There seems to be no halt in the onward march of the Rhode Island Reds. As a fancier's fowl they are becoming more popular every day, while the market poultrymen and egg-producing farmers are eagerly seeking the breed.

The income of the Rhode Island Red has been one of the few spectacular performances in the poultry world. It has been exceedingly interesting, and during the past few years everything has given way before the Red wave.

It is but a few years ago that this fowl, without name, was unheeded by fanciers. It was doing service upon the farms of Massachusetts and Rhode Island, yielding the best market poultry and supplying an abundance of eggs. Type and breed characteristics were unestablished, yet withal it was an attractive fowl.

During 1896-7 fanciers in Rhode Island and Massachusetts determined to take up this splendid market fowl and wonderful egg producer and to establish for it a breed character. In the case of the Rhode Island Red those who claim that the American fanciers look only to feather markings and ignore utility in this fowl must note an exception. It was the remarkable utility qualities of the Reds which first attracted the attention of the fanciers.

A few lovers of the Reds held a meeting in the Coffee Tavern, in Fall River, Mass., in February, 1898. At this meeting the Rhode Island Red Club was organized, officers being elected as follows: President, Daniel P. Shove; vice-presidents, Wm. P. Shepard and Thos. Roe; secretary-treasurer, John Crowther. These officers were voted "power to act" in promoting the interests of the breed.

On December 10, 1898, at Fall River, Mass., a meeting of "all interested Rhode Island Red breeders" was held and a standard for Reds formulated. Those who took a leading part in this proceeding were Dr. N. B. Aldrich, John Crowthers, J. W. Freelove, V. L. Stafford, Daniel P. Shove, F. W. Cochran. At this meeting the original officers were reelected. The standard adopted at that time proved to be an excellent working guide to breeders until the Boston meeting of 1901, when a more formal description and a more detailed statement of the points of excellence of the breed were decided upon. In the meantime the membership had grown to upwards of fifty. Included in the list were breeders from about a dozen states. The election of officers at this meeting resulted in the choice of Hon. Charles M. Bryant, of Quincy, Mass., as president; William P. Shepard, South Swansea, R. V. Browning, of Natick, R. I., and E. A. Robbins, of Nashua, N. H., as vice-presidents; John Crowther, secretary-treasurer; with an executive committee comprising, beside Messrs. Bryant, Shepard and Crowther, ex-officio, Vernon L. Stafford, Fall River; D. P. Shove, Somerset; Dr. J. Fred Watson, Nashua, N. H., and P. R. Park, Methuen, Mass. Honorary vice-presidents were

designated as follows: Maine, I. F. Clark; New Hampshire, Luther Robbins; Vermont, Sanford Daniels; Massachusetts, C. A. Sauborn; Rhode Island, Samuel Cushman; Connecticut, R. C. Tuttle; New York, Chas. Smith; Illinois, E. L. C. Morse; Missouri, R. F. Smith; Canada, W. R. Walters. It was decided to copyright the Club Standard. At that time the club numbered 102; today the membership is nearly 1,200.

During the years 1901-2-3 the club members made large exhibits of these fowls at the Boston and New York shows, and at the smaller exhibitions throughout New England. No breed applying for admission to the American Standard of Perfection met the opposition which was directed against the Rhode Island Reds. They were decried most loudly and vigorously by a great many fanciers. They were but mongrels picked up here and there from the farm yards of Massachusetts and Rhode Island, said their traducers. They possessed no beauty, and it was ridiculous for their promoters to offer them to the Standard as a distinct breed! There was no established blood in their veins! All this, and much more, said the self-appointed guardians of the Standard of Perfection. The editor of a leading poultry journal, whose columns now teem with Rhode Island Red advertisements, referring to the exhibition of these fowls at the New York (Madison Square Garden) show, 1902, described them as a "motley lot, of all colors," and advised their friends to speedily withdraw them from an offended public gaze.

And why, we may well ask, has this once denounced, ridiculed and much abused fowl become one of America's most popular and prominent breed? It is, first, because it is worthy of the place. This thing of the Rhode Island Red coming into its own is another illustration of the truth of the saying that "truth crushed to earth will rise again." But this is not all. The Rhode Island Red would not have reached the high place it holds today, would still be in the humble place we found it a few years ago, had it not been championed by men who firmly believed in it—men who possessed the ability, the courage and that determination which balks not at opposition. There was indeed a task before which most of men would have quailed. But C. M. Bryant, Dr. N. B. Aldrich, D. P. Shove, Lester Tompkins, Phillip Caswell, John Crowthers, R. C. Tuttle, F. D. Bareman and their co-workers did not turn from a practically united opposition. They knew the merits of the fowls they were supporting. They realized, as well as did the critics of the breed, that their fowls were crude and unfinished so far as color markings were concerned. They proceeded, undaunted, to establish the desired color markings. This done the battle was nearly won, for shape was firmly and satisfactorily established long before. Next they fixed the beautiful red color markings. The great merit of the fowl, its desirable shape and beautiful color markings—the deep rich red—at once won the approval and love of American fanciers and breeders. It was a battle royal, and merit finally won, as it always does in the end.

Today the Rhode Island Red Club is the largest specialty club in America, numbering among its membership prominent fanciers in every state and territory in the Union. The Rhode Island Red is today extensively bred in not only the United States but in Europe, and several other foreign countries. It is everywhere recognized as one of the most useful and beautiful of Standard-bred fowls. As an exhibition fowl it has taken rank with the Wyandottes and Plymouth Rocks. At the show held at Cincinnati, 1906, in connection with the American Poultry Association annual meeting more than 426 Reds were shown. The writer had the pleasure of placing the awards in this interesting and attractive class, in which the leading Red breeders of America were competing, and we wish to say that the winning birds there were marvels of beauty.

The Single Comb Reds were admitted to the Standard in 1904.

At the Minneapolis meeting of the American Poultry Association, 1905, the Rose Combs were admitted as American Reds. This action was bitterly denounced by the breeders of Reds generally, and the 1906 meeting of the association rescinded the action and the Rose Combs were admitted as Rose Comb Rhode Island Reds.

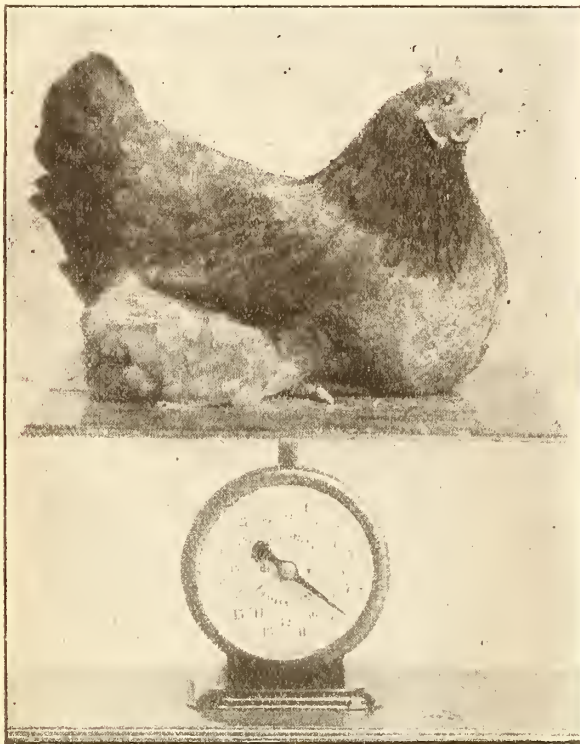

Breed Characteristics.

Standard weights, both varieties: Cock, 8½ pounds; cockerel, 7½ pounds; hen, 6½ pounds; pullet, 5 pounds.

The Rhode Island Red has distinctive and individual shape. This shape should not be confused with that of the Plymouth Rock which it somewhat approaches, but from which it differs materially. In the male the following distinctive character must be prominent:

Back—Broad, long and in the main nearly horizontal; this horizontal effect being modified of slightly rising curves at hackle and lesser tail coverts. Saddle feathers of medium length and abundant.

Breast—Broad, deep and carried nearly in a line perpendicu-

R. I. RED HEN.

First prize hen New York State Fair, 1905 and 1906. The hen that lays is the hen that pays, but the hen that weighs and lays is the hen that better pays.

lar to the base of the beak. At least it should never be carried anterior to this line.

Body—Deep, broad and long; keel bone long, straight and extending well forward and back, giving the body an oblong look.

Tail—Of medium length, quite well spread, carried well back, increasing the apparent length of the bird.

Color of the male: General surface rich brilliant red, except where black is desired. Free from shafting, mealy appearance or brassy effect. Depth of color (red) is slightly accentuated on wing bows and back, but the least contrast between these parts and the hackle or breast the better; a harmonious blending is what is desired. The bird should be so brilliant in luster as to have a glossed appearance. Other things being equal the specimen having the deepest and richest red, salmon or buff under color shall receive the award. Any smut or white in the under-color is to be cut hard. The quill of the feather should be red or salmon. White showing on the outside of the body is to be cut harder than white that is out of sight. Black is desired in the under-web of the wing flights. The main tail feathers and two main sickle feathers are to be black or greenish black. The greater tail coverts are mainly black, but as they approach the saddle they may become russet or red. The blending of the red body with the black tail is gradual, thus preventing any sudden contrast. With the saddle parted showing the under color at the base of the tail, the appearance

should be red or salmon, not whitish or smoky. The hackle should be free from black, although a suspicion of black, that can hardly be found, would not cut the bird much. White in hackle will be cut harder than black. The wing bars should be free from black, and all black in the primaries and secondaries should be out of sight when the wing is folded.

The female carries the same general color—rich red. In the female the lower hackle feathers should end with black tip, making a ticking.

History of the Breed.

The history of the breed written by Dr. N. B. Aldrich, of Massachusetts, has been accepted and endorsed by the club and made a part of its official catalogue. Dr. Aldrich says: "I am not one of those who is willing to say, 'Never mind the origin of the "Reds" or any other worthy variety of fowl.' I have been breeding poultry for twenty odd years, and I am always interested in the origin of every breed. Go back into history with me fifty years, and we find that, at that time, 1846-1850, different Asiatic breeds were introduced into this country, especially in neighborhoods that were near the coast. One variety, the Shanghai fowl (yellow and white), was introduced just after the Cochin China, and the two breeds for a time became confused, and many farmers and poulterers declare, spite of feathers or no feathers (on their legs), that their fowls are Cochin Chinas or Shanghais, just as they please." At this time Bennett, in his poultry book, says: "There are but few, if any, bona fide Shanghai fowls now for sale." These Shanghai fowls (Simon pure) were heavily feathered on the legs. Not so with the Cochin China. At this time the Cochin Chinas were bred extensively in southeastern Massachusetts and Rhode Island. Dr. Alfred Baylies, of Taunton, Mass., imported in July, 1846, specimens of the yellow Cochin Chinas. "The cockerels were generally red." These were not specimens of what were called the Royal Cochin Chinas, as bred by the queen of England, but direct importations. "The Royal Cochin Chinas were one-third larger." The Shanghais were heavily feathered in the legs; these imported Cochin Chinas lightly feathered, if at all. The ship *Huntress*, in May 1847, direct from Cochin China, brought a pair of this variety of fowl, and Mr. Taylor, in speaking of them, says, "The imported cock was a peculiar red and yellowish Dominique, and the hen a bay or reddish brown;" that the young stock varied "only in shade of color." Bennett says, "The legs of both sexes are of reddish yellow, sometimes, especially in the cocks, decidedly red—more so than in any other variety." How many times I have called attention to the red pigment in a R. I. Red cock's legs.

"So much, then, for the Red Cochin China cock of fifty years ago. The sea captains brought home just such specimens to Little Compton, R. I., but a little later came the great Malay fowl, with its knotty knob of a comb—a comb that even today occasionally is to be seen on the R. I. Reds. The Jersey Blues—Bucks County and Boobies—were inferior varieties of Malays. The great Malays came from the peninsula of that name, at the southern point of the continent of Asia. They were spoken of as 'serpent headed.' Their color was dark brown or reddish, streaked with yellow; some varieties of Malays run more reddish than others. In Little Compton was introduced what was known as the Red Malay. The Red Cochin China and the Red Malay cocks were selected, and crossed with flocks of fowls in Little Compton forty and fifty years ago, the same as today. Later, before the Wyandotte fever, the R. C. Brown Leghorn was introduced into many flocks of fowls in the neighborhood. Even at the time of the introduction of the R. C. Brown Leghorns the red fowls were spoken of as R. C. Reds. In a certain section, where the Leghorn blood was not used, today old settlers speak of their fowls as Red Malays. In this section ten years ago the Reds were all of the single comb variety, whereas ten or twelve miles further south were to be found Rose Combs in abundance.

"Now, Mr. Editor, let me say right here, and I wish to say it plainly, there were no Pea Comb Reds ten years ago, any more than today. Why should R. I. Reds have Pea Combs? Where is the comb to come from? It is not even the common comb of the barnyard fowl. Pea Comb Rocks were once admitted to the Standard, only to be dropped again. I do not believe the Red Club will admit Pea Combs only to be dropped again." [The club and the American Poultry Association has refused to admit the Pea Comb variety.—T. F. R.]

Dr. Aldrich supplemented the above article with the following:

"If I were to say that the foregoing article told the whole story of R. I. Reds, I would be making a mistake. This breed derives its name Rhode Island Red from the male bird. The utility farmers of that section of Rhode Island known as Little Compton for nearly sixty years, have been selecting red males and leaving the females to be what they may. By this means

they have carefully out-bred this now famous breed. Probably today there is not in the whole world another breed of fowls produced by fifty years of out-breeding. If it were only so, how much more vigor our several breeds would have. The R. I. Reds stand as the only proof of what out-breeding will do. We fanciers do not live years enough to compose a breed deliberately, unless we in-breed, but it was not so with the original R. I. Red breeders, they knew the Red cock was the most vigorous and almost unconsciously they made a breed.

“The famous Barred Plymouth Rock, called more than once the ‘American mongrel,’ was not produced by out-breeding, and right here it might be of interest to note that the early Plymouth Rocks produced red males. Listen to Dr. Bennett’s own statement: ‘I have given this name (Plymouth Rocks) to a very extra breed of fowls, which I produced by crossing a cockerel from Baylies importation of Cochin China with a hen, a cross between the fawn colored Dorking, the Great Malay and the Wild Indian (game). The cocks are usually red or speckled.’ By a later cross with the Black Java and in-breed-

1784, weighing about ten pounds,’ and Dickson says ‘the plumage of the male is brilliant in the extreme, being a bright red—the hens are of a bright yellow.’ I do not need to quote more to convince you that Red cocks are nothing new, even though the world did lose sight of them, except isolated Little Compton, R. I. It was the ghost of Hamlet’s father who, suddenly hearing the crowing of the cock, announces abruptly that he ‘snuffs the morning air,’ and then vanishes to his dreary home. Probably this very crower was a Red cock.

“The red rooster of fifty years ago vanished to a small country village, but now has been returned to the large world. If the R. I. Reds were not a worthy breed they would have been relegated from the show room long before this. Little Compton, R. I., and Wertfort, Mass., are adjoining towns, lying to the southward of Fall River, Mass. One small vessel from 1827 to 1850 made about twenty-five trips annually between Wertford and Providence, R. I., averaging 400 dozen of eggs. The total was 3,450,000, and the value of them \$35,000. This gives some idea of the value of the ancestors of the Reds in 1850. Finally a few of us ‘discovered’ the Reds and the ‘colony plan’ of raising fowls.”

The Rhode Island Reds, like the Wyandotte and Plymouth Rock, are America made and will continue to deeply interest not only the fancier but the market poultryman.

ORIGIN AND HISTORY OF THE BREEDS

The Turkey, a Native of America, Now Bred and Highly Prized by the People of All Civilized Countries—Taken to England in an Early Day, and from There Distributed to Nearly All Countries and Climes—The Bronze Variety the Most Popular at Home and Abroad—The White Holland Said to Be a Native of Holland—White Sports of the Common Turkey Not Unknown, Both Here and in England—The Breed in Various Colors Produced by American Fanciers.

Paper No. 19—The Turkey.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The Bronze turkey of the American Standard of Perfection is the acknowledged king of all poultry. The turkey is evidently of American origin. The wild turkey was found in abundance by the pioneers in the eastern, southern and western sections of the United States. They existed also in great numbers in Mexico long before this time. It is evident that the turkey was introduced into Europe from America. The following historical review of this matter was written for the American Poultry Journal by Rev. C. E. Petersen, October, 1905, and covers the ground completely:

“At what time the domestic fowl was first introduced into England is unknown, but there is a tradition in Cornwall that it was originally brought to that part of the coast by the Phenicians when they came to traffic for tin and copper with the natives, previous to the Roman invasion; and to this day, in some parts of the country, it is called the Persian bird, but why this latter does not appear; and further, it is especially noted by Cesar (‘De Bello’) that the cock, the goose and the hare were among, if not the whole of, the domestic animals of the ancient Britons, and kept by them for pleasure only before his invasion of the country, but that soon after their scruples in this direction disappeared.

“However that may be, it is certain the Romans brought with them ‘the fighting cock,’ both to the south and the west of England; clear proof of which are the bones, nay, the very metal spurs used in their contests, that have been found both in Surrey and Cornwall.

“One metal spur was dug up in Southwark, and a pair in an old Roman wall in the latter county, besides others that unfortunately were not preserved or sufficiently noted.

“That these same ancients were not acquainted with the turkey goes far to settle the somewhat disputed question, whether the turkey is a native of this country or not, being now taken for granted by all naturalists and historians that the new world was its birthplace, and from there was introduced into the old world.

“It is interesting to note the mention of these birds in the writings of the old historians, a few of which follow:

“The first author in whom any mention is made of the turkey is Oviedo, who wrote about the year 1525. He has described them minutely with that curiosity and attention which new objects generally excite; and as he was acquainted with no name for these birds, till then unknown to the Europeans, he gave them that which he thought best suited

ing were produced the modern Barred Rocks.

“In regard to Rose Comb R. I. Reds, I am positive the rose comb variety existed long before the introduction of Leghorn blood. Old settlers assure me their fathers brought home Red cocks with rose combs, and I have been informed that some Cochin Chinas had rose combs. There was also a red variety of Chittagongs, and Mr. Rugg says ‘sometimes there is a rose comb.’ I know my grandmother and others had Chittagongs in this neighborhood fifty years ago; possibly, the rose comb on our reds may date back to Red R. C. Chittagongs.

“In reviewing this subject one thing has struck me very forcibly, and that is, that Red cocks were numerous in 1850; just think of the different breeds that produce them. At the first Boston poultry show held at the Public Gardens on Nov. 16, 1849, Red Shanghais and Cochin Chinas, ‘the cockerels were generally red,’ were exhibited, as well as Plymouth Rocks, which, as I said before, produced Red males. At this time we also find Red Malays and Red Chittagongs. The Shakebag fowl were imported to this country by Mr. J. L. Tucker of the Tremont House, Boston. Mr. Mowbray thus writes of one in his possession, ‘The only one I ever possessed was a red one if

to them. He calls them a kind of peacock, and he relates that even then, at this early date, on account of their utility, and the excellent taste of their flesh, they were not only reared and domesticated by the Europeans in New Spain, where they were first found, but that they were carried also to New Castile and to the West India Islands.

"Lopez de Gomara, whose book was printed in 1553, makes use of gallopavo; and says that the fowl resembles in shape the peacock and the domestic cock; and that of all the fowls in New Spain its flesh is the most delicious.

"In the year 1584 wild turkeys were found in Virginia, and Rene de Laudonniere found them on his landing in North America in 1564. Fernandez also reckons them among the birds of Mexico; and takes notice of the difference between those that were wild and those which had been tamed. Pedro de Cieza saw them on the isthmus of Darien, and Dampier in Yucatan; beside the testimony of many other travelers, which is hardly worth while noting, shows the early date of its domestication.

"An account by Smyth deserves notice; he visited Pennsylvania in 1784, and says:

"The wild turkeys run about here in the woods. Their wildness excepted, they are in nothing different from ours, but in being generally larger, and in having redder flesh, which is, however, superior in taste. When anyone finds their eggs in the woods and places them under a tame hen to be hatched, the young, for the most part, become tame also; but when they grow up they make their escape. On this account people cut their wings before they are a year old. These wild turkeys when tamed are much more mischievous than those from domesticated birds."

"Smyth assures us that wild turkeys are so abundant in the uncultivated country back of Virginia and the southern provinces that they may be found in flocks of more than 5,000.

"The earliest account of them in Italy is contained in an ordinance issued by the magistrates of Venice, in 1557, for repressing luxury, and in which those tables at which they were allowed are particularized. About the year 1570 Bartolomeo Scappi, cook to Pope Pius V, gave in his book on cookery several receipts for dressing these expensive and much esteemed fowls.

"That they were scarce at this period appears from its being remarked that the first turkeys brought to Bologna were some that had been given as a present to the family of Buonocompagni, from which Gregory XII, who at that time filled the papal chair, was descended.

"That these fowls were not known in England in the beginning of the sixteenth century, is very probable; as they are not mentioned in the particular description of a grand entertainment given by Archbishop Nevil; nor in the regulations made by Henry VIII, respecting his household, in which all fowls used in the royal kitchen are named.

"They were, however, introduced into that country about the above period; some say in the year 1524; others in 1530, and some in 1532.

"We know, at any rate, they were served up at a great banquet in 1555; and about 1585 they were commonly reckoned among the number of delicate dishes, and we have the following from 'Tusser's Five Hundred Points of Husbandry,' published at that date:

"Beefe, mutton and porke, shred pies of the best,
Pig, veale, goose and capon and turkey well dressed;
Cheese, apples and nuts, jolic carols to heare,
As then in the countrie, is counted good cheare."

"There was another edition of Tusser published in 1557, but no mention is made there of the turkey, so it is positively sure that some time between these two dates the turkey was introduced into England from the colonies.

"According to the account of some writers, turkeys must have been known much earlier in France; but on strict examination no proof of this can be found. The earliest period assigned for their introduction into that country is given by Beguillet, who confidently asserts that they were brought to Dijon under the reign of Phillip the Bold, about the year 1385.

"Had this French author quoted his authority, we might have discovered what gave rise to his mistake; but as he does not, one cannot but help to think that the whole account is a fiction of his own which was not a very strange proceeding in those times.

"De la Mar also is in error when he relates that the first turkeys in France were those which Jaques Caur, the well-known treasurer to Charles VII, brought with him from the Levant, and kept on his estates in Gatinois, after he had received the king's permission to return to the kingdom.

"This Caur, however, who was banished in 1450, never returned, but died in the island of Chio in the year 1456.

"Equally false is the account given by Bouche in his 'History of Provence,' that Rene, or Renatus, King of Naples and Duke of Anjou, first brought turkeys into the kingdom and reared them in abundance at Rosset. This author gives as authority the oral tradition, which certainly cannot be put in competition with testimony of a more authentic nature.

"Another Bouche, who wrote later (1785) a 'History of Provence,' and who has collected many things which do honor to Renatus, makes no mention of this service, though he could not be ignorant of what had been before related by his namesake.

"Had these fowls been known so early as the time of that monarch, who died in 1480, it is impossible that they could have been so scarce in France as they really were about 100 years after. The assertion oft repeated, but never proved, that they were first brought to France by Phillip, the Chabot admirable under Francis I, is much more probable.

"Chabot died in 1543; and what Scaliger says, that in 1540 some turkeys were still remaining in France, may be considered as alluding to the above circumstance.

"This much, however, is certain—that Gylius, who died in 1555, gave the first scientific description of them, which had been given shortly before his death, and which were made use of by both Gesner and Aldrovandus in their work on 'Ornithology.' The same year the first figure of them was published by Bellon.

"About the same time they were described also by La Bruyere-Champier, who expressly remarks that they had a few years before been brought to France from the Indian islands discovered by the Portuguese and the Spaniards.

"How, then, could Barrington assert that this Frenchman meant the East and not the West Indies? They must, however, have been a long time scarce in France; for, in the year 1566, when Charles IX passed through Amiens, the magistrates did not disdain to send him, among other presents, twelve turkeys. This information seems to agree with the account often quoted, that the first turkeys were served up, as a great rarity, at the wedding dinner of that monarch in the year 1570; but it seems the breed of these fowls was not very common under Charles IX, for they are not named in the ordinances of 1563 and 1567, in which all other fowls are mentioned.

"In the year 1603 Henry IV caused hugglers to be punished who carried away turkeys from the country villages without paying for them, under the pretense that they were for the use of the queen.

"As these American fowls must have been carried to Germany through other lands, we cannot expect to find them in that country at an earlier period.

"Gesner, who published his work in 1555 on 'Ornithology,' seems not to have seen them.

"We are, however, assured by several authors, such as B. Heresback Colerus and others, that turkeys were brought to Germany so early as 1530; and at the same year carried to Bohemia and Silesia.

"Respecting the northern countries, by the authority of Pontoppidan, they had been in Denmark 200 years before his time (1698).

"As these fowls are found at present in Asia and Africa, it may be worth while to briefly mention that as much proof can be given that they were not known there until introduced by Europeans."

The Standard weights of Bronze Turkeys are: Adult cock, 36 pounds; yearling cock, 33 pounds; cockerel, 25 pounds; hen, 20 pounds; pullet, 16 pounds.

The disqualifying weights are: Adult cock weighing less than 30 pounds; yearling cock, less than 25 pounds; cockerel, less than 18 pounds; hen, less than 14 pounds; pullet, less than 10 pounds.

Color of body black, beautifully shaded with bronze. Fluff, black, each feather ending in a wide black, bronze band extending across the feather, with a narrow edging of white. Male's wing bows a brilliant bronze with greenish luster. Each primary feather must be evenly and distinctly barred across with parallel bars of black and white throughout the length of feather.

White Holland Turkey.

The White Holland turkey is said to be a native of Holland. This breed of turkeys as described by the American Standard of Perfection is far and away a larger and much more beautiful fowl than the common white turkey of Holland.

The Standard weights are: Cock, 26 pounds; cockerel, 18 pounds; hen, 16 pounds; pullet, 12 pounds. Disqualifying weights: Cock weighing less than 20 pounds; hen, less than 12 pounds.

The plumage is pure white throughout. Shanks and toes,

white or pinkish white. Eyes, hazel. Head, rich red, changeable to bluish white.

The Narragansett Turkey.

The Narragansett turkey is a native of Rhode Island and Connecticut. They are next to the Bronze variety in size, the Standard weights being: Cock, 30 pounds; cockerel, 20 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weights: Cock, less than 22 pounds; hen, less than 14 pounds. In plumage color this turkey is black, each feather ending in a broad, light steel-gray band edged with black.

The Buff Turkey.

This variety is of American origin, having been brought out but a few years ago. Plumage color, pure buff, the wings being a very light shade of buff. Standard weight: Cock, 27 pounds; cockerel, 18 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weights: Cock, less than 18 pounds; hen, less than 12 pounds.

The Slate Turkey.

Also of American origin. These fowls when right are nearly blue in plumage color, the shade resembling that of the Blue Andalusian, the female being much lighter in color than the male. The Standard calls for a plumage color slaty or ashy-blue, sometimes dotted with black. The Standard weights are: Cock, 27 pounds; cockerel, 18 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weights: Cock, less than 18 pounds; hen, less than 12 pounds.

The Black Turkey.

The Black turkey is a native of America. In plumage color they are a lustrous black throughout. Standard weights: Cock, 27 pounds; cockerel, 18 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weight: Cock, less than 20 pounds; hen, less than 12 pounds.

The best of care should be taken of our fowls to keep them in good condition during the trying period of moulting. It is a great drain upon their vitality to grow a new coat of plumage. Too often the needs of our fowls are totally ignored during this really critical season, because they have dropped off in egg yield. It is best to select such fowls from one's flock as you desire to retain for breeding and market the balance before they begin to "shed their feathers." We are too apt to look on our time spent on our biddies getting their "new clothes" as lost, not giving due credit to them for the long months of faithful service given in filling the egg basket and hatching and rearing our young birds. In consequence when eggs grow scarce we call into use the hatchet and not unfrequently the most useful member of our flocks loose their heads because of the ragged condition. What does one expect? That there shall be no period of rest and recuperation for these farm friends, as well as other individuals? Did you ever withhold food and water from your milk cows because they no longer fill the pail full of good rich milk?

RHODE ISLAND REDS.

In comparing the relative merits of different breeds we are apt to consider only the laying qualities and the value of the old stock for market purposes, but when we look at it from a business point of view there are other ages that should be considered nowadays, such as the broiler and roaster ages and the old fowls for breeding purposes.

E. T. DE GRAFF

I will try to tell briefly why I am partial to the Rhode Island Red fowls and illustrate by actual photographs what I want to show, as a good photograph tells more in one glance than I can tell in a whole column.

It has been the history of the poultry fraternity that one new breed has followed another in rapid succession, enjoying a longer or shorter boom of popularity, only to be dropped from view, bred by a limited few.

That the Rhode Island Red is the most popular fowl of the day no one will deny; and the coming winter will see the Red alley the center of attraction in all large shows, and the old-time kickers against the "Great American Dunchill" will see that they have gained by their own merits the deserved title of "The Greatest Utility Fowl On Earth."

I am glad to see that the general public opinion is rapidly changing from the idea that a good Red should be a bird nearly buff, so as to be entirely free from smut.

The popular demand is for a Red that is red, and as far from smut as possible, and still harmonize and be free, or very nearly free, from smut. The Standard does not say that a bird that has a slight trace of smut is worthless, as many judges claim in their decisions, but all it does say is that birds being equal in other points, the birds free from smut should be given the preference, which is right, but a brilliant rich red bird, harmonizing in all sections, and something to charm the admiration of any lover of beauty, should not be overlooked because he may have a slight trace of smut over back when he is nearly perfect in other respects, and the prize given to a half-grown buff bird that is entirely free from smut and an even color all over, as I have often seen in some shows. Many of the oldest breeders claim they have to use birds with slight smut in undercolor in order to produce the prize-winners which we are all striving to get, so why it should be looked upon as such an unpardonable defect by many I cannot understand. Give me shape, vigor and ideal surface color and let the undercolor be a minor consideration in selecting the ideal type, as the Red has won its popularity as an oblong, hardy constitutioned red bird.

E. T. DeGraff.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Fred D. Silloway, Springfield, Ill., and the second prize to Frank McCombs, Martins Ferry, Ohio.

POULTRY YARD SANITATION.

Upon good sanitation, even more than scientific feeding, depends the health and development of poultry, and it is safe to say the lack of healthful surroundings is either the

easy outlet into a tile or sewer such a course, as far as proper sanitation is concerned, would be unhealthful and dangerous. The only really available drainage would be to either lay tile or raise the level of the yard several inches above the surrounding surface.

However favorable the location, soil and drainage may be, they will avail little toward the health of fowls when the pens are strewn with a collection of the debris and rubbish of years; and as long as it is allowed to remain it not only indicates a strain of laziness in the poultryman, but it is a constant menace to the health and best growth of the fowls. Since cleanliness is so necessary and a point where it is so easy to fortify against the inroads of disease, there is absolutely no excuse for an unclean poultry yard, especially among enlightened poultry keepers, whose experience has surely taught what trouble negligence can work.

Probably the point where we are most prone to make mistakes regarding the application of sanitary principles in our own plants lies in our poultry houses. They should invariably face the south or east, with a run at the front, insuring a warm, sunny place on the sheltered front side of the house during winter. The house should occupy the highest ground about it, and should this not be possible its floor should be raised high enough to secure necessary lack of moisture.

So many excellent plans of poultry houses have been published of late that one can hardly go astray when building if he takes the best of each and combines them to suit his own requirements. In constructing a house with regard to sanitary arrangements the first and best provisions must be for air and sunshine, for upon these most depend the healthfulness of a poultry house. At the same time the house must be so arranged as to be thorough protection for its occupants against the coldest weather. These apparently opposing requirements have been brought together with wonderful results in the open-front houses, in which the rear wall to the north and the two sides toward east and west are practically airtight, but the front facing the south is entirely open, being covered with netting to exclude prowling animals. A canvas curtain could be provided to be let down over the open front when the weather demands. In such a house the birds profit by the conditions which make roosting in the trees healthful without veeping its bad results.

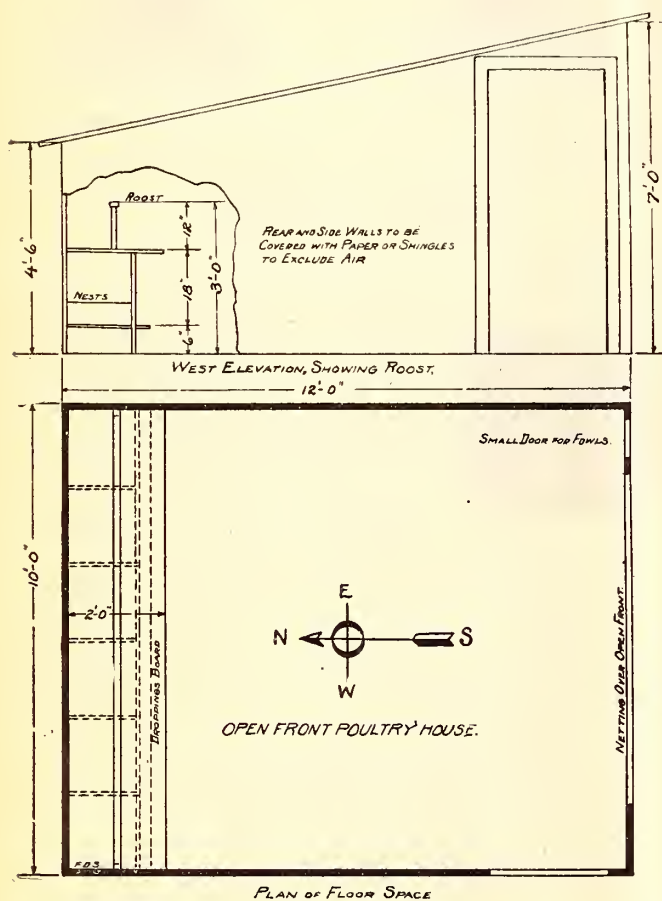

This sort of house is shown in the accompanying illustration and is capable of comfortably accommodating a breeding pen in as nearly sanitary environments as possible. The open front allows free circulation of air, while the rear and side walls, being wind-proof, guard against draft and insure warmth and comfort during the coldest weather. If this house is properly constructed not a comb will be frozen in zero weather.

In building a poultry house in accord with the best knowledge of sanitation, too much stress cannot be had on arrangement that will allow easy cleaning. If no musty litter can collect beneath needless paraphernalia, if droppings can be easily removed, and if refuse food and other debris can be readily disposed of before it contaminates the atmosphere, then only sun and air are needed to complete the healthful conditions.

Poultry yard sanitation to be effectual must be constant in its efforts. No occasional cleaning or tardy precaution will avail in a work so necessary and important. One must be ever on guard for lurking disease and tireless in the cause of health among our feathered friends.

Springfield, Ill.

Fred D. Silloway.

PLAN OF FLOOR SPACE

direct or indirect cause of as many deaths among poultry as all other causes combined. This assertion, though broad, must be true, since roup, gapes, cholera and many other equally contagious diseases manifest their deadly influence only where poor sanitary environments are in evidence.

Few things are of more vital importance to proper hygienic conditions than the location of the poultry house with regard to the drainage of the immediate vicinity. The yard should be situated upon high ground, where the drainage will be natural and efficient, and the air ever pure and wholesome; where the sun, wind and rain can work their effectual service of purifying the atmosphere, soil and water. It is a fact, however, that the majority of our poultry yards are not naturally drained to our satisfaction, therefore that conditions may be made conducive to health artificial drainage is our only choice. As a cheap means of draining flat yards some poultry writers have suggested the use of cesspools or sumps—one or more to each yard—into which the surplus water would drain by shallow ditches, but unless there is an

A great many people who keep poultry often wonder why they do not get a plentiful supply of eggs in winter. These people are mostly ones who have only a few hens and do not spend much time making their hens as comfortable as they should be in winter.

Take, for instance, the farmer who has "too much other work on hand to monkey with poultry." Why, he says, this is probably because he may once have had a few hens which he let roost in the trees or any place else it suited them, winter and summer, and then disposed of them because they were not profitable enough. He may also have tried raising some chicks, and if they died from neglect or improper food he blamed the hen or ill luck for his failure. It never seemed to enter his head that if poultry is to be profitable it must be housed properly, fed properly, and attention be given to their wants—the three great stepping stones which lead to success. Of course, all farmers do not class poultry with the unprofitable things on their farm, for they have found that when properly cared for poultry is a very profitable investment.

Townpeople often keep chickens for "pleasure and

WINTER LAYERS.

profit," but they do not need to try raising poultry under this subject unless they give their flock proper attention, for they will neither find them a pleasure or a profit if they do not keep them in good quarters, give them the proper food they should have or anything else they may need.

The first thing to be thought of is the house. This is one of the most important factors in poultry raising, and too much reasoning cannot be spared in connection with its construction. The aim of the builder should be to make it warm and dry and as convenient as possible. If the old poultry house can be made warm and dry by a little repairing it should be done at once, if it has not already been overhauled. If it is damp and cold, make a new floor (either of boards or cement), and all the cracks should be closed by nailing weather-strips over them, and if the roof leaks it should be fixed or a new one put on. A window or two is quite necessary, for a well-lighted poultry house is better in every respect than a dark, gloomy one. A scratching shed is an important addition to the house, but if the roosting room or laying room is large enough to accommodate the flock it can be used. The roosts should be about three or three and a half feet from the floor and at least two feet apart. Keep the house well ventilated, but precaution must be taken against drafts, especially at night when the fowls are on the roost. Make a frame just large enough to fit in the window frame and tack a piece of burlap over it. If this is placed in the window frame at night it will let in a great deal of fresh air, while a slatted vent (12 by 6 inches is large enough for a small room) placed close to the eaves will let out all the impure air. A ventilating device like the above should be built in each room. If the interior of the poultry house is whitewashed it will improve the looks very much, although it is not necessary. Keep the house as clean as possible, as filth breeds vermin and disease, and no one can have success with poultry and such enemies as these around.

After the house has been completed and ready to be occupied by the fowls (which should be pure bred) the next important step is the feeding. Recently great progress has been made in the feeding of poultry for the production of eggs, and is said by the most experienced poultrymen that exercise is one of the best methods known for producing eggs; therefore, all dry feed should be fed in a litter. A good and simple method is as follows: Cover the floor of the apartment used for the scratching shed thickly with straw, chaff or dry leaves. After the fowls have gone to roost a feed of mixed grains such as wheat, oats, barley, cracked corn, buckwheat and sunflower seeds should be scattered in the litter. It should be scattered in the litter in the evening so the fowls will have something to scratch for as soon as they get off the roost the next morning. They will thus be kept busy until noon, when a warm mash of table scraps such as bread, meat, potato parings, etc., cooked well and mixed with enough bran and middlings to make it crumbly, can be fed. After this lettuce, cabbage, mangles and other greens should be suspended from cords about eighteen inches from the floor. The hens will jump for them and this exercises them very much. Before going to roost they can be fed whole corn that has been well warmed. They should be given water two or three times a day that has had the chill taken off. Green cut-bone is a great egg producer and can be given to the hens about twice a week. Charcoal, grit and oyster shells should be kept before the fowls at all times so they can help themselves whenever they need it.

The fowls should be kept confined in the house and scratching shed while the snow is on the ground, but can be let out when the weather permits.

To have success in the poultry business the flock must be kept healthy. Here are a few suggestions for keeping them in a good condition:

Keep the poultry house warm and dry, for damp poultry houses are breeding houses for disease.

Scald out the drinking vessels every few days and keep them as clean as possible.

The hens should always have a dust bath handy, winter and summer. This will help keep the fowls free from lice.

A little salt and pepper mixed with the mash is good for the hens.

An unsuspected draft striking the fowls at night while on the perches is responsible for many a case of cold in the head and incipient roup. Stop up the cracks in the henhouse.

A variety of food will help to keep the hens healthy and will also be good for the egg production.

The three great factors in winter production of eggs are cut-bone or meat, green food in some shape, clover or roots and exercise.

Forcing egg production is a dangerous practice if the flock

is a good one. Keep them in good condition and they will do their part.

Change the food for a day or two if the fowls have bowel disease. Half of the troubles of this kind can be traced to a lack of sharp, hard grit.

The best condition powders for the poultry consists of clean quarters, good feed and pure water.

* * *

Try this method of caring for your flock, and also keep an account of your receipts and expenses, and be convinced that poultry is profitable when well cared for. You will also find it a greater pleasure.

Frank McCombs.

Martins Ferry, O.

S. C. BLACK ORPINGTONS.

The Good Qualities of this Variety Exploited by an Enthusiastic Admirer—
How to Feed to Produce the Size in this Variety—
As Layers They Have Few Equals.

Written for American Poultry Journal by Joe Coleman, Bellville, Ohio.

In taking up the subject of S. C. Black Orpingtons for a short article, it is not our intention to toot our own horn, for we have not a single bird for sale this season. First we will digress a little.

Our poultry experience, covering a dozen or more years, has been spent with only two varieties, and those at separate intervals. Have always been a one-variety man; and without question where many fail is by breeding too many kinds or taking up new breeds for a season or two and then discarding them for others.

I'll tell you, brother, it isn't always the most popular breed that yields the largest income, especially for the man who has limited cash with which to spread printers' ink. Our first love was one of the less popular fowls, and we could hardly supply the demand for stock and eggs, because of being among the few who advertised them. Our next venture was a more popular breed, and we did not do nearly so well with the same amount of money expended in advertising. We desired another change, and what to take up next was a nightmare.

Finally deciding, we have centered our efforts on the S. C. Black Orpington, and consider our judgment good, for they possess so much of genuine merit to make them appeal to both the fancier and the utility breeder alike. The youngsters grow like weeds. This season one brood was hatched May 23, and at one month old two chicks averaged 11 oz. each; two months' old, 2 lbs. 1 oz. each; Aug. 23, three months' old to the day, reached the remarkable weight of 4 lbs. 11 oz. each. The Standard calls for weights as follows: Cock, 10 lbs.; hen, 8 lbs.; cockerel, 8½ lbs.; pullet, 7 lbs. These weights are easily maintained, and in fact a good percentage of matured stock will go overweight and will run somewhat larger than the other Orpington varieties.

The Australian egg contest, held under the direction of the Australian government, demonstrates their laying qualities. Here they averaged over 200 eggs per hen a year and defeated all other breeds. Can we say anything against the color of the Black Orpington? What is prettier than raven black with a lustrous beetle-green sheen? To their advantage is the fact that sun, dirt and smoke do not affect their plumage.

Some may be interested in knowing how we feed for size. We induce exercise, but feed plentifully and make the diet as varied as possible. Milk, meat, grain and green food form the main basis of our feeding. Skimmed milk at 6 cents per gallon is a cheap food, and we also use quantities of thick sour milk. Practically no corn is fed our young stock until six months' old. Bran and middlings are a daily portion of the diet and kept before the chicks at all times in a dry state, but sometimes we moisten this mixture with milk for a change. Have found whole oats soaked in skim milk a great growth producer, but should not be fed until chicks reach the age of six weeks. Charcoal, grit and cool water are not forgotten. As a human being craves a variety of food, so does our feathered friends.

While enthusiastic, we haven't said a word more than this fowl justly deserves. The S. C. Black Orpingtons are here to stay, and the beginner as well as the "old timer," if desiring to add another variety or make a change, will do well to consider them.

American Poultry Journal

Issued the first of each month.

Notary Public.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

What He Found.

The advent of Mr. Edward Brown, of England, secretary of the National Poultry Society, into America and among American poultry institutions, has caused many a ripple in the poultry news matter of the country during the last six or seven months. It is said that he has visited between fifty and sixty poultry plants and packing establishments, besides many colleges where poultry culture was carried on, and experimental stations. As a result of the experience he has gained in America he states that utility poultry farming as a paying institution in America does not exist. He says that what may be termed a combination farm is a success, that an establishment at which the sale of stock birds and eggs for hatching is conducted in co-operation with marketable fowls and eggs and fruit growing is not a failure. As regards table poultry,

this well-known writer on poultry topics gives it as his opinion that America is distinctly behind England except in the matter of South Shore roasters. He says that outside of these famous table fowls he did not see a decent one during his tour, which he concludes is due to the fact that farmers have no knowledge of how to fatten or feed scientifically. Further, he says that our eggs are but little better than our table fowls and that he could not get a really palatable egg in New York, which he attributes to the poor facilities for marketing produce in this country. As a matter of fact, he says that before many eggs reach New York and Chicago from the western states they are three weeks old. He does not believe that any cold storage fowl will ever have the table quality of a fresh-killed bird. Inasmuch as he covered a good portion of Canada, as well as America, he gained some idea of Canadian conditions. He believes that Canadians are ahead of Americans when it comes to table poultry and strictly fresh eggs.

Expressage Rates.

Not long since we saw in a recent issue of a poultry journal a statement made by Mr. E. B. Eddy, inspector of the U. S. Express Company, and president of the National Fanciers' and Breeders' Association, giving express rates on fancy and market poultry. The rate on eggs and poultry for market figures from all points nearly 20 per cent less than the regular rate on merchandise, and in quoting the rate on fancy poultry and poultry to exhibitions, he says:

"Between points where the merchandise rate is less than \$2.00 per hundred, 1½ merchandise; between points where the merchandise rate is \$2.00 or more per hundred, merchandise; the charge between points where the merchandise is less than \$2.00 per hundred must not be greater than \$2.00 per hundred.

"For exhibition, when returned from the first place of exhibition to the original point of shipment, if in slatted coops, 1½ merchandise rate to the exhibition, and half merchandise rate for return. If in cloth coops, on which double merchandise rate was paid, return free."

As a matter of real information this may be filed away for future reference, because readers, either as buyers or sellers, may have use for it in getting a few of the reckless express agents square with themselves.

American Poultry Journal a Foreign Business Bringer.

R. E. Jones, Paducah, Ky., the well-known breeder of Silver, Golden and White Wyandottes and Golden and Silver Sebright Bantams, informs us that he recently received an order through American Poultry Journal for a trio of Silver Wyandottes from New Zealand, Australia; and also says that business has been exceptionally good with him the past season and American Poultry Journal brought the larger portion of it. Mr. Jones is deserving of all the patronage that comes to him, as he has been untiring in his efforts to build up a strain of breeding birds that would be second to none in this country, and that he has succeeded to a remarkable

degree is evidenced by his record in the show room and by the large trade he now enjoys. A great deal of his success is due to advertising, as he uses large space the year round.

The foreign trade that is being attracted to this country through the columns of American Poultry Journal is rapidly assuming large proportions, and breeders who a few years ago were large importers are now exporting birds to nearly every country in the world. We mention this fact to show that our claim of a world-wide circulation is founded on facts and each season sees our foreign list doubled over that of the previous one, and our foreign subscribers look upon the advertisers in our columns as being thoroughly reliable and up-to-date; otherwise they would not have a place in the columns of American Poultry Journal.

New Man at Crookston.

Mr. Gus Walters, who has been in charge of the poultry experiment end of the Minnesota Northwest Experiment Farm, at Crookston, has been attracted by a private poultry enterprise in the far East, this a little after a year of service at the station. The new poultry manager at this poultry station will be Frank G. Thayer, who comes direct from Cornell University. Mr. Thayer is a young man of ability who has made poultry culture and horticulture a systematic study ever since he was in his last high school year. We understand that he has been connected with Weber Bros.' Big Pekin duck ranch in Massachusetts and also with other poultry work that has well fitted him for his new position. He was manager of the poultry plant of the college of agriculture of Cornell University during 1904 and 1905, and was assistant in poultry husbandry in the college to the long and short-term students. Minnesota seems to have the faculty of getting hold of good men on her state experiment station farm, but some way or other the inducements offered are not large enough to retain them any considerable length of time.

A Long Way to Show.

Speaking about sending birds a long way to the poultry exhibitions, calls to mind a paragraph that we read recently in the September 7 issue of Poultry, published in London. The paragraph goes on to say that Mr. T. H. Heyden, a well-known South African fancier, has determined to send a "team" of his Partridge Wyandottes to England for competition at the grand International show this fall. It is said in the paragraph referred to that all the birds will be colonial-bred and will consist of a cockerel which has secured six first places, six specials and three second prizes, and two excellent pullets which also have splendid records, as far as the show room is concerned. The fowls will leave Johannesburg, where Mr. Heyden resides, in October, and will not be returned to him for three months. Mr. Heyden seems to be a sportsmanlike poultry fancier and we are wishing him the best of success. We shall watch the South African Poultry Journal for comments on the condition of these birds when they are returned to that distant clime.

The Poultry Uplift.

The state fairs are now about over and to the close observer they have meant much. The big poultry exhibits at the fairs have excited greater interest than ever before because of the past few years' good prices for eggs and table poultry. Farmers, truck gardeners and those who raise poultry for utility in goodly numbers are singing the praises of the pure-bred hen. She is fast displacing the mongrel, and shows her good qualities to all who cultivate her acquaintance. Poultry knowledge is becoming more in demand and the hen is now never left off the farmers' institute platform. The weekly and monthly agricultural journals have placed their poultry columns in the hands of good pure-bred fowl champions who are doing much to fill the field that lies before them. Poultry pays—all acknowledge it; but the things they want to know are how to make it pay more.

Poultry work is on the uplift—has been for years, and all breeders know it—and the big state fairs are a cog in the educational wheel which grows larger yearly.

Poultryman Bickerdike a Candidate for Illinois Legislature.

One of American Poultry Journal's advertisers, J. A. Bickerdike, of Millersville, Ill., is a candidate for the Illinois Legislature in the district including Christian, Shelby, Cumberland and Fayette counties. He is making a fight on the County Option issue and has a most excellent prospect of winning.

The Poultry Industry of Illinois should be represented in the State Legislature by just such active and energetic men as Mr. Bickerdike, and if he is elected we will know he will do his utmost to further the interest of poultry matters, and be of value to poultrymen.

Mr. Bickerdike is a prominent and successful breeder of poultry, and we urge all of our readers in his district to actively assist in sending him to the next Legislature.

A Secretary's Success.

It will please many readers of this Journal to know that Mr. George A. Loth, he of the winning smile and gladsome hand, secretary of the Minnesota State Poultry Association, has been successful in his candidacy for the nomination for the office of sheriff, by the Republican party of Hennepin

county, Minnesota. Mr. Loth has been a deputy sheriff for several years and has made a good, clean record, which his friends seem to appreciate and which will put him in a higher office without doubt. Mr. Loth is the type of energetic man who makes a go of whatever he takes hold of, and it is no wonder that he has been successful in pushing the state poultry show to its present high place in the Northwest. We wish him well at the polls.

Prevention Better Than Cure.

There are a great many diseases to which fowls are subject that, if taken in time and the proper precautions taken, might be avoided, thus saving an immense amount of worry and labor as well as adding very materially to the profits of the poultry business.

It is very discouraging indeed when the young chicks are attacked with gapes, lice, bowel trouble, etc., any of which will cause great mortality among the young stock. But worse than all these is that dreaded disease—roup.

This disease usually shows itself in the fall or early winter, and when once established in the flock is very hard to eradicate, and is liable to continue during the greater part of the winter. It is this disease to which I wish to draw special attention at this time, as the season will soon be here when it makes its appearance, and as it attacks the fowls after they have practically reached maturity, the loss of one may be equal to that of a dozen lost in infancy.

To avoid this trouble a great many poultrymen build expensive buildings, making them almost air-tight, and keep their poultry confined in these buildings the greater part of the winter, thinking their troubles with roup are ended.

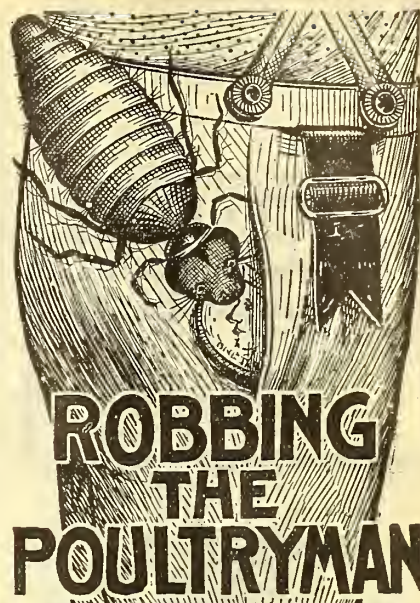

This was brought very forcibly to my mind a few days since, when calling upon a friend who has been in the poultry business quite extensively for several years and who had built a very nice poultry house a few years ago.

This building was built similar to a dwelling house, sided with good lapping, with several windows, and lathed and plastered on side walls and veiling. Upon entering I noticed that the plastering had all been taken off, and when asked why this was done I was told that there had never been a case of roup on the premises until the poultry was placed in this building, and since that time they had not escaped a severe attack of roup every year until last fall, when the plastering was all taken off and the widows taken out and replaced with muslin. The result was not a single case of roup appeared in the flock.

This is very convincing evidence that damp, frosty walls and foul, impure air are the most prevalent causes of roup. And that sometimes, when we think we are putting in a little more money than we can well afford for the comfort of our fowls, we are not only throwing it away, but are also throwing it where it will cause great injury to our flocks.

Remember the old adage, "An ounce of prevention is worth more than a pound of cure." Fancy, high-priced buildings are not necessary.

Good dry, comfortable quarters, well ventilated and with no direct drafts,

Every louse on your poultry is a robber. The longer you let them work the more money you are out of pocket. Stop them with Lambert's Death to Lice—the old favorite louse and vermin killer. Saves time because it does the work quickly; saves money because it saves fowls, saves you from bankruptcy because it turns loss into profit.

Get Death to Lice

It never fails to do the work. It is made in powder form for sprinkling, as a liquid for spraying, or as an ointment for head lice on young chicks. Lambert's Death to Lice is certain, safe and sure—a louse killer, and a profit maker.

WHAT HOBBS THINKS OF IT.
Ellenburgh Center, N. Y. March 7, 1905.
Mr. D. J. Lambert,
Apponaug, R. I.

Dear Sir:
Your Death to Lice is worth its weight in gold to any man who keeps poultry. It is fine for setting hens and the chickens grow strong.
(Signed) WILL HOBBS.

See that the name and picture of "Lambert" is on the cans. Ask your dealer for Lambert's Death to Lice. 100 oz. package \$1.00. Sample mailed postpaid, 10c.

White Wyandotte Popularity.

How It Came About and Why Interest in Them Is Undying.

Written for A. P. J. by H. P. Rankin, Hartington, Neb.

With all that has been said and written about White Wyandottes and with all the prominence of this grand variety of fowl which is doing such a great good work to help push the old barnyard mongrel out of existence, still the public and a large number of breeders, fanciers and poultry enthusiasts do not realize how and why this great and lasting popularity came about.

Without fear of authoritative or successful contradiction, it is safe to say that no one variety of fowl in all the world today surpasses them as an all-round general purpose utility profit-paying chicken and that they have very few equals as ornaments for the show room or lawn when bred in their purity by our most progressive American breeders by their latest and most advanced systems.

But with all the desirable qualities which the White Wyandotte possesses, would they be where they are today in America, if they were not purely an American product? I can hear all true Americans answering, as with one voice, "No, never." Like the American citizen himself, who is the result of a mixture of Dutch, German, French, English, Irish, Scotch and what not, the acknowledged leader of all peoples, master of all trades, a specialist in any, so our American varieties of chickens and especially "America's Big Four," which includes the Barred, White and Buff Plymouth Rocks and White Wyandottes, have been found by actual test and experience by our government experiment stations, egg farmers, market poultrymen and life-long fanciers to have no superiors if any equals in producing large quantities of eggs, extra choice sweet-meated, yellow-legged table poultry, or graceful, handsome and finely-feathered show specimens, that are interesting, pleasing and delightful to the eyes of all who admire the beautiful.

It is a fact that the White Wyandottes have been blessed with a highly progressive club of live and active members, a most worthy, original and capable secretary, besides its many other pushing, sincere and influential officers, but these facts alone would never in the world, in such a live, progressive country as America, and in such a wide-awake day and age of the world, put a variety of poultry at the very top and into such lasting prom-

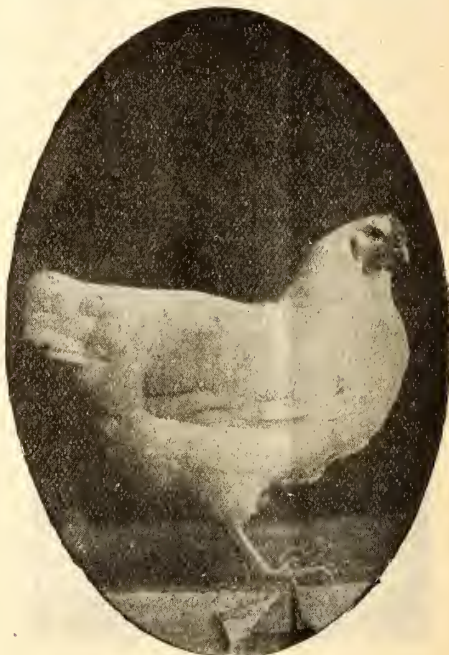

inence and popularity as that of these beautiful birds, if they did not pay the profit by bounteously filling the egg basket, the dinner pail and the world's bread basket with superb quality.

White Wyandottes as they are bred today by our most progressive Ameri-

White Wyandotte Male.

can breeders are fast approaching the perfect standard at which we are all aiming. The creamy, brassy and flecked plumage is rapidly giving place to pure white-quilled and snow-white feathers, good combs are the rule rather than the exception, while pearl or glassy

White Wyandotte Female.

eyes have been replaced by the red or bright bay, white or part white earlobes to the pure scarlet red and green or colorless legs to the beautiful yellow so much admired and sought after in both our show rooms and markets.

The American people have become

CHICAGO, ILL.

thoroughly wedded to yellow-legged fowls, knowing only too well that a clean rich yellow leg is one of the strongest guarantees of good health, a strong and robust constitution with like backing for generations of vigorous parent stock, while white or bloodless legs often denote an anemic run-down constitution with a lack of stamina, stability and vitality.

Fanciers, breeders, poultry experts and even farmers are fast learning that naturally yellow-legged fowls are not inclined to throw or breed green-legged birds and this fact, together with the knowledge that green-legged birds can be sold for nothing but cheap utility stock, that they are graded low and discounted on the market, while the buyers of fancy table poultry are gradually becoming more and more suspicious of any but first-class poultry, has created an even greater demand for the yellow leg. Of course, much leg coloring depends upon the houses, runs, foods, conditions, etc., furnished the growing chicks and the breeding stock, but it is also true that the yellow leg of the White Wyandotte is one of its strongest points for favor, not only as a mark of beauty but as a sure proof of stamina.

Thus we have today in our bird of curves, not only a fowl that is beautiful to the eye on the green lawn or in the well-lighted show room, but one that will fill the egg basket as full as the fullest and at the same time produce as much of the very finest and choicest poultry meat at as little if not less cost than any other breed in existence.

The writer does not make these claims to boost or boom White Wyandottes, neither is it his desire to exaggerate or make one overstatement. Their march is steadily onward, as it will ever be, for they were produced by Americans for Americans and meet our American demands.

My object in writing and giving these few lines to the public is that I may perhaps help some beginner, amateur or possibly someone who has made a mistake and chosen a variety that has proven unsatisfactory, to select one that will bring them the desired results both now and ever afterward, and without fear or favor, for such a purpose I can heartily recommend the White Wyandotte variety, for long will they continue to represent a type and a large portion of the much-talked-of "Better American Poultry and More of It" in our land.

"Profits in Poultry Keeping Solved" is the title of a new book published by Edgar Briggs, New Rochelle, N. Y. This book tells how to select a farm suitable for the poultry business; "how to build the best and cheapest houses; how to care for four thousand layers without help; what to feed to produce the most eggs and how to feed it." Mr. Briggs has spent many years' time in study and experimenting with feeds for poultry and we believe has at last discovered how to produce the greatest amount of flesh and eggs at the least cost. Anyone who doubts Mr. Briggs' statement can be convinced by paying him a visit at New Rochelle, N. Y., where he is manager of the Bonnie Brae Poultry Farm. Here will be found a practical demonstration of Mr. Briggs' system, which will convince the most skeptical that it is all he claims it is.

I. A. Freeman, proprietor of La Grange Poultry Farm, La Grange, Ohio, has some young and old stock for sale of the following varieties: S. C. Buff Orpingtons, Buff Cochins, S. C. Brown Leghorns, R. C. White Leghorns. Ask for free circular and mention American Poultry Journal.

STANDARD BONE CUTTER CO.,
MILFORD, MASS.

AFTER ALL IT'S THE OIL

Even temperature has a great deal to do with the successful hatching and rearing of chicks. Even temperature often depends on a very simple thing—the kind of oil you use. Impure oil clogs the wick with impurities from the acids in the oil. A crust forms on the top, the flame grows smaller, the heat becomes less intense, the lamp begins to smoke and much mischief is done. There would be larger per cent hatches, more vigorous chicks and fewer chicks smothered to death in brooders if pure oil was used.

Wyandot White Oil

is a pure oil refined by a process which frees it from impurities found in other oils. It burns with a constant, steady flame without smoking or making any fumes of an injurious character. The wick does not get gummy or dirty and the lamps are easier to care for. Wyandot White Oil is a perfect fuel; insuring the steady evenness of temperature so necessary for the best results in both incubator and brooder. Try it and be convinced. Write for circular and prices. The Wyandot Refining Co., Dept. A, Cleveland, O.

HINTS ON ADVERTISING.

Originality in Advertising is One of the Main Points—An Advertisement Brings the Inquiries, the Advertiser Must Make the Sales.

Written for A. P. J. by Rev. C. E. Petersen.

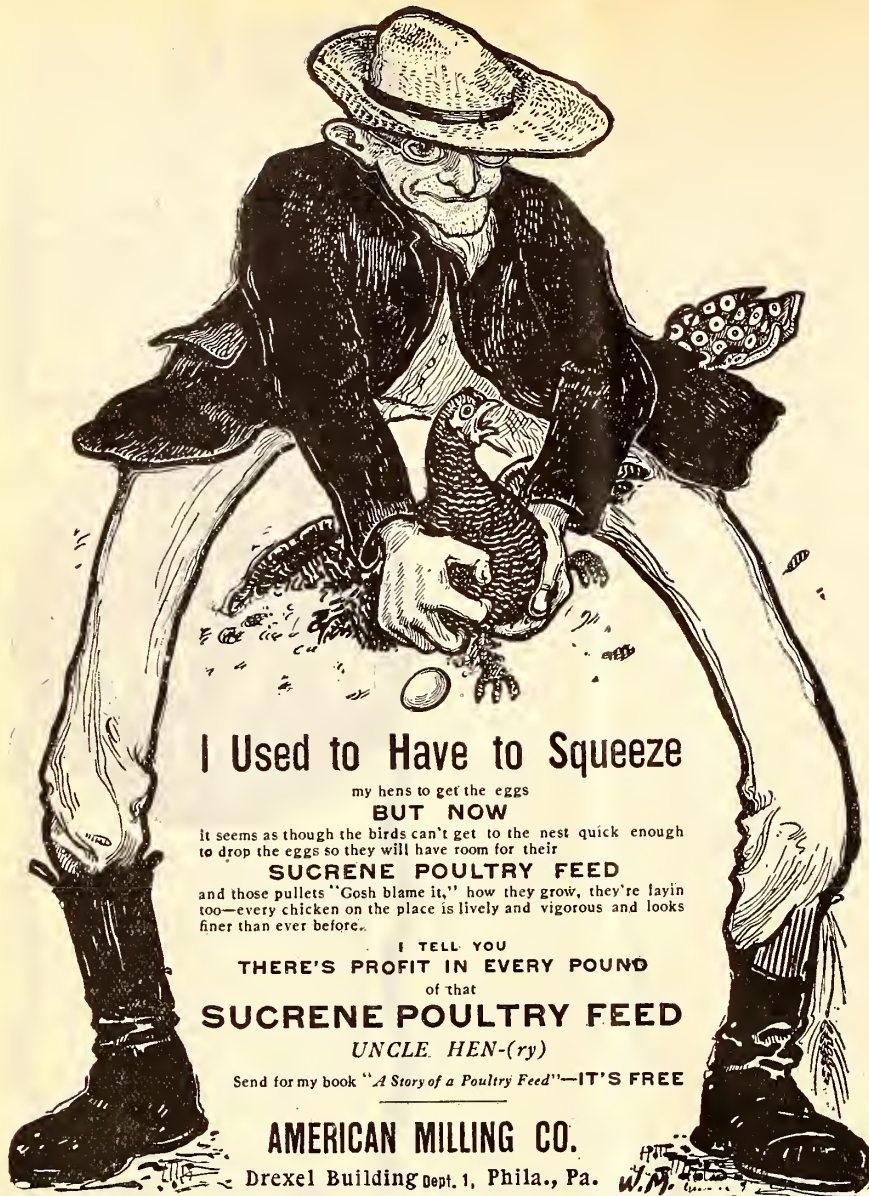

If you have got the goods and you ram home the selling points through some good medium, business cannot but help to come to you sooner or later.

In writing an advertisement tell the truth; then if you cannot think of anything else, repeat it.

A man is known not only by his advertisement, but by the way he backs it up—good stock keeps on talking business.

Show your birds and win the ribbons, then make your ad dance to their whistle.

There are just four foundation principles to good advertising. The first is display it well, then tell the merit, tell

I Used to Have to Squeeze

my hens to get the eggs

BUT NOW

it seems as though the birds can't get to the nest quick enough to drop the eggs so they will have room for their

SUCRENE POULTRY FEED

and those pullets "Gosh blame it," how they grow, they're layin' too—every chicken on the place is lively and vigorous and looks finer than ever before.

I TELL YOU

THERE'S PROFIT IN EVERY POUND

of that

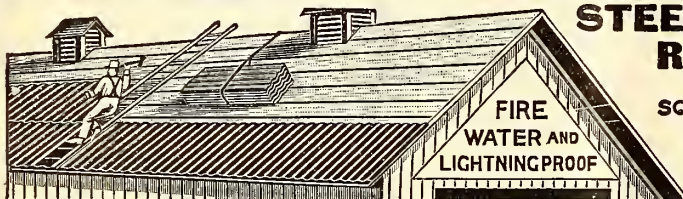

SUCRENE POULTRY FEED

HOUDAN COCKEREL.

First Boston cockerel and champion challenge cup winner. A splendid proportioned bird, of a long ancestry of winners. Bred and owned by C. E. Petersen, Penbrooke, Me.

the merit, tell the merit—these are the other three.

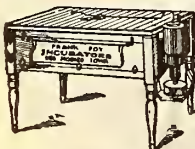

Be original; don't follow in anyone's steps. Say what you have to say; say it in the same way you would say it to the man if he was face to face with you. Never mind how your ad looks to the other fellow—if it brings results keep right on in the same way; don't get off the track as long as it leads to results.

You cannot run an incubator on last year's heat, neither can you run your business successfully on last year's advertising.

I have known a number of men who persistently refused to advertise and depended on their winnings to do the business; they had won a reputation at show after show, and expected that this would sell their stock for all times. Other men bred the same kind of birds and did advertising, and the time came when the former man ceased to sell and purchasers came to the latter.

It is no use to depend on the notice given in a show report—this will not

"MONEY in POULTRY."

Our new 84-page book for 1906 tells how to make it; also how to breed, feed, grow and market your poultry for best results. This book probably gives more reliable information about the poultry business, obtained from actual experience on the largest farm in America devoted exclusively to the rearing of pure-bred poultry, than any other book published. Describes and illustrates 25 varieties of our pure-bred fowls. Quotes extremely low prices on stock, eggs, incubators and brooders. Mailed for 4c in stamps.

successfully advertise a man's stock but for a little while.

If a man should buy a fine pen of fowls and then board up the yard in which he kept them so no one could see them, this would be very foolish indeed; yet that is exactly what a man does who has plenty of fine stock for sale but refuses to advertise.

Don't expect your advertisement to do miracles for you; it takes time to build up a good trade, but once it is built up it stays as long as the buyers are satisfied.

Don't stop advertising during the dull months, but push business with all your might; when the other fellows are taking a rest you work.

Find a good field, then sow your ad—and you will reap a harvest of customers in due season.

It has been most beautifully stated that "the ad is the bud of promise, the inquiry the blossom of hope, and the order is the fragrant fruit."

It is always best to answer every inquiry you receive, whether you have the stock inquired for or not; you may have it some other time, and it is even possible that the prospective customer may wait.

It is poor business to pay out good money for advertising and then spoil your own ad by a poorly written reply, and on stationery of poor quality. Have a printed letterhead and a return envelope; it gives confidence in your business capacity. The other way is a free ad of slovenliness and confidence is destroyed.

It is not enough to tell people that your stock is the "best in the world"—the buyers are weary of such threadbare publicity.

It is absolutely necessary to prove that your stock is either the best, or has some special qualities that makes it an important factor in the other man's breeding yard, and taking everything into consideration as to quality, style and productiveness, is cheaper than any other stock he could get, even if the price is much more than the other man offers the same birds for. When you can do this you are on the right side of successful publicity.

Wit alone won't do it, as a cleverly put up ad may draw attention, but in itself is not enough.

To shake a man's faith in the breed in which he is interested, or in the strain from which he got his stock, strong arguments are needed—smooth, plausible talk will not do it; nothing but facts and figures will, and so in answering any inquiry state plainly and honestly where your birds are superior to others, give their winnings if any, and make your letter so convincing, because it breathes the spirit of truth, that it will shake your inquirer's belief in his present connections, appeal to his reasoning powers, and it won't be long before you have another customer on your books.

A good photographic illustration of your stock is one of the best means to follow up your ad; it tells more in a glance than the words you could use in the description of one or more specimens, but let me repeat "a good photograph," as a poor one, will spoil an otherwise good ad.

A good camera is a wise investment for the poultry fancier. Keep it in your pocket, and every now and again an opportunity will present itself for a bit of poultry portraiture that will

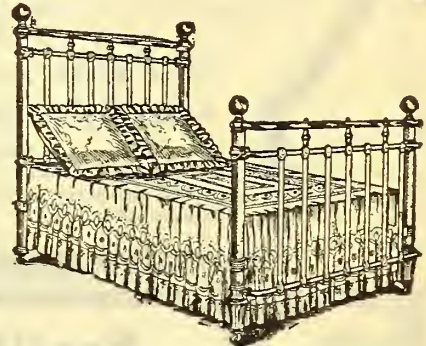

Furnish Your Home Absolutely Free!

We want every woman in the country to know the great saving our plan of direct dealing will afford her; that is, buying direct from the manufacturer all her household supplies.

We want to show her in actual dollars and cents just how much money she can save every month by our "FACTORY TO CONSUMER PLAN." We also want to show her how she can furnish her home, absolutely without cost, with the latest and most up-to-date furniture, on our FREE HOME FURNISHING PLAN.

Make Your Grocery Money Buy Both Groceries and Furniture Without Extra Cost

This can be accomplished if you will buy your household necessities, such as Teas, Coffees, Baking Powder, Soaps, Flavoring Extracts, Spices, Pickles, Rice, etc., direct from us.

Brass Trimmed Iron Bed Free with a \$10 assortment of groceries and other products.

When you purchase \$10 worth of groceries and other products from your home merchant, you pay from two to four times more than the original cost of production, because the manufacturer, jobber, wholesale dealer have had their profit and expenses added to the actual cost of the goods after they left the manufacturer, and before they reached you. And who pays this difference, this profit? You! When you purchase \$10 worth of groceries and other products from us, the manufacturers, you save the above profits and expenses, and you secure the goods at actual manufacturer's cost.

This accounts for the fact that we can give you choice of \$20 worth of products, usual retail value, without premium for \$10. Or we give \$10 worth of products, usual retail value, and a \$10 premium, both for \$10. Every article and every premium is guaranteed to give satisfaction or money refunded.

Groceries at Half Price on Our "Factory to Consumer Plan"

If you don't need the premiums you can buy our high-grade groceries for just one-half what regular dealers charge.

To convince you that the groceries and premiums we offer are high-grade, we send both on 30 days' trial. We even allow you to use them—test them—and if not satisfactory you can return them at our expense and your money will be returned without a question. What more can you ask? One trial will convince you that we can save you money.

A \$10 premium is saved every time you use \$10 worth of groceries and other products in your home. Write today for our large list of premiums and other information regarding our money-saving plans, and learn how to cut your living expenses to one-half.

A. P. J.

WINTER COURSE IN POULTRY HUSBANDRY AT THE CORNELL UNIVERSITY, ITHACA, N. Y.

The date of the opening of the winter course in Poultry Husbandry at Cornell University, Ithaca, N. Y., has been changed. This begins December 6 instead of the first week in January as heretofore. The course has also been

HOUDAN HEN.

A five-year-old Houdan hen who has won first at Boston several years in succession and taken all ribbons for shape and color. Bred by Rev. C. E. Petersen, Penbrooke, Me.

lengthened from eleven to twelve weeks. This change of date was made in order to enable the students who had completed the course to begin operations on their own plants, or for others, three or four weeks earlier in the spring than they formerly have been able to do, which is a distinct gain, the three or four weeks in the spring being worth very much more than the same length of time in the fall of the year. They have already received about twice as many inquiries about the poultry course as they have received at the same time in former years, which indicates that, notwithstanding their increased facilities, they will be unable to accept all who apply. Inasmuch as applications are filed in the order that they are received, the above announcement is made in order that any who may have anticipated taking the course will know of the change of date and not be too late in making their application.

This is a worthy and very beneficial line of instruction in poultry culture and we most heartily recommend it.

3

Profitable Poultry Foods

Midland Poultry Foods are profitable because each one of them is a scientific preparation for a specific purpose. We know what they will do, and we sell them under a guarantee to do it. You feed them without loss of time or feed in experimenting. Just now you will want to begin feeding to fatten your fowls for Thanksgiving and Christmas Holidays. You will also want to commence feeding your hens and pullets for eggs.

No. 3 pushes your pullets on to maturity, preparing them for early layers. It is the greatest fattening and finishing food ever fed for early broilers; for fattening hens it has no equal.

No. 3 is a complete balanced ration—feed it as a mash—it will make you lots of money.

No. 7 does the same thing for ducks. Every duck grower in the land needs **Midland Duck Foods**. They have turned many a duck farm from a losing to a profitable business. The largest duck raisers in this country and Europe endorse them. We can supply you with a special **Duck Food** covering every period of a duck's life. They will increase your profits—stop your losses.

No. 4 the feather and egg food—starts your lazy hens and your pullets to laying early—keeps them at it all winter. It puts that beautiful, glossy plumage on your show birds that wins the prizes for you.

No. 4 makes fine feathers and lots of eggs—with it you can actually control your egg supply to a wonderful extent. We sell it in car lots to the big poultry-raisers who feed for profit and get it.

Grenadier Meal is the great milk-fattening food that produces the very choicest fowls the markets afford. Milk-fattened poultry is a luxury and always brings top-notch prices—from 5c to 10c a pound over birds fattened in any other way. Our two free books, "The Science of Poultry Feeding," and its companion, "Poultry Fattening Perfected," tells how to feed scientifically for more profitable results. These books are worth many dollars to any one raising poultry either for pleasure or profit. We send them both free, and will tell you how and where to buy **Midland Poultry Foods**.

NEW TURKEY FOOD

Here is something entirely new and unique, a combination Turkey Food. The turkey cannot provide his own living profitably. He must be fed an appetizing food at regular intervals. A proper ration for the turkey must contain the choice bits of food he would find on his foraging expeditions.

Midland Turkey Food

contains everything the turkey appetite craves and will produce a tender, juicy, sweet flesh. We guarantee **Midland Turkey Food** will produce the choicest morsel of turkey flesh you ever ate, and do it at a profit to you. It can be fed to the young and old turkey alike, and will be the greatest money-maker you ever fed. Feed it to your young and old turkeys from now on and see the difference.

GRENADIER MEAL

Midland Poultry Food Co.
Dept. A Kansas City, Mo., U. S. A.

Mica Axle Grease

Makes the Load Lighter

An ounce of grease is sometimes the *only* difference between profit and loss on a day's teaming. *You know* you can't afford a dry axle—do you know as well that Mica Axle Grease is the only lubricant you can afford? Mica Axle Grease is the most economical lubricant, because it *alone* possesses high lubricating property, great adhesive power and long-wearing quality. Hence, the longest profitable use of your outfit is to be had, *only* when the lubricant is Mica Axle Grease.

Mica Axle Grease contains powdered mica. This forms a smooth hard surface on the axle, and reduces friction, while a specially prepared mineral grease forms an effective cushioning body between axle and box. Mica Axle Grease wears best and longest—one greasing does for a week's teaming. Mica Axle Grease saves horse power—consequently saves feed. Mica Axle Grease is the *best lubricant in the world*—use it and draw a double load. If your dealer does not keep Mica Axle Grease we will tell you one who does.

WEST VIRGINIA STATE FAIR.

The poultry at this fair was one of the leading attractions, and from early morning till the gates closed in the evening there was a continual stream of people passing through the Poultry building. There were about 2,000 birds on exhibition, quality very good. Chas. McClave, of New London, Ohio, showed a large string of birds, winning 101 firsts and 45 seconds. I was very much impressed with the exhibit of Grand View Rabbit, Jos. R. Connihan, Prop., of Wheeling, W. Va. He made a clean sweep with his Belgian Hares. The Sure Hatch Incubator Co. was represented by Mr. Herman Seelig, of Indianapolis. Mr. J. D. Rice, superintendent, has been in charge for the last fifteen years. He has made the Wheeling fair what it is today. The awards were placed by Robt. Shields, Hanlius, Pa. J. Brinkama.

OHIO STATE FAIR.

The Ohio State Fair, held at Columbus, Sept. 3 to 7, was a grand success. The poultry building on these grounds is an imposing brick and glass structure, located in close proximity to the

live stock buildings, and with its splendid equipment of coops and pens, arranged in tiers that the various classes can be shown collectively; the excellent provision for light and ventilation, and the general arrangements for passing through the building, have called forth high praise from fanciers in all sections of the country.

The success of this exhibition was largely due to its superintendent, Mr. S. G. Case, of Shreve, Ohio. Chas. McClave, New London, Ohio, made the best winnings with his land and water fowls, winning 116 first and 56 second prizes! The awards were placed by Ira Keller. The incubator companies represented were Prairie State Incubator Co., I. A. Freeman in charge; the Sure Hatch Incubator Co., C. A. Johnson in charge.

INDIANA STATE FAIR.

The Indiana State Fair, held at Indianapolis, was a grand success. Better stock and better management than ever before. Mr. I. N. Brown, of Franklin, was in charge of the poultry department. C. E. Spaug, of Rugby, won most on Barred Plymouth Rocks, winning 3 firsts, 3 seconds, 2 thirds. U. R. Fishel, Hope, Ind., made a clean

Cyphers Poultry Remedies for all diseases of Fowls. Single Vial 40 cents. Case complete \$3.00.

75 cents each; \$8.00 dozen.

IT TAKES A POULTRYMAN TO KNOW THE NEEDS OF POULTRYMEN.

That's why all goods manufactured by Cyphers Incubator Company are a little better than others. We pride ourselves on the fact that this Company is composed of men who have devoted their lives to the poultry business, men who have met their difficulties in the showroom and in the poultry market just as you have done. Their combined knowledge has been the step to success both for this company and for its numerous customers. This combined knowledge is your safeguard and makes certain that what you buy of Cyphers Company shall be better suited to your needs than any other you can buy. Our principle is Quality first—the price as low as we can make it.

Successor to E. F. Bouldin & Co.

sweep in White Plymouth Rocks. J. C. Fishel, Hope, Ind., won the following on White Wyandottes: 3 firsts, 2 seconds, 2 thirds. Peter S. Hurt, Thornstown, Ind., won 7 ribbons on Buff Leghorns. I. N. Barker & Son, 4 prizes on Light Brahmas. Mrs. U. R. Fishel, Hope, Ind., 4 firsts on Bronze Turkeys. Chas. McClave won 33 firsts, 14 seconds, 16 thirds, on his land and water fowls. In the incubator exhibit the Chambers Incubator Co., Shelbyville, Ind., report the most sales. This incubator has many new features. Frank L. Shaw, Palestine, Ill., and C. E. Carter, Onarga, Ill., graduated from the school for poultry judges.

COLUMBIA CITY, IND.

The Columbia City Poultry and Pet Stock Association are perfecting their arrangements for their seventh annual show, December 13-19, 1906. James A. Tucker will judge. The method of judging has undergone a change, as all prize winners will be selected by comparison and the rest will be scored by the score card system, giving every bird value received. After considerable discussion we adopted this method, concluding it would be more satisfactory; it is much more rapid, and we believe the more fair. The association will furnish free coop room to all exhibitors, as we are having all new coops built sufficient in number to coop 1,500 birds. Columbia City is noted as one of the best patronized poultry shows in the Middle West, and breeders intending to make an exhibit this coming winter would do well to consider this show. We offer you the advantage of a first class judge and a moderate charge for entry fee, free coops, feed and A No. 1 care and attention for your birds by expert poultrymen, liberal cash and special premiums and last but not least fair and impartial treatment. In short, the bird will be scored, not the breeder. Another thing for the breeders to consider, this city will entertain for three days during the show the Indiana State Grange Association. No less than 1,000 strangers from every section of Indiana will be at this Grange meeting and we anticipate a large per cent will attend the poultry show. We state without fear of contradiction that Columbia City will hold the best show in the State, as the association is composed of about sixty members and every member is a breeder of thoroughbred poultry. Competition in nearly every prominent variety is keen and a bird that can win a ribbon in this show can go in any class in America. We are now preparing the premium list for the printer and it will be ready for distribution about October 20, 1906. For information and particulars address the secretary, who will cheerfully answer all correspondence. Philip Anthes, Jr., secretary.

DOVER, N. J.

The Dover Poultry, Pigeon and Pet Stock Association will hold its second annual exhibition November 26-December 1, 1906. Stanton Bean, judge.

This association is in a position, financially to pay liberal premiums to exhibitors, and they are prepared to give \$200 as special premiums, besides silver cups, etc., on all the popular varieties. The show will be held in a fine large hall and they are endeavoring to

Paraffine Hints for the Housewife.

Many of the cares that once made heavier the housewife's burden are vanishing before her increasing knowledge of the wonderful possibilities of refined Paraffine as a labor saver.

Paraffine is one of the most useful of all wax products. Its small cost is making it wonderfully popular, and the up-to-date housewife finds it almost indispensable.

She preserves her jellies and jams by pouring a little melted paraffine over the top of the contents of each glass. The paraffine in cooling, forms a perfect airtight seal that prevents mould and assures cleanliness. It saves the bother of cutting papers and fitting lids, as no other cover is necessary.

Another and somewhat similar use for paraffine is for sealing fruit jars after the lid has been screwed on. As every woman knows, a defective rubber, careless handling, or any cause for the admission of air results in a can of spoiled fruit. She can insure every can of her fruit by inverting the can after the lid is screwed on, and dipping into a pan of melted paraffine.

A teaspoonful of melted paraffine stirred into the hot starch improves the gloss and prevents the sticking of the iron, while half a cupful of chipped paraffine mixed with the soap on wash day is a wonderful saver of labor.

The highest grade of paraffine is manufactured by the Standard Oil Co. for household use, and is sold by most grocers. It is a beautiful translucent wax, tasteless and odorless. It is put up in moulded cakes, of about one pound each, and neatly wrapped. Full directions for use with each cake.

In these days it requires no argument to convince people that Nature's method of incubating eggs is the correct one. While her operations are full of uncertainties, her plan is not to be improved upon. The Chambers incubator, which is advertised in this issue, presents a new development in this direction. Its superposed heat and fresh air ventilation bring forth from everyone who examines them the remark: "That certainly is hen sense." The machine is not odd nor erratic in build, but a sensible combination of the best that is known in material and structure with an interior arrangement that insures to the eggs such conditions as they have been hatched under for countless ages. Safety and convenience in operating have been insured by a number of new appliances, among which the "ever ready" thermometer and the self-supporting drawer front tray are especially worthy of note. The Chambers Incubator Company, Shelbyville, Ind., will gladly send catalogue containing plain talk on incubation to anyone on request.

Dr. O. P. Bennett, Mazon, Grundy county, Illinois, has disposed of his property and practice in Mazon and will locate elsewhere. On account of this change he will offer for sale all of his flock of over 500 chicks and breeders with the exception of about twenty breeders. He is in position to give someone a very great bargain if they can take the whole flock. Write him without delay.

R. E. Haeger & Co., Algonquin, Ill., report that they have the finest and largest bunch of Barred Plymouth Rocks that it has ever been their good fortune to raise, and they are ready to fill orders for big, husky early birds, that are ready to go in the shows and win. Write them today for their large illustrated catalogue, and mention American Poultry Journal.

C. E. Spaug, Rugby, Ind., has some very fine exhibition Barred Rocks for sale. Mr. Spaug's birds have won the blue ribbons at Cincinnati, 1906, and the Indiana State Fairs. Write for circular.

J. R. Connhian, proprietor Grand View Rabbitry, Wheeling, W. Va., has some first class Belgian Hares for sale. He made a clean sweep at the West Virginia State Fair. Anyone interested should correspond with him.

Mrs. Anna L. Day, Fillmore, Ind., has in the neighborhood of 500 Barred Plymouth Rocks to dispose of. These birds have free range on a ninety-acre farm. Mrs. Day has won at leading shows for the past five years. If in need of first-class stock write for circular.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

COMFORT FOR HOME MAKERS.

The women who read this department are practical home-makers, the majority of them personally overseeing the work of their households. A large part of each day must necessarily be spent in the kitchen. Why, then, should this not be made one of the pleasantest rooms in the house? It does not follow that this means an outlay of money. On the contrary, the dingy, barren room, whose only merit is the spotless cleanliness which is the reward of doing one's own work, can be so gradually transformed that it will not even require much extra time or strength from the already taxed worker. If old-fashioned rag carpets are now considered worth placing on sale in the finest city stores, surely a pretty woven or braided rug or two of this same material, in bright colors, can find a place on the kitchen floor. Artistic pictures abound in these days of magazines, and the covers of the American Poultry Journal from month to month make

"poster pictures" which are genuine works of art. Do not be afraid of taking too much comfort in the kitchen. An old rocking chair, retired from the sitting room, with new cushions of bright calico or cretonne, is an ideal place to drop down in while preparing vegetables and, by the way, if you have an old piano stool, or can get one at the annual rummage sale of your church, spend a few cents for it. It can be raised until you can half sit, half stand, and iron in comfort, or wash the dishes, and when through with it, it can be screwed down and slipped under the table, out of the way. It is a woman's duty to take the easiest ways of doing her work, and many tired workers might save themselves a dozen times a day if they would think of these things and plan accordingly. Last, but by no means least, have a bit of growing green in the window. This may be as useful as it is pretty. A root of parsley from the summer garden, a little plant of cayenne pepper, with its glossy green leaves and bright

red pods, or even a pot of spearmint for "mint sauce," will not only take from the chill effect of winter but will add flavor and variety to the dinner meat as well. As long as women must work, let us be sensible and make it a pleasure instead of a task, remembering that a comfortable and cheery room will add a hundred per cent to our spirits and react through them upon the entire household.

EXPERIENCE DEPARTMENT.

This department is for the benefit of all our readers, and is to be just what its name signifies. Communications on all matters pertaining to household economics and experiences which have helped you and will help others will be very welcome.

Mrs. A. L. Porter, of Des Plaines, Ill., writes: "I wonder if the readers of the Household Department would not like to try my method of making apple chutney? It is delicious with meats. I take a dozen large, tart apples and pare and core them, and add two chopped green peppers from which the seeds have been taken, a teacupful of seeded raisins and two medium-sized onions, chopped. Cook this slowly for two hours in a porcelain kettle with a quart of apple vinegar, then add two teaspoonfuls each of sugar, salt, mustard seed and ground ginger. Some may like the mixture sweeter. Let it cook up and can while hot. If you don't like it to eat as a meat relish this winter I will be much mistaken."

Mrs. C. J. Stone, of Los Angeles, asks if some reader of the department will tell her a good use for sour milk

Paroid Roofing-

-Read This Trial Offer on the Roofing That Lasts the Longest.

PAROID is the best ready roofing ever made. You can prove it, to your own satisfaction from a sample, but a better way is to use it.

All we ask is that you try it, and we make the way easy.

Here's Our Offer:

BUY one lot of Paroid; open it; inspect it; apply it to your roof, and if then you are not satisfied that you have the best ready roofing made, send us your name and address, and we will send you a check for the full cost of the roofing, including the cost of applying it.

Is there any offer we could make you fairer than that?

Could we afford to make such an offer if we were not sure that Paroid is better than other ready roofings?

It is better; we are sure; and this is why:

Four things enter into the making of a good roofing:

The felt; the saturation; the coating; and the method of laying. Paroid excels on all four points.

* * *
The felt is the foundation. If it is not right to start with, no treatment of any kind can make it into a good roofing.

We know that our felt is right because we make it in our own mills (established in 1817.)

We make it because we cannot buy a felt elsewhere good enough for Paroid.

Other manufacturers who buy their felt in the open market—wherever they can get it cheapest—necessarily take big chances at the very start.

We couldn't give you the money-back guaranty we do if we did not make the complete roofing under our direct supervision.

* * *
Paroid roofing is not merely dipped in a solution, but is soaked in a water proofing mixture of our own, which renders every fibre of it—through and through—absolutely water proof.

* * *
And then the coating. Paroid is coated on both sides with a smoother, thicker, tougher and more flexible coating than is on any other roofing made.

There is no room for doubt about it. You need not take our word for it. Use your own judgment. Compare Paroid with other kinds. You will find that Paroid is the only roofing that doesn't

break when you give it a short bend. If you can freeze the various samples you'll have a still better test, and you'll find Paroid the only flexible roof in a zero temperature, while others crack like an icicle.

* * *
But even the best roofing must be properly applied.

In every roll of Paroid you will find a complete roofing kit, with a supply of square, rust-proof, water-proof caps. The only rust-proof cap made.

These caps are patented. You get them only with Paroid.

Being square, they give you larger binding surface and so hold the roof more securely.

Being water-proofed on both sides, they do not rust and work loose and cause a leak, as all other caps do, sooner or later.

* * *
And when the roof is laid, you not only have a good and durable,

but you have a sightly roof. Its smooth, uniform surface, makes it the best in appearance of all ready roofings.

* * *
And there you are:
The best felt for a foundation;
The best and most thorough water proofing saturation;
The best and most flexible coating;

The most sightly ready roofing made;

And a positive money-back guaranty.

Will you try it on these terms?

* * *
They are some of the reasons why Paroid has stood the test of time for the United States Government, for railway, factory, farm and poultry buildings.

It lasts longest. It gives best service. And we stand back of it. May we send you samples and prices?

F. W. Bird & Son, 13 Mill Street, East Walpole, Mass., 1413 Monadnock Bldg., Chicago, Ill.

Cut Out and Mail This Today.

Please mail me your book of plans for farm buildings and samples of Paroid. I enclose 4 cents for postage.

Address _____

aside from cooking. She has a quantity left every day or two which she has to throw away.

Mrs. A. L. Williams, of Denver, tells of her way of using stale cheese. She cooks rice by placing it in a double boiler with plenty of boiling water, then does not touch it until it is done and each grain is separate and mealy. Taking a deep pie tin, she butters it well and puts in a half-inch of rice, a layer of grated cheese, which should be thoroughly dry before it is grated, bits of butter, salt, pepper and a little sweet milk. Another layer of rice is added, with cheese, butter and seasoning over it, and the rice is made quite moist with milk. Cook this for from twenty minutes to half an hour and serve hot as a side dish at dinner. It is much more delicate than macaroni cooked the same way.

Mrs. N. E. Wright, of Defiance, Ohio, sends three good hints. She says, in her letter: "Have any of the household readers ever tried saving their empty cracker boxes, lined with par-

C. E. SPAUGH.

Breeder of Barred Plymouth Rocks, Rugby, Ind.

affine paper, and using them for baking sponge cake? They will not burn and the paper prevents the cake from sticking. I often bake potatoes on top of the stove when I am in a hurry and the oven is not hot by putting them on an asbestos mat and covering with a deep pan. They are mealy and well cooked. By the way, if you are in a hurry for either sweet or Irish potatoes, and can't wait for them to bake in the usual way, try boiling them for fifteen minutes and then baking them. They have all the flavor of the baked ones and the skin is tender and not all dried up, as is the usual case in baked potatoes. I enjoy reading the Household Department, and hope that others will pass along some of their experiences for my benefit."

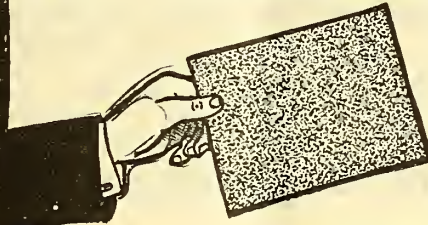

Mrs. Ida Ferris, of Clear Creek, Ohio, says: "I live on a farm near a small lake and can secure plenty of ice, but have never felt that I could spare the money for a refrigerator. Will some reader of this department kindly tell me how to improvise one at home which will be practical and not waste ice?"

No time like the present to give those houses a coat of whitewash.

FREE FOR YOU TO TEST

☞ We are so sure that Amatite is better than any other roofing that we want to send a Free Sample to every one who will mail us their name and address. We know Amatite is a great improvement on the ordinary ready roofings.

☞ It doesn't require painting or coating every year or two to keep it tight.

It has a non-conductive mineral surface, which gives it long life and offers absolute protection against rain, snow, hot weather, cold weather, frost and ice. You can depend upon it under the most difficult conditions.

☞ Any one can lay it. No skilled labor required. Nails and Cement free with every roll.

☞ It is a fire retardant. And of importance, its price is very low.

☞ Do not omit this chance to get a Free Sample and Booklet about it.

Let Me Hand You My Latest Book on Poultry Culture **ABSOLUTELY FREE**

I want to send you a copy of this book free. It is a gold mine of practical information for the poultry-raiser. I call it "An Easy Lesson in Poultry Culture," because the lessons it teaches are easy to learn and easy to apply. My object in publishing this book is to point out how dollars in place of cents can be made in producing poultry and eggs for market purposes. It is stated so plainly that the novice can follow the directions and make a success of the poultry business. I especially commend the chapter "The Back-Letter," to the city dweller who wants to "try-out" this business before going into it on a large scale. And then I have another book—a good companion for this one—"Poultry Feeding for Profit" that you should have also. It is full of feeding facts that I know, from actual experience, will be valuable to every chicken raiser. It gives feeding methods and information that will be helpful every day, for every fowl on your place—from the little chick "just out" to the old hen you are fattening for market. There is lots of money in the poultry business if you know how to handle chickens right. These two books will give you all the information you'll need—information you can put into practice. You cannot get this information anywhere else. Write today, I will send both books free, and also send my catalog on Model Incubators and Brooders the latest and most successful hatching and rearing machines on the market.

Do not confuse me with any Company, and be sure to include my street address

Pearl Grit For Winter Eggs

Begin now feeding for winter eggs. To develop young pullets and put them in the best condition for egg production they must have plenty of shell-making material. The system must be strengthened with energizing and vigor making elements. The fowls should have daily access to substances that build them up physically and make them strong and healthy.

Pearl Grit is just the thing for this purpose. There's nothing in the grit line just as good. It makes strong, healthy, productive fowls because it supplies them with Calcium Carbonate (Lime), Magnesium, Iron, Silicon and Aluminum Oxides and other shell-forming, muscle-making and egg-forming material. It's a splendid grinder, clean, sharp and white; having no dust and no waste—watch the fowls go for it. If you want results "Throw Pearl to Poultry." Write for prices and our booklet, "True Grit." We send it free.

COULSON'S

Balanced Rations for Poultry

The feed that made Petaluma famous as the greatest chicken center of the world. Over 1,000,000 laying hens.

Shipping nearly 10,000,000 dozen eggs per year. 2,000,000 dozen yearly set in incubators, besides vast amount used for home consumption : : :

Wonderful Opportunity FOR THE POULTRY INDUSTRY TO GROW

Their First Birthday—Time, December.

These pullets were fed on Coulson's Mash Egg Food since they were three months old, and they have been laying since they were five months old. The above photograph was taken in December, on W. G. Aldrich's Poultry Farm, Petaluma, Cal. Notice two large buckets full of eggs from one day's gathering. Healthy, happy hens, singing and laying eggs from morning until night.

EASTERN Climate is even better than California for raising poultry. All that is needed is the proper feed.

This will now be supplied. A large eastern factory is being established at Kansas City for preparing Coulson's world-renowned mixed feeds for poultry, and by or before October 1st a number of carloads of Coulson's poultry feeds will be shipped to various cities.

Orders are now being taken and agencies established in the different cities and towns for the handling of Coulson's poultry feeds in car lots of not less than 15 tons—about 350 sacks to the car.

A TRIP THROUGH THE EASTERN STATES.

Mr. Jas. W. Bell, Associate Editor American Poultry Journal, Makes a Visit to Some of the Large Poultry Plants in the East and Tells Our Readers What He Saw.

Worthington Poultry Farm, Elmsford, N. Y.

Everybody in the east knows the proprietor of this farm, Mr. Fred Harries, and everybody in the west should know him. He is one of the few men in this world who always wears "the smile that won't come off." The accompanying illustration was taken by the writer during a recent visit to this farm and shows "Fred" and a few of his young Indian Games and Buff Orpingtons. Mr. Harries has established an enviable reputation as a breeder of White Holland turkeys, and always wins all the good prizes wherever he shows this variety. He has also made a good record on his Indian Games and Buff Orpingtons at the New York shows. Owing to the attention that he was compelled to give to his extensive

teaming business the past year, he was unable to raise as many chickens this season as usual, but will have about 800 from which to select his prize winners. Some of the young Indians gave great promise at the time of our visit, and we have no doubt but what he will get his share of the prizes at the next Madison Square Garden show.

Mr. Harries has always been a very active worker in the American Buff Orpington Club, and by his efforts has contributed much to the success of this club. He is also closely identified with the Westchester County Poultry Association, which holds one of the largest and best state shows each season, and there is probably no one, outside of Mr. Cook, who is more familiar with the breeding of Buff Orpingtons than Mr. Harries.

We spent a very pleasant afternoon with Mr. Harries and was loath to leave when we did; but, owing to the fact that our time was limited, we were compelled to continue our journey, so with a hearty handshake we left "Fred" still wearing that happy and contented smile.

Our next stop was at Hartsdale, N. Y., where we visited the Meadows Farm, which is owned by Chas. W. Leavitt, Jr. This farm is under the direct management of Chas. E. Prescott, who greeted us in a most cordial manner. This is a comparatively new farm, but is thoroughly up-to-date in every particular. The illustration shown herewith is that of the brooder house and runs, and shows some 2,000 little chicks in this one inclosure. The older chicks were out on the range in colony houses, scattered over several acres of territory. On this farm they also raise a large number of pigeons, which are sold for fancy prices to the large hotels and clubs of New York City.

Up to the present time this farm has not made much of an effort in the

To Get More Eggs in Winter
 To Get Bigger, Stronger Hatches
 To Get Earlier Maturity
 To Get Heavier Fowls
 To Save in Grain Bills

Try This Way

EVERY atom of matter that the hen puts into an egg, must come from the food she eats. She can't get it in any other way.

So, it is perfectly clear that if you expect to get more eggs, you must give the hen materials to make eggs from—food containing more of the elements that enter into egg making, in an easily digested form.

There is no room for argument there.

But what kind of food is that? Where will we find it?

Well, it so happens that not only the egg, but the greater part of the fowl's body—bone, muscle and feathers, is made up of what the professors call "protein."

Unfortunately, it also happens that protein is found in only small quantities in the grains and vegetables usually fed to fowls, but in exceedingly large quantities in animal matter or food.

That explains why fowls of all sizes and ages, from the youngest chick to the oldest rooster, love worms and bugs above everything else.

They crave animal food, because Natural Instinct teaches them that they need it for growth, development, vitality and egg-making.

* * *

Of course your hens cannot get worms and bugs in winter or when they are confined to close quarters.

You, therefore, must give them this protein food in some other form, if you hope to get the best results from your flock.

You can get this "protein" in its most digestible form—most nearly like the worms and bugs your hens love so much.—by simply taking the trimmings from your butcher's block, the bones of beef, pork or lamb with gristle and meat adhering to them.

They make a perfect substitute—not only because they contain the same food elements as the worms and bugs, but also because, in its fresh, raw state, it is as easily digested and as greatly relished as are the worms and bugs.

In effect it is not something that

is almost as good," but it is identically the same.

It "balances the ration" by supplying what is lacking—or is very scarce, in the grain you feed.

It has more than four times the egg-making value of grain and is rich in the elements needed for making bone and muscle and so promoting rapid growth and developing as well as improving the vigor and vitality of the entire flock.

That is why fresh-cut raw bone

—doubles the egg yield by giving the hen egg-making material in its most easily digested form;

—makes more fertile eggs, produces larger hatches and livelier chicks, because it makes hen and

"beef-scraps, can take the place of raw bone.

It is the live worm the hen craves, not a dried up carcass, and it is raw, fresh animal food that does her the most good and is the most easily digested.

If dried, or cooked or embalmed or preserved it naturally loses a large part of its value.

Neither should you class raw bone with the advertised "poultry foods" or "condition powders" made from secret formulae, for which such extravagant claims are made. Your hens do not need these compounds or medicines to make them lay, if they have the right kind of material in their food.

Neither do they need the ready

To prove what it will do, we will send you any Mann's Latest Model Bone Cutter that you may select from our catalogue on

Ten Days Free Trial

(No money in advance)

You simply select the machine you want to try—and we send it to you. No red tape, no "deposit," no money in advance.

If it does what we claim it will do, you buy it. If not you return it at our expense.

Can we make you any fairer offer than that?

* * *

You will find that Mann's Bone Cutter turns easily, cuts rapidly and produces better poultry food than any other.

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

It makes better poultry food than any other because it cuts not only all green bone, but also all adhering meat and gristle—wasting nothing and leaving no chunks or slivers.

Its open hinged cylinder takes large bones and can be easily kept clean.

It is strong and durable and requires few repairs.

But try it and see—that's the way to tell.

Send Today for Catalog

and make your selection of machine for trial.

We will do the rest.

TEN DAYS FREE TRIAL
 No Money in Advance.
MANN'S
 LATEST MODEL Bone Cutter.

cock more vigorous, fuller of vitality, so that the eggs have more life in them;

—develops earlier broilers and layers and makes heavier market fowls, because it promotes growth by supplying the elements most needed for making bone and flesh and muscle;

—makes red combs, bright eyes and glossy plumage, because it gives the fowls that variety of ration so necessary to their health and well being.

No matter what line of poultry raising you are in, fresh cut raw bone will help you get better results and make more money.

And the beauty of it is, it costs you but little more than the labor of cutting it.

* * *

Don't be persuaded, however, that "bone meal" or so-called

mixed foods whose composition you don't know, and which you would consider extremely expensive if you did know their ingredients. You have to buy them "on faith;" you don't know what is in them.

How much better to use raw bone, and mix your own ration, using the cheapest grains and yet being sure that you have the best and most economical of all rations.

* * *

Of course the bone must be properly cut, but that is an easy matter with

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

DR. O. P. BENNETT :: Box 233, Mazon, Grundy Co., Illinois

fancy poultry line, but Mr. Prescott informed us that the coming season it was his intention to devote the greater part of his efforts toward building up a flock that would be second to none in the show room. We have no doubt of his ability to do this, and this farm will no doubt be heard from in the show room the coming winter.

**The Bonnie Brae Poultry Farm,
New Rochelle, N. Y.**

This farm is located in one of the garden spots of New York state, and is only about forty-five minutes' ride from New York City, the greatest poultry market in America, and therefore a good deal of attention is paid to the market question on this plant, but the fancy is by no means neglected.

This farm is under the direct management of Mr. Edgar Briggs, who is so well and favorably known in the poultry world, as the man who has discovered the secret of making hens lay at all seasons of the year at less than one-half the usual cost of feed. This is fully demonstrated on this farm, where we saw a flock of White Leghorn and White Wyandotte pullets four months old that were almost full grown and had been laying for some time. Considerable attention is given to Pekin duck raising by Mr. Briggs, and there were over 3,000 head of young Pekins on the place at the time of our visit. A flock of ducks of this size is a grand sight to behold. The accompanying illustration is from a "snap-shot" of one of the breeding yards of Pekins, in which there were over 1,600 young ducks.

Mr. Briggs informed us that he had over 1,500 head of young Leghorns and Wyandottes from which to make selections for the fall and winter shows, a large number of them being almost up to Standard weight in the middle of July, and gave every indication of developing into extra fine breeding and show specimens. Plants of this character are worth going miles to see, as here you will see a theory put to practical test and the most skeptical will go away convinced that Mr. Briggs has discovered the secret of how to make money out of poultry.

**Willow Brook Poultry Farm,
Berlin, Conn.**

Willow Brook Poultry Farm, the home of the Orpingtons, is located near Berlin, Conn., where the proprietor, Mr. W. L. Davis, resides. At the time of our visit to this plant Mr. Davis was absent on an extended automobile tour, but the manager, Mr. Harry Lamon, was very much in evidence. The great majority of our readers are acquainted with Mr. Lamon, as he has been an advertiser with us for a number of years.

Under the able management of Mr. Lamon the Willow Brook Farm will no doubt come rapidly to the front as the leading Orpington farm in the country. Many alterations are being made and new buildings being erected, which will add greatly to the facilities of this already large plant.

Owing to the fact that their egg trade was so heavy last spring they did not get out as many early chicks as they desired, but what is lacking in quantity will be made up in quality. In Blacks they are especially strong, and no doubt have the finest flock of Black Orpingtons in the U. S. today,

8,000 sq. ft. of Black Diamond laid over shingles.

More rolls of Black Diamond Ready Roofing are in use today than of all other ready roofings combined.

There's a good reason for it. Black Diamond was the first good ready roofing to be put on the market, and it got a long start. It could never have continued and maintained its present supremacy if it did not have merit. *Thousands of satisfied owners*, whose testimony we have in our possession, have advertised and recommended Black Diamond to neighbors and friends. Records of ten years and more of satisfaction prove the value of this veteran roofing.

Sample and Booklet mailed free on request.

Address the nearest office, **BARRETT MANUFACTURING CO.**, Black Diamond Dept. New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

HOW THE TELEPHONE HELPS THE FARMER

You Want This Free Book

Of course you need a telephone. You need it for business, for the family, in sickness, in case of fire, or in danger of any kind. The question is—how can you get one on your farm? This little book which we send free the same day we get your request answers the question perfectly and tells you how to get the greatest convenience of the twentieth century so easily and cheaply that it becomes a positive saving and a money-maker, instead of an expense. It tells all about

**Stromberg-Carlson
Telephones**

which are made in the largest independent telephone plant in the world. These are the best instruments for farmers' lines, because they have been constructed by experts for this particular purpose. They are described in detail in the booklet, together with full information on the organization of farmers' lines, the manner in which they are built, cost of material, etc. You want this book, 8¢; "How the Telephone Helps the Farmer." Write for it today.

and their young Blacks are showing up strong, and there is no reason to doubt but that their record the coming season will be up to the usual high mark made during past years, when the Willow Brook Farm generally captured everything they went after.

Our time was limited to a few hours at this place, but the short time spent here was enjoyed very much, as Mr. Lamon is one of those gentlemen who makes a visitor feel right at home, and especially one who is interested in "chickens," as he is a thorough chicken "crank" and is in his element when showing off the good and bad points of any particular specimen, and is one who sees the inferior qualities of a bird as readily as the good points, and this is the secret whereby he has been enabled to produce so many prize winners in the past and which will enable him to bring the Willow Brook birds to a high state of perfection.

Arthur G. Duston, So. Framingham, Mass.

The home of Duston's Wyandottes is located about 22 miles from Boston and the ride on the trolley line is a most delightful one, especially on a hot summer day. The farm is located about two miles from So. Framingham, from where it is necessary to take a rig, as the trolley line does not go past the farm.

Upon our arrival at the farm we found Mr. Duston in his working clothes busily engaged in showing some visitors about the place, and we hastened to make our presence known and joined the other sightseers.

Mr. Duston has accomplished a great deal since moving to this place, as the farm was absolutely without a poultry building when he moved onto it, and now he has eight large breeding houses, besides numerous smaller ones, and contemplates the erection of several more up-to-date buildings in the near future.

Duston White Wyandottes are too well known to readers of American Poultry Journal to need any praise from us; but we desire to say that our expectations were fully realized after a careful inspection of the many fine specimens of this variety on this plant. The young stock, while not as far advanced as some others we had seen, were coming along nicely, and gave every promise of developing into fine specimens that will capture some of the blue ribbons the coming season.

By careful and persistent breeding Mr. Duston has built up a strain of White Wyandottes that for breeding and exhibition qualities are hard to beat and he has built up his large business by fair and honest treatment of his customers.

The few hours we spent with Mr. Duston were enjoyed very much, and we wish to assure our readers that they will receive a hearty welcome from Mr. Duston any time they can make it convenient to visit him and inspect his stock.

J. H. Jackson, Hudson, Mass.

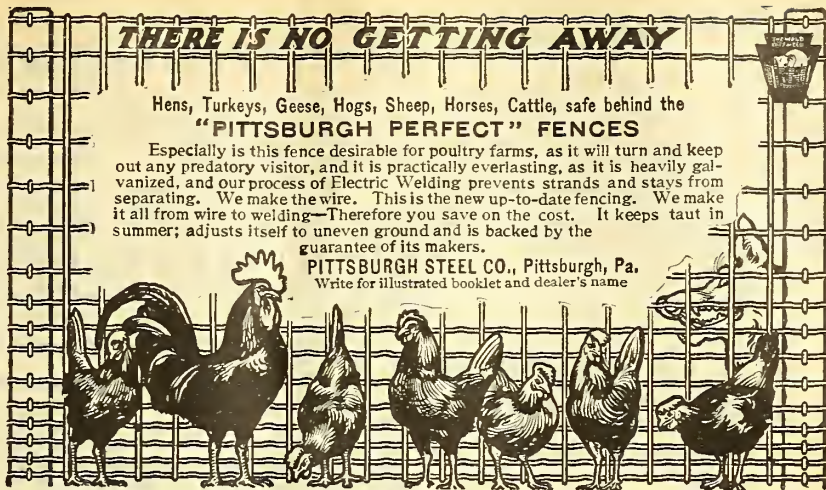

After leaving Mr. Duston's place we continued our trolley ride to Hudson, Mass., which is about 20 miles from So. Framingham. Here we visited the yards of Mr. J. H. Jackson, another White Wyandotte specialist. Mr. Jackson is not as well known to our readers as some of the other breeders that we have mentioned, being a compara-

THERE IS NO GETTING AWAY

Hens, Turkeys, Geese, Hogs, Sheep, Horses, Cattle, safe behind the
"PITTSBURGH PERFECT" FENCES

Especially is this fence desirable for poultry farms, as it will turn and keep out any predatory visitor, and it is practically everlasting, as it is heavily galvanized, and our process of Electric Welding prevents strands and stays from separating. We make the wire. This is the new up-to-date fencing. We make it all from wire to welding—Therefore you save on the cost. It keeps taut in summer; adjusts itself to uneven ground and is backed by the guarantee of its makers.

We have a full line of poultry supplies, poultry and eggs.

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

TRY IT Before You Buy It

We have a new and unique plan whereby every poultry raiser in the land may try the "DANDY" GREEN BONE CUTTER at our expense. It won't cost you a cent. Simply write us. We'll explain our plan and tell you how you may have

15 DAYS' FREE TRIAL

of any size "DANDY" that you want. This 15 days' free trial will give you ample time to test it and in every way satisfy yourself that it is just the machine you need to make your poultry more profitable. Green bone will make you lots of easy money and the "DANDY" will prepare the bone easily and quickly. It will cut it so that your chickens can get the greatest possible good from it. Cut Green Bone is a highly concentrated food containing all of the elements that hens need to make them lay lots of eggs. Feed it to your hens; they will amply repay you with a big increase of eggs in winter when eggs are high. The money you spend for a "Dandy" will come back to you very quickly in the increased number of eggs. We don't ask you to take our word for what the "DANDY" will do for you. We only ask the chance to send you one and let you try it before you buy it. Will you do it? If so, write today for free illustrated catalog and full information. Ask about our free trial plan. R. E. JONES, "The Pines," R. F. D. 50, Paducah, Ky.

tively new advertiser with us; but although a new advertiser with us he is not an amateur in the breeding of fowls, having been in the business for a number of years, and has the reputation of breeding some of the best White Wyandottes ever produced in the east. Mr. Jackson devotes his entire time to the breeding of this variety of fowls. The question is often asked: "Can a living be made from poultry?" Mr. Jackson is demonstrating that this can be done, as he informed us that his only source of income was from his poultry, and judging from the prosperous appearance of everything about his home he is making a living that the ordinary man might well be envious of. As our time was very limited we were compelled to make our visit a very short one with Mr. Jackson, so after looking over some of his fine specimens in both old and young stock, we bid him adieu and continued our journey.

A. C. Hawkins, Lancaster, Mass.

We arrived at the home of Mr. Hawkins about the middle of the afternoon and was informed that Mr. Hawkins was working out in the harvest field. Of course we were surprised, for we had never heard any one accuse him of working before, but being desirous to see for ourselves we journeyed out to the oatfield, and sure enough, there he was pitching oats "to beat the band," but as soon as he caught sight of us he quit his job and remarked something about work and him not agreeing very well, any way, and that we had better go back to the house and take a look at his Columbia Wyandottes. Of course our readers don't know that he has had a bad case of Columbia Wyandotte fever, but he has. So bad, in fact, that he had in the neighborhood of 600 young Columbians, and as nice a bunch of chicks as we ever laid eyes on, and Mr. Hawkins expects to go to Madison Square Garden with a good string of this variety and that means that he is going after the blue ribbons, and he generally gets what he goes after.

Of course, this does not mean that Mr. Hawkins is going to give up his interest in his Bared, White and Buff Plymouth Rocks and Silver, White and Buff Wyandottes, but is merely adding one more popular variety to his breeding yards. He informed us that he was raising more stock this season than ever before of all varieties and that the demand for birds of his breeding is steadily increasing year after year.

There is probably no breeder in the country today that is better or more favorably known than A. C. Hawkins. He is one of the old time breeders, and is one of the very few who have kept pace with the times and has kept on improving his stock as required by the buying public and has no doubt sold more fine breeding birds of his different varieties than any other breeder in America today.

The buildings on Mr. Hawkins' place are far from being up-to-date, but it is not buildings that count in the production of fine poultry, so much as to know how and what to breed, and that he possesses this knowledge goes without saying. Lancaster is only a short ride from Boston, either by steam or trolley, and it is well worth the time of any seeker after knowledge in the poultry line to make a visit to Mr.

Granite
TRADE MARK
ROOFING

Judge a Roofing By Its Weight

The durability of a roofing depends on the amount of good stuff that is put into it. Granite Roofing contains more material to the square yard than any other roofing on the market, its weight per roll being nearly double that of the ordinary three-ply roofing. Its top surface is stone, thoroughly embedded into its composition. This makes it unnecessary to use paint or coating to protect the top surface, and saves the annual expense for maintenance, which is so big an item with most roofs. Any one can lay it.

Granite Roofing is so heavy, so strong and so reliable, that it is used for large permanent buildings, as well as for light sheds and farm structures.

Let us send you a Free Sample and demonstrate how different Granite Roofing is from the other kinds.

Eastern Granite Roofing Co., New York Chicago St. Louis

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1 1/4 to 1 1/2 lbs. in seven weeks on it. No science required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish, as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit which does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to fowl what teeth are to other members of animal creation. Let us prove the truth of what we say by filling a sample order for you. Manufactured only by

GARDNER & DUNNING

M. S. Gardner, Mgr. : AUBURN, N. Y.

Hawkins' place and get a few pointers on how to make a success in the poultry business.

C. H. Latham, Lancaster, Mass.

Our next visit was to Mr. C. H. Latham's plant, which is also located at Lancaster, and only a short walk from Mr. Hawkins. We found Mr. Latham on his knees (something unusual for poultrymen, as a rule) in his large strawberry patch. Mr. Latham believes in the old saying that "it is better to wear out than to rust out," and judging from the appearance of his fine garden he practices what he preaches.

To those who know Mr. Latham it is not necessary to mention his good qualities; but to those who have never had the pleasure of meeting him we desire to say that there is not a more genial and whole-souled gentleman in the fancy poultry business today. He breeds but one variety and that the old standby, the Barred Plymouth Rocks, and anyone who has read the show reports of Madison Square Garden of late years will have noticed the record made by Mr. Latham on his Barred Rocks at this great show, which goes to prove that he knows how to produce the good ones. This year he is raising more stock than ever before and will be in shape to supply his rapidly increasing demand. Mr. Latham is an ardent worker in the interest of the American Plymouth Rock Club and a great deal of credit is due him for the magnificent prizes this club is able to offer each year at the Madison Square Garden and other shows.

Visit his plant when convenient to do so and get acquainted with one of the most enthusiastic Barred Plymouth Rock Breeders in the country.

Jas W. Bell.

A WHOLESOME FOOD.

Selected ripe tomatoes fresh picked from the field, put in tin cans in which they are sold, hermetically sealed and immediately sterilized by heat, are one of the purest, safest and most wholesome of foods. It is not true that canned tomatoes are adulterated or doctored with artificial preservatives, as sensational newspapers have declared. Certain brands of canned tomatoes are much superior to others, because of the fruit used and the care employed in picking, selection and handling.—Good Housekeeping.

E. D. Pierson, Addison, N. Y., won at New York State Fair, at Syracuse, N. Y., September 10 to 15, 1906: First and second cocks, first and second cockerels, second hen, first and third pullets, first pen old, first pen young. Winning five first out of six, in the largest class of R. C. Brown Leghorns ever at Syracuse; winning more prizes than all others combined. He has a nice lot of youngsters for sale, bred from the same pen as his winners at the state show.

SILVER LACED WYANDOTTES

UP-TO-DATE

Birds from my yards have won again the ribbons for my customers at many prominent shows last year. My Kansas City record: five 1sts, five 2ds, three specials. Young stock coming on nicely, and a number of fine exhibition birds will be ready for early delivery.

JULIUS BACHMANN, Kansas City, Mo.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Please advise, in Question and Answer department of your next issue, cause and treatment of scaley legs of young and old birds. J. M. Tennessee, Ill.

Answer—Scaly leg is a form of scabies or mange, caused by the mite known as the *Sarcoptes mutans*. It is a contagious disease, but does not spread very rapidly and there may be only a few affected birds in a flock at one time. When the disease is first observed, prompt and energetic measures should be adopted to eradicate it. The affected birds should be isolated to prevent the spread of the contagion. Begin treatment by soaking the legs in warm water, to which soap has been added, until the scales have become thoroughly softened and the loose scales can be removed without causing bleeding. After this has been done apply a good coat of carbolic ointment or balsam of Peru. This should be repeated daily for three or four days. The disease is not a difficult one to cure if the preliminary treatment is thorough and the loose scales and crusts are all removed. After recovering from this disease fowls can be used for breeding purposes.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in next month's Journal: 1st. I have a flock of 80 White Leghorns. They have four or five acres of land to run on, with the exception of 3 or 4 weeks, when tomatoes are ripe. This is what you call a free run, is it not? 2d. Now when snow flies and it is real cold I am supposed to keep these chickens shut up, am I not? 3d. If I do, and I want my eggs fertile, so that I can start hatching in February, how many roosters shall I have to have? 4th. Or in other words, chickens that have a free run, do they have to be shut up in cold weather? 5th. If they do, do I have to make up

pens of so many hens to a rooster? 6th. I feed my flock by hopper and it seems to me they lay around and loaf more than they should. How can you make a hen scratch for a living if you hopper feed, or how do you give them exercise? Wm. R. C. Cleveland, Ohio.

Answer—1st. Yes, this is considered free range. 2d. Yes. 3d. One male to every 10 or 15 females is considered about the right proportion for Leghorns. 4th. All fowls should be confined in extremely cold or stormy weather. 5th. For best results during the breeding season the fowls should be divided into breeding pens, from 10 to 15 in each pen. Where a number of males are allowed to run in a large flock they fight more or less, and the eggs will not be fertilized as well as where each male is given a certain number of females. 6th. Where fowls have free range they will get all the exercise they need; but where confined in pens or small runs during the breeding season we would not advocate hopper feeding; but suggest that all the grain feed be scattered in the scratching material.

Editor American Poultry Journal.

Dear Sir: I would like to ask a few questions through your Question and Answer department. 1. Which are best for setting, eggs that are new laid, or eggs that are several days old? What is the longest time it is advisable to keep eggs before setting them? 2. I have had two or three young chickens who kept their heads turned backwards and seemed unable to walk or stand up. What is the matter with them and what shall I do with them? 3. What should I do with a hen whose crop is hard and packed and who acts choked? Mrs. M. C. Cody, Wyo.

Answer—1st. New laid eggs are always best for setting. Eggs should not be kept longer than two weeks. The longer the eggs are kept the weaker the chick will be when hatched. 2d. This is generally the result of too much heat during incubation. Nothing can be done for chicks in this condition and they should be killed at once. 3d. This is what is known as "crop bound." Pour a small quantity of sweet oil into the mouth and cause the bird to swallow it. Then manipulate that portion of the crop nearest the throat by careful pressure and squeezing between the thumb and finger in such a manner as to break up the contents of the crop and force it towards the mouth in small portions. Suspend the bird head downwards from time to time and press the loosened particles of food towards the head

BIG RETURNS IN EGGS at little or no cost. One extra egg a month will more than pay the cost of Prussian Lice Powder to keep the fowls free from vermin and **PRUSSIAN POULTRY FOOD** to make them lay. It not only helps as an egg Producer but also prevents and Cures **CHOLERA, ROUP, ETC.** and helps on Moulting. I tried the **PRUSSIAN POULTRY FOOD** for roup and it cured my flock. so that they will escape from the mouth. With care and patience the crop may be entirely emptied in this way, if oil is administered as often as is required to soften the contents. After this is accomplished give two grains of baking soda in water, keep without food for a day and then feed sparingly on soft diet until recovery is complete.

Editor American Poultry Journal.
Dear Sir: Will you kindly answer the following questions in your valuable paper? 1. Will hens lay as many eggs or do as well without cocks as with them? 2. Are the Orpingtons as good layers as the Leghorn? 3. Are the Buff Leghorns as good layers as either the Brown or White Leghorn?

Answer—1st. Yes. 2d. We are not prepared to say. In some of the laying contests they have made equally as good records as the Leghorns. 3d. We do not believe there is any material difference in the laying qualities of these three varieties.

Editor American Poultry Journal.
Dear Sir: 1. What causes the rattling noise in throat of chickens, and the remedy? 2. I have some fowls that have what I think to be sore heads; combs and wattles are broken out in scabs. Remedy? 3. What time should Hamburgs commence to lay that were hatched in April?

Dillon, S. C.
Answer—1st. This is usually caused by a cold. A very simple remedy is kerosene oil and lard. Melt a lump of

lard the size of an egg and to this add a tablespoonful of kerosene oil. Give a tablespoonful twice a day for three or four days. 2d. Apply carbolated vaseline to the comb, wattles and head twice a day till cured. 3d. By the first of November.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue how many Light Brahma hens can I keep in a pen 9x12, where they have all the room for scratching and which is the best ration for winter feed? How many White Rocks in same size pen and which is the best ration for same?

Saginaw, Mich. Answer—Twelve to fifteen birds of either variety. Wheat and oats should be the main feed, with a little corn in cold weather. Green food and beef scraps should also be supplied.

Editor American Poultry Journal.

Dear Sir: Would you be so kind as to answer the following questions in

1st PEN CKL. NEW YORK 1906 Bred & Owned by ARTHUR TRETAWAY Wilkes Barre, Pa.

S. C. BLACK MINORCA. First pen cockerel New York, 1906. Bred and owned by Arthur Trethaway, Wilkes Barre, Pa.

your next issue? 1st. I have had several Minorca chicks die, which seemed to have the eyes stuck together, and I often had to open them. Am sure they were free from lice, as I used lard on them often. What is wrong and the remedy? 2d. Had a Minorca pullet whose comb grew black and she grew thin until she died. Fed with a scratch food of corn, wheat, oats, buckwheat, etc. 3d. Have just, by mistake, cut wings of promising young cockerel to keep him in yard. Will they grow in time for winter shows? Will they disqualify him? K. H.

East Orange, N. J. Answer—1st. We are unable to say definitely what the trouble is. This may be caused by a diseased condition of the parent stock or it might come from the chicks getting a cold. In either case it is useless to doctor them, for when little chicks get in this condition they are worthless. 2d. This was caused by a diseased condition of the liver. Diseases of this character are usually very far advanced before they are noticed and it is then too late for medicine to have any effect,

CAPON TOOLS

CAPONS bring the largest profits—100 per cent more than other poultry. Caponizing is easy and soon learned. but when taken in time, one of Carter's Little Liver Pills once a day for three days will have the desired effect. Douglass Mixture in the drinking water will act as a preventive of this disease. 3d. This will probably grow out in time for the winter shows. If it does not, the specimen will be disqualified.

Editor American Poultry Journal:

Dear Sir—I read in the last Journal (August) where parties were troubled by their chicks growing wings and no body and finally dying. I started out with full-blood Buff Rocks and Silver Spangled Hamburgs, and the wings on the Hamburgs commenced growing till they were out of proportion with the size of the chicks, and they commenced to get sickly. It was then that I commenced to look around for a remedy.

For this malady give the chicks sweet milk; keep it in front of them all the time. It must be kept lukewarm—in fact, it is best while the animal heat is still in it. However, you must keep

pure water in front of the chicks, as milk will not quench their thirst, but builds them up. Never give young chicks under three months old sour milk, as it will produce bowel complaint. Feed them boiled rice when they scour, and always keep dry bran in front of them, even when scouring. Never feed them cracked corn, but cornmeal just moist, and keep them in a dry, clean, warm place, and see that they are not in crowded quarters.

Follow this advice and you will have success. I have learned this lesson by reasoning and observing, as well as by experimenting. Rivola B. Bennette.

Vermillion, S. D.

Editor American Poultry Journal.

Dear Sir: Please answer these questions in September edition if I am in time: 1st. Would 150 feet or 200 feet from a railroad be too close for an incubator cellar? The location is on a hill overlooking the railroad. 2d. Would it be necessary to supply artificial heat in a brooder house in west-

ern Kentucky, when raising broilers in winter? The temperature sometimes goes below the zero mark, but usually stands at 18 or 20 degrees above. 3d. Is there a market in Chicago for squab broilers? If so, when do the best prices prevail? G. J.

Cayce, Ky.

Answer—1st. No. 2d. Yes. 3d. There is no regular market for squabs in Chicago, but there is always a fairly good demand.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following in your next issue: I have eight full blooded Black Orpington chicks. Ought these be kept separate from the other stock during the winter months and ought the Black Orpington pullets and cockerels run together this winter? R. K.

Monroe, Ind.

Answer—For best results, they should be kept from the other stock and the cockerels separated from the pullets.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE. STOCK FOR SALE, BOTH OLD AND YOUNG.** Illustrated circular free.

YOUNG STOCK

Over 3000 chicks are now growing on our farm, many of which will be ready for the fall shows. These young birds were all hatched from our own matings, every mating headed by a prize winning male, and all have free range. If you can't get what you want for breeders and show birds of us, where will you find them? Send for large illustrated catalogue and remember we satisfy or refund your money.

F. W. COREY, Manager.

THE BEGINNING OF A GREAT INDUSTRY.

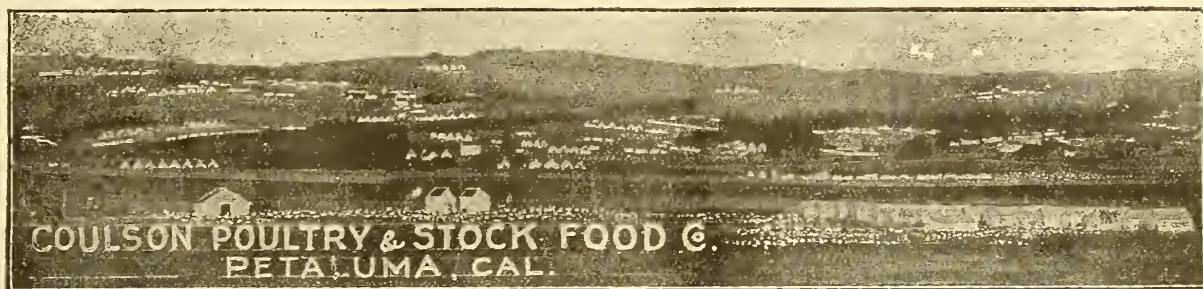

Out in California, at a place about forty miles north of San Francisco, there is a place known as Petaluma, which is famous the world over, as being the greatest white fowl poultry center of the world. At this place the principal industry for miles around is raising white Leghorn chickens, there

and 1,000,000 chickens, has been recognized at last by the national government as a great place. Experts of the Department of Agriculture have gotten out a report on the suburb of San Francisco, referring to it as the gold mine of the chicken industry.

This city of White Leghorns has a chicken hatchery, according to the department that is a whopper. It is probably the largest in the world. In

two of land. As you go out a mile or so from town, the poultry ranches are a little larger, three or five or ten acres, and four or five miles out you find from twenty to 100-acre poultry farms, and if you wish to go ten or fifteen miles out from town you will find poultry farms containing from 500 to 800 acres and with from 6,000 to over 10,000 fowls on these places.

These large ranches were all formerly

More than 40,000 laying hens in one square mile; near Petaluma, California.

being millions of them in an area of 25 miles of the town.

It Is the Greatest Chicken Village in the World.

Petaluma, Cal., known as the Egg Town, or the White Leghorn City of the World, is called so because of the millions of chickens that are raised there; and the most of which are of the White Leghorn variety.

National Government Issues a Poultry Report About Petaluma.

Washington, Jan. 1, 1906.—Petaluma, Cal., with a population of 7,000 people

the incubator house 30,000 eggs are in all stages of incubation.

See twenty-first annual report, Bureau Animal Industry, 1904, Department of Agriculture, Washington, D. C. Write them for free copy.

About nine-tenths of all the people who settle near Petaluma go into the poultry-raising business. Even in the city of Petaluma itself nearly everyone keeps a few fowls in the back yard, and in the suburbs of the town there are parties keeping all the way from 600 to 1,000 fowls on an acre or

stock and dairy ranches, and gradually the owners have gone into the poultry business along with the dairy business, and finding that the poultry, when properly taken care of, proved in most every instance most profitable, hence these dairy and stock ranches have gradually been changed into large poultry farms, many giving up the dairy and stock raising altogether in order to give their time and attention exclusively to the poultry-raising industry.

At one place, about three miles from Petaluma, there is a small valley of

“Better Than Gas or Electricity.”

“I have used The Angle Lamp far beyond the time set for trial and find that one cannot be too enthusiastic over it,” writes Mr. Granville Barnum, of Cold Springs, N. J. “It certainly gives the brightest and at the same time the softest illumination one could desire.”

“We lived, for some years, in New York City, and used all the latest and most improved appliances, devices, etc. in connection with gas or electricity and yet I must sincerely urge the superiority of this simple yet wonderful method of illumination. One can hardly say too much in its praise.”

Notice, please, that Mr. Barnum has used *gas* and *electricity* with all the most approved devices for years. He, like thousands of others who use these systems, would probably have pooh-pooed the idea that an oil-burning lamp (or any other system for that matter) could be more satisfactory—*until he tried The Angle Lamp.*

He now admits that The Angle Lamp is *far* superior. For he has found *from use* that this oil-lamp gives him all that either gas or electricity can give in convenience and something more—kerosene quality light. It floods his rooms with the finest, softest, pleasantest of all artificial lights.

Yet THE ANGLE LAMP Pays for Itself.

For where the ordinary lamp with the round wick, generally considered the cheapest of all lighting methods, burns but about five hours on a quart of oil, The Angle Lamp burns a *full sixteen hours* on the *same* quantity. This, even where oil is cheap, soon amounts to *more* than its *original cost*. But in another way it saves as much—perhaps more.

Ordinary lamps must always be turned at *full height*, although on an average of two hours a night all that is really *needed* is a dim light ready to be turned up full when wanted. A *gallon* of oil a *week* absolutely wasted, simply because your lamps *cannot* be turned low without unbearable odor. *All this is saved* in The Angle Lamp for whether burned at full height or *turned low*, it gives not the *slightest* trace of odor or smoke.

You should know more about the lamp which for its convenience and soft, restful light might be considered a luxury were it not for the *wonderful economy* which makes it an *actual necessity*. Write for our catalog 59, fully explaining this new principle of oil lighting, and for our proposition to prove these statements by

30 DAYS' TRIAL

When such people as ex-President Cleveland, the Rockefeller, Carnegies, and thousands of others, after trying The Angle Lamp, find it profitable to rip out gas and electric-light fixtures, to throw away gasoline and acetylene outfits or ordinary lamps, it is surely worth your while to send a penny postal to find out about it.

Write for catalog 59 which lists 32 varieties from \$1.80 up, and gives you the benefit of our ten years of experience with all kinds of lighting methods.

Page Poultry Fence

Needs no top or bottom boards. Is made of large wire—the smallest being No. 11. All horizontals are high carbon, double strength, spring steel wire, heavily galvanized to prevent rusting. Expansion and contraction are provided for—all the horizontals being coiled coil spring wire. It is easily adjustable to hilly surfaces—the coil does it. Stands up stiff, does not sag, bag or buckle. Costs less erected than common nettings. Looks better. Lasts much longer. Height, 4, 5 or 6 feet. If you need Poultry Fence, write us.

pontry ranches, where there is congregated more than 40,000 adult laying hens in one square mile, to say nothing of the hundreds of thousands of chicks that are hatched there every season.

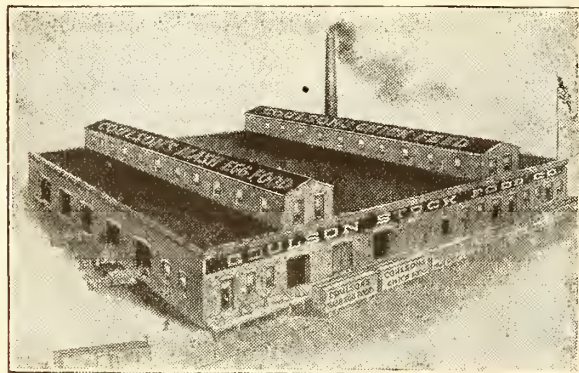

About half a dozen years ago a man by the name of A. R. Coulson had a 40-acre chicken ranch in this valley. This man was naturally gifted in the science and art of preparing good feeds.

Having had a few years' experience with drugs and chemicals, he commenced to study the analysis of different foods and the results that different foods produced. In the course of several years' experimenting he discovered many things. Some foods, while very rich in nutriment, were not easily digestible, and others of high protein content, not very palatable to fowls, and unless food is palatable and eaten with relish, it does not do the fowls or animals much good; and again, other foods, while a certain amount

ever they are used.

As the fame of the success of the Coulsons' feeds spread, many demands for the food were received from the Eastern States. Therefore, in order to supply the feed to poultry raisers east of the Rocky mountains, Mr. Coulson came East and organized a company capitalized at \$250,000, and is called the Coulson Stock Food Company; and the factory is located at Kansas City, Mo., on Fremont street, between Thirtieth and Thirty-first streets, the factory building covering nearly three-quarters of a block.

It is located right in the heart of a country where grain is the cheapest, and where many of the largest flour and cereal mills are located, and also near the great meat packing plants. Therefore the source of material for preparing good feeds for poultry and live stock is naturally cheaper here than any other point in the United States, and also it is the second greatest railroad

Coulson Stock Food Factory, Kansas City, Mo. Largest exclusive poultry and hog feed factory in the world.

would prove valuable, an over amount would prove injurious. Therefore, it took much experimenting and deep study to prepare a correct formula that would produce the greatest results, and also improve the health of the fowl.

This he finally accomplished. He then got a number of the other poultry raisers to try the feed for six months, in various yards, and it proved satisfactory. The feed produced tremendous results, and was pronounced a success.

The Coulson Poultry & Stock Food Company was then organized and this feed was prepared on a wholesale plan and shipped in car lots to all points of California, 327 carloads was shipped in 1905, and this year (1906), notwithstanding the disastrous earthquake, the shipments will be even greater.

One of the prominent members of the Coulson Company, Mr. H. C. Scrutton, is the owner of a model 18-acre poultry farm stocked with 3,000 well-bred fowls, which are fed continuously on these balanced rations. Many visitors who come to the ranch remark about the fine, healthy appearance of the fowls, bright red combs, etc. These birds took first prize at the recent California State Fair. A. A. White, another member of the Coulson Company, has the finest exclusive White Minorca poultry farm on the Pacific coast. In fact, nearly all the members of the Coulson Company keep fine poultry yards. Therefore, it is easy to understand that the Coulson Company know what they are doing when they prepare foods for poultry. Therefore, Coulson's Balanced Rations for poultry always give splendid satisfaction wher-

center, there being more than thirty-five different lines; therefore, the Coulson prepared poultry and stock feeds can be shipped profitably to most any part of the United States.

Free.

The company has had published a book called "Raising Chickens." It contains 104 large pages, beautifully illustrated in colors, showing 200 photographic views of California poultry farms, etc., and contains much valuable and interesting reading. If you are raising any poultry or stock, this book may give you some hints or suggestions that may be worth money to you. The book is free, but to show that you are interested, just send 10 cents to help pay postage, and the company will send you prepaid some samples of the different feeds.

Better mark this place, or better still, "right now" address an envelope to Coulson Stock Food Company, Kansas City, Mo., enclose 10 cents, your name and address, and kindly state about how many chickens you keep and about how many hogs you raise each year. Cut this out:

Coulson Stock Food Company, Kansas City, Mo.

Send one of your books, "Raising Chickens." Enclosed find 10 cents to help pay postage.

My name is.....
Address.....

I keep chickens.
Raise number hogs per year.
Also send me sample of the feeds.
Address Department B, Coulson Stock Food Company, Kansas City, Mo.

CLEAN SOUND SWEET
Offered on their merits as superior stock.

A trial will demonstrate their value.

FOR SALE BY DEALERS

The Albert Dickinson Co.
SEED MERCHANTS
MINNEAPOLIS CHICAGO

A TIGHT ROOF.

A rustproof tin cap is the latest device for getting a tight roof and it seems very practical.

The ordinary cap furnished with ready roofings is made of tin scrap which, of course, rusts in a very short time. The outside is painted but the inside will rust just as quick. Many roofs have failed because of tin caps rusted out.

A patent on this new rustproof cap has been granted F. W. Bird & Son, East Walpole, Mass., the makers of Faroid Roofing. It is made of new sheet steel and has more binding surface than the ordinary round cap because it is square.

THE CENTURY IN 1907.

The fiction of The Century for the new magazine year is to include novels by Frances Hodgson Burnett and Elizabeth Robins, besides the "Running Water" of A. E. W. Mason, which will continue for a number of months. Mrs. Burnett's new story will be called "The Shuttle" and is described as an international novel of English and American life. "Come and Find Me" of Elizabeth Robins will have its scenes laid in California and the far North.

A new serial by John Fox, Jr., author of "The Little Shepherd of Kingdom Come," opens the September number of Scribner's Magazine. It is entitled "A Knight of the Cumberland." The heroine of the story is a northern girl, but all the action takes place in the Gap and in the mountains. The story, which will run through three numbers, is full of the humor and delightful character-drawing which make the charm of Mr. Fox's writing. It promises to be one of Mr. Fox's best stories.

Caspar Whitney, just returned from the head waters of the Orinoco, says in The Outing Magazine for September that he will have something to say in reply to "the illogical, weak explanation offered by the Brown faculty in defense of its unexampled support of professionalism in college sport." Amateur sport in America has no more staunch defender than Caspar Whitney, and his remarks about the unusual attitude taken by the Brown University authorities should prove very interesting reading.

Des Plaines, Ill., September 3, 1906.

I have this day sold to Clement & Fike, of Libertyville, Ill., my entire flock of White Wyandottes, and hereafter shall only breed White Rocks. I think at this date Clement & Fike have more fully developed cockerels and pullets ready for the fall shows than any breeder in America, as they even took from here a large number that have been up to weight for some time past, besides their own large flock, which always has matured by September 1. I refer all my old customers to them, and know they will get a square deal.

J. L. Jefferson.

Mrs. J. H. Orebaugh, Batavia, Ohio, the White Plymouth Rock specialist, is offering her entire flock of noted prize winners for sale at a sacrifice. She is compelled to do this on account of moving to another part of the country. This is certainly a grand opportunity for anyone who desires to get started right with White Plymouth Rocks. Look up her ad elsewhere in this issue and write her at once. Mention American Poultry Journal.

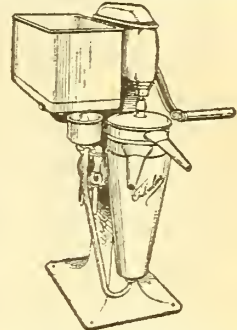

J. M. Detwiler, Dunlap, Iowa, the Barred Plymouth Rock Specialist, writes that he has over 300 of the best young Barred Rocks that he has ever raised, and can furnish customers with choice exhibition or breeding stock from either cockerel or pullet matings. If our readers are looking for something good for the coming shows they should correspond with Mr. Detwiler, and mention American Poultry Journal.

Rock Hill Poultry Farm, of Ossining, N. Y., won at Syracuse, N. Y., State Fair, September 10 to 15, 1906, thirty-seven ribbons on White and Partridge Wyandottes, White and Silver Plymouth Rocks, Silver Comb White Leghorns and Buff Cochins Bantams, in the largest classes ever shown at the New York State Fair. F. W. Corey, manager, Ossining, N. Y.

Peter S. Hurt, of Thorntown, Ind., won at Ohio State Fair, Columbus, September 3-8, 1906, as follows: 1st pen, 1st and 2nd cockerel, 1st and 2nd pullet, 2nd hen, on S. C. Buff Leghorns, in large class.

Because You Need The Money

It's your business and if you don't attend to it, who will? You cannot afford to keep cows for fun. That isn't business, and, furthermore, it isn't necessary. There is money in cow keeping if you go at it right, and besides there is more fun in going at it right than there is in staying wrong.

You need a Tubular Cream Separator because it will make money for you; because it saves labor; because it saves time; because it means all the difference between cow profits and cow losses.

Look into this matter; see what a Tubular will do for you and buy one because you need it.

How would you like our book "Business Dairying" and our catalog B. 205 both free. Write for them.

The Sharples Separator Co.

GREAT WHITE WYANDOTTE SALE

Clement & Fike, the great White Wyandotte breeders of Libertyville, Ill., have just bought the entire flock of White Wyandottes of J. L. Jefferson, Des Plaines, Ill. Mr. Jefferson has made a great success and reputation with his White Wyandottes and has won prizes at the largest shows and his strain is known the world over. The addition of Mr. Jefferson's stock to that of Clement & Fike cannot help but create tremendous interest among White Wyandotte breeders all over the country.

A notice of this sale by Mr. Jefferson appears in another column of this issue and we add below the announcement as sent out by Clement & Fike:

"We have just bought the entire flock of White Wyandottes of J. L. Jefferson, Des Plaines, Ill. Mr. Jefferson's Wyandottes have won prizes at the largest shows and his strain is known the world over. We now own the greatest lot of show birds in the world, and can give you the grandest selection, both in show and breeding stock, of any breeder east or west. The greatest strain on earth now stands without a rival. We now have 5,000 birds for sale."

HIGH CARBON STEEL WIRE FENCE.

Farm fences, like farm buildings, should be permanent improvements.

You don't buy the cheapest lumber for your farm buildings. Neither should you buy the cheapest wire for your farm fences.

The best quality of wire, firmly and securely woven, well stretched on securely anchored end posts, makes a fence that will last for years without repairs—that will outlast the posts.

Quality of wire first and then a practical weave make Page Fence the farmer's fence. Page Fences have been on the market for twenty years, and the first one sold is still a good fence.

Just how they are made is explained in a book which is sent to anyone who writes for it to the Page Woven Wire Fence Company, Box 582, Adrian, Mich.

OTTER CREEK POULTRY FARM CO. RETIRES.

The Otter Creek Poultry Farm Company, of Watertown, N. Y., is going out of business and advertising their poultry farm for sale. The proprietors have made this decision, as other business needs all their attention. They have 500 head of choice S. C. Black Minorcas, S. C. White Leghorns and Barred Plymouth Rocks, for which they claim no better blood anywhere. The farm consists of thirty-six acres with a fine house, healthy location, and they state that this has been a money maker for them.

The old reliable firm of Johnson & Stokes, Philadelphia, Pa., dealers in poultry supplies, has expired by limitation, July 1, and is now turned into a stock company headed by Herbert W. Johnson as president and general manager, who has been at the head of the business for twenty-five years. Other members of the firm, who have been with it from twenty to twenty-four years, are retained in the management of the different departments and as officials. Their new fall catalogue will be ready for mailing about September 1.

The De Graff Poultry Farm, of Amsterdam, N. Y., started in the year by taking a clean sweep at the New York State Fair, Syracuse, N. Y., which was the largest fair ever held and a very large class of Reds. Single Comb Reds owned by this farm took 1st and 2nd on pen of old, 1st and 3rd on pen of young, 1st and 3rd on cocks, 1st and 2nd on hens, 1st and 3rd on cockerels, 1st and 2nd on pullets, besides taking 1st on pen of Rose Comb Reds and Columbian Wyandottes.

Otter Creek Poultry Farm Company, Watertown, N. Y., won at Watertown, N. Y., September 4-7, 1906, as follows: S. C. Black Minorcas, 1st and 2nd cockerel, 2nd hen, 1st and 2nd pullet, 2nd cockerel, 2nd pen; Barred Plymouth Rocks, 1st and 2nd cock, 1st hen, 1st and 2nd cockerel, 2nd pullet, 1st pen.

J. H. Vanden Bosch, Jr., R. R. 7, Auburn, N. Y., has the Promoter strain of White Wyandottes, which are prize winners and layers of extra large brown eggs. Some of the largest breeders in America get their new blood from him. He also has a fine lot of Scotch Collie pups for sale cheap.

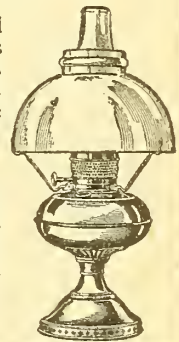

Have You an Extra Room to Heat?

There need not be a cold room in the house if you own a **PERFECTION Oil Heater**. This is an oil heater that gives satisfaction wherever used. Produces intense heat without smoke or smell because it is equipped with smokeless device—no trouble, no danger. Easily carried around from room to room. You cannot turn the wick too high or too low. As easy and simple to care for as a lamp. The

PERFECTION Oil Heater

(Equipped with Smokeless Device.)

is an ornament to the home. It is made in two finishes—nickel and japan. Brass oil fount beautifully embossed. Holds 4 quarts of oil and burns 9 hours. Every heater warranted. Do not be satisfied with anything but a **PERFECTION Oil Heater**. If you cannot get Heater or information from your dealer write to nearest agency for descriptive circular.

The **Rayo Lamp** makes the home bright. Is the safest and best lamp for

all-round household use. Gives a clear, steady light. Fitted with latest improved burner. Made of brass throughout and nickel plated. Every lamp warranted. Suitable for library, dining room or parlor. If not at your dealer's write to nearest agency.

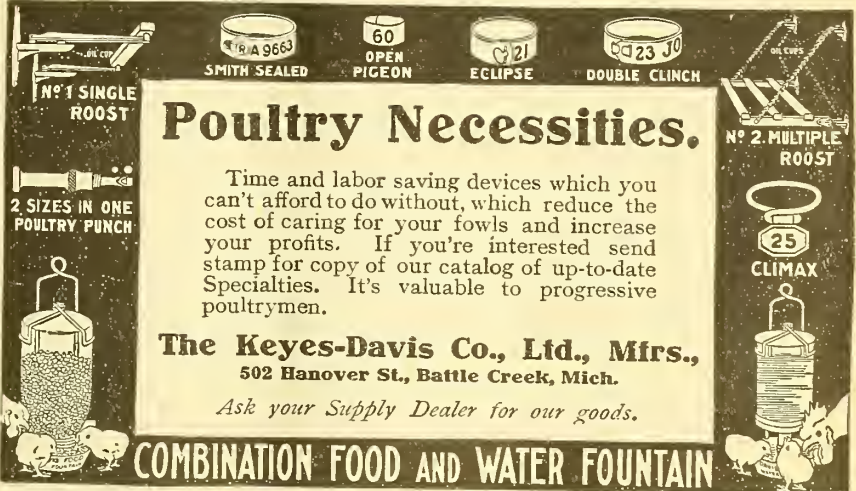

STANDARD OIL COMPANY.

Poultry Necessities.

Time and labor saving devices which you can't afford to do without, which reduce the cost of caring for your fowls and increase your profits. If you're interested send stamp for copy of our catalog of up-to-date Specialties. It's valuable to progressive poultrymen.

COMBINATION FOOD AND WATER FOUNTAIN

CUT ALFALFA HAY

fed in winter furnishes those same elements which make hens lay in summer. It will increase the egg supply when eggs are high. That's why it pays so well to feed it in winter. In summer the hens can get egg-forming elements in green feed and by scratching. Help the hen and she'll help you. Our Free Catalogue will help you save money on anything in the poultry line.

Harvey Seed Co., 30 Ellicott Street, Buffalo, N. Y.

WHEN EGGS ARE HIGH WILL INCREASE THE SUPPLY

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, four cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. Sixty thousand per month. We guarantee an average monthly circulation of 60,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

of six hundred A1 White Ply. Rocks. The chance of a lifetime to get quality at wholesale prices. I will make a special price to any one who will buy my poultry plant, stock, good will and trade, or I will consider a proposition to lease the plant to the purchaser of the stock. I must sell on account of other business. Make haste to write for bargain prices to the

Phoenix Poultry Plant Mrs. J. H. Orebaugh Proprietor Batavia, Ohio

Silver Cup Winner at Cincinnati, January, 1905.

WHITE WYANDOTTES!

Biggs' White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production. Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements. Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America. Eggs: \$3 per setting; two for \$5; three for \$7.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" cleans sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

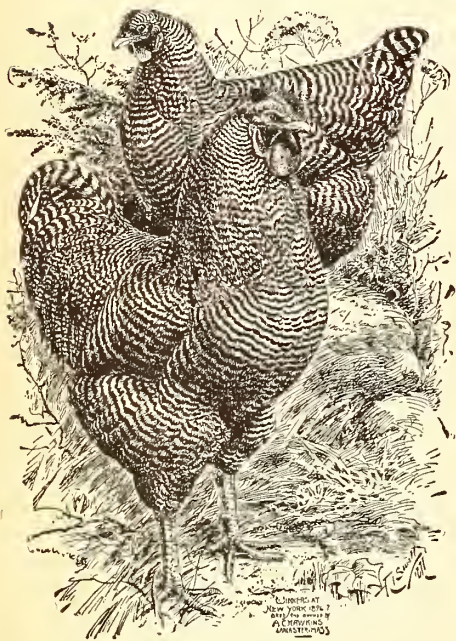

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

YOUNG'S STRAIN OF S. C. WHITE LEGHORNS

I HAVE NO OTHER BREEDS. My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined; including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; cks., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; cks., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 25th yearling hens for sale to make room for young stock.

D. W. YOUNG - Ridgewood, N. J.

EVER LOSE MONEY?
 by investing in one of those guaranteed incubators that fail to work?
 Some people build incubators on the cheapest possible plan and expect a high-sounding guarantee to sell them—but is it a guarantee that you want when you buy a incubator, or is it a machine that you absolutely know will hatch a chick from every fertile egg you place in the tray?
 If you want a hatching machine and not a guarantee we know you will buy a **QUEEN** for it is the only known incubator that will sell without a guarantee, but just to make you feel safe we say: You can take the **QUEEN** on your own terms—we won't place any guarantee restriction on you—just ask us to ship the size you want and keep it, thoroughly test it, then if you find a single fault send it back.
 But, we don't want you to place your dependence in this absolute guarantee—we want you to feel and know that the **QUEEN WILL** hatch your eggs—that's what we build it to do, and that is what it will do.
YOU DON'T NEED INSTRUCTIONS
 The **QUEEN** is built to work automatically—there are no weak spots in it—we don't give you an instruction book which tells you to watch a lot of weak parts. There being no weak spots in **QUEEN** construction the machine must work. Just keep the lamp filled, trim the wick and turn the eggs—those are our instructions—the "**QUEEN**" will do the rest. Our catalogue tells you why we know the "**QUEEN**" will hatch every fertile egg, and why it needs no attention—It is Free.

INCUBATORS OF MERIT

IN EVIDENCE OF SUPERIORITY OF WORKMANSHIP,
PRINCIPLE, AND HATCHABILITY

WE RECALL THE FACT THAT

Cyphers Incubators and Brooders

WON THE GOLD MEDAL

AT THE WORLD'S FOREMOST EXPOSITIONS INCLUDING

PAN-AMERICAN, Buffalo, 1901; WORLD'S FAIR, St. Louis, 1904; LEWIS & CLARK, Portland, 1905

THIS ILLUSTRATES THREE TRUTHS.

FIRST—Cyphers Non-Moisture, Self-Ventilating and Self-Regulating Principle of Construction has been in successful use so many years on so many poultry plants, under so many varied conditions, that it is acknowledged to be **The Only Principle That Makes Results Certain.**

SECOND—Continuous Endeavor, year in and year out, in our Inventive and Experiment Department has given us **Patented Labor-saving and Money-saving Improvements** possessed by no other machine.

THIRD—It has for years possessed above all others the **Quality of Durability; Advanced and Perfect Construction** as proven by our winning of the Gold Medals at America's Greatest Expositions; a **Principle of Heat Application and Conservation of Moisture** that contributes to the Hatching of Strong, Vigorous Chicks that Live; and a **Simplicity of Operation** so important to Beginners as well as to Operators on Large Money-Making Plants.

ADDITIONAL TO THESE FACTS ARE THE FOLLOWING PROOFS THAT

Cyphers Company's
Latest Pattern
Incubators
by Actual Test
Are as
Far in the Lead
as Ever.

READ THIS EVIDENCE OF 1906 AND WRITE US FOR MORE.

(EVERY LETTER CAME UNSOLICITED.)

8,281 Strong, Healthy Chicks.

Vineyard Haven, Mass., March 19, 1906.

Cyphers Incubator Co., Buffalo, N. Y.

Our hatches with your 1906-pattern Standard Cyphers Incubators (No. 2 and No. 3 sizes) have been simply wonderful for January and February eggs. It gives us great pleasure to report that we have hatched 8,281 strong, healthy chicks from 12,562 uncasted eggs. MAURICE F. DELANO, Mgr. Owen Farms.

Came Out Like Ripe Fruit.

Minnesota, Minn., Feb. 27, 1906.

Cyphers Incubator Co., Buffalo, N. Y.

You may be interested in a report from my new No. 3 Cyphers Incubator. I put in 392 eggs and on the fifth day tested out 84. This morning I took out 265 fine chicks—not one cripple or weakling. For winter eggs I call this great work. The chicks left the eggs as freely as ripe fruit drops. A. C. JONES.

Worth a Load of Wheat.

Minnesota, Minn., March 21, 1906.

Cyphers Incubator Co., Buffalo, N. Y.

My 1906-pattern No. 3 hatched again on the 19th inst. I was compelled to remove the nursery drawers to make room for more chicks and have today taken out all told, 361 chickens, and not a weak chick or cripple in the lot. A neighbor looked at this "mob" of chicks and asked, "When are you going to empty that machine?" I told him, and he replied, "I will bring you a load of wheat Saturday and take it home with me." A. C. JONES.

WRITE FOR FREE ILLUSTRATED CATALOGUE of 244 pages, entitled "How to Make Money With Poultry and Incubators." It's a big one. We pay the postage. It contains six of the most valuable chapters ever published on poultry. **Chap. I.**—Magnitude of the Poultry and Egg Industry. **Chap. II.**—Review of Our Great Poultry Markets. **Chap. III.**—Profit Making Broilers, Roasters and Capons. **Chap. IV.**—The Profitable Pekin Market-Duck. **Chap. V.**—Successful Chick Rearing. **Chap. VI.**—Profitable Egg Farming. Also Photographs of Successful Poultry

Plants, both Fancy and Commercial; Photographs of Government Experiment Station Experts; America's Foremost Exhibitors, Owners and Managers; their Poultry and Duck Houses, Incubator Cellars and Brooding Houses; Our Complete Line of Incubators, Brooders, Poultry Houses and Supplies. Built Right-Works Right

The 1906 Standard Reliable Incubator is the product of nearly a quarter century of successful incubator building. The principles of its construction have been successfully demonstrated beyond question. They are in accord with the most advanced scientific and practical ideas and the most direct and simple application of the laws of successful incubation

The 1906 Reliable Incubator

has many features you ought to know about. The double heating system which, besides being more economical and using one-third less oil for heating, preserves absolutely uniform temperature and supplies perfect ventilation. There are no draughts, no hot spots, no cold air but a steady even degree of heat that produces successful hatches every time. Remember our positive guarantee goes with every Reliable incubator. If it doesn't do as we say we'll refund your money—we know it's reliable because it's right. Send for free catalog. Pure bred poultry and eggs from Reliable Farm. Shipped everywhere. Get prices. OTHER TRAP NESTS HAVE COME AND GONE, BUT "THE SUPERIOR" HAS COME TO STAY

J. A. Bickerdike,
Millersville, Ill.

Dear Sir:—I received the trap nests in good shape, and for the man that wants to follow up pedigree breeding they are the best thing on the market, the only sure way of telling which hen does the laying or which hen produces the winners. There are several trap nests on the market, some have come and some gone, but your nest is the best thing that has been produced to my knowledge. It is perfect in every detail.

Wishing you the success due your invention, I am Yours very truly, R. E. JONES.

We are breeders at Pleasant View Poultry Farm of White Plymouth Rocks and White Holland Turkeys. Catalogue free. Address

J. A. BICKERDIKE - The Trap Nest Man - Box A, Millersville, Illinois

MRS. U. R. FISHEL'S Bronze Turkeys

are better this season than ever before, as our winnings at the

IND. STATE FAIR, 1906

prove. I am in position to give some special prices for the next 30 days, and would be pleased to figure with any one wanting turkeys for the show room or for breeders. My turkeys won at Ind. State Fair, 1906,

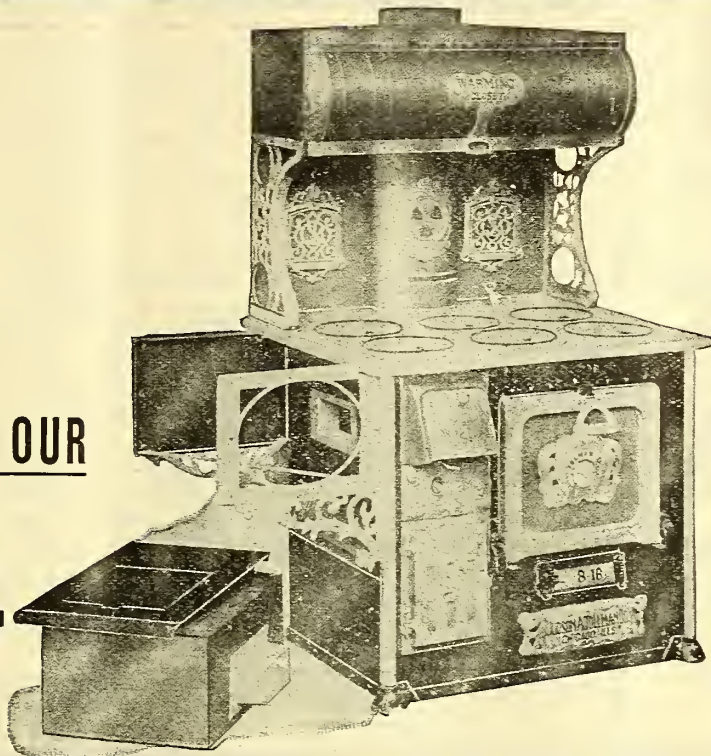

EVERY FIRST PRIZE

which proves their quality. Also winners at New York, St. Louis, Chicago and great St. Louis World's Fair. Write your wants, please. No catalog.

MRS. U. R. FISHEL, Box A, Hope, Ind.

BUILT TO BAKE

LET US
SEND YOU OUR

MONEY-SAVING
FREE CATALOGUE

OUR NEW CATALOG shows a complete line of over 100 styles and sizes of Stoves and Ranges, at prices which merit your attention if you are in the market for our goods. It contains Stoves and Ranges of the very latest styles, for all kinds of fuel, and tells how we sell direct to you from our own factory at wholesale prices; furthermore, how we ship on trial at our risk. It gives many valuable cooking recipes, and is filled with practical stove talk from cover to cover. If you think \$15 to \$40 worth saving, don't buy until you have heard from us.

Here is What You Gain by Buying a Tolman:

1. A Stove that will save enough fuel to pay for itself in less than a year.
2. A Stove guaranteed TEN YEARS, and will last a lifetime.
3. You save \$15 to \$40 by buying of us.
4. We ship to you, subject to your examination, a Range or Stove of the VERY HIGHEST

GRADE, and you pay the VERY LOWEST WHOLESALE PRICE, because we are actual manufacturers and therefore save you all jobbers' and dealers' profits.

5. When you receive your purchase it is all ready to set up for use. No experience required—you can do the work yourself in a very short time.

We guarantee safe delivery and ship on ONE YEAR DECISION TRIAL. This "Decision Trial" is an interesting part of our proposition, and you owe it to yourself to read about it in our catalog. It is a proposition which we make, so as to back up all the statements made herewith. We want to prove to you that you cannot buy a BETTER Stove or Range than the TOLMAN at any price.

TOLMAN RANGES KEEP FIRE ALL NIGHT, SAFE AND SURE. Did you ever consider what an advantage and saving this would be? Why have the housewife get breakfast over a disagreeable "cook stove" in a cold room, where the water may even be frozen, when with a TOLMAN the HOUSEWORK WOULD BE A PLEASURE.

It will pay you to send for our catalogue and look over our line before buying elsewhere. You should read what actual users say about TOLMAN. We can save you many dollars and it is to your OWN advantage. If interested, SEND POSTAL FOR CATALOG "G." It will be sent you free and you are under no obligations to buy whatever. Send to-day—NOW!

DO YOUR CHICKENS FLY OVER THE FENCE?

Neher's Wing-Hobble is a positive preventive. Your birds absolutely can fly no higher than they can jump. The most unique and novel device ever invented. You can't afford to be without them. Send today for sample; 10 cts. silver. Name size wanted. \$1.00 per dozen, prepaid.

THE NEHER MFG. CO., :: E-1325 West 38th Street, Los Angeles, California

10,000 CHICKENS - Raised With 36 Universal Hovers

Here is some more evidence of the wonderful adaptability of Prairie State Universal Hovers. During the past season W. R. Curtis & Co., on their famous Niagara Farm, at Ransomville, N. Y. successfully raised Ten Thousand and Chicks with thirty-six Prairie State Universal Hovers. They have used as many as four hovers in one house, transferring them to other houses after the chicks no longer require them. Messrs. Curtis further state that during the rush season it was necessary to place in some houses as many as three hundred chicks, and the greatest loss in any of these instances did not exceed ten chicks. Can you conceive of a more economical and successful manner of rearing chicks?

Poultry-raisers are taking their heating apparatus out of other makes of brooders and installing in their place Prairie State Universal Hovers. We are at present remodeling brooding houses on large poultry plants, taking out expensive pipe systems that have proven unsuccessful and installing our modern brooding devices.

One of 40 Colony Houses used on Niagara Farm - fitted with Prairie State Universal Hovers

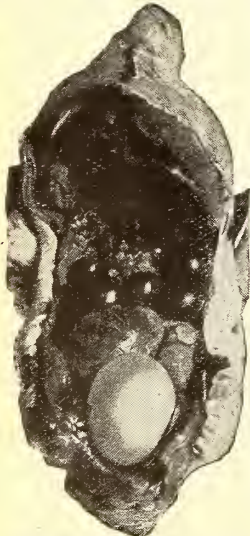

Think of this if you want to raise more chicks next year. Let us plan your brooding system for you now. Do not hesitate because your wants are not great, our systems fit the greatest or smallest plants and are as profitable for the little fellow as for the big one. Remember we positively guarantee our Brooding Systems. Write for our catalog, it shows the way and the why.

PRAIRIE STATE INCUBATOR CO.
468 Main Street, Homer City, Pa.

DO YOU KNOW The Potter System of ? Selecting Laying Hens

GREATEST DISCOVERY OF THE CENTURY IN THE POULTRY WORLD

DO YOU KNOW how you can have \$2 profit, not a \$1 loss, on every hen you keep?

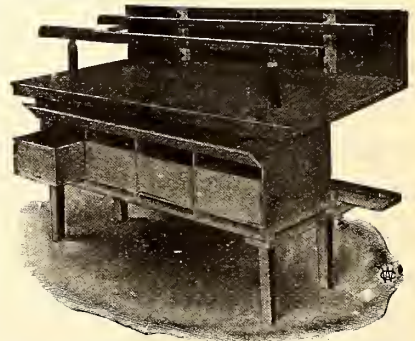

- How to breed only laying hens?
- How to select your laying hens?
- How not to kill your laying hens?
- How to mate your birds for best layers?
- How to save feed and labor and money?
- How to keep the layers and kill the non-layers?
- How to tell the drones and the barren hens?
- How to select the best laying pullets?
- How to stimulate the hen's laying organs?
- How to estimate the number of eggs a hen will lay in a week or a month?
- How to keep fewer hens and make more money?
- How to keep your fowls and their quarters free from mites and lice?
- How to hatch chicks that will make laying hens?
- How to make poultry pay every month in the year?

DO YOU

want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter System to their profit and advantage. So can you. Write today for free circulars telling about it.

DON'T BUILD THAT NEW HEN-HOUSE

or think of fixing up the old one until you have seen our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three styles and twelve sizes. Also "Simplex" Trap Nests; W. P. attachment, etc. No poultryman can afford to be without this book. For eight years we have manufactured this line of goods. Thousands of poultry houses in every section of the country are equipped with Potter Fixtures. You can have convenient and sanitary quarters, and you can save time, worry and money by using them.

Our Catalogue tells you how to keep free forever from these pests—LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for one red stamp to cover postage.

Why You Can Save Money

If you are going to buy an incubator, a brooder, a portable house, or any other poultry supply within the next six months, I want to urge that you consider the special offer I am making to induce you to buy *NOW*.

I have the Ideal line for 1907 all ready for you—and it is better than ever.

In January, February and March, I know that I will have more business than I can take care of without working my shipping force night and day. That has been our experience every year since we began making and selling the Ideal.

I'm mighty glad to have that business and we don't mind the hard work, but I would like to spread the trade over a little longer period.

I want to get my customers started to buying earlier in the season—so that I can take better care of their orders, and not have to rush them so in the shipping.

In order to get you to do this—to order now and help relieve the rush of the late winter, I am willing to make a sacrifice in price that I know will appeal to every careful buyer.

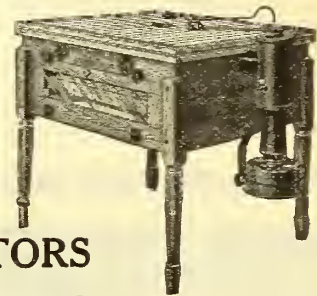

Note the prices quoted above, and then decide if you do not want to save that money. You can't make \$5 or \$10 easier. Get my catalog.

Very truly yours,
 J. W. MILLER.

Don't think for a minute that the machines and supplies I offer you belong in the "cheap" class.

They do not. I give you my personal guaranty that the

IDEAL INCUBATORS AND BROODERS

for 1907, are in construction—in materials used in making them—and in results obtained, the peer of any incubator or brooder ever made.

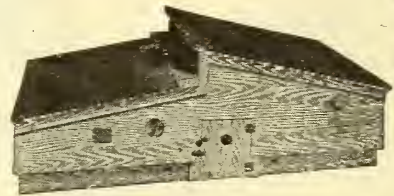

Their plan of construction is the result of 25 years experience in poultry raising on the famous Millhook Poultry Farm. They are founded on *Experience* not *Theory*, and they give results which astonish poultrymen. We give you a strong and binding guaranty and we know you will be satisfied.

We have paid especial attention to brooder construction and have made poultry raising easy.

Wants Another One.

Jeanette, Pa., May 15, 1905.
 I am more than pleased with my incubator. Out of 107 fertile eggs I got 106 good, strong chicks, and they are doing fine in your Brooder. I want one more incubator and two more Brooders this Fall.

W. A. WALTER.

Complete Line of Poultry Supplies

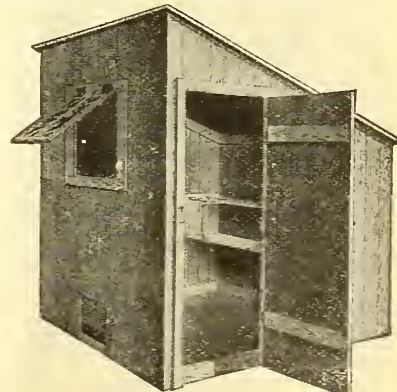

We manufacture and sell everything needed for poultry raising—Special Poultry Rations—Poultry Remedies—Lice Killers—Brood Coops—Bone Cutters—Drinking Fountains, etc. Let us quote you prices on what you need.

Ideal Portable Poultry Houses

Here is an \$18 Ideal Portable House, large enough for 20 to 25 fowls. We ship it to you in "Knock-down" form at regular lumber rates. The most convenient, sanitary and easily cleaned house you ever saw. Price now only \$16.

Model Incubators and Brooders

Assure Success in Profitable Poultry Raising

Would you build up a commercial Poultry Farm?

Do you desire to have a poultry farm that is a money-maker?

Then you must secure an equipment that will hatch and rear the chicks in profitable percentages.

Poor hatches make poor profits,—too many dead chicks a dead loss.

Model Incubators and Brooders assure success. Thousands of my customers have demonstrated their profit making qualities. At the Model Farm I have this season hatched and reared a larger number of chickens than has ever been hatched and reared by any one in a season. This with portable equipment such as I manufacture and sell.

I can teach you to do as well. If you would have one hundred layers or ten thousand layers I can furnish the equipment that will assure your raising them successfully. If you would raise broilers or roasters I can help you to do that profitably. For any branch of the business I can supply the most practical equipment and give you the best working advice. My customers are successful poultrymen. If you would guarantee success from the start purchase your equipment and get your advice from one who knows the business, and can start you right.

In the following letter from one of my customers you will note that Mr. Hardin not only hatched the chicks, but raised them. If you did not raise your chicks last year I recommend that you try my Model equipment. It hatches strong chicks—those that are born to live,—and then mothers them until they are strong enough to care for themselves. Mr. Hardin writes:—

VALLE CRUCIS FARM

Breeders of Heavy Laying Strains of Thoroughbred Poultry.

Valle Crucis, N. C., May 25, 1906.

MR. CHAS. A. CYPHERS, 39-47 Henry St., Buffalo, N. Y.

My Dear Mr. Cyphers:—For the past 18 years I have, as you are doubtless aware, devoted a considerable portion of my time to the raising of thoroughbred poultry. During this time, I have experimented with every makes of incubators and brooders, feed stuffs, etc., with varying results.

Three years ago when we erected our handsome new plant at this place, we decided to give your "Model" Incubators and Brooders a trial, and believe me when I say that I have since met with more than usual success.

During the past three months in addition to using your Model Incubators and Colony Brooders, we put in a line of your feed stuffs which, I must say, are altogether in keeping with balance of your products.

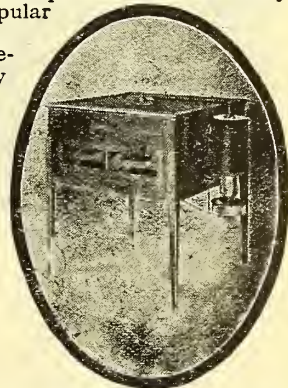

Below is a statement of results obtained from the use of Model Colony Brooders and Model Nursery Chick Feed, which I consider remarkable:

- Brooder No. 1. 50 White Wyandotte chicks. Number alive at end of six weeks 49.
- Brooder No. 2. 50 White Wyandotte chicks. Number alive at end of six weeks 50.
- Brooder No. 3. 50 S. C. White Leghorn chicks. Number alive at end of five weeks 48.
- Brooder No. 4. 50 S. C. White Leghorn chicks. Number alive at end of five weeks 50.
- Brooder No. 5. 50 White Wyandotte chicks. Number alive at end of five weeks 47.
- Brooder No. 6. 42 S. C. White Leghorn chicks. Number alive at end of five weeks 42.
- Brooder No. 7. 40 Rhode Island Red chicks. Number alive at end of four weeks 39.
- Brooder No. 8. 50 White Wyandotte chicks. Number alive at end of three weeks 38.
- Brooder No. 9. 32 Rhode Island Red Chicks. Number alive at end of two weeks 30.
- Brooder No. 10. 50 S. C. White Leghorn chicks. Number alive at end of two weeks 49.

All who have seen these chickens, pronounce them the finest, thriftiest lot they have ever seen.

From the standpoint of an expert poultryman, I feel no hesitancy in saying that your goods are the **VERY BEST** I have ever used, and I heartily recommend them to anyone desiring strictly honest goods at honest prices, that can be depended upon to do all that is claimed for them and more.

This testimonial is absolutely unsolicited, and you are at liberty to use it in any manner that you may deem expedient. Yours for better poultry and more of it,
W. H. HARDIN, Supt.

C. E. SPAUGH Box T, Rugby, Ind.

WHAT A BOY AND A "DANDY" CAN DO

A ten year old boy with a "Dandy" Green Bone Cutter, the scrap bones from the table and a few from the butcher, can produce the best, cheapest and richest poultry food in the world. And the "Dandy" runs so easily the work will be but play for the boy.

Chickens relish cut green bone because it supplies just what their appetites crave. It takes the place of the fat, juicy worm nature supplies when the fowls run at large.

Grain and vegetables do not

15 DAYS FREE TRIAL

CATALOG FREE

WRITE TO-DAY

contain protein in sufficient quantities for the hen's use—that's why grain fed hens don't lay more eggs—that's why you must supply your hens with a feed that does contain a high percentage of protein, if you want them to lay lots of eggs.

Green Bone is rich in protein—the important ingredient necessary for making eggs, flesh, feathers, bone and muscle. It supplies the materials the hen needs in the right proportion.

But you must prepare the bone in such shape that your fowls can utilize it—you must cut it.

That means that you will have to provide yourself with a "Dandy", Green Bone Cutter—the machine that cuts the bone in the proper form. The "Dandy" produces cut green bone in ideal condition for feeding.

It automatically feeds the bone to the knives, no faster than they can cut it, consequently it does not chip or slice the bone off, nor tear or splinter it, but grinds it like coarse corn meal—bone, meat and gristle; they're all alike to the "Dandy."

The knives are made from solid tool steel milled out—not drop-forged and rolled—that's why they cut so free and the machine runs so easy.

The "Dandy" is easily and quickly cleaned which means a great saving of time and trouble.

We'll send you one on 15 days free trial, without a cent in advance. If you find it comes up to our guarantee, which is broad, you keep it—if not, you send it back at our expense.

You need a Bone Cutter—we want to supply it. The "Dandy" and your boy can cut all the bone you'll need and the increase in your egg production will make this a profitable investment for you. Let us send you catalog of the sizes—we know the price will please you. Write today for our free trial plan. Stratton Mfg. Co., Box 17, Erie, Pa.

At The Tennessee State Fair

One of the many bargains offered in my Special Sale

Oct. 8 15, 1906, there was held one of the largest Fall Poultry Exhibitions ever held in the south. Not only were the best birds of the South on exhibition, but many choice specimens had been purchased by breeders for this show. With all this keen competition,

U. R. FISHEL'S WHITE PLY. ROCKS

won first, second and third prize cock, first and second prize hen, first second and third prize cockerel, first and second prize pullet, first and second prize breeding pen. (The third prize pullet was bred from a \$15 trio of breeders I sold last season) My exhibit was the attraction of the show. What better proof can I offer you that the high quality of the U. R. Fishel White Ply. Rocks is without an equal, and that they get better each season? My claim as having

THE BEST IN THE WORLD

is and has been fully demonstrated time and time again. I advertise no winnings made years ago, but prove to you each year in strong competition and under different judges that my birds get better each season. I have something like TEN THOUSAND BIRDS TO SELL, and as I will not show any more this season, I am in a position to FURNISH YOU EXHIBITION BIRDS TO WIN those coveted prizes for you. SELECTED BREEDERS AND UTILITY STOCK in any quantity you desire them.

MY NEW 56-PAGE CATALOG CONTAINING FOUR COLOR PLATES will be ready to mail December 1st. Send TWO DIMES (twenty cents) for a copy. This is the finest Poultry Catalog ever issued. Write me.

U. R. Fishel, Box A, Hope, Ind.

GOING OUT OF BUSINESS

The great closing out sale continues. We have left in S. C. B. Minorcas 70 yearling hens, 50 pullets and 5 cockerels. Also about 50 pullets and 50 chicks of Barred P. Rocks. The White L. ghorus are all sold. Write for prices on quantity wanted. We also offer our farm of 36 acres with fine orchard, spring water and good buildings. A fine home for some one and a money maker. Otter Creek Poultry Farm Co., Box A, Watertown, N. Y.

IDEAL TRAP NESTS SHOW WHICH HEN LAID THE EGG

The "Ideal" is the only make with a long record of satisfactory work for practical poultrymen. Inexpensive, but they work right. Convincing circulars. 1900 You provide the nests, I supply the traps. 1907. F. O. WELLCOME, York St., Yarmouth, Maine

REMOVING WEST? Write us regarding rates and through cars in connection with the forwarding of your household effects. Trans Continental Freight Co.

THE BEST FOWL IS THE BUFF WYANDOTTE

There are reasons why. Write me for circular. A large flock of Youngsters from the choicest specimens growing for fall and winter shows. Ten years of experience with the variety. BUFF ROCKS from the famous Hammer and Kingman strains.

W. R. WOODEN - Battle Creek, Mich.

300 EGG INCUBATOR \$24.90 DELIVERED

For \$24.90 we will pay the freight and deliver one of our 300 egg Victor Incubators anywhere in the U.S. east of Rocky Mountains or the price will be \$29.50 delivered west of the Rockies.

The 300-egg Victor has triple walls, triple top and triple bottom, a large copper tank and double-jacketed heater and is fitted with the reliable Victor Regulator. The case is finely finished in Butternut and Vel. Walnut. The lamp has a big bowl, a wide burner and a stout metal chimney. The ventilated egg chamber with double glass in the doors contains automatic turning egg-trays with nursery below.

The machine is 45 inches long, 38 inches wide and 36 inches high. In addition to this substantially built incubator, with its egg-trays and nursery copper tank, double-jacketed heater, modern lamp and automatic regulator, the \$24.90 price includes an egg-tester, thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at your railroad station. Other makers quote \$30 f.o.b. factory for a machine of this size not half so good and charge you cartage to the freight depot. We make the price laid down at your station so you may know just what our machine will cost you. Better write us to-day; we will ship promptly on receipt of your order. Remit in Postoffice or express money order or bank draft, and if these machines are not just as we represent them we will return your money. If you want a larger machine write for our 80 page "Victor Book" and our new booklet "Autobiography of a Hen". A postal will do, only do it to-day before you forget. Geo. Ertel Co., Quincy, Ill. Established 1867

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

TREMENDOUS SUCCESS FOR THOSE WHO USE
“COULSON’S”
IMPROVED MASH EGG FOOD

Over six carloads of Coulson's Mixed Feeds for Poultry—over 1,980 bags, eagerly taken by the most important and largest poultry raisers in the State of Colorado during the past six

weeks. The foremost poultry raisers have contracted for tons and tons of Coulson's Rich Balanced Ration for feeding their laying hens and chickens.

**Takes Less
FEED**

**Makes More
EGGS**

COULSON'S IMPROVED MASH EGG FOOD is a highly concentrated food, containing a large percentage of protein and egg producing material, due to the quantity of meat meal, blood meals, bone meals, etc., which go towards making up its composition. For this reason you will find, when feeding it, that you not only get a larger percentage of eggs than when feeding in the old way, but you save in your feed bill, on account of the hens not needing so much of this concentrated feed to eat.

You will also keep your flock in a healthier condition, not only on account of the special ingredients in the feed for that purpose, and on account of the perfect balance of the ration, but also because their digestive organs are not overtaxed by having to eat a very large amount of food in order to produce the necessary eggs.

Therefore you will get more eggs, have a healthier flock, and the reduced amount of feed necessary will offset the slightly increased cost of this high concentrated food.

Give it a trial now when the price of eggs is high: when even a few additional eggs mean a big profit to you and insure yourself a good season this fall and winter. I tell you there's profit in every pound of Coulson's. You get more eggs in winter.

Opportunity is knocking at your door. It's up to you not to let Opportunity escape you this time. Order a ton of Coulson's Balanced Ration from your local dealer and feed it to your poultry once every day in the year. Coulson's rich mixed feeds make hens healthy and cause them to lay steadily. Coulson's is as necessary to the hen as alfalfa is to the cow that produces rich milk.

AT OUR NEW FACTORY IN KANSAS CITY, MO.

Largest of its Kind in the World

we are manufacturing for immediate shipment to fill an unprecedented demand, Coulson's Improved Mash Egg Food, Coulson's Moulting Food, Coulson's Scratching Food, Coulson's Fattening Food and Coulson's Special Dry Chick Feed.

Send in your name immediately, and 10c (to cover cost of mail-only) and we will send you our fascinating and beautifully colored catalog, "Raising Chickens," showing largest poultry ranches in the world, and also give you many valuable hints on the poultry business.

A LITTLE LIGHT BRAHMA HISTORY.

Some Strong Arguments in Favor of This Grand Old Variety
—An Appeal to Breeders of This Variety to Wake Up and
Sound the Praises of Their Chosen Breed—Early
Experience With the Light Brahma.

Written for American Poultry Journal by C. P. Nettleton, Shelton, Conn.

In my article on Light Brahmas in your September number are a few typographical errors, as follows: In place of rooster read roaster, also Chas. Lees should read Chas. Tees, also Carney should be Comey, T. Williams, P. Williams.

We probably never shall know more of the origin of the Light Brahma than we do today. This earth has been well explored up to the present time and if there was anywhere on its surface a breed of fowls anything like the original Brahma they would have been found before this time, but on the contrary there never has been an importation from any

Light Brahma of today to what it used to be. How many Brahmas do we see in the show room today that are up to standard weight? Not many. They may not be disqualified, but certainly very few come up to standard weight at either New York or Boston.

The late E. C. Comey's Colossus weighed 16 lbs., and many cock birds of that time would go over the present standard weight.

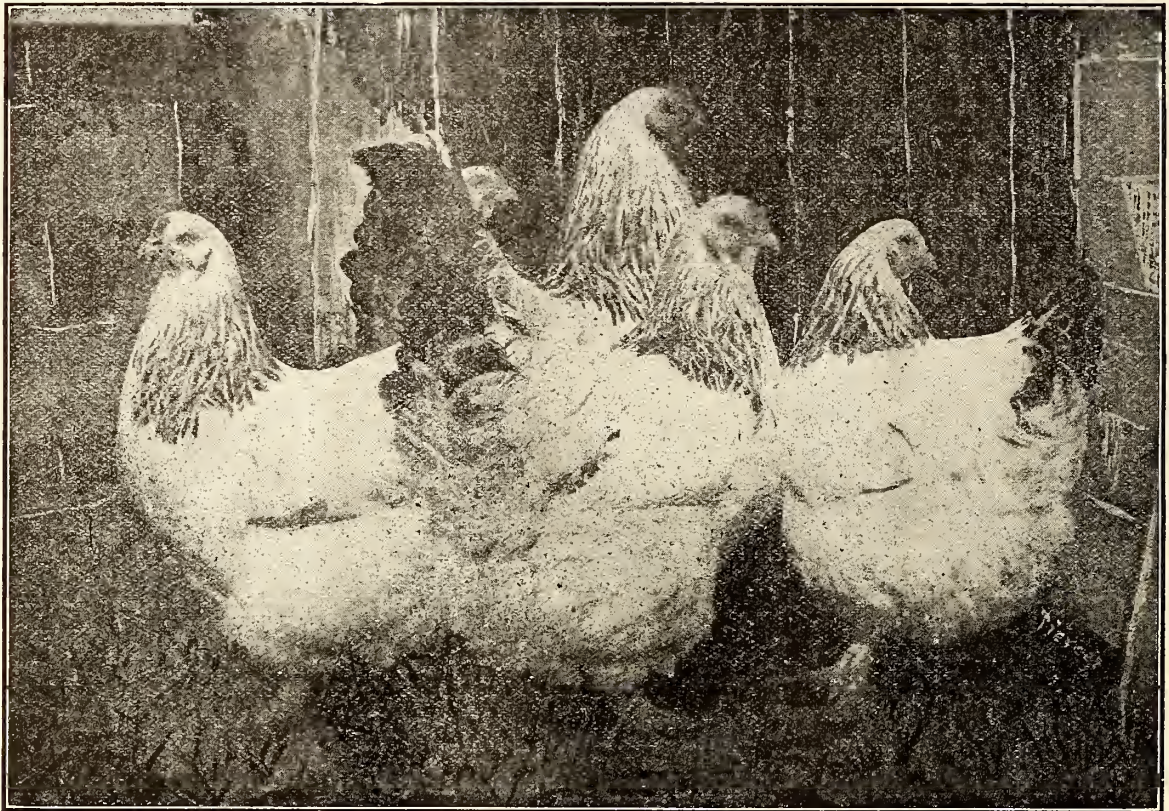

I showed a cock bird at Meriden, Conn., in the seventies, that weighed 16 lbs., but a 16-lb. bird is an exception.

It is all wrong that comparison shows don't weigh their birds and judge accordingly, cut for under weight and give the larger bird the benefit, other things being equal.

Light Brahmas are by far the largest of our domestic fowls, and why not keep them up in size and weight where they belong.

I never saw a person who, color, shape, etc., being alike, but what would prefer the larger bird to the smaller one.

I prefer comparison judging, but have all birds weighed and judged according to the standard as well by comparison as score card judging.

First prize Pen at Indianapolis, February, 1905. Score of Cockerel 95; Hens 94½ and 94½; Pullets 95 and 95. Owned by I. N. Barker & Son, Thorntown, Ind.

country of the old world since the Chamberlain Brahmas came into notice.

We had the "Shanghai," "Chitagong" importations before the Brahmas came, but not a record of any importation of a fowl anything like them since the Brahma came to notice.

Can anyone tell why? Did they think we had enough of that kind of fowls in America, or have they run out or become extinct in their native country, so there are no more to be had? I mistake a little. The Langshans are of a later importation and are classed as Asiatics, but bear no resemblance to the former Brahma, Chitagong, Shanghai types.

If all the older importations of Asiatics came from China or adjacent countries formerly, why don't we hear from them today? Those countries are better known today than ever before, still we hear nothing of any breed of fowls resembling the Asiatics. In a number of Poultry Monthly, formerly published at Albany, N. Y., was an article claiming the Brahma were still to be found in their native country. There was no name to the article. At the time I cut it out for future reference but find I have mislaid it, so cannot quote it correctly; but the writer claimed as I have stated. Who knows who wrote the article? Also, how did they come into possession of such knowledge? If anyone can tell, let him speak right up now.

We are not keeping up the size, or rather weight, of the

It is no harder to keep up color in a large bird than a small one if we only breed for it. Do the Light Brahma Bantam breeders find it easier to hold color in their Bantams because they are smaller? I think not. We can keep size and weight by breeding and feeding for it.

The short-legged, short-bodied bird never makes large birds; it takes more length of bone, frame and body to carry weight, and if we only breed and feed for it we will surely get it.

A noted poultry judge and writer told me that the English people would take our Wyandottes over there and by their method of feeding soon have them weigh one or more pounds more than we do here in the States. We can do the same by the Brahmas, only feed for it. Who does not admire a large, stately Light Brahma? Which brings the best price, the large or the small bird? Anyone can answer that question and be right. The short-legged, short-bodied bird is getting down towards the Cochins type which so much has been said about in the last few years. Strong, intense color is all right as far as color goes, but when you sacrifice weight in a Light Brahma for color it is wrong.

Give me the happy medium. Let a bird with good fair color and standard weight, or over, win over a bird with intense color and under standard weight.

The standard weight on cocks or cockerels ought to be one

pound more than it is; then cut one point for every pound under weight and allow one-half point for each pound over weight.

The large size of the Brahmas, their strong characteristics, make them valuable as a cross on the common stock; it improves the size as well as improves the laying qualities. I once sold a farmer a Light Brahma cockerel to put with his scrub hens. The next season this man told me he brought twelve dressed chickens to market and they brought him \$1 each, or \$12 for the lot, and this was the first time in his life he could get \$1 each for dressed chickens. In the summer of 1903 in August I found a Light Brahma cockerel was making rapid growth. I weighed him again and found he had gained just one-half pound; in the next week he gained just six ounces. Of course, this is exceptional, but there are no breed of fowls that will produce as many pounds of meat for food consumed as the Light Brahma.

THE GRAND OLD LIGHT BRAHMA.

It will be but a very few months now before hundreds and hundreds of new young and old poultrymen and poultrywomen will order eggs for hatching and stock for breeders of poultry all over the country.

Many starting in will, no doubt, be in doubt as to what breed they wish to take up, as so many breeders claim theirs is the best breed. There cannot be so many best breeds and we think you will find after some experience it is in the man who has charge of the fowls rather than the breed one keeps that has to do with the yearly profits. And now just a few good words about our favorite breed; yes, one which has been a great favorite with many of our greatest breeders for the last half century—the Light Brahma, bred on truly great lines and bred for winners as well as along the laying and meat side of the market; a fowl beautiful to behold, stands confinement easily and well, and is a joy to look upon and to own. They have been bred to the standard for such a long time they are quite easily kept up to the show mark if one has the ability to reproduce them. Grand and stately in carriage, they add to the attractiveness and beauty of any home and when rightly taken care of are first-class layers of large, dark-brown eggs. When such men as Felch, Williams, Nettleton, Rumbolt and dozens of others breed them now and have bred them for so many, many years it looks as though there must be something doing in Light Brahma markets. Try a few of this great breed this spring or winter and be convinced; also write up your details of breeding and tell us about the good old Light Brahma.

ORIGIN AND HISTORY OF THE BREEDS

No Authentic Account as to the Time the Goose Has Been Domesticated—Two Breeds Mentioned by Belon in 1555, But No Description as to Color or Breed Characteristics Is Given—America, England and France Each Has Produced a Distinctive Breed of Geese—Bred the World Over and Highly Prized.

Paper No. 20—The Goose.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

We have no authentic record as to the length of time the goose has been domesticated. Pierre Belon in 1555 speaks of two breeds of domestic geese, but does not describe them. The Greeks of early days highly prized the goose for the delicacy of its flesh. Daniel in his "Rural Sports," 1810, says that "vast flocks of geese are driven annually to London from distant countries to supply the market. In 1783 one drove of about 9,000 passed through Chelmsford. Other flocks of two and three thousand are common."

Toulouse Geese.

These are of French origin. Standard weights: Gander, 20 pounds; young gander, 18 pounds; adult goose, 18 pounds; young goose, 15 pounds.

Body color, gray and white.

Embsden Geese.

Of German origin. The city of Embsden was in an early day the central place for marketing the geese of the country; hence the name of this breed. Standard weights: Gander, 20 pounds; young gander, 18 pounds; adult goose, 18 pounds; young goose, 16 pounds.

Plumage color, pure white.

African Geese.

Natives of Asia and Africa. In color, light gray. Standard weights: Gander, 20 pounds; young gander, 16 pounds; adult goose, 18 pounds; young goose, 14 pounds.

Bement in his work in 1845 first referred to this as the African goose.

Chinese Geese—Brown and White.

These are natives of China. Standard weights: Gander, 12 pounds; young gander, 10 pounds, adult goose, 10 pounds; young goose, 10 pounds.

In color the Brown China geese are a grayish-brown.

The white variety is pure white in plumage color.

Egyptian Geese.

Natives of Egypt. Standard weights: Gander, 10 pounds; young gander, 8 pounds; adult goose, 8 pounds; young goose, 6 pounds.

In color they are gray and black on upper parts of body; pale buff and yellow, regularly penciled with black lines, on under parts of body.

Paper No. 21—The Duck.

Nearly all the breeds of ducks recognized by the American Standard of Perfection represent the work of the fancier, his construction out of crude material the various breeds and varieties. The wild duck, of course, has served as the foundation upon which fanciers have worked through the ages.

The Pekin Duck.

This is the most popular breed of ducks in America. The great commercial duck farms of the east are stocked with this breed.

They are a native of China, and were introduced into the United States about forty years ago.

The Standard weights are: Adult drake, 8 pounds; young drake, 7 pounds; adult duck, 7 pounds; young duck, 6 pounds.

In plumage color they are white throughout.

Aylesbury Ducks.

They are a native of Aylesbury, England, and in that country are far more popular than the Pekins. Standard weights are: Drake, 9 pounds; young drake, 8 pounds; adult duck, 8 pounds; young duck, 7 pounds. They are pure white in plumage color. Bill, pale flesh. Shanks and toes, bright or light orange.

Rouen Ducks.

These ducks are a native of France. Standard weights: Drake, 8 pounds; young drake, 7 pounds; adult duck, 7 pounds; young duck, 6 pounds.

In color they resemble the wild Mallard duck, being a combination of brown and greenish black.

Cayuga Ducks.

They originated in New York. They resemble the Ceylon duck. In color they are a greenish-black. Standard weights: Drake, 8 pounds; young drake, 7 pounds; adult duck, 7 pounds; young duck, 6 pounds.

Call Ducks.

No Standard weights. The Gray Call duck is steel gray in color, resembling the Mallard. They are a small duck. The White Call is pure white throughout. They are sometimes called the decoy duck.

Black East India Ducks.

A native of East India. Are solid black in plumage color.

Crested White Ducks.

These are natives of Holland, having been brought to this country in an early day by the Dutch. Standard weights: Drake, 7 pounds; young drake, 6 pounds; adult duck, 6 pounds; young duck, 5 pounds.

They are pure white in plumage, supporting a crest.

Muscovy Ducks.

Natives of Brazil and Guiana. In plumage color they are blue-black, sometimes broken with white. Standard weights: Drake, 10 pounds; young drake, 8 pounds; adult duck, 7 pounds; young duck, 6 pounds.

The White Muscovy is pure white throughout.

India Runner Ducks.

Natives of India. In color, light fawn and gray. Standard weights: Drake, 4½ pounds; duck, 4 pounds. They are wonderful egg producers.

Blue Swedish Ducks.

Natives of Neuvor Pommern, which at the time of their discovery by German fanciers was a part of Sween. Standard weights: Drake, 8 pounds; young drake, 6½ pounds; adult duck, 7 pounds; young duck, 5½ pounds. In plumage color they are blue, with white in breast.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Fred Goeben, Tolland, Conn., and the second prize to W. M. Jolley, Billings Bridge, Ont.

AN APPEAL TO REASON.

"Why don't my hens lay?" "Why are my chickens sick?" are among a host of questions that greet one when visiting amateur poultry keepers. Being an admirer and breeder of thoroughbred poultry and getting around to different parts of the country, while traveling on business, nothing interests me more than to look over different poultry plants, both large and small, and what to me has seemed the most striking difference between the successful and the unsuccessful poultryman is the seemingly willing blindness of the latter to the causes pertaining to either success or failure.

The old adage that there are "None so blind as those that will not see" applies fittingly to many keepers of poultry.

Upon visiting a small plant last winter the owner, before entering his poultry house, related a tale of woe: that his pullets did not lay, now that eggs were away up, and the

fowls were not laying he could not afford to feed them heavily; so he fed them one quart of corn three times a day until they recommenced! He might be waiting still at that rate; they (the chickens) would most likely feed upon their own eggs, if they could find enough superfluous material in the quart to make an egg out of.

However, a few moments' preaching put that idea out of his head and after a few days' proper feed they recommenced laying.

If your hens don't lay, or are sick, or anything else goes wrong, don't, *don't* say WHY? Keep your ears and eyes and nose wide open every time you get near anything pertaining to poultrydom, and SUCCESS, in capital letters, is yours, just as surely as the sun rises in the east and sets again in the west.

Tolland, Ohio.

Ferdinand Goeben.

CARE OF THE PULLETS.

At this season of the year those who have been fortunate enough to raise a flock of nice early pullets will no doubt be feeling greatly encouraged at their appearance, and are likely looking forward to the fall and winter egg yield with more or less satisfaction.

It is at this stage of the game that we are apt to injure our prospects as regards winter eggs, also the future usefulness of our pullets as breeders.

A great many make the too common error of forcing the pullets for egg production from this time on, regardless of the fact that such forcing is detrimental to well matured fowls. A pullet that has been forced for egg production from the start invariably makes a poor breeder, at least we have found such to be the case.

We are aware that the increase in price of eggs during the fall and winter months is a temptation to all of us who are in the business for profit to get the best possible egg yield from our flock at this time, but if our yearling hens have been

View on the experimental farm of the Chambers Incubator Company, Shelbyville, Ind. On this farm they have about 10,000 feet of floor space in modern and substantial buildings, devoted to raising poultry and developing ideas in incubation and brooding.

flock was so delicate that it was with the deepest interest to discover the wherefore that I followed him through the garden to the house, a four-pen 10'x48' structure, slant roof, and four windows, all closed up tight to keep out the brisk zero weather. He led the way and opened a door at the side, and although I stood in back of him the moment that door opened the odor, a warm stench, was almost enough to knock me over. He asked me to step in quickly, as his fowls might take cold, and again hurriedly closed the door behind us. Inside his house the pens were separated by wire partitions, with screen doors leading through, and the fowls, upon our entering, instead of flying to the farthest corner of their pen away from the approach of a stranger, the very reverse happened. They just flew toward where the fresh air had been admitted, those in the pen we had just entered vainly trying to fly past us through the open door before it could be reclosed. There was the answer to his problem, as plain as though written in letters of black upon his whitewashed wall, and in spite of all, his first remark was, "Why do you think my hens don't lay?" "What makes them so delicate?" I gave him a plan for a scratching-shed house and told him to alter his accordingly; he did so this spring and reports his birds entering the winter in sleek condition—not progeny of his stock, though.

Upon another occasion, while visiting a friend who had about fifty head of a thoroughbred breed but whose complaint was also a scarcity of eggs, I accidentally arrived as he was feeding his poultry and was surprised to see a quart measure in his hand. He explained, upon my entrance, that as his

properly handled they should now be well over the moult and ready to shoulder the responsibility of egg production, thus giving the pullets ample opportunity to become fully matured.

Whenever it is possible the pullets should have free range as long as weather permits, as this gives them a good sound body and healthy constitution to withstand the long, cold winter when they must necessarily be confined a great deal. If they are on range where they have an abundant supply of green food almost any well balanced grain ration will be found to answer all their requirements, with the addition of beef scraps or other animal food.

Perhaps there are some readers of American Poultry Journal who have not as yet learned the value of bread and milk as a food for growing pullets. Used in the proper proportion there is nothing to beat it to make the youngsters grow. We find that by soaking the bread in milk and crumbling it up dry as possible it gives best results, as it does not tend to cause bowel trouble. After buying all our milk and stale bread we find that the cost is a little less than by feeding hard grains or prepared foods.

If our pullets have not the advantage of free range they should have a liberal supply of green food of some sort, and should be given all the yard room possible. We will be abundantly repaid for a little extra attention at this time, as our future success in building up a strain of heavy layers or exhibition fowls depends to a great extent upon the care we bestow upon our pullets at this time.

Billings Bridge, Ont.

LESSON ON LINE-BREEDING.

A Subject that is Commanding the Time and Attention of a Great Many of the Present-day Fanciers—A Detailed and Comprehensive Article on the Subject, with Extended Breeding Chart.

[This article appeared in these columns in December, 1905, but by request of a number of our subscribers we reprint it.]

The art of establishing a line of breeding which will reproduce its kind, the only sure way of reproducing any kind of stock, is to establish a line of breeding whose ancestry is known for several generations. In poultry breeding to establish a line the male bird should be large and vigorous; the comb and ear lobes medium large for the breed, denoting vitality. Head should be broad, eyes bright, neck of medium length, back broad, breast meaty, body of good length for the breed, deep and well rounded legs to be moist to the touch, stout and well set apart. Tail wide, carried medium high for the breed, to come of a line of sires known for vigor, shape and color. The color to be as dark as the standard of the breed allows. At the close of the breeding season the male to be bred from another year should be placed in bachelorhood until another season comes around, so as not to impair his usefulness as a breeder.

The female line to come of large stock from one-half to one pound over standard weight, vigorous, active from a well-known laying strain; other qualities to be as described for the male. The male controls in the greater degree the breed, type or shape and color; the female controls in the greater degree the weight and size of our flock. Never choose a bird to breed from with a long narrow head, small comb, for the breed denotes lack of vigor. The males which are sure breeders up to and including their fourth year are large combed. The large comb hens are generally the heaviest layers in the flock. Never use a male bird lacking wattles; they are never good breeders. A bird, male or female, with dull and listless eyes should never find a place in any breeding pen. Birds with good meaty breasts, broad backs, bodies deep and well rounded are the birds which, when properly dressed, take the premiums in the dressed fowl exhibits and bring the best market prices. It is folly to start line breeding with birds less than standard weight or less color than called for in the standard of the breed. Good weight, size and prime color denote health and vigor of the specimen.

Avoid starting a line of breeding from a bird which has been sick and apparently cured of ulcers of any kind on any part of the body, foul breath, foul vent, weak legs, knocked-kneed or wobbling gait. A bird with any serious defect should never be bred in line; defects are liable to perpetuate themselves for many generations; the same holds good with cured birds. The birds we have selected to start our lines with a cock kept celibate till 20 or 22 months old and a pullet not less than nine months old, both to have every indication of maturity. The cock's crowing should be loud and clear. His call to his consort should be readily answered by the pullet selected as his consort. The pullet's voice to be sharp and clear; eggs to be of good shape and color for the breed, shells firm. The pullet should be early on the range and late getting on the roost.

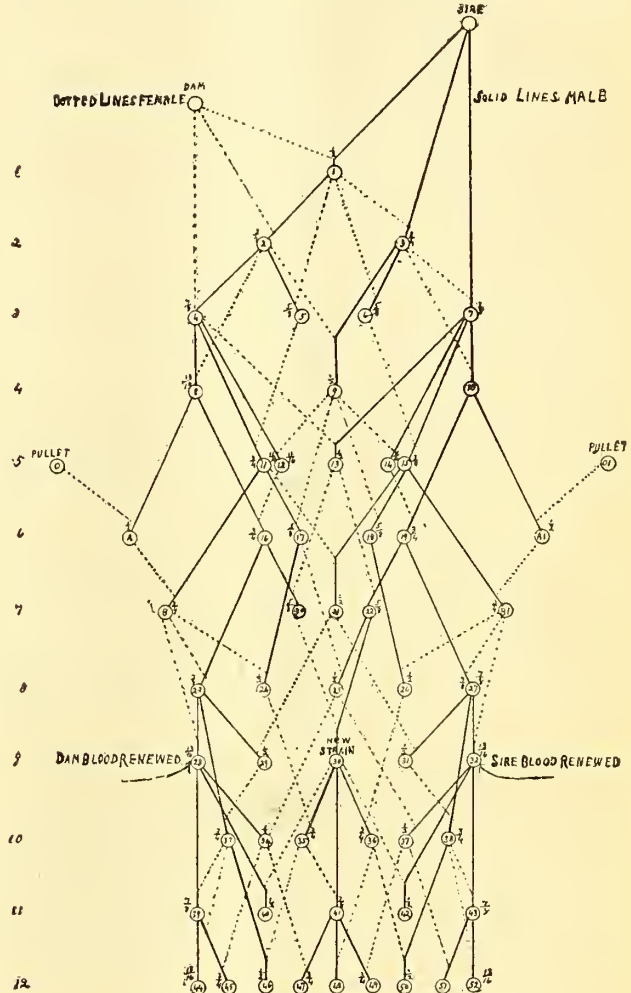

Having mated our birds the product will be group 1 of our chart. Many of the birds will not resemble either parent, owing to the crossing of two strong blood lines and the breaking upon ancestral influence. By mating a cockerel of group 1 bred back to his dam and a pullet bred back to her sire, then do we find the strongest line of our breeding. Often when we breed back to the sire and dam, producing matings 2 and 3 of our chart, do we find birds to strongly resemble both sire and dam; to return to group 1, while the young stock is growing to watch for the birds which make the best and most regular growth. The young cockerels should be carefully watched when coming into their second feathering, the coloring of which will denote his pullet-breeding quality. Cull out all chicks that do not have a stout, well-curved back and stout, well-shaped legs. Chicks with good beaks and legs as above generally grow up to have well-shaped bodies fit to take their place in the breeding pen, remembering as we mate from year to year that any deficit should be compensated in the mate in the first years of our breeding. Care must be taken on the dam side of our line; hens lose color at a more rapid rate than the males.

To return to our chart, in the third year take a cockerel from group 2, three-quarter dam blood, breeding it back to the original dam, the produce of the mating will be group 4, seven-eighths the blood of the original dam; the best cockerel of this mating to be used to carry on the blood of our original dam. A cockerel from group 2, three-quarter dam blood, mated back to a hen from group 1, one-half blood of our original pair, produces group 5, being five-eighths dam blood and three-eighths

sire blood. A cockerel from group 3, three-quarter sire blood, mated to a hen from group 1, one-half the blood of the original pair, produces group 6, five-eighths the blood of our sire. A pullet from group 3, three-quarter sire blood, mated to the original sire, produces group 7, seven-eighths the blood of our original sire.

In the fourth year of our breeding, a cockerel from group 4, seven-eighths dam blood, mated to a hen from group 2, three-quarter dam blood, produces group 8, thirteen-sixteenths dam blood. A cock from group 3, three-quarter sire blood, mated to a hen from group 2, produces group 9, one-half blood of our original pair. A cockerel from group 7, seven-eighths sire blood, mated to a hen from group 3, three-quarter sire blood, produces group 10, thirteen-sixteenths the blood of our original sire.

In the fifth year of our breeding, a cock bird from group 4,

seven-eighths dam blood, mated to a hen from group 5, five-eighths dam blood, we get group 11, three-quarter dam blood. A cock bird from group 4, seven-eighths dam blood, mated to a pullet from group 9, one-half blood of our original pair, produces group 12, eleven-sixteenths dam blood. A cock bird from group 7, being seven-eighths sire blood, mated to a hen from group 4, seven-eighths dam blood, produces group 13, one-half blood of our original pair. A cock bird from group 7, seven-eighths sire blood, mated to a pullet from group 9, one-half blood of our original pair, produces group 14, eleven-sixteenths sire blood. A cock bird from group 7, seven-eighths sire blood, mated to a hen from group 6, produces group 15, three-quarter sire blood.

In the sixth year of our breeding a cock bird from group 8, thirteen-sixteenths dam blood, mated to a pullet from group 0, on the chart the best bird we could get in no way related to sire or dam, special care being taken to get a bird strong in any the dam line is weak, the produce of the mating will be group A, one-half of the original dam blood and the pullet 0. A cock bird from group 8, mated to a pullet of group 12, produces group 16, three-quarter dam blood. A cockerel from group 11, mated to a hen from group 9, the produce will be group 17, five-eighths dam blood. A cockerel from group 15, mated to a hen from group 9, will produce group 18, five-

eighths sire blood. A pullet from group 14, mated to a cock from group 7, gives us group 19, three-quarter sire blood. Take a pullet, the best we can secure not related to the other lines we are breeding, care being taken to get bird strong in any points in which our own sire line is weakest, having found a bird to our satisfaction we mate it to a cock from group 10, from which we get group A 1, one-half blood of our original sire and the pullet 01.

In the seventh year of our chart we mate a pullet from A, one-half dam blood, mating it to a cock bird from group 11, from which we get group B, three-quarter dam blood. A cockerel from group 16, mated to a hen from group 13, gives us group 20, five-eighths dam blood. A cock bird from group 15, mated to a hen from group 11, gives us group 21, one-half blood of our original sire and dam. A cockerel from group 10, mated to a hen from group 13, gives us group 22, five-eighths sire blood. A cock bird from group 15, mated to the best pullet from group A 1, will give us group B 1, sire blood and one-quarter the blood of the pullet 01.

In the eighth year of our chart a cock bird from group 16, mated to a pullet from group B, will give us group 23, which gives us the blood of our original dam almost renewed to its full strength. A cock bird from group 17, mated to a pullet from group B gives us group 24, being one-half blood to the original dam and the new strain we are to produce. A cockerel from group 22, mated to a hen from group 17, produces group 25, one-half blood of our original sire and dam and only one mating from our new strain. A cock bird from group 18, mated to the best pullet from group B 1, produces group 26, one-half blood of our original sire and the new strain we are producing. A cock bird from group 19, mated to the best pullet from group B 1, gives us group 27; this mating gives the blood of the original sire again almost renewed to its full strength.

In the ninth year of our chart a cockerel from group 25, mated to a hen from a group B, gives us group 28; this mating restores the blood from our original dam to its full strength. We have consumed the blood of the original sire and the blood of the pullet from group 0. A cockerel from group 23, mated to a hen from group 21 gives us group 29, one-half dam blood and one-half blood of our new strain. A cock bird from group 22, mated to a hen from group 20, gives us group 30. Our new strain is now complete, the blending of the blood of our original sire and dam has in this mating given us a new strain, strong in the fact that we have overcome the faults and combining the best qualities of both sire and dam.

A glance at the chart will show how strong our new strain should be. In group 8 and group 10 we have the blood of the dam and sire at thirteen-sixteenths, which is as close as a safe line breeder should go. From group 8 and 10 the chart shows both lines drawing to a central point, which point on our chart is group 30. A cockerel from group 27, mated to a hen from group 21, gives us group 31, one-half bloods of our sire line.

In the eleventh year of our chart a cock bird from group 28, mated to a pullet from group 33, gives us group 38, seven-eighths original dam blood. A cock bird from group 28, mated to a hen from group 30, gives us group 40, one-half bloods of the dam line. A cock bird from group 30, the new strain, mated to a pullet from group 35, gives us group 41, seven-eighths the blood of our new strain. A cock bird from group 32, mated to a hen from group 30, gives us group 42, one-half blood of the sire line. A cock bird from group 32, mated to a pullet from group 38, gives us group 43, seven-eighths the blood of our original sire.

In the twelfth year of our chart a cockerel from group 39, mated to a hen from group 33, gives us group 44, thirteen-sixteenths the blood of our original dam. A cockerel from group 39, mated to hen from group 34, gives us group 45, eleven-sixteenths the blood of the original dam. A cock bird from group 33, mated to a hen from group 35, will give us group 46, one-half bloods on the dam side of the line. A cockerel from group 41, mated to a hen from group 34, gives us group 47, eleven-sixteenths the new strain on the dam side of the line. A cockerel from group 41, mated to a hen from group 36, gives us group 48, restoring the new strain to full blood. A cockerel from group 41, mated to a hen from group 37, gives us group 49, eleven-sixteenths the blood of the new strain on the sire side of the line. A cock from group 38, mated to a hen from group 36, gives us group 50, one-half bloods on the sire side of the line. A cockerel from group 43, mated to a hen from group 37, gives us group 51, eleven-sixteenths blood of the original sire. A cockerel from group 43, mated to a hen from group 37, gives us group 52, thirteen-sixteenths the blood of the original sire of our flock.

Having followed the breeding of our chart, throughout which we have never mated a cockerel and pullet together, care should be taken at all times to guard against breeding from immature stock. The chart was started with a yearling cock and a

mature pullet; in the third year of our breeding we should have birds to average as good as the sire and dam we started with. Many breeders fail in line breeding at the eighth to the tenth year by failing to reinforce their breeding lines as shown on the chart when we secured pullets 0 and 01 of our chart. As we follow the lines laid down in our chart breeding from an unbroken line of sires selected of the same shape, weight and color, culling out all that do not literally fill the standard of the breed as to shape, weight and color, allowing no freaks or weaklings in our pens, then we can be reasonably sure that like will produce like. The fancier who wishes to reach the top should line breed in pairs, selecting the best from year to year; pullets to be selected to balance any defects in the male; cockerels to be selected to balance any defects in the hens. Never breed two birds together with the same defects; neither should a bird be bred to another whose sire or dam have had the same defect or it will surely ruin the flock.

In line breeding defects accumulate slowly, and only by careful inspection of the birds on the roosts can the evil effects of too close inbreeding be detected. As soon as the breeder notes that his birds lack weight and stamina, eggs largely infertile; males with small wattles; hens lacking dew-lap comb, small for the breed, narrow skull, beak long and head flat; chicks small-bodied and long-legged for the breed, backs narrow, pinched tails, eggs below normal size for the breed; cockerel lacking in aggressiveness, you have violated Nature's laws; failure will be your lot if your lines are not reinforced; the waste in breeding will ruin the flock.

By careful selection and allowing for the waste in breeding by carrying an excess of weight and color we will surely reach the top, where there is always room for the best in any line; the higher we climb the greater will be our reward.

Detroit, Mich.

Adam M. J. McKendrick.

THE HOUDAN FOWL.

The V-Shaped Comb, One of the Desirable Features of This Breed, and How it Was Brought About—How the Color Has Been Improved by Continuous Selection.

Written for American Poultry Journal by Rev. C. E. Peterson, Penbrooke, Maine.

After having been bred in this country for nearly fifty years, it is not to be wondered at that there is a steady and continuously increasing demand for Houdans that are Houdans not only in regards to feather, but also to egg production, in which respect the birds have never been excelled by any other breed and never will, and consequently when an all around fowl is wanted there are none that can take the place of the Houdan.

It is not the purpose of this article to go into its history, and so I will simply say that a number of fowls was imported from France by a Mr. Mallory, of Tarrytown, N. J., which had taken the highest honors at the Paris Exposition.

The birds at that day were much lighter in color and with the ill-shaped, unsightly comb, which for a good many years were seen at all the different exhibitions where the birds were shown.

The small V-shaped comb is by no means an American acquisition in any other way; then to go back to first principles, as Mr. Harrison Weir informed me, that when the birds first came into England from France they all had the stag-horn comb—large, but still the V shape. This did not suit the English fanciers, and so they originated the so-called butterfly shaped comb, which was the comb that was introduced into this country.

Every now and again a bird would appear with the V-shaped comb, and one of our early breeders, Mr. Pinkney, of New York state, who really was one of the first real Houdan fanciers, showed such a specimen to Mr. James White, who was very much impressed with the looks of this shape of a comb and urged Mr. Pinkney to breed it into his flock, which he did, and to him the honor is entirely due of fixing this desirable feature in the breed. At this time the color, as formerly stated, was very light and did not suit American fanciers, and so a continuous selection of the darker birds finally resulted in specimens that looked more like a Creve for color than real true Houdans, and in many minds was a drawback, as part of the beauty consisted in the mottling of pure white, which in some specimens was entirely absent.

After a number of changes in the Standard we are finally coming to a correct understanding in this matter, and dark birds, splendidly mottled all over with a pure white, is at

this date no uncommon sight in strains of birds that have been correctly bred.

All this color trouble simply came from the fact that after the first moult the bird would go light in feather, and sometimes to such an extent that the bird would be absolutely useless for any further purposes of breeding or exhibition, and so it became the habit of breeding birds so dark that after the first moult they would show correct color markings, which was of course a very wrong proceeding, as the color was attained by a change in the moulting and not by continuous selection of specimens that would keep their color intact after each moult, which of course any breeder of understanding readily could see.

This trouble is still present in many breeders' flocks, and we get letter after letter regarding this matter, and demand for stock black enough to turn out right after the first moult.

But at this date, after years of selection, our birds do not change color after the first moult so as to be of no value for further operations, but hold their color, and we have specimens of aged birds that are as dark now as when they were younger, and some exceedingly fine females that have

been advertised every now and again by unscrupulous and lying breeders, weighing from ten to thirteen pounds, and a Houdan weighing any such amount of pounds would not be a Houdan and would in every way be lacking in shape and curves.

The Standard weight is all right, and when specimens are bred that will weigh from one to two pounds over those requirements we have excellent weight and all that could be desired.

Females of the first mentioned size are rarely if ever found, and not at all desirable, though sometimes a cock bird will turn up that comes close to the first mentioned figure.

Still, it is wise to keep to the Standard requirements, which will take all the skill of the breeder to keep up all through his flock.

As far as utility is concerned the Houdan has so many desirable features that most breeders who ever tried the breeding of it has continued so to do, as where once introduced it is hard to give it up, and even where only one or two are kept in a flock it is the usual thing to hear "That hen with the topknot does beat the rest of them for laying." Here in Maine, where the winter is long and hard and where the birds must be closely housed all winter, without artificial heat of any kind, our flock will lay steadily all during the worst weather, sing and be happy, when in zero weather we are hugging the stove they are lively and energetic scratchers, never sick, robust and hardy, for during fifteen years of breeding we have never had a single case of roup in our flock.

As an exhibition bird it combines every desirable feature. It is simply beautiful in its whole make-up, and there are always a large crowd in front of the exhibition coops containing Houdans, and when a flock of well-bred Houdans are seen on any lawn every team will stop to admire them, and as the Houdans are very docile, they seem to like all the petting and attention given them—in fact, it is a fowl more suitable for the man who can only keep a few fowls than any other, as a 5-foot fence will keep it in, and it will be perfectly contented in small quarters and do well under the most ordinary circumstances and conditions.

A \$5.00 POULTRY HOUSE.

A person with very little mechanical ability can build a durable 8'x8' poultry house suitable for a dozen hens for a five dollar bill. With the object in view of keeping down expenses and the pleasure derived from doing the work ourselves, we built a couple of such structures this fall, and thinking possibly others might be interested in their cheapness a brief description of these houses and the materials used will be given.

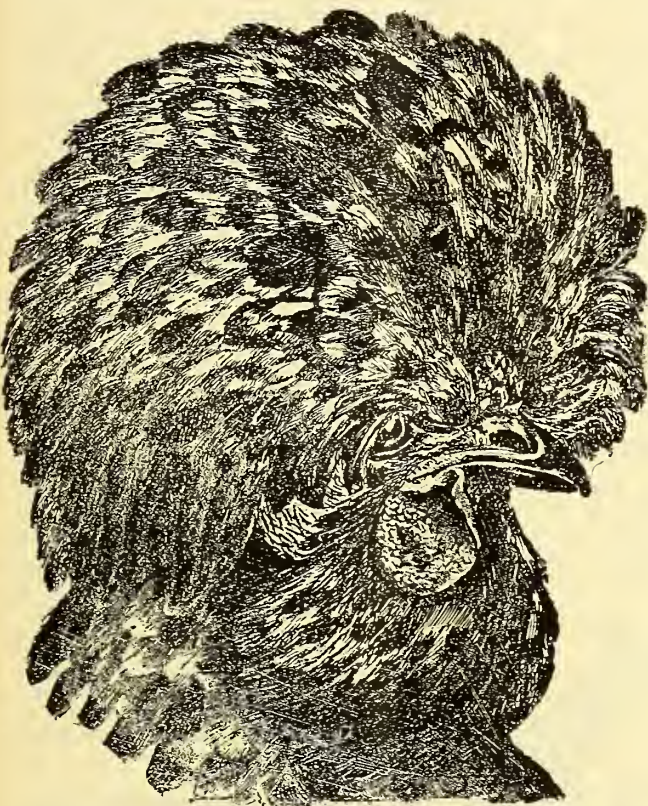

A saw, hammer, plane and square are all the tools needed, and some might get along with even less. We went to the dry goods and clothing merchants and purchased large boxes, using about four for each house. The boxes cost 50 cents each and are made of good inch material, plowed and grooved and surfaced both sides.

No matter whether a shed or cone roof plan is followed, the cost will be within the five dollar limit. The cone roof house requires eight pieces 2"x4"x8' and six pieces 2"x4"x6', and the shed roof plan eight pieces 2"x4"x8' and three pieces 2"x4"x10' of cull studding for framing. The frame rests on four stones about six inches above the ground level and then gravel or stones are filled in and ordinary garden dirt on top and pounded down. Dirt is banked up around the outside to the sill, thus perfect drainage is insured and consequently a dry floor. The exposure should be south or southeast, and as no glass windows are used an opening 30 inches by 6 feet, crosswise, is left, commencing about 2½ feet above the ground floor, and if the shed roof plan is followed and the house is 7 feet high in front the opening will extend to a height within 2 feet of the roof. This opening is covered by 1-inch mesh poultry netting and has a burlap curtain to be dropped at night and in case of stormy weather. The only glass used is a pane 12x15 in the door. We think a house 7 feet high in front and 4 feet in the rear about right, and for a cone roof 7 feet in the center and 4 feet at either side. One square of three-ply tar felt is sufficient to cover the roof.

Now comes the roosting device. A roosting closet is built in the rear of the house, the floor of which is used for the dropping board. The closet is built box-like, which makes the roosting apartment double and is placed 18 inches above the floor with nest boxes underneath. The roost is seven feet long and is a 2x4 scantling set edgewise, with the sharp edges planed off, and placed six inches above the dropping board. The top and front of the roosting closet is a frame covered with burlap and hinged in the center and hung up out of the way during the day.

Joe Coleman.

Bellville, Ohio.

A well shaped and finely proportioned Houdan crest. The kind of crest that should be the crowning glory of a well bred Houdan female. C. E. Petersen, president American Houdan Club, Penbrooke, Me.

been exhibited year after year whose colors are splendid enough to get the special color ribbon year after year, and I only mention this feature to show that breeding by selection of superior specimens will in time accomplish everything necessary in this respect.

The accompanying cut shows a hen five years old that is as good at this writing as she was last year after her moult, and all of her progeny are the same in this respect. Breed the color into the blood and the color will be all right, as that can be fixed as well as any other desirable feature.

The crest also has become, from an unsightly, all-over-the-head-and-eyes falling affair, a sight of beauty, with a globular smooth, falling back over the head appearance that gives that distinguished look of extra fine breeding, wanting in all the inferior specimens so often found in the show room, and even at such an exhibit as Boston, where we passed on the Houdans last January as one of the judges, quite a few of this sort of crest was found, which showed that skillful breeding is still at a premium.

In size and shape much is still lacking, but this will not be found wanting in any of our strains today that have any right to be so called.

There are, however, no specimens found of the size we

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

New American Poultry Association Constitution and By-Laws.

The proposed new Constitution and By-Laws of the American Poultry Association, in the form that it will be presented for adoption at the next annual meeting, to be held at Auburn, N. Y., Jan. 10, 1907, is published in full in this issue.

The American Poultry Association desires to have its provisions read and studied by all interested persons in plenty of time for a full and free discussion and for wise action at the Auburn meeting next January, and trusts that in its essential features the proposed reorganization of the association, as per the provisions of the constitution and by-laws to be recommended for adoption at Auburn, will meet with the approval of the members.

This is the work of a committee of fourteen that recently met at Mt. Clem-

ens, Mich., which committee was selected at the Cincinnati meeting to prepare a new constitution and by-law to be presented later for adoption, and is, in our judgment, equally of importance with the making of the new standard.

We consider this action one of the most eventful in the history of the association. The association has been running for years on the lines laid out for it over thirty years ago, and with the changed conditions and increasing importance of the poultry business, it is absolutely necessary to reorganize on new and improved lines to keep pace with the growth of the great business in which we are interested.

The committee was selected with care from all sections of the country, and consisted of men representing the needs of all sections and the various interests in the poultry business.

The new constitution and by-laws represents the earnest work of fourteen representative men. They have performed their work faithfully, and the result of their deliberation will be presented at the Auburn meeting of the association, there to be accepted in full or to be modified by changes that may seem wise at that time by the majority of the members present.

It is hoped that this meeting will bring out the largest attendance that any meeting of the association ever enjoyed, so that the work may be discussed fully and freely in order that a new start be made and the influence of the association become greater than ever for the advancement of the poultry business.

Now is the time when the breeders of the country should hold up the hands of the officers of the association, and work with them in making the American Poultry Association a strong and influential body which, in turn, will benefit every poultry breeder.

The Supply and Demand.

Through correspondence with several large dealers in poultry we find that it is difficult for them to secure stock of certain varieties of fowls, ducks and geese. Especially difficult is it for them to secure specimens of the more rare breeds. Many breeders of the more popular varieties, such as Wyandottes, Rocks, Orpingtons and Leghorns, find the demand in excess of the supply.

There is nothing phenomenal in this great demand for breeding stock. That the demand will become greater each succeeding year is an apparent and undeniable fact.

Let us consider the situation. Our country is prosperous. Our population is rapidly increasing. Fowls and eggs enter into the daily food ration of all our people. The population of our cities and towns is increasing at a wonderful rate. All these people are consumers, not producers. The market which supplies these people with poultry and eggs must, in the very nature of things, become a greater market as the years go by.

The market poultry of America will eventually be standard-bred poultry—all of it. Today all market poultry is judged, graded and priced with standard-bred stock as the desired quality.

The farms of America, from which the market must be supplied, are be-

coming stocked with standard-bred fowls, and the demand for breeding stock from this source will rapidly increase each year. It will not be long before this demand becomes tremendous.

The outlook is a most pleasing one. Every breeder of "the egg and meat" varieties of standard-bred fowls can safely double his capacity for rearing breeding stock, and by judicious advertising sell every specimen of merit he can raise. This is so evident a fact that there is no room for speculation or doubt.

But this is not all. There is another source of great revenue in connection with the rearing of standard-bred poultry which at this time is not given proper consideration. The demand for the more rare and ornamental breeds of fowls was never as great as it is today, and will be greater tomorrow, and the following days and years. Here the competition never will be great, and there is much money to be made by the comparatively few fanciers who will breed and properly advertise these ornamental, and withal, useful varieties of fowls. This field today is practically unoccupied. It does not seem as though this condition could long exist.

The supply of standard-bred geese has never been equal to the demand. Why this is true is difficult to determine when we consider how the American people are ruled by the spirit of commercialism. There is a wide-open and but scantily occupied field for goose breeding in this country.

England, France and other foreign countries annually demand of us more extra choice breeding turkeys than we can supply. Here, too, is a most inviting field. We have the best turkeys in the world. In no other country are conditions so favorable to turkey culture. Why not supply this demand? Will not American breeders soon supply this demand? All that is needed is for them to raise the stock and let the world know that they have it. That is all.

There is practically no limit to the successful operation of the American poultrymen who will raise good stock and by judicious advertising let the buying world know that he has it for sale.

Truth About Baby Chick Eating.

The story of the baby chick industry now going the gamut of the press would bring tears to the eyes of a motherly old Brahma hen. The hotels of the east are always on the qui vive for new dishes, and the six weeks' chick has been surrendering his carcass to humanity the whole summer past under the name of "baby chick and toast." Baby chicks might easily be the broiler chick that failed to thrive. Some of the young chicks served up on the tables of the big transportation companies have tasted like young crows, so say those who strive to down them. The newspaper articles that tell the story of the baby chick are headed in a way that makes child-labor look like a good religion! The baby chick industry is a farce when it comes down to the meaning that its name implies. Eight-weeks'-old chicks are broilers if they are of good stock, and there are thousands of poultrymen who have eaten six-weeks'-old chicks and never shed a tear, either. Many a six-weeks'-

old chick is a fry, and if you dig into these fake newspaper stories far enough, you will find that six weeks is the age "the tender babies are sent to gladden the palates of the overlords of wealth."

Silver Cups for Fresh Eggs.

The practical poultryman would be better pleased with poultry exhibitions during the winter if there were more premiums offered on utility poultry. In other words, they would like to see prizes offered on the best capons, large and small, entered singly or in pairs, on the best broilers and best eggs. The Nebraska State Poultry Association has induced a creamery company to offer a \$20 silver loving cup for the largest and best display of eggs, said cup to be won three times before it becomes the final property of any one exhibitor. White and brown eggs may compete one with the other in the contest for this cup. These eggs will be scored under the following score card:

Freshness	30
Weight	30
Color	20
Cleanliness	10
Uniformity of shape.....	10
<hr/>	
Total	100

This association has had a large display of eggs each season because they have offered good money premiums on them. But this creamery company, now in the market for more and better fresh eggs, feels the need of a further stimulant to their production. Let other associations take notice!

American and English Langshans.

The real Langshan, the type of Langshan imported by the deceased Major Croad, has had a hard run of it in the mother country. Special classes have had to be made for it at the exhibitions where the Pure (Croad) Langshan Club would guarantee a full class. The fanciers have all seen the pure Croad Langshan in reproductions taken from the English journals and have smiled much at the great length of leg and closeness of feathering. The opposite type of English Langshan is very Cochiny and competes unto itself at the shows. The American Langshan is bred between these two extremes and largely for utility. A Cochiny Langshan goes as far begging in this country as the one on stilts. And this is as it ought to be. Two distinct classes for one variety of fowls is splitting the hair and draws the fowl no favor.

"RANKIN'S ROYAL"

Barred, White and Buff Ply. Rocks and White Wyandottes are bred to win, bred to pay, bred for quality and business in every way. Hundreds of selected specimens, line and pedigree bred by my trap nest system, from America's greatest sires and champions for sale on approval at guaranteed bonest prices. Eggs \$1.50 to \$10 per 15; \$7 to \$20 per 100. Seriously, you can't afford to place an order (large or small) before writing me.

H. P. Rankin, Box 61, Hartington, Neb.

Large Breeders.

Considerable advice has always been given to amateurs and others beginning the poultry business, and the first rule that is heard is usually: Stick to one breed; it pays best in the long run. A firm in England breeds about everything that wears feathers and lays eggs. In one month, besides local sales, they have sent consignments of Black Japs to the United States; nine Orpingtons, Barred Rocks and Partridge Wyandottes to Germany; six Indian Games and Dorkings to Central Africa; three Cochins to India; ninety birds of the general purpose breeds to South America; fourteen birds to Canada and 250 high-class birds to Japan, Switzerland, India, France and South Africa. Such stupendous sales as these cause the beginner to want a seat in the all-variety wagon. Nothing in the entire category of fowls is overlooked in this establishment.

Purdy Goes to California.

Will Purdy has lately removed to southern California from his previous location at Dallas, Tex. Mr. Purdy is a well-known English fancier and judge and now is located permanently in Los Angeles. Mr. Purdy has judged and done considerable reporting for the best English poultry journals, and we have seen, from time to time, some very good criticisms of American shows in our contemporaries across the pond. Mr. Purdy has had much experience in judging and handling high-class fowls and canines of all breeds, and the fanciers of California are congratulating themselves on his location in their midst.

We have received a copy of "How to Make Poultry Pay," a new book just published by Inland Poultry Journal Co., Indianapolis, Ind.; price, \$1.00. This is published on a fine quality of

paper, and includes colored illustrations that appeared from time to time in Inland Poultry Journal, accompanied by an interesting lot of information regarding all phases of the poultry business, nicely illustrated by original designs and photographs. It also contains illustrations in black and white, drawn by J. W. Burgess.

Poultry Success Co., of Springfield, Ohio, sends us their new book, entitled "Poultry Keeping in a Nut Shell." This is a book of 72 pages, 6x9 inches, illustrated, and containing interesting and valuable reading matter to every poultryman.

"The early bird catches the worm" is an old saying and one that is very applicable to poultry raisers, for the poultryman who does not get up early and feed and care for his fowls will never make a success of the poultry business.

It does not pay to winter a lot of culls. Send them to market and thus cut down your feed bill.

Prompt treatment of a cold often prevents roup from spreading through the flock.

O. K. ROUP CURE

Checks roup at once. Just as soon as you see a case in your flock give O. K. Roup Cure according to directions. It rarely fails to give immediate relief. Cures Colds, Canke, Catarrh, asthma in poultry, pigeons or song birds. This is a guaranteed roup cure and perfectly safe to use. Sent postpaid for 50 cents.

THE AMERICAN POULTRY ASSOCIATION CONSTITUTION.

Constitution and By-Laws, Drafted by the Committee of Fourteen, to be Submitted at the Meeting of the American Poultry Association at Auburn, January, 1907.

ARTICLE I—NAME.

The name of this organization shall be "The American Poultry Association."

ARTICLE II—OBJECTS.

The object of the association shall be the publication, revision and improvement of the American Standard of Perfection, this book being the exclusive property of the American Poultry Association; the consideration of all questions pertaining to the poultry industry of America; the promotion of the interests of poultry breeders in general and of members in particular, and the encouragement of poultry exhibitions held under the rules and regulations of this association.

ARTICLE III—MEMBERSHIP.

Section 1—The members of this association shall consist of five classes, as follows:

(a) Life—Individual membership shall be for life, for which a fee of \$10, payable with the application, shall be charged. The applicant shall be eligible to all rights and privileges of membership immediately following his election by the executive board.

(b) Associate—Any poultry association or society, organized for the purpose of holding annual poultry exhibitions, may become an associate member of this association on payment of a fee of \$10, such membership to be approved by the executive board, and shall be entitled to one representative having one vote at meetings of this association. Such associations or societies, on becoming associate members of the American Poultry Association, shall be amenable to its rules and regulations governing poultry associations and shows.

(c) Clubs—Any specialty club, organized in the interests of any breed or variety of standard bred poultry, may become a member of this association on payment of a fee of \$10, such membership to be approved by the executive board, and shall be entitled to one representative having one vote at meetings of this association.

(d) Society—Any society organized in

the interests of poultry culture may become a member of this association on payment of a fee of \$10, such membership to be approved by the executive board, and shall be entitled to one representative having one vote at meetings of this association.

(e) Branch—Any state or province, or any district composed of any combination of adjoining states or provinces, not exceeding six in number, may be organized into one branch association, subject to the constitution and by-laws and the rules and regulations of the American Poultry Association. The membership of branch associations shall be made up of life, associate or society members of the American Poultry Association. Each branch association, through its properly accredited representative, who must be a member of the branch association, shall be entitled to one vote at meetings of the American Poultry Association for each five of its members who are not present at roll call.

Section 2—All applications for membership of classes a, b, c and d must be made in writing, be addressed to the secretary-treasurer of the American Poultry Association, bear the endorsement of two members of the association and receive a majority vote of the executive board present and constituting a quorum. No application shall be approved unless the prescribed membership fee has been paid. Should the application fail of approval, the fee shall be returned. An application for branch membership must state, over the signature of its secretary, the number and names of its members who are life members of the American Poultry Association.

Section 3—The credentials of representatives of branch associations and associate, club and society memberships must reach the secretary's hands before the opening roll call of meetings attended by such representatives, otherwise they shall not be entitled to take part in the proceedings as representatives.

Section 4—The representative of any club or society must show by his credentials that said club or society has held a regularly called meeting as provided for by its constitution and by-laws within one year from the date of the meeting of this association in which he seeks to take part and a certified copy of said constitution and by-laws must have been filed with the secretary-treasurer of the American Poultry Association at the time of the filing of the application for membership.

Section 5—In advance of each annual meeting the secretary-treasurer shall drop from the roll call all members of the association who are two years in arrears in payment of their dues.

Section 6—Fifty per cent of each life, associate or society membership fee coming to the secretary-treasurer of the American Poultry Association through any branch association for membership in the American Poultry Association shall, upon the election of the applicant, be returned to the branch from which it came.

ARTICLE IV—OFFICERS.

Section 1—The officers of this association shall be a president, a first vice-president, a second vice-president, a secretary-treasurer, an executive board, a finance committee, a standing revision committee, an election commissioner and a board of review.

Section 2—The executive board shall consist of the president, vice-presidents, secretary-treasurer and nine elective members, together with the presidents of all duly accredited branch associations.

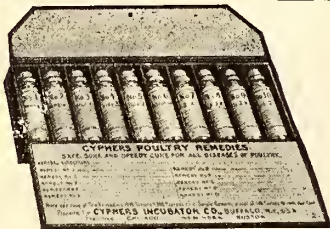

Section 3—Neither the vice-presidents nor any two of the nine elective members of the executive board shall be elected from the same state or province. The nine elective members of the executive board shall be elected the first year after the adoption of this section as follows: Three for the term of three years, three for the term of two years and three for the term of one year. Three members of the executive board shall be elected annually thereafter, each for a term of three years.

Section 4—The finance committee shall consist of the president, who shall be chairman, and two other members of the executive board, to be chosen by the executive board at its annual meeting, and shall serve for one year.

Section 5—The standing revision com-

mittee shall consist of three members, to be chosen by the executive board, to which committee all matters pertaining to standard revision shall be referred for attention, with or without recommendations.

ARTICLE V—ELECTION OF OFFICERS.

Section 1—The election of all officers of the association shall be by mail, unless otherwise provided for by this constitution, and shall be conducted under the direction and control of the election commissioner, except that his final report of the results shall be verified and certified to by a board of review, as hereinafter provided.

Section 2—The election commissioner shall be elected by a majority vote at each annual meeting of the association. His necessary traveling and hotel bills, postage, stationery and other expenses shall be paid by the American Poultry Association.

Section 3—Except as otherwise provided, the terms of all officers shall be for one year, and until their successors are elected and qualified. All official terms shall begin at the commencement of new business at each annual meeting, and end at the close of unfinished business at the next succeeding annual meeting.

Section 4—The traveling and hotel expenses of the president, first vice-president, second vice-president, secretary-treasurer and nine elective members of the executive board, for attendance at all executive meetings, shall be paid by the American Poultry Association. The traveling expenses of members of the executive board sent by branch associations shall be paid by themselves or by the branches that send them.

Section 5—The board of review shall be elected by ballot at each annual meeting of the association, from among the members present, no member of said board to be either an officer of the association or one of the candidates for office. The term of office of each board of review shall terminate at the adjournment of the meeting at which said board is chosen.

ARTICLE VI—DUTIES OF OFFICERS.

Section 1—President: The president shall preside at all meetings of the association, act as chairman of the executive board and of the finance committee; countersign all checks when properly approved and when signed by the secretary-treasurer; appoint all committees not otherwise provided for; call special meetings of the association or of the executive board within sixty days at the written request of five or more members of the executive board, and perform such other duties as pertain to the office.

Section 2—Vice-presidents: In the absence of the president, or in the event of his inability to act, the first vice-president or, in his absence, the second vice-president, shall preside at his place and perform his duties.

Section 3—Secretary-treasurer: The secretary-treasurer shall prepare and distribute all notices of meetings of the association and of the executive board; shall keep the minutes of such meetings and have charge of all books and papers pertaining to his office, and shall keep a correct list of the names of all members of the association and their places of residence and the dates of their election, a copy of which he shall furnish on request to the election commissioner and to the chairman of the board of review.

Section 4—He shall be the custodian of the seal of the association, which he may use only under the direction of the executive board or by direct vote of the association.

Section 5—He shall furnish to all members a certificate of membership.

Section 6—He shall conduct the general correspondence of the association and have custody of the same. He shall keep on file all letters received, together with carbon or duplicate copies of all letters sent out by him, for the information of the president or committees, and shall act as secretary of the executive board and prepare a report of all meetings of said board for the information of the members of the association.

Section 7—He shall at the proper time furnish the election commissioner and chairman of the board of review with lists of all officers to be elected, and full information regarding the territories from which said officers are eligible to election.

Section 8—He shall collect all money due the association and be custodian of all moneys belonging to the association which must be deposited by him in the name of the association in a bank or banks approved by the finance committee, from which money all bills of the association shall be paid only when such bills have been approved in writing by the finance committee; he shall sign all checks drawn on the funds of the association, which checks must be countersigned by

The Reason You Don't Have To Paint Amatite ROOFING

It's all in the top surface. We could show you better if you had a sample in your hands. But the enlarged diagram of Amatite shows it pretty well. The mineral surface you see there takes the place of paint and coating. It makes that extra expense unnecessary. It saves both time and money.

Lay Amatite and that is the end of your roofing troubles. When you lay the ordinary kinds, your

AMATITE
PITCH COMPOSITION
WOOL FELT
PITCH COMPOSITION
WOOL FELT

ENLARGED SECTIONAL DIAGRAM

roofing troubles begin. You have to paint or coat them every year or so. Their expense soon amounts to as much as the original cost of such roofings.

Amatite costs less than the other kinds to buy, and it costs nothing whatever to maintain. Amatite is the kind of roofing you want. The kind that is naturally waterproof. Amatite does not have to hide under a coat of paint in order to give good service. It is made to take the brunt of any kind of weather under any kind of conditions.

Send for a Sample and examine the mineral surface for yourself. You will see at once that it is the only kind worth having. We will send a Sample free on request. Address nearest office of

LEE'S

LEE'S GERMOZONE

Sick hens won't lay—dead chicks don't pay. They'll never grow into fat broilers, or make you any money. Don't worry about disease; just use Germozone, according to directions. "An ounce of prevention is worth a pound of cure." A 50c package from your dealer or direct, used before your chickens get sick, is worth a whole drug store of stuff when they begin to die. Germozone twice a week in the drinking water keeps your entire flock well and productive. Just the remedy you need to cure Roup, Colds, Frosted Combs, Canker, Swelled Head, Inflammation of the throat and all winter disorders.

LEE'S EGG MAKER

Early winter layers are the hens that roll up the profits. Now's the time to feed them. Get them at once onto the egg-laying rations. Lee's Egg Maker holds them in condition to go through winter keeping their egg-production up to the point where you get top-notch prices. It is the best egg making food—the result of scientific study and practical experience. Contains everything the hen needs to make egg and shell. It does not contain a particle of sand, grit or cheap fillers. Every ingredient is there to help you get more eggs quickly.

One-half the bulk of Lee's Egg Maker is granulated blood (deodorized)—a concentrated, protein food which combined with the other essential elements furnishes the materials the egg-producing organs require to do the work. Lee's Egg Maker has years of success and wonderful egg records back of it, as a guarantee of its true worth. Your hens need it. Price: 25c, 50c and \$2.00 according to size. Sold by dealers or sent direct. Buy a package at once and see the egg baskets get fuller.

LEE'S LICE KILLER

No bother to use; no greasing, no dusting or handling fowls. Just spray roosts, nests and every crack and corner of the hen-house with it, then see the lice, mites and other tormentors disappear like magic. Price per can 50c, 80c, \$1.00. Write for Lee's free, new, poultry books and a "Mandy Lee" catalog. Agents everywhere.

GEO. H. LEE CO., Omaha, Neb.

LEADERS

the president; he shall keep the necessary books, in which shall be entered the amounts received and disbursed by him, and shall have his books, papers and accounts always open for the inspection of the executive board or any other member thereof.

Section 9—He shall make an itemized report of the financial condition of the association, together with a full report of all transactions, such report to be made annually to the executive board, covering the last expired fiscal year, which reports shall be in the hands of the chairman of the executive board ten days before the date of its annual meeting.

Section 10—He shall be custodian of and keep well insured all property belonging to the association not otherwise provided for.

Section 11—He shall give bond to be approved by the finance committee for the faithful performance of his duties, said bond to be paid for by the association.

Section 12—The salary of the secretary-treasurer shall be \$1,500 dollars per year, payable by check in equal monthly installments as due. The salary of his office assistant shall be \$10 per week, payable weekly. The only other expenses allowed the secretary-treasurer shall be for postage, freight, telegrams, expressage and other incidental office expenditures in transacting the business of the association and his actual expenses incurred in attending the meetings of the association and executive board, and such other expenses as are authorized by the executive board, all of which expenses must be approved by the finance committee before checks covering the same can be drawn against the funds of the association.

Section 13—The secretary-treasurer shall devote his entire time and attention to the duties of his office, and the same shall be required of his office assistant.

Section 14—Should the secretary-treasurer neglect his duties to the detriment of the association, it shall be the duty of the president, or any member of the association, to call attention to the fact, and the executive board, on proof of due cause, may require him to resign, declare the office vacant and forthwith appoint his successor to serve out the year. In case of the dismissal of the secretary-treasurer for cause, he shall receive no salary for the unexpired term for which he was elected.

Section 15—Duties of executive board: The executive board shall have general control and supervision of the affairs of the association, and shall be its official organ at all times and on all occasions.

Section 16—It shall be its duty to safeguard the interests of the association at all times, and especially during the intervals between the annual or special meetings, acting promptly within its legal powers.

Section 17—It shall fill all vacancies that occur among the officers of the association or on standing or special committees not otherwise provided for.

Section 18—It shall hold a regular meeting once each year at the place of holding the annual meeting of the association, said regular meeting to be convened one day in advance of said annual meeting, and it shall not adjourn sine die until after the final adjournment of the annual meeting of the association.

Section 19—It shall meet in special session on call of the chairman of the board, or on written request of five or more of its members, said written request to specify the time of meetings, which shall not be less than ten nor more than sixty days later than the date of the request; said request to also specify the object or objects of the said special meeting, and the place at which the meeting is to be held.

Section 20—It shall make a written report, in detail, at each annual meeting of the association, through its secretary, covering its acts, such report to include the reports of the secretary-treasurer and finance committee, and a report from, or regarding, each branch association.

Section 21—It shall have authority to contract indebtedness in the name and interests of the association; provided, however, that such indebtedness shall not at any time be greater than the amount of the current funds in bank.

Section 22—It shall take official notice of any neglect of duty on the part of the secretary-treasurer or his assistant, and shall act of its own volition, or upon charges properly preferred by any member in the matter of such neglect of duties.

Section 23—It shall appoint, instruct and control the standing committee on revision of the American Standard of Perfection, and take the initiative in providing for a revision of the American Standard of Perfection once in five years.

Section 24—It shall carry out the will of the association in the organization and promotion of branch associations; have

control of the establishment of branch associations, of the division of territory and of the enforcement of the rules and regulations which govern their relations to the general association, except as otherwise provided for in this constitution.

Section 25—It shall use its best endeavors to secure Associate Members of the Association and shall encourage the formation of specialty clubs and of poultry societies that express a desire to become members of this association.

Section 26—It shall provide a certificate of membership for each class of members, and require the secretary-treasurer to furnish members with same, properly dated and signed, and having the seal of the association thereon.

Section 27—It shall provide an appropriate seal or emblem, to be protected by trade-mark, registration or copyright, for use on printed matter, stationery, certificates, diplomas and medals of the association, and to be furnished in the form of electrotypes for the use of members of the association.

Section 28—It shall have charge of and promptly act upon all matters pertaining to the disqualification, suspension, expulsion or restoration of members, with power to suspend, disqualify or expel any member, for cause, by a vote of three-fourths of the members present and constituting a quorum; provided, that no member shall be suspended, disqualified or expelled without formal charges and the opportunity to be heard, and that any member thus suspended, disqualified or expelled shall have the right to appeal to the association at its next annual meeting, which shall be the final judge in the case. Said board shall have the power to restore disqualified or expelled members, subject to protest from any member in good standing against restoration, in which event the case shall go before the association, at its next annual meeting, for decision.

Section 29—It shall arrange for licensing judges of poultry and shall have power to suspend or disqualify said judges for cause, and to revoke their licenses on order of the association.

Section 30—It shall enforce the rules of the association governing the holding of poultry shows.

Section 31—It shall co-operate with branch associations and associate members

in avoiding conflicts of dates in holding poultry shows and other poultry meetings.

Section 32—It shall appoint from among its members a committee of three on certificates, diplomas and medals, and arrange to supply these awards of merit to branch associations and associate members for the encouragement of exhibitors at annual poultry shows held under the rules of the American Poultry Association.

Section 33—It shall arrange for poultry conventions in branch territories in cooperation with branch associations, and provide for an annual poultry institute to be held in conjunction with the annual meeting of the association.

Section 34—It shall organize and promote, through the office of the secretary-treasurer, a bureau of lecturers qualified to deliver addresses on poultry topics, and shall issue certificates thereto authorizing them to announce themselves as members of the American Poultry Association bureau of lecturers.

Section 35—Duties of finance committee: All bills and claims against the association shall be referred to the finance committee, and, before payment, must be approved in writing by a majority of the committee, this majority to include the chairman; all papers showing such approval shall be preserved by the secretary-treasurer and made a part of his financial report to the executive board at its next annual meeting.

Section 36—The fiscal year of the association shall close on June 30th and the finance committee shall audit the books and accounts of the association in July of each year, certify to their correctness covering the last preceding fiscal year, and report its findings to the executive board at its next annual meeting. It shall also audit the books and accounts of the secretary-treasurer at such other times as the executive board may direct.

Section 37—Duties of standing committee on revision: It shall be the duty of the standing committee on revision to collect such data as it may find practicable for use in each general revision of the American Standard of Perfection. To this committee shall be referred all information, suggestions and requests pertaining to changes in the text and illustrations of the Standard of Perfection.

Section 38—At least one year before the

time for a general revision of the American Standard of Perfection all such information, suggestions and requests shall be classified by this committee and placed in convenient form for adoption or rejection by the association at its annual meeting, or by a general revision committee to be appointed by the association. This standing committee on revision shall make an annual report to the executive board and shall be made members of the general committee on revision to be appointed by the association once in five years.

Section 39—Duties of the election commissioner: On the first Tuesday of February of each year the election commissioner shall mail to the last known address of every member of the association a printed nominating ballot, to be so designated, together with an official statement prepared by the secretary-treasurer, and approved by the president, naming the officers to be elected and specifying the territories from which each is eligible; these nominating ballots to be made returnable within thirty days, and each ballot to be dated and signed in ink by the member whose vote it represents.

Section 40—On receiving and counting the nominating ballots the election commissioner shall ascertain by mail, within the ensuing thirty (30) days, who among the five (5) candidates for each office receiving the highest number of votes, or who among the total number of candidates voted for, provided there are less than five (5) nominated for any office, are willing to stand for election, informing each candidate of the number of votes cast for him and for each of the other nominees, thus honored for the same office and a list of all successful nominees for all offices of the association.

Section 41—On receiving authority to formally announce the various successful nominees, the election commissioner shall, within thirty (30) days of the counting of the nominating ballots, mail printed election ballots, to be so designated, to all members of the association, making them returnable within thirty (30) days from the date of the printed notice that shall be enclosed with each ballot, naming the candidates for election, and giving full particulars as to their eligibility.

Section 42—Exactly thirty days after the mailing of the election ballots the

BUY NO OTHER

“WYANDOT WHITE”
IS THE OIL
THAT’S RIGHT

Pure air—even temperature—the two most important things in raising chicks. You can't be too careful about having both in your incubators and brooders and they both depend on the kind of oil you use. Dirty, foul smelling lamps have been the death of many a promising batch of chicks. It don't pay to work, watch and wait for weeks, pay out your good money for eggs and spend your time and labor only to have your chicks die in the shell or, if they escape that misfortune, to go out some fine morning and find them smothered to death in your brooder. You cannot afford to run any chances of losing your chicks. Pure air and even temperature are easy to secure and maintain. The problem is a very simple one—use the right kind of oil. Oil that won't clog the wick, that won't cause the lamp to smoke and that does not give off poisonous fumes. That's the kind of oil you get when you buy Wyandot White Oil. The

PATENTED PROCESS

which it goes through removes the acid and impurities found in ordinary oils and the result is an oil that burns with a clear, bright, steady flame. When you light the lamp and adjust the flame you can be sure that it will burn just that way as long as there is a supply of oil in the lamp. The flame

won't grow less after burning awhile. It will keep the same intensity and even temperature all the time. It MAKES LESS LABOR for the lamps do not get dirty and foul smelling and are easy to keep in order. Try Wyandot White Oil and you'll see we've told you the truth. There are more good points about Wyandot White Oil. Write to us for full information and prices. WYANDOT REFINING CO., Box A, Cleveland, O.

Pratts Food makes Cows give more milk

Pratts Poultry Regulator

(For 34 years called Pratts Poultry Food)

Will make your Hens lay

Our Word

- 1st.—We say Pratts Poultry Regulator will help you raise your little chicks, make them **grow rapidly** and develop into fine broilers or good layers.
- 2d.—It will keep the flock **healthy, improve the appearance** of all the birds and **greatly increase the egg production.**
- 3d.—It is the **best tonic, regulator, egg producer and disease destroyer** ever made. It is **guaranteed** and will **insure you profits.**

Their Word

Mr. P. Dill, Vice-President of the C. W. P. R. Club, of Seaford, Canada, February 16, 1906, says: "At the last Ontario Show I won 25 prizes with my White Rocks, and attribute my success to **Pratts Poultry Regulator.** I commenced with the chicks when a month old and used it in every mash. It promotes their **growth** and gives grand lustre to their **plumage.** It brings them through the molting period looking and feeling fine and gives them a good start on their **laying trips** for the winter. I would not be without Pratts Poultry Regulator for twice the price and find it very beneficial in case of **colds** and recommend it to all lovers of **fine fowl.**"

L. Weidel, Stroudsburg, Pa., April 10, 1906, says: "I am using Pratts Poultry Regulator. During February my 32 chickens laid 553 eggs."

Package, 25c.; 9c. per lb. in 100-lb. bags

Pratts Lice Killer.—Positively destroys all lice on poultry. 10c., 25c. and 50c.

election commissioner shall count all votes received by him in the form of printed ballots that are properly dated and legibly signed in ink by the members of the association entitled to cast same, and shall immediately furnish the poultry press a report of the officers elected, as shown on the face of the returns.

Section 43—After counting the nominating and election ballots the election commissioner shall carefully preserve same and deliver them either personally or under seal, by registered mail or by express, to the president of the association on the opening day of the annual meeting of the association, before the opening session of the meeting has been called to order, who shall hand them in the unbroken package or packages to the chairman of the board of review immediately after said board of review has been elected.

Section 44—Duties of board of review: On receiving the official ballots, both nominating and election, the board of review, assisted by the election commissioner, if he is in attendance at the meeting, shall carefully verify the work of said commissioner, certify in writing to the election of the successful candidates, or the choice of the place of holding annual meetings, and shall report its findings to the meeting of the association, as provided in the order of business. At the counting of the votes by the board of review, if it shall be found that two or more candidates, or two or more places of meeting, have received the same number of votes, this fact shall be reported to the annual meeting of the association, whereupon the members present and constituting a quorum shall have power to elect their choice from the candidates or places that are a tie, a majority vote to be decisive.

ARTICLE VII—ANNUAL MEETINGS.

Section 1—The annual meetings of the association shall be held in August of each year at some central point to be determined once in three years by a vote of the members, cast by mail; the five points receiving the highest number of votes on the nominating ballot to be resubmitted for final choice, the point then receiving the highest number of votes to be declared the place of meeting for the next three years.

Section 2—The election of each place of meeting shall be conducted by the election commissioner in substantially the same manner as that provided for the election of officers, the nominating and election ballots for the places of meeting to be sent out by said election commissioner once in three years, at the same time and in the same way as that required of him in conducting the election of officers; provided, further, that his work in receiving and counting said ballots shall be verified and certified to by the board of review, the same as prescribed in the case of election of officers.

ARTICLE VIII—QUORUMS.

Section 1—Fifteen members of the association present and voting shall constitute a quorum.

Section 2—Eight members of the executive board present and voting shall constitute a quorum of said board.

ARTICLE IX—FUNDS.

Section 1—The moneys of the association shall be kept in two separate funds, to be known as the emergency fund and current funds.

Section 2—The money comprising the emergency fund shall be placed at interest in one or more banks at the discretion of the finance committee, and shall not be disturbed except by resolution adopted at an annual or special meeting of the association.

Section 3—A petty cash fund not to exceed one hundred dollars in amount shall be furnished the secretary-treasurer for small disbursements, which fund may be replenished from time to time on his making an itemized report, to be approved by the finance committee, and issuing a check for the amount so authorized, which check must be countersigned by the president.

ARTICLE X—REVISION OF STANDARD.

Section 1—A general revision of the American Standard of Perfection shall take place once in five years and not oftener.

Section 2—No changes shall be made in any part of the Standard of Perfection unless written notice, specifying word for word the proposed change or changes shall have been filed with the secretary-treasurer at least ninety days before the annual meeting at which the changes are to be acted upon, in which case the secretary-treasurer, in announcing the next annual meeting, shall notify all members of the proposed change or changes, specifying same word for word.

Section 3—New breeds or varieties shall be admissible to the Standard of Perfection only at the time of general revision. Corrections may be made and omissions supplied by a majority vote at any annual

Feed Your Poultry For Profit

Nine times out of ten haphazard feeding is responsible for the lack of profit in the poultry business. Whenever poultry-raisers fully realize the benefits of feeding scientifically prepared rations for specific purposes, there'll be a whole lot more money to the credit of the hen and her owner. A trial of any one of the **Midland Poultry Foods** will be an education that will mean more profit in the poultry business. In the **Midland** line there's a food for every fowl, from the little chick to the old turkey gobbler—for fattening, for feathers, for eggs—a food for every purpose.

MIDLAND Poultry Foods

are prepared for specific purposes—each food has its special use. It will save you money to use foods that you know will do the work—don't feed by guess—trusting to luck for results when there's a way to be certain.

No. 4.—This is the food that will interest you the most at this season, because its use means more and better eggs. It increases the production of eggs by supplying the materials the hen needs to make eggs from. It is not a stimulant or medicine that forces the egg supply for a few days and then leaves the fowl in a weakened, run-down condition—the hen lives on it, thrives on it, and lays eggs because it's what she needs. No. 4 not only makes lots of eggs possible but it gives your fowls a beautiful, glossy plumage and fits them for the Fall Shows.

We sell it by the car-load to the big fellows—it pays them—it will pay the woman with 12 hens as well in proportion. There are nine other foods in the **Midland** line,—for fattening fowls, for ducks, geese and turkeys. We'd like to tell you about all of them and just what each one is intended for—especially our new **Combination Turkey Food.** One trial of this unique food will show you how to make money growing turkeys. Our two free books, "The Science of Poultry Feeding" and "Poultry Fattening Perfected" tell how to feed **Midland Poultry Foods** for profit. Write for books today. We will tell you how, where and why to buy our foods.

Midland Poultry Food Co., Dept. A Kansas City, Mo., U.S.A.
or Cornell Incubator Co., Atlantic Coast Agts., Ithaca, N. Y.

4

meeting of the association, on recommendation of the standing committee on revision; provided, written notice, specifying word for word the proposed corrections or omissions, shall have been filed with the secretary-treasurer ninety days before the date of the annual meeting at which same is to be considered, and that a printed notice, specifying such corrections, shall have been mailed by him to each member of the association at least sixty days before the date of said annual meeting.

ARTICLE XI—NEW BREEDS AND VARIETIES.

Section 1—Before a new breed or variety can be admitted to the American Standard of Perfection it must comply with the following requirements, to-wit:

(a) It must be able to produce 30 per cent of the specimens reasonably true to the type and characteristics of the breed or variety, as set forth in the proposed Standard, and must have been exhibited in at least two generations, both male and female, at not less than three annual meetings of the association.

(b) Written notice of the presence of such breed or variety for inspection at annual meetings shall, upon each occasion, be supplied the secretary-treasurer at the place and time of meeting, and the secretary-treasurer shall ascertain whether or not the required exhibitions of specimens have been made, and shall record the facts in the official minutes of the meeting.

(c) Both male and female specimens of at least two generations each must be on

exhibition at the time when the breed or variety shall be presented for admission to the Standard of Perfection, in order that the members of the association may inspect the breed or variety to determine the propriety of admitting it in accordance with the specifications of the application.

(d) If application is made for admission of a new breed, the breed must possess such new breed characteristics as to give it a very distinct character of its own, and if application is made for admission of a new variety, the variety must truly possess all the type characteristics of the breed of which it is a variety. Extraordinary care shall be exercised to prevent multiplicity of varieties.

Section 2—A petition addressed to the American Poultry Association shall be presented.

(a) This petition shall contain a description of the breed or variety seeking admission, together with all ascertainable facts regarding its origin and breeding, and a prayer for its admission.

(b) Affidavits of not less than five breeders of the breed or variety shall be presented, containing statements of the percentage of specimens breeding reasonably true to type and characteristics of the breed or variety as above required.

(c) The proposed Standard for the breed or variety shall be presented at the same time with the petition, but may be amended by the petitioner or the association before the admission of the breed or variety. This standard shall be read at the meeting at

which admission of the breed or variety is sought.

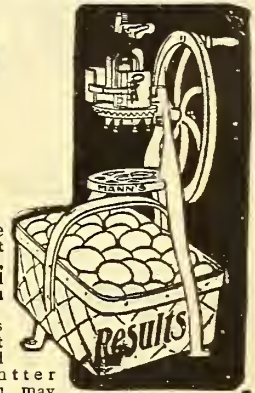

(d) At least ninety (90) days prior to the meeting of the association at which admission to the Standard of Perfection is sought the papers required in the application shall be filed with the secretary-treasurer, who shall give to all members of the association sixty (60) days' notice of the pendency of such application.

Section 3—If upon consideration of all the evidence the association is satisfied that the breed or variety is worthy of recognition in the Standard of Perfection; that it has, in fact, the qualities and characteristics set forth in the application; that all claims and characteristics set forth in the application are justified, and that all requirements for its admission have been complied with, a majority vote of the members present and voting by written ballot shall admit the breed or variety to the Standard of Perfection.

ARTICLE XII—AMENDMENTS.

This constitution and the by-laws of the association, having been approved by a two-thirds vote of all members present at a regular meeting of the organization, can be repealed or amended only by a like vote. Such repeal or amendment must be offered in writing, and be forwarded by the person proposing same to both the president and secretary-treasurer; and the secretary-treasurer, if so directed by a majority of the executive board, shall have such repeal or amendment printed, and shall mail a copy to every member of the association at his

Keep Your Hens Laying ALL WINTER LONG And Get More Eggs at Less Expense

EVERY atom of matter that the hen puts into an egg, must come from the food she eats. She can't get it in any other way.

So, it is perfectly clear that if you expect to get more eggs, you must give the hen materials to make eggs from—food containing more of the elements that enter into egg making, in an easily digested form.

There is no room for argument there.

But what kind of food is that?

Where will we find it?

Well, it so happens that not only the egg, but the greater part of the fowl's body—bone, muscle and feathers, is made up of what the professors call "protein."

Unfortunately, it also happens that protein is found in only small quantities in the grains and vegetables usually fed to fowls, but in exceedingly large quantities in animal matter or food.

That explains why fowls of all sizes and ages, from the youngest chick to the oldest rooster, love worms and hogs above everything else.

They crave animal food, because Nature's Instinct teaches them that they need it for growth, development, vitality and egg-making.

* * *

Of course your hens cannot get worms and hogs in winter or when they are confined to close quarters.

You, therefore, must give them this protein food in some other form, if you hope to get the best results from your flock.

You can get this "protein" in its most digestible form—most nearly like the worms and hogs your hens love so much,—by simply taking the trimmings from your hatcher's block, the hones of beef, pork or lamb with gristle and meat adhering to them.

They make a perfect substitute—not only because they contain the same food elements as the worms and hogs, but also because, in its fresh, raw state, it is as easily digested and as greatly relished as are the worms and hogs.

In effect it is not something that

is almost as good," but it is identical the same.

It "balances the ration" by supplying what is lacking—or is very scarce, in the grain you feed.

It has more than four times the egg-making value of grain and is rich in the elements needed for making bone and muscle and so promoting rapid growth and developing as well as improving the vigor and vitality of the entire flock.

That is why fresh-cut raw bone—doubles the egg yield by giving the hen egg-making material in its most easily digested form;

—makes more fertile eggs, produces larger hatches and livelier chicks, because it makes hen and

"beef-scrap, can take the place of raw bone.

It is the live worm the hen craves, not a dried up carcass, and it is raw, fresh animal food that does her the most good and is the most easily digested.

If dried, or cooked or emulsified or preserved it naturally loses a large part of its value.

Neither should you class raw bone with the advertised "poultry foods" or "condition powders" made from secret formulae, for which such extravagant claims are made. Your hens do not need these compounds or medicines to make them lay, if they have the right kind of material in their food.

Neither do they need the ready

To prove what it will do, we will send you any Mann's Latest Model Bone Cutter that you may select from our catalogue on

Ten Days Free Trial

(No money in advance)

You simply select the machine you want to try—and we send it to you. No red tape, no "deposit," no money in advance.

If it does what we claim it will do, you buy it.

If not you return it at our expense.

Can we make you any fairer offer than that?

* * *

You will find that Mann's Bone Cutter turns easily, cuts rapidly and produces better poultry food than any other.

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

It makes better poultry food than any other because it cuts not only all green bone, but also all adhering meat and gristle—wasting nothing and leaving no chunks or slivers.

Its open hinged cylinder takes large bones and can be easily kept clean.

It is strong and durable and requires few repairs.

But try it and see—that's the way to tell.

Send Today for Catalog

and make your selection of machine for trial.

We will do the rest.

TEN DAYS FREE TRIAL

No Money in Advance.

MANN'S

LATEST MODEL Bone Cutter.

cock more vigorous, fuller of vitality, so that the eggs have more life in them;

—develops earlier broilers and layers and makes heavier market fowls, because it promotes growth by supplying the elements most needed for making bone and flesh and muscle;

—makes red combs, bright eyes and glossy plumage, because it gives the fowls that variety of ration so necessary to their health and well being.

No matter what line of poultry raising you are in, fresh cut raw bone will help you get better results and make more money.

And the beauty of it is, it costs you but little more than the labor of cutting it.

* * *

Don't be persuaded, however, that "bone meal" or so-called

mixed foods whose composition you don't know, and which you would consider extremely expensive if you did know their ingredients. You have to buy them "on faith"; you don't know what is in them.

How much better to use raw bone, and mix your own ration, using the cheapest grains and yet being sure that you have the best and most economical of all rations.

* * *

Of course the bone must be properly cut, but that is an easy matter with

Mann's Latest Model Bone Cutter

We want you to try this machine and we make the way easy for you.

Granite

TRADE MARK
ROOFING

The Heaviest, Toughest and Most Reliable Ready Roofing Made.

A roof that will last *ten years or more* before it needs to be painted or repaired, is the roof that *saves you money*. Thousands of Granite roofs all over the country are giving this kind of service. Granite Roofing is the *heaviest, toughest and most reliable* made.

SAVANNAH LUMBER CO.

Unlike most ready roofings, it lasts long enough to be practical for big factories and railroad buildings, where it has been used for years with great success. It is the original stone-surfaced roofing. It does not have to be looked after every year, and touched up with paint to keep the rain from getting at it. It is a fire retardant. Any one can lay it. Write for free Sample and see how good a roofing can be made at a low price:

EASTERN GRANITE ROOFING CO., 1 HUDSON ST., NEW YORK. CHICAGO. ST. LOUIS.

Don't handle the Eggs

Every time you touch an egg you lessen its chance of hatching. Some birds leave their nests forever, once human hands have touched their eggs. Bird instinct should teach us never to handle the hatching eggs. The **Bradley Incubator** is the only one made in which it is not necessary to touch the eggs after they are put in.

The Bradley Turning Tray

Turns Every Egg

in one second's time. Works like a charm—never an egg broken, a great time saver, better hatcher, better starter of new-born chicks. The **Bradley heater** has neither rivets nor solder. You can take apart, clean and put together again in five minutes. A fresh heater every hatch, if you like; no soot to cause fumes and smoke. A new method of construction renders the Bradley hatching chamber cold and damp proof and gives an absolutely **non-variable temperature**. No open joints, no cold corners. We guarantee the Bradley to give results second to no other incubator made in good, strong, healthy chicks, **or your money back**.

Don't buy an incubator until you have seen our catalog A. Ready to mail Dec. 1st. Free if you mention this paper.

THE BRADLEY INCUBATOR COMPANY,
Eaton Rapids, Michigan.

Pearl Grit

The Two-Fold Grit

Double value and two-fold results are secured by "Throwing Pearl Grit to Poultry." There is a reason for it and it is because Pearl Grit not only serves every purpose of ordinary GRIT, but also nourishes and builds up the bird's system besides.

It is a natural mineral substance composed of Calcium Carbonate (Lime) Silicon, Magnesium, Sulphur, Iron, Aluminum Oxides and other mineral properties which enter into the bird's system and are assimilated the same as food.

It is not itself a food and does not take the place of it in any sense, but it furnishes necessary elements which ordinary food does not supply in sufficient quantities for shell-making, egg-forming and the other vital processes of the fowl's system. That is why it makes poultry pay. It makes them strong, healthy and productive—vigorous and lively. It saves you half the expense for no other shell-making material is required when Pearl Grit is used. Write for our free booklet, "True Grit," it tells why.

- 3—Election of board of review.
- 4—Report of executive board.
- 5—Report of committees.
- 6—Unfinished business.
- 7—Report of board of review.
- 8—Inauguration of officers.
- 9—New business.
- 10—Discussions.
- 11—Adjournment.

ARTICLE III—LICENSING JUDGES.

Section 1—Two classes of judges of poultry shall be recognized and licensed by a majority vote at annual meetings of this association, to be known as American Poultry Association judges, namely, general judges, comprising those who are licensed to judge all varieties of fowls represented in the American Standard of Perfection, and specialty judges, including those who are licensed to judge one or more varieties in the Standard, but not all varieties, provided, that such judges must be members of this association.

Section 2—At the first annual meeting of the association, following the adoption of this article, the executive board shall report in writing, with recommendations, a list of experienced judges, divided into the two classes, general and specialty, including therein all persons it believes should receive licenses without other endorsement and without charge. Members of the association present at said annual meeting shall be entitled to supplement the foregoing described list; provided that names thus suggested shall be referred to the executive board and must be reported upon favorably by said board.

Section 3—Applicants for judges' licenses not provided for in the foregoing section shall be endorsed by at least five licensed judges of the American Poultry Association in the form of separate letters addressed personally by said judges to the secretary-treasurer of the association, who shall transmit same to the executive board in due course.

Section 4—Applicants for judges' licenses shall sign application blanks furnished by the secretary-treasurer of the association for this purpose.

Section 5—Each such applicant shall file with the secretary-treasurer a statement of his qualifications and experience as a poultry judge; also three or more references as to his reputation for uprightness of character in the community where he resides.

Section 6—Printed notice of each application, with the names of the five or more licensed judges who have endorsed each applicant, must be sent to all members of the association by the secretary-treasurer at least sixty days before the opening date of the annual meeting of the association, at which action is to be taken on the application, thus giving members the opportunity to protest, for cause, if they so choose.

Section 7—The application blank signed by each person desiring to become a licensed judge of poultry, as herein provided for, shall clearly state that if the license asked for is issued it shall be revocable by the executive board of this association, for cause, subject to appeal to the association at its next annual meeting.

Section 8—Each license issued under this article shall state whether the licensee is a general or a specialty judge, and, if the latter, it shall name the varieties said licensee is licensed to judge.

Section 9—A charge of two dollars shall be made for each license issued, as per sections 3 to 9, inclusive, of this article, to cover cost of correspondence and clerical work.

ARTICLE IV—A. P. A. POULTRY SHOW RULES.

The following rules and regulations shall be printed on the back of each entry blank used by branch and associate members of the American Poultry Association, or other clubs or societies whose exhibitions are to be held, and advertised to be held, under the poultry show rules of the American Poultry Association, and must be signed in ink by each exhibitor whose entries are accepted:

Section 1—Any person under disqualification by the American Poultry Association for fraudulent practices is ineligible to compete or judge at this show. Fraudulent practices shall be understood to include, among other dishonorable acts, the lending,

borrowing or hiring of birds for exhibition in competition; also "faking" of any kind, as defined in the glossary of technical terms in the American Standard of Perfection.

Section 2—Every bird entered for competition must be the bona fide property of the exhibitor, otherwise all entries of the exhibitor shall be canceled, he shall forfeit all entry fees, shall receive no prize money or other premiums, and if ordered to do so must remove his exhibit from the show room within forty-eight hours. In case of disqualification under this rule other exhibits may, at the discretion of the management, be moved up in the list of winners, subject to the disqualified exhibitor's right of appeal.

Section 3—Any exhibitor at this show, if called upon to do so by the management, shall make affidavit that he is the bona fide owner of every bird entered by him for competition.

Section 4—The judge or judges officiating at this show shall disqualify any exhibit found to contain a specimen entered for competition that is not the bona fide property of the exhibitor, or that has been faked.

Section 5—This association reserves the right to return entries, thus enabling the secretary to exclude the exhibits of any disqualified person endeavoring to show under his own or another's name. In the event of it coming to the knowledge of the management that any disqualified person is exhibiting, his birds shall be debarred from competition, his entries canceled, entry fees forfeited, and prize money and other premiums withheld.

Section 6—Exhibitors must not interfere with nor attempt in any manner to influence the judge or judges officiating at this show, on penalty of having their entries disqualified by the judge or show management, and of having their winnings protested by other exhibitors in the class.

Section 7—The judges shall be required personally to place, or superintend the placing, of all prize ribbons or prize cards on the coops of the winning specimens.

Section 8—No bird shall be removed from the show until the close of the same without the written consent of the secretary.

Section 9—Any exhibitor who shall be disqualified at this show for fraudulent practices shall have the right of appeal to the executive board of the American Poultry Association, also to the next annual meeting of the association; but meanwhile shall be temporarily disqualified from exhibiting at any show held under American Poultry Association rules, and it is understood that every exhibitor who signs this entry blank thereby agrees that his entries may be canceled, and all entry fees, prize moneys and other premiums withheld by the management of this show, in the event of his being disqualified; provided that, if his appeal is sustained, all entry fees, prize moneys and other premiums shall be delivered to him; provided further, that his appeal must be made within one year of the date of the disqualification.

Section 10—Notice of disqualification with a detailed statement of facts, with such corroborative evidence as is procurable, shall be mailed within five days after the close of the show by the secretary or some other officers of this association to the secretary-treasurer of the American Poultry Association, and a complete copy of the notice of disqualification, and other papers or charges accompanying said notice, shall be mailed at the same time to the exhibitor or judge disqualified.

Section 11—In case of alleged fraudulent practice on the part of any judge, exhibitor or other person, or of collusion, the aggrieved exhibitor shall have the right to protest in writing, on depositing the sum of five dollars with the secretary of the show, and said protest shall be passed upon forthwith by the management of the show, subject to an appeal by either party to the executive board of the American Poultry Association and to the next annual meeting of the association. In case the protest is sustained, the fee shall be refunded.

Section 12—Any person may protest in writing for palpable dishonesty or fraudulent practice of the judge in placing awards. Such protest must be handed to the secretary of the show, and a copy delivered or mailed to the judge and to the chairman of the executive board of the American Poultry Association, before the close of the show; provided, that an appeal may be taken to the executive board, also to the association as a whole.

Section 13—No judge of poultry at this show shall exhibit in any class he is assigned to pass upon; should he do so, he shall be disqualified forthwith by the management on protest of any exhibitor or

member of the American Poultry Association and another judge shall be assigned to the class.

Section 14—No exhibitor at this show shall receive a prize on any bird that has been owned by, or in the possession of, the judge assigned to the class within six months prior to the close of the entries.

Section 15—The printed regulations or rules of this show, where they are not less stringent than, or where they do not conflict with, the foregoing, shall be binding on the exhibitors and judges and supplemental to the American Poultry Association rules.

Section 16—Any exhibitor at this show

who is not a member of the American Poultry Association shall submit, and hereby agrees to submit, to the jurisdiction of the American Poultry Association, and shall be dealt with as though he were a member of the association. Each exhibitor at this show shall sign the appended declaration, to-wit:

"To whom it may concern: Be it known that for the purposes of this show I agree to be bound by the poultry show rules of the American Poultry Association, as above set forth.

(Signed) _____

"Date, _____."

ILLINOIS STATE FAIR.

The Poultry Exhibit at Illinois State Fair of 1906 will go on record as the largest of any previous year. Every standard variety was represented except Sultans. Mr. C. B. Blodgett, of Downers Grove, was in charge, and it is to Mr. Blodgett's hard work that the exhibit was the best in the history of the fair.

The poultry building should be enlarged to accommodate all exhibitors in the future. Last year one tent was put up; this year two were filled to their utmost capacity, in addition to the main building, which is 80x200.

There are several features which might be improved upon. One is the system of judging; there should be at least three judges employed instead of one. Through some cause the state board of agriculture made a rule that one expert judge should pass upon this whole exhibit, consisting of almost 4,000 birds. It required almost five days for Mr. D. T. Heimlich, one of the best and foremost judges in the world, to make the awards, and by appointing three judges this work could be accomplished in two days.

The quality of birds was equal, if not better, than ever shown before at any show, especially in the leading varieties. In Barred Rocks Mr. M. M. Smith, of Farmersville, captured the blue ribbon on hen. This bird was a

grand specimen, both as to shape and color, and owing to the fact that his other birds were not finished, he had to be contented with the above prize. The Sunny Side Poultry Farm, of Macomb, Ill., captured three prizes in B. P. R. The White Plymouth Rock class certainly was a strong one. Size, correct type and whiteness characterized this whole exhibit. Mr. Wm. Miller, of Crescent, Mo., almost made a clean sweep, winning 1-2-3 Cock, 1 Hen, 1-2 Cockerel, 1-2-3 Pullet, 1 Pen. This is something never accomplished before at this fair, and we congratulate Mr. Miller for being one of the largest and best breeders of Wh. P. R. in the world. In White Wyandottes Mr. Coltam captured most prizes, including the most coveted prize of first cockerel. Partridge Cochins, Sunny Side Poultry Farm, Macomb, Ill., 1 Cock, 1 Hen, 2 Cockerel, 2-3 Pullet, 1 Pen. F. W. Niesman, Freeport, Ill., was there with a large string of land and water fowls, winning more prizes than any other exhibitor, including first prize cock in Black Langshans. This bird was the finest specimen ever shown; he was admired by all visitors; in fact, he was the talk of the show. J. A. Bickerdike, Millersville, Ill., was there with his trap nests. He made many sales. Mr. Bickerdike is a candidate for the Illinois State Legislature, which prevented him from showing his White Plymouth Rocks—that is, he did not

have the time to prepare his birds. Mr. Jas. Workman, of French Village, Ill., breeder of White Wyandottes, was at the fair for two days looking over the White Wyandotte exhibit. We were also pleased to meet Mr. B. S. Hume, of French Village, Ill., another White Wyandotte breeder of national reputation. He put in most of his time judging trotting horses. Mr. Theodore Ambrosius, of Collinsville, Ill., was there also. He made many sales of White Wyandottes for the winter shows. We were greatly disappointed by not seeing Mr. Dudley Walker, of Riverside, Ill., with a string of his prize-winning S. C. White Leghorns and Barred Plymouth Rocks. Mr. Walker informs us that he has been very busy on his farm building houses to take care of his young stock and could not possibly get his birds ready in time. No doubt he would have captured several blue ribbons. The Chicago Poultry Supply House made a neat exhibit of "Model" incubators, manufactured by Chas. A. Cyphers. Mr. Fred J. Phillips, the manager, reports that they sold the entire exhibit. The Sure Hatch Incubator Co. was represented by Mr. C. E. Johnson and Herman Seelig, of Indianapolis, Ind. They report many sales. The Petaluma Incubator Co. was represented by their Indianapolis manager. They made a creditable exhibit. Mr. D. K. Groff, of Cerra Gordo, was there with his colony brooder. This brooder is different from any other brooder on the market. The heat is diffused through a diaphragm, the cloth touching the chicks the same as the hen.

Go to the poultry shows and get pointers from watching the judge do the scoring, and don't be afraid to ask questions.

<p>Keeps Poultry Healthy</p>  <p>VIGER'S Crushed Charcoal</p>	<p>Prevents Disease</p> 	<p>IF HENS COULD TALK It wouldn't take them long to tell their breeders what they needed to make the eggs come faster. And they'd put it something like this: "We need something in our crops to absorb all the impurities, gases, and correct digestive disorders. Pure Charcoal will do all this in great style, because it's the most powerful absorbent and purifier known. It makes us healthy and strong and ready to lay our daily egg. Viger's Crushed Charcoal is the best, because it's the most chemically pure." Send for a 50-pound trial bag (\$1.00), and let the hens show you how they like to eat it. Prepared in 3 sizes: Coarse granulated, for mature poultry; fine granulated, for little chicks; pulverized for soft feed. Special prices for quantities. Sample free.</p> <p>VIGER'S COAL & WOOD CO. 434 20TH STREET. DETROIT, MICH.</p>

DR. R. SCHIFFMANN, St. Paul, Minn.

NEBRASKA STATE SHOW FOR 1907.

After a very strenuous lot of work on the part of all officials of the Nebraska State Poultry Association, the news connected with the 1907 show, which will be held in the superbly lighted, well warmed and perfectly ventilated Auditorium, in the heart of the city of Lincoln, is to be given to the poultry public.

For judges at this Madison Square of the west have been chosen W. S. Russell, Ottumwa, Ia.; Charles H. Rhodes, North Topeka, Kan., and Fred Shellabarger, West Liberty, Ia. These three stand at the top of the great list of judges in the central west, and have never been questioned regarding accuracy, honesty and ability. They are competent to work intelligently in scoring fowls, no matter where they are put. One of the secrets of a growing show is good judges, and the pinnacle reached by the Nebraska State Association shows is largely due to the efficient judges they have annually used.

As an advertising show the Nebraska state exhibition has always been regarded as one of the best in all the west for breeders of Kansas, Iowa, South Dakota, Missouri and Nebraska, and the keen competition found there sets the seal of approval on the winning birds. For a selling show it has no equal in the west. More good birds change hands there than in any other western exhibition.

Plan to send your birds to the Madison Square of the west the third week of January, 1907. They will be well cared for, and if they have the quality will win. The superintendent of the 1905 and 1906 shows has been re-engaged owing to the good work he has done.

Luther P. Ludden is secretary, and will be glad to furnish premium lists and further information if addressed at Lincoln. A. D. Burhans, Lincoln, has been again selected as press agent, and any business coming under his care will be well treated.

HARTFORD, CONN., TO HAVE A DOG SHOW UNDER THE A. K. C. RULES.
Nov. 20, 21, 22, '06.

The Hartford Show Association was formed Sept. 25, with Mr. W. L. Davis president, Mr. J. F. Crangle vice-president and Mr. F. O. Groesbeck secretary-treasurer. The secretary is empowered to incorporate the association, and immediate steps will be taken in that direction. The constitution reads under Article II:

"Objects—The objects of this association shall be the holding of annual dog shows, or field trials, or for the protection or benefit of dogs, the holding of poultry and pet stock exhibits and the improvement in live stock breeding."

The promoters are all men well known to fanciers through the country. Mr. Davis being owner of the Willow Brook Kennels, also Willow Brook Farm, Berlin, Conn.; Mr. Crangle, superintendent of Valley Farm, Simsbury; Mr. Groesbeck, owner of Elm Poultry Yards, also Sky Farm. Mr. Groesbeck has for several years been secretary-treasurer of the Hartford-Manchester Poultry Association, which gave annual exhibits, the last being a great success, and the combining of dogs with poultry necessitated cancelling many entries, and by

Paroid Roofing-

The Roofing With a Money-back Guaranty

Paroid Lasts Longest

BUY one lot of Paroid; open it; inspect it; apply it to your roof, and if then you are not satisfied that you have the best ready roofing made, send us your name and address, and we will send you a check for the full cost of the roofing including the cost of applying it.

Because it is made of the best felt—made in our own mills (established in 1817); other manufacturers buy their felt outside and simply saturate and coat it.

Because it is soaked (not dipped) in a saturating compound which makes it water proof in every fibre.

Because it is coated on both sides with the strongest, thickest, smoothest, toughest, most flexible coating used on any ready roofing. Don't take our word alone for it. Compare Paroid with any other. You can see and feel the difference. Paroid does not break or crack in the coldest weather or run in hot weather.

Because it is applied with our patented square, rust-proof caps—water proofed on both sides—the only caps that will not rust, work loose and cause leaks.

These are some of the reasons why we can give Paroid so strong a guaranty—why it lasts so long—why it is so largely used by the U. S. Gov't., railways, factories and farmers everywhere. All we ask is that you try it, on our money-back guaranty.

If your dealer cannot supply you, don't take a substitute but send for samples and prices. **BUILDING PLANS FREE** Enclose 4c in stamps and we will send you by return mail our 48-page book of plans for Practical Farm Buildings. Better do it at once.

F. W. BIRD & SON, 13 MILL ST., EAST WALPOLE, MASS. or 1413 MONADNOCK BLDG., CHICAGO.

GRAND SEASON'S OPENING

To test the merits of my young stock this season, as well as retain the high rank of the old ones, I made just one fall show, selecting the largest exhibit in the South, Nashville, Tenn. State Fair.

JONES, THE WYANDOTTE MAN, having won at every show of any importance in all sections of the U. S., just decided to try the South land, and as usual captured the majority of all prizes offered, winning all firsts in the classes, and all seconds but two, a record that is only a repetition of itself and equaled by no breeder in America. No other breeder has competed and won at as many large shows on **SILVER, GOLDEN AND WHITE WYANDOTTES.**

I have a grand lot of young birds to sell and still have quite a lot of yearling breeders that I am offering. In all I have 2500 head to offer at prices that will move them. If you have not a copy of my handsome color plate catalogue don't fail to send for one. It is

a work of art and a book that is full of valuable information. Send 10 cents in stamps for mailing. **SIX LITTERS OF HIGH-CLASS SCOTCH COLLIES FOR SALE.**

R. E. Jones, The Pines, R.F.D. 50, Paducah, Ky., U.S.A.

SINGLE COMB BROWN & BLACK LEGHORNS

Exhibition Birds At Low Prices

We have 200 fine cockerels for sale, bred from our 1906 Toledo winners, which we will sell at \$3.00 each while they last; first come, first served.

We also have fine B. P. Rock cockerels, both pullet and cockerel mating; prices quoted on application. Here is your chance to get a good bird cheap.

Our 80-page catalogue and 1906 mating list describes the finest line of Poultry Supplies and our fowls, sent free. Ask for it.

GRIGGS BROS., 516 Monroe St., Toledo, Ohio

forming the Hartford Show Association, with active membership in the American Kennel Club, also the American Poultry Association, will bring Hartford exhibits to the highest possible standard, drawing hundreds of breeders to the exhibit, as the winnings will count toward championship honors. The premium list of the dog show will be ready for distribution about Oct. 10. Entries close Nov. 12, the show to be given under the A. K. C. rules.

For further information address F. O. Groesbeck, secretary, Hartford, Conn.

EFFINGHAM, ILL.

The Central Illinois Poultry and Pet Stock Association will hold their first exhibition for the display and competition of thoroughbred poultry, pet stock, eggs, dressed poultry, feedstuff, apparatus and appliances pertaining to the poultry industry at armory hall, city of Effingham, Ill., December 17, 18, 19, 20 and 21, 1906.

The association is officered and managed by professional business men and breeders, who are deeply concerned in promoting interest in and breeding of pure-blooded poultry and pet stock in central Illinois, and pledge a high-class exhibition and honorable treatment. Mr. O. L. McCord, president Illinois State Poultry Association, will judge the exhibits.

Awards will be made and all cards placed before the public are admitted. Large cash and special premiums will be awarded, and payment of every dollar awarded made. There will be a special sales day and exhibitors will have every opportunity to advertise and dispose of their stock at best prices. The show will be held in a most commodious and brightly-lighted hall, this together with low entrance fees and small price of admission, insures large attendance and strong competition. You are interested!

Finely illustrated year book and premium list mailed free. Address all communications and send all fees and exhibits to the secretary, David J. Cook, Effingham, Ill.

FREEPORT, ME.

The fourth annual exhibition of the Freeport Poultry Association will be held at Freeport, Me., December 26-28, 1906. The judges will be Messrs. Lambert, Watson, Newell and Bartlett. The premium list this year will offer greater attractions than usual for the exhibitor, and anyone interested should apply for a copy. This association always pays its premiums in full before the close of the exhibition and is conducted in the interests of the exhibitors, and is one of the most successful poultry shows in the Eastern States. For information or premium lists apply to the secretary, George P. Coffin, Freeport, Me.

THE ILLINOIS STATE POULTRY SHOW.

The Illinois State Poultry Show will be held Jan. 7 to 12, 1907, at Macomb, Ill. Macomb, while not centrally situated and not easy to reach, is for many reasons one of the best places in the state for a show. The country in and around Macomb is a hotbed of fanciers, they having a local membership of 150 of actual breeders, and have birds enough in that locality alone to

make a big show. They have one of the largest and best halls the writer has ever seen for holding a show. They have two railroads and plenty of good hotels and every facility for the accommodation of all visitors. There need be but little said for the state show, as it is too well known. It pays a \$5 first prize on a fifty-cent entry, the only show I know of doing this. Another advantage, it allows birds entered in single classes to compete in breeding pens, something not done at any of the large shows. Everyone is invited and urged to come. Premium list will be ready Nov. 15. Write Secretary A. L. Moore, Normal, Ill., for a copy.

ROCHESTER, N. Y.

A new poultry and pigeon association was recently formed in Rochester, N. Y., known as the Genesee Valley Poultry and Pigeon Association. The new association buying out the old Flower City Poultry and Pigeon Association and the members of the old association have joined hands with the new association to hold one of the greatest poultry shows in the history of Rochester, January 22-26, 1907. W. S. Stanton, H. J. Quilhart and J. H. Drenstedt have been secured to do the judging. A. Newman, secretary, 12 Selden street, Rochester, N. Y.

ESTHERVILLE, IOWA.

The Estherville Poultry Association will hold its first annual show Dec. 13, 19 and 20, 1906, with Geo. D. Holden as judge. The show will be one of the best ones of the state, offering very liberal cash and special premiums. The cash premiums will be larger than some of the bigger shows, and it will be worth your time and money to enter a few birds at this show. A copy of the premium list will be mailed upon request. Any other information desired may be had by addressing Geo. H. Lyman, secretary.

THE CHICAGO SHOW.

The eleventh annual Poultry, Pigeon and Pet Stock Show of the National Fanciers' and Breeders' Association will be held in Chicago, January 23, 24, 25, 26, 28, 29 and 30, 1907. Conditions are promising for a most successful exhibition. Breeders have raised more and better stock than ever and are preparing for a larger and more profitable business the coming year.

Fred L. Kimmey, Sec., 325 Dearborn St., Chicago, Ill.

GOSHEN, IND.

The Northern Indiana Poultry Association will hold their third annual show at Goshen, Ind., Jan. 2-5, 1907. T. E. Orr, judge.

Liberal cash premiums and the largest list of specials ever offered by the association will be a strong feature of the show. Premium list will be gladly mailed free to any interested parties. Will H. Schadt, secretary, Goshen, Ind.

ROCKFORD, ILL.

The Rockford Poultry and Pet Stock Association will hold their annual show January 21-26, 1907. F. H. Shellabarger and Thomas F. Rigg, judges; Charles S. Gilbert, secretary.

THE RHODE ISLAND RED CLUB.

The third edition of "Red Hen Tales" is now ready for distribution. The book has been revised, and contains a great deal of information relative to Reds that is not only beneficial to breeders of Reds, but to poultry judges and all others interested in thoroughbred poultry.

Dr. N. B. Aldrich, the best authority on Reds in the country, gives us an article on "Origin of Reds." Philip Caswell, president, gives some excellent suggestions as to what R. I. Reds ought to be as to shape and color. Hon. C. M. Bryant, the man who did more than any other to have Reds admitted to American Standard of Perfection, relates "How the Reds Were Admitted." Thos. Hollis writes of "Reds for Meat and Eggs." Lester Tompkins, who has no equal as authority on mating and breeding, gives some valuable information on breeding. W. J. Drisko, ex-secretary, gives an excellent article on "Defects and Dangers." A. J. Murray answers the query, "Will R. I. Reds Breed True?" and E. T. DeGraff states the "Practical Side of Reds."

Besides these instructive articles, there are many interesting reports from state vice-presidents.

There has been a steady growth to the club, and after cutting out some "dead timber" we have about 460 members at present, and constantly adding new ones. We have arranged the membership rolls by states in this edition, which will prove interesting to many.

While Massachusetts is easily the banner state, still it can readily be seen that ours is not an eastern club, New York holding second place, Ohio third, Connecticut fourth, and our members are scattered from Canada to Florida, Texas, California, Hawaii and Alaska.

We regret very much the great delay in getting out this edition, but the members and public must consider the amount of work evolved to get out such a catalog. The members who have compiled it are busy men, poultry being side lines with them—hobbies for most. There are no salaries connected with our club and our officers devote their time, services and expenses for the welfare of the club.

Then, again, the persons who have contributed articles are scattered all over the country. We all know what a busy time it is during breeding season, when attending to hatching and raising chicks besides attending to demands for eggs for hatching, consequently some of our contributors were delayed in sending in articles.

The cost of getting out the edition of

4,000 copies has been heavy, consequently we are obliged to ask ten cents per copy to help pay expenses.

This is not a money making scheme, but heretofore the officers and some of the members have had to go down into their own pockets to square up the accounts at the end of the year after paying for cups, badges and other expenses. Consequently we think that anyone who is interested in the breed will be willing to enclose part of the cost for a copy of R. H. T.

E. L. Priekett, Secretary.

Hazardville, Conn.

WATER FOWL CLUB OF AMERICA.

"Article 11. That the object and purpose of the club is to improve the culture of water fowl, and to protect, by coöperation, the interest of the breeders thereof."

The above needs no comment. Every breeder who wishes to see improvements in the way of more sales, better quality at the shows, better classifications, more specials, should be willing to assist. "Our membership contains many of the foremost breeders of the fancy as well as of the economic classes of this great family. The work of the club has been preëminently in practical lines, and a continuance of same we consider our duty. The membership is already active in most of the states and in Canada, and with the promised additions will, we believe, prove a force not to be ignored."

Each state having ten or more members is entitled to extra specials at the leading show of the state. "All prizes offered out of the club funds shall be open for competition only to birds owned for more than thirty days by members of the club, in good standing."

Don't write unnecessary letters, but send your name, address, etc., with \$1. As fast as additional printed matter is issued the same will be mailed to you. Send all names to C. J. Ross, secretary, 289 Fourth avenue, New York City, N. Y.

A FEW REASONS WHY YOU SHOULD JOIN THE WATER FOWL CLUB OF AMERICA.

(From the Water Fowl Guide.)

It gives you a standing and prominence in the fraternity that you cannot obtain in any other way.

It is a medium through which the public is made more fully acquainted with the good qualities of water fowl, and this creates a greater demand for your stock and eggs.

It guarantees to the public that you will be fair and honorable in your dealings, under penalty of being publicly expelled from the club, and it urges them to patronize you for this reason.

If you are breeding water fowl solely for pleasure you should take pride enough in the work to lend your assistance to an organization devoted to the upbuilding of the breed.

If you are an exhibitor you are benefited by being afforded an opportunity to compete for the coveted prizes offered by the club at shows all over the country.

The cost of membership is so small that it is nothing when compared with the advantages to be derived.

In no other way than by organized effort can the objects for which we are working be accomplished.

AMERICAN WHITE WYANDOTTE CLUB.

The American White Wyandotte Club will hold its annual meeting in connection with the New York show Jan. 2 at 4 p. m.

The club will offer \$100 in special prizes to be competed for by club members in good standing, as follows: Cock, first \$10, second \$5; hen, first \$10, second \$5; cockerel, first \$10, second \$5; pullet, first \$10, second \$5; pen, first \$10, second \$5; best exhibit, \$15; second best, \$10; to be decided by points. First prize to count seven points, second prize to count five points, third prize to count three points, fourth prize to count two points, fifth prize to count one point. In case of tie, largest entry to decide. Join the club and compete for these prizes. W. R. Graves, secretary.

BUFF ORPINGTON CLUB.

The National S. C. Buff Orpington Club wishes to announce that they will give five handsome silk badges at every poultry show in America for first cock,

cockerel, hen, pullet and pen, providing the winning parties are members of the club.

They will also give the largest list of Specials, including silver cups, etc., at nearly every large show in the United States; a complete list of same will be published later. If you are not already a member you had better join at once. Large illustrated 72-page catalogue with application slip may be obtained free by addressing the secretary, Will H. Schadt, Goshen, Ind.

AMERICAN LEGHORN CLUB SPECIALS—\$150.00 CASH.

The American Leghorn Club offers to its members in cash \$150.00 to be won at the New York show, held at Madison Square Garden (H. V. Crawford, Sec'y) the first week in January, 1907, and to be offered on the following classes:

\$10.00 to the member winning the most points on any one variety; \$5.00 to the second.

To compete in this class, member must have cock, hen, cockerel, pullet and pen, and must be under competition.

\$3 for best cock, \$2 for second; \$3 for best hen, \$2 for second; \$3 for best cockerel, \$2 for second; \$3 for best pullet, \$2 for second, on Single Comb White, Rose Comb White, Single Comb Brown, Rose Comb Brown, Single Comb Buff and Single Comb Black Leghorns. \$5 for best, \$3 for second best dis-

play of Duckwing Leghorns; must be cock, hen, cockerel, pullet.

Members to compete for the above specials must be of good standing.

W. F. Brace, President.

W. W. Babcock, Sec'y and Treas., Bath, N. Y.

NATIONAL WHITE WYANDOTTE CLUB.

The next annual meeting of the National White Wyandotte Club will be held at Boston, Mass., January, 1907. The club is preparing a fine list of cash specials for this show and the indications are the White Wyandottes will lead all other varieties, as they have in the past. Silver cups are being offered by the club in almost every state in the union.

The new annual club catalogue is about ready for mailing, and any person interested in this, the most popular breed of poultry on earth, may secure a copy free by addressing the secretary, Ross C. H. Hallock, St. Louis, Mo.

CONDITIONS FOR BIDDING FOR THE 1907 IOWA STATE POULTRY ASSOCIATION SHOW.

Arnold's Columbian Wyandottes

The Fowl That is Making People Think all Over the World

AT MADISON SQUARE GARDEN, NEW YORK, 1906, in competition with all the leading breeders of the East, and the largest collection of Columbian Wyandottes ever shown in the world. In a class of 11 pens we won first, second and fourth (every bird bred by us); also winning in all the single classes including first pullet. Also a number of specials including the grand Sweepstakes Special for Best Display. This season we bred from all our winners including two first prize Madison Square males; also our first pen cockerel, which created such a sensation at Madison Square Garden, so if you buy our cheapest young birds you get the blood that will tell. 1000 birds to select from, the quality of which is truly remarkable. All these birds will come in from the farms between the 10th and 20th of Nov. The best proof of the quality of our flock is the birds themselves. It will pay you to come 5000 miles to see them. Remember the interest in this breed is out of the ordinary. Write at once.

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish, as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit which does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to fowl what teeth are to other members of animal creation. Let us prove the truth of what we say by filling a sample order for you. **Manufactured only by**

Altoona, Iowa.

POULTRY CAMPAIGN ARRANGED BY MISSOURI PACIFIC RAILWAY CO.

Missouri is about to witness a poultry crusade, the object of which is to double the output of this line of products in the commonwealth.

The plan is fathered by one of the largest railroad systems operating in the state, in co-operation with the state board of agriculture.

The plan involves the use of a poultry train, filled with exhibition coops for the display of the finest specimens of the various standard breeds produced by Missouri poultrymen. In addition a complete display of every appliance will be made, including poultry feeds, incubators, brooders, bone cutters, etc., used by growers of poultry. Experts will be present to explain their uses.

The state board of agriculture will furnish trained experts to lecture on topics relating to poultry culture in all its phases. The territory in southeast Missouri will be covered on the first trip.

This is the first time that a poultry train has been used by any railroad.

The projectors of the move believe that an enormous increase in egg production will result with the proposed improvement in varieties. The interest to be aroused in standard poultry is expected to result also in an enormous increase in the number of fowls maintained on each farm.

The industrial department of the Missouri Pacific System, at St. Louis, Mo., is planning the poultry crusade and securing the co-operation of the state board of agriculture.

The itinerary of the train, which will close the first trip at Bismarck in time to be present at the District State Dairy Convention, to be held there October 19-20, is as follows: De Soto, October 8; Potosi, October 9; Ironton-Arcadia, October 10; Piedmont, October 11; Doniphan, October 12; Dexter, October 13; Sikeston, October 15; Jackson, October 16; Lutesville, October 17; Fredericktown, October 18; Farmington, October 19, and Bismarck, October 20.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Please answer the following three questions: 1. A few months ago I wrote you about a lump that one of my hens had that hung very low between her legs and you answered that it was probably a tumor. Now when I opened her I found that it was her gizzard had dropped in that position. Was that a rupture and what would be likely to cause it? 2. Give a good formula of a good home-made mash and quantity for about 25 hens. 3. Kindly let me know of a good way to prepare a white bird for the show bench. Thanking you in anticipation, I am,

J. C. M.

Toronto, Canada.

Answer—1st. This is not necessarily a rupture, but is frequently caused by the bird becoming too fat, and usually occurs in old fowls. There is no remedy for this that we know of. 2d. Two quarts oats, two or three beets, turnips or a few potatoes; cook these thoroughly, after which add wheat bran and beef scraps enough to make it into a crumbly state; never feed it wet and sloppy. 3d. This question is asked so frequently at this season of the year and is so important that we have decided to devote more space to it than is our usual custom with questions in this department. The following will be found a very good method to pursue in preparing either white or colored birds for the show room:

Have three tubs of water, one quite warm, another lukewarm and another with the chill taken off it. Place the bird in the tub of warm water and have an assistant to hold it on its

sides. Open the fluff and all sections of the short, soft feather and gently work the water into the plumage thoroughly. Press the long, stiff feathers in wings and tail between the hands under the water until they are well soaked through. After the entire plumage is well soaked, apply Ivory soap or other good white soap, and rub it well into the feathers, rubbing only one way, and that the way the web of the feather runs. The soft feathers can be handled more carelessly without injury. The plumage will stand much more rubbing than one would imagine. After the fowl has been well washed in the first tub, remove it and rinse well in the second tub of lukewarm water, pressing as much of the soapy water out of the feathers as possible. If the soap is not thoroughly removed the feathers will split and cling together when dry. After the soap has been rinsed out into the second tub of water, immerse the fowl in the third tub, in which there should be dissolved beforehand a small quantity of wash blue sufficient to blue the water as required for clothes. After working the blue water well into the plumage, hold the fowl above the tub and press as much water as possible out of the feathers, then allow it to stand on a clean table or other convenient place and dry with a towel, rubbing the right way of the feathers. The bird should then be placed in a coop deeply littered with clean straw and placed in front of a fire, but not so close as to blister the comb or plumage. After the feathers are fairly dry on the outside and commence to assume their natural position,

remove the bird from in front of the fire and confine it in a clean coop where it can plume itself and properly arrange the feathers as they dry. The operation is comparatively easy and one becomes very skillful after a few attempts.

In addition to washing the plumage, particular attention should be given to the comb, wattles and legs and toes, to see that all dirt is removed and that they present a bright, clean appearance.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: 1st. My chicks mope around and seem lazy for a week or so, then wont eat; get weak in the legs and sit down on their haunches; then loose use of their feet; sometimes legs will burst and bleed; can't walk; but some of them will eat well; food don't seem to digest, lays in crop, unless I give salts. I have killed three valuable pullets, as I don't know what to do for them. Is this caused by overfeeding? I feed corn meal, cracked corn, usually at night, and curds. 2d. Will lice make chicks sick, and what is the best to clean them. 3d. Is hen house 4 feet by 6 feet too small for 35 chicks, and should they have air? At night I usually shut them up tight without air, as skunks and weasels are plentiful. 4th. What is the cause of hens going blind? They run up against anything; eyes seem whitish color. Is this caused by improper feeding, and what shall I do for them?

J. A. L.

Indian Harbor, Nova Scotia.

Answer—Your trouble all comes from lice and the lack of ventilation in your poultry house. Any of the lice remedies advertised in these columns will do the work and you should at once put ventilators in your house. This can be done very easily by making small openings under the eaves of the roof and covering same with wire net-

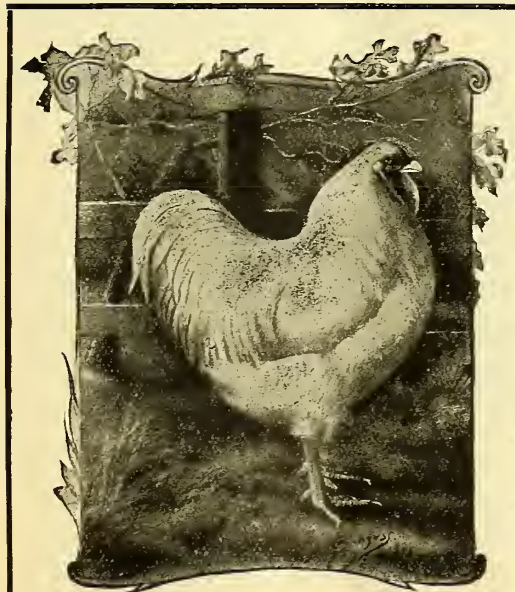

BENT'S MILK ALBUMEN.

(Dry Skim Milk)

Originator Milk Food for Poultry.

Batavia, Ohio

ting. These should be so arranged that no direct draft will strike the fowls while on the roosts. A house to accommodate 35 fowls should be at least twice the size you mention.

Editor American Poultry Journal.

Dear Sir: Please answer the following in the Question and Answer department of American Poultry Journal: 1. How many (grown) fowls will a yard 8x18 with a house 7½x12 accommodate? 2. I have a cockerel that has a kind of a white coating or scab covering his comb. Please tell me what is the cause and give me a remedy. The comb gets hard and lifeless. 3. Please tell me if feeding right: Morning, scratch feed in a litter; noon, table scraps mixed with bran; night, scratch feed in litter. Also quantity for seven hens and one male bird at each feed. G. T. N.

Atlanta, Ga.

Answer—1st. From 150 to 200. 2d. This is a form of scabies. Wash the comb in warm, soapy water, and after

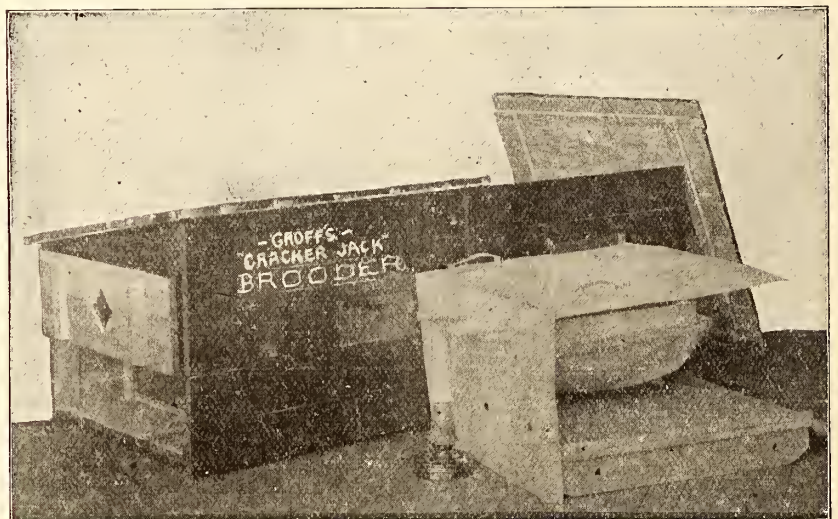

ing year, or can I raise my own cockerels from these? Mrs. J. R. H.

Dandridge, Tenn.

Answer—1st. The male birds are much darker than the female; also much larger, and the combs and general appearance are very different from that of the female. 2d. They should commence to lay about the first of November. 3d. Yes. 4th. Not the first year, but the second year it would be better for you to introduce some new blood.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: 1st. I have a coop 5x10 with a park 20x36. How many Brown Leghorn hens ought I keep with each cockerel for best results? 2d. In the above space, how many Buff Orpington hens with each cockerel for best results? 3d. In the above space, which breed is better for laying and confinement, the Brown Leghorn or the Buff Orpington? 4th. Of the above breeds in the given space

The Cracker-Jack Brooder as it appears when open. Manufactured by D. K. Groff, Cerro Gordo, Ill.

thoroughly drying apply carbolated vaseline, rubbing it in thoroughly. A few treatments of this character will usually restore the comb to its natural appearance. 3d. If you are getting results from your method of feeding that is all that is necessary. The feeding question is one of the most difficult problems that the amateur poultryman has to solve; or at least he thinks it is. Where fowls are fed grain in deep litter there is no danger of overfeeding. One quart for eight fowls is about the proper amount to feed at one meal.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your October issue: 1st. I purchased a setting of S. C. Buff Orpingtons in the spring. Hatched and raised nine. I had never seen any of this breed. I can't distinguish the sexes. Four are a light yellow, five are dark, deep color. Which are the pullets and is it common for them to be such a slight difference in appearance? 2d. When will they lay, with good care, I mean? They were hatched last of April. 3d. Are they a good utility fowl? 4th. Will it be necessary to purchase another setting next spring to mate with what I raise for the follow-

which would you advise keeping as an investment? M. H. K.

Answer—1st. One dozen females and one male is all this space will accommodate. 2d. Eight Orpington females and one male. 3d. This all depends on the care and feed given. 4th. We never advise which breed to keep. We leave this to the judgment of the fancier.

Editor American Poultry Journal.

Dear Sir: Can you throw any light on the loss of hens. Our chickens do well and look well, but for the past three years about 25 per cent of the hens become lame; often become better again, but always result in dying. They are Brown and White Leghorns; also mixed chickens. E. K.

Olalla, Wash.

Answer—This is usually the result of overfeeding, causing the hens to become too fat. The only remedy for this is proper feeding and well ventilated and dry houses.

Editor American Poultry Journal.

Dear Sir: Would you kindly give me information in regard to the following: Fifty per cent of my spring chicks have their combs and wattles quite full

with what I might call warts, and some of their combs look purpleish. Their tongues develop what is commonly called pip, but I think it is probably liver trouble. I feed corn and wheat for breakfast and supper, with a mash of bread and bran for dinner; have grit before them always; house is clean and free from lice. J. F. W.

Irvington, N. J.
 Answer—This is evidently chicken pox. Wash the affected parts with warm, soapy water, after which apply carbolated vaseline, or sulphur ointment. A few treatments of this will usually effect a cure. Moisten the tongue with a few drops of a mixture of equal parts of glycerine and water.

Editor American Poultry Journal.
 Dear Sir: Please answer the following questions in the next issue of the American Poultry Journal: 1. I got some White Wyandotte cockerels with single comb. Can I use same for breeders to White Plymouth Rock hens and can I call the chicks from these breeders White Plymouth Rocks? 2. To how many degrees may the thermometer fall when it gets too cold in a hen house to keep chickens comfortable in the winter? J. J. N.

Clements, Minn.
 Answer—1st. You cannot do this and be honest in your business dealings. 2d. Fowls will stand very cold weather providing they are given plenty of feed and exercise. They will stand zero weather under certain conditions; but the house should be so constructed that the thermometer will not go below 15 above at any time.

Editor American Poultry Journal.
 Dear Sir: Will you or some one answer through your valuable paper in the next issue of American Poultry Journal the following questions: 1. Will you please give an outline map of the line breeding system and fully explain some in proper form? 2. Please explain the double mating system. 3. Having started a double mating, how must I proceed with young stock to obtain best results? H. F. S.

Munith, Mich.
 Answer—Read article on line breeding in this issue. 2d. Space in this department will not permit us to fully explain the double mating system. 3d. This must be done by selection. If you desire a mating to produce exhibition male birds, you must make your selection accordingly, and the same for females.

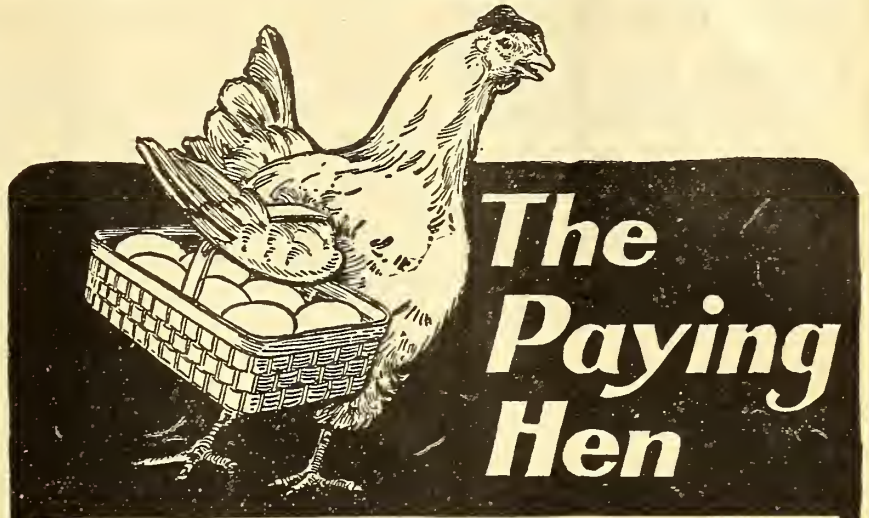

Editor American Poultry Journal.
 Dear Sir: Please answer through "Questions and Answers": 1st. Are turkeys ever caponized successfully and at what age? Are the same operations used? 2d. Are the testicles in the same location as in roosters? Fulton, N. Y.

J. T. P.
 Answer—1st. We have no record of where turkeys have been successfully caponized. 2d. Yes.

Editor American Poultry Journal.
 Dear Sir: I would like information through the "Questions and Answers" department of your Journal. Can you tell me what is the matter with my Buff Leghorn cock? He seems perfectly healthy in every way and eats well, but the back part of his comb, also the tops of the spikes have turned dark, almost black. He has free range

and I feed on wheat almost entirely. He has plenty of pure water, plenty of green feed; also plenty of grit. Mona, Utah. C. H. P.

Answer—This is usually caused by a slight attack of liver trouble. A little Douglass Mixture in the drinking water will usually remedy this. A few ap-

The Paying Hen

is the one which contributes 150 eggs or more in a year, toward the family grocery bill. The sure way to have such hens, eggs in abundance, and a lot of ready cash, is to give a little of

DR. HESS POULTRY PAN-A-GE-A

with the morning feed every day in the year. Dr Hess Poultry Pan-a-ge-a is a tonic, the sole purpose and action of which, is to assist nature in the performance of necessary functions. It aids digestion, prevents disease, and sends the proper proportion of each food element to the organ most in need. It also contains germicides which destroy bacteria, the usual cause of poultry disease. Poultry Pan-a-ge-a is the prescription of Dr Hess (M. D., D.V.S.), and is a guaranteed egg-producer. Endorsed by leading poultry associations in United States and Canada. Sold on a written guarantee, and costs but a penny a day for 30 fowls.

 Instant Louse Killer Kills Lice.

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
 W. L. Davis, Prop. Box A, BERLIN, CONN.

WHITE WYANDOTTES

A word to the wise is sufficient. Get Hume's celebrated Knoxall Strain; both utility and show. I have forty yearling cock birds for sale. These are coming along nicely and will be heard from in the show room later on. Any one wishing cocks for winter shows can be furnished as long as they last. First come, first served. No females for sale. Birds sold on approval. Write to

B. S. HUME - Mgr. and Owner Glen Echo Poultry Farm, - French Village, Ill.

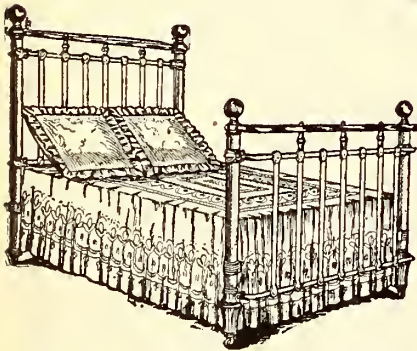

We Give You \$20 Worth of Goods for \$10

We want every woman in the country to know the great saving our plan of direct dealing will afford her; that is, buying direct from the manufacturer all her household supplies.

We want to show her in actual dollars and cents just how much money she can save every month by our "FACTORY TO CONSUMER PLAN." We also want to show her how she can furnish her home, absolutely without cost, with the latest and most up-to-date furniture, on our FREE HOME FURNISHING PLAN.

Make Your Grocery Money Buy Both Groceries and Furniture Without Extra Cost

This can be accomplished if you will buy your household necessities, such as Teas, Coffees, Baking Powder, Soaps, Flavoring Extracts, Spices, Pickles, Rice, etc., direct from us.

Brass Trimmed Iron Bed Free with a \$10 assortment of groceries and other products.

When you purchase \$10 worth of groceries and other products from your home merchant, you pay from two to four times more than the original cost of production, because the manufacturer, jobber, wholesale dealer have had their profit and expenses added to the actual cost of the goods after they left the manufacturer, and before they reached you. And who pays this difference, this profit? You! When you purchase \$10 worth of groceries and other products from us, the manufacturers, you save the above profits and expenses, and you secure the goods at actual manufacturer's cost.

This accounts for the fact that we can give your choice of \$20 worth of products, usual retail value, without premium for \$10. Or we give \$10 worth of products, usual retail value, and a \$10 premium, both for \$10. Every article and every premium is guaranteed to give satisfaction or money refunded.

Groceries at Half Price on Our "Factory to Consumer Plan"

If you don't need the premiums you can buy our high-grade groceries for just one-half what regular dealers charge.

To convince you that the groceries and premiums we offer are high-grade, we send both on 30 days' trial. We even allow you to use them—test them—and if not satisfactory you can return them at our expense and your money will be returned without a question. What more can you ask? One trial will convince you that we can save you money.

A \$10 premium is saved every time you use \$10 worth of groceries and other products in your home. Write today for our large list of premiums and other information regarding our money-saving plans, and learn how to cut your living expenses to one-half.

C. E. MURBACH & CO.

62-64 PLYMOUTH PLACE : CHICAGO

plications of vaseline will brighten up the comb.

Editor American Poultry Journal.

Please answer the following question in your next issue: Does popcorn contain any more protein than the common field corn? F. J. Z.

Hamburg, N. Y.

Answer—Popcorn contains a slight amount more of protein than common corn, or about the same amount as sweet corn.

Editor American Poultry Journal.

Dear Sir: Kindly inform me through the columns of your journal that, when dubbing a game bantam cockerel, must the comb come completely off, or is the low comb permitted by the Standard? 2d. What are the disqualification concerning the feet of a B. B. R. Game Bantam cockerel. 3d. What is the undercolor of the Light Brahma Bantams? J. C. S.

Chicago, Ill.

Answer—The comb and wattles of the male bird should be dubbed, in order to have the head and lower jaw smooth and free from ridges; this means that the comb should be taken completely off. 2d. Read "General Disqualifications" in the American Standard of Perfection. 3d. This should be the same as in the larger variety of Light Brahmas. See Standard.

Editor American Poultry Journal.

Dear Sir—Kindly answer the following: I have a White Leghorn hen which runs crazy, and at the approach of any person flies and makes a great racket. She flies into everything as though she cannot see, but she seems to know, even at a distance, if anybody is near. When by herself she lies down and sleeps. W. L. B.

Jersey City, N. J.

Answer.—This is a form of epilepsy, caused by an extreme nervous condition. There is no cure for this and the bird should be killed.

Editor American Poultry Journal.

Dear Sir—Being a subscriber of the American Poultry Journal, would be pleased to have you answer a few questions in your next issue. Last spring we purchased some Brown Leghorn eggs from a man who claims to have first-

class stock, but we find white feathers in their wings. Can you please tell us what causes the white feathers? They are first-class every other way.

Springfield, O.

J. B.

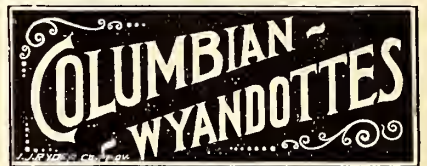

Answer.—This is no doubt due to the way they have been bred, but, not being familiar with their breeding, we cannot tell.

Take extra care of those birds you have selected for the show room. This is usually a trying month for them.

Mrs. H. W. Hand, Whitehall, Ill., breeder of White Wyandottes, will dispose of 300 birds to make room for her breeding stock. We have seen her stock and must say that Mrs. Hand has one of the best equipped poultry farms in the country. Her birds are all pure white, fine in shape and low in price, quality considered. If in need of exhibition or breeding stock write at once. Mrs. Hand is absolutely reliable.

J. W. Parks, Altoona, Pa., the well-known Barred Plymouth Rock breeder, is now holding his annual cockerel sale, and all orders received by him before December 15 will be filled at greatly reduced prices. Write him today for his sale circular, which gives prices and other information in regard to this sale. Mention American Poultry Journal.

Why Don't You Build Your Own Incubators and Brooders

OTHERS ARE DOING IT. We furnish all parts not possible for you to make **PLANS FREE**

If you think that you can't do this, you are mistaken. Over eighteen thousand people were interested by us in building their own machines last year.

A great many thought they could not do it, too, but our Catalog and Book of Plans convinced them that they could, and in addition proved they could build a better machine than they could buy for less money.

You see it's all because the plans are so simple and the work so easy. We supply all parts not possible for you to

make such as Lamp, Tank, Regulator, Doors, Legs, Hardware, etc., at a special low cost.

We don't want you to take our word for it. Just let us send you our Catalog and Free Plans, if it fails to convince you, then we'll drop the matter.

If you already have machines this catalog will be valuable to you. It tells how to save time, labor, money. Tells how to reduce your present operating expenses one-half with our Acme Lamp and Regulator outfit. Can be easily attached to any make of machine. Sold singly or together. If you want better and bigger hatches; want to save time, labor and all annoyances common with ordinary fixtures, send for this free catalog and plans today. It's worth dollars to those interested. H. M. SHER CO. 102 Hampshire St., Quincy, Ill.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

AN OLD TIME THANKSGIVING.

The person who has no memory of the good, old-fashioned Thanksgiving is indeed to be pitied. In these days, when people are crowding into the cities, it sometimes seems as though the art of home making is in danger of being lost, and with it the genuine spirit of Thanksgiving Day. To be sure, the overburdened housewife may find cause for thanks in the fact that she can take her family out to a hotel or cafe and give them a dinner which has not cost her an expenditure of time and strength; but to be genuinely thankful, one needs to go back to the old-time method of keeping the day. There is nothing on earth equal to the gathering from far and near of the boys and girls (some of them gray-haired, but still young in heart), who have long since left the home-nest, the welcome, the cheer, and later the gathering around the big dining-room table, stretched to its utmost capacity. Mod-

ern menus, with their French names, cannot equal the regulation Thanksgiving dinner of New England tradition.

There was the big turkey, stuffed with oyster or chestnut dressing and browned to a crisp. Flanking it were an appetizing chicken pie, and a roast ham or crisp spare-ribs. The typical old-time New England housewife used to think that she must supplement these with all the vegetables the farm could boast of, but, no matter what else she served, she always included mashed potatoes, squash, and a dish of onions, cooked in cream. Cranberry sauce, jellies and pickles filled all the available spaces on the table.

When these had been cleared away there came to each guest a plate filled with segments of pie, symmetrically arranged, of mince and pumpkin, apple and cranberry tart, and last, but by no means least, a saucer of Indian pudding, without which no New England Thanksgiving dinner was supposed to be complete.

With such a feast before them, no wonder our forefathers found cause for genuine thanksgiving. And there is cause for thankfulness today, not only for all the bounteous harvests which have made the year 1906 one to be long remembered, but because in hundreds of thousands of homes, all over our broad land, plans are being made for a genuine day of home-coming and Thanksgiving.

FOR THE THANKSGIVING DINNER.

Turkey with Oyster Dressing—Chop very fine sufficient bread crumbs for the dressing. Scald a pint of oysters in their own juice, season them and let them get cool. Then put them whole into the dry bread crumbs with one beaten egg, a little butter, salt, pepper, sage and mace. Wet with the oyster broth, being careful not to make the bread too moist. Prepare and stuff the turkey in the usual manner, steam it until tender, and brown in a deep baking dish in the oven.

Cranberry Sauce—Many prefer this cooked until the berries are soft, after which they are pressed through a colander, sweetened and allowed to cool. For those who like the berries whole the following recipe is given: Put the berries in an earthen dish (no other will answer), with sugar in the proportion of two cupfuls to a quart of berries, and water to nearly cover them. Cover the dish tightly, set it on the front of the stove for ten minutes, or until the berries pop vigorously. Do not stir or uncover them while cooking. At the end of ten minutes, take

"Better Than Gas or Electricity."

"I have used The Angle Lamp far beyond the time set for trial and find that one cannot be too enthusiastic over it," writes Mr. Granville Barnum, of Cold Springs, N. J. "It certainly gives the brightest and at the same time the softest illumination one could desire."

"We lived, for some years, in New York City, and used all the latest and most improved appliances, devices, etc. in connection with gas or electricity and yet I must sincerely urge the superiority of this simple yet wonderful method of illumination. One can hardly say too much in its praise."

Notice, please, that Mr. Barnum has used *gas* and *electricity* with all the most approved devices for years. He, like thousands of others who use these systems, would probably have pooh-poohed the idea that an oil-burning lamp (or any other system for that matter) could be more satisfactory—until he tried *The Angle Lamp*.

He now admits that *The Angle Lamp* is far superior. For he has found *from use* that this oil-lamp gives him all that either *gas* or *electricity* can give in convenience and something more—kerosene quality light. It floods his rooms with the finest, softest, pleasantest of all artificial lights.

Yet THE ANGLE LAMP Pays for Itself.

For where the ordinary lamp with the round wick, generally considered the cheapest of all lighting methods, burns but about five hours on a quart of oil, The Angle Lamp burns a *full sixteen hours* on the *same* quantity. This, even where oil is cheap, soon amounts to *more than its original cost*. But in another way it saves as much—perhaps more.

Ordinary lamps must always be turned at *full height*, although on an average of two hours a night all that is really *needed* is a dim light ready to be turned up full when wanted. A *gallon* of oil a *week* absolutely wasted, simply because your lamps *cannot* be turned low without unbearable odor. *All this is saved* in The Angle Lamp for whether burned at full height or *turned low*, it gives not the *slightest* trace of odor or smoke.

You should know more about the lamp which for its convenience and soft, restful light might be considered a luxury were it not for the *wonderful economy* which makes it an *actual necessity*. Write for our catalog 59, fully explaining this new principle of oil lighting, and for our proposition to prove these statements by

30 DAYS' TRIAL

When such people as ex-President Cleveland, the Rockefeller's, Carnegies, and thousands of others, after trying The Angle Lamp, find it profitable to rip out gas and electric-light fixtures, to throw away gasoline and acetylene outfits or ordinary lamps, it is surely worth your while to send a penny postal to find out about it.

Write for catalog 59 which lists 32 varieties from \$1.80 up, and gives you the benefit of our ten years of experience with all kinds of lighting methods.

from the fire and set them away closely covered, until wanted for use.

New England Chicken Pie—Have ready chicken which has been cut in pieces and cooked until perfectly tender. Make a baking powder crust, as for biscuits. Arrange the meat in the bottom of a baking dish, covering it with a gravy made by bubbling two tablespoonfuls of butter and the same of flour together, adding the chicken broth and a little rich milk, and cooking it until it is smooth and velvety. Place the crust on this, cutting a hole in the center. If a cup is placed upside down in the baking dish before the meat is put in, and allowed to project through the hole in the crust, there will be no danger of the juices boiling over.

Pumpkin Pie—One cupful of pumpkin stewed down until very dry, two cups of milk, two well-beaten eggs, two heaping tablespoonfuls of sugar, one teaspoonful of ginger, one of powdered cinnamon, a little nutmeg and a pinch of salt. Bake in the following crust: One cup of lard, three cups of flour well rubbed together, one teaspoonful of salt, one-half cupful of very cold

Mrs. A. L. Starr, of Waukegan, Ill., writes as follows: "I am glad that we are to have an experience department. I have worked out a number of simple, yet useful, ideas which may be of help to other readers. For instance, I never have any more trouble with the juice running out of my apple pies since I have learned to put a little cone of white writing paper in the opening in the upper crust. This is also true with all juicy berry pies. I wonder if every one knows that salt sprinkled on the stove where anything has boiled over will prevent the disagreeable odor of burning? One thing more about salt: The next time you spill soot on your nice, clean carpet when putting up the stoves after the fall housecleaning, don't be discouraged, but spread common table salt thickly on it and sweep it up. If it is done carefully and thoroughly, no mark will be left. If you do not happen to have enough salt on hand, try cornmeal, putting it very thickly on the sooty spot, and sparingly for quite a distance around it, and sweep it thoroughly."

Mrs. Albert Guiseppi, of Madison, Wis., says: "I have taken much interest in the Home Department this

Fac simile of a draft received by R. E. Jones, Paducah, Ky., for a trio of fowls, from a reader of American Poultry Journal in New Zealand.

water. Stir with a spoon, turn on a well-floured molding board and add flour if needed to roll out, handling just as quickly and lightly as possible.

New England Thanksgiving Pudding—(This recipe has been used in one New England family and among its descendants all over the country for over two hundred years.) Stir into one quart of boiling milk six tablespoonfuls of Indian meal. Let it scald until it thickens. Add one-half cup of brown sugar, one teaspoonful powdered cinnamon, half a teaspoonful of ground cloves, butter the size of an egg, a little salt and, if possible, one cup of finely-chopped sweet apples. If these cannot be procured, raisins may be used in their place. Bake three hours, stirring occasionally for the first hour. This pudding will keep indefinitely and may be put in the oven and reheated over and over again. When served it should be eaten with a little butter or a hard sauce made by beating one cup of powdered sugar to a cream with butter the size of an egg, and after it has been thoroughly creamed, adding the stiffly-beaten white of a small egg. Flavor with nutmeg.

year. Perhaps some of the readers would like to try two typical Italian dishes which we are very fond of in our family. For stuffed green peppers, take equal parts of freshly-cooked spinach and freshly-cooked pork sausage. Mix them with cracker crumbs, one or two well-beaten eggs, some grated cheese and a couple of tablespoonfuls of olive oil, or if you do not have this, use melted butter. Add pepper and salt to taste, stuff the peppers, first removing the seeds, and if the peppers are very strong, soaking them in cold water a couple of hours. Bake and serve at once. The other recipe is for banana pie. Make a good, rich crust and fill it with the following preparation: One cup banana pulp beaten to a cream, one-half cup sugar, one large cracker powdered fine, one-half cup milk, one-half teaspoonful salt, one-third teaspoonful cinnamon, one egg, one-third cup cream, grated rind and juice of two lemons, and two tablespoonfuls molasses. Bake in one crust, like lemon pie. If you do not wish a firm pie, omit the cracker."

Mrs. F. C. White, of Utica, N. Y., says that she has met with great suc-

cess in poultry raising for the local markets, ever since subscribing for the American Poultry Journal. She gives her method of keeping her windows spotless, even in the heart of the fly season, as follows: She puts two tablespoonfuls of kerosene and two of water into a basin, and with a soft cloth only a little larger than the hand she first dips into the kerosene and water, half wringing the cloth, then washes the window, both glass and wood. She quickly rubs it dry with a soft newspaper and polishes with a soft towel that is free from lint. She says this process removes both dirt and flyspecks more easily than soap and water and gives a wonderful polish. The quantity of kerosene and water given will wash two good-sized windows.

Mrs. R. A. French, of Davenport, Iowa, answers the query of Mrs. Ida Ferris, Clear Creek, Ohio, regarding a home-made ice box. She says she has had one in use all summer which she adapted from the idea of the fireless cookers, so much talked of nowadays. She placed a fair-sized wooden box inside a larger box, raising one end of the inner one a couple of inches by small blocks. An auger hole was bored through the bottom of this, with one to match in the larger box, and a piece of old rubber tubing tightly fixed in them, carrying all waste water off, and through a hole in the wall of the shed where the box was kept. The space between the inner and outer boxes was tightly stuffed with newspapers, which are among the best non-conductors of heat, and could be replaced easily whenever they became soiled or musty. A tight cover to both inner and outer box with a pad of newspapers between completed this simple and easily made ice-box.

SOME DAINTY WAYS OF COOKING EGGS.

These recipes are of special value for invalids, though they will offer some good variations for the regular family table as well.

Egg Custard—Beat the whites of the eggs to a stiff froth, adding a scant dessertspoonful of sugar for each egg. Salt to taste, add a little grated lemon rind, and new milk in the proportion of a pint for every three whites. Bake in cups set in a pan of hot water, and let them get very cold before serving. Turn out in glass dishes and add a spoonful of jelly to each. This makes a beautiful white custard.

Egg Top—Butter thick slices of bread. Separate the yolk and white of each egg, beating the latter to a stiff froth. Place a liberal spoonful of the white on each slice of bread, making a hollow, in which place the yolk. Sprinkle pepper and salt over it and bake in the oven until the white is set.

Egg Tea—This is especially good for an invalid, as it is both appetizing and nourishing. Beat the white of an egg to a stiff froth; beat the yolk into it with a scant tablespoonful of sugar; pour in, slowly beating all the time, half a cupful of hot milk or water, and add a dash of grated nutmeg.

EGG NOODLES.

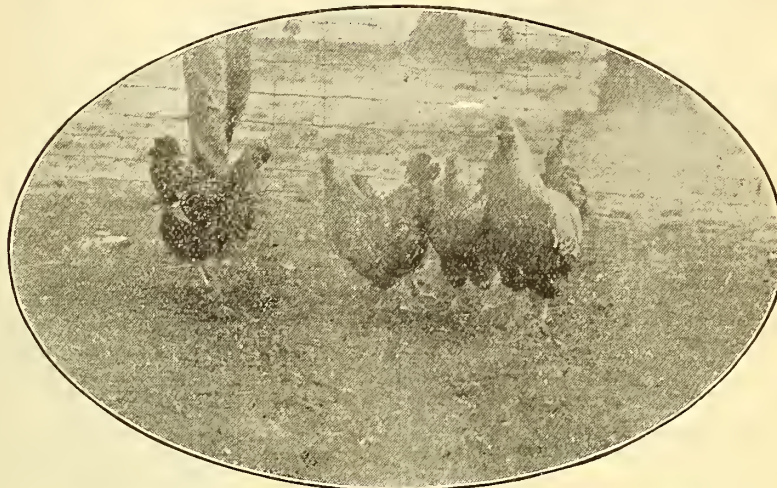

Four eggs, four teaspoonfuls water. Beat the eggs, add water and stir in enough flour to make a stiff dough. Take about one-quarter of the dough

at a time and roll out to the thickness of a knife-blade. Lay these sheets on a clean tablecloth and let them dry until they can be folded or rolled up without sticking together, then cut in narrow quarter-inch strips with a sharp knife, spread out and let them dry until quite brittle. Have ready a kettle of boiling salted water and drop the noodles in, letting them boil briskly for fifteen or twenty minutes, then turn into a colander and drain. Serve on a

uted to the Home Department by a German lady who brought it with her from the "fatherland."

A GOOD BREAKFAST DISH.

Chop fine any kind of cold meat left from yesterday's dinner. Add one-quarter of a pint of bread crumbs; season with salt and pepper, and moisten with a little of the gravy left from the same meal. Put by spoonfuls in in-

A pen of Silver Wyandottes, owned by E. B. Barnett & Son, Michigantown, Ind

platter and sprinkle over them melted butter in which some crumbs of noodles have been lightly browned. They may either be served with roast meat or dried prunes or other cooked fruit. If used with a soup they should be cooked first in clear bouillon. For this purpose they are cut very fine. Left over noodles are good if allowed to cool in a stiff mess, then cut into slices and fried like mush. This recipe is contrib-

dividual baking dishes (saucers will do, if they are heavy enough not to break in the oven), and break an egg on each, sprinkling it with bits of butter, pepper and salt. Set in a hot oven and when they begin to cook, dust lightly with finely rolled crackers.

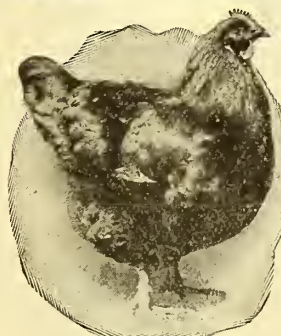

A tablespoonful of powdered alum sprinkled in a barrel of water will precipitate all impurities to the bottom.

Alton Farm Barred Rocks are Invincible

Fine exhibition cockerels and pullets now ready. 300 grand breeders, nearly all related to Chicago and New York winners. Our birds won nine regular and special prizes on ten entries at the late Chicago show, including championship female and special for best shaped male. Write your wants.

SKIM MILK FOR FOWLS.

Skim milk is rapidly gaining in favor as a food for fowls. We all remember well that our grandmothers used to give their chicks skim milk to drink, and how they would grow. For many years its value was lost sight of, but is now recognized again. In fact, some poultrymen estimate its value as high as 75 cents per hundred, while none place it below 25 cents. It is certainly difficult to obtain, and there has always been one great drawback in feeding it. It soils the plumage and renders the drinking dishes sour and germ-breeding. Besides, it is difficult for a fowl to consume enough to obtain the desired result.

Now, however, skim milk can be obtained and fed in a dry form. The amount can be thus controlled and all of its advantages retained with none of its disadvantages. This discovery was made several years ago by Myron H. Bent, a fancier living at Antwerp, N. Y., who is the originator and inventor of this product. He conceived the idea that the waste accruing from the milk sugar making process must contain all of the albumen in milk and hence be a valuable animal food for poultry. Long experi-

ORPINGTON CATALOGUE FREE.

Owen Farms, of Vineyard Haven, Mass., wishes us to state that they will send their catalogue to every one of American Poultry Journal readers by writing them for it. Address Owen Farms, Vineyard Haven, Mass., Box A. Their ad appears in this issue, giving a statement of the magnificent winnings they have made at Madison Square Garden and also Boston.

Jones, the Wyandotte Man, Paducah, Ky., won on Wyandottes all firsts in the classes and every second but two. Silver Wyandottes—Cock, first and second; hen, first, second and third; cockerel, first and third; pullets, first, second and third; pens, first and second. Golden Wyandottes—Cock, first and second; hen, first, second and third; cockerel, first and second; pullet, first and second; pens, first and second. \$50 special for best display in Wyandotte classes, winning more prizes than all competitors in all the classes.

Joseph A. Burkhardt, Smithsburg, Md., won at the Hagerstown show on S. C. White Leghorns, first pullet, third hen and third pen. Judge McClay, in speaking of the first pullet exhibition at Hagerstown

This view shows store of Griggs Bros., Toledo, Ohio, largest poultry and bee supply house in the world.

ments fully verified this conclusion, a company was organized for its manufacture, and the product instantly received the warm approval of the highest authorities and prominent poultrymen everywhere. It is endorsed by both the New York and Maryland Experiment Stations as being most palatable and most healthful of several animal foods tested, such as animal meal, etc. It also produces lustrous plumage and puts birds in fine show condition, as well as being a superior egg maker. Its keeping qualities are perfect, which renders the product especially desirable in warm weather and hot climates. It is manufactured and sold under the name of Bent's Milk Albumen for Poultry, and is really skim milk in a dry form without the sugar, and hence has a high albumenoid content, running from 43 to 50 per cent. Five pounds is equal in feeding value to 100 pounds skim milk, and figuring the latter at 25 cents per 100 the former would be worth \$100 per ton, but it is sold at the price of meat scraps. If the supply were unlimited it would no doubt be universally used. It is not laxative, like fresh skim milk, and is certainly a desirable food and one which all poultrymen would do well to investigate. Send a postal for booklet and free sample to The Bent-Crossant Co., 14 Main St., Antwerp, N. Y.

Ira B. Sleet, of Warsaw, Ky., proprietor of the Elm Hill Poultry Yards, is a breeder of high-class White Wyandottes exclusively. He has been breeding White Wyandottes for several years which are raised on a large farm. While Mr. Sleet breeds for exhibition, he is increasing the egg production. Eighteen pullets averaged twenty-five eggs each for one month. He writes that his birds this year are much better than any previous year and he has several hundred for sale, including a large number of hens, very cheap, to make room for young stock. He guarantees his stock as represented or will return the money.

show, said it was in a class all alone, as no other in the show could touch her, and she was the best he had handled so far. Judge Warner said she was a typical Leghorn and one of the finest. This was in the strongest class of best pullets ever shown.

Dudley Walker, proprietor Renewood Farm, Riverside, Ill., has some high-grade S. C. White Leghorns to dispose of at a very low price, considering quality. These birds have been scored and score not less than 91 points, some as high as 96. Any one in the market for A1 birds should not miss this opportunity and write at once. Mr. Walker also breeds Barred Rock, which will be ready for delivery Dec. 1, unless you are in need of last year's breeders, which are ready now for delivery.

Single Comb Brown and Black Leghorns can be bought at a very low price from Griggs Bros., Toledo, Ohio. These birds were bred from 1906 Toledo winners. Griggs Bros. inform us that they will accept \$3 each for them, which is a very low figure. They have also a few Barred Rock cockerels to dispose of. Send for their eighty-page catalogue, which is free if you mention A. P. J.

We are in receipt of the fourteenth annual catalogue of D. B. Smith & Co., Utica, N. Y., manufacturers of the "Lightning" sprayer. The goods manufactured by this firm are so well and favorably known that comment here is unnecessary. Write them for a copy of their new catalogue and mention American Poultry Journal.

Dr. O. P. Bennett has moved his poultry yards from Mazon to Washington, Tazewell county, Ill., where he will devote more time and ground to his Barred Rocks than ever. He will only show at Chicago this winter and has choice cocks, hens, cockerels and pullets for sale that can win anywhere.

EGGS TO BE HIGH.

How to Double Egg Production Without Extra Cost.

People who have tried it know that it is an easy matter to get nearly as many eggs in winter, when eggs are worth 40 cents a dozen, as in the spring, when the price drops to 15 cents. Increasing egg production is largely a matter of the proper feed—egg-making feed.

As a matter of fact, the whole secret is cut green bone. Under the right conditions this costs no more, and in some localities much less than grain. Yet, pound for pound, cut green bone will make just eighteen times as many eggs as grain.

Everyone who keeps poultry should write to E. C. Stearns & Co., Syracuse, N. Y., and ask for their new booklet, "How to Make Poultry Pay." This booklet contains a great deal of valuable poultry information, and gives special attention to the preparation and proper feeding of cut green bone.

In this matter E. C. Stearns & Co. are good authority, as they manufacture several different styles of green bone cutters that are wonders of easy and rapid operation. These are not the ordinary bone mills, but cut any kind of green bone, meat or gristle with a clean shearing cut, fine enough for the smallest chick—fast enough for the largest flock.

Be sure to write for the booklet, which is sent free, and learn the secret of winter eggs and early broilers.

POULTRY NECESSITIES.

We often hear the term "poultry necessities." These are general words which sometimes mean one thing and sometimes another. If we were asked to name a thing which is a necessity at all times to all poultrymen everywhere we could think of nothing better to be named than reliable roup and cholera cures. Roup and cholera come as naturally to the flock as a cold and attendant ills do to us. It is of the utmost importance to have some dependable and effectual means of treatment directly at hand. Unquestionably among the very best remedies to be had anywhere are the Conkey Roup and Cholera Cures. They have been long in use, are widely known and have stood the tests under all conditions. It goes without saying that they are scientifically compounded and they have made their way into all parts of the world. In general, where comparisons of other remedies are made, it is with Conkey's as the standard. Perhaps the best known, though not more efficient, remedy of Conkey's is the Roup Cure, as it is the specific for the greatest scourge of the poultry yard. No treatment could be more simple or effective. The fowls are burning with thirst; you simply place the Roup Cure in the fowls' drinking water and they take their own medicine.

A most excellent little book, "Poultry Diseases," which was formerly sold for 25 cents by the Conkey people, can now be had free by sending in the postage, 4 cents, and names and addresses of two neighboring poultry keepers. It is a book you should have if you keep poultry. Notice the Conkey advertisement for particulars.

HOW TO HAUL HEAVY LOADS.

It is said that when common grease is used on the axles of a wagon, nearly half the power necessary to move it is used to overcome friction. If this is the case, the use of the best axle grease is nearly as important as a good horse. On the other hand, an axle grease that "gums" is nearly as bad as none at all.

A very clever idea to reduce friction and make it easier to haul heavy loads is a mixture of ground mica and mineral grease which is manufactured by the Standard Oil Co. and sold everywhere under the name of Mica Axle Grease. This is the most perfect lubricant for all kinds of wagons. The reason is that the finely ground mica in the mixture forms a thin surface or coating on the axle that is almost frictionless. It smoothes over and fills up any roughness or irregular surface on the axle, making an almost glass-like bearing. The practical result as a load lightener is wonderful. Furthermore, after this coating of mica has formed on an axle only a very small quantity of axle grease need be used, thus making its use a decided economy.

Mica Axle Grease is put up in convenient tin boxes, and is sold nearly everywhere in hardware and general stores. It saves horseflesh, money and time.

We Sell You Doors 80¢ Windows 62¢
ALL HIGH GRADE AND AT HALF YOUR LOCAL DEALER'S PRICES

If you have any use for Doors, Windows, Storm Sash, Stair Posts, Mouldings, Porch Brackets, Columns or any kind of Millwork for your own buildings or as a contractor, don't buy elsewhere until you write us for our illustrated catalog. It quotes you at least 50 per cent lower prices than your local dealer or any retailer or "mail-order" house possibly could, as we are manufacturers with the largest mill in the world.

SEED MERCHANTS
MINNEAPOLIS CHICAGO

CERTIFICATE OF SALE.

This is to certify that I have this 2d day of October, 1906, sold to J. L. Hewes, of Oak Park, Ill., sixteen Single Comb Buff Legborns, including some of my most famous winners, as follows:

My famous old cock "Starter," first cock at Lebanon, Frankfort, Terre Haute, Crawfordsville, Central Indiana Poultry Show, and Indiana State Fair 1905, and first at Illinois State Poultry Show, Crawfordsville and Indiana State Fair in 1906.

Cockerel, second Lebanon and Ohio State Fair and third Indiana State Fair, 1906.

Hen (89), first Central Indiana Poultry Show, 1905; third and in first pen at Illinois State Show, 1906, and third Martinsville, 1906.

Hen (64), in first pen Central Indiana Show, 1905; second pen Martinsville, 1906, and first pen Indianapolis, 1906.

Six other hens from my best breeders. Pullet (26), second Columbus, O., 1906. Pullet (53), second Crawfordsville and in first pen, 1906.

Pullet (78), in second pen Lebanon, 1906. Three other fine breeding pullets.

This puts Mr. Hewes among the front ranks and am sure success will be his reward. Peter S. Hurt.

During the last few years chicken raisers who have kept close track of events have found that the time has arrived to do away with the hen as a means of incubation. With the steady improvement in incubators and brooders, perfection has been so nearly reached that a larger percentage of fertile eggs can now be hatched in a modern incubator than can be hatched under a hen. Not only this but there is no danger of the incubator breaking the egg; there is no danger that it will cease incubation in the middle of a hatch and decide to set no longer. It must be borne in mind, however, that there is a vast difference in incubators. There is one concern that in the face of the gradual cheapening of incubator construction has actually increased the cost of building their machine. This has been done because the management fully realizes that if a lasting and growing business is to be built it must be done by placing incubators on the market that give satisfaction. This concern is the Pinkerton Manufacturing Company 1021 N. 14th street, Lincoln, Neb., makers of the renowned Queen Incubator, which has taken first prize at every poultry show and fair at which it has been exhibited during the past two years. In the Queen Incubator is combined all of the good points contained in all other machines, together with the very finest material and workmanship. If you contemplate buying an incubator or brooder you should write for the Queen catalogue. Queen Incubators and Brooders are sold with the understanding that they do not cost you a cent unless they give perfect satisfaction.

Iowa State Fair, Des Moines, Aug. 25, 1906.

To Whom It May Concern:

This is to certify that T. F. Potter has demonstrated to our entire satisfaction his system of selecting the laying hen from the non-laying hen, as described and illustrated in his booklet entitled "Don't Kill the Laying Hen," and we are convinced that his system is absolutely certain.

Signed: J. R. Hoover, president Iowa State Poultry Association, Oskaloosa, Iowa; W. S. Russell, poultry judge, Ottumwa, Iowa; Rev. A. B. Adams, secretary Iowa State Poultry Association, Altoona, Iowa; H. S. Shivers, assistant superintendent poultry, Knoxville, Iowa; A. L. Pedrick, poultry judge, Ottumwa, Iowa; E. C. Pranch, poultry judge, Summit, Mo.; B. G. Garner, poultry breeder, Bloomfield, Iowa.

U. R. Fishel, of Hope, Ind., won at Tennessee State Fair, Nashville, Tenn., October 8-15, 1906, as follows: First, second and third cock; first and second hen; first, second and third cockerel; first and second pullet; first and second breeding pen; F. J. Marshall, judge; 83 in White Rock class.

J. C. Fishel & Son, of Hope, Ind., won at Nashville, Tenn., State Fair, October 8-13, 1906, as follows: First and third cock; first, second and third hen; first and second cockerel; first and third pullet; first and second pen; F. J. Marshall, judge; 257 in White Wyandotte class.

The De Graff Poultry Farm, Amsterdam, N. Y., has won first premium on breeding pens at the following shows this fall: Cambridge, N. Y., New York State Fair, White Plains, Trenton, N. J., Ponda, N. Y., and Madison Square Garden County Fair, New York City.

HOGAN HENS

Are Laying Hens Every One of Them

If you could certainly cull out all the tolerable layers, poor layers and non-layers and keep only the good layers, wouldn't you do it?

Of course you would.

Then you are looking for

The Walter Hogan System

It teaches you to do that and more. Pullets sure to become layers. Cocks sure to breed layers. Selection and breeding. A new system that's sound.

All Hogan hens are 200 egg hens. You can have them, absolutely sure. Yes, its startling—a revolution in poultry raising. But we have the proof. Write us for it.

POULTRY CUTS

Latest and best. Our new Catalogue shows all varieties. Send for it today. I also breed Barred Plymouth Rocks. Eggs in season. **CHAS. L. STILES, 921 Mohawk St., Columbus, O.**

Mr. D. T. Heimlich, Jacksonville, Ill., one of the foremost Barred Rock breeders and judges, has some exhibition cockerels and pullets to dispose of. Mr. Heimlich has more shows to judge this year than any one else, and any one in the market for some prize winners should address him at once, as later in the season he will not be able to attend to the shipping personally.

The birds from Gen. E. A. McAlpin's Rock Hill Poultry Farm, Ossining, N. Y., made nearly a clean sweep at the Interstate Fair at Trenton, N. J., and the Great Hagerstown Fair, at the former place winning fifty-six regular and special ribbons on forty-nine entries and the silver cup for best exhibition yard in the show. At the latter show they won

as follows: On White Wyandottes, first and second cock, second and third hen, first, second, third and fourth cockerel, first, second and third pullet, first, third and fourth pen, and National White Wyandotte cup for best pen. On Partridge Wyandottes, second hen, second cockerel, second pullet and second pen; special for best display of Wyandottes, all varieties competing. On White Plymouth Rocks, first cock, first and second hen, second and fifth-cockerel, first and third pullet, first and second pen. On Silver Penciled Rocks, first and second cock, first and second hen, first cockerel, first pullet and first and second pen; special for best display of Plymouth Rocks, all varieties competing. On White Leghorns, first and second cock, first hen, first and fifth cockerel, second and third pullet

and first and second pen. On Buff Cochinchin Bantams, second and third cockerel, first and second pullet, first and second pen.

This remarkable win was made after showing at four previous shows, in every one of which their birds captured their share of the prizes, and proves that they not only have a few good ones, but many. Send to them for prices and catalogue.

J. Frank Van Alstyne, of Niverville, N. Y., won at Poughkeepsie Show, Poughkeepsie, N. Y., September 25, 1906, as follows: First Silver Wyandotte cockerel, first Silver Wyandotte pullet, first Columbian Wyandotte cockerel, second Columbian Wyandotte cockerel, first Columbian Wyandotte pullet; only six birds entered; J. H. Drevenstedt, judge.

—NINE YEARS AGO
Ralph R. Root started out to make a brooder of a new kind—one that would brood as nature does—and

THE ROOT BROODER

is the result. It is a brooder success, because it broods just as the old hen does. The hen broods by actual contact with her body, and heat by contact is one of the features of the Root Brooder. Our free illustrated circular tells all about them. Root Brooders are sold on trial, and are shipped, freight prepaid.

ROOT INCUBATOR CO.

Your Advantage in Advance Fence

ADVANCE

We give thirty days' free trial on your own farm—money back if not entirely satisfactory—and allow you the wholesale maker's price if you decide to keep it. Now, Advance is the strongest fence made because we don't cut the stay wire but weave it right into the top and bottom strand wires, thus saving all the strength and making the fence solid as a rock. Our catalogue tells all about it and gives wholesale delivered prices.

ADVANCE FENCE CO., 1382 Old St., Peoria, Ill.

Big Salaries

Men and women of every age are making big salaries with us. Work honorable, easy and agreeable at home. We want some one in your neighborhood. Are an old established firm. Write to day. Big money for you.

ROYAL MANUFACTURING CO. Box 1851 Detroit, Mich.

C. P. Nettleton, Shelton, Conn., for the second successive year sweeps the Hagerstown show on Light Brahmas and thus becomes the owner of the Cost Memorial Cup. This handsome challenge trophy was offered a couple of years ago as a memorial to the late John L. Cost, who was a strong supporter of the annual show at Hagerstown, and who was known and beloved by poultrymen all over the country. This trophy was won by Mr. Nettleton last year, but by the terms of the gift it had to be won twice in succession and this year every effort was made by the breeders of Light Brahmas to prevent its being won by Mr. Nettleton. This was in vain, as the dozen birds exhibited by Mr. Nettleton not only took every first prize in the class but a number of seconds and all the third and fourth place ribbons. This, of course, carried the cup, which was to be given to the owner of the best cock, hen, cockerel and pullet in that breed of fowls.

William Miller, proprietor Fair Lawn Poultry Farm, Crescent, Mo., made a phenomenal winning in White Plymouth Rocks at the late Illinois state fair, winning first, second and third cock, first hen, first and second cockerel, first, second and third pullet and first pen. Mr. Miller's farm consists of seventy acres and he informs us that he will add to this forty acres more to be able to raise enough birds to supply the great demand for this popular breed. Anyone who is contemplating taking up the White Plymouth Rocks or any one in the market for high-class exhibition stock should correspond with Mr. Miller at once to get the cream of a flock of 1,000 birds. Mr. Miller is one of our people—we guarantee him.

E. B. Barnett & Son, Michigantown, Ind., recently purchased the second prize Silver Laced Wyandotte cock at Indiana State Fair, 1905; also the first prize pullet of 1906, and three other high-class exhibition pullets. These four pullets were sired by the first prize cock at Indianapolis, February, 1906. This pen will be mated for their egg trade the coming season, and parties desiring eggs from this mating should place their orders early. When writing mention American Poultry Journal.

Charles Nixon, of Washington, N. J., the White Wyandotte breeder, has a change of ad, in which he asks readers: "Don't you think I am competent of selecting birds that can win at your show or sell you breeders that will produce prize-winning specimens, if I can make one entry at Madison Square Garden and win first hen in class of fifty-one, and one entry at Boston and win fifth hen in class of forty, together with four firsts on four entries at Dover, N. J.?" Mr. Nixon has had twelve years' experience with his favorite variety.

F. H. Wells, of Deer Park, L. I., N. Y., won at Queens County Fair, Mineola, L. I., September 25 to 29, 1906: First and second Barred Rock cockerels and special; second Barred Rock hen; first and second R. C. R. I. Red hen, and special; first and special and shape special R. I. Red hen, S. C.; first R. C. pen; third S. C. pen Reds; first R. C. cock; second R. C. cockerel; third R. C. pullet; W. Stanton, judge.

Mrs. U. R. Fishel, of Hope, Ind., won at Indiana State Fair, Indianapolis, Ind., September 9-14, 1906, as follows: First prize old tom, first prize old hen, first prize young tom, first prize young hen; Buck, judge. At Tennessee State Fair, October 8-15, 1906, Nashville, Tenn.: First prize old tom, first prize old hen; no young birds show; R. E. Jones, judge; 32 in Bronze turkey class.

M. M. Smith, Farmersville, Ill., breeder of Barred Rocks, won first hen at the Illinois state fair. This hen is truly a gem of correctness of type and carriage, with barring standing out snappy, clear and deep. Mr. Smith informs us that he has some very fine cockerels and pullets to dispose of.

George A. Barrows, of Groton, N. Y., won at Dryden, September 18-21, 1906, as follows: Second cock, second cockerel, second pullet, first and second pens, S. C. White Leghorns; Dennis Shea, judge; forty-five in S. C. W. Leghorn class.

W. H. Gifford & Son won at New York State Fair, Syracuse, N. Y., as follows: Black Orpington, first pen old; first pullet; second cock; third hen. White Orpington, first pen, young; second pullet; hen, first; second cock; Denny, judge.

Mrs. W. S. Robison, of Fayette, Mo., Route 3, Box 1, is a successful breeder of Buff Rocks. Pleased customers are her best advertising, and once a customer they always come again.

Mr. J. A. Bickerdike, Millersville, Ill., manufacturer of trap nests and breeder of White Plymouth Rocks, has some high grade cockerels and pullets to dispose of for future delivery.

M. E. Dirk, of North Baltimore, O., won at the Wood County Fair, Bowling Green, O., September 25 to 29, 1906, as follows: First cockerel, first pullet on Buff Wyandottes. Travers, judge.

Mr. Jas. Workman, French Village, Ill., has several well finished White Wyandotte cockerels and pullets to dispose of. These birds are correct in shape and pure white. Write him for prices.

When Eggs Are High

The Ohio State University proved in an 85 day test that hens fed cut green bone made an increase of 21 per cent in egg production over hens fed only grain and gravel. Green bone costs no more than grain, and will make hens lay.

STEARNS Bone Cutter

makes winter egg production a certainty. Cuts green bone, meat and gristle, rapidly and finely. Self-cleaning. Automatic feed. Free Trial for 30 days. Satisfactory increase in egg production guaranteed or money refunded. Write for catalogue and valuable booklet, "How to Make Poultry Pay." Sent free

A FARMERS' COMMITTEE SAYS TUBULAR IS WORLD'S BEST CREAM SEPARATOR

The Tubular

Low Can
Lightest Bowl
Simplest Bowl
QUICKEST CLEANED

Self Oiling
Ball Bearing
Enclosed Gears
CLEANEST SKIMMER

A community of farmers and dairymen recently united and appointed a committee of six wide awake farmers to thoroughly investigate cream separators and decide which is best.

Why? Simply because they were convinced that cream separators pay, and wanted to know the best before buying. The committee requested all leading separator representatives to meet the committee and show their machines.

Why did they do that? Because the committee wanted to find out positively which separator actually is best. They didn't want to take anybody's word for it, but wanted to see all reliable separators side by side and decide for themselves.

When that committee met, many farmers were present waiting the decision. The committee carefully examined the different separators, and unanimously decided that the Sharples Tubular Cream Separator is best, excelling all others in fifteen essential points.

The members of the committee backed up their decision by buying for themselves six No. 6 Sharples Tubular Cream Separators right on the spot—one Tubular for each farmer on the committee.

What did that mean? That this investigation had absolutely satisfied the committee that the Sharples Tubular is the best cream separator built—the best in every way. If you buy a Sharples Tubular, you will get the world's best separator.

It is to your advantage to learn all about this committee—its decision—and the world's best separator. Write for our handsome, complete catalog C 205, with leaflet and the committee's sworn statement telling all about it.

A FOOD FOR ALL FOWLS

Harvey's Mixed Grains is a food made to meet the needs of all farm fowls. It is an excellent combination of mixed grains especially selected for their value in the production of eggs, flesh, growth and health. It is an economical feed because it's all grain—contains no grit—no waste. All fowls relish it keenly. That's why it produces such good results in the nests and on the scales. It is not a condimental nor a stimulating food, but a good common sense, substantial grain ration that you can rely upon. An all grain food that produces bigger gains in poultry profits. That's what you want. Try it—a test tells. Write for catalog.

 Lenox, Mass., January 8-10, 1907.

TO MAKE HARNESS LAST LONGER.

A little economy, which sometimes means a good many dollars to a man, is the proper care of harness, carriage tops, etc. Leather in daily use, exposed as it is to sun and wind, soon becomes dry, hard, inelastic and unable to stand strain. Then, very likely at the most unfortunate moment, a break occurs, and precious time and money are lost. All this is easily prevented by a little forethought and care on the part of the owner. Every one owning horses should be supplied with a good leather preservative, and a good axle oil. These two things are necessary to the largest economical use of a working outfit, or a pleasure equipage.

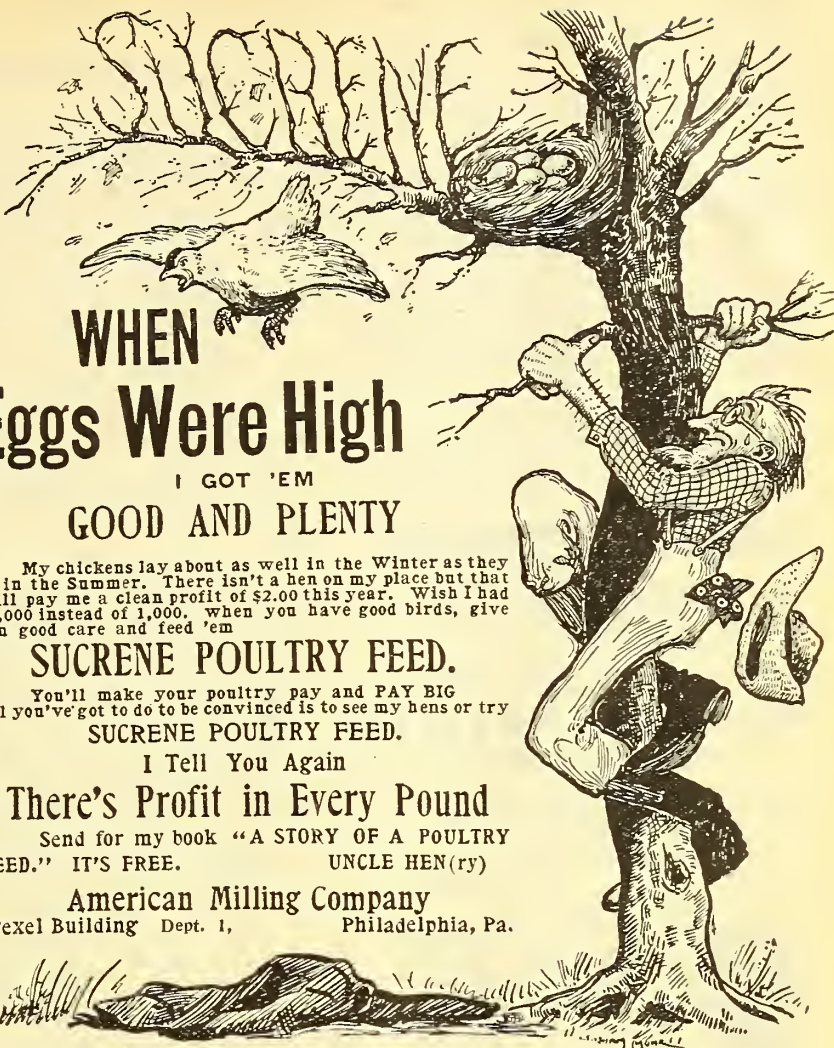

Observation has shown that no oil penetrates leather so deeply, and resists the drying effect of sun and wind so well as Eureka Harness Oil.

Neatsfoot and some other inferior oils sometimes used, easily become rancid, or because of containing acid hurt the leather. Stable men and others posted on the subject, invariably use Eureka Harness Oil. When harness is given an occasional dressing of this oil, and wagon spindles greased with Boston Coach Oil, a very large reduction is made in the necessary repair bills. Boston Coach Oil, by the way, is very much superior to Castor Oil. It has splendid lasting qualities, will not gum or corrode, and is more economical in every way.

People who are after economy in stable management will do well to ask for these oils.

Mrs. W. S. Robison, of Fayette, Mo., won at Missouri State Fair, October, 1906, as follows: Second cock; first, second cockerel, first, second hen, second, third pullet, first, second pen, on Buff Plymouth Rocks, in the best class ever shown at the fair.

Charles Staaff, of Peapack, N. J., won at Trenton, N. J., September 24 to 29, 1906. Showed one hen, one pullet, Barred Plymouth Rocks; won second hen; J. H. Drenstedt, judge.

**WHEN
 Eggs Were High**

I GOT 'EM
GOOD AND PLENTY

My chickens lay about as well in the Winter as they do in the Summer. There isn't a hen on my place but that will pay me a clean profit of \$2.00 this year. Wish I had 10,000 instead of 1,000, when you have good birds, give 'em good care and feed 'em

SUCRENE POULTRY FEED.

You'll make your poultry pay and PAY BIG All you've got to do to be convinced is to see my hens or try **SUCRENE POULTRY FEED.**

I Tell You Again

There's Profit in Every Pound

Send for my book "A STORY OF A POULTRY FEED." IT'S FREE. **UNCLE HEN(ry)**

American Milling Company
 Drexel Building Dept. 1, Philadelphia, Pa.

PRICES: Sucrene Poultry Feed is sold by Sucrene Feed Dealers in nearly every city and town—or shipped direct, freight prepaid, in 100 pound bags on receipt of price.
\$2.00 per 100 lbs. \$9.50 per 500 lbs. \$18.00 per 1000 lbs. \$35.00 per ton.

**DARLING'S
 BEEF SCRAPS
 The 60% Protein Feed**

Now is the time to develop your laying pullets. They must go into the winter strong and well fortified with egg making material. They must have Protein Feed.

They can no longer get the bugs and worms of summer time. The best substitute for these bugs and worms and insects—the quickest acting, the farthest reaching, the best thing for results—is **Darling's** selected, specially prepared **Beef Scraps**. Not only sweet and pure but guaranteed to be 60% protein and only 12% fat. Test them by analysis or by results, you'll find only the slightest variation. Their high per cent of protein and their purity and

freshness make them the most valuable egg making food on the market.

Shipments Made from Chicago or New York. Price \$2.50 per 100 pound bag, f.o.b. either place.

Darling's goods are quality goods. Each enables you to feed to a definite purpose.

**Guaranteed
 Fresh and
 Pure**

Chick Feed \$2.50. Laying Food \$2.00. Scratching Food \$2.00. Forcing Food \$2.00. Oyster Shells 60 cts. Mica Crystal Grit 65 cents per 100 pound bag, F. O. B. either Chicago or New York.

DARLING'S CATALOGUE is full of good things for poultrymen.

If you see it there, it's reliable—best of its kind. Best guide published on feeding for special results. Send in your name and let us mail you the latest edition. *Address nearest office.*

Darling & Company,

Maple Grove Poultry Yards

Where the World's Fair winners were bred, and still breeding good ones. Stock and eggs at reduced price from the noted World's Fair winners. Also Scotch Collie pups at a bargain.

Mrs Della Maxwell
MAPLE GROVE POULTRY YARDS, R. 5, FAYETTE, MO.

Oak Grove Poultry Farm
Exclusive Breeders of Silver Laced Wyandottes

We have some fine young chicks, for sale that are going to win the blue this winter or there will be some extra fine stuff shown, anyhow we have never been beaten in the show room wherever we have shown. No females for sale. Remember our Silvers are the same line of breeding that has done most of the winning at the national shows.

FANCY YOUNGSTERS!

I have the finest lot of S. C. B. Leghorn cockerels and pullets I have ever raised. Prices reasonable. Will furnish cockerel or pullet bred stock fit to win in any company. Birds shipped by me may be returned at my expense if not as represented. Nothing but Bright's Strain. No old birds for sale.

C. H. COLEMAN - - LOGAN, IOWA

AMERICA'S BEST WYANDOTTES IN GOLDEN SILVER AND WHITES

We offer for sale 300 head of our this year's breeding birds out of our this year's matings at less than half price for quick sales. Fine cock birds and females in any numbers to suit, but no birds for less than \$2 and up. Here is a chance to secure as fine birds as the country affords at very low prices. Eggs from our choice matings now at \$1.50 per setting straight. Eggs from Japanese Silkies and Golden Sibrights, \$3 per setting. Remember our birds have won hundreds of premiums at the great shows of this country, including N. Y., continually for 15 years. Buy the best at great bargains. A few Collie puppies cheap. Large circular free.

IRA C. KELLER - - Brookside Stock Farm - - Box 5, Prospect, Ohio

POULTRY-BULL FENCE Strong enough to turn bulls, close enough to turn chickens. Wires are High Carbon steel, double strength, Coiled Spring, heavily galvanized to prevent rusting. Some sold 18 years ago is good yet; outlasted the posts. Can set posts 40 feet apart. Sold to user at factory prices on 30 days free trial. We pay all freight. Get our free catalog before buying. We make big line farm fence too. Write today. KITSELMAN BROS., Box 295, Muncie, Ind.

At the late Chicago show won twenty-seven firsts, one third and six specials on thirty-one entries. Write

CHAS. McCLAVE - - NEW LONDON, OHIO

Sass Bros.' White Rocks

The Strain of superior quality. They are blue ribbon winners at Chicago, Streator, Ill. State Show and many other leading places. Judge Shellabarger says that our exhibit of 80 birds at Streator was the best exhibit for so many birds shown by one exhibitor that he has ever passed upon, and he has been judging for 20 years. If in need of single birds, pairs, trios, pens or utility flocks of W. Rocks, it will pay you to write us.

1500 HEAD TO SELECT FROM

Send your orders to headquarters and get the best. Nicely illustrated catalogue free.

SASS BROS., : : Box A, Ancona, Ill.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Sixty thousand per month.** We guarantee an average monthly circulation of 60,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

RHODE ISLAND REDS.

RHODE ISLAND REDS. Change of business, making personal care of my birds impossible, compels the sale of my Rhode Comb Reds with "good will," ribbons and diplomas. The reputation I have made, by hard work, fair dealing, a constant struggle for the advancement of the breed and the expenditure of thousands of dollars, is now worth much to one who can properly handle the business. I have only exhibited at the great shows, and in the current issues of "Poultry" and "American fancier" I have published my record. I challenge any man to place by its side an equal record. F. D. Baerman, Dunellen, N. J. 11-1

FOR SALE. Rose and Single Comb R. I. Reds, cocks, cockerels and hens and pullets. Fine birds. Write. W. A. Ferst, Urbana, Ohio. 11-1

Chas. H. Ring, R. F. D., Decatur, Mich.

200 Egg Incubator \$12.80

THE WOODEN HEN

At \$12.80 the Wooden Hen is the best 200 Egg Incubator on the market—the remarkably low price being made possible only by the immense production forced by the constantly increasing sales of this perfect hatcher. Substantially built and thoroughly finished throughout, it solves every problem of ventilation, moisture and heat—practically runs itself and requires but five minutes' time daily while in operation. The Wooden Hen is not only the best of incubators and the most economical to operate, but it also hatches the greatest proportion of fertile eggs. Send for free catalogue, illustrated in colors, containing full information regarding incubators and Poultry Appliances.

CEO. H. STAHL, QUINCY, ILL.

PURE BRED PEKIN DUCKS

2500 ponderous (Rankin-Hallock Strains direct) for sale. Now contracting for eggs—deliveries after Jan. 10th—at \$5 the 100, \$45 the 1000. Magnificent Pea Fowl, Milch Goats. Over 30,000 duck eggs sold in 1906. 160 acres. Established 15 years. Stamp for reply.

Remember I can sell you good cockerels much cheaper at this time of the year than I can after the first of the year. Address

Harmon Bradshaw, Box A, Lebanon, Ind.

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production. Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements. Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per setting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America. Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

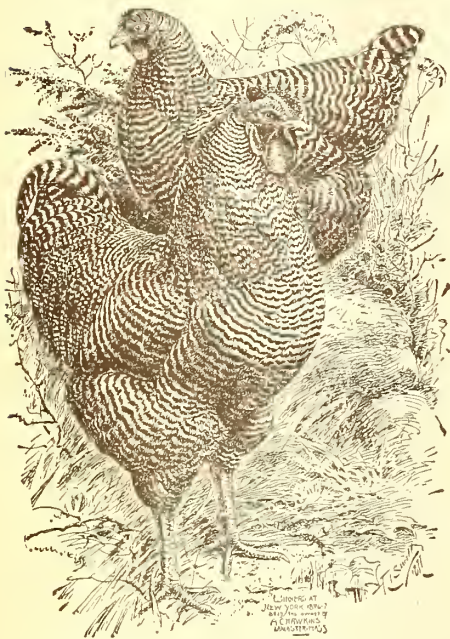

My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandotte

A. C. HAWKINS, Lock Box 20 Lancaster, Mass.

YOUNG'S STRAIN OF S. C. WHITE LEGHORNS

I HAVE NO OTHER BREEDS. My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined; including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; cks., 1st, 4th; hens, 3d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; cks., 1st, 3d; hens, 1st, 4th; pul., 3d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 250 yearling hens for sale to make room for young stock.

OUR SILVER JUBILEE

This year marks the Silver Jubilee of the "Reliable" Incubator. For twenty-five years they have stood the severest tests under all conditions, and have demonstrated that Reliable machines are thoroughly practical and satisfactory in every respect. Today, the demand for Reliabilities is greater than ever. They are scientifically constructed along the most practical lines. They employ those principles of hatching which have been proven to be correct. The double heating system, perfect ventilation, even temperature and the absence of draughts produce the highest possible number of chicks from any given quantity of fertile eggs. The Reliable Incubator is cheaper to operate, requiring one-third less oil than any other. We guarantee it to do as we claim or money refunded. Silver Jubilee Catalog free. Get our prices on pure bred poultry and eggs.

Shipments made same day order is received.

RELIABLE INCUBATOR & BROODER COMPANY, Box A-1, QUINCY, ILL.

BUFF ORPINGTONS 1906 CHICAGO WINNERS

We won every first and 2d prize in both Single and Rose Comb; silver cup for display. Our World's Fair record, St. Louis, was seven out of ten firsts. Our catalogue gives our other winnings.

J. M. WILLIAMS & CO. Box B, No. Adams, Michigan

**World's Foremost
White Wyandottes**

won more prizes the past 10 years at leading shows of America than any other strain. Remember, all stock purchased can be returned at my expense if not satisfactory. Have furnished winners for many of the leading shows and have a most promising lot this season.

"CATALOGUE FREE" S. D. LAPHAM, DEARBORN-MICHIGAN.

SINGLE AND ROSE COMB REDS

Young stock for sale of Single Combs only. All birds bred from exceedingly fine breeders, males heading the pens scoring to 95. Have won many prizes with birds of my own breeding, as have my customers also. I will have some grand matings for this season's egg trade at popular prices. Let us get acquainted.

C. L. TE BOW, Suburban Poultry Farm, R. F. D. 11, Springfield, Ohio
Member Single Comb Rhode Island Red Club.

NORTHUP'S MINORCAS SINGLE AND ROSE COMB

Eggs from 30 grand pens guaranteed to hatch regardless of distance. 28-page catalogue free. 68-page book, "Minorcas, All varieties," history, mating, fitting for show, etc. Fully illustrated, 25 cents postpaid. My S. C. Minorcas have never lost a special for large size, and have won more than 3,000 prizes for my customers in strong competition. My R. C. Black Minorcas have won more 1st and 2d prizes than all competitors combined at Chicago, Boston, Philadelphia and New York.

GEO. H. NORTHUP, Raceville, Washington Co., N. Y., R. F. D. 6

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.
ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
 Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Penbrooke, Maine

BEST HATCHER**

CYPHERS POULTRY FOODS

PROTECTED BY SEAL

SCIENTIFICALLY
BALANCED RATIONS

The Greatest Success in Poultry-Keeping Is Secured By Aiming Constantly Higher and Higher

The Best Foods Produce the Best Fowls that sell for the highest prices. Screenings won't do it! Inferior grains won't do it! A pile of wheat today; a pile of corn tomorrow—an indiscriminate feeding of grain without a knowledge of cause and effect will not accomplish it. Blood alone won't do it, even though the ancestry may be traceable for generations.

There Is No More Important Consideration Than The Food You Feed!

And while for your profit we don't want you to miss getting the Best Foods, neither do we wish you to take it for granted without investigation that

Cyphers Company's Foods Are The Best

We know that the closer you investigate the nearer you are to buying our Foods
For the following reasons we repeat that Cyphers Company
Poultry Foods are the Best:

1. THE members of the Company are leaders in the poultry business—experienced exhibitors and market poultrymen who know the needs of poultry. See page 7 of our new catalogue.
2. OUR mill is devoted exclusively to the mixing and grinding of poultry foods—no breakfast foods, no stock foods, no waste products. We operate the largest exclusive poultry food mill in the world—all for poultry.
3. OUR foods are scientifically mixed and balanced by automatic machinery that cannot go wrong once the proportions are adjusted—and we readjust them for every different ration.
4. EVERY Sack of Food is Sealed. Whether you buy direct or through one of our agents see that the Seal on the bag is unbroken. Our foods are too valuable to take chances of adulteration.
5. WE make a special food for every purpose: Chick Food for Chicks; Laying Food for Layers, etc., etc., every one balanced to meet requirements whether for forcing birds for market or for show, for laying, or for growth.
6. CYPHERS Incubator Company's guaranteed analysis is on every bag. Cyphers Incubator Company stands behind it, and the individual members of Cyphers Incubator Company recommend its use for best results. The leading fanciers recommend it as will be seen by reference to our 260 page Free Catalogue.

Write For Free Illustrated Catalogue of 260 pages, entitled "How to Make Money With Poultry and Incubators." It's a big one. We pay postage. It contains six of the most valuable chapters ever published on Poultry. Chap. I.—Magnitude of the Poultry and Egg Industry; Chap. II.—Review of our Great Poultry Markets; Chap. III.—Profit Making Broilers, Roasters and Capons; Chap. IV.—The Profitable Pekin Market Duck; Chap. V.—Successful Chick Rearing; Chap. VI.—Profitable Egg Farming. Also photographs of Successful Poultry Plants, both Fancy and Commercial; Photographs of Government Experiment Station Experts; America's Foremost Exhibitors, Owners and Managers; their Poultry and Duck Houses, Incubator Cellars and Brooding Houses; Our Complete line of Incubators, Brooders, Poultry Houses and Supplies. If in return for this book you will send us the names and addresses of two acquaintances who keep poultry we shall consider it a favor.

Built from the Standpoint of Experience, Not Theory.

Now Understand!

These are not cheap machines, mind you, built for bargain sales only, but are our regular high grade 1907 Model

This is the Brooder that has made Poultry Raising Easy and Profitable.

IDEAL

Incubators and Brooders

that have made such remarkable hatches during the past few years.

In construction, in materials used in making them and in results obtained they are the peer of any incubators or brooders ever made;—strong and substantially built, of strictly high grade lumber—with every convenience that has yet been discovered to make hatching sure and easy.

They are the result of my twenty-five years experience on the famous Millhook Poultry Farm, where almost every incubator ever made has been tried and tested.

The Ideal was built first to give us a thoroughly dependable and satisfactory machine for our own use. It proved so successful that we are compelled to manufacture it for other members of the poultry fraternity.

We give you a strong and binding guaranty and we know you will be more than satisfied with results.

Why not take advantage of our offer and order now?

Medina, Ohio, Aug. 28, 1906.
J. W. Miller Co., Freeport, Ill.
Gentlemen: The two No. 3 Incubators purchased from you have given the best of satisfaction, they hatched every fertile egg. I will send you an order for two No. 2 Brooders.
Respectfully,
GRACE JONES.

Cazenovia, Minn., Apr. 13, 1906.
The J. W. Miller Co., Freeport, Ill.
Gentlemen: I purchased one of your No. 3 Incubators second hand, and started it March 7th, as a result I got 99 chicks from 120 fertile eggs which I consider exceedingly good, taking into consideration that it was the first time I ever saw one of your machines and the time of the year it was run. I have run two other makes of machines, but the IDEAL heats either of the others, both for management and hatching.
I remain yours truly,
F. L. EDSILL.

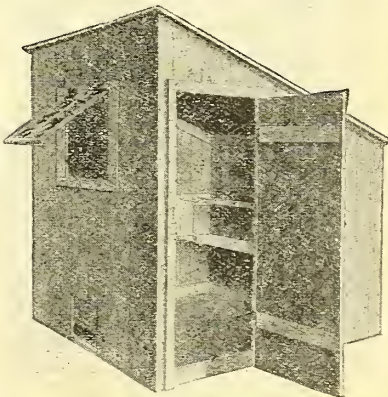

Complete Line of Poultry Supplies.

We manufacture and sell everything that the successful poultryman needs for the profitable conduct of his business.

Our line of supplies is not surpassed in extent or quality by any house in the country. It includes special poultry rations, poultry remedies, lice-killers, brood coops, hone-cutters, drinking fountains and colony houses, etc., etc., etc. We sell nothing which we cannot honestly recommend

BIG BOOK FREE.

Send your name today for our big 128 page book, "Poultry For Profit," which fully describes our complete line of incubators, brooders and supplies, illustrates and describes the principal varieties of fowls, and is brimful of interesting information which will help you make more money from your fowls.
Write for it today.

For 20 to 25 Fowls.

TRAP NESTS

SHOW WHICH HEN LAID THE EGG

THE "IDEAL" IS KING OF THEM ALL

Combines accuracy, compactness, convenience, simplicity, durability, at lowest cost. No watching! I sell PLANS, TRAPS, RECORD BLANKS, LEG BANDS. No freight! Write for circulars that are full of facts. F. O. Wellcome, York St., Yarmouth, Maine
"The Man Who Made Trapnesting Practicable"

IT IS EASY

to escape the rigors of a Northern winter and enjoy a home in a mild and equable climate all the months of the year. It is a change, too, that can be made at comparatively little cost, as Southern lands and homes are undoubtedly selling lower now than they can be purchased again. There is a constant and steadily increasing demand for them and values are increasing. Unimproved properties can be arranged for at as low as \$5 per acre, and improved lands from \$10.00 per acre up. These properties are susceptible of the highest cultivation and produce a range of crops which cannot be approached in Northern latitudes. Right now is the time to make a selection of your future home and arrange for early spring crops.

HOME SEEKERS' EXCURSION TWICE A MONTH

Detailed information concerning lands, business opportunities, rates of fare, etc., upon request.

For Big Poultry Results

Feed cut clover or alfalfa—the cheapest and most productive poultry food for winter feeding. Great for all poultry—especially ducks. Don't buy so-called "clover-meals"—half dirt and dust. Cut it yourself with a new

HUMPHREY Rapid Cutter.

Cuts finer, more rapidly and more easily than any other. Fine enough for young chicks—no pieces over 1/8 inch. Double knives, strong and durable. Unlike any other.

Send to-day for "Poultry Helps," Humphrey's new book of Poultry Specialties. It's free and it's all right. Address

HUMPHREY, New Street Factory Joliet, Illinois.

Incubator Book

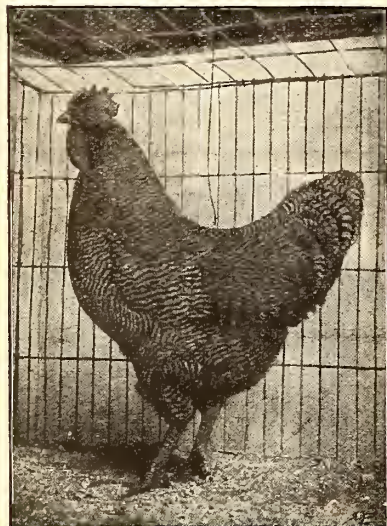

The Best That Was Ever Written.

If you will write us to-day we will send you the best book ever written on incubators.

It is interesting, fascinating, written by a man who knows, by a man who has spent 25 years on the problem. It tells all he has learned, all the results of hundreds of experiments with every kind of incubator made. It is a book you should read before buying, if you wish to avoid a costly mistake. The writer has spent 25 years in perfecting Racine Incubators and Brooders. The book tells all about them—that is why we send it free. It will lead you to choose the Racine. But it will give you the knowledge you need, and it is fair. It tells you practical facts that no other book ever told. Don't buy without reading it. Write to-day.

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Detroit, Buffalo, Kansas City and St. Paul.

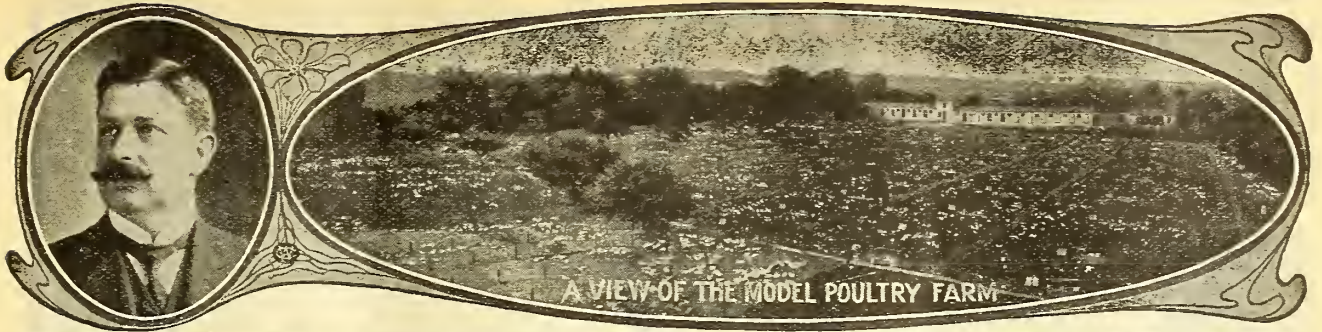

First Prize Cock at Madison Square Garden, 1904. Bred and owned by Gardner & Dunning.

MODEL INCUBATORS AND BROODERS

**Constitute an Equipment that will Enable You to
Make Your Poultry Business a Financial Success.**

Whether you want a small poultry business or a large plant, you want it to be a commercial success. You want the best equipment and the best advice you can secure. What you attempt to do, do right! In any business, the best tools are necessary to success. In the purchase of your equipment, you may save on the first cost by buying low grade incubators and brooders; but your experiment will show a loss not only in the price of the machine, but in the wasted eggs and the entire loss of the season.

The Model Incubators and Brooders are the cheapest equipment for the amateur or for the expert, because their use makes success possible.

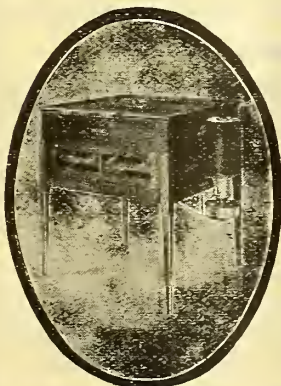

The success of the big Model Poultry Farm is in the greatest measure due to these real hatchers and real chick mothers. Here we raised over 20,000 head of poultry in six months from the time the Farm was bought. Twelve thousand chickens were raised in Model Colony Brooders. This means more chickens were raised in portable equipment than have been raised on any farm under any conditions during one short breeding season. Your own plant may be equally successful. Let me tell you how to make money out of poultry.

Catalogue is mailed free on request.

EGGS, BROILERS AND ROASTERS

An Easy Lesson in Practical Poultry Culture.

This is my latest book. It was issued last year and over 100,000 copies have been circulated. It gives the prices paid for eggs and poultry, week by week, for three consecutive years. It tells when a hatch taken off each week in a year could be most profitably marketed as a broiler or as a roasting chicken. It tells what profits can be made with each of the popular breeds, and the costs of production.

Of this book the papers say:—

Farm Poultry, Boston, Mass.—“A valuable reference book.”

American Poultry Advocate, Syracuse, N. Y.—“The best published in recent years.”

Poultry, Peotou, Ill.—“A great book; it should sell for a dollar.”

Sent to any address upon receipt of 20c in stamps.

FOR THIS
STANDARD GREEN BONE CUTTER

Here is a bone cutter entirely different from any other on the market—every point of difference is an improvement. It feeds the bone endwise to the cutting knives automatically, thereby producing a much finer, better chipping than is possible in any other machine. Every poultryman knows the advantage of feeding fowls cut green bone. We want them to know how easy it is to prepare it. You can get the green bone fresh every day from your butcher at a trifling cost—it's no bother and very little work to prepare it with the

STANDARD BONE CUTTER

Fed regularly green bone will double your egg supply, make eggs that will hatch strong, vigorous chicks, and keep your whole flock healthy and profitable. The money you spend for a bone cutter will return a profit to you every day. Machines are made in several sizes and warranted by responsible concern. Write today for free catalog, prices, and our original Trial Plan.

OPPORTUNITIES

IN

SOUTH

DAKOTA

Along the railway extension between Chamberlain on the Missouri River and Rapid City in the Black Hills of South Dakota, the following towns have been opened: Reliance, Kennebec, Presho, Vivian, Draper and Murdo Mackenzie, all of which are in a flourishing condition. The actual successes of new settlers in these towns recently have been wonderful. Ten more new towns will be opened as rapidly as the railway is completed.

Mobridge, in Walworth County, South Dakota, on another new line of this railway, has just been opened for settlement and promises a great future. It is located near Evarts, Walworth County, S. D., just east of the crossing of the Missouri River in the famous Blue Blanket Valley.

Why not start in business now in one of these towns, where everything is new, where you will have an unusual chance for success?

Send two-cent stamp for map and descriptive book of South Dakota.

300 EGG INCUBATOR

Delivered East of Rocky Mountains for \$29.50 Delivered West of the Rockies. **\$24⁹⁰**
We Pay the Freight.

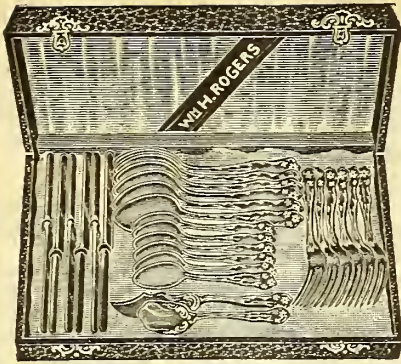

The 300-egg Victor Incubator is 45 inches long, 38 inches wide and 36 inches high. It is highly finished in Butternut and Vel. Walnut, paneled and moulded. It has triple walls, triple top and triple bottom scientifically constructed to hold the temperature necessary within the incubator for the least expenditure of oil, regardless of how cold the air outside. It has a large copper tank and heater so that in this as in all our other machines we have the benefit of a circulation of hot water, which cools slowly and cannot be quickly heated too hot. Each machine too is fitted with our regular Victor Regulator, which has a record of maintaining the temperature of 103 degrees for the 21 days of incubation without appreciable variation. There is an outer covering of metal around the water chamber of heater with an air space between, and this double jacket makes a tremendous difference in the oil consumption. Nothing is too good that can be made in the way of a lamp burner and the very best is included in this outfit. A big lamp bowl doesn't need filling so often and is less apt to burn out if forgotten for a few hours—a big, wide burner means heat—a big, stout metal chimney doesn't get broken, and means a saving in expense. All these things the Victor has. They are the vitals of an incubator. Lamp, heater and tank provide the circulation of heat, which means life to the chicks that are to come. An ample supply of hot water passes up from the heater over into and through the tank, and, becoming gradually cooler, drops back to the heater where it is warmed and again put in circulation. Such an incubator is a living mother, with the lamp the stomach, the heater the heart and the water the blood circulated over and around the chamber in which the eggs are to become baby chicks. Below the egg chamber, with its movable tray, is a nursery for the care of the newly hatched chicks—taking them off of the tray containing the hatching eggs so that they do not interfere with or smother the piping chicks. The double glass in the door permits of the inspection of the interior of the incubator without the necessity of subjecting either eggs or chicks to drafts of outside air. Ventilation is provided for by air inlets in the vicinity of the hot water passage into the tank, insuring a constant supply of warm, fresh air. In addition to the substantially built incubator, with its automatic turning egg trays and nursery, copper tank, heater, lamp and automatic regulator, the \$24.90 price includes an egg tester, a thermometer, funnel and hook of instructions, giving valuable hints as to the raising of young chicks, besides telling how to get the best results from the incubator, all delivered at your railroad station if east of the Rockies, or \$29.50 if west.

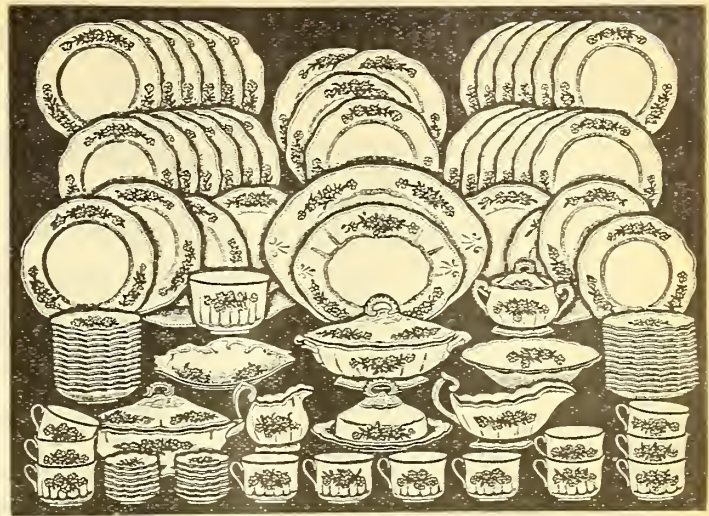

NOTE—That we deliver this incubator at your railroad station for the above price. Some makers quote prices f. o. b. factory and charge you cartage from the factory to their railroad station. We pay the freight and above prices are the cost to you laid down at your station. Other makers are asking \$30 to \$35 for a machine of the same capacity, but not nearly so well made or efficient and you have to pay the freight. Better write us today and have yours ready to start up just as soon as possible. We have made up a large stock of these machines in anticipation of this special offer, and are in position to ship promptly on receipt of your order. Remit in postoffice or express money order or bank draft, and if these machines are not just as we represent them, you may send them back and we will return the full amount you paid.

If you want information about other sizes and styles of machines, write for our large illustrated catalogue "The Victor Book," testimonial sheets and order blank, and our new hooklet "Autobiography of a Hen." A postal will do, only do it today before you forget.

Do You Want More Eggs More Fertile Eggs Right Now?

Read What the Experts Say!

In regard to the use of cut green bone as a food for poultry, will say it is one of the essential food things in the poultry yard. Where it can be had and used fresh at all times, it is almost indispensable. The results of feeding cut green bone to poultry are very noticeable from the start, and it is not surprising to know that it is very generally used over the country by up-to-date and successful poultrymen.

CHAS. MC CLAFE,
Judge of Fowl Exhibit at World's Fair.

We consider cut green bone the most important as well as the cheapest food that we feed. No other food will take its place, either in producing eggs or making rapid or healthy growth in young stock. We feed our hens an ounce each every day, and have done so for years, with the most satisfactory results. We feed it to all chicks daily after they are ten days old.

W. B. GIBSON & SONS,
Breeders of Exhibition Barred Plymouth Rocks.

From feeding cut green bone we get much faster growing chicks; also larger and healthier ones.

F. H. SHELLABARGER,
One of our best-known judges.

We consider cut green bone one of the most important articles of food for young chicks and laying hens.

KNAPP BROS.,
Breeders of Leghorns and White Wyandottes.

We have used cut green bone as feed for ducks, light Brahmans and Plymouth Rock fowls and consider it cannot be beaten as an egg producer, especially in winter when eggs are higher in price. It is really superior to all other animal foods.

JAS. RANKIN,
Probably best-known Duck Breeder in the World.

I always feed cut green bone to my laying and breeding fowls during the winter and spring months.

A. C. HAWKINS,
Breeder of Plymouth Rocks and Wyandottes.

I feed cut green bone to my fowls the year round and have done so for ten years. No poultry raiser can get along without it.

W. S. RUSSELL,
Poultry Judge and Expert Breeder.

Fresh cut green bone makes hens lay, in the coldest weather, because it gives them egg-making material and stimulates the egg-making organs.

Read what experts say in the preceding column.
You can double your egg yield and save half your feed bill if you go about it right! But

You Need a Humphrey

Because the Humphrey Green Bone and Vegetable cutter does better work for you—in less time—with less trouble than any other bone cutter ever made.

You Can Prove It

We give you a Free Trial and charge you nothing extra.

We urge you to give the Humphrey a free and fair trial.

That's all we ask.
So far, in all the years we have been building this cutter, only one person out of every 374 customers, has been dissatisfied.

Therefore, we ask you to try a Humphrey in competition with any other make, and if our machine does not run with less power and do more and better work than any other machine of the same size (bar none), return the Humphrey to us, and we will remit to you the full purchase price.

You may send for a Humphrey cutter on free trial.

To be paid for if found to be as represented. A test will tell the story.

Our guaranty means exactly what it says. The Humphrey bone cutter is built for business. It does the work. It does it more easily and more rapidly than any other, and we give you a ten-days' trial to prove it.

You are too busy to spend any time on a slow bone cutter or on one that turns hard. The Humphrey turns so much more easily and cuts so much more rapidly than any other, that with it you can cut all the bone you need for 100 fowls, while you are getting ready to cut with any other type of bone cutter. Just try it and see. That's all we ask.

This Is Why.

Don't buy any Bone Cutter until you get a Humphrey on trial.

No other machine will do for you such good work as will the Humphrey.

Because it is the Simplest—It has only three working parts; nothing about it to get out of order; no springs or screws to wear out; no sliding surfaces between which pieces of bones can get wedged and stop the machine, and no expensive split nuts to replace; no bevel gears to wear out or force the shafts out of alignment.

The Most Durable—because of its simplicity. There is nothing about it to break.

The Most Convenient—It stands at the right height. It is assembled in such a manner that power is applied easily and naturally, therefore no "tired feeling."

Easiest to Fill—The open hopper of the Humphrey takes a bone of almost any size without chopping with an ax. There is no cylinder into which you have to pack

the bone. It is ready when you are ready.

Most Complete—It will cut all sorts of poultry foods, such as corn on cob, charcoal, stale bread, roots, vegetables, etc. It is not necessary to buy a root cutter if you have a Humphrey Open Hopper Bone Cutter.

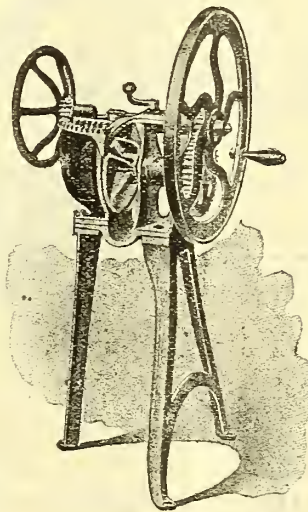

It Saves Time—You don't have to fuss around with the bones a quarter of an hour before you begin to cut. You simply drop the bones into the open hopper, and away you go. The Humphrey is the only bone cutter of which this is true. You don't have to stop to dig pieces out of the cylinder.

Most Economical—It will cut any bone you get. You don't have to discard any as too big or hard.

The Easiest to Clean—By unscrewing one nut all of the working parts can be taken out, and every portion of the machine exposed for cleaning.

The Best Finish—The Humphrey is the only bone cutter made entirely by machinery, insuring an exact duplication of all parts. It is the only bone cutter that is given a first-class painting with best paints, by hand.

Ease of Operation—The Humphrey will operate with one-half the power required by any other bone cutter. The feed is entirely in your own control. You can make it cut as rapidly or as easily as you like. Then we avoid all friction, thus saving the enormous waste of energy which is inherent in other types of bone cutters. This is important to you, for you realize it every time you cut bone for your fowls.

Send For This Free Poultry Book.

Our new catalogue showing the Humphrey Line of Poultry Helps is just off the press. Every reader of this journal ought to have a copy. Describes our Bone and Vegetable Cutters, the Humphrey Pure Air Brooder; the Humphrey Rapid Clover Cutter, the Humphrey Grit Mortar, the Humphrey Cyclone Corn Sheller, the Humphrey Dry Bone and Shell Mill. Handsomely illustrated and full of practical helps for poultry raisers.

FOR A GOOD HATCH USE GOOD OIL

Careful attention to details is what brings success in poultry raising. Has it ever occurred to you in your efforts to bring off successful hatches, how much depends on the kind and quality of the oil you use? To get the best results you should have a perfectly clear, bright, steady flame, as that is the only way to preserve pure air and even temperature. Pure air is a necessity in securing a good hatch. There is nothing that will make the air in your incubator impure quicker than a smoky, foul smelling lamp. When a lamp smokes and smells bad it's because there's something wrong with the oil. Poor oil has acid impurities that clog the wick, prevent the free flow of oil, cause a hard cinder to form on the wick and make the lamp smoke and give off deadly fumes. Such fumes are very injurious to chicks. You can avoid all such danger if you will use

"WYANDOT WHITE" OIL

It is oil that is refined by a patented process which takes out the acid impurities commonly found in other oils. It does not clog the wick nor cause a cinder to form. It does not cause the lamp to smoke or become dirty and there is absolutely no danger from gaseous fumes. Wyandot White Oil burns with a steady flame that insures perfectly even temperature at all times. It's the oil to use in both incubator and brooder. Don't be bothered any longer with poor oil. Write to us for our circular and price. We have some valuable information for you.

DO YOU KNOW The Potter System of Selecting Laying Hens ?

Don't kill a hen in this condition but learn the secret of selecting the laying from the non-laying hens.

Greatest Discovery of the Century in the Poultry World

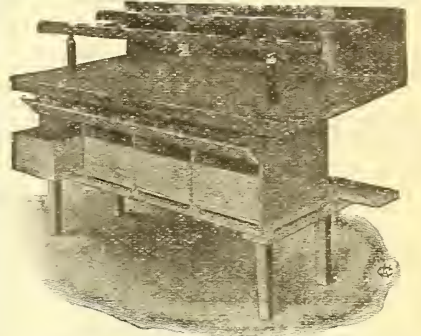

- Do you know** how you can have \$2 profit not a \$1 loss, on every hen you keep?
- How to breed only laying hens?
 - How to select your laying hens?
 - How not to kill your laying hens?
 - How to mate your birds for best layers?
 - How to save feed and labor and money?
 - How to keep the layers and kill the non-layers?
 - How to tell the drones and the barren hens?
 - How to select the best laying pullets?
 - How to stimulate the hen's laying organs?
 - How to estimate the number of eggs a hen will lay in a week or a month?
 - How to keep fewer hens and make more money?
 - How to keep your fowls and their quarters free from mites and lice?
 - How to hatch chicks that will make laying hens?
 - How to make poultry pay every month in the year?

DO YOU

want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter System to their profit and advantage. So can you. Write today for free circulars telling about it.

DON'T BUILD THAT NEW HEN-HOUSE

or think of fixing up the old one until you have seen our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three styles and twelve sizes. Also "Simplex" Trap Nests; W. P. attachment, etc. No poultryman can afford to be without this book. For eight years we have manufactured this line of goods. Thousands of poultry houses in every section of the country are equipped with Potter Fixtures. You can have convenient and sanitary quarters, and you can save time, worry and money by using them.

Our Catalogue tells you how to keep free forever from these pests—LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for one red stamp to cover postage.

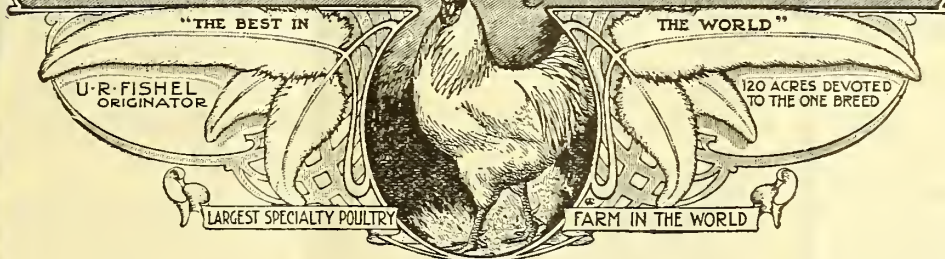

WRITE US TODAY

for free circulars on the POTTER SYSTEM and our new catalog. They will please and interest you.

"FISHELTON"

THE HOME OF

Fishel's White Plymouth Rocks

Mr. Thos. F. Potter,
Downers Grove, Ill.

HOPE, INDIANA, Oct. 23, 1905.

My Dear Sir:-

I am more than pleased with the value of your system of telling the laying hen. I would not take fifty dollars for the information you gave me in fact it is so valuable to any poultryman that it can not be reckoned in dollars.

I have been in the Poultry business all my life and never knew how to tell a hen that was laying (unless I saw her lay the egg) or one that would lay soon or one that would not lay at all. No Poultryman can afford not to know this system and really every farmers wife should know it so as when they sell their hens they would not sell the one that was laying eggs every day. Trusting you will be well paid for your discovery so valuable to us all I beg to remain

Your Friend,

U. R. Fishel

READ Mr. Fishel's letter, also endorsement by Iowa State Fair officials found below. Isn't this convincing evidence that the Potter System is what every poultryman should know?

We have many such letters from Judges, editors and breeders in every section of the country. Thousands of breeders are making more money on their poultry by using the Potter System and our sanitary poultry house fixtures. So can you. You are losing money every day you wait. Write us today.

Downers Grove, Ill.

Iowa State Fair, Aug. 25th to 30th, 1906, Des Moines, Iowa.

To whom it may concern:

This is to certify that T. F. Potter has demonstrated to our entire satisfaction his system of selecting the laying hen from the non-laying hen, as described and illustrated in his booklet entitled "Don't Kill the Laying Hen," and we are convinced that his system is absolutely certain.

(Signed)

—TO THE BEGINNER

all brooders are brooders. But, with experience the poultryman learns that there are different classes of brooders. Some brooders are good brooders. The poultryman knows it, the chicks show it. Among these better brooders

THE ROOT BROODER LEADS

This is not a mere statement—but a fact, and there are reasons for this fact. A general reason is—because the Root Brooder broods just as the old hen does. Our illustrated circular shows how, and tells why the Root Brooder is just like the old hen. We would be pleased to send you a copy of this circular and tell you about our free trial offer. The circular is free. Root Brooders are shipped, freight paid.

ROOT INCUBATOR COMPANY,
Dept. B Cleveland, O.

Doolittle's Partridge Wyandottes

The original strain; the one that has true Wyandotte shape, the proper color and markings. They have from the beginning yearly produced more prize winners at the Nation's important shows than all others. They are the original, are line bred, from single matings and the only strain that produces prize winners that are full brothers and sisters. They stand apart from all others and have no close rivals. If you see a well penciled female trace her up and you will find she carries the blood of my strain.

Send 10 cents in postage for the handsomest and most complete catalogue to date, with show record and how to mate and breed Partridge Wyandottes. Stock for sale.

W. A. DOOLITTLE, The Partridge Wyandotte Man SABETHA, KANSAS

THE BIGGLE POULTRY BOOK

Farm Journal

is the leading farm paper in America, with more subscribers than any other farm paper in the world. It is a monthly, thirty years young, taken and appreciated everywhere, from Maine to California. Thousands in your state already take it. Your neighbor knows all about it. It is full of sunshine and gumption, is edited by practical farmers who know whereof they write. It has no ax to grind, prints no long-winded articles by theoretical specialists, but aims to give in season, and just when wanted, advice and timely help such as you, a busy farmer, need. **Farm Journal** has departments for the stockraiser, the orchardist, the dairyman, the trucker, the general farmer, the poultryman and the women folks, with many short cuts, recipes and hints, many of which, our readers often write, are worth the cost of the paper. **Farm Journal** is 75 cents for five years, sixty numbers.

Biggle Poultry Book

More copies of Biggle Poultry Book have been sold than any similar book ever published. We have no hesitation in saying it is the most up-to-date, helpful poultry book ever written. It is concise, practical and to the point. Tells the whole story from the egg to the roasting pan. Seventeen chapters, sixteen colored plates, each printed in ten colors, showing birds true to life. Over one hundred other illustrations. Printed on enamel paper, bound in cloth. A novice can take Biggle Poultry Book and succeed in the business; and an expert will find lots in it that will be helpful to him. Price, by mail, 50 cents.

There are eight other Biggle Books, one each on the Horse, Cow, Hog, Sheep, Health, Pets, Orchard and Berries. All built on the same plan as the Poultry Book, and bound uniformly with it. Price of each, 50 cents. So popular are the Biggle Books that over 175,000 have already been sold. Nothing nicer for a Christmas gift.

The Roosevelt Family Calendar

is a high art calendar for the year 1907, showing a family group of President and Mrs. Roosevelt and their six children. It contains no advertising matter whatever, but it is a beautiful and artistic production, such as anyone will be glad to hang in parlor, sittingroom or office, and preserve forever as a historic souvenir. Or it will make a valued, attractive Christmas gift for some relative or friend.

For \$1 **Farm Journal** for 5 years, (60 issues) and Biggle Poultry Book and include the Roosevelt Family Calendar, if your order is received before Jan. 1st. (Any other of the Biggle Books may be substituted for the Poultry Book.) Safe delivery of Book and calendar guaranteed.

For \$1 **Farm Journal** to one address for 10 years, or to two addresses for 5 years each, provided at least one of these subscriptions is a new one; if both are new so much the better. A Roosevelt Family Calendar as a free gift for promptness to each subscriber if subscriptions are received by Jan. 1st.

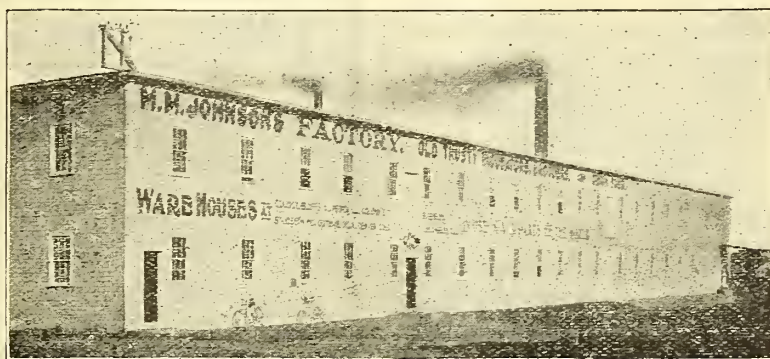

For 25 cents **Farm Journal** on trial two full years, and a copy of the Roosevelt Family Calendar. This offer for new subscribers. Calendar offer is good only to Jan. 1st. Send coin or stamps at once; your money back gladly if not satisfied with any of these offers. Agents wanted on salary.

FARM JOURNAL, 1006 Race Street, Philadelphia, Pa.

Johnson, Incubator Man.

"I want to tell you Chicken Raisers about my Old Trusty Factory. I believe that it is the Biggest and Best Equipped Exclusive Incubator and Brooder Plant in the World. Others that should know tell me so and I believe it myself."

The Old Trusty Factory Has Floor Space of 39,400 Feet.
(This picture is a real photograph)

WELL, well! Time flies, sure enough, doesn't it? Here it is pretty near a year since I had a good big talk with you folks. Tell you the truth, I've been too busy making and shipping incubators and brooders to do much talking. But I've made some big improvements in the factory and office end of the Old Trusty business, and I'm going to tell you about it if it takes the whole blamed page.

* * *

THE Old Trusty factory you see here is all mine and all paid for, too. I built it out of my hard earned profits of \$1.00 on each Incubator and Brooder, and I want to tell you, Friends, that Johnson's brow shed quite a bit of sweat.

Yes, I do feel pretty good about this new factory and the way my business has jumped up this year.

My wife and my customers have helped a whole lot. They're the only partners I recognize, and I cheerfully take my hat off to them.

* * *

As the Old Trusty factory now stands the wheels are turned with a 100 horse power steam plant.

The factory is equipped with electric light, water works and steam heat, also the very latest wood and metal working machinery, operated by over 200 skilled mechanics who have grown up with me in the business.

Last season we were not able to accept and promptly fill all orders, but for this season let me say we have our guns loaded. We have doubled our manufacturing capacity and have our store rooms loaded to the muzzle; we are ready for the big meeting.

I have store rooms located in different parts of the country and quick shipments will be one of our specialties; but let us talk about the 1907 Old Trusty incubator.

It is now fitted with interior chick drawers, and the nursery is 4½ inches deep.

The front doors are divided; that is, you can remove the egg trays and look after the incubation with-

out opening the whole front, otherwise the machine remains the same.

We have improved in every point improvable, but have not molested the principle that has made Old Trusty famous.

The big 1907 Catalog tells all about it, and a mighty interesting story it is, too.

* * *

I sold more incubators and brooders of the one brand last season than any concern on earth.

Did it right here at Clay Center, Neb., the best town in the west for manufacturing. Have plenty of propositions to move into larger towns and greater troubles, but I do not care to sell out and "hike."

Would have no excuse for doing so; my business is going up instead of down and our mechanics stay with us. Yes, Sir, we are hooked up all right.

When you come to Nebraska, come to Clay Center.

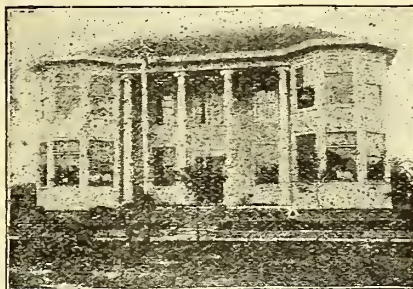

Over the Old Trusty factory entrance you will find a big sign that says "Come In." Don't stop to knock at the office, come right in and let us talk the chicken question over from A to Z.

I've studied poultry and their ways in sickness and health, summer and winter, under all sorts of conditions, for a good many years now.

While I don't know it all, yet I've managed by hard digging to prove a good many things of practical value to every poultry raiser.

If you can't come, send for the catalog; it does my side of the visiting pretty thoroughly.

Write to me right now, please. I want to hear from you.

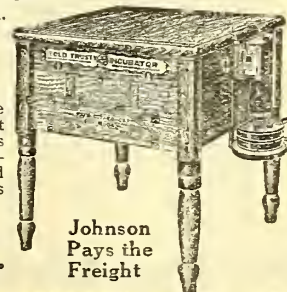

Our New Office Building.

Send for the Old Trusty Catalog.

I want to tell you about the 1907 Old Trusty catalog. It is a "square from the shoulder" proposition on the poultry question. I wrote it to help poultry raisers out of trouble instead of into trouble. It tells how to get money out of poultry raising as well as how best to put some money into the business. It contains over 200 illustrations, most of which are photographs. If you want the book send me your name and address. It's easily worth \$1.00, but is free to any one who loves chickens and wants to know more about them.

Write to me personally. Address your letter this way:

M. M. JOHNSON, CLAY CENTER, NEBRASKA.

DANDY GREEN BONE CUTTERS

If you have no bone cutter, or if the one you have isn't satisfactory let us send you a "Dandy" Green Bone Cutter on 15 days free trial—without a cent in advance.

We believe that every poultry-raiser with ten hens or more should have a good bone cutter. We make the "Dandy" in sizes to suit all needs.

Cut Green Bone will make every hen more productive; it makes chicks grow faster; it keeps fowls healthy and in the pink of condition.

No addition you can make to your poultry business will earn you so much money as a "Dandy" Green Bone Cutter.

A great many poultry - raisers have never fed fresh cut green bone. They have read about it and think it may be so, but they don't know. A great many more have tried stuff sold

as cut green bone, but results didn't satisfy them and they are doubters. But no man or woman ever fed fresh cut green bone who was not enthusiastic over it. Why? Because fresh cut green bone is a natural food for fowls; it supplies what their appetites crave—the fat bug and the juicy worm. Penned-up poultry cannot get bugs and worms in sufficient quantities to satisfy them, consequently you must supply a substitute. Cut green bone is the only substitute known—it is the bug and worm in a different form, and is the best and cheapest chicken feed in the world. It costs you practically nothing—it is made from scraps that would be thrown away, but which the "Dandy" quickly turns into money for you.

Write today for free catalog, select the size you want and send us your order to ship it at once on 15 days free trial.

STRATTON MFG. CO.,
Box 17. ERIE, PA.

SENT ON 15 DAYS FREE TRIAL

2+2=4

SURE RESULTS

are obtained from the "QUEEN" Incubator.

When you place your eggs in the "QUEEN" you may rest assured that every fertile egg will hatch.

We build the "QUEEN" in the finest incubator factory in the world—our factory was built especially for the manufacture of hatching and brooding machinery, with every convenience for doing the very best work at the least possible cost.

Only the best materials that can be procured are used in our factory.

The selected redwood that forms the body of every "QUEEN" comes direct to us from the forests of California—

The finest grade of heavy sheet copper, from which the tanks are made, is bought in enormous quantities from the largest sheet-copper manufactory in this country—

The asbestos which lines the walls is carefully selected by an expert, from the entire output of the largest mills—

The material which goes into each part of the "QUEEN" is selected and accepted on its merits before it is used, and each separate piece is carefully inspected after it is completed.

This system of double inspection insures your receiving a perfect Incubator when you buy the "QUEEN." It costs more to build

"QUEEN" INCUBATORS

than many cheap machines sell for, and still it is built at the least possible cost, considering the quality of work and material we put into it—our facilities enable us to sell it to you at as low a price as the ordinary machine is offered.

Every workman in our factory is an incubator expert—he not only understands the strong points of the "QUEEN," (it has no weak ones) but he understands the weak and strong points of other makes. It is each employe's constant aim to improve the "QUEEN" if improvement is possible.

Is it any wonder that the "QUEEN" is perfect?

You may be sure when you buy a "QUEEN" that there will be no smoky lamp—that the special heat regulator will do its work better than you could possibly do it with constant attention—that every corner of the hatching compartment will be just as warm as every other corner and the middle.

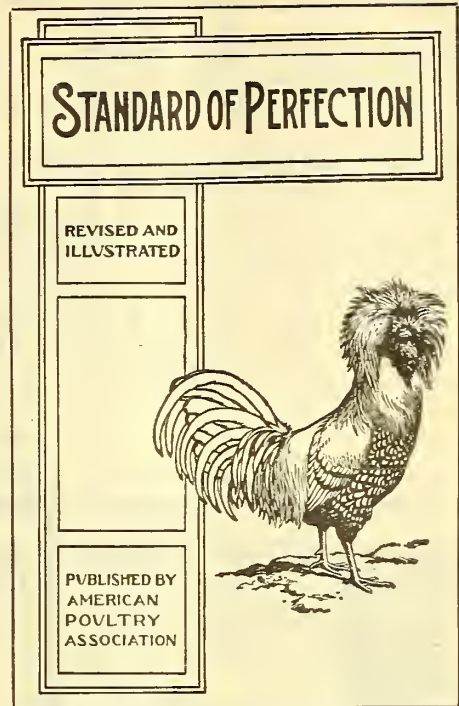

We are so sure the "QUEEN" is perfect that we will ship it to you on your own terms—select any size "QUEEN" you want from our FREE catalogue—test it until you know it will hatch the fertile eggs. If it fails in a single point return it to us—don't keep an incubator that don't suit you.

Send for our FREE catalogue. PINKERTON MANUFACTURING CO., 1021 N. 14TH LINCOLN, NEB.

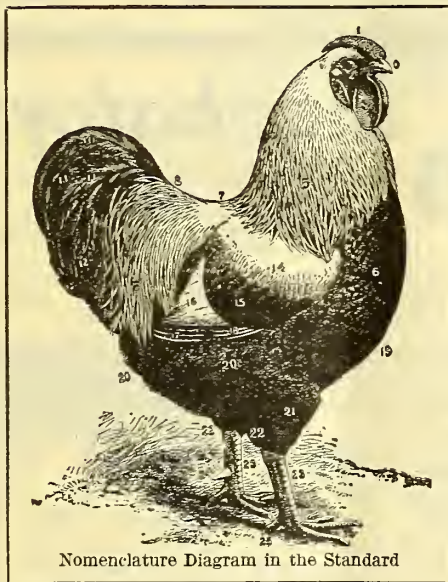

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
 Latest Revised Edition (1906)
 304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
 WORK ON THE TECHNICAL POINTS OF
 STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
 MORE THAN THREE THOUSAND DOLLARS

Nomenclature Diagram in the Standard

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

- a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.
- b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.
- c. Instructions to judges and the official “cuts for defects”—invaluable information for every exhibitor who wishes to be successful.
- d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world’s best poultry artists, and were revised and approved by members of the A. P. A. at a four-days’ session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE

RINGLET BARRED Plymouth Rocks

Five hundred grand breeders and show birds fit to win in strong competition. Our birds have won the leading prizes at state shows for ten years. At the Wisconsin State Show, Jan. 1936, in a class of 300, our birds made nearly a clean sweep, winning more prizes than all our competitors combined, a record positively unapproached by any other breeder east or west. We sell as good a bird for \$5 as you can buy of any other breeder for \$10, our \$8 and \$10 birds can't be duplicated for less than \$20 to \$25, our \$15 and \$20 birds would positively cost you \$75 in the east. Send us your order. We guarantee our statements by paying return charges and refunding your money cheerfully if what we send you does not please you.

SPECIAL

FIFTY GRAND YEARLING COCKEREL bred hens from our own exhibition cockerel mating yards, well worth \$8 and \$10 each. Our price, while they last,

\$2.50 AND \$3.50 EACH.

Sincerely,

KING BROS. - OSHKOSH, WIS.

MORE EGGS LESS LABOR.

No wet mashes to feed, no digestive or bowel troubles, no overfed or underfed hens where the **NOURSE POULTRY FEEDER** is used. Send for free circular "Successful Feeding of Poultry." Learn how to have healthy, vigorous fowls that lay plenty of eggs.

Sure Hatch

Incubators

Have the Highest Hatching Record

and the lowest selling prices. They will hatch chicks for you cheaper and better than hens, or other incubators.

The Sure Hatch runs itself and pays for itself, or we take it back at our expense. Guaranteed for 5 years and made to last a lifetime.

You can set it any place where a hen might be housed. Hatches when you "set" it, and you "set" it when you are ready, summer or winter.

No trouble to have "early hatched" chickens, if you use a Sure Hatch. Used successfully and most highly recommended by more practical poultry raisers than any other incubator on earth, none excepted.

For ten years we have been making and selling the Sure Hatch, freight prepaid, for prices that put it in a class by itself.

Anybody can make a cheap incubator, but when it comes to delivering one that positively will hatch cheaper and better than hens, and is covered by a responsible guarantee that it will do its work year after year—that's a proposition that is not so easy.

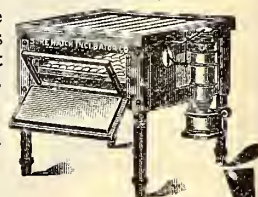

We do this very thing. We have the facilities and experience that make it possible.

We operate the greatest incubator

and brooder factory in the world. Our experimenting for improvement never stops. These facts enable us to turn out machines, strictly up-to-date — leaders always — imitations never.

Our customers are successful from the start, because we know how and what to tell them, that they may get the results that pay, without disappointments.

Our new 100-page illustrated Sure Hatch book tells all about our machines and low prices. Besides it is a very helpful poultry book. Write us today for one of these free books.

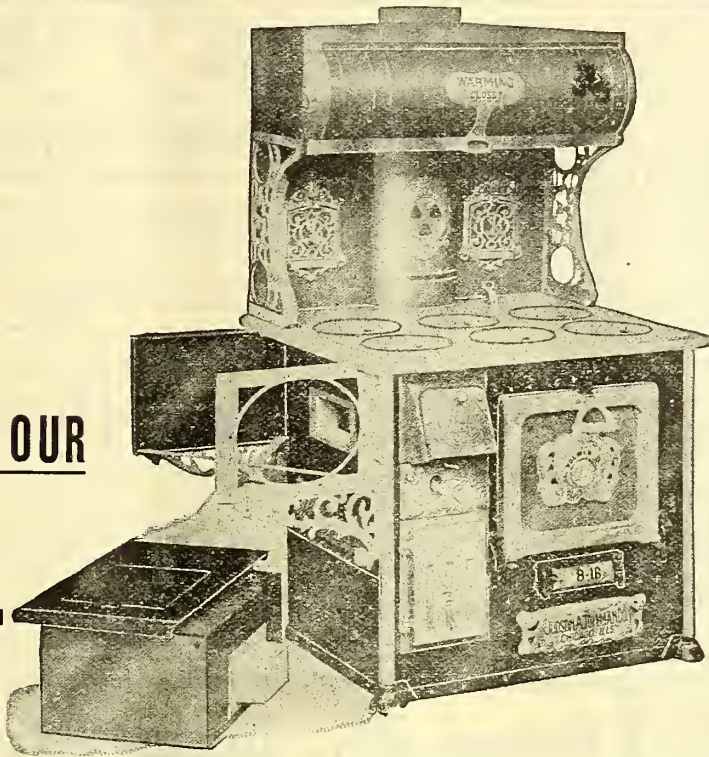

Sure Hatch Incubator Company

Box 6, Fremont, Neb., or Dept. 6, Indianapolis, Ind.

Note—July 1, 1906, our main office and factory were removed from Clay Center to Fremont, Neb.

BUILT TO BAKE

LET US
SEND YOU OUR

MONEY-SAVING
FREE CATALOGUE

OUR NEW CATALOG shows a complete line of over 100 styles and sizes of Stoves and Ranges, at prices which merit your attention if you are in the market for our goods. It contains Stoves and Ranges of the very latest styles, for all kinds of fuel, and tells how we sell direct to you from our own factory at wholesale prices; furthermore, how we ship on trial at our risk. It gives many valuable cooking recipes, and is filled with practical stove talk from cover to cover. If you think \$15 to \$40 worth saving, don't buy until you have heard from us.

Here is What You Gain by Buying a Tolman:

1. A Stove that will save enough fuel to pay for itself in less than a year.
2. A Stove guaranteed TEN YEARS, and will last a lifetime.
3. You save \$15 to \$40 by buying of us.
4. We ship to you, subject to your examination, a Range or Stove of the VERY HIGHEST

GRADE, and you pay the VERY LOWEST WHOLESALE PRICE, because we are actual manufacturers and therefore save you all jobbers' and dealers' profits.

5. When you receive your purchase it is all ready to set up for use. No experience required—you can do the work yourself in a very short time.

We guarantee safe delivery and ship on ONE YEAR DECISION TRIAL. This "Decision Trial" is an interesting part of our proposition, and you owe it to yourself to read about it in our catalog. It is a proposition which we make, so as to back up all the statements made herewith. We want to prove to you that you cannot buy a BETTER Stove or Range than the TOLMAN at any price.

TOLMAN RANGES KEEP FIRE ALL NIGHT, SAFE AND SURE. Did you ever consider what an advantage and saving this would be? Why have the housewife get breakfast over a disagreeable "cook stove" in a cold room, where the water may even be frozen, when with a TOLMAN the HOUSEWORK WOULD BE A PLEASURE.

It will pay you to send for our catalogue and look over our line before buying elsewhere. You should read what actual users say about TOLMAN. We can save you many dollars and it is to your OWN advantage. If interested, SEND POSTAL FOR CATALOG "G." It will be sent you free and you are under no obligations to buy whatever. Send to-day—NOW!

Let Me Quote You a Price on a CHATHAM Before You Buy an Incubator

It will take one penny for a postal, and a minute of your time, to write for Special Prices on 1907 Chatham Incubators and Brooders. No matter what kind of a machine you have in mind—no matter where you intended buying, or when—**TODAY** you should send me a postal and get my catalog and prices.

My book will tell you how good

Incubators are made—will tell you what you ought to know about poultry business—will tell you about brooders—will post you on the best way to make money out of poultry—and my prices on Chatham Incubators and Brooders will show you how to start in the poultry business for a small amount of money

Chatham Incubators sold on 84 days FREE Trial

freight prepaid—guaranteed 5 years. That's the story of the celebrated Chatham Incubator. We sell them on trial, pay the freight, and guarantee them for 5 years. With proper care, they will last a lifetime. I am going after the Incubator business of the country this season, and I intend to get it—on great big value in the machine and a very low price. Chatham Incubators are the best possible to make. They are tested, and known to produce the largest percentage of strong, healthy chickens. We have two immense factories—one in Canada and one in the United States—and run our own experimental station, where a battery of Chatham machines are in operation every day in the year, under the care of expert poultry men.

If you are most ready to buy a machine now, put it off for a day or two, until you can get my prices and catalog—then decide on what to buy.

We have warehouses in all the leading trade centers—where Chatham Incubators and Brooders are kept in stock—insuring prompt delivery.

Depend on this:—With the immense amount of money—\$500,000—that we have invested in the Incubator manufacturing business, we are sure to give our customers every improvement worth having in the Chatham Incubator. We can afford it, because that is what brings us the largest business in the world.

That is all I can say in an advertisement.

I invite you to write for my prices and book. Address me personally.

ORPINGTONS

1200 Buffs, Blacks and Whites growing. Some bargains in breeding stock yet. Owing to our late phenomenal record will not exhibit this year, and will offer our highest grade show stock. I can and will furnish exactly what you are looking for. State quality wanted.

C. S. BYERS : ORPINGTON SPECIALIST : HAZELRIGG, IND.

The World's Best W. Wyandottes

First Prize Cockerel at Indianapolis, 1906

The record of 1906 proves our claim: Cincinnati, Ohio, January 16 to 20, great A. P. A. Show, a very large class. T. E. Orr, judge, 1st cockerel, 1st hen, 4th cock, 5th pullet, 3d pen, five specials, best cock, cockerel, hen, pullet, best display. February 4th to 10th, at Indianapolis, Ind., one of the largest shows ever held in that city, W. C. Pierce, judge, we won 1st, 2d cocks, 1st, 2d ckl., 1st, 2d hens, 1st, 2d pullets, 2d, 3d pens, three silver cup specials. Indiana State Fair, September 10 to 14, Shaw, judge; 1st, 2d, 3d cocks, 1st hen, 2d cockerel, 1st pen. Nashville, Tenn., State Fair, October 8 to 14, F. J. Marshall, judge, a hot show, 253 competing, we won 1st, 3d cock, 1st, 2d, 3d hens, 1st, 2d cockerels, 1st, 3d pullets, 1st, 2d breeding pens. These winnings are not stale and moss covered, they are like the birds we are offering.

Up-To-Date And Are In Style

We have 1500 birds to sell; cocks, cockerels, hens and pullets. Quality away up. We will not show any more this winter, so you can feel safe to purchase your winners of us.

They Win For Us, They Will Win For You

Send for catalogue with fine picture, painted from life of a pair of our winners, which we will mail you for 10 cents in stamps. Every breeder of White Wyandottes should have one. It gives pointers how to fit birds for the show room, feeding and caring for white birds. Please write us.

J. C. Fishel & Son, Box J, Hope, Ind.

Just What The Poultry World Has Been Waiting For

AN INCUBATOR IN WHICH THE HEAT IS APPLIED TO THE TOP OF THE EGGS

This is Nature's way, and there is no other natural way. The eggs are surrounded by fresh air, moderately, correctly warmed. No hot-box egg chamber; no burned out air; no feverish, thirsty chicks; no subsequent chills and bowel trouble. Largest hatches, much the hardest chicks.

You want to know about the incubator that supplies every condition that Nature supplies, and in the way that Nature supplies it.

You want to use the most convenient machine yet devised. Ours is a pleasure to operate. With new self-supporting egg drawer, you never lift or carry a tray; you never spill an egg. Our thermometer arrangement is the handiest and best ever made.

You want to own the best constructed, most durable and finest appearing incubator made. It will never wear out. It embodies the best points of all classes of incubators in addition to its own exclusive features. The prices are right. The machine is guaranteed. You take no risk.

Chambers Incubator Co. - Shelbyville, Indiana

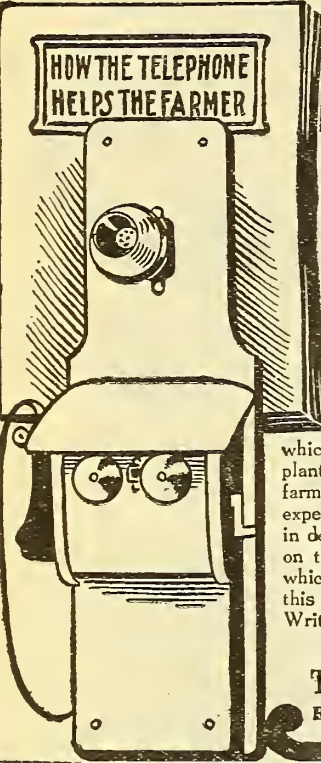

Write for our Incubator Book. It is honestly devoted to setting forth the facts and principles of incubation. Free if you mention AMERICAN POULTRY JOURNAL.

THEO AMBROSIOUS

GOLLINSVILLE, ILLINOIS

You Want This Free Book

Of course you need a telephone. You need it for business, for the family, in sickness, in case of fire, or in danger of any kind. The question is—how can you get one on your farm? This little book which we send free the same day we get your request answers the question perfectly and tells you how to get the greatest convenience of the twentieth century so easily and cheaply that it becomes a positive saving and a money-maker, instead of an expense. It tells all about

Stromberg-Carlson Telephones

which are made in the largest independent telephone plant in the world. These are the best instruments for farmers' lines, because they have been constructed by experts for this particular purpose. They are described in detail in the booklet, together with full information on the organization of farmers' lines, the manner in which they are built, cost of material, etc. You want this book, F 81, "How the Telephone Helps the Farmer." Write for it today.

Telephone Mfg. Company**
ROCHESTER, N. Y. CHICAGO, ILL.

Why Don't You Build Your Own Incubators and Brooders

Thousands Are Doing It.
Send For Our
FREE PLANS

and See How Easy
and Simple they
are. We Furnish
Parts not Possible
for You to Make

The first thing that occurs to many who read our advertisements, is that it is impossible for them to build their own machines.
If you think so, you're mistaken.
You can build your own machines with our plans and fixtures, and do it easily.
Over eighteen thousand people were interested in building their own incubators and brooders from our plans last year.
No special experience or tools required.
We've worked and studied on these plans and fixtures until we have made them so simple and easy to understand that anyone, even a girl or boy can follow them.
Remember, we furnish all the parts not possible for you to make, such as Lamp, Tank, Regulator, Doors, Legs, Hardware, etc., at a special low cost. That's why it's so easy.
Now just to convince yourself that you can make a better incubator than you can buy, one that will have exclusive features especially advantageous to the inexperienced operator, send for these Free Plans and if they fail to satisfy you, we'll say no more.
All it costs is a mere request; they're free

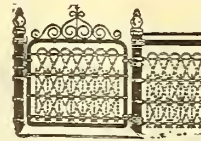

post-paid. If you already have an incubator or brooder, our catalog will be valuable to you. It tells how you can cut your operating expenses in half and save a lot of time, labor and annoyance, by using our Improved Acme Automatic Lamp and Acme Compound Wafer Regulator on your old machine.
Here's some of the reasons in brief:
Lamp holds over gallon; can't be upset; no danger of fire. Combined Damper and Flame Regulation shuts off oil consumption when heat is not needed.
Automatic Valve keeps oil always same depth on wick, insuring uniform flame—steady heat. Mineral Filtre Wicks don't burn nor char—saves trimming.
Burners are air-cooled; can't overheat, explode nor cause fire.
Acme Compound Wafer Regulators are positive in action, accurate to fraction of degree.
Both Lamp and Regulator made to fit any machine—anyone can attach them. More reasons in catalog. Send for it and learn how to save one-half the time, labor, expense and get better hatches with your old machines.

HOW'S THIS

H. M. SHEER Co., Quincy, Ill. July 6, 1906.
Gentlemen:—I send in same mail, a photo of a hatch made last week with one of your 100-egg machines, built on your plans and using your fixtures.
When the parts came, everything fitted fine. I run the hatch just as your instructions said, and from the results I got, I am well satisfied.
I put 100 eggs into the machine, not the picked eggs, sorted for color, but just eggs; and tested out 25 at first test, 10 at second, and hatched just 60 chicks you see in picture. C. W. CHRISTMAN, Waterville, Minn.

SOME MISTAKES TO AVOID.

Advice and Counsel Which All Breeders of Columbian Wyandottes Should Carefully Consider and Heed—Some Misfortunes Which Should Not Overtake the "Fowl That the Whole World Will Want."

Written for American Poultry Journal by D. Lincoln Orr, Orr's Mills, N. Y.

Years and years ago, after having spent quite a few hours with chickens when not minding the cows, weeding in the garden or picking stones in the meadows, I decided to branch out in the thoroughbred line with chickens. There were not so many varieties then as now, but I had always been in favor of "black and white." To me there was nothing in the color line that so thoroughly took my fancy as black and white, and where can one get it better than in the Light Brahma? The markings of the Light Brahma so thoroughly captivated me back in the 70's (and I may add no more so than now) that I sent to the "Sage of Netick," I. K. Fetch, for a trio of this noble breed, paying him \$35. I was very much pleased with them and sent them to the Orange county (N. Y.) fair and won with them. Big? Why, big is no name for it. I just simply was the greatest creation of the Almighty in my own estimation. F. B. Zimmer judged the birds, and I looked upon him then with awe and wonder—a great man. I still look upon him with admiration, and all these years I have learned that he is a great man. Well, I was doomed to a bitter disappointment. The cockerel died. I learned that B. Holmes, Jr., was running the poultry end of Houghton Farm, just four miles from here, so I went up there and bought a cockerel fully equal, if not better, than the one I lost. Well, I kept on breeding Light Brahmas with more or less success for years and finally had to give them up, although no fault of my own. So for three or four years I had nothing on the place that had any resemblance to a Light Brahma. At every show I would admire these birds of beauty, and every year would decide to start in them again. But I am sad to say that I heard many complaints of their being slow sellers and not a few gave them up for a more popular variety, although I am happy in the thought that they are coming to the front again. But I was "stuck" on these markings and when the Light Brahma bantams put in an appearance I was caught at the first bound. I sent over to England and had three different importations, bred them to the best of my ability, and my success in these bantams your readers are well aware of. Now I am getting down to modern history. About three years ago the Columbian Wyandotte caught me and in conversation with Mr. G. W. Hillson, a former breeder of Light Brahmas and at present a very strong breeder of Light Brahma bantams, he rather discouraged me into going into Columbians, as he wanted me to still boom the Brahma bants. But I couldn't keep away and last year I bought a pen of Columbians.

There is no use of anyone trying to describe the Columbians. We all know the markings of a Light Brahma and the shape of a Wyandotte. It is easy enough for one who is familiar with both these breeds to picture in his mind just how a Columbian Wyandotte should look. But: Yes, I say, but there's the rub. Picturing in one's mind is easy, but to produce in flesh, bone, shape and feather is quite another matter. And right here let me remark "that two and two make four—not sometimes, but always."

The proper matings will always produce the proper results; not sometimes, but always. When the results are not as expected I'll guarantee the matings were not what they were

supposed to be. It is not sufficient from my point of view to know only the birds one is mating. It should be a matter of record to the one who does the mating what was behind the birds that are to be mated. If that is not known it will take a few years to find out and it pays if one will keep a record. I've bred Brahma bantams for five years and as for vigor, health and markings I could challenge the world. Be very careful about getting new blood. Two prize winners from different breeders may sometimes make four, but not always. While I feel rather modest about writing on what to do and what not to do about mating and raising poultry, I feel about as modest as the "young girl who had to go into a dark room to change her mind;" and again, there has been so much, so very much, written by men of ability, men of good, sound, practical experience, and men of no experience at all save what they got from reading, that I feel rather like Senator Clark, who, having listened to all the brains of the United States senate on the now famous railroad rate bill, when asked what he had to say, remarked "that it put him in mind of a gentleman in the south who told two darkies he would give 10 cents to the one who could name the three best things in the world. One promptly responded, 'watah-melon, sweet potatoes and 'possum;' whereupon the other said, 'Ah won't play, boss; he done just told all dey is.'"

Is there anything left? There is no use saying the following, as all know it. Breeding stock should be strong and vigorous, consequently must be healthy. They should be fully matured and as near the standard requirements of weight as possible. If they are little over it, so much the better. I would rather be a pound over than half a pound short on Wyandottes. They should have combs, eyes and legs that are called for by the standard and not only should they have it but those that went before should have had it. Don't forget the fact that "two and two make four—not sometimes, but always," and you cannot always get good birds with an ancestry that are not two and two; you may sometimes, but not always.

Don't be afraid to cull closely. I would like to say something here about the egg trade but won't because I was not asked to; but cull closely. Just make up your mind for the time being that you are not going to sell any eggs for hatching and cull your stock accordingly. You won't be out anything. You know as well as I know that puny, undersized stock, while they may have the markings, are very undesirable birds to have in your yards. We will drop out of sight the shape and spend more thought on the markings. We are all striving for the Brahma markings, that black tail with its greenish hue and the covert black edged with white. Did you ever notice the tail of a fine, large Light Brahma? That's what we are after and one can not get it always by breeding from smutty, mealy tails. Remember that two and two make four, always. Then again, the hackle is no less important than the tail. The hackle feathers, when perfect and distinct—that pure white fringe if I may call it—so surround the black to the extreme point of the feather and continue, if possible, to the very skin of the neck. In Columbians we have yet too many smutty hackles. Weed them out by putting two and two together and the wing, the flight feathers, should be four-fifths black. The wing, where black, should be a positive black; or where it is white should be a positive white. What is there more disgusting than to open a wing of a Light Brahma and find an almost white wing? Don't spoil your good, hard work for the sake of a lot of eggs. I would advise those who are breeding Columbians to visit some good Light Brahma breeder and follow out his method of mating as regards color, but be sure you know your birds, as I have remarked in breeding birds of unknown qualities: Two and two may sometimes, but not always, make four. If you are

wise and get on to the game of mating there are several little things that you will learn, but 'tis better not to dwell on them here for reasons that it is hard to explain why two and two don't always make four. Regardless of what breeds constituted the make-up of the Columbians, I feel firmly convinced that it ought to have been the White Wyandotte and the Light Brahma, and I also feel that, judging by some of the chicks I have gotten, there is Barred Rock blood in them,

First prize Barred Rock hen and champion female, Chicago, 1906. Owned by A. C. LeDuc, Chenoa, Ill.

but I am going to mate on the basis of the Light Brahma cross. I'll come out in the end all right, but it may take a little longer. However, I'll know what was behind.

The Columbian Wyandotte has no superior as a general bird of ability to please the eye and the stomach as well, and in a few years, when the lacing on the tail becomes more established and the tail itself more solid in black, the hackle with that pure white along the black—who is there who would dare to challenge its supremacy? They will indeed be the best, and there is nothing as good as the best. Don't take my word for it but look at the show records. I'll venture to say that before many years the Columbians will outrank the leaders of today. I am not easily stampeded to a new breed and this is my first offense, but the ability of the bird and its attractiveness captured me along with others more prominent.

I would like to warn breeders about selling. Don't try to palm off on others what you would not breed from yourself, just because that today anything that resembles a Columbian goes. The success of next year rests on your matings, and the raising of the chicks and the matings are first. Remember that two and two make four—not sometimes, but always.

PREPARING BIRDS FOR SHOW ROOM.

When to Hatch, How to Feed and Select Birds Intended for Exhibition—A Knowledge of the Standard Necessary in Selecting Birds for Exhibition—How to Wash and Clean Birds for the Show Room.

Written for American Poultry Journal by L. Watson, M. D., Chesaning, Mich.

Many of the prize winners at our poultry exhibitions are prepared by nature alone; but nature is ever ready to make kindly use of any assistance we may give her, and the little attentions given throughout the season make the fall and winter shows a success. In preparing birds for the showroom the breeders who give the most constant attention and watchful care from the time the chick is hatched until prizes have been awarded are the ones who will have the greatest success in producing prize winners; while it is true that many prize winners grow up and are shown without any extra fitting. In these days of close competition we often see one-half or one-quarter point win; it therefore is plain to be seen that every little art and device known must be made use of to give us this probably fractional point and the coveted blue.

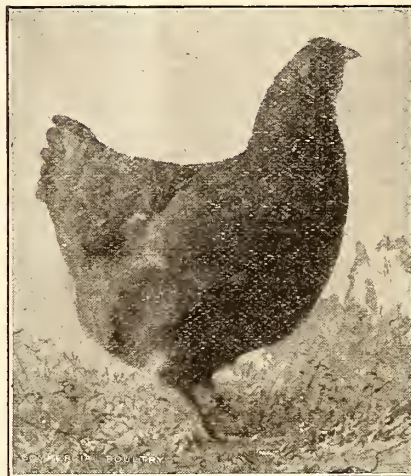

Chicks intended for early fall and winter exhibition should be hatched early. The latter part of February or the first of March is the proper time; if hatched too early they will moult and then they are useless for the early shows. By hatching at this time they will be well developed and up to

standard weight without having to make up weight by extra adipose tissue.

In selecting chicks for exhibition, always take more than actually required, as they often do not do so well as you would expect, and then you have the extra ones to fall back upon. A knowledge of the standard is the foundation of selection of birds, and better have it right with you to turn up and refresh your memory on any disqualification or coloring of which you are not just sure. First reject all birds having disqualifications of any kind; small and undersized birds pass by; this will leave us with birds whose imperfections will only be cut as defects by the judge. Now separate the cockerels and pullets, giving each sex separate quarters and range, as they will both develop more rapidly if kept separate during the hot weather. Keep white and colored birds out of the sun as much as possible, as its rays turn the plumage of white birds yellow or creamy. Black birds are also turned brown from this cause.

Feeding is conducted along lines intended to ensure growth of bone, muscle and feathers without the birds becoming fat. To do this, oats is the basis of our mash or morning feed, the meal of which it is made being prepared as follows: Ground oats, hulled, 25 pounds; ground corn, 5 pounds; middlings, 5 pounds; bran, 3 pounds; linseed, 1 pound. Ground charcoal, 1 pound, is added to this for white birds, as fed in this way it does not soil the plumage. This is mixed thoroughly and mixed with either skim milk or water and is fed in a crumbly state for the morning meal, which they will eat up clean in a few minutes. Now the birds can be turned upon the range until noon, when a very light feed of hulled oats and a little wheat mixed may be given. See that the drinking vessels are clean and freshly filled often, and that the birds can get in the shade away from the sun. At night, after again filling water vessels, give all the grain they will eat up clean, giving wheat, barley, buckwheat, millet, kaffir corn and cracked corn, as a variety is beneficial. Feed beef scraps in mash at least twice a week. Green bone and grit are best fed from hoppers when the chicks may help themselves. Some prefer to feed the beef scraps in this way, and if desired this plan may be adopted. Charcoal should be provided and fed as above stated to white birds. Milk in any form—sweet, sour, or buttermilk—is very beneficial. A teaspoonful of sulphur for every fifteen chicks of twelve weeks old may be given in the mash once a week; this helps the growth of feathers wonderfully. Sunflower seed and hemp should be fed occasionally for a short time before exhibiting, as they increase the lustre and brilliancy of the plumage. Have birds up to weight, but not too fat, as when over-fat feathers are loose and fluffy. This is all right for Cochins, but is not desirable in the American, and especially so in the Game class. The latter should be in good condition without being fat, yet up to standard requirements as to size and weight.

Cooping and training the birds is a most necessary part of

BUFF WYANDOTTE FEMALE.

Winner of first at Chicago, 1905, third at Chicago, 1906. Owned by Simon Beuth, German Valley, Ill.

the preparation of birds for exhibition. A bird that is frightened upon any one approaching the coop has no chance with the handled and trained bird, who steps to the front of the coop and poses for the judge's inspection, and who by his very action shows the judge the work of the careful and painstaking exhibitor who has prepared him, as well as showing visitors what pets your prize winners are. Birds need not be cooped continuously but should be placed in the coop for an

hour or two each day and handled exactly as the judge handles them. Then give from the hand little bits of meat or something of the kind, and in a very few days the bird will look for the handling and his accustomed dainties. Birds intended to be shown in pens should be cooped together before being shipped for exhibition so that they mate up and become accustomed to one another. In making up pens be careful to see that the birds match as far as possible in markings, size and style. Before cooping see that they are in good health, up to weight, free from vermin, are clean, and that the coop is clean and roomy with plenty of litter of cut rye straw, and we are now ready to ship, or rather prepare for shipping. Line coop with cheap muslin, as it prevents the feathers from getting soiled or broken in transit. It also breaks the cold wind off the fowls while waiting for late trains around draughty depots. If accompanying the fowls yourself, a good plan is to carry a good, heavy lap robe with you, and you can throw this over the coop when you see it sitting around in an exposed place, thereby saving colds and possibly roup. At any rate, it makes the birds more comfortable, and that is time well spent.

Before shipping have all birds banded with your leg band and number, as well as description of bird taken. Also copy made for secretary of show, if you are not going with shipment yourself. Ship prepaid by express to secretary and write him long enough beforehand that he may know when the birds will arrive; get receipt from express company for shipment. On the return of your birds check over your list and description with the birds returned at once, and if wrong birds have been returned notify the secretary at once, so that the error may be set right; and right here I would say that it is a credit to the overworked secretaries of our poultry exhibitions that so few mistakes are made, considering the very large number of birds shown without attendants.

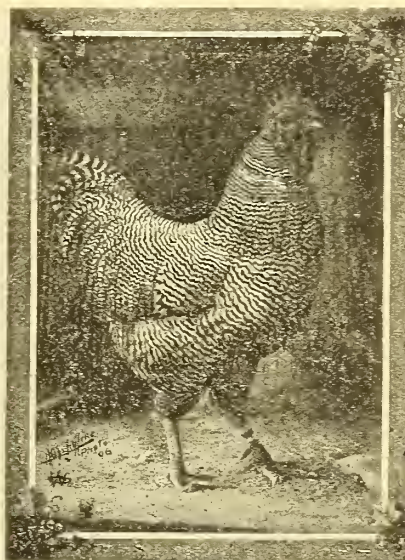

Washing is not necessary for all show birds, but those of white or light plumage must be washed, and if feathers are tarnished with anything soluble in water they will be improved by the process if properly done; and if not properly done, it had better be left undone. To wash a bird properly is a simple operation and requires an assistant to hold the bird during the operations, two rooms, one for washing the bird in and the other having a window in which the sun is shining and containing a stove so that the bird may be kept warm until thoroughly dry. Three tubs are needed for the operation, a supply of heavy Turkish towels or light blankets, Castile soap (white), a flesh brush, sponge, sharp pointed stick, plenty of hot and cold soft water, and we are ready to commence operation. About half fill two tubs with warm water and one with cold, about 60 degrees. Into the first tub have your assistant place the bird, holding it with its back towards you, fill the sponge with water and allow it to run over the hackle, back and saddle feathers until they are thoroughly wet; then fill the sponge with soap and rub well, making plenty of lather to remove all dirt right down to the skin, always stroking the bird the right way of the feathers. Turn on side and repeat the operation until he has been washed all over in the same manner; now squeeze sponge dry and rub the same way, rubbing out the suds. Afterwards take both hands and work out as much of the dirty suds as you can, then remove to tub No. 2, which also has warm water and immerse the bird. Keep the head clear, work out all the suds by rubbing with sponge and hands, then take your flesh brush and lather the feet and shanks, and rub well with the brush; if any particles stick under the scales of the shanks remove with the sharp pointed stick. After the feet and legs have been cleaned to your satisfaction remove to tub No. 3 of water at 60 degrees, to which a little bluing has been added, which is to be used for final immersion and rinsing of the bird. Rub all the water out of the feathers you can by stroking the right way of the plumage with sponge and hands, wrap in heavy towel or light blanket and place in drying room, not too close to stove, until steam begins to issue from wrap; then remove it and place the bird in the sun to finish drying off and pluming himself. This done, remove to clean coop, covered at least six inches deep with fresh, clean litter. Washing should be done at least three days before the exhibition, as then, in case of accident to a bird, you will have time to repeat ablutions if necessary. Don't try to arrange the feathers; the bird can do this better than you can. Also don't dry too fast by placing too near the stove; for this reason placing in the sunshine is best, as the birds dry more slowly while warm enough to prevent catching cold, and they enjoy arranging the feathers and pluming themselves as much as a maiden making her toilet for a ball.

Before finishing the toilet, the legs and feet must be wiped over with a little olive oil or vaseline, and then wiped and polished with a soft, dry cloth. The comb, wattle and face should be wiped off with a little warm water and castile soap with a dry sponge, and a little glycerine and alcohol wiped

over them. If white scales appear, wash with a little soft water, to which a drachm of tincture of myrrh has been added. Any off colored feather should be plucked. This may be called faking, but better either pluck the feather or else leave the bird at home, and I know for a fact that this is practiced by at least some of the exhibitors at our leading shows. Every legitimate means must be used to place our bird before the judge in the best possible condition, and every detail, no matter how small, must be attended to, as extra care may give us the extra point or fraction thereof, which wins.

Have the coops roomy and as near square as possible. Cut rye straw is the best litter and full 6 inches is none too much, as the grain feed may be thrown in it, and the birds scratching for it will keep the litter stirred up and clean. Coops for single birds should be 24 inches square and 30 inches high. For breeding pens American and Mediterranean classes, 36x36x30 inches, and for Asiatics 48x48x30 inches. The more roomy the coop the better the birds will appear. Have the door on center of front of coop so that birds can be easily taken out and returned when judging. If you send a fine exhibit of fowls go with it yourself, as by this your birds will not be subjected to any sudden change of diet, which may throw them out of condition on account of disordered digestion, etc.

Carbolate of lime scattered on the floor of the coop is a good deodorizer and disinfectant. Now comes the feeding during the exhibition. Assuming that we have accompanied our birds, as we have been feeding mash for the morning meal,

Third prize Barred Rock cock and best shaped male, Chicago, 1906. Owned by A. C. LeDuc, Chenoa, Ill.

we will just have a good supply of that meal mixed up with sour milk, to which the usual amount of salt and saleratus, used in making biscuit, has been added; put in bread tins and bake in the oven until thoroughly cooked. This will be broken up and given them for their morning meal. At noon put in corn, wheat or oats enough for their supper, and in the evening give a little fine chopped cabbage or thin sliced beet or mangel wurtzel. Water at 9 a. m. and 4 p. m. If the birds show any signs of having caught cold or droopiness, crush a few red peppers in the bottom of the coop. They eat them readily and they will brighten the birds up at once.

After returning from the show, keep the birds separate from others for a few days until quite sure they have contracted no disease, feed lightly and let them rest up before placing them in the breeding pen. Any that are over-fat should be reduced in flesh before trying to secure fertile eggs. Many birds are ruined as breeders by the so-called fitting they receive to put them in show condition.

If our amateur will attend to all the little details laid down in this article, and has the right kind of stock to begin with, he could have the satisfaction of at least placing his birds before the judge fit, and in all probability win his share of the blue ribbons. This is the time when the careful exhibitor looks back over the season's hard and continuous work with a satisfied smile, and makes resolutions for still greater achievements next year. If you would win year after year, you must spend the whole season preparing your birds, for it is this continuous looking after minor details in breeding, feeding, cooping, training, etc., that brings success.

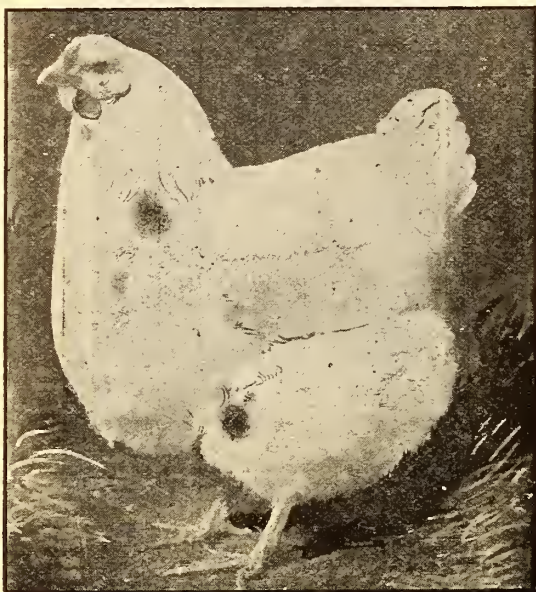

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Robt. A. Read, Union City, Ind., and the second prize to Louis Boehm, Defiance, Ohio.

DISINFECTING A POULTRY PLANT.

Disinfecting a poultry plant does not mean simply to obliterate the lice, but to kill all forms of life, whether animal or vegetable, which is a menace to the health of the birds. It also means to remove all odors and conditions which cause sickness and death to the flock. The main causes for sickness are lice, impure feed and water, and decaying matter left around the yards. Remove these and give the fowls good shelter and feed and you can scarcely find a sick bird on the

Mapleside Queen, First and Special Prize at Madison Square Garden, New York, January, 1906; bred and owned by Chas. Nixon, Washington, N. J.

farm. Therefore to disinfect a poultry plant is quite an item when it is done right.

In the first place begin with the yard and remove everything which is not needed. All old bones, buckets, tin cans, stones, straw and rubbish of all kinds. Possibly lice don't exist in places like this, but are you sure that disease germs do not? Can't the fowls pick up decaying materials from this trash? Don't decaying matter cause sickness? Then, too, what good do they do anyhow? Why not move them? Then clean the shed, removing everything not needed. Then place everything that is absolutely necessary to the plant in the shed, in such a position that the sulphur smoke can get in every crack and crevice. Now place a tub containing about two inches of water in the shed, put two bricks in the tub and on them place a pan or crock and in this place three pounds of sulphur to every 1,000 cubic feet of air space. Now fill the shed with steam by pouring hot water onto a hot brick, placed in a kettle to prevent fire, and when the room is full of steam pour a half pint of coal oil or alcohol onto the sulphur, set it afire and close the door. The sulphur is burned to a gas, which in the presence of steam kills all infection. Sulphur without steam is worthless. Do not on any account leave the steam out. These are the directions given by the Indiana State Board of Health for disinfecting rooms occupied by sick

persons, and why will sulphur kill germs and odors in poultry plants without steam when it won't do it for the sick room?

After the gas has escaped through the cracks of the shed everything should be aired thoroughly. Then whitewash should be applied generously to render a neat appearance and still more thoroughly disinfect. Then, too, a bucket or box of lime should be placed in the shed to absorb the odors which must arise from the birds.

Next turn attention to the birds themselves. Have they lice? If so, grease the under part of their wings and their heads with lard and coal oil. This will kill most of the lice and the bird will kill the rest if given good clean dust in which to bathe. Of course if you have birds on which the dirt shows the grease will not allow your birds to look the best, but it is better to have dirty fowls for a week or so than to have sick and dead ones, for—well, it depends on how long they last.

Another thing that is positively essential to the proper disinfection of the plant is light and sunshine. Germs can't stay where there is plenty of these. Everything in nature is congested in the dark and no life can be started except in the dark. Therefore don't forget to wash the windows and glasses in the poultry house. Again, ventilation plays an important part in successful poultry raising. Be sure that you have sufficient ventilation to keep the entire shed dry, yet on no account allow the slightest draught to cross the enclosure. A chicken can stand almost any amount of cold weather, but it can't stand draughts.

Give the fowls your best attention. Don't leave this or that until tomorrow. The fowl may die in the meantime. Don't blame the fowls if you don't succeed. Blame yourself. If you always do this you won't blame yourself more than once or twice, then you'll succeed. About the only motto one can follow when working with poultry is "Do it now," although a maxim which nearly rivals it is "Do what you're doing," and still another saying is, "If it is worth doing at all it is worth doing well." Write all three above the doors and gateways of your poultry plant and always bear in mind that "The man that's worth while is the man who can smile when everything goes dead wrong."

Robt. A. Read.

THE EGG PROBLEM.

There have been so many articles written on the various subjects of poultry keeping, and yet the problem of how to get eggs when prices are high has not had the "just right" solution so as to have all understand it and put it in practice with success. Therefore I think all persons experienced in this great occupation should compete in writing up articles for the benefit of our fellow brothers and sisters. Many of these articles may seem more theoretical than practical to the amateur or farmer, but yet there are always some good points to be learned from our competitors, and I hope I can give a pointer or two to help solve this great annual income problem.

Now I think it is high time to plan out your work for 1907. If you have a nice flock of fully matured pullets you can begin business with them at once, but if you have not succeeded this year in getting them 1907 will be another good year to try again.

Now we all know who have had "mongrels" and then "pure-bred fowls" that the latter are by far the better. It does not matter what breed, for every one has made good records; but for egg farming I would take Leghorns for my choice.

Now, having chosen a variety I will try and explain how to make fairly "egg machines" out of them (as they are sometimes termed). Take the best fowls you have, or the best you can get for the money, according to your finances, and then mate them up in breeding pens of 10 to 15 with each cock, and start to hatch as early as possible, for your pullets must be matured by early fall and at least six months old by election time. Then when you have been at the polls and voted for protection "of cold weather" hurry home and get ready to protect your biddies that are roosting out in their colony houses, unless you have done so already, but it is well not to house them up too soon unless the nights get too cold and blustery.

Many kinds of houses will do, but yet the house often has as much to do in the production of eggs as the feed and breed. Therefore in considering the kind of house we have four particular forms to pick from. No. 1, the one used by many, with cracks on four sides, no windows and door open 365 days in a year. No. 2, the one entirely closed up, almost air-tight and ill-ventilated, is about as good as No. 1. No. 3, the open or muslin front. This one I think is very good. But No. 4 I think is more of an ideal one, the closed (well built) house, with window lights and good ventilation, accompanied by an open scratching shed with muslin front. This gives plenty of

fresh air and a more comfortable place to roost, and especially on very cold days gives a warmer place for the birds to stay than in the entire muslin-front house, where the Leghorns with their large red combs are apt to get frost bit.

Then after you have the house and it is thoroughly cleaned put your fowls in, and then you will be ready for your winter's feeding and caring for them. Feeding for eggs should begin at an early age of the pullet. When you have separated the cockerels from them, which should be done at an early age, keep the hoppers filled at all times with a variety of grain, bran and middlings, grit and oyster shell, and one with beef scraps. Supply green food, such as cabbage, beets or lawn grass, unless they have free range. This same diet that will bring your pullets to maturity in the shortest time will also induce them to lay eggs if properly fed, for the bones, muscles and feathers of your fowls are all made very largely of the same chemical elements that an egg is, and the principal element is protein.

After housing the fowls my rule is to disband hopper feeding and feed in variety at regular times. Wheat is rich in protein, therefore makes a good feed; oats and barley have some, so the three together make a good variety of feed for the morning. At noon I feed a mash composed of cooked oats or barley, potatoes or beets and fine cut clover. This also contains a good per cent of protein. Then mix in bran and middlings to absorb all water not boiled down. For evening feed same as in morning, with corn added. This containing more carbohydrates and producing more fat must be fed more sparingly.

If green bone can be secured it will furnish the greatest amount of protein and bring best results, but you will have a good egg production without it if grains alone are fed and the house kept in proper condition, and never omitting the fresh water and grit. To keep the water fresh and clean the vessels must be cleaned out daily. A large fountain therefore is inconvenient; a crock or iron kettle will answer the purpose much better. Milk is also very rich in protein, therefore if fed will bring good results, but it should never take the place of water, for it will not quench their thirst.

Now this topic is getting quite lengthy. I will leave it to others for modification. Louis Boehm.
Defiance, Ohio.

HOW TO ADVERTISE SUCCESSFULLY.

Study the Advertisements of the Successful Breeders—Do Not Use Slang in Writing Your Ads Make Your Prices Reasonable and Ship Exactly What You Describe—Advertise in Only the Best Papers.

Written for American Poultry Journal by M. S. Gooding, Brockport, N. Y.

We will start with the idea that you have chosen a breed and have been breeding and studying them for several seasons, and have been successful, so far as you can judge, in producing some good birds.

You have taken some prizes at the shows and feel that you can venture into a wider field.

You have some good stock and some surplus; you can also furnish eggs for hatching in limited quantities.

Good stock is what the public is looking for—well-bred birds and eggs from choice matings.

If you wish a permanent business, don't think you can sell culls or poor stock. You may sell it for a short time, but the public soon finds out the quality of your goods. If you desire a good reputation give full value every time and your customers will come to you when they want more.

Now, before beginning your advertising, subscribe for the leading poultry papers, if you are not already a subscriber. Take some from the eastern, some from the middle and some from the western states. Some breeds sell better in one section of the country than in another, and you will want to test the matter in regard to your own kind. Now take these papers and read all the advertisements of the breed you are handling. Study their prices and how they write their ads; this will give you a fair idea of how the field is covered.

You have already made an estimate of the amount of money you wish to spend. If you cannot go into but one paper, look it over carefully and act on your best judgment. After you get started business will come so you can gradually expand and use more papers. For a beginner it is best to start in a small way in the classified columns. These small ads will sell all the goods you can spare. Don't try to jump in with the big fellows with large ads. Let your space grow with your business. You will find, as a beginner, you will get better results from small ads than from large ones. Your business will grow, and also your reputation as a breeder, and as it

grows you can increase your space as your business will guarantee.

Don't make a mistake and think that papers whose rates for advertising are very cheap will pay you, for you cannot buy something for nothing, in advertising space any more than in any other line of business. Give your business to papers charging a fair price and that publish a sworn statement of their circulation.

Now, about writing your advertisements, use enough words to clearly describe what you have to sell. If you can do it with twenty-five words, don't use any more; but do not make the mistake of using so few that the advertisement fails to give the idea that you wish to convey. Don't claim to have Madison Square winners in your pens unless you have them, for anyone can readily turn to the show reports printed in the poultry papers and look the matter up. Make your ads simple and to the point. Don't try to be funny or slangy; and never say anything about a competitor or refer to another ad, for if you do you will be simply spending your good money to advertise the other fellow, and that would be very poor business for you. Make your prices reasonable, but not too cheap. As your business and reputation grow you can increase your prices. After you have written your ad, look it over carefully and see if you have said what you wish; see if there are any superfluous words, and if there are, cut them out; they will only add expense without adding results.

Never leave the writing of an ad until the last minute and then write it in such a hurry that you send it in with some-

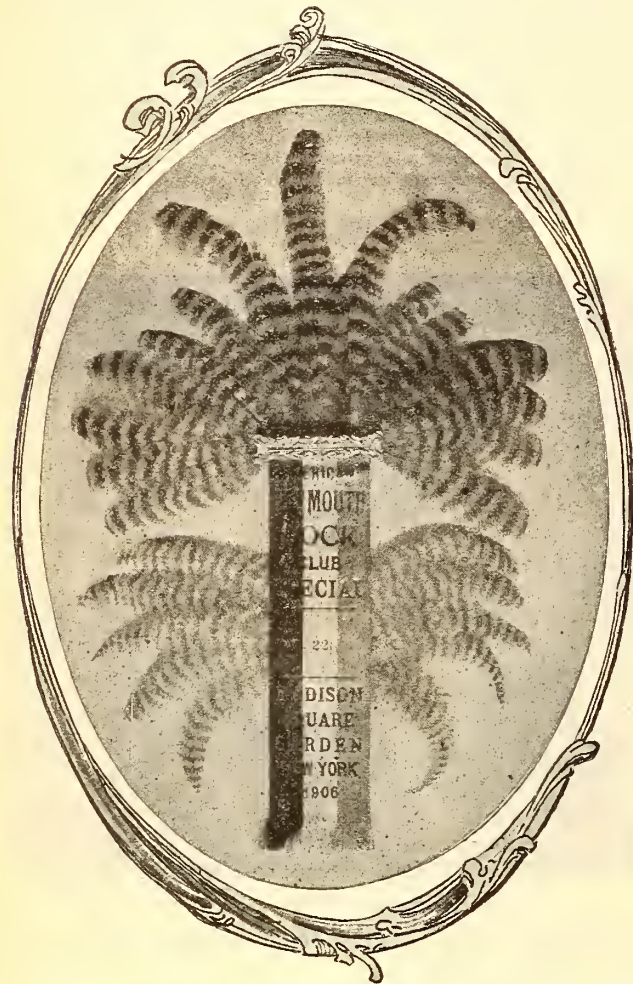

ROSE COMB WHITE LEGHORN.

First cock St. Louis World's Fair, first cock New York, first cock Chicago. Owned by Rocky River Poultry Co., 14 "The Oaks," Deerfield, Ill.

thing omitted or with a mistake in price. It is a good plan to leave an ad written for a week or more before sending it out; after three or four days look it over and see how it sounds. If it is all right, send it along; if not, correct it till it pleases you. Don't expect to do a hundred dollars' worth of business from a 50-cent ad. If you get back your money and a little over you will do well for a beginner.

The longer you keep your name before the public the more returns you will get for every dollar spent. After you once start in advertising keep it up all the time, using a little more space during the busy season and a little less in the dull times. Keep your name in connection with the breed you are raising before the public all the time and your business will have a steady growth, increasing at a greater rate the longer you advertise. If you place an ad in more than one paper, key each by changing the box number. In this way you can tell by the address on your letters in which paper the writer saw your ad, and you can soon tell which one pays you best. Your postmaster will know the letters belong to you even though the box number is not always the same. Some papers will give you a large number of replies, but you will be unable to make as large a percentage of sales as you will from a smaller number of letters from another paper. This will show that the quality of the business from one paper is very much better than from the other. Keep this idea in mind when renewing your contracts and go accordingly.

Now you have placed your advertising, the next thing in importance is to have neat and tasty letterheads and envelopes, also a nice little circular describing your breed and telling of your winnings, your matings and giving prices for eggs and birds. If you do not know how to write up a circular, write to several breeders of your kind of birds, enclose stamps and ask for circulars and mating lists. These they will send, and you can study them and get an idea how to write yours. Make your circular more interesting if possible. It is a good thing to have in your circulars some illustrations of your birds. If you have some show winners take some photographs of them in natural positions which show their shape. From these photographs you can have halftones made and use these cuts in your circular. Nearly all the publishers of poultry papers can make the halftones, or, if they do not, can get them for you. And most of them do printing for poultrymen. If you cannot get halftones of your own birds, you can buy stock cuts from the

Feathers from the best hen in Barred Rock pen, winning special prize for best pen mated to produce exhibition cockerels, and feathers from first prize pen cockerel at Madison Square Garden, New York, 1906. Bred, owned and exhibited by E. B. Thompson, Amenia, N. Y. Note the matchless barring of the feathers.

publishers of poultry papers. Illustration in your circulars add to their value and make them more businesslike; but cuts or halftones of your own birds are worth more than any other kind. A good cut of your own birds will do more to show the prospective buyer the quality of your stock than a whole page of printed description.

Now, in regard to your correspondence, always answer every inquiry the same day you receive it, if it is possible for you to do so. The writer has probably written to several other breeders at the same time he wrote to you, and your promptness and businesslike way of answering him may be just the one little point that will influence him to place his order with you. Answer every inquiry in a courteous manner, even though it was written on a postal card, and by a person who was evidently very ignorant in poultry matters. Keep this in mind constantly, that it has cost you some good money to get the inquiry, and do all you honestly can to make a sale. Remember, the poultry paper cannot make the sale for you; it can only put you in touch with the prospective buyer and it is then up to you to make the sale.

Do not expect to sell to everyone who writes. Some inquiries will come from those breeding the same kind of birds. They want to see what you have to offer and to size you up. Then there are a certain class of people who are always writing for circulars. They never intend to buy, but their object seems to be a desire to have letters coming to them in the mail. Treat them as courteously as you do the genuine buyers, for you cannot afford to be discourteous to anyone. In all your correspondence relating to your business use a carbon paper and make a carbon copy for future reference. It will save a great deal of trouble and you can then always turn to the copy and see what you have agreed to do and what prices you have quoted. Have a letter file and file all letters, together with the carbon copy of the answer. Keep a record of each letter and every sale and credit to the paper that brought the inquiry; then you will know which papers bring the most inquiries and which make the most sales. If in a reasonable time after answering an inquiry you do not get a reply, write a second letter, asking if there is anything more you can say about the matter. Make a second offer if you can. If you reduce prices later in the season write, announcing the fact to all with whom you have been unable to close a deal. You will find that this plan of following up your inquiries will result in enough business to well repay you for the trouble. It is a good plan after the season is over to write to those to whom you have made sales, asking them how they are satisfied. If you receive any replies that show any appreciation of your way of doing business, or telling of the fine quality of your stock, use these letters and testimonials in your next season's circulars, for a satisfied customer is the best sort of an advertisement.

Now one thing more. You will sell stock and eggs that, so far as you can tell, are as good as any in the market; but you will have customers who will lie about their hatches and kick about birds and eggs and write very insulting letters. Treat them as courteously as you can and please them, if possible. You had better give away a few eggs or take back a bird, which you know is all right, than to make an enemy of a customer. You will be imposed upon once in a while, but you will find in the long run that nearly all of the people who are interested in poultry are pretty good folks to do business with.

FOR THE NEW READER.

The Beginner in Poultry Raising Should be Given Advice that will be of Benefit to Him—A Side Line that may Develop into the Main Pillar.

Written for American Poultry Journal by Geo. Enty, Templeton, Pa.

No doubt each month adds new names to the list of subscribers to the Journal, and at this time of the year very many are becoming interested in fowl culture and egg-farming. These new readers have much to learn, many of them all to learn ere they will be able to follow this work with any degree of intelligence. Some will be ignorant of what can be accomplished in the work and will look upon it as a foolish hobby, fit only for those cranks called chicken fanciers, and incapable of being made to pay a profit upon investment like other branches of farm work, and I want to say a few words to just such people. I can show them in short time that the work is worthy of their best efforts. And if I can induce but a half dozen readers to take up poultry raising upon intelligent, present-day lines I will feel very grateful and well repaid for my trouble. And let me remark that the true fancier is always unselfish and is never better situated than when imparting helpful information to others, and I shall never forget those old-time fanciers who away back in '76 and '77 helped me with advice, poultry journals and kind words. Such men as W. N. Todd, Philander Williams, Geo. S. Josselyn, C. A. Sweet, Rev. D. D. Bishop, C. J. Ward and others deserve the thanks of many a present-day fancier.

My new reader, do you know that a boy of sixteen took up the work of breeding chickens just as a hobby, spending two dollars for nine eggs from pure-bred fowls and in a few years was making a yearly profit of four or five hundred dollars, and that without interfering with his regular employment?

You did not know that, did you?

Well, that is a true story.

You did not know that a couple of poorly-paid school teachers started in the business of producing first class eggs for market in a small way, and after the lapse of a decade had built up a business worth four or five thousand dollars per year?

And that is true, too.

And there have been quite a few boys and girls that I have known who solved the question of an education, a library, a parlor organ or piano, painting the house and in more than one instance showed fathers and mothers that the mortgage on the old farm was not doomed to exist forever, but the hen and her brood could make foreclosure proceedings a needless shame.

Then there was an elderly man who had fought the battle of life manfully, but lost the battle at last. He knew as well as you or I that the factory, the mine, the office and the store clamored only for the strong and young, and that in them there was no opening for him. He was forty years past the age when all want the chance to use his brain and brawn. But the cackling of a hen, one January morning, after she had laid an egg that anybody would be glad to get at four cents, was an inspiration to him, and the river lost its black, beckoning hand, and now the white-haired but cheery old man has found that the final charge of a good, brave soul must win the fight for bread and home.

Away over the hills in the Keystone state, away back from the public road, a lad all crooked and deformed by nature shrank away from the world with its men and women so full of selfishness, avarice and greed. But one of that class of fanciers that see the goodness of God in giving us beautiful finches and thrushes, woodchucks and golden pheasants, and all the long list of charming birds as well as beasts, found the shy lad in his cabin and set about bringing the beautiful world to him. The poultry journals and the living fowl were both treasures of unspeakable delight to that shut-in soul. And it grew strong and loving and hopeful and life's useful field opened out before him like a picture being unrolled to one's raptured gaze.

I have only told you a few things that I know. But what I have said tells you that a year's subscription to the Journal presented to some friend or acquaintance may be the "stepping-stone to higher things."

And when I tell you further that no one following such a hobby will ever go far in the bad you will recognize the fact that an inexpensive way of doing home missionary work lies before you.

It may also be the case that your income, like that of many another in this and all past ages, and will be in all ages to come, feels the need of augmentation. Perhaps expenses have been curtailed to the point where curtailment can no longer be practiced. The Journal can help you start a side line that may eventually become the main pillar in the building. The Journal can show you how to make a fifty-cent biddy earn from one to two dollars in a year. And fifteen or twenty such hens will solve the flour problem for a small family. And the boys and girls will grow up with a new acquirement that may some day mean a position that will guarantee them more than average wages or income.

POULTRY JOURNALISM.

What the Poultry Press has Done for the Advancement of the Fancy Poultry Industry All Over the World—Benefitting by the Experience of Others,

Written for American Poultry Journal by Mrs. Francis Tallon, South Haven, Mich

We so often hear this cry of "What use are all these poultry, farm and other journals giving advice and instructions? What do these writers know more than we do or can find out for ourselves; we usually do as we think best anyhow." Yes, please think it over carefully and critically if you want to, so you give it good, solid thought. How long would it have taken the world to know about the Plymouth Rocks, the Wyandottes, Leghorns and other of the older birds, or the newer Orpingtons and Rhode Island Reds, if there had been no journal or other newspapers not only to advertise them, but for some writer familiar with the breed to tell of their good qualities. Look at the improvements in the poultry business, both in breeds and new inventions to bring those breeds to perfection in the easiest and best way. The incubators and breeders on the market alone are a great item, but for journals and newspapers in general we might all be using hens yet for both and "barn yard" fowls at that. Literature is the wheel that makes the world buzz with its enterprise. They often say, "That writer don't know any more than I do," maybe not as much; but he or she is willing to advance to others what they do know, giving you the privilege of sifting the chaff from the good, and if there is anything you did not know that the writer did, you could then add it to your great store of knowledge and have one more point to your score.

But I have always noticed that people strongest in this are those who principally take sample copies. I know a party that, when he wanted anything special in a journal, sent for a sample copy. He also told a party taking subscriptions that he got his literature free. Such people are the bluffers, not the actual producers of ideas, and often not of good stock. They can always buy or borrow what they want. I think that even the old, reliable breeder often gets ideas from someone else, for, as a rule, a good business man is broad in his views and ready to try somebody else's experience. He will then be ready to tell you the results.

Give to the world our ideas for good, help along someone that is puzzled or more unfortunate than ourselves; do not lock up in the dark corners of the selfish past of ourselves what might benefit others. The beginner is often at a loss over some simple thing and in a more complicated problem ignorance of what to do is often a puzzle. To the old, experienced breeder it seems easy enough, that anyone ought to know that; but we often forget that we were all beginners once and needed a helping hand in the way of advice. But don't give advice just for the sake of saying something. Let it be practical and to the point, and of some use to some one at least. Don't let us have much chaff, for the four winds will soon carry that away and then the writer sinks into oblivion. Better carve a little name high up that will stay than to cut a big one deep into the bark low down that may soon be peeled off by some ruthless hand.

Then, readers must not be too critical. Things that seem impossible often happen. What happens in one poultry plant may never occur in another, but it is well to be protected in case it does, and you cannot hear from the thousands of breeders but through the press. It is well to know sometimes—and in some things—what your neighbors are doing. I do not think that, as a rule, poultrymen are selfish about telling what will benefit your flock.

I want to say a word again about vermin on fowls. Get rid of every kind before putting your birds into winter quarters, or else wring the fowls' necks. Don't let the poor, dumb creatures suffer all winter, or as long as their vitality lasts. Just think how a few lice will make you feel if they get on you. What must it be to have thousands on one fowl? It takes work, but anything takes work that succeeds. We can't sit with folded hands and let the machinery of life's problem—a living—go on; it simply won't do it. So be up and after these chickens before they are in winter quarters, or you go to shows with them and have the people wish your fowls in the bottom of the deep blue sea before they became infected from them. I hope that poultry shows will take some measures to prevent lousy birds being in the show room; it is a disease or at least the cause of most diseases. I am a member of our association here and shall use what influence I can to have vermin barred. I do not care to spend the rest of the season getting rid of lice; better make the exhibitor hold up his hand and say, "So far as I know they are free," and he generally knows, if he is anything of a poultryman. Let us take good poultry journals and be careful thinkers. Let those who contribute to journals give the best practical advice they can, and make it as plain as possible. With me the American Poultry Journal has first place.

FOWLS FOR LAYING PURPOSES.

The number of good laying breeds of poultry has been largely added to of recent years. Not only has this been done, but many of the cleverest breeders have carefully selected and bred from those hens known to be the most prolific layers. The faculty of laying being hereditary, this selection has considerably improved the egg production, so that some poultry growers are able to claim that many of their birds will lay upwards of 200 eggs each per annum. That this high average can be equalled by the majority of hens is certainly not to be expected, though with proper treatment it should not be difficult to obtain 150 eggs from each, a number that leaves a good margin for profit.

Of the breeds that rightly bear a reputation for being free layers the Leghorns deservedly rank high. The White, the Black and the Brown Leghorns all are excellent. Active and good foragers as they are, they will yet stand confinement in a small run fairly well, and will lay a great number of medium-sized eggs. The whites are kept in all parts of the United States, laying as well in the north as in the south. The blacks, though somewhat a newer variety, are rapidly increasing in popularity, owing not only to their handsome appearance, but to their great laying powers. Leghorn hens rarely become broody and lay freely when the weather is cold and also in the heat of summer. The eggs are white, but some hens lay a slightly tinted egg.

A splendid laying breed is the black Minorca, which can be

strongly recommended both to the small poultry keeper and to the man who has plenty of room. This fowl is probably more generally kept in this country than any other. It does well in confinement, is a non-setter, and lays a number of large white eggs. In cold exposed situations it is liable to suffer from frost bite, and this is the most that can be said against it. The hens have often been known to average from 150 to 200 eggs each annually. Minorcas are moderate eaters; the chickens do better if not hatched too early in the year; as they mature quickly they need not be brought out before May. There is a white variety of the Minorca, not very often seen, and not so good a layer as the black.

The Wyandotte is another most valuable laying breed. It is bred in various colors, including silver, golden, buff, white, partridge and silver penciled.

The White Wyandotte is considered by many people to be the hardest fowl in existence; it is certainly unsurpassed as a winter layer. It will thrive in any situation, and no beginner can do wrong in having some of these birds. The Partridge Wyandotte is one of the most recently manufactured of the family, but already it is coming into much prominence as a most handsome, hardy and useful fowl. It is a free layer, does not become unduly broody and has the advantage of being a most excellent table fowl, the chickens maturing rapidly and carrying a lot of flesh in the right parts. It can certainly be classed as a good fowl for laying purposes.

The Buff Orpington has for some years had many admirers, and it has been claimed for the fowl that it is a splendid egg producer. The eggs are colored and of good size, and the buff's lay well in the winter. But in the spring and summer the Buff Cochin blood in its veins renders it liable to become broody too frequently, and either Leghorns or Wyandottes will, as a rule, lay a better average.

Poughkeepsie, N. Y.

A. V. Meersch.

MATING THE BREEDING PENS.

On Selecting Birds for the Breeding Pens the Layers Should be Given Careful Consideration—"The Hen That Lays is the Hen That Pays."

Written for American Poultry Journal by Russell Canby, Winfield, Iowa.

In selecting birds for the breeding pen I have come to the conclusion that it pays to select the layers. I am not prepared to say that they should be of the typical (wedge shape), which has been suggested, but they should be layers. That is what is wanted as well as markings, and if there is a milk type in cows there surely ought to be an egg type in hens. Whatever the shape, it stands poultrymen in hand to make such selections among the best layers as possible to breed as well as for the purpose of supplying eggs for the trade and for the market. Other things being equal, the hen that lays the greatest number of eggs is the best hen for the breeding pen, and there is a possibility that a breeder of pure bred poultry in mating his pens may lose sight of some of the really valuable points in his poultry in order to get a certain color of feathers on certain parts of the body. It has been charged, and truly, too, that some breeders of cattle have lost sight of dairy qualities of some breeds in endeavoring to get a certain shaped horn or a uniform color. Those that lose sight of the egg-laying qualities when mating up their pens are usually persons breeding for exhibition purposes alone and as there are no prizes offered for egg records, they do not care to compete for them. The farmer who obtains his breeding stock from breeders of this kind will usually regret that he did so. He is liable to join the ranks of those who say standard bred poultry is not the thing, and he may be right in making this declaration.

I am a breeder of pure bred poultry and do not believe in scrub poultry at all. I am free to say, however, that some scrubs will do more along certain lines than some pure breeds, because of lack of selection in strains adapted to a certain line of market products. Feather markings are all right and we should look after them, but what do they amount to if the bird which has perfect markings will not produce a good market fowl or a good egg layer? Fortunately there are breeders among us who never lose sight of the practical qualities which they know will make their fowl of two-fold value as compared with those bred for exhibition purposes alone. It is not a difficult matter for breeders to keep the practical qualities of their fowls developed in a satisfactory degree and at the same time not interfere with their usefulness as exhibition birds. A breeder who aims to have his birds excel in both respects always has sale for his birds and need only give them the care necessary to induce the production of eggs, and

which, in fact, consists of keeping them in the most vigorous, healthy condition imaginable, rejecting for breeding purposes such as fail to respond to such treatment. It is a noticeable fact that while a few years ago only a few breeders mentioned the useful qualities of their fowls in their advertisements, or circulars, now the number has doubled. It shows that there is a fast growing demand for the useful as well as the ornamental birds. It is possible for us to run off after too pure a feather and get ourselves into trouble, by sacrificing the useful qualities of our birds. So let us get together and breed the useful bird as well as the exhibition bird and the farmer will have no trouble finding his utility birds in some pure bred kind instead of saying mixed chickens pay the best.

BEGINNERS SHOULD KEEP AN ACCOUNT WITH THEIR POULTRY.

The first thought I had after arising on New Year's morning was the welfare of my family, and the second thought was my business, which is a specialty of the Barred Plymouth Rocks.

I have found out in my ten years' experience, study, ups and downs, that there is a great deal to learn about the American hen—much more than one would think when starting out on such a broad field. I say broad, which is a pretty big word for the poultry business, but I think that the poultry business is about as broad a field as a person could enter. When I first started into the poultry business I bought a pair of Barred Rocks of a good type, bought of a good, reliable breeder, and since that I have been breeding a little better stock into my flock each year, until now I have two pens of as fine birds as any one need want.

My first experience in the poultry business was very unprofitable, as I suppose every beginner finds out. The losses figure up faster than the gains until a breeder gets a good strain of birds and lets the public know he has got them. Then he can see an increase on the credit side of his poultry account. In speaking of poultry account, that is something I think every poultryman should do. I have been keeping an account with my poultry for the past three years, and I find it very convenient and profitable.

For the beginner who wishes to start out on the new year and wishes to know if his poultry is paying him or not, let him start out by taking an inventory of all his stock on hand, and then keep an account on the debit side of all the stock, eggs, feed, grit, etc., bought, while on the credit side keep an account of all stock and eggs sold. I suppose to make it plainer to the beginner a model would be appropriate. Below is a model that the beginner will find very convenient.

MODEL.

Poultry Account for 1906.

Jan. 1.	50 hens at 50c each.....	\$25.00
Jan. 1.	10 roosters at \$1.00 each.....	10.00
Feb. 3.	Feed	3.00
Mar. 20.	Advertising	15.00
Apr. 16.	20 dozen eggs at 18c each.....	3.60
Apr. 20.	Grit	1.00
Apr. 30.	2 roosters bought.....	5.00
Nov. 20.	50 roosters sold, at 50c each.....	25.00
Nov. 30.	10 roosters sold, at \$2.00 each.....	20.00
Dec. 31.	100 hens, at each 50c, on hand.....	50.00
Dec. 31.	15 roosters, at \$1.00, on hand.....	15.00
		\$59.00	\$143.60
	Net Gain	84.60	
		\$143.60	\$143.60

Another very convenient form I find in the poultry business is a chart about two feet square ruled off on nice, clean paper with every month of the year printed at the top and ruled off in such a way that you can tell how many eggs you get each day, how many chickens die, how many killed, how many hatched, etc. This chart I keep tacked up on the wall of my poultry house with a pencil hung to a string by its side so I will have no trouble to put each incident down as it happens through the day. And at the end of each month I transfer it to the poultry account in my books and at the end of each year I foot up the account to find if it has been profitable or unprofitable.

But I think if the beginner will attend to the little chicks, start on a small scale, get a good, reliable breed that he takes a liking to and sticks to it, climbing the ladder rung by rung, he will find that the chicken account will be a gain of a good many dollars instead of a loss.

The Greatest Event in the Poultry World Today

IN THE '70s the AMERICAN POULTRY JOURNAL produced the first series of colored pictures of fowls. It was the pioneer in color work as in every other department of endeavor connected with poultry journal publishing. Those colored pictures viewed in the light of our accomplishments and opportunities today were crude and inartistic, but they represented the then highest type of colored illustrations, and ran through nearly two years' issues of AMERICAN POULTRY JOURNAL.

Many of our older readers will remember these illustrations and recall with what enthusiasm they were received. As we look back over the old files of AMERICAN POULTRY JOURNAL in our office, it forcibly brings to our mind not only the advancement in the art of color work and illustrations, but also the great advancement that the scientific and painstaking breeder has accomplished in his improvement over the old requirements, which have resulted in the high ideals and perfection of thoroughbred poultry, as it now exists. These old colored pictures covered many of the recognized breeds and varieties at that time, and, contrasted with the efforts of the poultryman today, discover many new breeds added to the list and many new varieties to claim the attention of the fancier and the utility breeder.

We aim now to make another epoch in the history of the poultry business, and take infinite pleasure in announcing to our readers that we propose to furnish them colored illustrations, commencing early in 1907 issues of AMERICAN POULTRY JOURNAL, of every recognized variety of poultry, turkeys, ducks and geese.

The work is tremendous in its scope, requiring the highest skill and the most perfect familiarity with every variety represented, will cost thousands of dollars, and we modestly hope and confidently expect that its influence will be far-reaching and its effect have a marked value in a still greater development and activity in the poultry world.

Never before in the history of the poultry business have all recognized varieties of poultry, ducks, geese and turkeys been pictured in colors and assembled in one harmonious uniform series of illustrations. Single colored pictures have from time to time appeared, but never has the opportunity before been presented to the poultry loving public of seeing all varieties grouped together, perfect in shape, color, feather markings; uniform in size, and correct in comparative proportions, as AMERI-

CAN POULTRY JOURNAL proposes to present it.

Thousands of breeders have never seen all varieties, even at our largest poultry shows, gathered together; very few of our best breeders have ever seen all varieties.

This will be an object lesson of surpassing value and beauty. Never before has it been possible to have for comparison and admiration all varieties together; to note the almost endless variety of color and markings; to realize the beauty of hundreds of richly colored animated and life-like reproductions of the most beautiful of nature's creations, that make sportsmen of fanciers and that attract men and women from every walk in life who realize a delight in moulding and developing into higher grades of beauty and utility this form of bird life, that is, more than any other, susceptible to high ideals of perfection.

If we, as beauty lovers of a dozen varieties, become enthusiastic fanciers, how much greater will be the delight to see all the varieties together, perfect in shape and color.

Few, even of the most experienced breeders, are thoroughly familiar with all varieties. What then will be the effect upon the beginners? These colored pictures of AMERICAN POULTRY JOURNAL will be an education so far-reaching in its effects that their value to the poultry business can hardly be estimated and will charm and captivate the fancy of thousands who have thought of them as "just chickens."

This will be a work so great in its scope and grand in its possibilities that every breeder in the land will benefit by its publication, for his favorite will be represented, his choice of variety will be found before the series runs out and his business be boomed by the publishing of this colored index to the greatest fancy that interests the people of the world today.

This series will consist of nearly 300 specimens, male and female of each variety. The painting will be done by the world's greatest poultry painter; will be reproduced by the latest method of color work, on heavy enameled paper and will appear in AMERICAN POULTRY JOURNAL until the series is fully completed.

This work has been contemplated by us for years as the culmination of our hopes and ideals, and has been in active course of preparation for nearly a year. The first pictures will appear early in the new year of 1907. The issues of AMERICAN POULTRY JOURNAL will be limited to 60,000 copies each month, so renewals of subscriptions will be necessary to secure the complete series.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Our Colored Frontispieces.

The coming season promises a feast for readers of American Poultry Journal in the way of colored illustrations. We have arranged with U. R. Fishel, of Hope, Ind., the noted White Plymouth Rock breeder, to reproduce two of his world-famed prize winners. These will consist of two famous birds raised by him. These are illustrations of cock bird Edward B., Jr., bred by U. R. Fishel and sold for \$500. The thousand-dollar hen Mary E., winner of first at World's Fair at St. Louis; first at Indianapolis, Cincinnati and Nashville, bred and owned by U. R. Fishel. One will appear in the January issue and the other in March issue. The original paintings, from which these reproductions are made, are by a new artist, Mr. M. A. Ide, who has won his way to fame in the poultry world by the painting of these two

pictures, and we make the assertion that these paintings have never been excelled by any poultry painter.

Mr. Fishel accomplishes big things in the poultry business; he succeeds by bold and intelligent methods. Never before, we believe, has a poultry breeder been represented by two colored illustrations in one season in one poultry journal. We have been able to secure Mr. Fishel's co-operation in this treat for our readers, for we, in turn, believe that nothing is too good to present to the poultry world through the columns of American Poultry Journal.

We know that our readers will anticipate with pleasure our publishing of these pictures, and we take equal pleasure in presenting them, regardless of the great expense to us necessary for the production of this work.

Rhode Island's Suggestion.

Mr. J. Willard Bolte, acting chief of the Department of Animal Husbandry, who is located at Kingston, R. I., and working with the Rhode Island experiment station, has proposed a laying contest to be participated in by all the specialty clubs in the United States and Canada. He outlines a plan which he thinks will do away with the free advertising which he thinks individuals would receive from a contest of this kind when conducted by state or national governments. He suggests that each specialty club contribute a pen of ten birds to the contest, two of these birds to be held in reserve in case of accident or death to one of the eight pen in the laying test. He wants but one pen of fowls of each breed, or variety of a breed, to compete and suggests that a male bird be placed in each pen. He says that the initial expense to each club entering fowls will be close to \$50. The eggs will be sold to defray the attendant expense involved in feeding and keeping records. All hens will be trap-nested in this proposed contest, and this of itself will be a distinct improvement over the Australian system of conducting laying contests where the individual record of each hen is not known. His plan, however, which he says has been approved by a number of America's leading poultrymen, contains a number of ideas which will bear improvement. In the first place, laying contests are carried on, or should be carried on, because of their educational value and there is bound to be more or less advertising connected with the entry of any heavy laying pen of fowls, no matter where they come from. If laying contests are to be educational in nature we must know where the heavy layers come from—we must know who is breeding them. Let the reward of public approval settle itself on the breeder who has brains enough to produce heavy layers. A laying contest in which are entered only one pen of each breed or variety would not be fair in the conclusions drawn from it. The matter of who should supply the layers for each specialty club would create more or less feeling in the ranks of club members. A contest where each hen in each pen of layers came from a different yard would not tell us who was breeding the heavy layers of the contest. If six of the best layers from the yards of ten of the members of each specialty club were sent to the contest then we might know who was producing the heavy laying hens. One pen of each variety would be of no edu-

cational value in determining which breed or variety was the best egg producer. The male bird should be omitted from the laying pens because he is more or less of a nuisance and his absence will prevent any particular rush for eggs from the heaviest laying hens. Mr. Bolte also suggests that a bulletin be issued concerning the results of the contest upon its close. We would further this idea by suggesting that monthly records of the contest be given to the poultry press for publication. It is an Australian plan that can be used here to good advantage. Mr. Bolte has the correct idea when it comes to the individual record of each hen and the market value and weight of her eggs. Keeping a record of the feed consumed per hen will be practicable only in averages. On the whole the idea is a good one and should be encouraged, but we believe that if the greatest good would come from it the scope of the contest must be enlarged.

Utility Awakening.

At last signs of a great utility poultry awakening are coming. What are they? Indications point to a series of big laying contests; the poultry press is busying itself with more real matter of interest to marketers and egg growers; the railroads are giving the hen some attention; the national government has undertaken the carrying out of a line of practical experiments and other signs have made themselves plain.

Signs? There are hosts of them and all we have to do is search and find them. We predict that Kansas and Rhode Island will stand well to the front in laying contests. The other colleges that have given poultry culture more or less attention could profitably follow. Knoxville, Tenn., is well located for a south central laying contest; the California state experiment station could conduct a fair contest that would largely be made up of Mediterraneans from the heavy laying flocks of the whole coast; the station at Crookston, Minn., could and doubtless will begin one of these poultry educational tests and draw its support from northwestern fanciers and breeders. The Utah station is splendidly located for a laying contest also. We cannot hold too many tests of this nature if they be rightly conducted.

The Missouri Pacific railroad found a wonderful interest in pure bred poultry along the lines that its initial poultry special (train) ran and now it sends out a second train through Arkansas and other territory it covers.

Verily, things be doing along utility lines.

The Chicago Show.

The eleventh annual Chicago Poultry, Pigeon and Pet Stock Exhibition, under the management of the National Fanciers' and Breeders' Association, will be held January 23 to 30, both inclusive, 1907. It will be noticed, the show opens on a Wednesday and continues during that week and Monday, Tuesday and Wednesday of the next. This new program will be a decided advantage, both to exhibitors and managers. The hurried, hard work and annoyances of getting ready and shipping stock and goods incident to a Monday opening and Saturday night closing will be done away with.

Whether viewed from the standpoint of the exhibitor, the visitor or the man-

agement, all of the ten preceding shows of the Chicago series have been most successful. We do not mean to imply that everyone has been pleased to the uttermost. The spirit of competition and rivalry has been at work and there have been a few—very few—protests and murmurings against the wisdom of judges and management. Against their honesty and fair dealing not a hint. Every promise made, every premium offered, every debt contracted, has been promptly liquidated. There is every reason to believe that the glory of these continued successes will be increased with the maturing of the plans and efforts now being made.

Every show, large or small, is a decided advantage to the industry. Believing this, the American Poultry Journal encourages and supports them all, in every way possible, and urges every fancier and breeder among its many readers to do likewise. It is a duty to render aid to a local worthy object. Each and every one should give it to his town, county and state enterprises.

The Chicago Show is, in a sense, local to the whole country. By reason of its geographic position, the avenues of transportation make Chicago and everything in Chicago of national importance. To its show will and should come specimens from every state in the Union, and from Mexico and the Canadas. Being held so late in the season it will have no competitors as to dates. All stock exhibited in other places will have a grand round-up in its hall. It will be a season of great profit and pleasure to us all.

The Madison Square Garden, N. Y., Show.

America's great show, Madison Square Garden, New York, January 1-5, should be attended by every fancier. It is unlike any other poultry exhibition in all America, and stands alone as to quality of stock exhibited, interest to fanciers and breeders and as an educational institution. The poultry will be passed upon by the following judges: C. M. Griffing, Shelter Island, N. Y.; Ira C. Keller, Prospect, Ohio; George H. Burgott, Lawton Station, N. Y.; Richard Oke, London, Can.; W. C. Denny, Rochester, N. Y.; Thos. F. Rigg, Iowa Falls, Ia.; Joseph B. Thomas, Simsbury, Conn.; Wm. R. Graves, Springfield, Mass.; H. J. Quilhot, Johnstown, N. Y.; W. W. Babcock, Bath, N. Y.; Dr. J. S. Wolfe, Bloomfield, N. J.; H. P. Schwab, Rochester, N. Y.; Wm. Barber, Toronto, Can.; Eugene Stiles, Elyria, O.; Chris. Kirshler, Newark, N. J.; George Pur-

"RANKIN'S ROYAL"

Barred, White and Buff Ply. Rocks and White Wyandottes are bred to win, bred to pay, bred for quality and business in every way. Hundreds of selected specimens, line and pedigree bred by my trap nest system, from America's greatest sires and champions for sale on approval at guaranteed honest prices. Eggs \$1.50 to \$10 per 15; \$7 to \$20 per 100. Seriously, you can't afford to place an order (large or small) before writing me.

H. P. Rankin, Box 61, Hartington, Neb.

due, East Orange, N. J.; J. H. Drevensstat, Johnstown, N. Y.; A. F. Dikeman, So. Peabody, Mass.; Geo. H. Northup, Raceville, N. Y.; Chas. M. Smith, Brooklyn, N. Y.

The article in this issue of American Poultry Journal written by Mr. D. Lincoln Orr should be carefully read. It is of especial interest to the breeders of Columbian Wyandottes. If every Columbian Wyandotte fancier will read and heed the advice and counsel given by Mr. Orr they and this new variety of fowls will be greatly benefited. If the men and women now pushing Columbian Wyandottes will avoid the mistakes made by the boomers of nearly every breed and variety ever placed in the Standard it will be a grand good thing for all concerned. Mr. Orr tells what not to do. And he tells it so well that all may understand.

Alaska-Yukon Poultry Exposition

To the poultrymen of America:

The Alaska-Yukon Pacific Exposition, which will be held at Seattle, U. S. A., during the summer of 1909, will be a great international exposition, a world's fair in every sense.

The executive committee of the exposition has already appropriated \$100,000 for the live stock show. A liberal amount of this sum will be allotted for the poultry exhibit, which it is the aim of the management to make the most successful from every standpoint ever held.

As poultrymen you are interested in seeing that we succeed in our purpose, and in order to do so the arrangements must be of the highest order and the prizes offered so large that they will induce every breeder of thoroughbred poultry in the United States and Canada to bring their birds here to compete. Such an event will be of incalculable benefit to every earnest poultryman, and will be another great stride forward by the poultry industry of the country.

Now, in order to successfully accomplish this great object it is necessary for every poultryman to take an active interest in it and do all in his power to help make the exhibition a success. One of the first things to be done by everyone interested in poultry is to take this matter up with your senators and representatives and have them use their best efforts toward securing a large appropriation for this exposition, as the larger the appropriation each state gets for its exhibit the better will be the poultry exhibit.

Second, take this up in your local association, have your county authorities do something for you in the way of helping to bear the expenses of a good exhibit from your county, and do such other things as you think will help your state to be fully represented at this great fair.

Now, brother poultrymen, here is your opportunity to help us make a success of this. If you show the proper interest I am sure you can get your state and county officers to work for appropriations which will assure your state of an exhibit of which you may be justly proud. Don't throw this away, but get to work at once. Make any suggestion or inquiry you like, but do something.

Fraternally yours,
J. L. ANDERSON, Supt.

O. K. ROUP CURE

Checks roup at once. Just as soon as you see a case in your flock give O. K. Roup Cure according to directions. It rarely fails to give immediate relief. Cures Colds, Canke, Catarrh, asthma in poultry, pigeons or song birds. This is a guaranteed roup cure and perfectly safe to use. Sent postpaid for 50 cents.

THE O. K. STOCK FOOD CO.,

BURN THE HEN HOUSE.

The Proper Method of Trimming Lamps and Handling Kerosene Oil—Kerosene Lamps will not Explode—Tricks of the Oil Trade.

Written for A. P. J. by Dr. S. A. McWilliams.

That is what you are likely to do in extremely cold weather unless you know how to prevent it.

The burning of a little kerosene goes a long way in removing the chill from a coop in the dead of winter, but economy and carelessness in its use often leads to disastrous results.

To prevent trouble and sorrow, from the burning of kerosene, everyone using it should learn how to take care of the lamp and then do it.

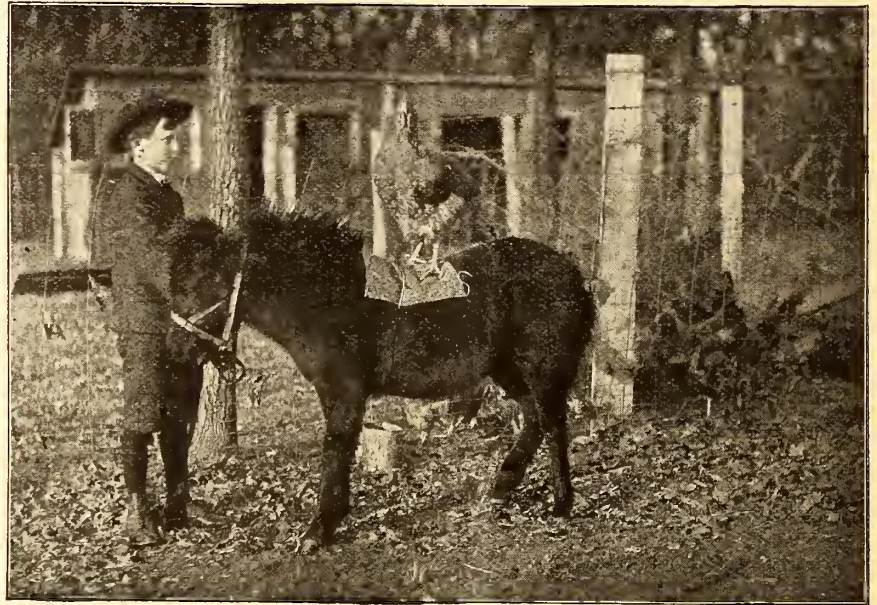

No one should be allowed to put a lighted lamp in a poultry house until it

charred surface must not be scraped off, but cut off, and the burned particles not allowed to drop down on the perforated floor of the burner.

We use burners that do not need chimneys, but if chimneys are used they must fit level on the floor of the burner. The burner must be level and true and not twisted or bent in any direction.

When the top of the wick chars and turns black it is because the oil does not get to the top of the wick fast enough. The oil cannot get to the top of the wick fast enough if the wick is not sufficiently porous; if the wick is broadened at the top, so that it needs more oil than the wick can furnish; if the wick is too tight in the tube of the burner, owing to the tube being squeezed or bent.

The top of the wick should be trimmed narrow or thin and short, not made broad and long, under the delusion that a greater flame will be pro-

**ALL READY FOR THE FIRST RIDE ON THE SHETLAND.**

Forrest Larmer, son of Robt. Larmer, Ravenswood, Mo., taking for a ride the Buff Rock cock "Gentry," score 94 1/2. First prize cockerel at Stanberry and Topeka and in first pen at Kansas City. Winner of the Missouri State Cup; 1st cock at Topeka and Stanberry, 5th cock at Chicago, 7th cock in world class and 2d cock in Missouri class at World's Fair Show, St. Louis.

Two sons of this great bird were winners last season at St. Joseph, Stanberry, Indianapolis and Kansas City, again winning the Missouri State Club Cup and Association Cup for best Buff bird in the Kansas City Show.

has been proven by actual test and examination that the party knows all about a lamp, as follows:

My assistants have had several fires from kerosene lamps in my poultry houses, because they could not or would not learn how to care for a lamp.

Remember that kerosene oil and water do not mix. No water should be used about a lamp or wick or kerosene can. To clean a can, or lamp, only kerosene oil should be used, inside or out. The wick should be clean and dry, free from dust, dirt or water, before being used.

The burner also must be clean and every hole in it must be open and clean. The tube through which the wick passes must be clean and straight, not bent or crooked. The wick must be able to pass up and down through the tube easily. The top and corners of the wick must be clipped with scissors and kept clean and close, not spread out with stick or shears. The

duced. The oil must be reckoned with.

The lamp must not be filled too full, not beyond one-half inch of the top. The coop lamp is lighted to make heat. It heats the lamp as well as the poultry house. The oil expands, fills the lamp and, if too full, runs over and may ignite and set fire to the house.

The lamp must be kept cool. Cool air must surround the lamp, otherwise the oil gets hot, bubbles up around the burner, ignites, melts the solder and trouble ensues.

Economy, or fear, causes the poultryman to set the lamp in a tin pail or box, where it becomes overheated, solder melts, oil runs over, ignites, sends a blaze to the top of the house and a fire is the result.

In the home the lamp sits on the table, surrounded by plenty of air, and the properly cared for lamp never gets hot. In the poultry house the lamp is confined in a receptacle without air and a fire ensues.

Keep plenty of fresh wick on hand all the time; never tie a rag to the end of a piece of wick, as the rag is not porous enough to draw up the oil by capillary attraction. The wick in the bowl of a lamp should not have a sharp bend in it, because it interferes with the capillary flow of the oil.

Who ever saw a kerosene lamp explode? They may have seen kerosene oil flow and burn, but not explode. You may put a lighted match into a cup of kerosene and it will go out as rapidly as if inserted into a cup of water. Kerosene, gasoline or illuminating gas does not explode unless it is vaporized and mixed with air and then lighted. Kerosene oil does not vaporize until it is heated beyond 120 degrees Fahrenheit; hence, if the oil is kept below 110 degrees it does not vaporize, hence cannot catch fire and explode.

No lamp made of glass or tin can set fire to a poultry house if the lamp is surrounded by cool air, as it is on the table in a home.

Of course, in the poultry house the burning lamp must be protected from the fowls; hence it must be placed in some receptacle surrounded at the bottom and top with plenty of inch ventilating holes to keep the bowl of the lamp cool.

The screw cap which covers the filling hole of the lamp should have a hole of sufficient size punched through it to permit the gas from the inside of the lamp to pass out.

Remember that if the wick is not in the center of the burner the flame will not pass directly up, but will strike the side of the brass burner and overheat it and char the wick away down into

the oil, but there will be no explosion as long as the fount is kept below 110 degrees.

If the wick tube becomes bent, dented or twisted, I insert a suitable piece of iron inside the tube, and with a light hammer smooth the tube out as good as new.

Tricks of the Oil Trade.

Oil agents occasionally use sleight-of-hand tricks to convince us that their kerosene oil is superior to the other fellow's.

Trick No. 1—A perfectly new chimney does not show as clear a light as one that has been used. Therefore, to appear perfectly fair he gives the other fellow's oil a new chimney, while he uses an old one.

Trick No. 2—He takes two perfectly new, clean wicks and dries them; then secretly moistens one of them for about an inch with saliva. This moist one he slips into the lamp with the new chimney, so that when the wick burns down to the moist part it burns badly. His lamp, of course, continues to burn bright and clear.

Trick No. 3—He would trim his wick thin, and his competitor's thick, and spread out broad. This would make his light white, and his competitor's yellow, as shown in front of a white background, as a white sheet or white paper.

Trick No. 4—He would put a long wick curled around into the bottom of the bowl of the other lamp, while by a nice little excuse he would put a short wick into his own lamp, which would reach only to the bottom of his lamp. This short wick would allow the

oil to syphon up freely to the flame, while the twists in the other wick with the broad top would prevent the oil from sucking up as fast as wanted; hence the wick would burn faster than it could get oil, then it would become charred and blackened down into the oil.

Trick No. 5—In order to get an excellent light, the bottom of the chimney must fit snugly all round to the burner. He would bend the base of the other burner slightly so that a current of air could get under the edge of the chimney and the flame would be inferior.

Trick No. 6—He would be very careful to have all the holes in his burner clean and open. He would carry a little blackened flour in his pocket, lick the palm of his finger, stick it into the flour and smear it over the holes of his competitor's burner, so that the air would not get through freely and flame would not burn so brightly.

Perhaps you are convinced that there are tricks in all trades, except in that of the poultryman.

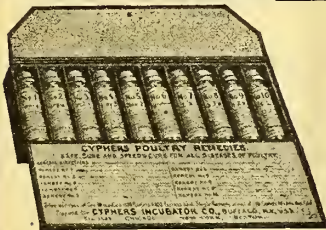

See to it that your houses are provided with proper ventilation. This is one of the main causes for disease in the flock during the winter months.

Do not put 50 fowls in a house that is only large enough for 25. Your profits will be decreased at least 50 per cent if you do.

The next five months is the poultryman's harvest time. Have your poultry crop in shape so that you will reap a golden harvest.

CYPHERS POULTRY REMEDIES

FOR EVERY DISEASE A CURE

Medicine Case.
Ten Remedies with case, \$2.00. Single Remedies, 25 cents.

Cyphers Poultry Remedies are prepared with the knowledge that the best ingredients give the best results. Back of these remedies stands the good name of Cyphers Incubator Company. **There is Danger** in cheaply compounded preparations.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

CINCINNATI, OHIO.

The ninth annual exhibition of the Cincinnati Poultry and Pet Stock Company will be held in the magnificent Music Hall building January 15 to 19, inclusive.

Messrs. T. E. Orr, of Beaver, Pa., and Frank Heck, of Chicago, Ill., will assist in the judging of the poultry department and special arrangements will be made to handle the pigeon classes.

The entry fees and regular prizes will be the same as last year, viz.: Entry fee for single birds, \$1; first prize, \$4; second prize, \$2. Entry fee for exhibition pens, \$3; first prize, \$6; second prize, \$3.

The extraordinary success of our show last year, when we entertained the American Poultry Association, will make it possible for us to put up the best line of cash specials that were ever offered, and special cash inducements will be offered to any of the clubs desiring to hold their meeting in Cincinnati.

The deficiency in the light which caused some trouble in certain classes last year, will be remedied and there will be no complaint on that score this year.

Our premium list will be ready for

mailing about December 1 and it will be sent upon application to the Cincinnati Poultry and Pet Stock Company, P. O. Box 122, Cincinnati, Ohio.

THE COMING FREMONT, NEB., SHOW.

The seventh annual exhibition of the Dodge County Poultry Association will be held at Fremont, Neb., December 4-6, 1906, and the officers and committees in charge are working hard to make this a bigger and better show than any of the six that have gone down in poultry history.

Several of Nebraska's most prominent breeders are residents of Fremont and are active members of the association. We also have among our members prominent breeders of the state who reside in adjoining counties, and all are working to make the coming Fremont show second only to the exhibition of the State Poultry Association.

It is easy to reach Fremont as railroads come in from all directions and should the weather be a little cold no one need hesitate for fear of having some of their birds delayed in transit. There is going to be some hot competition at this show and a prize won here is worth having, and is good advertis-

ing for the breeder who has stock for sale.

The well-known judge, C. A. Emery, of Carthage, Mo., will place the awards, and the score card system of judging will be employed. Judge Emery has been in the harness for years and he is recognized by all as painstaking and honest. He judges the birds and not the owners, thus all will get fair treatment and the best birds will win.

All birds sent for exhibition will be carefully cared for throughout the show and will be returned promptly at the close of the exhibition. We want the breeders to accompany their exhibits if possible for them to do so, but when anyone cannot do this, the stock will be given the best of care by the superintendent.

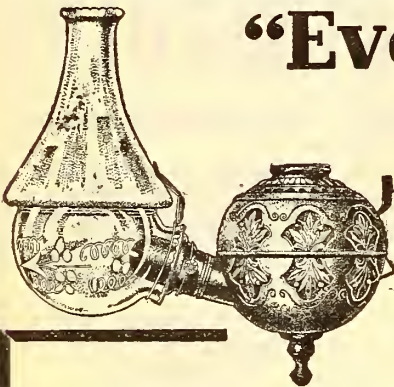

We have a premium list and show catalogue that you will want if you are thinking of exhibiting, and a copy will be mailed to any address upon request. Any information in regard to the show or in reference to hotel accommodations will be cheerfully furnished by applying to the undersigned. Remember that this year's Fremont show will be a good one, and we want you to be with us. Let us hear from you in regard to it. Address the secretary, 50 West Tenth street, Fremont, Neb.

G. D. McClaskey, Secretary.

THE CHICAGO SHOW.

The annual Poultry, Pigeon and Pet Stock Show to be held in Chicago January 23 to 30 inclusive, 1907, will be an improvement on any of the series of high class shows heretofore held under the management of the National Fan-

"Everyone Exclaims About Our Lights!"

"THE LAMPS are splendid. Everyone exclaims about the amount of light they give," writes Mrs. W. T. Reese, Tiffin, Ohio. "My City friends visiting here say they are as good as Gas. In fact, my home is now considered the best lighted house in the county. Why, when we go visiting our neighbors of an evening it is hard to keep from exclaiming about the poor light they have!"

The Angle Lamp is the *new* method of burning common kerosene oil, and is as different from the ordinary lamps in *results* as it is in *appearance*. It makes common kerosene the best,

the cheapest and the most satisfactory of all lighting methods. Safe and more reliable than gasoline or acetylene, yet as convenient to operate as gas or electricity.

THE ANGLE LAMP

is lighted and extinguished like gas. May be turned high or low without odor. No smoke, no danger. Filled while lighted and without moving. Requires filling but once or twice a week. It floods a room with its beautiful, soft, mellow light that has no equal.

And yet the lamp *actually pays for itself*. For while the

ordinary round wick lamp, usually considered the cheapest of all lighting methods, burns but about 5 hours on a quart of oil, The Angle Lamp burns a full 16 hours on the same quantity. But send for our catalog "59" explaining the new principles employed in this lamp, and for our proposition for selling on

30 DAYS TRIAL

Wouldn't you like to have your home admirably referred to by your neighbors as "the best lighted house in the country"—if you *knew* such a light would cost so *much* less than your present system as to pay for itself in a few months use? Then write for catalog "59" describing The Angle Lamp fully and listing 32 varieties from \$1.00 up. It is free for the asking.

THE ANGLE MFG. CO., 78-80 MURRAY STREET, NEW YORK.

ciers' and Breeders' Association. The exhibits of stock, incubators, brooders, appliances, foods, remedies and all things pertaining to the poultry, pigeon and pet stock industry have at all times taxed to the utmost the capacity of the largest hall obtainable. The attendance of visitors, always great, was phenomenally large last year. Plans are now being perfected to make the exhibition, whether from the standpoint of the exhibitor, the visitor or the management, better than ever before.

Premium lists giving names of judges and the varieties to be passed upon by each of them, and all necessary information to intending patrons, will be issued about December 15, 1906. Twenty thousand will be mailed out and it is the intention to have one sent to every interested person, but if for any reason it is not received or additional copies are desired, write to the secretary, Fred L. Kimmey, 325 Dearborn street, Chicago, Ill.

MINNESOTA STATE POULTRY ASSOCIATION, 21ST ANNUAL SHOW, MINNEAPOLIS, MINN., JANUARY 15 TO 23, 1907.

No poultry show in America has done so much to dignify the poultry industry, and bring its importance to the notice of the business interest of the northwest, as the show at Minneapolis for the past five years.

Every detail of the great show has been carried out upon the lines of strictest business integrity, and the showroom neatness has been a marvel, wondered at by people attending from every state in the Union. Over 20,000 people attended the show last winter.

Every premium and obligation has been paid before the close of the show, while the annual banquet at the rooms of the Commercial Club, given free of charge to all visitors, has been a social feature that is doing everything to promote good fellowship and bring the breeders nearer to one another for an exchange of ideas of mutual benefit.

Secretary Loth expects to eclipse all former attempts this winter. The cash premiums have been doubled in every instance and a third and fourth cash prize added, making by far the largest cash premiums offered by any association in America, to say nothing of specials, and twenty silver cups by the association, and nearly as many more with ribbons by specialty clubs.

In addition, the association will add 50 per cent. to the regular cash premiums in all classes where the entries reach a certain number.

Owing to a change of arrangements the time for closing the entries has been extended to midnight, January 5, 1907.

Premium list December 1.

Write George A. Loth, secretary, Box No. 47, Minneapolis, Minn.

KANSAS CITY, MO.

The Kansas City Fanciers' Association will hold their next show in Convention Hall, Kansas City, Mo., January 15 to 19, 1907. This association has now given three very successful shows, each one surpassing the preceding one, and from present indications the coming show will surpass all previous ones, and rightfully GAL 2-POULTRY BEACH it should, as the location of Kansas City in the center of the best poultry producing section of the country makes it pre-

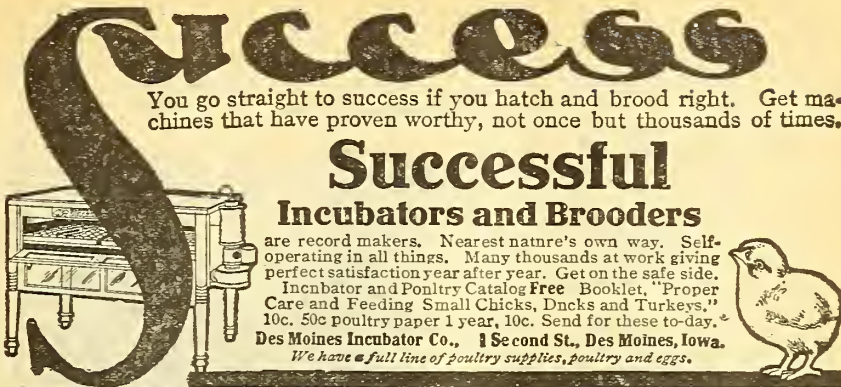

Success

You go straight to success if you hatch and brood right. Get machines that have proven worthy, not once but thousands of times.

Successful Incubators and Brooders

Reliance Incubator Co., Box 550, Freeport, Illinois.

4 NO 4. WILL KEEP HER CACKLING

The cackle of the hen right off the nest is sweet music to the poultry-keeper's ear, especially in winter when eggs are scarce and prices high. If you want to keep your hens cackling right through the winter, feed them **No. 4 Midland Poultry Food**.

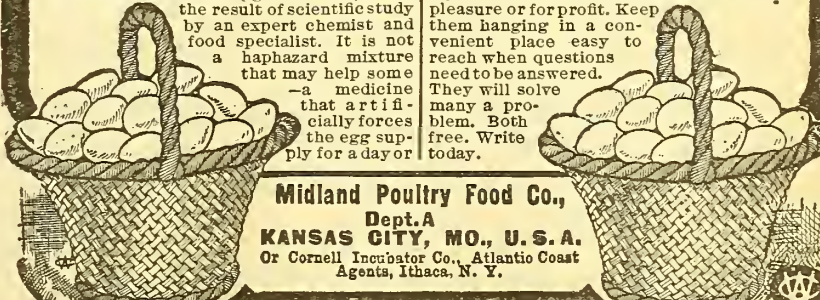

There are just two things that **No. 4** will do—it will increase your egg supply, and it will keep your birds in fine plumage. We don't recommend it for any other purpose. Feed it to your laying hens for eggs and to your show birds to put them in fine feathers for the show. We have ten other scientifically prepared foods for fattening fowls, etc., but now **No. 4** is the food in most demand.

It is the greatest egg food you ever fed. We sell more of it to big and little poultry-raisers, than is sold of all other poultry foods combined.

When you want eggs, the sure way to get them is to feed the food that actually enables the hen to produce eggs—**No. 4** contains every necessary ingredient, it contains the materials from which eggs are made, and is the result of scientific study by an expert chemist and food specialist. It is not a haphazard mixture that may help some—a medicine that artificially forces the egg supply for a day or two and then leaves the hen in a weakened, run down condition. **No. 4** is a ration that stimulates and nourishes the egg-producing organs at the same time furnishing food elements in proper proportions to enable the hen to lay in a natural way. Hens live and thrive on **No. 4**. If you have a half dozen hens or a half hundred it will pay you to feed **No. 4** as a regular ration.

If you raise ducks, turkeys, geese or pigeons we have foods in the **Midland Poultry Food Line** just suited to them, and when we say suited we mean it—we mean that every food is adapted to a specific purpose. Sensible idea isn't it, to feed scientifically for a specific purpose? Results prove that it pays to do it. We'd like to tell you how to feed that way. Our two books, "The Science of Poultry Feeding" and "Poultry Fattening Perfected" will prove valuable helps to the poultry raiser who's in the business either for pleasure or for profit. Keep them hanging in a convenient place easy to reach when questions need to be answered. They will solve many a problem. Both free. Write today.

MAKE POULTRY PAY

Or Cornell Incubator Co., Atlantic Coast Agents, Ithaca, N. Y.

eminently the best show town in the southwest. Breeders who have exhibited at this show in the past are unanimous in their praise of the treatment received, and the results of the sales made. Anyone in doubt as to where to exhibit the coming winter will make no mistake by deciding on Kansas City, as the directors are sparing no efforts to make the Kansas City show to the southwest what the Madison Square show is to the east. Fairchild, Topeka, Kan. These gentlemen are of well known ability and insure to all exhibitors a "square deal." For premium list and other information write the secretary, P. H. Dupree, 932 Jackson avenue, Kansas City, Mo.

SUCCESSFUL SOUTHERN POULTRY SHOW.

The first annual exhibition of the Virginia State Fair Association, held at Richmond, Va., during the week of October 9, 10, 11, 12 and 13, proved to be a decided success, especially in the poultry department, held under the auspices of the Virginia Poultry Association. The exhibition of fancy poultry as entered on the official list shows nearly 1,500 entries, consisting of nearly every breed known to fanciers listed under the American Standard of Perfection. Much credit is due Mr. S. S. Stansbury, under whose personal supervision the entire department was run. "Sam," as he is familiarly known to every fancier in the south, was "here, there and every-

where" attending to the many little details entrusted to his care. The show was well represented by well known breeders, both from the north and west as well as the south, who showed only

BUFF WYANDOTTE MALE.

Winner of 2d at St. Louis World's Fair; 1st, Chicago, December, 1904; 1st, Chicago, 1905; 3d, Chicago, 1906. Owned by Simon Beuth, German Valley, Ill.

the cream of their flocks. The most notable exhibit made at the show was that of Ambrust Bros., of Ambrust, Pa., who had a total of 350 entries with 370 birds competing. Another prominent

breeder and exhibitor was Mr. J. Wallace Snellings, of "Ferneliff Poultry Farm," who had quite a large string of birds on exhibition and the way he made the boys hustle for the "firsts" was a-plenty. Mr. Augustus Rowe, of Fredericksburg, Va., also showed some remarkably fine Barred Rocks which showed up as clear as a summer's day with a good under-color and bars of the pin stripe variety. He also showed some fine Rose Combed White Leghorns which were not only white in name only, but, in fact, were the whitest birds in the show. Mr. Rowe is only a young breeder, but from present indications promises to make other fanciers hustle for the ribbons. The show was cooped by "The Empire Cooping Co.," of Fultonville, N. Y., who had a representative on the grounds making friends with the fanciers and exploiting the merits of his company's goods.

FORT WAYNE, IND.

The People's Poultry and Pet Stock Association announces its second annual exhibition January 21 to 26, 1907. The management desires to inform all those who intend to make exhibits that their facilities for giving a first class, up-to-date exhibition are of the very best. Every effort is being made and every inducement at our command is offered to make our show both pleasant and profitable to our patrons. We have secured the most commodious hall our city affords in which to hold our show. We have purchased 1,200 commodious and up-to-date exhibition coops that will enable us to display your exhibits to the best possible advantage. More than \$2,000 in cash and special premiums will

What To Do To Get Winter Eggs

Winter egg getting is a question of feed.
Eggs are largely protein. Hens need protein.
In summer they get it by catching bugs and worms.
They can't get bugs and worms in winter.
To get eggs you must supply egg materials.

Try Darling's Lean Meat Protein Feeds

WE'VE been furnishing egg making material to a good many hundred poultry raisers for a number of years now.

Of course we don't claim to sell all the poultry food that is sold. But we do claim to sell our share—a good big share—and we are selling to a class of buyers that know the kind of feed that pays.

And here's another thing we're rather proud of: We have a long line of regular year after year customers.

They are result getters.

They know the kind of feed they want and they know where to get it.

You can buy all sorts of poultry foods, put up in all kinds of attractive packages, and sold under wildly extravagant claims at fancy prices.

There's a good deal of mystery about most of them. You are asked to buy them on faith. Neither you nor anybody else except the maker knows what they are made of.

That is not the kind of egg making food we have been selling to the poultrymen of this country.

The fact is, there is no better egg making material to be had than straight lean meat and bone, as all well posted poultry raisers know.

They have all the egg ingredients. There is no mystery about them. Every poultry raiser knows, or ought to know, that feeding lean meats and bone pays and pays big.

That is the class of poultry foods we are selling.

Take, for instance, our Beef Scraps. They are simply lean meat. Not any better than a piece of beef you can buy at the market. But

you can't afford to buy steaks and good cuts to feed your hens. We collect and prepare lean meat scraps and sell them at a price you can afford to pay.

There is but little fat but a great deal of lean. We guarantee them to run over 60% protein—unquestionably the best protein feed on the market.

And we guarantee the Darling Beef Scraps to be fresh and pure. There's no waste. Your hens will eat every morsel of it.

If you have ever fed any of the Darling Scraps you know how greedily the hens eat it and how the good results are sure to follow.

We manufacture and sell other foods. There is no mystery about any of them. Either they are like the Beef Scraps, largely protein feeds, to help along egg getting, such as our special Laying Foods, or they are adapted particularly to some other branch of the poultry business.

Every Darling Food is a special purpose food. They are scientifically prepared—that is, compounded and balanced with all the necessary food elements, so they do work out the particular results desired.

Darling's catalog will give you the particulars on these special purpose foods.

It's the poultryman's own—full of pointers. Nothing listed but standard things, the best of their class.

Don't fail to write and receive a copy. We are prepared to send catalog as well as ship goods from either Chicago or New York Address nearest house.

Darling & Company, Box C, Long Island City, N. Y., Box C, Union Stock Yards, Chicago.

positively be given exhibitors before the close of the show. Reduced rates have been secured on all steam and interurban roads entering our city. Our merchants will have special sales during the week of our show. We are advertised both far and near. Great crowds will be in attendance daily. You will be well repaid by showing your birds in Fort Wayne this winter. Good fellowship, fair treatment and every courtesy at our command is yours if you show your birds with us. Our premium list is now ready for mailing. Ask for it.

D. F. Ault, Secretary.

THE NEBRASKA STATE SHOW FOR 1907.

The Nebraska state show for 1907 will be held in the Lincoln, Neb., Auditorium, the largest and best show room in the whole west, lighted by electricity and steam heated, in the daytime having more than enough light from its numerous windows. Exhibitors will be pleased to show their birds under its roof.

The judges are W. S. Russell, C. H. Rhodes and F. H. Shellabarger. The premium list is almost ready for delivery at this time. It will be found to contain a big list, with liberal money prizes in every class. Exhibitors should remember that this is one of the best "selling" shows in the whole west and that our premiums are guaranteed by the state and paid in full on the Friday of show week to every exhibitor who asks for his prize money.

A big silver loving cup has been offered for the best display of fresh eggs to be shown under the score-card method. This score card will be found in the premium list. E. E. Smith, of Lincoln, Neb., is chairman of the entertainment committee for the 1907 show, and has full charge of the arrangements for the annual banquet. L. P. Ludden, Lincoln, Neb., is secretary, and any further information can be had from him.

CHILTON, WIS.

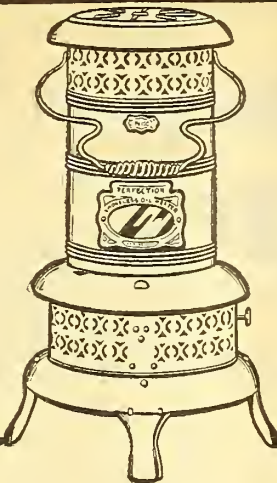

The Chilton Poultry and Pet Stock Association will hold its fourth annual show January 9 to 13, 1907. Frank Heck, of Chicago, is poultry judge, and J. P. Heer, of Milwaukee, pigeon judge. This association offers handsome silver cups that are worth going after and the competition for cups is opened to the world, not confined to members only, as other associations generally do; besides, there will be a large list of specials that will be well worth competing for. But this is not all. The association will pay cash prizes and these will be larger according to entry than any other association ever offered. Coops at this show are free. This association will give handsome silk ribbons which every winner will be proud of.

The premium list is now ready for distribution. Entries positively will close January 1, 1907. Before making any plans for exhibiting remember the importance of the Chilton show. For information and premium list address A. Stransky, show secretary, Chilton, Wis.

WISCONSIN'S BIG SHOW.

The annual exhibition of the La Crosse Progressive Poultry Association, to be held at La Crosse, Wis., will be one of the largest and best shows in Wisconsin. The show will open on January 9 and continue until the 15th. This will give exhibitors an opportunity of shipping

**What
You
Can
Do**

**With
This
Oil
Heater**

With a Perfection Oil Heater you can heat a cold bed-room, make a sick-room more comfortable, warm a chilly hallway, heat water quickly, and do many things better than can be done with any other stove no matter what fuel it burns. The superiority of the

**PERFECTION
Oil Heater**

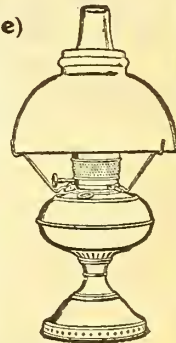

(Equipped with Smokeless Device)

lies in the fact that it generates intense heat without smoke or smell. The oil fount and the wick carrier are made of brass throughout, which insures durability. Gives great heat at small cost. Fount has oil indicator and handle. Heater is light and portable. Absolutely safe and simple—wick cannot be turned too high or too low. Operated as easily as a lamp. All parts easily cleaned. Two finishes—nickel and japan. Every heater warranted. If not at your dealer's write nearest agency for descriptive circular.

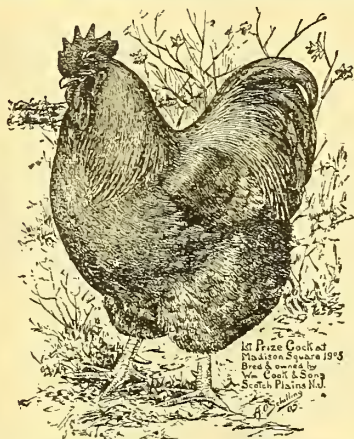

The **Rayo Lamp**

can be used in any room and is the best all-round house lamp made. Gives a clear, steady light. Is the safest lamp you can

buy. Brass throughout and nickel plated. Equipped with the latest improved burner. Handsome—simple—satisfactory. Every lamp warranted. Write to nearest agency if you cannot get it from your dealer.

HOGAN HENS

Are Laying Hens Every One of Them

If you could certainly cull out all the tolerable layers, poor layers and non-layers and keep only the good layers, wouldn't you do it?

Of course you would. Then you are looking for

The Walter Hogan System

It teaches you to do that and more. Pullets sure to become layers. Cocks sure to breed layers. Selection and breeding. A new system that's sound.

All Hogan hens are 200 egg hens. You can have them, absolutely sure. Yes, its startling—a revolution in poultry raising. **But we have the proof.** Write us for it.

THE WALTER HOGAN CO.,

17 Nat'l Bank Building, Fergus Falls, Minn.

their birds on Monday and receiving them from the show the middle of the following week. By having the show open on Wednesday and run over Sunday there will be no danger of having valuable birds lay over Sunday in depots. The show will be open to visitors on Sunday and the exhibitors will receive the benefit of the extra attendance expected on this day.

Large cash prizes will be paid on single birds and exhibition pens, and in addition to this valuable special prizes and sweepstakes will be offered. La Crosse is noted as a point for selling birds, and exhibitors will have an opportunity of coming in contact with people from all over western Wisconsin and Minnesota who are interested in poultry. The show will be judged by James A. Tucker. Put this show on your list and come to one of the largest and best shows in the northwest. For premium list address E. H. Hoffman, secretary, La Crosse, Wis.

ASHTABULA, OHIO.

The Northeastern Ohio Poultry and Pet Stock Association will hold its first annual show January 29 to February 4, 1907. Thomas F. Rigg, judge. Catalogue and entry blanks will be mailed to all who desire them, upon application to the secretary, D. D. Whitaker, Ashtabula, Ohio.

DOWNER'S GROVE, ILL.

The Downer's Grove Poultry Club will hold its third annual show Friday and Saturday, January 4 and 5. Nine handsome silver cups, all appropriately lettered and engraved, will be awarded as special premiums, in addition to about fifty cash prizes. Mr. W. C. Pierce, of Indianapolis, has been engaged as judge. His well known ability as poultry judge, it is expected, will please all of the exhibitors and leave nothing to be desired in that direction. The premium list is arranged in such a way that no one person can carry off more than one cup, unless he exhibits in more than one class and has the birds to win.

The show held by this club last year was a grand success in every way and the net earnings, over and above all expenses, were about \$100. It is confidently expected by the officers and executive committee that the show this winter will be even a greater success. There is certainly a chance here for the exhibitors to get lots of glory and carry off some trophies which are worth while. Premium lists and entry blanks will be gladly sent by the secretary, Mr. E. G. Lemon, to all who are interested.

DELANAN, WIS.

The management of the Southeastern Wisconsin Poultry Association takes pleasure in announcing its ninth annual exhibition at Delavan, Wis., January 1, 2, 3, 4, 5, 1907. This is the oldest continuously organized poultry association in the state, and its increasing popularity is its best recommendation. Its aim is to please and the praises of scores of Wisconsin and northern Illinois exhibitors attest the fact that it does please. Among the many superior inducements to the fancier which this show offers may be mentioned the following: The exhibition is held in a well lighted hall in uniform exhibition coops furnished free by the association. The cash and special prizes are both liberal and

MILK CANS ROB YOU

Look through a microscope at milk set to cream in pans or cans and you'll see how they rob you. You'll see the caseine—the cheese part—forming a spidery web all through the milk. You'll see this web growing thicker and thicker until it forms solid curd. How can you expect all the cream to rise through that? It can't. This

caseine web catches a third to half the cream. You stand that loss just as long as you use pans or cans for they haven't enough skimming force to take out all the cream. But, just the minute you commence using Sharples Dairy Tubular Cream Separator, you stop that loss.

Sharples Dairy Tubular Cream Separators have 10,000 times more skimming force than pans or cans, and twice as much as any other separator. They get all the cream—get it quick—get it free from dirt and in the best condition for making Gilt Edge Butter. Caseine don't bother the Tubular. The Tubular is positively certain to greatly increase your dairy profits, so write at once for catalog T-265 and our valuable free book, "Business Dairying."

The Sharples Separator Co.
West Chester, Pa.
Toronto, Can. Chicago, Ill.

Your Advantage in Advance Fence

We give thirty days' free trial on your own farm—money back if not entirely satisfactory—and allow you the wholesale maker's price if you decide to keep it. Now, Advance is the strongest fence made because we don't cut the stay wire but weave it right into the top and bottom strand wires, thus saving all the strength and making the fence solid as a rock. Our catalogue tells all about it and gives wholesale delivered prices.

ADVANCE FENCE CO., 1382 Old St., Peoria, Ill.

BANNER POULTRY SUPPLIES

of every description. Empire State and Star Incubators and Brooders, Drinking Fountains, Wire Netting, Spray Pumps, White Washing Machines, Powder and Liquid Lice Killers, Roup and Cholera Cures, Condition Powders, Egg Foods, Oyster Shells, Beef Scraps, Dog Cakes and Medicines, and everything necessary for Breeding Poultry and Pet Stock. Our immense illustrated catalogue gives a complete list. It is free. Send for one. **EXCELSIOR WIRE AND POULTRY SUPPLY CO., Dept. O, 26-28 Vesey Street, New York City.**

promptly paid. The birds are well cared for and returned in good condition. Only the best judges are employed. Good things are in store for Delavan exhibitors and all poultrymen are invited to come and take advantage of them. The premium list and Breeders' Directory will be ready for distribution about November 26. All inquiries regarding the show will be promptly answered by the secretary, L. L. Littlefield, Delavan, Wis.

HICKSVILLE, OHIO.

The Hicksville Poultry Association will hold their annual show January 29 to February 1, 1907. S. B. Lane, judge. B. F. Nye, secretary.

WARREN, PA.

The Warren County Poultry and Pet Stock Association will hold its sixth annual show December 24 to 28, 1906. J. Y. Bicknell, judge. Wm. Gray, secretary.

THE SPRINGFIELD SHOW.

The fourth annual Springfield show by the Springfield Poultry and Pet Stock Association will be held this season January 8 to 11, 1907, which will be a score-card show.

The hall committee appointed for the purpose of selecting a hall has decided upon Apollo Hall as the only place suitably lighted and large enough to hold a show of this magnitude.

Tuesday, January 8, will be a closed day until 5 p. m. to enable the judges to complete their work and get the prizes awarded.

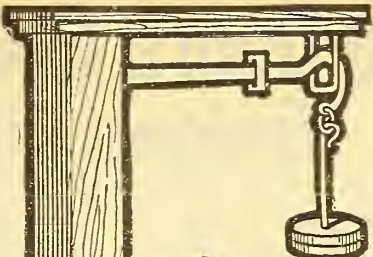

It is not only the intention, but the determination, of this association to secure the best judges obtainable for the several classes. Club-ribbons will be offered by a large number of the national and state clubs. The well known liberality of this association in giving cash and cup prizes will be enlarged upon, and in addition a greater number of special prizes will be offered than heretofore.

All birds will be handled by a member of the association as soon as they arrive in this city, and until returned to the express company they will receive the best of care.

The association has received a large increase in membership this fall and is in a flourishing condition. In making up our mailing list we may not have the address of some very desirable exhibitors, and the association would consider it a favor if all who desire a premium list would send their names to the secretary, so one may be mailed to them as soon as published. R. J. Hamilton, secretary.

MISSOURI STATE SHOW.

The Missouri State Poultry Show will be held December 11 to 14, 1906, at Pleasant Hill, Mo. Nearly all towns in the state have direct lines of railroad to Kansas City, and Pleasant Hill is but a short distance from there. Pleasant Hill has three railroads and passenger trains stop there nearly every hour of the day or night. All indications point to the most successful show ever held in the state. There will be nearly \$1,000 offered in cash prizes and specials. Ten handsome silver cups are being offered, and no other show in the United States will excel the long list of specials offered this year at the Missouri show. Judges of national reputation have been employed, such as Judge Charles H. Rhoades, of Topeka, Kan.; Judge W. S.

The Scales Don't Lie

The weigh scales don't lie. If you have given your fowls Dr. Hess Poultry Pan-a-ce-a regularly with the daily ration, there will be more pounds registered on the scale beam when you come to sell; there will be no disease in the flock, and the poultry buyer will find eggs in the crate next morning.

DR. HESS Poultry PAN-A-CE-A

is the famous poultry tonic—formulated by Dr. Hess (M. D., D.V.S.). By the action of bitter tonics the medical authorities attest that the organs of digestion will extract more of the egg-making material from the food, as well as other nutrition which is applied to the manufacture of bone, muscle and feathers. Dr. Hess Poultry Pan-a-ce-a besides making hens lay, cures and prevents cholera, roup, indigestion, etc. It contains germicides that destroy the minute bacteria which produce so many fatal diseases. Remember Dr. Hess Poultry Pan-a-ce-a bears the indorsement of leading Poultry Associations in the United States and Canada, costs but a penny a day for about 30 fowls, and is sold on a written guarantee.

 Kills Lice.

Again The Victory is Ours

At the Tennessee State Fair, Oct. 8-13, 1906, where the best birds that could be raised and bought were shown, with entries from many states including New York, Ohio and Indiana.

Jones, the Wyandotte Man, repeated the winning of last winter at this same show, winning every first in the classes, also every second but two, they going to birds bred from my stock direct. It is no trouble to win when you get

The Strongest Blood Lines on Earth

Can't I furnish you with what you need? I have 2000 birds to sell, highest class exhibition birds that will win in any company, breeders that will produce winners, male birds that will improve your flock, can furnish you with any number, you know the classes I breed:

Silver, Golden, White and Buff Wyandottes

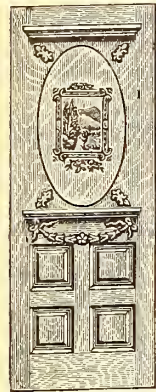

Get a copy of my handsome 36-page catalogue, a beautiful color work of art, a book full of valuable information and worthy a place in any library. Send 10c for mailing.

High-Class Imported and American Bred Scotch Collies For Sale.

R. E. JONES, R. F. D. 50, "The Pines," PADUCAH, KENTUCKY

We Sell You Doors 80¢ = ALL HIGH GRADE AND AT HALF YOUR LOCAL DEALER'S PRICES Windows 62¢ =

If you have any use for Doors, Windows, Storm Sash, Stair Posts, Mouldings, Porch Brackets, Columns or any kind of Millwork for your own Buildings or as a contractor, don't buy elsewhere until you write us for our illustrated catalog. It quotes you at least 50 per cent lower prices than your local dealer or any retailer or "mail-order" house possibly could, as we are manufacturers with the largest mill in the world.

Modern Front Door 3.90
Regular price \$8.50

We sell our Millwork only direct to the user. We ship anywhere in the United States and guarantee to make you a clean saving, freight included, of from 25 to 50 per cent on anything you order.

Just send us a postal with your name and address and we'll promptly send, postpaid,

Our Grand Illustrated Millwork Catalog

showing everything in the latest styles of High Grade Millwork at lower prices than you have ever thought possible.

You can get an idea by the few illustrations and prices in this small space of what a saving you can make by buying from our catalog, but you must see the catalog to fully appreciate this selling plan of ours direct to you.

Do not think of buying until you get our estimate.

Our work is all Guaranteed strictly up to the Official Grades adopted by the

GORDON VAN TINE & CO., Station A39, DAVENPORT, IA.

Sash, Door and Blind Manufacturers' Association of the Northwest, and if not exactly as represented in every particular, you can ship your order back at our expense.

Windows 62¢
Regular \$1.50

Our lumber is first air-dried and then put through a scientific drying process. Joints are made with heavy hardwood dowel pins glued with impregnated glue, pressed together by heavy steam-power press. There is no "come apart" to our work.

Remember, you save 50 per cent, freight included, on your Local Dealer's prices.

We operate the largest mill in the world—168,000 feet of floor space (four acres)—have been in business since 1865—own our timber lands, saw-mills and lumber yards.

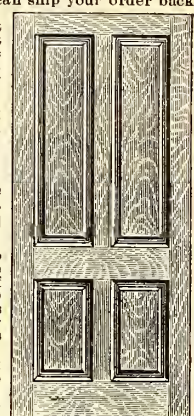

We carry a large stock and can therefore ship promptly.

We have no traveling men—sell only for cash.

We are the only large manufacturers of sash, doors and blinds selling direct to the consumer. Our prices will astonish you. Don't buy anything in our line until you get our catalog, the grandest woodwork catalog published.

Your banker, or any banker in Davenport, Iowa, our home, will satisfy you that we are thoroughly responsible. Our catalog will explain everything to you. Write for it today. You will receive it by return mail, postpaid.

STAIR NEWELS

Worth \$3.00 to \$5.00

High Grade Door 80¢
Regular price \$2.00

Russell, of Ottumwa, Iowa, and Judge A. H. Asche, of Princeton, Ill., a Langshan specialist, has been employed to judge the White and Black Langshans, as the Langshan Club will hold its annual meet at the Missouri show and offer a handsome silver cup. Poultrymen of national reputation will make addresses during the show on subjects of interest to the breeders of Missouri and the west. Catalogues are ready for distribution, so write the secretary, T. E. Quisenberry, Slater, Mo., for further information.

EAST ST. LOUIS, ILL.

The St. Clair Poultry Association will hold its annual show December 17-23, 1906. D. T. Heimlich, Ross C. H. Hallock and William Campbell, judges.

This association is incorporated and the premiums assured; \$2 for first, \$1 for second in single entries; \$4 for first and \$2 for second in pen class. Entry fee only 25 cents. A large and commodious hall has been secured, with plenty of light and ground floor steam heated. The association has just bought 750 new Empire coops with which to coop the show. For premium list address David O. Thomas or Henry Renshaw, East St. Louis, Ill.

MANITOWOC, WIS.

The second annual show of the Manitowoc Pigeon and Poultry Fanciers' Association will be held January 17 to 20, 1907. Jas. A. Tucker, judge of poultry; Herman Osthoff, judge of pigeons. Send for premium list to the secretary, F. C. Borchardt, Manitowoc, Wis.

COREY, OHIO.

The Corey Poultry Club will hold their show December 11 to 15, with Geo. A. Burgott, judge. Some liberal specials have been provided, including a \$45 run-about buggy on highest scoring pen. Send for premium list to Geo. Wolfrum, secretary.

CANTON, ILL.

The fifth annual show by the Fulton County Poultry Breeders' Association will be held at Canton, Ill., Jan. 14-19, 1907. O. L. McCord, of Danville, is judge. This show at Canton has an enviable record. Each year it not only pays all cash premiums but closes up the year's business with good big balances to carry forward. The association recently offered a reward of \$25 for the arrest and conviction of any one stealing poultry from a member of the association. This has been a big card, popularizing the association with the farmers of Fulton county, who have been afraid to buy fancy poultry for fear that it would be stolen.

A GOOD PLACE TO SHOW.

The St. Louis Poultry and Pet Stock Association of St. Louis, Mich., would like to have as many breeders of fancy poultry that make a business of showing birds come and show with them this winter; also all others are invited. The old breeders will find plenty of competition here, as some of the best birds raised in Michigan will be at this show. Our cash premiums have been made as liberal as our expenses will warrant and are specified amounts and not on the percentage plan. Frank W.

POULTRY RAISERS PREPARE FOR ROUP

CHANGING SEASONS—CHILL WINDS—WINTRY WEATHER bring on colds, catarrh, etc., that lead to ROUP, the scourge of the poultry yard. It can be prevented and cured with

Conkey's Roup Cure

Travis will place the awards, and every fancier can feel assured that the awards will be placed where they belong. Remember, we pay good cash premiums, and that we have a nice list of specials. For premium list write to W. E. Hain, secretary, St. Louis, Mich., lock box 54. W. E. Hain, Secretary.

“TO BE A HUMMER.”

The Central Indiana Fanciers' Association will hold their fifth annual show December 17 to 22, 1906, and promises to be the best ever held by this association.

The association will award first, second and third premium on all varieties, and give special badge for every special premium, of which there are more than sixty. Our cash premium will also interest you.

A special feature of this exhibit is the number of specialty clubs represented. The secretary, Mr. Hurt, has left nothing undone along this line, and results are more than flattering.

This show is always welcomed by the exhibitor who has surplus stock for sale, as they always find ready purchasers at good prices.

This show is run on purely business principles and invites you to bring your best and see what a good show is. For further particulars and premium list address the secretary, Peter S. Hurt, Throntown, Ind.

NO CHANGE IN INDIANAPOLIS SHOW DATES.

The Indiana Fanciers' Association will hold their annual show February 2 to 8, 1907, as originally planned. There was talk of tearing down Tomlinson's Hall, in order to erect the new Coliseum, and work was expected to begin not later than October 1, but the city officials have decided to make no changes in the building until the close of the present show season. The poultry fanciers have been advised of this fact and instructed to go ahead with their exhibition.

The American Kennel Club meets with the poultrymen in Indianapolis, and this

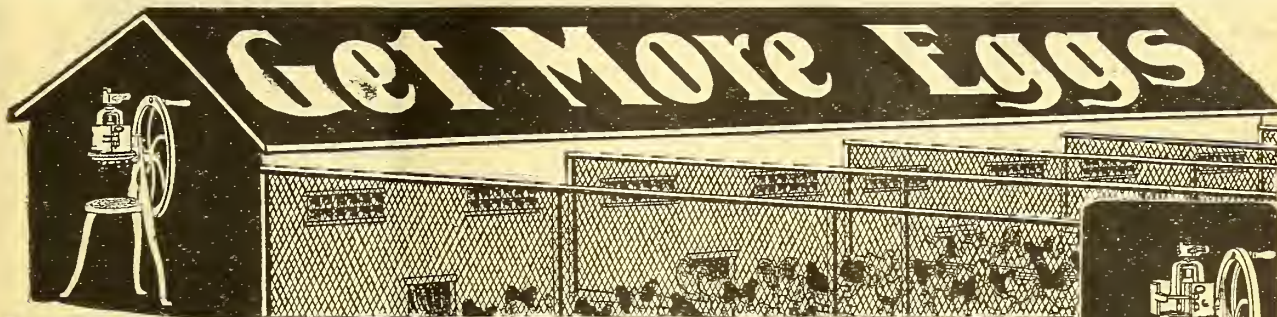

will be one of the big shows of the year. The premium list will be ready December 15. Theo. Hewes, of Indianapolis, is the president, to whom all inquiries for premium list should be addressed.

LYNN, MASS.

The Lynn (Mass.) Poultry Association will hold their tenth annual exhibition January 1, 2, 3 and 4, 1907. Messrs. A. F. Pierce, John Crowther, W. H. Card and J. F. Crangle will judge. Wm. F. Craig, secretary.

TIFFIN, OHIO.

Again the Northwestern Ohio Poultry and Pet Stock Association, of Tiffin, Ohio, comes to the front with \$125 in special cash premiums. This association is now considered one of the top notchers of the state, always paying its premiums promptly and in full, and fulfilling every promise made. They have this year secured the meeting of the State White Rock Club, which alone goes to show that they are up and doing.

EVERY atom of matter that the hen puts into an egg, must come from the food she eats. She can't get it in any other way.

So, it is perfectly clear that if you expect to get more eggs, you must give the hen materials to make eggs from—food containing more of the elements that enter into egg making, in an easily digested form.

There is no room for argument there.

But what kind of food is that? Where will we find it?

Well, it so happens that not only the egg, but the greater part of the fowl's body—bone, muscle and feathers, is made up of what the professors call "protein."

Unfortunately, it also happens that protein is found in only small quantities in the grains and vegetables usually fed to fowls, but in exceedingly large quantities in animal matter or food.

That explains why fowls of all sizes and ages, from the youngest chick to the oldest rooster, love worms and bugs above everything else.

They crave animal food, because Natural Instinct teaches them that they need it for growth, development, vitality and egg-making.

Of course your hens cannot get worms and bugs in winter or when they are confined to close quarters.

You, therefore, must give them this protein food in some other form, if you hope to get the best results from your flock.

You can get this protein in its most digestible form—most nearly like the worms and bugs your hens love so much—by simply taking the trimmings from your butcher's hock, the bones of beef, pork or lamb with gristle and meat adhering to them.

They make a perfect substitute—not only because they contain the same food elements as the worms and bugs, but also because, in its fresh, raw state, it is as easily digested and as greatly relished as are the worms and bugs.

In effect it is not something that is "almost as good," but it is identically the same.

It "balances the ration" by supplying what is lacking—or is very scarce, in the grain you feed.

It has more than four times the egg-making value of grain and is rich in the elements needed for making bone and muscle and so promoting rapid growth and developing as well as improving the vigor and vitality of the entire flock.

That is why fresh-cut raw bone—doubles the egg yield by giving the hen egg-making material in its most easily digested form;

—makes more fertile eggs, produces larger hatches and livelier

chicks, because it makes hen and cock more vigorous, fuller of vitality, so that the eggs have more life in them;

—develops earlier broilers and layers and makes heavier market fowls, because it promotes growth by supplying the elements most needed for making bone and flesh and muscle;

—makes red combs, bright eyes and glossy plumage, because it gives the fowls that variety of ration so necessary to their health and well being.

No matter what line of poultry raising you are in, fresh cut raw bone will help you get better results and make more money.

And the beauty of it is, it costs you but little more than the labor of cutting it.

Don't be persuaded, however, that "bone meal" or so-called "beef-scrap, can take the place of raw bone.

It is the live worm the hen craves, not a dried up carcass, and it is raw, fresh animal food that does her the most good and is the most easily digested.

If dried, or cooked or emulsified or preserved it naturally loses a large part of its value.

Neither should you class raw bone with the advertised "poultry foods" or "condition powders" made from secret formulae, for which such extravagant claims are made. Your hens do not need these compounds or medicines to make them lay, if they have the right kind of materi-

To prove to you what it will do we will send you any size or style of

Mann's Latest Model Bone Cutter

that you may select from our catalogue on

Ten Days Free Trial

(No money in advance)

You simply select the machine you want to try—and we send it to you. No red tape, no "deposit," no money in advance.

If it does what we claim it will do, you buy it.

If not you return it at our expense.

Can we make you any fairer offer than that? * * *

You will find that Mann's Bone Cutter turns easily, cuts rapidly and produces better poultry food than any other.

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

It makes better poultry food than any other because it cuts not only all green bone, but also all adhering meat and gristle—wasting nothing and leaving no chunks or slivers.

Its open hinged cylinder takes large bones and can be easily kept clean.

It is strong and durable and requires few repairs.

But try it and see—that's the way to tell.

Send Today for Catalog and make your selection of machine for trial.

We will do the rest.

TEN DAYS FREE TRIAL

F. W. Mann Co., Box 56, Milford, Mass.

A Large Egg Yield

A hen—any hen—will lay a great number of eggs (some more than others) if conditions and surroundings are such as meet the requirements of her nature. Here is where your part comes in. Give the hen a regular daily portion (a penny's worth is enough for 30 hens) of Dr. Hess Poultry Pan-a-ce-a, and she will do the rest.

DR. HESS POULTRY PAN-A-CE-A

is not a food—it is a tonic, specially prepared to give "tone" to the digestive and reproductive organs, so that the maximum of food, over and above the maintenance ration, is used to make eggs. It has also a property foreign to a so-called poultry food. It is a germicide, that is, it destroys bacteria, the cause of nearly all poultry ailments. Poultry Pan-a-ce-a is the prescription of Dr. Hess (M.D., D.V.S.), is endorsed by the leading poultry associations in United States and Canada, and is sold on a written guarantee.

PINELAND INCUBATORS AND BROODERS

"94 chicks from 100 eggs." John Burroughs, Pemberton, N. J. did it with a Pineland. "If I needed 100 incubators," he says, "I would buy only the Pineland." That's just one only of scores of equally good hatches. Our guarantee securely protects you from disappointment or loss. Free catalog. Agents wanted. Pineland Incubator Co. Box W, Jamesburg, N. J.

20 YEARS SUCCESS

EGG MAKING

is a hen's natural work. Cut bone is the raw material she needs to make her lay an egg a day. A CROWN BONE CUTTER will prepare the food from scrap bones quickly, easily. Write for catalog—tells about the Crown. Wilson Bros., Box 200, Easton, Pa.

HEALTHY TREES HONEST IN QUALITY WE PAY FREIGHT

Grafted apple 4c, budded peach 4c, budded cherry 15c, oncord grapes \$2 per 100. Black Locust \$1 per 1000. Complete colored cat. free. Galbraith Nurseries, Box 77, Fairbury, Neb.

With, as judges claim, the best lighted showroom in the state, money in hand with which to pay every obligation, and Chas. McClave to place the awards, fanciers should certainly consider Tiffin January 9 to 12, 1907. Premium lists can be had by addressing V. Crabtree, Secretary, Tiffin, Ohio.

CLEVELAND, OHIO.

There is great enthusiasm in Cleveland over the show which is to be held in January. A year ago the interested business men of Cleveland formed an association on a strong financial and business basis and pulled off a show last February that was a remarkable success financially and otherwise. This year they have a nice balance in the treasury and are planning to pay all the premiums before the close of the show.

A great many cups have been secured and the prizes throughout are attractive. If large entries in the various classes, hospitable treatment, and a thorough good time are appreciated, don't forget the Cleveland show.

The date is January 14 to 19 at Gray's Armory. The poultry judges will be Chas. McClave, Thos. F. Rigg, Eugene Sites and M. S. Gardner, and the pigeon judges L. A. Jansen and Chas. Lang. Entries close January 7. Obtain premium list from F. L. Gruhl, secretary, 9902 Woodland avenue, Cleveland, Ohio.

WHITE WYANDOTTES AT BOSTON.

The White Wyandotte class at the coming Boston show promises to be a record breaker, as the National White Wyandotte Club has prepared a list of \$400 in specials for this show, which, added to the \$100 offered by the Boston management in regular and special prizes, will make a total of \$500 to be competed for by exhibitors of this popular variety.

Mr. W. R. Graves, of Springfield, Mass., president of the club, has called the annual meeting for Wednesday, January 16, at 4 p. m.

Every person interested in White Wyandottes should secure a copy of the Boston premium list, giving a detailed list of the special prizes, a copy of which may be had free by addressing the secretary of the show, Mr. S. H. Roberts, South Attleboro, Mass.

EAST LIVERPOOL, OHIO.

The Tri-City Fanciers' Club will hold a poultry, pigeon and pet stock show December 24 to 29. T. E. Orr will place the awards. Arrangements have been made to coop over 1,000 birds, and over \$350 in silver trophies, cash and other valuable prizes are offered. All premiums will be paid promptly. All fanciers and breeders are earnestly requested to show with us, as this will be one of the important shows of the state. Full information and premium lists can be obtained by writing the secretary, Ernest W. Simpson, Station A, East Liverpool, Ohio.

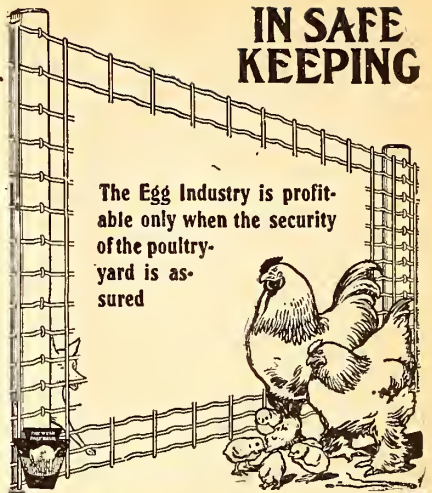

DETROIT, MICH.

The officers of the Michigan State Poultry Association are now preparing for their fourteenth annual exhibition to be held at Light Guard Armory, Detroit, January 4-9, 1907.

The association is free of all indebtedness, has a membership of over 300

WILLIAM ELLERY BRIGHT, Proprietor
A. C. SMITH, Superintendent

Helps Raise Little Chicks

Mrs. J. Irvine, of Five Mile, Mont., says: "Pratts Poultry Regulator is a wonderful remedy, and I would not try to keep chickens without it. Out of 60 young chickens hatched this year I raised 59 and not one sick chicken. The one I lost got hurt."

Gives Health—Produces Eggs

Mrs. Satek, of Chicago, Ill., says: "My 30 chickens were poor and sickly-looking until I used Pratts Poultry Regulator. It helped them at once, and in January and February, when eggs were 40c. a dozen, I got as many as 24 in one day, and never less than 15 or 16. I would not be without it."

Poultry Regulator

Makes Success and Prize Winners

Mr. F. L. Garnett, of Nottingham, Ohio, says: "I have used Pratts Poultry Regulator for 15 years or more and always found it the very best goods to be obtained, and have been the winner of prizes East, West, North and South, and attribute my success in the poultry business largely to the good results from the continued use of Pratts Poultry Regulator."

Improves Appearance

Andrew A. Overton, of Nashville, Tenn., says: "Since feeding Pratts Poultry Regulator my chickens are never sick; their combs are red and clean; feathers smooth, and their general condition healthy."

Best Made

Mr. C. B. Smith, of Black Rock, Ark., says: "I have used all kinds of poultry foods, but Pratts is the best egg producer and disease preventive on the market."

Order Pratts Poultry Regulator to-day—the **guaranteed** egg producer, fattener and disease destroyer. Packages, 25c. and 60c.; 9c. per lb. in 100-lb. bags.

PRATT FOOD CO.
Philadelphia

fore Jan. 1, 1907, will be entitled to compete for the club specials.

This, the parent Orpington club, is in no way antagonistic to the specialty clubs, and every member of a specialty club should belong to the general organization. The club offers ribbons for competition by its members at every show in the United States and Canada, and they are well worth winning. We will be glad to welcome you, and full particulars will be sent if you will address

Wm. Barry Owen,
Secretary, Vineyard Haven, Mass.
W. L. Davis, President.

THE NATIONAL S. C. BLACK ORPINGTON CLUB.

The National S. C. Black Orpington Club was organized November 10 for the benefit of S. C. Black Orpington breeders. Its object is to exploit the sterling qualities of the breed and advance its interests in every possible manner. It stands every S. C. Black Orpington breeder in hand to join and assist in making this one of the largest specialty clubs in the country. The dues are \$1.00 per year, or \$10.00 life membership.

The officers are: President, W. L. Davis; vice-president, O. A. Bogardus; secretary-treasurer, Joe Coleman; executive committee, Wm. P. Palmer, C. E. Vass, C. S. Byers, and the president and secretary of the club. State vice-presidents are as follows: New York, Dr. M. S. Sherwood; Ohio, H. Beck; Indiana, D. N. Foster; New Jersey, C. E. Vass; Pennsylvania, Samuel Gibson; New Hampshire, J. E. Dustiu; Missouri, C. A. Emry; Maryland, Wm. P. Palmer; Kentucky, O. A. Bogardus; Illinois, Geo. Whitelaw; Massachusetts, Maurice A. Delano.

Breeders desiring membership address the secretary-treasurer, Joe Coleman, Bellville, Ohio.

CLUB OFFER.

The Cornish Indian Club of America offer four splendid silk ribbons, one each for best cock, best cockerel, best hen and best pullet, to exhibitors at any show in the United States where three or more members are competing. To non-members, as a special inducement to join our club, the same offer will be made (for the fall shows, 1906, and spring, 1907, only), where thirty or more birds are on exhibition, proof of number of entry to be forwarded to Charles S. Brent, club president, Oconomowoc, who will promptly forward ribbons. Send \$1 for annual dues and membership fee to Wm. Sawyer, Jr., secretary and treasurer, Owosso, Mich.

Wm. Sawyer, Jr.,
Secy. and Treas.,

Charles S. Brent, Pres., Owosso, Mich.
Oconomowoc, Wis.

AMERICAN WHITE ORPINGTON CLUB.

SASS BROS., : : Box A, Ancona, Ill.

LUX-OIL • A Dependable Kerosene For Incubator Use

If you ever try it you will use no other. It gives you a good strong flame that stays the same until the last drop is gone—that's why it is dependable. Notice these points:

You don't have to watch your incubator. It produces more heat. It MUST burn with a Uniform Flame. It does not smell or soot.

There's a reason. **LUX-OIL IS ALL OIL.**

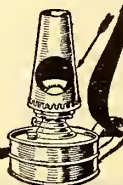

It is specially prepared from Premium Pennsylvania Crude Oil at one refinery; is filtered through 26 feet of fuller's earth; has a gravity of 50; is better than the best kerosene. Put up in 5-gallon sealed cans, packed two to the case. Price \$3.00 per case. Order today. For Sale by all first class dealers. If your dealer does not handle, order direct.

Marshall Oil Co., Factory and Laboratory, Marshalltown, Ia.
Station: Lincoln, Neb. Fargo, N.D. Okaloosa and Mason City, Ia.

When Lux-Oil is used

When common kerosene is used

Orpington hen, special club ribbon for best White Orpington pullet.

As stated, these special prizes will be given on American bred White Orpingtons, and only members of the American White Orpington Club are eligible to compete for the prizes. The said club is a national organization, officered by breeders of known standing, and they desire to have every breeder of White Orpingtons as a member. Application blanks can be secured by addressing the secretary, Box 328, Richmond, Va. W. L. Davis, president. Dr. F. S. Bullington, secretary-treasurer.

AMERICAN WHITE PLYMOUTH ROCK CLUB.

The annual meeting of the American White Plymouth Rock Club for Illinois will be held at Macomb in connection with the State Show, which is to be held there in January, 1907. At this show the American White Plymouth Rock Club will give as specials, on White Rocks, \$5.00 in gold for the best collection and \$1.00 each on best cock, hen, cockerel, pullet and pen, to members of the club in good standing. Anyone joining the club previous to the closing of the entries for that show will be eligible for these specials.

J. L. Jefferson, DesPlaines, Ill., Illinois Rep. of the W. P. R. Club.

AMERICAN PLYMOUTH ROCK CLUB.

The American Plymouth Rock Club offer fifty-six special prices on Barred Plymouth Rocks to be competed for by club members at the next Madison

Square Garden show, 1907. These prizes consist of two silver cups and \$380 in cash. In addition to above prizes a handsome numbered silk ribbon will be awarded with each of the prizes. H. P. Schwab will judge the Rocks. We are looking for a record-breaker exhibit and a lively time in "Rock alley." C. H. Latham, Lancaster, Mass., secretary of club Committee on Funds for the New York show.

AMERICAN PLYMOUTH ROCK CLUB.

The American Plymouth Rock Club will meet at Chicago, Ill., Jan. 23 to 30, 1907. Over \$225 will be offered as cash specials on the Barred Plymouth Rocks and a large and fine exhibit is anticipated.

The club will meet in the officers' rooms Saturday, Jan. 25, at 2 p. m. All that become members of the club before the first day of the show will be entitled to compete for the club specials. All are cordially invited to attend.

H. P. Schwab, Irondequoit, N. Y., Secretary.
M. S. Gardiner, President.
Dr. O. P. Bennett, Washington, Ill., State Vice President.

AMERICAN ROSE COMB WHITE LEGHORN CLUB.

The annual meeting of the American Rose Comb White Leghorn Club will be held in Chicago, January 24, during the National Breeders and Fanciers' Association's show. All members are requested to be present.
Lincoln, Ill. John J. Peters, Sec.

AMERICAN LEGHORN CLUB.

The annual meeting and election of officers of the American Leghorn Club will be held at Madison Square Garden, in New York city, on Thursday, January 3, 1907, during the New York show.

W. W. Babcock, Sec.-Treas.
Bath, N. Y.

224 India St., Brooklyn, N. Y.
Nov. 10, 1906.

Editor American Poultry Journal:
Dear Sir: Being a small poultry keeper and reader of the American Poultry Journal I take this opportunity to ask the other readers of the Journal for a good method for preserving eggs in a very moist locality. I used the lime solution for a number of years, but my folks taste lime out of the eggs. I prepare the solution by taking 1 pound of unslaked lime and 1 pound of rock salt to every 3 gallons of water, leave it stand for three weeks, stirring it daily, and place the eggs in as soon as the thin crust has formed on the surface of the liquid.

Last year I used watergrass, but this was a failure for the eggs lost their flavor and had the peculiar taste of store eggs.

Could anyone suggest a better method, even if it be but another way of preparing the lime solution?

Brooklyn, N. Y.

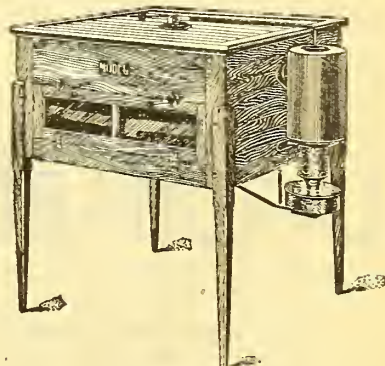

Chas. Rolper.

The show season is now upon us, and both the amateur and old breeder should attend as many as they can conveniently. There is always something to learn at a poultry show.

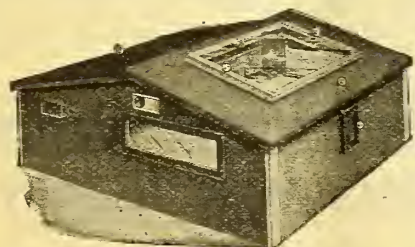

PHILLIPS' SECOND CROP CUT CLOVER

This is a very choice article. Crop being selected with the greatest care. We have our own mill right in the heart of the clover section of this state, which saves us exhorbitant freight rates, thereby allowing us to give the trade a first rate article at a moderate price.

PHILLIPS' BALANCED HEN RATION

A well balanced feed for laying hens. Grains changed according to season. Very high in protein. The price of this is governed according to market changes.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

A SIMPLER OBSERVANCE OF CHRISTMAS.

All over the world, wherever the American Poultry Journal goes this month, the spirit of Christmas is in the air, with its cheer and gladness. In city homes, in little hamlets, and on the more isolated farms, there is the same happy feeling, the merry confusion, the half whispered secret, the half hint of good things to come.

Our little editorial chat this month has for its theme the thought of a more simple observance of the day than has been the tendency for the past few years. It is not the gift, but the loving thought that prompts it, which makes its value. A simple gift, showing careful study on the part of the sender as to the tastes of the recipient, is worth infinitely more than one which represents an outlay of money only, and is given to "pay off" a Christmas debt. A little note of Christmas greeting to some lonely friend, whether she be rich or poor, may light a spark of happiness that will warm a lonely heart. A spray of holly or bit of greenery gathered by the sender will carry a message of love and cheer and leave no sense of obligation to be repaid by some one who can ill afford it.

The memory comes to the writer of one of the sweetest, yet most simple

Christmases she ever heard of. It was in a home where money had not been plentiful during the year, and Christmas week dawned with a gloomy outlook. It was decided that Christmas would have to be a day of loving thoughts rather than of gifts. But the two daughters of the family planned together, and in the gray dawn of Christmas day they stole into the room where their father and mother were sleeping, and woke them with loving kisses, placing in their hands stockings full of mysterious knobs and bulges. They had tried to remember all that their parents had ever told them of the Christmas days of long ago, when they, too, were children, and the stockings, though representing an outlay of but a few cents each, were as perfect duplicates of those of the far away days as this modern era could produce. There were gingerbread dolls, sticks of red and white striped peppermint candy, hoarhound and clear lemon, a china doll for the "girl" and a spinning top for the "boy," big marbles with a silver horse blown in the center of each, gorgeously painted whistles, a few raisins and nuts, and tucked in the toe of each stocking was a big, shiny red apple.

Do you wonder that, as one thing after another was produced, the tears were quite as near the surface as were the smiles, while thoughts of the childhood days in the old home and of the dear ones, "loved, and lost awhile,"

mingled with the merriment produced at the sight of the quaint gifts?

The story needs no comment. Christmas should be a time of simple, loving, thoughtful remembrance, of happy home gatherings, and a time, as well, when the doors are opened to take in the lonely ones of earth; a day when all worry and sorrow is put aside for the time being, and love abounds.

EXPERIENCE DEPARTMENT.

Miss C. N. B., of Traverse City, Mich., says: "I am sending something for your Experience department that has helped me in times of difficulty. I have always had a good deal of trouble with the curdling of custards, if they are left a moment too long on the stove, but lately I have scalded the milk thoroughly before adding the other ingredients and both boiled and baked custards come out as smooth as velvet. If there is time let the scalded milk cool before adding the eggs, sugar, etc., though I have had no trouble when adding them to the hot milk.

Mrs. Kissinger, of Yuma, Colo., whose Ralston bread is in great favor with all who visit her hospitable home, gives her method of making it. She says that there may be short cuts to good bread making, but she prefers to take a little more trouble with hers, knowing that it will always come out of the oven looking just right. At night she makes her white sponge for her regular supply of white bread, using half a cake of compressed yeast, half a tablespoonful of salt, a scant tablespoonful of sugar and the same of lard, to lukewarm water in which potatoes have been boiled, adding also a little mashed potato. For the white bread she adds in the morning some more milk or lukewarm potato water and lets it rise again, then kneads down twice, and after it rises the last time she makes it into loaves and bakes it. For the Ralston bread, after the sponge has risen all night, she stirs in enough Ralston health flour in the morn-

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE. STOCK FOR SALE, BOTH OLD AND YOUNG.** Illustrated circular free.

Keeps Poultry Healthy Prevents Disease

VIGER'S
Crushed
Charcoal

WATCH YOUR HENS' CROPS.

Most people dig their graves with their teeth. Of the toothless hen we may say with equal truth that its crop is its thermometer of health. If the crop is filled with poisonous substances and the hen suffers from digestive disorders, the hen will become weak, unhealthy and cease to lay regularly. Viger's Crushed Charcoal will absorb all poisons and noxious gases in the crop and put your hens in prime condition.

Not a drug, but a simple product of nature, recommended by the highest authorities. Our iron-clad guarantee with every bag; the results we claim for it or money refunded. A trial is all we ask.

3 sizes. Coarse granulated, for mature poultry; fine granulated, for little chicks; pulverized, for mashers.

Prices—\$1.00 per 50-pound trial bag. Special prices in quantities. Samples free.

434 20TH STREET,

VIGER'S COAL & WOOD CO.

DETROIT, MICH.

MY SINGLE COMB W. LEGHORNS WIN AGAIN

as usual at the **GREAT HAGERSTOWN SHOW.** I won first pullet in the strongest class of pullets ever shown at this show. Also 3d hen and 3d pen. I have about 300 fine large pullets already matured, and about 100 fine cockerels, sisters and brothers of my winners, for sale at right prices, considering quality. About 200 of these pullets were bred especially for egg production. Money back every time if not satisfied.

JOS. A. BURKHART

STATE VICE-PRES., NAT'L
S. C. W. LEGHORN CLUB

SMITHSBURG, MD.

ing to make a very moist dough, one which cannot be handled without greasing the hands. She lets this rise like the white bread before making into loaves.

Mrs. Mary Wilkins, of West Alton, Minnesota, says: "I am much interested in everything which appears in the American Poultry Journal, and have had success with my hens ever since following its advice. I like the home department, and think we should take advantage of its columns. Many of us live in small places, or on farms, where we find it difficult to get the pretty things which make city Christmas trees things of beauty. I have found that there are many simple decorations which are just as effective. Bits of cotton pulled into flakes are a good imitation of snow and are especially pretty if the tree is further decorated with strings of popcorn alternating with cranberries, or the bright red berries which are to be found in the woods in the late fall. A novel surprise for the children is to wind the smaller presents in balls of cotton, to resemble snowballs, and hang them on the tree. It is not the value of the gift, but the fun that accompanies it, which makes it worth while to the little folks. Instead of the old method of making stockings of netting for the candy, cut the netting into stars, crescents, or other odd shapes, just for a change. All the children will enjoy making chains of bright colored bits of paper. If you live near a printing office, scraps can generally be had for the asking, or at least for a few pennies. Cut these in narrow strips, and catch them together into rings, with flour paste. Save the egg shells used in your holiday cooking, trim the tops carefully with the scissors, paste bits of bright paper around them, or use tiny pictures cut from papers and magazines, adding a strip of paper for a handle, and fill them with tiny candies. Or they can be colored, like Easter eggs. They make very pretty ornaments for the trees."

Mrs. C. J. Green, of El Paso, Texas, says: "I have been a constant reader of the magazine ever since we moved here from the east, and find something helpful in each month's number. We are making a border in our sitting room from the colored covers and you have no idea how bright and cheery they make the walls of our little home. I always feel sorry for housekeepers who 'take hold of things by the wrong handle.' For the benefit of those who do not know all the easy ways of doing the household duties I want to tell of some things I have learned. While they are so simple that I am almost afraid to take up your space with them, yet they will doubtless be new to many readers. Do you know that you will shed no more tears when peeling onions if you hold them and the knife under water? That butter rubbed on the fingers and knife when stoning raisins will prevent the disagreeable stickiness? That new tinware will never rust if it is thoroughly greased with fresh lard and heated in the oven before using? That Indian meal mush for frying should not be cooked as long as that to be eaten fresh? Pour it into a deep pan after cooking it half an hour and stirring it frequently. When cold, cut in slices, dip in beaten egg, and it will fry crisp. That batter for griddle cakes will pour easier and the disagreeable dripping will be avoided if it is put into a pitcher instead of using a spoon? That the yolk of an egg will keep for several days if it is covered with cold water and put in a cool place?"

The only roofing sold on a money-back guaranty.

READ OUR TRIAL OFFER.

Paroid Roofing

IF YOU want the most durable and most economical roofing you can buy, please read the guaranty we give on Paroid.

We can and do give you this guaranty because Paroid is the best ready roofing ever made.

If you will compare a sample of it with others, you can see and feel the difference.

Use your own judgment.

Put your samples out in freezing weather and then try to bend them.

Paroid will be soft and pliable.

The others will all break and crack!

The difference is in the way they are made.

We make the felt for Paroid in our own mills, established in 1817. We know how and we take no chances.

Other manufacturers buy their felt, the most important part of a ready roofing, where they can get it the cheapest, and run big risks at the very start.

We saturate the felt in a compound of our own, that renders every fibre of it water proof. Soaked, mind you, not merely dipped. We coat it with the toughest, strongest, thick-

est, smoothest, most flexible and most durable coating used in any ready roofing ever made. You can see and feel that for yourself.

Then we give you with every roll of Paroid a complete roofing kit, containing our patented caps—the only rust-proof cap made. Water can't rust them and cause them to work loose and spring a leak as all other caps do.

These are some of the reasons why Paroid has stood the test of time for the United States Government here and in Cuba and the Philippines, for railway companies, manufacturers, farmers, dairymen and poultrymen everywhere.

Send today for free samples. Enclose 4c in stamps and we will send you our new 48-page book of plans for practical farm and poultry buildings.

If your dealer will not supply you, send to us direct. We pay the freight.

BUY one lot of Paroid; open it; inspect it; apply it to your roof, and if then you are not satisfied that you have the best ready roofing made, send us your name and address, and we will send you a check for the full cost of the roofing including the cost of shipping.

Do you want show birds or breeders? We have both, bred from Chicago and N. Y. winners. Every bird pedigreed and guaranteed to please, or money refunded. We can furnish either cockerel, pullet or Standard bred. Quality the best; prices reasonable.

ALTON FARM, A. G. LeDUC, Prop., CHENOA, ILL.

(Mrs. Green's hints are very helpful and we hope she will favor us with another letter.—Ed.)

Mrs. A. J. Cummings, of Bridgeport, Conn., sends a helpful hint. She advises the saving of the tiny little scraps of cloth which usually find their way to the stove after the larger scraps have been carefully sorted and put away. Keep a bag of the smaller scraps in the kitchen and use a piece whenever you get a spot on the floor or stove, burning it afterward. Or, if a knife is soiled after the dishes have been washed and put away, again the helpful rag comes into use, with a bit of brick dust, or ashes from the stove, to scour it, and another cloth to wipe it dry and shining. Start your "scrap bag" and you will be surprised at the many uses you will find for its contents every day.

FOR THE CHRISTMAS TABLE:

One of the prettiest ornaments for the Christmas table is made by sawing the top from a symmetrical fir tree, making a miniature tree of it. Put this into a firm standard and cover the latter with moss. Decorate the tree with candles, strings of popcorn and cranberries and bits of cotton batting.

A pretty and inexpensive table decoration is a mound of rosy-cheeked apples, surrounded with a wreath of ground pine, or any pretty autumn vine from the woods. If you are not fortunate enough to live where you can go and gather your own Christmas greens, a wreath of myrtle from the garden or of evergreen branches, which can be obtained in almost any part of the north at Christmas time, will be equally pretty, while American Poultry Journal readers in the "sunny south" have access to holly, mistletoe, and other beautiful southern greenery.

A basketful of evergreens mixed with holly and tied with a bright red ribbon is one of the cheeriest of Christmas table decorations.

EMERGENCY DESSERTS.

Every housekeeper gets in a rut, especially in the matter of desserts, and the daily question as to what to cook is one of the real trials of a cook's life. Here are a few simply prepared desserts which may help in this dilemma:

Chocolate Pudding—Mix together one small cupful of sugar, four tablespoonfuls of chocolate or cocoa, three tablespoonfuls of cornstarch and a pinch of salt. Stir this into one quart of scalding hot milk and cook four or five minutes, stirring constantly. Let it cool in cups or a fancy shaped dish, and serve with cream and sugar, or a soft custard.

Cake Custard—Pour hot custard over slices of stale cake in individual dishes and serve at once with cream and sugar.

Fruit Pudding—If the Christmas plum pudding does not materialize, steam slices of fruit cake and serve them with a rich sauce and no one will know the difference.

Cream Pie—This is delicious. Cook a shell of pastry, let it cool, and just before serving fill it with stiffly whipped cream, dotted with bits of jelly or preserves.

In baking bread or rolls put a saucpan of boiling water into the oven. The steam will keep the crust smooth and tender.

For winter eggs feed Bent's Milk Albumen.

INCUBATOR INSTRUCTIONS.

The temperature of a laying hen's body is 98 degrees. The temperature of a setting hen's body is 103 to 105, and I have known them to register 106. A setting hen has a fever of from 5 to 7 degrees. It is this fever that makes them want to set. This fever stays with them to a greater or less degree until the chicks are weaned or her setting notions have been broken up. Little chicks discover the lower temperature days before the hen quits them and become uneasy. This can be verified by any experienced poultry raiser.

In operating incubators, the tendency is toward warming the eggs up too fast. It should take two days instead of two hours. The rule when operating incubators is to run the heat up to 105 in empty machines, set the regulator and let her go Gallagher. The cool eggs run the temperature down, it also holds the damper down and the heat of tank gets greater and greater. It would be foolish to surmise that the hen gets hotter and hotter.

The contents of an egg is one of the best known non-conductors of heat or cold and in order to warm eggs clear through to 103 degrees without injury to the side next the heat, it should take two days instead of two hours, as stated it is my convictions that it is the rule to warm the eggs up too fast.

My conviction drawn from experience is that 102 for the first week, 103 for the second week and 104 for the third week is the correct temperature, and if occasionally the heat gets a little too high that it is the proper time to turn and air the eggs. A little too high would mean 105 degrees, which sometimes occurs with the very best regulators.

The setting hen turns and airs the eggs more than we credit her for. We draw our conclusions too much from casual notice. When we enter the room where she sets, she settles down on the eggs and gets mad. The entrance of a cat or dog has the same effect. Any unusual noise will cause her to settle down and to stay that way so long as she is uneasy but when everything is safe she is an entirely different hen. She is continually working with the eggs, has a number of notions to move, stir and turn them.

She turns them with her beak, with her feet and hocks and very often she settles down on them and shakes her whole body. Not only does this during the day but through the night. To verify this all you need to do is to mark the eggs late in the evening and look at the marks early in the morning. The hen not only goes through all these motions mentioned but she settles down with her head in different directions, her whole aim seems to be to keep the eggs warm and moving.

Reader, no matter the kind of incubator, the mere turning the eggs half over once each day would be a weak mimicry of the hen. The sooner the old superstitions about eggs are put in the background and we get right down to apeing the hen in dealing with the artificial method, the sooner incubators will be used on every farm and by every poultry raiser. The Jewel Incubator's Success Well Earned

Success was well deserved, for the most severe critics say that Jewel Incubators and Brooders in competition with well known machines hatch and rear better chicks than they have ever seen done before. Jewel Incubators not only turn out big hatches, but Jewel Brooders rear more chicks that are hatched than any other machine known.

International Stock Food Co., Minneapolis, Minn. South Windham, Conn.
Gentlemen:—Jewel Incubators are the best machines made. I have seen a good many makes, but the ventilating system in the Jewel beats them all.
Very truly, Willis A. Slate.

99 per cent Hatch by L. H. Moran, Montfort, Wisc. 100 per cent Hatch by F. E. Wheeler, Moscow, Penn.
95 per cent Hatch by W. J. Bailey, Owingsville, Ky.

Does it pay to take chances with inferior machines? The evidence is strong in favor of the Jewel. No other incubator or brooder has met with such universal favor as the Jewel. Our new mammoth Catalog tells of the wonderful success of our Incubator and Brooder. It tells how to raise good poultry. Ready for mailing January 1st. Send us your name now. We have something to tell you that is true about good Incubators and brooders.

Poultry Supply Department, Box E, INTERNATIONAL STOCK FOOD CO., Minneapolis, Minn.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir—As I am a reader of your paper I would like to ask some questions.

1. I have a flock of about 70 hens and 175 young chickens from four months old down to two months. I feed

its head over toward the left side until the lower bill was nearly on top. What was the matter with it?

3. Several of my chicks this summer seemed to thrive pretty well, but would grow no feathers at all scarcely, some being almost naked. Some would finally

sometimes I have not time to look it up. They don't describe the symptoms plainly enough.

7. Would it be advisable for a man to try to learn caponizing with no instructions other than what he gets with a set of instruments? I have never seen it done.

Kinmundy, Ill.

Answer.—1. The question of how much and what to feed fowls and chicks has been asked and answered so often that it seems like a waste of time and energy to again go over the same ground, but we have to take into consideration the fact that each season

The Harding Sweepstakes Cup, won by E. B. Thompson, Amenia, N. Y., for best exhibition pen Barred Plymouth Rocks, at Madison Square Garden, New York, January, 1906.

bran, cracked corn, wheat and beef meal and give some oats in the sheaf. How much should a flock of that size be fed and in what proportions? They are a mixture of several breeds—Leg-horns, Barred Rocks, Brahmas, etc. I have been keeping the old hens in a yard, but now they will all have unlimited range.

2. I had one three-month chicken that was sick; would lay or sit down, and seemed like it was so sick it could not hold its head up, but would lay it down on the floor, and as it did so would turn

chill and die, and some would grow some feathers; on others the wing and tail feathers would grow faster than the rest and look very ragged. What is the cause and remedy?

4. I have been told the Wyandotte's eggs do not as a rule hatch as well as the Rocks. Is this correct?

5. Should a pullet hatched September 12 lay by April 15, 1907?

6. What is the best book on poultry diseases? I have one or two, but a man has to read them through to find anything, and when I find a sick chick

there are many new fanciers in the poultry field, and the thing that seems to bother them more than anything else is "how much to feed." Again let us say that there can be no fixed set of rules on this part of chicken raising, for the simple reason that no two flocks of fowls require or will consume the same amount of food. What will be plenty for one will not be sufficient for another. Some fowls will consume twice the amount of food required by another fowl of equal size. What will keep one hen in good laying condition

will cause another one to become too fat. Therefore we say give your fowls just what they will eat up clean, and no more. Where fowls have free range they do not require as much feed as when they are confined. Wheat and oats should be the principal grain food. 2. We are unable to say. 3. There have been many theories advanced for this, but none of which we can say is the right one, neither are we in a position to suggest a remedy. 4. There is no reason why Wyandotte eggs should not hatch just as well as any other if the stock has been properly mated and taken care of. 5. Yes. "The Diseases of Poultry," by Dr. Salmon, is considered one of the best books of this kind on the market. Price 50 cents. For sale by American Poultry Journal. 7. The instructions furnished with the instruments are generally pretty thorough and plain, and no doubt after a few trials you could do the work all right.

Editor American Poultry Journal.

Dear Sir—Please answer the following questions:

1. Are Buff Rocks with black spots in their wing and tail feathers pure stock?
2. Are Buff Leghorns with black spots in their wing and tail feathers pure stock?
3. What is the trouble with chickens three months old when black knots or warts come out all over their head and comb and some on their toes?
4. We had a Barred Rock cock that seemed very healthy, but one day we found him dead. His head and comb had turned purple. What was the trouble?
5. How many Buff Leghorns could I keep in a house 6 by 10, with a run 125

by 50? How many Buff Rocks?

6. Is it unusual for chickens three weeks old to crow? J. R. Ironton, Ohio.

Answer.—1. Buff Rocks frequently have black feathers in their plumage. 2. White feathers in Buff Leghorn plumage is of frequent occurrence. 3. This is probably scabbies, but you do not give enough detail for us to say positively. 4. This was probably due to heart trouble. 5. Twelve to fifteen of either variety. 6. Yes.

Editor American Poultry Journal.

Dear Sir—Please answer in your next issue:

1. Will Buff Orpingtons, having black feathers in tail, do for breeding purposes? Should Buff Orpingtons have black feathers in them at all?
2. Where can I get a book giving how to line breed? Please state price, too. O. J. G. Hunter, Okla.

Answer.—1. All buff varieties of fowls show more or less off-colored feathers in their plumage and the Buff Orpington is no exception. In selecting breeders, those that are the nearest solid buff should be used. 2. We do not know of any book on line-breeding, but there have appeared several articles on this subject in these columns, and by request we reprint one of these in this issue, which will no doubt give you the desired information.

Editor American Poultry Journal.

Dear Sir—I have taken American Poultry Journal for the last three years from my newsdealer, and find it a great help to me. I keep 25 R. I. Reds for pleasure, and find that they keep me in

eggs and a few to spare. I hatched 75 chicks between May 1 and June 15, and until about ten days ago they got along very nicely. Then they became dumpish, wings drooped, seemed to eat very good but remained poor, finally would sink as if their legs would not support them, and die. After eight or ten had dropped off in that way I cut two of them open and found things all right, except that in the gizzard I found several long white worms about the size of a darning needle. I feed wheat, buckwheat, wheat screenings and cracked corn and scraps. I feed one kind of feed a couple of days and then another. They are kept on a city lot 65 by 175 feet. W. F. K. Watervliet, N. Y.

Answer.—The worms you discovered in the gizzard are the cause of your trouble. Oil of turpentine is an excellent remedy for all worms which inhabit the intestines of fowls. It may be given in a dose of one to three teaspoonfuls, and is best administered by forcing it through the mouth and oesophagus to the crop.

Editor American Poultry Journal.

Dear Sir—Please answer the following in your next issue of the American Poultry Journal: I have some B. R. pullets that are being mysteriously attacked by a disease of some kind. It seems to overcome them very suddenly, and affects them in the first joint of the legs. It is first noticeable by the fowls sitting down, and when they get up they can hardly walk, and only a very short distance until they sit down again. The legs seem to be stiff in the first joint and are stiffened while sitting down, and they can't straighten

CHECKERBOARD CHICKENS

BRING HIGHEST MARKET PRICES.

Why are you raising Chickens? For your Health, or to Make Money?

If you want to raise the best chickens—chickens that will produce the most eggs, and chickens which when sold will bring the highest market price—you want to pay more attention to what you feed your poultry.

Any old kind of poultry feed will produce any old kind of chickens, but it takes the **best poultry feed** to produce the **best chickens**—chickens that make you a profit. Mixing a few things together doesn't make a Poultry Feed. It is a scientific proposition and requires a thoroughly equipped mill to grind and clean and screen and blend together grains and seeds in just the right proportion for the baby chicks or the laying hens.

ASK FOR THE CHECKERBOARD BAG.

All Purina Poultry Feeds are put up in Checkerboard Bags, to insure that you get the original feeds. **Every bag is absolutely guaranteed.**

PURINA POULTRY FEEDS are made from sound, sweet grains and seeds thoroughly cleaned and sifted. No smutty or burnt wheat. NO GRIT or SHELL. Our reputation is back of every Checkerboard Bag. A feed for every purpose. Purina Baby Chick Feed, to develop the little fellows; Purina Scratch Feed for every day in the year; Purina Mash to made hens lay; Purina Alfalfa Meal, green feed for the year 'round.

Ask your dealer for **THE CHECKERBOARD BAG** and insist on having it. Take no substitute. Don't let anybody make you think something else is just as good. If your dealer doesn't handle our feeds, then send us his name and we will send you samples and a copy of the "Standard Poultry Feeder."

up, and they walk on the leg all the way up to the first joint. The fowls were in perfect health when this was first noticed, and they eat and drink as heartily as ever. Please tell me the trouble and remedy.

S. P. H. Cobden, Ill.

Answer.—Rheumatism. This is usually caused by the fowls being confined in damp quarters. It is also caused by an overfull condition. The buildings where the fowls live and roost should be thoroughly dry, free from draughts, yet well ventilated and not too cold. With proper attention to the sanitary arrangements this disease should be prevented. Affected birds should have frequent change of ration, with plenty of green food. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water, and give two or three grains of salicylic acid twice a day. Apply camphorated or carbolic ointment to the affected joints. The birds that are seriously affected would be better killed than treated, and the main reliance must be in prevention.

Editor American Poultry Journal.

Dear Sir: I have about 100 chickens of the Barred Plymouth Rock breed. I haven't got any eggs since last June. I have been feeding all different kinds of feed and they have a fine run, but still I get no eggs. If you can give me any information concerning the facts above I will be very thankful for same.

Morris Plains, N. J. W. O. K.

Answer.—The reason why your Plymouth Rocks do not lay is probably that you are overfeeding them with all those kinds of food in a fine run, as you state; reduce their food to only just what they will eat greedily twice a day and you will find matters to alter; your hens are probably too fat.

Editor American Poultry Journal.

Dear Sir: I have some chickens, both old and young; seem to become nearly blind, acting strangely, turning round in a strange way; eyes look set. If you can give me any information as to cause or remedy please do so.

Doniphan, Mo. W. W. G.

Answer.—Your chickens, old and young, are probably affected by "migrums," otherwise called the "staggers." Your only remedy for it is to thoroughly disinfect your chicken house and all appliances.

Editor American Poultry Journal.

Dear Sir—Please answer through your paper if poultry can be raised successfully in Texas, New Mexico and Arizona, and why are eggs so high in price there? Which of the three states is best adapted to poultry? I. G. N. Ashtabula, O.

Answer.—We know of no reason why poultry cannot be raised successfully in the three states named. The supply and demand is what regulates the price, and eggs being scarce in this section of the west causes the price to be high. Texas would no doubt be the best of the three for poultry raising, as there are larger markets than in the other two.

Editor American Poultry Journal.

Dear Sir—Will you kindly answer the following questions in the next issue of your paper? If, in caponizing, a "slip" is made and not discovered at the time, how and when may it be dis-

covered? Is there any way of correcting this fault in operating? 2. How do Black Langshans stand among fowls in regard to egg-laying capacity, weight and hardness? W. H. B. Sanger, Mich.

Answer.—1. This will be discovered by the lack of growth of the bird and in his general appearance and actions. The only way to correct this is for the operator to use the necessary caution in his work. 2. The Langshans are considered good layers and a hardy fowl, and their weight is a little above the average.

Editor American Poultry Journal.

Dear Sir—I would like to have you tell me why young ducks pull feathers out of each other and eat them. Please tell me in the next Journal what to do.

Battle Creek, Mich. W. B.

Answer.—Feather pulling is usually caused by the fowls having nothing else to occupy their attention. Where they have plenty of range and are compelled to hunt for a certain amount of their food this habit is unknown. When once this habit is acquired it is almost impossible to break them of it. Aloes dissolved in water and sprinkled on the feathers has proven very effective in some cases.

Editor American Poultry Journal.

Dear Sir—I have quite a number of pigeons and all are young ones, and it seems they are getting warts around their noses. They get very large and then they fall off. It goes from one to the other, and with chickens they get like a boil around their bills and then get very sore inside their bills. Their coops are large and well ventilated. Please give me information in the next number of the Poultry Journal.

Newark, N. J. D. H.

Answer.—This is what is known as sore head, and is contagious. All diseased birds should be separated from the flock and confined in warm, dry coops. Bathe the parts with warm soapy water and after drying thoroughly with a soft flannel cloth apply carbolated vaseline. A few treatments usually brings relief. The premises should be thoroughly disinfected with a 10 per cent solution of carbolic acid.

Editor American Poultry Journal.

Dear Sir—In your October number kindly give your opinion as to the percentage of fertility that may be expected in late March and early April eggs from pullets hatched June 6 of the previous year, if said pullets are mated with cockerels hatched on or about the same date. J. M. S. Irving Park, Ill.

Answer.—From 40 to 50 per cent.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your Question and Answer department:

1. Should there be large windows in roosting part of house?
2. Should the nests be where it is a little dark or in the open light?
3. How many chickens can I winter in coop with scratching house 12x27 ft. and roosting house 12x12 ft., with about three acres range?
4. How would you place ventilators in coop?
5. Which incubator proves more successful, the hot air or water?
6. Is it well to use a pullet's egg for hatching?

7. Is it profitable to incubate eggs for half the hatch?

8. Do large incubators hatch as large a percentage of eggs as the small?

9. I have a 280-egg size hot water incubator and at the day my hatch comes off I find that nearly all eggs have chicks, but over half do not seem to be fully developed and are dead in shell. The temperature is kept from 102 to 104 degrees. Can you give reason?
O. A. S.

Put-in-Bay, Ohio.

Answer.—(1) In the working part of a hen house, a two feet square window is large enough.

(2) Put all nest boxes where it is slightly dark, and never fully exposed to light.

(3) According to your sleeping house accommodations, twelve fowls can be kept well, although it must be said that your range is sufficiently large enough to hold many more, even with your sized scratching shed.

(4) Ventilation in coops as well as in all other structures should always be placed at the top; but high enough not to come in contact with the upper part of the birds.

(5) Both hot water and hot air prove successful; it is simply a matter of like or dislike, but which ever is used must be practiced with.

(6) Pullet eggs are not advisable to be used for setting; two-year-old hen's eggs are the best.

(7) No; full hatches are the most profitable.

(8) No; large sized incubators do not hatch a larger proportion of fertile eggs than small ones; we always prefer to use smaller sized ones and more of them if needed. In case of a failure of one, the loss is not so heavy. The failure of your 280-egg machine in completing the hatch is either too dry or too much moisture in it. Try to find out and reverse the method.

Editor American Poultry Journal.

Dear Sir: Will you please answer a few questions for me in your next number of the American Poultry Journal.

First: What should be the temperature of the poultry house for winter layers when kept in for several days?

Second: What is the value of sorghum seed as a poultry food? Will it induce egg production or not?

Third: I have three White Wyandotte cockerels that have a swelling on the breastbone. It is reddish and quite hard. They have been roosting in coop on floor over which dry road dust has been scattered. What is the cause and how can it be cured?

Fourth: If pullets are mated to Single Comb White Wyandottes will I get all single comb chicks or both single and rose comb chicks?

Port Clinton, O.

A. E. J.

Answer.—(1) Above freezing point. (2) We are not advocates of sorghum seed for the production of an egg yield; it does not induce laying. (3) Your young Wyandottes have crooked breast forming, but as it is getting hard, much fear is that it is already above a cure. (4) No, not all will be single comb birds produced by such mating, as it is well known that Single Comb Wyandottes are somewhat scarce and not generally reproductive.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your "Questions and

Answers" department. I bought some Ancona eggs last summer from a breeder in Michigan.

1. Should I mate my pullets with my best cockerel or should I buy another cockerel not related to my pullets, my aim being to produce high scoring exhibition specimens and at the same time to build up a heavy laying flock?

2. Are not Anconas considered to be about the best laying fowl there is?

3. Do you know of any book written on Anconas, and where can I get it?

4. Please give a short description of "line breeding" and "in-breeding."

Epsom, Ont.

A. C. McC.

Answer.—You should procure another strain of Ancona cockerel or cock to mate with your own strain, and especially is this necessary in your case, as your aim is to produce high exhibition specimens as well as a heavy laying strain.

Anconas are certainly as good a laying variety as any.

There was a book on Anconas published in England, but we did not note the author's name nor its publishers; but we will keep your query in view, and as soon as we run across it will let you know.

In-breeding is using brother male with his sisters, a subject which you must avoid in your case of winning Anconas.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue if possible. I have a flock of Barred Plymouth Rocks consisting of twenty year-old hens and sixty chickens. They have something wrong with their throats. It seems to bother them most when eating. They will throw up their heads and make a peculiar noise as if something was in their throats and stand with their mouths open for a few seconds. While on roosts I can hear them breathe. They seem healthy otherwise, combs and wattles red, the old hens are laying. They have free range with a woods to run in, are fed wheat, oats and corn, have a comfortable house with no drafts. Please tell me what is wrong and how to treat them. Also whether fit for eating.

Poland, O.

K. M. L.

Answer.—Your chickens are either suffering from "gape" or a commencement of an attack of "roup," both of which are different in treatment; but by all probabilities it is gape; if so, they are fit for eating on the table, but not exactly so if it is roup. Your feeding is all right.

Editor American Poultry Journal.

Dear Sir: Will you please let me know in your American Poultry Journal what to do for a chicken that was hatched with a crooked beak; the top part of the beak turns over to one side, leaving the lower part a quarter of an inch from the top. It is a Buff Cochon; it can not pick out its feed right. Can there be anything done to the beak?

Wilmington, Del.

Mrs. L. L.

Answer.—There is but little to be done for your chick which was born with what is called a "crooked beak." The only thing to do is to use a fine file upon it, or file off as much of the hard beak as possible without making it bleed.

Editor American Poultry Journal.

Dear Sir: Please advise in question and answer department of your next issue cause and treatment of ducks with weak legs. I have twelve ducks that are

four months old. There are four of them that can hardly walk; they have been that way for two months; they eat but do not grow like the rest of them. What do you think could be the trouble?

Hampton, Ill.

A. H.

Answer.—The case with your ducklings is not weakness of the legs at all; it is cramp they are subject to; dry bedding at night as well as dry surroundings will ultimately remedy the trouble.

Baby Chicks & Ducklings

Now is the time to order little chicks and ducklings for spring delivery. B. and W. P. Rocks, B. Leghorns, R. I. Reds and Pekin ducklings. We guarantee absolute safe arrival and full count. C. E. Zoeller & Son Jackson, Mich.

Dean Breeds Barred and White Plymouth Rocks, White Wyandottes, Buff Cochin Bantams, and Pekin Ducks

My winnings at Naperville, Belvidere, Evanston, etc., proves the superiority of my strains. Stock for sale at reasonable prices. Eggs from prize matings $\frac{3}{2}$ per fifteen, \$5 per forty-five. I also breed Mammoth Squab Breeding Homers.

L. B. DEAN, Box 62

LAKESIDE, ILLINOIS

Editor American Poultry Journal.

Dear Sir: Will you or any of the readers of the Journal be kind enough to tell me what this disease is; also remedy, if any is known: Apparently healthy chickens suddenly lose the entire use of their legs, causing them to fall forward or on their sides. Soon after they are attacked in this manner difficult breathing ensues, the chicken breathing with her mouth open, the breath coming very fast; comb and wattles very pale; droppings are normal and there is no other evidence of disease apparent. The last one died within twelve hours after being attacked. One peculiarity of this disease is, it attacks only the pullets or hens. My chickens are the B. P. Rocks. La Grange, Ind. Mrs. F. D.

Answer.—These chickens when hatched or hatching were evidently submitted to too much heat as well as too dry a heat. If they can possibly survive, it will remedy itself.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in the next month's issue: Are boiled potatoes good things to feed to chickens and how often should they be fed? M. A. K.

Pine Grove, Pa.

Answer.—Boiled potatoes are very good to feed fowls on, about two or three times a week, especially when green food is somewhat scarce; these should be given in different forms of mash.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue and tell me what is the matter with one of my hens? For the past three or four weeks she has been acting very strange; she runs most all the time and seems never satisfied with the rooster and she does not lay. St. Louis, Mo. D. W.

Answer.—That hen of yours is too vivacious and should be mated and let run for a time with two lively cockerels; but we fear in the case that she will never be a good layer. We have had experience with similar cases.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue:

First—I have some B. P. R. cockerels that have five toes, what is the cause?

Second—Are they all right for breeding purposes?

Third—I have some S. C. B. Leghorns that when about two months old had white feathers in their wings, but latter disappeared. Are they full bloods? Kingfisher, Okla. G. M. S.

Answer.—First—The reason why your rocks have five toes is that formerly a cross of Dorking has been used in their strain to increase their size probably. Second—For breeding purposes, if otherwise good, you may use them as a trial. Third—Yes, your Black Leghorns with white feathers in their wings when young are full-blooded; that is generally the case with all black fowls.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions: In what propor-

tion should the following feeds be given to get best results for eggs. For dry mash to be fed in hoppers I have wheat bran, middlings, cornmeal, ground oats, beef meal and alfalfa meal. For grain in litter, corn, oats, wheat. Can a proper ration be made for chicks with the above feeds? If so in what proportion should they be used. D. P. S.

Hopedale, Ill.

Answer.—All the feeds you mention are good, but should be varied in proportion. For example, wheat bran and ground oats in like proportion, varied with middlings. Alfalfa meal and meat meal. We do not advocate cornmeal much for best results. As to dry grain in litter, only one kind to be given at a time, varied daily, oats one day, wheat the next and corn only once a week at the most. That is a fair proportion.

THE NEW BRADLEY INCUBATOR.

This issue of our paper brings out a new candidate for incubator favors. The Bradley incubator, manufactured at Eaton Rapids, Mich., is in the field, and from information we have it will refuse to take a back seat for any of the old machines. It has already won some renown, having been exhibited at the Michigan State Fair this last fall, where it was awarded first premium over all comers, and many of the leading makes of incubators were in the competition. It was also exhibited at many of the Michigan county fairs; there it was uniformly successful in landing highest honors. There are several points of superiority claimed over other incubators. Perhaps the most important is its most ingenious method of turning the eggs in the tray. It cannot be doubted that upon this important matter no other incubator approaches the New Bradley. The turn is perfect and it is done instantly, every egg turned, and no handling of the eggs. Superiority is also claimed in the make of the hatching chamber, the nursery tray and in an ingenious non-smoking and non-sooting heater.

The company's catalogue is now in the press. It will be ready for mailing December 1. Meanwhile the manufacture of the incubator is going forward. Full information will be given to anyone writing for it and the catalogue sent as soon as it comes from the press on December 1.

L. B. Ford, of Somerset, Ky., the Black Minorca breeder, writes us that he has been successful in raising a fine flock of birds this year and that he is prepared to furnish his customers show birds good enough to show anywhere. Their winnings in some of the large shows of the country stamps them as one of the finest exhibition strains in America. See his ad in this issue.

Mrs. A. J. Colvin, Pearl, Ill., breeder of Barred Plymouth Rocks, White Wyandottes, Bronze turkeys and Pekin ducks, has some choice stock to dispose of at prices that will suit anyone. Mrs. Colvin breeds good birds and sells them at reasonable prices and guarantees entire satisfaction. Anyone who desires any of the above varieties would do well to write for prices and particulars and mention American Poultry Journal.

A. & E. Tarbox, Yorkville, Ill., the Silver Wyandotte men, write that Judge Russell has been to their place and scored their stock, fifty cockerels scoring from 90 to 93½ and fifty pullets from 90 to 94¾, and that they are in the best shape they have ever been to supply the trade. Write them for prices and other information and mention American Poultry Journal.

E. J. Fish, Strongsville, O., has just bought a farm and moved his flock of 200 grand Buff Cochins onto it. They are the finest lot he ever raised. He is ready to fill orders with early, massive, buff birds that are fitted to go into the show room and win. Every customer more than pleased last season. Write him today and mention American Poultry Journal.

Sass Bros., Box A, Ancona, Ill., breeders of White Plymouth Rocks, have 1,500 birds for sale.

Sunnyside Poultry Farm, Klein & Anderson proprietors, Macon, Ill., won as follows at the Illinois State Fair, Springfield, Ill.: On Partridge Cochins, 1st cock, 1st and 3d hen, 1st breeding pen, 2d cockerel, 2d and 3d pullet; Barred Plymouth Rocks, 2d cock, 2d hen, 2d pen; 2d on pair Pekin ducks.

T. O. Wellcome, Yarmouth, Me., the manufacturer of "The Ideal" Trap Nest, has just issued a new catalogue, which gives a vast amount of information about trap nests and the benefits to be derived from their use. Send for one and mention American Poultry Journal.

A. B. Kaye, Route 7, Walworth, Wis., will dispose of all of his last year's breeders, including the Chicago winners; also pullets and cockerels that are hard to beat in the hottest competition. Anyone in need of Single Comb Black Minorcas should address Mr. Kaye.

Anyone in need of Barred Rock cockerels or pullets for exhibition or breeding purposes should address C. E. Spaug, Box T, Rugby, Ind. His winnings at the Indiana State Fair are still in the minds of fanciers. Send for illustrated catalog.

James Workman, French Village, Ill., has some first-class White Wyandottes for sale.

Mrs. H. W. Hand, Box H, White Hill, Ill., breeder of White Wyandottes, will dispose of 200 exhibition and breeding birds. These birds are pure white with yellow legs and exceptionally fine in shape. Mrs. Hand's winnings at the World's Fair and Chicago, 1906, are too well known to require mention.

S. J. Matherson announces his removal from 7429 Normal avenue to larger and better quarters at 3547 Halsted street, Chicago, Ill., where he will be better prepared than ever to do good printing quick. Write for prices and mention American Poultry Journal.

Ira B. Sleet, Warsaw, Ky., breeder of White Wyandottes, informs that he has thirty cockerels and twenty hens, all choice birds, that he will sell at a bargain if taken at once. Write him and mention American Poultry Journal.

F. W. Niesman Co., Box 40, Freeport, Ill., are offering 500 show birds of 20 different varieties for sale. Their winnings at the late state fairs are still fresh in the minds of the fanciers.

Wm. K. Lewis, Dry Ridge, Ky., breeder of Buff Wyandottes, has some high grade exhibition cockerels and pullets for sale; also breeding stock.

HEBRON FRUIT AND POULTRY FARM
Barred Plymouth Rocks and Colored Muscovy Ducks

A SPECIALTY. Also breed White Plymouth Rocks, Buff Cochins, African, Brown and White China Geese. Choice show and breeding stock for sale. Write for prices and mention American Poultry Journal.

Pocantico Poultry Yards, Pocantico Hills, N. Y.

Gentlemen:—Inclosed please find \$2 for one of your Egg Testers. Kindly send it as soon as possible, but remember I will return it if it does not work satisfactorily.

Yours very truly, Otto Mollenhauer.

Dr. M. S. Sherwood, Marquette, Mich., April 21, 1906.
Dear Sir:—I am very much pleased with your Egg Tester and can heartily recommend it to any one who has use for Egg Testers. It throws a very powerful light, is very easy to handle, and cannot get out of order. Truly yours, Otto Mollenhauer.

PATENT APPLIED FOR

ARNOLD — THE COLUMBIAN WYANDOTTE SPECIALIST

AUG. D. ARNOLD, : : : Box 777, DILLSBURG, PA.

Pearl Grit
Saves You One-Half

Remember this the next time you buy grit and it will pay you when you figure up costs and profits. You get double value when you buy Pearl Grit. It's a grinder and it's a shell builder. No other shell making material is required when you feed Pearl Grit. We grind it in suitable sizes for little chicks and adult fowls. It makes the little fellows thrifty and the older ones vigorous and productive. We guarantee it to absolutely take the place of shells and grit combined and it has been proved by chemical analysis that it contains the elements needed for egg-making, growth of plumage and strengthening of muscle, bone and sinew. It retains its grinding properties down to the smallest particle. Its chemical properties are assimilated by the bird's system and supply nourishment for the body. If you want strong, vigorous, prolific fowls, "Throw Pearl to Poultry and Watch Results." Write for prices and our free booklet, "True Grit." It is full of valuable information and explains the importance of good grit. Write to day.

THE OHIO MARBLE CO., Box 209, North Wayne St., Piqua, Ohio.

WE WANT NAMES.

We want you to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you **TWO BEAUTIFUL COLORED PICTURES FREE**. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of the **HOME MONTHLY** (The National Poultry Journal), to a lot of poultry raisers who are not now taking our paper and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you, postpaid, **ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES**, beautiful colors, size 15x20 inches. Address: **THE HOME MONTHLY**, 20 North William St. New York.

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish, as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit which does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to fowl what teeth are to other members of animal creation. Let us prove the truth of what we say by filling a sample order for you. **Manufactured only by**

We are in receipt of a copy of the annual catalogue of Matt W. Baldwin, Sioux City, Ia., the man who breeds Barred Plymouth Rocks. This catalogue tells all about the Hawkeye strain and is beautifully illustrated with half-tone cuts of Mr. Baldwin's prize winners. This catalogue should be in the hands of everyone who is interested in this grand old variety. Send for one today and mention American Poultry Journal.

A GROWING CONCERN.

One of the best evidences that a manufacturer of any kind of goods can offer that his line is popular with the buying public is demonstrated in the development and growth of the manufacturing facilities.

If it becomes necessary to enlarge the plant, increase the working force, install new and additional modern machinery—you can rest assured there is a reason, and a good one too—an increased demand.

And there is still a further reason, one that the buyer is more particularly interested in, and that is the merit of the goods.

Invariably when you see a firm growing bigger you will see their product growing better, and for this reason it is with considerable pleasure that we give space in our columns to a much deserved mention of the growth and development of one of the foremost manufacturers of incubators and supplies now in the field. The H. M. Sheer Co., Quincy, Ill., manufacturers of the Famous Acme Automatic Lamp and Acme Compound Wafer Regulator and other incubator supplies.

But the thing we wish to speak about more at length is the wonderful growth of

in this issue will be found their advertisement. Last year over eighteen thousand people were interested in this fascinating work of building their own machines. The plans are so simple and easy to follow that anyone can do the work successfully. If you are interested send for their catalog and Free Plans. It also describes fully the Famous Acme Lamp and Regulator which save half the oil, expense and bother usual with ordinary lamps and regulators. It is worth dollars to you.

In writing please mention this paper and address H. M. Sheer Co., 102 Hampshire street, Quincy, Ill.

THE DARLING POULTRY FOODS.

We direct the attention of our readers to the Darling Poultry Food advertisements, which have again appeared in our columns. We welcome the Darling advertisements, for they relate to goods of the known substantial kind. They get right to the "meat" of the matter, as it were, for Darling & Co. make it a specialty to handle meat scraps, meals and bone products which are recognized by all poultry people as being the best kinds of foods that can be supplied. There is nothing mysterious

"He couldn't help it." This is Paroid Roofing. F. W. Bird & Son, Makers, East Walpole, Mass. Established 1817.

this concern in recent years. Mr. Sheer is one of the "old timers" in the incubator business. He's been "at it" 18 years, and this accounts for the wonderful success of his inventions. They are the fruits of ripe practical experience.

From one man organization to the largest manufacturers of incubator supplies in the world is a record anyone might feel proud of. It speaks well for the man at the helm and particularly well of the goods. The business the past year has not only enforced larger manufacturing space, but larger capital to take care of it. To accommodate this growing demand for Acme Lamps, Regulators and Fixtures, the Sheer Co. have doubled their plant, added more room, more machinery, more men, until they have not only the largest but the most modern equipped plant of its kind in the world.

So great has been the growth that a special tool and die room has been added at great expense for making the special tools necessary in manufacturing the special inventions of Mr. Sheer.

The plan and method of the business will be the same as in the past and directed by Mr. Sheer, who is so close to the needs and desires of the poultry people that he has no trouble in meeting their demands. As usual they will push their free plans for building your own machines, and elsewhere

and nothing concealed about the makeup of Darling foods. This is more than can be said of all the ready prepared poultry foods now on the market. Darling & Co. pretend to nothing except the well known substantial, very largely protein elements, which lies at the bottom of poultry success always. Beef scraps, beef meal, chick feed, a laying food, a forcing food and grits consisting of oyster shells and a flinty stone grit, called mica crystal, are the chief things in their line. They have a rapidly growing trade, which is said to be largely among the most successful class of poultry raisers. They publish a catalogue giving full particulars of their food and supplies. A copy may be had free by addressing the company at either its Chicago or New York house.

Simou Beuth, German Valley, Ill., the noted Buff Wyandotte breeder, writes that he has 1,000 choice young birds for the season's trade and can furnish anything from fair breeders to the highest quality of exhibition birds that will win anywhere in any company. He also has 300 old breeders for sale and can quote prices that will suit everybody. Write him for his large illustrated catalogue and prices and mention American Poultry Journal.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequalled in standard qualities. Without question the most profitable strain of poultry in America today. 1000 extra choice yearling hens mated with grand, strong, early hatched cockerels must be sold at once to make room. They are the ideal breeding matings for season of 1907, and we will make special inducements in prices to early purchasers. When writing for prices and catalogue please state plainly just what is wanted. Address

WYCKOFF'S FARM,

Aurora, Cayuga Co., N. Y.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

We also have fine B. P. Rock cockerels, both pullet and cockerel mating; prices quoted on application. Here is your chance to get a good bird cheap.

Our 80-page catalogue and 1906 mating list describes the finest line of Poultry Supplies and our fowls, sent free. Ask for it.

GRIGGS BROS., 516 Monroe St., Toledo, Ohio

SOME VALUABLE PREMIUMS.

Our readers will no doubt be very much interested in the Farm Journal special offer appearing elsewhere in this paper. It is well known that Farm Journal is one of the brightest and the biggest little farm paper published. It is a paper for busy farmers "full of sunshine and gumption." It is so reasonable in price that everyone can afford to take it. At the same time it is so valuable that no one interested in farming can afford to be without it.

The Farm Journal special offers are of more than ordinary value, and at this particular time will be of unusual interest to those who desire to present friends or relatives with gifts that will last with the years.

The Biggle books offered are well worth a place in every library, and are especially valuable to the farmer. A new Biggle book for the orchard is offered among others and it promises to be fully up to the standard of the eight Biggle books already published.

The Roosevelt Family Calendar offered will certainly be desired by every reader of this paper, as it is suitable for parlor, sitting room and office.

We can heartily recommend Farm Journal to everyone, and we know that the premiums offered are well worth looking after. Promptness, however, is essential in securing the Roosevelt Family Calendar premium, as this offer is only good until January 1, 1907.

Look up the Farm Journal advertisements and see what they have to offer all old and new subscribers.

SASH, DOOR AND MILLWORK BARGAINS.

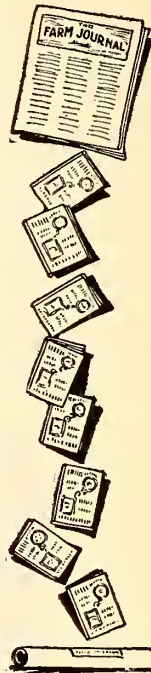

Write Gordon Van Tine & Co. for Catalog and Buy Guaranteed Building Material at 50% Saving—Quality and Safe Delivery Guaranteed.

Gordon Van Tine & Co., of Davenport, Iowa, are the largest manufacturers in the world of sash, doors, millwork and building material. Their catalog tells all about their own timber lands, their own saw mills, their factories, their enormous capacity, their guarantees of quality, and safe delivery, and shows why they save 50 per cent over dealers' prices, no matter where you live. They sell by mail order only, and guarantee safe delivery and quality.

To get the benefit of this saving, whether you are a contractor, carpenter or individual user, or whether you want a \$5 or a \$10,000 order; whether you are going to build a handsome home or put storm windows in the old home—first write for the catalogue of Gordon Van Tine & Co., Station A39, Davenport, Iowa.

This catalog is so simple you can order everything by letter and save 50 per cent. The catalog is illustrated, and one of the main features is a set of pictures and complete architect's plans for five houses of moderate cost, which in itself saves many a builder the expense of having plans drawn.

Other features of this catalog, completely illustrated, are the tables of sizes and prices on front doors, grained doors, painted doors, storm doors, white pine doors, art windows, plain rail windows, storm windows, barn windows, base mouldings, casing, sash, thresholds, lattice, mouldings, hardwood flooring, window screen stock, door frames, window frames, gable ornaments, colonial columns, turned porch columns and porch newels, stair work, stair newels, porch frames and rails, stair balusters, building paper, stepladders, window

glass, glazier's supplies, art glass, etc.

In fact, the Gordon Van Tine & Co. catalog is such a complete one that it has become a standard reference book in thousands of country homes, to be consulted whenever any building is to be done. Write today and get your order in before prices go up.

Money in Poultry.

Those interested in poultry and incubators will find it to their advantage to obtain Foy's new book "Money in Poultry," advertised elsewhere in this issue. It is one of the finest and most valuable books ever published. It is finely illustrated and contains a very large amount of practical information about the poultry business in general and is valuable as a reference book, telling the beginner how to start on a small or large scale, and how the largest pure bred poultry business in the world has been built up from a small beginning. Tells how to start right; how to make money raising fowls on the farm; how to line breed; how to win at shows; how to prevent and cure diseases; how to run an incubator and manage a brooder. This is the most valuable book for the beginner in poultry raising ever published. Revised and enlarged edition just issued. This book will be mailed for 10c, by addressing Frank Foy, Box B, Des Moines, Iowa.

THE CONKEY BOOK OF POULTRY DISEASES.

Poultry raisers who are not already in possession of it will find a valuable aid to their business in "Poultry Diseases," published by the G. E. Conkey Company, of Cleveland, Ohio. This book was formerly sold at the regular price of 25 cents, and an examination reveals that it is well worth the money. The Conkey people are now distributing it among poultry raisers gratuitously. See the condition named at the close of their advertisement in this paper.

This book, as indicated by its title, is truly a book of poultry diseases. All the ailments, from the dreaded roup and cholera down to the trivial things which beset the poultry raiser, are treated in the most thorough and painstaking way. First the disease with its cause, then the symptoms so well defined that an error in the nature of a disease is impossible, and then the methods of prevention, followed by the best methods of treatment for an absolute cure. It is a little work of forty-eight pages, and we know of no other which will, in the same small space, give the poultry raiser as much valuable information and plain direction on the troubles he has to contend with. Every page is replete with other information besides diseases and treatment. The beauty of it is that it is so plain, brief and compact. No wading through pages of matter hard to understand. It shows what is the matter with your hens and what to do. The book comes from a reliable source and can be depended upon. It gives the best methods of practical money making poultrymen. Look up the advertisement and follow its directions. Get the book.

MINERAL SURFACE ROOFINGS DO AWAY WITH PAINTING.

The coming of the mineral surface into the "ready roofing" industry removes one of the familiar annoyances of the farmer, and it is safe to say that this class of roofings will soon become a favorite. The principal roofing of this class is Amatite, which is coated on the weather side with a layer of crushed mineral matter firmly imbedded into the composition. This surface takes the brunt of the weather and makes painting or coating of any kind entirely unnecessary.

When Amatite is once laid on the roof there is no further work to be done. It is not necessary to look after it every year for leaks or to go to the trouble and expense of painting or coating it every year or two.

On the old style "ready roofing" the dealers usually recommended a coating of

their own for annual use, and the expense of maintaining their roofs in this way was considerable. In the case of Amatite, however, the first cost is the only cost, and the farmer does not have to take into consideration any future expense.

It is an easy matter to lay Amatite, as no skilled labor is required or special tools. Weight for weight, its price is considerably lower than that of any of its competitors.

Samples of this material can be seen by addressing the Barrett Manufacturing Co. at any of the following offices: New York, Chicago, Cincinnati, St. Louis, Philadelphia, Cleveland, Kansas City, Allegheny, Minneapolis, New Orleans and Boston.

These samples are sent free of charge and without implying any obligation on the part of the recipient.

What would you think of a physician who, after examining a case of diphtheria, would place a glass of medicine within reach of the bedside and then say to the patient: "Take as much of this as you want and as often as you desire"? How long would you call him your "family doctor"? And

yet such is the treatment meted out to the noblest family of birds on God's green earth when afflicted by roup, the scourge of the poultry yard. Since Roup Tonic has been placed on the market by the Star Poultry Tablet Company, Belleville, Ohio, such treatment is inexcusable. Whose judgment voices the above? Ask Judge Shellabarger, of Iowa; C. P. Nettleton, of Connecticut; U. R. Fishel, of Indiana; Henry Berrar, of California, and a host of others. No claim is made for Cold-Water Tablets except that it is a convenient form in which to keep the standard aconite and bryonia prescription known and used by poultry breeders generally. Breeders living on the Pacific slope will find it more convenient to obtain these tablets of Berrar & Robertson, San Jose, who are sale agents for California. See advertisement in this issue.

Write to Dabbert Poultry Farm, Box A, Wheaton, Ill., for Barred Rocks.

Send for sample Bent's Milk Albumen.

Another Step Ahead

Why the 1907 Prairie State Incubator Hatches Chicks Like Those Hatched by Hens

IF YOU could have been at Homer City this summer and watched the numerous experiments and tests that were made by us for the purpose of making the 1907 Prairie State Incubator better than ever, you would not be so much surprised at the remarkable results we obtained.

From the early spring months until the hatching season was well over, more than sixty exhaustive and practical tests were made in order to render the 1907 Prairie State a closer imitator of nature's way of hatching eggs.

That you may know how systematically, how carefully and practically this was done, we propose to give you a synopsis of the experimental work.

First permit us to say (and our files of testimonials prove it) that the 1906 Prairie State machine was an unusually high per cent hatcher. But we were anxious to make it a better hatcher, better in percentage and better in the quality of the chicks hatched.

It is not uncommon to find a machine that will hatch a good percentage of the fertile eggs, but it is uncommon to find a machine that will bring out a big percentage of strong, healthy, vigorous chicks. And right here is where we made the greatest advancement in the 1907 Prairie State Incubator that has been accomplished by any other incubator manufacturers.

We have an incubator that will bring off chicks as near like the "old hen" does as to size and vigor that an expert cannot tell the difference.

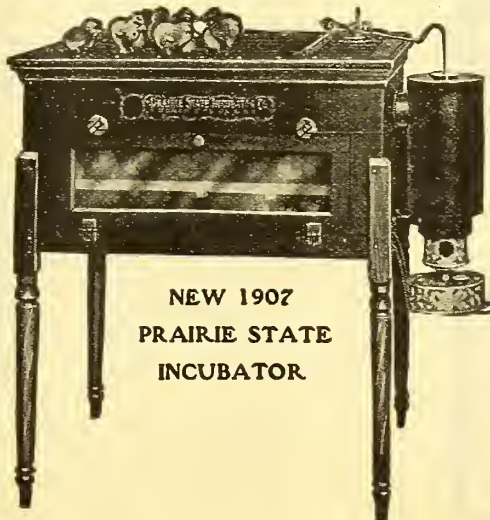

And how did we accomplish this? Simply by producing the same conditions in the egg chamber as we found by hygrometer tests exist under the old hen. To get this absolutely correct we did not "set" the hen, for that is not natural. We permitted her to "steal" her nest so that her natural instinct would also have its proper influence.

We then took careful notations at stated intervals of the brooding period with the most sensitive hygrometer we could obtain and made records of moisture evaporation, carbon dioxide conditions under her. With this important knowledge we were equipped to reconstruct the egg-chamber of the Prairie State so as to obtain hatching conditions that were natural, just like those under Mrs. Hen. It required some time, many experiments and tests to accomplish this, but we DID it, not by guess work but by testing our improvements with the same testing apparatus as we used on the hen and did not stop until we obtained the same hatching condition with the exception of carbon dioxide as found under the hen.

In brief, that's the remarkable improvement we offer in the 1907 Prairie State Incubator.

What does it mean to you?

It means better success, better profits, better satisfaction in every way. It means more chicks and better chicks, and in a nutshell that's what you are striving for.

You should write at once for the new Prairie State catalog describing and illustrating this new improvement in detail and showing how it was accomplished. We'll also send you our new Brooder Catalog, which shows the latest in successful brooders. Send today.

The Prairie State Incubator Co.

468 Main St.
Homer City, Pennsylvania

ORR'S Wyandottes Orpingtons

Twenty-five years a breeder of Wyandottes.
Breeding birds \$2 to \$5 each
 Scotch Collie Puppies, \$10.00 to \$15.00 each.
 Orr's Lice Killer is best, \$1 per gal.

T. E. ORR - Box 807, Beaver, Pa.

KNEBEL'S S. C. W. LEGHORNS

Winners of highest award at World's Fair.
 High class show birds for sale.

G. M. KNEBEL, Box A, WACO, TEXAS

HALLOCK'S W. WYANDOTTES

Have best show record of any in America.
 Write for free circular.

ROSS C. H. HALLOCK, 6314 Clifton Ave., St. Louis, Missouri.

Columbian Wyandottes

The Vietnam Strain, line bred since 1900, has in the past two years produced more prize winners than any other in America. Eggs in season \$3 per 15, \$5 per 30, \$12 per 100. Poor hatches duplicated at half price. All stock sold on approval. Write your wants.

ELM LAWN POULTRY FARM Route 3, Raymond, N. H.

Persistent Layers

WHITE WYANDOTTES

Cockerels for sale. Bred from hens that have made records in my trap nest from 207 to 272, with 8 generations in their blood of hens that have laid 200 and over. Write for prices and copy of records.

R. A. RICHARDSON

65 Linwood St. Haverhill, Mass.

BILLING'S WHITE WYANDOTTES AND R. I. REDS
 (both Rose and Single Comb) are the winning kind. He has for several seasons produced winners in many of our largest shows in the hands of his customers. Have this season more of them and of better quality than ever before. 1000 head of good breeders and exhibition birds to sell. Sold on approval. Send for circular.

B. M. BILLINGS - Oberlin, Ohio

LIGHTNING
WHITEWASH SPRAYER NO. 28
 Whitewash your poultry houses and stables easily, rapidly, with the "Lightning" Whitewash Sprayer. Kills lice and vermin. Can't clog. Also for spraying trees, washing wagons, etc. Double action pump. Sprays 30 ft. high. Has 3/4" ft. heavy hose, extension rod, brass nozzle, steel stirrup, ball valves. All brass, \$5.50. Galvanized iron, \$2.50. Cash with order. Exp. paid. Agents wanted.
D. B. SMITH & CO., UTICA, N. Y.

Morgan's Sanitary and Portable Poultry Houses

They are easy to keep clean and attractive, and keep your fowls healthy and thrifty. Morgan's Sanitary Houses and Brooders are made in styles, sizes and prices to meet your special needs. They are the best and cheapest on the market. Write now for illustrated catalogue and prices.

Sanitary Portable House Co., Dept. B Lemont, Illinois

POULTRY SHOW DATES FOR 1906-7.

[We would be pleased to have the Secretaries of poultry shows notify us of any errors or changes in the following list, as it is our desire to make this as near correct as possible.]

- Dec. 3-5—Brookfield, Mo. Rhodes, judge; J. S. Hill, Purdin, Mo., secretary.
- Dec. 3-6—Ravenwood, Mo. Russell, judge; Robert Larmer, secretary.
- Dec. 3-6—Canton, Kan. George Rehbein, secretary.
- Dec. 3-7—Ellicottville, N. Y. George W. Webb, judge; William Green, secretary.
- Dec. 3-7—Rolfé, Iowa. Heimlich and Anderson, judges; Marion Bruce, secretary.
- Dec. 3-7—Owosso, Mich. Hathaway, Judge; Bert P. Lovett, Secretary.
- Dec. 3-8—Emporia, Kan. O. P. Greer, Judge; D. M. May, Secretary.
- Dec. 3-8—Union, Iowa. U. J. Shanklin, judge; Fred Marshall, secretary.
- Dec. 3-8—Parsons, Kans. Adam Thompson, judge; A. Davis, secretary.
- Dec. 3-8—Oklahoma City, Okla. Frank W. Hitchcock, judge; T. E. Shaw, secretary.
- Dec. 4-5—Harrisonburg, Va. G. O. Brown, Judge; C. O. Henton, Secretary.
- Dec. 4-6—Fremont, Neb. C. A. Emry, Judge; G. D. McClaskey, Secretary.
- Dec. 4-7—Holyoke, Mass. George Barnett, Jr., secretary.
- Dec. 4-7—Jackson, Mich. Tucker, Traviss, Butterfield, judges; C. W. Kroosz, 229 Mansion street, secretary.
- Dec. 4-7—Montezuma, Iowa. J. L. Todd, judge; J. D. Smith, secretary.
- Dec. 4-7—Mount Sterling, Ill. Ben S. Myers, judge; E. Hambaugh, secretary.
- Dec. 4-7—Philmont, N. Y. G. L. Anderson, secretary.
- Dec. 4-7—Youngstown, Ohio. Orr and Feil, judges; H. J. Cossler, secretary.
- Dec. 4-7—Palmyra, Mo. Shaner, Judge; Maud Bloomer, Secretary.
- Dec. 4-7—Leominster, Mass. Lambert, Hawkins, Ballou, Shove, May, Judges; L. D. Mudgett, Secretary, Box 382.
- Dec. 4-7—Humeson, Ia. Shellabarger, Judge; George King, Cor. Secretary.
- Dec. 4-7—Roland, Ia. D. E. Hale, Judge; John M. Mason, Secretary.
- Dec. 4-7—Columbus, Neb. T. W. Southard, Judge; P. J. McCaffrey, Secretary.
- Dec. 4-8—Providence, R. I. Smith, Fox, Glasgow, Watson, Chas. A. Wheeler, Judges; W. I. Brown, Secretary, 6 Exchange Place.
- Dec. 4-8—Paterson, N. J. J. Frost, secretary.
- Dec. 4-8—Wilkes Barre, Pa. D. T. Miller, secretary.
- Dec. 4-8—Winchester, Ill. T. M. Campbell, judge; H. A. David, secretary.
- Dec. 4-8—Eureka, Kan. J. J. Atherton, Judge; Mrs. Charles Osborn, Secretary.
- Dec. 5-8—Carlisle, Pa. F. W. DeLancey, Secretary.
- Dec. 5-8—Anadarko, Okla. John Pfaff, Jr., Secretary.
- Dec. 5-8—Waco, Tex. H. B. Savage, Judge; Nick Jones, Secretary, 1416 Ross Ave.
- Dec. 5-8—Danbury, Conn. Drenstedt, McGrew, Nichols, Card, judges. Charles Brundage, secretary.
- Dec. 5-8—Dowagiac, Mich. F. Traviss, judge; J. N. Bilderback, secretary.
- Dec. 5-8—Grand Rapids, Wis. Frank Heck, judge; B. G. Eggert, secretary.
- Dec. 5-8—Villisca, Iowa. Russell, judge; Dr. F. M. Childs, secretary.
- Dec. 5-6—Greenfield, Mass. J. Fred Crangle, Judge; F. I. Gaines, Secretary.
- Dec. 5-8—Taylorville, Ill. Thos. F. Rigg, Judge; James Hunter, Secretary.
- Dec. 5-8—Indianola, Iowa. J. E. Hime, Secretary.
- Dec. 5-10—Birmingham, Ala. McClave and Sites, judges; Dr. E. Ballard, secretary.
- Dec. 6-8—Monroe, La. H. W. Blanks, judge; E. S. Ely, secretary.
- Dec. 6-8—Yevay, Ind. Wilk H. Works, secretary.
- Dec. 6-8—Mt. Ayr, Iowa. A. L. Pedrick, judge; H. C. Beard, secretary.
- Dec. 6-8—Fulton, Mo. Rhodes, judge; J. W. Barran, Secretary.
- Dec. 7-13—Oconomowoc, Wis. Tucker and Vanslow, judges; Charles Behrend, Jr., secretary.
- Dec. 9-15—Mount Vernon, Ohio. Ira C. Keller, judge; George H. Brown, secretary, R. F. D. 3, Gambier, Ohio.
- Dec. 10-11—Gulfport, Conn. Paul P. Ives, Secretary.
- Dec. 10-13—Lexington, Ill. A. C. LeDuc, judge; William Stickler, secretary.
- Dec. 10-14—Sheboygan, Wis. Tucker, judge; E. C. Kuehlmann, secretary.
- Dec. 10-14—Lacon, Ill. Ben S. Myers, judge; John Watt, secretary.
- Dec. 10-14—Waverly, Iowa. Shellabarger, judge; B. L. Burbank, secretary.
- Dec. 10-14—Rochester, Minn. Holden, Judge; Louis E. Nietz, Secretary.
- Dec. 10-14—Monroe, Ia. Pedrick, Judge; J. Q. Vandermast, Secretary.
- Dec. 10-14—Carroll, Ia. O. J. Easton, Judge; I. F. Daniel, Secretary.
- Dec. 10-15—Guthrie, Okla. L. F. Laverty, Secretary.
- Dec. 10-15—Salem, Ohio. Rigg, judge; J. Alton Cornell, secretary.
- Dec. 10-15—Great Bend, Kan. Fite, judge; J. A. Lesseman, secretary.
- Dec. 10-15—Warren, Ill. Heimlich, judge; B. L. Wright, secretary.
- Dec. 11-14—Knoxville, Tenn. F. J. Marshall, Chas. McClave, Judges; J. T. Oates, Secretary-Treasurer.
- Dec. 11-13—Woonsocket, R. I. Ball and Lowe, Judges; B. M. Briggs, Secretary, 166 Main St.
- Dec. 11-14—Streator, Ill. Heyl, Bennett, Arthur, Judges; E. R. Schurman, Secretary, 115 N. Sterling St.
- Dec. 11-14—Bonaparte, Ia. L. G. Householder, Judge; Albert M. King, Secretary.
- Dec. 11-14—Pleasant Hill, Mo. Rhodes and Russell, Judges; T. E. Quisenberry, Secretary.
- Dec. 11-14—Portland, Me. Smith, Atherton, Watson and Coffin, Judges; A. L. Merrill, Secretary, Auburn, Me.
- Dec. 11-14—Willshire, Ohio. George Ewald, Judge; H. M. Davis, Secretary.
- Dec. 11-14—Warren, Ohio. Orr and Sites, Judges; Wm. G. Baldwin, Secretary.
- Dec. 11-14—Muscatine, Iowa. A. B. Shaner, judge; F. M. Ziegler, secretary.
- Dec. 11-14—Winsted, Conn. Graves, Card, May, judges; L. E. Capewell, secretary.
- Dec. 11-14—Temple, Tex. H. B. Savage, judge; Mrs. W. E. Matthews, secretary.
- Dec. 11-14—Quincy, Mich. S. B. Lane, judge; A. E. Rogers, secretary.
- Dec. 11-14—Norway, Iowa. U. J. Shanklin, judge; W. J. Pine, secretary.
- Dec. 11-14—McCallshurg, Iowa. J. L. Todd, judge; E. P. Pierce, secretary.
- Dec. 11-14—Lewistown, Mo. Frank Heck, judge; A. O. Brooking, secretary, LaBelle, Mo.

HOW a bird's nest caused a revolution in the methods of modern incubation is all told in our new book. It also describes the

NEW METHOD INCUBATOR

—the result of careful study of the way Nature assisted the mother bird to hatch every egg in her nest. If you want an incubator that will hatch more chicks, better, stronger and healthier chicks, you'll want this new book. It's free. Write for it today.

The New Method Incubator Co.,
150 W. Main St., Morrow, Ohio.

S. C. B. Orpingtons
Kings and Queens of the Poultry Yard

No more stock to sell until after November first.

A. A. LEE - Painesville, Ohio

Buff Wyandottes

Have just got our young stock in from the country, where we had them raised, and find we have a superb lot. We expected this, as our this year's breeders were the best we ever had. If you are in need of anything, either in old or young stock, write us for prices and description.

F. L. Waterman & Son - Barrington, Ill.
Western V-President American Buff Wyandotte Club

ASTHMA CURED

SCHIFFMANN'S ASTHMA CURE

Instantly relieves the most violent attack and insures comfortable sleep. **NO WAITING for RESULTS.** Being used by inhalation, its action is immediate, direct and certain, and a cure is the result in all curable cases. A single trial convinces the most skeptical. Price, 50c, and \$1.00 of any druggist, or by mail. Samples free for stamp.

DR. R. SCHIFFMANN, St. Paul, Minn.

POULTRY FENCE

Best and strongest made. Lasts a lifetime. Also Farm Fence, Ornamental Wire, and Wrought Iron Fence. Catalogue Free.

WARD FENCE CO.
Box 202. Marion, Indiana

Steel Roofing, \$1.50 Per 100 Sq. Ft.

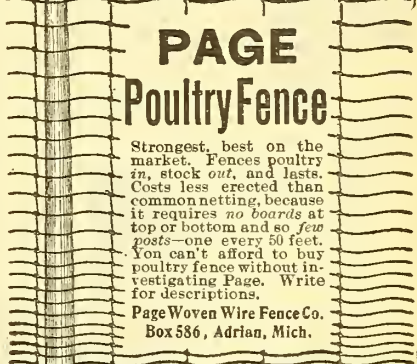

New, painted both sides, most durable and economical roof covering for Houses, Barns, Sheds, etc. **FREIGHT PAID TO ALL POINTS EAST OF COLORADO,** except Oklahoma, Indian Territory and Texas. Prices to other points on application. At this price, we furnish our No. 15 Flat Sheets, 2 ft. x 2 ft. At \$1.60, we furnish the same in corrugated like illustration. We can also furnish this roofing in 6 ft. and 8 ft. lengths at an advance of 25c per square. Ask for our FREE Illustrated 500-Page Catalog No. B. F. 188 on Lumber, Roofing, Wire Fencing, Hardware, Furniture, Clothing and General Stocks from Sheriffs' and Receivers' Sales. We bought the Fifty Million Dollar St. Louis World's Fair.

Chicago House Wrecking Co., 35th & Iron Sts., Chicago

PAGE Poultry Fence

Strongest, best on the market. Fences poultry in, stock out, and lasts. Costs less erected than common netting, because it requires no boards at top or bottom and so few posts—one every 50 feet. You can't afford to buy poultry fences without investigating Page. Write for descriptions.

Page Woven Wire Fence Co.
Box 586, Adrian, Mich.

QUEEN OF HATCHERS

TRY IT! Test its superior heating system at home for 90 days and if you are not satisfied that the **Missouri Queen Incubator** is the most practical and successful hatcher, return it at our expense. It's a hatcher you can depend on and we know you'll like it—write for descriptive catalog and free trial plan, Missouri Queen Incubator Co., Dept. C, Princeton, Mo.

THE LIFE SAVER POULTRY BOOK.

A 32-page book on the care of poultry is now being distributed by Cugley & Mullen, and it is one of the most valuable books ever offered. The author is evidently familiar with the diseases of poultry and has undoubtedly struck the right chord in prescribing a remedy for each disease. At least it appears to us as one of the best methods, as it is very difficult to treat several diseases with one remedy.

The "Life Saver" book describes minutely the symptoms of each malady and prescribes the proper remedy and treatment for each.

The "Homeo" remedies sold by Cugley & Mullen are put up in homeopathic tablets, which are placed in the drinking water, thereby eliminating the old method of pouring medicine down the fowl's throat. The value of letting the bird take its own medicine cannot be overestimated, as few, if any, of us are willing to spend time and trouble to treat a fowl day after day unless it should be of particular value.

"The Life Saver" contains many suggestions that will prove valuable to everyone who raises chickens, pigeons, ducks, turkeys or geese. There is also valuable information about housing, feeding, incubation and brooding of poultry.

"The Life Saver" is a copyrighted book and can be had only from Cugley & Mullen, Philadelphia, Pa., to whom all inquiries should be addressed. The book is sent free to all who are interested in poultry raising.

A NEW TRAP NEST.

The Favorite Trap Nest manufactured by Walter P. Baynes, of Salem, Ind., is a winner. It is simple, accurate and handy. No wire triggers in it to entangle the hen or get bent out of shape. The hen can be let out instantly and the trap set again quick as you can snap your fingers. It can also be easily changed to an open nest if desired. It can be used on the floor, under the dropping board or in tiers, any way you want; in fact, it is a "Favorite" with busy poultrymen. Write Mr. Baynes for his descriptive circular. He will please you.

HOPPER FEEDING SAVES LABOR.

Dry feeding in hoppers is rapidly gaining favor because it saves almost half the labor of feeding and makes healthier, more productive fowls. The main disadvantage has been that the fowls would waste the grain. This fault is said to be overcome in the Nourse Poultry Feeder, advertised in this paper; in fact, it is claimed that this feeder will pay for itself in two months by the food it will save. Look up the ad in this issue.

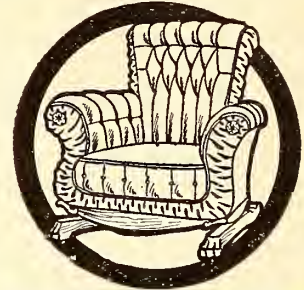

Owing to the increasing demand of the Rose Comb White Leghorns, the Rocky River Poultry Co. were compelled to move their plant where they could have more room for the increased demand. They are now located in the beautiful little town of Deerfield, twenty-four miles from Chicago, and only forty-five minutes from the city. They have purchased forty acres of the finest timber land in the country and have raised all of their young stock there this season, giving them the run of the timber land, which gives them a stronger line than ever. This company has cleaned up the leading shows of the world and now has many prize winners for shipment. If you are interested in the world's greatest egg machine send for their newest catalogue. Rocky River Poultry Co., The Oaks, No. 14, Deerfield, Ill.

In this issue will be found an illustration of a bird that was bred and is owned by W. D. Holterman, the fancier, of Fort Wayne, Ind. This shows indeed a marvelous specimen, and we would earnestly advise all our readers that are interested in Barred Plymouth Rocks to write Mr. Holterman. He is getting out a grand new catalogue, which will show this bird and other splendid males and females as they are found in his yards. His birds have been bred in line for many years for one purpose only—for show birds. That Mr. Holterman is succeeding to a remarkable degree is shown by this photograph.

At the Westchester County Poultry and Pet Stock Show, held September 17 to 22, 1906, Greystone Poultry Farm, F. H. Davey, manager, Yonkers, N. Y., won: White Rocks, 1st cock, 1st hen, 1st cockerel and 2nd and 3rd pullet. Black Minorcas: 1st and 3rd cocks; 1st, 2nd and 3rd hen; 1st

and 3rd cockerel and 1st and 3rd pullet; 1st and 2nd hen; association cup for best cock, hen, cockerel, pullet and pen, and president's cup for best display and variety.

We want to call your attention to a wonderful advertising proposition. You can furnish your home free or get many valuable premiums without cost by investigating this great offer. The Judson A. Tolman Co., 7714 Woodlawn avenue, Chicago, Ill., have recently issued a Special Christmas Jewelry and Silverware Catalogue. With all goods purchased of them they give you advertising bonds. You save these bonds

One of their articles given for advertising bonds.

until you have enough to secure any articles you may select from their special bond premium catalog. This premium book shows over 500 elaborate articles and we pronounce their proposition a winner. They will send you any one of their catalogs as follows, free: Catalog J of Jewelry; Catalog F of Sewing Machines; Catalog G of Stoves. They give bonds with all goods purchased of them, and it will pay you to send for at least one of their catalogs. A postal card will bring you the answer. Write them today and mention American Poultry Journal.

Griggs Bros., Toledo, O., have 200 fine cockerels for sale. They won the following at Toledo, 1906: Single Comb Black Leghorns, 1st and 2d pullet and 2d cockerel, no cocks or hens shown; Single Comb Brown Leghorns, 1st and 4th pullet, 2d cockerel, 2d cock, 2d hen. These birds are of a high grade exhibition type and especially bred for laying. They have a fine farm with modern houses and appliances, which enables them to supply all demands. We guarantee them. Send for their 80-page catalog and mention American Poultry Journal.

B. M. Billings, Oberlin, Ohio, breeder of White and Golden Laced Wyandottes and Rose and Single Comb Rhode Island Reds, won at Elyria, Ohio, Sept. 18-21, eleven firsts and five seconds; Eugene Sites, judge. He informs us that he has about 1,000 head of stock for the season's trade, among them a great many show birds that are fit to win in the largest shows. He is particularly strong in S. C. Rhode Island Red cockerels. Write him for prices and particulars and mention American Poultry Journal.

Charles Bennington, of Edminston, N. Y., won at Gloversville, N. Y., December, 1905, as follows: 1st cock, 1st hen, 1st cockerel, 3rd pullet, 1st pen; special for best cock, hen, cockerel and pullet; special for best display. At Scranton, Pa., January, 1906, eight prizes. Also bred first prize winners at several prominent shows, S. C. Buff Orpingtons.

C. P. Nettleton, of Skelton, Conn., won at Hagerstown, Md., October, 1906, as follows: 1st, 2d, 3d cock, 1st, 4th, 5th hen, 1st, 3d, 5th cockerel, 1st, 2d, 3d pullet. David A. Nichols, judge. Thirty Light Brahmans in class.

Send for Griggs Bros.' 80-page catalog of Bee and Poultry Supplies. They are the largest dealers of its kind in the world. Address Griggs Bros., 516 Monroe street, Toledo, Ohio.

Before purchasing your exhibition White Plymouth Rocks correspond with Mr. William Miller, Box 1, Crescent, St. Louis county, Mo. We have seen his stock and guarantee him.

Dudley Walker, Box 1, Riverside, Ill., has some very fine S. C. Wh. Leghorns and Barred Rocks to dispose of at a very low price, considering quality.

SYMPOSIUM ON THE TRAP NEST.

From Some of the Leading Poultry Breeders and Writers in the United States.

(Compiled by J. A. Biekerdike, Millersville, Ill.)

Trap nests are a boon to the poultryman.—Poultry Keeper.

There is no getting around the fact that Trap Nests are going to be more and more used as the fancy increases.—Poultry Topics.

The use of Trap Nests will pick out the drones in the flock. Every poultry keeper should have Trap Nests, if for no other purpose than to find out which are the working hens.—Farm Journal.

The first year that we used Trap Nests we discovered that about one-fourth of our flocks were not worth breeding from. The next year we secured 20 per cent more eggs with 25 per cent less hens—we bred only from the cream.—M. K. Boyer in Poultry Keeper.

It is worth your while to adopt some form of Trap Nest and know for a certainty which hens lay enough eggs to pay for their keep and which birds produce your best young stock.—Successful Poultry Journal.

The man who can advertise a Trap Nest Record for his pure bred stock which will show an average production of more than 150 eggs per year for each hen will not be able to fill his orders at \$5.00 per setting of eggs.—Poultry.

Nothing will contribute more to any breeder's success than the knowledge of the breeding value of his fowls, obtained by the use of Trap Nests and a pedigree system.—Victor D. Canaday in American Poultry Journal.

Trap Nests and Pedigree Records mean work, to be sure, but the breeder who expects to improve his flock without either of these in some form or in some degree has a long, hard road before him. Quit guessing and study your individuals.—J. M. Beecher, Jr. in Poultry.

Trap Nests do not consume near the time nor require the attention that some people imagine, and I have found that they more than pay for themselves by giving me results which I would not know how to obtain any other way, though the cost in time and money were twice as much.—W. G. Cory, in Poultry Keeper.

The Trap Nest has been discussed for years. It is coming more and more into use as the time goes by, but it should have been in universal use on breeding stock a good while ago. The time when the rule of thumb and guess was good enough has passed. What we should have in these progressive days is exact knowledge of what we are accomplishing. A flock of hens which will produce an average of close to 200 eggs in a year for each individual in it, which has been built up by a trap nest system, will bring its owner as much money as one which would win in any show in the country. Our people are practical fanciers and like to get tangible results which they can see in their bank accounts.—Poultry.

Practical and scientific poultrymen the world over are today acknowledging the superiority of Trap Nests. The poultry keeper without Trap Nests is working as much in the dark as would be the big department store that did not keep books. To those who are afraid that the poultry business is being overdone, just

enter into the breeding of high-class, standard-bred poultry, bred to lay by an up-to-date Trap Nest system, stick to it carefully and persistently, and from your results, financially and otherwise, I will guarantee that you will agree with me that the poultry business is only in its infancy.—H. P. Rankin in American Poultry Journal.

The interest in Trap Nests is increasing. More and more of these are being installed in breeding and laying pens. We have learned and unlearned many "facts" since we begin to use Trap Nests during the breeding season. I have not found it the trouble I expected and my birds took to it from the start. I have learned more about my birds, have advanced more in the few years I have used these Nests than in the ten years that preceded. I have fewer broken eggs than under the use of the common nest, and I have learned much along egg lines since I began to trap my birds.—Dr. N. W. Sanborn in Poultry Keeper.

Trap Nests are opening the eyes of a great many to possibilities not yet thought of in poultry culture and the future is bright with prospects for those who will take up poultry raising and put into practice the principles of breeding which have been the means of the wonderful improvement seen today in the best specimens of pure bred horses and cattle.—Victor D. Canaday in American Poultry Journal.

It is highly important that the poultryman knows the egg laid by each hen in his flock. This is practically impossible without the aid of the Trap Nest. If the breeder who has never given the Trap Nest a trial would seriously consider the subject he would see the many advantages to be derived from its use.—R. H. Jones in Commercial Poultry.

To become convinced of the amount of good there is in Trap Nests, one must use them. It enables him to get into touch with the individual hen, ascertain her good and bad qualities and satisfy himself of her general condition.—Fred O. Sibley in Agricultural Epitomist.

The Trap Nest system is proper and its use will bring about absolute knowledge of results in breeding operations in high class stock or higher averages in egg production. It's mighty satisfactory as a fancier to look at a bird and know beyond doubt that it was produced by such a dam and such a sire and then to be able to follow its breeding back several generations. We were talking with a fancier but a few days ago that has such a record, and could feel the gleam of satisfaction as he told us the breeding of one of his birds—even to the number of eggs laid each year by dam, grand dam, and back for several generations. Such a system is not hard to establish, not hard to maintain, eliminates the haphazard system too much in vogue, and reduces the breeding of poultry to a more systematic basis, and while it is impossible to make two peas or two birds grow just alike, it is possible by a systematic method to breed to a greater uniformity of the general flock by a carefully kept system of pedigree breeding in which the Trap Nest plays a most important part.—Western Poultry Journal.

There is not a question of a doubt that the "utility" is coming to the front in giant strides. Are you prepared to meet the demand for eggs from bred-to-lay stock this coming season? Every indication points to its being the banner year for the utility man and his birds. Trap

Nest your flock and get into line.—N. A. King in Commercial Poultry.

What I have learned with the Trap Nest: I have a 200-egg hen that has not laid a fertile egg. The worst looking pullet in my yards is one of the best layers. One of my largest hens lays the smallest eggs. Some hens, after being broken up from broodiness, commence laying again in a few days. Others take two months. Some lay ten consecutive days. Others always miss a day. The hen or pullet that starts laying early in the winter is also the best spring and summer layer.—M. J. Whitty in American Poultry Journal.

What are you doing with Trap Nests? Do not be frightened by the statements of some people that they are too much work, hens do not take to them, or the confined hen breaks the egg. You will be surprised to see how little time it does take to handle Trap Nests, how quickly the birds begin to use them, and you will find that very few eggs are ever broken in them. I have a bunch of six splendid cockerels, every bird fit to show, plainly just the same blood. What does the Trap Nest tell me about these birds? Their punched webs tell me that they were from pen headed by my best show cock, and also that they were out of my best brown-egg hen on the place. What of all this? Simply that my brown-egg hen will be mated next spring to the same male. Shall I get any more cockerels of show quality? I certainly expect to. The man who expects to work up his flock cannot afford to neglect the Trap Nest. It is not expensive, is easy to work and is an aid to progress.—Poultry Keeper.

Given a helpful knowledge of certain laws of heredity and transmission, and apply them in the selection and breeding of domesticated fowls and there is sure to result a like improvement in productiveness. To constantly improve the prolificacy of egg production in the "Hen Family," one must have some means of ascertaining the exact number of eggs each hen lays. There can be no real advance made along this line without some method that is authentic and accurate. With this end in view, the Trap Nest came upon the market—some good, some bad and some of doubtful worth; but now the experimental stage of the Trap Nest is past, real progress is being made by painstaking breeders in not only reaching the 200-egg yield annually with each hen, but even surpassing that number. An experiment made by one poultry raiser resulted in the knowledge that twenty-four of the hens laid 160 eggs; six laid 208; ten laid 202; eighteen laid 200; the balance fell below 160. These hens were banded, their number entered upon the daily record kept, and the number of eggs entered, each hen being credited with the performance of her dutiful deposit in the Trap Nest, or a blank alone spoke of her worth or worthlessness.—Alma Cole Pickering in Commercial Poultry.

Exhibition B. B. Red Games

Choice birds for \$1 each; worth \$5 each. Address Orville D. Chlun, Portsmouth, O., Station No. 2, Residence 80

1882 LIGHT BRAHMAS 1906 GILT EDGE STRAIN

**200 Egg
Incubator
\$12.80**

**THE
WOODEN
HEN**

At \$12.80 the Wooden Hen is the best 200 Egg Incubator on the market—the remarkably low price being made possible only by the immense production forced by the constantly increasing sales of this perfect hatcher. Substantially built and thoroughly finished throughout, it solves every problem of ventilation, moisture and heat—practically runs itself and requires but five minutes' time daily while in operation. The Wooden Hen is not only the best of incubators and the most economical to operate, but it also hatches the greatest proportion of fertile eggs. Send for free catalogue, illustrated in colors, containing full information regarding Incubators and Poultry Appliances.

CEO. H. STAHL, QUINCY, ILL.

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per setting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

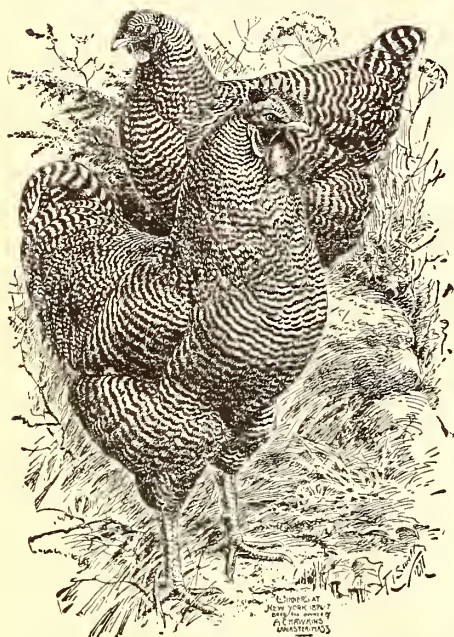

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.
