Among the Buhylouinus and Hebrews these same tales were believed, and at the excavations of Khorsabad M. Botta found a figuro of Ordinus, a creature half man and half fish, and at Nimrond M. Layard brought to light an immense statue with a fish's head as a cap and a hody depending over the shoulders. On the coins of Ascalon, in bus relief, is the figure of a goddess, while at her feet lies a creature that would evidently be more at home "down among the mermaids at the bottom of the sen." So among all nations we find these queer, quaint tales, so astounding to us in youth and not unpleasant in their halo of romance in later years. The pet subject of the ancient poets, and the wouder of antique naturalists, they will always live in the imagination and uphold the romance of the ser.

DEER PARKS AND PADDOCKS

THE following description of the manner in which an old pioneer and frontiers man is spending the winter of his life, ealls to mind the fact, that as a people we are undergoing great changes, and in our tastes and modes of life approaching uearer to the races from which we sprung. There is a growing tendency on the part of men who have aurassed or inherited fortunes, to withdraw from the bustle of business and devote themselves to such pursuits and recreations as afford not only pastime, but, in many instances, are calculated to improve and educate the people by whom they are surrounded. Judge Catou is not alone in the possession of a deer park, as there are a number of others, both public and private, scattered over the country, and many gcutlemen of means are by the collection of animals of various kinds, interesting themselves closely in the study of natural history. The sparing of forest trees with a view to the future adornment of his home, is a subject which would searedly have presented itself to the average American of fifty years ago. Now, however, there is for tunately a disposition to spare them, and in some States. to oven increase the supply. Notwithstanding the fact that California is the least well supplied with timber of any of the States, what she has is most gloriously disposed and ar ranged by nature for the adornment of the country. In places you may drive for miles through natural parks of evergreen oaks, many of them assuming the shape of the pollard, which is so highly esteemed in England. The addition of an occasional herd of deer would enable them to rival anything across the water, where centuries of labor have been lavished upon Britain's pride, ber noble parks. ROCKFORD, Ill., May 20th, 1875.

EDITOR FOREST AND STREAM :-

Editor Forest and Stream:—
While on a recent visit to Ottawa, a parly, of which I was fortunately a member, received a cordial invitation to visit ibe well known parks belonging to Judge Caton. I bad heard often of the Judge, he being one of the wealthiest and most inducatial men in the State, bat I did not know natil my visit and acquaintance how different he was in many respects from many other wealthy men.

Judge C. is a noble specimen of a ploneer. He is of unusual size, heling over six feet in height, strong chest and limbs, and is, even in bis old age, a powerful man. He has always delighted in field and forest sports. He says "the does a little shooting yet." He kas an hexbaustible fund of rich experience connected with the history of his part of the State. Judging from the pride he has taken in preserving the native forest trees in his parks, and the pleasure be takes in sbowing appreciative friends around among them, he is in sympathy with Misa Cary's beautiful poem:

"Of all the heautiful pictures
That hang in memory's hall
Is one of a dim old forest
That seemeth best of all."

Is one of a dim old forest.

That seemeth best of all."

Leoutd hardly do justice to any description of Judge Caton's home and the parks without giving a brief description of Ottawa and lie beautiful situation. The natural beauty of Ottawa's curroundings cannot be eurpassed. It is here that Fox River, a stream of no inconsiderable importance, empties into its more pretentious and better known neighbor—Iflinois River. Both streams are bordered by bigh bluffs, which have been chosen as sites for many of the handsome dwelling places of the more wealthy citizens. Ottawa's a city of about 10,000 inbabitants, and is admirably situated for manufacturing purposes. It has lately been attracting considerable attention as a place of resort, as springs have been found there whose waters possess rare medicinal virtue. But your readers will care more to know about Judge Caton's deer parks. About a alls from the business part of the city, and upon one of the most beautiful bluffs, commanding a flue view of the town, the two rivers, and all the surrounding country, is situated Judge Caton's splendid residence, and just west of the house is park No. 1. At or near the entrance is a small lake, the banks of which have been protrected with cobble stones, and there is a little artificial stone island in the middle of the lake. Hore can be seen some rare specimens—Japanose geese, Chiesesticated Canada geese, and mallard and other varieties of wild ducks—and what seemed stranger than all to me, a pair of sand faller causes and brunt; for i had never before seen the latter named fowls domesticated. There are also in this park a large flock of (tame) wild tracys, and twenty or more deer; all but a few of which are the com. mon Virguia deer. There are two antelops and one mule deer; the lat-

ter the Judge values highly, it having been sent to him by a friend from Mexico. After viewing and admiring the variety of beasts and hirds in park No. I we were conducted to the elk park. This park is surrounded by a very high picket fence, and people are warned to "stay out" or to enter at the peril of their lives, as some of the elk are victous, particularly one cross old fellow, who "killed his matt" hast Winter. This herd of elk, consisting of about twenty, have attracted much attention, it belog the largest herd owned by any private Individual in this part of the country. Their owner takes great pride in this herd, and has much himself acquainted with the habits and peculiarlites of this species of deer. We were highly entertained and instructed by an account given us by the Judge of his recent trip to Norway, and some observations he had made regarding the resemblance the reindeer of Norway bears to the elk and carbon of our own country. The has evidently posted nion, self thoroughly in these matters. We were taken from the elk park to see the alderney and Durham cattle, among which we saw some fine animals, and thence to the conservators, whose we found, in cheering contrast to the bleak appearance of the follage outside, towing to the tardy coming of warm weather,) a grant profusion of rich and fragrant howers. Among other things shown as was a bandsome rose in full bloom, which the Judge had brought thinself from Rome. Also a Japanese tree with the fruit uniquag almost ripe. After seeing other things of interest we bade our host farevell, receiving a cordiat invitation to come again, which we hope to do some time. Should you or your realers ever visit Ottawa don't fail to flue out some friend who can take you to Judge Cuton's. You will find him a genial old mus, and he can entertain you hour after hoor by relating his early ploneer stories, many of them from his own personal experience, and his parks and valuable collections will richly repay you for a visit.

POWDER TESTS.

POWDER TESTS.

E published editorially last week an article which was intended to have appeared only as a commu-nication, with tests of various descriptions of powder. Since then, and upon more careful examination of the different brands tested by the gentleman who furnished us with the tables, we have concluded that such tests are of little value as showing the relations between either Ameri-ean and English, or the different makers of the native article, unless precisely similar grades, with corresponding rank, are used.

In this country each manufacturer makes at least five grades of powder, ranking from the highest to the lowest qualities; each for special uses and adapted to those uses. Each of these grades has its corresponding rank with every manufacturer, and in composition of materials, in finish of appearance, and in other particulars, are designed to be identical. A comparison of different powders should be a comparison of powders of the same grade of the respective makers. Any other comparison is simply unfair, and tends to mislead the public.

to mislead the public.

The Duponts make five grades, of which the first three are—1st, "Diamond Grain;" 2d, "Eagle Duck;" 3d, "Rifle." The corresponding grade of Hazard's make are—1st, "Electric;" 2d, "Duck Shooling," or "American Sporting;" 3d, "Kentucky Rifle." While the corresponding grades of Laftin and Rand's make are—1st, "Orange Lightning;" 2d, "Orange Ducking;" 3d, "Orange Rifle." The "Creedmoor" brand of this last company belongs by composition of materials and finish to their second grade. The Curtis and Harvey No. 6 English powder belongs to the first grade and Harvey No. 6 English powder belongs to the first grade

of that mannfacturer.

The tables published show, thon, the comparison between the first and second grades of Laslin & Rand Company, the third grade of Hazard's, and the first grade of Curtis & Harvey's English make, thus making the tables, as showing tests between powders of totally different grades and quality, entirely valueless.

quanty, entirety valueless.

But after all, this sort of test, though curious and suggestive, gives little satisfaction to the practical marksman, who judges of the suitability of his ammunition by the result it produces. One only of the four powders tested has secured a preference with the experts and sharpshooters of Casalmoor range, and that is the Marsal will be considered. ers at Creedmoor range, and that is the Hazard rille pow-der, which apparently shows the lowest velocity of the four. Practically a powder not too quick proves to be much the steadiest in its impulse to the ball, and is found more reliable than powder of higher velocity, which increases the chance of upsetting the ball and is more or less capricious in its action. Major Fulton, who stands at the head of these experts, states that in using the Curtis & Harvey No. 6 (which by the Burton test showed a velocity of 1,507 feet) he was compelled to make his elevation at the 1,000 yards range five points higher than when using the Huzard (whose velocity by the same test was determined at 1,404 feet), so that the slowest velocity proved itself capable of securing the lowest trajectory, a matter of uo small importance, as every long range shooter knows. Ou the other hand, there are uses to which powders of great quickness are specially adapted, and these are supplied by the other brands included in Burton's tests and the corresponding grades made by the other manufacturers, all of which doubtless have their friends and advocates,

DEATH OF HON. K. C. BARKER .- The Detroit Free Press gives the following particulars of the drowning of the Hon. K. C. Barker, once Mayor of Detroit Commodore of the North Western Yacht Club, a leading member of the Trotting Association and member of the Board of Appeals of the National Trotting Association:—"Between 9 and 10 o'clock on Thursday morning, 20th ult., the yacht Mattic set sail for Gibraltar light house, at the mouth of Detroit River. The passengers consisted of Kirkland C. Barker, River. The passengers consisted of Kirkland C. Barker, Frederick Dudgeon, Marely Webb and Peter Miller. When almost opposite Dallas Norvell's dock at Texas Landing, three hundred feet from the Canadian shore, and in a direct line with their homes at Grosse Isle, but little over a mile distant, the Mattie unexpectedly sink. A white capped sea raged, and with great difficulty the holy of Mr. Barker, a corpulant man, was recovered. The rest were all lost.

Mr. Barker was the owner of the celebrated trotting sire Ericsson, and largely engaged in breeding young trotting stock,"

The Rifle.

THE NATIONAL RIFLE ASSOCIATION

THE Spring meeting rommenced most anspiciously an Friday last, the day being perfect and the lawns of Creedmoor looking like velvet under the warm sun. The new Wimbledon targets, circular in form, were used, and the new system of scoring, the bullseye rounting twe instead of four as formerly, center four, inner three and outer two. For the Directors' Match there were thirteen cutries. At 3:30 P. M. a Galling gan gave the signal to commence firing, and the competitors at the 200 yard range took their positions. Major Fulton and Mr. E. H. Santook their positions. Major Fulton and Mr. E. H. Sanford tying, each fired another shot, and Major Fulton make ing a hullseye to his opponent's centre is entitled to wear the badge until the next meeting. The following are the

Following the above came the short range match, open to all members of the National Rifle Association, any rifle, position standing. Twelve prizes were offered, the first the gold medal presented by the *Spirit of the Times*, the next a life membership in the National Rille Association and \$25 in eash; also nine eash prizes, varying in value from \$3 in \$50. Fifty-uine rittemen appeared as contestants, with the scores as given below. Again Major Fulton was saccessful, seoring 33 out of a possible 35, said to be the highest score ever achieved on a circular target:—

On Sucurday under conville t	2	0					

On Saturday, under equally fine conditions of weather, the riflemen competed for the cup left by Major Leech, the captain of the Irish team in the international match. For the first time at Creedmoor the new circular targets were used at the longer ranges, but notwithstanding the change the scores are capital. Several mishaps occurred, throwing out some of the best men. Mr. Canfield was compelled to change his gun, his first becoming disabled through the bursting of a cartridge case, and Mr. Sanford's was so ruined as to compel his retirement. Col. Bodine was the winner, by seven points, pushed very closely by Col. Gildersleeve. It will be observed that the members of the team head the list. Mr. Hepburn, whose name appears fifth on the list, however, caunot join them. Although the match is to be shot at the old targets, the Irishmen are using the new ones exclusively in their practice, and it will be interesting to compute their scores with those made at Creedmoor in the competition for this cup. The conditions were fifteen rounds at 800, 900, and 1,000 yards, any rifle or position, no artificial rest; prize, Leech cup, to be held during the year, and a gold badge of the value of \$50. The following are the scores:—

—On Monlay the meeting closed with the Military Long and Short Range Matches. The day being a holiday, large numbers of persons, both military and civilians, were attracted to Creedmoor. The usual pressure upon our columns this week prevents our giving more than a summary of the shooting. The scores in the Short Range Match

were as ronoms.

The set of a set for the set of the set		

In shooting off the ties, Lieut. Hofele, of the Eighth Regiment, took first prize. Mr. Stearns made a bullseye to Capt. Smith's inner. Six tied on 23 aml shol off in the order named in the scores. The prizes were valuable, ranging from a Creedinoor building lot to \$3 in cash. After luncheon, the competitors for the long range match, twenty-two in number, took their positions at the 500 yards range. We give the scores of those winning prizes only:

In the regular practice of the American leam on Wednesday last all of the members with the exception of Mr. Balland participated. The wind was rather unfavorable, and considering this fact, the scores were good. Major Fulton scored 158, and the others as follows:—T. S. Dakin, 146; II. A. Gildersleeve, 140; L. C. Bruce, 130; A. V. Canfield, Jr., 139; R. C. Coleman, 135; G. W. Yale, 128. Col. Bodine was absent during the shooting at the 800 yards range, but completed his practice at this distance after the rest of the team had fluished for the day, unking fourteen bullseyes and one outer, and the capital score of 162.

—Company D., Twelfth Regiment under the command

-Company D., Twelfth Regiment under the command of Captain II. B. Smith, are practicing for their California match with much energy, and a marked improvement On Thursday last the team shot at Creedmoor with the following scores, the distances being 200 and 500 yards each, seven shots at each distance. The weather was favorable, John Beattic, 45; Achilles Word, 44; E. Il. Madison, 43; W. Y. Carson, 42; J. Henry, 42; H. B. Smith, 40; W. S. Smith, 39; W. C. Reddy, 39; T. J. Dolan, 37; M. Farrell, 36; A. Beattie, 34; G. A. Banta, 34; L. Moran, 30.

-Col. G. W. Wingate, General Inspector of Rille Practice, has issued his first circular to the National Guard. The directions are general, and intended for the several division, brigade and regimental inspectors of rifle practice. On Friday, June 4th, at 3:30 P. M. the above inspectors are directed to meet at Creedmoor with Col. Wingate to compete for the "Marksmen's" badge.

THE INTERNATIONAL MATCH.-Col,' Gildersleeve has transmitted to the Board of Aldermen of this city a sugges-tion that the municipality be represented at Dublin during the match. On the motion of Alderman Cole a committee of three was appointed to accompany the team. Aldermen Cole, Purroy and Billings are the fortunate individuals. The team have also extended an invitation to Mr. A. Alford. of Messrs Remington & Son's, to accompany them to Ireland. This is but a just recognition of the emineut services bestowed by Mr. Alford in procuring for the team their passages without cost, in his exertions in making Creedmoor a success, and in the matter of rifle shooting gener-

-It is probable that the Irish team will be composed of the following gentlemen:—Dr. Hamilton, Mr. J. Righy, Mr. J. Wilson, Mr. 11. Fulton, Mr. J. K. Milner, Mr. John McKenna, Mr. E. Johnson, Mr. J. G. Pollock, with Capt. Walker and Mr. Waterhouse as reserves

-The match between the Irish-American and Scottish-American rifle clubs which was to have come off on Monday, was postponed by mutual consent, in consequence of the regular meeting at Creedmoor making it difficult to procure the requisite unmber of targets.

THE SHORT RANGE CHAMPIONSHIP .- This match being for the elumpionship and the Forest and Stream gold melal, was shot on Monday at J. S. Conlin's gallery, No. 908 Broadway. A number of the crack shots of the city had assembled to do honor to the occasion, and much interest was manifested. Mr. G. W. Hamilton led off with a score of 14 inches, which although good was immediately had a large by Mr. Tongescon, with 12 16 inches. beaten by Mr. John Tragesson with 12 1-6 inches. Mr. Wm. Hayes followed with 12 3-8 inches, and for some lime it appeared as though Mr. Tragesson would be the winner, but at the last moment, almost, Mr. G. W. Yale, one of the members of the American International Team, and by a score of only 12 inches garried of the price S. etc. score of only 12 inches, earried off the prize. So close v Tragesson that a committee comprising Messrs Mc-Donahi and Farwell was appointed to measure the strings, and they decided in favor of Mr. Yale. Mr. McDonald presented the prize in a neat speech, to which Mr. Yale replied in fitting terms. The badge will be shot for at the same place again ou Monday week, June 14th, and must be won three line to become the proposite of the badge. be won three lime to become the property of the holder. The following are the names of the contestants and their

scores:—
John Tragesson, 12 I-16 inch. Wm. Hayes, 12 3-8. G. W. Hamilton, 14; Robert Fuben, 15\; E. H. Madison, 21 7-16; W. H. Howard, 21 9-16; D. S. Beckwith, 26 11-16; F. H. Holton, 27 1-8; J. Stewart, 46 2-3; Wm. Klein, 13 2-3; W. McDonald, 15\; A. G. Hewling, 15 5-16; P. Klein, 15\; C. H. Cheever, 15 6-8; T. C. Moone, 19 6-8; D. Schlisinger, 19 6-8; G. W. Yale, 12; W. B. Farewell, 15 9-16; J. E. Whitty, 23\; A. Marsh, 24 9-16. T. H. Holton, 27\; —The "National Guaril" of Virginia City, Nevada, the oldest organization of the kind on the Pacific coast, has forwarded to Col. Church of the Army and Navy Journal, or proposes to ferward, a gold medal of the value of four or five humbred dollars, to be awarded at the close of the target practice of 1875, to that company of the National

target practice of 1875, to that company of the National Guard of the State of New York making the best score at Creedmoor. "The conditions are that the companies shoot with the minimum number of men required by the law of New York State to constitute a coupany, who shall be actual members on the muster roll at the time of the last annual return. The distance shall be 200 and 500 yards, five shots each distance, under the Creedmoor rules. Weapons, any military gun, open sights, trigger pull six

Our contemporary in commenting upon this very gener-ons offer, says that "its terms are such as may well excite the emulation and mimiration of the best among our crack regiments. A single company of militia 3,000 miles from the fancied centre of civilization in New York city has set the whole militin of the United States an example it may be pround to imitate. For the love of rifle practice the men have willingly taxed themselves to present to their brethern in the east a trophy, asking only in return an official copy of the score that wins the prize."

-Waterbury, Connecticut, is to have a rifle club.

On Saturday, the 5th instant, the gentlemen who are to compete as the American International Team with the riflecompete as the American International Team with the riflemen of Ireland take their departure on the steamer City of Chester for the scene of the contest. The eyes of all America will be upon them, and the result of their visit, be it victory or defeat, will be flashed from one end of the carth to the other. At the antipodes and the furtherest corners of the globe where the English language is spoken, the greatest interest is manifested in this event. We wish our countrymen a pleasant voyage and success,

Game Bag and Gnn.

JUNE IS A CLOSE MONTH FOR GAME.

-On the Barnstable Marshes, Mass., birds in considerable numbers came just at the usual time of their Spring visits, May 24th. They were principally black and red breast plover, and robin snipe.

The Paine-Bogardus Maten.—This event, which has

heen looked forward to with unusual interest by all pigeon shooters, was decided at Prospect Park on Saturday last. The match was made for \$1,000 a side, the Hurlingham rules to govern, 12 gnage guns. The traps five in number were placed five yards apart, twenty yards from the score, the use of both harrels allowed. Bogarilus was the favorite before the match at 10 to 7, and the issue was scarcely ever in doubt, Bogardus ont shooting his opponent whenever he desired to, notwithstanding that by some ill luck the hard birds came to him. After the seventieth bird he killed twenty-nine straight, missing the one hundredth, but winning by three birds. The "Captain" can justly chim the twenty-nine straight, missing the one innureum, one wraning by three birds. The "Captain" can justly chim the title of champion field and trap shot of America. Paine shot with a Grant muzzle loader, which by the way was found to be 11 guage, and for which he was compelled to stand back one yard. Bogardus used a new Scott 12, breech londer, especially furnished him by Messrs Win. Read & Sons, Boston. The following is a summary:—

Prospect Park Fair Grounds, L. I., May 29, 1875.—Match for \$1,000 between Captain A. II. Bogardas, of Illinois, and Ira A. Phine, of New York; to shoot at 100 single pigeons from five traps, thirty yards rise, eighty yards houndary, with 14 omees of shot; Hurlingham Gun Club rules; Paine to find the birds and to allow Bogardus \$50 for expenses.

The second, fifteenth, sixteenth, twenty-second and thirty-fourth birds, which are scored as misses, were hit and fell dend out of bounds.

The star denotes that the second barrel was used-Time, three hours.

The shooting was conducted to accordance with State Itales, from 11

and T iraps. Only a part of the pigeons were used, and accide match will take place such, when I presume a better score will to made.

Chusos.

MONTGOMERY, Ala., May, 1875.

EDITOR FOREST AND STREAM:—
Inclosed I send you result of our quarterly match. The Montgomery shooting (Inh gave a pienic and barheeue at White Hall, on the Western Hailrond, twenty-five miles from the city, on May 13th. The match was shot off at seven birds (piecons,) twenty-parts rise and eighty yards bonodary. The distance was increased five yards each on first and second ties. The following is the score:

THE DITTMAR POWDER.

TRENTON, N. J., May 18th, 1875.

THE DITTMAR POWDER.

TRENTON, N. J., May 18th, 1875.

EDITOR FOREST AND STREAM:—
Having further experimented with the Dittmar powder, I am enabled to give you the result of my investigations, which I have prosecuted with cunsiderable enre, not only for the purpose of reporting the same to you, as per your request when you kindly sent me the powder which I have used, but for the additional object of sall-fying myself of its merits or demerits in commarison with ordinary charcoal gunpowder.

There is on question whatever in my mind as to its superiority over common powder as regards smoke and recoil, the Dittmar producing much less recoil and very little smoke. As regards fooling the harrels, I could see every tittle alliference after a single discharge, but could see a decided difference after a baif dozen discharges in favor of the Dittmar. I find that to get the same ponentiallow I tavo to use three parts, by weight, of the black to one part of the wood. In bulk about the same, or rather more of the wood. In target the wood powder throws the shot considerable lincker, about twenty-five per cent. That is, I think, accounted for from the same cause that produces less recoil, viz., the powder is not signified all at once so nearly, as is common powder, which saves the pellets from being flattened, the effect of which is a very with flight of the same after they leave the gan. I also notice a decided difference in the report, the Dittmar making much less noise.

Of course I ilo not claim that I have been able to analyze this new powder as thoroughly with the Hollted number of shots—some ten or a dizen—which I have made as one could with a large quantity, which will name, viz.: Would it not be likely to be affected by a damp or moist atmosphere more than common powder? Also, can It be relied upon as being always of the same strongth? What says Mr. Ditt, mar on this polut?

I hope to see the results of careful experiments made by ottera, and if

method of maintacture insure evenuess of strength? What says Mr. Ditt. mar on this point?

I hope to see the results of careful experiments made by othera, and if the cost of this powrier is no greater than that now in use, and future developments show it to have no seriously adjectious ble features. I shall be gratified to see it come into universal are, for it is a very clean article to handle, and its smokeless (aloos!) conversion to gas, and slight recoil, are two very great features to its favor.

[Our correspondent, "Tenl," also writes that he has test.

ed the Dittmar powder and is pleased with the result.-Eo.]

BALTIMORE, May, 1875.

EDITOR FOREST AND STREAM:—
YOUR NORMAL COTTESPONDENT gives us some visituable loformation in reference to the Ditim ir powder, but I think omits a very important point. Did be use the three drachms of wood powder by a Dixon mea-

soro, or did he use it by weight? Now, thave been experimenting too, and in the past week have shot some two hundred loads of it with general satisfaction; but I am puzzled about the proportions between the Dittmar and black powders. I find that 2½ drachus, measured by a Divon charger, weighs sevenly-seven grains, and the same measure of Dittmar weighs twenty-one grains. Another weight gives me only a half drachm in weight to three drachms in measure of the wood powder. According to "Ull," three drachms of black, weighting eighty-four grains, and three drachms of Ditmar (this hy weight also) wonth give me a tearful load; but I find that the same loads by measure are in favor of the black powder.

Can any one tell me the explosive force of a drachm of black powder and a drachm of the Ditmar, each being by weight? This is the only way I see to find the reat proportion between the two, for no measure can noesably be reliable as we now three them. The Dittmar mowder is so light that measuring is very uncertain, and until we have a better system of obtaining the proper quantity I think we shall have very varying results. If acceptable, at some future time 1 may give you details of my experiments, but thus far have hesitated became of the greater knowledge and abilly of those who are leading in the experiments. Baltimore.

CHOKE BORING.

EDYTOR FOREST AND STIBAM:—
In your issue of May 6th is an article on choke horing. Allow we to make a few trunks on that subject. I think the scheme has its good as well as its bad points. If a gun to choke hored a very little, say shout the thickness of a sheet of writing paper, it improves the shooting; but it it is choked from one half to a full size, as it is sometimes done, it is infortious. They are left similared, about one eighth to a half inch at the muzzle, and then bored straight through the burrel. As the shot strike the shoulder it crowds them together and mashes them all out of shings. They shot was to the barrel are the most in juried. For dock shooting t think it is a decided advantage to have them choked a little, where long and close shooting is required, and large charges of powder are used; but for snap shooting, on such as quall, subje, and all small game, the old styte is the hest. It is an easy matter to hore a gain on the now plan so that it will put from forty to fifty No. 4 pellets in a toot square at forty yards, but at elgiby to one hundred yards they will spread more than the straight bore. Unless a gain is made expressly for choire boring, I do not think in advisable to have it done; but if the barrels are thick at the muzzle, and straight taper, it will not hyper them. "Cheek Cord" is right. Nearly all the barrels are too light in the middle, and are myt to have thin places to them, onless of very time quality. A friend of nine has a 12-gauge breech loading gon, weight nine only a hall pounds, which I choke hored for him. He ness five drachms powder and one and an eighth shot the hasses shell for heavy shouting with splendid success.

A geutleman mentioned in your paper some time ago that be shoots three drachms of powder in a 10-gauge Remington gain. I should like to see him shoot mallards in the Spring of the year, when they are heavily feathered, flying over the tall ehn trees. The way they do here, it should with light loads, is to fly two in three hundred yards and drop in th

SUMMER WOODCOCK SHOOTING.

PORTLAND, Maine, May 18th, 1875. EDITOR FOREST AND STREAM:-

Editor Forest and Stiean:

Portland, Majne, May 18th, 1875.

Bottor Forest and Stiean:

I find that my little squib on Summer woodcock shooting has stirred up the natives a little, and they have expressed themselves in various ways in regard to it, many of them taking my view of the same. Some, however, take the opposite side, but onderneath it all I see that they have some other "goose to cook." S. K., Jr., of Cohassett, don't want the close time on October 1st, because then he has got to gn dack shooting, and cannot do both. So of course we minet not abolish. Summer cook shooting; it would interfere with "we dack shooters." The article of your correspondent, John DeBanes, of Dausville, N. Y., takes, I think, a sportsmanlike view of things, and t like it. And then comes in trend "Mae," making me eat my own bread. Wetl, I did cover more ground than I meant: in saying the close time for all game birds should be October 1st, I was thinking of my favorites, grouse and wooleock. No, "Mac," I don't want to give up the sport oo "old Scarborough," but I would tike to stop the Summer cock shooting; yet I presame I shall shoot them according to law, Summer or Full. But I cannot allow that we do not have some October days, "when the Autumn tinged the greenwoot, turning all lis leaves to gold," that are most heautiful. Those are the days for cock shooting, when, with dog and gun, I love to spend my time in the woods. That is the time of year when the ruffed grouse can "git up and git," and it takes a keen eye and ready hand to bring them to bag: I can seldom do it, but when I do there is "a hesp" of satisfaction in it-But ecrously, I want a law for the general good, and want It enforced. We have a very good law now, and it has done good already, and will, I bope, do more. We are having a good Spring for hreeding, and I hope the birds will be plenty next Fall. If I don't rust out hefore that thine I shall be there.

MOOSE IN MAINE.

EDITOR FOREST AND STREAM:- GREENVILLE, Maine, May 27(ti, 1875.

GREENVILLE, Maine, May 27th, 1875.

A Portland contributor to your paper writes as though moose were not plenty in any part of Maine; but in the worthern part of this State they are abundant, and that gentleman is not acquainted in this region, or he would not have written as he dd.

In the Winter of 1873-11 found eight moose yards in two townships, with from two to turn moose in each yard. In regard to the moose inverses this Winter, it is no protection at all to the moose, and the State get no benefit from the moose killed now, as they are all killed by the Canada Indians and taken to Canada for their bides, when before they were killed to their meat, which was consumed in the camps in this region. The blea of passing a coosel law for the protection of moose and leaving our State border fully explosed! If the State thinksenough of the moose to station men on our border to protect them, why well and good; and if they do not, then let them he slayed as they are by Canada In dians, and the State derive no benefit at all. Would the State protect our border, which it could do at a small expense, the moose could be protected and become plenty, but us it is now they are becoming less, and the geople of the State are not allowed to kill them. Caribon are not very plenty here, large numbers of them being shot on the lee on the lakes and ponds as they come on to feed on the moss on dry trees ou the shore. They are very rarely killed in summer on the mountailos.

[The remedy for the evil complained of is in the proposed International Law for the protection of Game. - Ed.]

—At the regular meeting of the Georgia Game Associatiou held at Savannah, Ga., May 13th, the following officers were elected to serve for the ensuing year:—President, Jas. D. Weed; Vice President, Robert Wayne; Second Vice President, Robert B. Haburshau; Recording Secretary, W. M. Nichols; Corresponding Secretary, C. Taliaferro; Treasurer, W.H. Connerat; Directors, John G. Buller, S. J. M. Baker, W. F. Chaplin, Jr., F. W. Dasher, Jas. Hirschbuch. A private pigeon shooting match between several of the unsuccessful contestants for the silver medal which was shot for the previous week, was to come off sometime last week, but we have not been advised of the result.

Rational Pastimes.

There are no longer thirteen confesting clubs in the professional areas, as the last week in May saw the Centennials of Philadelphia dishaml and retire from the scene. The Athletic club has been strengthened by the acquisition to their number of the two best players of the Centennials, viz.: Craver and Beelatel, who give to the Athletics just what they wanted—not only a change pitcher and catcher, but two strong men by occupy the positions lately illed by two such men as Fisher and Eggler, the former being subject to breast trouble, and the latter ill with plearisy. The week's play, ending May 31st, was marked by two occurrences discredibible in the one case to the Philadelphia base hall players, and in the second to the New Ilaven club. If there is any one thing of vital importance in the permanency of professional playing, it is that of abiding by the decisions of the nupire in a match. Once let the precedent he adopted that clubs can dispute the umpire's decisions at will, and an end to professional play will soon he reached.

—The game in Philadelphia on the 22th of May

The game in Philadelphia on the 27th of May was one of the best ever witnessed in the city up to the close of the minth inning, but then it was that trouble begue. The Bostons had, in their tenth inning, made their customary rally to the tune of three rans, and it sure victory was auticipated, when the Althelies went to their tenth inning and Chapp and Anson had secured bases, and Craver went to the but and struck a foul; Chapp and to third, Auson to second. Spalding fielded the bull to Barnes at second, and Auson threw up his shoulder sufficiently high to interfere with Barnes (a sure catch), thus causing him to miss the ball. Several of the Bostons appealed by the unpire, who finally declared Anson out. But that gentleman refused to go out, and here the confusion commenced. After some discussion the unpire walked off the ground, and the clubs, finding it impossible to clear the field for play, consulted with the umpire, and a draw game was declared, leaving the score as follows:—

BOSTONS.				AT!	ILETTO.			
14.	ls.	2.0.			11.	16.	PO.	Α.

-The professional games of base ball played outside the etropolitum district, May 31st, resulted as follows. At metropolitum di Philadelphia :—

On May 27th the Chicagos defeated the St. Louis Reals

—The games between the St. Louis Browns and the Westerns, played May 25th and 27th, resulted in victories for the St. Louis uine by 3 to 2 and 12 to 4.

—A summary of the champiouship contests to the close of May shows the leading clubs occupying the following positions:-

Games Played. Games Won. Games Lost Clubs The Centennial games are not recorded.

Merion Cricket Club at Ardmore.—On Saturday last the new groumls of the Merion Cricket club were opened by a club match between the first Eleven and Twenty-two, picked from the members of the club. The time weather on Saturday, and the interest felt in the home club, brought out a large concourse of ladies and gentlemen, who testified their approbation, both of the grounds and of the play. By the annexed score it will be seen that the first Eleven was victorious; their score against a Twenty-two of 130 was quite creditable. On the part of the Twenty-two the steady play in the field during the earlier part of the innings was worthy of comment. Mr. Williamson bowled with great regularity and success; most of the first Eleven being unable to hit his bowling with any effect

—The Manhallan cricket club played their opening game May 29, on the Prospect Park parade ground, in Brooklyn. Sides were chosen by Messrs. A. Gilbert and McDongall, and after the first and only inning had been played the score stood: Gilbert's side, 74; McDougall's side, 38.

—The Prospect Park ericket club, of Brooklyn, opened play May 29th in a one-inning game between sides chosen by Messrs. Ronaldson and Dodge. The first mentioned side was victorious by a score of 26 to 20.

—In September there is to be a grand international cricket tourney in Philadelphia. The English officers of the Garrison team at Halifax are most auxious to visit Philadelphia, and are already training for the contest.

The Staten Island and St. George clubs played a good me Muy 31st at Staten Island, in which the St. George in by a score of 77 to 66. Mr. Giles, of the St. George ven, carried his bat out for 17, the only double figures of

—Young America stock is above par again. On May 29th they whipped the Philadelphians in one inning by 174 to 58 and 59—117. Welsh's 15 was the highest score on the Philadelphia side, Large's 48 being the best on the part of the Young America; Bussier also got 38, and H. Newhall 28.

The New York Athletic Club beld their Spring games on their grounds at Mott Haven on Monday list. A large assembling of spectators, numbering some 3,000, witnessed the sports. The first event was a one mile handicap run, which was easily won by M. D. Stern. The second contest was a 100 yards race, handicap, in three heats, which was won by A. H. Cartis in 103 seconds. The running high jump fell to M. E. Burris, he having attained a height of 4 feet 64 inches. The most interesting feature of the exhibition was a seven mile walk for the club championship between D. M. Stern and James Fraser. Stern made the time in th. 4m. 11s., Fraser completing bis task about six seconds later. In the running broad jump, handicap, M. E. Burris eleared a space measuring 17 feet 7 laches. The seventh feat, a half mile run for the club championship, was performed by M. E. Burris, who went over the course alone in 2m. 24s. Ont of four competitors in a one mile walk, handicap, W. E. McCredy proved the victor, his netual time being 8m. 29s. The concluding contest, a 440 yards race, handicap, was won by W. B. Cartis in 38 seconds.

The New Jersey Athletic Association held their meeting also on Monday, at Ridgewood. The races were all close, being confined to members of the club. The following were the winners:—One hundred yards, won by Harris in 101s. One mile walk, private match, won by Butler in

Sm. 9\frac{1}{3}s. The mile club wulk, won by Lynch in 8m. Owing to an accident to Mr. Cameron, he declined to run the quarter mile on his handicap, and Mr. T. W White and Mr. Kneeland having a desire to run it only on account of Mr. Cameron's entry the race was withdrawn, as was also the 120 yard hurdle races.

Mr. Kneelaud having a desire to run it only on account of Mr. Cameron's entry the race was withdrawn, as was also the 120 yard hurdle races.

Grand National Curling Club.—The minth annical convention of the curlers of America will be held at the Getty House, Yonkers, on Wednesday next, the 9th inst. The arrangements have all been completed, and include a meeting of the Executive Committee, the general meeting of all clubs in attendance, the annual match for the Bell Champion Quoit, and a hanquet in the evening. The Curling convention is one of the great events in the eurler's calendar. It is the means of bringing logether devotees of the game in all purts of the American Union and the Dominion of Canada, and it has hitherto been an occasion of social enjoyment, only second to the Winter meetings on the ice. The chief business of the convention consists of a revision of the huws of the game. In this respect the Grand National is the legislative assembly of the whole fraternity. The rules which it promulgates are accepted as final and decisive on every point by all affiliated clubs. Arrangements will also be made for the medal matches of next Winter. These medals are given by the Grand National to be played for by its members according to the manner in which they are matched at the convention. This series of games is another most prominent feature of each occasion. They are looked upon as test matches, and invariably bring out the best strength of the clubs eugaged. The Grand National, as a central organization, also takes cognizance of all the great bonspeils of each year. The arrangements for an International match between the United States and Cunala have always been remitted to a committee subject to the same body. These and similar matters occupy the attention of the convention, and make its deliberations of paramount importance to the interest of curling.

The afternoon of the day of meeting is devoted to the quoiting match for the Bell Champion Quoit. This trophy is at present in the hands of Mr. A. Dalrym

-Paul Boyton, dressed in his life-saving suit, last week crossed the English Channel from Cape Grisnez in twenty-three hours and thirty-eight minutes.

Hew Unblications.

MAGAZINES.

The Galaxy contains contributions from its well known The Galaxy contains contributious from its well known and regular writers, as well as some whose names are unfamillar. A sketch of the "Marats of Florida" is very interesting. Prince Achilles Mirat, eldest son of the King of Naples and Caroline, sleter of Napoleon I., settind in that country at the deposition of his nocle, and married Miss Gray, whose family had removed from Virginia. This lady, who was already a niece of George Washington, by this inarriage held the same relationship to the Great Napoleon—a brilliancy of connection that could hardly be surpassed. The articles in the June Issue of the Galaxy are all interesting and instructive, but we must admit a desire to see a fittle more froth, if it is only to give zest to the solid.

The Aquatic Monthly for May is at hand, and, as the

see a filtle more froth, if It is only to give zest to the solid.

The Aquatic Monthly for May is at hand, and, as the yachting season is opening, lovers of the "hriny" will find much in its pages to instruct and amise them, not only as regards salling craft, but for those who stick to the ashen breeze. Prof. Wim Wood, well known in rowing circles, con "the case a hierarchy in the coxessual question is fillly discussed, while "Big Topmist," "Centreboard," "Coriuthian," and others argue pro and con, for and against keels and Engitsh models. D. If E. la very sound on the "rig" question. The Aquatic is a necessity for the yachteman, who can find many useful and thindy hints it its pages.

Bigh in scientific miscoullancy and much that is intersection.

Rich in scientific miscellany and much that is interesting Rich in scientific miscellany and much that is interesting in natural history is the American Naturalist for the current month. Dr. Laphan, Prof. Webster, and Mr. Packard base all contributed valuable papers, the latter one entitled "Life Histories of the Mollasca," which is particularly worthy of note. In it we learn of the development of the oysier, and that he is a lamelibranchiate mollusk whose embryology is unknown. We look in vain, bowever, for a solution of the vexed question as to whether clause have the power of motion, and are rather surprised to learn that most of our information regarding the mollasks is derived from foreign sources. The cockle shell (cardium pygmetum) is the only one of whom we have a complete life history, and for that we are indebted to Loven.

The Maritime Monthly drifts upon us from St. John N.

are indebted to Loven.

The Maritime Monthly drifts upon us from St. John, N.
B., like a ray of sanishine through a fog bank. Itaidy and strong, as be comes one horn of a Nortbern race, the Maratime with its substantia table of contents is always welcome. "Livingstone" and bis travels and the "Origin of the Acadiaus"—could one wish for greater variety? The "Valley of the Platte" is also continued, and as for sketches, enthracing the romantic and poetical, this rangazine is in no degree behind its older and more widely circulated brethren.

The Agriculturist is so invariably good that a word in its The Agreements is so invariably good that a word in its praise would be painting the lily. It is, as usual, rich in litustrations and valuable information. We can particularly recommend the plan of furnishing correct pictures of prominent stallions. The breeder at a distance can thus judge for himself whether the borse before blin has the proper points to "alck" with his mare without the labor of a journey and personal inspection.

The Live Stock Journal is another periodical which fills the great craving of our people for practical information. In addition to its regular agricultural unit turf department. It devotes certain of its space to fish enture, under the abte direction of Mr. Fred Mather, whose lucid and valuable contributions have so often enriched our own columns. The Journal is published in this city, and the American News Company supply the trade.

The little folks must have rejoiced when they opened their St. Nicholas for June. As full of good things as a Christmas stocking, this excellent magazine is closing its bold upon the hearts of the ilsing generalion. A great mission it has in forming the tastes of its young readers, and also a responsibility which is nobly met. The current number is almost encroaching on our preserves, as one writer describes the entelling of his first front, and another gives explicit directions as to senside camping. The natural history is good, and so is the poetry.

poetry.

In the current number of Scribner's Monthly Dr. Holland's capital story of "Sevenoaks" is continued, as is also the version of Jules Verne's "Mysterious Island." Albert Rhodes contributes au Ilinstrated paper descriptive of Parts stinlents and the "Latin quarter," and Mr. Waring's excellent description of the Dutch farming and dramage system is continued. There are an unusual number of illustrations in this number, adding greatly to its attractiveness, notably those of Clarence Cook's "Chapters on House Furnishing," which at Interesting and Instructive. Interesting and instructive

-Whateren Eric's financial troubles, the travel-ing public will bear testimony to the fact that so for as the safety, convenience, and comfort of passen-gers are concerned, the road was never hetter con-ducted than at the present time.—New York Commer-cial Advertiser, May 27th, 1875.

The Chicago, Milwaukee & St. Paul Railway

Traversea a finer country, affords views of grander scenery, and passes through more business centers and pleasure records than any other northwestern line. Its brests, prairies, lakes and streams, abounding with game, present unequaled attractions to the votaries of Nharod and Wahon. It is the only railway route along the valley of the Upper Missleshppl. It is also the shortest as well as best route between the great metropolities centers of the Northwest-Chicago, Milwaukee, St. Paul and Minneapolis, Track and equipment anequaled, and its trains of palace coaches and sleeping care run through without change.

TRIAL OF SCOTTA GREENER'S NEW SYSTEM

OP BORING, HY THE EDITOR OF

"THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Mysers Scott's gans showed a marked supertority over Mr. Greener's, both in average and in the highest score made. Inshoth the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that parilcular shot by eight sheets."

NEW YORK, THURSDAY, JUNE 10, 1875.

i Volume 4, Number 18, 117 Chalbam 81, (Cityllali 5gr.)

Hrom Omaha to Alevada=== Mountain Ranges, &c.

WHEN on my way to Nevada I stopped at Omaha and VV its vicinity for two weeks, and took a general survey of the country for ten or fifteen miles around. Omaha is a growing and enterprising city, and numbers fifteen thousand inhabitants. It lies directly on the west bank of the Missouri River. A fine railroad bridge spans the river bere to Council Bluffs, on the opposite shore. The latter city is two or three miles distant from the bank of the river, on a beautiful plain, and does not compare in size with Omalia. The overflow of the river prevents its being huilt upon its banks; for the Missouri at this place is a treacherous stream, occupying a wide space for its bed, and is liable often to change its current from side to side. The country around Omaha is hilly; the timber is mostly cottonwood, which grows very rapidly, and serves for fuol and fencing. The Platte River, which rises in the mountains of Wyoming and empties in the Missouri fifteen or twenty miles below Omaha, is also an everchanging stream. Although it contains sufficient water for navigable purposes, it cannot be confined within its banks. In Nebraska for a hundred and fifty miles west of the river the ceil con-

posses, it cannot be commed within its banks. It is for a huralred and fifty miles west of the river the soil cannot be excelled, but beyond that it thins out into hroken the Wissming becomes a harsand hills, and before it reaches Wyoming hecomes a bar-ren waste. The eastern part of Nebraska is generally well watered, yet the oft-repeated storms of wind which sweep over its plains like a devouring sirocco, together with the parching droughts, are a drawback for settlements, yet the population far exceeded my calculations. There are two tribes of Indiaus in this part of the State, who are settled about ninety miles up the river from Omaha, at a place called Omaha Mission. They are supor intended, according to the arrangement of the United States Government, by Quakers. A gentleman who lives there and supplies the Indians with goods told me that one of

the tribes a year ago last Fall went with their wives and children on a buffalo hint into the Territory of Wyoming, and, while in the midst of their sport, were attacked by the Sioux—a powerful and warlike tribe, who claim to be the lords of the country. The Nebraskas, being weak and of a cowardly nature, fled before them, losing one hundred of their number besides their game, and borgers. They reof their number besides their game and horses. They re turned in the most wretched and forlorn condition imagin able. Much has been written and said of the oppression of the Indians by the whites, but facts show that the Indian is the greatest enemy of the Indian, and if these Western tribes fade away and become extinct, like the Pequoits and Narragansetts, on the Atlantic shores, it will not be the fault of the white man, but the treachery and cruelty of the Indian to his hrother Indian.

The Uniou Pacific Railroad runs up the valley of the Platte River a hundred miles or more, and then crosses its north hrauch. The great American desert commences in the western part of Nebraska, and entering Wyomlag, stretches the length of this territory to the base of the Rocky Mountains. This is a desolate region; not a tree is seen, and no signs of water appear for a long distance in this stretch of waste, yet the monotony is often broken by llocks of antelopes quietly feeding on the scanty herbage Prairie wolves and prairie dogs abound in this region; huf-falo are seldom seen from the ears, as the noise has a tendency to frighten them away, and from the present indica-tions a few years more will render them extinct here.

In Wyoming the grade hegins to ascend, but no one would think that he was ascending the Rocky Mountains, by an outlook from the cars. The doubling of the engines, however, indicates this fact. Up, up, up the laboring machinery forces their ponderons proportions in spite of the heavy grade to an altitude of 9,500 feet, and this is by no means the highest point in the rountains. uneans the highest point in the mountains. On reaching their summit the problem is solved how a railroad could be built over a mountain so high, and why they are called

The ideas of an Eastern man of a mountain is rocky. The ideas of an Eastern man of a mountain is steep declivities, overhanging rocks, and yawning cañons; but not so. The Rocky Mountains is a smooth plain of so vast dimensions that no one would regard it a mountain; its slopes are gentle and easy of ascent. As to the rocks, they are like pyramids rising from a smooth plain to the height of one and two thousand feet from their base, as heard, they had been placed by heard they had been placed by h height of one and two thousand feet from their base, as though they had been placed by human hands, tho surface of the earth being left unbroken and andisturbed. These rocks give unnistakable evidence of volcanic action; they are generally of a reddish furregineous couglomerate quartz. These rocks are perfectly denuded, so much so that they glisten in the rays of the sun. They are seen in every imaginable form, not in regular ranges, but seem to be scattered promiscuously over the surface of the mountain. Here fine moss-neates are found also chalcedons. Here fine moss-agates are found, also chalcedony.

Sherman Station is the highest point in the mountain

where the railroad crosses, and is five hundred and fifty miles from Omaha. Ogdeu Station is the terminus of the Union Pacific Railroad, and is ten hundred and thirty miles from Omaha. The Pacific road runs from Ogden to San Francisco—a distance of eight hundred and seventy-seven miles. It was at Sherman Station that I first felt the effect of the rarified atmosphere upon my lungs, causing breathing to be laborious. Ogden is on the western slope of the mountains, in the Territory of Utah. The coal mines of Utah are on this slope of the mountain, lying in sight of the railroad. A thousand tons per day are said to be extracted from these mines. This labor is mostly performed by Chinamen, who have the reputation of being faithful laborers. Indeed, Chinamen are the principal laborers on the Pacific Railroad. They all appear to he young men; many of them have families, and live in mud huts along the line of the road. This is the best bituminous coal I ever saw, very hard and compact, quite free from sulphur, and is nearly as good as the anthracite coal of Peunsylvauia. The western slope of the Rocky Mountains differ very materially in appearance from the eastern. The rocks appear to be of the same furregineous quartz, but the face of the mountain puts on a more wild and romantic appearance. The ranges are longer and higher, with wide and deep gorges in their sides. The general surface of the earth is more broken, containing deep and wild cañons; in these cañons signs of vegetable life appear in the form of grass, shrubbery, and timher. Now, the desceut is down, down, down, for niue thousand feet until you reach the great valley of Utah, in which lies the celebrated American Dead Sea or Salt Lake, which, like the Dead Sea of Asia, has uo outlet. I do not say that the city of Salt Lake deserves to be doomed like the eities of the plains of Sodom, yet if its true history could be written it would doubtless reveal abominations quite equal to Sodom.

In descending the mountains in Utah the railroad passes through deep canons and along steep sides of declivities, through deep canons and along steep sides of declivities, the most wild and fearful my eyes ever beheld. Rocks piled on rocks with deep gorges opening in their precipitous sides, as though cut out by human hands. There is a deep and awful canon on the side of the mountain, which has a suhterranean entrance, called the "Devil's Oate." The railroad passes within a few feet of this entrance, but not through it, so we escaped whatever calamity might have happened. The first sign of human habitations we discovered. happened. The first sign of human habitatious we discovered in descending the mountain was a small settlement of Mormons, uestled down in a basin scooped out of the mountuin side, containing perhaps a thousand acres. The rail-road runs along an arm of Salt Lako for a number of road runs along an arm of Salt Lake for a number of miles, while a branch from Ogden runs to Salt Lake Chy—a a distance of forty miles. It is said that Salt Lake lies quite as low as the Pacific Ocean, but on looking at the scale of elevations I find this to he a mistake.

What has formerly heen termed the Rocky Mountains is the first range going west, commonly called Black Hills, but many are perplexed to know where the Rocky Mountains to the west, for after desempting to the

tains terminate on the west; for after descending into the great valley of Utah you begin to rise again, and continue the rise for three hundred miles, which carries you into the State of Nevada, the elevation being more than six thousand feet above the ocean, and between this and Salt Lake

range after range of mountains rise from two to three thou-sand feet ahove their base. These mountains are mostly piles of denuded rocks, rising from the smooth, elevated plain like those ou what is commonly called the Rocky Mountains. From this elevation in Nevada there is a gradual descent to the Sierra Nevada Mountains—a distance of about two hundred and fifty miles. Mountains of rocks, range after range, rise through all this distance, their general temlesses being north, and south. The Sierra Nevada cral teulency being north and south. The Sierra Nevada Mountains are nearly as high as the Rocky Mountains, and mark the boundary line between Nevada and California.

The next and last range of mountains is on the coast—a distance of three hundred miles from the Nevadas. Now, it may be said in truth, that the whole country from the Rocky Mountains to the Sierra Nevadas—a distance of one Rocky Mointains to the Sierra Nevadas—a distance of one thousand wides—furnishes a continuous series of mountains and valleys. These mointains will average perhaps twenty miles distance from each other, leaving valleys of this width between them, so that it may be said that the Rocky Mointains only terminate in the Sierra Nevadas. These silvered ranges, which are from two to four thousand feet above their bases, are but mointains upon the top and sides of higher and layers montains, and the valleys essentials of higher and layers montains, and the valleys essentials. above their bases, are but mountains upon the top aud sides of higher and larger mountains, and the valleys, especially in Nevada, are valleys upon the top of a high and exceedingly broad mountain. The people of this coast do not speak of any one range of mountains as the Rocky Mountains proper. Each range from the Black Hills to the coast has its name; also each valley lying hetween these mountains. Nevada being my place of destination when I left New York, I accordingly stopped at Hamboldt Wells, Elko county, which lies in the northeastern part of Nevada. The Wells is a railroad station. From this place Clover Valley extends forty miles south. Nevada. The Wells is a railroad station. From this place Clover Valley extends forty miles south.

Clover Valley, March 15th, 1875. REV. HIRAM CHASE.

OFF THE LINE.

NUMBER TWO.

IN the Fall of '70 Nathan and I built a home shanty at the southwest end of Butts Mountain, and from there a line of traps on the cold stream waters—Misery, Salmon Stream, Moose River, and the Spencer—thus giving as the centre of a circle for headquarters. We designed in the early Winter, before the law expired, to kill deer for the market, and have it answer the double purpose of bait as well as venisor, the scent of the blood being the best thing to draw fur. We always bury the game in the snow till we collect sufficient to ship it, so there is another advantage, as the snow retains the scent long after the carcass Is gone. In this tract of laud, bounded as described, snow falls very carly, sometimes as early as the last of October, and remains. In such Falls and Winters you can

easily find, though not always so easily kill, your game,
But to my story. For eleven days the sun had not shone;
for eleven days it had snowed, rained, or squalled—snow or rain, or both; everything was eneased in ice; snow had settled from a foot and a half to about nine or ten inches, but it was quite solid and fine snow-shocing, so on the morning of December 14th we packed our knapsacks with ten days' provisions and struck for Misery. I took the Misery stream route from Big Cold Stream Pond, and Nathan took the Cold Stream route over the mountain. At Nathan took the Cold Stream route over the mountain. At night, on the shore of Big Misery, we had as the result—one ofter, one beaver, three sable, and one mink, beside the usual number of grouse we had shot on the way. At the Misery we found our camp broken down, Usually it would not have mattered much, but this was a very had camping place, especially so with the boughs all lee and no good wood to barn, and worse yet, the weather was getting decidedly cold, and an ominous cloud gathering in the norwest warned us to prepare for a blow. I had seen the effect of tornadoes in the forest, but never had witnessed one, and Nathan said he "guessed I'll see enough of it hefore morning." Choosing the lee of a friendly hill, we found an old pine log four feet in diameter. It did not lie right, but we concluded that its protective powers on

weighted its uncomfortable situation. Digging the snow up nown to the ground in a year or feet state feet, and a banking it around so, in a year or feet state feet and a banking it around so, which the state is the feet of the pine log, acting as rufers; across these rafters were laid small sticks, and over all was laid ince brief bank in large piles, just as you would lay shingles, only we had to put considerable weight out to the put from carding until weight of the put of the

possible I made after him, but hefere I had run far Nathan's ritle put in end to him. He was a large one, ilressiog 175 pointeds, or rather weighing that two weeks after at Skowhegan.

We were now both of its prelty well tired, and looking at our watches found it was two o'clock. Our packs were far behind its. We estimated that we had run six or seven miles; that is, run when we could, which was not more than half the time, and were now on Spinaw's Cap, near Indian Pond. We were both lungry and thirsty, for all we had was a bisenit each, and a little tea, which I always carry in my pocket for emergency. We looked uround for a spring ur brook; but there was plenty, of birch bark, which would answer for a tea kettle, and us the modum operandi of miking tea without a kettle and water may be interesting to some if your renders I will give a short account. Selecting a nice birch, free from knots, you peel off in piece sufficiently large for your purpose, then make a hasket, Imlian fashion, taking care to put your pins in below the water line. That being really, and a good tire also, you may bury your hark dish in snow in front of the fire, so as to keep it from warping. Close attention must he paid to this, or you will lose your dish. You then place hard wood sticks, with as many crotelets on them as possible, in a slanting position, so that they will incline immediately over the dish. On these sticks place snow balls, and in sthey melt they will fill your dish. Your dish at last filled above the pins, your fire dawn to hot coals, you place your bark on the roals and in a moment your water is boiling. Add your ten, and you soon have as good a necture as it drawn from a metal hettle. After our ten, which we made strong, and our one bisenit devoured, with deer heart and liver for ment, and a little salt, which Nuthan had, for savor, we retraced our steps to our packs and butt a camp there that afterwards came to be known as "Sanoky Camp." The next three days we killed four more deer, ami then commenced building traps

SOUTHWEST FLORIDA-No. 10.

BEING NOTES OF A TOUR OF EXPLORATION-BY OUR OWN COMMISSIONER.

THE morning after on arrival at the Anclote we started for Salt Spring, two miles distant. Leaving the river to the left we entered Salt Spring run, and soon found ourselves flonting on the basin of the spring. We found the basin to be one hundred yards wide and eighty first deep at the deepest place. The water of this spring differs from that of the many we have visited in the State, being dark in color, like that of the St. John's River. The basin swarmed with fish, and large tarpun could be seen breaking water in every direction. It is named Salt Spring, but this is evidently an error, for the water in the basin is acrely brackish, while in the run where the tide chbs and flows the waters are very salt. We have reason to believe that Salt Spring is the outlet of Lake, Butler, distant two or three miles. This lake has several tributuries, but no visible outlet; the water is dark colored, and it is at a bunch higher level than Salt Spring. The brackish condition of the water in Salt spring is evidently the result of tidal influence. Leaving Salt Spring and its outlet we entered the river and ascended it for three miles, where we discovered a stream on our right hand twenty feet in willth and ten in depth. This we followed for half a mile, when we came in sight of Salt Lake, an interesting and picturesque sheet of water one mile long and half a mile when. At the entrance lo the lake, snipe, duck, coot, and curlews were visible in countless numbers, and large redfish, sheepshead, and trout fled before the boat in hundreds. This sheet of water is worth visiting, especially if the day is warm and the sportsman found of 'gator shooting. Lake Butler, a noted place for aquatic birds, is half a mile from the sunthern short of Salt Lake. Deer hunting in this neighbor land is fair, and the region would be found worthy of a visit.

Finding nothing of special importunce lo detain us, we

noted place for aquatic birds, is half a mile from the southlive it shore of Salt Lake. Deer hunting in this neighborlive it is fair, and the region would be found worthy of a
visit.

Finding nothing of special importance to detain us, we
descended the river and started for the Wiccawatchee river,
thirty-five miles to to the northward. En route we sighted
the month of the Pithlachestaeootic River, but from inforination obtained we deemed it innworthy of a visit. In
steering a course for Buyport, at the mouth of the Wiccawatchee, we kept the main land from two to three miles to
starboard, finding from lour to five feet of water. In runuing along this section of the coast, it is essential that the
tourist should keep a good lookout for "nigger heads."
Bayport is ensily recognized by a large storeliouse and a
pile of cedar logs. We reached the dock at three P. M.,
and weut in search of soda crackers, and at the store
laid in an addition lo our stock. The storekeeper assured
us that "his oranges were the best on the coast." Upon
his recommendation we purchased a supply, and regret to
say that we found them very inferior. The present popuhation numbers about twenty. Before the war large quantities of certar timber was shipped from this point, but of
late years the trade has almost ceased. Standing on the
dock we noticed a large ofter on the opposite side of the
river, and tried the effect of a Winchester cantridge. It
proved to be a line shot, but the clevation was too great,
and the ball passed about one inch above his head. Ascertaining that the spring of the Wiccawatchee resembled
those of streams farther north, we deemed it best to forego
the pleasnre of ascending the river.

From such data as we were enabled to collect, we have
reason to believe that the cannery buck of Baypert is well
stocked with bear and deer, and feel assured that the
sportsman may secure some excellent sport. The section
referred to can be reached. The louisite will find the neighborhood of Burkville an interesting locali

course selected the deepest and plainest, which soon headed in a mud hole, to the disappointment of all. Returning, we tried the right hand hearnch, and for half a mile polei the "Spray" through recels and Bly pods, when we found the river to widen and deepen. We soon reached the head of the stream and found an enchanting spot, one worthy of the penel of an artist. The basin of the spring of the Christowikki is about one hundral feet in illumeter, and the depth of the water in the spring thirty-sight feet. The water is as pollucial as air, and the most minute object on he plainly seen on the clear white bottom. From appearances, the water issued from an entitle of the boat, we and four high. Looking over examily permanent of the control of the co

THE LARGEST FARM IN THE WORLD, -This is rather a large claim to make, even in this country where real estate lies around in parcels of considerable size, but according to the St. Louis Republican it may be fairly applied to the estate of George Grant, founder of the Victoria colony in His farm embraces the whole county of Ellis, is larger than any dukedom of Europe, and contains 576,000 neres. Mr. Grant devotes himself principally to stock raising, and has accomplished a great deal by the introduction of the best blooded stock and exhibiting the best methods of rearing, feeding and improving the foreign and domestic breeds of horses, cattle and sheep. He has just wintered 7,000 sheep, with a loss of less than one per cent., the ecret of his success lying in providing good shelter. is the owner of the thoroughbred stallion Flodden, valued at \$25,000, the father of which won the Derby race in 1860. He lms just purchased for his farm thirty odd brood mares in Ohio, Virginia and Kentucky, and he has \$250,000 invested in stock. Among the large number of resident colonists and stock raisers who have purchased land of him, and are now raising stock in Victoria colony, are many young men of promneuce, both in this country and England.

Hish Gultune.

Shad in the Delaware. -The Fish Commissioners of Pennsylvania and New Jersey, having learmonized their views on fish culture, as respects the waters dividing the two States, are preparing to engage more actively than ever in shad culture on the Delaware River. Hatching boxes have been located at Point Pleasant—the same ground as last year—and in soldition at a point at the head of title water, just below Treaton, and at Dr. Hawell's Fishery, a few miles below Philadelphia, one of the most extensive fisheries on the Delaware, where all the shad desired in proper condition for maniputating, will at all times be available.

—Salmon measuring six and a half inches long have just been captured in the Bushkill River, a tributacy of the Delaware, where they were planted by the Peunsylvania Fish Commissioners,

SALMON CULTURE IN NEWFOUNDLAND,-Our frequent correspondent, A. M., informs us that the artificial breeding of salmon from spaws will be attempted at Heart's Content this season,

FISH CULTURE IN VIRGINIA.

LEESBURG, Vu., May 31st, 1875.

LEESBERG, VII., May 31st, 1875.

Editor Forest and Stieau:—
I have been so closely confined that I have been anable to make any extensive explorations with regard to fish and tishing. The front distributed from this place are doing well, being whom twice as large as when they were first put is their respective springs. They have shown themselves in all of these localities to be "at home;" so we may consider most of the spring branches in Londonn county suitable places for the footinalis. I camplet one a few days ago with a pin hook fastened fato the notial end of a long shoe string. I have reliable information of trout being caught in nearly all the counties next the Hidge from Landoun to North Caradica—in Londoun, Rapponhamock, Mathang, Nelson, Brdford, etc. It seems to me that they thourist in Virguin mostly in limestone regions in freestine springs, as for instance in West Virginia, I have friends who have caught them in the valley of Virginia, as well as in the remidry west of the Alleghamy Mometalus. They all think the trous streams comparatively free from line. The innestone formation about Leesburg is comparatively free from line. The innestone formation about Leesburg is comparatively free from line. The innestone formation about Leesburg is comparatively free from line. The innestone formation about with fisher means and select an earlier short to deliver him some black biass as goont move on the part of our authordies, as he is a lover of indural history and an endustable sportsman. To is trying now to make arrangements with fishermen or adjers here to deliver him some black biass at Alexandria for distribution through the State. The black hass second to be filling the Irithiaries of the Potomac, and schools of small biass him inches in leigth may be esea in Goose Creek any samp day by the softary student. Goose Creek is a beautiful stream flowing liot the Potomac and Is clear and rapid in its hyper part; but for the dams with no fishways, and the seining, the stream would be fold of the fish to many

HABITS AND METHODS OF PROPAGAT-ING FISH-SOME CURIOUS FACTS.

THE following is an abstract of an essay read before the Illinois Fish Culturists' Association, at its re-cent meeting in Peoria, by Dr. W. A. Prott, the great Elgin

the Illinois Fish Culturists' Association, at its recent meeting in Peoria, by Dr. W. A. Prott, the great Elgin fish enlturist:

"To enter into details of all the varieties of Fall-spawning fish would make a volunce of itself, and I have an time to write a volunce, or even time to do any justice to the subject. I will simply mention a few things which came heatere the fish culturists but quite recently, and may be new to some of you. You not doubt all understand the method of receiving the spawn from the varieties of fish and the manner of hatching the eggs. Till very lately, or within two years, to latelt 2,000 trout eggs in a box eighteen inches square and six inches deep was doing all it was thought possible. Now, with the wire trays, set one above another, six times that number of fish can be hatched and letter cared for than by the old method of hatching on the gravel. Hybridizing fish is carried on extensively in certain establishments in Europe. Considerable attention is also keing paid to crosses between closely allied species of the submondi family, as the Salmo sular, the brook trout (Salmo fontinalis), and the fish thus produced is of a superior quality, is much more lender. It is with fish as it is with other animals with deficient organs of generation; they bear the same relatious to other fishes of their kind as cattle, hogs, and sheep do. Salmon thus hybridized lose the instinct of migration to the occan, and there is no reason why the same method may not be applied to other fresh water species and to certain sea fish with corresponding results, the salmondi and most all species of fish which live in the occan and run up into fresh water to spawn.

There are other varieties of fish that live in the large lakes and run into the tributaries and outlets to spawn, their spawning season heing the Pull, the same as the salmon atterns of rivers and streams in early Summer and pass up us far as an open passage will admit. After reaching a suitable place of abode it is supposed they remain for at least th

that the eel is strictly hermaphrodite—that is to say, that it has both the male and female organs. They are said to be developed to the proper degree in Winter, and the eggs disclarged from the ovary are fertilized by the seminal fluid leaving the body in a condition for further development. Science has hut very lately exploded the mistaken idea that the eel is a hermajdrodite, and what was called the testicle of the female is found to be but a deshy substance, and the male fish is shammer and more flut than the female. It was only decided within lite last year that, with but a pail of water once a day, a large amount of the salmon and treat eggs ear be hatched. A hatching house can be arranged right in one's celiar, and by the small amount of trouble of securing a pail of water from a spring or well one can hatch a considerable amount of eggs. I have mentioned a few things which I thought might be of interest to some persons who may not have made fish culture a study as I have. I want to say that the Fall-spawning fish is not found in our waters, and there is but one fish yet known that inhabit the waters of this State that spawn in the Fall—that being like eel. I trust another Legislature will give as better lows in this State for the protection of fish, and that something may be done in the way of restocking our waters with better food tish."

AN ACT TO PREVENT THE DESTRUCTION OF FISH.

We publish for the benefit of enquirers the following law relative to protecting fish in Missouri:-

We publish for the benefit of enquirers the following law relative to protecting fish in Missouri:—

Section 1. It shall not be lawful for any person to place in any river, creek, pand, lake, slongh, bayou or other waters of this State, any medicated drug, fish-berry or coccutus indican or other poisonous drug or substance, calculated to poison, kill or injure any fish in any such waters; nor shall it be lawful for any person to place in any such waters any nitro-glycerine or other explosive thing or substance, whereby any fish therein may be killed or injured; nor shall it be lawful for any person, by means of any explosive thing or substance, to take, catch or kill, any fish in any of the waters of this State. Any person who shall violute any of the provisions of this section shall be deemed guilty of felony, and on conviction shall be confined in the penitentiary not exceeding three years.

SEC. 2. No person shall be allowed to place, erect or maintain, or cause to be maintained, across any of the waters of this State, or in front of the mouth of any stream emptying into any other stream, any seine, net, tramunel net, leag weir, fish dam, trap or other similar device or obstruction, which shall prevent the passage of fish up or down in any such water or stream; nor shall any person or persons be permitted to use my such means or devices for the purpose of catching fish in waters solely upon the premises of the persons without the written consent of such owner or owners; nor shall any person, during the months of July and August, of any year, by means of such device, eatch or take any fish in any of the waters of this State. Any person who shall violate the provisions of this section shall be guilty of a misdemeanor, and upon conviction be fined in any sun not exceeding five hundred dollars, and shall be quilty of a misdemeanor, and upon enviction be fined in any sun not exceeding five hundred dollars, and shall stand committed until the fine and cost of process and trial he paid.

Sec. 3. Nothing in this act

mery. Approved March 26, 1874.

Sea and Biver Hishing.

FISH IN SEASON IN JUNE.

Trout, Salmo fondinalis, Salmon, Salmo salar, Maskenonge, Esox nobdior.

Salmon Tront, Salmo conflots. Stad. Alosa. Laud-locked Salmon, Salmo Glovert

FISH IN MARKET.-Fish of all descriptions continue plentiful. The most noticeable feature during the week has been the increase in the supply of salmon, large quantities being received from St. Jonns, N. B. and selling for 40 cents per pound. Spanish mackerel are also abundant, coming from the Chesapeake Bay, price 30 cents per pound. Fresh mackerel are not so plentiful as heretofore, and the price has advanced to 12 cents. A few shad are still coming from the Connecticut River and selling at 50 cents for the roe fish and 25 for the male. Sheepshead have arrived in large quantities from Norfolk, selling for 12½ cents; a few from New Jersey bring 20 to 25 cents. Bluefish averaging in weight alout four pounds, are coming from New Jersey and Long Island, and sell for 12 cents per pound. Halibut alundant at 12½ to 15 cents; eod, from Nantucket, 8 cents; weakfish la large supply from Long Island, slow of sale at 8 cents; striped bass have been received from Rockaway beach averaging twenty five pounds each, being taken with a net in the surf; they sell for 15 to 18 cents. During the week soft crabs have been very abundant at from 50 to 75 cents per dozen. Lobsters identiful, large numbers being caught uear Staten Island; selling for 8 cents per pound. Frags legs from Canada, worth 50 cents per pound. Green turtles very abundant at 15 to 18 ecuts, according to size.

-Anglers have been having fine sport with weakfish in the Great South Bay during the past week. One party from Babylon were so fortunate on Monday as to land a sheepshead weighing 17½ pound. It is still a little early for trolling, but a few bluedsh have been taken with the squid in the inlet. The indications are that fishing in the bay this seasou will be excellent.

-Weakfish are now being taken in considerable quanti-tics in the Great South Bay, off Babylon, Long Island. -Salmon made their appearance last week in the Mira-

miehi River, New Brauswick, Canada.

—A letter from Lock Haven, Pa., duted May 31st, menlions that a large party from Bultimore passed through there on a splendid car en route for Kettle Creek, Potter county, where they intended to spend a week in fishing. This region was one of the finest in the country some years ago, but the most accessible localities are now much lisked

The advices from the Magnetewan and Muskoka country indicate that this thoo game region will be filled with visitors this season. We know of several parties going there, and others who would go if guides could be procured, which is not easy.

-The season for salmon fishing is rapidly approaching enough to be their friends are preparing for the "June rise." Rod fishing in Canadian waters is at its prime about

the 20th of Jaly.

Our friend A. J. Wilkinson, of Washington, will fish the York River during the first week of July by courtesy of Mr. Reynolds, its lessee.

Mr. Fred Cartis, of Boston, deserves a large score on his

river—the Dattmouth—for he very generously volunteered last year to let the Canadian fishery officers uet his salmon for hatching purposes when the Canadian lesses declined.

for hatching purposes when the Canadian lesses declined. We hope Mr. Curtis will get full credit for this act.

Dr. Frank Cleik will no doubt pay his annual visit to the Graud River, an excellent stream, in Gaspe; and there are other gentlemen who are booked for choice localities which we should like to obtain permission to reveal, for the satisfaction of their curious friends. At all events, when the anglers are fairly at work on their respective grounds we shall make mention of their whereabouts less grounds we shall make mention of their whereabouts lest their relatives be anxious.

For those who want salmon fishing at a moderate cost there is the river Margaerite—a branch of the Saguenay—which is advertised in our paper by Messrs. Willis Russell, of Quebec, and Abbey & Imbrie, of 48 Maiden lane, this city. Parties can fish this river at \$50 a week, and enjoy

of Quebec, and Abbey & Imbrie, of 48 Manten lane, this city. Parties can fish this river at \$50 a week, and enjoy all the comforts to be expected in camp. There are good buildings and bunks on the river, and skilled attendants. Other rivers which deserve the attention of anglers are the Nouvelle and the Romaine, the former famous for its sea trout in June and July, and the latter for its heavy salmon. Rod privileges for the latter at \$150 for the senson can be had by applying to Capt. J. W. Coventry, Nouvelle, Bonaventure, Province of Quebec, Canada. There are good buildings on the river, and no uets. This chance ought to be eagerly embraced. There are vastly more expensive rivers which will not yield such rich returns. pensive rivers which will not yield such rich returns

-Quite a large number of sportsmen are booked for the witherness of Northern Michigan, which the Grand Rapids and Northern Indiana Railroad has recently opened up. For description of this country, see Forest and Stream April 8th.

-Messrs, J. B. Crook & Co., the well known rod makers, of 50 Fulton street, wish us to inform our angling constituents that they have a lot of selected and seasoned green-heart wood, in the rough, which they will be pleased to dispose of to any wishing to use it for the manufacture of fishing rods. Much of the imported stuff is green, and when worked up warps, but this can be depended on to keep straight.

when worked up warps, out anseem to dependence keep straight.

New Young.—Comp Comfort, the Adironducks, Jane 2d, 1875.—Here I find trolling and illy fishing unequaled—in fact, for the past five years I have not met with equal success. Very few persons in the words, to which I attribute in a great measure success in luck and sport. The Murray fever has subsided; the reaction has commenced; hardly enough here to pay their respects with becoming loaner to a four pound river tront. At Martin's I find registered the Smith party from Buffulo, and Messrs, Batcheller & Co. from Vermont. At Bartlett's, Hon. W. A. Wheeler and wife, Malone, N. Y.; Dr. J. R. Romeyn and wife, Keeseville, N. Y.; Mr. E. Titus and party, from New York. At Paul Suith's, a party or two; names unknown. The woods this year present their usual attractions, and would that you were here, and other cound lovers of the rod, ruel and fly (veterans) to enjoy the unequaled sport, which we have and cherish. As I am writing from the Saranac Lake region—Raquette River and Tippier's Lake country—I cannot add any information from the southwest direction.

S. S. N.

—A Utica party, led by Gen. R. U. Sherman, started last week for the North Woods, and here's a contrivance the Utica Herold says they take with them:

Utica Herdid says they take with them:

"They will carry with them a patent collapsible boat, owned by Chief Operator Howe, of the Western Union Telegraph office. This is quite a novelty. It is about fourteen feet in length, weights sixty pounds, and will carry three persons, or 1,200 pounds in weight. The model is very handsonne, and is provided with a sharp keet. The frame is of hickory, and so arranged as to be taken apart and folded into a size that can easily be accommodated under a langey scat. The covering is of one piece of heavy dnek, which is perfectly waterproof. The design is novel, and Mr. Howe says it is to be arranged so that boats can be folded and put away in the staterooms of steamers, and be ready for service as quickly as the time required for the adjustment of a life preserver. The fishing party will lest the bout thoroughly before they return."

—While fishing in his smack off Montauk, May H. Cant.

—While fishing in his smack off Montauk, May II, Capt. E. T. Rackett, of East Marion, caught a codiish weighing about thirty pounds. When the fish was opened the following carious assortment of articles were found in its stomach: One Russia turnin of good size, one pointe, one parsnip, one cabbage stump, three of the fish called scarobins, some times known as "grunters," The vegetables were all in fair condition, and had evidently been swallowed only a few hours before the fish was caught,

probably for "chowder" purposes. -Montauk (L. I.) As-

*New Jersey.—Kinacy's Askley House, June 1st, 1875.—We are catching bluefish by the hundreds. Not less than 9,000 pounds have been taken to-day by the squid aloue. C. Purker and J. W. Kinsey caught 262 from 10 A. M. to 1 P. M. The first fish of the senson was taken by E. H. Miller on the 31st. At time of writing herrings are being driven ashore by the bushel. It is a sight to see the shore; for the space of 1,000 yards the sand is covered with them. Three other yachts have just landed, and report from 100 to 175 bluefish caeli. Over 275 have been taken off the shore by throwing the squid. Mr. S. King reports over seventy-five with one line.

Forked River, Ocean County, June 1st, 1875.—The first bluefish caught on a squid line this season in Burnegat Bay was taken by my hoat—the Mattie—to-day. The catch amounted to 683 pounds, and averaged five pounds to the fish.

Mayre—Markias June 3d, 1875.—Black flies and front

amounted to 683 pounds, and averaged five pounds to the fish.

MAINE.—Machias, June 3d, 1875.—Black flies and front are now ripe here.

Calais, June 2d, 1875.—I have just returned from up Grand Lake, Ishing the Little Salmon. There are the usual number of fishermen. When I left yesterilay there were twenty hark canoes, seven boats, and seventy men. About two hundred salmon were taken each day, besides some large brook and lake tront, by the fly fishermen. Fish do not appear to be half as plenty as last year, but may soon come along. I did not hear from the Dolisis club; they have but just got along.

—Bungor, May 31st.—The fresh water salmon fishing (land locked salmon) is now in its prime at Schee Lake. The line of country opened by the European and North American Reithroad from Bungor to the St. John River is teeming with glorious trout brooks and lakes. The sportsman can't go amiss here. Every man on the railroad is a sportsman and a gentleman, from the President and Superintendent to the brakesman. The postal clerks are all anglers, and will take pleasure in imparting information to visitors in search of a few days' recreation. In a few days the black flies will begin to be troublesome.

E. M. Stillwell.

—A society known as the Androscoggin Fish and Game

E. M. STILLWELL,

—A society known as the Androscoggin Fish and Game
League, having for its object the enforcement of the State
Game laws and the encouragement of gaming interests, has
been organized in Gorham with the following officers:
President, Andrew J. Graham; Vice Presidents, B. F. Osgood, Warren Noyes, P. G. Evans, James A. Callahan,
Henry C. Harmon, Emlyu W. Evans, and R. Evans, Secretary and Treasurer.

-The Bedford (Pa.) Gazette, published June 9th, 1807,

nearly three-quarters of a century ago, has this item:

"Twenty-seven fine shad were caught at one haul a short distance above the Dunning's Creek bridge; also 24 shad were bagged yesterday at a place called 'The Widow China's Pond,' about two miles below the Crossings."

The "Dunning's Creek bridge" is only two miles north of Bedford, and the "Crossings" is fourteen miles east of Bedford, on the Raystown Branch of the Juniuta River.

Bedford, on the Raystown Branch of the Jumaty River.

—According to what we believe to be the last emetment, black base can be taken with the ordinary rod and line, commonly called angling, from June 1st to March 1st in each year, the close senson being only the months of March, April, and May. The Schuylkill River contains already a vast number of these fish, the first hatching now weighing from three fourths to one and a half pounds. The river, however, is now too low for successful fishing.—Germantenon Telegraph.

—A fish and game protective club has too been organ.

n Telegraph. -A fish and game protective club has just been organ-tin Lawtenceville, Virginia, with Cup. D. T. Poyner, ized in Lawrenceville, Virginia, with Cup. for President, and Warner Lewis, Secretary.

ized in Lawrenceville, Virginia, with Cup. D. T. Poyner, for President, and Warner Lewis, Secretary.

Catheornia.—San Francisco, May 29th, 1875.—Anglers this season are beginning to enjoy some good sport in Luke San Andreas, the preserved fish there being under the auspices of the California Acclimatizing Society. Many large from a boat with a small sized spinning spoon buit. The society have placed in this lake, from time to time, the following amount of lish, according to the statement of W. A. Newell, Esq., the President: Native tront, 200,000, Hake Tahoe, 150,000; Eastern front, 500, and salmon, 20,000, making a total of 430,500. The society did not place any fish ova in the waters of the lake, but liberated the young fry when able to take care of themselves. The growth and development of the fish have been remarkable. The society has now at its fish pouds at Point San Pedro 60,000 young trout fry, which will soon be liberated in Lake Merced. It is the intention of the society to make this lake one of the best fishing grounds, perhaps, in the United States. And by the late successful catches it really looks very much like it. At Liddle & Kaeding's sporting store I lately saw several fine fish from these waters; among them were two salmon and two trout, the largest of which weighed five and a half and the smallest two and a half pounds. The salmon were placed in the lake ahout sixteen months ago from the Sacramento River. The largest tront is just four years old. There have been a large number of different species of salmon taken this season from this lake, and the prospects are splendid.

—The Canadian fishetics report shows the following as the comparative value of the catch in the provinces men-

-The Canadian fisheries report shows the following as the comparative value of the cutch in the provinces men-tioned for the past two years:

	1874.	1873.
Nova Scotia	\$6,052,301	\$6 517,800
New Britishick	2,685,793	2,285 661
Quebec	1,608,660	1,391,567
Ontarto	146,267	203,000
Prince Edward Island	288,863	207,505
Tutel\$1	1,681,684	\$10,754,038

A steamer is now running from St. Johu, New Bruns k, to the island of Grand Manun.

wick, to the island of Grand Manan.

The Figurales,—The number of fishing arrivals for the week ending June 3d was sixty—twenty-nine from Georges, twenty-one from the Banks, and ten from Southern mackereing trips. The amount of Georges cod brought in was 500,000 pounds, and 60,000 pounds halibut. Bank cod, 1,475,000 younds; hubbut, 130,000 pounds. Total receipts of macketel, 2,200 barrels. Mackerel have said for \$51 per barrel in the pickle, and halibut from \$4 to \$42 per cwt. The porty sciners are meeting with fair success, and the fish are selling from \$1.50 to \$2 per barrel. The fleet is small this season, comprising four steamers and some dozen schooners.—Cape Ann Advertiser, June 4th,

BLACK BASS FISHING

BLACK BASS FISHING.

Entron Fonest and Stream:—

The season for black bass fi-hing having commenced, it may not be inopportune to describe the various modes of angling for the black bass, as practiced in the Northwest. As our bass fishing is almost universally alone in lacks and navigable streams, it will be understood that boats are employed in all of the different methods about to be described.

Thotaing write the spoon.

This is a very successful way of catching bass, and is very popular with those infortunates who cannot or will not hearn to bandle the rod; but when considered in the highl of sport it is only one remove from shooting or spearing bass on their spanning grounds. Still, the 'murder-ons spoon' bas its devotees, who are gaite enthusiastic upwin the subject, and who apparently enjoy this very questionable style of sport; but they belong to that class of quant sports men who would not hesitate os shoot into a hevy of quait or a covey of planated grouse when hinded together on the ground, and intervard display their "bag" with feelings of the most evident withsfaction and gratification.

The necessary mekle for this mode of fishing in this Stale (Wiscousin) and throughout the Northwest generally, consists of a strong hand line of linen or cotton, and from twenty-five to seventy-fave yards long; a redium sized surfrel, and a spoon hook, or one of the multitudinous array of splunding halts, troiling spoons, propeters, &c, with the nsual accompaniments of red and white feathers and group of books so extensively advertised throughout the land. The ordinary, original thorbins spoon, with single hook soldered on, with a sayled, will be found to be equal to if not better than any of the later inventions; the single hook is certainly far supernor to the group of two or three books usually found on the so-cailed improved troiling haits.

The outlit for troiling is very simple, and early in the season, before the weeks are fully grown, this style of fishing is very successful. The method is equally as simple

with a good "mackerel breeze," it "wet sheet and a flowing sea," with hand the and squid, trolling for bluellsh is exeiting and excellent sport; but on the bosom of a quiet lake, surrounded with charming rural scenery, trolling with the spoon for black base hearness uninton destruction of a noble fish, and is a cruel pastime, and only excusable when he camping out in ithout suitable tackle, and when, like the boy digging at the tenanties woodchuck hole, one is "out of meat." In the absence of a spoon book, the floor of the mouth of the pickerel cut into the semblance of a fish, is tough, white, and glistening, and is a capital batt; a similar hait cut from the beily of the dogdsh absorances a good purpose.

of a spoon book, the floor of the mouth of the pickerel cut hito the sentilance of a fish, is tough, while, and glistening, and is a capital batt; a similar hait cut from the belly of the dogdsh also ansirers a good purpose.

STILL FISHING.

This mode of angling lis very popular, and is the one generally practiced by the average angler of the Northwest. The rod and reed here come into play, but as I have heretofore, in the Porrer and STREAN, fully described the hass rod, reed, line, and dook, any further description of them at this time is unnecessary. I will simply remark that the finer and more delicate he tackle crapboyed, the greater will be the sport experienced; but as a rute still fishere use clumay tackle.

The angler must provide bimself for still fishing with a snitable rod and reel, and fifty pards of approved line, together with books, sarivels, sinkers, landing net, and balt; the latter should be minnows or erawfish. Minnows are far the beat, and If sinkers, are the very best hait that can be used. Chub come next, and small yellow perch are also good, especially if the dorast divs are ellipted of with a strong pair of seiscors, lift the intomos are lively and strong, and there is a softeent depth of victor, a floor is not necessary; but if the ground is vecty, and then a stratter shallow, or if crawfash are used for buit, a cork finat must be used. If the mitmors are large, usert the hook through the lower by vaid out the notefit, if small, hook them under the dorsal fin.

Our still fisher being fully equipped proceeds to the fishing ground, anchors he boat, and propares for the fray. Having butted his hook and cast his line, his thomb must be kept upon the coil of line upon the reel, as the line slackens be must red it in. When a base takes the built thin have the for a short time, say from five to len seconds, secording to the mood of the fish, whether they are on or off their freel, whether energy of the solve and the proper time our angler must check him by before the congression of the humb a

CASTING WITH THE MINNOW.

CASTING WITH THE MINNOW.

This is the most scientific way, and the very acme of black hass fishing. It is the most scientific way, and the very acme of black hass fishing. It is the mode adopted by our most expert base anglers, and combines all the best features of still fishing and trofting with the minnow, healines possessing advantages which those methods do not. The very hest rods, reels, and lines must be used, such as I described in a former number of Fonest and Stream. The augler proceeds in his boal on the initide, or deep water side, of the fishing grounds, and casts we toward the feeding grounds, the careman rowing along rapidly or slowly, or holding the boat stationary, as circumstances demand. The brut being in deep water the fish are not so apt to see it, which is a great advantage. The angler can must he any direction and to any distance, greater or lesser, within the length of his line as be may desire. He can cast astern and proceed as in trailing, or east to either side, or forward, and by reeling in the line keep the but in motion. It can readily be imagined how expert casting has so great an advantage over any other method of base fishing, and libat when once acquired it will never be relinquished for any other

mode. This is the best method to follow when fishing from the banks of a stream, where there are no trees or bushes to interfere; it is also the best method to pursue when wading the stream is practiced—it is, in fact, the "evuning mode of black bass fishing," and will, before many years, be the only recognized artistic method.

[Energy of the control of the minnow, when a fish is hooked let the carsman pull out at once to deep water, so as to give the fish hetter play and more room, and also to prevent his taking to the wends.

The angler should never be in loo great a burry to land his fish; for if he is well hooked he cannot get away, but if he is hooked in a thin or weak part of the month, there is a greater necessity that he should be glogerly played and lenderly handled, until he is completely "inchered out," and turns up his belly to the sun. There is never anything gained by too great a hurry in bass dishing. On the contrary, "the more haste the less speed," is a maxim particularly applicable in this case.

In landing a hass the carmon cheath of the present the belief to the sun.

into a haste the less speed," is a maxim paraceurary typic one in this case.

In landing a buss the oarsman should, at the proper time, bold the wet just uniter the surface of the witer, and hold it perfectly still while the angler brings the fish into or immediately over the net, when the narsman should lift it up quickly and with one motion. He should never he suffered to fulling the fish with the net, or by sudden larges afteupl to seeme him; for this only serves to frighten the fish and put your tackle in Jeopardy. Remember that the largest bussulways escapes when nearcest the hout, and when about to land him. You will therefore take due notice and act accordingly, and resolve that hereafter none shall be lost though middle haste on your own part, or through any mykwardness of the boatman, if hy your power to prevent.

I shall reserve my remarks on "Fly-dishing for Bass" for another communication.

BLUEFISHING.

BLUEFISHING.

Entrier Forest and Stream:—
The near approach of this exciting sport induces me to give a few hints and a little personal experience for the braefl of your reviters.

My thining grounds for blueflest for the past year have been Barnegat Bay. Blueflest make their appearance by the shove waters on or about the 20th of May, never, for seven years past, varying six days from that date. The first run are always the largest, listing some two or three weeks; they run from six to twelve pounds. The past two years I have always been on burnt for them and have captured as bigh as 1,300 pounds per day. As some as the fish make their appearance I am on the ground and can be among them in five minutes time, whereas from the multifiel. I prefer stopping at the Intet; when once there I am on the ground and can be among them in five minutes time, whereas from the multifiel sor flood tide. Another consideration is, that should there he no whild to sall after them, you can have fine sport enteining them from the heach Very frequently they come in from sea and only remain for an hour or invo during the flood tide. If not on the spot you miss this fishing. As an example: On my way over on the 21st day of May last year, I was beenlined at the turn of the channel. I could see the guils to the later ur the lighthouse, which haddened the presence of fish. We were detained until near samet, and when I reached the house I found two gentlement from Jersey City with some 1,00 pounds of hinefish taken from the heach and in row boals. As I did not expect to lish on the first day if my arrival I was not much disappointed; still, it was provoking to sit in the boat within half a mile of such sport and not take a hand in it. Houver, we made up for it inc day following, a yest of mile friend catching 87, averaging seven ponnils. If any of your renders are destrons of having a few days of capital sport, engage your yacht, write for information when to start, and on receipt of answer, gn.

MATERIAL FOR FLY RODS—HORNBEAM,

MATERIAL FOR FLY RODS-HORNBEAM

Boston, Mass., May 28th, 1875.

Entron Forest and Stream:—

Hornbeam, Carpinus betulus. Tupello tree. Hy'ssi multiflora (Walker), Called Hornbeam from the extreme longthess of the wood—a tree widely disseminated throughout the New England, Middle, and Southern States, with various synonyms. If a straight grained, well sea-oned piece of this timber is worked properly, and well filled with artist's oil, carefully applied with a soft rag for several times, it will make a very fine classic lip or a complete rod. We know of one that has been used on the Saco, and other rivers of New Humpshire, by one of the oil school of experts, for front a number of years, and is now as good as ever, resisting the heaviest strains required from a rod while front thing. Mr. C. Harding, a former well known artist of Buston, priceived some of the hornbeam wood from Dr. B., a resitent of the White Monntains, and took it to England for manofacture laton a saluran and ity rod. This was probably when there were not as many artists in rod making here as at the present time. The result, however, proved very raitisfactory during the balance of his fishing days, as reported; for if there ever was an untiling disciple of the rid, it was Mr. Burding—sort of Wikind of the North on river, lake, or stream, a perfect terror to vill the sulmo family. You may have heard of blu.

The difficulty is to get the evoid straight grained and properly seasoned for the purpose asked for We have never known hackborn to be used in this branch of the business, but do know that it makes a first-class heige, if kept in order.

GREENHEART FOR RODS

GREENHEART FOR RODS.

New York, June 2d, 1875.

EDITOR FOREST AND STREAM:—

Allow me, through the culumus of your vulnabile paper, to state my ophilou of the material suitable for a fly rod, and hom it should be made, through tend in the business for the last forty years, I have tried all kinds of twood, but have never found out until within the last flue years the wood that will insiver all the requirements that a fly rod is supposed to possess. About five years ago, Mr. Blossom of this city, a thorough angler, brought to my store two swimm rods to be clement and warnished, and I was so thoroughly pleased at finding the u ond so stiff and light, but very powerful, that I asked him what kind of material they were made of, and he told me it was greenheart. I tried everywhere to get some of it, but could not, and flually I sent to Liverpant and had a log shipped to me; but it did not turn out as I expected. It was the dark color and very cross grained. It got to late in the senson to get my more, but in the following year I sent ugain, and told the negerit to be sure and send me light color. It did come, and I have been making runts up to this time, and I can say without fear of criticism that it is the only wood suitable for a rod. Now, for the jointing and mounting of rods; my experience is that the less joints you have in a runt the more strength you get. I have on hand now a sample of rods made all in one piece without spilce or ferrule, for a Mr. Bolmer of this city, to be used on Moosehead Lake, in Maine, a thorough angler, who has lished there for the last fifteen years, and is known by everybody as the "Commodore." He leaves his rods there from season to smasm. It is theory is that ho can kill as large fish with a greenheart rund weighing is, or, all in one piece, as a person cun with a 10 oz, and and languaged fig. or, all in one piece, as a person cun with a 10 oz, and and languaged fig. or, all in one piece, as a person cun with a greenheart rund weighing is one of the rod in the remains with a greenheart rund regishing in the rods are heavy, some f

Matural History.

-The Farmington (fll.) News mentions the capture in that vicinity of a cross of black, gray, and fox squirrel. The legs and belly were black, the back gray, with a regular fux squirrel tail. The most singular thing is, that there never was seen a black squirrel in Illinois, and consequently there is a line of the squirrel of the squirrel of the squirrel in Illinois. quently there is no way of necounting for this cross.

INSTINCT IN THE WOODCOCK .- Mr. Shepherd, of Passaic while walking near that place a few days since with his nephew, nicee and dog as companions, flushed a woodcock, which, after fluttering before them for some distance, rose which, after fluttering before them for some distance, rose in the air, holding a young bird in its claws and tightly to its hody. After flying a hundred yards or so it deposited the young bird by the side of a large stone and fluttered into the brush. The dog remaining on a point, Mr. Shepherd went to the spot, and, being struck by his remarkable firmness, searched in the grass until he found another young woodcock almost under the dog's nose. The old bird fluttered around the purty until the dog turned, when it flew away, ficing rejoined by the young birds when set at liberty.

THE POLICE FISH OF THE OCEAN.

MONROE, Mich., May, 1875.

Monroe, Mich., May, 1875.

Editor Forest and Stream:—

The shipwam, or loredo, is a hivalve shell fish which, as if in revenge for the nuceasing war waged by mankind against its near relative, the oyster, serms to have resulved to extinguish the vitality of as many kuman beings as lies within its power. That power, though exercised by an insignificant shell fish, is a prodigions one; for ever since mankind inrued attention to nanifical affairs and weut "down to the sea in ships" the leredo has uncreasingly endeavored—unfortunately with loo much success—to sink their murine conveyances. Nor have vessels alone have the object of his attacks; for many a goodly dock and pler has it riddled into shreds, not to speak of bolder attempts, such as the endravor to swamp Holland, by destroying the piles of her endkankments. The shipworm is the only mollask that has ever succeeded in frightening politicians, and more than once it has alarmed them effectingly. A centrry and a half ago, indeed, all Europe believed that the United Provinces were doomed to destruction, and that the teredo was sent by God to pull down the crowing arrogence of the Hollanders. In England, although in no danger of being suddenly submerged, as their Douch neighbors might have been, they have suffered seriously in their dock yards and harbors by the operations of the sbipworm, to which the soundest and toughest oak offers no impediment. Our own docks and plars will be and are found to have suffered from the ravages of this destructive little nantical pest. Like most molnesk, the teredo, though fixed when adult, is free in its young state, and consequently is enabled to migrate and attack which must puzzle them greatly). Even lead, and sissor woods, hard as they are, dissolve before it; and though the chemical process of kyanizing Himber successfully defeats the ravages of time, it fails before the voracity of the teredo. By a remarkable instinct the shipworm tunnels in the direction of the grain of the wood, whatever be its position, and then succee

How the cavity in which if lives is excavated, is still a matter of discussion.

There are many shell fish endowed with the instinct to burrow luto wood or clay, or even into slone; and it is not certain whether they do so by mechanical or chemical agencies, or by combination of the action of an anger and a solvent. Many sea snails, as well as bivalve shell fish, have the power to perforate solid substances, and some of the predacions kind exercise this faculty to the detriment of their outer coverings and extracting the juice of their bodies by means of long, soft, and extensile tranks. There is reason to believe that this operation is effected by the silicious teeth, which stud their long, ribbon-shape tongnes. These interascopic teeth are heautiful objects, exhibiting regular and constant shapes; so constant, indeed, that by a mere inspection of the longue of a sen or land snail the naturalist can pronounce to a certainty upon the affinities of the creature to which it belonged. Even its particular genus may be verified, and I am not certain but its very species may be thus distributed of the common limpet a tongne two inches in length may be extracted, armed with no fewer than one two inches in length may be extracted, armed with no fewer than one hundred and fifty or norme bands of denticles, twelve in each row, so that in all it may possess nearly two thousand teeth. The thought particles the substance of the sea went on which it feeds. In some of our garden sings as many as twenty thoughts of the common the control. Wonderful, indeed is this complication of minute organism.

The Rennel.

THE WATERTOWN BENCH SHOW.

The Bench Show of Dogs last week at Watertown, N. Y., in conjunction with the annual State Shoot and Convention, attracted much attention. The number of dags on exhibition was seventy, which was a very fair show considering that the exhibition was for hunting dogs. show considering that the exhibition was for hunting dogs only. The receipts reached several hundred dollars more than enough, we suppose, to defray expenses. The affair was under the immediate supervision of Dr. N. Rowe, "Mohawk," of the Turf, Field and Farm. The judges were E. H. Lathrop, A. B. Lamberton, and John B. Sage, for the setter classes; W. Jarvis, C. H. Raymond, and N. Saltus, for the pointer and spaniel classes, and W. B. Jenkins, Edward Wheeton, and Dr. A. Russell Strachan, for the fox hounds. The following were the entries:

Class 1—Red Trich Setters.—1. Jack, Robert Sullivan, Brooklyn; 2. Bush, Nicholus Sultus, Brooklyn; 3. Brsg, Imported, N. Saltus, Brocklyn; 4. Shunrock, William Jarvis, Claremout, N. H. (5. Duke, A. C. Wudhled, Newton, N. J. (5. Purdy, Henry Shipman, Brooklyn, N. Y.;

Champion Seller—L. Barber, Syracuse, Buff.
Champion Fuppy—A. C. Waddell, Dan
Special Class—Clumber Spaniels.—B. W. Jenkins, Baltimore, Md., Juck and Flax, 25°C ash
Exhibition—G. W. Flower, Watertown, a water spaniel, Beauty, highly commended.

POINTERS vs. SETTERS.

WHITE HOUSE, N. J., May 17th, 1875.

Editor Forest and Stream:—

I notice that nearly all your notes are on the setter and his strain. I cannot think with most of your writers, as I consider the pointer suporior in all cases, andess with rare exceptions, where briars or thorns are too thick, and then if the dog is properly trained and of a pare strain he will go nearly anywhere the setter can get. I do think I have studied the notice of the dog as closely as the next one of my years, and I have owned a number of them of different breeds; but I consider the pointer superior as a bird dig, and if properly handled, of great service for other uses.

[We agree with our correspondent in regard to the usefulness of the pointer in many parts of the country; but from our long experience in shooting in Delaware, Mnryland and Southern New Jersey, where the "cat" brier abounds, the setter is decidedly the most useful deg. We have never owned or met with a floroughbred pointer which would continue to take such cover day after day. By the way, this correspondent has a two year ald pointer, perfectly formed, liver colored, except an breast and fect, which are dotted with white, and a dog that any one would be proud to exhibit in the field or at the kennel.—Ep.]

BELLEFONTAINE, Ohlo, May 31st, 1875.

Bellepontaine, Ohio, May 31st, 1875.

Editor Forest and Stideau:

Mr. John J. Palmer's fine pointer bitch, Fly, dropped, on the 11th instail, eleven jumpies, sirell by a celebrated Euglish pointer owned by George T. Branden of this place. They are very handsomely marked, as well as fine stock. Mr. Palmer is a first-clase shot and always keeps in fine brace of dogs. Ho makes it his business to protect the game and fish laws in every respect.

Our shooting match, which was held at Hunlaville on the 25th and 26th instant, was a success in every way; weather was good, birds fine, and good shooting was done for amateurs. The fishing was splendid this Spring.

From our correspondence with Mr. John J. Palmer we are fully convinced that he may be ranked among the best field sportsmen of our country. No man has been more caroful than he has been in the selection of setters and pointers for his kennel. Wo have selected for him several tine dogs, and there is no doubt but that the pups from his Fly are A No. 1 in all respects.

The Borse and Course.

The American Jockey Club.—One was reminded on Saturday last of the Scriptural objurgation to the lilies of the field, that neither toil nor spin, for verily no flower bed or bank of lilies ever presented a greater variety of colors than did the ladies' stand at our greatest racecourse, Jerome Park. The Solomons were there also; those in fine mineral and decorated with Lake George diamonds, as well as the wiser tribe who made the pool stand their Mecca and laid their slekels on the uncolared horse, Wildidle. A new starter officiated in place of Capl. Conner, who, probably from inexperience, was multie to control impatient jackeys and tractious horses, and left the multitude to indulge in mild profanity. Now, starting horses is one of those things which look so easy, and yet requires the greatest skill and coolness. In England a

professional travels from one ruce inceling to another to officiate in this capacity, and the name of Mr. McGeorgo is as familiar to English turfiles as the anothings themselves. There is no use in denying the fact, we are lamentably behind our consins in the details of racing. Why the very reports of our races are gardbell and inexpressive, rarely giving the name of the jockey or the weight carried by the horse, on both of which so much depends. To be sure there is a weight for age, but penalties are tarely published, and in hamilicaps, after the first list of acceptances, few seem to pay attention to the weights. The first event on Saturday was a dash of three-quarters of a mile, for a purse of \$400, for all ages; entrance 5 per cent, of purse, to go to the second horse, of which the following is a summary:

to go lo the second horse, at which the following is a summary:

D. McDanlel's ch. f. Madge, four years old, by Anstralian, dum Alabana, 105 pounds. Hennessey.

M. H. Sanfaul's b. h. Made, six years old, by Anstralian, dum Mattle Gross, 118 pounds. Hayward...

R. W. Cameron's hr. m. Inspiration, four years old, by Warminster, dam Sophie, 105 pounds. Hughes.

Timo-147;

The following also started:

J. Coffee's br. b. B. F. Carrer, J. S. Callamen's ch. f. Minnle Mc, Robtneon, Morgan & Co.'s b. c. Searcher, 4 Donobae's ch. h. Spin-drift.

Robinson, Mogan & Co.'s h. c. Searcher, A Donobae's ch. h. Spindritt.

Searcher, coming from the South with his lately made record at a mile in 1.41%, was made a favorite, and lots of mency was dropped by his friends. Although getting a good, start, he never showed prominently in the race, Madge having it safe the entire distance.

The next race was the eighth renewal of the Fordham Handicap Sweepstakes, at \$50 cach, half forfeit, only \$10 if declared ont, with \$500 udded; the secund to receive \$200 out of the stakes; closed with fifty three nominations, of which twenty-three declared ont and paid \$10 cach; winners, after publication of weights, of \$1,000 to earry 51b.; of \$2,000, 71b. extra; value of stakes, \$1,780; oue mile and a quarter. The following is the summary:

M. A. Littel's b. k. Wibidde, two years old, by Austrolum, dam billewild, its pounds.

N. Hayward.

J. Donobae's cb. h. Spindfift, aged, by Beanle Scotland, dam by Wagner, 118 pounds.

Chambers.

M. H. Sandford's b. Preakers, aged, by Lexington, dam Bayteaf, 131 pounds, including 5 pounds extra. Hayward.

Time—2:12.

The following also started:

The following also started:
J. Douohue's h. h. Carlbon, R. Cutheart, Jr., h. g. Kadi, A. M. Burton's h. h. Survivor, D. McDunief & Co. 's br. f. Josie H., J. Hunter's b. c. Lelaps, J. Harher & Co. 's ch. f. Australind, J. M. Harney's b. f. Oenge, G. Lungstoff's b. f. Counters, D. J. Bannatyne's h. A. Arda-

Wildidle, a fivo year old, with only 101 lbs. np, was a very good thing for the knowing ones, and the desire to get "on," put him at the top of the list in the mod selling. Running second for most of the distance, he went to the front when given his head, and won easily by two lengths. Preakness, tiring with the weight, could get no better than third, Spindrift landing the "two centuries," to which the second was entitled.

The third race, and most important of the day, was the second renewal of the Withers Stakes for three-year olds, at \$40 each, half forfeit, with \$1,000 added; the second to receive \$200 out of the stakes; closed January 1, 1874, with fifty-seven nominations, two of which were void by death; value of stakes, \$4,400; one mile. The following is a summary:

The following also started:

The following also started:

It. P. McGrath's b. c. Che-speake, T. Puryear & Co.'s h. e. Warrick, Robinson, Morgan & Co.'s h. e. Dob Woolley, D. D. Wilher's b., by Glodiateur, J. F. Cuamherlin's ch. c. Lord Zulland, W. Controlle h. f. Ascension, Doswell & Co.'s h. f. thyolce, J. A. Grinsteni's r. D'Artagan, A. Beimont's imp. h. c. Maiador, D. McDanlet's ch. c. oc Cerns.

In the books opened on this race Aristides had been the In the books opened on this race Arisides had oeen the favorite, at 2 to 1. After an bours' delay at the past the flag dropped to a bad start. At the bluff Arisibles took second place and kept it around the lower turn to the local of the stretch, where Mutador, who had been leading, full back, and the favorite, going on with a clear lead, fluished first by two or three lengths; the others in the order named above.

The mile and a half dash and the selling race were naeventful, and resulted necording to the summary given below: Purse of \$600, for all ages; entrance, 5 per cent. of purse, to go to second horse; three-year-old mainlens allowed three pounds, if four-year-olds or upwards five pounds: one mile and line-quarters.

D. McDanicl's ch. h. Springbok, live years old, by Australian, dant Hester, 114 pounds. Hennessey.

A. O'Donnell's ch. c., Miner, three years old, by Leanington, dann by Lexington, 87 pounds. McCartney.

Robleson, Morgan & Co. 's ch. c. Big Fellow, four years old, by War Dance, dam Fly, 108 pounds. Wilker.

Time—2.12

The following also started:
Sam, J. Sayler's ch. c. Big Sandy, J. Coffee's gr. h. Donnybrook.
Purse of \$500, for all uges; entrance, 5 per cent. of the purse to go to the second horse; the winner, if to be sold for \$1,500, to curry weight for age; if for \$1,000, allowed 5 lb.; if for \$750, 7 lb.; if for \$500, 10 lb.; one mile and a half

Trestandering at the late of the largely attended, were comparatively inneventful. Manige was again a winner, carrying off the \$500 All-aged purse; time, 1:45.

Theo Westehester Cup brought but four to the post, the race being considered a certainty for Ballankeel. He justified the expectation by winning in a canter, doing the wo miles and a quarter in 4:064.

A bail start marred the interest in the Maryland Stakes for three-year old fillies, Mr. Belmout's Olitipa winning in such slow time as to give no indication of her abilities; time of the mile, 1:49.

Springhok and Mate met in the second All-aged race, the former winning handily with only the mild weight of 100 pounds for a five-year old; time of the mile and a half, 2:434.

2:434.
The Grand National Steeplechase wound up the day's sport. Six started, and all managed to go the course without mistake. Diavolo was the winner; no time taken.

Nachting and Boating.

—The New York Yacht Club Regatta will be sailed on Widnesday, Jace 16th, over the usual course with the exception of the following alterations, to which the attention of yacht owners is directed.

Yachts will round broy No. 16 on Southwest Spit, instead of No. 3½, will keep to the southward of largy No. 8½ and ontside of broy No. 5½ on the point of the Hook going and returning. There will be uo stakeboat at the Southwest Spit.

Spit.

Yachts belonging to the club and not in the race are re

Yachts belonging to the club and not in the race are requested to keep to be ward of and behind those engaged in the race, and to be careful not to interfere with them in any way, particularly at the torning points.

There will be four prizes of the value of \$250 each, as follows:—One for first-class schooners—Those measuring 7,000 cubic feet and over; one for second-class schooners—Those measuring 12,000 cubic feet and over; one for second-class schooners—those measuring 2,000 cubic feet and over; one for second-class sloops—Those measuring less than 2,000 cubic feet. The regatta will be sailed according to the sailing regulations of the club, and with time allow-measuring regulations of the club, and with time allow-measuring.

On the same day the club offers a prize of the value of \$250, to be competed for by steam yachts belonging to the club, the course being almost the same as that named for the sailing eraft. They will be restricted to the government allowance of steam, per certificate; to the use of only wood and coal for fuel and to steam power alone for propulsion. The time for starting will be fixed by the Regatta Committee on the morning of the race, and will be so arranged that the steam yachts will not interfere with the sailing yachts.

REGATTA OF THE OFFICE Y YACHT CLUB — The first regat.

REGATA OF THE QUINCY YACHT CLUR.—The first regatta of the Quincy Yacht Club for the season of 1875 came
off ou Saturday last at Quincy Point, Mass.—Two courses
were assigned, one for the first and second class yachts,
and the other for third class yachts. The former was eight
miles and the latter six miles. It is estimated, however,
that in consequence of head winds, the yachts going over
the eight mile course sailed a distance of fourteen miles.
The result was as follows:—

	Awl	nal t	tine.	C01	trecl	Time

There were two prizes—mounted boat compasses—for each class, and winners are indicated by the table of correct time. The judges were Messrs Potter, Souther and Holden. The annual series of races for the club championship between boats in each of the four classes will begin in July, during which mouth also several of the boats will take part in the Isles of Shoals regatta; a grand cruise of the club is also spoken of.

Annual Meetinn of the Boston Yacht Club,—The adjointed annual meeting of the Boston Yacht Club was held Wednesday evening, 26th alt., at the Club House, City Point, South Boston, when the following named gen flemen were elected officers of the club fur the ensuing year: Commodore, Benj. Dean; Vice Commodore, W. H. L. Smith; Rear Commodore, Geo. B. Durfee; Secretary, Thomas Deau; Treasurer, Angus, Russ; Trustees, S. D. Nickerson, Arthur Chency, A. Claxton Carey; Regulta Committee, Coolidge Barnard, F. E. Peabody, Rosene D. Oweus, Clarence Jones, Benj. C. Dean; Measurer, D. J. Lawler.

South Boston Yacht Club.—The regular monthly meeting of the South Boston Yacht Club was beliffed by Mednesday evening, June 2d, at the Club House, City Poiut, South Bostou; Viee Commodore J. A. Woodward in the chair. Mr. Arthur Dean, owner of the Niagara; Mr. William Frizzle, owner of the Ranger, and B. L. M. Tower, owner of the Mystery, were cleeted members of the club. The accessions to the club are good boats. The Niagara is a cal-rigged, centre-board boat, 26 feel water line; the Ranger is a keel schooner 31-4 feet water line; the Ranger is a keel schooner 31-4 feet water line, and the Mystery a cal, 18 feet.

Mr. Peterson, a member of the club, has received his newly purchased boat, the Admiral, cat rigged, 22 feet water line.

The Regutla Committee of the club have decided to have

The Regatla Committee of the club have decided to have the first race on the 10th inst. The general classes are two in number, and the division is made for all boats over 24 feet water line in the division is made for all boats over 24 feet water line in the first and under 24 for the second. These will be sub-divided into keels and centre-boards, with prizes for each. The first class will be restricted to working sails and not allowed to shift ballast. The second-class are not 10 be restricted in these matters.

The club is not now a chartered institution, but arrangements are being made to take advantage of the recent act of the Legislature and scentre a charter.

Messrs, Frank and Wm. Whittaker have remodelled their pleasure stemmer, fitted her with new machinery and propeller, and have added her to the flert.

Sours Boston, June 5th, 1876

EDITION FOREST AND STREAM:—
All the yacht buddlers of South Boaton are quite Lusy just new
Pierce Brothers are putting the Miduel in racing from, and the Lurdeys
are doing the want for the Vidosus. The schouner Rimmuce is at Ribbor's, and is bring thoroughly overlauted. Her masts have been short-

ened about three feet. I see that the Niagara has foined the South Bostoh Club. She is a valuable acquisition—She was built by the former owner of the Riptle, and util probably take part in the South Buston Club Begatta, which romes off on the 10th of Juno. By the way, it is expected that this will be one of the most interesting races the club has ever held, especially the contest among the first-class bonts, which are allowed to use working sails only.

READY ADDIT.

THE SCHUYLKILL NAVY REGATTA

The following are the entries for the Schuylkill Navy gatta, open to all amateurs, which takes place June 16th and 171k, 1875:

regatta, open to all amateurs, which takes place Jane 16th and 17th, 1875:

possible, when and where their boats will arrive, so that they may be
properly housed and cared for J. Gillisghim, Secretary.

BALTIMONE, Md., June 7th, 1875.

BALTIMONE, Md., June 7th, 1875.

The Schuytkill Navy crew arrived here on Sahurday and have been improving the time in practice on the course. The weather has been very bail, and the water rough until the creating. The Patapace crew are somewhat heavier this season than last.

SUIGLS.

—In the race between the picked arews of the Schuylkill and Patapsco navies of Baltimore on Thesday, the Schuylkill crew won with case in 13 min. 533 sec. Distance, two miles. The race between the home crews for the championship unfortunately resulted in a fonl.

REGATTA ON THE SCHUYLAIL.—The annual regatta of the Vesper Boat Club, which took place Saturday upon the Schuylkill, proved a decided success. It was rowed over the national course, from the Falls Bridge to Rockland, and the banks on either side of the river were lined with spectalors, in carriages, ahorse and afoot.

The first race was for single scalls, prize, a club cup. Competitors, Vim, Will. J. Kerr; Vision, Will. W. Maris; Vox, Will. T. McNeely. Distance, one mile and a half. The shells gol away well together shortly after 5 P. M.; but Kerr and Maris soon fonled, and consequently McNeely obtained a fair lead he never relinquished. He won the race in twelve minutes and thirty-four seconds, Kerr being second.

The second race was for double scall girs.

Neely obtained a lair lead he never lengthshed. He won the race in twelve minntes and thirty four seconds, Kerr being second.

The second race was for double seull gigs; prize, a club cup. The contestants were: Vivandicie, Howard Mirphy, stroke; J. DeF. Junkin, bow; coxswain, C. McCord; Vamos, Alonzo Parsons, stroke; Elias Hauson, how; coxswain, Thomas fludson. Off Peters' Island the Vamos were fully nine lengths ahead, and they maintied this position to the gool. Time—Vamos, 13 minutes, 15 seconds; Vivandicre, 13 minutes 44 seconds.

The third race was the finest and certainly the most exciting. It was for the champion fours of the club, and was contested by the crews of the Viper and the Vambal. The first mentioned crew comprised Theo. Vogel, stroke; C. F. Godshal, A. E. Abbott, J. B. Mingus, how. The latter, H. W. Peacoek, stroke; W. T. Corson, T. B. Evans, Harry McMillan, and W. J. Kerr, coxswain. The bow of the Viper steered that shell. A capital start was effected, the Vipers gliding quickly in advance of their foes, but steering so frightfully with that they hast several lengths, and came very near fouling several times. It was not until half the course was covered, however, that they and has managed to get on even terms with their opponents; but when they did, they held their position sturdily, and it was a bow and bow race down the home stretch. The Vandal's bow finally pointed her nose honce, victress by one second. Time—Vandal, 10 minutes and 27 seconds; Viper, 10 minutes and 28 seconds. Unipire—E. E. Griffith. Judge—A. J. Marphy. Timekeeper—Samuel 11. Kneass.

—Tho young men of Wilmington, North Carolina, are

-The young men of Wilmington, North Carolina, are about to organize a rowing club.

The Colleges.

University of Pennsylvania, June 7th, 1875.

Editor Forest and Streau:

We have learned since our last that the reason the University was not represented at the last Saraloga convention was not due solely to the defiguate's invitages. As has been automated, the Schotykill Navy hold their automit regular June told and told. The college local chib will unler a crew for the four-mared shell nucle to be scheeded from the following gentlemen:

W. B. Athicks, '74; Samort T. Kerr, '75; Calhoom Megarger, '75; W. W. Purter, '75; Eugene Townsend, medical department. The crew in all probability will be Addicks, stroke; Morrison, 2; Porter or Kerr, 3; Townsend, bow. The boot to be used will be one nor being built by Fearron, of Yonkers. But to quit the physical and lurn to the incollal, from branen to brain, from the chase of examinations for degrees [May 2981] up to Commencement day (June 24th.) '75 has built leisure to reclibe in their Alum Mater's lap, and deck her with the chalces! Howers of their fancy, and this they have done by celebrating the time-homored events of rines and vivy days. Upon the first occasion all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the History; all that they had acted was see forth by Mr. R. B. Morris in the Insert. Quantity of the devision of time can only serve to nonicish.

shoat marks the stern emal, and rocks, where sits the syren, who, like analytion, lives men to their ruin.

II.ARVARD UNIVERSITY, June 27th, 1875.

EDITOR FOREST AND STREAM:—

The foolball under between throward and Tufts came off yesterday afternoon. Both elevens played very well; and Harvard was declared defented. The rules were somewhat like the McGill rules, but with sufficient difference to reader the practice Harvard had lad under these rules of hittle account. To an ontsider, Ifurvard scened to have not the slightest chance of winning, as her men were all of light weight, from one hundred and twenty to one hundred and fifty-five pounds; while Tufts brought ont men most of whom would weigh one hundred and fifty at least and one hundred and eighty at most. She had but one man who was very light, and two who were considered as about first-class runders—one made the 100 yds. dash in 104 seconds, and all were in good training. When the play commenced the superior manner in which 'Infits backed her own with her own was noticeable, while Harvard was much the quicker. The unipies were Prof. Pilman, for Tafis, and Mr. Whiting, for Harvard. Prof. Pilman learned the game while in a foreign university, and has trained his men in all the line mints. He seemed bound to have 'Tufts win, and, as Mr. Whiting scenned to be overawed by his colleague, gave all the donotful points to Tufts.

The clevens consisted of Aldrich, Benoch, Brown, Camp.

and has franced his brea he all the flow points. He scenned bound to have Trits win, and, as Mr. Whiting scenned to be overawed by his colleague, gave all the donotful points to Tufts.

The clevens consisted of Abdrich, Bennch, Brown, Camphell, Dwinnel, Fletcher, Gernec, Hendle, Harrington, Perry, and Whitchend on the Tufts cleven; Ellis, Fencan, Cray, Frebble, Culo, Cushing, Leeds, Leamans, TriEmy, Thomas, and Lombard for Harvard. The test plays were made by Harrington and Dwinnel, with Prol. Primm the back them on the Talls tean; while Thomas made some prely good spurts for Harvard, and Lombard forest some prely good spurts for Harvard, and Lombard frew several men in a very pretty manner.

The maces at the Union Boal House on Manday afternoon were quite good. For the single scull race Mr. Wiley, '77, took his own time, and came back in 15 minutes 58 seconds. Mr Mulge was to have contested in this race, but at the last moment found that the stretcher in the boat be was to use was too short. The four onred mee was between the Union Boat Club, with Williams, stroke; Morse, 2; Stevens, 3; Endon, bow; a crew consisting of Loring, '78, stroke; Barcan, '76, 2; Taylor, '77, 3; Morgau, '78, bow; and a crew from the Scientific School, with Otis, stroke; James, 2; Thayer, 3; Yzangu, how. Loring's crew casily came in ahead in 14 minutes 15 seconds. The prizes were handsonae silver cups.

The Freshmen of Yale and Hurvard played the first match of their series here lo-day, with a score of 6 to 3 in Harvard's favor. The jahying was very good on both sides, and the druble plays of Richards, (ceutre held,) and Thayer, (second buse,) and of Holmes, (catcher,) with Thuyer, were piays which Harvard Freshmen should be proud of, he the game with Brown yesterday Holmes had a blow in the right eye from a foul tip which knocked him alown, and remired his playing—for he commenced again after ten minutes—during the rest of the game withole him hown, and remired his playing—for he commenced again after ten minutes—form and ulthrough th

Western Scientific Expeditions.—Dr. Powell and Licht. Wheeler are making preparations for their respective expeditions to the Western Territories this Summer. Both the expeditions expected to start about the first of June, and some of them will be in the field by the middle of June. Licht. Wheeler will send a small party of naturalists to the Pacific coast and some to the Pacific islands. The latter are a computatively unexplored field.

-Drawning casualties of the most painful nature, notably at Detroit, Michigan; Arlington, Massachusetts, and Parrishoro, Nava Scotia, unve characterized the opening of the yachting senson.

Bational Pastimes.

CRICKET TOURNAMENT IN SEPTEMBER.—This will be a return fourney for the Halifax Tournament of last year, in which the Philadelphia twelve came off champions, and will undoubtedly be the event of the Philadelphia vricket senson. Arrangements are already as train to reader this affair more attractive than any of the cricket fetes herefore held at the Germantown grounds. The re-appointment of the same committee who so successfully managed the International Tournament of 1863 and 1872, is a guarantee that the arrangements will be properly conflucted. Late advices from the captain of the Garrison team at Halifax, states that the English officers are keen to visit Philadelphia, and are already training for the contest; and the Canadians expect to send a stronger representative twelve than have ever before played together. The Spring cricket fete will be omitted this year, the usual interest in that event being merged in the Fall tournament.

—The Peniusular cleven of Detroit played eighteen se-

The Peninsular cleven of Detroit played eighteen selected men from different parts of Michigan on the 31st ult., the Peninsulars winning by a score of 208 to 75. We are indebted to Mr. Calveri, Secretary of the Detroit club for a full report, which we regret a want of space prevents our publishing in full.

BASE BALL-PROFESSIONAL GAMES

The events of the past week in the professional area have been the defeat of the Red Stocking champions in St. Louis, and the whippings the New York Mutnats have received in Chicago at the hamls of the White Stockings. Bostons defeat resulted chiefly from the fact of White's being disabled, the Brown's also playing a very fine up hilt game on the occasion. But in the first match, when White played the Red's beat the Brown's 10 to 3, and in the third game when he resumed his place, they beat them 15 to 2. This tells a story worth recording. The St. Louis nine, however, are entitled to the credit of being the first to defeat the champions in 1875, and that too, after Ferguson's Hartford toam had faded to do it. There now remains only the Chicago chtb as opponents likely to trouble the Reds. The following games have been played since our last:—

A SUMMER IN NORWAY-Illustrated. Janson McClung

A SUMMER IN NORWAY—Illustrated. Janson McClung & Co., of Chleagu, are getting out a bonk a ritten by Hon. J. D. Caton, of Illinois, entitled "A Summer in Norway," of which are have some proof sheets giving an account of the eider duck, and of the senery on the Norwegian coast in the Arctic circle, which may interest our readers. The book will be out early his month. Wo quote:

"The next murning, when I went on deck, we were gliding swiftly along the still readers between the letands. The tslands were more precipiture, the birtle shimbbry not su abundant, and the interestex along lite shares less. Still we were rarely out of slight of a fisherman's mid, and frequently clusters of thom, where the ground would induit; sometimes two or three of these little settlements round he on the same belond and quite near together, with no roadinay between them, then may interested that each menther of a family can pull an our or set a sail skillfully and is quite as much at home upon the twater as upon the land.

It was very rare we near out of slight of disheumen engaged at their work, although they seemed more generally in sailed the night, or the hours which are night in other countries, rather than the day, because the first health on the fish know the difference.

Now the snow vorcered the tops of all the mountain islands, and in protected places extended to the very edge of the numbers. The finning riviers down the mountain sides showed that the suow was fast melting inder the influence of a pergennal sun.

The riviets looked the subset furgeds against the dark background of

hours article are night in allier committee, father sum are any according to the thing the dash bits the best, things I am at a loss to determine hour the dash know the difference.

Now the snow powered the topic of all the mountain islands, and in protected places extended to the very rigo of the neutres. The fluaring remises down the mountain sides showed that the anow was fast melting mader the indistrace of a perpetual sun.

The rivulets looked that the silver fureads against the dark background of the smooth and almost vertical rock, in the face of which they have worn for themselves hille channels which concentrate the neutres. Sometimes many of these where the tream, which oftenthuses makes a sleer leap of two raw hundred feet, the light apray awaing in the rained the river the probability of the print of the print will be the brilled veil in the Yos-entite Valley. In one place, this slay, we control trends you for for an individual rock, which rose almost vertically from the waters of the food many hundreds of feet high, and about half a mile long.

It is impart middled in the Arclic circle in the Sammer time that the riched scenes of light and shade are presented to the travelor among the Islands on the Norwecian coast. Objects are then presented as in the shifting scenes at a moving panorania.

Sometimes he arest the sleens in the glittering snow on the distant mountain top as the bright laws of the sna are reflected back in governisplentor, some portions much ligher than others. Presently an intervining Island shate out the view, and then again a differention is opened in his slight. Before thin be think sees she brightness diving our by his chanced position, till a souther shade seems to settle durin mountain to as they are protected by stringer and diffuses best over a fails while and is seed to the control of a globule for nice burst for a control of the stranger of the stranger of the steamer aliams them, and they gly a virgin intipatives, which lights up all while and in the bright stranger of t

vigor, and, when hard pressed, dive and swim some distance unitrivator.

The cider duck, which the Norrecgians call eider-fugi, abounds on both sides of Finnark, being as abundant in the Varauger Fjord as on the usest coast and in the Loffodous. It is at home also in Greenhand, terland, and Spiribergee, and the other islands in the Arctic Sens, but the great aller of its skins has offered such indocement for its pursuit that it is sensibly dimmished in numbers where not rigidly protected by law, and I may add, by public oplaion.

Although importly ranked as an Arctic fowl, it is not strictly so. Though feeland and Southern Greenland are briow the Arctic ricle, yet, is we have seen, they must be included in its babitat, and if was formerly found even south of Trouditiem, and perhaps now and then a stray one may yet he seen still farflier south. But south of that point it is beyond the profection of the law, while north of that laining the penalty for killing an eider duck at my time is one specie dollar. It is only when we remember that a little money gues m great may there that we can understand bour tills is an adequate protection.

The islands where these lards bread are called by the Norweglans fugile vary, or bird Islands. I saw mone of the king cider (Sonnateria speciabilis), which is soil to be smaller and much more beautiful in its cotorings than the rider linck, but I obtained a robe composed or both skins of the king riller. From these skins the feathers are all plucked, leaving mily the very lack coar of down, except where a part of the feathers are left to show the more brantiful markings."

Answers Co Correspondents.

J. W. G., Plitsburgh. - Where can squirrels be shot in the State of Ohio? Ans Ashlabula county is a good locality.

J. H. R. - The manufacturer of the Boarden jack lamp maintains that it fills errery requisite for a boat light in speading. Address White Manufacturing Co., Bringeport, Cenu.

A. B. H., Montreal. - In reply to your luquity regarding pocket filters, we have hearned that H. A. Hall, corner of Federal and Franklin streets, Rostou, Mass., has them for sale; price \$1.00.

M. B. L., New Orleans. - Please tell me where and all what price I could practure a chart of Chirilotte Harbor. Fla.? Ans Address Br. Charles J. Kenworthy, of Jacksonvilly, Fla., who will produce our for you.

J 1... Cambridge.—Will you be kind enough to print a receipt for naking: a first-class article of bird lime and obligh? Ann. The best bird line is said to be made of imported lineed oil, boiled unfil it attains the onsistency of molasses candy.

C. C. S., Boston.—Can you tell me whether the cells an oviparons or a viparons dish? In Wallon's "Complete Angler" (chap. 13, page 345) are appears to be a difference of opinion. Ans. See Forest and track June 3d, page 261—the preceding issue.

TREMAN JONE 3d, page 261—the preceding issue.

TREMAN, Lost Creek, Wis.—I wish fo purchase a good, first-class, breech loading rifle with modern improvements, soon. Whese make would you recommend? Ans. See our advertising columns; one that would jumbably suit you for sale at this office.

ALBERT, Norfolk, Va.—Picase beform me if "Birds of North America," for sale by you, has colored plates, and if the three volumes include both land and water birds? Ans. Land birds only; game birds, soog birds, and rapidores. Platts not colored; but can obtain them for you. Price \$30; worth the money.

J. H., Boston.—What is the best work on training dogs, and whetles the price? Is three such a breed of setters as the Thompson, and whence originated it? Ans. The best work out is "Dinks, thicknisson and Mayrive". Can send a copy; price \$3. There is no such strain of setters.

W. H. B., Wilmington, N. C.—We wish to get up a rowing club here. Will you send us circulars antipuicalist of sulfathe boals? Ans. Address Stephen Roberts, No. 398 South street, N. Y.; Thus, Fearon, Yonkers, N. Y.; C. B. Elliotf, Greeopoint, N. Y., or Win. Blaker, Cambridge, Mass.

J. C. B., Troy, N. Y.—Picase inform me whether there is any book.

Mass.

J. C. B., Troy, N. Y.—Pirase inform me whether there is any book unbinshed which is calculated to teach the theory of riding horseback? Ans. Trof. Field and Farm have been publishing a series of arileles on filled the "De linesigny School," which we believe are to be published in book form. Address them at No. 37 Park Row.

Sener Conv.—What is your remedy against poultry killing on the part of a dog? It is foul play, disgraceful to so intelligent an animal. I have a setter jump nine months old so addicted. Ans. A three-fine ranchide judiciously applied is an effectual remedy. An old friend—Dr. Coleman, of Trenton, N. J.—need to say: "If a setter or pointer pup will not kill chickens be will never amount to much."

Garnous, St. Louis.—Lum about ordering a fine breech loader, and

ranhide judicionity applied is an effectual remedy. An old friend—Dr. Colmun, of Trenton, N. J.—need to say: "If a setter or pointer pup will not kill chickens be will never amount to much."

Gordon, Si. Louis —I um about ordering a fine breech loader, and vouid like to have your opinion as to which is the best material for the barrels, Damascus on laminated steel? What is about the correct weight for a lo bore; also a 12 bore? Ans. Laminated stred we consider the barrels, Damascus on laminated steel? What is about the correct weight for a lo bore; also a 12 bore? Ans. Laminated stred we consider the best material for gun barrels. For a 10 gauge gun, about \$\frac{1}{2}\$ or \$\frac{1}{2}\$ pounds.

Nat, Beintlagton, Vt.—Will you inform me if there is any law against using coemins indenes for stapefying fish, and the lest manner of using it, amit the best place to purchase a large scoop net? Aus. Your lefter indicates a strange ignorance of the game purfective larva and the object of them. The using of coemins is a serious affence. Call on Henry A. Itarman, Swerctary of the Benniogton Club, and join that association.

L., New York.—Are fhere any regulations for platel shooting: if so, what is the distance for target practice, what the size of target, rules of seeding. &c? Is there, or has fhere been in this country, any piteld association after the fashion of the Riko Association? Ans. The unswer to all your questions is a negative. We is could refer you; however, to Mr. J. S. Coulin, No. 808 Broadway, for further intermation.

J. S., Grass Valley, Cal.—Will you inform me if the limproved Winchester riff is an accurate riffe, and if if has schieved any good target shooting, and about its incriis generally? Which is the most reliable breech loading riffe now made for correctness? Ans. For your country the improved Winchester is an excellent arm. Where long range shooting is desired, say up to 1,000 yards, no ivould suggest fue lemington, Sharps, or Whuney.

J. S. N., Temlon, Ont.—Would you inform me in what may I co

supply the volumes you desire; price \$1 each, bound.

F. W. G., Erir, Pa.—I bave a spaniol puppy about nine mouths old. He had the distemper hadly in February. Since recovering, his left side has been very weak, with twitching about the shoulder. For some time he han no control whatever over his left side, but has now gained a good deal of strength. He eats well; have tried bromide of potassium. Can you inform me of a remedy? Ans We have scurcely ever known a dog afflicted as yours is, of chorea, to entirely recover. We have no knowledge of any remedy for that disease. Sometimes young dogs partially recover and became useful.

C. B., Cleveland.—Some time ago I saw an edition of a work entified "Zunlogy of New York," published by D. Appletum & Co., 1813 (by De Kay), the same profusely illustrated with colored engravings. Can you tell me whether or not I can get it and the price; if not, what other work is there relating exclusively to American Zonlogy fully libratized, and what is its price? Any DeKay's Nahral History of the State of New York was published by the State. Copies of the Zoology can be had from Myestes, Legatt Bros., No. 3 Brekman sfreef. Price, with colored plates, \$15; plain, \$3.50 to \$5 per volume.

MULDOWN—In a game of base buil played at Athona, Pa., on May 22d, tells bull year attack, and hatsman ran to, first here. In attamuting to

colored plates, \$15; plain, \$3.50 to \$5 per volume.

MULDOUN—In a game of base bull played at Attoona, Pa., on May 22d, a tair bad was attrack and hatsman ran to first hase. In attempting to put him out, the fielder overthraw that base, and the runner started for second base, after having hesitated at first, but was flually cought between these bases and put out, making the third hand out on the side. Byfore he was put out, however, and while running between first and secund, a man who had been on third base came home. Should the latter run home counit. Ans. The run counis if the home hase was touched before the third player was put out. See Rule VI, Sec. 7, Dr Witt's Base Ball Guide.

before the third player was put out. See Rule VI, Sec. 7, DrWitt's Base Ball Guide.

D. L. B., Bald Mountain, N. Y.—What has become of, or what is the matter with, Chas. Snydam, who published "Fur, Fin and Frather," at 61 Warren street? On April 5th I sent blim fifty cents for a copy of the above publication, which I urver received. He we written him three nimes since about it, but can get no reply. Directed once to the above number and street, and twice to 140 Chambers street. Ams. Address 61 Warren or 188 Chumbiers. Do your know of any book culted "Wild Spurts of Southern Africa," the Young Cant. Wm. C. Harris (British)? Ans "Published in London in 1852; handsomely illustrated. Can be had of Messrs. Scribner, Wilford & Armstrong, No. 731 Broadway; price \$5.

H. R. C., Buston.—At what age should I put a setter dog into the hands of a trainer? What is your opinion as fo the Gildiersteeve strain? Who would you recommend as a responsible and thorough trainer in the within of Boston? Ans. let. When a breaker takes a pup to break it is best fhat the dog should be old chough to stand several hour's work in the field, say from seven to turde months old; yet we have seen pups at six mouths old do protty good work on game; and then again, some dogs may be well broken after they are affreen or eighteen months old. One of the heat pointers we ever saw never had any breaking on a bird shot to him before he was two years old. In our opinion there is no better strain of setters than the Gildresleeve extant. 34, We have no ampaintance with any breaker in the vicinity of Boston.

**Efficiency of the heat pointers we ever saw never had one of the retain of setters than the Gildresleeve extant. 34, We have no ampaintance with any breaker in the vicinity of Boston.

GROUSE VERSUS GRASSHOPPERS

A LETTER from Delphos, Kansas, bewails the hard times and the destitution and distress caused by the grasshoppers. This latter sconge followed a severe Winter, which almost annihilated the game in some sections. Our informant says:

"It will take at least three years before we can have as good quail shooting here as we had last Fall. Out of two bevies of quail that I have fed all Winter I have only eight left. The balance were shot by people passing or were Irozen to death."

Another correspondent, writing from Fort Scott, informs us that the Legislature of Kansas has passed a bill making it a penalty to kill grouse between Murch 1st and October 1st, but leaves any person at liberty to trap them on their own premises between October 1st and March 1st, thus discriminating against the only friend of the grouse—the sportsman. Our correspondent writes that shooting will soon be very dry work in Kansas, and suggests that the only means of relief is legislative enactment making it a misdemeanor to ship birds out of the State, thereby depriving not burniers and transparent of the state. ing pot-hunters and trappers of their market. Certainly some mode of relief is required, and that right soon. One would imagine that after the recent visitation of grasshoppers with which Kansas and others of the Western States have been afflicted any, measure looking to even an amelioration of the evil would be readily adopted. And yet the people do not seem to recognize the fact that their prairie chickens can be made the means of escape from a portion at least of the trouble. A correspondent of the Fort Scott Monitor, who appears to have given the subject much attention, asserts that each full grown "chicken" will devour half a gallon of grasshoppers per week, and a quail half the quantity. Further, that during the last Winter the State of Kansas exported 20,000,000 of grouse and quail that had been trapped; and we have before called attention to the fact that hundreds of barrels were being shipped from this port to England even after the commencement of the close season. These 20,000,000 birds would have con-sumed 60,000,000 gallons of young grasshoppers, besides an immense number of eggs, during the time the grass-

hoppers remain on or near the ground when latelied.

In 1870 and the succeeding year certain counties in Southern California were visited by grasshoppers in the same myriads as more recently have preyed upon portions of the West, but with this difference, that in California instead of being scattered over a wide expanse of country they appeared to be moving in a compact body, turning neither to the right nor to the left. Half a vineyard, a nursery of fruit trees, or a field of grain would be devoured and the other hall remain uninjured. Many of the viniculturists assembled their full strength of Chinamen, Indians, or Mexicans, armed with long poles, and working upon them from the windward, literally thrashed the grasshoppers from among the vines, and by the aid of large brush fires sneceeded in turning the column. It was no ticed at the time the avidity with which domestic fowls but more particularly turkeys, pursued and ate them, and the expediency of raising turkeys in large numbers for this purpose was seriously discussed. The succeeding year some damage was done by the hatching of the eggs deposited en route, but ou the third they had totally disappeared. The natives of the district aver that about once in eighteen years they are visited in the same manner.

We have read of the grasshoppers being so abundant in the West during the past year as to stop railroad trains by the accumulation of their greasy bodies on the rails. The writer was once ascending the upper Yang Tsze Kiang when the steamer was compelled to stop for a hour owing to the immense cloud of grasshoppers that was crossing the river. In inconceivable myriads they filled the air, their white wings looking like flakes of snow in the heavi-Objects a boat's length ahead were entirely obscured, and the decks were so covered with them as to make walking almost impossible. Across the fairest por-tion of the province of Nganhwui, the province of peace and plenty, they took their course, and into Kiangsi, derouring the young rice fields, and leaving famine and devastation in their wake. The Chinaman lacks the energy to compete with misfortune like this, and attributing all to the spirit of evil, burns his fire-erackers and joss-stick and chin-chins until the mischief is accomplished.

-As we go to press the National Sportsmen's Association is in convention at Cleveland, Ohio. Mr. Charles Hal-lock, editor in chief of this paper, is in attendance as chairman of the delegation from the State of New York. The Sportsmen's Association of Ohio is also holding its an-

nual convention at the same place.

The National Association was convened on Thesday evening at the Brainerd Opera House. The attendance was not large, many delegates not having yet arrived. A. T. Brinsmade, President of the association, delivered the opening address, welcoming the delegates and congatulating the association on its growth and strength. An interesting paper by Dr. Garlick, of Cleveland, on "Hybridizing in Fish Culture," and one by Mr. Hullock, editor of Forest and Stream, on "Unclean Creatures," were read. Mr. Hallock claimed that nearly all game and fish when out of season is unwholesome and unfit to cat, and therefore uu-

-Through the courtesy of the "Central New York Sportsmen's Club," of Utica, we were last week made an honorary member of that club, at the instance of the Hon. honorary member of that club, at the thousand herewith beg to Chas. W. Hutchinson, its President, and herewith beg to chas. W. Hutchinson, its President, and herewith beg to render our acknowledgment of the compliment and our carnest desire for the continued prosperity of this very useful aml influential body.

-Mr. Wulter M. Brackett has on exhibition at his studio, in Boston, for a Iew days, a new series of salmon pictures, duplicates of the "Rise, Leap, Struggle and Lunded." They have been visited by hundreds, and greatly admired. The artist has promised to send them to Chicago for the In the artist has promised to send them to Chicago for the Iorthcoming art exposition, which is to take place in September, and will arrange with Snedicor, of this city, to take them some time in the Fall for view in his Fifth avenue gallery.

-Mr. E. II. Crane, of Grand Rapids, Michigan, is the embalmer and taxidermist, and not E. H. Cram, as our printers spelled his name last week, although he does stuff

-A letter from an officer of the Rhode Island State Association for the Protection of Game, dated at Providence,

sociation for the Protection of Game, dated at Trovidence, says:

"There is not much activity in our association in Rhode Island at present. We have open rooms, however, with a library and the periodicula on file, and told an informal meeting every Wednesday evening. There have been one or two prosecutions for violation of the game laws, and, upon the whole, the influence of the association is left beneficially.

F. H. H."

STATE SPORTSMEN'S CONVENTION.

HIGH TIMES AT WATERTOWN—GAME AND FISH—PIGEONS, Dogs and Men-The Press and THE CROWD

MOSE who attended the Annual Convention of the New York State Association for the Fish and Game" last week, will never regret that the occasion gave them the opportunity to visit the charming rural city of Watertown, with its shaded streets, its winding river, clegant residences, and general air of comfort, competence, and refinement. To metropolitan residents, the locality selected for the convention, with all the green and freshness of its vernal verdire, was vastly more grateful than if it had been a populous city emulous of the capital. Besides, it offered advantages for the satisfactory disposition of the rifle and pistol ranges, pigeon traps and ecops, stands for fly-easting, quarters for press reporters, kennels for the dogs on exhibition, booths and private tents, standing ground for vehicles, and elbow room generally, such as are seldom available on occasions and festivals of this standard of the property of the prope character. The dogs were kenuelled in the horse sheds of the River Park Race Track; the pigeon shooters took position within the course; and eleven immense coops of pigeons were set quietly apart, down by the river side, pigeons were set quietly apart, down by the river side, where the birds might be free from molestation and fright; the fly easters had a pier built out into the river, expressly for their use; the riflemen had a natural sand bank to drop their balls into; the shelter of trees, tents, and sheds, from sun or rain, was sufficient; refreshments were abundant and well chosen, and the committees of arrangements competent and courteous. The multitude in town was large, but well provided for by the several comfortable hotels, at which something like six hundred persons must have been quartered, the majority being delegates and contribu-tors to the Bench Show of Dogs. That so large a number of gentlemen of wealth, influence, and social position, as many of these were known to be, should gather here, is evidence of the rapidly growing interest in field sports and in the protection of our game and fish, and an carnest of future success in the efforts now being made to secure suitable protective laws.

The whole arrangements were in charge of the Jefferson Sportsmen's Club of Watertown, of which the following are the officers:-

President, Dr. E. L. Sargent; Vice President, Edwin C. White; Secre-ry, Charles R. Skinner; Tressurer, E. A. Andrews; Board of Managers, F. Porter, W. D. Wilson, Charles Weidner, George W. Wiggins, Dr.

The officers of the State Association, under whose auspiecs the annual convention and its business were condueted, were:-

President, G. W. Ftower, Watertown; First Vice President, Linus J. Peck, Lockport; Second Vice President, N. W. Nuthing, Oswego; Recording Secretary, John B. Sage, Buffalo; Corresponding Secretary, Charles R. Skinner, Watertown; Treasurer, S. M. Spencer, Rochiester, Standing Committee, Charles Borgess, Lockport; Rudson C. Tanner Oswego; James Manning, Syracuse; William Bowman, Rochester; W. J. Babcock, Rochester.

The week's proceedings were opened by a business meeting on Monday night, held at Washington Hall, when President Flower welcomed the delegates in a neatly turned and appropriate address, which we regret we cannot print for luck of space. When the roll of delegates was called, it was found that the following twenty-nine clubs re-

Was found that the following twenty-nine erans reponded:

Although Rife and Sportsmen's Clab, Albion, four delegates.
Andy bon Clab, Buffalo, five delegates.
Central Clay Sportsmen's Clab, Syrachse, twelve delegates.
Dean Richmond Clab, Batavla, dve delegates.
Forester Clab, Buffalo, etven delugates.
Genesse Sportsmen's Clab, Londequoit, five delegates.
Jordan Sportsmen's Clab, Watertown, five delegates.
Jordan Sportsmen's Clab, Watertown, five delegates.
Leather Stocking Club, Oswego, five delegates.
Leather Stocking Club, Oswego, five delegates.
Leather Stocking Club, Oswego, five delegates.
Leather Stocking Club, Conceco, five delegates.
Livingston County Club, Geneeco, five delegates.
Madison County Club, Morrisville, five delegates.
Monroe County Club, Morrisville, five delegates.
Monroe County Club, Rocbester, five driegates.
Mad River Sportsmen's Club, Camden, five delegates.
New York Cratral Sportsmen's Club, Utica, six fielegates.
Niagars Falls Shooting Club, Niagara Falls, tive delegates.
Phoriax Sportsmen's Club, Scancea Falls, six delegates.
Phoriax Sportsmen's Club, Skanceateles, five delegates.
Skancealeles Sportsmen's Club, Skanceateles, five delegates.
Field and Forcet Club, Watertown, five delegates.
Riverside Shooting Club, Buffalo, one delegates.
State Park Club, Watertown, five delegates.
State Park Club, Watertown, five delegates.
Tloga County Club of Owego, one delegate.
St. Lawrence County Sportsmen's Association of Little Falls, three delegates.
Herkimer County Sportsmen's Association of Little Falls, three delegates. tlerkimer County Sportsmen's Association of Little Falts, three dele-

dirondack Club of Adams, eleven delegates. ansyltle Sportsmen's Association, Dansyllle, five delegate

Fowler, Westchester; H. V. Perry, Chautanqua; John Williamson and Mr. Wilbur, New York; A. H. Fowler, of Tompkins. The eight last named are new clubs.

Tompkins. The eight last named are new clubs.

Mr. S. M. Spencer, State Treasurer, reported as money on hand at this date, \$872.40. Besides this there had been received \$350, making in all now in the treasury, \$1,222.40.

President Flower explained that \$50 had been paid to an informant who had procured the conviction of a Big Woods pot hunter.

Dr. Rowe moved that Messrs. Wheeten and Jenkins, of the State Association for the Protection of Fish and Game, of Maryland, be invited to scats in the convention. Carried.

The President announced Messrs. Silver & Flock of

Carried.
The President announced Messrs. Silsby & Klock as Captains of the State Shoot.
Mr. Babcock moved that the Association's offer of a reward of \$50 be continued, but subsequently withdrew his motion.

ward of \$50 be continued, but subsequently withdrew his motion.

President Sargent, of the Jefferson Club, invited the delegates to the club rooms below, and the convention adjourned to a hountiful repost that had been provided for them.

TUESDAY'S PHOCERDINGS.

The delegates assembled on the grounds this morning, and sides were chosen for the State Trap Shoot, by F. Klock and H. Silsby, Shooting commenced promptly.

STATE THAP SHOOT.

BUSINESS MEETING.

At 8 o'eloek the convention assembled at Washington Hall and proceeded to business.

The D. S. M. Band was present and favored the audience with several fine selections.

NATIONAL DELEGATES

Linns J. Peck, of Lockport, moved that the convention send five delegates to the National Convention at Cleveland, Ohio, to be appointed by a committee named by the Chair for that purpose. Carried.

The Chair named as such committee L. J. Peck, Lockport; G. B. Church, Albion; W. F. Porter, Watertown.

Mayor Hutchinsou, of Utica, moved that the delegates have power of substitution. Carried.

The following gentlemen were sppointed:—Charles Haltock, of New York; Roswell P. Flower, of Watertown; A. B. Lamberton, Rochester; Jonathan Sidway, of Bulfalo, and C. W. Hutchinson, of Utica,

they are eaught. He urged, therefore, that the law be repealed. It was unjust and oppressive. There should he a better and a juster law upon our stainte books. He introduced a resolution to that effect.

Dr. Brownlow, of Ogdensburg, desired as a delegate to call attention to a bill recently passed which permits a net to be drawn across the St. Lawrence River at its throat, which will prevent fish in spawning season from entering Lake Ontario. He desired the aid of this convention to protest against the law, and asked for the repeal of the same.

After some debate, an amendment was submitted asking for the appointment of a committee to go to Albany to lay the case before Gov. Tilden. Lost.

The sum of \$100 was appropriated for the ensuing year to assist in the prosecution of persons killing game out of

to assist in the prosecution of persons killing game out of seasou.

Mr. Hopkins, of Madison county, introduced a resolutiou asking for a committee of three to prepare an amendment to the game laws.

Mayor Hutchinson, of Utica, opposed the motion. The eye of the State were on this Association. It must act consistently and carefully. It had the credit of proposing the first effective game law that had ever been introduced in this State. He moved, in amendment, that the President of the Association confer with the President of the local clubs in reference to the game laws, and prepare such amendments thereto as may be by them deemed necessary and advisable.

Mayor Hutchinson's amendment prevailed.

Mayor Hutchinson's amendment prevailed.

CHANGES.

CHANGES.

Mr. Babcock introduced some amendments to the rules for Irap shooting.

Hon. Mr Mattoon, of Oswego, was in favor of such amendment, and suggested that a committee formerly appointed on this subject be now asked to report.

The matter was deferred till Wednesday evening.

Genesee was selected as the place for holding the next annual convention, by a vote of fifty-nine for Genesee to forty-seven for Syracuse, with seven scattering. The vote for Genesee was afterwards made unanimous, on motion of ex-Mayor Carroll, of Syracuse.

On notion of Levi II. Brown, Mr. Charles Hallock was admitted as a delegate from the Sportsman's Cluh of New York City. Carried.

Adjourned.

Eleven newspapers were represented at the convention.

Adjourned. Eleven newspapers were represented at the convention.

WEDNESDAY.

Fly casting was the first on Wednesday's programme There were an unusual number of spectators, a hundred or more, including some ladies. The judges chosen were Charles Hallock, of Forest and Stream, New York city, Dr. F. S. Lowe, of Pulaski, and Horace Silsby, of Seneca Falls. There were nine entries, just as many as there were prizes; entrance fee five dollars. The length of rods varied from eleven feet and ten inches to eleven feet and the length of lenders eight feet two and a half inches to eight feet. The result was as follows:-

R. Wood, Syracuse, 1st, 75 feet; C. Northrup, Rome, 2d, 74; A. M. Kenyon, Watertown, 3d, 72; M. P. Outterson, Phlaski, 4th, 69; S. M. Allen, Oswego, 5th, 67; H. B. King, Adams, 6th, 69; Henry Morse, Roehester, 7th, 66; J. B. McHarg, Rome, 8th, 60; P. M. Soule, Watertown, 9th, 55.

The judges in making the above awards of prizes have taken into consideration the length of red, style and case.

taken into consideration the length of rod, style and accuracy as well as length of east.

CREEDMOOR.

-The last regular practice of the team hefore their departire for Ireland occurred on Wednesday last. The new targets with the circular bullseyes were used, and the 900 yards range abandoned for the longer one of 1,100 yards. After eight shots at the 1,000 yards range Major Fulton retired for lack of sufficient curtridges to carry bim through the day's practice. The source were as follows:-

The difference is owing unquestionably to the wretched weather which has prevailed during a larger portion of this Spring's practice days. The competition for the Leech this spring's practice days. The competition for the Leech cup has week, gives us the first opportunity of comparing team scores with the practice of their adversaries. Both were at the same distance, at which the much will be shot, but at the new targets, whereas the old square bullseye will be used at Dollymount:—

At another competition for places on the Irish team the At another competition for places on the Irish team the following scores were made, showing a much smaller total but very uniform scores:—Mr. William Righy, 190; Mr. Wuterhoase, 180; Mr. J. K. Milner, 186; Mr. J. K. Rigby, 184; Mr. Pollock, 178; Mr. A. Barlow, 174; Mr. E. Johnson, 166. Total, 1,268.

Following the international match, on the 30th of June, the grand challenge cap will be shot for, from the successful competitors for which will be chosen the team to represent Ireland in the competition for the Elcho shileld at Wimbledon. On the Saturday following the All Ireland Shield will be shot for, in which the Americans will take part. Four men from each tenm will be selected; the distance, 1,000 and 1,100 yards. The shield is to be held by the successful team for one year, and whether the Americans win or lose, Major Leech has arranged that they shall have another opportunity of shooting for it at Philadelphia next year.

When the team visits Wimbledon they will meet repre sentative riflemen from Canada, Belgium, Australia and New Zealand.

DEPARTURE OF THE AMERICAN TEAM, - On Saturday the rillemen who are to contend with the chosen sons of Ireland in the return match growing out of the competition at Creedmoor last September, took their departure from our shores in the steamer City of Chester. Anxious to do the thing in proper shape and give the "boys" a send-off which would serve to insuite and cheer them in their make the would serve to inspire and cheer them in their undertaking, Col. Wingute had scenred the sleamer Nelson J. Hop kins to convey them and their friends to the Lower Bay, where they were to be transferred to the large craft whose stannch hull would carry them swiftly to their destination across the seas. A party of ladies and gentlemen, comfortable in numbers, assisted in this most interesting ceremony. Taking a position alongside the large craft, the Hopkins escorted her down the buy amid all the noisy demonstrations of strain whistles and caunon. Before reaching the point of deburkation Col. Wingate summered the members of the team and their friends to the rabin and addressed them in the following terms:

and addressed them in the following terms:

Gentlemen: For the first time a team of native born Americana leaves our shores for the purpose of purheipating in an international rite match. They are not professional shots, neither do they literal to compete for any peculiary advantage. Members of the Amateur Rifle Plun, they are thoughout a sacrifice of their personal business laterests (which new appreciate,) to represent their country in this contest. White their opponents have proatteed for years at the ranges at which this match is to see shot, none of them have more than a year's experience, and some only in few months. Yet, with all these theadvantages, they have discharded such skill and nerve that we feel couldent that the name of the experience in all of them, the fullest reliance upon the skill and fudgment of the experienced marksman they have selected as start leaf in under whose direction we feel couldent that nothing will be left authors which mails in the harden and the fullest confidence in all of the American Rifle Club and of the National Rifle Association, who have had charge of the arrangements for the match, and on behalf of those of as reliase business engagements have compelled them to remain behind, and of all Americans, I desire to assure them of our earlier confidence, and to say God speed them on their errand. [Applause and three cheers for the American Team.] [Applause and three cheers for the American Team.]

Cal. Gildersleeve being called upon responded as follows Cal. Gildersleeve being called upon responded as follows:

GENTLEMEN: I prepared no speech for this occasion or my other, but it is impossible for me to resist saying something to the many friends I see around me before we put ifmally. In the team that has been selected to uphold America in this international contest I will presume to say that some of the best material of the country in point of shooting is represented. I will go further, and say that the men in life team no worldy of representing America, for I know them to be men who are capable of sacrificing a great deal. They are not presumptions, and in their ways I might designate them as bumble, but they go across the occas la vindicate the nerve and muscle of American ritherner. We are very thankful for the genetoris way in which we have been treated. It was more than we expected. And now, gentlemen, you will accept our thanks for the way in which you have behaved in seeing as off in this gallont fustion.

Subsequently the Hopkins was placed alongside the City of Chester and the team transferred to her decks. Gen, Dakin had previously been placed on board from the Neversink, which steamer had been chartered by his friends to perform the same kind office for him as had been done

Dakis and previously been placed on board what has rescussive, which steamer had been chartered by his friends to perform the same kind offlee for him as had been done by the Hopkins for the other members of the team.

—The different duily papers of this city have contained bingraphical sketches of the members of the team, front which we condense as follows:—

Col. Henry A. Gildersleeve, captain of the team, was horn in Dutchess county, N. Y., August 1, 1840. At the commencement of the war he assisted in recruiting the One Haudred and Fiftieth New York Volnateers, serving with distinction, and participating in many leading engagements, as well as 'Sherman's march to the sea, and recriving a commission as Lieut. Colonel "for galbant and meritorious services." At the conclusion of the war he entered Columbia Cologe has school, and after granharing was admitted to the bar and has practiced ever since. In 1870 he was elected Lieutenant Colonel of the Twelfth Regiment N. Y. S. N. G. Subsequeatly he was appointed by Gen. Shaler A. A. Geueral of the First Division, with the rank of Col. His experience with the tifle latter from the opening of Creedmoor, since when, hy persistent practice he has become one of the first of the long range stots of the country.

Major Henry Fulton was horn near Rochester, in Monroe country, N. Y., in the year 1845. In October 1863, he entered the Twenty first New York cavalry and served with that regiment until the close of the war. He was present at the battles in West Virginia and Maryland, was wounded and taken prisoner at Saicker's Gap and imprisoned in Libby. After his exchange he rejoined his regiment and was almost immediately sent. West to tight Indians. During this time Major Filton crossed the plains ten times, five times on horseback and five ty stage. He was findly mustered out at Deuver, Colondo, and him May 1870 commenced practicing his profession of civil engineer in Brooklyn. In February 1874 he was elected Lieutenant of Company D. Twelfth Regiment. In the following Decemb

with the Femenhord the palm of victory to the American team.

Mr. Geo. W. Yale is a native of New Haven, and is fifty years old. His whole life has been passed in the gan anautacturing business. In the year 1852 he became Superintendent of the Sharp Ritle Company, which position he still retains. His long range practice has been canfined to Creedman. He won prizes in the "Sharpshooter's championship," and all-comor's matches in 1873, and recorded a score of 157 in the international match. In shaoting he uses a Sharp's rille, and, lying on his back, rests the muzzle of his gun over his left thigh.

General Thomas S. Dakin was horn in Orange county, New York, in the year 1831. As early as 1849 he became devoted to the interests of the National Guard, and in 1862 he organized a company, was elected Cuptain, and accompanied it to the war. In 1866 he was elected Major, in the following January Lieutenant Colonel, and in 1869 became Colonel of that regiment. During the latter part of the same year he was elected Brigadier General of the Fitth Brigade, and in the month of February hist was appointed Major General of the Second Division. He had had no experience in rifle practice previous to the opening of the Creedmoor range. He is a very scientific marksman, many

ufactures his own cartridges, carefully weighs the powder and ball, and records their weight upon the wrapper. His score in the last international contest was 139. His record is much better this year. On one occasion he made 157, at another time 151, and his average last year was 1464. Mr. Ruswell C. Coleman was born December 3, 1840, at Goshen, N Y., but resided in this city until he arrived at the 1856 of twenty years, at which time he graduated at the Free Academy, when he returned to Goshen, and subsequently repaired to Albany, where he attended the Albany Law University for three years, and was admitted to the Bar in the year 1863. Since that time he has practiced law at Goshen. Previous to this year he has never had any experience in the use of the cide. Upon reading the reports of the international match last Fall, he conceived the idea of establishing a rifte club in his tiwa, and, carrying out his intention, organized the "Leather Stocking Rifa Club," and was elected President. He has developed some very good shooting thus far, his highest score being 148 out of a possible 180 points.

Mr. Ardon V. Canfield, Jr., the youngest man on the team, is a native of Bedford, Westelester county, where he was born June 24, 1853. He attended school at Grammar School No. 15 in this city, and fluished his education in 1867. His shooting experience dates from his cutry into the National Guard as a member of the Twenly-second Regiment N. G. S. N. Y. in 1872, when, with his fellow gnavisanen of that command, he shot at their range at Clifton, N. J. This range was the first established in this country. In the competition for places on the American team for 1874 he made a score which placed his name on the list of reserves, and in the subsequent practice has steadily increased in skill.

Captain Leslie C. Brince was born at Lexington, Ky, March, 25, 1849. He is a graduate of the Kentneky University. He came to this city in the year 1871 and entered the Turf, Field and Furm basides on Senator Leslie Coombs, and an epiew o

Major Rockwood, 33th Brigdot, 24 0 8 0 9 Willslaw.

The three last named gentlemen were mable to shoot at 500 yards, being obliged to leave by the 4:10 train.

The desire to wear the "marksman's badge" is quite genral among the National Guard, particularly those going to Boston, and it is expected that a large number of applications will be presented within a few days by those desiring to compete directly for it in the first instance. It is understood that Gen. Shaler has announced his intention of shooting for this badge, and wearing it if he wirs it, which he will unforbitely do. The General has recently come forward very prominently as a rilleman.

The Saratoga Rifle Chun.—On Friday, May 28th, the above organization contested for its silver cap at the 200 yards range. The following are the scores:—

Nunte.	Score, T	mat.
Dr. W. H. Hodgmmi 5	44454233342335	116
II. W. Hays 4		56
A. M. Mitchell 4	83333343353333	.61
Hilell Giftes,	33223153523234	49
A. F. Flimsburgh 5	24838333333442	48
Joel Hayes0	44885824484054	48
W. H. Renson	405 2 1 4 3 2 3 4 3 2 3 4	47
B. W. Amsilett2	4 0 4 8 8 8 8 8 8 4 4 8 8 4 4	44
M. Grimes0	32414532344532	41
Jerome Pitury 3	55203222023002	31

at a future time. It is proposed to call the range after the gentleman who presented the ground to the club — Mr. T. II. Tanapkins. It is the intention of the club to have a match immediately after the regatin, open to all amateur rifle clubs. Turne valuable prizes have been afterol. Full puriticulars and programme will be given as soon as passible. Why would this not be an excellent apportunity for an intercollegiate rifle match?

—The Hulynke Ritle Club are having a series of con-tests at their 200 yards range. That of Saturday last re-sulted as follows. Seven shots at above distance:—

	Score. To	tal
A. Knlght 4	4 3 2 8 3 3 5	11
E. C. Smith 5	5 2 2 3 5 3 2	Sh.
II. White	5 1 5 0 3 3 2	
A. Monger	2 9 2 2 3 3	11
D. H. Smith &	6 3 2 2 2 0 1	19
S S Chapman	6 2 2 5 5 6	2
R. McDamild	3 3 0 1 3 3 1	ii.
8. Climpiton		н

The following score was made by Smith and White, in

Mr. Smith winning the badge for the second time.

-The Seventh annual meeting of the Ontario Rifle Association has been definitely fixed for the 31st August next. In addition to the usual matches, for which a large amount in prizes is offered, there will be a cavalry match, open to sections of four mounted men from any volunteer cavaly troop in the Province. The rifle to be used is the Sniller carbine, carried on back or slung to suddle, the distance 200 and 400 yards, the time twelve minutes, including the course. The men are to ride about three-quarters of a mile, taking two flights of bardles in the course, and fire dismounted at the two distances, the horses at the firing point to be linked or held by alternate files. The first prize will be \$50, the second \$30, and the third \$20.

Game Bag and Gm.

JUNE IS A CLOSE MONTH FOR GAME

-Mr. Chas. Hallock, editor of Forest and Stream, and Joseph Gillinghum, Esq., the Philadelphia representa-tive of that journal, were last week made honorary mem-bers of the Forest and Stream Club, of Philadelphia, in which act we recognize a twofold compliment, and tender our thanks herewith. This club is an active organization, and promises to become "a power." We publish the score

A Wisconsin correspondent writes:-

—A Wisconsin correspondent writes:—
"Last August, about the 20th, nine of us chartered a small steamer at Stillwater, Minnesotu, and took a four hour's trip down Lake St. Croix, "goose hunting." We ran into two tlocks, killing from the first thirty-one geess, and from the second, seventien. We were urned with double barrel shot guns and lying behind an inverted battean on the prow of the steamer. At the signal of our captuin discharged one harrel at them sitting, and the remaining barrel is they arose. So you so we took forty-right gress, all white enforch, at thirty-six discharges; pretty fair, was at it? as four of the nine made no pretensions at spartsmanship."

The same correspondent casually mentions having ent an inch ballsaye (with a rifle,) three times consecutively at forty yards, which is first class shooting.

DITTMAR'S POWDER.

BELLEFONTAINE, Ohio, May 29th, 1875.

EDITOR FOREST AND STREAM:

EDITOR FOREST AND STREAM:—

The idea expressed by several sportsmen that it lakes so much more of Ditmar's sporting pounder than of the black powher to produce the same effect, is erroneous. Its strength is precisely the same as Illazard's lineking powder No. 2. Any sportsmin who will use three and one-quarter dractims in bulk of Ditmar's sporting pounder No. 15, coarse, and one ounce of No. 9 sbot, will flud that foul as effectual on quanti, sulpe, or any small game, as any load he ever used. I am speaking of a 12 gauge breech loading gun; if a larger gan is used, of coarse the load ulli be greater, but the same proportion of powder and shot ought to he nach. I use on the powder first a filin card wad, then a heavy Ely felt wad, and a light wad over the shot, having the ends of the cartridge well turned down. I have used Dittmar's powder all Spring and I find it perfection in all respects. Yours truly,

J. J. P.

ANOTHER VIEW OF THE DITTMAR POWDER.

New York, May, 1873

And the common the content of the common that is common to the common to the common to the common to the common that common
as of my principto: In a ceries of tests made with Ditmar's powder, and 26 grains charge against 70 grains or black powder, the 22 grains eve 300 feet a second loss than the black powder, the 25 grains gave ser 200 feet a second loss. The result proved the wood powder very can and but little smoke, but the pressure on the shell gave writing of to danger; the base and sides of the brass shall was wedged so fast in ce chamber of the barrel that it had to be driven out by resemble blocks ith a rammer. The shells, after firing 70 grains of black powder, would mp mit by bolding the gon mazzte up hy weight of the built of breech lone; and even when firing 110 grains of orange lightning the shell could drup out by gravity alone, holding the cun muzzle up, the urange glattning powder gloing over 100 feet a second greater velocity; 22 grains of wood powder flied the same space as 70 grains of black powder (ordinary rife powder).

of wood powder filled the same space as 70 grains of black powder (ordinary rifle powder).

I am convinced that were it not fur the great strength of the modern made gui barrels, that ere this many would have come to gelef, and when I read of persons recommending increased charges of this wood rowder, I shudder at the thought of what will be the result. The nint alage, "Robs rush in where angels fear to I read," is here exemplified, and then the blea of compressing the powder in the shell which, with nood powder or gun cotton, increases its power immecontably, makes my blood chill. Ere lung, Mr. Editur, you will have the impleasant task of chronicling the loss of some nuble fellow, a vicilia to mood powder. If I am the means of specific so threatening an evil by warning the public of the dangerous consequences attributing the use of such powder. I will consider myself highly remunitated for my pains.

I am, Sir, yours very sheeredy.

THE DANE SHOT GUN

LA CROSSE, Whe, May 16th, 1875.

LA CROSSE, W. L., May 16th, 1875.

EDITOR FOREST AND STREAM:—

Mr. Joseph C. Dane of this place bas invented an improvement in breech loading shot gous, which I think worthy of being called to the intention of your readers. This improvement consists, first—in his self-recolling, or momentum firing pla, which Is a perfect guarantre against premature discharges by cardess handling, so often heard of all over the country. Secondly—his putent flager piece, which tours the fore part of the guind, and as a part of the mechanism for operating the lock down, it takes the places of bottom, top, or side levers. In ordinary gams, as overybody knows, the hammer follows the plunger to the explanetve point, when it rebounds, followed by the pin back to its place, that he man gam the hammer is arrested by the mapple, through which the pin is impelled by its momentum to its work. Anyloting less than the full force and swing of the hammer would not be followed by a discharge. Here is its perfect safety; for in no other way but a full cock and force on the frigger can me explosion take place. This is a great desideratum, and one which will atop the casualties of shooting.

R

SHOOTING IN WISCONSIN

ELETIONN, Wisconsin, May 30th, 1875.

Edition, Wisconsin, May 30th, 1875.

Edition Forest and Stream:

Thave waited all brough the Spring shooting season with the tupe that something would "turn op" here of sufficient interest to the field sporting fraternly to marrant its communication through from Interesting journal, but the season tas passed, and only a minimum of sport has been realized. Practically, our spring shooting season is belef, and includes but few kinds of birds. The killing of mallant, wand-inck and lead is probiblied by law, and our local sportsmen have by common consent given up the practice—that formerly obtained—ad shooting Wilson sulpe in the Spring thore, which arrangement occasions a great saving of ammunition, and leaves for "pursuit with linear to kill" only the few varieties of migratory water fowl that favor our takes and streams but a moment during their northern flight. These are pursuit, binehill, butterball, widgeon, redhead, and rudity duck, with occasional whistiers, scoolers, and canras back, the blaebill predominating largely in this synction. Usually we have good shooting from the 10th to 20th of April, but there was no good shooting libs Spring. Blaebills minic their inperature in small numbers early in April, and were seen more in less (mustly less) until the first week in May, but wore at un time plentiful. The best day's sport I know or heard of was on the 20th of April, and Lakes Lambendah, when there has scored to three gains the ty-bour bluebills, seven butterballs, and one ruddy finek. This seemed small compared with former scores on the same waters. We don't know whicher the exactivy of wild fowl was owing to the pecultarity of the spot on or to the fact that continual "banging" has occasioned a diversion in the line of flight. Of course we hope that this season was only an exception to the ract that continual "banging" has occasioned a diversion in the line of flight. Of course we hope that this season was only an exception to the ract that continual than your before. The Wilson same is a fold. Quall ha

GEORGIA GAME ASSOCIATION.

SAYANNAH, Ga , May 28th, 1875

EDITOR FOREST AND STIESM:-

Editors Forest and Sturam:—
The Georgia Game Association, composed of about sixty-five members, and formed for the purpose of protecting game, held their first sucial meeting an Friday, May 7th, down on Beach Hammick, a very fine place facing the sea, about eighteen utiles from the city, on which beershould be gauged in a piacon and rifte match. A prize was offered for the best shot and a leather medal for the worst. The following members particlipated, first in the piacon match shooting, which proved quite exciting and resulted as follows:—

exciling and resulted as for	Idwa.—	
Name.	Killed. Name,	Killted.
R Wayne	4 II. B. Gonim	3
J. G. Butler	1 W. J. Folliard	. 1
W H. Connerat	5 M. C. Murpby	5
W F. Chaplin, Jr	5 Juline Kantzian	1
J. P. White	4 Joseph Herschback	4
B. C. Aright	441, P McBerrien	4
S. J. M. Baker	4 J. H. Sbmfer	5
Will. N. Nichols	5 W F. Scherif	5

Six of the above were ties, which were shot off and resulted as fol-

H. Gonum. 19th W. F. Scherff. 25th W. J. Folliard. 38 R. B. Habersham 25th Juseph Hyrschback carried off the prize for the best shot and W. J. Folliard the leathen medal for the worst shot.

The association is now in a flourishing condition, and composed o none but good amateur hunters. W. E. Scherff.

Third Avenue Stables

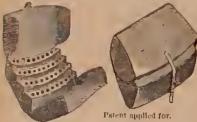

Third Avenue Stables.

Of the large stables in the world, that of the London Omaibus Line is probably the most extensive. The next in size is in this city, and hydongs to the Third Avenue Street Car Company, and is situated on Third avenue and Sixty afth street. The building is immense, being 600 feet by 200, is made mostly of fron and brick, and besides turing enlistontial, and about the same as freproinf, it presents, an appearance unisually attractive for a structure of the kind. The fascade lass three towers, there being a five clock in the unin one; and the general arribuctural design is not only tasteful, but peculiarly sulted to its position and purpose. There are three similes—the first for furres, the second for cars, and the third for horses; with perfect arrangements for larges and egress, and with ventilation, drabage and all appointenances so complete that it would seem the to pragosa a charge. The number of horses ander its roof and skylights is now about 1,700, in fine condition, and average vary well for such extensive stables, while many of the teams are notweably superior in size, smoothness and first. Frifty thoms and pounds of corn and oats, ground by two "rum" in steam mills, mixed with cut hay, are fed daily. Twenty thorse shoers are occupied shoeing in the shops, and the number of grooms attending the stable proportionately large. The general management by Sami. L. Phillips, Esq., President, is unday stood to be dreidedly acceptable to the horses, as he was recently orerheard to give an order prohibiting any num research indication of pala or panishment to an animal under any circumstances; which regard for the feeling of brates seems as coomendable as it is gentlemanly and humane. The more immunediate superintendency of the stables devolves upon Dr. J. M. Heard, V. S., who, while he looks after the horses had all very condition. Is of course improved, and the surmundings more airy and agreembly. For the interests of the company, it would seven that the horses are in good hands is beyond

SCOVILL'S

Blood and Liver Syrup

An Impure Condition of the Blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE
as it courses through the viens, sowing seeds of death
with every pulsation.
In this condition of things something is needed AT
DUCK TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will pushively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Jumireds of certificates attest its value. Price \$1 a pottle.

Tourists' and Sportsmen's Route

THEERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY Is peculiarly rich in the variety and extent of its energy, and while the tourlat has alternating plinguage tho beauty of rivers, gaps and mountains, the ortsman has within easy reach many localities that ord him every fuellity for the enjoyment of the orts of the field and stream. We enumerate a few the pleasure resorts which crowd the line of the

of the pleasure resorts which crowd the line of the road.

Rinherfurd Park,—04 miles from New York, Fine hotels and boating pastimes on the Passaic.

Clifton.—134 miles from the city, overlooking the picture-spie Lake Donalee.

Lake Mohunk.—A beautiful body of water 1,200 feet above the Ilud-on—spiendid hotel accommodations.

Orange Lake.—Six niles West of Newburgh, and noted for its fishing attractions.

Milford, Fa.—About cight miles from Port Jervis, Is noted for its front fishing, woodcock shooting and superior hotels.

as noted by the superior botels.

Avon Springs.—Criebrated for 20 years as a resort for invalids, the waters possessing many valuable heal-

Invalids, the waters possessing many variation conling qualities.

Wolkins Glen. -This beautiful gorge is distant 294
miles from New York, via Eric Road to Elmira. Its
wild and picturesque attractions are second only in
reputation to flose of Niagara.

Chaotanqua Lake. --18 miles loog, 3 miles wide, said
to be the highest analyzable water on the American
continent, being 730 feet above Lake Eric and 1,290
free higher than the Atlantic Ocean.

Magara Falls. --This great canaract is reached by the
three tile of the Eric Railway.

There are along the line of the road no less than

There are agong the fine of the road to least and the least the mill affirding most delightful sport for black bass and pickerel. Their connes are—Lakes Greenwood. Orange, Mohonk, White, Otsego, Caynga, Seneca, Keuka, Siver and Chautunqua.

The following schedule will afford a partial guide to the numerous fishing localities reached by this road:

TRIAL OF SCOTTA, GHEENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELL," LONDON.

(See The Field, January 30th, 1875.)
"From a comparison of the two tables it will be seen that with whiker's shot, Mesers Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest reors nade. Indeed, with the left barrel, in his little shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern under by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

Hevada, Its Mountains and Inhabitants.

NEVADA is decidedly a State of mountains and valleys. The chief occupation of its inhabitants is mining its mountain regions, and cattle raising in the valleys, though there is more or less attention paid to the cultiva-tion of the soil in the valleys throughout the State. The principal productions are wheat, barley, oats and potatoes; but little Indian corn is raised, on account of the early frosts. The only means of watering the fields of grain and meadows in the valley is by irrigation, as but little rain falls during the season. Cattle do not require feeding dur-Winter, although the snow may he six inches or even a foot deep. They thrive on the white sage and the tall grass, which grows in ahundance in most of the valleys throughout the State. Up to this time there has been no snow, hut to day snow is falling plentifully. Two years ago snow had fallen to the depth of two feet throughout the norther part of the State, thousands of cattless. out the northern part of the State, thousands of cattle per-ishing with cold and hunger, which could not be avoided, as hay was not gathered in the Summer more than to serve their domesticated horses and cattle. Single individuals often own from one to ten thousand head of cattle, and one man owns fifty thousand head; during this season he lost ten thousand head, so that it will be readily seen that to provide for cattle here as in the Eastern States during the Winter would be utterly impossible.

San Francisco is the great cattle market for this State and California. These vast herds of cattle do not cost their owners more than the necessary expense of procuring help to look after them and mark and brand the calves. There are no fences to mark the houndary line between ranches; indeed fences are not used, except occasionally to enclose a small garden. After the cattle are collected in the Spring for the purpose of marking and branding, they are turned looso into the mountain ranges, where grass grows luxuriantly on the mountain sides and in their vast canons, which is called bunch grass. It is very tich and sweet. These canons afford water for the herds during the Summer months. After the crops are harvested on the ranches the cattle arc brought from the mountains into the valleys, where they are allowed to remain until the herding season in the Spring. The cattle belonging to different owners mingle together, and it not unfrequently happens that they wander from fifty to one hundred miles from their ranch when collected and brought back in the

The herding of cattle is an exciting business. Every man and boy who is able to ride, within an area of twenty miles is mounted on a pony with whip and lariat. The lariat is manufactured from the green rawhide, is suple and pliable as a string, and will hold any bullock or wild horse. This as a string, and will hold any bullock or wild horse. This is made fast to the horn of the saddle—for all use Mexican saddles in this country, which are secured to the horses hy a girth a foot wide, made of hair; this is drawn as taut as possible by the strength of a man, and fastened by a strap to an iron ring on the side of the saddle. This being done the saddle cannot turn when the lariat is thrown over the horns of a hullock or the head of a wild horse. Ten thousand earlier nearly head in an adverse owned by many and cattle may be herded in one drove, owned by many different parties, perhaps, and all herded on an open plain and surrounded by men mounted on horseback to keep them together, while each owner in turn rides through the herd to "cut out" his own and drive them in a herd by themselves. This is no small task, for the cattle are wild and mostly of the Spanish breed. The metal of the horses is often tested, as well as the skill of the rider in this employment. ployment. This work heing finished, each owner drives his cattle home, and yards, marks and brands the calves. These yards are called corrals. When a large stock of cattle is owned by one individual it is necessary to keep horses to gather and herd them; in some cases it requires

as many as one hundred mustangs for this purpose.

Clover Valley, from which I write, is one of the hest and most lovely valleys in the State, and embraces about forty

miles in length north and south, and will average about fifteen miles in width. Ifumboldt Wells lie in its northern extremity. It is bounded on the west by a lofty range of shivered rocks and yawning cañons, which afford an abundant supply of water for the valley. Nearly every mile perhaps a fresh cold stream comes dashing down through these openings along the mountain sides. From through these openings along the mountain sides. From these streams ditches are cut in all directions to irrigate the vast meadows which lie beneath, stretched out to the op-posito mountains in the east. A peculiarity of these east-ern mountains is, that very little water oozes from their western slopes; but silver and galena are found in quanti-tics. Another remarkable feature is the vast number of the Sierras, which head in the mountains of Nevada east of the Sierras, which have no outlet. They either terminate like the Humboldt River, in a low morass, or are taken up by the meadows in the wild valleys.

In the centre of Clover Valley, east and west towards its southern extremity, is a lake into which all the surplus water of the valley is deposited; but this has no outlet, and at some seasons of the year becomes nearly dry, but never entirely so. At the southern end of this valley a creek sufficiently large to run a mill breaks out of the hase of the foot hills of the mountain, the water of which is too warm to drink, even at this season of the year. It evidently passes through a composition of minerals which impart to it this heat by their chemical combination. The water is impregnated with lime, magnesia, sulphur and borax. It is not unpleasant to the taste when cold, but if taken freely, operates as a cuthartic. On this creek is a fine ranch of four hundred acres, with a public house fitted up with every convenience for the entertainment of guests who throng this thoroughfare from Humboldt guests who throng this thoroughtare from Aug. Wells station on the north, through this and Ruby to the southern part of the State. This ranch belongs to the estate of the late Mr. Broomfield. A few miles south of this in Ruby Valley, which is only separated from this by a few low foot hills, are found about fifty hot springs. all within a few rods of each other. The temperature of these springs varies very much; some arc holling hot; food is often cooked in them, and the farmers near by, when butchering, scald their hogs in them. The depth of these springs has never been ascertained. Steam rises from these springs Winter and Summer, and the amount of water in them always remains the same. Calk center is formed in large masses around all of these springs.

Humboldt Welts are another curiosity. source of Humholdt River. There are a number of these wells, which are of different forms and sizes, and they rise like the hot springs of Ruby Valley, out of a smooth, sunken valley. Though often attempted, these springs have never been sounded. The water is cold and clear, and of a good quality for usc. It was by these wells that the old emigrant road passed in going to California, and was made a camping place for the weary and worn traveler. The rich bottom grass flourishes at all seasons of the year. In crossing the dry barrens over the Rocky Mountains the wagon wheels would become unsafe from shrinkage; Humboldt Wells was a convenient place for repairs and to recruit man and beast. One time a company of emigrants reached the wells with wagons rickety from a long journey through a dry country. Their wagon wheels were immediately taken off and thrown into one of the wells to expand by the dampness and tighten the tire. To their dismay the next morning they could not be found, as they had settled to the bottom of the well, and they could not procure a rope of sufficient length to reach the bottom. Although water flows through the mountain streams in great ahundance, there are vast tracts in the valleys lying uncultivated hecause they cannot he irrigated, for the reason that they are higher than the streams. These uncultivated soils are rich and fertile, and covered with a heavy growth of wild sage, which grows to the height of two feet and has a strong odor, like sage, and the leaf very much resembles our domestic sage; hut nothing will eat this shrub hut a large gray hen, as large our domestic fowl. These are called sage hens, and are quite as good food as the prairie chicken. The sage hens go in flocks, and are

quite numerous. They are not found east of the Rocky Mountains. The wild sage grows very rank, with half a dozen shoots or stalks coming up from the root, each as large as a man's arm, and is of a woody texture. Indians use it much for fuel. Irrigation kills it; it cannot endure water, hence it only grows on high and dry ground. Could artesian wells he sunk in these elevated places many thousands of acres of the best lands in these valleys could be utilized. Applications have been made to the U. S. Government to give such lands to partles who would sink wells for the purpose of irrigating them, but as yet no action has been taken.

The valleys of Nevada afford no timber except the wild sage, which in some places occupies miles in extent. Sometimes will be seen growing along the foot hills of the mountains a kind of juniper, or what the people call cedar, though not to be compared to the cedar of the Eastern States. These trees grow of sufficient size and length for fence posts, but only one can be obtained from a tree. timber is found on the mountain sides and In the canons. These canons commence high up in the mountains and extend down through the foot hills to the open plains. In the lower end of these canons is often found a heavy growth of aspen, or a species of poplar; this is used for building purposes and for fencing corruls for the cattle. The first houses built in Nevada were made of aspen timher in the following manner: Logs were cut of eight or ninc feet in length, sharpened at one end and driven into the ground, or placed in holes dng for the purpose, up right, and as closely together as possible; then timbers laid across the top, close together, with grass thrown on them and then covered with earth. Sometimes a floor was lale and sometimes it was not; then by cutting a doorway and windows the house was complete, excepting the plastering up of chinks with mud. Having hut little rain in this country such a huilding would be comfortable in Winter and Summer for many years. Many men worth thousands of dollars live in such houses. At the present time there are many good frame and brick dwellings in the valleys.

The principal timber found on the mountain sides is

mahogany and pine. The mahogony is a very hard and mahogany and pine. The mahogany is a very hard and heavy wood. The bodies of the trees are very short, like all timher growing in high altitudes, but some of them are large with large and gnarled tops. This wood takes a beautiful polish and makes the most beautiful furniture, but in consequence of its gnarled and winding grain is very least to word for fuel in the work. Pine is the principal wood for fuel in the It also has a short hody, never above twenty or hard to work. State. It also has a short hody, never above twenty or thirty feet long; but some of them grow very large at the base, tapering to a point at the top. The branches of this base, tapering to a long and arroginess of at a point at the conditions of the base of the state of the st base, tapering to a point at the top. The branches of this pine are large and long, and are given off at about ten or twelve feet from the ground. There is also a species of the yellow or pitch pine, with burrs growing on them resembling those of the yellow pine of the Eastern States, but unlike the pine of the East each bask or folding of the hurr has a nut deposited at its root, so that in one hurr there will be from thirty to forly nuts, which are as large a marrowfat pea, though oval in shape. One large tree will yield a bushel or two of nuts. These, like peanuts, are roasted before caten. The inhabitants call this hy the name of nut pine. The Indians used these nuts for food before the whites settled the country. They are very palatable, having a slight piney taste.

Rev. A. Chase. table, having a slight piney tasto. Rev. A. Chase.

Warm Creek, Clover Valley, Nevada, January 18th, 1875.

BITE OF THE RATTLESNAME.—A post office agent traveling in Texas, tells of the successful use of the gall of a rattlesnake as an antidote for the lite of that reptile. In rattlesnake as an antidote for the litte of that reptile. In the case spoken of relief was almost instantaneous to the patient, who was writhing in paroxysms of great pain, rapidly swelling and hecoming purple. A friend of the writer, who spent several years in California and New Mexico, saw the same remedy successfully used among the Indians in the latter country. In one instance an Indian's dog near the camp was hitten in the nose by a large rattlesnake. The Indians immediately opened the reptile and administrative with a coll. The case was rapid and offertual and for the case was rapid and offertual and the case of the case was rapid and offertual and the case of the case was rapid and offertual and the case of the case was rapid and offertual and the case of the case was rapid and offertual and the case of tered the gall. The cure was rapid and effectual .- St. Auguetane (Fla.) Press.

SOUTHWEST FLORIDA-No. 11

BEING NOTES OF A TOUR OF EXPLORATION—BY OUR OWN COMMISSIONER.

THE morning after our arrival at the month of the Homosussan we were moving by davlight, and after hrealfast followed in the wake of our new frieuds, as their bostman professed to be acquainted with the channel. We had not proceeded over one mile before we found the Spray to be hard and fast on a cove oyster bar. As the boat beloneing to our new friends was light draft, they left us aloue in our glory. Finally we found the channel, and proceeded but a short distance whom we discovered what appeared to be two rivers, and we naturally followed the widest. By the use of the lead we found the channel to shoul rapidly, so we returned and took the right hand stream, and after sailing a distance of four miles we sighted a residence on a high shell bank and an attractive hoat house at the water's edge. As we reached the handing the rain descented in torreuts, and we pushed the stern of the Spray mider the boat house. We had bariely secured the boat before a youth presented himself and invited in to accept the hospitalities of the homse. We inquiried for Mr. Jones, and were informed that he was absent, so we politely declined the invitation so hospitably extended. As it was blowing a gale we deemed it prindent uot to light a fire in our stove, but indulge in a homoopathic ment, consisting of three red herrings, a cup of lemonade, and a few soda carackers per man. Our frugal repast was barely thished when we received a pressing invitation to dinner, and as our clothing was not very ornamental, we offered as a excuse that we had dlued sumptionsly. Soon after we noticed a lady rimning through the rain toward the boat house, and her pleasant and studies from the stabilishment under the circumstances. Finding that "no excuse would be accepted, and that would have gratified both a gournand and a gurnet. For nearly two montes we had not the fact and the circumstances. Finding that would have gratified both a gournand and a gurnet. For nearly two montes we had not excepted, and that would have gratified both a gournand and a lo THE morning after our arrival at the mouth

where fish can be seen. We measured the deepest point in the hasin and found tho lead to reach bottom at forty-eight feet, around the basin and along the banks of the river we found large numbers of water turkeys, cormorants, fish hawks, and species of the heron and crane families, which were more easily approached than on any stream wo have visited. Ducks, not to be enumerated by thousands hut hy square acres, were visible to the right and left and before and hehind us. The sportsman can find accommodations at Mr. Jones', and can fully occupy his time. Near the house excellent sheepsheading exists, and these noble fish, of large size, can he eaptured until the arms ache, By trolling with a spoon or spinner redfish can be caught ranging from five to thirty pounds. A year or two since a gentleman from the Hub engaged in this kind of fishing, and pickerel fisher like, placed the line hetween his teeth. He secured a bite, the line fonled, and at the end of the performance he has minus a tooth, but landed a thirty-two pound redfish. By visiting the spring four miles from the house the knight of the rod can land fish of large size as annielly as he can bait and secure his fish. If he desires larger and more clumsy game he can amuse himself capturing turtles ranging from eighteen to thirty inches in length. In the Houseassa and Salt Rivers and in the bayons and blind creeks near Mr. Jones' residence the shootist will find ducks by the square acre, and if he is disposed to engage in the destruction of larger game—such as pelicans ganuci, and an endless variety of herons and cranes—all that is necessary to he done is to lay in a stock of provisions, take a boat, and sail to one of the St. Martin's Keys—a few miles from the mouth of the Homosassa. On one of these keys the sportsman will find a rookery, where the sea birds, frequenting an area of probably forty miles, nightly collect to roost.

At the old sugar plantation two miles above the house good quail and snipe shooting is obtainable. Bear exist in the hummacks, a

Jones' as a place of resort. The still hunter by visiting the old sugar plantation or lile edge of the pine timber, four miles from the house, will experience but tittle difficulty is securing a pair of authers worthy of gracing his Northera home. For miles west and southwest of the house large areas of low-lying land exists, covered with a luxuriant growth of rushes and coarse grasses, with here and there islands of timber, consisting of ganu, live and swamp ouk, ender and eabbage palms. The low lands furnish excellent feed, and the islands shelter for deer. Late in the year the rushes and grasses lose their vitality, aml if a windy that is selected thousands of acres can be hurned over by the application of a single match. In a few weeks the fluts will be covered with a luxuriant and succulent growth of grass, and deer will visit the locality in numbers. These flaits are comparatively dry, and would furnish the fire-pan lunter an excellent field for sport. If purities who propose visiting Homosassa would cammunicate with Mr. Jones a few weeks in advance he would buru-off a few square miles of marsh for the benefit of his visulors. If turkey shooting is desired the sportsama can enjoy it by ascending the river to the spring and proceeding to the edge of the pine limber. Mr. Jones' ucubew, a mere lad, informed us that he had killed sixteen deer within a hart period and in haid of the house, on a small clearing on the opposite side of the river. As Frank was unacquainted with fire hunting it suggested that we should engage in the sport. After supper we provided ourselves with some fat pine and a long-handled frying pan. We lambed on the opposite bank in the elearing, lighted out fire, and had not proceeded over over eighty yards before we noticed four fine deer within thirty yards. Fortunately for the deer Frank hud an acute attack of the brick fever and aimed at the Pleiades. While he was taking aim it heard voices at the honse; hence here was deer shooting with many farmed and the proceedion over the hunting i

and deposit them when the spirit moveth. Having referred to the hivalve attractions of the place I may as well notice the hose and hostess as well as the house and dictic attractions.

Mr. Jones is a Bostonian, and served wilh honor in the First Massachusetts Cavalry during the war. Visitors will find him quiet, intelligent, unohitrosive, and ever stanlious of the comfort of his guests. Mrs. J. is a native of Bhomnfield, N. Y., and will be found to be intelligent, alfable, kind, and ever ready to contribute to the comfort and pleasures of those who favor her with their patronage. She seems to anticipato every want of her visitors, and as a cook and housekeeper she cannot be excelled. Everything was scrupulously clean, and the table in every way unexceptionable. What the visitor to Florida schlum meels with he will find at Homosussa—the best of home-made bread, fresh milk twice daily, and fresh Inter at least twice weekly. In addition to a lavish supply of the necessaries and luxuries of life the visitor is expected to deposit an indefinite number of the most deficions oranges after each meal, between times, and hefore retiring at night. The house is uear the river, one story high, and surrounded by a spacious veranda. The rooms open on the vermulas on two sides, the ceilings being very high, and each having a fire-place in it. The beds are such as visitors schlom find in Florida. Owing to the limited number at rooms Mr. J. can accommodate but four couples in the main building, but at a distance of one hundred yards from the house is Liherty Hall, where from two to four slags can sheep and enjoy themselves. If justified, (and I sincerely hope he will be,) Mr. J. will add to his present building.

In my humble opinion no place in the State presents an many attractions for the sportsman, if we take into consideration the sporting advantages in connection with honose is an independent of the superior of the accompanied by their better halves will find this place to offiny many attractions. If a sing party of from t

routes—one via Savannah, Fernandina, or Jacksonville to Ceilar Keys, and the other via Silver Spring and Ocala. The sportsman can easily ascertain upon what day he will reach Cedar Keys, and hy aldressing Alfred E. Jones, Postmaster, Homosassa, Fla., in advance of the day of arrival, Mr. J. will be found on the keys with a bout to truns, port visitors to his place free of charge. If numble in communicate with Mr. J. a snitable hoat may be chartered at Cedar Keys for about \$10 for the trip. If the sportsman is desirous of visiting an interesting and attractive portion of the State he can take steamer from Jacksonville to Silver Spring, and back from the Spring to Ocala—a distance of six miles. From Ocala to Homosassa the distance is furty miles over a good road, and E. J. Harris, of the Ocala House, will make the necessary arrangements for trunsportation of visitors to the hospitable ingleside of A. E. Jones, We have at various times wandered over a large portion of the State, and in all sincerity can assure the readers of the Forest and Stream that, laking everything into consideration, we found Jones', on the Houmsassa, the most attractive point we have thus far found in Florilla, and if alive and kicking during the course of next Winter we propose visiting there again, and it would afford me great pleasure to meet some of the sporting readers of the Forest and Stream at the hospitable home of Alfred E. Jones, At Freece.

GAME LAWS OF VERMONT.—We copy the following from the Game have of Vermont, approved November 24th, 1874. Those who fish in Lake Champlain will do well to pernse what is written:

SECTION 1. Whoever takes or catches any salmon in any of the waters of this State, or has in his or her possession any such lish captured within the limits of this State, for five years from the passage of this act, shall forfeit and pay in fine not to exceed \$10 for each and every salmou so

SEC. 2. Whoever takes or catches any Ironi, lami-locked salmon, salmon trout, or longe in any of the public waters of this State between the 1st day of September of one year and the 1st day of May of the next year, shall forfeit and pay a fine not to exceed \$10 for each and every fish aforesaid.

said.

SEC. 3. Whoever takes or calches any black hass in any of the public waters of this State between the 1st day of June and the 1st day of August in any year shall forfeit and pny a fine not to exceed \$5 for each fish so taken.

SEC 4. Whoever takes or catches any white fish or lake shad in any of the public waters of this State between the 1st day of October and the 1st day of December in any year shall forfeit and pny a fine not to exceed \$10.

SEC. 5. Whoever takes or catches any wall eyed pike or pike perch between the 1st day of April and the 1st day of June of any year shall forfeit and pny a fine not to exceed \$5.

pike perch between the 1st day of April and the 1st day of June of any year shall forfeit and pay a fine not to exceed \$5.

See 6. No person shall be allowed to capture any tront, land-locked salmon, salmon, salmon trunt, or lunge in any of the public waters of the State except by hook and line, in the ordinary way, with bait, lly, or troll, under a penalty of \$20 for each violation of this act; provided always that the Fish Commissioners may be allawed to inke 4th in any season of the year for stocking ponds, lukes, and rivers, and for maintaining and cultivating fish artificially, and for no other purpose; and may also grant permits in writing for other persons to enpure fish for artificial propagation and maintenance in private ponds.

Sec. 7. Any person legally engaged in the artificial enlure and maintenance of fish may take them in his own waters, how and when he pleases, or take them in the public streams for breeding purposes, provided he gets the written permit of the Commissioners of Fisheries to do so, or the permit of the selectmen of any town where he so takes them, but shall not sell them for food at seasons when their capture is prohibited by this act.

Sec. 8. All pound-net or trap-net fishing in the public waters of this State are hereby prohibited.

Sec. 13. No person shall pursue, kill, or destroy any will deer, buck, fawn, or elk within the dimits of this State, save through the months of September, October, November, and December in any year, uor shall any person kill, cutch, or destroy any mink, heaver, fisher, or other between the 1st day of April and the 1st day of October in any year, under a penalty of \$20 for each offense.

GAME IN TEXAS,

RHUND MOUNTAIN, June 6th, 1875.

RIBUND MOUNTAIN, June 6th, 1875.

Editor Forest and Stream:—

I send a few tiems regarding the game of this locality, hoping by so doing to benefit some friends of gun and dag. The country here is open woodland, resembling an hummuse orchard, the oaks looking like apple trees and the mergant (pronounced maskeet) like peach, there being an occasional banch of chaparral for cover. The whole country is easy in access on a Spanish pony, and you can shoot off any of them that have been need as cow pontes, or, if preferred, get off and throw the reins on the ground; he will graze while you secure the game.

First on the frontier Texm's list of game is Mr. Lo, whose rails for poules on the settlements, though growing less frequent, are by no means ended. Here, however, we do not look for them again, the cow boys having so completely whitpped them on Pack Saddle Mountain, eighteen months ago, ten with a mith of me, that they will hardly venture so near sgain. Buffulo still range in large herds seventy-live to one hundred miles west. Our neople pay but little attention to them, caring multing for the sport, as they have similar excitement thilly h hunting with entile. Deer are very plenty, though are not so numerous as a few years ago. They are fast becoming thinnel out. Many shoot them for their skins, leaving the carenes for the wolves and coyotes, who are over on the alert for so dulity a morsel. I have seen as many as five-leer in a hunch within a mile of the house. Wild tarkeys are found in large numbers in the ceda brakes during the Winter months; this height field hatching season they are scattered over the open country. Morang and evening the found call of the gobiler can be beart in every direction, often causing me to wash for my breech londer. They are generally instead at their mosts, one person often killing six or seven in our night—a mootalight night being chosen for the hunt. The pecary, or wild hogs, are yet to be found on Sand Mountain twelve miles west. They are not hunted much, though are often shot

Black tors, perch and white earlish may be caught in all streams of any size. The infler are very plenty and often cought welching sixty to eighty pounds in the Columnto. We have no profite believens neer. Northeast of us, on the practice, they are very plenty; but we have quall in large numbers. They are hard to shout on the wing, however, owing to the low llmbs on the trees and chapters). Juck rabbils and cottain tails can be jumped almost anywhere. The first make fine sport for dogs on the open mesqudi flats.

Having mentioned all the game animals and birds of this section of Texas, but one loss within giving space for our twocking hirds, Mexican paradise, or forked talts, chaparral hous, &c. The latter are a species of pheavant, are very prelty, and in one particular are peculiar, They lay one egg and commence satiliar; while suiting lay four more, generally no more or less than five eggs, the first leding the largest and like fifth the stealest. The lards, when grown, seem to be of the same size, By the time the fifth egg is balebed the first is nearly a fally fledged bird. The first egg is about the size of a phensant's. The others gradually taper down to the size of a qualify egg, or less. At some future day I may give some account of a day's sport to Texas.

Hish Gulture.

-The Albany Argus says that Seth Green has been successful in hatching a quantity of sturgeon, with which the Hudson River will be ugaln stocked in a few years; therefore it is expected "Albany beef" will be plenty again.

-Dr. C. W. Torrey, Vice President, and A. J. Prime, counsel of the Yonkers Sportsmen's club, keep up a sharp look out for persons suspected of infringing the game laws. Just now their efforts are particularly directed toward the protection of the syster beds near Yonkers, and to this end the elub wish to secure the co operation of the "New York City Society for the Protection of Game."
That body will hold no sessions until next November, but we commend the subject to the attention of its detectives and presenting officers. The destruction of the system beds very much impairs the fishing by destroying the food.

Grayling Raised Autificially.—We are informed that Mr. Fred. Mather has hatched out 4,000 grayling from spawn collected in Michigan this Spring.

—The first instalment of 40,000 salmon arrived and were deposited in Pennnigewasset River, near Campton, N. H. last Thursday night by Messrs. Robinson & Hodge. The second lot of 40,000 were deposited in Buker's River, at Plymouth, N. H., the following day.

Lake Cochiekewick, in North Andover, Mass., has been leased of the commissioners on Inland Fisheries by several gentlemen for the purpose of propagating useful fishes. They have already commenced stocking the lake with black bass.

GENERATION OF EELS

with black bass.

GENERATION OF EELS.

This subject has been obscure and overlaid with fakles from the time of Aristotle to that of honest Izank Walton, and both the father of natural science and the author of the "Congletc Anglet" left the question with no better noswer than they found it. The late Edward Jesse, seeing its interest and importance, entertained the impairy in his "Gleanings of Natural History," and with the assistance of the late William Yurrell, concluded that cels, like other fish, are unisexand, i. e., disceious. Meanwhile, observations had been unade fram which it appeared that exceptions occur to the rule, even in higher osseons fishes, since some of the perch tribe, notably \$8 pranus, were found to be bisexual or hermaphrodites, each individual with an ovary or roe on one side, and a milt or testis on the office. But though this fact has been amply confirmed by independent researches, it at the same time praves to be merely un accidental exception, nothing more than a lusas naturae. However, about three or four years ago, two Italian anatomists, Halsama-Crwelli and Maggi, canne to the conclusion that cels are telly moneccious or hermaphrodite, and these alsearchions have since been credited rather extensively. Sull, an amonucement so at variance with all our previous knowledge of the universality of the separation of the sexes in thishes, and so important in a physiological point of view, was mat likely to be accepted without further inquiry. And now, in the "Bibliotheque Universalle de Geneve," Fehnmary, 1875, M. Syrski, this on menuar in which he dissents altogether from the conclusions of the aforementioned Italian physiologists. He assents that the so called testes and spermatozoa described by them are nothing more than fatty bodies, and the misexuality of eels is the truth after all. The males are smaller than the fenales, and it would seen the Italians had only the larger females, which they mistody for hermaphrodites, under observation; and such residents at our sea costs as may hav

cels from time immemorial, their life history is still as recondite as ever. Wo are not quite certain that male cels ever enter our rivers, for it has been asserted by respectable authority that the females are only frond there; and at all events, the presence of males where there is a roo ready for fecundation might seen useless, even if they then had a mature milt, which nohody pretends to have seen, and which, so far as we yet know, can only be expected during their marine life. Where do they breed? In the shallows of the sea shore, or in the greater depths towards the abysses of the ocean? Are eels oviparous or viviparous? Nay, as to such seemingly easy matter as the identity of the species, or rather genus, perplexing questions are still arising, even in our courts of justice, as exemplified lately in the administration of our tishery lows. In short, very careful unadomical investigations are required to illustrate the whole subject; and how the most important preliminary point now presents itself for inquiry we have already intimated. —Land and Water.

Matural History.

MOUNTING VS EMBALMING

EDITOR FOREST AND STREAM:—
In your issue of Jane 3d your correspondent, E. H. Crane, claims to be the discoverer of a process to embalm any animal or bird in a more skillful manner than any taxidermals! can moun! It. Verily, I hope that he has, and that the world wilt give him credit for the advancement of taxidermy. Yet before we take the above for a fact, let us agitate the subject and look at embalming mechanically. Mr. Crane speaks of the embalming art as successfully applied to cabinet specimens. Now, small birds and mamneals embalmed will do very well for scientific use, but when it comes to large specimens, their imatomy must be preserved, and their natural eyes must be substituted with glass onces. Such being the case, the from ble of inacting linem must necessarily exceed that of putiting eyes date a skinned specimen. The natural eyes must be removed from the ontside, and a foundation of some material nuist he used to set them in. Now, all of this work has to be done through the cyclole of a specimen, and unless performed very carefully the bird's ere will be rulined, or the eye holes in an animal's skin will be stretched out of shape, as a large mammal's eye needs considerable coaxing to make it leave its socket.

spectinen, and unless performed very carefully the bird's eve with be rulned, or the eye holes in an animal's skin will be stretched out of shape, as a large mammal's eye needs considerable coaxing to make it leave its socket.

In speaking of birds' eyes, I will meniton the owl's. Any laxidermist knows the nature and construction of likeir eyes, and if Mr. Grane can remove the eyes front a great horned owl and replace likem naturally from the outside of the skin, and poke his eyes and materials through the eye hotes quicker than we taxidermists can form a seal for, and the given time that our best taxidermists can. He further says he can compensate for skrinkage. Now, there is but one way to do that, and that is to build out the shrunken purts from the invide of the skin with some solid material. How is a man going to get at the flesh side of an animal's skin to build out any manutural depressions unless he skins the mammal? If one wishes to perforate a skin with bodes, and work from the invide of the skin with sides, and work from the outside, he can do so with a long coaled unimal, when the friendly hair can be cause to cover the stillches and inclisions; but that node can be practiced with but fow of our manumals, particularly during Summer. I would like to see some of the muzzles of the runnimalia embalmed successfully, or the snont of a borse or swine, also the deshy indicated combs of some of the rasorial birds. I find it necessary to use runn rods two and an eighth of an inch thick to mount substantially a mammat the size of a deer, particularly when putting it in an active position without putting irons to them, und frether, one mast eccessarily have something more solid to fasten them to than flesh, or the viscera of an animal. Supposing we have birds of prey to be preserved, with wings full spread, what is to hold them to than flesh, or the viscera of an animal. Supposing we have birds of prey to be preserved, with wings foll spread, what is to hold them to than flesh, or the viscera of an animal. Sup

CENTRAL PARK MENAGERIE

DEPARTMENT OF PUBLIC PARKS, NEW YORK, June 13, 1875.

Autmain received at Central Park Monagerle for the week ending June 13, 1875:—

One Woodelack, Arctonys manax. Presented by Mr. F. G. Skinger One Seal, Phoen situitina. Captured in New York Bay.

One Mocking Bird, Minus polygiotius. Presented by Mr. D. Porter Lord.

Three small Alligators. Presented by Mr. Robert G. Hono. Two Striped Squtrels, Tinnias steiatus. Presented by Master Henry

Bred in the Menagerte—Two Lions, Felia lee; two Etks, Cereus Condenses, two cygnets, Cygnus clor.

W. A. CONKGIN, Director,

W. A. CONKGIN, Director.

GARDEN OF THE ZORLOGICAL SUCCETY.

FARRMOUNT PARK, PALLADELPHIA, Moy 7th, 1875.

The following are reced arrivals:—
One Specially Adder, Heteroton sirings. Presented by Smithsonian Institution, Washington.
One Black Snake, Buscanion constitution. Presented by Smithsonian Institution, Washington.
Five Scaly Ideards, Sceloporus undulatus. Presented by Smithsonian Institution, Washington.
One Bald Eagle, Hallactus lencocepalus. Presented by Smithsonian Institution, Washington.
One Moose, Alees machlis. Purchased.
One Beaver, Castor canadensis. Purchased.
One Beaver, Castor canadensis. Purchased.
Three Brown Capaching, Cebus capacinus. Purchased.
One Squirel Monkey, Salanacis sciural. Purchased.
One Green Monkey, Cercopithecus enlitrichus. Purchased.
One Spoited Cavy, Coclogamys paca. Purchased.

One Capybura, Hydrochrerus capybuca. Purchased.
Two Red and Yrllow Macaws, An echloraptera. Purchased.
Two Bine and Yrllow Macaws, And avaranna. Purchased.
Two Bine and Yrllow Macaws, And avaranna. Purchased.
Three Cocks of the Rock, Ruptcola crossea. Purchased.
One Tricu Toucan, Ramphastos toco. Purchased.
One Tircu Toucan, Ramphastos toco. Purchased.
Two White-crossed Guans, Pipille jurutings. Purchased.
Three Maralt Goans, Psuclope marait. Purchased.
One Laon, Colymbus glachalls. Presented by Messes Otdfield & Opson, Baltimore, Md.

Sea and River Hishing.

FISH IN SEASON IN JUNE.

Salmon Tront, Sulmo confinis, Shud, Alosa, Land-locked Salmon, Sal mo Glovert

Under the head of "Guine, and Kun in Rearm" we can only spect by in general terms the several varieties, because the know of States vary so much that were we to attempt to particularize ye could do no test than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space, in designating names or are quietly by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

Fish IN MARKET.-Salmon are arriving more liberally, and are selling at 35 cents per pound. Spanish mackerel are scarce and bring 65 cents. The shad scason is about winding up; some 300 arrive each day from the Counceticul River; the roe fish bring 75 cents each. Bluefish are in moderate supply at 15 cents; the trollers are having more success than the act fish the trollers are having more success than the oet fishermen, but their catch senreely affects the market. Halibut are abundant at 15 cents, which remark and price will apply also to sheepshead. Weakfish are in fair supply at 12 cents; blackfish and sea bass being from 12 to 15 cents, Striped bass are very searce, and are worth 25 cents for choice sizes. Porgies are abundant at 8 cents. Green lartle are worth 15 cents per pound. Soft crabs from New Jersey are scarce, bringing \$1 50 to \$1 75 per dozen. Lobsters are being taken in New York harbor this senson, 1,500 to 2,000 pounds per day being sent to the city from Governor's Island, Staten Island, Robbins' Reef, and from the vicinity of Long Branch. There have been very light arrivals of fresh unckered during the week; they soil for 15 to 18 cents cach. Codfish from Nautacket in limited quantities are selling for 10 cents per pound.

STRIPED BASS.—We saw at Middleton, Carman & Co.'s stand, Fulton Market, some magnificent specimens of this

STRIPED Bass.—We saw at Middleton, Carman & Co.'s stand, Fulton Market, some magnificent specimens of this fish, averaging from 25 to 40 pounds each. They were taken in the surf at Fire Island, one boat catching 25 fish weighing 800 pounds. Some few catches of striped bass have also been made at Rockaway beach during the past week with the hook and line, one geutleman, we are informed taking sixty fine fish. formed taking sixty fine fish.

CarOur subscribers will greatly oblige us and assist the angling fraternity by sending us brief fishing notes from their respective localities.

A. G. Wilkinson will fish the St. John by invitation of Fred Curtis, the last week of June, and the York River the first week in July, both in Gaspo.

—Mr. Beattie, of Mesars. Alfred Field & Co., No. 03 Chambers street, hus kindly left with us a specimen of "greenheart," the wood which is now attracting attention as being so well adapted for the manufacture of rods. Mesars. Field & Co. are importing the wood for the use of rod makers in Philadelphia and Baltimore, and those interested can see the suscimpt above alloyed to in our office. ested can see the specimen above alluded to in our office

-We learn that the Great Falls Fishing Club of Wash We leard that the Orest Pains Pishing Gibb of Washington has changed its mane 10 that of Angler's Association of Washington. The following named officers have heen elected for the ensuing year: S. W. Slonn, president; Norman Wiard, Theo. Friebus, Samuel Perreton.

Our correspondent "Valley City" writes us from Grand Rapids, Mich., that the Kant county Sportsideu's Cluk have resolved to offer a standing reward for the arrest and conviction of all violators of the game and fish have, there being now a great deal of netting and spearing going on in that vicinity. It is also proposed to suppress shooting and fishing on Sunday. Our correspondent writes further that bass and pickerel are taking kindly he the spoon, he having taken on the all hinst in three heavel as the spoon, he having taken on the all hinst in three heavel as the spoon. ing taken on the 4th inst., in three hours' fishing, seven fine pickerel and fifty bass.

—There is a dispute at Barnegat as to who caught the first bluefish this season, but as it makes little difference to any of our readers, and none at all to the lish, we decline to say more about it.

GAME PROTECTION IN MASSACHUSETTS. -In addition to the rewards provided for by the laws of Massachusetts, the Warcester Sportsmen's Club offer to pay Tweaty-five Dol lars to any person who will give information that shall lend

lars to any person who will give information that shall lead to the conviction of any one in the county of Worcester detected in breaking the game or fish laws of the Commonwealth during the year 1875. A circular issued for distribution, which is before us, reads.—

"Framers, Tawn Organizations, and others having Patvate Fish Ponds that are molested or encroached name also owners of forests or covers where bards are illegally snared, are invited to communicate with the Secretary, as it is the desire and intention of this Organization to render all aid in its power to insist on the enforcement of the nature again and maintain that initial good will and understanding which should ever exist between all haddoblers and those who barefully indu ye in the honorable and healthy recreation or field sports."

The co-operation of the Mayors, Aldermen and Selection of the several citics and lowns in the State is solicited, This is a capital movement and worthy of imitation in

This is a capital movement and worthy of imitation in

all the States. Every county in which a sportsman's elub sts should take similar action, and post their notices in the public places. The laws of Massachusetts, as apall the public places. The laws of Massachusetts, as approved March 19th, 1874, prohibit the killing or capturing of woodcock between the 1st of January and 4th of July; rnffed grouse, January 1st to September 1st; quail, December 15th and October 15th. There is a fine for destroying nests or eggs of birds other than birds of prey, suaring game birds, except on one's own premises for private use, or killing water fowl by batteries and punt guns.

MASSACHUSETTS, New Bedford, June 15th.—Last week we had copious rains, previous to which some of our amateur fishermen caught fine strings of trout. A Mr. Lumbard took 21 fine fish in one of our oldest fished brooks, and others various quantities, showing that old Bristol connly is not yet fished out, although there are many fishermen. Bluefishing in our barbor is now in full swing.

—At North Andover, Mass. onTuesday, a selne was set in the Merrimack River for shad. On drawing the seine it was pounds.

Bluefishing in our barbor is now in full swing.

—At North Andover, Mass, onTuesday, a selne was set in the Merrimack River for shad. On drawing the seine it was found to contain a black bass which weighed thirty-two pounds.

Mann, Schoolie Luke, June 9th.—Grand Lake and Grand Lake Stream, the home of the land-locked salmon, is the quintescence of the Schoodie flavor; for this spicy wind of shime is concentrated to a small bit of the stream and to Grand Lake itself. Big Lake, just below Grand Lake, has hardly a trout or tong to its name. Plenty of men and not so many fish this season. The dum and tamery, constructed within a few years, are lessening the fish. The dam-gates often close just at the best hour of fishing, and so drive the fish back to the lake. Moreover, the mill wheel helps to grind up some bundreds of the fish every season. Last year, too, a large number of salmon were killed hy removing their spawn, or by doing it care-lessly; and lastly, the fish cannot be whipped for readily this season. The most successful practice is to let out six feet of line and let the salmon strike themselves. At least up to this date most of the salmon artick themselves. At least up to this date most of the salmon art taken so. A fair average of weight is near two pounts, with oo. A fair average of weight is near two pounts, with oo. A fair average of weight is near two pounts, with oo. A fair average of weight is near two pounts, with own in ten of two to those professional hooks in my list, and when we parted company, in the course of time, I could not replace the loss. Bluck flies and mosquitoes reasonably thick and sharp. Alast that Grand Lake siremu (three miles long) could not have becu bought (as it could) for \$5,000, a very few years ago, and so made a sportsonar's paradisc. Ali the fishing possible in season could not have depleted the land-locked salmon. Now, thanks to the dam proceeding and tamery, the Bishing is conflued to a contracted space and receive and the season of the year. For larger trout you go n

the Eveleth House. Later in the Fall good sbooting can be found in and around the Lake. "Dexter."

Vermont—Newport, Lake Memphremagog, June 11th.—Came here seeking lake and brook tront fishing. Get report of some lake trout being caught near Magog, at the foot of the lake, but no boat is running, and there are no row hoats here yet in the water. All is chaotic here as yet, and the season will open late. The brook trout are small hereabout, and long distances must be gone to get them. The views bere are fine, and in the midsummer it may be an attractive place, but any one coming for fishing will do better to go to Magog. In Lake Winnipisaukee large numbers of lake trout are being taken..—L. W. L.

New Yolk—Alexandria Bay, June 11th.—The Spring fishing is now open here in good carnest. There were seven fine mascalonge taken last week by our gnests; largest weighed 24 pounds. One geutleman caught three in one day, and another two the day after. The boats bring in from 13 to 25 pickerel for a day's fishing. Bass are beginning to late a little, but do not anticipate much sport from them until later in the season.

Ogdensburg, N. Y., June 5th.—Last week your correspondent and two others made a trip to Black Lake, about six miles from this chy, up the Oswegatchie. We took our boat, tent, &c. around the rapids by team Friday night and camped on the lake shore nine miles above this city, Saturday morning we started early, using two side and one stern line with trollers. We fished until pine A. M., and

went to camp for breakfast. We had caught 45 pickerel and pike and I bass. We went unt again at 1:30 P. M., but a heavy wind had risen and made the fishing bad. However, we got 25 more pickerel, making 71 in all. At 6:30 we started for home by the lake and river, arriving at 8:20, making the dislance—nine miles—in one hour unifity minutes, which I call good rowing. From May 25th to June 1st there is no better fishing anywhere than upon this lake. The lake is about twenty miles long and from one-bulf to one and a half miles wide. The water is very black, hence its name. Parties often get over 100 pickorel in a day. At one time we had a pickerel on each of the three lines, and often we would take in two at the same moment.

Lake Erie.—Pittsburg; June 5th, 1875.—I nolice but little in the columns of your paper about the black huss fish-

three lines, and often we would take in two at the same moment.

Lake Erie.—Pittsburg; June 5th, 1875.—I nolice but little in the columns of your paper about the black luss fishing at Kelley's, Put-iu Bay, and Point-an-Pelee Islands, in Lake Erie, although some of we fishermen think it pays to spend a week or two at these islands every Spring and Pall. The fishing during the last week in May was splendial, although the bass did not overage as well in size us they did last Fall. Ou Monday, 24th ult., one boat with two rods took 140 fish. One person on Monday of the present week, using a 9-onnee Orvis rod and a light silk line for tackle, with a minnow and two artificial flies, made three successive catches as follows: First, three bass, weighing 74 pounds; second, three do., 6 pounds; third, two do., 54 pounds. Fly fishing for bass is not a success in the above locality, but it is quite an indvantage to use a couple of gandy flies, tying them on the line, about 18 and 36 inches respectively above the minnum, as they attract the fish, and when two or three bass are hooked at once with light tackle, it requires no little financecring to land them all. Kelley's Island is the headquarters for black bass anglers from Cineinnati, Covington, Pittsburg, Columbus, and Cleveland, and may be reuched by bout from Santusky, Ohio, or Cleveland. The Spring fishing is now over, but the regulars anticipate fine sport next Fall.

New Jerset-Kinsey's Ashley House, Barnegat Inlet, June 11th: Monday, Charles White, of Philadelphia, Ecening Telegraph, 67 bluefish Tuesday, Charles O'Neal, of Philadelphia, and friends, 150. Wedwesthy, storming, Party from yacht Comfort, 27 bluefish; C. Parker, with a gentleman from Philadelphia, 31 sen bass; average, 14 pounds. Thursday, storm drove the bluefish to son; only boat reported any catch was Capt. Predmore, with party, 19, With the exception of Monday, fishing poor. Prospect looks lietter to duy.

INDANA—Valparaiso, June 11th.—We are having fine success with the rod and line this season; bav

looks hetter to duy.

INDIANA—Valparaiso, June 11th.—We are having fine success with the rod and line this sesson; have killed several black bass, which tipped the bar at six pounds; live minnows for bait. With the best of wishes for you all, I am yours.

W. H. H.

The Fisheries.—The number of fishing arrivals at this port for the week emling June 10th was eighty-six, sixty-seven from Georges, ten from the Banks, and nine from muckereling voyages. Total amount of Georges colbrought in, 975,000 pounds; halibut, 100,000 pounds. Amount of Bank cod, 500,000 pounds; halibut, 120,000 pounds. Number of bartels of mackerel, 720. The Georges fares average much lighter than those of last month, both in cod and hulibut.—Cape Ann Advertiser, June 12th. Revival of the Walle Fishery.—Whilehone and oil are gradually going up in price, it being well established that nothing can supercede sperm oil for the finer purposes of lubrication, and in consequence. New Bedford is awakening again to her opportunity. The whales have not been huntel so sharply, and are therefore probably more abundant than they were years ago. At any rate all the vessels to arrive in New Bedford, as well as those already in port, will be immediately fitted for sea, and the whole whaling fleet seut off with all dispatch.—Oupe Ann Advertiser.

BLUEFISH ON THE JERSEY COAST.

FORKED RIVER, Ocean County, N. J., June 5th, 1875

FORRED RIVER, Ocean County, N. J., June 5th, 1875.
Entron Forrest and Stieram:—
After waiting and watching day after day for the arrival of the "big blue 18th," our minds are set at rest, and all thoughts of a poor fishing season are dispelled. The game is here, and we have been after it with prelty good success, too. Since Monday last our bouts have caught nearly 23,000 pounds with the reguld. Yesterday the Mattic caught 113 fish, the Sarah 127, and the Haze 93, besides many others caught by bouts not hatting from this place. Total weight, 1,585 pounds. The fish seem to have all put for the feeding grounds apposite our river, and as an indication of the immense quantities here may be stated the fact that Capts. Potter and Philips caught in one hand, with scheenet, over 9,000 pounds of bluefith. Of course the bayroom are in high spirits, and while they welcome the arrival in the fish as a menns towards gaining for a time a profitable livellihood, visitors also share to the satisfaction of "good linck" and pleasant moments.

and pleasant moments.

The Spring flight of bay snipe is now at an end. 'During the past two or three weeks excellent sport has been had near this place. The average "kill" has equalled fifty to sixty birds to a man, mostly robios and

will" has equalled fifty to sixty birds to a man, mostly runnes and plover.

Among the many who have arrived here within a few days to enjoy the pleasure of gnn and line may be mentioned Messrs. L. W. Warner, 67 Marray street; Wm. H. Hall, of Hall & Racekel; Oscar B. Smith, of Greenleaf, Nurris & Co., 66 Exchange place; Edgar S. Allien and family, of New York City; and Messrs. Thomas Thorne, James S. Streat, F. B. Tilghman, Samuel Whitels, and others of Wall street famo.

Weakfieb are now being caught in units, weighing from three to six pounds, but of course as yet will not take to hook and line.

Excellent pickerel fishing has been enjoyed by several of your citizens on the river directly in front of the house. One gentleman canght yesterday seventy-six, running from one half to two pounds weight. Should any party make an extraordinarily large had of fish I will advise you. Until then I remain, yours piscatorially.

TROUT AND SALMON FISHING LAKE MERCED, CALIFORNIA.

San Francisco, June 3d, 1825

SAN FRANCISCO, June 3d, 1875.

Among the lakes at short distances from this city is Luke Merced, a sheet or water nearly cut in two by a tongue of land, which very nearly makes it two takes. It belongs to the Spring Valley Water Company, and has been leased by the Culfornia Accilmatizing Society for the purpose of the preservation of fish for the recreation of sportsmeo. It has been stocked with Lake Taboc trout and salmon, 18almo quinnat.) About eleven years ago some young front were put into it by a Mr. Leonard, and have become large fish of about six or seven pounds weight. Four years ago a number of Tabbe trout and some young estimou were planted, and every year since successively they have placed into it many more. It is not until this year that any considerable number of both these kinds of fish bave been captured, either by troiling or splinning with

a small spoon hait, or by angling with builts, or rarely with the fly. It now promises to afford good sport in future years. The scalety was incorporated in April, 1871 wills an amound in stock of 5,000 shares, capital \$40,000, at \$10 each. All omisiders are allowed to fish in the lake on payment of \$2.50 per diem, and sharcholders difty cents. All permits must be signed by Dr. Newell, President, and Mr. John Williamson, Secretary. Of coarse, sometimes permits are presented to distinguished visitors, and when yon, Mr. Edilor, visit the Golden State, dombiless you will be complimented with a free permit.

An interesting and curious problem has been solved in the stocking of this fine sheet of water or 865 acres. It is a fresh water lake, but salmon two and thrive in it without going to the ocean, willt which it has no connection, but is incretly the grand and vast recoptacle of its surplus water. There are no other fish in the take but builheads and slickle backs, with perhaps a few other sorts of small fish. There is on the shores of the lake a toolet-life Ocean View House-and at the head of the lake a surail taverus, kept by one Haskins, a very accommodating person, where boats can be obtained. Near the ocean, also, and but a short distance from the lake, is the Ocean Side House, four miles from the famous Scal Rocks and Cliff House, and seven miles from the city. In the vicinity of these hords is the new Golden Clute Park, very extensive, and laid ont in hundsome style, and planted with a great variety of beautiful decidnous and evergreen lrees.

A day or two since, for the first line, I took a two days' fishing trip to to thus lake, and being a tolerably good pedestrian I walked the whole distance (seven miles) to fit. By crossing three or four small mountuins I lessened the detance about a mile and a half. On this purtlen of the coat the hills and mountuins are almost devold of trees, but the hills and valleys produce good crops of gruin, grass, and vegetables. It is too windy for fruit trees. The first mor

The Kennel.

AMERICAN KENNELS.-NO. 4

MR. J. J. SEITZINGER'S.

A MONG the prominent kennels of field dogs in this eountry must be ranked that of J. J. Seitzinger, Esq., of the city of Philadelphia. This, however, differs from those kennels described in previous unmbers of our paper, inasmuch as Mr. S. has not given attention to the paper, masince as arr. S. has not given attention to the breeding of dogs, but depends upon the experience and judgment of Horace Smith, "Esquire," Field and Kennel Editor of our paper, for keeping binself supplied with broken dogs for the use of himself and a few friends with whom he shoots. And the probability is, that no kennel in this country or Europe could turn out as many good staunch, thoroughbred, well broken stylish setters as this a brief description of which we will give

Clyde-1s a full sized, fine high-bred looking setter of the Clyde—1s a fill sized, into light the dowing series of the Gordon strain, colured, bluck, tan and white, bred from the famous Gardon setter, Fritz, belonging to Edward flow, Esq. of Princelon, N. J., and out of A. Cruser's of Maryland, black and tan bitch. We have shot over Clyde Maryland, black and tun bitch. for several weeks in Iowa and Wisconsin and consider him one of the fluest dogs we have ever met with. His nose and qualifications as a spino and chicken dog are truly

Charm—Is a full sized, up standing, jet black setter, half brother to Clyde; a stylish, stanneh, fleet, well broken dog; good on all game

Czar—Is a thoroughlired blue Belton, black, tan and white; imported by Dr. Ash from one of the best kennels in England for Mr. 11. Smith. This dog has an excellent nose; is very staunch on all game, but excels on wondcock, and is exceedingly well broken.

white setter, bred from fine imported stock, an extra good dog on quail, which game seems to be his "particular vanits." Bright-Is a very fine looking up standing, orange and vanity.

Duke-Is a large sized orange and white setter of the Gildersleeve strain; a time looking, well formed dog, and very serviceable on all game,

Jerry—Is a tlack, white and lilue setter, a shade below medium size, but compact and well formul, and for suipe, woodleock, and as a thick retriever, has few if any superiors. Jerry is bred from Major Armstrong's fine bitch, June, out of Horace Smith's famous old blue Belton bitch Cura.

Joe-Is a brother to Jerry, very dark orange and white mottled, a medium sized, compact, well formed setter, and having had much work on the prairies of fowa and Wis-

cousin, is now ranked among first-class dags.

Dash—is a magnificent tri-colored setter, black, lan and white, bred from Mr. II. Smith's old imported setter hitch Fly, by Maj. Stockton's, dog Hal, of Princeton, N. J. Old

Hal was considered the wonder of his day.

Dush 2d—1s a larged sized black setter, bred from Armstrong's Juno, a fine looking and very serviceable alog for general purposes.

Queen-Is a splendid full sized setter bitch, black, with a linge of tan, and a very little of while. She is bred from an imported blue Belton bltch, by a fine dog cross of Gordon and red Irish. She promises, with a little more work, to be an extra good one to shoot over, and for slock purposes she will be very valuable, as she is very high breat and one of the most heautiful setters we have ever seen

-We have an interesting letter on hand for our . Kennel Department from Rev. J. Cumming Macdona, who is now nt Schloss Braunfels, Prinssia

A VALUABLE DOG.—Mr. John S. Oyer, of Upper Mount Bethel, has a very fine dog of the "setter" species which he has spent considerable trouble in training. One after-

noon last week while Mr. Over was plowing, his pocket hook, comfortably filled with greenbacks, made an excursion down his trouser leg and out into the furrow, its loss not being discovered until several furrows had been turned over it. Then Mr. Over called his dag, and showing him as near as he could guess, the spot, bade him hunt for it, and went on with his plowing. The dog went to work and by the time his owner came around on the next furrow he had found the pocket book, opened it, and was investigating the contents with more interest than skill. That dog is not for sale.—Enton, (Pa.,) Free Press.

Arsenic in Hydrophobia.—In a late number of the Correspondene: Blatt, Dr. Guisan gives a number of enses showing the value of arsenic as a prophylactic in hydrophobia, and even as a reactly also after symptoms are marked. He relates that a rabid dog, between the 7th and 9th of Jane, bit thirteen persons in various towns of the canton Freihurg. All were recommended to be treated with one-twentieth of a grain of arsenic morning and evening, as a prophylactic measure. Eight submitted to this prophylactic measure, and none were affected. Four defined or were not allowed to take the arsenic. Of those four, two remained manifected, and two died. One began the arsenic treatment, but specifily left it off; she was attacked, but at a much later period, and died. Dr. Guisan recommends not only the enternal employment of the arsenic, but that the wound should be dressed with it.

Wachting and Boating.

All communications from Secretaries and friends should be mailed ne later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Date.	Boston.	New York.	Charleston.

—Mr. Garner's new yacht, Moltawk, was successfully lanuched on Wednesday hast from the yard of her huilder. Mr. Joseph Van Deuser, who was also the constructor of the Fleetwing, Magie, Cohumbia, and other celebrated yachts. At half past one the last block was knocked from under her and the magnificent vessel glided from the ways. As such great expectations have been formed of the Mohawk, a brief description of this largest and latest addition to our yacht fleet may not be uniateresting to our readers. The observer is first struck by the immense height of her spurs. The dimensions of these are as follows:—

	reet.
Length of majamast	
Length of nuintopinast	.60 00
Length of forening	
Length of foretopmast	.55 00
Length of main boom	90 00
Length of updu gaff	.41 00
Length of fore boom	
Length of squaresuit yard.	.63 00
Length of howspril out-buard	.30 00
Length of jiaboom from cap to hounds	24 00
Extreme length of bowsprit	.42 00

The dimensions of the schooner's hull are

Length over all from knight heads to taffrall	
Length on deck	144 00
Length on the water tine	
Length of keel	
Breadth of beam	
Depeth of hobt	9 04
Length of centrelioard	21 00
Length of overhaughing stern	18 00
Length of roke of stern	14 00
The state of the s	

with much interest.

—The Brooklyn Yacht Club held a meeting at their rooms on Thursday evening last. For the regatta to take place on the 19th hist, the following yachts had up to that time entered: Madeleine, Sea Witch, Clio, Comel, Gipsy, Vision, W. F. Lee, Victoria, Florence, Sadie, Undine, Petrel, Libbie B., Elizabeth, Emma T., Lizzie L., Sophia, Playful and Maggie B.

The course for schooners and first class sloops will be from anchorage to stake boat S. W. Spit, passing it from westward to snathward, thence to lightship, turning same on the sturbourd hund and return to home stake hoat, which will be off Bay Ridge dock.

For second class sloops, from anchorage to stake boat at S. W. Spit, passing it from the westward to southward, thence around stake boat at outer bay buoy in Gedney's Cloumel, rounding same from southward to eastward, thence to home stake bont.

For third class sloops (open boats) from anchorage to stake hoat at S. W. Spit, rounding same from westward to southward, thence to home stake bont.

The winning yacht in each case must make the race in eight hours to be entitled to a prize.

Commodore Dickerson announced that the annual cruise would take place about July 19th, the date being so arranged as to accommodate those members wishing to take part in the Cape May regutta, July 12th and 13th.

On the day of the regutta the steamer Neversink will convey guests of the club down the bay.

Rear Commodore Davidson announced the presentation to the club by a Mr. Merrill of a silver or nickel plated log to be sailed for as a prize.

It was resolved that it should be sailed for by yachts of the schooner class.

Mr. S. L. Blood then presented to the club an elegant flag for the club house, 19x15 feet in dimensions.

It was announced that Mr. Garner's new yeeht, the Mohawk, would not be completed in time for the regatla.

hawk, would not be completed in time for the regatta.

—The annual regatta of the Brouklyn Yacht Club will be sailed on Satorday, the 19th inst. over the usual courses, starting from the stake boat off Buy Ridge. Four classes of boats in all will participate, there being two prizes for each class. Among the yachts mentioacd as likely to take part in the regatta are the schooners Madeline, Tidal Wave, Sen Wilch, Idler, Coinet. Clio and Gipsy; sloops Vision, Sadie, Petrel, Undine, W. T. Lee, Lizzie L., Screamer, Playful, Victoria, Brooklyn, Florence, Maggie B., Libbic B., Elizabeth and Emina T. The event promises to be one of the most successful ever inaugurated by this popular club. lar elub.

lar club.

THE SEAWANHAKA COMINTHIAN RACE.—The fifth regatta for sloops of the Seawanhaka Yacht Club was sailed on Monday last under most favorable asspices. For such of our readers as may be unfamiliar with the term we would explain that in "Corinthian" matches the entire erew, from the hands at the wheel to the cook at the foresheet, are amateurs, no professional sailors being allowed on board. For the race in question but two sloops were entered, as follows:—

Mean tength feet.

Addle Voorhis	H. M. S	Coming	П. М. 8. 1 24 30

At 1:40 the Vision was ahead, but here her luck deserted her. Running out of the wind she lay becalment, while the Addie, only a few hundred yards away, carried a moderate breeze. Before the Vision got it ber adversary was a mile ahead and to windward. This advantage she kept, in spite of all the efforts of the Vision's erew, and the home stake boat was passed according to the following summary:—

Counted Time. H. M. S. 4 58 26 5 90 3t Time. H. M. S. 5 08 40 5 10 48 1E, M. S. 4 2 23 8 7 03

The Addie is, therefore, a winner, by counted time, by m. 5s. The Coming came in five minutes astern of the

Vision.

In the run to the S. W. Spit it seemed to us that the Captain of the Addie V. erred in not keeping his sails full, as they were shalling from the Hospital to the Spit. In running up from the light-ship he showed his judgment, however, in getting under the land, where the wind hauled more to the west, and he had a better tide. The Addie was better manned than the Vision, but the Captain of the latter followed his opponent too much. It was the day to bring out the Vision's best qualities.

The cup was duly presented on board the accompanying steamer, and congratulatory speeches made. The Seanwanhaka Club deserves great credit for inaugurating these Corinthiau races, and we look for a large fleet and much sport on the occasion of the Schooner Regatta to be sailed under their auspices on the 24th inst.

Seawanhaka Yacht Club.—The Commodore and

sport of the evension of the Schooler regatal to be saided under their auspices on the 24th inst.

Seamanhaka Yacht Club.—The Commodore and Rear Commodore of the Seamanhaka Yacht Club, offer prizes for a schooner ruce, to be sailed from Sandy Hook Thursday, Jane 24th, at 10:30 o'clock, A. M. The race will be open to all schooners belonging to the New York, Eastern, Brooklyn, Boston, Atlantic and Scawanhaka Yacht clubs, and will be governed by the sailing regulations of the Seawanhaka Club, with time allowance, and will be under the supervision of the Regatta Cummittee.

Schooners will be divided into two classes, as follows:—First class, those measuring more than 90 feet over all; second class, those measuring 90 feet and under.

Owner's measurements will be received for all vessels not belonging to the Seawanhaka Yacht Club, and in ease a question arises concerning the measurement of any bont it will be remeasured by that club. There will be a prize of the value of \$300 for the first-class, presented by the Commodore, and another of the same value for the second-class, presented by the Rear Commodore. No race unless there are at least three entries in each class,

The course will be from buoy No. 5, off Sandy Hook, twenty miles to windward and return if the wind permits, or twenty miles to leeward and return. Yachts will pass the Judge's steamer and linoy going out and coming home, at which points the time will be taken. After starting the yachts, the steamer will proceed to, and be statiumed at the turning point, and yachts in rounding will leave her on the starboard hand.

The start will he a flying one, and the signals which will be given from the Ludge's steamer will he as fullnws:—Fur preparatory signal, a prolunged blust of the whishle, and inwering of the club flag. Fifteen minutes later, for the start, the same signals will be repeated. Fifteen minutes will be allowed for crossing the line, after which no yachts time will be taken.

All yachts in the race will fly their private signal from the main peak.

Entries must be in writing, should be addressed to the Secretary of the Regatta Committee, Mr. M. Rousevelt Schuyler, at his offlee, 52 William street, and will be received until noon of the day preceading the race.

Members of the Seawanbaka Yacht Chib are invited to accompany the Judge's steamer, which will leave the Burgo Offlee Warf at 7 o'clock on the moraing of the rure, stopping at Tompkinsville Lumling, Staten Island, it 730.

Regatta Committee, Frederic G. Fuster, M. Rousevett Schuyler, Win. Krebs, James H. Elliot, L. De Furest Wooodruff.

—The Williamsburgh Yacht Club held their fifth annual regata on Tuesilay last; the report reaching us too late for our last issue. There was very little wind but an excellent days sport was afforded the spectators. The heats passed the house stake bout in the order named below, the Victoress won the prize for the yachts of the first-class, the Sorceress for yachts of the second class, the Sorveress for yachts of the second class, the Sorveress for yachts of the second class, the Sawyer for the third-class, and the Pidgeon for the fourth class. The Sawyer also won the club pennant as the first yacht home, irrespective of classification:—

Yacht. H. M. S.I.	Yacht, H 7	I. S.
J. M. Sawyer 6 00 00 1	Ntrivina 6 3	1 00
Favorita	Frannette 6 4	2 30
Nottle	John Lantliler 6 1	1 88
A. J. Brush	8. M. Rogera 11 4	80
Pldgeon 6 27 40	Horcerenn 7 D	0 30
Victoress	S. J. Colahan 7 B	5 00

SOUTH BOSTON YACHT CLUB.—The first champion regalta of this club was held on Thursday, but awing to a lack of wind was not the success of anticipated. At 3:50 P. M. the first class, comprising the following yachts were stocked.

Yacht and Captain.	Measurement.	Yacht and Captain.	Measurement,
Bva. Burry	25.01	Naullin, -	
Naiad Queen, Kilner	26 01	Gaet, McCormack	
Lydia, Whorf			35 06

The gun for the second-class race, for all yachts, twenty-four feet water line or less, was fired at 4:10. Yuchts entered in the following order; the first three having centre-boards and the last four keels:—

Yacht and Captain.		Yecht and Captain.	ement.
Ripple, Macomber			81.00
Mabel, Cum, Roberts	19.0?	Pearloss, Griffin	 20,03
Posy, McKre		Banchee, Orcutt	 23,05
Gertrade, Tattle			

Three other eraft were entered but soon dropped out. The whist of a breeze soon died away, and for five murtal hours the yachts dragged along the seven mile course. The Starlight returned at 9:15 o'clock, the Eva at 10:3, the Gud at 10:11, and the Mabel at 10. Thus it was shown that there was just wind enough for a crack boat to make 9; miles in five hours and twenty-two minutes. The Starlight, ex-Commodore Wright, undoubtedly can claim the prize for the race among the first-class keels, and the Eva the same among the centre-boards of the same, and the Mabel, Commodore Roberts, among the second-class centre-boards.

-The Neried Boat Club, of Brooklyn, held their Spring regatta on Saturday. The course was from the foot of South Court street to the Bay Ridge Dock, a distance of two miles. The first race was between four-oared gigs. There were two crews composed as follows:—

two miles. The first race was between four-oared gigs. There were two crews composed as follows:—

Endora—Ceters Red.
W. P. Earle, bow.
D. C. Brown, No. 9.
A. K. Brown, No. 9.
A. K. Brown, No. 3.
J. C. Egerton, coxswaln
The Eudora crew won the race in Hmin. 28sec. There were two entries, the Eruhl and Thetis, for the pair oared race. The erew of the Eruhl, whose color was red, consisted of H. C. Brown, bow, and Win. Wise, stroke. The Thetis men (color blue) were C. C. Brown, bow, and P. A. Hardy, stroke. The blues took the lead and kept it to the end, winning in 12min. 48sec. There were entered for the single scull race, J. P. Earle, color rel; P. B. Rogers, color blue, and Arthur K. Brown, color white, and the eintest was for a silver challenge enp. presented by Mr. Charles J. Stewart for the scuson of 1875. The course was a little less than two miles. Brown gradually pulled nway from the other two, and kept the lead to the end, winning in 8m. 21s. The contest between Rogers and Earle was spirited, but the former came in second. After the race the contestants and their friends assembled on the steamer Fort Lee. Mr. Brown was presented with the challenge enp, and Mr. Frank Lawton made a speech.

—The Passaic River Amateur Rowing Association, in

enp, and Mr. Frank Lawton made a speech.

—The Passaic River Amateur Rowing Association, in which are comprised the Eurck, 'Priton, Passaic and Mystic rowing clubs, held their regatta on the Passaic River on Saturday. The course was a mile and a hulf, extending from a point just above the Eric Railway bridge, and extending up to a point a little below the midland Railrond bridge. The first race was between the six-onced gigs of the Passaic and Eurcka clubs; distance 14 miles straight away; prize, a stand of colors. The Eurckin crew won by twelve lengths; time, 9min. 50sce. J. W. Kennedy, of the Passaic, and E. D. Small, of the Triton Club, contested the single scull race; same distance as the first. Small came in the winner by a length; time 10min. 41sec. The great event of the day was the four-oared shell race between all the clubs. The following are the crews:—Passaic, E. M. Roberts, bow; F. R. Fortmeyer, C. H. McCormick, C. H. Remer, stroke, and Captain. Triton, L. H. Smith, bow, F. C. Townley, W. A. Brintzenhoffer, Alexander Hardy, stroke, Mystic, W. W. Beebe, R. W. Adams, A. R. Pomercy, D. E. Tuthill, stroke. Eureka, John Young, Captaiu and how; Hudson Ryno, George Chark and John Angilman. The distance was three miles, being up and down the course. The Eureka's won after a good race, Triton's second. The time was not given out.

The Dorchester Yacht Club are to day holding their second regatta of the senson, over the Nahant course, which being an aniside one with deep water affords no cluace for yachts to stick in the mnd, as occurred at the last regatta. Our correspondent, "Binnaele," writes that the club propose to make their regattss more interesting to spectators than they have been hitherto. Under the old arrangements the spectators on the judges' beat or club onse were left to anuse themselves as less they might, while the yachts were down the lay. It is the intention of the club to have at their next regatic, Jully 10th, a hand of music stationed on the judges' beat to enliven the tedima of waiting, and it is also proposed that a tender race shall take place over a coarse so arranged that the heats will be in sight the whole time. Cards will be issued to members of the club who desire to have places for Triends on the places' boot. If these arrangements are carried out the pleasure of visitors will be much enhanced, and the club will set an example worthy of imitation.

of the club wito desire to have peaks are carried out the pleusure of visitors will be much enhanced, and the club will set an example worthy of imitation.

The Philadelphila Yacut Club Regatta took place on Saturday, the 12th, on the Dehaware river, under the most favorable circumstances. The prizes offered were three landsome silk flags, trimmed with gold Iringe, and bearing the word "Champion, 1875," a like number of neat blue and white largees, bearing the letters "P. Y. C., 1875," were offered for the second prize. At 10 o'clock and 10 miuntes the third class yachts received the word go, the little things making a good start, and were soon sendingup the river with a free wind. At 10:30 the yachts of the second class received a flying send-off, the fleet keeping well together. At 10:50 the first class was started. When opposite Palmer street wharf the second class yachts, John Wilson, Jr., and Dolly Tiltor, capsized, and the Julin F. Ohl, of the first class, was soon seen to follow suit. The men were speedily picked up and towed ushere. When the upper buoy was reached the yachts of the third class passed as follows: Mille forst, Ambrose Hager second; of the second class, the fda May was the first to turn, at 12:15; Stambilord, 12:15:10; Joseph Leury, 12:15:13; Brewer, 12:15 to; with the remainder of the thee close astern; of the first class, the Mahlon S. Thomas rounded at 12:30; A. T. Eggleton, 12,30:10; Bazley, 12:30:13; Haff, 12:31; Ardis, 12:35. The louts all around landed on the wind for the Pennsylvania shore, the wind continuing to blow harder every moment. On the first statech the Thomas swamped, and lost several minutes. The same ill lack also befel the Eggleton, which allowed the Al Dager to take first place, followed by the Hoff. At the lower end of Rancocas Island the second class yachts Leo Reinfried and Iday May capsized, the latter at the time being first boat. Off Andalasia the yachts stretcled over to the Jersey shore, where the Mainer carried away her headstay. When opposite the House of C

Yacht Sales.—The large schooner (C. B.) yacht Romance has been sold to Mr. G. A. Brooks, of Cincinnati, for \$2,400. The gentleman has a Summer residence at Swampscott, and so the yacht will remain in Massachusetts waters. She was built in 1874, and was sold at a great bar-

gain.

The eat-rigged sloop Water Witch, of Boston, has been sold to Wm. Gorman by Mr. U. K. Pettengill. The sloop Queen Mnb, M. J. Kiley's, has probably been sold to a Boston gentleman, and she has been put in the water and being rigged and fitted at Pierce's wharf, City Point, South Boston.

Schuylkill Navy Regatta.—The preparations of the Schuylkill Navy for their second annual regatta, open to all amateurs, have been completed.

The drawing for heats and positions took place at the Undine House, Fairmonut, al 7 o'clock, P. M. on Monday, The programme has been fixed as follows:—Wednesday, June 16th, first day of races, will be devoted to the trial heats for singles, final heats for doubles, and trials for the fours. There will two heats of singles and two of fours, making five races for the day.

Chance has so thrown the crews together that the races cannot help heing exciting. The second heat for singles will bring the great Chicago scullers, Yates and Curtis, together. In the fours the three Philadelphin crews have been drawn together. The Argonauts, Waverly, and Seawanhaka, will be together. The Waverly crew are heavy, in good training, and pulling in good form. It is to be hoped that the 'heat' will be hot. The odds seem to be out the Argonautas for one, and Quakers for the other heat.

For Thursday the three races will be finals for singles, pairs and fours. The pairs are much above average. Yides and Curtis, Brown and Walker, and McMillan, and Mingus being pitted together. Mr. J. Henry Ferguson, Presidut of L' Hirondecle Boat Club of Baltimore, has accepted the invitation to get as umpire.

The Saratoga on Salurdov liest and are now comfortably in

the invitation to get as umpire.

The Saratoga of Regatta.—The Columbia erew arrived at Saratoga of Saturday lest and are now comfortably installed at their quarters, legrithant's, at the lake. They took with them three boats, a six our shell, a pair-our gig and a six-oar barge. A new shell is expected from Fearon in a few days. The Hamilton crew is already on the ground. Cornell is expected to arrive during the week and the other crews will put in appearance as college duties will permit. It is rather an unfortunate coincidence that the withdrawal of Triaity should have again brought Harvard and Yale side by side, not that we believe either would be guilty of a deliberate foul, but young blood is warm, and even an accidental collision would tend to increase the present feefing into something like animosity and cause as unpleasant a termination to the race as that of last year. The Hamilton crew did not draw a position with the rest and they have applied for the vacant one,

which we hope will be granted them. If the new plan of laying out a separate course is successful it will greatly simplify the referee's work, and, prevent jockeying and the accompanying bad blood.

simplify the referee's work, and, prevent jockeying and the necompanying bad blood.

—The new boat house of Yale is at last completed, and on Wednesday was dedicated to the use of the Yale Navy by the Committee of the Faculty and Alamni, by whom it was put up. The cost of the building and land amounted to \$16,50d, nearly all of which amount was voluntarily subscribed. Among the givers are Rubert Bonner, \$2,000; George P. Wetmore, \$1,000 and over; William Waller Phelps, who has made an annual gift of \$250 for some years past; Fred W. Stevens, \$1,000 and over; William M. Evorts, Prissident Porter, and nearly all the foculty; Goo. C. S. and Moses S. Southworth, of Springfield, Muss., the givers of the Southworth cup; the Hon. William M. Stewart, of Nevada; George Bliss, of Morton, Bliss & Co.; If. B. Challin; Gen. C. C. Dodge, of Phelps, Dodge & Co.; and the Hon. S. W. Kellogg, of Comnecticut.

The building is \$3 feet wide by 75 feet deep, and will hold 100 boats easily. Among the original devices are iron our racks, by which each our can be padlocked into place and made safe from all predatory freshmeu and other interlopers.

terlopers.

Speeches were made by President Porter, Rev. Joseph II. Mitchell, Mr. W. C. Gulliver and others. In presenting the house to the navy, Prof. Brewer alluded to physical beauty as exciting admiration in all eyes. "An athlete," said he, "is its highest development; but where a desire to excel in athletics exists, it should be directed in proper clumels." Mr. C. H. Ferry, to whose untiring energy the completion of the boat house is largely due, responded its a very neut and appropriate speech, and concluded by wisleing that Yale might be victorious in the coming regatin, and declared that all the college desires is "fair play and no favors."

-Lack of space prevents our printing a very interesting and elaborate report of the regatla of the Patapsco regatta from our correspondent "Sculls," a telegraphic summary of which appeared in our last issue

-We are in receipt of one of Bond's sectional boats, new pattern, galvanized iron sides, and wooden bottom. These boats are rapidly extending in use among sports-men; their strength, durability, and convenience of transportation especially adapt them to sporting purposes, appended letter speaks justly of their merits:

Locisville, June 10th, 1875. Mr. W. E. BOND, Cleveland, Ohlo. -

It have first returned from a long boating trip—tor which you so promptly sent me one of your sixteen-foot boats—to Londonville, Ohlo. One finedred and fifty mites of our course fay through the creeks tribulary to the Walhonding, and down the entire length of this river, all the way fall of shoals, rapids and dams. The boat was bumped, dragged, and carried at some point every heur of three days hard work, and in one place entirely capsized by a sunker rock, throwing me ont in the river; but I suffered no damage worse that scratches and one severe bridse. No other least could possibly have borne the rough maage to which this one was subjected. She leaks a very little, but I think a few coats of plaint will make her ready for another royago.

A. H. Siegfried.

Bational Pastimes.

CRICKET

CRICKET.

The first elevens of the Merion and Germantown elms played an exciting cricket match on the grounds of the former, at Ardmore, on Saturday lust. A large audience, among whom were many ladies, were in attendance, and the playing was much above the average. The bowling of Sam Welsh, Tom Hargreaves, Richards, and Hunt, in spite of the hard ground, was excellent, and the fielding good. In the first inning the Merion scored 61 runs, 24 of which were made by Richards, and 14 by Barley. For the Germantowns, in their first inning John Large made 21 beautifully, while the steady play of Joe Hargreaves added 47. In the second inning the Merions showed that they were overnatched, though Taylor and Huston deserved the 13 runs they each made. Richards not out earned his 32, and Hunt was run out at 17. In their second inning the Germantowns lost but four wickets when they had carned the requisite 54 to win. The following is the score: Merion—First inning, 61; second inning, 86; total, 147. Germantown—First inning, 94; second inning, (four wickets,) 54; total, 148.

The Germantowns and Philadelphias plays a match.

total, 148.

—The Germantowns and Philadelphias play a match game, on the l'hiladelphias' ground, next Saturday.
—It is probable that three grand cricket tournaments will take place this season, viz.: One in Ottawa, Pravince of Quebee; the second in Toronto, Province of Onturio, and third in Philadelphia. The committee of Philadelphia elubs, in their letter to Rev. T. D. Phillips, of Ottawa, invite a Canadian twelve to take part in the Philadelphia tourney, and Mr. Phillips, in accepting the invitation, says:

"In this connection I may state that the Ottawa Cricket Cub is now arranging a lournament, to commence July 1st, in which the following matches will be played, if satisfactory progress is made with our present needle and the connected of the connection.

arranging in the played, it satisfactory productions:—
newoilations:—
Duly 18t-Monifeal vs. Olfawa.
July 2d-Montreal vs. Thronto.
July 2d-Oltawn vs. Toronto.
July 2d-Oltawn vs. Toronto.
July 2d-Oltawn vs. Toronto.
July 6th-Hamilton vs. Oltawa.
July 6th and 7th-East vs. West, with Cohourg for houndary line.
The accasion would seem to offer rare facilities for making arrangements for closing a Canadian Eleven. It a similar formament could be provided for in the West, and all the end of Agogust, an opportunity would be afforded for a flaat estection, and for playing the selected Eleven ngaints other tea ms, as practice for the matches in the United States. As the expense will be light—thanks to the generosity of the invitation from Palladeiphla—a tund of \$300 (perhaps less) would be annule.

It is to be hoped that the Toronto cricketers will not be slow in taking up this matter, and that every elfort will be made so have the city well represented at all three tournaments.

—On June 10th the Germantown eleven whipped the Rivertous by 18 to 4.

BASE DALL

The Muluals of Mealsville, Pa, are making arrangements for a tour East during the early part of July, viz.

Newstate, Pintstich, Harrisburg, Easten, Philadelphia, and New York, to "measure lengths" with some of the strong Eastern mateurs. They are one of the representative annoteur idnes in the West, and are desirous of improving their play by croatest with some of fleir Eastern brethren, and woodd like to hear from the Fly Awnys, and tridgeport June 16th by 8 to 5.

Chelseas, Arlingtons, Shibes, Doerrs, and other provincial cluts. They have all been written to, but from some inexplicable reason, in a majority of the cases, have failed to

—The Sancea club of Flatbush, defented the Startles of Gleu Cove, at Prospect Park, on Jane 12th, by 28 to 8.

The Knickerbockers were prevented by other engagements from playing their return match with the Staten Island nine, June 12th, and to oppease the disappointed spectators, the Staten Islanders played against a picked nine, detenting them in seven lunings by a score of 6 to 5.

—The Fly Aways visited Bridgeport, Conc., June 11th, and for the first time eucountered the T. B. F. U. S. club of that city. The gume was pourly played, especially by the Fly Aways, they losing all chances of winning by loose fielding in the first and eighth coning. Decriped, Snigg and Thompson, of the T. B.'s, and Longhlin and Quinn, of the Flys, did best, Longhlin batting and tielding bandsomely. Below will be found the senec:—

Tantuge

Yale has challenged the Harvard nine to play a series of games, beginning June 2d Unless Yale can manage to play before commencement there is little hope of the two nines coming together this year.

—The Grafton, Mass., nine has already arranged for the following games: With the Live Onks, at Lynn, June 18th or 19th; with the Atlanties (professionals), at Warcester, June 26th; with the Rollstones, of Pitenhurg, at Warcester, July 10th. The second game with the Live Oaks will probably be played in Worcester July 3d.

On July 10th the Relinnee club, of Brooklyn, defeated the Juspers, of Manhattan College, in a well played game by the score of 5 to 3.
 On June 8th the Chelseas defeated the Keystones, at Brooklyn, by a score of 7 to 4.

-The St. Louis and Matants elabs met for the first time St. Louis Jane 9, and the Brawns took the Mates to ap. The following is the score.

PROFESSIONALS.

PROPESSIONALS.

—The best game West this scusom was that of June 8th, the score of which is appended. The Chicago club played one of the fluest fielding games ever seen on any ball ground, and this, together with the fact that the Bustons only made three buse hits on Zeitlein, accounts for the defeat of the latter. The Chicagos made their two runs in the fourth inning, not so much on their good batting as the poor fielding of the Reds, O'Rourke fuiling to hamile a sharp hit to bim, Burnes missing an easy chame to put out Devlin between first and secund bases, White making a wild throw, and Spalding musting a thrown ball from White at home base.—

Curning Convention—Matches for Next Winter.—
The Ninth Annual Convention of the Grand National Curling Club was held at Yonkers on Weinesday last, the 9th inst. The meeting comprised curlers from Canada and the West, but was not as well attended as on several previous occasions. At the Executive Committee meeting, which was held in the Grand Army Hall, President John L. Hamilton occupied the chair. The culting of the roll discovered the following representation from the several clubs:—
N. Y. Caledonian, John Russell; New York, George Grieves; Jersey City, Junes Loye: Burns, Ordenshared.

L. Hamilton occupied the chair. The calling of the rall discovered the following representation from the several clubs:—

N. Y. Caledonian, John Russell; New York, George Grieves; Jersey City, James Love; Burns, Ogdensburgh, W. Winterbottom (proxy); Milwaukee, J. A. Bryden; N. Y. Sl. Andrews, A. Dalrymple; Albany, Thomas McCredle; Yankers, W. B. Edgar; Palerson, James Peacock; N. Y. Thistle, William Meikle; Thistle, Detroit, George W. Sparks; Caledonian, Brooklyn, James West; N. Y. Burns, Wm. Hagg; Four Brothers, Canada, R. Malcion; Thistle, Brnoklyn, W. Wurd Watkins; Caledonian, Buffalo, James E. Thomson; Ivanhoe, Paterson, H. L. Butler.

The clubs not represented wore the Chicago; Empire City, N. Y.; Thistle, Chicago; St. Lawrence, Prescott; New York Mills; Orchard Lake, Mich.; Burns, Cleveland; and Granite, Detroit.

After the reading of the minutes of last meeting the reports of committees were ealled for, and the first presented was that of the committee on the International match hetween the United States and Canada. It was given informally hy Mr. H. L. Butler, of Paterson, and set forth the circumstances some time ago stated in the pages of Fonest and Strueam, which made the arrangement of such a match impossible last winter. Out of a required number of fifty rinks, only fifteen could be found which could be depended upon to go.

The reports of the Secretary and Treasurer having been disposed of, the Chairman called for the resolutions drawn up by a special committee regarding the death of Mr. A. Cassels, writer to the Signet, Edinburgh, the Secretary of the Royal Caledonian Curling Club of Sectland.

The New York Mills Club was dropped from the roll, and was the clubs applying for admission were represented as follows:—

new clubs applying for admission were represented

The new clubs applying for admission were represented as follows:—
Tray, Thomas McCredie (proxy); Newark, W. W. Love; Manhattau, N. Y., G. T. Addison; Utica, none; St. Lawrence, Presect, Ont., J. Gillies (proxy). Of these the last named was merely reinstated. It was really defunct for a period of three years, but having been restored to animation, was somewhat anomalously treated as though it had been in membership all along.

Mr. A. Dalrymple brought forward a series of hy-laws, for the regulation of the match for the Bell Champion Quoit. A modification of the existing practice was advocated some line ago in these columns in an article upon quoits, having especial reference to the size of the quoit used in the champion match. This and other defects are now remedied by the adoption of Mr. Dalrymple's code, which is founded upon that of the Excelsior Quoiting Club. Its main provisions are as follows:—

1st. That the players stall be palted by padot, those drawing the same numbers being ongenerits.

21 That the match shall be played on the natural turf, without clay unds.

31 That the metis, or plus, shall be eighteen yards anart.

That the motis, or plus, shall be eighteen yards murt.

That the players, when delivering their quoits, shall stand within feet of the mot.

That the heater shall be decided by lot.

That the players shall remain at thound played from until the last from each cent is played.

That the size of quoits shall not exceed eight inches in diameter.

That in case of floots or dispute all measurements shall be name compasses from the centre of the top of the pin to the nearest visiton.

the Iron.

9th. That in case of a broken quot the measurement shall be made from the up of the pin to the nearest visible from of the fragment lying closest to the pin.

10th. That any disconcerting act done by one player shall entitle his anneously to play his shot over again.

11th. That two unipries and a referee shall be appointed by the executive committee of the Grand National.

On motion these by-haws were ordered to be inserted in

On motion these by-fliws were ordered to he inserted in the next annual.

At the general meeting a large accession was made to the number of curlers present, chiefly of members of the Caledonian, New York and St. Audrews Clubs of New York, and from the local club.

The following are the matches for the Graad National medals to be played next winter:—

Unipire.

New York vs. Yonkets.
N. Y. Catedonian vs. Jorsey City.
St. Amtrews vs. Ivanboo.
Pubrisan vs. Empiro City.
N. Y. Thislie vs. Thistie, Brooklya.
Berns, N. Y. ys. Catedonian, Brooklyn.
Newark vs. Manhaitan.
Albany vs. Gray. Alhany vs Troy.

Inthe, Ugdensburgh, vs St. Lawrence, Prescot.

Buffalo vs. Four Brothers

Milwackee vs. Thistle, Chicago.

Grante, Detroit, vs. Orchard Luke.

Thistle, Petroit, vs. Chicago.

Cleveland vs. Ulica Buffalo.

The nutch for the Gordon medal was again made the subject of a lengthy discussion, but the motion offered was ultimately laid upon the table.

The letter of resignation of the Chuphain, Rev. Dr. Thomson of Fourth Presbyterian Church, New York, was resized.

son of Fourth Presbyterian Church, New York, was received.

Mr. A. Dulrymple moved that as the Western section had played for the Gordon medal last winter, the Eastern section play for it next winter on the pond in Central Park, during the first half of January, our day to be more exactly fixed by the President, the mitch to be played in the regular way by one rink from each club. Curried.

The Convention will meet next year in Jersey City.

The medal played for two years ago by the Milwaukee and Grandto, Detroit clubs, was ordered to be returned to the Grand National. The match was never satisfactorily decided, and the medal is at present in the possession of Mr. G. W. Sparks of Detroit.

The subject of an international mulch was again brought up by Mr. R. Malcom of Toronto. He reminded the Convention that such a bonspiel was first proposed in 1872, and that in 1873 it had been regularly moved and carried in the Toronto Convention that it should be played last winter. He was willing to accept the Committee's report as presented by Mr. Butler to the Executive Committee, but he would certainly not he satisfied if another winter went past without it being played. The twenty-seven clubs on the roll, ontside of the Canadian members, ought to arrange

two rinks each on an average, and if they made up their mimls to do it there should be no difficulty about it. It was worth bearing in mind that next year was the year of the Centennial, and a grand international match might be used as a means of reminding his countrymen on the other side of the horder, how America had been victorious over her furefathers of England a hundred years ago. A very general disappointment was felt by Canadiaus because the match thin not come off list winter.

On motion the Executive members of each club were appointed a Committee of the Whole to attend to the matter.

milter.

The President's subfress, one of the best ever given before the Grand National, was then delivered by Mr. Hamilton, and the election of officers for the cusuing year was proceeded with. It resulted as follows:—President, John L. Hamilton; 1st Pice-President, James Stewart of Youkers; 2th Vice-President, G. W. Sparks, of the Thistle Club, Detroit; Secretary and Trensurer, David Fonlis.

The meeting clascal after the installation of the newly elected officers and the transaction of some Informal business. A banquet was given at the Getty House in the evening.

The Onoiting Mutch.—The match for the Bell Champion

evening.

The Quaiting Mutch.—The match for the Bell Champion Quait was postponed on account of the rain until the following day, when it came off on a piece of ground to the south of Yankers. Twenty-eight players entered, and the pluy was very fine over almost the whole ground. The improvement upon that exhibited a few years ago, in the same match, was very marked. Mr. A. Darryaple, the winner of the medal hist year, was disposed of an the second tie. The remaining lies were watched with great interest and resulted as follows:

THIRD TE
G Henderson 21 D, Fontis 35
G. Grieves 21 W. Lewis 5
John Terapietan a hyo.
FOURTH TIE
J. Transdeton
G. Grieres
FINAL TIE.
J. Templeton
W. H. Doly of Vonkors goted as unining

W. H. Doty of Yonkers acted as umpire.
Mr. Templeton, the winner of the medal, now holds it for the second time. He was the first to went the trophy, when, in 1868, he earried it off from a field of twenty two players. He is champion of the Execisior Quoiting Club, and a member of the Caledouia Curling Club of New York.

Value of Earth Worms,—Mr. Josiah Parkes, the eminent English agricultural engineer, found that earth worms were great assistance in land drainage. He says they love moist, but not well soils, and will bore down to water, but not will but not well soils, and will bore down to water, but not will be read of the line of the long previous shallow drainage, he found that the worms had greatly increased in number, and that their bores descended quite to the level of the pipes. Many of the worm holes were large enough to receive the little finger, and it was evident that one worm has several bores, some of which are used in dry weather, and some as a refuge from rain. A piece of land in Lineolashire, over which the sea had broken and killed worms, remained sterile until the worms again inhabited it.

There was a piece of pastare hand near his house in which the worms were in such numbers that he thought their casts interfered too much with the grass, and he had libelied rolled at night in order to destroy them. The result was that the productiveness of the field declined, and was not restored until the worms land recruited their numbers, which was aided by collecting and transporting multitudes of worms from the fields adjoining. The great depth to which the worms will hore, and from which they east up fine fertile soil to the surface, has been described by Mr. C. Darwin, of Kenl, who states that in a few years they have elevated the surface of fields by a layer of fine molds several inches thick, thus adding to the fertility of the soil.

Potted Shad.—An esteemed friend furnished us with the following seasonable recipe. We have tried it, and find the fish put up it excellent—every way as pleasant to the pulatens the northern article of shad sold in hermaticully scaled boxes by our grocers: Take four good-sized fresh shad, cut each into six pieces and by these in salt water for a few hours; after taking these out of the salt water for a few hours; after taking these out of the salt water drain them well. Then take eight teaspoonful of made, and mix them thoroughly. Sprinkle the fish well with these condiments; by the fish in a stone jar, and cover it with good strong vinegar. Place a cloth cover over the jar, lie it down, and bake contents over a slow tire from six to eight hours. When done, set away in a cool place for a few days, and when the jar is opened, you will find all hones have disappeared, and a nice relish is before you. Warrenton Index.

Answers To Correspondents.

C. W., Minnesoth Janction, Wis .- Can send you Wingute's Ride Munnal; price \$1.50

Thas R. Snyilam, editor of "Far, Flu and Feather:" Please send pres-sent address to this office.

F. W. G., Eric, Penn.—Glye your spaniel suppy three drops Foreler's solution arsenic three times a day, and you will find good results.

MESSENER, Boston—In Forest AND STREAM June 3d, page 268, in ride match at gallery of J. S. Conlin for "short range championship," what twee the distance? Ans. Twenty-five yards.

a universe the distille? Ans. Thenty-five yards.

Sancho, St. Louis.—Will you please liftly in me where I can procure same 30 inch cirele targets to try a shot gan? Ans. From Peck & Shyder, No. 126 Nassan street. New York.

D. MoG., Harrisville, Mich.—Where can I get Curtis & Harvey's No. 6 gappointer? three tried several places and can't get it. Ans. None to be find in this city.

e mut in this city.

E. C. V., Springfield, Mass.—In the report of fly casting at Water-own shire, do you count from foot of the caster or from tip of rod? ons. Measurement of distance from but of rod to end of tender, or cust-

stated that wood ducks cannot be domesticated. I have more than once seen them in that combition, and mingling familiarly with the other poultry, on the Des Momes River near Chicago.—S. C. C.

M. D. Morris, Run, Tiogn, Pena.—Ran you inform me in your Adswert to Correspondents where tem procure from one to five thousand small trust; also, the best month for stocking a good? Ans. Thompson & Tagg, Newhinge, Bucks county, Penn. Best time for stocking, in the Spring season.

F. B. P., Montello, Wis.—Please Inform me what is the number and street at which the *Sportsman* of New York is published; also the Washington Sportsman? Ans. The Sportsman, No. 23 Park row, New York; Washington Sportsman discontinued.

York: Washington Sportsman discontinued.

Constant Realish, Syracise, N. Y.—Where can I obtain a pair of fishing shoes with perforated soles, and what is the cost of such? Ans Fishing boots are not made with perforated soles, but the top and sides of the foot are punched. Address Messis, Ferguson & Stevens, No. 87 Nassao street, New York.

W. N. W., Hoston — W. and S. both agree that the Chnard Company have tost two stemmers between this country and England. W. bets. S. \$5 that the two stemmers bust by the Chnard Company ivers not lost, one in Cape Cod and the other near Halifax. Who what Ans. The Columbia, of the Chnard Line, ive are informed, was lost on the rocks in Massichneelts Bay about 18th. The Tripoli was lost on the coast of Ireland.

Forest, Childenango.—Some time ago I saw in your Answers to Correspondents the mance of a work on tront and other files, but I cannot now find it. Would it be too much to ask if you would repeal the name, or that of some other work, with price of each? Ronalds & Blacker's "Fly Fishers' Entouslogy," Thaddens Norths' "American Anglera' Book." The price of the latter is \$3.50; the others are English works, and we do not know the price. and we do not know the price

and we do not know the price.

J. E. S., Philadelphia,—A frient and I wish a few days bluedshing the coming week; who can me get to formish bont and man, and which is the best place easily accessible from "hiladelphia". Ans. Kinsey's Ashley House is attanted within one bundred yards of the celestrated fishing grounds of Burnegat Inde, where conformible necommodations, dehermen, boats, &c., can be found. There are also good hotels, boats, &c., at Barnegat Village and Warrtown.

J. H., Boston.—Ist. What is the weight of the Scott gun you have fur sale, and which he advertised for sate to this week's issue? Ans. 8; pounds. 2d What is the lowest cash trice it can be hought for? Ans. 8; 150. 3d. Do you think I could be able to get a pair of stuffed mullard and one formale blackfill dock to New York, or could you get them and send them to me, and at what price? Ans. Address Messes. Earon & Co., No. 103 Nassan street, New York.

MERGURY, Boston.—Phase describe in your next laste, if possible "blucdish tackle" as used by disherinen about Beaufort and on the coast of the Carolinas. I have read somewhere that they use in place of bone or bright metal a piece of adder with the line and a portion of book drawn through it. Ans. The same tackle as ours, but heavier, as the dishere larger. The adder is used simply to take the place of bone or metal where the latter are not procureble.

H. B., Now York.—Piense Inform me where, within five hints' journey of this city, one would find good trout fishing for a couple of days during the first week in July next? How to reach such place, and where to put up? Aus. Take Eric R. R. to Port Jervle, and stage to Milford, or Frie to Lackawaren and wagon to Moses Westbrook's. Ask for John Williamson at Lackawaren. You can fish the Sawkill, Bushkill, or Shohola streams. Take 9 A. M. or 7 P. M. train.

hole streams. Take 9 A. M. or 7 P. M. train.

DAUPHIN, Harrisburg, Pa.—I inclose berewijh a piece of wood of the kind we use for our hest front and lines rods. It is scarce, is found in the western part of the State, and is remarkable for the longiness and clasticity. Please let me know what it is—that is, the proper name for it. We call it from wood. Ans. The specimen se at appears to be a species of centar; is close in grain, but with very short dire; consequently we should think it too brittle for good rods. Could not classify it without further particulars.

It without further particulars.

It J. R., tthaca.—Can you give me the fures on the following routes: let. From Toronto to Duluth our Collingwood line; 2d. From Buffulo to Duluth by propeller! Is a sportsman allowed to carry a gun and amountillon with thin from the States into Canada without extra charge of duty! Are there exemption rates on either of the above lines about the middle of July? Ans. Fure from Toronto to Duluth vin Collingwood, Sault Sie. Marle and Thunder liny is \$1.25, currency; from Buffalo bouldin by book, \$27, meals and statement highlight. No difficulty shout carrying your gan. No exemptions that we are aware of, but you can ascertain before starting.

ascertain before starting.

C. D., New York.—I have bought a small cannon of 10½ linehes in length, weight 14 pounds wheels unit all, and 12 bore. Please, oblige by laforning me how big a food, and what third of powder and wads to need t would like to have it make as runch "noise" as possible. Ans Four or five drachers, powder meisurement, of any kind of gaupowiter, with two or three Ely wads, will make noise enough, but such gaus are generally mule of inferior metal, and being so short are very damperous to handle, consequently we would suggest the propriety of having your life listened before using it.

Comstock, Cieveland, Ohio -In your repty to "Athert COMSTOCK, Cleveland, Ohio —In your reply to "Albert" in Fourar And Sthead June 10th you say you can send him "Birds of North America," with colored plates, price \$30 for the three volumes. How many librarations does the work contain, and are there colored plates of all the birds embraced in the work? Is it is scientific or popular work? Ans. Sixty-four colored plates and 593 wood cuts. It is both sectentific and popular, the reputations of Professors Bard and Ridgway and Dr. Brewer being a grarantee of the thoroughness and ability with which the subject has been treated.

E. G. H., Philadelphia —1. What are the names of the different parts of an oar-more strictly I should say, what is the mane of that part of the oar between the bown and blade? 2. Also best off for gane? I have tried several hunds, but my gan will get rusty in Wiater. 3. Also, which size of Remington gan is best for general shooting, 34 or 28 linch, 10 or 13 bore? 4. And whether Holnbird's softs are fit to wear both Summer and Winter? Also, t. We have always hourd it cathet the shank. 2. Sewling machine oil, being pure sperm. 3, 12 gange 30 linch harrel. 4. Good for both Summer and Winter.

Good for both Summer and Winter.

C. D. W., Rockville, Conn.—Which is the cheapest tonte to Texas, and the fire? Ans. Fix Missouri, Kaneas and Texas Rullrond; fine from St. Louis to Dennison, \$28; Dallas, \$31,60. Where shull we find buffalo without danger from the Indians? Ans. Dou't know, buffalo range to south and west of Fort Sill, aeribward to the Platte River, What book or maps would assist ms? Ans. Address "Brother Sportsman," box 301, Sedalia, Mo. Can you give us the address of some one in Texas who will answer a few questions? Ans. Address G. H. Ragsdule, Colineville.

dale, Gainesville.

C. W. A., Jr., New York —Can you inform mo of some place within 200 miles of New York a here good trout or black bass fishing and woodcock shooting can be laid during Juty? Also the name of some resident to whom I can write in relation to beard? I have loaded a number of Ety's green shell carlyinges, filled with the rifle powdet. Are such timegerons and liabte to burst a breech loader? Ans. Witte to Moses Westbrook, Blooming Grore, Utke country Pa. Try one of your shells, and If the recoil is not too great use them. If your gan is a good one there should be no danger of bursting it with ordinary charges, but the result will probably not be as satisfactory as though you had used coarser powder.

powder.

P. A., Boston.—I have a little blich that I suppose is a full binoded cocker spaniel. Can you tell by the following description what subside is the looks like a very small setter, only her bead is shorter in proportion and her nose more pointed. Color, white write sides of her bent and cars orange, and orange spate on her body. She is well feathered with soft, silky hart, furt on her tall and stern it is inclined to carl; she has set offes of hair between her toes. Her nose, ligs, and roof of her mouth are black; types dark and very large and handsome. Length in head, 64 lockes; from nose to roof of lad, 25 lochrs; tall, in inches; height, 17 inches? Ans. From your description of the blich ive are inclined to think that she is a well here cocker; yet "one cannot almost always tell unless you've been there."

OHIO STATE SPORTSMEN'S CONVENTION.—The Ohio State Sportsmen's Association assembled in Cleveland on Tuesday of last week. In the absence of the President A. T. Brinsmade, the first Vice President, occupied the chair. Delegates from eight clubs and associations were present. The standing Committee on Rules and Regulations reported that the present game laws were entirely inadequate to the demands of the case, and recommended that proper delegations be appointed to visit the General Assembly and petition them to pass more effective laws. The name of the association was changed to the Ohio State Association for the Protection of Game and Fish. The constitution was changed so that no shooting tournament where pigeons or other birds are used can be held or permitted under the auspices of the association. The following officers were elected for the ensuing year;—President, Thomas A. Logan, Cincinnati; Vice Presidents, C. C. Brigham, Toledo, and Col. D. W. Thomas, of Akron; Recording Secretary, W. B. Milhank, Toledo; Treasurer, H. H. Brown, of Cleveland.

A committee was appointed to confer with the managers of the leading railroads in the State and endeavor to make arrangements whereby fixed fare and suitable accommodation shall be established for all dogs carried on their lines. Adjourned sine die.

From the reports we are receiving from sportsmen's clubs, societies for the protection of game, and others interested in the proper enforcement of the laws against shooting out of season, we feel confident that those who shoot woodcock before the season opens will find it a more expensive luxury than they bargained for.

NATIONAL SPORTSMEN'S CONVENTION.

THE Second Auuttal Convention of the National Sports-THE Second Auuttal Convention of the National Sportsmen's Association assembled on the evening of the 8th of June, instant, at Brainard's Opera House, Cleveland, Ohio. The Convention was called to order by the President, Hon. A. T. Brinsmade, who occupied the chair. In the absence of the Recording Secretary, Mr. T. C. Banks, of the Rod and Gun, was elected secretary protem. Jonathan Sidway, of Buffalo, W. J. Bahcock, of Rochester, and Dr. Holmes, of Michigan, were appointed a Committee on Credentials.

Committee on Credentials.

The following delegates were in attendance, then, or at subsequent sessions of the Convention:

Massachusetts—Jerome Marble, Worcester; S. T. Hauuand, Springfield; Luther Adams, Boston; George Delano,
New Bedford: F. L., Sturtevaut, Framingham.

Connecticut—R. O. Cheeney, South Manchester; William Humphrey, West Meriden; Henry B. Harrison, New
Haven; H. J. Houghton, Waterbury; A. C. Hobbs, Bridgeport.

port.
Vermont—Dr. M. C. Edmunds, Weston; George Gregory
Smith, St. Albans; Colonel M. S. Colburn, Factory Point;
Dr. G. F. Gale, Brattleboro; Gen. W. H. W. Ripley, Rut-

Dr. G. F. Gale, Brattleboro; Gen. W. H. W. Ripley, Rutland.

New York—Charles Hulloek, New York City; R. P. Flower, Watertown: William J. Babcock, Rochester; A. B. Lamberton, Rochester; Jonathan Sidway, Buffalo. Ohio—L. A. Harris, Cincinnati; R. C. Smith, Bedford; Edward Taylor, Akron; Z. C. Pheatt, Toledo; Henry A. Harvey, Cleveland.

Hillnois—J. V. La Moyne, Chicago; F. P. Hopkins, Palatine; W. F. Milligan, Chicago; D. T. Ellston, Chicago; John L. Pratt, Sycamore.

Mlehigan—Robert P. Jones, Detroit; W. C. Coburn, Detroit; E. S. Holmes, Grand Rapids; D. H. Fitzhngh, Bay City; Edgur Week, Mt. Clemens.

Kausas—Col. N. S. Goss, Neosho Falls.

Texas—Wade Luchett, San Autonio.

Maryland—Duncan C. Clark, Baltimore.

Nebraska—John W. Petty, Omaha; John D. Jones, Omaha.

maha.
Indiana—A. B. Wade, South Bend.
Wiscousin—H. N. Sherman, Beloit.
The President then delivered his annual address, which was received with nucl applause. Mr. Brinsmade spoke as follows:—

ave men of the thmoor the law makers. The proper persons to consult and solvies with in reference to needed legislation for protection of same, are sportenism and scientists—men of practical knowledge. The General Government undambtedly cannot legislate upon game awa, so far as the States are concerned and such work must necessarily all upon State Legislatures. I cannot, therefore, too strongly recommend to brother sport-men in every State in the Union, where no State escation exists, the immediate formation of ouch, and their spare no andeavor to prevent the passage of any law affecting the game laws when it cannot sanction.

We also invoke the assistance and co-operation of our brethern in the Provinces, so that their game laws may be, so far as practicable, uniform with those in States configuous to their hordern. Game is now a laxity, and that it may be enjoyed without inviduous distliction by the upor as well as the rich, we discretely without such protection I will be only a president of an arrangement of the states configuous without such protection I will be only a lit is be earnest desire of all genuiue and honoratels sportamen to be in terms of friendship with the farmer. A hitter feeling has grown up not that In many cases he has good cause for considering them his energiant that In many cases he has good cause for considering them his energiant.

and then the frue sportsman is made to suffer for the wanton and mea malicious acts of the stragging hunter. It is no picasant thing farmer to have his fences turn down, his cattle at large, coppled, hay-stucks burned, fruit stolen, and himself defied and

wings, in haste accelerating their passage, saying: Pass on, pass on quickly; let no avoid the land of death, the land of destruction."

Brother sportsmen, let as look well to It that our laws are strictly enforced.

We have several excellent papers in the country especially devoted to mature of interest to sportsmen, and their afforts for the Inthurance of the same object as this association commend them to our perusal and warm patrorage. Their columns, open to correspondence, are an avenue for the communication and for the receiving of useful microration, and in behalf of this association I desire to tender thanks for the kind words and invaluable ossistance they have so cheerfully accorded to us.

I would respectfully recommend to the several State sportsmen's associations to publish in a compact form the came laws in force in their to spective Slates and have them generally circulated and posted in conspicuous places, so that ill may know the law; and request also local auxiliary clubs to offer suitable rewards for the apprehension and conviction of all offenders against it is same, whomsoever they may he. A law amounts to nothing unless enforced, and let it be known that hereafter all our game laws innest be rigidly observed. In this connection I would also recommend the formstion of local associations by a least every county, auxiliary to the State associations, the members of each such organization to come from all classes in the community, including the farmer, the mechanic, the merchanic, or any respectable man, for the object in view is for the general good, and claims a common interest.

And now, gentlemen, having a common interest in the protection of fish and gaine, let us in the coming years, as far as possible, exact our energies toward this object, and I am sare that no one will have cause to recret anything he may so do in that behalf.

I trust that our meeting will be a pleasant one, and that no person will regret heling with a say of oh in that health?

It may be a supplied to the several sta

much interest, and attracted the closest attention.

Mr. Charles Hallock, of New York, editor of Foirest AND Stream, then read the following paper on UNCLEAN CREATURES.

Mr. President, and Gentlemen of the Convention: My subject is "Unclean Creatures," and the helf of the text will be found in the book of the Old Textune," and the helf of the text will be found in the book of the Old Textune, and the helf of the text will be found in the book of the Old Textune, and the helf of the text will be found in the book of the Old Textune, and the helf of the text will be found in the book of the Old Textune and the ned contains only a few thoughts germain is a dirty subject to landle ned contains only a few thoughts germain is a dirty subject to landle ned contains only a few thoughts germain is a dirty subject to landle ned contains only a few thoughts germain is a dirty subject to landle ned contains only a few thoughts germain is a dirty subject to landle ned contains only a few thoughts and subject in which we are all inherested. It is merely a kind of argent subject in the logic of fairs with which our Grand Army of Protection has be well as to their common sense, and in no way scientific or bearing fleavily upon the logic of fairs with which our Grand Army of Protection has been developed in the codification of game laws to the barristers, and the determination of penalties and the ways and means of poul-himself to the codification of game laws to the barristers, and the determination of game parts to congratiate the recognized ploucers in Sa caking and game parts to congratiate the recognized ploucers in Sa caking and game parts to congratiant to the recognized ploucers in Sa caking and game parts to congratiant the recognized ploucers in Sa caking associations, including namerons exist converse sports and caking associations, including namerons exist converse sports and game parts to the parts of the same parts of the same parts of the parts of t

lent trake torives, turner the beer resort to feed. So that of imageacountries, and fishes—we ascertain their babits and habitats by their requirements.

We need just new to persovere in preparing the public mind to accept and approve some indictions system of game laws, such as the host informed men of the country, in and out of this Accordation, are now contemplating and contriving, and their coactment will came in due time length and solve one committees all the time they need.

lemplating and contriving, and their coactment win time in discussed level us make hasle slowly, and give our committees all the time they need.

We have much lahor to perform in respect to adjusting interests that seem to clash; in determining and defining the rights and privileges of land owners and venders, so itse constitutionality of laws to govern them; in removing prejudices; in instructing the ignorant as to any objects and aims, the economic valoe of game protection, and the necessity wrestle with the statitudin and observance of close scasons. We say to rect morbid tasies and unnatural appetites, and lop off the protein-long with and no health, who would serve appearance with inner weith and no health, who would serve wings to excite the envy and admiration of obsequious guesto.

This brings are directly face to face with my subject of "UNCLEAN CREATURES," which you have begun to fancy would be smothered in the percention, already made too profix. You may ossuine, gentlemen, that I have chosen this subject because and down the bood surface of this forcestrial sphere, and find myself whole world is fall of it. I do not refer to biseness of invaries and interesting of weigh in the profit of weight and only self whole world is fall of it. I do not refer to biseness of invaries and interesting of weight although the Apostel Paul has told us that we are filled Thure is not a thing organic but what is inclean at some period—the structure requires a monthly purification; all creatures at their periods

of gestation; all creatures that div by natural causes; those creatures that are intrinsically nucleun, and which comprise ninc-tenths of the animal creation. Even the celestial feast that was let down to St. Pani in a sheat compelsed a large proportion of the "four-forted beasts of the certi, and wild hearts, and creeding things, and fouls of the air," which the property of the

ply. They kill does that are heavy, birds with their broods, and shoot indiscrininately in song birds. They regard protective clubs as invasive, and gone laws as a lyramilcal encroachment upon their inherent rights.

Now, all like can be corrected in time; it has been done, and can he done again. A very large proportion of these men are open in argument and conviction, and could they be brought to comprehend the hencificent operation of these laws they would acquioce in their observance and coforcement. We have proof of this by experiment. It look years for the projectors of thone's Point, Lake Eric, to convert the projectics of the recipility, but now they could desire no more carnest or efficient allies. Their profile in fur and feathers have in retained fourfold. Upon each rough woodsman, sturdy in their blows but honest in their nature, a cood word and a good example has great in thence, and I believe that an append to their soher jadgment and the dissemilusition of proper information mong them would work wouters toward reform. I might perhaps venture to eaggest, and If approved, embody the suggestion in a recolution, to be submitted to this convention at the proper time, that all indictously prepared circular be printed and distributed throughout the country by the agency of local sports men's clubs and protective socie les, appealing to the farmers, market handers and backwoodsmen to protect and spure the game and fish in designated close seasons, soiting forth in simple language the reasons therefor and the bruelleent advantages to accrue thereby.

Gentlemen, full detain you but a moment longer. Did any of you ever see a gravid or spent salmen, or trout? If not, go and view the plaster case at the Samithsonian Institute at Washington. See the game and say if this is a fitting food for pumpered appetites and aristocratic tables. Take other fish in unseasonable times, covered with visible and microscople pansiles and funcion growths, and reli me if the hongit of ever and halammation, the narrow shoulders a

they are chipped by the steamer load in March and April, pay seven and sixpence a hair!

Well, genilemen, I must hold. The subject is inexhaustible. The world, as fluve said, is full of unclean creatures. We have attempted to define them, and those who eat them. Livingstone and Du Challiu have loid us what the Africans ent. Their menus made up almost exclusively of nuclean creatures. Verman is the principal diet of the Digger Indians of America, and of many of the Arizona and California ribbes. To the most civilized of our prairle Indians the entrails of the buffalo and dog meat are the choicest comestibles. I have seen three olibowns quarrel over the contents of a dead hare's womb, and cat the inhorn progeny—entralls, hair and all—half roasied on the coals, as a Dutchman would ent sausage. Unclean food and game out of season holoug to the condition of savagery and harharism, and f submit whether the chightened ritizens of America are ready now to retrograde su much —whelber they are willing to admit that their ta-tes are so assimilated to those of the savage that they are content to grow great upon the same moat upon which they teed. Have we no respect for our belongings or our origin? Do not deniers recognize the difference between corn-fed and switt-dep pork, or Texas beef and stall-fed beef? If we feed on diseased ment, suall we not ose our physical manhood? or shall we not, at least, lature become "unclean creatures?"

The convention them adjourned until 9 o'clock Wednes-

The convention then adjourned until 9 o'clock Wednes-ty morning, to convene in the parlors of the Kennard

WEDNESDAY .- Second Day. The Convention met in the large parlor of the Kennard House. A. B. Lamberton, of Rochester, from the Committee ou Nomenelaturo presentell a very exhaustive report, a synopsis of which he read. We will print this and Dr. Garlick's paper in our next

The following gentlemen were made a committee on Nomenclature for the coming year:—A. B. Lamberton, New York; R. R. Clark, Illinois; T. A. Jones, Ohio; Greene Smith, Illinois; Dr. E. S. Holmes, Michigau; Hon. J. D. Catou, Illinois, P. H. Bryson, President of the Ten uessee Sportsmen's Association, was admitted a member of the National Association as per written application. A communication was read from W. F. Parker, of West

Meriden, Conn., requesting that the name of the National Association be changed to International, and that delegates from Canada be admitted to membership. The measure was advocated by several genilemen, and opposed by Mr. Charles Hallock, of New York, who contended that the National was a recognized centre and head, to which the State Associations a recognized centre and head, to which the State Associations were subordinate, and the local clubs, in turn, to the State Associations; that these several bodies held he same relation to each other that the legislatures do to the Federal government, or the States to Congress; that even were the constitution and functions of the National so changed as to embruce Canadian clubs, a strictly National Association would still be necessary, and would have to be formed anew; that a national body of the United States could not exercise imisdiction over the clubs and associations of a exercise jurisdiction over the clubs and associations of a foreign country; that the game and fish laws of Canada were under the control of the Ministry, and not of the Provincial legislatures, as In the United States; that a scientific society was already in existence in the United States tific society was already in existence in the United States under the name of "International Association for Protecting Game and Fish;" that a change of name poses shows weakness, uncertainty, and vacillation; that the National Association was destined to become a power in the land, whose dignity and influence would pres be felt; and that a movement was on foot in Canada looking to the formation of a Dominion Game Protective As sociation, to which the Provincial and local clubs would be tributary; and that the Canadians looked carnestly to co-operation with the United States, and regarded barmony and uniform laws as indispensable. The speaker advocated the closest uniformity, but thought it could not be promoted by the changes proposed. The question was referred to the Executive Committee, who reported at the afternoon session against a change of name, but in favor of admitting Provincial associations upon the same basis, and with the same rights and privileges as similar organizations in the United States and Territories; and the necessary changes were accordingly made in the constitution by a two-thirds vote of the Convention. The Executive Committee also reported favorably upon a proposition to admit individuals, not connected with any club, and isolated clubs in States having no State Associations, to membership in the Association. This measure was warmly opposed in certain quarters, and finally laid upon the table.

Mr. Chas. Hallock, of New York, offered the following resolution:

WHEREAS, The scientific and advisory body which is known as the International Association for the Protection of Game and Fish at its meeting last month, in New York, made overtures to this body through the following resolution:

tion:

Resolved. That the committees of the National Sportsmen's Association to be appointed at its convention in Cleveland upon nomencluture, close time, protective laws, &c., be invited to confer with the sum committees designated by this body with a view to secure all the information and visadom that can be obtained upon the important matters under consideration."

Attonand vision that can be obtained apartic inspirate the determinant."

Therefore, Resolved, That it is like duty of all who have the protection of our game at heart to gather all the information possible upon the subject of game protection, from whatever source it may be obtained, and that the committees of this National Association be anthorized to invite or receive conferences with the committees of the luternational Association at such time and place as they may agree upon.

The Executive Committee, to which this resolution was referred, made the following report, which was adopted:

The Executive Committee, to which this resolution was referred, made the following report, which was adopted:

"A resolution has been offered by Mr. Hallock, of New York, as to the propricty of opening communication with certain gentlemen associated in New York city (?) for scientific purposes, which resolution has been referred to this committee for their consideration.

The committee call attention to the amendments to the constitution, and submit that the admission of new clubs and new members covers the ground comprised in this resolution. Tho gentlemen, members of the International Association for Protecting Game and Fish, may become members of this association if they so desire. The objects of that association are generally and particularly included in the scope of this association. Our standing committees always have power to consult with any gentleman or body of geutlemen for the purpose within their authority. We do not think it expedient to take action on the above resolution."

The Committee and the Convention certainly could not have comprehended the character, composition and ob-jects of the "International Association," whose members are such scientists as Agassiz, Cope, Gill, Coues, and whose object is to assist with their professional wisdom the efforts heing made for protecting game.

Col. L. A. Harris, of Cincinnati, presented on behalf of Thomas A. Logan, of Ohio, a draft of a game protective law, which contains many valuable sections that may ultimately be incorported into such a general law as is sought

to be secured.

Dr. Garlick, Col. Charles Whittelsey, and Postmaster General Jewell were admitted to the floor and made brief addresses, commending the cause of protecting our game, fish, and forests. Mr. Jewell was mule an honorary mem ber of the association.

C. H. Babcock, of New York, offered a resolution of regret at the serious illness of Wilbur F. Parker, and recognizing his instrumentality in founding the National Asso

ciation, and in hringing it to its present stage of success.

Chloago was selected as the next place of meeting, and

the last Tuesday in August as the time. The following gentlemen were elected officers for the

nsuing year:

nsuing year:

President—J. V. LaMoyne, Chicago.

First Vice President—A. B. Lamberton, Rochester, N.Y.
Second Vice President—Hon. E. H. Lathrop, Springfield,
[assachusetts.

Treasurer—R. R. Clark, Chicago.
Recording Secretary—John B. Sage, Buffalo,

Corresponding Secretary-Wilbur F. Parker, West Mer-

The Executive Committee was instructed to confer with Mr. Lamberton, and If possible have several hundred copies of his report on Nomenclature printed for distribution

among the clubs throughout the country.

There was an evening session of the Convention on Thursday, at which the report of the law committee was received, and some minor business transacted.

Thursday, Friday, and Saturday, of last week, and Monday, of this week, were devoted to pigeon shooting. We have no room to publish results this week.

Kentucky Styte Sportsmen's Association.—On Tue.

day, June 1st, a large erowd gathered at Paris to witness the shooting lonrunment. The shooting took place on the beautiful grounds selected by the Nimroil Club of Bourhou. Appended is a full report of the three days' sport from our correspondent "Fayette:"

The first match in the programme was \$10 entrance, five double birds, 18 yards rise, and 100 yards boundary. W. R. Fleming and Arnold Burges, judges; Col. Robert Stone

referee:

J. W. Ferguson 10: Chas. Kenny
J. If. Dew 7111 G Craig
S. W. Bagger
T. C. Woodford
Wm. Kemp
J. M. Carlos Ci.I. P. Matter
Wm. Bowles 6 Joe Redmon
Wm Bowles 6 Joe Redmon Chas Leland 6 F. Champ.

Ties for first prize divided; ties for second prize divided third prize won by Major Manucu; fourth prize won by J.

Thes for first prize divided; thes for second prize won by J. M. Taylor.

The principal event of the third day centred in the shooting for the State Association championship budge for 1875, there being eighteen entries, \$10 entrance, as follows: Wm. Kennp, J. M. Taylor, Chas. Kenney, J. W. Feighson, F. Champ, R. Turrel, S. W. Bagge, E. F. Clap, T. C. Woodford, C. F. Clay, George R. Bell, James H. Kerr, H. G. Craig, Major Thomas Mannen, George Redmon, C. Y. Peak, Joe Redmon, R. A. Thornton.

Taylor and Woodford being the only ones who made clean scores in the double birds, were called to shoot on single ones. Taylor first to score, hitting first bird hard, which fell just out of boundary. Woodford then shouting, continued to end without a miss, thus keeping but all, and the many who had only one miss on their score were hopeful to the end that he would miss, and thus let them in to contend again. The President, R. A. Thyruton, presented the badge, (handsomely designed and executed by Messrs. Star & Marcus, New York,) in the winner, when he was warmly congratulated.

The second match this day was for five double birds, eighteen yards rise, twenty entries, as follows:

eighteed juras their menny control is territories
J. H. Kerr 7 T. C. Woodford .
J. H. Dew
Chas Leland 9 M. Taylor 9 M. Taylor
J Payne, 6 W Kemp
C F. Clay 10 J. T. fleilges
J. W. Ferguson 4 Col. E. F. Clay
R Turrell 8 M. A. Kenny
W Bowles 9; "Jones"
Chas. Kenny 9 Joe Redman
S W Bagge b Major Maunon

First prize—Kii Cluv, \$83.33. Second prize—Col. E. F. Clay, \$50; shot off. Third prize—R. Turrell, \$33.33; shot off. Fourth prize—J. H. Kerr, \$20; shot off. Fifth prize—J. T. Hedges, \$18.33, shot off,

On Thursday a meeting was called for the morning ke-fore the shooting, and a comber were abled to the roll of members. An election of officers was held, resulting as follows:

ollows:
President—Hon. J. B. Beck, of Hunters' Club.
President—E. F. Clay, of Nigural Club.
Second Vice President—E. F. Clay, of Nigural Club.
Second Vice President—Arnold Burges, Maysville.
Secretary—J. M. Taylor (re-elected.)
Treasurer—George R Bell (n-elected.)
Executive Committee—F. Bierbawer, Maysville; R. A.
hormon, Lexington; Capt. J. H. Kerr, Bunrham county;
W. Fergusou, Bourbon county; H. G. Craig, Lexingm, Ky.

J. W. Fergasou, Bourbon county; H. G. Unitz, Lexington, Ky.

Delegates to the National Convention at Cleveland, Ohio—Major Thomas Manneu, Muysville; T. C. Wordford, Boarhon county; S. W. Bagge, Bourbon county; J. W. Fergason, Bourbon county.

Fish Commissioners for Kentheky—Hon. James B. Beck, Lexington; Lewis Suldett, Versailles; Frank S. Owens, Maysville; J. M. Taylor, Lexington.

Committee to Draft Laws for Profection to Fish, Game, and Dugs—Hon. James B. Beck, Lexington; R. A. Thoruton, Lexington; Frank Waters, Lexington.

It was decided to hold the next meeting at Lexington, the time to be decided by the Executive Committee, and due notice to be published by them hereafter. A few unimportant matches were shot after the regular programme was exhausted. A number of visitors were with us from other States. Prominent among them were Messrs. Dew, Leland and Bowles, from Tennessee, whose gallant behavior won for them many friends. We hope to meet them this Foll at Memphis, and many times at our annual meetings hereafter. Prominent among the accessions to our association is Mr. Arnold Burges, who has moved into our State, and now lives near Maysville. Our association has received new vigor, and may it hecome prominent among the many State associations is the wish of your correspondent.

The Bifle. CREEDMOOR.

-The quiet which has crept over Creedmoor since the departure of Colonel Gildersleeve and his team was dis-turbed on Saturday by the shooting for the Turf, Field and Farm gold badge. There were fifty eight entries for the match, which was shot at the 200 yards range, off hand. No money prizes accompanied the badge as heretofore, and as three gentlemen had each won it twice, it was looked upon as almost certain that one of these would be the ulti-male possessor. It so resulted, as Mr. Collins, who had succeeded twice before was again the winner, and now he comes the permanent owner of the trophy. The first forty of the competitors made scores as follows

Name.	Se	ore. Name. 22 B. G. Doughty	5	Score.

At a succting of the Executive Committee of the club, it was resolved to accept the challenge of the Scottish-American Rifle Club, with the understanding that the teams are to be limited to six men each, and the mutch to take place on the last Friday of this month. Mr. Browne, the Secretary of the Irish-American Rule Club, has written in this sense to the Scotlish-American Rule Club.

AMERICAN RIFLE ASSOCIATION .- Two meeting of the Board of Directors of this association have been held during Board of Directors of this association have been held during the past week. A committee consisting of Col. John T. Underhill, Hon. Chas. M. Schieffelin, Capt. Frederick Whitaker, and H. E. King, were upointed to scenre a range which had been reported upon favorably to the association. Hon. Wm. H. Pemberton, Col. John Badine and Mr. Beekman Van Gasbeck, were elected Honorary Directors. It was decided to have a prize meeting on Monday, July 5th, 1875, at the 200 and 300 yards ranges, with three contests, to consist of Military, All Comers, and Westchester County Matches.

County Matches.

The Team in Ingland. —A dispatch from London dated the 14th inst. advises the arrival of the steamer City of Chester, with the American team on board, at Queenstown. The steamer was met outside the harbor by a delegation from the Corporation of the Dublin and the Irish Rifle Association. from the Corporation of the Dublin and the Irish Riffe Association. Among the delegates were Mujor Leech, Captain of the Irish team, and Alderman Mauning. The Americans were escorted to Queenstown, and upon their arrival there met with an enthusiastic reception. They left for Cork by the evening train. They will proceed to Dublin to-morrow. On the arrival of the team at Queenstown they received from the Police Inspector licenses to carry arms during their stay in Ireland.

They arrived in Cork in the evening and received a hearty welcome from the people. The weather was remarkably fine throughout the voyage across the Atlantic and all enjoyed the trip. The members of the team gave a dramatic entertainment on the City of Chester last Wednesday evening. They are much gratified with their reception, which they say is quite equal to the ovation given them on their departure from New York.

A dinner was given the same night to the members of the team and accompanying friends. Major Leech, on the part of the Irish team, nade an address of welcome, to which Colonel Gildersleeve, of the American party, respected. spanded. Toasts were given and speeches made of the most cordial character, and much cuthusinsm was displayed. The gentlemen of the American team will be the guests of the Lord Mayor while in Dublin.

FOREST AND STREAM BADGE.—The second contest for this badge occurred at Mr. Conlin's gallery, No. 908 Broadway, on Monday evening, finder the same conditions as when it was won hy Mr. Yale, viz.: Strictly off-hand shooting, distance 25 yards, with target reduced to scale to correspond with Wimbledon 200 yards. The following are the scores. Mr. Yale's string in the first contest was twelve

John Tregesser	-S [A. Marsh

Waternunt, Conn., Jane 2d, 1875.

WATERBURY, Conn., June 2d, 1875.

Editor Forest and Stream:—

I received the copy of by-laws sent me. Please accept my thanks.
Last night we organized a rise clab with eighteen exembers to start with and elected officers as follows: President, George II. Cowelf; Secretary E. W. Smith; Treasurer, E. M. Hurlburt. We have a committee looking up a range, and I hope to be able before long to sent you an account some shooting. Yours,

E. W. Smith.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

POWDER TESTS AGAIN.

EDITOR FOREST AND STREAM:—

to your lessers made by me, and pathlished in a previous edition of Forest that the tests made by me, and pathlished in a previous edition of Forest and Stream, are of no practical value. It states that I did not just the relative grades, but used an inferior grade of Hazard against Luftin and Hand's dock shooting provder. You then go on to say that Hazard punder, though slow, gives a higher trajectory than C. & H. No. 6, thus refuting and admitting my statement in one breath. Before making those trails I called myself at the office of the Hazard Compony and asked for their best Creedinoor powder. I told them that I wanted it to test against other powders, and was assured that the powder given me was the best, and that It would give entire satisfaction. They at the same time requested me to let them know the result. This and no other was the powder tested by me against the same grade of L. & R., and not a cheap powder, as stated by you. It is a little strange that chrap, low grade ponder should show so good results as the figures published by me, and, in my opinion, the manufacturers have no remon to be ashanced of it, and though not su clean or strong as its competitor, it was by no means bad powder. The trials made were for the purpose of comparing Curtie & Harvey's with Laffin and Rand's lightning, and not, as you say, Laffic & Rand's lightning with Hazard duck shootling, and wheever impression I made on the public is wrong if taken in any but the way I now state it. Again, you state, and as afe statement it is, that practically a powder not too quick proves much the steadiest. Now quilek, le not ton quick. I fancy it will take a man of Fuiton's experience to hell that, the must be a philosopher indeed who can make it appear that a projectile with a also velocity gives a higher trajectory than one with a quicker fallow. The general impression of the team does not bear out Mr. Fallon's principle, or why senoil they order firty pounds of C. & H. powder to be sent to Dublin by the ti

supply of Curtis & Harvey's powder for their use at Dub lin, we think that therein they have displayed great wisdom. They are going to a climate the combitions of which are totally different to our own. The immunition they are found different to our own. The imministion they carry with them, although carefully prepared and scaled, is still liable to be affected by the excessive moisture of Great Britain, and in ordering a supply of a description made to suit the peculiarities of the climate they are but covering one more of the chances which possibly might lend to defeat, -ED.]

THE DITTMAR POWDER.

Entror Forest and Stream:—
In your issue of June 10th an urficle from a gentleman signing libuself "A Subscriber" criticises the eafety of the Dithmir powder, and as I can sakistantiate his criticism from a little mersional experience I mighad to do so if it will save any one from serious injury.

A few weeks ago I londed a Remmine or revolver with Dithmar powder, filling each chamber up within one half its diameter of the tup, as I do not librar powder, that space allowing the ball to enter and firally priss the pounder grains together without breaking them. The clusticity of Dithmar powder was so great that the pressure I put on the lover consect the hall to slip too far In, and the entire load occupied only whout one third the chamber. I was akaid that for free result thea, but I rusted an increased recoil would be the only injary. When I fired the charges for any the entire upper surface of the chamber, and took the top strap over the cylinder, and it was a kind Interference of Providence that I was intereducing injured, as the two scraps of from barely missed my head. This shows that the powder must possess an intensity which will not endure too clove confirmench, and this great are slimbil be taken in using it. I have been pleased with the more perceptible results of the Dittmar powder, but if the foundation upon which those good features are based is so unsafe and dangerous it will never have my sanction for sporting purposes.

LETTER FROM CARL DITTMAR.

EDITION FROM CARL DITTMAR.

Neighber, Mass., June 5th, 1875.

Edition Forest and Stream:—

I min very thankful to you for opening your columns so freely to communications whom my pounder. I am always learning something by it, and if I field anything against it I try to Improve. I min now making a much slower powder, as many consider it too quick, and I will stick to it and make it always uniform as soon as I find that the sportlog community like the latest issue kest. The method of manufacture theorems in sointe evenness of strength, and if your correspondent, Mr. D. C. Allinson, decides which kind he likes best I can give it to him always the same. As to its being affected by dampness, my own experience is that it is not much affected by a damy atmosphere; the powder is only air dried, as I do not enquloy artificial heat. I can tell your other correspondents about the explosive force of one druebm of black powder and one drachm of my poinder, each lening by weight. At themy-shren yards the Dittinar powder gives over three times more penetration and three times hetter pattern than the best lifack powder. At forty yards the difference is mach greater. If your correspondent should make that trial It will actous blim. If he will he kind coung to give me his address I can send him poinder which can be loaded from a common pander lask, and which I make expressly for muzzle loading guns. It is leavier than that for breach leaders.

What you say in your last issue about ponder tests, I find just right for

for breach loaders.

What you say in your last issue about non-der tests, I find just right for my powder. I always attempted to give it the same or greater velocity than that of the heat black powder, but when I make it affices hundred feel or more I cannot get good shooting. The most uniform shouting I can get with it is from 1,300 to 1,400 feet velocity, or tess than that. With the lower velocity the strain on the gun is decidedly less than from the high velocity black powder, which I can see best from the impression at the orimer.

Cana Dittant.

BOUDBEN'S JACK LAMP.—The following testimony as lo the value of this lamp will be received implicitly by all our readers:

OFFICE OF COUNCER JOURNAL, LICEISVILLE, June 10th 1875.

Office of Councer Journal, Laureville, June 10th 1875.

Editor Forest and Stream:—

I have just returned from a paddle and trainp along the crecks and smaller rivers of Central Ohio, in which I used the Bourden Jack Lamp, mide by the White Mannfacturing Company, Bridgeport, Com., in camp and on the water. As an illimination for host and camp to be the liest I know, while its cheerful submission to abuse is simulating proaderful. Last week, in one case, a carcless thow knocked the lamp over and down a fall of three feet, turning a complete somersant and tanding on its back; in another case is sudden and terrible storm blew down our tent and tambled over the tamp, exposing it to driving wind and rain for half an hour. In neither case did its bright light desert us, nor did it receive the least damage to its illuminating qualties. The lamp stooi by me through a tycek of gennine "roughing it," and now sits complicently on my dining room table, ready for more work of the same sert.

A II. SEOFRIED.

PROTECTION IN CANADA.

Peterbood, June 7th, 1875.

Editon Fonest and Stheam:— Peterbood Fish and Game Protective Society was held an Wednesday evening last, the 2d instant, Vica President Eastland in the chair. The Secretary read betters from the Minister of Marine and Fisheries, thanking the Society for their suggestion of having a government emidoyce to determine the species, class, scientific name, etc., of dended specimens of the found of Caranta; also letters from Mr. G. W. Sheridan consending to act as the Society's diblegate at the International meeting, in New York May 19th, and a communication from the Secretary of Galeph Protective Society.

Mr. Toker wished to know if any convictions had been obtained since last meeting, and was informed that one party had only that morning been fixed for taking base out of season.

Mr. Robert Waiton then introduced to the members present Henry Morriam, of Rice Lake, an old trapper and hunter, who gare much variable information regarding the buildte of our game flah and fur-bearing animals, with their different spawning and breeding seasons. Mr. S. S. Kelly, of Chemong Lake, who has probably hunted ble Cimathan furnish for the last lifty years, also gave the meeting the benefit of past experiences.

Alternation that he precious was a probably hustering and both needs of past experiences.

Altogether the niceting was one of the most interesting yet helit, and am glad to say the society continues to grow in favor as well as numbers. Very truly years, C. A. Post, Secretary.

LACQUER FOR GUNS.

Pensacola, Fla., June 5th, 1875.

I found hy year paper a few weeks ago a receipt for a lacquer to preserve gone from the effects of ealt water. It is composed of gum sheliac, sanderach, spirits inspendinc, and alcohol. I which to worm your readers that to preparing it they will flad it highly explosive. I given the formula to a druggist in this city with orders to prepare me a supply. He succeeded after some half dozen attempts, but sinced his whiskers eyebnews, etc., hadly, to say nothing of the danger to which this eyes were exposed. As a lacquer it is a success.

F. B. S.

A NEW GUN STOCK

South Bean, Ind., June 3d, 1875

RIGHTON FORCET AND STURMENT.

I times seen a new feature in the evay of impracment which will an family be of interest to the readers of your paper, and as you are always resolv to keep up ofth the times I will explain in brief. Mr. Gen. Smith, of this plane, has filed a cavent on a new adjustants gain stock which, for many remons, cannot help being a great desideration to the gain trade, as it is not unly adapted by changes in the drop to any one's conventence to the great envired in meterial, which is rapidly becoming scacce both in the old as uncl as in the new world. To illustrate the subject, we cell take a pistul grip stock and ent off the main part back of the grip on a line of the enries. From this, you see, by moving the main part of the stock up or down on the enree you have any dropdestred. This is backed by plains, which are concealed in the ivond, an any destred point, and a secrety in the encaye at the grip securely fasters it to be place. The grip in this case can be a natural or an artificial head, the balance the same as usual, at of any other kind of wood, and coulding in shorter everytimes, can be picked up from the rubblish and brought into valuable use at much less expose than a tall piece stock, as beccouse in use. Any one who will take tale op and sludy the points cannot help bid to appreciate the langrovement.

B.

Piugos Shootish.—A pigeon match, or rather several, tere shot at Tony Miller's grounds, Flushing, on Friday asl. The first resulted as follows:

Total. ..0101101100101011101p=10 ...100111010101111001011=12 Mr. Prescott.

In the second match Mr. F. W. Lenvitt shot against Mr. Churles Hance, each five hirds, same combinions as above, Mr. Lenvitt killing all of his to his opponent's 4. In the sweepstakes which followed Mr. Hance killed all of his birds, taking first prize. Mr. Leavitt tied no 4 and again on 3, and then divided. It will be seen that Mr. Leavitt killed 29 straight birds and 35 out of 36, rather remarkable shooting for an amateur.

—The Central Sportsman's Club of Meriden, Conn., of which Mr. Jacob Gluhn, the well known artist, is president, lind a match at gyros on their grounds on Thesday last. The following is the score:—

Pico.adsi.ruia, Jime 12th, 1875.

I seed you the score of a shooting match, held on the 2d of June by the Kenshegton Hunting Club; eight birds each; twenty-one yards rise; eight yards boundary. First prize, gold (club) medal; second prize, gold medal; third prize, silver needal. The prizes to be shot for every three months.

.5 Chr. Haug .3 E. Wut. Stees .5 G. Sonneck a M. Brierly... 7 R. Scheuringer 4 Jus. Ginded .5 M. Blind .5 L. Hotzscheide F. Schniz.
F. Retz
G. F. Beechman
Wio Deisscoth
Fred. Whinceger.
Chas. Hehding.
Fred. Deisenth.

Ties were shot off. M. Brierly received first prize; Wm. Deissrott. second; and H. Schenringer third.

The Borse and Compse.

Thursday was an off they at Jerome Purk, no race of magnitude being offered for the public delectation; but the attendance although unmerically small, comprised an enthusinstic party of race-goers who were amply repaid by a most successful day's spart. At least two surprises were in stare far them, and while the unfortunate ampority who had beeked Madge in the all aged purse, and the favorite in the three year old race, were somewhat disampainted, the lucky minurity were correspondingly jubilant. The Juvenile Stakes brought twelve to the past, of which Mr. P. Lorillord's landsome Learnington filly was minuce the favorite, and justly so, as she won the dash with plenty in hand. For the mile heart Springbok was somes aheart of his three competitors, and but for the appartunity of seeing one of the handsomest and fastest horses now an out turf, the race would have been without interest. But two started for the mile and half dash, and the race was looked upon as being as much of a certainty for Madge as the previous one had been for her stable compution. But here comes in one of the glorious uncertainties of racing; Madge was held too long and only set going when half way up the stretch; probably her sex and the conditions peculiar to the season had something to do with it; certainty she did not respond as her jockey had anticipated and was beaten by half a length. A fine field of liver-year-olds started for the mile and an eighth dash and it was pleasant to see a son of that wonderfal horse, Gludiantenr, coming to the front. Challistenr, one of the most succeeded in winning the triple event of "Guiness," "Derby" and "Leger," has, as yet, accomplished but little at the stail. It is probable that Mr. Belmont, in Matador, possesses his best representative now on the turf.

The steeplechase was one of the best ever contested in this pountry. A blanket would have covered both horses most of the distance, and the jumps were nearly all taken logether without a mistake. Bullet is much the neutest funcer. Somebody will be

Tattoo started with the lead, but rounding the Club House turn Maindor book first place with Consignee second. Coming up the straight the handsome Lord Zetland made a determined effort, but could not reach the leaders.

dain by Wagaer, 130 pounds

A. H. Torrene's etc. g. Trouble, by Ulverson, daine Kate McDonald, 150 pounds.

The horses kept together most of the journey, Bullet being but a leugth alrend at the last hurdle and won by the same distance. Time—4:183.

Saturday was the great day of the meeting, and although not productive of many surprises, at least one event cumbled the plunger on the right horse in the 'manitals' to get back a very satisfactory amount for his hinded investment. For the great event, the Belmont stakes, a capital field of fourteen horses started, but the McGrath stable was in such form and force, starting liree, that the result was looked upon almost as a foregone conclusion. The mile and an righth dash was but hittle more than an exercise gallop for Springbok, and in the Jockey Club Handicap the lightly weighted Wiblidle, notwillstanding his extra five pounds for winning the Fordham Handicap the Saturday previous, had but the difficulty in disposing of old Preakness and his 130 pounds. Members Caps have so often proved faces, or been necessarily withdrawn from a lack of gentlemen jocks, that it is pleasant to record one such event which can be reported as a success. And is to be hoped that with the advent on the turf of a young gentleman in the social position of the rider of Spindrift, that more of our young men of wealth and leisure may be fuduced to cultivate the pigskin. Intercollegiate contests are along much towards the development of muscular christianty, and while it may scarcely be proper to melade riding as referring to racing, under that head, the shillity to handle a borse from his back is a graceful and health developing accomplishment. A selling race concluded Saturda, 's sport, and was won hy Survivor, who ranking as an outsiler in the pool at 1, 2, a. | (cangety so we thought, gave his backers an opportunity of raading a grand conp. The summaries are as follows:—

so we thought, give his backers in opportunity of maining a grand conp. The simpliance are as follows:—

Fourth day of the Spring meeting of the American Jockey Club, Saturday, June 12th, 1875.

Furce \$500, for allages; endrance 5 pot cont. of the purse, to go to the second horse; duch one mile ned nu eighth.

D. McDangel's ch. h. Springhok, the years old, by Australian, dam Hoster, 114 pounds. (Hennessey) 1 Robinson, Morgan & Co's h. c. Bob Woolley, three years old, by Lemmogton, and Inem, 9d pounds. (Junior.) High Jump—Five entries. Won by J. P. Conver first; height, 4 feet 10 inches. H. Folsom, second, 4 feet 4 beches.

(Open.) Pole Jump—Six entries. Won by Frank Wilcox first; height, 5 feet 19 inches. A. P. Thuyer second, 7 feet 93 inches.

first; height, 7 feet 10 inches. A. P. Thnyer second, 7 feet 94 inches.

(Senior.) Hurdle R ns., 120 yards—Eieven entries. Won by D. Stewart first; time, 20 seconds. W. B. Van Hensseher second, 204 seconds.

(Junior.) Dash, 100 yards—Twenty entries. Won by J. D. Chrever first; time, 114 seconds. P. Evatts, second, 114 seconds.

(Open.) Running Long Jump—Ten entries. Won by J. P. Conover first; distance, 16 feet 4 inches. H. G. Chapman, second, 16 feet 1 inch.

Putting the Weight 16 lbs—Nine entries. Won by W. N. Elbert first; distance, 28 feet 34 inches. E. D. Appleton, second, 27 feet 7 I-3 inches.

Mide Race (Grand Challenge Cup)—Nine entries. Won by D. Stowart; lime, 5 minntes 464 seconds.

(Open.) Throwing the Oricket Both—Hight entries. Won by W. N. Elbert first; distance, 214 feet 8 inches. H. Ridgely, second, 305 feet 11 inches.

(Senior.) Dash, 100 yards—Twelve entries. Won by A. P. Thayer first; time, 114 seconds. D. Stewart, second, 124 seconds.

(Annior.) Hurdle Race, 120 mards—Six entries. Won by L.

12½ seconds.
(Junior.) Hardle Race, 120 yards—Six entries. What by John D. Cheever tirst; time, 20½ seconds. E. H. Nicolisseemd, 21½ seconds.
(Dpen.) Quarter Mile Roce—Fiftern entries. Won by R. C. Duyton lirst; time, 1 minute 3-10 second. F. Doualdson, 1r., second, 12½ Judges—Messrs. F. Dorr, T. Lewis, C. Stark, F. A. Appleton. Referee—Mr. R. H. Dann—Committee—C. F. C. White, S. G. Fisher, W. N. Elbert. Starter—Rev. J. Hargate.

PRINCETON CIGARGE, June 11th, 1873.

Princeron College, June 11th, 1875.

Button Folleyt and Stural:—

The fact that Commended is not far off initially suggests the propriety of informing you of the present state of Athertos here generally but of boating in particular, as much of the progress made on the half field has been collect already. Both crews have been steadily at work throughout the cuttre ression. They have alread their daily pall but a very feir itines—not more three days intogether. The University riew has unde admirable progress. The men composing it are nearly all but a very feir itines—not more three days intogether. The University riew has unde admirable progress. The men composing it are nearly all but excellent form. Of course there are a teo more fourly which need correction, but Caplain Nicoll scenes to feel combined that any such will be crailicated before the face is roused. It seems as though a more congenital and a happine sta could not be solvered. The Preshuen are doing very well. They, as well as the University, have been making some very good time on the canad. The time made by high crows is kept in a very secret manner by the capitalits, and but more only hove the other members of the college succeeded in fearning it. I can out at liberty to stude how fast thus the University has made, or I might surprise some who has think that because Prioceton was het in the regata of 74 she must invitably "bring up the rear" in "5. There are so many enlarges that are going to send the "chining crow" that I cannot predict so much of Princeton; especially since unny of them are positive of success. Such a sait of affairs will incellably make the rice is the and in those even go to Sarato a to speed one day only. It would be us but as it was bust year, when many every forced to remain there so long on account of the postponement of the race. The crows leave for Suratoga week after uext.

The University defeated the New Haven professional one on Thesday.

The Unicessity defeated the New Haven professional ofne on The ny the score of 1 to 2. The victory was easily won. It o as expect some that the New Havens would disbund some after leaving here, a Featinghold odd. The Trenton nine was a similarly the University terday, the score being FI to 4.

—It seems as if fate had destined the two most prominent rivals in the coming regata at Saratoga to stringle side by side. Owing to the death of Mr. Cameron the Trinity erew has withdrawn from the race, thus leaving Yale and Harvard with nothing but a narrow expanse of water to separate them. This is not as it should be, and we hope the positions of the crews will be changed. Not that we suppose either Harvard or Yale is going to take, intentionally, the few strokes necessary to bring their boats into collision; nor because we think that any one of the twelve gentlemen composing the crews is going to take advantage of any opportunity for fond play. But, spite of the utmost precantion, foils do often ocent between Yale and Harvard, however accidental it might be, could not fail to increase any slight bitterness between the colleges to positive animasity. It is a matter of the highest importance that every chance of complaint on the part of either erew against the other should be removed. This can only be done by preventing even the possibility of a foul hy placing the two crews at a sufficient distance apart. However just or unjust the mutual criminations were last year, the conduct of Yale and Harvard certuinly destroyed the humony and much of the pleasure of the regatu. If the presence of these two colleges is going to act us such a disturbing element, we repeat what was so often heard at Saratoga last July—Let Yale and Harvard row their races alone. — Yale Record.

Third Avenue Stables.

Third Avenue Stables.

Of the large stables in the world, that of the London Omilbos Line is probably the most extensive. The next in size is in this city, and belongs to the Third Avenue Street Cai Company, and is situated on Third Avenue Street Cai Company, and is situated on Third Avenue and Sixty-offth street. The building is immense, being 600 feet by 200, is made mostly of from and brick, and besides being substantial, and aloud the same as freproof, it presents an appearance immenally attractive for a structure of the kind. The la-cade has three towers, there being a fine clock in the main one; and the general architectural design is not only lasteful, but peculiarly sulted to its position and purpose. There are three stories—the first for horses, the second for cars, and the third for horses with perfect arrangements for ingress and egress, and with ventilation, drainage and all apportenances so complete ibat it would seem idle to propose a change. The number of borses under its roof and skylights is now about 1,700, in fine condition, and average very well for such extensive stables, while many of the teams are noticeably superior in size, smoothness and floch. Fifty ibousand pounds of corn and outs, ground by two "tran" of sleam inills, mixed with cel hay, are fed daily; 20 to 27 horse shoers are occupied shoeing in the shups, and the number of grooms attending the shalls proportionately large. The general management by Samt. C. Phillips, Esq., President, Is under stood to be decidedly acceptable to the borses, as he was recently overheard to give an urder probibiling any unnecessary Infliction of paln or punishment to an animal under any circumstances; which regard for the feeling of bruies seems as commendable as It is gentlemanly and bomane. The more immediale as uperintendency of the stables devolves upon Dr. J. M. Heard, V. S., who, while he looks after the horses in daily use, gives attention to the tew in the "hospital," and by he skill and experience in their treatment is worthing more airy an

abbreviated, or with different initials, are not genuine,
TRIAL OF SCOTTAC OR ERNER'S NEW SAYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.

(See The Field, Jannary 30th, 1875.)
"From a comparison of the two tables it will be
seen that with Walker's shot, Measta Scrutt's gams
showed a marked apperfortly over Mr. Greener's,
both in average and in the highest scare made indeed, with the best harrel, in his third shot, Mr. Scutt
got a selected group pattern of 239 and a peneleration
of 35, equaliting the highest pattern made by Mr.
Greener, and exceeding the penetration of that particular shot by eight sheets."

The Saranae Route.

MY acquaintance with this route pertains to the ante-Murray period. I have been over it twice, and explored it in its length, breadth and depth, from Marlin's to the head of Tupper's Lake, and from Hough's to Mother Johnsun's. These excursions were made in the years 1860 and 1868, and were the source to me of untold gratifica-In my early years it used to be debated whether there is more pleasure in anticipation or fruition. I do not propose to decide this issue, which may depend greatly or cirrumstances, but wish to suggest another alternative the pleasures of retrospection, or of memory. Campbell sung the pleasures of Hope, Akenside the pleasures of agination, Rogers the pleasures of Memory. They all had scope for their finest powers, and produced felicitous results. There is great pleasure in them all, parlicularly as applicable to the Adironduck field. I have passed through in large measure the pleasures of hope and fruition respect-ing it, and hegin lo have recourse to retrospection and the pleusures of inemory. Whether my lucultrations are read or not, I have my reward in these reviews. As an enthu-siastic angler once told me, he found his chief pastine, stattle angier time total may be considered year, in prepar-and the carrs of business in the opening year, in prepar-ing and projecting for his June vacation. Then he took it, ing and projecting for his June vacation. Then he took it, and had joy enough, and for the remainder of the year he liked in think and speak and write about it.

In relation to this route, I would first temark the pleasing variety of the modes of travel connected with it, and even its lack of opportunity for fatigue by walking. localities I have walked eleven or twelve miles stretch" on my way to the lakes, but I can go from my house to the depths of the wilderness in this way without walking scarce a mile. The route from all points to Whitetall is by railroad, where the tourist steps into the steam-boat as easily as I write this sentence. There he shreps, if he chooses, and has every accommodation for dreams of waking bliss; or he enjoys the charms of Lake Champlain till Port Kent receives him. Thence he proceeds by stage or private conveyance, via Keeseville, over good roads, in the enjoyment of exhibitating air and an entertaining landscope, to the Lower Saranac, where he takes boat and guide, and can go, as Martin says, an hundred miles. Till he reaches Bartlett's he has walked only a few rods. There he can promensile for a quarter of a mile, and then at the Indian carry for a mile, but for his next walk he move

Circumstances led me on my first trip into the house and hands of Milote Baker, Esq., and I must say that he did all lendd reasonably expect to promote my happiness, and made my sojourn very agreeable. My favorite fishing ground while there was that high, long shoping rock just below the dam up the river. On one side was rushing water, and underneath lay the spangled darlings, those dizzling nainds of the wave, waiting to be woord and won. On the other side, most accommodatingly, there was a miniow stream, or oozings from the river, where the little ones collected, and could be taken without difficulty. used a small gang, as the water was violent, and stauding on the rock, with reel ready to spin and all prepared, I dropped the minnow. Stars, what a rash! and how he gues down the river way off an hundred feet! Well, let him run; I fear it is his last swim. As a lad fisherman once said, having caught his first trout, "O, you beauty, how sorry I am that I've got you; but I can't let you go. So I reel in my prize on the other side of the rock, where the water is quiet und peaceable, and the tront even more quiet than the water—a pound and a half.

I have almost invariably found in my experience that however well domiciled I have been in the woods, I have seen and enjoyed for more when, after suitable preparation, I have committed myself under Providence to the cure of my guide, and moving off with him for weeks and miles away have camped where the night overtook us. Concerning tastes, there must be no dispute; but I, at least, do not resort to the woods for inxurious living, preferring to rough it for a time, the better to appreciate the comforts

of home after return. I go lo flad luxury in other things than those to which I am accustomed, and therefore choose the shanty and the tent, with their wild surroundings and better game, rather than those palaces in the wilderness near which no fish or deer can live. Brussels earpets in the woods are surpassed by the carpets of Nature, and hemlocks are better than feathers there for rest-

Where the splrit unit def Nature's child
On the breast of her holy mother,
In the stlence sweet may hear too beat
Of her toying heart and tender,
Nor wish to change the wildwood's range
For all earth's pomp and splender.

William Moody was my guide; another or better I did not desire, nor could I have obtained. It is remarkable, in his case, that somewhere or somehow he had received a bullet through his lungs, and vet he lived on many years, strong and capable. I met him twice afterwards-once at Arnold's the next year, and again at Bartlett's in 1868, with a heavy string of lake trout in his hands, caught from set He has since, I am told, paid the debt of Nature We entered the lake via the river, mid way up, and on the heights at the left, bathed in sunlight, took our first repast. Arriving at the rapids, or quasi-falls, over the rocks of the inlet, where there is a short portage, I moved for a trout, and trout seconded the motion. I had him, and he was a big one. After playing him awhile, as if exhausted the thrust bioself for refuge in shoal water between two the thrust bimself for refuge in shoal water between two stones, where he was wedged. Moody was equal to the situation, which he at once comprehended. Wading in, guided by the line which I held, he inserted his right hand and lifted a two pounder.

Why is it that Round Lake is so easily disturbed and agi tated? It appears to have a quick temper—one readily roused and ruffled. I have generally found it, as others have, full of high rolling waves, though the Saranacs were On this first occasion of crossing it the distance was doubled, because here we went up, up, up, and down, down, down. We reached Bartlett's after a long succession. sion of ascents and plunges, agreeable for variety but not favorable for expedition. I noticed the umbrella of which I had read, which Dame Nature keeps hospitably spread over un island in case of rain.

All right at Burtlett's. The river comes down stairs there in a harry to meet arriving guests, and the secuery is romantic and picturesque. We are in comfortable quarters, where nothing is left undone which should be done for re-Motions for a meal are always in order, and it is laid upou the table without debate. I retain two incidental re cullections of my sojourn there. Mr. B. sbowed me an otter, the only one I have ever seen, remarking that he was "great on fish." Producing one, he committed it to the care of the black little imp. Applause immediately fol lowed. The energy and vehemence with which he received it, chewing it to pieces right and left, while looking up with prodiglous satisfaction, was a ludierous scene, which in its way could not be surpassed. "Ah," said Mr. B., "I told you he was great on fish." I was pleased in the morn ing with his simple, effective way of supplying his visitors with live bait. These essentials are generally procured with difficulty and loss of time; but Mr. B. had trained shiners and company to be near his dwelling by feeding them. Taking his fine hand net with him, nothing doubt he threw in an attractive morsel to concentrate them and with one swoop supplied all the live bait we required through the entire day. Verbum supicatibus satis.

Launching our craft on a bright morning on the waters

of the Upper Sarauac, we proceeded as happy as larks over a section of the lake to the Indian carry. I this time tool the route, as it is mapped in Street's "Woods and Waters, I this time took directly to the head of Tupper's Luke. Directly as to place, for we did not wander, but not us to time, for we were in no hurry. Our boat was drawn across the carry by a yoke of oxen. We tested as we walked, hefore settling ourselves for further navigation. Down the twists and turns of the Ampersand Creek we took our torthous way to the lovely, silent, solitary Racquette River. Monotouous in its solitude of charms, we glided over its winding waters, walled on both sides with spiral trees—tama-

rack, cedar, hemlock, spruce, and balsam-inbaling health, pure draughts of medicated air, inspirations of Nature in its fairest scenes—(a pull); well, a fish must be attended to any time, even if it breaks up my poetry. I bring him in line upon line, no matter just now about the precept upou precept, but here a little sunl there a little, and he comes have eight the heat, good for a dispersion of the comes houncing into the hoat, good for a dinner at one o'clock How I like these telegraphic despatches from the depths! Well, let us move on.

Arrived at the rapids, the scene became exciting. one man in his bout was throwing the tly, and there are other. Here a fish was coming aboard, and there one, with sober second thought (thought he wouldn't), while sounds of water curling round the rocks lent their music to the scene. I took my share as we went through, and loitered for the welcome passengers. The trunk of a fallen tree at one point to the right afforded a good footing for eastling the fly, so disembarking, I stood on it and had sport. I could see trout through the transparent water before feeling the unsophisticated creatures on the end of my line,

and then with my fingers.

Tupper's is one of the most beautiful of all lakes. Nothing is lucking to it for delightful scenery. High rocky walls are there, and rocky islands, us well as leles of green. Capes, bays, and promontories, streams and fulls, echoes, deer, and the salmo in variety, all combine. I saw the distant silver of Bog River where it sought the lake, coursing down over a base that broke it into foam, and drew near, attracted by its illumined white. While there I enugle a deer. I was throwing in for what might be under, when looking to the right I discovered the deer, not far from the shore, which had entered the river to swim across. Let him swim. We lay low and kept still till he was opposite, mid-way over, when we took a notion to call on him. Seatselves in the boat, we moved in the direction of the deer. He began to look seven ways for Sunday, and seemed to contemplate which was the nearer shore. The novelty of his position evidently turned his head. If I could imof his position evidently turned his heat. It I could imagine such a thing as his having ever read Shakespeare, I could fancy him saying: "Now would I give a thousand furlongs of sen for an acre of new ground, long heath, brown forze, anything. The wills above he done; but I would fain die a dry death." We made up to him. "Good morning my friend, how are you?" No reply. "Would morning, my friend, bow are you?" No reply. "Would you like to come aboard?" Nary. "Well, come here and let me pat you, if it is compatible." He came near to us, or we to him. I patted him, played with him, and let him go. Nothing but the direst familie would have induced me to harm him, thrown as he was on my hospitulity. Moody pronounced him a yearling. He struck out for the shore, but Bill was determined to make him cross an island which was near. He headed him off with the order, "Go to the island," The deer finally aimed for it. We saw him go up it and down on the further side and take to the water back again whence he came, and disappear in the forest. Need I say that we did not see him again all that day.

Doubtless he long since was vruison.

We met on this luke several remnants of the aboriginal we met on this take several reminate of the aportiqual tribes. I visited them at their wigwams, and was kindly received. They were ragaged in making baskets, which I was told might be a profitable business for them if they could recape from the fuscinations of the chase. One evening while we were at the folls two canoes approached. the one was an erect, stern looking Indian, with squaw and papooses, and in the other, putdled by another Indian, were the family effects—entables, blankets, dogs, and guas. They were on their way up the Bog River after moose

On my return, I was trolling one evening us we passed along the river, till, coming to a place of rocks, I took a tront, and circling round soon took another. Becoming intrrested in the sport, I passed back and forth over it re-peatedly. Meanwhile a storm was coming on. The clouds were growing denser and darker, but I did not beed them till down came a drenching rain, and the thought was forced upon us that right there, on those wet banks where we were, we would have to pass the night. We protected ourselves from the rain as much as possible till it was over My rubber coat was called into requisition, and donned imnediately. When the shower ceased, Moody will his hatchet ent into dry wood and gathered materials for a fire, and for two hours a blazing configuration dried the adjacent ground on which we were to sleep. We had our supper, and the white tent was raised directly under a lofty tree which grew near the bank. In an lann or two even the remnants of the clouds had passed away, and a full moon shone forth in all its loveliness. I moved off a little distance to cujoy the scene. We were many miles away from any lumna habitation. All around as was unbroken wilderness. There was the blazing fire throwing red light on the canvas. Above was the lofty tree in its moonlit unjesty, while the quiet river below reflected the radiance of the queen of night. There we lay peacefully shown like hrothers tried—

And slept until the marning beam

And slept until the marning beam Paroled the mountain and the stream

Perpled the mountain and the stream.

I took home with me after this excursion three troit as trophics, which weighed about three pounds each. Side by side there was little perceptible difference between them, but they represented the three graces as well as fish cap do it, and made an impression in Utica which is remembered to the present day.

Utica*, New York*, June 16th*, 1875.

AMATEUR.

For Forest and Stream FISHING ON LAKE SUPERIOR.

On the 8th day of Angasa, 1868, the writer and a friend with the classical initials of H. O. C., started from Chrongo on a fishing trip to the north shore of Lake Superior via Greenbay and her provest. A steamer was advertised to said a first of the country of the classical to the clas

of the gravs home happened to be around. Pailing down stram we essayed the lake once sorre en route to the Salmon Tront River, which we reached at 7 P. M. and rowed couple of miles up strosus, when we had to camp, on account of the blockaded state of the channel. Here we fomily hoped to make a beginning to our sport, although, as in the river we had just left, these never failing evideuces of trout were couspicaous by their absence. Two soiltary anglers might have bees seen next morning whipping that devoted stream in a fashiou that must have assonished the inhabitants thereof, but harry fish could they allure from its uncertain deplies. At this particular juncture of affairs I don't imagine two sicker men could be found within the boundaries of the State of Mieligan Tront is uncertain deplies. At this particular juncture of sight. We must be more appearance of the stating to remove mountains, or not of sight with the total stating to remove mountains, or not of sight. We must be more about an analy salmon interapherical speaking, for the Salmon Troot has no more current than the Calimet, as quick as he and his swartly mate could ply their oars, my friend remarking meanwhile lhat, in his opinion, there were ahout as many salmon troot in this river us yellow dogs in the one we fished yesterday! Our guides assured us that it the Huron River, eituate some indefinite distance further in, the fishing was far better than in the Salmon Troot; but we no longer had any heart to pursue this Will o' the Wisp, so pulling out to sea, we were fortumate in eatching a hreeze from the southwest, which soon took as ont of sight, if and of mad, of our nisfortunes. Soon after surting we rigged another sail, a jury one, out of a cauvus sheet we had among out the colored to the Smith family, and an excellent hotel we found it. After completing our arrangements for another eraise, this time to the Agawa Hiver, about one bundred miles, more of the Smith family, and an excellent hotel we found in the singular to the size further wome c

I can imagine no more enjoyable trlp than a crulse round this same Lake Superior, and fishing from the many points of vantage which present themselves around its rockbound coast. All the supplies the fisherman requires can be had on the Canadian or American side of the falls of Ste. Marie at the lowest tariff, including sea worthy bouts and also seamen to manage them—men who are nonpuried as camp servants and learned in the gengraphy of the coast. This item of boats is an important one, as this lake shows her superiority aver the rest of the chain as much in the extent of her aron as the frequency of her storms. If the untutored ludian can "see God in clouds and hear Him in the wind," he must surely, in these parts, have the Deity forever present to his mind. In a word, if excellent sport, magnificent scenery, fine bracing air, and a "free trade" tariff, (the Canadian "Sno," I believe, is still a free port), are considerations, I unhesitatingly commend the north shore of Lake Superior to all my brothers of the rol and rect.

3. C. I can imagine no more enjoyable trip than a cruise round

To CLEAN COAT COLLARS — Take a lump of carbonate of ammonia the size of a walnut and put it in a cup of water. When it is dissolved, take a piece of clean flannel, dip it in the solution and rub the collar two or three times with it. It will also remove the glossy appearance along the seams and upon the cibows.

SOUTHWEST FLORIDA-No. 12

BEING ROTES OF A TOUR OF EXPLORATION-BY OUR OWN

PRIVATE business requiring Mr. Jones' presence at the settlement at Crystal River, we took advantage of the opportunity and followed in his wake. We reluctantly hade good hye to Mrs. Jones, and the unbounded hospitality, and mneerous sporting attractions of Homosassa. This was our first visit to this sportsmun's paradise, and we have reason to helicect that it will not be the hast. Crystal River is distant about ten miles from the Homosassa, and the two are connected by a cross stream, known os "Sult River," the latter being purallel with, and distant six miles from the fulf. Two years since, two northern sportsmen were rowing a small Whilehall boat at the Homosassa, end of the river, when a tarpon weighing 125 pounds, leaped into the hont. The result was Indicrous in the extreme. In his efforts to escape, the motions of the fish imperilled the hull as well as the shius of the occupants. Oars were tried, but the sportsmen soon discovered that they would run the risk of knocking a hole through the boat's bottom. Jackknives were tested, but the huge scales of the fish protected it. As a demicr resort, the two tegged occupants sought refuge at either end of the hoat, and waited until the fish became exhausted. For several miles after entering this stream, we found it to be literally ecovered with wild ducks, but as we could not utilize them, we retrained from wasting annumunition. This river is torhous and shallow, and presents numerons illilicalities in navigation in the why of extensive oyster lars and mod llats. The hivdives are very large, fat, and almost inex hunsible. Haviog no experience in the canning process; but if the climate did not prove too warm, we fancy that this would be une of the best locations in the United States for a canning establishment. Wages are low, and oysters of large size can be obtained in unlimited quantity for a trifling onthy. The prepared nysters could be cheaply shipped to New York, New Orcanos in the United States for a canning establishment, was child as a consisterable trale

narrost his way, was near his bone, and in a sportsuanlike manner had killed a heifer and colt belonging to himself.

Finding nothing very attractive about the settlement, we departed for the Crystal River ayster bars. These are situated about four miles from the main land and should be visited by every sportsman who is famd of superior bivalves. By lauding in the bars at low water, large and delicious oysters can be gathered in any quantity. We found them to be fit and at the most excellent flavor. Leaving the cyster bar, we headed for the Withlacouchie River, distant ten miles. The opening of this river can be easily detected, by the presence of a large saw mill at the mesterly side of the river's anouth. We encamped for the night near the mill, and the next morning commenced assending the stream. We asceaded it for several miles, but in consequence of the height and density of the timber, we found our sail useless; as we were not inclined to pull against the rapid current, and as the river did not seem to present any sporting attractions, we returned to the mill and headed for Cedar Keys. Not being disposed to follow the trend of the coast and dodge cyster bars and nigger heads, we steered a course by compass and reached the Keys at 1 P. M., at which paint ended the cruise of the good hout Spray. We have wandered some little in this, as well as in other lands, but our trip, extending over a peried of two mouths, we shall always review as the most pleasant one we have ever taken. Having found our tour so enjoyable and satisfactory, we feel disposed to try it again, and visit the best fishing and hamilting points, and examine the portion of coast lying between Punta Rassa and Cape Sable.

It taking a farewell of the readers of the Fourst and Striebal who may have tollowed as in our cruise, we may

Suble.

lu taking a farewell of the readers of the FOREST AND
STREAM who may have followed as in our craise, we may
remark that however fishly some of our statements may appear, they can be relied upon. To day I received a letter
from a gentleman residing in Savannak, in which I find the
following:

"I have traveled considerably in Florida, more especially in the castern and western portions of South Flori-

"I have traveled considerably in Flurida, more especially in the castern and western portions of South Flurida; and I may here add, that while reading your interesting fetters in the Forker and Strucan, I wandered is my memory over many familiar places with you, and I have estly congratulate you on the accuracy of your reports."

I may also remark that I have become so unch attached to Floridians, and an so much pleased with the climate, that I have permanently settled in Jacksonville, and that it will at all times afford me pleasure to communicate to sportsmen visiting the State, any information in my possession. Our good friend, the editor, is at liberty to give my name to sportsmen who desire it. In the future we propose visiting localities away from the beaten track of tourist travel, and shall briefly describe their sporting advantages, for the benefit of gunnists and fishermen.

Having acquired some little knowledge of the outfit necessary for a trip to the southwest coast, we would advise those who intend visiting the region to lay in an ample

supply of the best pilot bread in New York or Savannah, A partion of the stack could be forwarded by steamer to Tampa Bay, eare of Miller and Henderson, and a parting to Panha Rassa to care of telegraph operator. In a former communication, I stated that the steamer Emilic of Robert's line, carried the mail between Cedar Keys and Key West, touching at Tampa, Manatee, and Punta Rassa; but since that was written the government has unde a change, and the service is performed by a steamer belonging to Capt. McKay, of Tampa. Sportsmen will find the captain a jolly, companionable, conteous and obliging Scotsman—one who is everrendy to convey information or confer a favor. In a former number we refered to our outlit for the expedition, and have but a few suggestion to make. We would recomment sportsmen to provide themselves with a harpoon and grains, as these would be found useful in the capture of fin fish and tarpum; and if more noble game would prove destrable, the asylicant for sporting funemy fasten to a large stark or devil fish, and to say the least enjoy a tow. We frequently experienced the want of a light skiff, and can assure the spottsman that one would be found very convenient. A large frying pan with a long handle would be found very nextlu for fire hunting. In a recent issue of the Fonest And Stieza for the hunting, in a recent issue of the Fonest And Stieza for high hunting, and from the description, have reason to believe that it might prove useful—or at least, we would like to give any a thereof the provention of the purchased at any point on the const, and we would noties sportsmen to supply thrunselves with a suitable outlit. In this conrection we cannot refrain from referring to the fact, that our dishing tools and tackle were supplied by Shipley & Son, of 503 Commerce street, Phila;; and gun, rille, and animanition by William Wurfflein, 208 South-second street, of the same city. The prices were moderate, and quality proved to be in every way satisfactory; and from experience we say honestly recomme

valuable.

to concluding our brief notes of a sportsman's paradism we may remark, that we have endeavored in he practice and confine ourselves to data that would interest sportsmen; and if the end has been attained it will gratify An Fresco.

THE DUCKS WE WENT FOR.

THE DUCKS WE WENT FOR.

JACK B—and I, sword friends, edgoy our pleasures together. Now, Jack has been out houting a few times and considers himself quite a sportsman. He has always urged me to accompany him, but I persistently refused, utill early in April, when he came round to my house one evening and declared I roust positively go with him to shout ducks. We could short alount mice o'clock in the morning, take our dimers at a furnt house, which was the holde at some of Jack's friends, and in the afternoon try our hands at the game. I consented to gu, the mure readily because my companion confessed that he had never shot at a duck in his life. The latter made all the arrangements necessary, burrowed about thirty decoys, provided annumition runging to list us a month, even if we were successful, and procured a pretty little hunting wagon to carry us to the farm, and I cought some of his enthusiasm and bought myself a breech hader, a hunting court, and a pair of lostes that looked us if they could keep one dry even in the midst of the sea. My purse is not one of the longest, but I taid Jack that I might as well have these things and he ready for a day's spart st any time. My friend smiled his approval, and when the morning came we sharted, as full of leight acticipations as two happy children.

We reached the farm about uson and were hospitably entertained, but met with a dissopholinument here which dampened even Jack's arrior a little. Harry, the farmer's son, was away from hone; therefore we would have to go out gaileless, and my friend knew but little about the hunting grounds or the streams in their midst. The old farmer tried to make the way clear before as, and if many words could have accomplished this, all would have been well. Alout three o'check we started forth. The wind was rather loud and cold, but we cared nothing for that and phadded our way through the old forest which he hads to the backs of the Whippuny River. The path was narrow, but distinct, and we consult that if the lole let the water in,

things are not always what they seem, and I hated to disches my ignorance by any awkward altempts. So I let pair Juck labor on and aneusily watched his growing dissatisfaction. Suddenly, however, the thought struck me, if Jack finds it hard to row down, what will the rowing up he? I knew from some little experience that pulling against the stream is often a hard pultimideal. Fired with this thought I said, as if it had just occurred to me: "Jack, hig give me the oars; why are you doing all the labor?" My companion quickly changed sents with me, and I took hold determined to row aright; but I never knew before what a heavy, stubborn element water was. The oars would rise to the top, though I tried to imitate Jack's movements and keep them under. At length I was obliged to give up in despair and confess that I knew nothing about rowing. It seemed that we would never reach our destination; and no wonder, for we, in our Ignorance, left It far behind us—sailed at least a mile heyond it! Sunset came and darkness also; all hope of getting ducks was lost, and we were lost also. Rowing up the Rockaway is no easy task, and Jack grew discouraged, for the evening was durk, and the bout went from side to sible, and at last in a shallow place refused to go further. We scrambled out, wailed to the shore, and after a weary walk reached the farm house again. We were met with a shower of questions, such as "Where are your ducks? Why are you so late? Did you find the way all right?" And when we spoke of our walking home the farmer, in surprise, asked: "Why was that?" "Oh," said Juck, contemptumosly, "we had enough of navigation for one day." We have not cared much for duck shooting since then, but intend to Iry what we can do ut smaller game.

A. D. W.

BLUEFISHING AT BARNEGAT INLET

Emros Fonress and Strakasti—
Buschshing a certain sections of the year is generally good at the labet. Ally even luck down there has always been very good, the most favorable time I should say it a shout the middle of June 21 at of July The libers begin to come along its quite large schools about the cud of May; the laben go commerce about that the, but to take it in the helph of the easent, when the field are really taking the squid well, I should say that the 1st July is the perferable time for real good port. Take my word for It, you will never come home with an empty boat. It is an extremity exciting sport. It makes the high of the excitement as you draw in hand over band a six-pound bluesled, who by tremedous bounds and planges is trying to 1th threstof of your hook by vigoroogly shiking lith head when out of water, spound bluesled, who by tremedous bounds and planges is trying to 1th threstof of your hook by vigoroogly shiking lith head when out of water, spound bluesled, who by tremedous bounds and planges is trying to 1th threstof of your hook by vigoroogly shiking lith head when out of water, spound bluesled, who by vigoroogly shiking lith head when out of water, spound bluesled, who by vigoroogly shiking lith head when out of water, spound bluesled, who by vigoroogly shiking lith head when out of water. The proving of your ment in the contract of the plant of your lith of your plant of your lith of your plant of your lith of your plant of

PIKE FISHING

Entron Ponget and Stingam.—

The fish of which I write to known in the laws of Canada as the "Massikinongs," from the Chippewa word markmonds, mesoting long nose; but in the States it is generally called "masculings," from the French marque and allongs, ling fare. Compared with other members of the genus, this is the pike of Atherican waters. It is aliment hinck on the linek, gray ish yellow on the sides, and crossny withe heneath, while the whole body is beautiful with a reay; shading together of thems thus. Its weight muticize are often colossal for a fresh water game side. I have complete och that weighed fifty-one pounds mid-measured five feet and a half in length; and many others weighing from twenty to furly pounds. It is hing, slin, strong, and ewift, and the every way formed for the life it leads—that of a force and thantless marander.

It is difficult to imagine a more ferectous louking creature than a forty pound pike, with his scaly, smakeh hide, his long, weige-shaped lical, and his nose seemingly fashloned to be thrust into other dules business, his mater juny projecting and revealing a fearful equipment of feelih, making his mouth as langerous as a wolf's, his flus all aquive with excitement, and his eyes glaring like a feed's us be lurks in his lair smong the weeds to spring upon his prey.

As a specimen of the greed of the mascalongo, was used caught weigh his own kind, some of which were still altre, hasdes several of other speckes. At another time a gentleration on upself were "skillering," as disherment call it, along the hanks of a deep still pond noted for its pike. Skittering, one of the bast methods for taking massalongs, is done with a long elastic rod, reel and line to match the game, and honk of formidable size, upon which is imposed a minnow of from seven to fifteen inches in length. The minnow is twitched along through his water near the surface with a motion suggestive of the word skiltering. Upon my frend landed him safe and sire. He proved to be a twenty-five pounder; in his throa

vice. A marculonge of six poonde veight is equal to gainy qualities to a sulmon of twenty. He can supp a larger hook or part a stronger line and escape where a salmon would be secure. He can summ froster, whith quicker, pull harder, leap biglar, and show more digit and more consisting.

On one excension, with a boy of fourteen to row for me, I had the mist fortune to run in very large nancalonge into shallow water on a mould fat, and when my host ran seconds to gath him, the boy made for him by wending in the constant of the bog him, the boy made for him by wending in the constant of the bog him, the boy made for him by wending in the constant of the bog him, the boy made for him by wending in the constant of the bog him, the boy made for him by wending in the constant of the constant of the bog him, the boy made for him by wending in the constant of the fath. Floor getting him tone the bott, it was not surprised at the right had weighed forty passed.

It is not intured to this monarch of the streams, when trying to free himself from a book, to leap ten of fifteer feet show the water out shake him bent like a rimed bull. He always dies game. To Illustrate uit contact, in the constant of the streams, when trying to free himself from a book, to leap ten of fifteer feet show the viser out of the constant of

my honors the balance of the day. The first of these two pike was the one alluded to above, weighing fifty-one pounds. But though I perched on that pile several times afterward, like a hawk where he once caught a chicken. I never had musher shot from my cycle.

Still balting for this fish is not as successful as for the glass eyed pike and pickerel. Only the similer ones are generally caught thus, the larger requiring more action in the balt in order to challenge their speed and pugnacity, and induce them to bite.

Fishing through the lee is an interesting method of taking our game. But it is like pickerel ich rishing, in which a book bafted with a small minuow is cast through a hole and the other end of the line ited to a full stuck in the snow. Such a mode would avail for mascalonge about as a mouse trap for a wolf. A hole two feet across is cut through the lee, and above it is erected a close lent or cabin to shall out the hight. The fisherman seats himself so as to conveniently look and mee the gaff through the hole, and find the water clear below while he is in the dark above. Both the gaff and a silver decoy, attached to a wire three feet long, are lowered into the water. The former is held motionless in the right hand, while with the other limid the decoy is moved around as if it were a real minnow. When the pike iliscovers the decoy, he slowly and threateningly glides forward to investigate. The fisherman will discover thim when several feet distant, and here is where the excitement begins. He sieals along like an Argus, now straight on, now endexies, stopping every few inches to take notes, rapacity and craftiness evinced in his appearance as clearly as in any other member of the animat kingdom. At length he is within reach of the gaff, and the silent and excited man of the teet, with skill mid muscle, snatches the fishy prowlet from his native element.

As a food fish there is nothing superior to this. He ranks with the sal-

native element.

As a food fish there is nothing superior to this. He ranks with the salmon and speckled trout, and surpasses the black and striped bass. The meal is almost as white as snow, five grained, nicely laminated, and the flavor is perfect. The dainties) spicare is silent with satisfaction white itesting the merits of the mascalonge.

HYBRIDIZATION OF FISH.

HE following paper, prepared by Dr. Garlick, of Cleveland, Olio, was real at the recent National

HYBRIDIZATION OF FISH.

THE following paper, prepared by Dr. Garlick, of Cleveland, Ohio, was real at the recent National Sportsmer's Convention:

Mr. Parstdent And Members of the Association:

There been requested to real a paper on the subject of fish culture at this meeting. It is searcely necessary for me to say that the subject has been written upon extensively, and is very well understood by a majority of the people throughout our country: therefore you will not expect anything new on this subject.

In the year 1857 I wrote and published a work on artificial fish hreeding, based mindy on my own experiments. Being quie an enthusiast ou anything that strikes my fancy, I expected to see in a very short time every man who had a suitable place for such a purpose raising his own fish. I need not fell you that I was very much disappointed, for the subject lay "last as a flounder" for many years. It is quite different now, for not only severe States, but the general Government, have taken hold of it extensively and made liberal appropriations of money to restock our impoverhied streams and laketest, establishing breeding houses and other suitable happrovementy instanced in the portion of science of the early provement of the ports, you will seed that I was will read Prof. Baint's reports, you will seed that I was will read Prof. Baint's reports, you will seed that I was the ports, you will seed the ports, you will seed that I will be done, and a very few years will prove the green sone facts and generally known. The green that the for roy your consideration industry in fact the for for your consideration industry in fact the read of the brask as table "remarked the his fifth breakhast this "certain things are good for nothing until long kept and used; of the first is wine, and among the briterial propers, with particular of the brask fast table" remarked this fifth the paper, and the predict of the will be seen that this paper I offer for your consideration is over two years old and has been used; but the "cultur

the herrings came in the Spring to deposit their spawn, they always swam up the river where they used to catch them, but never came into the other. This circumstance led Mr. Franklin's father, who was settled between the two rivers, to try whether it was not possible to make the herring likewise live in the other river. For that purpose he put out his nets as they were coming up for spawning, and he caught some. He took the spawn out of them, and carefully carried it across the hand into the other river. It was hatched, and the consequence was that every year afterwards they caught more herring in that river; and this is still the ease. This leads one to believe that the fish always like to spawn in the saam place where they were hatched, and from whence they first put out to the sea, heing, as it were, accastomed to it."

Very correct, Mr. Kalm. All observation since that time shows that you were a close observer. Peter Kalm was a Swele, an eminent botanist, and the favorite student of Charles Linneaus, the great botanist. Our beautiful Kalmias (the Laurel) was named after Peter Kalm.

It appears by this little bit of history that Dr. Benjamin Franklin's father was the original artificial fish lireeder in this country, and Dr. Bachman and unyself must go down to the foot. He was not only the first man that made the attempt of artificial fecundation of the ova of fishes, but the idea was original with him, and this more than a century and a quarter ago. I am glad to know that an American citizen can claim this honor and be the father of our own Dr. Franklin."

- A "Fish Bureau" has been started in Boston, the object of which, the pupers say, is "to create a fraternal feeling among dealers, and thus making Boston more decidedly the centre of the fish trade, which position it holds to day." The room is fitted up with a telegraph office, newspaper files, advertising boards, letter boxes, and other conveniences, making it a useful apartment for husiness conveniences, making it a useful apartment to hashing a mea. Books are to be kept, open at all times to subscribers, giving information of sales, arrivals, the catch at the various grounds, disasters, and all other matters of which intelligence can be received by telegraph or letter.

—A shipment of shad for stocking the rivers of the State of Ohio has been made by the United States Fish Commis-sion. They will be placed in the rivers at Columbia, Daytou, and Defiance.

Hatural History.

NOMENCLATURE.

THE following is an abstract of the report of Rev. A. B. Lamberton, chairman of the Committee on Nomenclature, made to the National Sportsmen's Convention

THE following is an abstract of the report of Rev. A.

B. Lamberton, chairman of the Committee on Nomeochature, made to the National Sportsmen's Convention at Cleveland:—

"Sportsmen naturalists have long felt the need of a correct systematic classification of the names of our game, but it was not until the formation of the National Sportsmen's Association that any action was taken to organize a system of nomeoclature. The National Convention appointed a committee for this work. The chairman undertook to give the scientille names of all game indigenous to America, together with the vertacular nomes and the classification of all into orders, families, genera and species, with specific characteristics of each individual, so that sportsmen, by referring to this synopsis of description, might he oble to ascertain the proper Lutin and English name of any game species foand on our continent.

That the convention may form some idea of the characteristics of each individual, so that sportsmen, by referring to the impracticable to read it now on account of its length, consisting, us it does, of about three hundred pages, I have prepared a brief.

Our game quadrupcits consist of three orders and one sub-order. The sub-order embraces four families. The list family includes the wild cats and lynxes; the second family covers the wolves and foxes; the third family, the matins, weesels, otters, and badgers; the fourth family the raceoors and bears.

In the second order is form but one family, which contains three families. The first family contains the tree species of squirrels that may properly be called game. In the second sub-family of this order is found the American beaver. This order also enhraces the hares. There are two genera and fourteen species of hares known to science in North America. The fourth order son damily contains the authologes, mountain goats, mountain sleep, and bisons, making five genera and the deer. These are divided into three genera and four species.

Our gume brids are found in three orders and f

mit a few fishes which are esteemed by epicures, though not affording much sport to the devotee of the rod. The fourth family, the earp, includes the luckere, the roach, and the famous slzed species koown as the haffuh dsh. The fifth family, the pike, contains one of the most noted game fishes of America, the muscalonge. The stxth family, the salmoiles, contains the leaping salmon, the most royal of game fishes, and speckled trout, that dart to the tempting fly, spinning the reel as if burn to the sport, and the grayling, the newly discovered game fish of our waters, he sides others, less esteemed for their game qualities, but as highly prized for the table. The most famous fish in the seventh family, the herring, is the American shud, also the angler's joy. The most moted of our salt water fishes are the mackerel, bluefish, and and herring. I will no longer detain you with the fishes. Those not maned in this brief will be found in the committee's report on Nomenclature. All embraced in the above classification may be properly, I think, regarded as game, though the word game is purely arbitrary, its scope and meaning depending upon the untionality and object of the writer, rather thun upon any accepted delinition. In gastronomy, for instance, the word game covers all animals fit to be eaten which are found in a wild or natural state. The term has malergone various changes in the course of its history. At first, under the denomination game came only those anicals of fur anifesther which certain breeds of dogs would naturally pursue through native institucts or sense. Next, all animals pursued by men and dogs for sport. And this is not far from what we sportsmee would have the word signify now. In Eugland and other countries, where animals pursued by men and dogs for sport. And this is not far from what we sportsmen would have the word signify now. In Eugland and other countries, where animals pursued by men and dogs for sport. And this is not far from what we sportsmen would have the word signify now. In Eugland

matter how rude and primitive their rules of sportsman-ship.
Your committee has arranged and classified our game, as far as possible, in accordance with the above definition. Game being an arbitrary term, including under certain contingencies and in certain countries various animals that could not, under other circumstances, be so considered, it is, therefore, not only proper, but essential, that the sense of the word with us should accord with the genius of our woods, fields and waters, including therefrom all taken of

of the word with us should accord with the genius of our woods, fiehls and waters, including therefrom all taken of walue in sport.

We cannot pursue field sports intelligently, nor enter into the discussion of subjects connected with the preservation and habits of our game, onless we possess an accurate nomenclature. The vernacular names now applied to animals of the chase must be dropped and their correct scientific or English namensed. Sportsmen know how various are the names applied to the same animal in different sections of our country. For instance, the ruffed grouse are known in the Middle States as partridges, and in the Southern States as pheasants. In some States quails are called partridges. These examples are sufficient to indicate the present condition of our sporting vocabulary.

Although the arrangement of the names of our games in accordance with the requirements of science will give to field sports—a most important branch of natural history—the character of a science, it is not expected that it will do away entirely with the use of local names, ignorantly used to designate certain species or varieties of game; nevertheless it will produce a marked change.

A fruitful source of the wrong naming of one game was the applying of the cognomens of the animals of the old world to the animals of the osew. Our hures, for instance, since they bore a slight resemblance to the rabbits of Enrope, are called rabbits; our migratory thrush, a robin; our bison, a buffalo; and our wapiti deer an elk, und our elk a moose. After these names became fixed as a part of the listory of our fanna, naturalists discovered that we had no rabbits, no buffaloes, no robins, no partridges, and no pleasauts.

English field writers declare that Americans are ignorant

moose, Ariel these names oceanic actions a part of the history of our fanna, naturalists discovered that we had no rabbits, no buffuloes, no robins, no partridges, and no pheasauts.

English field writers declare that Americans are ignorant of natural history, and we must concede the truthfulness of the statement, though made in had taste.

Our newspapers, for instance, are ever making public the discovery of some animal, bird, or insect new to science, which proves to be among the most common and well known of the species. A short time slace a journal of considerable repute described a bird that was found in the unfrequented parts of the State of New York, not mentioned by any ornithologist, as larger than a dove, short winged, head like a hen turkey, white bill, shaped like a erow, blunt and heavy, a red bunch on the top of the head at the joining of the feathers and the heak. This remarkable bird was none other than the common coot (Fulica Americana). The following incident related to me by a friend, illustrates the want of general information on field sports in America: On one occasion I was accompanied to the field by a sportsman triend; he was well equipped, good dog, gun, and costly game bag. He professed to be somewhat acquainted with game and a fair shot. The first woodcock shot i put into the bag of my companion. Not long after we were separated by a small 'cover.' My friend's dog llushed a woodcock. I was where I could ob erve the movements of the would-be sportsman, who drew forth the deat bird to see if it and the flying one were alike. While it is not necessary for many gentlemen calling themselves sportsmen to curry samples of our game, as a means of recognizing the same in the field, yet how few the number who are familiar with the proper names of half our game. In this we differ from the sportsmen of other countries. We have better wing shots, and know quite as much about the habits and ways of animals as do the sportsmen of any country, yet we are far behind in all our aequaintunce with the na

tridge, bison, buffulo, and cougar, panthers. As to these last animals the generality of sportsmen are not aware that the animal called panther is not a panther but a cougar. America has no panthers. Few of our quadrupeds having so large a range as the cougar, extending from Florida to Mexico, are so unfortunate as the cougar in heing misnamed. Indians saw in the forest an animal that lived by browsing and they called it moosa, wood-cuter. This name has been corrupted to mouse. The same animal in Europe is called elk, while naturalists here apply the term elk to an entirely different species of the family cervidæ, viz: the wapiti theer. But why unalight examples of the wrong maining of our fnom? All most be convinced of the recessity of a municalclature of game."

SALEM INSTITUTE NOTES.

SALEM INSTITUTE NOTES.

DANYERSPORT, Mass., June 8th, 1875.

Edition Fonest and Stream:

Herewith I send you an account of the first field investing of the Essex Institute of Salem, which took place at Chebrico Pond, Essex, the 3d inst. Learing Salem by the 8:3d trait they reached the pond at about 9:30, when they separated late groups—some to ramble in the woods, others to sail upon the lakes, while a few spent the morning hours in searching for plants and other objects which the locally afforded. Returning at one o'clock an ample meal was served in the grove. At 2:30 the company assexuable in the hall of the Chebacco House, where an interesting meeting was held, Dr. Henry Wheatland presiding. Prof. F. W. Pritans made some remarks upon the finding of several curiously-formed heaps of stones on the banks of Parker River, in Newborryori, and passed around some photographic views of the different forms in which they were placed. Some were of circular form, while the stones in one view had the furm of the letter E. Owing to the carious form of the piles Prof. Putuant thought they might disclose some relies of the indians, but upon careful exombutton nothing was found in them hat a small place of pottery. He said that they must have been there from thirty to sixty years, as stamps of trees of that age were found which had grown over and through the piles. Following Prof. Putuam's remarks an address was made an the "Newburryort Mines" by Mr. Alfred Osgool, of that city, a well-known geologist, who spoke in a rather depreviating manner, saying that rich float ore had been found, but no true fissure velos. He said that he had been hooled on the street for expressing an opinion, and had not been allowed an opportunity to investigate the subject as he would have lone had he been treated in a gentlemanly manner. The interest in mining was shating, he said, as the land was the hands of speculators, who were doing their hest to keep up the centiless subjusting the profession of which he spoke of an ewolate, and the profess

BLACK SQUIRRELS IN ILLINOIS.

Salem, Mass., June 13th, 1875.

SALEM, Mass., June 13th, 1875.

Editor Forest and Stueam:

I noticed in your lesse of June 10th a statement of the Farmington Neimo of a cross between a fox gray and black squirrel. The most shugglar thing was that a black squirrel was never seen in lilitots. If those connected with that paper, or any other residents of that place, would take a trip to Wankegan, 11l, a town situated on the banks of Lake Michigan, and take a shoil through the woods, which are miles in extent, they would find the black squirrel more plenty than they are aware of. I made it a place of residence from 1856 to 1861, and spent a great deal of time in hunting, game of most klads being abundant; fox and black squirrels very plenty. Relatives of mine who were among the first settlers speak of them as being very plenty. I never fancted squirrel meat, so seldom took any.

MR. THEODORE GILL AND HIS HARD NAMES

JUNE 10th, 1875.

EDITOR FORKET AND STREAM:—
Probably you and your readers are already tired of me it not of Mr.
Gill, and I will merely say in conclusion that Mr. Gill's reply to my question seems to me rather evasive. I impired whether some of the modern naturalists are not adding to the confusion of nonnenclature by the consist invention of new names. Mr. Gill replies that amateur and imperfectly emeated naturalists have increased this confusion, and that among such are several to whom almost is made in my letter of May 6th. As the immes I mentioned were those of Storer, De Kay, Agassix, and Herbert, the last of whom with myself probably represent the guilty amateurs, it follows that Storer, De Kay, and perhaps Agassiz, are, in the upunion of Mr. Gill, imperfectly clinicated naturalists. It is some consolation for fulling under the reproof of the Oracle that one suffers in good campany. But as all these writers preceded those of the new school, it is difficult to understand how they—Storer, De Kay, and Agassiz—could be the innovators and confusion makers. Perhaps, however, as Mr. Gill graciously remarks, "when I more fully understand those unitors," and become a disciple of the new school, some rays of light may dawn upon my mud.

S. C. Clarke.

The Leaveuworth Times says: "It is a singular fact that those portions of the State which were most afflicted by the grasshoppers last year, are now favored with the lest crop prospects, while those sections that suffered the least then are now complaining of grassboppers and chinch bugs, and are predicting a failure of crops. The only cry of distress we now hear comes from sections that were favored with good crops last year."

The Rennel.

-The first exhibition of the National Poultry Associa-The first exhibition of the National Poultry Associa-tion will be held in the exposition hailding, Chicago, from January 20th to the 28th, 1876, and will include all varieties of poultry, pigeons, dogs, rabbits, fish, singing and orna-mental hirds, and small pets of all kinds. Dog show to commence January 28th and close January 28th. The American Poultry Association will hold its annual conven-tion at the same line and place. For premium list or other information, address Churles P. Willard, Secretary National Poultry Association, corner Redfield and Stein streets, Chicago, Ill.

-As we go to press the Mineolu Bench Show is in progress, and as it is held within a reasonalde distunce of the large attendance of spectators. The following is a list of the judges:—E. S. Carman, chairman; Charles H. Ray-mond, Dr. Strachan, on Irish red setters, black and tan Gordon setters, setters of any breed, pointers, lurge breed; pointers, small breed, and cocker spaniels. Colonel F. G. Skinner, chairman; N. Saltus, Dr. Rowe, on shepherd dogs, fox hounds, beagles, and dachshunds. Peter Strong, chairman; R. Arnoldi, James R. Tilley; George C. Colhurn, alternate; on black and tru terriers, Scotch terriers, skye terriers, hull lerriers, Newfoundland, St. Ber nard, mastiff, greyhounds, large breed; greyhounds, small breed, and Spitz.

—Mr. W. Knight, of Philadelphia writes us saying. "My setter bitch, "Dot," on Thursday last pupped cleven dups to "Bismarck," the famous setter belonging to Mr. David Brooks, of this city. All the pups are red and white except four, which are entirely white, and resemble the old dog "Biz." The paps are daing well.

FOLLY—NO. 3.

For Forest and Stream.

POLLY—NO. 3.

CTOBER 19TH.—Walter came over with the Proold kind of a high-topped buggy; wanted me to go after mallard or anything else inhat might turn up. The frosts had been pretty severe; no rain for two or three weeks; everything very dry and dusty. As we crossed the bare prairie just out of the eity, cropped close by St. Peal's numerons herds of cattle, the suu came up in a labze and kept at it for the rest of the day. We could hear the golden plover whistling all about, and Polly ran into a flock in her accustomed style. We could not stop for such small game, for to shoot golden plover upou a close-cropped prairie, with a white dog, and that white dog Polly, was simply impossible; we had tried it. Five miles but, over roads as smooth as a floor, we rattled our old earryall, striking the brush country on the hither side of Lake Johanna, still three miles distaut. As we passed the big wheat stubble a large pack of chickens were just settling to their hreak-fasis—seventy of them at least. Polly would willingly and suddenly lave disturbed their arrangements, but we were out for all day and did not wish to get into a fret. Upon our left the country was covered with the serrubbest kind of scrub oaks growing thick together, averaging from two to six leet in height; ministure oak trees, sturdy and stubborn; hard things to get about among as ever mother nature invented. Through this tract, which was quite rolling, in the depressions ran a chain of grassy ponds, which were from one to two acres in extent, water at the deepest too the study of the ponds and while wished many at time before the day was doue that he her] gone hardoot rather than worn his portable veries. We tied Dextret to a filtitle oak tree, where he could browse comfortably upon its upper hranches, and went for the ponds, surfact just two mallards one of which Walter dopped, and Holly retired in good style; two or three English suipe, very wild and unshootable, an average rise at ten ro

toward our place of approach. Taking advantage of this and the low scruis we managed to get within cight rods, and as we rose up, the little water in the centre of the small pad in which they were appeared crowded with them. We fired hold together upon the water, and as they street of the world over the hills and far away. Polly feelch of woweld over the hills and far away. Polly feelch of woweld over the hills and we single bird. The flow of the world of the hills and we single bird. The flow of the largest pond, and hold dring together they are they are they are the world for the largest pond, and hold dring together he gold down one with a thoped wing. Polly went for him, and together they traversed that the acre poan in many directions in an exceedingly lively manner. With the thick great him perfect order had a gloost of a chance green hoaded falow—proof enough. "We will doek with 20ly, and non-she case in with the melland—a fingeren hoaded falow—proof enough. "We will end with the polly, and non-she case in with the melland—a fingeren hoaded falow—proof enough." "We will always claim, Polly, that you were splendlid in the sheck lussiness." We waited an hing but no more mallards appeared, so we mounted our veice, put Dexter to his speed, and away we went for Lake, John Land, ou the road shouling one great hoade in the sheet proof the proof of the great fishing in the lack lussiness. However, out shing. "He wall only our friend in the or enhigh to the lake welcomed to kindly, boasting of the great fishing in the lack, how and pagions." The san was fabraige look, lot with this once of game around as we were an falous to be up and doing. We hunsted the korders of the cordited, and that at length flush in time key of quall, much to my surprise; for I knew Mr. Malhoy was an awful lar, until the he had a well with the world were well with the world were and to the world with great that he had seen a force of lake if we had a gold time and was willing to kny for it. Then she hunted usely at three or fourth, early

PRINCE ALBERT'S DOG KENNEL

SCHLOSS BRAUNFELS, Prussla, May 26th, 1875.

Schloss Braunfells, Prassla, May 26th, 1875.

Editor Forest and Stream:—

tike most of the ancient German castles, Schloss Brannfels is situated upon the top of a high hill, and is surrounded by a most charming country, over which it commands most extensive views of endless variety. Americans who have visited here say it reminds them in the Fall of the year very much of the most beautiful parts of their own country. Every window of the hundreds in the castle looks over ranges of andusining forests, lively and lovely with overy shade of lenf, with parches here and there of will dilowers of surpassing heanty. The castle stands in justice and supreme—a central object of attraction in the midst of the rominite valley of the Lahn. Though so much indebted to nature for the lavish way in which she has strewn her cholects gifts at its frel, yet Schloss Brauffels has many other associations connected with it which enhance its attractivenees. It has been cline 1025 life object of many a strife, the secue of maya a romantic episode. Gustavis Adolphus of Sweden mice stood upon its miniparts a victor and ministers of all he surveyed. Brave and noble scions of the illustrous house of Salms have fullen in mortal strife for the home in their name and for the lave they hore their "indyes fatre." It is one of the few ancion castles in Europe that has remained in the possession of the direct desendants of its original founders. The Princes of Salms have held this their ancestral stronghold since 1025. It will interest many of your readers to know that II. S. Highness Prince Albert Salms has added another feature to the attractions of the place in the establishment of a first-class kennet of the purest bred dogs to be had at any cost. My felend Prince Albert has traveled far and wide seeking the best strain of each bred of day. He has taken the champion Ranger as his bean ideal of what an English setter should be, and has now in two kennels nearly twenty Mindonia setters, all by Ranger. His Irish setters are descendants of my fiel

PETE

WE give this week an excellent portrait of one of the M. Strong, Esq., of West Meriden, Conn. Pete was sired by old Phil, whom he closely resembles. Phil took the first premium for pointers at the recent bench show at Mineola last year. Pete was awarded first premium and extra prize at the hench show of the Rod and Gun Club at Springfield; his dam taking the prize for her sex at the same time. Pele will be two years old in August uext.

His sire, Phil, was bred, we believe, at Hartford, Con., and His sire, Phil, was bred, we believe, at Hartford, Con., and is better known as the Colt dog. His dam, Prudence, is by Mr. Wabbetton's (of New Britain) Dandy, out of Mr. Crotchet's Moll; Moll by Phil, out of Mr. Crosby's Fan. Dandy by Mr. Russell's Shot, out of Mr. Goodrich's Nell, Nell by Mr. Smith's Rake, ont of Mr. Buell's Belle, both imported English pointers. Mr. Strong, the owner of Pete, is very enthuishistic over his good qualities, and from the reputation of that geutleman as an all day sportsman and walker, we should judge that this all day sportsman and walker, we should judge that this dog must be sound in condition and have perfect feet to do

his work. Phil beat Pete but one point at Watertown, and perhaps the judges were influenced slightly by the difference due to the age of the sire.

A LARGE FAMILY.

STRATHON, Ont., June 17th, 1875.

STRATHROY, OHL., June 1110, 1010.

EDITOR FOREST AND STREAM:

My Field Trial bileli Durt on the 15th inst. gave hirth to a most extraordinary illier of whelps (afteen), viz.: Eight dogs and seven bilelies, all but one alive and hearly, and doing well on their own and foster mother. This is such an unusual number that I thought you might which to take a note of it in your next bene. The pupples are by Lelecster, and are all black, white and in a and blue helton in entarget. H. FISH IN SEASON IN JUNE.

Tioni, Salmo funtinalis, Salmon, Salmo salar, Muskonongo, Esoz nobilior, Weakfish Styped Bass, Kingdob

on Trout, Salmo confinis. Shad. Alora. Land-locked Salmon, Salmo Gloveri. Bluefish.

FISH IN MARKET.—The supply of fish during the past week has been very abundant, in fact the summer supply has fairly set in. Bluefish are being received from the Jersey and Long Island shores in large quantities, running from 3 to 8 pounds each and selling for 10 cents per pound. Spunish Mackerel are more abundant, considerable quantities being received from Norfolk and the price has fallen to 20 to 25 cents per pound. These fish are for size and quality not surpassed by those eaught later in the search of the price of son on our own cost. Fresh mackerel are in fair supply and bring 12 cents each. Salmon are coming from Nova Scotia in splembil combition and sell for 30 to 35 cents per pound. Striped bass are being caught in the surf on the south side of Long Islaml in large quantities. They average 40 pounds each and sell for 15 cents per pound. One party near Bayville caught at one hand of the seine, 1,940 centric. Sheepshead, are very abundant, coming, from ponnis. Sheepshead are very abundant, coming from Norfolk, Long Island and New Jersey, and are sold at the nunsually low price of 10 to 12 cents per pound. A few pompano have been received by Mr. Blackford of Fulton Market from the Chesapenke Bay, and sold at \$1 per pound Halibut are in abundant supply and sell for 18 cents. Porgies are in good supply at 6 cents; weakfish good supply at 10 cents. Green tuttle are abundant at 15 cents per pound. Soft crabs searce at \$1 50 to \$2 00 per dozen.

IMMENSE BASS .- We saw at Mr. Blackford's this week a monster striped bass, weighing seventy-eight pounds. This fish was taken in a seine on the Connecticut River, and transferred from the market to be served for the delecta-tion of the guests of the St. Nicholas Hotel.

-A remarkably fine fish-the moon fish-eaught off Norfolk and the coast of North Carolina is fast coming into public favor as the most delicate of fish food. Its weight is from five to ten pounds. It is caught in the nets set for sheepshead. It resembles the sheepshead slightly in form, but its flesh is of a finer grain, and of a more delicate flavor. This fish has been minutely described in our

THE SOUTH SIDE.—The hotels at Babylon and the other South Side resorts have been full to overflowing during the past week. Selah Smith's appears to be the favorite point d'appui for the fisherman. Some good catches of bluefish are reported, both with the squid and chamming with meuhaden bait. The latter mode of eatching this gamy fish is fast coming into vogue, and the "correct thing" is to kill them with a fly rod. We know of several gentlemen who are having split bamboo rods made at Couroy's, in Fulton street, for the purpose.

—On Wednesday of last week a sword fish attacked the fishing boat of Captain D. D. Thurlow, while he was hauling

mackerel nets off Fire Island, thrust its sword clear through the bottom, and stuck fast, while the fishermen took sev-eral half hitches around its body and so secured it. It was afterwards brought to Fulton Market, and found to weigh 390 pounds. Its sword measured three feet and seven inches, and its entire length was over eleven feet. The stuffed skin will adorn the Central Park Museum.

-The Bath Holel, Sheepshead Bay, L. I., has just been opened by that popular proprietor, C. A. Bunting, Esq., who has leased it for a term of years, and will umbuiltedly restore it to its ancient prestige and popularity. It is one of the most attractive localities within easy access of New York, with groves, sea bathing, drives, yuchting, fishing, &c., and can be reached in an hour and a half by

-Mr. E. R. Wilbur, of the Areadian Club, has become the fortunate possessor of one of the finest places on the South Side. This property, known formerly as the Green Place, comprises one hundred acres of excellent hind, with a frontage on the Grent South Bay. In addition thereto, one of the best trout streams on the island rans through the property, affording every facility for the propagation

-An experienced Canadian angler proises the efficacy of the Allerton trout fly, so named from Mr. R. G. Allerton, of the Oquossoe Club, with which, he says, 'I have had for four seasons the best success of all kinds used. Larger fish have been taken with it, and more of them. It would work finely in Nova Scotia just now." This fly has a yellow body, red ibis wing, a silver pheasant tail, and a yellow and green backle, diessed on No. 4 hook.

and green backle, diessed ou No. 4 hook.

—We have received from Capt. J. W Coventry, of Nouvelle, Canada, a couple of caribou skins of his own capture, which we intend having made into moccasins and leggins for nur own use. They are fine specimens. The Captain is lessee of the Romaine and Nouvelle rivers, and offers some roil privileges at reasonable rates to salmon anglers. The Nouvelle is also noted for its sea trout. Our friends who intend visiting Canada will do well to apply. do well to apply.

-For two weeks past there has been ou exhibition at the

—For two weeks past there has been ou exhibition in the Art Building, in Brooklyn, a very fine trout painting from real life, of which the Brooklyn Union says:—

"Mr. Colin Camphell, of this City, was fishing last year in the Nepigon River, Lake Superior, and apon one oceasion took fifty-seven trout, averaging three pounds each, as the results of his day's sport. The Toronto artist, F. A. Verner, happening to no on the spot, sketched two of the fish, and from sketch produced this painting. As works of art they are perfect. No such faithful reproduction on canvas of this king of game fishes has ever been exhibited here before."

The portraits are of the exact dimensions of the originals.

The portraits are of the exact dimensions of the originals. -People who intend visiting the "Thousand Islands" and Alexandria Bay, will find the Crossmon House in charge of a thorough sportsman, who knows how to cater for the angling fraternity as well as for Summer visitors in general. It is a most attractive resort and deservedly

-Colonel A. II. Fowler, of Ithaca, the inventor of "Fowler's Rubber Reel," and the maker of excellent split bamboo rods, writes us a naturally exuberant letter, calling our at-

rods, writes us a naturally expherent letter, calling our attention to the fact that one of his rods, in the hands of Reuben Wood, of Syrucuse, took the first prize at the Watertown contest last month, and says:—
"For four years my rods have taken first prizes. At Rochester first and second, at Batavia first, at Oswegn first, and at Watertown first." There were several rod makers present, at the last convention. All acknowledged my rod to be the finest and best that they had ever seen. I make nothing but six strip rods for trout, bass, and salmon, and warrant them as good as can be produced in the world."

There are four or five makers of fine split bamboo rods whose respective qualities are so excellent that it is difficult to determine which is the better of them all, if, indeed,

there be any essential difference. We have tested quite thoroughly the Fowler rod to our completest satisfaction, and while fully convinced that it would not have taken first prize in our hands at the trial mentioned, when that indominable expert, Reuben Wond, was a contestant, we would not debar it from an equal place with any competing split bamboo rod.

-White and yellow pereh of great weight are abumulant in the Rancocas, Pensancon, Newton and Timber creeks, of western New Jersey. Good hotels at Gloucester and

-A drumfish weighing seventy-three pounds was captured near Jacksonville, Florida, recently.

-A tront weighing nearly four pounds was enught in the River John, Picton county, Nova Scotia, a fortnight ago. It was twenty and a half juches in length, and more

-Fishing for bass and rockfish at the Great Falls of the Potomae appears to be remarkably good at this time,

ew pleasure steamer has been placed on Rangeley Lake, Me. She is about twenty tons hurden, and on her trial trip attained a speed of ten knots an hour.

—Mr. Rubert Cruwford, the genial agent of the Hudson's Buy Company at Red Rock, Nypigon, Litke Superior, has been trunsferred to Fort Chinis, Ungava Bay. Mr. Crawford is well known to many anglers who have visited the Nepigon, and all the conveniences to be found there for the graphy rout of spent have been introduced by him. We the enjuytment of sport have been introduced by him, trust that his successor (whose name we have not henril) will take good care of the tents, canoes, and so forth, and have them available to visitors. Mr. Crawford was in Toronto last week.

—Bluefish are getting plenty in Vineyard Sound aml Buzzurd's Bay waters, having struck in carlier than usual.

Buzzurd's Bay waters, having struck in earlier than usual.

—Another hig squid, or devil fish, has been east ashore on Newfoundland, the two largest arms of which measured liventy-six feet long and sixteen inches in circumference, and the eight shorter arms each eight and a half feet long. The heak and one of the suckers have been preserved. The largest ever obtained had a body fourteen feet long and arms twenty-six feet long.

New Jeusey-Forked River, Ocean county, Juno 16th.—Mr. Charles E. Calman caught to day seventeen sheepshead, twenty sea bass, and thirty blue fish at this place. One party caught twenty-eight sheepshead, besides many sea hass. The fishing is now better than ever known before, and all may sufely anticipate good sport down here why chouse to come right away. A party from here caught to-day in the Na Name thirty-eight bluefish, and amatter party in the Lady Jano caught twenty-six. All these fish are large and in fine condition.

E. H. F.

Kinsey's Ashley House, Burnegat Indet.—Weekly report

Kinsey's Ashley House, Barnegat Inlet.—Weekly report ending June 18th:—
June 12th.—Culonel Lovi Davis and friends, 29 bluefish;
R. S. Sentt, Bridgeport, Conn., 18. Culonel Davis captured a striped bass weighing sixty pounds, which was being thriven ashore by a large shark. The shark succeeded in getting about one foot of the tail, and the Colonel the halance.

June 13th.—Mr. T. Garrett, of Jersey City, 56 bluefish; blue C. Bailey, 48 sea bass. June 14th.—G. L. McGill and H. Whitber, of Camdeu,

85 bluefish.

June 15th.—Captalu Joel Ridgway, with party from Beverly, N. J., 16 bluefish; DeCamp of New York, 15; West, McCarrly & Co., 35.

June 16th.—Splendid success with the sheepshead. R. S. Sentt, 16 sheepshead; S. Ridgway, 52; H. Soper, 32; Whi. Inman, 8; Williamson and Parker, 10; H. Perrine, 8; Christopher Grim, 21; J. C. McCarrly & Co., of Philadelphia, 46 bluefish; H. O. Wilber and W. T. Bailey, of Canden, 16.

the afternoon blowing a gale from south and. Among the artivals to day we notice your contributor "Music," whose "Three Weeks on the Magnetewan" was so interesting; also Uncle Thad Norris, of Philadelphia.

Vireinia—Leceburg, June 17th, 1875.—I weighed to alay the heaviest bass I ever saw from the Polymine. I have heard of larger, but never saw one. It weighed over five and a quarter pounds eight hours after Mr. Alexander Breckinridge caught him near "Red Rocks," on the Polymine. Anglors have had better luck lately than heretofase, and there are better prospects for success in that line. Major Ferguson, of Maryland, picked up twenty with the fly last Salurduy, and some successful angling by New Yorkers near Harper's Ferry has availanced the hopes of fish folk here. I took a few trout the other day on my wny to the bass grounds, [waters] T. W.

Wisconsin—Janesville, June 17th, 1875.—Our bass fishing is fine now, and we are after them every day between four P. M. and dark. We are hailding a new club house at Koshkonong Lake. Colonel L. A. Hurris, of Cincinnati, is a member of the club.

The Fisheries.—The number of fishing arrivals for the

The Fighthers.—The number of fishing arrivals for the week ending June 18th was eighty-four—forty-nine from Georges, twenty-three from the Bunks, and twelve from mackereling. The amount of Georges cod brought in was 750,000 pounds, halibut 50,000 pounds. Bank end 1,500,000 pounds, halibut 50,000 pounds. Mackerel have been quite scurce of late, and the vessels bring in very light fares. About 1,000 barrels have arrived the past week. The fleet that have been tending the New York market are arriving home, and will proscente the business off this shore, as the mackerel are fast working this way.

Schwoner Gertie E. Fraster, Captain Morris, arrived from her fifth bank trip on Saturday, having been absent hat three weeks. She weighed wif 78,114 pounds of balibut and 5,050 pounds of collish, her stock amounting to \$2,300. Her total stock up to this time is about \$14,086.

Schooner Alfred Walen, Captain Thompson, also arrived from the banks the same day, having mule the trip in eighteen days, the shortest but one on received. She weighed off 94,000 pounds of halibut and 4,000 pounds of collish, her stock amounting to \$3,320.—Cape Ann Advertiser, June 19th.

Rational Pastimes.

CRICKET.

ST. George's vs. Young America, of Philadelphia.—This match, played last Saturday at Hobokea, proved a treat to the lovers of cricket, present in force, who had fine weather and good cricket. The visitors won the toss and began the batting with George and Dan Newhall. The latter was master of the situation, playing an almost faultless inning for 62, his play being equaled by that of his lunther, R. S. Newhall (not out), 51. They being ally aided by the rest, the score reached 169 before the eleven were disposed of. With this large score to face, Bance and Steight began the batting for St. George's, but the hardfield work of the morning told on the mon, and with the exception of Bance, who played patiently and cautiously for 23, and Moerna and Cashman, who his freely and well for 13 and 17 respectively, the St. George's eleven made little resistance, their total being only 86, and therefore 83 behind that of their opponents. The fielding was excellent on both sides, but the bowling was inferior to the butting. Despite the apparent disparity shown by the score,

it was an excellent game, and we heard several of the older men of the clubs, whose faces were right welcome, loud in their praise of the play. As will be seen by the appended scare the credit of the victory was mainly due to the broth-ers Newhall.

BASE BALL—PROFESSIONAL GAMES.

—A noteworthy contest took place in Chicago on June 19th on the occasion of the first game this sensum between the Hartford and Chicago nines, the game being so finely played on both sides that neither party could score a run until the eleventh innings, and then the Chicagos munaged to obtain a single, and this run decided the contest, us the White Stockings put out the Hartfords in eleven innings without their scoring a run. This is an nuprecedented score, and the first time in the annals of the professional class of contests that two nines have played through thus linkings without scoring a run. The Hartfords had just left Buston after a whipping at the hands of the Reds by a "chicago" game of 4 to 0, and this double defeat was quite a dampener to them, us it was unexpected. The Bostons, on the same day of the Chicago victory over the Hartfords, enputured the new nine of the Athletics by a score of 11 to 6.

—The record of games since our last issue is as fol-

-The record of games since our last issue is as fol

11 07 -
June II-Bostow vs. Chicago, at Chicago
Jane 14-Philadelphia vs. St. Louis, at St. Louis 15 to 2
June 14-Mutnot vs Western, at Keokuk (five funings I to D
June 14-Hartford va. New Haven, at Hartfurd 10 to 0
June 15-Philadelphia vs. Red Stocking, at St. Louis 4 to 3
June 18-St. Lonis vs. Philadelphia, at St. Lonis 5 to 1
June 16-Athlytic vs. Atlantic, at Brooklyn 13 to 1
June 17 -Boston vs. Hartford, at Boston 4 to 0
June 17-Athletic vs. New Haven, at New Haven fi to 4
June 19 Chicago vs. Hartford, at Chicago (11 lunings) 1 to 0
June 19-Boston vs. Athletic, at Boston
June 19-St. Lords vs. Mathal, at St. Louis
June 21-Boston vs Atlantic, at Boston 8 to 7

THE CHAMPION'S RECORD.—The champion's up to June 20th had played in all thirty-three games, as follows:—

	Gamys Won.	Lost.	Forfetted.	Tirst
Boston vs. Washington	6	0	0	0
Boston ve. Musual		0	0	0
Hoston vs. Cyntenutal	4	0	0	0
Boston vs. Philadelphia		0	0	น
Hoston vs. Daytford		0	0	0
Illuston vs Athlytic	3	0	0	1
Boshin vs. New Itayon	2	0	0	n
Bushin vs. St. Lonie	2	- 1	- 0	0
Hoston vs. Chicago		- 1	- 0	0
Itoston vs. livd Stocking.	1	0	- 0	- 0
Boston vs. Western		II	2	11
Boston vs. Atlantic		11	n	0
		-		-
Total		2	Z	1

Out of thirty-five games played it will be seen they have won thirty-two, and had a ten innings tie game, a record previously tmequalled in the professional areas. That they will go through the senson successfully there is now but little doubt; but they will not pass through the fight as unscathed as it was thought they would, their Western trip having shown their prominent opponents that there is yet a chance to "go for the Reds" ou a rally for first place during July and August. The record of their Western tour is as follows:—

υı	IL 13 :	48 IOHOW	,							
	June	2-Boston	va. St.	Louis, a	t St. 1	aimo.			 . 10	to 3

	0.0									

In addition, there were two games furfeited to the Western club by 9 to 0, leaving six victories, two defeats, and two forfeits for the tour.

Answers To Correspondents.

H. H., St. Louis.—We know of no new map of the Adirondacks ex-cylt Colylu's, which is not nearly as sultable for general use us Ely's. F. H., Biddefo.d, Me.—Can you inform me where I can absalu a limi-dred gold fish for an aquarinu and garden fish pond? Aus Seth Green, Ib Moritimer street, Rochester, New York.

S. D. G., Philadviphia —Can Curtis & Harvoy's powder he obtained in New York? Ans. Yes; Henry Squires, of No. I Courtisudt street now has an involce of Curtis & Harvey's powder.

F. 1. II., New York.—Please give me the terms of membership of the National Rifle Association? Aus. Apply to Secretary, No. 93 Nassau Sirvet, for blank form of application. Entrance fee \$3, and annual does were proposed.

and modult.

G. W. D., Philadelphia.—Would you please give me the address of one one in Canandagua, Ostavio county. N. Y., to whom I could write and obtain information as to the price of board charged up there? Ans. George Herenden.

Tonacco, New York.—How many pounds of tollacco to the acre in Tonacco, New York.—How many pounds of tollacco to the acre in Connecticut? What county is beat adapted? Drive not the Connecticut Villey cumities leaf bring the highest price? Aux. The Connecticut Villey cumities produce the best tubucco, but the prices have not been remanageative the

R. E. S., Newark.—I have a fine setter pup about six months old. He as no control of his hind legs whitever; has a good equelite, and links veril. Can you let me know what to dw bir him, or where I can get dog aedichies? Ans. Apply to Hynry Gardner, M. D., No. 111 South Fifth

medicines? Ans. Apply to Benry Gardner, at D., 30. It boards aroune, this city.

P. E. B., New York.—Can you recommend me a hotel at Good Ground,
L. 1.? Can you give me an estimate of altent what the bound is per week? Ans. Wm. Lane; possibly \$8. I should also like to know if there is good woodcock shooting at Lackinwaxen, Ps. Ans. Yee, generally; none last year.

D. C. R., New York.—Will you oblige my by sending directions of a good hotel at White Lake, Sullivan coundy, N. Y.? Also, if there are any black luss caught at that lake? Ans. Tow good hotels at White Lake. Boss fishing used to be good years ago, but we believe picketel lusve nearly run them out.

A. B. H., Montreal.—I would like to know an address where I can send for one of those little porket filters—those with rubber ticke and small stone on end, as they cannot be obtained here. Ans. We have sa-certained that these filters can be purchused of B. Hoaghud & Co., 37 Maiden Lane, New York, at 25c. a 50c. each, two sizes; by the slozen, 92 Sun 83.

NEWFILDSHLAND.—Could you kindly let me know if it is possible to purchase Cornack's account of his trip across Newfoundham, published in purphilst form, probably in Lambur about the year 1821? Your transcript in the culmine of the Fornest and Stirkan made me think it possible that I might get the destret inferential from you. Any Address Rev. M. Harvey, St. Jahn's, Newfoundhad.

G. R. M., "Firmuto, vint.—Kindly wome the best ground in the St. Lawrence for the larger varieties of ilsi, worke at fishing, depth of water, &c. How is Alexandria they? And From Alexandria Bay to Ulayton, thirty inthes, is the best fishing ground, and the prevailing method is trailing. We have seen a mascalong taken at theyton this graven that weighed levely-four pounds. Make headquarters at Crosswer, June 1997.

L. C. W., Phrentxvilly, Pa.—1s there much game in Livingston county, Ill., and what kinds? When does the law permit shoulding gamy in that State? Fare from Philadelphin to Chicago? Ans. You will find good shooting in Livingston county, Ill.—prairie chickons, quall, thicks, &c. The season for "chickons" commence on the 15th of August; for quall, 15th of October; for theks, genre and suipe, August 15th. Fare from Philadelphia to Chicago \$23.

Philadelphia to Chicagu 22.

F. L. G., New Haven, Cl.—Would it be possible for a party of four to get any accummodations, or would they have to compout, in the weighborhood of the Eagle Lykes, in the mulh of Maline near the Canada line? Can you give us the middress of any one our thioty, or with the over them there? What would be the expense of a four week's compling onl, including fare, from New York? Ans. For full information rubbress A. H. Harrower, P. O. Box 594, Montreal, or N. P. Lendt, Box 771, Montreal.

Monteal.

Dr. McA., Rockford, III.—Why is it that during the spaining sensor, from latter part of May to about 20th of June, we are not successful in dishing for black bass to our rivers, when at any time the angler who visits our small Western lakes is remarked with a fine cutch? Is not the sensor for spanning the same in both waters? Ans. Don't know how to answer this. As you know it is the spanning sensor you should not try for them. The season may vary alightly, according to hemperature of water, or they may move up the river to find more suitable granuds for spanning.

spawifing.

C. B., Poughkeepsie —Please by my know whether there is any piaco-within 500 or 500 ralles of Poughkeepsie that would pay my party of two to hunt and trop; it so, where is it, what would it cost in get there, and what the game is? Ans. The best trapping districts and the Reetiguache country. New Brunswick, the Carlonge district, back of the Oltawa River, the Magnetewan, and the worthern partions of Michigan and Wisconsin. There is some far on the northern horder of Mathe and New Itaanpshire, and adjusting traindian voimities. Beaver, work, morion, which, ofter, dver, caribon, and herefor had these players.

mink, otter, dver, caribon, and incide hyalf these playes.

F. K. H., Halthaore.—World you please inform no where I could procure large and separate packet maps of several canaties in Pounsylvania and West Virgina, and are those \$1 compasses which you self "jeweled," and have they stops; are they perfectly reliable? Also, could you dived use to some works on building cances? Ans. I. Caffor, 173 William street, New York. 2. Compasses are chesp allnirs, integrity reliable for addinary ass. We do not know of any for sale at present. 3 We know of no work of instruction on building cances, but you will find full information, with diagrams, in Powest and Stream, Val. 11., 123ys 93, 104, 170, 237, 279, 364, 407.

PLANKERS, Halson, N. Y.—Please tell me what to take, and the man-

92, 109, 170, 279, 279, 364, 407.

PLAKERS. Hulson, N. Y.—Piense tell me what to take, and the quantity necessary for four persons to take in Indian take for four weeks' camping? Please give the invessary articles. Ans. Essentials are in axe, matches, and and twine, the nad of lot flies, 100 pounds of floor, 25 do. Indian meal, 50 do. park and hum, four caus Barden's condensed coffee, there are four strings of onlives, one tasked of potatives, ten pounds sugar, box of salt, one rubber and worden hanket each, heavy wooden said of clothes, woolen shift, extra sacks and brats, fold hat, shippers or moccastus, one bar of yellow song, frying pan, wire griding, six quart path, coffee pol, four the caps, knife, folk, and spoons, New Testament; a tent adds to one's comport.

a tent adds to one's comfort.

Neprune, Bath, Mc.—1st. Where in Boston or New York can I procure curridges for a Suider rifle, and if su, the price per 1007-2d. What regulation does the Williams-Powell gun have la comparison with other makers? 3d. I have a pup from months old that is tradical with flavor. What can I use to drive them away? 4th. Can a Newfoundland dog he tribuyed so as to make a good retriever for wild toot shooting? Aus. 1st. From II. sty C. Squires, No. I Continual street, New York. 3d. The guns made by Williams-Powell compare fororably with the hest makers. 3d. Use varballe map freely and your jump will not be troubled with them. Common brown soap will answer the purpose if properly applied. 4th. Almost my Newfoundland dog can be made a duck retriever.

till. Almost any Newfoundland dog can be made a dick retriever.

Guerar, Cleveland, Ohio — Will you phase masser through your very whilely read and valuable paper a few inquiries rot the benefit of a small party abo expect to go during the coming month to Michigan for a fish on the An Sable for grayling? With what should we provide ourselves for a ten duys' trip? We expect to make a raft at Grayling, and sail down on that, fishing as we go. What size of hooks should we take, and what kind of fires? How many fires ought we to have each, and what kind of line would your refer? Any other information which your large experience would suggest we shult be very hunkful for. Ans, You write amonymumsly, which farthids us, under our rules, to take unities of your correspondence. That we your indiress, however, we should be pensed to because they you copies of Funest and Stream that contain full particulars, which cannot be printed here for want of space.

Gravall, Out.—Would you be kind enough to let use know

full jurtivulars, which cannot be printed have for want of space.

Grouval, Cornwall, Out.—Would you be kind enough to let use know how for a crude could be baken from Potsdam, N. Y., up the Rappetle Biver? Ans. Its whole length up to Rappetle Point; thence into Tripper's Lake, and three almost indefinitely. We believe that a hout can follow an almost introder water course for 160 infless. There are several circles or route from Potsdam to Rappetle Poud. Wright you also please felt use what is the indivationy, if any, in a central-fire variable, or gird, over is plusfire, other things being equal? There used both, and really can see none. All the gins, cateridges, parapherantle, 4.c., that we see advertised use central-fire, or or every his connection with central-fire gives or carvidges. I flust timberstand it. Ans. Glyan in the working gins speaks of the merits of the two systems is being about capacity thylded. Central-fire, however, has come into vogue, and taken precedence of pro-fire.

deuce of parefre.

D. F. R., Saratoga.—Which is the furthest place up the Neuse River in North Carolina that can be reached by railrond or houl, or by other means, and have must I got. Ans. Radelgh, reached by Richamonf, Petersburg and Webbox Railroud. How for will the new Crift's revolvers that carry rife varietilgys shout point blank, and are they accounte? Ans. Penindly accounted up to 100 yards. What is the level thing in new hir trolling for Spatish unrekerel? Ans. Signal of the lead we bone. During \$90 Sharer's tille use either a small or large varietilgy; also, will like sparing ville at \$38 and \$40 shout well at 100 and, 600 yards? Ans. The sparing ville at \$38 and \$40 shouthord expressly for lung and short entrings. We should not consider the latter rifle officience with the Reinfungton who the further state give their experience with the Reinfungton who the further and Stream saying its recell was very girat. Is that vire usually? I should buy 12 gauge. Ans. The Reinfungton does not recell more than other gaus; 12 gauge is the proper size for field shooting.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will and our columns a destrable medium for advertising announcements.

The Publishers of Forest and Stream alm to merit and seeme the patronage and countenance of that portion of the community whose refined mielligence enables them to properly appreciate and enjoy all that is beautiful in Name. It will pander to no idepraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the viruous and good. No advertisement or business notice of an Immoral character will be received on any terms; and nothing will be admitted to any depart ment of the paper that may not be read with propriety in the bome circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Salurday of each week, if possible. CHARLES HALLOCK, Editor.

CALENDAR OF EVENTS FOR THE COM-ING WEEK.

TRUBSDAT, June 24th.—Trotting, Palerson, N. J.; Beacon Park, Boston; Watertown, N. Y. Regatlas, Schooner Match, Scawanhaka Yacht Club; Toms River Yacht Club; New Jersey Yacht Club. Scalling match between Balnbridge and Smith, and Yates and Curtis, Harlem River. Bench Show of Dogs, Mincoln, L. L. Buse Ball, Althetic vs. New Haven, at Dover, Del.; Quitekstep vs. Active, at Reading, Penn.; Atlantic vs. Litre Oak, at Lynn, Mass.

Friday, June 25th.—Trotting, Beacon Park, Boston; Watertown, N. Y. Riffe, Scottleh-American vs. Irish-American Club at Creedmoor, Base Ball, Atlantic vs. Gratton, Worcester, Mass.; Doorr vs. Quickstep, Wilmington, Del.

Base Ball, Allantic vs. Gratton, Worcester, Mass.; Doerr vs. Quickstep, Wilmington, Del.

Saturdat, June 26th.—Troiting, Denver, Col. Rule, California Team against Co. D. Twelth Regiment Team, at Creedmoor. Harlem Association Regatta, Harlem River. Base Ball, Philadelphia vs. Chicago, at Chicago; Boston vs. Althelic, at Philadelphia; New Haven vs. Amateor, at Trenton, N. J.; Hoboken vs. Keystone, at Hoboken; Allantic vs. Taunton, at Taunton, Mass.

Mondat, June 28th.—Rife, Coniest for Forest and Stream badge at Conlin's, 908 Broadway. Base Ball, Albeite vs. Boston, at Philadelphia, New Haven vs. Philadelphia, at Chichnosti.

TUESDAY, June 29th.—Bilenational Rife Maich, at Dollymonut, near Dublin. Regalias, Nassau Boal Club, N. Y.; Little Bayanc, L. I. Troiting, Mystic Park, Boston, Wennzeday, June 30th.—Troiting, Mystic Park, Boston; Kalamazoo, Mich.; St. Paul, Minn. Buse Ball, Hoboken vs. Nampless, Hoboken.

SCIENTIFIC EXPLORATION OF FLORIDA.—Our Florida commissioner, whose researches in Florida have been sub-mitted to our readers through a series of twelve interesting papers, very carnestly arges the importance of a scientific

papers, very carnestly nrges the importance of a scientific investigation of that region. He says:—

"It appears to me that it is the province of the Smithsonian Institution to examine the archælogical remains in the United States. The ancient canals and numberless large mounds on the southwest coast are, in my opinion, worthy of being earefully examined and described. The expense would he trifling, and the result important to science. The Institution is in a position to command assistance from the Navy Department. If my suggestion was carried out you might send a representative along who could collect some data that would interest the readers of Forest and Stream."

We may add that this subject has been pressed upon the attention of our scientists by several of our correspondents, one of whom, "L. W. L.," has volunteered a contribution of \$25 toward the investigations desired.

-Messrs. Hall & Son have forwarded to us a gold plated "elimax combined" creaser, loader, cap-expeller, and shell-extractor, which they desire should be given as additional premium for either pointer or setter classes at the Mincola dog show. We have examined this beautiful prize, and can congratulate the winner of it upon his good fortune. The advertisement of Messrs. Hall & Son will be found under its proper head in our columns.

THE INTERNATIONAL MATCH.

T is very pleasant to read of the cordial reception granted to our American riflemen in Dubliu, not only by those who were recently our guests here, but by the Irish people The clamor of those who would fain have generally ale political capital out of the event has been drowned in the general jubilee, and there is every prospect of the visit terminating, if not in victory, at least with nothing to distant the harmony and feeling of good fellowship which now prevails. Before our paper shall have gone to press again, viz., on Taesday next, the great matter will have been decided, and the cables have flushed as the signal of victory or defeat. Cansidering the small fluores by which victory or defent. Considering the small figures by which the match of September last was won, indicating the slight disparity in skill between the men, and also the musual conditions of climate, much more trying to our men than our September days could have been to their competitors, it would be unwise to look for an easy victory, if one is at all within the scope of probability. But let the result be as it may, the effect of the visit upon the minds of the heterology. ter classes of the Irish people, or indeed of the British generally, will be to lead towards better feeling, and an addition to the somewhat limited knowledge of our country and people which almost universally prevails.

Among the diversions provided in Dubiu for the enter-tainment of the Americans bas been a grand assault of arms by the garrison troops of Dublin, and a special the-utrical performance, when Miss Genevieve Wurd, also an American, played Medea for their edification. Ou Suaday last, on the invitation of the Lord Mayor, they attended divine service at St. Patrick's (Protestant) cathedral, where they were treated by Canon Keeper to a sermou eutogistic of mouarchy and the Established Church; a proceeding which appears to have been commented upon in Dublin as au example of very questionable taste. We finey, however, that Colonel Gildersleeve and his companions are 100 good and true republicans to be at all affected or even au-noyed at any such eulogy of institutions the principles of which may be opposed to our own, certainly not enough so as to affect their aim on the eventful day.

The bridges at Cloutarf having been repaired, the match will be shot at Dollymount, as at first proposed. We give herewith, below, a description of this celebrated old battle ground, which will possess especial interest in view of its being the scene of such another important, if more peaceful event, than those which occurred in its earlier history, when readition can that the Link these transfers in the control of the tory, when tradition says that the Irish there met with two

A correspondent of the *Herald* describes the "Bull," opposite Dollymount, the range on which the match is to be shot:-

opposite Dollymount, the range on which the match is to be shot:—

"The whole line of coast, he says, and the Buil itself is a memorable place in Irish history as being the scene of the great battle fought hy Brian Boroimhe ou Good Friday, 1014, which put an end to the Dunish power in the island. The distance from the Dublin Post office is but two and a half miles and the communication by rail. The Bull is divided along its entire length into two strips of nearly equal dimensions. The northern side is a level patch, rising gridually from the water's edge, or rather out of the sloo, to an elevation at its highest point of about twenty-five feet above high water mark.

The southern side of the Bull is mainly composed of a series of rolling sand hills, the highest of which is raised searcely more than fifteen or twenty feet above the level of the borthern plateau. A narrow fringe of white strand runs all along this southern side. The northern plateau is covered with a short coarse grass, mixed with moss and in some places patches of licheus appear. Rough as the herhage is it appears to be relished by the small herds of cattle that usually tenant the Bull. A mong the sand hills there is searcely any vegetation, even the sleuder reeds which are usually found in such situations seeming to find a difficulty in obtaining "root hold" amidst the shifty soil. For all that, those sand hills are, in one way at least, a boon. From the position of the Bull it will be seen that seaward it is quite unprotected and is exposed to the east and southeast winds which prevail in Dublin Bay and its neighburhood. Those winds would quite rake the plateau but for the interposition of the sand hills, which shelter it all along its southeast edge and break at least the violence of the blast, although they are not high enough to quite ward it off.

From this it will be seen that the Bull is u natural rife

off.

From this it will be seen that the Bull is a natural rifle ground. It is a piece of natural waste hard, unavailable for tillage of any ordinary purposes of husbandry, lying quite close to the metropolis and yet sufficiently removed from the main land to render the wildest shooting of the most inexperienced member of the "awkward squad" per feetly innocuous. Among the laps of the sand hills (with one exception, to be presently referred to) no spaces sufficiently open for even short ranges can be found. The short sward gives excellent foothold for those who stand, and is a carpet spread by nature for those who prefer to lie while firing.

and is a carpet spread by nature for those who prefer to lie while firing.

A walk of about three quarters of a mile brings us to an oblong yard, fenced all round with a high stone wall, in which there is a residence for a herdsmau (vulgo, "herd"), to care for the cattle which may happen to be grazing on the Bull. This yard may be said to rest upou the sand, hills and is well screened by them from the easterly winds, the invariable companious of the long spring of Dublin and its neighborhood. This spot may be considered to be the main point in connection with the range. A little in front of this is the 800 yards range, alongside is the 900 yards range, while the 1,000 yards and 1,100 yards lie a little in front and to the left of the "Herd's Yards."

A little in front and to the left of the "Herd's Yards," 800 yards away, directly in front of us, we see the targets. There are four of them, numbered 1, 2, 3, 4, from the northern shore toward the sand hills. Each is composed of six strong upright slabs of iron bolted on to a strong wooden frame. Each target is twelve feet long by six feet high. Tacy have a round bullseye, and according to the Wimble-

don arrangement of 1874, a surrounding space called the "centre," which is again surrounded by an "inner," all the rest being out. The targets are altermately fur long and short ranges, the bullseye for the long range being three feet in diameter, that for the short range being only two feet. Between each pair of targets stands a mantlet or scoring but of wood, covered with sheet iron, properly equipped with thick plate glass windows, slots, &c. About ten yards in front of target No. 4 there is also a mantlet or sentry box of iron, in which the score marker can sit and note the firing.

The match, however, is to be shot at the old form of tar-

The match, however, is to be shot at the old form of targets with square bullseye.—ED.

—The Irish Rifle Team was selected according to the following scores:—James Wilson, score 782; Fulton, 765; McKenna, 759; J. B. Hamilton, 748; J. K. Miluer, 743; J. Pollock, 738; Young, 736; John Righy, 729; Waterhouse, 727; Edmund Johnson, 715; Walkinton, 711, and Hon. Mr. Plunkett, a member of Parliament, 705.

—A despatch, from Publing gives a report of the first

Plunkett, a member of Parliament, 705.

—A despatch from Dublin gives a report of the first practice in which the American team have engaged. This was a match for the Duhlin Rifle Club's Long Runge Challeuge Cup. The following are the best scores made:

Trishmen—Rigby, 135; Hamilton, 132; J. Rigby, 125; Pollak, 121; Milner, 113; Johnston, 119.

Americans—Pulton, 131; Bodiuc, 129; Dakin, 127; Gildersleeve, 123; Coleman, 112; Bruce, 117.

The total score of the Irishmen was 745; of the Americans, 739. Mr. Rigby won the match. The wenther during the day was bazy and ruiny, and the shooting of the Americans, when considered as a first practice at a new range and in a new climate, must be looked upon as very range, and in a new climate, must be looked upon as very fair. Their reception has been of the warmest and most hospitable description.

-Before leaving for Ireland Col. Gildersleeve, of the American Team, forwarded to Mr. dames Esdaile, of Montreal, Vice President of the rifle club there, a beautiful Sharps rifle, accompanied by the following letter:

Sharps rifle, accompanied by the following letter:

New York, dine 14th, 1855

Dear Esdalle: I often little of the very pleasant time I had white it
Montreal has Summer, and as often as I do I inwarily thank you fur the
very marked kindness you extended to my associates and myself I
have long intended to write to you, but being very hasy bure neglected
to do so. I have a "Sharps" rifle of the same character I med in your
meeting, which I beg you to accept from me. We are off in-instructy of
City of Chester, and propose to do our best in Dublin. I shall be
pleased to hear from you there. Please present my very kind regards to
Mr. and Mrs Eedalle. And befleve me very limit yours.

Another very interesting rifle match is that which is to be shot on Salurday next at Creetlmoor and the Alameda range, near San Francisco, simultaneously, hetweet teams from Co. D, Twelfth Regiment N. G. S. N. Y., and Co. E, First Regiment California National Guntl. Colonel Windowski gate will act as referee for the Californiaus, and Mr. Krllogg, late of our National Guard, will perform the same office for the New Yorkers.

PINNATED GROUSE Eggs .- We received this week from PINNATED GROUSE Eggs.—We received this week from Richard Valentine, Esq., of Janesville, Wisconsin, a consignment of fresh eggs of the pinnated grouse, obtained in Iowa, which we have transhipped according to directions to Mr. R. J. L. Price, Bala, Wales, In care of Wm. Cross, 51 Aldhall street, Liverpool, England. It will be remembered that Mr. Valentine assisted hist year in two experiments to introduce our prairie fowl into England by hatching the eggs there, hoping that the birds would be more easily acclimated, if thus made native and to the manner easily acclimated, if thus made native and to the manner born, than if parent birds were imported to lay their eggs and incubate there. One of these experiments was promoted by H. R. H. Prince of Wales, with the result of three birds hatched ont of the lot, one only surviving, which at hist accounts was strong and doing well. This method of introduction was encouraged and arged by Mr. Jackson Gillbanks, a devoted naturalist of the north of shand, whose efforts in this direction are conspicuous

England, whose efforts in this direction are conspicuous and praiseworthy. This gentleman has a mode of packing eggs for transportation, which we have adopted in the present instance, and we therefore hope for better results than those of last year. A recent letter from Mr. Gillbanks to the editor of this journal says:—

"My letter [published last year in Forkest and Stream giving suggestions how to pack eggs so as to preserve their vitality, was much quoted in English papers, and was translated on the continent. It was highly praised by poultry fanciers, and I hope has given a fresh impetus to the business, which should not die out. I wish I had asked you at the time to print a lot of slips and distribute them to hunters, trappers &c., and those likely to gather eggs. Mr. Valentiue, I bope has seen it, and will act on it."

—Severe earthquakes shook up the States of Ohio and Indiana last week, doing considerable damage. Walls were

Indiana last week, doing considerable damage. cracked and chimneys fell.

...There is a corner in canary bird seed, and the price has advanced from \$4 50 to \$12 per hushel.

-Caterpillars are ravaging the woods of Maine and leaving no green thing. They are consius germain to the Western grasshoppers.

-Ten casks and one case of furs valued at about \$10, 000, were exported to England from Halifax, Nova Scotia, last week

-Pigeons have been plenty in Minnesota and northern Wisconsin this Spring-large roosts being in order.

-A Minnesota Correspondent says that Blue Earth county paid out in about one week, \$28,000 dollars for captured grasshoppers at teu ceuts per quart.

—Seven wolves were seen to float over on an ice cake from Cape Breton to Newfoundland recently. They were pursued, but escaped into the woods.

The Rifle.

CREEDMOOR.

—The Remington Diamond Badge, presented by the firm whose name it hears, was competed for at Creedmoor on Saturday last for the eighth time. Mr. L. L. Hephurn, a member of last year's international team, who was unable to necompany his former companions in arms to Ireland, was for the second, time, the winger, and that her charges are was for the second time the winner, and that hy a score rarely ever equalled on the range. Seventeen gentlemen competed. The weather in the morning was hazy, but hy two o'clock the mist had scattered, although a strong wind more them; was klowing neross the range at right angles with the line of fire. The following are the scores:-

-Two hundred and eighty-two men of the First Battalion N. G., comprising detacliments from the Eighth, Ninth, and Fifty fifth Regiments Infinitry, and the Third Cavalry, practiced at the Creedmoor ranges on Thursday last. By order of Col. Wingste, the practice at the 300 and 400 yard ranges was discontinued, and the men fired only at 100, 150, 200, and 500 yards, those firing only at the two latter ranges who had qualified by making at least 25 points at the two shorter ones. Those who made 25 points or over

in the lutter practice were:—
First Battalion—Seigeant Toellner, 28.
Eighth Regiment—Milton Swayze, 37; John C. Wheeler, 34; George Buchanan, 31; Edward Voss, 29, and Captain W. Ross, 27.
Nicks Designest Corporal Strauss, 33; W. A. Bickle-

W. Ross, 27.
 Niuth Regiment—Corporal Strauss, 33; W. A. Bicklehaupt, 29, and Private Crilly, 27.
 The highest score in the Fifty-fifth at these ranges was

that of Captain Klathaar, 23.

—General Shaler has issued an order to the First Division N. G. S. N. Y. to parade on the ninety ninth anniversary of our country's independence, or rather on the 5th, and for review by the mayor. The troops will be formed in close columns, the head of each culumn resting on Fifth avenue. The Division Staff are directed to assemble at the "Rendezvous" at 7:15 o'clock A. M., mounted and in

SHORT RANGE TOURNAMENT.—Owing to the interest awakeued among the advocates of off-hund short range shooting by the recent competitions for the Forest and STREAM hadge, Mr. Coulin, at whose gallery the shooting takes place, has decided to add thereto two additional prizes, to be contested for at the same time and place, viz: one to the gentleman making the score nearest to and over fifteen juches, and another to the one making the nearest to or over twenty inches. The next competition takes place under the usual rules at No. 930 Broadway, on Monday, the 28th inst., commencing at six o'clock P. M. and continuing until midnight. There is no entrance fee, and all riflemen are invited to compete.

-We have been shown a new rifle, manufactured by Messrs. E. Remington & Sons expressly for use at Mr. Con-

lin's gallery during the short range tournament. The rife is a model of neutness and finish, and for accuracy is expected to produce results better even than the very excel leut scores which now stand recorded at this popular place

-A necting of those interested in rifle practice and kindred sports was held at Ridgewood, Bergen county, N. J., last week, with a view of organizing un association linving for its object the protection of game and the development of good marksmanship. The title of the "New Jersey Rifle and Gun Club" was adopted, and the following officers elected: President, J. Gnyler; Vice President, James Reading; Secretary, Charles Masten; Treasurer, Louis Lane

-Mr. Wilson MacDonald, the sculptor, while shooting at Conliu's gallery a few evenings since, rang the hell ninety-seven times in succession. Mr. MacDonald is prepared to shoot "at the word" with any man in America.

AMERICAN RIFLE Association.—The programme for the unitches which are to take pince on Monday, July 5, at Mount Vernon, we shall publish next week. Laptain Chas. J. Chatfield will be the Officer of the Day, assisted by Mr. E. Cardoze. We are pleased to learn that the committee upon procuring a range are actively at work, and trust that they may be able by the duy of the match to announce their success.

Sanatoga Rifle Club.—On Monday, July 5th, a match for the "champion ladge" of the club will take place.

-The return match between the Guelph Rifle Associa tion and the Toronto Rifle Club was shot on Tuesday of last week, and resulted in favor of the latter by 476 to 450. Inst week, and resulted in favor of the latter by 476 to 450. The terms were: Eleven men a side, 200, 300, and 500 yards, 5 shots at each range, any position. The highest scores for Toronto were mude by Mr. A. Bell, 49; and Messrs. C. F. Doudiet and T. McMullen, 46 each. For Guelph Mr. John Crowe, 40, and Mr. W. McDonald, 46, were to the fere. Four members of the Toronto Club left for England on the 16th with the Wimbledon team.

-A contest took place at Edinburgh on Saturday hetween the ritlemen of England, Ireland and Scotland for the International Challenge Trophy. Seotland won by twenty points ahead of England and 139 ahead of Ireland.

An article of great value on point blank range, &c., prepared expressly for this journal by an old United States Army officer, has been unavoidably crowded over to our next issue.

-A dispatch dated San Francisco, June 21st. announces that the Summer Guards rifle team to compete with the that the Sammer Guards rifle team to compete with the New York team on Saturday next was completed the previous day, and consisted of Captain II. J. Burns, Licetteamt E. O. Hunt, Sergeant G. H. Strong, Corporal Charles Nash and Privates Walson, Sarle, Burke, Steed, Dove, Marphy, Prehle and Robertson. The reserves are Sergeants Murray, Wilson and Post, and Corporal Murray. The ampire here for the New Yorkers is Licettenant Shelten. J. Kelloger, and for the Supper's Colone, John Medical L. Kelloger, and for the Supper's Colone, John Medical L. Kelloger, and for the Supper's Colone, John Medical L. Kelloger, and for the Supper's Colone, John Medical L. Kelloger, and for the Supper's Colone, John Medical Leville Supper's Colone, John Medical Leville Supper's Colone, John Medical Suppers and Suppers tion J. Kellogg, and for the Sumner's Colonel John Mc-Comb. The two will name referees.

MATCH IN CALIFORNIA.

SAN FRANCISCO, June 14th, 1875

SAN FRANCISCO, June 14th, 1875.

Entron Forest and Stream:—

A maich was shot yesterday on the Sumuer Rifle Range between the Range Committee of the California Rifle Association and seven members of Company E, First Rifles. The Range Committee, containing some of the best shots on the coast, challenged any sevon of the charter members of the C. B. A. to shoot at 200 and 500 yards, seven shots each distance. Pardee and Kellogy, of the Range Committee, were unable to shoot on account of slekness, and their places were supplied by Messrs. Harmon and Burke. Col. McComb drew out at the conclusion of the 200-yard shooting, Mr. S. Benyer replacing him. The shooting commenced at 1:30 P. M. Day dell, at times showery; wind brisk from 3 and 4. Target, Wembielon. Rifles, military, regulation slights and trigger pull. The Sumners were victorious by 101 points.

A correspondent in Albuny writes:-

A correspondent in Albany writes:—
"I wish you could do something to wake up the sportsmen of this city to the necessity of a club for the protection of our game hirds. The woodcock are all shot off before the 4th of July, and pactridges before the middle of Angust. I have spoken to several of the most influential sportsmen, and they all seem to be willing to join a club, but no one will commence it. I call on your for help."

S. C.

Albany ought certainly to have a game protective club, and we should think an organization could cusily be effected in the usual manner.

The cump stove advertised elsewhere by Mr. H. L. Duneklee, and for which letters patent have been granted, appears to be coming into general Invor and use. It is estainly a multum in parco, and for wilderness life the most compact and portable article of the kind ever pro-

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

—In our issue of May 20th we gave a detailed description of the late Field Gun Triul, as far as the 10 and 12 gauge guns were concerned. For the hencilt of many of our readers who have written to us on the subject, we rint this week the results as obtained from gams of 8 and print this week the results as obtained from gans of 8 and larger calibre, and next week will give a similar description of the trial of Class 4, which comprises gans of 20 gange and under. We still hold to the opinion expressed at that time, that sportsmen should be in no haste to discard old gans for those bored on the new principle, as we kelleve that, except for target practice, the instances wherein satisfaction will be obtained will be the exception.

CLASS 1, TOR SCHALER AND UNDER, OF ANY WEIGHT OF HOME

CLASS 1, FOR S-RAIGE AND UNDER, OF ANY WEBSIT OF KINE OF HOR-ING, AND DEED WITH ANY FILAHOR, ROCKE 1. (At 30 years, with central group of 30-lack circle.)

The last issue of the Field gives the result of the wenr and tear trials with the winning guns, as far as completed—that is, one-half of the \$500 rounds from each gun having been fired. Up to this time there had been upparently no appreciable wear upon the competing guns, which seem to have retuined their relative positions as in the trial for pattern and penetration. The figures of merit,

the trial for pattern and penetration. The ignres of ident, as far as the trial has proceeded, stand thus:

LETTER FROM CARL DITTMAR.

LETTER FROM CARL DITTMAR.

Recorder, Mass., June 14th, 1875.

The statenceurs of "Subscriber" to your issue of 10th of June in regard to my new powder are erroneous. I do not make suck powder us he describes; he must have confused my new article whit the Engilleh "wood puwder," from which mine differs essentially. I do not use alcubel in its unaufacture; if he will burn some of the will tool that it is very different from "gon corton," and that it burns very much slower than black powder. It works in the gon whout the same as black powder. This your correspondent can prove for himself by using a fittle more than the proper charge and shooting over a sheet, when he will find unburned gradus, which would not be the case if the combination was "instantaneous," as he describes; for in this case all the powder would be consumed before the builes or chot left the harrel. I manufacture two distinct grades or kinds of provider—one for rilles, the other for shut ginus—and. If your correspondent has used my powder it all he must have used the shot gun powder he bis rife, as the ritle powder is beavier, and the proper charge would be twenty-time grains and not twenty-him grains. If he will use my ribe powder he will have no trouble about the shells, and if he gives it a fair trial he will be salisfied that there is decidedly less strain than from common powder. The ribe powder I am now making is of needigm vehicity, as I obtained better shooting than by using gowder of a higher degree of whickly, allthough I can easily make it at I,8xt feet per second. The infiner the hidle the greater thin velocity, therefore I recommend tigh ditting builties. In conclusion, i would say that spurtsone and rifferen are and bave heen experimenting with my new powder of a higher degree and whickly allthough I can easily make it at I,8xt feet per second. The infiner the hidle the greater thin velocity, therefore I recommend tigh ditting builties. In conclusion, i would say that spurtsone and rifferen near and bave heen experimenting with

my powder is not only three times stronger than black powder, but like a times as bulky, so that the same holk has the same effect, he would not times as bulky, so that the same holk has the same effect, he would not have pressed It dawn with a lever to bult its bulk, thus getting builder force in a smaller space, and itoukling the strong. In my instructions for ribre, I say do not press the powder into a shell with a stick; simply shake It down. This also applies to a revolver. I find no differently in preasing the lover down until the limber rests in the proper place, the point being level with the top of the chumber. Why did "Durr" fire the second charge who it he first startled thin with such a dealening report? I certainly should have withdrawn the multer from the second larret. When I first communiced making this new powder I had no more experience than your correspondent, but I have not but a single accident, although I have fired more than twenty thousand times in a variety of gones. The powder I am mow toucher, but I have not but a single accident, although I have fired more than touching is inhoduled glower in its combation in the gine or ritle than blink, powder, and if proper core is pald to my Instructions in localing I am very positive that acculates from its use will be very man he less than from the use of black powder. Calle Dittnar.

INSTRUCTIONS FOR THE USE OF CARL DITTMARUS NEW PATENT SPORTIND POWHER.

(Patented Recentlor 9th, 1873, and February 10th, 1871.)

This powder has to be used in about the same manner as linked powher; pare only has to be taken not to press if into ton aboult a space, as it is more clastic than the thick. The new powder makes very little smoke, causes no recoil, does not solt the gun, does not leaf the barrel, sends a half further than the all powher, keeps shot well together, can be kept without alonger from fire. It is those fines but well to stowed in that sate without alonger from fire. It is those fines alonger it mad hinck sporting powder and three thoses as budly. There are two distinct and different kinds of shot gun powder, marked—

S. A., coarse grain.

S. B. medium grain.

S. B. medium grain.

S. C., the quib.

If, very fine grain.

The shot gut powder may be used in all the larger heres, from No. 6 to No. 11. If it bornes alove 11 the rifle powder should be used, as this variety these not give good results unless well confined, as the braich shower than shot gun powder. At present I mute three sizes of rifle powder—

R. A., course.

 $\left. \begin{array}{l} R, \, A_{\alpha} \; \text{conve.} \\ R, \, B_{\alpha} \; \text{inedium.} \end{array} \right\} All \; \text{same strength} \\ R, \, P_{\alpha} \; \text{thm.} \end{array} \right\}$

When using ritle powder fill the earthing shell in the top, give it a tew taps in the table so that the powder fill the earthing shell in the top, give it a tew taps in the table so that the powder new settle diwn even, and load the builde as usual. Its not press powder into a shell with a shek. There is no need of using a wid and independent into a shell with a shek. There is the powder down with the builder powder. For mixed building rifles pross the powder down with the builder, as you wind when using black powder, till you feel the builder is on the powder. Usual good fitting build. It you use the powder in plathla for revolvers, without shells do und ran or force the builder with a learning the chamber, as la this case you will suffer the pawder too chosely. Simply ose force camigla to permit the builder to rest upon the powder, having top of builds beet with top of chamber. The rifle powder having top of builds beet with top of chamber. The rifle powder having top at build for small arms.

Channer. The rifle powder is the purper kind for small arms.

Diffections for Loading stort dues.

Use about the same measured quantity as you would of litack powder.

If this does not give scalifar from use a little more, up to a half druchin measure. This will give you the same bulk as black powder after the most is present dues. Give a few laps to the charge to settle the punder everly, and you will always have the same tooloh (that is, about one liked) as you would have by using an equal bulk of black powder. It imas or metal ahelts use a wad two sizes larger than bore, and in paper aby carefully fullowing the above itetaded directions for shot guns and rifter, effectively and safety are secured.

If the powder becomes wet, spread it on paper and it will dry quickly without triping to its power. If desirable to store it in an exposed size tion, it can be kept with a casek and alterwards did by the sir or in a raim. The most definale less those for made have not exhibited the eligibiest trace of injury to the finest harrers by the products of combination.

-We are in receipt of one of Betlamy's shell pouches, which appears to "fill the bill" as well, if not better, than anything yet brought to our notice. It is made of cork, and fastens with a helt around the body as well as with shoulder straps. Its extreme lightness is its most desirable feature. The pouch can be seen at this office or at Messrs. Eaton and Co.'s sportsmen's emporium, No 102 Nassau street

-An amateur prize pigeon shoot is to be given under the auspices of the Amuteur Shooting Club of Detroit on Monday, July 5th, 1875. Six prizes, of the value of \$150, will be shot for. Entries can be made and prizes seen at the gan store of George B. Mather, No. 133 Jefferson avenuc, Detroit, where further particulars may be obtained.
Ten hirds each, class shooting. Entry, \$5, birds included.
Professionals barred. Pleuty of wild birds.

—Another shooting tournament will be held at Chittenden's Bridge, South Chicago, Illmois, on the 3d and 5th of July, under the management of the well-known sportsmen, A. M. Decker and E. T. Martin, of Chicago, open to the world. Eutrance, \$10 each day; prizes, \$600.

The Early Birds Sporting club turned ont on the 11th of June for a pigeon shoot at Mr. Dooley's lovely place on the Rocknway road, Springfield, L. I. The score was as

A Kleper	.1 1 1 1 1 0-5)W. Hager	.001100-9
Th Erans	1 1 0 1 1 1-5 C. Hager	0 100 1 0 1-3
H. Patter	0 1 1 0 1 0 = 3 A. Petric	- 11 B D D 1 1-2
E. Kuba	1 H 1 R R 1+3[C, Targel	1 0 R 1 B H=2

This being their first turn out, the jovial club was much pleased with the result, and will repeat the sport early in the Fall.

-The Union Club of South Bend, Indiana, shot a pigcon match on the 12th inst. for the club gold medal, ten single rises, with the following result, E. P. Stanfield and Chas. II. Applegate judges:

James Andrewa	5 G. W. Rough
Win. II. Longley	TiFrank Rowley 2
	8 James Comper
J. M. Studebaker	
A. B Wade	R ₁ D M ₁ Coonley

ton, Ohio. The fourth was won by O. P. Ehey, of Daylon, Ohio. The lifth was won by W. J. Farrar, of Cleveland. The purse affered for the fourth and last day of the National Shooting Tauruannet manimized to \$1,500. The first prize was \$500; second, \$400; filth, \$300; fourth, \$200; fifth, \$100. Fifteen birds, 21 yards rise; entrance, \$30. The day was fine and attendance good. First namey was won by E. B. Lavett, of Pittslaurg; second, by H. Silsly, of Seneca Fulls, N. Y; third, divided between Phenit, of Todedo, and Harrison, af N. Y.; faurth, was by C. F. Wheat, of Cleveland, and filth by H. O. Hull, of Tuledo. G. F. Tuledo.

Tuledo.
The prize of \$100 for the best average shouting throughout the Imprament was awardad to If Cook, of Detroit, and a crayon, vullned at \$50, for second best average, was won by J. Radbone, of Wimbor, Camabb.

GAME IN KANSAS

GAME IN KANSAS.

FIGURE SCITT, Kail., June 11th, 1875.

Buttor Princet and Stubble.

I find I make a misstatement in reference to the game law passed fast whiter. The Secretary of Slate civites me: "No game tay was enacted, but the law you speak of passed one of the Huttes". The country newspapers have already commenced to how against the sportsman, and misocate a law forbiditing the killing or taking any kind of game. I have just returned from a linee date! trainp, and find chickens at some distance from town rather plenty, and most of them paired off, some with young broods. The qualit are, however, scarce. We had more Wilson andpolast Spring that ever before seen by us to this section. We also have some woodcock, and the writer killed in the Spring a Virginia rail, inknown to any non-hereforce in this section. On the whole, we have the finest groups, quait, and an pe country in the West. Your correspondent has lumied in Emissis and the indican country for eight years, and claims to know. Sixty-five indica from here in season we have as line disck, gouse, and tarkey shooting as any locality in this lutinide in the United States. As to mir dags, we are and ashment of the slock, well hered with our native, while we have the fargest breed of pointers I tilthk I have ever seen.

well fired with our ristive, while we have done to the ship and of the fifth k have ever seen.

Your advicery of have roaking it a misdementur hy ship and of the State, in after for sale in the State, will cive us the relief we want. Lives against trapping and pot-hunting are a field better, as no neighbor will follow against mobiler, but every sportsman with make wir in common carriers and express companies. The fight, then, is not against individuals but corporations. This kind of a law strikes at the most, and refleves us of wholesale destruction of our films.

Un Zon Eg.

Nachting and Boating.

All communications from Secretaries and friends should be multed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

The New York Yarit Club.—Wednesday opened as a real N. Y. Yacht Club day; not a breath of wind lifted the gay flags and streamers which decked steamboat and yachin holiday colors, and a dense baze almost alsoured the green shores of Staten Island from the anxious gaze of thousands who had looked forward to the day with the brightest anticipations. Indeed, at one tine it looked as though the ill luck which land so often befallen the club was to meet them again, and that there would be no rare, or at least but a drifting match. Fortunately a strong ebb tide was running during the morning, enabling such yachts as had not taken the preenution to be on the ground the previous evening, to take up the position assigned to them off the club house at Staten Island. At 11:24:30 the first and preparatory gun was fired from the William Fletcher, the committee and press steamer, and the yachts with everything set that could be liandled, were stanling off and on near the line like a field of high mettled racers waiting for the starter's ward. Ten minutes later the booming of the gan aurounced the expected signal, and the yachts were off. The following are the entries:—

The Fletcher remained behind to start the three schooners, and in order to give the sailing craft plenty of time to clear the Narrows, this was delayed until 12:3:20. The wind was from the southward, necessitating a dead beat to windward to make the first turning point, the Southwest Spit langs. The little Active, of the second class, sloaps, was first around at 1:27-35, followed closely by the Vision about a minute later, the rest of the fleet rounding at short intervals, amid the most enthusiastic demonstrations from

the immense flect of sleamers assembled, from the lingary plymouth Rock with her chime of bells, to the veriest little cuck-hoat of a steam hunch. The wind was just right, a pleusant sailing breeze endding the yachts to carry all those "kites" in which the yachtsman so delights, and the sen so smooth as to excite no fears of qualmishness on the part of the most delicate lady out. Leaving the Spit, the flect made a fair wind of it for the lightship, the Active still leading. Her sailing master, however, either ignored or furgot the sailing regulations, and instead of passing in the sauthward of lancy Nn 83, as instructed, went to become of it, thus bosing all chance of taking a prize. The wind was now quite fresh, and the hig schooners legan overhanding the sloops lund over land. Of the former the Palmer and Comet were deing sphambilly, and the Vision rapidly came up with the Active and passed her to windward. The Palmer turned the lightship first, followed by the others in the order runned:—

The Brooklyn Yacht Club—Balurdry was just the day to delight a yachtsman's heart, particularly if his yucht Imprenel to be a good lide schooner with the utility to go to windward with the lest of them. It was emphatically a schooner day, and yet but four of the immense fleet of magnificent vessels now in these waters participated. There was but very little wind during the early marning, but before the starting hour had arrived the northwester that had been blowing all the previous day and night again pipel up, and reefs were in order for most of the smaller craft. The place adopted by the Breaklyn child of having the yachts numbered with large figures in their mainsail is a most excellent one, enabling the speciator by a glacee at his cand to at once distinguish the vessel. The following are the currents:—

The course for schoolers and first-class sloops was from starting line to stake boat at Southwest Spit, passing it from westward to southward, theree to light ship, turning same on the starboard bund and return to home stake boat, off Bay Ridge dock. For second-class sloops, from starting line to stake boat at Southwest Spit, passing it from the westward to southward, thence around stake heat at outer bar liney in Gedney's Chaunel, rounding same from southward to eastward, thence around stake heat at outer bar liney in Gedney's Chaunel, rounding same from southward to eastward, thence to home stake boat. For third-class sloops (open bouts), from starting line to stake boat at Southwest Spit, rounding same from westward to santhward, thence to home stake hoat. As it was blowing too fresh far the boats to anchor in line Mr. Sawyer announced to each from the judges steamer that the start would be a llying one, the yachts passing between a stake nont and the shore, the time of their crossing the line to be taken and due allowance made in summing up the result. The Madeleine was near the scare when the gin lired, and flew aver it closely followed by the Clio and Comet. All were under lower sails hut immediately after crossing gaft topsails were set. The first class sloops followed the schooner closely; the White Wing, with topmast honsed, and recfs in mainsait. The serond class sloops followed the schooner closely; the White Wing, with topmast honsed, and recfs in mainsait. The serond class sloops were apparently in no hurry to get aff, each one wanting to be last. The following list shows the time of starting:—

Bulle.

By the time the hast of the sloops were off the schooners were out of sight beyond the merrows. The Maria caught and passed the Sophia shortly after the start and gained rapidly on the Lizzie L. and Emma T. Of the latter, one was carrying galt topsail and whole mainsail and the other jib topsail. Nearing the hospital ship the Maria set her jib topsail, which lifted her along at a sphendid rate. The strain, however, was too much for the slender stick, and in a few minutes topmast and sail went over the side and there was lively work getting in the wreck. The weather

had now set in so thick that nothing could be seen of the land or of competing yachts of more than one class. The long lead of the schoeners had carried them far out of sight on their way to the light ship letter the sloops had reached and rounded the Southwest Spit, which was done in the order and time as follows:

Yacht. R. M. S. Yucht. R. M. S. Sailo. 12 51 to William T. Lee 12 59 by Schoener 14 63 44 Mangle B. 12 59 by Likzle L. 12 51 53 Victoria. 1 03 52 Knana T. 12 55 of Pleneire. 1 16 63 Maria. 12 55 of Pleneire. 1 16 63 South 12 56 of Pleneire. 1 16 63 Maria. 12 55 of Pleneire. 1 16 63 Maria. 12 55 of Pleneire. 1 16 63 Maria. 12 55 of Pleneire. 1 16 63 Maria. 12 56 of Pleneire. 1 16 63 Maria. 16 64 Maria. 16 65 Maria. 16
Elizzle h. 12 53 63 Propries. 1 69 63 Runna T. 12 53 67 Propries. 1 69 63 Runna T. 12 53 67 Propries. 1 66 68 Sophia. 12 67 60 Prum bere the ynchts squared away thead before the wind for the Gedacey Cleanuol budy and kiles were again in order. This point would have been difficult to find without the aid of chart and compass had it not been for the stemmer Only Son, said to have been chartered by the owners of the Schenker, which acted as pilot for the fleet. This last named yacht was around first, followed by the Lizzle L., Emma T. and Maria all in a bunch. From here back to the Dumb Beacon on the Romer Shoul, which it was necessary to pass to the westward, was a dead beat to windward. Most of the small sloops kept an easterly course, but the pilot of the Maria, looking for the wind to hand to the westward load kept in an opposite direction. Unfortunately the wind handed core to the northward, and when the Maria was able to head up for the Beacon the other yachts were three miles to windward of her, and all her chances gone. The Maria has been lanuched but a few weeks and in spite of carrying her topinast had come up with every yacht but one in her class, proving herself to be a remarkably able hoat and a credit to her huilder, Mr. Wan. Smith, of Bayport, L. I.

While the little shops were fighting their way up the bay in the teeth of half a gale of wind, the schooners were fighting tout their contest outside. The Madeleine turned the lightship first in the excellent tione of th. 46m. from the start, fullowed chosely by the similer Conset. Both were carrying all the s if that was good for them, and by the time the point of the Hoak was reached the Madeleine took in her topsail, on example speedily imitated by the Conset. The latter lead the misfeatune to part some of the gear connected with her flying jib and was deprived the rest of the journey of the nid of this useful sail. Notwithstanding this sile was but seven minutes behind her competitor at the finish, and by the aid of difference at the start and time

The Palmer, therefore takes the first class schooner enp and the Conet the same prize in her class. The ked schooners were suiling for a subscription eup among themselves, which was won by the Wanderer. The Vision takes the prize for first class sloops and the Madeap that for the second class. The Luchune beat the bload by ten seconds in the steamer race, the backout having broken down. The prizes were caps of the value of \$250 for each class.

in the steamer race, the biokont having broken down. The prizes were caps of the value of \$250 for each class.

—The Columbia Boat Club, of Brooklyn, held their fourth annual regatta ou Saturday, the course, owing to the roughness of the water off Bay Ridge, being the Argonauta Club conrac, from Bergen Point to the Newark Bay Light House. But one race was rawed, a four-oared gig race, between the Dixic and the Dandy, the former being the favorite before the start. A picked crew of the Argonauta Club also entered the race, but not in contest for the prize. The two crews were composed as follows:—Dixie, colors red, W. P. Bruff, stroke; C. O. Lewis, No. 2; C. W. Lippdit, Na. 3; H. Seymour, bow; C. S. Batter, cosswain. Damly, colors like, H. T. Dunham, stroke; E. A. Loveys, No. 2; R. Bleecker, No. 3; J. D. Halsey, how; F. F. Lervens, coxswain. Of the two crews that of the Dixie was slightly the heavier, but C. W. Lippdit, her No. 3, having a sprained wrist, it counterbalanced his crew's advantage over the Dandy arising from the greater weight of the neal. At 6:36 the signal for starting was given by Mr. A. S. Wightman, Chairman of the regata Committee, and the boats immediately shot forward, the Dandy taking the lead, which was immediately gained again by the Dixie's crew, who led the race by about half a boat's length for a quarter of a mile, when the Daudy again went altead. On nearing the stakehoat both crews spirited, that of the Dixie increased the flag at fourteen minutes and three seconds after the start, followed by the Dixie nineteen seconds later. At the conclusion of the race each member of the

victorious club was presented with a miniature fac-simile gold rudder, suspended from a blue rildon, and hearing the following inscription: "Aunual Regutta Columbia Boat Club, June 19, 1875."

Club, June 19, 1875."

—A untel between a foor-oared shell of the Nautius Club and a six-oar of the Stevens Institute was rowed on Saturday evening, off Indioken, the functor being allowed twenty seconds start. The distance was two miles against the flood title with a heavy northwest wind making the water almost too rough for comfort. The crews were composed as follows:—Stevens Institute—Loseph Kingsland, low; J. M. Wallis, J. O. Buerk, J. E. Denton, H. Hazard, H. Duane, stroke. Nauthus Boar Club—Frank Shippen, low; W. T. Kudiich, Julin Washington, Will Forbes stroke. The four made good use of their start, but the six pulled in good form and crossed the score a length and a half ahead in 14m. 37s.

—A new lood club has been organized by the members

—A new locat club has been organized by the members of the New Haven Gymnasium. The crews have been selected, and it has decided to connucie training at once on Lake Whitney. Ruces will take place during the

—On Saturday, the 26th just, the Harlem Regatta Assocition hold their third Spring regatta. The races commence at one o'clock. The following are the entries:—

SINGLES.

For the Diamond Sculls.—New York Athletic cluli, W. B. Cartis, F. E. Yates, R. B. Buintridge; New York Rowing club, William Bacon, Francis Ellison, Rudolph W. Slanck; National club, Charles E. Courtney.

PAILS.

For the Ladies Challenge Plate.—New York Athletic club, P. A. Curtis and W. E. McCready; Niessau Boat club, F. G. Brown and John A. Walker; substitutes, J. B. Roberts and J. Barton Reynolds.

For the Grand Challenge Cape—New York Athletic clube, R. W. Bathbone, bow; S. L. Mack, 2; H. C. West, 3; C. H. Cone, stroke; substitutes, R. L. Newton and G. C. Barnette. Drumless float club, Henry Peckwell, bow; Ches. R. Trotter, 2; Charles E. Khapp, 3; Celeman Cleband, stroke; substitute, D. Back, Jr. Harlem Raving club, H. M. Khapp, Iow; T. R. Kentor, 2; A. G. Seranton, 3; C. W. Turner, stroke; substitute, Haward Cankling—Nassan Baat club, F. W. Bacon, A. W. Montgomery, John Gunster and John A. Wulker; substitutes, George S. Floyd Jones, J. B. Robert, L. Walson and J. B. Reynolds.

—Six Freshmen crews will contend at Saratoga this year, z: Brawn, Columbia, Cornell, Harvard, Princeton, and

THE SCHUYLKILL NAVY REGATTA.

PHILADELPHIA, June 18th, 1875.

Emitor Funest and Stream:—

The Schnykill Nary came first into more than local pronducines in 1572 by giving a regata, open to all anadeurs, and to which the rowing world is indebted for the Notlonal Association and the national definition. This was the first open animient regatin hold in this country, and has opened the way for the many that are this season before the public. Last year the Navy began their present series of open regatins for which they provide landsome childrengo prizes. The entries this year mere not as animerous as was hoped, but were of the very best material. The committee made one serious inistake his arranging the pragramme that the doubles should immediately follow the singles, thus offectually shutting out four of the scullers. Otherwise of the management no fault can be found. Yates and Carris being drawn for the same lwat, played a game of seven up to decide who should row against Pleasow ton, and Carris, having six points, cut the Jack and won the chance to watch the Franks. The Alahmat of New York has sent on an entry of Biduhridge for singles, but owing to a mistake in standing it got to the Dead Letter Office, and was not received in Philadelphia until the 14th inst. Mr. B. thought it too late.

The Double Scull race was a surprise to all. Mr. Yates seewed astonished at the presumpt of of a pair of Philadelphia wellers extering against to famous Western champions, and freely expressed his opinion that he Hought it a "soft strap." He came near masting who Elited calls "a metake." To make matters still more differentially rith and only bear with a saw blade for a "song." Some of the viscaetes suggest that it may be the champions were hippodroning; but they won do vot risk so close a shave, hesides play will not "do up" as well trained men as these overe.

The races for fours were predicted, Qunker City fur first heat and Ar onautas for the second, and fire sono desperate work. The favorites dow but rather scanly toads, and after sono desperate work. The favorites down of the predic

first day.

On Wednesday the weather was line, water smooth, altwodance good, the races on time and very exciting; everything to minke the regatta a success. The second flay the southwest wind unde the water so lumpy that the final for elagtes had to be postponed with five o'clock, and it was not until rearly shy that the caves entirely subsided. Mr. Kromblan, chalrman of the Reception Committee, deserves great credit for the effective working of his part of the regatta. The unipre was J. Henry Perguson, President L'Hitrondelle Club, Balthuore, Judge-C. R. Zellner, Pennsylvanias. Timekeepers-W. R. Tucker and J. Gillingbam, Undhie Club.

WEDNESDAY, JUNE 16-FIRST DAY'S RACES.

FIRST THAL HEAT FOR SINGLES.

WEDNESDAY, JUNE 16—FIRST DAY'S RACES.

PHIST THIAL HEAT FOR SANGLES.

1. David Roach—Waverly Boat Chib, west.

2. E. G. Harthicher—Scamminka Binut Club, cast.
Roach took a look at bis opponent right invey, and had an easy time of the sculing without offort. In that prenifier clean, swappy, beautiful style of his, conding in winner easily in 10.384. Harrischer, 11.224.

SECOND THAL HEAT FOR SINGLES.

1. F. Pleasouton—Quaker City, west.
2. Frank E. Yaics—Clinearo sculters, east.
Pleasouton showed inquivements in style over last year, but there was no speed, which may be becaase he to just off a sick hed; but he has no lustices with Yairs at bost. The latter give an exhibition of good sculling and had taste by dropping back and then rowing shead, showing Flip that he was bring played with. Yairs, [1:454; Pleasonton, II:51.
The west face was for the Dauble Sculls enaltenge prize. A handsome silver lee bowt.

some silver fre howl.

1. Vesper Bout Chiu-west-Harry M. McMillan, stroke; James B. Mingus, how.

2. Nas-sau Boat Chil-contre-John A. Walker, stroke; Frank G. Browa, how.

3. Chicago scallers-east-Wm. B. Chils, stroke; Frank E. Yates,

The latter are holders of the Double Scull challenge prize of the Na-

liunal Association, won at Troy last year. The Naesau crew ivon the Schuylkill prizes for doubles and pairs at the regula of June last, while the Vespers hud no record. The first named were the favorites by long odds at the start, and no one was prepared for the sequel.

At the send inf. away went the Naesaus like a rocket, at forty-four strokes to the infinite, and shared the fate of the sitek. At a hundred yards they leit the Vespers half a length and were clear of the Scullers, but the precentil the Nespers half a length and were clear of the Scullers, but the precently the hold. At a furtiong they had dropped back, Yules and Curtis vasily going across that howe to take a look at the "new men." Much to their apparent astonishment the Philadelphians would inf will, and it was only after a sharp struggle they could be caught. Durin along the Island the Verpers seemed to be coing high becaught. Durin along the Island the Verpers seemed to be coing high becaught that the received the judge decided that the Scullers even ahead a quarter of a length, but it was touch and go. Time—Unin. 31; see, and no room to take second time.

ter of a length, but It was touch and go. Trine—o turn of sec jump nor come to take accord time.

The Nassans, in he had hing been out of the rain, paddled in some dincen lengths helbind. This race revived the literest, and although the next was another briggone conclusion, the favorities found themselves in trouble before the red flag of the judge bud fallen.

First Thial hear Fun foundants shells.

1. Unline Barge Club—wish—colors, red—A. S. Ruberts, Ar., how; P. M. Hesser, 2; I. N. Deltaven, S. John R. Baker, Jr., striku, 2. Onaker Elly Hayge Club—centre; culors, while—Sam Shusan, how;

2. Quaker City Barge Club - centre; culturs, while—Sam Stimson, how; C. R. Adams, 2; Frank Hendyson, 3; John D. McHenth, streke, J. College Boat Club—cast; culture, blue—R. Townsend, how; J. R. Fell, 2; S. Morrison, 3; W. H. Addicks, struku.

3. Argonaida Rowlog Association—East, blue—Walter Man, stroke, W. M. Taylor, how.

This race, which promised from the entries to be very interesting, preved to be a chapter of accidents. Hardly were the boats off byfore the Argonaniae stroke shipped his seat and ended their chance at once. A claim was made by them that it was not a "fair start," but was not allowed by the amptre, very properly loo, as "all brads conta thidde by their own accidents." The Nasemis soon got a short lead. The Waver key hout happed them half way, off Lauvel Hill, when Williamson's seat hopped off, and the Nas-aus were allowed to go down the course with no une to chase them. Thuy 11:162. Then came the flind leat between

year by the Argonautas.

f. Quaker City, wester S. Stinson, how; C. It. Adams, 2; Frank Henderson, 3; J. D. McBeath, strake
2. Argonauta, east-Ed. Smith, bow; J. F. Ward, 2; B. Stephenson,
3; Fred. C. Ehlred, stroke.

8; Fred. C. Ehlred, stroke.

The Argonamas obtained a small lend, and, although well pushed, architained it to the finish. The rowing of the Quakers was a decided improvement over the previous day's work, but there is no indirecting in their style. They will have to make a change in the crew and row much better before they can get away with such crews as the Waverley and Argonama. Almost the middle of the island Archeath hit it my, but Eldred met it with a spurt that won by a little over a length. Thus—Argonama, 9:32; Quaker City, 9:3; f. Thus ended the must successful regate ever held on the Schuylkdi, five of the eight races being work by leads so short that the greatest difference of timo was but five seconds, and in three of them there was not a half length's difference at the finish.

Sculls.

LANSINGBUNG, Juno 14th, 1875

Lansingbung, Jino 14th, 1878.

Lansingbung, Jino 14th, 1878.

Quite an interesting four-oared race took place at 6:30 P. M. to-day over the Troy course, between the R. P. R. A. crew from the Polytechnic Institute of Troy, and the M. L. Filley, Jr., of this place; distance, two miles straight away; time, M. L. F. 12:22; R. P. R. A., 12:26; won by two lengths. Judges—M. L. Filley and C. F. Carbonal. Refereo—George A. Waters. The race was for the champiouship and a very next flag furnished by the Troy gentlemen.

-If there be corners in grain, corners in produce, corners in stocks, etc., wby not a Koh-i nor in diamonds?

Hew Hublications.

BOOKS RECEIVED.

ECCE FEMINA: OF, THE WOMAN ZOE, G. W. Carleton & Co. New York.

Many will remember the controversy which raged some years since relative to the authorship of the poem "Nothing to Wear," professed to have been written by and credited to Wm. Allen Butler. The claimant in the above case, Miss Peck, recently died, leaving a posthamas work, which has been published with the title of "Ecce Femina." That the book is the production of a facile pen, none who read it will deny, and if there is a fincture of Troilope about it in the clever saire upon charch government, the plot is none the less carnestly wrought and forcibly portrayed. The story is short, absorbing in interest, and welt worthy of perusal.

A MAD MARRIAGE. O. W. Carleton S.

Irayed. The story is short, abstroing in interests and welt worthy of perusal.

A Mad Marriage. O. W. Carleton & Co. New York.

As the authoress of a number of novels which bave taken high rank among the corrent works of fiction, Miss Agnes May Fleming, in her fatest production, his fully sustained her reputation. There is a growing propensity on the part of English novel writers to dash their works with a soupcon of American life, indicative perhaps of the coming time when our own writers may find at home that material for their works which they now look for in Baronial Halis or the Rotten Row. As the hero in the present work is entitled into marriage by a graduate of a Bowery enterert saloon, we may accept it as a compilment, but the improbability of such an event is none the leas apparent. This book, while belied highly interesting as a narrative, is full of those glaring inconsistencies which mark the majority of seneational novels. Still, in warm weather we are not opt to consider these detects, and for a Summer day by the sea share or under the elms. "A Mad Marriage" will be found quite sufficiently exciting.

A WOMAN IN ARMOR. G. W. Carleton & Co., New York.

A WOMAN IN ARMOR. G. W. Carleton & Co., New York.

Miss Mary Hariwell makes her alcour in the work which bears the above title, and as a first cesny has succeeded very well. Now this is a book of the purely American type, romantle yet not picturesque. The scene is laid in Boston, and, as might be expected the manife of decornin covers all the characters, if we except, perhaps, the heavy father of the plot, who does nothing worse than desert the wife and indulge too treely in gin. And yet there is paths in the story; poor little Georgie and his tribulations will before the onbiddon tent, and we are led to ask if, after all, the true sentiment which appends direct to the heart is not more entisfactory than the mock heroic which pure a cilt edge to crime, and seeks to pass as pure metal that which when tested with the acid of truth is found to be the basest culn. is found to be the basest cula.

WOLF RUN; OR, THE BOYS OF THE WILDERTNESS, Lee & Stiepard, Boston; Lee, Shepard & Dillinghsm, New York.

Notwithstanding Mr. Abbot and Mr. Merry and the Rollo books, we hold that the boys of the present day are more fortunate than we of a former generation. Such a traveler as Du Chailio, and such a writer of fection as Mise Lonice Alsott, hesides a host of others, have not besitated to write for their amissement and instruction. In the work under discussion the Rev. Elijah Kellogg, already well known as the author of several series of hoys' books, has forcibly portrayed the trials and adventores of the early seriters of tennsylvania. Don't fancy, boys, that because this book is written by a clergyman that it had Sonday School and goody goody talk. On the contrary, there is lots of bunting in it, and Indian fights that will make you feel fair your scalp every midute, and look under the hells for Injune.

The Morals of Abou Ben Admen. Lee

heds for Injuns.

THE MORALS OF ABOU BEN ADHEM. Lec & Shepard, Boston; Lee, Shepard & Difflingham, New York.

Mr. D. R. Locke, or, as he is more smilliarly known, Petroleam V. Nasby, is the author of this clever, satirical work. An Eastern sage takes his abide in a quiet town in Jersey, and fornishes advice gratin on politics, morality, and religion to nil comers. The idea is cupitally conceived and admirably carried out. The advice is sound, even if conceived in a himorous spirit, and the whole portrayed in Mr. Locke's happiest vein. The dedication, to his mother-in-law, shows the spirit as well as the courage of the man, and alone entities his book to a fair perosal.

MAGAZINES.

The American Yacht List for 1875. L. Il Biglow & Co., No. 13 William street, New York. Mr. Neils Olsen, from his official position as the steward of the New York Yacht Club, enjoys peculiar facilities for the preparation of a work of this kind. We are glash to see in the present lesse that care has been taken to prevent some of the palpable errors which have appeared to previous editions, and can commend it to yachtsmen as a useful handbook and necessary portion of the yacht's library.

The Literary Gem is the title of a pleasant mouthly miblication by Henry J. Allen, of Schoolcraft, Mich., which is devoted in some degree to sports of the field and stream. Price 59 cents a year.

Our Animal Friends is the title of a new Our Animal Friends is the title of a new illustrated paper, utited and published by Mr. Geo. Will Johnson, and issued under the anspices of Mr. Bergh and the Society for the Prevention of cruelty to Automia. It is to be invenile in its character, and divided to the interests of damb animals. The field is a large one, and the inculcation of lessons of mercy and the suppression of the cruel instincts of our natures must important. As the twig is bent, so the true inclines; and if children can be taught not to mutai and torment, the tendency thus engrafted will leaf to the production of nature's higher froits.

A PURE OIL that does not gum up and has the adorsement of the principal Sewing Machine Com-Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, ahl that's the difficulty. There are cheap, harsh, drastle pills, that are of even less benefit thin a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of discare, is a desideratum ladeed. Will positively cure all discares of the Liver. Sold everywhere. Price 25 cents per hox.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the or-gans of digestion while giving temporary relter. To obvute this mil present to the piblic a tonic free from Alcoholle Poison, Dr. Green prepared the Oxy-gented Blitters, a sure cure for dyspepsia and all kin-dred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most won-derful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many sinds of disease, and it is an absolute necessity in the nursery. Price 25 cents.

Miscellaneous.

Tourists' and Sportsmen's Route.

THE ROUTE OF THE ERIE RAILWAY Is recullarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the aportsman has within easy reach many localities that afford him every facility for the enjoyment of the sports of the field and stream. We counterate a few of the pleasure resorts which crowd the line of the road.

of the picasure resorts which crowd the line of the road.

Butherfurd Park.—9; niles from New York. Fine hotels and boating pastines on the Passale.

Cillion.—13; miles from the city, overlooking the picture-que fake Dundre.

Lake Moboik.—A beantiful body of wster 1,200 feet above the Hudson—splendld hotel accommodations.

Orange Lake.—Six miles West of Newburgh, and noted for its fishing structions.

Milford, Pa.—About eight miles from Port Jervis. la noted for its trout fishing, woodcock shooting and superior botels.

Avon Springs.—Celebrated for 20 years as a resort for luvalids, the waters possessing many valuable healing qualities.

luvalids, the waters possessing many variation ing qualifies.

Walkins Glen. -This beautiful gorge is distant 294 miles from New York, via Erie Road to Einira. Its wild and picturesque attractions are second only in reputation to those of Ningara.

Chautanqua Lake. -18 miles long, 3 miles wide; sold to be the highest navigable water on the American continent, being 730 feet above Lake Erie and 1,230 feet higher than the Atlantic Ocean.

Ningara Falls. -This great cataract is reached by the direct line of the Eric Railway.

There are along the line of the road no less than

There are along the line of the road no less than Ten Lurge Lakes, Abounding with Fish, and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Moltonk, White, Otsego, Cayuga, Scucca, Keaka, Silver and Chautauqua.

The fullowing schedulo will afford a partial good to the numerous fishing localities reached by this road:

TRIALOF SCOTIAS GHEERRES AEW SYSTEM
OF HORING, BY THE EILTHEOP
"THE FIELD," LONDON.

(See The Field, January 30th, 1875.)
"From a comparison of the two labiles it will be seen that with Walker's slutt, Messus Surfey gons showed a market superiority over Mr. Orienter's, both in specing and to the highest score male. Indeed, with the left burred, in his third slut, Mr. Scott got a selected group pattern of 239 and a penetration of 37, conaling the highest pattern made by Mr. Greener, and asceeding the penetration of that particular slut by eight sheets."

For Forest and Stream

Tishomingo.

A CCORDING to promise I will attempt to give you a A brief sketch of that portion of our State embraced in the cession of lands by the Chickasaw Indians to the United States, and which may he stated to be, in general terms, all of North Mississippi. The Chickasaw country, however, originally embraced far more territory than that lying in North Mississippi. The Chickasaws were once a powerful and warlike trihe, and elaimed in their most prosperous period to exercise absolute dominion over all the country now embraced in Southwest Kentucky; that portion south of Paducah and lying between the Teunessec River on the east, the Ohio River on the north, and the Mississippi River on the west; all West Tennessee and all of North Mississippi as far south as the country of the Choetaws. These two tribes—the Chickasaws and Choetaws—claimed These two tribes—the Chickasaws and Choctaws—channed to have had a common origin. They immigrated from the East at an early day—probably from the northern part of South Carolina—to this country. The Chickasaws were a noble race of men, and probably developed as many of the virtues of savuge life as any of the Indian tribes that in-behited this continue. habited this continent. They were high spirited, brave, budy, well-developed physically, manly, and pribled themselves on their fidelity to their engagements. They were always allies of the English-speaking people, and it was their boast that they never shed the blood of the white man in buttle meaning by the term white mean in buttle. man in battle, meaning by the term white man the English, in contradistinction to the French and Spanish, with whom they waged bloody and unrelenting war. The history of the adventurous expedition of De Soto, and of the efforts made by Iberville, Bienville, and other French com manders to extend the dominion of France over them, gives abundant evidence of these facts. The Creck Indians were their hereditary enemies, and if the truth of their tribal traditions is to be credited, their conflicts were many, bloody, wild, and romuntic in the highest degree. One incident only of their was fare will be mentioned here. The Chickasaws had lung entertained the idea of a removal west of the Mississippi River. Many causes operated with them to produce this desire. One of these causes was a jeulousy that had grown up between them and their kin-dred trihe—the Choetaws. How this jealousy came about I am not fuily informed, but it was sufficiently strong to prompt them to action. For the purpose of selecting and acquiring a country—hunting grounds—either by discovery by conquest, sufficiently large and advantageous for the tribe to emigrate to, they fitted out and sent west a large and well-equipped party, composed of their hest, braves and wisest chiefs. This party or expedition was abseat many months.

The Creeks, who had learned of the absence of the Chickasaw warriors, thought it a favorable time to gratify their revenge, and for this purpose, and the further purpose of exterminating the women and children and erushing the power of their eucmies, sent against the defenseless Chickasaws a numerous war party. The Chickasaws had left a few of their best men at home. Among them was Levl Colbert, quite a young man then, a half breed, and one of the powerful family of that name. Levi Colbert, ever active, vigilant, and careful of the interests of his people, by some means got information of the approach this formidable invasion. By incredible activity, effort, and intrepidity he assembled what few braves were at home, and with these and the old men and boys of the tribe prepared as best he could to defend his country. True to the tactics of Indian warfare, and by a masterly display of address and cunning, he led the invading Crecks-who were confident of an easy victory-into an ambuscade in the swamp of a small stream that meanders through what is now Lee county, MississIppi. He gave the everny battle, and gained a complete, decisive, and bloody victory, and so nearly were the Creek warriors exterminated that the name "Yah-Nubbee," meaning all killed, was given to the stream on the banks of which the hattle was fought. may be supposed, the Chickasaws were very product achievement. Levi Colbert was the recognized here of the be supposed, the Chickasaws were very proud of this

battle. And when the party which had been sent West returned home and were fully informed of the magnitude of the battle, and the splendid fruits of the victory, a conneil of the untion was called, and it was determined to make Colbert a chief, young as he was, with the highest honors of the tribe. It was a custom among them when a warof the tribe. It was a custom among them when a war rior was to be inducted into the honors and order of the chiefs for the warrior to be made a chief to be seated flut on the ground. Around him in the first circle the oldest and most honored chiefs were scated. Next to them the next oldest, and so on in order until all the braves present were seated. When the king, prophet, or chief medicine man, whoever was the officiator in the eeremonies of the man, whoever was the omerator in the eeremonies of the occasion, eame within the first eirele of chiefs the first words he uttered were applied to the new chief as his name, designation or title ever afterward. On this occasion the young men of the tribe, who had taken great pride in the ceremonics, constructed a rude seat or bench, which they cannot with larged boughs on which they cannot with larged boughs on which they cannot collect. covered with laurel boughs, on which they seated Colhert.
This fact had not been communicated to the officiator, and he was first apprised of the eireumstance when he passed within the circle of the chiefs and his eyes rested on bert seated as above described, when he exclaimed, "Itta, Wamha, Mingo," or the laureled brace scaled on a beach. "Ittawambu" was adopted by Colbert as his title as chief, und he was ever afterward known in his nation as Itta-wamba. And this name in honor of him has been perpet uated by the Legislature as the name of one of the counties in North Mississippi. But however attractive and fasei nating it is to think of and about the traditions and history of the Chickasaws, now reduced to a mere handful in the Indian Territory, it concerns us most, and is far more im portant for us, to give our attention to the splendid domain they have ceded to our Government. Perhaps I hazard nothing in saying that a more genial, more healthy, more fertile, more productive country, and one better adapted to every branch of agriculture, of the same dimensious, is not contained within the limits of this broad Union. Extending across five degrees of latitude, being bounded on east by the Tombigbee River and the Alabama line until it strikes the Tcunessee River; thence by that river to its mouth; on the north by the Ohio River; on the west hy that grent "inland sea," the Mississippi River; on the south by the thirty third degree north latitude. It embraces every variety of the best soil known in any country. It has many broad hottoms of the richest allavial. Its hill country elothed with forests of the most useful timber in great riety and rich profusion. Game and fish abound, the cli-mate is of the most salubrious character, and less liable to extremes of heat and cold, wet, and dry than almost any other; it is indeed a Heaven-favored land. But my attention is directed more particularly to our own section— Northeast Mississippi—and I can truthfully say that it is difficult to find one possessing more advantages in any por tion of the Uniou. And I have frequently heard it said that the portion of it embraced in what was the western third of old Tishomingo county was the best farming country in the South, considered in all its variety and aspects. This now forms the larger portion of Alcorn and Prentiss counties. The lands are mostly all good, and most of them splendid, while every variety of cereals richly reward the lahor of the industrious and skillful husbandman. It would be difficult to say what kind of crop it produces best. Cot ton, corn, wheat, rye, hurley, oats, peas, and potatoes of every kind are raised in great abundance. Clover and the different varieties of grass, when proper attention has been given them, flourish luxuriantly. Fruits of all sorts well. Nearly every variety of grapes, the apple, the peach, the pear, and the plum thrives luxuriantly, and rewards the earc of the horticulturist with abundant yields. The raspherry, the blackberry, and the strawberry grow in great profusion, and are unsurpassed in size and luseious-

In healthfulness it vies with any portion of the United States—East, West, North, or South. This is conclusively proven by the Census Reports for the years 1850, 1860, and 1870. Our Summers are never very hot, the mercury seldom reaching 100°. The Winters are never very cold. It

rarely happens that the weather is cold enough to keep a laboring man indoors all day. We have no ralny season and no protracted droughts. In our portion of the country we have never had an epidemic of cholera or of yellow fever. I'cople sieken and die with us as they do everywhere; but with ordinary care men and women are as healthy and live as long here as in any other country.

healthy and live as long here as in any other country.

Those in the Northern States who wish to escape the rigors of the Northern Winters can here find a genful elimate, one free from malaria and the dehilitating effects of a too Southern residence; to the furming class of the Northern States and of England, Scotland, Irchaud, Wulcs, France, and Germany it occurs to me that this scetion presents unsurpassed attractions and advantages. At this time lands are very cheap, much cheaper than they have been at any time since the country was opened to innucrition after the Indians removed west of the Mississippi Hiver. The close of the late civil war found the country wasted and prostrate. Many of the farms were utterly ruined—the buildings and fences turned, the owners scattered, and many of them dead; and, although the country has grently improved and built up since that time, yet many good farms are still vacant and uncultivated. In addition to this, owing to the change in the circumstruces of the people, it has been found by experience that a man really needs anich less land than was formerly considered desirable or neces sary for him to have. Planting in our immediate locality is not carried on so extensively as in former times. The people now desire to sell part of their lands, and are willing to do so on very reasonable terms. Land is now cheap—cheaper than it will perhaps ever be again in this part of the State. The interest and attention of the solid and good men of the North is being directed to the South with the view of making investment and permanent residence here.

The friendly and kindly feeling recently awakened between the different sections will he productive of good results, no doubt, and immigration started thitherward will be quickened and accelerated as Northern men will finihere such homes as they have long desired to obtain. The endless and thirsty plains of the West have proven dehisive to their hopes. The grasshopper raids of those regions and the rigors of the Winters of the North are inclining the people to look Southward, and Southward soon they will come, not only from the Northern States but from Europe. The few Northern men who come to the South with the bona fide intention to become identified with us in person and in fortune have unde a success of their venture socially and materially, and they will luduce their friends and relatives to come, and soon we will have many of their best men with us. And why not? The lands are productive, the climate genial, the country healthy, and the laborer's toil amply remuncrated. The crops never full.

In addition to the advantages above enumerated there are others of great importance to be considered. The markets at all points are open to us; the railroad connections and lines of travel under good management, running in all directions, afford a choice of markets at each point of the compass within the limits of the government. Not only so, but we may go directly to Europe with our commodities and obtain what merchandise we desire direct from the old countries. The system of railways is admirably devised for the convenience and development of the country, and we have very great facilities for travel and the transportation of freight as it is now arranged and connected. But as the country prospers and develops, according to its capacities of commerce, agriculture, and manufactures, the lines of rallway will be extended, railroad centres will be multiplied, and every demand of transportation will be supplied. A disposition to embark into manufacturing is beginning to manifest itself. Enterprises of this sort are already appearing, and the first effort of this important interest that develops into a success will be hut the harbinger of other establishments, until there will be large investments in this branch of industry made in different parts of the country. When we glance at all these interests in connection with the attractions of soil, climate, productions, and salubrity belonging to this splendid do-

main, we can proudly challenge a comparison with any country of equal cateat in the South, and predict for its future a degree of wealth, solid comfort, and progress unsurpassed in the history of any other country. Guyon. Corinth, Miss., June, 1875.

GOSSIP OF SUMMER TRAVEL AND SAL-MON FISHING.

WIT EVERY ONE SHOULD ANGLE-HOW I BECOME A SALMON

Lest old, charms every one, save perchance, one who has never been forlunate enough to fall in love, so the tyro with his first salmon never fails to interest the true angler, who with him fights his lattles o'er again, and in memory goes back to the lappy hour when he for the first time found his dreams more than tealised, and himself immemory goes back to the lappy hour when he for the first time found his dreams and the control of the

of the true angler, for I at once made arrangements for my Ophassoc friend to accompany me, although he hol so ridicated my setting in an arm whair, in a hap-strack hoat and palling in logy pickerel with a spoon and bed cord at the Thousaud Islands.

The York is one of the most picturesque of the Canadian rivers—well stocked with salmon, of large size—casy of access by Galf Post Steamer from Quebec which leaves you directly at its mouth, well provided with most comfortable canors, sloves, cooking attensis and conveniences of every sort, all of which, Mr. Reynolds with his characteristic liberality insisted upon my using as if they were my own. The salmon of the York are of more graceful outline than those of most other rivers. To this beautiful stream I would like to take the reader, and have him enjoy with me the pleasures and perplexities of taking salmou. I go by the steamer "Secret" from Quebec the 23d of Jane, and the reader shall follow about Angust 1st, in the Forest and Office, June 15, 1875.

For Firest and Stream. SPORT IN TEXAS—MY FIRST BUFFALO HUNT

THINKING you might like an occasional note from this part of oar great State, I have concluded to recount my experience in bulfalo lunning, more particularly because it occurred in the locality that Colonel McCarty and his party are now (perhaps) operating in. I refer to the headwaters of the Brazos and Rig Whethita rivers.

In April, 1874, in company with some friends, I visited this section for the purpose of examining some lands, prospecting for minerals, encauntering the American biscan, etc. After ten days' travel westward from this place, from oar camp in the morning we could see that a stream of considerable size flowed into the Brazos from the south side, and wishing to identify the junction of the Dauble Mountain Fork with the Brazos i concluded to make a closer examination, in order that no doubt might remain on my mind in regard to having passed the junction. Selecting six men, well mounted, I instructed the train to travel slowly up the divide," and we would intercept them at a given point ou the divide. Not wishing to encumber my nag with any unnecessary weight, and not knowing but what we might have to give leg bail to the Comanches during the day, I swapped my Spencer carbine for one of Sharp's army size, central fire earlines. I also had more confidence in the Sharps, as I bad used one some time previously with great success.

Starting out in a southwesterly direction, we soon came to the Brazos, with its brackish, bitter water, wide sandy bed, and shallow channel, flowing through the level plain with scarcely a tree or shrub to mark its course. Selecting a place where some bulfalo bad crossed, we ventured our selves on the treacherous quicksand and passed over without "bogging." We now soon discovered that it was a large creek flowing into the Brazos, and not the junction of the two rivers. We also discovered that this creek was marked on the maps as the north fork of Miller's Creek, when really it was no tribubary of that creek.

After traveling up it some two miles, we turned our course westw

closer, although it lay some three or four miles out of our way.

After traveling towards it for a mile we could see that it was a tent, and when a little closer could see horses feeding in the valley. After awhile we saw a man come down from the tent to the horses. All was now lost to sight for some distance, owing to the intervening hills. When we rose the hill we came almost directly over two men lying down near the horses. When they heard our horses' feet they sprang to their Sharps ritles, and wheeling towards us they were surprised to meet the pate-face instead of the red man. After a few words they invited us up to the tent, where we met Captain Terry, of Fort Worth, who informed us that himself and nine others lord been there two mouths, and we were the first white men they had seen. They were locating hind certificates for the Texas Pacific Railrand Company. This was the 9th day of April, and the day before some of his party came near being lost in a driving snow storm. The Captain kindly showed us his maps, and informed as that we were some distance below the junction of the two streams. After a pleasant stay of an hour we bade them adien, feeling quite clated at finding pale-faces so near us.

of the two streams. After a pleasant stay of an hour we bade them adieu, feeling quite clated at finding pale-faces so near us.

As we rose the bluff we entered a village of prairie dogs that must have embraced thousands of acres. The little fellows cluttered on all sides of us til Lieutenant Savage concluded he would kill one subl stop some of it. Dismounting, he fired his lifenry rifle at one, and the little fellow dropped into the mouth of his hole, stuck bis eyas over on one side and his tail over the other, built kept on barking. The Lieutenant aistaking the twitching of his tait for death struggles, exclaimed "Tve got him, I've got him," and rushed irrantically on to the little fellow, but was surprised to see him vanish into the hole as he came close to tim. The joke was too good, and the Lieutenant joined in the hearty laugh which ensued. As we crossed the valley Lieutenont S. and I made some long shots at buffalo, but without effect. During the past Winter some trappers bad been trapping for wolves (the large, whitish-colored wolves, called loafers), and they most have been very successful, as we bad hardly seen a live wolf, while the plains were strewn with carbasses.

As we rose the crest of a bill, after crossing the river, we came in full view of three untelope feeding. Every man dismounted and tried to five first. Covering the shoulder of one, I hastily bet lly at about 150 paces distant, and was mortified to see the dust rise just above the animal's shoulder and far beyond. Each man now declared that if I had just held one second longer he would have killed one. I just replied that they were all privileged to shoot before I did, if they could. We soon rose on to the divide, and saw the train near by. I tethered my horse and laid down ou my blanket, while the remainder straggled oil after the antelope that were gazing at us in mute astonishment. I was almost asleep when I heard firing and shouting. Jumping up I saw them ranning down a ridge that passed close to me. Mounting my horse I rode hastily

slown the hill, the nearest being about 200 pages and running directly from the. Dismonnting, I firrd at him, and at the crack of the gnu I saw him pitch forward on bis knees and then heard the ball strike. In an instant ke was on his feet, and went humbering off ou three legs, I soon came up with him again. This time I dismounted and rested my gan by the side of a mesquite and fired into his rear. This shot checked him considerably, and I soon overtook him and repeated the operation; this Ihird shot brought him to a sland for fight. I now approached to within about eighty yards of him, and gave him a broad-side behind the fore shoulder which brought him down. I rode up near him, and he struggled very hard to get up, his eyes turning green. I think I never saw mything more frightfal. I now hegan to look around, and found that I had got out of sight of every thing and every body, and I hardly knew which way to start. I thought to myself, well, if the Indians were to get after me now I'd have to fight it out on this line. I rode to some high ground and discovered lihe wagnas near by. I reported to them my success, and that it was a four-year-old, not very fat. Our gnible thought best not to bother with such ment, and we marched on, trying to get some water for our stack before night. One young mun that had caught a young wolf run down and got some of the flesh to feed his wolf upon. I was almost sorry after I had killed the poor brune, that struggled so manufully for its life, just the satiste my thirst for blood. But it was a my lirst one. The first shot had pussed through the thigh, ranging downward, and bruken the foreleg near the knee. Had the ball not struck a bone I would never have known that it touched him. On this expedition I frequently saw them shot with the fleary and Winchester rithes (calibre 44), but they were seldum killed outright, amil rempently escaped entirely. We canlid have caught plenty of calves, but could not furnish them milk to drink. On one oxcasion a young calf followed one of the men

NEWFOUNDLAND NOTES.

NEWFOUNDLAND NOTES.

Having well cleared the Harbor Book and the Brandende Rocks, which he off Cotalina, hetween Green Island and the North Head, the Summer sun of an porty September evening has with crimsou and golden lined glory set in the westward. Pretty Green Island, with its linte meadlows, bears on its brow a lighthouse, the cheerful ray from the lamps of which illuminate our way and instruct our bearings and deporture, which it is always well to have in case of fog coming on. A sail of a few hours, or less that it is one of your yachts, will bring us into the Hall Island Tickle. I may remark that in this country we call a comporatively narrow passage between the main land and an island a teckle, and, indeed, such a place is of times very ticklesome, with a liverse winds, or building briezes, or hibiter rocks. How like the seas of life here below. Keep the island inboard and we may run against a hibblen vack, and keep the Cape of Bouarvista too much outboard and we may run on another rock, so the onlysafe rule is to hormer on the cape moderably. The Spiller's Rocks lay not far hence; they look like so many teath of some lings proteon animal. I suppose they derive their mame from some good obl hisherman of the name of Spiller. All what would Newfoundland by without her harrly lishermen? Still we must promote agriculture, and the wisest hing our planters can be in a strong advocate for the micble man, while I respect all closses. Cape Bonavista, indeed the land ulong to Bonavista, is composed by dark clay slote, with seatered veins of quartz. We know that there is a geological rule, or rather let me say mineral rule, that veius of quartzenting slate may lead to preciona metal. Plumbago is reported on this coast. I may alway the submitted by two motaral arches, through which the great sea billows surge with mighty uoise. A few spokes of the wheel office in a storm "like mighty doors slamming on their hings" has form and guarled this const. into mininture caves, and must be coast toward. Bonavista there is t

round the pole until we think of the "central san," and turn in to rest fairling the deck to the faithful night watch, whom Heaven guide and preserve.

Harbor Grace, April, 1875.

For Finest and Stream, DEER HUNTING IN ALABAMA.

A Abdama, to "deive" or "shine" there is the sport par excellence. Half a dozen goutleanen meet of a bright, bracing, breezy morning, and, with a pack of fifteen or twenty dogs, start for "the mountains," a chain of high hills some seven miles from Butler. Taking their stands, the dogs are put in. All is quiet hat for the sounds of the forest. A nut falls at your feet. You look up, and the bright eyes of a bischievous squirred flash at you as duris around the trank or branch of some tall oak or hick ony. You hear the woodpecker tapping as he explores a contract of the stories told in the books are true; so you put a stune right in their puth, and, yes, the train steps at once. Presently you see the engineers come running up. They great around it—remove every blade of grass, leaf, or material of any knad, making a smooth road. The train at once moves on, the engineers falling back to their places. A many and the step is the stories of wood and place it in the path. Again the train of new or it. Yes, they can move on the path, Again the train of every blade of those who change they are decided by and secure to decide they lay hold of those who change to hostruction. Others, again, clear away any small obstacles. One chief stunds by and secure to direct the movement. Presently it begins to move, and now it is drawn aside and the train moves on as befare. There comes a mocking hird, which ists on a limb, and, looking right at you, pours out sanch flood of metable "Mars Mothy" now. The san is bright, the air is often the path of brank mer by, and toops away. You will now it so drawn as they sweep around the hill, the whole pack breaks out in full chorus Again it is look, and your cars to cuch the bill test sound. Again the cryp sales out, and this thus it is sarely coming towards you; and now you are all eyes and ears. A bocken site, snaps. You turn your long of stand motionless by a tree and strain your cars to cuch in full chorus Again it is look, and your course deep work in the propose of the bill, his wide spre

Another new game has been introduced in England, a result, probably, of the success of the revival of polo. It is known as "tent-pegging," The game econsists in driving a lance point, while going on horsehack at full gallop, into a tent-peg stuck into the ground and bearing it off triamplantly. It looks easy enough, but it is in reality very dillicult, while it is admirable practice for those cavalty regiments who have to use the lance. It has the advantage over polo as being an exercise which is, in some sort, a training for transfixing enemies,

Hish Gulture.

United States Fish Combission .- The II. S. steamer, "Blue Light," L. A. Beardstee, communder, known to our correspondents as "Piseco," is now at Woods Hole, Massuchusetts, which is to be the headquarters of the U.S. Fishery Commission for the Summer. Last year it was localed at New London, Cr.

VINGINIA FISH COMMISSIONERS,-The Bourd of Fish Commissioners of Virginia, as finally consistented by the Governor, now comprises the following named gentlemen, which is about as strong a working team as any of the which is about as strong a working team as any or the States could boast of: Alexander Mosely, Esq., Richmond, Dr. W. B. Robertson, Lynchburg, Dr. M. G. Ellzey, Bhicksburg, We anticipate most beneficial and speedy results from their efforts. The black bass and brook tront interests of inland Virginia are of great importance, while the coast and estuary fisheries, including the oyster business, cannot be estimated too highly, either in respect to revenue or gastronomy. We do not covy these gentlemen revenue or gastronomy. We do not covy these gentlemen their prerogatives, for their daties are numerous nul intricate, and the task assigned them a thrukless one. Our columns and co-operation will be always available to them. Dr. Robertson and Ellzey are well known out of the State or. Robertson and Edizey are well known out of the State as well as in it, while Mr. Mosely is the senior editor of the Richmond Whig, one of the oldest papers in Virginia, and represents the fishing interests of the State. All these gentlemen need is a good still appropriation from the Treasury, and the moral support of the State officers and breisbares.

FISH PROTECTION IN ONTARIO.-The success which has attended the operations of the Peterboro Fish Protective Association has induced a number of sportsmen in the vi-cinity of Guelph, Ont., to establish a similar association, having for its object the preservation and culture of fish in the streams of the district. At a largely attended meeting the following officers were elected, who will, by their position and popularity, undoubtedly insure a very prosperous cureer for the association:—President, Judge Macdonald; Vice President, James Goldie; Treasurer, Capt. Swinford; Hon. Secretary, C. Acton Burrows, editor of the Guelph Herald. The association alrendy bousts of a numerous membership, and is now thing. merons membership, and is now taking steps to secure a quantity of black bass to lay down in the Eramosa branch of the river Speed. Next Spring it is intended to procure a large quantity of speckled front from Mr. Wilmot's cs-tablishment to by down in the main stream of the same

Fistures, Brewauer.—Inspector C. Gilchrist, of Rice Luke, has already proscented Jusceph Robbias, on May 12th. The fine was \$20 and costs, the speur, jack, and fish were also taken. Joseph Dickson, on the north shore, had to pay \$40 and costs, for using a spear in a canoe. Several sats of apparatus have been taken, and boats from those engaged illegally in fishing. Parties fishing without permits in Rice Lake or any of its fributary rivers would do well to keep clear of Mr. Gilchrist, or they may have to pay for their fish pretty dearly.—Peterhorough Review.

Inspector Gilchrist, an netive and zealous preserver of game and fish, has been placed over the Rice Lake District

game and fish, has been placed over the Rice Lake District by the Ontarlo Government, at the instance of the applied tions of "Peterborough County Fish and Game Protection Society," and the above is the second haul of depredators which he has invited up to the captain's office, in the meantime he holds on to their boats, spears, &c., so that on Rice Lake and its surroundings the transgressor will find the way pretty hard, should be meet Gilchrist.

-Information having reached the Hartford Game Club that the sulmon deposited by the State Commissioners in the Farmington River were being illegally taken therefrom, the club with commendable abscrity commenced snit against the guilty parties, and the violators of the law have been bound over to appear before a superior court. The Hartford club has given due notice that they will vigor ously prosecute all like offenders against the provisions of either the game or fish hows of the State. Their vigorous action is worthy of imitation by sister clubs in adjoining

MASSACHUSETTS ANGLERS' ASSOCIATION .-- At a regular meeting of this association, light on Wednesday of last week, S. W. Jenkins of Squautum, a member, was expelled for violation of the smelt law

Seawn or Deep Sea Fish .- But little is known with regard to the lights of deep sea fish during the spawning senson. M. Surs has discovered that the ova of some fish, notably the cod (Gadus morrhua) and of the plaice (Pleuronectes platesal), are hatched while floating on the waves. Ova of these and other fishes have been found floating in different stages of development. In some of the larger different stages of development. In some of the larger rivers of China the spawn of certain fishes is collected from the surface of the water by means or wisps of grass and of suft matting, and used tor piscicultural purposes. The eggs thus gathered are removed to waters barren of fish which are thus replenished.

There is no doubt that different species of fish spawn in different places, some at the hottom of the sea and some on the surface. The herring (Chapea harengus), and probably all its congeners, spawn on the hottom, the eggs remaining there adhering in masses to the rocks and stones. The eggs of the salmon are emitted on beds of fine gravel in

shidlow parts of the rivers, and covered over with gravel by the femule in order to hide them from their numerons enemies. Depite of this precantion unaltitudes are devoured by fish, by insect larvæ of many kinds, and by ducks and other water fowls searching for food on the bottom, while a flood often sweeps them entirely away or buries them so deep by the shifting gravel that they caunot hatch, or the young can never emerge from the drift. It is the opinion of some unturalists that most sea fish emit thelr eggs at the bottom, and that these rise to the surface when approaching maturity. The late Mr. Rotert Buist, of the Tay fisheries, states that he had seen salmon eggs, as tho time approached for the eclosion of the fish, rise to the surface in the breeding boxes at Stormontfield, but they always sank again before the birth of the fish.

NEW HAMPSHIRE FISH COMMISSION-ERS' REPORT.

THE following is the substantial part of the Fish Com-

The following is the substantial part of the Fish Commissioners' report for 1875:—

We find, upon examination, that we have the greatest facilities for the culture and propagation of food fish of any State in the Union, in proportion to its size. We have lifty-eight rivers, fourteen lakes, and about 260 pounls, which are well adapted to fish culture, but are now generally inhaldited by comparatively worthless fish, such as sunfish, suckers, dace, and the like. We find that some of our hest waters are well stocked with lake trout.

A number of our lakes are now well stocked with black lass. They have done remarkably well, increased wounderfully in numbers, and grown very fast, wherever they have been introduced into our waters; some have been taken the past season, weighing from six to seven pounds each. We have taken a large number from Sunapee and Webster lakes, and stocked other waters.

We have made arrangements to obtain several thousand whitefish from Lake Champlain the coming season, for introduction into such waters as are best adapted for their culture and propagation.

We have made arrangements to introduce wall-eyed pike into our waters as soon as convenient.

We attended the meeting of the New England Commissioners on Fisheries, in Boston, in Jannary last, and found a great interest in fish enture, and much earnest work heing done, to introduce the different varieties of food fish into the various waters throughout New England, and received many valuable suggestions from the different Commissioners. It was there suggested that a joint Intelling-house be established at or near the headwaturs of the Councetient or Merrimack rivers, which suggestion we think entitled to favorable consideration. We received from the Massachusetts and Connecticut Commissioners the genetons offer of a present of about 400,000 young salmon, to be placed in the leadwaters of the Connecticut and Merrimack rivers. We accepted the offer, and intend to put the salmon into said waters during the coming Spring.

We flud many large

preferable, in piost cases, for introduction, to either eggs or fry.

We have not yet had time to examine the fishways, but intend to do so as soon as practicable. From the reports of the Massachusetts and Connecticut Commissioners, we are assured by the Massachusetts Commissioners that the fishway at Holyoke is a success. We are assured by the Massachusetts Commissioners that the fishway at Lawrence shell be made to answer the purpose for which it was intended.

We have expended a large proportion of the State appropriation, and spent much time, in enforcing the laws for the protection of fish, Regarding this as one of mir most important duties, we have already appointed, under the authority of Chapter LXX of the laws of 1871, about 200 lish wardens, in localities where they seemed to be most immediately required, and shall appoint others as occasion seems to demand.

OLIVER H. NOYES,

JOHN S. WADLEIGH,

ANDREW C. FIFIELD.

Commissioners.

FISH CULTURE IN CALIFORNIA.—The fish commissioners of California have just achieved a success in piscicultureone for which the people of our State should accord to Mr. J. G. Woodbury, superintendent of the hatching and distributing department, their approval. From eggs obtained from New Hampshire uncety six per centum of fish have from New Hampshire ninety-six per centum of fish have been hatched, and 60,000 red speckled trout have, at the age of four mouths, just been placed in the streams of California; 20,000 have been distributed to the small streams of Lake and Mendocino connties, 20,000 were placed in the streams of the western Sierras, at the head waters of the American, Yuba and Feather rivers, and 20,000 in the streams of Contra Costa county emptying into the Bay of San Francisco, the Calaverns, the Alameda and the San Leandro creeks. The hatching process was conducted in the lantebiag house at the University grounds at Beckeley, and have since their birth been stored at 8t. Helena mountain, where in four months they attained a growth of two inches. Of the 20,000 speckled beauties taken to the Lake and Mendocino county streams, it is said that only two fish died.—Stin Francisco Chronicle.

Sturgeon as Shad Protectors.—The fishermen along the Hindson have refused to review their nets for twenty-four heurs once a week, in order to allow the shad a chance to move up the river, where they are in the hibit of spawning. Seth Green has hatched 40,000 young sturgeon, which he has placed in the river, and which number he intends to increase to 3,000,000. In three years' time they will have attained a large size, and will then go through shad nets like an arrow through the air, and thus enable the other fish to move at will up and down the stream. Stargeon were very plenty in the stream twenty years ago, selling for fifty cents to one dollar each, while the present price in the New York and Albamy markets is \$3, and the demand is greater than the supply. Shad are selling for a third of the price that they sold for hefore artificial propagation was introduced, and Mr. Green expects in three or four years hence the price of stargeon will be

reduced in a similar ratio. The sturgeon is valuable as food for the poor on account of its cheapness, while the spawn is used as caviare, an epicurean delicacy, large quantities of which are annually exported to Europe.—
Rochester Express.

Hatural History.

NATURAL HISTORY OF OREGON AND ARIZONA, -- An officer of the First Cavarry, now stationed at Camp Harney, Oregon, in the Pah ute country, is a naturalist of no small repute, and is at present collecting specimens of the different kinds of trout found in Oregon for the Smithsonian Institution. We take pleasure in quoting from a recent letter to the editor of Forest and Stream some

the different kinds of trout found in Oregan for the Smithsonian Institution. We take pleasure in quoting from a recent letter to the editor of Forest and Stirram some facts relative to the funna of Oregon and Arizona. The Captain strys of the game of Oregon:

"So far as fine fishing is concerned, a man could scarcely go amiss by pitching his line in the first stream he eame to. I think that you can find fine trout in every brook in the State. I would not recommend the vicinity of Camp Harney for hunling and fishing purposes, although game of both kinds is extremely plenty. The great trouble is getting here. It is in the heart of the Indian country, Pallutes, about 280 miles from the railroad in a southerly direction, and the same distance to the Dalles, on the Columbia River. Accommodations, you might say there are none, or of the rudest kind, and the expenses would not be light either. The roads are had and blocked by snow during five months in the year. For pleasure-seckers this would not do, as there must be any amount of better places nearer to civilization and easier of access. Geese, ducks, and swan are extremely abundant on all the lakes about here, some of which are of quite good size. We have just finished a fine sail boat, and I hope to have a chance to explore Luke Harney and Malheur Luke thoroughly both for fish and birds. I consider Sonthern Arizona one of the finest game countries in the United States, but it is rather inaccessible also, and not safe for a small party. Deer are extremely abundant (two or three species;) antelope also; bear, if any one has lost any, pumas and such like; wild lurkeys (Melingris Mexicana,) from which the domestic race is supposed to have sprung. It differs from the Eastern species (Melingris gallopazo) in the coloration of the tips of the upper and lower tail coverts and thil feathers, these heing white in the former while they are fulvons or chestnut red in the latter. Of quail you can fud three species, viz.: Lophortyse Gambels (Gambel's quail,) which is very comm

ARTIFICES OF WOODCOCK.

ROCHESTER, N. Y., June 18th, 1875.
In a recent number of years ROCHESTER, N. Y., June 18th, 1875.

Editor Forest and Stream:—

In a recent number of your paper a correspondent described the action and efforts at concealment practiced by a woodcock that once came under his observation. The retailon of such incidents is interesting to sportsmen and naturalists, who are ever glad to tearn of some pecularity in the subjects of their respective researches. An incident somewhat similar to that alluded to took place in my experience a few years ago. An ardent sporting friend and I were after ducks on Black Creek in this county about the middle of October, 1868. Ducks were scarce, but In rossing a piece of marsh we came on a very farce swarm of suipe that hy like stones, and had to be kicked up. I marked down one bird, and walking up thought to get him to rise at a suitable distance. He didn't show himself on the wing, and as I got to the edge of a poul in the march I saw the bird run quickly along the muit and nestic close down behind a stick. I watched bim for several infinites, and he would stretch out his head and peer at me with the air of a gamin watching a blue runt around the corner. The code of the field sportsman to be sure prevented me from taking a pot-hunter's advantage of Scohypar II filtent, but when, after throwing a sod or two at him, he started on Ilyely wing I did as is usual on such occasions, and cloved up his account, terminating one of the best day's supe shooting I ever enjoyer. Should my wandering friend Will. F. see this ho will remember the occusion.

E. R.

COCK GROUSE PROTECTING NESTS.

Machias, Me., June 21st, 1875

While driving in this vicinity a few days since, a ruffel grouse ran out loto the road, and with rollled plumage and lowered head attacked us, but the rapid pace soon discouraged it, although keeping cluse to the wheels for several rode. To my surprise 1 saw that it was a male. We returned a few hours later with a salmo forthadis of three pounds and an ounce weight and a number of his brethren of lesser note.

[The incident referred to is unusual, as it is the belief that the cock hirds do not assist the hens in taking care of their young .- ED]

STRANGE FREAKS IN DEER NATURE.

Nicasio, Marin county, Cal., June 14th, 1875,

Nicasio, Marin county, Cal., June 14th, 1875. Editor Forest and Stheam:—
In builting deer in the county of San Luis Obispo some years ago, 1 found quite a number of weibers among the lucks shot, and as it was caused by disease, I give it to the readers of your paper. At the time I first shot them, in thily, their horns were in the velvet, and remained the same in September when I left that county. Itemming the following Spring, I found some with full bead of horns still in the velvet but much faded. Among those I killed some had imperfect horns and some large epikes covered with kinds from base to the many were in good confliction, more very poor. The cause I did not know, things same bunters said it was from a disease brought. In from Texas cattle. I have heard of weithers being killed in Montrey county within two years, but have never heard of one north of San Francisco.

For Forest and Street
THE CLIMATE OF CALIFORNIA,

ONE of the most surprising things I have seen lately is a letter from a person signing himself "Forty-niner" in the New York Spirit of the Times, and entitled "Gossip from San Francisco." The main subject in the letter is a talk about horses, and I have no fault to find with that, and besides, I will not occupy your columns with a subject foreign to them. But when the writer speaks of the elimate of California and says:

besides, I will not occupy your columns with a subject foreign to them. But when the writer speaks of the elimate of California and says:

"If Tennessee be like this, and the climate such as 'Hark Comstock' describes, I can only say that I want to leave this humbug California, and migrate backward to a place where there is a decent climate of seasonable weather, and where there is a decent climate of seasonable weather, and where the men who call themselves horsemen &c. * * * * I would like, however, to get a little honest information in your columns from 'Hark Comstock' or any other man in respect to the climate of Keutucky and Tennessee, and in return I will give you what you don't often get—a lime plain truth about California. I am perfectly sick of the falsehoods disseminated about our clerual Spring, our unseasonable had strawberries, our monster beets, which have teen two or three years growing, and various other California staple clap traps. Now, California may be the paradise of the whole Union, but if so, your country is simply unfit for human occupation during a considerable portion of the year. California can be lived in, and by contrust to the people of Vermout and New England all over, is considered delightful, because insteal of snow we have mad, and instead of sunstroke, liver complaint and rhenmatism. Now, a word of truth, which I bet you won't see in any liventy miles of our delightful metropolis. During the week last past—on Suturdny, 3d, Sundny, 4th, Monday, 5th of April of this year, 1875—we have tad a series of the most horrible and most atterly abominable hurriennes of cold winds, accompanied by cold rain, hail, and sleet, and snow on the tills, productive of more misery and discomfort to man and best than mything I ever saw out of Culifornia. In exposed places in my neighborhood the crops—barley, oats, potatoes—are blown hodily out of the ground, and there are piles of sind, three feet high, blown from the plowed fields into the pasture fields. This is in San Mateo county, Cal., a portion

First lel me state that I own neither land nor lot in Cali-First let me state that I own neither land nor lot in California, and never expect to. I have no interest in praising her. Well, now, Mr. Editor, will you be jurtent enough to hear a few words from one who, it is true, is not a "Forty-niner," but has lived in California five years, and ought therefore to know something of what he speaks. But I will first observe that nearly every person in California, and I might almost say out of it, has a totally opposite opinion from "Forty-niner" concerning his statement about California and its climate, or, I should rather say climates, for it has many. I will, however, confess that its general climate, or its particular ones, are not per-

fect or faultiess, but I will maintain that they are not surpassed, if equaled, in the whole world. The climate of San Francisco in Winter is the best mean climate of the State-probably the test in the world. Upon that point there is no difference of opinion either among residents ary visitors. Its general character in the whole State, as that its Winters are warmer; the Summers, especially at night, cooler; the changes fram heat to cold not so great or so frequent; the quantities of tain less, and confined principally to the Winter and Spring months; the atmosphere drier, the cloudy days fewer; thunder, lightning, half, snow, and ice rarer; the winds more regular, and Intricances or formedos almost never occurring. Of course there is some mud in many places in the country during the rainy season or Winter. I do think, and it is generally considered, that it is one of the most healthy countries in the world. I do not believe at all, according to "Forty-niner," that rither dyspepsia or rhenmatism me prevalent; on the contrary, I think they are less common than in most intherparts of America. Compared with the Eastern States and most parts of Enrope we have here "an eleman Spring," and as to "Forty-niner" objecting to unsensounable bad strawberries, I cannot see much to complain of heemise we have four or five crops of that delicious fruit a year, lasting in plenty for four or five months, and to be obtained for at least eight months in the year. And as to the quality, that fruit is nearly all of the Longworth Prolitic surt, so highly prized at Cincinnati, and next only in flavor to McAvoy's Superior. Everybody who knows anything at all of South California knows that we have all the fruits of the temperate and semi-tropical regions in perfection, and as to both their and vegetables growing to manimoth size and lasting longer than in any other country, it is but an oft-told and veritable tale. "Forty-niner" says: "I have been in Kentucky myself, but in the month of May, and assuredly then the country and climate s

—The potato bug, which his recently appeared for the first time in many sections of the country, is reliard-shelted, striped inseet, nearly twice as large as the "lady bag," with a yellow and black spotted head, six legs, and a yellow and black striped armor. It is a native of Colurado, whence its name of Colorado beetle. It was first seen in 1820, feeding on a wild potato, but when the settlers introduced the domestic potato the bug attacked it at once. It breeds prodigiously, the female laying from 700 to 1,200 ergs, which hatch in about six days, and immediately begin work, lasts for nineteen days. Paris green is the necepted remedy for this pest.

PROFITABLE COW.—The dacksonville (Fln.) News of the 14th inst., tells of a cow in that town, belonging to A. J. Prevott, which is nine years old and gives twelve quarts of milk per day. It costs but twenty-five cents a day to keep her, and the net profits on milk about for eight years past have amounted to \$4,526. The cow has laid several fine calves besides, which have brought good prices when sold. Pretty good for a Florida cow!

The climate of South Devon, England, must be cuti the doubt the process bestowed upon it. A correspondent of the Field, writing from thence, states that as early as the 18th of April, while returning from church, a hen phensant started from the roadside and fluttered before him. While watching her movements he discovered eleven young phensants, apparently newly hatched, in the hedge near by. It is further stated that such early nidification of the pheasant is not unusual in Devon.

—A Texas correspondent writes under thile of June 6th:

"We have plenty of vegetables now. We are harvesting our wheat and laying by corn. Our wheat is very fine, and the prospects for a fruitful senson are flattering. Our cows are fat and our bees are rich, and well it may be said that Texas is a land of milk and honey. Our prairies are like anto beautiful gardens. If you were here we could have some pleasant hours killing old bucks and enting toney."

DEATH OF A VALUABLE House.—Our correspondent T.

DEATH OF A VALUABLE House.—Our correspondent T. W., writing from Leesburg, Va., June 17th, snys:—

"Messes. Sellman and Fadeley of this town host quite a valuable stallian to day, called Wombiridge. He fell dead hack of Dr. Moriarty's statiles ou the new track for training horses near the county fair grounds. One of his owners, present at the lime, thinks Woodbidge ruptured ablood vessel, as he was rearing in excitement, etc. Dr. M. thinks the fell and struck the occipital bane, causing instant teath. His senson cuded June 30th, and horse funciers think his death a loss to the county. He was from A. J. Alexander's studies, Woodford county, Ky., and had the bload of Messenger, Manularino, Abdallah, and Hamble-Ionian."

-Fifty families, principally from the New England States and New York, have settled during the past Winter on Fruitland Peninsula, in Patnam county, Fla. Water fronts on Drayton Island, Lake George, which were offered two years ago for less than \$3, are now bringing \$100 per

Sewage Grown Crops.—It is certain that all kinds of crops may be grown with sewage, so that the furner centering specific states and best sell. Nevertheless, the slaple crops must be cartle food, with occasional crops of corn; and it is also certain, from the analysis of the soil, that it has become very much vicher, and that the manning constituents of the sewage accumulated in it. Cattle should be fed on the farm, which leads to a vast increase in the production of ment and milk, the great desiderate of the population producing the sewage. Thus the system of furning must be specialized and capital concentrated, the absence of which conditions has proved a great barrier to the satisfactory practical solution of the sewage question.—

Popular Science Monthly for February.

The Rennel.

RENCH SHOW AT MINEOLA.

The Bench Show of Dogs at Minenia, held last week in connection with the fair of the Queens County Agricultulal Association, was concluded on Thursday. The entries in all classes were not as large us we expected from the proximity of the grounds to the metropolis, which is to be proximal for archeblar from the fact that owners distinct. necounted for, probably, from the fact that owners dislike to express their dags during the extreme heat. Still there were some rare specimens of both setters and pointers ou exhibition. Among the former Mr. Jenkins' recently imported real brighters. ported red frish dag Ranger was worthy of particular note.
Ohl Phil was again at the head of the pointers in the large Ohl Phil was again at the head of the pointers in the large class, and of the small, Mr. Jeukins was again successful with Sanelm. In the hall of the association was a magnificent display of fruits, vegetables, and flowers, which in point of attractiveness fairly divided the honors with the dogs. The grapes and strawherries were particularly fine. The number of the judges were as follows:

No. 2—Red Irish Setters.—First, Ranger, B. W. Jenkins, Baltimure, Mh.; second, Tom, Keuneth G. White, College Point, L. L.

No. 2—Red Irish Setters.—First, Ranger, B. W. Schrikes, Baltimure, Mil.; seeond, Tom, Keuneth G. White, College Point, L. I.

Interes.—First, Lady, Horatio M. Parkes, Bayside, L. I.; seennil, Belle, W. J. Bickerton, Jr., Flathun, L. I.

No. 3—Back and Tan Setters.—First, Shot, T. A. Jerome, Lucast Valley, L. I.; seeoud, Drake, Wm. E. Leavitt, Flushing, L. I.

Bilches.—First, Alice, W. B. Jenkins, Baltimore, Md.; second, Dinna, Chas. O'Doherty, Coram, L. I.; highly commended, Rue, J. G. Hecksha, New York.

No. 4—Setters of any Breed except Red and Black and Tan.
—First, Snowball, J. B. Finlay, Roslyn, L. I.; second, Dush, orange and white, A. C. Waddell, Newton, N. J.; highly commended, Dan, K. G. White, College Point, L. I., emmanded, Pamsh, David G. Hart, Northport, L. I., Bitches.—First, Nellie, Edmand Orgill, Brooklyn, L. I.; serund, an competitor.

No. 44—Setter Pappy of any strain one year old or under.—Lady 2d, reit, Kenneth G. White, College Point, L. I., Na 5—Pointers (large.)—First, Phil, A. C. Waddell, Newton, N. J.; second, Pero, Chas. Porter, Roslyn, L. I., (this dog was wrongly entered in No. 5) as a small pointer; he is a large pointer; highly commended, Cairo, W. E. Leavitt, Roslyn, L. I.

Bitches.—First, Belle, A. C. Waddell, Newton, N. J.; second, no roungetitor.

No. 5½—Painter (saadt).—First, Sancho, B. W. Jenkins, Baltimore, Mil.; second, no nward made.

Pitches.—First, Lilv. Edmand Orgill, Brooklyn, L. I.;

Baltimore, Mil.; second, no award made.

Bitthes—First, Lily, Edmund Orgill, Brooklyn, L. I.; second, Fanny, Clms. Porter, Roslyn, L. I.

No. 7—Cocker Spaniels.—First, Shot, Frank P. Eastman, (this dog, though awarded first prize, having no competitur, is not considered by the judges as a true cocker;) second, no competition.

ond, no competition.

Bitches.—First, Belle, A. C. Wnddell; second, Stelle, A. C. Wnddell; second, Stelle, A. C. Wnddell; second, Stelle, A. C. Wnddell; second stelle, This class, thungh unta true cocker, in the judges opinion, is highly commended as a beautiful field spaniel.

The gold pluted creaser presented by Messrs. Hall & Son

was awarded to Mr. Waddell's setter pup Bang, by Colhurn's Dush.

The prizes for shepherds' dogs were awarded, first, to Mr. Miller; seemed, to Mr. Weld. For fox hounds and heagles to Mr. D. C. Harte, of Northpurt, L. I. For dachs humls, Mr. Folke, of New York.

E. S. Carman, Ches. H. Raymond and Dr. N. Rowe of ficiated as judges.

For the Forest and Stream. LAVERACKS PURE OR FALSE.

HAVE lately noticed at the many dog shows that bave I recently been held in different parts of the country the immediate number of entries of Laverack settlers. Where did they come from, and by whom were they imported? I scarcely take up a sportsman's paper that I do not find that some one ur another bas a blue Belton or a Laverack in his kennel. The truth of the unitter is that there are only three pure Lavernek setters in America, viz.: Pride, Fairy, and Ruby, all owned by Mr. Raymond, of New Jersey. It is true that one or two gentlemen own pure Laverack pup-pies, the progeny of these dogs. I believe there are also one or two half Laveracks, and these must have been im-ported, as the get of Pride by mative setters are at present top young to enter on the show hench. I had occasion to write to Mr. Laverack asking him if he had any puppies, to which he replied as follows:

to which he replied as follows:

"I regret at present that all I have were bespoke more than twelve months ago by Messys. Price, at Bala, and Hemming. Had you applied prior I would have reserved one. The next litter I have I will bear you in mind. Any I may send I shall guarantee as pure as any he England. I have sent but three dogs in America, namely, two. Falry and Pride of the Border, to Mr. Raymond, and prior a blich, named Ruby, to Dr. dianter. I regret to state that several gentlemen from America have written me saying they have particle several pure Lavenick setters, and asking melf tever sold one pair to a Mr. Matthews. I answered them stating I never sold any but the three above mentioned. At the Crystal Palace Dog Show, held on June 2d and 3d, a son of Mr. Raymond's Pride took the first prize in a class of forty. Indeed, every prize taken had more or less of my blood. Fairy must breed well with Pride, but the bileties not pare sent to Pride, viz.; crosses, cannot be expected to produce a progeny equal to Fairy's."

Mr. Laverack continues to say:

Mr. Laverack continues to say:

Mr. Luverack continues to say:

"Once got the pure breed in your possession, slick to it, avoid crossing, and rely upon it you will find none superior, particularly for duity endurance in all localities and all weathers. Had the international match come off between English and American logs in America I feel confident English alogs would have been well betten, entirely owing to our does not having been necessioned to your game and locality, and rice versa. Your American dogs on English or Scotch moors, and on our kind of game, would be well benten. Our field Trials are no tests of the merits of dogs, being the short, ten our twenty infinites accrety at the incrits of dogs, being the short, ten our twenty infinites accrety at pairingles. All dogs require to be accustomed to the ground and game they are required for. Matches for four days, eight hours a day, on different ground and game are the only tests. Distinctly universitian, four pure bred dogs were necessioned to your game, covers, qualif. So., I

fancy they then would beat cross-treds. My great pleasure is breeding setters, and I don't approve of—crosses. The secret is, Darwin and Adams and other naturalists are right respecting natural selection of races or species; the strongest and most vigorous animals beat off the weakly, and thus continue the species. You are going on the right principle. You must preserve, otherwise in time your buffaloes, all animits and species of hints must decrease. America is a vast, grand country, but unless laws to protect game are enforced she must decline."

I write these facts in order to show that there are some

unserupulous persons palming off handsome-looking mon-grels for pure Laveracks, without doubt receiving large prices, and materially injuring the reputation of Mr. Laveruck and the Raymond kennel. I would suggest to the committees of dog shows that they should add another, and I think a most important class, to their programmes, viz.: THE CHAMPION CLASS, which should for the present take in setters of all breeds that have previously prize in lheir particular class, or, in fact, setters that have taken a prize at any recognized bench show in America, so as to har out all prize winners except as entries for the Champion Class, an honorable mention or diploma not to be considered as a prize.

JNO. M. TAYLOU.

The "Retreat," Blacks and Whites, Notioway county, Va...

A GOOD DOG BREAKER. - We have been frequently asked if we knew of a good dog breaker in the vicinity of Boston. A resident of that city, to whom we feel under no small obligation, has helped us to answer this question eategorically, and thus relieves us from any reluctance to shoulder the responsibility which we seek to avoid, of recommending such a person to our readers. The name address of the tactician to whom our friend refers is Heman F. Stranger, West Bridgewater, Mass., of whom the following "certificate of character" is furnished us:—

"A good fellow, eapital shot, and constant reader of the Forest and Stream. I have given him several dogs of my own to hreak, and have sent several friends to him, notably Wm. Jarvis, "Nimrod," of Claremont, N. II.; George Delano, of New Bedford, the importer of Doll; Mr. Penhody, of Sahm, and others, of our liest sportsmen in this vicinity. They all express perfect satisfaction.

-George H. Burnet's dog Sport was buried last week at Easton, Fa., with funeral eeremonies, aged 17 years. The cuffin was a regular casket, the grave was sodded, and a monument will be creeted over it

Sea and Biver Hishing.

FISH IN SEASON IN JULY,

Tront, Salato fontinalis.
Salmon, Salato salar
Maskenonge, Esox nobilior.
Weakileh,
Stilped Bass,
Ringfieb.

Under the head of "Game, and Fish in Season" we can only spect by in general terms the several varieties, because the laws of States vary o which that wore too to alternate bartelularize we could do no less than publish those entire sections that relate to the kinds of yame in nuestion. This would repaire a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assess them will only create confusion.

Fish in Market.—The fish market has been abundantly supplied during the past week with all the choice varie Salmou are coming in in large quantities, and selling at 25 cents per pound. Spanish mackerel from the Chesa-peake are being received in unusually large quantities they sell for 20 cents per pound. Bluefish from Newport, R. I., are very plentiful, and sell for 8 cents. Striped base of large size are selling for 18 cents per pound; halibut are in fair supply at 18 cents. Green turtle are plenty at eents; soft erabs are very scarce at \$2 per Sheepshead are very abundant, coming from Long Island, and sell for 12½ cents per pound. The common varieties of fish are abundant, and remain as last quoted.

-Mr. Blackford reports that on last Thursday a fine, plump salmon, weighing 17 pounds, was caught in a pound net about 200 feet from the railroad bridge at Sandy Hook. It seems probable that this unusual visitor was trying to make his way up the Hudson or one of the neighboring rivers when he fell a victim to the netters. We have hopes for the salmon anglers yet.

-The largest salmon in market this week weighed 41 The largest shad was received from Maine, and weighed 7‡ pounds.

-Bass fishing begins in Connecticut and Mussachusetts to day, July 1st, under the law. The bass fishing in Twin Lakes, at the northwestern corner of Connecticut, accessible by Harlem and Connectient Western Railroads, is represented as very flue. There are three good hotels in Cunaan Village, one of which, Mr. Corbiu's, is advertised in this paper. Sherman Pease, whose house is most romanti-enlly situated on the border of one of the lakes, will also take a few gentlemen boarders who are willing to rough it in semi-backwoods style. Six miles frum Canaan, at Ashley Falls, Mass., on the opposite side of Twin Lakes, is the very comfortable house of F. F. Cooper, which is advertised in this paper-a commodious farm house two miles from this lake on a hill commanding fine views. There are several streams near this locality, where a few trout

-A disinterested friend, who has regard for the comfort and pleasure of parties seeking a quiet resort for the Sum-nter season, as well as those foul of bass fishing, wishes us to recommend Liufleld Lake, a delightful sheet of pure water, within ten miles of the city of Boston, which was abundantly stocked with Oswego bass five years ago by Judge Saltonstall, who owns a country resultance in the vicinity. These fish can now be taken (after Anly 1st, when the law permits,) in great ahundame, and frequently five pounds in weight and very gamy. Unlimited fishing is invited, as this lake is now so fully stocked that it is alwsirable to diminish the number of fish, imamuch as otherwise able to diminish the number of fish, imismuch as afterwise they will prey upon each other, and in time run out. The luke is accessible by the Boston and Maine Railroad to Linfeld Hotel Station, so called, although there is an hotel there, simply a quiet country village, where board can be obtained in private families. Parties wishing information thereof can address C. K. Brailford, Esq., who, we are assured, will kindly respond to inquiries. Bouts can be had. sured, will kindly respond to inquiries. Bouts can be had. There is a pretty island in the lake, and grassy shores slope to the water, well shaded by Juxuriant elms, maples, and

-Mr. J. Reed, on the heach opposite Forked River, Barnegat Bay, has reported natching five burrels of bluefish single handed with the squid; number not taken. Burnegat Bay is literally alive with the fluny tribe. The Carman House, at Forkel River, is a capital resort for gentlemen fishermen, whose wants are carefully attended to by the proprietor, Mr. E. H. Frame. There are pickerel in Furked River that weigh two or three pounds.

-Some of the sheepshead taken in Burnegut Bay weigh

twelve pounds.

-W. S. Kimball, of Rochester, has gone to the Schoolic Lakes and remoter parts of Maine.

-Rev. Joseph T. Duryea, D. D., O. G. Walleridge and wo sons, and N. G. Stabbins and Arthur and Richard Gibb, all of Brooklyn, are spending a fertnight at the Club House, Blooming Grave Park, Pike county, Pa.

-The fishing fleet of Newburyport will not exceed twenty vessels.

-Fish, particularly scap and bluefish, were never more plenty in Buzzard's Bay than during the present senson.

-On Monday last, a sworthish, weighing 300 pounts, got in short water on the bench at Dennisport, and a man there seeing him jumped upon his back and took his life by beating the fish with a rlab on the head, after riding something less than a league,

-On Thursday Mr. John Waterhouse caught sixteen weaklish with the squid, and of which weighed nine and a half pounds—a thing hitherto unknown in these waters. Perhaps Forest and Strream can tell us whether or not it is a common occurrence elsewhere.

On Wednesday and Thursday Mr. Wallace Reeves, off Prospect, Shelter Island, took in his shure saine—about fifteen rols long—235 blumfish and weaklish, averaging three pounds each.—Greenport Fland and Field.

John N. Genin, Jr. 100k lifty, six weaklish in one hour

-40hn N. Genin, Jr., 100k llfty-six weaktish in one hour off White Hills, Shelter Island, last week Wednesday, one of which weighed eight putuals.

-The Cavier Club, of Cincinnati, have become cuthosiastic over greenheart fishing rolls, and many of the leading members have supplied themselves ar sent in orders for these rods. We used the greenheart salman rods, mule by Serilmer, of St. Inha, and found them very admirable until we substituted split hamhon us being lighter. The greenheart is admirably mapped to Western lishing.

—The Cape Ann Advertiser says the losses attending the fishing business from Glouerster this season are increasing at a fearful rate. Already there have been eighty-five lives and nine vessels lost since the 1st of January—twenty mure lives than were lost during the whole season of 1874.

lives than were lost during the whole season of 1874.

The Fishermas.—The number of fishing arrivals for the week ending June 24th was seventy-six—fifty from Georges, nine from the Bauks, and sixteen from mackereling vayages, and one salt herring fare from Magibilene Island. Amount of Georges col brought in 650,000 pounds, bull but 50,000 pounds; Bauk rod 550,000 pounds, halling 65,000 pounds. The mackerel sciners bring in light fares, atout 1,600 barrels only having arrived the past week. The Georges fares have fallen off considerably, late arrivals bringing very light fares of cold and hallbut.

Schoomer Chester R. Lawrence. Capt. Thomas F. Hodgdon, which arrived from her fourth Bank trip hist week, weighed off 128,926 pounds coultsh, and 5,000 pounds hallbut, her stock amounting to \$3,824.97. Time absent five weeks. Capt. Hodgdon's total stock un four trips is \$11, 397.93, making him thigh line" of the fleet thus fur.—Canada.—Bauerbiage, Outario, June 26th, 1875.—Mr.

Canada.—Beacebrioge, Ontario, June 26th, 1875.—Mr. Higgins, proprietor of the Queen's Hotel, in this town, last week took a 3½ pound trout from the South Muskoka River.

week took a 3½ pound trout from the South Muskoka River.

Massachusetts.—Springfield, Jane 24th, 1875.—Shad fishing with fly has been poor this year. B. and I have been up some six times. Once we eaught one each, and the remaining five times none. The law water has kept them all drawn at Willamansett, three miles below Holyake, but there are no boats or entwentences for fishing there. Have been trout fishing many times; day before vesterday I eaught 160 fifteen miles from here. There will be many partrilges and woodcock this year. I have run across many brooks of both.

W. S. W.

New Jersey.—Barnegat Talet, Kinsey's Ashiey House.— Fish scarcs for the week eming June 25th:— June 18th—J. E. Saule and T. K. Ober, Phihadelphia, 30 bluefish; C. Grim, 28 sheepshead. June 19th—Clas. Noble & Co., Phihadelphia, 23 bluefish; Howard Soper, 16 sheepshead; S. Rirlgway, 16 sheepshead; C. Grim, 10 sheepshead; S. Rirlgway, 16 sheepshead; C. Grim, 10 sheepshead; J. H. Ferris and C. A. Neuman, Stamford, Ct., 12 sheepshead; R. S. Laquier, New York, 12 sheepshead; W. Lawton, Morristowu, 14 bluefish. bluefish

June 20th—John L. Smith, John Lamond, Philadelphia, 8 sheepshend; George Knight, Otto Acker, Philadelphia, 10 sheepshead; C. Nuhle & Co., 26 bluefish, June 21st—R. S. Laquier, New York, 12 sheepshead; J. C. Coullaird and brother, 13 bluefish.

Cal. Robert Orr, Chas. Close, James Tay, Christopher Marian, F. Caswell, Philadelphia, 49 bluefish; Dr. Bennett, 18 sheepsheud.

June 24th—Blowing a gale from south and; an Idaefishing; sivepsheaf from 3 to 5 per locat.

**Corman Hause, Facket River, Occur County, N. J., June 27th, 1875.—The past week has been a remarkably pour one for fish of all kinds. The bluelish appear to be gorged with food. Weakfish are coming now, several having herm taken 10-day. This season is what a sportsman generally terms "between wind and water," or, in other words, just hetween the first run of fish and the general arrival of all kinds for the Summer. We expect better luck next week.

E. H. F.
Philadelphia, June 28th, 1875.—"I wind to know,"
"Now den tell," "Say it agin." Mr. Irving L. Bennin in
Frankst and Strilam, issue of June 24th, tells some wondwful things of the mescalonge, which he seems to confimily with the great northern pike or pickergl. Says it
tanks with the salmon and trout in excellence as food; says
one of six pounds is equal in gainy qualities to a salmon of
twenty pounds," (who e-cwf) and is known to lenge "fifteen
feet above the water and slake his hyad like a mad dull."
Now, won't Mr. Beman come down a little? Won't by full
a foot or two?

Thaddeus Norris.

TROUT FISHING AT BAYFIELD, LAKE SUPERIOR.

BAYFIELD, Wis., May 28th, 1875.

Bayfillia, Wis., May 28th, 1875.

By general consent Bayfield is the most attractive point on Lake Superior for pleasure and health seekers. Bettoliful and justimesquely situated befund the Apostle Islands, which land-lock is cust of over fifty miles, where boating in small hoats is a matter of outro sufety, and with the incomparable healthfolies of climite, pure wider, and delicious field of various kinds combine in affording attractions that can only be appreclated by those enjoying them. The special feature among the uttractions of Bayfield is the manerons from streams and the front fishing along the coast in the vicinity. There are between twenty-live and fifty streams running into the lake within the limits of the coast protected by the islands, which seem to possess exhaustless numbers of brook front, and in addition the fishing along the coast for the whode allistance (album fifty wites) is unexcelled. The "rock fishing," as this coast fishing to term d, has afforded your correspondent more genuine sport limit he received from all other sources combined. This is said, too, with a two years' experience in the Rocky Monatains with ritle and rod in "forest and stream" of thin wild region, where only the feet of hautsum and saving have pressed the rocks fished wastes. I cannot gw hat the fields to give your readers a description of the feelings of pleasure experienced in taking clighty troot, averaging two pounds each, in a single day where there was an open field for fish and feherman to each display their dexiculty and skill.

Boats have almost daily from Buffalo, Cleveland, Detroit, and Chicago for this place; also froin Dahith, which is reached, by rall, 120. St

in taking eighty troot, averaging two pointals each, in a shigle day where there was an open field for fish and fisherman to each display liber dexicity and skill.

Boats have almost duity from Beffalo, Cleveland, Detroit, and Chicago for this place; also from Dalith, which is reached by rail 192. St. Pint. The Wisconsin Control from Milwakee to Ashkund (eighteen mive distant from Bayfield) has not yet been completed clear through, and is, therefore, not in a condition for persons to reach here by that rome. The accommodations here have never been equal to the demand. This session, however, emissilerable additional accommodations have been provided by several boarding houses being filted up. J. B. Bono can engage that yet and in the same; N. La Bobin four or five; William Herbert seven or eight; M. Milligun, on the fled Chif Indian Reservation, where he is beautifully located, can accommodate several, and so can Col. E. Henderson on a furm vight miles from bere, and where one of the fluest front streams we be towed in any country runs through the yard. These are all, in addition to Smith's Hotel, which can accommodate advertion one handred persons. We have here three steam yachts that can be hired at any time at low rates, in addition to vay nomber of small boats subtable for boaling and fishing porpuese. The yachts are owned by How. S. S. Vanghy, vopt. S. W. Tanner, and Capt. James Chapiman. The latter gentlyman is the "crack fisherman" of this section, and the lines are comparatively without number that the writer hiereof and "Chap" have vid with each other, with a zeal worthy the cause of the statesman or philantbronish, to outdo each other in recling in the speckled beautys. It is entitled to the prize Issae H. Wing, Esq., Receiver of the United States Land Office, is no "clouch" of a fisherman, and rounds up his pile at sunset to proportions that the up the bite of jealousy. Capt. T. J. L. Tyler is preferation, and this is long, jointless bamboo manages to "make it hot" for the "hoys." The Bayfield Sport m

Dachting and Boating.

All communications from Secretaries and friends should be matted no later than Monday in each meek.

HIGH WATER. FOR THE WEEK

Date.	Boston. New York. Churleston
Inly 1	15, M,

The Seawanhaka Schooner Race.—When at the early hour of seven o'chock the members of the Seawanhaka Yacht Chib and their guests assymbled on board the good stomac Cyclops, at the Baltery, there was but little appearance of their long-loaked-lor schooner regulta proving the success it infterward locame. Arrived at Staten Island the Ariel and Peerless were picked up and towed to the Hunk, where the other entired vachts were found. With the coasent of the owners of the Idler and Palmer, the only two yachts entired in the first class, the Counct, though only measuring 82 feet, was rated at 90 feet and put in that class. The entires in the second class were the Triton, Peerless, Restless, Meta, and Ariel. The start was from bnoy Nw. 5, and the course twenty nailes to windward from that point. The Polover was the first to cross the line at 12h, 30m, 2s., followed by the others in quick succession. The wind was now blowing with a freshness which give

the yachts all they wanted, and song canvas was the order of the day. The Cyclops steamed off to windward until she had logged the required twenty miles, and ther anchoral to await the meers. They rounded her in the following reduce.

TOWING DIRECT.			74 41
	II. M. S. J.		M. S.
Palmer,	 3 21 Mtl Promiesa 	 - 1	41 33
Comet	4 12 40 biller	. 4	69 11
Restless	t 11 105 Shria	 . 5	DU 46

The Arivi and Triton had found the heavy sea too much for them and returned to the Hook. By the time the Cycliqs had picked up her anchor the yachts had obtained such a start that she could not eatth up with them, and the yachts were obliged to take their town time. The Palmer wins the prize in the first class, and the Peerless in the

second.

Atlantic Yapite Chin Regarta.—This interesting event was suited on Thesday of last week, but our report came to lund too late for that issue of our paper. The day, as far as wind was concerned, was almost more than endly the smaller yneits from proceeding further than the Smithwest Spit. The schooners and the Uniling of the first-class sharps runnded the lightship, and the run home was very interesting. The following is the result as for as the yneits which completed the runnear exactence:—

class stoops; G. B. Dean in the second class sloops, and Tough in the third class.

New Jersey Yacur Club.—This flourishing club also held their regata on Tuesday. The course was from a stakebout anchored off the Club House to and around a stakebout anchored off Spuyten Duyvil, turning the same from east to west, and thence buck to the home stakeboat. The following is the order in which the yachts arrived at the home stakebout:—

Yachi.	11.	M.	S.I Taclit.	Π.	M.	8.
Employ	19	30	to Engenia		00	417
Chariw	. 2	E3	20 Ripide		02	30
Geo. W. Dilks						
Spray	2	518	40 Daviel Doe		15	45
Soules						

The winners were as follows:—First-class cabin sloops, Emmu; second-class cabin sloops, Annie M., (there being no other yacht in the class;) first-class open sloops, Charm; second-class open sloops, George W. Dilks.

Id—The second annual regatla of the Central Hudson Yacht club will be sailed to-day over the club course at New Hamburg. The prizes, furnished by Messrs. Starr & Mirrous, two hambsome specimens of silverware for each class. The following are the entries already reported:—

PHEST PLASS-25 PRET AND OVER.		
Name, rig, and place. Divice Fe	rel,	In.
Lorelet Lion , Newburg C. Fanik Brown		44
Emily-schnoner, Hyde Park N. P. Bogers	13	-1

Usprey-cas, N. Humburgh, J. II, Weildle	19	9

—Very praiseworthy in the owner of the Comet to put his schooner in the first class in order to make a race in the Seawanhaka regulta, but insfortunate as far as winning was concerned. The Palmer was too many guns for her. It would have been pleasant to have seen the Magic and Conet together on Thursday.

—Sag Ifurbor is to have a gala day on the 5th instant—a bool race, the race, foot race, bug race, greased hig, an artifon, dinner, and a regalla. A very elogont silver ara, solver, goolet, and howl have been procured in New York by Mr. Benj. F. Hunting, of Sag Ifurbor, to be competed for by friends of the steamboats Escort and W. W. Coit, who will deposit ballots marked with the natures of those vessels respectively, paying ten cents for each vote. The balloting will close at eleven P. M. on the 5th.

—There will be the usual rowing regatta on the Charles River rearise, Boston, on July 5th, when \$675 in prizes will be distributed in five mees for single and double scalls, four coared and working hoats. Entries free, to be made to J. M. Bugbee, City Hull, Boston.

There will also be a sayling regatta in Roston Harbor on the same day and under the same anspives, when a similar amount will be distributed. The ruces my open to all yachts, and there is also a special race for fishing boats measuring from twenty-five to farty feet. Entries to be under as above.

-Glonevster, Mass., is to have a regula this month

EASTERN YACHT CLUB REGATTA

CEBMI CLIFFS, SWAMPSCOTT, June 24d, 1875.

CERMI CLIFFS, SWAMPSCOTT, June 22d, 1875.

EDITOR FOREST AND STREAM:—

The annual regain of the Eastern Yachi Clinh has just been sailed, and hast year's victors still keep their place at the head of the fleet. The waving opened with a very light southwest alr, which have on providingly for some time, had just before the start it breezed up a field, and after the yachis had rounded Hulf Way Rock, shifted a little to the southward and stendly increased till, on the buttle stretch, some of the boats had to take in halloon jils in order to save their epors. The steamer John Romer, with the members and halles about d, and the Pierson with the Regaith Camuditee, were promptly on hand in the starting point in Sciencestellary. The following is a list of the entries:—

The corrected time is calculated in each class separately, that of the largest bort in each class fieling the same as her actual time. The prizes were taken by the livelying Feerbess and Mahans, the prize for best time belog saveit to the viole by the Hulleyon inking another prize. After crossing the bouse line, the valids elvivel for lime; but before leaving, Foam salled close wround the whater and gave her three good cheers. The club share on its animal critise to the elistward on the 8th of July, when lively times are expected.

BLUV WITH A GOLD CASTLE.

—One of those incidents which will sometimes occur even with the best regulated newspapers displaced a portion of our teport of the New York Yucht Club regarda, in our last issue, so that it appeared beneath the conclusion of the Brooklyn report. The gullant award of the Unitine has written to us protesting agrinst being "drowned," as he chains we did not notice his yucht after the start. The Undruc's return is timed in our report, with the White Wing and Salle, and if we did not give sufficient stress to to the placky manner in which he suffer over the longer emusse in the light ship, and carried off the prize in his class, it was for want of space and not because he did not deserve full cononendation,

YACHT RACE ON BARNEGAT BAY.—The ninth annual regatts of the Toms River Yacht Club took place on Barneght Bay, New Jersey, Thursday, June 24th. There were thirteen entries, names and owners as follows:—

T. Predmore

Royer West Cheek.

Royer B. Woodward,
Juhn A. Weart.

Bart Seamon.

A good start was made by all, the Lulu getting under way first, closely followed by the Charrie Hooper and and Vapor. The Legal Tender and Haze were delayed by their anchors forling, the former having to aloudon hers. The course was from stakes placed off Turtle Island, to and around the stakehout unchored off Cox's Point, which was rounded from west to cast, and thence back again to the home stake, a distance of twenty miles. On nearing the slakehout the Charrie Hooper passed the Lulu and took the lead, which she kept through the race. The Vapor was caught several times in nets, which caused her to full behind. The most exciting part of the race was on the homestreleh. Going down the yachts sailed on the wind, which was rather light. After passing the stakeboat the wind freshenced up, and before the yachts had got half way home it blew quite a stiff breeze, and kicked up a heavy sea. Several of the yachts had all they wanted, and were kept basy in holsting and lawering sail. They pussed the home stakes in the fedlawing order: Charrie Hooper, Rover, Lulu, Oscar Robinson, Mist, Elizabeth, Legal Tender, Vapor, Ifaze, Idle Hour. The time of the Ella. J. Weart and Minnie King was not taken, they being so for behind that the judges left before their arrival. The time allowance was two minntes per foul, which, after heing deducted from regular time, left the winners and prizes as follows: Lulu, challenge cup, 3:49:711; Rover, silver watch, 3:48:06; Charrie Hooper, one dozen silver spoons, 3:46; Oscar Robinson, silver custor, 3:55:40; Mist, silver butter dish, 3:6:56‡; Vupor, silver molasses cup, 3:57:45.

We are indebted to our correspondent "Squid" for another interesting report of the above regattu.

Dounle Scull, Race on the Harlarm.—The match hetween Frank E. Yates and W. B. Curtis on the one side.

other interesting report of the above regath.

Double Schle Race on the Harlem.—The match between Frink E. Yites and W. B. Chris on the one side, and R. B. Bhinbridge and Edward Smith on the other, was rowed on Thursday last. The course was from Gale's lumber dock, at Morrisania, to Morris' duck—a distance of 40 feel over three miles. For a dozen lengths or so the boats pulled abreast, but at 200 yards from the start the Smith hoat had gained a lend of half a length. Unfortunately some of those ignoramness who are always getting in the way pulled a row boat directly in the course of the shells, and the bow of Smith's boat coming in contact with it the lighter crift was badly injured. Carris and Yates gained fully ten lengths by the accident, and although their apponents pulled a game stern race, the former made their first mile, with about five lengths to spare, in 5.08, finishing the serond mile with a lead of six lengths in 13:16, winning the race in 19:52\frac{1}{2}, the time of Smith and Bainbridge being 20:10\frac{1}{2}.

—A match occurred on the Harlem River on Wednesday last between Frank E. Yales, of the New York Athletic Club, and Richard Bainbridge, of the Atlanta Roat Club, for the single scull championship. The match was won by Buinbridge in 22m. 48‡s. Yates' time, 23m. 10‡s. Distance, three miles.

Buinbridge in 22m. 484s. Yates' time, 23m. 194s. Distance, three miles.

11ARLEM REBATTA.—The third annual regula of the Harlem Regatu Association was held on the Harlem River on Saturday last. Five races and heats were rowed before a large concourse of spectators. R. B. Bainbridge and W. B. Cartls computed in the first heat far single scalls. The rowers had a fair tide led strong wind against them. Buth rawed in good form, but Bainbridge was muster of the situation, and limished the mile several lengths ahead in 7:07. Willour faceu of the New York Rowing Club, and Frank E. Yist, or the New York Athletic Club, contested the second heat. Yntes obtained in good lead at the slart, and kept it to the end, winning in 6:503. In the pair-cared race, F. G. Brown and J. A. Walker, of the Nassans, rowed against P. A. Cartis, Jr., and W. E. McCready, of the New York Athletic Club. The Nassans pair had the lest of the short, but were soon passed by the Athletics. The latter, however, did not long retain their advantage, as the Nassans settled steadily to their work, and, passing their opponents, won by a length and a ladf in 6:47. The Athletics had their revenge in the four-oured race, for which the fullowing crews reported: New York Athletic Club—R. W. Ruthbone, bow; S. L. Mack, H. C. West, C. H. Cone, struke. Harlem Rowing Club—H. M. Kunpp, bow; T. R. Kendur, A. G. Scrantan, C. W. Thruer, stroke. They got an excellent send off, the Athletic crew rowing in splendid style, and obtained a good lead; but then the Harlem crew increased the gap to a few feet, at which they held their opponent to the third quarler, when the Athletic crew again draw wway, finishing the lirst mile in 5:55, and leading their competitors through the centre arch of Macomb's Dam bridge by a length and a half. From this point to the finish the Athletics had it their own way, despite some good efforts on the part of the Harlem crew, the latter being defented by four lengths. The time of the Athletics was 12:40. The concluding heat of the single scalls

Ins ontrigger,
—The New York Rowing Club decided two events on Wednesday. The first, the contest among the senior scullers for the Lehmd medal, moveheld by R. W. Schnek, brought but two to the starting point—the holder and Frank Ellison. Edison won by three lengths in 11m. 444s.; distance a little short of one and a half miles. The second event was the junior scullers' race, for which three contended. These were Charles Ingersoll, John McKinn, and Charles Leland. The course was from Plorence's dock to the powder schoouer—one mile. Leland won by three and a ball lengths. No reliable time can be given.

—The 21st of the being the 126th auniversary of the settlement of Halifax, N. S., it was a general holiday, and was celebrated by a great variety of amasements. A salinte of 126 gans was fined in the morning, hells were rung, base hall nonlehes, horse races and foot races took place, and there was a very interesting regath for hoats and yachts.

The first of the regaths was between five racing whaters, for \$20 and \$8, manued by yanths of eightern years and number, and was won by the Crown Prince, first; Bluenose, second, Victoria, third; Mayflower, fourth; and Blue Bell, fifth.

ninher, and was wan by the Criwn Prince, tirst; Blaenose, second, Victoria, third; Mayflower, fourth; and Blue Bell, fifth.

The second race was a scall race for \$20 and \$5, over course No. 2. George Lavell, E. Walsh, and John Brown (cansin to George Brown), were the contestants in this race, Lavett came in first, Walsh second, and Brown last, the latter having made a mistake as to the turning lood.

Third race for man-of-war culters, prizes \$20 and \$3, with three entries from 11. M. S. Bellerophon and two from the Sea Gall. Result—1st, first enter of Bellerophon; 2d, first enter of Sea Gall; 3d, second enter Sea Gall.

The fourth vace on the programme (for wherries) did not take place, one of the two boats entered (a double scull) heing disquatified.

In the merchant ships' jolly boats, only one prize was offered (\$10), which was wan by the Fanny M. Carvell, Wm. DeWulfe, which took the lead at starting and maintained it; the Seathmal, J. A. Campbell, canne in second, and the Start, R. J. Dalrymple, third.

The race between Government houts, pulled by soldiers, was a very well contested one. For this race prizes of \$12 and \$6 were offered. Three entries. Result—Black Watch first, True Blue second, and Half and Half third.

The next event was a race between the Ross-Foley crew and the Yanng-Parker crew, in lapstreak boats. The race was bravely contested, and was finally handsomely wou by the Ross-Foley crew.

Five dingies started for the next race, the Bellerophon's hout taking the prize, \$5, and a dingy belonging to the Pyranns coming in second.

Two competitors from H. M. Navy entered for the tub race. The Bhenose deteated the Skylark, and took the prize of \$5.

The race for sailing boats was started about ten minutes after twelve. The boats came in as follows: 'The Benice, J. A. Butler, took first prize, \$40; the Circe, Brookfield, won the second prize of \$20; and after these came in the Little Annie, J. Fraser, and the Minnie, L. Briand, The yacht races for the challenge caps of the Royal Halifax Yacht Club

Pelvel, Vice Com. Black. 3 9 0 Squirrel, R. F. Armstrong. 3 5 4 Nymphu, S. A. White. 8 3 0 0 Alabatross, D. Cronan. . . . 3 14 20

The Whisper gave up, having carried away her jih stay. In the second class, tour yachts started, and came in as follows:—

......3 19 45 Spray, H St G. Twinlag...3 31 30

The Kate, Rear Com. Hutchins, was not timed.
Only two yachts started in the third class, viz., the Wavelet, Rolls. Macdonald, and Iris, J. W. Harvey. Their time is as follows:—

FIRST ANNUAL REGATTA OF MALTA BOAT CLUB.

PHILADELPHIA, Jane 28th, 1875.

PHILADELPHIA, Jane 28th, 1875.

EDITOR FOREST AND STREAM:—

OR Saturday, 26th, the Multi Club held Their first annual regata, and its success is very creditable in their officers and members. There were four entries low singles, two for doubles, and two for six-oured barges, of these but one fulfeit to come into position.—Wm. Hopper—entered for singles. Com. Junes M. Ferguson mas chosen umpire, and Vice Com. Juliu Hockley, Jv., and Mr. J. Gillingham thockeepers.

The first event mas the single send! race, one mile straightamay, from Laurel Hill to Rockland, for club limitge (challenge.) 1. A. H. Lane, ivest, color red; 2. John P. Huneker, centre, white; 3. C. E. H. Brelsfind, east, blue.

The ampire had only given the cantion, "Are you ready?" when away

fard, east, blue.

The ampire had only given the cantion, "Are you ready?" when away they went, and, bring even, he let them go. Linue fell off at once, Ituneker taking a lend, working very hand. Breisfurd rowing with appurent ease lapped his lender for half a mile, when Huncker went away, winning about seven lengths in 8m, 41s. Breisfurd bin, 9s.

they wenl, and, bring even, he let them go, Lune fell off at once thunker knowing verth apparent case lapted his lender for half a mile, when Huncker went away, winning about a seven lengths in Sm. 418. Hrelsford ham, Das, The second event was the double scall Tace, same course, for ribp prizo, it pair a finance.

1. Miniculatus—E. Rilling, etroker L. Hoppey, bow; J. Bedichimer, C. Vinnows—C. E. H. Bredsford, stroke; J. Dedichimer, C. Vinnows—White lead, in their opponents had no very large three strokes and the strokes and the strokes and change in the vicinity of Fort Standard College of the College

Answers Co Correspondents.

- S. M. H., M. D., Monmooth, III.—Copy of by-laws sent by mail.

 A. B.—The "Shot Gun and Sporting Rifle," by Shenchenge, is out of polet.

- W. W. W., Broadway.—Where cau I get a good book on like rave of rubbits, the different breeds, &c.? Ans. "Rabbit Book for the Many," or Rement's "Rabbit Fancier," price 30 cents. Address Joseph M. Wade, 39 North Ninth street, Philadelphia, Pa.
 W. L. T., Swampscott.—Can you Inform me what the laws of the State of New York are concerning the shooting of birds for scientific purposes; here we can do it with a peemli from the town anthorities? Ans. Birds can be shot for scientific purposes.
- CAPTAIN, N. Y.—What is the total amount of milltin in the United States, New York State, and New York elly? Ans. According to the U.S. Army Register the total number of militin in the United States in 153,320; In the State of New York, 21,327; city not given, probably not over 5,100.
- F. P. M., New Haven —Piesse lell me the best way lo carry pestells, and which is the best kind of case, belt or vest? Ans. Spimen differ as to the best arrangement for carrying shells. See vertisement in mother column.
- D. L., Lancuster, Pa.—Please inform me who imported "Planket," and who is the present owner; also his address, if in your possession? Ans. We are informed that Dr. Goldenilli, of Ruthind, Vt., who is near in Europe, has purchased Planket, and intends to bring him to this country.
- othery.

 J. R. C., dersey City.—Will you please tell me what time the law is a conditional and pariridge in New Jersey? Ans. The time for shooting uait is between the lattlay of Nov, and the lattlay of Jan. For ruffed rouse (called pariridge or pheasant) between the 1st of Oct. and 15th of
- tecamber.

 J. G. A., Aurora.—In your premiums given to those who get up clubs an the weight and the size of the gum be sent to suit the agent, and see a person have to be a subscriber to get up clubs? Ans. You will of the restricted to any particular weight or size of gun, A non-subcriber can get up clubs.
- C. G. W., New York.—Can you give me any information about the country around Calisle, Clinton country, III.; whether it is headily on the river, and how the country is settled there? Where can light a sample of Dillmar powder? Ans. The country around Carlisle is prefly well settled and considered healthy. Address Carl Ditmar, Naponsett, Mays.
- ponsett, Mass.

 S. R., New York.—Cun you give me some information as to the kinds of fish that can be enought in Lake George, and the hooks and lines necessary, and whether liere is any shouting in the neighborhood? Ans. Black loss, rock hass, perch, pickerel, and take trout. Use minimize and Bucl, McHarg, or Chipman spinning tarkle. The country all around Lake George is wild, and of coarse affords good shooting.

 R. R., New York.—Will you be kind enough to tell me if the Stony Lake region of Canada is a good place to spend iron weeks in the Fall, building, and what game can be shot; also whall line of boals run from Rochester, N. Y., to Port Hope, Canada? Ans. Excellent game and fish country. For fullest information see Forest and Sturaa, April 234, page 164. Boats daily from Charlotte (port of Rochester) to Port Hope, and also via Toronto. and also via Toronto

and also via Toronto.

Dave, Hobokus.—We have published recipes for making varmals for fishing rods several times, but herewith add another, which we are assured is better than all the rest: Take 3 oz. best gum shellad, If az. gum benzolu, § oz. gum samilanach, § oz. gum mastic, I quart alcohol 50 per cent, proof; pulverize separately and add the alcohol. Put in a black bottle, set in the sun, shake often, then pour off. If his black, add alcohol; if too thin, take out the cork. Apply with linen rug.

- add alcohol; if 100 thin, take out the cork. Apply with linen ring.

 S. W., C. D., Philindelphis.—Please inform me at what age a slut (setter) should be spayed, and if it is well to let them dist have a litter of jups? Do you think the operation impairs the assimiliess of the dog? Ana. The sconer a pup is spayed after it is four weeks old the better. If the operation is performed after they are grown up, it generally energates them and their usefulness is impaired. Our deld editor has frequently had them spayed at four weeks old, and always with good results, and considers a birth thus spayed a very desirable dog to have when not required for stock purposes.
- F. W. C., Paterson, N. J.—Will you please ask some of your subsertibers in Southern California to send us some account of that section of the country—its climate and productions, also the character of its people, its game and fish, and the price of land and anything else that may occur to the writer? Ans. If F. W. C. will look under the beast of Woodland Furm and Garden in the present lesue of our paper, he will find an article on this climate of California, and for a detailed description of Southern California, its people, climate and products, new ould refer him to the sketches entitled "Santa Morica," and "Vernon," in Nos. 11, 13, and 25, of Vol. 3.
- 25, of Yol. 3.

 2. Messiter, West Exeter, England.—World you kindly lell me what you think is the best functing ground in America for elk and brar? Do you know anything of the country in the neighborhood of Fort Stanton, New Mexico? Ans. The vicinity of Fort Stanton is beautifully remained and rugged, well limbered and well watered, abounding in trout, deer, black and clamamon bents, and small game. The post lies between the Organ and White Monaidhi ranges. No elk in this locality. Elk range from Northwestern Minnesola to Washington Territory. Terhaps the best elk country is an the Laramie Plaites, in the vicinity of Fort Sannders, reached via Union Paellic Rallroad.

INDEPE DENCE DAY.

THE usual din of guns, large and small, and the cracking of those infernal machines, yelept fire crackers, invented by the Chiuamen for the propitiation of evil spirits, will on Sunday morning next usher in the dawn of the ninety ninth anniversary of American Independence. The real jubilee, however, will be postponed until Monday as far as the boys and those unfortunates who may by necessity he forced to remain in the city, are concerned. The great multitude will take advantage of the two holidays coming together, to get more than the usual Sunday allowance of fresh air and amusement. The fasbionable watering places will be crowded, but the knowing ones will eschew fashion and fireworks and go after bluefish on the Great South Bay or Barnegat Inlet, or beat the swales and swamps of New Jersey and Pennsylvania for the wary woodcock

-The subject of running the hotels at the White Mountains and other popular resorts on the Europeau plan is being agitated. This European plan is simply to pay for your room and at the table pay for such meals as you order. It would give much better satisfaction to the mader. It would give much better satisfaction to the ma-jority of travelers, who do not average a meal a day, as they are continually absent on excursious and tours of in-vestigation in the neighborhood, sometimes camping out for days together. Those of slender means could afford to go oftener and stop longer,

CANADIAN GUIDES FOR SPORTSMEN

T IIIS paper having alluded incidentally to the scarcity of guides in the Muskoka district of Canada, whither several of our readers weut last year, the Orilliu, Ontario, Expositor calls upon the young men of Muskoka to acquaint themselves with the geography and fannu of the district so as to qualify themselves for duties which may readily be made remunerative in the Summer and Autumn months. We might add the Winter months also, for we have frequent inquiries relative to the fur bearing resources of this region of Canada, and whether it would pay to trap there.

The young backwoodsmen of Canada would be surprised to learn how profitable the occupation of guide may be made (which we hope they will not, at present,) and to know that in the Adiroudacks alone the number of professional guides, independent and steadily employed, is Three Hundred and Fifteen. At least, this is the number given in Wallace's New Guide to the Adirondacks, and we infer that the true number is really much greater. There are guides also at Mooschead Lake, Rangely, Murquette, and all the principal hunting and fishing resorts of the United States—good and intelligent guides, too, many of them. It is surprising how much information that is of service in surveying, lumbering, agriculture, and geology, and other noble departments of industry, can be gathered up by a man serving in the simple capacity of sportsman's gnide. His duties fit him for a dozen conditions of a useful life. They make him a good cook, tailor, carpenter, sailor, axeman, fisherman and hunter. The vicissitudes of satior, axeman, nesterman and hunter. The vicissitudes of his life constantly teach him expedients, and make him self-reliant and brave. They make a mun of him. Negatively, his occupation keeps him out of temptation and mischief, It is an honorable occupation. Should the young, hardy, hard-fisted men of Muskoka elect to follow the very sensible and seasonable advice of the Orillia Francier that will be the seasonable. advice of the Orillia Expositor, they will, by the adoption of their new vocation, acquire more knowledge of their own district than they could in any other way, and thus unwittingly become valued, useful, and well informed members of the community, who would be always called upon for counsel, and to take active part as leading men in

The wages of guides where boats are furnished, is generally \$2 50 per day in the United States; without boat erally \$2 50 per day in the United States; without boat \$1 50. A guide is required to make camp, construct shanty, cook, row or paddle, cut firewood, bring water, and perform such general duties and labors for his employer as he would for himself, provided he were alone and in similar circumstances. He must be a good guide indeed who possesses these several and diverse attributes and can employ them without complaint or show of impatience.

We perceive that settlers in Muskoka have been disappointed as to its quality as a farming country, and that local papers advise them to turn their attention to grazing. It may be that guiding would prove more profitable still. At all events, the business might be employed conjointly with that of the herdsman and stock raiser.

ANNUAL CALEDONIAN CONVENTION.

OR the sixth time the Scotsmen resident upon this continent and in affiliation with the North American United Caledonian Association will, on the 21st inst, assemble in convention. The former meetings of the association have been held in this city, Montreal, Philadelphia, Auburn, and this year it will convene at Toronto, Onlario. The occasion is the most important in the Caledonian It brings together members of thirty-one affiliated clubs and societies, which have a membership of upward of four thousand, and is regarded as the grand annual "gathering of the clans." The President of the association is a kind of little "Lord Mogul" to the Scotsmen of

A few words in regard to the history and objects of the association will at present be seasonable and heneficial.
The association was organized on the 31st day of August,
1870, under the Presidency of Col. A. A. Stevenson, of Mon-The objects of the organization are a matter of in ference, and are not stated in either its constitution or by-laws. The power conferred under Article VI. of the former would appear to be the sole constitutional authority of any importance, heyond merely formal privileges, vested in the association. The article referred to reads as follows:—"The rules of games adopted by this association shall be binding upon all clubs and societies connected with it." In exercising this authority the N. A. U. C. A. has performed a sergical which has been fully seen with it." In exercising this authority the N. A. U. C. A. has performed a service which has been fully recognized both in the columns of Forest and Stream and among Caledonians everywhere. A further clue to the sims of the founders of the body may be obtained from the first by-law, which reads as follows:—"No club or society shall be eligible for affiliation with the North American United Caledonian Association execut such as are compassed on Caledonian Association except such as are composed en-tirely of Scotsmen and their descendants, and organized for the encouragement and practice of Scottish games, and the promotion of a taste for Scottish literature, poetry, and the promotion of a taste for Scottish Interature, poetry, and song." While recognizing the latter part of the constitution of its members, the association exercises no active surveillance over the cultivation of Caledonian intellect. It has been repeatedly urged to do so, and especially by the Scotch papers of this city, but has hitherto restricted its attention to the development of Caledonian musclo. The fact would almost appear to have been overlooked that to

do more, and arrange a series of Winter feetures or literary amusements, would be altogether unconstitutional. For this and for the other reason above alluded to, that there is no exact definition in the constitution of the association of its objects, it seems eminently desirable that that doenment should be subjected to revision. It is true that the central Scottish authority should possess and exercise some right of dictating to local clubs a course by which they may purvey some kind of mental publilum to the country. men of Scott, Burus, Stewart, Hamilton, Mucaulay, Miller,

In regard to the manner in which games are conducted there are only two suggestions at present occurring, which ought to receive the attention of the convention. It was pointed out in the article No. 5 apon Scottish games in these columns, that from the disparity between the fents of the same athletes at different places it seemed doubtful if the rule regarding the weights of the hammers stones were more than nominally observed. Any doubt upon this ground might be obvinted by the Insertion of up injunction that these implements he weighed in presence of judges at every eelebration of Highland games.

It seems also very desirable that some more fully de-tailed code of laws should be drawn up for the regulation of the quoiting match. That adopted by the Grand National Curling Club would be at least a good basis.

It is also somewhat strange that no official record is published of the events of the Caledonian year. For six years the annual of the Grand National Carling Club las been issued, and hus conveyed to curlers all over the country full information of the doings of their own and other clubs. There are many Caledonians who would gladly welcome the appearance of a similar volume upon the affairs of Scottish societies. It would supply a remedy for a want long felt, and its publication could scarcety do otherwise than put a handsome surplus into the treasury of

the association.

Further suggestions are at present withheld. The Toronto gathering, held under the suspices of the local club, whose reputation for generosity and liberality is a sufficient guarantee to every visitor of a warm reception, is certain to be a success.

The following are the clubs at present on the roll:—Montreal, New York, Philadelphin, Boston, Scranton, St. Cutharines, Ont., Hudson county, N. J., Auhurn, Pitiston, Dearines, Ont., Hudson county, R. J., Rundin, Philston, Detroit, Newark, Troy and Cohoes, Syracuse, Sun Francisco, Hardord, Newton, Glengurry, Brooklyn, Hazieton, New Haven, Bridgeport, Toronto, Westerly, Paterson, Wushington, Baltimore, Buffalo, South Adams, Albuny, Ilmilianton, Baltimore, Buffalo, South Adams, Albuny, Ilmilianton, Buffalo, Buffalo, South Adams, Albuny, Ilmilianton, Buffalo, South Adams, Buffalo, South B ton, Saginaw Valley. Several additions are expected this

The day following the convention will be devoted to au international tournament, in which the usual programme of Higaland games will be gone through. The best uthletes of America and Canada are expected to be present.

DISAPPEARANCE OF FISH AROUND NEW YORK - DESTRUCTION OF NEW YORK - D NEIGHBORHOOD OYSTER BEDS THE CAUSE.

One principal cause of the lamentable fact that the waters of the Hudson River no longer contain, as of yore, a multitude of bass and weakish to mirred amatour fishermen to our shores, and furnish sport to thase picalorinily inclined, is that for many years past hystermen from the southern countles of the State have been in the labil to dreaging or optices in the challow waters along the shore, removing them to other parts of the State for the purpose of planting, thus depraying the dish of their astural food—the spawn of the oyster. — Yonkers Statesman.

We alinded to this matter in a recent number of Forest and Statesman, and it has since been present as

AND STREAM, and it has since been pressed upon our attention by Dr. Chas. W. Torrey, an officer of the Yonkers Sportsmen's Club, who has interested himself in put ting a stop to the destruction, and arresting and prosecu-ting those who take oysters contrary to law. So fully con-vinced were our law makers of the past generation of the importance of preserving these oyster beds, that in 1851 they prohibited the taking of oysters from any of the waters in the county of Westchester during July and August under penalty of \$25 and an additional sum equal August under penalty of \$25 and an additional sum equal to the value of the oysters taken. The law as it now stands (passed November, 1853,) permits the inhabitants of Westehester to eatch oysters to plant in their own waters, but all other persons are fined \$100 and the value of all oysters taken. Nevertheless, the law has been steadily violated up to the middle of last June, when the Yonkers Club, assisted by deputy sheriffs, made several arrests, after which the depredators thought it prudent to move off. Nine private vessels were counted, in one morning, between Mount St. Vincent and Spuyten Duyvil, with their small boats digging for oysters. Now that it has become evident that there is a prohibitory law for Westehester county, and that it will be enforced in the vicinity of Yonkers, the theatre of digging operations has been changed Yonkers, the theatre of digging operations has been changed to the vicinity of Turrytown and Spuyten Duyvil, above and below. At the former place no less than thirty-one vessels have been counted at one time. It is evident, from the little that has been done, that energy and persistence will put a stop to the depredations complained of, so fur as Westchester county is concerned, but since the annexation of the lower portion of that county to New York city. Yonkers, the theatre of digging operations has been changed tion of the lower portion of that county to New Yurk city, the supervisors have no jurisdiction below or south of Mount St. Vincent, and it seems to be a question whether Mount St. Vincent, and it seems to be a question whether there is a New York county law under which the Youkers Club or New York Club can not. If there is none, one ongbt to be passed at the next session of the Legishiture. Perhaps the counsel of the New York City Society for the Protection of Game can tell us. If within its jurisdiction It should aid the Yonkers Club in its endeavors to save out

bivalves and fish. Many of our readers are certainly aware that buss and weakfish were formerly eaught along aware that buss and weakfish were formerly eaught along our shores in great abundance; whereas, except in a certain locality at Spuyten Duyvil, where oyster beds lie in water too deep to be disturbed by roking or dredging, they are now scarcely ever seen on either side of Westchester county and Manhattan Island. We have now before us a letter from an old fisherman, whose reminiscences extend back to the palmiest doys of Pelham Bridge and McCombs Dam deploying the disappearance of the striped has from Dam, deploring the disappearance of the striped base from those favorite localities, and endeavoring in vain to account He says:

those favorite localities, and endeavoring in vain to account for it. He says:—

"I have for years fished for striped bass in Hell Gate and vicinity, and have during late years noticed their gradual disappearance. A few seasons ago, with my knowledge of the ground and the habits of the fish, I could go ont and he certain of a good catch, but now things are changed. In the Spring of last year I thought from my landing a few there up to six pounders that hetter fish times had come again, but as the season hore on the fish gradually disappeared, so much so that in the Fall, when fish nacd to be abundant, I could not even get a "smell." So far as my experience has gone this season, and I have been out almost daily since April 15th, I have not had the good fortune to land a single striped bass, nor ean I hear of one being captured in this neighborhood.

I would like your opinion on the above subject, as it is often discussed where "fishermen most do congregate," Some attribute the absence of fish to the improvements now going on in the gate, others to the number of nets that are set for the fish as they wend their way to this locality. In fact, every one has a reason of his own. But the complete disappearance of the striped hass this season is the most perplexing conundrum of the whole lot. I attribute it to the long and severe Winter. T. T. W."

No doubt the reasons assigned by our correspondent, especially the setting of tykes at Westchester Creek and other creeks emptying into the Sound hetween New Rochelle and the Harley River do security is part fact.

other creeks emptying into the Sound hetween New Rochelle and the Harlem River, do account in part for the disappearance of the bass; but the main cause is the destruction of the oysler beds and shell fish, and in this the severe Winter may have aided. Nevertheless, we have caught in the creeks above named, notwithstanding fykes and depredations, us many as eighteen bass at a tide, in the Full, which, however, is after the spawning time of oysters, and when flddlers are "about." We have little doubt that, were the oysters replenished and allowed to recruit by natural propagation, we should find the bass fishing as good at Hell Gate and the Harlem River in three years from now as it used to be in the olden time. The remedy, legal and natural, cannot be applied for soon. The aid of many prominent citizens of Yonkers has been enlisted in the work, and it will not be their funit if success and satisfaction do not follow.

-Mr. Edward C. Edgar, of New Jersey, who has passed the last two years in the Adironducks for the benefit of his health, died quite suddenly at the Prospect House, Upper Sarance Lake, on the 19th of June. Mr. Edgar was a Mr. Edgar was young gentleman of high moral worth, and extensively known among the visitors in the vicinity of Paul Smith's, Bartlett's, and Martin's, and his death is deeply regretted. His camp was always a model of neatness, and a most hearty welcome always extended to all who called. He was a true gentleman and sportsman in the entire meaning of the two words. He will be greatly missed from his large acquaintance. To his family we extend our worm sympathy in their sore bereavement.

-Game protective clubs having spare copies of their by laws and constitution would assist the cause by sending them to us for distribution, as we are called upon almost daily to supply copies to parties desiring to perfect club

POINT BLANK AND POINT BLANK RANGE EXPLAINED.

THE following communication on this subject is from the pen of a distinguished offleer, late of the United States Army. It will be found to be an elaborate explanation of a question which has troubled many young riflemen, and probably not one in many thousands is now familiar with what the writer has endeavored so carefully to exploin. We think he has succeeded in this, and collected the points together for the first time. Every sports-fnau should understand these terms, and yet he would have to go into coulc sections for the facts unless thus explained to him :-

EDITOR FOREST AND STREAM:-

EDITOR FOREST AND STREAM:—

A correspondent in FOREST AND STREAM, and apparently a young simulationer, asks: "What is meant by point blank and point blank rauge in rilie shooting!" These are very apt and important questions. I must confess; none more so. I purpose to answer them, using the prainest terms at my command. But to do so directly and without explanations would, I fear, leave the reader quite in the dark. Besides, the very interest of this subject lies in the tarking facts connected with it. Hence I will first deduc certain terms relating thereto, then make the necessary explanations, and lastly give my answer.

To experiment with, I select the common and hest practical sporting rifle with croten and head sights, and sighted for 150 yards.

First.—What is meant by the "line of sight" of a rifle? It is the straight time from the eye, passing through the bottom of the croteh sight, taking in the hip of the head sight, and thence straight on, plereing tao farget at its very centre. Mark, it is a straight line and plerces the centre of the target.

Second.—The line of sight heing understood, I ask what is meant by the axis of the place, or barrel? It is the straight time running from the muzzle to the breech, and king the centre of the hore throughout. It curresponds to the centre of the last when the piere is touded, and is the "line of dire." Mark, the axis of the ribe and the line of sight are both straight times, and if purallol, it follows they would never cut each other if troduced.

The above heing well anderstood, we must proceed to make three experiments with our rifle, and order three different circumstances. These

Il produces.

The above heing well understood, we next proceed to make three experiments with our rifle, and under three different circumstances. These three trials cover all the cases that can arise in firing from a horizontal position to that of near ninety degrees elevation,

Case f, no point blank.—Lef na first suppose that the rear ant front sights are of the same height—that is, that both are equally distant from the axis of the barret—then will theil ine of sight and the axis of the barret—the parallel lines; so also will their prolongations. Now place the riflathin sighted, horizontally, aim it at the exact contre of the target, at say one handred yards distance, and free. There will be no point blank or potot blank range in this case. Whys Because the balt starting la its romaso on a flae parallel with the line of sight, it will not rise above its level to cut it, which, as will hereafter appear, is a necessary condition in the premises. To the contrary, the tail will describe a downward curve of about four inches in this distance. The same is true if the piece be fired auther an elevation, and these same principles apply to cannon. Rifles time sighted aiways shoot a title too low, and the remedy in part to tids will appear in the next case. This limitation has been introduced mainly to correct erroncons tarpression and to show the effect of changing the sight, but the late to the remediate to here

flee these sighted aiways shoot a tittle too low, and the remedy in part to tids will appear in the next case. This illustration has been introduced matnly to correct erroneous tapression and to show the effect of changing the sights.

Case 2, one point blank.—Let its now suppose the rear sight to be a little the highest, but only enough so as to cause the ball to its flight to use barely to the line of sight and to cut it; and after this to describe a curve to the ground. It will be seen that in this case the trajectory of the ball cuts the line of sight in but one point. At this point, then, we have a true point blank will be found near to the place, say should fifty yards distant; hence this not the point blank range. But hyproclice this point blank will be found near to the place, say should fifty yards distant; hence this is not the point blank range. But hyproclice this point blank will be found near to the place, say should fifty yards distant; hence this is not the point blank range. But hyproclice this point blank will be found near to the place, say should fifty yards distant; hence this is not the point blank range more remnte. It flees thus sighted are gond for squirrys and other small game; they are close shooters within about seventy yards, but at about this yards they shoot too low by four inches. The next case will give a longer and better range, and furnish a sointion of questions.

Case 8, two point blanks.—We will now clevate the rear sight a little more, and say just enough so that when the piece is aimed true at the centre of the object the ball will strike it there, at 150 yards. This particular distance is selected only because I wish hereafter to trace the curve of the ball in this case of cievation. Using well ahaed, now tre. What is the result? We see this clevition of the rear sight emises the hall to go entirely above the line of sight in its ascending curve (very small, 'dis troe) and after reaching his highest point, bin it gradmilly falls to the line of sight, where it cans it aga

pondine rauge is the true point blank range. This belay well understood, I will now miswer the loquity by giving definitions.

First—By point blank rauge is smut the second point where the trajectory or curve of the bail in its flight blaterects or cuts the time of sight.

Second—Hy point blank rauge is smut the setralgist line timiziontal) or shortest abstance from the piece to the second point blank; (or in practice to the target whose centre is struck at this point.) The French and Anoricans see the cana point blank, but in the first hervice it is different. Their point blank distonce: is the distance at which the properties of the different. Their point blank distonce is the distance at which the properties of the distance at the properties of the properties of the distance at the properties of the prop

A cow in Peterborough, Canada, recently dropped a calf that weighed 100 pounds,

The Rifle.

THE AMERICAN TEAM, -Dispatches from Ireland bring almost daily reports of the movements and practice of the American ritlemen, which are watched with the greatest interest. On the 22d they practiced at Dollymonut, and although the scores of that date are not given they were reported as being extremely satisfactory and a surprise to reported as being extremely satisfactory and be surprise to the specialors. In the evening a promenade concert in their honor took place of the Theatre Royal. The visitors were cuthusiastically received upon entering the building, and a number of American airs played by the band were boully applauded. It is impossible for the team to necept more than a constluction of the impossible special properties. than a small proportion of the invitatious sent to them.

than a smoot proportion of the invitations sent to them.

On the 25th they practiced again at Dollymount, their scaring being remarkably fine, the total points made being sixteen above the victorious score of last year at Creedmoor. The following are the figures:—

...170 Colem: ...181 Boiline ...159 Yale

fine spirits, and their calmness and skill has been remarked fine spirits, and their calmness and skill has been remarked and praised by the Dablin journals. Dispatches dated the 26th state that the scores made by the Irish Icam were much smaller, and that the impression was galating ground that the Americans would win. Another dispatch says that Cat. Gildersleeve, Capiain of the American Rithe Team, has received a letter from the Lloyds, of London, affering a lifty guinea cup to be contested for at Wimbledon by the Euglish, Irish, Scotch, and American eights at the time of the Elcho Challenge Shield, motch. The Americans have the Elcho Chullenge Shield motel. The Americans have signified their acceptance of the oller, and will compete for the cup in the match. The discipline and harmony of the American Tenns is admirable.

On the evening of the 20th a grand bunquet was given by the Fellows of Trinity College in honor of the American Rifle Team. There were seventy five guests, including the American Team and the party accompanying them. Dr. Humphrey Lloyd, the Lord Mayor of Dublin; the Mayor of York; Provost of the College; Right Hon. James White-side, Lord Chief Justice of Ireland; Mr. Wilson King, the American Consul; Mr. Barrington, ex-United States Vice Consul, and Rev. Dr. Somnel Haughton of Trinity Col-lege. The event was regarded as a mark of peculiar honor, it being the first banguage of a similar nature for twenty as re-

it being the first hanquet of a similar nature for twenty years. On Monday the Lord Mayor and Ludy Mayoress of Londau arrived in Dublin to witness the match and participate in the festivities. They attended a review of six thousand troops at Phenix Park, at which the American Teom were present and outlinglastically, received. The weather have present and enthusiastically received. The weather, however, was unfavorable. The team also practiced at Dollymount, but did not fire the full number of shots. The following the full number of shots. lowing gentlemen were finally selected to compose the Irish team:—Dr. J. B. Hamilton and Messrs. Pollock, John Mc-Kenna, J. K. Milner, Wilson, and Edmund Johnson. They all shoot with the Rigby rifte, while of the American Team Messrs. Fulton, Bodine, Dukin, and Coleman would use Remington's, and Messrs. Gildersleeve and Yale Sharps rifle. Eleven o'clock was the hour fixed for the maich, and it

was ordered that absolute silence prevail during the match, conversation not being permitted even among the shooters. Neither team were to be allowed to know the number of points made by the other until the end of the firing at each runge. A large number of Americans had arrived at Dublin to witness the match, and the general impressions pre-vailed that the Americans would win.

The Gueat Match—The Battle Fought and Won.— Thousands of hearts in this city beat high with anticipa-tion on Tuesday, as the cable flashes were anxiously await ed to bring the news of victory or defeat in the greatest of International contests. From the carliest hour at which the first reports could be expected, crowds surrounded the different newspaper offices gazing auxionsly at the bulletin boards for the first tidings. At last they came. The result of the shooting at the first range of 800 yards was posted, Americans 337, Irlsh Team, 338, one point to the had for our side. Hopes scarce expressed before were sank in gloom, for the Americans. They came the strongest point for the Americans. Then came the next dispatch announcing the score at 900 yards, 1risb, 292, Americans, 327, or 34 points to the good for our side. And finally the 1,000 yards score is received, showing the Americus to have made 303 to their opponents' 209, giving them the victory by 38 points. The totals as compared with those made at Creedmoor are as follows:—

	1875	1874.

On an extra sheet we present diagrams giving the individual scores and a report of the match in detail,

THE INTER-STATE RIFLE MATCH.-This event, which enlminated on Saturilay fast, was between a team selected from Company D, Twelfth New York Regiment, under the command of Capt. R. B. Smith, and a similar number of twelve men from the Sunner Light Guard, Company E, First California Regiment. The New Yorkers short at Crecilmoor, and the Californians at Patterson's ranch, in Alannela, fourteen miles from San Franciscu. Col. Gen. W. Wingute acterl as judge at Creedmoor for the California team, and Lient. Shehlon J. Kellugg, dr., performed the same office for the New Yorkers. The conditions of the match were seven scoring shots at 200 and 500 yords respectively. The California team used Shurps rifles, and the New Yorkers the regulation Remington. The California team used shorts in their Alamela, fourteen miles from San Francisco. Col. Gen. nians won by a score of 511 to 488, being 23 paints in their favor. The following are the total scores:

	C. Jenkins
31 31.1	

Mr. Yale, of the American Tenm, was the first winner of the Fonest and Stingal badge, being succeeded in its possession by Mr. John Tragesser, Jr. Mr. Hayes will now will hold it until it is wrested from him by muther now will hold it noted it is wrested from into by mounter competitor. It will be shot for again according to an annuancement to be made in our next issue. Major D. L. Beckwith presided as umpire with all the diguity due to the position, and Mr. MacDonald presented the prizes in one of thuse graceful and felicitous speeches for which he is so justly celebrated.

GALJERY TRAM SHOOTING .- A match occurred un Friday evening hast all Zettler's gallery, No. 207 Bowery, between a team from Hat gallery and one from Helllwig's gallery, No. 487 Eighth avenue, each consisting of ten men and captain. The conditions of the malch were ten shots, off-hand, at 105 feet. Helliwig's team was victorians by a score of 603 inches to 75 inches made by the Zettler team.

THE AMERICAN OFF-HAND RIFLE CLUB.—This associatim, the object of which is to encourage off-hund rifle shouting, is now regularly organized with the following officera:—President, Wilson MacDonald; Vice President, Wm. B. Farwell; Secretary, A. J. Henninn, Jr.; Trensurer, A. Marsh; Shooting Musters; Philip Klein, John Trensurer, Directors, L. C. Bruce, L. S. Coulin, D. J. Book. gesser; Directors, L. C. Bruce, J. S. Coulin, D. L. Beckwith, A. G. Hellwig, Geo. W. Hamilton. The entrance fee for membership is \$5, with \$3 mmual dnes. The head-quarters of the club are at the Military Rendezvous, No. 9

West Thirteenth street.
—Six companies of the Seventh Regiment, 185 men, practised on Monday at Creedmoor. The ranges were 100, 150, 200, and 500 yards, five shots at each. Major Wylie, at 200 and 500 'yards, out of a passible total of 50, scarcel 16, 17—33; Gen. Varian, 15, 11—26; Cal. Fleming, 17, 14—34; Cal. Westworth, 11, 7–18; Capt. Varian, 12, 9—41; Lant. Car. (Elebelt), 10, 10, 29. 21; Lient. Gee (Eighth), 19, 19-38

The Bridgeport people are making stremuous efforts to have the Sharp Rifle Manufactory transferred from Hartfaul in that city. The result will materially affect the business interests of either city.

American Rifle Association.—The prize inceting will take place on the 5th of July, 1875, us previously announced, at Monat Vernon, Westchester county, N. Y. The programme will be as follows:—

"Westchester Match"—First prize, cup, value \$40; second prize, \$10 cash. Conditions—Distance, 260 yards; fire second selections—Distance, 260 yards; fire second shots, two significants and prize states only, as Issued by any Government. No internation of signis, cather of bure, or stock allowed Off-hand, standing, without rest. Pull of trigger, minimum, six pounds weight, analymmen, ten pounds. Time of shooting, half past one to four o'clock P. M. Entrance tee, \$1; to members, 75 cents. Competitors to furnish rule and anomalism.

Entruice lee, \$1; to members, 55 cents. Competitors to famish rifle and anomalitim.

"All Comers' Match"—First prize, fruit stand, vulue \$35; second prize, flower stand, value \$20. Conditions—Distance, 200 yards; five scoring shots, two sighting shints. Any rifle of not tess than three pounds trigger pull. Maximum weigh, ten pounds. Sights to conform with regulations. Fostion, off-hamd, standing, without rest. Time of shooting, and past one till four welves P.M. Entrouce, \$1; to members, 75 cents. Competitors to furnish title unit annuacition.

"Subscription Match"—Conditions—Distance, 200 yards; position, off-hard, standing, without rest, and rifle within the rates. Entrance, \$1. Due half of entrance for benefit of the association, balance to be divided between the three highest scores. Match to open at ten o'clock A.M. Competiture to furnish rifle and animalition.

Stages will connect with trains on the New Haven road.

Stages will connect with trains on the New Haven road for the range. The previous matches of this association have been a success, and we predict for those who may altend the present a hearty welcome from the members, and a good time generally.

-During the past week or two the ranges at Greedmoor have been given up almost entirely to practice by detachments from the different regiments of militia, and Inspeclors of Rifle Practice have been kept fully occupied.

Game Bug and Gun.

GAME IN SEASON IN JULY

Woodcock, Spipe, Curlew, and Buy birds.

-Woodcock shooting is in order July 4th, and we believe that those who are fond of Summer sport will not be debarred this year, all efforts to prohibit it by law having failed, so far us we have been able to learn from careful

—Bay snipe will make their appearance, going south-ward, in a few days, and afford good shooting until the 1st of September. There will probably be a good flight along the eastern part of Long Island. Look out for them!

—A letter from Forkell River, Ocean county, N. J., says "we are getting out our jack shods and overhanding and painting them for July, about the 4th or 6th of of which month the first flight occurs. The lirst "kill" I will report you.

which month the first flight occurs. The lirst "kill" I will report you.

New Jensey.—Garman House, Forked River, June 27th.—Capt. Tom Porter and party, out on the bay to-day report several large flocks of bay snipe on the wing south. Among them they noticed willets, dowitches, and marlin. Rather early for their appearance. Waadcock are in good number in this neighborhood, and the restriction against shooting them expires July 4th next, at which time several New Yorkers are coming them. Quail were never more plenty, and it is a common sight at daylight every morning to see them on the grounds of this house, and on the various highways leading therefrom. The unusually severe Winter gave rise to serious apprehensious of a searcity of quail and partridge, but the indications are nt present that the coming Fall will be better than many preceding ones, and consequently gunners and sportsmen may anticipate a good season. Almunt the latter part of next week we expect a flight of "curlew" snipe, and are making preparations for them. Among the arrivans here last week may be mentioned Messrs. Theodore Curran and son, A. Emmons, J. B. Pusselle, J. Olinger, R. G. Brawning and sans, Charles F. Green and son, Charles P. Frame, Newboll Lawrence, John W. Kartwright, and Geo. W. Bruce, all of New York.

E. 11. F.

-The sum of \$315 cash prizes will be given at the trap shooting tournament to be held at the South Bend Trotting Purk Association Grounds, South Bend, Ind., under the anspices of the Union Club, commencing July 5th, 1875, and continuing two days. Open to all except thuse burred at Cleveland, Ohio, A double bird sweepstakes will be nr-

ranged on the grounds. Entries can be made each duy until the close of the match. Purker's patent self-closing traps will be used. Two thousand wild pigeons have been procured for the occasion.

—The annual "Huyden Burgoo" was held last week in Gorham's Grove, near ducksonville, Illinois. The guests filled themselves with burgoo soup in the marning, and then shot pigeons on a full shumach in the afternoon. One hundred and fifty hirds had neen obtnined at Chiengn. In the match eight sportsmen entered the list, each man to have len brils; rise 21 yards, full 80 yards. Gates Strawn referce. The following is the score:

_ Name.	Spire. Pr	olut.
Fügene Shorth	LEBOTIOTIE	b.

Mr. Shuster's from straight took the gold medal. The Spen-cer the silver, while the ries of four will be shot off for the leather medal some day in the recent future when the ther-mometer is not, as on Thursday, at 95" in the shade. The scores of seven and eight were both unfortunate, as their "misses" fell dead out of bounds. SCOLLS.

EAST NEW YORK, June 25th, 1875.

EDITOR FOREST AND STREAM:—
Enclused you will find the score of a shoot (pigeon match) which truns pired yesterday, under the anspices of the Nussan Shooting Club of this place. A handicup match of 5 birds each, for the Club 3udge, 14 oz. No. 7 shot. A strong wind was blowby, assisting the lidds, which were good ones, to get out of bounds in quick than. A majority of the birds teld deaf out of bounds. The score is as follows:—

Name,	Yds.	Score	Name	Yifs	0
i vitti A. Hillitahi	9.9	9.5	T. 17 Manage 11		
Win. Ibuidford	134		C Colver		. 2
					. 3
II Boehme	27	7	·	21	1

Ties of three shot off at 21 yards, L.1 Rules, miss and go out, and e medal was awarded to Wyckoff.

-A pigeon shoot took place at the Fair Grounds, Frank-lin, Tennessee, June 24th. The first mater, for five hirds each man, 21 yards rise, 80 yards boundary, was shot as follows:

l	F. R. Mitchell 1 1 1 1 1 1 -5 Van Kirkman d K Highes 1 1 1 1 3 -5 Clurk Princhen John Wells 1 0 1 1 1 1 -4 Captain Taylor T. F. Perkins, Jr 1 1 1 1 0 -4	· · · ·	1 1 1 1 1-5 1 1 1 1 1 1-5 1 1 1 1 0-4
	Ties of live 26 pards 2 ideal 1		

Ties of live, 26 yards, 3 birds each, won by Kirkman with three straight birds; ties of faur, 21 yards, 3 birds, won by Perkins with three straight birds.

In the second match, same confestants and terms, there were again four lies of five, which were shot off, and after two trinds was won by Wells against Pritchett. Second maney was divided between Hughes and Kirkman.

The double birds match was won by T. F. Perkins; sreend money divided by Hughes and Wells. The third match was won by F. R. Mitchell.

Hensus, Mich., June 21st, 1875.

Button Furgest and Stugan:—

LETTER FROM MR. B. BURTON.

June, 1875.

Softon Firest and Stream:—
I request that you will correct in circl in my letter under the head of "Powder Tysis," which appeared in your fact uses. In the treaty-third that is should have read, "How quick," not "now quick." Again, in the twenty-sixth thus, the reads "higher trajectory" should have been written "strater trajectory."

Wille in the subject I all make an allowing to a premiting impression created in the minds of many of our rife should star this country, that shay punder is assential for five shooting, as it does not appet the bullet, and so stated in your comment on my powder test June 3d. The

fact is, Sh, that all hullets now used for long range practice are purposely made in fit so they will had without taking the milling, degrading entitely on the blow lawy rerelier from the powder to upset them, so they will take the granes of the milling, and an matter how had the blow given by the explosion of the parales, it cannot expend more than enough to fill the granes of the larrel, and that it is absolutely necessary the powder should do; if not, the fullets reful go doministing about through the not, turning some results in any but a true direction. This is a common every day occurrence where show-forming pander is used, which finds in appet the hallet. Who has ever seen a hallet gass through a harrel without taking the rilling, when Carts & Hurrey or other equally good powder is used? The fact of the matter by the force of such pander. Hence, gammake is recommond show powder, and even with show powder the heads of the shells frequently tear, so much so that the persons who use them in gams that admit it gas from the poorder harring their eyes, and provide a shield made of cloth, taking an healthy, which they attach to the back slight of these rifles in product thair eyes. There are shalls made in England that n'ill resist any powder, and one drain in the United States make a carrialge equally us good as the English, but have not necessary millimmers backed by capital to pure the roy linearish harling these cartridges used.

Mr. Will I direin, the compiler of the linik which brais the above eighandous title, says that he is the multier of more lineks, pumphiets, and magnithe attickes in vinitication of "Individual sovereignty" than he new remainders or cares to be reminded of With all deformers and magnitude stores of the reminded of With all deformers and madesty we suggest that we would rare still less to read them all, you we remaind and be minimherstood to say that there is not much in the health had be nell written, and in those interested in vertain legics of value. For mistance, the chapter on he History of Mariage, though it that institution perforts in the Sandarch Islamis, as therein disertibed, we minifer decaptions of many of the present administration in the nation of the process of sactely, as well as bur, a direction committed that which are imagine that the antifer decaptions of many of the present cache as understood and practice display abouting chirages.

DISEASES OF THE Hamse, and How to Theat Them. Furier & Contes, Pithudolphia

Dr. Robert Charmer is a receivancy surgeon of distinction, and his nawk now before as Is what it parparts to be a concord mathod of special juffuology for the use of horsenon, farmers, stock raisers and finde an arathae not only have new discusses like the optioned in the pears, and in the manthan not only have new discusses like the optioned and spinal methodist appeared, but the oth system of firehement is giring way. The book contains a classification of discusses and their causes, with remedies and applications simplified and explained so as to be readily understood and casily followed.

SMLING ON THE GREAT LAKES AND RIVERS OF AMERICA.

J. Disturacii, Polindelphia.

J. Disturnell, Philadelphia.

J. Disturnell, Philadelphia.

This bank is a complete gailing to the traveller through some of the most picturesque parts of our cannity, and util be found invaluable to the lamist, as it contains, besides an imposine mass of information relative to the country through whitely he passes, time tables and lables of distances. Mr. Disturnell, as early as 1841, published his "Picturesque Tourist," and since that there a number of works of similar nature, which have been well treeired.

MAGAZINES.

The Galaxy for July has made its appearance in new type and muor. The two serials, "Door Lady Distrib," and "Leal, a Winnan of Fashion," by Justia McCarthy and Mr. Annie Edwards, respectively, are continued, and the old galaxy of familiar names adone the indee of contents. Mr. Albert treats of Durias, and Mr. Richard Grant White still mass with anaburd vigor upon the ingrammatical use of lunguage. Mr. Grenville Murray, of the London Mordi, is also a contributing to the present mainlare.

The current issue of Seribner's contains its usual number of empitally discussifed and excellent articles. Perhaps the most currenthing is Mr. Williams', "The City of the Golden Gate," an Illustrated sketch of San Francisca as it was and is, including the Phinese quarter and many celebrated and, to us, familiar points and characters. That remarkably intelligent farmer, Mr. George E. Wurlug, Ir., in containing his "Vacation Abrond," describes most graphically bis experience in agricultural France, as repursented by those portions at Normandy and Brittany fronting on the Bight of La Manche. The illustrations to these articles enhance greatly their interest and value.

We have come to look for St. Nichelius as assessments in the

We have come to look for St. Nicholas as eagerly as the We have come to look for St. Nicholas as eagerly as the hoys and girs, and must express our bunks and appreciation to Messrs. Serliner & Co. for the phome their healty admirable magnitude affords as. In the present number Miss Alcold still discusses of fine "Eight Consists," and the mived area of fittle Rose and the bays are read with ambitted haverest. Our friend Fred Mather Instructs young dishermen how in hall their boats with little exposes besides the labor, and Mr. Troubuidge's "Young Streryor" rescues Snortful from old Penkslov to our gent satisfaction. In both quantity and quality St. Nicholas purelies for both boys and gris, and while amusing, server also to curvey much marful information.

Mr. E. J. Hooper, editor of the California Hovtienthuvist, has long been a contributor of interesting articles to our paper. In this nava magazine he possesses a field as multilited in extent as is that is nown magazine he possesses a field as multilited in extent as is that is not not of the Pacific shape fisself, and of which he has both the ability and nill to take due advantage. To those proposing a left to California the period of this magazine will convey to them much valuable information as to the soft and made of entitleting and propagating the flowers and fruits for which the State is so justify celebrated.

The Magazines Monthly engages to agree and from St. Lebus, N. R.

The Maritime Monthly contest on 18 from St. Johns, N. B., ultit its usual varied table of contents, which, though not numerically large, comprises appers, such for instance as the "Origin of the Acadisans" and "Memoirs of an Extinct Ruce," that are of great interest. "A Visit to Longfellow" is graphically described, and the other articles in the comprise the number well selected.

The American Rowing Almanac and Oarsman's Pocket Companion. Mr. Fred J. Engelbardt is so neil known as the Boat-lag Editor of the Turf, Fish and Farm, that his work needs no further recommendation. The oarsman will find it full of valuable information and hints, as well as a record of time and important events.

Munning's Yachting Annual for 1875. Published by Jno. Piliper, 223 Bondings, New York. Mr. Manuing has apparently according

Manning's Yachting Annual for 1875. Published by Jno. Filmer, 23 Broadway, New York—Mr. Manuing bas apparently spared neither time or expense in the preparation of bis work—I andditiou to the fists of yachi clobs and their firets, it contates a list of yachis not belonging to any club, also complete time and scather tables, and the Acts of Congress and Treasury Regulations relating to yachts. To give an idea of the scope of the nork we would say that the private signals of all the yachts belonging to thirty-six illiterent yachi clobs are given, each being beaunfully drawn and colored. The book will be found by yachtsmen to be of great value and convenience to them.

Misfit Carpets.

Misfit Carpets.

To M. S. Bendall, of No. 112 Pulton street, New York, belongs the excite of building up a branch of lustness which is a great sucing to buyers of that uccessary article of furniture—carpets. Mr. Bendall's uncressons are the expository of such carpels as have been cut and made up by some large dealer for a purchaser icho bas, perhaps, gleen a larger order for a purchaser icho bas, perhaps, gleen a larger order than he is prepared to meet, and who, when the curpet is brought, is mable to jusy for R. Asar result, heing musubible, it finds its way to Bendall's. Again, a carpet is ordered ent and made up for a certain room, but through some error it fulls to fit, is refused by the purchaser, and is sold by the deuter to Bendall at a discount. By this means he is enabled to offer to purchasers a discount of from 25 to 39 per cent, upon new carpels. Mr. Bendall is a conrecous, refined, and entreated gentleman, and hus, by his honest and inpuight manner of doing business, built up a trade of a biel be may feel proud.

Attractive Route

The allention of SPIRTSMEN and TOURISTS is inclied to the many altractions offerred by this flue, now complete from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Peloskey, on Little Traverse Bay, the waters of the Grand Traverse City, on Grand Traverse Bay, and to Peloskey, on Little Traverse Bay, the waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equabled, in the abundance and great wavely of the finity iribe. BHOOK TROUT abundance of the finity iribe, BHOOK TROUT abundant in the streams, and the farmons AMERIDAN CRAY LANG, now adjracting the attention of Sportsmen vectywhere, is found only in these twaters. BLACK BASS, PICK, PICKEREL, and MASCALDEGE are also found in great numbers in the many lakes and lakelyte of this territory.

TRIALOF SCITTAC GIRENER'S NEW SYSTEM

OF BOHING, BY THE ERITOR OF

"The Field, January 30th, 1875.)

"From a comparison of the two tables B will be
seen that with Walker's shot, Messre Scatt's gains
should a market superiority over Mr. Greener's,
hold in average and in the highest state made. Indeed, with the left barrel, in his third shal, Mr. Scott
got a selected gamp pattern of 230 and a penetration
of 37, equaling the highest pattern numbe by Mr.
Greener, and expending the penetration of that purlicular shot by eight sheets.

YORK, THURSDAY, JULY 8, \mathbf{NEW} 1875.

Volume 4, Number 22, 17 Chalbam 51, (Chyllall Sqr.)

For Forest and Stream Bow We Bunt the Hew Zealand Wild Boar.

HE fencers have stuff enough on the line for a flay or two, Wal, have'nt they

"Yes, but they'll want the strainers down from the Long

"Yes, but they'll want the strainers down from the Long Bush by the beginning of next week, they say."

"Ab, well, as it's Saturday, and we're out of dog's meat, we'll give the bullocks a spell till Monday, boys, and have a pig hunt to-day, ch?'l

All this is said at a comfortable up country homestead in the Northern Islaml in New Zealand, and the parties to the conversation are Fred Moreton, a stalwart young fellow of eight and twenty, with an unmistakably British nir and a long, brown, bushy beard and mostache. He is part proprietor, having a sleeping partner engaged in business in one of the adjacent towns of the sning little sheep run which forms the scene of our narrative, and is, of course, magister tlomus. Wallace McKay, generally known in the district as "Old Wal," though he is some years Fred's junior, is his factorium and general locum tenens in Fred's junior, is his factorism and general locum teaens in the boss' absence; a brawny, broad shouldered, and withal simple and good natured soul, as active and untiring as a goat among his native mountains, and the boldest and most reckless horseman within a hundred miles; and Fred's cousin, Philip, a tall, light-bearded young Suxun, who is paying them a visit of a few months from the South.

Breakfast over, after a few minutes spent in looking to the condition of their rifles and sheath knives, the hunters bid adieu to the fair lady of the house and take their departure. Nature has been singularly niggardly with New Zealand in her distribution of animal life. Not one indigenous quadruped, excepting the lizard, has been found in the whole length and breadth of her woods and pastures, and her native birds are scarce in numbers and few in va riety. Ever since Captain Cook's time, however, the wild pig has occupied the roughest parts of the country in both islands, and is now in many places so numerons as to be a great annoyance to the settler, both by breaking his wire fences and uprooting his grassed lambs. The rabbit, too, has increased in many parts with extraordinary rapidity; indeed to such an extent that the "squatter" frequently keeps a stidl of men employed in shooting and trapping There are parts of both islands where bushmen and others live entirely on wild pork and rabbits of their own hunting, no man saying them nay on account of trespass or damages. One or two small herds of axis and red deer, too, which have been turned out in suitable places, are inereasing fast, and will in a few years afford noble sport. Of indigenous birds, the three or four varieties of wild dnck are of most interest to the sportsman, but they are now gelting very scurce in many parts. Quail used to abound on some of the plains, but indiscriminate slaughter and grass fires have almost extirpated them. Pheasants and partridges have, however, been well established and partridges have, however, been well established in both islands, and are making rapid progress. In the north the former bird has been regularly shot for some years, and the sporlsmen of the south have enjoyed the same luxury for the last two seasons. Taken as a whole, though, New Zealand is singularly bare of game, and the sterility and absence of cover which characterize a large portion, particularly of the Southern Island, will almost keep it so. Our hunters are attired in the usual New Zealand bush costume—wide-awake hats, with hrims in va-rious stages of dilapidation; rough woolen "jumpers" reaching to the waist; continuations of strong cloth in a variety of pattern and cnt, and all somewhat the worse for wear; light leather gaiters, and strong, heavily nailed lace boots. Each carries a sheath knife in his belt, a most essential concomitant of bush life; it serves as tobacco cutter, dinner curver, and for general incisive purposes, including sticking and skinning plgs, sheep, or any other

'What dogs have we got?" says Phil, who, though a stranger to the district, is no new hand in the pursuit of the wild boar,

"Wal has brought Toby and Darkie, and my oid Help makes a third," responds bis cousin. "I'd have let Whistle come, but if the old sinner gets after a 'sucker' there's no hauling him off. I went down into Wainni gulley him the other day, fully half a mile through supplejack and lawyer bush that would have tested the powers of a Hercules and the palience of a Joh, and found that he had got a little runt of a thing with a backbone like a John Dory; but the old dog sloped when he heard me coming and planted himself somewhere handy, and when I was away on the spur again I beard him at it in the same place; it's an old dodge of his, that, and I can't knock it out of him?

"You should try and get one of those bull pups of Tom McCarlhy's from Flat Hill," snggests Wal; "they're the pluckiest brutes I ever saw with a boar. Old Juno, the mother, is real grit, and I saw that pup of Aleck Mantou's at Waikaraka slick to a good-sized pig the other day in a way that astonished us. He can't be more than four months old, and many a full grown dog would'nt have shown half his pluck. After we had killed the pig we had to force his mouth open with a stick before he would let go.

"I've a horror of maything list collies on a sheep ran, interjects Phil; "these Newfoundlands, bull dogs, kanga a slicep ran," roo dogs, mastiffs, and the various crosses of them all, which have been kept in so many places for wild boar hunting, are dangerous brutes, if they once get a taste of ovine blood; and as they are'nt kept half worked, the old ovine most; and as they are not kept man worked, the ord adage coupling his satanic majesty and the unemployed is frequently verified in their case. There is nothing that arouses my righteons pastoral wrath so much as to see a dog killing sheep. I once butchered in hot blood a favor-Newfoundland of mine whom I caught in flagrante delicto, and I registered thereupon a solumn vow that I would

never open myself the way to such a sacrifice again."

"Ah! I remember," says Wal, somewhat maliciously,
"you told us how you did it once before—tied him up to a post with your stirrup leather, and staved his head in with a broken rail, did'nt you? Made a good quarter of an hour's work of it, if I remember right,"

"Now, don't rake up any horrid details, Wal; we are'ut all of us such impersonations of humanity as to be in a position to cast reflections," retorted Phil. "The necessity of capital panishment once established, nothing would have given me more sutisfaction than to have executed old Ma-jor with royal honors, even to have 'earved him as a disb fit for the gods;" but I knew that I could'nt do it, or even lave it done in cold blood, so I took whatever means were at hand."

Thus beginning the time with pleasant reminiscences we tridged for a mile along the narrow flat that interveued between the sea coast and the ranges. Park-like and beaubetween the sea coast and the ranges. Park-like and beau-tiful is the scene. Through a rugged rift in the hills tum-bles and rushes a limped creek, which opens ont on the that ground, and meanders, babbling musically, among the trees on its way to the ocean. Isolated specimens of the beautiful kuraka, a tree which, for deep, rich verdue and for symmetry of form, can scarcely have an equal, dot the plain; and beyond, far up the mountain's rugged sides, cling endless varieties of smaller bush and scrub, all remarkable for the deep green foliage, which is characteristic of the New Zealand forests.

"Here we are at the landing place," said Phil, as the party debouched ou a cosy little bay, well sheltered from the southerly swell by a distant reef, with here and there a towering citadel of rock, over which the surf was breaking with the noise and the spray of a hundred Niagaras. "Allan, the shepherd, told me that he saw the tracks of some boomers on the beach here a day or two ago; they must have gone across to that flax patch at the foot of the Sugar-loaf.

"If they crossed from this side there will be a good chauce of some of them baving come from Waikikino," says Fred reflectively. "I know the moors there have some whacking big barrones; but I've told them often enough that I shall exercise the right of slaughtering anything that is found this side the station; so its their own

Leaving the bay, the party treads again toward the ranges, and mother mile brings them under the Sugar-loal, whose precipitous sides elothed with wannka and cottonwood scrub to within a few hundred yards of the summit, throw that pinnacle into a conspicuous relief, strongly ang-geslive of a jolly friar's cranium with an nunsual prominent development of the organ of veneration. From the flat to the base of the hill the ground rises for some few hardothe base of the fifth and the ground rises for some tendered yards in gradual andulations, thickly covered with flax four or five feet high, and beyond, further along the flat, is the course of another creek issuing from the distant side of the hill, its banks dotted with scattered limber which thickens iuto close bush where the stream debouches on the plain. Wild boar hunting without dogs that can be on the plain. Wild boar nunting without dogs that can actelied on for holding your quarry till he receives his coup de graces, and in ground where you cannot see a yard ahead of yon, except in an occasional clearing, is somewhat precarions work. Collie dogs will seldom do more than bring the beast to bay, and hark at him from the safe distance of the beast to bay, and hark at him from the safe distance of a few yards; when an opportunity occurs of giving him a sly nip behind, they will avail themselves of it, with the result usually of provoking a savage charge, and bringing the enemy to bay again with his quarters mussailably ensconced in a flax bash. Woe to the pedestrian who is caught by the infuriated animal in this onset! He is to a certainty tripped up, and in all probability favored with a severe rip in the limbs or body from the formidable circular tasks of his assembled. lar tusks of his assailant.

There ought to be something in this flax," says Wal, who is armed with an extemporized boar spear, construct ed out of a stont manuka pole of about the dimensions of a ''weaver's beam," and a shear blade lirmly lashed at the end of it. Having nearly shot off his left hand some years previously by the bursting of a gun harrel-Wal always swears that there was only one charge in it—this stalwart Nimrod has foresworn firearms ever since, and stands by mainly for the post mortem manipulation of the quarry.
"St! St!" "hold 'em boys!" "rouse 'em out, lads," exhort

our hunters, as men and dogs plunge into the flax, and are almost lost to view. The latter are prescutly heard erasling away in a body towards the hill, and the men press on after them, their eyes and ears intent, and their rifles ready for instant use.

"They're on something," shouts Fred, as half a dozen short, sharp yelps are heard ahead. "Come on, boys, they'll have him bailed up by the time we get there." But the piercing squeals that ring through the air next minute tell the disappointed huntsmen that it is an ignoble victim which has falleu into their hands.

"Not worth his salt," ejaculates Phil, to whose practiced ear the sound is as indicative of the value of the quarry as if it was hanging up before him. Another hundred yards brings them to two of the dogs, with whom the Orpheus of the woods is making a very lame fight, for not being fermidable area. formidable enough to inspire much terror, the unhappy brute is not allowed to avail blusself for any length of time of the friendly shelter offered by the flax. Wallie McKay throws down his staff, and watchlug his opportunity, rushes in and seizes the victim by a hind leg. A scientific jerk and his equilibrium is gone, his captor's foot is on his neck, and the others closing round and lending their aid, his life blood soon "stains the heather." He turns out to be a quarter grown sow, in poor condition, and only worth further attention in the event of an unlucky day's sport.

There are more of them about," says Fred, oracularly. "I saw some tracks that don't fit this cat of a thing, as I eame up, and old Toby was'ut on this scent at all, I think." The other dogs bave disappeared, too, and the men stand and listen for indications while they recover their wind and take a modest pull at Fred's well known and apprecia-

and take a modest pull at Fred's well Ruown and appreciated flask of whisky.

"That's a very fair sample of liquor for New Zealand manufacture," remarks Pbil, with an affectionate glance at the flask. "I've always stuck up for the Duuedin whisky, and maintained that age is all it wauts; but the Scotchman days there have an entire training segment in the bound. mea down there have an awful prejudice against it, though they can't lell you why. You out the imported article yet," You mark my word, it will cut

"Any man would come off second best to day who foreswore anything but the imported article," said his cousin, quietly replacing his "shoulder pistol." "Halloa!" he exclaimed suddenly, "I hear the dogs again over towards the creek, sud they've collared no fifty pounder this time." Away all three dart again through the thick flax and over the uncertain ground toward the same; a steady, conlinents baying Indicates that the quarry is two powerful to be ensily moved, and that some sport is in prospect.

"Look out, now, hoys!" cries Phil, as they approach the scene of action, "this fellow is no chicken, and if he comes you'd better clear out of his road." The riflement alvance cantiously, with their rifles full cocked, Wallie judiciously keeping the rear. So thick, however, is the fax that nothing can be seen of either dogs or bour; but an occasional short, savsge rash, followed by a temporary retreat on the part of the former, show that the quarry's patience is about exhausted, while the ominous angry champ of his tusks, heard occasionally during a hull, indicate that he is not a fee to be trifled with.

"We must get him out of there somehow," shouts Wal, excitedly, "or we shan't see the color of his hide in a week," and in he rushes boldly, heating and perforating the flax with his mighty staff from the side opposite to the dogs.

"Have a care, Wal, old man," exclaims Fred. "Look

"We must get him out of there somehow," shouts Wal, excitedly, "or we shant't see the color of his hide in a week," and in he rushes boldly, heating and perforating the flax with his mighty staff from the side opposite to the dogs, a care, Wal, old man," exclaims Fred. "Look oul, boys, there he goes!" he continues, as a confused sentifing among the dogs, a crashing through the flax, and the streak of a dark body seen for an instant show lbnt the game is started.

"By George! be's a boomer!" eries Phil. "I'm glad the brute dii'nt come my way; he might be hetween a man's legs here before he knew it—there, they have him again." The big hoar seldom condescends to ran fast of far; confident in his defensive powers he soon comes to bay again. "This looks like better ground," suys Phil, as they again come up with the combalants; round a lofty, isolated buuch of flax the dogs, now pretty well out of breath, are baying. Ten or a dozen yards of clear ground extend between it and the thick bush; but our quarry is entirely enuevaled by its friently foliage, and his whereabouts can only be approximately conjectured by the movements of the dogs, and the sullen champ that issues from the recesses of his retreat.

"Hold him, boys! hold him?" "Put him out!" variously exhort the hunters; but the dogs won't go in, knowing very well that they cant'r each him behind, and that his sharp little eye, backed by those terrible guashing lusks, is watebing the front.

"I must try what I can do with the 'great orgin' again, says Wal, "or we'll never get a shot at the brute. If he'd only run down into the creek now," with which aspiration the stubborn spearsman advances again, boldly, yet cautiously, on the spoi where the boar ought to he. Pred and Phil plant themselves on the edge of the clearing, says Wal, "or we'll never get a shot at the brute. If he'd only run down into the creek now," with which aspiration the stubborn spearsman advances again, boldly, yet cautiously, on the spoi where the boar ought to he. Pred and Phil plant themsel

made

"Each particular hair to sland on end
Like quilts upon the fretful porcuphe;"

the boiling waters of the creek, stained and reddened by
the sbine and gore which flow from the wounded monarch
of the the glen, and thick with the mud stirred up by the
struggle—all form a savage scene in striking contrast with
the serenity of the spot. The dogs, excited by the intumdiate presence of their masters, and the full view of their
quarry, make frequent dashes at him every now and then,
but are repulsed with more or less loss. Ohl Help, the
gamest of the pack, has a bad gash on his left shoulder,
and the others show signs of having been trampled and
submerged beneath the crimson waters, or dashed against
the walls of rugged rock. But the old boar's time has
come.

think I can sit and survey the situation for a few minutes to advantage. I wonder whether we can hand the brute up the terrace without entiting him up; he's a devil of a weight. What d'ye think, Phil? Here, man, take a pall at this. You're standing there over that brute's ugly erreass with as much pathos in your expression and attitude as one might imagine Marc Antony exhibited wer Cresar's mutilated body."

"Thanks," suys Phil, with a smile. "I don't mind if I do, Yes," he pursues, after a refreshing interval, "the positions are somewhat amalogous, all the actors, perhaps, slightly inferior in the general estimation; but one might appropriately address our defunct friend, on Wal's authority, as 'the rains of the noblest lang that ever lived'—or died hereabouts; or, in the immediate prospect of having to haul him up that infernal bank, one's regret that we failed to drop him on the top would insturally enough that yent in such an apostrophe as 'O, mighty Aperl thou dost lie so low!" I could that a dozen parallelisms in the positions; they open on one every minute—for instance—

"For heaven's sake thon't look for them," says Wal, contempthously, "a dozen good leaves of thax would be much more to the purpose just now, and you'll have no wind left for the pull if you get fairly started in the sponting line."

"I always said you had no soul, Wal," retorted Phil.

left for the pull if you get fairly started in the sponting line."

"I always said you had no soul, Wal," retorted Phit. "however, you've one advantage there; your fature need in be any consideration to you. I must admit that I like to see a man who can extract pathos from the death of a pig under suitable conditions."

"Suppose you two philosophers agree to differ for the present and fight it out afterwards," says Fred, who had been listening with an ammsed air.

All hands have now rested and finished their pipes. The dogs, who had lain panting in the water, have recovered their wind and imbibed to their heart's content. A couple of strong flux ropes are quickly constructed, and the decapitated and otherwise lightened carrass of the boar is dragged by slow degrees, and with the intnost excitions of the inniters, up the steep bank; the head is brought up separately, and the two are then suspended from a strong bough to await a future call.

"We can get the bullock dray up here on Monday," says Wal; "but I should like to have some good Christian pork to bring home into the bargaiu; this brute's searcely passable dog's meat."

"It must be two o'clock by the sun," says Fred, taking "The mean of the party of the sun," says Fred, taking "It must be two o'clock by the sun," says Fred, taking "The party of the sun," says Fred, taking the sun, "The party of the sun," says Fred, taking the sun of the sun, "Says Fred, taking the sun of the su

ble dog's meat."

"It must be two o'clock by the sun," says Fred, taking an 'noular,' aml I should like to be home early for the old lady's sake. However, we're sure to find something more by working back through the flax, and it will be all on the work."

"We had better keep well up under the range," suggested Phil; "the chances are that anything about here has made its way up as high as possible on hearing the dogs and our rifles."

So away up through the thick flay again, and over the

"We had better keep well up under the range," suggested Phil; "the chances are that anything about here has made its way up as high as possible on hearing the dogs and our rifles."

So away up through the thick flax again, and over the slippery ambilutions the party strole, and the dogs are soon ahead out of sight, and almost out of hearing. Nothing is seen till the foot of the Sugar-loaf is almost traversed, when the dogs are heard again at the very highest point of the flax, and evidently by their steady barking in view of good-sized game.

"What have they got now, mother obl bristly" asks Wal, pausing for a noment in listen. "We'll go up, boys, and see, aniwany," he continues, leading the way at a pactitude tries the hings and knees of his companions.

"What a tiger to walk that fellow is," gasps Phil, whose southern life has been chiefly passed in the saddle. "I wish I had his mind for a day's work like this." As they ascend, the dux hecomes some what shorter. "I think those old hears are too large and imbiferent to take safel ground as this," says wai; 'but we shall see what's on hand in a minute or two." The dogs are baying round a grano of two or three small llax bushes, from the recesses of which a luzy grunt or two issue at intervals. "A big sow, are some of those Maori barrows, I expect, says Freal; 'but whatever it is let 'en have it on the first chance. I'm not coming all the way up for nothing, if I can help it." Urged by their masters, and evidently not so apprehensive as in the case of their last quarry, the collies make a promiserous charge into the flax, and amid a mingled merody of grants, squeak, barks and howks, a couple of large, black hodies issue forth in different directions. Phil, who has perched himself ou a little rise overlooking the clearest exit from the lair, by a clever side shot plants a builte in the brain of one, which drops on the spot; the other closely pursued by Freed and the pack, makes down the hill through the flax of himself ou a flux promise of the dogs is plainly hea

the walls of rugged rock. But the old boar's time has come.

"You take him, Fred," says Phil, "and look out for the dogs." Watching his opportunity, and carefully balancing himself on the slippery sideling, Fred raised his little Terry's breech loader and sent a ball crashing through the powerful skull. With a smothered roar and a death bound that scattered the dogs like hoodhums before an irale police officer, the huge hrute plunges for a few yards down the creek hottom, and lies prostrate and kicking in the discordered waters. Dogs and men are on him at mace, Fred and Phil bolding his legs and sitting on him generally, while Wal, his brawny arms bared to the shoulder, gives him the linishing touch with his long sheath knife.

"By Jovet that's the biggest boar I've seen on this coast," says Wal, surveying the indeous carcass with professional admiration; "four hundred pounds, if he's an ounce, and his tusks are in splendid order. You'd better take them down South with you, Phil, just te show what we can grow mp here."

"We'll, boys, we'll just take a toothful 'o mountain dew, and a draw at the dhulcen," remarks Fred, unslinging his 'pistol,' and further suiting the action to the word. "I

quarters are ent off and slung on the rilles for the immeriate use of the dogs at home, the hunting pack having reguled litemselves on the spat.

"We must go back and hand up that barrow. Fred," says Phil; "Whi and I could'ut manage him alone," "Oh! me of the Maoris, is he? and a good one, ton, if you two could'nt hang him; sorry the hazy breggars right; I'll tench then to hook after their property better,"

"By Jovel he is a hearny," exchains Fred, when they reach him. "When such a tempation as that is thrown in a man's way, I don't suppose he is meant to resist it,"

"Its a very comfortable theory under the riccumstances at any rate," remarks his cousin, mischievously, 'und I should recomment you to hold on to it till the next time the Maoris drop across a fat wether of yours in tantalizing proximity to their 'pah,' when you can hand it neer to them as the result of years of deep thought and practice on your part." In justice to Fred Moreton, however, it might be here stated that he afterwalls made a clean threast to the owners of the annual, and gave them ample 'nta' in the form of Iobacco, flour, sitgar, and tea for their lost property.

"By Jovet I don't know what this country would do

form of lobacco, floar, sigar, and tea for their lose property.

"By Jove! I don't know what this country would do without flax," exclaims Wal, as they gaze in admiration on the suspended quarry; "they say that green hide and stringy back hold Australia together; but I'll thet the pair of them dun't do so much for her, or do it as cheap as that alone does for New Zealand."

"I don't believe they do," assents Phil, "and the latter has, at all events, this advantage, that any man who is anxious to shullle aff this mortal cail with the lenst possible expenditure of cash, can do so not the shurtest active by a judicious utilization of the marest tree and flax hush," with which causolatory reflection, suggested on doubt by the several suspensions at which he had assisted during the day, Phil shouldered his rifle and led the way home.

L. Morner,

PHANTOM FALLS.

And the state of t

of carries, and agreed very well with Julia, for Julia wanted to do all the talking, and Belle was willing she should. Mr. D. was a lawyer, but seemed interested by scientific pursoits, for he was heard at times, expecially on the corries, to talk about damaing the lakes. Which of the three is the author of this production the reader may build.

the corries, to talk about daturing the lakes. Which if the three is the author of this production the reader may devide.

Our trip might have ended here, so far as lake traveling was rancerned, but for the story of Phantom Falls, which fall thought a liction, by Rev. Remoueer Marray, but the serelibility of which tale was indorsed by a very respectable gentleman, a frequenter of Schröde Lake, Mr. N., for whom we all but the highest regard. He heated the scene of the occurrence on Forkel or Roquette Lakes, and advised us by no means to return without satisfying ourselves as to the reality of the appartion. Increditions, Indeed, must have been the person who could divegard the nativice of this elaquent dishermin, who, like the "uncient mariner," convinced us of all he would laive as helicov, and accordingly we pressed on to Phantom Palls. One day we spent in a visit to the falls, and on the adjacent bank devoured our lauch while unsquitoes devoured us, but no phantom appeared, probably because in daylight it would not be visible, so we contented ourselves with surveying the rapids and falls, and scheding the safest way down in case we had to make that descent of forty feet, and concluded that the falls was an excellent institution for making phantoms of those who went over them. Resting a day, we went on to Forkel and Raquetle Lakes. Here we left hotels betind us, and had either to comp on the share or content ourselves with the limited accommunities and the hermit Alva Dunding's bark shanty an Ospray Island, formerly the reinlezvons of Marray. This last we chose, reasoning that if we were at the spot where Marray limb been the shore and watched patiently the different points wherever might be expected to appear the spot where Marray had been the hone of the real man, though now the frequenters of the place.

"Are principally while With may red."

"Are principally white With mary red."

Surely those horn and reared on its shores must have been mind and straight, like the pines on the meightoring hills, and maidens as lovely as the smaller evergreus, that frings the shore. And if ever their spirits return to hand the enth, no other place would more likely be the seene they would revisit.

The night wore on; our watching seemed unavailing; all had chosen their respective resting places, and the writer watched slome. Whether sleep overcame my eyes as I gazed entranced on the seene, I cannot say. Suddenly the shore till opinise their barking to a mournful howl, and whining, stank away, and pround a distant point appeared a misty figure in a dark canoe. Slowly it glided along the shore till opinosite the samularing remains of our fire. The figure and hoat seemed like that described by Marray Her bout just touched the shore, and she raised heiself up, and, basking toward the live, beckoned, when mother figure, seemingly of a young white man, chal in a hunting garh, emerged trum the gluon and stepped into the came, which bustnaff mayed to the orth. Just theo a fearful war-a hoop rang from the other direction, and two cames, apparently lifted with Indians, dushed into sight and fullowed the retreating hand, which was unw moving swiftly away. Far over the loke they rushed, pursue and pursued, in the direction of the river, and disappeared in the darkness. Lamely I remained spell-bound, mable to move, No desire to join in that ghostly nocturnal chase animated the shundered, or even to awaken the guides, but let them enjoy the sheep they had hardly carued; nor did I tell them the story far fear I should be laughed at and accused of seeing thongs in my dreams. I could not hope to overcome public incoedulity when Marray had failed. But I concluded that this was deserted, and that the botel below had not been a success.

When the morning broke the lake was shrouded in mist, and the guides said: "Alvy lus heen out jack shouling not

n success.

When the morning broke the lake was shrouded in mist, and the guides said: "Alvy has been out jack shooting not got lost in the fog, and warn't home yet." I inquired if they had beard nothing during the night? They replied they had heard nothing during the night? They replied they had beard anothing during the night? They replied they had beard anothing during the night? They replied they had been any and said he had not fired his gun. "to oust," and he probably had some venison. But be came onck without any, and said he had not fired his gun all night. We were further interpoted that the dogs had been making a wonderful row in the harking way all night hong, but how the guides could know all this and snore so stendily is a commutum we give up. We three held a council of war on the subject the next morning, but did not take the guides into our confidence. We decided that Murray's phantom had been reinforced; that it was not advisable to make further investigations on the subject at present, and it was resolved to pastpoom a further campaign till next senson, when Mr. D. has promised not to sleep so soundly. As to whether an apparition really appeared, the writer can only tell of what was, or seemed to he, visible to the writer whether sleeping or waking, and refer the reader to the Rev. Mr. Morray as to the probability of its reabty. As some as the unist rose we paddled away, and the last sound we heard as we left Raquette Lake was the loon's mocking langle.

On our return to Long Lake Inlia commenced an investigation to the properties.

we heard as we left transactive back with the tool installable.

On our return to Long Loke Julia commenced an investigation in the use of threatms and the method of their discharge, as the basic-bourd of her room will show, not reflecting that it is only a substance which stops a bullet that is harmed thereby, and a plumton would suffer an inconvenience from Inving a morsel of lead through even the most vital part. The rarduroy between Long Lake and Schrom nearly obliteinted the reculication of anything so evaneseent as a plantom, but with rest has strength returned, and a memory of our adventures, and we have written as nearly as we can for Mr. N. a dairy of our experiences at

Pheventive Adamst Morus.—A very pleasant perfume and also preventive against maths, may be made of the following jugrations: Take of cloves, carraway seed, buttineg, bace, einnamou and tonquin beaus, of each one bunce, then add as much therentine orristroot as will equal the other jugrations put together. Grind the whole well to powder, and put it in little bags among your clothes, &c. This will answer.

SPORT IN MANITOBA-No. 2

N pursuance of any promise in my lest japper I will make by in Manitoha. First, for the lantilose I must rounce, that I do unt speak from presonal experience regarding it, and I louw the pomnty they inhalt so self, and have a surface of the Boundary Street, which is a self-and have a surface characteristics from holf-fired hunterstond ground the most of the Boundary Street, whin not and killed them in large quantities, that I feel almost as if I had engaged in a final which, to my dispeas, I was debarred by having the hole with departies from Cypress Hillistics, and those which, to my dispeas, I was debarred by the surface of the large with the large of the theory of the control of the c

ever got at one—at least I ought to bave got—I was out surveying, and while standing with a flag in my hand a splendid buck came to within flfty poces of one, and kept guing round and runnel me. I had not even a revolver. I was object so ond in my life; I think I could have bit bling with a stone, but there were no stones either. There was a ville in a sart oldont a mile alread, but it was ulways ahead, as when I moved it noved as I was going to a point, so there was no fear of my hurting this particular unimal, and I think he knew it, for he stayed about half an hour and then traited picetly many, leaving me to close the curl of bitter disappointment. It is hard work, but to the true sportsome this should be authing if his efforts are successful, and, indeed, there is suncething porticularly gratifying in successfully stalking one of these peaceful anhunds—a greater gratification. I was going to say, even than in langing a black bork in halm, but I cannot upite say thut, still there is, in one sense, for the block burk is much easier to get at end much more easy to flod. I have known a brother officer of nolne to kell seven un the line of murch in one thay. We were oblowed to fall out, or ruther stop helind, and shout out the march—at least those officers not required with their trapps or companies, one being generally sufficient when a regiment was peacefully traviling from one stution to morther, as they did to those happy days. Now the whole country is intersected with railwoys, and the salidiers of her Britannic Majesty know outhing of the glorious sport and juthty of the dear old marching days. With these remarks I will concline this paper. I may some day have a few order lines to write about the "greet hime hand," as Capt. Buther very apthy ealls those humalless prairies stretching for away to the west and the setting suc.

DEER CHASE AT BLOOMING GROVE PARK.

BLOOMING GRAVE, Pike Ca., Pa., July 516, 1875.

BLOOMING GINDER, Pike Co., Ph., July 616, 1875.

RINTON FOREST AND STREAM:—
The hemiquarters of the Bisconing House Park Association are now well parentized by members and their faunties and invited guests—not vals for the week just enough being seventhen. The house was never so cell kept, or the general arrangements see satisfactory. There are four hours on the lake ment by, one of them being a bona flut Burnigat social toot. The troopiet ground is well parentized by the tadies, while the lines with which the lake iens stocked four years ago have multiplied sufficiently to having sport at any time, and keep the table supplied with fish. The troot fishing in May was excellent but this streams are now very boy, and few lish to be had. Deer awarm in the woods, and are frequently seen. One got that the lake on Fuday, and was captured allow by your editor in chief, Mc Hallock, in one loot, and Augustes Walbridge, of Brookly, in another, other an exciting and fatigating chose of one hour and teenly mounter. Both process and pursued showed good "staying" powers, and dezens of allempts by the deer for reach the sloce were frustrated in a mosteely namier, the notional being repeatedly healed and and one though the centre of the lake. It was finally corneced between the two hoods, whore a none constitution of the heal and drawn light enough to lodd, but not be centre of the lake. It was finally corneced the local to which its legs were fled, and it was housted that the head and drawn light enough to lodd, but not be close. Thus secured, the deer deer the local to which its legs were tied, and it was housted that the head and drawn who have the local to be fight. The close was catched and encouraged by the guests and employees who know the shore. In Mr. Halbeck's hout was the feet, hough ? T. Decyes, H. D., of Brookkya, who is now spending his Sanoner cacation at the Pack, and who mus) cone in for his share of the hooces, if any, that belong to he achieve must.

Broaklya, who is now spending the similar canadian at the long to the achievement.

It has long been a chrisheit plan of Mr. F. S. Giles, the dest Poesident of the association, include the deer long the lake with dags and capture then in the manner above deer third, with a view to fine them of oscillation in the manner above deer third, with a view to fine them oscillation in the manner above deer third, with a view to fine them loose thin the breeding pack to mile square enclosed for breeding purposes. This is the float of ency, that has been to make my different would seem to indicate that it is impracticable, as the nervous considility of these gentle centures is so manter that they will do from fright. The expectation will not, therefore, probably he operated. The creature this untimely indeen off was a div doe, in splended condition, and verbied 201 points. Its desk was much cellshid by the ginesis, to some of whom venishing was a modify. I am surprised of the manner of deer to this vicially, and affethate has the fact that they must be constantly oscipling through the celes of the hearding pack, and perhaps to the close season being generally respected. I believe it is easier to start a deer keet than in any part of the Addionalarks, and their weight is houseness, some ceaching 250 pounds. A large number of facus base been dropped title year within the melasers, behaving several from the pet deer which keep constantly around the gamakeeper's lodge, and afford no fittle the leftest to ci-time. In two years mare, with the natural faciouse, the co-closice will have to be enlaged, or the surplinage he let house or killed, in they droe two years ago in Dardi Hill Tark, Balmines.

Yesterlay flev. De Daryen calliciated at Sunday services to the great qualities of the club limits, and the goant planto allied to the effect of the missle, which was cery good, the doctric timined has and pickeed, and there are hundreds of access of chartchebries in the vicinity, now rapidly traning line. John Accey, the President, i

University of Virginia.—The following letter came a day too late for publication in our last issue; it treats now of the fulfillment, not of events initicipated, so that it is perlmps none the less interesting:-

PHADLOTTE-VILLE, Vic., June 28th, 1875.

PHADLOTIE-VILLE, Vic., June 98th, 1875.

Entrol Parest and Streen'—
Preparations for the send-centennial of the Unicosity still go on, in spite of the heat and red dust, which latter is in Albanach, accularly at this season. Albanal actice by every tain, and every State in the Unicosity in the season and some delegations have fathers and their some, both actuated by the same love for the "old U-V". It is more fine resting than positiode to confri the heathcair of albania of differently in it's bonne—inco of the past, oth convis foot and cerukles, and he cost of the Thru warshoppers at the strike of the Nove. The negramme commenced hot Sunday evildage with Dr. Brautley's striking before the Y-M. C. A. of the University. Today (Monday, 28th) the Band of Visitors meet, and the Washington Literary Suclety has its celebration. Threshop, 29th, Sochety of Almand most, inhies by the J. Barbare, President, and a poem by it B. Laces. In the evening the sear-centennial address, by B. M. T. Hanber, after the amagname modal has been derived. Thirshay, July 18th by the Public Day, when diplomas, etc., are underred, Gen John S. Preson, of South Caodina, delivers the orathor, and the almand dinner, the event of the schooline, occurs in the public hall. At hight three is a half for those young enough or movested by the labors of preceding days. No school he the world has more thoroughly be tow and devotion of to be in this our old fluour, mother, the Unicessity of Vienda. Prof. Long and theirs he Regland, former professors in the Polecestry, have been invited to attend. I find some tool anglets here, and shall pump them a fittle as to localities and so footh. T.W.

Mish Gulture.

U. S. FISHERY COMMISSION.-We have a long and interesting letter from our last Summer's correspondent, "Piseco," describing Wood's Hole, in the Cape Cod country, where the United States Fishery Commission under Prof. Baird, are to have their headquarters this year. It will appear in our next issue. The following extract is pertinent to the prescut date:—

pertlnent to the prescut date:—

"The Commission have not all arrived yet, but those who are here are already hard at work. We are having aquariums prepared, to be supplied with sea water from a large tank, which will be kept filled by windmill power.

"Profs. Baird, Hyatt, Goode, Bean, Dr. Farlow, Mr. Rockwell, secretary, and Messrs. Dana, Taylor, and Nilson, stenographers, are here, and others are daily expected. Another week will, I think, see the fish house, laboratory, and aquarium finished, and we hope for a Summer of interesting results.

-Last year the State Fish Commissioners of New Jersey, stocked Lake Hopatcong with a quantity of salmon spawn and young salmon, thus sowing the seed from which great results are anticipated by the Waltonians who make this lake their objective point. Ffteen hundred young trout have been deposited in the pond helonging to the Lakeview House, and the prospects are for a hountiful fish supply in the near future

BLACK BASS.—The Delaware River in the vicinity of New riope is said to be full of black bass of fair size, and the fishing excellent. Persons desirous of stocking ponds can obtain a supply of these fish of any size, from one to three pounds, by addressing Mr. James B. Thompson, New

—J. M. Milner, of Washington, United States Fish Com-missioner, and Fish Commissioner Brackett, arrived at Holycke on Thursday of tast week, and hegan at once the work of securing shad spawn. They intend to leave one-half of the young shad for deposits in the Connecticut Rivers, and others in this Staté, if desired, and the re-mainder will probably he placed in Western States, in the head waters of streams that empty into the Gulf of Mexico.

-The \$10,000 fishway at South Hadley Fulls is pronounced a complete failure. Not a shad has gone over it this season, and efforts to improve it have been futile.

THE ORIGIN, DEVELOPMENT, AND PRO-GESS OF FISH CULTURE.

BY ICHTHYOS. - NUMBER ONE.

GESS OF FISH CULTURE.

BY ICHTHYOS.—NUMBER ONE.

ROM the most securate information gleaned from the distant past, we are forced to adopt the conclusion that fish culture is an art of very ancient application. Reasoning in connection with the watts of our race, in its primitive condition, in the absence of an enlightened agriculture, we are led to helieve that fish as a food resource, were used at an early period. Indeed, the vocation of fishermen was adopted by many of the Hebrews, some of whom hecame distinguished in the earliest efforts to establish christianity. And from this fact, we reason, that a large amount of food of those ancient people was taken from the waters of Judea. The Old Testament writers, too, make frequent allusions to fish-gates, which possibly were methods by which fish were caught for domestic and commercial purposes. We have positive proof that they had numerous methods of capturing fish for food, and that a large part of the sustenance of the human family at an early period of time, was obtained from the water area of the globe. Oriental scholars have discovered in the writings of the Chinese historians, authentic secounts of the practice of the art of fish culture, by that nation 4,000 years ago. It is a fact well anthenticated, that fish hatching has been practiced in that country, from the earliest period of the world's history, for mention is made by their oldest writers, and it is also affirmed by savants conversant with the literature of China, that in the works of Fo-bi, who fiourished according to the calculations of the best authorities 2,100 B. C., mention is made of laws regulating the time at which spawn should be taken.

The earliest notice of Chinese pisciculture by Europeans to be found in thistory, is that of Father Duhalde, a Jesuit Nissionary, who, in 1735, published at Paris a history of the Chinese Empire, in which he states that "at a certain season of the year an immense number of merchants went of the Empire of the Intervention of the Empire of the presence of th

The Romans were probably not familiar with the artificial means of impregnating and hatching ova, or some account of it would have been transmitted to us; yet they had enormous piscines—fish ponds, where fish multiplied naturally, and from which their tables were supplied with fine food fish. That these fish preserves were enormous, may he gather from the fact that the price paid for contents, in one case, that of Lucullus, amounted to 4,000,000 sesterces, equal to \$160,000, showing conclusively that fish culture, if not fish breeding, had at the period of the Empire and Republic, attained gigantic proportions. Rome at the acme of her power had a vast population, and it is but full to infer that she unde the most of food resources, and that the rivers and waters of the Empire contributed largely to sustain her millions of people. If we had space we might draw from Columella, whose work is full of facts regarding rural industries. Thus, fish culture, in a rade form has been practiced since the early ages of the world, quite commensurate, probably with its civilization. While the Romans, between the taking of Carthage, and the reign of Vespasian, contracted a perfect passion for fish culture, in which for the gratification of their tastes, fabulous sums of money were expended, yet, the interval of time which separates the Roman Empire from the Eighteenth Century affords us no particular evidence of any important progress in the art of fish culture,—in the lanshandry of the waters. The progress made by the Romans, was harely maintained during the middle ages, save that the fisherman's art was kept alive, perhaps, slightly extended, and perfected in Italy and in France, where fish preserves hecame quite numerous.

kept alive, perhaps, slightly extended, and perfected in Italy and in France, where fish preserves hecame quite numerous.

Towards the end of the middle ages, it appears, however, that new methods were sought for, with a view to the increase of the production of lish. Dr. Slack says, "the numerous fasts imposed upon monks during the middle ages by the Roman Catholic Church, rendered an ample supply of fish food an article of paramount importance to the monastic fraternity, and to them we we would naturally look for any improvement in the art fish culture. While hunting among the musty archives of the Abbey of Reome, Baron Mongaudray accidentally discovered that a monk of that religious establishment, yelept Dom Pinchou, during the fourteenth century, practiced a method of hatching, at least similar to those still pursued in some of our largest trout farms. How the reverend father obtained and treated his spawn is unfortunately not recorded; but obtain them he did, and no doubt received the blessing of his confreres for the welcome additions to their larder. To Dom Pinchon must he ascribed the honor of the invention of the first hatching box. For three centuries more, the art remained in the status reached by the Monk. In 1761, Charles Frederic Lind, of Lin Koeping, Sweden, having noticed the spawning of fishes in Lake Koken, prepared a large, wide, shallow box in which, after covering the bottom with hrush, he placed male and female carp, during the spawning season. As soon as the spavn was deposited, the parents were removed and the eggs protected from the attack of enemies. This process is still practiced with success in various portions of the continent. Spallanzani, an eminent Italian naturalist, performed for the first time the operation of artificial impregnation, not with fishes but with frogs; yet the fact was established, and practicul beuefit was derived from his experiment. Drifting along in the current of events, no real impulse as yet had been given to fish culture. Like all great movements and inv

The Habits of Black Bass.—They pair and spawn in May, make their nests on beds of coarse sand or gravel, in from four to six feet of water, by fanning the pebbles clean and smooth with their fins and tails, and then deposit their eggs. Two or three weeks, according to the temperature of the water, elapse before the eggs hateb. The hatching is almost instantaneous, the young coming out a perfect fish about half an inch long. After hatching, the young remain several days over the spawning beds, while the old ones keep close by to protect them. In about a week the young scatter, mostly into deep water, and are not seen again until September, when they come in shore, having grown about two inches in length. If well supplied with food, they grow about four inches the first season. When two years old they reach a pound in weight, and after that grow about a pound each year, until they weigh six or eight pounds.

PROPAGATING BLACK BASS.

GUPLPH, Ontario, June 28th, 1875

EDITOR FOREST AND STREAM:—

The members of the Guelph Protective Association being anxious to restock the streams in this district with black bass, recently made an attempt to man-port a quantity of the same from Lake thron here. I regret to say that the attempt was unsuccessful those baving charge being unable to keep the fish alive in the barrels of water provided for their transportation. I am therefore instructed by the association to ask through the medium of your columns if any of your readers will be good enough to give their experience or recommendations for the transportation of tive bass; also as to the mode to be adopted, and the same with regard to spawn; also as to the mode to be adopted, and the same with or spawn the most advisable proceeding. I have the honor to be, dear sir, your most obedient servant,

Screttery Goelph Fish Protective Association.

Ans. No attempts are made to stock lakes and other waters with spawn of black bass. Knowledge of the lights of this fish does not yet extend so far as to warrant any

its of this fish does not yet extend so far as to warrant any success in the endeavor. Grown fish are always employed, and failure is seldom recorded. We ourselves placed a hundred Lake Erie bass in our private preserve at Blooming Grove Park, Pa., four years ago, and the returns now afford excellent angling. Similar success is recorded in all quarters. The black bass is very easily propagated, and ts increase is so rapid that some fish culturists like Fred Mather (row one of the U. S. Fishery Commission) strenuously oppose its lutroduction into new waters. gard to transportation, most instructive papers by best anthorities have appeared in Fonest and Stream, and we have taken pleasure to forward to you the following numbers containing several columns of information on this subject, with illustratious: Jun. 21st; Feb. 4th, and April 1st, 15th, and 22d, all for the year 1875.

Hatural History.

-The Sanderson (Fla.) News of the 14th June says:-"A gentleman of this place informs us that last week, while fishing in the south prong of St. Mary's River, elx miles from town, the found a kind of Island In the swamp, containing about ten acres, covered with a dense growth of small timber. On every branch of these trees he found from one to five hird's nests. If e saw an innumerable quantity of eggs, besides myriads of young birds of every kind belonging to this latitude. He fired his gain saveral times, and a dark cloud of the parent birds each time would rise up from the swamp, circle around in the air, and alight again among likeir nests." and alight again among their nests."

For Forest and Stream.

THE WILD MOUNTAIN GOAT.

NE of the most interesting animals on this continent is the so-called goat which frequents the Rocky, Cuscade, and Sierra Nevada Mountains, and about whose niunbleness, daring, vigilance, cautiou, and leaping powers hunters tell the most unrevelons stories. This animal, which is known as the Aplocerus Montanus, belongs to the antelope as much as to the goat family, so that it is in reality a goat antelope; for, although its horns are placed in the head in the manner peculiar to the caprille, yet they are hollow, like those of the cavicomia unimals—that is, those having hollow horns. In height, beard, and form of face it resembles somewhat the chamois, but the latter is, on the whole, the more graceful in outline. Of the hollow-horned quadrupeds there are but two representatives on this continent, and they are those mentioned. The great difference between the two species seems to be more in habitat and the character of the thau in anght else. The goat frequents the most inaccessible mountains, and loves the alpine region with its towering crags, tender herhage, and fields of snow, where it is safe from all enemies, while the antelope makes its habitat on the high, rolling plateaus, where it can watch its foes and escape them by its speed. The former depends on its nimbleness in leaping from erag to crag, or hurling itself into an abyss, la avoiding the machinations of chemics, and the latter depends entirely on its fleetness. The covering of both animals differs much in density and character. That of the That of the goat is long, white, and intermingled with soft, silken hairs, while that of the untelope is short, thick, coarse, and tubular. The shorter hairs of the former, which lie close hairs, while that of the interope to short, thick, coarse, and tubular. The shorter hairs of the former, which he close to the fiesh, have a fiercy appearance, and could apparently he used for manufacturing purposes, as they are flue, flexible, and tenacious. The visage is that of the regular capride family, but the hody is more akin to that of the sheep in form. The harms are short, couldal, black in color, slightly recurved at the outer end, and have a ring around the base. 'The face is rather long, and decorated with a white, pendant heard; the nose is ovine; there is no

around the base. The face is rather long, and decorated with it white, pendant heard; the nose is ovine; there is no tear-hag and no mattle; hence it has no althily for the deer family, though closely allied to one of the species. Its home is among the snowy pinnacles where naught grows but mosses, licheus, a few alpine shrubs, and a meagre growth of the twisted, weather-beater black plue. A mid the rocky dells it is secure from all foes except man, and even he seldom enjoys the satisfaction of killing one.

In the Cascade range it reaches an altitude of from 8,000 to 14,000 feet in Summer—a height that would cause a man much difficulty to clumber, owing to the rarity of the atmosphere. At this altitude the range is one mass of precipiess, owing to its volcanic origin, but the gont seems to have no fear of them, for it nimbly leaps from crag without the least hesitation. When pursued or startled by a hunter a male leads the fack, and he is followed by the females and the young, and the adults close the rear. They will then bound from rock to rock with a rapidity almost inconceivable, and fly over chasms broad enough apparently to check mything else than a winged antiant. When hard years the leady down a precipice, and generally escape uninjured. I have heard old hanters and Indians say that they strike on their horns when they hard then selves downward, and then rebound to their feet unipfured, owing to the strength and plasticity of these appendages. They tell marvelous mecdates of the distance the animals will jump and escape injury, but how much is fact I could not decide, not having seen my such leaps made as I leave heard Nimtrods mention. It is said that the animal will jump and escape injury, but how much is fact I could not decide, not having seen my such leaps made as I leave heard Nimtrods mentions. It is said that the animal will jump and escape injury, but how much is fact I could not decide, not having seen my such leaps made as I leave heard Nimtrods mentions. It is said that the summer will jump

exceeded an ordinary sheep in size. From the hardy habits of this animal, its vivacity, dense coating, and the fine, woody character of the inner covering, which equals that of the most famous breeds of the Orient, it would seem that crossing it with the delicate cashmere and Angora goals would prove a valuable experiment, as the progeny would be hardier, better able to shift for Itself, less fastidinus in its choice of herbage, and produce a softer fleece than the pure breeds do. No person has yet tried the experiment; for where the wild species prevails the domestic is unknown. Should it he made, and the cross should prove a good fleece-bearing animal, the foothills and mountains of the interior plateaus lying between the Rocky Mountains and the Pacific Ocean could then be utilized, as they are well adapted as a pasturage for such flocks. Even if the wild animal were domesticated it sums phusible to suppose that the care bestowed upon it would be repaid by the price its coating would bring, and that it could supplant imported breeds, which require much attention to make them profitable.

NATURALISTS IN TROUBLE.—The Florida Agriculturist

says:—
"A naturalist from Detroit, Mich., and another from Germany, were recently arrested at Cedar Keys, charged with violating the act of the Legislature relative to killing and transporting game beyom! The limits of the State. Upon examination it was found that they had only been engaged in making a collection of bugs and flies, and were released, but not until they had been put to much trouble."

We are glad to see that the Fiorida people are interested

We are glad to see that the Fiorida people are interested in preserving the game laws, and commend them for their vigilance. Discretion, however, should be used, and no direcimination be made between ontsiders and those to like manner born, including the negroes

—One of Howes & Cushing's lionesses gave birth to Iwo fine cubs in St. John, N. B., on June 17th. They passed them around and allowed the audience to inspect them.

EMBALMING IS. MOUNTING

GRAND RAPIDS, Mich. June 30th, 1875.

EDITOR FOREST AND STREAM:-

Grand Rapids, Mich. June 30th, 1875.

Editor Folizst and Stream:—

In your Issue of June 17th, 1875, Mr. Batty, in reply to my article on embalming, no doubt te sincere in presenting what be supposes to be substainful objections to the art. He is no doubt a skillful taxidermist but I am led to believe, judging from his criticisms of the embalming art, that his experience has been very limited, at least in the art as discovered, perfected, and taught at my hand; and in answer I will endeavor to be brief. First, I never remove birds' eyes from the oniside. Second, I do not use solid substances to compensate shrinkage. Taird, I make but one incleion in the skin (in piace of perforating, us he supposes), and iberefore do not make use of the friendly halts of long coated animals to cover slitches. Fourth, I can remove or prepare the eyes of an owl in one half the time usually occupied, and not stretch or disfigure the eyelbts. Fifth, Mr. Batty says there ls but one way to compensate shrinkage; in that he is mistaken. Sixth, he can see some of the muzzles of ruminats in my collection at Grand Rapids, Michigau, which have received special compilment, frequently by skillful taxidermists. Mr. Batty says he cannot see how an embalmer can fasten a specimen in the required position without wires. I say, it answer, I don't wonder at that, as I always do use wires or rods, and I ceitainly can't expect him to fully see or understand what he has not seen, which makes bis criticisms the more inexensable. I say I can embalm abid the one half the time it takes me to skin and stuff one, and so can any other taxidermist who understands my method, and it silvays makes a finer specimen. I have mounted may bundreds of birds by both stet, and understand fully what it is to mount birds of prey with or without whigs extended. Mr. Batty says he thinks I may be easily beaten by four of your correspondents. This may be true. However, it always affords me pleasure to meet my brother laxidermists either in friendly controversy ur in lest of s

BLACK SQUIRRELS IN ILLINOIS

Washington, D. C., June 26th, 1875.

A paragraph

EDITOR FOREST AND STREAM:—

A paragraph copled into your journal of June 10th, from the Farmingtou (III.) Years, wherein it was stated that a black squirretwas never seen in Illinois -meaning, of course, in the foreast—brought unit from Massachusetts two gentlemen who seem to discredit that unfortunate statement. One of titem states that thirty years are such squirrets abounded in the woods of Northern Illinois, and the other advices the editor of the paper aforeaid to take a trip to Wankogan, Illinois, claiming that he would there find the black squirret more plenty than he is aware of.

I was born at Wankogan, and since I first became able to carry a gun have been thoroughly acquainted with all the woods of Northern Illinois. Since 1865 I bave considered myself a sportsman, and having hunted that State from its morthern to its southern boundary, will state that I have never therefu ever seem or beard of a black squirrel in its natural state. It to a fact that they were found there, quite rarely, as far back as thirty years ago, but nover, so far as f have been able to carry became a seem to hungine, and should the editor of the Nessa take the advised trip it would be att. Stone who would have to acknowledge himself at error in his woodcraft.

Gurdon.

CENTRAL PARK MENAGERIE.

NEW YORK, July 4, 1875.

Animals received at Centrat Park Munageric for the week ending Juty 1th, 1875:—
One White-throated Capuchin, Cobus hypoleucus. Presented by Mrs. Com. Parks.

eo, Ballar.

One Malhrouck Monkey, Chlorocebus cynosurus. Hab, West Africa.

One Capybura, Hydrocharus capybara. Hab, South America.

One Roebuck, Capreolus caprea. Hab, Europe.

BRED IN THE MENABRITE.

One Black Wolf, Cants occidentalis. Ver. ater.

One Cygnet, Cygnus olor

Three Pea Fowl, Pavo cristatus. W. A. Conklin, Director.

W. A. CONKLIN, Dhector

Woodland, Harm and Garden.

GRASSHOPPERS AND POTATO BUGS.

LTHOUGH the reports received of the ravages of A grasshoppers appear, upon investigation, to have been grossly exaggerated, yet the truth is bad enough, and been grossly exaggerated, yet the fruth is bad enough, and sufficient to excite our warmest sympathy for the farmers who have been so ufflicted. It seems rather strange that they do not disappear as rapidly as they come, as tradition and experience elsewhere would lead us to expect. In the western counties of Missouri, notwithstanding the plague, it is reported that fully fifty per cent. more land will be cultivated this year than last, and that in spite of the "hoppers," an average crop of all grain save wheat will be harvested. In fact, it seems that while in some places the destruction of vegetation has been enormous. will be harvested. In fact, it seems that white it some places the destruction of vegetation has been enormous, there is but very slight prospect of the people of Missouri requiring any assistance

requiring any assistance.

Our sympathy is now excited for the farmers of Long Island, in whose potato patches that terrible pest, the Colorado potato hug, or beetle, has made his appearance. In Kings county the "spud" is cultivated to a large extent, and the later varieties appear likely to suffer. The earlier kinds are now in flower, and although the plants in many localities are covered with the insects aml likely large the relations will be sayed. The rapidity of growth of væ, the potatocs will be saved. The rapidity of growth of this "bng" is remarkable; in a week he is a grandfather. The clicts of the various European Governments in forhidding the importation of American potatoes, though seemingly harsh, were yet founded in wisdom. The ap-pearance of this plague in Ireland would be productive of almost as much suffering as that during the great famine. The recuperative powers of the American people are strongly brought out, when they meet and conquer such visitations as the grasshoppers and potato bugs, whereby other nations would be prostrated and weakened for a long series of years. series of years.

The Use of Toads.—The Journal des Connaissances Medi-The Use of Toads.—The Journal des Connaissances Medicales states that the French horticulturists have followed the example of the Euglish ones, and peopled their gardeos with toads. These reptiles are determined enemies of all kinds of snails and slugs, which, it is well known, can in a single night destroy a vast quantity of lettuce, carruts, asparagus, &c. In Puris toads are sold at the rate of fifty cents a dozen. The dealers in this uninviting article keep it in lurge tubs, into which they plunge their bure hands and arms, without any fear of the poisonous bite to which they are supposed to expose themselves. Toads are also kept in vineyards, where they devour during the night millions of insects that escape the pursuit of nocturnal birds.

TOMATO TRELLISES.—The obcapes and most convenient trellis for tomatocs is to make a four square frame for every hill, of four pieces of hard would, two feet long and ooc inch square, for the four corner posts. Let three pieces of late, each one foot long, be nailed on each side; such trellists will cost only a few ceuts each, and they such trellises will cost only a few cents each, and they will save four times their cost in tennatoes. Let such a trellis be placed over each hill before the place thas begun to bend sideways, then the fruit will be kept off the ground. If made of durable timber, and carefully stored during Winter in a pile on one side of the field, this kind of a trellis will last balf a score of years or more, especially if they are dipped in a kettle of coal tur before they are placed over the tomato hills.

Time to Cut Grass.—The hay crop, according to the last census, cannot be estimated at less than \$400,000,000, and this immense aggregate shows the importance of husbanding the great resources in the best manner. We shall not overslate the fact if we say that twenty five per cent of the buy crap is lost by late cutting. Nature, in her efforts to perfect the seeds in all our ceral grains and grasses, accomplishes this at the expense of the instriment contained in the stalk. In fact, it may be assumed as true, that at the time of blossoming, the stalk contains all the nutriment which the seed and stalk contain after ripeoing; and therefore, that nothing has been gained by allowing the seed to ripen, unless in the case of octeal grains which are most valuable for their seed. As the seed ripens, the soluble fond constituents are taken from the stalk to perfect the seed. Chemical analysis has shown that elover before blossoming contained only twenty-eight per cent. of insoluble woody fiber, but immediately after blossoming, forty-three per cent. of insoluble fiber. All experimeots tend to show that our grass crops, intended for fodder, should be ent and eured into hay before anture has commenced the formation of seed. Therefore, the proper time for cutting grass for hay is at the commencement of blossoming. There is more sap in it, at this time, and, consequently requires more curing; but each ton of cured lary is worth at least, twenty-five per cent, more, as matriment for stock, than after the seed forms.

Hay is also injured by being too much exposed to the rays of the sun. This causes the volatile aroma to escape, and also dissipates much of the coloring matter, as may be seen by the bleaching, and also by feeding to milch cows, from which the milk and butter will be light-colored. Here cones in the value of the hay-cap, which protects the hay coke from the rays of the sun, and allows it to care with the fire green color preserved.

We write thus early that our readers may have their attention called to this impo

One firm in Key West ships 8,000 pineapples to New

The Rennel.

THE ST. LOUIS POULTRY AND DOG SHOW.—We are in receipt of letters from the managers of the Grand Poultry, Pigeon, and Dog Show, to be held at the Exposition Building at Chicogo, from the 20th to the 28th January next. The premium list, now in preparallon, will be the most liberal ever offered at any similar exhibition, and with the unequaled facilities for a large show, it is confidently expected that the exhibition will be the largest ever held lu America. The judges selected for the Bench Show are F. America. The judges selected for the Bench Show are F. Demuth, of Fort Dodge, Iowa, Arnold Burgess, Maysville, Ky., and Horace Smith, (the "Squire,") of Forest and Stream.

HARD LUCK.—Mr. C. S. Westcott, of Philadelphia, has had the misfortune to lose by distemper a very valuable pup from Fairy, by Pride of the Border, and his Gildersleeve hitch, which had been served by Pride of the Border, died while giving birth to a litter of pups. Two of the pups were saved, however, and are doing well.

We regret to hear that our centennial friend and brother sportsman, Dr. D. C. Estes, of Lake City, Minn., bas just lost by distemper a valuable English pointer, named "Buteo." He was considered one of the finest yearling pups in that part of the conotry.

For Forest and Stream. TRUE COLORS IN SETTERS.

TRUE COLORS IN SETTERS.

INOTICED some time since in your column of Answers to Correspondents that you say liver and white are not had colors in a setter. Now, as everything is comparative, and most of the authorities unite in giving liver with its modifications at low rank. I heg to take exceptions to your storements of far as to show that comparatively this marking is before the store that the store that the color belongs, as there are other break to which alone this color belongs, as there are other break to which alone this color belongs, as there are other break to which alone this color belongs, as there are other break to the color and the twenty reported that where certain ever appears under the color and the twenty in the calabilist is presence is, consequently, or limiting the proof of impure or crossed thood. It is very important that where certain every many from your unqualified asserted to the limit of those colors should be known, as a stiff the store of the store

I wish to be nuderstood as saying that with such a dog as Pride of the Border, or his get, I should not object to liver marking, because I should know from whence it was

derived; but in ordinary cases I would be slow to accept a dog thus marked, because it is a low grade color in comparison with others, and the best in all respects should always be sought for and encouraged. As me pure Irish setter has ever been known of this color, a well-posted breeder would not hesitate to denounce the short at first sight.

Maysville, Ky. Arrona Borges.

-Irish terriers are being imported to this country in considerable numbers. A correspondent of the Fonctors' Guz-ette writes regarding them as follows:—

silerable numbers. A correspondent of the Forcion Curette writes regarding them as follows:—

"With reference to your correspondent 'Shamrock's' letter on Irish terriers, I have observed that blue, dark fawn, or dark yellow dogs, have generally black toe mils; but, on the other band, dogs of a light tinge, of fawn, yellow, or wheaten have invariably whate toe nails, and hold, in my opinion, are equally pure bred. No doubt all Irish terriers must have black months and even leeth, and if dark about the muzzle so much the better; but it is not absolutely necessary that the latter should be so. I agree with 'Shamrock' that the ears should be of a darker tinge than the body, but the legs are by no means always so. I see that 'Shamrock' has given up the broad chest, which generally indicates the cross of the ball terrier, and that he has otherwise abered his points to indvantage. I think if he would try again that he might still further improve, With regard to weight, a dog between 18 and 25 pounds will do invything fibit a much larger dog can do, and will be much humber and quicker at bis work; besides, it is not desirable to breed them too large, for the ladies of the funity generally prefer them small, and Irish terriers have the rare faculty of making themselves great favorites at home, as well as being the lardiest of terriers and best of workers in field or river."

VERMIN IN DOGS.—There are many ways of accomplishing the same result. I have found nothing simpler than destroying vermin in dogs, after trying many applications, including train oil, which, I think, nets mechanically, causing the parasites to "stick in the mul," and struggle themselves to denth, like flies in trenele; perhaps the mechanical, accompanied by physiological action.

My first experiment in vermin was somewhat sensational. Many years ago, returning in Glasgow per steamer, after a day's shooting. I was accosted by a fustion jacket, who had under his arm a white poodle he wished to dispose of, as he was "bard up." The moderate sum of ten shillings was the price, and in two minutes the animal was mine.

as he was "bard up." The moderate sum of ten shillings was the price, and in two minutes the animal was mine.

Ou taking home my bargain I found it swarming with veruin, and the whole night it kept its elbows going diligently with a rat, tat, on the floor, that ruffled my temper and made me vow that I would make a clean sweep of the vermin next marning. Ordering a total and hot water, I searched out a bottle of torpeotine, confident that a smell of it would be a sufficient notice to quit. I acted with more zeal than discretion, however, for I washed the little brute with the turpentine from head to tail. The process was barely accomplished when, with a super-ranine effort, and a piereing yelf, poor Rose burst away from my grasp, tearing wildly through the house, out of one room and into another, capsizing clairs, and tilting at everything else capsizable. The whole house was in an uprour; and suspicious of hydrophobia produced a general stamped of all thal had legs to carry them. After an exciting chase I collared Rose, and plunged her into the tub of tepid water, having no little difficulty in keeping hold of her while soaping her all over, and gently rubbing her glowing hide.

The poor thing aftered many a pitiful whine, and I could not but uphraid myself when she looked up in my face with a mingled expression of pain and reproach. Soon the irritation subsided; and finishing off with a plentiful douche of cold water, a rub dry befare the fire, and a gentle combing. I was thankful to see the little patient was her tail, and look pleased. Rose never required to be treated again for vermin so long as I had her; hut that was not long, for I contil nut resist the desire of a laily friend to possess her, ofter the very handsome compliment she paid me, that "She thought more of Ruse than she did of myself."

My next experiment was with tobacco juice, with which I killed a fine little terrier puppy. I experimented in train oil to which I added a little suphur and turpantine, and

me, that "She thought more of Ruse than she did of myself."

My next experiment was with tohacco juice, with which I killed a fine little terrier puppy. I experimented in train oil, to which I added a little sulphur and turpentine, and found that effective; but, like some other preparations, offensive to the nostrils. Mercurial ontheat I found the most convenient and certain destroyer of vermin of the many other preparations I have tried. For a small dogsay under sixteen pounds—about the size of a pea rabled at the root of each car on the outside, and allowed to remain a night, will destroy every parasite on the skin. Next day wash the dog with soap made in the fullowing manner:—Take half a pound of white soap, pare it down into thin slices, put it in a pat with a lumbler of water, and hold and stir till the soap is dissulved, adding more water if necessary. Put into it as much mercurial ointment as will give it a slight tinge, stir well so as to mix tharonghly, and nour into moulds, such as caps, sancers, &c. When cool it can be ent to any size, and will be found deadly to vermin, and cleansing to the skin and cout. Mercurial preparations have a very powerful effect on dogs, and when the ointment is applied externally, they must be kept dry and warm.—Fanciers' Gazette,

A Nahant dog has a taste for visiting. He goes down in the depot and steps abourd the train, without the customary little ceremony at the ticket uthin; and when it reaches the right town he bounds off and pays a visit to some family friend of his master. He never makes a mistake about the town or the truin, and is such a fine intelligent fellow, he always meets with a welcome. He usually spends two or three days an his trips, and no about picks up considerable dog lare in his travels. I do not know whether the mightier days show him any particular attention on his return, but he is ou good terms with thom all.

Couns Sains Without Remaying time Hain—Take soft water, about ten galbins, one holf bushed whent bran, seven pounds at sult, two and a holf pounds at sulphbride acid. Dissolve altogether and put the skins in the solution and allow them to remain twelve hours; take them out and clean them well, and again immerse twelve more hours, or longer, if necessary. The skins nory then he taken aut, well washed and dried. They can be heaten soft, if dissited,—A, W. Lane, in Faucier's Journal.

Sea and Biver Hishing.

FISH IN SEASON IN JULY.

FISH IN MARKET .- Owing to the holidays of the past week the fish market is rather poorly supplied. Solmon still remain plentiful at 25 cents per pound. Sheepshead are scarce at 18 cents; sen bass from New Jersey, 15 cents; striped bass are very scarce and sell for 25 cents per pound. Bluckfish remain in abandant supply and bring 8 cents; bluckfish are plenty at 15 cents; balibut are scarce at 18 cents; coil scarce at 8 cents; weakfish are also scarce at 10 cents. Lobsters are not in full supply, and the price line advanced to 10 cents per pound. Green turtle are in fair supply at 15 cents; soft crabs scarce at \$2, per dozen.

—Our reports from Barnegat and the Great South Bay indicate that the fishing at those points is not so good as it was the previous week. At Fire Island little or nothing has been done with the bluefish since we last went to press. has been done with the fillieush some we first went to press. The weakfish have now all goor to the east end of the bay and will return the last part of this mouth or the first of Angust, when the fishing will again by good. The pound uetters are taking no fish except bunkers and porgies; not twenty bluedsh in all have been cought in this way thring season in this locality.

It is reported that there is an unusually fine run of fish Upper Connecticut this sesson, black bass, with which the river has been stocked, of four and five pounds weight, being quite plentiful, while several muskalonge have been lotely taken, one weighing lifteen pounds.

-Churles Bennett, of Imlian Lake, Hamilton Co., New York, and his brothers; have several boats and are recommended as good guides to all points.

-At the request of a gentleman who writes in behalf of "several readers," we reprint a cut and description of a mo-quito belmel published by us last year.

The way the original "model" was made is quite amusing, and we give it in the inventor's own words:-

ing, and we give it in the inventor's own words:—

"We took a spare rubber blankel and ent out a cap in shape similar to the soldier's havelock, with aval opening large enough to allow plenty of room for the face, and with cape about eight inches long. Then we took a witch-hopple stick, hent it runnd, and sewed it in the rim of the opening. We should have used wire if we could have obtained it, but did not have time to run down to the stare for it, as it was about sixty miles from us. Then with some boop skirt wire, which some unfortunate female had left in our shanty, we bowed out a piece from the forchead to the chin and then transversely, sewing it firmly in its place; then over this a covering of null, or netting, and your cap is complete. This is the only thing that I have land to keep off insects and insure a good night's sleep. You can lie in any position, it is not unconfortable, and serves also as a night cap. The cape should be securely tacked under the coat collar, and tied snugly around the throat. By using a very fine veil over the quening of your cap the punkies can be euched in the same way. I think oil silk would be belter than rubber cloth. We all tried this last Summer, and I used my old one this Summer, and money would not buy it if I could ant get another one."

—Fishermen in some parts of Europe and in this country

-Fishermen in some parts of Europe and in this country kill fish with a loufe or bludgeon as som as they are taken fram the waber, believing that fish thus killed are better than thuse that have lang gasped and struggled before dying. The Dutch destroy life by making a slight langitudinal incision under the tail with a sharp instrument. On the thine they kill salmon by thrusting a steel meetle into their heads. Fish may be easily killed be giving them a quick, sharp blow with a small stick on the back at the head, just helpind the eyes, or by toking them by the fail and striking the head quickly against any hard substance.

The Fisheries.—The number of fishing arrivals for the week ending July 1st was ninety—fitty-three from Georges, seven from the Hanks and thirty from Southern marker-ling trips. Amount of Georges end brunght in, 820,000 pounds; balibut, 75,000 pounds. Hank cod 560,000 pounds; balibut, 140,000 pounds. Markorel, 3,800 harrels. The southern field there mostly arrived home, having made a very fair season's work, particularly those that have readed the New York norrhet carrying in Iresh mackerel. Same of the fleet have made two salt trips, but the bow prices realized far modelered has not both a very heavy purify for the vessel awares after paying expenses. But very few vessels are fitting for the Bay as yet, and the fleet in this branch of the flaberies will be quite small this season.—Cope Alm Advertiser, July 3d.

—A Newfoundland paper says the business of outfitting this season is greatly delayed by the continuance of the ice on the coast to last week. Neither collish nor salmon was reported taken, which is unprecedented at the same date to any previous year.

—A St. John (N. B.) paper states that a few nights since, one host alone tink 100 sulmon outside the lumber. The catches of herring are recorded as good.

Graveshurst.—Ontario, June 24.—Fishing in the Milg metawan is now very good, trunt take the fly pretty lively, and the flies take hold of the angler just a little more su. Mr. Higgins of Bracebridge, returned last week from the South Milskoka with a good eatch of tront, among which, several weighed from two to two and a half pounds rock, and one turned the scales at four and a half pounds. There is a party of gentiemen from Turonou up there fishing now. Black bass are just beginning to lake the truwl.

is a party of genticmen from Toronto up there fishing now. Black bass are just beginning to lake the truve, J. S.

Rongely Lakes, Maine.—This is considered the finest trouting season in five years, the fish being very plenty, and running musually large. The fivorite moints on Mooseluctinagunite Lake, have yielded trout of four, five and six pounds, while on June 28th one gentlemm caught in the same breality, five trout averaging over five pounds cuch. Among the late arrivals at "Camp Kennehago," (the headquarters of the Oquissoc Angling Association) are Messes. J. H. Kimball, of Both, Mr., R. G. Allerton, of New York city, H. M. Messinger, of Brooklyn, and Royal C. Taft, and A. D. Lockwood, of Providence, R. I. During the past Winter, Mr. R. G. Allerton, Treasurer of the club, has built on a picturesque point of roach at Hugle Cove, Mooselucmagunite Lake, a convolicitly arrounged cottage. Mr. A. hus probably continued thering the past few years, more large trout than may member of the Association. For the past week the weather has bree quite warm; thermometer ranging from 70 to 80 degrees in the shade, but the "anglers' turnents," black thes have jost nade their appearance.

Some very fine specimens of Rangedy front, one of which weighed eight pounds, have been forwarded by Mr. Allerton, and can grow be seen at the restaurant of George Marthaler, 16 Dey st., until July 8th.

Massachteetts.—Mus Bedford, Jane 30th.—Albert C. Greene, of Johnston, R. I., on Thursbly of last week back a trip to Marthal's Vimyard on a fishing expedition, returning on Soturday, bringing with him as treasure of the son, about 160 pounds of see lass, among which was none weighing on Soturday, bringing with him estreasure of the son, about 160 pounds of see lass, among which was none weighing fire pounds, another forty pounds, and in the fittle fellum weighing the pounds of see lass, among which was none with ing on Soturday, bringing with him estreating the entraits, and one more (making nineteen in ally weighing there to such a fire of

Baird, of the Smithsonian, is here, or rather at Whods Hole, for the Summer.

Contral

Pasque Islan**, July 2, 1875.—The familiar flag of this club was given to the breeze on Judy 2ad. The latch string out and the house declared duly opened for the enjoyment of its members and their guests for the Summer. The sport so far has bren glorians and far the number of rads unprecedented. There are now regestered J. J. O. Donohue, President of club and family; J. G. Horlee and family; Peter Balen, A. B. Danhammat J. B. Stearus. To morrow, are expected, C. P. Casselly and wife, Fronk O. Herring and wife, R. C. Fellows, Sammel T. Brown, Thus. E. Tripher, Solon Humpbries, W. m. Honry Gunther, Thos J. Havemeyer, Levi Panling, Peter Balen, A. F. Higgins, W. H. Chapman, and others not yet heard from. The following scores will show the number and wright of fish taken in three day's by four rods, not including the catch of to day, but yet registered; three or four tish.—J. B. Stearus first bass of the scuson. J. B. Stearus, 1—37 lbs.; Juss. J. O. Donohue, 8 tish—40, 9, 18, 13, 7, 25, 8, 17, and 48; A. B. Danba, 1 fish—31, 29, 24, 18, 5, 29, 11, 5, 1, and 48; A. B. Danba, 1 fish—32; John G. Hodge, 2—10, 34. The blue fish are affording us enpital sport, but are ignorest for the more splendid gome. You will see that the fish are running larger than usual this season, and we are unticipating our best season.

Connection.—*Twenkey, July 14th.**—The bass tishing Connection.**

Connection.—*Twenkey, July 14th.**—The bass tishing Connection.**

running larger than astad this season, and we are unticlosting our best season.

Connecticut.—Twin Lakes, July 14th.—The bass defining season has opened splembidly on these brantifal holes. Not less than a dozen houts were out on the first of July, trolling, spaceting, and skittering, and the majoral of fish laken was large, as was the size of many of the fish. On the stand where I now write are three two pound bass, ranghl by J. R. Nilsen, the distinguished towar of Di Hall's church, who had never before tried his hand at fly rod dishing for that gamest of lake tish. A few days ago, E. S. Pense, the artist, tank from "Symodoble Hohe" brook, as fine a creel of trout, as one expects to see an a Summer's day; and a week of so before that, Mr. Henry Ambreas, of Hartbord, carried home a time basket token from Barlantanew brank and Madre brook, in Salishary. But the streams are getting very law, and one has to "dish the" to do match, even in the swamps. Pickerel are mansally abundant in "The Twin's" this season, and it is helieved that if the spearing can be stopped entirely for a few years, the lakes can be as alumdantly stacked as in abl times. Appropos of spearing, one man has heed tripped up, and made to suffer to the extent of \$15 by the Salishary Game Protective Company.

—Mr. J. R. Nilsen, of New Yark, takes home with him

—Mr. d. R. Nilsen, of New York, takes home with him some sixtren pounds of lass and pickerel, the result of a day's fishing an Twin Lakes, and he is a new hand at the troll. Several of the bass are of one and a half to two

—Mr. Bendle, of New York, who has humited the Twin lankes for the last mouth, has had glarious success naming the bass and pickerel, taking as many as ten or illicat pounds per day right along.

-Cooper's Summer house is list one poils from Twin Lakes, Ct., and two from Ashley Falls, Muss. It is a well kept and attractive place.

New Jensey.—Harnepet Inbt, Kinsey's Ashiry House.—Weekly report ending July 34:—
June 18, Wm. West and E. Taming, of Philadelphia, sis bluefish; A. Elkan and Mantan, of New York, three blue 18sh; Wm. Mibhilet own and company, Philadelphia, twenty one sheepshood; A. T. Mills, eight skeepshand. Christopher Grim, sixteen sheepshead

June 27—Juhn C. Bailey, Jersey City, eighty-one sea lass and four sheepshead; Win. Williamson, Philadelylin, lwo sheepshead; Sam King, eleven sheepshead. June 28—Robert Laquerc, New York, five sheepshead; J. Ridgway, five sheepshead; H. Soper, eight sheepshead; J. Super, seven—sheepshead; Sanuel Ridgway, seven sheepshead; some fifteen other bonts from three to seven

J. Super, seven sheepshead; Samuel Ridgway, seven sheepshead; some fifteen other bouts from three to seven each.

June 29—Rabert Laquerr, New York, seven sheepshead;
S. Ridgway, seven sheepshead; S. Ghem, seven sheepshead;
S. Super, six sheepshead; E. S. Sheeling and Win, Jacques, New York, four blurfish and four sheepshead;
E. A. Rahinson and C. R. Radgers, Philadelphia, farty-tive blackfish and sen bass.

June 31—Rahinson and Rodgers, Philadelphia, farty-tive blackfish and sen bass.

June 31—Rahinson and Rodgers, Philadelphia, thirty sun bass; H. Super, thirleen sheepshead; some forty boats nut, running from three to eightven sheepshead.

July 4—Jahn Soper, nine sheepshead; thirty boats, running from three to ten; Win, Williamson, nine bluefish; Capl. B. Predmore with party, seven bluefish.

Bluefish are very scarce. The porpoises have driven them nut to sea. To-day a school came in, but fish are small, averaging two and a half pounds.

Sea hass plenty, running from half pounds to three and a half pounds; haats are watching from thirty to fifty per slack water. Sheepshead still numerous and running good size, nut less than 200 to 300 taken daily from these gunnals.

Blackfish have ant put in their appearance.

grammls.

Blackfish have unt put in their appearance.

July 20—Messes. Rudgers and Robinson, have just come in and reported blacks thick. They caught thirty.

Minnesura.—Duluth, June 30th.—A party of seven of as spent Friday last on Baptism River and brought home eighty pounds of tront, the two largest weighing over three pounds each and the balance averaging a quarter of a punnel a piece.

BLUE FISHING WITH ROD AND REEL

ALBANY, N. Y., June 28th, 1875.

BLUE FISHING WITH ROD AND REEL.

ALDANY, N. Y. June 28th, 1875.

Until his neek I merer could bring myself to believe that it world pay me to curvail any of my time hail unt to angling for troot, black base, and shid, and devote it to brilling for blue fish; but in order to fully under stand the merits of line latter sport I neceptual an invitation from my firmal James A. Tinkham to member in the flum of S. M. Tinkham & Sone, Tannton, Mass.) in visit Monument, Buzzard's Bay, with him. Consequently, in suscert holds telegram: that the fish mere couling in, I took a right train and reached the ground in time for the inference of Cuptain Nathaniel Burgess, who in furmer years had happooned many an thate, and who num proposed to handle bit yincht in such a manner as to afford us a fair chance to shore an skill on similer game. The plan of operations was that my companions were to fish in the usual manner, and happing and heavy hand lines, and I to use my 9-food 11-pound striped base casting rod with the squid. We returned for supper with sight blues casting rod with the squid. We returned for supper with sight blues the limb, taken on the hand lines. The writer struck four, but in each case the fluny heardy succeeded in ranning up on his line, and by some effact of the junes, which he cannot quite multershand, flung the hock from his month. Feeling well satisfied that the landing of bluefish with rod and real and the arithmetally constructed spull would be only accelerated, we see that, a hading anough lend around the snowl to be for the lending of bluefish with rod and real man the arithmetally constructed spull would be only accelerated, we see that, a hading among blend around the snowl to before the only accelerated and the case, and the case, and the case, and the case of the case of the case, and the case of the case of the case,

FISHERMAN'S LUCK IN MISSISSIPPI

FISHERMAN'S LUCK IN MISSISSIPPI.

Country, Miss., June 16th, 1875.

Emitor Forest and Stheam:—

"Its british hot, but the Griege outlinck is good. We have hid splendid raths and genild sinshine. The disciples of the gooth Leak are out every day ensting their flues with indifferent success. Duncan Eight and I tried it this other day, about 1 nm not much of a disherman. We rose with the lark, in firthefore him, and having loaded up our buggy with commissary stores, not forgetting by incellable the enfect pot, and an Abayharinic, in case of an otherchy a ferocloss within moccasio of enton mainth, we were off before the town waked up, Charley and I in the baggy and John on the hardennee direk of a horse. When we cached this stream, three alles and, called through courtry a river, we found it knecked up from a mill thin, on account of a min a few days before. We whisted the mill mustin wouth a dam, and it really Is'nt. that fishing was spatiled for that day at may tale; but like Bogg's mother. In lac, we had came to stay. So getting out the basket we kindled a fire, made a pal of callent mill the fresh morning sir. We enjoyed it thoroughly, I can assure you. It was a reminiscence of those days when we always breakfasted under the tries—that is if there happened to be any around, and the romain and ing Generals on each side ever exchanging cast from compliments. We mere that such breakfasts then; hard task and sow abditioned in a once this lift of river the paperiod to be any around, and the romain did generals on each side ever exchanging cast from compliments. We mere that such breakfasts then; hard task and sow abdition in such the next hall such breakfasts then; hard task and sow abdition of the side of the side of which, it would have carried the mill may believe and curmmen cuffes to cash it donn; and full the corineal caffec we three had drauk during the run had been punced all a once this him in the paper. It is the condition of the paper when the true would have carried the mill may believe a few three with

The large with perfect ranklessness. In his mad flight he started up unothin, and they ran a steeple chase nulli they reached a tree over John, when the Parket beliefe for it right and left, and they bit the dust. The hides of those spilitels afforded a fearful proof of the awful penetrallon of a Parket gunt. They acret liet two oldest and toughtst pales familiass. In Noulh America. I shot a loggerhead furthe us we went back to the camp, where, after having devoured the rest of the comulissatial, and drink up all the enfect, we harnessed Euriphies and "lit out" for home, having had some fish for illinure—his they came packed in the hoxes. John and Charley are out loodiny. I passed. My new "Tailey" came the day before yesterday. "The a thing of becauty, and when you talk about pulse and ishue, and there of handly, and counting up all right" and fluthing the figure, and all that sort of thing, its got then all, and made hig. I'll tell you how it shoots when the intercury gets of the present hight.

THIS FLY AND THAT FLY

THIS FLY AND THAT FLY.

EDITION FUNGATION

THAT FLY.

A year of so back, when writing out the instructions for Incipient fly tyers which appeared in your rolumns, I infimiliantly a perhaps largeling, an article out first with the above fith I say "threatened" because I are disposed, while I humor and longing in the prejudices and notions of fly dishers, in while thom kimily for their fast official and inspected of long and varied experience, in his "Montrue Practical Angler" declares that it is vasily and vexistion of spirit, this innitiplication of names and varied experience, in his "Montrue Practical Angler" declares that it is vasily and vexistion of spirit, this innitiplication of names and varieties of combinations in "fur and feather," and settles down in three simple trust files—If tiles they can be called—and avers that they need all the necessities of the angler. These, as discribed and allepted in his book, are three simple, bristly-hoking backles—brown, yellow, and green—the hit of the backle forming rather a busby tail, and the remaining portion the legs of the socialled fly. Many ohi angives into consider a great variety of flies, and this or that fly for a particular seasum, as sheer nonacuse, and who sydom have more than six or right varieties in their hook, think that Mr. Pennell uniter "runs It his or the ground." And utiliningly there is much good sense in his theory, which he says is finanded on prartical experience, I also am of their opinion. His yellow and brown I have tried with success—the former as sciedier for exeming and on strains resaing just after a also, and the latter is alrupper on very small books in flue caler, or on a bright lay. His green I have rever tried, fancying It booked like the fragment of a leaf blown into the mater; and yet it may do execution.

In one of your issues of last Summer you remarked that there were four or five hondred illiferent kinds of flies having established names Mr. Prunell says there are over eight handred In England besides in memor in promptu

figured and colored in Mr. Pennoll's book, he traild select, parlicularly if the maler may how, the "sheet," the "guld," or the "mahibow." Either mound solf the writer if he a isbed to scare the salmon out of the pool.

It is evident that Mr. Pennoll has not the least shahue of fatth in the routing system—i.e., cethin flue for revious seasons, or in that theory of strel initiation. He allevsts fly fishing of all humbars, or in that theory in strel initiation. He allevsts fly fishing of all humbars, or in that theory in strel initiation. He allevsts fly fishing of all humbars, or in that the routing number of the mater and that resembles insert hir; that the March brown in the May dy when trout rise freely will kill in Angust, and that the red and trains hackle, the May by, or any good shundind fly is effective all Summer. I nare had so far this season a neck's dishing, fire in the party. I nent more for the frolle than the dishing, and gave up the water prety much to the youngsters, and observed that the other of neither mas in all respects the same as that of the others, and all had reasonable sport for so early in the season. There are certain raritinal rules, of course, which must always be observed—i.e., larger und gayer flies for full water and cloudy days, and smaller and darker for fine onler and bright high, but as to this or that being the fly to the exclusion of all others, it is all non-sines. A roung friend, who has been realing Roundle-"Fly Fisher's Entourology" is in exarch of rabbits' whiskers to make the tails of some green dakes he is typing. I suggested a few long fibrus of a black hackle, as the trout would not he exacting in that one particular, or suspicious of heing imposed on. But he wished to be exact and follow Roundle and the sample, and the real flow on the first has repetited in the surface of him, particularly and the roundle on the sample pointing farmed. He said the geal ground that the ulres hade pointing for market her significant of this particular to he made to the sunface of

properlate verse from "A Samos of all feathers," Ye Samberrye fysher has flies of all feathers,
For all some a secsons, he all sums of menthers.
Flies when ye Spingfath is blustrle and showerle.
Flies when ye Sammar is grassle and bowerle.
Flies whon ye Annum be gelden and gradule,
Flies who ye and while and gradule,
Flies who ye and while and gradule,
Flies who ye are graduled to yet a graduled to ye and yellow ye when ye we want to yet a graduled to yellow ye

Answers To Correspondents.

J. S. N., London, Ontario. - We can get a tame black bear for you for 3.5. No. Dondon, Gracial St., one year old.

J. M., N. Y.— For unseer to your query regarding rifle teams we would refer you to Mr. J. S. Conlin, No. 830 Broadway.

G. W. D., Philadelphia.—To your inquiry about holels at Canaudalgua we susuru-Messis. Cook and Wakeman have opened the Canaudalgua llutel, and propose to make it a most desirable place of sojourn.

BIOGS -A correspondent offers a copy of Stonehenge's "Shot Gun and Sporting Rife," us good as new, in exchange for \$5 worth of other books. Address E. G. Burnet, Key Box R, Newark, N. J.

II. B. S., Nouton, Mass.—Where can I get a pair of Indian moccasins, and at what price! Ans. Send to Gaton & Co., 102 Nassau street; they have several kinds of Indian uniccasins—Chippewa, Sioux, Blackfeet, Price, 24 to \$2.

Five Sportshen, Syraouse. —A parly of five persons would like to hand until supplies to take to camp a week at Cross Lake, (between Quandaga and Cayuga counties,) July, 12th, 1875. Ans. We answered this quesiton fully in our issue of June 21th.

this question fully in our issue of June 24th.

O. J. T., Naw York City.—Can you fornish me the rules and regulations for rifle practice; also how to construct targets, and can you furnish score books? What will be the cost of them, and also rules for pigens shooting? Ans. Books sent by mall; please remit.

Brazus, Marfressboto.—Can you fell me it Col. McCairy's Big Hunt is to come off, and do you know of his whereaboots? Ans. We have not heard directly from the redombtable Colonel since last March. Our impression is that the "hunt" will be no hunt.

YAURTHAN.—To bleach sails: Spread the sails on a clean surface and dampen them thoroughly and evenly; then rub common soap over them. We them again, and sprinkle fine pondured whiln; all over them, having the sails to ilry. After they are quite dry, scrub and wash

J. F. P., Philadelphia,—I see in your list of publications several works on "laxidermy." Which would you recommend as the best from which to get a complete knowledge of the art of stuffing and mounting blids! Ans. "Field Grutthology" is the best by long odds. Price \$2,75. E. R. Cano, the embalmer, of Niles, Miehlgan, will shortly issue a work on his branch of taxidermy.

MANHATTAN, New York.—Have soy of your readers a good seller hitch, (Gordon preferred.) soon to be in heat, which they desire to cross with a very rare, beautiful black and tan Sussex spanirl, thoroughbred and rery large? The lesue would be just the thing for our full hickers and improctable woodcock and quall bogs. Ans. Who will answer? Such a cross would make serviceable and bandsome dogs.

Such a cruss would make serviceable and bandsome dogs.

W. M. K., Cambridga, Mass.—Where are some good tout fishing incalities in Nova Scolia? Is then good frout fishing in Cape Bieton, and
if so where? Would you adoleg going to the aforesaid districts rathor
than to Rangely during August and September? Ans. Best in Nova
Scolia & Tusket River, by stemmer from Portland, Maine, to Yarmouth,
N. S. Plenty of troat in Cape Breton, too. Rangely fishing in September ivoolid be better than Nova Scolia, as the Rangely front remain in
condition untill October. For Tusket River, full information, see Forest
AND STUKAM, Val. II., No. 18, page 271.

Readen, Brockville—Is the Industrial Publishing Co., 176 Broadway,
still in existence! In February last, in reply to one of their adrectisemenus that any one sending \$5 or more for books would receive the
Technologist for one year free, I sent them \$5.25. I have in my possession a postal card dated Match with saying my draft had been received
and the books would be forwarded, since which time I have heard onliting from them, although I have written them three times. The Technologist comes to hund regularly. Ans. Same isouble as to your proper address has prevented your receiving the books. They will now probably
come to hamil

Stago.—To get to the Magnetavan you will have to leave. Toronlo, at

come to hand Stago.—To gel to the Magnelawan you will have to leave Toronlo at seven o'clock A. M. by the Northern Ruineay, reaching Savern Bridge, the terminus, at 1:15 P. M.; thence by Harrie & Milhard's stage to Gravenhurst, a distance of twelve miles; thence by steamer Nipfasting to Rossean, where it services at about ten o'clock at night. You then take a rest at either Pratt's Italel or the Walker House, two good houses. A stage house Rossean every Thesday, Thursday and Salarday for the Magnetawan, a distance of thirty-three miles from Rossean, atriving in the creating of same day. Fare from Toronto to Magnetawan ahout 36. Guldes with cances can be had for \$2 a day.

Guildes with cances cao be had for \$2 a day.

T. W. H., Neuark.—What is the regular name for the white fish that the Fish Commissioners have stocked the beadwaters of the Passale with 18 the had against catching them up yet, and what is the best tackle and half? The white fish are now about six inches in length, and are shaped like a tront, but are white, and their fisch when cooked is white. What is the Latin name of the sea front cought in New Brunswick! Is there any good fishing for front on Mt. Desert Island, and what will be the best firs for Angust there? Ans. Cannot ascertain that white fish (Correspons) albeit) have ever been placed in the Passale. White fish do not take a fook. Sahno Canadrasis is the accepted usine for the sea front. There is good trout fishing on Mt. Desert. Take steamer from Rockland, Me.

There is good trout fishing on Mt. Desert. Take steamer from Rockland, Me.

Bimos Trout, Detroit, Mich.—Will you please inform a few of your readers how large the brook trout grows? I remember of reading some time since of one eaught in Maine weighing twelve pounds, which was eaid to be a genuine blook front, but I have my double about the species of the fish, though not of the weight. Ans. There is no doubt of the identity of the Maine fish to which you refer, it having been altest do to by the first naturalists in the country. It can be seen at the office of Page & Khider, No. It Waters extreet, at any time. The largest brook front tealms fontinglist that we have ever heard of, was taken in the Agwann River, that implies into take Nepigon. Its weight and species are fully conched to by Chevather Le Roude, factor of the Budson's Bay Company at Nepigon post, into weighed the fish himself. It weighed seventeen pounds. We have his written affidant.

If W. B., Chicago, III.—A purly with our families wish to camp nut on the shores of Green Lake, Wish, between July 18th and August 18th Whit fish are most abundant there, and what game at that season? What is the best bail and size for blink bass and pickerel, and what other further would be inreded for the different kinds of fish found there? Ans Your questions will be answered in our Sea and River department next neck. Also, what works are three published on Florida leganding its climate, even and season of the publishers, and what sether purities? Ans. For maps and books on Florida, address Dr. C. J. Kenworthy, Jacksonville, Florida. The most valuable recent information of the climate, geography, and resources of reforda can be obtained by subscribing to the Florida. Agriculturist. Address the publishers at Jacksonville.

J. A. B., New York — A friend and I liteod to spendsix or eight weeks.

subcretoing to this reaches and linead to spend six or eight weeks in Cauada this Pall. Can you tell me for a certainty if a box or case containing our guns and amountation—a breach and mozzie toader apiece, 1,000 paper shalls, powder and shot sufficient for each, together with a few remaining attleles—would pass through the custom house at Port Hope without that being charged, or any delay? It is for our persunal use only. Suppose thry were toester at Toronto, how would save even be treated? Ans. We telegraphed to Toronto and Port Hope for positive information. Toronto collector says if you come to that elty there will be no detention or duty, provided assurances are given that more strict, in the officers depend upon rollections as part of their satary, though there should be no duty except upon loaded shells; no dir you any other portion of your appointments or ourag.

WEEKLY JOURNAL

Figh Culture, the Protection of Game, Preceded Natural History, and the Incucation in Men and Women of a healthy interest in Out-door Recreation and Study:

PUBLISHED BY

Corest and Stream Publishing Company, 17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Oppice Box 282.]

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent, allowed for five copies and npwards.

Advertising Baces.

In regular advertising columns, nonparell type, 12 lines to the Inch, 25 cents per line. Advertisements on ontil de page, 40cents per line. Reading notices, 80 cents per line. Advertisements in doublecohum 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent, will be made; over three months, 20 per cent; over six nonths, 30 per cent.

NEW YORK, THURSDAY, JULY 8, 1875.

To Correspondents.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to The Fourst and Stream Publishing Compant. Personal or private lefters of course excepted. All communications intended for publication must be accompanted with real name, as a guaranty of good fatth. Names will not be published if objection be made. No anonymous contributions will be regarded. Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are arged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will add our columns a desirable medium for advertising announcements.

The Publishers of Forest and Stream sim to merit and secure the patronage and countenance of that portion of the community whose refund intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no deprayed tastes, nor pervert the legitimate sports of land and water to those base nees which always tend to make them unpopular with the virtuous and good. No advertisement or husiness notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to as is lost.

Advertisements should be sent in by Saturday of each week, if possible.

williaw C. Harris, Business afranger

CALENDAR OF EVENTS FOR THE COM-

Thursday, July 8th.—Racing at Monmouth Park, N. J. Trotting at Lowett, Mass.; Detroit. Mich., and Greenville, Penn. Base Batl, Athletic vs. Boston, at Boston: Philadelphia vs. St. Louis, at Philadelphia; Union of Newark vs. Rehance, at Irvington, N. J. Friday, July 9th.—Trotting at Portsmouth, Ohio.

Saturday, July 10th.—Racing at Monmouth Park, N. J. Trotting at Portsmouth, Ohio. Regains of Dorchester Yach Club. Base Ball, Philadelphia vs. St. Louis, at Philadelphia; Concord vs. Numeless, at Capitoline grounds.

apitoline grounds.

Monnar, July 12th.—Meeting National Rifle Association at Wimbteon. Regalta at Cape May Crickel, Staten Island vs. Prospect Park lub, at Staten Island.

Later 12th.—Bactne at Monmouth Park, N. J. Board of Ap-

on. Regalta at Cape May Cricker, States Lib. at States Island.
TUBERDAY, Joly 13th.—Racing at Monmouth Park, N. J. Board of Apeals National Trotling Association meets at Saratoga. Pigeon Shooting ournament at Syracuse, N. Y. Cape May Regatta. Intercollegiate

WASHINGTON'S PERSONAL APPEARANCE.-It is a remark able fact that Washington's personal appearance, although well known to so many, has but rarely, if ever, been described by his historians. Even in Irving's "Life" there is nothing satisfactory on this point. The Journal of Commerce having been written to on the subject has given the following description gathered from various sources:

"Washington was six feet two inches in height, with a very erect, robust, stalwart frame. If c had a fine breadth of chest; long, well-shaped, and very strong arms; a broad, large hand, with a grasp like a visc, and very straight, well rounded lower limbs. He had a large head, set on a strong full neek, with a commanding carriage. His hair was brown, or dark authurn; his eyes a grayish blue, set far apart, and his complexion ruddy, or florid. Stuart, who painted him, declares that the sockets of his eyes were larger than be had ever met with hefore, and the upper part of his nose broader and fuller. All of his features were indicative of the strongest passions, although his judgment and great self command made him seem different in the eyes of the world. He appeared with great dignity in any position, either sitting, standing, or walking, hut he was a hold, expert rider, and never looked better than on a fiery horse, whom he always kept perfectly under his control. He was diffident on occasions, but never ahashed or ungraceful, and his personal presence always inspired confidence and respect. We have gathered these particulars from a dozen different authentic records, without flading anything like a satisfactory description in one of them."

Pigeon Shooting at Stracuse.-We publish in another column the programme of a pigeon shooting tournament, to he held at Syracuse, this State, on the 13th, 14th, 15th, and 16th insts., under the management of the Central City and Onondaga Clubs. About \$3,500 will be given in prizes, and only Bogardus, A. Kleinman, Payne, Ward, and Close are excluded. We predict an enormous gathering of pigeon shooters and much sport,

INDIAN CANOES

WHAT memories of a wild, free life are revived by the sight of an Indian canoe! of drifting noise-lessly down stream, or dashing over surging cascades. What romance we attach to these little birchen bonts!

The mode of life that Indians lead makes their light lucats of greater importance to them than either ships or steamers, for in the former they can pass over very shallow water, and if they come to places where it is not deep enough to float their shells they can take them ashure and carry them on their shoulders until they come to deep water again, and this they could not the with ships or steam The red hunter can lie in wait in his cause for the lordly deer when he comes to the river to quench his thirst, or push it among morasses where wild fowl dwell; and if he is away from his wigwam at night he can turn it keel up, and hy erawling under have a comfortable shelter and a means of protection agalust the savage animals of the

The simplest and most readily constructed canoes those made of bark, such as those seen at Niagara, Oldtown, in Maine, and on the upper Missouri River, birch canoe is that in use among the Indians of the East-ern States. The outer rind is first peeled off the tree in ern States. The outer rind is first peeled off the tree in long rolls, which are taken to the spot selected for the building of the canoe. At this place a framework the required height and length is suspended on four posts. The light gunwale is made first, and to this are attached the rihs, which are close together and are formed of very light pieces of wood. These are then sheathed with thin, flat and flexible pieces of cedar, placed lengthwise. The frame heing ready, the bark is placed upon it and sewed together with a large straight awl, the thread being made of the fibrous roots of the cedar after they have been soaked in water. The seams are next rendered waterproof by a coating of gum, procured from the pitch pine. The rude dee orations are subsequently added.

Canoes of this kind are of various sizes, from the punt

used in the chase, and capable of holding only one or two persons, to one having a length of forty feet and requiring from ten to sixteen paddles to propel it. The first canoe can be carried on the shoulders quite easily by any ordinary person, but from six to eight men would be required to transport the latter. The paddles used for the propulsion of this sort of cauoe are short, with broad blades, as the power must come from the quantity of water caught rather than from its depth and density. A fleet of the larger variety, when running down a river, presents a hund-some sight as the numerous paddles are dipped into the water together, just as if they were under the guidance of a single piece of machinery. The bark canoes belong spe-cially to the Northern tribes, such as the Iroquois, and are the prettiest made on this continent. As we go further West we find the forms changing, for the red men have different styles, just as their pale faced friends have various types of boats or yachts.

The Mandasa tribe, in the far West, have a very simple but exceedingly good canoe, which can be built in a short time. They first take two sticks, about three inches in circumference, and fasten them together so as to form a round op. This makes the bow. A similar contrivance forms stern, and both are then united by light pieces of wood, which extend along the sides and keel. Over these an ox or buffalo hide is drawn closely and tied to the brim and ribs with thongs. When finished it looks like a large hasin, and is about twelve inches deep; but slight as it looks it will carry from four to eight men. It is very huoyant, so that in passing over cascades it will ship no water.

When we cross the Rocky Mountains we find the canoes When we cross the Rocky Mountains we find the canoes still simpler, as birch is very scarce in some portions of the region adjoining these peaks; and even to get the pines and firs one must go to the higher ranges of hills. The consequence of this is that few of the tribes there have any boats. The Shoshone Indians, of fdalio, when desirous of crossing a stream that will not permit being forded, make a raft of bundles of long reeds, which are tied together with the same material. This has sufficient bnoyancy to sustain a couple of persons, and by using a long stick they sustain a couple of persons, and by using a long stick they can push it from one shore to another. As the rivers in that Territory are narrow, and not very deep, the Shoshones do not need canoes very often-only during the Spring floods; so their most cherished property is the small, coarse baired mustangs they use for traveling or hunting.

When we reach the Columbia River, however, we are among tribes that travel almost entirely by hoat. The canoe in use among them is made from a tree, and before the advent of the white man the construction of one was the labor of months, and perhaps years, for it must have taken a long time to hew it out of the solid log with the blunt stone implements that they employed. Now that they can procure sharp axes quite readily, their labor is comparatively trivial to what it was. The industry and unwearying patience required to build a canoe allout thirty years ago was undoubtedly the cause for the high value placed upon it by the fortunate owner. Even to day a canoe is the standard value among all the trihes frequenting the sea coast. The Indians that dwell along the Upper Columbia have a small, narrow, light boat, which they use for traversing shallow streams and marshes. They do not require the heavier sort sea they solders here. require the heavier sort, as they seldom have to travel over One advantage the former possesses is that it can he carried on the shoulders over portages, whereas the latter cannot, at least not without much trouble. The tribes dwelling on the Lower Columbia, near the ocean, have canoes much larger and deeper than the preceding, for as

nearly all their traveling is done by water they must have hearly all their traveling is done by water they must have hoots large and substantial enough to withotand the heavy swells which frequently agitate the river during storms. These are constructed of the hage fir trees that grow so huxuriantly in Oregon and Washington Territories; but the most desirable material is cedar, as that has more huoyaney than tir or spruce, and also stands the decaying action of water better than any other wood. When the outlining and excavation are completed, the canoe is filled with water, into which hot stones are thrown to generate steam, in order to make the wood more flexible, and thus enable the constructor to extend the sides, which he does by inserting stout pieces of wood between them until they have attained the required width. The prow and stern are of the same height, and extend above the middle, and are frequently decorated with grotesque figures of men, hirds, and heasts. These are formed of small pieces of wood, which are united by mortising, and then glued on. The sides seldom exceed an inch in thickness, hence the lightness of the canoe; and being flat-bottomed it will float in very shallow water. The paddles used are from three to five feet in length, and have broad, long blades. About one third of the paddle is round, and is used for a handle; it then widens and is hollowed in such a manner that the centre forms a The canoes vary from sixteen to fifty feet in length, and from a few inches to two feet in deptle. The smaller kind will not carry more than two or three persons, but the larger will hear forty, and if freighted could safely transport ten thousand pounds. The latter is used entirely by the coast Indians, who have to make long voyages by sea in traveling from place to place, or in parsuit of the far scal, sea ofter, and whale. As all the littoral tribes live by fishing, a canoe is a necessity they cannot do without; hence the wealth of an individual is measured by the number of eaners he owns. If he has two good ones he is considered quite fortunate, but if he has four or five he is an envied man. Great is his power, and deep the respect for him, as he is the millionaire of his hand or tribe.

To handle a canoe properly requires no small amount of tact in a novice, and he is fortunate if in his desire to learn he does not receive a thorough ducking. When the Indians embark in their treacherons craft they enter quietly; one seats himself in the stern and the others squat on their hecels and puddle on one side or the other, according to their position. To propel the boat rapidly, and without deviation from its course, the paddles are pushed into the water in a straight line close to the side and pressed back-The strokes are short and quick, yet it seems strange how swift the craft cuts through the water. The women haudle one as dexteronsly as the men, but whenever they are called upon to work they sit in the rear and steer. This constant plying of the paddle has given the fudians of the northwest coast great strength in the arms, so that they differ from their kindred of the plains in this respect. Few aquatic scenes are more picturesque than a first of these canoes riding the rolling, crested waves of Fuca Straits when out on a fishing expedition. As the billows rise they surge ouward with a heavy booming sound, and strike the frail crafts with such great force that you expect them to be overthrown and their occupants harled into the angry-When a canoe is struck by one of these enormous waves, and its upsetting seems almost an accomplished fact, the fudians on the upper side lean outward, sink their paddles deep into the water, and by this means obtain a leverage sufficient to prevent being overthrown. We have traveled much in canoes in all sorts of weather, and felt safer in them than in ordinary boats many times larger, for the hnoyancy of the first enables them to rise and fall with the billows, whereas the heavy specific gravity of the latter prevents this, so that their sufety would be seriously endangered in a storm which the former could weather quite

Proceeding northward from Oregon until we reach the British Columbias, we find the canoes of each tribe to be similar in construction and material, though varying in shape, size, and the character of the decorations; but when we arrive at Alaska, that wild, cold land in the frozen north, we see boats that differ from those found in any other portion of the continent. The Ingaliks make a very pretty and substantial cance of birch bark. When the bark is peeled off, it is sewed on a light frame of wood with the roots of the saves tree or solve. The reddless with the roots of the spruce tree, or cedar. The paddles are shaped like a lance, are small and slender, and are generally ornamented with fantastic groups of men and beasts, painted in red, black, and green colors. The two first colors they make from earth and the pine tree, but the green pigment is produced from a species of fungus that grows on birch wood. These Indians vend small models of their cances to the whites, and even use them as an article of harter with other tribes. The Mahlemet Indians, away in the north, and the Esquimaux, have three styles of hoats, made out of the skin of the scal, walrus, and other animals. The largest variety they call oomiak, but it is known as the bidarra among the Russians. It is large, open, and flat-hottomed, easily handled, and cupable of attaining high speed. As the skins of which it is composed are oiled be fore being placed on the frame, it seldom leaks. A smaller A smaller boat, fit for one person, is made like this, but it is covered completely over, except a hole in which the paddler sits. To prevent any water from entering the interior of the canoe, the occupant is enveloped in a waterproof sbirt, called kamlaika by the Russians. This is tied around the wrists and face, as well as around the rim of the cavity, and the head is covered by a bood. These canoes present a quaint appearance when first seen, as the occupants seem to be bundles of oiled skins, for all of them visible are the

eyes, nose and chia. They are known as kyaks to the natives, and in the Russians as bidarka. The Russians use a bont exactly similar to the preceding, except that it is large enough to hold two or three, having a hole for each person. All these boals are light, strong, safe, and conventent, and so hardyant that it is almost impossible to swamp them, provided one nuslerstands their use. The readilles need for propolling them have double bludes, so that a per-son can public ulternately on each side; and under a vigo-rous arm they attide wonderful speed.

Thus we see that each tribe produces a case suitable to its wants, and that this is small or large according to the rhumeter of the water on which it is to be used. The greater annaler of the Indians of the Northwest live on This is why they appreciate their corachs so highly, and seldom part with them on any condition. They have a pretty legend, which states that but for a canoe the Indian race legend, which states that but for a canoe the findan race would have been destroyed. According to this quaint tradition, a great flood swept over the country long, long ago, and destroyed every living thing except a young chief and like bride. He saw the mountain of water rolling onward, making a noise like deep thunder, so he jumped into his canoe, and by making a rope of seaweed, and tying a large rack heit, secured an anchor. As the water increased in volume he played out his rope of weed, and hence managed to retain his position. When the flood subsided he went ashore, rebuilt his house, and lived happily ever after. He was the Noidi of the red non, and from him all claim

AND THE CENTENNIAL -The Imperial Govern ment of China has appropriated 40,000 luels of sycee silver for a department to represent the Empire at the Philadel phia Centennial Exhibition. A tact represents a weight of silver equivalent in value to about one and a third Mexican This would make the sum appropriated, with the finvorable exchange, about fifty tive thousand dollars—a small sum for a wealthy Government like China lo devote thousand dollars-a lint sufficient to make a very elegant display, if properly expended. All who attended the great Paris Exposition will remember the gorgeons Chinese department, with its lea gardens and native attendants. The money for that display, bowever, was furnished by the French Govern-ment, and we believe that '76 will be the first occasion on which the Chinese have endeavored to have their arts and munufactures represented at an outside forbarian show.

It is also reported that the city of Hang-Chow has decided to spend the sum of 10,000 tacls in silks and porcelain ware for the same accasion. If the wires have not reported the name acrossion, it is worthy of comment, as thang Chow is not a treaty part, but one of the most conservative of celestial cities, and considering its proximity to Shunghai, one of the most difficult for the foreigner to obtain access to. It is situated but a short distance from the coast, midway between Shanghai and Ningpo, in the Province of Che Kiang, and is celebrated for the number and beauty of its tombs and temples. The Chinese have a proverb, in which to be born in Peklug, to live in Soo-Chem, and he had a little of the control of the c Chow, and be buried in Hang Chow, constitutes the ucme of human felicity.

THE SURVEYS. -The various parties engaged in the work of surveying portions of the Western and Southwestern States and Territories are now fairly in the field. Hayden Expedition left their camp near Denver, Colorado, last week, for the mountains, and the various purlies of the Wheeler command were in their organizing camp at Pueblo preparing to move. Lient, George M. Wheeler, with the California section, left them at Denver, and proceeded to Los Angeles, Cal., where his labors commence. One party under Lient. Marshall proceeds to South Park, in the Rocky Mountains, and from thence to the mouth of the Sonthern Arkansas and along the Atlantic and Pacific divide, between Cochetopa Pass and Mount Stewart. Oue of the objects of this party is a careful examination of the mines about the Upper Animas River and about Del Norte and Rosita. Another party under Lieut, Curpenter, goes first to Spanish Peaks, and Iben work on the drainage areas of the Purgatoire and Apishaba Rivers. They will also make further examinations of the fossil beds to the west and southwest of Tierra Amarilla. Lieut. Morrison's party goes first to Fort Gurland, thence to the head of Cor гејов Сийов, rejos Cuñon. After visiting the Manzana, Zandia, and Plover Mountains, they proceed to Santa Fe and the Rio Pecos. The parties will not meet again until about the 15th of November, when they will dishund at Lyons, New Mexico. The objects of the survey are, first—to determine the exact topographical features of the country west of the 100th Meridian, and to establish the best routes for the supply of interior posts; and secondly, to examine closely into the mineral and agricultural empabliles of the country traversed, for which purpose competent scientists ac company all the parties.

-Five Atlantic cables are now in operation, and one hundred and forty-nine ocean telegraph lines, of which number twenty-nine are over five hundred miles in leagth, which earry the news of the world. And the first of these Atlantic wires was laid only a few years ago. It only needs a line now from California to the Sundwich Islands and from thence to Japan, the surveys for which have already been made, to complete the circuit of the globe, and fulfill Puck's prophecy that he'd put a girdle round the earth in forly minutes. The last cable laid has its terminus at Rye Beach, N. H., and is 3,060 miles in length.

ENGLISH GENTLEMEN IN VIRGINIA.—We have a private letter from Capit. I. M. Taylor, now of Nottowny, Virginia, accompanying the very interesting kennel letter which appeared in its proper department hist week. This private letter contains so much of interest that we shall venture to give its salient points. venture to give its salient points to our readers, many of whom are aware that there has already been formed recently in Virginia quite a colony of English gentlemen, who have wisely availed themselves of the existing degrees sion in real estate there to purchase large tracts of land at a low figure. These already see prosperity and emolinment before them, with lots of recreation thrown in—a comblnution most essential to imppiness and contentment. As regards the abundance of beavers spoken of, we would naturally advise some one of the half dozen inquirers, who haterenty advise some one of the mail dozen inquirers, which have recently asked as to direct them to good trapping grounds, to pay Nottoway an Autumn visit:—

The "Retreat," Blacks and Whites, {
Nottoway Caunty, Va., June 20th, 1875. }

EDITOR FOREST AND STREAM :-

The "Retrieat," Blacks and Whites, Nottoway Genery, Va., June 20th, 1873.

Editor Forest and Stream:—

I like this place much. We are most confertably situated. The anciety is good, but the people poor and not possessed of much energy. I assure you that, with care and moderation, any gentleman with contral can make you that, with care and moderation, any gentleman with contral can make you that, with care and moderation, any gentleman with contral can make you that, with care and make money. I have been fishing a fittle; no game fish of any kind, but in order to vary on title I have complit a few pike, chinh, and caff-h. The wild indeeps have all hatched out, and, I should judge, promise some good sport. The great complaint here is the destruction of plantations by heavers, and I intend as soon as possible to destroy, if possible, some of linese rodents myself. They are very wary, and, as you know, make so little cuties in entering or having the water timt they have to be pursued on a quiet monalight night. My friend Major Nyhiett, of Forkhad, has purchased a large minder of traigs, and we intend setting them on the River Nottoway, which passes through his plantation. He also informs me that he has laken some palus to preserve his quall, so that you and your friends when they yield me in the Fall will have no reason to complate of the scarcity of birds, as the Haskins and Neblett piantations consist of 5,000 acres of good quall shooting, and I have received carle blunche from both gentlemen to kinding my friends. Un my own plantation there is just enough shouting for three guns. My kennel is fast increasing, and I intend that every dog I dispose of shall be the parest of the pure or else I will kill bind.

A very pretty sight occurred in nor hall on Sinday. White sitting in the porch I noticed a slight twittering, and on tooking up saw the midy introduced humming bird fighting the emerald back, both dashing through the hall at a great pace; afterward returning, they continued their fillipottan buttle, when the

THE COLVIN CANVAS BOAT .- Muny of our readers will be gratified to learn that R. A. Scott, of Albany, is manufacturing the Colvin canvas boat. Mr. W. H. Hill, of that city, well known as the Adirondack traveler, has had one made for him with which he proposes soon to start for the made for him with which he proposes soon to start for the Adirondacks to explore unknown lakes and ponds, and add them to his maps. A short time since Mr. Colvin took his boat, the "Ampersand," weighing 10½ pounds, on an excursion of the Albany Institute to Seth Greec's Camp, ten miles down the fludson, and an excellent opportunity was offered to test its merits. Mr. Hill and party paddled it for two hours in wind and carried four persons in it, and with perfect satisfaction to all. The bont can be rolled into a very small bundle and carried under the arm or on into a very small bundle and curried under the arm or on the back. Mr. Hill says he inteads to make it take the place of a rubber blanket, thereby adding but a mere trifle to weight of baggage.

Mr. Colvin delivered un address before the Albauy Club recently on the subject of boats and his own recent invention in particular. Before entering into an expla-nation of the latter, he gave a brief account of portable boats which have hitherto been used, beginning with that in which Moses floated among the bulrushes, and ending with the more recent constructions of rubber and canvas. Of his own invention he spoke asfollows:-

which that to which aloses hoated among the bullrishes, and ending with the more recent constructions of rubber and canvas. Of his own invention he spoke as follows.—

The peculiarities of the boat which I place before you to he had to be the canvas boat texterior.

The canoe exhibited is twelve feet long and four feet wide; the portion of the boat which is carried weighs teap pounds eight onnees (leaving out the light learthern pieces which receive the corners of keeba, and when compactly folded it occupies the special when construction of the property of the boat six that of the Adironalack lake on which it was first practically put to be test.

Ampersand Pondi Gorious lake, silent and remote in the depths of the Adironalack lake on which it was first practically put to be test.

Ampersand Pondi Gorious lake, silent and remote in the depths of the Adironalack lake on which it was first practically put to be test.

Ampersand Pondi Gorious lake, silent and remote in the depths of the Adironalack lake on which it sould should be contrated by the special will be some anomaly and placed it lightly on the water. Their incriment at the identity of the water special when the same good feeling, not only one water special when the same good feeling, not only one water. Their incriment at the identity of the special water when the same good feeling, not only two nations generally, which has marked the first two nations generally, whi

two ere he retreated, leaving us surprised, forgetful of our revolvers, I cannot here expatiate upon.

Nor can I tell you of our more dangerous experience on the Lowar Sarance lake in cold and starm. A stormy, rainy day familia us on the leanch of Cold Brook, an adherent of the Sarance River. Here we designed reconstructing our bond frame, the old one having loven thrown away at the last camp. In a short space the gailes had cat a young tamarack for the keelson, a couple of slout poles served as ganwhes, while two dozen boughs cut among the bushes at the brook side formed the ribs. A couple of paddles were hewn from a white color near. While one guide cooked dinner, unother, with my ald, tied in the ribs of boughs, slipped in the keelson, and brand on the ganwales and eross pieces, and in an hour and a half fram the time we struck the brook we were gliding down stream, three men, two hundred pounds of buggage and instrucents, and the hage hound sedately standing toward the prow.

The navigation of the stream was easy. Out in the broad Saranac Lake, the white caps in the distance proclaimed a heavy sea. It was a wintry day. Snow lay apon the mountain tops, and when mather hour pussed, wild, klack, feam-crested billnws swept around us, and our craft rade safely, now high on the crest, now low in the trough, we felt, though chilled and shivering, that it was a triungth when we lloated up to Martin's in safety."

Costs of the Beecher Trial.—We think we are safe in saying (with a degree of pride, too,) that the Fourst and Stream is possibly the only paper in the United States that has never alluded to what is known as the Beecher Scandal;" but now that the trial is concluded and the jury discharged, it may be well to sum up the costs of this public entertainment. Our readers ought to know the this public entertainment. Our readers ought to know the price of these luxuries. The trial has lasted six months, and has cost Kings county upwards of \$50,000. It is stated Mr. Evarts' fee in the case is \$25,000, Mr. Tracy's, \$10,000, and Mr. Hill's \$5,000, and that Mr. Shearman makes no charge for his services. It is received the matter than the services of the services of the services of the services. charge for his services. It is reported that Mr. Beach receives \$5,000, and Messrs. Fullerlon, Morris and Pryor. \$2,500 cach.

Seventy-five Indians, including chiefs and warriors of -Seventy-nve manns, memoring emergences, and Cad-the Cheyennes, Comunches, Kiowas, Arrapahoes, and Cad-dos are now undergoing imprisonment in the fort at St. Angustine, Fla., having been sent there from Fort Leavenworth, Kunsas. Col. Hamilton, communiting the loss, has worth, Kunsas. Col. Hamilton, commanding the joest, lins treated them with so much kindness that they are quite reconciled to their position. Their bill of fure is probably more varied, as well as hountiful, than anything they ever obtained on their native plains, and comprises, besides the regular allowance of brend and coffee, beef, bacon, rice, weet potatoes, stewed tripe, soules, and a variety of luxuries. They were recently treated to a halle which all declared to be "very hig accilicing halloon useension,

-The second annual meeting of the Illimis State Sports men's Association was held at Chicago, June 28th. The Reld says:-

Field says:—

"Hon, J. V. LeMoyne, calling the meeting to order, reminded the members of the efforts which had already been made in order to enforce the game laws already in existence, and of attempts to make new ones more suitable to the proper preservation of game. He recommended also that a case should be taken in hand in order to test the question whether or not we cannot prevent game dealers from selling game out of season, even though the game may have been killed in another State, the president giving it as his opinion that they could be thus prevented from serving as a kind of cover for those who disregard the game laws of the State."

The following gentlemen were elected officers: President giving gentlemen were elected officers:

The following geatlemen were elected officers: Presi-ent, C. E. Felton, Chicago; First Vice President, J. L. Pratt, Sycamore; Second Vice President, C. B. Miller, Genesco; Treasurer, R. R. Clark, Luke View; Secretary. L. Stockton, Chiengo.

THE AMERICAN TEAM IN TRELAND. - Notwithstanding

of Irish character and aspirations in the United States than

On the 30th alt, the Spencer Cup, free to all comers as shot for at Dullymount Range. Messrs. Bruce, Yule was snot for a Diniy mount mage. The parties of the Dakin, Gildersleeve, Ballard, Cileman and Cacheld, of the American team, and all the members of the Irish team and Shorting Club took part. The contest resulted in mother victory for the Americans. R. C. Culeman won the cup, making a score of 47 ant of a possible 60. The range was 1,000 yards. Gildersleeve and Yule also won arizes during the dicy's shooting.

In the contest for the Abercorn Cup on the following duy our countrymen ugain participated, but were not success-The match was not concluded antil the 2d, when Mr Edmand Johnson, of the Irish team, won ky a bond score of 383. Messrs. Righy and Pollock made higher scores, but as they had been winners before, the cup was awarded to Julinson. Of the Americans, the best scores were as follows: Falton, 371; Gildersleeve, 369; Builine, 361; Coleman, 360. The Americans won several all concers Prizes on this day. The weather was bad for the riflemen. Rain fell, and there was a high wind.

The Dablin journals, referring to Major Leech's retire-

ment from the captaincy of the Irish team, concur in saying that Irehml is indebted to Major Leech for hing range shooting, which he established in the face of great diff-

The official score of the Intercational rifle match at Dollymount gives Dakin 52, instead of 51 at the 1,000 yard range, and makes the number of points by which the

American beat the Irish team 29, instead of 28.

On the 3d the shouting for the All Induited Challenge Shield took place at Dollymoutd. The competiturs were four members each of the Dublin, Bulfast, and New York Clubs. The ranges were 1,000 and 1,100 yards, in each of which every participant had twenty shots. The shield was won by the Dublin macksmen, the score standing: Dublin 564; Amateur, New York, 558; Belfust, 521. The follow

Mr. Wilson, of the Belfast club, won the Wilkes Cup. Messrs, Coleman and Gildersleeve, of the American team, made four bullseyes each at the 500 yards in the contest for the Hundred Guinea Cup, presented by the Landon Drumatic News, Coleman won the final shot, but the cup gaes to Gildersleeve under the rules, as Coleman won the Spencer Cup. A strong and irregular wind blew during the shooting, but no rain fell. There was an immense crowd present at the place for the distribution of the prizes. The Lord Mayor of Dublin presided, and the Lody May-oress distributed the prizes, which included budges for the American team. The Lord Mayor, Major Leech, and Sir James Mackay made speeches congratulating the Americans on their victory. Major Leech suid the victory would serve as an additional tie between the two countries. Col. Gildersleeve responded. He thanked the Lord Mayor and all others in Dublin and Ireland generally for the warm hospitality and generous applanse that Lad been accorded his countrymen, and assured them that the occasion would never be forgotten by the Americans. At the conclusion of his remarks be presented an elegant cup of American silver and manufacture to be shot for annually by the Itish riflemen. The gift was enthusiastically received.

In the afternoon Mr. Vermon entertained the party at Clontarf Castle. On the 4th several of the American ri-themen direct at the residence of Mr. Milner, of the Irish team, and others at the residence of Mr. Waterhouse. usual sentiments were proposed by the bosts, the most honored being "The day we celebrate." The American team have been invited to a hanquet in Edinburgh. The closing festivities in honor of the team look place an Monday. The party made an excursion through Wicklow, in-companied by Alderman Maining, Major Level, mearbers of the Lord Mayor's family, and other leading citizens of Dublin. After visiting the residence of the Earl of Powerscourt, the party made a halt at Dargle, near the well known Powerscourt Waterfall. There a samplous hauquet given under a large tent crected for the occasion, Abbriman Manning presided, and on proposing the toast to "Our American Visitors," said he was delighted to web come them at this beautiful spot amid the scencry of Wick low. In ollering the toast he coupled with it the name of Gen. Dakin, whose record was so honoraidy connected with the success of the American team. The toust was drunk with cheers and the band played the "Star Spangled Banner." Gen. Dakin responded happily, complimenting culled for, spake with phasure of the reception they limb, and presented Aldermon Manning with a flask unde of the some silver as the American Cap. This called forth great cheering, the Abterman and nearly all present being taken A similar flask was presented to Major Leech.

When the dinner was ended the whole party were driven to Dalkey, where they spent the remainder of the evening at the residence of Alderman Munning. Col. Giblersleeve treeseed an official letter from Belfust, informing him that Thesday evening arrangements had been unde for a promenade concert and fireworks at the Bottatic Unrdens, for the next morning a trip drawn Belfast Lough is promised. Yesterday afternoun the American team were to compete at Clandebruke in a match with short rifles, each man tiring fifteen skots at a range of 1,000 yards. The prize is a silver cop, presented by the Mayur and citizens of Belfust. The day will conclude with a lumpuct in the Town Hall. As excursion will be made to the Ginnt's Causeway on Thursday (to-day), and the party will return in time for a performance in the evening at the Royal Theatre. On Friday the Americans will be taken to place interest in and around the eity, and on the evening of that alny will take their departure for Alosgaw.

-The telegraph reports that Mujur Level has resigned his position as Cuptain of the Irish Team. Although this proceeding is only in accordance with a long since avowed determination, it is unfortunate at this particular time, as conveying an impression that some dissatisfaction might exist in the mind of the gallant. Major with regard to ike late mutch. Such, we are sore, is not the case, as far as the mere question of defeat is concerned, for Major Leech is too polished a gentleman, and too friendly in feeling towards the visitors to display pique at the result. Itish are a renearkably outspoken people, and if the reports which reach us from that side as to the dissatisfaction exhibited towards their representatives are correct, the Majur cannot be blumed from retiring from an ungrateful affice. American Rifle Association.—This association hold a

meeting on Mouday on the grounds of Cuptaio Coburn at Eastchester, near Mount Vernon. Three matches in all were contested, full particulars of which we give below:—

We anderstand, though not officially announced, that the next match will be in about two weeks at the permanent range of the association, when the range will be formally apened. 800 yards is its length, but arrangements are being made to extend it to 1,000 yards. For a young association, supported by its officers principally, without any aid from the State, they have made great headway, and we trust their efforts may be crowned with all the success which they anticipate. A noteworthy feature of the meeting, and one worthy of imitation elsewhere, was the attention paid to visitors and press representatives,
Youngers Rifler Chub.—At a special meeting of the

Ynnkers Sportsmen's Club, held on Thursday evening last,

Ynnkers Sportsmen's Club, held on Thursdry evening last, the following resolutions were adopted:—

Resolved, That such members of the Yonkers Sportsmen's Club who desire to practice rifle shouting, chall be allowed to organize themselves into a sub-division of the same, to be known as the Yonkers Rille Club, with power to establish such rules and regulations for their general government as they may deem proper, and to enjoy the use of the rooms of the Yonkers Sportsmen's Club.

Resolved, That none others than members of the Yonkers Sportsmen's Club shall be eligible for election as members of the Yonkers Rille Club.

Maby of the members of the Suntismen's club have been

Many of the members of the Sportsmen's club have been practicing with the rifle at ranges extending up to 360 yands, and will soon extend their efforts to 500 yards. Their success at the first named distance has been very encourag ing, and the new club is expected to turn out some first class marksmen.

- A few members of the Amuteur RifleClub contin lad on Saturday for a badge, to be wim under what are known as the bullseye conditions. Any rille was permitted, and the distance 800, 900, and 1,000 yards; lifteen shots at each range. The peculiarity of the match was, that the largest number of lullseyes made in the aggregate at all the dis number of hullseyes made in the aggregate at all the distances constituted the winning score. Mr. L. Geiger, of Illin, N. Y., was the winner, making 18 hullseyes out of a possible 45. Mr. A. Anderson scored 17; H. S. Jewell, 16; A. J. Henniou, Jr., 13, G. W. Smith, 10; W. B. Farwell, 7; W. H. Hergen, 3. The total scores were—Geiger, 174; Jewell, 171; Anderson, 158; Facwell, 146; Smith, 138; Hennion, 127, and Bergeu, 47. Complaint was unde that the train of the Central Railroad was forty-eight minutes helded time in starting for Hunder's Point. behind time in starting for Huder's Point,

POINT BLANK AND POINT BLANK RANGE" EXPLANED-CORRECTION

Entron Forest and Stheam:—
In your last (duly i number) I observe an error in my definitions "first" and "second" in point blank and point blank range. This requires entertion, else the glst of the article will be inst, and myself, I four, subjected to a just broadside of criticism. As published, the definitions do not agree with the explanations on which they are based, and this will greatly contound the reader. The one word "mage" importing to the "dirst" definition instead of the "second," pervents the meaning of both definitions, as will be seen by reference to the article atready published, thense make the accessary currection in your max number by published, thense make the accessary currection in your max number by publishing as conspicuously as may be the foliawing:—

"First"—By publishing high the second publisher. The Imprectory or curve of the built in its fulling flight intersects or cata the time of sight. (See case 3.)

sight. (See case 3.)

Note.—This mathematical point in theory and school, curresponds to
the exact centes of the target in practice.

"Second"—By point blank range is meant the straight line or shortest
distance from the piece to the point blank (or cut us above.) (See

case 3.)

In all hing range shooting. But it may be oblique in practice, and generally in all hing range shooting. But it may be oblique in practice, and yet virtually comply with the conditions of long range thing. The horizontal distance is measured along the level ground from the piece is the larget, thoth in theory and practice the distances are the same. Our Screen.

The errors are not ours,—[ED,

THE DITTMAR POWDER.

WE publish below a number of letters on the subject of this explusive, some of our correspondents gaing for and some against it. We would recomment Mr. Dittnur to adapt the saggestion of "Herbert" and have a chemical analysis of his pawder made and published. We last week printed his explicit directions for the handling and use of this explusive, and we trust that the adoption of these will result in joilting un end to those accidents to guis, &c., which we are now called upon too frequently to notice, and which are probably caused by a want of this

WEST FARMNOTHN, Malmy, June 28th, 1875 EDITOR FOREST AND STREAM:

WEST FARDINGTIN, Malme, June 28th, 1878.

Entron Forest and Sturam:—

I have been watching with some interest the bible accounted that have recently appeared in your paper of experiments in various parts of the country with the full mart proder; and if II will add anything to the general stock of information cencerating a compound which, in some most at test, has proved heeft abundantly able for speak for leself, you and the readers of Forest and Stream are releaned to my min fible experience, and that of a friend of two, who treat some of the same lat.

In the first trial of it I made use of an ancient burse pistol, that band withstoned the shock of "glothans Fourths" probably very size them tras a Finish in celebrate. Into this tried and (Drusty neopon 1 put abund enough of Dilimac to kill a medium sleed mouse, and shows the charge down well with a paper and to hald II. The result was the explicit in the cop, with very little additional report, and a little smoke. There was scarcely any fouling of the barrel. For the next (that I used to there more of the powder, ried driven down, and also mided a small rharge of shot; the whole making apparently a fair charge for a pair ridge. But on manner reflection, after the explosion, I should judge hangle masver for a ried developed usticle, or a small dring sture has found. There was a very perceptible treoil in the part of the pishel, and the No. 8 shut mere driven into a board so far that a repetition of the experiment was considered needless at that line. After mois a felical of min consented to try iffelion of the "mixtur" in this rille. Ha mas very much delighted with its cleanilloses, power of peneration, light report, etc., until I gave him a small charge which had been red and inferiously distoned in the more attended in the paper are. This is esserveded to getting off quild quild mented of it, though, judging by the "corner" he made in stream unbeging the had burst his heavy rifle harrel and blown the tulie into the bind of the harder as the was before. On ex

HANNIBAR, Mo., June 28th, 1875

the intesting of this favorite rile, species very fertingly upon the embet with the provider speak medical species of the provider speak medical speak medical species of the provider speak medical speak medical speak medical species of the providers. It is not have necurred they should be all near from hereth to muzzle, but the manufacturer could examine that the came, and, if purshing the given in full detail, so that not only the sportsman could be on their geard, but the manufacturer could examine that the came, and, if purshing obtained it. A recent writer in Funest and Strikan states that the combustion is instructureous; such bring the case it there not seem passible that greater penetration can be under by the Dilliant than by the black powrder, and ultrough the statement stems to have been made candidly, I must confess to a little skepileism in regard to it. I have seen it stated that a brillar presentate six inches more of solid word with the time with black powder. If the combustion was instructureous, rould list superior penetration have been presible? If the new exposive is us dongroups as represented, it is highly important that some rureful and stringlife experiments should be made rith in to determine hayand a doubt whether or not listue is a translet with into determine hayand a couple cans of the new nowder, one marked No. 15 coarse. I need a few charges of four drarlans measure, and shaken from and these powers and there must shake the with a heavy No. 6 felt want and a life card board over the powder, well provide linear the material shaken which had never been used; the result shaken into explosion. Later in the second 1 and 3 farehay, shaken three which had never been used; the result shake mith in the shell shake which had never been used; the result shake mith had a fear first shake which had never been used; the result same as hefure. I found it were subspaced to the shell sh

with coarser grain, and, I suppose, slower combustion, but I have not tried they. Now, I may have been noire fortunate in the trials I have given It that have some others. I must confrest fell a rather ampleamnt sensation come over me on reading how two gams had been torn asandor from end to end, thinking how mear t came to using some rharges of six drachans, which I had loaded to shoot at tracks, but by some chance did not use them. I trust that the light of science may soon shine on this matter, and double be pain at rust befure you are called upon to recard the draft of some good fellow who satisfied his life to his in quistitiveness. When I can master up courage enough I intend to give the last can received a trial at the target, and, as thave some Petit paids for penetration, hope to the to give you the results. Before I close I wish to say a good word for the flurt metallic shell, which I have had in use for some time. I think them all the sportsman can ask for.

East Orange, June 21st, 1875

Enton Fonest and Stream:

A more larged bought a cur of Dilimar powder. I made a trial of that the line, but us the experiment was not successful I concluded to say nothing about it. Having heard multing thin good reports, I did not wish to fire the first shot at its fastgrowing reputation. But now, as others have donn't as to lis good quatities, and two have declared as to positive danger in its use. I feel inclined to give your renders the benefit of my experience. My trial was with an English breech londer, 12 gauge, 30-inch barrels, 75 punnels melght. I made Hy brown paper shells. My charge was with linck provder (Hazard's duck shooting) 3 drachins, with wood powder 3] bruchins, well shaken down, measured with a Dixon charges of moof porder infled, and later learing through a blook of over 250 pages, with a pastebuird cover, entered into the solid wood of a chest and tree over an inch. The two charges that did not ball made a slightly better target than 3 druchins block, but hardly equaled it in penetralion. Now, as to effects on the gun. My first charge of wood powder was fired from a real against a tree frunk, and I was rather in the shade at the time of discharge; nor could I surear that both eyes were open when I fulled. The result ustoulshed me. A quick treport, with scarcely any recoil, it seemed to me as though I was shooting very fine black provider. Hooked at my gun with a critical eye, and although everything looked right, something gave me to multershand that u ood ponder was bio quick for It. I tipped up the burrel, withdrew the shell, and looked thraugh. The barrel has userly as clean as its fellow which had no been shot. I fired black and won alternately, and found the wood cleaned the barrels after they were fouled by black. I noticed the smoke from the wood mis scarcely perceptible. The more I dired, the more I hecame satisfied that wond pornder was not he thing for breech loaders, but had the same bid effect as very quick black powder, if not a worse time. With its short illistributing qual

BORED GUNS FOR FIELD USE.

NEW YORK, June 19th, 1875.

New York, June 19th, 1875.

Editor Forest and Stream:—
In looking over the columns of the London Field II is surprising to see the namber of gummakers advertising guns bored on the so-called new system, since guaranteeing to put 230 pellets Inside the 31-inch etrele int furty yard.—I suppose after awhite some one will be able to make a gun that will place the whole charge of shot inside of the thirty inches. If I named a gun for larget shouling only I would order one of these guns. As shot guns are not supposed to be made for larget practice only, but for use in the field, I think sportsmen should hesitate before ordering a gim that nill tear his game so as to make it undt for use if shot inside the forty yards, as it is well known that American sportsmen kill most of their gument thirty yards and unler. Mr. W. W. R. Pape, of Neu castleson Tyne, winner of the gun fields of 1858-59 66, claixs to have bored guns on this system fiften years ago, and discontinued it on account in it is proving a faiture in the field. In the lite trial Mr. Pupe's guns were second and third in each class. The guns entered by Mr. R. Invilson were of fits make; he claims to have non this trial also, but was cheated onl of it, and has challenged the editor of the Field to show the targets. He has also challenged the editor of the Field to show the targets. He has also challenged the editor of the Field to show the targets. He has also challenged the editor of the Field to show the targets. He has also challenged the editor of the Field to show the targets. He has also challenged the editor of the Field to show the targets. He has also challenged the editor of the Field to show the targets. He has also challenged see he claims he was entitled to, I doubt whether he would inlyle any one to have guns hored on this system. I but with any of the supplies should be considered first class as 10 pattern; then tho gun that my be brought against him. Still, if the judges and each the gun triads as now conducted are entirely wrong. All gans that w

Synacuse, N. Y., Jime 26th, 1875.

I notice in your bist issue an inquiry from D. F. E., Shratoga, in regard to the Bendington double burrel shot gim. Having had considerable experience with the Reidington, I will state the same for his benefit. I own a 12 gauge, \$15 gim, Readington, which I have used over a year, principally for linck shouther, and it is as cound loothy as when I bought it. I use 34 draclads Antericad Sporting (No. 3, deaully), and It joineds said, and I experience no impleasand recoil, no more than from any gim tever shot, and I helieve it to be the best gim in the market to day for he pirler, 1\$15.)

MCGKIDE FURNACE, June 24th, 1875.

Betitor Foliest and Stream.—

For the bringit of your readers who use brids shells, I would say that have tried the preparation of sulpharte neid and bichromate polash, recommended in your paper for cleaning them. While it is good, still I do not find that this any better than good strong other vinegar. The vinegar is since more pleasant to use, as you can put your hunds into it without danger. I find that neither of them will make shells look (wew, but they will inke the dirt and, and that is all that is wanted. The vinegar is also muck the chargest.

Maryland.

-We have received from Mr. C. A. Zimmerman, of St. Paul, Mino., a empital photograph of Mr. G. W. Baldwin, the best shot, and holder of the State Champion Badge of Minnesotn. The photo, which is a engital work of art, was laken by Mr. Zimmerman, who is himself a sportsman of no empty. of no small repute.

-One correspondent "Gnyon" refers in his letter to day to a guar recently made for him by Talley Brothers, which for superior faish, general workmanship, and shooting qualities may challenge any gun made. The tool is in able and appreciative hands, and both Tolley and he ought to be conventicated.

Dachting and Boating.

REGATTA AT BAYSIGE, L. I.—An exciting regatta was sailed on Tucstlay last at the above place. The course was from a stakehoat off Miller's Hotel, Little Bayside, to the Stepping Stone buoy, passing the same to the eastward; thence to and around a stakehoat off McClellan's dock, at City Island, rounding the same from leeward to windward; thence to Throgg's Neck buoy, passing to westward of the same, and thence to the home stakehoat, crossing the line as at starting. The rourse was sailed over twice. Three prizes were aftered for the winners of the first, second, and third class sloops respectively. The following table gives the time of start and return:—

Nance Carrie Ortoplevera Harry Hall Three Bra's,	Shrt; n 2 8, .1:55/50 .1:58/04 .1:57/50 1:57/50	Sinkebant, B. M. S. 3:36:34 3:15:40 3:18:90 3:18:15	Home, n ar s 4.43:55 4.24:10 4:27:23 4:31:48	Time of race, up a s. 2:48:05 2:26:01 2:38:58	by id- lowance, in of s, 2:12:04 2:26:01 2:26:18 2:23:24

The Three Brothers, Filget, and Gracie won the prizes in their respective classes.

The Three Brothers, Filget, and Gracie won the prizes in their respective classes.

— The Cape May regatta is to be sailed on the 12th and 14th insts. The prizes, reaching in value \$1,000 each, are worthy of an excellent entry and spirited contest. The New York Yucht lebth has accepted an invitation to participate. Gurner's yacht Mohawk will go with the rest.

— On Thursday marning last the steam yachts Ideal, belonging to Mr. Haveneyer, and the Lookont, owned by Mr. Jacob Jorillard, started from Fort Schnyler for a race around Long Island, the stake being \$1,000, and the dismance about 222 mantical miles. The Ideal is double the size of the Lookont, but no lime allowance was made. The former won the race in 18 hours and 22 minutes, benting her antagonist 2 hours and 18 minutes. The ideal xveraged about 12½ knots throughout the match, and the Lookont about 11 knots.

— The Newburgh Bay regatta will be sailed on August the Entries may be addressed to Thomas P. Ramsdell, Newburgh, N. Y., on or before August 2d.

THE ALCYONE BOAT CLUB.—This Brooklyn organization held its annual regain on the 29th nlt. at lona Island, forly miles up the Hodson. The prizes were gold surs, with the monogram of the Alcyone Boat club and the inscription, "Jane Regatta, 1875," in blue cuamel, for the victors in the four-oured race, and gold compasses for the winner of the single scull race, and a small gold tub as a prize in the tub race. In the four-oured neet the Capactte, rowed by W. C. Haward, strake; W. J. Oliver, T. G. Wells, and W. J. Lawrence, with A. H. Tupper, coasswin, were victorious, time, thm. 23s.; distance, two uniles. The race for six onred gigs took place over the same course. The Blonde, colors bine, Abrum Allen, Jr., stroke; A. N. Walerhouse, G. E. Sauhier, W. T. Sharpe, James Kirkby, Churles W. Davis, and E. C. Lockwood, coxswain, took the lead, and maintained it throughout the race, winning the race by six seconds, making the distance in 12m. and 32s. Both races were very closely contested.

Arangeros Boat Club.—Th

were very closely contested.

Are not bound house, celebrated the event on Wednesday of last week by a regatta on the waters of Newhawa Creek, the course for each race being two miles. In, the double scall warking boat race J. Whenton and J. Hutchinson reached the home stakeboat in 14m, 15s.; the Haveneeyer, manned by R. Young and J. Rogers, in 16m, 15s. Messrs, Richard White and Charles Haveneyer started for the single scall race, but Mr. White's boat upsetting, Mr. Haveneyer withdrew to give his opponent another opportunity. The third race was between two eight-oared barges, the

crews being married and single men respectively. The buals used were the harges of the Senwanhaka and Artington clubs. Buth barges got off well at the start, the single men eventually winning. Time, 13m. 30s., the married men renching home in 13m. 44m. The fourth race was a contest between two paired-oared gies, the crew of one being 4. Ragers and F. Piligeon, with 4. 11. Bonaington coxawain; the other R. Young and T. Briggs, with C. Havemeyer coxawain. Time, 8m. 45s. for Rogers' bual, and 9m. 20s. for Young's.

—Philip Kleunan, of Brookley, and Jacobs had been accompanied.

—Philip Klenman, of Brouklyn, and Junes Hardey, of New York, rowed a three mile scull race on the Harleyn off Fort Lee, on Saturday, for a skeleton hant warth \$200. The race was very close, acither mon getting a lend of nore than a length, and at the close Klemman was winner by only half a length

Saratora,—On Tresday and Wednesday next, the intercolleginte regatta of 1875 will be contested at Surntaga. Speculation as to which crew will win can be governed only by such form as the men bave displayed in their training, nided a little, perhaps, by college prestige. We should be induced to place Yale, Harvard, and Columbin as the most likely trio from which he select the winner, but cach college and crew has its advocates and supporters, in whom defeat seems impossible. That our readers may form some blea for themselves as to the personel of the contestants we give below the names, weights, &c., of the men testants we give below the names, weights, we, of the mrn comprising each erew:-

TRIAL OF SCOTTA CREENERI'S NEW SYSTEM OF ROUNG, IN THE EDITOR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's short, Mesers Stott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest source made the decit, with the left barrel, but is third short, Mr. Scott gat a selected group pattern of 230 and a penetration of 37, equaliting the highest pattern made by Mr. Greener, and exceeding the penetration of that particular short by right sheets."

NEW YORK, THURSDAY, JULY 15, 1875.

Volume 4, Number 23, 17 Chatham St. (CityHall,Sqr.)

Camping on Encoming Greek.

MEMBERS of the different professions, shopkeepers, and others, whose occupations confine them within doors from year to year, soon find their nervous systems exhausted, causing many of the ills for which the physician is consulted during the Summer months. To persist in these sedentary occupations with the sole intent of adding money to the purse, or increased knowledge to the professiou, is frightfully injurious to bealth and intellect. In what manner these harmful consequences are developed we cannot stop to discuss, since the fact is sufficiently apparent to every individual whose labors confine him to office or store year after year without a season for rest and outdoor sports.

Those who have tried the various fashionable resorts as resting places, and have returned to their homes almost as exhausted as when they started, skeptically enquire, "What shall I do?" The same prescription made by the angler's patrou saint, good old Sir Isaak Walton, centuries ago, retains its efficacy, coupled with all its delightful pleasures, even to the present time, and fits our case precisely—"Go a fysshynge."

To the inexperienced angler, having in mind the reed pole, tive cent line, hob and sinker, with which he jerked high into the air the unsuspecting hullhead or the less pretentions shiner, from some neighboring pond or bayou, using for the althrement of these humble representatives of the finny tribe, the angle worm, fresh and squirmy, perhaps such indice will pass unappreciated and unheeded. To such I say, have the patience to follow me in my preparations for an augling excursion, when perhaps you could be persuaded to be one of such a camping party.

persuaded to be one of such a camping party.

Just one mouth ugo to-day, it being then the 1st of June, and the most pleasaut of all the mouths for outdoor sports, I started with my three compunions upon my annual vacation to the beautiful Lycoming Creek, located in Lycoming county, Penusylvania, having busied myself for a week previously, and enjoying every minute of the time, in making the following, with other preparations. We ground our axe and hatchet, filed our camp saw and the cutting edge of an inch and a half angur, varnished our rods, made a half alozen leaders, and constructed a quantity of "Hamlinflies." The tools, with a few pounds of nails, were deposited in the bottom of a large camp chest; and we added three long handled frying pans, a two quart coffee pot, a smaller tea pot, a long handled, eight quart boiling kettle in which to boil our potatoes, and which afterwards served as a dish pan, one dozen tin plates, half a dozen tin cups, one dozen tin spoons, three large spoons, half a dozen tin cups, one dozen tin spoons, three large spoons, half a dozen tin cups, one dozen tin spoons, three large spoons, half a dozen tin cups, one dozen tin spoons, three large spoons, half a dozen tin cups, one dozen tin spoons, three large spoons, half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons half a dozen tin cups, one dozen tin spoons, three large spoons four weeks; and it did it nicely, with nothing left to waste the day we struck our tents: Twenty five pounds of A sugar, in a neat covered pail, teu pounds of coffee, four pounds of black tea, teu pounds of fast salt pork, one small sack of corn meat, six quarts of w

stout, obliging sons, were there to help. By noon we had paddled up the creek to a beautiful little island, which terminated in a high spear-shaped point in the deep shade of the mountain. Here, nestled among the blooming laurel and rhododendron, and the most graceful and lovely ferns, and under cover of heech and pine, with mountains and streams on either side, we pitched our tents with true military precision—Fred's in the rear, the wall tent, which served as our bedroom, next, and the large fly in front for the parlor, as well as for shelter in cooking during a rain storm. Under this fly we placed Duncklee's camping stove, one of the most useful and complete affairs that could be devised for camping purposes. It packs in a space 12x20 inches, and contains within, an oven, pipe, and all the pans and kettles that are needed in cooking for a party of four, intending to camp farther from a railway than did we, where light equipage is absolutely necessary.

In the wall tent we soon constructed two bunks from the

In the wall tent we soon constructed two bunks from the drift wood found in the vicinity, in which our axe, hatchet, augur and saw played an indispensable part. We covered the hunks with hemlock houghs, filled our ticks with straw from Squire Bolline's harn, paddled them to camp in the hig boat, and deposited them upon the hemlock springs, where, with the clean sheets, pillows, and comfortables, they afforded beds upon which we slept quite as soundly, and from which we awoke more rested and refreshed, than from our more pretentious couches of curled hair and clastic springs at home.

By the middle of the afternoon our camp was in house-keeping order—heds made, ice box buried in the bank, dining table set up, surrounded with benches, and the old arbor of the year before, which served us as a dining room, was re-covered with green houghs; the camp fire was arranged with a good back log and two scrap iron rails, borrowed from one of the deserted railroads upon the mountain side, placed across two lateral logs in such a manner as to form a most excellent fireplace for cooking purposes.

as to form a most excellent fireplace for cooking purposes.

With these preparations, afterwards greatly improved and added to during the leisure hours of our four weeks' vacatiou, and with a large cake of ice from the farm house placed in our ice box, a plentiful supply of milk, butter, bread, and eggs from Mother Bodine's pantry duly deposited therein, we commenced the camp life which added nearly ten pounds to our weight, an unmeasured quantity of strength to our muscles, and most refreshing rest to our tired nervous system.

Retiring early at night, tirel from the camp duties of the day, we were awakened early in the morning by Fred's reveille upon a large frying pau, summoning us to a breakfust of trout, rolled in corn meal and fried brown in a small quantity of salt pork, a splendid enp of coffee, the aroma of which greeted our olfactories as we were performing our ablations by the creek side, builed potatoes, with their jackets on, and some piping hot flapjacks, smothered in butter and unaple syrup. This, caten in the open air, just as the san came peeping over the mountain top, with its golden beams reflected from the sparkling, rippling stream at our teet, to the beautiful green boughs above our heads, intensifying their beauty as they trembled in the cool morning breeze, while that charming sougster, the wood robin, mingled his musical notes with the shrill whistle of robin redbreast and the more plaintive songs of other forest birds, until the entire valley rang with their melody. Gracious, who couldn't cat under such circumstances and with such surroundings!

By eight o'clock our seven ounce Conroy rods were adjusted, click reels, with light silk lines, in position, and to the slender lender is made fast our favorite flies for the day's sport. Then, having donned our fishing suits, with feet encased in heavy hob-miled brogans, buckled over the flannel pants, half way to the knee, with creel over the light jacket, and landing net suspended upon the back from a large button on the jacket collar, the start is made for the half day's fishing with dress and tacklo that would astonish the devotee of bob and sinker.

As we journey up the stream we pass many well-known pools, note the change of channel in the creek since last year, and relate the victories achieved in landing magnifi-

cent trout from under the various rocks and stumps which are as familiar as the faces of our friends. Having accomplished a sufficient distance to occupy our time in fishing until two o'clock, our dinner hour, we strike for the stream, arrange ourselves a few rods apart, and commence the casting of our flies over the surface of the water in such localities as our experience determine the trout to be.

Soon wo hear a regular war whoop from H. that would have done credit to a full-fledged Iudian brave, calling our attention to the fact that he had struck a fine fish, and from the manner in which his rod bent, and from the occasional splashes in the water, accompanied by a vigorous yell from the happy fisherman every time his captly o trou leaps in the air, in his frantle efforts to release himself from the deceptive hook which bolds him, we conclude ho has hooked what in fishing parlance is designated a "huster." Just as we turn a bend in the creek our ears catch the strains of a merry song, coming from H.'s vicinity, the sentiment of which seemed to be that "trout, delicious, caught are," sung with such an evideut tone of satisfaction, we at once conclude that that particular trout has found its way safely to H.'s creel.

Occasionally we hear a happy refrain from S., who is below us, and as it comes clear and melodiously through the glorious morning air we distinguish the line, "A gay old trout from his hole came out," abruptly ending with a whoop, hi, hi, to inform me that he, too, was in luck, and whoop, hi, hi, to inform me that he, too, was in hek, and had hooked a beauty. While my companions are meeting with their full share of enjoyment I am by no means idle, but throwing my flies lightly and cautiously over pools, behind rocks, and under bushes and the grassy banks that aforetime had rewarded my labors. Scating myself upon s projecting boulder in the middle of the stream to exchange the "black gout" and "bright fox" for the "great dun" and "Haulin fly," or to imitate more closely the natural fly upon which the trout are feeding, we enjoy every minute of the time as we take in the charming scenc around us. Before us is the crystal creek, glistening and sparkling minute of the time as we take in the charming scene around us. Before us is the crystal creek, glistening and sparkling in the morning sun while it ripples down the rapid, or is dashed into foam against the rocks at the base of the mountain, and then flows silently away to farm the smooth and placid pool below, where the silver and golden hued naiads of the mountain streams for which we are searching are warily watching for their morning repast. On either side of the narrow valley majestic and solemn-looking mountains rise far, far above our heads, covered with irregular, scraggy, moss covered rocks, from which the crystal water is dropping and sparkling in the clear, bright morning sunlight like diamonds in a lady's necklaco. From yonder peak the immense old hemlocks, which seem to have died from ceuturies of watchfulness from these mountain heights, rear their dead branches and sharp pointed tops, piercing the very clouds, while the green trees upon a neighboring mountain present the varied tints of the brightly tipped heurlock and spruce, in contrast with the deeper foliage of the beech, muple, and oak, arranging their branches against the sky beyond into figures grotesque or graceful, to suit the mood in which we find ourselves. With such surroundings it matters little whether the fishing is good or bud, for one can come contented to the noon repast with a dozen tront, a keen appetite, and a thankful spirit for being enabled to so thoroughly enjoy nature in all her loveliness.

And so we jog along, varying the enjoyment by reeling uow and then a speckled beauty within reach of our landing net, until two o'clock finds us in camp and in the prescue of the diuner that Fred has prepared for us. Our meal of fried onions and potatoes, boiled trout, baked johnny cake, and broiled stake over with, we lie in the cool shade of the camp, smoke our pipes, and relate the adventures of the day. Charles busies himself in constructing rustic seats, banking up and leveling off the grounds, and searching for mammoth back logs, performing the labor of two ordinary mortals and enjoying himself as only a lethose Brooklynite can. In the evening we threw the fly for such old trout that, in defiance of our skill, broke upon the smooth surface of the many excellent pools near our camp;

and many were the beauties that spread their golden bued shides upon the paus in our ice chest.

Dring our stay we made excursions to Rock Run, four miles above, emptying into the main stream at Ralston, which it as favorite summer resort for Pbilladelphis, Baltimore, and Washington pleasure seekers. A large and well-kept hotel, by Mr. Chet. Myers, an old sportenans and a great story teller; the wonderful scenery which Rock Run afforsit; the mountain air, and the excellent ineals, served by Mrs. Myers, are the attractions of the place. Rock Run is really one of the national curioties of this country, far surpassing Watkin's Glen in the beauty and grander which shift hads to its attractiveness for the about the which shift hads to its attractiveness for the about the which shift hads to its attractiveness for the about the which shift hads to its attractiveness for the about the wonderful stream, and who is always ready to accompany any real lover of Nature upon an excursion through its wonderful accune, and at lunch time will leach you how to cook a tront without apparatus, in the woods, that will almost melt in your mouth, rivaling in delicious thavor any morsel of which you have ever parlaken.

This Gray's Run, two miles below our camp, is another famous resort for the angling fraternity. We visited this stream are server lines, and found it nearly exchanated of fish and and then fished the stream down to the mill, two miles from the month of the creek by noon; with a lair basket of fish and an excellent appetite for Mrs. Gray's hread and milk. While Charles and bure copying our huncheon, George, the son of old Tim Gray, would amuse us with the stories of bis father's adventures with rod and gun, and tell us of the deer and hear he captured, and of the monstrous trout the month of the creek by noon; with a lair basket of fish and an excellent appetite for Mrs. Gray's hread and milk. While Charles and by were copying our huncheon, George, the son of old Tim Gray, would amuse us with the stories of bis father's

ter has been especially known as yielding the finest mounter has been especially known as yielding the finest mountain trout in the country; but of late years the fish have been scaree, and are thoroughly educated. A special knowledge of their haunts, and a peculiar aptitude for al luring them, is essential to the angler who purposes a visit to Lycoming Creek, and even then he is not likely to get a large basket. We know of other streams in Lycoming county that are much better.—Ed.]

laud.

We brought no lish, 'tis true; but we were posted on Kern River trout, and we had gotten over the fever to go there; thushed talking about going down and having a "shy" at those big fellows. If I did not know that my frieud Col. W. was a truthful man and knew trout when he saw them, I should have gone for his sealp on my return. He is absent, but on his return I shall interview him. I think I have partially solved the mystery. He had fished in the river in the modutain rango, where there were

probably plenty of trout; in fact an old hunter told me that if we had struck the river fifty miles above we could have had the finest fishing in the world, and real trout; but that involved camping out, pack mules, &c., and too much time. The fish that we saw that were not trout, resembled Lake Eric whitelish, only they run larger.

The Doc was so disgusted, that on enquiring for him today I found that he had left town for a week. His man said: "I just know that the fellow has slipped off somewhere to make amends for the disappuintment, and is having it out on some trout stream." The idea is a good one, and I believe I will adopt it. I will take a rnn up to the Trockee and Lake Tahoe, Fullen Leaf Lake, &c., up in the Sierras, only a day's ride by rail. I know all about that fishing; been there before, and aever failed to have a good time. It is a glorious trip; leave here in the morning and take your dinner at six, six thousand feet is the air, and ha an haur land at the castern base on the banks of the foaming Truckee. I'fl tell you about it in my next, and I won't brag a bit, nor tell big stories to make amends for the little trip to Kern River for—chubs.

Hish Gultune.

PROPAGATION OF BLACK BASS.—Four years ago 113 bluck bass from Lake Eric were placed in Lake Giles, the property of the Blooming Grove Park Association, lu Pike county, Peansylvania, and their progeny has increased so fast as to insure good sport to the angler at any time. tast as to insure good sport to the angler at any time. The late spawners are now on their gravel beds in the shallow waters along shore, protecting either their spawn or the newly hatched fry, as the case may be. It is interesting to note the pertinacity with which they guard their precious charges and the vigor with which they drive away depredators and intruders of all kinds. They will frequently allow a hoat to pass over theat, scarcely six inches above their backs, and obstinately stand, their ground. Sonfish allow a hoat to pass over thear, scarcely six inches above their backs, and obstinately stand their ground. Sunfish and such are compelled to keep their distance. There are hundreds of these bowl-shaped excavations, eighteen juches or so in diameter, all along the shallow, sandy shores of this lake, which is very clear, and in the centre, some seventy feet deep, fed by bottom springs. Earlier in the season it would be very easy to collect their spawn for propagating experiments. It is difficult to perceive why bass cannot be cultivated as well as the salmoides.

GRAYLING PROPAGATION IN BAVARIA.—Our Munich correspondent, W. S. M., whose letter may be found on our editorial page, makes the rather unexpected statement that grayling were artificially liatched in Bavaria ten years ago, and used to stock other streams. "I make this statement," and used to stock other streams. "I make this statement," he says, "as I see by your paper of May 6th that Seth Green is chimed to have hatched the first that ever were natched. I can furnish you the facts if you like." We would be greatly interested to receive from our correspondent all the information upon the subject that be can support.

—A paragraph appeared in our last issue to the effect that the South Hadley fishway was a failure. We are now informed by Mr. E. A. Brackett, fish commissioner for the State of Massachusetts, that such stalement was an error; that so far as any evidence has been obtained, it all goes to prove the fishway to he a success, and that all fish that show any disposition to go above the dam do so with perfect ease.

U. S. FISHERY COMMISSION AT WOOD'S

HOLE.

THE U. S. Fish Commission have fixed upon this pret-I ty little attachment to Cape Cod for its Summer's work, and so superior are its advantages to those present ed by most points along our coast that it is probable that ed by most points along our coast that it is probable that even a more prolonged research than the limits of one Sammer will permit may be accorded to the adjacent waters. Even the features of the main land and of the adjacent islands—Martha's Vineyard, Nantucket, No Maus Laud, and others—furnish, from the peculiarities of the martin in thought, and habits, full material for lively the people in thought and habits, full material for lively instructive nagazine articles.

The wit and shrewdness of the Cape Cod man or Nantucketer, are proverbial; how much more, then, may we expect of carrious revealings when the dredge and trawls of the little Bluelight are set to work, and the brains of our scientific corps are stimulated and refreshed with the

or the little Blucight are set to work, and the brains of our scientific corps are stimulated and refreshed with the fish diet, tho cool sea nir, and the quiet, homely aspect of every surrounding, freed from noise and excitement?

We start at least under fair auspices. The village is prettily situated along the hilly binff which, from Nobsea Lighthouse Point, bends around a little nearly land locked harbor, which constitutes "The Little Hole," points outward to the sound, then breaks off into a rush of whirling, eddying tides, and nest of flaugerous rocks, through which a narrow, well buoyed chaunel leads into the harbor of Wood's Hole, where terminates the Old Colony Railroad, and where all persons bound camp-meetingward leave cars for steamboat. Across the Hole—as the rocky whirlpool is ealled—a little island with an Indian name springs up, trending to the westward; then another, and close to the long, narrow, and heantiful island of Nanshon, covered in parts with noble groves of onk, under whose shelter and around whose fustnesses the native deer roun and feed unmolested, till one fatal week, or longer, in Fall when, with a coterie of chosen friends, the owner of this magnificent estate, Mr. Forbes, culls upon the forest to reader its tribute, and his landsome country sent, with boats and yachts and wharf, to contribute to their entertainment. But Mr. F. does'nt get all of his own deer; they swim from the island, and many a fine buck has made venison for less daluty palates.

This island was, with the little ones mentioned, undoubtdaluty palates,

This island was, with the little ones mentioned, undoubt-

edly part of Cape Cod, ent usunder by the action of the waves. Wood's Hole and Little Wood's Hole are but distinctions without a difference; the house on the bluff point entered from the south is in Wood's Hole, from the north is the little one. Among the houses are sprinkled a number of comfortable summer houses, fled to in the heat of Snammer by their city owners, and on the bluff, overlook. Ing both harbors, is a comfortable, delightfully located hotel, which is only too small for the husiness it could do.

Till we made special research the ideas of most of us as cape Cod as an immeuse boot, which it resembles much, the leg is embraced between the Vincyard Sound and Massalmsetts Bay, trending to the eastward, and the foot pointing to the northward, Provincetown lying sang under the lee of the big toe; then Wood's Hole is built on the rear strap. Across the sound, finir miles, is Martha's Vlueyard, and beyoud the other islands steamers communalcate with Oak Bluff, Holmes' Hole, Nantucket, and New Bedford on strival of trains. We get yesterday's New York and to day's Boston papers at cleven o'clock A. M., have telegraph and express, and one straight, saudy real to and there's water enough, and as all Is fish that comes to and there's water enough, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to and there's water congla, and as all Is fish that comes to any the week (alge) which may foul our hooks may be rare ones, and have their special collectors and investigators, we feel sure of results.

At Noark, where we stopped to take on board last year's furniture, and whence, in consequence the Bluelight steaming my the sound

ONTARIO SHAD.—The Cobourg, Canada, Sentinel says: "Lately our townsfolk have been regaled with a now kind of small fish, which at first were supposed to be hel riog, and which have been caught in large numbers by on fishermen, as well as in other places along the lake shore

A careful Inspection of this fish by knowing ones shows that it is that variety which has long existed in American waters, and is known as shad. Some time since Mr. Seth Green, the note I fish culturist, introduced this variety into the waters of the Genesce, where it multiplied rapidly, and soon found its way to Lake Ontario. It appears now for the first time in great quantities on the northern shore, and is a great boon to us all. We regret, however, that it should be so largely eaught as it has lately been before reaching maturity, and hope some means will be found to prevent this and encourage the growth and increase of this splendid fish in our vlcinity."

SHAD IN LAKE ERIE.

CLEVELAND, Ohio, July 10th, 1875.

CLEVELAND, Ohio, July 10th, 1875.

Over a year ago several thousand young shad were put in the Sandasky River near Fremont, at a point about twenty miles from Sandasky Bay, which opens on Lake Eric. On drawing seine for minnow at our club house (Houe's Puint) we captured several of the young shad. They are about three inches in length, and as lively as could be expected of the salt water fish in the takes. We are watching closely their action during the last months, but think that there is no doubt of the success of raising shad in the takes, and if shad can be raised, why not salmon? We will keep a close watch on these dealzens of the ocean and post you on any new yolnts in their case.

Hatural History.

For Forest and Stream

THE VACATION OF AN ORNITHOL-OGIST,

A N ornithologist looks firmard to holidays and vacations from business as welcome seasons of uninter rupted work. The most careful plans are laid long before-hand to get the utmost amount of valuable results with the lesst expenditure of time, regardless of labor and trouble; and be reckons the value of the vscation by the work he has done, not by the rest he has taken. Yet it is really the best of rest 10 him, and every husiness man ought to bave a similar avocation, which shall take him out of doors and away from the pavements every spare day. My collection lacked Southern birds, and accepting the invitation of gentlemen of the West Vs. Oil and Oil Land Company to make their offices my home, I went to Petrolenm, Ritchie county, W. Virginia, on the Parkersburg division of the Baltimore and Ohio Railway. Any other appellation for this forlorn little station would be a misnomer, for it looked, felt, tasted, and smelled of oil—thick, greenish the best lubricator in the world. hlack, villainons stuff, but the best Inbricator in the world. The whole country thereabouts is on edge. So many high hills are there, that there is scarcely room for valleys between, all densely covered with a primeval forest of both hard and soft woods, and jungles of bushes and brambles, knit together with trailing vines and erecpers, the haunt of rattlesnakes, et al. It is the well marked seene of a geological riot long ago, and the streams, searching out the weakness of the shuttered rocks, ever betray the savagery of nature, which the luxurious vegetation is making every

effort to conceal.

In such a country, then, I spent nearly four weeks in collecting, with marked success. The first day, however, wis just sifter a cold storm, and I saw none but the commonest, such as robins, bluebirds, blackbirds, crows, golden wings, and song sparrows. The next day I was a little more successful, for I added to my list a king-fisher, turtle dove, a mocking wren, a blue-gray gnateatcher, and others. From this time every day brought varieties. The king-fishers do not seem abundant, but a few nest in a steep bank a mile or two down the road, in company with another troglodyte—the rough winged swallow. The burrows of these two birds are very different, although it is not always easy to tell their entrances apart. The king-fisher goes straight in several feet and lays her eggs on three or four straws; if anything at all, (it is the British species that builds its nest of fish hones,) while the swallow pierces her narrow tunnel only a few inches, and usually makes an elbow in it, at the end of which a little chamber is hollowed and a warm nest of straw and feathers tucked in. This is sloo the habit of its congener, the common bank swallow, and all three of them lay pure white eggs, like most birds that nest in dark holes—the woodpeckers and owls for instance—though there seems no direct connection between the facts.

How the king-fisher happened to be chosen to figure in that gentle legend of Halcyone, or rather how such a de-

most birds that nest in dark holes—the woodpeckers and owls for instance—though there seems no direct connection between the facts.

How the king-fisher happened to be chosen to figure in that gentle legend of Haleyone, or rather how such a delightful tradition of his origin ever arose, is a wonder to me, for hie is associated with anything but quiet and repose, and the causeist on an American river would regard the presence of our Cergle Aleyone as in indication of rough water, however the gubernator of a Roman trireme might have welcomed the birds. He is, note, too, as noisy as can be, and the immortal Alexauder Wilson, whom nowadays we are too near forgetting, described it perfectly when he compared it with a watchman's rattle.

Just where I found these nests Goose Croek makes a sharp hend to the right, sheering away from a high wall of rocks and plunging down some lively rapids. On the right bank there is a little flat, thinly covered with bushes and young trees. Amid these were many birds, and it was a favorite resort of mine throughout the whole vacation. Here came the shy little Carolina chickadee, a miniature of our northern black crested one, with his constant Iricnes, the black and white creepers and the "supsuckers," the sad wood pewees, whose slender plaint always seems to me algorificant of hlighting sorrow courageously overcome by moral strength; the loquacious bluejay, more brilliant in this warm latitude than ever 1 had seen him North. You hear many minstrels that you cannot see. Down the creek a field sparrow is still singing ereep, cree-ep, cree-ep, catch 'em, catch 'em, catch 'em, catch 'em, catch 'em, catch in a mother tells me he sang it when she was a girl. Up stream, the few clear notes of the mocking wren, which are all his own, ring out upou the air, and on the other side a cat bird is personang a whole choir. Business like robins are discussing with one another; angry chenricks are bustling about in great agitation, making the dead leaves fly from under the briers as though a small tor

pair of goldfinches are quarreling loudily out there by a dead tree, and altogether this little grove seems a sort of arim exchange at least the part of the little grove seems a sort of arim exchange at least the part of the little grove seems a sort of arim exchange at least the little grove seems a sort of arim exchange the little grows the creek, scramble up that you have the creek scramble up that you have the creek scramble up that you have been and the little grown his clarion was guiding! At last I see him—a brave looking bird, stunding high upon his legs in the top of a tall ash, his head crested, his tail long and restless; above he is ruddy brown, below ash-white and yellow. I knew him—the great-crested fly catcher, first cousin to the king bird. Down he comes, dead! I straighten him ont, wrap him up tenderly and put him nway in my trout hasket. Then I sit down. There is little use indeed when collecting in the woods to move about much; the birds will come to you, if you are quiet, just as surely as you can go to them. There is a different sort up here, less of the skulking bush and pasture lovers, more of the dendricoline and opeu air birds, like this poor handsome fellow in my basket, and that hawk coursing over yonder ridge. Presently I hear a flue squenk overhead, and after a long search discover a pair of great catchers (Pohoptida corrules) paying the foundation of their nests, which is too elegant a structure to pass unheeded. It would just about fill it. It is matted of various soft vegetable fibres and cottony substances, particularly downy within and enerusted outside with green and gray lichens and hits of wood moss. The bird itself is a tiny, stender little sylph, blue-gray above and white underneath, with black bill and feet. They went away, and returned again and again, always both together, with their mouths full of fully material. I wanted the Paliopathas budy, but hadrut the heart to shoot then in their busy hiss; so I left them and they.

There groups back as Prisilan, the Parinan mai

the creek.

by the creek. To morrow I must work more whether or not I think less.

Every morning after this I was oul carly and home about moon, so as to have time to skin my birds before dark. The northward migration was at its height by the 5th of May, and I saw the best of the travelers. I explored all sorts of localities, one day going to the dense distant woods and great second growth brier patches on the high hills; another following the windings of the creek, or some one of the many little "runs" which tumbled down ravines that an artist would love, for every turn bronght out some new secue of picturesque loveliness. These uarrow glens are beloved of the birds, and I find such warblers as the Kentucky, the hooded, the Blackburnian, the golden-winged, and the worm-cating, with the golden-crowned thrush, and his rarer brother, the water thrush (Sciurus ludovicianus), for whose nest I scarched unsuccessfully, though it must breet in this region. It was here, too, that I was most apt to find the least fly-catcher, and his brother, the greencrested Acadian fly-catcher, three of whose old uests I came across in one morning. Another species of this genus (Empidona) is the yellow bellied. It has the same olivegreen plumage as the rest, but differs in being bright lemon yellow underneath. Its song seems to one a string of coquettish questions, and is very pretty.

And now I am "at the end of my hobbin'," and have'nt begun to tell what I intended of this vacation in the Alleghanies, or the birds and bird-notes it added to my acquamtance; for though yon may know of many birds, it takes time to really get acquainted with even a few. Perhaps, too, I preach too much.

A correspondent sends us from Danville, Maine, the fol-

A correspondent sends us from Danville, Maine, the following interesting account of his attempt at ralsing ruffed grouse, the only successful one ever brought to our notice
DANYLLE, Me., July 10th, 1875.

DANVILLE, Me., July 10th, 1875.

Bottor Forest and Stream:

Last Fall 1 obtained four wild partridges (probably ruffed grouse, Bonasa umbellus, is the correct name.) They Wlutered finely in a cage 3 by 2. This Spring I built an inclosure—a circle ten feet in diameter, walls five feet in height, with conical tent top—setting the ground with little pines and furs, in a close clump of which I put dry forest leaves, of which they soon made a nest and deposited sighteen eggs, but when

setting time came they quarreled about the nest and threw out the eggs so I took away the eggs and put them under tire heas, "a haitan an a big one." During the third week some interceast animal destroye the hea's nest, but Miss Bantam brought not four young ones. I removed the old partriliges from their house and juit to bantam and he they brood. She seems to have a deep affection for them, for white they make a poor return, taking but little unities if her anxious cale and I frequently have to go in thring the night to place one or two of the crying chicks under her. They are the hurdest pole to keep contact that I ever deaft with, but I am very unvious to keep them, as I think the only instance known of breeding the wild partridge in captivity. Mexperience with these will enable me to carry it out entire another see son without the help of domestic fowt.

Smith, of Strathmy, Canada, have also be invited, and we believe accepted the instruction to assist as induces for the different cepted the invitation to assist as judges for the different classes of dogs.

BOSTON, June 20th, 1875

Boston, June 20th, 1875

A would like your oplulon and views on the following circumstances, which occurred during my last Fall's shooting. My imported butch Beauty in quall shooting set live or six times in a wreck on as many bevies. By set I mean that she first stood her game and then came that on her belty. This to me is a new feature, as I have owned and shot over many good dogs, and it is the first iten it has occurred with me. I see that Frank Furester says that it is very manual in this country distribution from the bed diags? I should that that the ground are which I was been shooting was open, with a growth of red haref and bay berry bushes, so called, and about twenty mites from the city. I am very happy to write you that quall have come through our senere white I and Plymouth cunnties.

S. S.

[We do not agree altogether with Frank Forester when he says it is a very rare thing for dogs in this country to

he says it is a very rare thing for dogs in this country to go down on their points. Our field editor—who has per-haps done as much shooting over setters and pointers as any one-has owned quite a number of dogs which were given to the habit of ilropping to point, and many line nosed, staunch dogs, will drop to point, when turning upon the wind and finding themselves too near the game. One pointer we owned would invariably drop to point when the cover was light, and then in dense cover would rise as high upon his feet as he could stand.

"Schuyler," a famous setter we shot over in Wisconsin a full season, would invariably drop to point on piunated grouse and quail, but never when pointing suipe.—Ed.]

LAVERACKS.

Entror Forest and Stream:—
In your issue of July 1st I noticed a communication in the Kennel Department from Mr. John M. Taylor—"haverack Setters, True or Folse"—In which he says there are only three pure Laveracks in this country basing his assertion on a letter from Mr. Laverack. In which Mr. Leays: "I have sent but three dogs to America," and further on he says, "I never sold but the three shove mentioned." The above, to me, give a wring impression, as implying that Mr. Luverack had only and all of them, when it is well known that there are several gentlemen, as reliable and as perfectly able to furnish pure Laveracks as Mr. Laverack himself, for his has sold for many years and is still selling them; so that the breed is not now his oxclusive property, alshough he for a long time was the only reliable retainer of it. If any one hought a dog with a pedigree purporting to be pure Laverack from such gentlemen as R. L. Pitcs. Esq., F. R. Hanning, Esq., Purceil Llewellen, Esq., it would be as put

snd as reliable as if bought of Mr. Laverack. Now, in the London Field of June 19th, I see advertised to be sold, dogs from the two first mentioned gentlomen (who, Mr. Laverack says, have bought all the pupities he had for vale), of undenlable pedigrees; also some from Wm. Billukhoru, Esq., including Scott and Victrees, from Laverack's Old Dash smi Moll, heelde a good many from them of pure Laverack's Old Dash smi Moll, heelde a good many from them of pure Laverack's Old Dash smi Moll, heelde a good many from them of pure Laverack strain. There may be (1 do not say there are) twenty Laveracks of pure breed in America, and Mr. L. may not have sold one of them.

In all dog shows Laveracks should go under the class English setters, as they do at home. They may be the best in the world, but I think eportsmen will find them too fast and rangy for any part of America hut the pintile and large salpe meadows. For New England and some parts of the Mithile States I believe they will be about useless. I should think thint, with their long lineage, they mould come nearer allke in color than they ito. Black and white ticked, orange and white, liver and white in all their radiations, is a pretty good range for one breed, claiming to be the oldest and purest. It would not the for the Irish and Gordons to vary that mach; they would be nowhere at shows except they are of the true colors. If you will look at the London Field after July 10th, you will see that the dogs of pure Laverack and other fine breeds bring no each enormous prices as have been pald by Americane, and are just as good and trillable, and the centleman from Virginia can get all the Laveracks he wishes without waiting a year.

[With regard to the importation of Laveracks, our correspondent is right as far as the practicability of importation is accordant.]

spomlent is right as far as the practicability of importation is concerned, but in point of fact we are inclined to agree with Caplain Taylor, that only three pure Laveracks have as yet reached this country, and for this reason: The importation of any high bred dog is so apt to be heralded with a flourish of trumpets on both sides of the water that it would be almost impossible for one of pure blood to creep into the country unknown. We agree entirely with 'Dry Land' as to the class in which they belong at bench shows, and probably no errors in this respect will occur again. As for their capabilities for this country, we apprehend it is the generation produced here to which importers look for the working dogs, the "imps" being for the producing of a strain which will answer best for generai field purposes .- ED.]

MR. ARNOLD BURGES' KENNEL.

Mayeville, Ky., July, 1875.

Editor Forest and Stream:

As you like to keep a record of all the fine dogs imported, I wish to say that my Irish Rufus, which won first prize in his class and championship at Parls, in this State, June 2d, is from the kennel of J. S. Skidmore, of Nantwich, England, and is the same dog advertised in your columns some time since. He is a magnificent animal, of first class pedigree, and with every mark of the true Irish setter, while for beauty lie has few equals and can have no superiors. This is the readict of all who have seen blim. I purchased at the same time a splendid Irish bitch from Mr. S., which will be shipped to me shortly.

The steamship Eria brought me on ber last trip a very beautiful fifteen months old blitch of the true Field Trial stock from Llewellth's kennet. Queen Mah is a blue and lan, and the most perfectly formed animal I ever saw of her age, or any age in her sex. She is by Dan, out of the pure Laverack blich Nelly, slater to Countess and Reid's Sam, Nelly and Countess made 100 points of merit in the brace stake at Vaynol, the only time this score was ever made. Mah is exactly the same blood as Llewellin's grand young bliches Countess Moll and Countess lear, they being by Dan, out of Conntess. Countess Bear is the fifteen months poppy, which beat the great (†) Ranger at the dog Derby, making the fourth victory Llewellin has won over this so-called "king setter" with the get of Dan, ad og which was never beaten. Queen Mah has, therefore, in her velns the blood which has proved its superiority to any

ing the fourth victory Liewellin has won over this so-called "king sette with the get of Dan, a dog which was never beaten. Queen Mab heterefore, in her velus the blood which has proved its superiority to a other strain in England. I consider myself fortunate in getting her, a trust she may live to perpetuate her race, and benefit the lovers of go dogs in this country. Will send her pedigree in full soon.

ARNOLD BURGES

VERMIN ON DOGS.

New York, July 8th, 1875.

New York, July 8th, 1875.

I notice is to day's issue an article on vermin on dogs, etc. Now, I will give for the benefit of your renders a vatuable new and harmless remedy, infallible and agreeable, and a sure cure against vermin an man or brast of any species or variety. Take:—Insect powder, I ounce; alcohol, 4 onnees; water, 2 onnees. Shake in a bottle till dissolved. Apply once or traite a day with a soft sponge till the vermin are destroyed. The above is as harmless as water, and a sure cure.

Sportsman.

The shove is as harmless as water, and a sure cure.

Doos and Default.—An ingenious observer of things in general has truced an unexplained connection between the default on the July interest of the Virginia and Tennessee debts, and the immenie number of dogs in those States, averaging three to each voter, it is said. The idea is funtastic enough, but not wholly without reason. A State that supports three dogs to every male adult could hardly be expected to meet all other current expenses in light times like these. Persous who, with Mr. Bergh, believe in the free multiplication and perpetuation of the cauine race, should whistle for their July interest, while the dogs replenish the carth. We should not charge this failure on the superabanniant dogs of Virginia and Tennessee, but rather on the general financial debility from which so many of the States, with most of their inhabitants, are sufferens at present. At the same time it is worth noting that the pourer people are the more dogs they own, as a rule; and the converse of the proposition is undoubtedly true. The enormous excess of dogs in parts of the South is one evidence of the poverty which rules among the people there. Joking aside, it is indispitable that the dog-raising mania of Virginia, Tennessee and North Carolina has been deadly to the wool growing interest in those States. In that sense they have been made poor by their canine indulgences.—Journal of Commerce.

The Longest and Higuest Step on Record.—We are

The Longest and Highest Step on Record.—We are informed that a few days ago Mr. A. C. Waddell, of Newton, New Jersey, while out woodcock shooting in Sussex county with two companions, and while walking through some tolerably dense cover, discovered a large rattlesnake directly at his feet, just as he was about to step forward. It being too late to draw back, he made a spring over the "critter," and it is said he went full six feet high and fifteen forward, and then turning to look for his dog-the old black pointer Phil—found that he was approaching the snake, and very near it, when he was ordered to "down charge," which he did directly alongside the sanke, but before the varmint could coil and strike, Mr. W. shot its head off.

-Paris pays taxes on more than 65,000 dogs.

Sea and Biver Hishing.

FISH IN SEASON IN JULY.

Under the head of "Hams, and Fish in Season" we can may spect fyin general terms the several varieties, because the talor of States was much that were we to alternate to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the talor of nature, upon which all legication is founded, and our reafers would so well to provide themselves with the laws of their respective states for constant reference. Otherwise, our attempts to assist them will only create confusion.

FISH IN MARKET .- Fish of all kinds continue scarce and prices are consequently high. The supply of salmon in particular, which has been so abundant of late as to bring this delicacy within the reach of all, has fallen off and the price advanced to 45 and 50 cents per pound; at this time last year it was selling at 20 cents. Spanish mackered from the Chesapenke Bay have also advanced in price and arc now selling at 80 cents to \$1. per pound. A few natives have been caught off the New Jersey coast, the avant courriers of the schools which may be expected soon to appear on our own shores, and bring \$1.50 per pound. Helibut sell for 20 cents per round, and sheepschool for 20 Halibut sell for 20 cents per pound, and sheepshead for 25 cents; fresh mackerel are worth 20 cents cach, and striped bass 25 cents per pound; weakfish (squeteagne) 12 cents; blackfish 15 cents; porgies 12 cents; sea bass 18 cents. Lohsters are now worth 10 cents; soft shell crabs still scarce at \$1 75 to \$2 00 per dozen. Fish and Congress water appear to be the staple articles of diet at Saratoga, and quests of the Grand Union ought to return to the circum. guests of the Grand Union ought to return to the city well supplied with brains. We saw at Mr. Blackford's, Fulton Market, an order put up for this house that comprised for one day's consumption only, 200 pounds salmon; 100 pounds Spanish mackerel; 100 pounds sheepshead; 100 pounds striped bass; 200 tresh mackerel; 150 pounds lobsters; 50 dozen soft crabs and 100 pounds halibut.

THE GREAT SOUTH BAY. -Bluefishing both in the bay and outside the inlet has been rather hetter during the pas week. Saturday was overeast with an easterly wind blow The Irollers had the best of the sport, the fish being near the surface and disinclined to take the chum. The fish taken outside the bar have been ranging from six to eight pounds, while those in the hay run much smaller. No one who has once been successful in catching bluefish No one who has once over successful in eatening indensity of large size with rod and reel will ever forget the excitement of the sport, and chumming is rapidly coming to be the sport par excellence. The weakfish are now returning from their haunts at the eastward to the feeding grounds. We have heard of one large catch of these fish taken with

-Trout fishing in the Rangeley lakes is better this season than for five years past. The members of the Oquossoe Club, with headquarters at Camp Kennebago, are having excellent sport, as will be seen from the following record Mr. R. G. Allerton has caught in all 157 tront, weighing 1774 pounds, the smallest weighing half a pound, and the largest six and a half pounds; but Mr. Thomas L. Page largest six and a mait pounds; out Mr. Thomas L. Page heads the list with a fish of eight and a half pounds, although a young man fishing in the Rangeley stream has very nearly tied him with one of eight pounds, taken with a fig. Mr. G. H. Bliss has caught 112, weighing seventyeight pounds; smallest, half a pound; largest, five and a

half pounds; snarrest that a pointer largest, live and a half pounds; nearly all taken with the fly.

We are authorized by Mr. George Shepard Page, President of the Oquossoc Club, to state that gentlemen desirous of joining the Kennebago Camp can have all the privileges on the same terms as members of the club.

-Fishing at No Man's Land has been excellent, Messrs. Oliver E. Gifford and Josiah Enton, Jr., took during a week's visit nineteen bass with rod and reel, weighing from thirty to fifty pounds each. Bluefish are abundant at New Bedford and off the Elizabeth Islands, eatches ranging as high as 150 to the boat.

-Bass are reported fairly plenty in the Schuylkill, at and above the Flat Rock Dam. The eatch per rod, running from four to fifteen.

-Mr. Holberton, the well known artist writes as from the Walton House, Clayton, N. Y. among the Thousand Islands, to the effect that the fishing is excellent, and he wonders that there are not more visiturs. The best fishing, he thinks, is for black bass with a trout rod and large fly. He caught thirty-eight in one afternoon.

-We learn through Dr. Ferber of this city, who is an ardent angler, that fine sport with black bass can be had at Marston Pond, near Wurtsboro, Sullivan county, Pa. Write to Geo. Olcott of that place, who will pilot and take charge of visitors.

charge of visitors.

New Jersey.—Barnegat Inlet, Kinsey's Askiey House, July 12.—Bluefish schools continue to come in the inlet, morning and evening, but do not take the squid well. The only cutches worth reporting this week are J. B. Dixon, Twaddell & Bro., twenty-oue; A. T. Tamar & Co., New York, fifteen. Sea hass since Thursday are biting well, and the guests are having fine sport. Weaktish still scarce. Sheapshead still plentiful, averaging 200 hemis per day. Taken from the grounds of the professionals I have to report on Thursday, Wm. Bound, twenty-one; H. Grim, fifteen; John Soper, twenty-one; S. Ridgeway, ten; C. Parker, six. Amateurs—J. B. Dixon, eight. Our daily report was mislaid; every day would have compared favorably with the above for sheepshead.

TROUT FISHING IN PIKE COUNTY, PA.—ALDNO THE ERIE RAILROAD.—Owing to the dry weather the trout season in Pike county, Pa., and adjoining country, has not been as successful as previous ones, but some excellent sport has been enjoyed. The Sawkill Creek—the "old reliable"—has yielded minisually large specimens this year, if the number has not been so great. The largest eatch made in one day's fishing this season, was that of the well known expert. Edi Cabill, of 17 Park Row, and Dr. Juliu Thompson, of Brocklyn. They caucht over three hundred, many of them being exceedingly large ones.

Trout fishing by moonlight is a popular phase of angling around Milford this season. With a white or yellow miller and a coachman, fish are caught at night, which all the art of the angler is lost upon in the that line. Fifteen large front, members of a school lying in Heller's dam, on the Vandermarck Creek, at the hend of Front street, in Milford, plainly visible to passers by at any hour of the day, were taken al midnight recently by a local fisherman. Moonlight fishing in this section was first, experimented in by C. P. Mott and E. H. Mutt, on the Raymondskill Creek, three miles from Milford, in Jane of last year, at a spot between Lorenny's menhaws und an old dam at what is called the "Gousset place." They took with a yellow and white miller twenty large front out an one hole, which was overhung by a dense grawth of alders, in a very short time.

The Shohola Creek has maintained its flue reputation this season considering the unfavorable circumstances. A creek that will yield to the fly of a fisherman, by no means an expert, three hundred front in six hun's fishing, a dozen of which being "pounders," and several two means an expert, three hundred front in six hun's fishing, a dozen of which being "pounders," and several two pounders, has not yet lost individuality as a tront stream. Such fishing has been done this season. A gentleman named Kenyon, from New York, also took over three hundred large ones from the Shohola early in t

angling, Thad. Norris, of Philadelphia, but of late years he has not ventured among its rocky mountain passes and thundering cataracts.

The Lackawaxen region has probably suffered more from the drouth than any other, in consequence of the streams heing smaller. Early in the senson, however, some excelent fishing was afforded in Lord's Brook, Panther Brook and others. Taylor Creek, one of the main tributaries of the Shohola, has responded well to the demand of the angler, and furnished a large number of fine specimens. A two day's rain would make trout fishing throughout Pike county as good as any one could desire until the close of the season. The large brooks, such as the Sawkill, Raymondskill, Dingman's, Shohola, Little and Big Bushkill, &e., will afford fair fishing for three weeks yet, and excursions are making daily to them.

—A correspondent writes:—

–A correspondent writes:-

Cursions are making daily to toem.

—A correspondent writes:—

"We have caught bluefish of from six to seven pounds weight with a pole for many years, but for real sport, fasten a bonita of about ten to twelve pounds to a good bass pole, and you are fixed for an hour. They are as stendy as a bass and as strong as a salmon. They don't cut bluefish capers, open mouth, tail foremost. Will send method of fishing if you wish it. We were the first who caught them regularly.

Minnesota.—Lake Pepin, July 5th, 1875.—Fishing in Lake Pepin was never better than at the present time. Every evening I sail and fish, and fish and sail; take all the black bass, pike perch and pickere! I want, and often get an overdose of the latter. I never knew fish in better order or more gamy. They bite freer, fight langer and pull harder than I ever knew them to before. The season has heen cool, and the coutinnal low temperature of the water, has been comlucive to the health and strength of the fish. I am using, for live hait, young dog fish (Seyllium canicula). They will live all Summer in a rain harrel without change of water. They are the best live bait I ever saw. I never knew a better time for sailing and fishing on this lake. Strangers begin to arrive, and all that are on sport intent find it to their heart's content. Weather splendid, cool nights and no mosquito bites. D. C. F.

The Fishenies.—The number of fishing arrivals for the meach and in a light of the sail of sailing and for the cook and in a light of the cook and in a lis

sport inteut find it to their heart's content. Wrather splendid, cool nights and no mosquito bites. D. C. F.

The Permenes.—The number of fishing arrivals for the week ending July 8th was 105, fifty-seven from Georges, eleven from the Banks and thirty-seven from mackereling. Amounts of Georges cod brought in, 900,000 pounds, halibut, 50,000 pounds, Bank cod, 1,600,000 pounds, halibut, 75,000 pounds, mackerel, 4,850 barrels.

The losses in the fishing business from this port during the first half of the prescut year have heen greatly in excess of those of last season. Up to the first of July, twelve vesselvs and eighty-six lives had been lost, and there is possibility that still another vessel will have to be added to the list, as the schooner rau down and sink on the Banks by English barque Towo, on the 8th ult., has not yet been accounted for. Last year there were ten vessels and sixty-eight lives lost during the whole season—less than the first half of the present year has furnished.

Schooner Alfred Walen, Cupt. William Thompson, has made four halibut trips to the Grand Banks within eighty-six days, and landed some 300,000 pounds halibut, and stocked about \$10,900. This is the best fishing and stock for the time made by any vessel from this port. She has made five trips thus fur this season, her net stock amounting to about \$12,500. Capt. Thompson bids fair of making a big year's work.—Cape Ann Advertiser, July 9th.—Anglers will please tuke notice. The fact is worth knowing. Mr. Samuel Baylis writes as follows to Land and Witter:—

"In the very amusing account of the Southport Aquarinu, by Mr. Buckland, he states what is quite true as regards a

"In the very amusing account of the Southport Aquarinm, by Mr. Buckland, he states what is quite true as regards a fish going to die when he turns on the side. After placing the fish Into my live-bait can, should they turn on their sides, to save them from dying, I insert a sharp pointed awl under the fin, in a shuting direction towards the gill, holding the fin up with the thumb. Het out the over charge of air, which is the cause of its floating on the side.

When the awl is withdrawn draw your thumb immediately over the wound to press out the air, and place the lish back into the water, when he will sail about oil right, and will soon recover from the wound. I have never found this 10 fail. The awl ought 10 be three-cornered like a bayonet, but rather flut. The awl must not touch the joint of the fin, but pass under it half an inch in for small fish, further for larger ones."

FISHING IN BUCKHORN LAKE.

EDITOR FOREST AND STREAM:—

TETERBORO, Canada, July 2d, 1875.

After a week's talk and hunting about for our fishing tackle, each as lines, hooks, spoons, rods, &c., logether willt camp equipage, grub, and two of English's bass wood double hunting cances, we started on the 19th of June hast from Peterboro to Chemong Lake by stage, distance six miles, and theore by water to our camp ground in Buckhorn Lake. Our party consisted of Mr. E., G. B. S., and C. A. P., together with M., who performed the double duty of golde and cook; so you see our crowd was small, but a more enthusiastic trio of fishermen than the first three above mentioned it would be difficult to find. Any one seeing the amount and variety of our fishing tackle would declare that we were bent upon taking every fish in Buckhorn Lake. We only unde a fair score, however, but indiced with much pleasure. The moment our cances were loaded and we had taken our sears the Irolling spoons were thrown over the side of the hoat. The water was probably rather smooth for good trolling, as we juadified mearty the whole length of Chemong Lake without a mibble, but soon after passing the parrows at Blair's the fish began to take the bait and by the time we had arrived at the camp ground three very good mascalong lead heen taken. Our country seat (for the time being) was selected by Mr. E., and proved a lovely camping place—a small island, obloing in shape, about 100 yards long by 80 yards wide, with wooded shores eloping gradually upo act, forming a grassy platuan, just solled for pliching our tents. The tookout lo all directions is quite picturesque. In front, or oi the south, hes the township of Eunlamore, with here and there a farm settlement; every tree seems in full foliage, while the top of an occasional plue is seen towering far above the more modest beech or nople, reminding one of the church splite in some of the click; to the north and west, in the back ground, nothing but a dense forest meets the eye; to the cast we harr an indian village tying on a peni EDITOR FOREST AND STREAM:

Entrop Forest and Stream:

Many years are, when your correspondent was in his teens, he lived in a raral district of Nonthern Roode Island. In those days there was caree a brook that a mess of the "speckled beauties" could not be taken from nearly any day in the season. There had come to my ears rumors of a large tront under the dam of a woolen mill not lar from where I lived, which had successfully resisted all the lares of the veteran Shermen for miles around. I expressed an opinion, in the presence of one of these vets, of my ability to capture the aloressid trout, which elicited from him a hearty laugh to think that a youth of my tender years should presume to measure lines with such growbeards as had been again and again vanquished; but keeping my own counsel, and thinking to myself he langhs best who laughs last, I set myself about contriving a plan for the capture of Mr. L. T.

Knowing that all previous endeavors bad been made with worms for bail, I naturally concluded it would be of no use to try them, and, as artificial flies were onknown to me at that time, I bethought me to try a meadow mole. One evening, at the close of an unuenally suttry day in June, when daylight was fast meging late darkness, having procured a young mote about half grown, I proceeded alone and cautiously to the dam. The domicil of his troutship was established under the apron, which was composed of large logs, and having been built nearly fitry years the water had washed out the stones and diff under part of it, so that there were three to lour feet of water in some places. I stealthly secured a good position behind a champ of alders and dropped my mote, with a stout hook through the slack of his back, into the pool; and no sooner had be commenced swimming than I heard a rush and fell a tag on my line that nearly nyset me. With limbs shaking with fear that I should lose him, I made for the foot of the pool, where the vater was shallow, knowing that if I allowed the trout to get under the apron my chance of getting him was rather

A. A. M.

LASTEIN TOWNSHIP, Canada, July 7th, 1875.

Entror Forest and Stream:—
The scason opens late this year, and there has been had few trout caught here as yet. The best catches that we have noticed were made by Messes, Geo Alien, A. B. Parholes, and a couple of other members of the Waterloo Pishing Clok, in the Bromjoun Lakes during the last week of May. They killed in two days some 115 "luage," on lake trout, from one to four pounds in weight. There have been a few good catches of speckled trout in Lake Nick and in Coon's Pond made by members of the same clob. During Messes, Allen and Parlmies's stay at Lake Brompton a Frenchman arrived at the take with a large quantity of gill nets to take "luage" with, claiming to have a liceuse from the Provincial Government, which coets him \$5 and allows him to see his nets in any waters in the province. Brook firthing has been fair, but the trout gry small.

THE SPORTSMAN'S PLEASURE

Editor Forest and Stheam:—
The sportsman's pleasure may be sald to consist of two kinds—first, preputation and adicipation; second, remint-cences of sport which has past.

has past.

I think the angler has more means of enjoyment during the Winter than the shooter; for besides his remembrance of numerous victories over the finny tribe, he has active employment in making new files and rods. In examining his fly-book he has brought virility before his mind scenes in which different files played a prominent part. He remembers how he got a rise to that white miller, and how this taitered palmer was taken by a minister front after he had tried nearly att his others.

palmer was taken by a moustar front after he had tried hearly att his others.

The first shooting in the Spring is for wild fowl, geese and snipy. This ends in our State on the 15th of May; then for a time the gan is put adds. But soon comes woodcark shooting, and at tas), best of all, comes shooting gall and primated groups and Full wild fowl. When the easons have rolled round again and Winter comes, his imagination is at rork, and he remembers how many quall he kitted in the opining day, and how many docks he killed at Barmgot Inlet, if an Eastern man, or at Prockaway Lake, if he belongs in the West. And so it gors, eeason after season and year after year, and so it will continuounli there are no sportsmen left alive, and that will be when there is no tonger a game hird or fish left in the country.

All sportsmen should until in demanding of the Legistainres of their States good and efficient laws for the printertion of game, and they should take it upon themselves to see that the laws are strictly rarried out, and that offenders are severely punished for any infringement. The laws should be made by mer, who understand the babits of the birds and fish which the law is intended to protect, and if this is done we shall have laws which are not the langhing slock of sportsmen, because they do not afford protection at the right time. If it should happen that the law dil not proceet game at the senson when they most need it, viz: at the breeding and spanning senson, and until the young are able to care for themselves, then all sportsmen's clubs should try and have it amended, and no true sportsman will shoot at such times even if he can do so legally.

United N. July 1.

Home, N. Y., July 1st, 1875.

Home, N. Y., July 1st, 1875.

Hower Forest and Stieral:—

In your issue of 24th of June we nolle an extract from Dr. Foreier's "exceptenant" letter in reterence to his make of fly rids. Our modesty would naturally prevent us from appearing in print, but the Doctor's letter as printed being in the nature of an advertisement, and containing statements which, if not questioned, might have a tendency to mislend those who "case hie fly," we centure a few words in reply. The Doctor doubtless makes a good bamboo red, but that it was acknowledged "by all the rod makers present" in Waterloan 10 be "the finest and hest they had ever seen" is quite a mislake. There are a number of rod manufacturers in different sections of the country that make, (if not better,) equally as fine and good rods as his, which fact can be easily domain strated by any test the Doctor may choose to name. He says, "For four years my this) rods have taken first prize—al Roches er, Batania, Oswego, and Waterlown." What his rods dol at Rochester we are not aware, but we have lately received from Mr. Wood, of Syraensy, a rod for repairs which he (Wood) says took the first prize at Bataria. That is an ash rod. It is well known that at Oswego Mr. Wood, using the Doctor's make of bamboo rod, did not east the longest dislance, lone ty some process of figures known only to the committee, was declared winner of the first prize, he easting sixty one feet In fanct, bull allowed eixty-eight feet by the committee. At Waterlourn Mr. Wood owed a light rod for style, (as he termed It,) and a 12 foot rod for dislance, casting seventy-five feet, one foot further than the winner of the second prize, who need an ordinary ash rod, and some mine inches shorter in length, and who might have claimed the difference in length of rod, and heen entitled to first prize, as some done by Mr. Wood at Oswego. The Doctor should give some better evidence of the superiority of his rods over all others than that named in his letter, or those "who were pr

Nachting and Boating.

The Seawanhara Yacht Cleb Regatta.—We regret that a report of this interesting event reached us too late for our last issue, and we can now only summarize the result. The day was scarcely a success as far as wind was concerned, but the list of entries and general enthusiasm must have been very gratifying to the committee and the officers of the club generally, who have succeeded within a space of a very few years in bringing their organization into the very front rank of yachting clubs. Sevenleen yachts competed, the liller winning in the schooner cluss, the almost juvincible Vision in the first class sloops, and the Christine in the second class. The result as regards the open boats is not decided as we write.

Delawane River Regatta.—No less than seventy

the Christine in the second class. The result as regards the open boats is not decided as we write.

Delaware River Regatta.—No less than seventy yachts assembled at Gloucester on the 8th instant, comprising nine distinct classes, to compute in the regarta. The following is a list of the prizes and build of yachts that were entered: First class, fifteen feet square stern yachts—first prize, \$10 gold piece; second prize, \$5 gold piece. Second class, fifteen feet square stern yachts—first prize, \$10 gold piece; second prize, \$5 gold piece. Third class, tuck ups—prizes same as former. First class, double end yachts—Smoky Hollow fleet, first prize, champion flug; second prize, large silver goblet. Second class, double end yachts—Prizes same as first class. Gilling skiffs, first class, measuring from to twenty-one feet in length, for which suitable prizes were offered. Second class comprised skiffs measuring from fifteen to twenty-eight feet, and comprising the Delaware River Yacht Club, first prize, a large fleht glass; second prize, an claborate water gooder. The fourth class was composed of sloop rigged yachts, for which a large water cooler was offered.

The course was from Gloncester pier to Chester island booy and return. The winning yachts of each class as follows: First class, fifteen feet yachts, first boat, willing Kleintz; second, William H. Clymer; third, A. T. Eggleston. Second class, first boat, hila May; second hout, Ulus Abel. Third class, linek ups, R thinson first; Millir Keyser

second. This yacht had the race won, but was compelled to go phond at the budy, and the time lost could not be made up. First class double end yachts, first boot, Jola Brugan; second, Floreme. Second ribss double end, Jos. Hagen first, Little Charlie second. Skill's measuring from eighteen to twenty-one feet, Louise first, Myers second. From fifteen to eighteen feet, Wm. Eckenbrien Irst, Wm. Taylor second. The yocht II. O'Neil was the lirst hout in her class, followed by the Soule, a good second. Of the Delaware River yachts, the Bionea was the first bout in, followed by the Adetpil and the fleet close astern. The race hetween the sloop yochts was humbourdy won by the Stella and Eliza. The judges were Charles Abel, Amos Bazdey, and G. W. Carley.

—The rogath in Buston Harbor on the 5th instant was a very exciting offair. We are indebted to a valued correspondent for a full report, but our space will only permit as to record the fact that the Caming won the first prize for sloops in her class, and the Fearless the schooner prize. In the second class the Clytic won the prize for centrebourd shoops, the Garl that for keel sloops, and the Vanitus the lirst schooner prize. The Volante won the thind class prize for keel sloops, and the Wamberer the prize for centreboard sloops.

QUINCY REGATTA.—The Quincy Yacht Club held an interesting regatta on the 5th Instant, in which seventeen yachts participated. The course, which was triongular, was about eight miles long and entirely within the limits of Quincy Bay. The following is a summary:—

The course for the first class will be from Star Island ten niles to stake boats, which will be not country and prize.

The course for the first class will be from Star Island ten niles to stake boats, which will be only half the course for the second prize.

The course for the first class will be from Star Island ten niles to stake boats, a lirst and second prize.

Second Class—For contreboards and keel sloops, and schooners, measuring twenty-three feet and best han forly feet. For centreboard sloops, a first and second prize.

For keel sloop-, a lirst and second prize. For schooners, a lirst and second prize.

The course for the first class will be from Star Island ten niles to slakeboat, about south southwest; then ten niles due east to slakeboat, then ten miles to judges' hant, leaving all stake boats on the port. The course for the second class will be the same as first class, except to location of stake boats, which will be only half the distance each way. All entries are tree, and may be unate up to eight o'clack on the evening preceding the race at "The Oceanic," art to D. R. Beckford, 20 India street, Boston until Iwelve M., July 22d.

On the second day a grant sweenstakes for a mammoth

On the second day a gramit sweepstakes for a mammoth punch bowl, valued at \$300, will be sailed; ten at more to start; tirst in to win.

BLEACHING YACHTS SAILS -A friend forwards us receipt for whitening yachts sails, which he thinks prefer

able to itest published by our issue of last week, and which he says, was used on the Idler's sails with great success. Our correspondent, however, who is a well known and successful yachtsmun, says that he his experience a thorough bleaching on a sand beach with salt water, finishing with settled time water, is better that all compositions. The Fall River Bleaching Company will take sails and bleach them satisfuelorily, or no charge. The following is the recipe mentioned. Five nounds weshing soils, five pounds the chloride of lime, and one ounce bluing. Dissolve the soda in ten gallons but water, and the lime in ten gallons cold water. Each must be thoroughly dissolved. Put the two together when ready to put on the sail. Mix the bluing in after the soda and lime are mixed, and stir well together.

The Intergolledate Regatta.—We can give but an

together when remly to put on the sail. Mix the bluing in after the soda and lime are mixed, and stir well together.

The Intergollenate Regatta.—We can give but an imperfect report of this event in our present issue, as our paper goes to press before the great event—the University race—is decided. A full account from our special correspondent will appear in our next.

The rucing on Thesday was confined to the single scull and Freshmen races. For the first event Weld, of Harvard, pulled over the course alone, his opponent, Kennedy, of Yale not appearing at the score, through, it is suid, some misunderstanding us to the time of the start. For the Freshmen race four craws, representing Princeton, Harvard, Brown and Cornell started. The race was won by Cornell by a boat's length; time, 17m. 32\frac{1}{2}s. The winning crew is comprised of the following earsmen:—

Bow, Lyndo Palmer, Plattsburg, age 19, height \(\frac{5}{2}\) feet 6 inches, weight 132; No. 2, James Leeworthy Camp, Dixon III., age 19, height 5 feet 10 luches, weight 150; No. 3, Vernon De Loss Grave, Richmond, Ind., age 19, height 5 feet 10 inches, weight 166\frac{1}{2}s tooke, John Lewis, Ithaca, age 19, height \(\frac{5}{2}\) feet 16 inches, weight 166\frac{1}{2}s troke, John Lewis, Ithaca, age 19, height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 155. Averages—Age, 19 1-6; height \(\frac{5}{2}\) feet \(\frac{9}{2}\) inches, weight 150 inches as to the colors of the various crews competlag in the great intercollegiate regatin. We give

Affair to the four oared shell race, but at the last moment the Howard crew declined to row, leavely following confestants:—

Four clubs had enfered for the four-oared shell race, but at the last moment the Howard crew declined to row, leaving the following contestants:—

Pelican club entered shell Alice; J. H. Bayhi, how; L. Kiern, No. 2; —, No. 3; John Connolly, stroke.

Hope club entered shell Line; Joseph Lusk, how, 120 pounds; M. Powers, No. 2, 143 pounds; M. Carey, Nu. 1, 119 pounds; John McNulty, stroke, 147 pounds; Louis Palms, coxswain, 50 pounds.

Orleans club entered shell Sam Royd; P. McGrath, tow, 146 pounds: C. B. Penrose, No. 2, 154 pounds; P. McKeon, No. 3, 156 pounds; James McKeon, stroke, 179 pounds; Willie McCuffrey, coxswain, 119 pounds.

Course, one mile and a half and return. The steady stroke of the Orleans told throughout, and brought them hame winners in 20m. 1s., beating the Hope crew 10s., and the Pelicans 75s. The Pellcan crew rowed without a coxswaia, a mistake, probably, in a river like the Mississippi. The pair-pared gig race, half mile and return, concluded the day's sport. There were two entries, the Camelia and Magnolia, both of the Orleans club. The last named wou, beating the Camelia three-quarters of a boat's length.

The judges were:—For Pelican club, Ferdinand Claiborne; Hope club, Wm. Clark; Orleans club, H. D. Wood.

Kalional Haslimes.

The Syracuse crickel club defeated that of Utica in a good game last week at the latter place; score, 58 to 27. Stevenson and W. Cowie bowled for Syracuse, and T. O. Spencer for Utica. A return match will be played at Syracuse shortly.

—The second elevens of the Young America and Germantown cricket clubs played a match on the latter's grounds last Saturday, resulting in a victory for the Germantown club.

There are some veteran cricketers in the Clarendon Colony of Prince Edward counly, recently established under the anspices of the Southside Virginia Immigration Society, of which Dr. Stanley James is one of the leading spirits. On a recent occasion the good old English game was played by Messrs. Powys, Homer, Allan, Stanley-James, Stewart, Siddons, Tom Butcher and Panton Homer. Mr. Powys, who is pronounced by Lilywhite the champion howler of the world, proved himself worthy of h.s. old republishing carned at Cambridge and at Lord's. Messrs. Homer, Hatcher, Stanley-James and Siddons also showed some excellent play. There was some talk among the cricketers of a challenge from a Prince Edward eleven to the Richmond eleven for a match.

BASE BALL—THE PROFESSIONAL ARISNA.

BASE BALL-THE PROFESSIONAL ARENA.

—In April last thirteen clubs entered the list in the race for the professional whip pennaut. In May the Contemnial club, of Philadelphia, withdrew. In June the Western

elub, of Kenkuk, left the track, and now in July the distanced Washingtons give up the contest and retire from the arena. This last withdrawal makes quite an important change in the positions of the recanicing contestants, inasmuch as though Boston is still left with the winning lead, the Athletics are obliged to give idage to the Hartfords and return to third position, while the Matuals step in front of the Philadelphias, the St. Louis club now being fourth, with a promise of soon reaching third place. The record up to July 13th is as follows:—

CLPB.	Boston, Athletic St. Louis, Philadelphia Matail. New Harce, Red Stocking Attautic.
Boston	5 5 2 3 6 8 2 1 4 31

Croquet.—The following challenge from New York to Brooklyn will no doubt be promptly accepted:—

To the Croquet Phygers of Brooklyn:—The undersigned world like to make up a match game of croquet with any tlece young ladies or gentlemen, between fifteen and twenty years of age, of Brooklyn, the match to take place at Prispect Park before August 1st. The terms of match, time, rules, etc., to be arranged between the captains of the contesting teams.

Fred C. Morehouse, Harry L. Termune, WM. H. Zugler, (Captain.)

Address P. O. Box 1071, New York city.

—The Scotch Regiment—the Seventy ninth, N. G. S. N. Y.—celebrated the ninety ninth anniversary of American hodependence by taking part in the military parade and review in this city, and a pienic and exhibition of Scottish games in Elm Purk. The programme included nineteen games, besides a National Guard shooting match, open to men of any regiment appearing in uniform. The latter, which was conducted under the direction of Capt. Joseph Ross, of Company D, excited a great deal of interest. At the close, the prizes, which were eight in number, of the value of \$15 downwards, were found to have been won as follows::—

First—Capt. Juseph Ross, Co. D, 79th; second—Lient. D. Vannett, Co. D, 79th; third and fourth—a tie hetween W. F. Edmundstonr, Co. A 79th, and M. Cockrane, Co. F, 71st; fiftle—Capt. Julia Munro, Co. G, 79th; sixth—Mr. Grieve, 22d; seventh—Thoms Duke, Co. E, 79th; eighth—Ord, Sergt. A. C. Molloy, 79th. The distance was eighty wards.

While the games were in preparess there could yet leave.

yards.

While the games were in progress there could not have been less than five the as and persons on the ground. Capt. G. T. Addison, of Co. A, bore almost the entire responsibility of directing the games. The following was the prize

Putting the Light Stone, (14 lbs.)—1st, W. Robertson, 38

feet 9 in.

Short Race—1s1, Colin S. Carmiellael; 2d, C. McLetchie.
Running Jamp—1s1, W. Robertson, 17 feet 9 in.

Egg Race—1st, C. S. Chrmiellael
Highland Pling—1st, James Kennedy.
Standing High Leap—1st, F. Robertson, 4 feel 4 in.
Walking Mitch (One mile, open only to the National
Guard.)—1st, W. M. Forrest.

Hitch and Kick—1st, W. Robertson, 8 feet 6 in.
Sack Race—1st, W. Robertson,
Vaulting with Pole—1st, W. Robbnson, 9 feel 5 in.
Broadsword Dance—1st, L. D. Robertson.
Throwing the Light Havener—1st, W. Robertson, 97 feet 8 inches.

8 inches.

Three legged Race—1st, F. Bobertson and W. Robertson.

Mile Race (Open to National Guard.)—1st, Geo. Tolmie.

Bunning High Leap—1st, W. Robertson, 5 feel 3 in.

Harille Race—1st, W. Robertson.

It will be seen from the above that Mr. William Robertson was the athletic hero of the day. In most cases be distanced the other competitors with ease. Mr. Charles McLetchic made his first appearance in the ring, and ac-

quitted himself in a style that argues well for ids future as an athlete. The dancing competitions were among the best of the day. While the games were in progress the covered dancing platform was crowded with the lovers of the 'mazy,' who, in spite of the heat, appeared to enjoy themselves hagely. The entire celebration was intensely. Scoteh, and what with the 'kilties' roaming about, and the lond interchange of greeting in the broadest 'Dorie,' Elm Park seemed to have been converted into a section of Scotland.

Answers To Correspondents.

S. K. A., Lancaster, Pa. - Lafith & Rand's powder to as good as any in the market. No. 71s the proper size grain for breech loading guns.

G., Boston - Can you give the exact address of the person who is ow manofacturing Colvin's canvas boals for sale? Ans. R. A. Scott,

D. P. B., Third avenue, New York.—Please Inform me where I can hay a raibift hound, well broken? I do not wait any fancy breed or fancy price. Ans. Address Peter Knox, Newton, N. J.

Subseminer, New York.—Please Inform me where I can purcha-pair of good heavy blankets suitable for camping out purposes. A Eston & Co. Sportsmen's Emporium, No. 102 Nassau street.

CABINET. Philadelphia.—Woold you have the kindness to let mis know if there is any place near this city where dogs can be hoarded? Ans. We do not know of any person taking dogs to hoard near Philadelphia. Perhaps some of our readers can inform us.

Perhaps some of our readers can inform us.

II. J. K., Philadelphus.—Can you tell me a good house to hoard at near the head of Barnegat Buy, and the best season for shooting there?
Ans. Go to Kinsey's Ashtey thouse. Address J. W. Kinsey, Waretown, Ocean county, N. J., as to the best time to be there.

M. R. H., Sanbury, Pa.—1st. In the late rifle match between the Irish and Americans did they use telescopic eights? 2d What constitutes choke boring? Ans. Telescopic sights are not allowed in ride matches, Choke birling is a contraction of the barrels at a certain distance from the muzzle, whereby the charge is concentrated.

Many Land.—Please Inform me through your paper what make of rifle

Manyland.—Piease inform me through your paper what make of rife was used by Gen. Dakin? I see he is claimed by hoth Remington and Sharps, and would like to know what rife he did shoot. Ans. Gen Dakin used the Sharps rife in the International contest at Creedmoor, but we are assured that he is shooting with the Hemlugton sporting rifle in Iretaud.

Substrainer, Rochester.—Witt you please let me know in your next issue the relative merit of hard and soft gun harrels, and whether the fine guns made now have soft barrels; also whether the hooks and holt to a breech loading fine gun should be hard or soft? Ans. The barrels of all fine guns are moderately soft. The hooks and bolts should be hard

hard.

II. M. W., Braintree, Muss.—Will you laform me through your ps
like hest charge of powder and shot for duck shooting in the bay for
ten gauge 8; pound Scott breech loader? Ans. 4; drachins powder
1; ounces shot; yet if are drachins powder can be used without
nuch recoil it will be more effective. Use two wads on powder. 8

No. 3 or 4 to a good size. No. 3 or 4 is a good size.

No. 3 of 4 is a good size.

C. G. W., New York.—lst. Will you have the kindness to let me know if the Parker gua can be used as a breech and muzzle loader? 2d. Give me the name of the gentleman who represents Mr. Sanford, who is celling Lake Monroe in Florida? Ans. The Parker gna is not censtructed to be used as a breech and muzzle loader. 2d. We do not know the name of the person alluded to.

structed to be need as a breech and muzzle loader. 2d. We do not know the name of the person alinded to.

Subscriber, Springfield.—Will you be kind enough to telt me a cure for fleas? I have a pet dog that is atmost diead with them. I have washed and scrubbed the poor thing until it to afraid of me, but still the things silek. I see in your last number, page 341, it speaks of "Vermin in Doga." Does that bit my case? Ans. Allison's insect powder is effectinal, but common brown soap, or carbolic soap, (which is better,) will kill every flea it comes fairly in contact with: but after you have exterminated the fleas you must keep your dog where they do not abound.

W. J. C.—Which do you think is the hest revolver for inrect practice, (22 callbre) a Smith & Weesson or a Colt's? How do you make a target? What do you think of the United States Cartridge Co.'s cartridge? Some time ago! tried some of their No. 22, long, in a good revolver, and about two fit every five would not go noff. I bave a small dog which has a sore constantly running on the outside of his throat. Do you know what is the disease, and how to care it? Ans. 1st. Smith & Wesson's pixelols are considered best for larget practice. 2d. You can make good targets with heavy card boards, drawing circles and marking black builseye.

3d. Not good. 4tb. Wash the sore repeatedly with carbolic soap, and feed your dog little or no meat.

SARATOGA RIPLE CLUB,

July 5th our club had a contest for a club badge, Wimbledon larget,

SONJATOS, each competitor to have fitteen shots. An unpire was appointed (or chosen) who was Instructed to keep a careful record of the

seores and at the conclusion of the match to present the hadge to the gen
tieman making the highest score. Having hut one target we decided to

divide up and shoot in two squads of sovon each, there being about 11

contestants. The first squal commenced and fired their score without

interruption, the highest score being 60 out of a possible 73, and the sec
ond commenced; but after making four shots esch a rain storm set in,

necessitating an adjournment to the next day. At the appointed hour on

the 6th the second squad were on the ground, accompanied by the nin
pire, and after taking five sighting shots (which, necording to a standing

resolution of the club, each contestant is entitled to at each club shoot),

commonced and finished the score began the day previous, the highest

score being 62, and the impire (under no protest) presented the badge to

the gentleman making 63 of the second squad, with the remarks: "Mr.

—I present yoo his badge, you having made the highest score. Take

it; yoo have won it fairly and honestly," etc. Now, the gentleman

making 60 in the first squad claims the hadge, and calls upon the club to

sustain him in such claim, upon the following grounds: it is claimed

that the gentleman making the motion to adjourn the shoot to next day,

included in that motion as follows: "allowing then two sighting shots,"

and although this claim was not fully inderestood, as the fact of the pres
ident not remembering or staling if when he put the motion shows, yet

there is not a particle of doubt but that said claims was included in his

orietinal mollom. Stift, the gentleman who received the bidge claims that

be matter is entirely

The action taken in adjourning is to be decided by the motion as put by the president and voted upon by the club. If he put it incorrectly, the mover should have objected. If the motion as put and carried contained no in-tination as to the number of sighting shots, and the rules of the club dlowed five, that number was properly al-lowed. Above all, the action of the umplre was final. The objection is a very tritling one, and displays a spirit which should be discouraged in all clubs.

WILLIAM C, HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COM-ING WEEK

THURSDAY, July 15th.—Racing, Monmouth Park, N. J. Trotting, Lynn, Mass.; Newark, N. J.; Toledo, Ohto; Newport, Ky. Intercollegiate Athletic Meeting, Saratoga, N. Y. Pigeon Shooting Tournament, Syracose, N. Y. Base Ball, Philadelphia ve, Live Oak, at Lynn, Mass.; Unlow of Newark va, Keystone, at Irvington, N. Y. PRIDAY, July 16th.—Trotting, Newark, N. J.; Toledo, Ohio; Conneautville, Pa. Pigeon Shooting Tournament, Syracuse, N. Y. Base Ball, St. Louis vs. Atlantic, at Union Grounds.

Bai, S. Louis vs. Atlance, at Union Grounds.

SATURDAY, July 17th.--Racing, Monmouth Park, N. J. Trotting, Great Barrington, Vt. Competition for Luther Badge, Creedmoor, L. I. Base Bail, Philadelphia vs. Hartford, at Hartford; St. Louis vs. Minthal, at Brooklyn; Starr vs. T. B. F. U. S. of Bridgeport, at Bridgeport; Concord vs. Nameless, at Prospect Park.

MONDAT, July 19th. - Regatta, St. John's, Rowing Club, New Or-ana. Base Ball, St. Louis vs. Boston, at Boston. TUBSDAT, July 20th. - Trotting, Eric, Pa.; Chicago, Ill.; Mystic Park, loston. Regatta, Flusbing Bay

WEDNESDAY, July 21st. - Trotting, Eric, Pa.; Chicago, 111.; Myatic Park, Boston. Base Ball, St. Louis vs. Boston, at Boston.

CAPTAIN BOGARDUS IN ENGLAND.-The riflemen who are representing this country on the other side of the water are not having all the victories to themselves. The shot gun in American hands is also witning fame for us, and, we trust, shekels for the shooter. Captain Bogardus, who went to Europe on the same steamer with the American team, has shot and won his first match in England. On the 7th he competed at Hendow with George Rimmel, the English champion, in a match at fifty birds each, from five traps, thirty yards rise, killing 36 birds to his opponent's There was a large attendance, and much enthusiasm shown. Bogardus has now challenged all England, and in August will shoot a match with Edward Thornton, of Yorkshire, for £500 aside. Conditions—100 hirds each, thirty yards rise, and Hurlingham rules to govern. The Captain's movements will be looked for with the greatest

-The Pennsylvania Railroad Company have issued two pamphlets of value to the sportsman and tourist; one, cutitled "Summer Excursion Routes," being a perfect guide hook of routes and fares to all the more prominent points of interest in the Middle and Eastern States; and the other, "Life at Cape May," is an illustrated description of rhat, charming watering place, with list of hotels, statistics, means of access, etc., prepared in the most thorough man-

OUR GAME LAWS-DEFECTS AND VIO-LATIONS.

WE have an accumulation of correspondence relative to our existing game laws, some of them suggesting wholesome emendations or additions, and others reporting shanneless violations and damage. The letters indicate a degree of solicitude on the part of the writers most gratifying to the advocates of game protection to observe. They show that people are everywhere on the alert; that they appreciate the accessity of restrictive regulations to prevent destruction and extermination; and are ready to co-operate in any feasible effort and means to the desired end. We wish their efforts found better reward. Americans resident abroad watch our movements here with thoughtful interest, and by comparing our laws with those of England and the Continent, where the game laws are much more perfect and in thorough operation, can readily detect defects here, and offer suggestions that are valuable. We append an extract of a letter from a gentleman now sojourning in Bavaria, long noted for its noble forests, its game, and its ancient line of poachers:-

I have been for a long time a constant reader of your paper. I am glad to see that the people of America are at list thoroughly stirred up in regard to the game laws. The International Game Association will, it seems to me, be the hest that can be formed for the protection of game in America, and is it will be formed of members from all parts of the country, each member will have a certain amount of pride in looking after the section of the country in which he lives. Since I came here I have been struck by the way in which the game is preserved. No one would think of shooting it out of season, or having it for sule. There is always plenty of shooting it out of season, or having it for sule. There is always plenty of shooting it out of season that they have always plenty of deer and reh is that they shoot no does. I believe if a man were to come into a village here after a day shum and had a reh doo on his shoulder he would be hnoted out by the small boys. I think if this law could be enforced by America that the old places would soon be restocked.

My guide last Summer took me to a place in the Adironiacks where, he said, ten years ago he could see afteen or twenty deer every time, but we saw only two. I think that the guides themselves could te made to see the seuse of it, and prevent the people from shooting the doos, as the deer in the Adironiacks are their stock in trade, and, of course, their occupation is gone with the deer.

A correspondent of the Chicago Field writes from Witshington, D. C., that ou Thursday, Mny 20th, there were

ington, D. C., that ou Thursday, May 20th, there were four dozen woodcock exposed for sale in the market at that place, which is in corroboration of the statement made in our columns some time since by our correspondent "Duke," at that place, and also confirms the remarks on this subject made by our editor in chief in his paper read before the National Sportsmen's Convention at the recent convention in Cleveland.

A New Jersey correspondent calls our attention to the fact that one Ed. Van Pelt, who makes his headquarters finds his market at Elizabethport, is in the habit of and index his market at Enzabethpott, is in the habit of netting all the small streams and creeks of Staten Island, from Mariner's Harbor down to West Quarter, and on the Jersey side, Ross Creek, Woodbridge Creek, Moss Creek and Pile Creek, using double nets and sweeping out all the little perelt, bass and other small fish. Cannot Mr. Shotwell of the New Lerent Fish (Cannot had) well of the New Jersey Fish Commission look out for Mr. Van Pelt and put a stop to his depredations? Here is a letter from a watchful correspondent who is

looking after the interests of the song birds:-

NEW YORK, June 24th, 1873

NEW YORK, June 24th, 1873

Entror Forest and Stream:—
I beg leave to inform you, and through the columns of your valuable journal the members of the Richfield Sporting Club, that a person is walking the woods from Boll's Ferry to Fort Lee, shooting all species of birds with a rific cane, and robbing nests of their eggs. He has been seen by two persons in the act of shooting, (whose names and address you will find at foot.) and being questioned for so doing, answered that he was a naturalist, which I don't think he is, otherwise he would not conceal his gun. Yours respectfully.

Ovac.

It is pretty difficult to prevent this shooting out of senson as it is almost imposible to prove culpobility, they have

son, as it is almost imposible to prove culpability, the law permitting shooting for scientific purposes. If the man can be proved dereliet, prosecution and punishment might be secured.

A subscriber sends the following lettter clipped from the Cumberland Beacon. This is a subject which we decline to meddle with, and pass without comment. The writer evidently writes from prejudice:-

evidently writes from prejudice:—

RAYEN ROCK, N. J., June 25th, 1875.

MR. EDITOR:—Since the shad fishing season closed, the Fiel. Commissioners of New Jersey have established a shad latching establishment at Point Pleasant. They beave here catching about fifty shad per day, and have exoglit nearly three hundred sitogether since they commenced operations, and out of that number have not taken as dozen ripe shad. The shad are divided among the fishermen, sud taken away and sold or other whee disposed of. Instead of batchlag a few shad they are destroying millions of them by taking them nut of the water, where, if let go, they would seek their natural spawning grounds. Of all the contrivinces for the destruction of shad, this heats anything 1 ever witnessed, even including the fish basket or small mesh net nuisance, which all sensible shad 8 shermen dennince. The money which they are using to carry on this noisance was supropriated to hance bad and not to destroy them, and the people should protest against these proceedings. But, as appearances are everything, and a few thousand dollars can be thus foul-ishly squandered, some one will be benefited by this putting on appearances, for that is in a manner, all it amounts to.

New York, July let, 1875.

NEW YORK, July 1st, 1875,

New York, July 1st, 1875.

Mr. Lech, who writes this letter, is a German. His experience us a fur dealer, shipper, and manufacturer for over thirty years renders his sayings upon far animals an authority. At the instance of the County of Peterborough Fish and Game Protective Society he was induced to write to the Peterharough Review his views upon the "close senson" and what, in his judgment, caused the falling off of many species of the fur-bearing sulmals which were at one time so numerous. The following letter is the result. Mr. Lech resides in Peterbarough, Caunda Wost, and can be addressed by any person desiring information upon any especial point.

PROTECTION TO FURLERAKING ANIMALS.

PROTECTION TO FULLBEARING ANIMALS.

TO THE ENTRING THE PETERBRIGGER REVIEW:

Having read the report of the Grain Protection Society in year paper of June ine 4th, I notice some interest felt to pinteet far tearing unimals. By the proceedings I see mention is made of fixing the close season at October the 15th instead of November 1st, I cannot see how conclusions can be drawn that this will protect and increase number. I do not know of what yaluable information the Game Protection Society is

possessed, or whether the information singht coald be gut by treers, as their interests are not always in harmony with the laws of ture, or else they would give up Spring hunting and allow intuits and proper time for breeding. I have repeatedly addressed tetters, and springer than for breeding. I have repeatedly addressed tetters, and springered in the Torouto Globe, in halps they might attract the attend of our legislators, and silmulate them to action. I have spoken in 'J. Carnege and Mr. 'T. Fairbairn, members of Parliament at the time my letters to the Globe, and challenged the public to contradict my deen the subject, and fully believe if such laws as I angested were pass and not only passed but rigorously enforced, the increase in many would soon be apparent. As the game haws before limitine in laws he altered several times—not that I could see any henceft either way matters very little if the lith of October of the let of November Is down, as no far is in perfection by that time. As a general rule it rapping ground, as they call it, but were to the internal in market in appearance on the trapping ground, for the inerclass slaughter hegh trapping ground, as they call it, but were to the animals that make the appearance on the trapping ground, for the inerclass slaughter hegh They argue that if they do not kill them somehody rise will, than such process great value to the country goes to loss is convincing, as pelts taken, for instance of mink in September, are worth diffy convicting that the portion in all other poles; this is the damage done in Fall limiting. It greatest mischelle is done in the Spring, and if carried on much long will sweep away a most valuable resource of the country. The law lowing to hunt to May list is as cruci, as rulhous, and allowing after the story of the standing of mismatten, ofter, beaver, fisher, and mustrat are swept away hefore if the one had been the Spring, and if carried on much long marten, ofter, beaver, fisher, and mustrat are swept away hefore if not the country. Th Maribuno, N. J., July, 1875.

offent the case before May, and their hand ends when they are driven into by the minequitoes and black this, and \$30 worth by next Fall are destroyed for fifty cents.

Bettoyed for fifty cents.

Marilanio, N. J., July, 1875.

Living in an adjoining county, and in years gone by having enjoyed some of the rarest sport within the ample borders of these maturally time game countles that I have ever had anywhere, it is but praper I should take a lively interest in the success of an organization whose object is so essential and worthy. It will certainly receive my winemest sympathy and aupport. My carnest desire is, (and I no doubt but after the semi-ments of other sportsmen of our county.) that the Central Assaciation take us under the shadow of their protecting wings, if agreeable ro them to do so, as we do not seem to be able to do anything for ourselves in the way of organized protection and propagation of game. I think the West Jersey Game Protective Society comprises four or two countles in the tway of organized protection and propagation of game. I think the West Jersey Game Protective Society comprises four or two countles in the tway of organized protection and propagation of game. I think the West Jersey Game Protective Society comprises four or two countles in the section of the State. I know from personal experiences the past season that they are doing a good work, and richly deserve the meed of pralse which they receive. With Manimouth and Ocean added to Mid diesex and Somerset, a very extended and valuable tract of game country would be benefited. I know of very many excellent sportsmen of your city and neighboring towns and cities with whom I have often enjoyed glorious sport in days long since gone by, extending over a prined of the past twenty years, who do not now often come near us; and why is this? It is easily understood. We do not protect our game, and it is at the mercy of all, in season and out of season, added with every device, tawful and onlawful, that can destroy it, and two himself and wi

WHOLESALE DESTRUCTION OF FISH.

wholesale destriction of fish.

Wholesale destriction of fish.

Editor Forest and Stream of pine water, an afficient of Caying Lake. It descends 400 feet in less than a mile, the lower fall—within the village—heling about 124 feet. From a noble pool below this fall it runs deep and strong to the lake, less than balf a mile away. From the hay, forming the month, up to the great pool used to be a regular "poor man's pork barrel." But among the manufactures which have clustered about the tails we are bleesed with a paper mill, periodically discharging its refuse into the creek. For some years, now, the pork barrel has been quite empty. Sometimes, if the deluge of death was withheld during a rise in the water, the fish, especially is the Spring spawalog, would venture up. But wor to them if they remained. An instance occurred last hight and this morning. The stream had risen from the recent rains, and last hight was full of suckers, with a sprinkling of hass and boilheads. This morning the refuse was discharged. In an hour the bottom of the creek, where the current was not swift enough to take thera off, was their lay white with the dead. I think it would be within bounds to say that more than two tons of suckers were killed by this single discharge of refuse into the creek.

Now, of course, an "enthused" fly fisher with his eight onnce apilt bainboo and his one-ounce rubber reel would turn up his nose in a June sucker, and wouldn't care if they were all killed. But such neverate one "fresh ron" from the cold, clear depths of Cayuga Lake. Now, the olghteenth section of the game act of 1971 probibits all such proceedings as this nuder a penalty of \$50 for each offense, in abilition to hability for all damage. Then, in the next paragraph, it is all qualified invay. Are we never to have a Legislature with backbune enough to prevent such highly to whole communities, and such depuphlation of the waters of the State to serve the avarice and greed of a few manufacturers?

It belongs to you, Mr. Editor, and others of your

Our correspondent will be able to appreciate the distressing obstacles to the protection and preservation of our game and fish, by examining the following extract from a recent veto of our very sensible Governor, who evidently despuirs of securing good results from any farther legisla-

despuirs of securing good results from any farther legislation on the basis of present enlightenment and procedure—
"Assembly bills Nos. 186, 847, 888, 489, 607, amendling the act to amend and concollidate the several acts reliable to the preservation of moose, wild direc, birds, and fish; No. 312, relating to fishing in Tonawanda Coreek in the county of Wyouling; No. 743, relating to fishing in Tonawanda to fishing in the Nagara liver within the county of Krie. Although in general law was passed so hate as 1871 regoining the killing of game and the laking of fish, the whole subject is more in regenter contusion, owing to the immerious and ill-canolidated mets which invariance been on-acted. The net passed at the late session retaining the powers of boards of supervisors, confers upon these hourds the power of the state that where a body of water is situated in more than one county the Legislature of the State that where is however, confided in its operation such a case. The belief that the power is likely to be as well exercised by the boards of supervisors as by the Legislature of the State is

strengthened by the fact that four of these bills prescribe the rules for fishing in Onelda Lake each in a manner different from the other, as the lift three were all aloned the centre. they were an agree the genue henerman would have to inquire which as signed heat in order to ascertain by what rule his govern bis conduct."

The above is about us plain a statement of facts as could

he desired, to show why existing laws are ineffective, not only in this State but in others, and why supplementary emetiments, no mater how wholesome, must simply increase confusion, and thereby insure impunity to offenders. What is needed, and this the Governor fully appreciates, what is needed, and this the Governor thiny appreciates, is a total abrogation of the existing jumble of imperfect and imperative laws, a wiping aff of the statutory slate, and a commencement de none. To substitute an intelligent and practicable calle of laws that shall satisfy the necessities of the whole country, and secure their adoption by the several States, is the aim and purpose of the two powerful organizations known as the "National Sportsmeu's Association," and the "International Association for Protect ing Game and Fish." Both are seeking the same object in different ways. The first operates through State sportsmen's associations, clubs, and local organizations, and its membership is made up of delegates appointed to its annual conventions by the State Associationa, five from each State; and each State association in turn obtains its composition from delegates chosen by the local clubs great unfority of the members so chosen to the National conventions have no knowledge of natural history, save that acquired in the sportsman's field of practice, and have no attainments as professional scientists. They cannot therefore be regarded as qualified to undertake the construction of a code of game haws, such as we want, erected nuon a scientille hasis. A committee of seven competent men have, however, been selected from that body to determine species; &c., and upon this basis draft the code of game laws which it is foully hoped will fill the bill. Still nauc of these gentlemen are scientists, we believe, in the strict acceptation of the word, and even were they, their number is too small to thoroughly cover a country of such vast extent, varied elimate, and numerous species, as our The most we can hope from their investigations, is a valuable contribution to the general fund of information which is needed to enable us to reach the result desired. To supply what may be lucking in the aggregation was the purpose that called the International Association into being—inter-national, because the harmonious co-operacalled the International Association into tion of Canada, with her homogeneous elements, was in dispensable. The greater portion of the members of this body were selected for their scientific attainments as The greater portion of the members of this The committees to be obtained from their number will be resident representatives of every locality in the United States and Canadu, and sufficiently large to cover each geographical belt to be investigated, from the Atlantic to the Pacific. The best single naturalist could not do this in a lifetime.

The "International," is in no sense a sportsman's association; it has no relation whatever to any club or association; it comprises individual memberships only; its functions are as indicated above, and its operations are fluite. Its work may he said to cease where that of the "National Sportsmen's Association" really hegins. When the desired laws are created the International dissolves, but it will be the business of the National, with its central power, and through all its club ramifications to exert a moral and physical influence that shall be felt. The "International" is, in a word, purely an advisory body, laboring to enlist and use the most competent and potential agents to the desired end. It is in perfect harmony with every association that seeks the protection of game, and in conflict with none. It has no ambition except to enlist the best talent in the country, from every section, and employ it in such a way that all confusion of species and confusion of laws shall be swept off. It constitutes but one division of the Grand Army of Protection, of which the National Association is a potential part. It fully recognizes the valua-ble efforts that have been made, and are being made by that bady, and in its desire to assist, did offer at its May meeting, held at the Cooper Institute in New York, a resolution inviting a conference between its committees and those of the National Sportsmen's Association, appointed by the Convention at Cleveland. It is to be regretted that the executive committee of the body last named decided it to be "inexpedient" to accept the overture. By what method of reasoning they arrived at this conclusion it would seem dillicuit to determine. Certainly, it could hardly presume to treat cavalierly, or to deliberately reject the cooperation of the gentlemen who are at the heads of our scientific public institutions and the government expeditions, and who coastitute in large part the membership of the International Association for the Protection of It is charitable to assume that they misapprehended the functions, offices, and purposes of the organization. inference is sustained by the publication of the following paragraph in a paper of such established character and houorable dealing as the Turf, Field and Farm, from which we clip it:-

"A BLACK EYE.—The International Sportsmen's Association failed to get the life Infused into it at the National Sportsmen's meeting that its projector anticipated for it. But, on the contrary, got a terrible ldack eye. All it meets now is Col. Mucarty's "big hunt" brass land to play the funcial dirge while it is being interred."

This is in allusion to the cold shoulder given to the resolution referred to above. The writer evidently wrote in ignorance, jealousy, or rank prejudice. Woure fain to be lieve that our contempurary admitted it inadvertently. Regarded in the light of the facts as we have attempted to give them, it is seuseless and puerlle. It would have can be procured ready made, passed unheeded by us, had we not been urged to define of any desired style and size.

more particularly than we have done, the objects of the Association, and correct any possible misapprelication.
We hope they are fully understood now, and that there will be no suspicion of clash or competition between or ganizations whose objects are the same. The members of the International wish merely to contribute their quota to the general fund of wisdom which other men are for, so that whatever decision is reached, and whatever system of protection is adopted it may be perfect in its unity and bused upon truthful and scientific principles. believe that those who comprehend the true interests of the country are awaiting the results of their action with no small degree of interest.

THE AMERICAN TEAM AT WIMBLE-DON.

HERE unfortunately appears to be some hitch in the anticipated arrangements by which the American riflemen are to contend for the Eleho Shield at Wimbledon. Mr. Henry Parsons, Adjutant of the English eight, writing to Colonel Gildersleeve, says: "The council is not willing to admit another team to shoot with our three eights in the Eleho Shield match, but they propose a match, to take place on the 17th instant, for the Lloyd's Cup, between the Americans and an eight selected by the respective Captains from the three British teams. same time the council does not despuir of a match between the four eights, which perhaps may be managed for the Monday following the shooting at Wimbledon. In the meantime it hopes that the match proposed for the 17th instant may be agreeable to the Americans."

It is just probable, however, that the deed of gift by which Lord Elcho presented the trophy contains some clause which restricts the competition to eights selected from the English, Irish, and Scotch riflemen, and that the council of the National Rifle Association has not the power, if even the inclination, to admit further contestants. The Euglish papers appear to have criticised rather severely Mr. Parson's proposal for a match between our men and a mixed British cight, to which he replies that his original plan was for a match between the English, Scotch, and American eights, which was approved by the Captaius of the teams concerned, but afterwards vetoed council through the persuasions of ontside parties. Mr. Parsons is of the opinion that a mixed British team, armed with various kinds of rifles and unknown to each other, would have no chance against the Americans, and that when they have been thoroughly heaten every riflemen in

England will say, "After all it was no match."

We are not inclined to be so sanguine of victory over a team selected from among all the riflemen of Great Britain as the English are of defeat. In a team of six against six the case might be different, but we look upon our team as being by no means so strong as an eight as it is as a six.

There is a weak spot that would tell very much in the averages. Besides, we think that too much stress is laid upon the fact that, as the Irish have beaten both the English and Scotch, and the Americans them, ergo, the Americans can beat the world. Let us see how the case stands with regard to the Elcho Shield. During the twelve competitions covering the years 1862 to 1873, the match was won by the English nine times, twice by the Scotch, and once by the Irish. The best score was made by the English in 1871, being a total of 1,204 out of a possible 1,440 (under the old scoring); average, 3.34. In 1873 the Irish score was 1,195; nverage, 3.32. The improvement made in shooting of late years is shown in the fact that in 1862, the first year of competition the score was but 890 points. Again, in selecting a mixed British team the best shots only would probably be taken from each of the eights, and a team thus organized would possess elements of strength sufficient to overcome the disadvantages of unfamiliarity and mixed rifics. We do not mean to say that even against these odds our men would not win, but the victories should not make us over sanguine, or inclined to look too lightly upon the new adversaries our team are to contend with. A defeat after anticipations of certain victory is much more bitter to endure, while victory following more modest expectations is doubly sweet. Since the above was written, the correspondence which

has passed between Colonel Gildersleeve and the Loudon agent of the Associated Press seems to preclude the possi-bility of another team match, as the Colonel has definitely and officially announced the determination of the Americans not to shoot again, us a team, in Europe, although, he says, five or six of them would probably be glad, as individuals, to shoot at Wimbledon on Saturday next, if the Lloyds cup is offered for competition to all comers.

SPORT ON THE ERIE. -The woodcock shooting in Pike county, Pa., and adjoining region of Sussex county, N J., promises to be excellent this season. "Bub" Wells, Ed. Imick, J. H. Wells, and C. P. Mott, well known shots in Milford, have bagged a number already in the haunts about George Malvern, of Port Jervis, brought down seven out of nine shots in the Nearpass and Hornbeck Swamps, on the Jersey side of the river, on the 5th of July. The birds are good size and strong of wing.

-Mr. J. H. Rogers, of Ogdenshurgh, whose advertisement will be found in another column, has made arrangemeuts for the manufacture of skilfs and bunting and fishing boats, suitable for the Thonsaud Islands. These boats can be procured ready made, or will be constructed to order

TROUT POACHING ON LONG ISLAND .- It is with pleasure that we record the fact that at least one of the many trout poachers who infest Long Island has at last met with his deserts. The extent to which this stealing has been carried is almost incredibte. It has become uext to impossib is amost necessive. It has become next to impossible to preserve trout, and many of the best streams on the island have been netted until not a fish is left. The holdness of the poachers is also beyond belief, and as panishment by the ponchers is also beyond belief, and is panishment by the ordinary course of law seems out of the question, it remains for a few to be shot in order to convince the rest that there is some risk in the basiaess. We have heard of one man at Babylon who publicly bonsts of his ability to net the trout from any stream or pond in the vicinity, and who is said to bave stolen the trout from one gentleman's preserve, sold them to a neighbor, and within forty-seight preserve, sold them to a neighbor, and within forty-eight hours restolen them again. Of the receat affray at Patch; ogue a contemporary gives the following account:—

thours restolen them again. Of the receat affray at Patch; ogue a contemporary gives the following account:—

"The widow Dayton, it appears, lives at Canaan, a small hamlet near Patchogue, and has a trout point with a fine lot of trout, the value of which is ahout \$1.25 a pound, a temptation that poachers find it hard to resist. On Thursday night a quantity of these trout were stolen, and this induced Mrs. Dayton to have the point watched, und this induced Mrs. Dayton to have the point watched, night. During the night the watchers saw three men approaching, evidently with the parpose of further plunder. On moving ont so as to intercept them, two of the area dashed off into the bushes and escaped, but the third, finding himself likely to be trapped, drew a formidable kaife and attacked one of the watchuea named Dodge, a resident of Canaan. The lutter, finding himself hard pushed by the desperado, struck at him with the ax with which he was armed, hitting him over the shoulder and cutting a fearful gash under the shoulder blade, from the effects of which it is doubtful whether recovery is possible. This man proved to be another resident of Canaau, named Wm McGregor, Jr., a young man of bad character, and son of Bill McGregor, who was arrested and lodged in the Sulfolk county jail, at Riverhead, some years ago on suspicion of baving murdered a German peddler, whose bones—or at least a skeleton supposed to be his—were found in the woods north of Patchogne, but who was discharged for lack of evidence. One of the two men who run away, named Jededish Dayton, resided in the neighboritood, and was arrested, taken before Justice Smith, at Patchogue, and on his own confessiou was sent to the county jail for thirty days. A man usuned Fields, of Wading River, was arrested as the third man, but was discharged for want of proof, although he is believed to have been the principal in the thefts, while his accomplices supplied the local knowledge which enabled theast oscerte their hooty. Many of the numerous trout pouds in Suffo

LEIPZIG, Germany, June 18th, 1875.

EDITOR FOREST AND STREAM :-

Editor Forest and Stream:—

Allow me as a passionate hunter, (I cannot say "sportsman," as I do not know anything about fishing like most of my compatriots,) to ask you why in all the American sporting papers nobody talks any more of phi-fire (Lefauchenz) game, and all prefer central fire. With us It is the contrary; most of my brothers in Dianam wear Lafauchenz phi-fire game and pin-fire sporting fifies. I possess myself two shot game, and double-barreled rifte for hunting red deer, wild hoar, and chamole, and a game with two barrels, one for shot and the other for butlet, which I use the stalking roebucks. All four games are Lafoucheux pin-fire, and I am so satisfied that I never wish to get any better ones should I live fifty years more. Yours, very truly,

Fig. vox (vernos).

[The above note is from the very intelligent editor of Der Waitmann, a sportsman's paper published at Leipzig,

Der Wantmann, a sportsman's paper published at Leipzig, with which we have had the pleasure to exchange for eightwith which we have had the pleasure to exchange to the een months. The writer's letter carries with it to us a handsome compliment for Forest and Stream, and the handsome compliment for Forest and salute to hunters—"Waid-German word of welcome and salute to hunters—"Waid-mannsheil." This we cordially reciprocate, with the additional sentiment, in plain English, "Success to your fish-ing!" The question included as above has been often asked of us, and we can offer no better reason for the apparent preference of the central fire cartridge and action than that it is the fashion. The pin fire gun certainly bas advantages which the central fire has not, oac of which is that the pin always indicates when the gun coutains a shell. The respective merits of the two systems are so evenly balanced that "Gloan," in his work on "Breech Loaders," can give neither a preference in recommendation. - En.]

Voice from the West .- Our correspondent "Freil. writing from Montello, Michigan, states that the West is cuthusiastic over the victory of the American riflemen in Ireland, and suggests that a grand reception should be given them on their return. We can assure "Fred" and our Western friends generally that this matter has already been thereughly continued, and arranged. The team will been thoroughly ventilated and arranged. The team will be banqueted, and each member receive a testimonial. Mr. A. T. Stewart has given \$500 toward the fund for this purpose. Colonel Porter, of the Twenty-second Regiment, has telegraphed Colonel Gildersleeve that his regiment will act as an escort on their arrival home.

-The Palace Hotel, now nearing completion, in Sau Francisco, is the largest hotel structure in the world. It covers 96,250 square feet of ground, and is seven stories bigli; 24,661,000 bricks were used in its walts, 3,000 tons of cest and wrought iron, and 4,561,524 feet of lumber and timber. It contains 1,060 windows, 337 of which are bay windows; 936 rooms, none of less size than 16x16 feet, and 388 bath rooms. It contains over three miles of halls; there are five passenger elevators and seven grand stair-ways; there are 4,540 doors, 9,000 gas burners, and thirtytwo miles of gas and water pipe. It requires 50,000 yards, ortwenty-eight miles of carpet. It can accommodate 1,200 guests, besides 860 servants and employees.

The Rifle.

OUR RIFLEMEN AUROAD.—The American team arrived in Belfast on the 6th instant, and met with quite as enthusiastic a reception as that awarded them at Dublin. The Mayor of the city met them at the depot, and they were escented to their hotel through streets festooned with banners and lined with crowds of people. Arrived there, the enthusiasm of the populace was so great, and the calls for the Captain of the team so urgent, that the Mayor introduced Colonel Gilderslove, who received round after round of applause. Major Leech also made a speech.

In the evening they attended a file given in their honor at the Botanic Gardens. On their way to the place of festivity they found the streets crowded with people, whose enthusiasm was irrepressible. The gardens presented a gala appearance. Fifteen thousand persous were present, and repeated cheers were given for the Americans. It was remarked that no such demonstration of popular enthusiasm had occurred in Belfact for twenty years.

asm had occurred in Belfast for twenty years.
On the 7th the Mayor and Citizens' Cup was shot for on the range on Lord Dufferin's estate. The distance was 1,000 yards, five shots each. All the members of the team and reserves took part, and the contest was very exciting up to the last shot. The scores were announced as fol-

In shooting off the tie at three shots, Messrs, Gilder-sleeve and Lee again tied, each making two bullseyes and a centre, and bringing the excitement up to fever heat.
On the final round Colonel Gildersleeve unde three bullseyes, scoring twelve to Lee's ten, and was pronounced the winner. In the course of the shooting for the cup, Bodine, Dakin, and Coleman, of the American team, made misses and were obliged to retire, in accordance with a rule which requires the withdrawal of any man who misses the target. A considerable number of the Irish competitors also retired under the rule, including Wilson, a crack shot.

After the contest the members of the American team

and friends, accompanied by the Mayor, aldermen, and other leading citizens, made an excursion on Belfast Longh. The party were entertained at Clandeboye, Lord Dufferin's country residence. Mayor Lindsay proposed the health of Lord and Lady Dufferin, which was drank with enthusiasm. Captain Hamilton, the brother of Lady Dufferin, responded, expressing his pleasure in receiving the gentlemen of the American team.

In the evening a hanquet was given to the Americans in the Town Ifall, when the usual speech-making and expres-

sions of good feeling prevailed.

While al Belfast Colonel Gildersheeve received letters from the Secretary of the National Rifle Association, inviting the Americans to shoot on the 17th instant, at Wimble don, against a team of eight picked from the United Kingdom, the range to be 1,000 yards, and cach man to have thirty shots.

Colonel Gildersleeve has replied, declining the proposition. He says the Americans have determined to adhere to their original plan of engaging in only one team match on this side the Atlantic. He thanks the Secretary for the invitation.

A letter of a similar character has been sent to Mr. Parsons, Adjutant of the English eight, in response to his letter of July 5th, proposing a match between the Americans and a team of eight selected from the four nationalities of the United Kingdom.

The team reached Glasgow on the morning of the 10th, and Edinburgh the same evening. Everywhere they received the most marked attention, and were to have started for London yesterday.

Mr. Hamilton, of the Irish team, has written to the

Standard as follows:—

"I have shot against the American team both in the United States and Irchard. I can say with confidence there never has been any team in this country able to heat them. I don't mean we have not as good individual shots, but their organization is simply perfect. Discipline will always beat soperior individual strength in such confests. The members of the American team have shot together for over a year. If one member by aecident gets off the target, another is able at once to put him ou again. Colonel Gildersleeve has assured me that men only win by the minutest trifle in America. The Irish made a higher score than the hest they ever made for the Eleho Shield, and yet, although it is true by accident, were beaten. The following week, when competing for individual prizes, they made fifty-two points more than the Americans over the same course. The Irish score at Dollymount on June 29th was again better than any they ever made for the Eleho Shield, while the Americans averaged 161.16, which is higher than the best individual score made at Wimbledon. Yet, in the Abercorn Cup match, for the selection of the Irish eight, six Irishmen headed the list, the Americans following at long intervals."

The members of the team were bamineted at Edinburgh hy our consul, Mr. Robeson, and from there each appears to have followed the bent of his own inclinations, as Colonel Gildersleeve is reported to have said that nearly all the members of the team will reach London in time to take part individually in several matches at Wimbledon on Suturday.

A dispatch from London dated the 12th instant says that Mr. Parsons, of the National Rifle Association, in a letter to the agent here of the New York Associated Press, confirms the statement of the Telegraph's Wimbledon correspondent in regard to the willingness of the conneil to make a match believen the four eights, and says: "But consider-

ing Colonel Gildersleeve's declination final, they, at a meet ing coloner Othersteeve's accumation man, they, at a inves-ing on Saturday, resolved that a cup of the value of £100 should be given as an individual prize, to be shot for by the Americans and the representatives of the three British eights of 1874 and 1875, on the afternoon of Saturday next, each man to have twenty-five shots at 1,000 yards range. There will be a special meeting on Tuesday to confirm the resolution. This match will be very interesting as exhibiting the finest long range shooting in the world. We have resolved to be prepared next year with an imperial lean, ready to try conclusions with any other nation, and we hope mother gallant band of Yankees will come and give to or take a lesson from Juliany, Sandy, and Paddy. They will have a hearty welcome, a fair field, and no favor.

The Nevana Bance.—We give herewith a cut of this budge, valued at \$1,000, which is now in possession of Colonel Church, of the Army wal Nary Journal. This beautiful trophy is a present from the National Guard of Virginia City to the National Guard of the State of New York, and is to halve for reader the following remaining. York, and is to be shot for under the following comitions, as prescribed by Colonel Church, in whose hands the multer was placed by Brigadier General Batterman, command ing officer of the danors;-

ing officer of the danors:

I. Any company in the State passessing the minimum number of officers and men required by law (46) may compete for the badge, but all the men and officers required for a minimum must compete.

II. The scores must be shot under the personal supervision of the regimental and brigade inspectors of rifle practice, certified as correct by them, and countersigned by the division and State inspectors of rifle practice.

III. They must be shot with the State military weapon, unaltered as to sights, save by blackening, with a minimum trigger pull of six pounds. The ranges will be 200 and 500 yards, five shots each range, with two sighting shots at each range.

IV. All scores must be sent in as required by November 1st, and the winning company will be entitled to hold the hadge as champions for one year. The scores will be adjudged by Colonel Charch.

V. After one year the badge will be held subject to challenge under the same conditions.

VI. The scores will be adjudged by the average per man of the number shooting, be the same more or less.

The shooting is to be under the direction of the Inspector General of Rifle Practice. Our space will not permit of a detailed description of the badge, but the trophy itself is now on exhibition at the store of Messrs. E. Remiagton & Sons, No. 281 Broadway, where it can be seen by those in-

-The first contest for the new Turf, Field und Farm badge occurred at Creedmoor on Saturday last. The rules under which this match is now shot have been so modified as to allow each competitor len shots instead of seven, as before; any rifle allowed; distance, 200 yards. Mr. W. B. Parwell was the winner, scoring 43 points out of a possible 50. Appended are the scores of those making 35 points

Willard B. Farwell	43 R. Rathhonede
as as resulting.	. Sur Butt. W. G. Clarko 92

On Saturday, 17th instant, at half past two o'clock, the Luther Badge will be competed for al Creedmoor by members of the Amateur Rifle Club. The conditions of the match are: Distance, 803, 900, and 1,000 yards; position, any; weapon, any rifle within the rules; rounds, live, with privilege of two sighting shots; entrance fee, \$1; to he won three times (not necessarily consecutively) helore becoming the personal property of the winner.

AMERICAN RIPLE Association.—This organization line nt last seemed a permaneul range. It is situated at Pel hamville, within ten minutes' walk of the depot, on the line of the New York, New Haven and Hartford Ruitron It requires only thirty-five minutes to reach the range the Grand Central Depot, Porty-second street and Fourth Avenue. The ground admits of shooting up to 1,000 yards. The ranges up to six hundred yards laive been staked out, and work commenced upon them. The formul opening of the new range will take place in about two weeks.

THE SARAYORA RIFLE CLUB.-This association hold a meeting on the 5th instant, the competition being for a badge of honor. The distance was 500 yards, at Wimble don targets, lifteen shots each, nuller raises of the N. R. A. The rifles used were all mozzle loading. Mr. A. Flansburgh was the winner, making a score of 60 out of a possible 75. The following are the scores:—

Name. A. Flansburgh			Score.		Total.
A. Flansburgh	. 18	4 1	45454	445435	60
W. F. Howard,	. 2 4	5.1	03493	155302	41

-The members of the Holyoke Rifle Club competed for the possession of its gold budge on Saturday last, under the rules of the N. R. A., the conditions being seven shots at 400 yards. Mr. H. White, who used a Mayuard rifle of 9½ pounds weight, and who shol in a standing position, was the winner. The scores were as follows: H. White 21, D. Keltou 18, S. Chapman 17, R. McDonald 16, A. Munger 14, F. R. Norton 11, and H. E. Nash 11. Mr. White was also sneecessful at the 200 yards range, same number of shots, scoring 29 out of a

New Lienon, Ohlo, July 5th, 1875

New Lismon, Ohio, July 5th, 1875.

Beiton Forest and Stream:

Please give your opinion of the lactosed diagram of three consecutive shots made with a muzzle loading sporting ritle at 225 yards, off hand. The rifle was manufactured in Syracuse, N. Y. We have a number of good shots here, and bluck of organizing a shooting club. We are a 1 glad to hear of the success of the American team, and hope for their statements in Facility.

[One shot in the diagram is in the exact centre of bullseye. The other two mensure about 12 imbles from centre. We call this extraordinary shorting. If you organize a club of marksmen like the one in question, then are laurels green in waiting.—ED]

-Among the foreign competitors at Wimbledon this year, says the Volunteer Service Gazette, will be Major Murcita, of the Japanese Army, who has entered for all the open prizes. Although, we believe this will be Major Marselle for this will be Major open prizes. Although, we believe his will be Major Muretta's first visit to Wimbledon, he is an old member of the N. R. A. through the Yokohama Riffe Association. If is not unlikely to take some substantial remembrance of Wimbledon home with him, for we are informed that the other day at Bristol, while trying some rilles with Mr. Gibbs, the gunnaker, he made twelve bullseyes out of 6f-teen shots at 1,000 yords, standing. And at Yokohama it is recorded that he once made 139 bullseyes out of 200 shots al 200 yards,

This is most remarkable shooting, and our representatives will have to look well to their lamels in keep in the front rank. We have always imagined that Asiaties, Chinese or Japanese, for instance, after once mastering the science of rifle shooting, would make excellent marksmen when furnished with the most approved style of weapons. Their diet being mostly vegetable, and their habits strictly temperate, render them, as it were, without nerves to shake and give unsteadiness. Of course this remark applies to turget practice; in presence of an enemy the want of nerve tells against them. Not but that the Japanese are a brave race; they are far more so than their neighbors, the China-

Game Bag and Gun.

GAME IN SEASON IN JULY.

Woodcock, Sulpe, Carlew, and Bay binls.

Our correspondent "Teul" writes us from Salem that woodcock are now in order in that vicinity. A light of robin snipe are daily looked for, and shooters are overhauling their toggery.

-A few woodcock are being killed on the Raucoens, and sume fine birds reach Philadelphia from the lower counties of New Jersey.

A new (portsmen's club was organized on the 1st inst. at Minneapolis, Minn., to be known as the Trup and Field Club, one of the principal objects of which is to see that the game laws of the State are enforced. Mr. F. L. Morse is Secretary. The club starts with a membership of thirtyis Secretary. The club starts with a membership of thirty-four, many being among the leading citizens of the place. They held the first pigeon match on the 7th inst., but the

The Bakersfield Californian suys that the quail threaten to overron the country if they do not import more sportsmen. They are out with their lirst broods, and are to be seen everywhere

Iowa—Redfield, July 7th, 1875.—As many sportsmen are no doubt auxious to know if the late heavy rules have destroyed the young pinneled grouse, I will state that yesterday afternoon, while out training a puppy, a dozen coveys were found on less than a square taile (the pup had never men in the held hefore), the biggest find on that ground for years. They were of all sizes, up to one third larger than full grown qualit, and remarkably thrifty birds. I think Eastern sportsmen need not hesitate to come on account of scarcity of game.

O. H. Hameros.

Other above would indicate that sportsmen need not four

[The above would imlicate that sportsmen need not fear a dearth of game in that vicinity at least.—Ed.]

dearth of gains in time vectors.

— The London Field contains the following account of Copt. Bogardos' first appearance in England. The Cock-ney's remark that "this stranger is no catch," is decidedly

The London Field contains the Tollowing account of Capt. Begardns' first appearance in England. The Gockney's remark that "this stranger is no catch," is decidedly good.

"The annonneement that Capt, Bugardns, the champinn wing shot of America, had arrived in this country, soon caused some stir in pigeon shooting circles, and the fact of his basing sent a challenge to the Hardingham Club by shoot the best man they have, proves that the stranger is confident of his ability to meet all comers.

"The locade first chosen for Capt. Bogurdus to show the Britishers how to shoot, was Mr. Warner's, the Welsh Harp, Hendon, and Monthay infernous being line, there was a very foir company present. The proceedings commenced with a sweepstakes, Capt. Bogardus stanting at twenty-niou yurds, at which distance be held his own against Mr. Fowler and many other well known pigeon shots. A move was now made down the field to witness the first of the exhibition matches, viz. Capt. Bogardus to shout at twenty-five pairs of pigeons, and in kill thirty cight birds from two spring traps, forty yards apart; the shooter to stund on a line between the two traps, which are sprung at the same time. All being in readiness the match began by the captain killing his left bird, and twisting his body roand, his legs being firmly planted, he haid the other pigeons dead a short distance from the trap. Throughout this much the captain killing his left bird and twisting his body roand, his legs being firmly planted, he haid the other pigeons dead a short distance from the trap. Throughout this much the explain took his left hund hird first, and at the fairsh the score stood thirty-nine kills ant of forty-four pigeons shot m. It should be unminoned that the birds were a mixed lot, with unmy "owls" amongst them, but for all his the general impression was that the captain could shoot, and, as one well known pigeon crack remarked, "this stranger is no catch."

"The next part of the programme was to kill wenty-live pigeons in four minutes, the cuptain to h

JULY SHOOTING.

EDITOR FOREST AND STREAM:—

On Monday, the 5th, with Frank 'F, of Jersey City, manufacturer of the best leadber gui creaces mide, and a gentol and enthipsiastic sportsman to hnot, with Freg, his splendld blue Belton, we took the train for his first crack at the woodcock; for though a good shot among the fluck and splipe, he had not as yet had an opportunity to try his hand at this, the most exquisite game of the world. After a few bours' ride—I meed not specify where—we were met at the depot by jolly Usele Ben, another white man, and by white man I mean the later and full definition of the word, who, souting our bags "sans ceremony," roshed us into the hotel, where he insisted, as a preliminary, on our washing the dust and cinders from one epiclottes are be carried us by force and urms to his meat little home on the bill, where we met with a hearty welcome from his jolly wife, pretty daughter, and young Henry, a chip of the old block. Huving placed an extraordinary quantity of that excellent home made, home-cooked diuner, (why do things in the country laste so much better?) where we thingfit "it would do the most goult" Frank, who was too anxious to wait until the next day, as it still lacked two or three hours of sundown, and nucle Ben houl a brood secreted where he could lay his eyes on thour at a few minutes' notice, we concluded togo down to the swale and witness Frank's first effort. As there was supposed to be only three or four birds in this small cover, neither Uncle Hun nor the undersigned took out our breech loaders, trusting to Frank to do all the execution. We were soon at the cover, having thoroughly impressed upon Frank on the way tho absolute necessity of shooting at all huzards if a bird got up—that be might possibly hit something—but that if he did not shoot he snooty wouldn't.

We had barrly cutered heyond the border of the alders, befure Peg lagan to make game, and son came to a point, as right as though carved in marble. Uncle Ben stopped towned and the well remembered whistle broke an our o

got another point. Stand where you are, Frank, the bird will come out leve, probably, and skirt around puisido of that clump of alders and pitch in agont further on, and you may get an open shot. Keep good, now, while I ruse him. Steady, naw, let him get well out. Alm a trife ahead, and let him baye it. Harrah! 'Drait bird!' Felch him, Feg good dog. Well done, Frank, a also Full grown cock.''

tut to see Frank drop bly gain, throw off his ball and shoot there, his

eyes sparkling with intense excitement, as the perspiration rolled in steams down his tace, as red "as the ted, ted rose," while his feelings, wrought up to too high a pitch for even an effort anniterance, was a sight confical to sen. Indeed it was a prond output for the young cash. We have all pussed through the same glorious experience, and could well appreciate and envy him the exhibitating emotion. That cock was skilined and purpared that evening for Prof. Bally to mount in the spiendid style he knows se well how, and will be kept in the T.—fundly as an heritoon of Frank's prowess among the Philobeia intoor. After a few moto shots, bagging two mure bitds, we teturn to the louise. Having dispused of a plut or more upiece of Unite Boa's decisions cider, smoked our pipies, told a story or two, we were ready for bed.

We were up early, and in the swamp bettines in the morning, and had some good shooting, but as the day advanced and the sun came down in his wrath we found the heat very excessive, and propordinately the hirds scarce, and has we trainped from swamp to asmony, the perspiration streaming from every pore until our cluthes were were through and through, we experienced all the disconforts of woodcock shooting in July. The dog, with panting sides and holling longue, showed exhibit eages to illistices, and having brough to hag but fifteen birds, we turned our taces homovarit. Uncle Ben having no bee house we had placed our birds of the stay before on the ground of his cellar. With these we placed our officer, thinking they would keep nicely. The next day flunk N., the celebrated fox hunter of that country, and a right good fellow, went with any simplifying better than the others, and the hirds even mote and several make wet to the epidemis, thoroughly disquested with duly shooting, and strong introcates of its early abollshined. We were more decided in this opinion when we found the birds we but killed the first day were spailed; "their offense was rank," and not only that, they were fast extending their

BERKSHIRE SPORTSMEN'S CLUB.

P) Treffeld, Mass., July 1875.

P) TEFFELD, Mass., July 1875.

The necessity for united effort in protecting game and fish has long been felt by those taking an interest in such inatters in this section of the State. We have at last perfected an organization, to be known as the Berk-shite Sportsment's Club, Hon. E. Il Kellogs, president; John C. Parker, E-q., vice presid, m; A. B. Root, secretary and treasurer; J. M. Barker, Esq., attorney; W. H. Marray, Esq., Capil. Morris Schaff, W. H. Wentworth, M. D., directors. To those acquainted with the gentlemen whose names are given above, it is unnecessary to say that our best men are interested in and have the management of the club.

MEMPRIL.

We are pleased to note the above addition to the ranks, which indicates an era of protection and consequent enjoyment in the serion of country in which the new organization has its headquarters.—Ed.

DITTMAR POWDER AGAIN.

Bellefontaine, Ohio, June 28th, 1875.

Bellefontaine, Ohio, June 28th, 1875.

The reason, I think, that "A Subscriber found his experiment with Dittmar's powder ansatisfactory is because he used too flue a grain; he should have used No. 15 charse. The powder is not a wood powder at all; its component parts are starch, sagar, and vezetable flue, with the addition of pure acid, anknown to anybody but the Inventor. The acid is theroughly washed out so that it will not injure the barrels. I have left my gun without cleaning for two weeks after shooting twelve shois of the Dittmar powder, and could see no stains in the burrels. We have just experimented with the face of the Dittmar powder compared with that of the bluck powder, each miconfined. We ignited one-eighth of a pound of Dittmur's powder inder a wooden box; when the powder exploded the box was not silred in the least, but when we placed the same amount of black powder under a wooden box; when the powder exploded the box was not silred in the least, but when we placed the same amount of black powder inner the box and ignited it the box was blown to pieces. This shows that in case a large quantity of Dittmar's powder should come in contact with fire in the house to would not do any damage as far as the explosion is concerned, and we all know the black powder would; so we find that Dittmar's powder in our as of the provider would be entirely ratured. If Mr. Dittmar can so arrange it as to sell his powder any heart shear price as a the lower grades of other powder, say about twenty-five cents per pound by weight, which would be about sevenily-five cents for the same quantity in bulk of black powder, and make arrangements with the clubs to sell it even chapper than that, he woold find much readier sale for his powder, and remove much of the prijudice against it. You will notice that all those conficuntog the powder have been experimenting with it at atagets. Noue of them appear to have tried it on game. I used it on snipe and decks hat Spring, and found it perfe

[Our correspondent is in error regarding the computative weight and bulk of the Dittmar powder. A pound in weight would certainly far exceed in bulk a pound of black powder.-Ed]

THALOF SCOTTA GHEENELY NKWSYSTEM OF BORDING, IN THE EDITOR OF CITIE FIELD," LONDON.

(See The Field, January 20th, 1875.)

"From a comparison of the law tables it will be seen that with Walker's short, Messes, Stott's guns showed a monked superiority uver Mr. Greener's, footh in average and in the highest score made. Indeed, with the left bursel, in his third short, Mr. Sort gut a selected group entern of 230 and a penetration of 37, equalling the hybrid puller manife by Mr. Frecher, and exceeding the penetration of that particular short by right shorts."

Volume 4, Number 24, 17 Chatham St. (CliyHall sqr.)

Camp Hishing in Georgia.

I SUPPOSE that most, if not all, the readers of Furest and Sturam know what a "camp hunt" is. A half dozen gentlemen, more or less, taking tents and provisions, guns and dogs, go into the woods and mountains, camp there for a few days and hunt. Camp fishing is much the same, except that you substitute nets, rods, and lines for gans and dogs. The gentlemen of the Sunthern States from time immemorial have been in the habit, at the proper sensons, of making up small parties and going off into the would for a week or more to limit and fish. Very frequently excursious are mide to the coast or some of the phenty executions it, and sea fishing and turtling are enjoyed.
When going to the islands for a "camp fish" it is called it is called "marooulng." This is more especially the case on the Gulf caust. It is a pastime almost peculiar to this section of the caustry, rich and poor alike indulging in it; for the facility of recess being secured. facility of access being so great, the distance being so small, and the transportation of the impedimenta so easy, these trips are a very common method of recreation. Once or twice during the year most of the men of business or leisure contrive to get away for a few days on a hunt or fish. Very often they go but a few miles—the hunting or fishing ground being so near—for populous, well settled and cultivated as Georgia is, in very many places a mile out of town is "into the wilderness," with only a farm here and there, often a dozen miles upart, beyond. Near or far, owever, they go, and a merry and healthy time they make of it. In the days gone by it was very seldom that a gen-tleman visited a planter for a few days that he did not get up such a hunt or fish for his entertainment. They are still very popular, and deservedly so.

A few days ago a little party, consisting of Gen. II., Capt. B., Commodore G., and myself took the morning train on the Western and Atlantic Railroad for the hill country. We had discussed the matter many times, but the backward sensou and the heavy rains had compelled us time and again to defer our trip, and several who had intended to have gone with us were prevented by husiness engagements from joining the party. Finally, we concluded that "rain or shine" we would delay no longer, and accordingly the four above mentioned took the train. We carried with us some tent-flies for shelter, an axe, hatchet, spade, auger and balls, some bread, bacon, a boiled ham, lard, salt, pepper, pickles, coffee, sugar, and Worcestershire sance, with coffee pot, frying pau, gridiron, kettle to boil water, some tin cups and plates, knives, forks, and spoons. Besides our blankets each had a band big containing a rough suit, nuderclothing, towels, soap, and hrashes and comb. Each man took his rod, lines, and hooks, and Gen. 11. took his nets—small gill nets; for, as we depended in a great measure on our "catch" for food, and feared the water would be in poor condition for fly or bait fishing, (which proved to be the case,) we resolved "to make assurance doubly sure" and provide means that we could depend on under any circumstances to supply the larder. I should also have mentioned that we took with us a likely negro lad as cook. After a pleasant ride of some four hours through a fertlle, well cultivated, lovely and picturesque country, passing Kennesaw and Lost Mountains, we arrived at Gordon county, and the conductor very kladly stopped tho train and dropped us and our baggage near our proposed camp. He had intended to have stopped within a few yards of the place, but by an error of the engineer carried us about a quarter of a mile beyond. This necessitated our "toting" the baggage to the spot we selected for our camp.

When we started the day was chilly and rather cloudy, but as we neared the mountains it became brighter, warmer, and, finally, quite clear. A heavy rain the previous night made everything clean and fresh, but alast spoiled the lake for fishing with rod and line. We left the train about halfpast twelve, and while one of the party went to hunt up the boat the others selected a site for a camp and transported the baggage. We found this last heavy work. For convenience of handling on the cars we had packed the ar-

ticles in empty flour barrels and boxes, and it was no joke to carry these through the hot san over a very rough road fer even a quarter of a mile. Pulling off a teut rope, we cut poles, and slinging a barrel to its centre we placed the ends ou our shoulders and trudged off. In this way in about an hour and a half we got everything to camp. We selected for our eamp ground a little sandy knoll covered with short grass and pine leaves, and shaded by a small clump of very pretty pines. It was a perfect gem of a camping ground. The ground sloped in every direction, and in addition, the soil being sandy, insured us a dry, comfortable eamp, while the pleasant shade of the pines made it agreeable outside of our teut as well as in it. Fifty yards to the right a fine spring of excellent water bubbled out of the hill, and some thirty yards to the front lay the lake.

Our first proceeding was to select two trees a proper distance apart, and suitably situated. These we trimmed up until the lowest branch was some nine feet from the ground. We then out a stont pole and laid it from tree to tree, resting it on the lower branch. Over this we threw a large tent-fly, and stretched and securely fastened it down with Across one end we then stretched a smaller fly, pegs. Across one end we then stretched a smaller fly, tying the centre to the pole, and bringing the ends over the other fly. The front we left open. The top of one of the boxes, properly manipulated, was soon fastened to the front tree, and gave a resting place for hrushes, combs, etc., and was a great confort. We next selected two other trees about ten yards directly in front of trees about ten yards directly in front of our tent, and, trimming them up and fixing a pole as hefore, stretched over it a fly, awning fashion. Under this we placed our provisions, and also used it for a dining room. A couple provisions, and also used it for a dining room. A couple of old boards we found near, when placed on top of the barrels, made an excellent table. We then built a fire between the tents, spread our blankets, stowed away our bags, and were ready to commence tishing. (Note. - Always make your camp before you begin to haut or fish.) Mean while, the hoat had been hanted up and brought around but was found to be so unsteady that she could not be used for setting the nets. This was a poser, for the water was so muddy that rod fishing would not amount to much. So we concluded to wait. It would have done you good to see our gallant General, (we dubbed him "General" hecause he was the biggest—he weighed from sixteen to twenty stone—man in the party,) paddling about in the tottlish, narrow skiff. Sixteeu stoue is no joke in a cauoe a foot wide, but the General is a veteran, and did credit to his training, so up accident happened.

A year ago auother of our party was on the same lake, but in a skiff much shorter and narrower than the one above alluded to, (we found her bones high and dry, smashed to pieces, where the floods of Winter had carried her.) While very earefully, gently, and gracefully paidling to a spot that looked as if some choice specimens of the finny tribe were likely to have made it their habitat, one of his companions called out to him quite suddenly. Turning his head around to answer the hail he lost his halauce, and, still graceful, disappeared beneath the waves. Yerb. sap. You may imagine the rest. Meanwhile, two of us took the boat, and, having caught a few minnows, proceeded to set some small lines, three or four feet long, tying them to the ends of branches which overhung the water. These were baited with the minnows. The others of the party while we set these hooks were busily engaged in fishing, for our supper pretty much depended on their success. As soou as we returned we also commenced fishing. We could see the trout (bass) leaping here and there, but after diligently fishing for about an hour and a half I found I had lost four hooks, which had enught on logs or roots that I could not see owing to the muddiness of the water, hat had not yet had one bite. My companions, however, were more fortunate, and we had quite a nice mess of "brim" by sundown; so our supper was secure. The set lines added a "red borse" or two and a half-pound trout (bass.)

Returning to camp we found a bright fire hlazing and a good bed of coals. All hands turned to, and lu a trice the fish were ready for the pan and merrily "sizzling" over the

I had brought a little bottle of butter for a start, and we afterward got pleuty of both butter and milk from a farm near by. Our bill of fare for supper was fried fish, farm near by. farm near by. Our bill of fare for supper was fried fish, broiled fish, fried bacon, bread and butter, pickles, excellent coffee, etc., and—mustard?" How we did cat! The pure mountain air and the exercise we had taken gave us excellent appetites. Paufin after panful of fish disappeared until finally, having "satisfied the inner man," we laid down around the fire, and, lighting our cigars, included in a lively talk. Few things are more pleasant than the talk around the evening came, fire, after a lord day's the talk around the evening camp fire after a hard day's hunt or fish. What stories are told; what jokes are hunt or fish. What stories are told; what jokes are cracked. The ball of conversation is tossed from one to the other, rapidly caught, and merrily passed along. All are interested, and time passes by unheeded until "the weemsma' hours" are reached, and some one, suddenly ranching sma' hours' are reaened, and some one, suddenly remembering that we must rise early to morrow, looks at his watch and exclaims at the lateuess. This night, while gnyly chatting around our fire, a contraband, who was recognized by one of the parties, stepped into the irrelight, and, after a short conversation, was dispatched for a couple of ralcula, twich was a mile or two off.) for we had deof plank, (which were a mile or two off.) for we had determined not to he beaten on the boat question, but fish our nets in spite of fate. So "Dave," the contraband, was dispatched for the lumber. Meanwhile, we "sat and smoked and talked, and talked and smoked and sat" until shout ten o'clock, when Dave contrabands and sat." about ten o'clock, when Dave, accompanied by another descendant of Ham, returned, bearing between them the theseendant of Ham, returned, bearing between them the desired plank. In a trice the old boat was drawn out of the water, and, taking off one side, we proceeded to add our plank to her hottom alongside the others, fastening them with strips which run from side to side. While we were getting things ready for action one of the party ent an old grain sack into strips about three inches wide and dipped to the strips are then allowed to them into some melted fat. They were then allowed to eool, and being doubled we placed them between the planks of the hottom, which were rough and unphanel, and keying them up, the cleets were united on. The sides were fixed in the same way. This made the boat as "tight as a drum," and the rough plank answered perfectly. This was the idea of the Commodore, whose duty it was to su-perintend the caulking of the little vessel. A board nailed ou either end and one in the middle for sents, and our boat was finished. By two o'clock A. M. she was in the water, and Capt. B. and myself made the round of the lake and examined our lines before retiring. Our reward was not great, for the terrapins, which were particularly abundant, had been before us. Rebaiting our denniled hooks we re-turned to camp, and, after replenishing the fire with enough logs to last till daylight, we turned in, and were soon sound

The first thing I saw the next morning was Capt. B. standing before me shaking a three-pound tront (bass,) and asking me how I would like it for breakfast. By the time I had made my toilet the fish was ready, and I breakfasted sumptiously. We all breakfasted, for the early risers bad taken only a cup of coffee and a sandwich before they left camp. The scene around the camp fire, where all except myself were busy preparing breakfast, was very picturesque. One big fellow in a gray shirt and a broad-leafed hat was frying the fish in a long-handled frying pan; auother in an equally picturesque garb was hrolling some busy preparing the fish for the property offee. The boy was hosy preparing the fish for the pnu. I think one of the most pleasant and picturesque scenes is when the party at the camp are gathered around engaged in getting up a breakfast or supper, especially the latter; the hight the lighting up the brouzed features of the party, and touching with a gleam of crimson or a tash of gold the well-polished tine or glittering knives as each one busily harries to and fro, performing his share of the work. Our party was happily constituted. We had no drones, and each seemed to vie with the others in doing all he could for the pleasure and comfort of the rest. Our servant had a sincence. His principal business was to wash the pans and plates, dress the fish, and keep up the fre. Although a cook in a somewhat famous restaurant in Atlanta, truth

compels me to say that he did not distinguish himself in the culinary line. In fact, like most of his race he was incorrigibly lazy, and was perfectly contented to let us do his work. But he had his good points, one of which was that he could cook a beefsteak to perfection, whereby hangs a

work. But he had his good paints, one of whereby hangs a tale.

Although an ardent, persevering, and patient fisherman, I am not fond of fish; for, though I eat them with pleasing, especially if there be nothing else in the larder, yet I am constitutionally appased to the real enjoyment of fish as an article of diet. Whether it is because if a bone, large or small, gets into my mouth it almost produces a spasm, or not, it is yet a lamentable fact that I cannot thoroughly enjoy fish. But I do like a nicely broiled beefsteak; it is my especial weakness. I remember that when I returned from a four years' tour of duty in California, where oysters only grow in cans, (or did notil lately,) my wife and myself on our arrival in New York went to one of the fashionable restaurants for lunch. "The little Madaume" is fond of oysters, so she ordered some in the style she liked best. After looking the bill of fare carefully through, and finding no delicacy which I particularly desired, save one, I ignored the whole line of fresh mackerel, bass, halibut, lohsters, crabs, oysters, et id omne genus, and ordered it—a beefsteak.

"Oh, Doctor!" said she, "are you not ashamed? You have been in California for years, and uever even saw a respectable oyster there, and here you are ordering a heefsteak. It is positively drendfu!!"

I meekly held down my bead, but I had and enjoyed my beefsteak nevertheless.

To return. Our contraband could cook a beefsteak, and the following morning when I awoke, (I was usually the latest to bed and the latest to rise,) my nostrils were greeted with an unexpected, familiar odor. A heefsteak was brailing on the embers. What a treat for poor me.

"Hurry up, Doetor, your steak is almost done," sung out Capt. B.

"Beefsteak!" exclaimed I; "where under the sun did you

"Beefsteak!" exclaimed I; "where under the sun did you find a beefsteak in this benighted country!"
"Came up ou the night train; burry up!" was the lacouic

response.

My kind friend, the Captain, knowing my weakness, had written a note, which be stuck on a stick by the track, and as the train dashed by it was taken by one of the employes, and the result was that on the next train up came some nice steaks, which were thrown off to us as it flew by. How I did enjoy that breakfast! Beefsteak is positively superlative!

as the train dashed by it was taken by one of the employees, and the result was that on the next train up came some nice steaks, which were thrown off to us us it flew by. How I did enjoy that breakfast! Becfsteak is positively superlative!

On a fishing excursion or a hunt, like in a garrisou, one day is like another, yet every day is different. The inecidents vary. One has bad on a big fish that broke his rod and line; another had a glorious nibible; a bird fell overboard while he was reaching out for some flouting object, r. as I told bim, "while admiring the reflection of his beautiful phiz in the water"—nature's mirror. Par parentlesis, he is a very haudsome man. Auditor shows a capital string of fish, and tells about the sequestered nook or deep hole where he caught them. And so the days go by, each one so full of health, so crowded with enjoyment—the very toil is pleasure.

About noon of the second day a lond shout in the bushes proclaimed the advent of Mr. P., a thriving planter in the neighborhood, who, bearing that our tents were not many miles off, mounted his horse and rode over. He was well known to all the party, and gave us a cordial welcome 15 his bailiwick. Of course we bad a talk and then a fish. Finally, when he was about to depart, he insisted that one of us should return with bim to his house, some two miles off, and he would tell bis good lady we were there, and make arrangements to spend the night with us and fish the nets. After much talk it was decided that I should go. So, like the Knights of the Temple in the bygone days, we started off, not forgetting to take a goodly string of tish for his "home folks." I bad a very pleasant visit, saw some very fine dersey and Alderney cows, a fine Messinger stallou, and a farm kept in such order us would captivate the eye of our best furners in New York, Pennsylvania, or New Jersey. Graced by the lovely young wife of my friend—for here in the heart of the hill country of Georgia I found the cbarming daugher of one of our Northern railroad kings, w

How do you get them out after you shoot them?" I

"Strip and wade in for 'em," was his reply,

Some days be got three or four, sometimes none, but generally enough for "a mess." I afterward learned that in this part of the country it is a favorite amusement, and promess in that line counts as much as if directed against ordinary game. Shortly after we left the reverberating ectoes of his rife told us of the success which enough the patience of our crucker friend. The time generally selected by these people—and I regret to state the medicated enokers are but the only ones who indulge in this sport, but also those who ought to know better—is when the fish seek the shallow portions of the lake to spown. Perched in the trees they can readily see the fish in the clear water, and nicely calculating the angle—shooting under them—the buliet or buckshot sums the fish and emisse it to float help-lessly on the surface, and before it can recover the shooter has descended the tree, waded in, and secured his prey. During the hat days of Summer, too, the fish lazily float on the surface, and they are then also much sought for. Very large ones are often thus killed. A son of the uwner of this lake shot one which weighed over filteen pounds. I trust the brothers of the rud and gun in Georgia will look to it and prevent this most unsportsmanlike method of fishing.

Alas! all things must have an end, and our time drew to

I trust the brothers of the rud and gun in Georgia will lonk to it and prevent this most unsportsmanlike method of fishing.

Alast all things must have an end, and our time drew to a close. On the fourth day we fished until noon, then taking onl, drying and repairing the nets we struck enum, and packing up everything, we removed all the luggage to the side of the track and waited for the train. Meanwhile, we had several hours to spare, so we took a thorough bath, and hall a fine swim in the lake, and packing our fishing clothes, appeared once more clud en regle. Finding the time bunging rather heavily on his hunds, the Judge, not satisfied with having been badly heaten at whist the previous night, challenged me to a friendly game of "seven up." I need hardly say that I was very unfortunate; for the Judge beat me seandalously. Of course, it was the fault of the cards. It always is. But the Judge was clued. Flushed with seceese he resolved to beat his other whist untugonist—and at "old sledge." Now, Gen. H. is a very quiet man, but he has been around the world considerably, and with open eyes. After much persuasion he consented to give the Judge his "revenge;" so they spread a blanket in the shade and went at it. Something was the matter with the eards; for from some cause the Judge was unsuccessful. It was positively wonderful how many jacks the General furned, and, strange to relate, it was singular how few trumps the Judge held. Again and again he tried it, but with the same result. There was surely "a heathen Chinee" somewhere. The little grove rang with langhter at the shulge's discomfiture until the train coming up, (through the kindness of the Superintendent of the road it had orders to pick us up where we had spent so many happy hours. As the train dashed around the curve, looking thoughtfully ont of the window and taking the last glimpse of the smoke of our singulatering camp tire, the Judge observed, "I cannat understand if, General, how you turned so many jucks." A pleasant ride through the shadows bro

For Forest and Stream OUT WITH THE TIDE.

Y little Water Witch has been safely harbored during all the Winter storms under the South versanla, within hearing of the rinde waters, but beyond their rough reach. Last Antinmi, when November winds were raging, and our buy was lashed to a maddening fury that threatened all tender craft, I helped to earry her over the fullen leaves and laid her there, and by her side the idle paidles, "One o'er one take tolded arms when the work is done."

eneil all tender craft, I helped to carry her over the fallen leaves and haid her there, and hy her side the idle paddles, "One o'er one take tolded arms when the work is done."

Many times during the Winter I have gone down on my knees in the snow and peered through the stained butice at my little darling, as she lay there like a caged uniuml, her gay eolor gone and her saucy pride very much lowered. But now that Spring has come, I have called John from his pea plantings in the garden, where the May sun has been heating on his bended back, and together we enried the pet down the hill and placed ber, keel upward, upon two tame-looking wooden horses. I have thrown the saddle on Julia and contered over to the country store and purchased paint, putry hall and caulking iron. I have bought for myself a pair of glazed overalls, in which I feel the dignity of labor and the accessity for keeping them on by light strapping about my waist. How many glad hours I have bad down at the water's edge upon a carpet of sea weed and grasses, getting my little vessel ready for service, and, like Robinson Crusse, I have done it all myself. Yet there is something trying and tiresome in the extreme about hoat painting; an aching right arm, a sore, complaining back, a feverish touch of pain about one's body. I should not care to assist at paint dressing the sides of a French mau of war, or a Russian frigate, or a Dutch donble decker, or even the long, sleek sides of a gondola, that floats swan-like along tho streets of Venice. A row boat is a joy forever, unless she leaks. Even with this symptom of grave depravity we do not set her adrift to drive hither and thither on a storay sea, a wreck past hope, without a hand raised or a mid driven to save. Nay, we have the caulking tron, the lamp wick, the putty bid and the mallet to win our during back to usefulness once more. What a mouthful for the hungry monsler, our little pet, swallowed in an instant with a greedy relish and a wicked haste, and the treacherous, rude waves amack their whi

gry waves run high, their white teeth show fiercely. It charmed a while ago; now it awes and frightens. Ahl but I love the sea, so I love the water of our bay. It has been friend and physician. When it was lonely on the bill, coming to it I found it sunging or talkative; as a friend it hus delighted me, borne with my wavs and moods putiently and politely; has advanced my interests, annused and entertained me high and dry, as some friends in mred have done. As physician, it has given the back my strength, reddened my blood, broadened my chest, and cunningly whetted my uppetite till an adge same as keen and sansitive as that of a Damaseus blade—an appetite such as a generous housewife only shouth have dealings with.

Then the day came for the lanneh—a day all rich with san and all like with sky. A saucy south wind gives no rest in the young foliage, and turns the smile of our hay into a white, hearty laugh. The sea has a merry face. In the soft haze of the offing a hundred tiny sheets dip. Commerce in miniature, but not in minimum. Every ecdar lush along the bluff grows red with feathery breasted rolins, with throats opened. A nosy lot of sea guills hang in clusters averhead and watch me. Possibly I do look fanlastic in my glazed and paint-stained overalls. I am the only one who has a bout to lunch this morning. No one but a little amilen who has struyed from the nest-like hum of a neighbor south of the point, and comes swinging a pert little eprbeille at arm's length, to idle the moraing along share, to gather sea shells, and any wonders the last tide has thrown up; floding such, she collects carefully and methodically, all to be thrown away again before returning. She advances timidly, pauses, drups a stone's throw distant—and eyes me curiously. She has no boat, and I know she loves the waves dearly. I shall tempt her with an invite and use her for ballast. So I heave at the stern and heave an energial part of parties and the waves dearly. I shall tempt her with an invite and use her for ballast. So I heave at

"Her face it is the fairest.
That eve the sun shone on."
Her blue eye dances merrily; a sweet contour possesses her, and she has a "Step like a mountain roe."

"Step like a mountain roe,"

She mans the helm and I the ours, and my little Water Witch, as if conscions of her freedom, cuts the waves proudly and carries us seaward, the while some half forgotten lines of a poem. I once wickedly loved, return, and half-andibly I tell them to her:

"The sweet south wind, with performe heavy laded Camp lightly tripping by.

And kissed a prelly, onestpecting maiden—
Why not I?"

As the morning ripping the wind halfs. Our hand see its

half-audibly I tell them to her:

"The excet south wind, with performe heavy laden Cambe (Labry Proping by).

And kissed a pretty, un-appecting maiden— why not It?

As the morning ripens the wind hulls. Our hay loses its white longh and stretches itself for a nap. An oar's length from our side that whitete, the mimble muckerel, the gympus of our bay, leaps from his water home two fert into the clear morning air—a silver leaf with the dew on it. As he drops his supple length again into his bath he turns a comie, half-closed eye upon us, as one asking, "Well, haw is that for high!" We both think it very high. Almost under our how the burly-backed porpoise, a very clawn in his way, does a hesitating somersault, or rather tries to do it, for it is a blunder from the starting; an awkward, untrained effort, yet to play out his part, adding strength to his awkwardness, he throws his leathery buck against a coming wave, making a confusion and splatter, and semiling a rain of cold drops that catches us unnitships; then, like a leaden weight, he sinks from sight, and the place that knew him knows him no more. Over beyond, a school of noisy young porpoises are playing at a game of natine leap-frog, and in their acrobatic fullies among the waves they are as froliesome as children at recess time. And well they may he, for it makes no matter of difference to them whether school keeps or not, and it does to the children. They play the barlesque only, and have yet to learn from our hittle mackerel his graceful leap. Now a bungry, cunning shark turns from his thoroughtare to enter our bay and prowl for prey. I know him by his stately fins that ride the water, cutting the waves like the prow of a racer. Of course he is un enemy, and I am glad when, hingry as he cume, he leaves our peaceful midst to seek elsewhere a feeding ground. Overhead a dozen hawks ami sar a gulls are circling, deciding among themselves what kind of a fish they will have to-day for dimer. Perhaps to morrow our silver grouns as will not perform. I do not und

dinner, I whisper to the fair goddess at my side that cold beans are enlar. With all baste we callark, and rested and refreshed I pull lastily to our mooring, where we part company. The shell gutherer trips homeword with light beart and tasket empty, and while I am studying, the true finish of her figure is lost behind the point wheare she

and refreshed i pull histily to our mooring, water we paint refreshed is post bothind the point wheme she came.

Our trial trip is lost bothind the point wheme she finish of her digure is lost bothind the point wheme she came.

Our trial trip is lost to beginning of a succession of Summer delights. Sametimes we are venturesome, the shell gatherer and I; we forget to be first and great with the tide, coasting it motif is here polled my Witch far out into the sumul that opens a highway to the east, and like any avenue where trade thas her itensand had, it is often a crowdool thoroughfare. Here the rivers and bays contribute the pride of their waters, and may a stately estimated from the result of the read of white wings that are hruring the wealth of the rest to the great city. To do her part once a week our lay sends out a heavyly freighted, mutronly-hooking shinp, the pride of our hearts, o joy to car eyes, rich with the fails of our furns and the return of our hurvests. Her soils are spothess, her rigging that and trim. The skipper's wife is at the water's edge with little most to wave a white adient her turty mate, who moust the trusty helm with firm, enions, guiding biand, and the little wessel minds it like a bit. It is induced a picture to see our little ship set sail, and we watel her propolly on her way westward in her decent pride, as with envirant new we sight her on mother tack, and now hese her in the ading. In three short days which he shipper's wife has numbered; perimps at sunset, or and favors, we sight at must bend in the labe distance a tiny, thattering pennam, which globens our eyes and tells it is mur probe nearing towards. So less to the bone stretch, and she enters the losy knowingly, hardly usking the gindance of the skipper's wide retages hanging ever the labit the strength of the resist just stepping overheard to pulled, and the little vessel is at test, parting, the gindance and the skipper's stiffened rheamnine right arm against the heckary helm. Gathering torce, she contrives loves in

neard, red head to the wind, hedds it quivering there are instant, there goes about, every spar and pulley protesting. When the tide changes, in a laddy the sancks drift up the lay, alregging their small hoats behind them like families of children.

When the wind is aff duty and undisturbed our lay dezes under the kind. May sun, not a verinkle nearring its sweet, calm face; or, when like one tired of play it stretches itself pencefully far a noon may, then I love to coax my Witch along the water's edge mid-filled down the rocky reach of hench. At such moments a great peace gussesses the world—the world about our bay. It is like a great whole some hush. The robins are in the woods, nesting, just out at gan shot; a few of these insatiable gulls are noiselessly putting their heads together, as if some of them may at last lawe discovered a new and finished design in flight with which to complete their rime enteroidery of the heavens. In the bazy affing a mighty flock of convassings is widting a friendly lirezze to speend and scatter it, and impartient skingors are pacing their decks, bke prison-res on a gally. Two art three featers and prahedly half lamished sand snipe are lunching off the shore, their little pipe-stem-like legs looking so unmistokabily teritue they might ensuly break apart, leaving a monitoful of feathers and a melting relish at buil tlesh to rot and go to decay. As the tide runs out and the width of heach increases, the scrious, sedema-looking soft shell chair rears its menty head, lifting an inch of fleshy neck in true Dombeyan style from its sloppy hume, and with true elected effect it bends not nor turus. Na yeang curate on his ritualistic parish walk could create such an impression of stolid uncansciousness. It seems so odd to me that this peculiar folk should live in this underfoot and interested and without integre, living arderly, and seemingly in true and whidesame content. My affection here ready run for the soft shell ciam. As a mild form of exhibite after the water's edge when the tide

OUR LITTLE FISHING CRUISE.

E went on the 21st of June—this 1875 June—to a small linke near Utopia. I shall not describe our journey. We had a nable horse, and saw two foxes on the way, hesides severae sunburat country lasses, as ugly as hedge-hage. At Lapreaux, twenty-live miles, we dined at a very neat botel and then wheeled merrity on, and arrived at the hotel he ha hon homme Reproduction, eighteen miles further, near Saint Grorge, in time for supper, which meel we partook of like july good fellows always do that are these of the weak of the corks out of two bottles of Alsopp's ale—

Recipe for Prieserving Meat.—As warm weather has come at last, the following by a writer in the New York Times will prove both seasonable and servireable. There is no good reason why farmers and their families should ent so much salt pork, leaving all the fresh meat to the inhabitants of cities and villages, when the following method will keep it fresh for weeks even in the warmest weather. I have tried it for several years. As soon as the animal heat is out of the meat, slice it up ready for cooking. Prepare a large jar by sending it well with hot salt and water. Mix salt and pulverized saltpotre. Cover the bottom of the jar with a sprinkle of salt and pepper. Put down a layer of ment, sprinkle with side and continue in this manner until the jar is full. Fadd a cloth or towel and wet it in strong salt and water, in which a little of the saltpetre is dissolved. Press the cloth closely over the ment and set it in a cool place. Be sure and press the cloth in tightly as each layer is removed, and your ment will keep for months. Then drain off all the blood that oozes from it. It will be necessary to change the cloth accasionally, or take it off and wash it tirst in edd water, then seald in salt and water as in tirst. In this way farmers can have fresh meat all the year round. I have kept beef that was killed the 12th of Pebruary till the 21st of June. Then I pucked a large jar of veal in the same way during the dog days, and kept it six weeks.

-Victor Emannel is no less a sportsman because he is a King. The description of his hunting grounds given in foreign journals make them seem to be a sportsman's paradise. The classe among the mountains of Valsavararche, which abound with game on the Italian side, is reserved to the King, who has established his central hunting lodge on a splendid plateau at Lorveille, 7,000 feet above tide level.

OPPORTUNITIES FOR TROUT PONDS

EDITOR FOREST AND STREAM:- LAKE CITY, Minn., July 15th, 1875

Editor Forest and Stream:—

I desire to call the attention of the many sportsmen who now or may hereafter spend the Summers in this locality to the fine opportunities afforded right here for valuable malicial front ponds. First, let me say that there is not, perhaps, it all the West a more heantiful or fit place for the sportsmen than Lake Pepin Valley, especially during the hot mouths. Many sportsmen, with their families, regularly spend their Summers here, and always find cool nights without any mosquitto bites it is a singular fact that we are not troubled with these fittle formentors. Alt these sportsmen get, of course, good troot fishing in the various streams and private ponds; but the word "good" will soon have to be dropped notess an effort is made to increase the sapply.

Let me repeat what I have said in former letters, viz: that we have emptying into the lake on other side nine trout streams. The most of these streams have afforded an imagense number of troot, but they have been so tremendously fished that their pristing glory has departed. Yet, in all these streams many fish are still found, affording some fine sport and an ample number to stock any ponds that may be created. Many fine localities for natural ponds on these streams are found within three and five miles of Lake City, and for a small sum can be leased or purchased. A dam that would create a pond sufficient to sustain tens of thousands of troot would cost comparatively but little money, and not one cent to feed the fish. As a sample of what can be done on these streams, I will refer to two nill ponds. One of these (Pine Creek Pond) affords from one to two thousand pounds of troot a year, and brings an income to its owner of five or six hundred dollars autually. And all this without expeading, from first to last, one single cent for the care or increase of the fish. Two such ponds are within three and five miles of Lake City. Both of these streams are small creeks, but matural, as are all trout brooks. Troot are allowed to be caught from

a source of income that would pay a greater interest on the capital than any other lovestment known.

Let me add that I secured last Winter a special law to protect those who erect dams, and naturally or artificially propagate trout or other rish. This law is very stringent, and affords all the legal protection that can be desired. In conclusion, allow me to say that circumstances have prevanted me from ever securing a right to one or more of these privileges, and I have therefore no "ax to grind," and desire only that some lovers of trout angling may be induced to avail themselves of these opportunities. Any further information I will freely furnish if desired.

DR. D. E. Estes.

TROUT AND SALMON NEAR SAN FRAN-CISCO.

Editor Forest and Stream:—

The balf fishing for trout and salmon in Lake Merced still cominues to he attended with good success. Mr. Kaeding, of the firm of Liddle & Kaeding, sporting emporium, with one or two companions in his book, has generally taken of a morning tarely, from sunrise to about nine o'clock A M., from ten to twenty trout and salmon. Other parties have also done tolerably well early in the day and tate in the evening. I lately had the pleasure of conversing with E. W. Leonard, Esq., one of our first enthusiasts and zealous operators in stocking our rivers and lakes with game fish. He informed me that the first lot of troot put in Lake Merced was July 24th, 1855, and the second to of "red line trout," or California species, was april 3d, 1806. This has continued every year since. Speaking of tate sport in that take I was informed by Mr. Liddle that two ashermen captured thirty—part troot and part salmon—hait angling, in four feet of water on a saady bottom.

I doe consider the young salmon or grilse, as well as the Tahoe trout, so many of 1bs former of which were taken in our bay last Winter and Spring bait fishing, and both now in our lakes San Andrews and Merced, to be the ne plus ultra of table ish. Their fiesh, as you know, it of a light plink color, tender, curdy, and in layers, not containing near so mach oil as the Salmo salar, nor full grown salmon, and on this account chiedly to most persons, (I may say the best judges and of the most epicarean tastes.) they are more palstable than most of our more nich northero salmon, particularly when these Colombia and other river salmon are of large weight. As a game fish, too, of course in fornishing amneement to the angler or dy fisher these fish have very few equals, as all spertemen know who have experienced the rapid, and sudden grasp with which they seize the hook, their delirions struggle, and the quick and careful work they require to salely land them, with fine tackie, which all eklifful anglers are almost eure to use.

Beeldes the great

THE MARSEER.—This fish, which takes the place in India of the salmon and front of Europe and America, somedia of the samon and front of Europe and America, some-times attains great size, reaching occasionally the enor-mous weight of from eighty to one kundred pounds, while forty pounds is by no means unusual. Artificial llies, grubs and grasshoppers are all used as bait, and sometimes even the ripe fruit of the fig tree is taken. They appear to inhabit meads all the views of the Lydica poningula, and inhabit nearly all the rivers of the Indiao peninsula, and being very gamy afford great sport and a gratifying relief to the monotony of "pig sticking" and fruitless tiger

-Dr. W. B. Robertson, one of the Virginia Fish Com for the Roanoke River. They were furnished by the United States Fish Commissioner, and were immediately forwarded to Stauntou River Depot, to he placed in the sticam at that point.

-We had pleasant visits on Friday last from our valued correspondents, Fred Mather, Esq., and Prof. Milner, of the Smithsonian Institution,

Matural Historn.

OUR HAWKS AND OWLS.

BY JOSEPH II. BATTY.

A MONG our Eastern birds of prey there are some spe eies which are killed on every accusion when a good chance occurs, simply because they are hawks and owls and have long talons and sharp beaks, said to make short ant have long falons and sharp beaks, said to make short work of poultry, game, and insectivorous birds. The greater number of the birds of prey are enemies of the farmer and fancier, and war should be made on them wherever they are found. Of this class of depredators 1 might mention the red-tailed hawk, red-shouldered hawk (hen hawk,) goshawk, cooper's hawk, sharp-shipned hawk (chicken hawk,) pircon hawk (bullet hard, terrestic feel (chicken hawk,) pigeon hawk (bullet head,) peregrine fal-con, and the great horned owl.

con, and the great horneal owl.

The red-shouldered and sharp-shinned hawks are the most rapacious, and cause the farmer the most trouble. They are hold unmerous species, and during the breeding sesson they are exceedingly wary and difficult to shoot, and they are exceedingly and difficult to shoot, and as soon as their young are him work of the property of the pr

effort.

Now I will speak of the more harmless birds of prey that assist the agriculturist in a measure, and feed chiefly on small rodents which are injurious to the crops. The

largest of this class of birds is the rough legged hawk and its melanistic variety, the black lawk. This species sits for hours on some favorite deal tree watching for unfortunate field mice that may chance to show themselves. This large hawk arrives in the Middle States in October, and inhabits the meadows and salt marshes, where it fluds mice enough to sustain it. Next in order comes the mursh hawk, which is a numerous species, and their great numbers destroy thousands, if not millions, of mice annually. This bid is known by its slow und easy tlight along the margin of meadows and sides of creeks, and the female may be recognized by her reddish brown planning and the large white patch on the rump, which is very conspicuous when the bird is on the wing. The number parsh hawk is very small compared with the female, and when flying it appears to be of a uniform pale blaish color. This lawk often preys on small hirds during the Summer, but when the fields have been reaped and mowed, and the mice are robbed of their friendly caver, the marsh hawk watch for the tray rodents, and catch and devour great numbers of them. This species nests on the ground in swamps, sometimes on an old maskrat house, and, like the pigeons, make the first young ones assist in batching the remaining eggs. The mate remains in the vicinity of the nest while the female hunts. When the female is coming with her prey she gives her signal cry, the mule meets her in midair, relieves her signal cry, the nucle meets her in midair, relieves her of her burden, and feeds it to the young lawks, while the female disuppears in search of other game.

The sparrow hawk is also a great slayer of mice, and, although he kills many small birds, I think in the aggregate the farmer is his debtor. This little foleon is a widely distributed species, and I have found it everywhere during any rumbles in the States and Territories in the belts of cottonwood limber mur the water courses on the planins, and on the alpine summits of the Sierra Madre and Rucky Monatains.

Monatuins. It is the pretriest of the luleans, and his number of the little form is readily recognized by the ornithologist as he observes him perched on some fence stake or dend tree.

Next comes the short eared owl, which I have never known to ke guilty of killing a larger animal than a mole. He preys aimost entirely upon mice, builds his next on the ground in a northern cline, and, as far as my personal discretions are comes he is very currions, and fallows your alog closely over the ureadows, sunpping his liftl and circling close around, yet he is harmiess, and unless you are in want of a specimen of Brachyotas cassinii, don't shoot him.

The little acadian owl is not very well known in the East except by naturalists, yet he is worth a dozen cuts, black and tans, and mouse traps around stacks of wheat or a granary. This little nouse exterminator is rather common in Minnesola, and several furmers told me they had often seen small owls without ears catch inice around their outbuildings. Two of this species were taken ut my camp in Minnesola during the past Winter, and one of their stomachs contained some small shrews. This will have been dubbed the sawwhet owl, on account of its perentiar screech, but as I have never heard its notes but two or three times, hesitatingly given, I cannot assert whether he is justly named or not.

Next comes the screech or mattled owl, robed in his smit of red or mattled gray, as you may chance to find him. Strange it is, birds of the same sex of this species ure found in two distinct plumages in the same next. Evidently Dame Nature forgot herself when she put the red coult on the little gray screech owl; yet he wears it with becoming dignity, and freely associates with his more plainly dressed fellows. The screech owl; the wears it with becoming dignity, and freely associates with his more plainly dressed fellows. The screech owl; have of the red consists and brains five or six of his choicest pigcons. I have known an owl of this species to kill six of my lall-grown pigeons in a

HABITS OF THE WOOD DUCK-(Aix Sponse.)

Editor Forest ann Stream:-

EDITOR FOREST ANN STREAM:—
It is wanderful to observe closely the sagacity of certain untimals and hirds, and calculated not only to interest but to instruct the devotee of natural-bistory. Among waterfood the wood, or Summer duck, these rank as a bird of artifices and instruct stripusced by but few of our North American Idials. Notice, for instance, the strong maternal instinct of the wood duck which prompts her to seek an admost innercessfule meding place, secure from either the scinotiony or preductor unimals. Often when travellog near some lake or stream in Spring time a pelestrian may be surprised to seek a wood since ity swiftly from ut overlanging tree, and find on inspection a nest of eggs samply ensembled in which the parent bird his just flown. In a few days the young ducklings from the tree are confincted to the waiter, and here it is that the mother duck shows to the fullest all her canning artifices to protect her young.

that the mother duck shows to the futuest ait her comming areasers of tect her young.

Only a short time slace I came unexpectedly upon a broad of young ducks feeding upon a small slough in company with the parent field. The duck, after covering the retriest of the little unes, seemed to be stringsling desperately to get away herself, but intuicked to perfection the action of a wounded, wing broken bird. The ducklings were tying on all suics, some with a twig for cover, and others having their heads beceath the leaves to hite thouselvis. After an apparent attempt to hy, the mother would fait heavily on the ground, beating the grass with her whyse and again rising feebly, as though the effort exhausted her,

I picked up two of the tender fledglings at my feet, and secreted myself helded a shrub to retrieves the firther action of the dock. In a few inhorates sic returned cautionally and alighted in the slough, calling plaintiely for the hrowl, which came around her with their "pyep, neep," and the the two in my hand join her, when upon showing myself the duck guided her brood into the thick grass, and not a trace could I find of them, for the mather's care had concealed them.

Fren,

BLACK SQUIRRELS IN ILLINOIS.

EDITOR PORSET AND STHRAM:—

I im a constant reader of your valuable paper, and have seen various statements converning the existence of the black squirrel in the State of Illinnis. This work there is a statement from a gynliwman from Wankegan, who makes the assertion that he nover heard of the black squirrel being found in this State in any considerable numbers since thirty years upo. He also says that he has traveled the State from north to south, and never saw may. If it were black squirrels he mas looking for, he need not go half that distance to that them, for I have shot them myself not fully miles from Chicago, and, Judging by the quantity I saw on my last trip, he can come and shoot some himself if he thinks it worth while. All he has lo do la to take the train on the Chicago and Northwestern Railtond is far as Decrifield, and he can find any amount of black squirrels in the twoods about that section. Chicago Spoutsman.

[Our correspondent, "G. B. S.," "withs that from "56 to '61 he hunted about Wankegan, and owned the only bird dog in the place; that there are numbers in that place who could substantiate his statements in reference to killing black squirrels.—ED]

CENTRAL PARK MENAGERIE.

DECARTMENT OF PUBLIC PARKS, NEW YORK, July 17, 1875. Authorite received at Central Park Menagerie for the week ending July 16th, 1875:—

Sth. 1875;—
One Indian Elephant, Elephas indicus.
One Sloth Ilvar, McIursus labiatus.
One Bless-liok, Damalis albifrons. (Rabitat, South Africa.)
One Lembrater Cocknino, Cacatna leadboateri.
Two Red-crested Cockninos, Cuentua roseicapillo.
One Horned Owl, Bubo Virginianus. Presented by Master Frank Cathan One Opossum, Didelphys Virginiana. Presented by Mr. Charles C.

Dyer,
The Red Foxes, Fulpes fulvus. Presented by Messes. O. B. Wheeler,
Jr., and George R. Olney.
One Red and Blue Macav. Ara macao.
One Sleeping Snake, Boa — ? (Habitat, Hayil.) Presented by Capl.
James McKle, brig Mary Knowlton.
Two Hed Flambigos, Phoenicopterus ruber. Presented by Mr. E. Paschal.

W. A. Conklin, Director.

Woodland, Harm and Garden.

CALIFORNIA RAISINS.

CALIFORNIA RAISINS.

THIS is a branch of industry which, although as yet conducted on but a limited scale, is likely in time to rank high in the productions and exportations of the favored State of California. We notice in an exchange that a gentleman, Geu. Bidwell, who possesses au estate or ratche of some 22,000 acres, has plauted thereon, or rather in one small corner (for the amount of land required would scarcely exceed 100 acres) 110,000 vines of the white muscat of Alexandria for the purpose of making raisins, and those he has now on hand are, according to the California Horticulturist, as fine as any Malaga raisins.

We are reminded by this of a visit we once made to the Azusu rancho in Los Angeles county, the residence of Mr. Henry Dalton, an English gentleman, who settled in the

Henry Dalton, an English gentleman, who settled in the county many years ago, and marrying into a native family built up one of those lovely homes for which Southern

California has become so famous. At the time of our visit the family were engaged in making these raisins, both for home consumption and shipment to the uearest market. The museat of Alexandria, whatever may he its peculiarities on its native soil, can scarcely he excelled in the rich aroma and moselle flavor it attains in California. The hunches, however, are inclined to grow close to and rest on the ground—at least such was the case at Mr. Dalton's—and where ruisin making was to be a specialty it would be and where ruisin making was to be a specialty it would be necessary to protect them by plucing leaves underneath; but it must be remembered that in California the mode of cultivation is not on trellises, but in rows, not even staked, but trimmed luck each year to one bud, until the stalk becomes gnarled, and as thick as a small tree. The bunches on being brought from the vineyard were carefully dusted, and all dead or imperfect berries trimmed off with a pair of scissors; they were then dipped for a moment in lye and afterwards spread on large frames arranged in the open nir. At night they were removed to the honse to prevent contact with the dew, and after two or three days exposure to the snn were fit to be packed in the boxes made for the purpose. These raisins had the transparent, almost golden hue seen in the finest imported from Malaga, and brought in Los Augeles but twelve cents per pound. Still this was much better than the one can per pound which is the in Los Augeles but twelve cents per pound. Still this was much better than the one cent per pound which is the average paid for grapes for wino making purposes. We have seen waggon loads of magnificent black Hamburgs tumbled into the presses with the common Mission variety, all selling at the same price. These same Mission grapes make capital raisins for family use, or to use as a preserve only, as they possess so much specharing matter no addition only, as they possess so much saccharine matter no addition sugar is acceded to preserve them. They are merely hung in bunches to the rafters in a garret or barn, where they gradually dry up until wanted for use. ludged such is their sweetness and so dry is the climate that they turn to raisins on the vines without decaying.

The value of California's fruit crop is now \$6,000,000, as much as that of all New England.

According to Böttger, a moderately concentrated so-lation of caustic soda or patash seems to promote the ger-minution of seeds even more than announce, especially of coffee heans, which germinate with difficulty. After souk-ing a few hours in dilute potash solution, they often put forth snow white radicles.

UNREALTHY PLANTS.-Mr. Peter Henderson gives the owing advice in the American Agriculturist

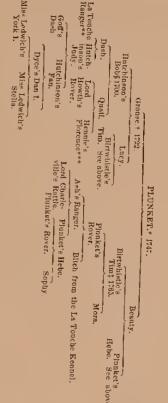

Unhealthy Plants.—Mr. Peter Henderson gives the following advice in the American Agriculturist:—
"Whenever plants begin to drop their leaves, it is certain that their health has been injured either by over potting, over watering, over heating, by too much cold, or hy applying such stimulants as guano, or by some other means having destroyed the fine rootlets by which the plant feeds, not usually important enough to call in a "plant doctor," so the amateur begins to treat the patient, and the practice is, in all probability, not nalike that of many of our household physicians who apply a remedy that increases the disease. Having already destroyed the, so to speak, nutritive organs of the plant, the stomach is gorged with food by applying water, or with medicine, by applying guano akin to what is a good one when the animal digestion is then, if the roots of the plant have heen injured from any of the above named causes, let the soil in which it is potted become nearly dry, then remove the plant from the pot, take the hall of soil in which the roots have been enveloped, and crush it between the hands just enough to allow all the sonr outer crust of the ball of earth to shake off; then re-pot in rather dry soil (composed of any fresh soil mixed with equal bulk of leaf mold or street sweepings), using a new flower pot, or having thoroughly washed the old one, so that the moisture can treely evaporate through the pores. Be careful not to over feed the sick plant. Let the pot be only large enough to admit of not more than an inch of soil between the pot and ball of roots. After re-potting, give it water enough to settle the soil, and do not apply any more until the plant has begun to grow, nnless indeed the atmosphere is so dry that the moisture has entirely evaporated from the soil, then of course water must be given, or the patient may die from the opposite cause—starvation. The danger to be avoided is in all probability that which brought on the sickness, namely: saturation of the soil hy too much water. Other caus

The Rennel. PLUNKET.

New York, July 17th, 1875.

New York, July 18th, 1855.

In a late issue of the Rod and the Gun I noticed a report of the arrival of the Irish setter, Plunkyl, with his pedigree altacticd, he having been purchased from Mr. Llewellin by Dr. Goldsmith. Upon comparison I find the one as putilished in the Rod and the Gun in some respects entirely different from his pedigree in my possession, received from the Rev. J. C. Macdona shortly after he bad disposed of Planket to Mr. Llewellin, and also to the one in the Kennel Club Stud Book. Enclosed you will find a copy of the same as I received it, tho numerals applying to their number in the K. C. S. Book, and the asterisks, etc., showing their chief performances. Regarding Carrie, which the Dr. also imported to breed to Plunket, sile is half Laverack, being by Prince (pure Laverack) out of Cora (pure Irlsh).

*Chief performances—Dog shows, Crystal Palare, 2d prize, 1870; Bala ampion prize, 1873. Field trials, Shrowsbury, 1870, 2d prize, Shrewsbury stakes; Vavnol, 1870, 1st prize for setters; Vaynol, 1871, 1st prize for setters; Vaynol, 1871, 1st prize fibe borong be stakes, and drst prize rith Counties in the Bodfel stakes; utilizampton, 1871, divided 2d prize in the Hampsbire stakes; Southspiton, 1871, entered in the all-aged setter stakes and braces, but not wed; Vaynol, 1872, 2d with Marvel in the Bodfel stakes. Chief performance—Birmingham, 2d prize, 1868, breeder, Hon, D. miket.

Warwick.

Our correspondent "Gnyon," writes us from Corinth, Miss., that his fine bitch Nora, has dropped nine handsome pups, of which he has saved six, five dogs and a bitch. Shooting prospects in that vicinity are excellent.

LAVERACKS IN AMERICA

EDITOR FOREST AND STREAK:

Point Dodge, Iowa, Jaly 10th, 1873.

Permit me to correct an error in Issue of July 1st, wherein John M. Taylor, Esq., indicates the precise number of true Laverack setters that have crossed the Allautle. It is evidently a misapprohension on the part of Mr. Taylor, who I am sure will be pleased to know that at least one more gennine representative has been imported by myself, namely, Pickles, by Prince torn brother to Countess, Nelle, and Dalsy), ont of Lill, who is also dam of Ledd and Lanra: Prince by Mr. Laverack's Dash II., out of his Moli III: Lill the Lanrack's Dash II. out of Blinkhorn's Lill, she by Laverack's Rock out of his Belle II., etc.

Pickles, as above stated, was timported by myself from the kennels of R. Le Parcell Llewellyn, Esq., Wellsley Hall, Ashby ile la Zanch, Letecatershire, England, and arrived in Boston, Mass., in company with Mr. Luthee Adams' Rock, per stramer Helveth Jinnary 23d, 1875. Shortly after her arrival she was warded by Rock, and on Apell 16th gave birth to five fine healthy lemon and while telton whelps, three bitches and two dogs, whielr at this time are all doing well and growing finely. I do not, however, claim that the whelps are true Laveracks, as Rock has an onteroas timouch Rhushe, who was by Hackett's Rake out of Payche, the latter a cross between the Gordon Castle and Soutt Eak Kennels combined. Pickles has all the characteristics of her race, and though small leraelf, her whelps all promise to make good sized animals, with plenty of bone, etc.

herself, her whelps all promise to make good sized animals, with prenty of bone, etc.

It would be nacless to comment inponithe character of Mr. Liewellyn, as he is well known both in England and America as an honorable gentlemen and ardent sportsman. To him Mr. Laverack dedicated his work, "The Setter," and in which he asserts that Mr. Liewellyn has spent more time perfecting the setter than any man living, sparing neither expense or trouble.

I make these statements since it is evident that there can be other pure Laveracks than those shipped by Mr. Laveracks himself, since other parties purchasing from him enjoy and exercise the same pelvileges.

C. F. Denuter,

[We are pleased to hear from Mr. Demuth, and gladly give place to his letter. As we stated in our last issue, there is no reason why there should not be other Lavthere is no reason why there should not be other Laveracks imported besides those which come direct from Mr. L.'s kennels. We admit, however, never having heard of Pickles, the more surprising as we have conversed with Mr. Adams regarding the importation of his dogs, and he made no mention at the time of another dog being importable them. ed with them.-Ed.]

"RANGER."

EDITOR FOREST AND STREAM:—
The setter dog Rauger, the property of Mr. Jynkins, of Baltimore, Md., recently imported from the kennels of Rev. Mr. Pierce ("Idstone"), is a very fine specimen of the red Irlsh breed, yot nut strictly up to the true old blood red or bay that distinguished the famed red dogs of Col. Hutchinson and the Evers breed, so tong kepl and bred at Mt. Hodges, the La Tonches at French Park, Sidwells, Lord Waterfords, Coopers, etc., and in Drebyshire, England, many of which in years gone by could be seen at the Evers kennel at Newtown, Is, I., and years afterwards in the keep of many members of the old and venerable "New York Ragitah Gentleman's Hant Club," having quariers in Liberty street below the old singar house, noted as the jurison in the limes of the reveluiton, and holding reserves in Jersey and on the Island. In those good old days we had the true blood, without any imnovations of orange, but a true inception of red liver, not brown, or, in other words, a true hores blood-bay, par excellence, with no possible shading of orange or the present show color, miscalled red. Nowadays many, very many, if not all, in the shows, called red, are simply the old fashioned and much admired orange, introduced by a cross of the old styled liver and the pure white, called by color selection and advanced from lemon to true orange through the intercross of the honest old blood red with the jemion. Nothing more not less the legister, the

intercross of the honest old blood red with the iemon. Nothing more nor less.

Now, owing to the excinsive breeding and personal bolding care of the true red in the individual kennels of the old stock breeders of Ireland, Derbysbire, and Lancashire, we have introduced into the States the orange for the scarce red; and why so! simply for the reason that the o'd stock blood red is in the hands and care of those who are landed proprietors, breeding only for personal use on their own large and extended preserves—that is, for their own and gamekeepers' use, and none are allowed to leave the manor, not even those known as cast-offs, or axed and retired dogs, these generally being shot under order; yet occasionally such can be picked up before the sacrifice (f) and hence we have disseminated through these conniles weaktened blood, which becomes the lorded progenitors of many hench show dogs and the nory grand prize winners sent over here in pedigreed form, almost exhaustive in its length. Nottribstanding all this, are the sportsmen of America to accept all these onteasts as true beed dogs of the true red—alas, orange color? Why, ohl yes, dear editor, why, are liere no offered prizes for the once highly prized orange? Simply for the reason that the Irish red, par excellence, is not to be had exceptibly rare occasion, and hence the orange is now substituted for the genuine true and honest blood red bay Irish, to the manor kennel born, and whelped under the gamekeeper's care and his lordly maslyr's supervision. Such dwas are not to be had by the public at large, and thus it is almost impossible to obtain an AI true bred kenneled dog.

Ranger is a great gain to the few good dogs of the country, being flat and finely coated, high in color, free from the black and orange shade

his lordly master's supervision. Such dogs are not to be holdy the public at large, and thus it is almost impossible to obtain an AI true bred kenneled dog.

Ranger is a great gain to the few good dogs of the country, being flat and finely coated, bigh in color, free from the black and orange shade defects, and rell up in bls many excellent points. We congratulate the sportsmen and gentlemen breeders, as trell as Mc. Jenkins, on his fortunate purchase, as this dog brings to our abil the following true Irish blood strains, viz: By Major Barry's Larry; Dam, Lilly the 2d, whelped July, 1971; sire, Cooper's noted Ranger, by Hutchinson's Bob, out of Lilly, Lilly by Shot, out of Trumbhils Quall, by Willkin, bred by Mr. Creagan onto f Belle, bred by Mr. Trumbhil. Willkin, bred by Mr. Creagan onto f Belle, bred by Mr. Trumbhil. Willkin, bred by Mr. Creagan onto f Belle, bred by Mr. O'Conner. Belle by Nugent's Don onto of Wallace's Dove. Don by Reeve's Robin, ont of Dr. Labotean's Jesse, bred by R. Moore, of Monastrain. Dove by Curhet's Gronze 2d, out of Corbet's Gronze 1st, from Lord DeFreynas' kennel, out of Corbet's Gronze 1st, from Lord DeFreynas' kennel, out of Corbet's Gronze 1st out of Kate. Fun by Gronze 1st out of Corbet's Pan. Dash by Corbet's Gronze 1st out of Kate. Fun by Gronze 1st out of Corbet's Pan. Dash by Corbet's Gronze 1st out of Hutchinson's Bob by Dash, out of Hutchinson's Nelly. Dan lat by Miss Ledwich's York 1st, out of Estella. Quall by Lord Howth's Rover, out of Harris' Flunner, bred by the late Marquis of Waterford.

Some fen days ago I had the pleasure of meeting my obl friend "Warwick," Mr. F. R. Ryer, at a private pigeon shoot, and was then and there enabled to shoot, and afterwards examine, a breech loading shot gon, which be had just received from that old established gun making frm, williams & Powell, of 25 South Casite street, Liverpoot, It is a 13-gange central fre, seven and a quarter pounds weight, and t

THE INTERCOLLEGIATE REGATTA

FROM OUR SPECIAL CORRESPONDENT.

Sanatoga, July 16th, 1875.

It has taken five years for the National Rowing Association of American Colleges to offer the public a successful general college regatta. Whether or not this good fortune on the fifth trial he accepted as a full compensation for the on the firm that he accepted as a firm compensation for the four wearisome failures which preceded it, the public ought at least to realize that, under the present system of intercollegiate rowing, a more satisfactory exhibition than the one of 1875 cannot reasonably he hoped for. Indeed, the chances are that another five years may roll around before the exercised colleges. fore the associated colleges can again offer so successful a show, and the possibilities are that its like may never be offered at all. But it is certain that whatever fault one may wish to find with this year's regatta must be found with the system itself; for, having once allowed for the many ineradicable disadvantages that attend a breast race between a large number of college boats, he will find no norm left for critishing. room left for criticism. Good weather, good management, and good rowing were all present at Saratoga Luke this week. And the best men wou,

The Freshman race of Thesday was witnessed by ahout

2,500 people, though not so many as that were assembled at the grand stand, where one report declares "5,600 or 6,000 people were gathered." Within twenty minutes of the signal call at half-past eleven the crews got into position. tion, Brown heing first in place, then in turn Princeton, Cornell, and Harvard, and at two minutes hefore twelve the "go" was given, and all four boats got a fairly even start, Harvard being puickest to eatch the water. The simple statement that these hoats crossed the finish line with an interval of but seventeen seconds between the first (Cornell) and the last (Princeton) tells the slory of the most exciting and closely-contested Freshman race on rec-ord. Horvard lost by but five seconds, Brown was ten seconds behind Harvard, and Princeton was two sreends behind Brown. The time of the winners was announced at 17:32‡, as against 18:10, the time of the winning Prince-ton Freshman last way. Navar buffers, eggs in 1821 when ton Freshmen last year. Never before—save in 1871, when Harvard beat Brown by 17 seconds—have Freshman crews

at 17:324, as ngainst 18:10, the time of the winning Princeton Freshmen last year. Never before—save in 1871, when Harvard beat Brown by 17 seconds—have Freshman crews been so evenly matched. Thus, twenty-eight seconds was the time by which Yale beat Hirvard in the Freshman match of 1867, and by which Yale was defeated in the similar trial of two years later. In 1870 the Brown Freshmen beat the Yale by 24 seconds and the Harvard by 39, and 1872 the Wesleyau Freshmen beat the Amherst by 22 seconds, the Brown hy 92, and the Yale Scientific by 111; and in 1873 the Yale Freshmen beat the Amherst by 41 seconds and the Harvard by 71. For four raw crews to row so pretty and even a race as did the Freshmen of this year was, therefore, an entire novelty, and the spectacle of their final struggle for supremacy was exciting to the most simpassive observer.

Not more than 250 people could be counted at the grand stand by half-past nine o'clock on Wednesslay morning, but for the next two hours a continuous throng moved thitherward, and at the time of the race perhaps as many as 7,000 people had assembled there, though 1 hardly suppose that the number of spectators at all points of the lake amounted to 8,000. Spite of some appearance of roughness in the water there was a general hopefulness that the race would be rowed, but the signal which announced that the crew were really "off" set many a doubting mind at rest, and was greeted with a hoarse murmur of gratified applause. At eleven o'clock, or just fifteeu minutes after the signal call, the boat of Bowdoin took its place on the line, and afterward, with varying degrees of delay, extending to half an hour in all, came Union, Cornell, Brown, Williams, Harvaril, Princeton, Hamiltou, Amherst, Wesleyan, Columbia, Yale, and Dartmouth. The order of their positions, named from the west sbore, was as follows:—Williams, Cornell, Amherst, Bowdoin, Brown, Columbia, Wesleyan, Princeton, Dartmouth, Yale, Hamilton, Ihrrard, Union. The latest crew of all bad been five minutes in po-ition

1867, 72; 1868, 50; 1870, 105. In 1871 the Agriculturists beat Harvard 37 seconds, and Brown 61. In 1872 Amberst beat the second boat (Harvard) 24 seconds, and the sixth and last (Yale) 100 seconds. In 1873 Yale heat Wesleyan (the second boat) 10 seconds, lintroard (the third bont) 37 seconds, and Trinity (the tenth boat) 154 seronds. Last year Columbia beat Wesleyan eight seconds, Harvard twelve seconds, and Princeton, the eighth and last hout, 116 seconds. Columns of descriptive writing could not indicate more fareibly than these simple comparisons the interest. The sixth crew, who were twenty one seconds helpind the victors in 1875, were evidently far better oursmen than the sixth crew who were 100 seconds behind in 1871.

About a tenth part of the morning's crowd were still at the lake when the start of the two-ndir single seull race occurred, at 3 o'clock luthe ofternoou. The contestants were Julian Kennedy, of Yale, agel 23, and weighing 160 paunds, and William F. Weld, at Harvard, aged 18, and weighing 160 pounds. The former won the race by half a minute in 14:21, though he had pulled in the three-mile tare with the Yale crew only three hours before. Weld, on the other hand, by order of the referce, had gone over the course at the hour regitlarly appointed for the race at the previous foreuoon, when Kepnedy, through a mistake of the Regatu Committee, had failed to present himself.

The street celebrations of the early evening were in marked contrast to those of last year, when, on recount of the "foul" which had thrown Yule out of the race, two hostile erowds, one representing Columbia and Harvard, the other representing Wesleyon and Yale, rashed angrity through the hotel corridors untering cheers and shouts of defance toward rach other, and apparently ready to accept the slightest pretext for a genoral secandoling fight. This year the best of good nature prevailed. Columbia mustered the largest crowd of partisms, and then in order, Cornell, Harvard, Yale, and Princeton men flocked aromal their fayes and

one of the hall rooms, and there presented with the champion flags and cups by Congressman Kellogg, of Connecticut.

On Friday about 1,000 people went out to see the foot races at the Glen Mitchell Trotting Park, aloud a mile and a half from the village, the attendance leeing rather larger at the afternoon thou at the marning meeting, and the nime "events" bring all creditadly and satisfactority contested. In the evening come the complimentary dinner to the Cornell crews, and afterward the pursonidion of prizes won by the albetes of the day, three gold watches being included in the list. The rain of this morning rather dampeted the enthusiasm with which the Cornell men were sent homeward in their special pubbee em, and to night the streets of the village give few tokens of the recent presenter of the intercollegiate crowds.

The regata of 1875 has proved the practicability of laying out racing lanes by lines of buoys upon a broad surface of water, and has given a strong hint as to the possible superiority of paper hoats to those constructed of wood. It has been rowed without serious accidents, or complaints, or bickerings. There were numerous breakings of stretchers and catchings of crabs; a few oars were unshipped, and a few outriggers were loosened, but no serious claims are raised against the thoroughness of Cornell's victory, which was indeed predicted by too many newspapers to make their surprise over its actual happening seem altogether geutine. The old hohit of exaggerating the number of spectators was well kept up by the newspaper men. To a Tones reporter, indeed "such a multitude presented itself on every hand that reason stopped counting, and imagination boddly suggested myriads," but he afterward deed, it was the foot to 20,000 people were at the lake, while the Word came down to the approximately reasonable estimate of 10,000.

—The Bayonne Rowing Club inaugurated their new boat house of such as a grant was a content with asserting that "from the came of the present of the such as a grant was a cont

—The Bayonne Rowing Club inaugurated their new boat house on Saturday by a series of rmes, comprising one for four-oured shells, another for four-oured larges, and one for single sculls. Two boats started for the first, and the crew with Walter Mann as stroke won, making the mile and a quarter in 7m, 20s. Two crews started also in the harge race, Mr. Van Buskirk's winning in 8m, 30s. Three contestants appeared for the single scull race, viz.—J. L. Beach, E. E. Shaw, and W. E. Van Buskirk. The latter gained a slight lead in the start, followed closely by Shaw, but the former won quite handdy in 11m., Shaw's time being 11m, 10s., and Beach's 11m, 13s.

REGATTA ON LAKE PONCHARGIANN—This guest sown.

being 11m. 10s., and Beach's 11m. 13s.

REGATTA ON LAKE PONCHARTRAIN.—This event occurred on Monday last, 1,500 persons being assembled at Milneburg to witness the races. The single small shell race was won by H. C. Cheever, of Charleston, by three lengths, R. G. Musgrove, of the St. John chib, second. The race was half a mile and return, and the time 9:45).

The pair our shell race was won by the St. John chib, Howard chib second, and the Pelican while third. This race was three-quarters of a mile and return, and the time 11:44.

roward emb second, and the Pelican while third. This race was three-quarters of a mile and return, and the time 11:44.

The four oared gig race was won by the Riversides by six lengths, Thope second. This race was one mile and return, and the time 14:082.

The four oared shell race was won by the Riversides, by six lengths, Charleston second, distance, two miles; time, 14 minutes.

14 minutes,

On Saturday, 17th inst., a match race in singles was rowed over the National course, near Phiindelphin, and add a half miles straight away, between Clerence E. Steel of the Grescents, and Frank Pleasonton of the Vesper Bont club. Mr. John Lavens, Jr., of the Pennsylvania arted as umpire, and Mr. Wm. Addicks of the Cadlege clob, as indegs. This rare excited interest, because the summer man had pulled a race for the Christiana Regutta, July 18th, 1874, Pleasonton winning ensity.

Both boats got away together before the word go was given. Steel was not long in getting to the front, and off the "Cemetery" was a good length clear, but by keeping

too for to the east, he got foul of the grass on the shoal water, and Pleusonton, who was steering close along the west hank, picked up until he was almost level. Cut som got clear and won by several lengths, in the very slow time of 11 min, 17% sec.

of 11 min, 17% sec.

Schals,

Cruss, the true Brooklyn Yacht Claus—Commodors
Dickersin has issued his order from the Mudeleine for the
yachts proposing to participate in the mutual cruise to true,
dezvous at Glen Cave to-day. Huntington and Greenjon
will be visited, and probably Martha's Vineyard, the liret
disbanding at Newpart. The following yachts are manned
as being likely to form the squadron:—Schamers Madeleine, Clia, Comet, Sen Witch, Lethen, Estelle, Syren, and
Glysic; slougs, Salie, Schent, Unline, Maggie R., Lizzie
L., Libbie B., Ibelena, Florence, Flying Chord, Emma T.,
Red Jacket, White Wing, Schemer, Saphie, Playful, and
Marcia.

The Care May Reducta.—This event, of which such high anticipations had been formed, was a success only as for as one day was concerned. The lack of wind on Mondoy rendered a postponement until the following day necessary. On Tarsday there was wind enough to enable the meet in he sailed, but not enough to bring out the hest qualities of some of the yachts. The following are the entries:—

Sen and River Hishing. FISH IN SEASON IN JULY.

Figure 18 Majoret —Fish of all descriptions have be rather more plentiful during the past week than the of preceding. Salmon are coming in from the Minumich larger opanisties, but to outling like the extent as at as lar period lost year; they sell for 30 to 35 cents per put Spunish nuckerel are being eaught to some extent in spinish nuckerd are bring eaught to some extent in one own waters, but the largest number still crans from the cinity of Norfolk; price for the former 75 cents per joind for the latter 50 cents. Fresh unackerd are coming in the ceatly from the Massachusetts moast, and sell for 12; real cach. Striped bass from Baltimore, Philadelphia, and Rhode Island, (singular how they dodge New York,) kins 20 to 25 cents per pannot. The largest blurdish are now received from Rhode Island and Massachusetts, the principal enteness being in Buzzard's Bay and the Vlacyard eriven from Rhode Island and Massarhaertis, the principal cutches being in Bizzard's Bay and the Vlucyan Saund; fish weighing 12 to 14 pagulas and selling for 8 to 10 rents per pound. Halilant are senree at 18 cents; cod of fair supply at 8 cents; sheepshead from the Jersey consistly for 20 to 25 rents. Large weakfish from the casiward are in good supply at 12 cents, but the smaller fish usually taken in this vicinity are very source. Sea lass from New taken in this vicinity are very search. Sea lars from New poor laring 18 in 29 crats. Soft crabs are scarre lad very man, and self for \$1.75 in \$2 per ilozen. Green in the about at 15 crats. dant at 15 cents per jound,

On Saturday last, Mr. E. G. Blackford, of Fulton Market, received from the Bremen steamer Donau a chest of entp, tench, and sterlet from Germany. These fish were put of a lot of breeders, to which reference is made elsewhere, sent lo the United States Fish Commission, and attracted touch attention, particularly from our German citizens, some of whom offered 25 cents per pound for them for table purposes. But the fish were not for sale, as they were to be forwarded to the Smithsonian Institute for the purpose of being cast and photographed,

purpose of being cast and pholographed.
RANGRIEV LAKES.—A correspondent writes that the treating in this locality with the week ending July 17th still andds good. Two gentlemen caught with fly in one day 250, and an another day thirty-six trout were landed, averaging from one to two unit a hulf pounds each. A huly caught at the mouth of the Rangeley River a land-locked salmon weighing half a pound, the first ever captured in this vicinity, and probably the first returns of the salmon fry put in at the Kennebago Rapids by the Maine Fish Cammissioners in the Spring of 1873. The weather has been cool.

fry put in id the Kennebago fabits by the Maine Fish Commissioners in the Spring of 1873. The weather has been cool.

New Arnesey.—Barnegat Inhit, Kinsey's Ashiey House, July 18th.—Weekly report ending July 17th:—

July 12th—Sheepshead taken by professionals:—John Soper, 21; C. Grim, 19; John Ridgway, 17; Job Fox 14; C. Parker, 4; A. Pharo, 4; S. Perrin, 4; H. Saper, 9; S. Ridgway, 20. Amatenrs—Bradway and Jenkins, of New York, 17; Alexander and Eddy, New York, 8.

July 13—C. B. Clifford und Martin Gites, Plainfield, N. J., 27 bluefish; Thos. Axworthy, Cleveland, Ohia, 2 sheepshend; by the prafessionals from 3 to 10 sheepshead; some twenly bouts out.

July 14th—Thomas Taylor, 13 bluefish; struck a school of large fish outside running from 10 to 12 pounds; C. B. Cliffon and Martin Gites, 27 iduefish.

July 15th—Chas. Wolf, New York, with friends, took 76 bluefish outside, running from 10 to 12 pounds, and reports large schools from the inlet north some six miles.

July 16th—Reports from the prafessionals show from 3 to 8 per hout; Chus, Wolf, New York, 6 sheepshead.

July 17th—Gea. Wooley, 20 weaktish, running from 2 to 3 pounds. Cupt. Laws took 39 sea bass to-day from the side of the wrecked scamer Mediator; they were from 1 to 3 pounds; from the deck of this steamer parties will have fine sport now, as they can fish from her with perfect safety, and at almost any time. Still Later.—C. E. Eggert, A. Pope, De Witt McMuun, of Brooklyn, just came in from ontside with 76 bluefish from 6 to 12 pounds.

Renarks.—Bluefish of small size continue to come in the inlet utonning and evenings, but do not take the squid well; sheepshead still biting freely, sen bass only middling. The first catch of weaktish worth reporting was yesterday; two men enught some 10, running from 14 to 24 pounds; prospect for settled fishing now good for the above. Gentlemen fund of this fishing, I think, can come with every praspect of good catches.

Forked Ricer, Ocean County.—Two weeks have elapsed since any has was seat yon, and during that t

men fand of this fishing, I think, can come with every pruspect of good catches.

Forked River, Ocean County.—Two weeks have clapsed since my lust was sent you, and during that time we have had the dullest kind of a season. For several days it seemed as if the fish had entirely deserted us, but during lust week good luck again crowned our efforts. Believing that the business of making folse statements as to the numbers caught for the purpose of misleading your readers and bringing them down here to empty baskets, to be numorthy of a "sportsman," I have purposely abskets, to be numorthy of a "sportsman," I have purposely abskets in Barnegat lay this season was taken on Sunday, July 4th, by Jos. L. Frame, Jr., of James F. White & Co., on the shoals opposite Forked River. Last Monday Messes, Waters and Peck, with Capt. Patter, from here, caught 63 weakfish. Tuesday, same party, 27 weakfish, 18 bluefish; Wednesday, E. H. Frame caught 48 weakfish and 3 sheepshead, Potter and party catching 37 weakfish; Tluttsday, fishing poor; largest catch by Mr. Holmes, 23; Friday, Oscar Van Bergen, of Long Island, and Mr. Williams, of Connecticut, 63 weakfish; Saturday, E. H. Frame 45 weak and 7 bluefish; Williams and party 61 weakfish and 2 sheepshead; Chas. Eggert and Mr. McMann, of New York, 76 bluefish (Irolling,) weighing in total 583 pounds. Yesterday the wind blew a perfect gale from the south'ard, and boats could not lay; no large catch. Suipe are beginning to come, and in another week we expect some shooting.

The Fishermes.—The whole number of fishing arrivals for the week ending July 15th was 48—28 from Georges, 11

The Fisherics.—The whole number of fishing arrivals for the week ending July 15th was 48—28 from Georges, 11 from the Banks, and 0 from mackereling. Amount of Georges and brought in 500,000 pounds, halibut 35,000 pounds. Bank cod 1,500,000 pounds; lletched halibut, 120,000 pounds; fresh do., 1,300 pounds. Mackerel are quite scoree of late, and the few brought in command good prices. The receipts have been light—about 900 barrels.—

Gape Ann Advertiser, July 16th.**

FISHING IN BUZZARD'S BAY,

FISHING IN BUZZARD'S BAY.

New York Citx, July 14th, 1875.

Edition Forest and Stream:—

Hard at work again, after a week of sport among the bluefish and hass of Buzzard's Ilay, my only consolation being the bone I bave of Hoading on that grandret of all veaters again next ceek, for really the bluefish are too heavy and too plenty to be let alone longer than a ceek by one who haves to bund away on a true pounder. By the cray, Buzzard's Bay is the very best fishing ground on the Athadic coast; the advantages of those grounds over all others being that many home, ceth experienced sallors, are glenty, ranging from twenty-five cetts per hour to \$6 \text{ far day.} Ome can make his hendiquarters either at Oak Bluffs, Wood's Hole, Falmonta Heights, are Nonquatt. The latter maned place being compactantively new, my be unknown to many. Horever, it is easily reacted, and, to my unition, in just the spat for headiquarters. It is located six mikes from New Beilford, on the cest shore of the lany, and commands a fine view of the whole group of Islands, comprising Peockese, Cittlyhmik, Namshon, Martha's Vineyard, etc. The New York and New Brilford steamers connect at New Bedford with ateamer direct to Nonquitt, the steamer flown Augusta making three trips a day to and from the Nonquitt flosse; heard from \$3 to \$3 per day. However, try for yoursplays. Thus of fish are needed, taken, from the scap of half a pound to thu minister means of balf a hundred. I may later give you a report of our prepased crabs amongst three fishends.

CARP OF THE ROYER, TWIN LAKES, July 18th, 1855.
EDITOR FOREST AND STHEAM:—
Having read accounts in your paper of the flahing at Twin Lakes, I take great pleasore in telling you that I never had better flabing. In two days we caught above flab, among them several fine lone; three of the tiont weighed over two pounds each; one caught by Genrga Wishington Smith, the others by E. W. Jewett, of Ponghkeepsle, N. Y.

John G. S.

JOHN G. S.

THE BLACK RASS IN WISCONSIN.

HOW TO GO AND WHERE TO FIND HIM,

HOW TO GO ANK WITEHE TO FIND HIM,

EINTER FOREST AND STREAM:—
Having been solicited to give through the cohomis of the Forest and
Strieam some information in relation to the valers for black bass fishing in Wisconsin, I propose in give a hrist description of the best tocallties, for these needs and goldance of the tocarist who may rish the Badger
State in the possible of beastil, pleasure, or sport.

The linest sensor for black bass fishing is from June outil October.

Mitovarkee, "Pince of the Beantifol," is the gateway or key to Wisconsile, and the starting point to the indocrous pleasure resorts and
as noish multiplined fishing localities. It is one of the most beautiful, as well
as houst prosperous, cities in the Union. The hotels are neezceptomashly
good, and the tourist will be well intertained at either the Nechall or
the Planklitten.

conside, and the stating point to the imprerous pressure teachers and abunding and flashing localities. It is now of the most beautiful, as well as most prinsperous, citles in the Union. This hotels are inexceptionably good, and the tearnst citle well interlained at either the Neahall or the Plankhitton.

The angler, citle in Mittvankee, should not fall to cill upon Mr. J. C. Welles, in 425 East Water street, the Inventor of the favante "Welles" bines red." Mr. Welles is againine sportman, with all that the name implies, "a ground, in base gentleman, who nill take great pleasure in giving all desired information in regard to the various fishing and shooting grounds throughout the State. He has the best selected stock of fine fishing tackle, gains and goin goods in the Northwest, and the tourist can be fishing tackle, gains and goin goods in the Northwest, and the tourist can lead to proceed a complete outflit for camping, fishing, or bunting.

Pewader.—Nincleen miles used of Mileankee, on the Chicago, Mileankee. This lake Is six miles hing and a unit wide, and the fishing toost excellent. Health's Hotel and the Oakton Springs Hutel, in the village, and Lideside, forther op the lake, furnish accommodations of the best kind. I saw Gen, and Mrs. Phil Sheridan get off the train at this place, a day in two ago, fully samed and requipped with rods, finding nets, &c., to do buttle with the hing base of this lake.

Ocomonococ.—O con-o-mo-moc, "Piace of the Beaver," or, as sometimes viridated, "Beautiful Waters," "Home of the Winds," is twelve niltes west in Pewindee, and thry miles from Milwankee on Chicago, Millirankee and St. Paul Relifouit. As a Summer revort it is popularly known as the "Samloga of the West," and in sporting parbine it is the "Angler's Pauladies," Within a radius of vight fully them or no less than thirty lakes, varying from one to several spare inties in extent, and teening with black hass (Westpherus milmodules) on experienced grains and housine case of the Samloga of the West," and the smaller f

will broth troit of his own raising. Eighteen miles soothwast fles the village of Hankesha, celebrated for its medicinal springs, especially the far-famed Bethesda. The hotel accomorbiations of Wankesha are flest class. The Fountain Spring Hotel is a magnificent slope structure, metropollian in all its appointments. The Brare Hotes is very pleasantly located in riose proximity to the several springs, and is a most comfortable and destrable abode.

located in riose proximity to the several springs, and is a most comfortable and desirable abode.

Elkhart Lake is sixty miles north of Milwanker, on the Wisconsin Central Railroad, and is becoming very popular, and deservedly so. The lake is a beautifol sheet of writer, and furnishes fine farilities for fishing, boating, or sailting. There are two hotels on its banks, and both are nell kept.

Menasha and Neenah.—These twin cities are 100 miles north of Milwanker, and can be reached by either the Wisconsin Central Railroad or Northmestern Railroad. They lie at the foot of Winarching Luke, on either side of Fox River, the ondet of the lake. This is the largest lake in Wisconsin, being thirty miles long with an arerage midth of from miles. On the opinistic side of the cities is Lake Buties des Morts. The hass fishing here is very good; the Neemah channel of Fox River is especially good for fly fishing. The bass are mostly the small-month variety. Here are also found the ubite bass (Labrar albiding) the pike perch (Lucioperca Americana) and, to the occasional disgust of the anger, the sheepshead, not Sargus orls—Heaven save the work—hat Corrina osculo. The storgeou also bolds blgh carniral in three waters, sometimes attaining the weight of 200 pounds. The National Hotel at Menasha is the angeler's resort. It is need ordered and ably conducted Boots, our-rieu, and all nevessary appurlemances for fishing are furnished by the host.

Geen Bay.—Proceeding down Fox Ricer Iron Menasha to Its month, some timent, diversing and the city of Green Bay.—The Some timent, and the contraction of the city of Green Bay.

by the host.

Given Bay.—Procreding down Fox Ricer from Mensska to its month, some trenty-five miles, we come to the city of Green Bay. The flue hotels and many attractions in and about Green Bay render it a very desirable Summer resort. It can be renched by the W. C. R. R. at N. W. R. R. from Milwauker. It affairls magnificent bass fishing and smiling, while adjacent streams flowing into Green Bay are well stocked with break treat.

while adjacent strams flowing into Green Bay are well stocked it in brook troot.

Green Lake is nimity miles northwest from Milmankee, and six milrs from Hipon, our diamod of the C., M. and St. P. R. R. This is quite a large body of water, heling some lifteen inflix long med three aide. The shores compaise it plensing variety of given slopes and racky clifts. The mater is quite deep and cool, for which reasons, I presume, the base do not commence biting before September. Here is the hest Fall base fielding in the State, and the base are minimally large. I have seen a stiling of forty black base taken from this lake a high arranged six pumuls apiece. The Oakmood House is a limitsonate and rommodious structure, attendageously located on the hank of the lake; it is kept upon until November, and furnishee every convenience for the burds of angler. A frir unles nest of Green Lake are Fickanny and Bulhalo Lakes, renormed for their good fishing and for furnishing the best direk shouting in Wisconsul.

frir onles nest of Green Lake are Pickanny and Buffalo Lakes, renormal for their good fishing and for farabiling the brist duck shorting in Wisconsin.

Minthon, the capital of the State, is ubjety-fire miles west of Micankee, on the C., M. and St. P. R. R. Minhism tessaid to be the most landsomely-formed city in the Union. It is situated on an isthmus, between lakes Monona and Myndota, two magnificent sleeds of eather. The city rises gradually by a pleasing ascent to the summit of the listinens, where is located the State Capital and park, some seventy free above the lored at the lakes. The city is especially noted for its great heavity and romardle situation, and is much resorted to by the tombst. The hotels are large and roomy, and kept in the best style. The lishing is good, and the lakes me navigated by many finely-equipped ynobts and pleasure steamers. The lakes, in addition to the usual railrites of fresh enter lishes, contails a variety of the white fish, genus Coregonas, which is much esterned for the table.

Devil's Lake, thirty-live miles morthwest, on the C. and N. W. R. R. is a mated spot. The lake is surrounded by perpendicular walls of solid ruck, rishing hundreds of feet above its placid surface, and is a favority resort for the inverse of the vonderful in nature. It is no doubt the result of volcanic action, as this part of Wisconsin has a rolling, and olds.

og sorface. There is a pleasant hotel upon the border of the lake. Thelve unles furtier north are found the famous "Dells of Wisconsin." These dells (talls s) are unoug the most sublime and stapendous natura curiosities on the continent. They have attracted the attention of our most rathent geologists, and are equally interesting to the scientist of the simple force of natore. The dells are several alles in extent, and small stranger piles up and down the tiver for the benefit of the sight see.

ever.

Oshkosh, Fond du Lac, Winacconne, Braver Dam, Fox Lake, and
Sparttenre plinces worthy of nutice in this connection. The secker after
licaliti, pleasure, or sport, in fact, can scarcely go amiss in any pertiou
of the State to realize his foudest wish or most ardent anticipation.

Occnowood.

Answers To Correspondents.

Dick, Charlotte, Mirh.—Cannol give you the information from our own knowledge. Dupout's powder, No. 2, 1811 cost you \$3 57 per keg of 61

E. F. B., Gogrerieur. —What is choke bore to a gun? What is the drup of stock on guns mostly used by trap shooters! Ann. It is the contraction of the bore a certain distance from the muzzle. The usual drop is about three inches.

C. A. S., Slokoper.—On page 300, June 17th, your Creedingor article reads: "There acre fifty-eight entries for the Tart, Field and Farm hadge, 200 yeards, off band." Please inform nee if the shots were made standing, etc. Ans. The position was similing.

A. M., Nyack.—Can you tell me of any good front streams in Rockland county, and also if Cedar Pond is good for black bass? Ans. We cannot. Can get no information regarding black bass in Certar Pond, but learn, in compensation, that the twoodrock shooting there is excellent.

L. S., Pidladelphia—Having noticed in your correspondence that the

leard, in compensation, that the rooters boothing function that the arrest in two good for corns in togs, and baring butted Philishelphia breef for it, can you inform me where it can be procured? Ans. Hive sent to you a few doses of areca but, and written you how to administent to you a few doses of areca but, and written you how to administrate the can be procured?

ter it.

E. S. E., Rochester.—In what part of the White Mountains is the best troot lishing, and is it very good to any piace? Is there any good shooting there to Joty and Angest; if so, what? About North Concay and Jackson Falls; fish small, but to fair numbers; buy Mr. Prime's "I go a fishing." No shooting worth mentioning.

C. & S., Baltimore.—Please inform as where the Kay concentrating cartridges can be had? Ans. Owing to some delay in getting the machinery to operation for the Kay concentrating cartridge, they are not yet in the market, but me are informed they will be for sale at the processing gun stores in this city in the course of a week or two.

J. L. G., Philadelphia.—Can you give me the number of the person in New York who sells the new dy book mentioned in your last lesite, and described in That Norris' letter? Ans. We presume you mean Mr. Pennell's kook, which is an English work, and only to be had through an inporter; but you can address Mr. Thad Norris, No. 209 West Legan Square, Philadelphia.

F. F. K., Boston.—Will you give me the names of some American

Square, Philadelphia.

P. F. K., Boston, —Will you give me the names of some American books an ynchting, and a ho they are published by? I have real about all the best English books on that subject, and wish to read some American ones. Ans. No American books that we know of, but there are some periodicals—the "Aquatic Monthly," for Instance—which contain much information on yachting topics.

muck information on yachting topics.

J. L. H., Tuftonbord, N. H.—Is "Hancy's Journal" now published in you city? Is Dittura's gooder to prove a failure or a success? Which of the Territories do you consider the best for hunting and trapping wild fowl? Aus. Yes; at No. H9 Nussau street, in this city. We have reason to believe that it will prove a success; see Mr. Dittura's felter next week. Nortbern Minnesota and Dacotab Territory.

SNIPE, Brooklyn.—Will you please Inform me through your paper of some good place, not more than 200 miles from New York, where I prefer some place on the coast, and I don't cane about a stylish place. Aus. Would recommend Barnegat Bay or Good Ground, Shinnecock Bay or Patchogoe, L. L. Finther to the eastwarf there are many points from a filch you will find correspondence in our colamns.

R. H. & Co., New York.—Will you kindly give us the size of the

you will find correspondence in our columns.

R. H. & Co., New York,—Will you kindly give us the size of the Wimbledon (arget? This infarnation you formished as ooce before, but to offertunately we have mi-band it. Aos. 200 yards target—ballseys, 8 inches diameter; centre, 16 inches; inner, 28 inches; onter, 40 inches. 200 and 600 yards target—ballseys, 22 inches diameter; centre, 38 inches; inner, 51 inches; outer, 70 inches. 800, 900, and 1,600 yards targets—bullseys, 3 feet in diameter; centre, 4 fret 6 inches; turre, 6 fret square; outer (remaioder of target), 6 feet by 12.

A. H. G., York, Penn.—Cau the John Rigby & Co. 's breech loading shot gun, advertised it your paper, be purchased in this country; if so, where? Is "Ghan on Bieech Loaders" ao English publication; what is the price of the look? Ans. Only one John Rigby shot gun in this city; and that is in the hands of Messes. Schayler, Hartley & Graham, No. 19 Maiden Lano. This is the gun brought to this country by Mr. Rigby at the time of the international match, and can be bought far below its value; 10 ganger, 30-inch barrels. "Gloam" is an Amenican work; price \$2. We can see of it.

Lano. This is the gan brought to this country by Mr. Rigby at the time of the international match, and can be booght far below its value; to gamer, 30-inch barrels. "Gloan" is an American work; price \$2. We can send it.

Wixerester, Philmiciphia.—Wanild you consider a Winchester ride, burrel 20 to 3d inches long, as good as the Sbarps or Remingtons at the long ranges? How does it compare with the aforesaid as regards accuracy and milability? Ho pair concider it a sufe gan? What books did Dr. Bethane write on fish and fishing? Ans. The Winchester ride would ansare up to say 500 yards; beyond that it could not compare with the others maned. The usual length of burrel is 20 Inches, and the calibre universally (1 it is perfectly safe. Walton and Cotton's Angler, poblished by Wiley & Putosin, bot now nearly out of print.

If W. A. New Haven.—Will you be so kind as to inform me through your paper a line the bird called. Mother Carry's chicken" comes from, or have they hatch out their young ones, for they are over seen on land or man the shore, but always at sea? Ans. The petrel, or "Mother Carry's chicken," breads on our roast as far south as Caseo Bay, on the coast of Mainr, and in ununbers about Grand Manna, in the Bay of Fundy. In No. 9, Vol. 11., will be found an article discripting of the habits of this bird. We can send you the paper.

R. H. T., Worcester,—Would like to inquire what is the O. K. thing for a hound that has what we call red mange; have looked back through all my oid papers and find nothing, although it may have missed my eyef Will you please give, if not niready given, the size of Creelmoor largets for two, three, foor, flye, and sky hundred yaids? Ans. Apply compound sulphur ointement reduced to thirkness with a hith oil, to make it door easily rabb d tote the tools of the bele. This should be continued every might for three or four times in succession, after which the dog should be nell mished with cosp and n ater. Besides, give him fire drops of Fourler's solution of arsenir trice a day for fo

—The New York Athletic Club held a meeting at their grounds, Mott Haven, on Sahirday, the principal event lecing the hulf mile race for the club championship. W. E. Chritis and M. E. Burris started, the former winning in 2 m. 12 sec. The second race was a quarter of a alle leanlicap for a silver medal, which was won by J. P. Fannon, allowing W. L. Stone 10 yards, in 573 seconds. For the third race, 100 yards handicap for a silver medal, A H. Cartis and C. Williams started at scritch. E. Goldsmith was handicapped at 5 yards start and won in 113 seconds.

WEDNESHAY, July 28th.—Trotting at Saratoga; Corning, N.Y.; Cleveland, Ohio: Beacon Park, and Gettysburg, Penn. Base Ball, St. Louis vs. Hartford, at Hartford.

TENNESSEE STATE SPORTSMEN'S ASSOCIATION.—The committee having in charge the preparation of the programme for the meeting of this association to be held in October bave so far advanced with their labors as to enable us to place before our readers the following synopsis. The dog premiums are munificent, and should call forth a very large entry, particularly if favorable arrangements can be made with the railroads for the transportation of dogs. We are indebted to Mr. Bryson, President of the association, for the following:-

tion, for the following:—
"The Field Trial, Beneb Show, and Shooting Tournament will take place at Memphis, commencing October 25th. For Irap shooting, three first days, \$3,500 is offered. Second and third days, Beneb Show. Premiums amounting to \$500 for the various strains of setters and pointers. Fourth day, Field Trial for puppies under eighteen montt.s; purse \$300; \$15 entrance. Fifth day, for braces; purse \$500; \$25 entrance. Sixth day, free for all; purse \$500; \$25 entrance. The association turned loose a large number of quail on already well stocked ground. Many are hatched out and able to fig."

Full programme will appear soon in our advertising

Full programme will appear soon in our advertising

BONE AND MUSCLE.

THE battle has been fought and won, and a double victory gained by one college-n most unprecedented and unlooked-for occurrence, and one that in several ways will break down custom and banish tradition. As the annual battle of the oars is fought in England by the two universities of Oxford and Cambridge, so had it been for years with us, and Yale and Harvard attained a supremacy at the sport which it was almost heresy to doubt, 1852, when Harvard defeated Yale in the first regularly or ganized race on Lake Winnipiseogee, until 1871, when the Massachusetts "Aggys" astonished the hoating world by their victory at Ingleside, on the Connecticut River, these two colleges had fought the hattle by themselves. The formation of the society known as the Rowing Association of American Colleges has, however, produced a great change in the combition of affairs, and but for the unfortunate accident to poor Cameron, of Trinity, on the present occasion fourteen colleges would have been represented at Saratoga. But we think that there is much more in this than a more matter of increased representation; it indicates a greater interest in those mauly sports which harden the frame and promise results, to he seen, perhaps, only in a future generation, but which will do much to relieve us from the not altogether unjust accusation of heing an enervated and effeminate race. In fact, it is apparent that a great change is being effected in the sentiments of Young America, and one that the fathers and sages of the nation should hail with joy. The growing disposition to include in field sports should he encouraged by every means, and particularly by a withdrawal of that surveillance which but a short time since rendered it almost a matter of shame for a man to be seen with gun on his shoulder or a fishing rod in his hand. We are changing as, a nation also, and the day when a man's credit suffered hy his taking an hour's relaxation from his business has passed forever. As fortunes are accumulated and there are children to inherit them, it should be a paster for reciping if the tastes and them, it should be a matter for rejoicing if the tastes and inclinations of sons, upon whom the burden of providing for life's necessities are not thrown, should be directed away from those pursuits which encryate and ruin toward those which inpart strength and vigor to the system, and give healthy occupation for both mind and hody. Surely it is better to break a dog than to fight a "tiger," even if the breaking of the latter beast be the result; and the increased interest taken in field sports in this country of late years can hardly be realized by those who are not in the direct channels of information. The development of an increased interest in both yachting and hoating is a most healthy sign, and the formation of athletic clubs all over the country indicates a period when the cultivation of the muscles will he deemed a necessary portion of education. That the mind need not suffer in the improvement of the physical system is amply exemplified in the case of Cornell, which college was also successful in the recent intercollegiate literary contests.

Iu England, boating, and, indeed, athletics generally, have found such advocates and adherents as the revered Kingsley and "Tom Brown," and although we are as yet behind that country, taking time as a test of bone and muscle we are rapidly approaching them. In the athletic sports which followed the regatla at Saratoga the performances of the undergraduates were far above mediocrity, and indicated a coming time, not far distant, when their perform-In England, boating, and, indeed, athletics generally, have cated a coming time, not far distant, when their performances will rank with anything across the water. The Englishman has a great advantage over the American student, inasmuch as the preparatory schools whereat he is fitted for college also fit him for the cricket and the boating, the running and the jumping in which he is afterward to parrunning and the jumping in which he is afterward to participate. At Eton, Rugby, and Harrow these sports form an important part of the curriculum, to the extent, indeed, of employing professionals in cricket and loot-ball to teach the young idea how to bowl, bat, and kick.

The increased attention given to rifle shooting is another bouldby, indication, and the successes of our representation.

healthy indication, and the successes of our representa-tives in Ireland will lead to still further emulation. Outof door life is what will make a man-one fit to reproduce his species, and give us a generation which may be able to correct and eradicate the wretohed political errors and dishonesty under which we now lahor. A sportsman is per force more or less of a naturalist, and, as a rule, such men are honest. Give the hoys ponies, teach them to shoot and feb, and accourage them, in their catalatic growth. fish, and encourage them in their atbletic sports. Mind and body will grow apace. The old-fashioned system of training by reducing has exploded, and is now as dead as philebotomy or Julius Cæsar; if another argument against it was wanting, the examples of both Yale and Harvard in the recent regatta would be sufficient. In the case of Yale over-anxiety to win produced over-training and consequent stalcness. Let us see if the coming generation will not compete in manliness and hodily and mental vigor with any race the sun shines on,

New Game Chromos. - Messts. Robert Newell & Co., Buffalo, have issued a pair of chromos after paintings Machin, representing a brace of woodcock and quail respectively, that are well worthy the attention of sportsmen, particularly as the price, only \$5, brings them well within reach. Specimens can be seen at No. 71 Liberty

A correspondent, "Dick," desires to know where he can and good duck shooting in October nearer Charlotte, Mich., than Sandusky Bay, Ohio; also information regarding board, hoats, etc., at the place directed. Can any of our readers furnish the information?

ON AND EXPORTATION OF FOOD FISHES. IMPORTATION

HE steamer Donail, of the North German Lloyd THE steamer Donail, of the North German Lloyd Steamship Company, arrived on the 16th with a consignment of live fresh water fishes, imported by the United States Commission of Fisheries for the waters of this country. They were brought in charge of Dr. Rudolph Hessel, a fish culturist of Enrope. The principal species obtained is the carp of Southern Europe. Quite a prejudice exists among many of our fish experts against the carp, which, it is claimed by others of experience and authority arises. it is claimed by others of experience and authority, arises from the fact that a number of varieties are confounded under the common name of carp. Several varieties are discilledly inferior, while it is claimed the mirror carp, (Cyprinus earpio, var. specularis,) and the scaleless carp, (var. alepidotus,) are a superior table fish. It is the last two nenlioned varieties which the United States Commission desire to propagate and to distribute through the country. The fish have been moved to Druid Hill Park, Baltimore, Maryland, where the city authorities have erected a building and ponds for their propagation, and also that of other

A few of the beautiful gold tench, (Idus melanotus,) which rivals the gold fish in brilliancy of hues, and the traut for activity, were also imported. The common teach of Enrope, fabled to make other species in the waters where exists healthy, were brought with the rest. It is to be hoped that the propagation of these species may prove a success, especially if it be the fact, that they are adapted to our shaggish stream), and even to the ponds of stagnant water, South as well as North

On the 17th the steamer Mosel, of the same line, took out a shipment of shad for the waters of Germany. The failure in the attempt of last year will occur to the of many of our readers when perusing this statement.

Dr. Finsch, a prominent naturalist of Germany, was seut out a few years since by his government to investigate the character of our food fishes and fisheries, and reported very favorably of the shad. Since then, in currespondence with Professor Baird, he has repeatedly referred to this fish, and asked Professor Baird's aid in an attempt to pro-

cure them for the waters of Germany.

The North German Lloyd Steamship Company propose to transport the shad and attendants free of charge, which makes the accomplishment of the task an ensy matter so far as expense is concerued.

An experiment has been carried on by a member of the corps of experts employed by Professor Baird during a fortnight's time, in which it was proven that the hatching of the eggs could be retarded as long as ten days if neces-The failure in last year's attempt resulted from the fact that the young fish starved after they were about ten days old. No experiments in supplying them with food have thus far succeeded, but it is believed that by hatching them five or six days out on the voyage they can be carried through the remaining five or six days in good condition, shad having been carried this length of time frequently.

The eggs were procured at Holyoke, Mass., from the Connecticut River, and moved in a series of flannel trays or frames to the steamer. This is an apparatus which has come into use of later years among certain American fish culturists, and upon which a patent is held by a gentteman in Michigan. The eggs are not at all immersed, but are kept moist by dripping water, and tiers of the trays filled with eggs, placed in wooden cases, are kept at an even cool temperature by the use of ice. By regulating the temperature the development of the eggs is at the control of the attendant, and they can be hatched in any period from four to ten days. Just before the period of hatching it is necessary to place the eggs in water, so that the young fish may find itself in its proper element when released from the shell. In order to keep up the circulation of water, so processary for the life of the term and the young fish as one necessary for the life of the egg and the young tish, a can has been devised with a funnel-shaped bottom, and the cir-culation is produced by pumping air in from beneath, the rising of the bubbles and the forcing of the air in at the bottom producing not only an ample movement, but at the

same time acrating the water. It was expected to start with about 400,000 eggs, and if the expedition is successful the River Weser, for which the fish are intended, will have a very fair seeding of Ameri-

RECEPTION FOR THE AMERICAN TEAM .- In order to give the American Rifle Team such a reception on their return home as their victories, perseverance, and self-denial enti-tle them to, as well as some testimound commemorative of the occasion, it is necessary to raise funds for the purpose. If the amount required was contributed voluntarily by the if the amount required was contributed voluntarily by the public it would not only be much more agreeable to the members of the team, but satisfactory to the committee who have the matter in hand, masunch as it would save the accessity of soliciting. It is therefore suggested that those desiring to contribute should send their dunations to the Secretary of the committee, Mr. Robert Johnson, of Messrs. Arnold, Constable & Co., No. 881 Broadway.

LAKE COUCHICHING.—Our special correspondent, who gossips clsewhere of Summer travel in Caunda, is quite travel in Caunch, is quite pardonable in descauting upon the merits of this Summer resort, for we can attest from personal experience to its combining, in our estimation, more attractions than most any place we have ever visited elsewhere. This is saying a great deal, but we feel warranted in the assertion. Descriptive pamphlets at this office,

SAUNTERINGS IN ONTARIO

[HY OUR SPECIAL THAVELING CORNESPONDENT]

O the tourist who is desirons of seeking a quiet retreat and the luxuries of home, together with aquatic sports to repletinn, perhaps no hetter resort could be found than the Muskoka district of Ontario, Canada. Its found than the Misskoka district of Ondrio, Canada. Its ready access from the States from almost any direction gives it an advantage equal to that of any other locality—not only by rail, but by water through the vast chain of lakes which skirt our northern boundary from Duluth to Collingwood, the extreme point to the castward, which is connected by rail with Lake Sincoc and the almost unlimited number of smaller lakes to the northward.

The tourist, after reaching Niagura Falls, can take the curs at Cliffon and go down the river to Niagara, where the fleet steamer Ruthesay Custle will take him to Toronto. ilistance thirty-six miles by water. At Nlagara, directly at the mouth of the river, on a slight bluff, is located the Queen's Royal Hotel, overlooking the mouth of the river and bay, with the walls of old Fort Niagara on the American side looming the presenting an edge looming the presenting of the control of the river and say, with the walls of the control of the river and say, with the walls of the control of the river and say, with the walls of the river and say the reserving the reserving the reserving the river and the riv can side looming up, presenting a very picturesque appearance to the observer from the limitel; which, by the way, is of the first class, and well patronized by visitors from both sides. In the waters adjoining is the favorite fishing ground for black lmss, which affords so much sport to the

In Toronto one should spend II few days at the Rossin House, or the Queens, both first class hotels, and visit the various places of interest about this interesting city, or take a sail in her bay or a drive in her parks and highways, pre-paratory to a trip to the lakes north. The Rossin House is the resort of sportsmen from all parts. The proprietor, Mr. Shenrs, long and favorably known as connected with the Clifton House, Niagaru Fulls, is a thorough sportsman himself, and will extend to all the hospitalitics which spring from the heart of every true lover of rural sports, let him come from whatever quarter he may.

The Northern Railway forms a connection between all the ports on the likes and the Muskoka territory through different railways running into Toronto, aml steamers from Niagaru, Roehester, Kingston, and Montreal. This railway is under good manngement. It has a fine bed, good track fine pulnee cars, unkes good time, and is thoroughly equipped in all its appointments, so that one may feel as much at home as on any of the roads in the States. By This road you can go to Lake Simeoe. Here you can stop over al Barrie after a two hours' ride or so from Toronto. It is a pretty little town on Kempenfelt Bay, an arm of Simcoe. Here you can find good quarters at hotels, and fine fishing in the lake. This buy was named after the commodore who went down in the Royal George, of bistoric notoricty. From this town you can take the railroad or stemboat for Lake Concluding, at the head of Lake Simeoe, separated only by a mirrow strait half a mile long, called the "Narrows." It is a heautiful lake, twelve miles long, studdled with many islamls and indented with some pretty bays. The little town of Orillia is on the south end, and the Imlian village of Rama on the east side. This lake abounds with black bass and trout, and discharges its waters by means of the Severn through beautiful scenery witers by means of the Severn through beninful scenery into Georgian Bay. Several little steamers ply upon its waters. Ynchting and fishing is the pastime of Summer visitors, with other sports, which serve to fill up their pleasures. To-day, which is Dominion Day, there is a yacht race on the lake, consisting of eight sail, one of the tonnage of eleven tons. This udds much to enliven the scenery, which otherwise is charming.

As all Indian names are supposed to bear some local sig-

nification, some of them highly poetical as well as appropriate, it may not be out of place to render the word Cou-chielding into the Queen's English. The surface of the luke, always stirred by varying breezes, will attest the name of 'lake of many winds." It was owing to these cool and varying winds that suggested to the enterprising capitulist the propriety of estublishing a Summer resort where all the advantages of aquatic sports and rural pleusures could have unbounded sway, with all the counforts of fashionable life, without the burthens and trammels of etiquette and court life. For this end it splendid hotel has been erected at great expense at the point of a narrow promontory, projecting a mile and a half northward into the lake, and surrounded on three sides by water. Thus it is fanned by every breeze, and every prospect pleases. I can scarcely conceive a more charming spot. Mr. Senlly, the proprietor, is an old lamillord, and a gentleman who studies to please his guests. His bouts, his luckle, his servants, himself—"ht your service, sir." I could dwell on this subject long, which would necoul with my feelings, but I do not inlend this as a "blow," and for fear it may be taken as such by the innuy renders of Forest and Stream, I will desist, and hasten to complete my lettor.

From the Conchiching hotel you can take a steamer or railway to the head of the lake. Here you will take the stage to Muskuka Lako, dislunt twelve miles, where n steamer awaits to take you through this lake into Lake Rosseau and Lake Joseph. The Northern Ruilway oxtension to Luke Maskoka will be finished by October next, making a continuous line from Toronto. Here the most enthusiastic sportsman and angler can luxuriato to his content. The great number of smaller lakes in the neighborhood can be reached by short stages, and the angler's hand tried on muskinonge, black bass, pickerol, sulmon tront, and thousands of speckled trout in the streams emptying into these lakes. The season of black flies and mosquiloes is now passing away. I have found other bills not so much attention.

exceptionable, the charges being moderate and satisfactory. The tourist can take a steamer at Rochester, New and cross over to Port Hope, and then, by the Midland Railway, reach the hotel at Couchiching direct, which may be a preferable route for those coming from be a preferance route for mose coming from the south and eastward to that via Toronto, provided he is sure of making connection; but then he would lose a visit to Niagura Falls, which the lover of the grand and sublime can never see too often.

Of the above group of lakes something has been said in your columns before, and consequently I will forbear any further comment until I make the tour complete at some future day, not very distant, I trust.

Couchiching, Ontario, Canada, July 1st, 1875.

The Rifle.

THE AMERICAN TEAM ABROAD .- Our last summary of the lelegraphic dispatches regarding the movements of the American Riflemen in Great Britain brought us down to the 15th inst. when they were still sojourning in Scotland. On that day Col. Gildersleeve wrote to Mr. Mildmay, Secretary of the National Rifle Association accepting the enp offered by the British riflemen for competition among the Americans, but as this arrangement was independent of the team organization il was not certain that all the members would enter for it.

On the 16th the team reached Wimbledon. Shortly after they arrived at their tent, Lord Wharneliffe and Lieut. Col. Phillips visited them and accompanied them to the Council's tent, where they were received by Mr. Mildmay, Sccretary of the Council. After the usual courtesies the Americans were shown over the camp. They were to shoot first in the St. Leger Sweepstakes, at 200 yards range. Each competitor to have ten shots.

They were also to compete individually for the Albert Cup, valued at £500, the Arthur rifle, worth £100, in the Derby and St. Leger Sweepstakes, for which there are numerous cutries. In several of these confests the rules require the use of the English military rifles. The Americans had some practice with these arms in an extra series of matches that day. Gen. Dakin, of the American toum, made 28 points out of a possible score of 35, and Sir Henry Gen. Dakin, of the American team, Hulford, a crack British shot, made 34. The scores of the other members of the American team who took part in the

shooting were not remarkable.
Ou Saturday the 17th, the Wimbledon competitions commeneed, the weather being rainy the match for the Ameriean cup was postponed, yesterday being the day named. The first contest was for the St. Leger Sweepstakes at 200 yards' range. Each competitor had seven shots, and the possible score 35. There were several hundred competitors. Of the Americans, Fulton scored 35, Gildersteeve 34, Yale 33, Canfield 31, and Dakin 27. The match was not concluded until Monday, Mr. John Rigby and Mr. Mitenell having tied Fulton, but in shooting off the ties Fulton won, Mitchell being second and Rigby third. The Albert prizes were also shot second and rigoy third. The Albert prizes were also shot for on Monday. The ranges were 200, 600, and 900 yards. The shooting at the first two ranges being finished, showed that Gildersleeve was ahead, having made 68 points out of a possible 70. At the first range Gildersleeve, Fulton, and Coleman, of the Americans, each made 34 points out of a possible 35, while Hamilton, Petty, Wyatl, Greenhill, and Rigby, (the latter two of the Irish eight) made 35 points. At the second range only Greenhill and Rigby maintained close competition with the Americans, seoring 32 points

Sir Henry Halford, the crack British shot, was the wiuner of the first prize, scoring 98 out of a possible 105, Col. Gildersleeve taking second prize with a score of 92.
In the match between the House of Lords and House of

Commons, the range was 500 yards. The Commons won, making 313 points, against 220 mide by the Lords, out of a possible total of 375. The following are the individual scores, the highest possible being 75:—

	COMMONS.	Londs.
	Name. Score	N
	Hon, Randle Plunket 6	Farl Forrors
	Robert Lindsay	Lord Wharncliffe35
ı	_	2010 What field Co 35
	Total	- m - 1

In the match for the Rifle Association Cup, in which each man had ten shots at 600 yards range, Coleman scored 49 out of a possible 50, leading a large number of competitors. Gildersleeve made 48. The excellence of the American marksmanship caused astonishment.

After much shilly-shallying it is finally decided that the American team will not again shoot in a team match, although Col. Gildersleeve is anxious to make a match with tenm representing the United Kingdom to ho shot in the United States next year. The captains of the English, Irish and Scotch teams petitioned the council of the National Rifle Association for permission for the Americans to shoot at the same time with the Eleho Shield conpetition, but without waiting for a reply, the substance of which had been amply foreshadowed, the question was de cided in the negative by the Americans not concurring in perition, Col. Gildersleeve explaining that the team left New York with instructions to shoot a team match only with the Irish. Moreover, the team is just now crippled by the illness of one of its members, who is an excel-

The Americans had been entertained at dinner by Lord and Lady Wharncliffe, and were otherwise the recipients of

THE FOREST AND STREAM BADGE.—The fourth competition for this trophy, as well as for the two supplemental badges added by Mr. Coulin, occurred at Mr. Coulin's gallery, No. 930 Brondway, on Wednesday evening, the 14th inst. A large delegation of shooters, both at short and long range, were present, and a brisk competition ensued, long range, were present, and a brisk competition ensued, the scores being better than those made at any previous competition. Mr. Wm. Hayes, with a score of H 13-16 inches was sneessful for the second time. The conditions were as before, twenty shots each at paper target, strictly off haml, distance seventy-five feel. There were in all twenty-four competitors, making scores as follows:—

THE REMINSTON DIAMOND BADGE.—The match for this badge will be shot on Saturday next at 2 o'clock. The conditions are as follows:—Open to incinbers of the National Rifie Association; weapon, any breech loading rific within the rules; distances, 500, 800 and 1,000 yards; posilion, any, without artificial rest. Rounds, seven, with two sighting shots at each distance; to be won three times (not necessarily consecutively) before becoming the winner's personal property. Entrance fee \$1.

-The Inspectors of Rifle Practice will hereafter distinctive uniform, consisting of a pith hat or helmet, known in India as the solar lopee, a coat of blue thunnel, single breasted, with a rolling collar, and no embroidery, and plain blue flannel pants. The insignia of rank will be worn on the front of the helmel instead of on the shoulder siraps.

-The several committees of the National Rifle Association have been revised, and will stand as follows until fur-ther notice:—Executive Committee, Gen. Alexander Shaler, President, Gen. J. B. Woodward, Vico President, Gen. M. T. McMahon, Treasurer, Major Henry Fulton, Sccretary, Col. G. W. Wingate, Col. H. A. Gildersleve, and tary, Col. G. W. Wingate, Col. H. A. Gildersleeve, and Hon. D. W. Judd; Range Committee, Col. G. W. Winguie, Col. H. A. Gildersleeve, and Col. Richard Vose; Finance Committee, E. H. Sunford, Hon. D. W. Judd, aml Hon. N. P. Stanton; Prize Committee, Col. John Ward, Capt. J. G. Story, and Capt. W. C. Casey.

THE LAFLIN & RAND MEDALS. -The Laffin & Rand Pow-THE LAFLIN & RAND MEDALS.—I de Lamin & condition der Company are now having executed a medal of exquisite beauty and high intrinsic value, which they propose to offer as a prize to be shot for at Creedmoor, L. I. The design and execution is intrusted to that celchrated urtist and medalist, Mr. George H. Lovet, 181 Broadway, which is a guarantee of the high order of which the medal may be regarded. The Lafin & Rand Powder Company, we understand, intend to give three prizes:—To the less shot, a derstand, intend to give three prizes:—To the best shot, a gold medal; to the second best, a silver medal, and to the third best shot, a bronze medal. The gold and silver medals will be made of perfectly pure metal, and as there is no limit put on the cost, it may be fairly inferred that Mr. Lovet will do full cre it to his already widely extended for the production of the cost, it may be fairly inferred that Mr. fame. All the medule will be alike in design and finish, any one of which will be highly prized by the winner, and from the fact of there being three prizes offered, the erack shot cannot carry all away. At an early day we hope to give our readers a full description and illustration of the medal, together with the conditions of the mutch upon which they are to be shot for.

RIFLE CLUBS.—The great success of the American riflemen abroad has stimulated the already growing interest in rifle shooting to a very great extent. From Chicago we hear that a number of prominent citizens, including Gen. Ducat, Gen. Strong, Mr. Handy, Mr. J. A. Shaffer, A. W. Shaffer, V. C. Blackburn, A. G. Alford aml others, have turned their attention to the formation of a rifle club, with every prospect of complete success. In pursuance with this object Gen. Ducut and Mr. Handy have visited Creedmoor to abserve the regulations and working of that ringe. Nor will their exertions end here. Mr. Handy offers \$100 towards the establishment of a range, and other liberal contributions will follow. To give emphasis to their current desire to pursue this intention, they met and shot a thousand yards match at Oak Park, situated about ten miles

from Chicago. Though they make no pretension to being Fultons, Badines, or Dakins, the scores that we here subjoin are in no sense discreditable, and give indications of formidable shooting in the future:—

match, when a learn of Iwelve from each State are invited

SYRACUSE RIFLE CLUB. - A new rifle club to be known Syracuse Rifle Club.—A new rifle club to be known as "The Rifle Association of the Sixth Division N. G. S. N. Y.," has been organized at Syracuse, this State, the object being to promote rifle practice among the National Guard of The Sixth Division District. The following officers have been elected:—President, Maj-Gen. D. P. Woorl; First Vice President, Col. James Manning; Serond Vice President, Col. J. Dean Hawley; Third Vice President, F. B. Kluck; Secretary, G. W. Edwards; Treasurer, Col. Geo. N. Crouse. Geo. N. Crouse,

POINT BLANK AND POINT BLANK RANGE.

RANGE.

MEMORIS, Tenn., July, 1875.

Editor Forest and Stream:—

In the Issue of your delightful journal for the 181 inst. an "Old Scont" very kindly explains his theory of rife shooting for the benefit of beginners. But I must be allowed to beg correction of an error in his interesting article, which I fear he did not sufficiently consider. Briefly, then, a rife oid, correctly speaking, traverses at the at first straight, but soon becoming more and more curred, and called the trajectory. And the extent of the coincidence of this trajectory with the straight line of the axis of the gan, determines the point blank. This follows from the fact that the ball leaves the muzzle with a constant decreasing monucitum, which, being subject to the constant force of gravity, soon loses the superiority of its centrifugal force, and produces hally the curve of its downward trajectory as a resultant of the two forces. And hence, also, the mnount of the curve, or the extent of the point blank in other words, will depend greatly upon the amount of the propelling force, which forms one element of the causes producing the curve. For its theoretically possible to apply a force so great as to balance the attraction of gravity for a greater or less distance or time. Hence the true point blank depends—first, upon the landents of the group second, upon the projectific! third, upon the amount of the propelling force. This, in fact, is the theory of the bligh charges and low trajectories of the modern rifles. Hence every gua has a true point blank, independent of the modern rifles. Hence every gua has a true point blank, independent of the modern rifles. Hence every gua has a true point blank, independent of the modern rifles. Hence every gua has a true point blank, independent of the modern rifles. Hence every gua has a true point blank, independent of the modern rifles. Hence every gua has a true point blank, independent of the modern rifles in the modern breast the difficulty of long ange shooting, which otherwise would be a simple c

Game Bag and Gun.

GAME IN SEASON IN JULY.

Woodcock, Suipe, Curlew, and Bay birds,

GAME IN MARKET is confined to woodcock and a few bay birds. The former are selling for \$1. per pair. A few are received from this vicinity, but the bulk come from the West, Henry county, Illinois, being the principal point of shipment. The bay birds comprise principally doewitch snipe with a few yellow legs; they could from Long Island, and sell for \$1.50 per dozen. Squabs are worth \$2.50 per dozen. worth \$2 50 per dozen.

worth \$2 50 per dozen.

Our correspondent "Alleghany" writes us from Deer Park that woodcock shooting in that neighborhood has been very good. A geutleman from Baltimore, and a celebrated shot, who is spending the Summer at Oakland, killed Iwenty-one birds in one day, and in four days killed altogether forty-two—a very fair bag. The prospects for quait were superb, every grain field heing alive with them.

-A large flight of "yellow legs" is reported at Atlantic City, and many Philadelphia sportsmen are "going for them.

-We have just had the pleasure of inspecting a splen did Williams & Powell gnn, 84 pounds weight, 30-inch barrels, 10 gauge, made to order for our neighbor "Mohawk." The workmanship of this gun is a credit to any maker, and we are assured that its shooting qualities are admirable, both in penetration and pattern, consequently we would suggest that all Indians at war with the "Mo-hawks" had better stand from under.

-A friend writes as from Hazleton, Pa., that with a parly of Iriends he shot along the Susquehanna on the 4th inst. Owing to the grounds belog in bad couldinous from the drought the shooting was poor, the bag only counting up fifteen hirds. Our correspondent speaks highly of his young dug, a litter brother of Mr. Shipman's Dan, also of his new Tolley gan, which gives him better pattern and

penetration than the makers guaranteed.

Barnegat lalet.—Kinsey's Ashley House, July 18th.—
Parties coming in to-they report large flights of brown backs, robin redbreast and other bay snipe. No guaranteed and, but quiten number making preparations for to-morrow.

—A) the animal meeting of the Staten Island Shaoting Association for the Protection of Game and Sang Birds, held on Monday evening, July 12th, 1875, the following gentlemen were elected to the respective offices for the ensuing year:—President, Robert Rogerson, M. D.; Vice President, C. L. Vrechand; Secretary, C. M. Johnson; Treasurer, J. F. Rathyen.

Treasurer, J. F. Rathyen.

—A match for the championship hadge of the St. Paul Sportsmen's Club was held on the club grounds at Lake Como on the 14th inst. The badge was in the pussessium of Dr. David Day, who had wan it in the last match from Mr. Baldwin. Mr. C. A. Zimmerman, the well know artist, challenged for it and succeeded in winning. The match was at 20 hirds each, 21 yurth rise, 80 yurds houndary. Dr. Day killed 18, last 2; C. A. Zimmerman killed 19, lost 1. In a general match which followed, at nine birds each, Mr. Kennedy killed all of his birds and won. The St. Paul Club were to have shot a match with the stillwater Club on the following day.

—From far off Sedalia, in Missouri, comes the note of the pigeon shooter, and we have at hand the results of a match recently shot on Col. Doty's farm at that place, with the following result. Match at 5 birds each, 21 yards rise, 25 yards on lies:—

Name. Killed.

Name.	Killed Name,	Killed
Al, McElvaney L. Kamm		
J. S. Cochran S. C. Gold	8 J. S. Lindes	

Mr. Gold and Mr. Parmerlee having find on four birds, and Mr. Cochran and Mr. Landes on three hirds, both parties shot off, with three birds each, with the following

resun:—		
Name.	Killed.) Name.	Killed
S. C. Gold	2d. S. Cochran	
d. C. Parmerlee	3 J. S. Landes.	

Mr. Parmerlee took first prize and Mr. Gold second.

—The third match between the Quincy, Ill., and Kenkuk, Ind., shnoting clubs was decided at Canton, Mo., on the 3d iostant. The match was at 10 single hirds, 21 yards rise, 80 yards houndary, 14 onuces shot. Mr. T. J. Birdseye was judge for the Quincy club, and Mr. Davidson acted for Keokuk. The result of the first match was as follows:—

Mr. Burnes won litst prize, killing Ich straight birds. In shooting off the ties Mr. Middleton took second prize, Mr. David Wadhaan third, Mr. Kizer fourth, and Mr. Wadhverton fifth. On the second day, in another match, Mr. David Woohnaa took first prize.

Daring the day Cot. Wade was challenged for the Union club gold medal by Major Blowney, ten birds, single rise; but the Colonel heing both to part with the ornament, shot eight of his birds, and the gallant Major gracefully acquiesced in a score of six.

The Syracuse Tournament which has been looked forward to with so much interest, and for which such extensive preparations have been unde, was duly imagnized. We are without a detailed report of the first day's shooting, but bearn that M. M. Mayhew, of Utica, wan the first prize of \$250. E. Mann, of Syracuse, second prize \$150. E. Hudson, of Syracuse, third prize \$150. E. B. Gruham, Utica, fourth prize \$100, and Thomas Kimber Jr., of Syracuse, fifth prize \$50.

On the second day no less than sixty persons contended, the conditions being ten hirds each. The scares were as follows:—

Ties of Ten, I wonty-a	-		
Name.	Killed. [Name	Killed

Before shooting all the ties of ten \$100 of the first prize was flivided between the four ties and the halance shoot for. So Mr. Sherman, of Beloit, Wis., received \$125 and each of the others \$25 cuch.

In shooting off the other ties Mr. C. F. Wrifil, of Chicago, killed, first, five hirds at 26 yards rise, and subsequently three at 31 yards, and tank second maney, \$150 Messrs. Groves and Ladder divided \$70 of the next prize, and in shooting off Mr Gen. Ladder took the remaining \$50. Mr. James Manning took fourth prize, \$300, and Mr. Thos. Kimber, of Syrncase filth, \$40. In this shoot Messrs. Thomas E. Townsend and J. Haward, of Syrncase referee.

on Thursday thirty-nine entries were made for the sweepstakes. Mr. C. R. Steeves, of Geddes, a member of the Onondagn elab, killed ten hirds, being the only one who killed this number, and took first prize. In shooting off the ties, Mr. S. C. Whent, of Cleveland; Mr. Ed. Rudson, of Syracuse; Mr. C. R. Parker, of Syracuse, and Mr. Sherumn, of Beloit, Wis., were successful in the order named. Another blank in the receipt of our exchanges leaves us without a report of Friday's shooting. With this day the tenranament proper closed, but on Saturday a number of minor sweepstakes were shot, and also the match between Chicago and Syracuse. In the betting Chicago was the favorite, and they succeeded in entrying off the stakes by two birds only, as will be seen by the appended score.—

LAKE CITY, Minn., July 8tb, 1875

LAKE CITY, Minn., July 81b, 1875.

Lake the liberty to inchese to you the scores made by some of "our hoys" duty 5th. Your thoroughly interesting paper has many earnest renders in our midst, and it is doing a noble work turvaril educating true synthese no the point that game must be preserved. If we expect my future enjoyment of this nature. We have no regular organized club in our city, but up are fortunate to having no shaon pure put-linators, the largest propurling of our squorenies being those who indulge as a matter of recreation and through pure love of the spirit. We are anximitely anywhing the 19th proximit, then we hope to interchew the planning formuse.

*Dead not of homods.

[We shall be glad to have our correspondent's "notes" at any time, and hope to hear of the organization of a sportsmen's club in Lake City.—Ep.]

PHILIPAND, July 9th, 1875.

Pinterand, July 9th, 1875.

Yesterday the Forest City Shooting Club held their annual pigeon shout. The spot selectrit cas on Little Chebeaque Island, in Casco Bay, and it must fortunate selection it was. The sun shone out very hot, but the ensietly threezes from the sea under it cool and delightful. Mineteen members participated in the occasion, and all seemed to enjoy themselves hingely. Dinner was secred at the Sanny Sho House by acine host Jeneks, who that eccrything be could for the good of the cause. Enclosed I hand you score. We hold our annual State shout here in Septembor for the chunquin chib badge, now held by this club. Other prizes will be offered, and a general good time by to be the order of the day.

I notice that gain manufacturers and rod and reel annuafacturers are fond at offering their goods as prizes to be shut for, just for the fun of the thing, you know. If some of the breeders of those fine imported setters wouth offer of some tall shooting in this section. Can't you "hijalee" them to do so. We are open to any offers of the kind.

SNIPE SHOOTING ON BARNEGAT BAY

FIGURIAN FOREST AND STHEAR:—

I have just returned from the head of Barnegat Bay, New Jersey, where I had some of the best enlips shooting at buy birds that it has ever been my good fortune in enjoy, and I want some of my kruther sportsmen to "take in" same of the sport. Last Thosoloy, our first day in the hilod, two of as killed right marlin, two phine curlety, and sixty-four rubhi enlips and big yellow tegs. There were very few small yellow tegs dying that murding, but the next mording we got four burrels in an immense flock of them, killing seventeen, when It began ruining, and we were obliged to return to the house. Thurshy opened bright and fair, and having focus obliged to remain in the day before, we were quite anxious for a shot. It was not long that we find to wait, for before reaching the blind in the "igniming ditch" we found the wolk-known voice of the greater yellow should, and then came a single rattler just skimming the water and making for the stoots, which had been left there from the day before. One of our party ran for the blind, and got there just as old yellow shunks swing late the ditch. Bang, bang, went both barrels, but Mr. Soipe continued his course as If nothing had happened. Our party now separated, three of us stopping he the shed blinds, which consists of three up-lights, alth cross steems, on which alfords full protection from the smeant and makes one of the most comfortable places to set to that can be hunglined, this seal being made of a "soft" plue plank about six feet long. While sixting in the shed we can see the salpe coming over the sand bliffs when we squat dozen and begin cailing. They generally sittle for the pand anyhory, but seeing the stools away they come. It is a sight for the goals to see them both burrels, and clean there is a third party he takes them as they sacing into the ditch, which connects a large fresh water point (in the beat of Barnegat Bay. The blinds soltom, if over, fail to take the usual course, and dee are prepared for them. Our friends who had gone

Irish life. At half past three o'clock ive were called to our feet by Mr. L., when we looked towards the bliml and saw an immense fluck of rothin sulpe just leaving the slools. The guiss were got at once, and we hirried dawn. As it was protty warm, we all sat to the shed blind and enjuyed the cool treeze from the broad Atlantic. We had only got about half cooled aff when the missic commenced, and the wind, which had been blowing from the south'ard for about a week, broke around to the dortheast and blew fresh and cool. I have that salte shooting, but not to equal this particular afternoon. We had all we could do to keep the studies clear. Theo of our party crossed to the upposite side of the pond, where the birds incisted upon alighting. It was one continuit discharge antil nearly sandawn. The birds flery in small flocks and pairs, and most of the large sulpic were single. Mr. Luveland and his son John killed with three barrels thirty-seven tobin snipe out of one fluck this afternoon. We combed our birds when we arrived home and found we had strongly this place, lake the Loue Resuch hoad to Sondy Mook, cars to

317 and eight varieties. People of party and the line in wide.

To reach this place, take the Long Branch boat to Sandy Hook, cars to Furniligible, where a branch meets the trains for Signan village, and Charles Maxim's stage will take guists direct to the house; or take Pennsylvania Raffront to Monmanth Jametton, and then the Signan village train. By the former route you can long New York at four P. M. and the latter at two P. M. It linkes about three hours and a half to get to John E. Lovekaul's, Point Pleasant, Ocean county, New Jersey.

MORTIMER.

JULY SHOOTING.

EDITOR FOREST AND STREAM:—

I have been out shooting a coolenck, and must again enter my printest against the barbarons custom—I am as great a barbarian as any one, as I want my share of the shooting. Monday, July 5th, In company with a friend, I visited a fine breeding place to revordecek. We shot live old birds. We had shot down one, and were seeking the dend bird when Phill pointed. Being close to him I told him to fetch, when I noticed him picking sumething that I thought was a tosa. I called out sharply to bim to drop it, and stepping forward what was my surprise to see an undedged woodcack, that could not have been three days backed. He was unharmed from his letroduction to Phil's month. I called my friead, and in booking about net discovered the old him stating within six feet of us, her bright eyes evidently watching our proceedings with interest. We allowe made up our minds to stop shooting. I tossed a silek to the hird, when she fluitered off, apparently in great trouble, until she men if few rods away, when she happent he cover and was out of sight in an Instant. We moved on, found our dead bird, and boal a retreat, resolved to let the birds alone until September. I think the deep snow a shall have plenty of birds this Fall, if let alone until that time.

Sange.

CLOSE-SHOOTING GUIS.

EBENEZER, tlt., June 28th, 1875.

EBENEZER, tll., June 28th, 1875.

EDITOR FOREST AND STMEAR:—

As the question is often asked, "Univ long will in close-shooting gin retain its extra shooting qualities?" I thought I would send you an account of a test that dook place here hist week at a guthering of spiritsmen with in gon that had been shut fire years, having had nothing done to it since it was made. In July, 1870, it cans throughly lested with the same charge, distance, and target as used last week, namely: distance, 40 yards; target, a circle 30 toches in diameter; charge, 3 drachms powder and 14 ounces No. 6 8t. Lonis shot; No. 13 paper shells; average pattern as it is sive, the store fruit each barrel. It will be seen that this gon bas lost very little after five years of "wear and tear" that few guns seldom see. Weight of gun, 7 pounds 2 ounces; 30 inch Damiscus barrel; maker, E. C. Green, Chittenham, Rughind.

Another test was tuade the same day with a gun neade by the same maker as the abore, haring been in use one season. No. 12 paper shells; weight, 7 pounds 13 ounces; 30 inch laminined steel barrels; the charge used was 34 drackins Curils & Harvy's dlamond grain No. 6 pon der, and 14 ounces No. 7 Chicago shot; average pattern, 2034. Witness.

Bational Pastimes.

St. George's C. C. vs. Germantown C. C., of Philadeliphia.—This match, played last Saturday, the 17th, at Hoboken, proved a very enjoyable one, both for players and on-lookers, the weather being all that candl be desired and the good cricket was not seldom applicated. The Home eleven won the toss and recrede to begin the batting, Bunce and Sleigh being the first to time the lawting of Welsh and Tom Hargreaves. Sleigh was soon bowled, the first wicket falling for 0. Moeran joined Bance, and 19 were added before Bance had to leave, stumped cleverly by John Hargreaves. Tee filled the vacancy, and playing with an wearying patience and precision, maintained his defence for more than two hours, scoring a faultless 22. Moeran made a good 15. The veteran Gibbes was greeted on bis appearance at the wickets with applause by both clubs, and though out of practice, batted in his old good style. Marsh was credited with 22, one hit being clean over the fence for 6. Soutter had a short but merry innings for 15. Sutterthwaite contributed (not out) 9 in first rate form, the St. George innings closing for 128.

The Germantown cleven were at the outset not a little discouraged by the wonderful success of Marsh, who bowled three good men in as many successive balls, the first four wickets falling for 11 only; but Joe Hargreaves, malanuted, hit hard and well for 25, being ably aided by Fisher and Sartori, who made 11 and 12 respectively, the latter carrying out his bat, and the lunings of the visitors closed for 79, leaving the St. George eleven victors by 49 runs. The towling on both sides was good, the fielding excellent, and some noteworthy catches were made during the mutch by Joe and Toe for the St. George eleven.

—One of the best contested games of the season in this vicinity was the march at Staten Island, July 14th, between

The for the St. George eleven.

One of the best contested games of the season in this vicinity was the match at Staten Ishnul, July 14th, between the Staten Ishnul clubnud the Prospect Park team, of Brooklyn. The contest was close and exciting up to the very finish, the Prospect Park club finally winning by one wicket, the score keing 114 to 113.

The Peninsular Club of Detroit played a game on the 12th inst. against the Toronto Club at that place, resulting in a victory for the Detroit men, in one inning, by a score of 108 to 105.

The bowling of Armstrong and the longstopping of Irvine—the only American in the team—were much admired. Armstrong also made the spleadid score of librity-seven against very superior bowling. The general play of the Detroit mea was much admired. On the following day the "Peninsulars" played against the London Club at the lutter place, winning again in a single inuing by a score of 119 to 88.

Our space will not permit of our giving the detailed

Our space will not permit of our giving the detailed scores of the above interesting matches.

—The event of the second week in the metropolitan base hall field, was the advent of the now noted St. Lonis club, who like Alexander "came, saw, and conquered," They

opened their eastern campaign in Philadelphia where they cuptured the "Fillies" with ease, by scares of 8 in 4 and 6 to 3, and thea they visited Brooklyn and opened fire on the Atlantic and Mutual forces, caused quite a camage in both camps. The Atlantics yielding to the time of 6 in 2 and 2 to 1—the latter a good light—and the Mutuals by 9 to 7, (a very tough battle of 13 inning's duration,) 5 to 1 and 10 to 4. Ou July 19th, the victorious chanopions of the West took their departure for Boston crowned with laurels earned in the Quaker city and the city of charches, and on the 19th they met with their first eastern defent, the champions of America giving them a lesson to the tune of 7 to 2. In the intering the Chicago nine had found Boston a very nuhealthy place for them, for they lost gauges with the Reils by scores of 14 to 1 and 8 to 7, this can with Golden as pitcher, and 6 to 0 was quite a dose for the Whites. They recovered somewhat of their lost ground afterwards in Hartford, score 4 to 3, and in New Huven, 4 to 1, and this week look to gain more victories in Brouklyn. The Philadelphias this not do well at Hartford last week, their defents there by 8 to 0 and 14 to 5 being unexpected reverses. They rallied a little on Monday in Brouklyn by polishing off the Mutuals by 7 to 5, this victory transferring them from sixth to fifth position. The record to July 20th is as follows:—

Tulm 12 Co. F. S. S.
July 13-St. Louis ve. Midnal, at Brooklyn. 9 to 7
July 11 - St. Louis vs. tlamic, at Brooklyn 2 (0)

by a score of 3 to 2.

Caledonian Games at Auburn, N. Y.—The Caledonian Club of Anburn gave its sixth annual display of Scotlish games on Saturday last. The competition was one of the best ever seen in America, and the feats performed were far above the average merit. This is the more striking as the prizes were small in amount, and in no case were more than two given. Of all the events in the programme the most remarkable was the hop, step and jump. The merits of the athletes who catered will be understood from the fact that the third man was over 41 feet, and that 39 feet only got a faorth place. The games throughout demonstrate that Scotch athletes bure within the last few years improved as much as the games they practice bave increased in popularity. The following is the list of winners.—

creased in popularity. The following is the list of winners:—

Putting Light Stone—1st, W. Robertson, 43 ft. 10 in.; 2d, James McGillinray, 42 ft. 1 in.

Running Long Jamp—1st, John Maloney, 20 ft. 2½ in.; 2d, J. S. Crossley, 10 ft. 4½ in. Viculting with Pole for Boys—1st, C. McGee, 7 ft. 2 in.; 2d, L. Chatterton, 7 ft.

One Hundred and Fifty Yards Rice—1st, J. S. Crossley; 2d, J. Maloney,
Tossing the Caber—1st, A. McKay, 41 ft. 3 in.; 2d, W. Rolertson, 39 ft. 1 in.

Hurdle Rice—1st, J. Muloney; 2d, J. S. Crossley, Running High Leap—1st, S. Minusell, 5 ft. 4 in.; 2d, J. Maloney, 5 ft. 3½ in.

Hitch and Kick—1st, A. C. Reid, 9 ft. 1 in.; 2d, S. Minusell, 9 ft. 0½ in. sell, 9 ft. 04 in.

Broudsword Dance-1st, L. D. Robertson; 2d, Wm. Rob-

tson, Highland Fling-1st, W. Robertson; 2d, L. D. Robert-

Highland Fling—1st, W. Robertson; 2d, L. D. Robertson.

Naulting with Pole—1st, S. Minsell, 9 ft. 64 in.; 2d, J. S. Crossley, 9 ft. 6 in.

Light Hammer—1st, A. McKay, 101 ft. 6 in.; 2d, W. Robertson, 90 ft.

Half Mile Race—1st, J. Maloney; 2d, A. C. Reid,

Running Hop, Skip and Jump—1st, J. Maloney, 43 ft. 3 in.; 2d, R. Minsell, 42 ft. 6 in.

Three-legged Race—1st, Reid and Robertson; 2d, Maloney and Crossley.

It was perhaps singular, but it was certainly pleasing, to find that the Auburn club did not exclude men of other nationalities from competing. This is not the general usage, but it seems the best course to pursue in order to further the practice of Scotch games—one of the objects of nil Caledonlau clubs.

"The Isl Corps M. V. M., of Boston, have adopted the Patent Camp Lounge-advertised in Forest and tream—the present season, and a large number of mages have been furnished by the Troy Camp Lounge ompany for the July encampinent of that superbody of coldiers at Boston."—Springfield Republican.

BREWER'S

Chute and Fishway.

The Fish-way is constructed in the hottom of a chute of any desired width, by nocans of timbers forming triangles, making a zig zag course, breaking the force of the water in its descent, enabling any kind of fish to ascend it. It may be constructed on a rise or grade of one foot in ten. Its appear end extends into the pool of a dam. The water "Hows with a uniform swiftness over a smooth bottom." It does not form any "pools or eddies."

This Fish-way can be seen in a dam in the Mohawk River near Schonecundy, N. Y., and for its successful working see the Report of the New York Commission ers of Fishories for 1874

may 6-1y

TRIAL OF SCOTTA OR EEE/RIPS NEW SYSTEM OF HORING, IN THE EDITION OF "THE RIELD," LONDON (See The Field, Junuary 30th, 1873.)

"From a comparison of the two lables it will be seen that with Walker's cloud, Mesons Scott's gams showed a nancket superior dy uver Mr. Greener's, both in average and in the highest scotte made. Indeed, with the left harnd, in life that hat, Mr. Scott got a selected group pattern of 23% and a neartration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of Interpreticular shot by eight sheets."

Pass Shooting in

in Minnesota.

TIME, OCTOBER 16TH, 11 O'QLOCK A. M. PLACE, OFFICE OF PROFESSOR L. & CO. (PROF. LOQUITER.)

ARREN (his partner in the chemical works) has got back. I will turn everything over to him, and I want you to go out to Ellsherg's with me duck shooting. I am tired and cross, and am bound to get out while the fine wenther lusts, and before Jack Friest comes down upon as like a trip hammer. Tell me what I shall need, for I have'nt fired a gua in five years. Young Ben (his irrepressible two year old) has been through and through my trups, and I don't suppose I can find a thing, so shall have to get new."

"I can provide the guns and will see to the necessary ammunition and fixings. You must have a pair of high rubber boots; these and an old felt hat, not white or black, are alout all the dress one needs for duck shooting; still, if you wish to be more dressy, hunt up an old gray suit, if you have one. If you wear black you will most certainly be in mourtding for blighted hopes, with no dead ducks at the funeral."

"All right; I will go across the street and get the boots insignter. Frank, never travel in Minnesota without lots of widskey. If you don't want it yourself somebady else will—without it we should ut be anywhere—and a lunch. Nelson will get up the horses and call for you, and I will be all ready at my house, and we will get off as soon as possible, not writing for dinner or anything."

Just alout forty minites after this, Nelson, Polly and myself drove up to the Professor's door. We bad a light, narrow, two-seated wagon. Dexter, the off horse, not much to look at and not much to go, but with Snipe, the most willing, the less natured, a tremeudous goer, and in fact every way the best horse I ever saw or wish to see, we could get over the ground very comfortably at ten miles per haur. Nelson had no sincenre, driving. The pull was constant and terrible, in spite of patent brake upon bit and rein. I had often admired his way of dashing down Third street just as the lamps were lighted, after an evening drive, with a speed and a force irresistible, and sadden death to any small hoy that did'nt get out of the way in very outch of a harry; yet he never had an aecident, which increased my admiration for Nelson's skill exceedingly. I noticed that they invited me to ride quite frequently, and perhaps thought it as well to have a "Dactor" along. The last time the Professor took the reius, two ludies, the Professor, and myself—no room for Nelson—six miles out and back, we sped over the smooth roads, I every moment expected to see the Professor's arms torn straight out of their sockets. He held on gallautly, enduring into the end; but the next day he was a very useful and ornamental member of the community indeed, getting around with each arm he and wilk handkerchief sling; these also he bought wholesale at the same place where he got the boots.

Hem!—Two guns, with flasks and ammunition according. The water pull for the horses, in which were two bottles of whiskey, the hallers, and a box of cigars. A half boshiel basket filled to overflowing with bread and cheese, and cake and apides and matches, and the Lord knows what else—I don't. Three overcoats; this appeared very sensitide, the thermometer being at least 75° in the shade. And what else? Why, just two of the biggest and henviest flannel lined and word stripped buffalo robes that were ever seen out of the frigid zare; these just disentembed from their Sammer whiskey burrels, there stowed to avoid the moths, sent up an odor of fusel oil that was at once powerful and refreshlug. Then cause the Professor's boots, the Professor, myself, Nelson, and last of all Polly came also. The springs settled down to hard pan. Were we packed freight? I think we were. We might have been rolled down Mississippi's sleepest hluff, and I will guarantee not a thing would have been jolted out of place. "Nelson, will you have a cigar?"

"No; I can't drive and hold Polly and smoke too—at least, not comfortably."

The Professor and myself upon the back seat, not having lo "drive and hold Polly," lit our cigars, and off we went with a jerk, from perfect quiet up to fifteen miles au hour, but which did'nt change the relative position of things the sixteenth of an inch, except that it nearly twitched the Professor's head off and brought Polly over the front seat, bang, into my unfortunate stomach.

"How far is it to Ellsberg's?" inquired the Professor. I had been there just ouce, he not at all. "Authorities differ; some say ten miles, others say fifteen miles. I say a good long twenty miles." Perhaps the "city limits" have something to do with it. I suppose they extend about fifteen miles from Third street bridge. Why don't they take in the whole State and the North Pole? On we go, over Trout Brook, switch off from the "ten miles to White Bear road" towards Little Canada, and through it and sand a foot deep. The oaks grow plentier and larger, and look more and more like bigger and bigger apple trees. At Pole Brldge Pass, the first of the rice lakes upon each side, we water the horses, who have'nt let the grass grow under their feet; for that matter, through this section the light, sandy soil would not grow enough grass in ten years to keep a horse from starving for five minutes. How the oaks manago it I cannot tell; but they appear as though they did'nt mean to, and did'nt intend to do so any more. What a country for a first class Desert of Sahara! or a glass fuctory! Could easily get the coal to coak it from Pennsylvania at eighteen dollars per tou. Further on I saw an English snipe standing in the mud by a small, balf dried up pond. I got ont, and he slurted wild and alighted in the dry leaves among the oaks. As he rose again I killed him.

Three o'clock, and we reached the rice lakes proper, near the old shaky bridge, floored with young oak trees from four to eight inches in diameter, laid crosswise, a pure and unadulterated cordinoy roud up in the air. Somebody will go through this bridge some time and take the whole thing with him. Fifteen midutes more, and up to Von Ellsberg's door. Five or six dock shooters lounging about waiting for the evening flight. In hulf an hour u good dinner was pluced before us, to which we did ample justice. Now four o'clock. We put on our equipments, the Professor gelting into a pair of high rubber boots for the first time. He and I took the road to the "pass," half a mile distaut. We had gone perhaps half way, the western sim came down blazing hot, and the rubber hoots began to heat up in earnest, the Professor striding along behind me without a word. "Well, how do you like it as far as you've got?" I inquired. "Oh! first rate; its a new sensation, and that's what I came for; but I believe if I ever again invest in a pair of these infernal foot coverings I'll bny retail—get just one-sixteenth of u pair, chew it up for gum, and then go barefoot." Just Ihen Nelson, who bad been delayed attending to the horses, caught up with us.

gnm, and then go barefoot." Just then Nelson, who bad been delayed attending to the horses, caught up with us. "Don't you want to shoot some chickens?" "Wbat? Ellsberg's chickens? No; its too hot, and he'd make it hotter. Not a bit. Prairie chickens! I saw half a dozen runuing in the brush not ten yards back." "Where did they go?" "They did'nt fly at all; they just rau." "Pooh! they must have been pheasants, (ruffed grouse) then."

The road upon which we were, cut off a strip of the second growth, perbaps six rods wide. Upon the other side a lake, the ground sloping from the road to the lake. In this strip Nelson had seen his "chickens." The oaks were from ten to thirty feet high, open below, and to the height of about four feet; then the right angle branches and twigs interlaced a little tighter than the meshes of a No. 1 seive. I left the Professor in the road, with Nelson holding Polly. I stooped and went in. Soon a rustling upon my right, and a cock pheasant running. I shot him without mercy. Another upon my left, and he went to kicking. One hopped into a tree; I shot bis head off. Two more fly, but I cannot see them. They flew down the strip and I followed. It becomes a little more open; I get three shots flying, killed two and came out. The Professor had followed along abreast of me; had seen but one

bird, which came out almost in his face, and was out of sight across the road before he could raise his gun or turn round. He said it seemed very much to him like a hurricane going through his hair. I transferred the five hirds to Nelson and we trudged ou, soon coming to the open low ground. Upon the right an open shullow lake, two miles or more in diameter, the rice a rod or two wide around its borders; muon the left another lake about as lurge, but with two-thirds of its area choked up with the rice stalks. These two lakes are connected by a strip of water furty feet wide. Along this a few stanted bushes, with here and there a patch of rice. The distance hetween the lakes is about forty rods, and this is the "pass." The ducks, starting from any cause upon either lake, however distant, and however much they might fly around, were almost certain to come down along this strip of water, the real skimming the surface, the bluebills at various heights, the mallard from seventy-five to two bundred feet high, a stray wood duck, or two or three canvas backs—I saw to more than this of these together—anywhere they chose.

We were early, it being now about five o'clock. I stationed the Professor upon this side, near the water, in a few broken down willows, perhaps four feet high, enough cover and allowing a free sweep. It was all needed; for the ducks might come from above or below, from one side or the other and they fine at a further than The Professor or the other, and they fiew at a feurful rate. The Professor is short sighted, wears glasses, as he explained upon the way down: "if I see a duck directly ahead, I know he is where I see him; hat if either side from the perpendicular, I know he is not where I see him at all. But I have studied the matter, and if I am quick enough I think I can make the necessary corrections." It was very necessary to make the necessary corrections." It was very necessary to lave Nelson with hom to descry the birds at a distance and give warning, also to inform him whether they might be ducks or blacklirds, size being a very uncertain quantity indeed in the eyesight of the Professor. But it fairly astonished me to see him calmly staring at an approaching duck, evidently in doubt whether it were legitimate game or not, and just in the nick of time pitching up his gun and cutting him down in good style. I crossed the water, fluding its depths just one inch less than the beight of my bigh boots, their tops being held well up with either hand, The shootes kept coming down until in the forty rods there were no less than twenty. The great trouble was, every duck that came anywhere near was saluted, sometimes ten or lifteen barrels at one bird, without a chance of times ten or nitten ourreis at one bird, without a chance of touching a feather. This thing had been kept up for a week or more, readering the birds very wild. The flight this evening was not good, the weather keing too fine. I fired about twenty shats, this being nearly the average for all. The shooting was entirely new to me, and I made wretched work. It is no easy thing for a beginner to shoot ducks upon a pass, however good a shot he may be, in or out of cover. I aimed ahead of them, five, ten feet, twenty feet; I followed them with the gun; I tried every way that I could Hank of, and when they were well with id range, and they would not come down satisfactorily—either not at all or only winged. Half an hour after durk they were through flying and we were through shooting. I had two mallard, two teal, and a wood duck; the Professor two mallard, three iduchills, and one teal, besides a mallard which fell near the timber a quarter of a mile away, and which Polly retrieved the next morning.

away, and which Tenfretteet the next morning. We ench hit as many more, which went off wounded.

The Professor was jubilant, "When I go out shooting I like to do some shooting, and verily, at these ducks you have to do an inchesse amount for the number of birds you get. They ought to bave a powder mill and a shot factory on this pass."

We found our hag somewhat better than the average; one man had ten, some none at all. Polly had done well, not only had retrieved our birds, but every other that fell within her observation. Nelson shouldered our game, and—ten of us in all—we marched up to the house, where, about eight o'clock, we ate a hearty supper of roasted ducks and stewed venison, cooked nicely, and well served. After supper, and any time in the evening, whiskey for these who chose, and all did choose; this from private stores.

One thing I noticed, every one brought a supply of whiskey, but every one drook that of his neighbor—very inexpensive and convenient. Ellsberg, a fine old fellow and a gentleman to boot, half dead with consumption, and with a cough that might be heard a mile, entertained us with his reminiscences.

pensive and convenient. Elisberg, a nine of tellow and a gentleman to boot, half dead with consumption, and with his reminiscences.

—"Do you ever shoot many geese here?" inquired some one. "Oh, yes, but in the Spring; we never get many in the Fall, for they go below upon the big wheat stuthles and corntields, and for that matter the mallard are getting to do so more and more every year, forsaking the rice lakes. In the Spring of '58 the warm weather come on all in a lump, but after a few days it turned around cold and froze up everything tight as a vice. A great many of the greese bad gone North, but that drove them hack. Over here, three or four miles, there are several Spring ponds which I knew would be partly open. The next day I took that old gno you see there in the corner, about two pounds of No. 4 shot, and no great stock of powder, and went up there thinking I might get a duck or two. I found the open places literally crammed full of geese. I hid in some low willows, and all day there were immeuse masses of geese passing hack and forth in all directions. I fired away my two pounds of shot—did not have to shoot much more than three rols—and towards the last did not use much more than half au ounce of shot. At three o'clock my ammunition was all gone, and I had sixty-two geese. I went home, got a horse and wagon, took the geese lot St. Prul, and got a dollar and a half apiece for them all. Before twelve o'clock that night my yard here was jam full of horses and wagons and my house of men and dogs. The next morning they went after the geese. It had turned warm again, and altogether they killed just six! So I made a good thing of It all round."

A black haired man by the name of Seymour then struck in: "Did I ever tell you about my big bag of mallard? Last Fall there were two fellows here from New York State. They had been on a trip around the lakes, came across from Duluth, and wanted some Minnesota ducks to take home. They spent two days here; hired a Frenchman to take them round to the mallard ponds, an

inquired at the hotels, but they had gone sure enough, and I never heard of them after."

The next morning, an hour or more before daylight, the Professor and myself, sleeping in the chamber over the sitting room, were awakened by the other occupants of our dormitory getting up and dressing, with manifold growling ejaculations, the room dimly lighted by about an inch of candle placed upon the floor.

"What is the matter?" inquired the Professor; "is the house on fire? Why such a row? I insisted that we minst get up, get our coffee, and go down to the pass. "Why, it is as dark as pitch, and I don't believe I'll get up at this unchristian time of night." "But you must get up; you came out here to shoot ducks, and you are going to shoot ducks, if the court knows herself, and I 'think she do.' You are no' going to waste your valuable time in hed." So saying, I ripped off every individual one of his coverings, except his shirt, and expeditiously getting down stairs left him to decide the matter as he might think best. In a very few moments—for the candle was spluttering its last when I left—the Professor came stumbling along down humming to himself—

"Oh! wake and call me early, Call me early, mother dear."

"Ohl wake and call me early, call me early, mother dear."

"But what's the use; a cat could'nt see to shoot ducks as dark as it is now." All were in the full tide of preparation. We got our eyes scrubhed out and our coffee. "Hallo! how is this? do these rubber boots hold water!" inquired he. "Why, of course they do." "I aupposed they were intended to keep the water out, and here they are wet inside from foot to top of their three-story legs. How did the water get in, is what I would like to know; for to my certain knowledge I did'nt go in yesterday over the anklo." I suggested perhaps the perspiration had something to do with it. "I did perspire some, that's a fact." "Particularly about the time you were prowling around after those pheasants." "If that is the case the next time I come I will leave my perspiratory apparatus at home, or else I'll leave the hoots, or, best of all, I'll leave myself; the three are plannly incompatible. Here's a square inch of skin torn off from each of my poor beels; new sensations are multiplying fazier than I am prepared for lhem." I bathed then beels in whiskey—"ouchl and there's another!"—and then patched them with sticking plaster—feared his toes might get loose if the wear was uot stopped. At last we were ready aud off, the Professor quonk, quonking ahead with every step, trying to get away as fast as he could from the tender spots.

It was very dark indeed, and when we reached the pass aud groped round lo our stations we could hear the ducks singing overhead and upon all sides, but could not distinguish them. Soon the banging commenced. It grew lighter, and we began to feel that it was not such a bad thing after all to be upon a duck pass at daybreak. A flock of brant came by, giving the Professor a chance at forty rods, which he was not slow to avail himself of, giving lhe moth barrels. I tried to stop him, but having no idea that he would fire at them at such a distance, the reports of his gun were about the first symptons that I comprehended. "What on earth are you about?

Upon lhis I started len or a dozen snipe, but could do môjhing with them. Every time, when dushed, they would filly ont straight over the mud, where not man nor dag could retrieve them. I killed one, when I dropped before he had flown three feet, and after driving the rest buckwards and forwards I wo or three times, gave it up, a cornelled which land flown three feet, and after driving the rest buckwards and flow or three times, gave it up, a cornelled which land in 17 forth of the house, just at the edge of the bushes, up from under my feet started two large birds, which lay in front of the house, just at the edge of the bushes, up from under my feet started two large birds, which looked to me like prairie eliciteens. They were overliead and out of sight among the trees as quick as a flash. I took a rapid snap shot. The bird was out of sight left to the shot reached him; a few feathers came floating back; I looked for a dead bird hut foaml none. At break fast told Elisberg ahout it, expressing my surprise linat prairie. The should here should here should here should here should here with the should here the first day. He had a breech loader and killed eight grouse as he stood it one spot while I was loading my gun. This time of the year yon will find them scattered here and there and all over. I do not think they are inclined to puck as much as the chickens. The grouse is larger than the chicken, the breast lighter colored, the tail pointed und the mean while—a far butter bird to cat than either the pheasant or the chicken. I expressed a wish to shoot some of these. Mr. Saddler, a light haired uran, with a heavy double gua and a very slim pointer dog, said "life we would take our team that he would pilot us where we could find them, and that his dog would hout them up and stand them." This shifed us. Nelson brought around the horses and off we went, leaving folly chained in the harm giving load expression to her woe. A perfect Indian summer lay—perfect, except that there was a good deal too much Summer in it.

their course not disturbed in the least.

The next morning, when the usual rumpus commenced, the Professor calmly rolled bimself up in all the bed clothes, at the same time remarking that he should'nt go to the pass. The ducks might miss him, but he did not care to spend two bours of a cold frosty morang missing them. I agreed with him, begged a portion of the covering and we went to sleep, pitying our friends who were upon the move. and we we

and we went to sleep, pitying our friends who were upon the move.

After hreakfast we stowed in our game and ourselves, and through the bright Autumn weather and the light sandy soil we rolled away down to the "uarrow streeted city" in time for dinner—just forty-cight loars absent—twenty-five ducks, seven pheasands, one prairie chicken and two snipe. The Professor boarded where there were about three dozen others, so he took the game and invited me to dinner the next day to assist in cating it. I was on hand and in due time the game came in, a right royal lot of it, roasted beautifully, but with a slightly suspicious odorousness. The Professor took a portion of the sharptail grouse—we had'nt decided at this time that it was a chicken. A few mouthfuls—"Look here! what makes this meat so hitter?" I replied that perhaps the bird had been feeding upon birch buds. "Doo't believe! like the flavor anyway; will try one of the saipe." A few moments speut in experimenting—"Why, how's this? hero's the same old bitter. Do snipe feed upon birch buds, too'! I am inclined to think the buds killed this one a week hefore you shot him." Alas! and alack! the game had been carefully picked and drawn the evening before, it had then heen thoroughly washed, and furthermore left for the night in the water to soak out the blood, or for some other equally defensible reason. The weather was not cold, the warmth and the moisture were too much for it; decompusition had communenced in caraest. Shades of clarcoal, broune chloralum, and carbolic acid, why were'ut you on hand in a gravy?

Aliquis.

—The Royal Yacht Club, of Halifax, keld a race for the Mayor's cup and flag officers prizes on the 21st. Eleven yachts competed. Mr. Morris' Cygnet took first prize, and Commodore Scott's Cloud the second.

AN ADIRONDACK DEER HUNT

A FTER a good diamer at Cools the guides left the boats and largesce in the wagons, and we are soon on our wind and all grave the wagons, and we fare soon of our wind swaps the breaches of earty to Hig Clear Pond. The wind swaps the breaches of any of the party awaiting us. We soon are launched upon a pund with our boat nearly gunwale deep. The sky has become a leader gray, which is steadily sweeping up the west, the distant inonatains are shut out with a misty gray sheet. "It is coming thick and find." The wind-tossed waves are moving to long, serried ranks; far sheal are the other hosts, W. in one with his favorite unbrella ready with the run. Now it is on and around as in great drops, with the run. Now it is on and around as in great drops, within an inch of the guawale. How cleectful shelter and in the secena sy out think of them, We rou across as fast as we can in titls heavy sea, and thempt the pand is three sailes long, we are at hest safely handed on the shore near our camping ground. Huming the boat out of the heavy railers up the beach we wind our way, wet and mourtful, toward where we hear the sound of an axe, catch a view of a faint curl of snoke, and find our courades have a sickly fire started. Gathering what dry land is soon enabling the pading the pad to the pating rail the pading the pad to our party, who said "they didn't care about each to me and the second of an axe, catch a view of a faint curl of snoke, and find our courades have a sickly fire started. Gathering what dry land is soon enabled up the pading the pad to
but very hungry after our day's tramp of twenty-eight nidles.

Early next morning we are all astir, and I start for McCauley Pond, six miles distant, where I am to watch. After a very wet tramp through the gruss and bashes laden with dew I reach the house of a settler, and after a good drink of milk and a slice of bread and butter, he pilots me to the poud—a beautiful little shret of water a mile long. The bushes around are laden with the largest blueberries I ever saw; acres upon acces, a perfect blue field, a wealth of luscious fruit with none to gather them. Eating as many as I could, I clambered over the piles of fallen trees lying crossed over each other in the burned wish. It was hard work crossing over this nelwork of lags. Now I would be up six feet from the ground walking carefully along the trink of a burned tree, steadying inyself along its slippery sides wet with dew, with ritle in one hand and a pair of ours on my shoulder, (I think I would make a good rope walker,) jumpling over on to another log, careful of my tooting, for a fall would be no light matter, and at last, with the perspiration streaming down, I reach the north shore, when I hint among the tangled brush wood for the bont, where by the diagram which Hank has drawn for me of the lake I might expect to find it. At last I come upon it. Soon I have it in the water, and row as fast as I can to my watch ground on an Island in the centre of the pond. It is a

beautiful morning, the pond is still, with hardly a rofflebeautiful morning. The pond is still, with learly a roffleon the town the last started a few miles to the west. The the size

MYSTERIOUS PROJECTILES.

MYSTERIOUS PROJECTILES.

ONE of the oldest, strangest incidents in the career of that modern Flying Dutchman—that strange ship of myth and mystery, the Maria Estrena—happened while she was in the Paraguayan service during the war hetween that State and Buenos Ayres. It was my good hap to hear a relation of the affair, jointly, and withal most annuslingly, from the lips of two chief actors therein in the trenches before Ho-nan Gate the night ere poor Fred Ward, (not John, as the papers will persist in misstating his name,) received his death wound. The worthy twain, though now wielding their good swords on the same side, bail been opposed to each other in the South American war. Colonel Paul Fekele, an Hungarian, served as Flag Lientenant of the Buenos Ayrean squadron at the period of our story, while Major Henry Clarc, an Irishman, who was the other narrator, had been first luff of the dashing Maria herself, but subsequently had made his way to China to meet his former antagonust, and with him enter that famous land service under General Ward.

"How is this?" some caviller inquires: "Were these men at once soldiers and sailors?" Good friend, they were. That's the kind of ampbihian that flourishes on the China coast—the men who are teachlug China how to form an army and build a navy that will laugh at those of the Western world comhined. Fred Ward—rest to his gallant soul—was another such. Like Garibaldi In this duy, like Richard Ceur de Leon in that of the Crusades, these men are equally at home on deck or field, men who can

"Like the Red Cross hero teach, Danntless in itagegeon as to breach;

Danntless in itagegeon as to breach;

"Like the Red Cross here leach, Danntless in flangeon as in breach; Alike to him the sea, the shore, The brand, the bridle, or the oar."

Denntless in flangeon as to breach;
Alike to bim the sea, the shore,
The brand, the bride, or the oar."

But this is digressing. Condensiog the two sides of the
narrative into one, here it is:—
The Paraguayan flotilla, ont-numbered, out-tonned, and
out-metaled, had, after a plucky defense, retreated for shelter behind Yalapi Point, above Montevideo, on which stood
a battery occupied by Paraguayan troops under General
Monteco, and which for a time heid the Buenos Ayrean
squadrin at bay. But the open rear of the hastily constructed forl was full of uncleared growths of timber and
chaparral, which extended away up inland. Old Admiral
Ballestero noting this, and that the morning breeze blew
briskly off the land, sent his boals to fire the tindery grass
and jungle to windward of the enemy's open rear, thus effecting a complete dislodgment without the cost of a shot;
for the snioke and flames blew right into it. The fort being
thus reduced, he was preparing to beat round the point and
renew the attack on La Guayra's flotilla, when out around
the bend furming the point swept the gallant Maria Estrena. She was bound down the river with dispatches for
Domingus, and De B. had promised Lopez to deliver "them
dispatches" before nightfall or "take supper with Old
Squarefoot." Now, she carried one formidable guu—a 68
pounder pivot—but hadn't a soittary shot for it; nor hadn't
had for a matter of three weeks. The entire length of
Yalape was one roaring sea of flame as she came spauking
out from behind it, and then she discovered within half
guashot the whole Buenos Ayrean squadron working up
right merrily with the cracking breeze. De B. took in
the desperate situation at a glance.

"How many of those Dutch cheeses," (they had captured
a Buenos Ayrean storeship last up-river trip,) "are left
aboard," he demanded of Ciare.

"Two casks, sir," replied Harry.

"Will they go into the pivot?"

"By Jove, Captain, the very ideal Yes, sir, they'll fit
nicely."

"Till her up to the nuzzle, then, and let Balleslero have
can as fa

"Two cusks, sir, 'replied Harry,

"Will they go into the pivot?"

"By Jove, Captain, the very ideal Yes, sir, they'll fit nicely."

"Fill her up to the nuzzle, then, and let Balleslero have 'em as fast as you can serve the gun. Steady, quartermaster, steady as you go, right for the centre of their line."

Away she spun, the shot from the squadrou whistling about her ears to the tune of "Puldy Carey's Wedding, O!" but she paid no more attention to them than so many mosquitoes until within sure range for her light ammunitiou, when bang! roared her heavy pivot. Now there wasn't an eight-iuch in the whole Buenos Ayrean squadron, and the Marin was beld a rough customer accordingly not withstanding ber insignificant throadside batteries.

"What the mid diublos is that?" roared old Bullestero, as a dozen or two of the novel projectiles came smashing through his bulwarks, scattering splinters in all directions, and hursting worse—to look at—than so many shell.

"Dou't know, indeed, sir; sometting entirely new to me," replied his Flag Captain. "Very destructive they appear to be, whatever they are."

"Destructive! Car-r-ramba! should say so," echoed the Admiral, as another grist whanged into his bulwarks, ripping the light phunks like a gang of steam driven circulars, and tripping up a dozen heets or so in the waist.

"Please, str," exclaimed the first luff, "I heard in Paris last Summer of a new shell that explodes without powder, and is charged with compressed hydrogen, or nitrogen, or some inflammable, suffocating gas or another, like a Chinese stink-pot, Greek fire, or—"

"These must be the very thiog," bellowed Ballestero, as a third discharge from the huge pivot shook the seas, and a third bushel of cheese came bowling through his quarter nettings, one of which engisted the binnacle, while another flew into a thousand pieces as it went with a wicked spang against the mizzenmast after scarce clearing the old fellow's nose. "I don't like 'em at all, carajo', some infernal new-fangled Chugreve or Phixhan that'll set

-Some years ago a new fort was commeuced in the road-stead of Cronstadt with revolving turrets. 'The new fort is now known as Noz, and will be completed in the Animan. It consists of seven separate revolving turrets covered with 14 inch curruss armor plates. Each of the turrets will be armed with an 11-inch rifled gan.

-Five hundred new buildings have been erected in 'Key West during the past year.

ture as any man in the State, if not more so; mostcutatious, bls advise in every department of pisciculture would be at once safe and valuable to any person desiring to embark in this new enterprise. There are several inlied lish farms, not yet developed into profitable establishments, owing to large expectations of their proprietors, and a luck of the application of good common sense in their management.

In California fish culture is taking high rank, under the management of the excellent Board of Commissioners, Messes. Redding, Throckmorton and Farwell. Trust farms are springing up in those portions of the State where water is alumiant, and adapted to the salmonidæ.

The Commission is already taking steps to obtain new varieties of food fish from China, that they may be engrafted upon their already extensive fauna. In looking back across a period of nearly 4,000 years, we find that fish culture has aided largely in the sustenance of the human family. In spite of the many vicissitudes and intoward contingences that constantly war against the spawn of fish and their hatchings, a large supply of food is obtained from the natural increase of fish. Though countless millions of the young are destroyed by their natural enemies, and by the silt of freshets, yet countless millions survive, and furnish us wholesome food.

The Even Countered.

THE FISH COMMISSION AND NEW YORK SHAD. -Mr. R. B. Roosevelt of the New York Fishery Commission, has written a letter to the New York Times, with regard to the fault which has been found in certain quarters with the United States Fish Commission in taking young shad from the Hudson River for distribution in other waters. He

United States Fish Commission in taking young shad from the Hudson River for distribution in other waters. He stays:—

"A certain number of young shad were presented to the United States Fish Commission in the early days of its existence by the New York Commissioners for the porpose of making experiments in acclimating this fish to different waters. Since then others have been obtained by the same commission for distribution, not a large number and not to an extent to seriously affect the fisheries of the Hodson. It must he horne in mind that a very small percentage of the eggs of shad which are deposited in the natural method ever hatch. Insects, foul water, freshets, predatory fish, and disease sweep them off by myriads, so that probably scorely more than one in 500 ever matures. Consequently, in determining the extent of the loss to our fisheries by the abstraction of a certain number of eggs, we must consider not how many fish were actually hatched by the artificial process, but how many would have hatched in the ordinary way. This would make the positive loss really quite small. Scientifically manipulated the ova are practically all matured; left to nature 499 out of 500 die.

The increase of the fish resources of the country is a matter of common interest, not to he restricted to narrow or sectional views. Most of our large water courses intersect or touch more than one State, and their restocking is not a mere local question. When the New York Cemmissioners propagated shad in the Hodson, they neces sarily benefited New Jersey fishermen, who claim the part of the river that hounds their coast. So, while the United States Commissioner has taken shad from the Hudson, he bas returned salman from Maine and California. The New York Commission has heretolore obtained whitefish from Michigan and Canada, and there has been more or less free interchange of fish hetween the States. Of course it is not to be expected that any State would willingly see its waters depleted for other localities, hut that is supposing a

FISH PROTECTION IN NORTH CARO-LINA.

The following law in relation to the protection of fish bas just been enacted by the Legislature of North Caro-

lina:—
SECTION 1. The General Assembly of North Carolina do enact. That it shan not be lawful for any person of persons to use drift new of any kind, except bow n '>, known as skinn nets, in the waters of Neusee Roser, between Newvern, Craven county, and Kinston, Lenior county, and in the waters of Contentines Creek, between its mouth said the Green

Iline.

3. It shall not be lawful for any person or persons to use more ne seine in the same seine hore.

so, 3. It shall not be lawful for any person or persons to use more a one seine in the same settle fole.

20, 3. It shall not be lawful for any person or persons to use any use, or drag out, or nets of any land whatsoever except bow nets, on any settle uset, in the waters of Neure River and Contentues etc., as described in section 1 of this set, from Friday evening samest all stonday morning an sunrel from February lated June 181, ac. 4. Any person or persons violating said acts shall be deemed by of a integementary, and on convenion shall be fixed not more usylvand imprisoned not more than one month, and in addition secondal forters all the fishing tackle used in violating this act.

2. A laws and causes of laws in conflict with this act are hereby caled.

DEC. C. This set to take effect from and after its radification.

Hauffield the 17th day of March, A. D. 1875.

A tree copy—teste:

J. E. West, Clerk Superior Court

The Preservation of Figure 1 James River.—The last General Assembly passed an act for the preservation of fish in James River, providing, among other things, against the potention of the river by enquying or permitting to flow into it any rufose or other delectricos matter. The indictment sgainst the city, as drawn up by the grand jury at onege tropton's suggestion last Monday, specifies that the waters of the river are polluted and rendered poisonous to the his by the gas far and other retuse flowing from the Gas Works.

Go. Works.

The officers of the Gas Works, who are responsible for whatever violation of law there may be in the case, claim

that the facts are not as set forth in the indictment. It has been the custom at the Gas Works for years past to pump the gas tar into wells, for the purpose of selling it to regular buyers. It is claimed, therefore, that the refuse that finds it way into the river is not gas tar, and, such as it is, is not hajarlous to any form of life.—Richmond Whia.

—Dr. J. R. Richardson reports that recently while pass-lug from Toronto to Kingston he found the surface of the water covered with young shall from two to six inclus long. This would indicate that there are unknown causes at work which promise; to interfere with the propagation of this fish in Lake Onlario.

Hatural Historn.

For Forest and Stream.

SOME WILD ANIMALS OF NEWFOUND-LAND.

THE OTTER

N some of the stores in St. John's at certain sensons of The year large quantities of after skins may be seen hanging from the ceiling. These have been purchased from the Mic Mac Indians and distant settlers during their periodical visits to the capital, and are all exported to Eugland. Judging by the number of otter skins brought in by the hunters every year these animals must be abundant in Newfoundland. They bring here from \$5 to \$7, according to size and quality, and during the last few years have been steadily rising in price, \$9 and even \$10 heing sometimes given for a superior skin. One of them is sufficiently large to make a winter cap and a pair of gauntlets. On traders and settlers make two varieties of the Newfound land otters. The most valuable, and that which is taken by the Indians, is called the "country" otter, and principally frequents inland brooks and rivers. It has far of a pally frequents inland brooks and rivers. It has far of a heantiful, shining, dark liver hrown, almost black on the back. The other variety, called the "salt water" otter, has far of a rusty brown color, and is considerably larger than the country otter, although the skin is not nearly say valuable, rarely realizing more than \$3 or \$4. The food of the otter is chiefly fish, but the creature will ent maything that comes in its way—the flesh of other animals or the young of water fowl; and it has even heeu known to enter a beaver's house and kill and devour the young. Its swinding powers are wonderful, and the rapidity with which it slides over or through the snow is also surprising. In it slides over or through the snow is also surprising. In hoth operations the tail acts a most promiuent part, but this can hest be seen when the animal is gliding through the snow. This it does by a succession of hounds, each of which ends in a "slide," often several feet in length, the thick tail, which is given by a peculiar lateral curve of the thick tail, which is provided with two powerful muscles, one on each side. The presence of these muscles can be detected even in a dried skiu, by two deep furrows, which are not obliterated by stretching and nulling the skin to a

THE WOLF.

There can be no doubt that in the interior of Newfoundland wolves are in strong force. Cormack, the only traveler who has crossed the island, tells us that he everywhere met their tracks, but only in a few instances did he see any wolves. He is of opinion that there are two kinds of wolves in Newfoundland-one large, which prowls singly or in couples; another small, sometimes met with in packs. I should be inclined to think that on this point Cormack is mistaken, and that the only species of wolf here is the American wolf, (Chinis occidentalis, Richardson.) It is difficult, however, to find two skius of this species, even in the American wolf, (Canis occidentalis, Richardson.) It is difficult, however, to find two skius of this species, even in the same litter of whelps, marked exactly alike, so great is the variation in the shades or degrees of enloring, from pure black to almost clear white. Few Winters are pussed without some wolves heing trapped along the shores. They often prowl near the houses of the settlers, or puss them in the chase. Their cunning in capturing deer is sometimes surprising. During the Winter season the deer feed in the marshes, which are generally surrounded by belts of conifera. The ravenous wolves secrete themselves in the deer paths and lie in wait until one or more wolves get round to windward of the deer and drive them through the puths, when some of them fall an easy pirey to the secreted wolves. The only instance on record of their attacking a human being is related by an Indian named John Juc, who stated that in April, 1866, when standing by the side of a small lake—one of the innuy formed by the River Exploits—he saw an old wolf coming toward him across the ice, and presently five or six more showed themselves. The Indian ran for the "tilt" where his gnin was, but the wolves gained on hum, and would have killed him had he not climbed a tree aut of their reach. After remaining nearly an hour under the tree they took their departure. It is rarely that wolves show such courage us in this instance, and they are generally well aware of the presence of firearms. The field of the carihou, which is usually of excellent quality when the animal is shat without chusing, is secreely palatable when killed by wolves, or even when chased by canoes for some distance and shot, having a frothy and flabby appearance, which is disagreeable to hoth touch and taste.

THE FOX.

There are two species of fox in Newfoundland—the common red fox, which has many varieties, and the blue or Arctic fox. Of the former there are the cross fox, silver lox, and the black fox varieties, all helonging to the same species. Settlers declare that they often find in the same inter all these different kinds—the black, the silver, the "patch" or cross fox, and the yellow. The most valuable is the black lox's skin, which is said from £13 to £15; a silver brings from £8 to £10; a cross £2, and a yellow \$3. The "patch" or "cross" lox is the smallest of these varieties. The Arctic or blue fox (V lagopus, Liun,) is tolerally common throughout the island, and is much more easily taken than the former, as it invariably searches out and from

quents human habitations. The other is shy and watchful, and will rarely go near a baited trap till driven by hunger. The white skin of the Arctic fox, however, fetches only \$1. Since seal skins have been introduced into the fushionable warld the price of black and silver fox skins has fallen considerably.

skins has fallen considerably.

THE MARTEN.

Martens, or American sables, are still common in various parts of the island, but from the increasing value of furthey are unusually becoming sourcer. It is a hold, rapacious animal, and in its hubits reminds one of the polecut. Marten cuts, as they are called in Newfoundhand, are easily caught in iron traps placed in "cut houses" or in "dead, falls." Some naturalists identify this species with the Enropean M. zibellina, but this is a doubtful point. Little reliance can be placed in the colors of the martine, as a very approximable difference exists in this particular, even in Newfoundland and the Labrador, the former being much lighter throughout, but especially about the head and ears, so perceptible is the distinction that a truder recally separates the Newfoundland skins from those obtained on the main land.

So perceptible is the distinction that a trade readily separates the Newfoundland skins from those obtained on the main land.

American black black black.

In his "Journey Across Newfoundland," which has been reprinted in Porker and Striam to research extensive districts remarkable for the abundlance of berries, and that these are the favorite humas of the black hears, who feel upon them. He tells us that the paths or beats of these animals throughout their feeding grounds are sumped with marks of actiquity seemingly coewal with the connective. He shot one which weighed 350 punnds, the futuround its body being four inches in some parts. The flish of the hear is much esteemed by the hulbans. The pickled hums are undoubtedly good exting, but require great entering preserving, as the faity parts are upt to turn rancial. There is some doubt us to the period of gestation, but from many lasts which have come in light it is pretty evident that they copulate in the Pall, and bring forth in the sang Winter caves; for on their appearance in the Spring they are generally accompanied by two, rarely three, young ones. Usually the thack hear is a solitary animal, although they or six are occasionally seen together. It may be regarded as omnivarous in its liabits. It is often seen on the sea shore in Spring, feeding ou any animal monter which may be east up by the waves, such as partid pieces of whales, fish, lobsters, etc. Later in the Summer the various berries, such as those of the mountain ash, for which it readily climbs, rumberries, and libraterries are its principal food. It rarely attacks cattle unless arged by lumger, but of molasses it is known to be extraorduncily fond. It is at once the most harmless species of bear, and the most easily destroyed. An onnee of shat not smaller than No. 6 is sufficient to kill the largest of the speches if lired into the intestines helinil the ribs at a distance not exceeding twenty yards. There is little shaper in approach ing these aminals, even when wanneld. The sense of sight ap

MUSKRATS.

This animal has been called, and not without reasing "this heaver in miniature." In economy, hidnes, and appearance the two numbers have a considerable resemblance. The food of the amskrat consists of the strins and roots of aquatic plants, bark, firsh water chans, and other mollinsks. The females bring forth six to nine at a birth during the Summer, and breed only once a year. The skins are worth twenty cents, and in Spring their mask like odor is very powerful. The houses of the maskrats, or masquash, are built of mud and rusines, and are frequently of considerable magnitude, but are tenanted only during the Winter. They are not built in the ice, but on the mud at the battont of the shallow water, and are raised same two feet above the surface, so that the water at the bottom remains unfrozen by the animals continually breaking it to go off in search of food under the ice. The houses are also provided with a kind of serond thor above the water heed, on which the muskrats lie on a bed of soft dry grass.

which the muskrats lie on a beil of saft dry grass.

HARES.

The polar hare is the only species found in Newfoundland, and it is pretty commun in must purts of the island. It is of great size, the ordinary specimens weighing nine or ten pounds. The flesh is not so puldable us that of the English latte, in consequence of its frealing in Winter on the tender shaots of birth. Nava Scotia larres bove bately been introduced, and are multiplying with great rapidity. Already they constitute an impartant addition in the Winter fure of the working classes. They are not half the size of the polar larre, and their flesh is not so good. In St. John's they are sold in Winter for six pance each.

THE STORMY PETREL

Synacusk, N. Y., July 21th, 1875

EDITOR FOREST AND STREAM:—
In your Issue of July 22d U notice un toquity regarding the institut of the "strong parter," or "Mother Carey's chicken." This faird, so faculture to every craft "laff soundings," I have never spen nesting except on "Rock Redwidth", or "Rock of Thumber," is whiteenen style it, an off-shoot of the itallipagos, Islands, in the South Pacific. They seem to nest there something like the swallow, along the edges of the claf, on the bare rock, in enoughess swands. Millions of other sea towl, including the lidack albatross, store the same initially place. The rock Redlibs in lancersable tower, taking straight from the oreas, with deep water close in the base, from which I have resisted in taking many a bant bod of the and escaled take.

E. R. Wilson.

Scurvy Leas.—The following is a good enre for scurvy legs among lowl:—Take sulphur, two omers; charcon, palverized, que-fourth annee; train oil, enough to paste; any with the hand, by rubhing well in. Atlow it to remain three days; then wash off in mild weather, with good soansuds, and repeat the dressing as often as it is necessary.

AMERICAN AND EUROPEAN COCK.

EDITOR FUREST AND STURANI:—
Sportsmen often usk, "What is the difference between the English and American windlewck?" Now, reather question is general, I give the following nates for the kinefit of sportsmen, who are interested scientifically in game lather. The Rampean Scolapus visition is a large, dark endings for lottle. The Rampean Scolapus visition is a large, dark endings for lott species are almost the same. The fine the remaining from the install to the eye, and a similar har from the check to the fines of the fine large are industriant to the large with proportionately the same. The general coloration of the Eurogean available hack partientarity the maler parts, which are crossed with frequist bursh lind, partientarity the maler parts, which are crossed with frequist bursh from the extremities of the feathers. The legs and bills of the two species are of the same shape and value, and the primarles and secondaries have their edges asky, and was it not for the plain may breast and diministrances of our commun Patholeta minor the apecies would hardly be recognizable save by the practived eye of the ornithologist, Buth species generally have fourless at the two klode that but twelve and threve meaning appeliance of the two klode that but but twelve and threve feathers in their rails. Woodland, Harm and Garden.

THE DELAWARE PEACH CUOP .- The peach growers of the Maryland and Delaware peninsulus have met in convention and agreed that their erop of this lucious fruit this year will be not less than \$,000,000 haskets; so we may expect them to be cheap and alcandant. It is not always, however, that the consumer reaps the benefit of a bountiful harvest. Dealers and middlemen usually enter into combinations to keep prices up, while the producer is spacezed down to the lowest point. About the 1st proximo the trade is expected to be fairly opened, although some of the earlier varieties may reach us sooner. The arrangements for transportation are on an immeuse scale. Quick trains are to run to New York, Boston, and even to Maine, at a rate of speed hitherto unparalleled. Eleven hundred and fifty cars have already been leased to growers and branch railconds, to be used in the New York trade, while the Ohl Dominion Steamship Company will do a heavy Susiness between Lowes and New York. A new enterprise is the opening of direct communication between the pench country and interior cities, and by this means growers unlicitate doing business quicker and making greater profit, by doing away with middlemen. These arrangements extend as far as Chicaga and St. Louis, and are made direct will the Pennsylvania and Baltimore and Ohio Ruilroads.

It is also proposed to fit up the between decks of European steamers with immense refrigurators and early thou-sunds of baskets arross the Atlantic in this manner.

—A revision of the sub-order Talipea, by J. G. Baker, has recently appeared in The Journal of the Linnear Society, of interest to American bottnists. This group of six genera and 176 species is confined to the north temperate zane, having its largest development in Eastern Asia, but ranging largely on the one side to Europe and on the other localitorain and the Rocky Mountains. The tulip is the only genus not represented in America, the hily extending across the continent and the fritillary stopping shart at the Rocky Mountains. On the other land, the enlochering, numbering twenty species or more, is limited to are more Western Territories. Of the half-dozen crythranians, our is restricted to the old worth, the rest is the new. It is singular that a species in the smallest genus (Lloydia scrotina) should be the one most widely distributed of all the lilytribe and the only one that is really arctic or alpine.

ABUTIGORS—BOULE DE NIEGE,—Among the many ornamental plants offered by the Mallow Family, the abutilons take a high rank. One of these, Abutilon striatum, has been a long while in enlitvation, and is now quite common under the rather absurd name of "flowering maple," no doubt so called from the resemblance of the leaves in shape to those of the maples. This is one of those plants that satisfy the most exacting grower, as it will know all the year round; it is easily managed as a window plant, and when set out in the garden in Summer, it proves attractive there. The principal objection to it as a window plant, is its tendency to grow out of bounds, and as many enlivators are too found of their plants to use the knife to them, we often see this grow out of all proper shape. No plant more needs judicious pruning, and none repays it hetter than this; it is so very tractable that it may be made to assume any desired form, and may be grown as a pyramid, well furnished with branches from the base npwards, or it may be pruned to a clean trunk, with a tree-like head at any desirable height. This tree-farm is very effective when planted out on the lawn in Summer, and it is well adapted for the window, as its head can be quite above the lower growing plants. Another reason for its popularity is the case with which it is propagated, cuttings of the half-hard-eneil stems taking root readily. The fine clean handsomely shaped leaves of this abutilon, together with its gracefully pendalous, bell-shaped, curiously veined flowers, make it a very desirable plant. A variety with the leaves handsomely blotched with golden yellow, is one of the few variegated plants that are satisfactory at all times. This, which is called Abutilon Thompsoni, is equally manageable with the plain form, and whether grown indoors with partial shade, or out in full sun, its makings are clear and brilliant; this form does not flower so freely as the plain. Another species, A. econum, has larger and darker flowers thun A. striutum, but is not so well ealcu

THE AUMY WORM—This pest has made its appearance in Sulfolk county, L. I., and is doing irreparable damage. In the vicinity of Sayville, entire fields of oats and corn have been destroyed, and the cry is still they come.

RUBBER CEMENT.—Four ounces of pure Iudia rabber, one cighth of an ounce powdered asphaltum, put logether in a tin can, then add about six times the quantity of benzine, let it stand three or four days, then take a stick and work it over, then add benzine and stir it well until you have it about the consistency of honey; then it is ready for use. It should be covered as tight as possible while dissolving, and afterwards. To use it, serape the polish from the rubber, then apply the cement to the place to be mended, and also to a piece of rubber to be used as a patch. Dry half an hour, and apply another coat, then, after another half hour, press the patch into the place over the break. Like all other preparations containing benzine, it must be kept away from fires, as it as explosive as burning fluid.

The following method for the preservation of fruit has been patented in England:—The fruit is placed in a vertical vessel in layers, separated by layers of pulverized while sugar, and is then covered with alcohol of 80° Gay Lussae. After twelve hours the closed vessel is inverted and the unceration allowed to continue for twelve to seventy-two hours, according to the nature of the fruit, which is then removed and allowed to drain and dry. About two pounds of sugar and two pounds of alcohol are recommended for four pounds of fruit.

—There is a vast difference in the flavor of eggs. Hens fed on clean, sound grain, and kept on a clean grass run, give much finer flavored eggs than bens that have accessostable and manure heaps, and cat all kinds of filthy food. Hens feeding on fish and onious flavor their eggs accordingly, the same as cows cating onions or cathage or drinking offensive water, impart a bad taste to milk and butter.

Oue fourth of the area of Prus in Is in forest, the most of which is controlled and preserved by the Government. In Hanover alone there are nine hundred thousand acres of wood under State management.

The Japanese are shipping bricks to California, and sell them cheaper than those made in that State, notwithstanding there is an ad valorous duty of 20 per cent. on them. The Japanese brick is 8½ inches long, 4½ wide, and 2½ inches thick.

The Homel.

bitch by Colhura's Dush, ilam, Mr. Rinks' imported Irish bitch. With the stock they inherit, Polly's whelps should turn out rare ones.

MR. LAVERACK'S SYSTEM OF BREED-

THE "RETREAT," BELLE FONTE, FORMERLY BLACKS AND WHITES, NOTIONAL COURTY, Va., July 20th, 1875.

The "Retheat," Belle Power, formerly Blacks and Whites, 1
Notional County, Va., July 21th, 1875.

Editor Forket and Stream.—
Your able correspondent, "Dry Land," In a letter which was published to your journal of July 18th, he answer to a cumminication from me states "that there are several gentlemen in England perfectly able to foralish as pure Laveracks as Mr. L. bimself," and goes on to say "that if any one hought a dog with a pedigree purporting to be june Laverack from such English gentlemen as Myssus. Price, Hemming, and Liswellen it would be as pure and as reliable as if purchased from Mr. L. himself," This is all very well as far as knowing that the dog as purchased came from the lotus of a pure Laverack, but as Mr. L. has frequently stated, "I do not like crosses, and especially those of Mr. *****." As a rice, English gentlemen do not biy other men's breeds of dogs to sell again, but purchase wholly for the purpose of sinalgamading a fashionable and successful breed with their own kennels, and, moreover, rarely sell the best of all, unless relinquishing breeding. In my lumble o shidon it is impossible for any one to breed pure Laverack setters except Mr. L. In person, and when the old gentleman dies, (which event, we trust, will be remote), then there will be an end, not to the Laverack filose, but the great judgment and discretion in mating, which has achieved such britliant successes in the field trials and heuch shown of the would. When a dog and blich tases tolls kennel (Mr. L.*) they also leave their master's eye, his plan of feeding, his system of giving mediches, his blending of colors and dispositions, and, in fact, the getteral runtine on which his kennel (English gentlement as pure dog and blich purchased from the founder of this system, the progeny of these animals are of course pure, and literally so, but does on know how to proceed to mate these dogs so as to give certain colors, temper, speed, endurance, nose, style? "There's the ruh." The direct written instructions from Mr. L. would be

sliows with the Laverack strain, some retailuling the original blood, others crossing with their own kennels. I should much like to see this continue.

Is the question of breeding animals all in the parity of the stock? In my opinion there is nearly as much credit to be given to the hreeder in matting as there is to the purity of blood. This will apply more especially to the breeding of animals that have a large progeny. How many well-known breeds are extinct, of have much deteriorated at the present day, owing to the death of original owners, and the evident incapabilities of fancy purchasers to mule judiciously? Gerileaven on this side of the water who are purchasing Laveracks are not buying them for field purposes, but as stock dogs and brood hitches, so as to perpetuate this well-known blood among our first-teles native performers, and also to keep this breed pure and intact as it can be without the actual supervision of the judge, and when this woughty acclimated, originate the American Laverack. Our friend "Dry Land" states "they are too fast and rangy for this country." This is a vast contry, and embrace a great variety of soil, climate, and cover, but like most other writers, ha hases blis assertions on particular States. As regards Virginia, fur instance, where most of the gentlemen shoot on horseback, one would suppose that a setter with the speed of a grayhound and the ensurance of a world would be most saltable. If the Laveracks are so fast and rangy I am glad to hear it, as it is a good faolt in an animal, and very easily timed down; but I must easy I have never noticed it, either in this country or abroad. This breed are not particularly headstrong; on the contrary, they are submissive and ohedicent, and of all breeds, just the one to mate with the headstrong Irish Americans selters. I would suggest not to cross this hreed will the hack and tans, unless they show excessive speed, as it would be hard to improve the nose of the Gordons. The theory of colors in dogs will in all probability never be p

COLOR OF THE SETTER.

COLOR OF THE SETTER.

RIVENVIEW HOUSE, LA GRANGE, MO., July, 1875.

EDITOR FOREST AND STREAM:—

In your Issue of July 8th appears an article devoted to the colors of the setter, giving the opinion of Mr. Arnold Burges in the matter, and disagreeling with your answer to a correspondent, as to whether or not liver and white is a good color in that threed of dogs. Your answer was, to the rest of the world of sporting men and dog fanciers, doubtiers correct. There cannot be, and is not, but one opinion as to one side of the origin of the setter, i. e. the spantel; whatever the other may be its a matter of conjecture. I, for one, favor the Scotch shepherd; an increase in standard a shortening of ear and curl has to be accounted for, with no diminished on the eligence; and no other dog seems to fill the bill so well. After writing thus far I again read the article of Mr. Burges until I cannot to where he expresses the opinion that fiver markings are apt to indicate a predominance of pointer or spantel blood. I would ask bim are the colors of the pointer is variable than those of the setter? Are there no letnon and white pointers, not black, black and white, or rest, etc.? not to mention a breed of the handsomesi dogs that I sin aware of in a breed of black and tan pointers owned in the county of Cumberland, England, near Derwent Water Lake. And I would now ask if alt spaniels are liver colored? Are not cockers frequently black, and hisek andian? and, without mentioning the King Charles and Blenheim, is not the most highly valued spaniel that we now have, that Is, the Clumber spaniel, tenton and white; and, supposing that the invariable coloring of the spaniels has a hetter right to It than the selter? And for this reason alone (though my predilection is for black and white) to I think that liver and white is a color which Is more appropriate to the setter that any after. Mr. Burges might as well say, and with much better reason, that the black and tan Gordon for Gurton setters, and real Irish selters for Irish dogs,

and a Gordon black and ian. If there is one thing more admirable than another in Mr. Laverack's lite it is this he has ignored color, for to have coher is to ignore the other qualities in his paps, which are of much more vilat importance to the spottsman; consequently, theveracks are of all colors. My Pash and Bang I presented to Mr. A. II. Hobard, of St. Louis. Their father was pupped al Edmond Castle. I have now modeys with liver markings, but if I was asked my opinion as to which color the softer dog owed slit ginuce, I would say liver and white, and the Earl of Cantrie and a thousand only a English gentlemen will say with me, for a dog of any a her color is not allowed inside the gates of Naworth Castle, and the breestle highly valued among the better class of spottsman in England, who long since had their fangers burned, and now offer no opposition to the enthusiasis who are inforting them numerical on this side of the Mantie. Insantly lea dreadful malady, and while no branch of knowledge or Industry can be thoroughly under our command without much biled and study, all the same than b is stragerous to give not undivided alterition to a subject so circumscribed as this, unless are companied by healthy exercise. In other words, twould give but little for the opinion of a dog tancier on a sporting dog was be not a sportismum and a fair to good shot, for except to such a man his beauties can uterer appear in the true and healthy tight of day.

Edward W. Hope,

Entror Forest and Stream:

In your paper of last oreck you speak of the bench show of dogs to be held to Chicago from the 25th to the 25th of January next as the "St. Losts Bench Show of Dogs." As this is a mistake which may tend to mislead the public, please correct. There will be a bench show of dogs given under the anspices of the National Poultry Association, in connection with their exhibition of poultry and pets, at Exposition building, Chicago, in January, 1876. Several leading sportsoner in the West will act as managers of the bench show, which is desired shall be a complete success, consequently efforts are already being under to secure the cooperation of the lending breeders and sportsmen in the United States and Canada, as well as all who take an interest in the improvement of the canne race. It has been decided to classify the sporting class as fullows: English setters, red Irish selters, black and lan or Gordon setters, setters of any variety, pointers, Irish water spanicls, cocker spaniels, sprolels of any variety, pointers, Irish water spaniels, cocker spaniels, sprolels of any other variety; also, champion class for brood binches, with not less than two of their progeny over four and under lowlve monts old, to which the addition of other classes will be made if a response is received from breeders and others to the circular of the association soon to be sent them. Pedigrees are desfred, and will govern the judges in the awardied of equal mert, one having a pedigree and the other none, the prize will be awarded to the one with pedigree; but to m case will not inferior autom be awarded a prize over a superior one simply because it has a pedigree. The most important matter connected with such exhibitions is to have independent and produced, will be offerent breeds. With this in view, the managers will take great pains to secure such. They have attendy received the assent of such well known gentlemen as Arnold Burges, Mayeville, Ry.; E. F. Stodiard, Dayson, Ohlo; and florace Smilh, Rennel editor of

trust our friends will give the Chicago show the hencfit of their hearty support.—En.]

ST. JOSEPH, Mo., July 21st, 1875

EDITOR FOREST AND STREAM:— ST. JOSEPH, Mo., July 21st, 1875.

One of your correspondents asks for a cure for fleas on dogs. I have used for several years carbotic acid for that purpose, in proportion of two leaspoonstuli (about an ounce) to a quart of rain water. The dog well wetted with this the fleas instantly die off. Must be careful, however, not to make the wash stronger or the dog may be injured. I use this preparation every time the these gather, and always successfully. J. P.

We have no doubt that the above remedy is a good one, but from long experience we are fully convinced that soap suds of common soft or hard soap will kill every flea it comes fairly in contact with. Consequently we can see no necessity for using a remeily which may be injurious to the dog.-ED.]

Sea and River Hishing.

FISH IN SEASON IN JULY.

Salmon, salmo sular Maskenooge, Essa nobilior, Weakh-h, Briped Bass, Klogdah,

Salmon Trout, Salmo confinis, Land-locked Salmon, calmo Glaveri, Black Buss, micropierus nigricane. Plice, ecox lucius. Plicerel, Bluedeb,

Sheepshead.

[Inder the head of "Game, and Kun in Season" we can may spect
by in general terms the several varieties, because the laws of States vary
so much that were we to attempt to particularize we could do no less
than publish those entire sections that relate to the kinds of game in
question. This would regain a great unusual of our space. In destrpating game we are guided by the laws of nature, upon which all legislatum is founded, and our readers would to not to provide themselves
with the laws of their respective States for constant reference. Otherwise,
our attenues to asset them will only create confusion.]

FISH IN MARKET. - During the past week fish of all descriptions have been in full supply. Spanish mackerel are now being eaught in large quantities on the New Jersey and Long Island shores, and sell for 40 cents per pound; Southern fish bring 30 cents. There has been a large arrival of pompano from North Carolina, selling for 50 cents per pound, which is about one half the usual price. Blue-fish are also very abundant, the largest coming from the vicinity of Buzzard's Bay; price î to 8 ccuts. Fresh mackricinity of Buzzard's Bay; price 7 to 8 cents. Fresh mackerel are being received from Boston, particularly fine fish selling for 20 cents each. Italibut are worth 18 cents per pound; sea bass 18 cents; sbeepshcad 20 cents; codfish plenty at 8 cents; striped bass, from Baltimore, 20 cents; porgies 8 cents; butterfish 8 cents; blackfish 10 cents. Green turtle plentiful at 15 cents per pound. Soft shell crabs \$1.50 to \$2 per dozen; hard shell crabs \$5 per 100.

STRIPED BASS - After an unusual scarcity this beautiful and gaine fish may now be caught with hook and line in fine quantities from McComb's Dam to Hell Gate. A correspondent writes that during the last few days he has caught from three to a dozen, weighing from one to four

pounds in weight, each time he has tried them. Buit with shedder crab or sand worm, the former for choice. A good place to start from is Mr. Jerolaman's, foot of Eighty-fourth street, East River, where Hell Gate's favorite base grounds may be learned; get a supply of shedder from Mr. Blackford, of Fulton Market, as none can be laid in the above locality.

Some HUGE TURTLES.-During the past week three enormons turiles, of the species known as the Lenther Turile, (Sphargis Orriacea) have been caught in this vicinity. the, (Sphargis Oriacca) have been caught in this vicinity. The first, which weighed about 1,100 pounds, was captured off Stonington, Conn., on Friday last, with a small scine, by Captain E. T. Wilcox, of Mystic Bridge. A full being made fast to one of his flippers, he was hoisted on board the vessel. This turtle was purchased by Mr. E. G. Blackford, of Fulton Market, and by him forwarded to Prof. Baird, of the Smithsonian Institute, Washington, for preservation and exhibition at the Centennial celebra tion. The turtle was seven feet in length by four broad. On Sunday morning, while the yacht Dreadnaught, with her owner, Mr. Charles Osborne, and a party of friends on board, were emising off Long Branch, they succeeded in catching another specimen of the same description of lurtle, and of about equal weight. A harpoon was thrown into the monster as he lay usleep on the water, and by it he dragged the boat several miles. It was not until numereral shots had been fired into him that he succumbed. The Dreadunught brought the prize up to the city, and it is now to be seen at the wurehouse of Messrs. Middleton, Carman & Co., No. 215 Front street. It is not yet decided what disposition will be made of it.

Still another turtle of the same species was enight last

week in Long Island Sound, between New London and Montauk Point, and taken, first to New London, and thence to Norwich for exhibition. It was about the same in dimensions and weight as the others,

It is singular that three specimens of this furtle should have uppeared almost simultaneously on our coast. The first one noticed was in 1811. In 1816 one was captured off Sandy Hook and for many years its shell formed one of the attractions of Barnun's old American Museum. In 1824 one was taken in Massachusetts Buy; in 1826 one in Long Island Sound, and in 1840 the last of which we have

record appeared in Chesapeake Buy.

The characteristics of this variety are seven longitudinal ridges on its back, truncated in front and pointed hind, with a smooth but tough skin. They breed on the Tortugas, but are great wanderers.

-On Monday last, Messrs. B. W. Peterson, M. B. Andrews, S. II. Davis, and Jos. F. Wallace caught nine sheepshead, aggregating 581 pounds, off the lighthouse at Barnegat Bay.

THE BEAVEREILL.—Mr. John Mullaly, known to our readers as the inventor of the Mullaly fly, writes to Messrs. Courby, Blisset and Malleson, from Shin Creek, Sullivan eounly, that sport has not been very good in that vicinity. He says: "At one time the Beaverkill was one of the finest of trout streams, but the fish are reduced not only in numbers but in size. The Beaverkill flies are a black gnat and bers but in size. The Beaverkhi mes are a blick ghat and a fly with a grey wing, very grey light body and brown legs. These are the most taking flies. In the evening the miller is the most taking, and the largest trout are then caught. These run from a quarter to a half pound. Occasionally a pound fish is taken, but this is very rare.

NEW HAMPSHIRE. - The Summer tourist will find some excellent fishing in the clear crystal streams of this State. A correspondent writes that he saw a few days since two sportsmen, who on two days' tramp along Drake's brook, which runs near the base of Ossipce Mountain, took one hundred and seventy five trout, of all dimensions, from the tiny little fellow up to those weighing a pound. Lake Winnlpisiogee offers many inducements to the camper out the many beautiful islands which dot its surface. Wolf borough Bridge is a good point d'appui, possessing fine hotels and boarding houses.

holels and boarding houses.

Rangeley Lakes—Arrivals at Camp Kennebagy, head-quarters of the Oquossoc Angling Association, like pust week, are: Messrs. Williams, llarvey, and Williamson, of Cleveland, Obio; Mr. Blanchard, of Boston, Mass., and Mr. Haines, of Manchester, N. H.

Messrs, Seiple and Comstock caught, on the Rangeley River, in one day, over two hundred troul, of very fine average weight. The weather has been quite cool.

Our readers will remember that the Oquossoc Club has kindly placed the privilege of Camp Kennebago at the disposal of all sportsmen who desire to visit this region.

 A sturgeon weighing about 300 pounds, recently jumped into a small sail boat, in which were five persons, when opposite West Ameshury, splitting the hoal in two, and throwing the occupants into the river. Three of them swam ashore, and the other two clung to the wreek, until rescued by a boat from the village.

Our correspondent, Oconomowoc, writes from Wisconsin that black bass and pickerel fishing continue remarkably good throughout the State; large strings and big fish are the order of the day. At Oconomowoc, recently, Harold S. Peck, Esq., of Chicago, captured three pickerel weighing respectively 18, 17, and 12 pounds.

The Oconomowoe Game Club, for the protection and preservation of game and fish, was organized a few days ago, and will be of good service in that locality. E. S. Stone, president; J. A. Henshall, secretary. The reports from the tront streams are as highly colored as the spotted beauties themselves, and the tront fisher is, consequently, New Jersky.—Barnogut Iulet, Kinsey's Ashley House, July 25th.—Weekly report.—Sheepshead are still biting freely, and as far as heard from the cutch for the week by as follows:—J. Perrine, 29; Steven Rhigway, 75; C. Grim, 75; Samnel Ridgway, 50; John Soper, 100; Wm. Imman, Jr. 40; Wm. Imman, Sr., 18; Howard Soper, 45; J. T. Mills, 25. S. Gulic, at New York, J. C. Low, John Beatty, 12 bluefish; Steven Lent, Joshua Harton, Warren Gordon, of Peekskill, N. Y., 40 bluefish, 15 weakfish, and J. and B. Peedamre 88 sen bass from the wrock of steamer Mediator; Mr. David Leavitl and Major J. H. Rutherford, of Dresslen, Saxony, 51 sen bass and kingtish. Kingfish are biting freely.

Cormon House, Focked River, July 26th, 1875.—Fishing for the past week has been unalerately good, and althought no extraordinary large strings were taken, yet good sport has been enjoyed by those who have visited us, among them E. C. Tuylor, of Osbaru & Co., Wall street, and family, C. E. Carman and family, Messrs. Reeder and Shan, Brooklyn, F. B. Tilglunan, wife, and Mr. Kuapp, of the Shoe and Leather Bank, New York.

There are Fishing parties to Markhe, Fully, on the Color

Brooklyn, F. B. Tilglumm, wife, and Mr. Kunpp, of the Shoc and Leather Bank, New York.

E. H. F.

Texas.—Fishing parties to Mardle Fulls, on the Colurado, report fine catches of black bass and "gasper-gues," but a great lack of rain, none baving falben in six weeks.

The Fisheries.—The whole mumber of fishing arrivals at this port, for the week culting July 22, was sixty seven—forty from Georges, elven from the Banks, and sixteen from mackereling. Amount of Georges coll brought in, 800,000 pounds Indibut, 50,000 pounds. Bank end, 1,300,000 pounds, Indibut, 160,000 pounds. Bank end, 1,300,000 pounds, Indibut, 160,000 pounds. Mackerel continue very scarce, the receipts being but about 1,400 burrels. Prices have considerably advanced in consequence, sales being made at \$15 and \$9 for Nos. 1 and 2.

Schoomer Nulli Secundus, of this port, Captain Charles Lawson, which arrived from the Grand Banks on the 9th list, weighed aff 102,800 pounds letched Indibut and 98, 912 pounds couldsh, her stock amounting to \$7,882.91. Crew shared \$308.67 each. This is the largest stock made on a saft fare trip, this season. Schmoner Lehra Nelson, which arrived some two weeks before the Nulli Secundus, stocked rising \$7,000. Both vessels belong to Messrs. D. C. & H. Babson, and the stocks are remarkably good ones, and in all probability will not be exceeded this season.—Cope Ann Advertisee, July 23.

Good Catches.—Our Louisburg correspondent informs us that the fisheries around that coast are so far very productive and that the fisherien all along the Southern coast are having splendid catches. We learn also that there are a large fleet of Bankers in port at St. Fietre, who report fish plenty on the Banks, but bait very scarce.—North Sydney Herald.

Canada.—The Canadian Department of Fisheries has intelligence from the Restigouche District that the salmon

CANADA.—The Canadian Department of Fisheries has intelligence from the Restignuche District that the salmon fishing has been so much interfered with in the tideway, by floating lumber escaping from broken booms, that the "take' so far has been greatly below the average of former

years.

It is proposed to creet additional fish breeding establishments in the Martime Provinces. Messis. Wilmut and Whiteher are now on route for the East in reference to this matter.—Canadian Journal.

—The Ingersoil Chronicle says that poachers are plying their trade on the river Thames, west of Lombon, by stretching seines across the stream, and bugging all that comes up. It is reported that these man after eath 1,000 good fish at a haul, valued at from \$4.19 \$7 per cwt. They have made from \$400 to \$600 a month at this work. The effect has been to destroy the fishing above the village of Cashmere.

BASS FISHING FROM HORSEBACK

BASS FISHING FROM HORSEBACK.

Personal Florids, July 10th, 1875.

Betton Porest and Sturan:

It is probable that your rasilines may smile and bly at the above expition, but I can assure them that I found gund sport in it, and will left them how. Some seven years ago I was living in Bradford county, at this State, and parily for pleasure and parily for hustness funnd or casion to visit an acquaintance some affected miles distant in Albachus county. Near my friend's residence were several well known lakes, which swarm with the Sunthern back bass, or, as the matives here mistance them, from: I intended on teaving home to have some sport in that line, and took along a common spoon hook and a juinted bumboo rod. My Irland donhed its nectathess. It clouked upon that gramp of three rather small books with a smile of incredibility. Burs are usually caught in this country with flive halt, and when the natives nee artificial it is composed of a bunch of gamily freathers and rags, with half a dozen large cod hooks, the whole thing as large us one's two lists, and made fast to a stout cord, three or four feet long, and this in turn fustered to a stout spruce or case pule. A man stands in the buw of a skiff, and as he is paddled along the edge at the fly pads hobe this "ily" on the surface. When he gast a bite (and they do rise to it freely) be pulls the fish in light rod, main strength, hand over hand. Knowing, as I thi, this style, I really could not blane than for baying donkts of my flut squan. He was univerteed, inwever, the same evening, we're a tetowished the natives, and myself as well, by having all t could attend to in like shape of large.

The next day we were rising along the large of large. The next day we were rising along the large of the late near tils house, which, like many others in this region, has sunk partially, so as to leave a strip of beech same thirty or forty feet wide sname therefore. The height light I could see many bass, and an occasional picherel, called here jark fish, lying eight ar ten fee

PICKEREL TAKEN WITH A FLY.

NEW YORK, July 28th, 1875.

Rew York, July 2011, 1870.

Mr. Thumas K. Lees, Vice President of the New York Gaslight Company, while flating lately at a late near Breasner's, on the Rarlem Railroad, cought with a spilt hundren rail and "tinge" my a pickered weighing one maind. This is the only instance of a pickerel helog caught with a fly that there here is a first and Sturan give another.

G. S. T.

FISHING ON GREEN LAKE.

JAMAICA PLAINS, Mass., July 18th, 1876. corum FOREST AND STREAM:—
I this erved in your pulper of the Sih of July some inquiries about the
shing and shouting at Green Lake, Wisconsin, and as I was there for a
swilays in Syptember last I will give you some extracts from my note

fishing and shouting at Green Luke, Wisconsin, and we was there for a tew days in Syptember last I will give you some extracts from my note book.

Syptember 22d, 1874. —Touk the 7 A. M. train at Milwankee on the St. Paul Rajiroud for Ripon, binvty milve; arrived at 12:30, and went to Wood's Hotel to dine. At 3 P. M. took a buggy and driver to go to Grorge Cufflings' boarding house on the south side of Green Lake. The dispance is seven miles, over an open country, mostly in largo wheat fields, where, my driver told me, were many prairie chickens. A mile from the lake we shike a wooded region and descend from the prairie in the share of thy lake, on which shands the large new house of Mr. Collings, punted brown, with brood plazzas, in a fine grove of oaks. I found the house neat and confortably, able to accommodate twenty-five bounders; pice from 28 is \$10 per week. The luke 1s ten miles long and two wille, with high, woodyd banks—a very handsome sheat of water. I found five or six good light boats for rowing, and a sell hoat; I got a son of Mr. C. to go out and row me while I trolled with a spoon. Went half a mile, and got one small plekerel, about two pounds. Two other men came in from fishing as I went out; one had three bases from two to three pounds in weight, the other nothing. The weather was warm and the sun bright.

September 23d,—Clear and warm. Went out about 8 A. M., laking a man to row the boat. Went three miles along the south shore and got two physics of about three pounds each, trolling with two linys and spoons, hat saw no bass. Shores high, and in some places walled with limestime, and generally covered with large oaks. Restired about the man across the lake to the mouth of a stream to get minimum and sent the man across the lake to the mouth of a stream to get minimum and sent the man across the lake to the mouth of a stream to get minimum of the sun bright.

and sent the man across the lake to the mouth of a stream to get introduce for still fishing to morrow.

September Mih.—Started at 7 this morning with a backet of live builty trolled along the south shore five miles without a stilke at either line. Then crossed over to a headland called the Sugar Loaf, and fished in twenty five or thirty feet of water with live minnows. Expecting to find hass fiere I used a book tied on gal, but a pike took me and ont off the bank, and this was the only bite of any kind; my mun, who was also fishing got nothing either. There were also two other hoars fishing at this place; they got two pickerel. The day was very warm and hright. Returning in the evening by the same route I hooked a pickerel of about five pounds, which I pluyed on my rod and brought up to the boat, but he boolman managed to lose it in bringing it the; so I wont home without a fish, having gone over eight or ten miles of water. The lake is said to be 200 free deep in places, and the fish in warm weather retire to these depths. June and October are said to be the best months of fishing been, as the base are then on the shallows. In the Spring and Fall ducks are numerous in the shallow bays.

Balloual Bastines.

Balloual Bastines.

There are apparently two ways of getting at the base hall whip pennant—the one is by winning it squarely by superior play in the field, and the other is to break up the term which is successful in holding it year after year, and then try and wedge your new team into the vacant place edgewnys. For the past lonr years New York, Philadelphia, Chicago, Hartford, and lastly, St. Louis, have hired huse ball teams with the object of getting possession of the pennint, won by the Boston club in 1872, and held by them ever since. Thus far the effort has been a failure, though no pains have upparently been spared to attain the object in view. Despulcing of success in any other way, the Chicago ball tossers have come to the conclusion to break up the clampion Red Stocking team by giving their leading players such tempting offers in the way of increased salules that they could not resist the ball. First filey secured the noted ritcher Spalding by tendering him the captainship of the new team, and this being done, they soon brought in White, Barnes, and McVey as prisoners, logether with Satton, of the Athletics, men who originally won their reputations as Western players—Spaldingly won their reputations as Western players—Spalding, Barnes, and Auson, in the old Rockford team, White and Satton, in the original Cleveland nine, and McVey, in the old Westerns of budianapolls. These, with Peters, originally of the St. Louis Red Stockings; Golden, of the Keoknk Westerns, with Devlin, Glenn, Hines, and Warren, are to form the Chiengo White Stocking Contennial team for 1876, the most thoroughly Western nine the Chiengo shave ever pluced in the field. Of course these arrangements are in direct violation of the spirit of the professional rules, but as the Chiengo managers stick to the letter of the law, and do not actually engage these seceding Reds and Athlefess until after November 184, they have been lively topies of conversation in base ball circles th

EDITOR FOREST AND STREAM :-

PORTLAND, July 21st, 1875.

RDITON FOREST AND STREAM:—

The closest and most exciting game of hase ball ever played in Maine came off at Presumpscot Park yesterday between the Lowells, of Lowell, Masse, and the Resolutes, of Idis city, the score similing 2 to 2 at the viul of the tenth liming. The Lowells went to the bat for the eleventh, and the first two strikers were put out, when the next one, (Brown, their catcher,) was taken suddenly ill, and fulnied upon the home plate. The Lowells having no substitute, refused to continue the game, and the nuplie, (Mr. Whire, of Lowells) curiously enough decided it a draw. The Resolutes go to Lynn to play the Live Oaks next Saturday.

Vidt.

The Great Swimming Match.—J. B. Johnson, of England, and Thomas Coyle, of Chester, Penn., contested in the Delawure River on Thursday last. When about six miles had been covered, Coyle, who had been leading, suddenly threw up his hand, and would have sank if he had not been taken into a boat. He was completely exhausted, his lips black, and his pulse searcely perceptible. Johnson swam a mile and a half further, and was perfectly fresh when he left the water. Coyle is said to have partaken of whiskey several times while swimming, and the reaction following the fulse stimulation may have lost him the match, and almost his life.

Answeys Co Coryespondents.

anthor of "Hills and Lakes," "Wild Northern Scenes," Ans. We do not know it.

B. L. G., Sharon, Penn.—Which of Hazard's powders do you consider the cleanest and most effective for woodwork, qual, and grouse shooting; for use in a fine beceeh loading gan? Ans. We find Hazard's electric powder clean and effective.

C. D., Hartford, Conn. — As I injend visiting the Thousand Islands, St. Lawrence River, about August 1st, I would like to obtain the address of some farmer, living near good dishing grounds, of whom I could obtain hoard and hoat. Ans. Don't know of any. Go to Crossman House first, and asvertain from there.

first, and assertain from there.

CONSTANT REAGER, New York. Will you kindly inform me whether there are any weakfles being caught at Prince's Bay, S. I., and if not, where is the best place in the immediate vicinity of New York to catch them? Ans. Weakflish are being taken in moderate quantities at Prince's Bay. Go to Steele's for boats, etc.; lauve the cars at Richmond Valley stalfon, thruce by stage.

stalfon, thence by stage.

S. W., Springfield, Mass. — Will you please tell me in the next answers to correspondents what is the best arrangement for carrying the cart tolders for the Mayand tifle, 40 calibre, long; also, where can I get a pair of army shoes? Ans. From Henry C. Squires, No. I Courthand street, in this city, you can get leather case for carrying rule cartridges. Army shoes can be had at Pickin & Waterbury's, No. 110 Chambers street.

W. G., Springfield, Muss.—I. Is the vicinity of Mooschead Lake, Me., a good place to camp a month in early Autumn for treat and la.ge game?

2. Are Insects a great annoyance there?

3. Can I flud a better covering for the feet than shoes and moreasins, with strong buckled leggings?

1. Yes. 2. Not very troublesome at that season; take some Culexituge.

3. No.
W. F. A., Washington, D. C.—Please inform me through the columns of your paper how much powder a 12-hore gan will harn with an ordinary load of shot. Ans. About three drachms powder to 14 ounces shot is a fair load, but much depends upon the weight of your gan, which you have not given. Bogardus uses five drachms in a 13-bore gan.

have not given. Begardis nees five drachms in a 12-bore gun.

C. D. S., Washington City.—I understand that by a recent act tront fishing is probibiled in the State of New York for a period of five years. If this is so, will you pleaso inform me whether the law is general in the nature, or only applies to particular counties? Ans. No such general to the has been passed, or even proposed. Some protection may be desired for a particular stream only.

E. B., Amberst, Mass.—Cun you direct me to any publication or publications where I can that the most reliable facts of speed and inne? Ans. "Rowing and Athlette Annual," by Jos. Watson, referve in intercollyginte regains; "Racing Record," by Spirit of the Times, and Clipper almanae, will give you the biformation you desire. The latter combines at histic, racing, trotting, vic.

C. O. A., Woonsucket Falls.—Please tell most be cheapest roote to the Rungeley Lukes from Baston; are bouts to be found on the lakes to let; can you tell where to camp? Ans. Rasiven Rallroad to Partiand, thence by Grand Trank Rallroad to Dunvillo Junction, and Androscoggia road to Farmington, from these stage to Rangeley. Mr. Richardson, superintendant of the Oquossoc club, wilt tell you where to camp. Boats can be had.

K. B. S., New York.—I want to get your advice about a gen. It is of gyttling a \$15 Remington gnn, to use mostly for hay bird shooting the heach and march, and for general shooting. Let me know what consider the heat size. Ans. A Remington or Whitney gon, 12-ra 30-line barrel, and of about eight pounds in weight, will be a good viewable gnn for the purpose.

B. Judianandia—On page 25-2 and a size of the pounds.

some the barrel, and of about eight pounds to weight, will be a good service while gun for the purpose.

B. Indianapolis.—On page 367 an advertisement of Kay shot cariridges says: "Synd to your gun dealer for sample." So far I have not found a gun denier in this part of the country who can tell anything about them. It would be well for the manufacturer to give his address. Ans. Owing to some defect in the machinery, the Kay shot cartridges have not yet come into the market, but we are assured that they soon will.

BUBBCRISEN, Rochester, Minn.—Having so kindly answered my query in regard to the hardness of gun barrels, and in which you stale the barrels are soft while the imps and bolts are hard, will you please tell me how, after hrazing, the lumps can be tempered band without hardening the harrels? Ans. Any skilfull gun maker can harden the lumps and bolts without hardening the harrels. It is one of their arts.

A. B. C., Angusta, Maine.—Will you kindly inform me through your correspondents' column what is the most taking bait for black has sy some five yvars succe a large lake in this vicinhy was stocked with them, and they have now become quile pleutiful. Ans. Fresh water crawfish, or live minnow, where the fly is not used; the latter should be a large and gandy tront fly, although we have known the simple havkle to be used with great success.

C. H. R., Galnesville, Texas.—Please state in your answers to corre-

and gandy front by, although we have known the symple in the bound with great success.

Q. H. H., Gainesville, Texas.—Please state in your answers to correspondents the correct name of our horned Irog; also, chapstral hen, found in Texas. Texas will soon be no longer a game region, as civilization is fast crowding the game westward to the open plains, and many valuable specimens will hocome exinct. Ans. Wood terms the horned frog the crowned tapayaxin, (Phrynosoma blainville.) The chapatral hen, known also as the road runner and ground cuckoo, is termed Geococyc Californianus.

G. R. W., New York.—Will you kindly laform me through the correspondents' column whether robins can be shot at all, according to the present laws of this State? Ans. Robins can be shot by August, type tember, October, November, and December, except in the countiles of Kinge, Queens, Putnam, and Suffolk; in these only in October, November, and December, But these birds can be killed on a person's own premises at any three when destroying fruits or grapes. [Chap. 511, amending sections 10, 19, and 5 of chap. 721, laws of 1871, State of New York.]

amending sections 10, 19, and 5 of chap. 721, laws of 1871, State of New York.]

D. M. S., Rogers' P. G., W. Va.—1st. I see advertised in your last Issue "pair cocker spaniels." Ptease advise me as to their age, color, size, price, etc. 2d. What can I get in New York for a doe (fawa,) tame as a cat; it is about two months old; was caught when about one week old? 3d. Do you know of any Rigby muzzle leading rife, in perfect order, for eale cheap? Ans. 1st. The price of the spaniels is \$20 cach, \$30 for a brace four months old, 2d. By advertising in our columns you would find a customer for your fawn; no demand from dealers. 3d. There are no Rigby muzzle loading rifes for sale in this market.

C. A. C., Philadelphia,—Please tell me of some tront streams near Philadelphia; also about Miford, or almost anywhere in Pennsylvania, and the best way to reach them. Ans. If you will make your beadquarters at Lackawaxen, on the Eric Ralfrond, at Williamson's Hotel, you will find many moderate streams within easy reaching distance. Also go to Trout River, in Lycoming connty, twenty-five miles above William-port. See MacWilliams, at the hotel, and he will drive you and your traps to Pleasant stream, a delightful hrook for fly casting. You are no doubt aware that the close season commences in Pennsylvania on August 15th.

August 15th.

W. S., Randolph, Mass.—How are the strings measured at Conlin's short range gallyry; do they measure from centre of bullseye to centre of each shot, or bow? Ans. From centre of bullseye to centre of shot. What is the proper size of bullseye, centre, and onter for 100 yard range, and how much does a hit in each space score for the shooter? Ans. Bullseye, eight inches diameter, counting five; centre, sixteen inches, counting four; inner, twenty-eight inches, counting thre; outer, forty inches, counting two. This is toe Creedmoor rarget need from 100 to 300 yards. Some of the short range clubs use a three luch bullseye at 100 yards, with mir exterior black circle to make it more plainly visible. Is the F. Wesson ride, 38-inchealibre, 30-inch barrel, good for long range? Ans. No. Can you tell mo of any hook or pamphlet which gives any good advice to heginners in the art of ride shooting? Ans. Wingale's Ritle Manual. We can send it.

G. W. G., Syrachee, N. Y.—in your next issue, if convenient, please

good advice to heginners in the art of rife shooting? Aus. Whigale's Rifle Manual. We can send it.

G. W. G., Syracnse, N. Y.—in your next issue, if convenient, please state as near as possible the nativity, habits, size, and the term of life of the popular fish called the shad. A great controversy has arisen in relation to whether the shad lives more than one year, and whether It is possible to grow shad in any other than salt water except for spawning. Seth Green to the contrary notwithstanding? Ans. The American shad, Alora aspiditsing, it is believed, is peculiar to this country. A fish reported to he similar is found in China, but has not been identified. Its habits are anadromous. They are reported to have been caught years ago of aine pounds weight; now, however, a six pound shad is a large one. The experiments of the United States Fish Commission have proved that the shad lives three years at least, and that the males are sexually mature at two. Before they were artificially propagated it was the byllef of the fishermen on the Hudson that a shad matured in one year, spawned, and then died. Shad are now living in Lake Ontario, and perhaps the other great lakes.

R. R., Vicksburg, Mtss.—Have shad heen caught to the Mississippi or

year, apawing, and then oried. Sind are now living in Lake Ontario, and perhaps the other great lakes.

R. R., Vicksburg, Miss.—Have shad been caught in the Mississippi or any of its tributaries this year? About two months ago a paracraph in the Forest and Stram slated that a fish supposed to be a shad had been caught near St. Paul, Minn., and sent East for identification. Was it a shad? Some of those placed three years ago in the Alicebany, in the White River, Ind., in the Mississippi, near St. Paul, and in the Flatte River, Colorado, by the United States Fish Commission, were expected to be seen this Spring. I have read the Forest and Stream carefully, but have failed to notice any report of their appearance in either of those rivers, except the paragraph alluded to above. Ans. The fish caught near St. Paul was decided to be a shad. Shad have been caught in the Mississippi this year, and each year a lew are caught in that river and its tributaries. Dr. Boyd, of Knoxville, Teum, reports having caught shad for the last thirty years, averaging from one to eight each year. See Prof. Milner's paper on shad and its artificial culture, in Prof. Bard's report of the work of the United States Fish Commission for 1873.

The Late George Brown.—The Dominion papers contain obituary notices of George Brown, the champion oarsman of America, who expired at Hulifax on the 9th inst., at the age of thirty-six. The record of his rowing life covers a long list of victories. The St. John Telegraph says that "his last race was on the Kennebeccusis on the 26th of September, 1874, against Evan Morris, of Pittsburg, whom he defeated hy a hoat's length in a race of five miles in 37 minutes. This race was for \$2,000, and excited great interest all over America. An altempt was made to get a match up between Brown and Sadler, the English champion, but the latter evidently had no wish to meet Brown, and nothing came of it. Brown was a fisherman by trade, and it was in that rough school that he learned to handle the oar. He was 5 feet 94 inches in height, and weighed when in condition for rowing 155 pounds." It is proposed to erect a suitable monument to his memory, and the Halifax Rowing Club has taken the matter in hand. THE LATE GEORGE BROWN .- The Dominion papers con-

POUND NETS AND RUN-AROUNDS.

N the last report of the Commissioners of Fisheries of the State of New York great stress is laid upon the damage to the fisheries of the State, and more particularly those of the Great South Bay, by pound nets; but there is another engine of destruction now in daily use which is working far greater harm, and which appears to have entirely escaped their attention. We allude to the runtirely escaped their attention. We allude to the run-arounds, or fly nets, which every fisherman who visits Babylon or Islip must have seen in operation. Those certainly who have followed the now popular sport of chumming, and been dependent upon these nets for their supply of menhaden for bait, must have observed their operation The fly netter, or fly by night, as he could appropriately be termed, generally commences his work either during the dark hours, or just before the dawn. In the shallow waters of the bay a school of fish, whether they be menhaden, weaklish, or bluefish, can be readily discerned from the masthead of a sloop. Upon such a school being discovered, the small boat, which is towing astern with the net conveniently disposed, is started off, and in a few minutes the school is surrounded. Now the fisherman commences pounding on the surface of the water and against the sides of the boat, making all the noise in his power, the object helug to frighten the fish into the meshes of the net, where he is held by the gills until taken into the boat. The effect

many do find their way under the leads or over the top of the net-would naturally he to cause them to leave where they were so much disturbed and not return to it.

This mode of fishing, or something akin to it, is in vogue among the Chiuese, but only on lakes which have no outlet, and where the fish are obliged to remain and propagute whether so disposed or not, The traveler approach ing one of the many series of little lakes which run lef with the Yang Tsze Kiang, more particularly in the Hupeh province, is often startled by this distant pounding, rlsing and falling in regular cadence, that at twilight has a most weird and unnatural sound. Reaching the lake he finds a fleet of hoats, from which proceeds the noise, at one end, or perhaps gradually approaching the other, where the sluggish carp are being aroused from the rundly hottom to be captured in the nets awaiting them.

Such mode of fishing in the Great South Buy, to which fish resort for the purpose of spawning, would most naturally have the effect of driving them to "fresh fields and pastures new," and we believe that the damage done by the fly netters far exceeds that caused by the pounds,

With regard to the pounds, without wishing to say night in their favor, we are still of the opinion that the information furnished to the Commissioners is erroneous and calculated to mislead-first, as to their location, and secondly, as to the amount of fish caught in them. In speaking of the uets at the inlets and entrances to the bay the report says:-"If a fish creeps up one side of a channel he runs into one uet; if he takes the other side he is met by another, and if he follows the very centre of the deepest water he is met face to face at the first turn with a third."

It is probably two miles from Fire Island Inlet to the first pound, and along the eastern or principal channel there are three or four in all. Not one of these nets is in the channel, but only on the extreme edge of it. Were the fair way in the least obstructed, the many vessels, some of them of considerable size, that ply to Sayville, Patchogue, Bellport, and points further east, would make but short work of them. There is not one tithe of the ilmnage done by pounds that is caused by the fly nets, or the fykes which are set in every little cove and creek frequented by striped bass along Long Island Sound. The report is correct stating that bluefish are seldom taken in the pounds, we believe it to be owing to an instinct which teaches them to avoid the danger, not because they do not still frequent the bay. On Wednesday of last week six thousand bluefish were taken in one fly net, and the many gentlemen who have enjoyed chumming at "The Elbow" this Summer will certify that a few remain. It is a notorious fact that weakfish have never before been taken in such numbers in the Great South Bay (in nets) as during this Spring, and when they return from the eastward, as they always do about the first of August, great sport is anticipated with the rod Among the people who reside on its shores who derive their living from the hay, and who would be the first to grumble at any diminution of the supply, no compiaints are heard. It must be admitted that the fishing so fur this Summer has not been so good as it was last year, but fish are sometimes fickle and duinty in their feeding, and as the menhaden is the great attraction which draws them to the bay, the greater scarcity of this food fish may be the cause. But the season is yet young, and the coming months may bring a full supply of voracious and larger bluefish. Our reports from Barnegat and Buzzard's Bay indicate that the fishing at those points has never been better. trust that something may be done to quelch the fly-by-nights, and give the fish some chance after they have run the gauntlet of pound nets, and the hungry maws of their own

A CAPTIOUS CRITIC.

HERE is a class of English newspaper writers who arc nothing if not cynical, but it is rarely our for-tune to meet with such examples as will be found in the following paragraphs. For the first, we can only express following paragraphs. For the first, we can only express contempt for the literary snob—of all snobs the worst—who would willingly malign a party of gentlemen who appear to have won golden opinions from all sorts of people. It is difficult to say which excites the most surprise, the maliciousness or the mendacity which prompted the attack. The paragraphs in question are taken from the London Sporting Guzette, in the department which bears editorial sanction, under the caption of "The Man About Town," The first, after alluding to a recent scandal trial, refers to the American team in the following manner -

refers to the American team in the following manner—
"But it is not only in religious matters that our cousins are giving us 'wrinkles' just now; they offer us also pat terns of secular excellence for imitation. For example, the American Rifle Team have heen carrying all before them in Iroland, and have shown that they can shoot 'some.' I had, however, given the a credit for being possessed by a purely chivalrous spirit of rivalry in these contests; I had fondly imagined that Yankee smartness and love of pelf had no place in their thoughts. If rumor speaks true, however, I have done the American ritlemen a gross injustice in helieving them capable of such unbusiness-like and unpractical motives, for I hear now that between them they have netted something like £30,006, having backed themselves to any amount with every one who would het with them. Possibly the rumor is false, and to that possibility I am sure all true sportsmen will cling."

If it were not for the extreme silliness of the above

If it were not for the extreme silliness of the above statement, one could be indignant at the insult; for as the winning of thirty thousand pounds, or one hundred and fifty thousand dollars, implies a wagering of a similar amount, the inference is that the American team visited Ireland with this large sum in their possession, for the pur-pose of hetting it. The whole statement originated in the of this noise or concussion upon the fish that escape—for | brain of the writer—probably the only original thing that | join them, in case the site can be obtained.

ever emmated from it. We have rarely seen anything to equal this, even in an English newspaper. And here is what the same party says of Captain Bagardus, in the sacceeding paragraph of the same article:—

succeeding paragraph of the same article:—
"We have to thank Captain Bogardus, too, another son of 'Greeu Columbia,' for knocking the last unil luto the cofflu of that morltunal pastime, pigeon shouling. Even those who retained any lingering penchant for that, to my mind, contemptible and odious amusement must have been fairly disgusted by the sickening details of the wholesale slaughter, of which Captain Bogardus has been the hero. I am aware that some sporting men of the present day patronize these 'tournaments of doves,' as the Premier, with withering sarcasm, dubbed them; but as almost every true sportsman, without exception, whom I have met in the course of my life condemns them, I have no hesitation in thus plainly and emphatically expressing my own alhorence and contempt for them. Surely no mau with any particle of the instincts of a sportsman in him will maintain that there was any element of sport in Captain Bogardus' exhibitions."

How hard it is for John Bull to take a henting, or to admit excellence in anything which emanates from outside of the Island! The oracle has declared pigeon shooting to be a "morihund pastime," and as all true sportsmen of his acquaintance condemn it, the gentlemen of the Hurling-ham, and Gun Cluhs who apparently the not enjoy the honor, must put away their guns, and confine themselves to skittles and small beer.

We were inclined to censure Captain Bogardus for giving exhibitions of his skill before shooting the matches which would bring him profit as well as honor; for there is no secret as to his profession, or the object of his visit. His purpose in giving these exhibitions would probably be inexplicable to our trans-atlantic cousins; but we recognize in it the inherent honesty of the man—the openness born of his Western life, and which distinguishes the sportsman from the sporting man. It was an outcome of the same chivalric sentiment which lost the Harvard crew their race on the Thames, where, through an implied un-derstanding, they declined, when leading, to take their opponent's water.

It is pleasant to turn from such twaddle as is contained in the above paragraphs, and which does so much towards counteracting the good feeling which springs from international amenities, and a hetter knowledge of each other, to the kindly scatiments contained in the following, which we clip from the Volunteer Service Gazette, a high-funerl journal, and the exponent of rifle shouting in Great Britain. The Gazette takes blame to itself for ant having sooner moved in the matter of a match between the English. Scotch, Trick, and American sight, which, which lish, Scotch, Irish, and American eights, which, having been left to the last moment, and heing everybody's lusiness, became nobody's business, and flually impracticable.

"The visit of the American team to Ireland has been in all respects successful, and Major Leech, who, we regret to learn, has retired from the chairmanship of the Irish Rifle Association, must be heartily congratulated on the results of the happy audacity which led him to organize the first of these very pleasant and legitimate International visits."

"There is no manner of doubt that everybody who has any connection with rifle shooting would have there ready to exert himself to the utmost, not only to make the visit of the Americans pleasant to them, but to get up a contest which should be worthy of the victors of Creedmoor and now of the "North Bull." We all knew long ago that the members of the American tenun, after fighting the Irishmen at Dollymount, intended to come to Wimbledon, and we knew also that we could not allow them to come to Wimbledon without finding them is highling to shoot in, besides giving them as warm a welcome, if that he possible, as they gave to the Irish term last year, and as Americans always give to their trans-atlantic consider."

Interpreters.-A Chinese Commission is now visiting dock yards at Portsmouth, and other English naval establishments, with the object of deciding upon the most perfect type of an iron chad for the Chinese navy. They are accompanied by a French naval lieutenant as interpreter. The last sentence contains a commentary upon our own system of civil service abroad, which could not be hetter expressed in volumes. Here we have a shaple French lieutenant able to interpret for a party of Chinese officials. No man in the French Consular service in China hut who is similarly qualified. In the English service the men are equally proficient, and hesides a regular staff of interpreters are always at hand. Under our miserable system we have no interpreters, and are depembent upon stray mis-sionaries or English speaking Chiuamen, the latter coluring his transactions to suit his own views, and the former, at times, "mixing" things most lamentably. No wonder that, although we stand second on the trade list, we are at the hottom in the respect of the natives

-Says La Nature, the fisheries in France furnish occupation for more than 100,000 sailors. Of this unmber the coastwise fishery employs more than 70,000 men. In 1820 these coastwise fisheries only employed about 35,000 men; in 1830, 50,000, and nearly 60,000 ten years later. The maritime fisheries produce to France to-day about 68,000, 000 francs per aunum, of which sum 24,000,000 to 25,000, ooo tranes per unium, or which sum 24,000,000 to 25,000,000 franes are the products of the oysters, mussels, and crustacha generally, the balance being derived from the capture of migratory fishes, such as coil, herring, mackerel, anchovies, sardnes, etc. This increased revenue is attributed largely to the increased forwarding facilities furnished by the railways,

-The Staten Island Shooting Association of Port Richmond, are trying to procure a site for a 1,000 yards rifle range, and there are several New York regiments that will

UNITED STATES FISH COMMISSION WOOD'S HOLE

WE who are about to spend the Summer at Wood's Who are about to spenn the summer at voods it lole begin to think that guod furtune was on our side when it was so arranged. Our daily papers and letters tell us of temperatures from 90° to 100° in the favored spots we have left behind us, while with us hot weather seems to be a furtly. We are absolutely wishing for it. This sleeping under a blanket every night, and wearing still our Spring overcoats, is something novel for midsumsuffering with thee hours away, in Boston, people are suffering with the heat. However, we don't complain, and won't, if we have freedom from fogs, which are the lane of fishermen and dredgemen. To be sure we have a pilut, native and to the manor born, who, it is said—and he does'nt dony it-can, in the darkest night or the thickest fog and strongest tides, take as safely through the whirls and rapids, the sunken rocks and deceifful eddies of "the Hole." It is well that he can, for it's our mission It is well that he ean, for it's our mission to seek what others avoid, and the deep, safe channels, are but crossing places to the rocky ledges and banks, which the creatures who furnish fish food inhabit, and where naturally the various fish congregate, and where we. who seek both, have to follow them home.

The Bluelight has begun her work, and we have bottles and pails full of dredge fruits, and before this letter is finished will have tried with the trawl the sandy bottoms of Nimshe Island. Last week our naturalist corps became complete by the arrival of Profs. Verril and Smith, Messrs. Clarke, Thateher, and others, whose names I will enclose in a complete list. The Molly, a roomy, comfortable yacht, placed at Prof. Baird's service through the obliging courtesy of Mr. Fay, her owner, has made trips and returned with sundry sharks and goose fish (Lophius Americanus) and a great torpedo ray, collections from pounds off Nausha and the Vineyard; but our main excitement has been our black fish. News enme on Tuesday evening that a school had been driven ashore in Dennis Harbor, and the next morning a dozen of us, accompanied by the Rev. and genial Mr. Treadwel Walden, of Boston, and his two bright boys, started on a trip for our share of the spurt and the spoils. We did'nt get the sport, but they spirit and the spoils. We did'nt get the sport, but they were rather spoiled—that is, for perfumery purposes; they were in prime order for scientific research. the smoking car on the Boston bound train in deference to our costumes, and reached Cohasset Narrows in half au hour or so, having in the meantime passed through a succession of Falmonths, three or four, yes five of them; viz: Falmouth; North do.; West do.; South do, and Falmouth Heights. At Colusset Narrows there is a junction with a branch line that extends along the cape to the extreme at Provincetown. We waited two hours for the train, but passed the time pleasantly. A unmber of the club men, who have a most delightful little club house on the beach, were engaged on the bridge, fishing in the rapid tide—which, from Buzzurd's Bay, here runs into a narrow resembling a river—lor striped bass and bluefish. Their gear opened my eyes; my efforts in that direction had been with opened my eyes; my efforts in that direction had been with hig lines, big hooks and big squids; they were using gent delicate enough for tronting, with long gut suells, small hooks and a single shrimp for bait, using, however, reed poles and large reels. The day, though, was not favorable, for some one of the many reasons which produce such results, and but one has was taken, while I, was there, and results, and lant one has was taken while I was there, and that but a four poumler. The skill with which he was handled and landed, two hundred yards off on a hit of beach, showed that there was at times good enough fishing to give practice. I horrowed a home made pole, with a me made reel that a lively horse would have experienced difficulty in turning, and fortunately struck and lost nothing. It is ut this point that it is proposed, by a three mile cut, to join the waters of Buzzard's Bay with Massachusetts Bay, and I think that any one who has had to go around Cape Cod in rugged weather and a small vessel, will wish the projectors of the plan and the company

From Cohasset it was a thirty mile ride to the castward to one of the "Deunis"," (there are four of them and five Saudwiches, and four Yarmouths—names are scarce up this way and they have to make the best of who they have)-but we found that even the station man who sold us our tickets had got mixed a little, and after passing through the third Barnstable, found that one of the Yar mouths was a nearer point to the right Dennis than the other Dennis; (I hopo you can keep track of us.) so we got out there, and with vehicles we had telegraphed for, started across to the beach, a five rulle ride. As we passed the natives we made inquiries as to the number of blackfish, and as we neared the scene the number swelled to seven or eight hundred and more being driven. Alas for the veracity of fisherment of Cape Cod fishermen par excellence, we found but one hundred and twenty eight, lying stiff and stark in a long row on the beach, side by side, heads in shore, and moored with ropes. A few were rolling to and fro helplessly from the surf, for they had been lanced and drowned! I have seen many black fish at sea, and had formed too great au estimate of their size, and these, although as I was told were a fair average lot, looked small; the largest was 16 feet 8 inches longthe great portion about 14 feet, and one newly born haby was the smallest; it was 7 feet 8 inches long, while its mother was but six feet longor. Our party secured several at different stages of growth and of both sexes, and they were transported to our fish house, and for a day or two

with plaster, procured fine molds of all of them, whichor rather the easts from which—will enrich our National Museum at the centennial. Our photographer, Mr. Sinlley, was unable to excreise his art upon ments had not yet arrived; but with Blake's drawings no

ments and not yet arrived; out with black photograph is necessary.

I have had at last a fair afteroom's fishing. I had about given up, for bluefish scemed to have become nearly extinct; but "still fishing" in an eddy last week I broked and scenred a line striped bass weighing 174 pounds, and shortly after, on the same buit—the tail of a shedder lobster-an eight pound bluefish. I have lost my faith in the gamy qualities of the bass. Mine was, as I said, nearly an eighteen pounder, measuring three feet in length; yet my eight pound bluefish gave me twice the work that he did. Two or three times I had to give him line; not once did the bass require more than checking. My bass was a good one, but the day before one of forty-six pounds had been taken in the same eddy. The bass make their appearance here three or four times in the Summer, when, for a day or two they are taken, and some pretty big ones; then they disappear entirely. They have been eaught and brought to market as large as seventy pounders; they have been hooked and "got off," if I am to believe all I hear, weighing twice as much. As there were no scales but those of the bass present, I have my doubts.

The Commission are well underway at their work. Our wind mill is up and working, and our tank of salt water, ever changing, ready to supply the aquarium. The pounds are sending in sword fish, sharks of all sorts, and other rare fish, and to day we got a splendid gar fish four feet in length. I will tell you some of these days of all the interesting ceremonies with which a rare fish is treated when he falls into our hauds, but want to see the photographer at work first, with his unique apparatus, to describe the first impression.

I did not do full justice to this place in my last. I described it as I then understood it—as a "hole." I find that the word is a corruption, and that in reality it should be known by a more dignified appellation—one that connects it by an interesting link to ages beyond our familiar history. I can indebted to Mr. Joseph Fay, who has published a monograph on the subject, for the information:

"In the tenth century the Norsemen visited this country, and coasting down from Greenland, passed along Cape Cod through the Vineyard Sound to Narragansett Bay, where they settled; that a knowledge of the history and migrations of such tribes, the Celtic Norweigans, and others, must be recovered from the study of names of the places they once inhabited; that in Shetland, without exception, the local names are Norweigan, the names of farms end with 'seter,' and the hills are called 'holl;' that coming through the sound, at such places where they would naturally resort, harbors and roadsteads and passages, all overlooked by bills, we find now the name of Hole. Powder Hole, with its high, sandy hills; Wood's Hole, with hilly bluffs, both sheltered Larbors; Robinson's Hole, a passage through from Narragansett to Buzzard's Bay, prominent hills marking its boundaries; and below Pasque and Nashawenec Islands the high hills of the former are a distinguishing mark for Quick's Hole, which is but a channel. It is recorded in their sagas that their intercourse with the natives was friendly, and It is probable that, familiarizing themselves with the localities by the prominent land marks, they give to the Indians the word "holl," which has again by them been passed down to later generations.

Their names are on our waters, Ye may not wash them out."

If this theory be correct-and it seems well substantiated-for in the sixty miles of their probably dallying voyage, stopping first in the harbors on the south shore, then when they ceased, following along the northern coast and leaving their names among the Elizabeth Islands, we have five places named "Hole," or "Holl," while to the eastward there are nine—then it is shown that to the Old Bay-State belongs the honor of priority of discovery and of settlement; but, with a few exceptions, the Indian names still adhere to the many islands of this neighborhood.

Cuttyhank, Penikese, Nashuana, Presquincese, Great Naushon, Nonamesseit, Assouet and Sukkonesseit, Uncatina and Weepecket

is a bit of thrilling poetry, familiar to those who heard it from childhood, but very hard to quote in an emergency. I dou't wonder the Indians took the new and easy word for their hills, nor that the English explorers under Bartholomew Gosnold adopted it with pleasure, prefixing, as is still a commou practice, (see Arctic charts) their own name to distinguish them. Piseco.

New postage rates, which took effect July 1, are us follows: Money orders not exceeding \$15, ton cents; over \$15 and not exceeding \$30, fifteen cents; over \$30 and not exceeding \$40, twenty cents; over \$40 and not exceeding \$50, twenty five cents. Postage to Germany, Great Britain, Luxombourg, Norway, Sweden and Switzerland, five cents for each half ounce. Postal cards to same countries, two cents; newspapers, two cents for each four ounces; mer-Postal cards to same countries, two chandise, two ceuts for each four ounces or fraction thereof; registratiou, eight cents. Prepayment is optional, double rates will be collected at place of destination, when payment is not made. Maximum weight of merchandise allowed to be sent, eight and three-quarter ounces. rates will be applied to France after January 1, 1876.

THE AMERICAN TEAM ABROAD.—The 21st was the day fixed for the match for the American Cup presented to the American riflemen by the National Rifle Association for competition-first, among the members of the team, and sabsequently, on its arrival in this country, by our rifle men generally. A heavy rain, now a familiar visitant prevented the match being nunounced at the appointed time, but later in the day the shooting commenced. The sky was lowering and the wind light. The range was 1,000 yards. Each man hall thirty shots, and the highest possible score was 150. Bottine and Yale did not take part in the contest. The scoring was remarkably fine, considering the distance and weather, and excited general admiration. Fulton made eight consecutive bullseyes and Canfield six. The following is the score:-

Name.	Sec	ore 1 Name.	Score
Fullon		133 Renco	4 1 00
Campiera		126/Balland	100
Coleman		119 Gildersleeve	 100

Mr. Samuel Remington gave a banquet to the American team on Friday. Major Leech and other members of the Irish team were among the guests. Speeches were made by, and the heartiest congratulations exchanged between, the Americans and Irishmen on their respective victories at Dollymount and Wimbledon.

On Saturday the members of the American rifle team witnessed the coucluding shooting of the Wimbledon meeting. Major Fulton received the Wimbledon Cup from the Princess Lonisc. The Americans were personally visited by the Duke of Cambridge, Earl Spencer, the Marquis of Lorne, and the Earl of Kingston. Monday, they they visited Eton with Sir Henry Halford. General Mc-Mardo has promised to arrange for a visit by the team to Woolwich this week, after which the Americans will go to Paris. They will sail for home on the steamship City of Berlin, which leaves Liverpool for New York on the 12th of August.

THE ELCHO SHIELD.—This, the most important match of the Wimbledon meeting, was decided on Thursday. The Irish term, coached by their recent American antagonists, were victorions by the closest as well us the best score ever made for this trophy, adding sixty-six points to the best made before, but still inferior to that made at Dollymount. The telegraphic report gives the following summary:-

The contest was limited to the teams of England, Scotland and Ireland. The teams consisted of eight members, each of whom had fifteen shots at ranges of 800, 900 and 1,000 yards. The bighest number of points (5 for each shot) that could be made at any one range was 600, and the highest total score was 1,800.

The shooting opened at the 800 yard range, the American team keeping the targets for the Irishmen and soperintending the shooting. At the close the score stood:—

ream.	romis.	Lighest.	Per cent.
England	515	600	. 158
Ireland	500	600	.836
Scotland	498	600	.830
1 000 1	77		1506

At the 900 yard range the English fell behind from 515 to 504. The Scottish team warmed to their work and made to 504. The Scottish team warmed to their work and maile some splendid shots, increasing on their previous scores 13 points. The Irish team went to the front with a rush, and a lead of 10 over England and 20 over Scotland, increasing their score from 502 to 527. At the close the scores stood:

Team. Points. Highest. Per ceut. Total. treland 52: 600 578 1029 Scotland 511 600 851 1,009 England 504 600 810 1,009

At no range to-day, or at any time, lowe either the Creedmoor or Dollymount scores of the American narksment here equalled, or even approached, and a correspondent of the Mad colls attention to this, which, he says, is the reason why the Americans were not permitted to should at a target to see how they would score.

After the victory of the Irishmen, Wells, captain of the English eight, called for cheers for the Irish cight, spake in response, and called for cheers for the Scotch eight, Dudop, captain of that team, in speaking, complemented the American team and America.

Col. Giddersleeve, captain of the American team, returned his thanks for the favorable remarks about his country. In regard to the hope that had loven expressed that an American team would compete at Wimbledon in 1876, he said: "We are to have at Philadelphin in that year a national centennial relebration, may we invite the rifle teams of the rivilized world to a friendly contest there. Should that he accomplished you will see an American team at Wimbledon in 1877."

Lard Wharneliffe said he boped the English, Scotch and Irish riflemen would be represented at Philadelphia.

THE AMERICAN OFF-HAND RIFLE CLUB.-Most of the members of this new and flourishing organization were present on the occusion of their first competition, at Union Hill Schnetzen Park, on the 22d inst. In addition to the accembers, the shouting was graced by the presence of the lovely daughters of the worthy president of the club, and hright glances and approving smiles doubtless had much to do with the excellent shooting. The prize contestration was a magnificent game, prograted by Lace Resider. to do with the excellent shooting. The prize contested for was a magnificent cane, presented by Leon Berker, Esq., and valued at \$50. The shooting was done with heavy target rilles, heir triggers, ten shots each at 200 yards. The targets used were of paper, with rings mumbered from the centre, the bullseye conditing as 25, and the outer ring 1, making \$50 the highest possible score. The members were entirely naused to the heavy rilles used, but the scores indicate that the club will be able to turn out a team worthy of competing, at that distance, with any in the world. At two o'clock the shooting commenced, and the following scores were soon rolled up: Mr. Wm. and the world. At two o clock the smooting commenced, and the following scores were soon rolled up: Mr. Wm. Hayrs, 202; Mr. Faber, 198; Mr. Klein, 198; Mr. Hellwig, 196; Mr. Tragesser, 192; Mr. Kessler, 180; Mr. Moone, 178; Mr. MurDanald, 167; Mr. Becker, 139; Mr. Hendon,

148; Mr. O'Kelly, 146; Mr. Farwell, 113.
Adjourning to the Castle, the prize was presented to Mr. Hayes by the donor, Mr. Becker, in one of his felicitous speeches, which was appropriately responded to by the winner. The president then gave an account of the formation of the club, which was was followed by other speeches and toasts. The next meeting of the club will be held at the Twenty second. Parisports be held at the Twenty-second Regiment Armory, at eight o'clock P. M., on the 30th inst. The American Rifle Association have tendered the Off Hand Club the use of their new range, in Westchester county, for their next meeting.

-The Connecticut Legislature has granted to the Sharp's Rifle Company, of Hartford, a special charter, giving val-uable privileges and extending their capital stock \$1,000, 000 000

THE INTER-STATE MATCH .- The Culifornia papers con tain detailed accounts and target diagrams of this match, the origin of which was through a challenge from California, published in this paper, and favorably commented npon editorially. Inter State shooting will probably hecome common shortly, but we trust in a different shape. Arrangements should be made for the contestants to shoot at the same targets and under the same conditions as to wind, elc., by which only can a correct test be obtained.

CANADA RIFLE ASSOCIATIONS.—We have received the

programme of the Seventh Annual Prize meeting of the Quebec Rifle Association, which commences on the 15th of August at the Point St. Clearles Ranges, and continues of Angust at the Paint St. Charles Ranges, and continues on the following days until the matches are all shot. Several of the matches are open to "all comers," and we are assured that if any of our rillemen go up to try their luck they will find fair play and be well treated. The Dominion Rille Association Tournament will commence at Ottawa on the 7th of September next. \$4,500 will be offered in prizes. There will be for the first time an Inter-provincial match, prizes for which amount to \$1,300.

Apropos of this meeting, we note that the Canadiana.

Apropos of this meeting, we note that the Canadians bave been very successful at Wimidedan, three of their men being winners of the Daily Telegraph prizes, two af men being winners of the Daily Telegraph prizes, two of the Alfred prizes, and three of the Windinnic prizes. In the first stage of the Queen's prize, the winner of the first prize, with National Rifle Association silver medal and hadge, made ninely points. He was followed by two Canadiaus, who, besides winning hadges and £12 prizes, rank among the sixty cutifled to shoot in the second stage. Their names are: —— Hunter, 85 points; Private Mills, Tenth Battalion, Ontario, 72 points. In addition to these, £3 prizes were won by the following Canadiaus: Ensign Wright, Fiftieth Battalior, Quebec; Gunner Little, Grand Trunk Railway; —— Ward, Prizes in the Bass match were won by Sergt, Power, Sixty-third Battalion, Nova Scotin; Sergt, Major Cruit. Four Canadiaus were successful in the Alexandria prizes; Major Gilbon, Thirteenth Battalion, Ontario; Major Hunter, Thirteenth Battalion, Ontario; Major Hunter, Thirteenth Battalion,

Scotor; Sergt. Major Cruit. Four Candidans were successful in the Alexandria prizes: Major Gilson, Thirteenth Battalion, Ontario; Major Hunter, Thirteenth Battalion, Ontario; Sergt. Major Cruit, Caot. Aruald. In the match on the 22d, between the English and Canadian rillemen, for the Kolapure Cup, at 200, 500 and 600 yards range, the Canadians won by 34 points. In the first competition the English learn did not put he an appearance, so the Canadians land a walk over. Afterward, upon ance, so the Canadians laid a walk over. Afterward, uping the arrival of the former, the Canadians voluntarily canceled their score, which amounted to 569 points, and shull the match over with the Englishmen, with the result

THE RIFLE AT THE CENTENNIAL

THE RIFLE AT THE CENTENNIAL.

THE RIFLE AT THE CENTENNIAL.

PRIMABELUIA, July 15th, 1875.

Enter Funcs of the State of the Business of the State of
the place extere the members of the associated clubs will try their skill next cour.

The Committee of Organization, however, which has been appointed by the directors of the Philadelphia Rifle Chib to prepare for and manage the association match and all the festivities chick will be arranged by the club at their park, in connection with the centennial celebration, proposes to glee to that acceting of ridemen a nach wider scope by connect, ing telth the association match proper a general ride contest among all nations which may be represented by ridemen at the centennial. Of course, all shooting, o'll be at 200 yards distance. A committee has been appointed to lay down a plan on which to conduct this international shooting festival. The generalities is, to begin with the association match, which will occupy eight or ten days; some of the targets heing open only to members of the association, others to all comers; then to set a week most for general personal competition at all kinds of targets, another week for competition of teams, which can easily be organized after two week's observation, a third week exclusively for military creapore, quick dring, recreation matches, etc. Thus the friends of target shooting all have plenty of sport, a place of rendezvous being opened to them, where they are at all times welcome, and where they are sure already to meet congeously company. The Committee of Organization bacing secured the co-operation of the Centennial Commission, it is expected that some of the fire-arms on exhibition will be tested at the Schoetzen Park.

[The contests suggested by our correspondent will be full of interest, and the various Schuetzen bunds throughout the Union will no doubt gladly participate; and there should also be a fair number of Enropean contestants. In addition to this, arrangements will undoubtedly be made long range shooting, and probably a repetition of the international match or matches, -ED,]

POINT BLANK, Etc.

Editor Forest and Stream:

In your paper of July 1st was an article on point blank from one who uses the nom deplume of an "Old Scont." The explanation and definition of point blank were so singular and remarkable that it seemed impossible it could pass unchallenged. On first ceading this article t was so strack with eviat seemed to me giaring errors that I joited down a few notes as the basis of a prompt reply. On a subsequent reading, and especially in cross of the fact flow in your introduction you approved of the explanation, I determined to wait and see if wher, older, and more experienced heads did not take up the matter to show his inconsistencies. Two issue of your paper have appeared, but no one seems to question the theories of your correspondent. (It is harely possible something may have been said in your number for July 8th, which I lost before lucing time to examine it. In that case my remarks may be lumppropriate.)

may have been said in your number for July 8th, which I lost before lucing time to examine it. In that case my remarks may be lamptor priate.)

My reasons for objecting to "Old Scout's" definition are that he first gives one case at potet blank range and then contradicts himself by giving another, which is slingerther an indefinite distance. In the first place, in his 'case 2," he defines the "Irms point blank range" as the point where the trajectory of the half fast cuts the line of sight. Had he shapped dight here he would have been preity near me truth; but he says in practice this point blank is only about fifty yards from the piece; hence it is not the point blank. Surely this is remarkable ressoning. Notice, he says, first it is the two point blank, then he finds it too car the plece; therefore it is not the point blank.

Nort, he defines point blank range to be the second polut where the trajectory of the bidl cuts the line of sight. In theory and practice this may mean almost any distance, and is therefore too indefinite. For instance, suppose the back sight are given in the point blank range and elective of sight. Here the pinut blank range, according to "Old Scout," would be at comparaticely a short distance from the gam. Elecale the back sight more unit the point blank range would continue to increase till it outlifs attaine a distance of 20.00 yards or more. In other words, our set, earlie infleman would have us helleve that point blank range is any distance we choose.

Now, I centure to say that when point blank range is spoken of, some distance approximately determine that they could fire their guns without clerating them. Would 'Old Scout,' when he was in the United States army, to describing some action in which our men fired upon the creamy at 2,000 yards what distance to mean!

I know of line one theoretically good definition of point blank, which is the thory on the same of the bore and the oldget arrived at are in the same plane, which only be either parallel or inclined to the horizon." The

point, yet in practice it is allowed a whier scope, and is from applied in the whole inflaeye or mark."

I must also take exception to his remark that "many persons, and some of life long experience, still cling by the fulsa notion that the rither and the straight." Surely this is imputing no much ignorance to even the most unimply ritherant. Indeed, I think there herer was a ritherant who did not know that in shooting with the common sights it can necessary to draw a "fine sight" in shooting at a near object, and a "finit sight" for more distant objects. Perhaps be teas thinking only of "new beginners," whatever new beginner may mean.

PLACE TAIL

A MINNESOTA RIFLE CLUB.

SHAKOPER, July 12th, 1875.

SHAKOPKE, July P2h, 1875.

In May last an association was forment by members of the muchinery department St. Paul and Shoux City Radheny, for the purpose of rifle practice and oding shouling, under the mone of the Practic Rido Pluh. Since then weekly meetings face been in order, the shooting being rangined to the 160 yards range, for short earth. There are but from tiles at present in the club, namely, a Shurps 30-furb farred, 32-gounder, and a Prank Wesson 91 pounds, both at 44 cultbra. As we are not to go on in the 200 yards range, a short review of our field meeting anny and as indistressing, considering that a majority of the members are nontiered in rille shooting.

At the open to all 4th July rule tournament, Spencer, Balch, and Sievens, of the club, won the three prizes offered by the committee of aumsements; others, and members of the club, either falling to appear or shooting to calld with their old fashlomal Henrys and rusty anazzlo horders.

horders.

At the last meeting, July 10th, an exciting contest took place for the horn, a splendid spectmen from the shaggy head of an unrient Montain "landler," presented by the secretary of the olds for the one making this highest score at each meeting, to be retained at this close at this season by the member retaining it the most times. Sides being closen, the score iscere, out of a possible 50, as follows.—

Name.

Score 1. Name.

Ira Cole

E. F. Balch (5)

Total

Total

T. Heinizstonan and J. Spencer shot of the tie, each making 3 limits eyes (15), and again one shot each if the tie, each making 3 limits eyes (15), and again one shot each if dinek, a rentre far II. and a full reys for S., which gave for the fourth time the form to Jonas Spencer. Heighteelows string on the first five regular shots was 9.9-16 inches, the shortest is yel, 164 and 124 to 134 being the first heretofure.

As this is about the first, if not the only organization of the kind in the Siale, if thought proper to have ourselves placed on record through the recognized ride journal of America, the Farket and Stikan.

GAME IN SEASON IN JULY.

Woodcock, Sidpe, Caclew, and Buy blids,

-A correspondent writes from Round Mountain, Texas, that large bevies of young quail are seen all over the country, thereabouts, and that the first butching are almost full grown,

-The members of the Staten Island Shooting Association have become affected with the Greener breech londer fever, and several of them already have ordered gons of that maker, through Mr. H. C. Squires, of No. 1 Cortlands

-A correspondent writes from Porthand, Maine, under

A correspondent writes from Formula, and date of July 21st;—
Our sportsmen report weedcock rather more plenty than usual, but your rather consider the weather too warm for tramping in caver, so had few are brought in. The marsh sbooting, which opens with as about Asgust 7th, is anxiously called for, when "Win's" knehen will be again the scene of surprising feats in the calling and drinking line, and many a brown back and yellow leg will come to grief. Dittinar's nowder is being tried by many of the good results.

A vidual correspondent, the author of the sprightly "Polly" letters, recently printed in our journal, gives the

"Polly" letters, recently printed in our journal, gives the following information respecting the game of Minnesota.

dolowing information respecting the game of Minnesota. He says:—

"There is plenty of game in Minnesota, and large large to be made, but with the best ranges the game has many chances to get away. A kery of quait, instead of thying the cut to pieces, as in Ohio, or the East, here ga into fram two to two hundred seres of dense onk strinb in which it is almost impossible to shoot at all. In the first place the birds will not scatter or lie, but keep in a bevy and run all day before a slow dog; and a fast dog wan't help the matter, supposing he does sneeded in Irrenking them inp—will take jost about such a hute as Polly to do it. They will not lie first rute, and if you start a bird you cannot get your gun around in time to cover him, on accumul at the interlacing limbs of these miserable little oak trees. Large levies are not rare, but I never heard of any one shoating enough to make a good dinner. The ruffed grouse, which they call pheasants, are very plenty, and in some covers good sport may be land. But generally they are found in the thick oak scenbs. They, like the quait, are little inclined to rise, and very much inclined to run, so that you are compelled to shoot them upon the ground, or when they tree. As for shooting them flying, there is the same trouble as with the quail—the utter targessibility of bringing the gan lo bear upon them. The most of the ruffed grouse brought into the St. Panl market—mud they are very many—are shot over a little cur dog, who is tangih, there them and engage their atjention until the shoater comes in grouse brought into the St. Panl market—mud they are very many—are shot over a little cur dog, who is tangih, the return and a passably fair way to make a living, but poor sport.

"Prairie chicken shooting in the season is first rute from Angust until the middle of September, when they begin to pack and will not lie well; beshes the dack shooting now commences, and then no one cares for anything else. A Westeru man does not consider a prairie chicken is catable, and very much so

always wift and the bag very musatisfactory, according to the labor, even though it might run up to thirty or forty birds. Some sportsmen affirmed that they bud never seen a real fat snipe in Minnesota. I found many in fair condition, but nothing to compute with the heavy buy hirds further south. Large large were sometimes under in the Spring Hight, the weather and grounds being in just the right roudition and the shooter being on hand just at the right time; but this was not often, and their stay with us very short indeed."

Altquis.

—Trap shouting at Reil Bank, N. J., July 26th—prize, home and glory—at five birds each, 21 yards rise, 80 yards homelary; 12 gauge breech honders, 24 druchms powder, 14 oz. shot:—

Emtor Forest and Stream:—
The following is the score of a pigeon shooting match which came off a few days ago at the Schnetzen Park between several of the members of the freezin Game Association. The tie between Messrs, Butler and Thiot was shot off at one bird each, which resulted in another tie, each bringing down his bird. For want of more birds it was decided to shoot the tie off on near Friday afternoon, the 2ld inst., when another match will take place at the old Schnetzen Park.

Editor Forest and Stream:

Sulps are coming on every day in good numbers, and while no shooting can yet be had from "trading" birds—that is, birds tocatied here for the Subtimer, yet good sport has been enjoyed at the "flight," which daily comes from the north. E. II. Frame, of this place, who generally kills the first and last bird of every season, and whose reputation as a sportsman is proverbial, killed quite a good bag on Friday of last week, consisting of marlin, enriew, dowlitches, and yellow legs. During the coming week we expect big shooting should the wind hold counterly, and should any one he fortunate enough to meet with more than common luck we will let you know. While we write we can hear the reports of using gone, and bynamen, who, passing them of the way, have just arrived at the dock, report them as making things lively for Mr. Sulpe. No statement of number killed received yet.

Annany, July 16th 1875.

I not surplised to find by your last tesue that some of your correspondents are stiff using a proparation for killing and keeping away black lifes and mosquitoes, long since abondoned by me in the proods, Mz., Lar, oil, ot., while its aritisprecable and unsightly mixture, while there is in the market a pleasant and clean preparation that does not variots the akin, but is pastly removed and softens and brantifies the cuticle, namely, "Collectinge," manofactured by S. J. L. man, of Montreal, and sold by some of the strigglists in New York city. I have lengthes with great satisfaction to myself and bidy companious, while trust fishing, in the Adironlacks, and would not go to the woods without it. Candala.

LETTER FROM CARL DITTMAR.

BOSTON, July 19th, 1875.

BOSTON, July 19th, 1875.

I will adopt "Horbert's" suggestion, and have a climitial analysis of my powder riade and published. There are also scientific tests in progress, clid thy to settle the question of the strain on the gun, which will also be given to the public. I am sorry that several brother sportsmen base that bad results with my powder, but am prepared to prove that the fault was nol in the powder itself, but in their own manipulation. I think the chief trouble is due to the last that they forget that my powcharges. If they would begin with small pharges, less than black, and increase them until they get the same pattern and penetration as with black, there would be no accidents or disappointment; but I find that many persons use housier charges when they cannot obtain the same results as they do with black powder. If the shot does not distribute well on the target, the charge is too beavy, or the powder has been ramine? down too much. Less powder should then be tried, pressed down less than before, and proper results will be obtained. If the penetration or pattern is not salislactory, it will be found that the shot is illattened; this indicates that the charge was too strong, and although it would have killed game at a greater distance, the exhibit on a target is poorer.

If your corresponden "Magna" will are a lew charges more with less powder than he used before, I hope he will be better satisfied. He will undoubtedly find that the powder heats the barrel less, and that it distributes the shot well and evenly.

Tregret, with "Gerbert," that the correspondent who stales that gons had been forn open from breech to muzzie, provokingly omits to give only particulars. He must have used gas pipes for barrels, as no other tube would not in that extraordinary manner. Even then it would only show that the combustion of my powder is not instantaneous, as in this case the barrel would have a rife or shot gun powder in his "anclent horse pistol." Although he had no accident himself,

Nachfing and Boating.

MANHATTAN YACHT CLUB.—This club hebl their sixth annual regatta from the foot of Elghty-ninth street, East River, on Thursday last. The course for the first and second class yachts was to and around the Can buoy at the Stepping Stones. The course for the third class yachts was to the buoy at The course for the third class yachts was to the buoy at Theogr's Neck, and returning over same course. This made a race of twenty mibs for the first and second classes, and a sixteen nulle to for third-class. Nine yachts entered in the three classes, and at 12 o'clock all were under way. They finished the race as follows:

Name. It. M. S. Name. It. M. S. John M. Sawyer 3 54 29 Orlote 4 11 40 Andrew L. Brach 3 58 40 Mary Gibson 1 15 50 Skip Jack 4 02 39 Carrie 1 15 50 Skip Jack 4 02 50 Carrie 1 19 30 Zephyr 4 06 58

Sarp shear wou the white pennant for the third class boats.

The Isle of Shoals Regatta —This event was sailed on Friday, the 23d, and was a success only as far as the hotels and a means of attracting a crowd thither was concerned. Owing to carelessness, or ignorance, in the mnongement of the details of the race, the result caused much dissatisfaction. Many of the yachts were madde to find the shakeboats at all, and those that were so fortunate as to run across them, report them either miles away from their proper positions, or still engaged in looking for the spot where they were to anchor. It was not until Salurday night that the judges were able to give their decisions and award the prizes. We would segrest that, hereafter, when similar regatus are projected, it would be well to place the matter in the hands of the regata committee of some yacht club, whose experience would enable them to carry out the details in a more satisfactory minner.

The day was everything that could be desired, and an Immense feet of yachts had assembled to compete. Stemmers from Boston, Portsmouth, and Porthaud, as well as the Plymouth Rock from this port, were crowded with excursionisls. The course was supposed to be a triangle in shape, representing a distance of thirty miles. At noon the following first class yachts were started, these being the yacht which were also timed on the return:—

		Sta	ırt.	Acti	ial ti idin;	
. Yacht	Port.	$-$ II. λ	1. S.	11	M	S
Resolute	New York	t2 8	7 58		85	15
Fearless	Portland	12 3	1 85	4	46	30
Ylva (sloop)	Portland	18 8	6 41	5	80	56
Ray	Portland	12 9	6 45	5	0.3	09
	Portland			ĭ	30	07
	Boston			ā	51	16
Hulevon	Portland	12	8 21	- i	23	20
Rambier	Naw York	12 2	6 52	6	07	06
	Boston			4		53

The Wivere, Romance, Sprite, Foam and Gracie started, but their return was not timed. The first class yuchts were unable to find the second stake-boat, it consisting of a small whale boat, anchored about ten miles out. Some of them, if not all, went several miles to beward, searching for it, but were unsuccessful, with the exception of the Rambler. The owners of the various yuchts, including Rufus Hatch,

Gen. Butler, and others, insisted that no stake-hoot could be seen; but Mr. Thomas, the owner of the Rambler, was equally certain of rounding it.

In the second class race forty-two yaebts entered. The same difficulty about the second stake on this course occurred as on the long course, and most of the yaebts bus time in searching for it. It was rounded by thirty out of the forty-two yachts, and the time of this number taken. Actual sailing time of twenty-six yachts is as follows:—

It M. S.

It M. S.

Sunbeam S Mariquita 1 Breeze 3 Sparkle 3	24 11	07 Gracle	39	57 19
		Chors.

Gart assessed 3	23	2) Coquette	11	41
TYPE I I		The second second	13.3	22

The judges awarded the Rambler the tirst prize for lirst class yachts, on the ground that she was the only one to round the stake hoat, which, by the bye, was found the following dry lo he on the course, but thirteen miles and a half, instead of ten, from the tirst stake-hoat.

In the second class, prizes were ovarded as follows: Keel sloops, first prize to the Tartart, Captain Hastings, of Boston; second prize, Murquita, Captain Dexter, of Dorchester. Centre-boards, first prize to the Shudow, Captain Deland, of Boston; second prize, Magic, Captain Neal, of Lynn. Schoomers, first prize to the Vanitas, Captain Ware, of Beverly; second prize, Sparkle, Captain Thomas, The Buckeyeau.

—The Rockaway Yacht club holds its annual regatta during the second week in August,

The Atlantic Yoels club will start on their annual cruise next Saturday. The fleet will rendezvous at Glea Cove on that day. The cruise includes visits to New Lomlon, New Bedford, Greenport, and Martha's Vineyard.

-The regatla of the San Francisco Yacht club came off on the 24th inst. A stiff breeze was blowing. The race was a fine one. The Freda, of Mare Island, won the prize for schooners, and the Gazelle that for sloop?.

for schooners, and the Gazelle that for sloops.

—A special regatta took place at Salem, Mass., July 29., starting at Beverly according to the previous arrangements, with a flue day and a glorions wimi. Fitteen yachts entered, and the prizes were won by the Eva of the first class, (Ilt. 28m. 40sec.); Ibis of the second-class, (th. 31m. 36sec.); Tulip of the third class, the only boat entering of that class. The Ibis won on the claim of a foul by the Water Lily, which really came in shead. The consolution prize fell to the Heron of the first-class, whose time of 2h. 4m. 6sec. seemed to show that it had been fairly earned. The annual craise will be on Wednesslay, and the second regatta will take place off Nahant Angust 20th.

The Bunker Hall Yacht Club were reviewed in the foremoon previous to sailing for the Isles of Shoals, by Excom. Beckford, off Naugushead, Salem Harbor.

"Teal."

Barnegat Lulct.—Kinsey's Ashley House, July 25th.—

Barnegat Iulet.—Kinsey's Ashley House, July 25th.—Col. Ricker with a party of friends connected with the New Jersey Central Railroad, in his new steam yacht, the Ocean Gem, arrivel in our inlet at 7 o'clook P. M. to day. They left Sandy Hook at 2:25 P. M., making the roa in four hours and thirty-five minutes. Your correspondent was invited on board and kindly offered an opportunity to inspect this sancy looking craft by the Col. As her dimensions have already been described I will only add that for beauty in model, taste in her littings and ingenuity displayed in converting every available space to some convenience, her equal is not affoat, (of her size). Col. R. is very much pleased with her performance thus far. He will leave our waters on Momlay after trying their skill with the sheepshead and bluefish.

Cincago, July 19th, t875.

EDITOR FOREST AND STREAM:—

The following is a report of the first organized regatta which ever took place in Chicago. Satorday, July 17th, was the day solveted for the race. Twelve yachts emerged. Weather rainy, wind very light, and calm doring the last part of the race. Time allowance, two seconds for every fort of home.

${f MOTTS}$ LIVER PILLS

It is easy enough to make a pill, but to make a good pill, ab) that's the dilliculty. There are cheap, hursa, drawic pills, that are of even less benefit than a dose of subs. Hat a good medicine, like Dr. Mon's Liver Pills, which panetrains to the seat of disease, is a desidentiam indeed. Will positively cure all diseases of the Liver. Sudd everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity, but there is danger in nodag stiantiants that induce the or-gans of digestion while giving temporary relief. To obvisite this and present to the public a tonic free from Almholte Pulson, Dr. Breen prepared the Oxy, genuted Bitters, a sure entry for dyspepsin and all kin-dred complaints. Solit everywhere, Price \$1 per bottle,

Packer's All-Healing Tar Soap.

It cares all kinds of Skin Diseases with a most won-suful certainty; it promotes cleanliness, personal ority and general health; it is a preventive of many leds of disease, and it is an absolute necessity in 10 nursery. Price 36 cents.

Miscellaneous.

THE GREAT London Gun Trial,

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trist, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 hores, and class 4 for 20 hores. He has woo in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior to the three most essential points, viz., PATTERN, PENETRATION, and RNGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cuttlandt St., New York, is now importing my DGUBLE CLOSE-SHOOTING GUNS 10 order, an invoice of which will be shipped to him on the ist July, and can be examined about the 18th. All special orders given to Mr. Squires will be carefully filted. A full report of the GREAT TRIAL, showing the marked superbuilty of my guns over gens made by Bougal, Pape, Westley Riebards, Tolley, Scotl, and others, will shortly be published, and can be had on application at No. 1 Cortland St.

Safety Halve:

HOW I LOST THE CUP.

GOGOLES was too impetuous; he should have made his amouncement gradually, and at a more opportune moment. After dinner for instance, when the consumption of a bottle of Braine Mouton would have assisted us to withstand the shock; and with some regard for our exhausted frames, debilitated by a long and trying Summer. Yes, under the circumstance, Goggles was basty; but then he always was, whether in giving the stroke in the four-our in our evening spins down the river, or in in the four-oar in our evening spins down the river, or in pushing his horse at a ditch in the Saturdays Paper Hunt. He should have remembered that with the exception of an

the should have remembered that with the exception of an accasional female missionary, the society of the other sex was tout a dream of the past to us poor exiles.

"I say, boys, what do you think is in the wind now?"

Three high office stools were swang on their pivots, and there pairs of eyes gazed at him in anxious expectancy.

"We are to have a volum worm in the bayes!"

"We are to have a young woman in the house!"
Three office stools were kicked over without regard to
idevitable dislocations, and the speaker was surrounded in un instant.

"Old father Time is coming up the coast by the next steamer with his daughter Nellie, and the taepan has asked them to put up here. Race week near at hand too. What are you all going to do about it?"

Certainly Goggles was too abrupt. Fortunately, as he opened the office door, the first fresh blast of the new monsoon swept past him, and its reviving influence prevented any disastrons consequences. Sure enough, what were we going to do about it? Four unfortunates, wearing out lungs and livers in the service of the Ti-Cheong Hong; sweltering through the long Shanghae Summers, and freezeing in the Winters; our ten-smelling lives, varied only by the arrival of the forthightly P. and O. steamer with the mails, and the semi-annual race, meeting, when all China muils, and the semi-annual race meeting, when all Chiua would wake from its torpor to go into the sport, with the vim with which your true Britisher—the prime mover—enjoys his games, even in the antipodes.

And now, the even tenor of our existence was to be disturbed by the advent of a young lady. Can any one imagine a mure discordant element to be introduced? I saw plainly how it would end; Goggles, in order to save his wind for Miss Nellie's delectation at the piano in the evening, would give up the foir oar, just when I most wanted the training. Stops, our heavy man, who was supposed to know all about the stores and Cario shops, would monopolize the pony trap and expect me to do half his office work; while the last of the quartet, good natured old Lubbock, would write more verses than invoices, and half kill us with his execusible puns. At any other time it would not have been so had; willingly would I have given up our evening rubher of whist or game of billiards, and even done Stops' work, for the fun of seeing the other fellows spooney; but just now when every day was precious, it was truly an unqualified bore.

Rumors of the irresistible attractions of the fair Miss Nellie had long before reached us, and report credited ber with having subjugated the affections of more than one gallant officer of each branch, military, naval and civil, of Her Majesty's service, while the list of Cha-zes (tea-tasters) and other small fry, who had succumbed to her charms, was as long as the string of characters in a Confucian proverb. But while giving the young lady credit for all the leveliness with which both nature and report had endowed her, and untwithstanding long years of abscuce from such enchanting society, her coming, instead of producing the usual heart flutterings, was a source of unmittgated annoyanco.

The fact is, at this time, all my affections were engressed by my pet pony, "Safety Valve," a recent importation from the North, with whom I confidently expected to carry off the Antuma Cup; the great steeple cluse event of the season; "a race of about two miles, or twice around a course to be selected by the stowards," as the programmes

of the meeting described it. Now up to this time I had managed to keep Safety Valve dark, and no one outside the hong, suspected the capabilities of the closely blanketed and hooded animal who took his evening walk to the course with the rest of the string, and was receiving his jumping lessons very quietly beyond the settlement. Neither would lessons very quietly beyond the settlement. Neither would any one have recognized in the smooth coated and well conditioned mag, the shaggy and unkempt beast, which but a few weeks before was landed from the Tien Tsin steamer. Night after night, assisted by my faithful mafoo and the dim light of a stable lantern I had worked over him, trim-ming off fetlocks and tail, which were still matted and clogged with the mud of his native Tartary, and hy constant friction, aided by judiciously administered warm mashes, had succeeded in removing his loag and dirty coat, until the rich steel gray of his new jacket began to shine like silver, and a few weeks' training, and abundant feeds of good old oats, had brought him into condition fit to run fee a merch life.

Autumn in Shanghae. What a relief to feel once more the refreshing breeze, which wafts from Northern Seas a

the refreshing breeze, which waits from Northern Seas a reuewed stock of life and energy.

"Five o'clock, Spois; put up the books and let us go down to the bund for a walls. The 'Aden' is due this evening, so I suppose there is no chance of getting you fellows out for a pull, but we may hear something of the steamer."

How fresh and crisp the wind feels, and how cheerful the cool and bracing air of the North-

every one looks! The cool and bracing air of the North-east Monsoon has driven from the minds of the enervated population the horrors of the past Summer. Even memory of those stricken down by disease and buried far from home and kindred, is rapidly fading, and the long dismal days of cruel, blinding sunlight and suffocating heat, past now, but soon to come ugain, balmy air of the present. And it is a glorious scene on such a day. The noble buad or promeuade, stretching for a mile along the Wang-poo River, is lined with polatial acidences of "princes," merchants in name, but who never than the princes of the strength of the str if immense retinues of servants, every luxury that money can buy, and above all, the most 'princely' hospitality, constitute any claim to it.,

The scene on this same bund almost defies description.

Constantinople, or Scutari in the days of the Crimeau war oild scarcely have exhibited such a motley gathering. Every pation on earth seems to have sent a representative, Hindoos, Armenians, Parsces, Malays, Turks, and Greeks, French soldiers in scarlet peg-tops, and British officers in red and blue. Picturesquely dressed Contonese, and dirty Shang-ballon. hatesc. Natives of every province—from Mantchuria to Cochin China, as well as every Enropean nation, and lastly, the inevitable and ubiquitons down east skipper, in a plug hat. The band of a British regiment plays the last new waltz. Feeble looking ladies, clouds of muslin and lastly, in Pavisian hopers, take their ground proposed in sets. in Parisian bonnets, take their evening promenade in sedan chairs carried by coolies in livery. Gay cavaliers prance about on beautiful Arabs or English thoroughbreds, while a few determined looking men with linge walking sticks, rush by at a five mile-au-hour gait, as though their lives depended upon their getting their constitutional walk before dinner. Off on the river, where the long shadows of the houses give a deeper tiut to the muddy water, ships of all nations lie swinging at their anchors; conspicuous among them all for grace and lofty symmetry, is the nable old Hart. ford, then as now, the flag ship of our Asintic Squadron. By the bye, why can not our navy department give this, our most historical ship, her well carned rest. Three con-secutive equadrons has she norshalled in the China waters, until the natives verily believe that she is the only ship of that class which we possess. The sun dips lower, sinking behind the innumerable mounds which cover the bones of The sun dips lower, sinking countless generations of Chinamen; beyond which, a few tall trees stand in bold relief against the clear red sky. puff of white smoke from the gangway of each man of war, and a general dipping of cusigus proclaim it suuset, and all Shaughae proceeds to array itself in immaculate broadcloth and spotless linen, preparatory to the great business of the day, its dinner.

Moved by the same impulse, we started for the hong, but before leaving the bund, a heavier puff of smoke, and the dull report of a gun attracted our attention.

"By jove," said Spots, "there's the Aden now, I can see her masts moving through the rest of the shipping; no doubt the gig has put off already, and we had better hurry home and dress.1

An hour later, in all the glory of swallowtail coat and white choker I descended to the drawing room, and the butler, meeting me at the door, imparted the pleasing the state of the state telligence that dinner would be postponed an hour on account of the new comers. So the delays and vexations and commenced already, and this was the way the thing was likely to be continued. To lose one's training and pleasant evenings was bad enough, but to have to cat cold soup every night while a woman prinked and peacocked before a looking glass, was crowding the mourners with a

Goggles was at the pinno as usual, practicing his most telling chords. Lubbock, looking very sentimental, was lost in reverie and the depths of an arm chair, evidently conning over his last poetical effort, and Spots, like a lump of animated mercury, was flylag from one to another whith his scraps of nonsense. The taepun, quiet and sedate as usual, whited with exemplary patience, his mind evidently turning upon the day's purchases of Moyunes and Pingsueys, or perhaps the sad expression which now habitually rested upon his face, was but a premonition of the fate which was soon to remove him forever from among us.

But even the most elaborate toilet must be finished at last, I know my patience was, and glancing up from the stere-oscope with which I had been endeavoring to beguile the time, I found that Miss Nellie and her tather had entered the room, and that the introductions were in progress. Dinner at last, thought I, as I howed in response to my name, and the procession duly proceeded to the dining roum, where Spots, having managed, by the aid of some diplomacy and much brass, to secure the seat uext to the young lady, was radiant with delight.

"I say, Ticks," whispered he as we crossed the hall, "isn't she jolly?" Under the influence of excitement Spois always would talk slang.

The soup was cold, the sherry was not. Old futher Time, who, by the way, only wanted a scythe and hour glass to give him complete claim to his soubriquet, was loquacious, and talked learnedly on the political questious of the Empire. It was not until the consumption of several glasses pire. It was not until the consumption of several glasses of wine and a prawn curry, prepared as only the Ti-Cheong cook could compose it, that I recovered my equanimity, and raising my eyes to my vis a vis, proceeded to deliberately take stock of her charms. Truly report had not lied when it called her lovely. I could have described her much better then than I can now, but I well remember, even through this long lapse of years and changes of scene, the intechniques expression of her face, as her eyes for the the intschievous expression of her face, as her eyes for the first time englit mine. Spots had evidently been entertaining her with a recital of my peculiarities, giving promineuce to a fondness for horseflesh and a disinclination for womankind. Judged by the strict standard of regularity feature Nellie might not have been called beautiful, but of feather vente high not have even entered countries, our there was a piquancy about her face, althed to an expression of bel esprit, which was almost beyond description. About the middle height, her figure was so accurately proportioned as at first sight to appear too slight, which it was not. Her eyes were large and of the deepest, darkest violet, indeed "beautifully blue," and shaded by eyebrows and lashes darker than her hair; her nose small, and a little, lashes darker than her nair; net most just a little, retrousse. Mouth small and perfect in shape; the little, retrousse last white and even. Her hair was a teeth rather large, but white and even. Her hair was a rich chestnut brown, and waved off her face in the most bewitching way, being gathered behind in some mysterious and incomprehensible manner. Her dress, a full evening costume, in accordance with the custom of the country displayed just enough, not too much, of a perfect bust, Do not let it be imagined that I discovered all this in one evening, or would have admitted half of it at the time. I was still as antagonistic as ever, called her nose a pug and her shoulders scrawney, all of which I am forced now to

admit was caused by one of those optical debusious when we see things only as we would have likem appear.

"Mr. Spots tells me, Mr. Tickson, that you are the 'horsey man' of the establishment, in quote his own words; if su, I can sympathize with you, as I om devotedly fund of riding. Pour little Timor, my pony, I fear will miss as much as his mistress our morning gallops around Ku-han-su."

"Take all that Spots tells you with an allowance, Miss Time; his imagination sometimes runs away with him, as Tunhour did the other day. Has he told you of that? I fanry not. I am really glad to know that you ride, and I am sare there is at least one horse in the stable that will carry a lady, at all events we will have him out to morrow and try him with a blanket. You are just in time fur the races."

"Yes," put in Spofs, "and to see Tickson and Safety Valve earry off the Antumn Cup. If you bet, Miss Time, luck him for all the gloves you can venture. The ohlis are all Lombard street to a China orange that they win; and when you wear those gloves, think of the giver of the tip."

Spots was progressing pretty rapidly, but Miss Nellic scenaed to enjoy his attentions and nonsense. In fact, he was getting along so fast that it was a relief when the cloth was removed, and after the conventional thast of, "absent friends," the young lady left us, pleading futigue as an excuse for not oppearing in the drawing room during the evening. No billiards for us that night. If ever three men were hopelessly and unmistakably spooney they were my three companeros, Goggles wandered back to the piamo and made night hillenns with his plaintive chords, while the others aided and aletted. After one cheroot I sought my "lowny" and dreamed I was riding a race, with Miss Nellie attired in jockey costume just beating me at the post by a head.

my "slowny" and dreamed I was riding a race, with Miss Nellie attired in jockey costume just beating me at the post by a head.

"Six o'clock hah got, sir," yelled my boy at what seemed an uncortbly hour in the morning. But there was no help for it, the nags had to be trained, even if I gave up myself; and in ten minutes I was at the door, where the trap and a mafoo were in attendance. Away we spin up to the Maloo, a long wide street stretching and spreading out from the foreign settlement of Shangkac, like the tail of a comet, and lined on either side with bative houses. In the morning the general market place where inside and outside barbarians are alike provided with the necessities of life. Hucksters, with pieces of soft sickly looking pork hanging on poles. Fish dealears with baskets of fat and slimy corp and abominations in the shape of saails and perriwinkies. Piles of mud-covered duck eggs, which have been buried in the earth until they have attained the degree of putridity required by your celestial gourmet; and all the other villianous and nameless articles which go to make up the native enisine.

"Maou lif" shouts the mafoo; and the crowd of coolies enjoying the matutinal cup of lea, retailed by traveling venders, scatter right and left at our approach. Men are pushing before them in the direction of the villages, large wheelbarrows, bearing on one side their household gools, balanced by a pig or a passenger on the other. I tinerant dealers in bamboo shoots and Shantung cabbage shout their wares, and their cries follow us until we reach the open country, and the road lined with the neat bungalows of the foreign brokers. The ruce course is reached at last, and the grand stand found to be half filled with men in flouncl enjoying their coffee, and looking exgerly for "tips" wherewith to be guided in their evening investments at the Club sweepstakes. Our "string" is corefully scrutinized as they file into the stable enclosure, but hoods and hlaukets defir curiosity.

"Off with the clothing, Ahim, and let'

a pericet mana for kicking. One more pattar inegritis, in leg up," and away we go for a mild hreather around the course, coming back after two circuits without having turned a hair.

"Now, Ahim, put Safety Valve's clothing on that other pony and open the back gate." Dodging behind the stand and jumping one or two ditches, a clump of hamboo soon hides us from prying eyes, and now the real work of the morning commences. Away we spin over the flat country, jumping ditches, walls and everything that comes in our way. All around us are the round topped tomhs of definite Chinamen, no elevation worthy the name of hill being within twenty miles. In this part of the Empire the Parth is so shallow that only a few feet of soil intervence belore water is reached. It is the custom of the natives to deposit the coffins containing their dead on the surface of the ground, the wealthier people covering them with a mansoleum of brick and mortor, and the poorer classes romenting themselves with a simple covering of mats, which for a short time, is an imperfect protection against the weather. The coffins are immensely heavy, the boards comprising them being several inches in thickness, with the crevices tightly closed with cement, and, nonreover, as the body is always plaxed on a layer of quick line, the after effects are not as disagreeable, to one of the senses of least, as might he imagined. When an unfortwante foreigner dies of cholera, fever, sun apaplexy, or what the frishman called "beautiful hard driuking," his remains are deposited in a shallow grave lined with brick so as to exclude the water. The foreign community were granted permission to huild the only drive they possess, on condition that the bones of deceased celestials that woull be distorbed by it, should be carefully gathered and preserved. This was done, and the earthen jars containing them deposited by the road side, where, as nobody claimed them, to aught I know they still remain. The sight of the jurs, with bere and there a leg or an arm bone protruding, or

properly constructed, convey the idea that the wearer has only to open her arms and flont gently through the nir. And Nellie possyssed hoth laste in dressing and thot wonderful grace of movement which served to carry out the illusion. If she looked lovely the night before she was simply angelic now, and with a holf despairing sigh, I gave up the ghost of resistance and joined the noble army of martyrs. And after all, there's nothing like an homest capitulation. Even the dread of Spots' chaff was lost sight of, and I think at that moment I could have sacrificed buth Safety Valve, my pet meerschuum, and new breechloader, on the altar of my new born affection.

"Been training this morning?" said Spots. "How do the ponies go?"

"Record training this informing?" said Spots. "How on the ponies go?"
"All right," I replied, "We're safe to land the vap. No one appears to suspect Safety Valve, and I think there will be some fine at the finish,"
"Do you feel quite sare you will win?" said Miss Nellie, "There's many a slip between the cup and the lip, you know."

Know."

"Yes, I know there is, but barring accident. I think we cannot lasy. I have the gauge of every animal in the race, and our candidate has spiral and staying power to beat them all; of course, there is a good deal of uncertainty in racing, but I think this time we have everything quite safe."

"Well, you know I belong to the hong now, and shall feel as much interested as any one, so I do hope you will do your hest, as though with New.

but I think this time we have everything quite safe."

"Well, you know I helong to the hong now, and shall feel as much interested as any one, so I do hope you will do your hest."

Do my best; as though with Nellie hosking on I could help straining every nerve, with the additional incentive of pleasing lier. Already I had gone, in imagination, through a little scene, wherein I was presenting her with the trophy of vicinry in a pretty little speech about the inspiration of such lovely eyes, etc. During the next few days, chair reigned supreme in Ti-cheung. We seemed to take turns in sneaking out of the other for a few moments' conversation with Nellie. Patient and long suffering too brukers waited in vain to have their musters tashed, and dealers in Long ells and grey shirtings, opened their eyes with astonishment at the rapidity with which settlements were made. Our dear edd tacqua must almost have regretted the hospitable impulse which brought such a disturfang element within the hong. Spots, hy virtue of bring hest posted in such matters, and the honor of accompanying our fur guest on her shopping excursions; while to me was given the happiness of escorting her for a ride every evening. Fortunately, at this time, Shanghar was overflowing with horses. The war at the morth had columnated in the treaty of Tein Tsin, and the British authorities had judged it byst to dispose of the horses of their two regiments of inregular cavalry, Probans and Fanes, instead of incurring the expense of shipping them to India. The whide led, good, bud and indifferent, were put up at anetion, and every man in the settlement hexame the possessor of no Armb of some kind or other. The choicest realized prives as high as three hundred tack, or, four hondred Mexican dollars, but the majority were wind broken and spavined, and seen secunded to the climate. Nellie rode remarkably well; feurlessly, and in perfect form. Her lithe, will shaped figure, in a closely fitting liabit of dark bline cloth, with high crowned hat, and vice of not pri

"Your visit is drawing to a close, Miss Nellic, have you enjoyed it?"

We had stopped our horses and were budding at the western sky. The setting sun had tinged the clouds about it with a mesate bue, gilding their edges, and swattering in every direction little flecks of gold, which were deepening and darkening as night rapidly approached. Nellie mode a lovely pictore, sitting motionless on her white Arali, himself a beouty, as she gazed rather shally and musingly I thought, at the glories of the departing day.

"Enjoyed it? of course I have; how could I help enjoying it, with you all so thoughtful and kind. Do you know, I san very glad we had this ride to-night? to morrow the rares begin, and even if we should ride again, it is not likely that two such subsets would occur within one week. This is one of those times and scenes which so impress themselves on one's memory, that they are constantly recurring. I know that, time and ogain, on the voyage and after I have reached home, I shall see these trees and the temple roofs, ond the little dragons that I know are under the caves although I van met see them; and I shall feel again the shuhler which I can scarcely now repress when I think of all those groves and the fitches less Miss Nellie? shall be a searcely now repress when I think of all those groves and the fitches which inhabit them."

inhabit them."

"And will you think of nothing else, Miss Nellie? shall I be enougly forgotten in your reveries? or only wante in as an adjunct to the scene?"

Nellie turned from me and her horse threw his head up, as though there had been a sudden tightening of the euro.

"How foolish for you to talk so, Mr. Tickson; could I forget how kind you bave been to my? all of you, I mean; and then you are coming home next year, and I shall see you and we can talk over all our good times again. You'll be sure and come and see me, won't you?"

"I don't know. I may not go baine."

"Not go home! but I thought it was settled that you were to go,"

were to go,"

"Yes, but Spots is anxious to go ut that time, and you know we cannot go together. It all depends on you, Nellie; do you want me to came? will you give me some hape, that I may freely say to you then, what I scurcely dare to now? that I love you, dearly and devotedly, and can only look forward to happiness, with you as my wife,"

It was all out, and in the most commonplace manner.

My hay moved nearer the Arah and my hand was on the horn of her sublie, as I pressed Nellie for an answer, "I cannot, Mr. Tickson—this is so sudden—my father, you know—really we must be going—see haw dark it is

horn of her subile, as I pressed Nellie for an answer, "I cannot, Mr, Tickson—this is so sudden—my father, you know—really we must be going—see haw dark it is getting."

But still I urged, while Nellie gathered her reins together, and shook herself into her seat, preparatory to storting. "Don't ask me mew. I'll answer you to morrow—when you give me the cup, as you promised to—"

And in another moment, both horses were stretching at full gollop towards the settlement. In a most unenvialde and uncertain frame of mind I arrayed myself for dinner, and Spots coming into my room, evidently imagined that something musual must have occurred.

"What's the matter old fellow? not liven jilted by Nellie, have yon? ha! ha! I think I've gut the best of you there. Take a sharry and hitters and brare up. But, I say, to come down to business, have about to morrow? Do you think everything is quite safe for the jumping race? You know I've gone a cracker on it! all my pussage and spending money for the trip hump."

"Of rourse it's all right; hoven't I got a pot on unyself? The horse is safe enough, mal I shou't think I'll ha likely to throw the race away." Yet I believe if the malme had appeared at that moment with the information that Safety Valve land broken his leg in the stuble, I should have received the news with perfect indifference. "Besides," I continued, "you've pleuty of time to hadge; lany a few swerps at the club to-alght on Dick Swiveller; he's the next hest in, and the best jock on the reast rides him."

"No," said Spots, "I'll should it all, and with the oalds I'm getting ought to land enough to permit of a little indiscretion, hey, ald fellow?"

At diamer Nelle was very quiet, never once looked at me, and addressed her conversation chiefly to the torpan; hat in the drawing-room afterwards, when some outsiders came in, she brightened up and was all vivacity. Spots, too, was as lively us a cricket, and kept in such close attendance that I canid not obtain a word in private. While finishing my lost eight before retir

Lett to my own reflections, which were not ambrosial, with an anotherma agoinst coqueties, instead of intringin, as pradence and the necessity for a steamly land for the instruction of the stables.

The morning brake aborg as a hell, with that delightful crispness in the air which is the result of a good Increavever night. A race day in China, although differing so in surroundings from a similar event in more vivilized countries, still hears the same holiday aspect. To the mercantile community, it is a long hole collection for slight specialities, and the crews of the different ships on the samon, and the crews of the different ships on the samon, and the crews of the different ships on the samon, in san absolute godseal from the dreary monotony of their lives. Not the least omnising features, are some af the feeble efforts made to ape the prevalent roustoms of the Derby day in England. A few anvient drugs are brought into requisition, each with the necessary nevomponyment of four horses and a tin hero. Juvymile Cantonese, of small storin, are for the excession inducted Intalivery and prefed behind the drug. The man who owns a dog cart is a huppy mortal, but by far tob largest portion of the community are reduced by Sinaiks' mores or a swhar chair. The matives turn out in full force, some of the wealther perchants, indeed, presenting valuable cups in the run to this day, and through the windows of their chairs, much rich runtrolery and valuable 'gwelry is to be seen, supplementing coal faves thickly covered with provider and vanuabl, and bright black eyes sparking with satisfaction at the maceristimed excitament. The Ma-han, the general wither the settlement, and leyound which the rice course issimated, is througed with a almost impensivable mass of Chimomen; through which, with difficulty, a launi is forced by a spectring torqua. The notion seeds or a cup of sanishu, is curried on arbitralingly. It increase in the word rever selected gamin me or inverse in a pint of meteors, are wending their way by a returned

some of the other women screamed themselves hourse. We feared at first that yan were injured internally, and were going to peg out, but thank God yan won't be a candidate for the bone yard yet a while; and the taepan says that as soon as you can move you are to go over to Japan until you get quite strong again."

"Is Nellie here still?" I asked.

"No; they left this morning. She was awfully cut up about you; and I say, old fellow, you've got the inside track there, and I've made an awful ass of myself. There's a note in the office for you; I'll send it over as soon as I get back. Chlu-clain Tickson; keep your plack up and I'll come over in the evening and give you all the gup."

In a few minntes the bay returned with the letter, which was worded as follows:

was worded as follows:

DEAR MR. TICKSON:—I cannot tell you how sorry I am at having to go away without seeing you. I would have insisted on remaining, had they not assured me that you were entirely out of danger, and would he seet to Japan as soon as you could move. We shall remain in Yokohama over one scenmer and I shall look forward with the greatest impatience to seeing you; particularly if you really meant all you said to me the other evening among the graves. If you did not, or have changed your mand, please do not come beyond Nagasaki until we have sailed. Yours, Nellie.

This was all, lost it was enough to set my heart bearing and make me curse my fate and the doctor for still keeping

and make me curse my fate and the doctor for stime exception in bed.

Ten days later, and still bandaged up and weak as a kitten, I was on board the mail packet steaming out of Yang Tsze ea route to Japan. In less than four days we reached Yokohama, and I was safely lodged in the house of our agent and again under the same roof with Nellie. What we did and said; of the charming drives along the magnificent Takoido, and how we watched the last rays of the san glancing from the snowy crest of old Fusiyama, all this was interesting only to ourselves. Suffice it to say, that before the steamer carried off Nellie and her father to San Francisco and left me feeling very desolate and loaely, it was arranged that within the year I was to follow them, and Nellie and I were to be united again for better or for worse, as long as we should live.

My wife, having seen the children to bed hus, for the last half hear, been looking over my shoulder, and throwing both my papers and ileas into the most reckless confusion. She says I've been writing a lot of the most unmitigated nonsense; that I was the spooniest man in the house from the first, and that as far as poor Spots—who, by the way, never made his visit home but now sleeps his last sleep in Happy Valley—having had his arm around her waist, it is perfectly ridiculous; and if he did she was entirely unconscions of it. However, mine is there now, and although we have not the cup to orunnent our sideboard, we possess another which thus far it has pleased a kind Providence to fill with its choicest blessings.

FISH CULTURE:

ITS ORIGIN, DEVELOPMENT, AND PROGRESS.

BY ICUTHYDS .- NUMBER FOUR,

THE extreme fecundity of a slices, by a wise endowment of nature allows a large margin for destruction, and still leaves, with suitably provident measures on the part of the governments, an abundance for our wants.

The number of eggs deposited by fish is uext to astonishing. The number deposited by a single salmon (Sidvao sodar) has been found to reach 25,000. A brook from, (Sidnao sodar) has been found to reach 25,000. A brook from, (Sidnao sodar) has been found to reach 25,000. A brook from, (Sidnao sodar) has been found to reach 25,000. A brook from, (Sidnao sodar) has been found to reach 25,000. The sole, (Side a vulgaris) have ascertained by close investigation that the pike (Eson lucius) produces 80,380 to 272,160. The sole, (Side a vulgaris) 100,360. The roach, (leuciscus rutidus) a fresh water fish of the earp family 113,340. The bream 137,800. The tench, of the earp family, 383,250. The markevel, (somber vulgaris) 540,240. The carp, (eypriaus carpeo) introduced from Persia into England, and from thence to America, a fresh water fish, 342,140 eggs. The goldfish Cypeinas aucatus) heloags to the same tamily. The flounder, (Piatessus flessus) has yielded the unprecedented number of 1, 359,400 eggs. A sturgeon (Acipaaser sturio) has produced the enormons yield of 7,635,200, and Lecuwenhock luss found 9,344,000 in the codfish, (Morrhau Vulgaris). M. Valenciennes, has recently ascertained that a turbut, (Rhoonbas naaciaus) nineteen and a half inches long, contained 9,000,000, and that he mullet, (Mullus bachatus) contains 11,000,000. The herring (clupus harreagus) contains 1,000,000 of eggs.

good pony handed with his fare feet just clear of the further bank. Insteant of giving him his head 1 lost mine, and pulled wildly at the reins. For a moment he strangled for his froting and them, his fore legs paving wildly in the nir, lost his haltinee and fell backwards on me. I felt the horrible crashing of his weight upon my body and then, the form the result wildly not be resulted in the multer, (Multas bachdus) contains 1,000, 000, of eggs.

Were it upon the remarkable feetingly many varies that him the multer, (Multas bachdus) contains 1,000, 000 of eggs.

Were it upon the remarkable feetingly many varies of the industries of his froting in the proposed by the small fish become a prey of the industries of the drug to perfect consciouoness, I realized at his that I was in my own man. The sun was shining lerightly and elicerfully, and my low, evidently placed on guard, was punttering about the wardrobe. Attempting to raise myself up I tound that I was quito helps said to their development; many are dropped into diffusion of your feel; hetter, eh? Tho doctor suys if you kneer? Mr. Spots?

"Boty, where's Mr. Spots?"

"Hat got office, sair."

"In a few minutes Spots came flying up stuirs two steps at a line.

"Hallo, all fellow how do you feel; hetter, eh? Tho doctor suys if you kneer paide for a few weeks you will be all right rgain; only a rid and a called home broken; but lands and I'll tell you all the event of the counter of the

vests. They have learned, as in agriculture, if they do not sow, they cannot reap. Artificial propagation of fishes is now exhansively practised in Great Britan, France, Holland, Belgium, Denmark, Norway, Sweden, Anstria, Prussia, Hangary, Russia, Switzerland, Italy, Spain, Canada, and in our own country, while India, Java, Australia, and Tasaoania have instituted investigations through fishery commissions, and have already imported valuable fixed fishes as parent stock, from which may spring large influstries in the near future.

The fishes of our country are admirably constituted for artificial propagation; for about an equal number are Autumn and Winter spawning fish, and Spring and Summer spawners. A brief list of prominent food fish is appended:—

AUTUMN AND WINTER:

Pickerel, Esox reticulatus; masquallonge, Esox nobdior; pike, Esox lucius; seu salmon, Salao salar; brook trout, Salao fontiantis; lake trout, Salao aamyoush; Pacific salmon, Salao quicaut; lake whitefish, Coregonous albus.

BERING AND SUMMER.

Perch, Perca flavescens; pike perch, Leucio perca Americana; striped bass, Lehrar lineatus; black linss, Grysles aigricans; rock bass, Centrarchus aeneus; shud, Alosa presentation.

Perch, Percon Bassecaw, pike perch, Leucio pecca Americana; striped bass, Lohrar tineatus; black hass, Grystes aigrifeatis; rock bass, Centrarchus aencie; sland, Mosa prostabilis.

To show how generally fish culture is being developed in our country, eighteen Slates of the Union have Legislative enactments for the protection of fishes and Commissions which are initifully laboring to replunt our great lakes and inland waters with food fishes, of which they have been almost entirely depleted through the rapacity of ignorant fishermen. Since the experiments at Cleveland, Ohio, in 1833, dish firms have multiplied by thousands, and the well nigh exhausted shad and salmon streams have been restocked with these delicious table fish. In no field of human effort have greater results followed, nor has any undertaking in any industrial department been undertaken in any department of the science, however bold in conception, has been nchieved, and as we have only become familiar with the alphabet of this study, we have every reason to expect greater things in the future. There has been a vast amount of labor expected in New England, New York, and other States, and the outcome has exceeded the most sanguine expectation of the most hopeful friends of the enterprise.

But the crowning work of fish culture in this country is now being performed through the United States Commissioner, aided by a corps of able assistants and deputies.

The able Commissioner first directed his attention to the food fish of the ocean, on the south coast of New England, studying their babits and ascertaining the eauses, if any existed, of diminishing numbers of some of the most valuable species. In connection with bis observations on the coast, in a shell existed, of diminishing numbers of some of the most valuable and the fresh water fishes a study, to ascertain the eauses of the increasing unfruitfulness of our inland waters. Besides these herculean labors, the acclimating of California, was undertaken, and heave trunders and the second of this co

DECAY OF BROOK TROUT IN VERMONT .- The Ruthand Herald, in commenting on the above subject, offers some very pertinent suggestions, both as to prevention and cure, which will apply equally as well to other parts of the country. Referring to the clearing out by natural decay and floods, of the ancient windfails, which made in time

and floods, of the ancient windfails, which made in time minature dams, easeades and pools, it says:—
"We would restore in so far as possible these old barriers, or rather we would construct similar ones along the water courses in those places where it could be done to the hest advantage; sometimes merely felling trees into or across the beds of the brooks in a discriminating way, leaving the filling up to time and drift, and in other cases completing the work with stones and brush. Here and there large open pools which have no sbelter from the sun, or hiting places for fish, could easily be made inhabitable by rolling in from the bank a few boulders, or so planting stones as to make a shelter. Doubtless there are almost every aftere for considerable distance sections of streams that are, for the present at least, past being helped in either of these ways without too much trouble and expense—where, for itestance, fleey flow through open, unsuchered grounds and sandy membass. But somewhere, usually higher up, there are generally plenty of chances, findeed most of our brooks are at intervals hordered by trees, and many of them for long distances from their sources flow through woodlamls. In such places plenty of admirable fish ponds could be made with no other implement for the most part

than an ax, and that, too, without sensible loss or cost to anybody. Next, let those pools and chdies which are usually found at the outlets of the smaller streams, and through which trout of all sizes are continually running as the spawning senson approaches, be served in the same way, or, at least, be partly filled or covered with brush, so that it shall be no longer possible for any unscruptous fisherman to visit them from day to day with the moral certainty of capturing the last arrival.

And lastly the same small spring runs and other places which are known as spawning grounds, and the nurseries of the young fry, should be so protected that they cannot at any time be reached by the hook of the fisherman. Indeed so much faith have we in the protective virtues of brush judiciously placed, from time to time, that we venture the assertion that a single ax vigorously but wisely wielded for a day along the banks of any ordinary trout brook would do more for the protection, increase and growth of trout in that particular stream for the next three years than any law that might be passed, though stringent even to prohibition."

[We have before advocated this mode of improving trout

[We have before advocated this mode of improving trout streams, and have given it practical application by intro-ducing it at Blooming Grove Park, on Taylor's Creek and other streams. -ED.]

LOBSTERS. - A writer in the Bostou Transcript says that the strange changes in the amount of yearly production of lobsters is very puzzling to fishermen. In Plymouth Bay they used to find good sized lobsters very plenty, while now the production both inside and upon the coast is very much diminished both in size and numbers. They attribute it partly to the raking of the rocky bottom for Irish moss, which is now carried on to a great extent. By this means the young lobsters are uncovered and often destroyed, as they need the refuge of the moss both for growth and

Another Failure in Shab Transportation.—Pro-fessor Baird of the United States Commission of Fisheries, has received a message by cable to the effect that the shad spawn shipped hence by the steamer Mosel and alluded to in our issue of the 22 ult, had all died. These shad were incended for the stocking of the river Weser, and it was hoped that by hatching them while on route the mission of last ways rollength the work of the rivers and it was fortune of last year, when the young fish were sent in ears, would he avoided. No cause is given for the failure, and the patent trays used do not appear to have produced the results expected from them.

Six thousand shad have been sent to Lake Ponchartrain, Louisiana, and about seventy thousand to Vermont, where the commissioners intend to continue their experiments in stocking Lake Champlain.

The last of the shad shipments this season from the lastching grounds at Holyoke, some 60,000, was made today, and it went to the Rhode Island fish commissioners. The shad will probably be put in the Blackstone River. A shipment of 70,000 was made a few lays since to Rock River, Illinois, a tributary of the Mississippi. The total shipments from the Connecticut River this year to other waters than its own, amount to 1,370,000. This enormous total includes the 40,000 sent to Germany.—Hartford Times, Avouat 2.

SAWDUST IN TROUT STREAMS.

GRAVENHURST, Canada, July 27th, 1875.

GRAVENHURAT, Canada, July 27th, 1875.
EDITOR FOREST AND STREAM:—
On the 25th of July W. H. Brown, of Baysville, was fined for allowing sawdost to escape from his mill and works at Baysville into the South Moskoka River, on the compidint of Air. R. K. Johns, of Bracebridge. Mr. Johns has since the above fine received att adidavit from Air Fesoni, of New York city, and another from Dr. Cameron, of Totonto, stating that on the 15th and 16th of July inst. they witnessed sawdust going into the river from the same mill. I am glod that a start has been made to stop mill owners from putting sawdost, etc., into the rivers.

J. S.

LETTER FROM PISECO-CORRECTION.

United States Fisher Commission, Steamer Blue Light, Wood's Hole, Mass., August 2d, 1875.

EDITOR FOREST AND STREAM:— WOOD'S HOLE, Mass, August 2d, 1875.

EDITOR FOREST AND STREAM:— When in your leave of the 15th inst your type selter turned my thin legged chairs into three legged ones, thereby depriving them of their great resemblance to the young persons with whom they were compared, and when he followed an a few lines farther by making me heave my anchor into a "creek" instead of into the crark of the split rock, I felt somewhat aggriered, but it concerned no one but myself, and I had got pretly well used to type errors and could stand them. But in your tast issue he deliberately knocked over the entire argument, by which I was trying to show that this place was Holl and not Hole, by turning my "none" into a "nine." This latter construction destroys the whole force of the views advanced. My object was to show that within the limits of the track of the Norsemen there were several cases of this name. None elsewhere. Your nine gives the precedence in that respect to the vection they had not visited. Please make the necessary correction, and oblige.

The sea scrpents seem to be moving around this side of Cape Cod; one has been seen on the ocean side of Cuttyhunk Island, at the cutrance of Buzzard's Bay. The New Bedford Standard says:—

New Bedford Shindard says:—

"The sea serpeut was seen from the top of the hill at Cuttyhunk, Thursday, by a number of persons, who judged that he was about sixty feet long. They saw him very plainly and distinctly."

The St. John Globe says:—

"The steamer City of Portland, on a trip last week from St. John for Portland, when off Segulu, passed the sea serpent within 30 feet. The monster was lazily floating along on the water, occasionally lifting his head to look around."

—Parties visiting California will find most pleasant and desirable quarters at Tubbs' Hotel, Oakland, at the terminus of the Pacific Railroad, forty minutes from Sau Francisco, with which steamers communicate every half hour. This botel is kept by Win. M. Lawlor and B. I. Kellogg, Jr., well known in this city and Albany, and is a favorite resort for tourists and sportsmen.

Matural History.

For Forest and Street A FEW REMARKS ON SNAKES.

WERE it generally known how harmless most of our snakes are, instead of a feeling of dread for them. we should admire their graceful motions and fine coloring; and the instinct to destroy them the moment they are seen would be changed to a desire to examine them more closely, to observe their habits, and the objects of luterest about them. Although we have about a dozen species in this part of the country, there are only two which may not be hundled with impunity—the rattlesnake and copperhead adder. The latter variety, however, is known by the name of chunkhead and red adder in different localities, and in some places is thought to be the female of the rattlesnuke, although it belongs to an entirely different genus from the rattlesmake. The bite of both is usually fatal, unless means of procuring a remedy is near at hand. The poison acts very rapidly, its effect heing to congulate the blood, consequently means should be taken to cause the blood to consequently means should be taken to cause the most to circulate rapidly as soon as possible on being bitten. None of our other species possess poison fangs. Although both of the black snakes will bite rather readily, the effect is of no more account than that of a mouse. I do not think that any of the remaining species are capable of making any the black snakes will bite rather readily, the effect is of no more account than that of a mouse. I do not think that any of the remaining species are capable of making any wound whatever. The milk snake is so named on account of its extreme fondness for milk. Although all snakes are very fond of it, none are so frequently found in the countryman's dairy. The belief that it sounctimes sucks cows is, I think, incorrect. Our most beautiful snake is the little green snake. It is usually found in thick grass in dump localities. Its color so corresponds with that of the grass that it is not easily distinguished while lying concealed in it. The ring racer is also a pretty little fellow, but is rather rarc. The most formidable uppearing of our snakes is the hissing adder, although it is perfectly harmless and cannot be induced to make any pretension of biting. On being disturbed, it flattens out the loose skin on the neck and sides of the head, and at the same time fills the lungs with air. If further disturbed, it expels the air through the nose with a dull but rather lond hissing sound, and frequently runs out its long, forked loogues, as do all snakes when disturbed, or in any way excited. It, motions are rather slow but very graceful. The most common snakes are the spotted water snake and striped snake. There has from time to time beeu considerable discussion as to whether snakes produce young by birth or by eggs. It depends entirely on the species of snake. Most species lay eggs; a few give birth to the young, while others are ovaviparous—that is, the young are produced in the form of an egg, but break the shell almost immediately on exposure to the air. Young snakes accompany the mother for a certain leagth of time. It case of danger the mother opens her mouth, when the young soon disappear down her throat, and cauremain there for some time if necessary. As the gastric juice cannot affect any living animal matter in the stonneh they of course suffer no danger of being digested.

The longue of the snake is popula

THE BREEDING HABITS OF PIGEONS.

THE BREEDING HABITS OF PIGEONS.

Editor Forest and Stream:

The male pigeon first selects his mate, paying court to her by stricting around her with his feathers spread, and cooling. When they wish to begin breeding the male finds a place for the nest and calls his mane to the title the state of the mest and calls his mane to the male face of the nest and calls his mane to the male to come hear her. When they have selected a place for the nest they commence to build, the male bringing the straw, while the female arranges it. They work only in the formoon. The nest is made entirely of straw, the inside being fluor than the outside. When the nest is find-hed the female gues on at high and in the morning there is an egg in the nest, though I do not know at what time It is laid. The other egg to laid to the offermoon of the following day. The female sits on the eggs during the night and until about 11 o'clock in the morning, when the male takes her place until about 4 o'clock in the offermoon. The period of incubation is eighteen days. When the young are hatched they are thinly covered wilth a yellowish down. The old birds feed them on a milky substance, which they refet from their crops, and as they grow older they give them coarser foul, but there is always considerable moleture in it. When the young are nearly fletged 1 have noticed that the male bird, after being fed at night, always drinks and then feeds the young, evidently giving them the grain he has just entent. The female usually lays again before the young are weaned. Pur a short time hefure the young are weaned only the inaic feeds them. A female pigeon cannot ralee a young hird without a mate to help her. I have had odd females, when there was a male in the flock, by eggs and hatch their young. They would raive them until they began to feather not, when they wound dee, evidently from siarvation. I think that the arrangements by which the mate performs so important a part to freeding the young is for the purpose of giving the female a neal, during which

History. Take some particular bird or animal, observe closely its habits, and let us have the result, will prove, ultimately, a great pleasure:—En.]

Collection for the Centennial.—A number of naturalists in this State, the most prominent of whom is Judge Bell, of Manticello, are now engaged in making a collection of lidds and reptiles of this State for exhibition at the Centennial. About 400 specimens have already been cullected, and it is expected that about 2,000 will be ready by the time of the opening of the National Exhibition.—
[Florida Agriculturist.

Woodland, Harm and Garden.

THE DEVIL TREE.

HE South Australian Register contains the following account of this remarkable plant:-

THE DEVIL TREE.

THE South Australian Register contains the following account of this remarkable plant:—

"Imagine a pine apple, eight feet high and thick in proportion, resting upon its base, and deamled of leaves, and you will have a good idea of the trunk of the tree which, however, was not the color of an anana, but was a dark, dings brown, and apparently as hard as iron. From the apex of this fusicitated come fut least two feet in diameter; eight buge leaves sheer to the graund, like doors swinging back on their hinges. These leaves, which are joined at the top of the tree at regular intervals, were about eleven or twelve feet long, and shaped very much like the leaves of an American agove or century plant. They are two feet through their thickest parl, and three feet while, hippering to a sharp point that looked very much like a cow's horn, very convex on the outer (but not under) surface, and on the under (not upper) surface slightly concave. This concave surface was thickly set with strong, harny hooks, like those upon the head of a teazle. These leaves, hanging thus limp and lifeless, dead green in color, hud in appearance the massive strength of oak fiber. The apax of the cone was a round concave figure like a smaller plate set within a larger one. This was not a flower, but a receptacle, and there exhibes into it a clear, treatly liquid honey, sweet, and possessed of violent intusinating suporific properlies. From underneath the rim (so to speak) of the undermost plate, in series of king, hairy, green tendrils stretched out in every threetion towards the barizon. These were seven or eight feet lung, and tapered from four incless to half an inch in diameter; yet they stretched out as stiffly as iron rols. Above these (from between the upper and mader cups) six white almost transparrart pulpireared themselves towards the sky, twirting and twisting with narrivolus incessant motion, with sinch as sublenly interrupted by the natives, who had been shricking around the tree with their skrill vaices, and cha

ness and saving tenacity of anaconthas hastening upon theoprey.

It was the barbarity of the Laocoon withant its heauty—this strange, horrible murder. And now the great leaves rose slowly and stiflly, like arms of a derrick, erected themselves in the air, arpromehed one another, and closed about the dead and hampered victim with the silent force of a hydraulic press and the ruthless purpose of a thanb screw. A moment more, and widle I could see the basis of these great levers pressing more tightly toward aach other from their interstices, there trickled down the stake of the tree great streams of viscid, honey-like fluid, mingled horribly with the blood and ouzing of the victim. At sight of this the hordes around me, yelling mally, handed forward, crowded to the tree, clasped it, and with cups, leaves, hands and tongues, each one obtained enough of the fluid to set him mad and trantie."

Spare the Blackburds.-Now that the army worm is creating such havoc with crops, the following letter from a farmer of Woods Hole to the Boston Advertiser may contain a timely hint:—

The above remarks on the breeding habits of pigeons are from the pen of a young had who has given the subject much attention. We mention this in hopes that some of our young readers may turn their attention to Natural ingupon what they did not sow. 'Why, they come,' said

he, 'in clouds from Naushon, and all about us.' Notwithstunding, I told him that I was satisfied that they did more good than harm, and that they were welcome to their share. The harvest began, and as the mawers reached the middle of the field they found the stulks of the grain very much stripped and cut up by the army worm. When the barley was down they began to march out of the field in a compact stream through the har-way into the next one, and here we saw clearly what the blackbirds were after. They pounced upon them and decoursed them by thousands, very materially lessening their numbers. The worms are so numerous that they have not destroyed them all, but have materially lessened them and their power of mischief. All hunor, then, to the blackbirds, which are usually counted mischlevons, and are destroyed by farmers like vermin. These army worms have returned after an interval of eight or len years."

The Army Worm.—The destructive pest, the army worm, has arrived at Portsmouth, Middletown, and Newmort, R. I. On Saturday the farmers were out mowing their outs and barley, which will be at best good only for fadder, as the grain is not nearly rips. The grass had all been cut before. Trenches are being dug around corn fields, and everything is being done to prevent the devastation which worms occusioned in 1861. They were not discovered before Friday, and then only in small quantities; since then whole fields have been completely covered with them. The worms have appeared also at New Redford and Westport in this State, and are making havoe with the gardens. The trench plan is being tried in these places also with some success.—New England Furmer, July 30th.

-The Babylon Signal says the army worm is doing damage on parts of Long Island, especially near Aquehogue and Ronkonkoma.

The Rennel.

—Mr L. H. Smith, of Strathoy, Ontario, Canada, has recently sold to Mr. Middleton his field trial setter hitch hiffey, by Leicester, out of Dart. Mr. Middleton takes Liffey to Japan, and we trust he will not share the fate that has met so many fine dogs imported into that country and China. The last named is a particularly fatal climate for dogs, a setter seldom lesting more than one or two seasons.

-Mr. B. W. denkius, of Baltimore, owner of the celebrateil Ranger, writes us under date of 2d inst., that his imported pointer bitch, Julep, bas whelped six pups to his imported pointer dog, Saucho. They are all marked white with liver head and large spot on back and rump, like the sire. Saucho won several prizes in England.

Lance Sales of Dogs in England .- An important sale of sporting dogs was held by the Messrs. Tattersall on the 12 ult., at Lillie Bridge, Brompton, England, comprising drufts from the kennels of the Earl of Sefton, Earl of Feversham, Viscount Downe, Mr. Lonsdale, Mr. Llewelliu, Mr. Statter, and Mr. J. Armstrong, names very familiar to our own sportsmen. As some of the setters were purchased for this country we append their names and the prices they brought:-

Flux, the first on the list, is said to have sold uncommonly cheap. The same purchaser also secured May, by Plunket. Mr. Statter sent six pulnters and twenty setters, all bred with great care, but only four reached the limit put upon them. Dimmind, who brought seventy guinens, is a liver and white dog, and has distinguished himself in many

"Nora."-Our correspondent "Lightfoot," writes advise us of the arrival of this celebrated Gordon setter bitch, per steamer San Marco. Mr. A. F. Copeland is the happy owner of Nora, having purebased her for a high figure by the advice and with the kind assistance of Mr. J. S. Skillmore, of Nantwich, England. Nora will prove a great acquisition to this country, being a very heautiful bitch, of good size and substance, and a celebrated prize winuer. She is the dam of many prize winners and has an excellent pedigree, being by "Idstone's" ebampion Kent, out of Mr. Churles Laughton's champion Duchess.

The same correspondent corroborates Mr. Demuth's statement in regard to Pickles, the pure Laverack bitch recently imported by that gentleman at the same time with Rock.

Mr. J. W. Knox writes us from Pittsburgh, Pa., that he hus heen advised of the shipment of a splendid setter dog, "Belton," hy Laverack's Dash out of a sister to Dick and Llewellin's Dau, etc. Mr. Statter is to send a full pelli gree shortly. Mr. Knox has also purchased "Rifle," in whelp to Liewellin's Prince. Rifle is hy Dan out of Ruby.

A FINE DOG LOST.

Enither Forest and Stream:— Davenport, Iowa, July 16th, 1875.

Daysnoot, Towa, July 1611, 1815.

A few weeks ago my son, while on a visit to this city, received a present of a fine setter dog from Col. J. II. Berryhill. It was over a year old, and well bruken. The ancestor on the male side was imported from Russis. On boarding the sicamboat to return to his bome in Southeast Minnesota he give the dog into the charge of the porter, with instructions to take good care of it and he would be paid for his trouble. The lineat had proceeded about a mile up the river, when, after having seen to the comfort of his family, he went down on deck to took after the comfort of the boat, dead. The railing, to which he was chained, was open enough to allow the dog to get through, and his love for his old home induced him to jump overboard, and so hung himself. Moral.—See well to your dog while traveling with one on a public conveyance.

WM. Gray

MORE LAVERACKS IN THE FIELD.

STRATHOY, Ontaria, Canada, July 27th, 1875.

Entroll Forest and Stream:

I have just received in my kennels a brace of pure Laverack setters Carowitz, sent me by Mr. G. Teasdate Buckell, and Victices, purchase for me by Mr. Buckell al Aidridge's, on the 10th alt. Carowitz is he Filkington's Dash, ont of Lieweilin's celebrated Counters. Victress by Dash, out of Moli, own sister to Nellie, Dalsy, Counters, Fairy, etc.

L. H. Smith.

A NEW CURE FOR MANGE.

BALTIMORE, July 29th, 1875.

Editor Forest and Stream:—

I see one of your correspondents wants a cure for mange. My setter had it so had last Spring that I thought he would die. White hesitating what remedy to try some one advised me to take him to a tannery and put him in a line vat. This I did, though doubting a favorable result. To my surprise two immersions cared him completely. The time water was not very strong, and did not affect him injuriously, although in plunging him in his head was wetted completely.

S.

CURE FOR RED MANGE,

WEST HAMPTON, N. Y., July 26th, 1875.

EDITOR FOREST AND STREAM:

Goineas.

Editor Forest and Stream:—Your remedy for red mange is O. K. I find that instead of a solution of arsenic, a "ball" of suppor administered three days in succession, omit it for three days and then repeat, has done the business, with the sulphut obtained, for my hitch Josephine. Her pape are now ten days old, and they seem to be breaking out all over, and I am very moch afraid it will rain them. What would you recommend for the paper. They are a very fine breed and valuable paps, and if you know of any tried remedy please inform me, and you will confer a great fuvor.

We would advise you to use the same remedy with the pups which has cured your bitch, but in very small doses aud milder form.-ED.

Sea and Biver Hishing.

FISH IN SEASON IN AUGUST.

Trout, Salmo fontinalis. Sulmon, Salmo salar Maskenonge, Esox nobilior. Weakh-h. Striped Bass. Kingfisb.

Salmon Trout, Salmo confints.
Laud-locked Salmon, Salmo Gloveri,
Bluck Bass, micropterus nigricans.
Plke, essa lucius,
Plekerel,
Bluefish. Sheepstend.

Under the head of "Game, and Kieh in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that more we to attempt to particularies we could do no less than publish those entire sections that relate to the kinds of game in guestion. This would require a great amount of our space. In designating game we are guident by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attenuts to assist them will only create confusion.

FISH IN MARKET.-Owing to the stormy weather during the past week, fish are not so pleutiful as they were the Salmou are ou tho wano and the season's cutch so far is fully one third less than that of last year; prime fish are selling for 35 cents per pound. Native Spanish mackerel are being caught freely on the New Jersey and Long Island coasts, and are unusually large and fine fish, many of them weighing five pounds each; they sell for 40 cents per pound, while those from the Chesa-peake Bay bring but 25 cents. Striped hass are coming from Baltimore and Philadephia principally, but few fish coming from the East; they sell for 20 cents per pound. Fresh mackerel are not in such good supply and bring 18 cents each. Halilmt are worth 18 cents; sea bass 18 cents; bluefish, from Massachusetts capes, averaging eight pounds each, bring eight cents per pound; large weakfish from the same locality are worth 12 cents; cod 8 cents; porgies paper mentioning the circumstance as entirely new in his scarce at 12 cents. During the past week large quantities experience. Space was, given, to this information in these

of pompano bave come to market from Baltimore and have sold at the unusually low price of 40 cents per pound. Soft crabs are scarce and sell for \$2, per dozen for large and \$1 50 for small. Green turtle are still in good supply at 15 cents per pound,

Phinness Bay.-In spite of the cluse guard which the Phins hay. —In spite of the clisse ghate which the bluefish have kept at the mouth of the hartan, the weakfish have finally made their way in and are now being caught in fair numbers and of good size at Princes Bay. Take the Staten Island Railroad to Princess Bay Station, theuce ten minutes drive by stage to the hay. "Sandhags" or any minntes drive by stage to the hay. "Sandhags" or any of the bostmen will put you on the ground, or go to Port Richmond station and find the way to Streles.

THE GREAT SOUTH BAY. -Bluefishing outside of Fire Island Inlet and chumming inside the buy have been good during the past week. The weakfish have returned from their periodical migration to the eastward and are now taking the hook freely. During the next munth the fishing will probably he excellent.

—Old fishermen about Bnzzard's Bay opine that the black bass, of which there was great plenty seven years ago, are again "setting iu," and are driving away the bluefish. Meahaden were hardly ever more numerous than now, and so much fish bait existing, the comparative scarc ity of bluefish cannot well be accounted for. Swordfish are being obtained of good size and in large numbers on the regular grounds for these fish.

-Bluefish are in vast numbers all around Nantucket.

-The Labrador fishery is reported almost a failure.

—Jarvis Smith and D. J. Runyon, one day this week, cast their lines for blue fish, and succeeded in taking 70, weighing from 4 to 10 lbs. cach. Thirty were taken on one tack. This is the heaviest hand with line and squid reported this season.—Babylon, (L. I.) Signal.

this season.—Babylon, (L. I.) Signal.

The Fisheries.—The number of fishing arrivals for the week ending July 29, was 90—56 from Georges, 11 from the Banks, and 23 from mackereling. Amount of Georges cod brought in 800,000 pounds, hulibut. 59,000 pounds. Bank cod 1,300,000 pounds; halibut, 40,000; mackerel, 930 barrels. Mackerel still continue very scarce off this shore, and quite a number of the sciners intend lenving for the Bay soon, to try their luck there. It looks now as if the shore mackereling would prove a futbure this season, although the coming month may shown a different aspect of affairs. In view of the scarcity of mackerel, prices rule high, last sales being made at \$164 and \$104 per bbl; for Nos. 1 and 2.—Cape Ann. Advertiser, July 30th.

Black bass are beginning to take the fly among the

-Black bass are beginning to take the fly among the Thousand Islands, and the sportsmen are enjoying fine sport. Wall-eyed pike are frequently taken. Among the leading anglers on the ground are Messrs. Cark and Lowrey, of New York city, Fred. Massey, of Brooklyn, H. E. Morse, and Mr. Hart (Kimball & Co.,) of Rochester, Mr. Redfield, of Hartford, and Mr. Beasley, of the Cuvier Club. Cincinnati.

-Last Spring, Dr. D. C. Estes, of Lake City, Minn., w kind enough to send us some patterns of bass flies used in Lake Pepin, which we have tried with good advantage in the River St. Lawrence and some of the back lakes of the River St. Lawrence and some of the back lakes of Canada. The most taking are those of grey and brown mixed with purple and scarlet colors, without much regard to method or design. The grey and purple wing, with scarlet body whipped with line silk, and white tail, served the best. We used also a turkey wing and black body whipped with orange silk. A killing fly may be made from the white and dun hair of a deer's bide, and has been in vogue for centuries, both North and South. The most successful fly-fishing for bass is done at the onliets of lakes successful fly-fishing for bass is done at the onliets of lakes or where the current rushes through narrow channels between islands. This is true of the St. Lawrence. Some fish are taken from boats, the angler casting in toward the rocky shelving shores. They are also found around sunken reefs and rocky points. Trolling with fly and long line is much practiced, but there is no skill in booking the fish, and but little required to land them. Average weight now, 11 pounds.

-Mr. Hume, of the Carolina Club, of Charleston, S. C., who is owner of one of the pretty islands in the St. Law. rence, has taken two salmon trout this season in the St, Lawrence River near Alexandria Bay, which is quite unusual good fortune. One weighed six pounds and the other twelve, taken in the latter part of May and first of

-One of the finest and hest known tront regious in America is in Michigan, all along the liuc of the Grand Rapids and Indiana R. R. Last June a party of six gentlemen from Penusylvania took two thousand there in less than a week's fishing, or about sixty each per diem. The Railway Company have issued a "Tourist's Guide," in dicating the best fishing places, which can be obtained on application at this office

-We learn from Mr. R. M. Shurtleff, the artist, who is sojourning in that region, that trout fishing at Keene Flats, Sussex county, N. J., is better than usual this year.

A 10-pound salmon was taken in the Saco River, in Maine, a few days ago, said to be the first caught in that river for about twenty years. It was caught in a weir.

-Our correspondent "Music," F. L. Magoou, of Philadelphia, and Dr. J. H. Richardson and sons, of 'Foronto, are at Doe Lake, near the hemiwaters of the Magnetewan.

-One of our correspondents, who has evidently done little fresh water fishing, accidentally discovered the other day that pickerel will take n fly, and wrote n letter to this paper mentioning the circumstance as entirely new in his columns, and forthwith a dozen emulous anglers, eager to ventilate their experience, write to state that they have known the thing done off and again! Pickerel take a flyy Why, gentlemen, they will take anything; so also will frugs, terrapius, and black snakes. Morad: Don't fly fish where these vermin chiefe where these vermin abide.

July 28.—J. C. Baily, Jersey City, 12 bart and sea leass; N. D. Taylor of Jersey City, 12 sheepshead, 40 sea bass, 30 kingfish.

July 29.—J. C. Bailey, 2 sheepshead, 15 sea bass and bart; S. B. Trewsdale, Cold Spring, N. V. 36 wenkfish; Walter Southwick, Brooklyn, 36 sea bass.

July 30.—Southwick and J. H. Crane, 23 bluefish; H. M. Friser and J. F. Danze, New York, 30 sea bass; S. B. Trewsdale 35 weakfish, average weight 24 pounds; Win. Muson and F. H. Southwick, Brooklyu, 17 bluefish.

Sheepshead fishing good, professionals taking from 150 to 300 daily. Bluefish are scarce and small, except those taken outside. Sea bass and hart plenty and laite well. Weakfish of large size have unde their appearance; the besteatch was made to-day (of large fish) at the Elbow Bony.

catch was made to-day (of large fish) at the Elbow Bony.

Canada.— Mt. Julien Hotel, Stoney Lake, July 31.—Bass fishing is in full blast here now, and a string of sixly per rod is an ordinary daily catch. Many are taken with fly at the outlets of the numerous lakes, hereabouts. A good many guests are here, of which a considerable proportion are from the States.

Gratendurst, Muskoka, July 27.—Bass fishing in lakes Joseph and Rosseau is now very good. Tourists are having some good sport fishing for them. I have received a letter from Richard Crooks of Magnetewan, in which he states that he will act as guide for fishing and hunting parties on the Magnetewan, and that he can furnish canoes, a lett, and three dogs for \$2.50 per day. As far as I can learn Crooks is a good and reliable guide.

CANADIAN SALMON SCORES.

New York, Aug. 2d, 1815.

New York, Aug. 2d, 1875

Having recently returned from a salmon fishing exentsion on one of the New Branswick rivers, I hand you a return of our take, five roles, seven days. In hand:—46 salmon, tour gribe, weighing 175 pounds. Our heavy weights were as follows:—24, 23, 23, 17, 23, 22, 27, 24, 20, 27, 20, 18, 21, 19, 27, 26, 22, 19, 21, 22, 19, 22, 23, 19, 22. Water high, and the filth, with few exceptions, made the most exciting resistance. The reports from nearly all the anglers I met was, poor success, fash not plenty, and that the run were late in making their appearance. Killing fly, dark maroon body, brown hackle, mallard or wild turkey wings. Novecz.

The above may perhaps be regarded as an exceptional score for this season. All accounts at hand corroborate like

score for this season. All accounts at hand corroborate the statements of our correspondent, that salmon augling has been almost a failure thus far throughout Canada. Salmou have also been scarce in market here, and the prices relatively higher, the partial failure attributable, no donbt, as is intimated, to the late Spring and protracted early floods. We publish berewith a letter which was omitted by an over-We publish herewith a feller which was omitted by an oversight, and which should have more properly appeared when written. It, however, fully serves its purpose, in our resume of the angling season, the facts being furnished by a gentleman whose presence on the rivers made fully cognizant thereof. We are not advised of any material improvement in the fishing since the date of writing, and it is altogether probable that a black mark will have to be set against the season of 1875. We quote:—

River York, Caspe Basix, Lower Canada, July 7th, 1875.

RIVER YORK, CASPE BASIN, LOWER CANADA, July 7th, 1875.

set against the season of 1875. We quote:—

River York, Caspe Basis, Lower Canada, July 7th, 1875.

Editor Forest and Stream:—

The fly fishing in the Gaspe lithers this year up to July 7th was an entire lailore, save in the Darmonth, a small river of but two good pools, where Messes, Guild and Barnes, of Boston, made a handsome score. On the York, Mr. Reynolds, the lessee, in three weeks got but seven sha, and his friend, Col. McNeil, but three, Col. McNeil, who was serond in command in the Ashantee expedition, came from England expressly to fish the York, which, all things considered, is one of the best in Canada, and retorned. One thousand miles to a fish is rather dear sport. On the St. John Frederick Curtis and myself during one week's stay killed only one-fourth the usual number, and during the same length of time in the York killed only about twenty fish, including, however, three of chirty-two pounds each, one to my rod and two to his. We are told this nearly sill the rivers of the Bay of Chalenr, including the famous Restigouche, Cascapediac and Matspedia are giving very little sport. On the latter river is Mr. Stevens, of Canada, and Mr. Douglaes, on of St. Chas. Douglaes, of London, England. Mr. Douglaes was with me a week on ibe St. John, and was to telegraph from the Matapedia II he had good sport there, so that Mr. Cortle and myself might drive down the coast and takes a day or two in that river, and also on the Cascapediae. We have not heard a word from him, and, therefore, credit the reports that no rivers are as yet giving the usual amount of spart.

The Spring has been very backward, and when we reached the St John, Jone 25th, it was a roaring forrent of snow water. Fre furmed quite thick on the York as late as the 10th of June. In addition to the difficulty of accending the ewollen streams the salmon have been gorged with capella, which was never known to be so abundant as furifug this Spring; the Jorners have even need them for number as we do mentalsed. When the rivers did get down so that

the Lower St. Lawrence. Messrs, Molson and Ives, of Montreal, visited a large number of rivers on the Labrador coast in July, taking few sulmon, but a large unmber of sea trout, making their cruise in Mr. Molson's beautiful steam yacht of 160 tons burthen, which carries a steam

lanneh besides her ordinary boots.

—Another carrespondent, who has been fishing the St-John, on the Lower St. Lawrence, North Shore, writes, 3d, twenty-seven indes methic river, as follows:-

Inly 34, twenty-seven miles up the river, as follows:—

"We have been here about a week, getting over from Gaspe in a 45-ton schooner. This is a glorious river, scanery beautiful, enreen) very rapid, and plenty of fish; lot they are very shy at taking the fly. In seven days I have 17 fish, averaging about 12 popula, a 27, 18, and 163 heing the higgest. II—100k a 34 pound one. The river runs about six miles an hour; it is a long, steady shore up here, but no bad rapids; it is easily affected by rains. After a twelve hours' train the other day it tose four feet, and of course thil for our fishing; but it is now falling gradually, and we anticipate grand sport."

W. A. M.

TWO DAYS' FISHING FOR SALMON IN LAKE SAN ANDREAS

SAN FRANCISCO, July 19th, 1875.

SAN FRANCISCO, July 19th, 1875,

Edition Firest and Stream:—

Although not by any meads teading a sedendary life in this city, a change of air, especially a hen my fivority sport of angling is concerned, is always benefichal to my health and spirit; so taking, at seven in the morating, the cars fourteer miles to San Binuo station and house, and tramping it three miles to Lake San Andreas, to the keeper's shanty and ranche, I found myselt and a small hant all ready to fish for the three or four-fear-old salmon (tith whick this Spiring Valley Wafer Coupany'n lake Is stocked and preserved. At this senson trolling with a small spoon balt seems to be the most successful method, while about two months earlier hait 6 hing answered also with It. At Lake Merced, leased for fishing by the California Acclimatizing Society, about twelve miler neader San Francisco, just the reverse has taken place, bait fishing now succeeding best; but this may be owing chiefly to this fast sheet of water containing a large number of Lake Tahoe tront, as well as egilse, or young salmon, the front regdily taking the worm, shrimp, and effices of fish. I designed staying two days and nights at the apperintendent's cottage, to preference to malking the three miles backward and forward to the San Bruno house, although I had to put up with a bunk for a sleeping place, and rather rough food for lare. But revegous news a salmon. The neather during my sojourn at this clear and intensely blue colored lake of troubles in length and hall a niche to breadth, was charteing. Light and fresh chreezes pleasantly ruffled its boson, and a lew alabaster log clouds from the near Pacific, rolling over its neighborlug hills and momining, harren on one side, but clothed in its vegenation with a variety of green shades on the other, mided occasional variety and beauty to the placid scene.

As the keeper had to aftend often to his slock on the ranche, I could

greet shades on the other, added occasional variety and beauty to the placid scene.

As the keeper had to attend often to his slock on the ranche, I could not get any person to row for me as I troited from the hoar's stern, but had to be contented with kandling the oars mysell, and laying my rod hefore me, with line extended on the water some sevenly five leet, and recel checked, anniting the highlining jerk of some hungry salmon setzing the spoon bait, when down went line oars and up went the rod, with the delightful sensation of a one or two pounder lastened to the frio of hooks at the end of the glittering revolving spoon, and presently leaping one, in o, three times out of the water, and occasionally, not withstanding all my care, jerking himself free from his unacceptable acceptance. But when he cannot free himself he comes generally, and apparently not very nowflingly, near the boat, and seeing his enemy commences to divo and plunge rather fryingly to the single gift, yet in spite of his siruggles, heing well hooked and not in the hands of a complete neophyte in the gentle art, be comes gradually to the surface, the net is placed ready for him, and he is safely laid in the holtom of the boat—a silvery, fine conditioned beauty, to gladden the sight of the eager and gratified sports man. When this exciting amusement goes on, and say liftee or four of these game inhabiliants of this prefly hike are captured every hour, the mijority of fishermen will be sure to have the measure of their happlness mell filled; they will be at peace with themselves and the rest in mankind, and have reached the very acme of their piscatorial deligh; although, of course, this spoon-balt angling, or what some might term spooney fishing—cannot by any means approach that highest point of a sportsman's amhition, the killing of a troit or salmon after seeing a rise of one or the other in the water, throwing his fly precisely over the spot where it rupled, and finding fast to his line a fish of three or four pounds, which, after the us

olly fanded.

During my pleasant stay at this peaceful lake I had the good forme to nepture twenty-five salmon, averaging three quarters of a pound, which has poor fishing compared with what had been done previously for about two months. This lake is well filled with the silvery beauties, and you be them at nearly all times rising and leading over the ultramarine collected waters.

E. J. Hoopen.

WISCONSIN ITEMS.

EDITOR FOREST AND STREAM:— MILWAUKEE, Wis., July 14th, 1875.

EDITOR FOREST AND STREAM:— Michael is now in its prime. I have seen many steings of from twenty to lorty base, averaging two and a half pounds each. The largest base recorded thus far this scason reighed six and a quarter pounds, and the largest pickerel turned the scale at seventeen and three quarter anomals. At Ocomomowoe and vicinity the angling traterotty is well represented by delegations from Chicago, Cincinnari, St. Louis, Louisville, Indianapolis, and other cities.

tions from Chicago, Cincinnatl, St. Louls, Louleville, Indinnapolis, and other clikes.

I lately had the opportunity to examine and lest one of the black bass rods made by C. F. Orvis, of Munchester, Vermont. This rod is made in accordance with my description of the "Coming Bass Rod" to Foigest AND STREAM of February 11th, 1875, and I must express expect as murching pleased with h. It is just right—eight and three quarter feet in leagth, weight the onnece, well balanced and handsomely finished, plant enough to yield to the slightest inovernent of the fish, and yet stiff enough to cast forty yards with mase. The standing giddes are neat and light, while the tapering ferrules, without dowers, are quite un improvement. It is made of oan not fanceivind, which are, when well selected, the very best woods that can be put into a rod. Upon the while, I consider it the best mode that can be put into a rod. Upon the while, I consider it the best mid cheapest black bass and manifectored, and Mr. Ords deserves the commendation and gratified of all black bass angle is accordingly. Lovers of the gain and dog will be pleased to learn that wondcock are mine innerons in this vicinity than for several years past, while pinnated grouse (Copidonta capido), raffed grouse (Bonasa unbellus), and sharptailed grouse (Podicectes phospharandhas) promise to be more phositial than ever throughout fan State, instantinismanding the extreme colid wenther of last Wister, and the late and wet Spring. Geese, brant, ducks, safer, and plover will be here in the Fall in Intil force.

BUZZARD'S BAY

New Bengood, Muss., July 27th, 1875,

EDITOR FOREST AND STREAM! Editor Forget and Strikan: —
The fishing notes from this denity can be written in a few words, 8 worlds lang continues later than n-nat this year; the samek T. B. May-heav brought in thirty one yesterday, naking 135 to that vessel since Jane 15th—The Cattylucak Clab ranght about 50a pannals has last Priday, and Capt. Butler this magning brought over from No. Man's bond six bass, avering about forty thre pannals each, the largest weighting fifty free pannals. Bottom 18th, such as sent, hadon, etc., thanks to the an morous traps, pounds, etc., that infest that waters every Spring, are very scarce. Bluefish me pleaty and large. A bill tish about sax best long was brought in here and sent to Prof. Burth, at Womil's Butle, last even-

TROUT FLIES.

CANAAN, Ct., Jidy 26th, 1875.

Entron Foccest and Stheam!— Canada, Ct., didy 26th, 1875.

I defined he a late number of your paper an attlebe by Thod. North, "Tids Fly and that Fly," which put me in mind of an experiment I make enumber of yours ago at almost my listst attempt at thy fishing. I misempted to make an initiation of a perullar materelllar, and, as it was acy first attempt at thy making, the result can be readily imagined. It was made by twisting a black toot white backe, a bulling it around the bare short, leaving a couple of long intis at the head and at the full bull. With blishy, which, despite of long intis at the head and at the full. With blishy, which, despite of long intis at the head and at the full. With blishy, which, despite of long intis at the head and at the bull. With this fig that is be heaver above, or be the partit beneath, or in the canars ander the earth," I have caught trail so early in Spring (April 18) that, I being a cold day, my by raught also on the bre, and could September. From my success with tide fly, and with similar may, I have reome to the conclusion that it depends more upon the initiation of the partitlar radding of the cater which an insect makes in symmolog them anything else connected with the fly. In support of this "theory" is the lact which probably every fly fisher has milred, etc., that samethurs a trust will rise to the rippic made by a giere of Irnyed silk or the rule of a hall knot on the leader in preference to the fisher.

Rational Pastimes.

THE CALEDONIAN CONVENTION,

GAMES OF THE TORONTO CALEBONIAN CLUB.

THE ninth annual convention of the Nurth American United Caledonian Association was held at Agricultural Hall, Toronto, Caunda, on the 21st alt., being called to order by President A. J. Young, of Syrucuse. The other officers present were First Vine President R. Mideolm, of Toronto: J. B. Meludyre, of St. Catharines, secretary; Thomas Monroe, of Hazleton, assts secretary; Thomas Monroe, of Hazleton, assts secretary; Thomas Widdell, of Pittston, treasurer; and C. G. Nicholson, of New York, member of runnmittee. Only two officers were absent—the second vice president and one of the members of the committee.

son, of New York, member of rummittee. Only Iwa afficers were absent—the second vice president and one of the members of the committee.

The formal constitution of the convention was effected by the appointment of a rommittee the examinar the credentials of the delegates. From their report, which was signed by W. B. Smith, John S. Dingwall and A. Marray, and as amended by a future inhition, it appeared that the following clubs were represented: Meatired, New York, Philadelpleia, St. Catharines, Hudson county, N. J., Aubury, Pittshin, Detroit, Newark, Synchise, Brooklyn, Hazleton, Bridgeport, Toronta, Wishington, South Adams, Albany, Hamilton, Bulfala, Colours, Tray, Seranton, New Haven, and Charlottelowa. The following were nurrinesented: Boston, San Francisca, Hartford, Newton, Glengarry, Weslerly, Paterson, Balimore and Saginnaw Valley. The committee being also appointed to consider applications for membership, recommended that the names of the following be added to the roll. Norwich, Richmond, St. Andrew's Society, of Milomaker, Sanotan, Morin and Charlottetown, P. E. I. The report and recommendations were adopted, the latter seriation.

After a recess and a reading of the minutes of the last convention, President Young delivered his apening address, in the course of which he made a binching allusion to the loss sustained by the Caledonian reliats in Boston and New York by the death of Mr. Junies Kelsa and Chief Harry Thomson respectively. The serietary's report, as presented by Mr. McIntyre, gave a review of the business of the year, which showed the finances of the association to be in a sound condition. The treasure's report shred the total income, expenditures and assets, and displayed a handsone surplus in the treasury.

A very interesting part of the proceedings was the presentation of reports from the affiliated clubs and sarrieties. It appeared that all were in a very prosperions condition; that the literary features of the chusina constraint of the proceeding was flourishing. New York has the strong

The committee upon increasing the usefulness of the association recommended—

First, The appointment of a committee to declase a system of life association for the advantage of C-d-combines.

Second, That no offiliated claimallose a probashoust to competent its games, unless special prizes are offered for such.

Third, That the association offer three prizes for the best artificant says on subjects thoroughly Scottlesh, and which have been delivened before the club to which the unrule belongs; that such example furneautied to a committee of they, appointed by the association to accord the prizes, schiele are not to exceed in the aggregate the sum of this duthers.

Foorth, That the association familish of chips in affiliation with regulation laminers and parting stomes, sumped by the association, the club receiving the same to pay the cost.

The report was adopted, and the following committees appointed: On Life Assurance, Thomas Worldell, R. H. Ramsey, and Jukin Steinhen; on Essays, A. A. Stevenson, R. Bertram, Dr. Smith, Dr. Gunn, and Thomas Moffat.

The report of the committee upon the Brooklyn appeal opened the way for the removal of resource of perty differency, which has existed between the clubs of Brooklyn and New York for a few years. The latter can afford to be magnanimous and "hury the hatchet," after the expressions of regret dropped at the convention by the gentlemen most concerned. The report was subpted.

A series of notices of molious to be made at the next convention were given in, one of which has reference to the regulation of the qualiting competition. A committee of five was, in the meantime, appointed to revise the existing by law; another referred to the weight of the homicers which it was proposed to clunge to 14 lbs, and 21 lbs, respectively. It is unnecessary to detail their for hobbing the seventh meeting of the association.

Philadelphia was appointed the place for hobbing the seventh meeting of the association.

Philadelphia was appointed the president, Paul Buchmunt,

Newark; secretary, J. B. McIntyre, St. Cutharines, Ont.; assistant secretary, Thomas Monror, Huzleton; treasurer, Hon. Thomas Wuddell, Pittstan; meadors of committee, Jehn Fulton, Montroal, and R. Hamilton, Sr., New York, After several formal motions the convection adjunated.

In the evening a grand banquet was given at the Walker House by the Taranto club in honor of the delegates. On the following day the games were held at the neicket ground. Canada and the United States were hold at the neicket ground. Canada and the United States were hold well represented by athletes, but it seems probable that the former is in the front. McKinnaa belongs to Hamilton, Ont., Allan be Montreal, and several others, whose mames appear in the following prize list are also Canadians.

Pintage 18th Heavy Mone.—1st. d. Mooney, 23 feet 2 Inches; 24, Hugh McKinnaa, 35 heat 7 Inches; 34, A. McKay, 32 feet 1 inches. These never the latt list alleannes. In partor off the the McKinnaa won.

The competitions were keen and exciting, and although it soems desirable that a little letter order should be pre-served, the day's sport was tolerably satisfactory.

Swimming Matches.—Arrangements have been consummated for nonther swimming match between the champion, Johnson, and his recent antigonist, Coyle. The course will be the same as before—from Chester to Gloncester, on the Delaware River. Some day between the 18th and 24th of this month is to be named, and the stakes will be \$2,000. will be \$2,000.

—A handicap swimming race, 100 yards with the tide, come off on the Harlem River on Saturday noon, James Fraser tonl M. Merrill starting from scratch, F. J. Hynes and H. W. Newton having an allowance of ten seconds, and Charles McCredy tifteen seconds. Hynes won in 1:25, McCredy coming in second, Newton third,

On the same day a match took place at Fort Hamilton for \$200 n side, between J. L. McAleer, of Brooklyn, and Androw Sprague, champion of Staten Island. The distance was half a mile to a stake boat and return. Sprague led by thirty seconds to the stake boat, but on the return became exhausted and had to be taken from the water, McAleer winning in eighteen minutes.

CHICKET,

CHICKET,

THE COMING CRIEKET TOURNAMENT.—Cricket has been very show this season in this vicinity, all public interest in it having died out, but in Plabodelphia, the nursery of cricket in this country, things show considerable life and the present feeling of interest is growing as the time approaches for the grand lourney which is to be the event of this year. The tournment in question will be a return of the llalifax tourney of last year, and the arrangements for it are in charge, gractically, of the same committee by whom the international cricket fetes of 1868 and 1872 were so successfully managed, viz.: Albert A. Outerbridge, Philadelphia Cricket club, Chairman; C. Staart Patterson, Philadelphia Cricket club, Treasurer; Frederick C. Newladd, Young America Cricket club; Thomas McKenn, Germantawan Cricket club, and Geo. Ashbridge, Merian Cricket club. A guarantee fond, slatted by committee, is being liberally responded to, and will doubtless be tilled up, by the patrons of cricket, to the required amount. Each subscriber will receive a season ticket to the matches with a secured seat on the grand stand, and it is understood that in case the tournament proves a financial success, the subscriptions will be returned in full. The guarantee funds for the international matches of 1868 and 1872, which amounted to \$7,250, were refunded in fall, and there is little daalit that the same result will occur on the present occasion.

The return match between the Peninsulars, of Defroit,

Occasion.

The return match between the Peninsulars, of Defroit, and Chatham Club, of Chatham, was played on the grounds of the former on the 26th of July, resulting in favor of the Peninsulars by 53 rms on the first limings. Whelen and Eberts, of the Chatham Club, were the only ones who scared double figures. Irvine, of the Peninsulars, scored 33 in Irrilliant style, including one 6, two 4's, and three 3's. Ridgely batted safely for 13. The score was: Chuthams, first innings, 57; second innings, 61. Peninsulars, first innings, 110.

THE PROPESSIONAL ARENA.

THE PROFESSIONAL ARENA.

-The sevession of four of the Bostou club players and two of the Athletics, which was a rumor only a week or two aga, has become a fixed fact, and there has been quite a base ball "pow wow," or commit talk over the subject. Chicago "fancy prices" have overraided the "solid reasons" Boston had to offer the secveders, and \$4,000 to the leading man of the rebots and \$3,000 to another, with \$2,500 cach; to the remainder, have proved too Templing buits to be resisted. In consequence Chicago, in 1876, will be able to place a regular western team to the held, consisting of Spaulding, Barnes, Auson and Hastings, of the old Rockfard team of '71 and '32; White and Sutton, of the ald Cheveland nine; MeVey, of the Westerns, of Indianapolis, of 1808, and the younger western players, Pefers, of the

St. Lonis Red Stockings of 1874, and Golden, of the Westerns, of Keokink of the same year. Here are nine western players, and with this teno, Chicago will, for the first time, enter the arem in 1876 with a regular representative western team in the field.

Hurry Wright will remain in Boston, and with his brother George, and Leonord, Beals, O'Rourke, Monning and Schafer, form a new Red Stocking team, which he intecols shall cope successfully with the best in the country.

—The professional record up to the cluse of July shows the clubs occupying the following relative positions.

Chajis.	Recton. Abletic. Harfford. St. Louis Phinadelphin Theato Statush. Cow Haven. Clear Haven. Clear Executing Statush. Clear Executing Statush. Clear Stocking
Huston Athletic Hayford	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
St. Louis Philadelphia	[40
Chicaga Mataul New Harva	. 1 th 2 3 1 1 2 2 2 2 1 1 1 1 1 2 3 2 1 1 1 1
Atlantic Ref stockings	
Games Lost	4 70 16 11 22, 10 21 20 20 20 17

Hartford has to recover considerable lost ground to take second place in the race from the Athleties, as the record those shaws, while St. Louis is rapidly pulling up to the Hartford position, and may take third place before the close of August.

—The record of model games played in the professional areas during July is as follows. The list includes only games in which the winning clubs score nine runs in a united, or less, all double figure scores being excluded:

July 2. Booton vs. Hastford at Booton.

July 3-Boston vs. Harlford, at Busina	. 3 to I
July 3—Unicago vs. St. Lambs, at Obianon	41.00

Fifty-nine games were played during the month, giving an average of 8 runs and 19 over to a game for the winning nines, and but 2 runs and 44 over for the losing nines, the best average on record.

AMATEUR GAMES

The amateur nines—nines of clubs not attached to the Professional Association, amateur on no other account—of the country have been playing some fine games recently,

The absence of the Editor-in chief for the past three weeks, will account for any apparent oversight or lapses, either in private correspondence, or in general matters per thining to this journal. We must practice recreation for prind and body, as we preach it.

Answers To Correspondents.

H. D., Hartfurd - It is wasy to get hond at most any of the found puses on the telands around Clayton and Alexandria Bay, St. Lawrence

Vus. Industric City, Del.—What is the color of Mr. David Brooks' fa-ons seller Hismarck? Ans. Mostly white, with a few orange-volored

O. H. M., Muyganlon, N. C.—Are the game chromos mentioned last tweek \$5 inch in \$5 for the pair? Ann. \$5 per pair, and remarkably cheap for the money.

Cheap for the money.

W. A. H., Lawrence, Kan. —Will you plyase tell trae where "Pytill'a pulsi" can be obtained, as I have tried in value to get them through our gan dealers? Ans. None to be had in this country.

J. L. G., Philadelphia —The fly hads referred to by this correspondent it on visue of 22d July (Answess to Currespondents) is as entitle 4 by Mr. Hyde, jeweller, 2: Maiden Lane, New York, and is for safe by Brahneni, also of Maiden Lane.

R. H. M., Philadelphia —What is the "Afleston" fly, and where can it be procused? Ans. A large fly, yellow hady ridded lighthy larkle shine and yellow, and tail of wand dark feather. Can be had of Messrs. Barton, Alexander & Walter, this city.

G. C. G., Bay City, Mich.—A number of gentlymen in this city are

Barton, Alexander & Walter, this city.

G. C. G., Bay City, Mich.—A number of gentlemen in this city are linking some ships toward urganizing a rifle team, and therical ask you for a copy of the rules and regulations governing the Creedmoor Association. Ans. By-laws, score hook, etc., send by mid!

Butterist, Hackensack.—There are many first rate haymen at Canassie who now their yachis, among whom we are pleased in mention P. J. thawkine, Bill Abams, Gvorge Mursh, and Capt. Hill. No doubt there are others not personally known to be who are equally capable.

E. L., Boston.—Will you phrase inform me what food is most suitable food a Gordon setter pap about ten weeks oid, and how often he should be fed? Ans. Mush and colik from corn or eatmen, with some scaps from the table. Have the mush well limited. Feed three times a day.

F. S. Worcester.—Can you tell me where I can get a small, scenarle.

fed? Ans. Mush and milk from corn or oatmeal, with some sexaps from the table. Have the mush well huited. Feed three himes a day.

F. S., Worcester — Can you tell mushler of ean get it small, accurate map, or chart, of the country lying between Lake Umlanger and the St. Laivence River, with especial reference to the Megalinivay River and Arnold's River? Ans. Implies of Colion & Co., map publishers, 172 William street, New York.

W. H., Hackensack — I have a voing setter, well bridgen, Init seems measure overein meast ont; will bring it if onrown convert in teast ontil; will bring it if onrown convert in teast ontil; will bring it if onrown convert in teast ontil; will bring it if onrown onny, 5.2 will only fetch when shot don by How can I make that retrieve? He is outtimally of a third disposition. Ans. By persevering with him kindly tw could soon be made to retrieve properly.

J. L. S., London Grove, Pa — Will you please inform me, 181. Where in Canada or thy United States I can procure in good pack haskel? 2d. Dan I buy edge tools as cheap in Towento as Philadelphin? 3d. Will I have drily in pay on raw firts from Chanday? Ans. 1st. Montred. 2d. Yes; and prohably much cheaper, (publicy considered. 3d. Daity on row firts lea per cent. ad valotem.

PAWPAW,—We do not know what work to recommend on the agricultural magnetics of Florida, but inherers that a new book has just been isyaed by the Florida Land Agency, turning Meests. Roblinson & Whinsey, Jacksonville, entitled "Floriha; Its Soft, Climate, Health, Productions, Resouves and Advibutages." It is intended to be a mannel of latormation in weard to the State.

W. S. B., Mansfield Valley, Pa.—I wish to know what is meant by deaching in measuring manufer, 4d. Bandhecanes! weight, Troy vicight, deaching in measuring manufer, 4d. Bandhecanes! weight, Troy vicight, deaching in measuring manufer, 4d. Bandhecanes!

ormation in wigard to the State.

W. S. B., Mansfield Valley, Pa.—I wish to know what is meant by rachins in measuring pointer, it is apathecaries' weight, Troy weight, a liquid weight? I have experimented with James Dixon & Sixu's harges, and it hidds out in shot but not in powder. I used Hazari's lectric Powder; 34 drachins only weights two drachins synothecaries, its, The dracho is a provider measure.

G. W. P., Canton, St. Lairrence curvity.—Can you laform me if the gaine liwe of Canada allow the killing of deer and fishing front. In the months of August and September?—Cas you inform me of a good locuion to Canada live that propose? Ans. Trout in August and September; lives in September. Go to Premisoke, on the Epper Oliawa. Take cars from Brockville, on Grand Trouk Rallroad, to Sands' Point, and Thence themshoat tw Pewbroke. We have mentioned dozens of good localities to our topics already. our pesper already,

6. W. M., Augusta, Me.—Will you please inform me which is the best work on American fish and fishing? Also the best guide for genting and trapping? Ans. Best works or Fish and Fishing are "North American Angler's Book" and Frank Forester's "Fish and Fishing; Di ks Maylow & Hulchinson on gunning, and Newhouse's "Trapper's Gulie." A complete trapper's guide is a work much needed, and we believe one is being prepared by Mr. J. H. Batty.

oeneve one is being prepared by Mr. J. H. Batty.

H. L., Syrnense —My boat Is 21 feet long; I wish to draw It up to the ceiling of my bont loose, so as to be out of the way. Can It be draw as one man can manage it without much labor? I prefer to do it with tackle libuck. Please answer, with directions, and you will oblige.

Ans. Make two broad convers bands with eyes at the end, one for each end of your boat; look your tackle into these. You must have help, or else holst as far as possible on one end, make fast, and then go to the other.

other.

CONSTANT READER, Townsintown, Md.—1s "Chincolink" (Chinkolingue), an island near Cubb's Island, a good place for gaining and fishing, if so, what kind of fish are caught? 2d. Do you know of any real good place for fishing and gunning in Pennsylvania; if so, where, bow can I get there from here, what will It cost, and what outfit is needed? Ans, let Cupital for shooting, dishing confined to sail water varieties, such as bluedsh, sleepsheid, etc. 2d. Condersport, in Poter county, or fedston, in Lycomang county. No examping outsit will be necessary.

December.

E. P. L., Flitt, Mich.—Will you please inform the which is the best target, Creedmont or Wimbledon, as we are just organizing a rille team here, and wish to know which is the best? We understand that the National Rifle Association we going to adopt the Wimbledon target; give size of target, etc. Can you send me the rules and regulations of the National Rifle Team? You would confer a great favor by so doing. Ans. By laws of N. R. A., score hook containing size of targets, etc., sent you by mail. The Wimbledon targets are now used at Creedmont.

you by mail. The Windledon targets are now used at Credenor.

F. M. B., New York.—Ist. Is "Mobawk's" recipe for lacquering gons in keep off salt water as good as shellne reduced with alcohol, for my gon, as in cleaning the riest from the barrels, so often, after salt water shooting, it have taken off most of the hurnish. 2d. Every week one or more of my pigeous become shapit; also very weak, and cannot walk straight; also discharge a waitery renter from their insert, a would like to know if this is from want of everyll gravel, or breatise I teed them some whole cent? Ans Ist Equally as good; but unless your gravels very mach expussed, no would recommend Beharontele and, which can easily be rithled off and repliced. 2d. Your pigeons are suffering from a want of change of diel. Feed then when one day, dried pour another, and come the third, with boiled polatoes, and a handful of hemp seed occasionally.

O. W. H. Philadelphia — had on a gramment with a party in reference

ful of hemp seed occasionally.

G. W. H., Philadelphin.—I had an argument with a party in reference to a gain called the Lefevre long range breest lowler, made in Symense, N. Y. He said that at the Widerham State shoot, beld in Jame last, a party using a Lefevre gain shall be woodcook at 152 yards, and got a gold awild, \$50, and of Lefevre gain as a priza for the leat. 2d. He said that the Lefevre gain took the first prize over W. & C. Soott & Smithad allothous, to wideh I replied that I must have better authority than his word, and I write you for information. By giving it in the Forest and Stieza yaw will oblige a constant reader. And, The obsardity of your first presidence are left as own refutation. If a gain kelled a woodcock at 150 yards, what would It have done to it at 40? There was no itial of gains at Walertown, and your informant is wrong in every partnership.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PPACTICAL NATURAL HISTORY, FIRE CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, APD THE INCUCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

END OF OUR FOURTH VOLUME.

THE present issue of Fonest and Stream completes its fourth volume, and concludes the second As we look back over the long period of of its existence. As we look back over the long period of financial depression which has prevailed since the very day of its birth, we may be pardoned if we indulge in a little self congratulation. That the paper, in this unpropitious self congratulation. That the paper, in this unpropitious period should grow steadily to a self-sustaining position, as it has done, is gratifying in a business point of view, while it evinces the popular appreciation with which it is regarded by the intelligent and liberal friends of the specialties to which it is devoted. The area of its circulation has steadily extended until it is read in every quarter of our own country, and embraces among its warmest supporters the cultivated sportsmen of other lands.

Chief among the evidences of popular favor extended to our enterprise, is the amazing variety of interesting and valuable correspondence which has enriched its columns and therefore contributed to its success. Leading scholars and scientists, as well as sportsmen handy with the pen, have found our columns a congenial medium for the interchange of views and experiences, while many army officers

on the frontier have availed themselves of the opportunity therein afforded to while away their leisure hours in connting their adventures and unfolding the results of their extended travels. We find that papers like ours, inspired by ardent calliasiasm for the elevation of rational pastimes, nerved with the freshness of out-door life, strike the chords of a wide popular appreciation, and are the most effective agencies to mould public opinion. Our constituents will heartily share the gratification we ourselves feel at the results of our mutual labors.

Appee with our pace, we observe overywhere multiplying evidences of organized effort to protect our game and fish, to encourage a practical knowledge of natural history, well as to acquire skill in shooting, rowing, and other healthful recreations, no where of so much practical ad vantage as among our overworked countrymen. To the development and elevation of this taste our best energies will ever be devoted. With sincere acknowledgments to our friends for the invaluable aid they have extended us, and a full appreciation of the substantial support which has encouraged our efforts, we enter with renewed energy and confidence upon the work before us. We commence next week our Fifth Volume

FORBIDDEN FOOD.

U NDER the above caption we find a letter addressed to the editor of the New York Times, in which the writer states that at any of the hotels at Saratoga "chicken partridges" may be had for the asking, and pertinently adds, that, as the laws of the State forbid the killing of these birds at this season of the year, "if I may eat these birds at Saratoga, why may I not be allowed to cat them at co's or at Sutherland's, in New York? Why is it dright to cat them in one part of the State and other." The writer of this letter, who signs him-"A Lover of Partridges," is evidently so foul of them that he is envious of those who can ear them out of senson with inpunity. He also asks if the society for the Protection of Grine, of which Mr. Royal Phelps is President, is awate of what is going on at Saratoga. "A Lover of Partridges" must have a wonderful impression of the far-reaching powers of the New York Society for the Protection of Fish and Game, and an equal ignorance as to the proscentions it has instituted against offeuders. As for the foul insimuation that Mr. Phelps is fond of chicken partridge with his Congress water, we ignore it with the contempt it deserves. It can scarcely be expected that a society with its headquarters in New York city can be cognizani of all the infractions of the game laws which may occur in distant portions of the State, and we would ask "A Lover of Partridges" why be did not lay his information before the society nearest to Saratoga for prosecution. Not that we believe the result would amount to anything. Saratoga hotel keepers can afford to pay fines as long as they have guests who are willing to pay for "forbidden food." It certailly ought to be somebody's business to enquire into this matter and find out where the chicken partridges come from. In spite of the efforts of all true sportsmen these infractions of the game laws are becoming too frequent. A correspondent writes us from Monmouth county, New Jersey, that there are parties there who boast of having killed from fifty to seventy five wood cock before the fourth of July; that one person confesses to have killed four early in the Spring while shooting snipe, and after mentioning several others, names one prominent official of this city who was shooting there in June

It is impossible to expect private individuals to take up such cases. It is for this object that sportsmen's clubs are organized, that the onus of prosecution may be removed from the shoulders of one person to those of the many.
Yet it is the duty of every person to whom a knowledge of these unlawful acts shall come, to obtain the evidence present the case to the nearest magistrate or Game Protective Society for proscention. We have always heard that Jersey justice was swift; although if there is any truth in the report published this week in a daily paper, to the effect that a gentleman who had seized the neis left on the border of his lake by poachers, was arrested for theft, we shall doubt the accuracy of its aim.

As for the Saratoga "chicken partridges," they may not all be partridges. We remember some years since at a hotel celebrated for its woodcock suppers, not a thousand miles from Richfield Springs, that a certain proportion of the woodcock had most unaccountably lost their heads. There was occasionally a strong flavor of squab, and the large number of pigeons kept by the proprietor confirmed the sus-picion. Perhaps the partridges were ouls.

HYBRID WILD DUCKS.

A FRIEND writes us that some weeks since he was in-A formed by an enthusiastic and experienced sportsman that hybrids between different species of wild ducks are now more numerous than they were formerly, and asks us if we can coulirm this observation by our own expericuce, or by that of our friends and correspondents. also adds, and very truthfully, that this is a most impor-tant fact in Natural History, and we shall be glad to have any high-inpon it that may be in the power of our readers

Hybridism with our native ducks is not common, ex-

Smithsonian, where the anatomy and plumage of the Dufila acuta predominated. With that exception we know of no anthentic testimony where hybridism has occurred with other species of our native ducks. We do not think water fowl produce hybrids any more now than they have done before; but sportsmen are studying up game birds more carefully, and of late several cases of hybridism among ducks have been brought to public notice through their researches. Sportsmen cannot be too eareful in identifying their birds. A well known naturalist informs us that he has had several old squaw, or long-tailed ducks sent to him in the Summer plumage, which were supposed to be hybrids or new species, by the parties who killed them, simply because they had only seen them with the white neck and back in Winter dress. Ducks, like Joseph, have costs of many colors, and if the sportsman does not observe them when breeding in a northern clime, he will meet them as strangers when found wounded in our have and lakes in Samuer plumage, and unable to go North to hreed with their succies.

WIMBLEDON.

FIFTEEN years ago, when the Indian mutiny and a war in China had taken all, or nearly all, of Great Britain's available forces out of the country, and when old ladies and timid gentlemen scarcely slept for fear that Nap. the Third would choose such a propitious minnent to avenge Waterloo and make a descent upon the shores of perfidious Albion, the Volunteer fever broke ont with anexampled fury. Not only did Mr. Paneli seize with avidity the excellent and almost inexhaustible fund of subjects offered for his inimitable pencil, but the Government wisely fostered the movement by all the resources within its power, thereby building up a bulwark for home defence, he importance of which can scarcely be overestimated. For, contrary to the usual result in movements of such sudden and rapid germination, this has outlived the mushroom period and settled down as a healthy plant of hardy growth. Fifteen years since Her Majesty, the Queen of that Dominion, pulled the silken string attached to the trigger of a Whitworth gan, and fired the first shat nigthe Wimbledon targets. Last week four thousand men, all belonging to the Volunteer force, were encomped on the plain, competing for the many and valuable prizes offered success of the movement. For year after year the spirit of emulation has been fostered and rivalry encouraged; eounty has been arrayed against county, Ireland pitted against Scotland, and England against both, until the analysis mulches are looked forward to with the greatest encourage and contents. nual inniches are looked forward to with the greatest cagerness, and every effort strained to achieve a victory.

That this same condition of affairs could obtain in this country is heyond a doubt. Our average militimman is the equal, if not the superior, to the English in physique, intelligence and drill; his inferiority, if it exist ut all, is in a skillful, practical knowledge of the use of his weapon. The State of New York-thanks to Creedmoor, the National Rifle Association, the Amateur Rifle Club, the American Rifle Association, and kindred organizations-hus taken lead in this matter which promises shortly to put its National Guard on a footing, as far as rifle practice is con-cerned, not inferior to that of any military organization, regular or volunteer, in the world. Still, more encourageregular or volunteer, in the world. Still, more encouragement is wanted to arouse the men to a greater interest, and this should come from both the general government and State authorities. The enthusiasm excited by the victory of the American team in Ireland is still warm all over the country, and now would be the time to strike not only in this State but in every State in the Uniou; and if one measure is to be free from the wretched incubus of political jobbery, let

It may not be generally known that an American rifleman visited England a century ago, but under rather different conditions than those who are now being so thoroughly lionized. The Boston Traveller publishes an extract from Mr. Frothingham's "History of the Siege of Boston," wherein is described a company of Southern riflemen who had marched from four to seven hundred miles to join the besieging army.

to join the besieging army.

"They were remarkably stalwart men, dressed in white frocks, or rific shirts, and round hats, and were skillful marksmen. At a review a company of them, while on a quick advance, fired their halls into objects of seven inches diameter, at a distance of 250 yards. They were stationed on the lines and became terrible to the British. The accounts of their prowess were circulated over England. One of them, taken prisoner, was carried there, and the pupers describe him minutely as a remarkable curiosity."

Their uniform, was a lumning shirt double caped over

Their uniform was a hunting shirt, double caped over the shoulders, made of brown Holland, or Osnahurghs, with the motto, "Liberty or Death," in capital letters on the breast.

But to return to Wimbledon: Never since the range was opened has the camp been visited by such a deluge of rain as on the present occasion. The Volunteers appealed to the commandant, and were allowed to go to the firing point hare legged. The Scotchmen were in their element, as they were ready for swimming at any time, and perhaps as they were ready for swimming at any time, and perhaps this accounts for the unusual number of prizes taken by them this year. This prize list of the British National Rifle Association would almost puzzle a Philadelphia lawyer until he had mastered its mysteries. The most important open match is that for the Queen's Prize. This is divided into two stages, the total aggregate value of the prizes in the first being £1,668, exclusive of medals and badges. Only the first stage are allowed to compate by cept with the Anas boschus (mallard), which has been known to breed with the introduced muscovy and native black duck. Prof. Baird showed us a hybrid duck at the the first slaty in the first stage are allowed to compete in

the second, in which the prize is £250, the gift of Her the second, in which the prize is £250, the gill of Her Majesty, the Queen, and the gold medal and gold badge of the National Rifle Association. The first prize in the first stage is the sum of £60 and the silver medal and silver ladge of the N. R. Association. The prizes in the next grade are fifty-nine in number, and consist of the N. R. A. badge and £12 each. The prizes of the third grade are of the value of £3 each, and are three hundred in number. The Alfred Prize is £350, divided into ninety-three prizes. The Alexandra Prize is £350, divided into ninety-three prizes. The Alexandra Prize is £800, divided into one hundred and eighty-eight prizes. In neither of these were the Americans permitted to shoot. Then there were other prizes, reaching in value from £50 to £400, all divided in a similar manner, and medals innumerable. The advantage of this mrangement is, that nearly every Volunteer carries away some memento of the occasion.

We have now the secret of Col. Gildersleeve's declining, on tabulate the team, to shoot against a mixed eight. It seems

behalf of the team, to shoot against a mixed eight. It seems that some days before the match at Dollymount he received a letter from some one in authority at Wimbledon, inviting the American tenm of eight to shoot at the same time with the English, Scotch, and Irish teams in the Elcho Shield match, the prize for the Americans, if they won, being the Lloyd Cup, as the Elcho Shield could not leave the United Kingdom. After being submitted to the team, this proposition was accepted and due notice sent to Wimbledon. But the ratification of the Council of the N. R. A. was wanting, and as the Council did not meet until after the Dollymonut match, the complexion of affairs had by that time become somewhat different, and the ratification denied. Col. Gildersleeve was perfectly right in declining the sop subsequently offered. However, it is all over now, and the Wimbledon meeting of 1875 a thing of the past. We hear of our rillemen as being at Woolwich Arsenal and present at lordly Goodwood during the races, where they probably divided attention with the beauties and grande dames on the lawn. Now they are in gay Paris, where good Americans are said to go when they die—if they ean't get there before. In a few days they will he homeward bound, and all that remains to be done on this to give them a hearty welcome, avoiding, if that is possible, too much buncombe and spread-cagleism, but making it as warm and sincere as they deserve.

PLY-FISHING FOR SALMON ON THE PACIFIC. - Lust 4th of July Hon. B. B. Redding, of Sacramento, Cal., eaught at the U.S. Fishery, McClond River, a salmon weighing 21 pounds, and another weighing 18 pounds, besides several smaller ones. They were both eaught with fine trout tackle, after a long struggle, the larger one making a brave fight of it from 9 A. M. till 3 P. M. Capt. J. D. Farwell caught fifteen salmon in all, the largest two weighing 162 and 19 pounds. Mr. Wm! H. Wallace also caught a fine string, but of smaller size.

It used to be denied that the salmon of the Pacific would take a fly, but the ignorance on this subject arose princi-pally from the fact that strangers did not try them at the proper sensons and places, while the resident anglers, like our Iriend "Podgers," et al, who were in the linbit of taking them with flies, were altogether reticent on the subject. The files of Forest and Stream give all the informution necessary to an intelligent understanding of the matter, describing fly-fishing from Puget's Sound to San Francisco. Livingston Stone, Esq., of the U. S. Fish Commission, who is fully acquainted with the habits of the Pucific fish, sends us an exciting account of the capture of Mr. Redding's fish. His letter is written from the McCloud River, Cal., July 24th. We quote:—

of Mr. Redding's fish. His letter is written from the Mc-Cloud River, Cal., July 24th. We quote:—

"Mr. Redding's fishing was done just in front of our house, and his contest with the inventy-pound salmon was watched with great Interest. He used a light himbor rod and a fine trout line with such skill that for six hours the powerful fish was unable to get the advantage of him. Mr. Redding was a puzzle to the Imilians. They could not comprehend why a man that wore such good clothes should work six boars in the hot son to catch a lish that they would self him for twenty-five ceuts. They thinglif he ought to be able to curn more money doing something else. The Indians are not, as a rule, very economical of their Ilms, as they have nothing to do, but one of them, who had settled down into a comfortable shidy scut to see the thing out, after watching Mr. Redding for two hours, concluded that his time was worth more than the white man's, and went home. The rest of its collected about seventeon times at the waiter's edge, resolved to be in at the death, but we were not equid to the occursion, and, after admiring Mr. Redding's perseverance awhile, retired each time in search of a couler spot. The contest was as well malnialned on both sides that we hardly knew which to admire the most, the angler or the fish. Some of Mr. Redding's rival anglers go so far as lo say that the salmon was finally sublined by a rifle ball from some one on the shore, but Mr. Redding's friends lesist that this is only a malichus slander, circulated to fletreat from the glory of his explot. They do not deny, however, that there was a strange looking hole through the lish, remarkably like what a rifle ball might have made if he had heen shot at. They admif also that some one armed with a rifle was seen drawing up to the fish us if toget a shot; but here the case rests. It cannot be denied, at any raie, that tho fish, by whatever means conquered at last, was a handsmine apectation of a salmon, and he fatry turned the secile at twenty pounds and t

A NEW WEAPON.-The new revolver, comprising the recent inventions and improvements of Colonel S. A., is probably the most perfect weapon of the kind in use in any service. The army pattern is a seven inch barrel, 45 calibre and weighs two and a half pounds. The cylimler is chambered for six charges and the mechanism for extracting and replacing cartridges, very perfect. The Smith and Wesson Company are now manufacturing them at Springfield. 3,000 have just been delivered and 3,000 more have been ordered by the United States Government, it being the intention to equip ten regiments of cavalry With them.

Archeological—A Most Valuable Collection.—Dr. H. C. Yarrow, of the U. S. Geological Survey, has recently returned from his explorations in Southern California, where be was rewarded with most gratifying succe nsuccess which would justify a more fulsome dourish of self glorification than is contained in the following modest announcement, conveyed to the Editor of the Forest and

STREAM in a private letter, under dute us follows:—

U. S. Engineer Oppier, Ogoonaphical Expeniations and Sunyeys West of the liken Memiar.

Washington, D. C., July 20th, 1875.

Washington, D. C., July 28th, 1869. 1

Dran Sin: I am sure you will be glad to know that I have made a magnificent collection of archeological material from the grave mounds of the coast of Southern California. The collection consists of large sheutite or soap stone pots, stone morears, and implements of all kinds, pipes, spear-heads and arrows, and last, though not least, of about 125 cranta. The entire collection takes up 48% entire feet of space, and will probably weigh twenty or iblirty time. It is the biggest hard ever made in this country. With kind regards, very truly yours,

H. C. Yarnow.

Our readers have long been indebted to Dr. Yarrow for many valued contributions, and it is possible that they will presently be favored with details of his California researches, as referred to above.

EDITORIAL NOTES FROM THE THOU-SAND ISLANDS:

ALEXANDRIA BAY, July 31, 1875.

EDITOR FOREST AND STREAM :-

Those who have never visited the Thousand Islands are little aware of the manifold attractions they present. Not even those who have threaded their intricate passages upon the steamers that daily traverse this most attractive route Summer travel have any conception of the pleasure to be derived from a fortnight or a months' visit at some one the hotels at Clayton, Fisher's Island, or Alexandria Bay. Here, in years gone by, before these most luxurious honses of entertainment offered their comforts to the tourist, fishermen of the old school used to resort-gentlemen who had n high pulitieal, commercial and ecclesiastical record, as well as a Waltonian fame—Dr. Bethane, Martin and John Van Buren, Gen. Spinner, Gov. Seymour, Dr. Berrian, Gov. Seward, and Bishop Hughes. In those days, some of them as long as 27 years ago, the "Crossmon House" at Alexandria Bure had a managed of the limited Security. dria Bay, had a monopoly of the limited Summer travel. It was a homely structure, though almost princely for that epoch, and entertained well. It had no modern improvements, as now; and none of the attractions of the place were artificial. There were only the beautiful Isles pure sparkling water, the vivifying air, and the multitudes of fish that rewarded the daily efforts of the princely anglers. Nearly all of the old habitues have by this time gone the way of the earth, though the venerable proprietor survives, and the ancient house is supplemented by an elegant, modern structure, with piazzas and grand pianos, and the days are devoted to fishing and the nights to flaunting, fliring and flippancy, though to a fur less degree than at most fashionable watering places. The plain, common sense routine of pastime and personal attire gives the place a charm which sensible people value much.

a charin which sensible people value much.

There is another magnificent house near by, called the "Tbousand Island House," which is much given to string bands and nightly hops, the proprietor whereof is surnamed Staples; wherefore it has been flippantly remarked that "the chief Staples of Alexandria Bay is hops and fish."

Here, among the Thousand Islands, one-half the ludies

Here, among the Thousand Islands, one-half the ladies breakfast at 6 o'clock, and go forth in their fishing boats to troll for muscalonge and blooming health, camping at noon on some unoecupied island, to cook and ent the fish that they have caught, or they vary the daily programme by calls upon their fortunate friends who have Summer cottages on the islands; and all day long miniature steamers ply around the labyrinth of woods and placid water, flags flaunt from staffs on rocky peaks, and the air is redolent with balsam balm and vocal with joyous sounds.

Verily, it is pleasant to sojourn at Alexandria Buy: to

contemplate your pail of minnows in the morning, which you buy at a cent a piece for bait; to sit in your cushioned chair, with trolling rod in hand, and be rowed about by your boatman at \$3.00 per day; and to count your trophies of pickerel and bass at night before envious and admiring erowds. Even old ladies grow enthusiastic when the moon shines on the veranilah at evening and sing with their squeaky gum falsetto:

Ohl come wish me in my little canoo, Where'ser sheo ish calm an' zhe shky ish bluo; Oh! come wish me, for I long to go To zhe isles where'ser mango appleszhe grow."

It is pleasant to renew these quiescent experiences each day, for a month, and to do nothing but rest and recuper-But there are those whose duties do not permit this indulgence, and the writer is one of them. away, and make my devoirs and adieus to the kind proprietors, (father, mother, and son,) of this very domestic Crossmon House, and tackly wish that my stay could have been longer than a week.

Bass fishing with fly is now at its best, and we have many experts here to try their hands at it. Sincerely.

If correspondents will write legibly-especially when using scientific terms and proper names—they will have less occasion to complain of errors. It is impossible for the most expert printers and proof renders to give illegible manuscript the exact significance the author intended to Some of our most valued correspondents seem convey. Some of our most valued correspondents seem to have learned chirography in the school of the heathen

The Rifle.

THE INTERNATIONAL RIFLE MATCH.

WE have received the fallowing letter from Mr. John VV Rigby, correcting some errors which appeared to our telegraphic report of the late match. The statements to which Mr. Rigby takes exception, it must be borne in mind, were telegraphed from the ground during the progress of the match, and were included in all of the reports published in this city at the time. It is possible that the eporters labored under as much as, or more excitement than the spectators, and as due allowance is always made for reports on such occasions, Mr. Righy has exaggerated the effect produced upon the friends of the tenm, or the public generally in this country. We can assure him that their ple generally in this country. We can assure him that their subsequent splendid shooting in Ireland, and the magnificent shooting at Wimbledon, has only confirmed the excellent shooting at Wimbledon, has only confirmed the excellent opinion entertained before of their qualities, both as riflemen and gentlemen. Indeed, in greeting their victory in the match for the Eleho Shield, it seemed almost as one gained by our own men, and was so received.

Dublin, July 15th, 1874.

gained by our own men, and was so received.

Entrue Forest and Stream:—Dublin, July 13th, 1873.

I have just read the particulars of the international rifle match in yours of the lat of July, and am sure you will regred as much as I do that statements are made therein for which there was an foundation, and which are calculated to give much pain to many on this shie who are your friends. I know that the fault hes with some one here who has telegraphed misstatements and exagerations in the American press, and I only report that the contradiction must come so bing after their public cutton that I fear It will avail first to remove the secong impression they are calculated to produce. This true that the crowd which assembled to white-set the risk match exceeded anything we calculated on, and the arrangements for keeping the ground proved, cumoquently, inadequate, but matching could exceed the good humor of the people; nor was there a single collision between the police and the peculiar, or a binw struck, is a policeman's basin drawn during the entire day. Informaticy, the formation of the ground gives but a narrow frontage destination where ange—that one on the right, or Trich side, reaching laws thirds of the way in the targets, while on the left or American fluid the line was much shorter. These lines bud a constant tendency to advance, and so at the conclusion of the Lixu yard shooting this, I must, however, give a distinct and categorical deathd to the shorters much more trying than it would otherwise have been, and the outside Irish against was most severely tried in this respect. Admining this, I must, however, give a distinct and categorical deathd to the slatements that there was affected and may also at the same nurmaned noise that they are constituted that they are decreased to proceed much order was restored, "or that "a pance of thirty-five minutes resulted," at la absolutely untrue. No such interroption took place, and, with the exception of a pais of a few minute hostitudes who saw the same men, (at l

without making onters. Rift men are aware that on the first-class target an onter, which counts two, is often a worse shot than a miss, which counts nothing.

The last contradiction I will trouble you with its that "before Fulton and Bodine fired their last shots the erowd formed two lines with entry two targets visible at the end," and that "the roar was almost deafcuing." All this is a pure fabrication. The crowd did not advance outil every shot was fired, and I remained alming with General Dakin's ride on one of the firing points for several minutes afterward until he and his friends had packed up their sights and apparatus and were ready to move off. I can further say that although the majority of the lower order among the spectators lost money by the result, they appeared animated by a sincere desire that your countrymen should have fair play, and the front ranks kept the grained clear as well as it was possible for them to divide when subjected to so heavy a pressure from those behind.

As the remarks I have objected to are unfair to the spectators and to the Irish team, so are the closing ones of the report to Mr. Millier His anishaps doubtless contributed more in the defeat of his side than the amount by which his score was below his proper average, but it is not correct to say that he has been engaged." He has twice shot in the Irish team at Wimbledon, and been first on one occasion and second on allother. Lust year he won the Abercorn Cup; made first secone in Irish learn at Wimbledon, and been first on one occasion and second on allother. Lust year he won the Abercorn Cup; made first score in Irish learn at Wimbledon, and been first on one occasion and second on allother. Lust year he won the Abercorn Cup; made first score in Irish learn to mich was more his misforme than his fault, and I have no doubt he will yet be heard of whenever his coolness, steadiness, and judgment have a fair field for their exercise.

Permit me to say before concluding that I do not in any remarks I have made desire to detr

THE AMERICAN RIFLEMEN ABROAD.—The American team, with Maj. Gen. McMurdo, visited Woolwich Assend on the 28th alt. They were received by Col. F. A. Campbell, the retiring Superintendent; Col. Younghusband, his successor; Deputy Assistant Superintendent, R. S. Frazer, inventor of the heavy guns, and Cols. Lyons, Field and Hordon, who accompanied them through the works. The visitors had an opportunity of witnessing the manufacture of eighty ton gnus. Every facility and courtesy was shown them by the officers of the institution.

THE WELCOME TO THE RIFLEMEN.—The joint committee of the National Rifle Association and Amateur Rifle Club having in hand the matter of the reception of the Tenno on their return, met un Monday at the ruoms of the former ossociation. General Shaler was in the chair and the meeting was well attended. Communications were asknowledged from the Ninth and Sixty-math Regiments,

knowledged from the Ninth and Sixty-muth Regiments, offering their services as escorts, which were accepted and referred to the Procession Committee. The following resolution was offered by Capt. Casey, and adopted:

Resolved. That all organizations, millions or eige, which desire to perfect the interception to the American tent of rubence the Informed that the Committee on Processions will need on Wednesday, the 11th and an 3.F. M., at No. 24. Nassay street, for the purpose of assigning positions to such organizations in the column, and the purpose of assigning the moduling offer is of such organizations. He required to urport to said committee at the hoar manned.

Gen. McMahom. From the communities appointed.

McMabon, from the committee appointed to confer with Messrs, Sheridan Shook and P. S. Gilmorr, of the Hippodrome Garden, reported that it was proposed to give a semi-military concert at the Hippodrome to which the Team would be invited.

CREEDMOOR.

—The ranges during the just week have been given up principally to National Gunral practice, the most important "club" match being the competition between the members of the Separate Troop Cavulry Ritle Club for a gold budge on Weiluesday last. The shooting commenced at the early hour of seven o'clock, and was complaided at eleven. The conditions of the match were-regulation earlines, five sighting shots at 250 and 300 yards. The following is a record of the leading scores:--

Names	250 Yan Is	T'lal.	SID ARDIS TERM, GRID

During the current month a number of interesting matches will be shot at Creedmoor, and on each Saturday visitors to the ranges may rely upon seeing some remarks bly fine marksmanship. The Seventh Regiment Rifle Club holds four contests during the month—on the 7th and 21st for the "shells," and on the 9th and 23d for the "rifles." Shooting each they rommeners at 3 P. M. On Siturday of this week will be held the second competition. Solurday of this week will be used the Second competition for the badge known as the Bullseye Badge, presented by George Crouch, Esq., to be shut for by members of the Amateur Rifle Club, bullseyes only searing. On the following Saturday—the 14th inst—the new Tarf, Field and Farm Badge will also be shot for for the second time. The conditions of this match are—200 yards, standing, open to members of the National Rifle Association. On Saturday, 21st, the Luther Badge open only to members of the Amateur Rifle Club will be shot for. On the 28th, the Remington Diamond Radge will be the prize, open to members of the National Rifle Association.

of the National Rifle Association.

The "Kellingg" Badge, competed for on Tuesday last by members of Co. A, Twenty-third Regiment, Captain J. Story, commanding, was wou by Lient. J. II. Earle, his score being 38 out of a possible 50. At a recent arreting of the Veteran Association of this command it was desided to offer for expensition as guid model valued at \$250. cided to offer for competition a gold medal valued at \$50, to be presented to the member of the regimental team making the best score in the Second Division untch at the Fall meeting of the National Rifle Association.

United Schehler Assorbation.—This tille organiza-tion bolds a meeting at the park, Union Hill, New Jersey, on the first and third Thursday of each month. The shooting is free to all comers, upon payment of a small fee, and the prizes are all cash. The targets are in the "ring" principle, being arranged in twenty-four rings, the centre one, or bullseye, counting twenty-five, and the oth-crs according to position. At the last competition the tol-lowing scores were made, the highest possible being 250.

Frank Wesson	19	80	49
Nathan Wushburn		3.1	50

In a subsequent sweepstakes at 500 yards, five shots each, without artificial rest, the following scores were numle, Mr. Frank Wesson scoring 24 out a possible 25, and two of the contesbuts uniking four hallseyes each:

A. P. Cuttuig,	. 21
Frank Wesson	14
A 6 Matta	
Nathme Washburo B. A. E. Grimes	11)
Stodiusu Clark 18.64 H Mail	0.1

The first prize was awarded to Frank Wesson, second to G. If. Ifall, third to I. C. Bates Smith. The third trial will take place Saturday, August 14th.

-Two rifle teams have been formed in the borough of Mount Washington, near Pittsburgh, Pa. They use the Remington and Winchester rifles. They begun practice at five hundred yards, and a match between the two teams is already talked of.

-The annual competition of the New Brunswick Provincial Rifle Association, is to take place in Fredericton this year, and the matches will probably begin about the 24th of this month.

-The Emperor William, of Germany, has telegraphed from Gasticu that he will contribute a prize of honor, to be competed for in the German National Rifle meeting, uow in progress at Stuttgart.

Game Bag and Gun.

GAME IN SEASON IN AUGUST.

Snipe Ray birds. Finnated grouse, Tetra cupido.

Financial groups, or "prafric chicken," are in season in Missurd, illinois, and Indiana. August 15th; Wisconsin and Iows, August 20th; Obio, Malue, New Hampshire, New York, and Pennsylvania. September 1st; Connecticut and Kentucky, October 1st. In Massachusetts the season is close built 1876, and in New Jersey until 1880.

-Accounts from almost every quarter indicate Hut quail and rulled and pinnated grouse will be unusually abundant the coming Autumn, notwithstanding the last severe Winter and late Spring. We could publish a column of extracts from private letters, giving corrollorative evidence.

—We took a run through the Province of Ontario, Canada, last month, and along the St. Lawrence border, and found the woodcock shooting fair, averaging perhaps a half dozen brace to a gnn, with exceptional larger haga in favored localities. Bob Cochrane, of this city, has done some good shooting in Jefferson county, N. Y., in the vicinity of Alexandria Bay.

-Canadian sportsmen are preparing for the first flight of ducks which takes place annually in the latter part of August. Rice Lake, and the Thousaul Isles, are well known and deservedly popular resorts, both for ducks and sportsmen. The rice on the back lakes is not yet quite strong enough to stand, but will soon afford feed and

New Jersey—Stockton Hotel, Cape May, N. J., Aug. 2d.—The bay sulpe are now coming in in considerable number, although they are very wild and do not decay well, so that most of the hirds have to be killed at long distances. This is especially the case with curlew. A party consisting of Mr. B—d, of Philadelphia; Mr. F—x, of ditto, and the writer, went to the Court House on Friday, the 30th ult., and under the guidance of Mr. A. fl. Foster, of that place, we succeeded in bagging 94 birds, among which

were 11 carlew. These birds were all shot outside of Burdecoys, and postly at single shots. We have previously been out twice in the sounds near here with Mr. Cubeh Warner, the best gunner to be had at the island, and one day Mr. B——d and myself bagged 51 birds.

MARYLAND

Markland
Wisconsin.—The prospects for grouse in this Sinta invery encouraging, as the young broods are well grown, and will be full fledged at the opening of the senson. August 15th. The covies are uniorrous and the "Bulger" sports, men will in all probability enjoy line shioting in the marshes and stubble fields. In this becality, (Montella, the chief resorts of pionnted grouse are the marsbes and low hands, and the stabble fields the not produce nearly su much sport. Quality will as usual be very senare, and it is doubtful if Wisconsin ever produces as many qualit as it doubtful if Wisconsin ever produces as many qualit as it did a few years since, when the Winters were more mild and the sensons propitions. Water fowl will likely he as pleuty as formerly, and many are hooking farward to September 1st with engerness. The wood or summer duck, ought only to be protected by law until August 15th, as by September 1st hearly all are gone southward. Finar

THE CHAMPION ACRUAD. -On the 14th of list munth The Champion Armondo.—On the 14th of last munth Captain Bogardus shot a match with Mr. A. Stevens, a crick English pigeon shot, at the Welsh Harp, Highlian, the scene of his first exhibition for England. The conditions were to shoot at thirty birds each, the Captain conceiling his oppournt four yards. The contest throughout was close and interesting, and at the fluish of the thirtieth round a tic was declared. It was then decided to shout at five birds more, and Capt. Bogardus killed four in succession to Mr. A. Stevens's two and wantle match. Capt. cession to Mr. A. Stevens's two, and worthe match. Capt. A. Bogardus shot with his usual gan—a 12 cholor hore, by W. and C. Scott & Son, Premier Gan Works, Birmingham.

shooting because he uses such large charges of powder, and suggests a match wherein the contestants use the some gun. It neglects to state, however, that the privilege of using noy charge of powder is open to both parties, or to give a renson why it is not availed of.

give a renson why it is not availed of.

SKANEATKLES, N. Y., July 28, 1875.—A pigemeshaot was held here to-day, under the anispices of the Skaneathers Spotsmen's Club. Spotsmen were present from neighboring places in good numbers, and a general 'good linne' was experienced. The first thing on the programme was the contest for the Skaneateles Club 'Pitcher' between S. M. Sheperd, holder, and Sam. Allen, challenger. By shooting 6 out of 10 to his oppaments 5, the latter gentleman won the pitcher. A sweepstakes followed, shooting of the Central Club of Synicase wan the first prize, and Mr. ff. Lewis, the second. A second sweepstakes when shot, at five single birds, same distance, and Mr. Hulson again won the first prize, he killing all his hinds. Mr. A. D. Lewis was awarded the second prize, he killing four of his birds. At 2 P. M., a third sweepstakes was called, with twenty-six entries, shooting at the single hirds at twenty one yards, eighty yards boundary, resulted in the following score:

minowing score:	
Ed. 11ad on	10 W. S. Barring,
R. B. Strong	10 R. B. Harman
Win, Sainson	16 M. Barbes
Chas. Suith	PA. D. Lewis
Dr. Kennedy	9D A. Sherry
Ed. Wheadon	918am Tuylor
R. H. Usut	9.Wm. Fage.
C. 11. Parker	9 Geo Bowline
C. McKinley	S'D. Wadswirth
R. Lewie	8 W. U. Graves.
A. Shtner	844. C. Cele.
T. Klimber, Jr	8.W II Croster,
11 R Steven	8136 Shortened

C. R. Sieves. R. S. Sheppind 4
In shooting off ties, Ed. Hudson, of the Central City
Club, won the first prize, Dr. Kennedy, of Authorn, the
second, W. S. Barnam, of Syracuse, the third, A. D. Lewis,
of Jordan, the fourth, and Wm. Fage, of Syracuse, the
fifth. At the close of this shoot another swrepsinkes was
called, at five single hirds, usual distance. J. H. Emil, of
Skaneateles, won the first prize, and R. B. flarman, of the
Central City Club of Syracuse, won the second prize. Rox.

A number of sweepstakes followed, Thomas Kinher, dr., taking first money in one, and Messes. Parker and Me-Kinley dividing in the second.

Homosassa, Pla , July 17th, 1875

Hombassa, Fla., July 17th, 1875.

Mr. Jenkins, of this pince, killed a very targe and fat hoor a tow days ago. He stood under his porch and shot him at alimit lifter passes. Frank went up and helped bith to dress it. They estimated the weight at 500 pounds. The signs of bears are all about. The door come take the fields near the binase so thick that the grainal looks as though it had been penned with them as you would herd entite, and I maked this morning that it running and playing among the room they had knowled down a great many hony sisliks. Thirds are plenty, and very some The birds on the reefs (St. Martin's Kry, opposite mouth of thompassa River) are laying up to present that I thrue not visited the Islambourself, but the "turtellers" tell me they keep themselves suched with eggs and squabs.

I received copy of Fireest and Stream, and I must say that the account of Homosassa was so flattering that I fear wa shall not be able to inced the expectations of those who may do us the honor of a Whiter visit, but assure you we will do all ln our power to make any and all comfortable who may be our gnesses.

A 18-3,

JOHN CHENEY AND THE BEAR.

NEW YORK, July 19th, 1875.

PHINABELPDIA, July 9th, 1875.

Button Poinest and Stineau.—

There were several articles in Funest and Stineau condending the Jiftiour powder.—I have not had very much experience with it, but what little I have find his devir very ratisfactury. I had a small sample sent me by Mr. Diffiniar, which I tried he a Maynard rifle and a 12-tore server mid at half powed breech booting shot gun. With three and a powder drachms (measured) he shut gun there was very littly noise and marked and little at no recall, while with the same charge of arrange dark powder the recoil was servible. With the wood powher the shells were quite as good after the discharge, If not better, that after using black pawder, My sample gave out, so that I could not test that lang range. At hirrly yards I put 270 pellets of No. 7 out of onnce in a thirty inche circle. The number of sample was 15. United to get a supply, when I will make a more thorough jest and let you know the result. If my next experiments are as satisfactory as those I have made so for, I will bid farewell to black powder.

G.W. II.

Duchting and Bouting.

All communications train Secretaries and friends should be mailed un later than Monday in each week.

The Long Island Yacht Clob —This club will bold their admil regulto on the 18th inst. The club has been in existence but there years, but numbers some inventy-five yachis. The offlers ore: George Farley, commodere; Ira Smith, vice commodere; Lames Lennox, president; George Crolius, secretary; Funix Boies, treosurer; E. Bond, assistant secretary; Henry Smedley, measurer; trustees, M. McMahon, J. Sweeney, George Grolius, F. Bates, and E. Bonet; committee on monther on monteship, J. Farley, R. Baham, and H. Smedley; regulta committee, Ira Smith, H. Smedley, J. Sweeney, F. Bates, and S. Smedley.

New York Yacht Cleb—The minual cruise of this club will commone to day, Beet Captain Brad traying issued orders for a rendezyons of Glen Core on Weilnesday, when the empirius are to report on board the flagship Alarm. A large squantron is expected to assemble, and it is proposed to extend the cruise os far East as Porthand if possible.

—Ou Sourday last a race was sailed off the Isles of

Alirin. A little spinistron is expected to assemble, and it is proposed to extend the cruise as far. East as Portland if possible.

—On Soturday last a rane was sailed off the Isles of Shouls between General Builler's tamons yneht America and the Resolute, of the Nov York Yncht Club, owned by Mr. Rofus Buich. The course was from Star Island round White and Boom islands and rotura, being a distance of thirty-nine uniles. The Resolute must have been remarkably well handled, as she came in first, although the America won the race on time allowance, the Resolute's time being 3h. 47m. 59s. and the America's 3h. 53m. 48s., but on allowance the latter won by 2m. 18s.

We learn by felegraph from Portsmouth (the mail not having come to lunal as we go to press) of the result of the race on Monday between these two yachts for the Oceanic Cup. The course was from Star Island around Boom Island Ledges and Light, a distance of thirty-eight miles. There was no time allowance. The Resolute started at 11:39:38 o'clock and the America at 11:49:38 o'clock and the America at 11:49:41 o'clock. The wind was east northeast. At 3:30 the America was well aliend, beating to whatward—her best point of sailing. The triemls of the Resolute expected her to make ap her loss on the return, free before the wind. At midnight a fisharman has just arrived from the Isles of Shouls, pulling a whalebout twelves miles single-banded. He reports that the America won the race, beating the Resolute by four minutes larty-two seconds. The sailing time is not given. Mr. Hatch has cladificaged Gen. Builter to sail the America man the Resolute six days in the week for six weeks from September 1st for \$1,000 a day, over the New York Yacht Club course, the yachts to carry their regular crows.—The steam yacht Grocie, belonging to Mr. Fred, Massey, of Brooklyn, arrived at Alexandria Bny, St. Lawrence River, on July 31st, reaching flort point via Huison River to Albany and Eric Canal to Urien and Oswego. She was a charge of Mr. Gilson and four sailors. Mr. Massey

anily are at the Crossmou House, Alexandrin Bny.

—There is a miniature steam yacht at Gloneester, Mass, of which the Cape Ann Advertiser snys:—

"Her length is 17 feet, with 42 inch beam, and her hull weighs but 100 pounds. Annilships is the boiler, made of strel, weighing 48 pounds, 18 inches high by 8 inches in diameter, and hos sixty-one live eighth inch lubes, all made from rifte burrels. It has a 14 inch cylinder, with 24 inch stroke. The propeller is four bluded, 12 Inches in diameter, with 24 inch pitch, and is placed under the bout, two feet from the stern. One gallon of water fills the boiler, and as it condenses it is only necessary to supply the waste. Her steam whistle is made of two gun cartridge tubes. Wood is used for fuel, and a supply for quite a long cruise can be carried. The boot draws 24 inches in water, which entries her propeller clear. She was built by her owner, S. H. Roper, of Boston Highlands, who is bound to the lakes of Shoals. The hoat, all completed, cost about \$500, and is rated at Iralf a horse power,"

On the 10th and 14th insts, the second named regoths of the Grand Haven and Spring Lake (Mich.) Association will be held on Grand River and Spring Lake. The programme comprises single, thouble, four and six-dared eners. Large delegations are expected from the Northwest Annabur Roying As ociation of Taledo, as well as Chicaga. Mr. R. B. Bainbridge and Frank E. Yoles, who resently pulled a roce on the Harlem, are expected to row, and a double sent quatch is boked for between Curtis and Yates and Bainbridge and Smith. Western cursuen would be pleased to receive a visit from some of our Eastern clubs, and in fact as they were represented here by Curtis and Yates at our regulas, it would seem but right for some of our leading clubs to send a crew or grows West.

—While there is no sport productive of more enjoyment.

than bout suiting, there is yet no more fruitful source of accident and lost of life. And yet much could be avoided if a few simple rules are followed, or if inexperienced persons would be content to accept the services of those more familiar with bonts until they had acquired some experience. The following pertinent remarks on this subject we take from the Cope Ann Aberriser, and commend them to DILL remlers:-

take from the Chipe Ann Altertiser, and commend them to our readers:—

11 One great source of danger is the habit of making sheets first when sailing in squally weather. The flaov cames in an instant, quick as lightning's flash, and strikes the sails, which no mode fast, and ere they can be toosed the daming is those, with the bont nearly tilled with water or capsizal and snak, jeopardizing the lives of those on board. Always have the sheets in your own or some reliable person's hand, when sailing in squally reather, as they need as much care as the helm, if not more.

Another source is carrying too much sail. Most of the small yachts' sails are made too large for sailing when there is a stiff breeze. There seems to be a recklessness in this respect which we offentimes wonder does not result more disastronsly. Then again these venturesome persons carry sail too long, deeming it a weakness to reef and make things sing and safe. They had rather run the risk, and many of them pay the penalty with their lives.

The large majority of these sailing accidents could be avoided, if persons would only exercise a little common sense. The first and most essential thing for those who wish to sail a bout is to learn the principles from some experienced limit and to practice sailing, taking such persons out with them and practically experimenting. Then let them in some comporatively safe place practice above mutil they become personally fundian with these principles. A clear head and constant watching is required, and if these hints are attended to, the casualities would some be realized to a very small per centage, and one of the keenest enjoyments would be constant, which are superiorly. In this connection it may not be imapropried to publish the following directions for restoring persons apparently deal from drowning, which ore issued by the Hamana esseciety of the Commonwooth of Massachusetts. The list of lenths from this cause obreatly this season is feightfully large, and maprestimably many might have been saved if pers

to be taken on such occasions. The following are the rules:—

1. Lose no time. Carry and these directions on the spot.

2. Remove the frath and mayns from the mouth and mostils.

3. Roll the body, for a few seconds only, with the head imaging down, so that the water may row only of the limes and windippe.

4. Loses of light articles of elotting about the neck and closet.

5. See that the tongue is palled forward if it falls book into the floont. By mking hold of it with a bundkerchief it will not slip.

6. If the areathing has ceased, or nearly so, it must be stimulated by pressure of the close with the hands, in initiation of the natural breathing; foreity expeding ine oil from the langs, and ollawing it to re-emerand expand them by the elasticity of the fibs. Reneaber that this is the most important step of all.

To do it readily, my the presum of his back, with a cash of, pillow, or since the lover hat of the brosst four at the upper person of the abdence, keeping my o regular repetition and rehixation of present with the state of the light with the body warm.

Rub the lights with the body warm.

Rub the lights with the body warm.

8. As soon of the person can swallow give a inblespoonful of spirits in hot woler, or some warm cuffee or tea.

9. Wink deliberabily. Do not give up too quickly. Success has remarded the efforts of nours.

maried the efforts of hours.

The O'Neit, Engelhautt Marra.—An agreement has been entered into between James O'Neil and George Engelhart to riow a three mile race at Saratoga on Tuesday, September 21st, providing the lake is smooth. The match is for \$1,000 a side, and Dr. Russell Withers has been chosen referee, or in the event of his declining, Mr. E. R. Craft will be invited to not. O'Neil has never rowed a professional race, but is credited with having made the fusiest three-mile time on record, viz. 21m. 194s. He was defeated by Engelhart at Troy in October 1872, when both winner and luser beat the best time, professional or amateur, on record, which up to that time had been dames 11. Mills 22m. 26s. Engelhart making 22m. 214s. and O₁Neil 22m, 26s.

—Charles Askins of Brooklyn and Thomas Jones of this eity, rowed a three-mile straight away race on the Harlem River on Saturday, the course being from Gates' Lumber Dock to Norris' Dock. Jones won by nearly a minute in

Dock to Norths' Dock. Jones won by hearty a minute in 26m, 40s.

On the same day the second semi-monthly race, two miles straight-nway, for the challenge medal of the Gramercy Boat Club was rowed, H. R. Mills, R. Weisner and Frank Winne being the contestants. Mills was the orinner after a sharp struggle with Winne. Weisner broke his stretcher and was disabled.

—The Rough and Rendy crew of Glen Cove and the Lorelei of Sea Cliff, rowed a race of the latter place ou Saturdny. The Rough and Ready won easily in 21m. 30s., the distance being somewhat under three miles.

-Pitision, Pa., is to have a bont club. Seven bundred dollars in money has already been subscribed, and an organization effected. The fine reach of the Susquehanna at this point will afford a splembid course.

at this point will alford a splembid course.

—The Schuylkill Navy Regatta has been fixed for Saturday, Sept. 18. There will be in addition to the regular challenge hags of the navy, special lings for the winning hours, and individual prizes for the winning crews. There will be races for four-oared shells, one and one-hull miles straightaway National Cruise, and for 60 barges, 40 gigs, Parts doubles and singles. One mile and return from Rockland, up and back. The date is made one week earlier than last year, to meet the date of the Crickel Tournament.

FREST AND STREAM PRIZE RACES -- We have the falhowing telegram from the Thousand Isles, river St.

ALEXANDRIA BAY, July 29th.—The heat regain for the Folkest and Stream maney prizes offered by the publishers of that journal through Mr. Charles Hallack, of New York, mown guest of the Crossmon House, same off this evening. There were seven entries. The first prize was token by Fitz Hout; second by Hurvey Ellint; U. H. Hout third. The distance rowed was allow one nile and a half, and the winner's time was nior minutes. First prize \$10; second \$50; third, subscription to Forest and Stream for one year.

Entrin Powert and Strram:

Busting has been so "duil" here since the Jone regular that, like a similar in a simily piace, came the house opening and regaria of the Junker Pay lidage Plob on Timersday last, 20th lint. They called it the seventeenth animal regatin. Perhaps it was, but we don't remember that they have had a regatin every year. Never mind, it's limitateral. The new wing of their house has been completed, and that avoilable room almost doubled. Very londsome is the haptovoment and very handsome was their externament, albeit the shortest were so frequent that the members who dodged the drops to be entertained were not symmetries as the utilist deserved.

First came a single scall race between J. D. Melleath, Frank Renderson, Gea. W. Parket and Oscar F. West. Their course was from just above Tortle Rock to their bont house; out of courtesy we will say half a nide. Parket showed them the may down, winning alongly by a length risar, white McBeatt came so non-being second that his bone was under Homlerson's vortrigger. West, lioding he couldn't win, pulled off to one sine to hook at the race.

nbove Tortle Rock to their bont hause; out of courtesy we will say half a ndie. Parker showed them the way down, wounding alealy by a length riest, which McBeath came so near being second that his bony was under Homlerson's vortrigger. West, lioding be couldn't win, publied off to one salie to hook at the race.

The next race was between two four oared shells:—Camilla—C. R. Adams, stroke; F. Henderson, 2; P. Whso, 3; Sam. R. Stincon, how Qundor Chy—J. D. McBeath, stroke; Geo. Parker, 2; J. D. Ferguson, 3; D. F. West, how. This course was from throat Bridge down, and was enquarier of a mile longer than the single scall race it was not mill the boats and passed the Undine club house that betting roce at all safe, when Adams pushed his crew to the front, and kept them there by a little over a length.

BOOKS RECEIVED.

WALLACE'S ADMONDAUR COIDE. - We had occasion, last WALLACE'S ADIRONDALE GOIDE, —We had occasion, last year, to notice most favorably this valuable book, which was then incorporated in a large rolling entitled "Balies in the Whole." It has slace been reissaed, as we fly analysis, in a separate work, whereby it has been made more portible and more available in the thoris) and sportsman, and the price considerably chempened. It is now capiously illustrated, and contains a most incoming map of the eather Adirondack region. Much valuable instruction has been indeed, and taken, all it all, it seems marrelous that so much of the very information which spurismon need should be compressed moreometed in so small a crimpass. Every query which would naturally alies is live annicipated in minutest detail, and so far as we can theern, nothing is lacking as to beights and depthe, distances, localities, sporting grounds, ralloud and willdeness rootes, botels, outliss, expenses, and all other points of instruction, by which both novices and old stagers may profit, it is butrissically perfect in its entirety. Soliboy the American News Company 119 Nassor street, New York, at \$2, which is but little more than the original cost of the map which it contaios.

Southern and Southeastern Neyada.—. We are in-

original cost of the map which it cominos.

Southern and Southeastern Nevada.—We are indefined to Lieut. George M. Wheeler, Engineer Corps, United States Army, for a copy of the Preliminary Report, which embraces the results of the recommissince made by him through Southern and Southeastern Nevada. It contains me outline of the geographical and minerealogical peculiarities of the country traversed, including the funous Winter Pine and other mining districts, and a list of the game and fish found by the Sinte. This report, or its principal features, will be embedded in Volume 1 of Lieut. Wheeler's northeoming report of geographical explorations and surveys west of the face Handredth Meridian.

TRIALOF SCOTTA GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD." LONDON.

(See The Field, Jaunary 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messes Scott's gins showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left harrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a pendration of 37, equalling the highest pattern made by Mr. Greener, and asceeding the penetration of that particular shot by eight sheets."

London Office:

0 Great Castle St., Regent Circus, near Langham Hotel.
Chief address:

Manufactory Premier Gun Works, Lancaster Streel, Birmingham.

WHOLESALE,

THE GREAT

London Gun Trial,

W. W. GREENER begs to inform his numerous chents in the United States that he has been very successful in the above trial, having secured the drest prize, a silver cup, value 40 gathens—class 3 for 13 tores; also whiner in class 4 for 18 times, and 10 bores, and class 4 for 20 heres. It has wor in all the classes for inproved horing, which is upon a different plan to any other maker, and 1s fur superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortiant St., New York, is now huporthig up DOURLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the ist July, and run be examined about the 15th. Alt spechl orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my gaus over gaus made by Dungal, Pupe, Westley Richards, Tolley, Scott, and others, will shortly by putilished, and can be had on application at No. 1 Cortland St.

Miscellaneous,

J. D. DOUGALL'S EXPRESS SHOT GUNS.

CHOWN by trials at Wimbledon by Editor of the Field to possess life GREATEST PENE. TRATION and therefore LONGEST RANOE—thus: Circle, 30 linches; 200 pellers, average, 191; penetration, 37. The Editor's trial of Greener gams with 340 pellers of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the ilurability of these new systems, we berewith warm at, heforehand that our system is our own livention (though founded on the American idea) and is DU-RABEE, a fact remarked on by the Field, that the gams tried had been in use during last season, and references permitted to the owners. Send for illustrated Circulars to
