Rates of Wages and Hours of Labour in Canada

September, 1920, and June, 1921

THE accompanying tables show for September, 1920, and June, 1921, rates of wages and hours of labour in twenty-seven cities in Canada and for twenty-seven of the more important trades or classes of labour. So far as possible the information for 1921 is of the same nature and from the same sources in each instance as that for 1920, so that the figures illustrate the changes in wages and hours which have occurred in the classes of labour shown for the cities included. Where, occasionally, reliable information was not available, rates have been omitted. In some cases a range of rates or hours is given with a view to show the condition under which an appreciable number of men were reported to be working, even though a strike or lockout might be in progress.

In some such cases arrangements had been made between the employer and employees concerned that the rates of pay were to be adjusted when the result of the strike was known. In all cases where an appreciable number of the men engaged in the trade were on strike in a dispute as to wages or hours it is indicated in the footnote.

In some instances, the data available are unfortunately somewhat meagre, but it has been considered advisable to include such data where the 1920 rates and hours from the same source appeared to be fairly typical, since the comparison of the new figures with the old would probably afford an approximately correct idea of the tendency of wages to rise or fall.

Where rates and hours for June were not available, those prevailing in May (or March in a few cases) have been given. There are also a number of instances where new agreements signed in July have been forwarded to the Department; rates from these agreements have been included when the information available for June appeared less satisfactory or indicated unsettled wage conditions, or where the July agreement was retroactive to cover June.

The sources of information from which the accompanying tables have been compiled are similar to those used for the bulletin on "Wages and Hours of Labour in Canada 1901-1920" issued as a supplement to the March issue of the LABOUR GAZETTE. While the present tables are published mainly for the purpose of illustrating changes in rates of wages and hours of labour between 1920 and 1921 in the more important trades, they also serve to bring up to June, 1921, the record back to 1901 for fifteen classes of labour in thirteen cities published in the bulletin above mentioned. It will be noted, however, that in the present case no figures for factory labour or lumbering are included, as the records of changes during the past year in occupations under these headings are not yet complete enough for publication. The classes of labour on steam railways given in the March bulletin are likewise omitted, as no changes were made in the rates then shown for 1920 until July 12, 1921, when a tentative reduction of 12½ per cent was effected, pending further negotiations.

The first group of the tables presented herewith comprises eight building trades.: Bricklayers, Carpenters, Electrical Workers, Painters, Plumbers, Roof-

ers, Stonecutters, and Builders' Labourers. The sources of information for this group were returns from employers, trade unions, and Departmental officers and correspondents, as well as copies of signed agreements and reports on the settlement of strikes.

The second group consists of eight metal trades: Automobile Mechanics, Blacksmiths, Boilermakers, Machinists, Millwrights, Iron Moulders, Patternmakers, and Sheet Metal Workers. The rates and hours of railway shop employees are excluded. The sources are similar to those used for the building trades.

The third group includes only two classes in the Printing Trades, namely, Newspaper Hand Compositors on day work, and Job Office Cylinder Pressmen. The effort to bring the 1920 rates up to date for these classes has been attended with some difficulty, owing to the unsettled conditions in the printing trades at many points. The information obtained is chiefly from returns of trade unions and Departmental correspondents. Returns were also received from some employers.

Conductors and Motormen and Electric Linemen are presented in the fourth group, representing electric street railways and power employees. The rates for conductors and motormen vary in nearly all instances according to the term of service, but the maximum rates have been selected as affecting the largest number of men.

The miscellaneous group is made up of Chauffeurs, Stationary Engineers, Stationary Firemen, Common Labour, Teamsters, Truckmen (motor) and Watchmen. The data regarding most of these classes are taken chiefly from employers' returns, but much information is also taken from returns of trade unions and Departmental officers and correspondents.

The classes of labour for which rates are here published are in the main skilled trades, and practically all, even the unskilled, are in most cities organized to a great extent in trade or labour unions. The statistics given in this bulletin therefore show wage rates and hours of labour in a number of organized occupations in certain cities at the two dates under review. They do not, however, indicate the changes in wages or hours in organized or unorganized classes of labour in rural districts or outlying parts, such as farming, mining, lumbering, fishing, etc. The March bulletin, by sample rates of wages, showed to some extent the trend of wages for common labour in factories, for a number of miscellaneous factory trades and for the lumbering industry. The index numbers published in the March bulletin indicated that rates of wages for these classes increased from 1913 to 1920 in somewhat greater proportion than for occupations in the building, metal, printing trades, etc. The information so far received of wage changes in factories and in the lumbering industry since September 1920 indicates in general greater proportional reductions than for the classes listed in the accompanying tables.
