# WYATT'S DEPENDABLE CORN HYBRIDS

**F-27 NC-27 (Yellow)** The picture at right taken in one of our crossing fields shows the fine appearance, high yield and uniformity of Wyatt's NC-27. This is the corn you get when you buy NC-27 in the Wyatt bag. No trouble getting into the 100 bushel per acre class with seed corn from those ears planted on good land, properly spaced and fertilized! In the 5 official tests in the Coastal Plain last year NC-27 averaged 108.7 bushels per acre, and in spite of a 35.8 yield in Guilford County, because of severe drought, it averaged 72.9 in the Piedmont, making 110 bushels per acre in Cleveland County. Besides a good yield record this hybrid has good grain quality and good stalk strength. Prices: 8 lb. bag \$2.40, postpaid.\* Not prepaid, 8 lbs. \$2.00; 14 lbs. (peck) \$3.25; 28 lbs. (½ bu.) \$6.00; 56 lbs. (bu.) \$11.00.

F-27 NC-27 Corn Hybrid

**F-2 NC-26 (Yellow)** A good 2 ear hybrid capable of yields well above 100 bushels per acre, properly managed on good land. In 5 separate tests last year in the Coastal Plain NC-26 averaged 108.8 bushels per acre. Good shuck coverage and average stalk strength. Prices: 8 lbs. \$2.40, postpaid.\* Not prepaid, 8 lbs. \$2.00; 14 lbs. (peck) \$3.25; 28 lbs. (½ bu.) \$6.00; 56 lbs. (bu.) \$11.00.

**F-4 NC-1032 (Yellow)** Recommended for the Piedmont and Coastal Plain where since 1943 it has consistently performed well among the very best hybrids. Official Coastal Plain 1947 average yield in 5 separate trials was 104.1 bushels per acre, one of only 7 hybrids averaging over the hundred bushel mark for the entire area. A dependable 2 ear yellow hybrid of good grain quality and storm resistance. Prices: 8 lbs. \$2.40, postpaid.\* Not prepaid, 8 lbs. \$2.00; 14 lbs. (peck) \$3.25; 28 lbs. (½ bu.) \$6.00; 56 lbs. (bu.) \$11.00.

**F-25 NCT-20 (White)** A good top-cross hybrid performing well on many farms from the Mountains to the lower Coastal Plain as indicated by 1947 official records of 91.9 bushels per acre in Ashe County and 126.2 in Camden. Prices: 8 lb. bag \$2.40, postpaid.\* Not prepaid, 8 lbs. \$2.00; 14 lbs. (peck) \$3.25; 28 lbs. (½ bu.) \$6.00; 56 lbs. (bu.) \$11.00.

**F-3 Tennessee 10 (White)** A consistently good white hybrid for the Coastal Plain, Piedmont and Mountain sections, where it held top place for yield until the introduction of Dixie 17. Last year in Camden County, Tennessee 10 officially turned out 142.1 bushels per acre and averaged 111.8 bushels per acre in all 5 trials. Prices: 8 lb. bag \$2.40, postpaid.\* Not prepaid, 8 lbs. \$2.00; 14 lbs. (peck) \$3.25; 28 lbs. (½ bu.) \$6.00; 56 lbs. (bu.) \$11.00.

Dixie 17 is a medium hard, white prolific hybrid with a red cob. Slightly more resistant to lodging and better shuck protection than Tennessee 10. Has out-yielded all other white corns in North Carolina official tests since its introduction 2 years ago, in both the Piedmont and Coastal Plain. ## N. C. Agricultural Extension Service Recommendations for Increasing Corn Yields

1. Have the soil tested and apply lime as recommended.
2. Prepare a good seedbed and plant level with the ground except where drainage is poor.
3. Use 300-500 lbs. of 6-8-6 or 4-8-8 at planting. Use the higher rates following crops receiving low amount of fertilizer and the 4-8-8 on potash deficient soils or following legumes for hay.
4. Avoid late, deep cultivation but control weeds early. Use a weeder where available until corn is six inches high. Cultivate shallow until the corn is 2½ feet high, and then stop cultivation. Do not use turning plow or bull tongue. Do not injure corn roots.
5. Place rows about 3½ feet apart.
6. Space plants about 16-20 inches apart within the row, using wider spacing for less fertile soils.
7. Sidedress with adequate nitrogen (potash where needed) when corn is 6-8 weeks old or about 2½ feet high. Yield increases of 25-45 bushels per acre may be expected by use of 500 lbs. of Nitrate of Soda, or 400 lbs. of Calnitro or ANL, or from 250 lbs. per acre of Ammonium Nitrate. One-fourth of this rate of application should give yield increases of 10-12 bushels per acre above similar corn receiving no sidedressing.

When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. # VEGETABLE PLANTING CALENDAR

Many otherwise successful gardeners lose months of valuable production because of a failure to realize the cold hardiness of a number of the most popular and productive vegetables.

By successive plantings beet, broccoli, cabbage, carrot, chard, kale, mustard, onion, parsley, radish, spinach and turnip (salad or root) can be kept in production, out-of-doors and without protection winter or summer, every day in the year in this isothermal zone.

The planting information shown in the chart on this page is the result of careful preparation and years of actual gardening experience. Planting dates shown for tender varieties are

based on the average U. S. Weather Bureau records of the last killing frost in the spring and the first killing frost in the fall in this zone, for the past 50 years.

Throughout our catalog we have endeavored to give the approximate number of days to maturity for all varieties. This information should be helpful, especially in determining the latest safe dates to plant tender varieties in the summer or fall, in order to make a crop before frost.

Soil conditions permitting, we recommend planting on or immediately after the average date of the last frost in the spring, otherwise spring rains may delay planting days or weeks.

## "TESTED SEEDS"

The term "tested seeds" as used in this catalogue, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

## CULTURE

"Glads" are the most popular and easily grown of all summer-flowering corms (not true bulbs).

Soil requirements are not very exacting. Plant large corms 6" or more apart 4" to 6" deep, smaller ones accordingly, being governed by whether the soil is light or heavy. Plantings made at intervals of two to three weeks beginning in early April and continued until early July should flower from the latter part of June until frost. Good fertilizers include cow and sheep manures. Apply two to three times as a side dressing during the growing season before flowering. Fertilizers should not come in contact with corms or foliage. Watering during dry seasons will give amazing results.

Our stock is Michigan grown, disease and thrip free.

Early 70-80 days. Midseason—85-90 days. Late—100 days or more.

## MORNING GLORIES

**IPOMEAS.** In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

① **1805 Pearly Gates** This is exceptionally free flowering with large fleecy pure white flowers making a heavy cascade of flowers on fence or trellis. One of the earliest bloomers. Pearly Gates received Special Mention in the 1942 ALL-AMERICA Selections. Pkt. 10c; ¼ oz. 40.

① **1808 Scarlett O'Hara** This introduction brings us an entirely new color in the popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite so large as the Heavenly Blue Morning Glories they are of good size, 3 to 4 inches in diameter freely produced on fast growing vines that bloom 65 to 70 days after seeds are sown. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. Easiest culture. Pkt. 10c; ¼ oz. 40c.

1809 **HEAVENLY BLUE.** A graceful vine of extremely quick growth producing a great number of exquisitely formed deep clear blue petunia-like flowers. Ideal for covering stumps or other unsightly objects. Pkt. 10c; ¼ oz. 35c; oz. \$1.00.

# Wyatt's Superb Petunias

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

**PEAT MOSS**

To have a healthy garden you must first have *healthy soil*. Don't waste time, seed and fertilizer on poor soil. Premier Peat Moss, 97% organic, gives your soil loam-like texture, making it more productive. It absorbs 20 times its own weight in moisture . . . loosens and aerates heavy soil . . . adds body to light soil . . . prevents leaching. Water and fertilizer penetrate deeply, feeding the roots as needed.

Remember, your garden can be no better than your soil. Get Premier Peat Moss, with the certified seal.

For new lawns 1 bale should be thoroughly pulverized and mixed in each 100 to 200 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold moisture. # CLOVER SEEDS

F97 Alfalfa

**F97 Alfalfa (Oklahoma Approved)** While Alfalfa is a relatively expensive crop, the first cutting usually returns about double the cost of seeds, lime, fertilizer and planting. A good method is to lime the land and plant an annual legume crop that can be thoroughly disked, not turned, in preparing the alfalfa seed bed. Use 20 to 35 pounds (not more) borax per acre and drill August 20 to October 1, or February 15 to March 25, 25 to 40 pounds of thoroughly inoculated seeds per acre. Roll or culti-pack after seeding. At seeding time use 1,200 pounds 2-12-12 and 8-10 tons barnyard manure if available and not weed infested. Apply 400 pounds 0-12-12 annually thereafter. Cut before  $\frac{1}{4}$  flowers open. Always leave the alfalfa stand 6 inches tall or more for winter since any closer cutting invariably results in severe damage. If your stand of alfalfa becomes thin or weak sow 3 to 5 lbs. Orchard grass per acre to help control weeds and increase production. We handle only premium quality seeds. Supplies of good seeds will be extremely limited. Please write for prices.

**BORAX.** Prices: 25 lb. bag \$2.00; 100 lb. bag \$6.00.

**F87 White Blossom Sweet Clover** Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. Especially good as a manure crop and to inoculate the soil in preparation for a crop of alfalfa. The roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows  $1\frac{1}{2}$  to 2 $\frac{1}{2}$  feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 15 pounds per acre July to October or February, March. Prices: lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.00; 10 lbs. \$3.85, postpaid. Not prepaid 10 lbs. \$3.40; 25 lbs. \$8.25; 100 lbs. or more at 32c lb.

**F86 Aliske Clover** We offer only premium quality northern grown seeds of hardy strains. Used mostly in mixtures but when properly handled produces heavy tonnage of highly nutritious hay or grazing. Sow 2 to 5 pounds per acre in mixtures or 12 to 15 pounds alone, early spring or fall. Prices: lb. 80c; 2 lbs. \$1.40; 5 lbs. \$3.25; 10 lbs. \$6.25, postpaid. Not prepaid 10 lbs. \$5.75; 25 lbs. \$13.75; 100 lbs. or more at 53c lb.

**F80 White Dutch Clover** Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas responding to lime and fertilizers recommended for other clovers. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. Prices: lb. \$1.50; 2 lbs. \$2.80; 5 lbs. \$6.50; 10 lbs. \$11.95, postpaid. Not prepaid 10 lbs. \$11.50; 25 lbs. \$27.50; 100 lbs. or more at \$1.05 lb.

**F82 Red Clover (N. C. Grown)** One of the most productive of the clovers. Well adapted to our piedmont soils. Especially valuable in pasture mixtures. Sow early spring or fall 20 pounds per acre. Lime and fertilizer as for other clovers. Prices: lb. 90c; 2 lbs. \$1.75; 5 lbs. \$4.00; 10 lbs. \$7.85, postpaid. Not prepaid 10 lbs. \$7.40; 25 lbs. \$18.00; 100 lbs. or more at 70c lb.

**F89 Ladino Clover More Popular Every Year.** A perennial clover of exceptional merit for pastures, especially on moist, fertile land. Recovers rapidly from grazing or clipping and is leafy and succulent. A complete recovery after grazing often takes place in two weeks. Its growing season is as long as that of any other legume. Like all clovers, Ladino succeeds best on well limed, fertile and somewhat moist land. Sow 5 to 6 pounds per acre alone or 1 to 3 pounds in mixtures. Prices: lb. \$2.85; 2 lbs. \$5.40; 5 lbs. \$13.25; 10 lbs. \$26.00, postpaid. Not prepaid 10 lbs. \$25.50; 25 lbs. \$63.50; 100 lbs. or more at \$2.50 lb.

**F83 Crimson Clover** Should be sown from August to October. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Write for prices.

**F95 Sericea Lespedeza** Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Prices: lb. 55c; 2 lbs. \$1.00; 5 lbs. \$1.95; 10 lbs. \$3.65, postpaid. Not prepaid 10 lbs. \$3.20; 25 lbs. \$7.75; 100 lbs. or more at 30c lb.

F89 Ladino Clover and Orchard Grass

**F93 Kobe Lespedeza** A variety particularly adapted to lowlands and lighter soils. The leaves and stems are slightly coarser making a heavier hay crop. This variety is recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 30 to 40 lbs. per acre. Responds to liming and fertilizing. Prices: 100 lb. bags \$18.00. Write for quantity prices.

**F92 Korean Lespedeza** Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is almost equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. Sow 30 pounds of seed per acre February to April. Prices: 100 lb. bag \$13.50. Write for quantity prices.

**F57 Alta and F53 Kentucky 31 Fescues.** Soil Conservation Service Photo.

**F57 Alta Fescue** A tall or giant Fescue adapted to a wide variety of soils and uses. Like most long lived grasses, growth is slow after germination and should not be grazed until 6 inches high. Once established Alta Fescue promises to be the most versatile and valuable grass in a generation. It is the highest yielding grass in virtually every experiment station where it has been tried; is palatable and grows over a longer period each year than other grasses. Alta has a remarkable resistance to drought and its dense, deep roots make it ideal for erosion control, soil building, weed control, roadside planting, athletic fields, parks, airports, etc. In combination with suitable legumes it produces an excellent almost year 'round pasture. Because it has no underground root stocks it cannot become a pest and is readily killed by plowing. Continued high yields will require feeding, especially nitrogen which may be supplied partly by seeding with clover. Seed in a prepared, firm seed bed fall or early spring 20 to 25 lbs. per acre alone; 10 to 15 lbs. with 3 lbs. Ladino, White or Sub Clover, or 15 lbs. Lespedeza. Seed will not germinate when ground is cold, and under favorable conditions, takes 30 to 40 days to germinate. Prices: lb. \$1.40; 5 lbs. \$6.50, postpaid. Not prepaid 10 lbs. \$12.00; 25 lbs. \$28.75; 100 lbs. or more at \$1.10 lb.

Not prepaid 10 lbs. \$8.00; 25 lbs. \$19.50; 100 lbs. or more at 75c lb.

**F66 Permanent Lowland Hay and Pasture Mixture** This Mixture includes the most valuable varieties of grasses and clovers for bottom lands and on good soils produces a maximum of grazing or hay. Red Top, Alta Fescue, Ladino, Carpet, Dallis, Lespedezas, and other

Better health, greater wealth and soil conservation with permanent pastures.

Not prepaid, 10 lbs. \$1.80; 25 lbs. \$4.75; 100 lbs. or more at 18c lb.

## SYRUP AND FORAGE SORGHUMS

**CULTURE:** Plant when the ground becomes thoroughly warm, about two weeks after corn planting, on a rich, well drained clay loam, in rows 3½ to 4 feet apart, and cultivate as you would corn. After the flowering stage is passed, but not earlier, it may be pastured or cut for fodder. Sorghum may be grown with cowpeas and soy beans either in rows or broadcast. Sown alone, 50 lbs. per acre. In rows 6 to 8 lbs. per acre.

**F192 Early Amber** If planted early it will yield two cuttings a season. Grown with cowpeas or soy beans the quality of the hay is improved. The proportions recommended are 15 lbs. Early Amber Cane, ½ bushel of soy beans and 1 bushel cowpeas to the acre broadcast. Grows 10 to 12 feet high. Sow broadcast 50 lbs. per acre; 5 to 6 lbs. plants an acre in 3½-to 4-foot rows. Write for prices.

**F193 Early Orange** Taller and heavier stalks than the Amber, although not as early. Write for prices.

If sufficient quantity is planted a continuous supply of, nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: lb. 85c; 2 lbs. \$1.50; 5 lbs. \$3.25, postpaid.

F197 Hegari

## COMBINE MILO FOR GRAIN

**F296 Plainsman (Combine) Milo** A superior plant for growing with peas for hay because of its low habit of growth. For grain it out yields corn and brings a higher price. Dry grain is ready in 110 to 120 days. Ready to cut for hay in 60 days. Plant 10 lbs. per acre in rows; broadcast 25 lbs. with peas or 50 lbs. alone. Prices: lb. 30c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.10; 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

## HEGARI

**F197 Hegari** Recognized as the most valuable and widely adapted member of the sorghum family, and well suited to conditions in the Southern states. Hegari has great forage value for two reasons. First, because its high sugar content makes stalks and leaves highly palatable to livestock, and second, it yields heavily with its many broad leaves and substantial stalks. As an ensilage crop many acres are planted to Hegaria every year in the South. As a pasture crop, in thickly seeded plantings it pastures well and also makes good hay. Its largest use is in bundle feeding and it can be left shocked in the field until fed, or as is coming into more general practice, it is ground head, stalks and leaves through a hammer mill. Hegari makes a good substitute crop for corn, which it out yields on light soils, and it can be planted much later. Prices: lb. 30c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.15; 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

## WYATT'S RECLEANED MILLETS

**F185 Golden Millet** German or Golden Millet makes a quickly grown, easily cured and large yielding, nutritious hay crop. Seed thickly, not less than 50 lbs. to the acre, from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Prices: lb. 30c; 5 lbs. 80c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

**F186 Pearl, or Cat-Tail Millet** One of the best and most nutritious of the continuous cutting green forage plants. Grows 8 to 10 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during the season. It does well even on poor land, and surprisingly well in dry seasons. Plant April to August, 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: lb. 45c; 5 lbs. \$1.45, postpaid. Not prepaid, 10 lbs. \$2.20; 25 lbs. \$5.00; 100 lbs. or more at 18c lb.

F146 Soy Bean, Ogden

## SOY BEANS

**CULTURE:** Soy beans may be planted either broadcast or in drills. They grow equally well on light and heavy soils, but on heavy soils they should not be planted more than 1 to 1½ inches deep except in dry season. On light sandy soils plant deeper, but not more than 3 inches. Plant in April, May or June. Such large seeded varieties as Mammoth Yellow require 1 bushel or more per acre, whereas Laredo small seeded kind only require 1 peck to the acre.

**F146 Ogden** Ogden is considerably earlier than most beans and is consequently better adapted to rotations with small grains. Seedlings as late as June in the Wake County trials made a substantial production of hay. Average bean yield for 6 tests at scattered points in the state during 1943 was 27.8 bushels per acre. Plants are nicely branched and for that reason are more desirable for hay than the coarser growing types. Prices: 2 bu. bags \$4.15 per bu.

**F150 Volstate** A yellow seeded variety producing high yields of good oil beans. Plants are somewhat taller than Ogden and slightly less branched. For a hay crop or a crop that might be optional we would recommend Ogdens, but for a crop planted on light land and for combining we would recommend the Volstate owing to the height of the plant and the fact that the beans are somewhat bunched on the plant. Prices: 2 bu. bags \$3.85 bu.

F304 Crotalaria, Giant Striata

**F151 Virginia** It is about twenty days earlier than Mammoth Yellow. The vines make a fine growth, are filled with pods, stand about three feet high, are easy to cut and easy to cure. Prices: 2 bu. bags \$3.85 per bu.

**F140 Wood's Yellow** A strong upright growing plant producing a heavy crop of beans. This variety is suitable for sowing thick for hay, or planting alone or with corn for grazing. One of the best varieties for bean production and the beans are readily accepted at the crushing mills. Late maturing. Packed 2 bushels. Write for prices.

**F147 Tokio** A heavy producer of extra-large pods and beans. Packed 2 bushels. Prices: 2 bu. bags \$3.85 per bu.

**F142 Otootan** Its late maturity is more than overcome by the abundant growth—five feet and more in long seasons—its fine stems and abundant foliage, and the fine texture of its hay. 1 peck to acre. Write for prices.

**F152 Laredo** A bean of outstanding worth, particularly for making hay. In a six-year test it averaged 1½ tons to the acre. It is medium in maturity, is a good yielder of beans. 1 peck per acre. Write for prices.

**F141 Roanoke (Certified)** A new bean developed in the N. C. Experiment Station, U.S.D.A. Coöperating. Bean yield is higher than other popular varieties and the oil content of the beans is higher. Prices: 2 bu. bags \$4.50 per bu.

Spanish, North Carolina Runner or Virginia Bunch in the Southern Coastal plains and counties bordering the Piedmont using Spanish, Tennessee Red, or North Carolina Runner if in doubt as to the ability of the soil to make the larger varieties. In the Piedmont the Spanish variety is recommended. Smaller varieties produce more oil per ton of nuts, however, on adapted soils the larger nuts produce more oil per acre. Use 35 lbs. small varieties; 45 lbs. large varieties (shelled) per acre. Buy 1-3 more nuts by weight in the shell for the desired amount of shelled nuts. Field tests show 27 per cent increase in yield when seeds are treated with Arasan. Average of 22 tests conducted in North Carolina showed \$16.43 per acre increase return where peanuts were dusted 4 times with sulphur-copper dust, after deducting the cost of dusting.

### HOW TO USE DILUTION TABLE

This Dilution Table indicates the quantities of any given spray material to add to a given quantity of water to give the desired dosage (strength) of spray.

All liquid or semi-liquid materials are proportioned directly on a liquid basis, i. e., 1 to 100 dilution indicates that one gallon of spray material should be diluted with water to make 100 gallons of diluted spray (or three tablespoonfuls to make one gallon of diluted spray).

Dry materials such as Lead Arsenate or "BORDO" are proportioned by mixing a given number of pounds of spray material with water to make each 100 gallons of diluted spray. To aid in mixing, the table shows the smaller quantities of dry materials in convenient household measuring units.

NOTE: When two or more spray materials are combined in one spray mixture the same water is used to dilute all the materials.

## FARM EQUIPMENT . . .

### COMPLETE LINE OF POWER-PLUS TRACTORS

Built in sizes to meet the needs of every farmer. No. 20, No. 30 Junior and No. 44 in Row Crop and Standard Tread usually in stock.

### GRAIN AND FERTILIZER DRILLS

Two drills in one. A combination grain and fertilizer drill. A double-run positive force feed insures an even accurate stand and maximum yield under all conditions, with any kind of seed. Strong main frame. Large, built-in, combination hopper.

### CLOSED END LEVER HARROW

There are no bar ends to catch on trees or posts when working near fences. Of ample strength, this harrow is flexible enough to render the most satisfactory field service. Each tooth bar hinges perfectly for angling or following the lay of the land. 50, 60 and 70 tooth sizes carried in stock.

### NO. 11 TWO-WHEEL SPREADER

2 Wheel Spreader for Tractor and 4 Wheel Spreader for either Tractor or horses can be furnished with steel or rubber tires. Spreaders are built low for easy loading and have wide spread.

### FAMOUS MASSEY-HARRIS SELF-PROPELLED COMBINE

A seven foot self propelled combine meets the needs of this section, as it operates easily in small fields. A limited number will be available for 1948.

### TRACTOR-DRAWN CLIPPER

Tractor-drawn Clipper Combines can be furnished in 6 and 7 feet cut, with power take-off or auxiliary engine.

**Remember,** No matter what type of equipment you are looking for, small or large, you'll find it pays to see what Massey-Harris has before you buy. Massey-Harris builds a complete line of Tractors, Combines, Forage Clippers, Plows, Cultivators, Semi-Mounted Mowers, and other implements for more profitable, easy farming.

### NO. 31 TRACTOR DISC HARROW

A strongly built harrow that is easily controlled from the tractor. Hard maple bearings insure long life and reduce friction. Provision is made to take up end thrust in gangs. This harrow draws lighter and there is less wear on the standards.

# PLANET JR. TOOLS

You cannot afford to till the ground without Planet Jr. tools. They not only save hard labor, but enable you to cultivate double the acreage in the same time, and thus add over 100 per cent to your crop yield. Invented by a practical farmer and manufacturer—the result of fifty years' experience. Strong lasting construction. Fully guaranteed.

## NO. 4—COMBINED HILL AND DRILL SEEDER AND SINGLE WHEEL HOE

The small grower should select one of the combined machines. The drill attachment will not be used as often as the hoeing and cultivating tools, but will be a source of much saving. This machine is a special favorite. There are probably more of them in use in the world than any other seeder made. As a Hill and Drill Seeder it opens the furrow, deposits the seed, covers it and rolls it, either in drills or hills. Holds 2½ quarts. Price: \$27.95. No. 4-D. Seeder only, no cultivating attachments. Price: \$22.35.

No. 4 Planet Jr. Combined Hill and Drill Seeder and Single Wheel Hoe

## NO. 9—PLANET JR. HORSE HOE AND CULTIVATOR

Weight 70 lbs.  
Price: \$24.65

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price: \$21.95.

## NO. 12—DOUBLE AND SINGLE WHEEL HOE COMBINED

No. 12 Planet Jr. Double Wheel Hoe

The arch is high enough to straddle a row until plants are 20 inches high; this insures close work. It can be altered into an admirable single wheel hoe for working between rows. Prices: \$17.25.

Send for Complete Planet Jr. Catalog

## NO. 4-D—PLANET JR. PLAIN CULTIVATOR

Weight 49 lbs.  
Price: \$15.25

This tool is strong and simple. It has patent handle braces; very firm, simple and convenient. With them the frame and handles seem almost like one solid piece. Changes in width are quickly made by loosening one nut on each side, and one side may be opened wide, while the other is closed. An everyday all-day tool.

## NO. 16—SINGLE WHEEL HOE

Designed to do all work required in the small garden; plowing, cultivating, hoeing and raking. It is very light, and can therefore be easily carried about. Price: \$13.65.

No. 16 Planet Jr. Single Wheel Hoe

## NO. 100-D—PLANET JR. PLAIN CULTIVATOR

We offer this Cultivator with the object of filling a definite need where lands are light or where farming is done on a modest scale. It weighs but 42 pounds. It will stand hard usage and do excellent work. A steady running tool and easy to handle and adjust.

Price: \$13.25  
Weight 42 lbs.

## NO. 19-R—SINGLE WHEEL HOE

A medium priced wheel hoe with all the attachments necessary for cultivating a small garden. Price: \$8.80.

NO. 19—SAME AS ABOVE LESS RAKE, PRICE: \$7.70.

No. 19-R Planet Jr. Single Wheel Hoe

## NO. 90—PLANET JR. TWELVE-TOOTH HARROW, CULTIVATOR AND PULVERIZER

Price, complete with steel wheel, \$27.50  
Weight, packed, 74 lbs.

This tool is a special favorite with strawberry, tobacco and sugar beet growers, market gardeners and farmers, because of its twelve chisel-shaped teeth. The teeth and pulverizer leave the ground in fine condition. Cultivates any width from 12 to 32 inches.

NO. 90-B. Without pulverizer, \$22.95.

NO. 90-D. Without pulverizer and wheel, \$18.25.

NO. 92-D. Without pulverizer, wheel or lever, \$16.25.

## NO. 220—PLANET JR. FERTILIZER DRILL

The No. 220 will distribute fertilizer in the middles of three rows 12 to 14 inches apart; it will side-dress one side each of two rows up to 36 inches apart (one complete row; and corn in wider rows). You can use it in very narrow rows—as close as 9 inches. You can use it in 42 to 48-inch rows by closing off the flow in three spouts and distributing through the other three—either on the right or left hand side.

The No. 220 spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel, making it easy to push. The No. 220 will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Quantity per acre is regulated by a notched index on the right hand handle. The shut-off rod is operated from the same point.

Price: \$41.75

# Wyatt's Lawn Grass Seeds

A smooth green lawn is your home's greatest beauty asset. Deep, thorough preparation, proper fertilization and good seed are the most important steps toward a successful lawn. Read "10 Steps in Lawn Building," then select the mixture below, most suited to your needs. The results will please you.

## Wyatt's Carolina LAWN GRASS MIXTURE

**F-60. WYATT'S CAROLINA MIXTURE** of lawn grass seeds is an improvement on all the better mixtures offered heretofore at comparative prices. Our constant experiments have taught us just what grasses are best suited for eastern and southern states. The finest seeds of these varieties are carefully re-cleaned and blended into our Carolina Mixture so as to give the very best results obtainable. Sow 6 lbs. per 1000 sq. ft. **Prices:** 1 to 4 lbs., 55c per lb.; 5 to 24 lbs., 50c per lb.; 25 to 99 lbs., 47c per lb.; 100 lbs. or more at 45c per lb., delivered.

## Wyatt's Colonial LAWN GRASS MIXTURE

**F-58. WYATT'S COLONIAL MIXTURE.** The continued demand for a mixture of the finer leaved grasses has led us to prepare this Colonial Mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher, only a fraction of the quantity required of other grasses is required of the **Colonial Mixture**, leaving very little, if any, difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 3 lbs. per 1000 sq. ft. **Prices:** 1 to 4 lbs., \$1.00 per lb.; 5 to 24 lbs., 95c per lb.; 25 to 99 lbs., 90c per lb.; 100 lbs. or more at 85c per lb., delivered.

## Wyatt's Sunny South LAWN GRASS MIXTURE

**F-59. WYATT'S SUNNY SOUTH MIXTURE.** For lighter soils and soils that become extremely dry, and in locations subjected to extreme heat during the summer months **Wyatt's Sunny South Mixture** of lawn grasses is recommended. The grass varieties used on golf greens over the entire South predominate in this mixture. Only the purest stocks are used. Sow 6 lbs. per 1000 sq. ft. **Prices:** 1 to 4 lbs., 80c per lb.; 5 to 24 lbs., 75c per lb.; 25 to 99 lbs., 72c per lb.; 100 lbs., or more at 70c per lb., delivered.

## Wyatt's Shady Nook LAWN GRASS MIXTURE

**F-61. WYATT'S SHADY NOOK LAWN GRASS.** A carefully blended mixture of grasses best adapted to shaded situations. Use 6 lbs. per 1000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional applications of agricultural lime should be made at the rate of 5 lbs. per 100 sq. ft. **Prices:** 1 to 4 lbs., 65c per lb.; 5 to 24 lbs., 60c per lb.; 25 to 99 lbs., 57c per lb.; 100 lbs., or more at 55c per lb.

**F-49. HIGHLAND BENT.** Not recommended for the South. Under favorable soil conditions in moist, cool places a beautiful velvety green sod, of the finest texture, is produced. Sow 3 lbs. per 1000 sq. ft. **Prices:** 1 lb., \$1.40; 5 lbs., \$6.25, postpaid. Not prepaid, 10 lbs., \$11.75; 25 lbs., \$28.75; 100 lbs. or more at \$1.10 per lb.

**F-48. BERMUDA.** Thrives best on rich, loamy soils but will grow anywhere the soil is not too tightly packed. The surest variety on soils exposed to full sun. Used on all golf greens in the South where it responds beautifully to close clipping, ample watering and feeding. Sow 4 lbs. per 1000 sq. ft. **Prices:** 1 lb., \$1.40; 5 lbs., \$6.50, postpaid. Not prepaid, 10 lbs., \$12.00; 25 lbs., \$28.75; 100 lbs. or more at \$1.10 per lb.

**F-37. HULLED BERMUDA.** You buy only the fine seed kernel itself in this pure, hulled Bermuda seed. Should be used only after the soil is warm in the spring and because it germinates much quicker it may be seeded later in summer. Sow 2 lbs. per 1000 sq. ft. **Prices:** 1 lb., \$1.95; 5 lbs., \$9.00, postpaid. Not prepaid, 10 lbs., \$17.00; 25 lbs., \$41.25; 100 lbs. or more at \$1.60 per lb.

**F-51. CARPET.** Beautiful, dark green, flat growing grass of spreading habit and excellent for the law, moist soils of the coastal areas. Tolerant to shade. ## Ten Steps in Lawn Building

- 1—Break or plow deep, with subsoil or similar plow to prevent burying top soil—then level or grade as needed.
- 2—Apply the equivalent of 3 heavy, green cover crops or 3 inches weed free manure or both if available.
- 3—Apply lime as needed up to 50 lbs. per 1000 sq. ft. and fertilizer, 40 lbs. per 1000 sq. ft.
- 4—Pulverize and smooth surface.
- 5—Seed 6 lbs. Carolina, Sunny South or Shady Nook, or 3 lbs. Colonial mixture per 1000 sq. ft., between September 1 and March 1.
- 6—Soak thoroughly but slowly to avoid mowing seeds. Keep moist until grass is up. Soak occasionally during dry periods.
- 7—Mow Bermuda and rye grasses close and often; Blue grasses and fescues no closer than 2 inches nor more often than necessary, particularly during hot, dry seasons.
- 8—Compost clippings with liberal amount of sand and return to lawn in light applications as mulching during summer.
- 9—Feed at 6 to 8 week intervals from February through November with 20 to 40 lbs. per 1000 sq. ft., high grade fertilizer or 50 to 100 lbs. per 1000 sq. ft. sheep manure, or both. Always sprinkle after feeding.
- 10—Apply additional seeds as needed with regular feedings.
