THE POLITICAL ECONOMIST.

NOTICE TO READERS.--Our Commercial Readers are particularly referred to an elabo-borate Review of the Sugar Markel in another part of this paper. To prevent the disappointment to which parties have been subjected on former occasions, who have required extra numbers of papers containing such articles, and ourselves the heavy cost to which we have on some occasions been put in reprinting such numbers, we have to request that all orders for extra quantities with the Supplement will be sent cost to which we have on some occasions been put in reprinting such anticles, and ourselves the heavy cost to which we have on some occasions been put in reprinting such numbers, we have to request that all orders for extra quantilies with the Supplement will be sent to the office by twelve o'clock on Tuesday at the latest. licular atlention is requested to the Supplement and the Tables of the Distribution of our Exports.

THE SELFISHNESS AND RIGOUR OF PROTECTION.

THE SELFISHNESS AND RIGOUR OF PROTECTION. THE pitiful and melancholy scenes which have disgraced the House of Commons during the discussions on the proposed alter-ations of the tariff, are calculated not only to lower the respect due to a branch of the legislature, but materially to damage the social influence of a large and important class of society through-out the country. We have frequently heard it asserted that those who cling to protection, are not so much influenced by any benefit which they believe they receive from its effects in their material interests, as by the political influence which they suppose they enjoy through it, over the *independent* yeomen of England, and by means of the county representation. But never was there a plan more securely laid, or so well executed for any work of de-struction, as has been the course pursued by the representatives of the Agricultural Protection Society in the House of Commons during the last week, to break down and utterly annihilate, not only the political, but the social and personal influence of the landed interest of this country. In the able speech with which Mr Cobden last week prefaced his motion for an inquiry into the cause of agricultural distress, one of the most striking features was the forcible way in which he exposed the great evils which result to agriculture in all its parts when taken separately, from the protection afforded to other branches.

one of the most striking features was the forcible way in which he exposed the great evils which result to agriculture in all its parts when taken separately, from the protection afforded to other branches. For the sake of protecting the growers of clover seed in Essex and a few other counties, the farmers in Scotland, the north of England, and throughout Ireland, must be condemned to pay a high price for what, in modern husbandry, has become a very important article in a farmer's expenditure. Nine farmers out of every ten are to pay a high price for the article of cheese, in order that the tenth, who makes it for sale, is to be benefited. The owners of stiff clay soils are to be protected in growing beans, to the great loss and disadvantage of the farmers on light lands to whom thefeeding of cattle is so important. The farmers may import guano from Ichaboe, and cattle are admitted at a small duty, but beans and other grain, with which he could feed cattle at home with great advantage to his general cultivation, if not actually prohibited, are subjected to so high a duty as to place them beyond his reach. The hop growers of Kent, Essex, and Surrey, are protected at the cost of all the other counties in Eng-land. And by these and many such inconsistencies in the circle of protection, every one is to submit to some injury in his turn as a sort of "hush money" for some fancied benefits which he is designed to receive. The injuries are felt and acknowledged by all—the benefits appear always of very doubtful reality.

But much as this spirit of jealousy has manifested itself among the protected interests on former occasions, we were not prepared for such an exhibition of the same feeling as was made in the de-bates during the last week on the proposal to exclude certain arti-cles from the tariff. The business of the House was stopped with "Grease," and a hard battle fought to prevent the sheep farmers in Scotland and the north of England obtaining the advantage of a reduction of one shilling and eightpence the cwt, the present duty on the importation of that article. The circumstances altogether connected with this material are interesting and instructive. Some on the importation of that article. The circumstances altogether connected with this material are interesting and instructive. Some years ago, before the country was so well drained and cultivated in the north, the seasons were so inclement, that in order to pre-serve sheep from the effect of the climate during the winter, it was the habit to smear them with tar. This practice, however, though it preserved the sheep, yet injured the wool very seriously, and it was one of the greatest advantages ever introduced into sheep farming, when an improvement of the climate enabled the farmer to substitute for tar a grease which could be removed and it was one of the greatest advantages ever introduced into sheep farming, when an improvement of the climate enabled the farmer to substitute for *tar* a grease which could be removed to some extent by washing previous to the clip. A mixture of inferior butter with rosin was first tried, and found to answer the purpose. It was then suggested that the legislature should re-move the duty, or at least lower it very much, on foreign butter, to be introduced for that purpose. This was acceded to, with a provision that it should be so mixed with other matter as to render it unfit for human food; and it was admitted at a duty of 1s 8d the cwt, while butter was charged 20s the cwt. This act of itself suggested many ideas, by no means very advantageous to the support of agricultural protection. It was always very diffi-cult to understand by what reasoning fine American and Dutch butter was to be rendered unfit for human food, in order to be ad-mitted at a nominal duty, for the comfort of sheep during the winter, while human wants and necessities were to be disregarded, or supplied only at the high price protected by a duty of 20s the cwt. All this was bad enough, and sufficiently difficult to be re-conciled with any intelligible principle; but when the Govern-ment, in sweeping off a number of useless and unproductive taxes, includes this 1s 8d the cwt on "grease," for farmers' sheep too, is opposed by the whole strength of the Agricultural Protection Society, lest some butter actually finds its way to the human mouth instead of a sheep's back, it shows that we have now a race of *Farmer's friends*, compared with whom all former supporters of protection sink into insignificance. If the removal of 1s 8d the cwt on "grease" be a sin against protection, what must have been the sin which originally allowed the reduction from 20s to 1s 8d, on the condition of its adulteration only ? The most severe thing said during the present session, was

Price 6d.

The most severe thing said during the present session, was when Mr Villiers described Mr Woodhouse's speech on that oc-casion, as "characteristic of the present day and no other," for cer-tainly there has been no other time when such exhibitions have

tainly there has been no other time when such exhibitions have been made in parliament. Nor was it any consolation to the champions of agricultural protection, to be told by Sir George Clerk that this said "grease" was really used and intended only for agricultural purposes. The farmers of Scotland had been deprived of all protection to their wool, but that appeared to Sir John Tyrrel no reason why the "grease" of Essex should lose its present protection of 1s 8d the cwt. It would appear to be a fixed principle with that class of legislators, that it is only the unprotected portions of the country that can bear the burthens which protection imposes. that can bear the burthens which protection imposes.

that can bear the burthens which protection imposes. There is, however, something truly odious in the selfishness which monopoly appears to engender among those who rely up-on it. It appears to have the same effect, in whatever shape it is found. A whole class appears very united as long as they fight for one common object. Is the question that of maintaining the corn law? Essex, Northumberland, and Roxburgh, equally unite in the common cause. But the moment the question is supposed to interest only Northumberland and Roxburgh, then is Essex as jealous and restive as if it had been a proposal for the benefit of the manufacturers of Lancashire or Yorkshire. It is by this means that the real motives and objects of monopoly are disco-vered. Public good is always a ready excuse for selfish ends; but it is by such exhibitions that the real objects become exposed.

THE ECONOMIST.

All of a piece with such petty jealousy and selfishness was the proposition of the Shipowners' Committee, in Cornhill, last year: For a long time, whenever they talked of protection, we heard much about the advantages to our colonies, between whom and the shipping interest at home there always appeared the most friendly compact. But no sooner did the British shipowners befriendly friendly compact. But no sconer did the British shipowners be-gin to feel the competition of our colonial built ships a little trou-blesome to them, than they come forward with the generous pro-position to place a duty on such ships. The compact of colonies and ships was only good while one served as an excuse for privi-leges to the other; but the moment the colonies interfered with the othering interacts of theme was as little recard for them the shipping interests at home, there was as little regard for them as if they had been Swedes or Prussians.

Again, there is a strong suspicion that, in the recent changes of the sugar duties, there was originally a covert design to give the West Indies a little more protection at the cost of the East Indies. These unseemly exhibitions of extreme and naked selfishness will do more to discredit the whole system of protection than the most strenuous efforts of the advocates of free trade could accomplish. Therefore, apart from the humiliating disgrace to which such scenes expose the country and the legislature, and judging only of their effects on public opinion, we should not be disposed to regret them.

THE ADMINISTRATION OF JUSTICE.

THE administration of justice is among the most sacred of the duties of an executive government, and of all in authority. Legislation itself more so, for though bad laws can hardly be made good is scarcely by the method of executing them, it is easy to make good laws the cause of evil in that way. In England, we fear, the administra-tion of the law, in all departments, not excepting the highest, is clumsy and expensive beyond what is, or ever has been, the case in any civilised country. In those higher departments, however, let us hasten to remark, in case we may be misunderstood, that let us hasten to remark, in case we may be misunderstood, that there has long been a high-minded purity, impartiality, and learn-ing combined in the dispensations of justice—so much as to make the opposite of these, when they occurred, a matter of wonder to all. "When we think of the flippant manner," (we use the words of the late Mr Sydney Taylor in the spirit of which we very heartily concur," the precipitory, the obstinate prejudices the new concur)—" the precipitancy—the obstinate prejudices—the pas-sionate first impressions of some of those who preside in certain inferior courts, we are the more led to admire that excellent, that unrivalled institution of the independent fifteen judges of ENGLAND, which provides such men as the most of those who now adorn Westminster Hall." But this comparison of our inferior with our superior magistracy, while it increases our respect for the latter, only adds to the deep and bitter regret with which we behold the labours of the former.

behold the labours of the former. The doings of the great unpaid are an old grievance, and jus-tice's justice has been a word of scorn for years. But the evil re-mains; complaints therefore cannot cease. Mr Justice Coleridge, in addressing a grand jury in Wilts the other day, said, that in Eng-land and Wales, during "the last year, there had been about 30,000 committals, and above 8,000 acquittals, or bills ignored. That was a very large proportion of the whole number. It might be said that many of these acquittals did not make out the entire in-nocence of the party; but he did not think either as lawyers or nocence of the party; but he did not think, either as lawyers or magistrates, they could venture to look at an acquittal in any other light than that of establishing the perfect innocence of the Every acquittal supplied some degree of reflection upon the party. something like a feeling that injustice had been done. committal-Delicate and yet decisive. It is indeed a frightful state of things to look at—more than a fourth part of all the committals by the common magistracy declared unjust by higher and better tribu-nals! What a condemnation of *them* is conveyed in this release of so many victims of their errors—must we say, in some cases, of their vengeance? How many of these 8,000 unkindly and unof their vengeance ? How many of these 8,000 unkindly and un-justly dealt by individuals, would be so-called poachers, impri-soned by Grantley Berkeley's—how many of them, obnoxious Sabbath breakers, as it would be called, imprisoned by the reve-rend and magisterial (seldom a happy union) Chetwodes and Martyn's of Asbendon—how many rebellious radicals made to an-Martyn's of Asbendon—how many rebellious radicals made to an-swer for some odd offences in the eyes of the reverend Roses of Buck-ingham! We do not suppose that every one of these 8,000 per-sons was innocent of the offences charged against them—far from it. We know with what mercy cases of very grave suspicion are looked upon, and justly so, in the higher courts, when the proof of criminality is not complete and perfect, from the prevalent sen-timent that it is better that several guilty should escape than that one innocent man should be wronged. But it is impossible not to feel that, in a vast majority of instances, these acquittals, by the superior tribunals, do convey a deliberate censure and con-demnation on the committing maristrates. So Mr Justice Coledemnation on the committing magistrates. So Mr Justice Cole-ridge on this occasion said, in substance, "He did not mean to say but that the committal might have been perfectly justified by the evidence placed before the magistrate, but all must join in wishing that some experiment should be made for the purpose of seeing whether these small charges could not be disposed of in a different manner. It was a delicate question, he admitted." Delicate, truly! But so distinguished a judge as Justice Coleridge ought to have met it in some other way than he has done. He thinks it "a question whether it would not be consistent with justice that cases of so light a nature should be summarily dis.

posed of;"-that is, he thinks the magistrates, more than one-fourth of whose committals terminate in the acquittal of the parties accused, should be invested with summary jurisdiction. did not mean to give the power to a single magistrate, but to the petty sessions, and there might be regulations giving the accused an opportunity of postponing or removing his trial." But, with deference, we suggest that the system is one not to be mended, but destroyed. Two heads, the one being Noodle and the other Doodle, are not better than one. but destroyed.

As the matter stands, a bad and bitter feeling against the social order is excited. Some of these 8,000 persons would be in jail for months, few of them for a shorter period than weeks. Their treatment there is little, if any, better than if they were already con-victed felons; and can it be thought that their acquittal fills them with feelings of gratitude, admiration of "the British con-stitution," &c. &c.? or, does it not rather send them forth more stitution," &c. &c. ? or, does it not rather send them forth more than ever disposed to be what they are already suspected of, and with feelings permanently deteriorated by the unkindly judgment of the world.

Are we told that it would be expensive to have a paid magis-tracy all over the country? In Scotland, where there is substan-tially that, as well as in the Metropolis, Liverpool, Manchester, and other places, it is by no means found intolerably so. And is the so. e or less, in pr. We will and other places, it is by no means found intolerably so. And is the expense of keeping up 8,000 innocent people, more or less, in pri-son for months running, to be considered as nothing? We will not stoop to weigh the expense of having justice executed. What-ever might be the expense, it is due to society. But it is worth re-marking that this amateur magistracy, though not paid for in the surrout coin of the works. current coin of the realm, is not so cheap a thing to the commu-nity after all. No services are cheap that are not paid for, and for which the servant is not made directly responsible. How far that is from being the case with the rural magistracy of England, we need not stop to say.

With submission, therefore, we are very much against Mr Justice Coleridge's proposal. And yet we almost doubt whether that excellent judge would not be against it himself if his whole mind were known. No doubt, he thinks summary jurisdiction, though often unjust, would be a less evil on the whole than longcontinued imprisonment on suspicion; and there probably he is right. But we are sure there is not a judge in Westminster Hall who would not-if left to decide whether the country should have a paid and qualified, or an unpaid and necessarily, in most cases, unqualified magistracy, from his own experience and matured opi-nion—decide in favour of an extension of those principles which have, for so long a period, recruited the judgment seats among themselves from every rank in society, qualification for duty be-ing, at least, the first test applied, instead of placing a self-complacent ignorance to decide upon the happiness, from day to day, of vast numbers of the people.

CURRENCY AND BANKING.

ARTICLE III.

HAVING thus far considered the fundamental principles on which currency and banking are based, and by which they are regulated, we will proceed to our next proposition, and consider, *Second*, The application of these principles to banking, as it existed in England prior to the late act.

For our present purpose it is not necessary that we should tra-vel back to examine the history of our banking institutions, or the various changes to which they have been subjected. It will be more to the purpose to confine ourselves to a consideration of

more to the purpose to confine ourselves to a consideration of what is worthy of remark in their modern history and condition. Banking, generally, as it has been conducted in England, has not had the tendency to attract much capital either for direct oc-cupation as a business, or as a means of permanent invest-ment for the capital of depositors. No banking business either requires or attracts much capital in the former capacity, and the construction of the English banks, as well as the principle on which they have been conducted, have been unfavourable to the encouragement of large and permanent deposits as investments.

As ageneral rule, the independent capital of bankers constitutes but a very small portion of the means upon which they trade. As we have before observed, bankers are rather the medium through whom the capital of others is lent and borrowed than dealers in their own capital. The private and independent paid dealers in their own capital. The private and independent paid up capital belonging to banks may be looked upon rather in the light of a guarantee to the public for their security against the risk which it is known they must run in the use of the deposits

the risk which it is known they must run in the use of the deposits placed in their hands, than as constituting any very important portion of their means of trading. A banker being essentially, in the first place, a borrower of money, returnable on demand, the great art of his profession is to employ those funds in such a way as will at all times, and under ordinary circumstances, enable him to meet such demands. The prudent employment of such funds entrusted to his care, is an infinitely more important consideration for a banker than The prudent employment of such funds entrusted to his care, is an infinitely more important consideration for a banker than the possession of a large independent capital. As, however, the credit which a bank can obtain with the public, on which its deposits must depend, can only be the result of implicit confidence, it is essential that so much *bona fide* paid up capital should be known to exist, as, in addition to the reputation and character of the parties concerned, will give perfect faith to the public. Apart

March 22,

THE ECONOMIST.

from this consideration, a large capital is generally felt rather as an inconvenience than as an additional means of making banking profitable. A well conducted bank should be able, in all ordiprontable. A well conducted bank should be able, in all ordi-nary times, and with the exercise of due caution in the selection of its securities, even in the times of pressure and panic, to con-duct its affairs with what may be termed, strictly speaking, its banking funds, and without infringing upon its capital. Nor has the constitution of English banks, nor the principles on which they have conducted their business, been favourable to attracting any year large portion of permanent deposits of capi-

attracting any very large portion of permanent deposits of capi-tal for employment. In the first place, there have been too many interruptions to the credit and soundness of English banks, to Interruptions to the creat and soundness of English banks, to entitle them to that degree of confidence which must exist be-fore banks are selected as the places of permanent deposit for private and, more particularly, for trust funds. And, in the next place, the practice of allowing interest on deposits is not general, and in London, with some slight exceptions, on special terms, quite unknown. Such capital, therefore, has generally been invested in the Funde or other government securities been invested in the Funds, or other government securities. The main capital on which banks in England conduct their

business is the deposits of the aggregate amount from time to time of the spare capital which the vast magnitude of the trade and income of the country release from occupation for temporary periods, too short or uncertain in their duration to induce to

rary periods, too short or uncertain in their duration to induce to any permanent or more profitable investment. Merchants, manufacturers, retail-dealers, farmers, landowners, the recipients of public salaries, and of interest from the Funds, have all at particular times considerable sums of money in reserve to meet their liabilities and future expenditure. Besides these monies, there are always layers amounts of earlied which having been released their habilities and future expenditure. Besides these monies, there are always large amounts of capital, which, having been released from one channel of investment or speculation, are waiting for investment in some new channel; and it is these accidental funds that constitute the chief means of banks to conduct their business—which, though accidental to each particular case, are yet remarkably certain on the general average. One half of a banker's customers may be lenders at one time and borrowers at another, but amid a constant change in the relation of each as his debtor or creditor, the actual amount of means in his hand, may debtor or creditor, the actual amount of means in his hands may vary but little. In short, we may consider a banker as an agent, acting between the lenders and the borrowers of money at any particular moment—always ready to borrow, and always ready to repay.

two great essential and fundamental principles, therefore, on which the success of banking depends, and to which hitherto very little attention has been paid in all the discussions which have taken place on the subject, are— *First*, By what means can a bank attract the largest amount

of deposits

Second, By what means can a bank employ those deposits to second, By what means can a bank employ those deposits to regreatest advantage, consistently with the conditions on which ey are made; that is—repayment on demand. These two propositions really do involve the whole art of the greatest they

banking, whether viewed as a source of profit to bankers, or as a source of economy, safety, and convenience to the public. We will consider them separately. First, By what means can a bank attract the largest amount of

Post, by the end of the property which a bank must possess, is The first and essential property which a bank must possess, is a perfect confidence on the part of the public. The small amount of benefit which a banker can afford to give his customer for the property in his hands, can never be sufficient to induce placing his money in his hands, can never be sufficient to induce any man to run a hazard; and more particularly the mere diffe-rence of terms which one banker can afford compared with ano-ther cannot be sufficient to induce any man to give preference to more tempting terms, when weighed against a greater security and confidence.

The want of this confidence, to a sufficient extent, and for a sufficiently long and uninterrupted period, has done more to injure the business of banking in England than any other circumstance. In this respect, and in the effect which the absence of confidence has exerted over the amount and character of the deposits of English banks, we discover a striking contrast between them and the banks of Scotland. Much of this fundamental defect in the character of English banks, if not all, we believe can be traced to the effects of legislation. From the time the Bank of England was erected into a corporation, the restrictions which the Government has, from time to time, imposed on the exercise of capital and the has, from time to independent efforts of individuals, whether singly or in a combined form, in order to confer privileges on that establishment, we believe to have been the root of much, if not all, of the mischief and discredit which has attached to the banking practice of England. But for the peculiar privileges granted to the Bank, from time to time—but for the restrictions thus placed on private enterprise, and the constant interference of the Government to tinker and patch up evils to which their own previous acts had led, there can be patch up evils to which their own previous acts had led, there can be no doubt whatever, that, many years ago, we should have had our banking establishments placed on the highest, safest, and most beneficial principles which free competition, intellect, and energy could suggest and carry into practice. Banking, above all other professions, is that which, under entire freedom and non-inter-ference, would soonest be placed in the most perfect position. The public will not employ an unsafe bank while they have those of perfect safety with which they can deal, and who are ready to

afford them all the facilities which banks can do. It may be said, that some men, who are chiefly borrowers, have no choice with which bank they can deal. But to suppose that bad banks could be supported by borrowers, with an indifferent credit, is absurd. is the *lenders* and not the *borrowers*, and, least of all, the *inferior b* It rowers, that constitute the strength and power of banks. We know what has been the result of the restrictions imposed on know what has been the result of the restrictions imposed on banking, by the law, in this country, and we have only to look to Scotland to see what has been the effect of a long career of perfect freedom and competition upon the character and credit of the banking establishments of that country, as well as in affording the greatest convenience and satisfaction to the public. Confidence is the first essential of banking, and it will be much in proportion as the banks of a country possess that essential that they will attract large deposits. Comparatively inferior hanks and of more tonuparty and floet

In proportion as the banks of a country possess that essential that they will attract large deposits. Comparatively inferior banks may command a certain kind of more temporary and fleet-ing deposits, but great stability alone can secure such large and more permanent deposits as constitute the power and strength of the Scotch banks. Nor is the advantage derived from any principle which leads to a large amount of deposits in the hands principle which leads to a large amount of deposits in the hands of bankers, felt more by the banker himself than by the com-munity where he is placed; for it is a means by which the spare capital of every locality is kept within itself, and is used, through the medium of the banker, to encourage productiveness and im-provements in the neighbourhood. But for some safe means of investment at home, the spare capital of every district will have a tendency to find its way to the metropolis for investment in the public funds or other securities, while, through the medium of a safe bank, it might be retained at home to effect important local improvements and facilitate manufacturing and agriculture.

safe bank, it might be retained at home to effect important local improvements and facilitate manufacturing and agriculture. But, independently of the great requisite of *confidence*, which a banker must possess, there are other important causes which ma-terially affect the amount of deposits in bankers' hands. Bankers, as borrowers and safe-keepers of the money of the public, must not only be paid for their services, but must also be reimbursed the expense of the establishments necessary to conduct their business. There are, however, various practices as to the mode in which bankers are so naid and reimbursed, and which, in their the expense of the establishments hecessary to conduct their business. There are, however, various practices as to the mode in which bankers are so paid and reimbursed, and which, in their practical effect, tend more or less to encourage or discourage large amounts of deposits. The Bank of England derives its profits from its circulation, and the use of a portion of its deposits, for which, however, it gives no interest, and which are, therefore, al-ways kept at the lowest amount which is consistent with the convenience of their customers. The other bankers in London, with very trivial exceptions, and those under special conditions, give no interest on deposits. Nor do they charge any commission for the trouble of keeping their customers' accounts, presenting their bills when due, paying their cheques, and performing a variety of services, which would otherwise cost each individual much labour, and no little risk; but they are remunerated by the balance which it is understood each customer will keep at his account, the ag-gregate of which constitutes a fund which the banker can invest gregate of which constitutes a fund which the banker can invest in securities, bearing interest; besides a given proportion of the other accidental balances, at all times averaging a large sum, which these various customers have in their hands. But, in consequence of this principle of conducting banking in Lon-don, by which no interest is paid on deposits, it must be ob-vious that even the sums left temporarily with bankers for em-ployment will be always at the lowest level consistent with public convenience. Out of this defect in the London banking a new class of money dealers have been called into existence, or rather an old trade has changed its character of late years. Some years Some years an old trade has changed its character of late years. Some years ago the London bill broker was merely an agent who negociated between the merchant having bills to discount and the banker having money to invest in such securities, and he was paid by a small brokerage for his trouble; but the practice of bankers not allowing interest on deposits has at length changed the character of the bill broker to that of a banker, taking deposits (money at call) at a given rate of interest from one man to lend it by dis-counting bills at a bigher rate of interest to others, at the same counting bills at a higher rate of interest to others, at the same time that he acts as a medium for transferring the spare capital which accumulates with bankers in one part of the country to those in other parts, where trade and commerce create a greater demand for it. It must, however, be evident that were the Lon-don banks constituted so as to allow interest on deposits for short don banks constituted so as to allow interest on deposits for short periods, that they would not only secure a much larger amount of deposits, but with them they would also secure the discounting of a large amount of the bills which, at the present time, are done by bill brokers. And many who now make temporary invest-ments in exchequer bills or consols would leave their money with their bankers at a low rate of interest, and thus increase their means of extending their transactions in bills of exchange and other securities. Bankers may reply, that, as it is, they have sufficient difficulty to employ their present deposits in good secu-rities, but they forget that by their present practice they raise up competitors in every man who is looking for a temporary invest-ment for the same securities. The best bills are taken out of the market by the money *at call* left with the bill brokers.

Among the country banks various modes are adopted for re-munerating the banker for his trouble and expense. In some cases a banker allows interests on deposits, charging a commis-sion on all transactions with his customer. The great disadvan-tage of this system is, that much more capital remains idle in the

THE ECONOMIST.

hands of the public; for a man will never pay money into his bank account, unless he can spare it for such a time that the in-terest which he will receive will exceed the commission which he will be charged for paying it in and drawing it out; and thus one of the great objects of economy of capital effected by banks is lost, and the amount of deposits in bankers' hands is necessarily much curtailed. This difficulty has been met by some bankers, who have charged a fixed sum per annum for doing business instead of a commission (this plan has been pretty generally adopted between country bankers and their London agents), allowing in-terest on deposits placed in their hands for a given fixed period, or subject to a certain notice before withdrawal, but not upon or subject to a certain notice before withdrawal, but not upon those which are operated upon in open account. But in this case one of the inducements to place money with bankers for short periods is removed, and much more idle money is left in the hands of the public. The principle of conducting banking, which has tended to the greatest amount of deposits, and gene-rally to the greatest success of the banks themselves, while the greatest advantages have been secured to the public, has been that pursued by the banks in Scotland.

In the first place, they are constituted on a principle to afford to the public the greatest amount of confidence in their perma-nent and ultimate safety. By the profits derived from their circu-lation, they are enabled to allow interest on all deposits for however short a time; and they derive a further profit from the higher rate at which they are enabled to invest a considerable portion of such deposits. The rate of interest which they allow on deposits is generally equal to that which could be obtained by investment in government securities, especially when people consider the charge of brokerage, and the risk of a fall in such securities at a time they may happen to require their money; and, as they al-low the same rate of interest for however short a period a deposit low the same rate of interest for however short a period a deposit is made, the consequence is, that almost every man keeps a bank-ing account, into which he pays whatever money he can spare at the conclusion of the business of each day, looking to the day's interest which he will receive. The combination of advantages which result from this system to the banks themselves, but more to the community at large, is greater than, at first sight, will be very plain to those unacquainted with the practical effects of the system. The first effect is to economise the currency of the coun-try to the greatest degree that, under any circumstances, would be possible. The strongest inducement is held out for every man to keen a banker's account, who ever has spare funds in his bands. to keep a banker's account, who ever has spare funds in his hands, and to keep no money, even for a day, for which he has not imme-diate use. In consequence of this, the whole trade of Scotland is diate use. In consequence of this, the whole trade of Scotland is performed with a circulation of only 3,000,000/, including notes of all denominations, from *one pound* upwards, while the circulation of England in coin and notes cannot be less than from 50,000,000/ to 60,000,000/. The population of England and Wales is *six* times greater than that of Scotland, and, therefore, a currency of 18,000,000/ ought to perform the functions of exchange as well here as one of 3,000,000/ does in Scotland. Nor can it be said that a greater commerce existing in the one country in proportion to the other is the cause. In the first place, it is doubtful if such is the fact; but, whether or not, the large transactions of com-merce are not those which require the aid of the common circu-lation of notes and coin, the use of which is chiefly confined to retail transactions, payment of wages, and private expenditure.

The next striking result of this great economy of capital is the enormous amount of deposits which are placed in the hands of the Scotch banks, and on which their great strength chiefly rests, amounting, as they do, to more than 30,000,000/.

amounting, as they do, to more than 30,000,000/. The bank of England, with a capital of 14,500,000/, and with a circulation of 20,000,000/, independent of what it holds on the part of the Government, commands deposits, even at the present mo-ment, to the extent only of 10,000,000/, a large portion of which are merely the reserves of the London bankers; while the Scotch banks, with a capital of less than 10,000,000/, and a circulation of 3,000,000/, command deposits to the extent of 30,000,000/ for investment and use. The effect of this system, as re-gards the public, is far more important than the mere interest which each receives for his spare cash. It is in effect increasing the actual capital of the country, by rendering much of it produc-tive, that would otherwise be idle; and, moreover, it keeps large sums at home, and in each locality, that would otherwise be isent for investment in government securities. And thus, through the for investment in government securities. And thus, through the medium of the banker, the spare capital of each neighbourhood is rendered available for the promotion of improvements and general industry, which, did the banks not allow interest, must necessa-rily have been sent to a distance for investment. And there can be no doubt that much of the agricultural improvement, for which Scotland is so remarkable, has been owing to this local appli-cation of the spare capital of the country.

We shall have occasion, in the future parts of this discussion, to refer more particularly to the influences exerted on the prosperity of the banks as well as the people of Scotland, through this prin-ciple, by which they attract, and permanently retain, such large amounts of deposits, and which we conceive tobe highly deserving the attention, not only of bankers in general, but also of states-men and politicians. In our next we will proceed to consider the nature of the various securities in which bankers may most safely invest their deposits, to combine a fair amount of profit

with the most perfect security, and consistent with the peculiar conditions on which they hold them.

IMPERIAL PARLIAMENT.

House of Lords.

Monday, March 17.

The Duke of BUCCLEUCH moved for and obtained the appointment of a select committee to inquire into the condition of the schoolmasters in Scotland.

ters in Scotland. The Earl of MINTO asked if it were the intention of the govern-ment to publish Captain Ross's journal of his Antarctic expedition, with his magnetic and meteorological observations; in answer to which, the Duke of WELLINGTON assured the noble earl that the subject will receive attention. Lord CAMPBELL moved the commitment of his bill for the abolition of decender.

of declands. The Earl of ELLENBOROUGH objected to the unnecessary repeti-

The Earl of ELLENBOROUGH objected to the unnecessary repeti-tions of the bill, which might be curtailed one half. Lord CAMPBELL considered his bill a model of brevity, as it only consisted of one clause, and, compared with certain Eastern docu-ments which had issued from the noble lord, was anything but ver-bose.—This led to some sparring between these two noble lords, Lord Campbell saying, in explanation, that he "meant nothing in the way of offence," and Lord Ellenborough retorting that the next time he meant nothing he should say nothing, at which, it appears, noble lords "laughed." The bill went through committee. THE INCOME TAX BILL was read a second time, and is to be com-mitted this day, with the understanding that the discussion on the bill will be taken after Easter, on the third reading. Tuesday, March 18.

The House of Lords sat for a short time. Some bills were for-warded a stage, after which their lordships adjourned until Thursday the 3d of April.

House of Commons. Monday, March 17.

"That it is the opinion of this house that in the application of surplus revenue towards relieving the burdens of the country, by reduction or re-mission of taxation, due regard should be had to the necessity of affording relief to the agricultural interest."

This is of of taxaton, due regard should be had to the necessity of allorang relief to the agricultural interest." He asserted that agricultural distress was not local, but general, and that it did not arise from any unfortunate vicissitudes of the sea-sons, but from the erroneous legislation of the present parliament. He showed, that under the existing corn law there had been an im-portation of foreign wheat, during the last 32 months, seven or eight times greater in amount than in the 36 months immediately subse-quent to the introduction of the corn law of 1828; and argued that the British farmer had suffered great loss from this competition of foreign wheat with his own produce. During the same period, too, there had been a great decline in the price of every kind of meat in Leadenhall, Smithfeld, and Newgate markets; and the importation of foreign cattle, though it was small in comparison with what was originally expected, had increased, was increasing, and would in-crease still more considerably in a few years. He went on to say that he and his friends had been misled, if not deceived, by the go-vernment :--vernment :-

vernment :---"He could say for himself, and for several other agricultural representa-tives, that if they knew the act of 1843 was to be followed as it had been by the tariff and the Canada corn bill, it would have been met by an opposi-tion which it would have been impossible for any minister to resist. (Loud cheers from the agricultural representatives.) The right hon baronet at the head of her Majesty's government had, however, with that tact of which he was so perfect a master, made no mention of the tariff or the Canada corn bill until the bill for regulating the importation of foreign corn and the in-come-tax bill had passed into law. (Hear, hear.) The act upon the sub-ject of the importation of foreign corn was followed by the tariff, in which the agriculturists immediately saw alterations proposed which were calcu-lated to have an injurious effect upon their interests; and at a subsequent period was passed the Canada corn bill, of which little need be said, as those who had given attention to the subject must be aware that it was nothing less than an act to permit the introduction, free of duty, of American corn ground into flour. (Hear, hear.)" To these measures the farmers attributed their present distress,

less than an act to permit the introduction, free of duty, of American corn ground into flour. (Hear, hear.)" To these measures the farmers attributed their present distress, but they complained also of the amount of the poor's and county rates; and insisted that in those two instances they were taxed more heavily than the rest of the community. He complained, too, of the rent-charge under the tithe commutation act: it had been calculated on an average of 54s a quarter, whereas they were now getting only 45s a quarter for their wheat. He then suggested several measures, which he conceived would either remove or alleviate the causes of those complaints; but the principal was a measure for transferring from the county rates to the exchaquer the whole expense of all trials before the judges of the assize, and of supporting and maintaining all persons committed to the county gaols for felony and misdemeanour, and of all persons committed on such charges; and half the expense of all prosecutions at the quarter sessions, leaving the other half, as at present, to be paid out of the county rates. He also proposed that half the expense of coroners' inquests, and that of printing every year the registry of county voters, should be transferred to the same pub-lic fund. He considered that in these respects the agricultural body was unduly taxed for the good of the community in general! And there was cause for believing that government meant them even more harm. After quoting some sentences uttered by Sir R. Peel lately, taking a favourable view of free trade, the hon. gentleman went on— "What was the agricultural interest to suppose from that statement? "What was the agricultural interest to suppose from that statement?

THE ECONOMIST.

They had already seen the tariff passed in the same session that the com law was passed (hear, hear), and they had seen that tariff revised in three years after. If they had seen that already, what, he would ask, was to prevent the corn laws from going next? (Loud cheers from the free trade members.) The government had cut away many articles in the tariff which entered into the profits of the farmers, and now the anti-corn-law members looked upon the corn law alone as the great nuisance which remained. (Cheers from the anti corn law members.)" — The Carl of MARCH seconded the motion , which Sin I. (County

- The Earl of MARCH seconded the motion; which Sir J. GRAHAM, on the part of the government, opposed. The grounds, he said, which Mr Miles had laid down for its support were rather reasons for repealing the existing corn laws, and for reconsidering that portion of the tariff of 1842 which was not affected by the tariff which would shortly be under the consideration of the house. Mr Miles had accused the government of doing tardy justice to the agriculturists. He defended the government from that charge, and took an historical review of its financial measures, from its first entry into office down to the present day. He denied the existence of such agricultural distress as had been pourtrayed, and said that low prices for agricultural stock originated in distress among the manufacturing population. He thought the objects, too, sought very paltry, considering the great interest on account of which they were asked, adding that, as the landed interest derived a certain protection on account of these burdens, he was of opinion that it ought not to attempt to throw them off.—The motion was supported by Mr NewDEGATE, and opposed by Lord J. RUSSELL, the latter concluding a very temperate speech, which consisted mostly of a history of successive corn laws since 1815, by urging the legislature to an early adoption of free trade principles. "What he would say was this—that as the question now stood, with a

prosed by Lord 3. Atossell, the latter conduming a very temperate speech, which consisted mostly of a history of successive core haws since 1815, by urging the legislature to an early adoption of free trade principles. "What he would say was this—that as the question now stood, with a large majority of the House of Lords and a considerable majority of the House of Commons, composed of persons interested in land and axious for the maintenance of that protection which they believed to be favourable to their interest, but which was looked upon by others as a protection and a favour given to them at the expense of the rest of the community, see in what an ungracious position was that in which the handed interest was placed. (Hear.) The honourable gentleman who brought forward the present motion had gone through various statements and figures to prove what had been the diminution in the price of meat. The honourable gentleman had shown that meat had declined in price sixpence or sevenpence a stone since the tariff of 1842, and that corn had also fallen in price since the same period; and the hon, gentleman had gone on to say that' this decline of price in their main articles of subsistence were evils which required the interposition of the legislature to remedy. Now, this line of argument, if followed out, must come to this—that it was an evil for the man who went to buy his two or three pounds of meat for the Sunday dinner, of himself, his wife, and his children, to be enabled to save twopence or threepence in the price; and that it was also an evil that he could save fourpence on fravend whet has family might require to consume; and see how ungracious it was for honourable gentlemen connected with the sgricultural interest to come forward with this kind of complaint, and state it as an evil which required legislative interference to remove. If agriculture had no special protection, and the prices of agricultural produce were high, it might be fair to say here is a happy state of the country—here, supposing

-The only other noticeable point in the debate was a renewal of salutations between Mr D'Israch and Sir R. Peel, the nature of which are now notorious. Mr D'ISRAELI taunted the Premier with his inconsistencies in a tone of singular bitterness, and gave it as "his solemn and deliberate conviction that a conservative government was an organised hypocrisy." Sir ROBERT contrasted this with former praises of his measures by Mr D'Israeli. He said he held in the same estimation the panegyric and the attack; but he was surprised that the attack should have come from the same gentleman who delivered the panegyric.

attack should have come from the same generation who derivered the panegyric. After a few remarks from Mr Banks, Captain Harris, and Mr Plumptre, (previous to this Mr Escott and Lord Worsley, the former against, the latter in favour of the motion, had addressed the house), the house divided, when there appeared for the motion—ayes 78; noes 213; majority against it 135; the Speaker then left the chair, and the house resolved itself into a committee on the Currents Acres —In the committee the resolutions respecting the

CUSTOMS ACTS.—In the committee the resolutions respecting the tariff were put and agreed to.

The house then resumed, and immediately afterwards adjourned. Tuesday, March 17.

WINDOW DUTIES.—Lord DUNCAN moved for a select committee to inquire into the present mode of assessing, levying, and collecting the window duties in Great Britain, and to report their opinion to the House. Sir R. Peel had stated that there were three million houses

exempt from the window tax, which would be benefited by the reduction of the duty on glass. But the causes of exemption were not stated, as employment as warehouses, and so forth. Recounting the particulars of the origin of the tax, he took particular instances to show the inequality of its assessment, diminishing, as it did, in an inverse proportion to the means of the occupants. Under the operation of the "sliding scale" of the tax, the town houses of Sir Robert Peel, the Duke of Wellington, and the Duke of Buccleuch were rated comparatively lower than those of humbler condition. In seeking for information, he found two returns made to the house, respecting the total and specific amounts of the tax, one of which showed a total increase, the other a diminution, of the tax, comparing 1841 with 1844 ; and on reference to the tables of Mr Porter, the discrepancy, instead of being explained, was still further perplexed. This was of itself a strong prima facie case for inquiry; still farther warranted by the many instances, some of which he adduced, wherein individuals endured annoyance, amounting to oppression, owing to the indefinite state in which the legislature had left the tax, exposing people to the contradictory decisions of collectors, the stamps and taxes, and of chancellors of the exchequer. In addition, the tax also interfered with that freedom to admit light and air, excluding cold, wind, and rain, which constituted an essential requisite in the sanitory condition of large towns.

rain, which constituted an essential requisite in the sanitory condition of large towns. "He would appeal to the right hon, baronet (Sir R. Pcel), who, as a private individual, had not shown himself indifferent to the comfort of the working classes in his native place, and as a minister had appointed a sanatory commission, called attention to its report in a speech from the throne, and recently countenanced the society for improving the dwellings of the working classes in London. He would appeal, also, to the right hon, gentleman the Chancellor of the Exchequer, whose heart, as a man, shrank from fulfilling the duties which his office imposed upon him, and who had seemed to wish, by a sort of side-wind, to permit the people to ventilate their dwellings. (Hear, hear.) The revenue to be parted with, to remit auction duty, would release from window-tax all the houses in England under 12 windows. But he (Lord Duncau) only asked for inquiry—inquiry why the duty was allowed to press upon the lower class of houses in greater proportion to the rent than upon the superior class, and upon the towns more than upon the agricultural population ; why houses having less than 20 windows paid 836,000/ of the 1,613 000/ produced by this tax, and houses having less than 40 windows 1,345,000/, leaving only 260,000/ for houses with above 40 windows. Inquiry might bring out some less vexatious mode of collecting it, either by a house tax, or by some small per centage upon the rental under the property tax returns. The people would never shrink from paying taxes, but they expected each man to be taxed according to his means-according to the amount of property insured by the government." The motion was seconded by Cantain Rous, and supported by

ment." The motion was seconded by Captain Rous, and supported by Captain Pechell, Sir C. Napier, Mr E. Ellice, jun., Mr Hume, Mr Wakley, and others, and opposed by the Chancellor of the Exchequer, the latter, however, giving a qualified promise that next year something would be done to alleviate at least the harsher features of the tax. On a division, there were—for the motion 47; against it 93; majority 46. New ZEALAND.—Mr MASTERMAN having presented and read the

NEW ZEALAND.-Mr MASTERMAN having presented and read the city petition relative to New Zealand, Mr G. W. Hope then rose to make his announced motion on the

Mr G. W. Hore then rose to make his announced motion on the subject of the disputed transaction between the New Zealand Company and Lord Stanley, and moved for some papers. The charge against the Colonial Secretary was, that having in May 1843, entered into an arrangement with the company on certain conditions, he had given a set of secret instructions to Captain Fitzroy at variance with them. To show that this originated in misunderstanding, he quoted copiously from the correspondence between the company and the Colonial office. The instructions given to Captain Fitzroy respecting the settling of the company's titles to land had been misunderstood by him; he had supposed that it was necessary the company should prove the validity of their purchases. On this point he was set right, by being referred back to his instructions as his guide. This was the cause of the misunderstanding [which had arisen; another was caused by the fact that the letter of instruction to Captain Fitzroy had been prepared while the negociations between the Colonial effice and the company were in an incomplete state, and when, consequently, they could not be recognised. So far from there being any wish to keep back the correspondence, it had been voluntarily tendered to the company, which, a month after it had been in its possession, expressed, through Mr Somes, their reliance on the justice and spirit of Lord Stanley. Having referred minutely to dates, he concluded by declaring that be the failings or the faults of Lord Stanley what they may, he had never before been charged with duplicity, a charge which he trusted he had shown to originate in misapprehension.—Mr C. BULLER followed on the other side, observing that the charge against Lord Stanley was at that time a member of the House of Commons, and as the charge against him appeared in an appendix to a report of one of its committees, might have brought it himself before the house. Lord Stanley, however, wrote an answer to it ; and that letter was brought bafore the hous

THE ECONOMIST.

office an answer, which was a written acceptance of their proposal in the handsomest manner, and which would have left the New Zealand once an answer, which was a written acceptance of their proposal in the handsomest manner, and which would have left the New Zealand Company without any reason to complain, had it been carried out in the same spirit. But there had been a total alteration in the spirit of all the subsequent proceedings, and the agreement had not been car-ried out at all. When that agreement was concluded by the letter of the 12th of May, the Directors of the New Zealand Company were anxious to know what the instructions were which would be issued to Captain Fitzroy as Governor of the island. They were then shown the correspondence which had been referred to Captain Fitzroy, and which they were told contained his instructions; but what he com-plained of was, that they were not told subsequently that different instructions afterwards followed. He then proceeded to show at great length that the New Zealand Company had been deceived by Lord Stanley; that they expected the agreement to be executed in one spirit, and that it had been executed in another; that Lord Stanley, by not communicating to them the instructions which he sent out to Captain Fitzroy with the gloss on the original agreement, had in their opinion most seriously impaired the efficacy of that arrangement; and that Lord Stanley had rendered himself liable to this imputation at least—that his agreement with the New Zealand Company was up to that hour inefficacious and inoperative. Under such circumstances, that hour inefficacious and inoperative. Under such circumstances, he maintained that the New Zealand Company had been unhand-somely treated, and that there was sufficient irregularity in the transaction to lead to very grave suspicions on their part against the hear of the Colonial office.—Mr HOPE again rose to defend Lord Stanley. head

of the Colonial office.—Mr Hore again rose to defend Lord Stanley. "It did seem to him that a complete answer to the charges of the hon. member could be given. He contended that there was no intention, or the least manifestation of an intention, upon the part of the government to deceive. To errors of judgment and differences in the construction of arti-eles they were all liable; but the question was, had the government wished or attempted to mislead the company? Now, in what way had their, in-structions been given? They had been given with reference to the corres-pondence itself. Then a doubt arose. If that doubt had been solved in a manner unfavourable to the company it had been corrected in a sense fa-vourable to the company. The real question was the alleged intention to deceive. Now, according to the admission of the hon. member, there had not only existed no such intention, but, on the contrary, the existence had been proved of a desire to correct as far as possible Captain Fitzroy's mis-apprehension; and in showing that such had been the case, he though the had made it clear that there was no real ground for stating that his noble friend had been guilty of any dereliction of duty, much less anything like breach of faith." A general discussion followed, in which the charges against Lord

breach of faith." A general discussion followed, in which the charges against Lord Stanley were reiterated by Mr Sheil, Mr Hutt, Lord Ingestre, and Mr Aglionby, his defence being conducted by the Solicitor General, and Sir R. PEEL took it for granted that Lord Stanley was not only acquitted of any intention to deceive, but also of any actual de-ception without intending it. He inferred that this impression was also shared by the house, from the fact that all the gentlemen on the principal Opposition benches who had listened to the statement of Mr Hope had left the house, and that the eight who now sat there were all directors of the New Zealand Company. He then entered into a vehement and eloquent defence of his noble colleague. After a few words from Mr MANGLES, the motion, as amended by Mr BULLER, was agreed to. Other business being disposed of, the house adjourned.

the house adjourned.

Wednesday, March 19.

Wednesday, March 19. NEW CUSTOMS ACT.—A discussion was taken to-night on the de-sirableness or otherwise of remitting some duties as proposed for the government. It was in committee, and the discussion was miscella-neous, and rather bitter.—In the first place, Mr BRANSTON objected to the removal of the duty on grease, as he dreaded that under that name butter might come in.—Sir G. CLERK, however, on the part of government, assured country gentlemen that precautions would be taken at the Custom house to prevent any butter coming in in that way !—Mr WARD, as one connected with land, felt ashamed of this— "Why of course it was parfnot well understood a lorgedy that if this

way !-Mr WARD, as one connected with land, felt ashamed of this-"Why, of course, it was perfectly well understood already that if this remission could in any way be made beneficial to the poor man, add in any way to his confort or his nutriment, the right honourable baronet would do his best to prevent it. (Hear, hear.) As to the amendment, it was wretched in the last degree : the corn law monopoly had a dashing bold-nes., a grandeur of grasp about it which gave it effect ; it had something of the same character with the daring splendid spoliation of the feudal barons, when of old time they issued from their mosted eastles and laid whole dis-tricts waste ; but as to the nasty, dirty, mean, miscrable, monopoly that the honourable gentleman was grasping at, it was no better than area-sneaking, that most paltry of civilized pilferings. (Hear, hear, and laughter.) No-thing could be more prejudicial to the true interests of agriculture than the paltry, pettyfogging discussions which had of late taken place on such sub-jects, except, perhaps, the right hon. baronet's standing forward as its ad-vocate. (Hear, hear.)" - After some discussion. Mr BRAMSTON said he would not divide the

-After some discussion Mr BRAMSTON said he would not divide the

-Atter some discussion Mr DirAMSTON said he would not divide the house, and the motion was negatived without a division. Mr Serjeant MURPHY, on the montion for the removal of the duties on tanned hides, moved that the removal of the duties should be post-poned until the dealers should have got rid of their stocks on hand. A discussion ensued, after which, on a division, the motion was nega-

A discussion ensued, after which, on a division, the motion was nega-tived by a majority of 73 to 27. Mr GROGAN moved that lard should be omitted from the list of articles upon which it was proposed that the customs duties should be repealed.—Hereupon another discussion on the spirit actuating cer-tain country gentlemen arose.—Colonel WYNDHAM was sorry to see his agricultural friends going to work in this way.—Sir John TYRELL, by way of carrying war into the enemy's camp, tannted Mr Villiers with inconsistency in opposing corn laws, which were for the good of country gentlemen, while he himself (Mr V.) held a sinecure office in the Court of Chancery.—Mr VILLIERS, however, saw nothing very as an argument for protection, which was a system to render the as an argument for protection, which was a system to render the people poor, in order to make the landlords rich, and retorted rather more sharply upon Sir John than he had expected probably. He said

NOMIST. [March 22,
"I have stated freely and frequently what I conceive to be the pernicious effects of the law which the hon, baronet, and hon, gentlemen beside him, obstinately uphold. (Hear, hear). I state what I have before stated again and the only answer I get from the hon. baronet to my statements is, that he has poked about the red book to discover what place I held in the Court of Chancery. (Hear, hear.) And that is your sole answer (addressing himself to the hon, baronet) to the charge against you and your law. (Hear, hear.) You must be reduced, indeed, to desperate shifts, if that is the only answer you have to give. (Hear, hear). Besides, in making your statement against me, you did not make it correctly. (Hear, hear). The place I hold is no sinceure."
Sir JOHN TYRELL was understood to say that he did not call it a sinceure. Mr VILLERS—You did not say that it was a sinceure? Then if it is not a sinceure, why should I not hold it? If you say it is a sinceure, I tell you more, that you are paid for the work which you don'do. (Hear, hear.) You come here to the house to get paid by the operation of iniquitous legislation. (Hear, hear.) You come here to the house and pass laws to swell your own rents. (Hear, hear). I state these things as the effects of your away it is not it is not. Hear, hear). I state these things as the effects of your is not it is not. (Hear, hear). Your haw is made—and you cannot dry it—for pecuniary objects (hear, hear) it is not and provide you with marriage portions. (Cheers). What do you give us in return for all this? We pay our mortgages, and what do you give us in return for all this? We pay our mortgages, and what do you give us in return? If you ask me what I do for what I receive, I can show you without hesitation, (hear, hear). You work not for what you receive, you having to work for it in the least, and if you had the mission the state many other fortunate accidents of society, (cheers), never having to work for it in the least, and if you had the miss

Set to the the transmission of the set of

-This rather put a damper on the discussion, and ultimately Mr Grogan withdrew his amendment.-Considerable discussion arose on the proposal for the repeal of the duty on thrown silk, and a division ensued. The repeal of the duty was carried by a majority of 85 to 26.

1845.

THE ECONOMIST.

The remaining resolutions were then agreed to, upon the under-standing that after Easter a day should be appointed upon which the house should again go into committee upon the customs acts, in order to allow certain motions for the repeal of the duties on butter, cheese, tallow, pine logs, &c., proposed by Mr Ewart and other hon. members, to be discussed. It was further understood, that if any of these motions should be carried, they should be introduced into the hill.

DIII. In reply to a question from Mr Hawes, The CHANCELLOR of the EXCHEQUER said he could not allow any remission of duty on account of stocks of glass on hand. He was quite aware that the parties might obtain the drawback by exporting their glass within a limited period, but that he thought was better than re-

mitting the duty. The house then resumed, and a bill founded on the resolutions was ordered to be brought in.

Thursday, March 20. A considerable amount of miscellaneous business was business tran-A considerable amount of miscellaneous business was business tran-sacted in the house this night, the principal of which is noticed below. There was afterwards considerable discussion on RAILWAY LEGISLATION.—Mr MORRISON, after a speech of some length on this subject, submitted the following resolutions :—

length on this subject, submitted the following resolutions :— " 1. That it is the duty of Parliament, in giving its sanction to the estab-lishment of new railways, to render them the means of affording to the public the best and safest communication, and the greatest possible amount of ac-commodation, at the lowest possible rates. " 2. That the clauses heretofore introduced into railway bills to limit the amount of tolls to be demanded for the use of the railway, having proved practically inoperative, it is expedient to make more effectual provision against the undue enhancement of the cost of travelling and transportation in every future railway bill, by fixing the highest rates which the railway company shall be allowed to charge for the conveyance of passengers and goods.

goods. "3. That for this purpose every committee on a railway bill, introduced in the present or any future session of Parliament, shall report a table of fees and charges, the lowest which they shall judge to be consistent, under the circumstances of each case, with a fair and reasonable return for the ca-

the circumstances of each case, with a fair and reasonable return for the ca-pital to be invested. "4. And that every committee to which two or more competing projects for new railways may be referred, shall require the promoters of each to put in statements as to the rates of charge for the conveyance of passengers and goods to which they are content to be limited, and the amount of accommo-dation which they will bind themselves to provide for the public at those rates; and that, in determining on the comparative merits of competing schemes, regard shall be had to the extent and nature of the advantages which can be thus reserved to the public from each."

-Mr WARBURTON, in seconding the adoption of the resolutions, ex-pressed his "horror" at the powers of the Board of Trade, and the way in which their powers are exercised.—Lord GRENVILLE SOMER_ SET, on the part of government, approved of the spirit of the resolu-tions, which he said were in point of fact being carried out by the tions, which he said were in point of fact being carried out by the house, but advised their non-adoption in a formal way; and after re-marks by Lord Howick, Sir R. Peel and a few others, Mr Morrison withdrew his resolutions.—The other orders of the day having been disposed of the house adjourned for the Easter recess.

Senior, Esq., R. A. Slaney, Esq., Dr S. Smith, Colonel Sykes, Thomas Tooke, Esq., James Whisham, Esq. Lord Ashley presided, and Mr Fletcher read the eleventh annual report, which was highly favourable to the progress and prosperity of the society. THE STATISTICAL SOCIETY anniversary meeting was held on Satur-

NOMIST. 267 MESMERISM.—Mr Spencer T. Hall, a gentleman who has ac-quired considerable fame in the provinces as a lecturer on the science, and practiser of the art, of mesmerism, commenced the first of a series of lectures and exhibitions which he is about to give in the different districts of the metropolis, at the Mermaid rooms, Hackney, on Tuesday night. He lectured and operated again on Thursday. On the former occasion Mr Hare of the *Patriot* newspaper presided, and on the latter the chair was taken by the well known Mr W. Howitt. On both occasions Mr Hall exhibited so me very striking effects of the mesmeric influence on two lads whom he has with him for that purpose, but on Thursday night he introduced a young gentleman residing at Hackney, and known to many of the audience, who had attended his previous lecture, as an unbeliever, but was himself now converted into a most suscep-tible and striking subject of mesmerism. On the Tuesday he had expressed his belief that Mr Hall (to whom he was a stranger) could not influence him; but before he left the room on that night he was so far affected as to be unable, on Mr Hall placing a walk-ing stick in his hand, to let it fall. In fact, without the slightest preconcert, he was made to obey in every respect the will of the mesmeriser, whilst he remained to all appearance quite vigilant, his eyes being wide open. This case was the more interesting from the patient's ready and intelligent explanations of his feelings and move-ments, the latter of which, he said, he endeavoured with all his prover to control, but without the slightest avail, as he felt himself for the time completely subject to some potent but extrinsic in-fluence. Thus, when a glass filled to the brim with water was placed in his hand by Mr Hall, he became transfixed, and could not shand, and once put in motion, he could not stop it. When a sked to tell his name, and whilst opening his lips to do so, his jaws became compelled to utter his name aloud, although he tried, and was re-quested by th compelled to utter his name aloud, although he tried, and was re-quested by the audience, to avoid doing so, if possible. A variety of other very curious and beautiful experiments followed, and Mr Hall had the gratification of receiving the thanks of an audience which first took him (at least some of them) to be an impostor. A similar compliment was paid to the chairman; and a third meeting in the same place was announced for Monday next. The LATE BOILER EXPLOSION AT BLACKWALL.—Mr Baker, the Coroner for East Middlesex, and the jurymen appointed to conduct the inquiry into the deaths of the men Chapman, Grimes, Smith, and Wright, who were killed by an explosion at the works of Mr Samuda, at Bow-creek. Blackwall, after repeated meetings and adjournments,

267

wright, who were killed by an explosion at the works of Mr Samuda, at Bow-creek, Blackwall, after repeated meetings and adjournments, re-assembled on Thursday, and the jury unanimously found a verdict of "Manslaughter against George Lowe," and they added their opinion that the machinery generally on Mr Samuda's establishment was of a most defective character.

THE PROVINCES.

CROWDED STATE OF THE HULL DOCKS.—The weather during the last few days has been almost hourly of the most changeable descrip-tion. The state of the barometer, but still more of the wind, upon which more than any thing the breaking up of the ice in the Elbe will depend, is becoming a subject of intense interest, and well it may, when it is considered that bale goods, estimated at from 1,000,000/ to 2,000,000/ in value, are now in this port, the greater part of which are under contract for delivery at the great continental fairs, which com-mence in Easter week. For Hamburgh alone we have five of the largest class of steamers and upwards of twenty sailing vessels loaded, and the sheds on the dock sides contain sufficient goods to load ten more sailing vessels. The cargo of one of the steamers is estimated at 60,000*L*—*Eastern Counties Herald*.

and the sheds on the dock sides contain sufficient goods to load ten more sailing vessels. The cargo of one of the steamers is estimated at 60,000.—Eastern Counties Herald. THE FARMERS AND THEIR "FRIENDS."—The Morning Post of Thursday contains the account of a meeting held at Newmarket on Tuesday, by farmers of the neighbourhood, and attended by the Hon. E. Yorke, son of Lord Hardwicke and one of the members for the county of Cambridge. The Newmarket Protection Society recently passed resolutions, which declared the distress of tenant farmers and of agricultural labourers to be general, if not universal, throughout England. To the new Corn Law, the Tariff, and the Canada Corn Bill, the society ascribed the distress of the agricultural body. There ensued some correspondence on the subject of these resolutions be-tween Mr Yorke and the committee of the society. In one of his letters, Mr Yorke declared that in his opinion the policy of Sir R. Peel had in no way whatever produced the present distress of which agriculturists complained; and this opinion Mr Yorke avowed him-self willing to maintain in discussion with his constituents. The chal-lenge was accepted by the committee of the Newmarket Protection Society, and the affair " came off." On this occasion, upwards of 600 farmers assembled in the Theatre, and heard quiety a long speech from Mr Yorke in vindication of the ministerial policy. When he finished, says the Post, Mr Ball of Burwell proceeded to tear to pieces the arguments which the hon. gentleman had employed.

"If," exclaimed Mr Ball, "Mr Yorke be right in what he has stated now, he and all of us must have been fearfully wrong in our views at the last ge-neral election. But we were not wrong then—and we are not wrong now— in adhering to the principles which impelled us to place Sir R. Peel in office " ffi

ornee." Mr Ball then proceeded to denounce the premier's policy as utterly destructive of the best interests of the country. The three county members Mr Ball declared to have utterly forfeited the confidence of their constituents. Mr Ball's speech was, throughout, received with the most vehement cheering, as was another of the same sort by a Mr Smith, when a Mr Dobede moved a resolution to the effect,

"That in the opinion of the meeting the distress of tenant farmers and ad agricultural holourers is general, and has been caused entirely, or chiefly, by the measures of Sir R. Peel." and of

Mr Dobede added, that the representatives of Cambridgeshire no

THE ECONOMIST.

longer represented the sentiments or interests of their constituents. The resolution being seconded, a person stepped forward to move an amendment, to the effect that "Messrs Yorke, Allix, and Eaton had not betrayed their trust." The speaker added that, in his opinion, in the event of another election, the same members would be returned not betrayed their trust." The speaker added that, in his opinion, in the event of another election, the same members would be returned for Cambridgeshire. This announcement was received with derisive shouts. "Who is he ?" was demanded from twenty quarters. "A tenant of Lord Hardwicke," was answered by three or four voices. The laughter and yelling with which this intimation was received drove the unfortunate man of the stage. The resolution was then moved and carried unanimously. Of the the six hundred farmers who were present, not one raised his hand in support of Mr Yorke's views or character as an honest representative of Cambridgeshire. Mr Johnson of Wicken Hall then made a long speech. He was, he said, a gentleman of high Tory principles—a staunch supporter hitherto of Mr Yorke, and the occupier of a very large farm. Mr Johnson read from a speech of Mr Yorke, at the last election, a declaration by that hon. gentleman, that in his opinion "the Corn law of 1828 was the best law which human wisdom could devise." " How, then, comes it," exclaimed Mr Johnson, " that the hon. gentle man has lent himself to the abolition of that law ?" Mr Johnson proceeded to read a declaration by Mr Yorke, made, also, at the period of the last cleetion—a declaration to the effect that "if ever he should find himself opposed in sentiment to his constituents, he should deem it his duty to resign his trust as their representative." " I ask Mr York," exclaimed Mr Johnson, " whether he is not now in the situation he spoke of? I ask him whether he does not feel that his own conduct, and the policy which he has supported, are condemned unanimously by this large meeting of his constituents—a meeting called expressly for the purpose of meeting his defiance ?" " I beg to tell Mr Johnson," said Mr Yorke, "that I shall not resign." Derisive cheers greeted this statement—because from the tone of Mr Yorke's opening observations, the impression was general that he meant, in the event of being discomfited, to retire f

Mr Yorke's opening observations, the impression was general that he meant, in the event of being discomfited, to retire from Parliament. When the excitement subsided, Mr Johnson returned to the charge, and belaboured Mr Yorke and his colleagues most unmercifully. "We have been betrayed," said Mr Johnson. "It is the more necessary that we should be true to ourselves- and whenever the opportunity shall be afforded us, return to parliament men who will not faw upon a fiitbless

be afforded us, return to parliament men who will not fawn upon a faithless minister, nor tremble before the leaders of the Anti-Corn-law League."

minister, nor tremble before the leaders of the Anti-Corn-law League." "The cheering," says the *Post*, "which welcomed this and similar bursts from Mr Johnson, Mr Ball, and Mr Dobede, was absolutely deafening. It is rumoured, however, that the farmers of Cambridge-shire mean to summon a county meeting, for the purpose of con-demning the agricultural policy of Sir R. Peel, and of summoning their three members to resign the trust which they have betrayed."

IRELAND.

REPEAL ASSOCIATION.—Monday being St Patrick's day, the Con-ciliation hall was more than usually crowded, and almost every one in the room wore a shamrock in his hat, the Liberator sporting a "monster" one. Mr W. Geery, mayor of Limerick, presided. Mr O'Connell announced that on Tuesday next, the repeal "martyrs" were to be entertained at a grand dinner in Kilkenny; they would not meet again, therefore, in that hall until that day fortnight. Mr R. D. Browne, M.P., addressed the meeting in an able speech on the various topics of the day. In reference to the Queen's visit, Mr O'Connell said that they would hail the visit of the Queen with re-joicing, but she had better keep her ministers within the shadow of her protection. He did not mean, of course, that any injury should be done them, but he trusted that they would get plenty of "cheek" music. He then brought forward a motion to the effect, that a ma-jority of the House of Commons having refused the inquiry sought for by Mr T. Duncombe, M.P., with a view to prove that his letters had been opened at the general post office, the Association felt it to be a duty to the people of Ireland, to place on record its indignant denunciation of a proceeding so disgraceful to the government of a free country, and to offer its cordial thanks to Mr Duncombe for his strenuous exertions in exposing the system of espionage practised. Strenuous exertions in exposing the system of espionage practised. The first report of the committee appointed to take into considera-tion the report of the Irish land commission was read, and commented on by Mr O'Connell. The rent was 398/55 4d.

FOREIGN AND COLONIAL.

-The accounts from the United States, received UNITED STATES. UNITED STATES.—The accounts from the United States, received on Monday by the *Hibernia*, do not possess very great importance. The resolutions for the annexation of Texas were still before the senate on the 27th February, the date of the latest advices from Washington; and the utmost uncertainty prevailed with respect to their probable fate. Down to a day or two before that date they were considered almost certain to pass; but one or two democratic senators, who had been relied upon as supporters of the resolutions, had unexpectedly announced their intention of voting against them. had unexpectedly announced their intention of voting against them. It was thought probable that these votes would turn the scale; and the general expectation appears to have been, that the resolutions would be negatived, though not by a larger majority of one or two; and some parties supposed that the question would be decided by the casting vote of the speaker, who was well known to be opposed to the measure.—The bill for the occupation of Oregon had made no pro-gress in the senate; and, as the session must terminate on the 3rd of March, it was impossible to carry it through; and the bill was con-sidered as having dropped. A new question has, however, arisen between the English and American governments; which seems likely to give some trouble. It

A new question has, however, arisen between the English and American governments; which seems likely to give some trouble. It appears that, some months ago, seven slaves made their escape from the state of Florida, and safely reached one of the Bahama islands; when their surrender was demanded under the terms of the Ashburton treaty, on the ground, or rather perhaps under the pretext, that,

in making their escape, they had committed a murder. In proof of the offence with which they were charged, the American authori nd produced a bill of indictment for murder, which had been fou against the fugitives; but the British governor of the Bahamas, know-ing pretty well what the finding of a grand jury of slaveowners was likely to be worth in such a case, demanded to see copies of deposi-tions on which the bill had been found; inasmuch as it might turn out (as indeed, we believe, was the fact), that the negroes had merely killed a person who attacked them, and endeavoured to prevent their escape. In such a case, the offence would not amount to murder by killed a person who attacked them, and endeavoured to prevent their escape. In such a case, the offence would not amount to murder by the law of England; and, under the terms of the treaty, the British authorities would not be bound to give them up. In this view of the matter Lord Aberdeen fully concurred; whilst the American govern-ment persisted in considering the finding of the bill by the grand jury a sufficient ground for the surrender of the fugitives; and Mr Everett, the American minister in England, is instructed by Mr Cal-houn to urge the British government to a speedy decision, in strong and earnest language. That decision has, no doubt, been already com-municated to the American government; and we may safely con-clude, that the negroes will not be surrendered to the tender mercies of their former taskmasters. FRANCE.—The Paris papers bring us intelligence of the vote of the

of their former taskmasters. FRANCE.—The Paris papers bring us intelligence of the vote of the Chamber of Deputies on Tuesday, on the proposition of M. Duver-gier de Hauranne to abolish the vote by ballot. Ministers took no part in the vote, but combated its principle in a speech of Count Salvandy, which is sverely criticised in the journals before us. Ulti-mately the chamber agreed that the vote by ballot should be replaced by the vote by division, but that, nevertheless, if 20 members of the chamber should concur in calling for the former mode of deciding a question, it should be done. The Opposition prints affect to re-gard this result as a defeat of ministers, but we are assured that the latter did not see it in that light, having had frequent occasion to complain of treachery on the part of their soi-distant supporters, who availed themselves of the secrecy of the ballot to vote against them. them.

Correspondence & Answers.

TAXING INCOMES.

SIR,—On the subject of "taxing incomes," I cannot say that S. L. B. has convinced me that I am wrong; but, right or wrong, I hold that good must be done by the discussion of the subject, and am well pleased that attention is drawn to it. I do not understand that S. L. B. denies the many advantages at-

I do not understand that S. L. B. denies the many advantages at-tendant on direct taxation, but he doubts the justice or the policy of limiting it, in the way I proposed, to incomes arising from realised property, which should be in use for enjoyment, to the exclusion of such as shall be in use for further production. The reason for this is this, that property in use for further production is thus employed infinitely more advantageously for the public than it would be if taken from that employment and applied to the use of the state, in the shape of tax. This is my principle. In practice there is this additional, and, I think, unanswerable reason, that, in order to get at it for the puppose of the state, you must of necessity have resort to yexations ones of the state, you must of necessity have resort to vexatious inquisitorial measures; and, after all, can effect the object but pur

and, I think, unanswerable reason, that, in order to get at it for the purpose of the state, you must of necessity have resort to vexatious and inquisitorial measures; and, after all, can effect the object but very imperfectly. If all men were perfectly guileless and honest, and would and could, with perfect candour and certainty, state the amount of their incomes, this last ground would not exist; but still I should object to it on the principle stated. And, on the same ground, I should not go so far as you, sir. Manufactories, merchant ships, §c. I think, ought to be considered as machines for carrying on the business of production, and be no more liable to the tax than a spin-ning jenny or a steam engine. Again, with respect to professional incomes, I would not call on "such men as Baring, Follett, and Brodie," to make any return of their incomes, in order to collect the tax; for, unless they locked up in their cellars, or sent abroad, the excess of their incomes beyond their expenditure, it must most assuredly pay the tax, because it must be invested in some tangible shape, which would be called on to pay. But S. L. B. thinks that these gentlemen would spend their super-fluous money in insurances on the lives of their families. I confess I see no harm in that. If the insurance offices made inordinate profits, competition would soon bring down their terms, and the public would benefit ; and would not the landed proprietors have the advantage of lower rates of interest on mortgages, &c. ? Again, if it is feared that too great a disproprotionate encourage-ment would be given to trade ; in this case, as in the last, competition would lower the profit of traders, and the price of commodities would fall—of all commodities except land, the saying out his money in the purchase of a farm, B his in commerce. But these gentlemen must have something more than these two sums; for if A spends all his money in the purchase of his land, where will be the capital required to stock and cultivate i? And if B spends all his his funded property, in which case it would pay the tax, or he may continue content with his income of 120/, and send out this time 11,000/ worth of goods. In the one case the tax will be deducted for the use of the state; in the other the country will have

March 22.

THE ECONOMIST.

the (I think greater) advantage of an adventure increased by 10 per cent. In this case, as in the case of the 4000/laid out in the cultivation of A's farm, the levying of the tax would be the conversion of what-ever is taken in the shape of tax from profitable to unprofitable em-ployment—from that employment which would reproduce itself with interest, to that employment which will utterly consume it, so that

it will be gone for ever. I consider the owners of realised property to be the fit objects of taxation—the trader, whatever trade he may follow, entitled to ex-emption. The first are idle and consume—the latter are industrious emption. The first are idle and consume—the latter are industrious and produce; the first are the drones, who eat the honey—the latter are the bees, who make it and enrich the hive. I confess myself one of the first—I play and do not work—I ought to pay for it. March 3rd, 1845. SENEX.

[We regret to have been obliged to keep over the above letter, since the date of it, for want of space.—ED.]

A WEST INDIAN. -- The deliveries of Sugars for the port of London, given last week, are correct. Those for the four ports, at page 255, from our City accounts, are wrong. A reference to the article on Sugar, in this paper, will furnish further particulars.
 J. A. is thanked for his note, which has received altention.
 A SUBSCRIBER, Whitby.-There can be no doubt the drawback on the sugar alluded to will be allowed, if it has not been taken out of the Queen's warehouse.
 The notice of Mr Neisons' paper, on "The Laws of Sickness and Mortality," will appear next week.

POSTSCRIPT.

SATURDAY MORNING, MARCE 22, 1845.

[•] INDIA.—An express from Marseilles has put us in possession of intelligence from India in advance of the mail from Calcutta of the 8th ult. The mail was brought to Suez by the *Precursor* steam ship, which left Calcutta on the 8th, Madras on the 15th, and Point de Galle on the 19th of February, and Aden on the 2nd of March.

which left Calcutta on the 8th, Madras on the 15th, and Point de Galle on the 19th of February, and Aden on the 2nd of March. The interval since [the departure of the last mail (only a fortnight) had presented in India none but the most common-place events, and a few ru-mours. The military men of the Bengal Presidency division remark the number of troops removed, not for the usual relief by general orders, but by order of the supreme government. Similar removals, as may be collected from casual and occasional orders for bullocks, and other incidentals to a march, have taken place in the other divisions of Bengal ; and it had at last been discovered that the destination of all these troops is the north west provinces. It may be thenceforth inferred that the state [of the Punjaub gives some disquiet to Government. When Lord Ellenborough formed his army of exercise, everybody felt sure that aggressive active operations had been determined on, and the public were not mistaken. Sir Henry is concen-trating on the north-west frontier all the available forces of the lower provin-ces, but in a manner almost to escape observation. His object was supposed to be to have the strongest possible security for peace at hand at the point of danger; that is, his policy is defensive, and it is not intended to cross the British boundaries, except in case of necessity, and to punish aggression. Railway's peculation continued to engage the public attention. Government was said to be determined to have the construction" and management of railways, whether established at the public expense or by private capital and this intention had not met with much favour.—The accounts from Ne-paul show the new minister, Mahtabbur Singh, desirous to conciliate our government, and anxious to meet its terms and wishes. Prince Waldemar was travelling through that country. No news had been received from Gwalior. In Soinde, Sir C. Napier had organized a force of 5000 men for the settlement of the Poolajee affairs. In Bombay the Mahratta war seemed as rackpore. COMMERCIAL.

-It is impossible for us to give much commercial in-

COMMERCIAL.—It is impossible for us to give much commercial in-telligence. It appears, however, that the rate of exchange for com-pany's bills has declined to 1s 10d, notwithstanding which there is but an inactive market for the leading articles. DEATH OF THE LOND BISHOP OF ELY.—The Right Rev. Prelate who, for the last nine years, presided over the see of Ely, closed his earthly career on Thursday morning, to the great grief of all his re-latives and friends. For some time past his Lordship's health had been declining; but within the last three or four weeks the decay of his strength, and the diminution of his vital energy, became so evident to his medical attendants, that no hope of his Lordship's restoration to health could be rationally entertained. THE DUKE DE BROGLIE, on Saturday evening last, arrived at the French embassy in Manchester square, and we understand he will remain with Count St Aulaire, the French ambassador, during his sojourn in this country.

sojourn in this country.

sojourn in this country. There has been a great fire at Liverpool. It commenced on Thurs-day afternoon, in the manufactory or laboratory connected with the Apothecaries' hall, situated in Back Colquitt street. The building in which the fire originated is four stories high. Short as was the in-terval between the alarm being given and the arrival of the engines, but it is four attach and the description of the engines. yet it was found utterly useless to attempt to save it. The exer-tions of the firemen were therefore directed to protecting the ad-joining premises, which they very nearly accomplished.

LIVERPOOL, MARCH 20. COTTON.—The Halifax Steamer of the 1st inst. having brought an account of con-siderable increase in the receipts at the various ports, and the uncertainty as to the period when the abolition of duty will take effect, have together tended to suspend business, and American descriptions, being more freely offered, have further declined id per lb; all other descriptions remain tolerably steady at the quotations. Taken for consumption | Whole import | Computed stock

SUGARThe	demand has b	een general ar	d extensive.	and the sales.	subject to the

SUGAR. -The demand has been general and extensive, and the sales, subject to the new duty, amount to 2,100 hhds B. P., at rather improved rates for good grocery des-criptions, but without change in brown refining qualities. TEA.--There has been a good business done in good and fine congou of the new im-port, at fair prices; all common descriptions of old teas are heavy, and to effect sales, lower rates are accepted. GRAIN.--Wheat is about 2d per 70 lbs dearer. Oats unaltered. Some parcels of sweet United States flour, in bond, have been sold at an advance of 1s 6d to 2s per bar.

EPITOME OF NEWS.

THERE has been a good deal of talk and work both-rather a rare conjunction-in the House of Commons this week. As might be expected, however, the talk had precedence, and, upon the whole, it may also be said to have had the predominance. On Monday the forlorn hope of "the farmers' friends" was ex-

hibited by Mr Miles, who moved an abstract resolution to the effect that in any reduction of taxation the agricultural interest was to be "duly" considered,-a very harmless proposition, certainly; but when Mr Miles and his friends were asked to state more particularly what it was that they would be at, they could only say that they thought the expense of roads through their own states, of administering justice in their own counties, &c. should be taken off themselves and saddled on the public ! Absurdities sufficiently gross were certainly to be looked for, from any party headed by the junior member for East Somerset, but, as the *Iimes* says, "the public were not prepared for anything so whimsical, so ingeniously composite, as the plan to which Mr Miles thought it no disparagement of his legislative character to attach his name. This gentleman is a statesman of the construc-tive school. His plan is a budget in miniature. It is a receipt for agricultural relief, and drawn up on the interesting model so familiar to the readers of Kitchener, Rundell, and Glass—so many of such an article, so many wholes, and so many halves. Take a judge of assize, a burglar, and a poacher, half an assault and half a trespass, the like proportion of an inquest, and so many votes for the county ; moisten them with a few tears of agricultural distress, and then you have Widow Miles's farmer's pill; under which and then you have Widow Miles's farmer's pill; under which name it will at least deserve a place in the next compendium of

popular medicine or domestic economy." This same never to be satisfied, never to be silenced, "agricul-tural interest," had another set-to on Wednesday night. The new customs duties bill passed through committee on that occasion, discussion on the parts of it objected to having been by con-sent reserved till then. The leading feature of the measure, in addition to the commendable one of its setting the example of sweeping away a multitude of paltry taxes on the importation of raw materials, is that it favours the continuance of that indelible disgrace of the statute book of England, the exclusion of imports disgrace of the statute book of England, the exclusion of imports of every thing in the shape of human food, except at exorbitant duties. "Grease" and "lard," however, are now to be admitted from foreign parts free of duty, but not without a protest from "country gentlemen," for, under the guise of grease, they fear that some wretched sorts of butter may come in, and if lard were to become plentiful, the labourers might at least get *something* to "kitchen" their bread. But Sir George Clerk makes friends with his rural supporters by assuring them that particular care will his rural supporters, by assuring them that particular care will be taken at the custom house to prevent the possibility of any butter getting into the country at a low duty. When it presents itself it is to be besmeared with tar. And the lard interest not being very strong in the house, has given way! It was really no wonder that Mr Ward, who, though a landowner, has about him the spirit of a gentleman, repudiated for himself such kindness as Sir George Clerk would thrust upon him. The corn law, as he said, from the very extent of its injustice, has at least something of the magnificence about it which accompanies other great robberies; but for these peddling and paltry, yet mischevious, exac-tions, on even the smallest comforts of the people, there can arise no feeling, when they are thoroughly exposed, but that of extreme contempt and scorn.

These discussions are placing "the gentlemen of England who re at home at ease " in a position not at all to be envied. It is live at home at ease all the more humiliating for them that the discussions are of their own seeking-the position of their own making. It is needless to own seeking—the position of their own making. It is needless to say that it it is a false position. Mr Eliot Yorke, for one, must know that by this time. So, it appears, does Col. Wyndham. In short Mr D'Israeli has expressed the state of things in right words,—"a conservative government" (a government conserva-tive of wrongs and injustice, and composed of men who know the injustice) "is an organized hypocrisy." Now hypocrisy, to do our countrymen justice, is not one of our national characteristics, and it hermes more and more avident the the present organized our countrymen justice, is not one of our national characteristics, and it becomes more and more evident that the present organiza-tion of parties is becoming too distasteful to the community to hold much longer together. Either the present government must hasten to carry out those principles which, after long opposition, they have at last unequivocally espoused, or they must fall back upon the prejudices which brought them into office, and let the struggle henceforth be between light and darkness, sense and nonsense. Half measures are distasteful to all parties. They nonsense. Half measures are distasteful to all parties. They bring along with them, too, all the inconvenience inseparable from changes, and only a fraction of the good which changes from wrong principles to right ought to do.

wrong principles to right ought to do. On Tuesday, Lord Duncan moved for a select committee to in-quire into and report upon the present mode of assessing and collect-ing the window duties, and, in a speech of considerable research and ability, pointed out the inequalities and injustice of the tax, and its mischievous operation in a sanatory point of view. It was

THE ECONOMIST.

March 22.

to no purpose, however. The Chancellor of the Exchequer said it was a bad tax, but that, as it yielded 1,500,000/, it could not be given up. Sir Robert Peel, however, as good as said that he meant soon to put an end to it. Of course, "he would not give meant soon to put an end to it. Of course, meant soon to put an end to it. Of course, "he would not give any positive assurance" (that is not Sir Robert's way), but his words had no meaning, if they did not imply that he was so sen-sible of the evils of the window tax that he should make it among the earliest of the next remissions made by his government. The window tax is a tax upon the public health and morals, and one of the few sorts of direct taxation resorted to for which there is no defence.

New Zealand politics came again before the house on Tuesday Mr G. W. Hope moving for some papers to vindicate the good faith, as he called it, of Lord Stanley. There was not such a fight as was expected, and Sir Robert Peel wound up the discussion, by taking it for granted that the graver charges against Lord Stan-ley personally were not now insisted on, which, to say the truth, ley personally were not now insisted on, which, to say the truth, seems to be the fact. That there has been gross mismanagement, however, in the Colonial Office, of which Lord Stanley, from his position, must take the largest share, by which the New Zealand Company and the New Zealand settlers have been great sufferers, is no secret. The Colonial Office, even with a good business head to direct it, is not fit satisfactorily to overreach the business which is now thrust upon it. With Lord Stanley for its head, it par-takes more of the character of a nuisance than a public benefit. A discussion on railways, on Thursday, closed the pre-Easter recess business of the House of Commons.

A discussion on railways, on Thursday, closed the pre-Easter recess business of the House of Commons. Upon the whole a great amount of public business has already been transacted. There has not, as yet, been a single count out of the House, a thing quite unprecedented, and more bills (their number being swelled of course, by those referring to railways) are now in progress than probably ever was before at so early a period. For the rest we may congratulate ourselves that the current of legislation is proceeding in that direction which we exist to advocate. There are many drawbacks notwith-standing, to the satisfaction with which it is possible to look at the events which are passing around us, among which drawbacks not the least is the regret to be felt at the sacrifice of character being made by public men. Mr Eliot Yorke goes down to bis constituents to convert them to ministerial views, but instead of that he is branded to his face as a deserter and betrayer, and he sulks, instead of answering the charge. Some 300 memand he sulks, instead of answering the charge. Some 300 mem-bers of parliament are in precisely the same position as Mr Yorke. The ghost of 1841 haunts them. Prejudices are more Yorke. The ghost of 1841 haunts them. Prejudices are more easily fed than allayed; and it is a question whether the sweets of office and of power are sufficient recompense for having to stand to be so branded before men. We should say not. Doubtless, the parties themselves so feel it, and believing that they do, we do not despair that their present humiliation will lead to good. We an-ticipate that a higher tone of morals in public life, as well as in the pate that a light to the of morals in public file, as well as in private, will be looked for in future; that a general consistency of *character* at least, if not of acts, will henceforth be required. Acts may be good or bad, as men are well or ill informed, but *charac-ter* should not change with time.

The Committee of the House of Commons which sat to try the validity of the Dartmouth Election has reported in favour of the sitting member. It was given in evidence that Mr Somes had transferred all his ships (his boasted recommendation to the Dartmouth people) to two nephews. The ships were employed in the execution of government contracts; Mr Somes therefore was a government contractor. Now, it so happens, that the act 3 & 4 Wm. IV. c. 55, enacts (sec. 34) that no bill of sale shall be valid to pass property in a ship, until such bill of sale shall have been registered in the registry-book of some port. The bills of sale of Mr Somes' ships to his nephews are all dated on the 17th of Dec. But there is no registry of a date previous to the election; the earliest date of any such registration being Dec. 28th—the day The Committee of the House of Commons which sat to try the But there is no registry of a date previous to the election; the earliest date of any such registration being Dec. 28th—the day after the election. Mr Somes had not, therefore, when he was elected to serve in Parliament, complied with the terms of the statute. He still had an interest in ships serving the govern-ment under contracts not voided before the day of election. It happens, also, however, that the committee which tried the case consisted of three gentlemen of Mr Somes's party (not men of great repute for learning or anything else), and only of two of Mr Mof-fatt's party. It is painful to have to speak of gentlemen as habi-tually sacrificing character and honour for the sake of party votes; but this charge is brought broadly against members of the House of Commons, who serve on committees. We are afraid it is not always without some foundation. A clearer case of legal disqualification than was Mr Some's, in our opinion, never was submitted to a tribunal. It certainly seems so to us, independently of the circumstance that Mr Somes does not think as we do. If the House of Commons is determined to retain its with the set to a tribunal the House of Commons is determined to retain its right to sit in judgment on the legality of elections, we apprehend the expe-rience of a few more decisions like this will make the conviction general, that the recent enactment has failed to place the present general, that the recent enactment has failed to place the present tribunals above the suspicion of being actuated by motives instead of being guided by decisions. We rather think the Court of Queen's Bench would settle the disputes better than party men taken from either side of the House; but, if it is determined to re-tain the jurisdiction where it is at present, we suggest whether a

permanent (small) committee of men, of known character and tried ability, would not be a tribunal to be preferred to one, appointed as the committees now are, on no principle whatever, but so as merely to make one member serve after another, whether he may have any qualifications or pat. We do not believe the House have any qualifications or not. We do not believe the House of Commons to be so fallen as that it does not contain men on both sides having every requisite for the duties of judges. That it con-tains so many who really have not those requisites is the reason why a selection of judges should be made, and so grave a matter no longer left to be decided on by chance or whim.

THE BANKERS' GAZETTE. BANK OF ENGLAND. 29.148.060 29.148.060 BANKING DEPARTMENT. 35,558,662 Dated the 20th day of March 1845. 35,558,662 M. MARSHALL, Chief Cashier. THE OLD FORM. The above bank accounts would, if made out in the old form, pre-sent the following result :---Lightities Liabilities. L. Assets. Circulatio .24,757,756 sits _ 37,122,908 40,702,337 TRANSFER BOOKS. Shut. 4th March.....Tuesday, 0Friday, 0 do 0 do do Open. 15th April, 1845. 18th do do do do

-THE above bank returns show a decrease of the circulation of 4.593/; an increase of deposits of 186,492/; an increase of securities of 115,918/; and an increase of bullion of 68,143/. A further advance has taken place in the continental exchanges. There is no change in the value of money. A great reduction is observable on the amount of business even on the part of jobbers in the funds for some time past. Railways appear to have absorbed the attention of the public as well for investment as for speculation.

MONEY MARKET.

IDENTIFY MARKET. SAVURDAY.—The English funds have not varied throughout the day. Business has been very slack, and scarcely a bargain is reported. Consols for money left off 995 to \$\$ and for the account 100 to \$\$. Excheque bills were 66 to 66 premium, and bank stock 216 to 217s In the foreign market operations were limited, and the alteration in prices was of the lesst possible importance. Mox DAY.—The public securities maintained much firmness, but there is a small for the account 100 to \$\$, and exchequer bills for for premium, bank stock for the open-ing in April is marked 216, and Indian Bonds 71 to 73 premium. Bank stock for the open-ing in April is marked 216, and Indian Bonds 71 to 73 premium. Bank stock for the open-ing in April is marked 216, and Indian Bonds 71 to 73 premium. Bank stock for the expe-ted the dealers are preparing for the extlement, and hence there has been little other business engaged in. The Peninsula stocks continue firm, but no alteration can be expected till the account is arranged. A good demand for money prevails. The quo-tations of foreign securities to 400 y at the close of business were—Spanish five per cents 204 to 3, the three per cents 408 to 4, Russian 1163 to 1174, Portuguese 68 to 69, Mezi-an actives 86 to 61, the deferred 168 to 62, Dutch two-and-a-half per cents 633 to 64, business 06 to 69, Let deferred 168 to 52, Dutch two-and-a-half per cents 633 to 64, business 100 to 91, Barzilian 90 to 92, and Belgian 101 to 10. TUESDAY.—The English funds have scarcely varied a fraction throughout the day. Consols for money this afternoon were the same as yesterday, viz. 993 to 2, and for the per const 100 to 16, bask stock for the opening is 216 to 217, exchequer bills 635 to 658 premium, and India bonds 70 to 72. The foreign stocks have not been largely deal in Spanish, Mexican, and Portuguese, all maintain their improved condition, but purchases are of no importance. The account has passed over in a very satisfactory and the stock for the opening is 216 to 217, excheq

In. Spanish, McNeah, and Fortuguese, an maintain the improved construct, which the purchases are of no importance. The account has passed over in a very satisfactory manner. WEDNESDAY.—Consols for money and the account are unaltered, the respective quotations being 992 to $\frac{5}{6}$ and 100 to $\frac{1}{6}$. Exchequer bills were the shade flatter, the pre-mium now standing at 60s to 64s, the margin being regulated by the description of bills, whether they are for 1,0001 or for 5001. Bank stock was quoted this afternoon 215 $\frac{1}{2}$ to 216 $\frac{1}{6}$. In the foreign market Spanish suffered a slight decline. There was not much business done, and the speculators appeared desirous of selling. TRURSDAY.—The public securities continue very dull, and the amount of business transacted was exceedingly limited. Consols closed 993 to $\frac{5}{6}$ for money, and 100 for the account. Exchequer bills were 59s to 61s pm, and bank stock 215 to 216. The foreign stocks were, as yesterday, exceedingly quiet, and no material alteration took place in any of the quotations. The closing ones were—Spanis 30 to $\frac{1}{2}$ for the five per cents, and 40 $\frac{1}{6}$ to $\frac{3}{2}$ for the three per cents, Portuguese 68 to 69. Mexican $\frac{36}{4} + 6$ f. Data 50 to 92, and Belgian 101 to 102. COMPARATIVE EXCHANCES.—The premium on gold at Paris is 109 per mille, which, at the English Mint price of 3/ 17s 10 $\frac{3}{6}$ dep rounce for standard gold, gives an exchange of 25 56; and the exchange at Paris on London at since the stange between England and Ame-rica being 109 23-40 per cent, it follows that the exchange is 0.68 per cent in favour of England. But the quoted exchange at New York being for bills at 60 days' sight, the interest must be added to the above difference.

The stocks of foreign are on the continent smaller than at the be The stocks of foreign are on the continent smaller than at the be-ginning of last month; but the total, those in this country included, show a surplus of 25 per cent when compared with last year's; and, upon an average, an equal excess over the corresponding periods of 1842 and 1843. Of British colonial sugar, the stock shows a much greater increase above the three years 1842 to 1844; it is more than double of last year's; the importation has been considerably larger, and the deliveries much smaller, in consequence of their almost entire cessation, from the time that it became known that the duty would be reduced, until the end of last week, when the new duties were taken. taken.

be reduced, until the end of last week, when the new duties were taken. The stock of foreign sugar in this market consisted, on the 1st in-stant, of 210,000 cwts Havana, 130,000 Manilla, Java, and Siam, and 85,000 cwts of Brazil; total, 425,000 cwts against 230,000 cwts on the 1st of March 1844. The demand for foreign sugar has not of late been animated. Of floating cargoes, ouly one of brown Bahia, con-sisting of 500 chests, has been sold at 19s 3d. The latest accounts from the Havana are more unanimous than hi-therto, as to the deficiency of the crop in the island of Cuba, which the more moderate estimate at 300,000 boxes compared with that of 1844. The supply from that island will likewise come into the market from six weeks to two months later than usual. The last crop accounts from the Brazils continue likewise unfavourable; but from Porto Rico, all the French, and all the British West Indian co-lonies, an ample supply may be confidently expected. Another cargo of Venezuela sugar is on its way to this country. Though the deliveries of B. P. sugar have been small, yet the dealers are well stocked with sugar purchased in bond, and liable to the reduced duty. It is not, therefore, expected that a very animated demand will soon take place. A good many sales are advertised, and a large supply of East India sugar, kept out by adverse winds, is near at hand. The preceding table again shows an increased surplus of stock compared with preceding years, which, however, could not be ex-

pected to be otherwise, imports coming in, whilst the continued severity of the season prevents any quantities being forwarded from this country and the continental seaports into the interior of Ger-

The scontry and the continental scapors into the interior of Ger-many, §c. The stock of coffee in the London warehouses amounts to 365,000 ewt against 269,000 cwt on the 1st of March 1844. Prices of the qualities fit for home use have again materially de-clined since the beginning of last month, but the demand at the re-duced rates is animated, and the deliveries for consumption large, and showing a fair increase upon last year's

duced rates is animated, and the deliveries for consumption large, and showing a fair increase upon last year's. The value of foreign coffee is now in this country, and likewise on the continent, with the exception of Java coffee in Holland, lower than at the corresponding period of the preceding three years. Stocks in the interior of the European continent must be greatly re-duced by the protracted winter season. The accounts of the crops of Cuba do not show any improvement; from Laguayra they are worse, only half a crop being reported as the probable result; from other quarters no change.

THE SUGAR MARKET.

A RETROSPECTIVE AND PROSPECTIVE REVIEW OF THE TRADE.

THE TRADE. THERE has never been a period when it was so important to take a wide and careful view of the sugar market as at this time. The in-troduction of the new law changes the character of the trade altoge-ther, and renders it needful, in forming any estimates or opinions of the future, to include an extensive range of elements which hereto-fore have been excluded as unnecessary. For many years past our colonies have practically had a perfect monopoly of the supply of sugar to this market; for, though foreign sugar has not been prohibited, yet the duty of 63s per cwt (being 39s higher than the colonial duty) has had the effect of excluding foreign sugar as much as if it had been prohibited ; for only on one occasion, in 1840, has the price ever been so high as to admit foreign sugar to consumption at the high duty. For a short time in that year the whole amount of differential duty, viz. 39s was effective, and 2,444 ewt of foreign sugars were taken into consumption at the duty of 63s per cwt, foreign sugars being then worth 24s in bond, and colonial of similar quality worth no less than 63s per cwt in bond.

consumption at the duty of oss per cwt, foreign sugars being then worth 24s in bond, and colonial of similar quality worth no less than 63s per cwt in bond. With that slight exception, however, the colonial and foreign sugar markets for many years past have had as little influence upon each other as any two articles that were totally distinct in their nature or uses. It is true, the law of last year contemplated breaking down this perfect monopoly, but up to the hour it was repealed its provi-sions, as far as regarded the *immediate* supply of the home market, were wholly inoperative. Indeed, the law of last year, it appears, was in-tended rather as a means of aiding the transition, by directing sup-plies in the interim from the distant free-labour markets in the East to this country, with the necessery certificates for admission, than to produce any immediate and actual change in the amount of supply. For it is evident, that had the present reduction of duties now taken place without any such preliminary measure, the revenue would have been sacrificed on all colonial sugars, without being in any way com-pensated by an increased quantity from foreign countries, until ad-vices could have reached those distant countries, and cargoes, with the requisite certificates, had arrived, which could not have been ac-complished in less than eight or nine months.

The requisite certificates, had arrived, which could not have been ac-complished in less than eight or nine months. From this day, however, the colonial sugar grower must consider himself practically brought into competition with the sugar growers of all the world. The law does, it is true, affect to confine the competi-tion to the produce of free-labour, but that regulation will only at the best have an influence in altering the destination of particular kinds of sugar, and will not in any way affect price. It is true, the competition is one in which great advantage is still secured to the colonial producer, by retaining a very large differential duty in his fa-vour. The new law establishes duties of 14s and 16s 4d per cwt on colonial, and of 23s 4d and 28s on foreign sugars, classified into brown muscovado or clayed, and white clayed, or equal in quality to white clayed; any intermediate quality comes in under the lower denomi-nation. The effect of this in practice will be, as we have maintained in this journal from the first night the duties were proposed, to estab-lish only two rates, viz. 14s the cwt on colonial, and 23s 4d on fo-reign sugars; for it is quite clear that all sugars will be reduced in quality, so as to come under the standard fixed upon for the higher duties, in order to avoid such higher duty. No doubt the fine white further and the first night the duty. quality, so as to come under the standard fixed upon for the higher duties, in order to avoid such higher duty. No doubt the fine white Java sugars, now on their way, will have to pay the 28s duty if taken for consumption, but future shipments to this market will be se-lected and assorted for the lower duties. This is the view we have urged on the subject all along, and we observe it is also adopted by Mr Gladstone, sen., in his letter to the *Times*, on Monday last. This view has further been confirmed since we have seen the sam-ple of the sugar fixed on as a standard. So that, practically, and for all future calculations, the new duties on sugar must be deemed— COLONIAL generally

FOREIGN generally

extinguishing altogether any consideration of the distinction be-tween free and slave labour, as well as of classification and the higher rates of duty. There is no doubt that the actual difference which has existed between the value of colonial sugars in our markets, and of foreign sugars in the markets of the world, has, for many years past, averaged considerably more than the newly established difference of 9s 4d per cwt; and that these rates consequently establish a reduction in the protective duty.

cwt; and that these rates consequency contains a protective duty. The chief modifying consideration of the full effect of this competi-tion on colonial sugar, but which is only one of a temporary character, is, that all foreign sugars seeking admission under the new duties must be accompanied with certificates of origin. A great portion of

THE ECONOMIST.

274 THE ECC the comparatively small quantity of these sugars, now on their pas-sage with such certificates, will be of the finest quality, and it will be some months before any very important quantity of general qualities of such sugars will come forward. The three great heads of inquiry interesting to the dealer and pro-duces are—*First*, The present and future annual consumption of sugar ; *second*, The stocks on hand immediately available for that consump-tion ; and *Thirdly*, The future supply ; especially considering in each case how far the change in the law is likely to affect these different elements in future, as compared with our present and past, experience. *First*, THE PRESENT AND FUTURE ANNUAL CONSUMPTION OF SUGAR. —The regulations affecting the introduction and the use of sugar have hitherto been so much calculated to interfere with the consump-tion of this great necessary, that it is quite impossible to form any ade-quate idea of what the various wants of the public would require where it entirely divested of all restrictions; but one distinct and clear rule has already been established by observation, viz. that in pro-portion as the price has been low or high, the consumption has larger supply and lower price was permanently established, the habit of using sugar would even more than proportionally increase ; for of all articles produced, not even excepting bread, there is none which of using sugar would even more than proportionally increase ; for of all articles produced, not even excepting bread, there is none which of using sugar would even more than proportionally increase ; for of all articles produced, not even excepting bread, there is none which of using sugar would even more than proportionally increase ; for of all articles produced, not even excepting bread, there is none which of using sugar would even more than proportionally increase ; for of all articles produced, not even excepting bread, there is none which of using sugar would even more than

-Roard of Trade Tables presented to Par	Tiamont from time to time

-Board of Trade Tables, presented to Parliament from time to time. In computing the actual expenditure of the public for this article during this period we find that, if we take the consumption at 4,000,000 cwts and the price (wholesale including the duty) at 64s the cwt, we shall have as near the real average of the period as it would be possible to arrive at. At this rate the wholesale cost to the country, of sugar, has been 12,800,000/ yearly. The future consumption will depend entirely on the extent to which the price is reduced. The reduction of duty on colonial sugar is 11s 3d per cwt ; but it will depend upon the entire supply of colonial and foreign, available for consumption, as to what extent that reduction will lower the price in bond. If we were to suppose that the addi-tional supply at the new relative duties were to be so great that the whole reduction of 11s 3d per cwt went to the benefit of the consumer, and that only the same sum was expended on sugar that has hitherto and that only the same sum was expended on sugar that has hitherto been, then the quantity required for consumption would be 4,853,080 been, then the quantit cwt, or 242, 654 tons.

cwt, or 242, 654 tons. It may be a subject on which considerable difference of opinion may be entertained as to whether this quantity will be immediately available for the consumption of this country. But we think there can be none that, as soon as the new duties have had time to exert their full influence on shipments from the East, and even without any material increase from our own colonies, that quantity, or even more, will be available, and that before long the duty-paid price will suffer a reduction to the full extent of the reduction of the duty. No doubt there are several existing circumstances which for some suffer a reduction to the full extent of the reduction of the duty. No doubt there are several existing circumstances which for some time may interfere with such an adjustment of prices as will finally take place, especially the fact that stocks in second hands in this country, having been reduced to a very low rate, will now require re-plenishing, and the demand may be expected to be active for some time. On the other hand, the stocks in bond are unusually large. The following is the comparison of prices on the 11th of January, before parliament met, and on last Saturday, with the new duties :---Jan.11. March 15.

	Jan, 11.									
	Brown				**********	42s	to	45s	Gd	
	Middling	56	-	57		46	-	48	0	
-	Fine	60	-	64	*********	51	-	57	0

East Indies	Yellow	52	-	56	*********	44	-	51	0	
-	White				*********					

The reduction established by these prices, taking the lowest and highest quotations throughout, is an average of 9s 2d per cwt, show-ing, therefore, an average increase in the bonded price of 2s 1d since the 11th January; that is, the consumer has obtained 9s 2d, and the importer 2s 1d of the reduction.

In considering the question of the immediate future consumption, In considering the question of the immediate future consumption, we cannot overlook the rapidly improving condition of the country. During the last year, as our annual tables show, the great prosperity so apparent in our manufacturing districts, and some large towns, had not extended to the great masses of the labouring population; nd, especially in the early part of the year, the consumption in most

of the counties continued at a low rate. The prosperity of our com mercial districts, the continued low price of the necessaries of life' the improvements going forward in buildings, &c. in all towns of any importance, and the commencement already of many of the railway projects, have materially ameliorated the condition of the labourer everywhere, and will, no doubt, during the remainder of the year, continue to improve it still further; and on this account alone we look forward to a considerable increase of demand for all the leading articles of consumption.

articles of consumption. Second, THE STOCKS ON HAND NOW AVAILABLE FOR CONSUMPTION. -On the first of this month the stocks of sugar in London, Liverpool, Bristol, and the Clyde were :-

West India Mauritius East India	tons 19,000 7,700 21,700	******	tons 13,000 4,800 10,500	**********	tons 17,200 6,700 12,300	140,

^{48,400} ^{28,300} ^{36,200} Showing an enormous increase in the stocks, in first hands in bond in the present year compared with former years. But there is no doubt that, to a very great extent, and probably wholly, this increase of stock is more apparent than real, for the two following reasons :— First, from the reduction, almost exhaustion, of stocks in dealers' hands; and, secondly, from the unusual arrivals of shipping from the East in the month of February. In confirmation of the former reason, we find that although it is well ascertained that a much larger actual consump-tion is going forward in the present year than in either of the two last, yet the deliveries from the warehouses exhibit an extraordinary decrease, having been as follows : decrease, having been as follows :-

Though an increased total supply will no doubt be received both Though an increased total supply will no doubt be received both from India and the Mauritius during the present year, yet we have no doubt that more than the same proportion of the entire supply has been received in the present year as compared with last, as we shall hereafter more particularly have occasion to allude to. On the whole, therefore, after a very careful consideration, we view the difference of stocks in first hands as only an apparent, and not al increase

a real increase. With regard to foreign sugars, by referring to our Monthly Tables in another part of this paper, it will be seen that they exhibit an increase, in the six great markets of Europe, on the 1st of March, compared with former years. Thus—

The increase of stock here shown, we believe also to be more ap-arent than real. The long continued severity of the weather has aused such an interruption to all internal communication for the last parent than real. parent than real. The long continued severity of the weather has caused such an interruption to all internal communication for the last three months, throughout the whole of the north of Europe, that many places have not been able to obtain supplies of the commonest necessaries, and there is not the slightest doubt that the stocks of sugar in dealers' hands have sunk to the lowest point in many dis-tricts of the Continent; the suffering consequent on this interruption of trade, will, however, to some degree interfere with the future con-sumption. The state of the navigation in the north of Europe no doubt is one of the chief causes of the great increase of stocks in this market of foreign sugar. Another reason why this increase of stock is more apparent than real, arises from the present state of the sugar market in Holland. At the Dutch Trading Company's sales of Java sugars, an impression having become general that the go-vernment contemplates the abolition of the present bounty allowed on the export of refined sugars—not more than two-thirds of the whole quantity sold, the refiners continuing with unusually small stocks,—this in some measure accounts for the apparent increase of the stocks in Holland. It will however be some time, from the recent accounts from the Continent, before we can expect such a change in accounts from the Continent, before we can expect such a change in

March 22.

THE ECONOMIST.

the state of the roads and rivers as to induce to any material increased deliveries for that quarter. The entire stocks of Europe on the 1st of March may be thus

Total			67,800	cei	70,975	18	102,250 844 and 18	843

exhibiting an apparent increase of 50 per cent over 1844 and 1843, and nearly the same over 1842; but we believe that the increase may, to the whole extent, be considered apparent only. *Third*, THE FUTURE SUPPLY.—The following Table shows the quantity of sugars which has been *imported* into this country for the last ten years, to compare with the former table given of the con-sumption : sumption :-

A DECISE SECRETERS FAMILY	

4,678,219 led to Parliament from time to time Board of Trade Tables. Having now laid before the reader the actual supplies to this mar

Having now laid before the reader the actual supplies to this mar-ket during the last ten years, we will now consider each market and its prospects separately. *First*, WEST INDIES.—The following table exhibits the shipments in each year, since 1830, from each of our West India possessions. The totals, it will be observed, vary to a trifling extent when com-pared with those given as imported. This trifling variation may be accounted for by the difference of the time of arrival, the one account presenting the shipments from the West Indies, and the other the arrivals here within each year :—

he total amounts annually exported from ALL the colonies in each of the

These we note that amounts annually exported from KLL the colonies in each of the fourteen years. With the exception of Antigua, Barbadoes, and Trinidad, the whole of the islands show a great decrease in quantity since 1830 and 1831. But it will be remembered that those were peculiarly pro-ductive years, and it will be seen, by referring to all the islands, that very great fluctuations have taken place in the quantities produced, altogether independent of the period when the emancipation of the slaves took place; and that in numerous cases larger crops have been produced in some years since, than there were in others before that period. The crop of Antigua was little more than half in 1833 that it was in 1839. In Barbadoes the crop was larger in 1838 and 1839 than in any former year. The crop in Dominica was less in 1833 than in 1842. Grenada, Jamaica, Montserrat, Nevis, St Vincent, Tobago, Tortola, and Demerara, exhibit a rapid and almost uniform falling off during the whole period; while St Christopher, St Lucia, and Berbice show fluctuations in quantity equal in extent before and since 1834. There is, however, enough before us in this table to show how variable is the quantity produced. The last two years

NOMIST. 275^{*} have been represented to be extremely unfavourable to production, and this table would certainly tend to confirm that report. We have looked with great care over the recent files of West India papers, for the purpose of gleaning all the information they afforded regarding the growing and coming crop. We have been unable to collect anything very specific on which we could rely as the proof of an increased produce, but the general accounts are such as would lead us to expect, from almost every island, a considerable increase. In many instances these papers hazard estimates, and in some par-ticularize them to each parish in the island, but it is evident that they proceed upon generalities too much to show any conclusive or accurate result. In all, however, it is agreed that last year the season was unfavourable and disastrous, and in all that in the pre-sent year prospects are greatly improved. It has, however, too often happened in former years that at this season the produce has been represented as much greater than it has afterwards turned out. When planters are making arrangements to draw upon their agents here, they, at least, do not underestimate their prospects. Seeing, however, that the actual quantity received last year was 122, 240 tons, we do not think that any of the estimates furnished to Sir Robert Peel were extravagant, looking at the general complexion of the accounts received. They were thus variously furnished to the Mi-nister—135,000 tons, 140,000 tons, 120,000 tons, and 130,000 tons. If the accounts we have received are to have any credit whatever attached to them, an estimate of 130,000 tons is the lowest we should be disposed to make. *Second*, MAURTIUS.—With regard to the Mauritius, there appears a general agreeance in a crop of the unprecedented quantity of 40.000

be disposed to make. Second, MAURITUS.—With regard to the Mauritius, there appears a general agreeance in a crop of the unprecedented quantity of 40,000 tons. It will, however, be borne in mind that a portion of that crop came into last year's consumption here, and that the quantity this year may be slightly influenced by the result of the present growing crop. Third, EAST INDES.—The general estimate of the supply from this market is 70,000 tons, or full 15,000 more than former years. We doubt much if this quantity will be realised. The lower price of sugar of late will tend to prevent so much coming to this market. We have accounts before us of the shipments from Calcutta for several years past—from the 1st of May to the 1st of January—the principal shipping season, and those accounts do not lead us to expect that quantity. The following are the quantities of sugar which were shipped from Calcutta form May 1st to January 1st in the following years :— Maunds. Cuta.

Which amounts to the same total, though the distribution is different,

As regards the supplies from Java and Manilla, experience, as yet, affords us no criterion for our future guidance. Though not a new field, the circumstances are new. The most recent Dutch and Spanish offi-cial documents show the exports from those sources to be :--Java...... Manilla

THE ECONOMIST.

ably more. From what we are able to ascertain, the crops in Java and Manilla present no feature, in the present year, deserving of comment.

comment. With regard to Brazil, the prospects are now generally admitted to be less favourable than last year, though there is little positive data which can be relied upon. The produce last year from Bahia was very large; and from Pernambuco, the other chief sugar district, about an average. The comparison with 1843 was thus :--

	1844			1843	

-	 99,173	bags	******************	109,500	bags

The crop this year in the Bahia districts is said to be about an average—from 50,000 to 60,000 cases, but not reaching, the unusual quantity of last year. From Pernambuco a small average crop is expected; and from the other districts somewhat less than an average.

From Cuba the last accounts speak more generally and positively of the ravages of the hurricane in the autumn, and the reduction of the crop in consequence. The following are extracts from two let-ters by the last packet, from large mercantile firms :--

the crop in consequence. The following are extracts from two let-ters by the last packet, from large mercantile firms :— "Havan, Feb. 8, 1845.—All our planters having commenced grinding, the time has now arrived when an opinion about our present sugar crop may be expressed with more certainty; and we are sorry to say that the news arriving from the country are rather gloomy—the complaint of the sugar-cane not yielding as usual has become quite general, and some fields which last year have given 1,000 boxes, do not render more than 300 to 400 boxes, so that we must come to the conclusion that the new crop will hardly reach the quantity of 500,000 boxes. The planters who make two-thirds of an ordinary crop are well satisfied, because there are many who will get only half a crop, and some even less." "February 9.—The weather has been unfavourable, and such as utterly to remove all possibility of any retrieval this year from the ravages of the hurricane, and the injurious effects of the previous and subsequent long and severe drought. The accounts from the country are most distressing ; there is scarcely a district where the cane has come to full perfection, proving al-mostfevery where stinted in growth, short, infirm, and so extremely defi-cientlin yield, that the returns on a large number of estates actually show a falling off of from 30 to 70 per cent on the results from the same fields in former years ; while, on others, where entire fields of cane have been eut down, affording barely any grain at all, all farther attempts at grinding for this season have been abandoned. We cannot, thus, otherwise than look forward to a very large deficiency in the year's production, and it is really painful for us to be compelled, not only to confirm the statement in our last, but to refer to our circulars of Oct, and Nov, where we rated the deficit at 40 per cert ; if any thing, the prospect is even more alarming, and the belief is very rapidly gaining ground, that the crop will not be less than 50 per cent short of the pr

The stock on hand in Cuba is also much exhausted, and the ship-ments so far in this year are accordingly smaller. COMP

On the other hand the United States, which last year drew very large supplies from Havana, owing to a small crop at home, has a crop this year which will turn out little less than 200,000 hhds, or nearly double that of last year. Our accounts from New Orleans, by the last packet, represent additional capital and attention being devoted to sugar, in consequence of the low price of cotton. Some further small shipments are mentioned as having been made to England, but the waste by leakage in the present state of their manufacture is too great to answer the importer's purpose. The quantity already arrived at Liver-pool suffered a great leakage on the way. Some vacuum pan sugar has been shipped, and will be free from this complaint. They are, how ever, anticipating a considerable trade in molasses at the new duty of 8s 9d.

The nearest estimate which, after the most careful and elaborate examination, we are able to make of the produce of the whole world during the next year as compared with the past, we may state as follows :-

British West Indies Mauritius East Indies	1845 tons. 130,000 40,000 60,000	*****	1844 tons. 122,000 27,000 55,000

French Colonies	80,000	*****************	75,000
Danish Colonies	13,000		13,000
	10,000		10,000
United States	120,000	*************	66,000
	Mauritins East Indies Manilla Java Brazil Cuba Porto Rico Surinam French Colonies Danish Colonies Siam, Penang, &c	British West Indies	British West Indies

Total . 738.000 This estimate, though we do not pretend in every individual case to perfect accuracy, yet, on the whole, we believe, will approach very near the truth, or at least sufficiently near for any useful purpose The total quantity shows an increase in the supplies of 1845 over those of 1844 of 25,000 tons; but against this we have to place the

increased consumption in this country, consequent upon the reduc-tion of our duties. This increase, we think, may be fairly estimated, taking all things into consideration, and calculating that the price will be permanently reduced throughout the year only from 9s to 10s the cwt, at 30,000 to 35,000 tons—making up a total consumption of about 240,000 tons in the year, for a supply of which we have al-ready pointed out adequate means. With this allowance the total supplies estimated for 1845 will be a very trifling quantity below those of 1844.

On the whole, then, taking a wide view of all the circumstances af-fecting the present and future condition of this important article, considering the existing stocks in first hands, but also, considering the peculiar circumstances which influence the stocks in the various dealers' hands, not only in this country, but throughout Europe :—look-ing at all the circumstances which are likely to influence consumption throughout the various due allowance for the offset of the redealers' hands, not only in this country, but throughout Europe :--look-ing at all the circumstances which are likely to influence consumption throughout the year, making due allowance for the effect of the re-duction of our duties, and some for the general improvement in the condition of the working population in this country, as well as in the manufacturing districts on the continent--looking at all the circum-stances which are at present known connected with production of sugar during the year; taking it for granted that the domestic beet-root produce will remain about the same; allowing for a slight re-ported falling of in Brazil, and a very large falling of in Cuba; duly regarding the known increase in the United States, and placing our colonial production on grounds that we know approximate very nearly to the truth; carefully and duly considering all these various elements, and carefully balancing their effects on the future, we do not see any cause to expect any important change in the value of sugar of any description during the present year. There are many complex and dis-turbing features connected with existing stocks, and the future sup-ply, which may lead to some considerable fluctuations in the course of the year, especially in foreign sugars, but they will be more acci-dental than permanent. The relative prices now existing between foreign and colonial sugars are, as nearly as may be, what the relative duties will justify and maintain; nor, in other respects, do we see good reason to look for any material change of the general value of sugar, either colonial or foreign, during the year.

FLAX AND LINEN MARKETS.

BELFAST.—In the prices of Flax but little alteration; owing to the severe weather of frost and snow the supplies were somewhat less in all the markets. The advanced rates, us already noticed, are fully supported; our spinners generally have good stocks laid in, at the low prices of November, December, and January. The present demand for Irish is from Great Britain.

In Dundee pri MANCHESTER.—There is no material change to notice in the cloth

market to-day; demand and prices continue as last week. Fo the market is still good, many spinners are quite full of orders. For yarn

LIVERPOOL MARKETS-Wednesday.

LIVERPOOL MARKETS—Wednesday. The Sugar Duties Bill, coming into operation on Saturday last, caused considerable activity at the Custom house, the entries under the reduced rates having been considerable. DYEWOODS.—The sales of this week have been more extensive than for some time past, consisting of 320 tons Campeachy logwood at 71 2s 6d to 71 10s per ton, according to quality; 100 tons St Domingo at 51 7s 6d to 61 per ton; 300 tons Jamaica at 51 2s 6d to 51 5s per ton; and 60 tons Lima wood at 132 to 157 per ton. HEM.—For clean Baltic there is a moderate demand at the quotations. Jute has been in good request, and several large lots have been disposed of at steady prices. Two small parcels have been offered by auction, of which one lot; 242 bales, realised 137 for good fair quality. HIDES.—The business done this week has been moderate, without change in prices. The sales consist of 5000 B. A. salted good ox, at 44d, common and cows at 4d, per lb; 500 dy salted Maranham, at 4d; 300 salted St Louis, at 34d; 500 salted New York, at 34d; and 200 salted Baltimore, at 32d per lb. MATALE.—The arrive? of the American steamer, bringing extensive orders for iron, and very fa* trable accounts of the state of the metal market in the United States, given a fresh impetus to the trade here. A large business has been transacted in Iron throughout the week, and prices are somewhat higher than before. Common bars have been sold in quantity at 107 per ton in Wales, and railway bars at 137 per ton. The prices at Glasgow being quite firm at 67 per ton, an advance in this market may con-fidently be looked for. At their meeting, held in Bristol, on Wednesday last, the tin plate manufacturers advanced their price to 37s per box for 1. C. British charcoal plates.

THE ECONOMIST.

OILS.—The delay in the proposed repeal of the duties has caused a mo-erate demand for olive and palm. In fish there is nothing to report. Oil f turpentine is rather higher. PROVISIONS.—The improved state of the butter market has continued, and prices have advanced 4s to 6s per cwt during the week; the stock now ft is under 4000 firkins, or about a week's supply. Bacon is more readily old, at 1s per cwt advance. Hams and lard quiet. Mess pork more in-mired for sold, at quired for.

Sold, at is per two advance. Trans include queue incomposite interval quired for. SALTPETRE.—The inquiry is good, and very full rates are obtained. Nitrate is held at 14s 9d per ewt. SHUMAC.—The transactions consist of 400 bags Sicily at 10s 6d, and 200 bags of Verona at 5s 3d to 5s 9d per ewt. TALLOW.—The unfavourable accounts from London keep the market dull. On the 15th instant 170 casks and 300 barrels of North and South American were offered by auction; about one half was sold; the finest of the latter realiesed 37s 6d per ewt. The North American, with the excep-tion of one lot, sold at 37s 6d, was withdrawn at 39a per ewt. TARTAR.—There has been a good inquiry, and fully 100 casks disposed of, on the spot and to arrive, at 52s to 53s per ewt for brown, and 66s to 68s per ewt for cream.

per ch WooL

WooL.—The market has been rather quiet this week. For East India descriptions the inquiry is good, but the stock here is light.

WEEKLY SUMMARY.

THURSDAY EVENING.

THURSDAY EVENING. INDIGO.—Purchasers for Russia have appeared in the market since a week or ten days, but we believe that very little business has as yet been transacted for that market. We hear, however, of nearly a hundred chests of good shipping Bengal indigo, which have been mixed up from dealers and others for the first shipments to St Peters-burg, which seldom begin earlier than the middle of April. The prices paid this week for the qualities just named, and for a few pur-chases of inferior sorts for the home trade, are quite as high as the average currency of the last Monday sales, which is likely to main-tain itself until the next April sales, when demand and supply will decide upon a new range of prices, or retain the former. There are as yet only about 2,000 chests of various sorts declared for the April sales, and it is understood that the sale is to commence next week. COCHINEAL.—The business this week has not been considerable, but

COCHINEAL.—The business this week has not been considerable, but the value is steadily maintained, low Honduras silver cannot be picked up under 4s 8d to 4s 9d per lb, better sorts from 4s 10s to 5s.

ITALIAN SILK.—Nothing of importance has occurred this week in the Ita-lian market, nor is much expected till the result of the announced public sale on the 26th instant is known. ENGLISH WooL.—Trade is very similar to last week, and no variation in prices, a triffing better demand is apparent, which will no doubt improve as the frost gives way, to the very long continuance of which the present distress may be attributed, inasmuch as it stays all shipments, all the goods bought during the last three months for export still being at Hull. FOREIGN WOOLS.—Little doing for want of fresh arrivals; what is sell-ing is at old prices fully maintained. COTON.—There was a fair demand until Tuesday, when advices were received from America showing a great increase in the receipts at the ports; these accounts checked speculation, and the market closes heavily, but without change in prices.

... 900 bales in bond. Total.....

FLAX.—The price supported; but not any activity. HEMF gradually improving, but the business is on the smallest scale. SEEDS.—There has been no variation in the prices of seeds of any descrip-tion from last week. The demand for grass seeds continues very slack, most agricultural operations being retaided by the continued severity of the weather.

the weather. The METAL MARKET may be considered steady at our quotations.

OILS.—Olive continues firm, holders not being willing sellers, except at full rates. Ceylon cocco nut oil has been held with firmness. For linseed a good steady business has been done. Common fish oils are quiet. LEATHER.—The business of the past week has been limited, and the atten-dance of buyers at Leadenhall was unusually snall. The only goods of which the supply was not fully adequate to the demand were, crop hides under 40 lbs, light foreign shoulders, and horse hides, which were in request. We cannot quote any alteration in prices. The discussion, in the House of Commons, on the removal of the remain-ing import duty of 2d per lb on foreign tanned leather, took place on Wed-nesday evening, and the principles of free trade were victorious over the elaims of those tanners who had filled their tanneries with high priced raw goods, and who had as clear a *right* to a drawback as had the holders of su-gar, who obtained it. It is only doing justice to the leather manufacturers to say, that they are almost to a man " Free traders," and their complaint is not that the principles of free trade are carried out, but that protection is continued on corn, sugar, butter, cheese, &c. &c. while it is removed from the goods which they produce.

1100 bales Bengal Raw Silk	

SUGAR.—Grocers and refiners purchased West India to a fair extent, and the rates previously paid were fully supported : the chief part of the sugars sold to-day ranged from 38s to 46s. The sales are estimated at 350 hhds, making 1500 hhds and trees for the week. *Bengal.*—This afternoon there was less disposition to purchase, still good prices were paid. At auction 2 parcels 2266 bags duty paid, only partly sold, 636 bags ditto in bond were

withdrawn, the trade refusing to purchase except duty paid. Madras-2870 bags in bond, at public sale were withdrawn, the trade showing the same disinclination to buy except the duty paid. Foreign.-187 hhds Cube Muscovado at public sale were all taken in at 20s to 22s for low to good yellow, and 18s 6d to 19s 6d for brown. REFINED SUGAR.-In the home market prices for refined have declined. A very moderate business doing. The grocers continue to buy sparingly in the expectation of lower prices. In the bonded everything remains sta-tionary, and, with the present searcity, no decline in price is accepted from Holland by to day's mail. Some few sales have been effected at our quotations.

from Holland by to day's man. Some lew sales have been effected at our quotations. CoFFEE.—The market has a quiet appearance for all kinds, and there are more buyers than sellers, still lower prices cannot be quoted. Good ordinary Ceylons are still held for 46s to 46s 6d. At public sale the sound of 121 bales Mocha were all taken in at 63s to 65s for middling palish mixed. The prices of Jamaica and Ceylon Coffee at this port for the last five years on the lath of March were—

 FRUTT,-Currants, no arrivals. One cargo fine Zante has been sold afloat at 49s, understood for the continent. Prices steady, with more inquiry. Raisins without interest. Some small parcels shipping to the colonies. Public sales of various kinds, including damaged, with 13,000 drums figs, were attempted on Wednesday, but failed. No offers. A few casks of Ta-fillat new dates fetched 81s, being much wanted.

 Provisions.-The arrivals to If risk butter last week was only 1930 firkins, the delivery 7100, leaving the stock only 9130 compared with 3180 corresponding week last year. The weekly deliveries also show an increased consumption of 620 firkins; but for a considerable arrival of foreign, 8590 firkins, there would not have been one week's consumption for the London trade; the foreign, being so much wanted, was all sold at from 106s to 120s. The expected supply from Holland, Holstein, and America, is not likely to be so much by one-third as in March and April last season, leaving little chance of lower prices for any descriptions. The advance in 1:sh, in the last ten days, may be stated at from 4s to 8 sper ewt; in Liverpool the advance has been from 6s to 10s. The stock there is very short ; Liverpool and Manchester must depend, in a great measure, on this market for a supply of Foreign butter in the absence of Irish.

 Bacon.-The stock of this article is decreasing, the deliveries are large, considering the state of the weather and the scarcity of vegetables; the holders continue to look for higher prices, both for landed and on board parcels. The live pig market in Ireland is quoted 1s to 2s higher than last week. Bacon may be quoted 44s to 45 per cwt for best descriptions, and 40s to 43s for out of size and heavy.

For quotations see our Weekly Price Current.

FOREIGN MARKETS.

FOREIGN MARKETS.
HAVRE, March 17.—Cotton—In the beginning of the week buyers were numerous, but the accounts from Liverpool having reported that market quieter, and the America steamer being near at hand, the demand has alackened; prices, however, are not steamer being near at hand, the demand has alackened; prices, however, are not steamer being near at hand, the demand has alackened; prices, however, are not steamer being near at hand, the demand has alackened; prices, however, are not steamer being near at hand. Corn Markets.

CORN EXCHANGE, MONDAY, March 17.—The wind has turnded N. W., and we have about an inch of depth of snow on the ground; but the frost continues so severe, (the thermometer standing at 21 deg. Fahrenheit this morning at six o'clock,) that, though the sun is shining brightly, the snow remains on the house tops. The last fornight 1 sheen very severe upon the Farmers in con-sequence of the want of provision for their cattle and sheep.—Wheat a quick sale at last week's prices. Bar-ley firm. The principal part of the supply of Oats is of Scotch, but as there is supposed to be a good many of Irish on the passage long detained by East winds, the dealers hold back, and prices are not at all better than last Monday, though there has been a pretty large sale. Beans and Peas a better sale at fully as much money. Flour, no change. Miner Here Harden Arther Harden Arther Harden Harden

Provision Markets.

NEWGATE AND LEADENHALL. NEWGATE AND LEADENHALL. MONDAY, March 17.—The arrivals of slaughtered meat up to these markets have been seasonably extensive since our last, and of fair average quality. The supplies of London-killed meat having been but moderate, a de-cided improvement has been apparent in the demand for prime qualities, at, in some instances, a slight improve-ment in the quotations.

prime qual FRIDAY, March 21.—We had a fair averge supply of leat on sale here, while the demand was heavy, on the dowing terms:—At nor store to re

SMITHFIELD.

 SMITHFIELD.

 MONDAY, March 17.—Notwithstanding the severity of the weather the importations of live stock from abroad since this day se'night have been on a somewhat extensive scale, having amounted to 100 Oxen and Cows, together with 80 Sheep, all from Holland. Although there were some well made-up animals amongst them, by far the larger portion were of unusually inferior quality. The Beasts were disposed of at from 84 108 to 194; the Sheep 28 to 37s per head.

 From our own grazing counties the arrivals of Beasts were being heavily supplied, the Beef trade was in a were seanably extensive. As to quality, there was, a slight improvement; yet by no means first-rate. The attradeance of buyers numerous, yet, owing to the dead markets being heavily supplied, the Beef trade was in a were seanably extensive. As you the value of all other with difficulty supported.

 The numbers of Sheep were limited and in fair condition, however the Mutton trade was somewhat active, at an improvement, the best of Downs readily producing to 400 of the Sheep were used their wool.

 The table of Wight 40 Lambs were received per failway; but the supply from other parts was rather to 4000 of the Sheep were out of their wool.

 With Calves we were acantily supplied; yet the Veal 4000 of the Sheep were used their wool.

 The same Porkers sold stacally; other kinds of Pigs and why, at the super sold stacally is other kinds of Pigs and the set of 2000 of the Sheep were supplied.

 The Same and Porkers sold stacally.

 Porkers the Mutton three was inactive.

 With Galves we were acantily supplied.

 The Lamb trade was inactive.

 With Calves we were acantily suppli

FarDAY, March 21.—This being the great lamb market, there was a numerous attendance of buyers, but the result of the trade was such as to disappoint the expectations of graziers. Frime Down qualities were, however, in steady request, at from 5s 104 to 6s per 81bs, but all other descriptions of lamb were extremely dull, at from 5s to 5s ed. The lumbers, per railway, from the Isle of Wight, embraced 200; from other quarters about 5,600 head.—The general quality of the lambs was by no means first-rate. The number of beasts, amongst which were thirty oxen and cows from Holland, and 70 Scots from Aberchers, inence, the beef trade, notwithstanding the coldness of the weather, was heavy, at a decline of 2d per 8lbs. Sheep, the supply of which was extensive, commanded a steady inquiry at Monday's currencies. The yeal trade was very dull, yet prices were mostly supported. In pigs pigs 320.

only a limited business was doing. Milch cows moved off slowly at from 154 m 19/ each. Supply at market: Beasts 700-Sheep 8,100-Calves 176-Pigs 315.

TALLOW.

TALLOW. LONDON, MONDAY, March 17.—There is but little at-traction in this market; buyers have taken Tallow spar-ingly, and the price this morning is a triffe lower than on Monday last. In new Y. C. there is no inclination to do busines; the quotation is 30% to 30% at for the last three months'sellers. Town Tallow is rather more sought after; there is no surplus quantity. *Particulars of Tallow*.

ADVERTISEMENTS.

THE BEST STEEL PENS. CEORGE and JOHN DEANE have constantly in stock a large assortment of WIN-DE''S CELEURATED STEEL PENS, comprising mot less than one hundred and fifty varieties, adapted to all the exigencies of Penmanship. Deane's Two-hole Black Pen, the very fac simile of the natural quill, is the general favourite with the clergy, the legal profession, and with merchants, bankers, and their assistanta.— George and John Deane, 46 King William street, Lon-don Bridge. don Bridge.

A NEW DISCOVERY .- Mr HOWARD, A NEW DISCOVERY.—Mr HOWARD, Surgeon-Dentist, 52 Fleet street, bers to introduce m entirely new description of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so per-fectly resemble the natural teeth as not to be distin-guished from the originals by the closest observer. They will never change colour or decay, and will be found very superior to any teeth ever before used. This me-thod does not require the extraction of roots or any pain-ful operation, and will support and pre-erve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvements may be within the reach of the most economical, he has fixed his charges at the lowest scale. Decayed teeth rendered sound and useful in mastication —52 Fleet street. At home from 10 till 5.

DRICE and GOSNELL'S PERFUMERY. PRICE and GOSNELL'S PERFUMERY. NOTICE.-EXECUTOR of the late JOIN GOSNELL versus RESS PRICE, PERFUMER, 28 Lombard street, trading under the firm of PRICE & Co.-The Judges in the Court of Exchequer this day decided in fa-vour of the plaintiff in this case. The defendant, Rece Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr John Goanell (father of the parties now carrying on business under the firm of John Goa-nell and Co, 12 Three King court, Lombard street), and bound himself, under forfeiture of 5,000, not to com-mence business within the distance of 600 miles from the same, and, notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract. 12 Three King court, Lombard street, Jan. 27, 1845.

For the convenience of parties residing at a distance, For the convenience of parties residing at a distance, T. W. has published a Hand-Book, full of useful informa-tion, and containing 100 engravings, which may be had gratis, and post free, on applying at WEST's, 18 Lud-gate street.

gate street. COMPOSITIONS FOR WRITING WITH STFEL PENS. STEPHENS' WRITING FLUIDS comprise the most splendid and durable colours, and the most indelible compositions which art can pro-duce. They consist of DENSE COLOURS. A Carbonaceous RECORD INK, which is invaluable to tankers, and all those who wish to secure writings against fraud; also to Reporters, and all who require an luk for rapid writing. A Patent Unchangeable LIGHT BLUE writing Fluid. These beautiful colurs are not subject to spontaneous decay, like common luk. They scarcely ever require blotting paper, as they dry so quickly. Should the Dark Blue become too dense from evaporation, it may be thinned with the Light Blue. The prechasing, be careful not to confound the Blue thack with the Unchangeabla Blue, this being often done. A KULING, Mechanical, and Architectural DRAW-NG INK, superior to Indian Ink for Ruling and Archi-tectural purposes. THIN COLOURS.

tectural purposes. THIN COLOURS. A BLUE BLACK Writing Fluid, which writes first Blue, and turns to a deep Black colour. This is the first improvement upon common ink intro-duced by the Proprietor of these articles, and which is still so celebrated for its liquidity and ultimate black colour. A good Copying Ink. A superior Fluid BLACK INK. Those who prefer Black Ink will find this the best composition of the kind for fluidity.

Black Ink will find this the Dest composite for fluidity. A Machine COPYING INK, expressly for copying. A Brilliant Coloured RED INK. A fine Liquid ROUGE CARMINE, MARKING INKS for Linen. SELECT STEEL PENS; FOUNTAIN INK HOLDERS, &c. CAUTION.—The unchangeable Blue Fluids being patented, it is illegal to sell or use imitations, which are infringements.

infringements. HENRY STEPHENS, the inventor of the Writing Fluids, begs to assure the public that his well-known and persevering attention to the combinations of colouring matter has enabled him to judge of and prepare the best possible articles for all the various purposes of writing. 54 Stamford Street, Blackfriars road, London.

SILVER SUPERSEDED,

A ND those corrosive and injurious metals called Nickel and German Silver supplanted by the introduction of a new, and perfectly matchless

ALBATA PLATE. C. WATSON (late Alderman), 41 and 42 Barbican and 16 Norton Folgate, aided by a person of science in the amalgamation of metals, has succeeded in bringing to public notice the most beautiful article ever yet offered, possessing all the richness of silver in appearance—with all its durability and hardness—with its perfect sweet-ness in use—und-rgoing as it does a chemical process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids, may be cleaned as silver, and is manufactured into every article for the table and sideboard. FRUIT DESSERT KNIVES, with FRENCH FORKS, of C. WATSON'S NEW ALBATA PLATE (which is so rapidly superseding silver) in sets of 24 pieces, with ivory handles, 45s; carved ivory handles, 30s; Albert pattern handles, 50s; if in mahogany cases, 15s extra. The Establishments of C. Watson have ranked pre-eminent for 50 years for their superior Table Cutlery, the whole of which is marked with his name and address, and subject to exchange if not approved of.

THREE PAPIER MACHE TEA TRAYS, 358; a set of three Gothic shape ditto (including the largest size) for 358; three Gothic shape japanned ditto, 258; three Sandwich shape ditto, 158; and every article in Furnishing Hardware unusually low. Quality is here the primary consideration, hence their uninterrupted success for 50 years, and their present celebrity, as the best and most extensive Furnishing Warehouses in London.

THE PATENT PARAGON CAMPHINE,

OR SPIRIT LAMP.

THE PATENT PARAGON CAMPHINE, OR SPIRIT LAMP. The New and Important Invention superscdes every other description of lamp, and possesses the following great advantages, viz...-The Light produced is equal to Gas, but with a more agreeable brilliancy, and at an ex-pense so trifling that it may be considered as nearly ocstless light. For cleanliness it cannot be surpassed, the Spirit being so pure that the operation of trimming does not soil the fingers, and if spilt upon the finest arti-cle of dress it will not even leave a stain. This Lamp may be used wherever artificial light is required, and can be fixed either to old pedestals or gas fittings. It is quite free from smoke or smell, having perfect combustion, and is not in any way affected by heat or cold, conse-quently suitable for all climates. The PATENT PARAGON LAMP is the only one that can be used with a straight chimney, which not only renders it very simple for clean-ing, but prevents constant breakages from excessive heat. This splendid Light is equal to three Sperm Oil Lampa, or twenty Mould Candles, and costs only Sixpence for ten hours, without any trouble after lighting.

Kept in every variety at C. Watson's, 41 and 42 Bar-can, and at 16 Norton Folgate. bic

Other Camphine Lamps rendered smokeless, and Per-fected for Six shillings each, by the Patent Paragon Ap-paratus as above.

The Pure and Odourless Lamp Spirit delivered to any part of London by C. Watson's carts, at 4s per gallon. Send for his

GOUT and RHEUMATISM.—The never-failing effects of BLAIR'S GOUT and RHEUMATIC PILLS, in curing every description of Gout and Rheumaiism, has accured for them a celebrity unequalled by any medicine of past or present times. They not only give relief in a few hours, where the pa-tient has been driven nearly to madness by the excruciat-ing tortures of this disease, but restore to perfect health speedy and certain in Rheumatism, either chronic or acute, lumbago, sciatica, pains in the head or face, and, indeed, for every rheumatic or goury affection; in fact, such has been the rapidity, perfect ease, and complete safety of this medicine, that it has astonished all who have taken it; and there is not a city, town, or village in the kingdom, but contains many grateful evidences of the benign influence of Blair's Gout and Rheumatic Pills. Sold by Thomas Prout, 229 Strand, London, and by most medicine venders in the kingdom. Price 28 9d per box. Pills. Sold by and by most me 2s 9d per box.

EXTRAORDINARY! NEW CASES !! HEALTH FOR ALL !!

BY HOLLOWAY'S PILLS. AN ASTONISHING CURE OF A CONFIRMED LIVER COMPLAINT!

MRS Mary Tanford, residing in Leather MRS Mary Tanlord, resuding in Leather Lane, Holborn, London, has been labouring for five years under the effects of a diseased Liver, which pro-duced Indigestion, Sick Headaches, Dinness of Sight, Lowness of Sepirits, Irritability of Temper, Drowsiness, Oc-casional Swellings of the Body and Legs, with General Weakness and Debility. She attended the Hospitals at different periods, for about three years, but she only got worse instead of better, and her recovery at last appeared quite hopeless; but notwithstanding the very bad state of her health, she was, in about two months, restored to perfect health by the means alone of this all-powerful and efficacious Medicine—HOLLOWAY'S PILLS.

CURE OF A CASE OF GREAT DEBILITY OF THE SYSTEM, OCCASIONED BY THE Baneful influence of Mercury, and the injurious effects of a long residence in Tropical Climates, by Holloway's

a long residence in Tropical Climates, by Holloway's Pills. JAMES RICHARDS, Esq., a gentleman in the East India Company's Service, and who had resided for the last Seventeen Years in different parts of India, where his constitution had become much impaired from the influence of the climate and the injurious effects of powerful and frequent doses of that dangerous mineral, Calomel, which, together, made such inroads on his con-stitution as to oblige him to return home to England, and on his arrival he placed himself for some time under the care of a celebrated Medical Practitioner, but re-ceived no benefit from that gentleman's treatment; he was then advised by a friend (who had tried this Medicine) to go through a proper course of "HOLLOWAY'S PILLS," which he did, and in about four months his formerly shattered frame was se completely invigorated as to enable him to prepare himself aga n for his imme-diate return to India, whither he will embark early in the coming spring of this year, 1844. This gentleman is now residing in the Regent's Park, where he is well known, in consequence of his opulence and liberality.

these Gentlemen state,— "All classes of people here are desirous to purchase your WONDERFUL MEDICINES, and we regret that we have now scarcely any left to meet the IMMENSE DEMANDS that are daily made upon us for them. We inclose you a testimonial from J. Davison, Eag, the Su-perintendent of Lord Elphinstone's Sugar Estate, at Caltura, Ceylon; and we can. if necessary, send you abundant other pre-ofs, not only from the middling classes, but also from the opulent and influential here, many of whom have derived immense benefit from the use of your lovaluable medicine.

your invaluable medicine.
Copy of a Letter from J. Davison, Esq., which is the same alluded to in the Extract of the Letter above.
"Caltura, 7th Aug. 1843.
"MY DEAR SIRS,—MRS DAVISON has received ao much benefit already from HoLLOWAY'S PILLS, that I am induced to trouble you for another supply, viz., an Eleven Shilling Box.—Your's truly, J. Davison,
"To Messrs Ferdinands and Son, Holloway's Agents for the Island of Ceylon, Colombo."

Indigestion	

Indigestion These truly invaluable Pills can be obtained at the establishment of Professor Holloway, near Temple Bar (where ADVICE MAY BE HAD GRATIS), and of most respectable Venders of Medicine throughout the civilized world, and at the following prices:—Is I<u></u></u><u>a</u>, 2s 9d, 4s 6d, 11s, 22s, and 33s each box.—There is a con-siderable saving by taking the larger sizes. N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each box.

NATIONAL LOAN FUND LIFE ASSURANCE SOCIETY, 26 Cornhill, London. -Capital 500,000/.-Empowered by act of Parliament. This Institution offers many important and substantial advantages with respect to both Life Assurances and Deferred Annuities. The assured has, on all occasions, the power to borrow, without expense or forfeiture of the Policy, two-thirds of the premium paid, (see table); also the option of selecting benefits, and the conversion of his interests to meet other conveniences or necessity. Assu-rances for terms of years are granted on the lowest pos-sible rates. sible rates.

DIVISION OF PROFITS :--

The steady success and increasing prosperity of the Society has enabled the Directors, at the last annual in-vestigation, to declare a second Bonus, averaging 60 per cent on the amounts invested on each Folicy effected on the Profit scale. EXAMPLES:

PERFECT FREEDOM from COUGH in TEN MINUTES after use, and a Rapid Cure of ASTHMA and CONSUMPTION, and all Disorders of the Breath and Lungs, is insured by Dr LOCOCK'S PULMONIC WAFERS.

The truly wonderful powers of this remedy have called forth Testimonials from all ranks of society in all quar-ters of the world. The following has just been received from the Rev. J. Stainsby, Rector of Hanover, Jamaica, dated Nov. 20, 1844.

ated Nov. 20, 1844. Gentlemen, — Having been cured of an obstinate and istressing Cough, under which I laboured for the ast eieven months, by the use of your Pulmonic Wafers, take the liberty of addressing you these few lines, oping that my feeble testimony of their efficacy may be he means of inducing those who suffer as I have to apply o so safe and effectual a remedy.—I am, Gentlemen, our obliged servant. is means of inductory so safe and effectual a remedy. - a many bur obliged servant, J. STAINSBY, Rector of Hanover, Jamaica. J. STAINSBY, Rector of Hanover, Jamaica. J. STAINSBY, Rector of Hanover, Jamaica.

J. STAINSBY, Receive of Hanover, Jamman The following particulars of ropid cure of Ashma o fourteen years' standing, are from Mr J. E. Bignett, Holg head Road, Wednesbury, and addressed to Mr Ladbury surgeon there:--

Sir-When I had the first box of Dr Locock's Wafers Sir—When I had the first box of Dr Locock's Wafers from you, I was labouring under one of those attacks of asthma, to which I have been subject now for about fourteen years. I have had the best medical advice the neighbourhood could afford, including two physicians at Birmingham, and one at Wolverhampton, but with no success. My breathing was so very difficult that I ex-pected every inspiration to be my last; as for sleep that was impossible, and had been so for several weeks. The first dose (onLY TWO SMALL WAFERS), gave me great relief—the second more so,—in short, the first box laid the ground work for the cure, which only four boxes has effected, and I am now quite well. I remain, Sir, your most obliged, G. E. BIONELL

THE FOLLOWING HAVE JUST BEEN RECEIVED :

THE FOLLOWING HAVE JUST BEEN RECEIVED: From Mr P. Roberts, Chemist, Ranelagh street, Liverpool. January 2d, 1845. Gentlemen,—I send you two cases of Cures which I have received since my last, and I think it would be doing good to advertise the Wafers in Liverpool, as they give very great satisfaction to all who take them—they are quite the leading article for Coughs and Colds this Winter,—Yours, &c. P. ROBERTS.

are quict the leading article for Coughs and Colds this Winter.—Yours, &c.
 P. ROBERTS.
 RAPID CURE OF COUGH AND DIFFICULTY OF BREATHING.
 To Mr P. Roberts, Ranelagh street.
 Hale, near Liverpool, December 10th, 1844.
 Sir,—I write to inform you of the great benefit 1 have received from taking Locock's Wafers, which you recommended to me. I was so much oppressed at my chest that when I lay down a coughing fit came on with such violence that I have often thought I should not live to see the morning; but now I can sleep a whole night without coughing after taking only two boxes of Wafers.
 REMARKABLE CASE OF IMPROVEMENT OF THE VOICE.
 From the celebrated Infant Thalia, saffered lately very severely from a cough, and relaxed viola, so much so that she could not fulfil her professional duties. Various remedies was erret without success, until a friend recommended your Pulmonic Wafers; their beneficial effect was instantly apparent, and a cure speedily effected. The continued use of them J find maker at thown for the benefit of others similarly suffering. I should not let this very effectual cure pass over without informing you of it, in the hope that you might make I known for the benefit of others similarly unght make I known for the benefit of others similarly suffering. I shall be happy to answer any inquiries. S. SMITH.
 Ag reat Queen street, London.
