What is Spell4Wiki?

Spell4Wiki

Spell4Wiki -> Spell For Wiktionary/Wikimedia Commons

- Mobile application to record and upload audio for Wiktionary words to Wikimedia commons.
- Also multi-lingual dictionary based on Wiktionary.
- Simply it is audio upload tool for Wikimedia commons.

App link :

<https://play.google.com/store/apps/details?id=com.manimarank.spell4wiki>

4 Features in Spell4Wiki

4 Features in Spell4Wiki

Spell For Wiktionary

List of words from Wiktionary.

Spell For WordList

Your own list of words from a text file or copy & paste.

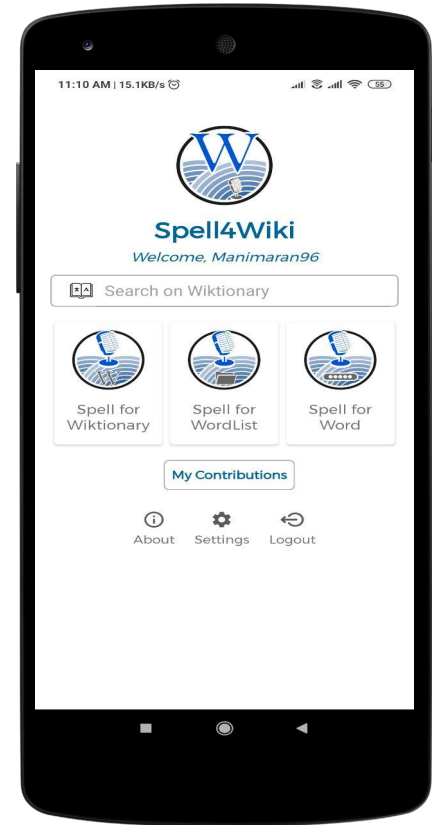

Spell For Word

Spell for your single word.

Wiktionary Explore

Wiki-Dictionary for any language.

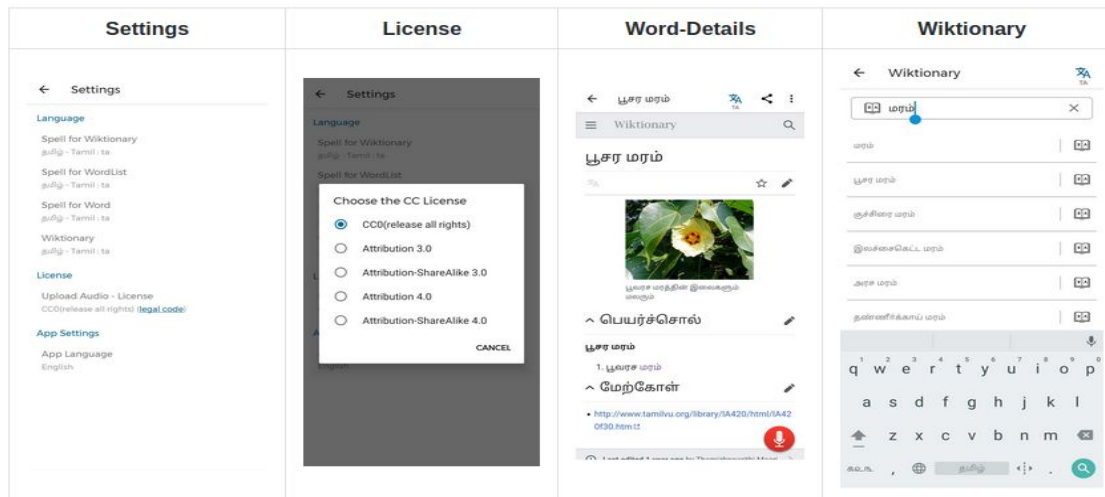

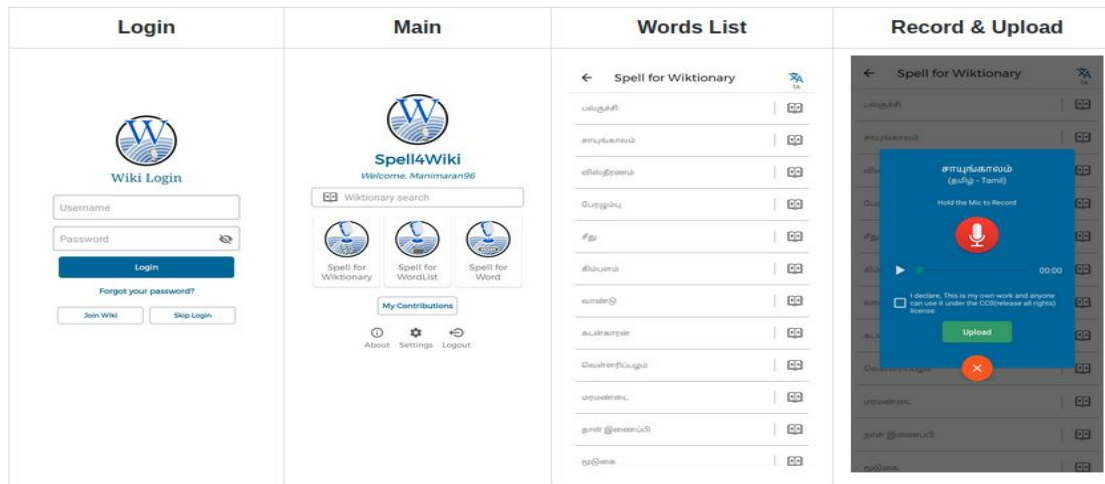

Benefits

Benefits

- There are plenty of words in the Wiktionary. But they do not have enough pronunciation audio files. So we can upload pronunciation audio for that words in a simple way.
- We can use those pronunciation for wikidata and other technologies like machine learning under CC-license.
- Audio files are uploaded “.ogg” format.
- Multilingual dictionary based on Wiktionary(250+ languages).
- Other linguists can learn how to pronounce a word.
- Mobile users can easily contribute daily basis.

Let's See Demo

What we done

What we done

- More than 6000+ audio files are uploaded still now.
- Tamil, Bengali, German, Russian, Dagbani, Swedish, Kannada, Odia & Italian Languages are now available in Spell for Wiktionary option.
- Dagbani wikimedians contributed lot of audios.
- App Showcased in [Wikimedia Hackathon 2020](#)
- All uploaded files are categorized on common and language specific categories.

Ongoing Plans

Ongoing Plans

- Update the proper “Structural Data” for audio files in Wikimedia commons.
- Linking audio files with Wikidata lexeme.
- Improve the app with more features and latest technologies.
