking with us only such articles as were absolutely necessary; each out took a back load. Abraham and Jacob undertook the taboggan, they bringing up the rear and drawing the sled on the track made by our snow shoes. We went about slx miles further into the weeds to another camp, and got into it early in the afternoon. After getting dinner Abraham and I started out. We came on another meose, a large buil, who had shed or east his horns. He went off at a tearing rate through the snow, as if it were so much air. We saw no sign of eariboo, and returned to camp. The next day being Sunday we remained in camp; but the two hinters started off to make a more extended search for game. Towards night they returned with the welcome news that earlboo had crossed some distance from the camp, but coming towards it.

On Monday morning we started in good spirits, and after

On Monday morning we started in good spirits, and after about an hour's walk from the camp struck the tracks. We On Monday morning we started in good spirits, and after about an hour's walk from the camp struck the tracks. We followed them into a grove of pine trees, where the cariboo had rested, as the many hollows in the snow showed where they had hid down. Crossing the grove, we came to a swamp with a thin growth of bushes, and here we first got sight of our game. They were feeding on the moss that grew profusely on the trees, and we could see a head raised and withdrawn ere we could get a shot. We moved off in the direction in which they were feeding, and as we gained an opening in the bushes the leader appeared. I raised my rifle, and taking deliberate aim fired. The animal bounded at the shot, and sprang away. "Too high!" cried Abe. As the herd rushed past, my friend fired twice and missed; a second time I fired, and this time too low, as the snow flew from under a fine stag who brought up the rear. We leoked at each other in blank amazement, not feeling at all flattered at the result of our marksmanship. I did not feel at all nervons or excited when taking my first shot, but, as is often the case, supposed the shot to be a longer one than it really was. We now started after the cariboo, which were making good time away. Following at a good pace by cutting across and taking advantage of the ground, we caught an occasional sight of the herd, and my frien I had another shot, but missed. We now separated, Abraham and I following in the track of the herd, the others entiting across to intercept them. We now found out the truth of the saving, that a stern chase is a long one, for we had a and I following in the track of the herd, the others entring across to intercept them. We now found out the truth of the saying, that a stern chase is a long one, for we had a long and tiresome pursuit, which ended in my having a long shot, wounding a buck in the back. Our distance from the camp, and the lateness of the hour, prevented us from the eamp, and the lateness of the holi, prevented us-from following farther. We were now a long way from camp, and had gono in every possible direction; but Abra-ham, although he had never been in this part before, locked at the setting sun, and after considering a moment struck off through the forest. He had calculated the direction so accurately that we came in almost a direct line to the camp Here we found the rest had arrived before us, and I, who considered myself (not without cause) a good shot with a rific, had to stand considerable chaffing about my ill luck. Abraham said "Carlboo not like target."

The next day we started again, Abraham and I to follow

the herd we had left, the others to hunt on some fresh tracks they had crossed the evening before. We did not get sight of game until the afternoon. There being no wind, the game started before we could get sight of them; but at last we came on the herd, and as they dashed through a grove of hard wood one buck paused an instant to see the cause of alarm, his head and neck showing hetween two trees. I raised my ritle, the sharp report rang out, and he fell in his track shot through the neck; another shot fired at the retreating herd wounded another, and we pushed on in hope of overtaking it, but found it would likely be a long chase; and as evening was closing upon ns, after dressing the buck we buried him in the snow and started to return. On the way we caught a porcupine, which Abraham carried along. We had a long traup, and Abe acknowledged that he felt done ont, for we had left camp at half past eight, and it was now shout seven in the evening. We had not brought food with us, and had no chauce to even.

we had not brought food with us, and had no chauce to control any.

Arrisone-cife than we, having killed three. One, which my friend killed when alone (the holian having returned to camp, leacing him to follow), weighed over livree hundred pounds. We now began to feel better satisfied with our performance, and having nu out of provisions—the breach tea, biscuit, etc., being all gone—recourse was the product of the control of the control

lowed with ease. The hoof of the cariboo is formed by nature to carry the animal readily over the snow, as it opens and spreads over quite a large surface. I was surprised to find that they would frequently travel in our tracks; they seemed, in fact, to prefer it. We would find on returning to camp that a fierd had either come or gone on our road; this occurred several times. They generally went at a steady trot, but when pushed would bound, and the space they would cover in this way was surprising. Each individual leaps into the hole in the snow made by the leader, and so the weaker ones have a good foothold. We killed five bucks and two does; they all had borns except the big buck, be having shed his. The old males generally east their horns about January. The first horns are carried two seasans.

The rilles we used were Snyder breech loaders, carrying the cartridges used in the British army. The ball is five hundred and seventy-seven one hundredtbs, or about twenty-five gauge, something larger than the Spencer military cartridge, but with a much heavier charge of powder. We found these very effective, as the ball, when it struck, from its size and the velocity with which it went seldom failed to disable the game. A small hullet is useless, as the animal, although wounded fatally, will run so far that the chances of finding him are slight.

The seasou for killing cariboo is from the lat of September until the 1st of March. The number each individual is allowed to kill is five, and on no account to kill more than it is possible to get ont of the wood.

AN ENGLISH TROUT STREAM.

AN ENGLISH TROUT STREAM.

(1) It was 5 o'clock in the morning, O!" as I briskly stepped ont of my domicile a bright June day—I say bright, because it erentually turned out to he one, and because at that hour it was not fair to judge it, as the sun had not risen to clear away the mist that secued to shroud all objects in delicious quiethde. I had made up my mind to take a day's recreation on the little trout stream that wound its way into mightler waters some three miles helow. I had not far to walk, as within a quanter of an hour I was by its side.

It was a pretty sight and a wholesome sound to-boot. The hanks were decked in fresh verdaut folinge of trees and plants, an abundance of the latter growing hy the water's edge and bobbing their blooming heads as if in obeis ance to the passing stream, as it rattled by harmless, happy, and serene, to the accompaniment of its gurgling ripples. I leant upon a rail that ran across a rustic bridge and looked and listened, absorbed in thought. I was soon aroused from my reverie by the passing of some laborers on their way to a hard day's toil. We exchanged greetings—they passed one way to work, I the other for a day of pleasne—I began to flog the water; a little abead of me I noticed a mined them, all right, away they went and dropped nicely over my frient. I will here state that I was using the 'May fly' solely, as, although it was June, the tront in our northern streams are het ind the fashion and take the 'May fly' in June with as much gusto as the better educated and more fashionahle fish of the South.

But to roturn to my story. I dropped my flies just over him—canght—Oh! he was a greedy fish and did not require asking, twice; in a minute he was rushing madly down stream, struggling with the most obstinate fly he had ever got hold of; he tried back again, hut all to no purpose; he repeated the operation several times and at last began to llounder on the top of the water; llip, flap, flippillie flap, went his tail as he vented his rage on the poor innocent when, you g

"A deep vale
Shut on by Alpine hills from the rude world,
Near a clear lake, margined by fruits of gold
And whitepering myrtles, glassing softest akles
As cloudless, save with rare and roseate shadows,
As I would have thy tate."

As cloudless, save with rare and roseate shadows, As I would have thy tate."

Such was the scene before me, when the romantic has been somewhat blended with the realistic. The little stream, the scene of this narrative, was scarcely more than fourteen feet wide, thickly covered at intervals by overhanging trees and shrubs, so that I had often the mortification of sceing and hearing fish rise without being able to throw over them; and hills ran up almost from its edge beantifully clothed in foliage. A thorough English plongheoy's remark on one occasion greatly amused me. After the Yokle had satisfied his curiosity by asking one or two questions, the dense stapidity of which could only be equalled by his class, I thought I would amuse myself by interrogating him. "Nice day, is'nt it?" I began.

"Um, I dun know," he replied, half asleep in the snn.
"Splendid view from here."
"Yes, think so—eht mun." I turned to look at the rustic; this was said with some fire. I thought I would try him again.

this was said with some fire. I thought I would try him again.

"You don't admire it, then." He stared at me for a second and then replied: "Admire it, no, I fancy I don't care particularly about it. You gentle folks, talking all your rubhish about hills and all that kind of thing, I'd just like you to be at the tail of a plough a whole day up and down your plagued hills. Good morning sur." Without another word Rusticus bolted and left me to laugh at his rough and ready attack on art and poetry. Oht Romance, you medicine to the fancy! I was fishing along with very fair sport when a hard throw deposited my flies into the tender embraces of a black thoru bush.

I'm afraid the beanties of nature, so poetically thought of but a abort time previously, became subjects for very abusive lauguage. "Haug that hush." "Botheration," "Fast as wax," and many more such expressions, were blurted out, accompanied by a furious scowl from your famble servant. Bushes are as bad enemles to the angler as hooks are to a hungry fish, so I thought as I snarled at the I laid my rod down and took hold of the line. No go, I

took a run, cleared the water and succeeded in loosing them.
To get hack was the trouble; I had jumped from the highest hank. Well, I knew I had to get back. I detiberately walked in and waded ncross, wet up to the middle; but a ducking on a Summer's day is generally pluasant, so I continued up stream, entehing the, loosing some, having my flies taken, and smoking my pipe with the utmost satisfaction to all present, that was to myself alone.

Suon after noon it hegan to get far too warm for good sport, so I determined to pass a few hours skytching under the shade of a hinge oak close by. Having arrived thete, I laid down my whole length, refilled my pipe, and took a few minutes to select my view. I soon decided. The brook with the fallen willow spanning it made a nice foreground, and distant hills seen through a nook in the nearer range gave a glorious distant view. Suffice it to say that I spant several hours over my sketch before I again betook myself to the stream; but as snou as I recommenced, I found the tish hnugry, and I flogged away until I began to tire. My hasket felt considerably heavier than in the morning. I put another fish in my hasket, looked at my watch, found it was 7 o'clock. I'll fish another hour and then give my basket to the tender mercies of the cook. I had a glorious hour's sport. The flivs covered the water in the cool of the evening, and I made the most of their appetites. Eight o'clock came, I had made very nearly home. I determined to desits for the day, so I sat my self down on the bank and spread the contents of my hasket out on the grassy bank. Seventeen and a half brace, a splendid sight, all the speckled beauties that within a short time had ornamented one of nature's ornaments, laying dead and motibuless, no more to try the anglers' skill or flash up stream in unsuffied freedom.

I began to get absurdly contemplative. I questioned myself accounts.

dom.

I began to get absurdly contemplative. I questioned myself as to whether fish could speak or not, and if they could, whether it was not probable that they swore when they found the barh of a hook in their mouth. "Bah," I burst out into a fit of ringing laughter, and came to the conclusion that I was a fool.

Reader you will excuse my folly—have you ever sat by the side of a rippling stream—the evening quietnde mellowed and not disturbed by its rustling monaing? 'Tis then the poetic mind is in its glory, and then that contemplation grasps the omnipotence of the Creator. Thus have I passed long hours, aloue, but not in solitude—

"To stron rocks, to muse o'er flood and fell,

ed long hours, alone, but not in solitude—
"To stowly trace the forest's shady scene,
Where things that own not man's dominion dwell,
And mortal fool but ne'er or rarely been;
To climb the trackless mondain all unseen.
With the wild flock that never heeds a fuld;
Alone o'er sceps and foaming fulls to lead.
This is not suitude; 'the but to hold
Converse with noture's charms, and see her
Stores unroll'd."—Byron.

Converse with nature's charms, and see her Stores unroll'd."—Byron.

Such were my thoughts as I musted o'er my array of "dead heads" and guzed at the scene around me. I gave a sudden start. "What's that?" "Oh!" A smile played across my features. "Only a water rat," another beauty of a stream—the little fellow stemmed the current and handing opposite me began to feed on some plant—now and then pausing to listen for sounds of danger, and when satisfied as to his security he again tackled his supper. I questioned my watch—half past eight by the road. I jumped to my feet and the rat, startled in his turn, plunged into the stream. I stowed my fish away, shouldered my net and rod, and was in the kitchen in a few moments.

"Here cook, let's have some of these for supper."

"Very well Sir," replied the buxom wench. "My stars, you've had good sport."

"Yes," I replied, "be as quick as you can," and I saliied on to the verandah. "Holloa girls," to my sisters.

"Ohl you've got hack, have yon," in chorus from all three.

"Well my inquisitive sisters. I helieve I'm myself."

three.

"Well my inquisitive sisters, I believe I'm myself."

"Oh! stupid!" (Sisters are always complimentary).

"What spoit?" inquired one.

"Seventeen and a hall brace, by all that's holy," quoth l.

"Tis well," rejoined one, taking in the councily of the

"Tis well," rejoined one, taking in the comedy of the thing.
"A short farewell, my sisters, I must change my attiro. I will presently return to tea."
"No fear of that Mr. Huugry." "Thank yon," from one. It is an old saying, that no fish are as sweet as those caught by yourself. I firmly believe it, and so I thought as I refreshed the inner man that evening. I refreshed to rest—my dreams were of fish in and out of water—a harmless subject, and a boquet of lovely women—a happy finish to a day spent in glorious, innoceut sport."

Perhaps many an eye will glisten as it seams these lines, which may recall to mind home scenes now known only in the rememberance of the past.

Britain.

For Forest and Stream.

STONEY LAKE, CANADA.

STONEY LAKE, CANADA.

POR the benefit of those readers of Forest and Stream who are already asking where they shall spend a few weeks recreation next Summer, a few lines in favor of that Canadian paralise, Stoney Lake, and connecting waters, may prove of interest. The county of Peterhore has the good fortune to possess this chain of lakes, and many there are, in said county, and perhaps not a few out of it, who have spent many a plensant day's lishing or darck shooting on Stoney and Clear lakes. The former is a body of water about uine miles lung by three wide, and dotted over with innumerable islands of all sizes and shapes. Many of these are wooded, others are covered with grass and small shrubs, while a few produce a fair crop of hare rock; these latter are sometimes selected as camp grounds for the weary traveler, as the following will show.

Two years ago, while our hunting party had their canoes stretched on what is known as Grassy Island, two of the company took a canoe about six o'clock in the evening and ran p the lake to Moant Anlien, and on their way back to camp a wind storm came up directly against them. They strove mantully for some time, hoping to reach our camp, where a hot supper and comfortable heds were awaiting them. As they were rounding one of those bare rocky islands a gust of wind turned them about, and completely exhausted, in full view of our camp fire, they were conspelled to make this island their home for the night. There is an old saying, that tursery loves company, and it was verified in their case; a couple of town pedagognes were also caught in the storm, and heing obliged to retire in favor of the very nugcutle zephyrs, were soon passing the

rock nn which our friends were perched, who called out to them to stop and partake of their hospitality, hoping at the same time, that the strangers' boat might contain something more substantial than eye-water. A thorough search being justituted, the whole cargo was found to consist of a hottle of pickles. They had to make the best of it, however, and the night was spent in search of a soft spot to lie on.

Hinckleberries in their season are very plentiful, and are placked as large as cherries. The hlack bass fishing in the lake is first-class, especially at the mouths of Juck's and Eel creeks. Trolling is also good in all parts of the lake maskalonge and land-locked salmon, taking the troll freely. The latter fish ufford magnificent sport for the angler (with live minnow for lait) early in May, at Purleigh Falls; they are seldom caught weighing less than seven pounds, and have been taken over thirty pounds in weight, and in point of flavor. I never tasted their equal. Summer duck shooting begins on the 15th of August, and remains good for four or five weeks, when the Fall flight commences. Wild rice and celery grow in great abundance in all of these waters, which are visited by uillions of the duck tribe, until the cold weather closes the waters, compelling them to seek a more congenial clime. Deer hunting, or, rather, the open season begins 1st of September, Stoney Lake, Lovesick Lake and Deer Bay, (all contiguous,) being favorite resorts for the deer hanter, as they are all casy of necess, and deer are plentiful. Surely the sportsman should be satisfied in the heart of such a game region as this.

should be satisfied in the heart of such a game region as this.

The Mount Julieu Hotel, crected last year on the very shore of Stoney Lake for the especial comfort of tourists and sportsmen, has accommodation for sixty guests, with every luxnry that could reasonably he looked for in the back woods of Canada. In fact, the house will be kept only in first-class style, and persons desiring to take their families for a few weeks vacation, will find every inducement for their harmless enjoyment. The proprietors are determined to see that the wants of every guest, male or female, man, woman or child, are supplied. Sailboats, rowboats and canoes are always at hand. Guides, if neccessary, can be procured, and dogs in the deer hunting senson. Our American friends will probably find the cheapest and most direct route via Rochester. Take the steamer Norseman at Charlotte in the evening, get a comfortable berth and a good night's rest. You reach Port Hope in time for the morning train, of the Midhaud railway, purchase tickets for Lakefield, on Lake Katchewaunook, where the steamer Chippewa is in waiting to convey you to Mount Julien; time from Charlotte ahout fourteen hours; total cost less than four dollars per head. I take appen myself the respousibility of adding that any further information respecting Stoney Lake and vicinity will he cheerfully given on application to Messrs. R. C. Strickland & Co., North Donro, P. O., Cauada. Begging your indulgence, I am, most respectfully, C. A. P. Peterboro, April 12, 1875.

For Forest and Stream FRED'S RETRIEVER.

APPENING up at Napa during the shooting season and observing that ducks and geese were abundant, to birrowed a gun and a pair of long boots for the purpose of making a raid early next morning, but I had no dog, and could not hear of a good one to be borrowed. On putting the question to my brother Fred, a matter of fact sort of a fellow, he answered,

"Dog! why, what do you want hetter than Pat?"

"Put!" said I, "who is Pat?"

"Why, my dog."

"Where is he? Have not seen any dog around the house."

"Oh! Pat is not a lap dog; he lives in an out-house of his own; goes it on independent principles. Come along, I will show yon a dog 'as is' a dog; the best dog in Napa." He took nie out to a keunel. I saw no dog; hut there was a whistle, and "here you, Pat, come out and show yourself!"

yourself!"
"Out came Pat, the first end, as he crawled out yawning, displaying a pair of broad jaws, cropped cars, teeth visible, a thick, stubby, brindle body, followed lastly by au inch of tail, wagging with such energy as to slew him around from side to side. I looked at him, "that dog! call that bow-legged, villainous cur a sporting dog? Ho's nothing hat a hall, and the ugliest brute I ever saw. Call that a retriever? What the deuce do I want of a bull dog for retrieving?"

from side to side. I looked at him, "that dog! call that bow-legged, villainous cur a sporting dog? Ho's nothing hat a buill, and the ugliest brute I ever saw. Call that a retriever? What the deuce do I want of a bull dog for retrieving?"

"Never mind," said Fred, "don't condemn Pat until you have tried him; he is a splendid retriever, will bring anything from a chipping bird to a bullock. Oh, you will be pleased with Pat."

I looked at Pat; his eyes were blear and red, his lower jaw projected, showing formidable teeth; his fore legs were un arch; he had hut little hair on his back, having a playful habit of scratching it on the upper end of his kennel as he went in and out; taking him all in all, he was the most unprepossessing animal I ever made friends with. Pat, evidently thinking he had made an impression, proceeded to smile, lick his chops, writhe and twist himself into all sorts of shapes, like a boiled shrimp, wagging his hrief narrative with great rapidity, unbalanced, as it was, by any onthourd weight. I said, "Pat, truth and veracity being called into question. I am compelled to admit that you are not a hundsome dog; and if you are a retriever, you have gone a long way out of your regular business, and have unistaken your calling." Pat, thinking to make a favorable impression, succeed, ruhbed his nose against me, and made frantic efforts to reach my nose, at the same time playfully snappling his jaws together to indicate what he could do if called upon. "Well," said I, "Pat, to-morrow morning we will try it, anyhow."

Break of day saw Pat at my heels as I followed a cowpath through the grass along the bank of the creek, until I reached some little inland ponds, where I knew the ducks and geese were to be found, and I now heard them, and so did Pat, for he began to grow and bark. I hit him over the head with my gun, hut be seemed hardly to notice the matter until I brought it down somewhat forcibly on the top of his skull, when he turned oue blear eyo up at me which said, equiringly, "Do yon mean me?"

this time Pat eyed me curiously, and seemed very mach puzzled. He evidently thought I was after a pig, and did not see the necossity for so much can and the necosity for so much can and a such mystery. He scorned anything like, or ping on a food in that surreptitions manner, and would dash good as sonally on his own account, probably with reiting coasionally on his own account, probably with reiting coasionally on his own account, probably with reiting the collar and administering a few hearty cuts, he would subside behind ne. The trail to the lake was very narrow through the tules, and very soft on either side, and I was thas enabled to keep lim in the rear; but now and then he would hear something, or fancy he was being imposed upon and defranded of his right to be "in," and would make a chish to go over my head as I crept along in a stooping position, or else would make a plinge to go be right of the control of the cont

INSTRUCTIONS IN TRAPPING.-NO. 1.

TO TAKE BEAVER.

THERE are many naturalists and collectors who seldom use traps for taking ornithological, and more particularly, zoological specimens. Supposing an animal is tumbled over at short range with a shot gun—a hare, for instance, the entrails are cut in pieces, or perforated with shot holes, the coat of the animal is partially spoiled, and wads of hair are driven into the flesh, making it in some cases almost unfit for food. I have spent many nights in preparing skins, and the flesh of hares, when mutilated, as described above. Often, when one has heen packing a gun, and perhaps a load of game over the mountains all day, he reaches camp at night tired, hungry and footsore. When arriving at one's tent the first thing to be done is to have a good wash; the next is to eat supper; and the last, but not least joh, is to skin the specimens, and press the plants collected during the day's rambles. When one is forced to sit up in a sleeply condition to wash and dry bloody animal skins by the faint light of a candle, he naturally hegins to study out some way to decrease his work. A man's wits are gradually sharpened by experience. Every hunter knows bow to trap if he is acquainted with the habits of animals. Traps should be set where animals have been observed. No class of men are hetter fittled for trappling than naturalists; they are familiar with the ways of the forest and plain; they are exploring every nook and cranny, now turning over a stone in search

of heetles, then rolling over a decayed log to expose some mouse or snake, and so on until a locality has been completely hunted over, and yet some individuals doubt their ability for trapping. When the proper places have been found and selected for setting traps, the next thing is to know what to bait them with. The veteran collector knows what baits to use, as his experience has taught him what mitmals prey upon. The amateur has but to examine the stomach of the first specimen taken, note its contents, and so on with the different species of animals and birds of prey, until the natural key to their existence is studied out.

the stomach of the first specimen taken, note its contents, and so on with the different species of animals and birds of prey, until the natural key to their existence is studied out.

When about to start on a collecting trip for specimens or fur, study your ground over carefully, and think what in localities you propose visiting. Say there is a party of four of us about to visit Colorado. Fur is not of first quality from that territory, yet, in some places in the foot-hills and mountains furbearing animals are numerous, and the ornithologist and the zoologist could not wish for a better field for rare specimens. There we shall find beaver, otter, mink, marien, foxes, wolves, badgers, (marmots,) haves, prairie dogs, gophers, mountain rats, &c. We will take two No. 3 traps for wolves, one dozen No. 1½ traps for foxes, two duzen No. 2 traps for rats, mink and marten, and one dozen No. 1² sof the weak spring If and N traps for the naturalist to take small animals with. Elk, deer, antelope, mountain sheep, and bear will come in for attention, but we will use a good heavy Sharp or Remlugton ritle for them.

Setting traps for hears I do not believe in. Occasionally bruin is taken with the trap, but one has to earn a bear skin by packing twenty pounds of trap over the mountains, to say nothing of the lubor in setting it with levers. Should there be any dog in camp his master will lay awake nights, fearing that poor "Ranga," or "spot," may happen to smell out the bait put out for brulu's hencht, and get his leg crushed and mangled in the ngly jaws of a twenty or forty pound trap; so we will take a good dog to find hears, and leave the big traps with their makers.

Having been out with pack unless, two weeks travel from Denver, we tinally strike the Eagle River, or some other good mountain stream for trapping, when we dismount, cook dinner and picket our stock. After dinner we shoulder our guns and strike out in different directious to find "sign." Night finds as gathered around the camp fire, having supped on dusky gro

here on a sand bar," says mother. "I was following some mountain sheep across that bail hill opposite camp and saw a flock of white-tailed ptarmagans," says the ornithologist.

Each member of the party gives his opinion on the surrounding country, and it is agreed that a camp is to be built on the site occupied by the party. Now some one moves that we turn in, and the hint is taken, and we are soon rolled up in our blankets and fast asleep. The first man that awakes in the morning builds a fire and arouses the whole party. While one is getting breakfast the others commence falling and butting logs, which are split through the middle for building an A camp. Finally our camp is completed and we are about to commence business in campeted and we are about to commence business in earnest. With a selection of traps tied to our beits tightly, so chains will not fingle, we start out to set them, two of us going up the river and the other two men down it. Having traveled a short distance we find bear sign and look for a place to set a trap. Now we have not yet caught our first beaver, so we have no "medicine" to assist as, and must look for the heaver's trails, elides and holes. We must catch our beaver, and drown him at the same time, unless we are content with a beaver's foot for our trouble. While searching we finally find a good slide in a small dam, and set the trap at the foot of it, about four inches ander water, in a depression in the ground, partially covering it with dirt. Make as little sign as possible about the trap, and fasten a stick about three feet long by the middle to the end of the chain. Now take a piece of rope, tie one end of it to the chain of the trap and the other end to a piece of dead bioquant wood, which will act as a float. Conceal this contrivance as neatly as possible and throw water on the leaves and soil you have handled. The trap is now set for the beaver. If he does not put his an appearance the first night he will the second, and in visiting the place where we set the trap, we flud i

—An exchange says that trees have been found in Australia which exceed the giants in California is helght, though not in circumference. One falleu tree in Victoria measured 420 feet in length, and another 480, while the highest yet discovered in California reaches only 450 feet, the average being from 300 to 400. These are the celebrated Eucalyptus globulus, or Australian gum tree, which are said to possess the property of absorbing undurin, and are now being planted so extensively throughout different sections of the country. If rapidity of growth is any indication of ultimate size they might attain the above dimensions without extreme age.

—A German gentleman, dining out, on being asked if he would take some ox tail sonp, replied: "God forbid that I should be reduced to such extremities.

as the boy said when he was kicked by a man who had nitro-glycerine on the too of his boot.

Hish Qulture.

PROTECTION OF SALMON.

PROTECTION OF SALMON.

PROF BAIRD, United States Fish Commissioner, in a recent official communication on the subject, says that on the Columbia River, where the salmon is found at the present time in greater abundance and larger variety time almost anywhere else on the face of the globe, the experience with regard to the fisheries will be the same as in other noted streams if steps are not taken to prevent it. The causes which are likely to lead to these results are various. Among them is, first, that of excessive fishing at untimely seasons, especially when the fish are depositing their spawn; second, the establishment of duras, preventing the appearance of the fish to their spawning grounds; third, some change in the physical condition of their spawning. The important cause results from the destruction of the forests and undergrowth of the region consequent upon the progress of civilization, and adulteration in the character of dramage. Where a region is covered with forests, the rains as they full are taken up by the soil, or absorbed by the dead braves and mosses under the trees, so that the drainage is gradual; flouds are infrequent, as are also low stages of water; the average depth is maintained throughout the year, while various ravines, hills, and cold springs maintain a regular discharge into the tributaties which flow into the main stream, and thus keep the water at a comparatively low temperature.

With this clearing up of the land the whole physical condition seems to be aftered. The falling rain is not retained, but rushes off in a flood, which, as far as the salmon are conceined, destroys the spawning heds, tenring out the gravel in which the eggs are deposited, or covering them to the depth of many inches, so that the young, it halched, cannot emerge. At other times the water is extremely low, scarcely affording a passage for the fish. The absence of the cantinued flow of the cold springs parmits an increase in the temperature of the waters to a degree beyond that which the salmon can susian. S PROF. BAIRD, United States Fish Commissioner, in a

paper mills, etc. This, however, has not materially affected the salmon fisheries of the United States, whatever it may have alone abroad.

From one or several of these causes combined the salmon fisheries of Europe, as well as the United States, have been almost interly destroyed, so that where within a period of less than lifty years these fish existed in the greatest abundance, they have now become an almost mathamable laxary. Warmed by these facts, we can readily appreciate one change which threatens the salmon fisheries of the Columbia River. Even now the diminution is appreciable, and although it may be several years before this becomes very marked, yet such a result is sure to arrive in time, especially as every year witnesses an increase in the establishments devated to the preparation of the salmou in one form or another. It is therefore a very wise precaution on the part of the Legislature of Oregon to seek for some action by which this threatened evil may be averted, and so important a branch of habitary retained by the United States, those of the west coast particularly.

Prof. Baird says that in 1874 there were secured at the United States breeding establishment on the McCloud River, 6,000,000 of regs. Of these 1,000,000 were hatched and returned to the Sacramento River, and the others were forwarded to the States east of the Mississippi River and hatched out in great part by the State Commissioners of Fisheries and introduced into the most suitable streams. The eggs were kept in hatching boxes on the McCloud River for six weeks, and after the eyes began to show in the embryo they were taken out, packed in buxes between hayers of dump moss, and sent to their destination. Owing to the heat of the season some of the lats were prematurely hatched out in the boss. The greater number, however, renebed their destination in good condition, and it is probable that the yield was 5,000,000 young. The 5,000,000,000 young 48h, according to the preceding calculation, are equivalent to 10.5,000,000,000 eggs spaw

Fish from Germany.—Fred, Mather, Esq., in the Live Stock Journal, notices the recent arrival at the New York State flatching flouse of a box of fish spawn from the German lish breeding establishment at Huningen. It was German lish inceeding establishment at Huningen. It was a sort of dry goods box, of about eighteen cubic feet, and the invoices stated it to contain 2,500 brook front, 7,500 salamu, and 7,500 hybrid eggs, the latter a cross of the other two varieties. They were packed at Huningen just one month before their arrival. The eggs were packed in oval wonden boxes, about fonteen inches hong and eight deep, in wet moss. The hoxes were packed in dry sen weet. When opened there was not a good egg in the lot; they had evidently been dead some time, as they were in a horizble state of putrefaction. The trouble seems to have been in the aveight of the packing as there was a great wad of moss on top of each hox. Our friends at Huningen do not seem to be expert at packing for hong voyages; this is the recomb latch that they have sent with the same result We think that Mc, M. A. Geen has packed spawn which have be a sent to Germany increasingly, and we know that so the Green has sent them to E (cloud).

The assent to these propagated at Huningen, as taken from the printed list accompanying this lot of spawn, is as follows:

SPAWNING SEASONS

Watenville, April 12th, 1873.

Reproduce Forest and Stream:

I wont lishing April 10th and cought six brock front. I took them bome, and when I came to clean them I found that four out of the six lind small spawn in them. I though this rather queer, considering the time trout usually spawn. I would like to know if any readers of Forest and Stream know of anything similar to this.

HARRY N CAMPER.

As soon as the roe sack of any kinds of fish has had time to heal after spawning the suck is small, and is as perfect as it was before spawning, and is full of small spawn. By examination under a magnifying glass seven different size will be found; each size is the spawn for each year. It is the same in fowls, which have a different size of eggs for each day. If Mr. Cundee will examine the front he takes from now until Fall he will find the spawn and suck a little larger every day until the spawn are ready to be east in the SETH GREEN.

SALMON IN THE RADITAN,-On Monday of last week some fishermen, seining in the Ruttlen, near New Brunswick, captured a young salmon about four inches in length This fish, which will be forwarded to the commissioners is undoubtedly one of those deposited in the Ruritan by Dr. Slack nearly two years since

-The North Carolina Legislature has passed this Winter a law for the protection of fish, etc., and a Mr. Welsher is now engaged in establishing a halching house for shad, rock, etc., at Newbern,

SAWDUST IN STREAMS.

WILEINSBURG, Alleganny couply, Pa., April, 1875.

Wilbinsburg, Allegaany couply, Pa., April, 1875. Editor Forest and Stieam:—

To "B. T. K. P. 's, Trackee, Cal., "inquiry in your last issue, I would say, that from personal observation I have known sawdust to be injurious to trout, and believe that the refuse from a saw mill, thrown into any trout stream, will soon depopulate. It of that beautiful fish. During the month of May, 1870, I was fishing in a small stream in Bald Eagle Valley, in thus State, and atthough in former sensons I had fovariably been successful, yet at this time my efforts were poorly rewarded. I caught but few, and they took the fly so very lazily that but pure sport was afforded, and I soon gave it up. On cleaning my fish, preparatory to leaving the stream, I examined them clovely, and noticed that they all presented a slettly appearance. Their spots were dim, they were poor, and altogether looked "very sick." On a further inspection I tound that in each of their ellis there were small festered spots that inclosed a grain of smethat! A saw mill had been creeted on the banks of the stream the previous Antumo. This accounted for it, and I empited my basket and left in diagnot. The next season, as I passed by I duitfully whipped the stream for more than an hour without getting a rise, and I doubt If there was a fish in the stream below the saw until, but learned that above the iront were more plentythan they had been for some years, but were very small.

I think that the above proves that the sawdust does directly injure the trout, besides, as you remarked, cover up their spawning beds. By the way, in your list of Close Sensons, given in your Issue of the 25th uit, you say our Stale prolifints from being taken from Angust 11th to April 1st. If I remember rightly, our late Legi-inture passed a law extending the time to April 15th. Very respectifully.

LAND-LOCKED SALMON AND SALMON TROUT IN CALIFORNIA.

EDITOR FOREST AND STREAM:-

EDITOR FOREST AND STREAM:—

Reading in your interesting paper a letter from E. M. Stillwell, concerning land-locked salmon in Mailee, reminds me that we have in Callifornia what are termed brud-incled salmon in some of the lagoons baving connection with the Pacific Ocean during the calmy senson, commencing about December and ending in February or Muich. Some persons here call them eadmon trout. They are rather in long fish in their form, of a yellowish red flogs, with many dark specks, and their fish is of a light plak color. Their size runs from about two to livelve pounds, at least 1 have seen none smaller. There lish lock no resemblance to the true salmon, either young or old, which are so plentilm in our rivers, and are now running (as f lately informed you) in considerable numbers in Sin Francisco flay, and affording its protity good sport in catching them. There is a rather large lagoon neross the bay, about fourier unites from here, in Mario county. Every year, by perulasion of the owner, Mr. Thockmorton, one of the Fish Commissioners, sportsinen capture a goodly number of these fish, as well as brook trout, which lahabit the crick which flows late this lagoon. These brook trout are generally rather small. These land-locked salmon are so entirely different from the real salmon in form, color and appearance, that I cannot bely inclining to the opiolon expressed by Prof. Agassis, in speaking of probably the same hind of fish in the East, that they are in distinct species, and not a demartalized salmon." By the exercise of patience and prudence, the prople of San Francisco can gain facilities for fively fishing for trout, perch and pike (a species of sucker, or Cyprinida,) in the tending streams anywhere within fifty miles of here. Few angless fall to appreciate litis fact. The fish Cammissioners of this Sinte inversall to appreciate litis fact. The fish Cammissioners of this Sinte inversally and intelligently performed their duffice. We owe very much to their upon the waters, as far as we are yet anabled t

FISHWAYS REQUIRED.

OLEAN, N. Y., April 14, 1875.

OLEAN, N. Y., April 14, 1875.

Editor Forest and Stream:—

We on the headwaters of the Alleghamy River would like to have you call the allegham of the Penn. State Fish Commissioners to the fact that the dams in the Alleghamy are not provided wish fishways, and that in consequence we are menty deprived of fish, bring for far from the likes or seem to get much of a supply from them. The most for addate than, known as the Corydina dam, is a gone out this Spring, and now ten far orable time for the Commissioners of the far appendixly be entirely, if the laws of the State provide for one. We are now thilly looking for the return of the shad piputed at Salamanca two orthree years since. Yours, &c.,

M. A. B.

FISH CULTURE IN VIRGINIA.

RDITON FOREST AND STREAM:—
The experiment in tront culture here was moderately successful. Out of the 5,000 ova we have saved aboot 3,000, 4. e., about sixty per cent. This was nor first trial, with no instruction except from the books. Some of our mistakes were such as experience will cure, and some were owing to our being unable to give personal attention to important details. An old trout association was resuscitated for this experiment, and their subscription, fiended by the genial Commissioner from Maryland, will pay fur the ggss, the sale of fish will. I think, pay the carpentary's hill, and the apparatus will be ready to hatch 10 000 next year for some one stream, so as to make a respectable beginning in this matter in the country, and at least altract attention to the feasibility of stocking Loudoun streams.

T. W.

WHITE PERCH FOR STOCK FISH,

WAVERLY, N. Y., April 10, 1876.

WAVERLY, N. Y., April 10, 1876.

Editor Forest and Stream:—

When I see so much said about salmon and salmo, it is to me remarkable that the white perch of fresh and said water is not used as a slock lish. They are gamey, prollife, and are almost annivalled as pan fish. Millions inlight be procared to the Chesapeake or Dolaware Bay, at an almost nominal cost, and they would thrive betterin our mill ponds or rivers than might be supposed. They seem to grow targer in fresh than in said water. I have taken them in ponds in Kent county, Delaware, weighing four pounds, it would like to see the field birroduced, and know it would be an acquisition to our totand waters, even if salmon are all the rage. Yours truly,

J. E. D.

Aatural History.

A FINE COLLECTION OF FOSSILS.—Negotiations are now pending, looking to the purchase by the trustees of the American Museum of Natural History, of the celebrated collection of fossils and owned by Professor Jas. Hurc, of Albuny, Gurator of the State Cabinet of Natural History. This collection contains upward of 200,000 specimens, and the duplicates alone, which will be available for exchange with European societies, fill several hundred boxes.

During the enlarging of the Eric Canal experienced collectors were appointed to collect all the valuable fossils found in the rock cutting. The Southern and Western States are also represented by paleontological specimens. The paleozoic fossils of the Silurian and Devonian periods

States are also represented by paleontological specimens. The paleozoic fossils of the Silurian and Devonian periods are in profuse numbers. The families of Trilobites and Crinoids, the former now extinct and the latter nearly so, are very largely represented, and it may be doubted whether a series of greater value can be found in this or any other country. Among the fossils from the later geological epochs, the tertiary beds at Claiborne, in Alabama, have furnished many valuable specimens. \$65,000 is the price asked for the collection, and it is to be hoped that New York will secure it. The lamented Agassiz has said, "the museum securing the Hall collection will become the finest unuseum in the country."

For Forest and Stream,

THE GREAT (?) AMERICAN EAGLE.

FEW weeks ago, while on a ducking excursion down A the Neuse, we ran into South River. During the second night of our stay the Julia pieked up her anchor and went ashore, under the persuasion of one of the most terrific gales I ever experienced; but the oft quoted saying, "that it is an ill wind that blows no one any good," illustrated in our case, as it blew us into, or upon, the hospitality of Mr. John B. Neals and his interesting family, who did everything in their power to make our enforced stay a pleasant visit. While sitting before the large open fire-place—filled with nearly a load of bright, blazing sticks—smoking our fragrant Durham, Mr. Neale related the following incidents, illustrative of the thievish propensity of the bald-headed eagle, which I thought of sufficient interest to jot down:—

the following incidents, illustrative of the thievish propensity of the bald-headed eagle, which I thought of sufficient interest to jot down:

"A few years ago," says he, "my altention was directed to a large lish-hawk that kept circling around, screaming as if in trouble. I immediately surmised that he was watching his natural enemy, our 'bald eagle.' I was right, for in a few moments he picked up from the shore something that looked like, and I believe was, a piece of hark, and began circling around in the air, rising higher and higher, and screaming constantly, as if wishing to altract the attention of his adversary, whom I now saw for the first line coming like the wind directly for the hawk. They were both hy this time at an elevation of several hundred feet, and when the eagle had reached nearly within attriking distance, the hawk dropped the bark with a scream of triumph, and like a llash our robber durted after and eaught it before it touched the water, but let higo almost instantly with a piercing cry of anger, while the hawk apparently screamed, 'fooled!' fooled!' and made every effort to keep above the cagle, who, the instant he discovered that he was not to have fish for thinner, turned and went for that hawk there and then. The hawk evidently knew that so long as he kept above the earth, the engle suddenly darted down upon his purveyor, who turned his sharp talons up and received him—if not with 'bloody hands to hospitable graves!—with weapons of death—neither ever lonseaed that grip of detth—for whirling, tumbling through the air they eame, screaming like very devils, and finally struck the ground in my yard, where we killed them both, still locked together as if with books of steel.

"Just before the war a neighbor of mine took his gun along one day in the Spring and went down to the shore of the river, about opposite Wilkinson's Point, thinking he might get a shot at some geese he land seen off there, and while behind some low bushes, used as a blind, saw a large hird eoming across the river di

Inally managed to reach the shore, within twenty steps of where my friend sat, apparently perfectly exhausted, and the object he carried across that fiver was a little live lamb, and anhurt. When the eagle dropped upon the shore my friend shot him, picked up the humb and curried it home, raised it upon milk and it flually became the mother, or the nucleus, about which gathered guite a large flock of sheep."

J. E. West.

Newbern, N. C., April 10, 1875.**

**ARTIMISES OF THE WOODSCORE Did alty one of our contents.

ARTIFICES OF THE WOODCOCK.—Did any one of our sportsmen ever see a woodcock before he rose? A corresponilent snys:-

sportsmen ever see a woodcock before he rose? A correspondent snys:—

"As quietly as possible I placed myself about twenty yards below a boggy spot where I expected to find a bird. From this spot there was a small stream running towards me down the goyle, and in several places I could see the fresh droppings of a cock. Every now and then I looked up this stream and into the marshy spot beyond, and wondered, if a cock were there, how it was I could not see it. I had for years tried to see a woodcock before it rose, and, although that happened frequently almost under my feet, still I had never succeeded in doing so. However, on this occasion I had a better chance, for I knew the bird must he in the stream or the boggy spot, and there was little covert for the bird to hide in.

"The dogs were now getting closer, when all of a sudden I saw something standing where the stream ran from the marshy spot. I looked at it carefully, when I saw it was a woodcock. The bird did not see me, and came waddling down the little stream towards me, little thinking I was so near; his walk was something like that of a duck. The bird had evidently heard the unusual sounds of the dogs, and was walking away. The dogs approached; the hird came waddling on till he was within ten yards, when he saw me; and I shall never forget his big eyes and look of surprise. He was down and almost invisible in nu instant, and I can now well understand how it is I had never seen a woodcock before. Immediately afterwards I shot the bird, and a finer one I never saw."

[In Gould's "Birds of Great Britain" an interesting ac count is given of a woodcock which was seen to alight, crouch, and with the aid of its bill cover itself with cad

count is given of a woodcock which was seen to alight, crouch, and with the aid of its bill cover itself with dead leaves to effect concealment.]—ED.

THE "NEW LIGHT,"-A correspondent ask us to identify The fish known by the local name of the New Light. We are indebted to Prof. Theo. Gill, of the Smithsonian for the information that follows. We should be pleased to have any further correspondence on this subject pass through our paper, that our readers may have the heuefit

of it:—

Editor Forest and Stream:—

I have read carefully your correspondent's letter, asking about the so-called "New Light," No characters are mentioned in it by which the species in question can be determined. I have heard of the name before, but am not sure what the species is, It is possible that it is given to me respecting fins, number of rays, and color, I can at once tell what the species is. But popular names are given with such extreme looseness, and so promisenously, that I dislike to form any conjectures, except with certain data before me. Yours very truly, Theo. Gill.

INSTINCT OF TURTLES.

EDITOR FOREST AND STREAM:—
I thought when I wound up the eayings and doings at Noank last Fall that I bul exhausted all of the subject which would not be likely to appear, properly garniched with strange words, suitable for a spelling natch to wrestle will, in the various learned reports with which the pens of Baird, Leinly, Verrill, Hyat, and Goodo would cooner or later circle the stock of the world's knowledge. But there is one peculiar point about a Summer's experience with the Fish Commission: things that are really carious occur so commonly that at the time they cease to be noticed. In after conversations such little matters furnish items of considerable interest.

terest.

For instance, I was discussing yesterday with friends as to how far the actions of animals may be attributed to instinct, and where a line could be drawn beyond which we misst admit that a reasoning power comes late play, and related an anecdote concerning a turile that was thought almost incredible. As nearly half of our corps of scientific men were present in the laboratory at the time of the occurrence, I will record if for Forest and Stream, knowing that In its columns it will meet their

be drawn beyond which we mist adult that a reconling power come late plays, and related an ancedote concerning a turlle that was stought showed incredible. An nearly balf of our corps of scleatific men were present in the laboratory at the time of the occurrace, I will record it for Forners AND STREAM, knowing that his to columns it will meet their eye.

Some one had captured a small sea turlle, weighing perhaps two of three pounds. For nearly a week it had been kept prisoner in an empty bucket near one of the tables it tile end of the room farthest from the door. The laboratory was on the second floor of rubulfully whose from was toward the street and its rear nearly over the sea. I believe that a light lide he sea cannou pt to the building. The door was at the easward end, and opened on to a platform, from which a fight of stars led to the ground. During the entire lamptionment of the tarde it was engaged in anremating efforts to get out, standing so its hind feet and digging with its fore feet, which just received the edge of the bucket. Sight and day I was leaded to the bucket was tooked, they was reached. They are the deep and went over head first on the thore strained to the bucket. In the was not excelled, and it was receptured and restrained to the bucket. In the majoring of the life door, stopping, however, made each window where a breach of sea all cause its—overpowering the various perfunes which our "specimens" generaled—for a moment, then unraping on jult its door was reached. There he progress was arreated, and it was receptured and restrained to the bucket. In two minutes that requile was seen buff way to the door. Its owner growled, and "who took him out" was the question. He was enter mend and watched, and just what length time allowed the was not entered and watched, and just what the progress was arreated, and it was receptured and restrained to the bucket. In two minutes that requile was seen buff with the door. Its owner growled, and "who took him out" was the question. The was entered and

ate, but one, quite handsomely marked, we kept a long time as a pet. His home was on the quarter deck, where he would crawl about in the sen, eleeping generally under a gim. This animal got acquainted with a number of men belonging to the after goard, and was evidently strached to one youngster of a messenger boy, who trequently used him as a seat. Ho would come out from under the gan at this boy's call and ear cabbage from bis hand. He evidently could distinguish persons, for he would not come at any one clee's call. We carried him a great while, sud his end was a happy one. A Japanese merchant fell in love with film, and at Nagssaki it may be that he still exists in the beaufful little artificial cave and grotto built for him by this gentleman, whose religion held him sacred and whose taste held him valuable.

A WHITE CATFISH

EDITOR FOREST AND STREAM:—
Did you ever see a white cattlab! I saw one taken from Otter Creek in Jersey county, this state, last week. The tail, and for a short distance up the back, had the itsual color, growing lighter as you approached the doral dn. From there to the head It was as white as It could be. The cat welghed about twenty-five pounds. Yanrstruly, Gzo. B.

A QUEER ANSER.

EDITOR FOREST AND STREAM:—
A few days slines I shot a guose, Anser Canadensis, that had nineteen tail feathers (Recta's). I have also obtained a specimen of the same species having the crown and back part of the head profusely blintched with white. Have any readers of Forest and Stream soen a bird of this species, of similar variety of plumage?

ANER.

GALLINULE.

THE PURPLE GALLINULE.

EDITOR FOREST AND STREAM:—

A flue specimen of the Purple Galibude was shot near Heavy's Pond, on April 12th, by Robert Wendel and presented to me. It can be seen at C. 1. Goodwlo's Natural History store, 93 Suddary street, Boston. It it not a rare bird to obtain in this lailtude? Yours truly,

G. P. Whitman.

Quite rare in this section. We believe that one was taken by Geo. A. Biogrammi, of Calais, Mc., some years ago in that vicinity, but we are not aware of any other specimen being captured north of Virginia.—Ed.

AN AMERICAN TRUE CROCODILE

EDITOR FOREST AND STREAM:
I have received from a correspondent in Flortda the following interesting bit of information:-

Casting bit of information:

LAKE NORTH, Fla., March 29, 1875.

"Mr. OBER: Six I have captured a crocodite 12 feet 9 inches in length, in Lake North. Have preserved both skin and skeleton in three order. I ask \$300 for him. It is the true crocodile, the same as those that are now living inportite banks of the Nile, and as muck a god as the Sacied Crocodite of the Madagascurs. It adds a chapter to the Natural History of Florida. Yours.

I think Mr. Butler perfectly competent to judge of the identity of this crocodile.

CENTRAL PARK MENAGERIE.

DEFARTMENT OF PURILIC PARKS, | NEW YORK, April 18, 1875. |
Animais received at Coutral Park Menageric for the week ending April 17th, 1875:—
One Horaced Owl, Bubo Virginianus. Presented by Mr. Hugh D.

One Horned Owl, Bubo Virginianus. Presented by Mr. W. S. Mallore, Franklinton, N. C.
One Red-tailed Hawk, Buleo boreails. Presented by Mr. W. S. Mallory, Franklinton, N. C.
One Wild Cat. Lynx rufus. Presented by Mr. Harry Hill.
Sixtuen Golden Pheasants, Thaumalea picta.
One Caseoway, Casaucius galeatus.
One Striped Hyena, Hyaena striata,
Two Babale Antelopes, Abelaphus bubalis. Hab. North Africa.
Two Harnessed Antelopes, Tragelaphus scriptus. Hab. West Africa.
Two Indian Antelopes, Antilope vervicapra.
W. A. Conkun, Director.

Woodland, Harm and Garden.

MORE ABOUT THE VIOLET.

One of the pleasant sights of my May afternoon rambles was a half dozen lutle girls sented upon a mossy bank making a violet wreath. They had some six different cob red specimens, and had woven themselves crowns of videts, from which the green leaves peeped out in fine relief from the modest flowers with which they were intermingled. It was the beautiful and artistic combined.

Of the violet we have laid down mearly forty species, We are quite sure of twenty very distinctly marked ones; all heautiful. Of one species is the chorolate colored, perhaps not known to our many readers. Some varieties also bloom twice each year; one is a variety easily cultivated, the 17 hencedata, which blossoms in Navember. We should very much like to have many of our violets toade the object of special cultivation; it would pay. All we have thus far experimented with Invo mare thou republiour pulsas. Violets will improve womletfully by cultivation. They increase in size, and the flowers become perfect. For out-of door culture, as a horder plant, the purple violet has a wonderful effect, and one must helpful the fine appearance of three distinct rews of the yellow, the purple, and the white violet to judge how much real beauty may be obtained by the combination of so simple a flower.

All the violets alrove manned can easily be transplanted, and a more heautiful slight seldote can be seen. They will, if well attended to, senter their thousands of seeds to replenish and makestll more heautiful the entire surroundings of your garden.

On the Orrest Correst of the first plants and the entire surroundings of your garden.

ANSWERS TO CORRESPONDENTS.

ANSWERS TO CORRESPONDENTS.

Miller, Schuate, Mass — From considerable study, and years of careful observation, we have not the exalted opiniou in relation to the coltivation of todocco that you seem to entertain. Its powers of alsorbeney, in the first place, are very exhaustive; its capacity for robbing the soil are greater than those of any other plant known. The great amount of its mineral constituents can readily be seen by carefully examining the ash as it accumulates upon the correlative examining the ush as it accumulates upon the correlator of a lighted eight. All these mineral roastituents are carried off or removed from the cutth in the growth of this great commercial narcotic. In noticing the ash, it offer remains after the organic portion of the tobacco is removed, making very apparent the full size and entire online of the rolled leaves, and as we hook attentively at this ush end it has to the eye apparently bost nothing by combustion. This point needs to be sunfind carefully as a lact of much value to the cultivators of the tobacco plant. For instance, of the wood burned in our stoves was as rich in sail and constituents it would employ an extra amount of physical labor to carry away the ashes. Every hundred pounds of dried tobacco leaves the soil produces takes directly from the earth at least eighteen to twenty pounds of its most valuable mineral atoms or fertilizers. This any one will grant who is at all acquainted with the science of agricultural chemistry. Well uttested facts go to prove that the exhaustive effects of tobacco upon soils is but little known to a very large portion of the community. From fourtern tons of wheat, fiften tons of cara, or twelve tons of oats, you have removed no more of the fertilizing principle than by one ton of tobacco.

ELLEN WILLARD, Topsfield Mass. -The treatment of the ELLEN WILLARD, Topsfield Mass.—The treatment of the gladiolus, to have a complete succe s, is very simple, care only being necessary to give your a finely developed flower or a succe-sion of flowers upon the stalk, which will have quite a long season. Our method has been to plant the bulbs upon carefully prepared, well spaded, well manured ground as soon after say from the 6th to the 10th of April as we can, and at the planting to drive near stakers of half an inch in diameter at the side of each bulb. They may be painted green, and to these you are to tie the stalks of the gladidals. Set six inches upart in a hedge or plat it ey make a very splended show at a low cost. The adonts its one of the best colors you can use, but the mixed variety are beautiful.

A READER Beverly, Mass.—"How shall I make a good.

are benutiful.

A READIM, Beverly, Mass.—"How shall I make a good wilk, and kill the weeds on it?" As your walk is already said and good, by your own showing, you will use hippoportion one pick of salt to one pound chloride of calcium. Add together, and pour on sutthient water to completely dissalve the same. Water added to these salts easily dissolves them, when you can add as much water as you please. The effect of the application of this solution upon any hard road or path will be to harden the surface to such a degree that after it is dry dust is not readily farmed upon it. This will completely kill all kinds of vegetation, and if used once a week the roads ar walks last much longer than without it. out it.

THOMAS J. S., Nyack, N. Y.—The larger ferms should not find a resting place in a small garden ternery. If you wish for the plan is you name, such as the Lastrea felicinas, Evila formina, and Osmanda cegalis, place them on the outside of the rockery, here they will give character to the whole. In the course of next month we shall give an article on the ferm as a specialty, in which you will find all the information you ask.

EARLY SPRING FLOWERS.

PALATONE BRIDGE, April 10, 1875.

Palatine Buider, April 10, 1875.

In your hast Issue, Olli of Quili, discoording of violets, says, that in early April they may be found in the St. Lawrence woods, Now I know not how this may be, but it It to so, then the St. Lawrence woods are more favored than the Mohawk woods, for you may search the country aide over ever so well and not find a single violet till the very last of April, and that, too, to toe most favorable seasons. The violets—aithof we have thrue in great profusion and of many varieties—are not one emilient flowers. It is season that we have any dovers before the fifth of April. The first that we I ok for under the lee of sonie racky ledge is the Bloot rost (Surgiumeth Canadensis), and it is very atumbant network the Bloot rost (Surgiumeth Canadensis), and it is very atumbant network for the Bloot rost (Surgiumeth Canadensis), and it is very atumbant he rock saxlings (Saxifraga Virginials). The tialing atlantas will no doubt be found in bioseom about as early as it he blood root, but don't epoch from experience, never having found it growing in the valley, until with a frivial I accidentally came upon it hast Fait. We have always considered it a stranger in this region, and no one dicanned of finding it growing here in all its beauty. So you can lunguae how delighted we were at the discovery.

Out vateris particulariy rich in ferne. In filling two fern one sheet Fish I found about twenty sart (its, and that, too, without aim appeals search. The walking fern is very abundant, in two I califes covering the rocks in done patch s. The millen's hair (itstan turn), the apposition expectances, and that beautiful botty-clums, one be found in all our words. MOITOR FILLERY AND STREAM! -

The Ronnel.

AMERICAN KENNELS-NO. I.

A VISIT TO FOX FARM.

NESTLED under one of the hills which rise in gentle nadulations until old Mount Morris itself Is reached, is the residence of Chas. II. Raymond Esq., and the home of the dogs which have attracted more attention on both of the dogs which have altracted more attention on both sides the water than any which have yet been brought to this country. It was not for the purpose of passing judgment on their merits that we journeyed thither, but to see the far famed Laveracks and their progeny. The portraits and pedigrees of Pride of, the Border and Fairy, have appeared so recently in this paper that our readers should be familiar, with their principal peculiarities, chief among which be the formation of the bind covertees the decoming which is the formation of the hind quarters, the drooping appearance, a point gained after years of hreeding, giving them great power and speed. Fairy was almost the first to thein great power and speed. Fairy was almost the first to come from her comfortable keunel to greet us; a picture in heauty, and as soft and clean as a lady's lap-dog. Fairy is not quite as large as we expected to find her, but in other respects fully conforms with the printed description. To give in detail a description of each of the dogs we saw at this most excellently aranged and managed establishment, world occupy more space than we have at command, and we must content ourselves with the following list:--

- 1. Dick-Lurge red Irlah setter, in long feather, and with a grand, obseless stilds.
- noiscless stride.

 2. REDDIE—A white and red ticked blich, about 16 months old, bred from a pair of setters precented from bls own kennels by the Duke of Hamilton to an American gentlemm.

 3. Bess—Red Irish setter, imported in 1874 by Mr. N Salters, of Brooklyn. She is of the "Untchinson's Boh" stock, has a fine even cost, deep free color, and is a well shaped and handsome specimen of heavy tender.
- Dino, by Old Duke onl of Gen | Sewell's May-Bred by Mr. R. in 1871; n very bright orange and white, with dark nose and large, flurk, lustrons eyes. She comes of excellent native stock, and is in whelp to

- 1871. In very bright orange and white, with dark nose and large, flark, lastrons eyes. She comes of excellent native stock, and is in whelp to Prido.

 5. Nemax—White and red, or orange ticked. A sector of the Gildersleeve strain, sent by "Homp" to visit Uride. A good sized, finely formed bitch of the Intelligence. She is very highly prized by her owner, and with her combing litter may be expected to originate a new strain of setters miding the Laverack and Gildersleeve blood.

 6. Kury—The blant, white and tan field trial bitch, imported by "Mohawk" in 1814. She has had one litter by Pride, and is awaiting her opportunity for a second allance. Kithy is herself balf Laverack, and of course so bred, will throw back strangly into that blood.

 7. A large, deep chestical, colored dog, by Colbura's Dash, (black and tan) out of Raymond's Bonnet Carre (red with white).

 8. A young bitch (red with white) by Saiter's Dash (deep red) onl of Raymond's Dlype (red with white). These two have since gone to Capt. Jao, M. Taylor's plantation in Virgina.

 9. Ruby—Imported from Mr. Laverack's kennel by Dr. Gantier, and now owned at Fox Farm, and m whelp to Pride. Orange red in color; small, but well formed.

 10. Paude of the down's peculiar to this strain, giving the animal a crouching appearance, and sending him along in his swinging gallop with a wooderful case. In fingland Pride achieved a fine reputation as a stock getter, being the sire of many winners. In America he has proved himself good and sianneh on quall, sulpe and woodcock, and his pupples promise to rival their English half-brothers.

 11. In a commodious box within doors, Fairy and her eight whelps by Pride, were found. Their dam is in fine health, and shows tittle reduction under the demands of her voraclous offspring. The latter are clean and fai, with coats like flows silk; colors, white with blook has knarkings and licks. Attention is immediately attracted to their larce brain room, stong limbs, and the bodily development. They are full of life and mischlef, and

At the "Everglades," the residence of Mr. Gco. B. Raymond, were seen:—

1. Our Duke-White and orange. A patriarch, and sire of many gen-

- 2. LAGE—Orange and white, by Mr. Brook's dog Bismarck, out of Dido. A handsome, stylish dog with as fine it all as ever received a prize at a bruch show.
- e at a bruch show.

 Point Hudson-A red puppy eight months ofd, by Colburn's Dash
 of Bonnet Carre. The "Squire" pronounced this the best puppy by out of Bonnet Carre. The "Squire" pronounced this the best puppy by Dush be had ever seen.

 4. Nun-A red with white puppy, by Mr. Saller's red Dash out of Dr. Strachas's white and red imported Belie.

We cannot but commend Mr. Raymond's judgment in the organization of his kennel and in the selection of such a pure strain from which to breed the coming dog for this country. It is to the produce of this pure blood kept un-contaminated through a long line of generations, crossed with the hest of our own, or with itself again, that we must look for the future setter of America; as in a similar manner we have found the blood and breeding which carries off the highest honors of our turf. Whether it rests with this strain or the Gordon's, or some other, or with a combi-nation of these, must be decided by the future. Certain it is that Mr. Laverack, a gentleman who has now attained his seventy-sixth year, and is possessed of great experience, has for fifty years endeavored so to breed as to produce what he considers the best for nose, speed, shape, beauty, color, and above all, endurance. The setter, Mr. Laverack thinks, has deteriorated from what he was fifty or seventyfive years ago; let it be our task to regenerate the stock, and let the old come to the new world for its finest dogs. We believe that no one claims that the best imported dogs are equal to the best of ours on their own ground; the mode of breaking, the game, and the cover are all so different that it could not be expected. But we have few large kennels in this country where strains are kept pure from generation to generation; where father and son shoot over dogs descended for years from a single strain, broken and cared for hy one family of dependents for similar periods. This brings us to the question of in-breeding, about which so much has been said and written, for and against, and which involves so much scope of argument that we fain must leave it for another time. Suffice it to say that should the Laverack's, the representitives of this system, prove all that is expected of them, the question will be pretty well decideil.

We left Fox Farm after a farewell look at Falry and her flourishing family, with the warmest wishes for their future prosperity and that of their genial master.

This little sketch would be incomplete did we not refer to Morristown, the loveliest of our suhurban cities, and the kind friends met there in the persons of Mr. Sherwood and family. The "United States" will doubtless be well filled this Summer, and we envy the guests.

TAPE WORMS IN DOGS.

WEST TROY, April 8, 1875.

Editor Forest and Stream:—

I have had a very bad case of a pap with worms, a description of which may be of interest to some of your numerous readers. He all drsl commenced to pass the long thread worms, three to six inches long. I soon rid him of them by giving four grains santonine cach day. He then began to pass small, flat worms, about one-half an Inch long. I continued the santonine for some four weeks, and he still kept passing them. He then began to show a weakness in his atoniders and knees, and in a few days bis legs had the appearance of a hoop cut in two and half stuck on each side. He walked with great difficulty. His appetite increased, and I suspected tape worms. Having read much about the areca nut, I sent to New York and received some, commenced giving twenty grains once a day, and the sixth day he vomilied up a bunch of worms about the size of a hulternut, and completely interwoven. I was carious to know the length of one, and with difficulty sneceeded in getting part of one loose, which parl measured twenty-two inches in length. These worms were composed of the small ones linked together like a string of sansage, the first one being about one-hulf an inch long, and each succeeding one perceptibly smaller till they ran out in a thread. It is my opinion that these worms, when they attain a certain 'slze, become detached from the main one and pass as above stated. I have had pups pass the same small worms before, but never the joined ones. I presume the santonine has heretofore dissolved them, and they never passed in silme. Santonine has been my remedy for years, and I never knew it to falls before. The pup is much better on his legs and gaining every day. He has passed no worms since the bunch spoken of. I have great faith in the arcea nut, and advise any one having a worm case on hand to at once procure some, and give, say two grains for every pound weight of dog.

Truly yours,

We can confirm the remarks of our correspondent regarding the efficiency of the areea nut, several instances of

We can confirm the remarks of our correspondent regarding the efficacy of the areca nut, several instances of positive cure of tape worm through its use having been brought to our notice.—ED.

RANGER.-The owners of dogs by Rev. John Cumming Macdona's setter Ranger, will be pleased to learn that the old dog and his progeny have won all the stakes at the Kenuel Club field trials held in Devonshire on the 15th of

Game Bag and Gun.

GAME IN SEASON FOR APRIL.

Smpe, Ducks and Witd Fowt.

Under the head of "Game, and Kish in Searon" to can only epectify in general terms the several varieties, because the laws of States vary so much that were use to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating ame we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—The game season is so nearly a closed one that the stalls show but little variety. English snipe are coming in considerable quantities from the West, but the New Jersey gunners must be having little sport and less profit. These hirds bring from \$3a\$4.50 per dozeu, the latter price for the fresher Jersey birds. Wild pigeons are searce at \$3; brant \$2.50 per pairs broad-bills, black are searce at \$3; brant, \$2.50 per pair; broad-bills, black ducks, etc., some in fair condition, continue to come from Shinnecock, and sell for 75 cents and \$1 per pair.

Shinnecock, and sell for 75 cents and \$1 per pair.

More Grese.—The cry is still they come! and this time in pairs. Good Ground must be good ground, indeed. Mr. Wm. H. Lane, to whose courtesies we commend all brother sportsmen, has sent us in reply to enquiries as to the shooting at Shinnecock, not one "anser," but two, and both fat and in fine condition, and for which he has our thanks. Mr. Lane has live geese for decoys, which enjoy the reputation of being the best trained on the coast. The shooting there, both for ducks and geese, has been exceptionally good this Spring, on account of local conditions, occasioned by the ice blockade along shore, which caused the fowl to congregate there; and although the seasou for this kind of game will soon be over, there is seasou for this kind of game will soon be over, there is good fishing to be had at Good Ground throughout the Summer, and fine bird and rabbit shooting in the Fall; and at whatever period of the year the visitor may seek his hospitable homestead, he will invariably find Mr. Lane obliging and assiduous in ministering to his wants and promoting his pleasures.

-A correspondent, F. A. M., who has recently removed from Pennsylvania to Walnut, Bureau county, Illinois, writes:—"I have happened to locate among all the wild geese, brant and ducks that any sportsman need to find, as they can kill all they choose. There are plenty of pinnated grouse here, too. Here is a large swamp, (Winnebago Swamp,) that has been a favorite resort for water fowl, but it is said there are not half as many as formerly, before they commenced ditching, draining and improving it. I

am on Green River, about 115 miles from Chicago, on a branch of the Chicago, Burlington & Quincy R. R., and any one coming from the East to shoot ducks should stop at Deer Grove Station, on this road. There will be plenty of game here yet this month, and again in the Fall.'

— Messrs McLaran & Williams, of St. Louis, are to provide the Greener gun with which Captain Bogurdus is to shoot his great English pigeon match, and the Captain was in that city last week to inspect it. The firm above mentioned handle Greener's guns extensively.

—An association for the protection of game has been formed in Salisbury, Ct., with twenty-seven members, and the usual officers, and an executive committee of eight members. It is a good start in a good direction, and if pushed to its legitimate results, will alo a good and unch needed work

-We would earnestly call upon the sportsmen of New Jersey to give the facts in the letter appended below, their careful attention. The evil is a crying one, and the wood-cock, from natural causes alone, are ahandoning us with sufficient rapidity, without having their final extermination accelerated in the manuer spoken of by our correspondent,
New York, April 9, 1875.

EDITOR FOREST AND STREAM:—

The purpose of this letter is to inform the clubs for the projection of game in New Jersey that woolcock are slaughtered in the marshy covers of Bergen and Hudson counties in great numbers. In the inversa and groceries the poor birds are openly exposed, and the rascally not hunters boast that for them the law is np, as soon as they see a bird. The people at large seem to be entirely ignorant of the duties that a gamekeeper bins to perform. In general only the idlers of the village are chosen for the position, and it seems that the Inclination of a youngster to carry about an old musket is his greatest recommendation for his nomination. It would be worth the while for some club members of telsure to make a trip through the villages, to imprice into the character and habits of the aspirunts for gamekeepers, and try then to induce the beading men to elect att and calledent men. Hoping the shooting of birds from off their nests may be stapped, I remain, Mr. Editor, Yours truly.

Our Smeedy.

Addrondacks—Malone, April 12, 1875.—The snow is rapidly melting in the woods, and the indications are that we will leave fishing in two or three weeks. Lee three feet thick in Meacham Lake, and small streams and mountain gorges frozen solid. Springs that have never yielded to the cold have the past Winter thrown up the sponge. The game in most parts has suffered terribly. "Old Mador," a worthless pot hunter at Round Pond, was overcome by the game protectors last week to the tune of \$25, and his companions lodged in jail. Fuller, of Meacham notoriety, in forms me that prospects never were brighter for a crowded season in the Adirondacks than at present. "Pol" Smith, Bartlett, Martin, and others, are already aunouncing "standing room only," and Dutrists who want to "see the play" should secure a "front seat" before the curtain rises.

H. E. Cantwell.

ILLINOIS—Alton, April 15.—Duck shooting all over here. Snipe not very plenty, and wild, almost always rising at G. B.

Snipe not very plenty, and wild, annow lively long range.

Wisconsin—Montello, April 12.—Ditck shooting hiss opened finely on the Fox River and on Buffalo Lake. The ducks are chiefly ruffled heads, mallards and scaup ducks, the former being hy far the most plenty. The ice has not yet broken up at Buffalo Lake, save a small space of a half mile at the lower end, and here the ducks gather in large fleets. They are but little hunded, as the mallards are protected by the game laws of Wiscousin until September, and the others do not furnish as fine sport. Yesterday I bagged three brace in half an hour by standing on a point at Buffalo Lake. On the river, (the water being at a high stage,) the ducks lay out on the low water overflowing on to the marshes. Snipe are not very ahundant as yet, though several have been seen flying about the river. Pinnated grouse are heard early every morning, their hooming call sounding delightful after the stilluess of last Winter.

FIED.

Janesville—April 16.—Our correspondent, A. M. Valentine, writes us that on a recent visit to Koshkonong he bagged in two hours morning shooting twenty-nine bluebills and eanwas backs. He also informs us that letters from Northern Wiscousin say that prairie chickens are very abundant.

Missourt—St. Louis, April 16.—The flight of snipe has been and still is fine. Large bags were made last week in the prairies above here.

J. W. M.

MINNESOTA-Shakopee, April 13.—Ducks and geese plenty

VIRGINIA, Norfolk, April 17.—A trip to Sand Bridge, with entertainment at Mr. Forbes, who will board visitors, embed last evening. We found the marshes very dry, no rain for ten days, and a long succession of northerly winds having driven the waters to the South, leaving the usual feeding grounds of snipe too hard, and springy new ground too soft to bear a man's weight. We got but ninely-five in our two days, though we found that the red-breasted snipe have begin their northern flight, together with "shanks," &c. Mr. Forbes proposes to have a regular establishment for ducks next Winter and snipe in the Spring, and can offer fine sport.

LEXINGTON, Ky., April 9, 1875.

Lexington, Ky., April 9, 1875.

Editor Forest and Stream:—
I have made a trial of my gun, and send you the result to get your opinion as to how it compares with the targels made by others of your subscribers, such as "Royal," whose report I saw hist week.

Gun—breech loader, No. 12, 30 inches, 7½ pounds, ande by W. & C. Scott & Sons. Six shot, powder, 3½ drachme; shot, 1½ No. 6; Tatham's target, 30 inche chicle; dislance, 40 yards. Lowest number in target, 131; highest number in target, 152; average, 144.

The shot according 131 was the only one which fell below 140, five shots ranging between 140 and 122, which shows the regutarity of the shonting. I then londed as hefore, and in the target placed some insurance tracks 6x4 inches, 40 leaves, 4 inch in thickness. Result: Within 30 inche circle, 148; within centre, 6x4 inches, 13; through 40 leaves, 6; through 30 leaves, 13. Forty yards, number of shot in charge, 1½ oz., by actual count, 231. The pumphlets were new and never opened, and the leaves lay close and hick. I enclose 1st and 30th leaves to show style of paper.

With 4 drachms powder, two No. It wads on powder, 1½ oz. No. 6 shot, 411 yards, 6 shots: Within 30 inche circle (average) 12F; within centre, 6x4 inch (average) 9; through 40 tenves, nil. How do these targets compare with the general average? Yours, &c., F. W.

Your gun shows a good average, both in the number of pellets and penctration.—Ed.

pellets and penetration.-En.

WOODCOCK SHOOTING OUT OF SEASON.

WEST HODGEN, April 12, 1875.

EDITOR FOREST AND STREAM:—

It was with great pleasure that I read the letter of "Hoboken," in which he is speaking against woodcock shooting out of season, especially in the vicinity of Secanens, N. J. It is a sad fact that cocks were shot this Spring in Secanens, N. J. It is a sad fact that cocks were shot this Spring in Secanens, N. J. It is a sad fact that cocks were shot this Spring in Secanens, N. J. It is a sad fact that cocks were shot this Spring in Secanens, and I, as well as my friend Old Smeedy, have complathed about it in Forest and Stream, but as far as I am posted these crimes were not committed by German put hunters, but by native born Americans—young men who make their living by shooting for taxidermists, as they say. I have heard of several birds murdered in this way, but am sorry to say that I myself have no proof of it, and others that most likely could prove it won't put themselves to the trouble. Now, if "Hoboken" knows who the purty of Germans are, why does he not report them to the Hobokou Sportsmons' Clibb! President Thomas Walker will do his atmost in prosecuting the offenders. Shooting for bird stuffers, who misk their living by selling to anybody stuffed birds, is not, in any sense, shooting for selence, and therefore gives no excase. So "Hoboken" ought to do his best, until the will give me his name and address through your paper, I shall communicate with him, and we not ted might do some good. "Hobiken" says that he visited Secancus on the 4th of July, 1874, without finding a solitary hird in said woods. If this is not a mistake t am bound to doubt the quality of his setters very much, as my irrother and usself killed tou cocks before nine A. M. of the 4th of July, 1874, wellout finding a solitary hird in said woods. If this is not a mistake t am bound to doubt the quality of his setters very much, as my irrother and useful to the number of birds in our vicinity now, kept away from the Ninthern States by too much lee and snow, and if these brites stop

PETERBORO, April 12, 1875.

Entroit Forest and Stream:—

The general monthly meeting of the County of Peterhore Fish and Game Protective Society was held at the Ruffman Hone, on Wednesday evening, the 7th inst. The secretary rend ictters from the Governor General of Canmia, accepting the position of Patron of the Society, also letters from Messers. Wilmol, of Newcastle, and Sheridan, of New York, who were mind homorary members at the annual meeting at the request of Dr. Chas. Ormand. Gen. P. Warren, Esq., of Troy, N. Y., was elected an honorary member, who, we believe, can spenk for himself as regards lines and maskining, fishing in this county. The subject of deer hunting with dogs was pretty thoroughly discussed, the prevailing optinion being that it would not be judicious to restrain sportsmen from hunting in that manner. It was resolved, honever, to petition the County Countillo have a by-law passed compelling owners of dogs to keep thom chained during the Winter season. The meeting was largely attended, and at the close is unamber of new names were entered on the incinite ship list.

C. A. P. EUITOR FOREST AND STREAM:-

MUSKOKA NOTES.

GRAVENHURST, April 3, 1875.

EDITUR FOREST AND STREAM:—
Signs of Spring have at hest appeared in Muskoka. Welcome it is, too, after such a evere Winter as we have just passed through. The snow, which is now fast disappearing, has been unusually deep this Winter—four feet at least—and in consequence the deer have been slynghtered an adarming exent. As fur as I can learn from different townships in the district, there must have been no less than four hundred killed since the first of January, some fur the ment, and others murely for the skins (which will be no good), leaving the careass in the snow fur the wolves to est. At last they were killed so publicly that information was laid before a magistrate, who had some half dozen or so of the deer slayers arraigned before him and thucd thom \$20 each. This soon put a atop to feer killing out of season. I think the stable was locked after the chorses were stolen.

stop to deer killing out of season. I think the stand was recovered to the horses were stolen.

Ruffed grouse unist bave got through the Winter pretty well, as they are quite plentiful this Spring.

Bears are also making their appearance, one having been seen a few days since just outside the viltage.

Wild geese are flying north, but ont of range of a shot gun. Dacks and wild pigeons have not made their appearance yet; expect them in another week or so. The lakes and creeks are not open yet.

Mr Cockburn is now hasy fitting up his steamboats, so as to have them really when navigation opens. It is expected that the Northern Rallway will be exteeded to Gravenhurst by next Fall. There is now but twelve wiles of staging, instead of forricen, as last year. Yours truly,

A BEAR RACE.

Emron Forest and Stream:—
Some years ugo, on one of my should trips to the Rangeley Lakes, troublug, this bear race occurred:—

Some years ago, on one of my annual trips to the Rangeley Lakes, troutlux, this bear race occurred:—

One morning my friend L, and I started up from the Middle Dam for the Nitrows to fish. There were three or four rilles and any quantity of revolvers in comp, any one of which we could have had, but as we were going fishing, and not bunting, we took no shooting irons. On rounding Reed's Point our guide, Mr. Morse, stopped rowing and turned half round and looked up the lake, as a believe all bunters and guides do when they have turned a point on the water, or ha path in the woods, to see what is ahead. His exchanation was, "See that bear in the water!" Hooked, and raw him. I was in the stern of the boat sleering, L, was in the bow, and Steve Morse amidships, rowing. L is a hase halliet and athiete. The bear turned in his course to go buck to where he started. Our guide knew at once where he started, and said to me, "Mr. B., steer for that dead pine, and don't you loose a foot of ground by crooked steering." We were then about half a mile from the hear, and about the same from the dead pine, making a triangle of our boat, the bear and the dead pine. Our guide told L to take one of the oars, which he did, and the race began. Of how those ashen blades did bend and spring to the muse of those two rowers! I, observing the situation, thought to myself: Supposing we head blim off! Suppose he gets u paw on the side of the boat and capsizes it! What then? Three men who can't swim and a bear in the water together! I tell you, my knees hegan to shake, and I asked our guide what he should do! I we headed him off? "IXIII him!" said he. "How?" said I. "With the ears," said he could not see it in that hight, and I rather think the paddle I etered with got flatway, instead of edgeway; but I steered for thist dead pine, and so we neared it! made up my mind that the bear was alltitle alread. Then my corrage rose, and I should, "Pull in boys! we'll have him, sure." But the hear came in the winner. When he struck the store our boat

PISTOL PRACTICE

BALD MOUNTAIN, N. Y., March 29, 1875.

Eurror Forest and Stream:

I am a close reader of your columns, and though I often see accounts of remarkable shots with the ritle, and innumerable quantities of game brought to bag with the fowling piece, I think there is another weapon which, though much neglected, has good claims to distinction. I refer

to the "six shooter." I am induced to write this under the following circumstances:

circumstances:—

To the Issue of your paper for November 12th, 1874, I saw a reply from you to a correspondent regarding a target made by him with a Colt's revolver—7 shot. 22-100 calibre—to which 21 consecutive shots were placed in a 54 inch circle at a distance of 28 feet, and which Mr. J. S. Coollin noticed as good shooting, and fully equal to any hensel seen with that elze weapon. As that time I had scarcely fired a revolver a score of times; but happening to have a No. I Smith & Wesson of that calibre, I determined to lay out a miliature Greedmoor and go to practicing. On Christmas day I made the three first targets I ever shot, as follows:—

Target—Bullseye, 1 Inch; centre, 3; outer, 6; distance, 10 parties; revolver, Smith & Wesson's No. 1, 22 100 cal., 21 consecutive shots. 1st target—None In bullseye, 7 in centre, 7 in outer. 2d target—none in bullseye, 6 in centre, 14 in outer. 3d target—2 in hullseye, 7 in centre, 9 in onter.

volver, Smith & Wesson's No. 1, 22 100 cal., 21 consecutive shots, 1st target—None in bullesye, 61 centre, 14 in outer. 3d target—none in bullesye, 61 centre, 14 in outer. 3d target—100 in onter.

The above are all I have yet fired. On target No. 2, 19 shots are so close together that a four-inch ring wonid enclose them all! Though this is not to be compared to the should like your ophiton.

Why don't combody push the matter of starting a National Pistol Association, with regular sized targets and stated disfances on the system of Creedmon, calibre and length of barret regulated, and then "we uns" who cannot afford a \$155 target rifle, and a couple of wecks or so practice every menth at Creedmoor, could, armed with these rules and a Colf, Reinington, or Swith & Wesson, as one's fancy suited, lidace away right at home, and coupare results through the enhums of your lively journal. Surely the revolver is as "useful at close quarters as the rifle at the longer distances, as many a bunter who has been caught in a tight place can testify. Nor is its use confined to defence alone. In the West and South Rismond extensively for deer and buffulo bunting on borsolack. And "Amstoor Six Shouter," in Forast AND STREAM for July 24, 1874, tells us there are those who carry and shoot revolvers, who would put to shame some of the crask rifle shots at short rangesial of the control of the crask rifle shots at short rangesial control of the control of the crask rifle shots at short rangesial control of the officers of the object of the shot of the control of the control of the object of the shots to measure it in the

Car. you give unuse of dealer who will furtish No. 10 shells at that figure? I see the Sort lever which shats under the trigger guard acrong and threathie? Aus. I. The pileo for

Htcksville, L. L., we believe, claims to have made artificial inculiation a paying process. Will send fur his paniphiri and forward it to you.

C. A. P., Peterborough.—What weight am 1 to take in proving my powder flash. I find a charge marked three dracinus on the thank is only a triffe over one drachin, apothecuries weight. The flash is one of Hawkeley's make. Is shot proved by the same? Ans. The drachms marked on your flash represent a measure, not a weight, being equivalent to apothecutes dutd monsure. A drachm (measure) weighs a little over 37 grains. Shot by weight.

A. M. N., flanesvillin, Wis —Can you or any of your readers tell me of a preventive for the headache, which is brought on by continuous shooting with heavy charges of powder, such as we use for ducks? I am atways bothered with this headache in Spring and Fall duck abooting, and have heard the same complaint from others. Ans. The trouble you speak of must be constitutioned, and we suggest no remedy, never having been similarly afflicted. The concussion acts directly upon the nervous system, which in some persons is more sensitive and delicate than in others.

In others.

J. D. F., Newton, Mass.—I am about to go on a ranche and take with me an imported English mastiff, to Wyonding Territory. What will to about the cost? He is too valuable to send by express. I have been looking at rifles.—Sharp's and livrington's. Anothers others you would recommend me to look at before purchasing? Which bore is the most desirable, 41 or 50? Ans. It will cost you \$20 or \$25 for your dog. Make arrangements with the baggage masters. You can do no helter than to take either of the rilles named. We should prefer the tending.

Make arrangements with the baggage masters. You can do no helter than to take either of the files named. We should prefer the tecilibre. P. C. T., New York.—I have a softer pup about a year old which tetrophed with a vary violent cough whenever he plays or runs alount, or whenever he is taken by the neck or brad, or led by a chain. He wears a leather collar, but is troubled as much with the cough with the collar off as he is with it no. Wilt you kindly inform me what you think the trouble is, and what I should give him for it, and greatly olige? Ans, Barbadoes for, if teachin; powdered equillis, if duchin; extract heliationna, to grains; powder legocia sufficient. Beat into a mass and make up into twenty pills; give four a day.

A RRADER, Montreal.—Where can I find good hass fishing and duck shooting in the mouths of Augest and September, near the lowns of Port Hupe or Peterboro, Canada, and are there any hotel accommodations? Ans. Toronfo sportsmen generally run up to Lake Shacoo and Concliding good intels at Belle Event and Bardo out the former, and at Concliding good intels at Belle Event and Bardo out the former, and at Concliding good intels at Belle Event and Bardo out the former, and at Concliding mid Orlilla at the latter, four hours from Toronto by rail. Excellent has fishing on Otwoahec River, ten unless below Princhoro This river emptles into the file lake, one of the best hass, nuncalwage and duck regions in Canada. Good hotels at Rice Lake, which can be reached from Cobourg; distance, sizteen miles.

Da. J. H. M., Marlou, N. C.—I have a very handsome pointer hitch, as good on quall and sulps as sho to pretty. Having tratoed and broken her myself, of course I am very proad of her, and as I cannot whow ber to you, will give you ber proportions, and ask what you think of her: Effe Doans—Color, liver and wilder; weight, 40 mounds to good hunting condition, neither fat or hear, height at shoulder, 20; inches; around cheet, 27 inches; height of head, 8; inches; longth of nock, 5 inches; around cheet. Ans

was rather undersked, according to our view, but have no doubt that shils a handsome and well bred blich.

M. A. B., Olean.—Does the text of the laws of New York State show the killing of roffeil grouse daring the class season. For treallest Ana, Nouxception of this kind. Do you know anything about black bers being infested with grubs during warm weather! I have been teld by several persons that they are thus affected, the grubs being along near the backbone, and whether they are in consequence unfit for food? Ans. Parasites of this kind are common. What kind of the woold be most suit able for stocking the headwaters of the Alleghany River! Ans. Your Commissioners seem to prefer the black bass for main stream, but trout are indigenous to all tributaries.

C. G. G., Boston.—It is the luteation of myself and companion to spend our vacation on the Magnetowan. If we had three weeks, would it he time enough to go and return, and spend two weeks in the heart of the country! You would have ten days. Is gone and fish as plicitly as one would infer from reading your correspondent, "Music?" Ans. Very abundant. Do you know of anybody with whom we could correspond with regard to procuring two reliable guides with birches? Ans. Write to Joseph Scott, Graventurst, Ontarlo. What is the best time to go to have good shooting and fly fishing both? Ans. September. Where can iget a map of the country lying around the river? Ans. Of Chas. Lount, Register, Bracebridge.

CF A large number of snawers to correspondents are unavoidably laid over until next week.

A WEEKLY JOURNAL,

PUBLISHED BY Morest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK, [POST OPPIOZ BOX 2882.]

Terms, Pive Delars a Year, Strictly in Advance

A discount of twenty percent. allowed for five copies and upwards

Advectising Bates,

In regular advertising columns, nonparell type, 12 lines to the Inch, 23 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent, extra. Where advertisements are inserted over 1 month, a discount of 10 per cent, will be made; over 1 bree months, 20 per cent; over six nonths, 30 per cent.

NEW YORK, THURSDAY, APRIL 22, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to The Forest and Stream Pustisming Company. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with call name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will dud our columns a desirable medium for advertising announcements.

and our columns a desirable medium for advertising announcements.

The Publishers of Fonest and Stream aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no deprayed lastes, nor pervert the legitimate sports of land and water to those base ness which always tend to make them unpopular with the virtuous and good. No advertisement or husiness notice of an immoral character will be received on any orms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mait service, if oney remitted to us is lost,

Advertisements should be sent in by Saturday of each week, if possible

CHARLES HALLOCK, Editor.
WILLIAM C. HARRIS, Business stanager.

HIPPOPHAGY.

THAT "they do things hetter in France," has not only passed into a proverb, but the excellence with which certain things are accomplished has led to their adoption on our trans-Atlantic shores. The charms of Opera bouffe have taken so firm a hold as to be regarded as an "institution;" the graceful costumes which brighten the avenue. are the results of French inspiration, and young New York has reached a point where his palate requires to be tickled hy French cookery, and his mind likewise exercised hy an unintelligible menu. But the question presents itself, where are we to draw the line? We read that a grand Franco-Anglo-American Horse, Mule and Donkey Banquet has recently heen held at Paris, when some sixty or seventy gentlemen sat down to a finner where the viands were composed exclusively of the meat of the above named animals commencing with a consume de clearly our sevents. mals, commencing with a consomme de cheval aux croutes gralles, and winding up with filets de mulets. At the close of the dinner it was announced that the Society Hippophagic would give a medal and 500 francs to the first person who opened a horse butcher's shop in London or New York! Gentlemen Francais, keep your medals and your horse meat at home; we need none of it. Shall the Texas steer he consigned to oblivion, and the delicate "bob" yeal no longer grace our butcher stalls? Shall seasoned horse sau ske the place of the succulent hologna, and our ma tutinal bacon he served with asses' liver? The advocates of hippophagy quote Hippocrates, Herodotus and Pliny, and declare that horse flesh eating is only an obsolcte custom, hut it is to Isidore Geoffrey, Saint-Hilaire, and later to M. Decrolx that the success of establishing boucheries de cheval throughout France is to be attributed, backed, no doubt, hy the necessities of the Prussian siege. But to us the idea is scarcely less novel than repulsive. Eat our fillies' feet? is scarcely less novel than repulsive. Eat our fillies' feet? feed our damsels on plebalds instead of pigeons? clongate the ears of our youths by a dlet of asses' milk and hrains braisil

And from whence is to come the supply? Paris has been able to procure in 1872, 5,732, and in 1874, 7,184 animals to be devoured by hungry hippophagi, and the society promises to supply if necessary two or three hundred thousand more unfortunate quadrupeds. Its prospectus asks, is not the entire world interested that so healthy and nour-isbing a food should not be lost while so many meu, wo-men and children are deprived of food? This is philanthropy of the highest class, and thanks to this hetacomb of

horse flesh, the poorest household shall no longer want its horses tongue with saucs piquante or mule filet a la gelée. But before our philanthropists catch the idea from their brethern of France and gallop off with hits between their teeth, let us put a bridle on their zeal, and with the spur teeth, let us put a bridle on their zeal, and with the spur of criticism, ask them whence the supply and wherefore the slaughter? As a Parisian asks, are our horses to be knocked on the head to supply the hippophagi with consomme a la A. B. C? Is 2.14 to give place to a saucieson do cheval aux pistaches? Forbid lt, Doble. Fancy eating a steak off Goblsmith Maid or a rib from Lexington; and how should be he steeled with ingratitude and indifference who would service to the cuiping the steel that but ence who would sacrifice to the cuisine the steed that but yesterday was the pride of Central Park? It remains then, that we should have to look for a supply from the horses which had met their death by accident, or whose slaughter was remiered necessary by disease or disability; and here let us remark that the advocates of horse flesh claim that the flesh of a diseased horse is perfectly innocuous to human beings. M. Decroix chains to have experimented on himself with the meat of horses which had died of disease, and on no oceasion had he felt the slightest ill effect.

We can understand that under certain eircumstances horse flesh could be readily used as an article of diet, and being granivorous their flesh should be equal, if not su-perior to that of the less cleanly and omnivorous hog. But it appears to be the association connected with the horse as the most familiar and useful of our domestic animals, that renders the idea of eating him so repugnant. The French plea is that of economy, which will never hold with us as long as our heef supply is brought within the reach of the laboring classes,

YACHTING IN CHINESE WATERS

A N enterprising gentleman, connected with the great A firm of Russell & Co., once had a schooner yacht, named the Haleyou, sent to China hy the way of the Cape of Good Hope. The schooner arrived safely and was subsequently sold to the Imperial Government for a revenue cutter. To all Americans living in Shanghue the sight of the saucy Haleyon riding at her ancher in front of the noble bund, or promenude, was one of the sweetest reminiscences of his home life. Quite a number of well huilt yachts of small tonnage now compose the Shanghae Yacht Club, and at Hong Kong several English schooners and cutters annually coupete for prizes. In the latter races centre-hoards are usually barred, but, on one occasion Mr. A. S. Post of this city carried off a cup and astomshed the natives hy the performances of a regular American model yacht.

The boat in most general use, however, and the one best adapted for either exploration or pleasure, is the craft commonly called the Woosung pilot hoat. Woosung is a little village eight or ten miles helow Shanghae at the juuction of the Whang po River with the great Yang Tszc Kiang, and the point from which pilots start to intercept vessels hound for the great commercial mart of Chinu. The pilot boots are rigged in the usual native fashion with sails kept in position by bamboos stretched across them, very light and haudy to reef; light draught, with lee-hoard, excellent eahin accommodation, and all capital sea hoats. The model is similar to that used by all celestial shipbuilders with the exception of the bow, which is carried forward until it is quite sharp. All Chinese vessels are built with water tight compartments, and the wood nicely varnished and oiled a kind of wood oil, which not only preserves the wood The universal eye but gives a very neat finish to the hoat. with which the junks are adorned is usually omitted on boats intended for the use of foreigners, much to the disgust of the crews, who stand in holy awe of the dread Fung-shoey, that mysterious spirit of wind and water. A low-ta, or cap-tain, once appealed pathetically to the writer on the subject of eyes. Said he, "suppose no got eye how can see, sup-pose no can see, how can walkee?"

There is just sufficient possibility of running across a pirate in one's trip to make yachting in China highly interesting. Indeed in certain localities on the Yang Tsze and among the islands of the Chusan Archipelago which dot the coast between Shanghae and Ningpo, a boat would not be safe unless heavily armed, and the house boats and yachts, used in the opium traffic hefore the general introduction of steamers, carried crews and batteries entirely disproportioned to their tonnage. The recent advices regarding the increase of piracy on the coast in the neighborhood of the Yang Tsze reminds of an adventure of Mr. Thomas Meddows, H. B. M. Consul at Shanghac in 1861 or '2. While ascending the Yang Tsze in his yacht on a shooting excursion he was attacked hy pirates, who followed and opened fire on him with the bow chasers of their junk. The wind unfortunately was light, and by the aid of sweeps they were rapidly over-hauling him, but hy capital rifle practice and the good behavior of his own crew the plucky Englishmen managed to clear their decks and escape.

Aside from the excitement of a possible encounter with pirates the yachtsman finds also excellent shooting in almost any direction. The debatable ground between Shanghae and the cities of Sung-kong and Kahding, which were for so many years in possession of the Taepings hefore the ex-tinction of the rebellion, became an immense pheasant preserve, and a hundred brace was no uncommon bag for two guns in a day's shooting. It may not be known to many of our readers that China is the original home of the English pheasant, as well as of all the other beautiful varieties of the same bird. In fact the whole avi-fanna of Asia is so allied to that of Europe as to render a tracing of the congenital lines a most interesting subject of study, and one to which we propose to devote a paper on some other occa-

To return to the yachts, almost the whole of that portion of China visited by foreigners is so cut up hy canals or intersected hy small streams as to render hoat travel the only mode of locomotion, and the traveler is forced means of carriage. Seaward there is not much to invite the yachtuce. The Chusan group possesses many beautiful islands in which are old temples and many, to the native mind, classic resorts, but the sport is indifferent, and as the Chinese confine their fishing to that done by nets, re-sources which may exist in this way are unexplored and uuknown.

As regards the seagoing qualities of the native boat, it is only uccessary for the traveler to make one trip between Hong Kong and Shanghae during the northeast monsoon, to be convinced. In the comparatively narrow passage he-tween the island of Formosa and the main land, a tremend-ous sea is kicked up during the gales which usually accompany the Winter monsoon. Here a whole fleet of fishing hoats can usually he seen anchored to drags to keep them head to wind and riding out the gale like ducks, the whole crew snugly stowed helow.

RECOLONIZATION OF FLORIDA.—The emigration to Florida and settlement there within the past five years has been so considerable as to command attention. The most extensive settlement has been in the vicinity of Lake Monroe, at Sandford, Mellonville, Orlando, and other adjacent towns, where a population of 2,000 and more has gathered, the land being high and rolling, well adapted to the culture of fruits and cane, beautifully dotted with lakes, and delightful in all respects as a place of residence; and there are smaller settlements all along the St. John River. But colouists have not confined themselves to any single locality; in prospecting they have scattered all over the State, even in prospecting they have scattered all over the State, even to the remote and little known regions of southwest Florida, penerating to the jealously guarded preciucts of the few Seminoles that remain. There our correspondent, "Al Fresco," who is writing a series of letters upon that section from material altogether new, met little companies from New Jersey and other Northern States, and found sparkling waters teeming with fish, and lands with native products: lands that were righer and levelities that tive products; lauds that were richer and localities that were far more desirable than those hetter known and usually sought after. A century ago, when Florida was possessed by the English, a noble aristocracy had princely domains along the coast, and these are to-day heing reoccupied and replanted by scores of hardy settlers from the Northern States, who flud abundant traces of a former high state of impropression, which it will be be the Northern States, who had abundant traces of a former high state of improvement which it will take years to realize again. These little germs of colonies are planted all along the Halifax, Hillsborough, and Indian rivers, and so important have their local interests already become that the land owners—they cannot be called speculators in the odious sense of the word—have begun the publication of a journal, called the Halifax Settler, to aid their prometion. At Daylong on the Halifax River is a bamble of twenty. At Daytona, on the Halifax River, is a hamlet of twenty frame houses, including two stores, with a population of seventy-five souls, and at the present rate of progress it will not be more than five years before this magnificent coast is lined with pleasant residences and fashionable hotels, to which comfortable communication will he had

THE STATE SPORTSMEN'S CONVENTION .- The Jefferson Sportsmen's Cluh, whose headquarters are at Watertown, have been particularly active of late in their endeavors to prevent the wanton destruction of game, and more particularly that of deer, in the Adirondack region. It is nuder the auspices of this energetic club that the Seventeenth Annual Convention of the New York State Sportsmen's Association is to be held this year, at Watertown, some time in the latter part of May or early in Junc. Col. Gco. W. Flower, of Watertown, is President of the State Association, and Dr. E. L. Sargent holds the same office in the local elub. The fields sports connected with the meeting will consist of competitions in trap, rifle and pistol shooting, fly casting, etc., for which prizes amounting to \$2,000 have already been offered. We are glad to learn that more attention will pe paid this year than ever to the subject of rifle shooting, and that a long range "Creedmoor" contest is in contemplation. Some half dozen new clubs have ex-pressed their determination of joining the State Association, and the fact of the Convention heing held in the northern part of the State, near the great game districts, will do much to stimulate the action of sportsmen towards a more rigid enforcement of the game laws of the State

We shall print the full programme as soon as published.

ART.—When lovers of the sports of forest and stream

are deprived of the actual enjoyment of their favorite pas-times, the next hest thing is the representation of them and times, the next nest thing is the representation of them and of their favorite baunts on canvas. At the exhibition of the National Academy of Design, now open, there are many pletures which will recall vividly the scenes of past pleasures, among them one entitled "Sports at Blooming pleasures, among them one cutified "Sports at Blooming Grove Park, painted from studies on the spot by Mr. J. B. Stearnes, N.A. The scene is laid on the shores of Lake Giles, near the Club House grounds. The principal figures are portraits of Messrs. Edward R. Wilbur and John Avery, members of the Blooming Grove Association. Trophies of the rod and gun surround them, and their suidal is cridently recently the guide is evidently preparing the canoc for another foray.

- An interesting letter from Mr. Bishop describing the termination of his canoe voyage is unavoidably laid over until next week.

SOUTHWEST FLORIDA-NO. 6.

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN
COMMISSIONER

THE annual rain fall of Southwest Florida is about sixty-five inches, but during the year 1874 the amount was but a fraction over thirty-one inches. In consequence the river (Caloosahatchie) was nearly two feet lower than ever hefore known. Under ordinary conditions the river can be navigated to the rapids by a stern wheeler with a light draft of water. Above the Caloosahatchie telegragh station the wauderer can at all times fill his frying pan with luscious front, (bass.) Before leaving Philadelphia Shipley & Son made for us au eighteen foot bamboo rod, which we found admirably adapted to fishing in the streams visited: With such a rod and a few feet of line, the piscator can fish around the tops, fallen logs and lily pads, without any dauger of fouling his bob or spinner.

As we were anxious to reach the rapids at Fort Thomp. son, the rising sun found us moving. Harry was aft using the setting pole, and Frank and I manufactured an ashen hreeze. Then we ascended the tortuous channel until cze. Then we ascended the tortuous charles that we heard the Soon after camping we fancied that we heard bark, and having seen no chasing, or evidence of settlement after leaving hospitable "Jerseydom," we were anxious to obtain information regarding our whereabouts. To attract attention, I discharged my gun, and Frank followed with his revolver. We listened, but no answer was returned. Early next morning my attentiou was attracted by the cracking of brush, and on looking shoreward, I noticed a white man peeping through the bushes. I hailed him, and on enquiry ascertained that his name was Cross, and that he had recently settled on a point a short distance above. He stated that he had heard the report of our fire arms, but fancied "that it was the accursed Indians shoot arms, but fancied "That it was the accursed Indians shooting, and it consequence he had not siept during the night." He expressed it as his opinion "that they would rise, and that another Indian war was in prospect." He favored us with his views of the "pesky critters," and assured us that they were a lazy, dirty, treacherous and thieving lot, and that they make were should be extending to the and that the whole race should be exterminated." Our visilor informed us that the ludian camp at Fort Thompson was distant three miles by land and nine by the course of the river. We bade our friend good bye, and applied our muscles to oars and setting pole. He preceded us hy land and unwirely informed the ladient the ladient three lands are the ladient three lands and unwirely informed the ladient three lands are three lands and unwirely informed the ladient three lands are three lands and unwirely informed the ladient three lands are three lands. land, and unwisely informed the Indians that some white men were coming up the river, armed with sixteen shooting guns, with the intention of exterminating all the Indians ahout Lake Okcechobee. At 9 A. M. we grounded the bow of the good boat "Spray" ou the northern bank of the river below the fulls. A few minutes afterwards we discovered four Indians approaching, armed with rifles and long butcher knives. From their manner we fancied that there was a "screw loose in their celestial machinery." As they neared the heat I handed and shook hands with all. To my surprise they manifested sullenness, and an indisposition to be friendly or communicative. Soon'after a squaw and several young feminino representatives of poor Lo approached, to whom I presented ear rings, beads and breast pins, costing \$1 per half dozen sets. These presents ex erted a happy influence, and the masculine Los expressed a wish to inspect our firearms. We exhibited our breech loading arms and ammunition, which seemed to surprise All seemed to be new to them, and they expre "Indian's rifles holywagus," their surprise by remarking,

An examination of Drew's and Colton's maps will show a large lake existing at Fort Thompson, and another seme miles east named Hickpockee. These bodies of water only exist in the imaginations of map-makers. As far as South west Florida is concerned, maps are to a great extent un-reliable and calculated to mislead tourists. Fort Thompson was a large and important station during the Indian wars, but at present only a few decayed stubs exist to indicate where a stockade once protected scores of valiant men. Surrounding the falls, a rich prairie of 500 acres exists, covered with a luxurious growth of succulent and nutritions grasses—the site of a lake, according to the unnitritious grasses—the site of a lake, according to the un-reliable map-makers. We instituted many enquiries of Indians, settlers and cattle drivers regarding Lake Hick-pockee, but all scouted the idea of its existence. On the north side of the river, and about 600 feet therefrom, a grove of linge live oaks exists, under whose protecting branches the Indians encamp during the Winter mouths, when on their annual hint. The region is underlaid with a herizontal stratum of hard limestone rock from tracks when on their annual hant. The region is underlaid with a horizontal stratum of hard limestone rock from twelve to eighteen inches thick, and beneath this a softer stratum containing an immense number of shells. The river has worn a passage through the hard superficial layer of rock at this point, forming the rapids or falls of the Caloosahatchle River. chie River. We found the water to fall about five feet in two hundred. The channol at the rapids is about fifteen The channol at the rapids is about fifteen feet wide, and within a few inches of the surface we discovered numerous sharp pointed rocks, over which we found it impossible to drag the "Spray" to the deep and smooth waters above. We noticed an Indian dng-out above the rapids, and at once visited Lo's camp to make arrangements for an exploration of the river above the falls. By signs and words we communicated our wishes, but were informed that "cance belonged to Medicine Many be gone By signs and words we communicated our wisnes, but were informed that "canoe belonged to Medicine Man; he gone Big Cypress. Indian no use him canoe." Here was an awkward position, and Harry and I resolved on an exploration on foot. We started on the south bank of the river, but after floundering for a mile and a half through mud, water, cane brakes, and saw-grass, we were forced to retreat. On my return I took my Shipley rod and weut for a mess of fish. In a few minutes I landed two cavalli averaging four pounds, and five trout from one to seven pounds. In the afternoon we were gratified at seeing the face of a white man, and found that our visitor was named Carlton, who resided about two miles to the north of the fort. We expressed a wish to hand our boat around the rapids on skids and rollers, and Mr. C. kindly volunteered his assistance, and assured us that he would induce two more recent settlers to aid us. During the latter part of the afternoon we took a survey of the difficulties to be encountered, and provided skids, &c. to transport our hoat around the rapids.

In the evening one of the Indians, named Jimmy, visited us, and we eventually arraged with him to take the Medicine Man's cance and paddle us up the river. Early on the morning of January 1st, in company with Harry and Indian Jimmy, I commenced an examination of the river above the falls. We had not proceeded over a quarter of a mile before we found a channel averaging sixty feet wide and six in depth. To say that it swarmed with numerous species of fish would not do justice to this stream. Ou the shores large alligators occupied the banks, and ducks, eoots, yellow-legged snipe, curlews, cranes, herons, water turkeys, and other birds existed in countless numbers. My imagination painted a channel leading into the Lake Okeechobee, and that I should be favored with a view of this body of water. But disappointment was ahead. We had harely proceeded three miles when we found the channel to cud in a broad expanse of aaw-grass. A careful examination revealed about two inches of water and three of tenacious black mnd overlying the horizontal layer of limestone rock. Poeketing our disappointment, we turned the bow of the cance campward. From our own observations, and from such information as I could coffect from cattleraisers, herdsmen and Indians, I am convinced that my preconceived opinious are correct—that the Caloosahatchie River is the main outlet of Lake Okeechobee. I am satisfied that the lake is not more than eight miles in un easterly direction from Fort Thompson, and that it can be reached by a light, flat-bottomed hoat in an ordinary stage of water. The Indians would not explain how the Medicine Mau had transported his cance from tho lake to the fort; but as no other route exists, he must have brought it by the course of the river before the water hecame as low as we found it.

On our return we found Mr. Carlton and his two friends ready to assist us in hauling our bont around the rapids; hut as we had explored the river we politely declined accepting their kind assistance. Upon enquiry, I found that Mr. Carlton had a wagon and a team of bullocks, and my first idea was to transport the "Spray" to Fish Eating Creek, a distance of fourteen miles, descend the creek, circumnavigate the lake, ascend the Klssimmee and return via the St. Johns River to Jacksonville. Upon questioning Mr. C., I found that his wagon was not broad enough to accommodate the "Spruy," and that it would be necessary to construct a new pair of axietrees for the purpose. The delay altending this arrangement, and our ahort stock of provisions, induced us to abandou it. Mr. Carlton had a pow-wow with the Indiaus, and ascertained that they had three causes at Old Fort Centre on Fish Ealing Creek. Mr. C. finally induced Billy Asceola to accompany us, and we arranged to start early the past, morning for the lake. e arranged to start early the next morning for the lake Mr. C. returned home to prepare for the journey, and we amused ourselves by visiting the Indian camp. One peculiarity of the feminine Lo is a love for beads, and instead of december the proof of the feminine Lo is a love for beads, and instead of december the proof of the feminine Lo is a love for beads, and instead of december the proof of the feminine beautiful to the proof of the feminine to be a love for beads, and instant of the feminine to be a love for beads. stead of decorating herself with panniers, laces, furbelows and false hair, she goes in for glass. After some persuasion, and amidst peals of laughter, we induced a squaw of sweet sixteen to divest herself of her neck ornaments. When the operation was completed wo had suspended on our arm forty six strings of large glass heads, weighing, at the lowest estimate, ten pounds. The only article of dress the lowest estimate, ten pounds. The only article of dress worn hy the juvenile representatives of Evo was a few strings of beads. The dress of masculine Lo was, to use a novelistic expression, picturesque and romantic in the extreme. Their head dress consists of from four to five small woolen shawls, costing two dollars and a half apiece. To arrange this capital encumbrance, Lo folds a shawl four inches wide, places the initial coll on the forchead, winds the folded shawl tightly around the head and tucks the outer cud under the first coil. This procedure is followed with each shawl until the horizontal and ridiculous looking structure is completed. They all wear calico ahirts, with grey vests, and these garments, with breech cloths, completed the dress of our new acquaintances.

Early next morning found us under way for Lake Okee-chobee in company with Mr. Carlton and Billy Asceola. We followed an old wagon trail leading to Old Fort Centre on Fish Eating Creek. This trail had been made during the Indian wars, since which time it has been followed by actilers, cattle-raisers and cattle. Mid-day found us near the dry bed of a Summer water course, where we camped for dinner. I took a spade and dug a shallow hole, from which we obtained water for coffee. After eating I seated myself in the centre of the trail to enjoy my old pipe. Frank laid himself down a few feet from me, and almost instantly jumped up with an exclamation. His fright was easily accounted for, for we heard the warning rattle of the death-dealing snake, within reach of whose fangs he had reclined. He seized his rifte and fired, but excitement spoiled his aim; he then used his revolver, and with the last chamber wounded his snakeship. In the interim one of the party provided himself with a stick, and soon finished the rattler.

Frank claimed the rattles, which, upon removal, numbered eight and a button.

After our encounter with the snake we hitched up the oxeu and started for the lake. Night found us four miles from the large mound at Old Fort Centre. Here we camped, and were favored with the bellowing of an ancient alligator in an adjoining swamp. Early next morning found us following the trail, and at 8 A. M. we reached Old Fort Centre. Leaving Mr. Carllou to take care of the hallocks, we soon found an ladian came and started for the lake, distant, according to the statement of our guide, tour miles.

We forced our way through several extensive beds of the floating lettince, and after poling and puddling for two miles, reached a continuous bed of this plant. We were provided with two puddles and a pushing pole sixteen feet long. The banks of the creek were perpendicular, and the water from twelve to fourteen feet deep. In this stream the lettuce was larger and more luxuriant thun any we had ever seen in the State. The roots were very long and perfectly matted, and we endeavored to force a passage through the obstruction, but might as well have tried to paddle or pole our canoe through one of the New York docks. For many years I had looked forward with pleasure to the day when I should visit Okcechobee, and nothing but disappointment loomed up before me. To force a passage for several miles through the lettuce we found to be impossible, and after considering the matter I resolved to reach the lake hy wadling and wallowing through the water, mud and saw-grass of the swamps between me and the lake, and accordingly hunled the canoe ushore.

Iliad I been aware of the difficulties to be encountered, I have reason to believe that I could have surmounted them, and reached the lake by the course of the creek. It I should again visit Fish Eating Creek I would provide myself with two hooked sticks about twelve feet long. If one man was stationed ou each side of the cance, say ten feet from the stern, and the two to hook into the lettuce on each side of the stern, and make traction towards the stern, we are convinced that such a maneuvre would make a passage for a cance; and the force applied would propel her ahead. From our knowledge of the growth, and the dilliculties to be encountered in forcing a massage through such an obstruction, we would advise tourists to test the mode anggested.

At Freeco.

PROTECTION OF MOOSE.—The Nova Scolians are prosecuting with vigor offenders against the new law prohibiting the killing of moose for three years. No less than twelve persons have been convicted and fined \$50 each in the counties of Halifax, Cumberland and Kings, and in default of payment have been sent to jall. A large number of prosecutions are also pending. Much of this effort has been accomplished through the Instrumentality of the "Game and Inland Protective Socioty," organized last year, and which now lucludes seventy members. This society has adopted measures to have the law apply to carriboo also, hundreds of which, as well as moose, have been slaughtered the past Winter, the unusual heavy snow facilitating their capture. The cases in court have attracted great interest, and been attended by hundreds of persons. In New Brunswick fines have been imposed on persons who have taken bass out of season, and there seems to be a widespread disposition to put the laws into practical effect. We notice in the Provincial paper a published list of twenty-mine wardens appointed for the several districts of Nova Scotia, six in all, each district being in charge of a commissioner. It would be desirable to adopt a similar police system throughout the United States, and to exandue carefully the measures employed by our neighbors, that we may profit thereby, if need be.

THE CENTENNIAL.—Professor Baird is to have an entire huilding at the Centennial devoted exclusively to an exhibition of fish and fish culture. He will exhibit upwards of 600 plaster casts of food fishes peculiar to the coast of America. The display will also include models of every description of fishing smack, hoats, seines, nets and all the parapherualia used in the catching, caring for and curing of fish. The Swedish Government has appropriated the sum of \$100,000 to be devoted entirely to a display of everything pertaining to the same subject in Sweden; we must look to it that our own exhibit is not inferior.

A New Aut Process.—Mr. J. Ives Pease, the artist of Twin Lakes, Conn., has invented a new process of pleture-making, by which partraits of men and animals and picturesque scenery can ho taken in a few seconds, having the closest possible resemblance to stipple engravings, or chalk drawings, printed in the usual manner of photographs, or ferrotypes; and these in turn can be transferred to stone or metal surfaces and printed as type, or in the lithographic or plate press. For pictures of dogs, horses, game and fish, this invention or discovery must lead to very surprising results.

Pistot Practice.—We wish to call attention to the letter from "Brandon" on this subject, which is printed this week in our Rifle column. Ho handles the subject intelligently for a "novice," and offers suggestions worth acting upon. "Read and you will know."

-The Canadian Gentleman's Journal, published at Toronto, has recently changed proprietors, and is now conducted by Mr. Peter Collins, of Dundas. It already shows marked improvement in all its departments. Canada ought to support a good field journal.

THE MIGRATION OF BIRDS.

SMALL number of hirds pass the Winter with us A while whole families are admonished by the chilling winds of Autumn and go from our shores. It is siagular that the feathered tribe know exactly when to migrate. The stork in the heavens knoweth her appointed time, and the turtle and the crane and the swallow observe the time of her coming.1

It is no less wonderful that creatures devoid of reason know by instinct exactly how to go, and calculate the time with precision without guids or compass. We have never witnessed their departure; we miss them, and they are gone. Wo do not see them arrive, but in Spring their are gone. We do not see them arrive, the in spiring the merry song attracts us and assures us of their presence. We hail with joy the meloily of their song, making the woods vocal with their music; and when the season comes for their departure they go in the same mysterious way.

It is known to naturalists that migrations are chiefly performed to some birds are apparent.

formed by night. The migrations of some birds are appa rent by their peculiar notes, which are distinguishable while passing through the air. When their forms are perceptible their peculiar manner of llight rendily distinguishes The great majority of hirds come and go silently, us ignorant of their route or destination. We know leaving us ignorant of their route or destination. by their direction in flight that in Spring they come from the South, and when cold weather approaches they return. Circumstances influence the direction of their flight birds follow different routes in autumnal migrations from those taken in the vernal. One variety may fly in a particular line, adhere to it for a period, and then change another route. This is apparent by observing certain hirds plentiful in some localities, and then entirely disappearing, to be seen in places where they have not been observed before in years. Other varieties, if not interrupted by inclement weather, arrive and depart from the same localities with great regularity. Some birds return annually to the home of their birth. The writer once resorted to Spallan Yane's experiment, and tied colored silk thread around the limb of a femule rottin, which by accident came in his positive by the statement of session while rearing a broad of young near his residence. The same nest had been accupied for seven years previous ly, and for two years after the identification the pair contimmed to build in the same nest, until the pagnacious English sparrows became so numerous that they gained the mastery and drove the rabins to another locality. The same season the identical robin was seen building half a mile distant from the old nest, where they completed their inculuations for the season; but it remains to be seen whether the pair will return to their present location another year. Usually, in migrating, the pair goes together, though sometimes the male anticipates the female a few days, when she joins him; but she never takes the lend. In certain lo-calities male bobolinks are seen in flocks for several days hefore the females uppear.

In autumnal migrutions, with some kinds, the females and their young go n few days in advance, when the males follow. A few birds remain stationary. The mocking bird affords an example. The writer has confirmed this hy the same tests as previously mentioned, and has known a pair to build in the fork of a tree, where their nest, as soon as completed, was removed seven times in succession; but still they persevered in building again, and continued to raise their brood for years in the same place.

Among guy plumaged birds the first to arrive in Spring are bright in color. Unlike the flowers that bloom in Spring, the first are those of modest hue, while their colors deepeu as Autumn approaches. Most birds, in migrating, when fully settled, hegin to nest; if they do not their destinution is not yet reached.

The causes of migration are various. It is observed that when the chill winds of Autumn destroy insect life, such birds as consume them migrate to a warm climate, where birds as consume them imprate to a warm charate, where they are again found in ahundance. When graniverous hirds find their supply of food covered with snow they go South, while rapacious birds follow their prey. The only kind that remains stationary are those whose supply of food is unaffected. From this it will be noticed that stern necessity compels birds to migrate, as well as climate.

The mild air of Spring awakens the instinct of birds, and brings them back to their Summer retreats, where last Antumu they undertook a long passage beyond the seas in search of subsistence and a genial clime.

Order is observed in the instincts of birds in their migra-ous. We observe that those birds which departed from us first are the first to return and cause the crisp air to reverberate with joyons songs, and with their tiny wings fanning the ntmosphere into a glow of warmth, bringing health, vigor, and strength to their every nerve and sinew.

The swallow returns to its nest, made the Spring before.

The robin seeks its old habitation, bringing back her young of a year's growth to enjoy familiar scenes and the society of friends. Wild geese, when on their northward flight, maintain it by night and day. Small hirds, perhaps, may do the same thing, though the darkness may not re-

Mr. Mitchell, the astronomer, used to speak of seeing small birds cross the field of his glass when it was directed to the moon in the durk hours of night. Other astrono mers affirm the same thing, and say at certain seasons the field of their telescopes are obscured by birds flying south-ward at night during the months of September and Octoher; and again in April the same is apparent. The keepers of lighthouses here ample testimony to the amount of life lost among birds during the season of migration, bliuded, no doubt, by the dazzling light. Mrs. Thaater, in her book

of "Life on the Isle of Shoals," says that "sometimes la Antunn, and always in Spring, when birds are migrating, they are destroyed in such quantities by this means that it is painful to reflect upon. The keeper at the island three years ago told me that he picked up 325 in one morning at years ago told me that he picked up 323 in one morning at the foot of the lighthouse, all dead. They fly with such force against the glass that their beaks are often splintered. The keeper said he found the destruction greatest in hazy weather, and he thought "they struck a ray at a great distance and followed it up." Many a May morning have I wandered about the rocks at the foot of the lower, mourning as little guron brimful of sparrows swallows. ing over a little apron brimful of sparrows, swallows, thrushes, robins, fire-winged blackbirds, many colored worblers, fly catchers, beautifully clothed yellow birds, nut catchers, cat hirds, even the purple finch and scarlet tanager and golden oriole, and many more besides—enough to break the heart of a small child to think of. Once a great cagle flew against the lantern and shivered the glass. That was before I lived there; but after we came two gulls cracked one of the large clear panes one stormy night. Another writer remarks—"Yes, they come in the night. We wake an some bright Spring morning to hear the well-

come notes of birds which were not here the day before, and had not been here for half a year at least. This is no tably true of the clear, mellow whistle of the oriole, those flying flames which come with the blossoms, but come and denly at the end of the first week in May. All our familiar Spring birds, in fact, seem to come back to us in the night. The lighthouse glare on the shore is perilous to all them, little and big.'

I them, little and big."

Longfellow, in his poem on the lighthouse, says:—

"The sea bird, wheeling round it, with the din

Of wings and whids unit softary cries,

Blinded and maidened by the light within,

Dashes biniself against the glare and dies,"

JAMES S. BAILEY, A. M., M. D.

NOTES FROM INDIANA.

[ny our cornespondent.]

Indianapolis, Indiana, April 14, 1875.

EDITOR FOREST AND STREAM:

I cannot leave this great central city without penning a few lines illustrative of its importance as a commercial point, as well us its sporting interest, and its ready access to the fishing waters covering a radius of 150 miles by rail in almost any direction, though the northward seems the course to which the angler directs his wanderings. As a central city, its importance is second to none. Its fine streets and public buildings will vie with those of the largest cities in the Union, its trade keeping pace with eities of greater pretensions, and its rapid growth a marvel to every one. The citizens claim over 100,000 inhabitants. to every one. This may pussibly be so, for its seems to hear the imprint to a casual observer that this amount claimed is not an overdrawn statement. Being the great railroad eentre of the mid-west, it is accessible from almost any point.
While the White River, upon which the city is located,

is filled with bass, which afford good fishing in the Spring and Fall, there are other points of ready access affording greater variety, which are the resort of many sportsmen who would rather he away from home, if only to shake off the shackels of domestic felicity for a scason. that they are unwilling slaves to home restraints or its concomitants, for any true angler would gladly take the better half, that perpetual luxury, in and out of scason; but I am half, that perpetual luxury, in and out of scason; but I nm constrained to confess that it is not always convenient, though it ought to be. I can imagine no greater luxury on your journey, nor a more congenial companiou in the forest and heside the rippling stream or placid lake, than a wife who can enter into the spirit and fully participate in the sports of the rod and liue; and to see her angelic form in some sequestered nook, perched upon a shelving rock, casting a fly and playing with the "speekled beauties"—so complaisant—so happy—so contented. Were I to picture the pristine abode of our first parents, I would give them

—so compliasant—so happy—so contented. Were I to picture the pristine abode of our first parents, I would give them

"A lodge to some vast witherness—
Some boundless contiguity of shade."

Seat her lailyship upon the mossy bank with rod and lino in haml, while the old gent should be shying rocks at every creeping, crawling creature.

On the other hand, if your "better half" has no taste for such things, send her to the sea side or "lo Hoboken;" don't encumber yourself with an incubus, that will spoil all your sport and bear you down with reproof and disgnst. You may assume to be happy to your friends, but you are not. They can tell what is the matter, but will not. If you are pattent, you need not take your place on a monument. They know you are smiling at grief, and "may heaven have mercy on you."

The Indianapolis Hunting and Fishing Association held their annual meeting for the election of officers for the ensuing year, April 9th. Dr. Miller was elected President, Sampel Beck, secretary and Treasurer, with the usual number of Directors. They don't seem to have necomplished much so far, but are determined to keep the lights burning. They labor in their State under the same difficulties as in others. It must take time to educate the people to the stand of propriety—indeed, I might say, interest. Anything coming from the cities and brought before the legislature is looked upon with distrust by the grangers, unless it is clear to them that Ilicre is no "nigger in defence." They say the game law is good enough for them, even though what they have is a dead letter. But this will work out ufter a time by persistently bringing the question up in and out of season. Such has heen the case clsewhere, and I can see no reason why it should be otherwise here.

I am credibly informed that the best place for tishing is in Lake Maxinknekee, Marshall county, 120 miles north, on the line of the Indianapolis, Peoria & Chicago R. R.
This lake is three miles by two and a balf, and fed by living springs and surrounded hy hills. It

good, with all the material supplied at the hotel for fishing. This is the favorite resort of the anglers of this city. Black bass, wall-eyed pike, croppies and striped perch, the usual game. The bass are said to be above the average in size for this section, and are in plentiful supply. The station on the railroad to stop at is Hargos.

Rome City, twenty miles north of Fort Wuyne, on the same road, is another favorite resort. It consists of a series of small lakes, and has good accommodations. Bass, pickerel and eruppies are the game; best in May and June and in the Fall months. In the latter time of year good bass fishing may be had in the Wabash, from its mouth to its head. Excellent bass lishing is found in the White River in the Fall and Spring, up to the dura above the city. Several thousands of shad were put into this river under the anspices of Seth Green, but with what result time alone can teil.

B.

The Bifle.

THE CONLIN TOURNAMENT .- This interesting event was brought to a close on Monday evening by the announcement of the winning score, and the presentation of Mr. John Righy's pin to the winner, Mr. MacDonahl. We give helow the names of the twelve gentlemen who having made the highest scores now compose the short range team who will continue to practice, and shortly will be prepared to meet any similar number in friendly competition for the championship. It may not be out of place to mention here that the nucleus is now formed of an association to he known as the Short Runge Rifle Club. There are many who contend that off-hand shooting is of as much interest and importance us the practice in any position at longer ranges, and Mr. Coulin, while ranking with the best at any distance, may be called the father of short range shooting, as from his school have graduated some of our finest marksmen. The presentation of a prize for rifle shooting seemed most appropriate on a day which marked the most important auniversary in our country's history, and when spring into life that cause which made sharp shooting a necessity. Mr. MacDonuld's score of eight and seven eighth inches seems almost marvelous when wo consider that the shots were fired at seventy five feet at bullseye one inch in diameter, and that the total deviation of twenty shots was but eight and seven eighth inches from the centre of the bullseye. Appended are the total

five scores made at Mr. Conlin's Gallery, covering a period

CREEDMOOR.-Saturday last was a dismal day for rific practice. The snow llurries almost obscured the targets at times, and the biting, piercing wind unmibed the fingers. The practice at the 800 yard range was very fuir, however, although the men frequently were obliged to wait for a glimpse of the bullseye and then take it "on the No formal scores were kept, although the usual fly." No formal scores were kept, although the usual number of shots, fifteen at each range, (800, 900 and 1,000 yards,) were fired. Among those present were Col. Gildersleeve, Col. Scott, Capt. Fulton, Capt. Bruce, Capt. Lindsay, Messrs. G. W. Yale, J. S. Conlin, E. H. Madison, L. M. Ballard, A. V. Canfield, Jr., A. J. Hennion, Jr., and a largo number of beginners. Several new positions were attempted, and several gentlemen adopted that of Capt. Fulton. Several alterations have been made in the targets and the top will along the crest of the epaulement at the butts is approaching completion. The picket fence has been painted and the general appearance of the grounds much improved.

THE INTERNATIONAL MATCH.-On Saturday next the gentlemen who are desirous of winning the bubble reputation at the rifle's breech, will assemble at Cracilmoor to shoot in competition for places on the team, which is to represent the riflemen of America in the approaching contest at Dublin. As the six genllemen who competed in last year's match have signified their intention of shooting in this, and as they have been permitted to stand on their previous records, an impression prevails that the team is virtually organized already, and that the competitive trials will partake very much of the character of the farce which sometimes precedes the tragedy. Such, however, is in reality not the case. Assuming that the six who are allowed to stand ou past scores can hold their positions, there still remains three places to be filled, this number being required as reserves.

We do believe, however, that the course pursued in allowing these geutlemen to stand on previous records will exert in more ways than one an unfortunate effect upon the success of the undertaking; first, in discouraging many who might otherwise have taken part in the competition, and again, in encouraging our opponents who will have in advance the metre of three-fourths of the team. Again, while admitting that the late victors have retained all their skill, bow much more assuring would it have been for us, who will look with so much eagerness for the result, to have known this, and perhaps more. Even the practice during the competition, as partaking of the nature of a match, would have improved and nerved them.

It is exceedingly pleasant to record the liberality with which the appeals for funds have 1 en met, and now that the sum of \$5,000, or more, as we are informed, has been

collected, we presume the requisitions will cease. As before noted, the Academy benefit realized about \$3,500. Several individuals, whose names have been published, have contributed liberal sums, and the subscriptions from the Stock and Produce Exchanges, the amounts of which we have not seen in print, must swell the total to an amount we have not seen in periut, must swell the total to an amount ample for the purpose. In addition to this liberality on the part of our own citizens, we now learn that the manager of the Inman Steamship Company has received instructions from the head office in Liverwood to tember free passages out and home in one of their steamers to the eleven members of the American term. Not only have the authorities of the city of Dublin insisted upon our riflemen leing their guests, but the mest challenge propagations are leintered. their guests, but the most elaborate preparations are being made for their reception and entertainment. The Irish Times of the 2d inst. contains a report of the committee appointed to this duty, and gives a list of some of the receptions and festivities which will take place. A deputation of the Irish Rifle Club Association will proceed to Queenslown, so as lo welcome the American leam. Visits to most of the public institutions and buildings of Dubliu are arranged. Next follows an exeursion to the Vartry Waterworks, which every one knows is a home phrase meaning a glorious and most jovial feast, at which very little Vartry water is imbibed. A grand concert will be given in the Great Hall of the Exhibition Pulace, and the visitors will be treated to a steam trip on Dublia and Killiney bays, and, if possible, will visit Lord Talkot de Malahide. A special performance is to be given at the Theatre Royal. A grand review of the military and a trip Malahide. to the Curragh Camp is arranged. The Lord Mayor has announced his intention to give a grand banquet, and the University of Dublin and many private individuals will The Times continues:-

follow suit. The Times continues:—

"It must be done right well. The truth is that the members of the Irish team, all steady men, where whisked up and down through the United States by a people whose hearls are as large as their country is powerful. Some of our champions got lost for a while, and with great difficulty persuaded their hosts to let them drop down to the coast one by one. The hospitality shown everywhere, and by all classes in America to the Irish leam, was unbounded and magnificent. We must return the generosity of the American hosts to the very utmost of our power. The fact that Major Leech has undertaken the direction of the reception, &c., is a guarantee that everything possible will be done in a style worthy of the occasion and of Ireland.

—The joint committee of the National Rifle Association and the Amateur Rifle Club held their weekly meeting in the Bennett Building, corner. Nassau and Ann streets, on Paiden lett. There were present. Colonel Gibbs to the Paiden lett. Friday last. There were present:-Colonel Gildersleeve Captain Fulton, A. Alford, George Crouch, E. H. Sanford, A. V. Canfield, Jr., Captain Bruce and Colonel Wingate. The last named officer was in the chair. A package was received from a Long Island railroad company containing 200 tickets for the gratuit ms use of those participating in the approaching international return rifle match. A vote of thanks was tendered to the company for their generous offer. A letter from Major Leech, asking for detailed in-formation in relation to the movements of the team, was read. The Committee on Transportation reported the receipt of the following communication from Mr. John G. Dale, agent for the Inman Line:-

INMAN STEAMSHIP COMPANY, April 13, 1875. To the Joint Committee of the Amateur Rifle Club and Na-tional Rifle Association:

tional Rifle Association:

Gentlemen: I wrile to inform you that we have received instructions from Liverpool, by cable, to tender free passage out and back to the members of the association who may be selected for the coming match with the Irisb riflemen. The number, we understand, is limited to eleven, and, as our steamer City of Chester, which sails on June 5, is a very popular steamship, it would be well to come to an early decision, so that we may reserve the best accommodations for the party.

Respectfully yours,

On motion of Colonel Gildersleeve the offer was accepted, and the Secretary was instructed to return the tbanks of the committee to Mr. Dale for his liberal invitation.

THE AMATEUR RIFLE CLUB.-The executive committee THE AMATEUR RIFLE CLUB.—The executive committee of this club met on Friday last with Captain Fultou in the chair and Mr. Geo. Crouch as Secretary. A challenge was read from Mr. C. K. Murry, on behalf of the Victoria Rifle Club, of Hamilton, Canada West, to a friendly contest of skill with the Amateur Rifle Club, on the Saturday preceding the annual Fall meeting of the National Rifle Association at Creedmoor. A resolution was adopted for the purpose of accepting the challenge, with the proviso that the new system of targets lately adopted at Wimbledon be used on the occasion. A report was received from the sub-some ou the occasion. A report was received from the sub-committee appointed to prepare the annual report of the clab, stating that Colonel Valentine had decided to print 2,500 copies, instead of 5,000, of which number Messrs. E. Remington & Son had subscribed for 1,000 copies; Sharps Rille Company, 1,000 copies, and 500 copies had been reserved for the use of the Amateur Rifle Club. Mr. Alford stated that his firm had incurred some expense for procuring advertising plates to be published in the report upon the representation that 5,000 copies were to be distributed, and he wished the terms of the contract carried out. On motion, Mr. Sanford was appointed a referee to ascertain the facts of the case, with instructions to report the result of his investigations of the contract. his investigations at the next meeting of the committee.

* IRISH-AMERICAN RIFLE CLUB.—This organization held its annual meeting on Friday last. The following offleers were

elected:—Pres., F. F. Millen; Vice-Pres., Col. Bethel Burton; See. and Treas. Edward Brown; Executive Committee, J. J. O'Kelly, Geu. F. F. Millen, Col. B. Burton, Major P. M. Haverty, Dr. C. J. MacGuire, Capt. Jerome Collius, and Licol. William H. Marphy. It was resolved that the initiation fee should be increased to \$3, and the annual dues limited to \$5. At a subsequent meeting of the Executive Committee it was resolved to hold the first match on Saturday. May 8, at Creeihnour, for the club badge. The conditions adopted for the contest were dislances 200 and 500 yards; two sighting and seven seering shots; weapous, any military rifle. shots; weapous, any military ritle.

THE CALIFORNIA MATTH.—The competition for places on the team, to be composed of members of Co. D. 12th Regt., N. G. S. N. Y., which is to shoot against the California riflemen on June 26th, is progressing rapidly. The contest has mirrowed flown to the selection of the two last men, and these will probably be appointed this week. We have seen some of the scores made, and are confident that in the match previous records at off-hand shooting will be excelled. Mr. Sleeklon J. Kellogg, formorly of the 23d Regt., N. G. S. N. Y., now residing in San Francisco, leas kindly consented to act as impire for the New York team at that side. THE CALIFORNIA MATCH. - The competition for places

THE DEPENSIER BADGE .- We give below a cut of this beautiful badge, which is lo be shot for by members of the National Guard at the next meeting of the American Rifte Association. On the clasp is a portrait of the donor, Gen. J. Watts DePeyster. The circle within the star is filled by a figure of Helios or Apollo, the first archer, shooting from the chariot of the sun. The bow and the ride are represeuled by figures of Daniel Boone and an Indian, on either side, with the ivy and hurrel erowns given for archery at the Olympian, Nemean and Isthmian gumes. A trophy of spears and rifles form the ha

AMERICAN RIFLEMEN ON BRITISH SOIL .- The laws re lating to the bearing of arms in Ireland are so stringent that the approaching visit of American rillemen has been thought of sufficient importance to be brought before the attention of the British House of Commons. From the reply of the Chief Sceretary for Irchand, who also took occasion to remark that all classes would heartily welcome the American learn, it was inferred that the visitors, being law abiding citizens, and not disguised Fenians, no interference was to be apprehended from the authorities, that, if necessary, a special arrangement would be made to seeme their entire freedom of movement and exemption from the formal operation of the law.

NEW RIFLE CLUB. - A new rifle club is about being organized at New Haven, Conn. Several meetings have been held at the armory of the New Haven Greys; a large number have signified their intention of joining, among Them many of the most prominent men of the State.

-An influential resident of Newbern, North Carolina, who has done a great deal toward securing legal protection for the game and fish of his State, mentions the rather strange anomaly that a serious difficulty in the way of complete success lies in the fact that deer are so plenty as to prove a serious annoyance to the farmers, destroying their erops of young peas, beans, &c., and they cannot under-stand what considerations of elemency can apply to these creatures 1

—The Duke of Argyll's new deer forest is about six miles round, has just been finished, and some 200 deer were driven into it lately. The fencing is composed of twelve wires, and is eight feet high, and is quite deer-proof.—Land and Water.

The deer paddock at Blooming Grove Park, Pa., is four miles around and enclosed in the same fashion with a fence of the same height.

Sea and Biver Hishing.

FISH IN SEASON IN APRIL

Salmon Trout, Salmo confinis,

Figure 18 Market.—Fish is in very fair supply, considering the unsensonable weather, the effect of which has been to retard the run of Hudson River shad. A few flue large ones, however, are sold at 75 cents each; Delawares bring 50 cents. One solitary specimen from the Connectient River is reported as having here seen in the city. Cod is plentiful at 8 cents; haldock 8 cents; halibut 20 cents; Potomae striped leass of large size, say 40 ato lis, each, self for 10 cents per pound; smaller sizes, 15 at 8 cents; Callfornia salmaen brings 35 cents; Canada tront, 80 cents; entitivated tront, \$1 to \$1.25 per pound. Smells are not in much demand, although abundant at 15 cents. A few real snappers from Savannah are selling at 20 cents; green turilo are also in large supply, price 20 cents per pound. Terrapin can be had at \$12 per dozen.

The Uolly Fishkhmen's Chun,—Mr. George E. Greene, Fish in Market,-Fish is in very fair supply, consider-

The UGLY FISHRIMEN'S CLUB,—Mr. George E. Greene, President of the New York and Newport Ugly Fishing Chib, has been made the recipient of two elegant bronzo statuettes in commemoration of the unniversary of his birth day. The presentation was made by the members of the Ugly Club, which was organized August 20th, 1865, and received its name from the peculiar expression of the countenances of the members when Mr. Greene caught an enormous dog-slark during the first cruise. The broazes are about eighteen inches in height, one representing a fixing of hundsome fish, and the other representing a laughing uniden displaying a cluster of fruit.

A neat and humorous address was delivered on the oceasion by Mr. J. W. Mars, which was as follows:-

A factor and admorous interess was delivered on the occasion by Mr. J. W. Mars, which was as follows:—

"We herewith present you, on this auspicious occasion, the 1st day of April in the year of our Lard, 1875, and the anniversmy of your leight, with this small token of our esteem and regard, and as a testimonial of your worth as a companion and member of the New York and Newport Ugly Fishing Club. We wish you to accept it as a token of our everlasting frieadship.

"This graceful form, one which you so admire, holds in her hand that which you so much alore, viz.: the fish. We hope that whenever you leave your line in, it will bu in Wash bowl. Sheepshead Bay, or Kettlekatlom, that you may be successful in entething not only sheg-lish and hanitas, but the famous tish which you so much revere, and which is usually known as the C. L. N. Wishing you many returns of the present occasion, we remain, yours truly."

This was happily responded to by the recipient, and speeches referring to the past hishery of the association, its trials and its pleasures, were made by J. H. Mathews, W. W. Starms, Thos. Jackson, John Gaile, P. W. Downing, and others.

ing, and others.

The record of the club shows its heaviest take in one

day, off Newporl, at 780 pounds. The heaviest tantog, (blackfish,) taken last season weighed twelve pounds twelve onnees.

-The magnificent \$2,000 tront rod which we mentioned in our issue of March 11th as being manufactured for Messrs, Abby & Imbrie (but Andrew Clerk & Co.,) for display at the Centennial Exhibition at Philadelphia, enn now be seen at their store, 48 Maiden Lane. As an exquisite piece of workmanship and value it is well worth an examination. Copying our notice, referred to above, " Lac Chasse Hustree," of Paris, France, remarks in its peculiar vivacious style of comment:-

"We learn that M. H. Leonard, maker of fly rods, at New York, has just manufactured one with reel, joints and handle of gold, at the price of—fishermen, ramove your lats—\$2,000; that is, 10,000 fmncs.; that is, at five per cent. 500 frames income a year; that is, at one frame per pound, 500 pounds of fish to eatch during the annual fishing season; that is, at flifty gudgeons to the paund, 2,500 individuals of these lateresting cyprinoids to be cought.

Well, no, however attracting such a fry would be, I would not care to risk paying such a price for it.

HENR CHATILLON."

-A new kind of sport has been opened for the angler. in the capture of flying fish, either with lait or fly. An English naval officer, cruising in the South Pacific, relates his experience in this line in the London Fold. Ho

writes:—
"We were on our way from Payta, Peru, to Callao, and on the day in question the wind had dropped, there being scarcely enough to even ripide the water. A large shod of flying fish kept by us all day, and afforded excellent sport during the afternoon. A variety of bails were employed in their capture—bits of red bunting, small spoon buits, and artificial minnows and flies—the most taking being a large red fly and a small gilt minnow; but all the baits mentioned caught some. In following the minnow through the water the flsh would open both pectoral flus, and poisu themselves for a rush at it. Spreading the flus also had the effect of checking their progress, if their suspicions were aroused by a near inspection of the leait. When kooked they proved very game fish, taking out several yards of line in their first rush, and often taklug a flight in the air, fluc and all.

in their first rush, and often taking a night in the air, line and all.

The motion of this fish under water is peculiar. The tall is its chief means of progression, the large pectorial fins being usually folded and laid along the side of the fish, so as not to be discernible."

-The trouting season opened on the 1st lustant on the Thus far the weather has not keen Thanics, England. very favorable for fishing.

Georgia—Adlanti, April 14th.—The heavy rains have gain flooded the hill country so as to prevent fishing for seekled trout. We wish to start on our trip by the 20th,

when we hope the waters will be within bounds. There is fine trout fishing among the mountains of Georgia.—A. R. E., U. S. A.

E., U. S. A.

Fishing Matters.—The number of fishing arrivals for the week ending April 15th, was nineteen, thirteen from Georges und six from the Grand Banks. The Georgesmen are now bringing in split fish, the aggregate entth for the week heing about 300,000 pounds, and 30,000 pounds halibut. Bank tadding have been in light receipt, the ire out the Bank greatly interfering with fishing operations. The total veceipts have been about 120,000 pounds, which have met with quick sale, al good paires. Several of the flocing operations are not some have come home with very meager force. In consequence it will prace a serious drawback to the halibut fishery, some of the their losing an entire firp. One hundred and diffy four lishermen have arrived at this port the past week, from Nova Scutin. They will all be wanted to man the fishing fleet — Caps. Ann. Advertises, April 16th.

CALEDONIA, Licingsion county, N. Y., April 13, 1875.

Binton Fineral and Stieral

I have been enjoying a little valuon Ashing. I incre not been to Canada, nor to Maine, mer in the Pacific coast, in that I have not been tarenly infler away from lockester, and yet I have engly salmon. What cestatic cuotions purrade the mache's hearst riben his sees the "entit" and feels the "teling," no the hook gurs boine? Then course the ting of nor (un the part of the fish, and I survey his stirry sides with intense satisfaction, as I lift him from the mater with my six oncessor, and drop had in the hom.

Perhaps, Mr. Editor, you think that I am joking. I assure you claimed to know hear I be your off." They are not tame list, either, out of my ponds, atthough I have plenty of sulmon there, but free dentities of the stream, rounding uncontrolled, funcy free, except the fancy for files, which they seem to cal atth supreme satisfaction.

Now, cir, I have alrays supposed, according to accepted outhorties, that the sulmon never look from white in tresh water; that they mally placed with files and reschande cold ment. But have they are, smalloning files and into shift what is going in be dume about this? Samething is exhibited cold ment. But have they are, smalloning shest and mile schemach cold ment. But have they are, smalloning shest and into the first what is going in be dume about this? Samething is exhibited uncertainty in the American Fish Culturites Assormation? You still allow that it is not a thing to be tolerated at ail, that these sulmon sampli, in this Christian country, go knocking their heads against all prepatiens of hearned men, nelling contrary to all authority, and behaving in this ancientaged manner.

I bey of you, Mr. Editor, in the interests of cell behaved affishion in general, just to dray them a line. However reserved end shy they may have been before, I have no doubt that this will be sufficient to fish which once passes through your bands will ever ent a fig again.

Yours, very truly.

A. S. Collin

FISHING NOTES FROM PENNSYLVANIA

PRILADELPHIA, April 19, 1875.

PHILADELPHIA, April 10, 1875.

The weather is still so cold that the shore dishing at Gioncoster, N. J., has not regularly begun. The "crillers" are mosting with very poor such as, ten firb being the less drift on any one tide up to to day. There has been but little use under of the fly rods yet. Two Philadelphia gentiemen were at Newcelle, Commercial country, but week, and are reported to have rothered with about a hundred trout, from twelve higher down—mostly down.

Souls.

THE RANGELEY LAKES

THE RANGELEY LAKES.

REITER FOREST AND STREAS:—
Allow me in bring in your notice a place where as good fishing can be had as in the Adirondacks. Andheer, Matro, it silmited in the rafley of the Ellis River, and nestles in the indict of high bills, from the siles of which face numerous front brooks. There are three somes where the fisherman mid his family can be entertained—the Greezy House, Pror's, and The The Terts mentioned is the best known to spiritimen, as it has been kept for some years. For the ladies and children there are some heartful drives and scenery, and if they be so inclined they can eatch from they filled falling. Then, but, there is a daily mail from Now York Chy and elsewhere, so that one can keep posted on the affairs of the notsale andle. When the fisherman's true is limited be assuily send word about 10 there his gather suggest, and strikes at once far the Richardson Lakes; there the bargest brook trout in the country are enough. On these takes are two hoteleamps—the Middle Dan Camp, menthment in Gento C. Senti's works, also in Chartes Hallock's "Fishing Tourlat". The other, or Upper Dane trains, is some six inlies further up the lakes, and nithough not as manch heard of so the Middle Dan, yet unany who have fished both places prefur the Upper Dane. To get to either camp from Andover, a bark-hoard to laken for twelve unthe to the arm of the lake. The ride for three miles is over a good country road, but the rest of the way the road is simply excernibe, although the fine natural scenery in the nother empsy for the distance from the miles for the spones are fined buildings. Here a mine tried to make a reflecent, but for the Middle Dam the distance is fair miles. The distance to the Upper Dam is 12 miles row or sail, and what fines walk. Todge through the incomes found fines for the apper lake there are two private camps, unued, our by J. P. Whiteney's comp lake there are two private camps, unued, our by J. P. Whiteney's comp lake there are two private camps, unued, our by J. P. Whiteney's co

Mi. Whitney's comp is at the month of Mosquito brook, where good dishing is had at times. Then comes the Dam Landing, a ten rous above which is Belton's thung.

The Upper Dam Camp is comprised of two diveiling camps and outlances. Due ramp is wholly given over far hed rugans, the other has accorded bed vooms, a diming runa, and a cook room. Cummings, a he cooked has full, set a first class inflir, rousdering his resources. For those celebring to compt out the heat place is at the month of the ricer, admit another from the camp. Last Full there was a comfortable log shandy there; one could she paire his host and get front for breakfast and though going to rous. There is mather camp opposite Whitney's, where parties are allowed to camp, when nobady to at the new camp, but had it is remote from all the heat fishing grounds we round not recommend it. If one atshes to continue his trip by bacting his boat hailed a mile or so, he can launch her on the Big Lake, or Mosculemagnatic. A sail of severa inties before an element stream, where if O Stanley's batching houses are stimited. By gaing up stream, or rather lake, by liven his place and different miles, you reach the Oquossac Clab House. Here partles cam be accummodiated nearly in July and August. This house is hardenlant the punction of Bangeby and Rennebago streams, about half a mile from the take. There is a good camping ground on Little Island, and formerly at Benne's stream. In the upper part of the lake there is a gond camp on Birch Island, when is just at the mouth of Cupsapile River, where we have had very good fishing.

To get those from Near York City, take the alght train for Boston; then lake there is a gond camp on Birch Island, when is just at the mouth of Cupsapile River, where we have had very good fishing. Then the take the figure from Near York City, take the alght train for Boston; then into the eight O'chick A. M. Irah on the Boston and Maine R. R. for Bryant's Pond. On reaching Portland there is a change of cars in the Grand Trank R. R. On arriv

THE FISH OF MINNESOTA.

REALDERD, Chow WING Co., Minn., March 5, 1875.

Entron Forest and Streau;—
Brook front are not found in my of the tribularies of the Mississtppi Ricet above St. Anthony's Fulls, mer so far as we know in any of the tribularies of the Red River, and are common in all the brooks that couly but Loke Superior (hr St. Lamis River he low the falls at Thompson, and possibly above the falls, although me have never seen them there. Fishing in This country is "good" the year round, no regard whitever being puld to the spauring or any other season. The "article men" of the State meet once a year at St. Paul, and "legislate till the core come home;" but he idea that they, the garnered nistom and bruins of the State, should conlescend to legislate about fish is too ridirations for Rich califore, &c., but of what avail is it. Why spend the money for fish spame, when the countless takes and rivers of the State shram with fish that me speared, shot, netted and polyoned every day in the year and up one to interfere? As we crite, a party is just starting for Gill Lake, facelye mates north, to fish fur pickerel and pike-perch through the ice, and daily Indians arrive from the same section, their "tologeans" loaded don'n with fish, some of the pickerel reighing, diessed, facenty in tranty-dire pounds. Spearing in the outler, mirts, and along shore, inferribe ice mults, commences about May ist or last days of April, and It is a wonderfat sight to see the fordes of discreming their may mp the shallouse or basiking in the same on the gravel hanks. It is no trick in all to spear a tragon load of them any day or night for two weeks after May 1st. About the middle or last week of May pike and pickerel will height to take a trail, and new days later hanks. It is no trick in all to spear a tragon load of them any day or night for two weeks after May 1st. About the middle or last week of May pike and pickerel will height to take a tring and new days later than to a doubt. How these trong get level, and a few days later than to a doubt. How

THE COMING BASS ROD.

EDITOR FOREST AND STEEAM:—
Among the recent advertisements in your paper the above attracted my attention. I sent an order to Mr. C. F. Orvis, of Manchester, VI., to forked me the choicest of those he had in stock. Yesterdsy it came to hand, and I cannot say enough in its praise. It is simply perfection, weighing but eight ounces, bequitfully taporing and willowy with plenty

of back, and bending truly from built to tip. The finish is exquisite throughout, and quite equal to the choicest front rods, than which it is somewhat stiffer, and is perfectly balanced; yet light me it is, it has the tequisite strength for killing a large fish. As a manufacturer of rods—if the one I received from him is a fair eample—I can safely assert that Orvis has no superiors and but very few equals. The extremely modest price asked for this beautiful rod must make a good demand fur them, for they supply a want long felt. It is now every generally admitted that the finest rods made are produced in this country, and many urders are constantly being filled here for the foreign dramand. I write from illisinterested motives, samply wishing to call the alternion of bruther anglers to this excellent rod.—Traly yours,—F. C. F.

-In spite of the snow storm the Model Yacht Club of Brooklyn inaugurated the senson on Saturday by exhibiting their handsome little crafts on the lake at Prospect Park. Many new boats, averaging five feet in length, have been built during the Winter, among them are many flyers,

-The yacht Eva, of the New York yacht squadron, has arrived at Savannah from the Florida coast, and will remain in southern waters until May.

Our Philadelphia correspondent writes:

Our Philadelphia correspondent writes:

The yachtsmen are not doing much yet, except in the way of getting rendy. The first regutta will be given by the Philadelphia Yacht Club about the last week in May. The Leary, Bayley, Eggleton, Stemmel and Kleintz, all of which gained considerable notoricty last season have been overhauled. Nathauiel Moore, of Chundra, N. J., has built a new yacht after the model of the Chumpion of Baltimore; 15 feet long; 6 feet beam, to varry 80 yards af canvas. She will be called William J. Kennedy. He has also built the Schooner Yacht Pairy for Thomas Hall Furemun. She is 20 feet long, 5½ feet beam, and said to be the most perfectly modelled yacht ever built in this city. She will be launched in a few days. There will be mathing new in row ing until next Saturday.

AN AMERICAN VIEW OF ENGLISH ROWING.

M. Julian Hawthorne, who—if not yet in possession of as lofty a literary position as his revered father, still exhibits talents furabove mediocrity—has contributed to the columns of the Herald an elching of the late University Boat Race, which is not only graphic in detail, but contains an announcement of such interest and encouragement to American oarsmen as to be worthy of more than a passing notice. notice. We are ignorant as to the right of Mr. Hawthorne to be considered an authority on rowing matters, but it is fair to assume from his Harvard experience, opportunities

for to assume from his Harvard experience, opportunities for observation on both sides the water, and the facility of his description, that he is thoroughly au fait.

Abandoning the idea of seeing the race from one of the three steamers allowed to Iollow in the wake of the contestants, and resisting the importunities of the Thames watermen, our writer took up his position with the plebeian crowd on the bank of the stream near the "Ship" Inu at Mortlake, where notwithstanding that the right idea was Mortlake, where, unlimitstanding that the rising tide was willin twelve feet of him, he escaped a welting and obtained an uninterrupted view of the last three quarters of a mile of the course. Although the distance was Four miles, bolh banks of the river between Pulney and Mortlake were crowded with specialors, and the mayer of the start was bolh banks of the river between Pulney and Mortinge were crowded with spectators, and the news of the start was telegraphed from month to mouth in five minutes. At last they were in sight, the famous "leights" of which we Americans standin such awe. The following description is in

they were in sight, the famous "eights" of which we Americans standin such awe. The following description is in Mr. Hawthorne's own words:

"First came the durk blue, and with them the cheer which had traveled stendily heside them along the banks all the rwn from Putney. They pulled a long, slow, hanging stroke, feathering clean and well together—well drilled, conscientions on smen, thoroughly used to one another; but the starboard stroke was, if I may be permitted to say so, the only man in the bout who really understood rowing. Edwardes-Moss, of Brasenose, is the best oar, and well fiam Simmons, of Harvard, that I ever remember to have seen. He pulled in a spontaneous, beonine, unconcerned style, delightful to contemplate; the others, as if they had learned the art with great pains and lahor, and were still a little auxions lest they should forget and make some mistake. There could be no doubt about their strength and endurance, however. After all those toiling, tagging unles, they pulled in as neatly, and to all appearances as freshly, as though they were just setting out. Only their stroke seemed a trifle tired; he was a small, nervous man, who had put his heart into every pull from the word "Got". They pa sed, and then came the light blue, heavy hearted, despairing, desperate, flabbergisted, the whist oars spattering water at every stroke, hopelessly beaten; and yet, in that hat dizzy moment, Mr. Rhodes called cheerfully to his unhappy crew and quickened them up to a final spurt. He himself was another how oatsman, and looked almost capable, even then, of winning the race on his own merits. Cambridge spuried, in the breathless, disjointed, incoherent style of exhausted men, and so their boat hobbled dismally on. The pisiol sounded and all was over.

I did not see the crew which beat Harvard; but among the sixteen young men who were the flower of Euglish amateur oarsmen this year, two only—Edwardes-Moss and Rhodes—would have been considered fit to row in the same boat with a certain Harvard crew that I reme

send another four over here; train them on English principles; give them a slow, deliberate stroke, and warn them against attempting too much during the first two miles. Unless they have been selected very unadvisedly and managed exceedingly ill. I think they may yet show the flower of England the quickest way from Putney to Mortlake. If they fail, let them keep on trying until they succeed."

THE LATEST THING IN BOATS.—To Mr. Verplanck Colvin, whose exhaustive survey of the Adirondack region has furnished so much that is interesting and valuable regarding our great wilderness, are we indebted for the most practicable, portable boat of which we have yet heard. It is twelve feet long with thin sheet brass prows riveted on, and so fitted us to receive the keelson, prow pieces and ribs when reted is to receive the keelson, prow pieces and ribs when required; the latter being boughs cut in thirty minutes from the nearest thicket. The canvas covering, which is made waterproof by having rubber gum dissolved in naptha rub waterproof by having rubber gum dissolved in naptha rubbed into it, can be rolled up and packed in a truck; the whole forming a light package less than one-half a cubie foot in size, and weighing only ten pounds and eight ounces. Mr. Colvin says that on reaching Ampersuud Pond there was no boat upon the surface, and that upon unfolding his canvas and cutting green rods for ribs, and lashing poles at the sides for gunwales, he soon had a boat floating that exclted the astonishment of the guides, and proved itself thoroughly efficient and comfortable. After use the temporary frame was taken out and thrown away, and the hoat folded and placed in the bottom of a knapsack. The invention, for such it undoubtedly is, while somewhat resembling the bull boats of the Indians, has so much to revention, for such it undoubtedly is, while somewhat resembling the bull boats of the Indians, has so much to recommend it that we trust it may be put in such available shape as to be within the reach of our tourists. This cruft of 12 feet in length carried Mr. Colvin, two guides, a hound and their baggage, the whole weighing one third of a ton, and proved quite seaworthy in a gale on Saranac Lake, as well as affleight in charging a deep in the water. Lake, as well as efficient in chusing a deer in the water,

The following challenge has been issued to the Schuyl-

BALTMORE, April 12, 1875.

The Secretary of the Schuyikill Navy, Philadelphia:

DEAR SIN—The Patapseo Nuvy, of Baltimore, hereby challenge the Schuyikill Navy, of Philadelphia, to row them a race on the Patapseo between the first and tenth days of June next prox.

The race to be rowed in four owed shells, over a course of two miles with one turn. Either Navy to have the privilege of selecting a crew from any or all of the clubs comprising it.

By order of the Patapseo Naval Bourd,

Cans. A. Martin, Secretary.

Action will be taken on the challenge at the next meeting of the Schwylkill Naval Board on the first Monday in May, but it is so near the Open Amatour Regatta of June 16th and 17th, that its acceptance is not at all certain

TTA PRELIMINARIES - REVIEW THE RECENT CONVENTION AND ITS PREDECESSOR.

Syringfield, Mass., April 7th, 1875.

Editor Forest and Stream:—
Though this first Wednesday in April is the day maved by the consiltation of the Colleges' Rowing Association for its "regular" annual convention, the character of the next regata was really decided upon at the so-called "special" meeting, which was held last January in Hartford That meeting, it will be remembered, decided that the college boat races of the coming Summer should be rowed on Saratoga Lake, provided that the local row ing association, which represents the hotel interest at the Springs, wortid give satisfactory assurances for the fulfilment of all the demands of the collegians. The committee of three who were then appointed to investigate the matter have to-day reported that a satisfactory bargulu has been maile by them with the Saratoga people; the convention has accepted their report with great unawimity, and so the decision that was provisionally made in January in favor of the lake is ratified and becomes a certainty tv April. Thesday, July 18th, is appointed for the rowing of the Freshnau and slogle scull races, and the following day for the rowing of the University race, and the boats are to be sent off at cleven o'clock in the forenoon, or at any later hour that offers smooth water before the closing in of darkness. If the weather of July 18th prevents the rawing of the races appointed for that day, they are to follow and not precede the main University race of the day after.

To-day's convention, therefore, was a time and good natured galliering, nobleable for the absence of those manifestations of Intercollegiate jeatonsy and distrust that are wont at such times to amuse the looker on. The presiding officer mas the samo who served so acceptably in January. Mr. W. J. Roberts, of last Summer's Trinity crew, a purlamentarian of such strictuess and sagacity as to make him appear quite a phenomenon in comparison to his predecessors in office.

At the January meeting the etalian of the rival rowing courses at New London and Saratog

II Ferry, a Yale graduate of "72, and for the last two years president of the Yale Nary.

Each of the ten colleges having nominated its candidate for the committee of three, the convention proceeded to vote, with the following result:—On the first ballot the Princeton candidate received the six votes needed to secure an election, and on the fourth the Wesleyan candidate received a like number. Then came the fifth and sixth ballots—Yale, 5; Harvard, 4; Columbia, 1. Then the seventh and eighth—Yale, 5; Harvard, 5. Finally the mark and decisive—Yale, 6; Harvard, 4. Now, inasmuch as the Yale candidate was the only one of the three committeemer of "74 ii hom any of the colleges had nominated, and as he had served with acknowledged efficiency and success as chairman of that regatts committee, his election might have been looked for on the first rather than the nimb ballot, did collegians manage their affairs on common-place histitess principles. Having to choose three representatives to attend to their interests and make successful hargains with the sharpest of business men, ordinary prudence would have ensured the putting to use of whatever experience and executive ability there was within reach

cilion) regard to college connections. But the product of associated indergraduates is not ordinary, and these special college connections apply the ruling explanation of their actions. However, they did chance o secure two men of experience and business sagacity in the persons of dessits. Entits and Fetry; for the creatly of the committeewee's three nonlins' work, as shown in to-day's report of their avianteement specific greenents with the Saratoga managers, indicates that they are persons no whose eyes dust cannot resultly be thrown.

The last act of the convention was to elect an unspire for the race, in he person of Mr. James Watson, of New York, for some time connected with the Spirit of the Times, and well known as a writer on aquatic and athletic sports. If he consents to assume the thankles office, it with the with his eyes fully open to the difficulty if wol impossibility of fulfilling is duffes to the acceptance of everyone. No rowing man of my acquaintuic appreciates more thoroughly than he the foily of expecting a sails, actory result from a breast race of a dozon six cared boats. And I don't think that he will take for gravied the swiftness of Saratoga "unpuresteamer," that can "make twelve miles an hour," with he has that it impossible.

[The above interesting report of the Springfield Conven

[The above interesting report of the Springfield Conven tion reached us loo late for our last issue, but it of sufficient value lo print it in this.]-Eb.

Bational Pastimes.

— The professional billiand tourney of Brooklyn closed on April 15th, Mr. Samuell's receipts at the hall door being less than \$800, while his ontlay was over \$1,500. The following is the full score of the tourney:—

Name.	Garnier.	gosax.	Dion.	Dion.	Ubbesty.	aly.	Radolphe.	ames Won.
Garnier Vignaux C. Dion J. Dion	1 0 0	0 1 0 1	0110	1 0 1	n-0-1	_ = = _ Da	n Ro	89 5722
Uhnesy Daty Radolphe Games Lost	0	1 0 1	0 0 0	0 0 1	0 0 0	1 0	t -	3 2 1

Garnier won the first prize of \$600; Vignaux, the ond of \$400; J. Dion, \$250; Ubassy, \$150; and Cy Dion, \$100; Daly and Rudotphe won nothing. Garmade the best general average.

made the best general average.

Prinsular Cricket Club.—Detroit, April 16th.—The members of this club are wide awake this Spring, and propose to make the season a "hot" one for all aspiring clubs. The grounds, already the finest in the country as far as natural advantages go, we to be still further improved, and the indications are that Detroiters will have alumdant opportunity to see the wickets full this Summer. No matches have been arranged as yet, but the Secretary and Committee of Arrangements will soon be at work, and any club can be accommodated with a game here at any time. The Peninsular will be able to place a stronger eleven in the field this season than ever before; several good players have recently been elected to membership. The following officers have here elected for the ensuing year:—President, J. W. Waterman; Vice President, R. B. Ridgley; Secretary, C. B. Calvert; Treasurer, H. H. Swinscol; Managers, F. Bamford, F. C. Irvine, A. C. Bowman.

—The St. Louis Cricketers are two pen play on St. George's

The St. Louis Cricketers are to open play on St. George's Day, May 23—the St. Putrick's Day of Englishmen. On April 15th, the Athletics played the Electrics of Philadelphia, and won by a score of 19 to 4. In their second game with the Rivertons on April 17th, the Athletics won by the muffin score of 55 to 2. Such batting is no practice at all.

—The professional championship season of 1875 was inaugurated on April 19th, on the day of the Concord Centennial Celebration, on which occasion the Reds of Boston defeated the Blues of New Haven by the appended
score in a score of 6 to 0. Even if the new professional
nine were defeated they won a victory in one sense by muking such a good fight of it against the champions. To
keep the "Reds" score down to six runs was "pretty
work."

their ways, and each having had their little say, they have wisely deferred further controversy on the subject in dispute until the close of the senson. In the meantime the little breeze they have had together will have had the effect to increase the excitement attendant upon their first meetings in the championship arena. They did not act with any such object in view, of course, but that will naturally be the effect. -The Boston and Athletic Clubs have seen the error of

any sten object in view, or course, one can win naturally be the effect.

—The Centennials were to have opened fire on the Philadelphians on April 19th, but it was too cold a day to make it a paying operation, and so this thrst championship game in Philadelphia was postponed to the 21st inst. The games for this week include the following:

April 22.—Boston vs. Washington, at Washington.

April 24.—Philadelphia vs. Athletics, at Philadelphia.

April 24.—Boston vs. Washington, at Washington.

At the annual meeting of the St. George Cricket Club, of this city, held last week, the following members were elected officers for 1875:

President, John G. Dale; Vice-President and Secretary, George T. Green; Treasurer, Charles Vinten. The club expect a busy season and will play matches in Philadelphia, Syraense, Toronto, Montreal and Fall River, iw addition to those with local clubs. George Giles is the club's new professional, and will have charge of the house and grounds at Hoboken. The club expect to open their coming season about the 1st proximo on their grounds at the foot of Niuth street, Hoboken. The club now numbers 143 members, of which 12 are honorary, 111 active and 20 junion.

—The Atlantics opened play April 17th, against a field nine at the Capitoline grounds, Brooklyn; snow stopping play at the close of the 15th inning. The score stood then as follows: Atlantics, 9; Field, 1. Umpire, Clinton of Reliance. The Atlantics played Knowdel, Cassidy, Crane, (not old Fred Crane), Patierson, Nichols, Kessler, Farrell, Clack and Boyd.

—On April 15th the St. Louis co-operatives, "Red Sox," played the Elephants—an amateur team—and won by 14 to 8—a poor score. They have now got Sweasy of the old Cincinnati Red Stockings as Captain.

-On April 22d the Hartfords got the heads of the T. B. F. U. S. Club, of Bridgeport, in chancery, and knocked them out of time to the tune of 66 to 3.

-The St. Lonis "Regulars" met the State champlons, the Empires, at Grand Avenue Park, on April 15th, and the result was, St. Lonis, 25, Empires, 1.

-The Hartfords will play the New Havens in New Haven on Saturday, April 2 th.

Haven on Saturday, April 2 Uh.

Daniel O'Leary, the victor in the hote 100 mile walk, having been challenged by Mullen, the ten mile champion, for a walk at that distance, replies that having no intention or desire of interfering with Mr. Mullen's burrels, he must decline the offer. He, however, is willing to walk any man in the United States a distance of from 100 to 500 miles for the bagutelle of \$5,000.

Dew Qublications. MAGAZINES.

The American Agriculturest for April, in adultion to its usual excellent assortment of indeedlary valuable to the farmer, has several articles of much interest to spartsurem. A process of the Arizona qualt (Lophertyr Gumbell) is beautifully illustrated, and so its mother article on "Sall boats and their Rig." As usual, the number is profusely illustrated.

The Northwestern Pou'try Journal is a mouthly period-lent of handsome appearance, whose well filled and fill stated pages are indicative of the rapid progress made by poultry functors by the region from which it emanates. The class, Mr Boch Ler, to a gentleman of large experience, and binaself a practical for eiter of fools.

large experience, and timisely a practical or compiling his through and volundment treatise on "Paker Playing," is compiling his through and volundment treatise on "Paker Playing," is not treating on the toes of a distinguished monther of our hypometric Comps. Is and for a to say, Certain it is, that with the mass of authority and information more before us, we feel samply qualified to pass upon the totally mortised "Straights," "fulls," and "dashes." The "Paker Payer" is published by the Advance Paddiching Company, No. 12 Worth street, this city.

The Medical Record, as the expendent of the progress of medical science, is of great value to members of the profession, and his reports of hypitals and societies are interesting, as showing the amount of good work done by these charitable histitutions.

of good work hand by these marmine institutions.

The Wisconsin Lumberman, published at Milwankee, is, as its little indicates, the argan of the great tumber interests of our northwestern territory. In addition, however, to its valuable statistical and current trada reports, there is much within its pages which is of interest as showing the rapid growth and great importance of the district framfrom widely it issues.

We have received the first minuter of The American Checker Physe, to be published intomitively Mesers. Kally & Phelan, In the Interest of layers of the gray of draughts. Literature of this description, accompanied by problems, increase the interest in what is really, when stuffed, in intellectual grave, and affords w final for much threside

Now that the yachting season is opening, layers of that muly and invigorating sport will dud much pleasure and instruction in the perusul of the Aquatte Mosthly, and Rady Lee and Jib Downlawe, by an interchange of liters and experiences, will benefit thousands who fraterally. The Aquatte is still edited by Mr. Peverelly, and published by Mr. Brentone, of Union Square. The Aquatte was astablished in June, 1875, and is the only Jaurant devoted exclusively in yaching and bouting.

A Fresh Water Spring at Ska.—From the Evening Post we learn that Lieut. R. D. Hitchcock, U. S. N., Assistant Coast Survey, commanding the Coast Survey steamer Endeavor, under dute of March 18th, has reported to the Superintendent of the Coast Survey as follows, relative to what is appropriately a force what is appropriate. to what is apparently a fresh water spring in the sea:-

to what is apparently a fresh water spring in the sea:—

"We have found—just above Mahansas Inlet, about two and a half writes off shore, in bailinde 20–46. 88" morth, kingitude 84' 12' 15' west, what is apparently a fresh water spring. The water at the surface is violently disturbed for a space of about thirty feet in diameter. The first day we crossed this place the water was rouning up with such violence as to throw the ship from her course, and the second time, although it was smooth, the vessel could be kept on her course but for a short time. The soundings in the centre of the spring gave twenty-three fullions, and a specimen of the bottom gives very clear, broken small shells. The soundines from the centre to the limits of the disturbed water decreased to nine fullwans. The water at the surface is brackish.

"The superintendent has directed a minute examination of the spring and its immediate heality to be made."

This is certainly a marine wonder, but its discovery is not new. Our readers will flud reference to it in "Williams History of Florida," published in 1837, in the following extract which we quate. It is fortunate that what Williams feared might be an error, has been corroborated by such authentic testimony:—

theatic testimony:—

"An account of an extraordinary fountain, bursting from the Atlantic coast, about nine miles scuth; of St. Augustine, and frum one to two miles from the east show at Amstasia Island, has been published on the authority of Captain Sisson. The subject has been mentioned to me several times by persons who alleged that they had not only sailed across it, but had drawn from the frumtain buckets of tolerable drinking water. Fearing that there might have been some mistake in the matter, I have heretafore hesitafed to introduce it. As the subject has now been published from an authoritic source, I think my-elf justified is stating the matter as it has been represented to me.

On approaching the place, says my informant, the sea appeared to be rullied with short waves, as though recks lay beneath the surface, and the enforced the lead to be east, which led him to fear that they were approaching a shoal. As the wind was light be ordered the lead to be cast, and found from seven to eight fathoms quite across the rippling space, that in some places boiled and whirled at Intervals, in a very singular minner. The whole space agitated was, perhaps, six rods across, and the water was considerably deeper here than on the adjacent coast."

—Some forty poultry fanciers, chiefly from Illinois, but including quite a number from lowa, Wisconsin and Mieblgan, have just organized a National Poultry Association, with Mr. Edward L. Lamb, of Chicago, as President, and Charles P. Willard, also of Chicago, as Secretary and Treasurer.

The Yorse and Connse.

New Orleans Races.—Our last is, sue contained the result of the first day's racing of the Louisiana Jacky Club Spring Meeting. On the second (April 13) Winifred was winner of the ull-aged purse, Bonaventure of the Louisiana Stakes for four yenrolls and Granger of the \$400 purse. On the third day Sarvivor won the Club purse, Galway a three mile dash and Harry Felter, the mile heats, for all ages. On the fourth day Century won the selling race; Survivor the mile heats, for all ages. On the fourth day Century won the selling race; Survivor the mile and a half dash, and Harry Felter the mileged purse. On the fifth day Tom Leathers won the hundicap hurdle race, Mary L. the mile heats, and Captain Hutchison the mile and three-quarters dash. The hardle race was the fishest ever run in this country, the time made, 3-47½, being the fastest on record. On the sixth and has thy America wan the Fortuna stakes, Sweet Bay, the Canschation purse, and Falmouth the four mile heats. The meeting as a whole was a great success.

—The Spring meeting of the Galveston Jockey Club is next in order. Extensive

whole was a great success.

—The Spring meeting of the Galveston Jockey Club is next in order. Extensive preparations have been made to accommidate the expected racing stables, and a lively remain is certain. Begins 20th Instant, continuing four days.

—Harmony, the well know label steeple.

continuing four days.

— Hinnigun, the well know Irish steeple-cluse trainer and rider, has urrived in this country, and is to take clurge of Donohue's stable. Mr. Henigan taught Guffney all he knows about steeple-chase riding, and the latter was a stable boy in the former's cau-idoy.

ploy.

—The Newmarket handicap run on the 14th at the Newmarket Craven meeting, was won by St. Leger, Peeping Tam coming in second, and Lord Gowenn third. Ten borses started, nine to two being laid against the winner, four to one against Peeping Torn, who was favorite, and ten to one against Lord Gowenn.

—The Waverley Park Gentlemen's Driving Park Association, of Newark, have reclected John Beylan, President; Charles W. Reeve, Secretary, and N. J. Demarest, Treasurer.

Reeve, Scereinty, and N. J. Demarest, Treasurer.

Anormen Noted House Dead.—The list of noted horses recently deceased who have accomized fame on the course and at the stud, has been augmented; by the death of the most celebrated, harring herlaps his sire, of any of our noted flyers of latter days. Kentacky died on Sanday last at the Minsery Stud Farm, Balcylon, Long Island, As a race horse Kentucky was probably equal to the hest that ever started in a race in this country, but at the studbis success has not been so prominent; some of the "young things" now at Bahylan, may, however, does not heen so prominent; some of the "young things" now at Bahylan, may however, does not here so prominent; some of the glory of the name. More money has probably changed hands in the various purchases and sales of Kentacky than for any other horse ever foaled in America. Mr. Leouard Jerome paid \$40,000, subsequent to which he was resuld for \$55,000, and Mr. Belmout who then owned an interest paid \$15,000 for three-fourils, and became entire owner of the horse. Our space will not allow us to give a record of the performances of the celebrated Kentacky. His race against time which resulted in his retirement from the turf is still fresh in the ududs of horsement.

The invacedate eause of Kentacky's death

men.

'The immediate cause of Kentucky's death with inhumination of the lungs, brought on by a henvy cold contracted some two weeks ago, which, notwithstanding the unremitting care of Mr. G. G. Walden, in clurge of Mr. Belmont's stud farm, resulted in death as stated. The loss is a heavy one to Mr. Belmont and in the first at large, and must enhance somewhat the value of his full brother, Daniel Boane, fooled in 1856, and owned by Cuptain Cattrill, of Mobile, Ala.

Volume 4, Anniber 12, 17 Chatham 5t. (CityHallSqr.)

For Forest and Stream.

The Bill Country of Georgia.

THERE are few among the reading public who have not heard of Tallulah Falls—of Tallulah, "the Thunderer"—the great cataract of the South. Many, too, have heard of "Toccoa," and have an indistinct idea that there is a waterfall there. But if I were to say that it was higher than Niagara, people would be amazed. Yet it has over two hundred feet clear fall, while Niagara has burely one two hundred feet clear fall, while Magara has birely one hundred and eighty six. But then the Toccoa is a small stream, while Niagara is a mighty river. One is a question of height, the other, one of might. Tallulah, too, is a mighty stream, a furious torrent—and as it plunges and thunders down its rocky bed, it rushes through and thunders down its rocky bed, it rushes through and forms a part of some of the wildest and grandest scenery on the American continent. Yet how little know nare these sublime and lovely seeues. I hear some one say: "Oh! They are in Georgia. I learned that in my geography, when I was a child." "Yes, it is so," in my geography, when I was a child." "Yes, it is so," and how few have since thought or heard of them. and now few flave since thought or heard of them. Georgia is a large Slate. Its variety of soil and climate are very great. It is a fertile and rich country. It has its wealth of colton, corn and wine. It has, too, its diamond and gold fields, and its mountains are rich in mineral wealth.

"But! has Georgia any mountains?" "Yes;" and so we come to what is known as "The Hill Country."

"But! has Georgia any mountains?" "Yes;" and so we come to what is known as "The Hill Country of Georgia." The northern and north-western portion of Georgia, embracing the counties of Rabun, Habersham, Hall, Towns, Uniou, Lumpkin, Fannin, Gilmer, Pickens, Murray, Gordon, Cass, Catoosa, Dade, Walker, Chattooga, and Floyd—a tract one hundred and forty miles long by about seventy-five wide—contains some of the roughest, wildest and most picturesque seenery in our land, and this is "The Hill Country of Georgia,"

You will find high mountains, crystal streams, deep, dark gorges, roaring torrents, smiling valleys—in short, the grand and the beautiful in nature in every conceivable form, and the lovers of the rod and gun can find in its recesses some of the choicest sport in the South. It is a wild country, and it will be no child's play hunting and fishing through this wilderness. Game of all kinds is abundant. Deer and bear are everywhere found, and amid its deep fastnesses the seream of the panther is not unfrequently heard. Did you ever hear the serecch of this huge eat close to neard. Did you ever hear the serecch of this huge eat close to you? In the dark and still night, when all, save the sounds of nature, is hushed—your companions sleeping around you—to be wakened by the horrid, cold-blooded, flesh-creeping, unearthly cry of the panther! If you hear it once you will, most assuredly, remember it to your dying day. A party of us, some years ago, while in the woods on a hunling excursion, were fortunate enough to stumble upon an old lumber camp among the mountains. Our hunt had been quite successful, and we had plenty of meat. sut round the fire, toasting venison and drinking coffee-and, later, smoking our pipes and discussing hunting, fishing, the morrow's prospect, and, in short, "everything under the sun," and finally had turned in-spreading our blankets on the slab bunks in the shanty. The logs were not overly close together, and the moss filling had fallen from between the heavy timbers. But this did not matter much, for the weather was not cold, and we did not even build a fire in the cahin, although its wide fireplace of commingled stone, mud and logs offered every inncement. I suppose, as is camp fashion, we had left pieces of cooked meat lying about, and the entieing odor was, no doubt, walted many a mile beyond on the gentle breeze. We were all sound asleep—good healthful natural sleep—and it was about midnight, when, amid the most unearthly cries wo were suddenly awakened and leaped from our berths. It seemed as if a knife had been thrust through

our ears.
"What is it? What's the matter?" and we grasped our weapons. A half cry and whine together, with the bounding of some large animal into the brush, told the tale. A large panther—we saw his immense tracks the next morn-ing—attracted, no doubt, by the savory smell of our re-

past, had stolen up to the almost extinguished fire and prowling about had possessed himself of lying around.

Whether he was dissatisfied with the result, or whether his acute senses, distracted from his scanty repast, had de on a log not six feet from our ears, and given vent to the most unearthly yell on record; and with the result aforesaid—for our hasty rising disturbed his equanimity—he rushed into the thicket and was out of sight hefore we had half gathered our scattered senses. If there was ever a fiendish sound in the woods world, it was when the woods and hills raug with that unearthly scream as we sprang from our sound sleep.

The visitor to the hill country will also find turkeys,

partridges (quait) and squirrels abundant, and the sensons in this elevated region are but little earlier than much further north. As to the fish, I cannot give so favorable an account. As a general thing fish are scarce; suckers, bullpouts and several other varieties are found in most Where the water is clear and cold the chub and streams. bream abound, and most of the lakes and mill-ponds contain "trout," i. c., the black bass of the South. These bass are also found in the rivers whenever they are not obstructed by falls or two steep rapids. East of the Blue Ridge, the mountain or speekled trout (salmo fontinalis) are not found, save in one creek—"Warwoman's Creek"—in Rabun county. On the west side of this ridge, however, they abound. Why this is the case I cannot say, but while I resided in Virginia I knew some gentlemen who On the west side of this ridge, however, had taken the pains to stock some streams on the cast side of the Ridge with the troat taken from the western.

After a year or two, thinking there had been time for an increase, they fished for them most diligently, but failed to As the trout had been netted and transferred with the utmost care, and without loss of time, there must be some natural cause for this. In Virginia, the Roanoke River breaks through the Blue Ridge. Trout are enight in abundance in its head waters; but after it has broken through the Blue Ridge, and received the waters from the eastern slopes, no trout have ever been found in it, so far as I could learn, and I made diligent inquiry. This seems to be the case all the way down from middle Virginia. The cast side bas no trout, save in the stream above meationed. Who shall explain this. Do our pisciculturists or lehthyologists know the cause?

A good rod, with the necessary accompaniments, then, will not be useless, though the rifle or smooth bore will yield the most sport. In the Spring or Fall of the yearsay, as the sportsman goes or returns from Florida-enumber of exceedingly pleasant excursions can be made and over and beyond the game to be found, the heautiful and wild seenery will amply repay the visitor. Tallulah Falls alone is worth the visit, he it Spring, Summer, Fall or Winter. Deer and turkey are abundant. There is an excellent hotel, the best I have ever met in the South outside of the cities. A week will be all too little to explore its various beauties. It is one of the most singularly placed falls I ever saw. As you ride over the country to it, except the usual beavy roll of a mountain country you will see nothing unusual, and you pass along the ridge hearing the sound of the entaraet in your ears, but seeing no sign of any river or fall. The surface of this ridge is comparatively flat, with a gentle incline, even to the very edge, and gives no indication of the terrific gulf below. The reason is that the river has, literally, cut out for itself a gorge or gash through the ridge, whose almost perpendicular walls, in some places, are quite, or more, than a thousand feet in height.

There are three distinct falls, with steep rapids between. There are three distinct falls, with steep rapids between. The "Upper Fall" is almost a rapid, consisting of a series of almost perpendicular leaps, amounting In all to about one hundred and fifty feet. The Middle, or "Tempesta," Fall, as it is called, is about one hundred and forty-five feet high, about one hundred of which is sheer fall, and the rest almost perpendicular. The Lower, or "Hurricane" Fall, is some hundred and sixty or seventy feet in height, and is, again, not a sheer fall, but a steep and almost perpendicular pitch. There are raphis both above

nd below, as well as between the falls.

I have never seen the measurements, but I should callmate the entire fall, from the top of the upper rapids to the bottom of the lower one to be about lifteen hundred feet. The falls proper are about a quarter of a mile upart, following the course of the stream. The walls of the chasm, though almost perpendicular, are in some places slightly terraced, and I noticed the rows of tall trees, one above the other, growing out of the erevices and fastened to the terraces, which seemed to be hardly wide enough for the heavy trunks of the trees. The walls of the gorge here about nine hundred feet high.

The edge of the stream can be approached in hut few places between the upper and lower rapids, though it is contemplated to construct a series of stairs and bridges, in the manner now adopted at "Walklus Olen," from one end to the other. There is now but one narrow bridge across the rapids between the upper and include full, connecting the equaties of Rabun and Habersham. Almost the only other place the edge of the torrent can be approached without using ropes, is at the head of the middle fall, where is a deep, green, slill pool, from the edge of which the water slips smoothly over into the abyss helow. This is called "Hawthorne's Pool," from a visit once made by

One peculiarity of the fulls is that the whole of each fall is white as milk, while the rupids between are dark green. A rainlow glitters in the mist arising from the fact of each fall. The volume of the stream, as estimated some ten rail. The volume of the stream, as estimated some ten miles above the falls, is about sixty yards wide by four feet deep, with a six-mile entrent. The amount of waler is therefore very great. Viewed from the top the elga is so wild and grand us to almost defy description, and yet there are so many small gems of beauty that it would require a folio to describe them. There is the usual "Lover's Leap" and "Venus' Chair." Then there is "Juno's Throne," about fifteen hundred feet, high, and so on militarium. and "Yenns' Chair." Then there is "Juno's Throne," about fifteen hundred feet high, and so on, ad infinitum. Some of the prettiest views are down the gorge. The alternate rapids and pouls, dark and still—the fringe of pines and the rugged walls of everlasting rock behind them—make a scene peculiarly wild and "Swiss" in character. The vultures flying hundreds of feet below you, and sweeping around, with motionless wings, in vast circles, give an appreciation of the idea of height and disof the moon, you lie on the top of the ellif—say the "Lover's Leap"—bathed in the white moonlight. Below, all is of an intense blackness. An occasional glimmer of a white, ghost-like sheet of foam is distinguished through the gloom. By degrees, as the moon mounts higher and higher, cliff and cataract come out little by little, till all la the abyss is light as day. The effect is wonderful. How it would appear from below I know not. I have never yet seen any one bold enough to attempt the deseant of the cliffs in the gorge at night.

At various times accidents have occurred at these fulls; but the victims never were found. Whether there are eaverns under the falls into which they were washed, no one knows, for this grave has never yet given up her dead. Two deer, pursued by five dogs, once dashed down the steep above the middle fall, and, arriving in safety at the rocks below, attempted the crossing of Hawthorne's Pool; but the smooth, swift and treacherous current swept them over the edge of Tempesta. Strauge to say, one of the deer and one dog escaped uninjured. The remains of the deer and one dog escaped uninjured. The remains of the others were never seen more. The only man who ever fell into that stream and escaped with his life, fell in the rapids above the middle fall, near where the bridge now is. As he was swept down, he was thrown into the eddy of Haw-thorne's Pool, near its head, close to the side, and was able to scramble out on the smooth rocks. There are numerous legends connected with these falls, but want of space compels me to forbear. That of the Cherokee malden and her Creek lover, who sprang from the "Lover's Leap," is very

To go to Tallulah, you leave the Atlanta and Richmond Air Line Rallroad at Toccoa City. There a carriage can

be obtained, and a pleasant drive of some nineteen miles to the falls enjoyed. By making a slight detour the Tocena Falls, three miles from Tocena City, can be visited. These are very peculiar. There is but one fall, and that is a shorr one, a little over two hundred feet. The volume of water is small, and when it reaches the basin helow it is, in very dry wenther, all spray. The fulls lie in a deep glen. This gleu is crossed squarely and abruptly by a perpendicular wolf of rock, over the top of which the stream falls. These strata of rock run from northeast to acultivest, but as I am not writing a geological essay, I will only say that garnets are found in the rock; verb arg.

As one lies on the flat top and books over the edge, lite distance seems very great; but when we go helow and look up, the sense of height is lost, owing to the contour of the surrounding hills. The stream runs off from the small deep pool at the foot with but little fall, for the Tocena Falls drop quite to the bottom of the valley.

Far different from this is Stekon Fall. The same wall of rock, some thirty miles to the northeast crosses another valley in the same way, and over the ledge runs a little stream, n branch of the Stekon River, which it joins about half a mile helow. A little mile of n mill is perched on the top of the rock, and the stream runs through a turbine wheel before it is let over the cliff—und this mill grinds the meal of the contray. A couch shell, lying on a log, is the means nseed by visilors to summon the miller, who lives in the valley helow. The little stream, after havieg fuithfully performed its duties, rushes down some shelving, broken ledges of rock, and leaps off into space. Owing to the manner in which the water is broken by the lodges, when it leaps over the cliff, it seems broken into glubules adout the size of grapes. 'These seems to retain their size and shape all the way down, and, as I sat below and looked up, it seemed as II some one above were shoveling over quantities of large glass heads, which

Idius, and is a promident object for a numerou fines around.

North and west of Mount Yonah, in Towns county, is the Hiwassee Valley, which I mention on account of its peculiarity. The valley is long and narrow, with high cliffs on either side. The rond runs close under the cliff, and the Hiwassee River, clear and cold, longs the road its whole length. Across the river is the meadow, varying from a quarter to a mile in width, and beyond this the rocks again. The place is a kind of cañon, and I have heard it called the "Gates of Hiwassee."

To the west of this, again, are the Amikalola Falls. From this road they seem but a thread of silver. They are said to be un irregular set of talls und rapids, about lifteen hundred feet high in all. I have never been able to visit them; they are off the main roates of travel, and even the main roads of the county. They are said to be very heautiful.

even the main roads of the county. They are said to be very heautiful.

But I must bring this hasty sketch to a close, though I have not mentioned a tithe of the heauties of this flill Country. One cannot go assiss, whatever direction he takes after he leaves the railroad. Horses and teams con be obtained in all the country or other towns with but little trouble. Hotels are scarce, though each country town, usually, has one or more. But if the visitor will be salisfied with the rough fare of the country, he will he welcome everywhere. All will be glad to go shooting or dshing with him, for no one is ever so basy as to have no time to spare. In all these counties are men who do little but lunt, and anywhere good guides and good hunters can be obtained.

The means of access to this country are—via Chattanoo-

obtained.

The means of access to this country are—via Chattanooga, over the Western and Atlanta Ruilroad, and via Rich mond, over the Atlanta and Richmond Air Line Railroad. After one leaves the railroad, at almost any of the stations, horses and wagons can be had, and then he can explore at his leisure the beauties and pleasures of the Hill Country of Georgia.

Monmouth.

REMINISCENCE OF THE MUSKOKA COUNTRY.

WE were induced to make the fourney into the Majesty's Dominion by a gentleman from Toronto, who assured us of the superfor trout fishing to be had in the Muskoka country, and in the Trading Lakes. He promised to accompany us on the expedition. So the party was organized, and consisted of four persons, old old trout fishermen, namely: Uncle Alee, John IL, the organizer of the expedition; Lewis, the scientific fisherman, who scorns to use a worm under any circumstances, and myself, the self-constituted historian. I reckon our darkey servant and cook omog the baggage und camp equipage, as the Civil Rights fill hidu't obtain there, to any extent.

We started from home in the latter part of June, (two years ago.) and without unusual incident arrived at Lewistown on the Niagara River, a few miles below the Falls, where a short detention was occusioued at the Custom House. The officers in charge, however, caused us no unnecessary inconvenience. Our haggage was passed at once when our business was made known, and with their hest wishes we stepped ahoard the stemper and in an hour or two arrived at Toronto, and were confortably entertained

nt the Rossin House. Here our Conndian frieud, the barrister, welcomed us. That night the proprietor of a store was roused from his bed and persuaded to fill an order for the commissary department, so that we could be off the problems.

next morning.

At seven o'clock we took the ears of the Northern Rail way. At noon we reached Orilis, there emiarsked upon a stemmer for Washingo, meros bake Couchicing. The country of the property of the p

Louis's boat moored to a rock on the west side of the river, himself out in the stream casting right and left, and each time hooking a tront and frequently taking a pair. Urging Bobby to ply the paddle as fast as possible. I soon landed on the opposite side and began operations. I was immediately rewarded with a large fish, and for a time I also enjoyed most excellent sport and legan to feel repaid for the long journey and incident fatigue. Suddenly, for some unaccountable reason, which all fishermen lanve experienced, the fish ceased to vise to our flies; though we made frequent changes in color, variety and size, they would not notice them. However, we had taken more than our whole party could eat that day. None of the fish were very large, though they averaged more than half a pound each in weight. The cannes were sent hack for the rest of the party, while Louis and I selected a phare for camp, and upon the return of the boats they are unloaded, tents set up, fire kindled and the darkey soon had dinner maler way.

entitis set up, fire kindled and the darkey soon maximumer miller way.

The situation of this camp was a most picturesque one. The text was pictuded upon an immense houslier rising above the falls, and descending in a series of steps at an easy angle to the water below. The view from the loof of the text opened upon a basin in quarter of a mile or more and on all sides was the princeral forest extenders of an analysis of the property of the series of the series of the analysis of the falls were noted to thing to mind and body. The clean rock was the table on which was labi our frequent meals, and its mossy to ourge and sleep, if possible. The flow for the substitute of the property of the prop

lake, where we had caught so many large trout the evening before, but the fish would not rise to our files. They could be seen deep down maler the boats, and the surface of a small lakelet below and the water around as were broken with the constant sphesh of the fish as they Jumped the state of the stat

when we sighted the church steeple in Bracebridge, in a few minntes we were at the hotel again, donned some flunnel underclothes, which the village store supplied, borrowed dry pants from the landlord and sat down to a good supper. We had bardly fluished eating and recounting our adventures when a stamping in the bar-room an nonneed new arrivals, and to our amazement Louis and the Barrister presented themselves, saying Unele Alee and the Captain were not far behind. After we left them they declared that all the mosquitoes in the Canadas settled down on them. The thought of our escape from the tortures they were enduring, and the certainty that we would have a good night's rest, were too much for them. A council of war was held, and committing everything into the hands of the guides, with instructions to follow as fast as they could, they "broke" for the settlements, and here they were, half dead, their faces, necks and ham's covered with blood and their eyes nearly closed. They had adopted no kind of pratection, but rushed frantically forward and were fairly driven out of the woods. Poor Uncle Alce was at once put to bed in an almost delirinus condition. He could not eat anything, and could hardly swallow a glass of hot whisky, which the following day he declared was the means of saving his life. This was practically the closing scene of our Canadian expedition and I conclude hy quoting from a letter written by Uncle Alce, "We caught some fine fist, not very many, but the sufferings we endured from the black flies, deer flies, black gnats and mosquitoes were almost intolerable. We were forced to abandon our encampament and get away. It broke mic down completely. I would not again go through what I have in the list two weeks for ten thousand dollars."

This was written by an old fisherman who had seen mosquitoes and black flies before, but he had never been to the back wools of Canada.

For Forest and Stream.

A PANTHER SERENADE.

THERE were four—A. V. F., F. S., and W. F., from the Bunker Hill ward, and your humble servant of the backwoods, acting as guide—bound for a week's sport whipping the tront brooks in the wihlerness of Vetonott. A day's ride from the "Hub" was the end of travel by public conveyance. A night's rest, and a part of another day's travel by buckboard stage, and the farmhouse was reached where a stop was to be made overnight and supplies procured. Early next morning, with light hearts and heavy packs, we started for a point six miles distant. The intense heat of an August sun poured down upon our devoted heads, causing the boys to wilt like the new mown grass. Our course was by a blind path in the forest, sometimes used by the backwoodsmen in going to a distant settlement.

heads, causing the boys to wilt like the new mown grass, Our course was by a blind path in the forest, sometimes used by the backwoodsmen in going to a distant sottlement.

Between the first named trio was horne, alternately, a small, rusty shot gun, and each in turn would houst the prowess he would display should a bear or other fierce animal stund in the way. Their courage was not put to the test, however, though signs of bruin were frequently seen. Several grouse and rabbits did get up temptinely before the gun, but the only execution done seemed at the breech. Once a halt was minde for luncheon, after which, with lighted pipes, we pursued our way. By mid-afternoon we arrived at a good camping place, near a fine trout brook that I was familiar with. The honor of constructing the camp fell to me, and in a brief time, aided by the others, in bark covered eamp was erected, the brondshie being left open, and the door covered with soft boughs for the come. Near by was a large dead spruce tree, at the base of which a fire was built, and while the others were scenting dry wond for the night I visited the brook to obtain trout for supper. The stream was alive with the real Schoo fontinoids, and in half an hour's time I returned with an abundance. I tumbled to the position of "chief cook and battle washer," and in due time we were sitting around a table formed by a huge slice of spruce bark, on which the ment was hid. The variety of dishes was not large, but that was made np in quality and quantity. First was the inevitable saft pork, at which, in the city, we turn up our dinity nose, but in the wools think the sweetest tit bit, a pile of well browned trout; ditto of potutoes; bread, both white and brown, and picks lighted as the shades of night appeared. A couple of hours at euchre and chatting, a piling on of more wood, in which all bore a part, a "highten," and then to the sweet and fragraut couch. A bad taken the precaution to drop a hall into the gun and place; it have to deep the word of the proper of the prope

are. After breakfast was discussed we lighted our briarwoods After breakthst was discussed we lighted our priarwoods and started for the beaver incudows, a mile distant. Here we soon filled our baskets and started for camp, having tront enough to last as that day. As we neared camp cer tain ominans looks culminated in the declaration, "We won't stay here in the woods another night for all the world." In vain I assured them that there was no danger, that the panther we heard was a roamer, and even then, perhaps, was twenty mil s away; but nothing availed to change their purpose, so packing up our duds we ceremoniously "hurried the bottle" and started for the farmer's tome, where we arrived in the time to surprise our host by our sudden return. Her the youngsters tell the story first, but to incredulous ears, until corroborated by ner, but later, when we returned to the "Hub," they had a more credulous and admiring crowd of listeners, as in the club room the story was related, with embellishments, perhaps, to the members of "Ours."

RALPH RINGBOLT.

NOTES ON TAXIDERMY.

BY JOSEPH H. BATTY.

THERE is scarcely a week passes but what I receive specimens by express, in a semi-putril state, which tax my ability as a taxidermist to mount. Now, any persons who will read this paper on preparing specimens, and follow my direct this paper on preparing specimens, and resolute the sale may be shipped series she countlend and reach the taxider may be shipped series the countlend and reach the taxider may be shipped series the countlend and reach the taxider may be shipped series the countlend and reach the taxider mists who make such assertions of the plant is become and the taxider mists who make such described and the plant and the taxider and in the woods in Winter, without any processor, and found them to be in line couldiby and universelved. Whatever, and found them to be in line couldiby and universelved, whatever, and found them to be in line couldiby and the plant is some of the year, in some localities, arsenic about will not preserve a pelt so the hair will not part from the skin when it is sonked soft and plankle, so that it can be cleaming an it is sonked soft and plankle, so that it can be cleaming the subject have been according to the substity themselves that something more than arceule or arsenical social be essential to their preservation. Birds can be preserved for a row do so and in the sole from the throat it necessary, now custifinite pawdered alum and sale, petr (one part salipetre, sky pet 3, alum) the entire longth of the throat, and push some of it into the crop with a stick, rub a little of the preservative into and around the voe extendibly, draw the entrals from the specimen through a small loic, made longitudinally be vanified to water and put a teappoint of the part with the powder, put a small piece of conton down the trivial, and crant the nostilistic parts of a specimen in the same manner as illevented to the care and the continual preservativ

your skins and meat by slashing animals to pieces with a huge butcher knife.

By making use of the above untersportsmen and collectors can save themselves the laborious work of packing a heavy buck's head or animal from comp to choop, and the prepared skins will mount better than a half putrid head or pelt with loose balr. The modest (*) taxi-lemaist will then be spared the mortification of telling his custome a that their specimens were a little too far gone to mount well when he received them.

—A genius recently altered an old Belglan musket into a fowling piece, and went out to slay a tew fowls with it. The first time he fired it it jumped out of his hands, knocked bim down, chased him across a thirty acre field, climbed through the ience after him, and kieded him, and jumped up and down on him, and the num only saved his need by climbing a big tree, while the gun waited an hour at the foot of the tree for him to come down.

Hish Quiture.

WHOLESALE POLLUTION OF RIVERS.

NE of the most glaring cases of fish poisoning that bas of late come under our notice is furnished by one of our Yorkshire correspondents. It appears that during the latter part of last week a fine tributary stream of the Swale, called the Wiske, in the meighborhood of Thirsk and Northallerton, was poisoned trea miles above its junction with the Swale, and tous of fish were killed. Information has been given to the collect that this dustardly act of the fivential of the river were one mass of dead fish of all kinds and various sizes, viz., tront, dace, furbot (for which this stream is noted), pike, perch, chab, cets, sie. The destruction was so great that a cande of luborers were employed on one estate two days removing the dead fish from tae banks. Cart houls were taken away, and at the Northallerton quarter sessions, on Tuesday last, the Hon, G. E. Luscelles referred to the dastardly alfair, which, he said, was of cognate intrest. the hourarable gentleman said it had been a most wanton act. Earl Calicart agreed with the remarks made by Mr. fascelles, and said that which poisoned lish would also thestray humann life, and therefore this was a very sorious matter. He hoped the Conservators of the Yorkshire Fishery District, or same of the riparian owners, would take the matter up. Mr. Hutton suggested a gubble prosecution as a lesson. The chairman said the riparian owners might take action, either by obtaining an injunction in chancery against the pollution of the niver, or bring in action for damages or praceed on the clause as at an of ollution of streams. It is said the main river was affected by the poison for some distance below, after receiving the Wiske, as humireds of fish were seen floating dead for many unites,—Lomfon Land and Water.

The foregoing statement, painful enough in itself, and Indicative of the most wanton contempt and disregard of rights of property and human health, contains same saggestions worthy of note as to mades of procedure to obtain redress for antrages of this character. The information as to the effect of the pollutions of rivers by gas refuse, and the extent of damage that may be caused thereby, is important and sufficiently starting to suggest the most rigorous pure be be stated by the offense. There is no doubt that an action on the grounds of pullutian would be readily sustained, in asmuch as the poison that kills fish by the cart loud, and disseminates itself through many miles of stream, is not only injurious to persons who drink it, but more than dangerous to buman life; for a medical examination of the cases of disease or death occurring in the tainted locality would undoubtedly show their origin in the poison intro

We have find occasion to allude to this matter before. It was prominently brought to the notice of the American Fish Culturists' Association at its last meeting by Mr. Fred. Mather, who deserves our thanks for thus guarding our sanitary and pecuniary interests. Too much thought cannot be paid to it. There are many streams in the United States that are notably polluted by gas refuse and dye stuffs. The insidious injury that certainly must result from the use of this water as a beverage, as well as from its per-colation into and through the adjacent soil, will some day be used manifest by an analysis of vital statistics that will exhabit results as startling and painful as the National Hotel poisoning at Washington years ugo. The whole subject should demand the affection of the game and fish protective associations that are soon to meet.

GRAYLING SPAWN.—Mr. D. II, Fitzhugh, Jr., who has been so closely identified with the introduction of the grayling, has added another wreath to his laurels. Remembering his failure to get spawn last year, by having Mather come too early and Green loo tate, he lat the correct time this year, and the result is that when himself and party, consisting at Fred Mather and guides, struck the river this year, on the 6th of April, they tained a few tipe fish. They took 12,000 spawn up to the 12th, when they had to leave, as Mr. Mather's engagements required his presence in New York on the 15th They think, however, that they could have taken 100,000 eggs in the next three days. They left 4,000 eggs and fifty fish with Mr. N. W. Chirk, and Mather went home triumphant with 8,000 eggs and forty yearlings,

the latter averaging five inches long.

We have a promise of an account of the Irip, which will be looked for with interest, as this party are the pioneer grayling fishers.

KEEPING SPAWN DRY .- Mr. Fred, Mather has sent us a clipping from the Buffalo Lies Stock Journal, containing asys occasioned him great apprehension two years ago, but which Mr. Monroe Green's subsequent experiments prove to have been groundless, as he has kept them for months in

that state:

"I once had the supply of water fail some time in the night, and the next morning, about nine o'clock, when I approached the house, I did not hear the unsical dropping of a dozen streams, which partly ussures me before unlocking the door that things me right within, and on entering I found the gravet in one triaight dry, and the eggs on top of 11 taking an air bath; this wits tedare I used putch, and instrough leaked enough to dry out when no water ran in. I never knew exactly how long they had been dry, but I had not been there in receipt four hours before, and suppose it must have been at least six or eight hours since the water stopped running.

I cfore going to the dam to ascertain the cause of the stoppage I gave the eggs some water, by filling the distributing trough with water from under the house, and tound that the dry eggs floated, which shows that the water had

been stopped some time. If stopped the water before it had risen high caough to flow over the strips and mix the different lots of eggs, and had then to touch each egg with a wet feather so us to well it all over, when it sank, and there

wet feather so as to well it all over, which were no eggs lost.

These decidents of freezing and drying happened at the commencement of my tront breeding experience, and I watched those batches of eggs with interest, but did not see lost the young were as strong as those from ova that had never met mishaps; there was no way of getting information in those days, especially about anything of an accidental nature.

Fred. MATHER."

VIRGINIA FIRST COMMISSIONERS.—The following gentlemen have been appointed Fish Commissioners of the State of Virginia, the two last named in place of Geu. Fitzlingh Lee and Mr. Dibball, declined:—Dr. W. B. Robertson of Lynchburg, Alex. Mosely of New Kenl County, and H. T. D. Lewis of Stafford County.

The General Assembly of the State, recognizing the importance of the subject, has passed a law for the protection of fish in the James river, of which the following is a brief

Scining or netting in any mauner is prohibited, except as regards the necessities of the Fish Commissioners for propagating purposes. The tailding of dams or obstructions of any kind, for the purpose of taking fish, is forbidden. The placing of line, gas the or the refuse of gas works, or encentus indicas, by any person or corporation, in any of the waters of the James river or its tributaries, or the Kanawin chief, is prohibited. The other sections of the act refer to lines and penulties.

-The township of Brock, in Ontario, Canada, is much exercised over the diminution of bass in the Beaver river, where they farmerly abounded, and which they attribute to the creetion of dams neross the stream. The residents have petitioned the Government to require fish ways to be built by the mill owners; that the fish may thereby be enabled to ascend; but it is argued, per contra, that the bass is not af those species of fish that ascend the streams to spawn, and hence that there is no sense or necessity for constructing the fish ways. However, it is asserted that bass were caught for miles up the river before the obstruc-tions were put in, and that they were so unmerous that they could be thrown out by scoopfuls below the dam at Beaverton, while awaiting an opportunity to ascend the stream. There may be a peculiarity about the Beaver river that is favorable to the well-heing of this fish in regard to food, or as a good locality for spawn deposit, inducing than to seek its anyon waters. them to seek its upper waters. At any rate if the river is frequented by bass, it is better to throw theory aside and insist upon opening a passage for the fish,

insist upon opening a passage for the fish.

Massachusetts Anglers' Association,—An adjourned session of the annual meeting of this association occurred an Friday evening. 16th inst., at their rooms in Boston. President Ordway occupied the chair for the first time since his accident. Several new members were admitted.

Cal. Theodore Lyman and Prof. Alexander Agussiz were unanimously cheeted homorary members. The Committee on the Change of the Trout Law reported progress.

The President explained the manner in which the petition of the association had been treated by the Legislative Committee on Fisheries, and read the laws of many other States concerning close times, showing that the law at present on our statute book was entirely uscless, and a bid for thieving and poncking in other States. The members seemed to feel that Justice had not been done, but they proposed to work with more zeal in the luture in obtaining production for this beautiful fish.

Wulter M. Brackett, Esq., who is an active member, was amanimously invited to exhibit at same future meeting of the association the series of four salmon paintings which he has recently finished, eartitled "The Rise," "The Leap," "The Struggle," and "Landed," and to give the members a "talk" on the respective subjects.

The stringer, and Edithed, and to give the members a "falk" on the respective subjects.

Enter of Pollutto Water on Fisher.—An appeal wis recently prescuted by the fishermen of Munich to the Government in reference to the a lmission of gas water into the river Isur, and its influence upon the fishes of that strenta. Prof. A. Wagner, an eminent chemist, was instructed to investigate the matter and make a report upon it. His article has lately appeared in the Buyerisches Industric-umi-Geocrebehatt, in which he describes a number of his experiments. For this purpose he introduced small fishes into vessels containing well water, different amounts of gas water leing added. The results were as follows:—

In water to which one per cent, of gas refuse was added, the lish put into it became at once very restless, tried to jump out, turned on their backs after they had been in the pollated water one minute, and were dead after the lapse of six minutes. In water containing one half per cent, of of gas refuse, hish became at once restless, floated on their backs after five minutes, and died in thirty minutes. In water to which one quarter per cent, of gas refuse had been added lish became restless after some finne, floated on their backs in one hour, and were dead after an hour and a half. In water containing one tenth per cent, of gas water, the fish remained quiet; one of them showed no change after three hours and a half, but died after the lapse of six hours; no change was noticed in the case of another, a small pike, after seven hours, but it was found dead the next morning.

To reduce the injutions effect, therefore, of gas water into the river at once, as hitherto practiced, it should be slowly rua into it in a thin stream, so as to effect the running in of the quantity during the day in the twenty-four hours, the stream never exceeding five quarts, nor being less than one quart per minute. By this means these small quantities would at once be diluted to such an extent us to become comparatively learninges, chemical

Hatural Historn.

THE GRAYLING OF MONTANA

IN FOREST AND STREAM, May 14th, 1874, appears a letter from Dr. J. F. Head, Surgeon U. S. A. since 1846, and for many years stationed in Montana, pertaining to a species of grayling found there, but of which sufficient was not then known to assign it definite place in the thymailus family. In that letter, which was one of much scientific value, attracting the attention and research of naturalists here and abroad, the following passage occurs:-

"An effort will be made to have some specimens sent as soon as practicable to the Smithsonian Institution, and to obtain notes of careful observations of the colors in the freshly taken fish, a copy of which I will endeavor to send

In accordance with Dr. Head's purpose, a quite thorough investigation of Moutann waters and critical similes of this grayling were secured through the co-operation of army offleers stationed in different parts of the Territory, and the correspondence has been kindly placed in our hands. As will be noticed by the subjoined extracts, specimens and data were forwarded to the Smithsoulan by Drs. Oldmixon and Hart:-

CAMP BAKER, Montana, July 11, 1874.

CAMP BAKER, Montana, July 11, 1874.

Dear Colonel:—

I have succeeded in obtaining some good specimens of the "grayting," which I will forward to the Smithsonian at the earliest opportunity, "The fresbly caught lish exhibits most of the colors described in the "extracts" from Fonest and Stierm you were good enough to rend me, the few exceptions consisting to the back and sides, suggesting (as you observe) a dlugy, or obscure olive, shiding, however, torwards the belly to a bluish white. The dorsal presents, in addition to the spoistisectibod, (what I should term) a bright lake color hordering its extreme crest, and relaining it long after innersion in nicohol. The anal, to many specimens changes abruptly from the light office green, observed in his opper partico, to a very light brown. The rest of the fins are much as Mr. Mather describes them; but in the shimmering and gameing rays of a bright sanlight, all so kaleidoscopte and inconstant as to baffle the keenest eyesight and render any but the plainest description mornifyingly hoveless.

This may, however, be the fish caught, and noticed by you in your communication, it being not unreasonable to suppose, as no pondaexisted with which to assist debborate investigation, that he variety of calor in the closed line excepted your securiny, and to the detection of which Mr. Mather bimself appears to have been indebted from leisurely seeing tim, as he enthusiantically observes, "coming he on the time with his fins all standing." Yours very sincerely,

Geo. Scott Oldminn.

COL, J. F. MEAD, U. S. A.

FORT SHAW, M. T., July 27, 1874.

Font Snaw, M. T., July 27, 1874.

My Dran Doctor:—

I am inclined to think that the colors of the Sun River grayling have heretofore escaped observation, because they have not been purificularly sought for. The brilliant spots and tints are upon the dorsat fin which falls close to the back when the fish is taken from the water, and are only observed when the fin is lifted. In the specimens which I have, Major Jackson (who was fishing with me) observed the brilliant lates, particularly the emerald green, which faded entirely away after death. The appearance the fish presented at time of capture was, back, gray with binish east running into silvery white on helty; elli covers, bue, pluk and yellow blended; dorsal flu, spotted bright red and blue, with emerald green in life; ventral flus, large, and striped with blue and plak; and flu, brown; two greented blue spots under gill covers; V and inverted W spots on the shoulders running in times back to the adipose flu. The number of these vary in different field. The weight of the largest specimen was afno onnes, and total length tweity tuches. The dorsal flu in this fish was four and a baif inches in length and one and a limid height. I have taken the number of rays in the various flus and relil include them in the description which I send to the Sinithsonian Institute, As they will probably be of no value to you I do not luctude them here.

Very truly yours.

CHAS. A. HART

CAMP BAKER, M. T., August 1st, 1874.

DEAR DOCTOR:—
With the exception of the large dorsal flu and the V shaped shots, I an see no resemblance between our dingy fish and the brilliant one decilied by Mr. Mather, although there is no doubt in my mind that they re the same, my experience being that the fish lakes its color from the rater in which he is caught, as I will show when you make your minual our. Yours truly,

11. B. Fireeman.

Mr. C. C. Gilbert, of Fort Shaw, states that these grayling are abundant in the Geyser district, where the camp fed plentifully upon them. "We caught them," he says, "in the Yeilowstone and tributaries (front and grayling on the same string every duy) and in the Madison River down as low as the bridge, on our return to Ellis after leaving the Geyser Basin. In Bridge Creek, near Ellis, no gray-ling were caught, so far as I can recollect, but the trout were large and superior in every respect. In Gardiner's River, near the Mammoth Hot Spring, we took even better frout, but no grayling."

We understood Prof. Gill to say, at the late meeting of the Fish Culturists' Association, that the data herewith given was amply sufficient for purposes of comparative identity.

One item of information respecting trout, that is not exactly pertinent to the subject in hand, should not be omitled here, as it includes an interesting fact relative to jurn-sites in fish. He says: "Between the upper and lower falls of the Yellowstone we caught over forty trout of the hirgest size, but all were 'wormy.' Prof. Hayden reports them not wormy below the upper falls. They may not have been when he was there, but they were in the month of Angust last. The distunce from the upper to the lower falls the Grand Fall of the Yellowstone) is only about one of Angust last. The distance from the upper to the lower falls (the Grand Fall of the Yellowslone) is only about one thousand yards. These wormy front may be extending down the stream; if so, it is a pity, for they are glustly, sickly objects. If the great fall does not destroy this plague it will spread."

This whole middent of the stream of the property of the p

This whole subject of parasites on fish is very interesting, and any knowledge thereof is most important at this time, because of its direct bearing upon fish culture, and in view of the efforts being made to determine the proper

seasons for eating and protecting fish; and we most earnestly solicit for our columns such information as our cor-respondents will be pleased to bestow. Perhaps Pref. Hayden will enlighted us upon the disease noticed as peculinr (?) to the Yellowstone

A PETRIFIED Chuncil.—As a specimen of unique building material, and unsurpassed for beauty, the stone comprising the walls of the Preshyterian church in Mumford, Monroe county, must carry off the pain. Ou the premises of Oliver Allen, Esq., is a quarry or deposit bed of petrified wood, which has been used in its construction. In this stane the fibres of different woods, together with leaves and berries, ferns, tendrils, and vines, have been perfectly preserved, while, mosses, barks, and roots are clearly observable in the larger pieces, grouped together in endless variety and heanty Probably no patisfactions in the world are more perfect than these, and when applied to a whither of this problemental proceedings. The effect must huilding of fair architectural proportions the effect must

-The contents of the stomach of a trout weighing forty pounds, lately sent from Michigan to Wushington, was found to consist of eight distinct fishes, six of which measured twelve inches in length each, and the other two eight inches each, making a total of seven feet and four inches of fish in a front forty-three inches long. The eight lay side by side, the heads and tribs being partly digested.

Subtermanean Fishes.—In boring artesian wells in the desert of Sahara very small fishes, resembling the white huit, not unfrequently occur, which inhabit the waters of the subtermen bed of the desert. They are identical with a species from the waters of the Biskra. The male differs from the female in being transversely barred, so that some nuthors have regarded it as a distinct species. The eyes are well formed, although these fishes live a part of the time in obsenrity. It seems that as far back as 1849 the governor of the onses of Thebes and Gaibe, in Egypt, stated that an artesian well about 105 feet deep, which he had cleaned out, furnished for his table fishes which probably came from the Nile, as the sand which he had brought up from this artesian well was identical with that of this river. In the Sahara, as in Egypt, these fishes were carried away by the waters which filtered into the soil down to the subberranean sheet into which the artesian wells open. Gervais chaims to have established the fact that these subtermean fishes are essentially flaviatile, and that some like them are found in the rivers of Senegal and Mozambique, of Syria and Egypt, of the Iberian peninsuh, and even America. Their fossil representatives are not found in deposits of marine origin, and all that we know occur in lacustrine formations. The existence of these fishes cannot, then, serve as an argument for the presence of the waters of the Mediterranean on the soil of the north of Africa.

One Florida Fox Squirrel, Schaus cincreus. Purchased. One Florida Pouched Rat, Geonys plusti. Purchased. Two Limber-backed Turtles, Putphalis, Frox. Purchased. Ninetien Gopher Tortoise, Xerobates Curolinus.

Eight Yellow Terrupin, Physicanys concinua.

One Leather-back Turtle, Platipellis ferox.

Twenty Scaly Lizzanis, Sceloparus undulatus.

Two Chameton, Anolius Carolinensis.

Two Domnoid Rattlesnakes, Crotalius adamanteus.

One Ground Rattlesnake, Crotalophorus unitarius.

One Moccasin Suske, Auchstrodon piscivorous.

Two Harlequin Snakes, Elaps fulbits.

One Garter Snake, Eutaenia cirtuis.

Two Water Muccasins, Tropidonolus fasciatus.

Three Spreading Adders, Heterodon platyrhinos. Two Spreading Adders, Heterodon ulmodes.

One Chicken Snakes, Ophibolas coccineus.

Five Black Snakes, Ophibolas coccineus.

Five Black Snakes, Buse milon constrictor.

One Black Spider Monkey, Atlets Belschuth.

Two Werger Monkey, Schus Cripucinus.

One One Macaw, Ara arancana.

TANNING SKINS WITH WOOL OR FUR ON.—The follow-

Tanning Skins with Wool or Fur on.—The following method is recommended for private use in skin tanning. Take e., and parts salt, alum, and Glauber salts, and half a pint saltpetre; pulverize and mix. Handle the skins and ruh the mixture in well three or four times a day, the oftener the better. If there is not sufficient moisture in the skin to dissolve the sults put a little water into the latter. We are assured that no moth will ever attack furs, the pelts of which have been thus prepared.

—A negro dialogue, as reported by the Vicksburg Herald;—"How do you do, Salhe, how do you do? I ain't seed you in such a time. How is you, no how?" Sallie, grasping the old darkey's corn stealer, and giving it a hearty shake, "The still a kicking, thank you, Uncle Tom, but I ain't a kicking high. How you getting on?" Uncle Tom, deliberately, "Well, Sallie, I'm still sticking together—in spots,"

Woodland, Harm and Garden.

RAISE YOUR OWN SEED.—It is not an easy matter to obtain just what we want to plant—just the kind of seed we require, but this is the difficulty I would desire you to meet, and which you will in time entirely overcome, so that you will not only have good seed yourself, but reliable seed for your less provident neighbor. Cultivate your own seeds. You then know what you have to rely upon. We would not be nuderstood as saying that there are no good, reliable seedsmen, of whom you might procure pure and excellent seed, but their name is not legiou. From our own experience and dealings with seedsmen, we believe the majority to be honest. They intend to do right, and sell good seed, yet the trouble lies in the ignorance of the seed they sell. They do not grow them; they buy them upon a fair recommendation, and hence they sometimes buy what is worthless, often mongrel, unfit seed for good, and which is given out to their customers all in good faith.

Now, as an illustration (we speak by the book), here is the way you get your mongrel. Two kinds of seed are planted quito near each other, and they mix in the pollen of the blossom, and the result is a mongrel, a cross, called hybrid. These hybrids are sometimes very well of themselves, and often a new fruit or seed variety, partaking of the qualities of both the originals, is the result. You have often secu this in the mixing, as it is termed, of different varieties of corn, the field squash, the citron, and the watermelon. Many curious freaks of nature are the results of a near proximity of seeds.

To avoil all this is within your own hunds. It is a reasonable possibility, attended with success when arriinary care is used. A lesson may be learned of our Arlington farmers and gardeners, which, if observed, auswers in full this whole question of the value of good and pure seeds for garden purposes. Arlington gardeners, for the most part, grow their own seeds, particularly all the staples. You find them to be execedingly careful not to grow in close proximity any two variet

fession.

The secret of their success is the great care they give to the selection of their seeds, the enture of the same, and an ever watchful care to raise, plant, or sell nothing but the most reliable kind of garden seeds.

Go thou and do likewise.

OLLIFOR QUILL.

BOTTLE THE APPLES—Not all of them, perhaps, but as many as you can afford to buy bottles for. Apples are about as near without a market price now as we ever knew, and if preserved by bottling they will really cost but little more than the expense of bottles, and if carefully handled these will last many years. Pure and cook the apples as for the table, and after gradually bringing the bottles to a degree of heat which will prevent breaking, fill with the apples boiling hot and seal immediately as for other fruits. All the cans, jurs or bottles which have been used during the Wiuter for preserving Summer fruits should be refilled now with apples. They make an excellent appetizer in the hot days of Summer, hesides being much more wholesome than fut meats.—New England Farmer.

Care of Breeding Animals.—At this season of the year all the farm stock, and more especially breeding animals—caws and ewes that are to produce young—need particular care and attention. The Winter confluencent and long use of dry forage now begin to show themselves in the condition of the stock, and unless extra care is given, and provender or better feel provided, the animals will lose in flesh and have a hard time to get up "May hill." Feed roots, shorts, or some kind of provender; save the hest hay to give the milch cooks and breeding ewes, and by liberal feed and good care now give the stock a good start, that it may be kept constantly gaining until turned out to the first fresh "bite" of new grass in May. The Winter has given the lay mows a severe test, and it will be necessary in many cases to help out with extra feed or provender.—Maine Farmer.

M. M. B., Syracuse, N. Y.—The insect you send is the Tingis arcusta, a sort at beetle, usually found upon the holishock. At the time of blossoming it is sometimes quite destructive, but may be removed by a solution of warm water, in which sulphur in small quantity has been disg solved.

Addison, Troy, N. Y.—On no account use any liquid fertilizer—such as guano water, soup suds, or monure water of any kind—in transplanting trees. Pure water is the only element to be used, with good, fresh, finely pniverized earth well mixed with the roots, and, if you choose, mulch a little.

OLLIPOD QUILL.

The Borse and Course.

THE RACING RECORD.—This convenient and useful book is issued from the office of the Spirit of the Times, and contains, beside a record of past races, a complete list of events and nominations for 1875, together with those of such of 1876 as are ulready closed. It comprises also the fastest recorded times, colors of riders, and much other information of value to the horseman.

TROTTING.—The first trotting coutest of the season oc-eurred on Monday, at Deerfoot Pack, between Hard Core and Skipper, the match being won by the former after five heats; hest time 2-52.

The first race-meeting to be heard from is that of the Nashville Blood Horse Association, which will begin ou Tuesday, May 4th, and continue through the week. Pools will be sold in this city at the Turt Exchange and Johnson's

The grand Spring trotting circuit, comprising the Point Breeze Park, Philadelphia; Prospect Park Fair Grounds, Brooklyn; Connectiont Stock Breeders' Association, Harttord; Narragansett Park Association, Providence; Beacon and Mystic Parks. Boston, will be shortly receiving the attention of turfmeu. The Point Breeze meeting will inaugurate the circuit, and follow in regular succession in

the order above given. The entries for all the above assectations are to close the same day, viz., Monday, Mey 10th, at 9 P. M.

The Spring meeting at Fluctwood Park will be held on May 18th and continue four days. On the first day \$3,000 will be given to the 2.50 and 2.25 classes. On the second day \$4,500 for the 2.31 horses and double teams. On the third day \$4,000 for the 2.30 and 2.24 classes, and on the fourth day \$4,000 for the 2.30 and 2.20 classes. The entries for these purses will close at Jahnson's pool rooms on Monday, May 10th, at 9 o'clock P. M.

May 10th, at 8 o'clock P. M.

—The stewards will meet at Fleetwood Park at 4 P. M. on the 15th of May to select judges and make the final preparations for the May meeting, and on the day of the meeting the judges will ald the stewards in scelag that the rules are strictly complied with. The rules require that each rither shall wear a cop of the color mentioned on the programme; that the riders shall report to the judges for instructions differ minutes before the time for starting; that while availing for the word the horses shall not turn inside the first ding nor go beyond the second diag; that a blacksmith shall be on the ground on every meeting day, and that the course shall be governed by the rules of the National Trotting Association.

—A spirited trotting horse, owned by Genree Cook and

—A spirited trotting horse, owned by George Conk, and driven by Col. Dickey of New York, his trainer, run away in Main street, Springfield, Mass., a few days ago, and dashed head first through a plate-glass window two the Union afflec, enting himself so severely that he has shore died. Dickey was severely but not fatally injured. The horse was half-first ter to Samigeler, and was brought East from Kansas by Amasa Springue of Providence.

—At a meeting of the Buffulo, Gleveland, Utica, Springfield, Rochester, and Poughkeepsle Association, C. J. Hamlin, Chuirman, and E. B. Graham, Secretary, the following classification of purses was suggested, subject to the approval of the clubs: 2:38, 2:37, 2:32, 2:20, 2:26, 2:23, 2:29, 2:17, and 2:14, the last three classes being left open for future consideration. The date of classing antries was also left for the future action of the associations. The Cleveland Club has approved this action. Mr. John Todd was appointed to confer with the other associations in regard to the details.

—The Terre Haute (Ind.) Trotting Association stables at

-The Terre Haute (Ind.) Trotting Association studies at —The Terre Hante (Ind.) Trotting Association stables at the truck are full of first horses, among them Bloosier Dick, a pacing horse, who paced three consecutive heats at Com-bridge City in 3:20\(\frac{1}{2}\), 3:19\(\frac{1}{2}\), and 3:19\(\frac{1}{2}\), Momreh, Jr., a trot-ter with a record of 2:25, and Harry Mitchell, with a rec-ord of 2:28 are also there.

-Three thousand dullars are offered in purses for a three days' meeting at the Mauchester, N. H., Riding Park in

—A new half-mile track is being built at Lynn, the location being about a sulle and a half from the centre of the city and near the Dunvers tarapike. A small hotel is being built on the gounds, and a large number of box stalls will be provided for the accommodation of horses. The inangural meeting will be held in July.

-Mr. J. G. Rounds of Lynn sold a Winthrop Morrill gelding last week to Boston parties for \$3,800.

e-Mr. J. G. Rounds of Lynn sold a Winthrop Morrill gelding list week to Boston parties for \$3,800.

Raciso is Exuland.—The Sandown Park Spring meeting commenced on the 22d inst.; the most notable event of the meeting, the Grand International Steeplechase, heing won by Galilfinder, who started at the long hids of 20 to 1. The meeting now in progress is the imaginal one of the new Sandown Park as an aristocratic racing ground. The Park is situated at Esher, in Surrey, within convenient distance of Lomban, and its opening from some peculiarities in management, etc., has attracted considerathe attention and comment. The special object of the Club, as set forth in its prospectus, is to promote racing of a high class character, and to this end gate unancy to the extent of 2s. 6d. Is charged, an innovation on the old custom which admitted the great unwashed to the field and excluded them only from stand and panidock. The stands and Club buildings at Sandown are particularly unique and cluburate; the members' stands being built of yellow bricks, relieved by red and black. It is modeled after that at Antenil, and holds about 600 persons. At the back of the stands as claratingly wooded eminence, somewhat after that known as "The Lawas" at Goodwood, has been insteady hid out and planted with rholodemirons and shrutes, at a cost of several thousand dollars. Four miles beyond Esher is the premises of the Coblum Stad Campany, where can be seen that magnificent specimen of a horse, Blair Athol, for whom the company paid £25,600, and whose life is insured for £8,500. Marsyas, Macuroni, Chaltanonga and Wild Onts, all horses with spleudid pedigrees, are also companions of Blair Athol.

THE COMING HORSE.

Milwaukee, Wis., April 25, 1873.

THE COMING HORSE.

Milwaurer, Wis., April 23, 1873.

Entron Forest and Stream:

My attention has been called to a routing horse—"Miszomaria," so hadra mance, signifying "from lourse"—truly no independent the was sired by Paul Jones, he by Vermont Black Hawk; dam, a Bellfounder mare, the is eight years out the spring, stands of free hands three herbes, he a light freethout, with silver mane and tail, owned by E. It. Broadhend, of the city. It so natural guit is a pace, but is brought down to a square trot. At a trial in Fidenzo last season the undo three heats as follows:

119, 220, and 2023. He will be put on the hirf libs coming season, when the best will be put to their attempt to hold their laurels. He was guaranteed to make five heats inside of 222, but at the filed best, as above, he gave swell complete satisfaction had be was purchased on the social \$10.000, the price asked for time. Mr. Broadhead is a wealthy banker in this city, and proposes to give his borses a record that will place him low in the "teens," when he will withdraw the bates from the tair entirely. That he will do it—if no accident befulle him—there to no question to any one who has withmesed his action. It is power, endurance and resolution is the best evidence of surcess. Please bear this lamind, you will hear more of this horse.

—The best result ever attained with any gun in existence is said to have been arrived of a few days ago with a thirty sight ton Woolwich gun, at the proof butts in the Government marshes, adjoining the Royal Arsenal, Woolwich. The gnu was being fired to determine the proper proof charge for guns of its class, and when discharged with 150 putuals of gnoptowiter and an 800 pound projectile it recorded the extraordinary velocity of 1,506 feet per second, the pressure on the inner surface of the gun at the same time remaduing moderate. This result is due to the use of the gun at the same time remaduing moderate.

The Remol.

PRIDE'S PEDIONEE.—In a letter from Mr. Edward Laverack, dated Broughall Cottage, Whitehurch, Shropshire, England, March 31st, 1875, he requests us to make a correction in the pedigree of Pride of the Barder, which appeared in our issue of March 11th. We quote his words: "I made a great error, through defect of memory, in saying Fred II. was the sire, instead of Dush. As I have committed an error I wish it publicly rectified. I send two nedicrees, one of Belle, dum of Pri le, the other of Dash. edigrees, one of Belle, dam of I'ride, the other of Dash,

It is to be regretted that This error ever accurred, as it has given rise to some confusion both here and in England; but Mr. Lawarack's amenda sets the matter right again. The Dash shown in the pudlgree sent in "Old Dash," by Stug, out of Cora, a far preferable sire to Fred II. A critical wither on "the Breeding of Sporting Dogs," in a recent marker of Bell's Life, says: "The most successful setter sire ever known has been Mr. Laverack's Old Dush."

We append the true pedigree, as certified to by Mr. Laverack, to take the place of the one published on page 70, No. 5, Vol. IV.

No. 5, Vol. IV

The Springeread Beach Show, -As we go to piess, the Rod and Gan Club of Springstell, Mass., are holding their flat bench show of dogs. From all we can learn the number of dogs present, as well as gentlemen interested therein, will be very large. The Club have made some errors in the formation of their programme and prize list, and incongruities in classification have subjected them to criticism, but the gentlemen interested in the success of the meeting leave acted according to their best judgment with the material at their disposal, and we have no doubt that from the experience gained on this occasion, another year will class the Springfield Show us among the first events of this description held in the country. Not the least interesting feature of this show will be the presence of the veteran, Mr. Ethan Allin, of Pomfret Centre, Ct., who will exhibit his the old setter "Fau." Mr. Allin has bred his awardess for a period of forty years, and most of them carry their pedigrees back for that space of time to first class dogs. They are bred and broken more particularly for raffed use shooting, and in that particular line are probably without superiors.

THE FOREST AND STREAM PRIZE CUP.-It is rarely one the Forest and Stheam Pheze Cup.—It is rarely one sees a piece of work of this description in which the resigner and engraver have so faithfully and admirably executed the idea conveyed to them, as in the Instance under discussion. The Meriden Britania Co., who manufactured the Silver Ice Pitcher presented by this paper 10 the best dog at the Springfield Bench Show now in progress, has our best thanks for the admirable success of the work, and the Instance of the Company of the Springfield. Mr Hirschflehl, the Company's Superintendent at West Meriden, is entitled to every probe for the very excellent engravings with which the putcher is embellished, the entire oost of which amounted to \$50; making the value of the cap \$75.

THE GLASGOW BENCH Show.—The Scotch National Bench Show, which was held in Burbank Drill Hall, Glasgow, on March 30th, was a great success, the number of dogs being larger, and the quality of them superior to that of any previous exhibition. In the setter class especially was this the case. Mr. Macdom's rod hish setter Mazart, by Plunket out of Twin, took the second prize, Mr. Fletcher's Ruce taking flist. Mozart is the sire of Mohnwk's Banshee, Imported last year.

"Dog on It."—In twenty-one counties in Georgia very careful agricultural statistics were collected last year, in campillance with a State law. In these counties the whites had 35,697 sheep; the negroes barely 265. They owned 4,211 dogs, or about twenty times as many dogs as sheep to supply them with woul for childing and mutton. It is difficult to discover any way in which Southern agriculture may prosper while a savage taste for dogs and gaus are so powerful, not only with persons of color, but with some millions of the white race. In the twenty-one counties referred to, the whites keep seventiers thousand six hundred and ninety-seven dogs.—Southern Watchman.

"MOHAWK" ON DOG'S TAILS.

New York, April 19, 1873.

The point inken by Mr. Fitchel in regard to debat fing dogs whinse talk have been cut, from exhibition in a lench show, is a good one. While I am in favor of follo ving line Regish in me by of their practices in regard to dogs, believing that we will be benefited by so doing, yet I certainly am in favor of cropping the dog's talls, if nothing more than taking off the two last joints. Occasionally there is a dog wince that lides not need it, but with the majority it not only tends to their confort in limiting, but in my opinion improves the animal's appearance. A long tall, curling up at the tip end, to my fancy detracts from appearance quite as nucle as a stubby tail. I there exir me is objectionable. At any rate, in relic shows, or no breach shows, I shall always do it, and on account of it will never har a dog in any show that I have anything to do with. The liea sceins to me perfectly absord that a dog, being sin jerior in every other respect, the fact of his talt having been docked she indicated shows for their animal whose tails all not been cut. If the owner spouls his dog's appearance by shortering ulstail, he does so at his own risk, and of course line dog exhibited shows for bimself. To colores such a rule at the present time would narrow a bench show to a competition between imported dogs, which will not he. All that have read my articles know my preferences for the imported dog, but fair play is a jewel, and the mative dogs must have an equal chance, and can't be debared from competition in any such uniquest and frivotous prefer as this. Therefore, Mr. Fitcher and all others whose dog's talls have hear docked, can count to Watertown with the positive assurrance that the best deg will get the prize, whether his tall is short or long, or whether he is imported or "native here and so the manor born."

PEDIGREE OF THE PURE LAVERACK SETTER DOG, "PRIDE OF THE BORDER."

AS CARREULLY CORRECTED BY MR. LAVERACK, UNDER DATE OF MARCH 31, 1873.

Bred in 1860 by Mr. Laverack, Broughall Cottage, Whitchurch, Shropshire, England. Imported in 1871, by his present owner, Mr. Charles H. Raymond. Pilde of the Border is a white dog, with fiver markings, and by site of Mr. Laverack's celebrated stock and field flow. Bine Prince; Mr. Daintry Hollin's Silk and Tory; Mr. Langston's idno Peter, prize winners at Broutagham and Manchester; Mr. Bickens, blue Dash, and many other highly valued actions.

PRIDE OF THE BORNER. Dash 2d (bine mottled) Belle 2d (lilk, white & lan.)

NAME CLAIMED,

Philadelphia, Pau April 24, 1875

EDITOR FOREST AND STREAM:—
I would claim the name Pride of the Border, Jr. for my black, white and fan dog, sent to me this day by Charles 41 Raymond, Morristown, N. J., said which being out of Laverack Fully by Laverack Pride of the Border.

-Our frequent correspondent "Teal," says he has liceu using Moore's Dog Biscuit, and can recommend them.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME IN MARKET.-To-morrow finishes the ducking sea son, and there ramains nothing for us to quote in the way of game between now and July 4th last English snipe and lary hirds. Some of the dealers declare that brant are now in their finest condition, and that as so little is known of the hubits of these birds, their breeding places etc., that the existing law ought to be so modified as to not apply to them. We saw at the Messrs. Robbius' a few yellow legs and some fine fat Canada lumling in bunches; they sell for \$1. per dozen. English suipe are worth \$3. to \$3.50 per dozen, a great reduction from last week's prices, accounted for by the fact that the market is largely supplied with birds from the West. Wild pigeons are worth \$2, per

-We are in receipt of a communication from a gentleman, who was induced by a representation made through our columns, by a correspondent, to visit a place some four hours jaurucy from this city, for the purpose of duck and goose shooting. He spent two days on the ground and in that time saw one flock of geese in the distance and three ducks. If correspondents who furnish as with information regarding shooting and dishing localities, which we publish solely for the benefit of sportsmen, would confine themselves closely to facts, they would save us annoyance and do themselves more credit. We shall be most cautions hereafter in recommending any particular place for either shooting or fishing, unless the information comes from sources that we know to be unimpeachable. A gentleman who can but occasionally steal a day from his business, and relying upon statements coming direct from the ground, finals himself gulled as regards sport and swindled out of a considerable sum of money, is naturally indignant. We refrain from publishing the letter in question, as the lateness of the season may have had something to do with the want of game, but on the recurrence of a similar case of deceit we shall give the matter free publicity.

—We have received from Messenger Bros., of Boston, a pholograph, en grand tenue, of the Winter hunting party whose experiences in Maine were printed a few weeks since in Fourest and Stheam. No "hearth rug knights" are the members of this group, with their blankets, snow shoes, coon-skin caps, Canadian muccasins, and woodman's axes slung over their backs, surrounded by pelts and deer skins, strings of trout caught through the ice, and such like trophies. Now that we are snugly quartered in our cosy sanctum with the genial warmth of Spring tilling the almosphere, it makes us long to be back to the wind swept shanty with the snow four feet deep in the woods, the thermometer 40° below zero, out of meat, the fire dead, and no -We have received from Messenger Bros., of Boston, a mometer 40° below zero, out of ment, the fire dead, and no matches to be had. The pleasures of picking a flint can be only appreciated then, when the fingers are blue and helpless, and the latent spark refuses to come forth to kiss the lightwood into a warmthful bluze. When the realities of camp life fade away, then the reminiscences kindle brightly The Messenger Brother's are among the most successful caterors of Boston, but though good hunters, we are not aware that they kill all of the game they serve to their

-We have received from Mr. John B. Sage, Recording Secretary of the New York State Sportsman's Association, a Iwelve page pumphlet, containing the names of the win-ners of prizes at the conventions from 1865 to 1874, inchsive, which we shall find very useful for reference.

THE WILLIAMS AND POWELL GUS. -Mr. John H. Wil liams, of Messis. Williams & Powell, of Liverpool, is now in this country with a view of introducing their gams to the sportsmen of America. The average charge for their twelve hore gams is three and a half drachms powder and one and an eighth onnec of shot. We have inspected a unmber of their guns and were much pleased with the

unmher of their gins and were much pleased with the finish and the targets made by them, say 231 pellets in a thirty inch circle at forty yards, with a seven pound gan, and others varying in weight and born, of equal pattern.

—A gentleman in Wilimington, North Carolina, while hunting snipe last Thurstay, killed a large white crane ninety yards by actual measurement, with a double barrel breech loader, ten gauge, made by J. & W. Tolley, and the charge was three and a half drachms powder and one and a quarter ounces No. 4 shot. It is not claimed that this was quarter ounces No. 4 shot. It is not claimed that this was anything more than a chance shot; for no shot gun can be relied on to kill birds at ninety yards; but it shows what a good gun, properly charged, can sometimes accomplish,

-We have received from Mr. Holabird, well known as the maker of shooting suits, a new eartridge belt of his own patent and manufacture, intended more particularly for brass cartridges and to prevent the loosening of the shot wad. Mr. Holahird is also now making a fishing suit,

said to be as excellent for its purpose as his shooting snit.

New Camp Baker. — Everything new and useful to sportsmen naturally finds its way to their notice through Forest and Stream, for advertisers who have used its Forest and Stream, for advertisers who have used its columns unanimously agree that no other medium gives them such good returns for their investment. One article which has interested us more than most others is a Camp Baker, manufactured by Messes. Scovill & Johnson, of alarquette, Michigan. This baker is in general use among the lumbermen, trappers, prospecters and sportsmen of the Lake Superior country, and no camp is without one. Its utility is as apparent as its ingenium construction. It bakes better than a Dutch oven, because its radiators conbakes better than a Datch oven, because its radiators concentrate the heat of the fire upon the viands to be cooked; at the same time it can be folded into a space searcely larger than the iron pan which receives the ment. It behoard which purports to be two volumes of Macauley's History of England, and is of the same shape. For compactness it is a marvel. To the ordinary traveler it would be an acquisition merely as a case for dress shirts which he can put into the tray of his trunk and thus preserve them from being ernsheil. So much is the food which we obtain in the woods—both game and fish—improved by baking, that we cannot imagine how any person who has ever seen one of these utensils could ever remain in the woods three days without one. Its weight adds almost nothing to the pack, and its bulk and shape do not make it cumbersome. It can be seen at our office.

PIGEON SHOOTING.—Ira Paine and Capt. Bogardus have agreed to shoot at 100 single pigeops each for \$1,000 uside and the champiouship of America, on May 15, near New York, but not on Paine's grounds. Paine agrees to furnish the birds free, and allow Bogardus \$50 for expenses,

—The International Shooting Association for the enforcement of game laws of the Stole of Vermont and British Provinces, was organized at Derby Line, Vt., April 10. Officers for 1875: President, D. Mellhiney; Vice President, A. H. Jones; Secretary, J. T. Pfint; Treasurer, C. W. Butterficht; Executive Committee, R. C. Parsons, W. M. Pike, H. S. Taylor, T. Himman, E. L. Nelson, L. A. Young,

MASSACHUSETTS.—Salem, April 26th.—Two suipe sho Saturday; so they are coming. Saw one "winter yellowleg"

yesterday, also saw four woodcock. Migrating birds are coming along slowly. Grounds are in fair order for snipe, but in the alder swamps there is yet much frost. Bay ducks, geese, &c., are numerons in our harhor. Hope to shoot some snipe this week, if I do will let you know. Seven snipe were killed at Newburyport the 19th.

"Tean."

On Saturday, 10th inst., there was organized at Irvington, N. Y., u game club, to be known as the Irvington, N. Y., u game club, to be known as the Irvington Game Club. The following officers were elected: President, Simon Lawrence; Vice President, C. H. Hauptman; Secretary, Lewis Gregory; Trensurer, Fillmore Jewell. The object of this club is the protection of game and perfecting the numbers in the science of shooting. It has among its members some cruck shots and may give some of its senior clubs a brush this full.

MARYLAND — Deep Park - April 19 1825 - Spring by

members some cruck shols and may give some of its senior clulis a brush this full.

MARYLAND,—Deer Park, April 19, 1875.—Spring has failed; its assets are frozen garden seedlings, blue noses, i.e.; its liabilities are too numerous to mention. We were in hopes of having flowers soon, but we have to full back on the blossoms of hope, and even these are in such a sickly coull/ion that we will soon have to throw them out of the window. All the spring birds were here and everything was budding, when a snaw-storm came and sent all these little angels to heaven. A greet many ducks have been killed during the past two weeks, and that is all the sport we have. I have seen in several papers lately an account of Mr. C. S. Abell, of Bultimore, killing in Florida a rattlesnake with sixteen rattles, as though this was something unusual. An Englishman who lived near us killed a rattlesnake that must have had charge of the nursery, for it had mineteen rattles. Many people saw this rattle and it is an undoubted fact. The snake was not a large one, being but about four feel long.

Numtu Carolina,—Wilmington, April 21, 1875.—On the 19th I bagged six brave of snipe in a mendow udjoining our city. It is unusually late in the season for snipe here, which is the only remarkable feature about this announcement. Can it be that the recent cold weather North drove the suipe back to us, or have they tarried longer than usual with us on account of the absence of any warm weather in the South up to this time?

—The time of meeting of the Kentucky State Sports.

the South up to this time?

—The time of meeting of the Kentucky State Sports man's Association has been changed from May 18th to the first Tuesday in June, to avoid conflicting with the Louisville races. The State Association is gathering strength rapidly, and will undoubtedly accomplish great good in its own State and prove a powerful auxiliary in the efforts being made to seeing a general respect and enforcement of laws for protecting came. laws for protecting game

GOOD REPORT OF THE DITTMAR WOOD POWDER.

LANSINGBURGE, April 18, 1875.

Editor Funest and Stugast:—
Having read in your columns many inquirtes about the Dittmar powder, Having read in your columns many inquirtes about the Dittmar powder, Having the pend some experiments made with it by myself, and their results:—
Dithmar—Three drachms pouder (bulk): I mg. No. 8 shot; target 8

their results:—
Dithmar—Three drachins poinder (bulk'; I uz. No. 8 shot; target, 8 buches; dislance, 30 yards: Pattern, 73; ponetration, 10.
Hazard Sen Shooting FG -Three drachins nowiler; I oz. No. 8 shot; target, 8 luclus; dislance, 30 yards: Pattern, 60; penetration, 40.
The above is the average of four shota of each kind, and the noucleastion pulls more leaves of a magnathe, a sample of which brackers. Against the Hazard FG. I tested with it I found an equal practitation, with only about one half the recoit; the smoke and report are greatly diminished, and the deposit, after dischinge, is slight and easily removed, not adhering to the barrel in a caked condition, as some clean powders do. Hoping this util he acceptable to you, I remain, yours respectfully.

B. F. Flower, Jr.

PROPER CHARGES FOR REMINGTON GUNS.

EDITOR FOREST AND STREAM

EDITOR FOREY AND STERAN:

Noticing in your paper an inquiry in regard to the proper load for a Remington 10 hore, 84 pound gun, and having used for a year past a gru of that description, will give you the result of my experience. After careful experiments I flod 3 drachms powder and 14 ox, shot Is the proper load for my gun, and with that load there is no recell whitever, and good pattern and penetration, and is a sure shot on anything between 41 and 75 yards. I use a Bahiwin and and a heavy felt avad over the pourder.

ALLEGUANY,

GAME PROTECTION.

Snnewsbury, April 20, 1875.

Sanewsbury, April 20, 1875.

In ish to mid a few remarks to my already expressed views upon "like desirability of shollshing the shooting of the Wilson snipe in the Spring and the woodcock in the Summer." The allowing these hirds to be killed at these seasons is the means of other kinds of game being destroyed contrary to him, particularly the woodcock during Spring snipe shooting, and quail and ruffed grouse from the heglaning of Sammer cock shouting. I advocate, as a matter of self-indeest to us sportsmen, the necessity of protecting the unipe and woodcock, and in their protection believe that other kinds of game would be protected by having laws probabiling field shooting in the Spring and Sammer. Hall we such laws the fring of games in these three would be a signal to all lineling a desire and opportunity to investigate who the parties were and what they were shooting. "Prevention is easier than cure."

Cheek Conp.

CHECK COND

PAPER SHELLS.

St. Paul, Minn., April 9, 1875.

Editor Fonest and Stream:

We hear much of lale about the relative merits of brass and paper shrlis. Being on the side of the latter, and us one of the min disadrantiges ascribed to Nom is liability to get next and swall, I would offer in the readers of your valued journal the following effectual remedy against wet or damp, having given it a very thorough trial myself: After properly loading underluping your sholls immerse them for a recond or so in a solution of the following proportions: Of gond orange shellac, one pound; alcohol, one galled. This quantity will coat and materiroof a limited of so shells, and drying almost instantly, they can be lumeded alely parked away for use. The exponse is very triding, as the solution on he used over and over, and only requires a blunding now and then from the evaporation of the alcohol. Very respectfully.

(HAS, A. ZIMMEDIAN.

A NEW METAL SHELL.

Sunewsbury, April 20, 1875.

Entroit Forest and Sturam:—
It is ultipleasure that I smable to give an opinion that at last there is a metal shell that Is really a desirable article; sound in principle and well made. I refer to the "Hart shell," manufactured at Newark, N. J. The desirable features are, first—a solid substantial anvil, backed up by plenty of metal in head of shell, insuring durability; eccond—the anvil

and cap recess are made of nickel to obelate corroding. Third—the shell takes like Berdan primer, and has the slotted head. The latter is by far the most convenient arrangement to facilitate the removal of exploded cans, which can be done with the point of a kinfe blade, or saw chappointed steel instrument. The Berdan primer, help a flat wide cap, admits of a large but not deep recess in livad of shell, consequently it is easily kept clean. Fourth—in the tube of this shell the metal is quite thick, residering the bore nearly the size of the paper shells, nulled thick, residering the bore nearly the size of the paper shells, nulled thousider an excellent feature, as it gives less friction to shot in passing through the barrel than do shells will thinner sides, and consequently larger buses. Mure powder and has friction is my blize. The general group of this shell its such as I have silvocated in Fourty and Stream as being desirable for all kinds of shooting from toots in blinds. I consider that metal shells are superior to the paper ones where they do not have to be carried input the person of the sportanen. I hold there is no economy in using metal shells in upland shooting; not from the standpoint of dollars and cents, as one of your correspondents, I am sorry to say, instituated mas the motive, but from their being liable to tripry if unit rarriish in a belt or next made especially far the purpose; and who would wish to he so harnessed intro he can divide. He weight of his ammunition by distributing his paper carridges in the many pockets of a shooting sait, and can throw many the empty shells instead of having to carry thirm.

Auswers Co Correspondents.

W. C. S., Bustan, --Your inquiry answered by malt.
Mess-except, Boston, --With regard to Colvin's cauras bont, see answers elsewhere.
A. L. St. John's School, Sing Sing, --Can you furnish me with a consess such as that "G. N." inquired about? Ans. Yes; can send by

pass such as that "G. N." inquired about? Ans. Yrs; can send by mail.

Subscriber, New Belford,—Will you pirase inform me where I can purchase a fair pair of live quail? Ans. It is too late in the season to procure live quail.

J. D. B., Sedalia, Mn.—I want to get the address of C. S. Brutcher and get one of his broks, if you will hillige me with his address? Ans. See austrer to other quartsts in this calaim.

Jerowz, Philadelphia,—Please inform me who is the lirst authority on the Olympian, Nymean, and Isthmian games? Ans. Grate's or Carlins? History of Grave will give you the information you desire.

C. C. M., Alleghany City.—Is there any guide book to the rivers and bays of the Eastern and Southern States?

Ans. No gaide hinds that we know of. The Government coast survey charts can be bought in this city and will give the information.

G. P. R., Tuscon, Arlzona.—Can you give me the address of a taxidermist in San Francisco, or any one of whom I can liny 1998 for birds and animals? Ans. Chas. A. Allen, Neasto, Marin county, Cal.; Geo. H. Strong, 221 Sansomo, San Francisco.

G. P. R., Angusta, Me.—I see a statement his your paper that Eloy's brown paper shells can be perchased at \$10 per thousand. Will you he kind enough to tell me where they ran he had at that price? Ans. From H. C. Squres, No. I Courtlandt sheet, New York.

R. R. New York —Will you kindly inform me if the Whitney sporting rifle is a good meapon? Ans. The Whitney is rumparmittedy a new rilly, and we have not yet heard of its merits. In failsh it is not equal to some of the others, but we understand the company are soon to turn out finer work.

W. J. Bridgeport, Conn.—Can less than one onnee and one-quarter of

W. J., Bridgeport, Conn.—Can less than one onnee and one-quarter of shot he used in a pigeon match shot under Long Island rules? Ans. In shooting a pigeon match, when the shooters are limited as to shot, any shooter may use any weight or size of shot he chooses, not exceeding

shooter may 180 any weight of each.

The limit.

J. D. B., Mancy Pa.—One of your pairous wishes to know where he can deal to the best advantage in fresh mickerel and other fresh fish?

Aus. Headquarters for fish is at Glaucester, Meas. Communicate with Middlitton, Carman & Co., or E. Blackfood, while-sale dealers, Fullim Market, N. Y. Your querry is not sufficiently explicit.

F. W. F., Brooklyn.—Will you be so kind as to inform me the amount of the fine for shooting rabins at this senson of the year? Ans. Fire dollars ponally for shooting rabins, except to the morths of August, September, October, November and December. Robbit shooting to forbidden in Kings county, except in October, November and December.

C. P., New York.—Plense inform a constant reader how to broaze or

September, October, November and December. Robbit charting is forbidden in Kings county, except in October, November and Dreember.

C. P., New York.—Please inform a constant reader how to bronze or stain a copper powder think, as I have a nice linsk and would like to know how to color it in some way? Ans. The princess is a trady secon, but you may get the Information, or inveryour linsk honzed by applying to the American Flack Cumpany, No. 5: Beechman street.

J. A. W., Montreal.—I have a very handsome pair of spaniels oline months old, and would like a few hints about training them. Would give the information I want, and whore it may be got? Ans. "Plaks, Maichimson and Maylrow" is the hest work upon dog breaking. The price is \$3; we can send you a city.

C. W. R., Montreal.—Will you kindly give price of the "Intest liling in boats," and where it is to ho had; also price am weight of Mr. W. E. Bond's boat, of Cleveland, Ohio? Ans. Mr. Verplanek Golvin's hoats am not on the market. For price list of Bond's boats address W. R. hund, 22 Soulh Water street, Gleveland, Olio. Prices range from \$35 for 12 foot boats, to \$67 for those hid feet long.

E. S. H., Grand Rupids, Mich.—Where can I get a copy of Ransid's or Blacker's "Entomotogy," and at what price? Also C. S. Boutcher's "Notes of a Western Hunting Trip?" Ans. The dirat you will have to seem to Louden her, they are very rare, and sell for though the face. Mr. Houtcher's hook was printed, we believe, for private distribution, but you may procure a copy by addressing the Free Press, Easton, Ps.

L. H. B., Troy, N. Y.—Will you he kind enough to hidarm me how I can obtain a cipy by addressing the Free Press, Easton, Ps.

L. H. B., Troy, N. Y.—Will you he kind enough to hidarm me how I can obtain a cipy of "Notes of a Western Hunting Trip," by C. S. Bonther's Rook may printed, we believe, for private distribution, but you may procure a copy by addressing the Free Press, Can obtain a copy of "Notes of a Western Hunting Trip," by C. S. Bonther's Cut you Inform no wh

cents,

J. A. B., Boston.—Can you give me any information in regard to the disease called "roup" in huns, and what is to be given them to offect a care? Ans. Same faticlers imagine that "roup" is a disease akin to diplitherin. The fowl gapes, raffles itself into a heap, and sents a noise not unlike that of a "rouring" in true. Sulphur in pills or niked in the unit; is suggested as a roundly; or a duse of castor oil. We should prefer trying the effect of pepper, red or black, mixed with corn mech.

for trying the effect of pepper, red on block, mixed with corn ment.

Tallarits, Brooklyn.—I am extremely anxious to obtain a copy of Verplanck Colvin's "Report of the Adironduck Surrey." I have applied to seceral Assemblymen, but without success, as I am not personally acquainted, and I four that the edition is nearly exhausted. Could you let me know where I can obtain the work? If I cannot obtain it as a gift I would like to purchase it. Ans. Address Francis L. Keyes, Clork of Assembly, Albany. Our opinion is, that the edition is exhausted, and the volume bard to obtain.

the volume hard to obtain.

C. W. H., Altoma, Pa.—There are a number of young men in the offices of the Pennsylvania R. R. in Altoma, who want to get up a rifle chult for amusement and mutual improvement. We don't know exactly have to go shouth (what rules of government to make, &c.), and will be very much obliged if you will give us some suggestions as to be organization and best rifles for short runge, say 100 yards to 200 yards, and of such price as will be suited to the limited means of railroad clerks? Ans. Pamphilat with all necessary information sent by mail.

Yousin Anglen, Philadelphia.—1. Is there any place in Pennsylvania where you can field for trund, and do you have to pay any charge for tishing? 2. What are the principal months for fishing? 3. Is J. B. Crook & Co. a reliable firm? 4. What book would you recommend to me to learn more about figh? Ans. 1. Address Miles Johnson, Forkton,

Wyoming county, Pa., and be will get you excellent front dishing in the Matoopony Rivor that is free to all. 3 May lat to Saut. 30th. 3. An old established boune. 4. North's "American Anglat's Book," pitce 55.No; a cheap but good book for a beginner is Routirdge's "Handhook of Angiling," 50 cents. We can get either for you.

C. A. P., Boston.—Can you tell mo hour to raise fan tall doves? Mine lay egys and then desert them, for if they hatch them, they stave the young ones to death. Ans. Fantalis, particularly thin aged, are frequently had seiters. You must keep a few common pigeaus and change the egys, putting those you wish to rear unfer the ruminou little. Which rides crossivered as good as the Sharp or Remington? Ans. Capitain Fulton made the highest score in the International match? Are the Mayuran files crossivered as good as the Sharp or Remington? Ans. Capitain Fulton made the highest score in the International match in the first of the Thirds you mention are all good.

F. W. C., Patersan, N. J.—I am going, to Italifax, N. S., to spend about a mouth dishing. Shall I mant heavy tackle for the laketernit? Ans. Take a trailing line and reel, 2. Will the last week in May be better than the first for fishing purposes? Ans. Yes. 3. Thirteed to go in Grand Pre. 1s there good dishing thereabant? Ans. A few trout in the rivers that empty this Minas Basin. 4. Where is the best place to put up for a day or two? Ans. There is a good hotel at timispare on the Anasphils R. R. but at Grand Pre you will have to lodge afth a Frenchauan probably. 5. How is the weather in Nora Scolla? Ans. Mith in the Interior, and streams opin—a New England clivate.

S. Now York.—Can you give my the address of Verplanck Colvin, or where I can see one of the honts such as he used in the survey of the Addrendack Widerneys; also where can be seen Frank Good's anoccasins? Ans. Address Verplanck Colvin, Abany, N. Y. We are not aware that Mr. Culrin has arranged for the manifacture of his hoad, or rather his canvas covering; for his lidea is to

soon at this office. We do not know of any place in this city where they cau be found.

B. U., Clevriand, Ohio.—Please tell me thin names of two came pictures isteel engravings preferred) for a gentleman's roam. I would like one representing a bunding scene, the other disbing, with also lamiscape background. Ino't want them very large? Ans. White there me plenty of cheap chronics and librographic priots representing hunting and disbing scenes, good sugravings of the same, excepting, of rourse, Landscer's admirating pictures, are scarce. The best no cau anggest for you as matching in tise as "The English Gamekreper," for a shooting and "Stendy, Juliany, Steady," for a dishing sketch. The last is worth \$40 for an artist's groof, and represents an old Scorchann and his son on the way to the samon pool. The prive of the first named is only \$7.50, to be had of W. Schmis, 742 Broadway; size about 28x,0 linches.

J. W. K., Ayer, Mass,—Will you please inform me how and where feare obtain a few pairs in slimp tailed grouse for breeding purposes, also the price? Ans. Sharp-t-sited grouse for breeding purposes, also the price? Ans. Sharp-t-sited grouse for breeding purposes, also the price? Ans. Sharp-t-sited grouse for breeding purposes, also the price? Ans. Sharp-t-sited grouse for breeding purposes has not hear great and the great more altoullon. From our extinctione in shouling this bird was refully convinced that it will do well in many sections of the Middle States, us it takes to cover much in the same manner as our ruffed grouse. States, us it takes to cover much in the same manner as our ruffed grouses. States, us it takes to cover much in the same manner as our ruffed grouses that manulance, we inquired if any live birds could be obtained, but could hear of nous bring caught. We think that urrangements ends he made to obtain a supply next Willer. Will write to asone parties in the Northwest and a certain.

and a certain.

E. B. V., Beverly.—1. Can you direct me to any place in New York or Philadelphia inhere I can examine Dougall's gaus? 2. Do you know any agent of their's In N. V. or Philadelphia if so, will you please give literance? 3. Are J. & W. Tolloy a reliable firm, and are their highest priced ginss equal to those of the hest Euglish makers? 4. Where can 1 get any of Ray's shot concentrators? 5. What hirrech leading action do you consider the strongest? 5. Do you know of any work on Slinoting by J. D. Daugall? Ans. 1. At Schuyler, Hartley & Graham's, No. 19 Mahlen Lane, N. Y., you can purchase a Daugall guit. 2. We do not know that hangall has any agent in this country. 3. J. & W. Toltoy are a reliable firm, and their gues rank among those of the bast English mahors. 1. At any of the guit dealers interesting in our purper. 5. The double under grip is as strong as any. 6. No.

5. The double under grip is as strong as any. 6. No.

J. C. S., Washington.—Will you be kind enough to give an optnion as to the necessary treatment for my setter, symptoms as follows: A dry cough, first heard three months since, and at utatorials of days, sometimes neeks, until the past few weeks, when it has been a daily occurrence. Wel, cold weather at saveral times made cough sound empty; tog has shown no other symptoms of distancer that I can discover. Has suffered no material loss of sphilts during this time. Has no considerable trouble to breathing, but fruths some when running. Gaga necessionally and smedthers cought. I gave two or three emetics, as found in Yount, without permanent tellst, Have also given a preparation for neorms a thout a call. Itog is one year old and in a much fatter condition than he should be. When taken out for exercise makes a anomal similar to that of a man about to expected microscopic sections, and the miles is not often heard again during exercise? Ans. Take Barbadoca at, one dracting powdered spatials, two theathas; extract of buildedones, two scruples; liquorice gooder a sufficiency. Beat into a mass and make in early pills; give four delly. Reduce your dog in desh and give very little meat.

S. F. D., Boston.—What is the meaning of the words "point blank"

s, F. D., Boston.—What is the meaning of the words "point blank range" in rife shooting? Supposing the large of a rife to be held impressed to the properly leaded and first, how far will the half go before it communes to drap? How much does it divides from a straight course at 50 yards, and how much at 100 yards? Is the hore of a ribe supposed to he parallel with the line of the slights, or is it boret as as to give an appared to the grave when the extreme paths of the fare slight to the range of the grave when the extreme paths of the fare slight to tall he with the bottom state of the lack slight; up, he other words, the trajectory of the ball streets and the lattice with the standing slights only. If a gun be held hor rezontably a halt commences to fall after it has gone a certain distance, or when the hilled farce is expended, and the attraction of gravitation commences. As this deciation depends entirely upon the farce with which the iniliet is prapelled, the object attained by express rifles, or those having a low, flat trajectory, is through the use of large charges of howder. We can assume that with the ordinary charge the ball, after healing been one second in the air will have attained a distance of 1,000 feet, and will have failon 69-100 feet. It is to counteract the fulling of the ball that the chevalion by means of moveable slights is given. The bore of a title is parallel with the blue of the slights.

CALENDAR OF EVENTS FOR THE COM-ING WEEK,

THURSDAY, April 29-Bench Show of Dogs at Springfield, Mass.

Saturday, May I - Creedmoor computition for pinces in international cam-Base ball, Boston vs. Washington, at Washington; St. Louis vs. Team-Base ban, nonton vo. Red Stockings, at St. Louis.

MONDAY, May 3-Buse ball, Chicago vs. Keokuk, at Keokuk

Tuesdat, May 4-Board of Appeals, National Trotting Association, meets at Palmer House, Chicagn-Racing, first day, Spring Meeting Nashville Blood Horse Association-Base hall, St. Louis vs. Red Stock.

WEDNESHAY, May 5-Racing at Nashville-Creedmoor, final competi-tion for places in International Team-Base ball, Chicago vs. Keokuk at Keokuk.

MR. BISHOP'S CANOE VOYAGE .- On the 26th ult., Mr. Bishop completed his canoe voyage of 2,000 miles. From the Gulf of St. Lawrence he has paddled through canals, rivers, sounds, and even short stretches of outside water, until his little paper canoe floated on the waters of the Gulf of Mexico.

Through Mr. McGregor (Rob-Roy) the pleasures of canoeing were first made known and popularized, and waters as far distant as those of the Jordan explored with the pad-dle, but it has remained for Mr. Bishop to accomplish a feat which eclipses all previous performances. The in-formation gained of the inland route along our coast must be of great value, and the snecess of the undertaking will encourage our yachtsmen and others to make trips to Flori-da in a similar manuer. His concluding letter in another column will be read with interest.

STEEL AND Inon Tests .- The Commission recently appointed for the purpose of continuing the experiments with steel and iron under Commander Beardslee's dis coveries, met at Watertown on the 15th, adjourned on the 17th to New York, and met at the building of the Associution of Civil Engineers. Many plans and suggestions were presented, the consideration and adoption of which were postponed until the meeting at Watertown Arsenal on Lyne 1st.

-The old fort San Marco, at St. Augustine, Florida, is being put in repair and fitted up, the report goes, for the confinement therein of 300 rebellious Indian chiefs of varlous Western tribes, to keep them from doing more mischief. It could not be put to better use.

VIRGINIA

W E learn from our exchanges that Messrs. J. A. H., St. Andrew, and J. S. Stauley-James, respectively Vice-President and Secretary of the Southside Virginia Immigration Society, and General Jas. R. Slayton, are meeting with a very cordial reception in their travels through Virgikia. At Classe City a public reception was tendered them and resolutions adopted by the magnates of the town, thinking them for their efforts and entineut services in tu-ducing immigration to Virginia, and the settling of the socalled worn-out lands of the State with a thrifty, intelligent, lubor-loving and luw-abiding people. The Chase City college has carried its gratitude so far as to present the above named gentlemen with the diplomas of Doctors of Law, and their speeches on various subjects have attracted much interest.

No one who reads the London papers, notably the Field, can fail to be struck with the numberless schemes for the colonization of outlandish places. Just now it is a portion of South America which is attracting much attention, and notwitustanding the almost heart-breaking reports of returning colonists, bundreds of other unfortunates are flocking to the arid plains of Buenos Ayres or the miasmatic swamps of Brazil. One would suppose that with her im-mense outlying dependencies Great Britain could find under her own flag ample room for all her wandering sous, and that moreover the sporting instinct, which seems innate in every true born Briton, would take them to Australia, a hunter's paradise, British Columbia, or even India, in preference to a country opposed to theirs in polities and reli-gion. But there is something about Colonial life, the closer contact with their own rulers or their representatives, which seems to fret and restrain them. And no wonder, for pure unudulterated snobbishness, your British Colonial office holders, as a class, have no equals. And yet, withal, there seems to be a doubt and distrust regarding this constry that is easier to explain than to understand. It lies in the fact that the masses of the British people are only too willing to give credence to any ill which may be spoken about America or anything "Yankee." One Englishman goes, say to Virginiu, with his mind wrought up to the highest point, meets with some disappointment such as might befall any settler, and immediately writes back that Virginia is a lambug and all Americans frauds. While the same thing said of Buenos Ayres would attract no notice. We have seen several letters in English papers warning settlers against Virginia. And yet there is in that State a large colony of English gentlemen whose numbers are being constantly reinforced. Some are keeping their packs of fox hounds, and all whom we have met have expressed themselves as pleased with their new homes. Certainly their forefathers found great attractions in the Virginias, and the bluest blood of Britain labl the foundation for our own F. F. V.'s.

By the way, we have a letter from Captain John M. Taylor, our late Field Editor, who is one of those English gentlemen who have recently settled in Virginia, which we will print here:-

THE "RETREAT," BLACKS AND WHITES, NOTTOWAY CO., VA., April 19, 1875.

EDITOR FOREST AND STREAM :-

EDITOR FOREST AND STREAM:—

I am preparing a paper for yon, giving an account of some of the hest quail, turkey and deer flude in the counties of Dinwiddie, Nottoway, Linenburgh, and the northern partion of North Carolina, all within casy railroad distance of City Point, where you take curs for the happy hunting grounds. The plantation we have purchased gives every satisfaction at present, admitting that novelty is an excellent sance. As rigards birds, the scason is not sufficiently advanced to give a decided opinion. (Thermometer yesterday 21° on the piazza, and to-day a heavy snowstorm; this is not so bad, considering we are on the border of North Carolina.) The quail are indoubtedly abundant, as we have three packs or families (not young hirds) within casy rifle shot of the house. Woodcock proper, none. Suipe (English) few and scarce in all seasons; the plantation heing too much inhand I should judge. Deer abundant; saw two yesterday, also in the adjoining conolies. The foxes and mongret cur hounds, owned by the negroes, are a misance; their music is a crose between a hyenn and a jacknes, with the wall of a whipped car thrown in. Several of these "beauties" came through the plantation yesterday; they scare all game and mask much ery over a little woof. However, I understand that Mr. Connelly owns in fine pack, which at present I have not seen.

The editorial in your journal, referring to English gentlemen in Virginia, has been copied in several local papers and one or two city (Virginia) journals.

Faithfully yours, JNO. M. TATLOR.

UNIFORM GAME LAWS.

GAME laws are as old as the forgotten ages. mountains of Europe arc historical with the warfare between ponchers and keepers from carliest times. To reconcile the game laws with the rights of the dwellers among the erigs where the game hides, has always been a matter of difficulty. Neither lapse of centuries nor the ingrowth of modern civilization has availed to entirely eradicate the primitive notion that game is free to whoever can take it, or that any restriction—ean be legally put upon the time or—method of its taking. Whatever modification of popular opinion, or acquiescence, has been obtained, is due to the teachings of science, more than 10 builiffs and fines. To convince the masses by palpable proof that it is not only politic to give our game creatures an opportunity to propagate their species, but that their flesh eaten out of senson is unwholesome and even dangerous to life, is the Juime object to be attained in order to secure respect for the laws. Then, to make the laws efficient they must be made intelligible and the laws officient they must be made intelligible; not only intelligible as to their purport, but definite as to their application. They should be so adjusted as not to conflict with each other in any given section, or in contiguous sections, to which they are in-

tended to apply, and thereby confuse the law-ahiding or afford opportunity of evasion to the evil-disposed. In a country of great extent, where the funna are the same and the climatic conditions similar, it is desirable and necessary to have the laws identical and uniform, and this end is what those gentlemen who are best informed upon this subject of game protection are striving to scenre.

Uniformity in laws for the protection of game is not a new idea. A uniform close time was adopted fifteen years ago throughout Great Britain, and its results have proved most beneficial. In this country, within the past five years, the attempt has been made to apply this system to all kinds of game and fish, and our legislatures have only to be conced of the wisdom and practicability of the measure adopt it, and thereby settle the difficulties which hedge in this question of protection on every side.

It might seem strange, were it not directly attributable to the covolousness of mercenary hucksters, that an effort is even now being made in Great Britain, notwithstauding the beneficence of the existing law, to vary the close time for salmon in different rivers of the kingdom; a course which, a member of the Fishery Board asserts in London Land and Water, "will, if persisted in, create humanse mischief, and undo much of the good work that has been achieved after many years of labor and core." We quate from the article bodily, for it bears more directly upon the question under consideration than any we have yet seen, showing not only the value of uniformity, but the objec-

question under consideration than any we have yet seen, showing not only the value of uniformity, but the objections to its repeal:—

"One great object for which salmon law reformers string gled hard, was the obtaining uniformity of law regulating the salmon fisheries of the whole kingdom. The difficulties in the way of arresting the downward progress of the British salmon fisheries were immensely increased by the varieties of local and general Acts, which applied to different parts of the kingdom, and to different parts of the kingdom, and to different parts of the same rivers. The Acts of 1801 and 1865 in a great measure cured this defect by establishing one uniform fence time throughout England and Wales, during which the capture and sale of salmon was prohibited. As the killing of game was forbidden between February 1st and September 1st, so the killing of salmon between September 1st and February tst was not permitted. Then came the last Act (1873), under which encu Board of Conservators was empowered (subject to the approval of the Secretary of State for the Hone Department) to make certain bye laws for the regulation of the particular fisheries comprised within its own district. That Act has been in force now little more than a year, and under it codes of bye-laws have been established (and approved by the Government authority) by numerous Boards of Conservators in different parts of England and Wales. The result is that we see alterations in the close time proposed by Boards of Conservators, already sanctioned by the floure Office, in numerous rivers, regulating the close time on one side of a county by one rule, and on the other side by another. Hence, as is plainly abown in your article, an increase of poaching.

"I am not one of those who are opposed to the making of bye-laws by Boards of Conservators: on the contrary, with the exception of the authority given to vary the close time. I think such authority should never have been given. This question stands in allogether a different position, tor whil

the uniformity of close time is broken the whole kingdom is affected, and the efforts to suppress poaching are parais affected, and the entires to suppress poaching are paint-lyzed throughout. With this precedent before us, we of the United States are the better prepared and encouraged to act. Having decided that uniformity is necessary, the next step is to put the matter into the hands of those most competent to devise a plan of protection that will be com-prehensive and suitable—of those in wbose judgment and seicutific intelligence the people can confide, and whose influence will enable them to command the attention of the law makers of the country. All that has been done thus far by protective clubs and associations has been conducive of great good in checking wasteful shughter of game and preparing the masses of the people for the new regime that must obtain; but just as the popular voice is potential in other matters as in this, so must the duty of devising and creating devolve in this, as in other matters, upon its representative men.

INTERNATIONAL ASSOCIATION F PROTECTING GAME AND FISH.

N order to enlist the services of the ablest naturalists of I the United States and Canada, and others who have not hitherto co-operated with the efforts made by the numerous clubs organized for game protection, an association has been quietly formed within the past two weeks in which these men stand promiuent. Every part of the continent is represented in its membership. The co operation of Canada is deemed indispensable to success in securing a thorough protection for game, and uniformity of the game laws between the two countries is not only practicable, but necessary. The preservation of game in Canada is most important to us of the United States, as well as the ereation and enforcement of laws that will prevent game and fish being shipped across the line and sold claudestinely or in open defiance of law. This international movement looks to a general uniformity of the game laws throughout the United States and Canada, where the climatle conditions render it practicable, and has been instituted by the committee of gentlemen whose names are appended to the card below. Memberships bave heen secured solely by personal cauvass, and while it is not con-

templated to create an organization formidable by mere weight of numbers, the eo-operation of any person interested in its objects is invited, and written applications will be received by the Secretary of the Committee:—

INTERNATIONAL ASSOCIATION FOR PROTECTING GAME AND FISH.

New York, April 26, 1875.

New York, April 26, 1875.

By vote of a majority of the Advisory Committee, a meeting will be held in New York City on the inheteenth of May, 1815, at it o'clock, A. M., at Cooper Institute, Room 24, or Geographical Society's rooms, same building, to organize an "International Association for Protecting Game and Fish," whose business it will be to select a competent Board in animalists, fish cultivitets, game breeders, and sportsmen, who shall be empowered to draft mitable laws and submit them to Congress, or duly consiltated Legislative bodies, for approval. The attendance of all who have entered applications for membership is carnestly desired.

(Signed.)

With regard to this movement the New York Times

which has always been foremost in encouraging and aiding any practicable scheme for Game Protection, says:

any practicable scheme for Game Protection, says:—
"The proposal to secure the co-operation of the Canadians, and therewith a uniform system of legislation throughout both countries by which game of all kinds may be protected from destruction, is one that commends itself strongly to public approval, and it deserves all the support that can be given to it, more especially from the urgent necessity, which increases year by year, for more thoroughly attaining the purpose of this society. We doubt very much whether at the present moment there is a sufficient appreciation of its importance."

Of the opinion last expressed we shall be most happy to

Of the opinion last expressed we shall be most happy to disabuse the mind of our worthy contemporary; and perhops the best way to do this is to print some of the more prominent names which we have on file of gentlemen who are applicants for membership to this International Asso-ciation. It will be seen that the subject has engaged much thoughtful attention:

PROTECTION OF GAME.

OFFICE SANDWICH NATURALISTS' ASSOCIATION,
SANDWICH, ILL., April, 1875.

North America has a rich and varied fanna, and it headler. be preserved from the predacious pot hunter and poacher. Protection to birds of the United States and the Dominion of Canada may he so skillfully arranged that shooting may begin at the same time Broughout both countries, and give all the time that any generous and intelligent sportsman of our most valuable game will soon become extinct. mmy portions of the country the opinion is still extant that the fowls of the air, the heasts of the forests, and the fish of the rivers, lakes, and seas belong to whomsoever has the ability at any time to capture them; that govern meuts have no jurisdiction over the game that migrates from one State to another in quest of food and for the purpose of perpetuating their kind; and the numbers who so believe are large. This opinion is strengthened by the general disagreement of hows for the protection of game and the universally lax execution of such laws. Therefore, m the grent "International" imprement for protecting game contemplates a uniformity of action and a universality of application of laws for the protection of game, founded upon scientific basis-upon a knowledge of the untural history of game—a time general acquiescence will likely be seenred

Another opinion prevails, and this is more general than the one just alluded to. It is that every farmer thinks the slmot iug of game of any kind upon his own hunds during the interdicted time is guaranteed to him by right of eminent domain. Now, in drafting laws for the protection of game this feature has been so lenderly haudled that it is an open question, and the larmer always takes the benefit of the doubt. This question should be settled once for all, for it is the scapegoat of the unprincipled and unappreciative, who form ideas of the unconstitutionality of laws favor able to their tastes and inclinations.

What we need is a uniform close time which shall work

a complete protection to all game, fish, fowl, and beasts; so broad and compreheusive as to cover and include all varieties. And while aiming at protection ditring breeding seasons, it would be eminently fit to inaugurate measures that shall prohibit murderous and wholesale cupture by impos-ing heavy penalties, or imprisonment if need be. But the grand difficulty in legislatures which have undertaken to enaet game laws wisely, as the law makers have supposed lies in the fact that they had no knowledge of natural his tory, and hence could frame no bills which would contain clauses covering or providing interdicted periods of cap-lure, for the reason that they were ignorant of their breeding seasons, and thus could not determine accurately those periods. This will be obviated by the "International As periods. This will be obviated by the "International Association," for from this body will cunauate such laws and regulations as are based upon a scientific knowledge of the game to be protected. More than this, the body being composed largely of naturalists it will become a sort of natural history, where, at its annual conventions, the natural history of the famus sought to be protected will be discussed from scientific standpoints, and standpoints, and thus standards of authority will be established and wrought into legislative cuactments, and the people cannot then plead ignorance of these questions. The masses need to plead ignorance of these questions. The masses need to be educated in natural history, which, more than all else, will elevate them above a desire to wantouly capture any living creature while fulfilling a supreme law of nature in the perpetuation of its kind. Besides, all persons ongbi to know that while gestation is going on among animals no bird, fish, or beast should be calen, for their flesh is destilute of all flavor, and, more than all else, it is cruel in the extreme to slanghter them under such circumstances. Zoology furnishes us the grandest field for study and research

-a theme which gives us the highest conceptions of the Creator of the universe, who notes alike the highest and lowest in the numerous gradations of animated nature. In our country we have a funna of such varied excel-lence that all law abiding citizens should aid in its protection, extending, as it does, through all the zones, from the tropics to the poles. We may challenge any other like area of the globe to produce a more valuable or interesting development of the animal kingdom. Whithersoever we may wander, our natural resources for the maintenance of vast and varied species of animal life are found to be abundant, and by excreising judicious bul vigorous protec lion we may vastly increase our game, thereby adding greatly to our food resources. We may inaugurate measures for transferring our game birds from one portion of the country to another, imitating the modern art of fish culture, which is so wonderfully opportune in restocking our barren waters, and which has been so successful in th introduction and acclimation of new species into waters where they were hitherto unknown. Let us all aid in giving protection to these objects, which furnish such agreeable pastime to the weary brain worker, and throw around them such a cordon of defense that no murderous engines or untimely capture shall lead to their extinction.

NAHUM E. BALLOU

-The New Haven Steamboat Company's new and clegant sleamer C. H. Northam, has resumed her trips for the season, leaving Peek Slip at 3:15 P. M., and New Haven at 11:30 P. M. This company contemplates making a landing at 3:15 P. M. on and after May 1st at Twenty-third street, East River, for the accommodation of the public. The steamboat train from New Haven commences running as usual about the middle of May,

SOUTHWEST FLORIDA-NO. 7

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN COMMISSIONE II.

A VISIT TO LAKE OREECHOBEE.

W E left the canoe hearhed, or, more properly speaking, mudded, on the north side of Fish Eating Creek, and steered a course for what we rousidered the hank of the lake. The walking we hand excellent, at hank of the lake. The walking we found excellent, at though not equalling that of Broadway. Beginning at the surface we found one foot of water, and beneath the aque one element diteen increas of black, tenacious musl. Every motion of the legs was ubstructed by lify pads, sputter-docks, lettuce, trailing vines, and fresh water plants in endless variety. Above the water saw grass, rends and rushes seriously interfered with vision as well as instination. Resolved upon reaching the lake, our grand objective point, we trudged on, and having proceeded about two miles reached a large floating island that had been drifted on the marsh during the burrience of the preceding October. Frank sented bimself on the island and vowed that he would "proceed no further." When youth gave out and cried "peccavi," it was time for old fogydou to push alread, so I hid a course for a small tree, on what appeared to have been a floating island, and ofter an impleasant transport two landered words I teached the course for a small tree, or what appeared to have been a floating island, and ofter an impleasant transport two landered words I teached the course covered to the course for the landered words. tramp of two hundred yards I teached the onsis and found growing upon it a symmp oak lifteen feet in helght. By signs and words I directed Billy Osceola to useend the oak; he did so, and shouted "Okecchobee, Okecchobee," chim no relationship to the feline race, but the way I serambled up that juvenile oak was a caution to the cat family. Reaching the upper branches, I was rewarded with a view of the mysterious lake, distant about slx had dred feet. From the time of my first visit to the south coast of Florida, in 1841, I laid been looking forward with pleasure to a period when I should be favored with a view of the lake, and here it was before me. My great desire was to navigate and thoroughly examine its various out lets, and if possible discover a practical boat route to the ocean; but I was disappointed. At some future time, if we can find the congenial companions, we propose remaining the lake rid the Ochhawalm and Klasinance rivers. In an ordinary stage of water we are convinced that a heat could be unvigated through the marsh between the lake and the rapids on the Calonsahatalin. But to the unintlisted the great difficulty would be to determine at what particular point to leave the take. About four humbred feet from the shore we noticed a

very large cypress tree, which would prove a guide for persons searching for the mouth of Fish Eating Greek. From what we could ascertain from the lay of the land (ur, more properly speaking, swamp), and from the statements of Billy, the mouth of the creek is south of the large cypress half a mile. From our point of observation the lake treaded to the south, and we are convinced that in a direct line the slare of the lake is distant from Fort Thompson not over eight or nine miles. Having gratified our carlosity regarding the take, and accomplished all we could umler the circumstances, we started on the home stretch, and although mately reached the cause tirel and exhausted. We would most respectfully recommend a tive mile experience of such walking to Weston when he trains for one of his pedestrian feats. As regards "Al Fresco," he without the least hesitation asserts that he has had enough of Okeechahee swamp experience to last him a lifetime. We have wan-dered in more than one section of the world, and have had some queer experiences, but our janut from the creek to the take and return excelled mything in the past, and convinced as that hunting Seminole Indians must have

been anything hul an amusing and pleasant necupation.

Reaching the eanor, Billy publied and Frank and I amused ourselves ventilating the 'gators that exposed themselves on the banks of the creek. Arriving at Ohl Fort Centre, I visited the large Indian mound while Mr. Carlton birther than any power power transfer. hitched up our bovine friends. I found the mound to he four hundred feet long, one hundred and fifty wide, and about forty high. At a point where some former visitor bud made a small exervation I scratched with a stick and found remains of human skeletons. In our uninion, this mound is worthy of being opened, and I trust that some fature visitar will be amply provided with stores, so us to enable him to spend a few days in the locality and carefully examine it. With the exception of one mound on the east bank of the Caloosahatchie River, thus is the largest we have noticed in the south. Scating ourselves in our springless conveyance, we started for New Fort which we reached about dark. Feeling tired, I resolved upon having a good bed, and by the light of a pine wood fire gathered a large quantity of the Spanish tures (Tillar nusia), hauging in luxuriant festoons from every tree After supper I enrefully arranged my massy bouch and turned in. Old Somnus soon took passessing of the man, and I have reason to believe that I was guilty of some responsible snoring until about midnight, when I was aroused by an unpleasant sensation of burning, smarting, and itch-For a few minutes I made the situation a practical study, and realized the fact that I had discovered some thing new to me under the sun. I soon ascertained that I was covered with insects. I went for the moss, threw it out of the wagon, and selected the softest board to finish I had on numerous occasions during my my night's rest. wanderings suffered from the effects of seed and ordinary ticks, but here was something exceeding all my past experiences in bug operations. To sleep was impossible, so I devoted the remainder of the night to scratching. I have

read of the palience of historic Job, but I have rea believe that he never suffered from a visitation of Florida "red bugs." Upon inquiry, I was informed that my atten-live and industrious visitors were ralled red bugs, and were only to be found on the Spanish moss in the southern por-tion of the State. Our current advice to future wanderers is to give mossy couches a wide berth.

On our return to our bout we prepared a suturating solution of common salt, and with it sponged several times thinly, and at the end of the second day dissolved our connection with Florida red lugs. We are at a luss to deter mine exactly what effort was produced on the bugs by the salt, but we discovered the fact that wherever we had removed the skin by scratching, the effect of the solution

was anything but idensunt.

Starting before old Sol appeared, above the castern horizon, we reached our hoats at four o'clock in the afternoon. Southwest of the lake, nearly to the shore of Churlotte Harber, and from the Calooschatchie River to Peas Crack, a distance of sixly miles, the sportsman will find a beau-tiful prairie, clothed with luxuriant and untritious grasses, different from those of the St. Johns and Atlantic sections. This vast expanse of lunning ground is dotted with "islands," that is to say, speas clothed with live oaks and majestic palms. These islands vary from a lew square rads to fifty acres, and here and there will be found small helts of pinc timber, the islands and helts fornishing ample shelter for game. We were charmed with the equatry, and leeply regretted our inability to compout and rajoy a few weeks' hanting in the neighborhood of Fish Enting Creek. different from those of the St. Johns and Atlantic sections From our own experience, and the slutoments made by reighber parties, we have no hesitation in asserting that this action is an equalled by any portion of the United States for deer hunting or turkey shooting. In prossing the praiic from New Fort Centro large herils of deer were mently visible on such side of the trail, but the effects of amount journeying, and a night's exercise lighting red bugs, revented as from leaving the wagon and attempting to had a deer. Owing to the inequality of the surface, and he protection afforded by the full grass and patches of saw valuetto, there can be approached without difficulty. At he period of our visit the Indians were on their manners and a large way to have unit to Part Thompson, and a large proportion of the elect and liven driven to points a tew miles distant. Since the emoval of the ampority of the Seminales, deer have named and increased on the proirie undisturbed. As an content and increased in the printer initiality of the systeme of the superiority of this section as a hunting round, we need but cite the fact that the Indians residing a the rastern side of the lake and in the Miami region annually visit Port Thompson for Ibeir winter's hunt. With the exception of the few annually destroyed in the wightly lead of Fort. Thompson, but now, I a clear room eighborhood of Fort Thompson by poor Lo, deer roam addisturbed, the grasses are nutritious, climatic conditions avarable, and, as a consequence, the amount of deer in his section is fabalous. This locality is truly the hunter's arrelise, and must be visited to be appreciated. I have aredise, and must be visited to be appreciated. I have obesitation in stating that the still hunter can kill from en to twelve deer duily. If he desires variety, he will find numberless turkeys on the banks of the creek or in the adoining islands; or if disposed to include in fishing, all that cill be necessary is to use a hob, spinner, or fly, and he will soon tire of landing the largest and fattest trout in the

If any one should contemplate a visit to this region w could recommend as a site for his camp a point on the reek ten or fifteen miles west of New Fort Centre. To each this locality the sportsman can take steamer to Char-ston, Savannah, or Fernandina, and railroad to Centr eston, Savannah, or Fernandina, and railroad to Cellar leys; or steamer from New York to Key West. Punta assa man he reached from Cellar Keys or Key West by teamer Emelie, sailing weekly. From Punta Rassa sportsten can ascend the river to Fort Thompson, or take a allock drug from Fort Myers. Mr. Carlton resides two alles north of Fort Thompson, and for \$3 per dug will aruish a conveyance to the creek. But hi find Mr. O.'s esidence after reaching the fort would be the rub. If any cross should desire his assistance a few simple directions right prove valuable. Lamling on the west side of the ver below the rapids a northerly course must be kept, aving the river to the right and the timber to the left. wo miles from the landing place Mr. Carlton's residence all he noticed to the left, near some large pine timber. Ir. C. will he found to be a good guide—kind, sociable, ttentive, and moderate in his charges; in fact, a gentleian whom we can unlesitatingly recommend to the favor-ble notice of sportsmen.

With regard to the Indians, we have only to state that fter the first few days we found them sociable and pleaint neighbors. The females are modest and retiring, and, om what we could learn, are remarkable for chastity. hose we met did not appear to have an appetite for infax-ating liquors, and with the exception of Johanny, a half rating liquors, and with the exception of Johnny, a half reed (part Imlian and part negro), they seemed to be triedly honest. The Indians stated that Jimmy was "holy-ragges" (no good), and we arrived at the same conclusion. We missed a pocket knife, which we had reason to believe immy appropriated. Descending the river, we overtook immy at one of his eather and found one of our spinners tached to his fishing line. He assured as a that he had ound it but his struggent was received over a reasonable. ound it, but his stutement was received cum grano salis. O persons visiting Fort Thompson we can recommend Billy Osceola as a good and attentive guide, and, as far as or observation went, perfectly reliable. Curiosity appears to be a prominent trait of these Indians, and their desire o see and examine everything at times proved annoying. To escape their inquisitiveness we would anchor the boat In mid-channel, and they would seat themselves on the the shore and stoically wait for hours for us to back the

The Indians of Florida are so advanced in civilization as to slum policies, rings, and poculation, and are disposed to remain honest and untainted by the intrigues of carpet buggers. They are entitled to one representative in the State LegIslature, aml this fact having local discovered by nn aspiring carpet bugger he visited Spotted Tail and so-licited his influence. Ohl Spotted Tail listened to his clo-quent pleading, and rather adruptly ended the interview by exclaiming, "Indian no want politics; go to h—..."

ROMANCE OF THE ERIE ROAD.

THE great State of New York contains so much of the scenie and picturesque that its mountains, valleys, lakes and streams, have furmed the grand perspective for many a work of fletion, among which are notably those of America's greatest movelist—Fenimore Cooper, whose ard America's greatest invents—remained Cooper, whose writings have invested nearly every part of it with something more than an historical interest. To the reader who has followed the fortunes of "Leather Stocking" among the Kanterskill Cliffs, and sojourned with him upon the shores of the sparkling Otsego Luke, 'participating in his hairbreadth escapes, admiring his diplomacy, his strategy, and his courage, and warming loward his ingenuous kindly heart, every scape posterved in the pararity allows with heart, every scene portrayed in the narrative glows with an indying charm. Absorbed in the events of a period that is long since past, and oblivious for the time of the growth of settlements, and the present means of locumotion and communication, he longs for the wings to fly to and the eyes to behold, these theatres of so, many sylvan romances, so that he may live the wild experiences over again. Prestol tear but the tilm of reverie away, awake to the present reality of the iron rail and the rumble of the wheels among the hills, and if one only wills be can be set down in the silence and solitude in a twinkling, and satisfy the lungings of his heart.

There are many wonderful front streams in these se-chided spots which even the march of settlement has not invaled, and many a lake where the black bass leaps, and the mascalonge stretches his large length under the fily pads; and to these the angler turns with wistful gaze when the burning Summer comes and his worn out body calls These places of grateful retirement lie the rugged cliffs where the torrent feams, and under the shadow of mountains which the eagle supposed were inaccessible when he chose them for his cyric. But the skill of the engineer has broken through all barriers, and the railway threads its rocky intricacies. The Ente RAILROAD is the great arterial channel into this virgin wilderness, more in graml perspective, illimitable distances, heights and depths, lights and shalows, and scenic beauty and variety, thun any other portion of our Eastern mountain ranges. It would require a catalogue of proper names to designate all the numerous resorts, known and unknown, that lie along its route from Hoboken to Niagara Falls, and from Hornellsville to Dunkirk and Eric. We are cognizant of many a choice locality, which we may not reveal, where the trout leaps and the deer hides, and the times that we have rumbled over its rails are not a few. Sportsmen true are many of its employees, and our dogs have fared well always; and many a goodly hauneh of venison and bunch of birds have we entrusted to the baggage masters along the line, for we knew their hearts were sympathetic, and that sportsmen could not be fuithless to sporstmen.

There is no railway route in America that lends to such a variety of scenery as the Erie road. It was a noble conception of the Appleton's to bring out for the enjoyment and wonder of those who never travel, their marvelous "Picturesque America," that the beauties of our country might be known. Fifty volumes are included in the work, and the ragged scenery of the Eric road occupies no small portion of the space allotted to it. But were the whole to be devoted to the Eric alone, it need not be filled. Erie Company have even essayed to publish a miniature "Picturesque America" of their own, under the title of the "Erie Railway "Pourist," which is hurdly less beautiful in its matter and embellishment than the other. This tells of all the choice places along the route, and we can do our renders no better service than to refer them to it.

ROWING AND ATHLETIC ANNUAL FOR 1875. -Mr. James Watson, the compiler of this useful little book, has brought not only great labor but his large experience into play in making it as complete as possible. For the rowing man and the athlete, it is a necessary pocket companion, as it contains a complete record of past events, fastest times at all distances etc. etc., together with useful hints on training. The book can be had by addressing the Editor, P. O. Box 678, and the price is but fifty cents.

THE YACHTING ANNUAL.-Mr. Thos. engaged in the preparation of his useful Yuchting Annual for the current season, and will have it ready to issue the latter part of May. One feature of the work will be a list of yachts not entered in any club, and gentlemen destring to have their yachts mentioned in this list can do so by addressing the Editor at No. 293 Broadway.

—Petroleum oils are coming into use for dressing leather, and it is stated that their use for this purpose is largely increasing. The heavier gravities of petroleum, such as paraffine and steam-reduced oils, are the only ones used in this way.

The Rifle.

CREEDMOOR.

Saturday last being the day fixed for the first of the competitive trials for places on the team which is to contest with the Irish riftemen on the 29th of June, the candidates with the Irish rittemen on the 25th of lands, the candidates assembled at Creedmoor and fired the righlation annother of shots, lifteen each, at the 800, 900, and 1,000 yard ringes. Fifteen gentlemen presented their names for the honor, and although the scores made were far short of those at similar triuls last year, taking into consideration the backsimilar truis last year, taking inlo consideration the luck-ward senson and the few equorimities for preliminary practice, the work alone was by no means ansatisfactory. Four members of the old team were shooting with the new aspirants, their scores ranking first, third, fourth, and ninth, and assuming that under more favorable circumstances these four would show the old form, the intermediate scores were at lourt paragraphic. We approphered that diate scores were at least respectable. We apprehend that the competition of yesterday—the result of which comes to hand after our hour of going to press—as well as the to hand after our hour of going to press—as well as the subsequent ones, will show much better shooting. The wind on Salarday was halling and uncertain, veering to all points of the compass, and necessitating a constant change of wind gnage. A number of the men experimental great dilliculty in getting "on" at the 4,000 yard range, which will be rectilled by further practice, and we do not despair, before the team is finally selected, of seeing scores fully up to the desired, mark. Limber the excellent operation fully up to the desired mark. Under the excellent exced-tive direction of General Sheler and the gentlemen compusing the range committee, everything worked smoothly.

We append the scores:—	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

THE RIFLE AT THE STATE STORTSMEN'S ASSOCIATION. -The time for holding the annual meeting of the State Sportsmen's Association, to be held this year at Watertown, N. Y., will soon be publicly announced. Hifle shooting will be made a specialty, and is to be conducted in the oldbe made a specialty, and is to be considered. Valuable fashioned way as regards measuring strings, etc. Valuable prizes will be given for off-hand shooting at fifty-five yards, any position permitted. We shall and others at 220 yards, any position permitted. We shall print next week, or as soon as received, a complete list of all prizes to be given at this guthering.

SARATOGA RIFLE CLUB.-An organization has been formed in Saratoga with the above title. The association has already secured a range of 1,000 yards in length, perfectly level and admirably adapted to the porpose. A large club house has been erected thereon for the convenience of the members. It is proposed to upon the range for practice

and matches early in the Summer. The Riflo Club will provo another of the many attractions of America's favorite Why not have a college match during re watering place.

SHORT RANGE SHOOTING.—The following record of shooting at Mr. Conlin's gallery will be found of much interest in connection both with the present Interest manifested in short range shooting and the competition at longer distances, as many of the names mentioned are familiarly connected with Creedmoor. The record covers a period of about five years. The figures given represent the gross measurement of twenty consecutive shots, fired at an inch lullseye, seventy-five feet distance, measured from centre of shot to centre of hullseyo. Wo give a cut of the best twenty shots mentioned in the list, being Mr. Hamilton's score.

-The Joint Committee of the National Rifle Association and the Amsteur Rifle Club held its regular meeting on Friday last. Generals Shaler, Woodward, Dakin, McMahon Knox; Colonels Wingate and Gildersleeve; Captains Fulton, Bruce and Casey, and Messrs. Alford, Canfield and Sanford were present. Colonel Wingate was in the chair. The Sub-committee on selecting an American the chair. The Sub-committee on selecting an American team for the approaching International match reported that competitions for places on the learn would commence on the following day. General McMahon reported that Messrs. W. R. Garrison and Martin B. Brown had each subscribed the sum of \$100 toward paying the expenses of the con-templated trip to Ireland. General Shaler was in favor of some more systematic and efficacious mode of taking up subscriptions, as the mode adopted was desultory and an satisfactory. Colonel Gildersleeve advocated secrecy regarding scores made by riflemen in the competitions for places ou the team, on the ground that many persons objected to having their names inserted in the newspapers, which suggestion we are glad to say was vigorously op-posed and incontinently voted down. Captain Casey sensibly suggested that such publication of scores would stimulate the zeul of competitors, and in view of the small number of entries such stimulation is undoubtedly beneficial. It was decided in solite of some emporition that a cial. It was decided in spite of some opposition that a cablegram be sent to Major Leech announcing the fact that a day had been fixed for the departure of the team. On the re-organization of the committee as a sub-committee for the selection of an American team, General Shaler occupied the chair and General McMahon announced that a colored fellow citizen desired a place on the team. A number of gentlemen made application for the position of Secretary to the team, all of which were laid over until such time as the team should be organized. After appointing a committee to supervise the competitive practice, the meeting adjourned.

-The tollowing telegrams, or rather cablegrams, between Mr. Alford of the Committee on Transportation, and Maj Leech of the Irish Ride Team, show the spirit of recipro cal concord and good will that attends the preparations for the coming match in Ireland:—

New York, April 23, 1875.

To Maj. Lezen, Irish Rifle Association, Dublin:
Inman Line tenders free passage to American Team, per City of Chester, to sait June 20th.

Transportation Com. International Match.

Dublin, April 21, 1873.
To A. Alrond, Reminaton Rifle Manufacturers, Broadway, N. Y.:
Caed mills failthe—(Hundred thousand welcomes.)

THE INTERNATIONAL MATCH.-The following are the rules by which the Irish team will be selected for the match on the 29th June:—

1. Six days are appointed for public competition to be held simultanconsily at Dublin, Belfast, and London—viz.: April 21, May 3, May 8,
May 15, May 22, May 29. Each competition to consist of 15 shots each
at 800, 803 and 1,000 yards; no sighting shot or privious shooting on the
same day will be allowed. Targets and scoring as at Wimbledon, 1874.
Each competitor to shoot on any four of the competing days, and
no more, the fine best aggregate scores to be primarily solected for the
toam and extra men.

3. If at the competing of the competition of the

ide ac; provided the majority of these selected agree with the Capitali's lew, whose vote will count two; and the competitor so called upon must emply of forfeit his place.

4. The filles need for these competitions must be trish maile, and lightle for the match in every respect.

5. The scores in each of these competitions to be kept by the Capitalia, remains one depended by him for that purpose.

6. Each competitor to pay a fee of £1, and the fund so created to be added to the Treasurer of Reception Committee in the name of the rish Kifle Association. F. O. objects to be made payable to H. H. Foster, lead addressed to him, No. 110 Grafton sirret, Dublin, when scoring ards will be forwarded.

7. In all matters of detail the Captain's decision to be final.

Some doubt appears still to exist as to the selection of a spot ou which the mutch shall be shot.

—The Eighth Regiment Rille Club appointed Thursday as a regular practice day, and during the pust Winter have lost but two days from their regular weekly practice. As a consequence of this practice they enter the Summer rille season us the best prepared team in the Guard.

CHOKE BOHING.—As an illustration of the uld saying, "there is nothing new under the sun," a correspondent gives us a description of a gun which has been in possession of his family since the latter part of the last century. The barrel is of brass, and underneath is the slamp G. R. (Georgius Rex), 1773, indicating that it was made at one of the government arsenals just prior to our war of independence. For a considerable space some eight inches from the muzzle there is, or was—for the harrel has been rebored-u contraction of the bore, evidently intended produce close shooting, and on the same principle as that claimed to be a recent American invention.

Sea and Biver Hishing. FISH IN SEASON IN MAY.

Troni, Salmo fontinalis. Salmon, Salmo salar. Orayling, thywalins tricolor. Black Bass, micropions nigricuns.

Salmon Trent, Salmo confints, Shad, Aloso, Land-locked Salmon, Salmo Glover

Black Bass fishing is permitted in New Jersey on and after May 1st; in ew York, May 20th; Ohio, May 2d; in New England and Pennsylvania,

[Uniter the head of "Game, and Fish in Searin" we can may specify in general terms the several warkeles, because the laws of States vary so much that were use to attempt to particularies we could do no less than publish those enter sections that relate to the kinds of game in question. This would veguire a great amount of our space. In designating mane we are guided by the laws of nature, upon which all legislation is founded, and our readers would do woll to movide themselves with the linear of their respective States for constant reference. Otherwise, our attenuits to assist them will only create confusion.]

FISH IN MARKET. - Fish of all descriptions now in senson are abundant and low priced. After long waiting our local fishermen have been rewarded, and the shad have local fishermen have been rewarded, and the shad have commenced to ascend the North River in quantities. The finest roe fish sell for 50 cents, while the male fish are worth but 30 cents. A few Connecticut River fish have been received and sold readily of \$1 each. Salmon have commenced to put in an appearance from Nova Scolia, and bring \$1 per pound. Large striped bass are arriving in quantities from the Connecticut, Hudson and Potomac Pirgas, and sell for 15 to 18 cents per pound according to Rivers, and sell for 15 to 18 cents per pound, according to These fish are said to be taking the bait in our bay. Reil snappers and sea bass from Savannah sell for 15 to 18 cents per pound. Crawtish from the Potomac \$2.50 per 100. Long Island brook trout are worth alive \$1.50, dead, \$1 per pound. We saw some clegant specimens of sulma fontinalis from the Wild Wood Trout Farm, East Frecton, Mass., price \$1 per pound. Canada trout are worth 30 cents. Maine trout 50 cents. Turbot 15 cents; lerrapin \$15 per dozen counts. Green turtle are in fair supply at 20 cents per pound. Cod are very abundant off the const of Long Island; one smack, the Wallace Biackford, cought in 36 hours 1,800 fish, averaging 15 pounds each. They sell for 8 cents per pound. Haddock from off Newport are unusually fine and large, some weighing as much as 20 pounds; they retail at 7 cents. In about 10 days we may look for fresh mackerel.

- A gentleman culleil at our office a few days since and desired to know where he could get a little salt water dshing. We referred him to Mr. Blockford who sent him for a cruiso on the Eugene B., off Long Island. The result was a catch as will be seen above of 1,800 fifteen pound cod tish—all taken with book and line. Our friend stood up to his work manfully, and with the exception of a few "raws" and projecting fish bones, looks ten years younger.

-Dr. M. E. Elmendorf, brother of the gallant "Tony," captured some front last week at a public creek, on the north side of Long Island, that weighed seventeen ounces.

-Wo have four salmon privileges to lease in the Romanie River, Canada, and two in the Little Romanie, at \$150 each for the season. Largo fish, shanties, &c. A map of the pools can be seen at office Fouest and

-Nova Scotia rivers are generally clear of ice and angling for salmon has been enjoyed already by officers of the Halifax garrison and others with considerable suc-

cess. -The St. John River is open for Thirty miles from its

-Gentlemen purposing to visit the trout waters of Michigan and Wisconsin are requested to refer back to our issue of April 8th, where they can obtain much useful information. A reference at all times to the files of Formst and STREAM for any specifical locality, will most generally result in a satisfactory answer to any inquires which they

might wish to made concerning the same.

PENNSYLVANIA, Phila., 26th.—I tried dropping a few flies to the trout in Drury's Run, Cliuton Co., Pa., on Friday, but the snow and ice is more plentiful than the fish. I got but one. Truly, Gillingham,

Vinisial.—Leesburg, April 21st.—Dr. Chus. Edwards captured the first bass of the season with us last Saturday, some wicked man catching a few on the fullowing Sunday. Some few trout have been taken from the Big Spring Ran, and one or two stray fellows in the Tuscarora, having escaped perhaps from the writer's hoxes of wild trout on a tributury of that stream. Our tackle men are busy with the Spring fever in their line, and will no about supply us rods and reels of the very best kinds. Many of your advertisers would get urders, I think, If the price of metleles advertised were published. Whether this would sant all the circumstances of their trade, I do'nt know, but unany a man would buy if he knew the article was within his means, who wo'nt trouble himself to send for circulars. F. W.

Franna.—St. Agustine, April 19th.—Drum fish are now

who wo'nt fromble himself to send for circulars. F. W. FLORIVA.—R. Agustine, April 19th.—Drum fish are now biting. Fine sport can be had with the base on the North Beach. All that is necessary is to have a lead or rad line, walk a little way into the surf, and throw out. Multer hait, which can be procured at the fish burket, is the best. A gentleman with a roll line, a few days since cought several in a short time, the largest weighing tru pounds, the smallest three. On the 8t. Schusthm lividge sheepshead and whiting are caught may be ubundance. The bait for the former, fielder; for the latter, multet.

Figure Marriers.—The number of fishing arrivals for

the smallest three. On the St. Schastina Bridge sheeps head and whiting are caught maw in abundance. The bait for the former, fidder; for the latter, mulbet.

Fishing Matters.—The number of fishing arrivals for the week ending April 224, was seventren—nine from the Grand Banks and eight from Georges. Total mount of codfish brought in, 120,000 pounds; hathout, 460,000 pounds; Owing to the large supply of ballbut, prices have ruled rather law, most of the sales being made at \$5.50 per cwt. for white and \$3.00 for gray.

The scarcity of hait has greatly interfered with the fishing operations this mouth. About a hundred sail of Georgesauen and Bankers were at Eastport, Grand Menun and other eastern ports, at last advices, awaiting herring, which have been very scarce there for the past six weeks. The catch of Georges' cadfish, the present munth, will be slim, indeed, and the salt bankers' trues will be greatly delayed by the bait fancipe.

The Greenland halibut fishery will not be prosecuted this season by any vessel belonging to this part, nor from any other, so far as we can learn. Some six or eight vessela have been employed in husbases during the past six years, but it has grashally died out, and last season hat one vessel went. The voyages, with a few exceptions, have never proved very successful.

Schooner Lizzie K. Clark, Capt Marphy, previously reported frozen up at St. Jahn's, Newfoundland, arrived hame from the Grand Banks on Friday last, having here absent upwards of three months on the trip -the langest on record. She branght to 60,000 pounds halibut.

The first of the southern unackerel fleet sailed on Saturilay. About twenty the suil soon fullow. The fleet will number about forty sail in all.

Fishing schooner Elihn Burritt, now fitting out at Messus, Petningel & Canningham's wharf, has an entire Vankre crew—a very musual occurrence in these days, and well worthy of record.—Cape Ann Advartiser, April 24th.

PENNSYLVANIA TROUT.

Praisionon, Ph., April 91, 1875.

Petristonon, Ph., Apell 21, 1875. 2 Editor Funest and Stream:—
I notice in the last mander of Fourst and Stream a communication from Mr. Hubley, of Wilkinsburg, Ph., in which he gives the impression that the close season for brook trout rous extended by the Legislatine in this State to April 15th. This is a mistake. A full making the close season for brook trout from August lat to May 184, passed the House, but there was in timilities in it," and the bill felt in the Senate.

Yours,

W. A. M.

SALTING TROUT.

SALTING TROUT.

LITTLE FAILS, N. Y., April 20, 1875.

Entror Forcest and Staram:

For feat some of the more libexperienced of your immerous readers may follow the advice of "A. A. R.," in Forcest and Sturam of the 15th of April, I artie to say to them, don't do it. But if you will sail your should tension. "J. d. it "s" advice should tension that a some think of sulfing wond-cock as front. Have known people to catch front with net and grapple from their spawning beits and sulf them for Winter use, and I do not know but that they were good. Trout carefully diese at any in preserved an oral days tresh and sweet, without lee or sail, by wrapping them in the long white moss found in the swamps in the vicinity of the lakes and streams whose front are caught, and their glein in a cool shady place; a hole in this ground current over with a four or more of earth is a good place. The helter why is to catch them only as fast as you can sume thim. I should think jerthing vends on importanceable, but for the size at the animal and the necessity of killing the whide of him for any part.

February

Nachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

-Commodore Voorhis, of the Tital Wave, has challenged the Madeleine to a race twenty miles to windward of Sandy Hook and return.

The yacht Kamehameha, built by J. & S. Von Cott, will be launched at New-Rochelle on Thursday, May 15.

—Mr. Henry Steers, at Greenpoint, has the Julier orce more under his cara. She has been supplied with new masts three feet longer than the old ones. She is to be new y fitted below; and will appear at the June regatta in an intire new suit of eanvas made by Mr. Sawyer.

-Mr. John Mumm is altering the schooner Peerless. Her must will be three feet longer and one funt will be ablied to her main boom. The centre-hoard will be dropped a little at the forward end.

Mr. Wm. H. Langley's schooner Comet has a new foremast 67 feet 4 Inches long and 154 luches in the partners. She is baying a new sult of canyas throughout, substituting a lug for a boom foresail.

—Mr. Richard Walling is huibling a handsome sloop for Mr. W. 11-11 Beebe, of the Atlantic Club. Her length is 36 feet 8 inches; heam, 12 feet 6 inches; and depth, 4 feet 6 inces. The mist is 38 feet long; topmost, 12 feet; howsprit, 14 feet; boom, 30 feet; gaff, 16 feet. She is to be

sprit, 14 teri, usoni, called the Daisy.

—At Roslyn, L. I., Mr. Bedell is building a sloop yachf, 45 feet long over all.

—Mr. A. A. Smith, at Islip, L. I., the builder of the schoomer yacht Counct is building a shoop for Mr. Hugh L. Willoughly, she will be 55 feet long on deck, 16 feet heam and 5 feet 3 inches aleep.

—At Mr. William Smith's yards is a centre-board gloop for Mr. R. Huntley, of the Brooklyn Club. Ther dimen-sions are, length 48 feet, 16 feet, benn, and depth 4 feet 6

—Mr. John Munnin, at the foot of Court street, Brooklyn, has huilt for Mr. Ruhinson a yacht 38 feet long, 14 feet hum and 4 feet 6 inches deep. The same builder has just finished a shop 26 feet long, 11 feet beam and 2 feet 6 inches deep.

just finished a shop 26 feet long, 11 feet brain and 2 feet 6 inches them.

The Qency Yacht Chan.—The regular meeting of this club was held on Suturday evening, April 3, at Quincy, Mass, and the following officers were elected:—Commulate, James H. Shale; Vice Commolore, I. A. Keith; Secretary, H. A. Keith; Measurer, Peter B. Turner; Regular Cammittee, the Cammulore, ex-officio, James T. Penninan, John Shaw, Jr., Marcus E. Wight; Edwin P. Worster. Cammitter on Membership, Warren L. Bruddock, James T. Penninan, Benj. F. Bass, Amber Cleverly, H. M. Frderhen. The prizes announced in a previous issue were precented to the winners of the regulars of the past season. Arrangements were mulo looking to a series of races, both sailing and rowing, to begin early in the Summer. The club, although organized late has Summer, Ital on its list thirty-five yachts of various classes, to which additions will be unde this year. It has now ninety-nine members, and is on an assured financial footing.

—The St. Angustine, Florida, Yacht Club this senson has hera prosperous, and they have added greatly in the entertainment of visitors. At the close of the senson, the Treasurer's report of the club exhibited a balance on humb.

—The Crusecul-Umline Somed shell race, was pust-ponel until Tuesday, the 27th, at 6 p. m., on account of the weather. Course, 14 miles straight way from Peters' Island to Turtle Ruck—Commodore James M. Ferguson, Umpire.

—The Malta Club of the Schuylkill Navy have received

Island to Turtle Ruck—Commodore James M. Ferguson, Umpire.

—The Malta Club of the Schuylkill Navy have received a new and beautiful double scull gig, designed especially for the use of the gentle sex, and anned "Minnelmha." She is of Spanish cedur, trimmed with ash, and is 27 foel long by 3 feet beam; her gratings are finished with siverplated muls, and she is further ornamented with siverbow and stern plates. M. H. Byron is the builder, and it is a credit to his known skill. He has under way a four-oared gig for the Buchelor Club.

—The students of Culumbia College have challenged the Yule Cullege Boat Club to row them a six-oared gig race during the caming regatta work at Sandoga.

—Thu Neptune Bant Club, of Staten Island, now unmbers about sixty members, and is officered by Nicholas C. Miller, President; Wm. J. Gunner, Vice President; Wm. R. Wemple, Captain. Their old bant house at Factoryville, recently destroyed by fire has been replaced by a new, cammadious, and elegant structure, including a cloak roun, drawing room, billiard roun, dining room, &c.

—St. John, New Branswick, "Sports" are talking shout semling the Paris crew to the regatta which is to take place on the Schnylkill during the Centennial Celebration at Philadelphia next year. Representative narsonen frum all parts of Europe and the United States will be present.

—At a recent meeting of the Central Park Club, Boston, the fullowing Board of Lovernment were elected for the sea.

all parts of Europe and the United States will be present.

—At a recent meeting of the Central Park Club, Boston, the following Board of Hovernment were elected for the season of '75: President, Churles J. Murphey; Vice President; Wan. Byrnes; Secretary, James J. Casey; Treasurer, James Dnyle; Log Kreper, J. F. Mailey; Steward, Jere. Cusey, Directors, T. Sullivan, M. J. Casey, F. Downs, J. O'Neil and M. Sullivan.

—Hultfux boating men and their champion, George Brown, have made every effort to bring about a match between Saller and Brown; and if there be any credit in boat race arranging, they are justly entitled to it. Robt. W. Boyd, of Guteshead, luving benten Sadler in a skiff race on the Tyne, the result of a challenge to him or Sadler from Brown should settle the question of champion oarsman of the world.—St. John's Nees.

—The Spring regatta of Yale University will take place

the world.—St. John's Aces.

—The Spring regatta of Yale University will take place on Lake Saltonstall the last week in May. The winner in the single scull-race will represent Yale in the similar race at Saratoga. Members of the University crew will race in

BISHOP'S CANOE VOYAGE COMPLETED.

DUTTON, Fla., April 12, 1875.

DUTTON, Fla., April 12, 1875.

Entron Forest and Stream:—
The pager cance "Maria Theresa" completed her vayage between the two great guife of the continent when she reached the valers of the Gulf of Mexico, at he anouth of the Saname River, on the night of March 20th, at olse o'clock. My last camp was on the little hammock (less than an acre in extent) which, like an ordis in a decert, rises out of the east marshes that frince the gulf along this part of our canst. With the strong current of the Sanamer (fed by a freshed in Okcefeenokee Sivamp) I was enabled to run easily two hundred and thirty five nilles, from the lower mineral springs above Columbus to the mouth of the river, in about five and a half days.

With the strong freshed current I could have moved faster, but a party of gentlemen had procured a boan fram Samman by rail, and kindly offered to record me to the gulf. Their hum was a heavy salt hoat, so we made the best time possible under the circumstances, they rowing and I putfiling, and at times floating along with the current of the Sawance. Thenty miles from the mouth of the Sawance are the Cedar Keys, the terminus of the railmad which runs from Fernandina, on the Allaudic coast, across Florida to the Gulf of Mexico. I have transported the canne by rail northeystward, to the "Big Bend" of the St. Mary's River, and from this station, Dutton, from which i now write, the canne will be put into the river, which I hope to follow one hundred and seventy five nulles to the sea. From Fernandina the boat will be shipped to New York, and to her boat house on Lake George.

In my hat contamination of mover introduced to Broughton Island, near Darien, Gas. Leaving that pleasant locality the cance proceeded on her vayage down the south tranch of the Alamaha to St. Simon's Island, and followed the Fredrica River, which is the eastern boundary line of the Island, to St. Simon's Sound. It was smooth enough to bus across the wide sheet of water to Jokyl Island. The steamers follow Jekyl Fresk into Jekyl Sound(Fut

along the marshes, passing the mouth of the creek, and approached Branswick.

Night came on, forcing me to seek a resting place in the marshes on John'te Creek. Only three humanacks were found to the alove the water. The already marshes extended for inles in all directions. An hour befare dark I reached a hanmock on the end of Cobmet's Island. Before palmetto braves could be end for a hed, an alligator nearly as large as the cance drove me out of the humaneck—that is, 1dd not only for thin to drive me; we both reflect at the same time, he into the river, while I rawed up the creek to hant up another resting place. The next day I reached 8t Androv's Saund, which is almost destinic of ramping ground, if you fullion the line of the marshes and cross the alde months of the two Satilla rivers to the head of Comberland island. Here, for the third time since I left the SI Lawrence, I was obliged to seek assistance to cross the wide sound. It was so rough that the sloop which took me found some difficulty in meathering the sand shoals and breakers, which at low this vex the unters of this treacherous sound. Mr. Clubb keeps a confurtable public house on the high binff of Cumberland, where I remained mult the tempest obtied, then rowed through the connecting waters along the benuitful shores of Cumberland, past the rains of Hangemess, mult be while alwellings of Fernandina, on Amella Island, opened into rion. This lavely sheet of water, between the SI. Mary's River, Amelia Island, and Comberland Island, with its fine interference anchoring ground, most may be become the headquarters, during the Whitermonths, for our Northern yuctuing feet. The depth of water, sheltered anchoring ground, most mit found from a tur south along our coast in any other section. As I turned to the right to row moss the month of the broad SI. Mary's River, the noble half of the Tudal Wave was ridained only two days in the towns of SI. Marys, on the Georgia side of the Itwer, and Fernandina, on the Florian shore of Amella Island. A portage was ma

thousand affes.

I have had a steam yacht (65 ft, keel) placed at my disposal on the Gulf of Mexico. As soon as I ship my came from Fernandina to New York, I butend to return to Cedar Keys and cruise southward as far as Sarasola Bay, to fish and faint. I may reach New York by the 25th of May, when I hope to pay my respects to you to person.

Yery Iruly yours.

N. Il Bieliop.

The Colleges.

CORNELL UNIVERSITY, April 17, 1815.

Cornell University, April 17, 1815.

Britian Formet and Stream:—

The lake is at last tree from lee, and the men who are pailing up for the "Varsity lake their daily practice thereupon. The pulling thus far last been in the pair-oar, and will continue to be conduct to such practice for a neek or so yet. About the first of May the quarters will be roady, when the crew will be definitely chosen and regular training linauginated. The Freshmen have men at hard work from whom a good crew can be selected, and they are doing their bost to raise the funds accessary to send a crew to Sarntoga, but yell it is in doubt whether any will be real. The foot bullests are at work once more, several practice games having been played upon the hill in the mud and shish, and soon we shall expect to see the "wind bag" realing along, impelled by stordy, as well as ectentials kicks, on the "avenue." Lost year base ball was not what might be called in good order among the studeuts, tilt very literather sensor; but this year like new board of officers have set the buil (not line b. b) rolling, and as fley mean buckness, we trust soon to see the "willow" raised on the hall ground with two good alues to back it up. As the ground is rapidly drying it will not be long before doffing our pants! eyes directed toward the ground with two good alues to back it up. As the ground is rapidly drying it will not be long before doffing our pants! eyes directed toward the ground thirty paces in front!!"—the commands of our captain—"Company, right forward, tours right, march! Fours in eircle, right wheel; or, Right front into line, march!" &c., &c., all autocum to some. Nothwithstanding a slight indisposition on the part of some to inilitary labor, a parade day will generally see about three hundred time coals in line.

The spelling school feer reached the University last week, and the result was a match between "town and gown" on Friday evening, under the analytics of the Navy. The town side was composed of business men, printers, teachers, scholars fr

HAUVARD UNIVERSITY, April 24, 1875.

EDITOR FOREST AND STREAM:—

I wish to correct a statement made in my last that Yale would accept our challenge to play us at foot hall, only on condition that we record agree to play them at hase ball. She has accepted the challenge of 177 foot ball leam, and ne are to play—if rules can be agreed upon which shall club has accepted a challenge to play a series of games, the first at New Hairen, May 13th, the second here, the third—though both unuse hope there will be no need of a third game—at some convenient place to be hereafter dechied upon. The University into played the Freshmen a game on Thursday, with a score which speaks very bad for 178. The University loot ball team are to play the graduates next Thursday (April 29th). The game will probably be very interesting, as the under graduates are in good practice, while this is the only weak point in the graduates are in good practice, while this is the only weak point in the graduates, who will have a very strong leam. The University team is to sit for a group picture on Monday (April 30th). The races of the trial fours took place last Saturday, but the water was very rough and all the attention of the crews was required to keep the hoat from being awamped. Whelmore's men came in a very little alwad, but it cannot be said that this crew was maile up of better material from this fact, and there will probably be other ruces soon. Many of the club crews rowed down to see the race, but most had cause to regret that they had taken their toots from the resta. Sevend boats were quite hadly damaged—all were nearly filled before reaching the float. The Chess Club is still engaged in games with the \$100 picture.

and with about equal chances for each. The Atheneum of '77 has received permission to give entertaluments, provided the sale of ficketts he sitedly private, to raise funds to pay the expense incurred in chinging and refuralshine their club house. The prigramme is very good, and the entertaluments will prubably be successful. The contential was thoroughly enjoyed by the students; many ment home, some stayed in their rooms, and about four bundted went in Lexhagton or Concord, or both. All declare that they had a stimular goon time, but I will not go to the next one. Strangeth-ead! but yet so true. Many went with the intention of staying to the ball, but when they saw the floor they concluded they could be hetter to go back to Cambridge and there received thrate." The rille corps are progressing fluidy. The rills are very regularly attended, and much latered is shown. Application has been made to the State for arms, and are shall probably get them by the true we are ready to commence drills in which they are required. Mr. Burnes of '76 has been elected captain of Company A, in place of Mr. Eldridge, elected major. Mr. Denny, ''.7, adjutant.

Rational Pastimes.

The cricket season of 1875 will open at the Germantown cricket grounds on Suturday, May 1st, when a practice game will be played by members of the Philadelphia, Germantown and Young America clubs. T. Rhodes has been re-engaged as professional, and will live in the cricket house. The silver cup won by the Philadelphia twelve at the Halifax tournament will be offered as a champion cup, to be played for in a series of matches between the principal clubs of Philadelphia. Some of these matches will doubtless be played on the new ground of the Merion club, which will be formally opened in May. It is expected that the officers of the Halifax Garrison and a Cammian twelve will visit Philadelphia in September next to take part in a grand cricket tournament to be held here in that month. It has not yet been decided whether there will be a cricket fête held in June.

—The professional season will begin on the Union

The professional season will begin on the Union grounds, Brooklyn, on the 30th inst., with a game between the Muthals and Centennials. On the 3d proxime the Muthals and Bostons will play on the same grounds.

—The Athletic and Philadelphia nines met for the first lime this season in a championship match on April 22d, and the game resulted in a victory for the former by a score of 6 to 3.

—The match played at Hamilton Park, New Haven, on April 21st, between the Boston and New Haven nines, resulted in favor of the former by a score of 14 to 3.

On April 23d the Mutuals played a field nine at the Capitoline grounds, and wan by 19 to 2. The next day they had tough work to win hy 7 to 3.
The Boston Juniors and Egleston clubs played a game April 23d on the Union grounds, Boston, with the appended result: Eggleston, 13; Boston, Jr., 16.

—George Wright, the short stop of the Bostons, has just issued a nearly printed pamphlet containing a complete record of the champion's doings on the ball field during the past season, wi'h other interesting items, including photographs of George Wright in twelve different altitudes; four for instruction in batting and the other eight for instruction in fielding.

-The Yale nine met the professionals of the New Haven elub on April 34th, and the result was a score of 15 to 5 in favor of the latter.

—The St. Louis club visited Louisville last week, playing the Olympics on April 19th, and winning by 26 to 0, while on the 22d they won by 24 to 4.

—The Lowell (Mass.) club is fully organized, and prearing for the season of 1875. The nine will be composed first class players.

-On April 24th the Allantics came near defeating the new nine of the Hartfords, at Hartford, by a score of 5 to 6.

The Syracuse club has made arrangements with the Driving Park Association whereby all matches played in the city will be played on the Driving Park. To clubs intending tours through the State good inducements are offered, which can be had by writing to the Sceretary, O. G. Lumbard, Nos. 6 and 7 Granger street, Syracuse, N. Y.

MAGAZINES.

The Popular Science Monthly, with its army of writers so well known to the scientific world, contains the usual number of papers on interesting topics. Professor Haxley relates some of the results of the Challenger Expedition which abunded the bottom of the sea almost around the globe, and Rev. S. Lockwood contributes a most excellent illustrated paper on Sea Anemones.

From way off in New Brunswick, where they are still beld in Winter's icy bonds, comes the St. Johns' Marktims Monthly, as bright and fresh as though born of perpetual sunshine instead of fog and rain. In the current number Mr. Poirier continues the "Origin of the Acadians," Rev. Mr. Harvey's discourses of "Livingstone" and Central Africa, and a variety of luteresting papers, complete the table of contents

The American Naturalist contains its usual contributions to knowledge, and scientific papers on Botany, Zoology, and Geology, to say nothing of Paleontology and Antaropology. Professor Ch. Fred Harit and Messrs. Parry and Packard are the principal escapiats in the

Scribner's for May is as usual excellently illustrated, and the table of contents as varied and entertaining as ever. Mr. Hulland'a "Story of Sovenoaks" is continued, and so is "A Farmer's Vacation." The latter is the most practical and interesting account of Holland and its wonderful dykes and cannis we have ever read.

St. Nicholas, published by the same house, who hy the way, are now occupying their new and elegant store, Nos. 713 and 745 Broadwny, is brindful of ambetient for the little ones, and, we may admit, for us of larger growth. The aim of St. Nicholas, however, is not restricted to management, it happroves and teaches as well. The contents of the carrent number are equal in variety and most to the best. As they say of Mrs. Winslow's Soothing Syrup, "the children em for it."

TRIAL OF SCOTTA GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELO," LONDON.

"THE FIELO," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs, Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in this third shot, Mr. Scott gut a selected group pattern of 239 and a prectation of 37, equaling the highest pattern made by Mr. Greener, and exceeding the penotration of that particular shot by eight sheets,"

DISTANCE, SOO YARDS.

Score of FIFTEEN CONSECUTIVE SHOTS BY COL. JOHN BODINE, AT CREEDMOOR, IN THE "BENNETT MATCH," Oct. 3, 1874, with a

REMINGTON Breech Loading, Long Range Challenge

The Highest Score on Record,

Please take notice, this Target was made in an OFFICIAL MATCH, not at private Practice.

Extract from the "Army and Navy Journal" Official Report, Dated Oct. 2, 1874.

"The match decides several disputed points, as near as they can be decided; first, that there is no perceptible difference in accuracy between broach loaders and muzzle toaders, but that if anything the former are the best, as they are certainly the quickest; second, that in our stear churste we may look for even better shooting in the future; third, that

THE REMINGTON RIFLE Stands ahead of all others for Accuracy,

AS IT DOES IN SIMPLICITY OF MECHANISM. THE REMINGTON RIFLES IN THE MATCH SCORED THIRTEEN POINTS AHEAD OF THE SAME NUMBER OF MUZZLE LOADERS, AND TWENTY TWO POINTS AHEAD OF THE SHARP'S BREECH LOADERS IN THE SAME TEAM."

In the International match, six muzzle loaders, three REMINGTON, and three other breech loaders were used. Capt. FULTON, Col. BODINE and L. L. OTONS.

My and Navy Journal, Oct. 3d, 1874. FULTON'S SCORE 171 OUT OF 189: HIGHEST SCORE EVER MADE.

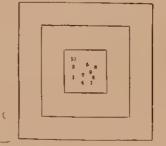

Military Match Rifles Just Out; Price \$35 or \$55 with Vernier and Wind Gauge Sights also Pocket Vernier Gauges Price \$2.50.

A Bide through the Blackfoot and Sioux Country.

DURING the Summer of last year I was engaged as guide to the Northwest Mounted Police, a force organized by the Canadian government for the suppression of the illicit whisky trade which was then heing carried on by a gang of Americau desperadoes, whose headquarters were on the Row River After a protreated meanly ters were on the Bow River. After a protracted march over some seven or eight hundred miles of prairie, during which the force suffered considerably from loss of borses and cattle, we arrived about the 1st of last September at the Cypress Hills, the Winter resort of the Blackfeet Indians, a chain of hills running parallel with the Rocky Mountains, and about one hundred miles east of them.
On the 7th of the month I was ordered to start at once with dispatches for Fort Garry, at the junction of the Red and Assiniborne rivers, near which is situated the town of Winnipeg, the capital of the Province of Manitoba, a distance of about eight hundred miles. I started from Cypress Hills at three P. M. on the 7th, riding a black Indian mare, about fourteeu hands high, carrying a regulation police saddle, same as light cavalry, valise and holsters filled with clothes, two blankets under saddle, oil skin sheet for sleeping on, and in which I also packed the dispatches, india rubber coat and sack, containing pemmican (dried buffalo meat) and biscuit, slung across crupper, and made to halance by tying its mouth and cutting a slit in the middle so as to form saddle bags. I was armed with regulation revolver, government pattern, and fifty rounds of ball cartridge for same, and was accompanied by a half bread wide who were to have taken me to the Woods Mountains. guide, who was to have taken me to the Woody Mountains, where there was a depot of the British North American Boundary Commission, and I had charge of a man of the force whom I was to put ou the road to an invalid depot of some mounted police, left bebind on sick list, and with sick horses. After proceeding a distance of about sixteen miles, I camped on the banks of a creek in a severe storm of wind and rain.

The next morning we were up by dayhreak, and having made a hurried repast we started in a blinding storm. The weather, however, improved, and we made steady progress in an easterly direction. The country was a level stretch of prairie, undiversified by wood or hills, and there being no trail we were dependant on the half breed for our route. After accomplishing about fifty miles we encamped for the night on the banks of a small lake or rather awarm. Dur night on the banks of a small lake, or rather swamp. During the day I bad had a shot at an untelope with the rifle ing the day I bad had a shot at an untelope with the rifle of the man I had charge of, but missed, so had to sup off permuican and hiscuits. The next day we struck the point where the trails to the Woody Mountains and the police depot diverged. The man who was to have proceeded to the latter place now expressed his fears of proceeding alone, and nothing would induce him to leave me. I saw nothing for it but to accompany him, but the half breed refused to go out of the straight route to the Woody Mountain. refused to go out of the straight route to the Woody Mountains. I decided on parting with the guide, and set out for Old Woman's Lake, where the depot had heen left.

Having made forty miles in an easterly direction, the trail being good, we were compelled to camp for the night without finding water beyond a chain of salt lakes. We resumed our journey at daybreak, and made Old Woman's Lake early in the afternoon, but found that the depot had better its position. After some trouble we discovered it. shifted its position. After some trouble we discovered it in an enormous canon some five miles off, through which Old Woman's Creek runs. I remained the rest of the day and night in the police camp, having donc thirty miles in

The next morning I started from the camp, and being ut on a bad trail soon lost it altogether. I kept my course put on a bad trail soon lost it altogether. I kept my course south, but owing to not knowing whether the Boundary Commission depot was to the east or west of mc I was afraid to persevere after nightfall, so was forced to camp by a creek running north and south in a very tortuous chan-nel, determining in the morning to endeavor to regain the

police camp and make a fresh start. I was up before sunrise, starting due north, but ere long struck a trail tending southwest, which I thought might lead to Boundary depot, and followed it about ten miles when I lost it again. then decided to retrace my steps to where I started. On my way I lost my blankets by my mare buck-jumping the bucking, throwing them clean from under the saddle. I also lost my mails, which came unstrapped from behind. I also lost my mails, which came unstrapped from behind.

My dismay on discovering my loss may be better imagined than described. There was no track to try back on, and nothing but endiess prairie of long grass around me, with not a single landmark to assist my search. After a long bunt I discovered them hy almost a miracle. I regained my original starting point, and had not traveled for north when I fell in with two half breed Indians from Woody Menutein, who mut me on a trail to the Peneder Compile. Mountain, who put me on a trail to the Boundary Commission depot. Night falling, I was unable to proceed farther, and so made my camp. I arrived at the depot the next day at three P. M., the whole distance from the police next day at three P. M., the whole distance from the police camp being only forty miles. This had taken me two and a balf days justed of one, as I had expected, and all my provisions were expended. At Woody Mountain I purchased a fresh horse for \$185, a roan of about five years old, Indian breed, fonrteen hands and one inch in height, and one of the most purchased when a live probability of the most purchased a live probability of the live probabili and one of the most perfectly shaped little animals I ever saw, and, as he afterwards proved himself, of wonderful staying powers. He would eat nothing but grass, and one might as well have offered him sovereigns as grain. He would only drink from running streams, and had never

The next morning I left the Woody Mountains and made for Wood End depot, 180 miles east. The trail was had, and I had only got over twenty-five miles when a fearful storm came on—hail, wind, and lightuing. I camped in a large canon, and passed a wretched night, and my provisions, consisting of boiled pork and biscuit, were completely soddened by the wet, while my blankets and clothing were also thoroughly drenched. Next morning the weather was fine, but a gale was blowing from the north-west. My course lay through the gorges that approach the range of hills called the "Cotean," and I halted at noon, range of hills called the "Cotean," and I halted at noon, having found traces of a large Indian camp. I now kept careful watch, and soon caught sight of their lodges. I saw it would be impossible to get by unperceived, and so determined to ride boldly on. Some Sioux seouts rode out to meet me. My vocabulary consisted of two words, which signified "policeman" and "Englishman;" but I managed by signs to intimate I could not accept their invitation to felt considerably relieved when I got fairly away from them. I had great difficulty in finding water for my camp, and was led astray several times by the deceptive salt lakes. The weather was bitterly cold, and sleep was nearly out of the quistion. I had that day ridden fifty miles due cast. I resumed crossing the Cotean Range next morning, the wind increasing in violence, and by four P. M. blowing a gale. I suddenly came in sight of what I took for a large Indian camp, but on a nearer approach it turned out to be an ox team of the North American Boundary Commission, returning from the Summer work. Having got over forty miles I halted, dined and slept with the officer in charge. It was freezing hard, and blowing a hurricane. I started next morning with the ox train, and kept with them for ten miles, when I pushed on twenty-six miles further and reached Long River (supposed to be the same as the Souri River) and camped there. I slept well, but had I known—se I discovered next marriage, that marked has a supposed to be the same as the Souri as I discovered next morning—that my head was resting on the grave of a Scotch half hreed, who had been drowned in crossing the river the preceding Spring, my slumhers might not have been so placid. A simple wooden cross

be the only means of preserving my life. I pulled out some hay, and making a hole to lie in thus passed the

Early the next day I arrived at the Wood End Boundary Commission depot, and turning ont my horse remained there till next day. I did not leave Wood End till ten A. M. next morning, so as to give my borse a longer rest, intending to make for the crossing of the Souri River, distance fifty miles. I balted for dinner by a spring, called by the hunters "St. Peter's Spring," from some legend. On resuming my ronte I lost the track, and emped on a perfectly flat prairie in a storm of thunder, rain, and wind. I rose at daybreak (rain, wind, and mist continuing), and Early the next day I arrived at the Wood End Boundary I rose at daybreak (rain, wind, and mist continuing), and endeavored to find the trail. I saw my horse feeding about a quarter of a mile off, and started to bring him in, forgetting to mark carefully the spot where I had slept. On reaching my horse I could not tell in the least where my camp was, even whether it was north or south of me. I struck south, leading the horse, and traveled some way till I thought it time to try north. I at last found my last night's trail, but the difficulty then was to know whether to follow it to the east or west, as I might very prohably for from instead of the the west where I had before well. go from instead of to the spot where I had left my saddle, etc. I knew, however, if I struck the Souri River that the spot must lie between where I was and it, and my anticipations were correct; but I did not find my camp till nearly noon. I now crossed the river, and keeping due south along its banks came to Boundary Commission road, which I know would lead me safely to Fort Garry. I did not proceed very far, my horse being tired, and I camped at a ereek. During the night I awoke, and fancied rheumatism was coming on in my right arm. I burst into a cold perspiration at the bare thought, knowing full well that if it did I could never saddle my horse, and consequently it would have been a close shave for me; luckly it passed off. I again came to a crossing of the Sourl River about noon the next day, and rested for two hours. After proceeding twenty-five miles farther east I camped for the night in a clump of bushes. I could find no water, and had done that day about sixty miles.

one that day about sixty mines.

I reached Turtle Mountain next morning. The wind

I reached to snow. My way lay was very high, and it threatened to snow. My way lay across swamps and ravines, and I got hadly bogged twice. Once I bad to let go everything and pull first my horse and then my traps out. The poor beast was terribly used up, and it was much as I could do to get him by evening to a depot of the Boundary Commissioners, situated about half way across the mountains. I was forced to give my borse way across the mountains. I was forced to give my borse a rest the next day, he being totally unfit to proceed. I started again at daybreak next morning, and having got over sixty miles camped at a creek called Badger Creek. Next day I traveled fifty more east, making Pembina Mountains, where I camped for the night. The weather was very cold, but fine. I came next day to the house of a half breed named Grant, twenty-five miles distant from the settlement. After going five miles farther my horse went lame from a "sweeney." Thad to lead him the remaining twenty miles to Dufferin Barracks, the headquarters of the Boundary Commissioners, where I left him in a paddock and took the steamer down Red River to Fort Garry, which I reached early next morning.

It was the 28th of September, and my entire journey had thus occupied, including rests, but twenty-one whole days, the fastest time known in the Province. The feat was looked upon by many as something uncommon, even in that country of hard traveling. Previous to my separation from Cypress Hills the half breed guides themselves laughed at the idea, and prophesied I should never reach in crossing the river the preceding Spring, my slumhers might not have been so placid. A simple wooden cross planted at his head marked the spot.

I made eight miles the next morning before breakfast, when I came to the second crossing of the river. Towards the afternoon a terrible gale set in, by evening it commenced freezing, and snow seemed imminent. As good luck would have it, I came to a haystack left by the Boundary Commissioners, knowing that if snow fell this would

SPORT AROUND ROCHESTER.

SPORT AROUND ROCHESTER.

A S I write there is a severe snow storm raging here, and about six inches of heavy, slushy snow muntles the ground. I mention this fact because but for the storm I would at this moment, in all probability, be engaged in the more congenial employment of waiting for a "dart" of red heads or widgeon on Irondequoit Bay. A party of "choice and master spirits" (shall I say) had agreed to try the points near the "float bridge" to-duy, but as there were eight or ten mines of hoofing to be done it was thought best not to overtask, and therefore I shall "help waste a sullen day" by recounting to the readers of Fonest and Stream a few incidents of my shooting trips this Spring.

Many of your readers know that the vicinity of this city used to be famous for the sport to be had hereabout with rod and gun, and if any of the vetersus who made this country their tramping ground twenty or thirty years ago should read this sbroad they will be glad to hear that there are still altractions here for fin and leather. A week or two ago pigeons flew in fair numbers, and some big bags were reported; hut it was with a sad shake of the head that he "old boys" gazed on the straggling flocks of two or three hundred hlue backs that would pass now and then, and relate with a sigh how in '48 or '54 "you could stand on a knoll and knock down scores on 'em with a club. Why, Setb G—— used to bring in five or six hundred a day. The nocks would darken the sky, and take hours to pass." It was not my fortune to get on their line of flight at the right time this year, and I cannot boast of much sport with them. With other and more gamey hirds I was more fortunate.

One day, while out with A. B. L., after anything that:

One day, while ont with A. B. L. after anything that might be legally shot, we found at the end of our shoot our bags well filled with fine Wilson snipe. We found a wisp on a piece of good ground, but they were as wild as hawks, for two youths had been blazing at them the previous day without other effect that to scare them. However, between the sagacity of Roy and the fact that his followers were not novices at the art of stopping a saipe, we left none of that wisp to mourt. After clearing the saipe ground it was determined to stop at a certain piece of woods where a small pond is known to attract ducks. As we cantiously made our way through the underbrush that surrounds the spot, the cracking of a twig startled two brace of mallards while we were still too far off to expect our shot to tell. The birds were going away through the tree tops in fine style, when I determined to chance it, as I fortunstely had in one charge of Ro. 4. "Fortune smiles upon the brave," at least she did this time, and we had the pleasure of seeing a fine mallard topple over, and in a moment more, through the assistance of Roy, rest at our feet. The bird was knocked insensible, but recovered suidenly and made a dash for liberty, which A. B. L. frustrated by a basry shot. Putting out the duck on the pool, with a twig to keep the head in position, we waited a few minutes and were rewarded by a brace of black ducks darting; they were quickly done for, and as the shades of evening were failing about that time we took to the buggy and had a pleasant tide home.

The best sport I heve had this year was on last Saturday, and if my tale does not wenry I will relate it. G. W. participated with me, and well earned a plees in the story. G. is an enthusiant, and whether the sniplect he the rig of a yacht or the best plan of hooking a pickerel, he will not admit that here is much for him to learn about it. I have had a suspicion that with his big group to the fact of the stop of the stop of the stop of the start of the stop of the stop of the stop o

DEEDS OF VALOR.

A SEQUEL TO THE TALE OF HOLLOW LAKE.

THE enclosed note is prima-facie a sufficient apology for my vengeance. I recognized "E. W's." account in your paper, of our Canadian trip to Hollow Lake last Aniumn, but the omission of "The glories and beauties of Kimball's Island," either hy accident or design, is to curtail one's honor, as Artemas Ward said, as much as "to go to war, be killed, then have your name spelled wrong in the papers:"—

My Dear Jackson.
I send you a copy of the Forzer and Stream with my journal marked
"E. W.," and it has been a source of polynami regret that I difful enlarge on the glories and beauties of Kimbell's Islami, of imperishable renown for deeds of valor.

Dearly Yours.

RATNOR.

My Dear Jackson.

I send you a copy of the Forzer and Stream with my journal marked "E. W.," and it has been a source of poliponant regret that I dilai enlarge on the giones and beauties of Kimbult's Island, of imperichable renown for deeds of valor.

What "E. W." tells us so beautifully is all true, but unless my eyes deceive me, the record is but balf made. With your permission I will tell the other half of the true story as I saw it. The Toronto and Nipissing Railway is comparatively a new road running almost north, ninety miles from Toronto. Dwight, the eaplain of our party, and a director in the Toronto and Nipissing Railroad Company, invited us to occupy the director's car, and it was attached to the train for our special benefit. When the director's car goes over the road, if it does not carry "Royal blood," it at least is expected to have that which is blue; and we were treated accordingly. In striking contrast was my trip home. I had a saddle of venison in a bag for Dwight, and when I had to pay my fare, and ride in common cars like any other Yankee, it was with considerable difficulty that I got the baggage man to take the hag, even for a director. "Cara't do that, you know. Carn't take it aboard without an border from the hagent, you know."

At Coboconk, the northern terminns of the road, is a very good hotel, the Shedden House; the chief corner of which is devoted to the har—and the corner stone of the bar is whisky. Now Raynor, I don't object to your hot night-caps in camp, but if it won't make a man temperate to travel through the newly settled portion of Canada, then there is no hope for him. Whenever a new town or village is laid out, the first thing planted is a whisky shop—one on each corner, and if corners as scarce, they put in two. Our day's journey thence to Barnum's is well told by "E. W" and I will not enlarge upon it. At Barnum's we found real good home folks. They did all they could to make us happy, and thry succeeded admirably, in fact they really smothered us with kindness. We shall

"Then on, perseveringly on, brother, I'll from conflict and softering free; Iright nugles now becken you over the stream, There's a light in the window for thee."

Till from condict and softering free:

Itright angels now beckon you over the stream,
There's a light in the window for thee."

A warm welcome we received in camp, and right glad were we to get there. After a good night's rest, we were eager for a hunt. Taking our canoes, guides and dogs, we put ont in different directions. Old Barnum generally had the best luck; so he favored me by taking me in his canoe. Oaksie took Theodore, and we all went to Long Luke; a heautiful, to think about, in New York,) some three miles long by about a mile wide; it is from one to two miles north of Hollow Lake. Ahout a mile from the eastern end of Long Lake is a beautiful island—that is Kimball's Island, a great place for deer! If you look on the msp you will notice that the conutry is surveyed only about oue hundred and fifty miles north of Lake Ontario, and one of the northern townships is Livingstone. What there is north of that is not put down; that is the reason you don't know where Kimhall's Island is. Long Lake is just over the line north of Llvingstone. Barnum put the dogs in; then we pseddled over to the island. Theodore went to a point about a hulf a mile further off. In twenty minutes more we saw a little dark spot about as large as a duck quietly moving toward us. Barnum was quick to discover that it was a deer swimming with his head just out of water, but as I bad never beeu to war, how could I tell? Undaunted, we began to prepare for battle, and just lere is where the "deeds of vulor" come in. In the first place we stooped down and kept quiet about ten minutes. I am sure it was more than a minute. This was an act of humanity to the deer; it would buve been "cruelty to animals" to have frightened it to death without the benefit of the elergy, that is, without heing killed as a clergyman would kill it. It swam on by the island, and we paddled ou after it. Barnum soon overtook it. I dou't mean, of course, that he was right up to it so he could put his hands on his nose as we do in Prospect Park; we were too mneb of spor

for me for one day; so we relired in good order to the island. The death knell of the thousand yard cartridge brought Theodore over to view the dead, and congratulate the slayer. It was my first and last deer. It was too quick work for the hounds, so they put out again. An hour later a fine buck came plunging into the lake, closely pursued. Now it was Theodore's turn. Having no less courage than I, he pushed out toward the infuriated wild antimal. We followed close after to pick him up should he get hurt. He had too fine a sensihility of what is due from a sportsman to his game to allow his guide to hold the buck hy the tail, so when some five or eix feet from hlm, be pulled trigger and crimsoned the water with his blood; that is, the deer's blood.

The next day was Sunday. On Monday Lyman and Easson took their guides, dogs and double barrelled shot guns and went to Kimhall's Island. It was not loug before they too had an opportunity to distinguish themselves. The deer seemed somewhat ahead, although the dogs were very close on them. Easson followed on in bis canoe sud Lyman not far behind. Easson let drive one barrel; he pulled trigger for the other—no fire; he laid the gun up over his arm, by and bye it went off. Nobody hart on either side. Then Lyman fired with good effect into the left ear of the game; his ramrod stuck so he could't re-load. Then the dogs tore off the right ear. Then the guides took turns in beating the deer's head under water with their paddles. They all got into camp that night, but it was never decided who killed that doe. Kimball's Island is a great place for deer!

Will is a grand good fellow; too khad bearted for a hunts-

beating the deer's head under water with their paddles. They all got into camp that night, but it was never decided who killed that doe. Kimball's Island is a great place for deer!

Will is a grand good fellow; too kind bearted for a huntsman, and although he delights, and has spent several vacations in the woods, yet he never took a ritle or shot a deer. I was determined, for conscience sake Ibat he should bear his share this time. So this Monday morning my guide took him iuto our canoe, and I went along with them to see the sport? We landed at a point on Bear Island, in full sight of our emp. In a half an hour the "music" of the hounds warned us to look out. In ten minutes more a magnificent great buck came leaping, plunging, splashing into the lake. A beautiful sight—what a shame to kill him! After he was well by us, we paddled on after. When we got up to about the "usual distance," Will salmed him. When I play billiards, if my ball goes so you can tell what I played for, I feel encouraged. So it was wilk Will—he came very near the nose, which caused the buck to turu a sharp angle. So we hard-a-port with our paddles and followed on. Soon Will blazed away again, but this time you couldu't tell what he did play for; so the deer wheeled again. We ditto on the starboard side. Bang! again and again—no count! Iu the meantime the demonstrations of Kilmer and Eugene in caup, showed thay enjoyed the manœuvering of the "men of war." The sixth shot he scratched and the "game" was out. As we were paddling ashore, you should have seen the astonishment of Will, when I said, "I'am going home to-morrow, do you want to send anything down?"

"In the first place I have had all of this kind of recreation I need this year—and in the second place, before I left New York, I went "short" of Luke Shore to pay my expenses, and the last quotation I saw it was upseveral points, and had a "rising tendency" and I feel a little uervous."

So that evening after the boys were in camp, all were very busy writing letters and telegrams to send

o'clock at night.

Those who read the money articles in our New York dailies must be impressed with the idea that each writer is a "hull" or "hear" himself, or writing in the interest of one. That is to say, that everything said must be to appreciate or to depreciate the market; and as "E. W." has been bulling Canadian sporting trips, to keep up the hear side I must select from my diary, for it won't do to have our ground Murray-Adirondaeked.

"Suppay Sept. 20th 1874

"SUNDAT, Sept. 20th, 1874.

Lust night the wind changed, blowing fresh and very cold right and camp. To-day it is unpleasant and disagreeable enough. My beart and changels are at home with my wife and children, and I wish I were there or the control of the cont

I shiver as I remember that night. I woke nearly frozen, wrapped up in my blanket, on the cold damp ground, (it had been raining a great deal). I began to put on what "extras" I had with me. In the morning I found myself inside of two pairs of woolen stockings and a pair of moceasins, two pairs of red flannel drawers, two pairs of punts, two red flannel undershirts and two outside flannel shirts, a vest, cont and overcoat. That is all you need to take; just enough to keep warm in a cold night, after the eamp fire is out. The last Sunday I spent is the woods, hefore this, we were camped near some beautiful falls on the Muskoka. Father was with us, and as he practices at home, so he does awny. It was a warm pleasant day. I shall never forget the beautiful religious services in which he led us. After he bad gathered us all around him on a big rock by the river, he read from the scriptures. We sang

"Shall we gather at the river Where bright angel feet have trod; With the crystal tide forever Flowing by the thorne of God?"

Flowing by the thome of God?"

And then he asked God's blessing on our pleasures. Our guides, who were Indians, were there with us, and they needed praying for the most of any guides we ever lad. One of them got beastly drunk before we got home; but he soon after became as Saxe says, "a stilf cold water man at last." He fell out of his cannoe—he don't puddle now—there isn't any water "there." But to day, if there is any praying done, each does it for himself. No wonder it is chilly all around.

What it Costs.—From New York to Hollow Lake it takes four day's time, live hundred miles of car ride, twenty-five miles of staging, (if you dou't care what you call it) over the roughest of rocky and corduroy roads, about thirty miles of flat boating and the same number canoeing, which is good, and the same, of course, to get home. The expenses of the trip are ahout one bundred dollars, if you don't go short of Lake Shore to pay it; if you do that, it

costs five hundred dollars more. It prohably will rain at least half the time, and you will carry on your back for miles, at portuges, your "traps," which you would have to get an express wagon to move one square at bome.

**Does it pay!*—When I have had enough hunting, fishing, mosquitoes and bacon, lired out and about taking a four day's journey for home, I think it does not pay. But as Spring and Summer comes, aml all nature scens full of love, and when overworked in business, the "spell" comes on. I get quite crazy and "hanker" for the woods. I think our party for the year is about made up, and it will not pay for any one, unless it is you individually, to join us.

Apologetically yours, Rohent Jackson, Brooklyn, N. Y., April 12th, 1875.

A SNOW-SHOE TRIP TO ALBANY LAKE

M. R. PENTON, Carter, and Green, the last two from Massachusetts, took a fabring trip on snow-shoes to Albung Luke, March Jolin. Thinking it might be interesting to brother sportamen, I give you Mr. Fenton's account of the trip. Mr. Carter has been stopping at the Fenton House No. 4, all Winter, and has spent most of the time tramping about hunting and trapping, and had required acrye and muscle, rendering him he for landors all Winter, unused to mann! Indoor all Minder and the sent indoors all Winter, unused to mann! Indoor all Minder and the consequently it told pretty bard on him, and caused a ped deal of fin at his expense. But he determined to try it, so they started for the lake, which is twenty-five miles from the Penton House. Mr. Penton suys: We were provided with a sled made narrow, so as to run in a snow-shoe track, on which we tied our supplies for the trip. We fild not take any dishes or culinary utensils, as I had two years ago fild a whole camp kit at the lake. Westarted at 10 'clock. Not the late of the commenced. I do not know that the fun commenced. I do not know that he fun commenced. I do not know that he fun commenced is a short of the fundamental properties of the fundame

and maple sugar and fisb, with nothing to cook them in.

"What shall we have for supper, said C?"

"Flour sir, nothing but flour."

"Well," says G., "this is the first time I was ever in the woods without any show of comfort; nothing to eat, and no decent place to sleep, and I'm going to dig out of this to-morrow morning."

"I lend thought," said C," "ever since I came to the Fenton House, that I should like a Winter trip in the woods, but if this is the kind of hardehips and privations one has to endure, I have enough of fishing in the Winter. Here I have been on the point of starvation for the past two days, nothing to cat but bread and erackers, (which I always did dislike) and now we are down to flour for the rest of the irip. I can't stand it much longer."

Now this talk was fun for me. "I aint going to starve boys," said I, as long as we've got pork and flour, so stop grambling; we'll get along sonic way."

"Arriving at the shauty, I told them every man must cook his own supper."

"We can't," said they, "we've nothing to cook in."

Lying on the ground was an old plat cup that some trapper had thrown away as worthless. I picked it up and scraping the rust from it with a kuife, I saw that it was light enought to hold water.

"Now I have something to make pancake in." said I."

"You don't mean to mix pancakes in that do you?" said both.

"Certainly," said I; "a little oxide of iron is a good

enought to hold water.

"Now I have something to make papeake in," said I."

"You don't mean to mix paneakes in that do you?" said both.

"Certainly," said I; "a little oxide of iron is a good tonic, and will strengthen you for your tramp to morrow."

"But how will you bake them?" they exclaimed, looking around; there's nothing here to cook in,"

"Well enough," suid I, at the same time inverting the pint cup of batter and turning the contents on the stove. My companions looked at me in nute astouishment, and began to smile at the prospect of paneakes for supper; but when the cakes were cooked, their keen appetites overcame all scruples about the rust and unanner of cooking, for when served up with maple sugar they rapidly disappeared. I passed a comfortable might, but my companions rested but little. In the morning we had more cakes, and G. struck out for home, and C. and myself went up the lake again to fish. We were not as successful as we had been the previous day, taking but seveuteen salmon trout; averaging about two and a half pounds each. I was lucky enough to find my cooking traps after another hunt, and after urriving at the cabin we had four tront of about two pounds each frying in the pan, and soon had a dinner "bit for the gods;" one that would tempt the most fastidions. We were now all right, having pleuty to eat and drink, and as our shauty got warm and dry it was very comfortable.

The following day there came on a thaw and covered the ice with water, which made it uncomfortable fishing; besides the fish do not bite well when snow water is ruuning. The snow had become so soft that it was impossible to walk on snow-shoes, so we were obliged to remain until it should freeze up, which it did on the night of the 16th, and the next morning we put our fish, about sixty pounds weight, into a bag and tying it to the sled started for home. When within five miles of the Feuton House, in making a turn the road, two figures appeared in the distance approaching us. There was no mistaking W's slow and lazy gri

DUCK SHOOTING, FOUL AND FAIR,

SINK UONES AND BLINDS.

Editor Forest and Stream:-- Washington City, April 12, 1875.

Editor Forest and Stream:—

In my previous letter 1 demonstrated how destructive the big guns were on ducks, and that one big gun used will in a short time either drive the ducks away or render them so wild that it is impossible to get near enough to shoot them with a shoulder gun. I regret to say that since the laws have been made and enforced so rigidly on the Chesapeake and its tributaries, it has sent to us all their sink buats. To your readers who have not seen one of these bonts or read a description of them, I will give a brief sketch. The sink boats, or more properly box, is about six feet three inches long, one foot two inches deep, two feet wide at the top, one foot eight inches at the bottom. To this box is fastened a platform about twelve feet long and seven feet wide, and to this platform is fastened a frame covered with muslin, as follows:—Width at head, aline inches; width at sides, two feet. This box is carried to the shooting grounds by placing it on a boat, and is then anchored at head and foot, head towards the wind. The shooter then places his decoys at both sides and strings them towards the foot, so that the decoys at both sides and strings them towards the foot, so that the decoys will form a V shape; but place most of your decoys on the left, so that the ducks will come on your left, as this is easiest shooting. After this is done the shooter gets into the box and places weights in it, so that it will be smak even to the water. The shouter then lies down in the box with his face to the leeward, so that he can see every dart made and thus bave an easy shot. Where ducks are plenty this is a most lees trendive contrivance, as the ducks can see nothing until they get niver the decoys, and then it is too late, for at his moment the shouter rises up and pours in his deadly for After the bunch of ducks have been shot at under these circumstances, they fly a long distance and do not alked within sight. I should say we have about a dince sink boxes in this city; so you can see that between the bi

monding fastern strips both on the outside and lesist of three post, and between these openings put in cedas or pine, so as in concess lemands a wait, so that when the shooter is avaited the concess lemands as wait, so that when the shooter is avaited the cycle will be put the other than the strip of the control of the

Such are some of our various modes of shooting lineks on lee, and I trust that they may be medul to some of your renders, as I have never seen them in print. There are a great many other devices used, but my letter is too long already. If any of your renders should at the next shooting season he successful in the ways I have indirated, I carnestly hope that no matter how faschasting the sport may be, they will not shoot any more than they need, and not take delight in shooting when they have more game than they want.

Dukz.

Hish Gultune.

REPORT OF THE NEW YORK STATE FISH COMMISSIONERS,

THE seventh annual report of this commission is voluminous in the detail of description of the work accomplished during 1874, and has also the additional attraction of heing profusely illustrated. The operations connected with shad hatching have been conducted with the usual success. No less than 5,149,000 eggs were impregnated, and a little over 5,000,000 young shad were turned into the Hudson River. It is gratifying to know that the yield of this fish is steadily increasing, and that larger hauls were made last year than have been known for many years before. The netting, however, is carried on to such an extent that the fish must run the gauntlet of a thousand foes before reaching the spawning grounds, and the commissioners strongly urge the passage of a law prohibiting fishing from Saturday night until Monday morning, as has been done in an adjoining State. In consequence of the restriction of pound fishing in the Eastern States the catches have largely increased; in fact, one haul in the Connecticut River, in which 90,000,000 young shad have been hatched and turned loose, produced 3,650 fish, the largest haul made at any time during the present century, while the cutire yield was as large as any since 18t1. Wise legislation might produce similar results on the Hudson, where the fierce competition reuders every one alert to get his share of fish and encourages fishing on Sunday, bed wiers are productive of great damage to young shad as well as to young fish of every description; the Oswego river would be equal to the Potomac for black bass were it not for them.

intry, while the cutter yield was a longe of any since list.

in the town of Niskayuna, Schenectaday county, and gives great satisfaction. The inventor and contractor of the work, in the presence of at least twenty gentlemen, with a round scoop net, thirteen inches in dismeter, took out at one haul two fish two-thirds of the way up the ascent, and numbers of others were also taken out.

Experiments with the grayling have been confined to hatching the impregnated eggs brought by Seth Green from the Au Suble in 1873, and in watching the habits of the young fish which were procured at the same time. Of these fish there are now ninety living, in charge of Mr. Collins at Caledonia, who deserves much credit for the successful manner in which he has brought this experiment to an issue and settled the principal donbts as to the hatching of this new variety of fish. Of the value of the discovery only the future can determine, but some excellent results may follow. These are the first and only grayling ever hatched artificially.

That slippery customer, the eel, has also engaged the attention of the commissioners, and they think him worthy of more attention than has been hitherto paid him. He is certainly indefatigable in overcoming obstucles, and not at all particular as to his diet. Regarding the vexed question as to bis propagation they say the question as to how eels were propagated was one which had puzzled naturalists for years. The organs are now supposed to he a long, beautiful membrane, the swimming bladder, and by the side of it a series of very delicate fringes, something like the fringes of an old fashioned shirt people nsed to wcar. Examined under a microscope it is found that the fringe consists of little globules, which would eveutually become eggs. The eels do not go down to spawn until October or November, and the young return in Spring and Summer. They descend in the floods and deposit these very minute eggs in the soft mud, and also in the muddy, sandy places. These little fellows will stay in the brackish waters of the example of the provide shade of the provide

At Restigouche "the breeding and hatching apparatus are well adapted and systematically arranged." In October last the Superintendent, Mr. John Mowat, fishery officer of the division, had 830,000 eggs hatching, and expected nearly the whole to turn out well. The cggs had been furnished by 110 female salmon, or an average of 8,000 from each fish.

The establishment at Miramichi is the most extensive in the Dominion. It consists of a building two stories high, the upper used for the residence of the officer in charge, and the lower for fish hatching. The work of the senson began with the capture—with nets—of 350 salmon, of which 300 were "manipulated," the bulance munaging to escape or to secrete themselves. Of the 300 that were spawned 200 were females, which yielded 1,500,000 eggs, or an average of 7,500 per fish. It is expected that the percentage of young salmon from this supply will be very large.

The report alludes lastly to the operation under Mr. Wilmot's own management, at Newcastle. At the close of 1873 there were in the troughs some 300,000 salmon eggs, and a large quantity of salmon trout ova, nearly the whole of both species being successfully hatched. The salmon trout fry were turned adrift into Lake Ontario, the salmon trout fry were turned adrift into Lake Ontario, the salmon being distributed in the following creeks and rivers: The Moira, the Trent, Grafton Creek, Barber's Creek, Duffin's Creek, the Rouge, and the Credit Rivers, as well as some rivers further westward. Salmon fry was also placed in the Saugcen River, "with a view to acclimatizing these fish to the fresh waters of Lake Huron, and others of the great inland seas of the West." The annual increase in the numbers of the fish entering the stream has been steady for some time past. Many of them are too large to pass the shallows, and have to lay their eggs in the open water, whereby large numbers are lost. Only the smaller salmon, in fact, cun reach the "reception house." Of these upward of 800 entered last year, a register of arrivals

Massachusetts Anoler's Association.—A regular meeting was held in their rooms in Boston Wednesday evening April 28th, President Ordway in the chair. Reports were made showing the measures being taken for the enforcement of our laws for the protection of fish during close seasons, and the commendable manner in which the efforts of the association are seconded by General Stephenson and his officers of the State Force.

Letters from Col. Theodore Lyman and Prof. Alexauder Agassiz, accepting the honorary memberships tendered them at the anumal meeting, were read.

An amendment to the constitution and by-laws was adopted, enabling applicants for membership from a distance to have the signatures to their application after being accepted entered on the roll of membership.

A committee of five, consisting of D. T. Curtis, John F. Mills, Walter M. Brackett, Edward Dexter, and J. C. King was appointed for the parpose of considering the expediency of obtaining the lease of some snitable pond, in the interest of the association, for the purpose of raising and introducing new species and varieties of fish and disseminating information relating thereto.

Charles Hallock, Esq., of New York, editor of Forest and Stream, was present, and favored the members with some interesting remarks, explaining the objects and composition of the International Association for the Protection of Game and Fish. Mr. Hallock's remarks were received with applause.

Among a large number of the reports of Commissioners of the several States, which were presented, was a full set (6 vols., 1868 to 1873) of the Department of Marine and Fisheries of the Dominion of Canada, presented by W. F. Whitcher, Esq., Commissioner of Fisheries.—Boston Journal.

-We have received from the Canadian Marine and Fisheries Department a copy of the Commissioners nual report for 1874, which we shall find very useful for reference, and have frequent occasion to draw upon for the information of our readers. Our thanks are due for the

Hatural History.

NOMENCLATURE.

New SMYRNA, FLA., April 1875.

PROBABLY you and your readers have had enough of the pompano discussion, and Professor Gill's explanation in your paper of April 1 leaves me nothing more to add. As to the nurse shark of Florida, it is evidently a placoid or selscian, according to Mr. Gill's nomenclature, differing from other species in its teeth, which are like those of a fine saw; it also has a harb or beard on the lower jaw, and in its hahits it is sluggish. The last one which 1 saw killed, though five or six fect long, allowed itself to be drawn alongside the hoat and gaffed, after a very feeble resistance, so that if not Somniosus, or a sleepy head, it has some right to the name.

Mr. Gill remarks that "this is simply another example of the confusion which popular names may lead one into." Did it ever occur to Mr. Gill that some of the modern naturalists are adding to this confusion by their constant changes of nomenclature? We of the old school who studied Storer, De Kay, and Agassiz are constantly puzzled with the new names used by the new school of naturalists, which, in more senses than one, are Greek to us. For instance, the black basses are named by Storer Grystes salmoides and Centrarchus fasciatus. Afterward by Agassiz Grystes salmoides and Grystes nigricans. The new school, which may be called the Smithsonian, alters the name of genus and species in one, and calls it Micropterus achigan, and changes the name of the genus in the northern form,

calling it Micropterus nigricans. Why does it tend more to confusion to call a species pike perch, Ohio salmon, or glass eye than to change its long accepted name of Lucioperca to Stizostedion? It used to be thought proper to allow the name given to a species by its first describer to stand, but the northern pickerel first described by Agassiz as Esox borcus has been in some mysterious way re-named E. tuccoides, which name, as far as I have been able to trace it, was first used by H. W. Herbert, and by him wrongly attributed to Agassiz. Now, it is proposed to call this species E. estor, a name hitberto applied to the muscalonge, that species to be known in future as E. nobilior.

And so also with birds. Thirty years ago I could drive out half a dozen miles from Chicago and shoot prairie bens and partridges, and they belonged to the family Tetrao, Now I have to go 100 miles to find them, and they have changed their names as well as location; for under the new dispensation they are to be called Cupidonia and Bonassa. Even our cliff swallow has lost his old familiar name of Hirundo, and henceforth flies under the polysylabic title of Petrocheldon lunifrons.

Who shall decide when doctors disagree? Is not a congress of naturalists needed to settle once for all this matter of nomenclature?

S. C. Clanke.

COLLECTIONS FOR THE PHILADELPHIA ZOOLOGICAL OAR-DENS.—Prof. G. Brown Ocode, of the Smithsonian Insti-tution, has been down in Florida making collections for the Zoological Gardens in Philadelphia, which are accumulating specimens very rapidly. The Jacksonville Union of April 20th says:-

lating specimens very rapidly. The Jacksonville Union of April 20th says:—

Those who visited the wharf of the Charleston and Savannah steamers on Thursday appeared to be greatly astonished by mysterious chatterings, scratchings, hissings, and rattlings proceeding from a pile of boxes in one corner of the warehouse. On investigation this proved to be a collection of living Florida animals on its way to the new Zoological Garden in Fairmount Park, Philadelphia. The animals were collected by Mr. G. Brown Goode, of the Smithsonian Institution, during a stay of three weeks at Arlington, near Jacksonville.

The eollection includes a large proportion of the animals of the State adapted for exhibition in a zoological garden, with the exception of the larger species of manumals, such as deer, hears, raccoons, lynxes, etc., which can be more readily obtained farther north, and hirds which it was found impossible to secure at this season of the year.

Among the mammals there are two fine specimens of the Southern fox squirrel (Sciurus vulpinus), one grey with black head, the other entirely black; an excellent instance of the "melanism" so common in this species; also a grey, or cat squirrel (Sciurus Carolinensis), specifically identical with the grey squirrel of the Northern States, but smaller and more rufous upon the back. Also two salamanders (Geomys pineti), familiar to Floridians as the animals which undermine the pine barrens so extensively, throwing up countless little hillocks of loose sand; they are pouched rats, and closely resemble the pocket gopher (Geomys bursarius) of the Western plains, so great a pest to the agriculturist. Eight or nine specimens were obtained, but only two were domesticated sufficiently to send North, the others dying or escaping. A young wood hare (Lepus sylvaticus) is included, and an earth mole (Scalops aquaticus), smaller and grayer than tuoles of the same species at the North.

The only birds shipped wete ten pairs of quail (Ortyx

others dying or escaping. A young wood hare (Lepus sylvatious) is included, and an earth mole (Scalops aquatious), smaller and grayer than tuoles of the same species at the North.

The only birds shipped wetc ten pairs of quail (Ortyx Virginianus), of the Florida form, which are smaller, darker, and have heavier bills than the Northern quail. A pair of Carolina doves (Zenaedura Carolinensis), some parokeets (Conurus Carolinensis), a marsh hen (Rallus elegans), and a sparrow hawk (Filco spareerius) were obtained, but all died in captivity before they could be shipped.

A large alligator (Alligator Mississippiensis), over ten feet in length, occupied a large chest outside the house. Here a box containing twenty chameleons (Anolius Carolinensis), in their liveries of green and scarlet, and twenty-five scaly, or alligator lizards (Sceloporus undulatus), and a pair of red headed lizards (Plestiodon erythrocephalus), the scorpions so dreaded by the negroes, in spite of their harmless nature. Specimens of the wood lizard (Lygosoma lateralis) and the snake lizard (Ophisaurus ventralis), the so-called "glass snake," or "joint snake," were secured, but did not take kindly to captivity. The collection of snakes is especially complete, comprising, with a few exceptions, all the species which bave been observed in Florida. Here are all the venomous snakes of the South—a pair of diamoud rattlesnakes (Crotalus udamanteus) from the Indian River country, two ground rattlesnakes (Crotalophorus miliarius), a mocassin, or cotton mouth (Ancistrodon pascivorus), and a pair of harlequins (Elaps futvius), gorgeons in their bunds of orange, black, and crimson. The garter snake (Eutaenia sitalis), the king snake (Uphidotus getulus), the bead snake (Ophibolus coccineus), the "calico" snake (Abastor erythrogrammus), with its delicate that of rose and purple, are here, as well as a pair of the red chicken snakes of the Floridians, (Coluber guitarus). In one hox are five slender black snakes (Bascanion constrictor), in another a fine bull s

To sum up, the total number of specimens shipped in healthy condition was 132, representing thirty-two species,

distributed as follows: Mammals, five species; birds, one; lizards, four; serpents, sixteen; turtles, five; amphibians, one. A number of Florida wild bogs have been engaged, and negotiations are heing carried on for some manatees (Manatus Americanus) from the Indian River country.

Two large tanks, couttaining a collection of the fishes of the St. John's River, made in behalf of the United States Commission of Fish and Fisheries, were shipped at the same flure.

BIRDS WALKING UNDER WATER.

NASHUA, N. H., Aprd 28, 1876

NASHUA, N. H., April 28, 1875.

Editor Forest and Stream:—
Some one writing to the St. John (N. B.) Telegre, ph says that while looking in the water from the Bay of Fundy from the lancers of the lighthouse at Digby, N. S., a height of ninely feet, he saw a flock of wild ducks, known as shell drakes, which anddenly dived down to an apparent distance of fifteen feet, spread out like a fan, and began literally to fly through the water, using their wings with a quick intermittent motion, while their legs and feet seemed only employed for the purpose of steering. In this way they darted here and there after small fish, which they seemed to catch and swallow with great rapidity.

I noticed tately in a work published in Cincinnall, issued in monthly parts, entitled "The Birds of North America," this description of the Great Northern Diver, Loon, or Studer: "Under water they stretch out to their full length, press whigs and feathers close to the body, and moving their feet only, shoot onward take an arrow through the water." Now, I would not question that statement had! I not been a witness a great many times to the manner in which they move through the water with such astonishing rapitity. They use their wings when swimming ander valer as they do in the air while flying. I think all aquatic fowl make use of their wings under water when in parent of their food. Jean.

For exhaustive article on this subject see description by Dr. Elliott Coues in Forest and Stream, Vol. 1, page

PARASITES ON FISH.

GRAND RAPIDS, Mich, April 26, 1875.
I looking ages 1979.

Editor Forest and Stream:—

I looking over your Answers to Correspondents I 'find a quertion in regard to grabs in black base during certain seasons. In your answer you state that such parasites are common, but you don't stato mything in requy to their hierting the flesh of bass so infected for food. We find base from our river (Grand) infected during the month of August, and about until the 15th of Soptember. By cutting out part of flesh near the backbone, where we only find them, we think no harm is done to the remainder of the fish, and if your correspondent "M. A. B., Olean," will come out here, we will try and satisfy him as above and also give him a chance to handle as fine a string of bass as he can wish, as I have taken in one afternoon, with an eight ounce red, there, seven hass, weighing nearly eighty-five pounds, and that during the month of August.

Yours, &c.,

Valley City.

SPECIMEN BIRDS.

ROCHESTER, N. Y., April 80, 1875.

EDITOR FOREST AND STREAM:

The following may be worth inserting in your valuable paper: During the past week a fine specimen of Golden Eagle was stot at W. Rush, Monroe county, and a specimen of Wild Swan (whistling, or Hooper was shot at Mt. Morris, Wyoming county, both of which are in my hands for preservation. Yours very respectfully,

Thos. W. Frank.

Woodland, Harm and Garden.

In Memoriam.—We turn our rules here in respect to the memory of the editor of this department of our paper, Mr. Luke Wyman, known to our readers as 'Ollipod Quill,' who died at his residence in Arlington, Massachusetts, April 29th, of heart disease, aged about sixty years. Mr. Wyman has heen connected with this journal from its start, and has worked hard to promote its interests. He was the uncle of John W. Hutchinson, gun dealer, Chambers street, this city, and for many years was associated with Mr. Downing in the publication of the Horticulturist. He was a keen sportsman and a devoted student of Nature. His death will be lameuted by a large circle of friends.

NEW METHOD OF CRANBERRY CUL-TURE.

THIS excellent and very profitable fruit has, during a series of years, almost changed its entire habits or forms of culture and location. We have frequent inquiries made for information, both general and special, as to the best known methods of the cultivation of this fruit. Years ago and the cranberry plant was confined to the bog meadow and overflowing low-lands, where it brought forth abundantly or sparsely, according to location and capabilities of land and soils. Then we had to content ourselves with a comparatively small and meagre fruit termed "wild meadow cranberry," of a subscied taste, not to be compared in size or flavor with the nice red-checked specimen of to-day. The cultivation of the cranberry may now be looked in the catalogue of remunerative fruits, and deserves the most careful attention of the farming community. We well recollect the days of the early listory of the diminutly eranberty of our schoolibor days, and the hours we spent ou the Lexington great meadows wise covered with short, stubby vines, full to overflowing with this tirtle purple berries. True, the meadows were covered with short, stubby vines, full to overflowing with this tirtle purple berries. True, the meadows with the formal property, or restrictions forbidding the gathering of the grant of the cranberry gathering were regarded by many persons in the ry gathering were regarded by many persons in the ry gathering were regarded by many persons in the ry gathering were regarded by many persons in the ry gathering were regarded by gathering of the grant meadows as not only a God-send, but a sort of carnival time, for the poorer elasses in particular. In these and other meadows with a nice as a private in the send of the cranberry gathering were regarded by a good coating of the regarded to a good lawn. Being the intervent of the send of the send of the send of the cranberry subtiletes.

We could make a pleasant paper fu

stances, changed almost cutirely from the old fashloned mode of letting them take care of themselves, now and then looking to "drainage and flowage," and a few minor matters that did not amount to any great ontilay eliter in time or money. The cultivation of this fruit is no longer confined to low lands and wet locations, as of yore, but it is now cultivated upon higher lands, such as dry, sandy lourus, grounds satied for core growing. It has become rather aristocratic in its acclimation and habits, and, so far as my own careful observation serves, may be easily and very successfully cultivated in our gardens with entire satisfaction and a plentful yield of a much improved fruit both in size and flawer.

The cranherry requires no more moleture than usually is found in most of our tilled arable soils. Fine cranberry beds may be made upon dry, sandy loam, and if well cured insidels per acre. I have rarely found under the lest yield upon what has been classed as fair cranberry roundow more than one-half of the lest crops under the old system of let them alone." The result of this method of improved enlitivation is, as before remarked, a much larger fruit, of a fine dark color, very firm in its texture, a better flavor by far, and it ripens sooner than the fruit of the old unedow. Having uit snew location adapted itself to its new soil it receives the full benefit of a superior fertilization, together with an abandance of sun and air, toolt of which were struggers to it in its old home in the meadows. If we add to the above the fact that under the each method of culture, the plants heigh stronger and possessing more follage, the fruit hangs below and among the leaves, and is protected from the September frosts, which offen kill be entire crops quanteristic pather without danger from cold of frost. I have seen fruit gathered in the Spring which had remained on the vines during the Winter.

It need not be told to those who have cultivated the cranberry for market under various clremustunces, that it is a very lardy,

ANSWERS TO CORRESPONDENTS

Melton, J., Sag Harbor.—In regard to your question as to "old strubberies," I give you a short extract from an article upon "Old Shrubberies, and Treatment of the Same," which will appear hereafter in book form: "You frequently find, more particularly in old gardens, the borders skirted by a promisenous assortment of all kinds of shrubbery; they are planted without any system, and it seems as though they eame up just as it bappened. Confusion, briurs, and often weeds hold revel here. Rabbits and squirrels barrow in perfect peace, and an entire abandonment of order reigns. In this case you cannot do much by way of improvement and elegance this year. Remove, if you please, first all weeds, and cut onl all unnecessary briars, if you leave this year the blackberry vines you mentioned, and the old red hawthorus, and give the same a good cleaning out; remove the rabbits and squirrels to another reservation, and give a good coating of manure, and let the evergreens, etc., and all the other plants live. This is about all that can be done for the first year on an 'old shrubbery.'"

The Rennel.

SPRINGFIELD BENCH SHOW OF DOGS.

IT is with pleasure that we record the success of the first attempt of the Rod and Gnn Club at holding a Bench Show, and Springfield (Mass.) has reason to be proud of the result of this effort on the part of a few of her enterprising citizens in inangurating the first Beuch Show in New England. It was a surprise to the oldest sportsmen present to find that New England possessed so many fine dogs, and the delegation from this city and New Jersey, though not large unmerically, could not be surpassed in the country. There are many who claim that Bench Shows are useless as compared with Field Trickle that the are thany who claim that Bench Shows are useless as compared with Field Trials; that the former allow the dogs no opportunities to show their points of excellence; but we will venture to say that there was no visitor to Springfield on Wednesday or Thursday last, who did not learn something about dogs. Even the gentleman whom we heard ask, with refreshing nauvele, to be told the difference between a setter and a pointer, went away instructed, and indeed carried with him information, greater than that presented by ried with him information greater than that possessed by many with more pretensions and less candor. The list of entries contained no less than one hundred and sixty-seven names, more, we apprehend, than have been upted at aay Bench Show yet held in this country. The fellowing is the full list:-

ENTRIES

Laverach Setters—C. H. Raymond, Pride of the Border and Farry; G. Delano, Dolt; G. A. Strong, Rock; Luther Adams, Rock and Duke.

Gardon Setters—John A. Foster, Dl Vernon; C. H. Bowker, Kent; H. Thompson, Dash and Flora; B. W. Jenkins, Alice; Luther Adams, Duke.

Gordon Selters—John A. Foster, Di Vernon; C. II. Bowker, Kent; II. Thompson, Dash and Flora; B. W. Jenkins, Allee; Luthor Adams, Dake.

Evalish and Native Setters—S. B. Caney, Dan; Luther Chark, Nero; Geo, Harrington, Trim; Miss Nellie Bassett, Fly; E. H. Smith, Branci O. D. Corley, Groose; F. Warin, Dick; W. H. Bsteom, Dick; W. S. Ferry, Peter, E. S. Allin, Sport; Chiss. Chimer, Princess; C. II. Foss, Nellie 21; J. A. Laken, Nod; E. C. Bingham, Bell; R. S. Knowley, Jim; F. E. Morse, Don; Luther Adams, Dora; Ethan Allin, Fan; B. E. Bowley, Trump; Maj. Geo. W. McGee, U. S. A., Fop and Tad; S. T. Hammond, Trim; W. H. Borrall, Jack; Richard Marris, Jack and thick and timop; E. M. Coats, Robin; John A. Foster's Flip.

Red Irich Setters—Lient. II. Meteatle, U. S. A., Jim; J. A. Barnes, Sulpe; C. II. Colt, Nellie; Wm. Jarvis, Dick; Hamilton Thompson, Dake, Ibb &, Belle and Dake, Ar.; Richard Morris, Hail.

English Pointers—Dr. W. S. Webb, Wirlsky,
Spanish Ivanters—Robt. O. Morris, Guy; Wm. M. Wüllams, Qanker; Charles Pierce, Pomp.

Mallie Pointers—II. C. Taft, Bess and Jake; Joseph Cumeron, Nell; E. B. Laibrop, Dan and Trump; W. A. Taylor, Mac (formerly Jock); Edward Sanderson, Jack; Robto, O. Morrls, Idy; H. W. Brown, Dan; T. B. Caney, Ben; C. W. Hixon, Cal; J. M. Dodice, Gny; G. A. Strung, Peter II. C. Taft, Psyche; John Murphy, Hip; R. E. Sabin, Trumps, D. B. Gillet, Jr., Jane; John F. Harrlson, Dasb; E. R. Smith, Scoll; John White, Jim; Frank E. Cork, Don; G. A. Strong, Prudence.

For Hounds and Bengles—H. W. Hammersly, Deetor; F. W. Hashins, Tim; G. W. Himman, Loud; C. H. White, Wilcop: W. L. Keyes, Rover; Martin Kooler, Dimonod and Masle; H. C. Jones, Loud, Buck and Flora; Jao, Kellogg, Jeff; W. E. Gibhons, Dick,
Spaniels and Retrievers—Winnow & B. Morse, Prince; D. S. Barker, Luti; Oliver Edwards, Max; II. C. Taft, Fred; Fred O. Hanson, Dick; Frank II. Petler, Zuleite (2 paps); Win. Thorohilt, Fanny.

Terriers—Wm. Gunn, Scotty, James S. Walker, Pretze! Baroness van Stralendorff, Coph. Chus. Barker; Benj. Hatmo

g.

Bull and Bull Terriers—Geo. W. Rice, Guess; A. L. Esta
etsy Baker; Geo. A. Duttmon, Buster; James Summers, Nero
l, Jepp; E. C. Robiuson, Mujor; A. L. Pease, Jack; John De

The judges appointed were "Squire" Horace Smith, Kennel editor of Forest and Stream, Lieut. Harry Metcalfe, U. S. Army, now stationed at the Springfield Arsenal, and Mr. F. W. Lawrence of Brookline, who devoted themselves to the merits of setters and pointers. Messrs, Ethan Allin, T. Eatou and O. B. Deane did the same duty for the other classes. We have yet to hear any dissatisfaction expressed with the awards of the judges, and when the difficulty of their positions is considered, and that over a huncally of their positions is considered, and that over a hundred setters and pointers, the majority of which would rank high anywhere, passed their secutiny, their success reflects great credit upon their skill. The smallest animal exhibited was the black and fan terrier Vinnie, weighing two and three quarter pounds, and the largest a Newfoundland which turned the scale at 162 pounds. The City Hall, a large and commodious building, was thronged through the day and commodive with helics and contractions. the day and evening with ladies and gentlemen, the ladies in particular evincing great interest in the show, and finding nothing offensive about it. A trained bull terrier amused the audience with really well performed tricks. A little Japanese spaniel attracted much attention, as dld also some of the toy terriers. President Lathrop of the Rod and Gun Club announced the prizes (as published below), and subsequently introduced Mr. Charles Hullock, editor of this paper, who made a short address in which he con-gratulated the club upon inaugurating in this country so gratulated the club upon inaughrating in this country so successfully this interesting kind of show. He believed they would become common. He enlarged upon their importance to dog breeders and owners. The canine race was said to be exceedingly susceptible of improvement by cultivation. It was of great use to man, especially in settling new countries where game was a staple of food and the extermination of troublesome and dangerous animals an important exception.

It is impossible to close this brief mention of a most interesting occasion without a word of thanks to the members of the Springfield Club and the Rod and Gun Club, for the courtesy and generous hospitality extended to the representatives of this paper during our recent visit.

The following is the list of awards: The best dog in the first

mentioned six classes receives a silver cup, and the second best a diploma, while the best bitch receives a silver collar. The other classes receive collars and diplomas, according to merit. The prizes will be delivered as soon as the names are engraved thereon.

THE PREMIUMS.

Laierack Setters—Best dog, Pride of the Border by C. II. Raymond of Morris Platins, N. J.; second best dog, field trial dog, Rock by Lutber Adams of Beston. Best bitch, Fatry by C. II. Raymond of Morris Platins, N. J.; second bris bitch, Doll by George Delano of New Bedford. Best dog pup, Duke by Luther Adams of Boston. Gordon Setters—Best dog, Duke by Luther Adams of Boston. Gordon Setters—Best dog, Duke by Luther Adams of Boston. How Jersey. Best bitch, Alice by B. W. Jenkins of Ballimore; second best blich, Flora by Illianition Thompson, of New Jersey. Best dog pap, Kent by C. II. Burker of Worcester. Best bitch pup, Di Vernon by John Foster of Stafford Springs.

ster. Best blich pulp, DI vernon by John Foster of Stafford s.

Ish, Irsh, and Natire Setters—Best dog, Filp by John A. Foster flord Springs, also as the best setter dog, receiving the Foster flord Strings, and also a camp lounge. Best bitch, Hora by Luther Adams ton; second best bitch, Fran by Kitun Alitin of Poinfert, Ct. Best p. Bonno by R. H. Smith, of Springsledt. Best bitch pap, Princess ries Paliner of Windsor, Ct.

Irsh Setters—Best dog, Duke by Hamilton Thompson, N. J., a mp; second best, Snipe by J. A. Burnes of Hariford, Best bitch, by C. H. Colt of Hariford; second best bitch, Belle by Hamilton pson, N. J.; best putp, Duke, Jr., by Hamilton Thompson.

Ish Printers—No dog in this class heing devined worthy of tho ize, il was not awarded. Best dog, Gny by Robert O. Morris of field.

Wassen's revolver as lead reduler; second how doe. Duch he

**Zinfers—Beat dog, Pete by G. A. Strong of West Meriden, Ct.; Wesson's revolver as best pointer; second heat dog Dish by arrison of Springfield, also camp louinge. Best blich, Prid. A. Strong of West Meriden; second best blich, June by D. of Enfeld. Best dog pnp. Ben by T. B. Caney of Springfield, Psyche by H. C. Taft of Springfield.

*Psyche by H. C. Taft of Springfield.

*Inds—Best dog, Rover by W. L. Keyes of Springfield, diplod best, Whoop by C. H. White of Springfield, silver colbr, plonings. Best blich, Flora by J. C. Jones of West Stocket dog pup, Lond by J. C. Jones.

*Best dog, Max by Gen. Olliver Edwards of Florence; second red by H. C. Taft of Springfield. Best blich, Finnay by Win. C. Springfield. Best dog pup, Fince by W. B. Morse of Ind. Best blich pap, Litta by D. L. Barker of Springfield. in 's water spaniel Dick received a diploma as being the best left exhibited.

Fred Hanson's water spaniel Dick received a diploma as being the best water spaniel exhibited.

Terriers—Best dog. Dixie by J. H. Damon of Springfield; second best dog. Billy by Mrs. Van Brunt of Boston. Best bitch, Tiny by F. Edward Gray of Springfield. Grabitites of collars to Fug by George E. Wilder, Scotty by Col. J. G. Benton, Pretzel by James Walker, a Yorkshire terrier by Win. Gunn, Tiny by F. S. Davis of Holyoke. Fldele by Butoness Von Stralendorff, a Cunan terrier by Michael O'Donovan, Frischer terrier by Win. Gunn, Tiny by F. S. Davis of Holyoke. Fldele by Butoness Von Stralendorff, a Cunan terrier by Michael O'Donovan, Frisch by Wilker, Waterman, black and tan dog Tommy by G. E. Betselv.

Neubundlands, St. Bernards, Collies, Dalmatlans, Spitz, Bleukeim Snan-tles, Poot the, Hailand Orsphonnois and Graphonnois—A silver collar to Capt. Spitz, by George Humilton of Springfield; a silver collar to Capt. Spitz, by George Humilton of Springfield; a silver collar to Capt. Black English greythound, by H. B. Handy of Springfield; a diploma to Flora and sky pups, monse colored greyhound Intell, by Wulker H. Whitcomb of Northsmitten, Spitz, Bleuheim Spintlel, by Baroness Von Simlendorff of Boston: a collar to Billy, hinck Newfoundhaland, by Miss Mamile Bates of Springfield; a collar to Spot, by G. H. Goniti of Springfield, as the best coach dog; a collar to Spot, by G. H. S. Nides of Springfield, as the best coach dog; a collar to Pontry, with two pups, by Mile. M. de Vrice of Agawan; a diploma to Torte, by H. S. Nides of Springfield, as the best St. Bernard; a diploma to Torte, by H. S. Nides of Springfield, as the best Hallum greybood; a diploma to Torte, by H. S. Nides of Springfield, as allowed to Dandy, by H. D. Entwards, as ilic best Hallum greybood; a diploma to Rose, a Nawroundhaland with pups, by L. B. Merrill

Manifes. Bull Dogs, and Terriers—Best terrier dog, Guess by G. W. Cennis Son des Julies and the second dog, a collar to Springfield, a silver collar, second collar, second collar, second collar s

The Springfield Republican thus speaks of the cup presented by as at the Rod and Gun Club Bench Show:—

sented by as at the Rod and Gun Club Bench Show:

"The most valuable and elegant prize is the superb silver pitcher given by the Forest and Stream, and which is, to-day, on exhibition in the window of Stowe's jewelry store. It is very heavy and capacious, porcelain-lined and most elegantly engraved with appropriate designs. Upon one side is cut the picture which is the "frontispiece" of the Forest and Stream, and a very artistic and life-like engraving of three noted dogs, a setter and two pointers imported by Sir Frederick Bruce, once the English minister at Washington. It is cut from a photograph. A tracery of boughs and leaves, with ruffed grouse, woodcock, troul, and other game dear to the sportsman's heart, complete the profuse ornamentation of the pitcher. It will be awarded to the best pointer or setter."

The judges awarded the pitcher to the English setter Flip, entered by J. A. Foster of Stafford Springs, Ct., he having received the highest number of marks from each judge.

Fip's portrait and pedigree will be published as soon as received. One of the finest pointers at the show was Dan, owned by Mr. E. H. Latbrop, President of the Rod and Gan Club. Dan is by Trumps, out of Dolly, and has a received which traces directly leak to a fine strain of incomparison. pedigree which traces directly back to a fine strain of imported dogs. Another capital dog was Mr. George Harrington's setter Trim, by Day's Rock 2d, out of Mr. Flagg's well known black and white bitch. Book 2d was By the

well known black and white blich. Rock 2d was by the Blue Belton Rock, imported in 1861 by Mr. John Boyden, President of the Sportsmen's Club of Worecster, Mass.

We saw nothing, however, that pleased us more than the magnificent setter Rock, recently imported by Mr. Luther Adams of Boston. Rock is by Mr. Barclay Field's Bruce, out of Mr. Purcell Llewellin's Daisy. Bruce was by Dash 2d, out of Mr. Staller's Phothe, founder of the Field Trial (So, called) breed. Daisy was by Dash 2d, out of Mr. 2d. 2d, out of Mr. Statler's Phœbe, founder of the Field Trial (so called) breed. Daisy was by Dash 2d, out of Moll 3d, both Laveracks. As Dash 2d was also the sire of Pride of the Border, the relationship between these dogs is very near. Rock resembles Fairy very closely, their heads, except in point of size, being almost identical. Mr. Adams has also another fine one in Duke, one of the Field Trial strain, by Mr. Llewellin's Prince (who was litter brother to Daisy mentioned above) out of Dogs own sides to Day. Daisy, mentioned above), out of Dora, own sister to Dau, who was a cross between the Gordon and South Esk or English setter, being by Mr. Barclay Field's Duke, out of Phæbe, as mentioned above. Dora was also exhibited at Springfield.

"GUESS," THE GREAT TRICK DOG.

SPRINGPIELD, Mass., May 8, 1875.

EDITOR FOREST AND STREAM:—
Enclosed you will find a likeness of the noted bull terrier trick dog, Guess, owned by Geo. W. Rice, of Springfield, Mass., who received two premiums at the Encich Show of Dogs held at the city of Springfield list week; one as the best dog in his class, and the other as a grainly by the judges for his many and difficult tricks performed. Gness is now live years old, and has been, from a pup, a dog of wonderful intelligence. He was pronounced by Mr. Raymond and many others as heling the most wonderful dog of his breed that they had ever seen. He was exhibited each afternoon and evening, and was the centre of attraction in the hall. He performed some twenty different tricks—jumps 7t, b in, in mid air, taking a cloth from the pole; balances lituself on a broom handle, and many other difficult feats. He is out of "To" Concy's imported Policy and Nan, Springfield, Policy and Rosa. Respectfully yours,

HUNTERS AND THEIR DOGS.

BOITOR FORDER AND STREAN:—

We have often wondered over the strong love of the sportaman for his dog; but one great reason of this is the remarkable intelligence and sagnety of that animal. We speak of the politice and setter, for our huntling is mostly done with these, and the inter is preferable because the most bandy, and we believe he is the inoat intelligent. These are our bird dogs, and of their we can spenk from our knowledge and observation. There is in both uniter and dog a love for like sport that cannot be realized by those who have not known the feeling. Our own setter is atmost wide with dwild cover a gan, and begs with the earnestness of an animal at the business to be allowed logo out for a built. But what is curious, she knows well of whom to ask the favor. If a lady picks up the gan and asks, "Pan, do you want to ga?" site turns hudferently away, and seems to say. "I know you are fooling met. I never go huntling with ladies." But when her master, or any gentlemm of her acquantinance ukess the above article in lunni, she burks, implices, and almost runs wild over the matter. There is no occasion to ask would she like to ea, for her articlase show the fact planlay enough for all to see. She is intelligent to an astonishing degree, and comprehends our meaning when we address her as quickly as a child. At one time, after we had spent the day in the fields, we found our dog missing, and looked and ealled in value; she did'it return, and we retired to our court anxious and sorrowful. The following morning the search was retiewed, but it was in vain until we reached the stream that flow near the old homestead, and there in the old bont, where we had left several articles and one or two dead birds, was Fau, who had failtfully welched through the atght over the bont and its contents. The good brute was called away, and had a sumptions brenishes as a reward for her thedily. She is as kind as Intelligent; our little two year old boy could fell you had. The rides and plagues her, and yet we have never know

DOG FARES.

short articles.

DOG FARES.

Jersey City Heidets, N. J., April 20, 1875.

Editor Forest and Stream.—

In your issue of Feb. 28th, is a leiter from Mr. Theodore Grey, conductor on the Pittsburgh, Fort Wayne and Chicago Railroad, stating that the tariff of charges for transportation of dogs on that mad is much less than one cent per mile, and that the baggagemen were whole-couled fellows who would lake charge of good dogs for nothing. My experience with them is different. On Thursday, Dec. 5, 1872, I took the 8 55 A. M. train from Manabeld, Ohlo, to Nevadin, a small station on the P. Ft. W. & C. Raifroud, and on Saturday, Dec. 7, took the 4.48 P. M. train for Mansdeld. I had with me Sir Frederick (setter) and Brace (pointer) bolk by the dogs imported by the hite Sir Frederick Brace, and presented to me by Dr. A. R. Strachun, and I also bad Mr. Salt-crilwatte's Grip, by his dog Plash. The distance between Mansdeld and Nevada is thirty miles, and each way I was charged lifty cents for each dog, and was not allowed to carry my gain in the passenger car, bit had to pay fifty cents for each long and was not allowed to carry my gain in the passenge car, but had to pay fifty cents for have list carrile dia the buggage ent on that road treat through passengers, but complaints of their extertion by parties living on the line of the road did not show how the huggagemen on that road treat through passengers, but complaints of their extertion by parties living on the line of the road did not show my case to be an exception. Should any one Mr. Grey was acquainted with agoin board his train with a gain that was not in a case, would the instance them taske it in the baggage car, for which the baggagemm's charge is twenty-five cents for carrying it, even between stations? I inderstool from Mr. J. Morris, the agent at Manafield, that it was the company's orders not to allow gains in the passenger cars. The mads ranning out of Jersey City carry hundreds of gains in the passenger cars every season, and there is no record of any acc

—"Pete," the black pointer owned by G. A. Strong of West Meriden, and to whom was awarded the pistol presented by D. B. Wesson to the best pointer at the Springfield show, is said by competent judges to be the best pointer in America. Gentlemen who were present at the Mineola show will remember his sire, "Old Pbtl."

MISSISSIPPI CANINE PRODUCE.

COBINTH, Miss., April 27, 1875.

Corinty, Misa, April 27, 1875.

Editor Forest and Stream:—
The coming dog of this section will be out of Mr. Ben Holladay's celebrated dog Jack and my blich Nora—pointers. Jack is the best combined dog by long odds I ever saw in the field; an astonishing ranger, splendld nose, and as staunch as a rock, and on single birds as careful as a dog can be, and yet not too slow; drops to shol, and is by fai the best single bird dog in this part of the State; lemon and white, a large and elegantly formed dog. Nora is a liver and white, large and a model in form; is the finest ranger for a birch I ever saw, upheaded, and as graceful as a deer in all her movements. She is, next to Jark, the best covey dog I ever saw, aplendid nose and staunch as Jack; a little too fast for single birds, but will find more of them then most dogs. She makes the prettlest stand I ever saw a dog make; graceful in every altitude she takes, no dog can be slauncher. Jack was sent a bundred miles by rall io me to meet Nora. He is half-brother io my hitch, Kate, by Col. Chas. Danlels' Old Ned, said to be the hest dog in the State. I sent Capt. Taylor, iben while Forest and Stream, the pedigree of these dogs.

Sea and River Hishing.

FISH IN SEASON IN MAY.

Trool, Salmo fontinalia. Salmon, Salmo salar. Grayling, thymallus tricolor. Bluck Bass, microptems nigricans. Salmon Trout, Salmo confinis, Stad, Alosa, Land-locked Salmon, Salmo Gloveri

Black Bass fishing is permitted in New Jersey on and after May 1st; in New York, May 20th; Ohio, May 2d; in New England and Pennsylvania, June 1st.

FISH IN MARKET.-Fish still continue plentiful and low FISH IN MARKET.—Fish still continue plentiful and low priced. North River shad, contrary to the apprehensimus of the fishermen, are very abundunt; roe shad bring 35 cents and the male fish 20 cents. In fact each year the demand for roe shad increases and the males are difficult to sell at any price. Very few Connecticut River shad have been received as yet, and the price they bring is not very much beyond that of North River; the plentiful supply of the latter keeping prices down. On last Friday the first catch of fresh mackerel arrived, one schooner bringing 19,000 and another 7,000. By Saturday night they hringing 19,000 and another 7,000. By Saturday night they were all sold at \$18 to \$30 per hundred. The dog fish have appeared off Sandy Hook and the Long Island shore, and in consequence the codfish have all disappeared. Smacks are now obliged to go further agest for a supply and for the are now obliged to go further east for a supply, and for the next month our supply of cod will come mostly from Nantucket. Penobscot salmon are arriving slowly and sell for \$1 per pound; Nova Scotians bring 80 cents. A few sheepshead have been received from Norfolk, Va., and sell for 40 cents per pound. Halibut are plentiful at 16 cents; very large lots of striped bass, weighing from 5 to 50 pounds each have been received from Edentou, N. C.; these fish are full to bursting with spawn; price 18 cents per pound. Brook trout remain unchanged in price and the market is well supplied.

-We have received a letter from the Adirondack suburbs, dated May 1st, in which the writer informs us that the ice in the Saranac Lake varies still in thickness from 14 to 18 Inches, and that the snow is quite deep in the woods yet. Sportsmen proposing visiting that region need not be in a hurry to reach there until about the 20th or later. We shall be telegraphed to immediately when the ice disappears from the Saranucs, and will publish the same for the benefit of the impatient and those who hold places on the anx-

-The Fenton House, at No. Four, Watson, Lewis county, N. Y., so long and favorably known to the sportsmen who love the wilderness, has changed hands. The property owned by Mr. C. Fenion, who was born and brought up on the place, and who has fished and hunted the waters and woods in its vicinity, has been bought by Mr. Cheney Green, of Springfield, Mass., who intends making extensive improvements the coming Summer, so that it will be one of the best wilderness homes in the Adirondacks. Mr Fenton remains in charge till Fall, when he retires with the hest wishes of numerous friends, who have enjoyed themselves many happy hours under his roof,

themselves many happy hours under his roof.

ADIRONDACKS—Suranae Lake, April 26, 1875.—Your paper comes to hand regularly every Saturday. We are looking for a speedy disappearance of the ice in the lakes; expert them to open some time next week. The ice is very soft, and is hardly safe to travel upon ou foot. The Winter has been long and severe, and the ice in some places fully three feet thick. The roads are in splendid condition, having dried with great rapidity. Martin, Burtlett, Paul Smith, and the Prospect House will be ready for guests as soon as they come. The Prospect, ou the Upper Saranac, will be kept by a Mr. Vanarnam, a true sportsman as well as a genial landlord. It will be a good place to slay. The sportsmen will be welcome after the long and lonely Winter. Those who enjoy good fishing will do well to come early.

—Messis, Abliev & Imbrie, successors to Andrew Clerk.

-Messrs. Abbey & Imbrie, successors to Andrew Clerk & Co., have opened a new salesroom for anglers' tackle at No. 77 Fulton street.

-Bass are biting in the Potomac. The Washington Sportsman says that they are being caught by the dozen at Great Falls, weighing sometimes as high as four pounds.

Great Falls, weighing sometimes as high as four pounds.

Fight Laws in Ontarto.—Close time for white fish November 10th to December 1st; salmon trout October 15th to December 1st; brook or speckled trout, September 15th to January 1st; tresh water herrings, October 15th to December 1st; black bass, May 15th to June 15th; pickerel (doree) or maskinonge, April 15th to May 15th. Net fishing without license is prohlbited at all times.

The Fisheries.—The dullness of other branches of business throughout the conutry will have a tendency to send more people on mackereling trips this summer than ever before, and the consequence will be that a majority of firet-cless men will be engaged in this very important

branch of the fisheries. The number of fishing arrivals for the week ending April 29th, was twenly-six, twenty-one from Georges and five from the Grand Banks. The Georgesmen have brought in an aggregate catch of 450,000 pounds codfish and 55,000 pounds halibut. Sales yesterday at \$3.50 per cwt. by the trip, for Bank, and \$4 for Georges. On Tuesday Georges sold for \$10 per cwt, and first Bank arrivals for \$6.25 and \$3.50.—Cupe Ann Advertiser, May 1.

THE NEPIGON REGION OF LAKE SUPERIOR.

PERIOR.

TROY, N. Y., April, 1935.

TROY, N. Y., April, 1835.

Entror Forest and Stream:—
It seems to me that the "pleasures of memory" are more largely enjoyed by the true sportsman than any other class of pleasure seekers, and the reasons for this are to be found partly in the enjoyment of sport in the abstract, which becomes almost a passion with those of as who have inherited it from a long line of ancestral Nimrods, and partly in the concomitants of such sport to those who are honest lovers of nature, for it is only the ignoble pot hunter that can soo no heanty in green fields and shady brooks (especially when the latter have trout in them), in the hirds of the ali and bensts of the field, when not snogly stowed away in a game hag, the only postlon which our friend of the pot (lo which I trust be is ever hastening) loves to regard them. On the other hand, how often the recollections of hall room trinophs to the man of fashion, or boisterous lines over the flowing bowl with home companions, carry along with them memories of headaches and henriaches, of ruined morals and chionic dyspepsia? This strain of thought was started this morning as I busied myself joitting down for my own pleasure, if not for the delight of your readers, a few notes from my journal of a trip undritaken several years ago to the Nepigon River on the north shore of Lake Superior. To preface what I have to say I must state that we (that is, myself and trater,) had heard such fabulous lales of the dishing in this vory impracticable portion of the Dominion, abest recounted by a gentleman as distinguished for his learning as for his unitring hospitadity; whose generous virtues are wasting their fragrance on the desert alr of Sault Sie. Maric, or In less elegant American, the "Soo," that we determined to test the authenticity of these reports as soon as we were satigfied that old Sol had sgain asserted his supremacy over the tillis and valleys of that northern region. Accordingly with the ready help of our friend, we soon accomplished the necessary arrangements incident to all

sbeointely incognize to all mankind, excepting the trappora in the employ of the Hudson Bay Company, and a conple of partles of whites who accended the river some years before for fishing purposes, and left their testament recorded on the rocks flanking the pools, to which they gave their names.

On the 20th of June all things being in readiness we embarked on heard the steamship Algoma, our party consisting of our two selves and a copie of buff breeds named 40 Sayre and Mortzaen, the former a genileman of the history and the same of a Sloux chief in straightened circumstances; the other a discharged employee of the Hudsun Bay Company, of no family distinction, but a powerful young fellow, and possessing perhaps more of the instincts of Father Lo than H. R. H. M. Sayre. A Mackinaw boat, the property of our braves, was etung, alongside the ateamer, and all our baggage comfortably stowed away inside of it. Atter two days of rather tempestuous worker we were put asbore on an anonymous baland between Thunder Cape and Fort William, the sea being too rough to enable the capital to fulful his promise of inreling us addit when opposite Nepigon Bay. Three days longer were occupied in narigating the lake between Thunder Cape and our destination, by no means the least delightful part of our trip. The coast here is bedd and rugsed to a degree betting such a stormy water. The cliffs in some places, as for instance those forming Thunder Cape, rise to an elevation of two thousand feet. The bays are many of them full of signess imbedded in the everlasting rocks. On one occasion we put salvore and were very successful in a short space of time in mutilating pleyond all recognition a hutchet, in value at a support, and a startly the work of nitro glycetine, viz:—the dislategrating of some of these rocks act with precluse stones. As we craised along past the anthreous recks as with precluse stones. As we craised along past the anthreous recks as with precluse stones. As ter a long palaver it was agreed that we should give him §2,

—They have queer fish out in Texas—fish called buffalo; and the buffalo go "Immbering" over the prairies where there's not a stick of timber to be seen.

Answers Co Correspondents.

Anonymous Communications not Noticed.

R. K. J., Quincy, Hi.—We have a fish here, locally called "croppy," further north, silver bass. What is the proper name? Ans. Pomoxis hexacanthus of Cavler—See also ansawer page 39, Vol. 4.

TAHAWUE, Brooklyn.—One of our subscribers informs as that he has a purchased copy of Colvin's Adirondack Survey, which you can have for \$3.50. Please send as your address, which has been mishald.

C. W. C., Alexandria Bay.—I sm looking for a lish aquartum, size four feet long by twenty luches wide. Will you please give me the address of a firm dealing in such articles? Ans. J. Bagot, 31 Fulton street.

G. W. T., New York.—Whore can I have a powder flask covared with hog's skin or leather, and where can I have the leather pair of a shot pench made and what is the best material to use? Ans. Go in any good harness maker or worker in leather.

W. B. C., Providence.—Will you please inform me which English

ponch made and what is the best material to use? Ans. Go to any good harness maker or worker in leather.

W. B. C., Providence.—Will you please inform me which English sporting paper conflues itself most strictly to red, gun and dog, and who the agent is on this side? Ans. The London Fidd and Lind and Water, to be had of A. Brentano, No. 33 Union Square.

W. H. C., New Bedford.—Could you tell me what the fare would be from New York to Stoney Lake, Canada, by the shortest ronte; also what it would cost to risy there two weeks? Ans. Pare each way about \$30; board at hotel \$10 per week, or private lodgings at \$5.

H. D. W., Corcord, N. H.—Will you please inform me which of the law game—sharp or Reinington—you would consider the best for sporting purpose, although both are very good. Which should you prefer? Ans. They are both so good that we could not make a distinction, each manufacturer having aimed to achieve perfection.

F. L. M., Philadelphia.—Is the match between Bogardins and Payne for the 15th of May still on, and will it come off; if so, when and where, and how much, as I want to see it and can get no information about it? Ans. The match is set for the 15th inst, at Prospect Park, and as part of the money is "up," we know of nothing to prevent its culmination.

Young Piscator. Overbrook.—What is your opinion of a fly will black wings and white hody, something like a coachman reversed? Ans. There is no could to the variety of colors and nondescript patterns in fly dressing. The monstrosity you speak of right do good aervice, when other irres failed. An experimental test would not be expensive Where he can obtain a copy of Colvin's Report.—In your last edition a corresponder enquires where he can obtain a copy of Colvin's Report.—In your last edition a corresponder enquires

value other tares latted. An experimental test would not be expensive Colvin's Report.—In your last edition a correspondent enquires where he can obtain a copy of Colvin's Report.—I am informed through a friend in Albany that the publishers—Messes. Weed, Parcons & Co., of that pisce, bave a limited number at \$3.50—an exorbitant price for the work, though it is one of much interest to a native of the Adirondacks, like myself.—J. L. L.

V. W., Philadelphia.—Will you please tell me the best book open sall boats, explaining how to manage them, and where I can purchase such a book, and the pilet Ans. "The Yacht Sallot," by Vander-decken, and "Yachts and Yachting," revised; both English works. Can be had by addressing Thos. Manning, No. 203 Broadway, or from this

C. G. P., Boston.—Can you inform me if there is any method wherehy I can prevent the growth of a spitz dog or pup; also at what time I can take it from its mother? Ans. 1st. It is said that whisky will produce the desired effect, and as our Kennel editor stands only five feet four in his stockings, we have some confidence in the remedy. 2d. When about five weeks old is a proper time.

F. B. S., Elizabeth.—I have a selter hitch who has just dropped a litter of puns got by her own son. They seem strong and of full elso. Will you please tell me whether they are likely to be worth raising; both dam and sire are well bred? Ans. We have seen many first class dogs haved just as your pups are, and the chances are your pups will be right, yet we do not recommend such inbreeding.

Exenses, Philadelphia.—I have a breech loader: welcht a many first class.

yet we do not recommend such instreaming.

Expurss, Philadelphia.—I have a breech loader; weight, \$ pounds; hore, .577; barrel, 24 hickor; ceulre fire. What quantity of powder, and weight and shape of ball will give best results at point blank range, 109 and 200 yards? Aos. We can unly suggest experiments with your gun until you have ascertained the best charge; or an ilress the maker of your ride, no we imagine it is of English manufacture.

until you have ascertained the best charge; or anireas the maker of your ride, us we imagine it is of English manufacture.

II. E. R., Philadelphia—Is a paper bost equal to a cedar one; also the address of a paper boat buthler? Ans. Yos; address Watera & Bon, Troy, N. Y. What is the hest exercise to bring out the muscles on the chest and shoulders? Ans. The new rowing apparatus. What is the difference in prices of shells in this country and England, and whother it would pay to import one? Ans. Cheaper here.

W. W. N., Troy, N. Y.—A few weeks ago I noticed among your Answers to Correspondents that convus knapsacks could be obtained of Schuyler, Hartley & Graham, 19 Maidon Lane, N. Y., for 25 cents; they may say they have none? Ans. Our information was obtained directly from Messrs. Schuyler, Hartley & Graham, who have again informed as that they have knapsacks for sale at 25 cents each, but that they are of such poor quality they dielike to send them out, even for that price.

J. M. H., East Liverpool, Ohlo.—Will you be kind enough to inform me of what strain the following described dog is: Color, femon and whitie; eyes, light; nose, light, and weight 59 pounds. He is heavily feathered. The breeder claims that he is a "Gildersleeve," but I have my doubts about it? In case a dog is poisoned what anildots should be given? Ans. Your dog answers the description of the Gildersleeve. In case a dog is poisoned, give a tracuptin of castor oil. After he bas vomited weil, pour oilve oil down his throat and rub bis belly.

G. A. H., Moorhead, Mtu.—I have a pointer pup at months oil that bus propored from an attack of the disconner. Sluce that time (some

vomited well, pour olive oil down his throat and rub his belly.

G. A. H., Moorhead, Mtuu.—I have a pointer pnp stx months old that his recovered from an attack of the distemper. Since list thin (some two months) he has suffered with nparsent weakness of the eyes, closing them when exposed to the light and eyes watering. I have need sngar of lead and opinm for a wash, but it does not seem to relieve him. Can vow give me any intermation as to his disease and a remedy? Ans. Take nitrate of sliver one grain, water, an nunce; pour a little of the liquid into a sancer; saturate a camel's hair brush in the liquid; pull the lids grantly asonder, being careful not to frighten the dog by haste or violeoce; then, having the eye exposed, draw the brush quickly across it.

R. S. R. Philadelphia.—Can you give me the sizes of the new Wim-

violeoce; then, having the cyo exposed, draw the hrush quickly across it.

R. S. R., Philadelphia.—Can you give me the sizes of the new Wimbledon targets, as recently adopted by the N. R. A., for 20, 500 and 800 yards? I have written twice to Col. Gilder sleeve, asking for the Report of 1874 of the N. R. A., and have had no reply. Can you give me his correct address? Will you be so kind as 10 send me a copy of the pamphlet mentioned in your reply to the Pennsylvania Italiand clerks al Altoona, who wish to organize a riflo club. Ans. The targets are as follows:

200 yds.

201 yds.

202 yds.

303 600 yds.

304 600 yds.

309 600 yds.

eent as requested.

Dash, Philadelphia.—For a long time my dog—a valuable setter, three years old—has been troubled with an almost perpetual and peculiar intiation, which either seems to hort or itch him very much. They noticed that he passes at alool a number of ascandes, and thinking the litching came from litem, gave him each day for say ten days, a pill composed of fitty grains of well powdered glass mixed with ginger and sworlard, as recommended by Youatt and others, but they reem to have produced uo effect. The dog's appetite is but medium, but he seems in good health and the spirits. Can you help me in this matter? Ans. First give him two draebms of jalap; then, in half an hoor, follow with an injection of tincture of aloes, one drachm; oil of wormseed, 30 drops, mixed with flour and water. Repeat three or four times agless the worms are discharged sooper.

BENCH SHOWS.

N another column will he found a report of the Bench A Show of dogs recently held by the Rod and Gun Club of Springfield, Mass. It will be seen that no less than one hundred and sixty-seven dogs were presented to the judges for examination and approval, and out of this number two thirds or more were dogs used for sporting purposes. In England this would probably be called a very small show, but in this country it indicates a growth of the sporting instinct which is at once healthy and extremely promising for the future. When that class of our people who are as yet ignorant of the sports of the field shall have come to know the difference between the di know the difference between the sportsman and the sport-ing man, we may look for Bench Shows and Field Trials of the magnitude to which they attain on the 'other side.'
This is but the sixth exhibition of the description which has been held in this country. The first was at Chicago, followed by another at Oswego last year and then by the shows at Mineola, Memphis, and Detroit. Those yet to come are the Kentucky State Tournament at Paris, May 18th the Watertown Shows arbits with a 18th the Watertown Shows which will be seen to be seen as the contract of the state o 18th, the Watertown Show, which will be held at the meeting of the State Sportsmen's Association during the latter part of May or first of June, to be followed by another at Mineola on June 16th and 17th. In October or November will be held the annual Bench Show and Field Trial at Memphis.

THE GAME FISHES OF ANCIENT EPI-CURES.

N referring to game fish we generally include those loved by epicures, and, in fact, any fair fish that will make a brave resistance to the wary sportsman, and under this heading we find the ereme of the finny population. In olden times, in the flush of Roman prosperity, immense sums were given by the wealthy gournands to satisfy their epicurean tastes, and the game fishes of that date were cultivated and educated for the feast with all the care and disintersal of fluction of the rival appare of modern Spring disinterested affection of the rival owners of modern Spring chickens

Standing at the head of the list was the red mullet (mullus barbatus), and its appearance is made additionally attractive by a most superb vesture of colors that change and flash in the varying sunlight like a nebulosity of marine rainbows. The Roman gournmuds gave fortunes for this splendid creature, and Pliny tells us that Hortensus, the advocate and greatest rival of Cicero, was so fond of it that it became a passion, and the poor creatures were introduced to the dining board alive by means of a small troduced to the dining board alive by means of a small canal under the table, and allowed to die so that the noble Roman could enjoy the change of colors produced by its agony and be diverted while at his winc. Such excessive epicurcanism caused the market value of the fish to rise, and the poor fisherman reaped a rich harvest. Martial says: "A fish of three pounds produced a considerable sum to the poor men, while a mullet of four and a half pounds was simply ruinous." Asinus Gelius purchased one for his friends at a price of eight thousand sesterces, or about \$300, and necording to Suctonius Calignly period or about \$300, and, necording to Suctonius, Calignla paid \$500 a pound, making nearly \$15,000 for four of them, and at another feast three were purchased at the neat sum of thirty thousand sesterces. Its flesh, like that of our mullet in the Gulf of Mexico, is when first caught hard. firm, and white as crystal, and well worthy the attention of sportsmen. It is found now in the Mediterranean, and is still eagerly sought after by the descendants of the old epicures.

The murry, or more properly the pipiro, that is now looked upon with loathing, was at the time of Angustus Casar prized very highly, and one species, the naurena helena, was kept in "stews" on account of its ability to live in fresh water, and Pliny in mentioning them, says that "Vedius Polio, a Roman knight and intimate friend of Casar's, proved the fierceness of these fishes by throwing condemued slaves into his ponds to be devoured by them. This tender feeding so increused the flavor of the fish the Roman mind that slave fed murries were in great demand, and it must have been a huge satisfaction to the fierce master to feel that he was grinding and masticating the victim of his condemnation without fear of the charge of cannibalism. To show the singular attachment felt for these fishes by their owners, it is said that Hortensius Orator wept when they died, and that Antonius Drusus so loved one that he dressed it with earrings—truly a rare mistress. Licinius Crassus trained his murries to obey his that he dressed it with earrings-truly a rare slightest word, and at his approach they darted from the recesses of the pond to be fed from his hand. Tartessus afforded the best murries, and also a smaller species than the one above mentioned, and now found near Cadiz and in the Straits of Gibraliar. The flesh is firm and sweet, and Brydone says that the murries of the Faro di Messina are the finest game fish (in a gastronomic view) in the world. This, however, was of course merely a matter of fashion, as the fish is hardly superior to the eel, and decidedly more snake-like. We have frequently caught them in the Gulf of Mexico, where they are known as murrays, and with their long, sharp fangs and snake-like appearance, they do little credit to Roman taste. In the family (Parceda) we find the Labraz lupus the delight of the ancient Greeians, and so fond of them was Archistratus that when a hass was presented to him from Mile; he pronounced it an "offspring of the gods." It took the place of the sturgeon in the feasts of Augustus, and bade fair to out do the fair sea snipe, as the surmullet was called, in the race of fashiou. At certain seasons the bass of rivers was most prized, particularly those taken between the bridges over the Tiber. These were the younger fish, and were spotted. The finest were named Lanate (woolly), because their flesh rivaled wool in softness and whiteness. According to Columalla, the cultivated taste of Marcius Philippus first taught the Romans to prize the bass that were taken while exhausting their strength in stemming the current of the Tiber, and Horace satirically asks, "Whence is it that your palates can distinguish between the Tiberine basse and those taken at sea? And why do you dislike the older fish of that kind when you praise insanely an overgrown surmullet !" To this he replies himself that it is solely because the bass is naturally of larger growth and the sur-mulet of less, and rarity adds to the value. From the roe of the cannori, a member of this family, a cake is made of rare good taste, and similar to the caviare, known in Italy as botargo, only that it is made of the eggs of mullets and tunnies.

In the fifteenth and sixteenth centuries the head of the maigre was considered the most delicate dish to set before a guest. The fish was large, weighing over fifty pounds, and the meat in the cheek and under the lips was always in demand, so much so that it was the custom to offer it as a valuable perquisite to the three conservators of the city of Rome. Bishop Paul Jovius, who published a work on fishes in the year 1531, relates the story of a noted parasite named Tamisio, who flourished in the year 1480. This gourmand being wont to station his servant in the fish

market to hring him intelligence of the destination of the finest fish, learned from him that a malgre of unusual size had been brought in. Tamisio immediately hurrled to wait had been brought in. Tamisio immediately hurried to wait on the conservators in expectation of an invitation to dinner, but as he ascended the steps of the capitol he met the head, adorued with flowers, and horne, by order of the conservators, to Cardinal Rhario, nephew of Sextus IV. Tamisio being acquainted with this prelate gladly joined in the procession. But Riario, delighting in a play of words, said that the greatest of fishes should go by right to the greatest of Cardinals, and sent it accordingly to to the greatest of Cardinals, and sent it accordingly Cardinal St. Severin, who was of extraordinary bulk. He in his turn dispatched it in a golden dish to the wealthy banker Chigi, to whom he owed money. This time Tamisio in his eager pursuit, had to traverse the whole city, and to cross the Tiber ln his way to the Farnesian palace which Chigi had built. Chigi, however, did not retain the much prized head, but replaced the faded gurlands with newly gathered flowers and sent it to his mistress, whose abode lay a great way off. There at length Tamisio, who, though fat and unwieldy, had tracked the object of his desires under a hot sun over a whole city, was at length permitted to partake of the luxury he had endured so much toil to obtain. History will never deprive him of his well deserved title of Prince of Gourmands.

The noted scarus, for a long time was endeared to the inner man of the ancients, and perhaps no fish was so thoroughly respected for its supposed arts as this same creaoughly respected for its supposed arts as this same creature. Aristotle stated that it was a ruminant, and the only one among fishes. Pliny repeated this, and states with all gravity (probably thinking of his stomach) that it was the chief of fishes. Ovid and Oppean sang its praises, and the chief of fishes. Ovid and Oppean sang its praises, and the grave Selencus states that it is the only fish that ever sleeps. Ælian swears it is the only fish that ever loves, and, after all this, the outbursts of poets and lettori, they cat the object of their rhapsodies. All poetry is but the insanity of a moment, that, especially if we eat the object of our adoration, fades away and proves our madness. In the days of the Emperor Claudius, however, Optatus Elipertius brought some of these fish from the Troad and turned them loose near the mouth of the Tiber. During five years all that were taken in nets were returned to the sea, after which they became abundant on the Italian shores. The pains that Elipertius took to bring a supply of this fish within reach of the Romau epicures was justified by the great value set upon it. Martial speaks of the intestinal fat of a sea fed scarns as most excellent, and Xexocrates tells us that the viscera of a searus newly brought from the sea are most agreeable. The liver was in high estimation, and formed along with the priits of reaching the set of the search of from the sea are most agreeable. The liver was in high estimation, and formed, along with the milts of mnrries the brains of peacocks and pheasants, and the tongues of flamingoes the dish named by Vitellius "The Shield of Minerva." So careful were Roman dinner givers to have was the custom to present it alive to the guests before it was consigned to the cook. The Scarus Cretensis is even at the present day esteemed a most delicate dish by the inhabitants of Asia Minor, but it is said to be taken with difficulty, and only by highly skilled felturnon.

habitants of Asia Minor, but it is said to be taken with difficulty, and only by highly skilled fishermen.

In later times and during the reign of Henry I. the lamprey was esteemed a delicacy, and this sovereign is said to have died in 1135 at St. Denis le Forment from eating them, as did the poet Pope in later years, both victims to this inoffensive animal. Pennant tells us that Henry IV. so loved them, quoting from Rymee's "Foedera," that he granted protection to such ships as brought over lampreys for the tables of himself and royal consort. Henry VI. contracted with William of Nantes for a supply to his contracted with William of Nantes for a supply to his army, withersoever it might march, of lampreys, to be taken from the mouth of the Seine and Harfleur. It was anciently a custom of the city of Gloucester to present the anciently a custom of the city of Groucester to present the British sovereign with a lamprey pie, and, fortunately for the Queen, the custom has died out. Camden, as an epicure, says: "The lampreys of the Severu are the finest in the Spring, heing then more tender, and that in his time the Italians prepared them for the table hy drowning them in Cretan wine, placing a nutmeg in the mouth and a clove in each gill opening, rolling them up spirally in the flour of filbert nuts and crumbs of bread mixed with oil, spices, and Cretan wine, and then boiling them for some time in a cloth. That surely should have been a right royal dish, and well worthy the royal board.

C. F. HOLDER.

AN UPRIGHT MEMBER.

HE Hon. A. M. Sullivan, M. P. for Louth, Ireland, is A covering bimself with glory, not gained on the gory field of battle, but in the more peaceful chambers of the House of Commons. The patriotism of Mr. Sullivan and his intense interest in the proper administration of his country's laws, has displayed itself in a question put to the Secretary for Ireland, as to whether the law regarding the carrying of arms on Irish soll would be modified in favor of the American riflemen so soon to visit Erin's shores. Notwithstanding the assurances given him on that occasion, Mr. Sullivan has repeated the question, and his uneasy mind is tortured either with fears of a Fenian landing, or that the Americans may be arrested for high treason; it is difficult to tell which. Sir H. M. Beach has assured him that the visitors are good cliizens, not likely to break the laws of the country, and moreover that all classes of the Irish people, including the Government, will give them a cordial and hearty welcome. Still the Memher from Louth is not happy, and demands to know whether "in accordance with the law they are not liable to arrest, having rifles in their trunks." We should be glad to know who inform-

ed Mr. Sullivan that the American riflemen would carry rifies in their trunks. We can assure him that no surrepti-tious rifle will erack on Dollymount, but that our country-men will land with their rifies in their hands.

But Mr. Sullivan has a contemporary in one Alfred Webb, a martial Quaker, who calls for a public meeting to protest against the match, or shooting of any kind whatever. Of him the Dublin Evening Mail discourses thus:—

against the match, or shooting of any kind whatever. Of him the Dublin Evening Mail discourses thus:—

"For aught we know, his modesty in not asking for an arms license may deprive him of great distinction on the famous field of Clontarf; but we must, in truth, confess that he has not hit the bullseye of public opinion in his recent shot. It is proverhially dangerous to get laughed at, and especially so when the laugh is raised at a futile attempt to keep out the tido of innocent enjoyment with Mrs. Partington's broom. The whole mass of Irish men are prepared to join in kindly welcome to their cousins from beyond the sea; they will not be baulked in the enjoyment of their festal holiday by the presentation to their view of a visage much moro lugubrious than any that sentimental woc could shape out of the kindly lineaments of Mr. Wehb. As we have said, we fear his assumed vizor of sadness will but raise a hearty laugh, which will probably not follow upon the fine drawn irony of Mr. A. M. Sullivan in the same premises. This joker of dull jokes may, perhaps, find that his wit may he repeated too ofteu for laughter before an assembly of gentlemen in the House of Commons. He, too, proposes to insult the Amerlean riflemen, our invited guests, by a clumsy insinuation, conveyed through the medium of a question in the House of Commons. The honorable Member for Louth would do well to recollect that he joked himself out of the Duhlin Town Council once already in his life; nothing surpasses, in annoying effect, the monotonous din of a street organ, except perhaps the inconsequential prattling of a trifler interposed amid grave discussions of real affairs."

NATIONAL SHOOTING TOURNAMENT AT CLEVELAND,

NATIONAL SHOOTING TOURNAMENT AT CLEVELAND, OHIO.—This tournament will be held, in connection with the National Sportsmen's Association Convention, to be held at Cleveland on the 11th of June, and will continue four days. The total amount offered for prizes is \$4,000 in cash, to be competed for under the supervision of S. H. Turrill, of Chicago, and W. J. Farrar, of Cleveland. The shoot is open to the world, with the exception of Bogardus, shoot is open to the world, with the exception of Bogardus, Ahe Kleinman, Paine, Ward, and Closc. The entrance for the first three days will be \$10, and for the last day \$30; all purses to fill or to be pro-rated; birds extra.

The programme is as follows: The first three days, ten single rises; last day, fifteen; all class shooting.

Thursday, June 10.—Purse \$750; first prize \$250, second \$200, third \$150, fourth \$100, fifth \$50.

\$200, third \$150, fourth \$100, fifth \$50.

Friday, June 11.—Purse \$850; first prize \$300, second \$250, third \$150, fourth \$100, fifth \$50.

Saturday, June 12.—Purse \$900; first prize \$350, second \$250, third \$150, fourth \$100, fifth \$50.

Monday, June 14.—Purse \$1,500; first prize \$500, second

\$400, third \$300, fourth \$200.

The rules of the first Chicago tournament will govern the affair. Entries to be made on the ground. The party making the best average throughout the tournament will receive \$100 cash; the second averago a crayon drawing

-We have been much interested in examining the large collection of horns, skins, moccasins, Indian pipes, and other curiosities, hrought home by our presevering friend J. H. Batty from his Western tour last Winter. He has which are very fine specimens, one carrying twenty-six prongs. If the age of deer is really determined by the number of spikes on his antlers, what an ancient the wearer must have been! The horus of the mountain sheep are great curiosities, some of them weighing forty pounds.

Mr. Batty brought home the skins of two of these animals, which he hopes to stuff, so as to restore the animal entire. He has also some anticlope horns, hoofs and skins. The moccasins are of different patterns, indicating that they helonged to different trihes, these heing Kiowas, Sioux, Chippewas, and Ricarees. The pipes are of red stone, with stems highly ornamented.

SPORTSMEN'S HEAD GEAR.—Among the indispensable items of a sportsman's outfit must be classed a traveling, fishing, or hunting hat or cap. Knox, of 212 Broadway and the Fifth Avenue Hotel, has addressed himself to this department of the hatter's business with great success. He is showing a neat and stylish sporting hat of dark green felt, having a round crown and a liheral breadth of brim. Summer felts are, from their softness, comfort, and lightness, admirahly suited for sportsmen and tourists. The designs are his own, and are very graceful. His stock pos-sesses another attraction in the form of a selection of caps of English soft cloth in different shades and patterns of material. These are waterproof, having an india rubber llning between two thicknesses of cloth, and are well adapted by a slightly turned flown brim for warm, sunny weather. They are the ns plus ultra of fishing caps, and only require a coil or two of gut or a cast of flies to complete their business like appearance.

A NEW CARTRIDGE LOADER. - We have on exhibition at our office an apparatus for loading shells for breech loading guns, the invention of Commander Beardslee, U. S. A. We desire to call the attention of sportsmen to it, as we think it in many respects superior to any we have seen in

-The great fossil moa bones, sent from New Zealand, have arrived at Central Park, where they are now being put la position.

The Rifle.

-Geu. Shaler has received a letter from Maj. Leach, of the Irish Riflo Cluh, lu reply to his suggestion that a na-tional convention of riflemen he held for the purpose of securing uniformity in the styles of targets and marking,

securing uniformity in the styles of targets and marking, of which the following Is a copy:

Mormuson's Hotel, Dublin, April 16, 1875.

My Dear Gen. Shaler.—

It gave me much pleasure to receive two days ago your letter of the 24th ult. npon a subject most interesting in all rilemen, namely, the uniform system of targets and of rules to govern future practice. It pleases me that this idea comes from America. Without this uniformity of practice the men adhering to the old system shoot at a positive disadvantage when they come to shoot at a round bullseye—a system which leads to such careful practice and thus closer shooting—for which the same necessity does not exist in practice at the square bullseye, when a centre adjoining the outer line counts as much as a centre tonching the bullseye. Before bringing the subject to the notice of the public, I will place your letter before Lord Wharneliffe, who is a charming man, and is now the President of the National Rifle Association of England. I will suggest Wimbledon as the fittest place for the convention of rifemen suggested by your letter, to meet and talk matters over. Believe me, my dear General, your faithful friend,

—It is said that the Lord Mayor of London will visit bublic during the interestical resident on the lateral resident of the interestical resident on will visit bublic during the interestical resident on will visit bublish during the interestical resident on an order to the said.

-It is said that the Lord Mayor of London will visit Dublin during the international match and assist the civic dignitaries of the latter city in welcoming their American guests.

CREEDMOOR.

The second competition for places on the International Team, which was to have been shot on Wednesday of last week, was necessarily rostponed on account of the furious storm which prevailed during part of the day. Most of the competitors were on the ground, and waited until after 2 o'clock, when, there heing no prospect of the wind or rain ceasing, the shooting was postponed until Friday. A small amount of practice was engaged in hy the most inde-fatigable, but heing unofficial, no record of the scores was

On Friday most of the competitors re-assembled, but the high wind rendered close shooting at the long ranges a matter of no easy accomplishment. The members of the old team of course possessed a great advantage from previous training, while the work of the new candidates was searcely equal to that of the first day's competition. Gen. Hawley, who made the second score on the first day, was absent, as well as several others, who withdrew from having other engagements, or from finding that their chance was hopeless. The following are Friday's scores.

On Saturday last the third competition for places on the American Team was concluded at Creedmoor. The day opened fine, but hefore shooting at the 1,000 range had commenced the wind veered, and the rain fell in sufficient quantities to make everything moist and disagreeable. The candidates for the vacant positions—for it is a foregone conclusion that at least five of the old team will retain their

.3 3 3 0 4 0 3 2 4 0 0 0 0 0 n...

places-are now reduced to cleven, and their scores on the

o days are as tenews:

Gen. Hawley, of Connectient, one of the hest shots on the list, has been absent through illness during the last two competitions, but it is reported that, as the committee have absolute power in the selection of the men, that he will be one of the chosen. The last shooting will be on Wednesday, after which the men will be named, and the regular practice as a team, which is so much needed, be actively entered upon. The election of a Captain will then he also in order, and it is to be hoped that the selection will be some strict disciplinarian like Gen. Shaler, who will have more regard to the necessity of hard work and will have more regard to the necessity of hard work and practice than the merry-making which the warm-hearted hospitality of the Irlshmen will almost force upon their guests. The following is the result of Saturday's practice:

-Providence is about to have a rifle association, admitting Newport to participation.

ting Newport to participation.

—A new rifle club has recently been organized in Saratoga. It has purchased land for a range at 1,000 yards distance, and will commence practicing immediately.

—A dispatch from Dublin under date of May 3d, states that subscriptions to the fund to defray the expenses of entertaining the American Riflo Team at the coming return match amounts to a considerable sum. A number of banquets and excursions have already been arranged, and others are proposed. Take care gentlemen. Postpone the hanquets until after the match, and then "go it."

THE RIFLE ASSOCIATION OF CALI-

SAN FRANCISCO, Cal., April 23, 1875.

SAN FRANCISCO, Cal., April 23, 1873.

EDITOR FOREST AND STREAM:—
California has organized a rife association, under the title of The Rife Association of California. At a meeting held April 22d the organization was affected affiliating with the National Rife Association of America, and adopting the hy-laws, rules and regutations of the earne, with new Wimbledon targeta. The officers elected are H. G. Shaw (one of the organizers of Creedmoor), president; Col. J. McComb, vice president; Maj. General Thompson, tressurer; Maj. D. Wilder, secretary. A committee of eaven was appointed to find a suitable lange and report to the R. A. C. at an early date. A match was annunced between the officers of the Division and Second Brigade Staff, to take place within thirty days. Captain Rurne, of Co. E. offered the use of his company is due, in a great measure, the present movement. They have been practicing for nearly two years by the Creedmoor system; thue, by familiarizing the public with it and the match tending with Co. D. 12th N. Y. and the one shot with the Emmetts, of Nevada, have thoroughly awakened the people. I trust to see an opening meeting field in Jone or July. Probably a small bore club will be organized similar to the Amstours. The friends of L. L. Kellogg, of the 23d N. Y., will be pleased to hear of his being one of the Board of Directors of the new association.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME IN MARKET.—With the exception of a few English suipe and plover from the West, which sell for \$3 per dozen, and a few bunches of willets and yellow legs, the market is hare of game, and must semain so until after July 4th.

It may not be out of place here to allude to the mode adopted on the south side of Long Island for massacring ducks and geese during the Winter. The pot hunter, arming himself with a lantern and reflector, creeps along the ice towards his bewildered prey until they are within reach of his cannon, and then slaughters them by the hundred. As there is a prohibitory law regarding the shooting of ducks between sundown and survise, we commend this matter to the attention of such sportsmen as may be disin-terested enough to see that, in their neighborhoods at least, the law is enforced.

GAME LAWS OF TENNESSEE. - The Legislature of Tennes-Game Laws of Tennessee.—The Legislature of Tennessee has designated the close time for deer to be from March 1st to September 1st; "pheasant, grouve, quail, partridge (sic), lark, woodcock or snipe, from March 1st to September 15th; linsectiverous and song birds not to be killed at any time, or their eggs or nests destroyed. Fine for killing deer \$10; turkey \$5; other game birds \$3.50; and the same for destroying song birds and their nests, or catching turkey or partridge in pens or uels. Hunting on other persons' groumls is forbiblen, except permission of the owner is obtained.

According to the Rochester Democrat the country bring.

in pens or uels. Hunting on other persons' groum's is forbiblen, except permission of the owner is obtained.

—According to the Rochester Democrat the country lying between the main line of the Erie Railway from Corning to Buffido, and the Rochester branch from Corning to Acon, is literally allve with wild pigeons. Their roosting place is situated in a wild mountainous region west of Coopers, N. Y., a few miles this side of Corning, and embrares a tract of land from seven to ten miles square, heavily timbered, and imbroken by clearings or highways, from which they issue at duylight and scatter over the country for miles in scatch of foul, which consists principally of acorns. The birds made their appearance near Coopers about three weeks ago, and have advanced further west daily until they now fly as far west as Springwater. During the present week they will in all probability be faund at all points along the Genesce Valley and scattered over the surrounding country, and there is a prospect that a considerable number of the birds will build their nests and breed in this county and those adjoining. Opposite the village of Campbells are three ligh hills; on the top of the ceutre a party took up a position, and when the flight commenced, about 5:30 P. M., could not load and fire fast enough to take the flocks as they came. The flight lasted an hour, the roaring of guns, the exhibarating excitement, and the lively running to and fro of a small army of boys picking up the dead hirds, made the seene a most animating one. From this elevated position is commanded a view of the country for ten or twelve miles in length and five or six in width, and for the entire distance immense flocks could be seen stretching out in long lines until lost in the distance. When nearing the "roost," several flocks arriving simultaneously would sweep together into one Immense flock and alight in the trees in a thick mass, seemingly covering an aere or more.

Massachusetts, Salem, April 30, 1875.—Snipe shooting

mense flock and alight in the trees in a thick mass, seemingly covering an aere or more.

Massachusetts, Salem, April 30, 1875.—Snipe shooting is good for nothing. From the 26th to 30th thirteen snipe shot al Newburyport. There is yet much frost, but if the weather comes right, if there is any shooting, it will come next week. Birds are in good condition, and lay well to dog. A record for five years shows better weather and earlier than this hy two weeks. We need rain, as the grounds are very dry. Yours,

Kanrase—Independence, April 26, 1875.—Your excellent paper is as much of a stand-by to our sporting men "out West" as it can be East. At this point (fourteen miles north of the Indian Territory and 145 south of Lawrence), we do not have as much trap shooting as we wish for, but make up for it in the excellent sport afforded us in our field shooting. All migratory game has been much later than usual this Spring on account of the cold weather hanging on so much longer than usual. Ou the 21st inst. Goo, M, (as true a sportsman as ever lived), and mysrlf concluded we would like some "snipe on toast," so gathering up our "shooting irons" we were soon bowling over the prairie behind a good team, with Jerry at the lines and Beu and Rover, our pointers, at our feet. An hour's sharp drive and at 12:30 we "stepped down and out" at Liberly Luke, our snipe ground. At 5 o'clock we were homeward bound with seventy-one snipe, ten plovers, and fifteen ducks (mostly mallard), safely stowed away in our wagon. Was not that a good four and a half hours' shooting? I think, Mr. Editor, we could show you or any of your readers, should we be favored with a visit in game seasou, such sport as they rarely witness. Our "chickens" are large and strong when the season opens (Aug. 1), and as plentiful as the most sanguine sportsman could wish. Ten miles into the Indian Territory gives us deer and turkey in abundance. Come and see us.

J. M. K.

Illinois. I bagged twenty-three jack suipe (S. Wilsonii), losing two birds in thick weeds, recording but one miss. Birds very wild. Gnn used M. L., No. 10 gauge (Wilmot maker), 3½ drachms powder, 1½ ounces No. 8 stor.

Mississippt—Corinth, April 27, 1875.—Weather cool and cloudy. Frosts on the 22d, 23d, and 24th, killed nearly all the fruit and blasted vegetation of all kinds, fortunately the wheat is not indeviably injured. I have not been out after the gobblers this spring an account of the bad weather. Two members of our club were out four days and only bagged one turkey; the mornings were so cold and cloudy that they would not "gobble." Capt. D., who kills them whether they gobble or not, and who can go where no other man can that a turkey and kill one, has only fired five shots, but then the Captain is the clumpion shot and hunter of this county on anything from a bold white to a buck, and ways all the art of shooting is in knowing when to pull the trigger. For a few thrys—the first of the month—the air was biding and cobb winds, and we have had no pleasant weather since. Plenty of fish coming in from the Tennessee River and per rail from the Gulf.

—A pigeon match was shot on Thursday last at Dexter Park, Long Island, between Mr. J. P. Bubertson, of New York, and Mr. J. H. Outwater, of Brooklyn, at thirty single birds at twenty one yords rise and eighty yards boundary; one and one foorth ounce shot; for a stake of \$200; loser to pay for birds.

-Mr. Jacob Glahn, of American Gun Engraving Company, West Meriden, is about introducing a gyro, which for simplicity of arrangement and comonny of price, will be the best thing of the kind yet invented, and within the reach of every one.

SAN FRANCISCO, Col., April 20, 1875.

EDITOR FOREST AND STREAM:—
In sending you the following score 1 feel bound in inform you that with the exception of two manies, the rest have never shot birds from a trap before. The exceptions are Misgill and Stetson.

PERLADELPHIA, May 3, 1875,

PRILABELPHIA, May 3, 1875.

A shooting club has been organized here, and named in honor of your paper, the Forest and Stream Shooting Club of Philadelphia. They have secured and furnished, not only a comfortable, but very handsome room, at the corner of Front and deferson streets. Their increasing roll of members and efficient officers hespirak a prosperious future for them. Their first match was held at Woodbine Park, on Taesday, 27th aft., and the following is the score:—

21 yards rise, 30 yards boundary.

CHOKE BORING

filtened ducks (mostly mallard), safely stowed away in our wagon. Was not that a good four and a half hours' shooting? I think, Mr. Editor, we could show you or any of your readers, should we be favored with a visit in game seasou, such sport as they rurely witness. Our "chickens" are large and strong when the season opens (Aug. 1), and as plentiful as the most sauguine sportsman could wish. Ten miles into the Indian Territory gives us deer and turkey in abandance. Come and see us. J. M. K. Missouri-Sk. Louis, April 26, 1875.—In the last few years I have frequently come across new varieties of birds for this latitude, noted in the books as never leaving the seaboard. Of this unmber, the great marbled godwit seems to be steadily on the increase, so much so that I have seen them for sale for a week past at the game stand of one of our markets, and on inquiry learned that they had been shot about the punds opposite the city. The red necks have been quite plentiful this Spring in the lakes apposite lever; also canvas backs. This Spring has been very backward. This month has been dechledly cool, consequently keeping saipe with us longer Ihan usual, the 10th generally being the height of the season, after which they rapidly migrate to their breeding grounds further north. Unfortunately for game preservation, many woodcock were killed this Spring, undoubtedly by Sunday lunters, who do not discriminate smiflerently between birds in and ont of season. They should know that woodcock nest very soon after their arrival, and are the first to hatch out their young. I took a two hours' tramp last Saturday (2441) about the well places in the fields some five miles over in

by a comparison with the size of the hore at the muzzle, enposing the barrel to be a true cylinder hore. I believe this system of barrel making is often carrier to such an extreme as to be dangerous; and yet that which seems to stand the test of use should be conclusive, but I would strongly urge that with the great extra strain upon the barrel, consequent apon clocke horing, there should be an increase of metal to proportion.

GAME PROTECTION IN CONNECTICUT

NORWALK, COUR., April, 1875.

Norwalk, Cour., April, 1875.

Entror Friest and Stream:

It is a sad fact—although the game laws of Connecticut, if properly obeyed, would have prevented it—that most of the quoit, partridge and woodcock that were so abundant about Norwalk and indicent forms are gandually but surely dubinishing every year. Persecuted on all sides, but of season as well as in, fullowed up by boys, men, or any one altie to carry or shoot a gun, spared and trapped and shot for market by not hunters—is it any wonder?

Rubbits are builed and killed from sheer wantonness, called sport, at almost any season. It is done economically, too. No gun or ammunition needed. A mongrel of a dog with nose and speed enough to drive a rabbit in a burrow, a ferret to drive it out, an old net over the entrance to 'bagthe game,' and the rabbit is safe; a blow behind the cars and the moraulinal is dead, and in most cases teft on the ground where he was secured. So the hunt is continued in the same fair sportanalike manner, until thed out, or ten, or twelve, or afteen rabbits have been left to rot or feed the crows. In view of these facts, and in order to enforce such laws as me on the statute, a Game Association has been formed, con-titution and by-laws adopted, and all the necessary officers elected in curry out its objects. Over two hundred persons signed like all for the fits meeting, and we think at least one hundred and fits will be libro, active members and on the watch for law breakers. About twenty assistant vice presidents have been appointed in different districts to not as 'especials' to the interest of the association. Only members of the association are allowed the privitege of shooting over the ground of other members. The grounds now flure up well into two thousand acres, and more wishing to join; so look out, pot hunlers, shouters for secience, &c., or you may get over the wrong fence! Yours, Uni

SHOOTING ON NANTUCKET.

BROOKLYN, N. Y., April 18, 1875.

BROOKLYN, N. Y., April 18, 1875.

Enother Forest and Stream:—

One muriting Bub and myself started to go glover shooting on a place they call the Commons, about three miles from them, but not finding many birds we concluded to go over to Hummnek Pond and see if we could get some snipe or blucks. The pund is shoot two and a baif miles long and from twenty yards to a quarter of a mile wide. The south flead of the pond comes right down to the heach, and in rough weather the wares wash over into the pund. We happened to come just at the right time. The shore of the pond was covered with snipe, and pretty soon like barrels of our gams began to get agreeably warm. We kept following the shore along, and pretty soon came to the South flead. The same success attended as here as on the other side, and our load began to get heavy. As we approached a part of the pond where the shores were covered with high rushes, I grew careless, not expecting to find any birds there, when suddenly Bob caught me by the shoulder and said: "Get down, there are some docks feeding!" Hooked and suw three black ducks saviuming in the water, and they slidh't seem su-pictous that any one was around. So taking off our powder flasks and sint ponches we tried to criwd up near enough to get a shot, but something seared them, and they jumped up before we could fire. While we were standing there I thought I saw a duck about a hundred yards below me, but Bob said! was a clod of dirt; still thinking it was a duck. I went down to see. I had not been mistaken, for it jumped up and flew across the pond, but laking a quiet aim I fired and it came down with a broken ming, but excepted by finttering into the rushes on the other side of the pond. Just as I was thinking of taking a boar togo after him I heard a foud "quack" down the pond, and looking in tha direction I saw a duck coming right, up the pond; so lying down I walled out! he got opposite to me, and then jumped up and fired at him, and he dropped into the pond. Now the tiling was to get him. We had no

INTERNATIONAL ASSOCIATION FOR PROTECTING GAME AND FISH.

AND FISH.

"New York, April 26, 1875.

By rote of a majority of the Advisory Committee, a meeting will be held in New York City on the ulnetsenth of May, 1875, at 11 o'ctock. A M, at Couper Institute, Room 21, or Geographical Society's moons, same brithing, to organize an "international Association for Protecting Game and Fish," whose business it will be to select a computent Bourd of naturalists, fish culturists, game breoders, and sportsmen, who shall be empowered to draft sultainte taws and submit them to Congress, or thely constituted Legislative hodies, for approval. The attendance of all who have entered applications for membership is carnostly desired.

Office Forest and Steban, it Christian street, New Y

—Michigan has followed the example of half of her sister Suites and formed a State Sportsmen's Association. The organization was effected with the following gentlemen as afficers:—President, R. T. Toms, of Detroit: First Vice President, E. S. Holmes, of Grand Rapids; Second Vice President, D. H. Fitzhagh, Jr., of Bay City; Secretary, Edgar Weeks, of Mi. Clemens: Treasurer, C. C. Cadman, of Detroit. These gentlemen were also appointed delegates to the National Convention at Cleveland. Fitteen clubs were represented. The next annual meeting will be held at Juckson, 2d Tuesday of May, 1876.

—The Fairfield County Gume Association, comprises some of the most influential men of Norwalk, Westport, Wilson, Darieu, and Weston, Connecticut. Its officers are:—President, John F. Raymond; Vice President, H. H. Bartlett, South Norwalk; Secretary, H. L. White, Norwalk, Ct.; Attorney and Treasurer, J. Belden Hurthurt, Weston; Excentive Committee, John H. Aiken, Geo. Vine, Geo. H. Raymond, J. F. Raymond and H. L. White. The statute laws of the State of Connecticut for the protection of game will be strictly enforced in every instance where violated.

Pachling and Boaling,

All communications from Secretaries and friends should be mailed n later than Monday in each week.

HIGH WATER, FOR THE WEEK

Date.	Eoston. New York. Charleston
May 6	M. M. II. M. H. M.
May 9. May 10. May 11. May 11.	2 20 morn, 11 20 8 20 0 5 morn, 4 19 1 6 0 19 5 17 2 8 1 17

at this time. It was finally voted to postpone the election of officers for four weeks. A committee of five was appointed to prepare a list of candidates, and the meeting adjourned to be called at the club house on the 26th of May. SOUTH Boston Nacht Club.—The annual meeting of this aquatic organization was held on the evening of April 7, at their club house at City Point, South Boston, Commodore Roberts in the chair. The following gentlemen were elected officers of the club for the cusning year: Commodore, J. N. Roberts; Vice Commodore, John A. Woodward; Fleet Captain, W. J. Oreutt; Recording Secretary, Wm. Morris; Financial Secretary, John Monks; Treasurer, T. Christian; Measurer, J. Winniatt; Trustees, G. G. Moris, F. S. Wright, A. K. Roberts. The Trustees were authorized to put the club property in good coudition, some damage having becu sustained from effects of the pust severe Winter.

—A schoouer yacht, 42 feet in length over all measurement, is now building at East Boston by John Caldwell, builder of the well known yacht Mabel. She will be entered in the Boston club by T. J. Gray, and in the Dorchester club by H. W. Hunt.

Thie Ocean Regatta.—The Ocean Regatta will take place off the Isles of Shouls on the 25th of June. Mr. John R. Poor, who inaugurated the sport last August, has received the encouragement of several leading yacht smen, and it is announced that annong the first class yachts to participate will be the Vindex and Curlew of New York, and the Coming, the America, and an English yuch; are expected to join the race. The first-class will comprise sloops and schooners 40 feet and upward, and the second class, centre-board and keel schooners. The prizes are valued at \$1,000. The race last year was a grand success, and the regatta of this scason promises to far eclipse the first. There will be present on that day the finest yachts owned on the Atlautic scaboard.—Boston Journal.

New Buston Yachts.—Frank H. Peabody the past winter, and she will be ready for him to take the helm this week. She is 3

—Mr. P. McGieltan, at Pamrapo, N. J., the builder of the schooner Meta, sloop Kaiser Wilhelm and several very fast small yachts, has two sloops on the stocks, one for Mr. J. B. Mills, of the Beverly Club, 27 feet 3 inches long and 11 feet beam. The other is 38 feet long, and is for a gentlement on the lakes.

At Communipaw, N. J., Mr. A. Jaroleman is finishing a 21-foot race bont

—The schooner Tidal Wave, Commodore Voorhees, which has been emising in southern waters all Winter, arrived at Fortress Mouroe on the 1st inst., en route for home,

—Mr. Henry Smedley, at the foot of Court street, Brooklyn, is completing a race boat for Mr. Mecker, of the South Amboy and Long Island clubs. She is expected to be very fast. She will be 25 feet long, 10) feet beam and 2 feet 8 inches deep.

The same builder has nearly fluished a boat for a Mr. Hopkins, 20 feet long, 8 feet 6 inches beam and 2 feet deep.

Mr. Carllet A.

deep.

—Mr. Carll of Northport is puttling 14 feet additional bow on the schooner Ariel, belonging to Commodore Swaa of the Seawanhaka Yacht Cluh. Her length when completed will he 78 feet feet 6 inches over all, and the alteration will probably greatly improve her sailing qualities.

—The shoop Undine, Mr. Brasher, of the Brooklyn Club, went into commission April 7th, and has the bonor of being the first yacht of the season to hoist her pennant.

—The Burlington Yacht Club of Hamilton, Canada, recently elected the following officers: Commodore, Edward Browne; Vice Commodore, Junes Wylie; Captain, L. H. Brookes; Secretary; Henry Stephens; Treasurer, C. D. A. Heath.

The schooner Phantom, Mr. William Osgood, of the New York Yacht Club, is being fitted out at New London.

—The schooner Columbia, Mr. Lester Wallack, of the New York Yacht Club, is at New London, undergoing a thorough overhanding. She will probably go in commission about the middle of next month.

THE CRESCENT-UNDINE EIGHT-OARED SHELL RACE.

[FROM OUR OWN CORRESPONDENT.]

[PROM OUR OWN CORRESPONDENT.]

April 27, 1875.—14 myles straightaway from Peters' Island to Turtle Rock, Schaylkill, for a flag.

Undine Club.—The Albion—J. N. Delluven, stroke, 149 lbs., J. R. Baker 143, W. H. Allison 160, Theo. Frothingham 167, W. C. Madeira 148, Geo. Bright 143, Charles K. Barnes 134. A. S. Roberts, bow, 130, J. Gillinghum, coxswain, 135. 1—Time 9 min. 364 see.

Crescent Club.—The Longfellow—George W. Young, stroke, 165 lbs., H. F. Witmer 135, M. M. Worrell 138, C. E. Steel 135, W. H. Glenn 145, George Milliken, Jr., 145, W. C. Harris 135, A. Spering, bow, 155, T. B. Harper, coxswain, 135. 2—Time 10 minntes.

Umpire, Com. James M. Ferguson; Judge, Frank Kilsby; Time-keeper, Austiu Street.

This race was flxed for Saturday, 24th nlt., but the weather fixed otherwise, and for sometime on Tuesday it was very doubtful if the boats would get off before the storm came. A good start was made about half-past six, both crews eatching the water at the same time.

The Crescents made a burst for the lead, going off at over 40 strokes to the miunte, and passed under Columbia Bridge nearly half a length uhend, the Undine swinging along steadily at 38. Here came the trying time of the ruce. The Undine was a half length behind, and on the outside of the long curve, another full half length disadvantage, but they gained slowly and steadily, coming up just level as the boats were straightened out toward Connecing Bridge.

Harper was uot steering the best, getting his boat too close to shore, and his crew were beginning to feel the pumping stroke—still over 40. Without spuring, the Undine weat ahead, and off the old Rolling Milt wharf land made a good gap between the two boats. From there down the race lost much of its interest.

The Crescents showed great lack of practice, and at times pulled wild, clipping badly, as indeed a crew must to follow so rapid a stroke. The Undines owe their easy victory to the two or three land weeks' work they have had together. This makes a "wim" for each ellu, and we have publi

break the tie.

There is being a strong effort made to have club regultus every week, or at least semi-monthly. The Quaker Cities would have had theirs on Saturday but the high winds interfered. It will probably come off next week.

The four heaviest and four lightest of the Undine eight will try their respective merits next Saturday over a one and a half mile course. Odds rather in favor of the heaviest.

iest.

Mr. Calhoun Megargee, President of the College Club of the University of Pennsylvania, which joined the may April 3d, hus been appointed by the Naval Board to urge at the Springfield Convention a lively interest in the international college regatta to be held here, among the other regattas of the Centennial. Truly yours, Setlls.

—The Schuykkill Naval Board met May 3, 1875, and accepted the challenge of April 12th from the Paupseo Navy, to come off between the 1st and 18th of June next, on the Patapseo, and a committee of five was appointed to make the necessary arrangements, as follows: A. Krumbhaar, Chairman, Philadelphia; F. W. Murphy, Pennsylvania; l. Bedichimer, Malta; George W. Parker, Quaker City; Calhoun Megargee, College.

—It is reported that the challenge issued by Messes. Ran-

—It is reported that the challenge issued by Messrs. Randall and Coughliu of the Potoniac Club to row any two men a five mile patroared race, has been accepted by McBlair and Cropley of the same club.

—Mr. George Motrison, one of the most famous University ours, is out in Land and Water with a clever letter, questioning the utility of sliding seats, which he pronounces to be a failure in every way. If he can prove the dirty machinery uscless, all oarsmen will be glad to accept his

The final meeting of the Executive Board of the Northwestern Amateur Rowing Association, for the purpose of making arrangements for their coming regalla, was held at Toledo April 28. The mooted question as to the definition of "junior oarsmen" and "junior seullers" was finally settled as follows: "A junior oarsman is defined to be one who has never been a winner in a shell race open to more than one club, nor pulled in such a race unless it was distinctly announced as a junior race. A junior seuller is defined to be one who has never been a winner in a sentl race open to more than one club, nor pulled in such a race unless it was distinctly announced as a junior race."

—A uew organization called the Emerald Rowing Club of the Saginaw Valley, has been formed in Saginaw City, Mich.

—It has been the desire of the Northwestern Association

—It has been the desire of the Northwestern Association for years to have some of the "crack" Eastern clubs purticipate in their regattas, but thus far none of them have

done so. Looking toward this end the hoard have determined to have a four-oared shell ruce, open to all amateurs, whether members of the association or not. A bandsome prize will be offered for this race, and it is thought it will be the great event of the regatin.

—The first boat race this season took place Thursday, on Gowanus Bay, between James Hall of South Brooklyn, and Robert Bridges of Staten Island. They rowed three miles. Hall won by five lengths. Time, 26 minutes, 4 seconds.

SCHUYLKILL NOTES

PHILADELPHIA, May 3, 1675.

Editor Forest and Stream:—
At a meeting presently murning of a number of the capitains and crews of firs', second and third-class yachts of the Philadelphia Yachi Club, to decide upon a course for the first regata of the senson. It was resolved that the first and second class hoats should start from Shackamskon street what and sail to the left of Smith's Island; there to the first buoy believe to the first one place as the first and second class, and sail to the Shoe buoy and return be place as the first and second class, and sail to the Shoe buoy and return Boals from ulneteen to twenty seven feet in length, of the Delaware River Yacht Club, will sail to the Chester buoy and return. The Regulta comes off May 24th.

BDITOR FOREST AND STREAM:—
Since my last writing the crew which is to represent Cernell at Sara, toga has been selected, and are now in training quarters. They are: King, '75; Gillis, '75; Ostrom, '16; Barto, '77; Waterman, '77, and Jarvis, '78. Messes King and Ostrom were on the Sarataga crew last year, and also on the Springfeld crew the year before. Mr. Ostrom is captain of the crew, and Mr. King will pull in his old place as stroke. Our new university shell, made for us by Messes. E. Waters & Sons, of Truy, arrived last Thursday, and gives great satisfaction. It is not apper, as indeed are all of their boats, and built upon the lines of the Culminia's witning boat of last year. The seats are of an improved pattern, invented by Mr. Ostrom, consisting of glass running upon liganon vites, for the eliding part, with molded leather for the uplinistering, and are A No. 1 for esse and comfort in rowing. Paper shells are taking the place of cedur entirely with us, since we find them to be stronger, stiffer, and better in every way. It is prefly certain now that we shall send a Freshman crew also to Samtoga. The men selected thus far are Lewis, Ilixon, Camp, Surith, Graves, and Palmer. 'They will go into training quarters in a tew days. Our representative in the single scull race will probably be Reed, '78

STEVENS' COLLEGE, HUNGKEN, N. J., April 20, 1875.

Entror Forest and Stieam:—
Seeing that you kindly devole a portion of your paper to college nows, I take it upon me to inform you on our boating affairs. Our scason was opened on last Fridny, the 33d inst., by a Frestman (Fis) eight going up the river, to the chagtin of the other classes represented in the club. The boating interest of this college—which was commoned with such energy by '78, when Freshmen—has been from some unaccontable reason allowed to fag, antil the Freshmen of '78 ratering, mak hold with such entinedam as to wake the other classes up to their duty. Arrangements are being mule for a regatta next month, when it is expected the rival classes, '78 and '78, will try their muscle. Send races are also taking place. I understand that as the Rowing Association of American Colleges have closed the entrance lists, a movement is on foot to form an Association of Scientific Colleges, which seem to be out in the cold. If this is successful you may hear from Old Stevens again. In the meantime, I beg to remain.

CHESAPEAKE CANOES.

Easton, Md., April 18, 1875.

Entror Forest and Stream:

Entror Forest and Stream:

As your valuable paper has a columit devoted to Yachts and Yachting, inclinding, I presume, sailing craft of nil descriptions, it has necerted to me that an article describing our Cheangeake canoes might be neceptable, as I believe they are only known on the Cheangeake and its tributable, as I believe they are only known on the Cheangeake and its tributable, as I believe they are only known on the Cheangeake and its tributable, as I believe they are only known on the Cheangeake and its tributable, as I believe they also devoted to yachting ever since I could "hold a tiller," I was much struck with the many good qualities of canoes on first moving to this good county of Tallot from the bunks of his Delaware. And now for a description of Tallot from the bunks of his Delaware. And now for a description of the craft: Imagine a bull built from (in most cases) three plun logs, which are brought into shape by the ax and adee, with the assistance of the plane and other tools, the sud logs being reduced to a thickness of about three lockes on the bottom of the canoe, thinning out to an inchanda half at the genavate. The three ecctions forming the hoat are put together with irrenalls. The boats are of various lengths, varying from twenty mit forty-dwo feet, but bunts of from twenty-five up to tility-one feet long as in must common use, those of the latter length having about its feet beam, being, as you perceive, very long for their heam. Their lines, of course, from being so narrow, are beautifully dive, and the heats being sharp at both code, causes them to leave the water as easy as they enter it. The rapidity with which they sail with "sheets hifted" to wonderful, and they are also very good on a while, especially those with centre boards. (They are holts to will accept board and they are also very good on a while, especially those with centre boards. (They are holts to be every good on a while, especially those with centre boards. The rapid they carry in addition

Rational Pastimes.

The St. George Cricket club will open the play the second week in May at their inclosed grounds, foot of Ninth street. Hoboken. The ears from the ferry go to Ninth street. The club has been forlunate enough to seeme the valuable services of an English gentleman cricketer as their professional for the season, whom the financial storm of the past year or two hus obliged to avail himself of his cricket knowledge and skill to eke out a livelihood. Mr. Giles, who will act in the capacity for the club this season, is a gentleman of education and a thorough cricketer in every sense of the word. Unlike the ordinary professionals, he will, of course, he treated as any other member of the club, as he should be. He is a very effective bowler, a strong bat, and an excellent general of an eleveu, and in every respect will he strengthen the St. George club.

—The Prospect Park Club will open the Brooklyn cricket

-The Prospect Park Club will open the Brooklyn cricket senson on Saturday, May 8th.

—On April 26th the Bostons defeated the Washingtons by a score of 8 to 2, at Washington, the new nine making a good show against the champious.

a good show against the champious.

—The Boston and Washington professional clubs played a champion match together in Richmond, Va., on April 29, which attracted a large assemblage of spectators, including quite a gathering of ladies. The field was rough and uneven, rendering sharp fielding difficult, but even under these adverse circumstances the beauty of the display on the part of the professionals was such as to elicit the admiration of the crowd. From the report of the Richmond Dispatch it would appear that the crowd in their prejudice against the Massanchusetts "Yanks"—as they called the Bostons—insulted the gentlemanly umpire. This is to be regretted. The score gave the victory to the Bostons by 22 to 5. It being the first game of the kind in the South we give the full score:

Bostons.

—On May 1st they again played in Richmond with the Washingtons, and this time they won by 24 to 0, the score by innings giving the Bostons 14 in their fourth inning, and 6 in their eighth.

—The first championship match between the Boston and Mutud clubs took place at Brooklyn on May 3d, over 2,000 people being witnesses of the contest. It proved to be almost a walk over for the Reds, they winning by 11 to 1.

—The games arranged to be played in Brooklyn the next three weeks include the following champion contests:

May 12—Athletic va. Atlantic, at Brooklyn.
May 13—Philadelphia va. Atlantic, at Brooklyn.
May 14—Philadelphia va. Atlantic, at Brooklyn.
May 14—Athletic va. Mutual, at Brooklyn.
May 16—Athletic va. Atlantic, at Brooklyn.
May 10—Athletic vs. Mutual, at Brooklyn.

May 18—Athletic vs. Atlantic, al Brooklyn.

May 19—Athletic vs. Atlantic, al Brooklyn.

—The Bostoas have arranged for the appended games up o July 5:

May 3—Matuals, at Williamsburgh.
May 4—Matuals, at Boston.
May 11—Phidadelphias, at Boston.
May 11—Phidadelphias, at Boston.
May 11—Phidadelphias, at Boston.
May 11—Washingtons, at Boston.
May 12—Washingtons, at Boston.
May 13—Washingtons, at Boston.
May 13—Washingtons, at Boston.
May 17—Athletics, at Boston.
May 18—Hartfords, at Hoston.
May 18—Hartfords, at Hoston.
May 18—Hartfords, at Hoston.
May 19—Hartfords, at Philadelphia
May 24—Centennials, at Philadelphia.
May 25—Philadelphias, at Philadelphia.
May 25—Athletics, at Philadelphia.
May 25—Athletics, at Philadelphia.

June 1——, at Chicannil
June 2—St. Louls, at St. Louls.
June 3—Bed Stocklings, St. Louls
June 4—Red Stocklings, St. Louls
June 5—St. Louls, at St. Louls.
June 9—Chicagos, at Chicago.
June 10—Westerns, at Keokuk.
June 12—Westerns, at Keokuk.
June 14—Chicagos, at Chicago.
June 17—Hartfords, Boston.
July 3—Hartfords, at Boston.
July 3—Hartfords, at Boston.
July 3—Hartfords, at Boston.
July 3—Hartfords, at Hartford.

—The opening game between the Athletic and Centennial clubs was played at Philadelphia, April 27, upon the latter's ground. The secre was 14 to 5 in favor of the Athletics, they making nine runs in their eighth inning. Before the score was 5 to 5 only.

—On May 1st the Centennials—on their tour Eastward—defeated the New Havens by 12 to 6, and at Hartford the professionals of that city polished off the Yule College te on to the tune of the "Chicago" score of 9 to 0. The Yales did not expect this after having previously defeated their only professionals of New Havenby 23 to 7. But the Hartfords went for them all the more on this account, for fear they might get too conceited, you know.

-The Philadelphia nine defeated the Centennials, in an exhibition ten innings match, at Gloucester, April 29, by 17 to 2

—The Centennials visited New York on April 30th, and played their first match with the Mutuals on the Union Grounds, and the game proved to be very exciting, the contest heing close to the very last. The score is as follows:

MOTHALS.					CENTENNIALS.

-Mr. Martin, of the Atlantic club. so by errors—Mutuals, 6; Centennials, 2. Runs earned—Mu centennials, 1. Time of game—2:05.

—On May 3d the Hartfords defented the strong nine of the Centennini club, at Hartford, by 13 to 4. The same duy the Athletics defeated the Washington uine, at Washington, by 21 to 0.

—The second championship game of the season was played April 27 between the Hartford and Atlantic clubs, at Hartford, Ct. The Hartfords made three errors, and the Atlantics fourteen. The only run made by the Atlantics was guined through a wild pitch by Cummings. The score was 10 to 1. In the first game the Hartfords won by 6 to 5 only.

On May 1st the Athletic and Philadelphia niues played close game together, as the appended score shows:

This is their second meeting.

-The record of the champion contests played up to

April John is as Toriows:	
April 19-Boston vs. New Haven, at Boston 6-	-0
April 2Boston vs. New Haven, at New Haven	-3
April 21-Philadelphia vs. Centeonial, at Philadelphia 7-	-5
April 22-Athletic vs. Philadelphia, at Philadelphia 6-	
April 24-Hariford vs. Atlantic, at Hartford 6-	-5
Auril 25-Philadelphia ve. Contemplat, at Philadelphia	-ĩ
April 26-Boston vs. Washington, at Washington 8-	-2
April 26-Atlantic vs. New Haven, at New Haven 3-	
April 27-Hartford vs. Atlantic, at Hartford	-1
April 27-Athletic vs. Centennial, at Philadelphia	-5
April 29-Boston vs. Washington, at Richmond, Va	-5
April 30-Mutnat vs. Centennial, at Brooklyn 4-	-3
The champion Roston nine it will be seen start off wit	1.

-On April 28th the St. Louis regulars played the amateur Niagaras, and won by a score of 22 to 2.

-Rain stopped several matches arranged for Tuesday,

—The same day the Harvest nine of Philadelphia defeated the Delanco chib, at Delanco, N. J., by 8 to 5.

—The seventh annual meeting of the Columbia College Association will be held next Saturday, May 8, on the grounds of the New York Athlelic Club. The programme includes running, jumping, and throwing base ball.

—The University club, of Clarkeville, Tenn., have the following nine to sustain the credit of the club on the field for 1875: Crosby, c.; Atchison, p.; McElroy, 1st b.; Muir, 2d b.; Elder, 3d b.; Allen, s. s.; Burton, l. f.; Hendnicks, c. f., and Richardson, r. f. They played their opening game April 23d against a field nine, the score being marked by the muffin figures of 44 to 44.

hy the muffin figures of 44 to 44.

—The Magnolia Base Ball club, of Newhurgh, (an amateur club), have reorganized for the season with E. Brewer as President; J. Nestell, Vice President; James Tole, Recording Secretary; d. Fowler, Corresponding Secretary. D. H. Ward will captain the nine. They have now one of the best amateur nines ever raised in the city, and are determined to give all the crack clubs along the Hudson a "erush" this season. All communications addressed to John Fowler, Secretary, or D. H. Ward, will be promptly attended to. Would like to hear from amateur clubs of New-York, Brooklyn, and towns along the Hudson.

—The New York Flyaway nine for 1875 will consist of the following well known amateur players: Purroy, pitcher; Chandler, eatcher; Moore, first base; Loughlin, second base; C. Fallon, short stop; Tracy, third base; T. Fallon, left field; Shandley, centre field; Buchanan, right field. The club played their opening game April 22d at Metrose, their opponents being the club's junior nine. The big fellows were short five of their best players, and they had all they could do to defeat the youngsters. The score was 12 to 11 is favor of the nine.

oll in favor of the nine.

—The Knickerbocker elub will this season take part in a series of invitation contests with the eolege club nines of Yale, Princeton, Harvard, etc., something they should have done seasons ago. The Kniekerhockers will play on the same grounds at Hoboken as last year, and, as litherto, will decline to participate in any professional or semi-professional matches. They very properly ignore the gate money business in connection with amaleur playing, the elub never having countenanced in any way any phase of professionalism, not that they regard the system, under honest auspiecs, as objectionable, but that it does not accord with their idea of amateur playing to participate in the gate money business. For this reason, while playing with college nines on enclosed grounds, they of course will have nothing to do with the receipts at the gate, which the leading college clubs are in the habit of availing themselves of to support the incidental expenses of their organization, just as they are obliged to do with their boat clubs.

There is a Base Ball Club at Columbia, Tequesse, whose members are all six feet high or over. It is called the Giraffe Club.

-The Yale Nine have made arrangements for playing ten games with professional clubs.

ten games with professional clubs.

—Mr. D. O'Leary, who it will be remembered beat Nelson Reid in this city in a twenty mile match, has succeeded in accomplishing the feat of walking 115 miles in less than 24 hours. The walk took place at the Chestunt Street Rink, Philadelphia, and the actual time was 22 hours, 59 minutes, Weston's lime at Newark being 23 hours, 59 minutes, 44 seconds. It is reported now that Weston will try one better, and attempt 120 miles in 24 hours.

—Messrs, J. B. Livingston and Wn. Marston, of the Union Cluh, walked a match on Saturday last from the Windsor Hotel, Forty-sixth street and Fifth avenue, to the members' gate at Jerome Park, the wager being a dinner. Mr. Livingston won the match in 1h. 53m. 4s., beating his opponent 6m. 19s.

—Mr. John B. Johnson, the English ehampion swimmer, who won a match with Frautz at Long Branch last Summer, proposes to return to Europe in Junc, but hefore going is anxious to make a match with Harry Gurr or any other swimmer in the United States. The amount to he staked is a matter of indifference to Mr. Johnson, but \$5,000 would be about the figure. He proposes on his arrival in England to attempt to swim aeross the Irish Channel.

-The manufacturers of waterproof clothing for sportsmen seem to have been made happy by the continued demand upon their sources of supply, and write us that the orders they obtain through Forest and Stream aloue are orders they obtain through Forest and Stream aloue are very large. (See advertisements.) Holabird has sent us this week a fishing coat, and with a different arrangement of pockets. There is something so comfortable in the feeling of these coats, that they can hardly be thought an encumbrance, even in hottest weather; for ordinary camp or boat use they are altogether desirable; they are even they shed rein or see spray, they do not absorb oil cool; they shed rain or sea-spray; they do not absorb oil or dirt readily; and they are invulnerable to briars and burrs. For office use they are most satisfactory, and we can safely say that we have saved the price of a cloth coat this winter by wearing one at our desk. They can be made to order of any desired cut. Henning's fabrics are in con-siderable request by the bass fishers of the Potomac.

-Mr. Blsekford had on exhibition at his stand in Fulton Market an enormous Jew-fish, caught at Key West, and the fiesh of which is esteemed such a luxury by the denizens of that place. The specimen in question, which weighed 70 pounds, has been sent to Professor Baird at the Smithsonian Institute, Washington city, for a casting to be exhibited at the Centennial,

Audubon's valuable library of Natural History of about 800 volumes was destroyed in the house of his sister-in-law, Mrs. Lucy Bakeweil, at the late fire in Oshkosh, Wiseonsin. Audubon died in 1851, in the 71st years of his

-Prof. Hayden, United States Geologist, has been elected as foreign correspondent of the Geological Society of Lon-

The Velocity of a Cannon Shot.—It is difficult to describe the chronoscope without a diagrant, but it is easy to indicate the general principles of its action in a few words, and this will be sufficient for our purpose. A gun having been selected for the experiment, six or eight holes are drilled in one side of it, penetrating to the bore, at intervals along its length from the seat of the shot to the muzzle. Through each of these holes an insulated wire enters the gun, its lower extremity being in contact with, but insulated from, a sharp cutting edge, so arranged in the bore of the gun that the passage of the shot would force it down upon the wire and destroy the insulation. Each of the wires is connected with the secondary wire of an induction coil. The recording apparatus consists of a series of disks of polished silver, coated with lamp-black, and made to revolve simultaneously by the action of a falling weight and multiplying wheels at a very high velocity. One of these disks corresponds to each of the wires, the cond of which is placed in a small discbarger close to its circumference. On firing the charge, the shot cuts the insulation of wire after wire in rapid succession, and as each is cut a current passes, and a spark darts from the discharger to the edge of the revolving disk, striking off a speek of the lamp-black, and leaving the bright silver bare. Now, supposing the velocity of the circumference of the disks to be 1,000 inches per second, and the mark of the electric spark on the second disk to be one inch farther on than that upon the first, this would show that the shot took the one-thousandth part of a second to pass the distance between the mark from the first wire in the gun to the next. Similarly, if the distance between the marks on the first and last disks were five inches, this would indicate that the time the shot took to traverse the whole length of the gun was five-thousandths, or one-two hundredth of a second. In reality, the time is even shorter than this. In the 10-inch gun, a 300

—The London Army and Navy Gazette says: "Our American 'grandfathers' are always giving lessons—not always gratis, however—to their British grandchildren, and in the Army and Navy Journal of New York may he seen the most effective advertisement we have ever come across, of the shooting of a Remington breech loader, wherein the target is reproduced to scale with the marks of the shots in black and white, and a portrait of the marksman, Col. John Bodine, Highland, New York, White County. At 800 yards 74 points were made out of a possible 75."

Miscellaneous

THE POWDER CO., HAZARD GUNPOWDER

Hazard's "Electric" Powder.

Nos, I (fine) to 5 (coarse). Unsurpassed in point of strength and cleaoliness. Packed in square caulaters of 1 lb, only.

Hazard's "American Spoiling."
Nos. 1 (fine) to 3 (coarse). In 1 b. cambiers and 61 b.
kegs. A the grain, quitch and clean, for upland and
prairie shooting. Well adapted to short guns.

Hazard's "Duck Shnoling."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 ib, canisters and 63 and 123 ib. kegs. Burns storely and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 124, and 64 lbs, and caus of 5 lbs. FFFG is also packed in 1 and 4 lb, canisters. Burns strong and moist. The FFFG and FFG are favorite brauds for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER GOVERNMENT CANNON AND MUSKET POW-DER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MAN UFACTURED TO ORDER.

The above can be bad of dealers, or of the Compa ny's agents to every prominent city, or wholesale at

88 Wall Street, New York.

THE CELEBRATED

Sporting and Blasting Powder, MANUFACTURED BY

CARL DITMAR,

UNDER HIS OWN PATENT, can now be had regularly and in any quantily. See Circulars for full testimoolals as to its superiorily over other makes. The new patent Sporting Powder does not soil the gun; cleanalt, when you use one charge of it, after many with black powder; no smoke—hithe recoil—no lond report—bigb velocity. The best ever made in this line; not to be confounded with Schultz' or English Wood Powder, or Sawdust Powder, as it is superior to each.

Ready Made Ammunition

For Sporting and Target Rifles, always on band. Send for full Instruction, and it sample desired, state if for rifle or shot gun, as each kind is made. Works at Nepouset, Address

TRIAL OF SCOTTA GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELO," LONDON.

(See The Fledd, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs Scult's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score male. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by leight sheets."

DISTANCE, 800 YARDS.

e of FIFTEEN CONSECUTIVE SHOTS BY COL. JOHN BOOME, AT CREEDMOOR, IN THE "BENNETT MATCH," Oct. 3, 1874, with a

REMINGTON Breech Loading, Long Range Challenge RIFLE,

The Highest Score on Record,

Please take notice, this Target was made in an OFFICIAL MATCH, not at private Practice.

Extract from the "Army and Navy Journal" Official Report, Duted Oct 3, 1874.

"The match decides several disputed points, as near as they can be decided; first, that there is no perceptible difference in accuracy between breech loaders and muzzle loaders, but that if anything the former are the best, as they are certainly the quickest; second, that in our clear climate we may look for even better shooting in the foture; third, that

THE REMINGTON RIFLE Stands ahead of all others for Accuracy,
AS IT DOES IN SIMPLICITY OF MECHANISM. THE REMINGTON RIFLES IN THE MATCH SCORED THIRTEEN POINTS AHEAD OF THE SAME
NUMBER OF MUZZLE LOADERS, AND TWENTY TWO POINTS AHEAD OF THE SHARP'S BREECH LOADERS IN THE SAME TEAM."
In the International match, six muzzle loaders, three REMINGTON, and three other breech loaders were used. Capt. FULTON, Col. BODINE and L. L. HEPBURN used the three RRMINGTONS.
For full official report, see Army and Nary Journal, Oct. 3d, 1874. FULTON'S SCORE 171 OUT OF 180; HICHEST SCORE EVER MADE.

Military Match Rifles Just Out; Price \$35 or \$55 with Vernier and Wind Gaure Sights also Pocket Vernier Gauges Price \$2.50.

BEING NOTES OF A TOUR OF EXPLORATION—EN OWN COMMISSIONER.

E left Fort Thompson with reluctance, but our active exhausted bread box prompted us to reach Manatee at an early day. We commenced the descent of the river and resolved upon thinning out the 'gators. Before reaching Pinta Rassa, we footed up our 'gator account and found that we had settled the affairs of ninety-four on the Caloosahatchie, the best day's sport heing thirty-six. We have done some little shooting in our time, but for excitement and amasement give preference to 'gator perforating, and can confidently recommend the Caloosahatchie to those who wish to eugage in this description of sport. At this point I may remark, that we thoroughly tested the Winchester and Remington rifles, and for penetration, convenience of loading, accurrey of shooting and general usefulness, we are forced to give the decided preference to the

Passing a bayon twenty miles below Fort Thompson, Harry noticed a woodcock and we landed. In this retired and beautiful spot we started seven, the only ones we noticed during our wanderings. We have often thought that these birds have a taste for the beautiful in nature, for they are generally found where nature has been most lavish In her offerings. After leaving the Caloosahatchie telegraph station, and before reaching the islands above Fort Thompson, we towed our spinners astern, but soon tired of landing cavalli ranging from five to fifteen pounds. Reaching Punta Rassa, we steered across the Caloosa entrance, entered Matansas pass and proceeded southward to-wurds the Erastro and Corkserew rivers. If time had permitted we would have ascended these streams and described an unknown but we have reason to believe an juteresting Relnetantly we lurned the prow of the Spray northward. En route we visited the northern end of Piue Island, situated three miles north of Useppi. Here we found a Yankee named Ham, who had resided there for twenty four years. At the landing we found two luxuriant cocoa nut trees in fruit, and buck of the hut, roasting ears, garden vegetables, and several hundred lemon trees loaded down with their golden fruit. At this point will he found four of the largest mounds on the coast, and the archeologist will be pointed to something interesting and calculated to puzzle him. The island is three miles wide and with the exception of a few hundred feet on each side, is canal forty feet wide and eight feet in depth. Mr. Ham assured me that a similar excavation existed on the main land, and could be traced in a direct line towards Okeechobee for a distance of fourteen miles. On the north side of Caloosahatchic River, near its source, a similar canal is found and of about three miles in length. I was assured by a reliable party familiar with the locality, that a similar one existed on one of the Thousand Islands. question arises, who excavated these canals, or for what purpose where they dug? It is a well known fact that the Indians were too indolent to engage in such au undertaking. There caunot be a question regarding these excavations having been made by man, but why made, or by whom, is the question. An examination of the live oak trees growing in aud on the sides of the excavation negatives any argument that they could bave been the work of the early Spaniards or the Seminoles. From our knowledge of the Indiau tribes it is not probable that these canals were dug by the Yamasees. We think that a thorough examination should be made of these aucient works by the Smithsonian authorities as such an investigation with the december of the second of the seco sonian authorities, as such an investigation might lead to interesting developments regarding the earlier races Inhabiting the southwest portion of the peninsula. In addition to the canals referred to, the large Indian mounds on the southwest coast deserve examination. Such an exploration would fall within the legitimate sphere of the institution referred to, and the expense incurred would be trifling

compared to probable results. During the trip, birds, fish and marine and fresh water algae could be collected, and the Institution benefitted thereby.

the Institution benefitted thereby.

Leaving Pine Island, with its hospitable inhabitants, we made for Bird Key, one mile west of Useppi. This small island consists of about forty acres and is covered with large mangrove trees. At one time it boasted of inhabitant for where we landed the shore had been carefully paret with large claim shells. It is the rookery, or roosting place for the multitudes of birds that frequent Charlotte Harhor. On the island will be found patients and concerns, water turkeys, cranes and herrors of all kinds, sizes and descriptions. A person descrous of collecting ornithological specimens would find this a desirable loculity. In the evening we amused ourselves by shooting white herons for their plumes, and the noise made by the birds after each discharge beggars all description. We left Bird Key and adjoining coast islands, after devoting a couple of days to their examination.

couple of days to their examination. Wending our way homeward, we reached the northern end of Gasparilla Island, and came to a lult for a time. We had been skeptical regarding the fish-stories that had been told us about the fish lu this region, but after having practically tested the matter we are prepared to predit almost anything we lear stated, or see printed, regarding fish and fishing on the southwest coast of Florida. I am somewhat of a veteran and energetic fisherman, but for the first time in my life became surfeited with one hour's fishing at the inner point of Little Gasparilla Inlet. At the young flood, Harry, Frank and I visited the inlet and noticed a school of minnows being chased by a red fish. To escape their pursuers hundreds jumped on the sand, and with hands and feet we assisted many more to laud. We commenced with rods and reels, but abandon these fancy implements; for whilst we were engaged playing a large red or other fish he would be gobgaged playing a large red or other lish he would be gob-bled by a shark and tackle would go by the board. I hooked a large red fish which was taken by a large shark, and to my regret I found that I had secured an elephant. I showed fight, the last foot of line left my reel, and my ex-cellent and serviceable Shipley bamboo rod was soon in extremis. The rod bent like a bit of steel, but the braided line held—one joint after another was strained, and at last the line parted, and I was left alone in my glory, with a strained and dihepidated Shipley rod. Resolved upon having a little piscatorial amusement, I visited the boat and having a little piscatorial amusement, I visited the boat and obtained three strong lines eighty feet long, attached an eight ounce sinker and two large hooks to each and again entered the lists. We baited with the minnows and would throw our tines out their full length. Almost instantly the baits would be taken by red fish ranging from five to twenty pounds, cavalli, weakfish, bone fish, grunts, or red and black grouper of large size. We unhooked the fish and returned them to their nutive element. At the end of au honr and Al Fresco abandoned the sport hausted and demoralized. Some of my readers will say that this was unnecessary slaughter and not sport. I am prepared to admit the soft impenchment, but in extennation enter the plea that we followed up the amusement in order that the readers of FOREST AND STREAM could form an opinion regarding the kind of sport obtainable on the southwest coast. Some of my readers will probably say that "this was equal to pot hunting, and that the piscator would only capture fish in an artistic manner, with rod and reel." To such we will simply say, hook and play a ten or fifteen pound red fish for a few minntes, and then secure an addition of from eight to twelve lineal feet of shark, and one such eatch and rods, lines and reels would ''go up.' side the inner point sheepsheading is excellent, the fish ranging from one to five pounds. With a stout nine foot rod and three hooks baited with fiddlers, from one to three sheepshead can be captured at almost every cast. The water is very clear, and the bottom a white shell bank, and the fish are visible in dozens slowly swimming along la search of food. Fiddlers of large size can be secured in quantity for bait on most of the sandy keys. To obtain them easily nothing more is necessary than to dig them out of the sand, where their holes are visible. If placed in

an ordinary wooden pail they will live for many days. Red and other fish will readily take cut fish buit, but seem to prefer minnows.

I noticed numerous deer tracks on the Island and suggested to Frank and Harry that they should kill one. After their departure for the central portion of the Island, I scated myself on an empty pail and engaged in catching sheepshead and throwing them in again unless so badly hooked as to render them unlit for anything but a frying pan. I was absorbed in the nonsement, when I was startled by a large buck and doe plunging into the bay within a few feet of my person. When Harry and Frank returned they informed me that they had started a nonder, the dat two, but did not kill. All the Jar to large breeked with deer, and on most of them nodes are unaccessary; in fact still hunting is the preferable mode. Coons in immense numbers exist ou these islands and their tracks are visible everywhere near the bay beaches. On the mud flats opposite our camplag place thousands of snipe and carlews could be seen at any time, apparently waiting to be destroyed. In the centre of the island the sportsman will find a large fresh water lagoon where excellent water can be obtained. For the invalid who is piscatorially Inclined, and who desires an excellent climate, we would say spend a few weeks or mouths on the northern end of Little Gasparilla. The air is pure, water excellent, frost absent, sea bathing unequalled, fishing beyond description, deer pleutiful on the island and on the main land. To the sportsman this Island offers many inducements, and I would carnestly advise any one visiting Charlotte Harbor to spend some days here. Yesterday I received a communication from a gentleman residing in the interior of Pennsylvania in which I flud the following:—

"I have greatly desired to visit Florida for years past, but have feared the trip on account of fevers and had water. I have also heard much of the iosects of Florida, and am enough of an angler to have a wholesome dread of the woods in fly time."

I proposed postponing the consideration of these subjects until the final communication, but as I find so much ignorance prevailing on many points, I shall take advantage of this letter to ventilate these subjects. Excellent water can be obtained at any settlement, or from the rivers and creeks above salt water. On a few of the Islands fresh ponds and lagoons can be found, where a supply can be secured. On Pine, Useppi, and Lacosta islands a superior article can be obtained. On any of the islands a fair to good sample can be found by digging a well from two to four feet deep. At Punta Rassa and Fort Myers, eistern water can be seened. From the streams and springs north of Clear Water Harbor, water equaling the Croton can be found. If the sportsman earries with him one or two five gallon water kegs he will not suffer. We could find room for but one five gallon keg and we managed very well. Aware of the suffering that results from a deficient supply of good water I was induced in a previous communication to refer to the

I have visited nearly all portions of Florida except Indian River and Bay Biscayne region, both in Winter and Summer, and can safely assert that I have suffered more from mosquitoes in one day at the head of Lake Superior, and at Barnegat, N. J., than I have during all my visits to Florida comblined. From what I bave heard stated and seen published, I have reason to helleve that insects are tromblesome on the Indian Blver, but tids should not be made to apply to the whole of the State. I spent nearly two mouths on the southwest coast, traversed several degrees of latitude and longitude, visited most of the hays, rivers, creeks and islands, and I can positively assert that I was really annoyed on but one occasion with sand flies and mosquitoes, and that was one afternoon and evening when we were encamped in the spring of the Chisiowliskl. We made it a rule to anchor a short distance from shore every night, but if the spoitsman encamps on land he will be somewhat annoyed by mosquitoes in the early part of the evening. The mosquitoes of the southwest coast are lethargic, and not active and industrious, as are those of Lake Superior and New Jersey. We carried with us a full

supply of mosquito netting and thin muslin to protect us from sand flies, but the original puckages were brought back anopened. I will admit that I was put through by the "red lungs," but my sutterings were the result of ignorance, and my dearly bought experience will benefit others. At Cedar Keys, Manatec and Tampa, a few tleas will be found, but never away from settlements or hog nests. At Fort Thompson I thoughtlessly entered one of Capt Henry's old palmetto leaf shanties where dozens of hogs slept nightly, and as a result I was literably covered with fleas. I secured such a supply that I was forced to strip and sink my clothing to the bottom of the river and drown the active customers. If the sportsmun steers clear of settlements and hug nests, he will not find a fleat in the southern portion of the State. The last night I spent at Cedar Keys I found that the bed contained a number of fleas and that to sleep was impossible. I searched my coat and removed from one of the pockets a box of insect powder. I sprinkled a small quantity in the bed, a little in each shirt sleeve and some on my neck; a few funning motions of my shirt and the top sheet, and peace reigned supreme. The Persian Insect Powder should be carried by every sportsman who rans any risk of coming in contact with fleas or bedugs. If the latter prove troublesome, a small quantity sprinkled on the lower sheet will not like magic, and nearly every bug that enters the bed will be found lifeless in the morning. My experience is that the yarms spun about in see life in Florida is to a great extent "twaddle and stuff." I suffer more from fleas thisu my person I have ever met, and have received so much benefit from the use of the Insect Floring that enters the bed will be found lifeless in the morning. My experience is that the yarms spun about in see life in Florida is to a great extent "twaddle and stuff." I suffer more from fleas this any person I have ever met, and have received so much benefit from the use of the Insect Floring the Winter months, a

For Forest and Stream, LONG LAKE, NEWCOMB, INDIAN PASS.

THESE names will indicate as well as any, the medium and limits of an excursion I took in the year of grace 1873. Making Newcomb my headquarters, I branched out right and left from there, very much in the directions in which the antlers of a deer branch out from their headquarters. I left home on the 12th of May, and in six hours was at Saratoga, where, despite of grand hotels and all that sort of thing, the close season of which spreads over three fourths of the year, my chief attraction was not the Congress Spring, but the wooded lawn beyond it, traversed and occupied by seven roving deer, for this was in the line of my pursuit. Mem: I know of no one who has done up Saratoga so concisely and well as J. G. Saxe. Read his song thereof:

song thereof:

"They eat, and they drink, and they sleep;
They talk, and they bugh, and they woo;
They sigh, and they bugh, and they weng.
They cead, and they ride, and they dance;
With other unspeakable things;
They pray, and they play, and they pay,
And that's what they do at the springs."

With other unspeakable things;
They prsy, and they play, and they pay,
And that's what they do at the springs."

In the morning—excelsior—I was going up via. A. R.
R. amid snow and ice, beckoned onward hy mountains and streams to holder scenery.

Was it not very cold? Yes; particularly as the season was backward. But a favorite time for visiting the North Woods is, and always has been with me when able to secure it, from the mibile of May until the flies become importunate in recommending return. Different seasons have have ther different advantages and disadvantages, and no one of them includes all. In Summer you get berries, bathing, warmth, (too much of it perhaps) but inferior fishing as a rule, and superior mosquitoes. Late trolling is in vain, or nearly so for the native lake trout, though you may catch imported pickerel. Go in early, and you get the first best fishing, and are not annoyed with flies. Everything daily improves. Nature rapidly develops her verdant glories, and you soon see her in her richest dress. I went in too early for strawberries, but not for prime sport or majestic secuery. Why should any complain of cold in the latter part of May, who at home have weathered January, February and March? Wood is plenty in the woods, and fire can be obtained by a scratch. The angler's friend, birch bark, will kindle a flaune even in the ram, which will make it too hot for him. But I am not recommending early shantying out; that is unnecessary, and frequent Spring rains render it unlesirable. There are numerous places where shelter and warm beds can he secured at night, where you can "be quiet and go a fishing" in the morning. Mem: Plenty of warm woolen clothing. Linea shirt-sleeves for Summer.

The Hunson River at this time was full of rolling logs, rumbling and tumbling promiscuously together, some in a desperate hurry to reach Glen's Falls, though stopping at many stations; others found, founded, or foundered on a

rock. They all tell the tale of devastation—how are the mighty fallen—mil prompt the inquiry, shall the axe devour foarever? This may not be viewing the subject in a utilitarian manner, but it is viewing it nevertheless. Going, going, going, as the interioner exclaims; fair warning, unless arrest sets in, that all will yet be—gone! It was computed his stunniner, (July 36th), that 100,000 logs passed down that day, at a given point. I saw a man on a height with a long pole apparently secking to bring two large logs ashore. In a moment he disappeared, but was soon seen again, having taken passage on those logs down the river. By keeping the two as one, close together, their rolling is prevented, and skillful men with iron in their soles may thus navigate in comparative safety. I saw a man, however, or another log; fast before I saw him—in the water. At Pottersheld I pushed my way against head winds to see the Schroon. I saw, but the sight was forbibility, and the sound even warse. So turning my back upon it, I was blown to where I came from.

Old Boreas opposed my progress northward strongly, but in vain. I was too much for him, wrapped, if not "in the solitude of my own originality," then in llanuel coats, shawls and overalls, so that I comfortably pursued my onward upward way. With the inspiring sight of snow-clad mountains continually before my cyes, I advanced over roads both good and bad, till evening found me safely ensecued in the house of mine lust, Davis, at Newcomb.

Of this place little need be said, for there is little of it. It is a quier hamlet, surrounded by hill, forest, lake and stream, "Where there's no water, it's dry," Such is a favorile axion or sphorism of my own. But there is much which ulocks such treasures of the woods and waters. There too, I found just the man I wanted, Capt. Parker, an intelligent, alse and faithful guide. The weather was lord several days forbidding; but the Captain observed the splitter as we were not likely to see again.

At length the wished-tor day arrived, when w

Robert Blas multer fleas that on him prey:
And these bave smaller still to bite 'em,
And so proceed at induition."

Evening found us safely harbored at the Island House, kept by John Subbatis and his brother Churles. There I passed a week delightfully, aml caught my largest front. Now stand aside, you Maine men, while I tell you my story. I know your exploits, and what Maine can do; and understand that you look down on New York figures in this line. The trout were not numerous, but they were large. Two of them weighed two and a quarter pounds each; one three and three quarter pounds, and one four and a quarter pounds. This last was three times weighed, by as many persons; twice with my pocket balauce, and once with steelyards, and all agreed. He measured twenty-one inches in length, and thirteen in girth. The two largest together weighed exactly eight pounds. Charles S. laid them on shingles, marked unit cut out their proportions, and opening eyes in the wood-work, hung them up at his cabin door as trophies. The largest was as brilliant in his hues as be was large; a speekled prince. I do not say a king, though I never saw a larger one, nor heard, well authenticated, of larger caught in this State. Mr. Chensy told me he had never caught one quite so large. I brought him home with me, and he received many cullers, of the angling fraternity, one of whom devoutly expressed the wish that he might eatch one such before he died.

Sunday came, a most havrious day. I never passed one more radiant in its heauty, mme perfect in its atmnsphere, more truly delicious in its natural influences. As I had several times expressed a desire to see and become acquainted with Mitchel Sabbatis, of whom I read a quarter of a ceutury before in Headley's admirable book, and who lived near the head of the lake, Charley proposed to take me there to see his father. It did not take long for me to make up my mind; so, soon after breakfast I was in the bout, and with a thankful, and I trust not undeyout heart,

in view of the glories of the kingdom of Nature around me, and the kind Providence which permitted me to enjoy them, I gave myself up to the welcome upportunity. We passed among the ornamental islamb, of the lake, (they are twenty-two in number) inhaling health and Joy with every impiration, and brought up at Krileges, where we thined. In the affermoon we called on Mitchel, one of the most prominent of all settlers in the Adironalreks, and noe who has done much for the community where he resides. This worthy son of the forest received me kindly and talked over Healtley, and recollections of the most prominent of the transport o

there was one exception, or we would not have gone there; one house open, where we were kindly received and well taken cure of to the end of the visit.

Various are the causes assigned for this destruction of property. The death of Mr. Henderson alone seems sufficient to account for it, as he was the original and chief supporter of the enterprise. But I heard also various remors, to the effect that it cost more to transport the iron from the woods than it was worth; that there was a strike among the laborers for higher pay, which failing, they all described in a body, &c. These causes may have conspired together to produce the result. But there is a plenty of described in a body, &c. These causes may have conspired together to produce the result. But there is a plenty of water-power there; plenty of ore, plenty of houses of wood and brick; plenty of charcant of linest quality, and hape is entertained that the ultimate completion of the A. R. As far as Tahnwus, will again start the wheels, and make the village hum with the sound of progress, life and influstry. Passing there the night, the morning (May 30th) opened cold and even flaky with snow, but the day proved to be the choice one of an humbred for our purpose. After a good breakfast, a boat was drawn to the water for our service, and we hamehed forth with cheerful prospects on Lake Henderson. This lake is a charmer. As Mitchel sant, "any one there who these not wish to see monulains, must look straight up." I learned on it what "walface" means. One side of the mountain presents a gigantic profile, lar larger than that on the Francentia heights, New Hampshire, but not so hold, or prominently defined. There are brow, eye, nose, month and chin unmistakable, and in the mouth are teeth, to which John specially directed my attention. It is the Old Guard of the Pass forever facing it. We crossed the lake readily and took to the woods, but searcely had we entered it when John sublealy halted. "A bird," he said, and true enough, there was a large strutting partridge

But this letter is already too extended. It remains for But this fetter is already too extended. It remains for me only to say, that crossing dashing streams, and persevering to the end of the projected journey, I attained the object of long desire, and received a full reward, gazing with rapt alluiration at the base of the Mountain Pass, awe struck by its solitary grandeur, its majestic altitude, its towering sublimity,

ELK HUNTING IN THE NORTHWEST

IIILE waiting for a steamer on the Upper Missionri River last Fall I enjoyed many advantages for kunting the larger kind of game so abundant in that region. The banks of the great river are covered with a thick growth of cottonwood, elao, and ash, with a dense underlingsh of willow and billberry bushes, which, extending for several miles, afford excellent cover for elk, deer and bear. Two young men were living at the woodyard where I was staying, and we were the only white men within a radius of sixty miles. They were too busy chopping wood for the steamers to find time to hunt, and with the exception of an occasional visit from a wandering band of Gros Ventre Indians, the game was undisturbed.

One bright still day late in September I left the log cabin, resolved to dud clk, if they were in the woods. One hundred yards travel and I was brined in the underfursit, which rose shove my head to the height of lifteen feet, presenting a wall impenentable to slight for a greater distance than ten yards. It was impossible to move with encition outside of the game trails which formed a perfect lubyrinthion way, enabling one to funt in any desired direction. Selecting a well traveled trail which seemed to knowing that if the animals were in that neighborhood their cross trails going to water could soon be found. The elk tracks all appeared to be quite old, but there was plenty of fresh theer signs, and the broken branches of idilliberry bushes gave evidence of the presence of that king of beasts, the crizzly. The trail often widened and led throngt beautiful little gludes and contonwood groves, dotted with patches of attentisia, affording a clear view for a hundred yards around, with everything combined to make it the most delightful ground for deer a alting ever seen in the control of the widetenide deer, and has the bounded not of sight. I was not sorry to see king of unbarriote; for although I should not have been able to resist the temptation to shoot him, if he had stood for me, yet having started out for elk, I hoped than to after gane would entice me to fire, and so destroy all hopes for that day. Elk, unlike deer, are easily dammed by fring, and will not remain in the vicinity where it is heard. The deer were so pleintiful that it was an easy matter to get one would entice me to fire, and so destroy all hopes for that day. Elk, unlike deer, are easily dammed by fring, and will not remain in the vicinity where it is heard.

It was now noon, and still there was nothing to indicate the I saw this one get away, and of antisfaction that no more were seen that day.

It was now anon, and still there was nothing to indicate the process of the control of the desired process of the desired process of the desired p

and they were soon out of hearing. My clk, however, was still brenking the bushes in an adarming manner and brenthing with a loud, distressful sound. Stepping warily up to the spot I perceived that he was unable to rise; but to termhante his sufferings a shot in the hearl was given as a coup de grace. Then taking a sent upon his longe body I fell to gazing upon his fair proportions and indulging in the pleasant raveries which always reward a necessful chase. Poor fellow! thought 1, you have fallen a vietim, not to man's inordinate spirit of destructiveness, led to the equally insettite demands of science. I will gladly make all the atonement in my power by placing your artificial self where thousands will view and admire you.

His antlers were six-pronged, and had attained a vigorous and symmetrical growth, with points as sharp as a landing knife. The animal would certainly weigh four-teen hundred pounds as it fell, requiring the labor of three men in cutting up and packing out to the river bank, where it was loaded in a canoe and taken to the cabin to be smoked and dried for Winter use. The entire skeleton was properly prepared, and now adorns our Nutional Museum.

For Forest and Stream.

THE RUFFED GROUSE,

In MAY the ruffed grosse begins pairing and finishes its rest by the middle of June. For incubation the most retired situations are otheore, such as no old storp, beneath an ohl log, or amengst small bushes and very frequently in the angle of the worm fence between the stakes. The ten lays from ten to fifteen eggs of a dark yeliowish color, and they are about the size of a buntum's egg. Tho nest is oftentimes robbed by the fox and crow, and other enemies that are always on the alert for a Spring menl. If the eggs are destreyed like hen seeks the conpany of the cock; they boild a new next and the hen lays about the sume number of eggs. If the eggs of the first nest are batched, she does not lay again and the following Spring. The young birds leave their nest a general thing the third day, and will at any time they hide under the leaves, or in the ground birds at any time they hide under the leaves, or in the ground them to the second of the strategen to draw the intruder away from her brood. Always upon being disturbed she will either cover them, or earry them one by one in her bill to along is tance among the henlucks and she cares for the whole brood. When the brood is ten days old they have sufficient strength to dy from twenty to thirty yanls, and as soon as they drop hide instantly amongst the dead leaves and grass. The hen is never assisted by the cock in caring for her young. The cocks club together until the latter part of August, when they all again join the hen and brood. I have frequently flashed both old birds and eight to different and the strategy of the strategy of the strategy of the strategy of the cock grouse can be found standing upon an old unoss grown log druenning. With this peculiar music he draws the female to his side. Singular as this may appear this is the only manner that he has of contring or wooing the lenf form her nest whilst she is setting. While drawming, his form is recet, and his feathers and part of the form of the contribution of the strategy of the contribution of the decim

long stiglt and then a short one, previous to settling for the night. When the snow lies upon the ground he settles in the lower limbs, or else in the top, where it is so thick the hunter cannot see him, and if seen the tree would be so tall that No. 8 would not disturb Idm. Many of the small hawks destrey the young, especially the red tuil. The mink and weasel catch the old hirds, while the fox, polecat and racceon kill the young. The piraneted groups thesh is light in the early season and dark after the frost, but the rufted is always white and delicate. In point of shoot they are equal. Of course, if the cook is not scientific the delicacy is lost. You can make it tough and dry, or juicy. If the nels and nooses, traps and pot hunters were seen to in the early season, this bird would be very soon in every State. Now they are extremely wary, and it is a good thing they are, for if they were not, they would only be found in private collections and museums. It requires a great deal of peaseverance on the part of the sportsman to make a decent bug. I have often seen them lie close and squat as I passed by them and then spring and whirr at a great speed. In the thickest cripples and deepest gulhes and deasest foliage, where it is impossible to get at them, remaining perfectly still antit the danger is over, is the position they take frequently. When the birds are searce one must be lively to bring them to bac. When raised on a hill they fly far its base, and then turn usually to the right or left very short, and very few sportsmen understand their light. When the snow was deep I have found them perched among the pines and hemlocks. I have seen them dive into the snow banks and leave only their heads exposed, and I have seen quail do the same times of the same times of one in marker in the early part of September, but he this state they lie best in December. Of comset hey me reflected upon beries and will remail to the groups that it is from a lathough they are very fast—probably as last as any in America—lies yeld

DUCK SHOOTING IN WISCONSIN.

DUCK SHOOTING IN WISCONSIN.

Giano Rever, Wis., May, 1875.

Entron Porret and Stream:—

A narrow stream tringed with wild rice, as appretentions river, indeed, though "Graud," for its shooting, is title ture. At three or four miles from its month the river runs from an alonest inquestable that of mind some noise to extent. Water and land seem to have a struggle for the superstace, as the place is impassable, either by hind or on finit. Wild rice abounds for vegetation and myrinds of water food seek it as a matorial refuge from their enemy, the sportsman. The ducks dy to mil from this slongt morn and eve, and the sportsman. The ducks dy to mil from this slongt morn and eve, and the sportsman takes advantage of this or kill bis game. Full oft have I visited like resort, and the onemory of delightful recreation comes to me al wrille. It was that retailor when El E. and I took a bant in Grand lilver. No large large of game recalls the Gige, but It was no pleasureable lind frementher it as a alsy of mine than ordinary sport. We now rapidly down fox River to reach the trining right learly enter the stream, turding the skill's prove of the arrow channel. I took the paddle and El the gas, and keeping close to the rice, prepared for action. Now, sleady morees, or the dark's swift spring and splash will disconcert the alin! Up starts a mailand, a fine drake, but this somorees "quackl quack?" was silicated by the report of the dumbt barrel. Splash willer amother rises a few yards further, and leastly mailard the secund arrives to leave the fattel spot. However, a fow pellets of No. I stops, and a slot from the second gain diades as the work and we refined. Muzzle loaders we have, and trusty ones; but really the provokteg, when reloading, to see a fine dick pass by an "affigured philon," and we lose the short by tho time this as in large, orward again! "Henr those darks off to the left," whispers RI, and all entity turn the skiff froward the shot of the shot by the otime takes in more possible to some postsman sucles it is

The San Antonia (Texas) Herald gives the following notice to its subscribers: ''Hereafter we shall publish the list of the names of those who go a fishing on the Lard's day and fail to send us a string of trout. Perch and sackers have too many bones in them to allow us to farget that the narral element of our population loak to the press to eradicate this growing desceration of the Sabbath."

For Forest and Stream

A TRIP AFTER GRAYLING SPAWN

BEARING in mind our experience of last year, which Conclusively proved that the grayling deposited their spawn in the month of April instead of doing it in February ary, as the books said they should or would do, our party arrived at Gravling on the evening of April 5th. It sisted of D. H. Fitzlingh, Jr., Len Jewell, Charles Pierce, guides and concernan, and the writer. We staid over nigh at the comfortable hotel kept by M. Hartwick, and in the We staid over night morning loaded our camp equipage into two hoats and proceeded down the Au Sable.

so many anglers are seeking information in regard to the fish and lishing in this and other rivers in the wilderness of Michigan that a description of the locats used to run it will probably be in order. They are both of pine, flat bottomed, pointed at each ead, and are twelve fert long by three wide at the middle; they are pushed with a pole as oars are of no use on this rapid, crooked stream, filled wit as one are of an use or this input, crooked stream, med white logs and overhusing with tree tops, as in many places there is simply a passage way between several tops wide enough for the boat to pass. Our boats held two men and all the impedimenta of camp, and there is but one other boat on the river besides the two owned by Mr. Fitzlingh. The weather was more favorable than on the occasion of our visit last year, and in consequence of the thaw the river was a foot higher than usual, and very much discolored.
We kept a sharp lookout for schools of fish in places

where we saw and caught them last season without seeing a single one; they seem to have deserted that part of the Mr. Fitzhugh accounted for this in this way: He says (and he knows more about the habits of grayling than uny man in America) that they are a local fish in the exfreme sense of the word, and that when all are caught out of a certain portion of the river that part remains destitute of fish for some lime. Certain it is that with the excep-tion of a large school of yearlings about four miles down, where the river widens at the first tributary below the rail road, we saw no lish until about eight miles below. passed Camps Hallock, Milner, and Green, and sach was the scarcity of fish that we never stopped nor unlimbered our rods until we reached Cump Bowles, twenty miles by river from the town of Grayling. The river has been not-ted and speared until the few remaining "magnificent dorted and speared until the few remaining "magnifleent dor-sals" have been driven by their gregarions hubits to seek the schools of their golden eyed comrades below a point which the average market fisher can pole a locat in a day, for be it known that the gentle grayling is more sociable in his nature than the carnivorous, or, rather, pisciverous fishes. We took one fish with the mark of a recent spear cul on it, and from my knowledge of the effect of injury to the skin of fishes I should not think it was over a week old. And this in the breeding season! We found the fish oncarly ripe, and saw many spawning beds that had been whipped, but no lish on them. The grayling chooses a gravel bed in a swift current, usually in shallow water, and in the open stream. From observations last season, which seemed confirmed by similar ones on this trip, we were unanimously of the opinion that the grayling moved from the dark pools at sundown and took their places upon these beds, which they did not seem to occupy by daylight. To prove this we sent Leonard and Charley with a juck over the beds at night, and they reported numbers of lish upon them. We fished four days from Camp Bowles, which is about two miles below the "hig pine," a point well known to all who have run the river. We were on the north bank, on the slope of a large hill covered with Norway pine, and our tent was pitched over a patch of the trailing arbatus with which the country abounds. In these four days we canght 118 lish to our two rods, Mr. Fitzhugh nsing a Nor canght 118 hish to our two roos, Mr. Fitzingh hishing a Norris tod with a Clerk reel, and I one of Judson's, with the new reel made by Orvis; this latter was on its trial trip, and proved very satisfactory. We used three flies, mainly the favorite grayling fly, made with a stone wing and a yellow body, with occasionally a brown backle or a gray with. The light did not rise as freely as they did lost. The lish did not rise us freely as they did last year which may be owing to their being further advanced to wards spawning, or to the freshet then prevailing, which brought them plenty of food in the shape of the caddls, etc., which could be plainly seen rolling on the bottom. brought them plenty of food in the shape of the caddls, etc., which could be plainly seen rolling on the bottom. The surface of the water in many places was literally alive with tiny flies of the genus chivenomas, which, with the exception of the school of yearlings above referred to, the fish did not seem to notice. An occasional white miller would be taken as soon as he attempted to cross a dark pool. These pools are mostly in shore, in a bend of the river, and have a dark bottom, caused by the vegetable deposit gathering there. We lished them from above, and could often see lish below the bont, after the commotion caused by our arrival had subsided, picking the cashlis, shrimp, and other fad swept by the current from the sandy shingle or the gravel beds into their dwelling place. Never have I seen a stream so swarming with food; a wash basin placed in a landing net and used as a dredge brought in one baul of mud from near a pool seventeen shrimp (gammarus), two enddis of the large kind (stick or house worm), four of the small kind with the sandy case, one larve of Alay fly, many smalls, and three of the little fresh water clams, that look like the qualang (not the mussel), and lats of the little red worm, the larva of the chironomus. It has been doubted by some whether the salmon put in the An Sable in the Winter would find food enough at that time of the year to support them. If do not think there is the least doubt of it. Insects are flutching in this water all Winter; the larva of thany kinds pass the Winter in this spring water. I even believe that whitefash would find

plenty of food here at any time, and that this or other spring streams would be a good place to deposit them and let them work down into the lake.

Of the 118 fish taken four were fully ripe, and their eggs flowed freely; six more yielded a portion. A fair proportion of milt was obtained, and the eggs were packed in hoxes and enps. A few were given to N. W. Clark & Son by Mr. Fitzhingh, and 8,000 were taken to Honeoye Falls. Had it heen possible to have staid a week longer we could have easily got ten times the number; but us my leave of absence expired on the 15th we left. Camp Bowles on the 11th and proceeded up the river to spend one day fishing for yearlings.

On account of the rapids we walked up, and the guides consequently made better time. Taking advantage of the windings, we had but little more than half the distance to travel. The snow was gone from the pine plains, but still laid a foot or more deep in the eedar swamps skirting the river. The woods had been lurned over last Fall, and our way was through the blackened pines and over the burnt mose, which filled our noses with its powdery ash and made us look so like wandering minstreds that the question naturally arose, "Where will we show to-night?" Deer Iracks were numerous, so were the plantigrade impressions of the coon, and an occasional bear. They tell a story of our host, Hartwick, thus:—

Last Winter he was going out for ruffed grouse, and his son Jimmy, a boy of eight years old, wanted to go along; so he took him with him, and shortly they came upon a hear eab, which he killed with one barred of his shot gru. The mother being pear, and hearing the appeals of her juvenile for help, came to remonstrate with Hartwick, but he, declining argument, gave her the other barrel in the face when only a few feet distant, which he adsuch an irritating effect upon "old hair oil" that she took a gentle hold upon the infuriated man, probably to compel him to keep the peace toward herself and hers, and only lost her temper when he shivered his gun stock upon

wells of the bonts—fifty-five for Mr. Clark, and ten specimens for I'rof. Baird. We now wanted some yearlings, which we calculated to get in the morning, and so we look a rest.

When we were camped below, Leonard and I had gone down the river one day to a favorite spring hole, and after fishing until they refused lo rise more we went ashore and made a fire. We were soon visited by an Indian, who paddled his dag out up with the usual salutation, bon jour, which was returned. He examined rods and lackle attentively, and then asked a few questions in Chippewa. Leonard, who is learned in the mysterics of the language, was absent in the swamp, and I addressed him thus:— "Whither, O child of nairre, guidest thon the prow of thy frail bark?" (It was a bass wood dug out.) To which he replied, "Kowin kendun, puckachee, seewass; I loss und dog," Here he whistled, but his companion appeared not, and I advised bim "to invert the terms of his divisor and proceed as in multiplication of fractions." He then requested "sentah-wabah." I am not certain of my Chippewa spelling, but the front part of that competund word refers to lire, and the hinder portiou to water, from which I inferred that whiskey was the desire of my red brother. That this article forms the chief portion of the supplies in some fishing parties I mm well aware—"pity 'tis, 'tis true"—mul that white men with means enough to own such fishing tackle, bonts, etc., should come so far into the wilderness without unlimited quautities of this villainous drug seemed incomprehensible to this muntored child of the forest. It was true when I told him that we had none, yet felt sure that he received it van grano sadis, as he made no reply. I was in the midst of a long oration, which had commenced with "Intemperance, my friend, is the bane of the nineteenth centary," to which he seemed to not an assent, which possibly included several previous centuries, when Leonard came back, and I felt then that I could make myself understood. "Tell him, Leonard," said I, "that as there

it in my hund, with some perintent remarks about to drink when before but not inebristes," was about to drink when in took it and drained it, with the appropriate remark, "Nishishshin."

He must have had a business engagement somewhere about this time, for after he had got into his canoe, and while I was in the middle of an argument conclusively showing him that the mother of intemperance was conviviality and social drinking, he quietly said bon jour, and getting into his dog-out he dug out. I did not need to finish this for Leonard's sake, for he is a true woodsman, whose favorite drink is pure water when he can't get coffee. I have hope that this son of nature will reflect on the words of wisdom that were bestowed on him, but as for his lost dog, that other son of nature, he is of the unregenerate. He visited champ three times, always in our abscuee; the first time he are all the crackers, the next time he consumed part of the bread and the remainder of the pressed beef, and on the occasion of his last visit he devoured four fried grayling (left for a cold lunch), two pounds of pork, and licked out the frying pan.

"May good digestion wait on appetite,
And health on bods."

'May good dige And health or

And health on bott."

Among the strauge fish hooked was one adult grayling without ventral tins, a slight projection marking their place; and when Leonard and f were at the lower spring hole I had let my flies go down stream when a fish took them twenty-five yards below. I strack him and held him a moment till I commenced to reel in. I had not Orvis' reel, which takes up very fast, with me this time, but a

wide one with a small core, and he ran in on me faster than I could reel up, and when I tidd bring a strain on him he leaned like a salmon, showing a fals hearly two feet long, but what fish we do not know, as he broke loose. The fly was not on off, as it might have hean if taken by a pickerel, By the way, the river is fed by lakes containing both bass and pickerel, yet none are found in the river. We also caught eyprinoids while fishing for yearlings; they are a sort of shiner, (either).

Mext day, Monday, 12th, we caught hfty yearlings, strack our tents, and moved to Grayling, where we staid all night to be ready for the morning train. Here we met Mr. Frank Clark, of the Michigan Fishery. We gave him our adult fish and the portion of spawn mentioned, reserving forty yearlings for our own ponds; these were of the uniform length of two inches, but in the yearling the magnificent dorsal is not developed; in fact, the larger the grayling the larger in proportion seems this fin.

A bill is now before the Michigan legislature protecting the fish at the proper time, instead of allowing fishing April 1st, as at present. I was much astonished to see how the tight had been thinned out near the railroad; possibly not all caught out, but diver by their love of companiouship, as suggested above, to lower waters.

Mr. Fitzlugh's term, "local lish," I think correct, and as the grayling occupies waters similar to the trout, and is always compared with his illustrious congener, it is not an local fish. True, you will find one in the sume pool, or under that bridge almost may time you look for it. He seems to dwell there allowers, and hardly leave his chosen spot even for faud, yet he will go to the Albattie Occum if he has a chance. He may stop in some lake or other ideep water; but at times trout run down as far as they find water that will asstain them. The only true love of locality that brout run into salt water is so well known on Long Isband as perhaps to easier a smile at its statement; but this fact is actually so lit

That ever secutied ship or cut a threat."

And such is the average hermit of the woods; ergo, go fixed to take care of yourself.

Our party had no firearms of any kind, but we were in force, and none of us like the popping of guns when we are fishing, nor care to slay every living thing that may approach, although the sheldrakes and kinglishers should be killed off; yet if you are tempted to kill all the birds and squirrels you may see, or to knock over a deer out of season, don't lake a gun.

Fued Mathen.

FIRST SHAD IN THE UPPEN MISSISSIPPI,-A fish having all the appearance of a shad, and supposed to be the product of the spawn deposit made by Seth Green in 1872, just below the Palls of St. Authony, was caught hast week in a finutel net by a fisherman named Corlis. It has been sent to the Smithsouian Institution for identification There was a standing offer of \$25 by the St. Paul Chamber of Commerce for the first shad caught in the Mississippi.

MAGAZINES.

The Overland Monthly. - Spirkling and bright comes the The Overland Monthly.—Spirkling and bright comes like current amber of this ever welcome visitor; another attle stone as the road of literature, along which our occidental sister is advancing with such rapid strides. In the present issue the Hon, W. J. Shaw has spent five years in active travel and research not on the beaten paths but in odd nooks and corners, in dimost every part of Europe and Asia, from the great wall of Ciden to the cutaracts of the Nthe, digging and delving until be has accumulated a mass of art treasures and a perfect mine of valuable liferomation. We had the tileasure of meeting this gentleman while he was en route for the Pacific, and hearing from thin some slight account of his travels. We can congretaliste Culfordia on the possession of the stone discovered by Mr. Staw, upon which is inscribed the unclent and veritable plan of the once ronownest Temple of Hellopolie, and also the Overland upon being the medium through which the rich results of his research are to be made public.

Aatural History.

INSECT LIFE.-NO. 5. BY KRUKA

MUCH as we may deplore the devastations of the timber boring insects, among which the beetle tribe figure conspirmously, it must be remembered that in pursuing their destructive operations they are but performing their share of the general economy of nature, which provides for the removal of all organic substances, whether animal or vegetable, as soon as the vital principle bus censed to netuate them. That all such substances shall return to the dirt from whence they spring, is a decree from which there is no appeal; and the insect tribes do but hasten its fulfilment while engaged in destroying our books, our furniture, the wooden framework of our houses, or the bofty tenants the wooden framework of our houses, or the lofty tenants of our forests. The case with which wood when wormenten is crumbled, even between the fingers, is well known; but it may not hese generally understood that the "worms" which produce this effect upon articles of furniture, formed of wood, are no other than the soft bodied grahs of various coleropterous insects which are thus carrying out on a small scale the more extensive operations that quickly reduce to a similar condition the giants of tropical forests.

Our domestic pests of this description are chiefly small beetles, which pass the early part of their lives in the wood, and by means of their powerful jaws, mine through it in all directions, only emerging when they assume the perfect state. One of these is the "death-watch," which even yet is an object of superstitious dread to the inhabitunts of many an old house, of the wood-work of which it has taken possession. The ticking noise, so alarming to weak minds, and which is often considered an infallible presage of impending death to some member of the family, is merely the call note of the perfect beetle of several spe cies chiefly belouging to the genus anobium, and, as we have often observed, principally by the largest species, A. tessettana. The manner of producing this noise, which greatly resembles the ticking of a watch, is thus very accurately described by Kirby and Spence.

eurntely described by Kirby and Spence.

"Raising itself upon its hind legs, with the body somewhat inclined, it beats its head with great force and agility upon the plane of position; and its strokes are so powerful as to make a considerable impression if they full upon any substance softer than wood. The general number of distinct strokes in succession is from seven to nine or eleven. They follow each other quickly, and are repeated at uncertain intervals. In old houses, where these insects abound, they may be heard in warm weather during the day. The noise exactly resembles that produced by tapping moderately with the nail upon the table; and when familiarized, the insects will answer very readily the tap of the nail.

the nail.

They also answer the ticking of a watch, if laid upon wood inhabited by them. By way of relieving this dry diseassion, we may quote Denn Swift's description of the death-watch, with his infallible method of breaking the spell. He calls it:—

He calls it:—

"A wood worm

That lies in old wood like a bare in her form:
With teeth or with claws it will be or will scratch,
And chambermids christen this worm a death watch;
Because, like a watch at always cries "click;"
Thus woe be to those in the house who are sick!
For, sure us a gun, they wilt give up the ghost,
If the mingot cries effek when it scrutches the gost;
But a kettle of scalding hot water injected,
Infallibly cures the Huber affected;
The onen is broken, the danger is over,
The magget wilt dle, and the sick will recover."

The onen is broken, the danger is over.

The maggot will die, and the siek will recover."

The maggot will die, and the siek will recover."

That is really the extent to which this beetle affects the destinics of mortals. We might go on, page after page, enumerating the many important services rendered to man by insects which are ignorantly condemned for supposed injuries done by them—condemned by those who have never stopped to inquire into or study the habits of these small but faithful benefactors. Even the common house cricket has not been a useles "member of society"—Southey relates an incident in which one of these little insects saved a vessel from shipwreek. The incident occurred in the voyage of Cabeza de Vara towards Brazil, and is as follows: "When they had crossed the line, the state of the water was inquired into, and it was found that of a hundred easks there remained but three, to supply four hundred mea and horses. Upon this discovery, the Adelantudo gave orders to make the nearest land. Three days they stood towards it. A soldier who set out in ill-health had brought a grillo, or ground cricket with him from Cadix, thinking to be anused by the insect's voice; but it had been silent the whole way to his no little disuppointment. Now, on the fourth morning, the grillo began to sing its sbrill rattle, scenting, as was immediately supposed, the land. Such was the miscrable watch that had been kept, that upon looking out, at this warning, they preceived high rocks within bow shot, against which, if it had not been for this insect, they must inevitably have been lost. They had just time to drop anchor. From thence they consted along, the grillo singing every night as if it land been ou shore, till they reached the island of St. Catalina."

GREED OF THE BROOK TROUT.

GREED OF THE BROOK TROUT.

NEW HARHUNG, May 6th, 1875.

New Hammung, May 6th, 1875.

One day tast week as I was fishing a mountain stream for trout I made a cast in a poel, and was rewarded with a good strong pibble. As I drew my rot back to hook my lish the tip of the rod struck a limb of a tree, the hook catefulag in a fush, and, not carting to wale in the stream to loosen the hook far fear of searing the fish, I recled in the line, breaking the suell. I saw the book fall into the water, and adjusting another, I made another east, instantly receiving a good strike, and fastened my fish, which I finally incided—a fine trout of about kalf a pound weight. Imagine my surprise when removing the look from his mouth I saw another snell projecting from his mouth, which I found to be the identical book I had lost but a few minutes before.

[Such instances are not incominod. They have happened frequently in our experience. The "Gillmore" salmon fly takes its name from an angler who caught a salmon in the Nipissiguit River, New Brunswick, (as related

by Charles Lanman, in his "Adventures in the Wilds of oy charies hanned, in his Adventures in the Wilds of America,") which had in its mouth the fly, leader, and the great part of a line lost by Governor Sir Edmund Head in a struggle with a fish. The tackle was recognized as the Governor's property, and, according to the etiquette of the stream, the fish, with the fly in its mouth, was sent to him at Fredericton-Eo.]

TAXIDERMY.

ALBANT, N. Y., May 3, 1875.

ALBANT, N. Y., May 3, 1875.

I unified an article in your fast bane entitled "Noles on Taxlderney."

Although I will not dispute the preservative properties of alam and salepetre. I must beg brave to recorder at the idea of Immersing birds in a rickle formed of the above articles, without spotling them; and if such articles were brought to me for mountag, I would be compelled to confess myself a "modest taxidermist" and remark: "Your specimens are a fittle too far gone to mount welt."

Pick 68.

FLIGHT OF MIGRATORY BIRDS.

SALEM, Mass., May 3, 1875.

SALEM, Mass., May 3, 1875.

Editor Forest and Stream:—
A question of query I should like you to jurin', and which I hope both or dihologists and sportsmen will answer, so far as they are able. With those of our sportsmen and or inthologists who can throw any tight upon the subject, state through the "Sportsman's Light-house," otherwise the Forest and Spriam. Their Ideas and opinions relative to the flights of game birds, such as woodcock, supe, duck and addre birds—that is, their coarses, whether east or west, as they go north; whether moving, as some say, illiptically, or in whatever manner they have heard or observed. Itaving known of solpe being shot in the Southern States and in the Western States, and having had no shooting here in Massuchusetts, I mi induced to propound this question, and that this may ilraw out some answers and throw tight on the subject is the carnest with of Teals.

TRAITS OF WOODCOCK

MARION, N. C., May.

EDITOR FOREST AND STREAM:—

tu the 22d of April issue of your paper you ask, "Did any one of our sportsmen ever see a woodcock before he rose?" I answer, t have our three occasions. The last was in November, 1874. I was out qualt shooting, and going through an oak clearing walked up within six yards of if the male. He waddled off, looking back at me and jerking his head in the queerest manner. White I was trying to point him out to my triend Lieut. II, he rose, and I shot him. I ctuffed and mounted him, and now in company with a fencale, which Lieut. II, shot previously, he gazes with a "caim and steadfast eye" on me and my surroundings. The two were the only ones I saw has season. Yours truly, Geo. H. M.

CENTRAL PARK MENAGERIE

DEPAUTMENT OF PUBLIC PARKS, NEW YORK, May 9, 1875. {
Aulmals received at Central Park Monagerie for the week ending

Aulmals received at Central Park Monagerie for the week eudl May 8th, 1875:—
One Himalayan Boar, Ursus tibetanus, Hab, Asin,
One Aondud, Onis tragstaphus, Hab, North Africa,
One California Quail, Lophirtyx Californicus,
Two Red diroated Amazous, Chrysotis collaria, Hab, Jamalca, Psented by Mrs. Cady.

-The following are recent arrivals at the Garden of the Zoological Society, Fairmount Park, Philadelphia:— One Speckled Tortoise, Emys guttata. Presented by Dr. F. A. Hass

one King Snake, Ophibolus yetulus. Purchased.
One Calico Snake, Abustor erythrogrammus. Purchased.
One Spreading Adders, Heterodou atmodes. Purchased.
One Chicken Snake, Coluber guttatus. Purchased.
One Ground Rattlesnake, Crotolophorus miliaris. Purchased.
One Rattlesnake's Pilot, Phytophis metanolencus. Purchased.
Three Florida Chameleous, Anolius Cavolinausis. Presented by Mr.

guam.

Due European Jny, Garralus glandarius. Presented by Master Ellis
ix Limas, Lama Peruana. Purchased.
ix Viennas, Lawa vicugna. Purchased.
Due Huanico, Lama huanacor. Purchased.
Due Condot, Sarconhamphus gryphus. Purchased.

ALBINO LINNET.

SALEM, Mass., May 9, 1875.

Editor Forest and Stream:—

While guining in Swainpscott Woods on April 3 I took a red-headed littenet (albino). Having made inquiry of C. J. Maynard and others, texidermists in my yleimty, as to the rareless of the bird, they never heard of one belog taken before, although the albino occurs with the littenet as in other birds, but perhaps not as often. If a bird of this kind has been linken before I should be happy to learn through the columns of the Forest and Stream.

G. B. S.

Woodland, Harm and Garden.

RECLAMATION OF MARSH LANDS.

RECLAMATION OF MARSH LANDS.

WE PROMISED some time ago to give our readers some hints on this subject. The reclamation of marsh lands is becoming every year of mare importance in an agricultural point of view, especially in locations near our scaboards and at the outlets of our larger rivers which empty their waters into the ocean. As the higher surroundings and more elevated portions of land in the near vicinity, and more especially near the fast increasing watering places und seasile resorts used for Summer residences, these long neglected salt marshes immediately acquire a value not heretofore known. These lands for the greater part are alluvial in their natural constituents, and as such are especially adapted to the production of several different kinds of crops; yet the real salt marsh ground always requires considerable preparation before it can be cultivated with profit. To produce crops of the highest excellence requires labor, rather than a great expense in cash. Among the many acres of salt marsh lying all along the shores of our own coast, and to a large extent also along the Pacific, a great portion are not worth a thought as an investment. We should not recommend an expenditure of money upon such lands, more especially when located at any great the tandent we should recommend letting salt marsh renovation or reclamation alone. But there is much land of the salt marsh order that will riebly repay the expeuse of bringing it to a better state. Among the cheap and abundant lands of this kind, we name quite a strip upon the borders of the Hackensack River. The drainage and reclamation of much of this land from salt marsh to a good

frialde state, fit for cultivation of English grasses, or in fact almost any kind of crops, would be made to pay a large percentage over present products. The example of Eeglish reclamation of the feus, and in Holland of the liarlem iske drainage, show what skillful enterprise will readily accomplish. There these heretofore worthless locations yield a stendily remanerative percentage, and are gradually becoming more and mure valuable. Sult marshes are formed by deposits of various kirds—vegetable, mould, raff, uningled with shells tilled with immunerable animaleule. From this animal and vegetable compound we gain a large percentage of stimulant fertilizer. The greater quantity brought up by the higher tides, distributed, and left upon these share belts of sund constitute the future of the border or marsh lands which lie along su large a portion of our shore lands. Much of this floating sea and stell life need only to touch the fresh water of our inland rivers, and they die at once—sink to the hottom and commence their future fertilizing life upon another and higher place. Thus, by the regular rise and flow of the fale waters, their careful spreading of this almost imperceptible fertilizer, are formed the mursh land basis of which we now spenk. One has only to carefully notice for a few years this matural marsh making or land elevation, as seen upon the shores of old Martbeleed, Salem, and Danverse, and other places, to understand that our marsh is now well formed, and that is future productiveness lees in our hands. Just as soon as natural vegetation appears from year to year upon these leentions, their improvement is made unch easier by the decay of this vegetable matter. I have often, gan in hand and a well filled game bug at my side, traveled over these very grounds I new describe to you; when list formed only sand, and poor sand at that, was to be seen. As time pursait of the "grey-backs," the "intringer," and he come very grounds I new describe to you; when list formed only sand, and poor sand are that, wa

THE CLIMBING FERN-Lygulium polovitum.

THE CLIMBING FERN—Lygadium padardum.

This most beautiful of our native ferns is so very peculiar in its form and general apperance, that not one person in ten would class it with the other ferns of our woods. To the botanist it has its apprapriate place as one of the most beautiful of the ferns. It being comparatively a rare fern adds to its vidue, and may be recorded as one of its peculiarities. I have found this tovely fern in various localities; in Maine, in Massachnsetts, in Connecticut, and many other places. It lives in Florida, and Is senthered in sunall patches aver several of the States. It was held in such great esteem in Connecticut that complete raids were made upon the locations in which it grew, and it was removed in such quantities as to become a sounce of disgust to many persons who loved and would cherish this lovely green fern. Such were the quantities carried away that it became necessary to protect it from entire extinction, by causing a law to be passed by the State for its future protection from the vandalism of outsiders. We were among the most carnest of the friends for the protection of our woodlands and forests, and are equally in curnest also for the protection of the beautiful and viduable in mature from unnecessary and wanton violation of herb, fruit, or flower. The Lygadium palaudum has a very slender light brown stalk, which in the wilder calrivation of its native haants turns for support lavingly around small shrubs, running to a height of from two to faar feet. From the minin stem the small branches alternate, and in their tarnalso throw off branches and bear leaves, or fronds at each and every division. These froad leaves are again divided into saveral lobes. By turning up the under sides of the leaves the small lobes will be seen, the spone cases or seed weasels, which are arranged with unch grace and beauty. It short this grace and beauty of the plant not only place it at the bead of our beautiful ferns, lait render it a great and deserved favorite as a decorative or festive

Tulle Roots as Food.—The Sun Francisco Obronicle says: "A new California edible has been discovered by the patient gastronomic researches and fearless experiments of some of our Chinese population. The Colusa San says that two tons of tule roots were shipped from that place to San Francisco last week, the consignors and consignees heing Chinauen. The Mongolians declare them excellent and nutritious as an article of food, and that a good market can be found for them at six cents per pound. If this statement is reliable, a tule swamp will be a more valuable possession than a wheat field of similar dimensious, and the business of reclaiming swamp lands may as well be given up."

—A fishing match for while perely took place last Saturday at the Little Fulls of the Potomac, where those fish are pleuty. There were nine contestants and three prizes. Joseph Paul took lirst prize with twenty-seven pounds of fish; Thomas Naylor second, with twenty-four pounds, and Mr. Barrows third, with twenty-oue pounds. The number of fish caught was 1,223,

Hambletonians in France.—From the last number of the Journal Official des Courses au Trot we learn that the American Hambletonian stallion Sirins, son of Prizefighter, American Handletonian stallion Sirius, son of Prizefighter, by Rysilyck's Hambletonian, foaled in 1868 at Scarsilale, Winchester (Westchester) Co. N. Y., is making the season at Lille St Omer, and neighborhood, at the low fee of 6 frances. The advertisement is duted "Stock farm of Breilly (sonme). Twelve dollars is rather a low fee for a Hambletonian stallion, but in France as well as in England, a horse must have begotten winners before he can command a fair fee. Sirius' dam was June, by Time Messenger, and we are of the impression he was fealed at Fordiam. Count the Puntales parchased and exported him in ham. Count de Pourtales purchased and exported him in 1871. Crossed with some of the fine thoroughbred mates quite numerous in France his get ought to be very

The Trotting Turk.—On the 18th inst, the trotting season will be fairly inaugurated at Fleetwood Park. On that day the beautiful drives through Central Park, as well as the far-famed Harlem Lane, although still somewhat in the sere and yellow leaf, rather than the garb of Spring, will be thronged with "Hyers," en route to the most aristociatic of our trotting tracks. A large number of horses are already in training at Fleetwood, and the track has been much improved for their convenience. The managers tave also taken a step in the right direction in reducing the admission fee to the popular price of \$1.

Following Fleetwood, on the 1st, 2d, 3d, and 4th of June, comes the meeting at Prospect Park—a misnomer to fact, as the grounds are located far beyond Brooklyn's pride, and almost adjacent to the territory so long and ubly rated over by the late Mr. Gil Davis. Here the disappointed pool investor can solace timeself with the sacculent clam, or retrieve his fallen fortunes at thimble-rig. This year the Prospect Park Association have stepped into the circuit and allied themselves with the Point Breeze Park Association of Philadelphia; the Connecticut Slock Breezler's Association of Hartford; the Narragausett Park Association of Providence, R. L., and with the Beacon and Mystic Parks of Boston. The programmes of each of these associations are identical, and as each gives \$12,000 in premiums, we have the large sum of \$72,000 given to owners of horses by six emporations.

Besides Prospect Park and Fleetwood we have close to the city Decefoot Park, which is located at Parkville, L. L., near or on the Comry Island road; West Side Driving Park, Jersey City, and Waverly Park, near Newark, N. J. All of these are half-uile tracks. Probably half a million ing trotting senson.

—Mr. William M. Parks, of Bronklyn, N. Y., has matched Prospero, by Messenger Darac, against Mr. Wea-

—Mr. William M. Parks, of Bronklyn, N. Y., has toutched Prospero, by Messenger Darne, against Mr. Weaver's Hooest Dutchman, by Hoaglaml's Gray Messenger. The race agreed upon is mile beats, three in five, in harness, \$5,000 a side, half forfeit, and to he trotted September 20th.

The Liennel.

-Our friend, Mr. J. T. Beeks, of Round Mountain, Texas, but formerly of Fort Wayne, Indiana, an enthusi-astic sportsman of the ohl school, is the fortunate possessor of a fine lemon and white pup, which is as handsome a specimen of the high bred sporting dog as can be found in Texas. Round Mountain is fifty five miles west from Austin. Mr. Beeks says: "I think this the most enchanting country, and have been over most of the States and Canada."

—We have been favored with a visit from Mr. A.D. Laws, of Bridgeport, who brought with him his fine bitch May. May, who is better known as the Hubbell bitch, it is elaimed is a Laverack, though we fancy her pedigree will show an out-cross. In appearance, bowever, particularly her head, she resembles Fairy and Mr. Adams' Rock. May was brought to the city for an introduction to Mr. Marshall's red dog Rock, by Putnam's Dan, he by old Dash.

LAVERACES.—On Monday, the 10th instant, Mr. Raymond's Laverack bitch Ruby had a litter of pups, sired by Pride of the Border. Ruby was never very prolific, and the puppies are but four in number, although very strong and finely formed. One of Ruby's sons of a former litter, Rock, owned by Mr. G. A. Strong, of West Meriden, Ct., was exhibited at Springfield, Mass., and is a large, hand-some setter.

—Mr. Harlie P. Hess' orange and white bitch Flora, lately purchased of Mr. J. Henry, of Philadelphia, and bred to Mr. Brook's Bismarck, whelped nine very fine, healthy puppies on the 22d ult. The young setter bitch Flirt, property of C. S. Westcott, Esq., Philadelphia, is out of Flora by Mr. Twaddell's Buster. by Mr. Twaddell's Busice,

FISH IN SEASON IN MAY.

Silinon Tront, Salmo confluts, Shad, Alom. Land-locked Salmon, Salmo Glovert

Under the head of "Game, and Firm in Seat in" me can mily spect fyin general terms the several purieties, because the bins of Shites vary in much that vive me to intempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This wanth require a givent amount of our space. In thesis unding yourse or are publish by the hums of nuture, upon which all legislatum is founded, and our renders would do well to provide themselves with the law of their repeature States for outenit reference. Otherwise, our attenuts to usess them will only civate contration.

Black Bass abiling is permitted in New Jersey on and after May 1st; in New York, August 1st; Ohin, May 2st; in New England and Promsyleanta June 1st. We will print by this column next (week an abstract of the re-clised law regulating Balding, passed by the last Lygislature. This changes from the ohi law are very material in some respects.

FISH IN MADKET. - Since the date of our last issue the fishing fleet have had fine hails. They found the mackerel schools about fifty miles to the eastward of the Delaware breakwater and have been bringing them into Fulton Murket slip by the hundred thousand. On Monday of this week, 60,000 were shipped through the country from Fulton Market slip the country from Fulton for the first state of the first state on Market; they average in price 15 cents each. The first purgies of the avason made their appearance in market last Saturday. In some mysterious manner our fellow citizens of African decent, who have decided predilection for this fish, became aware of the fact, and almost immediately cornered the market by huying the entire catch, amounting to some twenty-five pounds. As the price was high (18 cents) it caused a stringency in the money market which was felt in all the policy shops within a mile of Fulton

New varieties of fish are appearing daily as the weather hecomes warmer. Sea-luss, blackfish (tautog,) and weak-fish (squoleague,) are commencing to arrive in small quantities, and within the next ten days the market will be stocked with the largest variety of fish that is to be will be slocked will the largest variety of fish that is to be found during the year. Salmon are unusually scurce for the season, the receipts amounting to only about 100 pounds per day, instead of 1,000 pounds as at this time last year. Nova Scotia fish bring \$1 00 per pound, and Kennebec the same price. North River shad are in full supply and on same price. North River shad are in full supply and on account of the large quantities of macketel in market they account of the large quantities of mackerel in market they can be bought at very low figures; roe shad bring 30 ccuts and male 15 to 20 cents. Codfish are plenty and cheap at 7 cents for live and 6 cents for dead. Halibut are also in good supply at 15 cents per pound; base (striped) 15 cents per pound for large fish and 18 to 20 cents for smaller ones suitable for family use; white perch, 15 cents. All of the fresh water varieties are crowded out of market by the superior salt water specimens on sale. Lobsters are being received in liberal quantities from all along the coast and Long Islami; they self for 10 cents per pound. Green turtle are in good supply at 20 cents. Soft crabs from Nottle are in good supply at 20 cents. Soft crabs from Nor-folk, Va., have appeared in market aml notwithstanding their diminutive size, the first arrival of 200 dozen were cagerly taken at \$1.75. Tarrapin are slow of sale at \$12

Our Philadelphia correspondent says they have been having very good catches the past week on the Delaware and Gloucester. On the flood tide last Monday cought almut 800 shad. The shad are running larger than for amult 800 shad. The shad are running larger than for years past, the gillers being especially fortunate. At Gloucester the largest caught so far weighed about seven and a hulf pounds. One at Burlington, on the 5th, weighed within an ounce of eight pounds (authentic), and is the largest one known to have been caught here for a long time.

-Friend Fenton, of Number Four, Adirondacks, has made eighteen hundred pounds of maple sugar this Spring, which will sweeten a good many flap-jacks this Summer.

which will sweeten a good many flap-jacks this Summer.

The Fisheries.—The fishing fleet have arrived quit freely the past week. The whole number of arrivals up to yesterday aftermou was seventy-three—sixty-seven from Georges, three from Grand Banks, and three from Western Banks. The Grorgesmen have brought in about 1,350,000 pounds of cod and 260,000 pounds of balibut. Three salt fares of codfish, 240,000 pounds of balibut. Three salt fares of codfish, 240,000 pounds, have arrived from the Western Banks. Most of the Georgesmen have occupied the entire mouth of April in making their third trips, owing to the delay in getting luit, and the stock of lish in the market is necessarily quite light in consequence. hast year must of the fleet had made six trips up to the 1st of May; this sroson only three within the same time. Bank fish also come along sparingly, only four shares having arrived as yet, some 800,000 pounds, which will quickly be disposed of as soon as they can be got into marketable order. The Southern trackereling fleet lrave struck mackerel, the first fresh ones having arrived at New York on Friday lost, which were sold for \$15 per hundred. The schooner Cora good heginning of the season.

Among the halibut handed by the schooner Chester R. Lawrence, on Monday, was one will the name "Lynch" cut thereon. The halibut had grown considerably since the curving operation, which from the appearance of the scurs had been done about a year. The letters were some six inches in length and very clearly defined. Where's Lynch, who marked the halibut, is now the question.—Cape Ann Advertiser, 8th.

THE MICHIGAMMIN

MILWAUKEE, April 27th, 1875.

Entror Forest and Stream:—

As considerable inquiry has been made by sportsmen respecting fle widers of Northwestern Michigan, I send you a description of one of its streams, the Michiganmin, pronounced Michigan-my. This river inkes head from the lake of the same name, running south, and empty-

ing into the Menomines at right angles. This latter river runs casterly about 150 miles, emplying into Green Bay. Above the junction it is called the Brole. From the aforesald lake to the month of the Michiganunin River, in a illect line, may not be over fifty miles, but by the current it is estimated to be over 100 miles through a wild, manufalions region, often contracted into narrow, deep canonis, presenting a securery wild and romantic beyond description. It has been navigated by several parties ceithin the past two or three years, and ha sold by every one who has taken the tip to present the finest securery they had ever cisited, besides affording most excellent front fishing, deer and will fow shooling. The course of this stryam is through an intermbable forces, where, most of the way, the mark of civilization has need left that tacks, nor the trying of the surage bace ever head in its glean to startle the with them, and the trying of the surage bace ever head in its glean to startle the with the trying entire the parties of the surage of the surage of the complete titting out can have freight on short notice. At the junction of this river with the Mononines the falls of this river, which affords, lugether with the Mononines the falls of this river, which affords, lugether with the Mononines the most gorgeous scenery min can conceive. Should you not be sailout better should be good to short notice. At the junction of this river with the Mononines the forcet and stream? You will find above the junction of the most gorgeous scenery min can conceive. Should you not be sailout better should be good to the first greater abundance than the Britle above the junction of the forcet and stream? You will find several routes, one by rail and one by steamboat. After reaching the devent routes, one by rail and one by steamboat. After reaching this city you can take the rail via Marquette to Champien, at the head of the lake, where you take your breach canoes for the trup down the river. From Marquette to the lake is ab

SALMON IN THE BAY OF SAN FRAN-CISCO

Entron Forest and Stream:

A few ceeks since I promised to inform you of the time when the grilse or young sulmon of about two or three years old left our bay. About the let of April their captures began to be few and far between, and from that time they have been gradually diminishing nutil with eight or ten cods out out more than three or four are taken the whole day. Of course, they are ascending the two largest rivers that flow into the bay—the Sacramento and the San Jonquin. These streams, owing to the melting of the snow ou the Sierras and the wash from the saw mills and adulting districts, are for a long distance quite rilly, and rather thick with sawdnef, sand, and mud, and are of a yellowish coloc. In this kind of cater the selfmon can be eaught only in scines, and vast quantifies of them are brought to our markets on the deck of the steamers, echoners, etc. Nearly all that are sent here are large fish, averaging about ten pounds in weight. They are in great plenty now, their price being only from 8 to 124 cents pur pound. Their field is of a deep red, the two or three years old helps of a light pink. It is not common to see our small brook tront to market, but the species of trout from the Trackee River are pretty plenty, fetching from 20 to 30 cents per pound. We have still plenty of tom cods in the bay, and the season of smelt fishing is commencing at the Onklund Long Wherf, but those fish have not as yet come in so numerously as to previous years. The subscription lakes of the Spring Valley Water Company cummence the season's fishing to-morrow, the 1st of May, and it is early enough, for some of the trout bace been seen spawning there lately. These small lakes are only about ten unites from the city. The water is very clear and rather cold at all sensons. We have now a new coast railroad north for Unity eight nulles in Marin colouty, and it enables sportsmen to have aome good trout fishing in Paper Mill and Lagonitas Creeks among the cold woods in a one or two days' frip. Mr. Throckmorton will plan

FISHING NEAR OGDENSBURG.

OGDENSBURG, N. Y., April 30th, 1875.

Ogdensburg, N. Y., April 30th, 1875.

Editor Forest and Stream:

We are quite well located here for shooting and fishing Ogdensburg to tely of 12,000 inhabitants, situated on the St. Lacrence Ricer, and and is dicided by the Oswegatchie Intu what is known as the east side and west side. The cast side is the principal husiness portion of the city. Here are the incidings and docks of the C. V. R. R. and Niethern Transportation Co.'s line of propellers, two large steam plantagenils, edit extensive lumber yards, City Water Works, Castum House and Post Office, principal hotels, lumks, &c. On the west side is the depot of R. W. & O. R. R., marine ralway, gas wurks, couvent building, large flouring initis, &c. Opposite Ogdenshurg is Prescott, Canada, a place of about 5,000 inhabitants. Prescott is the ternious of the St. Lacreuce and Ottave, Railroad, and ac Important point out the Grand Trans Roifroad. Two ferries, running three boars and making balf-hourly trips, coanect Prescott and Ogleusburg. Alexandria Bay and the Thrussind Islands, the fancous fishing and camping grounds, are abouthly withes up the river, the Islands extending from Brockville to Cape Vincent, sixly unless. This great pleasure resort is reached from Ogdensburg by various lines of elections. During the season boats leace at 8 and Bi30 A. M., and I and 6 P. M., neaking the run to two hours. Below Ogdensburg—four utiles—is the first rapids below the lakes, and the head of micristion for rafts. These rafts are towed to this point from like great lumbor region of the West, and here are divided litti smaller rafts and made secure for the passage of Informous rupids of the Lewer St. Laurence. Durks have been very glenry, and our aportsmee bave made the best of the fow days' invorable weather, which has beyn unusually call this Spring. To morrow closes the senson. lus Spring. Yours truly.

Answers To Correspondents.

Anouymous Communications not Noticed.

11 B., Brooklyn.-You can address Verplanck Colvin, Esq., at Al-

C. A. M., New York.—Can you give me any information of the Hon. Mr. Sanford, who is settling Lake Monroe, in Florida? Ans. Address John A. Macdonaid, Msilonville, Fla.

E. M., Boston.—St. Flavie is the present termines of the Intercolomial Canada Raliroad. Melis is fifteen miles from thore. Raifs are laid to that point, and contractors carry passengers on their ballast train when they are going up and down.

T. L. G., Norwich, N. Y.—Will you please inform me. If the laws of New York prohibit the estering of pickerel with linek at any mason, and if so, when? Ans. No general law regarding the taking of pickerel, furthocal laws in some counties.

Readen, Toy, N. Y.—Car you tell ne where I can hay a good and cheap life-preserving helt, or some contrivance which routh be utilized in camp for pillow or suchlou? Ans. Address Goodyent Rubber Co., Nos. 365 and 367 Broadin ay, or D. Hodgman & Co., No. 27 Madden lane. Hanoven.—Can you tell me of any preparation for the faculand hands that will keep the masquiroes and black flees away from a person of hen troat fishing? Ans. Oil of penny-royal is good; so is a strong thrittee of Persian insect purder (pysidrina rossum.) We prefer for and sevent oil mixed.

oll mixed.

R. P. R., Morristown, N. J.—Can you tell me the price of Colvin's large find may, scale one mile to an tuch, and where it may be outstined in New York? Ans. The only maps of Mr. Colvin's which is have seen no those included in his Adironiack report. The pulse of

tulned in New York? Ans. The only maps of Mr. Colvin's ichich ice have seen me those included in his Adiromiack report. The pices of that work is \$3.60.

J. W. W., Sandy Hill, N. Y.—What animal, reptile, or insect 14 it that makes the shrill peoping soundaheard in low, examply pinces on calm still evenings at this time of year? Some call them "peop frogs." yet the noise is unlike the notes of a frog. Ans. Frogs; the notes of different species of frogs vary very much.

J. H. W., Holliston, Mass.—How do you account for the appearance of angle norms on the sarface of the ground after and during a shower of rain? Ans. In dry weather angle worms go deep into the earli; in ever weather they come to the sarface. It is known properly as the earth yorm, and is usually found in moist pinces.

Rosepa.—Is there good fishing in the vicinity of Lackawayon, Pa.? What kind? Where could get a placeto board? Whigh prior a family notice. How runch? What kind? On the properly as the earth could be accounted by the could be a family and the could be suffered and some bass within a few miles. A trout outfit and trolling tackle.

F. W. D., Tanuton, Mass.—On repticin your query cogniting size of largets for 200 yards range, in lastic of 234 ofte, should invercent; Target 6 feet by 4 feet, instead of 6 feet by 2 feet, as printed. Centre, 2 feet square; bulleyes, 8 inches square. The currect no assurements for largets at all ranges will be found in the report of the National Rite Association just lessed.

W. G. H., Wilkinshing.—Careyon give no feet and a cache and before me

W. G. H., Wilkinsburg.—Cau you give me the name and inform me whether the soudlized apider-looking heavet found in the early Signing lu new ground is injurious to plants at seeds? It is early minute, and of a beautiful secret citor; findled in grain many when digging in my garden lately. Ans. If we refer to the same lineet it is harmless, as far as plants and seeds are concerned. Nearly all the Arschilds are outsityoness.

rous.

Dr. J. P. H., Lonisville, Ky.—I. What is the best three to spread fee or trevive days on the Nepigon River? 17the season this year is very backword.) Ans. Middle of July to let of August. 2. Can company on the for the frip on had at the Hadson Bay Company's station there, with cause, guide, etc. f. Ans. Yes; everything. 3. Will a 12-fool 8-one of yord, eith 5 yands of three heavy enough for the large trout of that stream? Ans. If you are an expert angler. 4. Can you give a rough eatimate of the expense after reaching Nepigon Buy? Ans. Two dollars

per day.

J. L. P., New York, —Is good shooting to be had—sulpe shooting and tail—on the flucken-ack fliver in the month of August? What part of the river is the bost, and can a person starting from New York in the murning leave a day's shooting and return by dight? Ans. Rall shooting is prohibited in New dersey between Decumber 1st and Suptember 1st, and adope are protreted until October 1st. On a good day's duck shooting he had anywhere in the cicinity of New York, a person leaving the city in the morning and return by night? Ans. No, as you would thun lose the morning and evening flights of the birds.

Livery Dark, Syragers — The letters 2B, 1B, 100, 100 and 100 and

and autop are protrected until October 1st. Cnn a good day's datck skoofing he had anywhere in the cicinity of New Yurk, a person leaving their in morning and return by night? Ans. No, as you would thou lose the morning and ecenting flights of the birds.

In the Dark, Syracese.—The letters "R. 1B. P. O., A. "and E. at the head of the columns of figures in the base hill seares mean respectively, runs, aref base hits, good batting; the put out shows the show the score, the first base hits good batting; the put out shows the number of players each put out in the gaine, and the swisted ench gave in patting players out. 2. A player who macks a lares hit any affect of first base of for two or three bases, than he ready reakes three dress are thus, and these may yield two or six toils kase. "Farued runs" are thus scored by skillful natting and not by fielding erforts.

Diek, Chafotte, Mich.—Will you be kind exorgh to inform mo through the oodly arefeless sportsment's paper of tibs country, the Power and Synac, about cellar would be such as you describe we would engages 4 drawings prouder to the best for our bland rivers and lake for ducks even 5 drachms, and 1; or, short, try two wads over your pouder. AN IRISH VIEW OF THE RIFLE MATCH.

LATE copy of the Dublin Times contains an editorial on the subject of the return rifle match, in which it suggests that energetic preparations be commenced towards sustaining the reputation of the Irish riflemen on their own soil. It contends that they 'enter the lists against the Americans under manifest disadvantages, and against the Americans under manifest disadvantages, and that it is scarcely an exaggeration to say that there are in the United States millions of persons habituated to the use of the rifle." We will venture to say that there are ten persons in Great Britain and Ireland accustomed to the use of the long range, or in fact any other rifle, to one in this country. If we read correctly the figures given in the last number of the Volunteer Service Gazette, there are over 500,000 riflemen enrolled as volunteers in the empire; the contests at Wimbledon, where they are instructed in the use of the long range rifle, have been carried on for a series of years, and even the most distant of her colonies have followed in the wake of the great movement inaugurated ahout the time of the Indian mutiny. We have not the figures to determine the exact number of the contestants at Wimbledon who are also qualified for places on the Irish team. The number, however, must be far in excess of all the American long range riflemen who have yet practiced the American long range riflemen who have yet practiced

at Creedinoor, and no better commentary on the error into which our contemporary has fallen could be advanced than the fact that of the riflemen of America appealed to by the joint committee of the National Ritte Association and Amateur Rifle Club less than twenty presented themselves as eaudidates at the competitious. Virtually, the return match is one to be shot, on our part, by the same team as that which was victorious last year.

The Times continues: "Innumerable rifle clubs are seat-The Times continues: "Innumerable rifle clubs are scattered over the country, and there are, besides, whole classes of the population to whom proficiency as marksmen is a necessity of existence." As regards the clubs, they certainly are being scattered over the country (we are almost tempted to say very much scattered); but the class of riftemen of whom Leatherstocking was the type is, we fear, becoming smaller by degrees and beautifully less. The rifle used by these men is also becoming obsolete. "Killdeer," so true for one or two hundred yards, has given place to the Remington, the Sharp, the Ballard, and the Whitney, rifles that throw their heavy ball with accuracy Whitney, rifles that throw their heavy ball with accuracy to 1,000 yards and beyond; and the old squirrel shooting to 1,000 yards and beyond; and the old squirrel shooting Kentucky small bore is rapidly lapsing into a tradition of the past. We are glad to learn that public competitions are also to be held in Ireland, and that riflemen outside the Irish Rifle Association are invited to contend. It will be interesting to note the response and compare it with that made to our own like appeal. As for the "millions" of riflemen in the country, let the *Times* take off several cyphers and it will be nearer the mark. Earnest endeavors are being made to educate our National Guard to the standard are being made to chieate our National Guard to the standard of riflemen, and when that is accomplished we may be able to number them by the thousands.

THE INTERNATIONAL GAME PROTECT-IVE ASSOCIATION.

THE International Meeting for Protecting Game and Fish will be held at Cooper Institute at cleven A. M. on the 19th of May instant, as will be seen by the call appended.

Some question having been raised as to the relations of this International Association to the National Sportsmen's Association which will meet at Cleveland next month, we Association which will meet at Cleveland next mouth, we are anthorized to say that its functions are merely advisory, and that the Association will cease to exist as soon as its work of determining species and the proper times and measures for their protection, is accomplished. It is cooperative with, and in no way antagonistic to, or even competitive with the National Sportsmen's Association, except in the honorable emulation to accomplish the greatest trood It was projected as an institution ind:pendent of the other, because it was deemed necessary and wise to place scientifie matters in the hands of scientific men, so that errors might be fore and time he record in might he few, and time be saved in retrieving errors. So important a matter as the nomenclature of our fauna (which still puzzles our best informed scientists) should be entrusted only to naturalists, and to those whose study of the habits of creatures in the chase by land and sea has made practical naturalists. It was projected as an independent institution also because the co-operation of Canada was indispensable to success in the efforts to procure suitable and sweeping protective laws, and hecause a National Sportsmen's Association of the United States could not in clude Canada within its folds as a corporate and component part of it. When the Niagara Falls Convention met last September, overtures looking to an international organization were made to the Convention hy Mr. W. F. Whiteher, Fish Commissioner of Canada. His dispatch was courteously received, but no action was taken upon it. There were those present then who recognized the error at once, and some of them are now interested in the interna-

No doubt action will be taken at the Cooper Institute meeting endorsing the National Sportsmen's Association, and encouraging the formation of co-operative State Association in all the States where they are not already formed, as an applicable to prove of improve rather which shell the state. as an auxiliary power of immense value, which shall be come the educator, through all its branches and ramifica tions, of the masses, and a police force to detect offenders and punish offences of those laws which we trust shall emanate from the united wisdom of the country; and therefore, to secure the greatest good and the most perfect work from the most competent sources, the International should, and doubtless will, invite a conference between the committees of the two hodies named. Out of the two, certainly, a scheme of game laws should be framed to meet our long necessities. our long necessities.

ANNUAL RE-UNION OF THE PHILADELPHIA SPORTSMEN'S ASSOCIATION.—The Philadelphia Sportsmen's Club is in all probability one of the most energetic and efficient institutions for the protection of game, the advancement of good fellowship, unanimity, and a higher standard of action among field sportsmen, in the country, and at this time we understand that its roll of members numbers about two hundred and fifty including active contributing. and fifty, including active, contributing, non-resident, and bonorary members. Among the important regulations of bonorary members. Among the important regulations of the club is its annual social meeting and exhibition of skill at trap and rifle shooting, which also includes its glorious planked shad dinner. On Saturday, the 8th inst., this important event came off at "Fist House," Tinicum, near Chester, on the banks of the Delaware River, where more than one hundred members, with a number of invited guests, assembled. The Pennsylvania Railroad having dispersional the party, by special truin from Philadelphia constants. patched the party by special train from Philadelphia, on reaching the grounds arrangements were made by the shooters to contend for the prizes, two elaborately engraved silver cups of about \$100 in value, to be awarded to the

Best and second best shots respectively. The Hon.—Rayburg and Mr. A. Peterman, of Philadelphia, were selected as judges, and Horace Smith, Esq., Field and Kennel editor of this paper was appointed referee. The shooting was at ten birds each, from five traps, twenty-five yards rise, one and a quarter ounces shot, and instead of a given boundary the shooters were allowed three minutes time in which to gather a faller hird. Twenty-gight gentlemen which to gather a fullen bird. Twenty-eight gentlemen participated in the shooting with varied success. Mr. Glesparticipated in the shooting with varied success. Arr. Glesuer succeeded in killing nine out of the tan, which gave
him the choice cup. Four others killed eight blirds each,
and in shooting off the ties the second cup fell to the lot
Mr. Harrison. The shooting being ended, the party repaired to the commodions dining hall of the Tinicum Fish paired to the commodions diving han of the Timedia Fish House, where about one hundred members and invited gnests took their seats. Under the auspices of Mr. John B. Sartori a sumptions dinner, with a supply of the traditional Fish House puuch had been prepared, after which a special train conveyed the party back to the city. The weather was everything that could be asked for, and the meeting one of analloyed enjoyment.

MARYLAND ASSOCIATION FOR PROTECTION OF GAME AND Fish.—The regular meeting of this Association was held on Monday list. The report of the President stated that several persons have been prosecuted successfully for exposing game out of season, and for infringement of the ducking law. An amendment of the State law was advoeated, making it as effective as that applying to Worcester county, and so general as to affect seller, killer, and con-sumer of game alike. A committee of three, consisting of Messrs. John Stewart, Gen. Latrobe and T. B. Ferguson, was appointed by the chair to prepare and report at the next meeting of the association any alteration or addition to the present game laws of the State which they might deem advisable. It was resolved that not over five volunteer delegates be appointed to the National Sportsmen's Convention, to be held in Cleveland, Ohio, and upon notice of the absence of such volunteers the Executive Committee shall appoint one delegate and draw upon the Treasurer for the necessary expenses. The following gentlemen were elected officers of the association:—President, George S. Rrown; Vice Presidents, Thomus Poultney and P. P. Pendleton; Secretary, B. W. Jenkins; Treasurer, Robert Hodges; Executive Committee, C. E. Coffin, D. C. Clurk, J. S. Cittings, Lr. C. D. Fisher, T. R. Ferrymon and T. H. Gittings, Jr., C. D. Fisher, T. B. Ferguson and T. H.

The energy displayed by the gentlemen of the Maryland Association in protecting fish and game is very commend-able and worthy of imitation.

The Rifle.

CREEDMOOR.

On Wednesday, the 5th inst., the fourth and last competition for places on the American team look place. The weather in some respects was better than had prevailed on the previous days, but there was a strong breeze blowing, which, commencing from the south and west, and blowing which, commencing from the south and west, and blowing across the range, gradually veered around to the east. Among the visitors present were Gen. Staler, who superintended the firing; Adjutant-Gen. Towasend, from Albany; Inspector-Gen. Woodward, Gen. McMahon, Gen. Millen, Col. Stiles, Col. Carr, Col. Gouverneur Morris, Capt. A. Anderson, Capt. Willard Parker, and D. N. Judd, of the Board of Directors. The following are the scores

made: Totale.

THE AMERICAN TEAM .- The shooting made by the team during the practice on Saturday was more encouraging, better than anything accomplished during the petition. The scores made were as follows: General T. S. Dakin, 157; L. C. Bruce, 156; Major Henry Fulton, 151; Colonel H. A. Gildersleeve, 149; H. S. Jewell, 143; G. W. Yale, 143; A. V. Canneld, 139.

THE 12TH REGIMENT CALLEGENIA MATCH.-The mem bers of the 12th Regiment composing the team which is to shoot against the California team on the 29th June, were practising at Creedmoor on Friday last. It was some disappointment on arriving there to find the targets changed to the new Wimbledon pattern, as the match was made before their adoption, and the previous practice has all heen at the old targets. Captain Smith however has made arrangements to use the square bullseye as before, until after the match. We quote the score at 500 yards:—

DISTRU.	SUME.	T C DISTUS

MEETING OF THE N. R. A .- The monthly meeting of the Bourd of Directors of the National Rifle Association was held on Tucsday last, the report reaching us too late for our last issue. Gen. Woodward, of the Committee on Revising the Rules, made a report, and the rules as revised were adopted. The only Important changes were sections providing that no two competitors should shoot with the same gun, and that a shot at a wrong target should not be scored. The treasurer was instructed to remove from the custom house a lot of instruments sent over by J. H. Stewart, of London, for rille competition, and pay all charges against them. The committee having in charge the enter tainment at the Academy of Music, to defray the expenses of the American team in Ireland, reported that the receipts up to this time amounted to a total of \$4,305.50. The prize medals for the Fall meeting were ordered, and also badges for the life members. Col. Richard Voorbis and Judge M. P. Stanton were elected directors in the place of Shuler and Gen. Woodward, who, by a law passed last year, become ex-officio directors.

The Executive Committee of the Joint Committee of the National Rifle Club, baving in charge the arrangements for the international mutch, met on Thursday, with Major Fulton in the chair. Gen. Shaler, as chairman of the Range Committee, submitted the official report on the American team, the names announced being Major Henry Fulton, Col. John Bodine, Col. H. A. Gildersleeve, Gen. T. S. ton, Col. John Bodine, Col. H. A. Gildersleeve, Gen. T. S. Dakin, G. W. Yale, L. L. Hepburn, R. C. Coleman, A. V. Canfield, Jr., and H. S. Jewell. It was suggested that Capt. L. C. Bruee be added to the reserves in case Mr. Hepburn could not go to Ireland. The chairman said that Mr. Hepburn would not accompany the team on their voyage unless his presence should be deemed essentially necessary to the success of the Americans. Gen. McMahon sary to the success of the Americans. Gen. McMahon thought that Gen. Hawley, who was prevented by sickness from taking part in the competition, should be allowed to finish his scores on a day to be named by the committee. Col. Gildersleeve thought this a dangerous precedent; the committee might be accused of not adhering to established

rules, and the public might misconstructhelr motive. Mr.

rules, and the public might misconstructheir motive. Mr. Collins supported the views of Gen. McMahan, and cited the case of Col. Bodine last year as one in point. After much discussion the following premule and resolution, offered by Gen. Shuler, were adopted:—

11/hereas, The four competitions recently had for positions on The Team or 1875
gives to Messrs. Fulion, Bedine, Gibliersleeve, Dakin, Yalv, Hupbarn, Coleman, Camfield, Jewell positions on the learn in the order named; and whereas, certain competiors were not able, by means of elekness, to complete their scores, and it hard the highest importance that the mast competent men should be secured for the international match; therefore, Resolved. That all competions who wave provenied by reason of sickness, inon competing their scores be remitted to be a within ten days from this lade, under the hilderen of this committee, and that the three gentlemen above unused shall constitute the Ican of 1853, subject only to such changes in its personnel as may be effected by the operation of the resolution.

The following resolution, was then any assent.

The following resolution was then passed:

Resolved. That the three next highest compellions on the list by re-tered to practice with the team, in order that they may be prepared to I any vacanties that may be easily a occur.

A CHALLENGE FROM ULSTER.

Colonel Gildersleeve read the following letter from Mr John McKenna, Honorary Sucretary of the Ulster Rifle

No. 1 York Striket, Bellear, April 15, 1875

No. 1 York Striket, Bellear, April 15, 1875

My Dear Sin: At a recent meeting of war resociation it mas immissionally resolved that a cortial invitation to visit the final be sent to the American team of rithemen, with a challenge to shoul a match on any day, from the 5th to the 9th of July, Inclusive, Illia may be most convenient for them, at Earl Dufforla's seat, Clandshoye.

Conditions—Two sighting and differen scoring shols each, at 800, 900, and 1,000 yards. Any title; any position. Thisgets and scores, Whiobledon, 1874. Teams of six or sight a sule, as you may select.

I shall feel pleasure in bring the medlum of conveying the foregoing challenge and invitation, which I hinge you will know us by necepting. And I assure you that your visit will be hidded with the gremest delight by each individual member of our club, as well as by the outtre community, and notiting shall be wanting to render your brief stay among ne as agreeable and pleasung as can be.

It is, perhaps, propor to mention that we are all the more anxions to have the pleasure of meeting you here, humanich as by the conditions for selection of the Dublin team mmy of our litel-closes shots are prevented from participating in the match, simply, by reason of thor using the "McGrodt," or diffs other than "Righy's," Again expressing the hope that we may have the gratilication of meeting our American bristher ritemy in friendly competition in the bemultin henceane of the Governor General of Cinnals, I have the known to romain, my lear sit, yours very sincerely.

Jord McKenna, Honorary Secretary V. R. C. Colonel Glidderieleve, Honorary Secretary N. R. A., Mew York.

The Chairman was instructed to notify the different mem-

The chairman was instructed to notify the different members of the team of 1875 of their being cutitled to places on it in the order of the merit already indicated above. The committee then adjourned.

The Joint Committee of the N. R. A. au d A. R. C. held a meeting on the same day to receive the report of the Sub Committee on the selection of a team. The following letter from Maj. Leech to Col. Wingate was read.—
Monuson's Horst, Dunian, April 18th, 1875.

letter from Maj. Lecch to Col. Wingate was read.—

Moraison's Horai, Dirain, April 18th, 1875.

My Dear Colonel:—

Two days ago I had the pleasure of receiving your better of the 2d lost, and as you so wish it of course I will not have other teams to shoot with us on 20th of June; and I confees that your decision in this respect is must agreeable to one, as it naturally rehances still more the value of the compilment you are so good as to pay in, insuced, line to the letter and one international match here according to the terms of the programme which you hereofore sent me and dated 8th of Murch, and which I now beg to send to you enclosed, signed by me. In this under I also allogively view in selecting the programme in use in 1873. In fact, the match will be shot unifer the Wimbledon rules of 1873, as It was ni Greedmant in September last.

Wimbledon,—I will go to Lombin (D. V.) next week and I will see all about the camping ground for us and write to you fully shortly. The whole world here is talking of the match. I riber you to the annual episode in the House of Commons on the subject. * * * "All hands' here desire warm remembrance to our friends over the water. By the way, I want to nek you a question. Your remonstory oung Waterhouse, who was with as in America? It is very hard upon bim late he is not eligible to shoot in our Irish Team. He was horn here and his futner has lived here for lorly years, but he is achially the father; an Englishman. Young Waterhouse is quite a new shot, baying taken to long range allooding only has year, and he intends to compose to ra place in the Irish Team to shoot with the Americans on the 20th of June; hall can only permit him to do so (provided his whas a place) in He terms of your on objecting to him. Was any you? Kind regards to Mr.

Ever yours; very shoeredy.

After disenssion it was decided that, with regard to Mr.

After discussion it was decided that, with regard to Mr. Waterhouse, the rules of the mutch should be albered to, and he was declared incligible to shoot in the mutch. was also resolved that no challenges emunating from any other than a national source should be considered while the team were abroad. Mr. Johnston thought that energetic measures should be taken to raise funds to defray the expenses of the team.

The treasurer read his progressive report, from which it appeared that \$3,036 were the net proceeds of the late am-ateur entertainment at the Academy of Music, and there is a general subscription list of \$2,677. This makes the aggregate sum of \$6,313, of which \$4,000 are already paid in. An additional \$4,000 would still be necessary to defray the expenses of the contemplated voyage.

-On Friday the American team hold a meeting at the rooms of the National Rifle Association. There were present Col. Bodine, Gen. Dakin, Col. Gildersleeve, Mr. Yule, Major Fulton, Messrs. Jewell, Canfield and Coleman. Major Fulton took the chair and Mr. Coleman officiated as Secretary. Col. Bodine moved that Col. 11. A. Gildersleeve be elected Capt, of the American National Rifle Team of 1873, which motion was carried unanimously, as was also another proposed by the Chairman to the effect that the services of a secretary were unnecessary. It was also agreed that the Captain of the team be authorized to make such contracts as in his judgment might be necessary in securing servants or any other conveniences and comforts requisite for the passage to and from Ireland and the sojourn there. Also that Mondays, Wednesdays and Saturdays shall be the regular days of practice at Creedmoor until the embarkation.

-The rules adopted for the selection of the Irish team are substantially as follows: Seven days are appointed for public competition, to be held simultaneously at Dublin, Belfast and London. Each competition to consist of fifteen shots at 800, 900 and 1,000 yards; no sighting shots or previous shooting the same day allowed. Each competitor to shoot on any four of the competing days and un more. The nine best aggregate scores to be primarily se lected for the team and extra men. If, at the conclusion of the competitions, the Captain thinks it desirable, he can

call upon any of the nine best secres to enter into further competition with any of the excluded competitions; pravided the majority of those selected concur in the Captain's views, whose vote shall count two. The rifles used mus be of Irish make.

THE INTERNATIONAL RIFLE MATCH.

THE INTERNATIONAL RIFLE MATCH.

New York, April 7th, 1875.

Reitor Forest and Stheam:—

With all due regard for the lenerity that should proofed an ordinary mortal to even hid to an editor that he (the editor) does not know what he is writing about, I venture to assert that you, sir, were included in the process and Stream of May fill under the caption of "An Pright Member." In this article you call in task Mr. A. M. Softwan, M. P. for Louth, Irchard, in regard to his recent motion in Parlimient on the coming vitte match, and you think "his measy utilit is rured either with fears of a Peculan limiting, or that the Americans may be arrested for high trouson," and finally roughlide by assuring him "that no surrepliftons ride will crock im Dollymount." Now, sir, as Itake it, and I can assure you I not not no position for know, Mr. Suffivan's molive in moving his resulting may be of any the attraction of the world to the correlve legislathic of the English in Trebuid, and to make the vist of the American Tenn on opportunity for shaming the Government onlo granting something like railound legislation for thin unfortunate country. As you of doubt well know, the country is intally disarmed, and kept so by the most rigorus and galling lines. Before Mr. Suffivan succeeded in fireing the Government to make the answer to his toolion that they did there was not one of the American Team, or any one else, that could vestime into Irranda with as much us a percussion cap, much less a rifle, in his possession without midding himself libble to be thrown in jult by the first policeman that took the notion to search him. These laws are selff, in force, and, not withstamiling the answer of the American Team will be allowed in shoot for Februal in June next; fur, according to the letter of the law, may muc of them could be arrested, imprisoned, and sent to pound servinale for having arms in the "prochaimed districts". You can bear not mit as to the truth of what I say; and that it is no exaggeration. The police can enter the houses

an old woman who kept a traveling gallery for pistol practice with a toy gun.—En.] It is also on record to a Relfast court that a mankey was seized for fiding a pop gun, and the "infernal muchine" confi-caled, offile the monkey and his masses were exided from the town.—Can any one, therefore, blame Mr. Sullivan for his motion when such laws uxist?—In regard to Mr. Webb's meeting I table you also naistake. His object in calling it was not "to protest against the match, or shooting of any kind whatever," but evant it really was can be seen from the following electure, which I understand was posted all over Dublin precious 100 the meeting.—

ing ettentar, which i thick stand this ported all over Dhoun precious have the meeting.—

"Fellow-Citiens: A body of self-constituted representatives have challenged the great Annorlean antisot, in the name of Ireland, to a shoot ing outsite—a proceeding which tools not pass impressioned by the neople of this coefficed country.

America selects her shootins from millions of practicel ridement retund, deathed the right to have and learn the nec of arms, can noty elect from a few favored people win hold police licenses.

Let us append to the American people not to indepse the Indistrict deviced in this transaction. The friet in distanced. It should be become sistent with the dignify of the American ridement to shoot in a covered control with the dignify of the American ridement to shoot in a covered so shoot against mee celling itemselves othat they are not—representatives of the brish people at large."

The protest, therefore, was not against the nearch itself, but against alting it an "internalional match." This is what the Dublin Nation and of the meeting—

It is really too bad that a little party of gentlemen who are, by favor the palice, allowed to have rides in their noscession, should consider the palice, allowed to have rides in their noscession, should consider the palice champlons of Ireland In the art of ride should not an in a man of Ireland, go challenging contests with the proples of free names who have all their lives been accustomed to the use of directions. American riflemen who are shortly to vi-1(on shores are blametess it is matter, and no sort of defines to them is shortly in it is right directs and the story of officies to them it is shortly in the free apact should be put on this so called 'Internous' match, and the meeting of Friday next has been called for that nose.

purpose."
Such are the facts, and it is but just that our people here should know that the rifle clubs of trebuils they are only three or four in nombers—are merely made up of a few gentlemen who are permitted by the magistrates to have arms in their possession. Now, sir, apologizing for so lengthy an intrusing on your valuable space, and with success thanks for your klodness in giving me a hearing. I close, signing myself a well-wisher to Forcest and Stream, and an

As a matter of courtesy, and without desire to enter into any argument regarding the merits of the question involved, we give place to the foregoing letter. We fancy, however, that our correspondent has given the key note to his complaint in his acknowledgement that Mr. Sullivan's object in introducing into Parliament the question of the visit of the American ritlemen, was to draw attention to correive legislation in Ireland, and, if possible, to shame the Government into grunting changes that will be more satisfac tory to certain classes of the people.

With the question of politics we have nothing to do. Our columns are dovoted to subjects other than those which come more properly within the scope of journals with confessed predelictions. But now that Mr. Sullivan's object has been declared, we may be permitted to question the good laste which would turn into an instrument for political effect the visit of a party of our citizons rear solling to good laste which would turn into an instrument for political effect the visit of a party of our citizens, responding to an invitation extended by gentlemen who are supposed to be representative men in their own country. The agitation of such a subject at such a time, while it might be the cause such a subject at such a time, while it might be the cause of destroying the pleasure anticipated by our riflemen from their visit, could do no possible good to the ngitutors or the cause they may have at heart. We had supposed that Irishmen were more united in sentiment, and that the visit of our Team would have been acceptable to all classes of the people. Surely they have almost a right to expect courtesy, as the representatives of a country from which Ireland and its people, be their condition high or low, have never experienced anything but hospitality and cordial

Onr personal relations to the Irish Team of last year are such as to make us extremely sensitive to anothing that looks like a questioning of motives, or that may jeopardize the reciprocal harmony that has hitherto made our laternational intercourse pleasant. We regret that the subject should be in any way agitated through our columns; but respect for the source from which the letter cummates compels us to joiblish it.

PUNDS FOR THE AMERICAN TEAM.—We notice a statement in a morning paper to the effect that many are watching eagerly to see what the team will consist of before giving it their personal or peenniary support, and further, that should Gen. Hawley, who has been debarred by sickness from participating in the latter competitions, be awarded a place, a goodly sum is promised from Connectient. While desiring most carnestly to see Gen. Hawley on the leam, believing him to be equal as a marksman to any member, new or old, thereof, we must say that this looks very much like bidding for a place. And in this connection we should like to suggest to the finance com mittee, or those having the matter in hand, that they make puldic a statement of the sums received. If the Academy henceft realized over \$1,000, the private subscriptions must have brought the aggregate to a very considerable sum.

As the passages of the team to and from Ireland are given to the m, and they are to be the guests of the civic anthorities of Dublin while there, why a sum of money sufficient to maintain a regimeent in the field for a year should be required we are at a loss to ineigine. Give us a statement of the receipts and possible expenditures, gentlemen, and then if there is the least possibility of a deficit continue the begging and the duents will be forthcoming.

-Those gentlemen who have been desirons of serving their country and the American team as secretary, to say nothing of undertaking the ardnons journey across the Atlantic, will be disappointed at the action of the team in resolving to dispense with the services of such an attaché.

-Mr. Wilson McDonahl, the winner of the Righy Pic in the late short range tournament at Conlin's gallery, in addition to being a first class rifle short is also a sculptor of distinction. On Friday last Mr. McDonald lectured at Steinway Hall on "The Art and Artists of Ancient Egypt." lecture, which was illustrated by numerons sterescopic views, was at once entertaining and instructive. Mr. J. S. Conlin is about having an appropriate budge made, to be shot for by those gentlemen who have made the best target and for by hose gentlemen who have made the best target in his gullery. The trophy is to be known as the Short Range Champion Badge and anothe be won three times before becoming the property of the holder. The rules as to off hand shooting, that is, the body clear of everything, will be strictly observed.

-The superintendent of the Creedimoor range bas been instructed to have all the targets there painted and divided according to the recent changes in rules of shooting at Wimbledon, excepting the number of first class targets that may be required for the practice of the International team

-The National Rifle Association have issued their annual report for 1874. In addition to a large mass of information interesting and valuable to rillemen, it contains the report of the shooting during the international match, and dia-

of the shooting thring the international match, and diagrams of all the targets made.

Saratoga Rifle Cluit.—This association has completed its organization by electing the following officers: President, Jerume Pitney; Vice President, J. F. Fhirlay; Secretary, Odell Yates; Treasurer, A. F. Mitchell; Captain, A. W. Hays; Fish Shooting Master, W. F. Benson; Second Shooting Master, George C. Selfridge. It already comprises a membership of about forty. In response to our suggestion, they intend to invite the collegians to use their range, and we have no doubt that the colleges will take range, and we have no doubt that the colleges will take advantage of the apportunity thus offered. there is a movement on foot to have a match between a team from their chib and a team from the American Rifle Association, the contest to take place during the coming

Holyoke, Mass., does not intend to be behind the age. A rifle club has been organized and commenced practice at a 200 yards range. They have adopted the new Wimble

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

-Snipe and plover are the only game hirds to be seen in market, if we except a few bunches of yellow legs that accompanied them from the West. They retail at \$3, per

-- We received a visit on Tuesday last from Captain Rogardus, who informed us that the sulpe shooting at the West has been excellent. Mr. Bradford of this city was his compunion for a few days, and between them they bagged 489 snipe and plover

Paine Bogardus match at 100 pigeons each, 30 yards rise from five traps, will be shot on Saturday next at Prospect Purk. A peculiar feature of the match is that it is to be restricted to guns of twelve guage.

-W. A. Newell, Esq., President of the California Accelimating Society, writes us that pinnated grouse were exposed for sate in the San Francisco market on the 29th of April. They were shipped from the Western States. Our correspondent complains of the inadequacy of the game hows in that State, and of their inefficiency.

POSTPONEMENT. - The Executive Committee of the Ken-Incky State Sportsmen's Association autonoces that owing to the dates of their proposed meeting conflicting with that of the flates of their proposed meeting conflicting with that of the Louisville Race meeting, they have decided to postpone it for two weeks, or until June 1st, 2d and 3d.

The Field Gun Trial.—This important event was to have commenced at Wimbledon on the 26th ult., but we

are as yet without any information regarding its progress. A week was probably occupied with it. Among the list of A week was probably occuping with it. Among the list of names of 'ginninkers who have entered gins, we notice Messrs. Pope, Richards, Higby, Greener, Reilly, Telly, Dougall and Holly. The entries comprise the names of thirty-seven makers, and the whole number of gins to be tested amounts to one bundred and lifty light. Messrs. W. & C. Scott & Sons are conspicuous by their absence, but we have already explained that as large manufactores of and not dewers in guns, they have decided in the interest of dealers whicare their customers, not to compete.

-A silver cap is to be given in Eugland to the inventor of close bored guns who shall produce the best evidence of his claim to priority. As some half dozen claim it, the contest is likely to be warm. Just now it partakes somewhat of the nature of a free fight, and may one may take a hand in. The "American claimant" will probably be there,

-We have received from the White Manufacturing Company, of Bridgeport, Ct., a specimen of the powerful reflector which is advertised in our columns as "Bondren's Jack Lamp." The designation is not altogether appropriate, as jucking is only one of the many purposes for which it can be used, this being especially adapted for stuble and earriage use, camp use, lighting pienic grounds, etc. It throws a strong light 200 feet, and of course is much more serviceable for floating elect than a hark torch or fire pm. While we do not advocate this mode of lumbing, we believe that there is none other so exciting, or none that brings into pluy so many of the attributes that make up a prings into play so many of the attributes—that make up a good lighter—nerve, conrage, faith, self-possession, quickness, eyesight, skill in publifing, accuracy of aim, knowledge of wondcraft, and the habits of deer, and often the power of physical endurance. The chief objection to the employment of the jack is that the season of the year when it is most used is when the does are snekling their fawns, Deer, however, resort to the water courses as late as September to some extent, when the fawns are well grown and able to take care of themselves, and in that month we be-lieve that no exception can be taken to the use of the

-Wild pigeons are said to be abundant in and about

Chichester's Bottom, near Fairfax Courthouse, Virginia.

—At a meeting of sportsmen held on Friday last at the office of the Dansville Express, in Livingston county, New "The Dansville Sportsmen's Association" organized, with some fifteen members and the following of Hyland: Secretary and Treasurer, F. J. Robbins.

By courtesy of the Eric Railway officials we were permitted to inquire at sundry points along their line for that big pigeon roost, said to be near Corning last week, and found the accounts very conflicting. As a rule, the birds left just as the telegrans arrived.

found the accounts very commercing left just as the telegrams arrived.

Wisconsin—Montello, May 4th, 1875.—Ducks still continue plenty at Buffalo Lake, and are nesting in considerable numbers in the adjacent marshes. Scanp ducks are by far the most plenty, and a bag of thirty might easily be shot in a day by one sportsman. Mallards and tral are nesting, and are consequently not disturbed, especially as the law protects them until September 1st. Suite have brean scarce as compared with former seasons, and lat few have keen bagged. They are generally plenty in the Fall season, and rare sport may be had at Puckaway marsh in Autumn snipe shooting. For a rarity about a scare or more of wild geese are nesting at Puckaway mursh, a thing unusual in this locality, though common further north.

"Fred."

SNIPE SHOOTING OVER.

MORRIS COUNTY, N. J., May 8d, 1875.

Mornis County, N. J., May 3d, 1875.

Entror Forest and Stheam:

The 30th of April flushed the sulpe shooling for this year. Now they may poke their long bills into the mail and marshes and gobble up the worms at liker delener. How teappy they must be if they are oware of the fact, and the good book says. "A lid of the air shall carry the matter," welch makes one conjectire and ask chy the editic carry the part is bit of good ones one to another? The last few days of April overe exciting to sportsmen, and our othercise quite home was full of guests and pleusant confusion, which was delightful after our aconotion ones Winter. You are at acare that April and solipe skonting ecre fluished on Friday. Well, on the Tursday evening before we were all plauding for "an early term in," as the country people say, and brother flurry, do be the sportsman of the family, had refered that he night be in vigorous frim on the norrow, when there was a fund rup upon like outer door. We flew to answer the cull, and admitted two of our expected gumers. Harry was soon down shirts again, and the current limiter and her assistant harried to prepare a supper for the gentleness, cho were ready to do instice to good country fire after their long ride. Early the following morning came four more, which made the party complete. The day was pheasant, the suipe plenty, and the company morry and ready to find pleusure if out birds. The dogs were no really for the spirit as field masters of out birds. The dogs were no really for the spirit as field masters of out birds. The dogs were no really for the spirit as field masters of out birds. The dogs were no really for the spirit as field masters of out birds. The dogs were no really for the spirit as field masters of the flury. Bach carried a string of sulpe, and two in the number playfully bore between them a large bail-licaded eagle. Both had shirt at it, and each claimed the honor of killing the notes of its death might spread through the violage. This object can necessof the death might spread EDITOR FOREST AND STHEAM:-

YACHTING NOTES FROM THE HUB.

South Boston, May 5th, 1815.

Entron Funest and Stream:—

The culd weather of last munth interfered somewhat with yachitug affairs at the Point, but there are a fair number of yachis at their moorlings, and the flerit is rapidly increasing. Bither's yard is nearly empty, the Kitty, Whitewing, and a few smaller hoats being all that are not yet launched. Empt. Pictinglif's new boat is all ready for the water, though she has not yet received her sail. But few of the boats on Pierre's what have been put aff as yet, quite a number of them being for sale, so that their owners are in no harry to launch them. The sloop built by Messas. Pierce for Capt. Peabody is in the water. She is a very handsome boul, and looks as though she would prive unite fast. The Nettle, built by Lawley and owned by Capt Kifey, was humbed some days ago. She suits quite well. The Posy is being ultered to a sharp rig, which, it is hoped, will have she her speed. The Wanderer has been put in dost class order for melag, and the Pannie has been ecruped and pointed, and will probably be alloud in less than a week. By the except the season willlhave fairly commenced. Yours, etc.,

READY ABOUT.

—Messrs. Higgins and Gilford of Gloucester, who have already more than a local reputation as yacht builders, have on the ways a pleasure craft for Mr. Lewis II. Merchant, that promises to be a clipper. All her appurtenances are first class and her medel extremely graceful.

—Shelter Island promises to be well patronized this Summer. The Boston Yacht Club have purchased a portion of the island and are erecting a fine club house. We hear of a number of New York families who will make their Summer sujourn there.

—General Townsend's the adventors and the internal contents.

—General Townsend's line sloop Annie is filting out at the Sayville hasin under the direction of Capt. Davis. The Annie is having a new mast und other alterations. Gen. Townsend undes Fire Island his headquarters, and eruises in "blue water" as well as in the more sheltered bay.

Annie is having a new mast und other altentions. Gen. Townseml makes Fire Island his headquarters, and eruises in "blue water" as well as in the more sheltered bay.

THE FINA.—The anticipations formed regarding the visit of Mr. Baucher's celebrated entier, are not likely to he realized. The Ficht may states that Mr. B. has no intention of visiting this country, at least with the Fiour.

Renattas on the Delammar.—The regatta of the Delaware River yucht club, of Philadelphia, was held Monday, May 10th, their boats sailing from the West Jersey railrond wharf, Canmlen, around the Chester buoy and return. There were seven entries: Selby, Juhn Rutter, captain, Alelphia, James Wheeler, captain; Sappho, William Middelon, captain; Slaven, Jumes Collins, captain; Pushion, William Ibarper, captain; Burclay, Frank Kelley, captain; Orion, John Ibarper, captain; These boats are from 23 to 26 feet long.

The start was made at 10:30, with a heavy westerly wind, which freshened into a young gale by the time the boats gut off the mouth of the Schuylkill. The Adelphia and Baralay are both new boats. At the booy the Adelphia was first, and in all probability the Slaven would have been second if she had not had the misfortine to get boltom upwards after passing the Block Hause. Soon after the Bailey carried away her guff band, and was out of the race. The Adelphia came in first at 3:03, winning the champion flag. The Selby took the second prize, a silver pitcher, and the Fashion the Ibried, a cup.

THE CAMPEN (N. J.) YACHT CLUB held their regalta the same date and over the same course, starting at teu A. M. There were three entries of twenty feet ynchis, the George W. Howard, T. Brillin, captain; John P. Felden, William Llewellyn, captain; und J. C. Dubman, William Weaver, enptain. The Howard upset on her way to the slarling point, and the race was sailed by the other two, the Dubman withing the champion thag, and the Felden taking the second prize, a handsome goobet.

1 made a mistake in saying last week that the Philadelphia yach

143 lbs.; A. S. Roberts, Jr., bow, 130 lbs. Time, 10m. 23s.

National course, one and a half miles straightaway. Wm. R. Tucker, umpive; B. M. Ewiug, judge.

Stiff southwest wind, and water lumpy at the start, but not seriously interfering with shell rowing. The Ataluatus got away perlmps half a length in advance, and for a little over half a mile there was no change in the relative position of the two boals, both pulling at thirty-nine. Off Laurel Hill the extranoridupois—nore than twenty pounds per man—began to tell on the Whisper, which went to the front and stayed there. Off Strawberry Mansion the little fellows broke up badly, pulling with, No. 2 smashing his outrigger; but settling down again at thirty-eight to the minute they made a placky chase of it, coming in some seven lengths too late to win. This club has been very active since the season opened, and should by all means put in a four, and, well, a pair, in the June regatta. Having split their eight into two fours, couldn't they make a couple of pairs out of their fours, and have another club race?

Sculls.

—The Toronto rowing club at its anunal meeting, May 3t, showed 13D members. The following officers were chosen: President, Angus Morrison, 1st Vice President, J. Shivers Birchall; 2d Vice President, Robert W. Elliott;

Secretary and Treasurer, W. M. Davidson; Committee, James R. Hay, Massey Geilds, John MacNab, J. H. Beaty, A. M. Smith, C. Callighen, G. P. Sheaes, W. Arthurs, Sannel Beatty, A. D. Shniv. Arrangements for a grand regults and the annual dinner were made.

The Colleges.

Collumbia College Ataletic Sports —The Columbia College Association held its meeting on Saturday last on the granuls of the New York Athletic Chib at Matt Havin. The weather was interest was been in the proceedings and the inveiling was a succes. The games opened with the ane milu walk, which was won in gaml style by C. W. Francis, '77, in 9m. 18. In throwing the base ball E. A. Wetmore, S. of M. '75, was victorious, bis throw, with the wind, being 300 feet 4 inches. Fallowing this 1hr 100 yards spin brought four starters to the post; Silas C. Rool, '75 was successful in 113 s. A hurdle mee over eight hurdles, turdive yards apart, was won by C. L. Limdley, S. of M. '77 in 18 s. Six candidates faced the starter for the one mile race, J. F. Renwick, '76 being the winner in 5m. 17. Jus. W. Prvor, '78, won the running high jump, clearing 41t. 11 in. The 100 yard's three legged race fell to Cornell, S. of M. '77, and Van Buskerck, same class; time, 13\frac{1}{2}\structure started for the three mile walk, W. W. Bliven, '78, winning in 30 m. 15\frac{1}{2}\structure 6. M. Hammond, '78, won the half mile spin in 2 m. 18\frac{1}{2}\structure 6. M. Hammond, '78, won the half mile spin in 2 m. 18\frac{1}{2}\structure 6. M. Hammond, '78, won the strunger's handienp 100 yards race; Jevett won, his hest heat being 11\frac{1}{2}\structure score-quarter of a mile, was a match between Walker, '78, and Robbe, '77, the former winning in 1 m. 2s.

BROOKETN, May 10th, 1875.

EDITHE FOREST AND STREAM:—

The Spring meeting of the Athletic Association of Stevens' College, Hoboken, is to take place on Saturday next, May 16th, at their grounds, foot of Ninth street, (grounds formerly S1. George cricket grunnl.) The games will consist of running and walking ruces, standing and running high jumps; also long jump, putting the stone, and throwing the base ball, etc. I will let you know the results.

C. P. W.

Rational Pastimes.

Opening of the Chicket Season.—A well played match between the Germantown and Young America clubs upon the Germantown ground on Saturday, 8th instaut, opened the cricket season of 1875. The ground was rather soft, and the wind against the bowlers, but, notwithstanding, the play was good for the first match of a season, the bowling of Caldwell and Dan Newhall notably so. The match was played upon the "average system," the game, if not concluded, to be decided in favor of the side averaging the most runs per wicket. This arrangement will be adopted by the Philudelphia clubs, and will greatly add to the interest of one day matches, where it is almost impossible to get more than well into the second inning before game must be called. The Young Americas went first to the bat, and, assisted by some loose fielding, ran up their score to 173 rnns when the tenth wicket fell. George Newball contributed 55, among which were twn four and four three hits. John Large, 40; H. Newhall, 27; and R. S. Newhall, 15. The Germantowns went in and made a round humbred, of which the great feature was the steady and careful batting of Tom Hargreaves, who added 34 to the score, when he offered the first chance, which was taken by Bob New-

hall. The 10 nf Brown, 12 of John Hargreaves, and 14 of Cablwell, all well enrued, completed the double figures. The Young Americas sent them in again, and when the game was called, six wickets down, they had abled 80 more to the hundred, 36 of which were to the credit of John Hargreaves, and 18 to "Jue." This gave the victory to the Young Americas, whose 173 runs to ten ivickets gave an average of over 17, while the Germantown's 189 to sixteen wickets made their average less than 42.

An interesting game between the Philadelphia and Germantown clubs will be played next Saturday. Security.

The Professional Arena.—The professional compaign for 1875 is now in full operation, and thus far the three brading confessants in theorem are the Bustons, (champinus) Hartford, and Athletic clubs; three teams in the rice for the penuant which were placed in the front by shreed observers of the strength of the contesting nines for 1875 as early as March last. The record of the professional championship games as Is follows:—

-The New York Matuals, now on an Eastern trip, played their second championship game with the Boston club on the latter's grounds Monday afternoon, May 10th, when the Reds again wou.:—

Unipire, Mr. Hoilges.

Unipire, Mr. Holges.

The Amatrium Amera.—On May 5th the second game for the championship of South Jersey was played between the Creger und Theker claims of Cuanden, N. J., on this grounds of the former at Glancester, and after a very close and exciting contest was won by the Creger.

—The Bostous defeated the Live Oaks at Lynn, on May 6th, by a score of 12 to 2. Whitney, of the Live Oaks, made one of the best catchos ever seen on the Lynn grounds, and by a clever double play Beals and George Wright were put out. Record also fielded well, and King behind the hat was most excellent.

—The Harvards visited Lynn May 8th, and played the Live Oaks, and the latter polished them off in good style to the time of 8 to 7.

—On May 8th the Doerrs defeated the Rivertons, at Riv.

-On May 8th the Doerrs defeated the Rivertons, at Riverton, by the good score of 8 to 6.

On May 7th the Bostons defeated the Harvard nine by 17 to 8, the collegians playing poorly.

On May 8th the Lafayette College nine played a field tenm, and won by 18 to 11.

—At Seton Hall, last week, the Alerts defeated the Euro-kas by 6 to 5, in a prettily played game.

-On May 4th the Memphis ulne played the Knoxvilles at Memphis, and won by the model score of 7 to 3.

J. D. DOUGALL'S EXPRESS SHOT GUNS.

CTile registered.)

CHOWN by Irials at Wimbledon by Editor to of the Fleid to possees the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets, average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pollets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is one own invention (though founded on the American iden) and is DURABLE, a fact remarked on by the Field, that the guns tried had heen in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

BEWARE OF WORTHLESS IMITATIONS

AND COUNTERFEITS!

ROWN'S ESSENCE OF

FREDERICK BROWN, PHILADELPHIA, PA

THIS RELIABLE PREPARATION, one of the oldest of American Pharmaceutical Products, still maintains its enviable reputation, and finds a steadily increasing sale without advertising, and in spite of piracy.

Its high reputation has tempted the cupidity of parties, whose only excuse for their unfair simulations, exists in the great popularity of the original, and accidental similarity of their names.

BROWN'S ESSENCE OF JAMAICA GINGER is protected by the private Proprietary Stamp of the manufacturer, which is incorporated with the steel plate label.

The attention of Druggists and the Trade generally, is called to the Price List of

ENCLISH & FRENCH MEDICINES & PHARMACEUTICAL PREPARATIONS,

Which will be malled on application.

FREDERICK BROWN,

(Established 1822) IMPORTING, MANUFACTURING & DISPENSING CHEMIST,

THALOF SCOTT& GREENER SAEW SYSTEM OF HOMAG, BY THE EDITOR OF "THE FIELD," LOADON,

"The Field, London.

(See The Field, January 20th, 1875.)

"From a comparison of the two lables it will be seen that with Walker's shot, Messas Scott's gans showed a marked supertraity over Mr. Greener's, both in average and in the highest scott made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

SIZE OF TARGET, 12 FEET WIBE BY 6 FEET HIGH.

DISTANCE, 800 YARDS. Score of FIFTEEN CONSECUTIVE SHOTS BY COL. JOHN BODINE, AT CREEDMOOR, IN THE "BENNETT MATCH," Oct. 3, 1874, with a

REMINGTON Breech Loading, Long Range Challenge RIFLE,

The Highest Score on Record,

Please take notice, this Target was made in an OFFICIAL MATCH, not at private Practice,

Extract from the "Army and Navy Journal" Official Report, Dated Oct 3, 1873.

"The match decides several disputed points, as near as they can be decided; first, that there is no perceptible difference in accuracy between breech loaders and muzzle loaders, but that if anything the former are the hest, as they are certainly the quickest; second, that in our clear climate we may look for even better shooting in the future; third, that

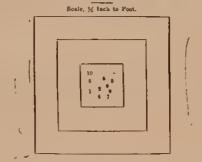

THE REMINGTON RIFLE Stands ahead of all others for Accuracy,
As it does in simplicity of mechanism, the remington rifles in the match scored thirteen points allead of the same number of muzzle loaders, and twenty two points allead of the sharp's breech loaders in the same team."
In the international much, six muzzle loaders, three remington, and three other breech loaders were used. Capt. Fulton, Co. Bodine and L. 1.. NS. nd Navy Journal, Oct. 3d, 1974. FULTON'S SCORE 171 OUT OF 180; HIGHEST SCORE EVER MADE,

Military Match Rifles Just Out; Price \$35 or \$55 with Vernier and Wind Gauge Sights also Pocket Vernier Gauges Price \$2.50.

HAVANA LOTTERY. IMPORTANT NOTICE.

OF

THIPORTANT NOTICE.

For the coming drawings, commencing January 5th, we have reduced the prices of tickets as follows:

Whole, \$20; \frac{1}{2}, \$10; \frac{1}{4}, \$5; 1-5, \$4; 1-10, \$2; 1-20 \$1.

Drawings take place every seventeen Bays.

We are prepared to fill all orders. Circulars sent upon application. Highest price paid for Spanish Bank bills, Governments, & TAYLOR & CO., Bankers,

P. O. Box 4,448.

Fishing Tackle,

Rods, Reels, Lines, Artificial Files, Nets, Baits, Flsh Hooks, &c.

Split Bamboo Fly Rods and Reels

OF THE FINEST WORKMANSHIP.
Tackle suitable for Maine, Adironduck, Canadiau, and other fishing.
ARTIFICIAL FLIES DRESSED TO ORDER.
BREECH AND MUZZLE LOADING GUNS,
And Sportemens' goods of all kinds.
Manufactured and Imported by

BARTON, ALEXANDER & WALLER,

101 & 103 DUANE ST., (near Broadway) New York,

MEAD'S PATENT SAFETY EXPLOSIVE BULLET,

METALLIC CARTRIDGES.

METABLE UNITED STATES AND MARKET AND STATES AND BEALERS, 300 Broadway, New York.

Send for Circular, describing effect on Grizzly Bears.

\$10 to \$1,000 Invested in Stocks and a month. Pamphlet free. Tumbridge & Co., Bankers. 2 Wall street, N. Y.

The Red Judians of Hewfound-

IN Cormack's "Narrative of a Journey Across New-foundland," which appeared lately in the columns of FOREST AND STREAM, the adventurous traveler, at page 49, gives us some account of the ahorigines of the island—a trihe of Red Indians now extinct. His reference is very brief, and embodies but a few facts regarding this race, which, by the steady advance of the white man, have been "improved off the face of all creation." I propose to embody in this paper a short summary of what is known regarding these red men of Terra Nova, by way of fur-

regarding these red men of Terra Nova, by way of furnishing a kind of supplement to Cormach's journey.

The aborigines of Newfoundland styled themselves Boeothics or Boeothucs. When the island was first discovered they appear, from the accounts of the early voyagers, to bave been a harmless, peaceable race. Schastian Cabot saw them "dressed in skins and painted with red ochre." "In war," he says, "they use bows and arrows, spears, darts, clubs, and slings." In Kerr's "Travels," vol. VI., pages 3-10, we find the following record: "In the fontteenth year of the King (Henry VII.) three men were hrought from Newfoundland, who were clothed in the skins of beasts, did eat raw flesh, and spoke a language which no man could understand, their demeanor being more like that of brute beasts than men. They were kept more like that of brute beasts than men. They were kept by the King for some considerable time, and I saw two of them about two years afterward in the Palace of Westminster habited like Englishmen, and not to be distinguished from Englishmen, until I was told who they were." Jacques Cartier, in 1534, describes them as "men of indifferent good stature and bigness, but wild and unruly. They wear their hair tied on the top like a wreath of hay, and put a wooden pin in it, and with them they bind certain hirds' feathers; they are clothed with wild beasts' skins, as well the men as the women, but the women go somewhat straighter and closer in their garments than the

somewhat straighter and closer in their garments than the men do, with their waists girded. They paint themselves with certain roan colors. Their boats are made of the bark of birch trees, with which they fish and take great store of seals." (Haklnyt, vol III., page 252.

Hayes, who was second in command to Sir Humphrey Gilbert, about 1583, and whose narrative has been preserved in the Haklnyt collection, says of them: "These savages are altogether harmless." Capt. Richard Whitbonrne, in bis rare and interesting book on Newfoundland, 1622 gives a pretty full account of the ahorizines. He 1622, gives a pretty full account of the ahorigines. He tells us "as they are few in number so are they sometimes rude and savage people, baving neither knowledge of God nor living under any kind civil government. In their habits, customs, and manners they resemble Indians of the continent." He further describes them as "ingenious and tractable, full of quick and lively apprehensions," willing to assist the fishermen in curing fish for a small hire, and only troublesome from their proclivities to annex "sails, lines, hatchets, knives, and such like." From Whitbourne's account it may be inferred that they had a strong resemblance, in their habits and modes of life, to the Canadian Indians, as they constructed their canoes of the bark of birch trees, "paying" the seams with gum and turpentine. Their cooking utensils were made of the bark of the spruce tree, and were so well constructed as to hear the beat of holling water. They dressed the skins of deer, beavers, otters, bears, and scals in excellent style, and always possessed a large store of them, and of red ochre, with which they painted themselves and their cauces and utensils.

There is now in the possession of the Protestant Bishop

of Newfoundland the original manuscript of Cartwright's ''Remarks on the Situation of the Red Indians of Newfoundland, with Some Account of their Manner of Liv-It has never been printed, but it contains much valuable information regarding the ahorigines, and was composed for the purpose of enlisting the sympathies of the British Government on bebalf of the defenseless Indians,

who were treated by the whites in the most barbarous man ner. Cartwright corroborates Whitbourne as to the inof fensive character of the Indians, and as to the friendly in-tercourse which existed at first between them and some of the white population. It is clear, however, that these friendly relations did not long continue. The rudo fishermen, hunters, and trappers of those early days were not tbe men to initiate the savages into the arts of civilized life. Quarrels arose; the savages could not resist the temptation to appropriate occasionally the iron weapons of the white settlers, which to them seemed to be of priceless value. The strong arm of the latter was raised in venge ance, and for two hundred years the fend between them and the Indians continued. Deeds of wrong and cruelty were perpetrated by the invader, and were followed by vengeful retaliation on the part of the savages. But what were bows, arrows, and clubs against the muskets of the white man? The poor red men were hunted and shot down like beasts of prey. The entire race were gradually exter-minated, and now there is not a single representative of the red men of Newfoundland known to be in existence haunts in the interior of the island have been explored in the hope of discovering some remnants of the ill-used race but in vain. Only their graves and the moldering remains of their hats and deer fences have been found. Their fires another dark page in the history of the white man's progress in the New World. Some helieve that a small hand of them escaped and took refuge in the interior of Labrador, but of this there is really no evidence. It is quite certain that in Newfoundland not a single individual of the race now exists. They are gone
"Like the cloud rack of a tempest,
Like the withered leaves of Autumn."

Still, it should be noted that their extermination was not entirely owing to the crueltics of the white settlers. hundred and seventy-three years ago the Micmacs, an Iudian tribe from Nova Scotia and Cape Breton, invaded their territory. A savage war ensued, lasting many years, but the Micmacs, having learned the use of firearms from the French, had an immense advantage, and the Bocothics, after severe losses, retired into the interior, pressed by the Micmacs on the one hand, and the whites on the other. It is not wonderful that, hunted like heasts of prey, they should have manifested the most determined abhorrence of their white destroyers, and, unlike the continental Indians, refused at length to hold any intercourse with them. Their hatred and distrust of the whites are almost unparalleled elsewhere, and prompting them to deeds of treachery and blood, hastened their own destruction.

The British Government at length seems to have been aronsed by the accounts of atrocities perpetrated on this unhappy race in Newfoundland, and, when it was too late, made many humane but fruitless attempts to arrest the war of extermination against the doomed Bocothics, Owing to the scattered condition of the settlements, the rude and lawless habits of the early trappers and fishermen who came in contact with the Indians, their efforts were all in vain. The earliest official notice of the aborigines is in the form of a proclamation by the Governor, and bears date 1769, and seems to have been repeated on the accession of each new representative of royalty. This document sets forth that his Majesty had been informed that his subjects in Newfoundland "do treat the savages with the inhumunity, and frequently destroy them without the least provocation or remorse. In order, therefore, to put a stop to such inhuman harharity, and that the perpetrator of such atroclous crimes might be brought to due punishment, bis Majesty enjoins and requires all his subjects to live in amity and brotherly kindness with the native savages;" and further enjoined all magistrates to apprchead persons guilty of murdering the native Indians, and send them to England for trial.

Not content with such a mere negative measure of repressing the evil, the Government of the island engaged in zealons efforts to establish friendly relations with the Bocothics. A reward was offered for the capture of a Red Indian; and in 1804 a female was taken by a fisherman and

brought to St. John's, where she was kindly treated, and sent back with presents to her tribe; hut no result followed. In 1810 Lieut. Buchan, of the Royal Navy, was sent to the Exploits River with orders to Winter there and open communication with the Indiaus. He succeeded in fluding a party of them. Taking two of their number as hostages, and leaving two marines with them as hostages, he returned to his depot for presents. During his absence the fears of the red men were aroused lest he had gone for reinforcements in order to return and overpower them, and having first murdered the two bostages, they fled into the Interlor. In 1819 another female was taken by a party of trappers on Red Indian Lake and brought to St. John's. She was named Mary March, from the mouth in which she was takeu. She was treated with great kindness, and sent back with presents, but died on the yoyage. Her hody was placed in a coilln and left on the margin of a lake, where it was found by her people and by them conveyed to their burial place on Red Indian Lake, where it was found yoars afterward by the traveler Cormack, lying beside the body of her husband. Another female was taken at a later date, and was known by the Indian name of Shanandithit. She lived six years in St. John's, and died of consumption, the fatal disease of her tribe, as she stated, and the same that carried off Mary March. Thus all hopes of atoning by kindness for past cruelties were frustrated.

A final effort was made in 1827 by the "Bocothic Society for the Civilization of the Native Savages." This society organized an expedition and dispatched Mr. Cormack, the traveler, who crossed the island in 1822 with three Micmac Indians to discover the retreat of the red men. After a difficult and perilous journey the party reached Red Indian Lake, which had been for centuries the headquarters of the Bocothics. This fine lake presented to Cormack a view grand, solemn, and majestic as he descended the hills which bound its northern extremlty. An unbroken sheet of water met his view, stretching far heyond the limits of vision, and perfectly placid, with not a canoe to ruffle its surface. Eagerly the eyes of the traveler searched the shores for some vestiges of the mysterious race, but no smoke from hut or wigwam rose into the air; no sound indicative of the presence of man reached their ears. The stillness of death had settled down on a scene which once swarmed with busy life and had long witnessed the great war councils of a powerful tribe, and had seen their braves returning in triumph from the battle or the chase, and reechoed for generations with their was sougs and shouts of victory. Now all was silent and deserted. The wild Micmac ludians with Cormac, though belonging to a hostile tribe, sank down overcome with grief at the sad and solemn sight, and the enthusiastic leader, whose hopes of a suc-cessful issue to his journey were thus blighted, was no less saddened and disheartened.

For "several melancholy days" the party continued to traverse the shores of the lake, meeting everywhere evidences that this had long been the central domain of the Boeothics. They found along the margin of the lake whole villages of Summer and Winter wigwams all in rnins. They saw the beds dug in the earth round the fire-place and in the sides of the wigwams, and a wooden building for drying and smoking venison still perfect. At one spot they found a large and handsome canoe, twenty-two feet in length, rent by the violence of a storm, the people in it having probably perished, as it contained some people in it having probably perished, as it contained some of their valuables still undisturbed. Most interesting of all were the burying places. These were variously constructed, according to the rank of the person entomhed. One of them was shaped like a cottage, and was ten feet by eight and five feet high in the ridge, and was floored with squared poles, the roof covered with bark, and every part well secured against the weather and the attacks of wild beasts. Here it was that the remains of Mary March wild beasts. Here it was that the remains of Mary March were found in a coffin, neatly shrouded in white muslin, having been conveyed to the tribe many years before hy a long and painful Journey from the sea side, where it had heen left. Bows, arrows, hatchets, and other property of the dead were found deposited near the bodies. Another

way of disposing of the dead was the same as that of the Indians of the sources of the Misslssippi, the hody being wrapped in hirch bark and inclosed in a strong box made of square poles laid on each other horizontally. The most common mode of interment, however, was by placing the body in a wrapping of birch bark and coverting it with a pile of stones, or where the ground was soft, a grave was dug and no stones placed over it.

Cormack was psrticularly struck with the great extent of the Indian fences to entrap deer. These were constructed with infinite labor, to lead the deer in their periodical migrations into the narrow end of the lake, or into suitable places along the hanks of the river, where, on taking the water, they were easily pursued and killed with spears. Cormack observed these fences extending for forty miles along the Exploits River, which runs from the lake in a noble stream for seventy miles to the sea. Along the bank of the river the Indians felled the trees without chopping the trunks quite asunder, taking eare that they fell parallel with the river, and gunding every fresh-cut tree so as to coincide with and fall upon the last. The weak parts of the fence were filled up and strengthened with branehes and limits of other trees, and secured occasionally hy large atakes and bindings. They were raised to the height of six, eight, or ten feet, as the nature of the ground required. Evideutly it required a unmerous tribe to erect and minitain such fences. "It is inclancholy," says Cormack in his diary, "to contemplate the rude yet riganlic efforts of a whole primitive nation, in their anxiety to provide subsistence, forsaken and going to deeay." The deer are there in as great unmhers as ever, but the red men have vanished "like the snowflake on the river."

Such is the sad history of the Red Indians of Newfoundland. Does a remnant of the race yet survive in some sechnded valley of the nnexplored interior of the island or anid the rugged hills of Labrador? It may be so, but as yet nn trace of them

For Forest and Stream. SPORT IN MANITOBA.

SPORT IN MANITOBA.

I THINK that when full reports of the boundary line recently run along the 49th parallel by a joint British American Commission are published, the sporting resources of that dismal, uninhabited, but marvelous country, stretching away from the extreme coufines of Western civilization towards the Rocky Monntaius, will be more generally known. Having myself traveled over 700 miles of the line, and for two successive years over the first 200, I am prelly well acquainted with the country lying around, and feel qualified to offer a few remarks on its opportunities for sport. It is, like the country, a difficult subject to approach. Game, as regards quantity, there is in abundance, but it variety it is rather restricted. I will put buffato and large game out of the question at present, and treat of smaller game. During the Sunmer months—you may say from May till September—every river, lake, and swamp swarms with duck, teal, mallard, plover, and every description of water fowl. Geese there are also in myriads, but I cannot say that these ancient warders of the Capitol seem to have degenerated in wariness, and had better be left aloue be those who are not blessed with an excellent temper, unlimited patience, superinman energy, and a sublime indifference to wet extremities, caused by having to stand for hours perhaps up to the waist in water among the rectle, watching for a shot, after which, having dropped a hird, unless you have an excellent retriever, you will chance to lose him, as they have an unpleasant habit (shared with them my most water fowl) of diving and bolding on to the weeds at the bottom, thereby even in death causing bothing hat chagrin to the exhausted sportsman. The half breeds have a way of getting them to come within range by imitating their call, but i never could, and judging by the very few. I have seen shot in the two Summers I was out, I do mot think cheers were much unore successful. As to the ducks, take a day we had at Long River, 200 miles west of Part tiarry. Wagoos baal

acouple of days. M. and myself diarted out about the life human. We started from camp at Pemblina, a settlement on the Red River. The shooting is always best lement on the Red River. The shooting is always best lement on the Red River. The shooting is always best lement on the Red River. The shooting is always best lement on the Red River. The shooting is always best mer than the property of the Red River. The shooting is always best mer than the Red River we had gone 200 inlies west of Fort Garry. Our objective point was the ridge half way between Even the Na. A. R. Gurden River, and the Red River of the Na. A. R. Gurden River of the Red River of the Red River on the red working with and watching his mother with great early to the and intelligence; and may he Red River pony, in cliarge of a hulf breed called George. These earls are institutions in their way, and most admirably adapted for the country they traverse, hut not pretty to look at. Being made entirely of wood, a hulf breed can always mend any part on the shoot of the Red River of the R

Buffalo may be got hy penetrating so far west as to incur great risk from Indians, unless the party is strong and well armed and mounted. Antelopegive an opportunity for the display of considerable strategy on the part of their would be circumventor. Lying on the back with the heels in the

air, and firing between the legs, being one position that may be practiced with advantage previous to the pursuit of that too luquisitive animal.

NEVADA, ITS CLIMATE AND INDIANS.

NEVADA lies between 35° and 42° north lailtude. The at the setting of the sain a cool breeze sweeps through the valleys from the deep canyons of the mountains which are alled with snow during the whole Summer than the valley from the deep canyons of the mountains which are all the collections, which stretch from the south end of the Ruby Valley on the west to the north end of Clover the Ruby Valley on the west to the north end of Clover in the better days of Summer, that a good supply liable to come in June, and as early as a supply liable to come in June, and as early as the and carly frosts do but little damage. Early vegets-bles are grown, such as cabbage, turnips, onlons, cucambers, and even melons have been produced by using care. Toustoes and Indian coru do not flourish in this State, yet-early sweet corn is risked. All grain does well in the valleys. Potatoes grow flaurishingly. One cause for this is that irrigation can be allowed when the potatoes require most water, and when necessary it can be turned off. It is no labor to irrigate the soil, after plowing single furrows in the right distance a turn of the foot or stroke of the spade will check or turn the water wherever it is required growing country. I have not easy as yet in this part of the State, but as it is easy first white man settled in Clover Valley. This could be suffered with the state of the work of the spade will check or turn the water will determine. It is now but ten years since late George Bromfield, the owner of the State, but as it is easy for the state of the white state of the state o

men are better workers than the men; they do the washing for the inhabitants of the country, and other hard drudgery.

These indians are a smaller race of heings than the tribes of the Middle and Eastern States, and of much darker complexion; they are only a shade lighter than the negro. The women are generally heavier and more strongly built than the men. Their women do all their work, and carry their burdens when they move from place to place, which they do a number of times in a year. They never live more than a month or two in a place. They never live more than a month or two in a place. They now dress with the cast off elothing of the whites. The women wear blankets. Their wigwams or lodges they call "wake-e-nps," not much labor is experienced in the erection of these temporary lodges, they generally seek a juniper whose branches spread out; on the east side of this they make a circle of sage hrush two or three feet high, leaving an opening ou one side for an entrance. In the centre of this, they erect their fire place. Here they live and here they sleep under the shade of the juniper. This they do the year round, though there are a few of them who erect cauvas tents of enormous height for Winter. This is done hy making a circle of long poles with one end on the ground and fastened all

together at the top. Around this circle of poles they draw their canvas nearly to the top, leaving this opening for ventilation and for a chimney. In the centre of this they make a fire and at night the family lay around with their feet to the fire. They make robes of rabbit skins for covering at night, and to wear about their hodies in Winter. They have a great antipathy to the skin of the prairie wolf. They mostly keep horses, and some of them bave large droves. It costs nothing to keep them; they are of the mastang species, low compact and tough. They live in Winter by cropping the wild grass of the valleys, and like the cattle, come out in the Spring in good condition. The religious sentiment of these Indians is difficult to comprehend, if they have any settled sentiments; and so far as I have been able to investigate the subject, I cannot learn that any thing has been done by the whites to bring them under any civil, moral, or religious cultivation. Indeed so far as I can learn, the whites who live among them seem opposed to use any means for their mental or moral improvement; and such are the morals of the whites in general who come in contact with the Indians, that they are made no better by their example. The Indians are very tenacious in holding and to their ancient heather rights and customs, and ridicule everything of an opposite character. They have no form, or customs that a white man woull call religious; yet they have forms and customs, nome of which are doubtless designed to be of a religious character. They have one man in each tribe who is regarded as a doctor. He prescribes for the sick, and watches the symptoms of the diseases, or remedies adapted to their cure. When one is taken sick, the doctor, after anointing the patient, commences a low guitural lowl. If the patient gets well the hovel dies away and ceases. If the patient gots well the hovel dies away and ceases. If the patient gots well the hovel dies away and ceases. If the patient gots well the hovel dies away and the some and child

by slitting and eropping their ears. Whether this is done for an atouement for the dead or to ward off disease, I canuot say.

They have a custom of dancing which is kept up at certain sensons of the year without fail. They collect together by hondreds, male and female; the first thing after congregating is to prepare a large quantity of soup, made from rabbits, prairie hens and other birds, which are procured for the purpose. With this they mix all kinds of roots and herbs, of which they are accustomed to cut. This done, they fall to dancing; men and women each in separate rings. The men and women never dance together. An Indian would think it was letting himself down to dance with his squaw, and would be laughed at and ridiculed by the other ludians. They all join hands, and each and all commence to dance by uttering a low uncouth guttural grant. They now go round and round, keeping up this grunt which is all the music they have. They always dance by the light of a fire, old and young engaging in it. They keep this up for hours without stopping, until the more agel and infirm become weary and fall to the ground. The return of day only closes the sport. The day time is occupied in eating and sleeping. This dauce is kept up for five successive nights, when they disperse. The feature which is worthy of notice in these Indians is that they do not use intoxicating liquors. I have never seen one of them drank. They despise whiskey—yet they are the most jovial and volatile set of beings I ever saw.

SOUTHWEST FLORIDA-NO. 9.

BEING NOTES OF A TOUR OF EXPLORATION-BY OUR OWN

FAIR wind favoring us we left Little Gasparilla Pass at 7.30 A. M., and reached Little Gasparilla Pass at 7.30 A. M., and reached Little Gasparilla Pass at 7.30 A. M., and reached Little Gasparilla Pass at 7.30 A. M., and reached Little Gasparilla Pass at 7.30 A. M., and reached Little Gasparilla Pass at 7.30 A. M., and reached Little Gasparilla Pass at 7.30 A. M., and several objects moving on the beach. Examining them with our glass we discovered that the men were poling the hoat against a head wind, and that the females had landed on the beach, and were keeping pace with their lords. A peculiarity of the southwest coast is a calm ocean and little, if agy, surf, unless after a storm, enabling persons to land without inconvenience or danger. Having suited over many oceans and visited more than one coast line, we had formed an unfavorable opinion of shore lines and surf generally, but we returned to our northern home with changed opinions, as far as the southwest coast is concerned. Our first thirty-eight miles of sea navigation was nudertaken with some reluctance, but the return voyage was simply viewed in the light of a pleasure trip, and was found to be most enjoyable. If I undertake another cruise ou the coast it is more than probable that I shall take the outside route, and thereby escape the annoyance of oyster burs and mud tluts; as a matter of course, if the bosom of old mother ocean happened to be lumpy, with an uncomfortable amount of dust flying, I would take the inside route. The cutire coast from Cedar Keys to Charlotte Harrhor can be safely navigated in a 16 foot Whitchall skiff. As proof that our opinion is not hased upon a few miles of sea work or one day's experience outside of the islands, our voyaging at sea amounts to over 175 miles.

Entering Sarasota inlet and finding the wind favorable we kept on our course, and reached the neighborhood of Anna Maria Key, at the head of Sarasota Bay, at 10 P. M., where we anchored for the night. Starting early next morning, we reached Manutee at 9 A. M. A

reached Tampa early in the afternoon, and received a hearty welcome from many friends. Tampa is situated on the Hillibsboro River where it enters Tampa Bay, and is a pleas ant town of about five hundred inhabitants. Society is excellent, and the inhabitants kind and hospitable in the extreme. The climate is good, and an invalid who Is partial to quietness might spend a Winter there very pleasantly. The town contains several boarding houses, and from information gleaned from several parties I can recommend the house kept by D. Isaac Cruft. I visited the house, and found everything neat and clean. Mr. Craft's terms are \$60 per mouth for two persons in a room. During the Winter nonthis the climate is pleasant, and the health of the place unexceptionable. At this place I made the acquaintance of Dr. Wall, and found him genial and conteous in the extreme, and, as a medical man, we formed a favorable opinion of his attainments, and we can assure invalids that if they should visit the place that they will find practitioner of medicine. I am convinced that Tampa would be more frequently visited if invalids could but realize the climatic advantages of the sonthwest coast.

For the piscator Tampa does not present many inducements. A few miles up the river fair trout fishing can be obtained, and about the docks and in the channel passable sheepsheading will be found. By taking a row or sail boat and proceeding to the oyster bar, nien miles down the bay, superior sheepshead and drum fishing can be enjoyed. On the morning of our departure we were notified that a hunting und fishing party had been made up for our benefit; that it was the intention of the party to take a boat and outfit by a mule team to a point on the river forty miles above Tampa, and to fish the river and hunt the south bank on the return trip. To have carried out the programme from ten to fourteen days would have been required, and as mr time was limited, we found it impossible to accept the invitation so kindly extended. At this point I made the acquaint

ward being our motto we steered for Big Bayou, where we found a sate anchorage for the night.

But to the hiscuit business. I have reason to believe that my readers will conclude that the crew of the Spray had an attack of bisenits on the brain, but when it becomes necessary to keep the teeth going and the stuff of life cannot be obtained, the biscuit business becomes an important subject. We purchased our harrel of "fresh and first class pilot bread" from a firm whose names we shall not mention; for it is possible that the clerk may have made a mistake and delivered the wrong barrel. We opened the barrel, and the first thing that met our gaze were hundreds of well developed cockroaches. We carefully separated biscuits from roaches, the bread being consigned to our bread box and the roaches to the hriny deep. We made an attack upon the new hiscnit, but discovered that eating them was a difficult undertaking; for each biscuit contained unmerous slate-colored insects tasting like quinine. To cat such bread was impossible, so we were forced to full back on sweet potatoes and fish until we could reach Clear Water Harbor. To intending tourists or sportsuen we would say: lay in an ample supply of pilot bread before leaving New York or Savannah, and not trust to luck, as did "Al Fresco" and his companions. It is possible that a supply of edible biscuit may be obtained on the ceast an other year, but if we ever visit the region again we shall lay in a larger stock of bread than we did on the occasion of our last eruise.

Mullet Key, at the mouth of Tampa Bay, is a noted range for deer, and the still hunter will find it worth a

other year, but if we ever visit the region again we shall lay in a larger stock of bread than we did on the oceasion of our hast eruise.

Mullet Key, at the mouth of Tampa Bay, is a noted range for deer, and the still huuter will find it worth a visit. We were informed by a gentleman of the colored persuasion, who was in the habit of visiting the island, that rattlesnakes were plentiful and of a remarkable size; this statement we give as we received it, but would suggest to hunters the propriety of wearing leggings and looking out for "suakes in the grass" if they ever visit this island. Leaving Point Prunelles we steered a course for John's Pass, and landed on the island on the west side of the entrance, and in a few minutes eaptured a number of fine sheepshead. This locality is noted for its beautiful marine algre, and we deeply regretted the want of proper appliances to collect and preserve specimens. On the point of the island, at the north side of the entrance, we found a shallow lagoon containing fish water, a matter of interest to sportsmen and tourises. An examination of the end of the island showed the existence of deer tracks in every directiou. We hoisted sail and steered a course for the northern end of Tampa Bay, where we found the bay to diminish in width and assume the appearance of a river. On our left the shore of the sea island varied from six to ten feet high, and on our right or main hand slde mud and grassy flats were frequently passed, and theso were literally covered with ducks, snipe, and curlows. As we approached the head of Clear Water Harbor we found the passage to become very narrow and ultimately end in a shallow mudflut, where the Spray grounded. The tide was ebbing, so we deemed it best to apply a muscular breeze and reach the come very narrow and ultimately end in a shallow mudflut, where the Spray grounded. The tide was ebbing, so we deemed it best to apply a functual bast the none foot of water. Soon after reaching Clear Water Harbor we sighted Mrs. Teener's residence, and lan

to sell us anything to cut, but when I assured him that we were in want he opened his heart and consented to sell us enough to last until morning. I engaged him in conversation regarding oranges, climate, sell, and the advantage and resources of the locality, and before I left purchased all his soda and sugar crackers. My clothing was anything but attractive, but when the sanctiponious old gentleman saw me open my packethook, and naticed that it contained the sinews of war, his Christian prejudices melted like ice in July. Before leaving he induced Frank to purchuse a small brutch of banannas, but when we attempted to ent then we found that they equaled a poor turnip in flavor. The land at this point is excellent, health unexcelled, and the clianate all that can he desired by the settler. The land along the harbor is high, and the locality is rapidly settling up. At the passes the fishing is inferior, as compared with many points to the north or south. The residents of the main land occasionally visit the islands and drive for deer, and in consequence these animals are shy and difficult to approach by the still limiter. Finding nothing to interest or detain as at Clear Water Harbor we headed our bont for the Auelote River, ten miles to the northward. Leaving the northern end of the barbor the tourist must follow the channel for two miles toward the Auelote Keys, so us to clear an extensive sand bank bounding the northern side of the channel. After rounding the bank a northwest course must be kept, leaving the shore two or three miles to the right. At this distance from land the water will be found to be about four or five feet in depth, and a lookout must be kept for "nigger heads," black rocks, in some cases rovered with but a few inches of water. The water is very clear, and no difficulty will be experienced in detecting them if ordinary care is taken. After making a few miles of northing a long point will be acticed covered with tall pines, and to the left several small keys. By keeping close to the point an

DUCK SHOOTING IN THE NORTHWEST.

DUCK SHOOTING IN THE NORTHWEST.

RIVER shooting is too monotonous to allow a detailed account, and if yon have some of the main points, with an occasional comment, yon will be able to appreciate some of the sport we netanily experienced. The stage of the water being about the proper height and ducks reported in paying quantities, I began arrangements preparatory to a two days' siege. There being quite a number of our crowd we decided to "open the ball" by taking two bouts; and breakfasting early on Friday morning we found ourselves and equipmen's awaiting the railway train conductor's signal for a start. The train being loaded, (hox cars) the bonts were put on top, and two of our party were kept comfortably binsy with holding them to their places, and keeping the einders from their eyes, while the other four entertained the conductor. Passing the Chelsea station, we left word for suppor to be prepared for six hungry hunters, as soon as it became too dark for shooting, and a run of ten miles more brought us to Tama, where a dray and twenty-five cents soon landed us on the banks of the famous lowa. The transportation from home to Tama being at the railroad company's expense, we felt that we should indulge in a little extravagance, hence the dray luxury. The distance we had determined to hunt over lawhit, heretofore, we have taken two days to accomplish, and we settled to our work quite systematically, dividing our party into paddling squads of two, each squad to work at the paddles an hour, giving them one hour on duty and two hours for resting. We knew If we stopped to hunt too buyons, or delayed to look for wounded birds, might would be upon us before we could not hunt our grounds very thoroughly, simply paying our respects to the unfortunates that happened to shelter themselves in the willows. As we rounded a bend two teal flew, and with each barrel I killed one, and charging shells as soon as possible, two mallards were seen flying across the timber at long range. I flred, and one of them yielded to the persu

six o'clock breakfast was ordered, and we were shown to our rooms.

At seven o'clock were again aftoat. We had plenty of time to reach the bridge, and decided to be as lazy as we pleased by taking considerable bank shooting, and it was the desire of each squad that this should be done when their hour came to work at the paddles. At noon we were feeling quite discouraged that there should be so few birds la the river; but from the dinner hour until the end of our journey we found the ducks more pleany, and at one time I really believe I saw more of them in the air from the noise of our guns than all we had seen for the day and a half before. The air was so alive with them we ran ashore, and while standing on the banks knocked down nine, all malbards. Out of these nine, five felt dead in the river. This was a fair specimen of our luck in recuvering hit birds. At five o'clock we reached like bridge, and twenty minutes later our boats were loaded in the wagon that awaited our arrival, and six o'clock found us home. The last day's result was an even fifty, thirty-eight of which were mallards. Tho trip was splendid, and has taught me one thing, which by that I may be proud of any new gun; for taking into consideration the tongliness of Spring ducks and the distance at which I killed scope of them, it will be necessary for me to roll my shot in sult for chicken sbooting, or they will spod before I can get to them.

Aish Culture.

-A Boston correspondent advises us that smelts in large —A Boston correspondent advises us that smelts in large quantities are now being netted at night from the small streams in Massachusetts Bay, whither they are resorting to spawn, and transhipped by the Old Colony Railroad from Boston to New York for consumption. The Massachusetts Anglers' Association are looking up the offenders. The smelts are in greater quantity than ever known before. Who says that shad, salmon, and other fish will not follow where small food is so abundant if the restriction of the says that shad, salmon, and other fish will not follow where small food is so abundant if the water course be clear and unobstructed?

-A fish hatching house will be erected under the super--A fish hatching house will be erected under the supervision of Mr. Klippart on the Agricultural College Farm at Columbus, Obio. It will be a plain wooden structure, 80x10 feet. Water from the spring will be conducted through a gas pipe to the hatchery. The object is to give the students of the college a practical knowledge of fish culture. Certainly a praiseworthy object, and one we should like to see carried out in other States.

-The California LegIslature has enacted a law prohibiting the taking of shad in that State until March, 1877. There is now uo longer a question that they can have shad

—The Pennsylvania Legislature, at its last session, reenacted the law appropriating \$3,000 for the propagation of shad in the Delaware, the present year, in case the Legislature of New Jersey shall do the same, but the latter, as on a previous occasion, has failed to respond.

-The Contennial Commission is making extensive preparation for a display of fish and fish-breeding apparatus at the International Exposition, under the auspices of tho Bureau of Agriculture, and by the Commissioners of Fish cries of the various States.

RANOELEY LAKES—At the annual meeting of the Oquosoc Anglers' Association, which was held in this city last month, the following gentlemen were unanimously reclected as officers for the cusuing year: George Shepard Page, President; John H. Kimball, Vice President; Lewis B. Reed, Secretary; R. G. Allerton, Treasurer; W. P. Frye, Lewis T. Lazell, F. N. Otis, A. P. Whitehead, and James A. Williamson, Trustees.

This association now comprises seventy-three members, as we learn from a list kindly furnished us by the President, among whom we notice many gentlemen prominent in professional, commercial, financial, and political circles. Probably no other body in the United States, devoted to like objects, is conducted with the same good judgment and economy, or on precisely the same plan of interval

in professional, commercial, financial, and pointed circles. Probably no other body in the United States, devoted to like objects, is conducted with the same good judgment and economy, or on precisely the same plan of internal arrangements. As our readers are aware, it occupies a large tract on the Umbagog Lake region of Maine, which is the home of those famous speckled trout whose individual weights run to eight and even to ten pounds. A stinffed specimen captured by Mr. Page, the founder and President of the Association, of the enormous weight of ten pounds, can be seen by any of our readers in his office at No. 10 Warren street. We believe it is seknowledged to he one of the largest brook trout on record. The best scientific authorities have pronounced it the true Stiano fontinuits.

The association owns eight fuildings, several of them large and finely furnished with camp conveniences suitable for the accommodation of ladies and children. They posses great advantages over most of the Adirondack resorts in their accossibility. The iron rail conveys the tourist to within thirty-live miles of the head of Rangeley Lake in twenty-four hours from New York. A pretty little steamer meets ine comfortable stage, and a nine mile sail to the outlet of Rangeley Lake leaves but a short walk of thirty minutes. Camp Kennebago, the headquarters of the association, at the junction of Kenuebago and Rangeley rivers, is reached, and the angler is at his delighitm wilderness home. There are no hardships experienced, either in the journey of during the stay. Augling is mainly done from boats, although the magnificent Rangeley and Kennebago streams cannot be surpassed as yielding rare sport to the angler who desires to wade the rapids. The boats are hull on the Admonack model lapstieak, sharp at both ends, sixten feet long. In no section of the builted States, Canada, or the Provinces can better or more rehable guides be obtained. They are without exception sober, courteous, and intelligent.

Many or our readers will be gratified

THE DOMINION FISHERIES REPORT.

THIS annual report, or collection of reports, makes a volume of several hundred pages, and takes cognizance of a great variety of subjects, such as light houses, steamers, marine police, inspection and classification of vessels, examination of masters and mates, weather returns, shipwrecks, marine hospitals, etc. The department may be said to owe its creation and organization to the Hon. Peter Mitchell, late Minister of Marine and Fisheries, who brought it, in the course of his incumbency, to a very high degree of efficiency. It is now under charge of Minister A. J. Smith.

The flateries of the Dominion are one of its most impor-

who brought it, in the course of his incumbency, to a very high degree of efficiency. It is now under charge of Minister A. J. Smith.

The fisheries of the Dominion are one of its most important industries. In this department Nova Scotia stands first, the aggregate value of its fisheries for 1874 being \$6,052,301; of New Brunswick, \$2,085,793; of Quebec, \$1,608,660; Ontario, \$446,267; Prince Edward Island, \$288,863; making a total of \$11,681,886. It will be seen that the fishery industry of Nova Scotia is greater than that of all the other provinces put together. The eod fishery is much the most important and lucrative in Nova Scotia. The eatch last year was 510,046 ewis., of the value of \$2,295,195; herrings to the value of \$22,4000; mackerel, \$1,220,580; lobsters, \$1,403,136, done up in 5,612,525 cans. The lobster business has expanded to vast proportions, both in Nova Scotia and New Brunswick, in which npward of 2,000,000 eans were made up.

The lobster trade is now equal in value to one-fifth of all the fisheries of the Dominiou combined, or more than \$2,000,000. As the Americans claim the right to impose a duty on canned lobsters—on the ground, we suppose, that they are not fish—the question is a very important one to Canadians. It is probable, however, that the business is being overdone; and if these crustaceaus continue to be fished in so merciless a manner, in a few years the yield may be very small indeed. This result threatens also to overtake the scal fishery in the Gulf of St. Lawrence. No close time is observed, the young, and females with young are indiscriminately slaughtered. Of course, the end of this folly will be that in a few years this description of fishing will become unremunerative, and a valuable industry be destroyed through thoughtless cupidity and ignorance.

A great deal is said in the report about the inland and river fisheries, fish ways, sawdust, wardens, overseers, and river fisheries, fish ways, sawdust, wardens, overseers, and

rance.

A great deal is said in the report about the inland and river fisheries, fish ways, sawdust, wardens, overseers, and all the rest of it. But the truth is this part of the duty of the department is worse than a sham—it is a declusion and a snare. A large sum of money is spent in salaries and otherwise with no satisfactory result. Our rivers are getting worse every year. The wardens and overseers are for the most part political appointments, and, in some instances at least, are the worst poachers. There is scarcely now one good salmon river in Nova Scotia. Upward of \$10,000 n year is puid as salaries to wardens and overseers, but from the character of those generally appointed, it might just as well be thrown into the sea. Small sums from \$100 to \$20 are given to persons in each county for the supposed performance of certain duties, but as these sums are almost invariably given for political services, the rivers are little better for the oversight—Halifax Herald.

We are indebted to the Dominion officials for a copy of this report, which we hope to use to the advantage of our readers.

Hatural History.

THE CANADA GOOSE-(Anser Canadensis.) BY JAMES S. DAILEY, A. M., M. D.

THE Canada goose is the most graceful in form of any varietics assuming the name of goose. Some writers are of the opinion that it is a variety of the swan. Cuvier shares in this belief. The wild goose is selden seen in a domesticated state. Though fully described by equithologists, it general appearance is not familiar to many of us. Its general characteristics are as follows: The head, thirds of the neck, the greater quills, and the rump and tail are very black; the base of the neck anteriorly, and the under plumage generally, brownish grey; a few white feathers are scattered about the eye, and a white, kidney shared cream forms a conscience of the constant forms are conscience of the constant forms are conscienced about the constant forms are conscienced as the constant forms are constant for the constant forms are constant for the constant forms are constant for the cons shaped cravat forms a conspicuous mark around the throat; upper and under tail coverts pure white; bill, feet, and too

shaped cravat forms a conspicuous mark around the throat; upper and under tail coverts pure white; bill, feet, and too nails hlack.

Audubon, when living in Kentucky, discovered the nest of a pair of wild geese. The gander was one of singular beauty. He (Andubon) being anxious to observe their habits, visited the nest daily. When encroaching too closely he was at first severely punished by the gander flying suddenly at him and striking him with his wings; but finally the thought occurred to him that a full stomach might secure his confidence and appease his wrath, so whenever he approached the nest ho threw to them some corn. For several days it remained untonched, but finally they ate it in his presence. Shortly after the period of incubation he managed to entice the gander into a trap, and when the goslings were being led by their mother to the water he seenred her in the act of defending her young. They were turned loose in an enclosure, and one wing of each was pinioned, which enabled him to keep them for several years. The parent pair did not breed in confinement while he kept them, but two pairs of the goslings mated; one pair reared three and the other seven goslings.

The writer has with a shot gan brought down from acrial flight nany individuals, and although they have remained in his possession for several years ho can truly say that "uary" an egg did they lay, although writers generally agree that after two years of domestication they lay and incubate.

In the wild state it is reasonable to suppose that goslings

that after two years of domestication they lay and mea-bate.

In the wild state it is reasonable to suppose that goslings of this year breed the next, if we judge by form, plnmage, and such other indications as are known to practiced or-nithologists. The habits of the wild gooese differ mate-rially from the domestic goose. They freely consume worms, insects, and aquatic plants, which domestic geese never do. When domesticated the Canada goose is slow to forget its migratory habits. The writer has hatched the eggs of the wild goose under the domestic goose, and reared them together, but on hearing the familiar "honk" of a passing flock during the migratory season they have mani-tested a disposition to join in flight the wild flock. Noth-ing but the precaution of amputating the first joint of one wing of each goose saved a flock of goese reared in do-

mestication from disappearing in this manner. When kept confined in a park or enclosure this is the only safe plan to adopt when within hearing of wild flocks. They will remain in perfect health with comparatively limited bathing faculties. A friend in this vicinity received a fine flock, which were reared from eggs hatched under the domestic goose, and to all appearances were thoroughly domesticated; but after keeping them for three years, without pairing or laying, when the autumnal period for migration enne they stretched their necks, loosened their pinions, and to his dismay disappeared not to again return. Wilson says "that a Mr. Platt, on Long Island, while out shooting, wing-tipped a wild goose, and brought her home. She took kindly to a dock of tame geese, and soon became apparently domesticated, and the wound healed. In the following Spring, when flocks of wild geese were migrating, she heard the bugle note of their leader. She spread her wings, joined the travelers, and soon disappeared. In the following Autumn, when wild geese obeyed the instituct of their nature and returned southward, Mr. Platt happened to be standing in his yard when a flock passed directly over his premises. At that instant he observed three geese detach themselves from the flock, and after wheeling around several times alighted in his yard. By several marks he was enabled to recognize his lost fugitive, who had traveled many hundred miles to the lakes and returned with the family she had reared in her absence to a life of civilization."

lift of civilization.

The geographical distribution of the Canada goose is quite extended. Wilson remarks—'Il have never yet visited any quater of the country where the inhabitants are not familiarly acquainted with the regular passing and report of the property of the country the regular passing and report of the property of the p

Turkey Buzzards on Long Island.—On Wednesday of last week Mr. F. Benner, while walking in the woods near Astoria, saw a turkey buzzard—a very rare occurrence, as these birds seldom find their way as far north as this latitude.

SNAKES.

SNAKES.

Editor Forest and Stream:— Albant, N. Y., May 10th, 1875.

Having seen tu your Issue of December 3d, 1874, an affirmative answer to the question "100 Snakes Eat Toads" it has induced me to write a few incidents of my experience with snakes, and I will alro ray that snakes do cat toads, as I have seen them do it very often. Belig inturally a "snake fancier," I have slawys had the habit of never letting one pass me, but always to "catch "em allve, Ot". In the Spring of "22, while catching paluted forcioless temps Preta) with a hand not in a smalt your dear. Albany, I perceived a very large swater anake (Troptanonius degledon) moving cantrolwyd around on the floating moes; leaves, &c., near the shore. While watching it closely to observe list habits, and if possible to procure it, I saw another one of the same species approaching cantibusely from some "thorning read towards the first one, evidently intent, both of them, or catchings a frog which was sitting on the shore mear me, whiking and hinking its intelligent looking eyes, in mild non-coursers of the fair that was awalting it, when one of them, apringing forlously towards its prey, was met midway hy my net sud toesed high up on the hank, where I captured it without diffuently. Not having my snake hox with me, and heing therefore compelled to carry the reptile on my wrist, I was forced to one alternative—either to lose my game (f) or go home; but preferring the latter, I artived at my residence, after being polliely invited by a horse car conductor to ride on the rear platform, and being interrupted by curious children and thind women, and feposited my prize in a eage of compartments where I then had over theirty others of five varieties, viz.; the ribbon. (Leptophia Saurita) the grass, (Coluber Fernalis) the brown, (Troppdanotus, De Kay) the copperhead, (Trigonocephalus contorita) and milk enake (Coluber examius).

One morning, having caught a living more, I determined to experiment with the copperhead, who do in the case, which did not ever the snak

ALBINOISM IN FISHES.

MUSEUM OF WESLEYAN UNIVERSITY, MIDDLETOWN, Conn., May 11th, 1875.

MUSEUM OF WESLETAN UNIVERSITY, MIDDLETOWN, Conn., May 11th, 1875.

EDITOR FOREST AND STREAM:—

A remarkshie specimen of the haddock (Melanogrammus aeglefinus) was shown me last Satuiday by my friend Mr. Blackford, of Fulion Market. Your readers are many of their familiar with the appearance of this fieh, with its uniform hae of brownleh gray, slightly darker unon the back; the heavy black stripe which covers the scales of the laterat line, and the dark hiotches behind and shove the pectoral fins which mark the spots, we are told, pressed by the fingers of Simou Peter, the disciple fisherman, when he took the tribute money from the fish's month. Mr. Blackford's haddock is an alhino, the only example in this group of fishes which has ever here brought to my notice. The stripes and blotches are absent, and the fish is uniformly a very fight pink, the back slightly darker and approaching a very light salmon color. The scales have a pearly lustre. The flue are dull white tinged with rose color, except the veutrals, which are a light salmon color. The eyes are normal in color. This fish was taken aff Barnegai, N. J., May 1st, by the schooner While Cloud, of New London. Mr. Blackford has had it forwarded to Washington for the use of the National Museum.

Another curious case is that of an albino of the common ed (Anguilla bottomensis), sent to Professor Baird by Captain Ellim Potter, of Noank, Conn. He color is a duli yellow of a light shade, approaching white on the helly. According to M. Dareste, alhnoism is not uncommon to the European cels, and perhaps white eels may be more ahundant with us than is neually supposed.

THE "NEW LIGHT."

THE "NEW LIGHT."

Midway, Ky., May 5th, 1815.

Midway, Ky., May 5th, 18:5.

Seeing in a late number of Forest and Stream some inquiries about a fish called "new light," I send you one by mail to-day. The same fish is found in Luke Erle; streams of Indiana flowing into the Ohio. I have seen it taken also from the inland lukes of Finrida. It made its appearance with us many years ago-about the time of the rise of the religious seet called New Lights, Campbellites, &c., and the populace, not knowing anything about the fish, called it by the common name indicated ahove. Respectfully,

We are greatly obliged to our correspondent for his trouble in sending this specimen, which came to us embalmed, or very perfectly preserved in a carbolic solution. It belongs to the 2d Class, or soft-rayed bony fishes, and is evidently a species of carp.

is evidently a species of carp.

DITCHING AND DROUGHTS .- A contributor to one of the DITCHING AND DROUGHTS.—A contributor to one of the Illinois papers suggests the idea that the excessive ditching practiced in that State in improving the prairies, is a fruitful source of the frequent droughts which have been exporienced of late years. Of the 35,000 square miles of prairie lands in the State, a larger portion was originally so dimpled and indented that in the Spring, after beavy rains, the surface of the country, when viewed from some commanding ridge, presented the appearance of being covered with ponds of water. At that time the water soaked into the soil, fed the springs, or by evaporation furnished man the soil, fed the springs, or by evaporation furnished ma-terial for a never failing rain fall. Now, the innumerable ditches scattered over the country carry off the rain as

ditches scattered over the country carry off the rain as rapidly as it falls, and it is in duo lime emptied into the Gulf of Mexico.

There is much that is plausible in the theory. The fact that opening new districts and-dounding the surface of the country of its timber affects the rainfall, is settled beyond a question; and the planting of forest trees in locations which before were treeless, has had the effect of increasing the supply of rain. The writer to whom we have alluded suggests that the sites of these original pouds, which are scattered all over the country, might, without much labor, he restored. We think that were trees planted in liberal numbers along the banks of these ditches, and indeed wherever the water from them can permeate to their roots, the same results might be arrived at. Certainly there is nothing more destructive or discouraging to the farmer than continued droughts, and any remedy which is likely to alleviate the cause should be most carefully and earnestly pursued.

RECLAMATION OF MARSH LANDS

estly pursued.

RECLAMATION OF MARSH LANDS.

In our further discussion of the reclamation of salt marsh lands, we would state that the first thing to be done is to set a bound to the encroachment of the tide waters upon such lands. The tide waters must be shut out from the lauds we would renovate. The cheapest, easiest, and most effective plan to accomplish this is to build the necessary dykes with the salt marsh turf itseif. These dykes, which any skillful farmer can erect, should be firmly constructed at from ten to one hundred yards from the edge of the marsh, leaving a flat of sufficient width to break the force of the waves and entirely protect the accumulation of boils river and tidal currents. This, at the very beginning of view provided the control of the waves and entirely protect the accumulation of boils river and tidal currents. This, at the very beginning of your labors, is of the utmost importance, and the work should be well done, as so much depends upon it. In making this dyke it should be from two to three feet higher than the level of the highest tido that usually occurs at the place to be reclaimed. You will be careful to give to the outside slope of this protective wall a full foot and a half to every foot rise; by so doing you place a firmly constructed barrier of resistance to the waves, and your future upland is protected from all tide encroachments. In making your inside slope you may make it steeper, say one foot of base to one foot rise. As there is no tide pressure from within, it will be found of sufficient strength for all purposes. When your dyke is finished you will have the top of it four feet wide, and firmly compacted. It situations of great exposure to the action of tide waters it may be necessary to make the dyke wider at both base and top. Ordinarily, flongh, the width I have here given bar proved of sufficient strength for all purposes. Wo have seen some reclaimed marsh grounds where even a less width has rendered good service, but they are quite liable to an occasional ove

—The Spring meeting of the Louisville Jockey Club opened most auspiciously on Monday last; upwards of 12,000 spectators were present, and the weather all that could be desired. The great event of the day was the Kentucky Derby, which was won by Aristides, making the fastest time ever made by a three-year-old, and only second to the time made by Tom Bowling as a four-year old. The fifteen borses started at the first tap of the drum, and got away in beautiful style.

The mile heat race won by Fairplay was also made in almost unprecedented time; the three heats being run in 1:44½, 1:44½ and 1:44½. Bonaventure won the Association Purse and Aaron Pennington the purse for all ages.

—At the meeting of the Keutucky Association on the

—At the meeting of the Kentucky Association on the 13th instant, in the sweepstakes for three-year-olds, Mr. Rodes' Scarcher distanced his two competitors in the remarkable time of 1:41‡, being the fastest mile time on record, and heating Grey Planet's 1:42‡ by ‡ of a second. The latter lime it will be remembered was made in a match against time with a running start.

The Rennel.

AMERICAN KENNELS-No. 2.

MR. THEO. MORFORD'S.

THERE are some few gentlemen in this country who, having found years since a strain of dogs that sulted them, have followed the example of Mc. Laverack and other breeders in Great Britain, and confined themselves to one family and to perfecting sun't good qualities are seemed most prominent. Whatever may be the effect of color in the field, or as affecting the value of dogs in which, as with the Gordons or the Irish, this distinction has not become a peculiarity of the strain, there is perhaps more prejudice regarding it than applies to any other characteristic. Mr. Morford has made color a specialty, and the orange and white to which he has confined his hilters is now recognized as a distinctive mark of the "Morford" strain.

Newton, the location of the kennel under discussion, is

Newton, the location of the kennel under discussion, is situated among the hills of Sussex county, surrounded by rich grass lands and dairy furms. A picturesque ride on the Delaware, Lackawana and Western Railroad takes the traveler to Waterloo, whence the Sussex road earries him to Newton. The valley lu which Newton la situated la contiguous to that of Hamburgh, Vernon, and so on to Warwick, across the State line, a region that has been ren-dered almost immortal by the pen of Henry William Herdered almost immortal by the pen of Henry William Her-bert (Frank Forester) as the scene of most of his shooting experiences. An advantage which Mr. Morford has is in this fact, that he is in a country which, while not abound-ing in game, as in years past, still possesses sufficient for him to try his dogs on and keep them up to work without having to resort to the distant plains of the Western States. The variety is also, excellent, consisting of ruffed, groups The variety is also excellent, consisting of ruffed grouse, woodcock, quait, and English snipe. The inhabitants of Mr. Morford's kennel are as follows:

Morford's kennel are as follows:—

1. Nelly, orange and white, eleven years old. From this hitch are descended, with one or two exceptions, all the present inmates of the kennel. All that is known of Nelly's pedigree is that she is by an orange and white dog owned by a gentleman on Staten Island, out of a red bitch from Virginia. Site was first bred to Mr. F. M. Ward's orange and white dog Bob, Jr.: he by Mr. Scott Rodman's Bob out of his imported Quall. The most celebrated of Nelly's progeny is Joe, who was sold to Mr. Shipman for \$500. We had the pleasure of seeing Mr. Shipman at Newton, and learned from him that he was more than satisfied with Joe, having worked him all the past Winter in Florida, and killing a large quantity of game over him. Joe has also sired many good ones, and possesses the quality of stamping his progeny with his own marks and characteristics.

stamping his progeny with his own marks and characteristics.

2. May, orange and white, hy Joe out of Nelly. May is a remurkably handsome bitch, possibly as handsome as any that could he shown on heach or in field; perfect for coat and feather.

3. Duke, orange and white, own brother to May. Duke only wants filling out to make a very grand dog. Both he and May are but fifteen months old, yet Mr. Morford carried them West with him last Fall and shot over thom to his entire satisfaction.

4. Don, orange and white, two years, hy Joe out of Gypsey. Gypsey is by Corson's Dun out of Buhhitt's Dell. Dan is comparatively untried in the field, but is very handsome and intelligent.

5. Trumps, orange and white, one year, by foe out of Dell 2d; she by Ward's Boh, Jr., out of Dell.

6. Queen, orange and white, by Joe out of Gypsey, as above. The grandsire of Dell (Gypsey's dam) was Horaco-Smith's Gildersleeve dog Bruee.

7. Fanny, orange and white, by Joe out of Frank (a singular name for a bitch), own brother and sister.

8. Beauty, lemon and white, an imported bitch one and a half years old. Beauty's breeding is unknown, but from her form and unarkings we should consider her almirably adapted to cross with the Morford dogs and continue the strain.

9. Puss, a puppy three months old, from whom great

strain.

9. Puss, a puppy three months old, from whom great things are expected. She is hy Cole's (Georgia) Bang out of Gibbon's Sukey, she by Morford's Joe. Bang was by Cole's Thad out of his Pixie. The second dam of Puss was Foote's Nell by his Shot, third dam, Cavendish's imported Belle.

10. Dick, red dog, purchased by Mr. Morford of L. R. Morris, Camel Station, Ohio, after seeing his excellent performance in the field. Mr. M. does not intend to breed to Dick.

Here we have another instance of close inbreeding without deterioration. Joe has been repentedly bred to his own mother, Nellie, and once to his sister, Frank, and has always produced offspring at once healthy and on an Improving plane. We were much struck with the extreme docility of Mr. Morford's dogs and their intelligence. These characteristics are either developed to a remarkable extent, or else Mr. M. Progresses manufactured positives and their intelligence. characteristics are either developed to a remarkante extent, or else Mr. M. possesses marvelous ability as a breaker and trainer; and it is indeed rare to find a gentloman able to break his own dogs without the assistance of a professional. These dogs are all broken to retrieve, not in play, but as a duty, obedience to which is strictly enforced. We alonal. These dogs are all broken to retrieve, not in play, but as a duty, obedience to which is strictly enforced. We do not remember having seen a more interesting instance of thorough control and obedience than when four or five of these closs were admitted to a room at once, all charging together at the word, and each answering to his name and retrieving or obesing any order given him. Such and retrieving or obeying any order given him. Such strict ohedience in the field, if the dogs possess the noses their appearance indicates, logether with the natural intelligence they certainly have, must make shooting over them the perfection of sport. We should have remarked that another peculiarity of these dogs, and one to which Mr. Morford has given great attention, is their black points-

We shall give a description next week of the breeding and sales kennel of Mr. A. C. Waddell, located also at Newton.

For Forest and Stream

POLLY-No.

POLLY—No. 1.

Polly for shert—a beautiful snow white, silver white, four-year-old setter, presented to me by express, charges paid. Her owner did not wish the breed to get around," to be sure! Cash value, \$150. The remen brance of old school days and the non-desire of having the breed "get around" favored mo, for some time before dogless, with the possession. Ah. Polly! yon were a beauty, the handsomest ludy dog that ever drove sportsman cray. Did you howl, Polly, for the first two or three insights? The neighbors can say; I had business from home and caunot. My wife said, "What can we do with her? She has Jumped through lew window and ran off, chain and all; and she cunde beek, and she barks and howls; but isn't slie a beauty?" My presence seemed to quiet her, though leading her home from the depot when she first arrived land been the whole of our acquaintance. We had no more howting, and the neighbors secured to have things generully agree with them beiter. But Polly had to skeep in the bonse; she was too handsome to leave out. Some-body would most certainly steal her if somebody ever chanced to set eyes upon her. A cash \$150 dog! We couldn't afford it. But what nu measy creature! Once in about two hours thring the night, at irregular intervals, there was evidently some one just brenkting into the house, but a volley of barks from Polly stopped hint thing short off every time. Vigorous arguments applied to Polly with the slog whip gave us quiet about 4 o'clock A. M. The burglars went away and ve went to sleep. After that she wore an anti barking muzzle st night, which I invented with great care, and which provented an inunense amount of unhappiness all round. At the time that this express package came to hand I was just about moving to S Paul, Minn., and had but one opportunity of triving her. I have found half u dozen woodock, but him human and have the hou

Sea and Biver Fishing.

FISH IN SEASON IN MAY.

Salmon Tront. Salmo confinis. Shind, Alosa. Luud-lucked Salmon, Salmo (eked Salmon, Salmo Gloveri

FISH IN MARKET.—Fish at all descriptions are still abundant and cheap. Bluefish from Norfolk are arriving, and although small, not weighing over one and a balf to two pounds, are extremely fine in flavor; price 15 cents per pound. Fresh mackerel are coming freely, the catches excitating larger than retail at 8 to 10 cents cach. Conpound. Fresh mackerel are coming freely, the calches continuing large; they retail at 8 to 10 cents each. Connecticut shad are in good supply, selling at 40 cents for the finest roe fish; males 20 cents. Sheepshead from the South bring 25 cents per pound; weakfish 20 cents; Ken usbee salmon 90 cents. A supply of California salmon arrived last week, coming over in better order than any that have preceded them; they are selling at 40 cents. Porgies have become very plentiful and the hearts of our colored brethern are proportionately elated; they sell for 10 cents brethern are proportionately elated; they sell for 10 cents per pound. Codish are worth 8 cents per pound; the best ome from Newport; striped bass scarce at 15 to 20 cents come from Newport; striped bass scarce at 15 to 20 cents; halibut 20 cents. Large sen flatish or flounders, called flukes by the fishermen, are being taken; they weigh as high as 7 to 10 pounds and sell for 8 cents. Soft crabs from Baltimure are plentiful at \$1 25 per dozen. Lobsters 8 cents per pound; green untile 18 cents.

—The catching of black task is permitted in the State of New York after to day, May 2014.

-The Saranac Lakes, Adirondacks, opened on the 12th of May, instant, two weeks later theu usual

KENNEBEC SALMON.-The first Kennebec salmon of this season was on exhibition Friday last at the stall of Shat-tuck & Jones, in Fancuil Hall Market, Boston. He turned

the scale at sixteen pounds.

The estimation in which pickerel are held by the law makers of Vermont is shown by the clause in the law passed last Fall, which prohibits the introduction of these fish into any waters of the State under penalty of one hun-dred dollars, or six months' imprisonment for each offense.

-Although the season is not yet fairly inaugurated, we —Although the season is not yet fairly inaugurated, we understand that Mr. Sammis is already entertaining a number of gnests at the Surf Hotel. The ferry steamer is not yet making her regular trips, but will soon be put on the ronte. Fishing in the Great Sonth Bay will be, like everything else, a little backward this year. The fishermen, however, are making fine catches of eels, and a few sea porgies have been taken off the fish factories. Wenkfish and sheepshead are looked for about the 1st prox. and sheepshead are looked for about the 1st prox.

The menhaden, or moss bunker fisheries are now in full blast along the sbores of Long Island. The Simmons' Point Fishing Company took 400,000 last week, and at other places they are being caught by the hundred thousand. This indicates the udvent of bluefish.

-Bluefish generally make their appearance at Barnegat Bay, New Jersey, about the 20th of May, seldom varying more than a week from this date.

—Several hundred flue shad have been taken in the menhaden fish pounds near Upper Aquebogue, L. I., within a

ADIRONDACKS.—Meacham Lake, May 10th, 1875.—There is out and the fishing good. I have been out two caught a nice lot of trout each time. No guests yet, by expect some this week.

A. R. FULLER.

MAINE.—Mossehead Lake, May 9th, 1875.—The ice generally goes out here about the 15th of May, but yesterday, the 8th, a team went forty miles on the ice. The seuson is late, and the ice will probably not be out before the 25th, and then good trout fishing may be had.

and then good trout fishing may be had.

—A number of citizeus of Detroit have incorporated the North Channel Shooting Chib, with a capital stock of \$10,000, divided into 400 shares, \$25 each. A lease has been obtained of a tract of land and water two miles off the mouth of Swan Creek, emptying juto Lake St. Clair, six miles from New Baltimore. This tract embraces about six square miles of marsh and woodland territory. The membership of the club is limited to 150, and there are at present eighty members. The securing of the lease of this tract gives to the club the only hunting and fishing ground combined on the lake. The officers of the club are Marcus Stevens, President; L. P. Knight, Vice President; J. P. Donaldson, Secretary, and E. H. Butler, Treasurer.

Wisconsin, —Montello, May 11th.—The fishing season for

Donaldson, Secretary, and E. H. Butler, Treasurer.

Wisconsin.—Montello, May 11th.—The fishing season for rod and reel has opened finely in this section. Pickerel are the most numerous, and are eaught in large numbers with trolling spoons and live minnows. Trolling is the favorite method of taking them here, and the average cutch is from three to five pounds each. At Collins Lake, three miles south of Muskulonge, they are taken with live hait or trolling spoon, and weigh from twelve to fifteen pounds. This is also an admirable place for bass fishing, and much songht by the enthusiastic anglers of this locality. At Buffalo Lake and other points near Montello black bass are frequently caught of five pounds weight and uyward. Perch are usually plenty in Fox River, though seine fishing has to a degree depopulated the river of these and other varieties of fish.

Montreal "Fish and Game Protection Club."—The

MONTREAL "FISH AND GAME PROTECTION CLUB."—The Canadians are taking renewed interest la the uniter of game protection, and seem to be camblating the United States in organizing clubs and associations. One of the largest, most influential and most efficient is the Peterboro Chib of which we have forwards each of the largest. Club, of which we have frequently spoken. In 1859 a pro-tection club was organized at Montreal under the title given above, and promised good service; but of late years it has lapsed into apathy, and only now is about to be awakened to activity and usefulness, chiefly through the exertions of our corresponding agent, Prof. Shewan, of the McGill College Seminary of Montreal. A meeting was called on the test of May justing the programulze, and our correspondent 13th of May, justant, to reorganize, and our correspondent says with pardonable pride, "all our subscribers to Forest says with pardonable pride, "all our subscribers to FOREST AND STREAM have promised to join the society!" (This is pleusunt testimony to the good that our journal is doing in all sections.) A committee of seven was appointed to draft a constitution and by hws and select a good working executive. We quote from our letter:

eentive. We quote from our letter:

"This committee, of which I am secretary, has promised to complete its labors and report to a public meeting to be held on Wednesday, 19th inst. Prof. Bell was present, but came rather late to take an active part in the proceedings. I have also started among our friends a notion which has taken. Away north of Montreal, say forly to fifty miles, among the Laurentide Mountains, we have a second edition of the Adirondacks, only five times bigger. What it is for game I cannot say positively, but for fish it is something wonderful. I myself have seen and eaten of a tront of fifteen pounds from that region. At present it is to Montrealers a terra incognita, but when the railway to Ottawa is finished—which will he in six months—we shall have a line running along the outskirts of this region, and I propose leasing, in the interests of our society, a hundred or so square miles of this cauntry and preserving it. How my plans may go I know not yet, but there is no harm in trying."

-Two salmon were caught in the harbor of St. John, N. B., last week, and salmon of a large size are being taken plentifully at Liverpool, Nova Scotia. It will be borne in mind that salmon tishing, both for rod and net, begins many weeks earlier in Nova Scotia than in the other Provinces.

-The Mirimichi River is clear of icc.

-Fishing for herring and gasperenux has commenced in the flay of Fundy and Gulf of St. Lawrence.

The Fisheries.—The number of fishing arrivals for the week ending May 13th was forty—thirty from Georges Bank, five from the Graud Banks, and five salt fares from the Western Banks. The total amount of Bank cod brought in was 350,000 pounds; Georges cod 600,000 pounds, and 70,000 pounds halibut. The receipts of Bank halibut word 300,000 pounds, which were mostly sold at \$5 and \$3 percent, for white and gray. The fisherman who marked the halibut mentioned in our last issue has turned up. It was John A. Lynch, of schooner Howard, who claims that he citt his name on the halibut a year ago while fishing in the bend of Sable Island. The fish was then about two feet in length. Last year we published a similar but more remarkable incident. John Como, of schooner Magic, in July, 1873, caught a halibut on the Banks and cut his initials thereon. Eight months after he caught the same fish, the letters being plainly legible. It was brought to this port, and attracted much attention at the wharf of the N. E. Fish Company.—Caps Ann Advertiser, 14th.

AFTER TROUT IN NORTH CAROLINA

Manion, N. C., April 28th, 1875.

Marion, N. C., April 28th, 1875.

Editor Forest and Stream:

I have intended for more than a week to write you a short account of a trip I recently made to which I call the troutless region of North Carolina. On the 14th of April Mr. M., of New York, Lieut, H., and i started on horseback, with bright anticipations and a haversack filled with "hard bread," for the North Tow and its tributaries. Had a pleasant ride of twenty-six miles over the mountains to Wiseman's, where we staid all night, and where we expected first to show our quality as followers of the gentle Isaac. But no, there were no trout, and we were advised to go seven miles further to Connelley's—there we would certainly flud them. Wo went, we interviewed Mr. C., and were told there very few trout, and those very small. However, we couldn't believe him, as he never fished, so ordering dinner and engaging C. as guide we sat down before a bright fire and waited till that Important meal of fried beans, holled polatocs, and heavy corn bread was rendy. While we thus waited there entered a gloomy young stranger. He was at once consulted by our friend M. on the trout question, who asked him it there were many trout in lin neighboring streams. He didn't know. "But," astd M., "my friend, do you never fish?" "No, sir; I carn my bread by the sweat of my brow, according to the decree set forth by the Crestor to the gardon of Eden. Fishing days find me at the work-bench?" M. willed, and we all felt we were but insignificant cumberers of the ground. To be brief, we fished the North Tow, Rearing Creek, and Squitrel Creek. We whipped them diligently with various tiles; wo tried them—oh, tell it not in Gath—with worms, and we canght ien. I think they would have weighed a pound. Linnville River wo did not fish, but the nuiversal opinion of all who know anything about these streams is that there are few tront in them, and they are very small; why, I cannot imagine; for more heantiful streams I never saw

We were caught in that "pohn wave," and rode home in a snow sto

SHAD FISHING ON THE HOUSATONIC

Boston, Mass., May 15th, 1875.

BOSTON, MOSS., May Eth. 1875.

EDITOR FOREST AND STREAM:—

In looking over my book, preparatory to great deeds, my eye fell on the fly, if fly It may be called, which I enclose to you. You will see that its workmanship is not remarkable for delicacy, but it has done good service notwith standing. Rongh as it is, it allured and killed fifteen or twenty shad last Sunner on the Housatonic River. A hit of white rag and a hook, as yeu see, make up the whole. Last Juno, not no be been hind others, I etarted to try for shad with a fly, and wishing to get to some place less frequented than Holyoko and other places on the Connecticut, hit on the dam at Derhy on the Housatonic. A ten mile ride in the cars from New Haveu brought me to my journey's end, where I found an excellent hole in a beautiful old town on the banks of the river, remarkable for its fine old elms, as well as for the bucy stir of its mannfacturing industry. A messenger dispatched from the bones soon brought me a bontram, who sgreed to be on hand at sun up and sun down during my visit. We went for two days, morning and evening, with almost unvarying fortune. I took but a single shad, though I worked conscientiously. The water was turbid, owing to the breaking away of dams shove during a freshet shortly hefore; so I returned with but little to the circuit of my rod. I was not, however, by any means dissatisfied with my jannt. The weather was beautiful, the seconcy charming, the seconmodations good and within ten minutes' walk from the ground, wildle the fishing, as I heard on all hands, had also been good until the waters became until for dy-fishing. I heard what others had done and could see for myself what shad fishing. I heard what others had done and could see for myself what shad fishing. I heard what others had done and could see for myself what shad fishing. I heard what others had done and rould see for myself what shad fishing. I have fished for striped has a hundred or two yards below, and hupe for a bute and a fight. I don't say a rice, for the

our sports.

When I left, my boatman—whether it was sarcasm I won't surmise—gave me the cuctored fly as one which, in his hands, had done good actual service, and as a specimen of those used by the natives in those narts. Its coarseness, if it fail to instruct, may amuse, in view of the refluement as to precise shade of feather and debeacy of make which are considered so absointly necessary to success by many good anglers. I confess that I have not the faith in all this nicely that I should have, though I welcome the feeling which induces the belief, even if carried to the verge of affectation. It is a part of our stock in trade and contributes to the halo with which we like to surround the gentle art. Ever since some fifteen years ago, at the folks of the beautiful Margarle, in Cape Breton, I took a fifteen pound salmon with a branch of red half picked from my heard (it is gray now), and tied on the spot, I have, I am afraid, fallen unwithfully from grace on this point.

FOX RIVER FISHING.

BATATIA, H., May 3d, 1875.

EDITOR FOREST AND STREAM:—

The Pox River of Illinois, from the Wisconsia line to its junction with the Illinois River at Ottawa, a declance of about one bondred miles abounds with the common to the tributarias of the Misalsetppi, and probably second to more in numbers, variety and eize. The general course of the Fox River for the upper fifty miles is due sooth, running parallel to the west shore of Lake Mieblyan, from which it is distant about thirty-alx miles; thence to Ottawa, southwest, fifteen inlies of its apper water mingles with quite a number of lakes, some of them six miles bing by three wide. Wild rice from four to twelva feet high grows in about thrae-fifths of their waters. The deapost water is about forty feet. For twenty miles below the lake postion the river is from twenty to thirty rods wide, gravel bottom, mater from two to ten feet and sing gish, and no rocks. For the next forty miles is is much narrower, more rapid, gravelly fords and the pools, except the hackwates of mill dums, must of the way through a limeation formation. The balance of its coorse is brough sandatone, in some places walled in rock, water course narrow and deep.

The lake region has the following fish, which are not found, except in isolated cees, by the river? Maskulome, the largest caught with rod and line (speaking of what I know) being 31 ponds, length, 3 feet 19 inches, caught with Buel spoon, No. 2; other weights, 25, 32, 16, 11, 10, and 8 pounds, but no smaller. With spears in Winter, they say, and t believe it, as high as 5 pounds. These are not numerous. The black bass of the lakes differ from the river bass in form and color, but ooly trifing; they are somewhat thicker set; the sides are withish groeg greatest depth of color onerest to back; belly, white, in larges stoughed 69 pounds; bott, as high as 5 pounds. These are not numerous. The black bass of the lake and five from the river bass, or time base, or called, are pleuty; form, broad as long, and then, it is not found in any of t

GAME PROTECTION IN CANADA

Perennono, May 7th, 1875.

PETERBORO, May 7th, 1873.

Entron Forest and Stream:

The general monthly meeting of the County of Peterboro Fish and Game Protective Society was held at the Huffman House on Wednesday evening last, Wm. Eastland, Esq., in the chair. The secretary read letters from Geo. B. Warren, E-q., of Troy, N. Y., (made honorary member at leat meeting.) expressing his desire to ald the society in carrying out its objects. After the transaction of other busicess a discussion was entered into as to the true name or species of oor Stoocy Lake sulmon trout. The result of the delate seemed to favor the opinion that they were identical with the Lake Octarin salmon. The thanks of the society are due Mr. Wm. Eastland for his trouble in procuring for examination at the unceting a fine specimen of the Stoney Lake salmon. O. A. P.

SOME FLORIDA FISH SCORES.

NEW SHIERA, Pla., May, 1875.

NEW SMIENA, Fla., May, 1873.

Edirer Fouest and Stream:

To give an idea of the fishing on the east coast of Plotida, I send an abstact from my fishing journal kept at New Smyrna the past Winter. The fishing was done in boats in the Hillsboro and Halifax Rivers, within a mile of two of the Maquito Inlet. We generally fished from two to four hours and usually on the flood tide. Bait for sheepshead, round clams or crabs; for other fish, bass, trout, groupers, and snappers, &c., millet is the usual bait. For hooks, I have found the Virginia pattern of Claffa & Co., Nos. t, 2 and 5, to suit this fishing better than any I have tried. I put to my list the abarks and rays, which are numerous, and are taken with the rod, from 20 to 100 pounds in weight; when larger they usually carry away the tackle. We also take many cattlesh which, with toadfish, awellish, &c., I do not include in my list, as we consider them as vermin. The sheepshead ron from \$\frac{1}{2}\$ to 7 pounds; average, 3 pounds; neares, 5 pounds; from 1 to 20 pounds; average, 6 pounds; drumfish from 5 to 50 pounds; average, 10 pounds; average, 4 pounds; drumfish from 5 to 50 pounds; average, 10 pounds; whiting and piglish average \$\frac{1}{2}\$ pounds cach; blocatch about \$\frac{1}{2}\$ pound; bluefish, \$\frac{1}{2}\$ pounds.

S. C. Clarke.

The Colleges.

PROVIDENCE, R. I., May 1st, 1875.

Bed the Forest and Steeral.—

Notwithstanding the severe loss of the Brown University Brat Club, in the birring of their hoat house with all its contents, in November last, thay begin the season under good surgices. Through the efforts of the undergraduates principally, a temporary structure has been ercoted on the site of the burned haliding, and is now occopied by the club. An English boat building firm—Dives & Ch.—use part of the house as a workshop, and have turned out a six—oar barge, used by the University crew, which is said to be very satisfactory. A large number of aspirants have been working in the gymnastum during the Winter, and the following men will probably compose the crews, subject to any usecessary changues. F. R. Brown, '75, stroke; C. M. Lee, '77. No. 2; W. A. Peck, '77, No. 3; C. E. Field, '75. No. 4; W. C. Joslyn, '76, No. 5; S. J. Brad bury, '77, how; with C. H. Poot, '77, as substitute.

Of these Mesers. Brown and Fiebl rowed in their class crew at Spring-field in 1872, and Messra. Lee, Peck, sud Bradhury to last year's Freshman crew at Saratoga. Freshman crow—J. B. Parrot, stroke; A. N. Fairbank, No. 2; F. T. Whitman, No. 3; G. P. Weston, No. 4; R. Case, No. 5; J. O. Winslow, bow; and Geo. Goodwin, substitute.

This cow a taking for practice a six-oar shell, purchased from the Amberet Agricultural Boat Club. Both crews will leare for their quarters on Saraloga Lake, Near Snako Hill, as soon after Commencement, June 16th, as possible.

PRINCETON COLLEGE, May 17th 1875.

PRINCETON COLLEGE, May 17th 1875.

Entros Forest and Stream:—
The University nine played its first games of base ball hist week. On Tuesday, the 12th, the Choiseas, of Brooklyn, succeeded in vanquishing as by the score of 8 to 3. As it was the first game our man had played, we were not amprised very much, but we did expect a little more from them when the Harvard nine came here on Suturday the 15th. We were hardly prepared for the poor playing evinced by both nines at various stages of the game. We felt quite confident of victory at the close of the fifth laning, when the acore was 8 to 2 in our favor. The Harvard men themselves seemed to despair of winning the game. They did not give up, however, but by the aid of strong batting on their own part mat many errors on that of the Polectons, they closed the ninth liming with the score of 9 to 7. The second game of the sories will be glayed at Boston on the 29th linst. We shall look for a different result than.

QUIDTIS.

—The Stevens Institute Athletic Association held its regular Spring meeting on the old St. George's cricket ground, at Hoboken, on Saturday last. The victors were presented with gold and silver prizes by the wife of President Morton, an innovation on established custom which we are most happy to record. The presence of ladies at these meetings would do much to tone down the roughness that is too apt to attach to athletic sports. The following is a summary of the day's performances:

Three-mile walk—F. B. Foote, class '78, 1st. Time, 29:18.

20:18.

One hundred yards run—H. Duane, class '76, 1st.
Pitting the shot—J. O. Burke, '76, 1st. Distance, 32 feet 34 inches.
Throwing base ball—W. F. Zimmerman, '76, 1st. Distance, 312 feet 7 inches.
Standing high jump—Joseph Kingsland, '76, 1st. Height, 4 feet 2 inches.
Standing long jump—J. O. Burke, '76, 1st. Distance, 9 feet 5 inches.
Half mile run—Duane, 1st, Zimmerman, 2d. Time, 2:284.

284. Blindfold race—W. C. Smlth, '78, 1st. Running high jump—H. W. Hazard, '78, 1st. Height,

Running high jump—II, W. Hazard, '70, 18t.

4 feet 4 inches.
One mile walk (walk over)—F. B. Foole, '78. Tin
Running long jump—Hazard, 1st; 16 feet 1 inch.
Three-legged race—Hazard and Duane, 1st.

-The Rose Hill College nine on May 12th whipped the Flyaways by 11 to 7.

-The Live Oaks and Harvards played at Lyuu, Mass., May 8th, when the collegians were beaten by one run.

Guo Eograving Co., West Merideo, Conn.

Phil, Lexingion, Ky.—In your valuable paper of the 6th of this month is an interesting article on the "New Method of Cramberry Culture." Can you inform mo whore the plants can be had, when to plant, and the price per 100 or 1,000 plants? I feet anxious to see the experiment tried in this blue grass ragion. Ana. The author of the article is slend, and no cannot inform you.

M. R. C. New York. In these good sales a labeling in the price of the sales of the control of the control of the sales of the control of the cont

in the vicinity of Port Washington, N. J., during Joly and Angust, and is it a pleasant place for a party of ladies and gentlemen to spend the Summer? Ans. First rate; bass, weaknah, soft crahs, &c., &c. Maoy plaasant hotels and boarding bouses on the river.

R. S. J., Sacramooto.—In Forest and Stream of April 20th I see a notice of a new motal shell for breech loading guns—Hart's, of Newark. Can yoo give me the maker's address, or any other information whereby I can get usample of them? Ans. See our advertising columns of May 13th and following. Wa will request that samples he forwarded to you.

La Far, Sarannah, Ga —What kind of a gun is the Whitney Sporting Ritle, which I see advertised in your paper? Is it not very much tike the Remington, except that it throws the shell clear of the chamber? Ans. The Whitney Rifla resembles the Remington in appearance. As to its shooting qualities are shell be better loformed shortly, as we have one under trial.

Chas, Baren, Poughkeepsie.—How much will it cost, and what kind

nnder trial.

Chas. Barra, Ponghkeepsle.—How much will it cost, and what kind of game la there, and would it pay a party of two or three, in any part of Pennsylvaois, bunting and trapping? Ans. In Elk, Potter, and McKean coin les, on the Linnanishoming and tribularies, are still many deer, bears, cate, and a few paothers and for beaving animals, but we hardly think in sufficient quantities to pay.

SETTER, Fort Scott, Kan.—Is there not a plan of docking and drawing the cords in a dag's tail, so as to render it perfectly straight and right, and can the done on a dog past six months of age? And. If the tail of your setter to long or out of proportion, it may be docked to advantage, but the drawing out of the cord is a cruelty and of no use.

C. W. R., New York.—Will you please inform the if you know of any place (not very far from New York city) where there is fishing and hosting; terms not to exceed \$7 or \$5 a week? And. There are doubtless many families along Long Island Sound and ou the New Joisey coast who take boarders at the price you mention, say two hours' sail from X York, but we have noted in mind at present.

H. F. R., Philadelphia.—Too have said the "rowing apparator" was the best method, for bringing out the muscles on the chest and shoulders, therefore you will greatly oblige me by giving me the address of the patchs who sell them? Ans. Jos. S. Baldirin, P. O. box 53, Norvark, N. J. Send for circular and price list.

INDIAN PARS.—Are there any other books on the Addrendack region

INDIAS PARA,—Are libres any other books on the Adirondack region except Headley's, Murray's, and the "Nodern Babes in the Woods?" Aus. Yes, several, among them are S. C. Stoddard's linetrated Adirondacks, published by Weed, Parsons & Co., of Atbany, and Varplanck Colvin's Adirondack Survey, recently published by the sume fru. It. Todd's "Long Lake" was a very pleasant and instructive book, but probable out of print. ably out of print.

ably out of print.

ZENUA THOMPSON, JR.—Can you tell me what makes my setter droot? Both three years old, and has been confortwo years. Long strings of spinle will hang from his mouth sometimes; cannot see anything the matter with his mouth. It is very annoying at times, as he alobhous everyibing ha toneless. Can you suggest any remady? Ans. Your setter may have old sumps of teath, which should be removed.

S. F. C., Jersay City, N. J.—I have read considerable about the Huckonsack River being stocked with different kinds of fish. Can you inform me what part of the river it is, as I live within a short distance of it on Jersey City Reights? What kind of fish and what sort of bate would I need? Ans. The Huckensack River was slocked a year or two ago with black hase and salmon trout by the New Jorsey Fish Commissioners, and anglers are forbidden to calch those dishin its maters under severe penalties.

J. C. C., New York.—Seeing in the Hilustrated London Notes of May

Commissioners, and anglers are forbidded to each those dahin its majers nuder server penalties.

I. C. C., New York.—Seeing in the *Hinstrated Landon Noice* of May Isi, 1875. W. Slads and J. Gibb's extraordinary time of 20m. Cls. in their four mile walk, I write to ask you if thus can be correct, and if you have the fastest time on record for each a walk (amister or protessional)? Ans. The report to which you allode was a running match. The best professional time on record at four miles to 20m. 30s. by J. Stockwell as London; best amaked time, 20m. 37s., by W. J. Mosgan, same place.

C. W. H., Philadelphia.—Do you know of any work that I can buy which will give me information how to catch pike, black base, rock and other fish found in the Delawara Rives? Ans. Practical instruction to angling has scarcely been altempted. The art can hadly be impasted by books. Norris' "American Angler's Book," Frank Forester's "Fish and Fishing," Roceovelt's "Gann Fish of the North," and Seett's "Fishing in American Waleta," are the most complete modern works we have.

F. O. W. H., New York.—Are there are phoading houses in the vicinity of Lake Hopatcong, N. J.; where are they, and how can I get to them, and what is the price of board per week? Is the fishing in said lake good, and what kind? What style of tackle would t need? Ans. There are good hotele on the lake shore at Hopatcong. Take Morets is Essex Railroad to Drakeaville. Hotel rates reasonable. Falt pickerel dahing in season. They are taken with Burd spinners, trolling.

Captarr, Moocehend Lake, — You will find enclosed a rough sketal, of a propheson Hyper place Ripper and the season and the season and the season.

ushing in season. They are taken with Burl spinners, trolling.

CAPTAIN, Moosched Lake.—You will find enclosed a rough sketch of a fish caught in the Penobscot River below Ripogenna Lake; weighs to a pound, marked off in brown scollops, to the centra of each of which less bright red spot; has fine scales, a little larger than those of a tront, and by scraping the fish the red spots become brighter. The meanlight colored, about the same as a small brook trant, and is about the same inflavor. The fish rises to a fly in the months of July, August and September. What is it? None of our sportsmen seem to know. Ans. Undoubtedly a smolt or second year salmon. Mr. Alkins is to blame for this

Undonbtedly a smolt or second year salaton. Mr. Alkins is to blame for this.

A D. S., Springfield, Mass.—Will you please tail on what will enrocanker to black and tan dogs?. Symptoms, salargement of glands of throat, offensive breath and dythiling from the mouth. Said to be a common disease, but we are unable to find a remedy. And Canker of this mouth often arises from atomps of old teeth, which should be recoved. Then take ladide of from two grains, powdered mr. vonica haif a grain, solicine two grains, extract of gentian, all grains, powdered quassla, as much as may be required. The above makes one pill; give three or four daily, and a gentic purgative, if required.

Amenions, New Humburg.—Some time lest year I read an article for the Fourer and Stream, salating that some time this season there were to be a grand trial of all the breech leading short goes of both Enchal and American manufacture, noder the direction of a board of experie? In such trial likely to occor this season, and if so whee? Ans. Such a trial line been projected, but not finally arranged; when it is, notice will be given through nor columns. 24. Are not lancewhood, bernbeam, and bucktorn used by red makers in meking tips of rode only, and is not greenheart used in making salmoureds, all but the joiner? Ans. A completed article on these very subjects is necessarily emitted from our columns until next week.

R., Fertsburgh, Vt.—Frank Foresiev describes the beagles as "a received will consider a product of the Southern bound," peritenlaries meaning as a "a received will consider a product of the Southern bound," peritenlaries meaning as a "a received william of the Southern bound," peritenlaries meaning as a "a received william of the Southern bound," peritenlaries meaning as a "a received william of the Southern bound," peritenlaries meaning as a "a received william of the Southern bound," peritenlaries meaning as a "a received william of the Southern bound," peritenlaries meaning as a "a received william of the Southern bound," peritenlar

until next iveck.

R., Fortsburgh, Vt.—Frank Foreslev describes the beagls as "a pocket edition of the Soothern hound." periterilerly mentions his miledious voice, and says that his "ears should have doen as far amout as to the chow." Are such beagles to be found now, and if so, where? I have seen a couple of imposted English houghs that are far from an awaring this description. They have little of the appearance of the bound, and thoir cry as immeladious as the yelping of a turkey. They have, however, fine intelligent faces, and their binating qualifies are very good. Ans. According to "Encyclopedia of Ruial Sports," the bracks should essemble the Southern for hound in miniature and be not over affected inches in belight. But those we have been be appointed from England and France bave not the full voice and length of car of such bounds.

Docton, Boston.—Cannot good sea trout fishing with the fly be contained.

THE FIELD GUN TRIAL

UNDER its appropriate heading, and as heing a subject of great importance to the sportsmen of this country, we devote much of our space this week to a description of the above trial and the comments thereon. Mr. Greener, as the winner, has certainly substantiated his claim to he the manufacturer of the closest shooting guns, hut we would suggest patlence and moderation to those who may fell inclined to rush into the new system which is llkely to follow in the wake of this trial. Nor can we agree with the Field that if the "wear and tear" test, as applied to the winning guns, is successful, that "every sportsman must order a new gun or be hors du combat. oth in the open and in hattue shooting, as compared with those who are furnished with guns on the new system."
For the average shot, in this country at least, extremely close shooting guns are neither necessary or desirable.

For shooting matches at pigeons, where only experts, as a rule, compete, and hirds must be killed within certain houndaries, they will be found of advantage, but for field work we imagine that in the majority of instances birds would either be missed clean or so riddled with the would either he missed clean or so riddled with shot as to he worthless. The "wear and tear" will also be a serious consideration. It is admitted that the ordinary Damascus metal will not stand the strain caused by the "choking" or constriction of the barrel, and the makers who have

adopted laminated steel are only willing to warrant their guns standing the test for one season. For the wealthy classes of Great Britain, to whom the shooting is almost entirely confined, and who can replace their guns at it may answer, but for our people, who flud most of their shooting on the Western prairies, such extravagance is not permitted. Time alone will decide whether the new system is to replace the old, and we helieve that guns bored straight or nearly so, will, in the long run, find most favor with the majority of sportsmen. However the question may be finally determined, great credit is due to the Field for the spirit in which this trial was conceived, and the admirable manner lu which the details have been carried out.

THE RELATIONS OF MAN TO THE UNI-VERSE

EVERY field of science, from biology to geography, is at present worked with a patience and perseverance that cannot be surpassed; for truth to those who love it possesses as many beauties as the paradise of Mohammed had for his followers, and they reach the goal of their aspirations when they find it. According to one of the most eminent of the delvers for truth, their purpose is not to dispute the principles of theology hut to learn from nature herself, as far as her teachings and suggestions will permit, what the composition of the universe is how and for what ends it was created, and hy what means the happiness of man can be increased. They are governed alone hy a spirit of inquiry, which is the most marked characteristic of the age, and the unfailing indicator of the intellectual activity of the people. Their researches thus fur have enabled them to learn the first with tolerable accuracy and to precently the third hypersection. racy, and to accomplish the third hy means of inventions, studying the laws governing unture, the education of the muses, and the establishment of justice; but the second proposition they are yet unable to answer in a satisfactory manner. That it is not an accidental creation is evident, as it shows a purpose and laws immutable in their action, and that it could not have been a mere caprice, is also apparent; hence the dilemma from which the most astute scientists cannot escape with even the most plausible theories. Was the universe created for the pleasure of man alone? This proposition cannot be unswered satisfactorily, inasmuch as the human biped is supposed to be known only to this planet, as the different conditions of soil, products, light, and atmosphere in other planets could no sustain him, at least in his present form and with his present cut wants. Does man inhahit other planets than this? This question must also remain ananswered until human knowledge enables it to overcome all the forces of nature, and to defy space. The supposition, however, that the man known to the earth cannot exist elsewhere, for the reasons specified, would seem to prove that the universe was not created for him alone, and that it has other purposes in view and other duties to perform, besides realistics. poses in view and other duties to perform hesides making him master of all terrestrial matters, and hringing him to a millennial perfection. The discovery of the fact that life cannot be totally destroyed by even the most violent convulsions of nature, and that it springs into activity when permitted, and readily adapts itself to the metamorphosed conditions of the elements, would seem to support this theory in the minds of some scientists, and, therefore, to make the problem as unsolvable as ever. It has also been learned that every epoch produces its own variety of ani-mals, and that they die or become supplanted by others which differ totally from them, although hearing a generic resemblance, and that man is subject to the same transformations, though not to the same extent in bodily form, as made evident by the different races; hence to learn the purpose and importance of man in the economy of creation is now the subject of mental microscopic analysis of several European societies. The latest announced result of the decision of one of the investigators, at least, is that the planets are subject to violent changes, owing to dirturbing causes; that by these changes they after their physical and atmospherical condition, and that the new plant and animal life that springs up subsequently is adapted to the metamorphoses, and progresses gradually from a low to a higher order; that man being subject to the same influences as all other created things, is affected by these mutations and, as a natural result, that he differs in form and character in the various cpochs or periods of the world's existence. Arguing on this hypothesis he attempts to prove that the same transformations will occur again, and that the present races will differ from those of the future. From the present races will differ from those of the ruture. From this premiss we can easily draw the deduction that while man may play monarch of creation, yet the universe is not formed for his special pleasure. If this is the result of biological investigation we do not see that science has hrought us any consolation in that direction; that it has increased our hope, made hrighter our anticipations, or, in fact, accomplished anything hut to prove that we are of little value, after all, in the scale of creation; tuat our wishes are never consulted, and that we are neither like augels nor gods.

The editor of this journal takes this occasion to publicly thank the "Rod and Gun Cluh," of Springfield, Mass., for their courtesy in making him an honorary memher. Success to this cluh, say we. May a trigger never be drawn in vain by one of its memhers, or a single bird has shot out of season, or double, hirds either. be shot out of season, or double hirds either.

-Capt. Bogardus gives a public exhibition of his skill in shooting pigeons at Deerfoot Park, L. I., on Monday, 24th.

THE STATE BENCH SHOW.

HE meeting of the "State Association for the Pro-The meeting of the "State Association for the Protection of Game and Fish" will be held at Watertown, commencing on Mouday, May 31st. At the same time the bench show will be held. The programme has been arranged, and is ready for distribution. There are ten classes, arranged in the following manner: Red Irish setters; Field Trial and Laveracks, including all breeds other than red Irish and black and tan setters; black and tan setters; pointers, large; pointers, small; cocker spaniels, for hounds, dachshunds, and beagles. Class 10 is the champiou class. In it are three prizes for the best setter whelp, the best all aged setter of any hand or either way and for the best all aged setters of any hand or either way and for the best all aged setters of any hand or either way and for the best all aged setters of any hand or either way and for the best all aged setters of any hand or either way and for the best all aged setters of any hand or either way and for the best setters are set of the control of the best setters. the best all uged setter of any breed or either sex, and the best pointer of any age, large or small, dog or bitch. In each of the other classes there are a first and second The prizes prize for the two best dogs and hitches. doubtless the most valuable yet offered at any bench show, and will, it is surmised, have the effect of bringing together a very large number of the best dogs, both native and imported, owned in the United States and Canada

The prizes are the Forest and Stream cup, the Turf, ich and Farm solid gold medal, worth \$75; four solid gold dog whistles, worth \$40 cach; two handsome solid silver cups, worth \$60 cach, one of which is donated by the Latin & Rand Powder Company; two solid gold medals, donated by J. D. Dougall and W. & J. Tolley; a fine Parker gun; an elegantly-engraved silver plated and fine Parker gun; an elegantly-engraved silver plated and gilt Remington revolver, with mother of pearl handle, and six solid silver cups, worth \$25 each, and the same number of solid silver collars.

The railroad company from Rome to Watertown will transport all dogs for the show free, and Mohawk, who has charge of the affair, is in hopes of getting Mr. Vanderhilt to do the same on the Hudson River and New York Cen-

THE LUXURY OF PRAINTE TRAVELING.—Our correspondent "Bison," whose sketches of wild Western life have so often entertained the readers of Fonest and Stream, is an officer of the United States Eleventh Cavalry. He is about to be absent from duty on sick leave, and has mapped out a Summer journey for his health as follows. He writes:

"I am going to New Mexico via the whole of Texas, or via Forts Griffin, Coucho, Stockton, Davis, Quitman, and El Paso, and then up through New Mexico via Forts Selden, McRae, Craig, Stanton, Sante Fé, Union, and then, I think, to Fort Garland, Colorado, to Deuver, and East."

It may be well to mention how our friend proposes to travel, not only for the interest of the general reader, but travel, not only for the interest of the general reader, but to demonstrate the practicability of the route of the "Big Hunt" proposed by Col. McCarty, which is almost identical with this, and about which so much cavil has been made. He says: "The trip I have laid out for myself is 1,600 miles by land. I shall go in my own carriago, probably taking my wife with me, and pass from post to post, taking advantage of wagon trains for safety. Two companies of traces or from best Fort Saill to Fort Poris and panies of troops go from here [Fort Sill] to Fort Davis, 600 miles, and we will travel together that far."

Col. McCarty, to whom we have incidentally referred, has been in Texas for some time past in company with sev Englishmen, who recently came over with him to verify bis statements, and to assure themselves of the practicability of the proposed expedition, and the integrity and good faith of its projector. The Texas papers that we have seen speak favorably of the whole movement. McCarty will soon acture to England, and the company will prohably reach America about July 1st.

THE RAINBOW AND THE POT OF GOLD.-What is that heautiful allegory that we all used to hear when we were children, that, if we could reach the end of the rainhow, we should find there a pot of gold? How the illusion van-ished as we sped on in its pursuit! and how the promise failed at last! We have been taught that this is the experience of human life, and moral lessons have heen read upon the fallacy of great expectations; but we have at last found a person—yea, an angler—who has actually succeeded in reaching the end of the rainbow, the abutment of the glorious are, and found there a pot of gold! not a veritable pot of the yellow ore, but that which possessed of gold! not a the intrinsic value of the precious metal. It happened in this wise, and the incident is told in a pleasant private letter by a correspondent who has frequently entertained our readers with sketches of wild wood life.

our readers with sketches of wild wood life. We quote:

"I am glad your how of promise is bright, and hope the
pot of gold is awaiting you. I, too, once found it. I
was standing on the edge of a lake easting for black bass.
The rain, which was pouring, drenched me. Of a sudden
the water seemed a combination of all the most benutiful
colors, and drops innumerable were dancing at my feet,
each separate drop resplendent with color. I was literally
standing at the foot of a gorgeous rainhow. Each east
brought one or two ravenous mouths at my flies, which no
sooner touched the water than they disappeared, and my
line played Æolian airs as it went whizzing through the
water. It was a 'pot of gold.' I have never seeu a rainbow since hut what fancy carried me hack to that lake
shore."

LAKE CONCULCTING, MUSEOKA.-We call attention, without request, to the advertisement in this journal of the Conchiching Hotel, which we consider the most attractive family Summer resort in Canada. Its varied means of enjoyment have contributed to some of our happiest leisure

The Rifle.

CREEDMOOR.

During the past week the American team have had two days practice at Creedmoor. On Wednesday the weather wood ays practice at Creedmoor. On Wednesday the weather was still regainst good scores, but this very fact may result in ultimate high as the men must necessarily acquire a better knowledge of the effects of the wind and facility in arranging their wind guages. Wednesday's totals at the filtree ranges were as follows:—Major Henry Fulton, 143; H. S. Jewell, 141; General T. S. Dakin, 140; Captain L. C. Bruce, 137; Colonel John Bodine, 137; R. C. Coleman, 194; A. V. Canfield, Jr., 130; G. W. Yale, 123.

Ou Saturday the wind was much more favorable and the scores correspondingly good, but still not up to the mark requisite to ensure a chance of success. The following are the figures:—Major Henry Fulton, 158; Colonel John Bodine, 157; General T. S. Dakin, 151; G. W. Yale, 146; A. V. Canfield, Jr., 146; Colonel H. A. Gildersleeve, 135; R. C. Coleman, 132; L. M. Ballard, 116; Captain L. C. Bruce, 112.

An interesting feature of this day's practice was the photographing of the team for *Harper's Weekly*. The team of 1874 was first taken in a group, after which the team of 1875 including the reserves was photographed. Two gentlemen were practicing at the new Wimbledon targets with the circular bullseye and the new mode of counting. It is worthy of note that while those who have sketch the county of note that while those who have sketch the county of note that while those who have sketch the circular bullseye and the new mode of counting.

—The team had an off day on Monday, when four of the nuembers indulged in practice. Col. Gildersleeve and Mr. Canfield were both rather unfortunate, the former from using a box of mixed ammunition, the difference in the two grades altering the elevation to the extent of seven points. Mr. Canfield lost the fore sight of his gun, and the substitution of a temporary one did not improve his shooting. The scores made were as follows:—Major Henry Fulton, 155; R. C. Coleman, 144; General T. S. Dakin, 141; Colonel. Gildersleeve, 129; A. V. Canfield, 128.

THE CALIFORNIA MATCH.-Co. D. 12th Inft., under command and direction of Capt. H. B. Smith, are preparing vigorously for this match. On Saturday a competition for places on the team was shot at Creedmoor, with the following results:

The decision shall he given in writing to the Sovietary, and shall he find, while the decision of the Board of Directors, whose decision on each question to the decision of the Board of Directors, whose decision on each question shall he find. No exception will be allowed, however, to the marker's signal.

2. Unless otherwise ordered, the shooting in the Spring and Fail matches shall begin daily at 10 A. M. and crase at sundown. An intermission in the firing of one hour will be limit at an ear moon as the progress of the markers will permit, included by fring a gun, the fring to commence fire minimates after the dring of a second gun.

3. No practice will be allowed upon the range during the week of the Fail meeting, noises necessary to drill the markers and scorekeepers.

GEO. W. Wingarte.

JNO. B. WOODWAID.

We have searched.

-We have received a copy of a pamphlet report of the late International match, which has been compiled for the Amateur Rifle Club. It contains an exhaustive account of Amateur Rifle Club. Il contains an exhaustive account of the match, illustrated by steel engravings and portraits. The pamphlet can be had from the various agents of the Remington and Sharps Rifle Companies at a cost of fifty cents, the proceeds of the sale being for the benefit of the funds of the Amateur Rifle Club.

The Erie Railway.—We would call the attention of our readers to an advertisement of this road in mother column. The beautiful scenery along its line is too well known to need description here, and some of the finest shooting and fishing to be lead within a reasonable distance of the city is found adjacent to it.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

-The meeting of the State Sportsmen's Association has been definitely fixed for Monday May 31st.
-The Paine Bogardus match has been postponed to

In our report of the Annual Re-union of the Philadelphia Sportsmen's Club in our last issue, we were in error in stating that the second prize at trap shooting fell to Mr. Mr. A. Biddlo was the skillful competitor to whose lot it fell.

whose lot it fell.

—At the annual meeting of the Central New York Club, held at the Briterfield House, Utiea, a week ago, the following officers were elected:—President, Thomas R. Proctor; Vice Presidents, Wm. M. Storrs, Jas. G. French; Secretary and Treasurer, Charles R. Weed; Executive Committee, John D. Kernan, J. Fred Maynard; Delegates to State Sportsmen's Convention at Watertown, Chas. W. Hutchiuson, E. B. Graham, I. C. Melntosh, E. Z. Wright, Col. F. G. Skinner.

There will be a large delegation from the Central New York Club at the meeting of the State sportsmen at Water-

-The sportsmen of Bridgeport organized a club in that city on the 15th instant with a goodly membership.

FIELD GUN TRIAL OF 1875.

W E append herewith the results of this important trial as far as received. It will be borne in mind that the "Class 2" to which the table applies was composed of guns of any kind not exceeding 13 guage, the charges to be 1½ oz. number 6 shot, and no restriction as regards powder. "Class 1," comprising guns of 8 guage and over, had not been sbot at the time the last issue of the Field was in press. The guns were fired first at 40 yards, with a Petitt pad in the centre of a 30 inch circle, six sbots from each barrel. The greatest number of pellets within the circle being added to six times the number of sheets penecircle being ailded to six times the number of sheets pene-trated by three pellets in order to give the figure of merit. The six highest gurs in this round were selected for a accord round, and shot at a target 4 feet square, having a Pettitt pad in the centre for penetration, and a selected group included in a 30 inch circle drawn from u centre se-lected by the competitor, for pattern: six shots being fired first at 40 yards, and the same number at 60 yards, the figure of merit being computed in the same manner as in the first round; the gnn making the highest score from hoth distances to be adjudged the winner of the eup. Our space will not permit of our giving more than the names of the competitors and the figures of merit in the first round: space will not perint of our giving more than the names of the competitors and the figures of merit in the first round; in the second we give the total scores. It will be remem, bered that a maker was not confined to one gun. Messrs Thompson & Son, Messrs J. Rigby & Son and Mr. W. W. Greener, used the Pigou powder, and the rest the Curtis &

Harvey; 3 dr. was the average charge:—
FIELD GUN TRIAL -TABLE OF RESULTS.

Wass 2, for 12 gauge and under, of any boring, weight not exceeding 71 pounds, charge of shot, 11 ounces.

The Field comments upon the result of the trial as fol-

Mr. Mateham.

The Field comments upon the result of the trial as follows:

"Our readers may remember that we have proviously expressed our opinion that the new system is an immense improvement on the old, if only the wild shots hitherto met with in the recorded trials at Birmingham and Wimbledon can be climinated, and it is found that the guns so bored will stand the test of work. On the first of these points the present trial will satisfy everyone that by longer experience the cause of this want of uniformity has been discovered, or at all events that the effect bas ceased; for by an examination of the returns it will be seen that the shooting has been unusually regular—far more so than that recorded by us in 1866. Mr. Greener's lowest pattern with list best gun, out of 24 shots, was 157; Mr. Pape's 89 once, the next being 145 twice; Mr. Baker, out of 48 shots with list two guns, had 78, 105, and 115; while Mr. Davison only dropped to 100, 108, and 125.

With regard to "wear and tear," our present trial only extended to 66 shots with the six winning guns, which each shot 22 eartridges in the first round; then 22 pit shots (after cleaning out); and finally two rounds of 12 cach—first at 40 yards, and afterwards at 60—the last 46 without being louched with the rod, and leaving no perceptible trace of leading. Two of the four competitors left in for the final round (Mr. Greener and Mr. Baker) have, however, agreed to carry on the trial under our supervision for the next three months, firing with the same gun three or four bundred rounds a week, and taking after each hundred half a dozen target shots, which we will record from time to time, so that our readers may judge for themselves the effect of "wear and tear" upon these guns.

The increase of penetration is, as we have before remarked, even more marvelous than the increase of pattern; for it unist he remembered that in this trial the unmber of the first of

45 sheets with 3 pellets. Of the six left in Mr. Pape scored 44×6—240; Mr. Baker getting 39×6—234; Mr. Greener and Mr. Davison each 38×6—228. Several pellets at 40 yards broke the sheet iron facing of the target, 1-18th inch thick, and the deal frame of the iron plate for defining the 30-inch circle was completely reduced to tinder in the two days' shooting, rendering a new one necessury. Clearly, if the "wear and tear" test comes out successfully, every sportsman must order a new gnu or be hors do combat, hoth in the open and in battue shooting, as compared with those who are furnished with gnns on the new system. At our trial of 1806 the winning pattern was 127-1, and the penetration of one pellet 25-4, and this pattern has not been quite reached in the first round of "Class 3" at this trial, though the penetration has been greater. Our impression is that the laminated steel used by Mr. Greener and Mr. Papo is a great aid to the new horing, but this is only an impression. Such as it is, however, we put it forth for the benefit of our readers. The constriction or "choking" of the muzzlo seems to us to require a harder kind of metal than Damascus to stand the severe strain put upon it, and we have reason to believe that several gunmakers, who have tried the new system with Damascus barrels, have condemned it as not standing even for a fortnight; while those who adopt laminated steel are ready to warrant their guns to stand at least one season without loss of shooting power, and then to be easily brought back to their old form at a very trifling expense.

With these cursory remarks—and merely adding to them the fact that all the guns left in were used with chilled shot, as were also more than three-fourths of the whole class, we must close our first report of this most interesting trial."

WOOD POWDER TESTS.

NORWALK, Coun., May 10th, 1875.

Norwalk, Coun., May 10th, 1875.

Edition Forest and Stream:—

I got a can of wood powder at Squires' the other day—at least I suppose it was Dittmar's wood powder; that is what I inquired for. It came in a square in can like boxed muslard we get at the grocery stores, with a cover the whole size of the lop of the box. It kad uo label of wrapper stating whether it was Dilituar's, Schultz's, or muslard; whether it was for rifes, shot gans, or pistols; how much to use, or bow little. It looked like granulated mustard, and I thought may be it was; but I bad asked for Dilimar's wood powder, and I knew Mr. S. practiced giving what was called for, so I allayed my suspicions and invested and took a can bome. (Would't lib be wet to label for benefit of buyers?)

It was quite a cariosity among the boys. Doe declared it was a fraud, and I was just 'guilting' my friends a little, and conflued to look at it in that light and was quite officious to belp me show up and explain, and so help 'take them in.' But I induced him to load np his gan next morning, although be continued to protest I was fooling bin, and if tree, I had better put some ground between us. I stood at my post and he held the barrels straight, and to my sattefection and his astonishment (as he afterwards said) 'it went off' with brite smoke, slight report, un recoil, and a well peppered target spoke for the efficiency as a powder.

But the next one that experimented was not salisfied. We substituted for bis benefit an ounce of siffed seeds which a person not familtar with them would easily confound with the powder. Ho loaded a few shells that evening, and after getting targets ready, ground measured off, &c., he proceeded—well, tried to shoot. No result reported, but know it was domaging to Ditmar and to us. But It cost the 'shoottat' roast oysters for six next day—'only don't say anything about it, boys.''

Now that I have gliven you two triels that made fun for us, I will give you the results of some experiments libat will show how it actually worked will

It will be seen by the above that O. F. Stone won the first prize, and Eugene Barthe carried off the feather. Hoping that our fall shoot will show an Improvement, I remain, respectfully yours,

A. C. Bingoram, President Yuba Shooting Club.

-The pigeon shooting tournament of the Meadville, Pa., Sportsmen's Club was called for the 19th May, and we presume took place yesterday. The prizes amounted to \$200, and 1,200 wild birds were to be shot at. We hope to receive a report of the proceedings.

CLINTON, Ill., May 1st, 1875

CLINTON, III., May 1st, 1875.

EDITOR FOREST AND STREAM:—
There is an old raying "there is nothing new under the sun," bot I think the fullowing cell be new to a few, if not a great many, readers of the Forest and Strikeam, and perhaps interesting. Blink being searce in this section, and almost impossible is procure at any price, at the suggestion of an "old sport" we concluded to shoot a nonth at eggs thrown from a spring trap, as follows: The shooter to reland twenty-one yards from the trap, and at the command "pull" the egg to be thrown by the trap about fifteen feet in the sit, and to be scored as "bit" must be hursted before the strikes like ground. Four of our best shots concluded to test their skill as "egg smashers" to day, and to make it interesting a pool of \$50 was made up by the contestants, the highest score to with. None of the following parties ever shot an egg before, therefore we think it very fair shooting, and a good test of close shooting guns, as the egg will not break unless hit by three or four shot. Each man shot 102 No. 5 shot.

PIGEON SHOOTING BY WHOLESALE-BOGARDUS' QUICK TIME.

PHILADELPHIA, Pa., May 11th, 1875.

RDITON FOREST AND STREAM:—

At SUROIC Park, Philadelphin, on May 13th, Capi. A. H. Rogardus, the changlion wing shot of America, executed a feal remarkable in the annals of pigeon shooting, viz: the killing of fifty-three pigeons on the wing in six minutes and twenty seconds, loading bis own gmi. After the match letween Miles Johnson and Dick Wood (score—Johnson, 1011 O 111; Wood, 11001110; Wm. Carson and Bagardus shout system single brinds, R. t. tulies, lo give the Contain a little practice with his 12 bore, which he was required to use in his unficipated match of the Paine, and also to allow the old veteran. Cursun, to try his skill ofth the champion, whom he succeeded in defeating by one bird—score, 12 to 13. Bless that 12 bore? Then came the exhibition, and a sight it was. Ording to some negligence the plunge trags were not on hand, and as it would be folly to use If or T trups in a time match, the matter one arranged as fallows: Two boxes, each containing thirty plgeons, were pinced at two different points right and left of the shouter, twenty-five yards from him. One man as to band out the hirds and another at each bux to alternately throw two at a time as high in the nit as possitive when the word was given. So Bogardus steps to the shand, have not twenty-five 12 bore paper sables in a row, and next to them thirty to bore ditto. His gin has two sets of harrels that are so arranged that, although one set is No. 12 and the other No. 10, they fit the same stock, and either one young the high paper should be rown of the shooting, for neither set would shand lifty shots in seven neinnets, or if they did, could not be held, even with bis luck-skin gloves on. Well, the Captain's coat is off, such himself and lifty shots in seven neinnets, or if they did, could not be held, even with bis luck-skin gloves on. Well, the Captain's coat is off, such himself are to-sed linto the sit. One starts off like a scared with did not, he lift and a cloud of cathers of progress of the serve

Bational Pastimes.

CRICKET AT PHILADELPUIA.—The second match of the season was played on the Germantown grounds on Saturday, 15th instant, between the Germantown and Philadelplia clubs. The wickets were pitched at 11:30 A. M., and drawn at six P. M., and as the game was played on the "general average" plan, though the Philadelphias led their opponents in the first innings by thirty-six runs, the tables were turned in the second iunings, the Germantowus securing 122 with five wickets down. The howling of Tom Hargreaves for the Germantowns, and of Magee, Law, and Meade for the Philadelphias, was excellent. Indeed, the play of the latter amply repaid them for their journey to be on hand. The fielding was good on both sides, and though there was considerable hard hitting the scores were acquired mostly by twos and singles. Next Saturday the Germantowns and Young Americas will play, and a good game may be anticipated. As soon as possible, the "general average" plan will be perfected and published, and will, we tbink, meet with the general favor of cricketers.

The New York Athletic Club will held as Securing.

-The New York Athletic Club will hold a meeting on their grounds, at Mott Haven, on May 31st. The New Jersey Athletic Association will hold a similar meeting at Ridgewood on the same day.

On May 13th the Frontiers defeated the Mystics, at Prospect Park, by 10 to 8.

—Saturday last was the first day of the season that offered any inducement to yachtsmen to cast-off from their moorings for a cruise down the bay. Several yachts which have been in commission for some time availed of it. The William T. Lee, Mr. Cheever, sailed for Rockaway. The Comet, Peerless, and Agnes were also out.

—The sloop yacht, Vindex, is to appear this season rigged as an Euglish cutter with the exception of the housing howsport.

-The American Yacht Agency has already for sale over \$300,000 worth of yachts,

—Mr. Wm. Smith, of Baypart, L. I., has on the stocks almost ready for launching a fine sloop ynchi, to be unined the Maria, and huilt for Mr. R. H. Huntley, of the Brooklyn and Atlantle Yacht Clubs. The dimensions of the yacht are: 40 ft. keel, 48 ft. on deck, 1B ft. beno, and 4 ft. 10 in. hold; mast, 64 ft.; bonn, 44 ft.; gaft, 23 ft.; lopmast, 22 ft.; jb, 30 ft. on foot; holst of midnesil, 38 ft. The cablin, which is very roomy for a vessel of the size, contained two staterooms, and is fluidled in black walnut and gift mouldings. Altogether, the Maria does great credit to her well known and popular builder, and ove concompartilate Mr. Huntley on the possession of so fine a craft for his Summer cruising.

—The Great South Bay oysterioen, as their oyster season approaches its close, are preparing to transform their loads into pleasure craft for the Summer Inryest. The Fire Island docks will be throughly with them evailing to take parties trolling. The "loay" is a hemitful phase for sailing, and the fishing cannot be surpassed on the coast.

Brooklyn Yacht Chun.—The regular meeting of this

and the fishing cannot be surpassed on the coast.

Brooklyn Yacht Caun.—The regular meeting of this club was hold on Wednesday last. The Regular Committee reported that arrangements for the regular were all made. The following gentlemen were chetral members by bulled. G. B. Carsen. J. S. Beecher and Messrs. Peck, Turmer and Tynen. Three new yachts were added to the fleet. The entries for the regular are so far twenty, the usual course to be sailed over. The sudget of a new club house was then debated and laid over till the next morning. The Treasurer's report showed a rash baharre on land, outside of the sinking fund, of \$187. Ex-Mayor Gunther stated that he was about to lease his hotel at Gravesend, and offered to building a new club house on it, rent free, if they would accept the offer. It was put to a vote, and the ex-Mayor's kind offer accepted. The following grullemen were then appointed a committee to examine the premises and report upon them:—Messrs. J. S. Dickerson, M. T. Davidson, Robert Dillon, H. S. Wood, and S. S. Illond. The meeting then adjourned, subject to the call of the chair.

The Boston Yacut Cion are incely again in their old quarters at the club house at City Phint, from which they were suddenly routed by the ice. The pictures presented them by Con. R. B. Forbes are lung and make quite an attractive addition to the collection previously upon their

walls.

The Dominester Yacut Chun open the seamn next Salurday, 22d inst., with the lirst series of cimupionship tegattas, in Dorchester Bay, Hoston. The several new yachts and improvements in older ones, the merits of which it takes a regata to decide, will make the accusher exciting.

—The Perth Amboy Yacht Club, at their anomal needing elected the following officers: Commodore, William Bull; Vice Commodore, Francis M. Scott; Treesaure, Evan Thomas; Secretary, William P. Boggs. A regatta will be held on Monday, the 31st instant, at which only boats owned by members of the club will be minitted.

—Mr. Garner's new yucht, the Mohawk, will be ready

-Mr. Garner's new yucht, the Mohnok, will be ready for launching about the 1st June. She will be fully rigged before launched, her masts and howspert being already in

—For the proposed national regatta at Cape May there are already nine entries, including the Mohawk, now on the stocks. This regatta will rank next in importance to the regatta of the New York yacht clubs among the events of the new area.

of the present senson.

—Every fine afternoon sees the fleet of minimum yurlds aflort on the the pand at Prospect Park. The Commissioners refuse to provide a suitable place in which to keep the bouts, and as the transportation of a yucht of 60 inches is no easy matter, the number of boats is very much reduced.

-Next Saturday the Prospect Park Club propose to have their formal opening of the yachting senson. The fleet of this club now numbers twenty two boats, of which nine are the full limit in dimensions as to length—sixty three inches. Several prizes are to be sailed for on Saturday. The following gentlemen have been elected officers of the club for the casning year:—James C. Peto, Commodure; W. H. Kershaw, Vice Commodure; Thomas Campbell, Treasurer; Willett Smith, Secretary.

THE PATAPSCO-SCHUYLKILL RACE.

PHILADELPHIA, May 17th, 1875.

Borror Porest and Streem:—

The committee of the Schrykill Navy will go to Ballimure on Saturday eext to meet a similar committee of the Paispace Navy, and complete the arrangements for the race. The inter will in all prointly be fixed in the first work of June. The Schrykill Navy craw has been selected as follows: J. B. McBeath (strike) 140 pounds; Frank Henderson (S.) 118 pounds; C. R. Adams (3.) 168 pounds; S. Stiteson (haw,) 140 pounds; abstitutes, Organ F. West and Frank Wood. Three are all members of the Quaker City club, and will represent that arganization in the Schuyikill Regulta of June 16th and 17th. They are in excellent condition. In practice, (they have been out every lay for some weeks,) they show up very well and are improving. The Patageo graw will be selected and put to work this week under a professional trainer.

Lansinguine, N. Y., May 15th, 1875.

Entron Fourst and Sthkan:

Spring has at last shown its bright side, its waters are subsiding, and boat clubs are commencing their season's compulyin. A club has been formed here, and are training a four-nared crew to race with all clubs on the control hoping to number several new boats among its property before the season closes. The crewa are progressing finely, and littend to do their best to make it sociable and lively in the Tray course. They are—Win. Church, stroke; B. F. Flower, port walst; S. C. flurtin, starboard walst; Juhn Hawkins, how and capible.

The Laurente club, of Troy, are making improvements in their already fine hullding, and will add several new boats to their present stock.

PHINCKTON, N. J., May 18th, 1875.

Editon Folket and Stream:—

1 enclose you, if of interest to you, or worthy of insertion in you columns, the measurements of the Princeton Freshman Crew, just taken as determined upon for the regains on Saratoga Lake this Summer.

Miscellaneous.

J. D. DOUGALL'S EXPRESS SHOT GUNS.

Citile registered.)

CHOWN by trieds at Wimbledon by Editor
Of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus:
Circle, 30 Inches, 300 pellets, wereing, 101; penetration, 37. The Editor's trial of Greener gams with 340
pelicts of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more peltets in each charge. Should any controversy arlee as
to the durability of these new systems, we herewith
warn all beforehand that one system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the
guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated
Circulars to

tion to the mind, it will be usery in arcance in ein

EZRA COUNTELL.

tion to the mind, it will be a step in arcance in eincalion.

Washington, D. C., March 18th, 1870.

I am much pleased with the success you have met with in giving to the stuffed specimens a very decided appearance of life.

I loop you many he able to continue the Serlera, and thave me minds they will furnish interesting means of information and instruction in regard to the wild animals of New York.

State House, Bostus, Minss., March 18th, 1870.

I have examined carefully the "Strenscope Studies of Natural History," and indiging by the first ten non-bers, should say that they will prove of very great mine they are successive. The defineations, position, and color of the different groups and the general trentment are minst perfect. I condaily recommend them to the public attention, and trust you will meet the securagement which you have carried.

EDWARD A SAMUEL,

Chrator of Zoology in Mass. State Cablinet.

PRABODY ACADEMY IF SCHENCE.

SALEM, Mass. March 19th, 1870.

I linve shown your Stereoscopic views to the Directors of the Academy and the editors of the American Marchaelta, Dr. Packard and Mr. Morse.

They concurs with nun in praising their truthfulness and the tuste which you have displayed in surrounding the specimens with airrest adjects and scenery of characteristic times. They are cretainly better fitted, not only as jurior and drawing room illustrations, but as educational illustrations for the near of schools and colleges, than anything we have yet sects.

A. HYATT.

Conxell, University, Pilebidery's Rooms, 1 That Ty, Pilebidery's Rooms, 1 That A. March 19th, 1870 1 That a Rooms, 2 That A. March 19th, 1870 1 That received the Stereoscaph Views of objects in Natural History, and have enjuyed them greatly They have surprised all who have seen them by their womburful libelity, both as regains the milmula and their surroundings; and I think they can not fail to be of great service to the study of Natural History, dret by attracting students to it, and next by perfecting them in it.

Breech Loaders.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 36, 1873.)
In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST wespon, combining all their recent improvements, marked on the rib between their name and Lendon address the brand—"THE PREMIER QUALITY."

QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade murk.

W. & C. SCOTT & SON, Tole makers of the Palent Top Lever, suiid, Doublie Locking Boll Breech Locker, bearing the full mane of the firm. W. & C. SCOTT & SON canton sportsmen against influences of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuise.

abbreviated, or with different initials, are not genuins.

THALOF SCOTTA GREENER'S NEW SYSTEM OF BOHING, BY THE EDITHR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tubles it will be seen that with Walker's shot, Messes Scott's gams showed a marked superiority over Mr. Greener's, both in average and in the highest soure made. Instead, with the left barrel, in his third shot, Mr. Scott gor a selected group pattern of 229 and a penetration of 37, equalling the highest pattern unde by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets,"

Three Bundred Miles in a Whale

THE accounts received of Mr. Bishop's canoe voyage along the Atlantic coast remind me of a similar eruise of my own, undertaken to pass over the same water, be, however, from south to worth, and the time ine. The sun glistened on the roofs of the three was in June. The sun glistened on the room, houses constituting the town of New Smyrua, as we cast off from Major Alden's wharf and took the cbh tide for off from Major Alden's wharf and took the cbh tide for off from Major Alden's wharf and took the chi tide for off from Major Alden's what are to the control of the children of the the Inlet two miles away. Two weeks previously I had reached the Major's as ragged and sorry looking a specimen as the forests of Florida ever gave up to civilization. An old felt hat adorned my head, unious portions of the brim, burned off in fauning numerous camp fires; a ragged woolen shirt, and trowserloons with both legs carried away below the kness. My feet were encased in Indian mocensins. Spite of my rough looking dress, and in face of the fact that the Major had met me but once before, he took me in and did for me, and half an hour later I was pad-dling in his bath tub and soon after sumptuously arrayed in store clathes

I had bought during my stay a whale boat, 27 feet long, well supplied with oars, sails, compass, water keg, anchor, &c., and two men had promised to accompany me on the whole trip for their passage. They were good sailors—one a Scotchman the other a Swede. The voyage was nothing short of a cruise from Florida to Massachusetts by the inside route. The Scotchman had professed himself acquainted with every mile of the way, and doubted not that he could make the trip, as he had come down on a small steamer the previous Fall. If I had known then that he came down in the capacity of freeman, it would have saved me a world of trouble at a later period. As it was, we set off buoyaut and full of hope, our only bugbear being Cape Cod, and this we felt sure we could weather hy watching our chances. Delusive hopes! In less thau two hours we were despairing of ever looking upon the shores of the old Ray State. Likent a journal for a few days and of the old Bay State. I kept a journal for a few days, and from this I will quote: "Fainter and fainter grew the Major's house, with its broad piazza, and fainter grew the high white bluff with its picturesque fringe of sisul hemp and century plants. Through the narrow channel and ou toward the foaming breakers we sped, until the breeze died away and I took the helm while the captain (the Scotchman) and Sren (the Swede) took the oars. Almost ont breakers on either hand; two hundred yards will find us through and on the waves of the Atlantic. The great waves toss us about like a cork and their white crests show ahove us angrily. "Keep her well ou!" shouts the captain, and just then a snap, a sudden lurch of the rudder to leeward, and we know that the lower holt is broken or out. "Pull, Sren! pull like ——!" shouts the captain, as he pulls in the drifting rudder and seizes the oar I pass him. Slowly she came about, but not before the top of a wave comes over the quarter and strikes me full in the cap. We go half a mile back and draw the boat's stern upon the saud for repairs. Meanwhile the tide is fast falling, and the water on the bar growing shallower and rougher. When we are ready no channel is visible—all is one stretch of foaming water. We put her head on, shutting our eyes to the danger, and pull straight for the headers. And now it is neek or nothing with us; a snap of an oar another break like that of an hour ago and it is all up with us. Higher and higher roll the waves, and the thunder of their descent prevents the hurried orders of the captain from being heard, though shouted in my ear, I only know that I must keep the boat head on to those green waves that tower above us, and knowing that is all I can do, I calmly await the result. Seen and the captain are tugging at the oars. On they come, the waves. The boat quivers under the repeated blows but nobly tops each wave until we reach the most critical part, where three or four waves decide our fate. They come! We can see them as they rise far away, gathering strength and volume as they rapidly ap-

proach, and now the first one is on us. Full in the face we take it and the old boat shakes from stem to stern; but we rise and it passes on and in comes the next, more furious than the one before. We hear no sound but its roar, and see nothing before us but its towering wall of green and white. I see it now, and I remember how calculy I gazed at it, wondering that I could watch my coming fate so coolly. But I find that in such cases of life and death, as it were, if one is doing all he can to save himself a desperate calminess here of the situation takes research. perate calmness, born of the situation, takes possession of him. I did not think—as many others in like situation have thought—of all the sins I had committed. Perhaps they were so many that the time was too short to revie them; anyway, I held squarely on to that radder tiller, and kept the boat straight, wondering only in a vague way if we should pull through. Bang! It is past, and the water surges from bow to stern and the boat broaches to, while God! Quick! Give me that pole!" and the last wave. "My God! Quick! Give me that pole!" and the captain, by exerting all his strength, brings her about just in time to save a fill. We breathe freer, but still have to keep on the alert, as the waves are rough and treacherous.

Now we are out on the open sea, and the long roll of the waves, now the excitement is past, brings me a visitation from my old foe—sea sickness. Taking a last look at the from my old foc-sea sickness. Taking a last look at the saud hills and palmettos, at the inner har with its crowd of pelicans, and at the Major's house, just discernible, 1 down, A varying breeze from the southeast and n southerly current made our progress at first very slow; but soon we went faster, and by nightfall had passed the last house on Halifax Lagoon. As I am unit for duty, to me is assigned the task of bailing out every half bonr, as the is assigned the task of bailing out every half bonr, as the waves had thumped a leak in our boat. The warm suu revives us, and with a comparatively dry boat we speil along quite comfortably. The captain and Sren take watch and watch as night comes on, at the helm, while I watch all the time, but cannot work from namesa. Improving a biprocleaf a raisin how and the compass. They alone vising a binnacle of a raisin box and the compass, they place the candle in it and regulate the watches by the burning of the candle in it and regulate the watches by the burning of the candle—one candle to a watch. We sight St. Angustine light about miduight, and do not lose it till near daybreak. This light is in about lat. 20°53' and long. 81°17'. It is distant from the St. John's River bar about thirty-five miles. Our course is N. N. W. and the sbore is in sight miles. Our course is N. N. W. and the shore is in significant daylight; we were guided by the roar of the surf on the beach during the night. The shore above is whiter than that below, that being a yellower sand with a fringe of scattered palmettos and a dark background of pine

I caunot help thinking of the stories of the early Spanish discoverers—Ponce de Leon, and more especially the crue Menendez—who cruised the very waters we then were sailing over, three hundred years before. I had intended vis iting St. Augustine, but midnlght was not a favorable tlme to enter its rather narrow ebannel. We may have passed over the boiling spring of fresh water, which is said to bubble up from ocean depths off the island of Anastasia, as our boat danced about curiously at one time in the night Owing to a light breeze we did not reach the bar of the St. Johus till noon. A long way out we see the buoys and we steer just outside the breakers and make for a spar and iron buoy, which we can hardly make out as they hob about on the hig waves. We reach the channel, round the buoys, and steer west for the lighthouse. The waves are high and dash as about, but we cross the bar without accident. Just inside the bar, with a stiff breeze blowing, the treacherons rudder bolt again gives way, and the boat comes up in the wind. "Let go the fore sheet! Down with the maiusail!" We then steer with an oar until we round the point of sand and then anchor at Mayport. There are two lighthouses here; the old one is near the Atlantic-too near, in fact, as it showed signs of being undermined by the waves, and had to be abandoued. It is an interesting ruin and many sketches have been made of it from tim new light is a tall structure, handsomely built, and yet set far back among the sand hills.

The village of Mayport is small and one has to scale

mighty sand hills before he reaches it. Pilot Town, nearly

opposite, has a more attractive appearance, with its large, square houses. After recuperating, we find that there is no blacksmith nearer than Fernandina, thirty railes, and consequently caunit risk our heat on the open ocean again; so we enter an inlet that in due time brings as out to a sound, where are pelicans and plover without number. A high bluff on our left attracts us by its beauty, being seemlugly hollowed ont into shady glens at its base and well wooded. At linsk we enter a channel that brings us up to a bath house, and from the bath house I wend my way beneath stately trees to a mansion house, whence ean see a long row of negro quarters and a fine grove of trees. I flud that it is St. George's Island—the same that General Oglethrope occupied a hundred and forty years ago in his invasion of Florida. The proprietor (Mr. Rol lins, I think) was very kind, and I afterward had the pleasure of meeting kim on board a steamer at Savanuah. We slept in the bath house, on the narrow ledge that such houses usually sport, assured that if we fell off the water houses usually sport, assured that it we left of the water-beneath is only six feet deep. At daybreak we depart and row for hours up a crooked ereek, against a head wind, and then bring up, had up, and no outlet. This is one of the few occasions when eussin' brings relief. I can dualy remember that somehuly—all hands and the cook, perhaps—looked hard into the fuces of the rest and said something.

We retraced our way and regained the right channel, for it was indicated by stakes at long intervals, and finally, after half a day of wasted effort, fetched up at a house whose sole inmate, a woman, after filling a corneob pipe and volunteering the information that she was from Georgy, told us that we were near Nassan Sound, and that people there could then direct us. A run of two miles brought us in sight of a beautiful sonad opening into the ocean, uear which was an old plantation. The people at this plantation "lowed" that Fernandias was about eighteen miles away, and that the land across the inlet was the southern end of Amelia Island, upon which—its northern end—Fernandina is built. A fair wind drove us through a beautiful sound and we entered a series of creeks similar to, though wider than those below. Fearing we may be Fearing we may be going wrong we run up to a solitary sharty on a bluff and have pointed out to us far away the bridge of the Florida Railroad, under which we go, and thence four miles to Fernandina. We had heard the screeching of the ear wheels a long while before, and wondered at the noise. I did not criticize the cars as some tourists have done, as they were the first I had seen for over six months and appeared very fair kind of cars, after all. At Fernandina, into whose magnificent harbor we sailed about five P. M., we found nothing but lumber; lumber at the wharves, on board the many schooners, and in the mills. The only blacksmith was sick, and we could procure no chart. The captain swore he could do nothing without a chart; hut captain swore he could do nothing without a chart; but without one we weat, after boarding nearly every vessel in the harbor. The following notes, taken three years ago, seem to correctly describe the condition of things there: "Fernandina is still in the rough. The streets are poor, and all business is done on the harbor street. Its high laud back of the harbor, commanding extensive and beautiful prospect of ocean and river, is being rapidly taken up, and F. will be quite a resort for northern visitors, who have not courage enough to go further south. It is destined to be the shipping port of the South. Its harbors are spacious and remarkably deep, with a good depth of water over the har. Just before dusk we set sail and run into Cumber-land Sound and cast auchor under the first lee."

Here my journal terminates; from whatever cause, it certainly goes no further. But our search for a black-smith was kept up and we sailed the next day, and some time, I can't just remember when, we sailed up to Brunswick, Ga., where we found a blacksmith and had our ruder remained. Stumping through the levels likely and der repaired. Stumping through the lovely little town in the captain's boots, four sizes too large, I met and made friends of several gentlemen, oue a civil cuglneer who lived at St. Simons, across the sound, and who kindly loaned me a map of the State, from which I roughly sketched a chart. I have it yet, that chart, drawn on any number of

miles to an incli, taking in the whole sea coast of Georgia, on a square foot of paper. Our voyage after this was but a repetition of slmihr adventures in following blind crocks and ranning up wrong chaunels. We passed through St. Simon's Sanud, the attractive Altanusha, and through Dobay and Sapiella Sounds, jeast the lovely island of St. Catherine, where a horde of niggers seemed to have possession, through Ossabaw and Warsuw Sounds and all their connecting creeks, iato the Tybee, I think, and brought up suddenly in a bruach of a creek that we had foodly hoped would rouble us to reach Savanush by a short cut. We had passed along the famous sea islands of Georgia, seeing, however, little of their attractive features, but heing throughout nearly all at our voyage surrunnied by marsh. It was wonderful what faith the exptain had in my chart. Finding that he knew nothing whatever of the coast, I was obliged to guess my way along, and he fell back on that that. The minimest creekthe the would lind detailed there, and would insist that such and such a course was wrong because the chart said so. When near Thunderbolt, a few miles from Secannah, we passed a suspicious looking revenue catter, from the deek of which a black-whiskered man ordered us to heave to, which we indigmantly did. It has accurred to me that we presented to that allicer a suspicious appearance, but at that time we wondered why he should insist upon our heaving to, when the tide and wind were in our favor. We proceeded, however, passing a dismanuled righthort further on, containing a great gun spaked and disamunated. We soon struck the yellow waters of the Savannah River amt sailed up toward the city, unjectic looking in the distance, hetween obstructious and post forts, till we thusly anchored at the whurf. Our search for a chart was unnvailing; this discouraged the cuptain, who tank passage for home on a steamer, leaving See and myself with the bout. We slept in the bout two nights, when we had the good fortune to sell her and thus avert a threate

vent thanks.

I sincovely hope that Mr. Bishop will accomplish his arduous voyinge, and when he arrives on the St. Johns I would that I were there to see. If he gets puzzled among the sea islands I will long him my chart.

FRED BEVERLY.

[Mr. Bishop, we all know, has succeeded in completing his long cruise without the aid of Beverly's chart. He dropped in upon us last week, on his return to the North, like a sentiard from the ocean when the storm is upon it, and after a brief interval sped on his way with the flush of exultation on his face, which well deserved success so naturally begets.-ED]

THE PEOPLE OF NEVADA: THEIR HABITS AND CUSTOMS.

CHAPTER II.

NEVADA was admitted into the Union as a State in 1864, when its inhabitants unmbered less than 40,000. It was an unfortunate coronnstunce for the tax-paying inhabitants. A few wire-pullers and office-seckers rushed the thing forward and got it admitted. This threw upon the people on coronnous burden of taxation. The State and county tax of a man worth \$10,000 is from \$300 to \$400, and could not be horne if it cost as much to live as it does in the Eastern States. What made it still warse was laws passed by the Legislatane voting large salaries and fees to all the officers in the county.

The State of Nevada, lying, as it does, between the great Sa't Lake Valley in Utah and the Sierra Nevada Monatums, on a high, clevated plain covered with mountains, wand never have turnished any particular attraction for its settlement by white people but for its mining interests. In view of the vast amount of territory within its limits that can never be brought under cultivation for the want of water to irrigate the soil, its inlimbitants can never equal in numbers that of other Slates. The climate furuishes no objection to settlement. Although the Summers are hot, the Winters are short, and while the merenry sometimes fulls to zero, yet such as the purity and stryness of the atmosphere that this degree of ead does not effect a person like the same temperature in New York, where the atmosphere is more humid. No country can be more healthy than Nevada. Colek, fevers, and consumption are strangers in this State. There is one phenomenon peculiar to the atmosphere in this canatry in regard to sound and sight. An old; state at the distance of ten miles can be seen as plainly as if two miles distant in the State of New York, and to one from the cast seems to be no further than one or two miles. The utwosphere is so light and open that samult pass through it with wonderful clearness. I was gonatify deceived in distance when I first came to the State. An object in the monutains would only appear a mile distant, but in attempting to r

tant, but in intempting to reach it I would find the distance eight or ten miles.

The white inhabitants of Nevada are generally young, from twenty-five to forty years of age. A man with gray hair is soldon seen. The settlers are hardy, stirring, and enterprising. They are originally from Kentucky, Missouri, Michigan, lown, and New York, as well us some Germans and Irish. I haive not seen a negro this side of the Rocky Mountains, and doubt if there is any in Nevada. Chinoanen take the place of Africans this side of the mountains, and serve as coaks and waiters in hotels, and it is considered that they make excellent servants. The settlements in Nevada differ from any of the other States in this particular, which is awing to the character of the country being composed of mountains and valleys; generally but one side of these mountains is supplied with water from streams: the settlements are necessarily on that side, and in continuous lines the length of the valleys, from one mile to three or four miles from the hase of the mountains.

Each settler controls the water that flows lirough his grounds, which he uses in irrigating his rauche. This prevents settlement beyond, although the soil may be equal or heliter, but no water can be obtained. It is used never to make the control of heliter his not accept the control of the

of their speed.

The men outnumber the women in Ruby Valley. Among all the families there are not more than hulf a dozen young single ladies. Young ludies from the States who come as teachers stand an excellent chance for matrimony.

REV. II. Chase.

THE MEGANTIC DISTRICT.

IN a former number of the Forest and Stream I noticed an article entitled "A Trip to Canada for Fifty Dollars," on the Megantic district. The author's suggestions, as far as reaching the town of Sherbrooke and procuring an outfit goes, were all right, but the section of Canada that he advised your readers to visit is quite remote from the Megantic district, all which I may write, and one that would give the trout tisher but little sport were he to visit it; for many of the best trout takes there have been stocked with that great destroyer of trout—pickerel; while the murderous gill net and fishing out af senson have pluyed sad havoc among the "speckled beanties" in the majority of the remaining lakes. The section of the Province of Quebec known as the Megantic country embraces the eastern part of the county of Beance, its southern and eastern boundaries being the States of New Hampshire and Maine. The surface of the country is of a rolling character, dotted with occasional mountains, the Megantic being the 'argest in the district, and one of the fluest mountains in the province. The district is well watered with numerous lakes and streams, which form the sources of two rivers of cousiderable size—the St. Francis and the Chaudiere. The

former river affords but little sport for the angler, as it only contains a tew moscalonge, pickerel, and other course fish, miles we add salmon, which run up the river to sono of its tributaries for the purpose of spanwing, but they always and the fish of t

site the camp is the mouth of Mountain Brook number two. This stream takes its rise from springs in a large basin on the west side of the mountain, and has the most transparent waters that I ever saw in any stream; back a meason large trout may examine and hove the upper still water you come to the strength and the head waters of the Salmon you will find good sport. After you have fished these waters to your satisfaction, and desire a change, return to Scotston and start for Lake Megantic. There are two routes—one to go by the new Government road and reach the lake at Myers', a distance of eighteen or twenty miles; the other, the old route via Gould and Starnioway, and arrive at the lake near the foot of it, at John Boston's, Lake Megantic Post Office, distance about thirty-eight miles from Scotston. Should you go by this route you will pass near two lakes—Moffat's and McCill's—before you reach Gould, but they coutain no speckled trout, but a fish called "white fish." I have no idea as to their species as I have not seen one. Gould is a small village in the towaship of Linwick. In the northern part of the town there is a trout lake, which It will pay you to led; species as I have not seen one. Gould is a small village in the towaship of Sunmer of '72, seventeen pounds of fine trout without goine twenty yards from the raid bridge. Some three miles down the brook is a "bog," or stretch of dead water, of counsiderable size that without doubt contains more of the "speckled heauties" than any other body of water of the same dimensions in the Megantic country. The stream from the road down to the hog has lately been cleared out by lumbermen to run down thick logs, so there would he but little trouble in floating a boat down to the dead water. You can find accommodations for your team at one of the farm houses you passed before entering the wood. You also pass another small river before reaching Starnoway which has a few trout. At Starnoway there is but one note lands the wind has been considered to the hout of the la

REMARKABLE FEAT IN OEF-HAND SHOOTING .- On Sat urday last, at Creedmoor, Col. Geo. W. Wingate performed a remarkable feat, making a score of 5 5 5 5 3 (four bulls-eyes and a centre), or 23 out of a possible 25, in five consecutive shots at 500 yards, off-haud (standing), using a Springfield military rifle (new model), with open sights, and a trigger pull of over seven pounds. The score was made in the presence of a number of speciators, and in quite a stiff breeze, requiring au allowance of uearly two feet. Although this score has been occasionally surpassed, yet this has been but seldom, and then only from a lying position, involving a dead rest. In shooting "from the shoulder," it is believed that it is the best score that has ever been made at Creedmoor. The bullseye was circular, twenty-two inches in diameter, the "inner" being

—On Thursday two pigeon matches were shot at Ira Paine's grounds hetween Ira Paine and E. Stevenson, with 11 birds each, English rules, 5 traps. Both matches resulted in a victory for Mr. Paine with the following scores:

"Prices!" said an old marketman yesterday: "why they're too cheap for anything. Salorday you could have had 'em from \$\frac{1}{2}\tio \frac{1}{2}\tio \frac

waters agree with them, and nowhere else."

A. S. Colling.

—The Montreal Fish and Game Protection Club was formally re-organized on the 19th inst. The committee appointed at the preliminary meetlug presented a draft of a constitution and by-laws, which, with some slight amendments, were passed. The following gentlemen were then elected office-hearers for the following year:—President, McPherson Lemoyne; Vice President, F. W. L. Penton, Secretary, A. N. Shewau; Trensurer, W. H. Rintonl, Committee, Messrs, Jas. Esduile, R. H. Kilby, F. J. Brady, E. M. Copeland, H. W. King, Maurice Cuvillier, Geo. A. Drummond, Henry McKey. Legal Adviser, W. H. Kerr. The ruthless slaughter of fish and game in the breeding season by thoughtless people was criticised in unmeasured terms, and the meeting was ununinous in the opiniou that unless something was speedily alone to put a stop to it we would soon have both forest and stream harren of the game and fish which was at one time so abundant. The bass and pickerel—two of aur finest fish—were alluded to as having almost totally disappeared from our rivers from the use of trawl and other nets used in small streams, which eaptured the fish by the cartload when they were on the way to their spawning grounds. The President spoke of the exertlons which were being made by the game protection clubs of the United States to protect their game and fish, and a suggestion was made that as these clubs had shown a desire to co-operate with Canadian clubs in the matter, they be communicated with by the President. It was also suggested that the President communicate with the Government, in order to secure their help in the matter of proseeniting violations of the law. After some further discussion, it was resolved to immediately engage the services of energetic men who would prosecute every person found violating the provisions of the law regulating the protection of game and fish.—Montreal Cazette.

—A dispatch from Windsor, Nova Scotia, dated May 24,

A dispatch from Wiudsor, Nova Scotia, dated May 24, states that Mr. Wilmot, of the Fisheries Department of Canada, is there engaged in selected a site upon which to erect a large and commodious fish-breeding establishment, to be more particularly adapted for artificial propagation of whitefield.

—The Connecticut fish commissioners report that the introduction of black bass in Connecticut waters has been successful, and that over 1,359,000 young salmon have been placed in Connecticut river during the year. Their experiments in hatching shad show that the eggs of the shad will not hatch in brackish or sult water; also that such waters are fatal to the young fry. The catch of shad last season was unusually large.

French Method of Oyster Coltube.—M. Crugny announces in Les Mondes that, after ten years of groping in the dark in the treatment of the great oyster banks of France, especially of Arcachon, these have entered upon a career of fertility so prodigious that Arcachou alone will soon be able to furnish oysters for the whole world, and at prices much lower than those which at present prevail. It is well known, according to Cruguy, that each oyster produces, every year, spat sufficient to furnish 4,000,000 of young, but that innumerable sources of destruction greatly reduce the yield. At the present time, in the light of more recent experiences, spat is collected on tiles previously coated with a sticky composition, to which it strongly al-

taches itself; while the slight adherence of this composijion to the tile permits the introduction of an instrument
which easily detaches the young oyster without Injuring it.
The spat, when it has acquired the size of a quarter-franc
plece, is placed in wooden hoxes covered externally with
zinc, the upper opening of which is closed by a wire network of close meshes. After the oysters have increased
in this inclosure, protected from every external strack,
they are placed in large ditches, excavated either by the
hund of man or by nature, in which at low tide there is always a sufficient depth of water to protect the young shells
against the severitles of the Winter or the heats of the
Summer. Thanks to all these precantions the oyster culturists in France have lately been able to save a large part
of their crop, and will soon be able, if nuthing interferes,
to farnish excellent oysters at a cheap price.—Tribune, 5th
March.

Sea and Biver Mishing.

FISH IN SEASON IN JUNE.

Trout, Salmo fontinalis. Salmon, Salmo salar. Maskenonge, Ecox nobillor.

Salmoa Trout, Salmo confints. Shad, Aloss. Laud-locked Salmon, Salmo Glovert.

[Under the head of "Game, and Fish in Searon" we can only spect by in general serves the several varies because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nuture, upon which all legislation to founded, much our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

Fish in Market.—All kinds of fish in season are being received in great numbers and, considering the backwardness of the Spring have been low in price. Among the choice varieties and latest arrivals may be mentioned the king fish, which are selling at 25 cents per pound; also the pompano, at \$1 00, aml sea bass at 18 cents. On last Saturday a live pound bluedsh was taken in the pounds near Coney Island, und we may soon expect to hear of the advent of these fine tish into the Great South Bay. Trolling for them will this Sammer give way in a great measure to the new and popular mode of chumming, or taking them with rod and light tackle. Connecticut River shad are now in prime condition, and for flavor and size cannot he bent; the best sell for 60 cents each. Sheepshead are arriving in large quantitles from Baltimore, and sell for 18 cents per pound. Striped bass are very scarce, those in market bringing 25 cents per pound. Salmon still lu very limited supply and fishermen report that at Ilalifux, N. S. ami in that vicinity the early run has been a total failure. Soft crabs from Virginia, are very abundant at \$1 00 per dozen. A few ahout the size of a cent have been sent up from Squan River, N. J., but owing to their diminutive size have found no purchusers. The catching of these very small crabs should be prevented, as they are unfit for the table, and an should be prevented, as they are unfit for the table, and an should be prevented, as they are unfit for the table, and an Fish in Market.-All kinds of fish in season are being no purchasers. The catching of these very small crabs should be prevented, as they are unfit for the table, and ma annoyance to the dealer. Green turtle are pleuty at 18 cents per pound. Fresh mackerel were never unore abundant than they have been this Spring, the fluest selling at the cents cach. and than they have been this Spring, the fluest selling at 10 ceuts each. Although very fine as regards quality and size, yet the muckerel caught in the Spring and salted never rank over No. 3, as they are not fat; the best salt muckerel, such as extra No. 1, are not put up until late in September or October. Live coddsh are plenty at 7 cents; ditto bulibut at 15 ceuts. Weakfish are coming in from Long Island and New Jersey, and sell for 10 cents; blackfish 12 cents. 6sh 12 cents.

PATTERN TROUT FLIES,-For the information of our readers, we append herewith a list of standard trout flies, with a description for those who dress their own. There are a great many nondescripts of fancy colors and strange combinations, and with fancy names, not mentioned here, but these we give are about all the generic flies used by professional anglers. Browns, yellows and duns are in

professional ungiers. Browns, yellows and duns are in best service at this scason:—
PROFESSON.—Red tall, yellow hody, brown backle, gray mallard wing. Gaizzly Kino.—Red tall, green hody, gray backle, gray wing.
ABET.—Golden pheasant and rid tall, brown backle, dark gray wing. Cow-dung.—Light yellow body, brown backle, slate colored wing.
Comchian.—Peacock body, black backle, slate colored wing.
Manon Brown.—Brown hody, ribhed with yellow slik, brown backle, Brown like. Peacock body.

Manon Brown.—Brown hody, ribbed with yellow silk, brown hackle, larkey wing.

Brown Hen.—Peacock body, brown hackle, wild turkey wing.

Silven Black.—Black backle, fight black body, ribbed with silver tingel, dark wing.

Governon.—Red tail, peacock body, brown hackle, turkey wing.

Oak.—Irange body, thied with black silk, brown hackle, turkey wing.

Black Grat.—Black osage hody, black hackle, black wing.

Gheen Drake.—Vellow body, ribbed with black silk, brown hackle, died-yellow matiard wing.

Millen.—White body, white hackle, white wing.

Blug Mole.—Dark gray body, gray hackle, gray wing.

Grange Black.—Orange hody, silve hackle, dark wing.

Mat.—Yellow body, yellow hackle, yellow wing.

Red Art.—Brown body, hrown backle, light wing.

Monthela.—Red hody, red backle, gray wing.

Blue Professon.—Red tail, hine body, hrown hackle, gray wing.

Stone.—Brown hody, ribbed with yellow ellk; brown backle, made of partridge and mallard wing.

Cinnanon.—Light brown body, brown hackle, hrown wing.

Alden.—Claret body, hlack hackle, slate colored wing.

Brue Bottle.—Blue hody, black hackle, slate colored wing.

New Jersey.—Kinsey's Ashley House—Barnegat Inlet, May 20th.—Some few bluefish taken in gill nets; weakfish of good size, running from three to six pounds, are also be ing eaught; noue with book and line. We are expecting our annual run of bluefish every day. For the past seven years lilue fish have been taken with nets for a week or ten days previous to their capture with the squid. B.

-The Salisbury, Ct., Game Protective Company includes about eighty residents of the northwest corner of the State. and has already demonstrated its usefulness the present season by totally preventing the spearing of base on their spawning beds in that section. In former years as many as a dozen torches have been counted on "Twin Lakes" in a single night. Bass fishing in these lakes is good, and will be permitted after July 1st. The month of June is a

-An Atlanta, Georgia, correspondent, says: "The bass are spawning in this section, and the 'crackers,' (and I am sorry to say, others who know better,) climb trees standing near the shallow creeks over their spawning beds, and shoot them with bucksbot." This is a new kind of sport, combining the pleasures of a 'possum hunt, target practice, and still fishing.

The Willewemoc Club held its annual meeting in this The Whichemor Club held is annual meeting in this city last week, at which the following officers were elected:

J. S. Van Cleif, President; Charles A. Macy, Jr., Vice President; C. Van Brunt, Secretary and Treasurer; J. S. Van Cleif, C. Van Brunt and George W. Van Sielen, Executive Committee. This association, which was incorporated by a special act, in 1870, has control and rendy access to some of the fluest lakes, and streams in the Carlottella. of the finest lakes and streams in the Catskills Lake Willewemoe, where the club house is located, is about 2,500 feet above tide water, and lies about thirteen miles north of the Midland R. R., and is easily reached in one day from New York, by way of Morston. The Willewemoe stream lies three and a half miles south; the upper Beaver-kill the same distance north, and a little beyond the well known Balsam Lake and Thomas Lake, both well stocked with trout, and both under control of the club. Lake Willewennoe is a quarter of a mile in length, and under the old name of Sand Pond, has long been noted for yielding large trout, and to those desiring both lake and stream fishing, and at the same time enjoy with their families the bracing mountain air, this club offers especial attractions. It will be seen by an advertisement in another column that a few shares are for sale to acceptable persons.

It will be seen by an advertisement in another column that a few shares are for sale to acceptable persons.

The Fisheries.—The number of fishing arrivals for the week ending May 20th was sixty-seven—fifty from Georges, sixteen from Western Banks and one from Grand Banks. The Western Bankers average very good salt fures, the receipts of cod being about 850,000 pounds. The Georgesmen have brought in some 1,000,000 pounds cod and 300,000 pounds limibut. Bank hulbint have been in good supply, the total receipts being 280,000 pounds.

The Southern mackereling fleet are doing a very fair business in the tresh muckerel line, several thres having been landed in New York the past fortnight, which have been sold at remnnerative prices. No salt fares have arrived home yet, and probably will not before the first of next month. The old stock of mackerel in the market is tast being closed off, and the new catch will come along in good time to supply future demands. The first arrivals of salt mackerel last year sold for \$12 and \$10 per barrel for large and medium threes, and the probability is that they will bring nearly, if not quite as much this season.

The salt bankers are arriving freely the present week, averaging good fares. The fish are of excellent quality and in good demand as fast as they can be got in readiness for the market. The number of vessels in this brauch of the fisheries is considerably larger than the ficet of last season, and the business bids fair to prove quite successful.—

Cape Ann Advertiser, 21st.

MATERIAL FOR ELY BODS

MATERIAL FOR FLY RODS.

EDITOR FOREST AND STREAM:-

BOSTON, May 6th, 1875.

BOSTON, May 6th, 1875.

BOSTON, May 6th, 1875.

Is there to be had of any importers or dealers in useful or fancy woods to New York or elsewhere the wood called the greenheart, suitable for the making of rods? You prehably are well aware of the quality of this wood (when it can be obtained) as a perfect article for rods, retaining, as it does in every particular, its clasticity under att circumstances, for it never rets or changes during ase by being water-soaked, and is recommended by all English, Irish, or Seoteh manfactarers of rods. It is certainly a valuable wood for the purpose, though our makers use it hat little, owing probably to the difficulty in obtaining it perfect. Francis Francis, an English author, speake of it most particularly in his work on angling, having used a greenbeart tip to a hamboo rod for salmon and trout fishing for nearly twenty years, remaining still most reliable. We speak of this as a matter of importance, for we have received this wood several times in logs, and when sawed up it has not proved of good quality, and it has been more or less riddled with holes by borers, and the clasticity, from some cause, gone, so that it would break with any sadden strike, and thas be rendered useless. We think if the greenheart wood could be obtained perfect from its lacation it would be a valuable addillion to the rod manufacturer's stock of woods.

In regard to the botany of the greenheart tree (Nectandra rodaei), it abounds in Demerara, Pero, Oulnes, and the Weel India Islands. The greenheart, or hibin tree of British Guinea, is named Nectandra rodaei by Sir R. Sehombark, though some botanista coosider it a variety of Nectandra lessandra, a large tree sixty to seventy feet high, frequently with-

out branches for fifty feet; tronk, two and three feet in diameter; bark, as he color, which is imported order the name of hibits hark, a tonic. It was for is) extensively used in ship instance, etc. Lloyd's list of ship huidding woods class it as No. 1. (For further particulars refer to Treasury of Botany, per: II., etc., etc.)

Perfection in all our tmptements and lackic is what we aim at, and if this wood can be children perfect, as Orvis says, it would be most desirable.

QUERCUS.

ANDREAS, NEAR SAN FRANCISCO.

SAN FRANCISCO, Msy 20th, 1875.

Editor Forest and Stream:—

On Saturday last my nephew and myself took the sonthern train of cars to San Bruno, fourteen miles from this city, where there is a neat and comfortable tavern, well conducted by a man of the name of Cundogham. We reached this station at a quarter past four in the afternoon, and directly seating ourselves in a wagon drawn by a pair af fast borses, reached our lake in ahout half an bour, the distance being about three miles, but part of the way was up a tolerably steep hill. On the shore of the lake there is a small cottage, inhabited by the keeper. We found a boat ready for us, but the westerly trade winds were hioving rather strong, and we were on the lee shore, so we had some difficulty in rowing from it out into the lake, our object being to reach the opposite shore to commence fishing where the water was not so rough. Our attempt to inveigle the fish (salmon trout) was nut rewarded with success that evening. My nephew tried with the fly, and I with halt, fishing with worms. The wind was quite high.

This is a sahscription water, and the permit to fish costs \$2.50 per capitum. The next morning, after an early breakfast, we rode again to this fine sheet of clear and pure water, which belangs to the Spring Valley Water Compuny, of this city. The wind, as usual on this const, was gentle till about cleven in the morning, and the san, as is almost invariably the case at this season, shone brightly, with an entirety clear sky. On reaching our water we took boat again, and trolled with a small spluning spoon bair, but with two rods out. Presently, while rowing across, my nephew hooked and secured a salmon trout of one pound and a half in weight. We continued to troil up and down a portion of the water from seven in the morning until after three in the afternoon. During that time my nephew took eight eaimon front, sveraging one pound each, and I took seven, one of mine being taken with a worm. These fish are very game, and affo

TROUT FISHING IN VIRGINIA

EDITOR FOREST AND STREAM:—
In your paper of April 29th your correspondent, "Monmouth," states it as a well established though eurlous fact that east of the Blue Ridge Mountains in Virgluiu, and further south the speckled tront are not to be found. Indeed, he avers that they have never been found here, and although—on one occasion, at least—carrefully latrodaced into these waters they speedly perished. He asks, "Who shall explain this?"
In needs no explanation. Your correspondent was simply misinformed as to the facts. Speekled tront (true Salmo fontinatis) have always been quite abundant in almost every stream flowing through or having its source on the eastern slopes of the Blue Ridge Mountains. Tront are still caugh in these streams, though in diminished numbers, as far down and below the mountains as the temperature and clearness of the water admit. The present season quite a number of fine front have been caught in the James River, some thirty miles below this city, as well as above. Many of the tributaries of the James, which rise on the eastern slopes and spars of the Blue Ridge, have long heen noted for their excellence as trout streams, and if they were properly protected and cared for would soon rivat the choicest streams in the Adirondacks. I could name hulf a dozen streams within a half day's horseback ride of Lynchhurg where as good sport may be had as in perhaps nine out of ten of the most famous tront streams of New York or New England. The troot of these waters, as caught by our sportsmen, range from a quarter of a pound to one pound and a half. The streams are generally a succession of cascades or rapids, and large, deep pools, and the hanks sufficiently free from hrush to afford a free use of the artificial fly.

W. B. Roaeutson.

Matural History.

-The Trustecs of the American Museum of Natural History gave an interesting reception at the museum in Central Park, on Tuesday last. The rain interfered somewhat as far as attendance was concerned, but the late addi-tions to the collection were viewed with much interest. Among them are the gigantic moas, cuts and descriptions of which have already appeared in this paper. Also i,100 fine skins of birds of North America, the Hay's collection of heads of moose, buffalo, caribou, etc. Mummies from Columbia River, and the original plates from which were printed Audubon's Birds of America.

-Mr. Geo. A. Boardman, of Calais, has had presented to him a deer's hoof without the cleft, which is something of a curiosity, though how unusual, we are not informed.

AMERICAN REPTILES.—Prof. Cope, of this city, has prepared for the Smithsonian Institute a list of the reptiles which have hitherto been discovered in America north of Mexico. Of 337 species admitted by him, 125 are snakes, 82 lizards, 41 turtles, and 2 crocodilians; 20 of the snakes are poisonous, 17 being ruttlesnakes, copperheads and water moccasins, and 3 coral snakes—the last are related to the viper of England, and are beautifully annulated with red or scarlet, yellow and black. Of the non-venomous snakes 103 belong to forms that are generally familiar, while two are sluggish and worm-like creatures, which have hence been called "Scolecopbidans," or worm-shakes.—Phila. Dispatch.

THE BANDED PROTEUS.

May 21st, 1875.

Editor Forest and Stream:—
I promised a few days since to tell you of the new fish (?) our fishermen are taking—the banded proteins, (Menobraneus Lateris of De Kay,) of which De Kay says in Nutural History of New York Zoology, Part III., page 87, that it is common in takes Eric, Seneca, Chumphain, and George, and that "it has heen found in the Eric Causi, and will doubtice a cre long reach the Hudson River." It is well on its way if it has not already reached the Hudson. For a few years past it has occasionally been taken in the Mohawk River. In the neighborhood of Little Falls, N. Y.; this year it is very common. One man is reported to have taken forty at one time in a net. They range from twelve to twonty-four uches, and one old sherman reports "three pounders." They are caught both with a hook and 1 fyke nets set for suckers, a d are reported to be full of small fish. Many fear they will destroy our game thish, and want to learn some way to get rid of them. De Kny thinks they are good to cat, but we prefer some other way, as our anglers "don't hanker after" them. Do they do any harm, and if so, is there any remedy?

WILLE Hole Source of the stream of the source of the

WHALE, Ho!—Seven whales were in sight at one time from East Hampton on last Friday, exciting the whalemen of that place to an indescribable piteb. After a long chase, however, the boats returned without having heen "fast."

USE OF PICKLE IN TAXIDERMY

NEW UTREORY, N. Y., May 17, 1875

EDITOR FOREST AND STREAM:--

EDITOR FOREST AND STREAM:—
You anonymous correspondent "Pickle"—an opinion given publicly is worth a name—wholber an amateur or voleran laxidermist, evidently does not understand practically all the "wrinktes" of taxidermy; for if he did he would not "wonder" at the simple process of cleansing some of our hard feathered birds in a pickle previous to drying their plumage and mounting them. I would like to ask "Pickle" how he would proceed to mount a fiah, dry skin of a toon, grebe, guillemot, puffin, ank, or pengulu that is split down the back tonglindhally from the occiput to the tail? Surely he would not allow the grease and blood to remain on the plumage of a bird and sew up a dry, contracted skin, thus making a deformed and dirty specimen; yet I cannot see how he can overcome such obstacles to good mounting without soaking dry skine into a pilable and mountable condition. Verity, I belleve "Pickle," If a professional taxidermist, will profitably bear a tittle further experience as a laxidermist, or else, in some cases, at lead, he must necessarily become a "modest taxidermist."

THOSE SWAMP PEEPERS.

WATERVILLE, N. Y., May 17th, 1875.

Waterville, N. Y., May 17th, 1875.

Editor Forest and Stream:

Your answer to J. W. W. may be correct as an abstract fact, but I think it would convey a wrong impression to the general acceptation of that term. If J. W. W. will some warm day, about dark, approach the apot on the marglu of a swamp where he is certain he heard some of the peeps proceed from, be will notice that they will suddenly stop, but if he will patiently stand motionless a few minutes be will observe signs of tife in a little thing that has looked like a small brown, dead teaf. This will cauliously rise and prove liself to be a thing of life by puffling out a threat as wide as its body and aftering a peep. If he remains perfectly shift he will soon see and hear another and another of its companions join in the general chorus. He will discover that the little fellows are not green like the builfrog, but brown like the garden toad, and that they are smaller than any ladpote-developed frog he over saw; that II would take three of them to weigh as much as one of its slimy, green cousins of the same age. He will find it difficult to get one an inch tong, although all the builfrogs batched out tast Summer were two inches in length before they went into Winter quarters. The peeps are, in fact, toads.

THE GRASSHOPPER PLAGUE.

THE GRASSHOPPER PLAGUE.

We be very much regret to learn that already great injury has been done to the growing crops of Kansas, Nebraska, and Missouri by the young grasshoppers, and that they have appeared in farge numbers in Minnesota. The injury thus far is not general, even in the sections visited last year, but is great enough to cause much uneasiness in itself and anxiety in view of the future. Dispatches of May 17th estimate the region in which they are worst at two hundred miles long and fifty miles wide, with St. Joseph near the centre in either direction. Thus far no effective plan of destroying them has been devised, and it is evident that it would be a great task, in any event, as the numbers are so great. It is reported that the insect enemies of the grasshopper are more than usually abundant this Spring. In his annual report for 1874, C. V. Riley, State Entomologist of Missouri, who devoted much attention to this pest, says:—

"If, after the young hoppers hatch, we have much cold, wet weather, great numbers of them will congregate in sheltered; laces, and perish before doing serious barm; but if, on the contrary, our Spring and early Summer provedry and hot, which is hardly to be expected after the several dry sensons lately experienced, much damage will result from these young locusts, where no effort is made to prevent it. They will rain most garden truck, do much injury to grain, and alleet plants. They will become more and more injurions as they get older, until about two months from the time of hutching, or about the middle of June, they will begin to acquire wings, become restless, and in all prolubility leave the locality where they were born, either wending their way further south, or returning in the direction whence their parents came the previous year. Some bevies may even pass to the eastward of the limit line reached in 1874, and fall upon some of the counties bordering that line; but they will lay no eggs and will in time run ther course and perish from debility, disease and parasite

from Kansas or Nebraska, or from the country to the sonthwest, may make their presence manifest, if the year should he exceptionally favorable to their development; hut whether delayed till 1876, or even till 1877, the last one will eventually vanish from Missouri soil, and their race will be no more known among us till—perhaps within six or eight years, perhaps within the next twenty—a fresh swarm wings its way to our borders from the plains along the mountain regions. There is, therefore, no danger of their over-running to the east of the limit line, or of their doing permanent injury to the country they now occupy."

ORNAMENTAL GRASSES

ORNAMENTAL GRASSES.

A MONG the grasses from which you can make choice for garden decoration use we name several that in our American garlens would add material features of beauty to them. The cultivation of the grasses have been almost entirely overlooked, and only occasionally are our cycs pleased with the beauties of the tall waving plumes of the Gynerium argenteum. This is a favorite adjunct of English and European gardens, and no garden of well assorted selections is considered complete without a clamp of the waving, plumy pampas grass. Our American gardens lack the tropical element and situations adapted to the growing of the tall, variegated grasses, so beautiful in the Fall months, and for that reason they are almost entirely discarded. This should not be. We would enter our plea for a little nook or corner in the gurlien where the pampas and the Sipa pennata as well as tho violets may be grown. We do not urge the cultivation of these grasses, variented and elegant as they are, in large numbers, for that would be an impossibility, but we ask our readers, particularly the ladics, to procure from the florists in May at least one good strong plant of the two above named grasses, to which I would add the Andropogan argenteum, a slender growing species with silvery hued leaves and plumes. All the above are quite hardy, and if large clumps of roots can be procured they will live and thrive welt.

In procuring any of the above grasses be particular to get a large sized chimp of roots, as from one or two stalks, your chauce for raising good tall grasses are very poor. Having from this cause made numerous failures in the growth of these grasses, I would nige the fact that until I obtained good clumps of well rooted grasses my libor and auccess was entirely in vain. With the right kinds of roots I had good succes. Seeds of the various kinds of these grasses, and the work: if not you had hetter huy your plants. The percunial kinds are the hest as a general rule, but the and the feature and placed in good position

The Bennel.

AMERICAN KENNELS-No. . 3

MR. A. C. WADDELL'S.

WE HΛVE hitherto described keanels wherein particular strains WE HAVE hitherto described kennels wherein particular strains were perfected and adhered to, according to the inclination of the owner. The one now under discussion varies from these, inasmuch as its shelter is offered to all descriptions of sporting slogs, and the visitor firds an omnium gatherum of setters, pointers, cockers, and beagles. The aim is also different. Mr. Waddell's kennel is essentially a public justitution, wherein dogs are boarded, broken, bred, and sold at all ages, frum puppyhood to full development. Many of the most celebrated dogs in the country have at one time or other passed dogs in the country have at one time or other passed through Mr. Wnddell's hands, and 'antercous fine field performers, now delighting the hearts of their owners, have either heen hred and hroken by him, or been purchased through his medium. This kennel is also located at Newton, N. J., ou the Sussex Railroad. A fine farm with appropriate outhuildings, and pastures through which runs a heart regarder excellent and among quarter for even also brook, provides excellent and ample quarters for even a larger number of dogs than are now occupying them. The fields afford fine opportunity for exercise, and the brook, affording a pleutiful supply of pure water, struck us as being a great feature of the kennel, insuring cleanliness, and being a great preventative of disease. As some fifty dogs were

inspected, our space will not permit of more than a passing description of some of the leading representatives, many of whom are known to fame as first-class field performers and getters of good puppies .-

SETTERS.

1. Pilot—A red Irish setter, used as a stock dog; fine in oat and feather, and the sire of a litter of five this pup-

coat and feather, and the sac pies out of

2. Flonnee—Red; one-half Gordon.

3. Duke—Black and tan Gordon, impurted. This dog is a grandson of Old Kent, the great field trial dog. He is a pure black and rich tan without a speck of white, and is of the true Gordon type.

4. Dash—A nearly pure white setter. He is a grandson of Green's (of Newark) Old Duke, one of the best dogs of his day.

18 day.

5. Fann—A fuwn-colored hitch; sire, the Colburn Dash.;

6. Bess—A black hitch; sire, the Colburn Dash.

7. Count—Reil Irish Gurdon.

8. Bang—Reil Irish Gordon.

9. May—Orange and white setter hitch; English.

10. Kitty—Liver and white setter hitch; English.

11. Nelly—Orange and white setter hitch; Gildersleevo

rnin.
12. Carric—Red Irish Gordon; imported.
13. Louise—Red Irish Gurdun; imported.
14. Belle—Black and tan; pure Gordon.
15. Maggic—Black and tan; Irish Gordon.
16. Pauline—Blue ticked; Irish Gordon.

POINTERS.

16. Pauline—Blue ticked; Irlsh Gordon.

POINTERS.

17. Phil—Black; used as a stock dog, better known as the Colt (Hartford)dog. Philt took first orize at Mincola, ami is the sire of Mr. Strong's hundsome black dog. Pete, first and extra prize at Springfield. We shall publish Pete's picture in a week or two, and at the same time a more extended discription of haudsome ald Phil.

18. Ben—Red pointer; stock dog. This dog Mr. Wall-lell has bred to for the last fuur years. He is the sire of his uoted bitch, Dream, now doul; also the sire of Shot, sold to Mr. Arthur Chapman, of Doylestown, Pa., who pronounces him the best pointer in America. The strain is a distinct strain of pointer, imported by Mr. Font, of Morristown, and designated as the rough-haired pointer.

19. Rock—Dark liver polater; sire, Ben.

20. Dell—Red pointer bltch; sire, Ben.

21. Juic—Orange mottled pointer bltch; sire, Ben.

22. Lott—Elver and white polater htch; sire, Ben.

23. Topsy—Black pointer; sire, Phil.

24. Phil, Jr.—Black pointer; sire, Phil.

25. Sum—Black and white pointer; sire, Phil.

26. Queen—Black and white pointer titch; Imported.

29. Bell—Liver und white pointer bitch; haported.

29. Bell—Liver und white pointer bitch, and five pups by Phil.

30. Start—Orange polater, by Pbil.

30. Start—Orange pointer, by Pbll. 31. Phil—Black ticked poluter. COCKER SPANIELS.

Bell and Still—Binck and tun Burdette cockers. These cockers are by some considered the most valuable of all the cocker spaniels. Mr. Hubbell hought the mather of these spaniels at a cost of £80 (\$400). They are very intelligent, natural retrievers, and have remarkably keen noses, equal to the best setters or pointers.

In addition to the above Mr. Waddell has fifteen setter puppies, and by July will have at least fifty. He has also thirteen dogs now with trainers being broken, and will have them for sale thiring the coming shooting senson. We also saw a pair of fine, pure beagles—Lotty and Jack—weighing seventeen and twenty-seven pounds respectively.

A visit to the green slopes of Newton and nu examination of the fine dogs to be found there, will well repay the traveler. We would wish, did space admit, to give a more extended description of these kennels, as well as of the dogs in the po-session of Mr. Northrup and many other sportsmen who have made Newton their bome.

A VERDICT AGAINST A DOG-KILLER.

WE APPEND herewith the report of a trial held at Morristown, N. J., which will be uf interest to all owners of valuable dogs. The result is important, not so much in the amount of damages awarded to the plaintiff for the loss of his dog, as in establishing the fact, and that through the rure means of a country jury, that dogs are really property, and that their owners are as much entitled to the protection of the law in their holding as though they were horses, cattle, or any domestic animal. It is a healthy were horses, cattle, or any domestic animal. It is a healthy indication that the value of dogs as personal property is indication that the value of dogs as personal property is being appreciated, and that their indiscriminate slaughier on frivolous pretences will no longer be permitted. The case in point is more remarkable from the fact that the jury was composed of farmers, a class—particularly the sheep owners—who are apt to look with suspicion upon all dogs but their own, and who would almost uccessarily have a leaning towards the side of one of their own class. They have preparently appears to be sound and honest men and have proven themselves to be sound and honest men, and the damages awarded are no doubt, in their minds, equal to the value of the hest dog that ever barkell. The counsel in the case must also have shown marked ability in overcoming their prejudices and getting a verdict. The report is of value as being a precedent for like causes in the future:—

Morris County Circuit Court—Judge Dizon Presuding.

Morris County Circuit Court—Jutge Dizon Presuling.

OLCOTT FR. TURIS.

This was an action for trapease, brought by the plaintiff, a non-resident of the State, against the defendant for killing a dog the property of the former, and was tried before a jury at Morristown, N. J., on the 12th and 13th May. 18th Albert State of the County of the former, and was tried before a jury at Morristown, N. J., on the 12th and 13th May. 18th Albert State of the cycle of the characteristic of the county of the same day. In the cycle of the same day. Defendant admitted the killing, and put in the pleading as justification that the Joy was mist.

The trial lasted 14 days and was meltily a pheniton of fact as both dog's condition at the lime of the killing. We shown by several witnesses that fonto, the spaniel, not five minutes before his death, and in alghi of the defendant, had ron up to and played in he feendly way with a fittle boy belonging to one of the witnesses, and no snapplanness, sulkiness, or other atrongly marked symptoms of rables was shown to

ore positively that the apof was mad. The Judge, on a foreible and impressive manager, charged by first that if they found the killing unjustifiable they should give belt verdict for the idalulif for such an amount as they considered the interface of the interface and if they found the dog was mad, hey should bring in helr verdict for the defence; and, moreover, if they found thin the pinion of a reasonable mind the defendant was justified in thinking hat the dog was dangerous to human life, health, up property, even hough not mad, then they should also find for the defendant. The jury were out density four inours, and brought in a verdict for the labulif will \$25 damages—probably about one-tenth the dog's activat also.

plaintiff with \$20 unungos—promisers years, value.

Connect for plaintiff—Niesars. Pitney and Youngblood, of Morristown

RAYMOND LAVERACES. -Our readers who have expresa curiosity to see the celebrated setters of Mr. Charles II. Raymond, will be gralified to learn that he intends to have them on exhibition at the Sportsmens' Convention at Watertown next week.

-Our Field and Kennel Editor has just been presented with a splendid setter whelp, hy Mr. David Brooks' wonderful dog, "Bismarck," out of Mr. Harlie P. Hess' handsome thoroughbred Gildersleeve bitch, "Flora." tbanks, gentlemen.

-When in Philadelphia a few days ago, we were invited When in Philadelphia a few days ago, we were invited by Redmond Abbott, Esq., to inspect a very promising litter of pups out of his orange and white bitch, by Mr. John Twadbell's famous dog, Baster, a pure Gildersleeve. Mr. Abbott's bitch is by Mr. Brooks' Bismarck, out of a flue lhoroughbred Gildersleeve bitch owned by Daniel Elmer, Esq., of Bridgeton, N. J. The pups are all orange and white and very beautiful.

Is There Anything in a Name?—We were recently informed that a geutleman near Boston had lost three dogs one of them named "Filz" died in convulsions, another named "Shot" was killed with a rifle, and the third, named 'Powder," went off.

Mr. John R. Day's Laverack bitch, Belle, dropped on lie 28th inst ten pupples, sired by a celebrated Gordon setter owned by John M. Betts, of New York city. They are large and healthy pups and handsomely marked. Mr. Day considers himself immensely wealthy since the occurrence, and the affair has created some excitement among the dog breeders of Easton, Pa.

policy breeders of Easton, Pa.

POLLY-NO. 2.

THE first of August, S. E. J., Polly and myself, with Thomas to drive, three miles out of St. Psul—time, four o'clock A. M. We were unlearned in chicken shooting; and one word of salvice right here: Don't go after prairie chickens early in the morning; you can indeed hunt them to you heart's content, and very comfortably while the dew is on, and the frigid zone tropical gun not yet up to roast you. But where are the chickens? We hunted theoroughly apon grounds where we knew the chickens lived—wheat stubbles, weed fields, and acres upon acres of bushes—we hunted faithfully. Polly was a jewel, ranged widely, obedient to call, and had there been a chicken within her sweep we found by after experience that most certainly would she have stirred out that chicken and every single one of his brothers and sisters hesides. We concluded they must have crawled into the ground, or somewhere. At eight o'clock we came round to the wagon, which was anchored in a large weed field bordered by brush, thoroughly tired and discouraged. But now the popping began here and there, becoming more frequent, until we could hear it all around the horizon, but noue nearer than half a mile. We note our breakfast quictly. We were quite tired, for we had worked leard for four bouts, and like the fishermen in scripture we had "caught uothing," which of course increased our weariness. Smoked a cigar meanwhile, making guessing estimates of the mortality among the chickens. Thomas had found the blackberries quito plenty upon the low trailing vines, and we set him at work with the lunch basket. We picked and ate, Polly exploring on her own book. Before many minutes she started a chicken off some distance, which chancing to turn my way? cut down at fifteen rods. A halfgrown prairie chicken in August is about as easy to shoot as a rai, and he goes down dead as easily und as much a matter of course as libough he had made up his mind to it before he rose. I then buuted the field carefully, finding four or fi

Itogether; still we progressed, though Polly pulled hard. All 'Polly, but you were a powerful dog at pulling! I felt very much like a small boy "walking turkey," a bigger boy looking him up by the seat of his pants so that his toes only touch the ground, and marching him forward in that position. S. E. J. kept well to the left—at least forty feet, that being the radius of the circle which we were sweeping over the stubble. Pretty soan Polly struck the seent. The traction grew exceedingly leavy; jerking her back did not wark worth a cent. She could not get more than forty feet away from me; but on she went resistlessly, head in pund tongue out, drawing like the locomotive to a freight train. Sendy! Polly steady! Whoat whoat Hold on, will you? Whirr! whirr! whirr! Why steady! Whoat whoat Hold on, will you? Whirr! whirr! whirr! Why steady the one of nother in the uncertain tennre of my foothood, evil a far but on the uncertain tennre of my foothood, evil a far but out to tagging at my bed like a forty lackase power. A broad to matter the ground and the locks were bead, if the property of the property of the property of the property of the lock

Attantic Yacut Club.—Pursuant to a resolution of the yacht owners of this club present at its regular meeting held 10th inst, this fleet is ordered out to participate ic an excursion on Decoration Day, May 31st, 1875.—Yuchts will rendezvous at Club Harlor, foot of Court street, Brooklyn, (Gowanus Bay) at nine & clock A. M., Monday, and start at half past ten at second signal of gnn. Membees of the chili intending to participate will be at Suith's Fluat, foot at Coart street, Brooklyn, not later than quarter past ten o'clock A. M. A committee, composed of Messrs, John B. Murgao, Edward Arnold and Henry M. Evans, will direct them in the yawls of the yachts to which they are invited. Every member of the club is bereby personally invited to parturi ate in this exentsion.

—The New York Yach, Club, held a general meeting of

The New York Yach Clab held a general meeting at its romas, Madison areans and Twenty-seventh street, on Thursday hest, there disposing of the rontine work, the question of changing tho day of the annual regath was brought up and thoroughly discussed. It was shown by several grathemen that the Centennial erlebration at Bunker Hill and the sixth day of the Jerone Park races fell on the same day (Thorsday, June 17th) as scheeted for the yuchting restead, and a claimage was therefore advisable. It was found that the eviat could not well be put forward on account of the tide not serving; so Wellnesday, June 18th, was tinally accepted and the regath will then come off.

An invitation sent by the citizens of Cape May, to participate in a reganta during the Sunneer, was accepted.

The club will proceed to Cape May about the 19th of July in squadron. Ten or twelve owners have already

announced their intention of taking part in this event, and vachts are also expected from the Seawanhaka and Eastern Yacht Cluls. The races will probably be sailed on the 12th and 13th of July, prizes of \$1,000 in value heing offered for both schooners and sloops on both days. The contest on the first day is to be sailed with time allowance. New York Yacht Club rules, and that on the second day without allowance and with a sweepstakes of \$25 entrance to go to the second boat.

A medification of the uniform was proposed and adopted. The building of the Sammer club house on Staten Island, against which an injunction had been procured, has been resumed, and it is hoped it may be ready for occupancy by the middle of June. Twenty-three members were elected.

—A movement is on foot at Porland. Me. to have a

—A movement is on foot at Porlland, Mc., to have grand regatta at that place during the annual cruise of New York Yacht Club.

—A small steam propoller has been purchased by E. M. Sammis, for the purpose of carrying papers and other dispatches from Babylon to Fire Island during the coming season. She will carry twelve passengers comfortably, beginning the companion of
season. She will carry twelve passengers comfortably, hesides freight.

CITY POINT ROWING Association, of South Boston—This association, although only eighteen months in existence, have on hand at their club house three four-oared working boats; one double scull sbell; two single scull open bouts, and four four-oared Spanish cedar working boats. On the 29th of this mouth a series of races between the different clubs of the State will be inaugurated by the Massachusetts Rowing Association, to take place on Dorchester Bay. There will be a single scull race for juniors, and a single scull race for amateurs; n double-scull race, a pair-oared scull race, and a double scull Whitehall race fer amateurs. These races will be over a course of two miles. There will also be a four-oared working boat race for amateurs, course three miles, and a four-oared shell race for all members, professionals and amateurs, over a three mile course. This last race excites a great deal of attention, and no doubt will be hotly contested. It may be as well to add here that there will be three races of each kind, except the junior race, and that the prizes will only be awarded to the best two out of three. The juniors after having finished their race become amateurs, and are enlittled to pull in amateur races. There is one feature about these races which will make them particularly exciting, and call forth the strength and uerve of the participants—it is this: a cerlain number of oarsmen will be selected from among the various contestants to represent the Mussachusetts Association in the great National Centennial race which is to take place at Philadelphia July 4th next year.

DORCHESTER YACHT CLUB REGATTA.

Восток, Мау 23d, 1815

EDITOR FOREST AND STREAR:—

The opening regatta of the Dorchesier Yacht Club took place on Saturday. The breeze was too light to make the contest very exciting, though there was some fine sailing done. At the start the wind was about southwest, but hefore the tending yachts were more than a mile from the starting point it suddenly changed to east, but immediately went back to southwest again. The Mabel and one or two others were foriunate enough to catch the first puffs of the wind as it returned to its old quarter, which sent them along in fine style, while a targe number of the fleet lay huddled together it a caim spot. Among the latter were the Lillie and Ioula, both of which had been among the teading boals previous to this. The Saxon, under a perfect cloud of canvas, kept well up with the others for about half the course, when she began gradually to fall behind. On the return she rac aground, as did also the Phantom and Sunbeam. A very pretty race was it at of the fourth class centreboards, which saited a shorter course than the others. In this class the Tulip, as usual, was the victor, though she was followed closely by the little Rocket. Below is given the corrected time of rach yacut:

—The Cape May Navy regalta will commence on Monday, July 12th, the race on that day being for schooners and sloops; two prizes valued at \$1,000 each; entrance free; to be sailed for according to N. Y. Yacbt Club rules. On the second day will be soliced a sweepstakes for vessels bolonging to an organized yacht club in the United States; no 15th along a contract fee will be charged, to be divided between the second best bouts of each class.

The course for the first day's race will be from the anchorage to the lightship on Five Fathom Bank, rounding it to the southward and westward, and return to a fing boat anchored along a mile from the shore in front of Cape Island, on the accan, rounding it from the southward and eastward. The course to be sailed for the sweepstakes will be animanced a few days before the race, with sailing regulations and further jeuticulars. The Regulta Committee consists of the following named geutlemen: John C. Bullett, Edward A. Warne, L. P. Ashmead, and Dexter S. Stone, of Philadelphia; Gen. W. J. Sewall, Albert W. Markley, and Gen. E. Burd Grahh, of New Jersey.

A large number of yachts are expected to compete, and a bull will wind up the festivities.

The Elizabeth Boat Club of Norfolk, Virginia, will probably accept the challenge of the Patomac Boat Club of Washington, to row a four-cared shell contest during the Samueer at some point near the National Capitol.

The Toms River Yacht Club will give their first regatta in June. The prizes generally amount in value from \$200 to \$250. The club numbers but nine yachts, yet all are entitled to enter. To hold the challenged cup, valued at \$100, is the height of all the captains' ambitiou. Chaz. W. Potter is Secretary of the club.

—The Paris correspondent of the Times writes that Mr. J. F. Loubat, owner of the yacht Enchantress, has just communicated to the French Yacht Club for the coming year. The cup is valued at \$1,000, and is intended as a prize for an international ocean race on the second Thursday of October, open to schooners of one hundred tons and over, belonging to any recognized club. Mr. Loubat is a member of the Maritime Conneil of the Yacht Club of France. It has just made an appropriation of the sums to be awarded this year. The grants are divided among thirty-seven bodies, and comprise in money, 11,700 francs; medals, 1,984; objects of art, 2,125, making a total of 15,809 francs.

CHARLESTON REGATEA.—Six four-oared shells contested at Charleston on Friday last, before an admiring audience comprising the entire population of the city. The bouts came in in the following order: Carolina, 1; Electric, 2; Vernou, 3; Queen City, 4; Cooper, 5. The Palmetto boat stood an excellent chance of winning at one time, but was swamped before the finish. The Vernon and Palmetto crews represented Savannah and Charleston, respectively, at Saratoga last year.

THE OCEAN REGATTA.—The following regulations have been adopted for the government of the Isle of Shoals Regatta, to take place on the 25th of June next:

"The prizes are valued at \$1,000. The first class is subdivided into classes of schooners and sloops, for each of which there will be two prizes; and the second class into schooners, centre-board sloops and keel sloops. For each of these three latter of the second class there will also be two prizes. The sailing regotations which will govern the races are as follows:

classes of schooners and sloups, for each of which there will be two prizes, and the second class into schooners, centre board sloops and keel sloops. For each of these three latter of the second class there will also be two prizes. The sailing regulations which will govern the races are as follows:

The measurement shall be the trugth in the water line and one-third overhang, added to sailing length; altowance on time to the determined by the judges he accordance with the schedule adopted by the Boston Yacht Club. Boats when tunning briver like vivid and within over an eighth of a mile of each, are not allowed to cover the head boat to take mind out of her sails; by so doing they will forfet all claims to the prizes. No bullist shall be thrown overboard. Boats shall not use any means of propulsion except sails, but are not forbidden to anchor during the tace. When rounding a mark or buoy, the boat nemest thereto is to be considered the headmost boat, and should any other boat in the tace compell the host which is nearest to any murk, boat, or buoy to touch each mark, buoy, or boat, the host so compelled to tourh a murk, buoy, or boat shall not in this case suffer any penalty for such contact.

Boals ening free must burariably give may for those by the whod on there tack. When true boats (by the whod) are approaching the share, and so close to each other that the one to the reavard cannot tack clear of the one to the rind, and by slanding forther on would be in dianger of running on shore, the undward has on being requested to put about must, bowever, la this case tack at the same thin as a the one she haids. When true boats by the wind) are approaching the share, and so close to each other that the one to the reavard cannot tack clear of the one to the rind, and by slanding forther on would be in dianger of running on shore, the undward has on being requested to put about must, bowever, in this case tack at the same time as the one she haids. When ture boats by the wind) are approaching each other and officien

—At a meeting of the Royal Halifax Yacht Club held yesterday afternoon the Mayor presented a vulnable silver cup, which will probably be competed for on the 21st June. A hundsome engraving—a yachting scene—was presented by Mr. Clark, of New York, a recently elected member; and u \$100 Provincial debenture was presented by the Hon. Provincial Secretary, who was constituted a life member of the club. Last year's sailing regulations were adopted.

her of the club. Last year's sailing regulations were adopted.

The Halifax Rowing Club met last evening; the principal business transacted being preparations to bring out a man to worthily succeed George Brown, who is about to actee one of three men named, should they be willing to compete—the committee to provide beats for practice. The club contemplates backing the man of their choice in any contest that may offer, but keeping particularly in view the big purse of \$4,000 which is offered, in three prizes of \$2,500, \$1,500 and \$500, for the best single scullers at the Philadelphia Centennial Exhibition, July, 1876. There is also some talk of having a four cared crew put in training for that event. The best built last Fall for the club by Epsey of Pittsburg, Pa., will be brought to Halifax immediately. The club will hold another meeting next week, to make arrangements to co-operate with the City Council's committee in prepuring for the celebration on June 21st.

A four-oured race, open to all comers, in in-rigged or out rigged boats, will probably he provided for.—Halifax Reporter, 10th.

—The New York Rowing Club and a crew of the New

porter, 19th.

—The New York Rowing Club and a crew of the New York Athletic Club contested on the Harlem River on Saturday last. The prestige of the former club placed them alread in the betting, but from the start the issue was scarcely in doubt, the Athletics winning in 11 min. 24 sec. The event created much interest in rowing circles, all the clubs being well represented, and the boat houses on the river gaily decorated with bunting. The crews were composed as follows: New York Boating Club—Phil Pimpson, bow; C. 11, Leland, No. 2; R. Cornell, No. 3; P. Leland, stroke. New York Athletic Club—R. W. Rathborne, bow; L. S. Mack, No. 2; H. C. West, No. 3; C. Cone, stroke.

stroke.

—The annual Spring regatta of the Cornell Navy was held on Cayuga Lake, on Saturday, the 22d inst. Cuyuga is one of the loveliest sheets of water that decorate the western portion of our State. On the day of the regatta the water was as smooth as a mill pond, and the weather everything that could be desired. Three races were contested, the first being for the Spraguo enp, two miles, for six-oared shells. Two crews competed, the '77 class heating the '76 in 12 min. 15 sec. In the second race, for single sculls, Chas. S. Francis, '76, of Troy, N. Y., heat F. C. Reed, '78, in 16 min. 56½ sec. The great event of the day was the two mile race for six-oared shells, contested by university crews. Three crews came to the starting point, comprising the university Saratoga six, the Freshmen university six, and a Union Springs picked crew. The race was close and the men in excellent form. The race was won by the university six in 11 min. 14 sec., the Union Springs crew being second and the Freshmen third.

The Delaware Regatta.—The opening regatta of the season, one of the largest ever sailed on the Delaware Biver, occurred on Monday last. The entries comprised an unusually large number of hoats, but our space will only permit af our giving the names of the winners, which were as follows:—First Class—First prize, Willie Kleintz; second prize, Srimmel. Second Class—First prize, Ida May: second prize, Ina. B. Brewer. Third Class—First prize, Ida May: second prize, Ina. B. Brewer. Third Class—First prize, Selby; second prize, Fushion. The third class race was very exciting, the Hager having led all around, but within a few hundred yards of the fluish she unshipped her rudder, and only won by a shave, three feet being a fair estimate of the lead.

—On Saturday, May 22d, there was a meeting in Baltimore of Messrs. Brumbhaar, Parker and Megatgee, of the Schnylkill Navy, and Messrs. Guitrie, Ford, Stillman and Ferguson, of the Putapsco Navy, to arrenge for the race arising out of the challenge of the latter organization. The date was fixed for June 8th, immediately after the championship contest of the Patapsco Navy, fair day and quiet water being expressly stipulated.

The race will be one mile, and return. M. M. Baily, of the Analostan club, of Wushington, D. C., was selected unipire. The Schnylkill Navy crew is a announced last week. Eight gentlemen of the Patapsco Navy are now in training, from whom a crew of four men will be selected by Fuulkner, of Cambridge, their trainer, about June 1st.

HEADQUARTERS SCHUTLKILL NAVY, 1 PHILADELPHIA, May 24th, 1875.

The entries for the regatta of the Schuylkill Nary, open to at ams terms, will be closed at 6 P. M. on Wednesday, June 2d. All amateu clubs are cordially included to enter.

JONA. GILLINGHAM, Secretary.

A. B. R., Montreal.—I would like to know an address where I can send for one of those little nocket filters—those with rubber tube and small stone on end, as they cannot be obtained here. Ans. Our inquiries regarding this filter are in valu. The impression prevails that none have been made stare the war.

hes regarding the first are in tail. The Impressed pressed that some bare been made shire the war.

S. E. P., Cheveland, Ohio.—Could you tell mo some good place for two of three boys to go camping for about a month or so, where there is good fating and some shouting; that is, some place not too far from Cleveland, and easy of arcess and not expensive? Ans. Go to Put-in-Bay for fishing; stemboad daily from Cleveland.

W. W., Cambridge.—Will you kindly inform me whether the Winch ester rike used by your Florida commissioner, "Al Fresco," was a new model, central fire, or a rin firef Aus. Our correspondent is now in Florida and no are therefore unable to answer your question. Your query will probably drair a reply from bim.

Nowther, Midway, Ky.—We have submitted your fish, lermod the "New hight," to the inspection of Prof. Cope. of Philadelphia Academy of Sciences, and have his answer: "A species of pomorys, near the hexacanthus, but requiring forther examination for determination." We hope to give estifactory answer in our next.

Midwirtham, U. S. Naval Naval Academy.—Is there anybody in New

bope to give satisfactory answer in our next.

MIDSHEPMAN, U. S. Naval Naval Academy.—Is there anybody in New York who limids the Rob. Roy canoe? Where should I apply for prices and information whont paper canoes? Ans. Messrs. Ingersoll, No. 259 Pront street, tills city, make the Rob Roy caooe in both wood and paper. Address them for price list with descriptive cuts.

H. S., Chirago.—What is the diffurence between a catish and a hullhead, if there is any? Ans. The same difference that there is between a pond pickerel and a river pike. The buillinead arcrages a quarter of a pond din weight, the catish runs to upwards of fifty pounds. They are different varieties of the same species, (Saturidae).

P. M. R., New York.—Does either the game or any other law of this State make it a penalty to exercise dogs in the woods on Staten bland out of seasoo; and does the law make exceptions of Sanday or week days? Ans. There is no law to prevent you exceeding your dogs in the country on need days, unless you shall commit a trespass by doing so. There is a law against Sabbath breaking everywhere.

A. M. T., Augusta, Me.—I have heard the opinion expressed by deal property of the property of provides to provide the property of provides the provides.

d. T., Augusta, Me.-I have heard the opinion expressed by deal-black powder that the Ditmar powder would injure the material gun barrels in which it might be used. Keed there be, in your

judgment, any fears of such a result? Aus. too limited and crude to permit of our express suggest caulion in regard to the charges used.

Zir. New York.—Do you know of any plane in the richility of this city where, in season, there is good simply shooting; also duck shooting. Bo you consider the Ely metalite shell, with adjustable head, equal to those of any other maker? Ans. South Side of Long Island, or Barnegst, New Jersey; price dependent upon stools, men, etc. The Ely shell is extolent, but there are shullar and equally good shells made in this country at far less cost.

at far less cost.

Piscator.—Sometimes, though soldom, angling and sare made wholly of greenheart, or even of landerwood, though the latter is generally preferred furtings; ash, basswood, and greenheart are used for that and second joints. Spili bamboo tolls frequently have lancerwood tips. These woods come chiefly from Demicrata, and are haported in log by Technus, of Canal street, lids city, and one or two other thulets. It is difficult to find a stick fit to make rode of. Sea atticle observers.

M. J. F., Now Jersey.—You can get good board in the Muskaka com-try for \$4 per recek, and parhaps less. Yan had better get your battom hills at Grarenhiret. They hult a steamboat there, and no doubt can build a battean. Freight to carry from the United States will cost as much as the boat. Wille to Joseph Scott, Gravenhirst, Initate, a pana, about trapping. If he can't fix you, write to flux, Charles Lount, Regis-ter of Bracchildge, and he will refer you to some parties in Nipossing county.

county.

O. L. T., Worcester, —I have a pointer puppy about ten months old, and he bad the distempor very badly. Since receivering from it he has been troubled with violent tedeching, apparently in the dechor monetoes covering the books. He cats well, and appears in take no notice of it inhaterer. Can yout inform me of a remedy, or let it something he will not get over? Ans. We have scarcely even here able to come a day affected with chorea, as yours is. But try two scraphs of himide of potassium twice a day before teeding.

fected with chorea, as yours is. But try two scruples of homide of potassium twice a day before teeding.

Amatern Amilea.—You will oblice a cruier by stating whether or not trust are ranght in either of the Saranac likes. And ivoidly you be kind orong to say if it is a remarkably uncommon thing to take lake intout utlan troll in the months of Angust and July? Ans. Sprekled trout are not caught in the Saranac likes. Water is very deep. There is excellent front dishing at Bartlett'a, outlet of Upper Saranac, both above and below the dam and bridge. The months you speak of are like for trolling, but by drawing across the places where the dishipunch hird for trolling, but by drawing across the places where the dishipunch like for trolling, but by drawing across the places where the dishipunch like for trolling, but by drawing across the places where the dishipunch like for trolling, but by drawing across the places where the dishipunch like for the government by a frequently gotten; but the dishipunch instantial policy of the government gotten; but the dishipunch with lake the fig. If they do, are they worth capinitring? Will shad take the fig. whou; interest not they, as stated, a gamey fish; when is the thin in visit linlyoke; what lackle is account; can a gaids be found there who is posted; has the experience of deborane princed that a reasonable day's sport can be expected? Ans. We know personally of shad having been taken with fly on the Commercial, Potomac, Homastonic, and Saranam chrees, but would prefer other angling. Thomas Chalmets, of ladyoke, is a good authority on shad dishing. For other authorities commit W. C. Prine, Fonget and Saranam, Vol. 2, No. 9, page 139; That. Narris, Vol. 9, No. 11, page 172; B. F. Bardes, Vol. 2, No. 19, page 230; That. Norris, Vol. 3, No. 10, page 135.

E. D., Montreak.—At what season do guld fiel spann? I have placed whet levels are dishipled to the game of the file of the large media.

kinson, Vol. 2, No. 15, page 236; Thad. Norths, Vol. 3, No. 10, page 135.

E. D., Montical.—At what season do gold fleb spann? I have placed a half inclinite mesh (wire screen) in my aquarinal, one then from but ton, afth some stones and aquatle plants; is this all that is arecovery if not, how am t to proceed? One of the fleb han a sort of fungus growth-attached to the fle close to the tall. I have cut it off several three, but It still persists in growing. Are the other flat liable to be affected by r, and is there any preventive or curs. Ans. Guld fish spann in April, May, and Jone, according to the temperature of the water. We should think your plan of screens sufficient for success. T. B. Ferencon, Eq., of Battimore, is one of the best authorities on aquathus culture. Finagas is common to fish, and is produced from various consecs. But notice will produce fungus. Throw your diseased fish out and replace it with another.

another.

W. F. L. New York.—I have a small and valuable, but I fear somewhat delicate hall terrier about a year old, whose relectness and intelligence requal that of the representative of the same bread numed Guess, he so distinguished humself at Springhold. My dog's appetite is very fifful. He now gets a few borrs, nearly bure of need, at breakfast and at lunch hour, and a tegular meal at six o'chick, usually of rice, with a fittle dish gravy and some chippings of meat mixed through. His everybure in almost constant leadency to weep, and he appears to shop inneasily, jurking and starting in his dream; and always snorbs heavily. It should be grad if you could suggest anything you think indebable in the treatment of my dog Guy. Ans. Your dog, in all praimbility, is affected with worms. Try of covage balf a drachin, this flings, very tine, four this huis, balts or closs.

Tan wee.—I expect to go to the Adirondacke this Summer, now, tat What part of Essex county confines the heat dishing, and how large the the trout min? My largest trust last Summer was only a mund and a limit 2d. Can I pricure a good general rul for hait and by dishing in New York, and what is the price; what is a reliable firm? 3d. Can you give me the name of half a dozen allies and the firm and of the munths of July and Angust; what make and number of house dayou recommend? Wh. Can you tell me anything better than tar and off to ward off the insects? Ans. I. Bloomingdale, in the northeest corner of Essex, is a fine front region, with all mainers hiprovements. The Saranac rivers and several the points are within four index beset county people generally go to Bartlett's "Front in Broax waters might inverage a half pound. 2. Good tods at Barton, Alexander & Walter's at \$10. 3. July and August dans, cummum fly, blue junfessor, red blis, orange fly; small sized tooles always, Sprant's been due them.

vicenble.

Dousat, Phila.—Being somowhat interested in the so-called "gold fish," or golden corp, and having fuelifities as I thought, for raising them, I gave their propagation a titul, but have signally failed in every instance in obtaining the of any color but thinks at the I procured from Long Island some fish of a bright guiden color, and placed tiem in a pond supplied from a spring. This was done but Spring, about the middle of April. To-day there are some thousands of small fry in the pond, but not one of a golden color, though some of them are of a dark copper brouze. I might mention that the pand is exposed to smillight, and contains numbers of angular plants. Is there mything radically wrong in the conditions under which I am working? Is the cause ellipside, or do you think there is any difference in the waker about Long Island and that in or about the Delaware Riter that would cance such effect? I have asked several of our knowing ones, but get no information. Ans. The gold fish, or golden carp, breads all sorts of rolors, the young are black, some change lite first season, becoming plet or thirthed utility do rivinte; owner conain black for years, others some become red, white, or straw color. The grogeny of the black ones are as likely to be black as any. Probably your water and stock are all right, but your colors, as you see, may be all wrong. Briter wat till segond season, at all events.

DEAD!-FOREST AND STREAM Iliis week loses two of its DEAD!—FORRST AND STREAM this week loses two of its warmest supporters by untimely and accidental deaths, namely, K. C. Barker, Esq., of Detroit, and S. H. Mead, Jr., of this city. Mr. Mead shot himself accidentally. He was the inventor of the well known explosive bullet. Mr. Barker was Commodore of the Northwestern Yacht Fleet, of Detroit, an ardent sportsman and much beloved gentlemsn. His brother, M. M. Barker, has long been the traveling correspondent of Forest and Stream, and has done more than any ten men to extend its circulation in the west and Southwest. The families and surviving relatives of the deceased have our heartiest sympathies in their

—Dr. Wm. F. Thoms, the well known philanthropist, presented the subject of a Floating Hospital to the American Medical Association at its session in Louisville, Ky. Resolutions of approval were unanimously adopted by the

CONVENTIONS CURRENT

INTERNATIONAL ASSOCIATION FOR PROTECTING GAME AND

Tills Association, which is composed in great part of naturalists, was formally organized at Cooper Institute, New York City, on the 19th of May instant. The attendance was small, although the roll of membership in the composer of the chief of an chaldes was small, although the roll of membership in-cludes some 225 persons. However, since the object of an organization was merely to constitute a body from which authority might emanate, and to appoint committees under such authority, from those who had expressed by letter a willingness to serve thereon, the pancity of representation did not necessarily imply that the cause was weak or the labor vain. The large number of reporter was any labor vain. 'The large number of reporters present was indicative of the interest taken by the press in the subject of game protection. We append a list of the gentlemen who

dicative of the interest taken by the press in the subject of game protection. We append a list of the gentlemen who attended the meeting:—

Prof. E. D. Cope, Academy of Sciences, Philadelphia, (too late to act); Dr. J. L. LeConte, Philadelphia Zoological Society; Bernard A. Hoopes, Prest. Philadelphia Zoological Society; Bernard A. Hoopes, Prest. Philadelphia Sportsman's Ciub; Benj. W. Richards and G. B. Lawrence, of Philadelphia; Dr. N. W. Green, N. Y. Society for the Protection of Game; Hon. Robt. B. Roosevelt, Prest. Am. Fish Culturist's Asso.; J. Russell Reid, of Cambridge, Mass.; J. Dwight Francis, Pittsfield, Mass.; Hon. Charles W. Hutchinson, Utica, N. Y.; Col. F. G. Skinner, of Virginia; Robt. B. Wnite, Shrewsbury, N. J.; Maj. H. W. Walker, Prest. West Jersey Game Pro. Society; C. E. Coffin, Muirkirk, Md.; J. W. Sheridan, Peterborough, Canada; W. A. Coffin, Boston, Mass.; W. M. Tileston, New York, and Chas. Hallock, of New York.

On motion of Mr. B. A. Hoopes, Major T. W. Walker was appointed temporary chairman, and Dr. J. L. LeConte temporary secretary.

Hou. R. B. Roosevelt was then nominated and elected president of the Association, and the following gentlemen as vice presidents:—

Prof. Alex Agassix, of Cambridge, Mass.; Prof. Robt. Bell, Dominion Geol. Survey, Montreal, Canada, Wright Rives, Esp., Washington, D. C.; M. G. Ellzey, M. D. Blacksburg, Va.; John V. Le Moyne, Esq., Chicago, and Chas. C. Cadman, of Detroit. The two last were nominated by Benj. W. Richards and the Philadelphia delegation. Chas. Hallock was elected secretary and treasurer.

Mr. Sheridan, of Peterborough, Canada, then addressed the meeting on the progress made in the unification of protective laws in neighboring provinces.

Letters were read from distinguished gentlemen of the United States and Canada, regretting that they were mable to attend, and expressing strong sympathy with the proposed movement.

We append an extract of the letter of Rev. A. B. Lamberton, of Rochester:—

We append an extract of the letter of Rev. A. B. Lamherton, of Rochester :--

ROCHESTER, N. Y., May 14th, 1875. DEAR SIR:-

Dear Sir:—
I regret exceedingly that pressing business will prevent me from participating in the proposed meeting at Cooper Institute. I need not assure you that no trivial matter would detain me from the proposed International. I cannot see where this organization and the National Sportsmen's Association will conflict, since their constitution and powers will be dissimilar. As an active member of the National, I coincide with the views expressed in your letter, as to their functions and objects. Please assure the convention for me of my hearty approval and support. I say this lest some might think that since I am so closely alled with the National that I might be indifferent as to the success of the International.

sternational. You have liberly to propose my name as member of Cor

International.

You have liberly to propose my name as member of Committee on Nomenclainre. Yours,

On motion of Dr. Le Conte it was resolved that four standing committees should be appointed, namely:

An Executive Committee, a Committee on Nomenclainre, a Committee on Geographical Distribution and Habits, and a Committee on Legislation.

On motion the following five gentlemen were appointed a committee on rominations: Dr. J. L. Le Conte, Hon. R. B. Roosevelt; Charles E. Coffin, of Maryland; J. W. Sheridan, of Canada, and Chas. Hallock.

Dr. Green moved that the nomination committee have power to appoint the executive committee, who shall, at their convenience, constitute the other committees.

On motion of Mr. Chas. W. Hutchinson, it was resolved that the executive committees as amay in their judgment be required to further the objects of this association, and that the committees now appointed shall have power to add to their number.

Mr. Hallock moved that the initiation fee be fixed at one dollar, which was so ordered.

The rough minutes having been approved, the association adjourned to meet at the call of the president.

John E. Le Conte,

Sceretary pro tem.

Immediately after adjournment a supplementary meet.

Immediately after adjournment a supplementary meeting was held at the house of the Hon. R. B. Roosevelt, where a collation was spread, nearly all the members being The nominating committee discharged their duty by designating the following Executive Committee Seventy:-

Seventy:—

CANDA.—Rev. M. Harvey and Archibald Muun, of Newfoundland; Jon. John Bertram, Robt. E. Strickland and C. A. Post, of Peterboro, Obtahlo; T. Herbert March, Toronto; J. M. LeMolne, Quebec; Hon. Morrow and Fliz Cochran, of Helifax, N. S.; W. F. Whitcher, Isangel Wilmol, Newcastle; Col. C. R. McMurdo, Westfield, E.; W. H. Venning, St. John; Capt. J. W. Coventry, Nouvelle, and

N. B.; W. H. Venniog, St. John; Capt. J. W. Coventry, Nouvelle, Gaspe.

United States.—Verplanck Colvin, Albany; A. B. Lamberton, Rodester; Hou, G. W. Cinnon, Buffalo; Dr. J. Warren Green, Portland, Me.; C. G. Akikins, Buckspott, Me.; W. H. Parker, Nashus, N. H.; Dr. Celly, Frondence, R. I.; Prof. G. Brown Goode, Middictown, Conn.; H. Bowell Wilberts, Port Elizabeth, N. J.; Hon, Clement Sinnlekson, Salend, W. Richards, Port Elizabeth, N. J.; Hon, Clement Sinnlekson, Salend, W. Richards, Philadelphia; Prof. E. D. Cope, Philadelphia; Prof. B. Cope, Middledphia; Prof. B. Cope, Philadelphia; Prof.

ncton, Ky.; Henry Mather, Marquetto, Mich.; Dr. D. C. Estes, Lake Riy, Minn.; Nahum E. Balton, Sandwich, Ill.; L. M. Wyatt, Fond do aasna; Charles E. Aikin, Colorado Springs, Colorado; Lt. Col. G. W. A. Newell and R. L. Ogden, of Sun Franctsco; Charles P. Williams, C. A. Newell and R. L. Ogden, of Sun Franctsco; Charles P. Williams, A. N. Keell and R. L. Ogden, of Sun Franctsco; Charles P. Williams, Innut; Gen. W. H. O'Stren, Omata, Neb.; J. W. Sprance, Kalama, anhity Gen. W. H. O'Stren, Omata, Neb.; J. W. Sprance, Kalama, Ineworth, Portland, Oregon; G. G. Cole, St. Louis, Mo., and George ark, Mich.

It will be the business of this Executive Committee to appoint all the other committees and such new ones as they may think proper.

In view of the fact that some misconception exists in certain quarters as to the objects and functions of this Association, the following declaration was submitted by Mr.

In view of the fact that some misconception exists in certain quarters as to the objects and functions of this Association, the following declaration was submitted by Mr. Chus. Hallock and adopted mannimously:—

"The object of the International Association is to secure the best means for the protection of all game birds, animals, and fish throughout the United States and Canada, as far as is practicable, based upon a scientific knowledge of the various species and habits of the game and fish to be protected. While recognizing the landable and energetic efforts that are being made by the National Sportsmen's Association, and subordinate and auxiliary organizations, to seeme suitable laws for the protection of game, the creation of this Association seemed indispensable to termining species should be placed in the charge of scientific men; for the nomenclature of our fauna, the identification of species, and the determination of breeding seasons—upon which a system of close time must be based—are subjects that still puzzle the best informed naturalists, despite the research of years. Besides, the co-operation of Canada was indispensable to success in obtaining thorough protection and obedience to laws, and this could not be secured by any other method so easy and direct. The functions of the International Association are purely advisory, all associations having the protection of game in view. Its business is to devise laws and determine close times upon scientific data. It will be left to Canada and the United States respectively to see that they are enacted, respected, with securing their observance, for when the work which we have laid out for ourselves as above is completed our duty will be discharged, and the Association cease to exist. To keep up an organization would tend to weaken the efficiency of both, while as respects a permanent international body it would be impossible to give jurisdiction to either Canada or the United States over the consolidated game and fish to devise any and component part of it,

a legal question to be settled by the courts.

a legal question to be settled by the courts.

Dr. Le Conte then said:

"This is not, in my opinion, in any way a Sportsmen's Convention; otherwise I would be greatly ont of place leve. We have met to devise means; not for increasing onr enjoyment, but for securing to future generations of intelligent eitizens the same pleasures of the hunt and the fish from which our ancestors and ourselves have procured so much delight. Accurate observers of nature, and men accustomed to generalize from masses of isolated phenomena, are alone suitable to collect the facts and indicate from them the proper legislative action which is required for such a purpose. There can, thefore, be no rivalry between this and any other organization heretofore existing in the United States. But we will always hope that the local and national clubs will co-operate with us during our temporary existence in this common and laudable object—to protect those who come after us from the thoughtlessness, ignorence, or cupidity of those who now live among us. The elements involved in the success of our undertaking are twofold: First, industry on the part of our committees in observing facts; in compiling in useful form those already on record, and intelligence in digesting and co-ordinating the results into definite laws capable of being enforced; and, second, capacity of the national mass, from which emanates all legislative and executive power, to appreciate the value of the instruction which we hope our committees will be able to give. It is yours to say that no failure shall occur in the first; the responsibility for the second rests with others. But let our descendants, who will suffer from the exhaustion of the vital resources of tour country unless the present squandering of them is controlled, not have it in their power to blame us for neglecting their interests. They will make themselves better and greater than we are by natural processes of evolution. Let us resolve that even in their pleasures they shall not be

The foilowing resolution of Mr. Hallock's was adopted: Resolved. That the committees of the National Sportsman's Association to be appointed at its convention in Cleveland upon nomenclature, close time, protective laws, etc., be invited to confer with the same committees designated by this body, with a view to secure all the information and wisdom that can be obtained upon the important matters under consideration.

The following names of members have not before been published:

published:
Colin Campbell, Brooklyn, N. Y.; Geo. C. Eyrich, Jackson, Miss.; John A. Galbraith, do.; Geo. H. Johnson, Bridgeport, Ct.; Alex. N. Shewan, Montreal, Canada; Zal. B., Canada; W. M. Tileston, New York; Major G. K. Sanderson, Fort Sill, I. T.; W. W. Walsh, Brooklyn, N. Y.; Wm. A. Coffin, Boston, Mass.; H. H. Thompson, New York; Abram S. Southworth, do.; Hon. W. W. STATE SPORTSMEN'S CONVENTION AT WATERTOWN

By referring to our advertising columns it will be seen that the Association offers a most liberal scale of prizes for the different sports to be participated in during this meet the different sports to be participated in during this meeting. Those for rifle shooting are particularly liberal, and the pigeon shooter and fly fisherman will each find rich gifts offered for skill in his particular line. We are indehted to several friends for the names of delegates who will be present on the part of local associations, and would print

the complete list did our space permit. The Bench Show of dogs promises to be a leading feature of the meeting, and as far as prizes are concerned, it certainly is ahead of any similar show yet attempted in this country. We trust that our friends who are also owners of fine dogs will respond as liberally as they did to the invocation on behalf of the Springfield Show, and that this most valuable portion of Springfield Show, and that this most valuable portion of the gathering will meet with due encouragement. The meeting proper commences on the 31st last., but the bench show will not commence until the 1st June, continuing the 2d and 3d. Entries will be received until 12 o'clock on Tuesday 1st, proxo; fee \$2. The New York Central and Tuesday 1st, proxo; fee \$2. The New York Central and Iludson River Railroad will transport dogs for half price to Rome; theuce they will be carried by the Rome Watertown and Ogdensburgh Road free. The 8 A. M. and 6 P. M. trains over the Iludson River Road from Grand Central depates of themselves. depot go through to Watertown.

NATIONAL SPORTSMEN'S ASSOCIATION.

This Association will meet at Cleveland, June 8th. Since This Association will meet at Cieveranu, some of a state of small beginnings at Niagara Falls last September, it has been materially strengthened by the creation of State Sportsmeu's Associations in a large number of States where they did not then exist. Many of these perhaps all, will send five delegates each, which, with delegates from numerous local associations, would seem to guarantee a large attendance and successful meeting.

Cash prizes to the extent of \$4,000 will be given at the National Shooting Tournament to be held in connection with the National Sportsmen's Convention at Cleveland ou June 11. Bogardus, Abe Kleinman, Paine, Ward and Close are barred. Chicago rules to govern.

POWDER TESTS.

A Sa matter of much interest to our readers we give A the following experiments, made with a view to determine the initial velocity of Euglish and American powder, and quality of the powder with regard to cleanliness, by B. Burton, inventor of the Ward-Burton gun. All the tests below given were made with a Ward-Burton Magnzine musket, May 15th, 1875, by the Benton Balestoc pen-dulum system. Six shots were fired with each kind of powder, the gun being wiped after each test. The first powder tested was Laffin & Rand's, known as the Creed-

of bullet, 550 grains; barrel very little fouled; powder remarkably good

This powder is less dense than any of the other three powders tested, a ninety grain measure weighing just 90 grains, whereas a ninety grain measure of any of the other three tested will weigh 96 grains. Those testing this powders the state of the powders of the state of the powders. der should weigh their charge, as the same measure charge will give more weight with the other powder than with

the Orange Lightning.

Mr. Burton declares himself to be perfectly unbiased in making these experiments, and calls attention to the slight disparity in the velocity obtained between the Lafiln & Rand and Curtis & Harvey, the latter firm being the representative English makers. We regret very much that the Dupont was not included in the trial, and have requested Mr. Burton to make further experiments at his convenience.

—A railway is now proposed for Newfoundland, the route being across the island, running west and east to St. George's Bay; estimated length, 350 miles. A party of engineers are already making the preliminary surveys.

-Mr. T. Sedgwick Steele, of Hartford, has painted a trout picture, which is said by connoisseurs to he the finest he has yet produced. It represents four trout strung as boys earry their "catch," on a willow twig, and is most artistically grouped and drawn,

OLLIPOD QUILL.-We are assured that the readers of the Forest and Stream will be interested in hearing some-thing of the life of Mr. Luke Wyman, whose death we chronicled a short time ago, and who is familiarly known to them by the signature of "Ollipod Quill."

to them by the signature of "Ollipod Quint."

He was born at Marblehead in the year 1810, and lived for a number of years in Brooklyn; but the latter part of his life was spent in Arlington, Mass. His entire life was spent chiefly in literary pursuits. He was connected at different times with several different newspapers. He was reader and the production of the literary criticisms. wrote readily upon many subjects, but literary criticisms and lindscape gardening were favorite topics. Here he was quite at home. The books that he criticised he caretully examined, and though always anxious to be just, he was quite frank and outspoken in his condemnation of what seemed weak and worthless.

He had a variety of talent, and was fond of drawing and He had a variety of talent, and was fond of drawing and painting, spending many hours in these pursuits. He was a great lover of nature; was never weary of studying the nature and habits of plants. The more he studied, the more he saw evidences of divine wisdom. "I have learned nhout God among the flowers; I have walked with Him in the fields," he said to an attendant during one of the last few days of his life. few days of his life.

Studying plants, he became interested in the insects that prey upon them, and during the last few years devoted much time to study with the microscope. He was very heartily interested in the education of children, but he befleved that they studied too much from hooks and too little from nature; that they gained too muny words and too few ideas. Some thought that his views on this topic were Quixotic; but he belonged to the advance guard, with the lamented Agassiz, who hoped for the day when classes should be taken to the fields to investigate for themselves, under the guidance of their teachers, when, by the use of the geologist's hammer and by actual experiment in the laboratory of the chemist, they should learn for themselves the great laws of nature and science

11e was affectionate and sympathetic in temperament, always the friend of those who needed help, and hopeful when others saw nothing to hope for. His religious creed was very simple; "love to God and love to man"—to use his own words-"was the whole of the law." His last sickness, though a most painful one-discase of the heart, from which he had suffered several years-was endured with great patience and even cheerfulness.

The Rifle.

CREEDMOOR.

-The American team visited this ground for their sixth day of practice on Wednesday of last week. Their ill luck followed them as usual, the wind was variable, and during the shooting at the 900 yards range a shower come up, which compelled them to cease firing for a while. Subsequently, however, the weather improved and the shooting, the average being 143½ per man, was the best yet made. The following are the seores:—A. V. Canfield, 154; Major Henry, Fulton 152; Can T. S. Dakin, 149, G. W.

made. The following are the scores:—A. V. Canfield, 154; Major Henry Fulton, 152; Gen. T. S Dukin, 149; G. W. Yale, 148; Col. H. A. Gildersleeve, 142; R. C. Coleman, 141; Capt. L. C. Bruce, 136; L. M. Ballard, 128. For the first time at Creedmoor, practice was attempted at the 1,100 yards range by several gentlemen, including Messrs. Conlin, Dakin, Yale and Canfield, and notwithstanding the difficulty in getting the proper wind guage and elevation the following scores were made:—

11002	3	J. 8. CONLIN. 434334243333041	
		GEN. T. S. DAKIN. 3 3 2 2 4 6 2 ? 3 3 2 4 4	
		G. W. YALE, 2 3 3 2 2 3 4 0 3 0 4 3 0

-On Saturday the American team again assembled for practice, all the members being present. The atmosphere was very hazy, and on the whole very unfavorable for good shooting, particularly when the 1,000 yards range was good shooting, particularly when the 1,000 yards range was reached. The following are the scores made:—Col. John Bodine, 154; Major Henry Fulton, 153; G. W. Yale, 151; Col. H. A. Gildersleeve, 149; R. C. Coleman, 182; A. V. Canfield, Jr., 126; Gen. T. S. Dakin, 123; L. M. Ballard, 117; L. C. Bruce, 115,

-Creedmoor presented quite an animuted spectacle on Saturday, the number of riflemen and spectators being unusually large.

The Seventh Regiment Rifle Club were practising, and also a party from the Seventy-ninth Regi-

The Twelfth regiment team were out practising for —The Twelfth regiment team were out practising for the California match on Saturday, with the following results, the firing being seven shots at 200 and 500 yards for each man:—W. C. Reddy, 44, E. H. Madison, 43, A. Wood, 42, T. J. Dolan, 41, W. S. Smith, 40, H. Smith, 40, W. G. Carson, 39, A. Bentty, 36, W. H. Francis, 35, G. A. Bauta, 35, L. Moran, 34, M. Furrell, 30, J. M. Burlew, 28, J. Beattie, 27, James, J. Hughes, 18, Wui, H. Bodlish, 15, R. H. Capron, 43. R. H. Capron, 13.

-Bleven members of the Separate Troop of Cavalry Rifle Association shot for a budge on Thursday, at Creed-moor. The weapons were cartilizes. The wind was high. The range was 100 yards, and the highest attainable score a man, 50. Corporal John Felten wan the budge, scoring 43 points. Quartermaster Sergeant Miller scored 42 points, Private Welgold 40, and Captuin Carl Klein 30. The latter is President of the association. Colonel Scott and several members of the Elghth Regiment Rille Club practiced at 200 and 500 yards.

The Twenty-Third Regiment held its first "Creedmoor reception" at the Armory in Clement Avenue on Wednesday evening of last week. The exercises consisted of shooting at a target by the regimental team of 1874, for a medal; a buttaliou drill in double time; review by General Townseml and presentation of a prize won by the regimental team at the Pall meeting of the National Ritle Association in 1874. The team scores on Wedneday were as faltion in 1873. The team scores on Wedneday were as fallows:—Lieutenant P. A. Hardy, 15; Sergeant A. C. Bunce, 14; Corporal J. M. Allen, 15; Corporal C. A. Cullin, 13; Privato Geo. H. Earle, 13; Private C. W. Dibble; 18; Sergeant R. B. Malloy, 15; Corporal Jumes H. Stearns, 16; Private F. H. Horton, 14; Private A. V. Young, 16; Private P. M. Gomenthereite, 12 vate M. B. Cowperthwaite, 17.

Messrs Gildersleeve, Dukin, Yale, Canfiehl and Bruce of the team, practised at the ranges on Monday. The weather was in every respect perfect, and the scores the largest yet made this season. At 800 yards, Col. Gildersleeve accomplished the best score on record at this distance, fourtee bullseyes and a centre, or 59 out of a possible 50. The following are the totals:—Col. H. A. Gildersleeve, 160; G. Yale, 159; A. V. Canfield, 155; Gen. T. S. Dakin, 148; Capt. L. C. Bruce, 143.

To-morrow (Friday) the Spring meeting of the National Rifle Association commences at Creedmoor, closing on Monday. Five matches are to be abot, according to the

Monday. Five matches are to be above, according following programme:

May 23th, at 3 o'clock P. M.
Ditterforms' Marcit.—Open only to illrectors and honorary directors of the National Riflo Association. Distance, 201 pards; position, standing-veapou, any milliary rifle; rounds, five, with two sighting shorts. Entrance fee, \$1. Prize-The directors' champtonship sold badge. Shot for assurably and held by the winner during the year.

This match was won last year by Col. Wingate by the fallowing soors. \$2.2.4.4. total 17—out of a possible 20.

following score:-3 3 3 4 4; total 17-out of a possible 20.

following score:—3 3 3 4 4; total 17—out of a possible 20. May 28th, at 3:30 o'clock P. M.

Short Ranks Match.—Open only to members of the National Rifle Association, Distance, 230 yanks; rounds, seven, with two sighting shots; postion, standing; weapon, any rille withto the rules. Entrange fee, \$1. Prizes—1. Spirit of the Times modal, presented by Mr. George Wilkes, value \$15°; 2. Life membership of National Rifle Association, transferrable, and \$25° cash, \$310°, \$20°, \$4. Cash, \$30°; 4. Cash, \$31°, \$2. Cash, \$30°; 4. Cash, \$31°, \$2. Cash, \$31°, \$2. Cash, \$31°, \$

This match appears to have taken the place of the Long Range Match shot at the Spring meeting last year.

Range Match shot at the Spring meeting last year.

May 29th, at 11 o'clock A. M.
Lezen Cur March.—Under the anspices of the Amateur Chili. Open to all native-horn citizens of the United States and all resident members of the Amateur Rife Club, regardless of nationality. Distances, 800, and 1,000 yards; position, any without artificial rest, raunds, afficen at each distance, without eighting shots; weapon, any rife within the roles. Entrance fee, \$1 for members of the Amateur Rife. Club, \$2 for sell others. Prizes—The Leech Cup, to be held by the winner during the year and championship gold badge, value \$50.

A large number of entries are expected for this match, and it is suggested that positions at the targets be assigned by lot:

by lot:

May 31st, at 10:30 o'clock A. M.

MILITARY SHORT RANGE MATCH.—Open to members of the National Rille Association and lo all members of the N. G. S. N. Y., in uniform, Illatance, 200 yards; postion, standing; rounds, sevien, with two sighting shots; weapon, any military ritle. Entrance fee, \$1. Prizes-1. A building for at Creedmoor, L. I., valued at \$300; 2. Life membership of the National Riffe Association, transferrable, and cash, \$25, value \$50; 3. Silver medal or cash, \$20; 4. Silver medal or cash, \$15; 5. Bronze and or cash, \$10; 5. Cash, \$5; 7. Cosh, \$5; 8. Cash, \$5; 0. Cash, \$4, \$1. Cash, \$4, \$3. Eleven prizes, ratin value \$507.

a possible 20.

May 31st, at 1 o'clock P. M.

Mittrativ Lono Range Marcii, -Distance, 500 and 600 yards; posttion, any without artificial rest. Other conditions same as in match 4.

Prizes-1. A long range Remington Creedmoor rifle, with appuritenances
complete, value \$150; 2. A telescope, presented by W. J. Gall, of Union
square, value \$20; 3. A life membership National Rifle Association,
transferrable, and cash, \$20; \$20; 4 Cash, \$37; 5 Cash, \$55; 6 Cash,
\$20; 7. Cash, \$15; 8. Cash, \$10; 9. Cash, \$5; 10. Cash, \$5; 11. Cash
\$3. Extra prizes-Offered by Second Division lieadquarters, open to all
members of the National Guard in the Second Division in uniform-1.
\$50; 2. \$30; 3. \$20. Fonreen prizes, total value, \$485.

Lieut. Col. Giblersleeve carried off the first prize in this match last year by a score of 3 4 4 4 4 4; total 27-out of a possible 28

Another Short Range Competition .- In order to encourage short range, off hand shooting, and also to deter-mine which among the gentlemen who have been for some time practicing at Mr. Conlin's gallery is the best shot, we have arranged a match, open to all comers, to be shot comers, to be shot at the above place, commencing on Monday evening, 31st instant. The prize offered at this competition consists of a handsome solid gold budge, to be known as the Forest and Stream badge, appropriately engraved and mounted for wearing. The conditions of the match are as follows:— The shooting to be strictly off hand, that is, no portion of the body touching the gallery. We have entrusted to Mr.

Conlin the details of this match as regards seeing that the regulations are strictly carried out. The match is open to all, and no entrance fee will be required. We hope to meet a goodly number of riflemen at No. 930 Broadway, on Monday evening, and see a spirited competition for this beautiful little prize.

Unique Tuoruy -It will be remembered that A Unique Thorny—It will be remembered that Mr. John Rigby of Dublin, presented to Mr. Conlin a pin formed after one of the hallets used in his rifles; also that Mr. Conlin offered this pin as a prize for off hand shooting at his gallery, during the tournament, and that Mr. Wilson MacDonald, the sculptor, was the fortunate winner. Mr. Conlin is reciprocating Mr. Rigby's attention by forwarding to him a silver fac-simile of a hullet suspended by warding to him a silver fac-simile of a hullet suspended by a string, and Indented by a shot from a rifle at twenly-five yards. The hullet in question is an exact copy of one made by Mr. Wm. Hayes, of Newark, N. J., known as one of the best shots in the country at 200 yards. The bullet is mounted with ribbon and chasp and forms a more unique trophy representative of rifle shooting, than any we have seen. This mode of shooting at bullets originated with Nr. Copile, and leas not only become very popular, but with Mr. Conlin, and has not only become very popular, but is one of the severest trats of good shooting.

—A correspondent, who signs his letter with the stamp of his "team," informs us that a number of young gentlemen, sged from sixteen to eighteen years, have formed themselves into an association to be known as the Union Rifle Team of New York. We should be glad to have further particulars.

—The formation of the Calfornia Rille Association is ereating great interest in that State and bringing to the front many marksmen who had been forgotten and who are now joining the Association. Bay Farm Island, near Alameda, opposite Sau Francisco, is spoken of for a range. It is perfect as to distance and safety, but the line of fire is from North to South, and therefore against the rare of the from North to South, and therefore against the rays of the

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME

THE MONROE COUNTY SPORTSMAN'S CLUB.-The handicap match of this club was shot last week with great eatis faction to the members and their guests. No less than forty-six gentlemen were haudicapped at from iwenty-one to twenty-six yards, and appeared at the seratch with varying success. ing success. A press of other matter will not permit of our giving in detail the total scores as we should be pleased to do. Several gentlemen tied on nine birds, and on shooting off, 11. H. Morse killed five birds and took first prize. Ten tied on eight, and Hiram Smith carried off second prize. Seven contested for third prize and it was won by prize. Seven contested for third prize and it was won by Henry Walzer. II. B. Hooker took the fourth and last. The prizes were handsome gold medals. Subsequently twenty four gentlemen shot a match at twenty double birds, which was won by II. G. Lucas, killing eighteen birds. Among the contestants we noticed the name of our old friend Seth Green, who came within a few of taking a medal—but then he bas enough now for one man.

The Kongerston Court.—This generalization organization.

THE FORESTER CLUB.—This enterprising organization, whose headquarters are at Buffalo, had a pigeon match on Thursday last for a handsome gold watch, made and presented by Mr. J. O. Robson, of Buffalo. Seventeen members of the club, handicapped at distances varying from 21 to 25 yards, 10 birds each, participated. Our space will not permit of our giving the full scores. Messrs. Ifenry Jones and W. W. Sloan having each killed nine were obliged to shoot off the ties three times before Mr. Sloan was finally victorious. The watch is to be shot for four times each year for three years, the member winning it the greatest number of times to become the final possessor. In a subsequent handicap Mr. P. D. H. Saunders killed eight birds consecutively, and took first money.

-Captain A. H. Bogardus and Iru A. Painc shoot of —Captain A. H. Bogardns and Irn A. Paine shoot a match at 100 birds each for \$1,000 a side on Saturday 29th inst., at Prospect Park, Brocklyn. Preparatory to the mateb Captain Bogardus bas been giving some exhibitions of his remarkable skill before admiring audiences. On Monday last he killed thirty-cight birds out of forty-four, trapped in pairs, from two traps placed forty yards apart, the shooter standing between the traps. Subsequently he killed twenty-six hirds in the remarkable time of two minthe shooter standing between the traps, killed twenty-six birds in the remarkable time of two minutes and forty seconds, loading his own gun. The birds were tossed in pairs from baskets stailoned at proper distances in the field. The match on Saturday will probably he one of the most exciting ever shot in this country.

—We received a call last week from Dr. Chas. W. Torrey,

Vice President of the Yonkers Sportsmen's Club, to wbom that association owes much of its present prominence and vitality. It has about eighty members. Its new club room is made very attractive by paintings, mounted specimens, books, &c. It will send delegates to Watertown.

GOOD SNIPE SCORES.

Sr Louis, May 15th, 1875.

EDITOR FOREST AND STREAM:—

Measte, Leeds, Stickney, and Hart, in two days' shooting on the marshes back of Claikestile, Pike county, Missouri, April 4th and 6th, bagged five hundred snipe. Mr. Leeds, considered the best shot in the West, scored 10s the first day, and 114 the next. Had not Mr. H. and Mr. S. run out of summnition, there is no telling how many of the long hills winhigh have come to griet, as they are both aplendid shots. Another of our crack shots, Mr. D. Rankin, bagged on April 5th, on the Darden marshes, St. Charles county, 114 snips.

Pradulx.

GAME PROTECTION IN NEW JERSEY.

EDITION FOREST AND STREAM:—

As some of your subscribers are members of the West Jersey Game Protective Society, and were mobble to be at the last meeting, it may not be amins to give a short synopists of what was done at that meeting. The society, although much smaller numerically than many other game associations to other States, to none the less active in outorcing its laws and those of its State for the protection of game.

In 1872, owing to the large number of sportsmen both from Now York and Philadelphia who were continually shooting in the State of Now Jersey, it became orident to a number of the leading sportemen of West Jersey that index some laws were passed for the protection of game the shooting in that port of the State would soon be one of the pleasures of the peat. With this state of facts before them, these gentlemen determined to organize themselves into a society for the protection of game, and to have such laws passed as would compel all desiring to shoot, and who were non-residents of the State, to join the society and contribute a small sum lowards the prapagetion of game.

Accordingly, on the ad of April, 1873, an act was passed giving birth to the society. By this act every non-resident of the State is obliged, before shooting in the six lower counties of Jersey, to-wit: Cainden, Gloucester, Allantic, Salem, Cumberland, and Cape May, to obtain from the society a cerificate of membership at the cost of \$5 the first year ond \$2 every year thereafter. The funds of the club are therefore derived from the sonice already siluded to, together with the annual dues of \$2 from the resident members

In consequence of its limited membership and resources, during 1873 the club were merely abla able to neet their running expenses, and were unable until the beginning of the Spring of 1875 to achieve their mela object, namely, the propagation of game.

During the Fall of 1874 the society, from shooting. These efforts were crowned with great success, and many arresto were made and hoary fines imposed upon

committee appointed for the parchese of live game reaches them hefore the ample funds to procure birds for the limited time given them hefore the opening of Spring.

During this abort period 900 qualt were purchased, and also ten pairs of prairie chickens as as experiment. Out of the 300 shipped to 114, at least 600 were turned out, and in most cases here remained in the immediate neighborhood. The profite chickens have been marked down.

The people in the neighborhood have taken great interest in the experiment, and if the law is strictly adhered to, which prohibits one frem shooting them for five years. I have very little doubt of seeing prairie chicken shooting again resorted to in New Jotsey.

As our shipment of five game has been so successful this ceason, the society has made arrangements to salp several thousand qualt from the South, and several hundred pairs of prairie chickens from the West, and by keeping up the chipment of live game from eason to season we hope to keep the westarn part of the State, which is under the jurisdiction of the society, well stocked with game.

I have stready, Mr. Editor, thanks to your kindness, taken considerable space in your columns, but it has been the carried esire of our members to contribute our slight experience in the pripagation of hirds to all our brother sportsmen, that we may all heartily work together for the great object of our chooting existence, to-wit, plenty of game and fine shooting. I will treapsas a little more on your time and space by acking you to publish a supplement to our charter, which has just been passed, and which is an important one to those who choof outpet to our charter.

STATE OF NHW JERSEY. STATE OF NEW JERSEY.

Supplement to an act entitled "An act incorporating the West Jersey Onne Protective Society.

Be it enacted by the Benate and General Assembly of the State of New Jersey, That howester any purson or persons, non-residents of this State, who shall kill, destroy, hint or take any doc, buck, fawa or any cort of deer whateever, or shall kill, destroy, hunt or take any partidge, moor fowl, ruffed grouse, commenty called phessante, pinnated grouse or prairie chicken or any other kind of grouse, quall, woodcock, Wilson or gray speckled brook tront or speckled river front at any time, or shall ested any speckled brook tront or speckled river front at any time within the counties of Canden, Gloncesier, Atlantie, Salem, Cumberland and Cape May, in this State, without complying with the by-lawe of this isane Protective Society, then the person or persons eo offending shall forfeit and pay the sam of fifty (99) dollais for each and every offence, and may be presended against in any county of the State wherein such person of prosecution, any person or persons so offending shall into the committed, and in detault of the payment of the forfeit mency, with costa of prosecution, any person or persons so offending shall into in the common jail until the same shall be paid; see half of the forfeit money shall be for the hencell of the person prosecuting for the same, and the remainder paid to the collector of the township wherein the conviction may be had, and all acts or parts of acts inconsistent with this act are hereby repealed; provided, that nothing in this act shall prevent residents of this State from taking game or fish subject to the existing laws of this State.

of this State from taking game or as a cooper to the State.

STATE OF NEW JERSEY.

Department of State.

I, Henry C. Keisey. Secretary of State of the State of New Jersey, do hereby certify that the foregoing is a true copy of an act passed by the Legislature of this State, and approved by the Governor the ninth day of April. A. D. 1873, as taken from and compared with the original now on file in my office.

In testimony whereof, I have berennto set my hand and affixed my ead, at Trenton, this seventeenth day of April, one thousand, eight hundred and seventy-five.

HEART C. Kalsur, Secretary of State,

THE PICEON ROOST NEAR CORNING

THE PICEON ROOST NEAR CORNING.

ROCDETER, N. Y., May 17th, 1875.

Beding a representation of the "pigeon roost" item which you copied from the Rochester Democrat, and to which you alinde in your last lesues. Previous to the occasion of my vielt to the locality mentioned (near Corning) the hirds had been flying for three weeks, night and morning, and had been fired at and scared by every native, so that they had begun to change their route, particularly that of the morning flight, which became from two to four mileo farther west. After this change had become a settled thing, the usual evening line of flight was gradually shandoned, until that, too, became only a "pleasant memory." Then the hirds became very erratic in their wanderings. One day there would be millions of them scattered around over a certain tract of country, and the next day not a solilary bird could be found, owing, I presuma, to the fact that their immense numbers were sufficient to clear a considerable territory of accorns each day, and also that the near approach of their neating time rendered them uneasy. The week following my first trip a party was made up and another visit to the locality made, with very poor success. Being an strache of the lefegraph at this place, I had every facility for ascertaining the whereabonts of the birds, and the ovenling previunce took the greatest paine to find the heet place to go, and supposed we had a "soft thing" on less favored eportsmen, but only received a fresh ilinatestion that "a donbtful thing te very uncertain," for we came back with ecarcely a hird aplece.

One evening during the same week the hirds enddenly seltled down and flew in all directions over and around the village of Liberty; a day or two after the same thing occurred at Genece, many miles further west. Since that time they seem to have neither "a local bahitation nor a name," and can't be heard from in any numbers. The general impression and mong trappers (who, by the way, spread their nets in volu) is that they have gone into the big

GEORGIA GAME ASSOCIATION.

EDITOR PUREST AND STREAM:—
The first social meeting of the Georgia Game Association came off last Priday, it being the first anniversary of the originization. An excursion to Beach Hammock having bean necisied upon, the steamer Katie was chartered and a fine boud of music engaged for the occasion. About has past seven o'clock the members of the association, with many of their hady friends and a lorge number of invited guests, went on beard the sleamer, and half an hour later were stonning down the river. Dureing was commenced at once, and kept up without consistion mutil the Hammock was reached. As soon as a landing was effected all purtice betook themselves to a point on the beach about a quarter of a mile from the wharf, and where a large brilding had been erceled for dancing. The pigeon shooting match was at nuce begin by the members of the association, and was a very close and exciting one, as will be seen from the following core:—

lowing ecore:-

SCOTTISH GAMES.

RIGHLAND GAMES-QUOITS, &O .- No. 5.

ITH international rife, yacht und boat races, we see no reason why there should not he international flighland gatherings, curling "bonspiels," and quoiting tournaments. Such would afford the best means of deciding upon the merits of Seotsmen at home and abroad, and of proving whether the latter degenerate physically in the climate of America.

If we turn to the respective merits of curlers in America and Seotland we find ourselves with as little ground for instituting a comparison as in the case of Highland games. Some negotiations have taken place with the view of arranging an international bonspiel, but until it is played the palm cannot be awarded.

Nor has there been any occasion upon which the champion quoiters of the two countries have met. Possibly the exchange of courtesies may so bring events around that we may hereafter find some daring American Scot returning to his native land with hostile intentions, and with a pair of quoits in his Saratoga. In such an event the simplicity of the game might become a decided advantage. We venture to supplement our previous article "by a few practical points in reference to the conduct of this game. All that is required to play it is a pair of quoits for each player and two iron pins, sometimes called "hobs." These are driven into the ground at a distance from cach other of from 15 to 30 yards, according to the agreement of the players. The more general ranges are from 18 to 24 yards, and of all other distances 18 yards and 21 yards are the most popular.

Two can play, and when more than three participate in

all other distunces 18 yards and 21 yards are the most popular.

Two can play, and when more than three participate in the same game the players are divided into sides.

In pitching quoits, each man takes up his position at or uear one hole or pin, and aims at covering the one at the other end. The nearest quoit or quoits (if more than one on the same side are nearer than any of the opposite) to the pin nimed at, counts. The score is kept as in curling; that is to say, one point is allowed for each quoit lying nearer than those of the opposite side. Pieces of paper or white fenthers are fixed at the pin played for, to guide the contestants, and when a quoit is so played as to lie surrounding the pin it is said to be a "ringer." Considerable difficulty is experienced in deciding which is the winning shot. The measurement may be either from the edge of the quoit nearest to the pin, or from that portion of it which is above the ground.

In treating of Highland Games in a former number we made the remark that most of the games practiced in Scotland have been introduced into this country, although some have been modified in form, and others have fallen into comparative desuetude. It is difficult, however, to lastitute a comparison between the representatives of muscular Christianity in the two countries. In fact it was a hard matter, until late years, even to compute Scotsmen in America with each other. In leaping, vaniting, and a few other sports of a similar character, it was, no doubt, perfectly practicable to arrive at a tolerably correct idea of the respective metits of the contestants, but this was precluded in all the games which are more peculiarly Scotch.

Hammer throwing, patting the stone, tossing the caber, depend upon the weight of the hammers and stones, and the size of the caber, and as to these there was no uniform practice. There were also different styles in vogne. Thus, a practice, now almost extinct in Scotlant, of throwing the bammer with a whirt, or swing round of the whole body, was revived, and is still to be met with in that section of Canada which has produced the best known athletes of the Dominion. In describing what may be termed the orthodox style of throwing the hammer, we said: "The athlete stands at a mark, and after attaining the necessary impetus, either by swinging the hammer round the head, or hack wards and forwards, delivers it in the necessary direction, usually the opposite to that in which he is looking." When the other system is adopted the athlete begins at some distance from the mark, which he approaches by a scries of gyrations, in which the body is whirled round, and the hammer beld with extended arms. The velocity naturally increases with the number of swings, and the hammer is delivered as the athlete reaches the mark. The direction it took was, and always must be, more or less haphazardous. Gyrating is an intellectually confusing exercise, as any one may find out by engaging, without practice, in a long waltz. Things are apt to take queer shapes, and ideas of distance and direction to be temporarily clouded. The result was that looking at a whirling athlete was not always safe. The hammer flew dangerously near or even among the speciators, and bence the practice in this form was deharred at games in Scotland. There can be no doubt at the same time that much greater distances were reached in that manner. The McCellans, pf Glengarry, Canada, who follow the older custom, have no living equals in their own way, and lave challenged the world. The mode which they have revived is now almost, if not altogether, peculiar to their own district, and certainly has never been revived into any degree of favor by Caledonians in the Unite

never been revived into any degree of favor by Caledonians in the United States.

Another obstruction to a comparison of merits consisted in the difference of weights in the implements used. This was put an end to in a great measure so far as America is concerned, by the formation of the North American United Caledonian Association, one of the objects of which organization was the production of miformity in the above particular. It fixed the weight of the light and heavy hummers at 12 and 16 pounds respectively. It is incumbent upou all societies affiliated with the Association to conform to this rule. Whether they do so or not is another question. A perusal of the record of games for any year reveals a striking discrepancy in the feats of the same athletes at different places, with implements of nominally the same weight. The distances reached vary to such an extent in some cases as to demonstrate beyond question that the similarity is nominal and nothing more. To ensure its reality, the Association must go a step further, and make it incumbent upou the judges, in every instance, to weigh the hammer and stones hefore the games hegin. This having been accomplished, and obedience enforced as well as a standard enacted, a comparison might be drawn between any athletes who had not met on the same ground.

In regard to Scotland the difficulty wo ild still remain at great as ever. There has never been a stardard in that country. Hammers are used weighing as much as twenty-seven pounds, or eleven pounds heavier than the "heavy" hammer of America, and the weight of the stone occasionally ruus as bigh as twenty-eight pounds. Until something like a common standard is adapted by the two countries, journalists will he spared the "odium" of Instituting comparisons.

A few facts may, however, be presented. In this coun-

shonarly return as origin as twenty-eight pounds. Onthe something like a common standard is adapted by the two countries, journalists will he spared the "oflum" of Instituting comparisons.

A few facts may, however, be presented. In this country we have no professional athletes in the strict sense of the word. Most of those taking part in Colledeniau games are husiness meu and artisans, who turn to athletics as a rolaxation, and who are always willing to run down to the celebrations of distant clubs for the sake of the sports Very few have an eye solely to the prizes, and none receive a direct reward for appearing as contestants.

In Scotland, on the other hand, there are a number of men who, during the season, make a business of attending games, and whose sole inceutive is the prize money. They travel about from place to place, as attractions offer, and their names are to be found figuring in every list of winners, when the sums offered are large enough to make the winning of half a dozen prizes anything of an object. These men are the hest representatives of Scottish muscle, and the fact may as well be conceded at once that their feats far exceed anything which has been attained by the Caledonians resident in America. So well known is their excellence that it is quite customary in Scotlaud for games' committoes either to dehar them from entering, or to vote them special prizes. The latter course gives the gatherings the additional éclat to be derived from their presence without disconraging other competitors.

In stating what has heen accomplished hy men of this stamp, we put upon record some of the greatest feats of the athletic arena. Possibly the greatest athlete whom Scotlaud bas produced is Dounald Diunie, a native of Abovne, Aberdeensbire, and now ahout thirty-six years of age. Donald is a perfect marvel of strength and symmetry. He stands exactly six feet high, measures 464 inches round the chest, and 154 inches round the arm, and weigbs in walking costume 210 pounds. The following are a few of his dis

reached at Leven 43 feet 6 inches.

Noxt to Dinnie stands James Fleming, a native of Tullymet, Perthehire, and now about thirty-two years of age. He stands 5 feet 11 inches, and weighs in walking cosmme 200 pounds; he measres 42} inches round the chest, and 14 inches round the arm. Among his best distances are the following: He threw a 22-pound hammer 90 feet; a 27-pound hammer at Braemar 75 feet 10 inches; a 16-pound hammer at Aberdeen 114 feet 3 inches; on ground slightly inclined at Danheld Fleming put a 22-pound stone 44 feet 0 inches, the hest throw on record; at Glen Isla a 28-pound slone 33 feet; at Crief a 23-pound stone 39 feet 6 inches, 5 feet 3 inches short of bis distance at Dunheld; at Aber-

deen a 16-pound stone 46 feet 11 Inches. In running high leap Fleming has cleared 45 feet 7 inches, has jumped 18 feet 6 inches, and in hop step and leap has reached 40 feet 6 Inches.

leap Fleming has cleared 45 feet 7 inches, has jumped 18 feet 6 inches, and in hop step and leap has reached 40 feet 6 Inches.

Both of these men have been beaten by J. Carruthers in running and jumping, the latter receiving the credit of having cleared fully 23 feet at Leven in a running jump. But as all-round athletes they have no rivals. Up to 1872 Dinnie had gained 2124 first prizes, 80 gold and silver metals, 12 silver cups, and other trophies, and Fleming land at the same time to his credit upwards of 700 first prizes, 30 gold and silver medals, beside belts, broaches, &c. When Dinnie and Fleming visited this country they carried everything before them in their specialties of the hammers, stones and cabers. On the occasion of his last visit Dinnie aprained his left arm, and with one hand out-distanced all rivals, with both hammers and stones.

Coming next to Scottish athletes in America, those of them who have yet appeared in public must be put between the two above mentioned in the heavier exercises. Mr. John Anderson, of Newark, and Mr. A. Rennie, of New York, are among the foremost in this class. At the Hudson County (N. J.) games, last Summer, the former put the beavy stone, 21 pounds, 36 feet, and the light stone, 14 pounds, 42 feet 6 inches; he threw the 16-pound bammer 82 feet 10 inches; and the lawy hammer 78 feet and 104. Both men have done better, Rennie in particular, who threw the light hammer at Boston several feet above a hundred.

threw the light hammer at Boston several feet above a hundred.

What is lacking in sheer strength on the part of our athletes would appear to be made up in agility. At the same games Rennic jumped 20 feet 10½ inches; D. T. Keelor 20 feet 3 inches; R. Mitchell 19 feet 10½ inches. In hop, step, and jump Mitchell stood first at 40 feet 6 inches, and on the same day Tom Buchanan, of Boston, cleared at the Newton games, 41 feet 9 inches, and was followed by P. Johnson at 41 feet 4 inches.

A reference to the Philadelphia games of the same year will suffice for further illustration. There A. McKay threw the 12-pound hammer 106 feet 6 inches; J. Anderson, 104 feet 7 inches; and A. Rennic, 103 feet 6 inches; Anlerson threw the heavy hammer 96 feet 3 inches; and Rennic 94 feet.

feet.

Among the best recorded high leaps is that of G. T. Addlson, a few years ago, at Newark, when he cleared 5 feet 6 inches.

It is unnecessary to adduce any further feats of this kind. The conditions here and in Scatland for pursuing athletic sports are altagether different. In the first place the taste for them there is more general, and the necessary spirit more widespread; in the next place the facilities for practice are much greater.

BASE BALL-THE PROFESSIONAL ARENA.

BASE BALL—THE PROFESSIONAL ARENA.

—The contests for the professional championship during the past week were marked by a scries of finely played games, which ou Friday, May 21st, culminated in a contest unequaled in the annals of the game, in the skill displayed, and the amallness of the victor's score. Prior to May 21st the game at St. Louis between the Reds of that city and the Whites of Chicago, stool innequaled as regards the score, but on May 21st the Munual and Hartford nines played a better game, the score was the same, viz.: 1 to 0! The first meeting between the two clubs took place at Hartford, and resulted in a score of 8 to 3 in favor of the Hartford, and resulted in a score of 8 to 3 in favor of the Hartfords, the Mutuals being out of practice. This time they were in better trim, and as the hall selected proved to be a decldedly dead ball, fielding skill decided the contest. To show the superiority of play in a game played with a dead ball, compared to a contest in which a lively ball is used, it is only necessary to point to the henuty of the display made in this game, compared to the muffin match of the previous Wednesday, in which the Athletics played the Mutuals with an elastic ball and won by a score of 11 to 6, the game being marked by nearly thirty fielding errors and by heavy hitting, whereas in the contest of Friday there were but three errors which told on the score, and not eight in the entire game. The score of the model game is appended:—

On May 20th an illustration of the rallying powers of the Boston nine was afforded on the occasion of their return game with the Philadelphias. The Fillies gut in six tuns in their second inning, and were so elated at the prospect of a victory over the champions that they were enabled to keep down the Boston's score until the seventh in ning, when the Brill Stockings began their customary rally for the lead, and at the close of the ninth inning the record stood in their favor by 8 to 6. The scare is as follows—

—Tho Doerrs and Keystones phyed a remarkable game on Thursday, May 20th, at the Centennial ground, Twenty fourth street and Ridge avenue, Philadelphia. The pitching was so effective on both sides and the flehling so superior, that not an earned run was sepreal, and only six clean hits made—three by each side. The brilliant play of H. Riffert of the Doerrs, as catcher, was a special feature of the game.

CRICKET-STATEN ISLAND VS. PHINCETON.

The match between the elevens of these clubs, played at Staten Island on May 23d, proved to be a rather one-sided contest, the Islanders fathing to muster in fares, as the score below shows:—

The Germantown club having refused to enter the lists the Philadelphias, Young America, and Merion Cricket clubs will contend this season for the Halifax Prize Cup, won by the American twelve at the formament at Halifax, N. S., August, 1874. The first match of the series will lake place on Saturday, May 29, between the Philadelphia and Young America, when the former will be strong in the possession of Meade and Law, two first-class bowlers.

On Saturday, May 22d, the Young America and Germantown clubs played a game, which was in many respects remarkable. The game, as on the previous match, was marked by extraordinarily good play on both sides. In the Germantown team were four brothers—Hurgreaves; in the Young America four brothers—Newhalls; and their skill added largely to the score upon each side. There was but one inning played, with a result of big figures. Young America, 248, an average of 11. For the Young America Boh Newhall made the grund score of 103 runs by some of the most brilliant hatting ever seen in this country, giving but one chance, and that when the telegraph gave him credit for 79 runs. This score has not been equaled in a first-class match by an American cricketer since the 105 maile in 1828 by the lale and greatly lamented Wulter Newhall. To this were added by good batting 23 by Loper Baird, 30 by Harry Newhall, 16 by Cooper Baird, and 35 by Dun Newhall.

The Germantowns were in good practice at the bat, but not up to the mark in bowling, a showery afternoon making the ball slippery and hard to handle by all the bowlers and fielders. The Hargreaves scored John, 21; Tom, 21, and Joe, 28, Holfman making 19. The Young America, is a promising young left-hund howler, the Hermantown having a good colt in "Bob" Hargreaves. The Young America need Pease, and both clubs will be reinforced when Brewster and Charles Newhall got hut 5. Harry Davis, of the Young America need Pease, and both clubs will be reinforced when Brewster and Charles Newhall return from Enrope. The wicket keeping of Joe Hargreaves

greaves and Geo. Newman was the main feature of the fielding.

The Yale Athletic Association held its Spring meeting at Hamilton Park on Saturday. Notwithstanding that at this senson of the year there are other attractions in the way of out door amusements to divide attention, the attendance was fair, including a large number of ladies. The entries were confined to the most proficient, owing to the fact that for each event a limit as to lime or distance was set for its performance. The events were as follows: Half mile race, won by D. Trumbull, '76; time 2:344. Three mile race, contested by three meu, Ward, '76, came in first, making the distance in 19 min, 31 sec., but lost the prize, as 18min, 30 sec. was the limit. Trumbull, '76, was more fortunate in the one hundred yards dash, accomplishing it in 10\frac{2}{3} sec. The one mile was not run within the 5 min, 15 sec. Wakeman, '76, won the hirdle race in 20 sec., and Ely the quarter mile in 1 min 3\frac{2}{3} sec. Three contested the one mile walk, and Johnson, '76, came out shead but not within the limit fixed, 8 min, 10 sec.

The New Havens left New Haven May

The Mew Havens left New Haven May 25th on the boat, and during a two weeks' absence will play the following clubs: Atlantics in Brooklyn, the 26th; Mutnals in Brooklyn, the 27th; Washingtons in Washington, the 29th and 31s; Philadelphias in Philadelphia, June 3d; Centenniuls in Philadelphia, the 4th; Athletics in Philadelphia, the 5th; Philadelphias in Philadelphia, the 5th; Philadelphia in Philadelphia, the 7th. They then return to play the Hartfords in New Haven June 9th and 12th.

The Bostons defeated the Actives of Reading, Pa., on Friday; 27 to 11.

—At New Haven, May 21st, the Athletics again defeated the local nine by the appended score:—

"—The St. Louis club's visit to Keokuk resulted in two victories, the last match played May 15th, was a close one, as the score below shows:—

-At Philadelphia, May 19th, the Fillies defeated the Centennial nine by the follow-

The Boston Red Stockings, the champions, now remain the only club in the professional arena yet undefeated, and there is but little doubt of their again being the wearers of championship honors.

THE AMATEUR ARENA

THE AMATEUR ARENA

—The noted Neshaunaek club of New Castic, Pn., has been organized with the following strong amateur rine: Al Hall, captain and catcher; L.W. McGntlin and Hawk, pitchers; Chas. Beunett, s. s.; R. S. McGuffin, 1st b.; C. L. Warnock, 2d b.; C. J. Hall, 3d b.; E. M. Richardson, l. f.; H. En-

nery, c. f.; Ed. Bigley, lenth man. The first game will be played with the Xanthas of Pittsburg, about the 28th.

—The Concord club of Brooklyn opens with a strong team for 1875. They whipped the Arlingtons of Orango on May 221 by 25 to 0. The Concords will play the Winonas of Flatbush, May 29th, at the Capitoline crounds.

—The Wiuonas of Flushing, and Mystics of Brooklyn, played an Interesting game at Prospect Park grounds. The latter were victorious in the ninth inning, the score heing

—On May 22d the Bridgeport club de-feated the Yale Gallege nine at Bridgeport by 6 to 5.

The match between the Mystic and Fnlton clubs, played at Prospect Park, May 18th, resulted as follows:

The Alert club of Bloomington, Ill., is the latest addition to the new clubs springing up all over the country. Edgar Stillwell is captain, Matt C. Smith, secretary; Frank Beal, treasmer; Clus. Pauliek and Cliff Carroll, directors. The nine is composed of Stillwell, pitcher; Smith, 1st h.; Yonngmun, s. s.; Beal, r. f.; Railburn, catcher; McClure, l. f.; Cullen, c. f.; Stuart, 3d h.; Allen, 2d b.; Parkes and Chatfield, substitutes, and Hank Sparron, scorer. They are uniformed in the latest style.

On May 20th the Olympies of Paterson Unions of Newark, with the appended re-olympie.

Dympic 1 2 1 0 3 0 0 1 7-15 into 4 0 0 0 1 1 0 0 2-8 Umptre, Mr. Parrow of the Union, of Elizabeth, J.

First base by errors—Olympic, 7; Unlan, 2. Runs earned—Olympic, 4; Union, 1. Time of game 1 hour

and 55 minutes.

—The same day the Red Stockings of Morrisania, visited St. John's College, and played a game with the second nine of the Rose Hill club of that place. The result was an easy victory for the college boys, as the Red Stockings were unable to hit Choonan's effective pitching to any extent. O'Callaghan carried off the honors in the field. McNally of the Red Stockings, did some fine work. Score: Rose Hill, 27; Bed Stockings, 11. Umpire, Chas. Purroy. Time of game, 1 hour and 55 minutes.

—On May 20th a game took place at

On May 20th a game took place at Prospect Park, between the academy nines of Bryant & Stratton and Brown & Hall

Tine of game I hour and 30 minutes.

—The Arlington and Stars played together May 20th, at the Capitoline grounds, Brooklyn, the result being the signal success of the Arlingtons, as will be seen by the appended score:

Umpire—Mr. Wilson of the Concord clob.
Runs earned—Arlington, 5. Time of game 1 bour said 40 minutes.

—For the information of our base bail readers we give below lie account of the throwing maleh, contained in Beadle's Dime Book of Base Ball for 1875, edited by Mr. Chadwick:—

"At the Base ball Tournament in October, 1873, on the Union grounds, Brooklyn, a throwing match took place, which resulted in a noteworthy exhibition of throwing, unsurpassed in the annuls of Base ball. The entries included Hatfield and Boyd of the Mutuals; George Wright and Leouard of the Bostons; and Fisler and Anson of the Athleties. Two stakes were driven in the ground near the pagoda, 110 yards disant from the home plate, with a rope stretched across, from which the hall was thrown up lowards the catcher's 10 sition. Each competitor was allowed three throws, and the rules governing the contest required that the ball be dropped within two large bags placed on a line with the home plate and about sixty feet apart. The measurement was to the spot the ball first touched in its full. Hutfield was ahead in each trial, and in the last throw he eclipsed his previous unequaled throw of 132 yards at Cincinnati, Ohio, in 1868, by sending the ball away up near the eatcher's fence, clearing 133 yards, 1 foot, 74 inches! The following shows the best libr we hy each man. Hatfield, 133 yards, 1 foot, 74 inches! Leonard, 119 yards, 1 foot, 10 inches; Wright, 117 yards, 1 foot, inch; Boyd, 115 yards, 1 foot, 7 inches; Fisler, 112 yardr, 6 inches; Anson, 116 yards, 6 inches."

—In Cincinnati preparations are being made to give the Boston Red Stockings a made

—In Cincinnati preparations are being made to give the Boston Red Stockings a grand reception on the occasion of their game with the Ludlow club. The chan-pions have not been to Cincinnati since

ing the inning with a round of applause. The whole thing was done with coolness and judgment, and it showed Nichols to be one of the most promising of the "pony" players of the season.

players of the season.

—In the sixteen games played by the Hartfords they have scored 119 runs to their opponent's 47, 23 of these being made by the Bostons. They have whitewashed the Mutnals, Atlantics and Wushingtons, and won five games in which their opponents made but one run. The highest number of runs made against them, except in the Boston games, was in the first game with the Atlantic club, who scored five runs. Nine is the highest number of errors scored against them in any one game.

—The "chiengo" games up to May 24th,

-The "chicago" games up to May 24th, during the present season, have been as fol-

lows:-
April 15—Boston New Haven, Boston 6 to 0
May 3-Boston Mutual Provident 6 to 0
May 3-Boston-Mutual, Brooklyn 6 to 0 May 3-Athletic Washington World 11 to 0

J. D. DOUGALL'S EXPRESS SHOT GUNS.

(Title registered.)

CHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thas: Circle, 30 Inches; 300 pellets; average, 191; penetration, 31. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DU RABLE, a fact remarked on by the Field, that the guns tried had been in use during has season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London. Tourists' and Sportsmen's Route.

THE ROUTE OF THE ERIE RAILWAY
THE ROUTE OF THE ERIE RAILWAY
The peculiarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the sportsman has within easy reach many localities that alterd him every facility for the enjoyment of the sports of the field and stream. We eminicrate a few of the pleasure resorts which crowd the line of the road.

sports of the belt and stream. We confidence a few of the pleasure resorts which crowd the line of the road.

Rutherfurd Park, -94 miles from New York, Fine hotels and boating pastimes on the Passaic.

Cliffon.-184 miles from the elty, overlooking the picture-sque Lake Dundee.

Lake Mohouk.-A beautiful hody of water 1,200 feet above the Hudson-splendid hotel accommodations.

Orange Lake.-Six inites West of Newburgh, and noted for its fishing ulres from Port Jervis. Is noted for its fishing utractions.

Milford, Pa.-About eight inites from Port Jervis. Is noted for its rout fishing, woodcock shooting and superfor hotels.

Avort Springs,-Celebrated for 20 years as a resort for invalids, the waters possessing many valuable healing qualifies.

Wattkins Glein.-This beautiful gorge is distant 294 miles from New York, via Eric Road to Elinita. Its wild and pleture-sque attractions are second only in reputation to those of Niagara.

Chautauqua Lake.—18 miles long, 3 miles wide; said to be the highest navigable water on the American continent, beling 730 feet above Lake Erie and 1,290 feet higher than the Atlantic Ocesn.

Ntagara Falls.—This great cataract is reached by the direct line of the Eric Italiway.

There are along the line of the road no less than Ten Large Lakes, Abonuding with Fish,

Ten Large Lakes, Abounding with Fish,

and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Mohonk, White, Otsego, Caynga, Senera, Kenka, Sil-ver and Chantanopa

TRIALOF STOTTA GHEENEH SAEW SYSTEM
OF BORING, BY THE EMITOR OF
"THE FIELD," LONDON.

(Sae The Field, January 20th, 1875.)
"From a comparison of the two tables it will be seen that with Walker's shot, Messrs Scott's guas showed a marked superior by over Mr. Greener's, both in average and in the highest score made. Insecting the left harrel, in his third shot, Mr. Scott got a selected group puttern of 239 and a penetration of 37, equaling the highest pattern made by Mr. Greener, and "xceeding the penetration of that particular shot by eight sheets."

Volume 4, Number 17, 17 Chatham 81, (CityHall Sqr.)

Seal and Porpoise Bunting ON THE ST. LAWRENCE BELOW THE SAGUENAY.

MESE animals are found in great abundance down the river St. Lawrence, from the mouth of the Saguenay to the Gulf. I have no doubt but that there exist several varieties of the common seal in these waters (Phoca vitulina Linn.) The animal, however, that the tourist is most anxious to see sailing down this heautiful river, is the eurious and interesting creature, the white porpoise. The school of white porpoise that sport about Tadousae Bay, present a novel and unique appearance; ever appearing on the surface of the water, and yet giving the spectator more than a glimpse of their forms now approaching close in shore and anon far away in the river, half summersaulting, head appearing, but seldom seen, making the innocent usk, 'lave these animals heads?" In form, they bear a close resemblauee to the whale, and

In form, they bear a close resemblance to the whale, and are about fifteen feet in length.

My first expedition for seals, was made from Tadousae, while there writing for wind and eraft to go salmon fishing up the Marguerite. Dr. Reed, of Philadelphia, a keen sportsman and devoted angler, joined in the cruise. We bad sat in front of our pretty little French cottage on the hluff of the bay and watched the seal and white porpoise play and sport in the broad expanse of waters, until our desire to capture one seal at least, became irresistable, and as there was nothing of especial interest about Tadousae, save the ancient church, built in the sixteenth century save the ancient church, built in the sixteenth century by French traders, our time could be spent no more profit ably and recreatively than to go and learn the ways of the strange inhabitants of the river. The Indians that camp every Summer outhe arm of rocks that stretches far out, dividing the Saguenay from the bay waters, are devoted to this sport, it affording them their only means of subsistence, Every day at the change of tide, several canoes leave the shore with two Indians in each, armed with au old musket and spear, paddling swiftly for the point where the waters Saguenay and the flood tide come together, causing a terrible commotion, and forming whillpools that wil spin a boat as a boy a top. It was out to these mad foaming waters that we sailed one August day. There were on buard, the master of the eraft, two Indians and their canoes, the Doctor and the writer. We had eugaged the Indians so as tole ave the sail boat and enter the current in canoes, that we might on observing a seal, pursue it unseen and swiftly, which could not be done in the yawl. We were over three leagues from town, as the Captain informed us; the wind had died away and our sails hung in a dead calm. This was to our mind. Had the wind kept up, dead calm. This was to our mind. Had the wind kept up, the current could not bave been entered in the canoes. As we lay too, the scene was enchanting beyond description. Not a ripple on the water; the grand shores of the St. Lawrence in full view. What a noble river this is in all its length and breadth. It has no superior on the continent; and what added to this notable scene, in the writer's was the recting of several canoes on the surface of the eyes, was the resting of several canoes on the surface of the glassy waters, like dark spots, with their swarthy occu-pants waiting for seals to come in with the tide. There were several shouls of these visible, though leagues away. Every few minutes they indicated their position by the cataract like noise, occasioned by their simultaneous appearance at the surface of the water, spinning up with great force againt the water, elevating their heads and necks, and at times parts of their bodies when plunging necks, and at times parts of their bodies when plunging forward. So vivacious and sportive are they when traveling in companies, that mariners say, "behold a seal's wedding?" The schools on arriving at the juncture of the waters, break ranks, angling separately. Entering the swift waters which literally swarm with small fishes, they feed upon them till satisfied, or until the abating of the

Our canoes were soon far away from the auchored sail boat. The Indians paddled about in the coutending current with remarkable grace and ease, pushing now and

then into the less troubled waters of the river. My Indiau had made several unsuccessful spurts upou scals as they beld their heads and neeks high above water level. This want of success, together with my unpleasant position, kneeling in the cance, was causing me to be weary, when right in front a seal elongated its neck to its utmost extent. It looked so intelligent and beautiful I hesitated to shoot, but the thought of the value of the parts of these animals to the poorly supplied Indians, their skins being used for many purposes, boots, clothing, &c., the oil obtained from their flesh being pure and fine as that of the whale. These facts alone would justify the killing of them. I raised my rifle; the canoe was as still as if held in a vice, The seal afforded an admirable shot. I fired, and as soon as the smoke cleared away, I saw that my shot had proved deadly. The bullet must have passed into the brain, as the animal did not move. The Indian pulled with all his vigor, and motioned me to do the same, but as he could not speak English, it took me a few minutes to read his gestures, which delay lost me the seal by two lengths of the which delay lost me the sear by two lengths of the canoe; for though we paddled with might and main, the hody sank ere we reached it. On arriving ut the spot the water was erimson with blood. The Indian shook his head exclaiming, "had, bad." I only felt sorry that the dead seal would be of no profit to any one. To kill to waste is a wantou destruction of life, and no true sportsman or naturalist will be guilty of the practice. I motioned the Indian to enter the current, where we coursed up and down.

The canoe could not live a moment in these turbulent waters were it under the guidance of any but skilled hands. There were now in sight some dozen canoes, all coursing in or on the outer edges of the leaping, dashing Another scal appeared, the boat nearest shot toward it in swift flight. In it were a man and woman; the squaw was the gunner. She rose, firel and missed; the man also rose, raised the paddle and plied it to her back several times. This served to tighten her cords and tune her up for the next chance. Let a seal show its head now, teu to oue she kills. Who takes the het?

On shooting a seal it is necessary to harpoou it at once,

that the body may not sink.

Looking westward 1 preceived the heavens growing black. A single heavy balf moon shaped cloud covered the western sky. This bad come up without notice or warning, save the dead calm of the day. My guide pointed to it, and acted out a big blow that was coming. Many of the canoes were far shoreward, all were making landward. I motioned the Judian to follow. The wind had already. I motioned the Indian to follow. The wind bad already reached us, and was flying over the water like an evil spirit. Giant waves next lifted and tossed our frail birch canoc. Of course I was not afraid, "who's afraid?" True I wished the river narrower and the sail boat nearer. Ah! there comes the white sail, like an angel, to our reseue. The wind increased into a gale and leaped fram wave to wave like a power invisible. We paddled like wet ducks amid the contending powers. The yawl came before the wind as if driven by a thousand excipace. Our best was in the contending powers. wind as if driven by a thousand engines. Our boat was in its course, and as it flew by I managed to entangle my paddle in its ropes and clutch its hull. A minute after we were on board. The other boat was picked up nearer land and the seil in was pleasant beyond degree.

Not a few Indians and half hreeds pursue seal hunting in

the Fall as a business, and to the industrious and skilled among them, seal catching proves quite remunerative. Those who own yawls at the commencement of the Fall months, sail down the river to the haunts of the seal, living

in their boats and not returning till Spring.

The skins of porpoises and seal are worth from one to two dollars each. The hunter realizes from each adult seal about eight dollars in gold. An expert seal eatcher will often earn in a season from three to four hundred dollars in

On examination I found the seal enveloped lu a jacket of fat. Over the brain, heart, and lungs it was an inch in thickness. Thus are the vital parts protected from the low temperature of the Arctic waters.

One day I assisted a squaw in skinning a seal. The Indian sat on the rocks near by bossing the work. She first

slit the animal down the back some four feet. Next the igaments, muscles and nerves were scraped and cut out. Then the coat of fat from which oil is extracted was removed and the balance of the animal thrown away. The muscles and ligaments are dried and used for thread in sewing moceasins and other articles of needle work made by In-

There is a great diversity of epinion among unturalists as to whether scals possess acute senses. Their powers of vision are considered good only in subdued light. Old hunters consider their sense of hearing excellent, even when under water. L. Lloyd in his book on Norway and Sweden, says, "music scens to have peculiar tharms for this animal." "During a residence of some years in one of the Hebrides," remarks Mr. Lizars, "I had many opportunities of witnessing this peculiarity and in fact could call tics of witnessing ties of witnessing this peculiarity, and in fact could call forth its manifestation at pleasure. In walking along the shore in the calm of a Summer afternoon, a few notes of my flate would bring half a score of them within thirty or forth wards of my sould be some and the score of them. forty yards of me, and there they would swim about with their heads above water, like so many black dogs, evidently delighted with the sounds. For half an hour, or indeed for any length of time I chose, I could fix them to the spot, and when I moved along the water's edge, they would follow me with eagerness, like the dolphius, who it is said at tended Arion, as if auxious to prolong the enjoyment. I have frequently witnessed the same effect when out on a boat excursion. The sound of the flute or of a common of the flute or of a common or the same effect. fife blown by one of the bontinen, was no sooner heard than a half dozen would start up within a few yards, wheeling round us as long as the musle played, and disappearing one after another when it ceased." These maning ferous animals have no external ear, in this resembling fishes, but like them, possess this sense in a modified though perfect condition. Its sense of smell is also good. Seal luinters say it can wind a man from an incredible dls. tance. The osteologist claims, however, that this sense must be imperfectly developed in seals, since their nostrils are closed by unuscular action while under water. Their sense of touch must be very limited, as the body is covered with bair, save the end of the nose

Seals are found on the sea coast of the world, are viviparous, bringing forth and sucking their They are polygamous and gregarious, living in large fam-

The seal's curlous baits and habits are worthy of note. It swims with great facility, and dives with the ease and grace of a loon, and can remain in the water a very long time. Like the shark, it often seizes its prey when on its back. It has a curious and most ingenious way of ascending a rock. It follows the swell of the sea to the rock and on the breaking of the water is fluide beef mishes the on the breaking of the wave it finds itself miliway its height, to which, with its fore paws happed, it clings until carried higher by by auother wave, where it agains lodges on the rock. This mode of advance is kept up until ar-riving at a point where it can draw its heavy clumsy hind quarters to a desired place of rest.

The seal is not naturally timid. In its disposition, mild and confiding, and easily tamed. It has a carlous habit of sleeping in a bolt upright position, when the sea is calm, with half its body ont of water,

A. B. LAMBERTON.

ARTIFICIAL ICE.—Tho Sta Francisco Chronicle, in a ve cent article on artificial ice, after giving the history of its lovention, goes on to say: "The ice is formed by extracting the heat from water. The manufactured article is inferior to natural ice, being more brittle, and consequently more wasteful. The most potent agent employed in the manufacture is the gas of ammonia. This circulates through pipes and plates. Troughs long and three feet wide are filled with water. Troughs twenty feet The hollow plates separate the troughs. When the machinery is set in motion the refrigeration begins against the sides of the respective plates, and advances rapidly until the requisite thickness is obtained. Each sheet then weighs nearly twenty tons, and as freezing goes on rapidly, an immense quantity can be produced daily."

THE WINTER STORMS OF NEVADA ITS FAUNA AND ORNITHOLOGY

CHAPTER DE

THE Summers of Nevada are unsurpassed for calumess and loveliness. The clearness of the sky and the purity of the atmosphere render the country very attractive during this senson of the year; indeed, so pure is the atmosphere throughout all this clearned country that fresh meat lung up in the open air will not taint, and yet the weather may be excessively hot. The warm weather continues through the Antunan atouths and frequently through the month of December. There was no snow until the first day of January; December was as pleasant as September in New York. When Wiater sets in everybody is sensible of the fact; for the change is very suddeed. Three cleanges are very frequent, and are usually accompanied with terrific winds and soow. Some of these storms are awfully sublime. "Winds war with winds, storm howls to storm," and woe to the traveler who is cought upon these wide plains during one of these storms are awfully sublime, and wor to the traveler is almost starte to lose his way. The roads illl an immediately, and there heing no fences to gaide the traveler in this country, the seenery around him soon becomes one wide sheet of snow, and such is the bewildering effect of the storm that he soon becomes lost, and if he moves at all is limble to move in a circle. Many have been unfortunate victims of these Winter storms. The only safe way when caught ho one of them is to stand still or not move any distunce until the storm abates, which it generally does in twelve hours, though sometimes it continues longer.

One of these storms recently occurred when the mountains surrounding the valley, showing their lofty summits in the air, looked twice as high as usual, being novered with a mantle of snow, while the plains below were also covered to the depth of snow-fall at any time in consequence of its drifting. These drifting winade cause the necessity of those curroms snow sheds and snow guards on the Rocky Montains and the Sterra Nevadas. Persons not having seen these protections comnot form any conception of the lab

the young early, which the mother singles out a world to fight, the rest of the pack seize the cell and soon destroy it.

The sleighing in Nevaula generally lasts one or two mouths. Such sleighs as are used here would be a novelty in the East. Planks rounded at one rad serve for runners; upon the upper edge of these are fastened cross-bems; then a box is framed and fastened on; a pole is added and the sleigh is ready for use. No builfulo robes are used in this country, but in their stead large California blankets. The people in Nevada dress much warmer during the Winter than in the Eastern States.

In reference to the fauna of this country: Wild animals are not found in large numbers excepting some particular kinds. This is owing doubtless to the lack of deep forests, thick jungless and swamps which abound in the Eastern States, yet there are wild acimals here, and some that are not seen as far East as the Rocky Mountains. We have the tolack tailed deer, which live on the mountains, sheltering themselves among the pines, cedars, and mallogany, which enver the foot-hills and line the sides of their deepent cañous. These deer, when taken nive, command \$100 for shipment to the Eastern States. Antelope are found here us well as on the castern side of the Rocky Mountains. It is a beautiful auinal, of a pale red and white color, and larger, I think, than specianers seen cast of the mountains. Some are quite as large as the Virginia deer. They are easily tained, and are a beautiful and larmless pet. Indians capture fawns and sell them from \$2.50 to \$5 cach. The red fox is seen in the mountains, and the bare and rubbit family are represented in overwhelming numbers, both in the valley and mountainous regions. The hare here is different from any I have seen elsewhere. It is larger, longer, and taller; its cars stand creet, and are as long as a graythound can overtake one. I have taken a number, which weighed from ten to twenty pounds. Their color is gray in Sammer and white in Winter. There is a rabbit nearly as large a

There are lynx, bear, and wild eats in the mountains.

The einuamon and grizzly hear are not found east of the Sierras. Monntain sheep also inhabit the mountains, but are not very plentiful; they are found in larger numbers north of Nevada in Idaho. Elk were found here a few years ago, but they have disappeared since the valleys have been inhabited. Buffalnes have not been seen west of the Rocky Mountains. Badgers are found in great abundance; they burrow in the ground; their holes are seen everywhere in the valleys and mountains. They are ferocious areatures to encounter; when heset by dogs they throw themselves on their backs and light with claws and teeth, the latter being as sharp as needley. I saw one eaught lately, and though low and short-legged, was quite a load to carry. The Indians regard the badger among the most dainty meats of the country. There are no other quadruppeds of note, except the beaver, that I have not named. Gophers and ground squirrels are plenty everywhere. Rattlesankes are plenty among the rocks on the mountain sides. In the valleys there is a very long and large brown striped soake called the racer. I have seen some of these coiled up, but never gave them a thorough inspection.

The ornithology of this country farmishes as great a variety perhaps as the nature of the country will admit. There are no will tarkeys here; they require forests in which to roost; but wild geese are in abundance; so are also saml hill cranes, which go in ttocks like the geese and traverse grain fields after harvest. Theusands of ducks of various species inhabit the valleys and canons of the mountains. Prairie chiekens and sage hens abound here, the latter feeding mostly on the black sage brush. They are about as good for the table as the prairie chieken if dressed as soon as taken, but if kept any length of time their flesh becomes rank and unsavory. There are no wild pigeons, but thousands of magpies and turtle doves, which till the cañons with their music. The pine bind inhabits the mountains in abundance. Among the small birds are the robin, meadew lark, la

ers used them in that way, most probably the age is too remote to leave any vestige behind. Here was a continuous city, nearly nine miles in extent one way, by two miles in width. If it was devoted to burial purposes it is truly a "city of the dead." The Doctor has for years been investigating these remains, and hus published many interesting papers as the result of his researches. He will be found ready and willing to aid any stranger who may desire to visit or study these mysterious mounds. His relained contains many relies of intenst tuken from them, and I have no doubt much more will be udded as he probes further into their lubyrinths.

Frontense, Minn., May 28th, 1875.

A CHICKEN SHOOT IN MISSOURI.

THE glowing Angust sur was just above the horizon when our jovial party of four "might have been seen" contexted by ensourced in the juntilest of spring wagens, wending our way swiftly toward the depot from which we reside some few unies. "Good by" had been spaken and with dogs in leash and breech louders saugly packed in their baize-lined cases, we were fairly off for a two weeks' chicken shoot. We were hand for Jusper cannty, Mo, where we expected to drop anchor in the little town of Carthage, from which place a conveyance was to carry os across country some thrity miles to the delectable spot where prairic chickens were said to abound.

Well, on whirled our train; the dusts and smoke of the city lay fur behind us; accadows and orehards of geen stretched out hefore our refreshed eyes; in the line distance the Ozark Mountains rested their verdure-crowned heads against the sky. Towards night the scenery grew more wild, and valley, stream and mountain succeeded each other in ever changing diversity of form and coloring. At many a little halting place the quail would hustle into the scorched weeds lining the truck side, and our rush and clatter seared many a buzzard from its revolting ment to wheel in slow circles around the nearest mountain crest. Towards noon the next day we reached Pierce City, where we changed cars, taking a brunel hine for Carthage, arriving there safe and dirty in about two hours. Our conveyance was waiting—a roomy, covered wagon, and a drive of thirty miles was the chicken formed had a drive of thirty miles was the chicken formed had a drive of thirty miles was the chicken formed had a drive of thirty miles was the chicken formed had a drive of thirty miles was the chicken formed had a faired by the chicken for the count of the chicken formed had a faired by the chicken formed had a

invited guests, visited the Club House last week. A portion of the time was devoted to from lishing, and the remainder was spent in rifle and pistol practice, trolling for bass, etc. Over 300 line trout were taken in the Shohada and Blooming Grove streams, some of those from the latter weighing over one pound. There have been no lires in the wonds within ten miles of the Park grounds, and no damage has been done to any part of the territory. The following rifle scores were made at short range, sixty yards, with an eight inch bullseye, circular target, six shots each:

Avery.

The first three shots in Mr. Avery's score were sighting shots, to obtain the range.

The Club House is in excellent order, and ready for the reception of guests. In the breeding park for deer, necessions are reported almost daily, this being the dropping

Hish Gulture.

-On the 28th of May Fish Commissioner Edmunds, of Vermont, deposited 50,000 salmon fry in good condition in the river near Manchester.

The town of Concord, Mass., has put a quantity of fine black bass from Lake Champlain into Wendon Pond that they had leased. It is a beautiful sheet of water, and well adapted to the wants of this species of fish. May they live and prosper, and give satisfaction to those who wish to benefit others more than themselves in this industrict. try. There is a movement at Cohasset to open the fishway and stock a pond there—situated at Beech Woods—with black bass. A good step in the right way.

-P. S. Hamilton, Esq., the new Commissioner of luland Fisheries for Nova Scotia, has just returned from an extensive tour over that Province. He reports that the laws and regulations are openly set at naught in many places; the streams are filled with sawdast, dams are built in many instances right across the rivers, and even where so-called fish ledders are availed livered to the rivers. fish ladders are erected they are totally unsuited for the purpose. Mr. Hamilton is about to make a circuit of the shores of the entire Province. All who are found violating the law will be notified, and if they do not comply with the regulations will be vigorously prosecuted.

ILLEGAL NETTING.

WARSAW; N. Y., May 29th, 1875

Warsaw; N. T., May 29th, 1875.

While fishing at Olcott, N. Y., at the mouth of the Eighteen Mile Creek one day last week, I noticed several nets being drawn for bass, and at every druw they left at least lifty young shal on the shore to die Three shad were placed at the month of this creek several years ago by Mr. Seth Green, I believe, and they are now just lurge enough to be drawn in by next to die. They average from four to six inches in length. It is but a few years since this creek afforded the linest fishing in Western New York; but to-day there is left but very little sport for the fisherman with hook and rod, as these nets are being drawn every day.

Very respectfully yours,

Very respectfully yours,

The Fish Commissioners will thank our correspondent

The Fish Commissioners will thank our correspondent for drawing their attention to this matter. - ED.]

THE SPAWN OF EELS.

SENECA FALLS, May 25th, 1875.

EDITOR FOREST AND STREAM:-

EDITOR FOREST AND STREAM:—
I inclose a small quantity of eel spawn. The eggs were taken from an eel weighing shoul four pounds a few days slace by a friend of mine. I am conddent that there is no mistake in this case, and am now satisfied that the eel is enough then to bring forth its young as others of the flah family do, and not after the snake style, as some persons claim.

[We have often taken spawn from cels, and it is a well known fact to fishermen that they spawn; but the manner in which they deposit their eggs has yet to be more thoroughly investigated. Wood's Natural History says they spawn in the gravel. Eels, as compared with snakes, vary greatly. Although some people think they are too snaky for the table, many epicures enjoy cating them. They differ greatly from snakes, and in good, clear waters, salt or fresh, they feed on the same food as some of our best edible fish. Snakes, on the contrary, prey on toads, nice, squirrels, etc., and sometimes on their own species. In fact, any animal food will suit them that can be taken into the stomach. Snakes are often found with a partially dithe stomach. Snakes are often found with a partially di gested toad projecting from their months, and many spe cies are noted for their voracity; yet they deposit their eggs like turtles, and although they swallow their young they are not vivinarous. We thank our correspondent for the specimens sent.-Ep.]

CANADIAN FISH CULTURE.

Boston, May 27th, 1875.

BOSTON, May 27th, 1875.

EDITOR FOREST AND STREAM:—

In the number of Forest and Stream for May 6th you miwitingly do me an injustice, which I am sure you will make hoste to correct. In your article on "Salmon Culture in Canada" you say: "Owing to Mr. Wilmot's difficulty in getting spawn, by the refusal of the lesees of the surrounding streams to allow the salmon to be taken for the purpose, &c." Now, I gave up the Dartmouth River last Sammer resumdarily to the Canadian Government, for the express purpose of having some salmon taken from it to get spawn; a proceeding, I believe no other lessee would permit of, as it was done at the risk of 'raining the fishing and against the protests of my friends.

would permit of, as it was done at the risk of 'raining the fishing and against the protests of my friends.

The Department at Ottawa expressed their sincere thanks at my surrender of the river for the purpose, and I am sure Mr. Wilmol also appreciated it. A letter "s" added to the word stream, in your article, would to some extent correct the impression that the lissees of the Gaspe salmon rivers do not care enough for the increasing of the supply of fish in other places to sacrifice a portion of their sport to enhance the efforts of the commissioners. Yours,

F. C.

SAWDUST IN STREAMS.

DEER PARK, Md., May 25th, 1875.

Deen Park, Md., May 25th, 1875.

Editor Forest and Stream:—

Summer has at last made her appearance amid vast applanse from the expectant multitude of anglers. In the Forest and Stream for April 22d there is a letter from W. G. Hubley, Esq., on sawhinst being injurious to troit. Last Summer I caught some trout in what was once the hest trout stream in the county, and when I cleaned them I found that the coating of the sionach of every fish was very much inflamed, and evidently diseased. On closer examination I found small grains of sawdust inclosed in little circles of festered fiesh. Last week I went to the same stream, but had poor luck, as I caught but two, weighing half a pound each. On my way home I mel a man who has lived near the stream all his life. He said that the first year the saw milts were started the troit seemed to leave their old grounds and go into the smaller branches. "Now, there's North Glade Run," said he; "when the mill began to saw I went fishing; it was the second day after they had commenced to cut pine, and the water was full of sawdust. Well, sir, the about two miles of the run I found over a hundred dead trout of all sizes." In the brooks which have no mill on them there are more from this Spring than has been known for ten years.

Alleghant.

Sea and Biver Hishing.

FISH IN SEASON IN JUNE.

Trout, Salmo fontinalis. Salmon, Salmo salar. Maskenonge, Esox nobillos

Salmon Trout, Salmo confinis. Shad, Aloss. Land-locked Salmon, Salmo Gloveri

Under the head of "tiame, and Pish in Season" we can only specify in general terms the energy varieties, because the laws of States var so much that were we to attempt to particularize we could stono less than publish those entire sections and relate to the kinds of games in guestion. This would require a great amount of our space. In defiation is founded, and our readers would do well to provide themely with the laws of their respective States for constant reference. Otherwise our attempts to use to use the provide themely with the laws of their respective States for constant reference. Otherwise our attempts to use states for constant reference.

FIGH IN MARKET. - A bountiful supply of fish covers the benches, almost every variety peculiar to our waters being on exhibition. The demand is rather light, but after this on exhibition. The demund is rather light, but after this week, with the steady warm weather, an improvement will be visible. Among the novelties to be seen at Mr. Blackford's during the week, were some splendid red snappers, brought alive from Florida in the well of a fishing smack. Also a large quantity of pompano from Pensaeola; price, 75 cents per pound. Kingfish are very plentiful at 20 cents: Somish mackerel made thair first appearance in the murket. 75 cents per pound. Kingfish are very plentiful at 20 cents; Spunish mackerel made thair first appearance in the murket on Monday morning; they were cought in the vicinity of Norfolk, were in unusually fine condition and sold readily for \$1. per pound. Ou Weducsday a few were caught in the Chesapeake Bay, and we may look for them in our own waters within the next two weeks. Bluefish have reached the vicinity of Barnegat and are coming into market in the vicinity of Barnegat and are coming into market in quantities; they sell readily for 12 cents per pound. Shad are a drug on the market, not the result of large eatelies, but from the plentiful assortment of other varieties of fish that appeals to the taste; price 20 to 40 cents. Fresh mackerel still continue abundant and sell for 8 to 10 cents each. Halibut very plentiful at 15 to 18 cents per pound. Cod-fish from Nantucket in full supply at 8 cents; sea bass and blackfish from Rhode Island, very bandsome bass and blackush from knode Island, very bandsome fish, weighing five to seven pounds each, sell at 15 to 18 cents. Soft erabs from Bultimore, Annapolis, and New Jersey, are unusually plenty and bring 50 cents to \$1. per dozen. Fine plump green turtle, 18 cents; sheepshead, usually a scarce and much sought for fish, are a drag in the purplet at 15 cents, per pound, they came principally. from Baltimore. The only exceptions to the plentiful sup-ply are salmon and striped bass, the former sell for 90 cents per pound and the latter 25 cents.

THE GREAT SOUTH BAY, -The first bluefish of the season were taken just inside Fire Island Inlet on Saturday last. In a week or ten days the trolling is likely to be good. The pound nets are taking large quantities of fluc weakfish (squeteauge) but few can be induced to take the hook with clam bait; shedder crab might prove the lure. The old eiuder bed east of the inlet presented quite an animated einder bed east of the inlet presented quite an animated appearance on Saturday. Boats were out from Sayville, Islip, Bayshore and Babylon. The sea bass were biting very freely and some very fine fish weighing as high as six pounds were landed with light tackle, also innumerable sea pergies of large size and equal to the best for the table. Oystering in the bay ceases ou the 15th, meantime the oystermen are making a harvest, the spat being wouderfully abundant. The feud between the towns of Islip and Brookhaveu relative to the hay rights of each, remains in

-Mr. Rogers has completed and has now open for the reception of guests, a fine new hotel to be known as the Prospect House, located at Buyshore, a little west of the Olympic Club premises, and due north from Fire Island Lighthouse.

-A Boston correspondent, for whose statements we have the highest respect and confidence, says we are mistaked in saying that speckled trout are not caught in Saranac lakes. He says: "I have caught them while fishing for lake trout, as late as the last of July or the first of August; still, as a rule they are found only at the mouth of the cold brooks emptying into the lakes. This is precisely as we wished to be understood. In the deep body of the lakes these trout are not taken. Sea trout are taken in the Atlantic, but only in shore—an analagous case.

New York.—Oydensburg, N. Y., May 28.—The season for trolling opened this morning rather auspiciously. A musealonge weighing forty-four and a half pounds was taken below the city. He measured four feet and one lueh long, twelve inches broad, and his mouth spread six inches. He was purchased by Boardman and will be retailed out in pieces from his market to-morrow.

CRUSOE.

Massachusetts.—At the Cohasset Nairows bass have been taken freely from the bridge for some weeks. This year for the first time shad have been taken there with rod. They were taken with shrimp; the first one standing to the credit of Baron de Bussieres, who is on a visit to a friend ut that place.

nt that place.

New Jersey.—Kinsey's Ashley House—Barnegat Inlet, May 29th.—We are having splendid success among the black fish and sen bass, catching some filty per boat, running from three-quarters to four pounds.

Maryland—Deer Park, May 25th.—I have heard from good authority that a tisherman caught 33 pounds of trout in the north branch of the Potomac in one day. I intend to leave in about a week for this river, and will camp out there for a couple of weeks. Who is the individual that signs himself "Alleghany" in the Fonest and Stream of April 29th? I don't think he bas any right to the name, as I used it first.

Wisconsin—Elkhorn, May 24th.—A good many fish are being taken with the spear from shallow waters, but angling has not yet commenced. About June 10th the annual cisco run at Geneva Lake begins, and there'll be sport in deed. If you can advise me how to do it safely, I will be

pleased to forward for your inspection a sample "mess" of these rare and beautiful fish. Following the cisco run comes our regular fishing season, when may be had in any of the many beautiful lakes of this section capitul sport with rod and line. Black buss, rock tass, pike-perch, pickerel, and yellow perch are abundant in all our waters, and the angler who does not have success must be backing in skill, patience, or live buit.

GREENHEAD.

Minnesota. —Brainerd, May 25.—Weather fine; thermometer 90° in the shude; bass fishing splendid.

HAVILAND.

mometer 90° in the shude; bass fishing splendid.

HAVILAND.

The Fisheries.—The number of fishing arrivals for the week ending May 27th was seventy-five—sixty-three from week ending May 27th was seventy-five—sixty-three from mackerel trip. The theorgesmen have brought in 1,375,000 pounds eod and 330,000 paunds—hallbut. Receipts of Bank cod about 390,000 paunds—hallbut 230,000. Amount of mackerel brought in 680 harrels. The halibut supply has been quite large and prices rule low, most of the fares selling at \$3 per ewt. by the trip, for cutting ap.

The southern mackereling fleet are coming along with good fares. Schooner Puthfinder arrived on Friday last with 280 barrels—first fare of the senson; and the May queen and Ernest Norwood on Monday with 200 barrels—each. Price rule considerable lower than the first fares of last season, the mackerel selling in the pickle at \$5 50 and \$5 00 per barrel, equal to \$7 50 and \$7 00 with the barrel. Last year the first fares sold for \$12 00 and \$10 00.

Porgies make their appearance off this shore on Saturday last and the fleet make some very good hauls. On Monday they were again successful, some of the vessels getting a few mackerel, which were sold for \$4, per hundred. The seiners builed some of the Georgesmen at \$2, and \$1 50 per barrel.—Cape Ann Albertser, 20th.

BLUE FISHING WITH ROD AND REEL

EDITOR FOREST AND STREAM:—

Perhaps some of your read-rs would be interested with an account of a bine-dshing trip I made last June in Buzzard's Bay, Massachusetts, Before starting I made Prouty, at Bradford & Anthony's, Hoston, a visit, and there gut a stont rod, a strong, fine silk line, a beary reel, and I we revolving minimows for batt, at a total cost of \$21. Thus equipped, I left for the bay, and the next morning, bright and carty, with a fast breeze, we started from the wharf in a sing cat-rigged sail bont, our party consisting of three—the skilpper, one companion, and your hamble servant. My companion was going to try dshing for the first fine with a hand line, and as we got out into the bay he commenced, under the directions of the skilpper, to play out his here just as we farly got the bereze.

What can be more plea-ant than sailing in a safe boat with a good breeze, and at the saint time dabling for the mint ginty fish that swims?

All st once my companion gives a start and commences to pull in the fraulte manner. "Strady, steady," easy the skipper, "pull hun right in, and don't be thing et ahead of you." Slowly the line comes over the storm, but the fish is there, and with the help of the skipper is landed into this boat. Now is my time, and awtoging my time over the side of the boat, ou the other side from the sail, and hobting the rod to my loft hand with thumbs of the right ou the reel, it commence unrecling, half sitting down against the side of the hout. After mining on about one hundred yards I stopped and walted for results. If there are any dish around they will be pretty sure to bite at my bait, which as an infinited minimow of a bright gold and silver cotor, with a grappid of three buoks, hong on a pivot, inserted just forward of his tail. This is kept down into the water by twining some thin strips of lead on the copper whe that attaches the minimow to the line. All at once i felt him, and shouting to the skipper "a strike," he huff has been a should acrea the water and when he had, and I

EDITOR FOREST AND STREAM :-

EDITIR FOREST AND STREAM:—

The Spring flabling will open in a few days on Black Lake. Pickerel are being taken in considerable quantities from the Caunda wide of the river and brought to this market. Bass and perch are commencing to bite the hook, and in a few days we shall have great sport with the bass in the Oswegatchie below the dam. Storgson are being secured with gaft hooks under the dam. One taken this morning weighted over sixty counds.

Chysog. Chysog.

A New India Rubbert.—A new source of caoutchouchas been discovered in Burmah, in a creeping plant whose botanical name is Chavannesia esculenta. The plant is very common in Burmese forests, and is cultivated by the natives for the sake of its fruit, which is said to have an agreeable acid taste, and to mature at a season when tamarinds are scarce.

-Now that the budding springtime has come, some sporting men of ubandant imblence and leisure are amusing themselves with Caterpillar Races, betting which creature will win in the long ereep. Any person must have lots of time on his hands to watch a caterpillar race.

The latest novelty in aquatics is a non-upsetable boat. This consists of an ordinary boat with a narrow canne, "pannier" fashiou, on each side. The cances displace no water and do not impede the course of the gig. The entited efforts of three people will not upset the crift, which will stand any spread of canvass, and can be sculled from outriggers, the blade of the oar dipping over the cances.

Matural History.

THE WOODCOCK AS A SONG BIRD.

REMARKED to my friend that the woodcock was very much of s singer. He smiled incredulously. "Yes, and so is your grandmother." "My dear sir," I said, "I would have you understand that my respected grandmother much of s singer. He smiled incredulously. "Yes, and so is your grandmother." "My dear sir," I said, "I would have you understand that my respected grandmother teas a good singer; whether she is now or not of course I cannot tell—still we hope." My friend replied: "Your remark is not at all relevant." I repeat it, sir; the wood-eock is to be classed among the singing hirds, with ms marked a song as the Euglish lark, and in some respects similar. You doubt it? I have seen the same smile so many times before that I think it worth while to state it here as a fivet not generally known. We all know his twitter, and a very lively twitter it is, especially in the Auturn, when white fronted, in full vigor, and in full feather, he gets up and "gits," dashing nway over the tree tops for a flight of half a mile with the speed of a telegraphic dispatch. In the Spring, if you flush him, he will give you the same twitter; but when undisturbed he has still something to say. Any time in the Spring, just after dark, if the evening be warm, and later, if it be moonlight, also in the morning, from three o'clock until daylight, if you will go quietly upon the grounds where woodcock are breeding you will before long hear a quanak (sound of a as in crank) at intervals of a few minutes. This is the nose of the cock bird, and I suppose (but this I do not know) (that he is now, with tail spread, strutting around madam. This sound can be heard, I should think, forty rods or more. I have noticed that it is generally neurer than one would suppose. This may be repeated ten or twelve times; then, if you are near enough, and it is not too dark, you may see him as he rises ut an angle of about sixty degrees, commencing as he leaves the ground with a chip, chip, thip; this note continuing, and repeated faster and faster until apparently he has reached the summit of his flight; then cheedle, cheedle, cheedle, tweedle, tweedle, running on to the finale with a general twist and twirl of different notes which I am interly unable to express. He the

-Mr. Seth Green, alinding to the methods of attracting birds to bird houses, offers the following advice: "Do not put more than one bird house about your premises the first season. Add one every year thereafter. If you put up a number a pair of birds will come, inspect each in succession, and ily away not to return; just as when you go into a store where there are a large number of the kind of articles you want, and after looking at them you will go somewhere else. If there was but one you would buy it, but in the great unmber you cannot make a choice."

THE SEA SERPENT.-Capt. Oliver, of the sebooner Winslow Morse, of Bath, reports having spoken this ubiquitous monster off Cape Elizabeth last week. While the Captain was at the wheel a great snake rose up from the water, his bead coming four feet above the rail, and his body was as large round as a hogshend. One of the men threw a pike into the snake's body, when he glided off. The Captain, who declares he was 120 feet long, still exhibits the pike, covered with blood and sinews

THE INLAND SEA SERPENT AGAIN VERIFIED.

Топомто, Мау 21th, 1875.

Tononto, May 21th, 1875.

Editor Forest and Stream:— Your article with reference to the "sea scrpent" recalls to my mind an account of a monstrous "use of prog" which is contained in Sir James Alexander's "Salmon Fishing in Canada." As this may not be accessible to you I copy the account as given by him. At this moment I have before me an official "Report of the Commissioners for exploring the country lying between the Rivers Sagnenay, St. Maurice, and St. Lawrence," ordered to be printed by the House of Assembly on the 22d of March, 1831. These Commissioners are gentlemen of the highest respectability and latelligence, Mesars. Andrew and David Stuart, who would not be likely to be deceived in a matter of the klud, and would be the last men to attempt a deception upon others. At pages 16 and 17 of their report are the foliowing words, being an extract from the journal kept upon the occasion:

their report are the following words, being an extract from the journal kept upon the occasion:

"Sunday, August 20th, 1820.—Embarked at 7. A. M. to go down to Baie de l'Echaffaud du Basque or Riviere aux Cauards, but when we encached the point of Baie des Riches the which blew too bard lor us to proceed, and we put ashore in a little cove till noun, when we embarked again, and kept ctare in shore with the tide and wind in our favor. We had not proceeded far when we were purseed by a monstrous flash of prey, in consequence of which we put ashore again. This animal was four hours about us, and apparently watching us. It came sometimes within twenty feet of the rock on which we were. It was at teest from twenty to twenty-feet feet long, and shaped exactly like a pike; its jaws were from five to six feet long, with a row of large teeth on each sale of a yellowish color. It kept need is sometimes for nearly a minute on the surface of the water. At 5 P. M., seeing nothing more of it, we embarked again, keeping close he shore, and at 7 P. At. we put in for the night at the fishing but at Echaffand du Basque. Two men named Baptisle Safanard and Caton Fallon, who were on their way to Malbay bunting for eachs, put in at the same time as we did. Thermometer 71°, 77°, and 69°."

EMBALMING BIRDS NO HUMBUG.

GRAND RAPIDS, Mich., May 24th, 1875.

Editor Forker and Stream:—
In your paper of May 18th, 1875, I notice the ansiver of J. II. Balty to a correspondent's question relative to embalming birds. Now, Sir, with your permission, and the excuse of a fittle egottsm, I will state some facts, the which I am prepared to prove. First, I have the honor of discovering, or inventing, a method of embalming which has stood the test for twelve years past, and has been compilmented by naturalists as being a method superior to the old one employed in skinned and stuffed speci-

mens in this or other countries. I will state that I can preserve any animal or skin, however fat or lean, at any season of the year, by the process; also that a bird that is so putrid that skining would be impossible can be preserved perfectly by this method (even though large as a turkey or a pehcan), and not become a prey to moths or demostes. I emhalmed a badger which weighed twelve pounds and piaced it in my door yard, where it remained in sunshine and storm for four years, and was not louched by moths or thisects. This was seen by over one hundred persons. Ask Prafessors Strång and Dantels, of the Grand Rapids Union School, in Michigan, what they think of the embalming art, as applied to cabinet spectmens.

Perhaps some one will say emhalmed birds must of necessity shrink. This would be a very natural conclusion, since seventy-five per cent. of all ficab is water, and when the water evapurates, shrinkage is the resait. However, even this is not a substantial objection, as I find it easy to compensate for the shrinkage by a cheap and practical method. I have specia nearly fourteen years in perfecting this method, and am now prepared to prove and defend it under the closest scientific invasitigation and test. My cabinet has been visited by some of the best taxidermists and acturalists in this or other countries, and pronounced superior to any other. My profession is tenching embalming and taxidermy. I devote my time and tife to it, and I know of what I speak. A specimen can be embalmed in one half the time it takes to skin and stuff one, and when done is more perfect. I am aware there are thousands of birds mounted by anskiliful operators in either method; but want of skill has rained many professions. The genileman—A. M. Decker—referred to in your jumper, is a skilliful embalmer and taxidermist, and was one of my students. Thave seven wild tarkeys embalmed, and will exhibit them in contrast with any others in the world, if the above is egotism, smen. I mean binehiness. For an authoritative opinion on this

CENTRAL PARK MENAGERIE

DEPARTMENT OF PUBLIC PARKS, NEW YORK, May 30, 1875. Animals received at Contral Park Menagerie for the week ending May 20th, 1875:—

Two Slow Loris, Nyclicebus tardigradus. Hab. Sumaira and Borneo. One Snow Bird, Junco hyemalis.
One Alpaca, Llama pacos. Bred in the Menageric.

Woodland, Harm and Garden.

CELERY-ITS CULTIVATION

CELERY—ITS CULTIVATION.

THIS now well known havary of the table, this prince among the salads, is the Apium graveolens, a biennial in its wild state, made an annual by a superior method of cultivation, except where it is grown for seed. Its bome was originally among the marshy grounds of the sea coast, and very fine plants of the same aeme from Italy. Celery is propagated from the seed and these seed may generally be obtained at our seed stores. For the purpose of culture, the raising of plants both in England and America, this plant has gained a great celebrity. It may be sown in any month from Christmas to the middle of April, the time of the sowing of the seed regulating the time when this rich salad may be gathered. Would you eat of this crispy delicately flavored salud in September as a garniture with your roast turkey, you must plant your seed in February in situations of warmth sufficient to give you your April plants. Much of our market celery, like the lettuces, are first started in the hot had and forwarded as they may be wanted to plant out during the season for early or late Winter use. This method of raising being so well known we need not recapituite it in this place. The English method of cultivation of this plant is made quite an expensive outlay, being planted in boxes, and frequently transplanted and covered with hand ghases, &c. By the time it is ready for the table, if at all early in the season, it becomes quite an expensive luxury, and costing about four times the amount of celery raised after what is termed our American method of culture.

Leving the English mode of culture to those who may desire to practice it, I pass to the usual method of culture adopted by agriculturists who grow for home consumption and city supply. For what is termed an arriy supply or crop, you will sow your seed (let it always be good seed) in a cold frame the latter part of March. Let the plants remain until they have attained a height of one inch or a certain extent, as to the best of two methods generally man

*Gooid's Fertilizer, manufactured and for saic by James Gouid, Arilington, Mass., is probably the best of the phosphatic fertilizers applied to celery. It is put up at small cost in large and small packages.

I have used it for fourteen years with great success.

O. Q.

and thrive well. Be very particular not to pour water over the surface, either before or after planting, for the action of the sun's rays upon this saturated soil has a tendency to lake and enernst the same. Gelery plants, when first set out, require an open, friable, free soil, to grow rapidly and well. The time to plant out celery is after four o'clock P. M., or on a damp, cloudy day, and if the plants are good and strong, as they should be, if care is taken to remove them from the seed bed with all their leaves and roots, particularly the top roots, they will go on growing without any check to their growing state. All our most skillful market gurdeners are very particular to preserve the tap root, knowing the saving of time and labor gained by planting out only good sized plants, and those well rooted and firm. As soon as your plants begin to grow heigh to use your hoe among the roots, stirring the soil every three or four days, if you would have your plants grow well. Keep out every weed, and do not begin to earth up your plants too soou. Much harm is sometimes done by giving too much earth to the plants, thereby depriving them of necessary sun and air. When you blanch the celery be careful to give the earth in small quantities, always keeping the leaves of the plants well straightened and all in an upright or perpendicular condition.

The lifting and landling of eelery and its Winter treatment are very important. If you have not injured your eelery at this period (and it is frequently entirely spoiled by too much earth in blanching) you will, at the time of the full growth of the plants, lift them carefully for Winter use. We suppose you have, as advised before, been very careful in the lifting of the lower leaves of the plant, and compressing lightly the lower part of the plant, with the hands; this has a tendency to prevent decay. This direction is very simple, I know, and it may appear trifling to some; yet it is a necessity for amateurs to know that celery is a peculiar plant and requires peculiar trea

the Winter's storage. The keeping of this plants, was ways, the simplest and the best of which, we think, is as follows:—

If you do not store your plants in a dry cellar for Winter, you will prepare a slight trench of eight to ten inches depth in some good, dry situation, and set the plants in a perpendiculr position against the outside of the ridge or border, each head touching the other, and puiting a layer of three inches of earth between every layer of your plants. You will be careful to leave about four luches of the top uncovered with earth, for the reason that you want light and air until the time of severe frosts. Whenever you apprehend a frost you are to place a temporary covering of boards over the celery, but not touching it; make a trench of eighteen inches in depth all around the bed, to carry off the rain water.

The variety I like best is the red celery, a rich, crispy, hardy plant, standing both heat and cold finely. There is a branching dwarf sort which is very good, and which commends itself to amateur culture, as it requires very little attention and always finds a remunerative sale in Fulton Market, New York. There are in cultivation the following kinds of celery, all of which are good: Early dwarf, white; Cole's superb, white, equal to his red; Mauchester giant, much grown in England, but not much used in this country; Seymour's white champion, very good, compact of habit, crisp, and easily blanched. Any of the above we can recommend for culture, as we know them all.

Story of the Big Squasi.—The big squash of Amherst Agricultural farm, which grew so stortly that it burst several iron cages, and finally lifted 4,120 pounds (and of which a plaster cast is preserved), had enough roots underground to feed it for its herculean work. The squash vine was washed out with its roots by the continued use of a garden bose for twenty four hours, and the whole root system was spread out on a floor and carefully measured. The main branch was twelve or fifteen feet long, and aggregated some 4,000. One of the seventy nodal roots, four feet long, had 480 hranches, and a most careful estimate of the ramifications of the rootlet, based upon the actual measurement of the division, showed that the squash vine had between fifteen and nineteen miles of roots. Reckoning the number of days it had been growing (fifty-two), it was found that it must have been on an average 1,000 feet per day, and on favorable days about 2,000 feet. Colonel Clark, the President of the Agriculturist College, says that while this growth was going on, and the big squash was expanding and lifting its enormous burden, great drops of sweat stood all over its rough rind, proving that it felt the great task imposed upon it.

-The current worms are again busy, and threaten in many places to destroy this valued fruit.

-A correspondent, G. B. S., Salem, Mass., deplores the looseness and inefficiency of the gamo laws in that region, and expresses a strong desire for an association for the preservation of our game birds. Such sentiments deserve encouragement, and we trust our correspondent will be able to secure the desired co-operation for a protective society,

The Rennel.

—We present this week an engraving from a celebrated picture painted by Mr. Bispham of this city, and now in possession of Dr. Strachan of the New York Kennel Cluh, representing three as fine specimens of the well bred dog as can be found in this country. The sketch was taken from nature, and reflects great credit upon Mr. Bispham, whose reputation, however, as an animal painter is too well known to require further comment. The setter Don, a lemon and white, and the liver and white pointer George, were brought to this country by the late Sir Fred Bruce, H. B. M. Minister at Washington, having been selected by him B. M. Minister at Washington, having been selected by him from the Duke of Beaufort's kennel. Both were very handsome, possessed of high courage, exceedingly good noses and very staunch. Don, the setter, was milk white with

lemon ears, and Dr. Strachan declares him to have been the best woodcock dog he ever shot over. He died from swallowing a greased cork, which had doubtless been threwn him, and which produced strangulation of the howels. So highly did Dr. Strachan esteem him that he had him "set up" in a glass case at considerable expense. His progeny are now distinguishing themselves. George was a grand specimen of the pointer. In Virginia, where he was shot over, he attracted the admiration of all who saw him. He was mated with Peg, and his progeny are now in the New York Sporting Kennel, and in the hands of some few gentlemen who appreciate them highly. Peg, owned hy Gen. Alex S. Webb, was level by Capt. Grafton, and is out of his black Di, by Mr. Finn's Grouse. Di out of Gilbert Wilken's black Fan by Gideon Knapp's black Carlo. Grouse out of Gov. Smith's imported Romp, by Mr. Griffin's black Dash. This breed of pointers has been lemon cars, and Dr. Strachan declares him to have been

known by Mr. Fred Schuchardt, the present owner of Di, since 1832, and he still keeps the breed pure at the Suffolk Clinh, Long Island. The strain is distinguished by being jet black with a small blazeon the breast. Peg, in style and action, was as the a hitch as could be found. Dr. Webb's Whisky, first premium at Springfield, and of whom we shall shortly publish pedigree and portrait, is out of June, from the Marquis of Westminster's keenel, by Flash, own son of the two pointers in the picture. We desire to call attentian to the excellence of the wood ent, for which praise is due to Mr. Jacobe Glahn, of the American Gun Engraving Co., West Meriden, and Mr. Tarbell of the same place, as drawer and engraver. An engraving of these dogs ornamented the cup presented by us at the Rod and Gun Bench Show, and due crecht would have been given the artist and owner at that time had we not had this piethe artist and owner at that time had we not had this

THREE CELEBRATED DOGS-DON, PEG AND GEORGE.

-Commenting upon the result of Field Trials of dogs used with the gun, the editor of the London Field states that after ten years of experience, it is useless to continue them, and cites in support of his conviction the result of the late Devon and Cornwall, Shrewsbury, and Kennel Club meetings. As the causes which have produced this decadence are cited; gross ignorance in the dogs them-selves, and of their capabilities by those having them in charge, and extraneous influences brought to bear on the judges, warping the decisions in the wrong direction. fancy, however, that the lack of interest which has been growing for so many years, is attributable more to the fact of so many owners sending their dogs in charge of keepers, to which the Field also alludes, and accepting their versions of the causes of defeat. Should field trials ever become popular in this country—and there is every indi-cation that in time they may—this cause will not exist. We are, as yet, sufficiently democratic to attend to our in-terests in person and not delegate them to irresponsible We are also inclined to the belief, after reading the reports of the above mentioned trials, that dogs in this country are better broken, and that although we may not, as yet, possess as much of the sangre azul, we have stock which is quite equal, if not superior, to that in the hands of our English cousins.

We have just received from R. I. Lloyd Price, Esq. -We have just received from R. I. Lloyd Price, Esq., Rhiwlas, Bala, North Wales, a catalogue and pedigree of bis famous kennel of dogs, which includes setters, pointers, retrievers, fox terriers, and spaniels, and with the catalogue he has kindly sent photographs of the three prize pointers, Drake, Mallard and Beau, which may be seen at our office.

THE DACUSHUND.-A correspon .: of the London Funciers' Gazette, in alluding to the many uses to which the elever little Dackshund may be put, meutions a day's sport in which one of these dogs brought to bag, or aided in the result—one buck, one fawn, a vixen, three cubs, a second vixen, four cubs, a dog-fox, and a hadger. A Dachshund ought not to weigh more than twenty pounds, and not less than thirteen or twelve. In black and tans, the smaller the white spots in the breast the better.

-Mr. R. Schmeideburg's black and tun setter bitch Katie, recently dropped seven fine healthy pups, by his tri-colored setter Prince. The pups are also tri-colored, hlack, tan and white. Prince is by Dush, a famous red Irish setter, which was sold by Mr. Charles Brown to a gentleman of San Francisco for \$300. Having witnessed the performance of Prince and Katie in the field, we can vouch for their stanuchness on game, their steady good style of going, and the skill of Mr. Schmeideburg in their management.

The Borse and Counse.

The acceptances for the several handicaps to be run at Jerome Park during the Spring meeting are published, and the uumher "content" is excellent evidence of the handicapper's skill. The venerable but evergreen "Admiral" himself could searcely have succeeded in better satisfying so large a number of owners. In the Fordham Handicap Sweepstakes no less than thirty-four out of the original fifty-three nominators have accepted the weights. Preakness leading off at the head of the list with 126 lbs., and the three-year old Australind bringing up the rear with the mild impost of 88 lbs. Preakness again leads lhe way with 125 lbs. in the Joekey Club Handicap, for which there are twenty acceptances out of twenty-six nominations. The Grand National Handicap Steeple Chase attracts ten, of which Bulletin, six years, carries the top weight of 165 lbs. It is always difficult, however, in the steeple classes to get a sufficient number of starters to fill the requirements of the rule, which says that three muet start, or no race.

—The programme for the Monmonth Park races is now

start, or no race.

—The programme for the Monmonth Park races is now issued, and with the judicious arrangement of the purses, promises to be a most successful and interesting meeting. The following are the principal events on the list:

FIRST DAY—SATURDAY, JULY 3.

Jersey Derby Stakes for three-year olds, at \$30 each, play or pay, with \$1,500 added; closed with fifty-three nominations; one mile and a half.

Long Branch Graud National Steeple-chase; purse, \$600; about three miles.

SECOND DAY—MONDAY, JULY 5.

Hopeful Stakes for two year olds, at \$50 each, play or pay, with \$500 added; closed with twenty-eight nominations; half a mile.

Monmouth Cup, for all ages, \$50 each, play or pay, with \$1,200 added; closed with twenty nominations; two miles and a half.

THIRD DAY—WEDNESDAY, JULY 7.

THIRD DAY—WEDNESDAY, JULY 7.

Monmouth Oaks Stakes for three-year old fillies, at \$50 each, play or pay, with \$1,000 added; closed with thirty nominations; one mile and a half.

Mansion House Stakes for four-year olds, at \$50 each, play or pay, with \$1,000 added; closed with eighteen nominations; two miles and a half.

FOURTH DAY—THURSDAY, JULY 8.

July Stakes for two-year olds, play or pay; winner of the Hopeful Stakes to earry five pounds extra; \$50 each, with \$500 added; closed with twenty-four nominations; three-pounders of a mile.

SECOND MEETING—FIRST DAY—SATURDAY, JULY 19.

Monmouth Sequel Stakes for three-year olds, at \$50 each, play or pay, winner of the Jersey Derby to carry five pounds extra; with \$600 added; two miles, second day—therapay, July 13.

Occan Hotel Stakes, at \$50 euch, play or pay, with \$1,000 added; to carry ninety-five pounds; fillies and geldlegs, ninety-two pounds; closed with thirty-five nominations; one mile and three-quarters.

Third day—thurbaday, July 15.

Thespian Stakes for two-year olds, at \$50 each, play or pay, with \$500 added; closed with twenty-two nominations; three quarters of a mile.

West End Hotel Stakes for three-year old fillies, at \$50 each, play or pay, with \$1,000 added; winner of the Monmouth Oaks to carry live pounds extra; closed with twenty-five nominatious; one mile and three-quarters.

Long Branch Stakes, for all ages, at \$30 each, play or pay; to carry 100 pounds; mares and geldings allowed three pounds; closed with eighteen nominations; one mile and three-quarters.

FOURTH DAY—SATURDAY, JULY 17.

August Stakes for two-year olds, at \$50 each, play or pay;

and three-quarters.

FOURTH DAY—SATURDAY, JULY 17.

August Stakes for two-year olds, at \$50 each, play or pay; winner of the Thespian Stakes to earry five pounds extra; closed with thirteen nominations; one mile.

Robbins Stakes for three-year olds, at \$50 each, play or pay, with \$1,000 added; closed with thirty-seven nominations; two miles.

The first most

The first meeting at Fleetwood under the new regime was brought to a conclusion Saturday week, in the presence of a larger number of spectators than had attended on any previous day. There has been some dissatisfaction expressed with the decision of the judges on several occasions, and it has looked as though the \$1 admission fewas to furnish amusement of an inferior and mastisfactory character; but we doubt not that the lessees intend doing everything in their power to raise the standard of trotting, instead of assisting it to relapse into the mire from which the gentlemen or the National Association have succeeded in lifting it. And in fact, with the most ordinary care, Fleetwood must always he a popular place of resort with our driving public. Located on the most hrilliant drive of the country and so near Central Park as to be easy of access, it must always be attractive to those who find their diversion in the sports of the trotting turf.

—The great racing event of the season, the English Der-

who find their diversion in the sports at the trotting turf,
—The great racing event of the season, the English Derby, was concluded on Epsom Downs course on Wednesday last. The stake, which it is hardly necessary to
mention is for three-year olds, closed originally in 1873
with 223 entries, but the death or Sir Joseph Hawley,
Barou Rothschild, the Rev. John King, and others, reduced
the number to 201. After the two thousand guineas, Camballo, the winner of that stake, was made favorite, but bes

fore the start Prince Batthyany's Galopin supplanted him, and justified his backers by landing the stakes easily. Camballo not being placed. This was the ninety-fifth time this rich stake has been contested, and its value now yearly approximates the sum of five thousand guiveus. Galopiu is by Vedette out of Flying Dutchess.

—Two days following the Derby, the Oaks, the great filly stakes, is ran over the same course at Epsom. For this year's race there were 136 nominations, but of this number ody seven appeared at the post. Lord Falmoutle's Spinaway, who had wan a few weeks previous the one thousand guinens stake, was made a hot favorite, and won easily by a length, her owner's second entry caming in second. Spinaway was heat by Lard Falmouth, and is by Macaroni; dam, Queen Bertha.

Another Occident.—A wonderful mustang, known as Don Elipha, has recently been shipped from Los Angeles to San Francisco. This remarkable "buckskin" without a pedigree, was worked in Arizona for a long time hauling stages and in the eavalry service. One of his feats was carrying a soldier 100 miles in a day. It was not until after his arrival in Los Angeles, however, that his trotting addities became apparent, and having beaten 2:30 there he has shut himself out of further races in that locality. It is thought that with proper haudling he will yet beat twenty.

—The Atlantic yacht club held their opening cruise to Sandy Hook and return on Mouday. The following yachts started from the rendezvous, accompanied by lhe schooners Meta and Comel, of the New York club:—

Schooners.—Triton, Com. G. A. Thayer; Peerless, Ex-Cam. J. Roger Maxwell; Agnes, Vice Com. L. A. Fish; Vision, Mr. Goo, H. Seeley.

Stoops.—Orion, Rear Com. Cooper; Kaiser William 1., W. E. Greenleaf; Undine, W. H. Fowler; Josephine, Mr. Sidney V. Lowell; Barbara Freitchie, Mr. John H. Rhodes; Curlew, Mr. II, H. Hogins.

The Josephine anchored first at the Horse Shoe, followed by the Undine, Kaiser, Triton, Peerles, Orion, and Agnes in the order named. On the run home the Undine took the lead and reached the bome anchorage first. Some eighty members of the club participated in the sail.

—The yachts Ripple and Charm had a race on Monday from Hoboken to the can buoy and return. The Charm won by a few minutes.

won by a few minutes.

The first regatta of the Tom's River yacht club this season will take place on June 24th. In addition to the challenge cup, some \$150 in prizes will be given to the three successful boats.

-The new club house of the N. Y. Yacht Club will be ready for occupancy in about ten days.

It is now said that Mr. Garner's Mohawk will be ready for launching in about a week. Her masts are in, stays set up and copporing finished. Her advent Is anxiously looked forward to, and many are the opinions expressed as to her probable performances.

The Ariel, Commodore Swan, of the Sewanhaka Club has had a new bow put on, improving ber both in looks

—The Williamsbnrg Yacht Club have elected the following officers:—Commodore, A. Barker; Vice Commodore, A. Conklin; President, T. W. Reaves; Corresponding Secretary, C. E. Mielke; Recording Secretary, W. A. Bardell; Treasurer, Henry Miller, and measurer, Andrew J. Busb.—Capt. Thomas llorgan, of South Boston, has ready for launching a fine keel sloop, which looks as though she would make things lively for the other boats of her class. She is twenty-six feet long on deck and twenty-two feet on the water line. Her cabin and standing room are finished in kheek walnut. She is a well-latil boat in every respect, and a credit to her builder, whose reputation as a fine workman is first class. She has been sidd to Boston parties.

workman is first class. She has been sidd to Boston parties.
THE AMERICA.—This yacht now lies at the wharf of the
Atlantic Works, East Boston, undergoing complete renovation and repairs, under the supervision of Capt. Reed, her
sailing master. Donald McKay, Esq., the well-known ship
builder, is doing the work on ker, having put on new walls,
water ways, decks, and thoroughly overhauled her bull, so

that there is not now a poor plank or timber in her. The interior arrangements have been entirely removed, and she is now being fitted with new cabins, staterooms, and other necessary conveniences of a first-class yacht, fore and aft. The new musts she has received have been set more upright than formerly—that is, the rake has been lessened, with a view of making her sail hetter before a light wind than she previously did; for then, on account of the great rake of the masts, it was almost impossible to keep the booms from swinging inhoard without the ald of a block and tack, except in a stiff breeze, and with their aid the gaff would fall in and out, according to the strength of the breeze. She will not probably he "put in commission" before the middle of June, but then her owners—Gen. Butler and Col. Freuch—will bave a craft a yachtsman may be proud of.

SCHUYLKILL NAVY.

The second annual regatta of this association will be held on June 16th and 17th. A copy of the rules under which the regatta is to be held is appended herewith. The prizes comprise the challenge Punch Bowl for four-oared shells, an elegant Pitcher, the challenge prize for pair oars,

and an Ice Bowl as the challenge prize for pair-oars, and an Ice Bowl as the challenge prize for double sculls;—
RULES OF SCHUTLKILL NAVY REGATEA—OPEN TO ALL MATERIAS.

1. This regata shall be open to all amateur clubs which have been alluly organized two months prior to the holding of the regatla. Entries from individuals will out be received.

2. No club shall be allowed to enter any person who has not been a member of that club for at least into months preceding the regatla.

3. Any club intending to compete for any of the prizes must give due notice to the secretary of the Navy on or before the flag appainted for closure the curries, which shall be two weeks before the first day of the regatla.

gatia.

In all cases of entries for four-oared races, a list of not more than eight names, and in all cases of entries for pair-oared or double scull races, a list of not more than four names stall be sent to the secretary, and from these names the actual crew shall be selected.

The name and address of the captain and secretary of each crew or chib entering for any race shall be sent at the time of the entrance to the secretary.

chib entering for any race shall be sent at the time of the entrance lofthe secretary.

4. No resumed names shall be given to the secretary.

5. No one shall be alloced to be entered twice for the same race.

6. The secretary shall not decline any entry nor report the state of the entrance list until such ills shall be clesed.

7. Olijections to any entry shall be made in writing to the Secretary of the Regards Committee, within seven days from the declination of the entries, when the committee shall investigate the grounds of objection and decide thereon forthwith.

8. No entrance noney shall be required in any race.

9. All races shall be one and a kalf miles straightaicary.

10. A meeting of the Regards Committee shall be keld immediately preceding the regards, at which the capitain or secretary of each crew or lith cutered shall dedeer to the secretary of the regultar a list of the sames of the actual crew appointed to confirm in the ensuing races, to skich list the name of one other member may be added in the event of filness or accident, subject to rate 11.

11. No member of a club shall be allowed to be substituted for another who has already rowed in a licat, nor shall any member of a club be llowed to row with more than one crew (a any of the heats for the same rize.

prize.

12. In the event of a dead local taking place, the same crews shall contend again, after such interval as the Regatia Committee may appoint, or the crew refusing shall be adjudged to have lost the race.

13. In the event of there being but one boat enterput for any prize, or it more than one cutter and all are withdrawn but one, the crew of that boat must row over the course to be entitled to such prize.

14. Heats and stations shall be drawn for by the Regatia Committee to the presence of such competitors or their representatives as may utend, and the contend after the notice having been given of a meeting of the Committee for that purpose.

An ompire shall be chosen by the Regatta Committee, and his de-n shall be unal.

cleion skall be tinal.

16. The judge at the winning post shall be appoted by the numpire, and bis decision shall be thud.

17. The leas of boat racing as adopted by the N. A. A. O. and S. N. shall be observed at this regatta, and the definition of an annateur oarsman, as adopted by the Schuylkill Navy shall govern the qualifications of each competitor.

18. The prizes shall be delivered at the conclusion of the regatta is their respective telmiers, who, in case of a challenge prize, shall receipt for the same as may be required by the Nacal Board.

19. All questions of eligibility, qualification, or interpretation of these rules, shall be referred to the Regatta Committee, and their decision shall be furthernal.

-The Centennial Commission last week passed resolutions officially endorsing the regatta of the Schuylkill Navy for 1876. They will award the diploma of merit and medals to the winners of the races, and will lend their aid to make it a grand success, giving promise of the greatest regatta ever given on any waters.

make it a grand success, giving promise of the greatest regatta ever given on any waters.

The Nassau Boat Club Races.—The Harlem River never presented a gayer sight than on Saturday last, when the steamer Seth Low, having on board the members of the Nassau club and their friends, steamed among the hundreds of boats of every description that dotted its surface. Every hoat house on the river was fully decorated with bunting in bonor of the occasion, and the early closing inovement enabled hundreds of enthusiasts to be present who would otherwise have been confined to the compationship of bigh stools and musty ledgers. The preliminaries to the racing commenced by Mr. L. L. Spring accepting the post of referce, Mr. W. E. McCredy that of judge at finish, and Mr. Englehard timekeeper. The course was one mile straightaway, from the powder schooner to Florence's Dock, the last half of the flood tide assisting the first two races, but slack water prevailed when the race for the flours was called. At three o'clock the competitors in the first heat of the single sculi race appeared in the following order: Edward W. Coles, New York shore; John A. Walker centre; James Wills, Westchester shora. Wills obtained a slight lead in the commencement of the race, but ere the half mile was reached Walker crept up and passed him, crossing his bow a length clear, rowing to the end an easy winner in six minutes three seconds.

The second trial heat brought out another field of three, starting in the following order: Wm. B. Kemp, New York shore; Joseph Muir, Jr., centre; James D. Foot, Westchester shore. Foot won the beat in 7:26½, the others fouling. In the final beat Walker, the winner of the fours in the interim, wan as he pleased in 6:28½, defeating Poot by about three lengths.

Four shells appeared at the starting point for the four-oared race, and made a most gallant contest. Tho Nassaus deserve great credit for being able to get together four as strong crews as thoso which contested in this race. Their names and positions were as

No. 3, Centre.—J. B. Reynolds, bow; Arthur B. Froil, No. 2; George C. Power, No. 3; G. S. Floyd Jones, strake, No. 4, Westehester.—Frank W. Bacon, kow; Lindsey Walson, No. 2; A. W. Montgomery, No. 3; John Gunsler, Strake

strake.

The Jones crew got away with a slight lead, but all were well up until half the distance had been accomplished, when they met the young she tide, which caused the Jones and Walker crews to collide, the Gaussier crew then going to the front and winning the race; time, 5:25. Very leaniful silver goblets were presented to the winners of the several races, after which the party steamed homeward, well pleased with their day's sport.

—The Argonautus, of Bergen Point, one of the crack crews, has been materially strengthened by the addition of J. B. Ward, who rows in Walter Mua's place, E I. Smith, Beujamin Stepheuson, and Fred. C. Eldred retaining their old places.

The Colleges.

-Trinity College has met with a sad misfortune in the death of Mr. H. S. Cameron, one of the University crew. While practicing in a shell a tug boat swell caught the boat, and Mr. Cameron, who could not swim, went down in the swift current. Mr. Cameron's father is a well known provision merchant of this city, lately of the firm of Jas. M. Smith & Son.

known provision merchant of this city, intely of the firm of Jas. M. Smith & Son.

—The following men have been selected for the Columbia College crew for the Saratoga race in June:—Sprague, bov; Hammond, 2; Murphy, 3; Sage, 4; Boyd, 5; and Captain Goodwin of last year's crew as stroke. The college Commencement will take place on June 21st., after which the crew will leave for Saratoga as quickly as possible. A new boat, similar to that used last year, will be built and be ready by the time they reach Sarataga. John C. Babcock will begin soon the imilding of the float on which the new club house is to be built. The plans and specifications of the club bouse, which is to cost \$10,000, have beeu approved by the committee in charge of this work. Mr. Rees will take entire charge of the coaching on their arrival at Saratoga. They practice every afternoon on the Harlem River, and although the crew is composed of five new men, they are au unusually promising set, rowing together steadily and in good form.

YALE.—Maxwell umpired the game between Harvard and the New Haven clubs to the admiration of every one. The first match between Harvard and Yale, '78, will take place in Boston on Salurday, June 5th, and the return game in New Haven on the following Saturday.

Hanvard.—The college color has been changed to crimson, or rather restored, as the adoption of magenta in '64 was owing to a necessity, the requisite number of crimson handkerchiefs baving been unprocurable. Now Union, rest in peace. The University crew are in active training and rapidly improving in form.

Trinity.—Boating matters are progressing favorubly, both the College and Sophomore crews doing good work.

THINITY.—Boating matters are progressing favorably, both the College and Sophomore crews doing good work. The Tablet appeals to the students to take more interest

Princeton.—So the cannon belongs to the U. S. Government, after all, and the marshal is to make a requisition for it. More from Princeton elsewhere.

PRINCETON COLLEGE, May 27d, 1875.

PRINCETON COLLEGE, May 22d, 1878.

EDITOR FOREST AND STREAM:—
The first victory that the University nine oven this season was secured in a game outh the Flyaways, of Brooklyn, on the 20th lists, the University obtaining an easy victory. The minh inning closed with the score of 10 10 4 in its favor. This was the second game played by these two nines, and the second victory wrested from the Flyaways by the Princetons. The score of the first game played tast Full was 10 to 3 in favor of the latter.

tons. The score of the first game played last Fall was 10 to 3 in favor of the latter.

On Friday the best game, I bave good reason to believe, ever played by a professional and an amateur nine took place here between the Centennials, of Pulladelphia, and the University. There were few errors on either side throughout the entire game. The lutting of the Princetons was somewhat stronger than that of the professionals, and ball it not been for a violent wind which was then blowing the University would have secured three or four two base bits. Mann's peculiar style of do fleery proced as effectively what the professionals as with the amateurs. Even Crayer and Radeliff both failed to make many good hits. The latter "struck ont" for the first time in months, it is said. The Princetons mide a run in the second lineng, and were "chicagoed" every other inaling, though they secored their first, second, and even third bases severed times during the game. The Centennials secured one rou in the third liming, thus making the secore 1 to 1. During the rest of the game not a run was scored until the last half of the unith limiting, when the professionals by two excellent hits unde another ran, closing the game of the the core of 2 to 1. Oo account of the excellence of the nbove game I will append the entire score, which is as follows:

PRINCETON.

E. B. P.O. A.E.

	FRINCEION.					CENTENNIAL.

Umpire—Mr. Denouling, of Princeton.
Time of game—I bour and 30 minutes.
The "cannon" difficietty, about which so much has been written, is finally settled. The Rutgers Faculty having discovered that the gam has always belonged to Princeton, and that Rutgers had no claim on it whatsoever, sent a written expression of their willingness to return the captured, or rather staten, cannon. The hasty action of some of Princeton's brave sons in breaking open the museum at Rutgers on the night of the 19th inst,, and in removelog from thenes several muskels ledancing to the United States Government, came very mear involving both colleges in further trouble. This morning at 9 o'clock, however, the "cannon" arrived. Its coming did not crute as much excitement as was expected. The muskets over returned to Rutgers to day also; so neither institution has further cause for complaint. The other affair was deeldedly foolish, and actually because dispusing before it was finally adjusted.

QUIDVISA

PRINCETON COLLEGE, May 24th, 1875

PRINCETON COLLEGE, May 24th, 1873.

EDITON FOREST AND STREAM:—
The University obtained an unexpected victory to-day in a game with the Atlantics, professionals, of Brooklyn. The Princetons made a run in the first inning, and ever "chicagoed" every other loning until the eighth in her they scored two more runs. The Atlantics scored two runs in the fourth liming, but failed to india another run to their score during the rest of the game. Both intensinade but for errors, and the game was nell contested. Washing's fine hit brought Langilli hi, who ecosed the first run made by Princeton. Though Denity's fine but brought and they are runs putter praisecurity, it would have failed to increase the accrobal not the Atlantic catcher allowed two builts to gass lum. The libe hall caught by Wuods of the University, and Campbell's excellent play on first, were some of the most brilliant features of the game. With a good fielding nine and with strong battors we do not fear the trial which awalls the University in the game to be played by it liks neek at Yale and Insvard.

Quidvis.

PRINCETON COLLEGE, May 31st, 1875.

Phinceton College, May 31st, 1873.

Editor Forest and Stream:—
The University this left beed last Thursday on list our to Harvard and Yule. On account of the defoil at the bands of Yule on Wednesday, the 28th, on our grounds, we were rather doubtful as to the success of the nine. The first game was played on Friday, 28th, with Harvard, at Cambridge. Harvard went be game by the score 10 to 3. On Saturday the second game was played with Yale. This was the finest intercollegiate game ever played. Princeton made eight base hits; Yale made one—tip to the eighth inning the score was 1 to 0 in favor of Princeton. During this limite, however, she scored two runs more. Both nines were relifed without a run in the last finding. The score of the game was 3 to 0 in tavor of Princeton. This result was quite gratifying after the severe defeat received from Yule on Wednesday, when the score was 14 to 4 in her favor. The third game will probably he played some time in Jame. The game for the climingiouslip of the culteges have resulted thus far as fullows: Harvard has heaten Princeton twice, while Yale and Princeton have each won a game from the other.

Transard University, May 22d, 1875.

Editor Forest and Stream:

For a start in hise bull our wine have been playing with the Boeton, Hartford, Live Oaks, Princeton, and Rhodo Island clubs, with a series of scores not to be considered had. The games with the professional clubs have been very good, Indeed, while with the others the play has been unexceptionable. Our fool bull team still keep all work notwithstanding life sevious lesses it has been subject to in the cases of Mr. A. Whiting of '77 with strained knee, and Mr. Weatherbee of '78 with broken collarbone. Mr. Whiting is one of the best "rush' we have; both played at Moulreal list Fail, and Mr. Weatherbee won two out of the three "touch downs." The club has played several games with the graduales with successful results. The Tutts' Foot Ball club are to play has a watch game on Jarvis' field on the 2d of Jinie, and as that will probably be the only game we shall pluy with hembers of other colleges this Spring. The interest will probably be quite strongly inconsed. Boaling matters are still progressing. The crew were thresteved with the loss of Mr. Taylor, but forthmately for all concerned in Harvard the game was vorse than the harm, since no harm has been done.

The Athlelic Association held their field meeting on Jarvis' field today. The programme was very good, but owing to avoidwis happening lo solwe of our hest athleles the interest was greatly deadened. The jumping was not as good as bas been recorded outside, and the running not as good as boats tribunes in college were laid up, and the winners find nothing to spar then on. The results ivere as follows:

Running High Jump—Lunger, '77. Distance, 18 feet 4 inches.

One Mide Hale—Taylor, '75.

The last was not completed, as all the competitors retired at the end of the second mite, leaving Mr. Taylor all alone. The first milk was completed by Mr. Taylor to 8 minutes and 25 seconds. The prizes were mostly presented by the association—all but the first, second, and eighth—constains of the parting and of

Самвинов, Мау 30th, 1875.

oppressive, and it is believed that the Pall meeting will improve on this to a considerable extent.

Cambunder, May 30th, 1875.

Edition Pohert and Stream:—

The hooling men of Harvard are entitled to be congratulated on the accessful working at the ciba system, modeled after that of the English universities, and first introduced by them has Auturm as a factor in the intercollegiate strife for aqualic hoora. Upward of 230 students have availed themselves of the privileges aversing from membership in one or other of the Holworthy, Holyoke, Maithows, or Weld cluba. The four class take their names from certain of the college halis; draw their members trom certain well defined sections of the college domain, and occupy premises adjoining those of the Harvard University Boat Club and Blakey's extensive cetablishment, where most of the shells pulled at Springfield and Stratoga have been built. On the rosts of the different clubs are to be found more than thirty boats, comprising six and four oared barges, single and double sculls, and pair oars. Yesterday the donts, beleuity, and root of the Union Boat Club and the sea wall which skirts the Cluarles River back of Beacon street, were thronged with colleginus and their tair admired and admiring triends, gathered to witness the lineary and spring races over the Charles River course. The sky was smilling, the air cool and bracing, and the water smooth. In the first event, a two-mile torning race, set for four o'clock P. M., and not delayed more than half an hour, each club was represented by a four-oared crew wearing the club colors, Holworthy's being dark him and white, those of Holyoke's light blue and white, Weld's orange and black, and those of Matthews crimson and black. The crews drev positions in the order named, Holworthy being hisside, nearest the wall. Weld at the start gaused a slight land. Holworthy came close behind, and once in the first quarter benied Weld. Holyoke and Matthews will to see the first quarter benied Weld. Holyoke and Matthews work left that

were considered to be quite evenly matched. The Matthews men were the heaviest, and pulled a long, strong stroke. Wold's stroke, set by Loring, the stroke ost in the Freshman six, was clean and even. Holyoke pulled gracefully, while the Holwoothy men handlyd their oars in a stgorous, heavy tashine, which in spired confidence, though their stroke set them a had example in not pulling straight backward and forward. In spite of bail form, however, thry jumped away is the start, and swen gained a lead of at least two lengths. Weld, Holyoke, and Matthews went off toward the right in a hunch, shore Matthews soon went to the front, and fed Holworthy almost to the turn. Holworthy squited, and the two intened their respective stakes together. Holworthy again got away with the head, Matthews million hard after Inside of Weld, which turned next, and the Holyoke boat, which unosteviationally brought up the rear. The crews maintained inheir relative nositious to the fine in 19 min, 11 sec., followed by Matthews in 10 min, 18 sec., Weld in 10 min, 11 sec., and Holyoke in 19 min, 21 sec., which in 19 min, 21 sec., and 10 sylve in 19 min, 21 sec., and Holyoke in 19 min, 21 sec., which in 19 min, 21 sec., and Holyoke in 19 min, 21 sec., and Holyoke in 19 min, 21 sec., which in 19 min, 21 sec., and Holyoke in 19 min, 31 sec., which in 19 min, 31 sec., and Holyoke in 19 min, 31 sec., which in 19 min, 31 sec., and Holyoke in 19 min, 31 sec., which in 19 min, 31 sec., and Holyoke in 19 min, 31 sec., which in 19 min, 31 sec., which in 19 min, 31 sec., and Holyoke in 19 min, 31 sec., which in 19 min, 31 sec., which in 19 min, 31 sec., and Holyoke in 19 min, 32 sec., which in 19 min, 32 sec., which in 19 min, 32 sec., which in 19 min, 32 sec., and Holyoke in 19 min, 32 sec., and Holy

The University of Pennstevana, May 31st, 1875.

Editor Forest and Stigalism.—

The University cannot, like Hamlet, "the bound in a nutshell sud count itself a king of intuite space," Its educational field, both mental and physical, is rupidly becoming more extended. Under the interest that Dr. Stille has aroused and the ceaseless efforts of Morris and Phillier of "75, the College Barge Club has elected the handsoncel bourse on the Schuj Rill, the facilities of which river for rowing are too well known to comment upon. On Sainrday, May 27th, the Spring contest for the ailliele prizes came off, as annotineed, on the Y. A. C. grounds, at Wayue Station, G. R. R. There were numerous entries for short dash, one-fulle race, throwing ball, hop, step and jump, trunuing jump, throwing bommer, and lurdle race. The estecossful contestants for the faregoing were as follows: Short dash, 100 yards—Kerr, of "75, with honorable mention of Geyellin, who came in a quarter second behind; thus, its seconds. Mile race—The entries "been to see a man," and did not return in time. Throwing the ball—Won by Andrews, of '76; ball, regwhaton size and weight, dietance thrown, 317 feet. Hop, step and jump—By Willoughby, of '77; distance, 38; feet. Running jump. By the same; distance, 16 fevi 8 inches. High jump By Biddle, '76; 4 teel 6 inches. Throwing hammer—By Willoughby, '77; timo, H seconds; distance, 100 yands; number of hardles, 3; height of same, 3 feet 6 luches. The prizes awarded for the foregoing are the sune as those of last year—elaborately worked Malteeo crosees. The college crew would have been represented in the coming races at Saratoga bud not Megargee, in accordance with his accustomed tardiness, failed to put in an appearance at the convention.

In the coming races at Saratoga hid not Megargee, in accordance with his accustomed tardiness, failed to put in an appearance at the convention.

Cornell University, Ithaaa, May 28th, 1875.

Editor Forest and Stream:—

Since my last letter the competition for the Woodford gold medal, for the most successful oration, considered both as to ment and delivery, has taken place. There were itx contestants—one a representative of the co-education branch of the university—and the contest, taken as a whole, was considered the best of the kind since the founding of the university. Miss Bradford, of Boston, the young lady contestant, did exceedingly well, and many thought that she fully carned the medal, at if not that, certainly honorable montion. But the contestite of award adjudged the medal to Mr. G. H. Firch, the successful intercollegiate essays, and honorable mention to Mr. D. J. Tompkins. The competition for the above named medal is conflued to members of the graduating class. Saturday, the 22d of May, the annual Spring regalts of the Connell Navy look place, and proved a great success in all respects. The day was pleusant yet not very warm, and the lake as quiet as a mivror. The long train of cars was crowded with sinkents and clitzons, with a goodly number of ladies in the passenger coach provided for their asy, and every one was pleused and satisfied with the morning's sport.

The first race was for the Sprague and Tom Highes capa, tor six coared shells. Two entries for the first cup and one for the second, hence the tree crews rowed together. The crows had had but little practice before the race, yet they rowed a fine race. The 777 crew won the Sprague cup against '76, in 12m, 15s., '76 making 12m, 20s. The '77 Tom Hughes crew won their cup, a row over, in 12m, 43½s. The second race was for incompany and the first practice before the race, yet they rowed a fine race. The '77 crew won the Sprague crew, a crew from Union Springs, lin which was Contricy, the firmous amateur single centler, and the University Fres

ATULETICS AT SARATORA.—The day following the boat race—Thursday, July 15th—has been fixed upon for the Intercollegiate Athletic meeting. Ten races are arranged for, eight to be open to undergraduates of the fourteen different colleges represented in the rowing races, and the other two to graduates. The sports, which will be under the direction of the Saratoga Rowing Association, will take place on the half mile track at Glen Mitchell. The prizes will aggregate nearly \$3,000 in value. The programme has been arranged as follows:—

First—One mile running race; second—Three mile walking race; third—One hundred mile dash; fourth—Seven unde walking race; fifth—Half-mile ennning race; sixth—One mile walking race; seventh—Two under running race; cighth—120 yard leardle race, ten hurdles, each three feet six inches high; ninth—Two mile running race (graduate); tenth—Seven mile walking race (graduate).

Extrics are to be made 10 Mr. Wm. 11. Eustes, at Saratoga Springs, N. Y.

Auswers Co Correspondents.

CRUSOR—Do you know of any person who would take a good bird spaniel blich, quite well trained, nice form, small boad, the rurly heir, and slice some good pups, giving the a tire dog each year for three years for her

and value some good pups, giving use a life dog each year for three years for her?

J. R. R., Ogdensburg.—Is three any dishing lamp made for use in spearing so constructed that it can be mounted on the boy of a boat and throw sufficient light to see the bottom plainty at a deed of four tret, and covering a space of, say ten feet square, and can be used when there is what? Ans. Bon't know of any

A. B.—Black bass dishing can be had within wenty-five mites of New York, at the Lake. Take flarious cars to White Plains; conveyance trons there to the lake. Can get boots, bait, and dishing tackle of Roht. Keeter, at the lake. The bass run from one to eight panale; I saw three the other day that weighed four, tout and a quarter, and five pounds.—W. B. C., Pleasantville.

Wh. W., New York.—Have I not the liberty to take at any time and place any bird I want for a speciment. I mean in any woods or open ground owned by no one in particular. I have special reference to Jamilea, L. Lans. We quote uniculaid laws State of New York, May 20th, 1871; "Sec. II. The last two sections shall not apply to any person who shall kill any hird for the puspose of studying its habits or instory, or having the same suifed or set up as a specimen." Your object in shooting out of season will have to be proved beyond doubt, or you must pay the penalty.

TANAMYS.—II. Your columns of queries May 27th, "Talianys," inputers.

who shall kill any hird for the pivings of sturiying its habits or history, or having the same stuffed at set up as a specimen." Your object in shooting out of season will have to be proved by owl donbt, or you must pay the peualty.

Tanamus.—In your colonium of quertes May 27th, "Toliamus" inquires for something better than tar and old to keep away the files. I give him a fortwiller. Old of penny-royal, four ounces; ofter oil, eight onices; tar, two onices. I have their many inixtures, but dud this the most efficacions of all. If "Tahawus" will make lits heariquiters at Martin's, he will dud overy accommodation and assistance he needs, and bein the centre of the best fishing givinuls that remain. Vold litrook, Ray Brook, Rogers' Brook, and a thansaid little cold streams are within available distance from the house.—W. R., M. D., Boston.

J. E., City.—Can you give intornation regarding a section of country shuated in Canada, near Kingsten, known as the Drowned Lands? Ans. Take New York Central and Indeon River Railroad in Runny, Watertown, and Cape Vincent. All linggage checked Through. At Cape Vincent you can make any nece-sary inquiries at the footel, where the Ringston steamboats stops. In Ringston the total times district in accessible from Kingston by various ronder; protty well fished, and shooling fair. Cobourg and Rice lokes are visity better, and can be reached at the same cost and will less trouble.

W. H. S., Philadelphia,—1. Is the Ballard sporting tiffe that William Read & Sons, of Boston, advertism in sell for \$18 as good a gun of the kind as any thin are made—that is, speaking of its allooting qualities, and how is the finish? Ans. We own one of these rifes, and are very well satisfied with it. 2. What is the best thing you know of to romove rust from the interior of a ritle borrel, and where can it by obtuined? Ans. Blue olitinent; at the druggists. 3. What is the best thing to provent frames from rusting in a damp climals? Ans. Relimonitie oil lata advertised in our columns. Aso, one of our cor

old plan.

J. A. A., New York — Will you include among your answers to correspondents in your next lesine the following question: I. What is the best length of barrel, weight, and calibre for a Parker breech loader fur goneral use in Florida? 2. What is the best weight, length, validing, and style of Remington vide for general use in Florida, and what style of triggers, sights, and cartridges would you recommend tor anne? Would Readington 32-thicaline sporting rife ho a destrible weight for introducer, nilligator, and hear? Als. We would recommend a double guin of 10 gauge, 30 luch barrels, and in weight about \$\frac{1}{2}\$ pounds. Such a rife as you require—a Remington sporting rife, 44 calibre—is now in this office for sale.

R. P. M., New York, William Letters and the support of the second of the sec

deer, alligator, and hear? Ans. We would recommend a double gun of 10 gauge, 30 linch barrels, and In weight shout \$\frac{1}{2}\$ pounds. Such a rille as you require—a Remington sporting rille, 44 calibre—la now in this office for sale.

R. P. M., New York.—Will you intoriu me through your paper whether the Delaware River is navigable from Port Jeevia, N. Y., to Tevalon, N. J., by a light row boat, and if a chot port Jeevia, N. Y., to Tevalon, N. J., by a light row boat, and if a chot gun would be after to a party of two to make the trip? Please state also bow the fishing is most likely to be there in Jone, and if a chot gun would be of any use. Ans. If you wish to ron the Delaware River and e-juy it, carry a good dug-out cance, (one of English's basswood cauces, made in Peterbore, Cuinada, would be better,) up to Wallon, Delaware coanty, N. Y., and issued; it there, or go further if you desire. A fair stage of water will be requisite. Two novices can take a flat bottomed skilf sufely train Post Jeevis down, You may get a few hars bullow froit Jeevis, and some truit in this streams that flow into lib. Delaware along your route. A tript down the Delaware or Rousainville Rivers would be note erilopable.

A. D., New York.—Within the past tour years a new variety of fish has made its appearance at Stanford, Cl., and occasioned a great dval of controversy as to how they cance there and what calird. The lish is in shape like a tout, and its allyer scaled everywhere except on the back, where it is allack. Nimbers have been cangled welghing a pound, and some nearly two. The balt need is bread dough, though I have some them caught with files. They were ut tirst called clink; then with files, sliver rout, and grass hase. Caw you settle the question of name, or shall I cently you a specimen? Awa. It is impossible to form an optable on such slight data, which are really wo data at all. Our corresponding the control of the file of the past of the past of the round of the past of the past of the past of the round, and care th

TUEBDAY, June S. - Racing, Jerome Park - Trotting, Kingston, N. Y.; Grand Rapids, Mich.; Titnsville, Pa.; Omaha, Neb.; Goshen, N. Y.; Hartford, Cl. - National Sportsman's Convention, Cleveland, Ohio. WEDNESDAY, June 9. - Trotting, Kingston, N. Y.; Titusville, Pa.; Omaha, Neb.; Goshen, N. Y.; Hartford, Cl. - Base ball, Mutual vs. St. Lonis, at St. Louis - Carling Club, Yonkers, N. Y.

THE CONVENTION .- The New York State Association for the Protection of Fish and Game is now holding its seventeenth annual convention at Watertown, N. Y. The convention was called to order at Washington Hall on Monday evening by George W. Flower, President. The attendance was much larger than usual, nearly every club in the State being well represented. After Mr. Flower's opening speech, and the reading of the Secretary's report, new clubs and several county delegates were admitted to membership. The Treasurer's report showed a halance of \$1,222. The hench show of dogs is one of the principal features of the gathering, all the prominent kennels being represented. A full report of the proceedings reaches us too late for this issue, but will be given in our uext.

OUR CONTEMPORARIES. - Flood and Field is the title of a our contemporaries.—Flood and Field is the title of a new paper established by Mr. John D. Neill at Greenport, L. I. Its tendencies are not so much in the direction of "sporting," properly speaking, as in circulating useful and entertaining matter for the sportsman and tourist regarding Long Island principally. Mr. Neill's abilities amply qualify him for the task, and we wish him every success.

The Sportsman.—This paper has been changed from a monthly to a weekly issue. Messrs Foster and McIntyre, late of the Spirit have joined the original proprietor, and with this array of taleut and experience the ultimate success which we would wish for them should be beyond a procedurative. peradventure.

-Mr. A. M. Halstead, for some time connected with this journal, has recently become the chief editor of the Poultry Bulletin, a journal which we heliove he originally started. Halstead is well known to the poultry fraternity, and, we might say, to all the "old cocks" in the country.

OLD SUPERSTITIONS OF "THE SEA,

"Of other plants more rare, more strange than these, As very fishes (tyling in the seas; As also rams, calves, horses, bares, and hogs, Wolves, archins, Hone, elephants, and dogs, Yea, men and maids, and which I most admire, The mitred bishop and the cowled friar."

S o sings the poet, and with Pliny, Ælian, Rondelet and others, to supply the appetite of superstition with their grotesque figures of food it is no wonder that they themselves became honest advocates in the cause of imagination, and so firmly fixed became those ideas concerning the population of the seas with a perfect race of heings, that we have in some of the old histories statements and assertions from men of anthority affirming that they have seen with their own eyes these wouders, and there can be no doubt of their existence, and to day we see the remnants of these strange beliefs in the toilers of the sea, who, although they laugh at the mermaid and the Flying Dutchman, would not for their lives put to sea on Friday; and to find one who has not seen a sea screent would he a

In looking over an old work hy the ouce great writer, Caforuia, we find the following "flow of soul," evidently thrown upon our ancient forefathers with honest intent, as it is confirmed by Arabian history. The name of the valuable volume is "Aganh el Malkowkat," and its contents compare with it most favorably. After a learned dissertation upon the wonders of nature in general, he states that in the year 894 a fish was captured in the Casing Section 1985. pian Sea of such wondrons feature that it was taken hefore Prince Salim and opened, and within, like Jonah of old, and perhaps communing with the "inner man" of his fish-ship, sat a sea girl, and he says "she had on a pair of pauts, without a seam, made of skin like that of a man, and which came down to her knees. She sometimes held her hands to her face, and at others over her hair. She drew heavy sighs, and only lived a few minutes." Again, he says, "on the 18th of March, 592, an officer stationed at the Delta of the Nile, in lower Egypt, while walking with some friends, came upon a sea man and woman. They swam along the shore," and this "brave soldier" says "the woman's face was sweet and unld, her hair was black and floated upon her back, her body white, and her breasts quite prom incut." The man, of course, had a fierce air and terrible aspect; his hair was red and somewhat hushy, and his skin was of a brownish color. These two monsters remained over two hours in sight of the officers, and so much attention was taken of it that Maurice, who then reigned, can to witness the wouderful spectacle. The name of this "observer of nature" is not given, but surely he should be enrolled with Pliny, and his fame handed down unto all Shakespeare has not forgotten these maidens fair, but refers to their vocal powers in the following:-

"I heard a mermald on a dolphln's back tiltering such dolcet and harmonious breath That the rude sea grew civil at her song."

And such a one saw Don Emanuel, and held converse with her, if we may believe a late history of Portugal, which states that on the Indian coast twenty-five mermaids were captured and sent to his highness, but two only survived the voyage, a woman and her daughter. They were very melaneholy, would eat but little, and were slowly dying, when the kind, touched by their condition, ordered them to be chained and put in shallow water. On seeing the water they rushed to it cagerly, and having plunged them selves showed by a thousand tricks their joy and satisfac-tion. They remained three hours under water, and in this manner were kept three years. He also adds that "they never spoke a word, a fact much lamented upon." That one fact endears their memory to us, and with the poet we ask in vaiu:--

"Now are there really coral caves below,
Or heds of amber, or of preclous stone,
To which the blashing Nereids languid go
In idle hours to recline upon?
And are there fays to fan them while they're dreaming,
Whose wings seem like two diamonds purest gleaming."

And to say no seems hard, as here lies all the romance of the grand old sea. Its huge plains and mountains hudding with twice living verdure—its forests of coral and "dark, unfathomed caves," alive with marine flowers—its entanglements of alge, that in rare beauty of texture and form far exceed their models on land—seem fitted for the home of higher forms, and as we look down into the Southern seas the fair forms that live but in the fancy seem needed

to frame the lovely seene.
So firmly did these strange illusions force themselves upon the minds of the people that on the 31st of May, 1671, the following account was drawn up by Captain Commander Peter Luce, off the quarters of the Diamant, in Martinico, and sworn to hefore Peter de Beville, notary, and four witnesses: "In returning from the islands of the Diamant we saw near the shore a sea monster of human form from the middle upwards, and terminating towards the tail like a fish. His tail was large and split; the head was of the size of an ordinary man's, with straight hair, black and intermixed with gray; his face was large and full; his arms and hands were the same as ours, and he seemed to wipe his face with them as he rose; his skin was moderately white, and his length seemed about five feet; his air was fierce, and he looked at us all with great attention. When we saw him first he was not over seven paces off, but ho dove and reappeared so close that one of the men offered his fish line, at which he disappeared."

This shows how strangely the imagination can be worked upon, as the oath is on file, and the men evidently saw

something and helieved it a man. Perhaps Barnum was

there,
Later, in 1720, Oliver Morin, captain of the vessel Mary de Gruce, swears (until everything must have been blue) "that as he was lying off the coast of Newfoundland a sea man came up under the figurehead. I took a gaff to draw him ahoard, hut was afraid he would draw me over. this reason I only gave him a blow on the back. the monstor felt the blow he turned his face to the owner like a man in wrath. He swam around the ship, and when he was leaving haid hold of the rudder with both hands, which obliged the erew to fix its handle to both sides of which omiged the erew to fix its handle to not sides of the ship, lest he should endanger her. Then he repassed by the starboard side, swimming like a man, and when he was at the how he stopped to look at the figurehead, which was that of a beautiful woman. After having long considered it he seized hold of a rope and raised himself up, with the convince intention of herivarial contents. with the seeming intention of laying violent hands on the wooden virgiu. He afterwards swam to the windward about a cable's leugth, and passed again and shook the rudder. I theu struck him upon the hack with a harpoou, whereupon he looked again at me as in a rage, and swam away. This entertainment lasted until noon, the monster having all that time been near the ship, and oft times not more than ten feet away, so that the crew, composed of thirty-two men, had the pleasure and convenience of re-marking the following facts: That his skin was brown and tanned, but without scales; that all the motions from his head to feet were like those of a real man; that his eyes were well proportioned; that his month was small, consid-ering the length of his body, which was supposed to be about eight feet. His tongue was thick, and his teeth large and white. In a word, he was similar to a man, except that his hands were joined with a pellicule, such as that found in the feet of ducks and geese."

Such was the belief of these simple folk, who, in the excitement of the moment, allowed themselves to see a hand for a flipper and the fat greasy face of some old seal for a fierce man or voluptuous uymph. The movements of these hige creatures are extremely human, and the hright, queer faces of the young seals and sea lions look not unlike the dusky faces of the little darkies seen rolling in the waters of the Southern States. Along the Scandinavian coast to-day many an old mariner can be found who will tell you of the mermaids of his day, and in fact the Nor-thern Seas have their hiatus of these tales, and the histo-rics of the times are filled with curious yarns telling of

these wonders of the deep.

In the "Speculum Regale," au Icelandie work of the twelfth century, is the following account of a meruaid that appeared to a select few: "A monster is seen also near Greenland, like a woman so far down as the waist; long hands and soft hair, the neck and head like that of a human being; the hands seemed to he long and not parted; from the waist down the mouster seemed like a fish, with scales tail fine etc." scales, tail, fin, etc.

It will be seen that most of these accounts agree in every particular, and are undoultedly taken from the seal or some similar creature. In Bishop Pontoppidan's History of Norway we find an account of a sea man, given in the usual liberal style of his holiness: "Ahout a mile from the coast of Denmark, near Landscrond, three sailors, observ-ing something like a dead hody floating upon the water, rowed towards it. When they came within seven or eight fathoms it still appeared as at first, for it had not stirred; but at that instant it sunk, and arose almost immediately in the same place. Upon this, out of fear, they lay still and let the boat float, that they might better examine the monster, which, hy the help of the current came nearer to them. He turned his face and stared at them, which gave the men a good opportunity to watch him narrowly. He stood in the same place seven or eight minutes, and was seen on the water above hreast high. At last they grew appreliensive of some danger, and began to retine, upon which the monster blew up his checks and made a kind of lowing noise and disappeared. In regard to his form they declare it to he that of an old man, strong limbed, with broad shoulders; but his arms they could not see. head was smail in proportion to his hody, and had short black hair, which did not reach below his ears. His eyes sat deep in his head, and he had a meagre face, with a hlack beard."

Such was the belief of the leading scientist and church-man of Norway, as there is no doubt but what the worthy Bishop believed what he thought he saw, or had within him, hy nature, a most wondrous vein of exaggeration. In the Southern Seas we hear of mermaids of levely form In the Southern Seas we near of incrinates of lovery form through Megasthenes, who listened to them at Taprobane, and upon hearing the story Aelian drew so heavily upon his imagination that he peopled the sea about Ceylon with fishes having the heads of all known terrestial creatures, and stranger still, in the form of satyrs.

The historian of the proceedings of the Jesuits in India gravely states that seven of these monsters were captured at Ceylon in 1560 and carried to Gon, where they were dis-sected by the surgeon to the Viceroy, and their internal structure found to be in all respects similar to the human. Many of these ideas were probably taken from the dugong, a seal-like creature found on the coast of Ceylon, and having a somewhat human appearance. The mother shows great affection for her young, often holding it to her breast while swimming, so that with a little imagination almost anything could he seeu.

In later times so-called "queer fishes" were exhibited to the public, and M. Rimhault, in his "Notes and Queries," says that this fever reached its height in the reign of Eliza-

both. Shakespeare mentions it in the Winter's Tale (act iv., seene 3), where Autolyens says: "Here's another ballad of a fish that appeared upon the coart on Wednesday, the

of a fish that appeared upon the coart on Wednesday, the fourseore of April, forty thousand fathoms above water. I sung this ballad against the hard hearts of muids. It was thought she was a woman and was turned into a cold fish, for she would not exchange fiesh with one that loved her. The bullad is very pitiful, and as true."

And again, in the Tempest, Trineulo says in doubtful compliment to Caliban: "What have we here? a man or a fish? dead or alive? A tish; he smells like a fish; a very ancient and fish-like smell; a kind of not of the newest. Poor John, a strange fish. Were I iu England now (as once I was), and had but this fish painted, not a holiday fool there but would give a piece of silver. Legged like a fool there but would give a piece of silver. Legged like a man, his fins like arms," etc.

In 1566 a printed notice appeared in England having as a title, "The description of a rare or rather most monstrous fishe, taken on the cast coast of Holland the 17th of November, anno 1566," with a modern cut of the creature,

and beneath the following lines:—
"The works of God, how great and strange they be,
A picture plaine, behold, heare you may see."
