DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

MAY

To : Public Health Section, Kanto Civil Affairs Region

From : Public Health Section, Kanagawa Prefectural Government

Subject : Report on deaths of the vaccinated dogs in Odawara Health Centre Area, Ashigara-shimo-gun, Kanagawa Pref.

Names & Address of the Owners	Breed	Age and Sex	Date & Place of vaccination	Date fallen sick	Date died	Symptoms
No.52, Sanno, Odawara Akira Ozawa	Miscel-laneous	12 months female	19, May, at Odawara H. C.	22, May	27 May	lost appetite on 22nd May. & vomitted violently. died on 27th.
88, Nakajima, Odawara Yasuo Kaneko	"	"	9, May, at Odawara H. C.	16, May	20 May	lost vigor from 16th May, vomitted yellow fluid & grad-ually lost appetite till died.
240, Kadokawa, Yugawara-machi, Heipei Ohno	"	"	23, May, at town office of Yugawara	25, May		from 25 May, vomitted yellow gastric fluid, gradually lost appetite from 2nd June [redacted] eye membrane colored red.
58, Kadokawa, Yugawara-machi, Ryosaku Ohishi	"	24 months female	23, May at Yugawara town office	25, May		from 25 May, lost vigor & appetite became noticeably thin on 2 June, but now being re-covered
Yoshihama-machi, Yugawara Ryuichi Nakamura	"	12 months male	15, May at Yoshihama village office	18, May	30 May	Lost appetite, vomitted & died
Yoshihara-mura Yugawara Tsurukichi Tsukagi	"	60 months male	"	"	20 May	same as above

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

Remarks:

1) Vaccine used in the above mentioned 1st case was assayed on 8th April. lot number 55, Manufactured by Nissei Lab.
Vaccine used in the 2nd case was produced by the same Agency & assayed on 27th March, & lot number 54.
Vaccine used in the 3rd 4th, 5th & 6th case was from lot number 55, assayed on 8th April at the same Agency.

2) No irregularities noted at or around the spots that the vaccination was made, in all cases.

3) The dog owned by Mr. Ozawa & vaccinated on 19th May at Odawara Health Centre (mentioned in the above mentioned 1st case) was autopsied on 27th May, in consequence no marked changes noted other than gastroenteritis.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

May 15, 1950

Subject: Report on Rabies Control etc.

To: Chief, Kanto Civil Affairs Region
Attn: Public Health Section

From: Chief, Public Health Department
Kanagawa Prefectural Government

We beg to inform you as follows with respect to the subject matter requested at the conference on V. D which took place on 4 May at your office

1. Rabies prevention

a. Estimated amount needed for rounding up stray dogs.
Answer: ¥ 50,000, appropriated for miscellaneous expenses excluding personnel expenses and purchase exp.

b. Measures taken by this Prefecture as to Dog Tax.
Answer: The whole district of Aikogun, Hiratsuka City, Yokohama City, Yokosuka City, Kawasaki City, and Kamakura City have not yet forwareded to this Government Agency, the report deciding upon the abolition of the Taxation so that we are pressing the relative authorities for settling the issue, as we find it difficult to announce this question to the public in general.

c. The amount of vaccine on hand
Ans. : 10,000 c.c. in storage (5 c.c. to be used per one head at a time)

d. Status of the report submitted when bitten by dogs.
Considerably much time seems required between the time of the notification and of the bite. To remedy this, what methods are adoped in order to inform the people in the Prefecture ?

Ans : People are recommednded to report to the Prefectural Health Centre, municipal offices, Police Stations, and Veterinary Practioners, and cases reported to organ's other than the Veterinary Practioners are put under examination by members of the Live-Stock Plague Prevention Board.
As regards through information for people in general, the matter encouraging people to submit the report, was mentioned in the Prefectural Political News and the Prefectural Gazette on 16 Jan. this year.and, on 13 Jan.

Received
K.L.O.O.
25.5.18
TIMB

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

this matter was broad cast through radio. Still more, General attention was called upon this subject through the News paper in this District.

e. What difficulties have been found in measures taken for rabies prevention ?

Ans : The dissatis factory number of information received by us which is closely connected with the matter of Dog Taxation prevented the people from being known as to the preventive injection, this fact resulting in failure on complete prevention. The difficult issue seemed to lie in compilation of balanced budget through the appropriation of Dog Tax for indirect rabies preventive measures.

2. Measures taken for emergency between the period from 1941, to 1945.

1. Relief matters

Submitted already.

2. Water supply

a. What sanitary steps were taken as to water supply when water-facilities were destroyed or when water were soiled by it ?

Ans : The most afficted areas from the war, throughout the Prefecture were three cities, that is, Yokohama, Kawasaki, and Hiratsuka. Even in these three cities, however, the sources or reservoirs of water suffered loss in such a slight degree, that there occurred only a partial hindrance in supply operation during three days immediately after the receiving of war damage. On the other hand, for fear of failure in supply operation in case of the destruction of the facilities, we carried out the examination for natures of the well-water in the premises of factories and houses, and also gave guidance to people as regards the method of disinfection of water.

b. Did the military facilites participate in cooperation, or were they available, when sanitary measures were unable to be effected ?

Ans: In Yokohama the military facilities neither participated in cooperation nor were they used.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

In Kawasaki, they borrowed from the military authorities a motor-car fitted with a filter, which moved round the towns to supply citizens with water when they were suffering from water-famine which occurred immediately after the war disaster.
In Hiratsuka in which water-service was operated by the Prefecture, they never utilized the military facilities, or the facilities did not play the role of cooperation with the city.

3. Live-stock

a. When did the artificial cross-breeding start, and when ended ?

Ans: It started around the end of the year, 1941, and is still under way of operation.

b. Status of the reduction of live-stock production.

See attached sheet

c. What about milch-cows with respect to "a" and "b" questions ?

Ans: See the answer for "a" question and the attached sheet for "b" question.

d. When the live-stock production reduced, did the military authorities cooperate, or were their facilities made avilable for public use, to remedy the situation ?

Ans: None.

for Dr. Y. Shimazaki.
Chief, Public Health Department

20 April 1950

SUBJECT: Daily Activity (Vet)

1. An inspection of the milk and meat processing plants and slaughterhouse was conducted in Kanagawa Prefecture (Hiratsuka City).

2. Milk processing plants are continuing in their program of improvement with construction and equipment installation being outstanding.

a. The Morinaga Plant is completing ceiling installation in the powdered milk packaging room in order to minimize contamination of the finished product. The large powdering unit which was completed in December 1949 is proving satisfactory in operation and its construction is such that sanitary maintenance is not a major problem. All employees in this plant have two complete changes of white uniforms; physical examinations were complete in December of last year by the plant physician - the next examination is scheduled for this quarter. In general, the equipment was sanitary; however, there was evidence of laxity insofar as sanitary handling of equipment utilized in processing dry ingredients.

b. The Moriyama Milk Processing Plant has completed the installation of all basic equipment; the final construction on flooring, petitioning and painting of the latter will be completed during May. The equipment in this plant is very crowded and in general not sanitarily utilized. Bottle cleaning brushes were observed in the receiving trough of the milk cooler and numerous lengths of rubber hosing was used to convey milk from one section to another. Pasteurization vats were uncovered and the major portion of lining enamel was found to have flaked off exposing recesses that were inaccessible to cleaning. No improvement has been made in the bottling procedures in the "coffe milk" section; rubber hoses are still being used for filling bottles and the company is depending upon high temperature sterilization to take care of potential contamination. The sugar storage room showed evidence of rodent contamination with destruction to the product; numerous, holes in the walls and rat trails along the ceiling rafters were observed.

c. The Kanagawa Livestock Products Cooperative Association has moved its meat processing plant to another structure and converting the original building into a milk processing plant for fluid milk distribution. The general layout of the plant and installation of equipment is being completed. The total cost of renovation and equipment

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

will be about one million yen. Prior to opening demonstration and lectures will be given to the employees of this plant by the health center veterinarian in Hiratsuka.

3. The slaughterhouse was in very poor condition. Walls were covered with dried blood and work tables were covered with meat particles and imbedded fat - no facilities have been installed for properly handling viscera. Outside drainage and waste disposal was improved. Fuel and boiler facilities are available, but are not in use for cleaning purposes.

4. The new building which houses the new meat products plant of the Livestock Products Cooperative Association is not completed.

5. The findings in all plants were discussed with the operator of the establishment and recommendations made to correct existing deficiencies.

SUBJECT: Sanitary Inspection of Japanese Dairies

B-3101

TO: Chief
Kanto Civil Affairs Region
APO 500

1. It is desired that close surveillance be given to improvement of sanitary conditions of the Japanese dairies adjacent to the Negishi Heights Elementary School and Area X dependent houses in Yokohama.

2. In the past, there has been some controversy as to whether or not the dairies in question would be forced to move to another location. The decision has been made that removal is not necessary, and it is desired that the dairy owners be so advised. Acceptable sanitary conditions can be achieved and health hazards can be reduced to a minimum by carrying out the following:

a. Proper disposal of manure and old bedding either by daily removal or by composting in a properly constructed fly proof pit or building.

b. Maintenance of properly constructed fly proof toilets.

c. Construction and use of mosquito proof covers for all open wells and night soil tanks on the premises of the dairies.

d. Removal of all receptacles which are not in use, and which would serve to collect water and thus afford breeding places for mosquitoes.

e. Establishment of the best drainage system that conditions in the area permit.

f. Maintenance of clean cow yards and clean premises.

3. The surgeon of Yokohama Command has a direct interest in the environment of a dependent housing area. For this reason, it is suggested that inspections be coordinated with him so as to realize maximum

1. In compliance with paragraph 2, 2d indorsement to letter AGGM 434, subject: "Relocation of Domestic Animals in Area X," Headquarters, Eighth Army, dated 19 December 1949, a sanitary inspection of the Japanese dairies in the vicinity of Area "X" was conducted by an officer of this section on 11 February 1950 and the following report is submitted:

a. Sozaburo Nemoto Dairy:

(1) Manure and old bedding were scattered on the ground outsider the barn.

(2) The building across from the cow barn, because of haphazard bedding storage, is an excellent rodent harborage.

(3) An uncovered well will serve as a mosquito breeding area in the coming mosquito season.

(4) The entire area was a virtual sea of mud and water and drainage was non-existent.

b. Akira Nemoto Dairy:

(1) Old bedding and manure piled on the ground in the rear of the barn.

(2) An uncovered nightsoil garden irrigation tank in the rear of the barn will serve as a mosquito breeding

SUBJECT: Sanitary Inspection of Japanese Dairies.

(1) All bedding and manure be placed in a building and disposed of regularly.

(2) A tightly fitted cover be provided for the nightsoil garden irrigation tank.

c. Mynoru Ishikawa Dairy:

(1) None.

d. Showa Dairy: Sick

(1) Garbage be placed in covered containers.

(2) Manure be kept in a building while awaiting disposal.

(3) Adequate drainage and/or filling be accomplished in the area behind the barn.

(4) Stagnant water in the receptacle behind the barn be kept covered with a film of oil.

ground during the coming mosquito season. During the inspection conducted on 29 November 1949 literally thousands of mosquito larvae were noted in this tank.

c. Mynoru Ishikawa Dairy:

(1) Sanitary conditions have improved noticeably at this dairy and no major deficiencies were noted.

d. Showa Dairy:

(1) There was a large pile of uncovered garbage on the ground near the entrance to the dairy.

(2) The area in the rear of the barn was a sea of mud and manure and drainage facilities are non-existent.

(3) There was an uncovered well of stagnant water in the rear of the barn.

(4) The cleanliness of the barn interior was excellent.

2. Conclusions:

a. Conditions at the Ishikawa Dairy are much improved but no noticeable changes are in evidence at the remaining dairies.

b. Conditions at the dairy owned by Mr. Sozaburo Nemoto show no improvement at all and the attitude toward the officer at the time of this inspection was hostile in that the owner constantly followed the inspector indicating by motions that he wanted him to get off his property.

3. Recommendations:

a. Sozaburo Nemoto Dairy:

(1) Manure be kept in the building intended for that purpose and disposed of frequently.

(2) Bedding and feed be properly stored.

(3) All wells and pools of stagnant water be covered with an oil film to eliminate mosquito breeding.

(4) Adequate fill and/or drainage of the area be accomplished.

b. Akira Nemoto Dairy:

14 Apr.	none

Owner's address and name
Mr. Hajime Yasuoka, 16-5 Oshimacho Kawasaki.

10. Is there sufficient vaccine available in prefecture for the rabies control program ? (Yes or No) How many c.c. ?

Yes — 12,000 c.c.

11. How many animals were vaccinated by private practioners ?

1,171

12. Any remarks pertinent to the rabies control program. (Detailed)

On one hand, negotiations were made with relative authorities, and on the other, by joint effort with live-stock technique organs, veterinery practioners etc, we did best for prevention of rabies thru vaccinating, bringing out good effect.

B. Meat Inspection:

1. What were the total number of animals slaughtered during the period covered by report ?

a. Cattle (milk)	110	d. Swine	6,568
b. Cattle (work)	604	e. Sheep	0
c. Horses	61	f. Goats	31
		g. Calf	155

2. Number of "T.B." and "Brucellosis" reactors referred for slaughter.

T.B. reaction positive 3 Brucellosis none

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

3. What disposition was made of all T.B. reactors ?

Three T.B. positive reactors showed transformation, altogether, in a portion of lymphatic gland, which were cut out.

4. List number of diseases diagnosed on antemortem inspection.

See attached list

5. What disposition was made on animals found to be diseased on antemortem inspection ?

Diseases	Kind	No.	Disposition
Malnutrition	horse	1	All over the body, dropsies were observed, and they were abandoned
Difficult delivery	Swine	1	All abandoned, release of blood poor, and mascles is engorged
Child-bed paralysis	"	1	All abandoned, Dropsies were witnessed over the body.

Principal part which were affected by the above diseases were abandoned.

6. How many postmortem condemnations were made during this period ?

a. Complete 7 b. Partial 2,699

7. For what conditions were condemnations made.

Diseases

Complete	Kind	No.	Pathology
Acute tympanitis	Cattle Calf	12 1	Gastroenteritis
Child-bed paralysis	Cattle Swine	2 1	Uteritis
Difficult delivery	Swine	1	Uteritis (Embryo too large)
Bowel burst	Horse	1	Gastroenteritis
Malnutrition	Horse	1	Hydropsy, malnutrition

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

Diseases			
Partial			
Fracture	Cattle	2	Partial blood. Fracture
Gallet block	Cattle	1	Suffocation

8. What postmorter conditions (generalized or localized) were observed and passed as fit for human consumption.

Pathology	Extent
See attached list	

9. Are records kept on all postmortem findings ?

All are kept

10. Are all carcasses properly stamped after being passed by inspectors ?

Properly stamped after inspection

11. Are inspectors always present during inspection ?

Always present

12. How much emergency slaughtering was done during this period and for what conditions ?

Conditions	Kind	Total
Injury from unexpected disaster	Cattle 2	2
irrecoverable condition due to unexpected disaster	Cattle 1 horse 2	3
Difficult delivery	Swine 1	1
Child-bed paralysis	Cattle 2 Swine 1	3
Acute tympanitis	Cattle 12 Calf 1	13
Grand Total	22	22

13. How much slauthtered meats is diverted to meat processing plants ?

Cattle : 4350 kgs Swine : 15,420 kgr
horse : 560 "

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

14. What type of processed meats are manufactured in the processing plants ?

a. Ham :	6,250 kgr
b. Sausage	3,218 kgr
c. Bacon	230 kgr

15. What quality controls are maintained on processed meats ?

Simaltaneous Picking-up inspections are made almost two times a month in which no of bacteria, amount of ammonia, and attached things are placed under examination.

16. How many samples were collected during this period and what was laboratory findings. ?

Inspection as to the amount of ammonium and colibacilli was made for ham (8,9 kgr) sausage (7.8 kgr) and bacon (1.5 kgr) and the above proved suitable for the use of meal.

17. Is there any evidence of fraudulent activities in meat processing plants ? (Detailed)

No fraudulent activities are found.

18. Give detailed report as to anticipated programs and complete programs in reference to meat plant sanitation.

More than three times a month, inspection is made. During May, the following items are expected to be operated for guidance and improvement:

Prevention of insects, rodents, repair and improvement for prevention of dusts; cleaning of the insides of refrigerators; and promotion of management for instruments and apparatus.

19. Is there a detailed list of all formulas used in sausage meats available at the prefectural office ?

With respect to used meat, report is requested from processing plants every month, while, in emergency inspection, a list is prepared by us.

C. Dairies and Milk Processing Plants:

1. What is the volume of milk being processed in prefectural plants ?

a. Pasteurized	1,016,460	litres
b. Condensed		
Sugared	23.9	kgrms
Non sugared	69.6	"
C. Butter	4.9	"

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

d. Powdered (15% prepared)	16.1	kgrms
e. Recombined	-	
f. Cheese	-	
g. Coffee milk	3,665	litres
Griko milk	3,953	"
Baby meal	13.5	kgrms

2. What is volume of raw milk produced for consumption as such ?

15.270 litres

3. What is the result of bacterial analysis for this period (Platecount) ? Use attached sheet for raw, pasteurized and processed milks. Also give Coliform index in each case.

Kind	Total	Fit	Unfit	Coliform Index
Raw milk	422	253	169	Endo red turning bacteria 84
Pasteurized	93	82	11	" 6

4. Is the "phosphatse test" used on pasteurized milk ? Give details.

No reaction by Kay-graham - Nearve

5. Is their evidence of mastitis as demonstrated by cultural analysis ? (Detailed)

None

6. Give results of bacterial analysis performed on dairy utensils. How often is this accomplished ?

Inspection as to washing of dairy battles was made this month, which resulted favorable owing to the perfect condition of chlorine disinfection equipments.
The number of inspection amounted to 520.

7. Discuss in detail programs of improvement in the handling of milk and equipment.

1. Rationalization of distributing pipes and thorough cleaning after their use.
2. Improvement in milk-receiving apparatus.
3. Strict observance of stipulations on the amounts of caustic soda and chlorine in case of washing milk bottles.

D. Seafood Processing:

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

1. What was the tonnage of sea food shipped into the prefecture ?

7,098 tons

2. Discuss in detail all conveyances used in shipment as to sanitation and refrigeration.

Large sized (over 50 tons)

a. fishing vessel : These are ocean-going vessels whose voyage extends approximately two months, with cold storage equipments almost in good condition. Sanitary status is good on the whole.

b. Small sized fishing vessel : These are coasting and bay, fishing boats which chiefly engage in fishing mackerels and sardines, with considerably fitted cold storage equipments. Sanitary status is comparably good.

c. Freight trains (Cold storage) : The equipments are used for transportation of fresh and processed sea-food from distant quarters. Attention is to be called upon the betterment on sanitary handling before and after usage of the equipment.

d. Ordinary freight trains : These chiefly engage in conveyance of dried sea-food, partially for that of fresh ones. Sanitary status is good, but the food carried from distant land is occasionally found poor in its degree of freshness.

e. Trucks : These are utilized for transportation from fishing places in the Prefecture and near-by prefectures and chiefly consist of those belonged to fishery cooperatives. Sanitary situation is generally good.

3. List the prefectures giving the most trouble in the shipment of sea-foods and in what respect ?

Fresh sea food conveyed on freighters maily from the district west of Chugoku District and from Tohoku and Hokkaido Districts are occasionally found very poor in freshness. Worsening condition is anticipated because of summer season coming near, and so immediate better steps are required to be taken up.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

4. What improvements have been made in the large fish markets ?

At the Yokohama Central Market, the rubbish boxes in the Fish Refuse Association were set up in addition, and 3 receiving goods companies established 50 more hurdles respectively and, stillmore, repaired the latrine in the premises.
At other markets, rubbish box hurdles are setting up more in number.

5. How many samples were submitted to the laboratory for analysis ?

Raw fish 47 Processed fish 39

Raw fish were examined by officials stationing in the market while processed food were placed under inspection of Prefectural Central Sanitation Laboratory.

6. Are fish canning factories maintaining adequate sanitary standards ? (Discuss)

None of specifical remarks

7. What improvements have been made in seafood processing plants during this period ?

Some processing plants have been directed to operate or improve the following items:

Repair for the site and completion for drainage equipments; Washing of material fishmeats and utensils; Lightning and ventilation; Prevention of rodents and insects; Prevention of dusts.

8. Discuss storage facilities for sea-foods - both processed and raw.

Some retail shops have been proved dissatis factory with respect to cleaning, but are good on the whole. Facilities which can contain a large stock are found to need betterment in some respects, but they are making towards better condition.

E. General Information

1. What training programs were accomplished for prefectural veterinarians (P.H.) ?

Not operated during the month

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

2. What educational programs were conducted for processors of food stuff ?

   Materials deposit places which are liable to become disordery and unsanitary, have been made arranged in good order.

3. Discuss cold storage and refrigeration plants from the standpoint of sanitation and storage capacity.

   Materials and proccessed goods deposit places are conducted to be arranged in good order.

4. What license procedures are followed in the licensing of new food processing establishments ? How many such plants have been licensed ? How many plants have had license revoked and for what reasons ?

   None during the month

5. Discuss present mathods of transporting slaughtered carcasses, raw milk, etc., and outline trends toward improvement.

   The following items need for guidance and improvement because they have been proved imperfect in many respects

   1. Prompt transportation of raw milk, slaughtered carrcasses etc.
   2. Complete refrigeration for raw milk.
   3. Cleaning and arrangement for covering sheets used for raw milk, slaughtered carcasses etc
   4. Sanitary handling in conveyance vehicles in which the receptacles to be carried.

6. Discuss any other problems relevant to veterinary (P.H.) problems.

   a. Authorization system for milk dealers
   b. Authorization system for Sea Food (dried fish) Processing Industry.
      The above mentioned failed to become authorization system, accompanied with a partial revision of Food Sanitation Law, and we find it difficult to conduct the business.
   c. Increase of the strength of Personnel in charge of rabies affairs, through defrayment out of the National Treasury, is urgently desired.

MEMORANDUM THRU: Kanto Liaison and Coordination Office

FOR: The Governor
Kanagawa Prefecture

SUBJECT: Rabies Control

1. The rabies control program in your prefecture does not reflect maximum efforts on the part of responsible prefectural agencies; moreover, Articles 15, 16 and 17 of "The Law Concerning The Prevention of Infectious Diseases of Domestic Animals" is not being properly implemented.

2. According to statistics received from the Ministry of Welfare for the period of 1 January - 29 April 1950, there have been 12,478 dogs vaccinated, 57 human exposures, 3 human deaths, 52 rabies cases and 123,500 cc of vaccine received by your prefecture.

3. Inasmuch as the rabies control program is of major importance during this period, it is desired that you take immediate action toward the control of rabies by:

a. Vaccination of all dogs.

b. Collection and detention of all stray dogs with proper disposal at the expiration of the detention period.

c. Establishing an adequate propaganda program to include radio, newspapers, posters and any other medium desirable.

4. It is desired that your office report progress on the rabies control program to this office through your Liaison Section each Tuesday and Thursday with reference to paragraph 3, this letter.

BY ~~ORDER OF COLONEL DAYTON~~:
For the Chief:

GEO. B. NIBLOCK Jr.
Major, Infantry
Adjutant

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

VP

VETERINARY INFORMATION SHEET

Public Health Section Kanagawa Prefecture

Period: From 1 March To 31 March 1950

A. Rabies control.

1. Number of animals(dogs) vaccinated and areas:

Area	Number	Area	Number
Yokohama city	6,372	Naka district	-
Kawasaki city	1	Ashigarashimo dist.	4
Yokosuka city	-	Ashigarakami dist.	315
Miura district	-	Aikoh district	-
Kamakura city	-	Tsukui district	-
Kohza district	1	Total	6,693

2. Number of rabies cases: 12 (include 1 cat)

   Number of persons who were bited 9

3. Number of speciments submitted to the laboratory: 20
   (impossible to examine 1)

4. Number of rabies cases diagnosed: 12

   a. Clinically _____ b. Laboratory confirmations 12

5. Number of animals remaining to be vaccinated 14,928

6. Number of stray dogs collected 766

7. Disposition of all stray dogs.

   In accordance with the regulation of Article 17 of live stocks' infectious disease prevention law, the collection of stray dogs in the prefecture is in force strongly till 13 July 1950.

8. Number of retention pens available and locations.

Pens	Location
6	Isogo-ku and Minami-ku of Yokohama.
3	Hiratsuka city, Naka district.
3	Ebina-machi, Kohza district
1	Koayu-mura, Aikoh district
1	Koyabe-machi, Yokosuka city

9. Were any prevaccinated animals found to be rabid - Give details.

   None

10. Is there sufficient vaccine available in prefecture for the rabies control program ? (Yes or No) How many c.c. ?

    Yes 40,200 c.c.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

11. How many animals were vaccinated by private practioners ?

369

12. Any remarks pertinent to the rabies control program. (Detailed)

Since the rabies cases are still at large in group which have not undergone the preventive injection, drastic measures have been taken to root out the diseases by joint efforts with the Prefectural Veterinarians Association, producing good result.

B. MEAT INSPECTION:

1. What were the total number of animals slaughtered during the period covered by report ?

a.	Cattle (milk)	126	d.	Swine	8,747
b.	Cattle (work)	672	e.	Sheep	-
c.	Horses	62	f.	Goats	6
			g.	Calf	148

775 014

2. Number of "T.B." and "Brucellosis" reactors referred for slaughter.

T.B. Reaction positive 3 Brucellosis None
Reaction suspect 1

3. What disposition was made of all T.B. reactors ?

Three "positive" heads and one "suspect" head were slaughtered. A partial transformation of lymphatic gland was observed in two positive heads, and so part of them was cast away. One other "positive" head and one "suspect" were passed because of them showing no sign of T.B.

4. List number od diseases diagnosed on antemortem inspection.

As per the attached list

5. What disposition was made on animals found to be diseased on antemortem inspection ?

Disease		Disposition
Malnutrition	1 (horse)	Totally abandoned
Uteritis	1 (cattle)	Totally abandoned becouse of whole body showing hydropies
Navel-string, inflammation	1 (calf)	Totally abandoned

As to others, principal parts affected by the diseases listed above were abandoned.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

6. How many postmortem condemnations were made during this period ?

a. Complete 7 b. Partial 1,451

7. For what conditions were condemnations made.

Complete	Partial		Pathology
Acute tympanitis 1.			Gastroenteritis
Child-bed paralysis 1.			Uteritis
Pericarditis 1.			Suppuration of the myocardium, muscle hydrops around the breast bones
Infectious anemia 1.			Spleen hydrops
Malnutrition 1.			Malnutrition, hydrops
Difficult delivery 1.			Uteritis (too large embryo)
	Fracture of waist bones	1	Waist bone contusion
	Fracture of bone	3	Partial blooding, fracture of bone
	Mastitis	2	Mastitis

8. What postmortem conditions (generalized or localized) were observed and passed as fit for human consumption.

Pathology	Extent
As per the attached List	

9. Are records kept on all postmortem findings ?

They are kept.

10. Are all carcasses properly stamped after being passed by inspectors ?

Upon inspection, they are properly stamped

11. Are inspectors always present during inspection ?

Always present.

12. How much emergency slaughtering was done during this period and for what conditions ?

Injured by accident:	3 (cattle 2, horse 1)
Hopeless for recovery due to injury:	8 (cattle 3, Swine 2 horse 3)
Difficult delivery:	3 (cattle 2, swine 1)
Child-bed paralysis:	1 (cattle 1)
Acute tympanitis:	6 (cattle 6)

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

13. How much slauthtered meats is diverted to meat processing plants ?

Cattle: 270 kgs Swine: 14,350 kgs
Horse: 215 kgs

14. What type of processed meats are manufactured in the processing plants ?

a. Ham: 5374 kgs
b. Sausage: 2569 kgs
c. Bacon: 187 kgs

15. What quality controls are maintained on processed meats ?

Almost twice a month surprise extracting examination are made, in which the number of bacteria, the amount of ammonium, and the nature of appended materials are inspected.

16. How many samples were collected during this period and what was laboratory findings. ?

The examination as to the amount of ammonium and coliform was operated on 3.8 kgs of ham 4 kgs of sausage, and 1.5 kgs of bacon, with the result that they were suitable for meal.

17. Is there any evidence of fraudulent activities in meat processing plants ? (Detailed)

They were strictly kept watched, so that they did not resort to fraudulent actions.

18. Give detailed report as to anticipated programs and complete programs in reference to meat plant sanitation.

More than three times inspections are expected to be made, in a month and, in April, guidance and improvement will be focused on the following.

a. Improvement and repairing in facilities for keeping off insects, rodents, and dusts
b. Cleaning and arrangement for the inside of the refrigerators
c. Betterment of management for imolements and machineries.

19. Is there a detailed list of all formulas used in sausage meats available at the prefectural office ?

Every month, information for the used meat is required to be submitted directly from the processing plants, and, on the other hand, emergency inspection is made frequently, on the basis of which, lists are being made.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

C. DAIRIES AND MILK PROCESSING PLANTS:

1. What is the volume of milk being processed in prefectural plants ?

a.	Pasteurized	979,560 litres
b.	Condenxed	sugared 19,019 kgms, non-sugar 96,230 kgms
c.	Butter	917 kgms
d.	Powdered	24,888 kgms
e.	Recombined	-
f.	Cheese	-
g.	Others	Whole powdered milk 462 kgms Skim powdered milk 1754 kgms

2. What is volume of raw milk produced for consumption as such ?

13,023 litres

3. What is the result of bacterial analysis for this period (Platecount) ? Use attached sheet for raw, pasteurized and processed milks. Also give Coliform index in each case.

KIND	TOTAL	FIT	UNFIT	COLIFORM INDEX
Raw milk	412	241	171	Endo's culture turning red germ 88
Pasteurized	86	75	11	" 5

4. Is the "phosphatse test" used on pasteurized milk ? Give details.

No reaction shown under improvement method of kay-graham-nearve

5. Is their evidence of mastitis as demonstrated by cultural analysis ? (Detailed)

No recognized

6. Give results of bacterial analysis performed on dairy utensils. How often is this accomplished ?

Number of bacteria has remarkably diminished owing to the fact that the chlorine disinfection for milk bottles has been operated at the low-temperature proccessing plants.

No of operations: 524 times

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

7. Discuss in detail programs of improvement in the handling of milk and equipment.

Consecutive from previous month, practical guidance and lectures have taken place regarding fundamental milk sanitation for dairyment, milk-dealers, and employees in the milk processing plants, in ten places of Kozagun.

Subjects follows:

a. Milk-enterprisers' responsibility and duty
b. Production of superior quality milk
c. Acquiring method for milk less containing bacteria
d. Mark list
e. Decrease of fat due to milking
f. Importance of freezing milk
g. Transportation of milk and caution in distribution of milk.

D. SEAFOOD PROCESSING:

1. What was the tonnage of sea food shipped into the prefecture ?

8190 tons

2. Discuss in detail all conveyances used in shipment as to sanitation and refrigeration.

Big type fishing vessel (above 50 tons):

Ocean-going vessels are predominating, which hold freshness of sea-food through reservoir ice effecting unfavorably to leave the food in new condition.

Small type fishing vessel:

This category consists of mainly coastal fishing boats and, though freshness of sea-food is kept up by means of ice in storage, the condition is favorable in general. The chief catch is mackerel

Freighters (cold storage):

Freshness is mostly good, but some cars are dirty inside.

Ordinary freighters:

Satted dried fishes are mainly conveyed, and the degree of freshness is favorable as a whale

Trucks:

Generally in good condition for freshness because of short-distance transportation

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

3. List the prefectures giving the most trouble in the shipment of sea-foods and in what respect ?

Some fishes shipped from Seto Inland sea quarters are found still lack of freshness.

4. What improvements have been made in the large fish markets?

Improvement directive has been issued to the Yokohama Central Market, but it has not shown any re respect bettered yet.
As for Misaki Fishing Market, its fishing landing place and water supply equipment are under way of betterment

5. How many samples were submitted to the laboratory for analysis ?

Raw fish 130 Processed fish 180

6. Are fish canning factories maintaining adequate sanitary standards ? (Discuss)

Deap-sea fishery canning factories has no clear division between store-rooms and work-shops, so that full warning was given them, on the matter; and there are not a few in other factories which are now under suspension of business

7. What improvements have been made in seafood processing plants during this period ?

During this month the cleaning and disinfection of the latrine of workers and also neatness of their Attires were stressed on to put into practice.

8. Discuss storage facilities for sea-foods - both processed and raw.

The refrigerators in the Yokohama Central Market were inspected twice a month and those of others once a month but it was found that there were many equipments which are in poor cleaning condition. Damaged portion in some walls of the refrigerators and others were made repaired

E. GENERAL INFORMATION:

1. What training programs were accomplished for prefectural vaterinarians (P.H.) ?

On March 8, the whole veterinarians in the Prefecture were rallied, and a lecture meeting dealing with the prevention of rabies and slaughtered live-stock inspection was held to contribute toward promotion of their work knowledge.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

2. What educational programs were conducted for processors of food stuff ?

Inspection was made as to the handling of raw-materials as well as management of implements and machineries; and by means of connecting with the result gained in the examination of bacteria, the processors of food-stuff were given guidance and improvement in their jobs.

3. Discuss cold storage and refrigeration plants from the standpoint of sanitation and storage capacity.

a. Sanitary point of view
There is shown some progress made in the reparing of damaged walls, and in entrapping of rodents, but the cleaning of the inside of rooms is still dissatisfactory.

b. Storage Capacity
It is satis factory in general , but there is foreseen and increasing tendency in the volume of shipment, shortage seeming to appear in Summer time.

4. What license procedures are followed in the licensing of new food processing establishments ? How many such plants have been licensed ? How many plants have had license revoked and for what reasons ?

None during month

5. Discuss present methods of transporting slaughtered carcasses, raw milk, etc., and outline trends toward improvement.

a. Slaughtered carcasses were conducted to use trucks and tricycles for transportation, in which the carcasses are to be placed on the hurdles, but the method to prevent them from being made filthy being dissatisfactory, the undertakers are directed to improve such mensure.

b. The raw milk are conducted to be conveyed Chiefly by trucks or tricycles after being contained in the cans, specifically with cover-sheets over them, but covering use is not yet prevailing.

6. Discuss any other problems relevant to veterinary (P.H.) problems.

On the occassion of the partial fevision for Food Sanitation Law and Slaughtering-Place Law, some portion of the Governor's jurisdiction came to be transferred to the authorities of such muncipalities as Yokohama, Kawasaki, and Yokosuka cities which causes, it is expected, some members of Personnels to be transferred to the three city agencies.

VETERINARY INFORMATION SHEET

Public Health Section Kanagawa Prefecture

Period: From 1 February to 28 February 1950.

A. RABIES CONTROL

1. Number of animals (dogs) vaccinated and areas:

Area	Number	Area	Number
Yokohama-city	405	Naka District	2
Kawasaki-city	1,844	Ashigara Shimo	1
Yokosuka-city	53	Ashigara Kami	-
Miura District	17	Aiko District	2
Kamakura-city	-	Tsukui District	-
Kohza District	8	TOTAL	2,332

2. Number of rabies cases: 11

3. Number of speciments submitted to the laboratory: 12

4. Number of rabies cases diagnosed:

a. Clinically _____ b. Laboratory Confirmations _____

5. Number of animals remianing to be vaccinated 19,507

6. Number of stray dogs collected 895

7. Disposition of all stray dogs.

In accordance with the stpulation contained in Article 11 of Dogs' Rabies Prevention Regulations, the collection of stray dogs was formerly conducted by reporting to the Prefecture and under the direction of Domestic Animals Disease Prevention Committee. The collection of stray dogs has been enforced in strong measures, and full expectation is made on the prevention of this disease.

8. Number of retention pens available and locations.

Pens	Location
6	Isogo-ku and Minami-ku of Yokohama.
3	Hiratuska-city, Naka District.
1	Yamakita-machi, Ashigara Kami District.

Newly permitted

3	Ebina-machi, Kohza District.
1	Koayu-mura, Aiko District
1	Kotenbe-machi, Yokosuka-city.

9. Were any prevaccinated animals found to be rabid - Give details.

None.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

10. Is there sufficient vaccine available in prefecture for the rabies control program ? (Yes or No) How many c.c.?

Yes — 5,400 c.c.

11. How many animals were vaccinated by private practioners ? ___

12. Any remarks pertinent to the rabies control prgram. (Detailed)

Accompanying the recommendation of Kanto Civil Affairs Region and enforcement of Dogs' Rabies Prevention Regulations and Dogs Regulations from 1 February, all manners of publicity organs were utilized concerning its management, thereby making thorough understanding of the same and at the same time, with close contacts with the Prefectural Veterinarians' Association, measures were devised for the stamping out of this disease, and excellent results are being obtained.

B. MEAT INSPECTION:

1. What were the total number of animals slaughtered during the period covered by report ?

a. Cattle (milk)	108	d. Swine	7,053
b. Cattle (work)	494	e. Sheep	-
c. Horses	111	f. Goats	9
		g. Calf	116

2. Number of "T.B." and "Brucellosis" reactors referred for slaughter.

"T.B." None "Brucellosis" None

3. What disposition was made of all T.B. reactors?

Recognized two (2) cattle with suspect of positive in the T.B. reaction, however, upon autopsy, no disease was recognized.

4. List number of diseases diagnosed on antemortem inspection.

As per the attached List No.1.

5. What disposition was made on animals found to be diseased on antemortem inspection ?

Disease		Disposition
Acute Tympanitis	2	Totally abandoned
Malnutrition	1	Totally abandoned

As to others contained in the list mentioned in the preceding paragraph, the diseased portion of animals referred to has been completely removed.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

6. How many postmortem condemnations were made during this period ?

a. Complete 7 b. Partial 1,239

7. For what conditions were condemnations made.

Complete	Partial	Pathology
Acute Tympanitis	4	Congestion & bleeding in stomache and catarrh inflammation
Difficult Delivery	3	Metritis & vaginitis
	Muscle Edem	as above
	Trauma	Local bleeding
	Distorsion	Local congestion
	Fracture	Fracture, local bleeding.

8. What postmortem conditions (generalized or localized) were observed and passed as fit for human consumption.

Pathology	Extent
As per the attached List No.2.	

9. Are records kept on all postmortem findings ?

They are being kept.

10. Are all carcasses properly stamped after being passed by inspectors ?

After inspection, they are definitely stamped.

11. Are inspectors always present during inspection ?

They are always present.

12. How much emergency slaughtering was done during this period and for what conditions ?

20 heads (Contingent Trauma 3; State where help was impossible due to contingent disaster 1; Difficult Delivery 4; Acute Tympanitis 12.)

13. How much slaughtered meats is diverted to meat processing plants ?

11,793 Kgs.

14. What type of processed meats are manufactured in the processing plants ?

a. Ham	3,915 kgs.
b. Sausage	2,085 "
c. Bacon	161 "

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

15. What quality controls are maintained on processed meats?

In general, inspection by selection is conducted twice a month, and inspection is made on the number of bacteria, ammonium contents and nature of added materials.

16. How many samples were collected during this period and what was laboratory findings ?

Inspection for ammonium contents and colibacilli was made against 4.5 kg. of ham, 3.2 kg. of sausage and 1.2 kg. of bacon, however, they were decided as appropriate for food purposes.

17. Is there any evidence of fraudulent activities in meat processing plants ? (Detailed)

Efforts were given on surveillance, however, no fraudulent activity was recognized.

18. Give detailed report as to anticipated programs and complete programs in reference to meat plant sanitation.

Surveillance will be made three times or more every month, and during March, instruction and improvement will be made on the following points:

a. To plan the decrease of the number of bacteria;
b. To improve the employees' clothings, and better the knowledge on sanitation.

19. Is there a detailed list of all formulas used in sausage meats available at the prefectural office ?

Concerning the meats used, reports are sought directly from processing plants every month, at the same time emergency inspections are made, and lists are drawn up.

C. DAIRIES AND MILK PROCESSING PLANTS:

1. What is the volume of milk being processed in prefectural plants ?

a. Pasteurized	937,882 litres
b. Condensed	105,573 kilograms
c. Butter	-
d. Powdered	40,907 kilograms
e. Recombined	-
f. Cheese	889 kilograms
g. Others	-

2. What is volume of raw milk produced for consumption as such ?

10,171 litres

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

3. What is the result of bacterial analysis for this period (platecount)? Use attached sheet for raw, pasteurized and processed milks. Also give Coliform index in each case.

Kind	Total	Fit	Unfit	Coliform Index
Raw Milk	521	281	240	Endo's cultur turning red 84
Pasteurized	75	63	12	-do- 7

4. Is the "phosphatse test" used on pasteurized milk ? Give details.

No recation by the "phosphatase test".

5. Is their evidence of mastitis as demonstrated by cultural analysis ? (Detailed)

Not recognized.

6. Give results of bacterial analysis performed on dairy utensils. How often is this accomplished ?

Due to insufficient steam sterilization of the top part of milk cans, at their mouths, the bacteria contents around the said part are great. The bacteria contents of milk bottles, which have been sterilized with chlorine, are extremely small.

Number of inspections made: 627

7. Discuss in detail programs of improvement in the handling of milk and equipment.

High temperature milk disposing business people were gathered together on 7 February, and lecture was given so as to use narrow-neck bottles, attaching crown caps thereto, and to conduct perfect sterilization thereon.

By gathering the people in milching business, retailers and employees of Disposal Stations, an actual training and lecture course on milk sanitation were held at Fujisawa, on 10 February.

As stated above, the instructions on milk sanitation are steadily enforced at present, against the people related to milk business.

Furthermore, the purchase of raw silk by its fatty contents is being made at the Disposal Stations, under strict inspection of the stationed officers, therefore, marked improvements can be seen in the nature of milk.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

D. SEAFOOD PROCESSING:

1. What was the tonnage of sea food shipped into the prefecture ?

23,128 tons

2. Discuss in detail all conveyances used in shipment as to sanitation and refrigeration.

Large sized (above tonnage of 50) Fishing Boats	These are principally for deep-sea fishing, and freshness is being held by ice storage, however, there are some in which the sanitary condition is not good, due to imperfect refrigeration.
Small sized Fishing Boats	These are coastal fishing boats, and are preserved by ice storage, however, the degree of freshness is good in general. Moreover, there are some requirements for the improvements of the crews' sanitary condition.
Freight Trains (cold storage)	The degree of freshness is good in general, however, the freshness of Seto Inland-sea fish is bad.
Ordinary Freight Trains	These are principally transporting salted and/or dried fishes, however, their sanitary condition is comparatively good.
Trucks	The degree of freshness and sanitary condition are good, in general.

3. List the prefectures giving the most trouble in the shipment of sea-foods and in what respect ?

There are great amount of defective ones in fish produced at Seto Inland-sea (principally loaded on freight trains).

4. What improvements have been made in the large fish markets ?

A written opinion on improvements was submitted to the Yokohama Municipality last month, but there was almost none that was put into practice. However, a certain amount of hurdles were additionally equipped against the Receiving Organs.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

5. How many samples were submitted to the laboratory for analysis ?

   Raw fish 123 Processed fish 165

6. Are fish canning factories maintaining adequate sanitary standards ? (Discuss)

   Various factories, in general, were good, however, instruction was given to Taiyo Gyogyo to install partition between the factory and warehouse.

7. What improvements have been made in seafood processing plants during this period ?

   There are always some questions relative to drainage, therefore, the rearrangement and cleaning of drains were enforced in a very thorough manner.

8. Discuss storage facilities for sea-foods - both processed and raw.

   The cold storages near various fish markets differ in their sanitary condition by the varying quantity of goods received, however, their cleaning condition, in general, is bad.

E. GENERAL INFORMATION:

1. What training programs were accomplished for prefertural veterinarians (P.H.) ?

   On 8 February, all personnel concered were gathered to whom indication was made relative to countermeasures for rabies, and at the same time, research meeting concerning the rabies prevention, was held, thereby contributing to the betterment of their knowledge and efficiency.

2. What educational programs were conducted for processors of food stuff ?

   Inspection and instruction were conducted on the handling of raw materials and care and arrangement of macninery and implements, and as they are gradually improving, it is scheduled to further instruct in comparison with the result of bacteria inspection.

3. Discuss cold storage and refrigeration plants from the standpoint of sanitation and storage capacity.

   a. The cleaning of floors and hurdles are insufficient, and especially, the corners of room are filthy.

   b. In general, the rearrangement of large rooms, is inappropriate.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

c. Quantitatively, it is sufficient at present, however, it is anticipated that it will be insufficient during summer season.

4. What license procedures are followed in the licensing of new food processing establishments ? How many such plants have been licensed ? How many plants have had license revoked and for what reasons ?

There was none during the month.

5. Discuss present methods of transporting slaughtered carcasses, raw milk, etc., and outline trends toward improvement.

a. Instruction is given to use hurdles and covers on trucks or tricycles for the transportation of slaughtered carcasses, however, the method of prevention from being polluted is still insufficient.

b. Raw milks are transported principally by trucks or tricycle and there are very few on which covers are used, therefore, efforts are being made for its diffusion.

6. Discuss any other problems relevant to veterinary (P.H.) problems.

Accompanying the reformation of organization, it is scheduled that the fixed number of personnel will be reduced.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

COPY

July 1948

From: The Kanagawa Food Office.

TO: The Chief of Yokohama Liaison and Coordination Bureau

Subject: Rereprocessing of the spoiled imported canned goods.

With regard to the reprocessing of the spoiled imported canned goods of nineth lot, we made reinvestigation of the designation of the factories in compliance with the memorandum of the Kanagawa Military Government dated the 6 June and as the result of our investigation, the Kanagawa Shokuhin, Toho Seika and Sakura Shokuhin were designated as follows.

Name of applicant For reprocessing	Location of Factory	Reason of approval or rejection.
Taiyo Goyogyo	Yokosuka City	Big factory sperated chiefly for packing & freezing whale & tuna. So request to refrain form reprocessing small quanity of spoiled goods.
Odawara Shokuhin	Midori-machi, Odawara City	Equipment chiefly for bottling, picle and fish-cake speration with insufficient premises of 36 tsubo. Accomodation unsatisfactory and rejected.
Yokohama Gomu (rubber)	Kanagawa-ku, Yokohama, City	Chiefly sperating in rubber, sulphamine etc. One building newly established for food & bread processing, but equipment is too small and not satisfactory. As it is not the main work, application rejected.
Toho Seika	Chigasaki City	Main equipment for cakes & bread. Newly established for bottling jam. Recognized suitable for rationing factory in Fujisawa-Chigasaki area. Approved.
Sakura Shokuhin	Kawasaki City	Equipped for processing of bread, bottling & other foods. Recognized suitable for rationing factory in Kawasaki-tsurumi area. Approved
Nihon Shokuhin		As the factory located at Shibuya-ku, Tokyo-to in dirisdiction of Tokyo Food Office, the Kanagawa Food Office unable to approve.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

		However, if suitable factory secured in Kanagawa Prefecture, no objection to approve the application.
Kanagawa Shokuhin	Minami-ku, Yokohama City. Machida in Odawara City. Misaki in Miura-gun	They have equipment for bottled or canned drinks, noodle manfufacture, dried food, frozen foods, fish caking, etc. Desiganted by Norinshe as central designated factory. Approved as the factory for rationing to Yokohama area as well as Kamakura Yokosuka area. Approved.
Nitto Shokuhin	Kozu-machi	Though they have general equipment for food processing, rejected in view of the problem of location.
Shinsei Shokuhin	Yokohama City	Bakery and no other equipment. decided to be rejected.
Kosei Kagaku Kenkyushe		Equipped for reprocessing of oil & fat. Recognized to be unsitable for reporcessing of spoiled foods.
Kamakura Ham	Kanagawa-ku Yokohama City	Operated for ham and sausage. Rejected as there is no suitable items amoung the spoiled foods.

The applications were submitted by Jujisha which has no equipment (Hodogaya, Yokohama City) and some individuals, but all were rejected as they were all found unsuitable.

Odawara Shokuhin and Nippon Shokuhin are disqualified in this investigation, but no objection raised in case they undertake the speration as the sub-processer of above three qualified companies.
