

1904

Cambria, Mass.

1904

Jan. 14

Clear, light, clouds breaking down after week's work.

Temperature at 7.30 A.M.

This morning at 10.15 I walked to the foot American of Sparks St. Charles River is frozen over, with a ^{Merganser} _{Charles River} large opening in the ice just opposite the foot of Sparks St., and a smaller hole some eighth of a mile below. I saw a few Whistlers (*Clangula S. americana*) diving in the larger hole and then I walked down toward the other one. There I saw a few Whistlers and a flock of six American Mergansers, feeding. As I came into the Park-way to get nearer, the Mergansers left the hole leaving the Whistlers behind and flew upstream dropping into the larger hole at the foot of Sparks St. They made a beautiful sight as they flew past me with their long necks stretched out before them. I returned to the former station and with my glass, watched them for some time. One was a full, adult male in magnificent plumage, the others all with rufous brown heads, the feathers rising crestlike from the top. They sprang forward as they dove, describing a beautiful curve as they disappeared from sight. I finally left them still feeding -

Cambridge Mass

1904

Jan. 17

Clean, strong wind, mercury at 8 AM. American
 I walked down to Charles River this morning ^{Megapode}
 at 10 o'clock. In the open hole at the foot of ^{Charles River}
 Sparks St. were two or three Whistlers. There
 was nothing in the lower hole - I then took
 the path along the Parkway up river and found
 that there was an open space in the air just
 above the enclosure dedicated to Leif Erikson's
^{full of megapodes} house. I had my strong field glasses and
 approaching as near as I dared, for the birds, clean
 in number were getting restless, I examined them
 for some time. There were a flock of American
 Megapodes, two of them being fine adult males.
 One male, facing me, rose on his tail, and
 flapped his wings showing the pure white
 lower neck, breast and upper parts and sides.
 Nine of the birds had rufous-brown heads. As
 I was a few hundred yards away and the wind
 was strong & cold I could not see the Salmon
 color in the old males. As I attempted to
~~get~~ nearer the birds all swam to the farther
 end of the pool from me. It was then a
 beautiful sight to see them rise. In order to
 face the wind they all turned about, and sprang
 from the water, and shot across the pool ap-
 proaching me to me. They having got head-
 way they quickly veered around and scattered over
 the marsh. I did not see them alight. As the
 two adult males passed me, I could see the
 unbroken white from neck to tail be health. It
 was a rare sight.

Cambriore, Mass.

1904

Jan. 24

Clear, nids.

The river is frozen, and the hole at the foot of Spark St., is much smaller than usual. I walked down there about noon today and Charles W. saw a pair of Amer. Mergansers, in fine ad. plumage. They kept close together and were very near, so that with my field glasses the delicate salmon tint on the sides and under parts of the male was plainly visible. They were as near again as when I saw them there formerly. Every feather stood out with distinctness and I watched them for fully ten minutes. The mate, presumably a female, raised the long head feathers continually, especially after emerging from the water. They were busily engaged in diving. At last they rose and separated the female flying up over the land, the male going up silex and dropping in the hole just above where were some two dozen Gulls. Once when the male rose on the water and flapped his wings he showed the salmon breast to perfection.

1904

Jan. 31

trip to Moon Island, Boston Harbor, Mass.

Wearing a little above freezing, saw deep over the ground. Clear and calm.

This morning George & I took the 10:15 Am. train South Station to Atlantic to see the birds off Moon Island. We met Dr. & Mrs. Charles W. Brown and two daughters on the train, going to the same place. At Atlantic we took the electric for Squalicum, but the car only went a very short way, as the tracks are blocked with snow. So we walked a long mile on the snowy road to Squalicum and another long mile over the Causeway, connecting Squalicum & Moon Island, to the Pumping Station where one hour after flood tide the sewage is emptied into the harbor. From this point is a fine view over the harbor, Point Flory being visible on the north shore, with the intervening islands, and the vessels lying at anchor far out. The vast stretches of salt marsh are now covered with ice and snow and men were seen scattered over the surface, engaged in spearing seals. At the Pumping Station the bay was clear of ice and close in front of us, Herring Gulls were swooping over the water, picking up bits here and there, for the gates had been opened and the immense sewage tanks were emptying. We were a little late for the immense number of Gulls that collect there, but we saw several hundred.

The most interesting sight to me was an *Oystre Manila* very large flock of Water Scops Ducks that off Moon Is.

Trip to Moon Island, Boston Harbor, Mass.

1904

Jan. 31 were landed a mile distance off the shore - They
 (2) were several hundred of them and with my
 field glasses I made out distinctly the males
 and females. At intervals a flock would rise,
 and fly towards us with wonderful speed,
 turning, wheeling and dropping in the wind.
 Sometimes quite near, I could see very
 markings distinctly, the blue bills showing clearly
 through the plumage.

Some Buffleheads were floating off the shore ^{*Chenonetta*} *albula* ^{imm. 4th.}
 a little farther in - I saw three adult males in fine plumage, while three darker
 birds with them were, I presumed, of the
 same species.

We saw about two dozen Horned Larks ^{*Otocoris alpestris*} on the shore running about in the snow and moon 4th.
 in places close to the water, hunting for
 weed seeds and bits of food. I was very much
 interested in watching these pretty creatures with
 these little black tufts for ears a horn. The dead
 stalks of the Evening Primrose and
 were standing up through the snow and the birds were
 very abundant about where the Larks had run
 from one cluster of stalks to another and around
 the stalks the prints were very numerous.

After an hour's wandering & trawling we walked back
 and returned home by electric. The Towns end left earlier.
 We saw to day *Larus marinus* ^{one wash'd & worn} ^{5 or 6 ft.} *Larus argentatus* ^{several hundred} ^{Imm. 4th.}
^(3 or 400) *Aythya marina* ^{abund.} ^{Imm. 4th.}, *Clangula canus* ^{3 or 4} ^{Imm. 4th.}, *Chenonetta albula* ^{Imm. 4th.}, *Chloephaga picta* ^{abund.} ^{Imm. 4th.},
Otocoris alpestris ^{abund.} ^{Imm. 4th.}, *Cornis canus* ^{no ad.} ^{Imm. 4th.}, *Actitis macularius* ^{4 or 5} ^{Imm. 4th.}, *Picus atricauda* ^{Imm. 4th.},
Regulus satrapa ^{abund.} ^{Imm. 4th.}, 11 species.

Sleighbells in Cambridge, Belmont & Waltham, Mass.

1904

Feb. 21

Clear, still, nippy, mercury 43° -

For the fourth time this month the mercury has gone above 32° - The sun is piled everywhere and the various snow storms of Jan. & Feb. have fallen on the unmetalled sums of the previous storms -

Gray & I took a sleigh ride this morning on Concord Ave. to Belmont, Waverley and some two miles on the Trapelo Road, returning the same way, except from Belmont where we followed School Street & Huron Avenue. The air was mild, sleighing fine, and the country is covered with masses of pure white snow. We saw a few birds:

Coturnix curruca leucomelas, two or three.

Colinus virginianus, five or six here & there.

Spiraea monticola, a dozen or more in the shrubbery on the west side of Freshfield by the road.

Thelospiza cinerea melodia, a single bird in the shrubbery with the tree Sparrows, Cambridge. It was close to us and was very active.

Junco hyemalis one or two.

Pinicola enucleator leucurus, I saw in the ash trees by the road on Concord Avenue, Cambridge near the Belmont line, a gray and a red bird eschewing Keys - The red was in fine plumage, and I viewed him in all directions from very near.

Lanius borealis, one bird on tree top, Waltham.

Parus atricapillus, several here & there.

Cambridge Mass

Max & min. thermometer hung from my north end star outside the window, not touched by the sun. The record on my best thermometer shows a rise in viscosity in about 2° lower. Deep snow all through the month and driving snow storms with continued cold.

Temperature. Min. = minimum of previous night. Max = maximum during day

'The Dine'

Cambridge, Mass.

written by R. T. Bigelow and read at the
The Dine at his house, Mar. 23, 1904.

Walter Deane.

Now dont you tell me, Walter Deane,
That boasts like these you've never seen.

For it was you who saw them rush
Around that famous Button Bush.

Although you modestly disclaim
Your rights to ecologic fame.
You were the first of all botanic
workers
To show Symbiosis' twixt plants and porkers

1904
Apr. 24

Beaver Brook Reservation, Belmont, Mass.

clear, cool, calm. Maximum temperature
The buds are just beginning to open - On the 21st of April, but three days ago, a remnant of ice still remained on the stone slab by the side door of the Brewster's house. I spent a couple of hours this morning in the reservation at Beaver Brook, I saw all my birds in the lower half or just outside where the brook begins to run through swamp ground - I saw the following:-
Flicker, seen & heard calling
Sayornis phoebe, heard
Cow, several
Meadow Lark, heard (Cawing)
Grizzled Tackle, numerous
Rush - in a flock of about twenty back of the Kane, they were very noisy.
Red-wing, numerous
Savanna Sparrow one.
Chipping - " heard one.
Song - " seen & heard, several
Swamp - " saw one.
Tee - " a few.
White bellied Swallow, saw a three
Yellow-capped Warbler saw & heard two or three.
" palm - " one.
Pine - " heard ".
White-breasted Nuthatch saw one.
Blue bird. Heard several
Robin. Saw several.

19 species.

Southland

Spotted Towhee

Korim

Red-shafted Flicker

On road between Hawea and Lake Dunstan
Spotted Towhee

Brewsteria magnifica, W. Deane.

[absent] man-of-the-earth; bird-on-the-wing; nimble will.
old wood, Concord, Mass.; Bethel & Lake Umbagog, Me. Rare in
cultivated ground except in Cambridge, Mass., where it has become
well established - Coll. Edward L. Rand, April 27, 1904,

I received the following joker from the fellows.

Batchelder. - A copy of "Harvard Celebrities" with
the following insertion "Of all the sprightly fig-
ures that adorn this festive scene

The most supremely
jewel is our beloved Dean [e]' [For some
of this misquotation, see p.] With all good
wishes for many happy returns - C. J. B."

Goodale. - A small basket containing a rolled up
Selaginella that opens when put into water.

Jackson. - A small basket containing two doves

Jeffries. - A toy owl with this inscription:
"Good evening. May the passing years bring
happiness.

Wisdom I typify, but, if you read me truly,
wisdom spiced with fun, or mischief if
you will.

I once, in Concord town, did utter such
unearthly noises, that learned ornithologists
were truly startled, not dreaming that a
sweet singer of such note as I, would
fright them in sheer sport.

What do you think of me? Alas I'll
never know, for "Speech was given to man
to conceal his thoughts."

Rand. - A little book "Little Black Santa". A wee pig.

Spelman. - A dancing pig on a box. By pressing a bell, the pig dances.

Thaxter - A box of dates marked "Natal Dates".

The following verse accompanied it :-

"Had I but known 'ere 'twas too late
That on this night we'd celebrate
The coming of your Natal Date
I might have brought what you would
deem
A fitter token of esteem."

Yet though I've found it over heard
To show the depth of my regard
May a kind fate o'er you keep guard
And many years of happiness and ease
Bring you a multitude of dates like
these."

Townsend. - A Noah's Ark tree covered over with buttons, and some little pyramids on it. This typified The Button Bush. The verse accompanied it:

"To Walter Deane on his - Birth-Day -
Health to the Master of the Club We-Dine,
The Bolano-ornithologist without repine,
Author of "How to Know the Wild-flowers from the Birds";
A man who never does a thing by thirds.
Although among us no president is seen,
We have at least our great and glorious Deane."

Herbarium of Walter Deane.

Deanea Walterdeanea, E. G. Britton

Ladies'-Delight
Bird-in-the-bush.

Cambridge. Introduced by William Brewster into his garden, and from thence spread everywhere by agency of birds and animals. Root enormous; seedlings variable.

Coll. Edward L. Rand April 27 1904

{ by E. L. Reed, sung by him at the
Wm Deane's Coff. 27/4/04 at his house
in honor of my birthday - W.D.]

If you ask ^{me} why are these flowers
Spread on the festive board.
It is in glad observance
Of what you will applaud,
For it is the birthday of a
friend.

You all know whom I mean,
viz Tis the botanist-ornithologist
Wm Walter, Walter Deane.

How he loves the birds and flowers
And likewise animals:
His speech is like Will Shakespeare,
His face is ~~wanting~~ ^{the} father in smiles.
Enthusiasm is his joy
We ~~know~~ ^{know} it well, I ween,
viz botanist-ornithologist
Wm Walter, Walter Deane.

=
Long life to our companion
To whom we make this feast,
Beloved by man and woman
And insect, bird, and beast.
Then fill your glass up to the brim
Let no heel-taps be seen,
viz To the botanist, ornithologist
Walter, Walter Deane.

Who was it had a nice birthday -
 And had of gifts a great display
 And went home grinning in a shay?

[E.L. Rand, Apr. 28, 1904]

Our Walter.

Good evening. May the passing years bring happiness.

Wisdom I typify, but, if you read me truly, wisdom spiced with fun,
 or mischief if you will.

I once, in Concord town, did utter such unearthly noises, that learned
 ornithologists were truly startled, not dreaming that a sweet songster
 of such note as I, would fright them in shere sport.

What do you think of me? Alas I'll never know, for "Speech was given
 to man to conceal his thoughts."

[An Owl was present to me - the Concord story refers
 to Mr Brewster being puzzled by a strange noise
 recently, that turned out to be a Screech Owl. V.D.]

Wat Jeffries
 Apr. 27/04.

To Walter Drane on his - Birth-day.

Health to the nests of the Club, We-Dine,

The Boston-ornithologist without refine,

Author of "How to Know the Wild-flowers from the Birds,"

A man who never does a thing by thirds.

Although among us no president is seen,

In him at least our great and glorious Drane.

"The One" - by C.W. Townsend - Apr 27/04

[A lot of salts was present.]

W. D. from R. T.

Had I but known 'ere 'twas so late
That on this night we'd celebrate
The coming of your Natal Date

I might have brought what you would
deem
A fitter token of esteem.

Yet though I've found it over hard
To show the depth of my regard
May a kind Fate o'er you keep guard
And many years of happiness and ease
Bring you a multitude of Dates like
these

by Roland Thayer
Aug 27/04 -
at the "Be Dine"

"Of all the sprightly figures that
adorn this festive scene
The most supremely genial is our
own beloved Dean[er]."

[For source of this misquotation, see p.]

Drive through Belmont, Mass.

1904
May 1

Cloudy, cool wind east,

Grace & I drove this morning to Belmont & Waverley and past the Reservation, up Marsh St. first way and then on toward E. Lexington, returning much the same way - The air was cool and fresh. The grass is green and the trees in some cases are getting a flush of color but in many cases the buds have not opened. We observed the following birds: -

Larus argentatus 200 or more rising over Fresh Pond.
Cedrospis a. culicivorus. A few seen & heard.

Corvus americanus several

Motacilla alba a flock of about 6 by the road. 33578
Cetzia phoenicurus numerous

Turdus migratorius heard in 3 or 4 places

Passerella iliaca savanna one seen

Spizella socialis abundant

" pusilla 2 or 3 heard off Marsh St.

Philospiza e. melodia frequent

" georgiana 2 or 3 (sic) Fresh Pond swamp (Maple Woods)

Passer domesticus frequent

Iridoprocne bicolor 4 or 5

Hedychrum coronata abundant, Hill to Stevens Ave. following.

" b. palmarum saw & heard many a " "

Picus atricapillus a few

Merula migratoria frequent

Sialia sialis a number heard.

18 species

To Elms, Maine

1904

May 4. Very hot day, maximum temperature 81°.
Mr. & I met Robt. hood at the North Union
Station this P.M. and took the 4.15 train
to Elms reaching there after a horride
at 6.52. Robt. maid Alice. went with us.
We had a delightful drive in the cool of the
early evening to the house. It is hard for
Robt. to begin the summer here alone.
We have the room over the parlor, large &
ample. We three sat down to a heart-
lupper and spent the evening talking
and reading. The stars are brilliant.
Birds observed in Elms:-

Melospiza c. melodia hd.

Merula migratrix hd.

Elms, Maine

1904

May 5 Sunny & the clouding up in Peler. Strong west wind, dying away at sun down. Temperature 81° at noon, but the wind made it pleasant.

In spite of the temperature and wind it has been a beautiful day. It is strange to be here so early, the trees are budded tight, though the elms & red maples are in flower, the grass is green in places, but the cattle will not be turned out to pasture before the end of the month unless they are put out for fresh air. The field in front of the house, left of the path is ploughed for corn for the silo. The ears are sunning themselves in the yard and the sheep and lambs are feeding in the sheep field. This morning we wandered over the place inspecting the buildings and the stock. I took a few snapshots with my new Kodak (Folding) 1A. The wind was too strong for the use of a tripod. This afternoon we three drove down to the main Wells road and then walked over Cole's Hill through the Little Pines. Rob took us to a beautiful patch of Hepatica triloba growing in a bit of rich damp soil well shaded. They covered a space some twenty feet across with more plants scattered beyond. The color varied from pure white to the deepest lavender. Rob dug up some to plant by the house. Mr Taylor met us later and took us home. Dinner or rather tea is over. It is mild & pleasant and the Hydras are very noisy. I weigh w-day just 168 lbs.

1904

Elms, Maine

o = in a flock r = flying

May 5th Birds observed today within 2 miles of the house:-

- (2) 1. Buteo lineatus? (3) or seen from the piazza flying between me and the beach. This is the Buteo here
2. Accipiter velox. Seen twice near the house r
3. Sayornis phoebe 3 or 4
4. Colaptes a. lateralis 2 or 3
5. Cornus americanus a large flock r over the marshes
Single birds here & there
6. Aythya fuligula. about 12 flying past the house.
7. Spizella Socialis 10 or 12
8. Melospiza c. melodia hd at 7.30 AM.
9. Pooecetes grammurus hd one singing fairly 6.30 AM.
10. Droppus fuscus. I was much pleased to see three
fine males at the two bird houses - They have
been singing finely. They utter 3 or 4 chirps fol-
lowed by a regular trill and then is often re-
peated - On the wing they utter quite a
different note, a sort of peent.
Mr. Farlow says that they appear first on
April 19 when he saw two. On May 3
he saw nine -
11. Dendroica virens. hd in pine woods.
12. Fitta carolinensis saw one -
13. Hippophae bicornis about six round the trees
14. Hirundo erythrogaster a few about the barn
15. Zonotrichia umbellata one in north woods, seen
16. Lanius phoenicuroides 2 or 3 at the docks.
17. Merula migratoria several

Eldus Maine

1904

May 6

Clear air crystal all day, very cool, breeze off the water.

It has been an ideal day. This morning as Rob was busy Mr. + I walked down to the beach and some distance down it. The views were superb. The tide was low and the water blue and the broad expanse of beach and blue sky all made a fine effect. I exposed a number of plates at different places, the pt back to dunes. This afternoon I wandered about the place and accompanied Rob over the golf links. We then went down into the woods near the boathouse and found some Dogtooth violets in bloom. Miss Ruth Whitney arrived this evening to stay till Monday.

Birds Observed today.

Larus argentatus about 25 off beach.

Flores sp. 1 on beach

Ducks off the "

Circus hudsonius ♀ + one field very near me.

Accipiter velox saw one twice near house

Corvus americanus a few

Cyclurus pectoralis (12) ♀ in trees near house.

Spizella breweri a few ♀

Pooecetes gramineus 1 ♀

Ammodramus s. savanna 1 ♀ seen on dunes,

Melospiza s. melodia 1 ♀

Progne subis 5♂♂ 1 ♀ about tops

Hippolais laticilla about tops

Hirundo erythrogaster a few. Hemeroc. m. second

Ebens, Maine.

1904

May 7

Clear Am., thin clouds in Pm. S.E. breeze off the water, air temperatn. cool, mercury last night reached 43° .

This morning we walked through the bang, photographed the cows, Belted Knight (the young bull), and other objects and later drove over Cole's Hill to George P. Rike's, where we fed Cened the horse and went into the woods and followed the banks of Little River through a most lovely region. The stream was tumbling merrily over the stones and was quite full. Mayflowers were abundant in places and we filled a basket with them. In one place we came upon a large Wood Turtle *lentiginosus* that measured 8 in. by $5\frac{1}{2}$ in. I don't remember seeing one in the wood before. Returning to Mr. Rike's we were entertained in his barn by him & his relative, a lady and in 9 truck. They showed us a lot of old relics, charms, Indian implement etc. Mr. Rike was in the Civil War and he gave me one of his cartridges that he brought back with him. It has the strip that was pulled off with the teeth — Home to dinner.

This Pm. walked with M. to the hill. Rob & Miss Melvin, went ahead. We met there. The water is high and the view very beautiful.

Cape along (R.W.Had) 4 mi.

Birds to-day:-

Accipiter velox. 1 flew against the big birches (in) to eat a Martin.

Corvus caurinus a few Phalacrocorax carolinus 2* Hirundo rufiventris numerous in ground

Spirochelus socalis, frequent Progne subis, as yesterday Colaptes satanas 3

Pooecetes gramineus 1* Himantopus erythropus a few Trochocercus tenebris

Motacilla flava 1* Zosterops japonicus a few Spizella breweri numerous at Pikes. Dendroica coronata 1*

Eelms, Maine

1904

May 8

Clear with light clouds in P.M., cool, breeze over the water -

This morning Rob & Miss W. went into the woods for Erythronium. H. & I walked to the beach and went south some distance as far as "The Hump" as we have christened the high bank of sand from where I took a picture on the 8th (Frig.). I took a snap with my Kodak, No 1 S., to day from this point. I also took a few more pictures of the water, bluffs, etc. Then we walked to the mouth of Little River, where I took a couple ~~of~~ connecting pictures. On our return we met Rob & Miss W. and we all went to the mouth of Little River through the fields. In the woods the Erythronium was very abundant and we picked large bunches. I took the group with the dogs, Bat & Ruff. Home to dinner. This P.M. Rob, Miss W. & I took a beautiful drive into the country. The last warm days have started the buds and a flush of green is very visible. On our return I called on Will Hill and enjoyed hearing him talk. He lives close by the doors here and is an original Yankee.

I saw to-day some arrivals, Yellow Warbler, Blk. Throated Green Warbler. & I will incorporate to-day's birds in my list of those seen during this visit -

We return home tomorrow morning.

Hear today -

We all returned to Boston by the early train.

May 9

Wells, Me.

1904

May 4-8 Birds observed between May 4 & at the Elms Farm
Wells or on drives in Wells. Some 2 miles distant.

- 1 Larus argentatus. 6²⁵ beach 8⁽²⁰⁾ mouth of Little River -
- 2 Ducks sp. a dozen or more seen off the beach under 6th. They looked like Black Scotters.
- 3 Actitis macularia 8' on drift in Little River, inland.
- 4 Plover sp. 6' on beach & large -
- 5 Zonotrichia umbellata 5' woods north of house -
- 6 Circus hudsonius 6¹ pasture near Summer house
- 7 Accipiter velox 5⁴ 6¹ 7¹ near the house. On the 7th it flew and clung against the big bird house, in its efforts to get a Martin or Tree Swallow. It soon flew away -
- 8 Buteo lineatus? 5⁽³⁾ low, pasture opp. house.
- 9 Cecropia alcyone 7¹ (by rice) (R.W. Land)
- 10 Dryobates p. medianus 8'
- 11 Colaptes a. luteus 5² 3³ 7³
- 12 Cathartes pelagicus 8⁵
- 13 Tyrannus tyrannus 7¹ 8⁽²⁾
- 14 Sayornis phoebe 5² 6¹ base 8'
- 15 Empidonax minimus 8¹ apple orchard near house
- 16 Corvus americanus ^{few were over} 3¹ ^{several} 6¹ a few of a few several
- 17 Aigialia phoeniceus 5⁽²⁾ 6⁽²⁾ near house 8^{a few}
- 18 Passer domesticus a few always about the house,
- 19 Anisognathus s. sabinae 6¹ suns ^{seen} 8³ suns.
- 20 Pooecetes gramineus 5¹ 6¹ 7¹ 8³ (near house).
- 21 Spizella socialis 5¹² 6^{a few} 7^{several} 8^{numerous}
- 22 " pusilla 7¹
- 23 Melospiza E. melodia 4¹ ^{no} 6¹ ^{1*} 7¹ ^{2*} 8^{1*}
- 24 Progne sallei 5³ 6¹ 7¹ 8¹ all about the 2 houses here first seen on April 18 (2) by Taylor who saw 9 on May 3.

Bells, Manáé

1904

May 4-8 25. Horned Lark erythrophthalmus. 4 and 5 about the barn every day

(2) as a rule -

- 26. Nisoproctus bicolor some half a dozen always about the tops of in the air.
- 27. Dendroica aestiva 8^{1/2}^{seen} in bushes by house 7.30 A.M.
- 28. " coronata 7^{1/2} near river.
- 29. " virens 8^{5 or 6}^x pine woods on divide.
- 30. Sitta carolinensis 5^{1/2}
- 31. Hylocichla a. Swainsoni 8²^{seen in bushes mouth} of Little River
- 32. " g. pallidii 8²^x in woods on opposite sides of the road near the village. It was beautiful melody.
- 33. Merula migratoria 4^{1/2} 5^{1/2} several 6^{several} 7^{in low ground} 8 numerous
- 34. Sciælia Sialis 6²^x 8²
- 35. Dendroica virens 5^{1/2} in pine woods

I took the following insects to Mr. Sam Neashaw.

- 1. Scelpha marginalis Carrion Beetle red margin to thorax. In Big House, May 5.
- 2. Lucilia sp. 7^{1/2} " " " "
- 3. Dipterous assimilis May 5
- 4. Pachygnatha lineatium, Longicorn on Beach, May 8.
- 5. May Fly. May 5 -

Cambridge to Shelburne, N.H.

1904

May 12

Clear, cool, still, a perfect day -

Mrs. & I took the 9 A.M. train from the North Station for Shelburne, making the usual wait in Portland where we dined. The vegetation in Cambridge has taken a great leap during the past 3 or 4 days and the trees & shrubs have jumped into leaf. As we advanced farther north vegetation was more & more backwood, though the willows are in full flower everywhere and the delicate green leaves of the gray & white birches are a beautiful feature in the landscape. Mr. & Mrs. Sortwell were in our car to Portland. As we reached the Androscoggin River we saw the five floating down, and many were stranded here & there in shallow places and on the banks. At Bethel, Mayori Philbrick met us. Mrs. Philbrick welcomed us at the Shelburne Station and we drove over the iron bridge to the house. There is a wayfarer camp near the north end of the bridge. The fawn is in patches on Mt. Madison & Cedars. Miss Fanny, Alice, & Lawrence welcomed us at the house. This evening Hyla! are screaming in the water just over the road. Nature is just beginning to unfold here. I shall keep a separate list of the birds observed each day and append it at the end. Barn and Cliff Swallows were flying over the fields & meadows and I heard a Savanna Sparrow near the house in the intervals.

1904

May 13

Shelburne, N.H.

Clear, still, warm, glorious day.

This morning Mr. & I walked as far as the bridge, taking pictures and admiring the beautiful scenes. The wagon is on the bank of the river, a very short distance above the bridge - We visited it and spent some time there. The cook was very polite and we were shown everything. There were there the cook, cookee, driver and one other. I took some pictures and promised to send them to them later. Their names and addresses are:-
G.W. Gorman, North Newry, Maine Cook
Garrett Brockway, Gorham, N.H. Cookee
Mary Mills, W. Bethel, Me.
Frank Burns, Box 222, Lancaster, N.H. driver

There is quite a center fair at the bridge. I rested in my room for some time this afternoon and later took a short walk down the road. Bank Swallows are here and the Barn Swallows are building. I heard a Berry, calling and a Chestnut-sided Warbler singing. A Woodpecker has a hole in the field near the Knobble. I saw him yesterday afternoon and again this afternoon - The wagon wagon is standing by the road in front of the house and some of the horses are in the barn -

It is a glorious night clear and cool.

Shelburne, N.H.

1904

May 14 Clear & cloudy Am. Cloudy Pm. with occasional mist. Breezy - cool.

This morning Mr. & I walked up the road to the bridge. In the woods near Burges' a Pine Warbler was singing vigorously. We visited the camp or wagon and watched the work going on. Then we spent an hour across the river visiting a small knoll a short distance up stream, where I took a picture of some white birches with Bald Teep in the background. Returning again to the wagon I took some snaps of the cook and the fireplace with the cookie making the fire, &c. While there, I saw a Broad-winged Hawk soar over the field. A pair of Phoebe's evidently have a nest under the bridge. The river at the bridge is entirely free from logs and the rear of the bridge is about opposite Philbrook's.

After dinner I went down to the river and saw the rivermen eating their lunch on the banks by the willows where we used to bathe years ago. It was raining at the time.

The cookie was dealing out food, and pouring out coffee. Late in the afternoon all the rivermen came up to the house and climbed into the wagon wagon and were driven back to camp. It was a lively scene. Mr. Sorman, the cook, is 32 yrs old and has been engaged in this work since he was 18 yrs old. He gets \$2.⁵⁰ per day. A riverman gets 2²⁵ per day.

Shelburne, N.H.

1904

May 15 A rainy day, holding up a little in the A.M.
 Maximum temp. 55° against 66° for yesterday and
 77° for day before -

This morning I took a stroll for a couple of hours and was only compelled to put up my umbrella as I was returning home. I walked over the Knobble and saw the rivermen at work in the creek & river.

The logs are piled up pretty thickly -

The Knobble looks as of old with the vegetation just getting under way - I saw Oryzopsis malacarpa in flower scattered over the top - In the branches just opening their leaves Chestnut-sided Warblers & Myrtle Warblers were singing and once I approached within a few feet of a Wilson's Thrush, as he sat quietly on a low branch watching me. I then walked down the road, going some ways into the woods where I came upon a Garter Snake so distended with his morning meal that he could hardly move. He was about two feet long. I saw him crossing the road with difficulty on my return. In the same bit of wood as last June I heard and saw a Blackburnian Warbler. Nashville Warblers were singing and at Wheeler's Pond I saw a Red-winged Blackbird. The Cassandra is in flower - I returned home in the rain.

Shelburne, N.H.

1904
May 16

Cold, max. 56°, heavy clouds, rain held up in the morning, but was steady all the P.m. Evening. This morning I walked over to the Knobble and watched the men on the river a little while, but they were beyond the islands and too far away. Then I walked up the road and followed the path through the wood nearly to Bowls & Pitchers. The brook (Mill Brook) is very high. Vegetation is hardly under way in the woods. Trillium erythrorhizon, the Painted Trillium, is in flower, but Medeola, Fritillaria bifolia are not nearly out yet -

Dog tooth violets are in flower and Gentian lutea is a mass of white blossoms. But that is about all. In the pine wood Black-throated Green Warblers were singing, and I heard a Parula Warbler. The Chipping was numerous, their silent call, coming from various directions. A Hermit Thrush sang in the distance, but I did not hear a Swainson's, as I hoped - I got home in time for dinner and was pleased to see and hear a Yellow Warbler in the willows by the barn -

Rain kept me during the afternoon. I finished Ebelina by Miss Barney which I had not read for many years.

I drove over to the station with Gus for the 5:06 train and met Mrs. Charlie Batchelder who has come up for a rest for a week or so.

Shelburne, N.H.

1904

May 17

A brilliant day, clear cool in after, pleasantly warm in P.M.

This morning I took some swaps of the wagon wagon, &c., near the house. Frank Burns, the driver, explained to me all the parts of the wagon wagon and showed how the seat & sides can readily be removed, leaving the floor of the wagon for the bateau which is at times carried here and there. I examined several dogs used for hauling or "twitching" logs in the river. Horses are employed at the Lake in the morning I drove down in the wagon wagon to the camp and watched the men break camp and pack everything on to the wagon. I took several pictures of the men at work, the cook's wagon with the lumps for the drivers, the boss's wagon with a white horse, the wagon wagon ready to start. The Home late for dinner this P.M. Mr. & I took a walk down the road to Wheeler's Pond. I saw a Wilson's Black-capped Warbler, and an Olive-sided Fly-catcher, the former by the pond, the latter on the big dead white birch by the rock near the Smeatons.

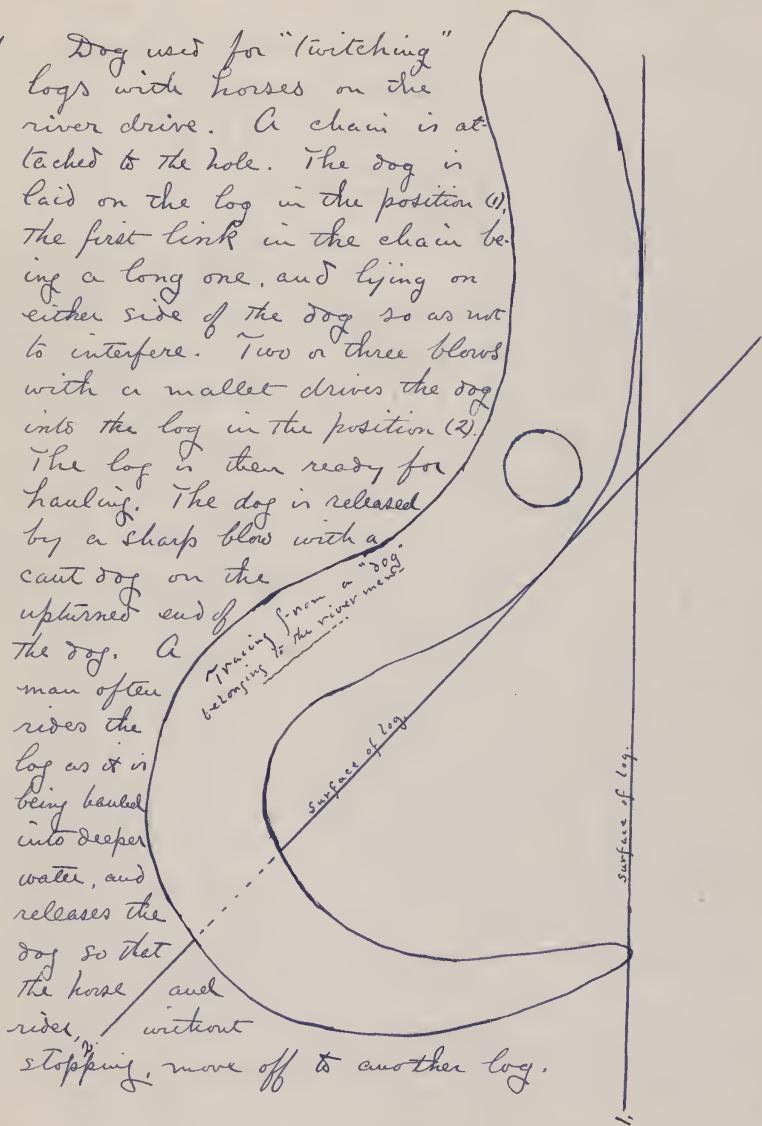

I made a tracing this morning of a "dog" which was in the wagon wagon with several others.

Shelburne, N. H.

1904

May 17

- (2) Dog used for "twitching" logs with horses on the river drive. A chain is attached to the hole. The dog is laid on the log in the position (1), the first link in the chain being a long one, and lying on either side of the dog so as not to interfere. Two or three blows with a mallet drives the dog into the log in the position (2). The log is then ready for hauling. The dog is released by a sharp blow with a cane dog on the upturned end of the dog. A man often rides the log as it is being hauled into deeper water, and releases the dog so that the horse and rider, without stopping, move off to another log.

Shelburne, N.H.,

1904
May 18

May 18 Cloudy & sunny morning, clear views, cloudy
and finally rainy afternoon.

This morning Mrs. Batchelder and I took a drive with Ralph and a pair of horses. We crossed the bridge and drove down stream to opposite Sheldrake's then up, over Lead Mine Bridge and up the other side to the last house. Then home, stopping to get the view from Miss Whiting's piazza. The views everywhere were very fine - Chestnut-sided and Nashville Warblers were singing almost continually during the drive. I heard across the river a Baltimore Oriole and I heard one also this morning early from my window. I saw a number of plants of Trillium erectum and also Viola peduncularis. Blue violets are very abundant everywhere -

This afternoon Mr. & I took a walk to the river and down the road till the rain drove us home. By the school house a Hermit Thrush was singing and another one nearer home and a very nice song in the near woods. I found to-day Filicium erectum, L. y Woods roadside. Viola pedata, L. ^{var. pubescens} Scabridula i. & Jr.

Fagus foresteria Bilt Seedlings } found - Miss Evans.

Shelburne, N.H.

1904

May 19

A steady rain nearly all day, clearing a little about noon and at tea time. Sun came out a few minutes about 6 o'clock in the afternoon.

We have had another unfortunate day as regards weather and have been obliged to stay in the house most all day. About 12 o'clock, Mrs Batchelder[†], walked into the woods back of the Scudder cottage. It was soaking wet under foot. I heard a few birds only.

This afternoon Gus & I with Ralph & Harry, his two men, worked over a log of Sugar Maple that was full of sugar holes made for drawing sap. These holes had long closed over and we made a number of sections showing the different stages. I shall take these home.

Before tea I took a short stroll down the road. This evening Miss Clegg, the only boarder here besides ourselves, played for us beautifully on the piano. Prof. & Mrs. Jordan with two children are in their cottage. They come here to dinner excepting the younger child.

I collected this Blm. by the road:—
Vaccinium pensylvanicum Linn. Low.
Salix rostrata, Richards.

" *discolor*, Muell.
 " *humilis*, Marsh.

Shelburne, N.H.

1904

May 20

Clear & cloudy morning, heavy rain in afternoon clearing about 5 P.M. but cloudy. Max.

This morning Mrs. Batchelder & I walked up to Bowls & Pitchers - I heard few birds on the way though I hoped Thrushes would be singing in the woods - Trollium erythrocarpum is now in full flower, and Oberonum luteum is very handsome with its white blossoms. The Apple trees have burst into bloom within a day or two, the Cherries have been out since we have been here. I saw the leaves of Daleboroda repens the little plant that first stirred within me a love for botany. The falls were very fine, filled to the brim with foaming water - The huge pot hole was a churning, seething cauldron -

This afternoon, after the rain had nearly ceased, Mr. & Mrs. B. & I with Gus drove over Lead Mine Bridge and called on Mr. & Mrs. MacMillan in the Eudicott house. Mr. & Mrs. B. made their acquaintance in Rutherford, N.C., a few months ago, when Mr. B. was taken sick. We had a very pleasant time. They have a large dog, a Dane, also a magnificent skin of a Grizzly or Kodiac Bear, and one of a Bengal tiger. The view of the big mountains from their windows is very fine indeed, much like the view from Lead Mine Bridge, without the water. Clouds are heavy this evening

Stellburne N.H.

1904

May 21

Cold, with fine cumulus clouds, warm, light breeze
a glorious day -

This morning Mrs. Batchelder, Miss Cheney,
Gus & I drove to the Ravine House, Randolph.
The fresh clear air, after so much rain,
was invigorating. We went first to Gorham,
and then over Gorham Hill, making a trip
to the top of Randolph Hill where we had
a glorious view of Madison & Adams with
King's Ravine. The deep gorges run into
the sides of the Ravine are filled deep
with ice, shining white. On the top of
the hill is the Mt. Crescent House kept
by Mr. Lane. The old guide who took us
up Mt. Adams, with Prof. J. B. Greenough
about 1880. I talked with him about the old
times. Returning to the main road we kept
on to the Ravine House in Randolph -
There we spent an hour taking dinner at
the little Hotel. I took a picture of a
fine American Larch in the meadow.
Moose River flows through the valley.
We returned the way we went reaching
home a little before four o'clock. I saw
the common birds in more or less abun-
dance. The first bird I saw was a
Bald Eagle, soaring very high overhead Bald Eagle
as we were returning over Gorham Hill.
I saw his white head and tail - After
circling a while he sailed off towards the
west.

Shelburne, N.H.

1904

May 22

Rather warm, clear with clouds in the m. clouds
with shower in P.M. May. temp. 79°

This morning Miss Cheney took Mrs. A. Tufts &
I up the hill back of the house to see a ^{Bonasa umbellus subsp?}
Partridge's nest. We ascended the hill some distance
by a logging road and then turned up the slope
towards a rocky ledge with a number of rocks
of various sizes. After searching a little while
Miss Cheney discovered the nest. The bird was
sitting on it, under an overhanging rock about
one foot above ^{her} head. She was lying in a de-
pression just deep enough to have her back at
a level with the ground covered with dead leaves,
her back scintillating. The color of her surround-
ings perfectly. I stood at eight feet from
her as she sat facing me in perfect silence.
Her little eyes intently watching me. As I ap-
proached another step, she suddenly whirled
off, taking a very sharp angle and disappearing.
In the leaf-lined hollow were eleven eggs. We
left the spot quickly so as not to alarm
the bird more.

At noon I took a few pictures in the intervals.
This afternoon, Miss C., Eas & I drove
to Gilead on the south side and some two miles
beyond to Tumble Down Dick, a fine cliff, and
home on the north side. Apples are in full bloom
a glorious sight. There is fine farm land in
the valley. After supper I drove with Eas &
his ladies who came up yesterday, to Sales' Cottage.

1904

Shelburne, N.H.

May 23 Warm clear air cloudy Am., cloudy P.M.
max. temp. 74°., breeze -

I have had a quiet day. This morning I took a short drive with Miss Cheney down the road as far as Miss Whitney's near the Gates cottage. From the piazza at Miss Whitney's I took a photo. It is one of the very finest views I ever saw - The broad, fertile interval stretches before you, with the beautiful Androscoggin River winding its way through, and in the distance Mrs. Madron, Adams, Jefferson, Cloy & Washington streaked with snow take up the background - I also photographed a sun dial, that was mounted on a granite post near the house.

Returning home, Mr. & I walked down to the Evans' house where I took some pictures of the apple trees which are so beautiful now.

This afternoon I did some work in our room and later we called on Prof. & Mrs. Jordan in their cottage on the hill.

All my photographs of the many car and wagon wagon, etc. have come back printed and in the whole are very satisfactory - I want to learn to develop my own films with my day light machine -

Mrs. Bettselder left this morning for Cambridge.

Trip to the Glen, N.H.

1904

May 24 Cloudy morning, clearing, clear afternoon

This morning Gus & I drove to the Glen in a buggy with Belle & Gip. It was a delightful drive of fifteen miles. From Gorham we followed the banks of the Peabody River. I took some views on the way. At one place we saw a machine at work drawn by two horses, that made a furrow, dropped and covered phosphate, then dropped and covered potatoes that had been cut and put into the machine. It worked beautifully. *Anemone nemorosa*, and *Trollium coccineum* we found in one place very abundant making a beautiful show. I collected some. We dined at the Glen and I took some pictures. We found in the barn a fine new mountain wagon that was made for Gus near Conway, and was driven to the Glen to-day to meet us. We drove back with the buggy hitched behind the big wagon. I took a picture of E. Libby & Sons Co.'s works with the logs in piles in the water. From this point I walked about half a mile to Gorham and as Gus had business there I walked on and he picked me up about a mile from the town.

We reached home a little after six o'clock.
Anemone quinquefolia, L. } wood. Glen Road.
Erectum (*Trollium*), L. }

Shelburne, N.H.

1904

May 25

Cloudy and clear, rain in latter afternoon. Windy.

We have been pretty quiet to-day. This morning Mr., Miss Cheung and I walked up to the Partridge's nest in the woods back of the house. The old bird was still sitting close. It was a beautiful syle. We staid out near by some time, then we returned to the house and Miss Cheung & I walked through the woods to Mill Brook. On the way we came upon a Crow that had evidently been shot and was still alive. I mercifully put an end to its sufferings. In the pine woods on the Farren farm I heard an Olive backed Thrush. I have heard very little of the Thrushes here. They must begin singing later - we got back to dinner.

This afternoon I took two pictures of the apple orchard at Leighton's - the apple trees are in full bloom now and they make a brilliant display in the valley. *Crataegus* is in bloom. I also exposed a plate of the Kumbie from near the twin elms.

R. B. & Mrs. Greenwich came this evening. After supper we all walked up to the Barn galow which Mrs. has built for R. B. and his wife and had a jolly time inspecting it.

Mrs. Gilbert K. McMillan and her cousin, living at the Endicott place called this P.M. I showed Mrs. M. how to press plants.

Shelburne, Vt.

1904

May 26

A hot, very muggy day. Max. 75°. Rain in early morn; rest of day cloudy with bits of open sky at intervals. Mosquitoes abundant.

This morning Rob Greenough, his wife & I walked up to the Particular's nest. She was sitting close and we did not disturb her. We then walked about in the woods and walked as far as Wheeler's bog - We saw a pair of Dendroica caerulea, the male in full song. We tried unsuccessfully to see a Nashville Warbler that was singing vigorously in the juniper on both sides of the road. Blackburnian was singing as for the first time since we have been here this month, the Wilson's Thrush was in full song - In fact it seems as if today the real song season has begun. At Wheeler's bog, I saw a good deal of Kalmia glauca and Menyanthes trifoliata in flower and I took some for press. A pair of Rose-breasted Blackbirds held possession there. Mr. Wheeler who was working near by told me that he heard last night his first Whip-poor-will of the season.

This afternoon I rest and went walking till the mosquitoes drove us back. They are very abundant & aggressive. Kalmia glauca, Aut. } Wheeler's bog. Menyanthes trifoliata L. }

Shelburne, N.H.

1904

May 27

Very muggy day, warm with much humidity.
very cool late P.M. & evening

We staid about the place this morning, it
was so uncomfortable - I wrote letters and
read. Took a soap of Rollie, the little Ty-
teree and of Donald Jordan near the house.

This P.M. Mr. & Mrs. Greenough & I walked
through the woods to Mill Brook - We fished
and Mrs. G. & I walked about looking at the
plants & birds. We saw an Olive-sided
Flycatcher on the top of a dead tree in an
open space - It was pipping and catching
insects. I found Pleurotus dryinus
exceedingly abundant in the woods on the
"island" between the brook and the loop
made by the stream - It grows in great
profusion and carpets the ground -

Returning to the Bungalow we had tea.
Mrs. J.B. Greenough, who arrived this morn,
and Mr. being there.

Dr. E.D. Peters, 38 Percival St., Worcester, Mass.
has written me about the poison glands of the
Gila Monster. Did they exist or not? He thought
not - I wrote to Dr. C.K. Fisher and he writes
me that there are poison glands situated under
the tongue. He refers me to "On the Physiolog-
ical Action of the Poisonous Secretion of the
Gila Monster (Heloderma suspectum), John
Vanderburgh & C.B. Wright, Amer. Journ. Physiol-
ogy, IV, 209-238.

1904

May 28

Shelburne, N.H.

Clear, with fine cumulus clouds, very windy and cool.

It has been a glorious day. Rob Greenwich & wife, and Mrs. F.B. Greenwich started off early this morning with us to drive to Dyer's Tavern and return to-morrow. M. & I took a delightful walk through the pasture back of the Seadee Cottage and for some distance along the path up Cabot Mountain. I collected a number of interesting plants, among them Corallorrhiza innata! I heard a Magnolia Warbler singing very different from his usual note. I could not imagine what it was till I saw him. I also saw and heard a Canadian Warbler, the latter the first one for Shelburne that I have recorded. We returned through the woods a good part of the way home —

This afternoon I spent some time getting my plants washed and put into press — Later M. & I walked up the road and called on Katie Bayless. We also saw her husband and baby —

I collected today: —

Viola blanda, Willd. (white) (On the path up Cabot or "blanda, Willd." (white) in pasture close to woods)

Vaccinium corymbosum, L. (blue)

Corallorrhiza innata, R. Brown (white) Woods on path up Cabot

Carex communis, Bailey

Clintonia borealis, R. Br.

Crypsis asperifolia, Michx.

Shelburne, N.H.

1904

May 29 Clear as crystal, rather warm, breeze in the calm R.R.

This morning M. & I wandered about in the interval and on to Sargent Rock.

Taking a few pictures -

After dinner I drove over to Lead Mine Bridge and called on Mr. & Mrs. McMillan at the Endicott Cottage. There was much excitement for the huge Dane and the Setter had come out of the woods with their mouths full of woodchop quills.

Dr. Marble had summoned from Erkham and the two dogs were strapped down on the barn floor. The Dane was chloroformed and the quills were extracted from both dogs -

I talked with Mrs. McMillan about pressing plants and have sent for material to the Camb. Bot. Supply Co. The view of the Presidential Range from their piazza is simply superb. Madison, Adams, Jefferson, Clay, Abashington with Booth's Spur spread out on the horizon beyond the interval while sheltered its broad green surface below the base, with glimpses of the Androscoggin River - To think of having such a glorious view before you all summer.

On my return as we passed Mt. Wintersop, two Wilson's Thrushes close by in the woods sang antiphonally for some time. Rich melody.

Shelburne, N.H.

1904

May 30

Cloudy, comfortable, cool breeze -

It has been a very pleasant day, without sun and without rain - This morning I drove with Sus, Reb, & the two Mrs. Greenoughs towards Impall's Brook behind Cross Neck. We left Reb home and then Sus dropped us.

M.B.G. & I near Evans' - We wandered home through the pastures & woods, visiting the Partridge's nest. She is still sitting and we approached within 5 feet of her, as she quietly cracked an egg. It was a very lovely sight. I took a snap picture, but the light was not good - We heard two Blue-headed Vireos and various Warblers.

This afternoon we drove back again and picked up the party. Reb had been fishing catching a few trout and Mrs. G. had been birding. We drove back and then Sus & I drove over Lead Mine Ridge as he had business in that direction.

I collected to-day.

Salix rostrata, Ribbed } leaves of bushes of May 17.
" discolor, Marsh }
" humbilis, Marsh }

Eriophorum alpinum, L. In 1882 I found a patch of this species in an open field on the Evans place between here & Lead Mine Ridge. I collected some at the time - This afternoon, I visited the same place. There is the old patch some $\frac{1}{8}$ acre in extent near the road -

Shelburne, N.H.

1904

May 31

Clear, with a light hazy cloud at times.

Light breeze, comfortable

This morning Mr. & I walked about in the intervals and later Howard Philbrick, who returned last evening from Grand Isle, Me., where he has just finished his Freshman year at the University of Maine, drove Mr. & me with Donald Jordan, across the river and down to a point opposite the Philbrick Farm. We then clambered up on the side of Mt. Elliott to a point some feet above the road where there is very fine view of the whole farm with the river in the foreground. I exposed two plates and hope for good luck ~

We then drove ~~down~~^{up} as far as Moses Rock and we again clambered through the woods as far as the foot of the great slide. It is a remarkably steep, smooth ledge. Home to dinner.

This afternoon I worked over my plants and walked up to the Emerson place where I took a Jaap of the Citellina canadensis that was very dense back of the house - Two or three Canadian Warblers were singing in the near woods ~ the Hylas are still peeping in the ditch opposite the house across the road ~

Citellina canadensis true. Open ground, Emerson place

Shelburne, N.H.

1904

June 1

Cloudy, cool, temp. 63°, light breeze.

We spent some time trying of getting ready to return to-morrow morning - I walked down the road this afternoon and picked some Lady Slippers (*C. acrea*) to take home.

This evening we all went up to The Sunnyside and sat round the fire and had a jolly time. Mrs. Greenleaf takes possession to-morrow when her mother and aunt come up. She has driven to Portland with us. (She does not go) -

The Butter Bush back of the barn is beginning to throw out some leaves. They are scanty and I fear that the plants are on their last legs.

The occupants here now are:-

Mrs. F. B. Greenleaf

Mrs. Converse

Mrs.

Mrs. Edwards (Mother of Mrs. Converse).

The Misses Davenport (two)

Prof. & Mrs. F. Donald Jordan

Mr. & Mrs. Pratt (sister & brother-in-law of W. S. M. C. Dease -)

Mrs. Jordan,

1904

June 2

Shelburne, N.H. to Cambridge, Mass.

Cloudy and partly rainy.

We bade our friends good bye this morning and took the 8.30 train for Portland. Howard, who returned from Armon, Me. lately, went with us as far as Bethel. We made the usual stops in Portland and reached home before five o'clock.

Vegetation has taken a great start since we left here three weeks ago. Our *Spiraea Van Houttei* is in magnificent flower. This and the Black Birch are the two ornaments on our little lawn.

We intend to stay in Cambridge till September.

The thermometer was hung in the shed, entirely out of the sun, and yet near the large open front.

1904
June

Cambridge Mass.

The month of June has passed quietly away at home. The weather has been good, with some warm and some quite cool days. Many days have been ideal June days. The principal event was well been:

July 3. - Botanical Club. The last meeting occurred in July and the question of accepting the suggestion made by the Gray Herbarium & Cryptogamic Dept. of Harvard for discussion at the National Bot. Congress in Vienna in 1905 was discussed and the proposition accepted. We had a pleasant evening to our meeting.

July 6. - The last Nutt Club meeting for the season took place. About a dozen of us were there.

July 7. - E. F. Williams & Miss Blanche Wheeler Concord were married in the little Episcopal Church in Concord and the reception was at the bride's home also in Concord. M. & I were there also Dr Kennedy & family, Dr. & Mrs. Robinson, E. S. & Mrs. Read, Mr. L. French, besides relatives and other friends of the bride & groom. We had a very bright time going & returning in the Ph.

July 9. - George & I went to a luncheon given by

Char Francis Adams at the Mass. Hotel.

Joe's Rooms - Many eminent men were there.

June 12. - Prof. Chas. S. Sargent opened his beautiful grounds to-day & yesterday to the public. The Red-bud trees were in full bloom, the day was perfect clear cool. M. & I went out and some 10000 people were there, all orderly and quiet, it was a remarkable sight -

Cambridge Mass.

1904

June
(2)

June 17. Will Brewster came down from Wolfeboro and spent the night of the 17th with us. He is feeling quite well still.

June 18. On this evening Mr. & I called on Mr. & Mrs. Jack Read and saw his war relics, and heard his stories of adventure and suffering. I never heard him talk on the subject before. It was a remarkable story. We also saw a wonderfully beautiful collection of shells, made in California.

June 23. Mr. & I with Ward & wife went out to Dr. Remond's and dined with him & Mrs. R. I always have a beautiful time there. We had a drive before dinner through a very fine bit of country, fine estates with extensive lawns and stretches of rolling hills.

June 24. Class Day - Mr. & I spent the day with Cecil Barnes, his mother Mrs. deKoven and her sister Miss Nellie Lanabee. Cecil graduated to-day. We went to the exercises in Faudree Hall to the Pudding Street, to Cecil's Room to the Auditorium used for the first time on Class Day. The exercises there were astonishingly beautiful. Some 10,000 people said dressed were there and the various classes marching in, with band & song under a bright sun and cool breeze, made an inspiring spectacle. The Ivy Orator was excellent full of wit, and when the confetti streamers were thrown to the winds and the vast audience was entangled in colored streamers and the air was full with them it was a beautiful sight as I ever witnessed. After this our friends at 4pm I called on the President in the evening & walked about in the Collier and

1904

Leaving to Mattapoisett, Mass.

July 12

M. & I took the 4.08 train at the South Station to spend a week at Mattapoisett with Mrs. John deKoven, Cecil, and their little Barnes. It was very hot in the cars, as it had been all day, but it grew cooler as we neared Buzzards Bay. Cecil met us at the station which we reached at about 5.10 and we had a cool drive to the house along the bay. The ladies gave us a warm welcome and we were very glad to find that Rollin's wife, Bertha with her two boys, Rollin and Leonard were still at the house. They are going to the Berkshire Hills early tomorrow morning. The boys are beautiful children and I regret not seeing more of them. A pleasant chat, some tea & sandwiches and a stroll on the piazza was followed by a retirement to one room where we were glad to see for dinner. We had a bright, jolly time at dinner and spent the evening talking, looking at photos etc. Cecil & I walked down to the shore and enjoyed the stiff breeze. His yacht lay off shore. The house faces a little east by north on the main road, while the back with its broad covered piazza overlooks the broad lawn and the vast stretch of Buzzards Bay which bathes the foot of the grassy slope. Barnstable & Chatham and Martha's Vineyard are visible to the Southeast.

Mattapoisett, Mass

1904

July 13

Sunny and clear of course clouds, fresh breeze.
 It has been a glorious day - this morning Cecil took Miss Nellie out sailing in his yacht Marie, a 6 ton boat. It was simply glorious. I held the wheel most all the time and enjoyed it much. We sailed out of the harbor and up the coast some five miles, as far as Marion, returning the same way. Terns (probably the Common Tern) were constantly winging their way back & forth up the shore, returning later with fish in bill. They were on their way to the islands at the mouth of Buzzards Bay to feed their young. We returned between 12 & 1. After lunch I took one or two pictures -

At 3 o'clock we all took a drive in the buckboard to Fairhaven & New Bedford. It is 7 miles to New Bedford through a pretty bit of country and across a long bridge, commanding fine views. In the city we drove through most beautiful streets with handsome residences and I saw the Grinnell place where Rebecca Steens has stayed so much. Crossing the bridge, Cecil & I climbed up into the power house and saw the man open & close the draw. We drove through Fairhaven which is a pretty town with fine roads. We saw the large estate of Mr. Rogers, a Standard Oil magnate, and we visited the Memorial Church that he is building - It is one of the most exquisite pieces of work I ever saw, in general design & carvings.

The evening was pleasantly spent at home -

Mattapoisett, Mass.

1904

July 14

Clear cool, breeze generally north west, veering to south in the afternoon.

This morning Cecil & I made a trip in the Marie to Ram Island to see the Tern Colony. Before starting I took 4 snapshots of the Marie under full ~~sloop~~ sail. I stood at the end of the stone pier and Cecil sailed by. We had a beautiful sail to Ram Isl. Some three miles away. We dropped anchor off the ^{the} Tern colony the little island and rowed ashore. There on Ram Isl. is a Tern (Sterna hirundo) colony there. It took about 15 min. to walk round the island which is very low with narrow beach, the center covered with grasses, rushes and running poison ivy. Terns arose in a cloud as we drew near and we could see young birds running about on the stones. As we walked along the head of the beach we saw nests in the dry sea weed and in our circuit of the island we found 14 nests with eggs varying in number from two to five. The young birds disappeared in the grass & ivy, but we found one and brought it out on to the beach where it ran about peeping. I took two snap shots of it as well as of two nests, one of sea weed with five eggs and one of grasses with two eggs one being broken. The nest of grasses was very compactly built. The old birds screamed incessantly and many of them had little fish in their bills. With my glass I examined a number of the terns and always saw the

Mattapoisett, Mass.

1904

July 14 Black tip of the rosy bill. I estimated that
 (2) there were two or three hundred birds in the
 colony - Broken egg shells were seen
 here and there and occasionally a dead
 young bird. In one spot near the head of
 the beach I saw a large patch of Hibiscus
moscheutos - As we were rowing back in
 Cecil's little flat bottomed boat, ~~but~~ he made
 and that folds up on the deck, we saw a
 little Terns on the water, some little way
 from shore, paddling with all its might
 toward shore. Old birds were flying over it.
 We got back to lunch at 1.30.

This afternoon we all drove up in
 the buckboard, this time to Marion along
 a very pretty road, marred now by the
 omnipresent electrics. At Marion we
 saw a great many very pretty places
 along the shore while the ~~and~~ looks
 harbor was full of yachts. Whenever
 we go we find the Crimson Rambler
 abundant and in its glory, its brilliant
 red making a beautiful display.

The evening has been clear and cool.
 I sat some time in the piazza looking
 over the water and watching Cape Cod
 Cove light which is on the South side.
 It has a fixed white light varied by
 white flash. Tomorrow we all go to
 Hyannisport to see Mrs. Street and
 family -

1904

July 15 Clear after. cloudy & clearing this., fresh breeze cool -

This morning we five went to Hyannisport leaving the house before eight, and going by trolley to Wareham at lightning speed, by train to Buzzards Bay, change to Yarmouth, change to Hyannis. There we were met by Mr. Charles Street & son Charlie. By carriage & stage we drove to Hyannisport to Mr. Street's house on the hill where we were warmly welcomed by Rosalind (Mrs. Street) and saw the other children, Margaret, a most beautiful girl of about 12 and Edward - We got there about 10.30, and staid till 3.30 and had a delightful time - The house is most attractive and commands a beautiful view over the ocean - How the place has changed since 1888 when I staid with Judge & Mrs. Chaceill well here. It is of course much built up with cottages each one having a tall wind-mill. We saw the little house where we had our room and the hotel where we staled. The soft, balmy cool air is refreshing -

We had a real, bright, jolly time, ten of us sitting at lunch - Mrs. Street is just as bright as ever. I saw her last in 1888. We returned the same way and had a pleasant evening at home, Mr. Thos. S. D. Warren, who live next to her, called this evening -

Mattapoisett, Mass.

1904

July 16 Cloudy with bright sun at intervals.
Very windy and cool -

This morning Mr. & Chamberlain by the 8:55 train as it was Mrs. Coolidge's birthday (82 yrs) I drove to the station with her. Then Cecil & I walked over the place through the woods opposite the house that Mrs. Delmon has bought and inspected the stable, etc. Then we took a drive in the sunney or unseated wagon for a couple of hours. We took the road to Fair Haven and turned north at the Mattapoisett River going toward Rochester through fascinating country roads. I saw in several places by the road Aletris farinosa, a friend that I had not seen for many years. Lilium philadelphicum was abundant in places - we returned in time for lunch. After lunch we worked over photographs and then I took a walk by myself along the shore to Ned's Point. It is very beautiful, looking over the broad expanse of water ruffled by the strong east wind - terns were beating along the shore, fishing and I sat on the rocks for some time. Carex peploides was growing at the head of the beach, but I could find no fruit. Gennaria canadense was common - I took a few Kodak pictures, the wind being too strong for anything else. Mr. came back all right at 6 P.M. We played games &c in the evening.

This morning on our drive we came across a Box Turtle in the road. I took it home for Mr. Henshaw.

Mattapoisett, Mass.

1904

July 17 Clear, light breeze, warm for this place, comfortable.

Sunday - This morning after a late breakfast, we drove to church in the village and listened to a sermon by Mr. Ewing of Ware. After church we drove home and Cecil & I sailed in his small boat up into the harbor and saw the bathers slide down the chute, an elevated structure on a float. After dinner we talked and wrote letters and at five o'clock Cecil took Mr. & me out in the "Marie". The breeze was gentle and steady from the south and we sailed over the harbor and out some distance beyond Ned's Point Light. Mr. enjoyed it very much - he stayed out till half past six. Mr. came to dinner and we had a pleasant evening -

Mattapoisett Mass.

1904

July 18

Clear, with light breeze, warm in the sun away from the breeze, but on the shore the breeze is with you - A most beautiful day.

This morning Cecil & I canoed across the harbor and up Mattapoisett River. It was a delightful experience. At one point is a dam with the people are allowed to take the alewives that are going up stream to spawn. After they are satisfied, the dam is opened and the fish go up. Cecil took the canoe over this point and I photographed the spot. Farther up we met Mrs. deKoven & Mr. who had dinner and Cecil, Mr. & I went some way up stream through the most ideal bit of overhanging vegetation on both sides of the narrow stretch that I ever saw. We were enchanted. Rosa carolina was very abundant in full flower, the red blossoms mirrored in the water below. We all returned the same way reaching home for lunch. Cecil paddled six miles.

There was much poison ivy running over the shrubbery and trees. Button-bush, Clethra, Swamp-rose, Vitis Labrusca were abundant.

This afternoon we all drove to Scouting Neck nine miles distant. glorious views on the way and at end of the point - A vast stretch of blue water, with white sails and light-houses. I found Aletris and Succowia Solidaginum abundant in one place. I collected a Callitricha on the point.

Dinner party this evening. Mr. & Mrs. Windeeler of Boston, & Mrs. Warren next neighbor of Mrs. deKoven.

1904

July 19

Mattapoisett, Mass.

Fog on the water in early AM - soon clearing.
Light breeze all day over the water. Very comfortable day, though warm in the direct sun.

This morning we sat on the pier after breakfast a while and then Cecil & I sailed till lunch in the "Marie". We went up into the harbor to see the steam yacht (India, N.Y. yacht club) that came in last evening and made a great electric display. Then we sailed out beyond Angelica Point and Cecil took a plunge from the boat while I snapped him as he was hanging on to the end of a rope at the stern.

This afternoon we drove some twenty miles up the coast through Marion and on to the point of land that forms the west side of Marion harbor. Beautiful sea views opened out constantly before us.

The harbor was full of sail boats.

This evening we (Mrs. A.C., Cecil, M. & I) walked over to Mr. Hamlin's near by and called on him and Mrs. Hamlin. Mr. H. was prominent in the Democratic Convention recently held at St. Louis and he gave us a most stirring account of the doings. The Parker telegram, the impudence of Bryan, the 17,000 people crowded together in the fire trap of a coliseum, all formed a thrilling talk. We leave for Cambridge tomorrow.

Mattapoisett to Cambridge, Mass.

1904

July 20 Fog in early AM., clearing, breeze from north west all day, very warm in the sun.

We stayed about the piazzas during the morning reading and talking -

At noon Cecil & I took a sea bath in front of the house. This is my first dip in the salt water since I hurt myself in 1898. How I enjoyed it! I swam about and I floated and revelled in the cool brine.

After lunch we bade our kind friend good bye and drove off to the station. Cecil went with us to Boston and then took the train to Southboro. We returned to Cambridge once more, reaching the house at about 6 P.M.

Mattapoisett, Mass.

1904

Jug 13-20

A list of the birds observed during a visit at Mrs. John L. deRover at Mattapoisett, Mass. between Jug 13 & 20. But little attention could be paid to the birds.

1. Sterna hirundo Constantly about the harbor, engaged in fishing. 300 or 400 breeding on Ram Island on the west side of Buzzard's Bay. I visited them with Cecil Barnes on the 14th and found 14 nests with eggs, & also a good many young. See Journ.
2. Totanus solitarius Saw 4 or 5 at different times on the shore or up the Mattapoisett River
3. Circus virgatus one on M. River on the 18th
4. Nycticorax n. macrorhynchos " " " " "
5. Ceryle alcyon two or three " " " " "
6. Colaptes a. caeruleus seen & heard occasionally
7. Tyrannus tyrannus " " " " "
8. Sayornis phoebe one on Telegraph wire on the 18th
9. Contopus virens heard in woods near the house a number of times.
10. Corvus americanus of frequent occurrence -
11. Divescus g. cinnamomeus numerous on M. River in the 18th
12. Carpodacus purpureus one in full song on the 18th
13. Loxia c. sinuata a flock of 4 alighted on a Pitch Pine near the house and soon fly away calling - This was on the 16th.
14. Passer domesticus a few only seen in the town - They seemed noticeably absent.
15. Pooecetes grammurus one seen & heard on the 18th
16. Spizella Socialis of frequent occurrence.

1904

July 13-20

Mattapoisett, Mass.

17. Melospiza s. occid. constantly singing, abundant.
It has a very rich strong song here.
18. Pipilo erythrourhynchus heard daily - there was
one near the house in the shrubbery that
sang every day - Heard elsewhere.
19. Hirundo erythrogaster Seen constantly, often
far out on the harbor.
20. Iridoprocne bicolor two or three seen on the 18th.
21. Vireo olivaceus singing daily.
22. Dendroica pensylvanica in the woods about the
house daily, singing its breeding song,
and also its summer song which is
very different.
23. Dendroica virens heard on the 19th in pines.
24. Geothlypis t. trichas one was located in
the undergrowth near the house and sang
at intervals during each day.
25. Galeoscoptes carolinensis a very tame bird was
also on the lawn by the piazza - Heard
elsewhere in full song.
26. Toxostoma rufum saw one by road in hedge
on the 13th.
27. Parus atricapillus heard constantly, singing
both songs.
28. Turdus migratorius common.
29. Sialia sialis a few seen.

Visit at Lancaster, Mass.

1904

July 29
Aug 1

M. & I took the train at Porter's Station in
mid-afternoon at 3:58 and changed at Ayer
for Lancaster. I utilized an hours wait at
Ayer by walking up to the hills back of the
town and getting fine birds. At Lancaster
(6.34 P.M.) we met John Thayer and drove up
to the house where we were warmly wel-
comed by Mrs. Thayer. The whole family
were at home Jack, Evelyn (16 yrs. old),
Nora, Natalie, Duncan. We had a bright
jolly dinner and a pleasant evening talking
over our books and the like.

July 30. Saturday clear cool breezy. After
breakfast John & I walked over the place first
visiting the Lily pond which is in superb
condition like a oasis of roses, lilies, Water Lillies,
Water Hyacinths in full flower. To our surprise Green
a young Green Heron was walking steadily about Heron
the borders fishing. It was very tame and
we got within a few yards of it. The
gardener said that there had been two of them
there for a few days past. Then we visited
the Greenhouses and saw Muscats & Black
Hamburg hanging in magnificent bunches
and also one large house devoted to Nectarines
ripe & sweet. Then we inspected the
young Pheasants which Bayard Thayer is raising (raising
under enormous heat). Corps were scattered Pheasants
over the slope near by and there were some
hundred young birds. It was a pretty sight.
They were all Ring-necked

(visit) Lancaster Mass.

1904

Jul 29- Then we went over to the aviary. There is a Aviary
Aug 1 nice lot of bird there. Perhaps the most interest-

(2) ing was a California Condor in immature
plumage, that was sent from California.
It was as affectionate as a dog and favored
at you fast pushing its head into your
hands to be patted. Sam, the Golden Eagle
is as noble as ever. There were also
Screech Owls (dark & light phase), Barred Owls,
Long-eared Owls, a Short-eared Owl, several
Barn Owls, a beautiful Barn Owl,
Great-horned Owls, Bald Eagles, Marsh Hawks,

We went into the latter building where the
birds are stored and I saw a set of
4 eggs & nest of Kirtland's Warbler taken this
spring in Michigan by Mr Arnold.

Later we went down in our automobile to Museum
see the new Museum on the main street.

It is most attractive and is built of red
brick with central door and three windows on
each side. It has tin flues, the upper one
without windows and lighted cutting from the
top. Below is a hall in the center with
rooms on either side, one for bird skins,
the other for nests & eggs. The hopes to
have it done by September next. The building
is absolutely fireproof. Above the six front
windows are set square pieces of white marble
about $1\frac{1}{2}$ ft. each way. On the sides are
five more on each, making sixteen (16) in all.
The names of sixteen eminent Americans

(visit) Lancaster, Mass.

1904

Jul 29 ornithologists are to be expected on there:-

Aug 1 I don't know the exact names but they are included in the following - Wilbur, Brewster,
 Swainson, Robinson, Nuttall, Audubon & Mac-
 Gillivray, Baird, Cassin, Lawrence, Brewer
 Gould, Barnes, Ridgway, Allen, Brewster
 (my original list has), Brewster erased
 nos. 3, 7, 16 and added Merriam, Townsend,
 Nelson -

Later we found John, his wife, Mr. & I walked over the place again - John took several snapshots of the Green Heron - After dinner we found took a beautiful drive of some sixteen miles through Harvard & Still River. The evening was spent in the parlor looking over beautiful editions of works on ornithology - I also examined with delight the large oil painting of a group of Black Cocks by the great Audubon that John had bought for his museum - I read some letters written by Mrs. Audubon, the widow in 1862 in connection with the presentation of this portrait to Mr. Harris a warm friend of Audubon. It gives a sad picture of pecuniary distress on the part of Mrs. Audubon. There was considerable money but it was all locked up, heavily mortgaged and taxed. Mr. Harris left the picture to his son who sold it to R. Woods who sold it to John Thayer. From the present Mr. Harris

(visit) Lancaster, Mass.

1904

Feb 29 - John has bought two original water colors water color
Cup 1 of Audubon, representing one a Crested Tit by Audubon
(4) mouse, the other a Hermit Thrush.
The first is signed J. A. Red Banks.

1 Feb 1810. They are very attractive.
John also has bought an signed autograph letter of Audubon's which was
published in Bull. Natl. Mus. Cen. Catalog V,
202-203 to Richard Harber, and announcing
the discovery of Talco Haemis. He bought
it of Dr. Shufeldt. Accompanying it is
a brief note from Mrs. Audubon (Senn) to
a Mrs. Miller in regard to this letter
"I received your note dear Mrs. Miller
just as I was on my way to see an
old friend in the country. I will
certainly endeavor to comply with your
request as soon as I get home. With
respect to all the members of your
family I am dear madam Yours
L. Audubon. Excuse my writing I
am very blind I assure you;
Sear's date ", Audubon's letter is
dated Nov. 18, 1828 and can be read
in the Bulletin. Dr. Shufeldt writes
to John Thayer "28 Feb 1904".

My dear Col. Thayer,

Here are the two Audubon
letters - The date "Sept. 2, 1869" [this is
on the back of Mrs. Audubon's letter] is the
day I received Mrs. Audubon's letter. The words

(visit) Lancaster, Mass.

1904

July 29-

Aug. 1

(5) "for Robert Schufeldt" on the other letter
were written by me

Faithfully yours
R. W. Schufeldt,

The main idea of the Hermit Thrush
was on it "Hermit Thrush
Turdus solitarius
drawn by John J. Audubon
opposite Fredericksburgh Kentucky
Oct. 16 1820 "

Aug. 31. Sunday Clear.
John, Jack & I took a ride in
Jack's automobile to Clinton where
I saw the immense work that the
Metropolitan Water Supply co. is carry-
ing on - Home to Lunenburg. We broke
the chain on the way, but Jack
mended it ^{done at Long Grove in the P.L.} and we were in the P.L.
through Sterling. Beautiful views.
Pleasant evening in the moonlight on
the piazza.

Aug. 1 Clear. hot.

After breakfast we bade our
good friend goodbye, were driven to
Clinton and got home by 10.20

Cambiere, Mass. to Scarboro Beach, Me.

1904

Aug. 26

Clear, cool.

In. & I took the 1.15 P.M. train at the North Station reaching Scarboro at 4.42. A buckboard belonging to the Atlantic House took us aboard and we drove 2½ miles to Scarboro Beach, picking up at the Golf Links, half way, Harry Towne and others. We haven't seen Harry for about 12 years. At the Atlantic House we met Ruthven, Martha, Charlie (2nd), Towne, George & Mary, the two latter having arrived from North Haven, Me. just an hour earlier. Ruthven & family have been here all summer.

The house holds over 100 guests. There are now about 80 guests. The hotel faces south and is but a few hundred yards from the beach where George & I walked last evening (the 26th) to see the moon over the water. Wood Island Light is plainly visible to the south, lying close to Biddiford Pool, while the light on Cape Elizabeth shines farther up the coast towards Portland.

We spent the evening promenading and listening to some violin playing by Miss who has remarkable execution -

The young people were on a long ride. A few Herring Gulls & Crows in the marshes near Old Orchard Beach were all the birds I saw on my way here -

Harry Towne goes back to Chicago
on Sat. After.

Scarborough Beach

1904

Aug. 27

Clear and quite cool all day with light breeze.

This morning Ruth, Turner, George & I took a walk toward the beach through a beautiful large garden of an acre or more in the open field left up by a Mr. Raymond who stays here yearly. A long row of large European willows (*Salix*) very old skirts the base of the garden and for some distance down just back of the sandy head of the beach. A very attractive path winds along through them and we walked to the end and then past a small pond lined by Cattails, *Scirpus validus*, *Spartina*, & to the beach and back to the bath houses where we were joined by the ladies. M. & I watched the bathing. It is a good beach some $\frac{3}{4}$ of a mile long. A white winged Seagull was floating outside, and once a seal poked his head above the water. After the bath Mary, M. & I walked back through the willow walk to the house.

This afternoon Ruth, George, Mary, Turner & I walked over the beach to Point's Neck and across the neck to the stone beyond. One mile and a half in all. The view of beach, rocks and shore are beautiful. We returned in time for supper and spent the evening in the parlor looking at photographs, talking, etc.

There is a colony of Wilson's Terns on Bluff Island off Point's Neck and the birds are always seen flying about over & off the beach.

Scarboro Beach, Maine.

1904

Aug. 28

Clear, light breeze, cool - Ideal day -

This morning Ruellen, Charlie, Turner, George & I strolled through the woods near the house. They are composed of White & Pitch Pines and Balsams. I made an exposure on a beautiful path with a film (4x5). Beyond the wood is an extensive salt marsh connecting with the bay back of Front's Beck. Later we went down to the beach and I watched the bathers, taking their ocean dips. I took a number of snap shots. The beach is a strong mile and a quarter long and is a fine one, but not quite as broad or as free from small stones as the beach at The Elms. A strong pitch at the head of the beach makes a bad undertow when the tide is up and the waves are high, but the more dangerous feature is that the general drift of the water is parallel to the beach, flowing northerly, and creating at the end, where a rocky point runs out, a large eddy against which it is very difficult to make headway. The eddy carrying a swimmer over the point of rocks and then out to sea - Accidents have occurred at this point -

This afternoon we all went down and sat a long on the beach, watching the glorious ocean and talking together. The water was the deepest blue -

My photographs seem to have excited the liveliest interest, much to my surprise, and I have been showing them both this evening and before to a good many people. I have with me only those of this spring & summer.

Scarboro Beach, Me.

1904

Aug. 29 Cloudy early morning clearing - Rest of day bright and clear warm in sun, light breeze.

Sky and water have vied with each other to-day in producing the most glorious blue effects -

This morning Mr. Raymond took me through his garden and along the willow path, and explained how he built the place from an alder swamp. The spring that was evidently the source of the swamp now flows through paved channels, under the high sand mound back of the willows where it sinks into the sand. The flowers flourish in stony soil by the sea in more cases. There is a Dwarf Clematis very small and effective -

Later we all went to the beach as usual. This takes up about half the morning -

We spent part of the afternoon on the piazza and then Ruthie, Martha, Grace & Mary & I walked north along the shore on the cliffs nearly to Higgins Beach. We lay down on the rocks high above the water for some time enjoying the glorious expanse before us. The sea was quiet but the waves were rolling in and three Loons (Gavia imber) were diving off shore, and close in to the rocks three White winged Scotts (Oidemia deglandi) were feeding - The white spot about the eye and on the wing showed plainly. A seal occasionally poised his nose high above water, and a large lot of Terns, evidently the Wilson's Terns from Bluff Island were feeding off the mouth of Spurwinkle River, a small stream beyond Higgins Beach. Glorious moon later.

Scarboro Beach, Me.

1904

Aug. 30

Clear, still, very cool, a glorious day -

This morning Celestine & I walked through the willows over to Bloody Pond near by, a pretty sheet of water surrounded by cattails. In this pond, as well as the small one just at the end of the willow patch we saw Pied-billed Grebes, two in Bloody Pond, and one in the other. I was quite near the one in the small pond and watched it diving for food. On Bloody Pond were also two Black Ducks. I took a picture of the pond on a 4x5 film, all my plateholders & plates having been left at home by mistake. As I was changing my films behind a small shed near by, and Celestine was standing near me, all of a sudden Celestine went right through the top of an old well, one leg fortunately remaining out. He caught on to the edge by his waist and got up again. The water was some ten feet down and some six feet deep. I consider it a most fortunate escape and Celestine got out of it well with a sprained leg which made him limp this evening.

This afternoon Rob had, George had, Margaret Briggs, Lillie Nowata (nee Gray) with her two children, Edith and Helen came over from The Elms and staid about an hour and a half. We enjoyed seeing them very much. I took a couple of pictures of the whole group of hosts, Briggs & Deane's.

The view from the Kibbewood clearing is very fine indeed including the whole of the beach and Biddeford Pool. Ruthen, Turner & I went up there this afternoon. Spent the evening by the fire.

Scarboro Beach, Me.

1904

Aug. 31

Clear as crystal, cool, still. Glorious day -

This morning Ruthen, Martha, Tommee, George.

Mary and I took the train to Portland, a short run, and first spent a little time in the city. Ruthen & I called on Hinds, Taxidermist & on John A. Ford. Ford has a mounted Marbled Godwit, & taken on Scarboro Beach, Me., Aug. 16, 1904 by Grose Cashman, and skinned and mounted by Ford. Price \$10. Have written Will Brewster. At 12 M. we all took the electrics round the edge of the harbor to the very mouth a entrance. Pretty views along the way. A large six-masted schooner was lying in the bay and I tried a snap shot from the electrics - Cape Cottage Cafe' is at the entrance to the harbor on a rocky height commanding a glorious view of the sea. The entrance, a mile and a half across (it looks only a short half mile) is always teeming with craft, large & small, and often we had enjoyed a good fish dinner, we sat on the rocks for some time. At 3 P.M. we returned to the city and took the train back. In Portland I saw the house where Longfellow lived. A tablet is on the side of the building. It is in the business part of the city and is open to the public a part of each day.

Charles leg is quite strained after his fall of yesterday and he will have to be quiet a little while. I think he got off very easily from what might have been a bad accident.

Eighty one small Sandpipers were shot on the beach to-day. Ruthen & I examined them all. Forty were Exemptus pusillus, Forty-one Tringa melanoleuca. A Solitary Sandpiper and a Spotted S. m. from a flock of three were taken, also a few Ring-necked Plover.

Scarboro Beach, Me.

1904

Sepd. 1 Sun in A.M. growing cloudy toward noon and remaining so during the day - Air clear all day. No wind. Mild.

This morning some of us walked over to the Kirkwood and I took an picture from the piergza looking up the beach. Later Cleartie, Oliver Cleardwick and I walked into the woods back of the house and lay down in the grass for some time on the border of the immense salt marsh, where Cleartie & Oliver have blinds for shooting. The woods consist mainly of White & Pitch Pine, Red Spruce, Falsam with some Red Maple. A rather large Hem rose is located in the woods across the marsh. One bird fly by this morning. I took a picture of a bit of marsh through the trees, the sky being cloudy at the time. On our return I walked down to the beach and saw a good flock of White winged Sesters flying a little way out. The usual sea side plants are on the beach. Cakile, Falloda, Euphorbia polygonifolia, Zostera washed up on the beach. Xanthium ceculatum, Anemone &c. Spartina cynosuroides is very abundant about the ponds near by, and also Typha latifolia.

This afternoon Ruthven & I walked over to Bloody Pond where two Red-billed Grebes were diving near shore. Sometimes they dove head first, and again they would sink out of sight, the head going under last. We visited the scene of Cleartie's accident. Before supper I walked alone nearly a mile up the beach. The sea was rolling in and the clouds were heavy. Pleasant evening in the house.

Scarboro Beach, Me.

1904

Sept. 2

Some rain in the early A.M. before 6.30. Cloudy & sunny during morning, cloudy in P.M., rather warm, still, light fog at sea -

This morning after breakfast we had an exhibition on the lawn by the house by Edd C. Stickney, a strong man, of an apparatus for light exercise. It was very interesting. He performed some good feats of strength and I took some pictures of him, one where he held Deamian Hull up in one hand, and a dumbbell of 75 lbs in the other.

Later Ruthen, George & I walked over to the salt marsh where we saw a Lesser Yellowlegs and I examined the marsh plants which were characteristic. Then we went to the beach and I sat there till dinner time -

This afternoon Ruth, G. & I drove over to the golf links with Townes. I wandered over the ground with them and saw my first Robin since I have been here. Returned below supper -

M. & I return to Cambridge to-morrow.

Scarborough Beach, Me to Cambridge, Mass.

1904

Sept. 3

Cloudy with sun breaking out at intervals
warm, with little wind.

This morning Ruthven, George & I strolled
through the Willows over to Bloody Pond where
we watched a pair of Pied-billed Grebes diving
a short way offshore. It is astonishing to
see them go down, body first and head last,
as they often do. I have seen one just sink
slowly out of sight in this way, without
causing a ripple on the surface of the
water. We then walked over to the beach
passing Spartina cyn., Typha lat., 9 or 10 ft. high,
Citernaria sandata, Cicuta bulbifera, large
branching plants, &c. On the beach I picked
up a number of clam shells to take home
for tanning fish in - The bathers all
came down from and we stayed till 12
o'clock and then returned to the house and
at one m. I bade all good bye and
left for Cambridge. We slept at
Old Orchard and I was impressed by
the dense mass of houses small forest
that completely hide the beach from view.
We reached home by about quarter of six.

I shall append a list of the few
birds I saw at Scarborough Beach.

Scarboro Beach, Me.

1904

Aug. 26-
Sept. 3 Birds observed at Scarboro Beach, Me. from
 August 26 to September 3:—

1. Podilypterus poriceps. - 1 in small pond at end of Willow and 3 in Bloody Pond, both back of beach. Seen in Bloody Pond whenever we went there. Oliver Chedwick shot one on the salt marsh in a small pool.
2. Gavia immer. 3 ♀ or imm. seen on the 29th off shore and watched for a good while from the cliff near Higgins Beach.
3. Larus argentatus. Seen at intervals off the beach in small numbers.
4. Sterna Hirundo. Flying over the beach and ocean at time screaming, in small numbers. A flock of 50-100 fishing off the mouth of Spermwhale River on the 29th. A large colony on Bluff Hill, (near) (The birds were rising then)
5. Anas obscura. A flock of 3 or 4 in Bloody Pond. Possibly they were rubripes. They were shot from the Pond and brought up to the house. They may not have belonged to this flock. They were straight obscura, pileum black. Throat immaculate, sides of head not strongly spotted, bill dark, legs grayish.
6. Cidemia deflantie. Single birds and flocks of as many as twenty birds off shore near the line, sometimes diving close into the rocks. The white spots on eye and wing were very conspicuous.
7. Nycticorax n. naevius. Saw 3 or 4 flying over in the morning. There is a good-sized roost in a piece of wood 2 or 3 miles from the hotel. Did not visit it.

Seabrook Beach, Me.

1904

Dept. 26-

Sept. 3

- (2) 8. Tripterus minutilla. Abundant on the beach. Out of 81
Deep shot in the beach, we found on examination that
40 were Eremomela pusillus. 41 Tripterus minutilla
9. Eremomela pusillus. Abundant on the beach. See no. 8.
10. Calidris arenaria. Occasional on the beach.
11. Totanus flavipes. Saw two on salt marsh. We got
within a few rods of one - It flew off uttering its
characteristic call whew-whew, whew-whew.
12. Totanus solitarius. Saw 5 or 6 that had been shot.
13. Actitis macularia. Saw one or more in. on the beach.
Examined an imm. bird that had been shot. Breast
immaculate. Ridgway says they frequent the beach.
14. Aegialitis semipalmata. Occasional on the beach.
15. Buteo borealis. One soaring over the R.R. station.
16. Trochilus columbris. Always seen about the flower beds,
sometimes two together. All ♀s or imm. ♂s.
17. Tyrannus tyrannus. Occasional.
18. Corvus brachyrhynchos. Seen daily in small flocks.
19. Passer domesticus. Seen here & there, but in small numbers.
20. Ashiopterus tristis. A few daily.
21. Pooecetes gramineus. Three or four.
22. Spizella socialis. Saw but one. Have been very abundant (RD)
23. Thelospiza s. melodia. Abundant.
24. Hirundo erythropogaster. Always about in small numbers.
25. Ampelis cedrorum. Several as the 2^d.
26. Dendroica coronata one in. in the woods.
27. Loxostomus t. rufum, one -
28. Dawn stricapillus - Common -
29. Hylacola g. pallasii. Ad. with young (feeding them) in woods.
30. Merulaxis septentrio. Saw but one -

Trolley ride to Worcester, Mass.

1904

Sept. 5

Light clouds and partially clear, cool.

Labor day - This morning, Mr. Sam Newland and I took the electric car at Park Square, Boston at about 9.15 and had a continuous ride in the same car to Worcester. It was most exhilarating, the car going at times at tremendous speed. We went through Brookline, Newton Highlands, Upper Falls, Bellesley, Natick, Framingham, Southboro (the southern part), Westboro, Shrewsbury to Worcester.

The country is very beautiful, large stretches of farming land alternating with woods - we saw the large Metropolitan Reservoirs in and near Southboro. Worcester is miles from Boston and we ran it in about $2\frac{1}{4}$ hours. We walked about in the city, got some lunch and then took the electric to Worcester Academy where Mr. Sibbs, one of the teachers kindly took us over the entire set of buildings. I was sorry not to find Mr. Abercrombie at home.

The school opens in about a week. It is a fine institution with splendid appointments. Five brick buildings, Mr. Abercrombie's house and some twelve acres of ground compose the plant.

Returning to the center of the city we took the trolley and rode and fairly flew to Boston - Received home by C. R. Jr.

Cambridge to Ipswich, Mass.

1904

Sept. 10

M. & I took the 3.30 P.M. train for Ipswich.
to Spend Sunday with the Townends. Dr. Townsend met us at the train - Reached Ipswich
at about 4.30 and drove some three miles
to the house. I have described the situation
on my last visit Aug. 29-31, 1903. The
vast stretch of salt marsh through which the
Castineck & the Essex Rivers flow is very
fine - The grass has been cut and taken
away and the stubble is a rich brown (Span-
tim pater, gimna of the man). - Along the
many creeks & ditches that intersect this
green area, the bright green of Spartina thick
shows clearly, marking the water ways, and
along the borders of the marsh the
Black Grass (Juncus Gerardi) gives a dark
tone to the picture.

Gertrude, Graces (6 years old my Oct. 14)
& Charles were all at home, Margaret
being away - I have never seen her.
We all retired at 9 o'clock.

Just before dusk we watched two
Great Blue Herons fishing at the mouth
of the River. We had a strong
Spy-glass and could see the birds
distinctly, although they were a good
way off - One was an adult, and
one an immature bird.

Plymouth, Mass.

1904

Sept. 11

A dense fog in the night and early morning breaking away by nine o'clock. Dr. Toward walked to the beach very early. Gertrude & I followed about 9.30 in the little cart with Stella, the pony. The beach and the dunes are as fine as ever - We found Dr. T. after a while. He had a pail full of big Sea Clams (Macra solidissima) which we had at dinner in the shape of a delicious broth - There were very few birds off or on the beach - Some Red-throated Larks was driving some distance off, but I should never have known them if I had not been told. A few Semi-palmated Sandpipers and Sandpipers were flying too and so are some Herring Gulls were winging their way over the waves - While Dr. T. & Gertrude were going for the pony & cart I walked across the stretch of dune to the inner road, taking some snap shots on the way - The net at Bromis and examined some birds that had been shot - They were Black-bellied Plover, Semi-palmated & Least Sandpipers. We then drove home again, Dr. T. walking beside the pony.

A bath in the river from the boathouse followed about noon, he & I looking on - The tide was very high, over the board walk connecting the shore with

Ipswich, Mass.

1904

Sept 11 the brookside along the marsh, and we
 (2) & I were canoeed over. Some ten or a dozen
 went into the water which was icy cold,

In the Pk. Mr & I with Frances walked
 over to a hill where was a fine view
 and then we called on Dr J. L. & Mrs.
 Goodale. Goodale showed me over his
 plantation of trees. He is going into it
 very extensively -

After supper we had a pleasant
 talk and retired at 9 o'clock,

Sept 12 We left an pleasant pause this
 morning taking the 7.3 train for
 Boston, reaching home shortly after
 eleven o'clock.

Ipswich, Mass.

1904

Sept. 11

- Birds observed at Ipswich Mass., on Sept. 11
 (with one exception Circus hudsonius, Sept. 10). All seen
 between Dr. C. W. Townsend's and the beach - A few
 as noted were observed by Dr. Townsend,
 1 Gavia immer off the beach (C.W.T.)
 2 " Lummus " " " ". too far for good observation
 Dr. T. knew them.
 3 Larus marinus, on the beach (C.W.T.), flock of six.
 4 " argentatus, several flying over the water.
 5 Sterna Hirundo, one imm. winged on the beach - Dr. T. killed
 it and I saw it afterwards.
 6 Ardea herodias, Two feeding on mud flats at mouth
 of Castle Neck River in late P.M., seen from the house
 through a Spy-glass - One ad. and one imm. (Sept. 10).
 7 Butorides virescens. One imm. in salt marsh, alighted on
 stake near us.
 8 Himantopus n. naevius. One flying over.
 9 Actitis macularia. One killed, seen at Woodbury's
 near beach, where we stopped to inspect some birds in the flesh.
 10 Erynnis philo. Flock on beach, one at Woodbury's
 11 Calidris arenaria. Two or three on beach.
 12 Squatarola squatarola. Two ad., one imm. at Woodbury's
 13 Aegialitis Scipio palustris. One at Woodbury's,
 14 Olinus virginianus. Several seen (C.W.T.)
 15 Buteo lineatus. One soaring over the Dunes,
 16 Ceryle alcyon. Several near the house, one or more al-
 ighting in trees by Dr. J. H. Goodale's house. The only
 water near the house is a very small pond -
 17 Cornus brachytrichos numerous over the salt marshes.
 18 Furnarius longicauda abundant in flocks. One lit on the
 ridgepole of the barn and chirped.

Ipswich Mass.

1904
Sept. 11

- 19 Astragalinus tristis, occasional.
- 20 Pooecetes grammurus, one feeding near barn door.
- 21 Passerulus s. savanna, in Anthonomus, back of beach.
- 22 Spizella socialis, a few in road.
- 23 Zenopsis c. melodia, occasional.
- 24 Trochus subis, one on telegraph post, ♀ or imm.
- 25 Petiveria litoralis Lamifrons, one flying over road.
- 26 Hirundo erythroptera, abundant in flocks of small size, 10 or 15 in a flock.
- 27 Iridoprocne bicolor, several about the house, flock of hundred back of beach, others flying about everywhere.
- 28 Riparia riparia, a few.
- 29 Campelis cedorum, one (C. W. T.).
- 30 Galeoscelis carolinensis, one (C. W. T.).
- 31 Merula migratoria, abundant, flying in flocks.
- 32 Sialia sialis, one, full song.

Cambridge, Mass.

1904

Oct 6th

Mrs Alice J. Headings and her sister died with us this evening, October 6; they came on to Boston to the Episcopal Convention. I have corresponded with Miss Headings since February, 1884 and am indebted to her for a number of interesting plants. We passed a very pleasant evening and I saw them to their hotel in Franklin Square off Washington St, Boston.

The two ladies came again to the house of the morning of the 8th, Saturday, and I took them over Cambridge in a carriage showing them all the points of interest possible, the Lee, Ruggles, Lowell, Waterhouse, Cushing houses, Christ Church which latter we went over. We drove through the College grounds and went into the Fogg Art Museum and Memorial Hall and Museum of Comparative Zoölogy and the Gray Herbarium where Drs Robinson & Greenman were very polite. They dined with us and then I took them to our Museum and also showed them the Riedel windows in the house. I bid them good bye after that, as the amount of work to be done before going to Shelburne on October 12 would keep me constantly busy.

Cambridge, Mass. to Shelburne, N.H.

1904

Oct. 12

very chilly and cloudy day -

Mr & I left for Shelburne this morning on the 9 o'clock train. For over two hours no heat could be got into the parlor car and we kept on overcoats & wraps to be at all comfortable.

The train was so long that we reached Portland nearly an hour late - We took a hurried lunch and then left at 1:16 for Shelburne arriving on time a few minutes after five. The changing foliage was a most agreeable surprise as I thought we should miss it. The red, yellow, browns of every shade were very beautiful especially along the banks of ponds and streams. The extensive salt marshes about Ipswich & Rowley and thereabouts were most exquisite. The low growing Spartina praeceps having a very rich bronze color and the large flooded patches of Scrophularia (Salicornia herbacea) brightening up the scene -

Gus Philbrick & his Fanny are away owing to the death of their brother Walter's wife - Gus returns late this evening and Miss Fanny, on Friday the 14th.

There are here Mrs. Duncklee, the two Miss Davenports, Mrs. Charles Endicott and his married daughters, Mrs. Charles W. Rantoul and Mrs. Kendall.

Mrs. Endicott is from Detroit, Michigan. Mrs. Rantoul has a little son with her, Endicott. Mrs. Macmillan who lives in the Endicott College is a daughter of Mrs. Endicott.

1904

Oct. 13

Shelburne, N. H.

Very chilly cloudy and misty with considerable rain. It snowed last night some and snow was on the roofs this morning. After breakfast some large flakes fell. A record of temperature will follow my visit.

This morning I walked down to the river and started a Great Blue Heron from the depression near the river. He rose from very near me - I walked round behind the Knobble over the stony shore which is covered at high water and admired the changing foliage on the Knobble and the white of the Paper Birches which are rapidly losing their leaves - A flock of Crows flew over and some twenty Robins were fluttering about in the Shrubbery attended by a single Juncos.

This afternoon I spent some time showing my photographs to the Misses Davenport who were much interested in them. They do beautiful work themselves. Later I walked to the village and down the road some quarter of a mile. I drove back with Gus from the Post Office. We counted the horses in Shelburne and made about fifty-two in all. In the village proper are fifteen. Stickney the strong man whose photographs I took at Scarboro Beach has written me thanking me for the prints I sent him.

Gus returned about ten o'clock last evening.

I shall record the birds seen at the end of my visit. Eight species were noted today all common —

Trip to Bethel, Me,

1904

Oct. 14 Heavy clouds with stretches of sunshine during the morning - Windy and cold. Some rain in the P.M. in Shelburne. Max. temp. 42°.

This morning Mrs. Duncklee, Miss Smith, Gus & I drove to Bethel on the north side of the river returning on the south side to Fiske and then crossing. We had a glorious time. The foliage in the meadows and hills and roadside was a constant inspiration. The White Birches and Poplars give a golden yellow, the Beeches a rich yellow and bronze, the Red Oaks a deep bronze, the low Blueberries a deep red. The trees are rapidly losing their leaves especially the Elms & Birches and Maples. The glory of the Maples is gone. The rich green of the Coniferous trees lends a beauty to the scene. The needles of the Larches are now yellow. Robins & Juncos were everywhere in great abundance. At Bethel we dined at "the Howard" and then strolled about in the town. Apples are everywhere in the greatest abundance and we got some very fine ones in Bethel. One large one was a foot in circumference - We left Bethel at about half past three and had a delightful drive home. It got very cold and windy and a few drops of rain fell but we escaped most of it - Got home at six.

Shelburne, N.H.

1904

Oct. 15

Clear, crisp, glorious day -

This morning Mr. & I walked some $\frac{3}{4}$ of a mile up the road. The White Birches are getting whiter & whiter as their leaves fall and I am never tired of looking at them. The summit of Mount Moriah has all day been covered with snow. The wet snow has frozen on the evergreens and the mountain tops sparkle like frost. In the large meadow by the old Green place, at least fifty Crows were scattered over the field, feeding while Juncos flitted up as we walked.

Later in the morning Sus & I drove over Head Nine Bridge to the Endicott place where I made a call on Mrs. Mrs. Macmillan. Mrs. Macmillan & I strolled over the fields to a pretty piece of water where the birds haen't in the Spring & Summer. The view is wonderfully fine from the ground. The Presidential range was white with snow and sparkling in the bright sun. Mrs. Macmillan invited Mr. & me to dine with them on Tuesday after at one o'clock. On our return I saw ~~about~~ a flock of twenty-two Horned Larks feeding in the ~~alpestris~~ ploughed land opposite Morse's Barn.

This afternoon our party of yesterday drove to Gorham up this side of the river and across the suspension bridge. It was very rough part of the way, and we got into the water over the floor of the carriage at the end of the bridge owing to a well & dam built below, which backed up the water - the dam is gone. The views were exquisite. We returned from Gorham with a fine moon in time for supper.

Drive to Glen Ellis Falls, N.H.

1904

Oct. 16

(1) still.

Clear as crystal, air cool, sun warm at noon.
This has been a red-letter day - Our party
of yesterday started about 9.30 this morning
and drove in an open carriage, with Helen & Blazier
to draw us, through Gorham to Glen Ellis Falls
in Rumelton Notch a distance of nineteen miles.
We stayed there till 3.15, reaching home at
about six - The day was absolutely perfect
in the softness of the cool air, and the
brilliance that the clearness gave to every
tree and stone -

The first excitement was just in front of
Charles Philbrick's in the western part of
Shelburne. A small bird flew across the road,
alighting in a tree in front of the house
some twenty feet up - I sprang from the
carriage, approached carefully and turned my
glass full upon an Evening Grosbeak!^{Evening Grosbeak}
I was but a few rods away and his plu-
mage was distinctly visible, his black cap
immense beak, and the black & yellow of body
wings & tail - I was excited enough.
It allowed a sufficient examination for
a perfect identification ere it flew
off among the trees back of the house
This was a splendid find -

As we were driving through the notch
and had arrived at Leighton's Landing
we came upon a wagon containing five
men with a large buck deer with 5 points

Drive to Glen Ellis Falls, N. H.

1904

Oct. 16 ^{autumn} and one of the party had just shot
 (2) distance in the woods. The deer was lying
 in a wood road running himself and was
 but five rods away - He never rose again.
 We took several snap pictures of the prop.
 I took a picture at this spot of the Peabody
 River -

Approaching Glen Ellis Falls we had a
 glorious view of Tuckerman's & Huntington's
 Ravines separated by Lin's Head and we
 could see the broad stretch of the Alpine
 Garden - The Falls were very fine - I had
 not seen them since the 60s. We lay
 in the warm sun on a grassy bank by the
 road and had a nice lunch of hot beef
steak, coffee, &c. Gus knows how to make a
 good dinner - On the way home some way
 after leaving the Glen House, a fine large
 Pileated Woodpecker flew slowly across the ^{Cephalous} road in front of us, near enough to allow the ^{pileatus}
 red crest and the black & white of the body
 I did not see him light.

After leaving Gorham we had the bright
 moon and Jupiter to light us home - In the
 Notch the leaves have mostly gone, and the
 beautiful spray on the road sides, mountain
 slopes, especially when pencilled against the sky
 was very fine. The yellow leaves of the Birches,
 brown & yellow leaves of the Beeches, bronze leaves
 of the Oaks, and some of the yellows of the White
 Birches still remain - The maples are practically denuded.

Shelburne, N.H.

1904

Oct. 17

Clear, rather windy, rather warm in the sun
at noon - maximum. 68° -

It has been another glorious day. This morning Mr. & I walked over to the village. I exposed a roll of 4×5 . films, 6 exposures to develop with Miss Smith in her developing machine. I found a flock of at least fifty Horned Larks running about in the ploughed furrows in the same place as yesterday, opposite Morse's barn. They would rise and ~~wanting~~^{flitting} loudly wheel over the field and then drop down into the ploughed land within a few yards of me, and become absolutely invisible, so perfectly did their coloring blend with their surroundings. They ran about like mice, picking here and there and it was only with my glass that I could detect the yellow throat and black tips about the head. When flying, they display much white. They circled and wheeled much like Sandpipers.

This afternoon Mr. & I drove with Mrs. down the south bank of the river some three miles. The blue waters of the Androscoggin River and the rich colors of the leaves, the delicate spray against the sky of the leafless branches all make a most exquisite picture. Passing the spot where I saw the Larks in the morning, I found them all there again. I developed a roll of films this evening in a developing machine.

Shelburne, N.H.

1904

Oct. 18

Cloudy, with the sun a while in P.M. Rainy Am.

I rested at home this morning, writing, &c.

At noon M. & I drove up to Mr. & Mrs. McMillan's to dinner. The sun was shining during the drive and the views were beautiful. The woods are heavily carpeted with leaves. We had a very pleasant time at the house. Mrs. McMillan has pressed this summer 49 specimens and she named them almost entirely correctly. It is a good beginning. We walked about the place and saw the farm, horses, pigs, ram (a tremendous fellow, 350 or 360 lbs), sheep (Oxford Down). The view of the big mountains was partly obscured by the heavy mist in the air, but the Hayes & Baldcap ranges showed up finely. We returned home about half past three. Juncos were abundant along the way rising before us as we advanced ~

I have learned from Dr. Robinson and through the papers that the bequest of Mrs. Potter of \$50,000 to the Gray Herbarium will probably be three times as much and the Herbarium is included in the list of residuary legatees. This is a noble gift and we shall all rejoice.

About two weeks ago a very large bear was shot on Middle Mt. by a gunner,

Shelburne, N.H.

1904

Oct. 19

Cloudy morning, clearing; afternoon expect'd
fair & wind.

We have had a quiet pleasant day - This morning Mr. & I walked through the pasture back of the Scudder cottage and some distance up the slope towards Cobod. Chickadees were abundant, a Jay screamed, but with the exception of a few cliffs here & there, the woods were absolutely still. The very silence was impressive. The sun came out as the clouds scattered and the trees presented a beautiful picture - On our return I walked down to the brook just below us and exposed low plates at some White Birches -

This afternoon we walked over the interval in front of the house with the Miss Davenports and saw a Bittern from very near. He rose and alighted a short distance off, immediately assuming a stake-like attitude. We followed him later some distance and stood very close to him, watching noticing him until he rose - On the river we saw two ^{Ducks, perhaps Green-tops,} ~~Geese~~ they ^{were} ~~had~~ flying up stream, and four White-winged Gulls flying down stream - The latter were coal black with large white specula which were very prominent as they flew close by us - I do not know about the White-wings passing down the river inland and shall find out later -

[* These Ducks had black heads & necks and white specula and were too small for Mergansers - W. Brewster says to-day, Oct 27, that my 4 ducks must have been White-wings. They are at Lake Umbagog every year.]

1904

Shelburne, N.H.

1904

Oct. 20

Cloudy, cool, slight rain at noon for short time.
Mild.

This morning I walked a little over three miles, ^{going} down the road round Wheeler's pond to the first house round Stark Hill. Robins and Chickadees were very abundant. I saw a flock of fifteen Chickadees feeding in the low trees and shrubs by the road. A Swamp Sparrow alighted near me, by the pond and a Red-tailed Hawk called for some time in the Stark Hill woods. I met Mr. Wheeler working in the field and he told me how abundant the deer were, coming down to his place at all times and doing really a good deal of harm, eating the apples, cabbages &c., and trampling on the grain. A two year old deer was shot a day or two ago in the woods near Crow's Nest by Al Wilson, the same man who shot the bear recently on Middle Mt. He got \$30 for the carcass & hide of the bear and \$5 bounty - A good deer will bring about \$12. (Twelve), says.

This afternoon I took a good long nap, a most unusual proceeding on my part. A letter from Bill Brewster from Bettie came this evening - He & Mrs. B. arrived there last evening - He says he returns to Cambridge on Nov. 1 - We return Oct. 31.

Shelburne, N.H.

1904
Oct. 21

Stormy day, wind east, very heavy, rain falling in sheets most of the time and all the time from 4 to 5 p.m.

The heavy easterly storm has kept most everybody in the house. This morning I walked over to the village with some mail.

The wind was fierce and especially on my return the rain fell in torrents, lashed by the strong wind. In the ploughed fields opposite Moses Barn I saw three Horned alpestris Larks on my way to the village, and four on my return. I was pretty wet in spite of my rubber coat.

This afternoon I spent in our room reading "The Silent Places" by Gilbert Stewart White. It contains beautiful descriptions of scenery in the far north, and it is a very exciting story. I also read aloud in "The Russian Advance" by Albert J. Beveridge. The day has been a quiet one without any special incident to record.

I might add in regard to the Evening Grosbeak of the 16th that it sailed across the road and up into the tree much like a Shrike. On a near approach I saw it distinctly, its very heavy thick bill, black crown, dark wings & tail, and the yellow of the body. It uttered no note.

1904

Shelburne, N.H.

Oct. 22

Cool, very cool, calm morning, cloudy in the afternoon with a few drops of rain by 4 P.M., light rain between 5 & 6, brilliant evening with bright moon.

The weather has been very variable today. It was a glorious morning, so clear air cool, and Mr. & I walked about taking photographs. The White Birches stripped of their leaves and showing their exquisite spray make fine subjects for the camera - Later in the morning we walked down the road a little way. I caught a number of insects and we returned through the bit of wood southeast of the house. In places the ground under the trees was densely carpeted with rich brown beech leaves to the exclusion of every thing else.

This afternoon Mr. & I with Mrs. Fautrol and Endicott drove up the road over head Pine Bridge and called on Mr. & Mrs. McMillan. Mrs. McMillan was sawing down some poplars in a grove of White Birches when we arrived. Mr. M. was in Gorham - We had a very pleasant time and returned just before it began to rain.

I sent to Will Brewster this morning by registered mail a number of sheets of the Cambridge list that he is going to make some additions to -

Shelburne, N.H.

1904

Oct. 23

Clear cool, fine clouds.

It has been a glorious day. This morning I took the 3-seated open carriage with Mrs. Ews., and got a jolly party, Miss Smith, the Misses Davenport & Mr. together for a drive. We drove up the road slowly and went as far as the end of the meadow at Stephen's Farm. Then we all alighted and followed the path some distance along the way to Gorham in the woods. We returned over Lead Mine Bridge - The bare White Birches make a glorious sight on the mountain slopes and the Androscoggin River foam-flecked and tumbling over the stony flood by at our very feet. A single Yellow-palm Warbler flitted before us in the woods and in a playbed just over the R.R. track north of the Station a solitary Vesper Sparrow was feeding close by us as we stopped to look at him. His light wingbars and white outer tail feathers were prominent.

This afternoon I read aloud in the Purkinian Grove by Beaverton and later Mrs. & I drove off to find a small Red Spruce for Miss Smith. We went down to Wheeler and turned to the left, coming out through a wood road to the main highway. Then we drove up as far as Burger's farm and found the Spruce. Later I walked down the river road the interval, but saw no birds -

1904

Shelburne, N.H.

(Oct. 24) Heavy, cold clouds, broken, all day. Sun shining at intervals. Maximum temp 51°.

It has been raining, but chilly to-day. The two Miss Devenports & Miss Smith left this morning. That leaves us with Mrs. Endicott and her family. I read alone this morning and later took a walk by myself. I went down the road past Wheeler's Pond and took the wood road of yesterday, going into the woods to investigate - I collected some fruit of the Sweet Fern, and found a good deal of Mayflower. I found one very fine ^{Big White} Birch - White Pine that measured, 4½ feet up from the ground, 8 feet in circumference. On my return I saw a Hermit Thrush on the fence about the burying ground. He was waffing his red tail.

This afternoon I read again and a little after four o'clock took another walk through the pasture back of the Scudder Cottage. I walked along the west end of it, and as I read near the north west corner I saw Rollie, the little dog that accompanied me, start and run. Looking up I saw in the north east corner of the pasture a beautiful doe capering towards the woods her white tail raised. It was a glorious sight. My glass brought her very near. She stopped as she reached the trees, for Rollie had not run far, and she had not seen me, and walked in among them when I saw her pause a moment before she disappeared from sight. It was a pretty sight as we could see.

Drive to Bethel, Me.

1904

Oct. 25

Light clouds during AM., sunny during the day till middle PM. when the sky clouded - Still, air brisk in AM. warmer PM.

This morning Mrs. Endicott, Mrs. Pantone, Sus & I started at 9:30 for Bethel reaching there at a little before 12 o'clock. It was a perfectly lovely drive the turns in the road bringing even fresh views, jagged cliffs, wide spreading meadows, the ever present Androscoggin River winding gracefully now at our very feet, now beyond some grassy stretch - I have not been prepared this fall for the beauty of leafless trees especially the graceful White Birch at the Elms - I never tire of them - As we were passing Tumble-Down-Dike whose jagged rocky heights are so imposing I spied feeding far up on the slopes above a solitary cow. It required a glass to make her out distinctly. Sus thinks she must have been lost. On our return we saw her again with another cow about a third of the way down feeding together - A Patriarch fled across the road in one place, but the feed of the day was a *Peregrinus* Canada Jay - We were approaching Bethel *canadensis* Bridge and were a short distance from the Fair Grounds in what they call Mayerville - One side of the road was lined with White Pines - On the other was an open grassy stretch with a graveyard just beyond bounded by a fence - Suddenly the Jay appeared on the fence by the pines. It hopped from post to post and as we quickly drew up

Drive to Bethel, Me.

1904

Oct. 25 it became very tame, hopping down into the road a rod or so in front of the horse. Then it flew on to the fence by the grave yard, dropping into the grass occasionally to pick up something. It would pause for a time on the fence or in the road and give me all the time I wanted to examine it with my glass which brought it close before me. Its black crown stripe, white fore head throat & sides pied and gray body reminded me forcibly of one mounted skins in the Museum. After four or five minutes it disappeared in the depths of the pines flying straight in front the fence. Its resemblance to a large Chickadee is striking.

At Bethel we dined at "The Howard" and then wandered about for an hour and a half amusing ourselves. We started for home at 2.30 and drove up on the south side of the river as far as Gilead, thus varying the scene. We passed an automobile without much trouble and also two trains of cars from quite near at hand. As we were passing Hawk Hill Guy pointed out Hope Austin the cellar of the home of Hope Austin, one of the earliest settlers who in an Indian raid fled to the top of Hawk Hill with his family and was saved. The Indians destroyed everything and carried a load of beef from one of the live oxen - we reached home at about 5 P.M.

Shelburne, N.H.

1904

Oct. 26

Dull heavy clouds and almost steady rain all day - Temperature between 45° & 43° all day.

There is nothing worthy of record to-day. Rain, rain, rain - Our visit to Mr. & Mrs. Brewster has been postponed till to-morrow. They are in Bethel. The day has been spent in reading and writing and late this afternoon I walked to Wheeler's, getting some two miles of exercise.

Gus has decided to make an addition to the addition to house on the east end and he has spent the afternoon the day in Erkham, purchasing lumber & hardware.

The addition will include an extension of the whole house, making seven or eight sleeping rooms and store room & closets in the house. There will be another front door and the porpoise will be extended. The lower south east room will be a second parlor and the little room back of that will be opened into the dining room.

1904

Oct. 27

(Shelburne, Vt.) Trip to Bethel, Me.

Cold, blustering, with frequent snow squalls. Temp. ranging between 39° & 31° .

M. & I took the early morning train for Bethel, reaching there at 9 A.M. It was cold and windy and at intervals snow squalls would come drifting down from the mountains whitening the ground while in other hills, the summits sparkled like crystals in the sun light.

Bill Brewster and Mrs. B. met us and took us up to Mrs. B's house (Mr. Tuell's) near Dr. Gehring's. Bill & I then took a very interesting drive of twelve miles round Songs Pond and through Albany, which consists of about three houses. The pond is a beautiful sheet of water, a good mile long and bordered by trees all round. We saw a flock of 8 Fox Sparrows and a good many Robins, two Crows, several Juncos. There are a great many Gray Birds in Bethel and Arbor Vitae's look fine while I see little of here.

Returning at twelve we all luncheon soon after at Mrs. B's and then Bill & I walked through Dr. Gehring's wood and saw the "Shack" and improvements about it. The shack is an open cabin of gray birch logs. Mr. B. & Mr. joined us. We all returned after a warming at an open log fire and M. & I took the 4.25 train back to Shelburne where Gus met us. I talked over the last with Bill and took with me a number of sheets - We had a very delightful day.

1904

Oct. 28

Shelburne, N.H.

Clear, cold, still. Min. temp. 25°.

It has been a perfectly ideal day. On rising this morning we found the big mountains white with snow, the ground frozen and the air as clear as crystal. Late in the morning we drove to Mrs. MacMillan's with Mrs. Endicott & family. The Presidential Range from Gates Cottage as was of surpassing beauty. They were a solid white, gleaming in the sun. Several inches of snow must have fallen. The tops of the spruce-clad mountains about us were frosted with snow which had frozen on to the branches and as the sun shone on them the effect was very beautiful. The views from Lead Mine Ridge and from Mrs. Macmillan's were at their very best and could not be surpassed. Every ravine stood out in the clear light, the shadows contrasting with the sun-lit portions in the white snow. We staid at the house and on the ridge some time and then drove home again. We kept both ways on the north side of the river.

In the afternoon we wandered about enjoying the views and taking a few pictures.

At Lead Mine Ridge this A.M. a fine adult Red-tailed Hawk rose from near by and began to soar and rise, displaying his red tail as he swayed. Higher & higher he went till he was almost lost. When he was very high I saw that a much smaller hawk had joined him. The small one appeared to be to the large one, as a Robin to a Cuckoo. I don't know what it was.

The view from sunset rock at Sun-don was fine. The red glow against the white hills! *Erythronium cicutarium* L'Her. 8' long near the Macmillan house.

Shelburne, N.H.

1904

Oct. 29

Light clouds, haze and clear sky during the day.
Air cool, light breeze —

This morning Gus & I drove down the road to Hope Austin's the old cellar below Wheeler's where Hope Austin's cellar lived (See Oct. 25) - I took a picture of the spot. Austin was buried in the small burial ground across the road. Then we drove through the red wood road at the foot of Hawk Hill and round Crows Nest to the old mill site on Infallis Brook where Site of the old mill. Gus' father ran a mill in about 1857-1862, cutting the timber used in the main house here. Gus' father owned the mill during that time with about an acre of land. Most all traces of the dam are gone while the mill is absolutely gone. One or two rotten timbers by the side of the brook bed, a piece of iron used in working the saw, and the blasted rock which was cut out to make the sluice way are all that remain. A few years ago over the bed of the stream was turned in a big presbet, so now all is dry.

I hoped to see a Hudsonian Chickadee in the spruce-grass pasture near by, but I did not succeed. Later on our return I walked down over the intervals and circled "The Island" just below the Knobble. This belongs to Gus and is some 15 acres of good hay land. The Island did not exist at the time of the original plan of Shelburne of which Gus has a copy. Gus considers this Island the best piece of land that he owns. It is approached from the main land except in high water. I think I never walked over it before.

1904

Oct. 29

(2)

Shelburne is divided in lots, upland & meadow. The upland lots are 100 acres each, the meadow lots are 20 acres each - Gus has a copy of the town of Shelburne made in 1859 by T. Clark from a copy by Benj. Akerman of the original plan which has been lost, so that the plans of Clark & Akerman are the only two that exist - Gus' plan is much worn and has been mounted on cloth and framed. I have copied that part that includes Gus' farm. He owns lots 10, $\frac{1}{2}$ of 12, 20 & 21 and the "Island" - the dotted lines separate the meadow from the upland, the road runs through the lower part of lot 10, with the house on the north side of it. The Knubble is not in the Philbrook Farm. It is owned by Prof. Greeley with the land between it and the road -

Plan of Philbrook Farm.
24 runs back about as far as the foot of Mt. Cabot.

This afternoon I walked over to the east end of the Knubble and tried the brook called some distance down. It empties into the river opposite Evans' farm. I raised a flock of six Black Ducks from the brook ~

Shelburne, N.H.

1904

Oct. 30 Cold clouds, with occasional sun in sun., sunny & cold P.M. Rather windy.

It has been a real wintry day requiring brisk walking and warm clothing to keep warm. This morning we were buried with packing for our departure for home to-morrow. Gus took us over the house to see once more the upper rooms especially in view of the changes to be made by the new addition the timber for which arrives to-morrow. He also went into the Goodale Cottage to see some changes there and to Prof. Jordan's little workshop which is a very attractive room for his bacteriological work.

Mrs. Gilbert N. McMillan wife and little girl, Ellen, came to dinner. In the afternoon I strolled through the pasture back of the Scudder Cottage. Mr. Rantoul saw a Pilated Woodpecker there in the morning. I saw none but joined Mr. & Mrs. Kendall & Mrs. McMillan who came out from the woods. We returned by way of Sunset Rock. About 4 o'clock Gus took Mr. & me with Miss Fanny to drive round Lead Mine Bridge. It was a glorious ride, clear cold. The sun was just setting as we reached Gates Cottage and the picture was beautiful one with the big Range white snow. Jupiter shone in the east and Venus in the west. This is our last ride here this year and a most delightful ending to our visit.

1904
Oct. 31

Stellburne, N.H. to Cambridge, Mass.

119

Clear, very cold, mercury at 7.30 A.M. 25°.

We were up bright and early this morning. It was colder than at any time we visit before and we bundled up to ride to the station. All our good friends bade us a hearty good bye. Mr. Reuel left with us. We took our last look at old Bald Cap as we crossed the river. At the station I saw the largest flock of English Sparrows that I have seen there. There were twenty-five of them, chattering away vigorously. We had a very pleasant ride to Boston. Mr. Reuel left us at Portland. We reached Boston at 4 P.M. and home at 5 P.M.

Shelburne, Vt.

1904

(Oct. 13-31)

Birds observed by me at Shelburne, Vt., in the valley and in the region along the valley between Glen Ellis Falls and Bethel, in the course of driving.

- 1 Anas obscurus 29^④ creek. Started suddenly from close at hand. They fly away from the water & flew rapidly.
- 2 Cidemia deplanae 19^④ down the Auto-rough. Seen very near & watched for about 13 min.
- 3 Buteo swainsoni 19¹, creek. Watched & followed some distance
- 4 Circus heroides 13' river 16' front of house.
- 5 Zenaidura macroura 15' (min. hunting) 16' river bank 16' gunner, Glen Road. 18² 23' woods 25' W. Bethel
- 6 Buteo borealis 28¹ 96' rose from nearby ad displayed its red tail.
- ? " Circus" 20¹ 12' air. It may have been a Juvenile.
- 7 Picipiter velutinus 15' near Leominster bridge.
- 8 Ceryle alcyon 14¹
- 9 Dryobates villosus 17⁴ 20³ 4' th. 22²
- 10 " p. medianus" 16² 19¹
- 11 Cecropis pileata 16¹ across the road directly in front of house, Glen Road.
- 12 Coturnix a. leucotis 16²
- 13 Alauda arvensis 15⁽²²⁾ 17⁽²²⁾ sun 18' C. E. P. 21^④ land near the station
- 14 Cyanocephala cristata 14' 16' 17¹ 19¹ 22' 29¹
- 15 Perisoreus canadensis 25' Bethel, roadside.
- 16 Corvus brachyrhynchos 13²⁰ 14⁵⁰ 15⁵⁰ 16⁵⁰ 17²⁵ 18¹⁹ 21²² 23²⁴ 25²⁶ 27²⁸ 28² 29² 30² 31² 32² 33² 34² 35² 36² 37² 38² 39² 40² 41² 42² 43² 44² 45² 46² 47² 48² 49² 50² 51² 52² 53² 54² 55² 56² 57² 58² Total 34 species.

All the species except Oscilleroes pileatus, Perisoreus canadensis, Passerella iliaca & Hylorchilus u. swansonii were observed in Shelburne besides, during the drives up & down the valley. Some of the best records, as 300 Robins on the 14th, were made on such drives. These drives are all recorded in accounts of the day -

Nov. 15th

Trip to the Thayer Museum, Lancaster, Mass.

118

Clear, cold day.

I took the 10 A.M. train this morning at Dartmouth St., Boston, and went to Leicester. I was surprised to find the ground covered with snow. John E. Thayer met me at the station and we drove to his Museum which was opened yesterday.

It is a gem, neat, tidy with perfect light. On the upper floor a exhibition room John has arranged himself all his mounted birds (of N. America) in the glass cases round the room. The back of plate glass is used and this in connection with the light coming from above through stained glass renders every thing clear and brilliant - At one end of the room hangs Audubon's large oil "The Blackcock" and a large number of groups are in the center of the room. They were made by the artist who makes the groups for the Amer. Mus. Nat. Hist., New York. On the ground floor are the private rooms for nests eggs (on one side) and skins (on the other). Over the windows on the front and sides on the outside of the building are carved in white marble the names: - left side beginning at back, Ridgway, Cones, Bendire, Merriam, Brewster; front, left to right, Audubon, Wilson, Bonaparte, Nuttall, Richardson, Townsend; right side, left to right, Baird, Lawrence, Brewer, Allen, Cassin - Several groups are on the ground floor where is also John's private room - We drove to the house at 1 P.M. for lunch —

Lancaster, Mass.

(2)

We dined with Mrs. Bayar and Natalie and then visited the aviary. The birds are all in fine condition. The young Red-tail that J.R. Churchill was instrumental in sending to John Bayar some months ago is in fine shape. He has a large crop and is in good plumage except for tail and fore tops of head - the former was hurt in the small box that it travelled in and the latter has suffered some from flying against the wire at the Golden Eagle in the reef cage. These feathers will all come up in the spring.

Bayard Bayar came to the house before I left. I had a good talk with him, not having seen him for many years.

John showed me the Green Woodpecker, a watercolor done by Audubon abroad when he was a boy. It is referred to in the Nutt & C. Bull. I took the in Lancaster and returned home via Ayer Junction reaching the house about 5.15 P.M.

American Ornithologists' Union in Cambridge, Mass.

(1)

This has been a very delightful and at the same time a very busy week. I have enjoyed most thoroughly every bit of it in spite of a bad cold which early in the week reduced my voice to a whisper. The A.O.U. meets in Cambridge every four years and is an event of great interest among our local ornithologists. I will summarize briefly each day.

November 28, Monday - Meeting of the Council in the Brewster Museum during the day. Meeting of the Fellows in the same place in the evening. Lunches served by T. D. Cope at 1 P.M. & about 9 P.M. I was at the Museum during the entire day helping in various ways, though of course I was not present at the meeting. For at least three hours during the day I混ed with the members and I enjoyed it immensely. Bill Brewster was on hand all day, taking a number of dinner in the late afternoon to the Oakley Country Club.

Councilors present were:-

Cory, Charles B.	President
Batchelder C. F. {	Vice-President
Helson, E. W. }	
Sage, John H.	Secretary
Dwight Jr., Jonathan	Treasurer
Chapman, Frank M. {	
Deane, Ruthven. }	Additional Member
Duthie, William	
Fisher, A. R.	
Allen, J. A. {	Ex-President
Brewster, William }

Nov. 28

- Dec. 3

(2)

November 28, Monday.

The following Fellows met in the evening:-
The Council members recorded on the previous page.

Bangs, Cuttam

Bishop, L. B.

Oberholser, Harry C.

Palmer, T. S.

Purdie, W. A.

Henry W. Henshaw, a Fellow, lately returned from the Hawaiian Islands, is not in good health and was not present in the evening. He came round to lunch however and I had a long talk with him in the afternoon, as well as with Dr. Bishop & T. G. Pearson of Greensboro, N.C. Mr. Pearson is a Member and is game warden in North Carolina - Mr. July of Portian has called.

November 29, Tuesday.

The public sessions opened this morning in the Nash Lecture-Room of the University Museum at 10 A.M. There were the usual two sessions morning and afternoon with lunch at the Colonial Club between 1 & 2 o'clock. The papers of special interest in the morning were Regurgitative Feeding of Nestlings by Mrs. Irene G. Wheelock of Evanston, Ill. (I met Mrs. Wheeler later), Some Interesting 1904 Bird Songs by Mr. Henry Aldys - Mr. Aldys stayed with us during the session. He arrived at the house for breakfast Tuesday morning and left for Washington, Thursday P.M. We enjoyed his being with us very much.

1904

Nov. 28

- Dec. 3

- (3) November 29. Tuesday -
- The afternoon session was taken up by four
short slide talks, one by Mr. Chapman on Florida
Notes, and one by Mrs. Wm L. Finley on The
Land Birds of Oregon and California. Mr. Finley's
views of the nesting of Red Tailed Hawks, Barn
Owls, and Golden Eagles were simply marvellous.

The lunch, as also the two on Wednesday
was a perfect success. I met many members
there besides those already referred to, L. A.
^{from time to time} Fuertes, H. K. Job & Mrs. Job, W. E. Clyde Todd &
besides many from our near neighborhood -

The Subscription Dinner, first inaugurated
this year was held at 7 P.M. at the Harvard
Union. About seventy, eleven or twelve being
ladies, were present, and it was a great success.
Tables were scattered about the large southeast
room on the second story, seating from
about four to twelve persons. Dinner tickets
were one dollar each. The Nutt Club will
pay the balance for the price was 1.35 each
plus the claret and cigars. The broke up
at between 10.30 & 11. Mr. Clegg & I drove home.
Indeed my cold was such that during Tues. &
Wed. I drove ~~every where~~ I went -

November 30. Wednesday -

Mr. Finley breakfasted with us this
morning and showed us some of his
bird photographs. They were as beautiful
as any I ever saw or could imagine.
He & his companion have wonderful success.

A. C. U. in Cambridge, Mass.

-Dec. 3

(4)

Wednesday, November 30,

The usual sessions at lunch occurred to-day. The great feature of the morning was Mr. Chapman's illustrated lecture on The Nesting Habits of the Flamingos. For one hour the audience was held spellbound by the marvellous colored slides and descriptions of his wonderful story. The December Century contains a partial account.

In the afternoon Mr. Finley gave another lecture, this time on the Sea-birds of the Oregon Coast. It was a marvellous account of adventure among the sea-girt rocks and the views were superb. Mr. H.W. Gleason gave Illustrated Readings from Thoreau's Journals. His exquisite views so perfectly illustrate the reading that it seemed as if Thoreau must have been writing from his very pictures. Mr. Gleason's photographs are deservedly famous.

In the evening Mr. Elsley & I went to dinner at O. J. Battledore's - the sat thus:-

Battledore, C.T.

It was a very

Elsley, A.	Helson, E. W.	Pleasant occasion
Purdie, N.C.	Townsend, C.W.	and I enjoyed it very
Bishop, L.B.	Chesterfield H.C.	much in spite of my
Kennard, F.N.	Bangs, C.	bad cold. I could
Sage, J.N.	Fleming, J.H.	only whisper. It
Bowditch, H.	Gent, A.C.	being a men's dinner
Pearson, T.G.	Dwight, J.P.	bus. Battledore re-
Deane, W.		mained up stairs.

December 1. Thursday -

This morning Mrs. Oberholser, Todd and F. B. Spalding of Lancaster, N.H., breakfasted with M. J. G. and Mr. Elsyz. The gentlemen visited the Brewster Museum after breakfast for an hour or so. We then walked down to the Agassiz Museum. The day passed as usual. Mr. Dutcher's report on the Protection of North American Birds was most instructive. Rev. H. K. Job's illustrated talk on The Seaside's Experiences with Shore-birds, Herons and Waterfowl was, as usual, most enthusiastically received.

Mr. Elsyz dined with a friend in Boston and we could not find each other in the afternoon so that I did not see him again as he hurried back to the house and left for home. The sessions ended to-day.

In the evening we had to dinner, Dr. Dwight, Dr. A. K. Fisher, Mr. T. G. Pearson & Mr. J. N. Sage.

December 2. Friday -

I spent to-day at the Museum. Putnam, E. W. Nelson & T. S. Palmer were there most all day long. They all dined with us. At home in town a number of Harvard men called this afternoon to see the birds. My cold was too bad to attend the Bot. Club.

December 3. Saturday.

I spent the morning at the Museum with Ruth & E. W. Nelson. Mrs. Irene S. Wheelock & friend were here for a while. Ruth & Nelson dined with us. They returned to the Mass. in the PM. I remained at home.
