DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

(for 6 Dec. to 0o Dec.)
Yamanashi Prefecture

(9) Typhus

Outbreak of suspected case of typhus.

1. Patient in question.

Series no. of the patient:		No. 3
Broke out on.		Dec. 8
1st medical examination carried on		Dec. 13
Reported on		Dec. 17
Diagnosed as suspected case on		Dec. 17
Name	:	Retsuko Mizukami
Age	:	49
Present Address	:	Shimoshogo, Enzan-chō, Higashiyamanashi-gun.
Occupation		Farmer.

2. Sanitary measures taken.

As soon as it was diagnosed as a suspected case of typhus, every household within the sphere 100m-radius from the house in question was checked up minutely, DDT (5% & 10%) being sprinkled around there at the same time. Except above case, no fevered-person is found at present.

3. Preventive inoculation

200 people around the house in question were inoculated against typhus.

4. Others:

We made people at large recognize typhus and guided them against the disease.

We encouraged general people to observe health examination and also encouraged officials in charge to take perfect steps for early detection of the disease.

Diptheria

On Dec. 14, 1949, the Welfare Ministry notified us with "Resumption of Preventive inoculation for Diptheria". So we are now making preparation for that, making liaison with offices and people concerned and it is to be enforced from next year.
